    - If a teacher, peace officer, or firefighter works 25 years or more, the retiree pays the percentages above, even if not eligible for Medicare.
    - If a PERS employee who is not a peace officer or firefighter works 30 years or more, the retiree pays 10 percent of the premium even if not yet eligible for Medicare.
    - These percentages can be changed by the actuary until the date an individual retires. The changes will be made in five year blocks to keep the cost of prefunding the system no greater than the DC system.

Technical and mechanical changes:

- The title is more descriptive of the bill.
- When an employee converts from one plan to another, the change is retroactive to the date of hire. (This does not change the service credit provisions in the bill.)
- Time limits for several irrevocable choices were changed from 60 to 90 days.
- Language was clarified to ensure survivors of Defined Benefit employees' survivors are eligible for survivor benefits.
- References to the Alaska Retirement Management Board transferring funds and adopting regulations were changed to the administrator (Department of Administration) to reflect current practice.
- Language requiring individual accounts to be transferred with "interest" was changed to "with investment earnings and losses" to avoid confusion with statutory interest rates under other retirement statutes.

Alaska Division of Retirement and Benefits

Teachers' Retirement System (TRS) Plan Comparison Chart

Feature	Tier I July 1, 1955 – June 30, 1990	Tier II Entered on or after July 1, 1990	Tier III Entered on or after July 1, 2006
Employee Contribution	Pre-tax employee contribution: 8.65% beginning 1/1/91	Pre-tax employee contribution: 8.65% beginning 1/1/91	Pre-tax employee contribution: 8% Employee may make additional contributions.
Employer Contribution	Determined by annual actuarial valuation.	Determined by annual actuarial valuation.	7% - DC account 1.75% Health Plan - determined by annual actuarial valuation after FY07. HRA - Flat dollar amount per employee based on 3% of the employer's average annual employee compensation.
Vesting	Members vest with 8 years of service.	Members vest with 8 years of service.	100% vested in employee contributions from inception. Vested in employer contributions based on the following schedule: 25% after 2 years of service, 50% after 3 years, 75% after 4 years and 100% after five years.
Qualifications for Retirement	Normal retirement age is 55, with early retirement at age 50; teachers can retire at any age after 20 years of membership service.	Normal retirement age is 60, with early retirement at age 55; teachers can retire at any age after 20 years of membership service.	None for investment account. Taxes and penalties may apply if withdrawn before age 59 1/2. See requirements for Retirement Medical Coverage.
Benefit Calculation Formula	Benefit formula is 2% for the first 20 years **and all years of service prior to July 1, 1990,** 2.5% thereafter. Benefit calculation is determined on the average of the high three contract salaries.	Benefit formula is 2% for the first 20 years, 2.5% thereafter. Benefit calculation is determined on the average of the high three contract salaries.	DC account balance plus investment earnings.
Alaska Cost-of-living Increases (COLA)	An Alaska Cost-of-Living Allowance is payable to benefit recipients who remain domiciled in Alaska after retirement. The allowance is 10% of the base benefit.	An Alaska Cost-of-Living Allowance is payable to benefit recipients 65 or older or disability benefit recipients regardless of age who remain domiciled in Alaska after retirement. The allowance is 10% of the base benefit.	None provided.

More detailed information may be found on the Division website, www.state.ak.us/drb, *or in the TRS Information Handbook.*

Feature	Tier I July 1, 1955 – June 30, 1990	Tier II Entered on or after July 1, 1990	Tier III Entered on or after July 1, 2006
Post Retirement Pension Adjustments (PRPA) **(Inflation protection)**	PRPA increases granted on an ad hoc basis. If an ad hoc is not granted, tier I employees must be age 60 or over or receiving benefits for 8 years to qualify for the automatic PRPA. The automatic PRPA legislated in 1990 applied to all members regardless of hire date.	Automatic PRPA adjustments to disabled members, retirees 60 and over, and those who have received benefits for 8 years.	None provided.
Retirement Medical Coverage	Medical coverage is provided to all benefit recipients and their eligible dependents. The retiree medical plan premium is paid by the retirement system.	The retirement system pays the retiree medical plan premium for all disabilitants regardless of age, for retirees and survivors over age 60 and for retirees with at least 25 years of membership service. This coverage includes eligible dependents. Retirees and survivors under age 60, with less than 25 years of membership service must pay the full premium cost if they want coverage.	Access to medical coverage at Medicare eligible age with 10 years of service or at any age with 30 years of service. Must retire directly from the system. If not eligible for Medicare, must pay full premium. May use health reimbursement arrangement (HRA) account to pay premiums. Once the HRA is exhausted, member self- pays premiums. When eligible for Medicare, the percentage of premium paid by the retiree or surviving spouse is: 10-14 years of service - 30% 15-19 years - 25% 20-24 years - 20% 25-29 years - 15% 30 years or more - 10%
Disability Benefits	Disability benefits are 50% of base salary, plus 10% for each eligible dependent child up to a maximum of 4 children.	Disability benefits are 50% of base salary, plus 10% for each eligible dependent child up to a maximum of 4 children.	Must be a total and presumably permanent disability whose cause is directly related to performance of duties of the job or an on the job injury. Benefit is 40% of salary, earns service while on occupational disability. Employer continues to make all required contributions as if the member were working, plus the member's required contributions to the DC account, without deduction from the member's disability payment. Disability benefits cease when the member becomes eligible for normal retirement at Medicare eligible age and 10 years of service or at any age with 30 years of service. No medical insurance until eligible for normal retirement.

NATIONAL INSTITUTE ON Retirement Security
Reliable Research. Sensible Solutions.

Pensionomics:

Measuring the Economic Impact of State and Local Pension Plans

Key Findings

Benefits paid by state and local pension plans support a significant amount of economic activity in the state of Alaska.

Pension benefits received by retirees are spent in the local community. This spending ripples through the economy, as one person's spending becomes another person's income, creating a *multiplier effect*.

Expenditures stemming from state and local pensions supported...

- 6,270 jobs that paid $385.2 million in wages and salaries
- $1.0 billion in total economic output
- $155.5 million in federal, state, and local tax revenues

... in the state of Alaska

Each dollar paid out in pension benefits supported $1.25 in total economic activity in Alaska.

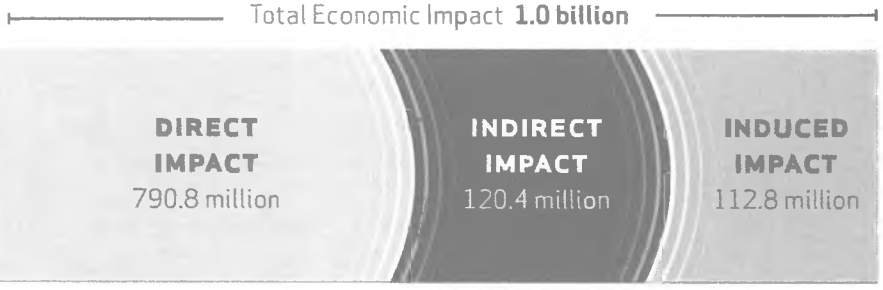
Each dollar "invested" by Alaska taxpayers in these plans supported $6.35 in total economic activity in the state.

Overview

Expenditures made by retirees of state and local government provide a steady economic stimulus to Alaska communities and the state economy. In 2006, 34,962 residents of Alaska received a total of $819.50 million in pension benefits from state and local pension plans, with $808.64 million paid from plans within the state and the remainder originating from plans in other states.

The average pension benefit received was $1,953 per month or $23,440 per year. These modest benefits provide retired teachers, public safety personnel and others who served the public during their working careers income to meet basic needs in retirement.

Impact on Jobs and Incomes



Retiree expenditures stemming from state and local pension plan benefits supported 6,270 jobs in the state. The total income to state residents supported by pension expenditures was $385.2 million.

Of this, the greatest share, $188.0 million, was comprised of employee compensation (wages and salaries). Proprietors' income (self-employment income) represented $33.6 million, and other property income (including payments from interest, rent, royalties, profits and dividends) totaled $163.6 million.

Economic Impact

State and local pension funds in Alaska and other states paid a total of $819.50 million in benefits to Alaska residents in 2006. Retirees' expenditures from these benefits supported a total of $1.0 billion in total economic output in the state, and $430.7 million in value added in the state.

$790.8 million in direct economic impacts were supported by retirees' expenditures on goods and services from businesses in the state. An additional $120.4 million in indirect economic impact resulted when these businesses purchased additional goods and services, generating additional income in the local economy. $112.8 million in induced impacts occurred when employees hired by businesses as a result of the direct and indirect impacts made expenditures, supporting even more additional income.

For more information on the data and methodology used for these estimates, please refer to *Pensionomics: Measuring the Economic Impact of State and Local Pension Plans* National Institute on Retirement Security: Washington DC. February 2009. www.nirsonline.org

Economic Multipliers

Taxpayer Contribution Factor*

$1.00
contributed by Alaska taxpayers to state and local pensions

$6.35
total economic activity

Each $1 in taxpayer contributions to Alaska's state and local pension plans supported $6.35 in total output in the state. This reflects the fact that taxpayer contributions are a minor source of financing for retirement benefits - investment earnings and employee contributions finance the lion's share.

Pension Benefit Multiplier

$1.00
pension benefits paid to retirees in Alaska

$1.25
total economic activity

Each $1 in state and local pension benefits paid to Alaska residents ultimately supported $1.25 in total output in the state. This "multiplier" incorporates the direct, indirect, and induced impacts of retiree spending, as it ripples through the state economy.

* Caution should be used in interpreting this number, because the Census data used reflect the taxable status of contributions only; because employee contributions may be reported as taxpayer contributions, the multiplier here may be underestimated.

Impact on Tax Revenues

State and local pension payments made to Alaska residents supported a total of $155.5 million in revenue to federal, state and local governments. Taxes paid by retirees and beneficiaries directly out of pension payments totaled $28.7 million. Taxes attributable to direct, indirect and induced expenditures accounted for $126.8 million in tax revenue.

Federal Tax	87.5 million
State/Local Tax	67.8 million
Other Corporate Taxes	0.2 million
Total	**$155.5 million**

Economic Impacts by Industry Sector

The economic impact of state and local pension benefits was broadly felt across various industry sectors in the state. The ten industry sectors with the largest employment impacts are presented in the table below.

Industry	Employment Impact (# Jobs)	Value Added Impact ($ millions)	Income Impact ($ millions)	Output Impact ($ millions)
Health Care and Social Assistance	1,354	$75.0	$74.2	$119.1
Retail Trade	1,331	64.4	50.9	97.0
Accommodation and Food Services	839	26.7	23.8	50.0
Other Services (Except Public Administration)	479	14.2	13.3	27.1
Real Estate and Rental and Leasing	452	33.8	28.2	50.8
Professional, Scientific, and Technical Services	229	11.8	11.5	23.2
Arts, Entertainment, and Recreation	229	6.2	5.6	10.8
Finance and Insurance	227	24.2	23.3	43.9
Public Administration	196	10.1	10.1	20.7
Transportation and Warehousing	187	11.4	10.8	22.0

The Top Ten Advantages of Maintaining Defined Benefit Pensions

Legislation has been proposed in several states to replace state and local government defined benefit (DB) retirement plans with defined contribution (DC) plans. At issue is not whether state and local employees should have access to DC plans—many already do in conjunction with their DB plans or else through supplemental DC-type plans, which play a useful role in providing additional tax-deferred retirement savings.[1] Rather the issue is whether defined benefit plans should be eliminated and replaced with defined contribution plans.

While recognizing that DC plans are useful in providing supplemental retirement benefits, this paper discusses the advantages of maintaining state and local DB plans and argues against replacing them with DC plans. Eliminating the DB plan and switching to a DC plan is likely to be a lose-lose situation for governments, their employees, and taxpayers for many reasons. After briefly describing how DB and DC plans work, this paper will discuss the following 10 advantages of retaining DB plans:

- Retaining a DB plan is likely to cost state and local governments less over the short term. The long-term cost savings of switching to a DC plan are uncertain at best.
- Almost all state and local DB plans provide disability and survivor benefits as well as retirement income. Switching to a DC plan would require employers to obtain these benefits from another source, likely at a higher cost.
- DB plans enhance the ability of state and local governments to attract qualified employees and retain them throughout their careers. Switching to a DC plan would limit this ability, possibly producing or exacerbating labor shortages in key service areas by increasing employee turnover rates. Higher turnover rates result in increased training costs and lower levels of productivity that can, in turn, result in the need for a larger total workforce.

[1] Examples of DC-type plans available to state and local employees include governmental deferred compensation plans (also known as "457 plans") and 403(b) annuities. In addition, some state and local employees are also covered by 401(k) plans, if the plans were established before May 6, 1986. As reported by the Nationwide Retirement Education Institute in their 2004 report *America's Retirement Voice: Public Sector Retirement Yesterday, Today, and Tomorrow*, governmental 457 plans are in place for most large and mid-size cities and counties and all 50 states, covering approximately 3 million participants. According to a 2006 survey by the National Association of Government Defined Contribution Administrators (NAGDCA), 7.4 million governmental employees are eligible to participate in some form of defined contribution plan. This represents about half of current state and local government employees.

- DB plans help state and local governments manage their labor force by providing flexible incentives that encourage employees to work longer or retire earlier, depending on the circumstances. Switching to a DC plan would limit this flexibility and make these incentives more expensive for the employer.
- By pooling risk over a relatively large number of participants, DB plans lower the overall risk do to investment losses and participants outliving retirement benifits. Switching to a DC plan would require each individual to bear these risks alone, consequently requiring higher contributions than if the risks were pooled.
- DB plans earn higher investment returns and pay lower investment management fees, on average, than DC plans. Switching to a DC plan is likely to lower investment earnings used to finance retirement benefits and increase management costs, to the detriment of plan participants.
- DB plan investment earnings reduce future employer contributions. Switching to a DC plan would prevent state and local governments from reducing employer contributions through investment earnings, which currently fund over two-thirds of public retirement benefits.
- DB plans provide secure retirement benefits based on a person's salary and period of service. Switching to a DC plan is likely to result in lower and less secure retirement benefits for many long-term governmental employees, including firefighters, police officers, and teachers, who constitute over half of state and local government workers.[2] State and local employees who are without Social Security coverage would be put at even greater risk.
- DB plans help sustain state and local economies by providing adequate and steady retirement benefits for a significant portion of the workforce. Switching to a DC plan may slow state and local economies, since a large number of retirees would likely receive lower retirement benefits.
- DB plans provide benefits that help ensure an adequate standard of living throughout retirement. Switching to a DC plan likely would result in pressure on state and local governments to augment DC plan benefits and require increased financial assistance for retirees.

Background

State and local government retirement plans in the United States cover 14.1 million active employees (about 10 percent of the U.S. labor force) and 6.9 million retirees,[3] including teachers, police officers, firefighters, legislators, judges, and general employees. Ninety percent of state and local governmental employees are covered by defined benefit retirement plans.[4] Approximately 25 percent are not covered by Social Security, including close to half of public school teachers and about 70 percent of police officers and firefighters. State and local retirement plans paid annual benefits of $141 billion in 2005, averaging about $20,400 per retiree.[5] As of December 31, 2006, state and local plans had accumulated $3 trillion in assets, which were invested in a broadly diversified mix of equity and fixed-income securities.[6]

[2] U.S. Census Bureau, *Statistical Abstract of the United States 2004-2005* (Washington, DC: U.S. Government Printing Office, 2004), Table No. 454. Teachers, school employees, police officers, and firefighters constitute approximately 60 percent of state and local government employees.
[3] U.S. Census Bureau, *State and Local Government Employee-Retirement Systems*, Fiscal Year 2005, Table 5a. In addition to active employees and retirees, state and local plans also cover 3.8 million inactive members who are eligible for retirement benefits upon reaching retirement age. Chart I: Participants in State and Local Government DB Plans

Source: U.S. Census Bureau, State and Local Government Employee-Retirement Systems, annual

Since the mid-1990s, legislation has been proposed in several states to replace state and local DB plans with DC plans. The pace of these proposals increased from 2003 through 2006, partly due to equity market downturns in 2000 through 2002 that resulted in increased contribution rates for many DB plans, both public and private. Proponents of the change argue that switching to a DC plan would lower the government's cost of providing retirement benefits, thereby reducing state and local taxes. They also argue that DC plans would benefit public employees by giving them higher benefits through DC plan investment earnings and by making it easier for employees to take their benefits with them when they change jobs.

As this paper shows, it is likely that switching to a DC plan would increase retirement costs over the short-term and possibly over the long-term as well. In addition, recent studies indicate that retirement benefits provided though DC plans are, on average, significantly lower than those provided through DB plans. Moreover, while DC plans are useful for providing supplemental, tax-deferred retirement savings, replacing DB plans with DC plans could cause severe, unintended consequences:

- Governments could lose a valuable tool for attracting and retaining qualified employees;
- Public employees could lose a significant amount of retirement income, potentially affecting state and local economies; and
- Legislators could face additional pressure to increase DC retirement benefits and provide additional financial assistance for public-sector retirees.

Chart 2: Accumulated Assets and Annual Benefit Payments of State and Local Government DB Plans

Source: U.S. Census Bureau, State and Local Government Employee-Retirement Systems, annual

How DB Plans Work

In a typical DB plan, employers promise to pay retirement benefits based on an employee's period of service and final average salary. A typical benefit formula for state and local general employees is 2 percent times final average salary times years of service.[7] Under this formula, an employee who works 20 years and retires with a final average salary of $40,000 would earn an annual benefit of $16,000.

Eligibility for the benefit (i.e., vesting) usually requires employees to work for a minimum period of time, typically 5 years.[8] Upon retirement, the benefit is provided as a series of monthly payments over the retiree's lifetime (and the surviving spouse's lifetime if this option is selected by the member who, in return, receives a reduced benefit). Most state and local employees are in DB plans that provide cost-of-living adjustments as protection against inflation. In addition, most also provide disability and pre-retirement death benefits.

DB plan benefits are financed by contributions from the employer (and most often from employees as well) and investment income. Employee contributions are usually established at a fixed rate of pay, averaging a little over 4 percent for general employees and almost 7 percent for public safety employees and teachers.[9] Employer contributions are calculated so

[7] The "2 percent" portion of this benefit formula is referred to as the "benefit multiplier." Benefit multipliers vary, depending on occupation and Social Security coverage. According to the NASRA/NCTR 2003 Public Fund Survey, the median benefit multiplier is 1.85 percent for state and local employees covered by Social Security and 2.20 percent for those not covered by Social Security.

[8] National Education Association, *Characteristics of Large Public Education Pension Plans* (Washington, DC: National Education Association, 2004). The 88 statewide plans surveyed cover 9.4 million active workers. Fifty-seven percent of the plans had vesting periods of five years.

[9] Public Pension Coordinating Council, *2000 Survey of State and Local Government Employee Retirement Systems*, April 2000, Table VII-7. Employee contributions as a percentage of payroll averaged 4.2 percent for general employees, 6.8 percent for teachers, and 6.9 percent for public safety employees.

that, over the long-run (50 years or more), annual contributions plus expected investment earnings are enough to pay the promised benefits plus administrative expenses. These calculations are done by actuaries and designed to maintain employer contribution rates at a level percent of payroll, by smoothing short-term investment fluctuations and using other actuarial techniques.[10] Plan assets are invested in professionally managed, broadly diversified portfolios, with investment fees paid by the plan or employer. Retirement benefits are paid from accumulated contributions and investment earnings.

For employers, a key advantage of DB plans is that investment earnings reduce future employer contributions. In other words, employer and employee contributions generate investment earnings that, in turn, are used to pay benefits that would otherwise have to be paid from future employer contributions. From 1986 through 2005, state and local DB plan investments earned $2.26 trillion, reducing the need for additional employer contributions and taxpayer revenues.[11]

A potential disadvantage of DB plans is that when investment earnings are less than expected, additional employer contributions are required. However, it should be noted that the $2.26 trillion earned by state and local investments over the past 20 years includes investment losses that occurred in 2000 through 2002, as well as in 1987 and 1994.

For employees, a key advantage of DB plans is that they provide secure and predictable retirement income over their lifetimes based on pre-retirement earnings. A key disadvantage is that employees who do not remain employed long enough to become vested often lose their DB plan benefits, although employee contributions are nearly always returned with interest.

How DC Plans Work

In a DC plan, employers provide employees with individual investment accounts and promise to contribute a certain amount to the accounts ranging from 3.5 percent to 8 percent (or more) of pay while the employee is employed. Employees can also contribute to their accounts and decide how the assets are invested, choosing from a number of funds representing major investment categories. Investment management fees are paid from the employee's account, reducing the funds available to pay benefits. At retirement, the employee's benefit is paid solely from the contributions and investment earnings that have accumulated in the individual's account.

For employers, one advantage of DC plans is that the employer's contribution rate is fixed and unaffected by downturns in investment markets. Moreover, the employer has no financial liability for the employees after they retire, even if the DC accounts are insufficient to provide an adequate retirement benefit. (While this may be an advantage for private-sector employers, it is a disadvantage for state and local governments—and taxpayers—who may have to pay increased public financial assistance as a result.)

A disadvantage for employers is that DC plans may not be a strong incentive for attracting and retaining qualified employees, especially if competing employers are offering DB

[10] These smoothing techniques work well when investment fluctuations are moderate and short-lived.
[11] U.S. Department of Commerce, U.S. Census Bureau, through 1996, *Finances of Employee-Retirement Systems of State and Local Governments*, Series GF, No. 2, annual; beginning 1997, *State and Local Government Employee-Retirement Systems*, annual.

plans. Moreover, if employees' account balances are inadequate to provide retirement benefits when the employees intend to retire, employers can end up with a number of active employees who are not performing at peak productivity (also known as being "retired in place"). Another disadvantage is that, since the employer's contribution rate is fixed in a DC plan, upturns in the investment markets do not reduce the employer's contribution rate, as they do in DB plans.

For employees, one advantage of DC plans is that the vesting period is typically shorter than for DB plans. Six months to two years is typical.[12] Moreover, DC accounts are more "portable"—that is, easier to transfer if the employee changes jobs. A major disadvantage is that DC accounts are subject to investment risk and may not be enough to sustain employees throughout their retirement. Another disadvantage is that a high percentage of employees cash-out and spend some or all of their DC accounts when they change jobs, significantly reducing the amounts available to pay retirement benefits.[13]

The remainder of this paper describes the advantages of retaining DB plans.

Advantage 1: Retaining a DB plan is likely to cost state and local governments less over the short term. The long-term cost savings of switching to a DC plan are uncertain at best.

- **DC plans are costly to establish and maintain.** A DC plan must be designed, vendors must be selected, its operation must be monitored, and employees must be informed about plan features and available investments. Staff time is spent throughout this process, and the sponsoring government must pay legal and consulting fees. If a third-party administrator is not hired to operate the plan, the government must do this as well. Even if a third-party administrator is hired, the government will still have operating costs related to the DC plan, possibly ranging in the millions of dollars.

    - For example, the budget for the State of Florida's DC plan, established in 2000, totaled $89 million from FY 2001 through FY 2004. This includes $55 million to educate Florida's 650,000 government employees about the new plan.[14] As of 2004, approximately 3 percent of DB participants had chosen to transfer to the DC plan.[15]

- **Pension benefits currently promised to state and local employees and retirees may not be abandoned. Switching to a DC plan does not reduce accrued DB plan benefits already earned.** Most governmental DB plan benefits are protected by the state's constitution or statutes that prevent accrued benefits from being reduced. Consequently, when an alternative DC plan is established, current DB plan members remain in the DB plan but may be given the option to transfer to the new DC plan. For current DB plan members who elect the DC plan, the value of the member's accrued DB benefit is often transferred to the DC plan.[16]

[12] However, some public-sector DC plans require 5 years of service (or more) for employees to completely vest in the employer's contributions.
[13] This is surprising since the cashed-out amounts are subject to income taxes. In many cases they are also subject to a 10 percent penalty tax on early distributions.
[14] Information provided by the Pension Protection Coalition, based on an analysis of the Florida Public Employee Optional Retirement Program's approved budgets and revenue collections. The analysis was done for the Coalition by the law firm of Olson, Hagel & Fishburn, LLP, January 18, 2005. The budgeted amounts exclude investment management fees paid by plan participants. Used with permission.
[15] Anya Sostek, "Pension Pendulum," *Governing Magazine*, March 2004: 28.
[16] If the member's accrued DB benefit is not transferred to the DC plan, it is maintained in the DB plan.

- **When given the option, most employees remain in the DB plan.** In most cases, only a small percent of employees elect to transfer from the DB plan to the DC plan.[17] To increase the number of employees who eventually enter the DC plan, some governments have restricted the DB plan to current employees and have required newly hired employees to join the DC plan.[18]

- **Even when new hires are required to join the DC plan, long-term cost savings for employers are uncertain and may take many years to realize.** When a DB plan is closed to new hires, it still covers current employees and retirees, and benefits continue to accrue to active employees as a result of their service. To the extent that plan assets are less than accrued liabilities, unfunded liabilities remain. For DB plans with unfunded liabilities, closing the DB plan to new hires will likely increase the employer's annual required contribution rate. Because new hires are not entering the plan, the cost of funding the liabilities is spread over a declining number of active members,[19] thereby increasing the employer's contribution rate as a percent of covered payroll. In addition, since a growing portion of plan assets must be used to pay benefits, a growing portion of assets will likely be held in short-term securities, thereby reducing investment returns.

    - For example, the Los Angeles County Employees Retirement Association (LACERA) estimated that the County's DB plan contribution rate would increase by 3.66 percent if employees hired after July 1, 2007, were required to join a DC plan. This would increase County contributions to the closed DB plan by $206 million in 2008. While the contributions would gradually decline over time, the County would have to wait until 2018 to see any savings in DB plan costs as a result of the change.[20]

- **In several cases, states have replaced (or have considered replacing) DC plans due to inadequacy of plan benefits or increased costs.**

    - In 1977, the North Dakota Public Employees Retirement System, originally established as a DC plan in 1966, was changed to a DB plan. Reasons given include the need to provide adequate retirement benefits and the need to attract and retain quality employees.[21]

    - In 2000, the State of Nebraska reviewed its two DC retirement plans for state and county workers and found that between 1983 and 1999 the DC plans' investment returns averaged only 6 percent compared with 11 percent for the state's DB plans. Recognizing these returns were inadequate to

[17] Sostek, 2004. Three percent of employees covered by the DB plan elected to join the new DC plan in Florida, 6 percent in Michigan, and 2.5 percent in Ohio.
[18] National Association of State Retirement Administrators, "Overview of Plan Types." Of the 14 state retirement systems discussed in this paper, only two (Michigan and West Virginia) required newly hired employees to join the DC plan. The remaining systems offered DC plans as a voluntary alternative to the DB plan or offered a new plan that combined DB and DC plan features. Available on the NASRA web site (www.nasra.org).
[19] Governmental Accounting Standards Board, Statement No. 27, *Accounting for Pensions by State and Local Governmental Employers* (Norwalk, CT: Governmental Accounting Standards Board, 1994), p. 7. In situations where a DB plan is closed to new members, unfunded liabilities are amortized as a level percent of projected payroll, including projected decreases in the number of active plan members.

[21] North Dakota Legislative Council, Employee Benefits Program Committee, "Public Employees Retirement Programs – History," October 1998.

sustain retirement benefits, the state responded by creating a new hybrid plan for state and county workers, combining both DB and DC plan features.[22]

- In 2005, the West Virginia Legislature passed a law requiring teachers in the Teacher's Defined Contribution (TDC) Plan (created in 1991) to transfer into the State Teachers' Retirement System, a DB plan, effective upon approval by TDC plan members. According to the West Virginia Consolidated Public Retirement Board's actuary, the change would save the State $1.9 billion over the next 30 years, because lower employer contributions were required for the DB plan (4.3 percent of payroll) than for the DC plan (7.5 percent of payroll). State teacher representative also indicated the change would help prevent teachers from leaving their jobs.[23] In 2006, TDC plan members voted to merge with the DB plan. However, because the law required the transfer of vested DC assets, it was contested and overturned in circuit court.[24]

Advantage 2: Almost all state and local DB plans provide disability and survivor benefits as well as retirement income. Switching to a DC plan would require employers to obtain these benefits from another source, likely at a higher cost.

- **Almost all state and local DB plans provide disability and survivor benefits.** According to the U.S. Bureau of Labor Statistics, 97 percent of state and local government employees in DB plans have disability coverage through the plan and 93 percent may elect joint and survivor benefits.[25] These benefits are largely funded through contributions and investment earnings. Disability and survivor benefits are especially important for employees in hazardous occupations such as firefighters and police officers who may die or become disabled in the line of duty.

- **Few DC plans provide disability benefits. Moreover, DC plan survivor benefits are usually limited to the participant's account balance.** In the absence of a DB plan, employers would need to obtain disability and pre-retirement death benefits through commercial insurance or else would have to self-fund the benefits. Either of these options would result in additional administrative costs. If the benefits were obtained through commercial insurance, the employer's cost would also include the insurer's profit margin.

Advantage 3: DB plans enhance the ability of state and local governments to attract qualified employees and retain them throughout their careers. Switching to a DC plan would limit this ability, possibly producing or exacerbating labor shortages in key service areas by increasing employee turnover rates. Higher turnover rates result in increased training costs and lower levels of productivity that can, in turn, result in the need for a larger total workforce.

- **Employers offer retirement plans as a way to attract qualified employees and retain them so their skills and experience are used efficiently.** According to the Diversified

[25] U.S. Department of Labor, Bureau of Labor Statistics, *Employee Benefits in State and Local Governments, 1998* (Washington, DC: U.S. Government Printing Office, December 2000), pp 94-98.

Investment Advisors' Report on Retirement Plans, most large employers see a tangible value in offering a defined benefit plan to their employees – despite the high costs sometimes associated with it. Fifty-eight percent of plan sponsors with 25,000 or more employees believe that their DB plans have a major impact on employee retention.[26]

- **DB plan provisions encourage employees to remain with an employer longer than DC plan provisions.** The vesting period for DB plans is typically longer (e.g., 5 years) than the vesting period for DC plans (e.g., 6 months to 2 years). Consequently, employees have a financial incentive to continue working for the employer at least until they vest. After that, DB plan benefit accruals based on continued service provide an additional financial incentive to remain.

- **Key governmental service areas, such as education and public safety, require skilled and dedicated employees to work in positions involving high levels of stress or physical activity or both.** Individuals with the skills and temperament to take on these roles usually have other opportunities in the labor market. DB plans provide strong incentives by rewarding long-term, dedicated service with a secure retirement.

Advantage 4: DB plans help state and local governments manage their labor force by providing flexible incentives that encourage employees to work longer or retire earlier, depending on circumstances. Switching to a DC plan would limit this flexibility and make these incentives more expensive for the employer.

- **Governments can use DB plan benefits as a way to manage their labor force by rewarding longer employment and encouraging retirement after a certain period of employment.** DB plan benefit formulas can be structured to provide incentives for longer employment by increasing the benefit multiplier after a certain period of service.

    - For example, the formula could provide benefits of 2.0 percent of final average earnings for the first 20 years of service and 2.2 percent for service over 20 years. To encourage retirement after a certain period of employment, DB benefit formulas can limit benefit accruals to a maximum percent of final average earnings or a maximum years of service. In this example, if the benefit accrual was limited to 62 percent of final average earnings, it would encourage employees to retire after 30 years of service. Other options, such as early retirement incentives (ERIs) and deferred retirement option plans (DROPs), are also available.

Advantage 5: By pooling risk over a relatively large number of participants, DB plans lower the overall risk do to investment losses and participants outliving retirement benifits. Switching to a DC plan would require each individual to bear these risks alone, consequently requiring higher contributions than if the risks were pooled.

- **DC plan participants must save enough to ensure they will not outlive their accumulated assets while protecting their funds against financial market fluctuations.** According to the Society of Actuaries RP-2000 mortality tables, 50 percent of U.S.

[26] "Majority of U.S. Companies That Offer a Pension Plan Say It Impacts Employee Retention," *Business Wire*, September 7, 2004.

males who reach age 65 will live to age 83, 10 percent will live to age 93, and about 1 percent will live to 100. Moreover, 50 percent of U.S. females who reach age 65 will live to age 85, 10 percent will live to age 96, and 2 percent will live to 100. To ensure their DC accounts will sustain them over their expected lifetimes, DC plan participants must save enough to ensure their benefits will be paid into their 90s.

- A 25 year old male would have to save 17 percent of his salary each year to age 65 in order to replace 75 percent of his pre-retirement income from age 65 to age 93 (assuming 7 percent annual investment returns). A 25 year old female would have to save 18 percent of her salary to assure 75 percent income replacement to age 96. However, if these longevity risks were pooled over a large enough group to allow the risks to be fully averaged, the required savings rate would fall to 13.6 percent of salary for both males and females.[27] Risk pooling is one of the main advantages of a DB plan.

- **In order to lower investment risk, DC plan participants usually shift a greater portion of their assets from stocks into bonds as they grow older. While this helps protect against equity market downturns, it also lowers likely investment return.** According to a 2004 Employee Benefit Research Institute study, 401(k) plan participants in their 20s invest 65 percent of their account balances in equities (including company stock) and 21 percent in fixed-income securities, on average. Participants in their 60s invest 49 percent in equities and 40 percent in fixed-income securities.[28] In contrast, large public retirement systems hold 60 percent of assets in equities, 29 percent in fixed-income securities, and the remaining 11 percent in other investments.[29] This pooling of assets allows DB plans to maintain a more diversified portfolio and helps to lower investment management fees.

- **By averaging longevity and investment risks over a large number of participants, DB plans lower the total costs of providing retirement benefits.** Instead of requiring contributions large enough to fund retirement benefits through each individual's maximum life expectancy, DB plans only need to fund benefits through the average life expectancy of the group. This lowers required contributions. Moreover, by spreading investment risk over a longer period, DB plans can maintain an investment mix that includes a higher percentage of equity investments. This increases likely investment returns, which further lower required contributions. In the example presented earlier in this section, if the pooling of funds could increase investment returns from 7 percent to 8 percent, then the required savings rate for the pooled participants would fall from 13.6 percent to 10.0 percent.[30]

Advantage 6: DB plans earn higher investment returns and pay lower investment management fees, on average, than DC plans. Switching to a DC plan is likely to lower investment earnings used to finance retirement benefits and increase management costs, to the detriment of plan members.

- **On average, investment returns for DC plans are lower than for DB plans, resulting in significantly lower investment earnings over an individual's lifetime.** According to Boston College economist Alicia Munnell, DB plans outperformed DC plans by one percentage point annually, on average, between 1988 and 2004.[31] For a person contributing $5,000 to a DC plan each year for 40 years, the difference between an 8.0 percent annual return and a 7.0 percent return amounts to a loss of over $279,000.[32] Other studies show that individual, non-professional investors may underperform the market by as much as 2.0 percent annually.[33] The difference between an 8.0 percent annual return and a 6.0 percent return amounts to a loss of over $521,000.[34]

- **Administration and investment costs for DC plans can be more than four times higher than for DB plans. In DC plans, these costs are borne directly by individual plan participants through deductions from their DC accounts.** According to the Investment Management Institute, the operating expense ratio for DB plans averaged 31 basis points in 2003 (31 cents per $100 of assets) compared with 96 to 175 basis points for DC plans.[35] According to the Illinois Municipal Retirement Fund, the total annual administrative and investment cost for their DB plan amounted to 44 basis points in 1999. Had they switched to a DC plan, total annual administrative and investment costs could have increased up to 225 basis points, or up to $250 million more than the annual administrative and investment costs paid by the DB plan.[36]

- **Employees direct their own investments in a DC plan, usually selecting from among several funds that reflect major investment categories. Generally, employees have limited investment experience or training.** According to a 2007 study by Watson Wyatt Worldwide, many DC plan participants "don't start saving soon enough, don't save enough, and don't follow sound investment principles in managing their retirement assets." The study also found that assets are more effectively managed in DB plans, in part because plan administrators work with consultants and professional asset managers to set and implement investment goals.[37]

- **DC plan participants often cash-out and spend some or all of their DC accounts when they switch jobs. As a result, the accounts contain less money to earn investment returns and to pay benefits at retirement.** According to Alicia Munnell, more than half of DC plan participants withdraw funds from their DC accounts when they change jobs, removing between one-quarter and one-third of their total DC plan assets before they reached retirement.[38]

Advantage 7: DB plan investment earnings help to reduce future employer contributions. Switching to a DC plan would prevent state and local governments from reducing future employer contributions as a result of investment earnings, which currently fund over two-thirds of public retirement benefits.

- **State and local governments have benefited from investment returns overall and many have used investment earnings to reduce employer contributions.** Over the long-term, an employer's cost of providing DB plan benefits depends on investment earnings. Although investment earnings can fluctuate sharply at times (as happened from 2000 through 2002), over the last 20 years state and local governments have substantially benefited from investment returns and have used the accumulated assets to lower employer contributions. As provided in governmental accounting standards, plan assets that are greater than plan liabilities are amortized to reduce employer contributions.[39] A 2002 survey of Michigan state and local government retirement systems shows that of 115 independent local government retirement plans surveyed, employer contributions for 102 (89 percent) were below the normal cost of benefits as a result of this amortization.[40]

- **Most of the money paid into state and local retirement plans comes from investment earnings.** Over the 20-year period from 1986 through 2005, state and local government investment earnings amounted to about $2.3 trillion, compared with employer contributions of $790 billion and employee contributions of $400 billion.[41] This means two out of every three dollars paid into state and local retirement plans over the last 20 years was received from investment earnings. According to a paper on state and local retirement plans prepared for the Wharton School's Pension Research Council: **"Setting aside all the other benefits to employers and employees of DB plans, contributions to public pension plans may be among the best investments a state or local government can make."**[42]

Advantage 8: DB plans provide secure retirement benefits that are based on a person's salary and period of service. Switching to a DC plan is likely to result in lower and less secure retirement benefits for many long-term governmental employees, including firefighters, police officers, and teachers, who constitute over half of state and local government workers. State and local employees who are without Social Security coverage would be put at even greater risk.

- **Retirement benefits paid from DC plans are significantly less than those paid from DB plans.** The U.S. Congressional Research Service found that, for current older workers, DC-type plans will provide annual benefits of less than $5,000 for half the workers.[43] This is one-quarter of the $20,400 average annual benefits currently paid by governmental DB plans to state and local workers.

- **If average state and local retirement benefits fell from $20,000 to $5,000, it would mean a loss of approximately $106 billion in annual U.S. personal income.**[44] This loss would be felt by state and local economies, since many retirees remain in the

[44] Author's calculation based on $141 billion in annual pension benefits paid by state and local government retirement plans in 2005.

same location when they retire. These pension benefits are also, in most cases, subject to federal and state income taxes, thus resulting in a loss of tax revenues. Tax loses would also be seen in reductions of state sales tax revenues.

- **The change would have an even greater effect on the 25 percent of state and local government employees who are not covered by Social Security, including about half of school teachers and about 70 percent of police officers and firefighters.** When first enacted in 1935, Social Security excluded state and local employees, due largely to constitutional questions about the federal government's right to tax state and local governments. In 1950, Congress amended Social Security to allow state and local governments to voluntarily elect coverage. By then, however, half of the largest state and local plans had already been established, including many plans for teachers and public safety employees.[45] These DB plans provide benefits that compensate for the lack of Social Security coverage. Replacing them with defined contribution plans would put members at even greater risk, since they would not have Social Security benefits to fall back on.

Advantage 9: DB plans help sustain state and local economies by providing adequate retirement benefits for a significant portion of the workforce. Switching to a DC plan would likely slow state and local economies, since a large number of retirees would likely receive lower retirement benefits.

- **Public DB plans have a substantial impact on state and local economies.** For example, a 2006 economic impact study by the Perryman Group found that the $5.4 billion in annual benefits paid by the Teacher Retirement System of Texas (TRS) to approximately 250,000 retired teachers and beneficiaries generates $9.9 billon in total economic activity within the state. Moreover, as a result of TRS's strong investment performance, the overall return on state (and therefore taxpayer) contributions is significant: every $1 of state funds contributed to TRS leads to $7.85 in total spending in the Texas economy."[46]

- **The overall economic value added by the investment income of state and local DB plans over what would otherwise have been earned in DC plans is estimated to be about $200 billion annually, or 2.0 percent of U.S. Gross Domestic Product.**[47] In essence, state and local retirement plans act as financial engines, using employer and employee contributions to generate investment income that, when paid as retirement benefits, bolsters state and local economies by $200 billion a year. State and local retirees purchase a wide range of goods and services with their retirement income. These purchases, in turn, promote employment and create additional economic demand, generating additional economic activity. As a result of this multiplier effect, the economic activity generated by the higher investment earnings amounts to 2.0 percent of U.S. Gross Domestic Product. As a growing number of state and local employees retire, this percentage will likely increase.

[47] Anderson and Brainard, p. 14.

Advantage 10: DB plans provide benefits that help to ensure an adequate standard of living throughout retirement.

Switching to a DC plan would likely result in pressure on state and local governments to augment DC plan benefits and require increased financial assistance for retirees.

- **If DC plan benefits are less than what is needed to ensure an adequate standard of living during retirement, continued pressure will be placed on state and local governments, legislators, and taxpayers as retirees outlive their retirement income.** Since DC benefits are not indexed to inflation, extended periods of even modest inflation will mean almost constant pressure for some form of additional financial support for retirees, who would make up a growing portion of the electorate. When DC plan benefit improvements are granted, they will be paid from current government revenues and will not be offset by investment earnings.

Conclusion

This paper addresses the question, "Should state and local government defined benefit plans be eliminated and replaced with defined contribution plans?" It concludes that such a move would have significant, long-term, detrimental effects on state and local governments, their employees, their economies, and ultimately the taxpayers.

In the final analysis, the real question is, "How can state and local governments efficiently provide secure, sufficient, and sustainable retirement benefits for their employees?" To answer this question, retirement benefits should be viewed in total, including benefits from Social Security, defined benefit plans, defined contribution plans, and individual savings. No single source alone is sufficient, but together they can be used to provide effective and efficiently funded retirement income. Eliminating defined benefit plans would only intensify future problems rather than provide solutions.

Instead, decisions should be based on a clear understanding of the goals that current plan design is intended to achieve for the various stakeholders, including the employer sponsoring the plan, plan participants, and taxpayers. Retirement plan design represents a significant public policy. Therefore, the plan sponsor contemplating changes must understand the policy implications of current plan design as well as any new proposals.

Success is most likely to happen after careful analysis. With proper analysis and an understanding of the needs of a changing population, fine-tuning the basic pension plan design can produce excellent results for all – sponsors, employees, retirees, and taxpayers.

Retirement Plan Choices for Public Employees and Employers

By Mark Olleman, FSA, MAAA, EA, and Ilana Boivie

September 2011

ABOUT THE AUTHORS

Mark Olleman
Mark Olleman is a Consulting Actuary and Principal in the Seattle office of Milliman, Inc. He has been with the firm since 1990 providing actuarial services for Milliman's defined benefit clients from Alaska to Texas. Mr. Olleman is a frequent speaker on public employee retirement issues and has authored several articles. He works with his clients on a wide variety of services including actuarial valuations, economic and demographic experience studies, asset/liability modeling, cost projections, plan design, funding strategies, and communications. He is a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, and an Enrolled Actuary. He has a Bachelor of Science degree from Whitworth University in Mathematics and Chemistry.

Ilana Boivie
Ilana Boivie is Director of Programs for the National Institute on Retirement Security. An economist, she conducts original research and analysis regarding U.S. retirement issues, and assists with the overall strategic direction of NIRS' programming. She was the lead author of *Pensionomics: The Economic Impact of State and Local Pension Plans*, and has been instrumental in NIRS' research and educational programs for over three years. Ms. Boivie is a frequent speaker on pension and economic matters, and has testified before policymakers regarding her research. She holds a Master of Arts in economics from New Mexico State University, and a Bachelor of Arts in English from Binghamton University, where she graduated Magna Cum Laude.

EXECUTIVE SUMMARY

In 2008, 14.7 million active state and local government employees had defined benefit (DB) pension coverage through their employers.[1] DB pensions play an important role in the human resource strategies of government employers. DB pensions have been shown to be an effective retention tool, and government employers are well suited to offer them. At the same time, DB pensions are highly valued by employees in the public sector. Pensions' staying power in the public sector stems from the fact that these systems serve employees, employers, and taxpayers well.[2]

In recent years, however, a handful of states have begun to offer public employees a choice between a traditional DB pension and a defined contribution (DC) account as their primary retirement plan.

This paper studies those states that offer employees a choice between primary DB and DC plans, and finds that:

- When given the choice between a primary DB or DC plan, public employees overwhelmingly choose the DB pension plan.
- DC plans are less cost efficient than DB plans, due to lower investment returns, and the lack of longevity risk pooling.
- Some states have considered moving from a DB-only to a DC-only structure in an attempt to address an unfunded liability. Making this shift, however, does nothing to close any funding shortfalls, and can actually increase retirement costs.
- Traditionally, employers bear most of the risk in DB plans, and employees bear most of the risk in DC plans. The hybrid plan for new employees in Utah provides a unique case study, in that it has capped the DB funding risk to the employer, and shifted the rest to employees.

The experience in the public sector thus far indicates that public employees highly value their DB pension benefits. This fact, coupled with the fact that DB pensions remain the most cost-effective way to fund a retirement benefit, suggests that the public sector is unlikely to mimic the trend away from DB pensions in the private sector.

INTRODUCTION

DB Plans and DC Plans Are Very Different

Defined benefit (DB) pension plans are designed to provide employees with a predictable monthly benefit for life. The amount of the monthly pension is typically a function of the number of years an employee devotes to the job and the worker's pay, usually at the end of his or her career. This plan design is attractive to employees because of the security it provides. Employees know they will have a steady, predictable income that will enable them to maintain a stable portion of their pre-retirement income.

DB plans are pre-funded retirement systems. That is, employers—and, in the public sector, employees—make contributions to a common pension trust fund over the course of each employee's career. These funds are invested by professional asset managers whose activities are overseen by trustees and other fiduciaries. The earnings that build up in the fund, along with the dollars contributed while working, pay for the lifetime benefits an employee receives when s/he retires.

Defined contribution (DC) plans, such as 401(k) plans, function very differently than DB plans. First, there is no implicit or explicit guarantee of retirement income in a DC plan. Rather, employees (and usually employers) contribute to the plan over the course of a worker's career. Whether the funds in the account will ultimately be sufficient to meet retirement income needs will depend on a number of factors, such as the level of employer and employee contributions to the plan, the investment returns earned on assets, whether loans are taken or funds are withdrawn prior to retirement, and the number of years retirees will live after they leave work.

DC plans consist of separate, individual accounts for each participant. Plan assets are typically "participant directed," meaning that each individual employee can decide how much to save, how to invest the funds in the account, how to modify these investments over time, and at retirement, how to withdraw the funds.

Along with differences in contributions and investments during employees' careers, another important difference between DC and DB plans becomes apparent at retirement. Unlike in DB plans, where retirees are entitled to receive regular, monthly pension payments for life, in DC plans it is typically left to the retiree to decide how to spend one's retirement savings. Research suggests that many individuals struggle with this task. Since they find it difficult to estimate how long they will live, they either draw down funds too quickly and run out of money, or hold onto funds too tightly and self-impose a lower standard of living as a result.[3] In theory, employers that offer DC plans could provide annuity payout options, but in practice they rarely do.[4] See Table 1.

Public Plan DB/DC Choices

Unlike employees in the private sector, who have seen a drastic decrease in DB plan coverage, most public employees still participate in a DB plan. For example, a 2008 study by the Bureau of Labor Statistics (BLS) showed that whereas private sector participation in DB plans dropped from 76% of full time employees in 1986 to 24% in 2008, public employee

Table 1. **Selected Differences Between DB Plans and DC Plans**

	Defined Benefit Plan (Traditional Pension)	Defined Contribution Plan (such as 401(k), 403(b), 457)
Contributions	In the public and private sectors, contributions are made on behalf of each employee by the employer. In the public sector, many pensions are "contributory," meaning that employees also contribute to the plan out of their own paychecks.	Employees make their own contributions to their savings account at whatever rate they choose. In the private sector, employers will often make a certain match—for example, 50 cents on the dollar up to 6% of pay—but they are not required to contribute at all. In the public sector, employers that offer a choice between DB and DC often contribute the same amount to the DC accounts as to DB accruals.
Investments	Contributions for all employees are pooled, and invested by professional asset managers in a diversified portfolio of assets—stocks, bonds, real estate, etc.	Investment portfolios consist of individual accounts for each employee. Employees make all investment decisions themselves, and can choose from a range of investment options offered.
Amount of Money in Retirement	The monthly benefit is determined by a set calculation, usually based on years of service and pay at the end of one's career.	The money available in retirement is simply the amount that one has accumulated in the savings plan, through contributions and investment earnings.
Lifetime Income	Payouts are provided as a monthly income stream that is guaranteed for the remainder of the retiree's life.	Plans are not required to offer a lifetime income option, and typically pay out benefits as a one-time lump sum.
Supplemental Benefits	Spousal protections, disability benefits, and cost of living adjustments are common.	Supplemental benefits are not applicable, and generally not available. If provided, they require extra contributions to some structure outside the DC plan.

participation in DB plans only dropped from 93% of full time employees in 1987 to 88% in 2008.[5]

Thus, while private sector DB coverage has declined in the last two decades, public sector coverage has remained relatively stable;[6] most state and local government employees still provide DB pension coverage to their employees. Yet a handful of states have begun to offer public employees a choice between a traditional DB pension and a DC account as the primary retirement plan.

This paper analyzes the following questions:

- When given the choice, what do public employees choose: the DB pension plan or a DC plan?
- What happens when employees choose their own investments?
- Can employers choose to offer meaningful supplemental benefits to DC members?
- What are the implications of an employer choosing to change from a DB to a DC plan?
- What are the implications for risk sharing in each of the systems, and is there a way to shift some of the risk to employees under the DB system?
- Finally, do employers give employees the chance to choose a second time?

This paper looks at the recent experience of statewide retirement systems that offer a choice between DB and DC plans, and seeks to provide some answers.

To conduct the study, we requested information directly from the retirement systems that allow new hires to choose between DB and DC. These systems provided the actual statistics of what percent of members have chosen each option. We also asked for other important provisions relating to benefits and contributions. Finally, each system reviewed their portion of our final report to ensure its accuracy. This primary source material provides a valuable insight into what really happens when public employees are allowed to choose between DB and DC.

OVERWHELMINGLY, PUBLIC EMPLOYEES CHOOSE THE DB PLAN

Although there is a common perception that DC plans may be more attractive to new employees than DB plans, relevant research seems to show the opposite—especially among state and local employees. Recent public opinion polling finds that DB plans are highly valued by public employees and are an important consideration for those who choose a career in public service.

A 2006 nationally representative survey indicated that public employees were much more favorable to traditional DB pensions and much less likely than other workers to express a preference for 401(k)-type plans.[7] When asked about proposals to switch public employees out of DB plans and into 401(k)-type plans, public employees were strongly opposed.[8] A 2003 survey also found that public employees place a very high value on their pension programs, with almost two-thirds of public sector employees stating a preference in favor of DB pensions as compared with DC plans.[9]

So, what do public employees really prefer? Seven statewide systems have been giving new hires the choice between participating in a DB plan or a DC plan for various periods over the last 12 years. These systems are Colorado Public Employees' Retirement Association, Florida Retirement System, Montana Public Employee Retirement Administration, North Dakota Public Employees Retirement System, Ohio Public Employees Retirement System, State Teachers Retirement System of Ohio, and South Carolina Retirement Systems. Tables 2 and 3 and Figure 1 summarize the experience of these systems, all of which allow their members to choose between a DB plan and a DC plan. Ohio and Washington members also have the choice of a "combined" plan, where employer contributions fund a DB plan and employee contributions fund a DC plan. Washington state members do not have the option of an all-DC plan.

Across the board, the experience of these seven systems indicates that public employees overwhelmingly choose the DB plan. In the most current year, North Dakota's DB plan has the highest take up rate at 98%; the lowest DB take up rate is in Florida, which still saw a full 75% of employees opting for the DB pension. This means the percentage of new employees electing DC plans currently ranges from 2% in North Dakota to 25% in Florida.

The trend of overwhelming DB coverage in states with a choice has been consistent over time. As shown in Figure 1, the DB take up rates in all of these states have been above 70% in all years, and three of the states have take-up rates of 90% or more during most years studied.

It should be noted, however, that many employees who do not actively elect one plan or another are defaulted into the DB plan. Unlike the private sector which uses defaults into 401(k) savings plans to build plan participation rates, most workers in the public sector are covered by a retirement plan as a condition of employment. Defaulting employees into the traditional DB plan is similar to a private-sector employer investing employee contributions into an appropriate investment allocation with the intent of reducing risk to the participant.

The overwhelmingly high take-up rates, then, could be at least partially driven by inertia on the part of employees, a large number of whom do not make an affirmative choice. In most states with choice, members must actively choose the DC plan; it is often the case that many DB members never submit an election and are placed in the DB plan by default.

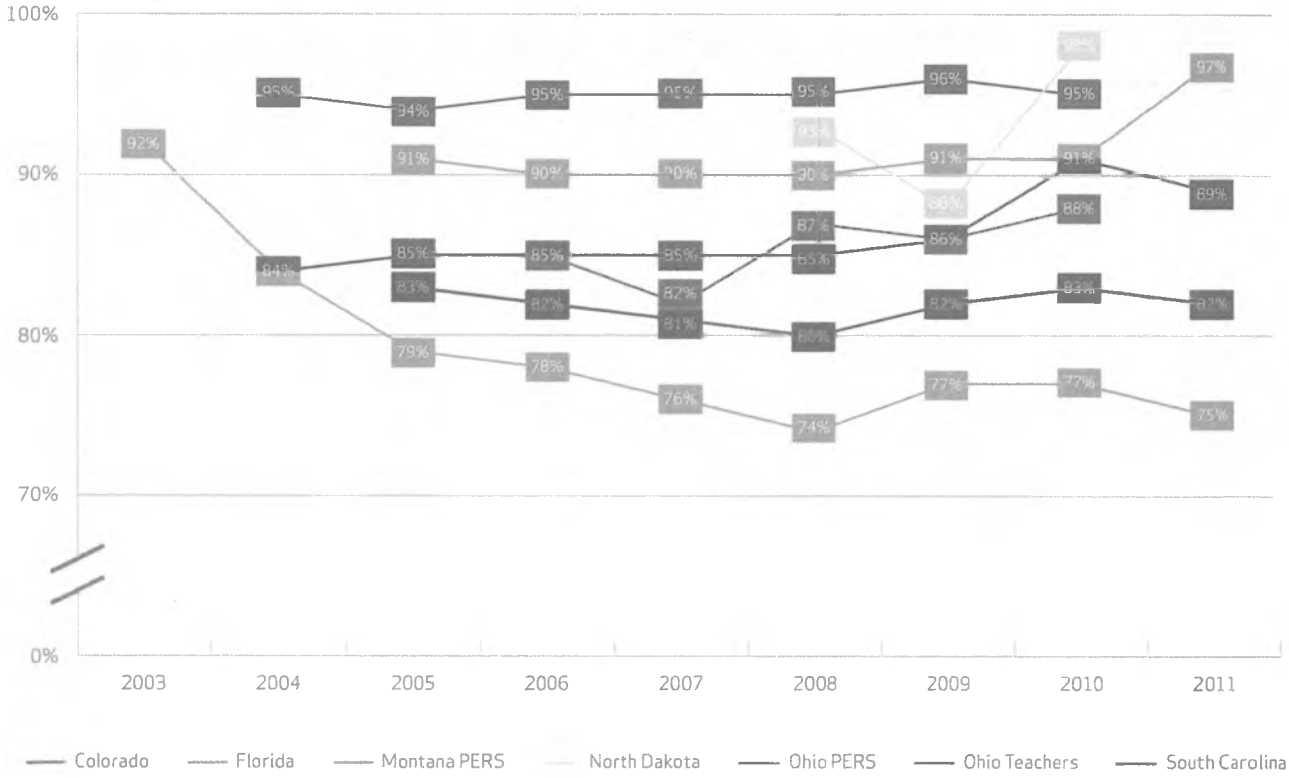
Table 2. **New Hire Elections in Most Recent Complete Year***

System	DB Plan Enrollments	DC Plan Enrollments	Combined Plan Enrollments
Colorado Public Employees' Retirement Association	88%	12%	Not offered
Florida Retirement System	75%	25%	Not offered
Montana Public Employee Retirement Administration	97%	3%	Not offered
North Dakota Public Employees Retirement System**	98%	2%	Not offered
Ohio Public Employees Retirement System	95%	4%	1%
State Teachers Retirement System of Ohio	89%	9%	2%
South Carolina Retirement Systems	82%	18%	Not offered

"Not offered" means enrollment in a combined DB/DC plan is not offered.
**Data for Colorado, North Dakota, and Ohio PERS are for January 2010 through December 2010. Data for Florida, Montana, STRS Ohio, and South Carolina are for July 2010 through June 2011.*
*** One new employee out of the 63 eligible joined the North Dakota DC plan in 2010.*

Three states separate out DB take-up rates by active choice and default. See the Technical Appendix for more information on default and elected DB take-up rates by state.

Another possible reason that public employees may go with the DB default is that their preferences for DB pensions are "revealed" preferences—that is, they reflect a preference realized by deliberately seeking out an employer that offers this type of plan. For instance, a Florida survey found that "up to 41% of the defaulters may be using this option as their active election in the belief that by defaulting there could be no mistakes made in their plan choice."[10]



The experience in Washington PERS is illuminating as well. This is the only choice state in which the traditional DB plan is not the default; the default option is a combined DB and DC plan. Table 3 shows that an impressive 68% of new members in Washington have actively chosen an all-DB plan over the default of a combined DB and DC plan, and only 11% of new hires actively selected the combined DB and DC plan. This suggests that most public employees in other states that are "defaulted" into the DB plan would actively choose DB even if it were not the default.

Table 3. **Cumulative Washington PERS New Hire Elections, March 2002 through June 2011**

DB Plan Active Enrollments	Total Elections for DB & DC Combined Plan	Combined DB & DC Plan by Default	Combined DB & DC Plan Active Enrollments
68%	32%	21%	11%

Figure 1 shows that most of these DB/DC choice plans have had relatively stable election percentages in the short time they have existed. That is, the vast majority of public employees have consistently chosen the DB option. However, this is not to say that members will continue to make the same choices in the future. The stock market declines of 2000 to 2002 and 2008 have certainly influenced many members. It is possible that the future of the stock market, or the experiences of people retiring with only DC plans, could influence future member choices.

Figure 1. **Total DB Elections over Time**

Please see the Technical Appendix for detailed information on each state's take-up rates over time.

WHEN EMPLOYEES CHOOSE THEIR OWN DC INVESTMENTS, RETURNS ARE LOWER

Research indicates the average employees directing their own investments tend to earn lower investment returns than statewide DB systems, for a variety of reasons.

DB plans tend to achieve higher investment returns than DC plans because assets are pooled and professionally managed. Expenses paid out of plan assets to cover the costs of administration and asset management reduce the amount of money available to provide benefits. As a result, a plan that can reduce these costs will require fewer contributions. By pooling assets, large DB plans are able to drive down asset management and other fees. For example, researchers at Boston College find that asset management fees average just 0.25% of plan assets for public sector DB plans. By comparison, asset management fees for private sector 401(k) plans range from 0.60% to 1.70% of assets. Thus, private DC plans suffer from a 0.35% to 1.45% fee disadvantage, as compared with public DB plans.[11] On their face, these differentials may appear small, but over a long period of time, they compound to have a significant impact. To illustrate, over 40 years, a 1% difference in fees compounds to a 24% reduction in the value of assets available to pay for retirement benefits.[12]

But fees are only part of the story; differences in the way retirement assets are managed in DB and DC plans play a substantial role. Research has found that DB plans have broadly diversified portfolios and managers who follow a long-term investment strategy.[13] On the other hand, individuals in DC plans, despite their best efforts, often fall short when it comes to making good investment decisions. Thus, it should not be surprising that researchers find a large and persistent gap when comparing investment returns in DB and DC plans. Munnell and Sunden put the difference in annual return at 0.80%.[14] A 2007 report from the global benchmarking firm, CEM, Inc., concluded that between 1998 and 2005, DB plans showed annual returns 1.80% higher than DC plans, largely due to differences in asset mix.[15] And Towers Watson found that, between 1995 and 2006, DB plans outperformed DC plans by 1.09%, on average.[16] In 2006 and 2007, DB plans outperformed DC plans by an average of about 1.0% per year based on asset-weighted returns, while in 2008, DB plans outperformed DC plans by roughly 2.7%.[17]

The experience of two states, Nebraska and West Virginia, are consistent with this research.

Nebraska's state and county employees hired between 1964 and 2003 had only a DC plan. During the same period, Nebraska maintained separate DB plans for its school employees, judges, and state patrol. Over the 20 years leading up to 2002, the average return in the DB plans was 11% and the average return in the DC plans was between 6% and 7%. One reason for this large difference is that nearly 50% of DC member contributions were invested in the stable value fund, which was the default for members not making a specific investment election. Although the stable value fund is very conservative and the investor's balance will not decrease, the investor also has a lower expected rate of return. Partially due to the lower returns, employees were receiving a replacement ratio of their pre-retirement income closer to 30% rather than the projected 50% to 60%. Nebraska has since decided that employees hired since 2003 will go into a cash balance DB plan.

West Virginia had a similar experience. While teachers hired between 1991 and 2005 had only a DC plan, after July 1, 2005, all newly hired teachers went back into the old DB plan. One of the reasons for this change is that average DC returns lagged DB returns. Between 2001 and 2010, the average DB return was 1.6% higher than the average DC return. For more details, see the Technical Appendix.

DC MEMBERS CAN POOL INVESTMENT EXPERTISE WITH THE DB PLAN, ACHIEVE HIGHER RETURNS

In response to the lower returns generally earned in DC plans, some states offer employees with DC accounts the option of investing in the same manner as the DB pension system—and thereby earning exactly the same returns as the DB plan. For example, members of Washington State Plan 3 have the option to invest in the Total Allocation Portfolio (TAP), which mirrors the investments in the state DB plan and therefore earns the same returns. Washington has made the TAP the default investment option for Plan 3, and approximately 56% of members' DC assets are invested in the TAP option.

All employee contributions of members in the Oregon Public Service Retirement Plan are invested in the state's Individual Account Program (IAP). Like Washington's TAP, Oregon's IAP money is invested in the same manner as the DB plan. However, unlike Washington's TAP, which is one of many investment choices, Oregon's IAP offers no other investment choices.

Both Washington and Oregon provide members with a professionally managed portfolio. Washington's approach leaves room for individual risk tolerance, for instance, members near retirement may prefer to invest more conservatively. Oregon's approach ensures that all member funds are invested in a carefully managed portfolio. In both states, by foregoing the ability to choose their own investments, members are able to earn returns competitive with the DB plan.

It is also worth noting that both the Washington and Oregon plans are hybrid plans, in which employer contributions fund a DB plan, and employee contributions fund an account. This is significant because the DB plan provides some level of guaranteed income regardless of the account's investment returns.

WITH EXTRA CONTRIBUTIONS, DC PLANS CAN PROVIDE DEATH AND DISABILITY BENEFITS

Meaningful death and disability benefits can be provided in a DC environment, but it will require extra contributions that are not deposited to the members' DC accounts. Consider the choices three states have made to respond to the criticism that DC accounts do not provide adequate spousal and disability benefits.

In Florida, where members choose between a DB and a DC plan, disabled members can choose to surrender their DC account balance and receive the same disability benefits as provided by the DB plan. To finance this benefit, the employer pays a separate charge ranging from 0.25% of pay for general members to 1.33% of pay for special risk members, and a side account is maintained to finance the difference between the cost of the disability benefits and the dollar amount of the DC accounts surrendered by the members. (On the other hand, if DC members die in Florida, their death benefit is the DC account balance.) Montana PERA has a similar provision, where 0.30% of DC member pay is set aside to finance long-term disability benefits.

Alaska has a different approach. Alaska public employees hired after July 1, 2006, are only offered a DC plan. Here the occupational death and disability benefit is 40% of salary until normal retirement (50% of salary for the occupational death of police and fire members). The employer continues both the employer and employee contributions into a special occupational death and disability trust account until the member reaches normal retirement, or until the date the member would have reached normal retirement in the case of occupational deaths. At normal retirement age, the 40% (or 50%) of salary benefit stops, and the member, or survivor, receives the DC account as well as the accumulated contributions from the occupational death and disability trust account with actual returns net of expenses. Employers make contributions into a separate fund to finance the extra benefit not provided by the DC account.

MOVING FROM DB TO DC CAN INCREASE COSTS

Several states around the country have looked at eliminating the DB plan altogether, and moving all new hires into DC accounts. DB funding problems are often one of the reasons behind these efforts. Yet freezing the DB plan and moving to a DC plan that provides a similar level of retirement income can increase costs to the employer/taxpayer at exactly the wrong time. This occurs for three distinct reasons.

First and most important, DC plans do not have the economic efficiencies of DB plans. This drives up retirement costs. DB plans save money by pooling risks and achieving greater investment returns. According to one estimate, a DB plan can provide the same retirement income at about half the cost of a DC plan.[18] Thus, when a DB plan is frozen and replaced with a DC plan, far greater contributions from both employers/taxpayers and employees will be required to maintain the same level of benefit in the DC plan.

Second, maintaining two plans is more costly than operating just one. State and local governments typically do not have the option of transferring current employees out of a DB plan and into a new DC plan.[19] This means the employer will have to bear administrative costs for two plans, at least until the DB plan is finally phased out completely, a process that could take many decades as employees in the system complete their careers, retire, and ultimately die.

Finally, when a DB plan is closed, payments to amortize the unfunded liability for the DB plan may be accelerated which increases short term contributions and lowers long term contributions. This is actuarially consistent with the DB plan's shorter future lifetime. The current GASB rules (Statements 25 and 27) actually require this acceleration of unfunded liability payments when a DB plan is closed to be recognized on financial statements; not all plans determine their actual contributions according to the GASB rules.

These factors have influenced many states studying whether to switch from DB to DC. As a result, the vast majority have chosen to keep their DB plan, in the best interests of employers, taxpayers, and employees.

MOVING TO DC DOES NOT SOLVE FUNDING PROBLEMS, AS SEEN IN WEST VIRGINIA

Regardless of potential cost increases, changing from DB to DC does not solve the underlying funding problem a state may be experiencing. One interesting case study is the West Virginia Teachers Retirement System (TRS). In 1991, West Virginia closed TRS to new members, and all new hires were put into a DC plan. The state later found, however, that this "funding solution" had overlooked some important considerations.

Specifically:

- New members do not start with any unfunded obligation.
- Projected DC contributions for new members were worth more than the projected DB costs for those members.
- No unfunded obligations for existing members are reduced when new members go into a DC plan.

As a result, the loss of new members made it more difficult to finance the unfunded obligations of the DB plan.

By 2003, the state began reexamining this switch. The 4,500 members who were transferred from the DB to the DC plan in 1991 found it hard to retire after the bear market of 2000–2002. Additionally, as mentioned previously, DC member accounts had achieved much lower investment returns than TRS. After studying the issue extensively, the state decided that starting in 2005 all new hires would go into the DB plan. It was also found that providing equivalent benefits would be less expensive under the DB structure than in the DC plan. The state has shown discipline to achieve a better funded position, with extra contributions of $290.1 million in fiscal year 2006 and $313.8 million in fiscal year 2007. In addition, West Virginia completed a tobacco bond securitization in fiscal year 2007 and deposited $807.5 million of those proceeds into TRS as another special appropriation. Most recently, in June of 2008, the teachers in the DC plan were given the choice to switch to the DB plan, and a full 78% chose to switch, including 76% of young teachers (under 40 years old).[20]

West Virginia projected a $1.2 billion savings in the first 30 years by moving new entrants from the DC to the DB plan. This relies on an assumed return of 7.5%. When the Legislature asked the impact of lower returns, calculations showed an investment return of 6.0% or more was needed for the DB plan to save money.[21]

One way to finance preexisting unfunded liabilities and to defray employer expenses is to require specific contributions to the DB plan as a percent of DC member pay. Colorado, Florida, Montana PERA, Ohio PERS, Ohio Teachers, and South Carolina all require contributions paid as a percentage of DC member salaries that are not credited to DC member accounts. See the Technical Appendix for details.

EMPLOYERS DO NOT ALWAYS TAKE THE DB RISK: UTAH GIVES EMPLOYEES A NEW CHOICE

Traditionally, employers take most of the risks in DB plans and employees take most of the risks in DC plans. For example, in traditional DB plans, employers take on all of the funding risk; that is, if an unfunded liability in the pension plan develops, the employer is solely responsible for filling that funding gap. Of course, employees may indirectly take on some of that risk, for example, through increased employee contributions or decreased benefits. But the legal and fiduciary responsibility to pay down the unfunded liabilities remains with the employer. Under DB plans, employers are largely responsible for investment risk, inflation risk, and longevity risk. Under DC plans, on the other hand, the funding risk, investment risk, inflation risk, and longevity risk is solely assumed by employees. See Table 4.

The new retirement system in Utah challenges this tradition of employers bearing the entire DB risk. Starting July 1, 2011, Utah allows new hires to choose between a DC plan and a hybrid plan that includes both a DB and a DC account. Employees who choose the hybrid plan assume DB funding and investment risk. That is, employers will contribute 10% of salary to the hybrid plan regardless of future experience. If this contribution is insufficient to fund the DB plan, employees will have to make up the difference through an automatic payroll deduction. However, employer contributions not needed to fund the DB plan will be deposited into employees' DC accounts. Since 7.5% of pay is estimated to provide for the DB benefits, employees would get 2.5% of pay deposited to their DC accounts if all future experience matched the assumptions. Employees can also voluntarily contribute more to their DC accounts under the hybrid plan. If employees choose the DC plan instead of the hybrid, employers will contribute 10% of salary to the employees' DC account.[22] See Table 4.

Employees in Utah, then, must make a unique decision: in order to get the advantages of a DB plan, including a guaranteed benefit for life, professional investment management, and the benefits provided by longevity pooling, they must also take on the funding and investment risks. Employees are not *forced* to take on the DB risk, however; it is a choice, and they can opt for the DC plan instead—which, of course, comes with its own set of risks. If the employee chooses the DC plan, the employer will contribute 10% of pay to the DC account. If the employee chooses the hybrid plan, the employer will contribute 10% of pay as described above. Thus, under either plan, the employer contribution is a flat 10% of pay. The employer is neutral to the employee's decision. See Table 5.

Interestingly, the changes in Utah were intended to avoid future funding problems rather than solving any immediate funding issues. Although Utah had a funded ratio close to 100% before the market crisis, the stock market decline of 2008-2009 did impact its funding status. Therefore the State

Table 4. **Risks in Traditional DB and DC Plans, and Utah's New Hybrid Plan**

	Typical DB Plan (Traditional Pension)	Typical DC Plan (401(k), 403(b), 457)	Utah's New Hybrid Plan
Funding Risk	Employer assumes most of the funding risk. Although the employer is responsible for fully funding the plan, employees can share this risk through increased employee contributions or reduced benefits, should an unfunded liability develop.	Employees assume all funding risk.	Employees assume all funding risk above the 10% employer contribution.
Investment Risk	Employer assumes most of the investment risk. The employer is responsible for making all investment decisions, however, should unfunded liabilities develop as a result of low investment returns, employees can share this risk through increased employee contributions or reduced benefits.	Employees assume all investment risk.	Employers assume all investment decisions, but employees assume investment risk in terms of any unfunded liabilities that may develop.
Inflation Risk	If the plan offers a cost of living adjustment (COLA), depending on the COLAs structure, employers may assume all inflation risk, or may share the inflation risk with employees. If the plan offers no COLA, employees assume all inflation risk.	Employees assume all inflation risk.	The plan offers an automatic CPI COLA, but it is capped at 2.5%.
Longevity Risk	Employers assume all longevity risk.	Employees assume all longevity risk.	Employees assume DB risk in terms of any unfunded liabilities that may develop as a result of members living longer than assumed.
Portability/ Leakage Risk	Employees bear portability risk, in that they are likely to receive lower benefits should they terminate before retirement. Career employees bear no leakage risk, as withdrawals cannot be taken prior to retirement. Employees who terminate before retirement may withdraw their contributions and forfeit their benefit.	Employees bear no portability risk, as assets accumulated in the account can be taken without penalty when terminating employment. Employees bear leakage risk, in that accounts are not always rolled over when changing jobs, and loans and pre-retirement withdrawals are often allowed, which can reduce account balances available at retirement.	As this plan combines a base DB benefit with a DC account, portability and leakage risks are proportionate as described in the first two columns.

Legislature commissioned a study to project the system's funding and to gauge the impact of putting new hires in a less expensive plan. The study projected that if no changes were made and the system earned 7.75% returns in 2009 and each year thereafter, the employer contribution rate would increase from 13.25% to 23.10% of pay, and the funded ratio would decrease to 70.5% before starting to improve.

The old DB plan had a normal cost rate of 11.71% of pay, meaning contributions equal to 11.71% of pay for future hires were projected to finance their retirement benefits, but this contribution amount would not finance the large unfunded liabilities created by the asset losses of 2008-2009. In addition, the old plan included an employer DC contribution of 1.5% of pay. In other words, the entire employer contribution toward accrued retirement benefits for future hires was projected to be 13.21% of pay.

Since the plan design finally adopted for new hires has a cost of 10.00% of pay, it is projected to have cost savings that slowly build to 3.21% of pay as new employees are hired (3.21% = 13.21% – 10.00%).

What differentiates the change in Utah is not cost savings, however; it is risk shifting. If another market downturn occurs, the employers' contributions for new hires will remain 10% of pay; the employees in the hybrid plan will absorb the risk through a combination of smaller deposits to their DC accounts, as well as possible payroll deductions.

The normal cost rate for the DB portion of the new hybrid plan is 7.5% of pay. Thus, if all assumptions come true in the future, 2.5% of pay will be available to deposit to the DC portion of the hybrid plan. Table 5 summarizes the differences between the old and new plan designs.

Table 5. **The Utah Retirement System**

	All Employees Hired Before July 1, 2011	Employees Hired after July 1, 2011: Hybrid and DC Options	
	Tier 1 DB	Tier 2 Hybrid Plan	Tier 2 DC Plan
Employer Contribution	Employer pays total cost with no cap	Always 10% of pay	Always 10% of pay
Employee Contribution	0% of pay into DB plan	Automatic payroll deduction required if DB contributions are greater than 10%	Employees may contribute, but contributions are not mandatory
DB Normal Cost Rate	11.71% of pay	7.50% of pay	N/A
DC Account Contribution	1.5% of pay	10% of pay less required DB contribution	10% of pay
Final Average Salary Period	3 years	5 years	N/A
Percent of Final Average Salary Replaced per Year of Service	2.0% multiplier	1.5% multiplier	N/A
Unreduced Benefit	Age 65, or 30 years of service, age 62 at 10 years of service with actuarial reductions, or age 60 at 20 years of service with actuarial reductions	Age 65 or 35 years of service	N/A
Cost of Living Adjustment	CPI up to 4%	CPI up to 2.5%	N/A
Vesting Period	4 years of service	4 years of service	4 years of service

What About Do-Overs?

One plan design choice employers face is whether to give employees a chance to change their mind, and switch to the alternative retirement system. Having a do-over option may be particularly valuable to employees whose situations change unexpectedly. For example, a teacher who is married to a member of the military and expects to move frequently may initially choose the DC plan, as the portability aspect may be most attractive. However, if the couple's plans change and they decide to settle more permanently, the teacher may then wish to switch over into the DB plan.

Montana PERA, North Dakota, Vermont, and Washington require new hires to make a one-time irrevocable decision, but several other systems do allow for a change. Colorado allows members to change their election one time in years two through five after they are hired. Ohio Teachers allows members in the DC or combined plan to change in their fifth year of membership, and South Carolina allows members to change their election once in the first five years, but the change can only be from the DC plan to the DB plan. Florida allows members to change once at any time before retirement or termination of employment. Ohio PERS allows members to change up to three times: once in their first five years of employment, once in their second five years, and one more at any time after 10 years of service through retirement.

Different systems handle employees' switches in different ways. Florida allows two choices when members switch from DB to DC. The members can either (1) freeze their current DB benefits based on service and salary to date and have future contributions accumulate in their DC accounts, or (2) convert their DB benefits into DC accounts based on the present value of the normal retirement benefit. If a Florida member wants to switch from DC to DB, the member must pay the full cost based on either the present value or the actuarial accrued value, depending upon whether the member has previous DB service prior to joining the DC plan. The DC account is used first. If there is more money than needed in the DC account, the member keeps the excess assets in the DC account. If there is not enough money in the DC account, then the member must pay the difference or stay in the DC plan.

In Florida, only 53,112 employees have chosen to take up the do-over option since its inception in 2002. With nearly 700,000 active members when the option was implemented, and between 45,000 and 98,000 new hires each year for the past ten years who could take advantage of the option, this represents a small take up rate. See the Technical Appendix for more information.

Ohio PERS, which allows up to three changes, takes a somewhat different approach. Changes are prospective only, but members transferring to the DB or combined plan have the option to purchase service in the new plan using their DC or combined plan assets. Frozen DB benefits are based on salary and service during DB membership only.

In Ohio, out of a total of nearly 400,000 eligible members, only 866 members have opted for a do-over since 2003. Thus, with an average of about 2 in 1,000 eligible employees choosing to change their retirement plan, it is clear that Ohio's do-over option is not very popular. This suggests that the vast majority of public employees, at least within Ohio, are satisfied with their initial decision. See the Technical Appendix for more information.

IMPLICATIONS

When given the choice between a primary DB or DC plan, public employees overwhelmingly choose the DB plan. This suggests that DB plans are more attractive than DC plans to public employees. This is not surprising, as research has shown that public employees tend to favor DB plans in general.[23]

In the final analysis, it's a question of accumulation and distribution. The accumulation of contributions and investment earnings determines available retirement income. A plan that maximizes investment earnings and pools longevity risk over many employees maximizes the benefits provided by contributions. Public employees seem to favor plans that provide lifetime income.

There is not yet much experience on how many public employees with DC plans have been able to make their assets last a lifetime, although the experience in West Virginia suggests that this could be quite challenging for some workers. Unfortunately, the consequences of outliving one's assets are severe. DC plans rarely measure whether assets accumulated will provide adequate retirement income. It remains an open question to understand how public (and private) sector employees with DC plans can be sufficiently educated and empowered to navigate the risks of pre-retirement accumulation, as well as post-retirement distribution.

Although employers have traditionally taken on most of the risk in DB plans and employees have taken on most of the risks in DC plans, the experience of some states suggests that risks can be more shared between employers and employees. Examples include the combined DB/DC plans in Washington, Oregon, and Ohio, as well as certain DB plans in which any increases in contribution rates are shared by employees. The new hybrid plan in Utah shifts the entire DB funding risk from the employer to the employees.

CONCLUSION

State and local DB pension plans provide a critical source of reliable income for more than 19 million Americans, including 7.6 million retirees and 14.7 million active employees.[24] These plans are a cost effective way to provide broad-based coverage, secure money for retirement, a lifetime income, and economic protections for spouses for our nation's police officers, firefighters, schoolteachers, and other public servants.

A handful of states offer public employees a choice between primary DB and DC plans. This paper analyzes the choices made by employees in these states, and finds that:

- When given the choice between a primary DB or DC plan, public employees overwhelmingly choose the DB pension plan.
- DC plans are less cost efficient than DB plans, due to lower investment returns, and the lack of longevity risk pooling.
- DC plans lack supplemental benefits such as death and disability protection. Some plans have attempted to address these discrepancies, but these provisions require extra contributions that are not deposited to the members' accounts.
- Making a complete shift from a DB to a DC structure does nothing to close any funding shortfalls, and can actually increase costs. The experience in West Virginia finds that employees with an initial DC benefit overwhelmingly chose the DB plan when offered.
- The hybrid plan for new employees in Utah provides a unique case study, in that it has capped the DB funding risk to the employer, and shifted the rest to employees.

The experience in the public sector thus far indicates that public employees value their DB pension benefits quite highly. This fact, coupled with the fact that DB pensions remain the most cost-effective way to fund a retirement benefit, suggests that the public sector is unlikely to mimic the trend away from DB pensions witnessed in the private sector.

TECHNICAL APPENDIX

A1. State Systems Referenced

System	Current plan	Effective date
Alaska PERS & TRS	DC	July 1, 2006
Colorado PERA	DB/DC choice	January 1, 2006
Florida RS	DB/DC choice	July 1, 2002
Montana PERA	DB/DC choice	July 1, 2002
Nebraska PERS	Cash Balance DB plan	January 1, 2003
North Dakota PERS	DB/DC choice (limited group)	January 1, 2000
Ohio PERS	DB/DC/combined choice	January 1, 2003
Ohio STRS	DB/DC/combined choice	July 1, 2001
Oregon PERS	DB combined w/ DC-like account	August 29, 2003
South Carolina RS	DB/DC choice	July 1, 2001
Utah	Hybrid/DC choice	July 1, 2011
Vermont SRS	DB/DC choice (limited group)	January 1, 1999
Washington State	DB/combined choice	March 1, 2002
West Virginia TRS	DB	July 1, 2005

Systems with Supplemental Contributions

The following systems have contributions paid as a percentage of DC member salaries that are not credited to DC member accounts. Supplemental contributions required to fund DB liabilities show that introducing a DC plan does not reduce the unfunded liabilities of the existing DB plan.

Colorado PERA

- Amortization Equalization Disbursement (AED): The total AED percentage for 2011 is 2.6% of pay, and is scheduled to increase 0.4% each year to a maximum of 5% in 2017.
- Supplemental Amortization Equalization Disbursement (SAED): The total SAED percentage for 2011 is 2% of pay, and is scheduled to increase 0.5% each year to a maximum of 5% in 2017.

- In Colorado, the AED and SAED are both contributions to the DB plan to account for adverse selection. Both are applied to both DB and DC payroll. The AED is paid by employers. The SAED, although technically an employer contribution, is considered to be an employee contribution because it comes out of the foregone employee compensation package.

Florida RS

- To fund supplemental disability benefits for DC members, a contribution ranging from 0.25% of DC member pay for general members to 1.33% of DC member pay for special-risk members is paid by employers into a separate side account.
- Employers contribute 0.03% of pay to fund communication and administration.
- Beginning July 1, 2011, the Florida legislature required funding of a portion of the unfunded actuarial liability (UAL) for the Florida Retirement System Pension Plan. The Florida Retirement System has been doing this since the first of the alternative DC plans for selected State University System employees became effective July 1, 1984. The practice continued through the 1998 FRS valuation when the system was determined to be in surplus actuarial funding and all existing UAL bases were fully amortized. The Florida Retirement System Pension Plan was in actuarial surplus through the 2008 valuation. The Florida Legislature required some by class in the contributions for the 2011-2012 fiscal year. Employers are paying the UAL rate on all persons in a regularly established position, including the Investment Plan and the non-integrated DC plans created before the Investment Plan.

Montana PERA

The following contributions are made by Montana PERA employers as a percent of DC member pay:

- A Plan Choice Rate (PCR) contribution equal to 2.64% of pay is made to the DB plan to prevent DB costs from increasing due to financing unfunded liabilities over a smaller payroll and increases in the normal cost rate due to anti-selection. The PCR was 2.37% from inception at July 1, 2002, until July 1, 2007, and 2.505% of pay from July 1, 2007 until July 1, 2009. The PCR has been 2.64% of pay since July 1, 2009.
- A payment of 0.30% is made to finance long-term disability benefits.
- A payment of 0.04% is made to the education fund.

Ohio PERS

- A contribution of 0.77% of pay from employer contributions was made for all DC and combined plan members to the DB plan by the employer in 2011 as a "mitigation rate." The board reviews the mitigation rate annually, and it can vary between 0% and 6%. The highest level to date is 0.77%.

Ohio STRS

- 3.5% of pay from employer contributions for all DC members is used to pay for the unfunded liabilities of the DB plan.

South Carolina RS

- Of the total employer contribution made for the South Carolina Retirement System (SCRS), each employer contributes 5 percent directly to participant accounts and the remainder is remitted to the retirement system. SCRS may retain from this employer contribution an amount as determined by the director to defray any reasonable expenses incurred in performing services regarding the plan. Table A2 summarizes contribution levels.

A2. South Carolina Employer Contributions

Fiscal Year	% Allocated to Member	% Retained by SCRS	Total Employer Contribution
2006-2007	5.000%	3.050%	8.050%
2007-2008	5.000%	4.060%	9.060%
2008-2009	5.000%	4.240%	9.240%
2009-2010	5.000%	4.240%	9.240%
2010-2011	5.000%	4.240%	9.240%
2011-2012	5.000%	4.385%	9.385%
2012-2013	5.000%	4.530%	9.530%

Further System Details

The following section provides a brief summary of information relevant to this article for each system.

Alaska

Starting July 1, 2006, Alaska's public employee and teachers defined benefit plans are closed. New hires will go into the defined contribution plan.

The default percent of pay contribution rates are 5% employer and 8% employee in PERS and 7% employer and 8% employee in TRS.

Alaska teachers do not participate in Social Security and many Alaska public employers, like the state of Alaska, have opted out of Social Security participation.

Colorado Public Employees' Retirement Association (PERA)

Starting Jan. 1, 2006, Colorado allowed new state employees (people without a tie to the PERA DB plan within the last year) to choose between the PERA DB plan, the PERA DC plan, and the state-offered DC plan. In 2008, the Colorado General Assembly expanded choice to include the new employees within the Community College system. The Community College members have the choice between the PERA DB plan and the PERA DC Plan. The state-offered DC plan was not available to the Community College employees. In 2009, the Colorado General Assembly passed legislation that moved participants in the state-offered DC plan into the PERA DC plan. Choice for new hires of both the State of Colorado and the Community Colleges is now solely between the PERA DB plan and the PERA DC plan.

Members have a 60-day election window and can then change their minds once between the PERA DB and PERA

A3. **Colorado PERA New Hire Choices* (Effective January 1, 2006)**

	DB by default	DB active enrollments	DC active enrollments
2006	37%	48%	14%
2007	39%	43%	18%
2008	58%	29%	13%
2009	53%	33%	15%
2010	33%	55%	12%

*Based on 28,322 new hires.

DC plans either way in years two through five. If a member changes to the DC plan, s/he must completely refund the DB account, and leave the DB plan for DC plan. DB service can't be frozen for an active member. If the member changes to the DB plan, the member has the option to purchase his or her original time in the DB plan after one year based on actuarial value.

The DB and DC plans require the same employer and employee percentage of pay contributions. The base contribution rates are 10.15% employer and 8% employee for state and school employees, and 12.85% employer and 10% employee for state troopers. For DB members, 1.02% of pay from the base employer contribution is used to fund retiree health care instead of pension benefits. For DC members, the 1.02% of pay goes into the members' DC accounts as part of the employer contribution and it is up to the members to pay for health care when they retire although they may participate in the association's health care program, PERACare. The AED and SAED supplemental contributions described earlier are in addition to these base contribution rates.

Table A3 is a historical record of the choices of new hires in Colorado PERA.

Florida Retirement System (FRS)

Starting July 1, 2002, Florida allowed new employees to choose between a DB plan and a DC plan.

There are no employee contributions to either the DB or the DC plan. Employer contributions to members' DC accounts range from 9% of pay for general members to 20% of pay for special risk. Employer contributions to fund additional disability benefits for DC members range from 0.25% of pay for general members to 1.33% of pay for special-risk members. Employers contribute 0.03% of pay to fund communication and administration.

DC accounts vest 100% at one year of service. DB benefits vest 100% at six years of service. Accounts and benefits are 0% vested before these dates.

A4. **Florida Retirement System New Hire Choices* (Effective July 1, 2002)**

	DB by default	DB active enrollments	DC active enrollments
9/02 – 6/03	86%	6%	8%
7/03 – 6/04	73%	11%	16%
7/04 – 6/05	61%	18%	21%
7/05 – 6/06	59%	19%	22%
7/06 – 6/07	58%	18%	24%
7/07 – 6/08	55%	19%	26%
7/08 – 6/09	55%	22%	23%
7/09 – 6/10	56%	21%	23%
7/10 – 6/11	53%	22%	25%

**At June 30, 2011 there are 552,984 DB members and 105,250 DC members.*

A5. **Take Up Rates of Florida's "Do-Over" Options, 2002-2011**

Do-Over Option	Total members who have made this change
Pension Plan to Investment Plan	51,055
Pension Plan to Hybrid Plan	138
Investment Plan to Pension Plan	1,919
Total	53,112

Table A4 is a historical record of the choices of new hires in Florida. Florida has an active education campaign. The overall DC election percentage of 25% in the year ending June 30, 2011, is the highest of any system in this study.

Members have a six-month election window and can change their minds once at any time before retirement or termination. Details of how the switch is treated are given in the main body of the article.

A6. **Montana PERA New Hire Choices (Effective July 1, 2002)**

	DC active enrollments
7/04 - 6/05	9%
7/05 - 6/06	10%
7/06 - 6/07	10%
7/07 - 6/08	10%
7/08 - 6/09	9%
7/09 - 7/10	9%
7/10 - 7/11	3%

Montana Public Employees' Retirement Administration (PERA)

Starting Jan. 1, 2002, Montana PERA allowed new employees to choose between a DB plan and a DC plan.

Members have 12 months after hire to make a one-time irrevocable decision between the DB plan and the DC plan.

The DB and DC plans require the same employer and employee percentage of pay contributions. Employers contribute 7.17% of pay. Employees contribute 6.90% of pay. Employer DC contributions can be broken down as 4.19% to the DC account, 2.64% plan choice rate (DB funding), 0.30% for long-term disability benefits, and 0.04% for the education fund. The entire employee contribution is credited to the DC account.

Table A6 is a historical record of the choices of new hires in Montana PERA. Members not making a choice are placed in the DB plan by default; however, statistics are not available on what portion of new hires entering the DB plan did so by default.

North Dakota Public Employees Retirement System (NDPERS)

Starting Jan. 1, 2000, North Dakota allowed nonclassified state employees to choose between a DB plan and a DC plan. As only nonclassified state employees are eligible, there were only 228 active members in the DC plan as of December 31, 2010.

Members have six months after hire to make a one-time irrevocable decision between the DB plan and the DC plan.

The DB and DC plans require the same employer and employee percentage of pay contributions. Employers contribute 4.12% of pay and employees contribute 4% of pay for a total contribution of 8.12% of pay.

Table A7. **North Dakota PERS New Hire Elections (January 2001–December 2010;* Effective January 1, 2000)**

	DB by default	DC active enrollments
1/2001 - 6/2008	88%	12%
2008	93%	7%
2009	88%	12%
2010*	98%	2%

** There are 228 active members in the DC plan as of 2010. Statistics are maintained by calendar year starting in 2008. One new employee out of the 63 eligible joined the DC plan in 2010.*

Table A7 shows that 12% or fewer of the new hires have actively elected the DC plan and 88% or more have either actively elected the DB plan or been placed in the DB plan as the default. Breakouts of the portion of DB elections that were active versus default are not available.

Ohio Public Employees Retirement System (OPERS)

Starting Jan. 1, 2003, OPERS allowed new employees to choose between an all-DB plan (the Traditional Pension Plan), an all-DC plan (the Member-Directed Plan), and the Combined Plan. In the Combined Plan, employer contributions fund DB benefits and all member contributions are credited to DC accounts.

The employer contribution is 14% of pay and the employee contribution is 10% of pay for all three plans and for all groups. Members in the all-DC and combined plans have all employee contributions credited to their DC accounts. However, a portion of the employer contribution is used to fund retiree health care (4.5% of pay in 2010; for DC participants, this contribution is deposited into a VEBA). Also, the mitigation rate, which is currently 0.77% of pay, comes out of the 14% employer contribution and is not credited to DC accounts.

Table A8 is a historical record of the choices of new hires in OPERS.

Members have a 180-day selection window. Members have three chances to change their minds about their choice—once in the first five years of total service credit, once between five to ten years, and once at any time after ten years. Changes are prospective only, but members transferring to the all-DB or combined plan have the option to purchase service in the new plan using their DC accounts. Service purchases are based on service in the plan the member is opting out of; must use the DC account first; and if the DC account is less than the total cost, then the member may still purchase all service with an additional lump sum, rollover, or payroll deduction. Frozen DB benefits are based on salary and service during DB membership only.

Table A8. **Ohio PERS New Hire Choices* (Effective January 1, 2003)**

	DB by default	DB active enrollments	DC active enrollments	Combined plan active enrollments
2004	84%	11%	3%	2%
2005	84%	10%	3%	3%
2006	83%	12%	3%	2%
2007	82%	13%	3%	2%
2008	81%	14%	3%	2%
2009	84%	12%	3%	1%
2010	78%	17%	4%	1%

** Based on 349,490 new hires.*

Table A9. **Take Up Rates of Ohio PERS "Do-Over" Options, 2003-2011**

Do-Over Option	Total members who have made this change
DB Plan to DC Plan	419
DB Plan to Combined Plan	114
Combined Plan to DC Plan	17
Combined Plan to DB Plan	120
DC Plan to Combined Plan	30
DC Plan to DB Plan	166
Total	**866**

A10. **Ohio Teachers New Hire Choices* (Effective July 1, 2001)**

	DB by default	DB active enrollments	DC active enrollments	Combined plan active enrollments
7/01 – 6/04	69%	15%	10%	6%
7/04 – 6/05	70%	15%	11%	4%
7/05 – 6/06	72%	13%	11%	4%
7/06 – 6/07	72%	13%	11%	4%
7/07 – 6/08	71%	14%	11%	4%
7/08 – 6/09	71%	15%	10%	4%
7/09 – 6/10	81%	10%	7%	2%
7/10 – 6/11	79%	10%	9%	2%

** Based on 171,568 new hires through June 30, 2011.*

State Teachers Retirement System of Ohio (STRS)

Starting July 1, 2001, STRS allowed new employees to choose between an all-DB plan, an all-DC plan, and a combined plan. In the combined plan, employer contributions fund DB benefits and all member contributions are credited to DC accounts.

Members have a six-month election window. After the member is put in the all-DB plan either by default or by active election, he or she cannot elect out. Members who choose the DC or combined plan have a one-time option at the end of the fiscal year following the fourth anniversary of the hire date to switch to one of the other two plans that were not chosen at the time membership began. Members must positively elect to stay in the combined or all-DC plan during this reselection period or they will default into the all-DB plan. If members change into the all-DB plan, they forfeit their DC accounts and are treated as if they had been in the all-DB plan since hire. There are no changes after the end of the fifth fiscal year of participation after hire.

The employer contribution is 14% of pay and the employee contribution is 10% of pay for all three plans. Members in the all-DC and combined plans have all employee contributions credited to their DC accounts. However, a portion of the employer contribution to the all-DC plan is used to fund unfunded liabilities for the all-DB plan (3.5% of pay in 2008).

Table A10 is a historical record of the choices of new hires in STRS of Ohio.

Oregon Public Service Retirement Plan (OPSRP)

Oregon has chosen that starting Aug. 29, 2003, all new hires go into a combined pension plan with two components: the defined benefit pension program and the defined contribution-like Individual Account Program (IAP).

The pension program provides a defined benefit equal to 1.5% of final average salary (1.8% for police officers and firefighters) for every year of service and is funded entirely by employer contributions and investment earnings.

The IAP is funded by the employee contributions, which are 6% of pay. All IAP assets are invested in the same portfolio as the DB assets; there is no difference. Employees have no choice in how IAP assets are invested. As a result, the members' IAP accounts earn comparable returns, positive or negative, to the DB assets. Earnings are credited annually to member accounts. Administrative fees are deducted from the fund's earnings as part of the annual crediting process. Members receive an annual statement after earnings are credited each year.

South Carolina Retirement Systems

South Carolina allows new employees of State agencies, institutions of higher education, and employees of k-12 schools to choose between a DB plan and a DC plan. Employees of municipalities, counties or special purpose districts cannot participate in the DC plan. This arrangement was made effective over the period from July 1, 2001, to July 1, 2003, varying by group.

DC members choose between four authorized investment providers. Members must choose investment options from their chosen investment provider. Members may change investment providers during the annual open-enrollment period subject to the investment provider's contractual limitations.

A11. South Carolina Retirement Systems Percent of New Hires Electing DC* (Effective July 2, 2001, and July 1, 2003)

	Higher Education	K - 12 Schools	State Agencies	Overall
7/04 - 6/05	32%	14%	11%	17%
7/05 - 6/06	34%	14%	12%	18%
7/06 - 6/07	37%	15%	13%	19%
7/07 - 6/08	35%	16%	13%	20%
7/08 - 6/09	33%	14%	11%	18%
7/09 - 6/10	31%	12%	10%	17%
7/10 - 6/11	33%	11%	13%	18%

** Based on 201,466 new hires through June 30, 2011.*

Members have a 30-day election window after hire to choose between the DB plan and the DC plan. During their first five years, members can change from the DC plan to the DB plan. Members cannot change from the DB plan to the DC plan. If a member changes to the DB plan during this five-year period, the member has the option to purchase his or her original time in the DB plan. The cost is 16% of the member's highest career salary for each year of service. The member has the option, but is not required, to use his or her DC account for these service purchases.

The DB and DC plans require the same employer and employee percentage of pay contributions. Employers currently contribute 9.24% of pay. Employees contribute 6.50% of pay. Five percent of employer DC contributions are deposited to the DC account; the South Carolina Retirement System collects the difference between the employer contribution and the 5% allocated to member accounts and may retain an amount as determined by the director to defray any reasonable expenses incurred in performing services regarding the plan. The entire employee contribution is credited to the DC account. Participants are immediately vested.

Table A11 is a historical record of the choices of new hires in South Carolina. Like most other systems, the DB plan is the default election. It is interesting to note that the percent of new hires electing DC varies widely by group. The percent of higher education employees choosing DC has varied from 31% to 37%, whereas the DC choice for other groups has only varied from 10% to 16%.

Vermont

Starting Jan. 1, 1999, all new exempt state employees were given a choice between a DB plan and a DC plan. In addition, beginning in July of 2000, the governing body of employers in the Vermont Municipal Employees' Retirement System (VMERS) can elect to offer employees a choice between a DB plan and a DC plan. To date, about 92 of the over 400 VMERS employers have chosen to offer this choice to their employees.
Employees make a one-time irrevocable choice at hire.

In the state DC plan, employers contribute 7% of pay and employees contribute 2.85% of pay. In the VMERS DC plan, employers contribute 5% of pay and employees contribute 5% of pay.

Statistics on the percentage of members electing the DC plan or DB plan are not available.

Washington State Department of Retirement Systems

Starting March 1, 2002, Washington allowed new hires in the Public Employees' Retirement System (PERS) to choose between an all-DB plan (Plan 2), and a combined plan (Plan 3). In the combined plan, employer contributions fund DB benefits equal to 1% of final average earnings for each year of service and all member contributions are credited to DC accounts. Starting July 1, 2007, new hires in the Teachers' Retirement System (TRS) and the School Employees' Retirement System (SERS) were given the same choice between Plan 2 and Plan 3.

Members have 90 days after hire to make a one-time irrevocable decision between the all DB plan and the combined plan.

At the same time the plan election is made in the first 90 days, members in the combined plan (Plan 3) also choose between six employee contribution-rate options. Once the employee contribution-rate option is chosen, it cannot be changed as long as the member remains with the same employer. If members separate from the employer, they may

change their contribution rate with the next employer. All employee contributions are credited to the DC account.

The six employee contribution options in the combined plan are as follows:

- Option A: 5% of pay contribution at all ages
- Option B: 5% to age 35, 6% at ages 35 to 44, 7.5% at ages 45 and up
- Option C: 6% to age 35, 7.5% at ages 35 to 44, 8.5% at ages 45 and up
- Option D: 7% of pay contribution at all ages
- Option E: 10% of pay contribution at all ages
- Option F: 15% of pay contribution at all ages

Employees who do not make an election in the first 90 days after hire are placed in the combined plan (Plan 3) with employee contribution option A. Approximately 65% of combined plan members are in option A, with the remainder spread fairly evenly between the other five contribution options.

One of the DC investment options is the Total Allocation Portfolio (TAP), which mirrors the investments in the state DB plan and therefore earns the same returns. Washington has made the TAP the default investment option for Plan 3 and approximately 56% of the members' DC assets are in the TAP option. Starting in October of 2008, target date funds managed by an outside provider have also been available. The target date funds allocate investments without the member's involvement and automatically change the asset mix as the member moves closer to retirement.

Table A12 shows that approximately 68% of the PERS members hired between March 1, 2002, and June 28, 2011, have actively chosen the all DB plan over the combined plan, which is the default. Breakouts of choices by year are not available.

A12. **Cumulative Washington PERS New Hire Elections, March 2002 – June 2011**

Plan 3 Combined DB & DC by default	Plan 3 Combined DB & DC active enrollments	Plan 2 All DB active enrollments
21%	11%	68%

West Virginia Teachers Retirement System

The following chronology of the West Virginia TRS fills in some holes not described in the article.

- 1941: West Virginia TRS was established as a DC plan.
- 1960s and 1970s: DB benefits were added to counter the inadequate DC benefits, but the benefits were never properly funded.
- 1991: The DC plan (TDC) was established for new hires in response to funding problems, and 4,500 former DB participants also switched from the DB to DC.
- 2003: Many of the 4,500 who switched felt misled and said they could not afford to retire. Other DC members were also not satisfied.
- 2005: The state decided that a given level of benefits could be funded for a lower cost through a DB plan. Average DC returns had been lower than DB returns in both up and down markets. Changing to a DC plan did not solve the state's funding problems. All members hired after July 1, 2005, go into the DB plan instead of the DC plan. West Virginia projected a $1.2 billion savings in the first 30 years due to moving new entrants from the DC to the DB plan.
- 2006 and 2007: Special appropriations of $290.1 million in FY2006 and $313.8 million in FY2007 were deposited into TRS. In addition, West Virginia completed a tobacco bond securitization in FY2007 and deposited $807.5 million of those proceeds into TRS as another special appropriation. All these amounts were in addition to the regular contribution determined under the ARC, which was converted to a level dollar amortization (from level percentage of payroll).
- 2008: DC members are given the option to switch to the DB plan. Of those DC members, 78.6% (14,925 members) chose to switch to the DB plan. Surprisingly, the switch, which was expected to cost the state up to $78 million before the elections were made, is now expected to save the state about $22 million. Fewer older TDC members than expected transferred. More young TDC members than expected transferred. 50% of those over 70 transferred; 69% of those age 65 to 69 transferred; 81% of those 45 to 64 transferred; and 76% of members under age 40 transferred.

Table A13 shows the investment returns for the 10 years ended June 30, 2001, through June 30, 2010. The ten-year average DB return was 1.6% higher than the average DC return.

Table A13. **West Virginia Teachers' DC Returns Compared to TRS Returns**

Year ending June 30	DC plan	DB plan
2001	-2.60%	-0.25%
2002	-3.76%	-2.94%
2003	4.84%	4.75%
2004	8.83%	15.08%
2005	6.33%	10.56%
2006	6.67%	9.55%
2007	11.85%	17.43%
2008	-3.28%	-7.64%
2009	-12.16%	-16.77%
2010	9.16%	15.20%
10 Yr Average	**2.32%**	**3.93%**

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB 130 (STA)
2012 LEGISLATIVE SESSION

Analysis

SB 130 will establish the Alaska Native Language Preservation and Advisory Council for the purpose of preserving, restoring, and revitalizing Alaska Native languages.

The Council will consist of five voting members appointed by the Governor and two non-voting members, one from the State Senate and one from the House of Representatives. The Council must meet a minimum of twice a year and may meet telephonically.

Personal Services includes two full time staff, a Research Analyst range 18 and an Administrative Assistant III range 15. Staff for the council will need to identify programs throughout the state that work on similar programs with the goals of this bill. These include programs from elementary schools in rural school districts, high school, adult education, and university programs. There are also programs run by non-profits and native regional organizations that receive public money that will be included.

Each program will need to be analyzed and examined for financial cost and results (cost benefit). Once this is complete and documented, a report will be compiled and provided to the council for review. The council may direct further investigation into the potential for reorganization or combination of programs, and the exploration of further funding.

The Research Analyst will perform research, investigation, and report writing. The Administrative Assistant will perform information gathering, and report editing, finalization and distribution to the council. In addition, this position will coordinate meetings and travel for Council, and provide public information services for the program.

Travel includes airfare, per diem, hotel, and miscellaneous costs for seven members and the two support staff to have two face-to-face meetings annually. The estimate assumes one meeting will be in Fairbanks and the other in a rural hub such as Bethel. While the council may meet by teleconference, in-person meetings are generally more productive and the preferred option.

Services include support for core service costs, communications, advertising, and other costs for research and reporting.

Commodities include one-time start up costs for cubicle, equipment, desk, chair, shelving, and on-going supplies.

Re: SB 130 & HB 254 Creating the Alaska Native Language Preservation & Advisory Council

Dear Senator Olson and Representative Dick,

On behalf of First Alaskans Institute, we extend a sincere thank you **(Unangam Tunuu: *Qa}aalaku{* – thank you)** ***(Inupiaq: quiagipsi apai - I thank you very much)*** to the sponsors and co-sponsors of SB 130 and HB 254 for your deep insight and commitment in moving the important topic of Alaska Native languages forward in this state; *it is critically needed*.

First Alaskans Institute is a statewide Alaska Native non-profit organization focused on advancing Alaska Natives for the next 10,000 years. We work to empower the indigenous peoples of this land to ensure that we are involved in, shaping, and making the decisions that impact our lives.

Revitalizing our Alaska Native languages is an important part of the restoration of healthy and well communities in Alaska – for all Alaskans. We ask all legislators to support this bill and vote in the affirmative to create the Alaska Native Language Preservation & Advisory Council. Some may ask why support Alaska Native languages when there are so many different languages from across the world spoken in Alaska? The answer is simple. All other world languages have a home, countries which speak them, nurture them, and grow their complexity and nuance over time but the only home the indigenous languages of Alaska have is right here.

Our languages contribute to the uniqueness of Alaska and the rich human diversity of this planet. Given an opportunity to blossom, they nourish and enrich lives, empower voices, grow cultural continuity, and strengthen identity. People who are strong in who they are and knowledgeable about their cultures are prepared for and work hard for individual and collective success.

Most importantly, languages contain knowledge not available anywhere else in the world, especially in relationship to the land it has grown and developed on. If we, as Alaskans, are to steward Alaska and her resources into the future for her common good and for the benefit of all Alaskans, then the languages of Alaska Native peoples is crucial to this endeavor.

In reading through the most current version of the bills, we want to emphasize and acknowledge the importance of this legislations purpose of working to preserve and revitalize our endangered Alaska Native languages and to advise the Governor and the Legislature on how to do so. In order for this Council to be successful it will need resources to implement initial and on-going activities. We also strongly support and request the Governor and the appropriate appropriations committees to accordingly allocate the needed state resources.

Again, it is with excitement over the promise contained in this bill – that our languages are vital to our success and that of our children, and to the health of Alaska overall, that we request full Legislative support of SB 130 and HB 254.

My Board Chair or I would be happy to provide testimony in support of this vital legislation if the need arises so please do not hesitate to contact me.

Iislilix,

Denise R. Morris (Unangan)
President/CEO

Quyanaq,

Willie "Iggiagruk" Hensley (Inupiaq)

The Honorable Bert Stedman, Co-Chair
The Honorable Lyman Hoffman, Co-Chair
Senate Finance Committee
State Capitol, Rm. 516 and 518
Juneau, AK 99801-1182

RE: SB 130, An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages

Dear Senators Stedman and Hoffman:

I appreciate this opportunity to testify in support of Senate Bill 130, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the Preservation, Restoration, and Revitalization of Alaska Native languages." I would also like to commend you in this noble effort to support the rich linguistic and cultural diversity of this State.

I am Byron Mallott, a member of the Sealaska Corporation Board of Directors, and former President and CEO of First Alaskans Institute. My Tlingit names are Dux̲ da neix̲ and K'oo del ta'. I am the clan leader of the Kwáashkl Kwáan (Humpback Salmon) clan, Fort House from Dry Bay, near Yakutat.

Before I state my reasons for supporting SB 130, it is important to briefly outline the status of Alaska Native languages today. Unless remedial action is initiated, most all of Alaska Native languages will join their already extinct linguistic relative, the Eyak, within a few short decades. A UNESCO report on endangered languages classifies native languages as "vulnerable", definitely endangered, severely endangered, critically endangered and extinct. In our state, the Yup'ik language is the healthiest, yet is still "vulnerable", meaning children still speak the language but in limited domains (home). The Inupiaq language spoken in the North Slope and Kotzebue and the Gwich'in

One Sealaska Plaza, Suite 400, Juneau, AK 99801 • Phone (907) 586-1512 • Fax (907) 586-2304

Athabaskan languages are "severely endangered," meaning that the languages are spoken by grandparents and older generations. While the parent generations may understand Inupiaq and Gwich'in Athabaskan, they do not generally speak these languages to children or among themselves. Aleut, Tlingit, Haida and Tsimshian languages are "critically endangered" meaning that the youngest speakers are grandparents and older, and they speak the language partially and infrequently. This state has lost the Eyak language, which is now extinct.

The State of Alaska can stop this rapid progress towards language extinction by passing SB 130 "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the Preservation, Restoration, and Revitalization of Alaska Native languages." This is a historic and symbolic bill. For the first time, the highest office in our state is acknowledging the value of linguistic diversity. This is progress. We have moved from a time when our people had their mouths washed out with soap for speaking their language to a time when the Governor of our state will have an Advisory Council on Native Languages.

The Council won't solve all of our problems. There is much work to do. That work must be in language restoration. Languages that are severely and critically endangered must teach and nurture language learners so that they can teach the language to others. Sealaska Heritage Institute recently surveyed language teachers/learners in Southeast communities. When asked how long they had been learning and how long they had been teaching, the difference was very little, sometimes only one semester. Our language learners/teachers need support at all levels. Native language curricula and Native Language teachers are critical for language revitalization.

The heart of the Council's work will be to "advise the governor and the legislature on programs, policies, and projects for cost effective preservation, restoration, and revitalization of Alaska Native languages in the state." This work together with the necessary funding can ensure that one of our most significant resources in the state survives. The Council must formulate policies that support the revitalization of Native languages and identify barriers that threaten the survival of Native language. Significantly, one of the most immediate effects of the legislation is that it would serve to reverse the perception that the State of Alaska is adverse to linguistic diversity. It would further send a powerful message that Alaska sees indigenous languages as a part of its heritage to be protected.

Language is a uniquely human gift, central to our experience of being human and Alaska Native. Our cultural identity and traditional knowledge are embodied within our language. This knowledge and the differing world views are worthy of protection and transmittal to future generations. An example of worldview in the Tlingit language is kinship terms. In addition to terms for

mother, father and grandparent, Tlingit kinship terms denote clan relationships. Aunts and uncles are either the same clan as a child or the opposite clan—their titles tell him so. Siblings are differentiated by gender and age. Clans have clan in-laws—the opposite moiety who they traditionally married. All these very complex relationships are carried in kinship terms. Part of knowing who we are, which is critical for healthy development, is knowing who we are related to and how. All this is carried in language. Linguistic and cultural diversity is a benefit to society.

We are not going to save our indigenous languages through culture week, or guest lectures on language. Our state needs all of us to say this is a priority, advise the Governor and administration on systemic efforts that are most effective. Each of our language groups is working on language revitalization. Let's look at what is most effective for which groups. Even the Yup'ik, who have the healthiest of our Native languages, are vulnerable. A systemic approach will identify the needs of each language community and advise on what is needed to move that language one level safer.

Sincerely,

Byron Mallot

23 January 2012

Honorable Donny Olson, Senator
Alaska State Legislature
Alaska State Capitol, Rm. 508
Juneau, Alaska 99801

Dear Senator Olson:

It brings me gratification to see the introduction of Senate Bill 130 - Alaska Native Language & Advisory Council, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration and revitalization of Alaska Native Languages."

I have been working in the field of language preservation and perpetuation for nearly 40 years and have seen first hand the extreme decline of the Iñupiaq language. A handful of our people have devoted their lives to teaching it in the hopes of reversing this loss. Much remains to be done.

I write in support of the bill and urge passage. Having an Advisory Council whose responsibility would be to advocate for Native languages across the state will go a long ways towards creating an atmosphere where we can realize a shift in language priorities in Alaska. It is high time the state recognize the importance of perpetuating the languages of its indigenous peoples.

Quyanaq.

Respectfully yours,

Jana Harcharek, Director
Iñupiaq Education

Sponsor Statement: Senate Bill 130
Alaska Native Language & Advisory Council

"An Act establishing in the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages."

Alaska Native Languages (ANL's) are threatened by extinction. The intent of SB 130 is to preserve and maintain ANL's. Indigenous languages are the most critical components in terms of preservation of cultural ideas and traditions and serve as the backbone of all cultural elements.

SB 130 will establish the Alaska Native Language and Advisory Council to assess the state of ANL's and re-evaluate the programs within the state and make recommendation to the Governor and Legislature to establish new programs or re-organize the current programs.

According to the Alaska Native Language Center's *Population and Speaker Statistics* published in 2007, only 22 percent Alaska Natives statewide can speak their native language. More specifically, only 29 percent of the Eskimo Aleut population, less than 2 percent of the Tsimshian and Haida, and less than 5 percent of the Athabascan and Tlingit communities combined are fluent speakers. The Eyak language recently lost its last native fluent speaker.

It is vital that the State of Alaska creates this needed establishment and I urge your support in the passage of this bill.

ALASKA STATE LEGISLATURE

SENATOR DONALD C. OLSON

ALASKA
STATE CAPITOL
ROOM 514
JUNEAU, ALASKA 99801-1182

(907) 465-3707
FAX (907) 465-4821

Changes in CSSB 130 (STA)

- Section 1.
  - Added "are the foundation of cultures" to the legislative finding.
- Section 2.
  - Changed the name of the proposed council to Alaska Native Language Preservation and Advisory Council.
  - Establishment of the council in the DCCED instead of the Governor's Office.
  - The Council advises the Governor and the Legislature.
  - Council meets at least twice a year and prepares a report to the legislature by January 1 of each even numbered year.
  - The two non-voting legislative members of the council will come from the Bush Caucus.
- Section 3.
  - Governor must appoint by December 1, 2012
  - First report is due by July 1, 2014.

LEGISLATIVE RESEARCH REPORT

MARCH 24, 2011

REPORT NUMBER 11.219

ALASKA LEGISLATION REGARDING THE PRESERVATION OF ALASKA NATIVE LANGUAGES

PREPARED FOR SENATOR DONALD OLSON

BY TIM SPENGLER, LEGISLATIVE ANALYST

You asked if legislation has been introduced in Alaska seeking to establish a board or advisory council to oversee programs designed to preserve Alaska Native languages. Briefly, we were unable to identify any such current or past legislative efforts in Alaska.[1] We did find, however, two examples of related legislation that may interest you, which we discuss below.

In 1972 the Alaska Legislature enacted CH 175 SLA 1972, which established the Alaska Native Language Center (ANLC) based at the University of Alaska Fairbanks (UAF).[2] The mission of the ANLC is to serve as a center for research and documentation of the Native languages of Alaska. The Center publishes its research in story collections, dictionaries, and research papers. It also houses a large archival collection of items written in or about Alaska Native languages. Staff members provide materials for bilingual teachers and others who work with Native languages and provide consulting and training to teachers, school districts, and state agencies.

Professor Lawrence Kaplan, director of the ANLC, was unaware of any legislative attempts to form a board or council to oversee programs designed to preserve Alaska Native languages.[3] He also polled his co-workers at the Center who were also unaware of such efforts. Additionally, we spoke with the founder and first director of the ANLC, Professor Michael Krauss.[4] Professor Krauss, a Harvard-trained linguist who taught at UAF from 1960-2000, informs us that no such legislative efforts have been put forward to his

---

[1] In an attempt to identify proposed legislation we reviewed the Bill Action Status and Inquiry Systems (for legislative activity from 1993 to the present), the Alaska Final Status of Bills and Resolutions books (for information from 1977-1992), and the Legislative Reporting Service reports (for information from 1960-1976). Additionally, we completed a Newsbank search and spoke to Alaska Native language experts. Despite our efforts, it is possible that relevant proposals of legislation have eluded us.

[2] More information on the Alaska Native Language Center is available at *http://www.uaf.edu/anlc*.

[3] Professor Kaplan can be reached at (907) 474-6582.

[4] Professor Krauss can be reached at (907) 479-6340.

knowledge.[5] He asserted that if such measures had been considered, he would almost certainly have been aware of them.

Additionally, Senate Bill 103, which addressed Native languages in schools, was passed into law in 2000 (CH 29 SLA 2000, codified as AS 14.30.420).[6] This measure mandates that school districts in which a majority of students are Alaska Natives shall establish a local Native language curriculum advisory board. If an advisory board recommends the establishment of a Native language curriculum, the school board in that district may initiate and conduct such a curriculum.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

[5] The idea of a board or advisory council to oversee programs to preserve Alaska Native languages intrigued the professor. He related that he would be very happy to consult with anyone considering such a measure.

[6] The version of Senate Bill 103 that passed the legislature was House CS for Senate Bill 103 (HES).

STATE OF ALASKA
OFFICE OF THE LIEUTENANT GOVERNOR
ANCHORAGE

MEMORANDUM

TO: Lieutenant Governor Mead Treadwell

FROM: **Esther Woo**

Cc:

DATE: August 15, 2011

RE: **Cursory Survey of Language Preservation and Revitalization Efforts in Alaska**

At your request, and as a background for the State Committee on Research, the Alaska Historical Commission, and the U.S. Arctic Research Commission, this memo is a report on our office's efforts to identify examples of language revitalization and preservation activities taking place in Alaska.

Executive Summary

Half of the world's languages are not being taught to children, meaning that 3,500 of the 7,000 languages are set to disappear within a generation. Specifically in the United States, only 201 of the 400 indigenous languages were being spoken in the year 2006; it is predicted that only 20 will be spoken in year 2050. In the state of Alaska, where there are 20 indigenous languages, one is already extinct, meaning there are no remaining native speakers. The remaining 19 are considered endangered.

In this light, this memo will provide a cursory view on why this issue deserves attention as well as action as well as examples of different efforts targeting education and documentation. It will also provide an overview of government related efforts assisting these activities. Finally, there will be several recommendations regarding actions the commissions may take to further support existing efforts.

The Importance of Preservation

Losing a language not only deprives the world of the language itself, but also the richness of culture, history, and knowledge carried within the language. As Wade Davis1 says, "Language is a flash of the human spirit. It's a vehicle through which the soul of each particular culture comes into a material world. Every language is an old-grown forest of the mind, a watershed of thoughts, an ecosystem of possibilities."

Language loss is an indicator of cultural loss because according to Linda Belarde,2 Curriculum Specialist in the Sealaska Heritage Institute, "Language carries a people's way of looking at the world." For example, the terms for "nephew" and "niece" in Tlingit are "kaalk'w," her brother's child, and "keik," his sister's child. This means that his sister's child is in the same clan while her brother's child is in the opposite moiety, indicating that it is the clan of the kin, and not his or her gender (as it is in English), that is taken in account. These Tlingit kinship terms thus serve to reflect the matriarchal structure of Tlingit society.

Native languages also carry scientific knowledge. For instance, some native terms complement knowledge on walrus anatomy and snowflakes. Furthermore, the extinction of a language will also bury history and cultural tradition, because many of these indigenous languages have been passed down orally for centuries. Despite existing writing systems for all Alaskan indigenous languages today, significant loss of such knowledge would be inevitable in the face of language loss. Thus, in the words of Davis, "We're living through a time when half of humanity's intellectual, social, and spiritual legacy is being lost."

Revitalization through Education

It is thus clear that subsequent generations will to some degree face irreparable gaps in culture and knowledge. However, there have been efforts across the state of Alaska, with the support of government related agencies as well as state and federal legislation, to reverse the trend of such loss. At the heart of these efforts is the education of the young, a vital approach in passing down language to the next generation.

One successful model of language education is the Ayaprun Elitnaurvik Yup'ik Immersion School in the Lower Kuskokwim School District. The immersion school is a K-6 charter school located in Bethel, with around 175 students each year. Efforts to implement an immersion program began in the 1980s when concerned parents petitioned for a stronger and more extensive Yup'ik program. Today, the school's mission statement is to provide a high quality education to meet the state standards and strengthen Yup'ik language and culture, while promoting an

---

1 Wade Davis is an anthropologist, ethnobotanist, author, and photographer who has been researching and exploring worldwide indigenous cultures. Davis is an advocate for the protection of the "ethnosphere," a term he coined that describes the sphere of all of humanity's cultures and beliefs. His books *Light at the Edge of the World: A Journey Through the Realm of Vanishing Cultures* (2001) and *The Wayfinders: Why Ancient Wisdom Matters in the Modern World* (2009) focus on such issues. Davis is an Explore-in-Residence at the National Geographic Society.

2Linda Belarde, Curriculum Specialist at the Sealaska Heritage Center: (907)586-9187

The Alaska Native Language Program offers major and minor degrees in Central Yup'ik and Inupiaq Eskimo. The classes are taught by members of the Alaska Native Language Center staff, who are working to further develop the bachelor's degree program by implementing more Yup'ik literature. The UAF also runs a teacher training program as a partnership with the Kuskokwim campus of UAF in Bethel. In 2010, the program graduated its first cohort of Alaska native teachers with a specialization in second language acquisition and teacher education: there were 15 graduates with master's degrees and 3 graduates with doctorate's degrees. This teacher training program is closely linked to the UAF's partnerships with school districts; according to Patrick Marlow,6 Associate Professor at the University, most of the training programs' graduates are now working as teachers or administrators in districts such as the Lower Kuskokwim school district, where teachers continue to go through training to learn good teaching methods as well as language learning instructional methods. Furthermore, several teachers in Bethel are partnering with the university to develop curriculum. The UAF is thus a vital source of human resources for language education programs.

Another challenge to revitalization is the loss of a natural language environment caused by rapidly decreasing speaker populations. The Sealaska Heritage Institute, which was founded for the Tlingit, Haida, and Tsimshian people of Southeast Alaska and in 1997 adopted language preservation as its foremost priority, strives to create language environments to support effective learning by designing units for language curriculum, providing educational tools, and hosting workshops for teachers. One example of the institute's educational resources is the recently introduced set of flash cards and audio CDs to complement Tlingit alphabet learning. Public school teachers throughout the region as well as community programs such as afterschool or summer school programs make use of the resources provided by the institute. The Sealaksa Heritage Institute also has partnerships with the Juneau School District and the Hoonah School District.

The Sealaska Heritage Institute's biennial Celebration further encourages this language environment, as all of the songs in the Celebration dances are in native languages. Depending on the year, the Celebration includes lectures and lessons in the language. In conjunction with providing these resources and opportunity for educators and the community, the institute has programs such as the Latseen Hoops Camps, an annual summer camp with an all-Tlingit coaching staff that exposes Tlingit to students by integrating native language instruction with basketball.7

The Goldbelt Heritage Foundation, formed in 2007, is also dedicated to offering tools and materials for people wishing to learn the language. For example, Fred White, Tlingit Language Sepcialist and also the youngest fluent speaker of Tlingit, has made audio recordings for teachers throughout the region. In addition, the foundation is developing a Tlingit verb database that

---

6 Patrick Marlow, Associate Professor at UAF: (907)474-7446

7 For more information on SHI efforts contact Linda Belarde mentioned in footnote two.

includes conjugations, a project originally started by Richard and Nora Marks Dauenhauer in the 1990s and now headed by Keri Edwards.8

Furthermore, the Bilingual Multicultural Education Equity Conference (BMEEC) is an annual conference supported by the Alaska Department of Education and the Alaska Association for Bilingual Education. Agendas for the conference include workshops and discussions on the topic of multicultural education. The keynote speakers in 2011 (Misty Adoniou and Mary Macken-Horarik) presented foundations for an approach to teaching literacy.

Preservation through Documentation

Besides efforts centered on education, there are numerous groups across the state working to document native languages. Three examples of such efforts are from the Alaska Native Language Center of UAF, Sealaska Heritage Institute, and the Alutiiq Museum.

The archive in the University is the largest repository of Native American languages and related languages in the world: it houses more than 10,000 items of written documents that include copies or originals of all material in or about all of Alaska's native languages, which in many cases are held nowhere else. In addition to these collections, there are collections of related languages such as the Eskimo languages of Russia and the Athabascan languages of Canada. The archive also houses a recording collection of about 7,000 recordings, although Gary Holton,9 Professor of Linguistics at the University, calls this "the tip of the iceburg." To extend this audio collection, the language center has formed partnerships with regional organizations, such as the Alutiiq Museum and the Ahtna Heritage Foundation. The foundation does the outreach in the community to locate tapes to preserve and digitize, while the language center archive provides infrastructure backup. In addition to the archive, the language center staff document native languages and provide resources. For instance, Lawrence Kaplan, Professor of Linguistics at the University and Director of the Alaska Native Language Center, is working on dictionaries of the Inupiaq language as well as texts and grammatical explanations for the language. Holton has led a project developing a new edition of the Indigenous Peoples and Languages of Alaska Map originally produced by Michael Krauss in 1974.

The Sealaska Heritage Institute has also published books and videos relating to cultures, languages, and history, including language dictionaries, phrase books, and Tlingit narratives. The institute also strives to document the history, culture, heritage, art, and language of the Tlingit, Haida, and Tsimshian people of the Northwest Coast by housing a collection of books, historical photographs, audiovisual recordings, manuscript materials, and ethnographic objects.

The Alutiiq Museum has the Qik'rtarmiut Alutiit (Alutiiq People of the Island) language program that focuses on documenting and revitalizing the Alutiiq Language of the Kodiak Archipelago. The Alutiiq Living Words Project, funded by the National Science Foundation's Documenting Endangered Languages Program, involves semi-fluent speakers and elders who worked together

8 For more information on the Goldbelt Heritage Foundation contact Fred White or Keri Edwards: (907)790-1424

9 Gary Holton, Professor of Linguists at UAF: (907)474-6585

to document Alutiiq speech, vocabulary, and cultural traditions in audio and video form, which were indexed and archived. Selected recordings are made available online through the Alutiiq Language Web Portal. The project also involves the New Words Council, which consists of elders and semi-fluent associate members who develop native words for contemporary terms such as "computer," "elevator," and "linguist." Besides these documentation efforts, the Alutiiq Museum's Alutiiq Word of the Week program, now in its fourteenth year, produces weekly cultural lessons for weekly broadcast on the radio, the Kodiak Daily Mirror, and email broadcast. The Alutiiq Museum hosts the Alutiiq Language Club, which meets weekly to talk in the language or have elders tell stories in the language.10

Supporting Organizations

In addition to language education programs, efforts to provide human resources and education resources, and documentation works, there are also supporting organizations which are not necessarily directly involved in language revitalization and preservation, but are vital to the state-wide effort as a whole. Such supporting groups include the Alaska Native Heritage Center and the Alaska Humanities Forum.

The Alaska Native Heritage Center, which focuses on expanding the public's knowledge of Alaska Native cultures, has been directly and indirectly involved in Dena'ina language preservation and revitalization. The ANHC is currently closing out a National Science Foundation grant for a project involving a partnership with a tribe to research rites of passage through studying and transcribing traditional stories. Though the ANHC currently does not offer language classes as it did in the past, the heritage center provides language lesson podcasts for online use as well as internship programs and afterschool programs designed to expose students to language environments through native dance and song. Annette Evans Smith,11 Interim President and CEO of the Alaska Native Heritage Center, envisions partnering with some of the regions that have immersion programs to create a language nest, such as a camp for young children that would fuse childcare and language immersion: "Immersion is the best way to learn a language," says Evans Smith.

The Alaska Humanities Forum acts as a convener and supporter of other groups, mainly through awarding grants as part of the National Endowment for the Humanities. Recipients of these grants include the Alaska Native Knowledge Network, which is working to preserve and promote native language and philosophy, as well as a program for preserving Eyak. A native language preservation program that has worked with representatives from villages in the Kotzebue area and been headed by Tom Okleasik also received funding. The AHF has supported the Rosetta Stone Endangered Language Program, which in partnership with the NANA Regional Corportaion designed two Inupiaq language CDs. has designed a program for learning Inupiaq. Greg Kimura,12 CEO and President of the Alaska Humanities Forum, commented that there are

12 Greg Kimura, CEO and President of the Alaska Humanities Forum: (907)272-5308.

not enough resources to cover the needs of various groups. However, he expressed that the Forum "wants to be around to be supportive and helpful of the different groups around the state who are part of preservation and revitalization efforts."

Government-related Support

Assisting these many layers of efforts are federal agencies; the National Science Foundation, the Administration for Native Americans,13 the U.S. Department of Education, and the National Endowment for the Humanities have provided funding for many of these efforts. The U.S. Department of Education in particular, in the words of Patrick Marlow, "has been absolutely fantastic in terms of its commitment to teacher training." The U.S. Department of Education's Office of English Language Acquisition provides funding for professional development for K-12 teachers, and the Office of Alaska Native Education provides grants for Alaskan efforts that focus on developing strong language programs for K-12. According to Marlow, both of these offices have been vital to establishing and maintaining teacher education programs in the University. Despite this, April Counceller of the Alutiiq Museum and Marlow both expressed concern for the growing difficulty in not only receiving grants but also maintaining funding for established programs.

In addition, both the federal and state governments have introduced legislations that may assist revitalization efforts. The Esther Martinez Native American Languages Preservation Act of 2006 was passed by Congress and signed by President Bush as an amendment to the Native American Programs Act of 1974. The amendment strengthened the act by providing for the revitalization of Native American languages through immersion programs. In Alaska, Senator Donald Olson has introduced Senate Bill 130, which recognizes native language preservation as "vital in maintaining traditional knowledge and understanding" and calls for the establishment of the Alaska Native Language Preservation Council in the Office of the Governor "for the purpose of recommending the establishment or reorganization of programs to support the preservation, restoration, and revitalization of Alaska Native languages."14

Furthermore, an Executive Order on Native American Language Preservation15 was drafted in 2010 between senior White House Staff and representatives from Native American communities across the United States. If approved by the President of the United States, this Executive Order would strengthen the Native American Languages Act of 1974 and the Esther Martinez Native American Languages Preservation Act of 2006 mentioned above by creating an Interagency Working Group on Native American Language Revitalization, mobilizing the coordination of federal resources for language revitalization, and appointing a Presidential Board of Advisers on Native American Languages. According to Gary Holton, "It would be recognition that this is something we believe in, that we make a commitment… If you go back to people who have had

decades of language suppression, that means something." As of July 2011, the National Congress of the American Indian as well as other language rights and American Indian rights groups are pressuring President Obama to sign this order.

Recommendations for the Commissions

There are several ways in which the commissions you participate in as Lt. Governor may assist the statewide revitalization and preservation effort. First, the Alaska State Historical commission can support efforts to officially recognize the natives by establishing native place names. In Hawaii for example, Hawaiian can be seen in signs in the airports and on the streets. According to Holton, this has the effect of increasing appreciation for native languages among both natives and non-natives. Representatives from the Alaska State Historical Commission attending the Council of Geographic Names Authority in October should identify other ways to establish more Alaska Native place names.

Second, there is a lack of coordination of all revitalization and preservation efforts on a state level. Although the Alaska Native Language Center advises new groups starting revitalization projects and provides information about existing efforts, there may be a need for a higher level of coordination. One problem with the lack of such coordination is that it is difficult to get a broad picture of efforts across the state, which causes another problem: according to Holton, "What we see across the state are grass root projects that are reinventing the wheel," which results in wasted time, resources, and effort. In addition, a higher level of coordination may allow native language revitalization efforts a higher level of recognition. The Alaska State Historical Commission may consider either asking Governor Parnell to establish a state-level coordination of language revitalization and preservation efforts, or offer to take on that responsibility under existing mandates of the Commission.

Third, students attending immersion or bilingual schools may need alternative testing to required standardized tests in English. In cases where students are in academic settings involving two languages, this requirement may drive parents, afraid that their children will perform badly on the test, to pull back on the language programs in place. School districts such as the Lower Kuskokwim district has requested a waiver and offered alternative tests in Yup'ik, but the state, in turn, has not requested such a waiver although it has the option to do so.16 According to Marlow, research has indicated that these students may at first lag behind in terms of academic achievement, but later tend to catch up to, if not surpass, monolingual students. Therefore it is recommended that the Alaska State Historical Commission work with the Department of Education to assist efforts to provide alternative assessments within immersion or bilingual programs in order for such programs to maintain and strengthen support of multicultural education among parents and community members.

Fourth, as emphasized by Linda Belarde of the Sealaska Institute, in many regions there is no natural language learning environment, rendering language learners to become dependent on structured classroom settings, which according to Belarde, "makes it very different from learning

16 For more information on the waiver contact Patrick Marlow mentioned above in footnote six

our languages naturally as our first languages." Furthermore, it is important to for native languages to appeal to young people: as Kaplan comments, "One of the worst things that could happen is for people to see these as languages of old people." To prevent this, Kaplan is working on a grant proposal for a project that would document and encourage text messaging in native languages. Thus, it is recommended that in order to assist efforts in creating a more effective language environment such as those of the Sealaska Heritage Institute and the Alutiiq Museum, the commission support efforts to increase native language use through the media, such as in music, television shows, movies, and radio.

Lastly, the commission should work with the State Committee on Research and the U.S. Arctic Research Commission to support further research on successful language revitalization models and current needs in language education, as educating the next generations may be the most effective way to ensure the survival of Alaska's indigenous languages. There have been successful language revitalization efforts in New Zealand and Hawaii that may be referred to as models for future efforts in Alaska. In New Zealand, where in the 1980s fewer than 20% of the Maori were considered native speakers, the Kohanga reo movement was founded in 1982. Primary schools and secondary schools were established, where students were primarily taught in the Maori language. Furthermore, Hawaii adopted this model through the Punana Leo (translated as "language nest"), which are essentially Hawaiian immersion. Later, K-12 Hawaiian immersion programs as well as higher level education programs were developed. These models have already inspired Alaskans, such as trustees of the Sealaksa Heritage Institute, who after visiting Hawaii and learning about its language restoration programs, decided to adopt language revitalization as the foremost priority of the institute.

In this light, one possible area of research may be regarding human resource deficiencies, an issue that the Alaska Native Language Center has been addressing. A possible way to support such efforts may be to strengthen cooperation between Greenland and Alaska through native language teacher exchanges: some natives in Greenland and some natives in Alaska share common languages such as Inupiaq with differences in dialect. Because the problem in many villages is that native speakers are too elderly to teach younger children, an exchange where teachers from Greenland could work in villages and language programs would not only bolster current language education efforts, but also establish a connection between the Greenlandic and Alaskan language revitalization efforts.17

Success through Community Involvement

Ultimately, it is most important to emphasize that the primary efforts must come from the community: "We're the support staff; they call us up and we do our best to help by producing materials and documenting the languages, but as far as the real spark to get people learning and revitalizing the language, I'd say that has to come from within the community. You can't make somebody do that," says Kaplan. Greg Kimura likewise stressed, "One thing is absolutely clear: that we are not going to be able to accomplish the preservation, let alone the propagation of some

17 The idea of the Greenland-Alaska teacher exchange idea was communicated between the office of Lt. Governor Treadwell and between Lt. Governor Treadwell and

of these threatened languages unless that whole effort is led by the communities; they're the ones who have to be the primary morale force for this, and also the voice for language preservation."

Alaska Native Language Center

Alaska Native Languages

Population and Speaker Statistics

The following table gives estimates of the population of speakers of Alaska Native languages in reference to the relevant community population. Numbers such as these should be interpreted with caution. As Krauss notes:

> Arriving at statistics of number of speakers of indigenous languages out of total relevant population is complicated by two types of major factors. The first type is of course in the determination of who is a speaker, and the second is in counting who is a member of the indigenous community. (2007:409)

More relevant to those wishing to understand the status of Alaska Native languages are the current and recent efforts at language documentation and revitalization.

Language Family	Language Name	Population	Speakers
Eskimo-Aleut	Aleut	2,300	150
	(*Russia)	200	5
	Sugpiaq (Alutiiq)	3,500	200
	Central Yup'ik	25,000	10,400
	Siberian Yupik	1,400	1,000
	(*Russia)	900	300

Yukon Koyukuk School District
Administrative & Support Offices
4762 Old Airport Way
Fairbanks, Alaska 99709

Kerry Boyd
Superintendent
kboyd@yksd.com

Telephone: (907) 374-9400
Fax: (907) 374-9440

January 23, 2012

Dear Alaska State Senators,

On behalf of the Yukon-Koyukuk School District, I am writing in support of Senate Bill 130 (YKSD). YKSD serves nine Interior Alaskan villages plus Raven Correspondence School. Three Native languages are spoken in our region: Denaakk'a (Lower Tanana Athabascan); Denaakk'e (Koyukon Athabascan) and Inupiaq.

SB 130 will establish the Alaska Native Language and Advisory Council. The council will assess the state of Alaska Native Languages and will re-evaluate the programs within the state to make recommendations to the Governor and Legislature.

In Yukon Koyukuk School District there are less than 100 fluent speakers, with the majority of them over the age of seventy. The YKSD Board of Education requires thirty minutes of Native language instruction for students in grades kindergarten to fourth grade. In some schools, all students receive Native language instruction. Classes are taught on site and over two-way video-conference. The students are learning to speak, read and write and learn about their culture through the language. The instruction increases their self-esteem and enjoyment of school.

It is vital that the State of Alaska creates this needed establishment and I respectfully request your support in the passage of this bill.

Sincerely,

Kerry Boyd

Kerry Boyd,
Superintendent

Last native Eyak speaker dead at 89

By DEBRA McKINNEY
dmckinney@adn.com

Published: January 22nd, 2008 02:51 PM
Last Modified: January 22nd, 2008 12:47 PM

Chief Marie Smith Jones, 89, the last full-blooded Eyak and last native speaker of the Eyak language, died of natural causes on Monday at her home in Anchorage, according to her family.

Services will begin at 1 p.m. Friday at St. Innocent Russian Orthodox Cathedral, 401 Turpin St. Viewing will begin at 11 a.m.

ALASKA FEDERATION OF NATIVES

AFN LEGISLATIVE/LITIGATION COMMITTEE

2012 RESOLUTION

RESOLUTION 12-01

TITLE: SUPPORT OF A STATE OF ALASKA ACT TO ESTABLISH THE ALASKA NATIVE LANGUAGE PRESERVATION AND ADVISORY COUNCIL AND RELATING TO THE PRESERVATION, RESTORATION AND REVITALIZATION OF ALASKA NATIVE LANGUAGES

WHEREAS: Alaska Native Languages have been spoken for thousands of years; and

WHEREAS: Alaska Native Languages represent a significant resource of the State of Alaska and have contributed to its vitality and diversity; and

WHEREAS: Alaska Native Languages are threatened by extinction; and

WHEREAS: the foundation of Alaska Native cultures and ancient traditional knowledge are embedded in Alaska Native languages; and

WHEREAS: knowledge of Alaska Natives languages promotes positive self-identity of Alaska Natives; and

WHEREAS: studies have demonstrated that the academic performance of Alaska Native students improve when Alaska Native students are taught their Native language and culture; and

WHEREAS: Alaska Native corporations, organizations, and tribes and educational entities throughout the State of Alaska are attempting to restore and teach Alaska Native Languages; and

WHEREAS: the Legislature of the State of Alaska is proposing through the proposed Senate Bill 130 to establish an Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages.

NOW THEREFORE BE IT RESOLVED the Alaska Federation of Natives conveys its support of Senate Bill No. 130 and urges the Alaska State Legislature and the Governor of Alaska to enact and sign into law the referenced Act.

1577 C STREET, SUITE 300 • ANCHORAGE, ALASKA 99501 ph 907.274.3611 • fax 907.276.7989 • WWW.NATIVEFEDERATION.ORG

BE IT FURTHER RESOLVED that Alaska Native Federal of Natives further urges the Alaska State Legislature and Governor of Alaska to support the allocation of funds to support Alaska Native Language restoration programs.

PASSED THIS 23RD DAY

OF JANUARY 23, 2012

Julie E. Kitka

Julie E. Kitka
President

ALASKA FEDERATION
OF NATIVES

January 23, 2012

The Honorable Don Olson
Alaska State Capitol, Room 508
Alaska State Senate
Juneau, Alaska 99801

Dear Senator Olson:

As you know, the Alaska Federation of Natives (AFN) is the largest statewide Native organization in Alaska representing more than 125,000 Alaska Natives residing in Alaska, and more than 120,000 Alaska Natives scattered throughout the other 49 states. AFN was organized in 1966 to facilitate bringing the various regional and village associations together in order to advocate with one voice for a fair settlement of our aboriginal land claims, which became the Alaska Native Claims Settlement Act of 1971 (ANCSA).

Today, AFN is governed by a 37-member board of directors representing villages (both federally recognized tribes and ANCSA village corporations), 11 regional tribal consortiums, and the 13 regional ANCSA corporations. AFN's annual convention is the largest annual gathering of Native people within the United States. AFN's mission is, in part, to enhance and promote the cultural, economic and political voice of the Alaska Native community.

AFN supports the enactment of Senate Bill 130, entitled"An Act establishing in the Office of the Governor an advisory council for the preservation, restoration, and revitalization of Alaska Native languages'and we join you in urging support for passage of this bill.

This bill establishes, in the Office of the Governor, an Alaska Native Language Preservation Council (Council) tasked with evaluating Alaska Native Language programs and making recommendations to establish new programs or reorganize current programs. We agree that indigenous languages are the most critical components in preservation of Alaska Native Cultures as they are the foundation of all cultural groups, including the Alaska Natives. Their preservations will preserve cultural ideas and traditions and serve as the backbone of all cultural elements. We also recognize the urgency of establishing such a Council as many Alaska Native Languages are threatened by extinction.

Attached is AFN Resolution 12-01,"Support of a State of Alaska Act To Establish The Alaska Native Language Preservation Council And Relating To The Preservation, Restoration and Revitalization of Alaska Native Languages." This resolution urges support of Senate Bill 130 and requests immediate action begin, by way of demonstration projects, to restore Alaska Native Languages. We believe inclusion of five language restoration demonstration projects will

1577 C Street, Suite 300 • Anchorage, Alaska 99501 • tel 907.274.3611 • fax 907.276.7989 • www.nativefederation.org

strengthen the bill as it moves the issue beyond analysis and to a point where positive progress can be made.

I am also attaching a copy of a document entitled "Sealaska Heritage Institute Alaska Native Language Programs January 2012." The first sentence of this document states: "Alaska Natives are comprised of seven linguistic groups including the Inupiat, Yup'ik, Aleut, Athabascan, Tlingit, Haida and Tsimshian. Each has or had its own indigenous language." This document describes the efforts of the Alaska Native Community from Barrow to Metlakatla on preserving the indigenous languages that exist in these regions. Their efforts will lead to the preservation of the foundations of the cultures that exist across the State of Alaska.

On behalf of the Alaska Federation of Natives, we urge passage of Senate Bill 130 with additional language adding five language restoration demonstration projects for the Inupiat, Yup'ik, Aleut, Athabascan and Tlingit language groups.

Thank you for your continued preservation of the Alaska Native cultures during your times as a member of the Alaska State Senate.

Thank you for your consideration. If you have questions regarding this letter, please call me at AFN at 907-274-3611.

Sincerely,

Julie E. Kitka

Re: Support of SB 130, Alaska Native Language Preservation and Advisory Council

Dear Senator Olson:

The Eyak Corporation greatly appreciates your introduction of SB 130 to establish an Alaska Native Language Preservation and Advisory Council. We strongly support the bill and encourage the Alaska State Legislature to adopt it this year.

In January 2008, after the passing of the last fluent speaker in the Eyak language, Chief Marie Smith Jones, the language was thought to be extinct. However, a number of shareholders of The Eyak Corporation, including descendants of Ms. Smith Jones, are of Eyak descent and have begun learning the language of their ancestors. In 2011, immersion clinics were held to teach the Eyak language in Cordova and Anchorage. Those clinics proved, beyond the slightest doubt, that Eyaks are fighting valiantly to keep their language alive.

Please let us know how we can support your efforts in furtherance of SB 130. We look forward to our Eyak shareholders and descendants expressing their appreciation to you, in Eyak.

Sincerely,

The Eyak Corporation

Alaska Association for Bilingual Education
An Affiliate of TESOL and NABE

Dear Alaska State Senators,

I am writing in support of Senate Bill 130 on behalf of the Alaska Association for Bilingual Education Alaska Native Language and Culture Retention Special Interest Group. The Alaska Native Language and Culture Retention Special Interest Group (ANLCR SIG) is comprised of a cross section of volunteer Native language educators, advocates, and activists working to protect, promote, and revitalize Native languages. As the only statewide Native language advocacy body, the ANLCR SIG carries out this work through conferencing and workshops, networking best practices, and advocating for institutional and governmental support for Native language revitalization initiatives. As a volunteer body our resources and ability to be effective are strained, however, which is why in 2010 the ANLCR SIG sought the creation of a statewide Alaska Native Languages Commission through Alaska Federation of Natives Resolution 10-34. It is for this reason that the ANLCR SIG enthusiastically supports SB 130.

SB 130 will help provide the political advocacy, human and financial resources Alaska Native language advocates, activists, and educators need to craft policies and projects that will contribute to the protection, promotion, and revitalization of Alaska Native languages. Such support is urgently needed at a time when all 19 indigenous languages still spoken in Alaska are endangered or critically endangered. The passing in 2008 of Marie Smith Jones, the last fluent speaker of Eyak, underscores the vulnerability of Alaska Native languages and the urgency with which we must undertake this vital work.

Native languages and the rich cultures they make possible constitute an invaluable contribution to the diversity and richness of our State, and are together an essential component of Alaska's identity. Indeed, there is nothing more Alaskan than Alaska Native languages, and future generations of Alaskans deserve the opportunity to experience and speak them.

Sincerely,

Timothy Aqukkasuk Argetsinger
Chair, AK Native Language and Culture Retention SIG

Senator Donald C. Olson
State Capitol, Room 508
Juneau, AK 99801

Dear Senator Olson,

I congratulate you on your continued effort to preserve and restore the many indigenous languages in our great state, and stand behind your push to create the Alaska Native Language and Advisory Council.

As an Iñupiat Eskimo who grew up in Barrow, and later spent time in Noorvik, Unalakleet and Bethel, I've seen first-hand how Alaska Native languages can link a community to its culture and traditions, as well as help to bridge the gap between generations. The passage of Senate Bill 130 would help to ensure that these languages in Alaska would not only thrive, but also serve as a guide for future Alaskans.

I look forward to the passage of this important piece of legislation, and will monitor its progress throughout this legislative session.

Sincerely,
ARCTIC SLOPE REGIONAL CORPORATION

Juneau, AK 99801

RE: Support of SB 130, Alaska Native Language Preservation and Advisory Council

Dear Senator Olson:

In the majestic forests of Southeast Alaska, along the coastlines of *Haa Aani* (Our Land), our people have gathered in the clan houses and told our stories for thousands of years, passing down the wisdom of Elders and the richness of our culture for generations. This oral history stood unbroken for centuries, but now the languages of the Alaska Native people face extinction. It is imperative that these languages be preserved and with them, the foundation of Alaska Native cultures and ancient traditional knowledge.

Sealaska Corporation offers its overwhelming support of SB 130, An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages. Sealaska urges the Alaska State Legislature and Governor of Alaska to also champion an allocation of funds to programs that restore Alaska Native Languages.

We can all be part of a solution to address the many challenges facing Alaska Natives. Native youth have been shown to improve academic performance when taught in their Native tongue; healthy self-esteem has been linked to a strong sense of identity; and thriving communities are built on the foundation of strong family relationships and lines of communication.

Please share this letter of support to any extent that it might encourage others to vote for the passage of SB 130, and secure funding for programs to restore the words of our ancestors.

Sincerely,

Albert M. Kookesh

State Capitol Bldg. Rm. 508
Juneau, AK. 99801

Dear Senator Olson,

The Alaska Native Educators Association (ANEA) Board is in favor of the SB 130. The ANEA Board was formed to provide a means to discuss issues facing Alaska Native students and is comprised of lifelong educators, representing most regions in Alaska. At the present time the Aleutian and Southeast region board seats are open and will be filled at our annual conference. Having no funding as an organization, we have had to piggyback with other conferences, specifically the Bilingual Multicultural Education Equity Conference (BMEEC). It is without a doubt that the longest standing issue in Alaska Native education is our Alaska Native languages.

Although the ANEA Board is a volunteer board, we are very active and dedicated to our youth as well as perpetuating our Alaska Native languages. Most of us have dedicated our lives to revitalizing our Alaska Native languages, doing what is needed to uphold our language and culture. As past and present certified teachers, we have taught Alaska Native language and culture, fitting it into mainstream classes within the educational system where ever we could. Some of us have created curricula in each of our perspective regions, which includes the Alaska Native culture and language. In the 1990's some of the ANEA Board members worked with Dr. Ray Barnhardt in developing the Alaska Native Cultural Standards with the Alaska Rural Systemic Initiative (AKRSI) grant, until the grant lapsed. Most currently, we have worked with Phyllis Carlson, Director of Alaska Rural Education, on the development of a rubric, based on the Alaska Native Cultural Standards. The rubric measures how well classroom teachers are integrating the Cultural Standards into their classrooms. In spite of not having her own state budget for her department, Phyllis has managed to obtain funding from SERRC for us to work together several times throughout 2011, starting from December of 2010. The rubric is near completion but we feel we still need to meet face to face once more to finalize it and to work on a survey that will go with it on a statewide basis. We have partnered with the Future Educators of Alaska (FEA) and often hold a workshop in their conferences or they sponsor us in a workshop for the youth section during BMEEC. Another organization we have partnered with is the Alaska Native Teacher Preparation Program (ANTPP), a grant that was obtained by UAF. Lastly but not least, several ANEA Board members have participated in the Quality Teachers meetings headed by DEED.

ANEA firmly believes that it is vital to retain and develop Alaska Native languages. Current research supports the premise that personal persistence and identity which includes Alaska Native language development reduces suicide, as it is a concrete contribution to self-continuity. Studies show that whenever there are students taking Alaska Native language immersion classes, they thrive in all areas of study. We have seen it in our students, some of which are being chosen to participate in the state science fairs or math competitions; taking student leadership roles as high school students; and to becoming leaders in our communities.

ANEA Board supports Senate Bill 130.

Quyanaqpak, quyaana, kunish 'gish, anabase' for taking our written testimony.

CITY OF BARROW

"Farthest North Incorporated City"

RESOLUTION 04 - 2012

A RESOLUTION OF THE BARROW CITY COUNCIL ENCOURAGING THE ALASKA STATE LEGISLATURE TO EXPEDIENTLY PASS SENATE BILL 130 – AN ACT ESTABLISHING AN ALASKA NATIVE LANGUAGE & ADVISORY COUNCIL

WHEREAS, Senator Donald C. Olson has introduced Senate Bill 130 in the State of Alaska Senate, an act establishing the Alaska Native Language Preservation Council and relating to the preservation, restoration and revitalization of all Alaska Native languages; and

WHEREAS, the varied Alaska Native Languages and the rich culture and traditions associated with them established the foundation on which the State of Alaska was built; and

WHEREAS, all Alaska Native Languages are threatened by extinction, including our own Inupiaq language; and

WHEREAS, for the past thirty years, the City of Barrow Mayor, Bob Harcharek, has been actively involved in researching and documenting trends and patterns of migration, the economies, language developments and educational opportunities of the residents of the North Slope Borough; and

WHEREAS, the *North Slope Borough 2011 Economic Profile and Census Report* documents the serious decline in Inupiaq competency among North Slope Borough residents; and

WHEREAS, the City of Barrow is committed to assisting any and all entities whose focus is the preservation and revitalization of the Alaska Native languages and cultures; and

WHEREAS, working and interacting with researchers and colleagues throughout the State, such as UAA Professor Emeritus Carl E. Shepro, the critical status of Alaska's Native languages has become an imperative which needs to be addressed as expediently and comprehensively as possible; and

WHEREAS, the indigenous languages of our state are critical and priceless components of the heritage of our State of Alaska, which need to be nurtured to insure their preservation; and

WHEREAS, the intent of Senate Bill 130 is to preserve and maintain our Alaska Native languages which are the most critical components of cultural preservation, continuity and revitalization; and

NOW THEREFORE BE IT RESOLVED, that Barrow City Council formally endorses and encourages the Alaska State Legislature to expediently pass Senate Bill 130 into law.

PASSED AND APPROVED BY THE BARROW CITY COUNCIL ON THIS 26th DAY OF JANUARY 2012 UNANIMOUSLY.

ATTEST:

Bob Harcharek, Mayor

Tracy Benson, City Clerk

RE: Support of SB 130, Alaska Native Language Preservation and Advisory Council

Dear Senator Olson:

Afognak Native Corporation offers its strong support for SB 130, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages."

Today there are only 45 fluent speakers of the Alutiiq language, the traditional language of the Native people of the Kodiak Archipelago, only 11 of which can speak the Northern Dialect, the traditional language of the *Ag'uanermiut* (people of Afognak). All the speakers are Elders.

Our traditional language, like so many Alaska Native languages, struggles for survival. Thankfully, through the joint efforts of the Alaska Native Corporations and Tribes in the Kodiak Archipelago and the Alutiiq Museum, we are preserving our language.

Afognak Native Corporation has funded a language program operated by the Native Village of Afognak and Native Village of Port Lions to create innovative language learning tools. KTUU Channel 2 News recently aired stories about these language preservation efforts:

- Alutiiq Language Website: http://www.ktuu.com/features/assignmentak/learning-alutiiq-online-20120112.0.5807593.story
- Alutiiq Iphone Application: http://www.ktuu.com/videobeta/80965544-341f-44e4-8e14-5210bac33c9b/News/Afognak-Alutiiq-Connect-iPhone-app-intro

Although we have made progress in language preservation, there is still much to do to revitalize our Native language. We welcome the opportunity to collaborate with the State of Alaska, school districts, and other Native organizations to ensure Alaska Native languages remain a vibrant part of Alaska's diversity.

Quyanaasinaq (thank you very much) for the opportunity to comment on this bill. If you would like to discuss our support further, please contact me at slukin@afognak.com / (907) 222-9505.

Sincerely,

Sarah L. Lukin
Senior Vice President, Corporate Affairs

ALASKA
NATIVE
HERITAGE
CENTER

January 20, 2012

Senate State Affairs Committee
Alaska State Legislature
State Capital
Juneau, Alaska 99801

Honorable Alaska State Legislators:

On behalf of the Alaska Native Heritage Center, and the many cultural and language bearers we serve and represent, I ardently express my support for Senate Bill 130 and House Bill 254 in the second session of the Twenty-Seventh Legislature, both entitled "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration, and revitalization of Alaska Native languages."

The Alaska Native Heritage Center (ANHC) is a 501(c) 3, non-profit organization whose mission is to serve as a gathering place for sharing, perpetuating and preserving Alaska's unique indigenous cultures, languages, traditions and values through celebration and education. Our 15-member Board of Directors is currently governed by members of the 13 Alaska Native Claims Settlement Act (ANSCA) Regions including Cook Inlet Region Inc., Chugach Alaska Corporation, Bristol Bay Native Corporation, NANA Regional Corporation, Arctic Slope Regional Corporation, Bering Straits Native Corporation, Koniag, Inc., Sealaska Corporation, and Ahtna, Inc.

As Alaska Native people, our indigenous languages fulfill a vital role in perpetuating cultural traditions and values. It is our sincere belief that it is critical to take proactive measures *now* to strengthen our languages while language speakers in each of the Alaska Native culture groups still exist, and the interest and aspiration to revitalize our languages for future generations is strong. At our core, we recognize that indigenous language learning promotes increased self-esteem and confidence for Alaska Natives, particularly youth, and a strong cultural identity and knowledge of self translates into a stronger person overall. In a recent early childhood development study (McIvor 2005), University of Victoria, B.C. researchers and speech pathologists working with Canadian First Nations have documented strong linkages between indigenous children who have a strong traditional cultural and linguistic background and academic and overall well-being.

Our vision is to promote intergenerational learning from within the indigenous Alaskan community. ANHC has sought to advocate for active language learning by hosting learning sessions for several Alaska Native languages, including Unangax (Aleut), Sugstun (Alutiiq), Iñupiaq, Tlingit, and Yup'ik, while the most thorough instructional efforts have been for Dena'ina Athabascan. Further efforts are underway as ANHC seeks Administration for Native

8800 HERITAGE CENTER DRIVE ANCHORAGE, ALASKA 99504-6100 • PHONE 907 330-8000 • FAX 907 330-8030

ALASKA
NATIVE
HERITAGE
CENTER

Americans (ANA) grant funds, through the United States Department of Health and Social Services. The project will assess and identify local and statewide resources and partnerships that could be made available to Alaska Natives living in Anchorage, for teaching languages within the Eskimo-Aleut speaking, Athabascan speaking, and Tlingit/Haida/Tsimshian/Eyak speaking nations.

Progressively, ANHC is working to develop programs on site at the Center to provide indigenous language learning opportunities in a full immersion environment. Such opportunities are urgently needed at a time when all 19 indigenous languages still spoken in Alaska are endangered or critically endangered. The passing in 2008 of Chief Marie Smith Jones, the last fluent speaker of Eyak, underscores the vulnerability of Alaska Native languages.

SB 130 / HB 254 will help provide the much-needed political infrastructure, as well as resources both human and financial, to build and follow policies within and outside the state government, to promote sustainable Alaska Native language efforts. Meaningful investment by the State of Alaska in the cultural strengthening of Alaska Native languages will not only contribute to a stronger Alaska Native society, but a stronger Alaska as a whole, and therefore warrants the highest legislative priority.

I am available to discuss this matter, and provide verbal or written testimony to further provide evidence for these facts, in my vehement support for SB 130 / HB 254.

Sincerely,

Annette Evans Smith, President & CEO
Alaska Native Heritage Center

SUBJECT: Resolution in Support of Senate Bill 130

Good afternoon, Senator Olson:

The Administration, Council and I personally, wish to commend you on the introduction of Senate Bill 130, Alaska Native Language & Advisory Council, in the Alaska State Legislature. We understand that the first hearing on this bill will be presented in hearing tomorrow, 24 January 2012, in the Committee for State Affairs. Because of our short notice on this hearing, please submit and accept this letter as the City of Barrow's unqualified but interim support in this effort.

For the Barrow City Council meeting this Thursday, 26 January 2012, I have submitted a formal resolution indicating the City's unqualified endorsement of this legislation for Council ratification. On Friday of this week, I will send you a copy of that ratified endorsement for your files.

Senator Olson, I commend you on taking the initiative of introducing this long-overdue and necessary piece of legislation. I look forward in discussing its progress through the legislature with you. If there is any way that the City of Barrow can assist in facilitating its passage, please do not hesitate to contact me. I also look forward to visiting you in Juneau during the second week in February.

Cordially,

Bob Harcharek

Subj: Senate Bill 130 – Alaska Native Language & Advisory Council

Honorable Senator Olson,

It is with pleasure and hope that I write this letter of support for Senate Bill 130 Alaska Native Language & Advisory Council: "*An Act establishing in the Office of the Governor an advisory council for the preservation, restoration, and revitalization of Alaska Native Languages.*"

The issue of preserving, restoring, and revitalizing Alaska Native Languages (ANLs) is of significant importance to my administration and to the people of the North Slope. This was true when the North Slope Borough (NSB) was incorporated in 1972 and has an even greater urgency today since we know far too few of our population is able to speak our language.

Senate Bill 130 seeks to establish a state-level task force within the Office of the Governor to assess our ANLs and to make recommendations to the Governor and Legislature. At the regional level, over 30 years ago, the NSB established through ordinance the Inupiat Heritage, Language and Culture (IHLC) Commission. Within our local government, this group is tasked with duties similar to those of this proposed commission as it relates to our Inupiaq language. Most recently this local commission focused on the issue of language preservation through the active participation in the development, creation, and now distribution of the North Slope Inupiaq version of Rosetta Stone language software. The Rosetta Stone project is an example of just one of many efforts of the NSB and IHLC Commission to preserve, restore and revitalize our Inupiaq language. While we are certain it is an important step in the right direction, we know there is much work ahead in the future for the North Slope and the state.

It is because of this that we give our highest possible recommendation of support of this Bill and urge the State Legislature to do the same. If we expect to succeed in the significant and challenging cause for our Alaska Native languages we must have a strong and unified effort at every level, local to state. Thank you for your consideration of our comments and recommendation of support.

Sincerely,

Charlotte Brower

January 19, 2012

Senator Donald Olson
Alaska State Capital Room 508
Juneau, Alaska 99801

Dear Senator Olson,

Thank you for introducing SB 130 to establish an Alaska Native Language Advisory Council within the State of Alaska. Kawerak Inc. supports this bill and encourages the legislature to work together to pass the bill as a way to begin preserving and advancing our proud cultural heritage as Alaskans.

All Alaska Native languages are considered endangered or severely endangered by linguists. The tragic loss of Eyac in 2008 underscores the universal vulnerability of Alaska Native Languages. The continued loss of Alaskan Native cultural identities has social implications for our state's civil society; including depression, self-destructive behaviors and community shame.

In the Bering Strait region, our Native languages have been declining over the years. While we don't have a formal language survey, we know our young people and children do not speak our languages as a first language. St. Lawrence Island Yupik would be an exception, but they are also seeing a decline. The Eskimo Heritage Program is working on an Inupiaq language project called Visual Inupiaq Vocabulary Acquisition (VIVA) with the Fish River Inupiaq dialect of which there are about four fluent speakers left. We must "catch" these elders in order to help their communities to relearn and retain their language. Native language revitalization has become very critical for the Bering Strait region.

Our Native language of Inupiaq is a global one, spanning from the Chukotka side of the Russian Far East to the Bering Strait region in Alaska, through Arctic Canada and on to Greenland. The valuable importance of our language can increase cultural heritage, support sustainable communities, and encourage collaboration among generations (Elders to Youth) in various projects and programs throughout the region and state.

Kawerak Inc. supports SB 130 as a method to build statewide advocacy, research and corpus on behalf of Alaska Native language revitalization efforts, and support greater cooperation between stakeholders that is urgently needed to initiate and maintain language revitalization initiatives in all Alaskan communities.

If you have questions, please contact Bernadette Alvanna-Stimpfle, Director of Eskimo Heritage Program at balvannastimpfle@kawerak.org or by writing to P.O. Box 948, Nome, AK 99762. Her direct line is 907-443-4386.

Sincerely,

M Bahnke for CB

Fax: (907) 442.3740 or 2930

December 30, 2011

Senator Donald Olson
Alaska State Capitol Room 508
Juneau, Alaska 99801

Dear Senator Olson:

Quyanaq for introducing SB 130 to establish an Alaska Native Language and Advisory Council within the State of Alaska. The Northwest Arctic Borough supports this bill and encourages the legislature to work together to pass the bill as way to begin preserving and advancing our proud cultural heritage as Alaskans.

As background, all Alaska Native languages are considered endangered or severely endangered by linguists, and the tragic loss of Eyak in 2008 underscores the universal vulnerability of Alaska Native languages. The continued erosion or disappearance of Alaskan cultural identities has social implications for our state's civil society – including depression, self-destructive behaviors and community shame.

Within the Borough/NANA Region, the Iñupiaq language has been in serious decline. In 2005 the Aqqaluk Trust with the Native Village of Kotzebue designed and administered a regional language survey of 4,112 households throughout the Northwest Arctic region's 11 communities. This survey was the most comprehensive survey of Iñupiatun speaking and understanding ability in the Northwest Arctic. Data from the 2005 regional survey were prepared by the McDowell Group, and according to the data:

- Only 18% (739) indicated understanding the Iñupiaq language well, while just 3% (113) indicated understanding the language well but hardly speaking.
- Just over 14% can speak the Iñupiaq language fluently.

Our Borough Comprehensive Plan (1993) recognizes the issues that maintaining traditional values and activities are important to the social, cultural and economic well-being of residents and whole communities. The plan recommends *supporting* these values including Iñupiaq language activities through education programs, land management and other Borough programs.

The Borough assembly through resolution 10-61 (see attached) recognized that our Alaska Native languages are inherently valuable and constitute vital sources of identity for all Alaskans, and reinforces positive cultural, geographic, and humanistic ties

NORTHWEST ARCTIC BOROUGH
P.O. Box 1110
Kotzebue, Alaska 99752
(907) 442.2500 or (800) 478.1110
Fax: (907) 442.3740 or 2930

that make us globally unique. The valuable importance of our Iñupiaq language can increase cultural heritage, support sustainable communities, and encourage collaboration among generations (Elders to youth) in various projects and programs throughout the region and state.

The Borough supports SB 130 as a method to build statewide advocacy, research and corpus on behalf of Alaska Native language revitalization efforts, and support greater cooperation between stakeholders that is urgently needed to initiate or maintain language revitalization initiatives in all Alaskan communities.

If you have any questions, please contact myself or Ukallaysaaq Tom Okleasik, Planning Director / Northwest Arctic Borough / PO Box 1110 / Kotzebue, AK 99752 / Phone 907-442-2500 / Fax 907-442-2930.

Sincerely,

Siikauraq Whiting, Borough Mayor

Port Graham
Nanwalek

Chugachmiut

January 18, 2012

Senator Donald Olson
Alaska State Capitol Room 508
Juneau, Alaska 99801

Dear Senator Olson:

Chugachmiut appreciates your introduction of SB 130 for the purpose of establishing an Alaska Native Language and Advisory Council within the State of Alaska. We fully support the bill and encourage the legislature to adopt it this year.

As I reflect on the Suqpiaq language spoken in our area, and how close it came to extinction, I am comforted that federal language grants have given us an opportunity to preserve it and teach a new generation of speakers. Yet we are losing our teachers at a very rapid rate. One of our few Elder speakers passed away recently and we feel the loss deeply. We relied extensively on him to help guide our language restoration efforts.

Our tribes are clear and focused on preservation of Suqpiaq and teaching our youth. Nanwalek has struggled for years to support an immersion school. We are now finding some acceptance for language instruction in our public schools. Chugachmiut has collaborated with the 2 school districts with schools in our villages over the past 2 years and we hope to see more in the future.

An Alaska Native Language and Advisory Council as proposed in your bill would be extremely beneficial to our language preservation effort. Please let us know what we can do to support it.

Respectfully,

Patrick M. Anderson
Executive Director

TAMAMTA PIGPET
"All of Ours"

NANA
REGIONAL CORPORATION INC

The Honorable Donny Olson
State Senate
Alaska State Capitol
Juneau, AK 99801

January 16, 2012

Dear Senator Olson:

NANA Regional Corporation supports Senate Bill 130, "An Act establishing in the Office of the Governor an advisory council for the preservation, restoration, and revitalization of Alaska Native languages" as well as its companion bill, House Bill 254. NANA appreciates that the passage of this bill would provide a mechanism for recommendation to the Governor of the establishment or reorganization of programs to support preservation, restoration and revitalization of Alaska Native languages. Many Alaska Native languages, which include Iñupiaq dialects found in the NANA Region, are in danger of becoming extinct. Alaska Native Languages are the key to preserving and perpetuating Alaska Native cultural ideas, philosophies and traditions as well as the rich and common history of the State of Alaska. The Alaska Native Language and Advisory Council wouldbe a powerful tool to bring language specialiststogether to share best practices and to identify programs and funding tools that can be used to address the urgent issue before us. The benefits of preserving and perpetuating Alaska Native languages, especially in youth, go beyond preserving history, traditions and culture; they directly impact the health and well-being of Alaska residents, the statewide economy, and thelong term sustainability and success of the State of Alaska.

Benefits Beyond Tradition:

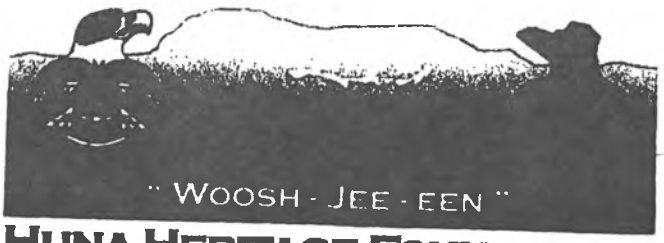
The benefits of revitalizing and perpetuating Alaska Native languages are not limited to continuing traditions. Revitalizing Alaska Native languages will preserve Alaska's rich history and diversity while reinforcing positive Alaska Native identity in Alaska Native youth. Positive reinforcement of Alaska Native identities in students can reduce youth suicide rates and decrease youth substance abuse. Native American language immersion schools throughout the United States (for example, Piegan Institute in Browning, Montana; Tsehootsooi Dine Bi olta in Fort Defiance, Arizona; Cherokee Immersion in Tahlequah, Oklahoma) show increased academic performance, lower suicide rates and reduced disciplinary problems. Improvement of academic performance is related to better testing scores, increased graduation rates and can increase the percentage of students obtaining a post-secondary education. In the long run, Native language programscontribute to the sustainability of communities by contributing to economic development and local capacity building as well as improvements in public safety.

Barriers to Revitalization, Preservation and Perpetuation:

There are significant barriers to perpetuating the Iñupiaqlanguage in northwest Alaska, but organizations within the region are working hard to surmount existing obstacles. In 2005, the Aqqaluk Trust, a non-profit organization dedicated to education and language and cultural preservation that NANA contributes to, and the Native Village of

Kotzebue surveyed the Northwest Arctic Borough. The survey showed that only 14% of the Borough's residents understand Iñupiaq fluently. The survey also found that 92% of speakers are over the age of 65. The median age of the Borough is currently 24 years old. These data show that we are faced with an uphill battle to preserve and perpetuate our language.

NANA, through the Aqqaluk Trust, is supporting efforts to revitalize and perpetuate the Iñupiaq language. NANA entered a unique partnership withRosetta Stoneto produce an interactive computer learning program as part of the Rosetta Stone Endangered Language Program.Software for the two predominant dialects in our regionare available to our shareholders and the public. An additional effort to perpetuate our language – a gem in our region – is the NikaitchautIlisagviat immersion school in Kotzebue. While the efforts in our region have contributed to the perpetuation of theIñupiaq language, greater institutional change is needed.These programs have limited audiences of learners. This coupled with limited funding to support Alaska Native language efforts, access to youth in public schools and access to adult language programs threaten to widen the generational gap between Iñupiaq speakers and non-speakers.



Coming together for Solutions:

On behalf of NANA, thank you for elevating this important issue by introducing SB 130. It would be invaluable for the Council to work with the Governor's Office to create real solutions to preserving and perpetuating Alaska Native Languages. As you know, the solutions will require a team effort and a multi-pronged approach from the State, private entities and local communities. The Alaska Native Language and Advisory Council would provide a forum to identify solutions by bringing together resources from across the state to share what is working, what is not working, and how the State of Alaska and other entities can work together to ensure that our Alaska Native languages are not extinct, but are a thriving part of our communities.

NANA supports the passage of Senate Bill 130 and suggests that your consider Linda Lee, Lorena Williams, Polly Agnik Schaeffer and Barbara Atoruk, all Iñupiaq language experts, resources for the Alaska Native Language and Advisory Council and the Alaska State Legislature.

Quyanuq- thank you,

Marie N. Greene
President/CEO
NANA Regional Corporation

Senator Donald C. Olson
Alaska State Capitol Rm 508
Alaska State Legislature
Juneau, AK 99801

The Huna Heritage Foundation wholeheartedly supports Senate Bill 130 which would establish the Alaska Native Language and Advisory Council to assess the State of Alaska Native Languages and re-evaluate the programs within the state and make recommendations to the Governor and Legislature to establish new programs or reorganize the current programs.

SB 130 would help to preserve and maintain Alaska Native Languages which are critical to the preservation and cultural ideas and traditions of all Alaska Natives.

We believe that SB130 would support indigenous languages and help stem the tide of language extinction within the great state of Alaska.

Sincerely,

Marlene Johnson

23 January 2012

Honorable Donny Olson, Senator
Alaska State Legislature
Alaska State Capitol, Rm. 508
Juneau, Alaska 99801

Dear Senator Olson:

It brings me gratification to see the introduction of Senate Bill 130 - Alaska Native Language & Advisory Council, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the preservation, restoration and revitalization of Alaska Native Languages."

I have been working in the field of language preservation and perpetuation for nearly 40 years and have seen first hand the extreme decline of the Iñupiaq language. A handful of our people have devoted their lives to teaching it in the hopes of reversing this loss. Much remains to be done.

I write in support of the bill and urge passage. Having an Advisory Council whose responsibility would be to advocate for Native languages across the state will go a long ways towards creating an atmosphere where we can realize a shift in language priorities in Alaska. It is high time the state recognize the importance of perpetuating the languages of its indigenous peoples.

Quyanaq.

Respectfully yours,

Jana Harcharek, Director
Iñupiaq Education

RE: Support for CS/SB 130 – "An Act establishing an Alaska Native Language and Advisory Council."

Dear Senator Olsen,

From its beginning of time, the truest picture and the deepest thoughts and feelings of this great land have been woven into the words of Alaska's indigenous people and their languages. A part of this Great Land's heart and mind and soul is lost forever, whenever one of Alaska's Native languages dies.

The Tanana Chiefs Conference views CS for SB 130 as a humble but important beginning of a process and partnership that brings Alaskans together to build a permanent legacy that will enrich the future of all Alaskans.

For many years, the Athabascan tribes of the Interior, along with other tribes and local, regional and state-wide organizations and educational institutions throughout Alaska have strongly encouraged the state to partner with them in supporting their efforts to preserve, restore and revitalize one of Alaska's most unique and cherished legacies - its Native languages.

Over the years, issues relating to Alaska Native language preservation, restoration and revitalization have been raised and approached by a patchwork of programs and projects. Numerous tribes, organizations and educational institutions have expended a considerable amount of time and resources to study and address issues related to Alaska's Native languages, and numerous Native language-related bills have been introduced in the legislature.

CS/SB 130 establishes a process to bring together collective and representative knowledge and experience that can provide guidance to state and tribal leadership regarding a more coordinated strategy to preserve, restore and revitalize Alaska's Native languages.

The Tanana Chiefs Conference most strongly supports the spirit and intent of CS for SB 130. We deeply appreciate your willingness to sponsor the bill, and encourage all members of the legislature to support its passage during this session.

Tsen`ii (Thank you)

TANANA CHIEFS CONFERENCE

Jerry Isaac

Jerry Isaac, President/Chairman

January 18, 2012

Senator Donald Olson
Community and Regional Affairs Committee Chair
State of Alaska
State Capitol Building Rm 508
Juneau, AK 99801

Honorable Senator Olson:

I am writing to convey my support for Senate Bill 130, a bill to establish an Alaska Native Language and Advisory Council. The creation of such a council is desperately needed and is long overdue.

In recognition of the languages of the Alaska Native peoples being treasures, and in support of our own efforts, as indigenous peoples, to maintain and develop our languages, it is my belief that the State of Alaska should make it a policy to act and assist the effort to revitalize, maintain, and development of the languages of Alaska's indigenous people with the creation of an Alaska Native Language and Advisory Council.

In addition to a making a shift from a past colonial government policies which have devastated languages and cultures of Alaska's indigenous peoples, and current policies which have perpetuated their decline, significant resources should also be applied to implement the initial and on-going activities of the Council. Time is of the essence as we continue to have elders and best indigenous language speakers pass on. As our languages are restored and valued for the treasures that they are Alaska will become a richer place for all.

I understand you are compiling a list of people to provide testimony during the first committee hearing with State Affairs which is chaired by Senator Wielechowski. I am willing to testify by phone during the committee hearing which is scheduled for Tuesday, January 24th at 9:30am. I could be available to call in at about 9:15 if I am provided the opportunity.

Thank you for sponsoring this legislation and for your support of the Alaska Native peoples of Alaska.

Shesh t'qe\ani,

Jonathon S. Ross
President and Principle Consultant

Alaska Native Language Revitalization

Prepared for the

Alaska State Legislature

SB 130 Alaska Native Language and Advisory Council

By

Rosita Kaahaní Worl, Ph.D.

Sealaska Heritage Institute

Juneau, Alaska 99801

January 31, 2012

In honor of my ancestors and in respect to this committee, I am privileged to tell you who I am:

Lingít x̲'eináx̲ Yéideiklats'ok̲ ka Kaahaní ax̲ saayí.

Shangukeidí k̲a Cháak' naa x̲at sitee.

Kawdliyaayi Hit áyá x̲át.

Lukaax.adi yádi áyá x̲át.

My Tlingit names are Yéideilats'ok and K̲aahaní

I am of the Thunderbird Clan and the Eagle Moiety.

I am from the House Lowered from the Sun of Klukwan.

I am a Child of the Sockeye Clan.

My Tlingit names embody my social identity and cultural values. They establish a bond between me and my ancestors, and they create a responsibility to our future generations. My social identity reflects our world view and our relationship to our land and environment.

My English name is Rosita Worl, and I serve as President of the Sealaska Heritage Institute (SHI), whose mission is to perpetuate and enhance the cultures of the Tlingit, Haida, and Tsimshians. SHI has been engaged in language restoration efforts for the last twelve years.

I am here today to testify in support of Senate Bill 130, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the

Preservation, Restoration, and Revitalization of Alaska Native languages." I would also like to commend you in this noble effort to support the rich linguistic and cultural diversity of this State.

I will not dwell on the historical reasons and circumstances as to why Native languages are on the verge of extinction. Rather, I will focus on the positive results that the adoption of this bill and language revitalization can bring to Alaska Natives and to the State of Alaska.

First, it is important to briefly outline the status of Alaska Native languages today. Unless remedial action is initiated, most all of Alaska Native languages will join their already extinct linguistic relative, the Eyak, within a few short decades. According to a UNESCO report on endangered languages, Inupiaq in the North Slope and Kotzebue and the Gwich'in Athabaskan languages are "severely endangered," meaning that the languages are spoken by grandparents and older generations. While the parent generations may understand Inupiaq and Gwich'in Athabaskan, they do not generally speak these languages to children or among themselves. Aleut and the Southeast Alaska Native languages are "critically endangered" meaning that the youngest speakers are grandparents and older, and they speak the language partially and infrequently. Yup'ik, which is the healthiest indigenous language in Alaska, is classified as "vulnerable." This means that most children speak the

language; but it may be restricted to certain domains such as in the home. I note with deep regret that Eyak is extinct.

In the 1990s, Alaska Natives began to advocate in earnest for the revitalization of indigenous languages. Sealaska was successful in advancing an amendment to the Native American Languages Esther Martinez Act of 1992 that provided for language revitalization programs in Alaska based on the status of our language restoration efforts at that time. I am enclosing a report prepared by the Sealaska Heritage Institute that provides an overview of the language programs administered by Alaska Native organizations today. We apologize that it may be an incomplete record, but it should provide for you the range and the limitations of the programs that are operating in the state. To my knowledge, state funding is not available for language restoration programs. The unfortunate reality is that the federal funding level has been woefully inadequate with something like $4 million in competitive grants available annually for all tribes throughout the United States. The gains we made in federal funding through aggressive advocacy on our part have been offset by the shrinking federal appropriations in the last few years, and we are yet struggling to ensure that funding for the Alaska Native Education Equity Act continues. Thus, the state's effort to support the preservation, restoration, and revitalization of Alaska Native languages becomes even more critically imperative.

It is also important to briefly review the work of the Alaska Native Language Center in the event it might be suggested that its work may be duplicated by the proposed Alaska Native Language and Advisory Council. The ANLC was established by state legislation in 1972, and it has focused on the documentation of Alaska Native languages. While the study of Native languages is important, documentation, which has been the primary focus on the ANLC, does not by itself, lead to restoration of a language. Documentation does not include the development of curriculum or the training of teachers to provide instruction on Native languages. Native language curricula and Native language teachers are critical in language revitalization. Rather than documentation, the heart of the Council's work will be to "advise the governor and the legislature on programs, policies, and projects for cost effective preservation, restoration, and revitalization of Alaska Native languages in the state." This work together with the necessary funding can ensure that one of our most significant resources in the state survives.

Native organizations have the capacity to implement language revitalization programs as reflected by the report I am submitting to you. Native Peoples have been staunch advocates of language revitalization efforts, and I would stress that it is essential that Native organizations be eligible recipients of state funds. Michael Krauss, the foremost linguist in the state, recognized the importance of Native American organizations and tribes as applicants for funding in his testimony supporting the Native American Languages Act of

1992. He stated "you cannot from outside inculcate into people the will to revive or maintain their languages" (Hinton 2001).

I would further recommend that the legislature and administration adopt interim measures to immediately support revitalization language projects for the most critically endangered languages. However, I also want to assure you that I am of the firm opinion that the legislation to establish the Alaska Native Language Preservation and Advisory Council must be adopted if we are to ensure the survival of Native languages. The Council must formulate policies that support the revitalization of Native languages and identify barriers that threaten the survival of Native language.

Significantly, one of the most immediate effects of the legislation is that it would serve to reverse the perception that the State of Alaska is adverse to linguistic diversity. It would further send a powerful message that Alaska sees indigenous languages as a part of its heritage to be protected. Unfortunately, the adoption of the English-Only legislation in 1998[1] was interpreted by many, and certainly by the Alaska Native population, as an effort to suppress Native languages. Although this may not have been the intent, I would hope that one

[1] The legislation restricted the state from conducting business in any language other than English with limited exceptions. In 2002, a superior court ruled that the law violates free speech rights, striking the law down. In 2007, the state Supreme Court issued a 4-1 split decision, ruling that the first section of the law (requiring English to be the only language used for government functions) is unconstitutional, and the second part (requiring English for all government documents and records) is constitutional as long as duplicates can be made in other languages.

of the first recommendations that the Council advances is a proposal to the legislature and the governor that Alaska join Hawaii in declaring that the state is officially multi-lingual.

The adoption of this legislation could also send a powerful message that indigenous languages are not evil or inferior to English. Children growing up with the perception that their language and culture are inferior more often develop low self-esteem, and studies have revealed that low self-esteem is a major factor in failure at school.

Conversely, a positive self-identity is a prerequisite to academic achievement. However, the emotional benefit of a positive self-identity must be accompanied by real changes in the classroom that provide for the teaching of Native language and culture. This will require considerable work and funding.

Sealaska Heritage Institute has consistently conducted evaluations of our programs in which Native language and culture are taught in schools. The curricula we have developed and the professional development workshops we have offered to teachers are oriented towards the instruction of Native language and culture. Equally important, our objectives have been to improve the academic status of our students by advancing critical thinking, knowledge and science. Our evaluations reveal that students do better academically when they are taught Native language and culture. We are preparing a longitudinal

study of students who have participated in the demonstration project we initiated in the Juneau schools, and we will be pleased to share the report with the committee when it is complete. We are confident that the study will demonstrate the academic achievement which results from the incorporation of Native language and cultural studies into the classroom. However, we have grave concerns that the school district will not be able to sustain their minimal efforts they have provided in teaching Native languages.

I believe that the legislature understands the social and economic costs to a society and to the state when a significant percent of the population has a poor education. It is my hope that our society will come to accept and understand that the incorporation of Native language and culture into our schools leads to improved academic success that ultimately benefits the individual students as well as our state and society.

Native languages contain intellectual wealth accumulated through thousands upon thousands of years. They have conveyed how Native people see and use the land. The difference in world views among different Alaska Native cultural groups was readily apparent to me when I was conducting field work in the North Slope studying whale hunting. I absolutely could not see the grey patches on the horizon that my companion hunters saw that signified open water. Neither did I know the over eighty terms they had in their language to distinguish the different types of ice (Nelson 1969). Knowledge of ice is critical

to the survival of the hunters who harvest whale, marine mammals and fowl on the sea ice. The 3,300 Tlingit place names that Sealaska Heritage will be publishing in a cultural geographic atlas provide knowledge about our environment and land in Southeast Alaska. Interestingly, these names may also provide information about climate change through thousands of years. Language is a uniquely a human gift central to our experience of being human and Alaska Natives. This knowledge and the differing world views are worthy of protection and transmittal to future generations. Linguistic and cultural diversity is a benefit to society.

Unfortunately Native languages are on the road to extinction unless we initiate immediate efforts to rectify this trend. I urge that the legislature act immediately to adopt SB 130, "An Act establishing the Alaska Native Language Preservation and Advisory Council and relating to the Preservation, Restoration, and Revitalization of Alaska Native languages."

I would like to dedicate my testimony to the late Dr. Bill Demmert of Klawock, who served as a Professor of Education at the University of Alaska Southeast. He was the first and only Native to serve as Commissioner of the State of Alaska Department of Education. He was an educator with national prominence and was instrumental in the passage of the Indian Education Act. He was also a staunch advocate of Native language restoration and studied how Native language contributes to academic success. We were fortunate to

have him serve on the Board of Trustees of the Sealaska Heritage Institute. I would also like to respectfully recommend that the state legislature consider incorporating his name into the title of SB 130 "The Bill Demmert Act establishing the Alaska Native Language Preservation and Advisory Council." It would be a tribute to all who have worked tireless to revitalize Alaska Native languages.

Gunulchéesh

Alaska Native Language Programs

January 2012

Alaska Natives are comprised of seven linguistic groups including the Inupiat, Yup'ik, Aleut, Athabascan, Tlingit, Haida and Tsimshian. Each has or had its own indigenous language. But today, no group is producing new speakers with Native as their first language. Many have language revitalization efforts in which students learn many nouns, some verbs, some greetings and introductions. None are producing fluent or even proficient speakers. Most programs are for beginners and a few are for intermediate learners. Very few programs are for advanced learners. Many communities have singing and dancing groups where individuals learn songs in their Native language and may or may not know the meaning of the words they are singing. At this time, many young Native individuals have expressed great interest in learning their language. Native language acquisition formerly occurred in the homes. Because of many factors, parents today do not know their Native language and are unable to teach the language to their children. The challenge of teaching Native languages has largely been left to schools and community organizations. This paper provides a brief summary of programs offered around the state. Not all regions responded to the request from Sealaska Heritage Institute (SHI) for information about their language programs. We received responses from seven regions. The Arctic Slope and Aleutian Pribiloff provided SHI the most detailed information. Other language revitalization programs may exist in Alaska of which we are not aware.

From Barrow to Metlakatla, community organizations and school districts are offering language programs. In the Arctic Slope, the schools teach the four dialects of Iñupiaq throughout the 12 schools in the district. The Iñupiaq Education program has created VIVA (Visual Iñupiaq Vocabulary Acquisition) online language units. Each unit contains its own assessment and scoring—students' keep track of their own progress. Once a unit is completed, the students practice their verbal pronunciation with a fluent speaker—the district employs fourteen fluent Iñupiaq speakers. This program is noteworthy for several reasons: sequential units based on the Greymorning method, scoring contained within each unit; emphasis on hearing the language tied with images rather than words and pronunciation work with fluent speakers. Classes are

held 3-5 times per week in the elementary school and are available as electives in the middle and high schools. Production of the VIVA units requires a full-time curriculum developer. The units are recorded in four Iñupiaq dialects. The North Slope Borough School District (NSBSD) is also working with cultural units and developing a math program based on the traditional Iñupiaq number system.

Nome is adapting its language program based on the NSBSD materials. They are receiving training from the curriculum developer on how to create their own programs using 'flash'. This region has a web-based vocabulary development game. They are recording fluent speakers of the different Iñupiaq dialects. Their record demonstrates the benefits of sharing resources, materials and staff knowledge to maximize the language revitalization efforts in our state.

In the northwest Arctic, 14% of residents are fluent in Iñupiaq. Of these speakers, 92% are over the age of 65.[2] Despite the disheartening statistics, communities are taking action to ensure the language survives. NANA Regional Corporation entered into a unique partnership with Rosetta Stone to produce an interactive computer learning program as part of the Rosetta Stone Endangered Language Program. Software for the two predominant dialects in the region was made available to the head of household for each family of shareholders and is available for sale. An additional effort to perpetuate the language in the region is the immersion school in Kotzebue, Nikaitchuat Ilisagviat. For 13 years, approximately 20 students age 3 through first grade have been learning all subjects solely in Iñupiatun. The Nikaitchuat staff hope to someday offer more grades at the school. The University of Alaska Fairbanks Chukchi Campus based in Kotzebue, offers an Iñupiaq A.A.S. degree and certificate program. Classes are available online so students in the villages are able to participate. Finally, the Aqqaluk Trust is a non-profit organization with the mission: "Empowering the Iñupiat people through language, culture and education." The Aqqaluk Trust coordinates the regional Iñupiaq Language Commission and conducts Camp Sivunniigvik each summer, at which children from across the region spend one week sessions on the banks of the Kobuk River enveloped in Iñupiaq traditions, values and the Iñupiaq language.

Bethel has operated an immersion school for more than 17 years. They have produced many materials including Big Books in their Yup'ik language.

---

[2] Survey of Residents of the Northwest Arctic Borough conducted by the Aqqaluk Trust and the Native Village of Kotzebue in 2005.

Other regions are also making use of technology. The Kodiak area has produced an online audio dictionary and electronic Aluutiq flashcards. They also have a Stories and Lost Words project and are in a consortium with Port Lions and the Aluuttiq Museum. Today there are only 45 fluent speakers of the Alutiiq language, the traditional language of the Native people of the Kodiak Archipelago, only 11 of which can speak the Northern Dialect, the traditional language of the *Ag'uanermiut* (people of Afognak). All the speakers are Elders. Alutiiq, like so many Alaska Native languages, struggles for survival. Afognak Native Corporation has funded a language program operated by the Native Village ofAfognak and Native Village of Port Lions to create innovative language learning tools. See Alutiiq Language Website: http://www.ktuu.com/features/assignmentak/learning-alutiiqonline-20120112,0,5807593.story and Alutiiq iPhone Application: http://www.ktuu.com/videobeta/80965544-341f-44e4-8e14-5210bac33c9b/News/Afognak-Alutiiq-Connect-iPhone-app-intro. Through the joint efforts of the Alaska Native Corporations and Tribes in the Kodiak Archipelago and the Alutiiq Museum, language restoration efforts are underway.

The Chugach Region has produced many posters, videos and books. They also teach Aluutiq at Spirit Camp each summer.

The Aleutian Pribilof Islands region is the only one of the seven regions who reported that Native language still spoken in the home although we suspect this is also the case in Yup'ik villages. The village of Atka reports that Unangam Tunuu (Aleut) is still spoken in one-fourth of the homes. They report that there are 124 fluent speakers still living representing 3.5% of the enrolled tribal members. Two of the 12 schools in the region offer language and culture classes in the curriculum. Ten schools offer limited exposure to language and culture. In Atka, where ¼ of the homes still speak Unangam Tunuu (Aleut), a fluent speaker teaches language classes one hour/day. In St. Paul, a certified teacher is also a fluent Unangam Tunuu speaker. She teaches one language class, five days per week. There is an active singing and drumming group. Youth and elders collaborate to write lyrics for new songs. At community gatherings elders speak Unangam Tunuu. Three culture camps are held during the summer months. The region is seeking $1,000,000 to create a Rosetta Stone product for Unangam Tunuu. The corporation board of directors has committed themselves to one hour of language lessons during each of the three annual meetings.

Southeast Alaska has many and varied programs. Throughout the region, "language learners," who are teachers and who are yet learning their Native language, teach with few exceptions all language classes in some cases in collaboration with fluent speakers. Yakutat has federal funding to write children's stories in Tlingit and develop learning materials for the stories. Local students and artists illustrate the stories. The core language staff work with fluent speakers on a weekly basis. Classes are taught outside the school system. Klukwan classes are taught in the school while in Haines, language classes are taught in the local museum. In Juneau, the Goldbelt Heritage Foundation is developing curriculum and working with teachers and fluent speakers to develop lessons using the Tlingit Verb Index. The region-wide entity, Sealaska Heritage Institute, produces curriculum and provides teacher training on a region-wide basis. SHI is concentrating on the Developmental Language Process (DLP) and has produced curriculum materials for academic content areas (math, science, social studies and literature), as well as Tlingit, Haida, and Tsimshian DLP units. SHI has also published Tlingit, Haida and Tsimshian dictionaries and has highly popular interactive language programs on its website. SHI sponsors summer basketball camps in which Native language instruction is integrated into basketball training. Both Goldbelt Heritage and SHI sponsor summer camps for youth. The camps feature language classes but are not conducted in the language. Other communities in Southeast have Tlingit language classes in the schools (Hoonah, Sitka and Kake). Wrangell and Ketchikan have programs after school.

In addition to offering classes, Ketchikan Indian Community has devoted time and grant money to improve advanced learner skills. One Haida, Tsimshian and Tlingit advanced learner is teamed with fluent speakers. They spend a significant amount of their week with the fluent speakers. The goal is to increase the learners' skills to proficiency. This is the only program in the state with that stated goal although others may be doing the same work.

University of Alaska Southeast has offered Tlingit classes at beginners and intermediate levels, as well as studies of oral literature and narratives. UAS also offers mentor-apprentice classes. The University of Alaska Anchorage and Fairbanks also offer Native language classes.

In summary, a significant effort is being expended in the state to revitalize Native languages. The programs focus on using technology to teach vocabulary. Most regions are recording fluent speakers. Some regions are sharing resources and adapting materials for their own dialects. None of the regions reported stability in their Native language. Fluent speakers are passing

on with no new speakers replacing them. Hundreds of learners of all ages are learning nouns, verbs, greetings and introductions. Few progress to proficiency.

The major expressed needs are:

- Programs to support teacher language learners to work with fluent speakers to increase their own language proficiency. Mentor apprentice programs appear to be very effective.
- Programs to recruit more language learners into the teaching of the language.
- Stable funding for these programs so that teacher/learners know they can count on their program continuing.
- Curriculum development at all levels and ongoing, teacher training workshops.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB135

Analysis

This bill amends AS 12.61.010(a) by requiring that the victim of a crime be notified of any request for a continuance or pending motions that may substantially delay the prosecution, and inform the court of the victim's position on these motions. This bill amends Rule 45 (d)(2) of the Alaska Rules of Criminal Procedure by adding language that requires the court to grant continuances only after consideration of the crime victim as provided in a new subsection (h) that his bill would also add to Rule 45. The new subsection (h) requires the court to consider the victim's position on motions to continue.

Courts currently consider the impact of delay on a victim's rights under the state constitution. The compulsory language in the amendment to Rule 45 may have the collateral effect of causing additional hearings and delay if the victim cannot be located. This will be impacted by how courts interpret "substantial delay."

Although this bill may increase hearings and delay, the Public Defender Agency cannot reliably predict whether this will, therefore the fiscal impact cannot be accurately determined.

FISCAL NOTE #2

STATE OF ALASKA **BILL NO.** CSSB 135(JUD)
2012 LEGISLATIVE SESSION

Analysis

This bill amends AS 12.61.010(a) by requiring that the victim of a crime be notified of any request for a continuance or pending motions that may substantially delay the prosecution, and inform the court of the victim's position on these motions. This bill amends Rule 45 (d)(2) of the Alaska Rules of Criminal Procedure by adding language that requires the court to grant continuances only after consideration of the crime victim as provided in a new subsection (h) that this bill would also add to Rule 45. The new subsection (h) requires the court to consider the victim's position on motions to continue.

Courts currently consider the impact of delay on a victim's rights under the state constitution. The Office of Public Advocacy believes that the victim's concerns are already considered by parties in trial cases as a result of constitutional requirements concerning crime victims. The compulsory language in the amendment to Rule 45 may have the collateral effect of causing additional hearings and delay if the victim cannot be located. This will be impacted by how the courts interpret "substantial delay."

Although this bill may increase hearings and delay, the Office of Public Advocacy (OPA) cannot reliably predict whether this will occur or what the fiscal impact will be. Therefore, the Agency submits an indeterminate fiscal note.

FISCAL NOTE #3

STATE OF ALASKA **BILL NO.** CSSB 135(JUD)
2012 LEGISLATIVE SESSION

Analysis

This legislation requires prosecutors and judges to consider a victim's right to a timely disposition of their case when deciding whether to allow continuances. This legislation also ensures the victims are notified of any requests or motions that could substantially delay prosecution of their case. Passage of this legislation poses no fiscal impact on DOC.

Alaska State Legislature

Senator Hollis French

SPONSOR STATEMENT

SB 135 – Continuances in Criminal Cases

Article I, section 24 of our constitution is entitled "Rights of Crime Victims." The amendment passed by an overwhelming majority when it was placed before Alaskan voters in 1994. Included in its eight specific provisions is the promise that crime victims will have "the right to timely disposition of the case following the arrest of the accused."

In the eighteen years since the amendment passed, the promise of a timely disposition of the case has often not been kept. Moreover, the breaches of that promise frequently occur in the most serious of cases. Delays in the trial of a case, known as continuances, can go on for years.

SB 135 requires prosecutors and judges to consider a victim's right to a timely disposition of their case when deciding whether to allow continuances. This legislation will also ensure that victims are notified of any requests or motions that could substantially delay speedy prosecution of their case.

Repeated delays prevent victims from reaching emotional, physical, and financial closure from the trauma that they suffered as a result of the crime perpetrated against them. Delays in prosecution can also affect the availability of witnesses, a victim's ability to recall important details, and it can create other impediments to a successful trial.

Currently, Alaska is one of 27 states with constitutional provisions to protect a victim's rights; however, there is no statute in place to implement it. With this important piece of legislation, Alaska will join 15 other states that have enacted a statutory provision recognizing this crucial right.

SB 135 will guarantee a victim's right to a timely resolution in the court system. I urge your support of this legislation.

MEMORANDUM

Summary of Changes SB 135, Version M

- Section 2, lines 12-15 – incorporates a definition of "substantially delay"
- Section 3, line 24 – removes the word "only"
- Section 3, line 25 – "if known" was added to provide for instances where the victim cannot be contacted or does not wish to participate
- Section 4, line 4 – "if known" was added again to account for the aforementioned circumstances

MEMORANDUM December 14, 2011

SUBJECT: Sectional Analaysis of 27-LS0966\A

TO: Senator Hollis French
Attn: Lila Hobbs

FROM: Doug Gardner
Director

You requested a sectional analysis of the above referenced bill. Preliminarily, please note that a sectional analysis should not be considered an authoritative interpretation of a bill -- the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it relates to a particular set of circumstances, please advise.

Overview of the Bill

As an overview, the bill has the primary purpose of amending statute and court rule to provide a right to victims of crime defined by AS 12.55.185, to notice from the prosecuting attorney of any request for a continuance that will substantially delay trial. The bill also provides that the prosecuting attorney must inform the court of the victim's position on the motion. The bill requires that prior to ruling on the motion, the court must consider the victim's position on a motion to continue that may substantially delay the prosecution. The bill provides that the court must consider the effect such a continuance will have on the victim. With that overview, a brief sectional analysis follows.

Section one of the bill amends AS 12.61.010(a)(2), by adding a provision to the enumerated rights of crime victims providng that a victim has a right to be notified by the appropriate law enforcement agency, or the prosecuting attorney, of any request for a continuance that may substantially delay the prosecution

Section two of the bill amends AS 12.61.015(a), the duties of a prosecuting attorney, to include the duty to inform the victim, as defined in AS 12.55.185, of a pending motion that may substantially delay the prosecution, and inform the court of the victim's position on the motion.

Section three of the bill amends Criminal Rule 45(d)(2), which is the criminal rule that provides the court with the authority to grant a continuance in a criminal case. This section adds a provision that requires that a court, when considering a motion to grant a continuance, may do so only after considering the victim's interest in a ruling by the court

on the motion to continue. This section references the new section of Criminal Rule 45 added in section four of the bill.

Section four of the bill amends Criminal Rule 45, by adding a new section (h), entitled "Victim's Interest on Ruling on Motion to Continue." Section (h) provides that before ruling on a motion to continue in a case involving a victim of crime as defined in AS 12.55.185, that the court must consider the victim's position on the motion to continue, and the effect that a continuance will have on the victim.

Prepared August 2002
(updated November 2007)

General constitutional protections provided in Article I, section 24 of the Alaska constitution to all crime victims:

- ○ Be treated with dignity, respect and fairness;
- ○ Protection from accused through the imposition of appropriate bail or conditions of release by the court (including release on appeal) (see also AS 12.30.025(a); 12.30.027(a); 12.30.029(a); 12.30.040(a));
- ○ Confer with the prosecution;
- ○ Timely disposition of the case;
- ○ Obtain information about and be allowed to be present at all criminal or juvenile proceedings where the accused has the right to be present;
- ● Be heard, upon request, at sentencing, before or after conviction and at any proceeding where the accused's release from custody is considered;
- ○ Restitution from the accused;
- ● Be informed, upon request, of the accused's escape or release from custody before or after conviction or juvenile adjudication.

Rights of crime victims upon initial police contact:

- ○ Right to obtain access to immediate medical assistance AS 18.65.515(a)(3); AS 12.61.010(a)(7);

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- Transportation to safe house or shelter where the crime involves domestic violence AS 18.65.515(a)(1);
- Provide domestic violence victims with information about how to obtain a 72-hour protective order AS 18.65.520; AS 18.66.110; AS 18.66.100(c)(1) - (5),(8) - (12),(16);
- The right to be notified of the name, address, and telephone number of the Office of Victims' Rights upon initial contact with the police and prosecuting attorney. AS 12.61.010(15);
- The right of domestic violence victims to be notified by law enforcement of the rights and services available to them AS 18.65.520;
- Provide all victims with information about Violent Crimes Compensation Board assistance and make application forms available AS 18.67.175(b);
- Ability to participate, upon request, at the defendant's initial appearance before a magistrate when bail conditions are set, AS 12.30.010; AS 12.61.010(a);

Sexual assaults and domestic violence – medical concerns:

- Council on Domestic Violence and Sexual Assault is established within the Department of Public Safety. The council is to provide for planning and coordination of services, crisis intervention and prevention programs to victims of domestic violence, sexual assault or to their families AS 18.66.010;
- Sexual assault victims may not be charged for sexual assault exams AS 18.68.040;
- In a crime involving sexual assault where penetration is an element of an offense, a victim may petition the court to order that the defendant submit to a blood test for presence of HIV and other STDs. AS 18.15.300 – 18.15.310 The defendant need not be convicted, the court may order the testing as soon as the defendant is charged by complaint, indictment, presentment, or information filed with a magistrate or court, that alleges a sexual assault involving penetration. The court may not order such testing until seven days have passed since arrest nor after a disposition favorable to the defendant AS 18.15.300;

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- If the results of a blood test conducted under AS 18.15.300 indicate exposure to or infection by HIV or other sexually transmitted diseases, the victim is entitled to free counseling, testing and referral to appropriate health care facilities and support services at the request of the victim AS 18.15.310(h);

Protective orders for crime victims:

- A victim of a crime involving domestic violence may file a petition for a protective order against a household member. A parent, guardian, or other representative may file a petition for a protective order on behalf of a minor AS 18.66.100;
- A certified copy of an unexpired protective order issued in another jurisdiction and filed with the clerk of court in any judicial district in this state, has the same effect and must be enforced in the same manner as a protective order issued by a court of this state AS 18.66.140;

Privacy rights of crime victims:

- Confidential communications between a sexual assault or domestic violence victim and the victim's counselor are privileged. AS 12.45.049; AS 18.66.200 – AS 18.66.250;
- In a crime involving kidnapping, sexual assault, sexual assault of a minor, or indecent exposure, the name of a victim is not public record and may not be used in court document; instead, the victim's initial will be used AS 12.61.140;
- The residence and business addresses and telephone numbers of a victim of a crime or witness to a crime are confidential AS 12.61.110; AS 12.61.120(a); AS 12.61.130(a);
- Victims are not required to speak with defense counsel and may request the presence of a prosecuting attorney or other person present during an interview AS 12.61.120(c) (victims of sexual assault and domestic violence; other victims have these rights but may not know they are being interviewed or electronically recorded);

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- If a victim of sexual assault or domestic violence must first give oral permission to be interviewed by the defense;
- The interview may be electronically recorded (at the discretion of the defense investigator) and the defense will furnish a copy of any electronic recordings to the victim upon request. If the victim is a minor, the parent or guardian must provide written consent prior to the interview whether or not the interview is recorded. AS 12.61.120; AS 12.61.125;
- ○ Applications to the Violent Crimes Compensation Board are confidential AS 18.67.030(c);

Bail review rights of crime victims:

- ○ Notice of hearings where the accused's release is considered, the right to be present and to be heard Article I, sec 24; AS 12.61.010(a)(2);
- ○ Court must consider the victim's comments in making the decision to release a defendant in domestic violence cases AS 12.30.027; in sexual assault cases AS 12.30.029(c)(2);
- ○ Victim's safety should be specifically considered before releasing the accused in a stalking non-DV, AS 12.30.025; in domestic violence, AS 12.30.027(a); in sexual assault AS 12.30.029(a) This includes an order prohibiting the defendant from having contact with the victim;
- ○ Notice of cancellation of a hearing or court proceeding at which the victim has been subpoenaed to testify AS 12.61.010(a)(3);
- ○ Receive a copy of the conditions of release when a prisoner charged with a domestic violence offense is released from custody (from correctional facility AS 12.30.027(d)(1); by other arresting authority AS 12.30.027(d)(2));
- ○ Victims should receive protection from harm and threats of harm arising out of cooperation with law enforcement and prosecution efforts and be provided with information regarding the protection available AS 12.61.010(a)(4);
- ○ An automated phone service (VINE) is established to provide crime victims with notice when there is a change in the status of their offender, especially offender's

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- release or escape. Go to www.vinelink.com or call (800) 247-9763. The system also allows a caller to inquire about the latest status report for an offender AS 12.61.050;

Crime victims' rights at trial:

- Victims shall be notified of the date and time of trial and have a right to be present at all hearings and court proceedings where the defendant has a right to be present AS 12.61.010;
- If a victim of a felony or domestic violence crime requests, the prosecutor should confer with the victim regarding trial testimony AS 12.61.015;
- The prosecuting attorney may introduce the victim to the jury during jury selection or as part of an opening statement at trial. (Not a victim legal right, but victim may request of prosecuting attorney.)
- A victim cannot be compelled to submit to a psychiatric evaluation unless the victim's psychiatric or psychological condition is an element of the offense charged; or the victim suffers from a continuing psychological or psychiatric condition that resulted from the offense charged. AS 12.45.042;
- Evidence of past sexual conduct inadmissible absent a specific finding of relevance by the court AS 12.45.045(a);
- An employer may not penalize or threaten to penalize a victim because the victim is subpoenaed or requested by the prosecuting attorney to attend a court proceeding for the purpose of giving testimony AS 12.61.017;

Proceedings relating to psychiatric commitment of the accused:

- Notice shall be provided if an offender is committed to the custody of the Department of Health and Social Services; notice shall be given of any pending or actual change in status. AS 12.47.095 (1)-(5) ***Victim may request notice by providing address information to DHSS*** AS 12.47.095(b);

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- Any victim given notice of a proposed change in commitment status of an offender has the right to submit a written statement, or to appear personally before the court. AS 12.47.095(e);
- Notice regarding a finding of not guilty by reason of insanity AS 12.61.010(a)(11);
- Notice upon request, of hearings relating to special medical parole AS 12.61.010(a)(12); AS 33.16.087 ***Victim may request notice by providing address information to Parole Board.***

Sentencing:

- The court may not mitigate or reduce the punishment of the defendant based on the failure of the crime victim to appear or testify AS 12.55.151;
- Except for crimes involving domestic violence, a crime victim and offender may present the court with a negotiated/agreed upon sentence for the court's review. This agreed upon sentence may be imposed if both the victim and offender consent, the court determines that the victim has not been intimidated or coerced to make the agreement, and the sentence complies with the sentencing statutes (AS 12.55) and will accomplish the goals of restoration of the victim and community and rehabilitation of the offender. This procedure is commonly known as "civil compromise." This procedure may **not** be used if the offender is being sentenced for a crime involving domestic violence AS 12.55.011;
- The court must consider the safety and protection of the victim and any member of the victim's family before granting probation to an offender convicted of a crime involving domestic violence AS 12.55.101;
- In crimes of domestic violence, the prosecutor shall, upon request of the victim, confer with the victim about proposed plea agreements prior to acceptance AS 12.61.015(a)(4);
- As part of the pre-sentence report prepared for felony offenders, and as part of the predisposition report prepared for juvenile delinquency matters, the probation officer shall prepare a victim impact statement reporting any financial, emotional,

NOTE: ○Automatic rights
●Rights triggered only by request from victim

and medical effects of the offense on the victim; the need of the victim for restitution; and any other information required by the court AS 12.55.022; AS 47.12.130(a);

- For felony offenses, the prosecutor shall, upon request, provide the victim with the address and phone number of the office preparing the pre-sentence report AS 12.61.015(a)(2)(C);
- For felony offenses, prior to sentencing, the prosecutor shall, upon request, provide the victim with portions of the pre-sentence report outlining the summary of the offense prepared by DOC; the defendant's version of the offense; summaries of the victim's statements; and the sentence recommendation of the DOC AS 12.55.023(a)(1)-(4);
  - In a felony sentencing, the victims may make a written or oral statement for use in preparation of the pre-sentence report AS 12.61.010(a)(8);
  - A victim may appear personally at the defendant's sentencing hearing to present a written statement and to give sworn testimony or an unsworn oral presentation AS 12.61.010(9);
  - If the victim declines to make a statement at sentencing, the victims' advocate may submit a written statement or oral presentation at the sentencing hearing on behalf of the victim AS 12.55.023(b);
  - In a conviction for a felony offense, the court shall specifically make a finding regarding financial, emotional, and medical effects of the offense on the victim; the need of the victim for restitution AS 12.55.025(a)(5)(A)-(B);
  - Victims may address the three-judge sentencing panel if the panel chooses to supplement the record AS 12.55.175(b)

Restitution rights of crime victims:

- When determining restitution, the judge must consider public policy that favors requiring criminals to compensate their victims for injuries and damages sustained AS 12.55.045(a)(1);

NOTE: ○Automatic rights
●Rights triggered only by request from victim

- When issuing an order of restitution, ***the judge may not consider the defendant's ability to pay*** AS 12.55.045(g);
- A restitution judgment is a civil judgment that remains enforceable and is not discharged when a conviction is set aside under AS 12.55.085 (SIS), AS 12.55.045(l);
- Restitution does not limit civil remedies AS 12.55.045(b);
- Restoration of the victim shall be specifically considered as part of the sentencing criteria AS 12.55.005(7);
- Information regarding violent crimes compensation and the procedure for applying for such aid under AS 18.67 should be given to the victim AS 12.61.010(a)(5); AS 18.67.175.

Post sentencing crime victims' rights:

- Prosecuting entity, if requested, shall notify the victim of a felony or domestic violence crime, in writing of the final disposition of the case within 30 days after final disposition of the case AS 12.61.015(a)(3);
- Prosecuting attorney or other appropriate law enforcement agency shall notify the crime victim if an appeal is filed AS 12.61.010(a)(2);
- Notification if the offender escapes from custody or is released to the community on a furlough, on an early release program, or for any other reason AS 12.61.010 (a)(14); AS 33.30.013 ***Automatic in domestic violence crimes; upon request in other crimes*** AS 33.30.013(b) ***Requires victim to keep address on file with DOC;***
- After conviction, the victim is entitled to be informed by the prosecutor about the defendant's complete conviction history AS 12.61.010(a)(10);
- Every person contracting with an offender with respect to the reenactment of the offender's crime by way of a movie, book, magazine article, radio or television presentation, live entertainment of any kind, or from the expression of the offender's thoughts, feelings, opinions, or emotions regarding the crime, shall pay the victim's restitution claims first, the remainder of the monies go to the state AS 12.61.020;

NOTE: ○Automatic rights
●Rights triggered only by request from victim

Post sentencing – modifications:

- Victims are entitled to address the court presiding over a prisoner's motion to modify or reduce their sentence AS 12.55.088(d) ***Victim may request notice by providing address information to DOC*** AS 12.55.088(h);
  - Department of Corrections shall send the victim a copy of any motions to modify or reduce sentence and inform the person of that person's rights under this section, the deadline for receipt of written comments, the hearing date, and the court's address. AS 12.55.088(e) ***Victims must maintain updated address information with DOC*** AS 12.55.088(h);
- Notification of hearings to consider or review discretionary parole of the defendant AS 12.61.010(a)(13); AS 33.16.120 ***Victim must maintain address information with DOC and Parole Board;***
  - Before granting probation to a person convicted of a crime involving domestic violence, the court shall consider the safety and protection of the victim and any member of the victim's family AS 12.55.101(a) The court may also impose any other condition necessary to protect the victim and any members of the victim's family or to rehabilitate the defendant AS 12.55.101(a)(3);

Public Records-exception for crime victims:

Alaska statute 40.25.120(a), Alaska's public records law, provides in pertinent part:

> "Every person has a right to inspect a public record in the state, including public records in recorders' offices, except
>
> * * *
>
> (6) records or information compiled for law enforcement purposes, but only to the extent that the production of the law enforcement records or information
>
> (C) could reasonably be expected to constitute an unwarranted invasion of the personal privacy of a suspect, defendant, victim, or witness;"

THE ALASKA OFFICE OF VICTIMS' RIGHTS: A MODEL FOR AMERICA

STEPHEN E. BRANCHFLOWER*

In this Article, the director of the Alaska Office of Victims' Rights ("OVR") gives an overview of an agency that was created by the Alaska Legislature in 2001. OVR lawyers provide free legal services to victims of crime to help them protect their guaranteed constitutional and statutory rights with regard to their contacts with police, prosecutors, defense counsel, judges, and criminal justice agencies in the state. The attorneys also advance and protect those victims' rights in court when necessary and authorized by law. The author offers the OVR as a model for other states.

I. INTRODUCTION

No one plans to become a crime victim, yet, when crime strikes, victims are drawn immediately and unwillingly into an unfamiliar and bewildering criminal justice system. Victims soon learn first-hand that the system intended to help and protect them often cannot do so because it is overburdened with too many cases and inadequate resources; frequently it simply cannot help them meet even their most basic needs. For example, victims need to feel that police are responsive and willing to investigate their complaints in a timely and professional fashion. In addition, such victims also need police protection from defendants who are out of custody on bail, case information from and access to prosecutors, prompt court notification of hearings, meaningful participation in the trial process, and restitution ordered by judges. In sum, they need to have their statutory and constitutional rights implemented in a manner whereby the offender faces swift and certain justice by those in charge of the system.

*The author retired in January 2002 following twenty-eight years of service as a major crimes prosecutor for the State of Alaska. He then became Alaska's first Victim Advocate when he was appointed and confirmed by the Alaska Legislature in May 2002 to direct the newly created Alaska Office of Victims' Rights. The author may be contacted at stephen_branchflower@legis.state.ak.us.

Instead of having these basic needs satisfied, crime victims too often face excessive delays in case resolution and hear unintelligible legal jargon from judges and prosecutors. They are expected to understand unfamiliar legal forms and attend repeated mandatory court hearings. This only compounds their confusion and frustration. The wake-up call is heard when victims finally realize the truth: victims, who should be at the center of our justice system, are often on the outside looking in. Too often, the system treats victims as uninvolved bystanders with little or no effective voice in the outcome of their cases. Too often, there is no one to advise, educate and help guide victims through the seemingly labyrinthine pre-trial hearings and trial phases of prosecutions. The answer must be that, just as we protect the rights of criminals, so too must we take equal care to protect the rights of victims. In Alaska, victims' calls for help have been answered.

In 2001, the Alaska Legislature created the Office of Victims' Rights ("OVR"), a unique publicly funded victims' rights law firm with wide-ranging investigative tools, powers, and privileges. The office has only one mandate: to advance and protect the rights of crime victims throughout Alaska. The OVR and its statutory resources were expressly tailored by lawmakers to accomplish this goal in order to return to a fair balance between crime victims' rights and the rights of criminal defendants. It is the first and only office of its kind anywhere. Since it was established, the OVR has become integrated into the state's criminal justice system and has earned a rightful place as a viable and effective agency. But, while Alaska has pioneered a modern approach to help its crime victims, this is an area of the law still developing in most states and much work remains to be done by victim support advocates to match Alaska's progress. To that end, this overview of the OVR model can serve as a blueprint to legislatures and victim advocates regarding how to establish such an agency.

II. VICTIMS' RIGHTS IN ALASKA

A grassroots victims' rights movement in modern American jurisprudence over the last two decades has produced a body of law in most jurisdictions intended to provide a means for crime victims to effectively participate in the criminal process, and to require that victims' concerns are addressed by police, prosecutors, defense counsel, and judges. The principal objectives of this movement have been twofold: (1) to promote respect for and to protect crime victims' privacy and safety; and (2) to foster administrative and judicial sensitivity to the difficulty experienced

by crime victims when they are unexpectedly drawn into an often indifferent, but always confusing criminal justice system.[1]

In 1984, the Alaska Legislature attempted to achieve these goals by enacting Alaska Statutes sections 12.61.010 to 12.61.900, entitled "Rights of Victims, Protection of Victims and Witnesses." Ten years later, in 1994, Alaska voters overwhelmingly approved passage of a Victims' Rights Amendment to Alaska's Constitution.[2] The rights now guaranteed in article I, section 24 are similar to those of many other states that have enshrined victims' rights in their constitutions.[3] Article I, section 24 vests crime victims with eight major rights:

> Crime victims, as defined by law, shall have the following rights as provided by law: [(1)] the right to be reasonably protected from the accused through the imposition of appropriate bail or conditions of release by the court; [(2)] the right to confer with the prosecution; [(3)] the right to be treated with dignity, respect, and fairness during all phases of the criminal and juvenile justice process; [(4)] the right to timely disposition of the case following the arrest of the accused; [(5)] the right to obtain information about and be allowed to be present at all criminal or juvenile proceedings where the accused has the right to be present; [(6)] the right to be allowed to be heard, upon request, at sentencing, before or after conviction or juvenile adjudication, and at any proceeding where the accused's release from custody is considered; [(7)] the right to restitution from the accused; and [(8)] the right to be informed, upon request, of the accused's escape or release from custody before or after conviction or juvenile adjudication.[4]

Of these rights, the most empowering for crime victims must be "the right to be treated with dignity, respect, and fairness during all phases of the criminal and juvenile justice process."[5] Even though the terms "dignity," "respect," and "fairness" as used in article I, section 24 are not specifically defined in Alaska law and may be difficult to determine, such concepts have nonetheless gained widespread acceptance in American jurisprudence. Fifteen states, in addition to Alaska, have

---

1. The Alaska Legislature has recognized forty-two distinct rights to protect crime victims. *See* Alaska Office of Victims' Rights, *Listing of Your Rights*, *available at* http://www. officeofvictimsrights.legis.state.ak.us/ovrlisting.htm (last visited Oct. 25, 2004).

2. ALASKA CONST. art. I, § 24; Alaska Division of Elections, *1994 General Election Official Results Statewide Summary* (Nov. 8, 1994), *available at* http://www.gov.state.ak.us/ltgov/elections/result94.htm#bal2 (evidencing that 86.6% of Alaskan voters supported the amendment) (last visited Sept. 3, 2004).

3. *See, e.g.*, MICH. CONST. art. I, § 24. An amendment to the United States Constitution providing for victims' rights has also been proposed. S.J. Res. 3, 106th Cong. (1999).

4. ALASKA CONST. art. I, § 24.

5. *See id.*

passed constitutional amendments that use those same three words.[6] Among those fifteen, eight state legislatures have also promulgated victims' rights statutes that expressly set forth one or more of the concepts of "dignity," "respect," and "fairness."[7] Additionally, fourteen other states have specifically set forth one or more of these terms in their statutory victims' rights legislation.[8] The federal statute, 42 U.S.C. § 10606(b), that grants legal rights of participation to crime victims also expressly spells out the important concepts of "dignity," "respect," and "fairness."[9]

Against this legal fabric and due to growing awareness and concern for the protection and advancement of victims' rights, the 22nd Alaska Legislature promulgated the "Crime Victims' Rights and Advocacy Act of 2001."[10] The bill created a new agency called the Office of Victims' Rights. The OVR is an agency of the Alaska Legislature that provides free legal services to victims of crime to help ensure that their legal rights, guaranteed under the Alaska Constitution and statutes, are protected in their contacts with police, prosecutors, judges, and other criminal justice agencies. OVR also serves to advance and protect those victims' rights in court when necessary and authorized by law. This legislation continued the natural progression in the development of rights for crime victims in Alaska that began with the passage of the Victims' Rights Amendment in 1994.[11]

11. ALASKA CONST. art. I, § 24.

III. ESTABLISHMENT OF THE OVR

In a press release on February 20, 2001, announcing the enactment of Senate Bill 105, Senate President Rick Halford, the chief architect and proponent of the legislation, stated, "In 1994 voters approved an amendment to Alaska's Constitution that guarantees victims' rights, but simply passing an amendment is not enough."[12] He then added, "[i]t is difficult for the victim of a violent crime to wade through our judicial system, which is full of technicalities and legal jargon. Many feel victimized twice—first by the criminal, then by the system. This office would ensure that victims' rights are protected."[13]

The OVR was created as an inspector general's office within the legislative, rather than the executive, branch as a way to avoid conflicts within state government.[14] This separation helps ensure that the victims' advocate and his professional staff have sufficient independence to investigate criminal justice agencies of the executive and judicial branches and to make appropriate findings and recommendations.[15]

In order to fully implement the legislature's intent to assist crime victims, lawmakers granted the victims' advocate the statutory authority to adopt regulations to

> [e]stablish procedures for advocacy on behalf of crime victims, receiving and processing complaints, conducting investigations, reporting findings, and ensuring that confidential information obtained by the victims' advocate in the course of advocacy on behalf of a crime victim or in the course of an investigation will not be improperly disclosed.[16]

13. *Id.* Senate Bill 4, an earlier bill similar to Senate Bill 105, was passed by the 21st legislature and transmitted to then-Governor Tony Knowles, who vetoed the legislation on June 8, 2000. Governor Knowles signed Senate Bill 105 on July 20, 2001.

14. STEPHEN E. BRANCHFLOWER, 2004 ALASKA OFFICE OF VICTIMS' RIGHTS ANN. REP., at 6, *available at* http://www.officeofvictimsrights.legis.state.ak.us/ovrdocuments/2004_Annual_Report.pdf (last visited Oct. 22, 2004) [hereinafter 2004 ANNUAL REPORT].

15. *Id.* The OVR professional staff consists of the victims' advocate and two associate victims' advocates, an OVR investigator, and a support staff. *See* Alaska Office of Victims' Rights, *Office of Victims Rights Staff available at* http://www.officeofvictimsrights.legis.state.ak.us/ovrstaff.htm (last visited Oct. 27, 2004). The advocates all have previous experience as prosecutors, and the investigator is a former career police officer. *Id.*

16. ALASKA STAT. § 24.65.090(a) (Michie 2002). This authority was granted pursuant to the Administrative Procedure Act, which is codified in Alaska Statutes § 44.62.

The victims' advocate was also empowered to establish procedures so that advocacy and investigations on behalf of crime victims in felony cases could take priority over misdemeanor cases.[17] The OVR law, which may be found in Alaska Statutes sections 24.65.010 24.65.250, went into effect on July 1, 2002.[18]

Crime victims have responded enthusiastically to this new agency.[19] It is the first and only such office to have been vested by a legislature with such extensive investigatory tools and powers to advocate for crime victims' rights. Since its inception, OVR's clients have obtained a variety of services including information, education, investigation, in-court advocacy and support.[20] In providing these needed services, the OVR has focused on facilitating a cooperative relationship between criminal justice agencies, the courts, and victims of crime.[21] The OVR's first annual report documents the agency's success and was published July 1, 2003.[22]

Additionally, lawmakers have sought OVR's assistance and advice to help craft victims' rights legislation and to provide supportive testimony before various legislative committees.[23] With such support, the 23rd Alaska Legislature recently passed five victims' rights bills that were signed into law by Governor Frank Murkowski on April 20, 2004.[24] Persuaded by the OVR's widely recognized success during its

(Alaska 2004) (authorizing the Commissioner of Public Safety and municipalities of the State to empanel domestic violence fatality review teams); H.B. 357, 23d Leg., 2d Sess. (Alaska 2004) (requiring judges to order restitution from convicts in all cases in which a victim has suffered a financial loss and repealing a law requiring the court to take into account the defendant's present ability to

first two years of operations, the legislature in 2004 repealed the OVR's sunset provision, thereby making it a permanent agency of the legislature.[25]

IV. OVERVIEW OF THE ALASKA OFFICE OF VICTIMS' RIGHTS

A. Selection and Appointment of the Victims' Advocate

Legislators wanted the director of the new agency to be a lawyer with substantial experience in the practice of criminal law, and they did not want politics to play a role in the selection process. Consequently, a candidate for appointment as the victims' advocate was to be nominated by a victims' advocate selection committee, "composed of three members of the senate appointed by the president of the senate and three members of the house of representatives appointed by the speaker of the house; one member of a minority party caucus in each house was required to be part of the selection committee."[26] The selection committee's charge was to examine applicants regarding their qualifications and ability and to place the name of the person selected in nomination.[27] The

pay when determining restitution awards); H.B. 348, 23d Leg., 2d Sess. (Alaska 2004) (requiring police and prosecutors to notify crime victims about the Alaska Office of Victims' Rights upon first contact); H.B. 397, 23d Leg., 2d Sess. (Alaska 2004) (requiring criminal defense attorneys and investigators in sexual offense cases to first obtain the consent of a minor victim or witness' parent or guardian before contacting or conducting a tape-recorded interview with the minor); H.B. 349, 23d Leg., 2d Sess. (Alaska 2004) (amending Alaska Rule of Evidence 412 to permit prosecutors to use suppressed statements and physical evidence to impeach a defendant who commits perjury during a criminal proceeding, bringing Alaska into the mainstream of the law in this area and in line with the United States Supreme Court's holding in *Harris v. New York*, 401 U.S. 222 (1971), which approved the use of statements obtained in violation of *Miranda v. Arizona*, 384 U.S. 436 (1966), for impeachment purposes but not as part of the prosecutor's case-in-chief).

25. H.B. 534, 23d Leg., 2d Sess. (Alaska 2004) (repealing sections 8, 18, 22, 24, 28, 30, 32, 34, 41, and 51, ch. 92 of Senate Bill 105, the original OVR enabling statute; these sections would have eliminated the OVR on July 1, 2006).

26. ALASKA STAT. § 24.65.020 (Michie 2002). OVR director Stephen E. Branchflower was nominated from a field of 10 applicants by a bipartisan victims' advocate selection committee, composed of Speaker of the House Brian Porter (R-Anchorage), Senate President Rick Halford (R-Chugiak), Sen. Dave Donley (R-Anchorage), Sen. Donny Olson (D-Nome), Rep. Pete Kott (R-Eagle River), and Rep. Reggie Joule (D-Kotzebue). He was unanimously confirmed to the appointment in a joint meeting of the Alaska House and Senate on May 13, 2002, and assumed his new duties on July 8. *See* Press Release, 22d Alaska State Legislature, Branchflower to Head Victim's Rights Office (May 22, 2002), *available at* http://www.akrepublicans.org/pastlegs/22ndleg/press/prhalford105222002.shtml (last visited Oct. 22, 2004).

27. ALASKA STAT. § 24.65.020 (Michie 2002).

appointment became effective if approved by a two-thirds vote of a joint session of the legislature.[28]

In addition to other statutory requirements and limitations, "[a] person may not serve as the victims' advocate (1) unless the person has been a resident of the state for the three years immediately preceding the person's appointment, [and] (2) . . . has been engaged in the active practice of law for the three years immediately preceding the person's appointment."[29] The term of office of the victims' advocate is five years, and reappointment is possible but may not exceed three terms.[30] The victims' advocate may be removed or suspended from office only by the legislature, upon a concurrent resolution adopted by a roll call vote of two-thirds of the members of each house entered in the journal, and then only for "neglect of duty, misconduct, or disability."[31] The services of the OVR are free, and no fees or costs may be required of its clients.[32] In sum, legislators wanted to ensure that the newly created agency would be guided by an apolitical director, experienced in the criminal law, who would have a free hand to zealously defend crime victims and would simultaneously be insulated from repercussions from police, prosecutors, and judges when unpopular findings or recommendations were made.

B. Jurisdiction and Role of the Victims' Advocate

In promulgating the OVR Act, the legislature clearly defined the mission of the new agency: "The victims' advocate shall assist crime victims in obtaining the rights crime victims are guaranteed under the constitution and laws of the state with regard to the contacts crime victims have with justice agencies of the state."[33] The class of crime victims statutorily entitled to the protection and assistance of the OVR are those in all felony offenses, all class A misdemeanors involving domestic violence, and all misdemeanors involving crimes against the person.[34]

Because the OVR holds a broad mandate from the legislature to protect the rights of the victim zealously, several of the terms defining its scope are given wide breadth of application. First, consistent with that broad mandate, the term "justice agency" was defined expansively by lawmakers to include agencies of the executive as well as the judicial

branches of state government.[35] Examples of justice agencies and officers that come under OVR oversight are state and municipal police departments, municipal and state prosecutor's offices, adult and juvenile probation and parole officers of the Alaska Department of Corrections, the Alaska Parole Board, and judges of the Alaska court system to name a few.[36] Second, although OVR's jurisdiction is restricted to providing legal services to crime "victims," Alaska law defines that term broadly. It specifically excludes the perpetrator and includes not only the person against whom an offense was actually committed, but also that person's extended family, given certain conditions.[37] Such a broad definition recognizes that the impact of a crime affects the entire family structure and not just the person directly aggrieved by the defendant's misconduct.

C. Receiving and Processing Complaints From Crime Victims

The victims' advocate is authorized by statute to investigate complaints from crime victims that they "have been denied the rights they are guaranteed under the constitution and laws of this state."[38] One of the most difficult tasks undertaken by the author during OVR's start-up months was the establishment of written criteria and procedures regarding how to evaluate complaints from crime victims and how to investigate them. This was accomplished by adopting regulations pursuant to Alaska's Administrative Procedure Act[39] by virtue of the specific authority vested in the OVR to do so.[40] Those regulations require that an allegation that a crime victim has been denied a right guaranteed under the constitution and laws of the state be in writing and be specific.[41] The regulations also require that the written allegation must be submitted to

35. *Id.* § 24.65.250(1). "Justice agency means a department, office, institution, corporation, authority, organization, commission, committee, council, court, or board in the executive or judicial branches of the state government that is, in any manner, involved with or responsible for the apprehension, prosecution, incarceration, or supervision of criminal or juvenile offenders; it also includes an officer, employee, or member of an agency acting or purporting to act in the exercise of official duties." *Id.*

36. *Id.* Such offices fall within the description of the term "justice agency." *Id.*

37. *Id* § 12.55.185(17). For example, if the "victim" is a minor, incompetent, or is incapacitated, that term includes: (1) "an individual living in a spousal relationship" with the de facto victim; (2) "a parent, adult child, guardian, or custodian" of that person; (3) if the de facto victim is deceased, "a person living in a spousal relationship with the deceased before the deceased died;" (4) "an adult child, parent, brother, sister, grandparent, or grandchild of the deceased;" and (5) "any other interested person, as may be designated by a person having authority in law to do so." *Id.*

38. *Id.* § 24.65.120(a).

39. *Id* § 44.62. See *supra* note 16 and accompanying text.

40. *Id.* § 24.65.090(a).

41. ALASKA ADMIN. CODE tit. 23, § 10.010(b) (2004).

the victims' advocate on an OVR complaint form and must be signed by the victim or a person authorized by law to act on the victim's behalf.[42] Anonymous complaints are not accepted.[43]

The victims' advocate retains substantial discretion to refuse to accept a complaint or provide crime victim advocacy or investigative services when, in his judgment: (1) it appears that the OVR does not have jurisdiction as established by Alaska Statutes section 24.65; (2) the complaint does not involve a violation of a specific statutory or constitutional "crime victim" right; (3) the complaint may involve a violation of a specific statutory or constitutional crime victim right, but the complainant is not a crime victim as defined by Alaska Statutes section 12.55.185(17); or (4) the complainant is a "criminal defendant" as that term is defined in OVR's regulations.[44] The complaint may also be rejected if (1) it is a civil matter or is primarily civil in nature[45] or (2) the resources of the OVR are, or may be, inadequate to provide the complainant with competent advocacy or investigative services, or may be unduly diminished by providing the complainant with such services to the detriment of other cases.[46] Finally, a complaint may be rejected if the complainant refuses to sign the complaint form or, in the judgment of the victims' advocate, accepting the complaint or providing crime victim advocacy or investigative services to the complainant would not serve the public's interest or welfare.[47]

Upon receipt of a signed complaint asserting denial of a crime victim's right, the victims' advocate conducts a preliminary examination of the complaint to determine whether, based upon the information provided, the OVR has jurisdiction to investigate the complaint under Alaska Statutes section 24.65.[48] The victims' advocate then determines whether there is "specific and credible information to indicate that one or more crime victims' rights guaranteed by law may have been violated by a justice agency."[49] If the resources of the OVR are not sufficient to process pending or new complaints or requests for assistance from crime victims within reasonable time limits, the victims' advocate is required by law to apply a priority standard as follows. First, complaints "of an emergency nature in which disposition according to normal handling would subject the complainant or victim to a substantial risk of serious

42. *Id.* The complaint may be submitted to the OVR in person or online through the office web site, mailed by regular U.S. mail, or submitted by facsimile. *Id.*

49. *Id.*

and irreparable violation of crime victim rights or other harm" are given the greatest priority.[50] Next come complaints involving felony offenses, followed by complaints regarding class A misdemeanors involving domestic violence or "crimes against the person" under Alaska Statutes section 11.41.[51]

Within each of these priority categories, the victims' advocate may assign further priority to the processing of a complaint "alleging, or where there is evidence of, prejudice, harm, or disadvantage to a class of people."[52] Such cases have precedence over processing of a complaint alleging an individual instance of prejudice, harm, or disadvantage.[53] Processing of complaints is undertaken substantially in accordance with an order based on priority of the date on which the complaint was received.[54] The author believes that the establishment of these screening and processing criteria has greatly enhanced the efficiency and productivity of the OVR and allowed the agency to better direct its limited professional and financial resources to victims whose constitutional and statutory rights have been violated.

D. Investigative Powers of the OVR

The victims' advocate's investigative powers are considerable. While conducting an investigation of a complaint from a crime victim, he is authorized to "make inquiries and obtain information considered necessary," and to hold private hearings.[55] In order to investigate fully, the victims' advocate is also entitled to have complete access to any record of a justice agency, including court records of criminal prosecutions and juvenile adjudications, which the victims' advocate believes is necessary to investigate claims and to ensure that the rights of crime victims are protected.[56] Further, with regard to records held by a court or the prosecutor, the victims' advocate is further entitled to obtain access "to every record that the defendant is entitled to access or receive."[57]

56. *Id.* § 24.65.120(b)(3).
57. *Id. See also* ALASKA R. CRIM. P. 16. Additionally, the uncodified law of Alaska was amended to advance the work of the victims' advocate by adding a new section which reads:

> INDIRECT COURT RULE AMENDMENT. AS 24.65.110 and 24.65.120, added by sec. 19 of this Act, have the effect of amending Rule 16, Alaska Rules of Criminal Procedure, and Rule 9, Alaska Delinquency Rules, by allowing the victims' advocate a right of access to information in criminal prosecutions and juvenile adjudications that is equal to that *available to criminal de-*

The victims' advocate may elect to conduct a formal investigation of a complaint,[58] or he may simply elect to attempt to resolve the matter informally by contacting the person or justice agency in question to make the necessary inquiries and to obtain information and documents he considers essential.[59] Regardless of which approach is employed, when the victims' advocate initially contacts a respondent he will briefly describe in writing the basis for the complaint and provide details that he considers necessary and sufficient for the person or justice agency to respond fully.[60]

The power to "make inquiries and obtain information considered necessary," which is authorized by Alaska Statutes section 24.65.120(b)(1), may be exercised in different ways. For example, the victims' advocate may simply request the agency or person who is the subject of the complaint to provide a written explanation of the relevant facts.[61] The victims' advocate must make this request in writing, and the respondent is also required to submit the explanation in writing.[62] If deemed necessary and appropriate to the circumstances in the judgment of the victims' advocate, the written explanation must be provided under oath.[63] This informal procedure does not preclude the victims' advocate from additionally requiring the person or justice agency to provide the explanation of the relevant facts and circumstances under oath pursuant to a formal inquiry as authorized by Alaska Statutes sections 24.65.120(b)(2) and 24.65.130(a).[64]

The victims' advocate is authorized to make inquiries and obtain information considered necessary, under Alaska Statutes section 24.65.120(b)(1).[65] This authority may also be invoked to require submission of all information or documents available to the criminal defendant without regard to whether the information or documents sought

have been provided to the defendant when the request is made.[66] For example, prosecutors, police and juvenile authorities are required to grant discovery of materials to the OVR even before charges are filed or when materials are otherwise required to be provided under the state's criminal discovery rules and case law.[67] In dealing with the OVR, individuals and justice agencies are required by law to cooperate fully with the victims' advocate and to provide all requested information in a timely, complete, and good faith manner.[68] Specifically, they must respond fully in writing within ten calendar days from receipt of the victims' advocate's written request.[69] A request for additional time beyond the ten calendar days may be granted, but the total amount of time may not exceed thirty calendar days from the victims' advocate's initial request.[70] In accordance with Alaska Statutes section 24.65, if a person or a justice agency fails to respond in a timely, complete, or good faith manner, the victims' advocate has two choices: (1) he may elect to proceed with the investigation without further notice to the person or justice agency, or (2) he may elect to seek judicial enforcement in superior court.[71] These OVR discovery provisions are necessary to enable the victims' advocate to fully investigate complaints from crime victims in a timely fashion, something that, because of Alaska's speedy trial provisions for defendants, is especially critical if there is a pending criminal case.[72]

Another investigative tool granted by the legislature to the victims' advocate is the power to "compel by subpoena, at a specified time and place, the appearance of any person whom the victims' advocate reasonably believes may be able to give information and produce documents and objects relating to a matter under formal or informal investigation under Alaska Statute[s] [section] 24.65."[73] The victims' advocate

72. ALASKA R. CRIM. P. 45; ALASKA CONST. art. I, § 24.
73. ALASKA ADMIN. CODE tit. 23, § 10.120(a) (2004). Persons exempt from subpoena are: (1) "a justice, judge, magistrate, or a law clerk" concerning a judicial action or nonaction taken by the person; (2) "a member of a jury concerning a matter that was considered by the jury;" (3) the "person accused or convicted of committing the crime that is the basis for the complaint, and investigation;" (4) a "victim counselor concerning a matter made confidential by Alaska Statute[s] [sections] 18.66.200 - 18.66.250;" or (4) "a justice agency concerning records that lead to the disclosure of a confidential police informant." ALASKA STAT. § 24.65.130(c) (Michie 2002).

may elect to issue the subpoena in connection with a private hearing[74] or in connection with an informal investigation, without requiring the witness to provide testimony at that time.[75] If the victims' advocate elects to conduct a private hearing, it must be conducted subject to the privileges recognized by Alaska court rules and statutes but "in an informal manner to the end that truth may be ascertained and proceedings justly determined."[76] To ensure this goal, OVR regulations provide that the Alaska Rules of Court, including the Alaska Rules of Evidence, the Alaska Rules of Civil Procedure, the Alaska Rules of Criminal Procedure, the Alaska Child in Need of Aid Rules, the Alaska Delinquency Rules, and the Alaska Administrative Rules are inapplicable to any hearings or proceedings before the OVR, including the taking of sworn testimony.[77] Any witness appearing at a private hearing has the right to counsel at the witness' expense.[78] The only persons permitted to be present at a private hearing during the taking of sworn testimony are (1) the victims' advocate, or members of his staff; (2) a court reporter; (3) an interpreter or other person needed to assist a witness who is hearing, speech, or otherwise medically impaired; (4) the witness under examination; and (5) the witness' attorney if one has been retained.[79] Witnesses are required to "be examined individually outside the presence of other witnesses."[80]

A person properly subpoenaed may not refuse to provide the material sought by claiming that the material is privileged unless the person first asserts the privilege and the basis for the privilege in writing to the victims' advocate.[81] If requested in writing by the victims' advocate, the written assertion of privilege must be provided under oath.[82] If the person asserting the privilege is a public employee, then the commissioner of the department or the head of the justice agency involved is required to assert in writing the privilege and the basis for the privilege to the victims' advocate.[83] If the victims' advocate deems it appropriate, he is empowered to require the written assertion of privilege and the basis for asserting it to be provided by the commissioner of the department or the head of the justice agency involved under oath.[84] In any case in which a

person refuses to provide material sought by claiming a privilege, the victims' advocate may seek review of the claim in the superior court by instituting enforcement proceedings under Alaska Statutes section 24.65.[85]

Whenever the victims' advocate seeks enforcement of a subpoena to compel testimony or the production of documents, he must initiate proceedings in the superior court in accordance with Alaska Statutes section 24.65.130(b) under the provisions of Rule 90 of the Alaska Rules of Civil Procedure.[86]

OVR regulations permit the victims' advocate to discontinue, terminate, postpone, or suspend an investigation at any time if certain factors are determined.[87] For example, an investigation may be closed if any of the following requirements are met: (1) "the victims' advocate subsequently learns that the subject matter of the complaint is not within the jurisdiction of the office under Alaska Statute[s] [section] 24.65";[88] (2) it is "determine[d] that disclosure of the complainant's or victim's name is necessary to enable the victims' advocate to carry out duties under Alaska Statute[s] [section] 24.65 or to support recommendations, and the complainant or victim refuses to allow disclosure of the complainant's or victim's name";[89] or (3) "the victims' advocate requests information or documents from the complainant or victim and the complainant or victim fails or refuses to produce the information or documents within the time specified by the victims' advocate for its receipt."[90] The same result would be obtained: (1) if a "complainant fails to file a written complaint as required or requests to withdraw a previously filed complaint";[91] (2) when "information or evidence provided by the complainant or otherwise obtained by the victims' advocate provides no specific or credible basis to believe that continuing an investigation is warranted";[92] (3) where the victims' advocate concludes that there is some evidence to believe that the complainant's or victim's rights may have been denied, but the victims' advocate finds he may not be able to present an opinion, finding or recommendation that would provide direct

relief or benefit to the complainant or victim; or (4) where it could be without substantial value or significance to improvement of the public administration under the law.[93]

In order to conserve limited human and financial resources, the victims' advocate is empowered to "discontinue, terminate, postpone or suspend an investigation" if he determines that the act complained of was recently investigated by the OVR, and that "the complaint fails to present an issue not considered in that prior investigation, and the victims' advocate believes that further investigation would not advance a material interest of the complainant or the victim or a significant public interest."[94] The victims' advocate may also alter the investigation's timetable where he determines that the resources available are insufficient to maintain the investigation;[95] the complainant or victim refuses or fails to maintain contact with the victims' advocate;[96] the complainant or victim has knowingly provided false, misleading or incomplete information or documents to the OVR;[97] or "the complainant refuses to sign the complaint form."[98] Finally, the victims' advocate may also elect to "discontinue, terminate, postpone or suspend an investigation" if "in the sole opinion of the victims' advocate the investigation should be terminated in furtherance of justice, the public interest or for the reasons stated in a written request of the victim or complainant."[99] In sum, the above OVR regulations, and others, were designed to facilitate the victims' advocate's effective enforcement of Alaska Statutes section 24.65 to safeguard victims' rights.[100] In drafting them, the author balanced considerations of law, equity, and practicality to ensure that the OVR staff would have the capability of taking timely, decisive, and effective legal action as appropriate when investigating complaints in order to protect and advance the rights of crime victims under a wide range of circumstances.

In the discretion of the victims' advocate, these regulations may be relaxed or dispensed with for good cause by the victims' advocate in any case where it shall be manifest to the victims' advocate that strict adherence to them will work injustice.

Id.

E. Preparation of a Report Following a Formal Investigation

OVR regulations authorize the victims' advocate to prepare a written report of his findings, opinions, and recommendations upon completion of a formal investigation of a justice agency or a person.[101] However, a written report must be prepared if the victims' advocate's findings are critical of a justice agency or person or it has been determined that a justice agency or person has denied a crime victim's rights protected under Alaska law.[102] The report may classify the complaint or allegation by the crime victim as either justified, partially justified, not supported, or indeterminate depending upon whether the complaint is supported by evidence.[103]

Before giving an opinion or recommendation that is critical of a justice agency or a person, the victims' advocate is required by statute to consult with them,[104] and all communications are deemed confidential.[105] Such consultations may be in writing or accomplished orally.[106] The victims' advocate may ask the justice agency to notify him of any action taken on his recommendations.[107] All replies must be provided in writing within fifteen days unless extended by the victims' advocate.[108] Any request to modify the preliminary report must be complete and specific and may be supported by documentary or other evidence considered appropriate by the justice agency or person.[109] "The victims' advocate may accept or reject, in whole or in part" the request to modify his preliminary report.[110]

"Within a reasonable time following receipt and consideration by the victims' advocate of a response or request submitted by a justice agency," "or if a justice agency has failed to submit a timely response or request," the victims' advocate must complete a final report and provide a copy of it to the justice agency, stating that the investigation has been concluded.[111] In preparing his final report, the victims' advocate is given considerable leeway. For example, the report may contain references or summaries of witness testimony, documentary evidence, or other evidence submitted under 23 Alaska Administrative Code section 10.230, seeking a modification of a finding or opinion in the preliminary

report.[112] It may also include different and additional findings or opinions not contained in the preliminary report.[113]

The final report may conclude that the subject matter of the investigation has been "rectified" if the victims' advocate determines that the "agency has initiated corrective action or commits to take corrective action substantially as recommended" by the victims' advocate.[114] If corrective action is refused, or if an agency does not affirmatively commit to take recommended corrective action, the victims' advocate may comment upon that refusal.[115] The ability of the victims' advocate to issue written reports identifying violations of crime victims' constitutional and statutory rights and suggesting corrective action to criminal justice agencies is key to ensuring that such agencies will grant victims their constitutional rights to be treated with "dignity, respect, and fairness during all phases of the criminal and juvenile justice process."[116]

F. Opinions and Recommendations of the Victims' Advocate May Be Released to the Governor, Legislature, a Grand Jury or the Public

While most of the investigative and deliberative work product of the OVR is confidential[117] and privileged,[118] there may arise circumstances in which it becomes necessary to make findings and recommendations known in order to improve agency accountability and the administration of justice, not only for the crime victim, but also for the public. In recognition of this, the legislature decreed that within a reasonable amount of time after the victims' advocate has reported the advocate's opinion and recommendations to a justice agency, he may also present his report to the governor, the legislature, or the public.[119] The victims' advocate must include with his report any reply made by the agency[120] or state if there was no reply.[121]

The final report may be disclosed only after notice has been provided to the justice agency that the investigation has been concluded and after the written consent of the complainant to release the report has been obtained.[122] The victims' advocate may also present his findings

and recommendations to a grand jury[123] and explain his report to them.[124] If requested, he may also provide advice to them regarding his opinions and recommendations.[125]

G. Objections to Publication of Confidential Matters in the Victims' Advocate's Opinion to the Governor, Legislature, or the Public under Alaska Statutes section 24.65.160

Occasionally, in publicizing a written report, the victims' advocate may find it necessary to disclose information believed by a justice agency to be confidential in nature and therefore, non-disclosable. The following procedure has been adopted by the victims' advocate through regulation to address questions regarding confidentiality of such information.[126]

If a justice agency has an objection to the publication of confidential materials in a preliminary report, it must send a written objection, describing the basis of the objection in detail, to the victims' advocate within ten calendar days of receipt of the preliminary report.[127] The victims' advocate must then proceed in accordance with OVR regulations. However, if a timely objection has not been filed, objections are "deemed waived and the victims' advocate may disclose the confidential matter."[128]

If a timely objection is made, the victims' advocate may still publish the information.[129] He must first find that the disclosure is authorized by Alaska Statutes section 24.64.120(c) and necessary to inform others, and he must obtain the justice agency's acceptance of a recommended action.[130] The victims' advocate must give written notice of the intention to publish to the objecting agency.

At any time prior to that publication, a justice agency may request an order from the superior court seeking to prevent disclosure.[131] Three considerations are determinative.[132] First, if the record contains both disclosable and confidential matters, and the confidential matters cited may reasonably be separated from the disclosable matters, the court may

131. *Id.* § 30.140(d).

132. *Id.*

order the confidential matters deleted and may allow the victims' advocate to release the disclosable portions.[133] Second, in cases in which the matter is wholly confidential, or if the matter contains both disclosable and confidential information that cannot be reasonably separated, the court may allow the victims' advocate to disclose the matter if it determines that the need for disclosure outweighs the nature and weight of the privacy interest asserted by the justice agency.[134] Finally, if the material objected to is found by the court not to be a confidential matter, the victims' advocate is free to make disclosure.[135] In any event, nothing in the OVR statutes or regulations may be construed to prevent or delay the publication of a final report if the material objected to has been redacted pending a decision of the superior court.[136] In sum, there exists a clear and specific written procedure in the law to address questions regarding the release of information that justice agencies claim to be confidential.

H. In-court Advocacy on Behalf of Crime Victims: Representation in Ongoing Criminal Cases or Juvenile Adjudications

The victims' advocate is authorized to represent a victim in any ongoing criminal case or juvenile adjudication[137] for the purpose of defending and promoting the victims' rights, including the constitutional right to counsel.[138] To do so, the victims' advocate must have "reason to believe a crime victim may have been denied, is being denied, or may in

---

133. *Id.* § 30.140(d)(1).

134. *Id.* § 30.140(d)(2).

135. *Id.* § 30.140(d)(3).

136. *Id.* § 30.140(e).

137. The term "ongoing criminal case or juvenile adjudication" includes:

> an active or closed prosecution, trial, legal action, lawsuit, or juvenile adjudication of any kind, at any stage or proceeding of the trial, legal action, adjudicatory hearing, parole or probation revocation hearing, lawsuit, or juvenile adjudication, including any appeal, in a court in Alaska or another state or of the United States.

Id. § 20.210(d), 40.100(12).

The phrase "ongoing criminal case or juvenile adjudication" is also defined to include:

> an open or closed investigation conducted by any justice agency, and matters under investigation by a grand jury, undertaken by any one or more justice agencies of the state, regardless of whether the investigation is considered open or closed by the justice agency and regardless of whether criminal charges are still under consideration, have been filed or have been declined by a justice agency.

Id.

The term "legal action" includes a "grievance before the Alaska Bar Association or the bar association or licensing or disciplinary entity of another state or jurisdiction." *Id.*; *see also* ALASKA STAT. § 24.65.1101 (Michie 2002).

138. ALASKA ADMIN. CODE tit. 23, § 20.210(a). *See also* ALASKA CONST. art I, § 7.

the future be denied a right under the constitution and the laws of the state by any person or justice agency."[139]

The right to representation includes the right to bring an action on behalf of a crime victim when the victims' advocate believes it will protect and advance the crime victim's statutory and constitutional rights.[140] Upon deciding to represent a victim, the advocate must file an entry of appearance and provide written notice to all parties and the court.[141] The notice must contain a statement that the crime victim has submitted a written complaint with the victims' advocate[142] and may set out the particulars of the complaint and request for relief.[143] The entry of appearance and notice may be made at any time in the ongoing case, either in writing or orally.[144] The advocate is precluded from advising or advocating for a victim in a way that would deter the victim from cooperating in a criminal investigation conducted by a justice agency, testifying in a criminal proceeding, or withholding evidence in a criminal investigation conducted by a justice agency.[145] In sum, because the legislature recognized that victims' statutory or constitutional rights could be deprived during a criminal prosecution or juvenile proceeding, the legislature granted the victims' advocate broad discretion to decide, given the specific circumstances, whether to participate as an independent attorney on the victims' behalf.

I. Standing of the Victims' Advocate to Appear Before the Courts of the State

The authority and jurisdiction of the OVR to appear before the courts of the state, and to seek requested relief for crime victims, does not depend on whether OVR is a party to the case; the victim is never a party to a criminal action in Alaska and such a rule would disable victims from enjoying rights enumerated in the state constitution and statutes. One of the goals of the legislature in establishing OVR was to grant crime victims "access to the same legal assistance as other participants" in the criminal justice system.[146] The principal architects of the

139. ALASKA ADMIN. CODE tit. 23, § 20.210(a).

140. *Id.*

141. *Id.* § 20.220(a).

142. *Id.*

143. *Id.*

144. *Id.* § 20.220(a)–(b).

145. ALASKA STAT. § 24.65.100(c) (Michie 2002); *See also* ALASKA ADMIN. CODE tit. 23, § 20.200(a)(1)–(3) (2004).

146. The legislative history for Senate Bill 105 suggests that the legislature intended that the OVR appear before the courts of the state to represent victims in ongoing criminal cases. *See, e.g., An Act Relating to Victims' Rights: Hearing on S.B. 105 Before the*

OVR believed it would increase victims' awareness of their constitutional rights and also serve to advocate for victims in Alaska courts.[147]

The OVR has specific jurisdiction to assist felony and violent crime victims in vindicating their rights in ongoing proceedings in Alaska state courts.[148] OVR lawyers are also authorized by statute to address the sentencing judge on the victims' behalf when the victim does not personally make a victim impact statement.[149] In sum, by promulgating the OVR Act in 2001, the Alaska Legislature specifically authorized the OVR to represent crime victims before all state tribunals, at any stage of the proceedings in criminal cases, in order to ensure that their statutory and constitutional rights are protected and enforced.[150]

Senate Finance Committee, 2001 Leg., 22d Sess. (Alaska 2001) (statement of Sen. Rick Halford, sponsor).

147. *See, e.g., An Act Relating to Victims' Rights: Hearing on S.B. 105 Before the House Judiciary Committee,* 2001 Leg., 22d Sess. (Alaska 2001) (statement of Juli Lucky, Chief of Staff to Sen. Rick Halford).

148. Alaska Statutes section 24.65.100 provides in pertinent part:

> The victims' advocate has jurisdiction to *advocate on behalf of crime victims of felony offenses or class A misdemeanors, if the class A misdemeanor is a crime involving domestic violence or a crime against a person under AS 11.41, in the courts of the state* and to investigate the complaints of crime victims of felony offenses or class A misdemeanors, if the class A misdemeanor is a crime involving domestic violence or a crime against a person under AS 11.41, that they have been denied their rights under the constitution and the laws of the state. In this subsection, "crime involving domestic violence" has the meaning given in AS 18.66.990.

ALASKA STAT. § 24.65.100(a) (Michie 2002) (emphasis added). Additionally, Alaska Statutes section 24.65.110 provides in pertinent part:

> (a) The victims' advocate shall assist crime victims in obtaining the rights crime victims are guaranteed under the constitution and laws of the state with regard to the contacts crime victims have with the justice agencies of the state. . . .
>
> (c) *When advocating on behalf of a crime victim in an ongoing criminal case or juvenile adjudication*, the victims' advocate is entitled to all information available to the defendant or juvenile.

Id. § 24.65.110(a), (c) (emphasis added).

149. *Id.* § 24.65.110(b). Crime victims have "the right to be allowed to be heard, upon request, at sentencing, before or after conviction or juvenile adjudication, and at any proceeding where the accused's release from custody is considered." ALASKA CONST. art. I, § 24.

150. The OVR has represented victims in numerous criminal cases, in various parts of the state, at various stages of proceedings. *See, e.g.,* Alaska v. Carr, 3 PA-S01-2455 CR (Alaska 2004); Alaska v. Clemens, 4 FA-04-2202 CR (Alaska 2004); Alaska v. Foote, 3 AN-S04-5216 CR (Alaska 2004); Alaska v. Gioletti, 3 AN-S01-5586 CR (Alaska 2003); Alaska v. McComas, 4 BE-04-682 CR (Alaska 2004); Alaska v. Owens, 2 NO-S03-821 CR (Alaska 2004); Alaska v. Pomeroy, 3 AN-S02-10469 CR (Alaska 2004); Alaska v. Short, 4 HE-04-63 CR (Alaska 2004); Alaska v. Wright, 3 AN-S02-9447/9463 CR (Alaska 2004); Mun. of Anchorage v. Cooper, 3AN 03-10934 CR

J. Maintaining Confidentiality of Documents and Information

The OVR statutes demonstrate a profound concern by the legislature that documents and information received by the victims' advocate remain confidential and within the exclusive custody of the agency. For example, the legislature spelled out that "[r]ecords obtained by the victim's advocate shall remain in the exclusive custody of the victims' advocate. The victims' advocate may not disclose confidential information to any person."[151] Additionally, the advocate must maintain confidentiality concerning "identities of the complainants or witnesses coming before the victims' advocate except insofar as disclosures may be necessary to enable the victims' advocate to carry out duties and to support recommendations. However, the victims' advocate may not disclose a confidential record obtained from a court or justice agency."[152]

In accordance with specific statutory authority, the victims' advocate has adopted regulations to ensure that confidential information about crime victims and specific cases will not be improperly disclosed in the course of advocacy or an investigation.[153] To further ensure confidentiality, the victims' advocate also requires that a court or justice agency that provides a document considered to be a confidential record must clearly identify and designate it as such at the time it is provided in order to be considered for nondisclosure.[154] In addition to being so identified and designated, it must in fact be a "confidential record" within the meaning of that term as used in Alaska Statutes section 24.65 and title 23 of the Alaska Administrative Code.[155]

OVR's regulations are flexible and allow for authorized disclosures of some confidential information under certain circumstances. For example, certain confidential information may be disclosed if the victims' advocate first obtains written consent of the crime victim and no federal or state law or regulation specifically prohibits disclosure.[156] As long as the identity of the victim remains confidential, the victims' advocate

(Alaska 2004); Cynthia Cooper v. Dist. Court and Daniel Cooper, Ct. App. A-08836 (Alaska 2004); Alaska v. Wade, 3 AN-S00-8436 CR (Alaska 2003).

151. ALASKA STAT. § 24.65.110(d) (Michie 2002).

152. *Id.* § 24.65.120(c).

153. *Id.* § 24.65.090(a); *see also* Press Release, *supra* note 12.

154. ALASKA ADMIN. CODE tit. 23, § 30.010(b) (2004).

155. *Id.* Unless a federal or state law or regulation specifically prohibits the disclosure of the confidential record in question under any circumstances in the matter then under consideration, the term "confidential record obtained from a court or justice agency" as used in Alaska Statutes section 24.65 and this title does not include (1) a document obtained or obtainable by a member of the public under Alaska Statute section 40.25; (2) a document obtained or obtainable by a member of the public from other public sources; or (3) a document that is a matter of public record. *Id.*

156. *Id.* § 30.110.

may also reveal information as part of a report.[157] This exception is included in order to assist criminal justice and other government agencies in responding to inquiries, and to increase public understanding of the operation and achievements of the office of victims' rights.[158] The information may also be used as part of the annual report prepared by the victims' advocate that is required by Alaska Statutes section 24.65.170.[159]

Finally, OVR regulations authorize disclosure of otherwise confidential information regarding a victim or complainant's case to the state bar association, or other licensing or disciplinary entity, in response to a complaint or inquiry about the victims' advocate or any member of the staff of the office of victims' rights, if the entity in question is required by law to keep such information confidential.[160] In sum, these provisions underscore the strong legislative policy of maintaining confidentiality while recognizing that in certain limited circumstances release of otherwise confidential information will assist the OVR in advancing and protecting crime victims' rights and informing the public about the functions of the OVR.

K. Procedural Protections and Immunities for the Victims' Advocate and Staff

It is evident from the OVR statutes that the legislature sought to permit the victims' advocate to discharge his duties with a minimum of interference by the justice agencies of the executive and judicial branches that it oversees.[161] For example, the OVR Act states, "A proceeding or decision of the victims' advocate may be reviewed in superior court only to determine if it is contrary to the provisions of this chapter."[162] To further insulate the victims' advocate from interference by those agencies or individuals investigated, the legislature promulgated a strongly worded civil immunity statute.[163] Furthermore, to safeguard the confidentiality of information, documents, and materials gathered by the OVR from acquisition by third parties, the legislature vested the victims' advocate with a broad statutory privilege not to testify or

157. *Id.* § 30.120(a).

158. *Id.* § 30.120(b).

159. *Id.*

160. *Id.* § 30.130.

161. *See* ALASKA STAT. §§ 24.65.180–.210 (Michie 2002).

162. *Id.* § 24.65.180.

163. Alaska Statutes section 24.65.190 states: "Immunity of the victims' advocate. A civil action may not be brought against the victims' advocate or a member of the victims' advocate's staff for anything done, said, or omitted in performing the victims' advocate's duties or responsibilities under this chapter." *Id.* § 24.65.190.

produce documents or other evidence in any civil or criminal action.[164] Finally, the legislature criminalized ignoring or hindering OVR's lawful demands.[165] Legislators enacted a statute which provides in pertinent part that "[a] person who knowingly hinders the lawful actions of the victims' advocate or the staff of the victims' advocate, or who knowingly refuses to comply with their lawful demands, is guilty of a misdemeanor and upon conviction may be punished by a fine of not more than $1,000."[166] The significance of these procedural protections and immunities is clear: legislators wanted to advance the work of the OVR by ensuring that limited human and financial resources were not unduly or unnecessarily diminished by detractors.

L. The Office of Victims' Rights is Funded by Convicts

Next to the collective legislative commitment, resolve, and continuing support needed to create and sustain an independent investigative and advocacy-oriented victims' support agency like the OVR, the second largest obstacle is the difficult issue of funding. Fortunately for crime victims in Alaska, this obstacle has been overcome.

By any measure, whether its panoramic landscape and variety of wildlife, vast size, bountiful natural resources, remote location, or extreme climate, Alaska stands uniquely apart from what Alaskans call "the lower 48" or the land "Outside." But one of the most unique aspects of living in the 49th state is the Alaska Permanent Fund ("PFD"). This statutory program has paid more than $23,000 in cash to each and every eligible resident of the state from oil royalties since it was created in 1982.[167]

In 1968, huge recoverable reserves of crude oil were discovered at Prudhoe Bay on the state's North Slope.[168] In the fall of 1969, the state

---

164. *Id.* § 24.65.200. The OVR Act provides:

> Victims' advocate's privilege not to testify or produce documents or other evidence. Except as may be necessary to enforce the provisions of this chapter, the determinations, conclusions, thought processes, discussions, records, reports, and recommendations of or information collected by the victims' advocate or staff of the victims' advocate are not admissible in a civil or criminal proceeding, and are not subject to questioning or disclosure by subpoena or discovery.

auctioned oil exploration leases that provided millions of dollars in lease bonuses to the state treasury.[169] Intending to conserve a portion of their newfound wealth for the benefit of future generations, Alaskans eventually approved passage of the Alaska Permanent Fund.[170] This fund was established through a constitutional amendment approved by Alaska voters in 1976.[171] The constitutional amendment and its supporting statutes set aside at least 25% of certain natural resource revenues paid to the state for deposit into a public savings account to be invested for the benefit of the current and all future generations of Alaskans.[172] Each year Alaska's statutory permanent fund program distributes a share of fund earnings from its investments in stocks, bonds, and real estate to every eligible Alaska resident.[173] The dividend program now in effect was enacted in 1982 and the first dividend—$1,000—was issued that year.[174] Since 1982, eligible Alaskans have collected their PFD checks each fall.[175] In the fall of 2004, the fund was valued in excess of $27 billion.[176] The 2004 dividend amount was $919.84 and was distributed to eligible Alaskans on October 13, 2004.[177]

173. *See* ALASKAN'S GUIDE TO THE PERMANENT FUND, *supra* note 172. Eligibility depends upon submission of a written application to the state Department of Revenue, state residency, physical presence, U.S. citizenship, and other factors. ALASKA STAT. § 43.23.005 (Michie 2002). A "state resident" is "an individual who is physically present in the state with the intent to remain indefinitely in the state under the requirements of AS 01.10.055 or, if the individual is not physically present in the state, intends to return to the state and remain indefinitely in the state under the requirements of [Alaska Statutes section] 01.10.055." *Id.* § 43.23.095(7).

174. *See* ALASKAN'S GUIDE TO THE PERMANENT FUND, *supra* note 172.

175. *See id.*

176. The PFD was valued at $27,678,700,000 as of September 20, 2004. *See* Alaska Permanent Fund Index, http://www.apfc.org/index.cfm (last visited Sept. 20, 2004).

177. Alaska Department of Revenue, 2004 Permanent Fund Dividend Calculation, *available at* http://www.pfd.state.ak.us/forms/2004DividendAPFC-PFDcalculation summary.pdf (last visited Sept. 28, 2004).

An individual is disqualified from receiving a permanent fund dividend check in a dividend year if the person was sentenced or jailed for certain criminal convictions.[178] Criminals lose their PFD when sentenced or jailed for a felony conviction during all or part of the qualifying year.[179] A person also forfeits his or her PFD for the year when incarcerated as a result of a conviction of a felony or a misdemeanor if the person was previously convicted of a felony or two or more misdemeanors.[180] Forfeited amounts are used to "obtain reimbursement for some of the costs imposed upon the state criminal justice system related to incarceration or probation of those [convicted] individuals" as well as to "provide funds for services for and payments to crime victims and for grants for the operation of domestic violence and sexual assault programs."[181] Consequently, each year such funds are used to pay for the Alaska Violent Crime Compensation Fund for payments to crime victims,[182] the Council on Domestic Violence and Sexual Assault[183] for grants for the operation of domestic violence and sexual assault programs, the Alaska Department of Corrections for incarceration and probation related expenses, the Alaska Office of Victims' Rights, and nonprofit victims' rights organizations for grants for services to crime victims.[184]

How does this translate into funding for the OVR? Fiscal year 2005 illustrates the multitude of uses to which these forfeited funds are put.[185] As a result of this legislation, 8,490 persons lost their PFD checks for dividend year 2003,[186] a number that represents approximately .01% of Alaska's total population.[187] This amount totaled $9,403,184.40 in forfeited dividends.[188] Portions of that amount were

appropriated by the Alaska legislature in 2004 for fiscal year 2005 to the Alaska Department of Corrections,[189] Alaska's Violent Crimes Compensation Fund,[190] the Council on Domestic Violence and Sexual Assault,[191] an anti-batterer's intervention program,[192] and the Alaska Office of Victims' Rights, which received $481,600 of the forfeited funds.[193]

M. OVR Case Category Profiles

During its first twenty-four months of operations, July 1, 2002, through June 30, 2004 (the "reporting period"), 445 crime victims from around the state and all walks of life utilized a variety of services offered by the OVR, including information, education, legal advice and advocacy, investigation, in-court representation, and support.[194] Victims have been referred to the OVR by judges, prosecutors, defense attorneys, physicians, mental health practitioners, legislators, victim support and advocacy groups, and others. The following statistical overview demonstrates the breadth of legal services that have been provided to Alaskans since the OVR was founded.[195]

During this reporting period 162 clients contacted the OVR for information and subsequently decided not to file a complaint with the OVR.[196] Seventy-two crime victims sought advice and information and, after speaking with OVR staff, filed a formal complaint with the of-

fice.[197] These cases were easily resolved and involved minimal document collection and preparation. They primarily involved victims who only needed information on how the criminal justice system operates and who wished to have an independent third party look over their case to determine whether their treatment in the criminal process was consistent with crime victims' legal rights.[198] An additional eighty-seven crime victims came to OVR with particular problems or concerns regarding active criminal cases.[199] These clients filed formal written requests, and their cases required OVR to seek documentary evidence from the justice agency involved.[200] In addition, these cases required more time from OVR staff and created a longer-term cooperative relationship between OVR, the client, and the justice agency.[201] One-hundred eleven crime victims came to OVR, seeking assistance with:

> [S]ignificant problems or concerns regarding active criminal cases during the current reporting period. These clients filed formal written requests with OVR and their cases required OVR to seek documentary evidence from justice agencies. These cases were significant in terms of the documents collected and reviewed, the time commitment required from OVR staff and the level of inquiry into justice agency affairs. These cases did not result in the publication of a formal report pursuant to Alaska Statute[s] [section] 24.65.160.[202]

During this reporting period fourteen clients came to the OVR with "significant problems or concerns regarding active in-court criminal cases."[203] "In addition to requesting documentary evidence from judicial agencies," these cases required the OVR to represent and argue on behalf of crime victims in the courtroom.[204] Finally, during its first twelve months of operation, the OVR opened one formal inquiry that involved significant problems regarding an active police investigation.[205] In that case, a crime victim filed a formal written request with the OVR, which required the agency to seek documentary evidence from the police de-

partment in question.[206] The case was significant in terms of the documents collected and reviewed, the time commitment required from OVR staff, and the level of inquiry into the operation of the justice agency's affairs.[207] The case resulted in the publication of a thirty-six page formal report pursuant to Alaska Statutes section 24.65.160.[208]

V. CONCLUSION

The Alaska Office of Victims' Rights was expressly created by the legislature to help crime victims cope with, understand, and successfully navigate the criminal justice system. More importantly, it was established to provide victims with free legal services provided by experienced criminal lawyers whose sole duty is to explain and secure for them the rights they are guaranteed under Alaska law in their contacts with police, prosecutors, defense counsel, judges, and other criminal justice agencies. Since its inception in 2002, the OVR has helped foster administrative and judicial sensitivity to crime victims and has worked to promote respect for and protection of victims' privacy and safety.

In a real sense, the OVR has served to illustrate what can be done to help crime victims when legislative resolve is strong and funding is available. To that end, the author hopes that states wishing to strike a fair balance between crime victims' rights and the rights of criminal defendants will follow in Alaska's pioneering footsteps and implement the Office of Victims' Rights model.

Dear Senator French:

On behalf of the Alaska Peace Officers Association (APOA), I would like to thank you for introducing Senate Bill 135, an act relating to the rights of crime victims; relating to the duties of prosecuting attorneys; and amending Rule 45, Alaska Rules of Criminal Procedure.

The APOA State Board of Directors recently reviewed this proposed legislation and decided to unanimously support this bill.

We thank you for addressing this issue. Please contact the APOA office in Anchorage at 277-0515, if there is anything our organization can do to assist in the passage of this bill.

Sincerely,

John Lucking, Jr.

Making A Difference In The Last Frontier

January 24, 2012

The Honorable Hollis French, Senator
Chair, Senate Judiciary Committee
Alaska State Legislature, State Capitol
Juneau, Alaska 99801

RE: Senate Bill 135, Continuances in Criminal Trials; Victims

Dear Senator French:

On behalf of the Board of Directors of Victims for Justice, I am writing to support Senate Bill 135.

Time and time again, we see continuances provided to defendants in criminal cases for reasons that seem insufficient and sometimes disingenuous, with absolutely no consideration given to the challenges this presents to victims in the case.

We have supported victims of violent crimes, and the surviving family members of homicide victims, in cases where so many continuances have been granted that they caused the trial to be delayed more than a decade. This length of delay can work to the benefit of the defendant, when witnesses die or leave the state, memories fade, prosecutors change over and over and it becomes difficult or impossible to win a conviction. And these delays work to the serious disadvantage of victims who only want to see justice done, and to society in general.

We have known victims to travel hundreds or thousands of miles, and incur great expense and inconvenience so that they may exercise their right to attend a trial or hearing, only to have the trial or hearing continued with absolutely no consideration given as to how this impacts the victim.

We recognize that courts want to extend the benefit of the doubt to defendants, who, after all, are the ones whose liberty is at stake. However, we feel the courts often fail to take into consideration the rights afforded by our state Constitution to victims in these situations. Senate Bill 135 puts the victim in the picture, and supports the judge who considers the victim when deciding whether to grant a continuance.

This bill is a very modest change to existing statutes and court rules. It simply describes a means to implement the requirements of our state Constitution and statutes with regard to victims. However, in a very important way, this bill brings balance to our justice system.

The Board of Directors of Victims for Justice strongly support SB 135.

Regards,

Susan Sullivan

STATE OF ALASKA
OFFICE OF VICTIMS' RIGHTS

January 17, 2012

The Honorable Hollis French, Senator
State of Alaska Senate
Chair, Judiciary Committee
Alaska State Legislature
State Capital
Juneau, Alaska 99801

Re: Senate Bill 135, Continuances in Criminal Trials; Victims

Dear Senator French:

I write in support of Senate Bill 135, Continuances in Criminal Trials; Victims.

The proposed legislation strengthens notification standards for informing crime victims of any request for a continuance that may substantially delay the prosecution, the date of trial, sentencing, an appeal, and any hearing which the defendant's release from custody is considered.

The amendments to Alaska Criminal Rule 45 strengthen a crime victim's right to address the court, and for the court to consider the crime victim's perspective, before issuing an order based on a motion for continuance.

Both components to the proposed legislation fortify a crime victim's statutory rights and Alaska Constitutional rights to be "treated with dignity, respect, and fairness" and "to timely disposition of the case..." (Alaska Constitution, Article 1, Section 24). The proposed legislation also stands to amplify the crime victim's voice before the court and other criminal justice agencies regarding delay in the criminal justice process.

I believe strongly that the administration of justice is improved when a crime victim's voice is heard and considered within the Alaska criminal justice system.

1007 WEST 3RD AVENUE, SUITE 205 • ANCHORAGE, ALASKA 99501-1936
TELEPHONE: 1-907-272-2620 • FACSIMILE: 1-907-272-2640

In sum, the proposed legislation wisely aligns with the Alaska Constitutional rights of a crime victim - especially with regard to the timely disposition of a criminal case.

I stand ready to testify in support of this legislation.

Respectfully submitted,

D. Victor Kester

Re: Senate Bill 135, Right to a Timely Disposition

Dear Senator French:

Thank you so much for introducing this very important bill. The Alaska Network on Domestic Violence and Sexual Assault strongly supports Senate Bill 135. It is our understanding that this bill will provide a victim of crime, including domestic violence and sexual assault crime victims, a notice from law enforcement or prosecution when there will be a request for a continuance that would substantially delay a prosecution. All too often in Alaska victims have been disappointed in the process, procedure and outcome of their case. This bill will provide for consideration of the victim's wishes, the impact that continual delays will have on a victim of crime, and provide the victim with information of what to expect or what not to expect, in the nearer future.

Our eighteen member victim service agencies throughout the state witness daily the impact these delays have on the people they serve. Time and time again, our advocates appear in court with victims of both domestic violence and sexual assault, only to have their courage and hopes dashed by yet another delay. It has become a 'tactic' which, when employed, disheartens the victim, decreases their sense of safety and decreases their faith in the criminal justice system and the State of Alaska. Hopefully, this bill will strike a balance between the Constitutional right to a speedy trial for both defendants and victims.

Sincerely,

Peggy Brown
Executive Director

Standing Together Against Rape
Crisis Intervention | Advocacy | Education | Prevention

January 20, 2012

Senator Hollis French, Chair
State Capitol, Room 417
Juneau, Alaska 99801

Re: Senate Bill 135, Continuances in Criminal Cases

Dear Senator French:

Standing Together Against Rape (STAR) strongly supports any bill that affords a victim of crime the opportunity to have their voice and concerns heard by the justice system. Senate Bill 135 appears to strengthen "the right to a timely disposition of the case following the arrest of the accused" as stated in the Alaska Constitution.

Crime victims, in particular, victims of sexual assault feel a tremendous amount of anxiety when contemplating facing the person who assaulted them in court. The anxiety builds, creating sleepless nights and increased reliance on coping skills. The day arrives, and the trail is continued. This pattern can be repeated over and over and over again. If the offender is incarcerated the victim is afraid they will be released. If the offender is not incarcerated the victim feels they must continue watching over their shoulder at the market, the department store, the movies, etc. The ability of the victim to move about freely may be inhibited.

While I believe it is not the intent of prosecution to re-victimize crime victims, repeated continuances often do. At the same time STAR recognizes the need for the prosecution to put forth a strong case, to increase the possibility of conviction, to hear defense requests and to lessen the likelihood of appeal. Hopefully this bill will allow for a balance to be struck between the two.

Respectfully submitted,

Standing Together Against Rape
Nancy A Haag, MSW
Executive Director

Dear Lawmakers,

I am writing to encourage your support for Senator Hollis French's SB 135 dealing with a victim's constitutional right to "timely disposition of their case."

As many of you may recall, my daughter, Bonnie Craig, was murdered in September 1994. Her killer, Kenneth Dion was finally sentenced October 31st, 2011. For 17 years our family, friends and the community waited for justice. Our constitutional right to "timely disposition of our case" was violated again and again. I vowed, when thrown into this horror story, that I would make sure the things that went wrong in our case would be changed for others.

Protecting a victim's right to "timely disposition" is the most important change that needs to come out of this incredible tragedy. It was the most egregious violation that our family had to endure, and that violation was at the hands of the State of Alaska, not the criminal. I need your help to ensure all future victims will have their constitutional rights protected in Alaska. Let's balance the scales of justice and honor the victim's right to "timely disposition."

Do not be mistaken. It is not okay to think: "At least the criminal is behind bars and can't hurt anyone else." The pain inflicted on the victims is inexcusable and the prosecution of the case against the defendant weakens daily. Delays are a tactical advantage for defense attorneys to accommodate defense attorneys, rarely the defendant.

Kenneth Dion was identified November 2006. From the time he was identified our family was basically placed under a "gag order." Nothing could be said to the press, our friends, or the community. Our incredible grief - the wounds being ripped wide open, bringing us back to the day we were notified of Bonnie's death - were to be muzzled, and kept deep within us. We weren't allowed to share the news, our private trauma, our personal hell, for four months. As a family, we tried to continue our life as if nothing was happening, pretending this incredible burden and stress didn't exist. It was tearing us apart, eating at the very core of our existence, like a cancer. It destroyed relationships and financially ruined me. It affected our health and my parenting abilities. It could, and can, destroy a whole family.

Finally, May 1st, 2007 the news was released. Although we talked with the press and could finally share the information with friends, the gag was, once again, placed on our family members to avoid all contact with media. The threat of a "change of

venue" is not something a victim's family can take lightly. Until a jury is selected, avoiding any media coverage is critical. Our jury was selected more than 4 years later. During that time it became abundantly clear that the defense attorney and the defendant hold all the power and they call all the shots. Victims can only sit back and wait without complaining.

I know that you will never be able to even imagine the pain and suffering a parent, a sister and brothers goes through while awaiting a trial. Our pain and stress and fear was multiplied ten-fold with the memories of Joshua Wade being acquitted. We knew things could go wrong, evidence could get lost, a technicality could cause a mistrial, investigators and witnesses could die or be lost. We know memories fade. We know each day something could come up that could make it impossible to prosecute the man who brutally raped and murdered Bonnie. Our life is in a limbo, teetering on insanity. It is beyond comprehension. Yet, we try to continue our life with a new kind of normalcy.

Our first trial date was set for September, 2008. Please keep in mind that the killer was identified November, 2006. I wept when Judge Patrick MMcKay set the date. It was like having your guts ripped out of your body. He justified it by saying it would give both the prosecution and the defense plenty of time to prepare and that there would be absolutely no reason for any continuance. He vowed that he wanted to make sure both sides would be prepared, so we were going to have pretrial conferences to avoid any surprises or complications from arising. And we did. By the time we got to trial we had 45 pre-trial conferences, status and motion hearings. The judges, both Judge McKay and Judge Jack Smith were trying to make sure the defense was getting all they needed and getting ready for trial. They both failed. If the defense asks for anything, the judge, in fear of an appeal, will always grant the defense more time, even if it meant losing Pat Gullufson, our prosecutor of 3 years who had to retire for medical reasons. (July 15, 2010 a new prosecutor, Paul Miovas, took the case over. He successfully handled the case in less than 10 months.)

More than once, Lee De Grazia, the first public defender, misled the Judge. We all knew it and yet he never called her on it. One month before the trial was to start she claimed she fired her "DNA Expert" and would need more time. We all sat there amazed and wondering if she was lying. Had she even hired one yet? She doesn't need to answer to anyone. There was no accountability She made a mockery of the whole system. When the case was finally handed over to Office of Public Advocacy defense attorney Andrew Lambert (03/23/09) he told Judge McKay that De Grazia had done virtually nothing on the case and the judge

responded, "I was afraid of that." 18 months had been wasted on a totally incompetent defense attorney.
Make no mistake, the delays are not about affording the defendant a fair trial, nor protecting the defendant's rights. They are for the benefit of, more times than not, the defense attorney's schedule and needs. The litigation of a case is dictated by the personal life of the defense attorney. Timely disposition is about case management and having efficient and effective counsel. It is about prioritizing cases that have been lingering on for the benefit of the defense attorney's schedules. You can't imagine how disheartening it is to hear your case is going to be delayed, yet again, for 4-5 months because the defense attorney wants to go on their second, one month vacation of the year and he needs about a week to do a divorce case for a buddy of his and he is going to visit some schools for his daughter. Why can't co-counsel take over?

If a builder is building a home he can't tell the client he is going away for a month on vacation and will need 3-4 more months. In just about any profession a project must be completed before those involved can decide to take time off.
If you were diagnosed with cancer and the doctor goes for vacation for a month you have the opportunity to use another doctor. Victims have no choice, but to sit and wait. Prosecutors can't request that we use another defense attorney or that co-counsel handle the scheduled hearing, nor can the judge tell a defense attorney they will need to hold off on their vacation.

Below, I have listed each trial date that was set. I can never describe the sickening feeling a family feels when you are told, once again, that the trial date will be changed. You feel like you are going to vomit. Again, it's like your guts are being ripped out of you. In many cases I was on the verge of tears, knowing we would be given no consideration. And, it is always incredulous reasoning, something that you think may require an extra week or two, delays the trial by 4 months or more.

Preparing for each pretrial hearing is mentally exhausting. You have difficulty functioning and sleeping in fear of what the defense is going to do each time. The tension and anxiety are overwhelming. Getting to court is difficult. We had 45 pretrial hearings. Please consider what that does to families. As a victim, you can't plan life too far in advance; you can't start to rebuild your life.

Refusal to deal with "timely disposition" is a refusal to address the inefficiencies in our justice system. and allowing the "justice system" to re-victimize the victims. Please, support Senator French's SB 135 to honor victim's constitutional right to

"timely disposition of their case." Show the victims the respect they deserve and stop the re-victimization of the victims.

Sincerely yours,

Karen Foster

FISCAL NOTE #1

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 136(STA)

Analysis

Bill Language:
The bill provides an income tax credit of $2,000 for each veteran who is hired and who works 1,560 hours or more, during the 12 consecutive months immediately following the date the Alaska veteran is first employed. Any unused credit may be carried forward. The credit is not refundable, nor transferrable.

Revenues:
It is difficult to know how many Alaska veterans will be hired as a result of this legislation and, therefore, difficult to determine its affect on revenues. However, for each Alaska veteran hired in the state that meets the requirements of this bill, corporate income tax revenues will decrease $2,000 in one year.

Expenditures:
Department of Revenue can administer the provisions of this bill utilizing existing resources.

Adopted 2/24/12

27-LS0983\R

Sponsor(s): SENATORS WIELECHOWSKI, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act providing a tax credit for employing a veteran that may be taken against a liability for the tax on corporation income; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 43.20 is amended by adding a new section to article 1 to read:

Sec. 43.20.047. Veteran employment tax credit. (a) A taxpayer that hires a veteran and employs the veteran in the state is entitled to a credit under this section against the tax due under this chapter. The taxpayer is entitled to the credit for each veteran whose employment qualifies under this section.

(b) To qualify as a veteran for the purposes of the credit under this section, the veteran must have been unemployed for more than four weeks immediately preceding the date employment begins and must have been discharged or released from military service

(1) not more than 10 years before the date employment begins in the case of a veteran who is a disabled veteran; or

New Text Underlined [DELETED TEXT BRACKETED]

(2) not more than two years before the date employment begins in the case of a veteran who is not a disabled veteran.

(c) The amount of credit that may be applied by a taxpayer for each qualifying veteran under this section is,

(1) for a veteran employed for 1,560 hours or more during the 12 consecutive months immediately following the date the veteran is first employed,

(A) $3,000 for a disabled veteran; and

(B) $2,000 for a veteran who is not disabled;

(2) for a veteran employed for 600 hours or more in a seasonal position during the five consecutive months immediately following the date the veteran is first employed by an employer in a seasonal position, $1,000; an employer that hires a veteran for a seasonal position may take the credit under this paragraph only for the first season in which the employer employs the veteran.

(d) The tax credit under this section may be applied against the tax due under this chapter for the first tax year ending on or after the end of the employment period described in (c) of this section. The credit may not be used to reduce a person's tax liability under this chapter below zero for any tax year, and any credit or portion of a credit not used under this section may be applied in a later tax year.

(e) A taxpayer shall keep a record of the name of the veteran employee whose employment is the basis for a credit under this section, documentation supporting the employee's qualification as a veteran or disabled veteran, and the veteran employee's hours employed and period of employment. The department may adopt a regulation that lists the documentation that must be maintained to support a claim that an employee qualifies as a veteran or disabled veteran for purposes of this section.

(f) In this section,

(1) "disabled veteran" has the meaning given in AS 39.25.159;

(2) "seasonal position" means employment that is not intended to continue through an entire calendar year but recurs annually;

(3) "veteran" means an individual who served in the

(A) armed forces of the United States, including a reserve unit of the armed forces of the United States; or

(B) Alaska Territorial Guard, the Alaska Army National Guard, the Alaska Air National Guard, or the Alaska Naval Militia.

* **Sec. 2.** This Act takes effect July 1, 2012.

CS FOR SENATE BILL NO. 136(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS WIELECHOWSKI, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act providing a tax credit for employing a veteran that may be taken against a liability for the tax on corporation income; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20 is amended by adding a new section to article 1 to read:

Sec. 43.20.047. Veteran employment tax credit. (a) A taxpayer that hires a veteran and employs the veteran in the state is entitled to a credit under this section against the tax due under this chapter. The taxpayer is entitled to the credit for each veteran whose employment qualifies under this section.

(b) To qualify as a veteran for the purposes of the credit under this section, the veteran must have been unemployed for more than four weeks immediately preceding the date employment begins and must have been discharged or released from military service

(1) not more than 10 years before the date employment begins in the case of a veteran who is a disabled veteran; or

(2) not more than two years before the date employment begins in the case of a veteran who is not a disabled veteran.

(c) The amount of credit that may be applied by a taxpayer for each qualifying veteran under this section is,

(1) for a veteran employed for 1,560 hours or more during the 12 consecutive months immediately following the date the veteran is first employed,

(A) $3,000 for a disabled veteran; and

(B) $2,000 for a veteran who is not disabled;

(2) for a veteran employed for 600 hours or more in a seasonal position during the five consecutive months immediately following the date the veteran is first employed by an employer in a seasonal position, $1,000; an employer that hires a veteran for a seasonal position may take the credit under this paragraph only for the first season in which the employer employs the veteran.

(d) The tax credit under this section may be applied against the tax due under this chapter for the first tax year ending on or after the end of the employment period described in (c) of this section. The credit may not be used to reduce a person's tax liability under this chapter below zero for any tax year, and any credit or portion of a credit not used under this section may be applied in a later tax year.

(e) A taxpayer shall keep a record of the name of the veteran employee whose employment is the basis for a credit under this section, documentation supporting the employee's qualification as a veteran or disabled veteran, and the veteran employee's hours employed and period of employment. The department may adopt a regulation that lists the documentation that must be maintained to support a claim that an employee qualifies as a veteran or disabled veteran for purposes of this section.

(f) In this section,

(1) "disabled veteran" has the meaning given in AS 39.25.159;

(2) "seasonal position" means employment that is not intended to continue through an entire calendar year but recurs annually;

(3) "veteran" means an individual who served in the

(A) armed forces of the United States, including a reserve unit of the armed forces of the United States; or

(B) Alaska Territorial Guard, the Alaska Army National Guard, the Alaska Air National Guard, or the Alaska Naval Militia.

* **Sec. 2.** This Act takes effect July 1, 2012.

SENATOR BILL WIELECHOWSKI

Senate Bill 136: Income Tax Credit for Employing a Veteran
Sponsor Statement

Our veterans are some of the most highly trained, highly educated, and highly skilled workers that we have. When businesses hire veterans, they are getting proven leaders with solid work ethics who can solve problems efficiently while staying focused and contributing to an improved bottom line.

Despite many employers acknowledging the advantages of hiring someone who has served in the Armed Forces, veterans continue to see higher than average unemployment rates nationwide. In June 2011, according to the U.S. Bureau of Labor Statistics, one million U.S. veterans were unemployed and the jobless rate for post-9/11 veterans was 13.3%. The picture was even worse for young, male veterans between the ages of 18 and 24, who saw an unemployment rate of 21.9%.

Senate Bill 136 will assist Alaska's veterans get civilian jobs when they leave the service and provide direct benefits to Alaska businesses. The legislation provides a $2,000 credit for each veteran hired who works at least 1,560 hours within a 12-month period, or approximately 30 hours a week. The tax credit can be applied in the first year after 12-months of employment and any credits not used could be used in a later tax year.

This is a win-win situation. Struggling Alaskan businesses can get the tax help they need, while Alaska's veterans have an increased chance of finding employment.

MEMORANDUM

DATE: February 2, 2012

TO: Senate Finance Committee

FROM: Senator Bill Wielechowski

SUBJECT: Changes from SB136 to CS SB 136 (STA)

The following changes made in the Committee Substitute for Senate Bill 136 (STA):

- Concerns were raised through conversations between the Department of Law and Department of Revenue with language referring to "Alaska veteran" as it could be a potential constitutional issue, instead language was changed to refer to a tax credit for a "veteran hired in Alaska" to eliminate any questions or concerns.

MEMORANDUM January 17, 2012

SUBJECT: Sectional Summary for SB 136 (Work Order No. 27-LS0983\I)

TO: Senator Bill Wielechowski
Attn: Kendra Kloster

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends AS 43.20 by adding a new section, AS 43.20.047, to provide a tax credit against the corporation income tax for employing an Alaska veteran; states the requirements for the credit and the amount of credit available for each Alaska veteran that is hired; and requires recordkeeping to support eligibility for the credit.

Section 2. Makes the Act take effect July 1, 2012.

LEGISLATIVE RESEARCH REPORT

DECEMBER 28, 2011

REPORT NUMBER 12.119

STATE AND FEDERAL TAX CREDITS FOR BUSINESSES THAT HIRE VETERANS

PREPARED FOR SENATOR BILL WIELECHOWSKI

BY TIM SPENGLER, LEGISLATIVE ANALYST

You wished to know whether any states provide tax credits for employers who hire veterans or for veterans who are starting a business. Additionally, you wanted to know if federal tax benefits exist for businesses hiring veterans.

Briefly, Vermont offers both benefits when veterans have recent military history, while a few other states provide benefits for businesses hiring veterans under limited circumstances.[1] Federal tax benefits are available to employers who hire veterans through the *Returning Heroes* and *Wounded Warrior* tax credit programs.

Alaska

As you may know, Alaska does not provide tax credits to employers for hiring veterans or for veterans starting their own businesses. The state does provide, however, a five percent bid preference (that may not exceed $5,000) if a bidder for a state contract is an Alaska veteran and is a "qualifying entity." According to AS 36.30.175—Alaska Veterans' Preference—a qualifying entity means the following:

1. Sole proprietorship owned by an Alaska veteran;
2. Partnership under AS 32.06 or AS 32.11 if a majority of the partners are Alaska veterans;
3. Limited liability company organized under AS 10.50 if a majority of the members are Alaska veterans; or
4. Corporation that is wholly owned by individuals and a majority of the individuals are Alaska veterans.[2]

---

[1] None of the states with credits were able to provide us with data regarding the effectiveness of the benefit.

[2] For more information on how Alaska's veterans' preference is applied please contact Vern Jones, chief procurement officer, Department of Administration, (907) 465-5684.

Other States

Vermont

On May 25th, 2011, House Bill 275 was signed into law in Vermont and codified at 32 V.S.A. 5930nn. The legislation, entitled the Veterans' Tax Credit Act, provides employers with a $2,000 tax incentive for hiring veterans who have returned from deployment in Afghanistan or Iraq within the last two years. In order to qualify for the tax credit, businesses must employ veterans before the end of 2011. The act also provides veterans who start new companies with a $2,000 benefit. To qualify for this credit, the veteran must hold at least 50 percent ownership in the company.

Specifically, to be eligible for the tax credits a Vermont veteran must meet the following prerequisites:

- have left federal, active duty within the past 24 months;
- have been a resident of Vermont at the time of entry into military service or served in a guard or reserve unit located in Vermont; and
- be eligible to receive unemployment from the Vermont Department of Labor, or would be eligible except unemployment has been exhausted.

Clayton Clark, director of Vermont's Office of Veterans Affairs notes that earlier this year he queried fellow state directors asking if their states offered similar veteran tax benefits and none did. This corresponds to what we found in our review.[3]

We include, as Attachment A, various documents pertaining to the tax credit in Vermont including the state statute, a question and answer document on the credit, and the application Vermont veterans use to certify their eligibility for the tax credit.

California

The Enterprise Zone Program (EZP) in California entitles employers that hire and employ qualified applicants—including certain veterans—to tax credits. The California EZP was established in 1984 to stimulate business investment in depressed areas of the state and to create job opportunities. If a company is located in one of California's 43 EZPs, the company may be eligible for up to $31,000 in California tax credits (over five years) if the veteran hired meets any one of the following three tests:

- left military service within the last 48 months;
- is a service-related disabled veteran; or
- is a Vietnam era veteran.[4]

[3] Clayton Clark can be reached at (802) 828-3379. For this report, we contacted numerous state veteran's offices both telephonically and by email, searched many state and national veteran websites, and conducted a West Law search.

[4] More information on California's Enterprise Zone Program can be accessed at *www.caez.org/*.

Illinois

Illinois employers can earn an income tax credit for hiring veterans of Operation Desert Storm, Operation Enduring Freedom, or Operation Iraqi Freedom. The credit is five percent of the total wages paid to every qualified veteran hired after January 1, 2008. The credit may not exceed $1,200 annually. Veterans must work at least 185 days during the tax year for the employer to qualify for the credit.[5]

West Virginia

Entities hiring economically disadvantaged Vietnam or Korean era veterans, unemployed West Virginia National Guard members, or *any* disabled veteran, are entitled to a state tax credit. The credit available to the employer is 25-30 percent of the first $5,000 in wages or compensation paid to the veteran.[6]

Federal Tax Benefits

On November 21, 2011, President Obama signed legislation that provides tax credits to employers who hire military veterans. The *VOW to Hire Heroes Act* contains two components—the *Returning Heroes Tax Credit* and the *Wounded Warriors Tax Credit*—that provide credits to businesses that hire veterans. The Act passed both bodies of Congress unanimously and, while the legislation is not expected to lead to the creation a significant number of new jobs, it is hoped that it will help many veterans secure employment.

The **Returning Heroes Tax Credit** is intended to provide an incentive for businesses to hire unemployed veterans in the following ways:

- *Short-term unemployed:* A new credit of 40 percent of the first $6,000 of wages (up to $2,400) for employers who hire veterans who have been unemployed at least 4 weeks.

- *Long-term unemployed:* A new credit of 40 percent of the first $14,000 of wages (up to $5,600) for employers who hire veterans who have been unemployed longer than 6 months.

The **Wounded Warrior Tax Credit** will double the existing tax credit for businesses that hire long-term unemployed veterans with service-connected disabilities as follows:

- Maintains the existing Work Opportunity Tax Credit for employers that hire veterans with service-connected disabilities (currently the maximum is $4,800).

- Introduces a new credit of 40 percent of the first $24,000 of wages (up to $9,600) for firms that hire veterans with service-connected disabilities who have been unemployed longer than 6 months.[7]

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

---

[5] To file for Veteran's Tax Credit, Illinois employers complete Schedule 1299-D, "Income Tax Credits."

[6] For disabled veterans, the credit is the percentage of disability multiplied by the first $5,000 in wages. We include, as Attachment B, West Virginia Annotated Code 21A-2C-4, which pertains to the tax credit and tax schedule J—the "West Virginia Military Incentive Credit."

[7] Detailed information on these tax credit programs is available at *www.whitehouse.gov/the-press-office/2011/11/21/fact-sheet-returning-heroes-and-wounded-warrior-tax-credits*.

Attachment A

Vermont Statute 32 V.S.A. 5930nn and other documents regarding Vermont's Veterans' Tax Credit Act

West's Vermont Statutes Annotated Currentness
Title Thirty-Two. Taxation and Finance
Subtitle 2. Taxation
Part 3. Income and Franchise Taxes
Chapter 151. Income Taxes
Subchapter 11N. Recently Deployed Veteran Tax Credit
➞ § 5930nn. Recently deployed veteran tax credit

(a) A qualified employer shall be eligible for a nonrefundable credit against the income tax liability imposed under this chapter in an amount equal to $2,000.00 for each new full-time employee hired after the passage of this act but on or before December 31, 2012 for a position, the majority of the duties of which are at a business location within Vermont.

(b) A recently deployed veteran shall be eligible for a nonrefundable credit against the income tax liability imposed under this chapter in an amount up to a total of $2,000.00 for expenses associated with one start-up business in which the recently deployed veteran holds at least a 50-percent ownership interest. A credit under this subsection may only be taken for a business started after the passage of this act but on or before December 31, 2012, that is located within Vermont, and that shows a net profit of at least $3,000.00 for the year in which the credit is taken.

(c) A credit earned under this section shall be claimed in the tax year following the new full-time employee's date of hire, or in the tax year following the date that the start-up business was created, and may be carried forward one year.

(d) In this section:

(1) "Expense associated with a start-up business" means the following expenses:

(A) expenses associated with the development of a business plan;

(B) professional services associated with the formation of the business (e.g., attorney and accounting services);

(C) an analysis or survey of potential markets, products, labor supply, or transportation facilities;

(D) advertisements for the opening of the business;

(E) salaries and wages for employees who are being trained and their instructors;

(F) travel and other necessary costs for securing prospective distributors, suppliers, or customers;

(G) salaries and fees for executives and consultants, or for similar professional services.

(2) "New full-time employee" means a recently deployed veteran:

(A) who works at least 35 hours per week for not less than 45 of the 52 weeks following the individual's date of hire;

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

(B) whose compensation equals or exceeds the prevailing compensation level, including wages and benefits, for the particular employment sector and region of the state as determined by the commissioner of labor;

(C) who has certification by the department of labor at the time of hire of:

(i) collecting or being eligible to collect unemployment benefits; or

(ii) having exhausted his or her unemployment benefits;

(D) who has not been employed by the qualified employer for 90 days prior to the date of hire.

(3) "Qualified employer" means a person who:

(A) is in good standing with respect to applicable registration, fee, and filing requirements with the secretary of state, the department of taxes, and the department of labor; and

(B) has in place a valid workers' compensation policy.

(4) "Recently deployed veteran" means an individual who:

(A)(i) was a resident of Vermont at the time of entry into military service; or

(ii) was mobilized to active, federal military service while a member of the Vermont National Guard or other reserve unit located in Vermont, regardless of the resident's home of record.

(B) received an honorable or general discharge from active, federal military service within the two-year period preceding the date of hire.

(C) for the purposes of the credit in subsection (b) of this section, a person who at the time of starting up a new business has been certified by the department of labor as:

(i) collecting or being eligible to collect unemployment benefits; or

(ii) having exhausted his or her unemployment benefits.

(e) The department of labor, in coordination with the department of taxes, the agency of commerce and community development, and the office of veterans' affairs, shall:

(1) promote awareness of the recently deployed veteran tax credit authorized in this section to employers and eligible veterans;

(2) establish procedures for prequalifying an individual as a recently deployed veteran and for providing notice to the department of labor when a new full-time employee is hired;

(3) establish procedures for certifying a qualified employer's compliance, or in the case of a credit under subsection (b) of this section, a recently deployed veteran's compliance, with the eligibility and expense verification requirements to claim the credit authorized under this section;

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

(4) adopt measurable goals, outcomes, and an audit strategy to assess the utilization and performance of the credit authorized in this section;

(5) on or before January 15, 2012, submit a written report on its assessment of the credit to the house committees on commerce and economic development and on ways and means, and to the senate committees on finance and on economic development, housing and general affairs;

(6) engage in efforts to promote the hiring of recently deployed veterans through the hiring practices of the state of Vermont.

(f) An employer shall not claim the credit in subsection (a) of this section for an employee who has claimed the credit under subsection (b) of this section, and a recently deployed veteran shall not claim the credit in subsection (b) if an employer has claimed his or her hire for the credit in subsection (a).

VERMONT

Veteran Services Directory

Maintained by the Vermont Office of Veterans Affairs

Tax Credit for Hiring a Veteran with Recent Military Service

The State of Vermont now provides a tax credit to employers who hire a veteran with recent military service. The tax credit also extends to veterans with recent service who start their own business.

To be eligible, a veteran must:

- Have left federal, active duty within the past 24 months
- Have been a resident of Vermont at the time of entry into military service OR served in a guard or reserve unit located in Vermont
- Be eligible to receive Unemployment from the VT Dept of Labor, or would be eligible except Unemployment has been exhausted

Applicants should fill out Office of Veterans Affairs Form 44 and send it, along with a copy of their most recent DD Form 214, to the Office of Veterans Affairs. Additional information is on the form, and there are questions and answers below.

Questions and Answers about the Tax Credit

How much is the Tax Credit?

$2,000 to employers for hiring a veteran; up to $2,000 to veterans who start their own business.

How long will the program be available?

The program expires December 31, 2012.

What is the date range for new hires that are covered by this credit?

The new hire must occur between May 24, 2011, and December 31, 2012. For veterans who start a new business, the business must be started by December 31, 2012.

Is this only available to Vermont residents?

This is available to veterans who were a resident of Vermont at the time of entry into the active, federal military service OR was mobilized to active, federal military service with the Vermont National Guard or a reserve unit located in Vermont.

Is the tax credit good for all businesses in Vermont?

No. The employer must be in good standing with the Secretary of State, Vermont Department of Taxes, and Vermont Department of Labor. They must also have a valid worker's compensation policy.

Can the tax credit be used by a business outside of Vermont?

The credit is only available to businesses that file state taxes in Vermont.

Is the tax credit good for all positions?

No. The position must be at least 35 hours a week, the position must be held for 45 of the 52 weeks following the hire, and the compensation must be equal to or exceed the prevailing compensation level for that employment sector and region of the state.

Where can I get information about my military service eligibility?

Call the Office of Veterans Affairs at (toll free in-state) 888-666-9844 or 802-828-3379.

Where can I get information about my unemployment status eligibility?

Call the Vermont Dept of Labor Unemployment Claimant Assistance Line at (877) 214-3332.

For veterans using this credit to start a new business, does the veteran have to be the sole owner?

The veteran must hold at least a 50% ownership interest in the business.

For a new business, does the business have to be profitable?

Yes. The business must show a net profit of at least $3,000 for the year in which the credit is taken.

What expenses associated with starting a new business can be counted towards the tax credit?

The following expenses associated with a start-up business, up to a maximum of $2,000, may be deducted:

(A) expenses associated with the development of a business plan;
(B) professional services associated with the formation of the business (e.g., attorney and accounting services);
(C) an analysis or survey of potential markets, products, labor supply, or transportation facilities;
(D) advertisements for the opening of the business;
(E) salaries and wages for employees who are being trained and their instructors;
(F) travel and other necessary costs for securing prospective distributors, suppliers, or customers;
(G) salaries and fees for executives and consultants, or for similar professional services.

Instructions from Office of Veterans Affairs Form 44

1. Complete the Applicant Information portion of the Certification for Unemployed Veteran with Recent Military Service form. Make sure to complete all blocks within this section and to print legibly.

2. Vermont Office of Veterans Affairs (VOVA) will determine if the applicant meets the military service eligibility criteria. Deliver the form to VOVA via:

Mail or In Person: 118 State Street, Montpelier, VT 05620-4401

Fax: (802) 828-5932

Applicants should include a copy of their most recent DD Form 214 to ensure fast and accurate processing. VOVA may require additional documentation necessary to verify eligibility. Approved applications will be stamped by VOVA and returned to the applicant. Disapproved applications will be returned to the applicant by VOVA with the reason for disapproval.

3. The Vermont Department of Labor (VDOL) will determine if the applicant meets the Unemployment eligibility criteria. Applicant will deliver applications approved by VOVA to the local VDOL Resource Center listed below. Approved applications will be stamped by VDOL and returned to the applicant. Disapproved applications will be returned to the applicant by VDOL with the reason for disapproval.

Town	Location	Phone
Barre	McFarland State Office Building, 5 Perry Street, Suite 200	476-2600
Bennington	150 Veterans Memorial Drive, Suite 2	442-6376
Brattleboro	State Office Building, 232 Main Street	254-4555
Burlington	63 Pearl Street	863-7676
Middlebury	1590 Route 7 South, Suite 5	388-4921
Morrisville	197 Harrel Street	888-4545
Newport	Emory E Hebard State Office Building, 100 Main Street, Suite 210	334-3351
Randolph	50 Randolph Avenue (by appointment only)	476-2600
Rutland	200 Asa Bloomer Building	786-5837
St. Albans	20 Houghton Street, Room 101	524-6585

Springfield	56 Main Street, Suite 101	885-2167
White River Jct.	220 Holiday Drive, Suite 28, Gilman Office Center	295-8805

4A. New Hire: After receiving approval from both VOVA and VDOL, provide the form to your new employer. The employer will then file this document with the Vermont Department of Taxes (VTAX), which will also require documentation of employer and position criteria.

4B: New Business: After receiving approval from both VOVA and VDOL, the applicant will provide the form to VTAX when filing your income tax return. Additional documentation will be required to verify eligibility criteria and allowable expenses.

Period of Eligibility

This tax credit is for new hires or new businesses started between May 24, 2011 and December 31, 2012. A credit earned under this section may be claimed in the tax year following the new full-time employee's date of hire, or in the tax year following the date that the start-up business was created, and may be carried forward one year. Appropriate tax forms and instructions to claim this credit may be downloaded from the VTAX website (www.state.vt.us/tax/index.shtml).

Military Service Eligibility Criteria

The date of hire or date of new business start up must be within 24 months of an Honorable or General Discharge from active, federal military service. The veteran must either have been a resident of Vermont at the time of entry into the military or was mobilized to active, federal military service while a member of the Vermont National Guard or other reserve unit located in Vermont.

Unemployment Eligibility Criteria

The applicant must be collecting unemployment benefits, be eligible to collect unemployment benefits, or have exhausted unemployment benefits. For new hires, the applicant must not have been employed by the employer within the past 90 days. Questions regarding Unemployment eligibility criteria can be directed to the VDOL Unemployment Claimant Assistance Line at (877) 214-3332.

Employer Criteria

To be eligible to receive the tax credit, an employer must be in good standing with respect to applicable registration, fee, and filing requirements with the Secretary of State, VTAX, and VDOL. In addition, the employer must have in place a valid workers' compensation policy.

Position Criteria

To be eligible to receive the tax credit, an employer must hire the applicant to a position that provides at least 35 hours per week of work for not less than 45 of the 52 weeks following the date of hire. In addition, the position must provide compensation that equals or exceeds the prevailing compensation level, including wages and benefits, for the particular employment sector and region of the state as determined by the VDOL Commissioner. Employers can determine if a position they have is qualified by visiting the VDOL website (www.labor.vermont.gov/veterans) or calling (802) 828-4153.

New Business Eligibility Criteria

To be eligible to receive the tax credit for a new start up business, the applicant must hold at least a 50% ownership interest in the business and the business must show a net profit of at least $3,000 for the year in which the credit is taken.

New Business Allowable Expenses

The following expenses associated with a start-up business, up to a maximum of $2,000, may be deducted:

(A) expenses associated with the development of a business plan;

(B) professional services associated with the formation of the business (e.g., attorney and accounting services);

(C) an analysis or survey of potential markets, products, labor supply, or transportation facilities;

(D) advertisements for the opening of the business;

(E) salaries and wages for employees who are being trained and their instructors;

(F) travel and other necessary costs for securing prospective distributors, suppliers, or customers;

(G) salaries and fees for executives and consultants, or for similar professional services.

Mail Completed Applications and DD Form 214 to:
Office of Veterans Affairs, 118 State Street, Montpelier, VT 05620-4401
Toll-free: (888) 666-9844; Phone: (802) 828-3379; Fax: (802) 828-5932
Operating Hours: Monday – Friday, 7:30 a.m. – 4:00 p.m.

CERTIFICATION FOR UNEMPLOYED VETERAN WITH RECENT MILITARY SERVICE

In accordance with Act 44 of 2011, employers who hire a recently separated veteran may be eligible to receive a tax credit of $2,000. Veterans who start their own business may receive up to a $2,000 tax credit. Instructions and important eligibility information is attached.

To ensure fast and accurate processing, applicants should include a copy of their most recent DD Form 214.

APPLICANT INFORMATION (PLEASE PRINT LEGIBLY)			
(Print) First Name:	Middle Initial:	Last Name:	
Date of Birth:	Social Security Number:		
Phone:	Email Address:		
Mailing Address:			
Town:	County:	State:	Zip:
Signature:		Date:	

STAFF PROCESSING (VERMONT OFFICE OF VETERAN AFFAIRS STAFF ONLY)	
The applicant above meets the military service requirements for this program. ☐Yes ☐No Authorized VOVA Signature:_____ Printed Name:_____ Eligibility Expires:_____	Application not valid without Office of Veterans Affairs stamp

STAFF PROCESSING (VERMONT DEPARTMENT OF LABOR STAFF ONLY)	
The applicant above meets the criteria relating to the Unemployment provisions for this program. ☐Yes ☐No Authorized VDOL Signature:_____ Printed Name:_____	Application not valid without Vermont Department of Labor date stamp

For more information on the benefits and services available to veterans and their dependents in Vermont, visit:
www.veterans.vt.gov

Instructions

1. Complete the Applicant Information portion of the Certification for Unemployed Veteran with Recent Military Service form. Make sure to complete all blocks within this section and to print legibly.

2. Vermont Office of Veterans Affairs (VOVA) will determine if the applicant meets the military service eligibility criteria. Deliver the form to VOVA via:

Mail or In Person: 118 State Street, Montpelier, VT 05620-4401
Fax: (802) 828-5932

Applicants should include a copy of their most recent DD Form 214 to ensure fast and accurate processing. VOVA may require additional documentation necessary to verify eligibility. Approved applications will be stamped by VOVA and returned to the applicant. Disapproved applications will be returned to the applicant by VOVA with the reason for disapproval.

3. The Vermont Department of Labor (VDOL) will determine if the applicant meets the Unemployment eligibility criteria. Applicant will deliver applications approved by VOVA to the local VDOL Resource Center listed below. Approved applications will be stamped by VDOL and returned to the applicant. Disapproved applications will be returned to the applicant by VDOL with the reason for disapproval.

4A. New Hire: After receiving approval from both VOVA and VDOL, provide the form to your new employer. The employer will then file this document with the Vermont Department of Taxes (VTAX), which will also require documentation of employer and position criteria.

4B: New Business: After receiving approval from both VOVA and VDOL, the applicant will provide the form to VTAX when filing your income tax return. Additional documentation will be required to verify eligibility criteria and allowable expenses.

Period of Eligibility

This tax credit is for new hires or new businesses started between May 24, 2011 and December 31, 2012. A credit earned under this section may be claimed in the tax year following the new full-time employee's date of hire, or in the tax year following the date that the start-up business was created, and may be carried forward one year. Appropriate tax forms and instructions to claim this credit may be downloaded from the VTAX website (www.state.vt.us/tax/index.shtml).

Military Service Eligibility Criteria

The date of hire or date of new business start up must be within 24 months of an Honorable or General Discharge from active, federal military service. The veteran must either have been a resident of Vermont at the time of entry into the military or was mobilized to active, federal military service while a member of the Vermont National Guard or other reserve unit located in Vermont.

Unemployment Eligibility Criteria

The applicant must be collecting unemployment benefits, be eligible to collect unemployment benefits, or have exhausted unemployment benefits. For new hires, the applicant must not have been employed by the employer within the past 90 days. Questions regarding Unemployment eligibility criteria can be directed to the VDOL Unemployment Claimant Assistance Line at (877) 214-3332.

Employer Criteria

To be eligible to receive the tax credit, an employer must be in good standing with respect to applicable registration, fee, and filing requirements with the Secretary of State, VTAX, and VDOL. In addition, the employer must have in place a valid workers' compensation policy.

Position Criteria

To be eligible to receive the tax credit, an employer must hire the applicant to a position that provides at least 35 hours per week of work for not less than 45 of the 52 weeks following the date of hire. In addition, the position must provide compensation that equals or exceeds the prevailing compensation level, including wages and benefits, for the particular employment sector and region of the state as determined by the VDOL Commissioner. Employers can determine if a position they have is qualified by visiting the VDOL website (www.labor.vermont.gov/veterans) or calling (802) 828-4153.

New Business Eligibility Criteria

To be eligible to receive the tax credit for a new start up business, the applicant must hold at least a 50% ownership interest in the business and the business must show a net profit of at least $3,000 for the year in which the credit is taken.

New Business Allowable Expenses

The following expenses associated with a start-up business, up to a maximum of $2,000, may be deducted:

(A) expenses associated with the development of a business plan;
(B) professional services associated with the formation of the business (e.g., attorney and accounting services);
(C) an analysis or survey of potential markets, products, labor supply, or transportation facilities;
(D) advertisements for the opening of the business;
(E) salaries and wages for employees who are being trained and their instructors;
(F) travel and other necessary costs for securing prospective distributors, suppliers, or customers;
(G) salaries and fees for executives and consultants, or for similar professional services.

West Virginia Annotated Code 21A-2C-4 and tax schedule J—the "West Virginia Military Incentive Credit"

C

West's Annotated Code of West Virginia Currentness
Chapter 21A. Unemployment Compensation (Refs & Annos)
Article 2C. Military Incentive Program (Refs & Annos)
➡ § 21A-2C-4. Tax credit; eligibility; amount

(a) Each person, partnership or corporation which employs an economically disadvantaged Vietnam era or Korean conflict veteran or any disabled veteran, or an unemployed member of the West Virginia national guard or a member of the reserve forces of the United States for a continuous period of one year, except as otherwise provided in this article, shall be entitled to an appropriate tax credit for each such individual so employed. In the case of a person or partnership so employing such individuals, the tax credit provided for in this section shall be applied against the employer's personal income tax liability. In the case of a corporation so employing such individuals, the tax credit provided for in this section shall be applied against the corporation's corporate net income tax liability. This tax credit shall be nonassignable and may not exceed an employer's total tax liability with respect to the specific tax against which the tax credit is required to be applied.

(b) The amount of the tax credit allowed under subsection (a) of this section shall be an amount equal to the following:

(1) For each economically disadvantaged Vietnam era or Korean conflict veteran employed as described in subsection (a), the amount of the tax credit allowed shall be thirty percent of the employee's wage base. For the purposes of this section, the employee's wage base is the first five thousand dollars in wages or compensation actually paid to the employee by the employer;

(2) For each disabled veteran employed as described in subsection (a), the amount of the tax credit allowed shall be a percentage equal to the percentage of disability suffered by the veteran multiplied by the employee's wage base. The employee's wage base is the same as provided in subdivision (1) of this subsection. The percentage of disability referred to in this subdivision means the percentage of compensation for service connected disability as determined by the United States department of veterans affairs; and

(3) For each member of the West Virginia national guard or member of the reserve forces of the United States employed as described in subsection (a), the amount of the tax credit allowed shall be twenty-five percent of the employee's wage base. For the purpose of this section, the employee's wage base is the first five thousand dollars in wages or compensation actually paid to the employee by the employer.

Schedule J
Rev. 11/97

WEST VIRGINIA SCHEDULE J

WEST VIRGINIA MILITARY INCENTIVE CREDIT

The purpose of the West Virginia Military Incentive Credit (formerly called the Veterans Employment Credit) is to encourage the employment of veterans and members of the guard and reserve forces in the private sector. This would be accomplished by providing tax credits to qualified employers providing employment to economically disadvantaged veterans, disabled veterans and unemployed members of the West Virginia National Guard and United States Reserve forces.

ELIGIBLE TAXPAYERS

Eligibility for the Military Incentive Credit is limited to employers hiring individuals certified as eligible by the West Virginia Division of Employment Security. The credit typically applies if the eligible individual is employed for a continuous period of one year or more. Certain other restrictions and limitations also apply.

Tax credits will not be available to employers for any individual employed for less than one year of continuous employment. However, if the individual voluntarily leaves employment with the employer; the individual becomes totally disabled and unable to continue his employment; or the individual is terminated for good cause shown, the employer shall be entitled to a partial tax credit in a proportional amount corresponding to the ratio of the time period during which the veteran was actually employed.

The tax credit is not available for the employment of any individual who displaces a person already employed or for the employment of any individual for whom the employer is receiving job training payments from either the federal or state government.

AMOUNT OF CREDIT

For economically disadvantaged veterans hired, the credit available to the employer is 30% of the first $5,000.00 in wages or compensation actually paid the employee. For disabled veterans, the credit is the percentage of disability multiplied by the first $5,000.00 in wages or compensation actually paid the employee. For members of the West Virginia National Guard and United States Reserve forces, the credit is 25% of the first $5,000.00 in wages or compensation actually paid the employee.

Classification	Percentage	x	Wage Base	= Credit
Disadvantaged Veteran	30%	x	$5,000.00	
Disabled Veteran	Disability Percentage	x	$5,000.00	= $1,500.00
National Guard or Reserve	25%	x	$5,000.00	= $0.00 - $5,000.00 = $1,250.00

DEFINITIONS OF QUALIFIED EMPLOYEES

An "Economically Disadvantaged" veteran means a person who:

1. Receives, or is a member of a family which receives, cash welfare payments under a federal, state or local welfare program;

2. Has been certified as eligible by the West Virginia Department of Employment Security and has been employed for a continuous period of one year;

3. Has, or is a member of a family which has, received a total family income for the six months prior to application which, in relation to family size, was not in excess of the high of:
   a. The poverty level determined in accordance with criteria established by the federal office of management and budget; or
   b. Seventy percent of the lower living standard income; or
   c. Is receiving food stamps pursuant to the food stamp act of 1977; or
   d. Is a foster child on behalf of whom local government payments are made; or
   e. Is an adult handicapped individual whose own income meets the requirements of subdivisions 1 and 2 of this subsection, but who is a member of a family whose income does not meet such requirements.

"Korean conflict" veteran means a person who served in the armed services of the United States at least one day during the period of time beginning on the twenty-seventh day of June, one thousand nine hundred fifty, and extending through the thirty-first day of January, one thousand nine hundred fifty five.

"Vietnam era veteran" means a person who served in the armed services of the United States at least one day during the period of time beginning the fifth day of August, one thousand nine hundred sixty-four, and extending through the seventh day of may, one thousand nine hundred seventy-five.

"National Guard member" means a member of any component of the West Virginia National Guard.

"Reserve member" means a member of any component of the reserve forces of the United States.

If you desire additional information about the "Military Incentive Program Act of 1991", you must contact your local Job Service Office or the West Virginia Employment Services Division, 112 California Avenue, Charleston, WV 25305 (304) 558-7849.

INSTRUCTIONS

Enter the name(s) and Identification number shown on your West Virginia State Personal Income Tax return or that shown on the West Virginia Corporation Net Income Tax return.

Enter the employer name and Identification number as it appears on the "Employer Certification" issued by the West Virginia Department of Employment Security.

Column 1 - Enter the Veteran's or member's last name, first name then middle initial on the first line. Enter his or her social security number (SSN) on the second line.

Column 2 - Check the appropriate box. If the veteran or member is disabled, enter the percentage of compensation for service connected disability as determined by the Veteran's Administration of the United States. If the veteran or member is disadvantaged, the legislated thirty percent (30%) limitation has been preprinted. See introduction for definition of "Economically Disadvantaged Veteran". If member of the National Guard or Reserves, the legislated twenty-five percent (25%) limitation has been preprinted.

Column 3 - Enter the Beginning and Ending date of employment during your taxable year for each veteran or member. If the period of employment for a veteran or member is less than one year, then the allowable credit must be prorated as described in the "Column 5" instructions.

Column 4 - Enter the total amount of wages or compensation paid to the veteran or member during the taxable year or $5,000.00, WHICHEVER IS LESS.

Column 5 - Enter the amount of allowable credit for each qualified veteran or member you have employed for the entire taxable year computed by multiplying the amount shown in column 4 by the applicable percentage shown in column 2. If the period of employment is not for the entire taxable year you must also prorate the calculated credit according to the ratio of the employment dates shown in Column 3 to a full one-year period. In other words, if the period of employment was August 1, to December 31 of the taxable year the calculated credit must be multiplied by 5/12.

The maximum credit for each veteran or member is limited to the smallest of either the calculation just described for a partial year of employment or $5,000.00 for a 100 percent "Disabled" veteran or member.

Add lines (a) through (e) of Column 5 and enter the total in the appropriate space. Carry this total over to the appropriate line on your Resident Personal Income Tax Form (IT-140), your Nonresident/Part-Year Resident Form (IT-140NR/PY) or Summary Schedule TC of the West Virginia Corporation Net Income Tax Return.

VETS HELPING VETS

2808 E. TUDOR ROAD, SUITE 3
ANCHORAGE, ALASKA, 99507
907-433-0011

"Making a difference one person at a time"

Date: 22 January 2012

Subject: Support Letter for SB136 Income Tax Credit for Employing Veterans

To whom it may concern,

On behalf of many Alaska Veterans and the Vets Helping Vets organization of Anchorage, Alaska, I am writing this letter of support for the Income Tax Credit for Employing Veterans bill.

My name is Calista Anderson; I am the President of the Vets Helping Vets organization located here in Anchorage at 2808 E. Tudor Rd. , and a proud military (US Army) wife of 17 years. My husband along with many other spouses, sons, daughters and mothers and fathers have made many sacrifices and will continue to do so today and in the future for all the freedoms we enjoy in our way of life today. Many of these are now business owners. Too many have given the ultimate sacrifice! In saying this, every state in America should have such a bill as this put in to motion, but especially here in Alaska with the enormous amount of unemployment we have right here in our own community. Now and always in the future every business should receive a tax credit for hiring veterans, as we will always have veterans in our country. The reason we have the ability to open a business anytime or any place we choose is because of these veterans that ensured we are free, not living under a dictatorship as many countries today are forced to do so. Offering this bill will encourage business owners to hire more veterans, giving them a chance to improve their lives and the chance to get back on their feet, a hand UP, not a hand OUT. Many of our veterans have fallen thru the cracks to many times for too long, providing this tax credit bill to businesses in our state will be a great incentive to reach out to many more veterans and to decrease the percentage rate of unemployed and homeless veterans in Alaska, therefore, giving veterans an opportunity to improve their quality of life as well as for their families. By hiring our veterans and allowing them to learn new trades opens many doors for them and their families to begin a normal way of life, the dream they had when they entered the military to defend our freedoms, the AMERICAN DREAM. Not only will it give business owners a tax credit but in many ways for many people it will give a sense of pride and self-worth that needs to be restored today and for the business owners that tax break that many of them deserve as well. Passing such a bill as this can only benefit our local business

owners and our nation's heroes that deserve that second chance. Employing our veterans and getting them off the streets should always be a priority in our state and across our nation, as "homeless " and "veteran" should never come together in the same sentence. Veterans voluntarily gave up so much of their "normal" way of life to protect ours; allowing business owners to employ them with a tax credit will provide a sense of normalcy and appreciation back to our veterans and some businesses across our great state.

When making your decision to pass this law, please remember that all of our veterans (that are many of our business owners today), gave some, however, some gave ALL.

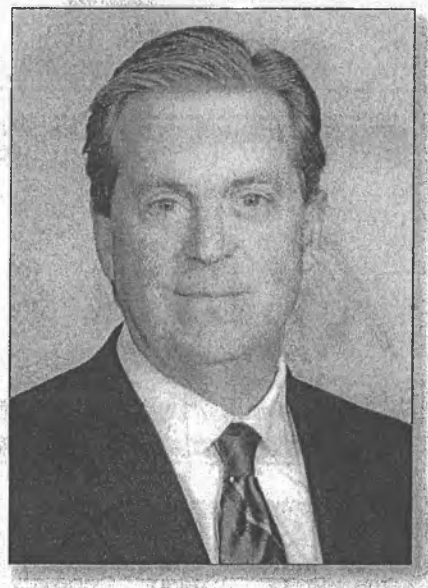
In addition, we are fully supportive also of the Military Training Credit bill as well. This is very important for our military; training is very important and is the very thing that provides our military with the knowledge to continue to keep our country free.

Sincerely,

Calista Anderson

US Army wife and President of Vets Helping Vets of Anchorage, Alaska

Hiring Military Veterans is Good Business



Unemployment rates high for these individuals

By Bill Whitmore

If your company's diversity recruiting strategy fails to include military veterans, you are missing out on working with some of our country's most outstanding men and women. Organizations that fail to recognize the extraordinary leadership qualities veterans bring to the workplace pass up the opportunity to work with results-oriented employees who have a strong sense of accountability and responsibility. It is time for our country's corporate leaders to awaken to the reality that combat leadership and military discipline translate into dynamic employees who can enhance an organization's productivity.

While the national unemployment rate hovers around 9.7 percent for civilians, the unemployment rate for young male veterans, including those returning from Afghanistan and Iraq, is more than double the national average at 21.6 percent, according to the Bureau of Labor Statistics. Isn't it time to shine the employment spotlight on the brave men and women who serve our country?

What essential set of life skills do military veterans bring to corporate America that makes them an indispensable pairing? The military trains our men and women to lead by example, as well as understand the nuances of delegation and motivation. As General Douglas McArthur once said: "A true leader has the confidence to stand alone, the courage to make tough decisions, and the compassion to listen to the needs of others." Military veterans understand the value of teamwork, which they

Bill Whitmore

can apply in our country's offices and board rooms. Veterans understand their role within an organizational framework and serve as exemplary role models to subordinates while demonstrating accountability and leadership to supervisors.

Veterans generally enter the work force with identifiable skills that can be transferred to the business world, and are often skilled in technical trends pertinent to business and industry. And what they don't know, they are eager to learn – making them receptive and ready hires in work environments valuing ongoing learning and training. Veterans represent diversity and collaborative teamwork in action having served with people from diverse economic, ethnic and geographic background – as well as race, religion and gender. Even under dire stress, veterans complete tasks and assignments in a timely manner as they have labored under restrictive schedules and resources on the battlefields and military installations they've served.

Employers can find qualified veterans from a variety of sources including the Employer Partnership of the Armed Forces, Employer Support of the Guard and Reserve, Military.com, HireVeterans.com and the Wounded Warriors Project. Employers can become true partners with selected veterans' organizations and work with them proactively to ensure they are maximizing their ability to recruit from this extremely qualified talent pool.

Lest we forget, the men and women who have chosen to serve our country are patriots who have made enormous sacrifices to ensure our safety and freedom. By employing military veterans, we are saying, "thank you for your service" and for protecting us from terrorism and other threats. ❑

Chapter 904 - Anchorage, Alaska
"An Agenda of Service"

January 19, 2012

Senator Bill Weilechowski
Chairman
Senate State Affairs Committee
Alaska State Legislature

Senator:

As you know we were very much involved in the development of a veteran jobs package in Washington, DC that was finally approved by the Congress and signed by the President. An important component of this package was a tax incentive for American businesses to hire veterans, with some additional incentives for disabled veterans. The incentives start at $2,400 in the federal package.

Like so many Alaskans we have heard time and again about how imposing our state incorporation taxes are. So, in an effort to encourage Alaskan businesses to also hire veterans we were very pleased with your interest in an additional incentive, right here in Alaska to hire veterans.

We strongly support SB 136, and would suggest that the tax credit be at $2,600. This would allow a combined tax credit (federal/state) of $5,000 per veteran hired at a minim of 32 hours a week and retained for most of a year.

With the provision of SB 136, we have shared with bill with 48 other VVA State Council Presidents, and I can report that a number of them have asked their legislators to seriously consider doing the same.

With passage of this bill, Alaska will continue to be viewed nationally as a very veteran friendly state.

I wanted to again thank you for the Town Hall Meeting you and your colleagues held in east Anchorage last year. It was without question one of the best to date and I think those Members of the legislature who attended got something substantive out of it. Certainly SB 136 was one of those ideas presented at that meeting.

It is an honor,

Ric Davidge
President, VVA 904
Also: National Chairman, VVA Govt Affairs Cmte
Former National Chairman, VVA Economic Opportunities Cmte

To: Kendra Kloster
Subject: Re: Military & Veteran Legislation for Next Week

Kendra,

In response to this proposed bill, offering a tax credit to employers, would generated both jobs and greatly enhance the economy for
AK. I am speaking as a Vet who is currently working for the Federal Government. An organization that is currently is cutting jobs and an organization that has not seen growth in a number of years. Also, the opportunity for career enhancement is non existent att. In fact they propose a wage freeze until 2015. This one reason, I would like for the State of AK to take an initiative to spur growth in the private sector for working for the gov offers a minim wage or less and a bleak retirement.

In speaking of the private sector this bill will benefit many veterans who are unemployed or underemployed, as well as, allow
veterans to utilize their training and skills that they have achieved while serving. In fact most new veterans (young ones) are far more
educated were 10 years ago. In addition, this bill will be an initiative for the Oil and Gas Industry who may consider hiring Veterans vs.
individuals who are from the Lower 48.

While looking into the future, will foster the ability to live and work in AK, for there are many young military members who will be looking for
work as the DOD is implementing cost cutting measures, in order to achieve a balance budget. This scenario will play out within the next
two to five years, since the writing is on the wall; i.e. many active duty will be in voluntarily discharged, separated or be asked to
retire, in order to create a streamed line military that is strong/effective/and small in numbers.

Now that the war is so called over in Iraq, and they plan to decommission a number of Brigades, the question is what is our nation going to do when our sons and daughters are required to return home to being a new life and required to re enter the Civ Work force? Having worked with the new and seasoned military members whom have served for a few years, tend to forget what Civ Life has to offer and there is many culture differences in the work place; The young ones tend to forget what it is like to be a Civ and recognize the worth of the older and experienced Veterans who work shoulder to shoulder in order to accomplished the mission.

Bottom line if AK desires to maintain its future and ability to function as a state, it must create insensitive that will offer and open system
that will provide the ability for its Veterans to work and live in AK, as well as, have the ability to live the American dream (Have a career, family, home and live their life comfortably over time). If this initiative is over looked then we will see our kids and grand kids migrating to the lower 48. All this is left will be those who are living from pay check to pay cheek and those who require state assistance. On a personal note, I did not go to school and server my country in order to live in poverty and live in fear of not being able to retire.

When speaking of initiating the Hero's Act 2011, this program will be beneficial to all who is involved. It allows veterans to complete a transformation of their military careers into the Civ Sector with limited limitations. Most veterans now days are married and have children. The thought of returning to school, in order to find employment or better themselves is often impossible. This is due to the fact, funds are not available after being discharged. Furthermore, most young GI have spousal units who are young themselves and have small children in tow. Only one can return to school at a given time. Secondly, in most cases, the idea of daycare is not an option.

If an individual can access a professional position or allowed to reenter their profession (trade), with limited requirement, it is a win win situation for both the State and the Veteran, otherwise the family will be required to seek state assistance, which can be be challenging at times, since support often equates to control and after being in the military for years, this can create animosity. The Hero's Act will offer skilled professionals who will be able to enter the work force with out the need of extensive training requirement which for an employer, training is major cost and can determine one's long term ability to survive in a volital economy, esp now days. Lastly, the idea and the ability to find employment shortly after being discharge is a moral booster for the fact a Veteran is able to survive and make a living for themselves and their and family, (Work equates to self worth and pride, as well as, securing the ability to maintain emotional and financial security). The idea of being financially disposed and the idea of having to live with family, in order to survive is not pleasant.

If you have any questions, please send a reply. It has been a long cold January and I am ready for spring...I have many irons in the fire; however, I am like many Alaskans who are praying and waiting for the legislators to pave the way, which will build a better economy than what we have experienced in the last few years.
PS I hope I am not late but I have been busy at work, as well as, at home. It actually warmed up today and it felt good.

Thank you for your time and assistance.

Why this fiscal note differs from previous version (if initial version, please note as such)

As there are existing trainings modules available at no cost to school districts, regional educational attendance areas and the department, there will be no need for additional funding. Therefore, the Department has reduced the fiscal impact to zero.

Approved by: Mike Hanley, Commissioner — Date: 1/30/2012

(Revised 8/17/2011 OMB)

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB137

Analysis

The legislation would require annual two hour suicide awareness and prevention training for each teacher, administrator, counselor and specialist who is employed by a district, regional educational attendance area, or department teaching grades 7-12.

The short title of SB 137 is Jason Flatt Act, which is a reference to a student who committed suicide in Tennessee. Jason's father then created the Jason Foundation. The foundation is a non-profit suicide prevention organization. The Jason Flatt Foundation currently has four modules available free online with each module being two hours long.

Additionally there are other commercially available products that the Department would consider for approval if school districts are interested in using them. One available product, that the Department will approve, is Kognito At-Risk, an evidence based and rigourousl y evaluated best practice training.

Senator Bettye Davis

SB 137, 27-LS0994\M – "An Act requiring suicide awareness and prevention training for certain school personnel."

SPONSOR STATEMENT

This bill, short titled the Jason Flatt Act, requires mandatory youth suicide awareness and prevention training approved by the Commissioner, Department of Education and Early Development to each teacher, administrator, counselor, and specialist who is employed by a school district, regional educational attendance area, or department each year for services to students in grades 7-12. Training is important because suicide is the 3rd leading cause of death for ages 10-24 and the number one cause of death for Alaskans under the age 50 years.

Awareness and education are key to prevention. Tying suicide prevention efforts into teacher training has proved very helpful in other states in reducing teen suicides. Most young people contemplating suicide show clear warning signs prior to the attempt. It is imperative that educators know how to recognize signs of at-risk youth and are prepared to intervene when they identify a problem.

Recognizing that Alaska has by far the highest rate of suicide per capita in the country, particularly among teens, young men, and Alaska Natives, the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, in partnership with the Statewide Suicide Prevention Council, the Alaska Association of Student Governments, the University of Alaska, and the Jason Foundation have established goals, training programs, and resources for teachers, coaches, and staff in suicide prevention.

The Alaska Bureau of Vital Statistics 2000-2009 reported the following suicide facts and statistics:

- 21.8 suicides per 100,000 Alaskans; vs. 11.5 suicides per 100,000 nationwide
- 56.1 suicides per 100,000 Alaskan young men ages 15-24, and 141.6 Native young men and 50.3 young women in same age group.
- 1369 suicides in 176 Alaska communities between 2000 and 2009; 11 per month; 2.6 per week

- 78% of suicides were committed by men and 22% by women who made twice as many but many more failed attempts
- 90% of suicide victims experience depression or have diagnosable and treatable mental health or substance abuse disorders

The 2011 Youth Risk Behavior Survey revealed that in the last 12 months:

- 12.8% Alaska High School students reported they seriously considered suicide
- 8.7% Alaska High School Students actually attempted suicide one or more times
- 2.7% Alaska High School Students –attempted suicide resulting in injury, poisoning, or overdose treated by a doctor or nurse

Just as "it takes a village to raise a child," it takes parents, teachers, mentors, and communities to support efforts to reduce suicides by developing environments of respect and connectedness among youth and adult role models. This will create in youth the needed hope, promise, and optimism to build healthy and appropriate relationships and behaviors. By requiring – and making resources available for – suicide prevention training for educators and school staff through this bill, the state of Alaska can ensure that youth at risk of suicide are more likely to be identified and receive help.

Alaska has many state agencies, non-profits, private citizens, health care providers, and policy makers working on this problem with programs and materials. This bill is but one part of suicide prevention which has proven successful in other states. The Jason Foundation which was named after the tragic loss of the founder's son to suicide has made available to Alaska and a limited number of other states its library of suicide awareness and prevention training materials free of charge.

Not only will this bill and community efforts reduce suicides, particularly among vulnerable youth, but it will also reduce the number of self-inflicted injuries occasioned in over 1200 hospitalizations per year due to suicide attempts at cost of $9,000 per case excluding physicians' and specialists' fees, as researched and reported by the Alaska Mental Health Trust Authority in 2001-2002. The same research found 75% of the costs of Alaska suicide hospitalizations were paid through public funding sources and 15% were written off as losses by hospitals.

Suicides and attempted suicides have taken an incalculable toll on individuals and families in Alaska. The burden of this tragedy is shared by society as a whole. With all of our efforts the numbers have not decreased very much over the years. This bill, admittedly not a solution by itself, will help reduce the "silent epidemic" of youth suicide through educational and awareness programs that equip young people, educators and parents with the tools and resources to help identify and assist at-risk youth.

Alaska Association of Student Governments
Resolution #5 (PASSED)
Requirement for Teachers to receive Suicide Prevention Training
By Donald Handeland and Tessa Baldwin

Be it resolved by the Alaska Association of Student Governments:

1. Whereas, Alaska has the highest suicide rates in the nation,
2.Whereas, people between the ages of 15-22 commit the majority of the
3.suicides which is the age group that are in high school
4.Whereas the signs of potential suicide can be unrecognizable,
5.Whereas, in Alaska most teachers are not required to get suicide
6.prevention training,
7.Whereas, teachers interact with students on a daily basis,
8.Whereas, the State of Alaska doesn't require teachers to receive suicide
9.prevention training,
10.Whereas, resources are available for training, like Kognito online training,
11.Whereas, schools usually provide grief counseling immediately after a
12.suicide, but its tends to eventually be discontinued,
13.Therefore be it resolved by the Alaska Association of Student
14.Governments that the State of Alaska look into developing a system to
15.require all teachers in Alaska to participate in a suicide prevention
16.program.

Action statement: if passed by the Alaska Association of Student Governments, this resolution will be sent to the Statewide Suicide Prevention Council as well as the State Board of Education and Early Development.

Alaska Commissioner of Education and Early Development

- The Jason Flatt Act -

A legislative Act to require suicide awareness and prevention training for educators within the In-Service / Certification Requirements of a State.

No Fiscal Note Implementation Report

The Jason Flatt Act should be implemented without a fiscal note. A state will find that once passed, various organizations within their state that already have programs in suicide awareness and prevention are excited about being able to provide those programs at no-charge to schools / educators. Such organizations include Crisis Intervention Services, NAMI, Mental Health America, mental health cooperatives, mental health facilities, state mental health agencies, and school counselors. Many non-profits, such as The Jason Foundation and American Foundation for Suicide Prevention, provide suicide awareness and prevention training programs at no-charge. These organizations can either directly provide the training services or provide resources for school personnel to provide such training.

One question always arises concerning passage of a Bill requiring training without a fiscal note attached and relying on the above scenario for training support. "What about that rural / remote school that does not have access to such organizations?" How can they satisfy a state requirement on training without having to pay for such training? If "The Jason Flatt Act" is passed as the template for the legislation, The Jason Foundation will provide that state access, **without charge**, to their web-based "Library of Training Modules" which will satisfy the training requirements as set forth in the Bill. A teacher / educator only needs access to a high-speed internet connection to access the training and at the conclusion of the module take a brief Summary Test. A certificate of completion will then be emailed to the participant to provide to their school or school district as proof of training. It is important, however, to stress The Jason Flatt Act does not single out any specific training program as the "required or suggested" program to be utilized. The offer by The Jason Foundation to supply its On-Line Library of Training Modules to a state who passes The Jason Flatt Act is done as assurance that the Bill's required training can be supplied without a fiscal cost to the state, school or school district. We have found that not only rural / remote schools appreciate the ability to do the training on-line at their convenience, but many schools choose to annually utilize the On-Line Training or DVD Facilitator Packet for training.

This explanation on passage of The Jason Flatt Act without a fiscal note is more than "theory" or that we believe it will work this way. Out of the six states which have already passed The Jason Flatt Act, five of those states have passed it without a fiscal note attached. In each state it has functioned as outlined above without any problems of the schools / educators having access to such training and without a cost to the school, educator, school district or state. (The only state to pass The Jason Flatt Act with a fiscal note was California which requires all Bills with mandates to have a fiscal note attached.) Not only have these states implemented The Jason Flatt Act without a fiscal note; it has functioned several years as such, proving sustainability, too. Those states are:

- **Tennessee** – The Jason Flatt Act passed without a fiscal note in 2007. Since passage, over 74,000 educators each year have received training in youth suicide awareness and prevention without a fiscal note.
- **Louisiana – passed in 2008**
- **Mississippi – passed in 2009**
- **Illinois – passed in 2010**
- **Arkansas – passed in 2011**

All states above have passed and maintained The Jason Flatt Act without a fiscal note.

The Jason Foundation, Inc.

The Jason Foundation, Inc. (JFI) is a national non-profit leader in the awareness and prevention of youth suicide. Founded in 1997, JFI has 87 Regional Affiliate Offices located in 34 states that serve all fifty states. The Jason Foundation trains more educators in youth suicide awareness and prevention than any non-profit in the nation (over 150,000 in 2011).

The Jason Foundation's Board of Directors is a national representation with 18 members. Two of the Board members are current state Attorneys General and three former Attorneys General serve on the Board as well as the CAO of Walmart and the President of Ohio State University.

MEMORANDUM January 24, 2012

SUBJECT: Sectional Summary (SB 137 (Work Order No. 27-LS0994\M))

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Requires public school districts, regional educational attendance areas, and the Department of Education and Early Development to provide approved youth suicide awareness and prevention training to school personnel. Specifies standards for training approval by the Commissioner of Education.

Senator Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

Re: Letter of Support for Senate Bill 137 – Suicide Awareness and Prevention Training

Dear Senator Davis,

On behalf of the Statewide Suicide Prevention Council, I express support for SB 137, a Jason Flatt Act, requiring two hours of training for certain educators and school personnel. As you know, one of the groups of Alaskans most at risk for suicide are youth age 15-24.[1] To connect with this high-risk group, suicide prevention must be part of the education system.

Research shows that, when educators and staff are equipped with the skills and support to identify when a student is at risk and properly intervene, lives are saved. This is why the Council endorsed the state suicide prevention strategy mandating training for **all school district personnel.** Children and youth interact with more than just their teachers at school -- coaches, cafeteria staff, maintenance staff, librarians, and others all have the chance to support a student and save a life. By requiring suicide prevention training, SB 137 will help ensure that youth experiencing depression, hopelessness, and other risk factors associated with suicide are identified and connected with the help they need before they attempt suicide.

There are many resources available to support this effort. Some are even available at little or no cost to school districts. The Jason Foundation offers training and resources for school personnel at no cost to the school or teachers. The Division of Behavioral Health offers Gatekeeper trainings, also at no cost. In the FY13 proposed budget, there is funding to support a three year pilot for evidence-based training through a web-based program. Kognito Interactive offers interactive online training, At-Risk, for high school and university educators and staff (as well as other health education training).

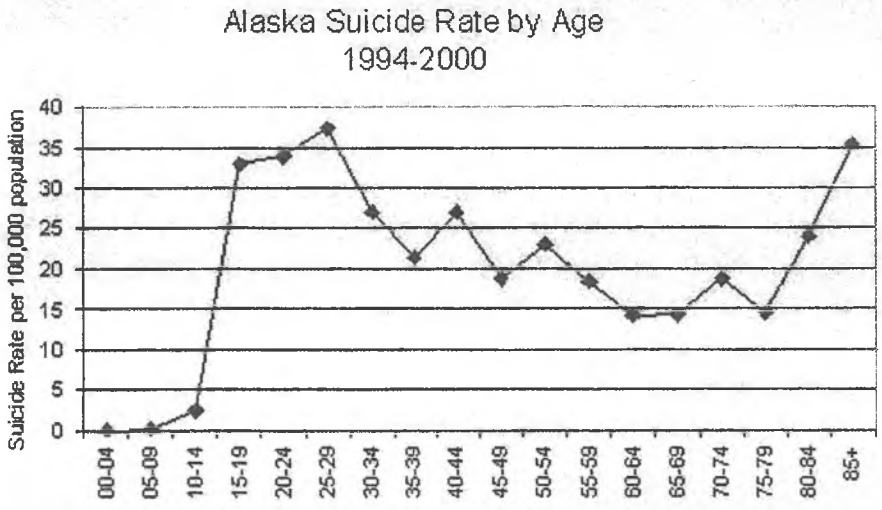
The Council supports SB 137 and the policy of requiring suicide awareness and prevention training for school personnel. We thank you for your work on behalf of Alaskans, especially our youth.

Sincerely,

J. Kate Burkhart
Executive Director

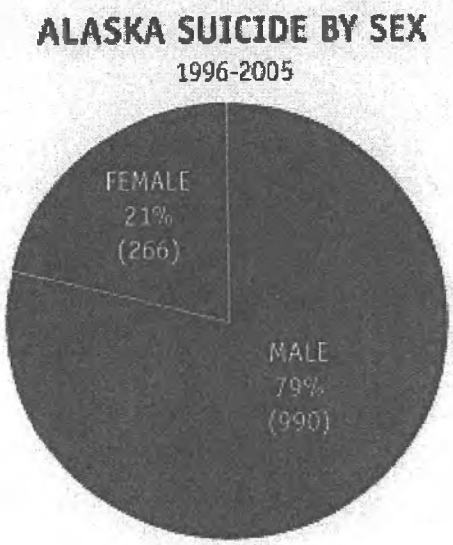
cc: William Martin, Chairman

[1] The age-adjusted rate of suicide for young men age 15-24 in Alaska between 2000-2009 was 56.1/100,000.



Alaska Suicide Facts and Statistics

- Alaska has the highest rate of suicide per capita in the country.
- The rate of suicide in the United States was 11.5 suicides per 100,000 people in 2007. In 2007, Alaska's rate was 21.8 suicides per 100,000 people. The rate of suicide among Alaska Native peoples was 35.1 per 100,000 people in 2007.
- Alaska had 1,369 suicides between 2000 and 2009, an average of 136 deaths by suicide per year. The highest number of suicides, 167, occurred in 2008. The lowest number, 123, occurred in 2003. That is an average of about 2.6 suicides in Alaska every week, or more than 10 a month.
- At least one suicide occurred in 176 Alaskan communities between 2000 and 2009.
- About 78% of suicides in Alaska are committed by men and 22% are committed by women, according to the Suicide Prevention Resource Center.
- Alaska Native men between the ages of 15-24 have the highest rate of suicide among any demographic in the country, with an average of 141.6 suicides per 100,000 each year between 2000 and 2009.
- Youth who are exposed to suicide or suicidal behaviors are more at-risk for attempting suicide, according to the American Association of Suicidology.
- Suicide deaths consistently outnumber homicide deaths by a margin of three to two, according to the American Association of Suicidology.
- More than 90% of people who die by suicide have depression or another diagnosable, treatable mental or substance abuse disorder, according to American Association of Suicidology.



Information is from the Alaska Bureau of Vital Statistics unless otherwise specified.

Alaska Suicide Attempts

RECOMMENDATIONS FOR REPORTING ON SUICIDE

Developed in collaboration with: American Association of Suicidology, American Foundation for Suicide Prevention, Annenberg Public Policy Center, Associated Press Managing Editors, Canterbury Suicide Project - University of Otago, Christchurch, New Zealand, Columbia University Department of Psychiatry, ConnectSafely.org, Emotion Technology, International Association for Suicide Prevention Task Force on Media and Suicide, Medical University of Vienna, National Alliance on Mental Illness, National Institute of Mental Health, National Press Photographers Association, New York State Psychiatric Institute, Substance Abuse and Mental Health Services Administration, Suicide Awareness Voices of Education, Suicide Prevention Resource Center, The Centers for Disease Control and Prevention (CDC), and UCLA School of Public Health, Community Health Sciences.

IMPORTANT POINTS FOR COVERING SUICIDE

- More than 50 research studies worldwide have found that certain types of news coverage can increase the likelihood of suicide in vulnerable individuals. The magnitude of the increase is related to the amount, duration and prominence of coverage.
- Risk of additional suicides increases when the story explicitly describes the suicide method, uses dramatic/graphic headlines or images, and repeated/extensive coverage sensationalizes or glamorizes a death.
- Covering suicide carefully, even briefly, can change public misperceptions and correct myths, which can encourage those who are vulnerable or at risk to seek help.

Suicide is a public health issue. Media and online coverage of suicide should be informed by using best practices. Some suicide deaths may be newsworthy. However, the way media cover suicide can influence behavior negatively by contributing to contagion or positively by encouraging help-seeking.

Suicide Contagion or "Copycat Suicide" occurs when one or more suicides are reported in a way that contributes to another suicide.

References and additional information can be found at: www.ReportingOnSuicide.org.

INSTEAD OF THIS:	DO THIS:
• Big or sensationalistic headlines, or prominent placement (e.g., "Kurt Cobain Used Shotgun to Commit Suicide").	• Inform the audience without sensationalizing the suicide and minimize prominence (e.g., "Kurt Cobain Dead at 27").
• Including photos/videos of the location or method of death, grieving family, friends, memorials or funerals.	• Use school/work or family photo; include hotline logo or local crisis phone numbers.
• Describing recent suicides as an "epidemic," "skyrocketing," or other strong terms.	• Carefully investigate the most recent CDC data and use non-sensational words like "rise" or "higher."
• Describing a suicide as inexplicable or "without warning."	• Most, but not all, people who die by suicide exhibit warning signs. Include the "Warning Signs" and "What to Do" sidebar (from p. 2) in your article if possible.
• "John Doe left a suicide note saying...".	• "A note from the deceased was found and is being reviewed by the medical examiner."
• Investigating and reporting on suicide similar to reporting on crimes.	• Report on suicide as a public health issue.
• Quoting/interviewing police or first responders about the causes of suicide.	• Seek advice from suicide prevention experts.
• Referring to suicide as "successful," "unsuccessful" or a "failed attempt."	• Describe as "died by suicide" or "completed" or "killed him/herself."

AVOID MISINFORMATION AND OFFER HOPE

- Suicide is complex. There are almost always multiple causes, including psychiatric illnesses, that may not have been recognized or treated. However, these illnesses are treatable.
- Refer to research findings that mental disorders and/or substance abuse have been found in 90% of people who have died by suicide.
- Avoid reporting that death by suicide was preceded by a single event, such as a recent job loss, divorce or bad grades. Reporting like this leaves the public with an overly simplistic and misleading understanding of suicide.
- Consider quoting a suicide prevention expert on causes and treatments. Avoid putting expert opinions in a sensationalistic context.
- Use your story to inform readers about the causes of suicide, its warning signs, trends in rates and recent treatment advances.
- Add statement(s) about the many treatment options available, stories of those who overcame a suicidal crisis and resources for help.
- Include up-to-date local/national resources where readers/viewers can find treatment, information and advice that promotes help-seeking.

SUGGESTIONS FOR ONLINE MEDIA, MESSAGE BOARDS, BLOGGERS & CITIZEN JOURNALISTS

- Bloggers, citizen journalists and public commentators can help reduce risk of contagion with posts or links to treatment services, warning signs and suicide hotlines.
- Include stories of hope and recovery, information on how to overcome suicidal thinking and increase coping skills.
- The potential for online reports, photos/videos and stories to go viral makes it vital that online coverage of suicide follow site or industry safety recommendations.
- Social networking sites often become memorials to the deceased and should be monitored for hurtful comments and for statements that others are considering suicide. Message board guidelines, policies and procedures could support removal of inappropriate and/or insensitive posts.

MORE INFORMATION AND RESOURCES AT:
www.ReportingOnSuicide.org

HELPFUL SIDE-BAR FOR STORIES

WARNING SIGNS OF SUICIDE

- Talking about wanting to die
- Looking for a way to kill oneself
- Talking about feeling hopeless or having no purpose
- Talking about feeling trapped or in unbearable pain
- Talking about being a burden to others
- Increasing the use of alcohol or drugs
- Acting anxious, agitated or recklessly
- Sleeping too little or too much
- Withdrawing or feeling isolated
- Showing rage or talking about seeking revenge
- Displaying extreme mood swings

The more of these signs a person shows, the greater the risk. Warning signs are associated with suicide but may not be what causes a suicide.

WHAT TO DO

If someone you know exhibits warning signs of suicide:

- Do not leave the person alone
- Remove any firearms, alcohol, drugs or sharp objects that could be used in a suicide attempt
- Call the U.S. National Suicide Prevention Lifeline at 800-273-TALK (8255)
- Take the person to an emergency room or seek help from a medical or mental health professional

THE NATIONAL SUICIDE PREVENTION LIFELINE
800-273-TALK (8255)

A free, 24/7 service that can provide suicidal persons or those around them with support, information and local resources.

MIKE DINGMAN: Legislators should come together on suicide prevention bill

By Mike Dingman | Posted: Friday, January 27, 2012 5:32 pm

This year, even early on in the current legislative session, there is a lot of talk of oil taxes, productivity of the Alyeska Pipeline and other important issues. However, another important issue being moved through committees this year is that of suicide education for teachers around the state.

According to the National Conference of State Legislatures:

19.3 percent of high school students have seriously considered killing themselves.

14.5 percent of high school students made actual plans for committing suicide,

900,000 youth planned their suicides during an episode of major depression.

Senate Bill 137 will provide teachers with education about suicide to help save the lives of our children. By giving teachers the tools to notice early warning signs of suicide they can intervene and hopefully provide these children with the help they need.

Cynthia Curran of the Department of Education and Early Development said in the Senate Education Committee meeting that this would happen through an "E-Learning" module that would allow teachers to access this training on their own time.

Many of us have been touched by suicide. Its effects reverberate throughout a community. Taking one's own life may seem an easy way out, but it can be very difficult on those that you leave behind. Those who are left often feel guilt, sadness and confusion. They wonder what it is they could have done to help, before depression led to tragic consequences.

The front page of the State of Alaska Department of Health and Social Services webpage lists no resources for suicide prevention. The resources are provided, but you have to dig into the website to find them.

Alaska has, however, taken some important steps towards the end of preventing suicides. The Alaska Suicide Prevention Council was created in October of 2001 with a mission of "reducing the incidence of suicide and non-lethal suicidal behavior in Alaska."

The 2010 report by the Statewide Suicide Prevention Council shows the overall suicide rate as twice the national average, and that Alaska Natives continue to account for an even more disproportionate number of that.

Remind the people close to you how important they are to you. Show them your love and affection; help everybody to understand that their life is sacred and that you are there for them if they need support. Help them reconnect spiritually if they have lost their course, and treat them with the caring and compassion that their life dictates.

If you know someone who is, or may be in crisis, make sure they find help. Some risk factors to look for are: joking around about suicide, previous suicide attempts, trouble eating or sleeping, drastic changes in behavior, taking unnecessary risks, withdrawing from friends and activities, increased use of alcohol or drugs and dramatic changes in appearance.

While the legislature is busy fighting partisan fights over oil taxes and other issues, it is important that Republicans and Democrats alike can come together over a bill so simple, that can save countless number of lives.

Mike Dingman is a fifth generation Alaskan born and raised in Anchorage. He is a former student body president at UAA and has studied, worked and volunteered in Alaska politics since the late '90s. He can be reached at michaeldingman@gmail.com

CASTING THE NET UPSTREAM: PROMOTING WELLNESS TO PREVENT SUICIDE

Alaska State Suicide Prevention Plan

Statewide Suicide Prevention Council
William Martin, Chairman
Sean Parnell, Governor

Acknowledgements and Appreciation

This state plan for reducing suicide in Alaska is truly the result of statewide effort by individuals and organizations all over our state. We would like to thank the following people for their contributions, expertise, wisdom, and support throughout this planning process:

James Sipary • Dr. Rita Blumenstein • Sam Trivette • Gayle Trivette • Paul O'Brien • Kimberlee Jones • Bernard Gatewood • Alvin Jimmie • Audrey Saganna • Dr. Mark Erickson • Thomas Chard • Ella Craig • Dr. James Allen • Susan Soule • Iva Greywolf • Andrew Jessen • Patrick Sidmore • Margaret "Peggy" West • Phyllis Rhodes • Matt Sena • Bryson Corbett • Dr. Jay Butler • Doug Harris • Kyla Hagan • Eric Boyer • Gary Ferguson • Lt. Kris Sell • Michelle Woods • Bridie Trainor • Jessie Dybdahl • Brendan Kiernan • Barbara Martin • Col. Audie Holloway • Michael Kerosky • Eric Holland • Jim Biela • Carol Waters • Nina Allen • Amanda Murdoch • Chris Gunderson • Officer Wendi Shackelford • Scott Saxon • Ian Erlich • Amber Latham • TJ Wocasek • Russell Overman • Karen Forrest • Randall Burns • Dr. Ephraim Palermo • William Hogan • Patricia Harding • Mary Russell • Bob Curtis • Liz Moore • Elizabeth Hensley • Matt Lazarus • Doug Modig • Bruce Alver • Rep. Reggie Joule • Linda Joule • Sgt. Duane Stone • Stan Hawling • Brian Laurent • Renee Schofield • Mary Sullivan • Hillary Strayer • Ariel Zlatkovski • Geordie Sherrick • Ann Brainerd • Larry Ledoux • Patrick Hefley • Jim Henkelman • Joan Boltz • Reynold Okitkun • Sally Rue • Patrick Anderson • Sarah Dewane • Richard Nault • Karen Shaff • Chris Washko • Kalynn Peak • Mindy Cason • Stephanie McPeeks • Cynthia Erickson • Dr. Kathy Graves • Francine Harbour • Marlene Adams • Katie Baldwin-Johnson • Patty Owen • Diane Casto • James Gallanos • Wilbur Brown • Sharon Fishel • Christian Montean • Joe Yates • Paul John • Kendra Kloster • Desiree Compton • Joe Davis • Joseph Felix • Larson King • Thomas Jumbo • John Abraham • Suzy Walter • Mr. Pete Peter • Bobbi Outten • Myron P. Naneng, Sr. • Dr. Stacy Rasmus • Bill Charles • Diane Bensen • Glen Ramos • Doreen Shumacher • Beth Smart • Laura Brooks • Jeanine Sparks • Christian Stettler • Michelle Faison • Brian Houston • Lance Brown • Scott Ciambor • Teri Tibbett • Brittany Arey

Statewide Suicide Prevention Council

Letter from William Martin, Chairman

Statewide Suicide Prevention Council

Friends,

Suicide is such a painful, personal issue that it is often too hard to think about, which makes solving the problem of suicide seem impossible. I am so grateful that brave people from all over our great state are speaking openly about suicide and how it affects our families and communities. Thanks to this more open and honest conversation about suicide, Alaska has a new state plan of action for preventing suicide.

We started the process of updating Alaska's state suicide prevention plan in January 2010 with the *Mending the Net* Statewide Suicide Prevention Summit. The work that was done at that summit, and for months after, helped us see that our suicide prevention system had just as many strengths as it did weaknesses. Together, we were able to start to build a more coordinated and comprehensive approach to preventing suicide. And we were able to bring the excellent work of our tribal organizations and the suicide prevention efforts of state and local organizations together in a new way. This was the foundation for a broad and inclusive planning process driven by the **people of Alaska**.

We call this plan *Casting the Net Upstream* because, in addition to helping someone in crisis, Alaskans have to focus on what is happening during life that can lead a person to being at risk for suicide. It is based on an idea – a prevention parable – long used in public health systems. The further up the wellness stream you go to intervene, the more likely you are to avoid serious health problems like suicide.

Casting the Net Upstream is a **plan of action.** Every single Alaskan has a job to do if we are going to prevent suicide in our families, schools, work places, and communities. We have provided resources and information to help individuals, communities, and the State of Alaska take action to achieve these goals and objectives. We hope that you will read the plan, and then you will use it to help build stronger, healthier communities.

Every life matters. Your life matters. And you are not alone.

Together, we can prevent suicide and save lives.

Table of Contents

Parable of the River.....1

Introduction.....2

Goal 1: Alaskans Accept Responsibility for Preventing Suicide.....4

Strategy 1.1 ~ Alaskans learn and understand that suicide is preventable.....4

Strategy 1.2 ~ Alaskan adults and elders choose healthy, responsible lifestyles in order to serve as role models for younger generations.....5

Strategy 1.3 ~ Alaskan youth seek out healthy and appropriate relationships with role models in their community.....6

Strategy 1.4 ~ Communities will develop environments of respect, value, and connectedness for all members.....7

Strategy 1.5 ~ Communities will engage parents and other mentors important in the lives of children and youth in health promotion efforts.....9

Strategy 1.6 ~ Communities will prioritize building protective factors and resiliency in all comprehensive prevention efforts.....9

Strategy 1.7 ~ Communities will participate in efforts to destigmatize suicide and accessing treatment for mental health crises.....10

Strategy 1.8 ~ Community organizations will offer supports to promote healthy families.....11

Strategy 1.9 ~ The State of Alaska will support peer-to-peer wellness promotion and supports as an integral part of health promotion and suicide prevention.....12

Goal 2: Alaskans Effectively and Appropriately Respond to People at Risk of Suicide.....13

Strategy 2.1 ~ Alaskans know how to identify when someone is at risk of suicide and how to respond appropriately to prevent a suicide.....13

Strategy 2.2 ~ Alaskans know about Careline and other community crisis lines, and can share that information with others.....14

Strategy 2.3 ~ Providers of services to veterans will prioritize suicide prevention screenings and effective interventions.....14

Strategy 2.4 ~ Spiritual leaders will encourage suicide prevention awareness and training in their communities of faith/belief.....16

Strategy 2.5 ~ The primary health care system will prioritize suicide prevention screenings.....17

Strategy 2.6 ~ School districts will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance use, violence, depression, etc.).....17

Strategy 2.7 ~ Senior services providers will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance abuse, violence, depression, etc.).....18

Strategy 2.8 ~ The State of Alaska and its partners will engage village police and public safety officers in developing tailored community based responses and protocols for responding to crises.....19

Goal 3: Alaskans Communicate, Cooperate, and Coordinate Suicide Prevention Efforts.....20

Strategy 3.1 ~ Communities will partner with non-traditional organizations to raise awareness about limiting access to lethal means.....20

Strategy 3.2 ~ The State of Alaska and its partners will make training in evidence-based suicide prevention and intervention models accessible to all interested Alaskans.....21

Strategy 3.3 ~ The State of Alaska will mandate evidence-based suicide prevention and intervention training for all school district personnel.....22

Strategy 3.4 ~ Communities will develop wellness coalitions that include suicide prevention in their mission/area of focus.....23

Strategy 3.5 ~ Community suicide prevention efforts will expressly address the contributing factor of substance abuse.....24

Strategy 3.6 ~ The State of Alaska will coordinate all prevention efforts across all departments and divisions, to ensure that Alaska has a comprehensive prevention system that recognizes the "web of causality" implicated in suicide, substance abuse, domestic violence, bullying, child abuse, teen risk behaviors, etc.....25

Strategy 3.7 ~ The State of Alaska will balance the policy of comprehensive and integrated prevention with the use of evidence based practices to achieve verifiable outcomes reducing the impact of suicide, substance abuse, violence, sexual abuse, and mental illness on communities.....26

Strategy 3.8 ~ The State of Alaska will provide financial and technical support for innovative, research-based suicide prevention practices.....27

Strategy 3.9 ~ The State of Alaska will coordinate and support stigma reduction efforts around mental illness, addiction, depression, and suicide.....28

Goal 4: Alaskans Have Immediate Access to the Prevention, Treatment, and Recovery Services They Need.....29

Strategy 4.1 ~ Alaskans know who to call and how to access help — and then ask for that help — when they feel like they are in crisis and/or at risk of suicide.....29

Strategy 4.2 ~ Community behavioral health centers will provide outreach to ensure that community members know what services are available and how to access them.....29

Strategy 4.3 ~ Community health providers will offer bridge services for young people identified as experiencing serious emotional disturbance, other behavioral health disorders after age 18-21.....30

Strategy 4.4 ~ The State of Alaska and its partners will, through StopSuicideAlaska.org, create and support a learning network among communities to share ideas and strategies that work.....30

Goal 5: Alaskans Support Survivors in Healing.....31

Strategy 5.1 ~ Survivors of a loss to suicide know about suicide prevention resources and how to participate in suicide prevention efforts that support their own healing.....31

Strategy 5.2 ~ The State of Alaska will provide resources, tools, and technical support for community postvention efforts, with emphasis on natural, organic responses developed in the community.....31

Goal 6: Quality Data and Research is Available and Used for Planning, Implementation, and Evaluation of Suicide Prevention Efforts.....32

Strategy 6.1 ~ The State of Alaska will improve statewide suicide data collection efforts, employing epidemiological standards/models to ensure quality reporting, analysis, and utilization for timely data driven policy decisions.....32

Strategy 6.2 ~ The State of Alaska will partner with tribal and academic organizations to continue to explore and research the "web of causality" of suicide, prioritizing the health and environmental factors affecting high-risk populations.....33

Strategy 6.3 ~ The State of Alaska, with its partners, will evaluate the effectiveness of crisis intervention models and responses in use in Alaska.....34

Conclusion.....35

The Parable of the River

There once was a village along a river. The people there were good and kind, and life was good there. One day, a villager noticed someone floating down the river. He quickly dove into the river, swimming out to rescue the person from drowning. He dragged the person onto the bank, saving a life.

The next day, the same villager noticed two people floating down the river. He called for help. Another villager came running. Together they saved both people from the river. The next day, there were four people caught in the river, and the next day, eight people!

The good and kind villagers organized themselves to save as many of the people as possible. They built a watchtower, to better see the people rushing by in the river. They trained their strongest villagers to swim through the swift waters. Soon, they had watchers and rescue teams working all day and all night. And yet, each day more and more people came down the river.

The good and kind villagers rescued many people, but there were just too many coming down the river. Not every person was saved, though the villagers felt they were doing good work to save as many as they could each day. For many weeks, life continued this way. One day, someone asked, "Where are these people coming from, anyway?" The villagers looked to each other, but no one had an answer. Being good and kind and very efficient, the villagers organized a group to go upstream to find out why the people were ending up in the river. Because it might be a long and hard journey, they decided their strongest members would go.

The village leaders objected: "If our strongest rescuers go upstream to find this out, who will save the people from the river here? We need everyone here."

Some villagers argued in favor of sending a group upstream: "If we find out why they are ending up in the river, we can stop whatever is happening and save everyone! By going upstream, we can solve the problem."

The leaders weren't convinced, and so the villagers continued to rescue the people from the river as they passed by the village. The number of people continued to grow each day, and while the villagers managed to save a few more people each day, there were more and more they did not save.

This parable is used to describe the difference between a system focused on intervention – rescuing people from the river – and one that emphasizes prevention. We are **all of us** villagers with an opportunity to save lives. The State of Alaska and its partners have spent the last two years "mending the net" of our suicide prevention systems. It's time now to cast that net "upstream," to determine why Alaskans are at risk for suicide and to help strengthen our peoples, families and communities.

Introduction

The Statewide Suicide Prevention Council ["Council"] was established by the Alaska Legislature in 2001. After a legislative audit in 2008, it was extended by the Legislature to June 30, 2013. The Council is responsible for advising legislators and the Governor on ways to improve Alaskans' health and wellness by reducing suicide, improving public awareness of suicide and risk factors, enhancing suicide prevention efforts, working with partners and faith-based organizations to develop healthier communities, creating a statewide suicide prevention plan and putting it in action, and building and strengthening partnerships to prevent suicide.

Casting the Net Upstream: Promoting Wellness to Prevent Suicide in Alaska is offered to fulfill the Council's statutory duty to create a statewide suicide prevention plan. It is an update of the Council's 2004 plan. Unlike the previous plan, this is a five year plan with specific measures (indicators) that will be evaluated to ensure that the state suicide prevention system is effective – or to allow for further development if the expected results are not achieved. It is based on extensive public input and stakeholder efforts to create a suicide prevention plan that responds to the unique needs of our communities and benefits from the creativity and culture of Alaska's people.

This is a call to action. Specific strategies have been identified to achieve the goals and objectives of the suicide prevention system. These strategies were developed from the wisdom and experience of Alaskans all over our state. They are based on the most current and credible data and research available. These strategies are ways that individuals, communities, and the State of Alaska can act together to prevent suicide.

Examples of programs and initiatives that fit within these strategies are provided. However, these are not all of the ways Alaskan communities are working to prevent suicide. Tribes, tribal health organization, teachers, school districts, and individuals are all working together to prevent suicide in unique and creative ways.

This is a uniquely Alaskan endeavor, though is aligned with the National Strategy for Suicide Prevention and the American Indian and Alaska Native National Suicide Prevention Strategic Plan (2011-2015). This will help us evaluate our system against national standards and other states' efforts. The Council and its partners will be able to offer annual scorecards and implementation reports, highlight the successes of evidence-based suicide prevention programs as well as emerging and innovative prevention efforts, and foster better coordination and communication among suicide prevention providers.

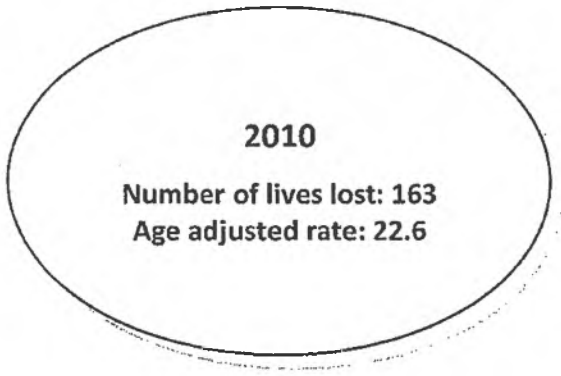
The plan is organized to reflect the most current research and understanding of the "web of causality" of suicide. Suicidal behavior results from a combination of genetic, developmental, environmental, physiological, psychological, social, and

cultural factors operating in complex, and often unseen, ways. Human beings are innately resilient but the events and experiences of a lifetime can weaken that resiliency to a point when a person becomes at risk of suicide. The warning signs of suicide are provided in Appendix A.

The Council has stressed the need to mend the net of services and supports in place to prevent suicide. In this plan, the Council is encouraging Alaskans to cast that net in a way that promotes physical, emotional, and mental wellness and strengthens personal and community resilience – to prevent suicide by promoting the health of our people, families, and communities. Over the next five years, Alaskan individuals, families, communities, and state government will be challenged to take responsibility for the entire spectrum of suicide prevention.

It starts with Wellness Promotion, the overall health and environmental condition that can increase or decrease the risk of suicide. The next layer is Suicide Prevention, universal efforts to improve awareness and understanding about suicide among all Alaskans.

Then there is Crisis Intervention, the services and supports provided to a person who is experiencing a mental or emotional crisis that creates a serious risk of suicide. Finally, there is Postvention. This is a term that includes the ways that we respond after a suicide occurs to prevent further loss, and how we support survivors of a loss to suicide as they grieve and heal. The Council calls for postvention in Alaska to include how we support the person who survives an attempted suicide and his or her family and community in preventing further attempts.



The plan is organized to make it easy to see who can act and how. There are six (6) goals. You will learn about the specific strategies that individuals and families can use to reach these goals. You will also learn what practices communities and organizations can adopt in prevention efforts, and how the State of Alaska can improve the effectiveness of suicide prevention system.

Because *Casting the Net Upstream* is a call to action, it references but does not include a comprehensive look at the data or a historic perspective of the problem of suicide in Alaska. The Council's FY2010 Annual Report, *Mending the Net: Suicide Prevention in Alaska*, provides an extensive review of the data and funding information related to suicide in Alaska since 2000. Additional data and research resources are available on StopSuicideAlaska.org, the State's suicide prevention portal, and the Council's website. A bibliography and resource guide is included in Appendix B.

Goal 1: Alaskans Accept Responsibility for Preventing Suicide

Preventing suicide is every Alaskan's responsibility. Like any other public health problem, suicide can be prevented through increased awareness, education, and targeted interventions to reduce and address risk. In order for these efforts to be successful, Alaskan individuals, families, communities, and governments must take ownership of the problem – and the solution.

Strategy 1.1 ~ Alaskans learn and understand that suicide is preventable.

Suicide is preventable. While each suicide or attempted suicide can be as unique as the person who experiences it, there are ways to address the "web of causality" – the multiple social, emotional, environmental, and health factors – involved. If every one of us learned about suicide, and the risk factors and protective factors involved, we would be better prepared to prevent suicide in our families and communities.

How can Alaskans learn about suicide and how it is prevented?

Resources:

1. Go to StopSuicideAlaska.org and read through the resources provided there.

2. Go to the Council's website and read:
   - annual reports tracking suicide and suicide prevention in Alaska since 2002;
   - the 2007 Alaska Follow-Back Study; and
   - newsletters and periodic updates on research, data, and practices.

3. Attend a meeting of the local suicide prevention or wellness coalition.

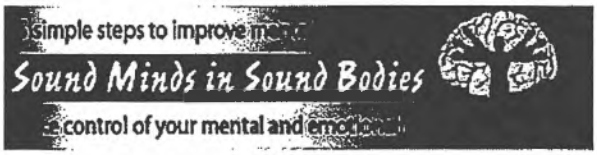
4. Explore national suicide prevention organizations' resources:
   - American Association of Suicidology www.suicidology.org;
   - American Foundation for Suicide Prevention www.afsp.org;
   - Suicide Prevention Resource Center www.sprc.org;
   - Indian Health Service www.ihs.gov/NonMedicalPrograms/nspn;
   - National Action Alliance for Suicide Prevention www.actionallianceforsuicideprevention.org/; and
   - Substance Abuse and Mental Health Services Administration Suicide Prevention Section www.samhsa.gov/prevention/suicide.aspx

5. Attend a Council meeting (in person or by telephone).

Learning about suicide will allow Alaskans to talk openly with their families, friends, and neighbors about suicide and how to prevent it.

Indicator: 1.1.a. Number of unique visits to StopSuicideAlaska.org: 11,306 (2010-2011)

Strategy 1.2 ~ Alaskan adults and elders choose healthy, responsible lifestyles in order to serve as role models for younger generations.



Throughout the planning process, Alaskan youth shared the profound need for healthy role models at home and in their communities. Substance abuse by parents and community leaders was identified by stakeholders young and old as a major contributor to suicide. Given the evidence that substance abuse is involved in many reports of harm to Alaskan children, and research shows how adverse childhood experiences[1] increase the risk of suicide in adulthood, it is important that every Alaskan adult make healthy and responsible lifestyle choices and model those choices for others.

Alaskans seeking to make healthy choices and overcome addictions and negative behaviors can learn more about treatment and support services from their medical provider, health educator, or community health/behavioral health aide. Mental health and substance abuse treatment options vary from community to community. Information about what is available is provided by Alaska 2-1-1, community behavioral health centers, health corporations, Careline, and the Advisory Board on Alcoholism and Drug Abuse.

Research shows that mental and emotional health can be improved and maintained just like physical health. Mental health promotion is as simple as adding five things to your life: exercise, social connection, acts of giving, self-awareness, and learning.

[1] Extensive research on the impact of child abuse, parental addiction, and other negative events during childhood has been documented by the Adverse Childhood Experiences Study (ACES). This is a longitudinal study by the Centers for Disease Control and Prevention and Kaiser Permanente, tracking the consequences of adverse childhood events in over 17,000 people. Information about the study and its findings are available at http://acestudy.org/.

Promoting mental and emotional wellness in your life and the lives of your family members is directly related to reducing the risk of suicide. Nationally, the data reflects a distinct link between depression and risk of suicide. The American Association of Suicidology reports that about 66% of people who complete suicide are depressed at the time of their deaths.[2] The risk of suicide in people with major depression is about 20 times that of the general population.[3] Depression can be prevented in some cases, and in others, it can be mitigated and managed, through proactive lifestyle changes that improve or maintain health.

Resources:

To find a mental health treatment provider in your community, call Alaska 2-1-1 or the Alaska Mental Health Board at 1-888-464-8920.

To find a substance abuse treatment provider in your community, call Alaska 2-1-1 or the Advisory Board on Alcoholism and Drug Abuse at 1-888-464-8920.

To find a primary care provider in your community, call Alaska 2-1-1 or the Alaska Primary Care Association at (907) 929-2722.

To learn more about how to improve and maintain mental and emotional health, talk to your medical provider, health educator, or community health/behavioral health aide or visit the *Sound Minds in Sound Bodies* project at http://hss.state.ak.us/abada/sound.htm.

[2] American Association for Suicidology, *Some Facts About Suicide and Depression* at 2 (online at http://www.suicidology.org/c/document_library/get_file?folderId=232&name=DLFE-246.pdf).

[3] *Id.*

Indicators:
1.2.a. Rate of adult binge drinking: 17.9% (BRFSS, 2009)
1.2.b. Child seeing violence or physical abuse in person: 4% (CUBS, 2009)

Strategy 1.3 ~ Alaskan youth seek out healthy and appropriate relationships with role models in their community

Just as it is important that Alaskan adults and elders become good role models, it is important that young people seek out healthy role models of their own. Not every child or young person has the benefit of a family member who can model resiliency and wellness. That should not mean that there is no one for youth to look up to.

Young people consistently cited the value of school social workers, coaches, teachers, ministers, and other trusted adults in their lives. These adults are a source of support and guidance. Young people can establish healthy and appropriate relationships with adults by getting involved in sports and clubs at school, cultural activities, scouting, church/faith-based organization activities, and mentoring programs that promote connectedness and other protective factors.

Resources:

Facing Foster Care in Alaska is a group of foster care youth and alumni (over age 15) focused on improving Alaska's foster care system. Facing Foster Care offers the added benefit of youth supporting each other through shared experience and education. For more information, call (907) 230-8237.

Juneau Youth is a community coalition sponsored by United Way of Southeast Alaska. Through its website and social media, Juneau Youth provides a clearinghouse of opportunities to participate in healthy activities and connect with appropriate adults (coaches, teachers, etc.) in the community. Visit www.juneauyouth.org for the activity clearinghouse, or email: compass@unitedwayseak.org for more information about the coalition.

Big Brothers Big Sisters is a nationally recognized mentoring program. Children and youth are matched with adults through community-based mentorship (long-term, traditional matches) or site-based mentorship (at school or through a youth program). Big Brothers Big Sisters of Alaska also has a Native American Mentoring Initiative to strengthen programs in rural Alaska, a mentoring program for youth at McLaughlin Youth Center (a juvenile justice facility), Operation Bigs for children of military families and military members seeking to be a big brother or sister, and the Amachi program for children with a parent in prison.

To learn more about how to enroll a child in Big Brothers Big Sisters or how to become a mentor, email info@bbsak.org or call your local office.

Youth can also connect with healthy and responsible adults through their communities of faith, scouting programs, and school programs. Student government, Boy Scouts, Girls Scouts, Campfire, sports teams,

and church youth groups are all excellent opportunities to find positive role models.

Indicators: 1.3.a. Traditional high school students participating in organized after-school activities 2 or more days a week: 44% (YRBS, 2011)
1.3.b. Alternative high school students participating in organized after-school activities 2 or more days a week: 64.9% (YRBS, 2011)

Strategy 1.4 ~ Communities will develop environments of respect, value, and connectedness for all members.

Risk factors for suicide include low self-esteem, psychological pain in response to loss or rejection, and lack of personal or familial acceptance of sexual orientation.

Shame, guilt, hopelessness, and purposelessness are also risk factors.[4] These risk factors often develop as a result of racism, discrimination, and exclusion based on cultural and personal differences.

Bullying, including "cyberbullying," is rampant in American schools. Studies have found that 32-65% of high school students have reported being bullied in school because of "their perceived or actual appearance, gender, sexual orientation, gender expression, race/ethnicity, disability, or religion."[5] Bullying is associated with increased depression and risk of suicide among victims.[6]

Research has shown connections between experienced and/or perceived racism and negative health consequences, especially regarding mental health.[7] Experienced and perceived racial discrimination can have physiological consequences, as well as result in the "adaptation and maladaptation of the individual to the circumstances of life."[8] This means that, when someone is discriminated against, it has a real impact on his or her life and health.

Lack of acceptance, bullying, discrimination and exclusion from familial and community relationships have been cited as contributing

[4] The American Association of Suicidology has compiled a list of chronic and acute risk factors based on the current research (online at http://www.suicidology.org/web/guest/current-research).

Seeman, *Annals of the New York Academy of Science* 896: 31 (1999) (cited in *Undoing Racism in Public Health: A Blueprint for Action in Urban MCH*, D. Barnes-Josiah (2004) (online at http://webmedia.unmc.edu/community/citymatch/CityMatCHUndoingRacismReport.pdf).

factors to higher rates[9] of suicide among lesbian, gay, bisexual, transgender, and questioning (LGBTQ) individuals.[10]

The Centers for Disease Control and Prevention's Strategic Direction for Prevention of Suicidal Behavior proposes to prevent suicide by "building and strengthening connectedness or social bonds within and among persons, families and communities."[11] That feeling of connectedness or belonging has been proven to be highly protective against suicidal thoughts and behaviors.[12] Communities can promote equality, inclusion, respect, and acceptance by:

- coordinating and supporting efforts to create safe, inclusive, respectful environments for all members of the community;
- emphasizing the strengths and contributions of different cultures in the community;
- instituting school and workplace policies that encourage inclusiveness and prohibit bullying and discrimination.

Resources:

The PACER National Center on Bullying Prevention was founded in 2006 to unite, engage, and educate communities to address bullying. It provides creative and interactive resources, like Kids Against Bullying (for younger children) and Teens Against Bullying. These are interactive and age-appropriate websites designed to educate about bullying and encourage action to prevent it.

PACER provides classroom resources and peer advocacy tools. PACER coordinates National Bullying Prevention Month in October each year. Visit PACER's National Bullying Prevention Month Facebook page or http://www.PACER.org/bullying for more information about the event and how to participate.

Indicators: 1.4.a. Traditional high school students reporting being bullied in the past 12 months: 23% (YRBS, 2011)
1.4.b. Alternative high school students reporting being bullied in the past 12 months: 16.8% (YRBS, 2011)
1.4.c. Traditional high school students who agree/strongly agree that they feel they matter to people in the community: 64% (YRBS, 2011)
1.4.d. Alternative high school students who agree/strongly agree that they feel they matter to people in the community: 46% (YRBS, 2011)

[9] Since 1990, population-based surveys of American adolescents that have included questions about sexual orientation have consistently found rates of suicide attempts reported by LGBTQ youth 2-7 times higher than average. "Suicide and Suicide Risk in Lesbian, Gay, Bisexual, and Transgender Populations: Review and Recommendations," A. P. Haas et al., *Journal of Homosexuality* (Jan. 2011) (available online at http://www.informaworld.com/smpp/section?content=a931819675&fulltext=713240928).

[10] *Id.* "Over the past decade, consensus has grown among researchers that at least part of the explanation for the elevated rates of suicide attempts and mental disorders found in LGB people is the social stigma, prejudice and discrimination associated with minority sexual orientation (Cochran, Mays & Sullivan, 2003; de Graaf at al., 2006; King et al., 2008; Mays & Cochran, 2001; McCabe, Bostwick, Hughes, West, & Boyd, 2010)."

[11] "Promoting Individual, Family, and Community Connectedness to Prevent Suicidal Behavior," Centers for Disease Control and Prevention (online at http://www.cdc.gov/ViolencePrevention/pdf/Suicide_Strategic_Direction_Full_Version-a.pdf).

[12] *Id.* at 4.

Strategy 1.5 ~ Communities will engage parents and other mentors important in the lives of children and youth in health promotion efforts.

In order for Alaskan youth to build healthy and appropriate relationships with adult role models, communities must engage parents and other mentors to be involved in the lives of children and youth. A 1995 impact study of Big Brothers Big Sisters programs documented a positive impact on the lives of children and youth served over several life domains implicated in suicide risk.[13] Reduced likelihood of initiating drug or alcohol use, reduced incidence of violent/antisocial behaviors, improved academic performance, and improved connection and relationships with parents and peers were all included.[14] This sort of change can be achieved through other efforts to connect youth with healthy mentors and role models. Anchorage United for Youth is an example of how a community can do this.

Anchorage United for Youth, led by United Way of Anchorage, is a community coalition focused on increasing opportunities for, and providing supportive adult relationships to, youth. It supports families and works to change community norms to promote positive lifestyle choices by youth.

Anchorage United for Youth was formed in 2007. In less than five years, this coalition and its partners have helped improve the graduation rate in the Anchorage School District by over 6% and reduced youth substance use.

Even the smallest village can assemble a group of healthy role models to help youth thrive. By encouraging parents, elders, and other adults to get involved in the lives of youth, every community can promote healthy lifestyles and connections with family and friends.

Resources:

United Way has shown success in engaging community members in all sorts of endeavors. In Juneau and Anchorage, the local United Ways have helped connect parents and mentors with health promotion efforts (*see also* Strategy 1.3). To find out how, contact United Way of Anchorage at (907) 263-3803 or Juneau Youth at United Way of Southeast Alaska at (907) 463-5530.

Indicator: 1.5.a. Students who would feel comfortable seeking help from one or more adults (besides their parents) if they had an important question affecting their life: 85% (YRBS, 2011)

Strategy 1.6 ~ Communities will prioritize building protective factors and resiliency in all comprehensive prevention efforts.

Some Alaskan communities are already engaged in collaborative prevention efforts to help children and youth thrive. Others are not. While prevention efforts that target people in crisis or at risk of suicide are effective, they focus on "fixing a problem" rather than building personal and community strength. By increasing protective factors in their youth and families, communities can prevent suicide – as well as violence, substance abuse, academic failure, and other social problems – far "upstream."

The Alaska ICE Initiative of the Alaska Association of School Boards is an example of how a concerted effort to promote connectedness and inclusion can have positive outcomes on many of the life domains (academic success, alcohol/drug

[13] *Making a Difference, An Impact Study of Big Brothers Big Sisters*, Public/Private Ventures at iii (2000 re-issue) (http://www.ppv.org/ppv/publications/assets/111_publication.pdf).
[14] *Id.*

use, personal safety) implicated in suicide risk.[15] The Anchorage Youth Development Coalition is a group of 60 youth-serving organizations working together to promote resiliency and health among Anchorage's children and youth. They offer intensive evidence-based training for people working with Anchorage's youth. This ensures that people working with youth have the tools and skills needed to help build protective factors and resiliency.

Alaskan communities can promote resiliency and protective factors against suicide risk. Focusing on the strength and talents of our children and youth can, over time, protect them from many of the underlying risks associated with suicide.

Resources:

The 40 Assets, part of the Developmental Assets framework developed by the Search Institute of Minnesota, provides concrete, common sense, and positive qualities essential to healthy development.

The Association of Alaska School Boards and Department of Health and Social Services created *Helping Kids Succeed – Alaskan Style.* This handbook is for parents, teachers, coaches, aunties, uncles, and community members. You can purchase a copy from the Association of Alaska School Boards for $15, or call the Council (which has a limited number of free copies).

Indicator: 1.6.a. Student Overall Connectedness (statewide, weighted): 3.49 (on a 1-5 scale)(SCCS, 2010).

Strategy 1.7 ~ Communities will participate in efforts to de-stigmatize suicide and accessing treatment for mental health crises.

The stigma associated with mental illness creates a significant barrier to accessing services. People are afraid of being judged or treated differently if they go to see a mental health professional. Stigma is especially serious among older Alaskans, a population with high rates of suicide.[16] Senior services providers have reported that it is often difficult to engage seniors in behavioral health services because of stigma. Veterans, active duty military, ethnic minorities, and youth are other groups for whom stigma is a barrier to accessing the help they need.

It is important for communities to explicitly address this stigma and to support people seeking help for depression, grief, and mental health disorders as part of suicide prevention efforts. Communities can develop their own anti-stigma efforts, or participate in ongoing efforts like Mental Health Awareness Week and the National Day Without Stigma, Mental Health Month, World Suicide Prevention Day, Children's Mental Health Awareness Day, and other widely recognized public awareness events.

Events such as the Walk for Life, television and radio public service announcements, and educational efforts can be as complex or as simple as a community's readiness and resources permit.

Resources:

Successful campaigns involve simple messages of hope: "Treatment Works and Recovery Happens," "It Gets Better," "What a Difference a Friend Makes," "Reach Out,"

[15] The Alaska Association of School Boards Initiative for Community Engagement is focused on creating positive school and community environments for Alaska's children. www.alaskaice.org

[16] From 2000 to 2009, the rate of suicide among Alaskans over age 85 (34.4/100,000) was almost as high as for adolescents and young adults. The actual number of suicides was low (13) but this is an alarming trend that bears further attention.

"Live to Ride. Call to Live." The Substance Abuse and Mental Health Services Administration offers a **FREE** tool to help develop an anti-stigma campaign: *Developing a Stigma Reduction Initiative* helps with planning, recruiting partners, and outreach. It includes public service announcement scripts.

SAVE (Suicide Awareness Voices of Education) is a national organization that offers many public education and anti-stigma materials. While these are not free, they can be customized. Visit www.SAVE.org for more information about the organization and the resources available.

Indicator: 1.7.a. Alaskans comfortable with a family member, coworker, guest, or neighbor experiencing mental illness: 77.3% (AMHTA, 2010)

Strategy 1.8 ~ Community organizations will offer supports to promote healthy families.

There are many ways a community can support families and promote healthy relationships. In some communities, there are agencies and coalitions specifically focused on providing these supports. Supports and skills are provided through a variety of community parenting classes offered by tribal health corporations and village clinics, hospitals, domestic violence shelters, churches/faith-based organizations, mental health centers, and other organizations.

Alaska's early childhood learning program, *thread,* offers supports and services, as well as local referrals, statewide. For more information, visit www.threadalaska.org.

In some communities, there are specialized services and supports for families with high risk situations. Examples of these programs include Alaska Youth and Family Network, helping families and youth engaged in mental health services, and Fairbanks Native Association, providing case management services to families engaged with the Office of Children's Services to help parents successfully engage in substance abuse treatment.

Unfortunately, not all communities have readily accessible parenting classes and supports, especially those designed for young parents, parents from other cultures, or parents with disabilities. In order for all Alaskan children to grow up protected from risk of suicide, communities must offer ways for families to build the skills necessary to help their children grow up healthy.

Resources:

The Alaska Association for the Education of Young Children (AEYC) offers a wide variety of services and supports for families and communities. In Southeast Alaska, they have partnered with Partnerships for Families and Children to offer an interactive calendar of parent and family events and resources organized by community. Find community programs at www.southeastfamilies.org or contact the coordinator at (907) 789-1235 to learn about how the partnership was formed and the resource developed.

In Anchorage, the public library offers the Ready to Read Resource Center, dedicated to promoting early literacy. This is a **statewide** resource for anyone working with infants and toddlers. The Resource Center has over 200 reading kits that can be loaned to child care centers, health clinics, churches/faith-based organizations, and other early childhood providers. Call (907) 343-2970 for more information.

Indicator: 1.8.a. Number of communities offering parenting/caregiver classes (new)

Strategy 1.9 ~ The State of Alaska will support peer-to-peer wellness promotion and supports as an integral part of health promotion and suicide prevention.

Peer support is an effective and affordable way to help people achieve and maintain recovery from all manner of illnesses, from cancer and diabetes to mental health and substance use disorders. Peer support is also an effective tool in promoting overall wellness and preventing suicide.

Peer support can take many forms. It can involve one-on-one counseling and support, or group support. Peer support can help someone cope with a chronic disease, like diabetes or mental illness, or overcome a periodic or temporary issue like grief.

The Natural Helpers and Youth Leaders peer programs in the Lower Kuskokwim and Northwest Arctic school districts are an excellent example of how youth mentoring and supporting youth can reduce risk of suicide. Peer-identified natural helpers receive training and guidance from teachers and school staff to share positive coping skills, peer counseling, and support with other students. These programs also provide a way for youth who have experienced a loss to suicide to support each other (a form of postvention).

While some communities, like Anchorage and Juneau, have active peer support networks, not all communities do. Peer support is a cost-effective and locally available way of helping promote physical, emotional, and mental wellness to reduce risk of suicide. The State of Alaska has begun efforts to expand peer support services in rural communities.[17] This commitment supports communities as they develop local peer support resources.

Resources:

The Alaska Peer Support Consortium is the statewide coalition of peer support providers offering technical assistance to help communities plan and develop local peer support services. Call (907) 258-2772 for more information.

The Alaska Mental Health Trust Authority's Beneficiary Project Initiative also provides technical assistance to peer support organizations. Call (907) 269-7960 for more information. The Division of Behavioral Health can also provide support to communities developing peer support resources. Contact the Vocational Specialist at (907) 269-2051.

Indicator: 1.9.a. Number of Alaskans receiving state funded peer support services (new)

[17] Annualized funding ($225,000 GF/MH) for rural peer support services was appropriated for FY12.

Goal 2: Alaskans Effectively and Appropriately Respond to People at Risk of Suicide

Strategy 2.1 ~ Alaskans know how to identify when someone is at risk of suicide, and how to respond appropriately to prevent a suicide.

Understanding the warning signs of suicide is the first step in helping someone in crisis. Appendix A includes an explanation of the warning signs and a pocket card you can carry with you.

There are many types of trainings available to help Alaskans better identify when someone is at risk of suicide. These trainings provide the skills and tools needed to help. Mental Health First Aid, Applied Suicide Intervention Skills Training, and SafeTALK are internationally recognized intervention models that are all available here in Alaska. We have people trained in these models in communities statewide, and the opportunity to be trained in them ourselves. We also have a Gatekeeper model developed right here in Alaska by the Department of Health and Social Services and University of Alaska.

Mental Health First Aid educates people about mental health disorders and crises and provides skills to identify and help when someone is developing a disorder or experiencing a crisis. It teaches how to respond and how to connect someone in crisis with professional help. It is a 12-hour training designed for everyone, not just mental health professionals. Mental Health First Aid teaches people how to help someone experiencing a wide range of mental health emergencies, including thoughts of suicide. Mental Health First Aid is coordinated through the Trust Training Cooperative, a state-funded health care workforce trainer. The cost is currently $85.00. Call (907) 264-6228 for more information.

ASIST stands for Applied Suicide Intervention Skills. It is a two-day training that increases understanding about suicide and provides skills to recognize suicide risk and intervene to prevent suicide. The Alaska Native Tribal Health Consortium coordinates ASIST trainings statewide. ASIST trainers have trained nearly 1,000 teachers, health aides, counselors, clergy, and others in communities from Barrow to Klawock, King Cove to Tok.[18] To learn more about hosting an ASIST training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

safeTALK complements ASIST. It is a half-day training for anyone over age 15. safeTALK provides education about how to respond when someone expresses thoughts of suicide, how to identify a person at risk of suicide, and how to connect a person thinking about suicide to the resources to keep them safe. The TALK steps are Tell, Ask, Listen, and Keep Safe. The person at risk "tells" someone they are thinking about suicide. The

[18] A map of communities with local ASIST trainers is available at from ANTHC online at http://www.anthc.org/chs/wp/injprev/upload/Map-of-ASIST-Trainers-6-11.pdf.

safeTALK trained person "asks" the person what's going on and then really "listens" to the person. The last step is to connect the person with resources, like an ASIST trained intervention caregiver, so the person can "keep safe." To learn more about hosting an safeTALK training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

Alaska Gatekeeper Training is designed to educate people about suicide and help them identify warning signs and risk factors for suicide as well as protective factors that could help someone get through a crisis. Gatekeepers learn active listening skills and how to develop a safety plan that includes referral to appropriate community resources. Call (907) 465-8536 for more information.

The Iason Foundation, which opened an Alaska affiliate in Fall 2011, offers students, parents, and teachers/youth workers the tools and resources to identify and help at-risk youth. This is accomplished through a series of programs and services that focus on information about the awareness and prevention of youth suicide. For more information, contact the Jason Foundation affiliate at (907) 264-4304.

Indicator: 2.1.a. Number of Alaskans trained in suicide prevention/intervention (new)

Strategy 2.2 ~ Alaskans know about Careline and other community crisis lines, and can share that information with others.

Even without special training, you can always encourage someone who you think is at risk of suicide to call Careline, Alaska's statewide suicide prevention and crisis intervention hotline. There is also a national Suicide Prevention Lifeline, a Veterans Suicide Prevention Hotline, and the Trevor Project hotline for lesbian, gay, bisexual, transgender and questioning youth. All of these are 24/7 confidential call lines. Some communities have a local or regional call line. A wallet card with all these numbers is provided in Appendix A. You are encouraged to cut it out and keep it in your wallet so you can share it with anyone who might need it.

Indicators: 2.2.a. Number of calls to Careline annually: 5,507 (2010)
2.2.b. Alaskans who report knowing how to access services for suicide prevention: 69.6% (AMHTA, 2010)

Strategy 2.3 ~ Providers of services to veterans will prioritize suicide prevention screenings and effective interventions.

Veterans are at a higher risk for suicide, with an annual rate that increased 50% between 2001-2008.[19] Research about suicide by members of the armed forces indicates that gender (male), depression, substance abuse, and relationship difficulties (divorce, infidelity, etc.),[20] as well as prior attempts, traumatic brain injury, access to firearms, and loss of a close friend or loved one to suicide are all contributors to suicide.[21] Also an issue is homelessness, which sadly many Alaskan veterans face – 7% of Anchorage homeless identified in the 2010 Project Homeless Connect were veterans.

As with any population, veterans and military service members benefit from programs that identify risk factors and address them with

[19] *See* The War Within: Preventing Suicide in the US Military, Rand Corporation (2011).
[20] James LC, Kowalski TJ. Suicide prevention in an army infantry division: a multi-disciplinary program. Mil Med 1996; 161:97-101.
[21] Summary of The War Within: Preventing Suicide in the US Military, Rand Corporation, at 8-9 (2011).

effective – usually evidence-based – practices. The U.S. Air Force designed and implemented a universal, multi-layer suicide prevention program that involved many disciplines and engaged with service members throughout their system.[22] The result was a 33% decrease is the suicide rate over 6 years.[23]

The Veterans Administration has a robust suicide prevention program that includes a crisis line, specialized media tools and resources, local suicide prevention coordinators at every Veterans Administration Medical Center, an online clearinghouse, the "Ask, Care, Escort" model for identifying and connecting at risk veterans to services, and other tools.

Providers of services to Alaska's veterans should prioritize screening and early identification of warning signs/risk factors for suicide. This should include promotion of self-care and awareness. Evidence-based interventions should be chosen to specifically address the special needs of Alaska veterans – including homelessness, geographical barriers to accessing veterans health care services, stigma, and cultural differences. Use of telemedicine (through the systems provided by Alaska Native Tribal Health Consortium and Alaska Psychiatric Institute) should be encouraged and reimbursed so that veterans in rural Alaska have better access to mental health and substance abuse treatment service. Restriction of lethal means (Strategy 3.1) and effective postvention supports are also key to reducing suicide among Alaska's veterans.[24]

Resources:

The Anchorage Veterans Health Care Facility has a suicide prevention coordinator who works with mental health providers in the VA system to address suicide risk and responses. Call 907-257-4824 for more information.

The Department of Defense and Veterans Administration online clearinghouse is www.suicideoutreach.org. Outreach and awareness resources and education materials are available here. There is also a local resource center at the Anchorage Veterans Health Care Facility. Call 907-257-4824 for more information.

A national crisis line is available for veterans: 1-800-273-8255 and press 1. Veterans can also have a confidential online "chat" with trained staff at http://veteranscrisisline.net/.

The Veterans Health Care Administration offers Telehealth Services programs for some Alaskan veterans with chronic health disorders, including depression and PTSD. This program is not available to all veterans.

The AFHCAN System is the tribal health system's telemedicine program. This

[22] *See* Knox KL, Litts DA, Talcott GW, Feig JC, Caine ED. Risk of suicide and related adverse outcomes after exposure to a suicide prevention program in the US Air Force: cohort study. BMJ 2003; 327:1376

[23] *Id.*

[24] After an extensive review of research and program evaluations, the Rand Corporation identified best practices for preventing veteran suicide. These include: raising awareness and self-care, identification of those at risk, improving access to and providing quality care, restricting access to lethal means, and responding to suicides appropriately. *See* Summary of The War Within: Preventing Suicide in the US Military, Rand Corporation, at 10-11 (2011).

connects tribal health corporation clients to specialized services – including behavioral health services – not available in their local community. This system is not limited to clinical services; it can be used to deliver training to providers in remote communities.

Alaska Psychiatric Institute also coordinates tele-psychiatry services for the publicly funded behavioral health system. Like the AFHCAN system, the API Tele-behavioral Health Care Program can used for training.

Indicator: 2.3.a. Number of suicides among Alaska veterans (new)

Strategy 2.4 ~ Spiritual leaders will encourage suicide prevention awareness and training in their communities of faith/belief.

Many people considering suicide turn to a minister, clergy member, or spiritual leader for help.[25] This may be due to an existing relationship of trust with the spiritual leader or the lack of stigma associated with pastoral counseling (unlike that attached to mental health treatment services). In order for leaders of faith based groups to be prepared to help individuals at risk of suicide, they need to be trained to recognize suicidal tendencies and have the resources and abilities to intervene.

In addition to helping someone in crisis, spiritual leaders have an opportunity to encourage entire congregations to learn about the issues and warning signs of suicide, basic gatekeeper and advanced intervention skills, and how to support community members and families after a suicide occurs.

Spiritual leaders have an important role in responding when someone expresses thoughts of suicide directly, as well as in identifying when a congregant displays signs of risk of suicide. This does not mean ministers and spiritual leaders must become mental health professionals. Instead, by learning how to be a gatekeeper – someone who helps identify when someone is in crisis and then connects them to appropriate services – they can help prevent suicide among the members of their community of faith. Expanding that awareness and preparedness to include the entire congregation can strengthen the faith of a community and have a wider "ripple effect" through an entire region.

Resources:

Alaska Gatekeeper Training teaches about suicide and how to identify warning signs and risk factors, as well as protective factors that could help someone get through a crisis. Call (907) 465-8536 for more information. Other trainings are available (*see* Strategy 2.1 for more information).

The Suicide Prevention Resource Center has a catalog of more than 100 resources for clergy: Resource Scan of Faith-Based Materials Addressing Suicide Prevention. Brochures, prayers, web sites, and other training-related materials on topics including stigma, raising awareness of suicide, and depression are included. Most of these resources are available at little or no cost. Recommendations for leading suicide prevention efforts are also presented.

The Jason Foundation offers training and education resources for Christian youth groups. Contact the Jason Foundation affiliate in Alaska at (907) 264-4304.

[25] Suicide Prevention Resource Center, *The Role of Clergy in Preventing Suicide* (citing Goldsmith, S. K., et al. (Eds.). ***Reducing Suicide: A National Imperative (2002)).***

Indicator: 2.4.a. Number of spiritual leaders trained as Gatekeepers (new)

Strategy 2.5 ~ The primary health care system will prioritize suicide prevention screenings in practices.

People considering suicide often visit their primary care providers within days or weeks of taking their lives.[26] Primary care providers (doctors, nurses, physicians assistants, health aides, etc.) are on the front lines when it comes to preventing suicide. Unfortunately, few primary care providers receive training in suicide prevention as part of their education.

Rural primary care providers face additional challenges: a hectic practice, complicated by geography, lack of access to mental health services, and stigma. Stigma and discrimination regarding mental health is pervasive in many rural areas and hampers efforts to treat behavioral health problems.

There are resources for primary care providers. The Suicide Prevention Resource Center (SPRC) has developed a free tool kit with information and tools to allow primary care providers to implement a practice-wide suicide prevention practice that is connected with local and statewide resources. In addition to this free toolkit, technical assistance is available from the Council and Suicide Prevention Resource Center.

Suicide Prevention Toolkit for Rural Primary Care

http://www.sprc.org/pctoolkit/index.asp

Contact Kate Burkhart, Statewide Suicide Prevention Council, for more information about using the tool kit. (907) 465-6518.

There are other practice models that focus more specifically on depression. IMPACT, a model developed at the University of Washington, has been implemented by the Anchorage Neighborhood Health Center and other Alaska providers to help identify adults with co-morbid depression and then offer care. The evaluation of IMPACT in other states shows positive outcomes for patients and providers, reducing risk of suicide by improving physical and mental well-being.[27]

Primary care providers can also implement standards of care and practices that promote wellness. Patient education about nutrition, Vitamin D, exercise, stress management, chronic disease management, prescription medications, and other health issues can help individuals better manage their health.

Indicators: 2.5.a. Number of practices implementing suicide prevention protocols (new)
2.5.b. Number of practices implementing IMPACT (new)

Strategy 2.6 ~ School districts will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance use, violence, depression, etc.).

Signs of Suicide and other school based screenings have been implemented in Alaska school districts with success. The Matanuska Susitna Borough School District has been actively screening and responding to students

[26] According to the Alaska Suicide Follow-back Study, 64% of the cases reviewed involved people who had seen their physician within 6 months of committing suicide. (Follow-Back Study at 38). This is confirmed as a trend among people who commit suicide nationwide by the Suicide Prevention Resource Center.

[27] Learn more about the research and evaluation of IMPACT at http://impact-uw.org/about/research.html.

at risk for several years, reporting successful outcomes for students and teachers. The Juneau Douglas School District has tailored a student-centered response around the Signs of Suicide screening. Students receive wrap-around services to address all the problems (substance abuse, domestic violence, teen parenting, poverty) they face that contribute to suicide risk. The Lower Kuskokwim School District is also using evidence-based school screenings, to help address the youth suicide problem in their region.

Interested in how school-based screenings might work in your school district?

Contact the Department of Education and Early Development Suicide Prevention Coordinator at (907) 465-6523.

With these successes, and the strong research base[28] that shows how effective school-based screenings can be, Alaskan school districts have a foundation for expanding school screenings so that no student is left vulnerable to suicide. Screenings can be done in a way that balances student health with privacy and parental notification concerns while engaging parents and the community to protect youth from suicide.

Indicator: 2.6.a. Number of school districts implement evidence-based screening: 5 (2011).

[28] See "An Outcome Evaluation of the SOS Suicide Prevention Program," R. Aseltine, Jr. and R. DeMartino, (*Am. J. Public Health*, March 2004); see also the NREPP overview of Signs of Suicide for additional research/ evaluation (available online at www.nrepp.samhsa.gov/ViewIntervention.aspx?id=53).

Strategy 2.7 ~ Senior services providers will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance abuse, violence, depression, etc.), too.

There has been an alarming increase in suicide among Alaskans over age 65 since 2000.[29] Many people think depression is just part of "getting old," but it's not. Nor is feeling lonely, hopeless, or worthless. Neglecting to pay attention to the mental and emotional well-being of Alaskan seniors increases the risk of suicide. Just like schools are a primary environment for addressing youth suicide, senior centers and senior services providers are a primary environment in which to address suicide among seniors.

While every senior services provider may not be able to screen older Alaskans for suicide risk or contributing factors, there are many ways that senior services providers can help identify and respond when a senior is at risk of suicide. Nursing homes conduct basic periodic screenings, asking residents if they are feeling suicidal. Some medical practices are using IMPACT (*see* Strategy 2.3), SBIRT,[30] and other integrated care models to help identify seniors at risk of depression and/or suicide.

[29] See *Mending the Net*, FY10 Annual Report at 9 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

[30] Screening, Brief Intervention, and Referral to Treatment (SBIRT) is a comprehensive, integrated, public health approach to the delivery of early intervention and treatment services for persons with substance use disorders, as well as those who are at risk of developing these disorders. Screening quickly assesses the severity of substance use and identifies the appropriate level of treatment. Brief intervention focuses on increasing insight and awareness regarding substance use and motivation toward behavioral change. Referral to treatment provides those identified as needing more extensive treatment with access to specialty care. For more information, visit http://www.samhsa.gov/prevention/SBIRT/index.aspx.

Resources:

In 2011, the Council provided copies of *Promoting Emotional Health and Preventing Suicide. A Toolkit for Senior Living Communities* to senior centers statewide.

This is a free toolkit, available online, that can help senior living communities promote the mental health of clients and prevent suicide. It contains resources for an agency to conduct in-service style training for staff. For more information about the toolkit, or help using it, call the Council at (907) 465-6518.

Indicator: 2.7.a. Rate of suicide, Alaskans age 65-84: 18.8 (2000-2007, crude rate, AABVS)[31]

Strategy 2.8 ~ The State of Alaska and its partners will engage village police and public safety officers in developing tailored community-based responses and protocols for responding to crises.

Anchorage, Fairbanks, and Juneau have Crisis Intervention Team[32] (CIT) trained officers to help respond appropriately to suicide emergencies. These trainings are made possible through a partnership between the municipalities, NAMI, and the Alaska Mental Health Trust Authority. Communities with CIT officers report positive outcomes for mental health consumers and officers, with crises more often averted than escalating.

[31] The crude rate average for 2000-2007 is used due to the small sample size. The average crude rate for individuals over age 84 was not included, due to the very small *n* of the sample. However, this population will continue to be monitored for upward or downward trends.

[32] The Crisis Intervention team model was developed by the police department in Memphis, Tennessee. It is a community partnership to ensure effective and appropriate law enforcement responses to situations involving mental health consumers. Learn more at http://www.memphispolice.org/crisis%20intervention.htm.

Cynthia Erickson and Alaska Wildlife Trooper Jon Simeon, part of the Live to Ride, Call to Live suicide prevention campaign in 2011. (Photograph courtesy of Beth Ipsen, Department of Public Safety)

CIT training is not offered as a standard part of training offered to public safety officers or village law enforcement. It may be that an essentially urban community policing model is not best suited for the everyday situations faced by Alaska's rural law enforcement officers. Instead, a tailored community-based response and protocol that provides support to the often only officer in a community may be a better tool for preventing suicide in Alaska's villages and rural towns.

This community-based model should include elements of postvention and critical incident stress management, to ensure that first responders to a suicide in a small community have the supports needed to deal with the experience.

Resources:

Information about the Crisis Intervention Team model is available from the Memphis Police Department, online or from the CIT Coordinator (901) 636-3700. For information about developing a CIT training, contact NAMI-Fairbanks at (907) 456-4704.

For information about Critical Incident Stress Management and other postvention

trainings, contact the Alaska Police and Fire Chaplains' Ministries at (907) 272-3100.

Indicators: 2.8.a Number of officers attending CIT trainings annually (new)

2.8.b Number of communities with Emergency Response Plans that include responding to a suicide (new)

Goal 3: Alaskans Communicate, Cooperate, and Coordinate Suicide Prevention Efforts

Strategy 3.1 ~ Communities will partner with non-traditional organizations to raise awareness about limiting access to lethal means (guns, drugs, alcohol, etc.).

From 2003-2008, 55% of Alaskan suicides were by firearm.[33] The number of suicide attempts and deaths by poisoning (drugs, alcohol, prescription medication, etc.) is increasing. In 2005, the Alaska Trauma Registry published a review of suicide hospitalizations for 2001-2002. During that time, 77% of hospital visits resulting from suicide attempts (or other self-harm) involved an overdose on medications. Of those medication overdoses, 64% were prescription medications. Tylenol was the most common medication on which children age 0-19 years overdosed.[34] The Alaska Violent Death Reporting System reported that 20.1% of suicides in 2003-2008 were by hanging.[35]

Preventing suicide means preventing access to means of suicide.[36] The American Association of Suicidology recommends supervision of youth by parents and communities, maintaining drug and alcohol free homes, and safely storing guns as a universal means of preventing suicide.[37] Effectively preventing access to the most common lethal means includes looking widely for partners to help raise awareness and promote safety.

Communities in the Bristol Bay region have a unique relationship with the local housing authorities – not a usual partner in suicide prevention – to help prevent suicide in Dillingham and the region's villages. Bristol Bay Area Health Corporation, Bristol Bay Housing Authority, and the Alaska Native Tribal Health Consortium partnered to install gun lockers in village homes in the region. This project was so successful that it expanded from one region in 2009 to two regions in 2010 and four regions in 2011.[38] These programs have proven, in Alaska and elsewhere, to help reduce the number of suicides in communities where implemented.

Promoting effective and safe prescription drug disposal is another way of reducing

---

[37] *Id.* at 3.

[38] Alaska Native Tribal Health Consortium has participated as a partner in all these gun locker projects. More information about the project is available at http://www.anthc.org/chs/wp/injprev/suicide-and-suicide-attempt-prevention.cfm. A similar project implemented in Norway resulted in reduction of firearm suicides by almost half (more information at http://www.hsph.harvard.edu/means-matter/examples-of-means-restriction-programs/#norway).

lethal means. The Senior Behavioral Health Coalition began assembling partners to conduct disposal events in 2009. These events continue to grow and are usually held in conjunction with the National Drug Take Back Initiative. Ketchikan's Wellness Coalition, of which the local suicide prevention task force is a part, helped establish a permanent way for people to safely dispose of their unused medications by partnering with the local police department.

These are just two examples of how Alaskan communities are working to restrict access to lethal means. There are other ways. Some are as simple as locking away prescription and over-the-counter medications. Keeping liquor cabinets locked is another way of limiting access to the means of suicide. Other strategies include evidence-based education and intervention models,[39] partnering with medical schools to train new doctors on lethal means restriction, and implementing prescription drug monitoring systems.

Interested in learning how to start a gun locker project in your community?

Contact the Injury Prevention Program at the Alaska Native Tribal Health Consortium (907) 729-3799.

Go to Means Matter, from the Harvard School of Public Health, for more information and examples of effective restriction programs.

[39] The Emergency Department Means Restriction Education model is part of the SAMHSA evidence-based practice registry, available online at: http://nrepp.samhsa.gov/ViewIntervention.aspx?id=15.

Indicator:

3.1.a. Rate of suicides by firearm: 55% (AKVDRS, 2003-2008)

3.1.b. Rate of suicide by poisoning/overdose: 22% (AKVDRS, 2003-2008)

Strategy 3.2 ~ The State of Alaska and its partners will make training in evidence-based suicide prevention and intervention models accessible to all interested Alaskans.

Training in several suicide prevention and intervention models is available to Alaskans. Some are evidence-based and some are not. Some are more expensive than others, which means that some Alaskans can't afford to be trained to help someone in crisis.

Mental Health First Aid, is coordinated through the Trust Training Cooperative, a state-funded health care workforce trainer. The cost of the training is currently $85.00. Call (907) 264-6228 for more information.

Applied Suicide Intervention Skills Training (ASIST) is coordinated by the Alaska Native Tribal Health Consortium. The training cost is currently $35.00 per trainee plus costs of the trainers' travel expenses. To learn more about hosting an ASIST training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

Gatekeeper Training is offered through the Department of Health and Social Services Division of Behavioral Health and is **FREE**. Call (907) 465-8536 for more information.

The Jason Foundation offers students, parents, and teachers/youth workers the tools and resources to help at-risk youth. These programs are offered at no cost. Call (907) 264-4304 for more information.

One way to ensure that all Alaskans have access to training and ongoing support would

be to enhance Alaska's Gatekeeper program. The Gatekeeper program could be tailored to meet the level and areas of need for specific groups if a more robust pre-training process of assessing current competencies, goals for the training, and plans for implementing the skills learned was undertaken.

This pre-training process would need to include a complete assessment of available resources for someone in crisis. This would help Gatekeepers learn where to refer someone at risk of suicide and how to access those services. If Gatekeeper trainings were coordinated with local suicide/wellness coalitions, Gatekeepers would have a local source of support and resources to help them use their skills more confidently and effectively in the community.

While many Alaskans have been trained as Gatekeepers, there is no capacity for ongoing support or periodic "refresher" trainings. If all trained Gatekeepers were connected through a StopSuicideAlaska.org online community, they could provide support and share resources more effectively. They could also create and make use of a learning network through StopSuicideAlaska.org (*see* Strategy 4.4).

These intensive suicide prevention trainings are very valuable, but they are not the only options. In an effort to make suicide prevention training accessible and affordable, the Juneau Suicide Prevention Task Force and local NAMI affiliate developed a video-based training that is offered monthly to the public.

By responding to the opportunity presented during a 2010 visit from a grief and bereavement expert, Dr. Bob Baugher, the local coalition and its partners were able to develop a video and curriculum – *Building Intervention Skills* – that can be offered at no cost to attendees. This sort of community led education and awareness building is a key component to preventing suicide.

Want to learn more about the Building Intervention Skills training?

Contact NAMI Juneau at (907) 463-4251

The State of Alaska can ensure that every Alaskan who seeks to be trained to prevent a suicide has access to training by a) providing adequate funding to support scholarships/ sliding fee scales for the intensive trainings like ASIST and b) providing flexible grant funding for community coalitions and organizations seeking to develop culturally and/or locally relevant and accessible trainings.

Indicator: 3.2.a. Number of Alaskans trained in suicide prevention/intervention (new)

Strategy 3.3 ~ The State of Alaska will mandate evidence-based suicide prevention and intervention training for all school district personnel.

In Alaska, the suicide rate for young men age 15-24 is 56.1 per 100,000; for young women, it is 16.6 per 100,000.[40] For Alaska Natives, the rate for this age group is 141.6 per 100,000 for young men and 50.3 per 100,000 for young women.[41] To connect with this high-risk group, suicide prevention must be

[40] Data is for the period 2000-2009, provided by the Bureau of Vital Statistics.
[41] *Id.*

part of the education system. Research shows that, when educators and staff are equipped with the skills and support to identify when a student is at risk and properly intervene, lives are saved.

The Alaska Association of Student Governments (AASG), a statewide organization of student leaders, recognizes the importance of teachers and school staff being trained in suicide prevention. They passed a resolution calling for teachers to receive suicide prevention training in 2011. The Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, in partnership with the Council and AASG, have advocated for funding to make training available for all Alaskan secondary school educators and staff.

By requiring – and making resources available for – suicide prevention training for educators and school staff, the State of Alaska can ensure that youth experiencing depression, hopelessness, and other risk factors associated with suicide are identified and connected with the help they need before they attempt suicide.

Resources:

The Jason Foundation offers training and resources for teachers, coaches, etc. Call (907) 264-4304 for more information. Kognito Interactive offers interactive online training for high school and university educators and staff (as well as other health education training). School personnel can also take advantage of other training opportunities (*see* Strategy 2.1 for more information).

Indicator: 3.3.a. Number of school districts offering suicide prevention training to educators/staff (new)

Strategy 3.4 ~ Communities will develop wellness coalitions that include suicide prevention in their mission/area of focus.

Given the "web of causality" underlying suicide, it is important that local efforts to prevent substance abuse, violence, school drop outs, etc. are coordinated with health promotion efforts. Blending efforts to build protective factors and reduce risk factors will more comprehensively address the many factors involved in suicide.

Some communities, like Juneau, Bethel, Fairbanks, and Barrow, have active suicide prevention coalitions. Other communities have coalitions that include, but are not focused on, suicide. Ketchikan has ensured that suicide prevention is linked to health promotion and other prevention efforts in the community by making their suicide prevention coalition, SPEAK, a sub-committee of the umbrella wellness coalition. This has helped coordinate the community's overall prevention and health promotion efforts over several years, increasing their impact throughout Ketchikan.

It only takes one or two champions to start a health or wellness coalition, as long as the community is ready to come together to address the specific concerns facing their people. In other communities, coalitions form to address a serious issue under the

leadership of a respected person or agency.

For some communities, a planning process is necessary to identify those concerns. The Mobilizing for Action through Planning and Partnerships (MAPP) and COMPASS II (q United Way of America community assessment tool) planning frameworks have seen success in Homer, Fairbanks, Juneau, and other Alaskan communities.

Whether starting a new coalition or expanding an existing coalition to address suicide, Alaskan communities must provide a meaningful role and opportunity for leadership to youth, survivors of an attempted suicide, and survivors of a loss to suicide. By including these important stakeholders, coalitions can support the strategies in Goals 1 and 4. They can also engage the people in their community with the most to share with and learn from the coalition.

Resources:

You can connect with Alaska coalitions and learn from their experience. This has worked well for Ketchikan and Juneau, communities where the coalitions have shared to inform each other's efforts.

The Suicide Prevention Resource Center provides a list of resources, as well as technical assistance, to communities developing suicide prevention coalitions. Visit these resources online at www.sprc.org/taking_action/build.asp.

The National Highway Traffic Safety Administration has a "how to" guide for coalition building. Community Anti-Drug Coalitions of America (CADCA) offers a host of resources, publications, webinars, and trainings to help people create, grow, and maintain community coalitions. These resources focus on substance abuse prevention, but are very helpful. CADCA also offers training and tools for youth leaders and youth-led coalitions (http://www.cadca.org/training-events).

Indicator: 3.4.a. Number of active wellness and suicide prevention coalitions (new)

Strategy 3.5 ~ Community suicide prevention efforts will expressly address the contributing factor of substance abuse.

Alcohol and drugs play a role in the suicide problem in Alaska but they are not a cause of suicide.[42] In some cases, the addiction of a parent or parents creates an environment in which a child cannot grow up safely. In some cases, a person with an undiagnosed mental illness self-medicates with drugs or alcohol to feel better but inadvertently increases the risk they will commit suicide. In some cases, the use of drugs or alcohol decreases the natural inhibitions that would prevent someone from acting on a suicidal impulse. Whatever the case, the role of drugs and alcohol in suicide in Alaska is clear.

In order for a community to effectively address suicide, the contributing factor of substance abuse must also be addressed. This can be done through a single comprehensive wellness coalition, coordination of substance abuse and suicide prevention efforts through an organization like the Ketchikan Wellness Coalition, or through regular and consistent partnerships between existing prevention groups.

Implementing this strategy might be hard in communities that have made possession and use of alcohol unlawful. It might be difficult to deal with substance abuse openly when there are legal consequences, as well as

[42] For discussion of the data related to drugs, alcohol, and suicide, go to *Mending the Net*, FY10 Annual Report at 10 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

issues of reputation and stigma. However, it is important to recognize that, even in "dry" communities, drugs and alcohol are contributors to suicide.

There are resources to help coalitions bring suicide and substance abuse prevention together. Because the State of Alaska focuses on comprehensive prevention programs based on the Strategic Prevention Framework, the Division of Behavioral Health is an excellent resource. The Advisory Board on Alcoholism and Drug Abuse can also provide technical assistance. The Suicide Prevention Resource Center has specialized tribal technical assistance as well as general support for community coalition building.

Indicators: 3.5.a. Rate of adult binge drinking: 17.9% (BRFSS, 2009)
3.6.b. New mothers reporting that someone close to them had a bad drinking/drug problem: 13.1% (CUBS, 2009)

Suicide Prevention
Resource Center
1-877-438-7772

Strategy 3.6 ~ The State of Alaska will coordinate all prevention efforts across all departments and divisions, to ensure that Alaska has a comprehensive prevention system that recognizes the "web of causality" implicated in suicide, substance abuse, domestic violence, bullying, child abuse, teen risk behaviors, poor school performance, etc.

The factors involved in suicide include a wide range of personal and environmental issues: depression and mental illness, poverty, sexual assault, bullying, lack of education, unemployment, historic trauma and loss of culture, alienation, grief, victimization and exploitation, alcohol abuse, addiction, and others. By addressing these factors in a unified and cohesive way through health, education, employment, and community development efforts, the State of Alaska could reap far reaching benefits with greater efficiency.

The National Prevention Strategy, released in June 2011, emphasizes the need for broad collaborations between state, tribal, and community organizations involved in prevention. States are encouraged to support truly comprehensive prevention efforts that involve all governmental departments and broad groups of stakeholders in creating healthy and safe communities, improving community and clinical prevention, empowering individuals to make good health and lifestyle decisions, and eliminating health disparities. Alaska employed this sort of model at the community level with the Alaska Tobacco Prevention and Control Program – and successfully reduced the amount of cigarette sales to adults by almost 50%, to a

level below the national average.[43] (It is important to note that this success took significant investment of resources and over 15 years to achieve.)

Resources:

Alaska has already undertaken this sort of interdepartmental collaboration with the Criminal Justice Working Group. The commissioners of Health and Social Services, Corrections, Public Safety, and Education and Early Development, as well as the Chief Justice of the Alaska Supreme Court, work through this group on joint efforts to prevent crime and reduce recidivism.

A similar sort of interdepartmental collaboration is involved in Governor Parnell's Choose Respect initiative to end domestic violence and sexual assault in Alaska.

Indicator: 3.6.a. Number of executive agencies and partners engaged in a comprehensive prevention workgroup (new)

Strategy 3.7 ~ The State of Alaska will balance the policy of comprehensive and integrated prevention with the use of evidence-based practices to achieve verifiable outcomes reducing the impact of suicide, substance abuse, violence, sexual abuse, and mental illness on communities.

An evidence-based practice is a prevention program or intervention shown to be effective through strong scientific research. Evidence-based practices have been evaluated and peer reviewed to ensure quality and integrity. When available and used with fidelity in an appropriate context, an evidence- based practice ensures that the intervention will achieve the desired outcomes. Promoting use of evidence-based practices will help spread effective suicide prevention programs and interventions throughout Alaska, benefiting more communities and families. Use of evidence-based practices is part of the National Strategy for Suicide Prevention (NSSP),[44] which includes a specific objective of increasing the number of evidence-based suicide prevention programs in schools, colleges and universities, work sites, correctional institutions, aging programs, and family, youth, and community service programs.

Part of requiring that grantees use evidence-based practices is providing the support and technical assistance needed to implement them effectively. The State of Alaska has provided this sort of technical assistance to prevention grantees, particularly those funded by the Strategic Prevention Framework State Incentive Grant. However, technical assistance resources are limited and do not always meet grantees' needs.

[43] Between FY96 and FY09, the number of cigarette packs sold per adult in Alaska dropped 48%, from 128.6 packs to 67.4 packs per adult. This drop in cigarette sales translates to 405 million fewer cigarettes sold in Alaska in 2009 compared to 1996. (*Tobacco Prevention & Control in Alaska Annual Report: 2009 Update*, Alaska Department of Health and Social Services, http://www.hss.state.ak.us/dph/chronic/tobacco/PDF/TobaccoARFY09.pdf).

[44] The National Strategy for Suicide Prevention Goals and Objectives for Action: Summary is available online at http://mentalhealth.samhsa.gov/suicideprevention/strategy.asp.

By coordinating with the Council, Alaska Native Tribal Health Consortium, and other in-state providers of technical assistance – as well as the Suicide Prevention Resource Center, Substance Abuse and Mental Health Services Administration (SAMHSA), and other national sources of technical assistance, the State of Alaska can expand the supports available to prevention providers. This will enhance the delivery of suicide prevention services, having greater impact statewide.

Resources:

The National Registry of Evidence-based Programs and Practices is a searchable online database of more than 200 peer reviewed interventions in mental health promotion, substance abuse prevention, and mental health and substance abuse treatment (www.nrepp.samhsa.gov/).

The Best Practices Registry for Suicide Prevention is a searchable online database from the Suicide Prevention Resource Center. It includes evidence-based suicide prevention interventions, expert statements, and other less rigorously evaluated practices that are aligned with the objectives of the National Strategy for Suicide Prevention (www2.sprc.org/bpr/index).

Indicator: 3.7.a. Percentage of state grantees using evidence-based practices (new)

Strategy 3.8 ~ The State of Alaska will provide financial and technical support for innovative, research-based suicide prevention practices.

While there are many evidence-based practices that can be implemented in Alaska to help prevent suicide, we must recognize that our state is unique: geographically, culturally, economically, and spiritually. Our people are smart, creative, and dedicated to improving the lives of our neighbors so that no one feels that suicide is the only option. With these strengths and talents, Alaskans can – and have– created promising suicide prevention programs and interventions.

The Qungasvik Project was developed through inclusive and participatory research by the Center for Alaska Native Health Research, Alakanuk, and another Southwestern village, with substantial support through a National Institutes of Health grant. Qungasvik is founded on traditional Alaska Native values and traditions, to build protective factors and resiliency while healing any hurt. They were able to create a suicide prevention practice that resonated with community members and met rigorous evaluation and review standards.[45] One participant, Marvin Kelly, described the Qungasvik Project as "celebrating life" instead of "suicide prevention" – taking a strength based approach to resolving the underlying contributors to suicide. In FY12, the State of Alaska provided an additional $1.5 million to extend this project in Southwest Alaska.

Creating, testing, and evaluating an Alaskan suicide prevention practice takes time,

[45] Read about the Qungasvik Project in *Aurora Magazine*, Fall 2009 (http://www.uaf.edu/aurora/archives/fall-2009/canhr/). Contact the Center for Alaska Native Health Research at (907) 474-5528 for more information about this and other participatory research efforts.

expertise, and funding. There is no consistent source of funding or resources for developing innovative, research-based practices. By providing financial and technical support to develop research-based practices, the State of Alaska will enrich our suicide prevention system and help every Alaskan take responsibility for preventing suicide (Goal 1).

Resources:

The Center for Alaska Native Health Research (CANHR) and University of Alaska Anchorage Center for Behavioral Health Research and Services have experience and credibility in this field. The CANHR focus on collaborative research in partnership with local people is very well suited to Alaska's cultural differences and traditions. The Center for Behavioral Health Research and Services has been active in the evaluation of suicide prevention projects in Alaska.[46]

Indicator: 3.8.a. Number of Alaskan research-based suicide prevention practices receiving state funding/technical assistance: 2 (2011).

Strategy 3.9 ~ The State of Alaska will coordinate and support stigma reduction efforts around mental illness, addiction, depression, and suicide.

Stigma is not just a major barrier to accessing mental health care. It prevents people from reaching out to someone they suspect might be suicidal or experiencing a mental illness or addiction. Stigma can also prevent a survivor from talking about what happened or asking for help, because he or she is afraid of being judged – often when they need help most.

The Council's 2011 media campaign *How Are You Really Doing?* was designed to educate about suicide and encourage action to help someone at risk of suicide. The Alaska Mental Health Trust Authority partners with the Council, Advisory Board on Alcoholism and Drug Abuse, and Alaska Mental Health Board to educate people about the realities of suicide and behavioral health disorders. The *You Know Me* and *Treatment Works, Recovery Happens* campaigns are part of these anti-stigma efforts. It is important that the State of Alaska continue these efforts and broaden them to reach every Alaskan. Research shows that knowledge of mental illness and suicide is not enough to eradicate stigma. Effective campaigns include direct contact with people who experience or have experienced suicidal thoughts, depression, or mental illness and with people who have experienced a loss to suicide.[47] Effective anti-stigma campaigns do not just educate – they transform fear and ignorance into concern and compassion.

Resources:

The Council, Department of Health and Social Services, and Alaska Mental Health Trust Authority partner with organizations in anti-stigma campaigns. Contact the Council at (907) 465-6518 for more information.

Indicator: 3.9.a. Alaskans comfortable with a family member, coworker, guest, or neighbor experiencing mental illness: 77.3% (AMHTA, 2010)

[46] Read about active and completed evaluation projects at the Center for Behavioral Health Research and Services website (http://www.uaa.alaska.edu/cbhrs/).

[47] For a more in depth discussion of the roots of stigma and research about effective ways to address it, see *Mental Health: A Report of the Surgeon General*. Chapter 1 (US Department of Health and Human Services, 1999).

Goal 4: Alaskans Have Immediate Access to the Prevention, Treatment, and Recovery Services They Need

Strategy 4.1 ~ Alaskans know who to call and how to access help — and then ask for that help — when they feel like they are in crisis and/or at risk of suicide.

Part of preventing suicide in Alaska is being aware of when we ourselves are potentially at risk – and then reaching out for help. Periodically ask yourself if you have any of the warning signs (there is a wallet card in Appendix A you can cut out and keep handy). If you answer yes, **ASK FOR HELP!** Your life is precious, and you are not alone.

Resources:

If you do not have someone you feel comfortable talking to, or you aren't sure who to talk to, help really is just a phone call away.

Indicator: 4.1.a. Number of calls to Careline annually: 5,507 (2010)

Strategy 4.2 ~ Community behavioral health centers will provide outreach to ensure that community members know what services are available and how to access them.

In order for Alaskans to know where to go for help, community behavioral health centers must provide outreach. In some communities, the behavioral health center is a partner in the wellness or suicide prevention coalition. However, this is not true of all communities.

Providing outreach and information about how to access services is key to effectively preventing suicide. Alaskans experiencing depression and other mental health disorders need to know where to go for help – before they experience a crisis and become at risk for suicide.

CARELINE CRISIS INTERVENTION

1-800-273-8255

www.carelinealaska.com

Resources:

Outreach can be as simple as creating a Facebook page and linking it to the local coalition's page and StopSuicideAlaska.org. Outreach can include having booths at local health fairs, public markets, and other venues. It can involve a free public service announcement on the radio or scanner channel (often very effective in rural communities). However the community behavioral health center engages in outreach, the message should include Careline information, what services are available locally, and how to get help when someone is having thoughts of suicide.

Indicator: 4.2.a. Number of community behavioral health centers reporting outreach (new)

Strategy 4.3 ~ Community health providers will offer bridge services for young people identified as experiencing serious emotional disturbance or other behavioral health disorders after age 18/21.

Youth and young adults are Alaska's highest risk group for suicide, with rates up to five times the national average.[48] While communities and states have invested heavily in the adolescent mental health system, the services for youth transitioning to adulthood are not always seamless. Many youth and young adults experiencing a behavioral health disorder face increased stress and risks during this time. Community health providers need to partner to provide bridge services to maintain mental and emotional stability – and sobriety, sometimes – so that youth can effectively move into adulthood. Southcentral Foundation's Denaa Yeets' program offers case management, information and referrals to services for young adults at risk of suicide and their families. In order to expand these sorts of programs, the State of Alaska must prioritize resources for these bridge services (which currently aren't always paid for by parents' or public insurance programs).

Resources:

The State of Alaska has invested in services for transition-age youth. Grant funds for programs for youth coming out of foster care, tuition waivers, job training services, and transitional housing have increased.

Indicator: 4.3.a. Number of Alaskans age 18-24 experiencing serious behavioral health disorders who receive mental health services (new)

Strategy 4.4 ~ The State of Alaska and its partners will, through StopSuicideAlaska.org, create and support a learning network among communities to share ideas and strategies that work.

Many resources are provided in this Plan, and many more exist here in Alaska and from national and other states' organizations. We learn how to prevent suicide through education, experience, and sometimes, heartache. Sharing that wisdom effectively requires having a central learning network where every Alaskan can access information and resources (at low or no cost) to help prevent suicide.

Resources:

StopSuicideAlaska.org provides an excellent platform for this learning network, but it requires partners to give life to the learning network. Interested in helping? Contact the Council at (907) 465-6518.

Indicator: 4.4.a. Number of active group administrators on StopSuicideAlaska.org (new)

[48] *Mending the Net*, FY10 Annual Report at 9 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

Goal 5: Alaskans Support Survivors in Healing

Survivors include individuals who have experienced a loss to suicide and those who have attempted suicide

Strategy 5.1 ~ Survivors of a loss to suicide know about suicide prevention resources and how to participate in suicide prevention efforts that support their own healing.

Survivors of a loss to suicide need their own forms of support and help. Just like with any grieving process, what a particular survivor needs can be as unique as the person. Survivors' support groups are one way that people can find help, but there are others. Cultural activities, healing circles, therapy, or counseling – all are sources of support.

Not every community in Alaska has a survivors' support group. In addition to formal survivors' support groups, survivors can support other survivors informally. Whether it's by reaching out through local suicide prevention coalitions or one-on-one, establishing informal networks to help survivors, or incorporating cultural traditions to help healing, individuals can share their experiences and support ongoing healing.

Resources:

- Survivors can connect through support groups in Fairbanks. Contact Fairbanks Counseling and Adoption at (907) 456-4729.
- Survivors can also connect informally through StopSuicideAlaska.org and its social media outlets. There is a map of active groups on StopSuicideAlaska.org.
- The American Foundation for Suicide Prevention has a database you can search for online and in-person groups, as well as a Survivor Outreach Program.

Indicator: 5.1.a. Number of survivor support groups with contact information available on StopSuicideAlaska.org: 1 (2011)

Strategy 5.2 ~ The State of Alaska will provide resources, tools, and technical support for community postvention efforts, with emphasis on natural, organic responses developed in the community.

The Council and Division of Behavioral Health developed the Postvention Resource Guide. This guide provides tools, information, and resources for use after a suicide occurs.

Resources:

- The Postevention Resource Guide is available online on the Council's website. You can also request a printed copy from the Division of Behavioral Health. Call (907) 465-8536 for a copy.
- Training on the Postvention Resource Guide was provided in June, 2011; on-going technical assistance is available from the Division of Behavioral Health. Call (907) 465-8536 for information.

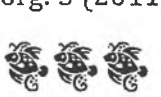
Indicator: 5.2.a. Number of Alaskans trained in the Postvention Resource Guide: 70 (2011)

Goal 6: Quality Data and Research is Available and Used for Planning, Implementation, and Evaluation of Suicide Prevention Efforts

Strategy 6.1 ~ The State of Alaska will improve statewide suicide data collection efforts, employing epidemiological standards/models to ensure quality reporting, analysis, and utilization for timely data-driven policy decisions.

Suicide attempt and completion data is collected through the Alaska Trauma Registry and the Bureau of Vital Statistics. These surveillance systems provide data based on the information collected by acute care hospitals and emergency services providers, as well as through cause of death information provided on death certificates. The surveillance system is supplemented by data collected through the Alaska National Violent Death Reporting System,[49] Youth Risk Behavior Survey, and Behavioral Risk Factor Surveillance System. The data, being available from only a few sources, can be correlated and collectively analyzed.

The current surveillance system relies on third party reports of suicide attempts and certifications of cause of death. Suicide attempts that do not result in treatment at an emergency department are not counted. Suicide attempts that are attributed to "accident" are not counted.



Deaths are not always investigated. Some deaths attributed to accident may be undocumented suicides. The Alaska Violent Death Reporting System does investigate **potential** violent deaths to collect data from different sources and determine whether the death was a "violent death" (suicide, homicide, undetermined intent, accidental firearm, legal intervention, or terrorism) and why. For this reason, the Alaska Violent Death Reporting System is a valuable source of information in tracking suicide data.

Data on suicide and suicide attempts is reviewed, analyzed, and used by state, tribal, and community organizations to guide and evaluate suicide prevention efforts. The efforts are uncoordinated – with even internal sections of the Department of Health and Social Services releasing differing reports or analysis. This hinders planning at the statewide and local level and prevents any meaningful attempts to address data gaps. It also makes pursuit of long-term data collection efforts, such as follow-back studies (also known as psychological autopsies), a lower priority. By bringing all the partners involved in data collection, analysis, reporting, and utilization together to coordinate the way Alaska uses data to drive decision making, the State of Alaska can improve the surveillance system for all users.

Resources:

The Strategic Prevention Framework State Incentive Grant workgroup structure brought many partners together to identify, validate, and analyze data from a wide range of sources. This ensured that the multi-year, multi-million dollar grant was aimed at the most pressing prevention issues.[50] With this recent experience, the State of Alaska and its tribal health partners can transform the suicide surveillance system.

Indicator: 6.1.a. Data sources available on StopSuicideAlaska.org: 3 (2011)

[49] Alaska is one of 18 states participating in the National Violent Death Reporting System. Learn more at http://www.cdc.gov/ViolencePrevention/NVDRS/index.html.

[50] For more information about the SPF SIG Epidemiology Workgroup and how it informed the overall project, visit http://hss.state.ak.us/dbh/prevention/programs/spfsig/EPIwrkgrp.htm.

Strategy 6.2 ~ The State of Alaska will partner with tribal and academic organizations to continue to explore and research the "web of causality" of suicide, prioritizing the health and environmental factors affecting high-risk populations.

While we know there are many factors that can lead someone to consider suicide, the field of suicide research is still developing. Add to that our state's significant indigenous population, an ethnically diverse overall population, a unique geography, weather patterns and frequent natural disasters, historic and current social issues related to historic and personal trauma, and many other "Alaskan" characteristics (positive and negative). There is much we do not know (or do not know we know) about suicide and protecting our people from it.

Alaska is home to a high-quality university system with access to researchers, such as those at the Center for Alaska Native Health Research, with experience working with Alaskans and Alaskan issues. The Alaska Native Tribal Health Consortium's and the State of Alaska's epidemiology programs are robust. However, because Alaska has many pressing health concerns, suicide is not always a priority for funding and resources.

Alaska's institutions and universities should build on the work already being done with Alaskan communities to improve the science related to suicide and understanding of the issue. Research and study must comply with rigorous protections for the people involved, and must be conducted and used in a way that benefits all Alaskans.

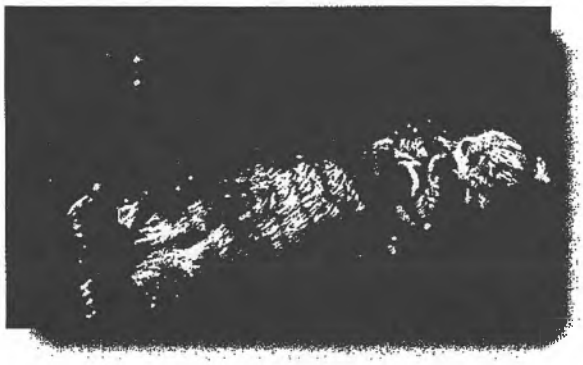
In addition to academic and health research, the State of Alaska should prioritize rigorous and thorough study of suicide through "follow-back studies" (also known as psychological autopsies).[51] Follow-back studies are considered a best practice in documenting and understanding a death by suicide, helping to answer the painful question of "why?" These studies can also improve overall prevention efforts. They are complex, multi-dimensional investigations that require careful planning and thoughtful implementation. A long-term study through which investigation and interviews are conducted contemporaneously – yet respectfully – could provide a more thorough understanding of suicide as it occurs in Alaskan communities.

The follow-back study of Alaskan suicides occurring between 2003-2006 was a study of deaths already certified as being by suicide. Data was reviewed on 426 cases, but survivor interviews – a crucial component of the follow-back study protocol – were conducted for only 56 cases. Thus, the information gleaned from those interviews (71 in total) is for 13% of the total study population. Thus, the results are illustrative but not sufficient to serve as any basis for drawing broad conclusions.

[51] For an overview of psychological autopsies, see *Suicide: Psychological Autopsy, A Research Tool for Prevention*, INSERM Collective Expert Reports, 2005 (a synthesis of international scientific literature and recommendations by an expert advisory group) available online through the U.S. National Library of Medicine, National Institutes of Health (http://www.ncbi.nlm.nih.gov/books/NBK7126/).

Resources:

Conducting ethical and effective health science research takes time, expertise, and money. There are state and national resources to support these undertakings. There are federal and philanthropic sources of funding for research and study.



Examples of agencies and organizations that fund research projects include the National Institutes of Health (including the National Institute of Mental Health), the American Foundation for Suicide Prevention, and the Agency for Healthcare Research and Quality. Resources supporting inclusive and participatory research include *Research that Benefits Native People: A Guide for Tribal Leaders*. This was developed by the National Congress of American Indians, the First Americans Land-Grant College and Organization Network, National Indian Child Welfare Association, Administration for Native Americans to address that fact that indigenous Americans are underrepresented in data collection and analysis (and have too often had negative experiences with outside research of their peoples).

Alaska's universities, and the Alaska Native Medical Center, have institutional review boards that can be engaged to ensure that the study complies with all research standards and protects the participants from harm. The American Association on Suicidology offers training and certification in the best practices of follow-back study investigations, so that investigators have the tools and understanding necessary to conduct an effective and respectful study.[52]

Indicator: 6.2.a. Number of follow-back studies completed since 2011 (new)

Strategy 6.3 ~ The State of Alaska, with its partners, will evaluate the effectiveness of crisis intervention models and responses in use in Alaska.

The State of Alaska and other organizations and communities have worked in suicide prevention for decades. However, there has been no systemic evaluation of the effectiveness of the interventions and programs implemented in our communities. While some organizations employ evidence-based practices, others rely on cultural or locally developed programs. With this wide array of suicide prevention efforts, and varying success from community to community, we need a guide as to what works best in Alaska.

There is precedent for reviewing prevention models and determining the practices – or the elements of practices – that have proven effective in Alaska. Through the Strategic Prevention Framework State Incentive Grant, a wide group of Alaskan practitioners and experts on substance abuse prevention came together to review the field of evidence-based prevention practices. They worked together to determine what evidence-based practices have worked, or could be expected to work, well in Alaskan communities. They were careful to consider that some practices would work in a large urban community, while others would work better in a small village or within a cultural community.

This process helped ensure that the programs funded by the Strategic Prevention Framework State Incentive Grant had the information and

[52] For more information about the training and certification program, visit the American Association on Suicidology at http://www.suicidology.org/web/guest/psychological-autopsy-investigator.

resources to choose a prevention strategy that best suited their goals and the population they served. We can do the same service for communities engaged in preventing suicide.

There has been preliminary evaluation of the Gatekeeper suicide prevention trainings, and evaluation of ASIST by the Alaska Native Tribal Health Consortium has begun.

Resources:

Evaluations of assessment tools, prevention programs, and other research are available to help in this quality improvement effort. For example, the American Association of Suicidology has completed a review suicide assessment measures for adults, older adults, and youth.[53]

Evaluation and research done by outside organizations could supplement a review of Alaskan programs and practices, to ensure a comprehensive look at how well our efforts to prevent suicide are working – and how our successes can spread.

Indicator: 6.3.a. Number of suicide prevention programs evaluated by the State of Alaska and/or its partners (new)

Conclusion

Casting the Net Upstream, Promoting Wellness to Prevent Suicide in Alaska is a call to every Alaskan to prevent suicide. In ways big and small, we can work together to prevent suicide. By improving the health and well-being of our children, our elders, our families, and our communities, we can reduce the rate of suicide in Alaska.

Over the life of this plan, the Council and its partners will provide annual reports on the progress being made. That progress will be weighed against the indicators in the plan. While the Council isn't solely responsible for moving the needle on most of these indicators, these population outcomes and performance measures will help show whether we are in fact making progress. In order to do this, we need every Alaskan to act. Review the checklist on the next page and start checking off all the ways that you, your family, your community, and your state can help to prevent suicide.

Overall Indicators: Rate of suicide: 22.6/100,000 (AABVS, 2010)
Rate of suicide attempt: 98.11/100,000 (Trauma Registry, 2001-2008)

[53] Available at www.suicidology.org/web/guest/current-research.

CASTING THE NET UPSTREAM CHECKLIST

Individuals/Families

- ☐ Visit StopSuicideAlaska.org
- ☐ Attend a Council meeting
- ☐ Attend a prevention coalition meeting
- ☐ Print out Appendix A & put it in your wallet
- ☐ Get trained in suicide prevention
- ☐ Lock up your guns
- ☐ Lock up your medicines
- ☐ Lock up your liquor
- ☐ Get help to overcome unhealthy behaviors (drinking, drugs, etc.)
- ☐ Feeling depressed? Talk to a mental health provider.
- ☐ Join an after-school program (as a participant or leader)
- ☐ Call Careline if you or someone you love need help
- ☐ Have you lost someone to suicide? Reach out for help.
- ☐ Get (& read) *Helping Kids Succeed – Alaskan Style*
- ☐ Ask the elders in your life if they feel depressed or suicidal (and connect them to services if they say yes)
- ☐ Get (and read) a copy of the Postvention resource Guide

Communities

- ☐ Set up a coalition
- ☐ Create a webpage on StopSuicideAlaska.org for your coalition
- ☐ Create an anti-stigma campaign or host an event
- ☐ Host a suicide prevention training
- ☐ Start an after-school program
- ☐ Establish a parenting class or support service
- ☐ Adopt an anti-bullying rule at school/at work
- ☐ Coordinate an anti-bullying campaign
- ☐ Contact United Way Anchorage or Southeast about starting a youth prevention coalition in your community
- ☐ Implement the 40 Assets
- ☐ Implement suicide prevention in your medical practice
- ☐ Implement evidence-based screening for suicide risk in schools & senior centers
- ☐ Implement a means restriction program
- ☐ Ensure youth have treatment and support services after age 18/21

State

- ☐ Promote and coordinate prevention programs across disciplines
- ☐ Encourage research and study of suicide in Alaska
- ☐ Mandate suicide prevention training for teachers
- ☐ Promote evidence and research based practices
- ☐ Evaluate effectiveness and outcomes of suicide prevention programs
- ☐ Create and implement suicide prevention, intervention and postvention for rural police and public safety officers
- ☐ Improve data and surveillance systems related to suicide
- ☐ Fund a long-term follow back study
- ☐ Ensure every Alaskan has access to suicide prevention training, regardless of means
- ☐ Fund innovative research based prevention models
- ☐ Create a learning network via StopSuicideAlaska

Appendix A – Warning Signs

Warning Signs of Suicide

These signs may mean someone is at risk for suicide. Risk is greater if a behavior is new or has increased and if it seems related to a painful event, loss, or change. Seek help as soon as possible by contacting a mental health professional or by calling Careline at **1-800-266-HELP (4357)** if you or someone you know exhibits any of the following signs:

- Talking about wanting to die or to kill oneself.
- Looking for a way to kill oneself, such as searching online or buying a gun.
- Talking about feeling hopeless or having no reason to live.
- Talking about feeling trapped or in unbearable pain.
- Talking about being a burden to others.
- New or increased use of alcohol or drugs.
- Acting anxious or agitated.
- Behaving recklessly or taking more risks than usual.
- Sleeping too little or too much.
- Withdrawing or feeling isolated.
- Showing rage or talking about seeking revenge.
- Displaying extreme mood swings.

(from the National Suicide Prevention Lifeline)

Know the Signs of Suicide: IS PATH WARM?

Appendix C - Contact List, 2012

Part of equipping Alaskans to take action and implement *Casting the Net Upstream* is ensuring that you can quickly contact the right person for the specific information you need. This list is provided so that you can do that. Because we know that people change jobs, retire, get promoted and move, the Council will publish an updated contact list with each annual implementation report.

The Jason Foundation

- **The Jason Flatt Act** (we request each state name this legislation as such to help us build a national awareness about this legislation – much like the "Amber Alert" legislation) – is a legislative action that builds within a state's current In-Service Training / Certification requirements two hours training in youth suicide awareness and prevention. It is important to note, this does not increase the number of hours required – only shifts hours from what would be "elective subject hours" to "required subject hours".
- **The Jason Flatt Act** has had the endorsement from the Teacher's Association and Department of Education in every state it has passed.
- **The Jason Flatt Act** has been passed in Tennessee; Mississippi; California; Louisiana; Illinois; Arkansas.
- If passed as proposed / outlined, **The Jason Flatt Act** can be passed as a mandatory requirement without a fiscal note or any cost to the educator, school, school district or state for the training. The Jason Foundation will provide at no-cost to the participants / state access to their On-Line In-Service Training Library that will satisfy the requirements of the law and acts as a "fail-safe" safety net to insure access to training by all educators without cost. (will be glad to discuss why "mandatory" is an important part to assure all youth have benefit of a teacher who has been trained).
- Although The Jason Foundation offers its On-Line In-Service Training Library as a resource, **The Jason Flatt Act** **does not** require any specific program be utilized. We have found, as we have foretold, that many groups such as NAMI, MHA, Crisis Response Centers and Suicide Prevention Coalitions have eagerly offered to provide such training to schools at no-cost.
- In a recent national survey of educators who had satisfied their requirement utilizing The Jason Foundation's On-Line In-Service Training Library (we don't have access to other organization's records) – almost 90% of the educators reported now feeling more confident in reaching out to a student whom they feel may be struggling with issue of suicidal ideation or more confident should a student come to them for help.
- As to an argument that some have utilized – "not putting any other responsibility on our teachers": The Child Abuse Statute that most states have adopted already specifically names "teachers" as "First Reporters" in issues that deal with physical or emotional abuse (suicidal ideation is such a sign). It can be argued that teacher's are already legally responsible to report signs of suicidal ideation, they just have not been trained which could raise legal questions.

- Over a five-year period (2004-2008) in Tennessee, It was reported by the Department of Health that although suicide rates increased overall 15% - youth suicide continued its decrease...31.4% over 5 years. Two of these years The Jason Flatt Act was active in TN, but the previous three years – although not mandated – JFI had trained several thousand educators. Since this training was one of the only differences of resources

provided across Tennessee's population – we believe the importance is easily seen in the training of educators as an impact on lowering suicide attempts and suicide deaths.

- Providing training to our educators is also listed as one of the "Goals" of the National Strategy for Suicide Prevention – a model most states utilize for the state plans.

FISCAL NOTE #4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 140(JUD)

Analysis

This bill classifies certain compounds commonly called "bath salts" as Schedule IIA controlled substances. This classification creates new crimes that can be charged as multiple degrees of misconduct involving a controlled substance.

These crimes range from class C felonies to unclassified felonies, with broad sentencing ranges; fourth-degree misconduct involving a controlled substance is a class C felony and carries a potential sentence of up to 5 years imprisonment; third-degree misconduct involving a controlled substance is a class B felony and carries a sentence of up to 10 years imprisonment, first-degree misconduct involving a controlled substance is an unclassified felony and carries a sentencing range of up to 99 years of imprisonment .

The Agency has no reliable method for determining how many cases will be charged under the new classification or how many individuals charged will require public counsel. Additional felony cases will, however, have a fiscal impact on the Agency. The Agency, therefore, submits and indeterminate fiscal note.

FISCAL NOTE #3

STATE OF ALASKA **BILL NO.** CSSB 140(JUD)
2012 LEGISLATIVE SESSION

Analysis

This legislation classifies certain substances as Schedule IIA controlled substances.

Currently, possession of a schedule IIA is a Class C felony with a possible sentence of 0-2 years. Manufacturing or delivering a schedule IIA controlled substance is a Class B felony with a possible sentence of 0-4 years. The current average daily cost to house an inmate is $134.90. Therefore, housing an offender could cost the department anywhere from $0.0 (no time served) to $196,954.00 (for a 4-year sentence).

DOC analyzed the impacts of similar laws passed in recent years (Example, HB 7 - Synthetic Marijuana), we have found zero convictions and therefore zero offenders being housed in DOC facilities.

The department is currently unable to quantify the fiscal impacts of this bill, as we cannot predict the number of offenses that will occur. Should this legislation pass, the department will closely monitor the potential future fiscal impacts.

FISCAL NOTE #2

STATE OF ALASKA **BILL NO.** CSSB 140(JUD)
2012 LEGISLATIVE SESSION

Analysis

This proposed legislation would add certain synthetic substances to the Schedule IIA list of statutorily controlled substances and provide for an effective date.

The Scientific Crime Detection Laboratory (crime lab) provides analysis of suspected controlled substances, issues reports, and provides expert testimony for the State of Alaska. The crime lab currently receives an average of ten submittals each month from law enforcement referencing "suspected bath salts." If these substances become controlled, the Chemistry Section of the lab can expect some change in requests for laboratory service, but is unable to determine how significant that change will be; whether it will remain roughly ten submittals per month or if it will increase.

These substances are unlike most that have been previously criminalized in that they are not "street drugs" but legally contrived and sold online via the internet and locally over-the-counter through tobacco shops. Because actual fiscal impact is unknown and difficult to determine, the crime lab is not requesting any additional funds or positions at this time but also does not wish to leave a matter the crime laboratory cannot fully assess without the reality of possible, though not probable, future fiscal impact.

FISCAL NOTE #1

STATE OF ALASKA **BILL NO.** CSSB 140(JUD)
2012 LEGISLATIVE SESSION

Analysis

SB 140 adds new substances to Schedule IIA of Alaska's controlled substances. These substances are currently not controlled. They are sometimes referred to as synthetic cocaine or bath salts. It is difficult to predict the number of cases that would be filed after these substances are included in Alaska's schedules of controlled substances but the number should not be great.

Schedule IIA currently includes, among other substances, amphetamines and methamphetamines, which are fairly dangerous substances.

The fiscal impact is zero.

Alaska State Legislature

Interim:
716 West 4th Ave.
Anchorage, Alaska 99501

(907) 465-4945

Senator Kevin Meyer
Senate District O

SPONSOR STATEMENT FOR SB 140

"An Act classifying certain synthetic cathinones as schedule IIA controlled substances; and providing for an effective date."

SB 140 would classify certain synthetic cathinones, commonly known as synthetic cocaine and marketed as 'bath salts,' as a schedule IIA controlled substance.

Marketed as bath salts or plant food with names like 'Meow-Meow,' Vanilla Sky,' 'Ivory Snow,' and 'Bliss,' synthetic cathinones are inexpensive, accessible, and undetectable in most drug tests. Many users of this drug use them in combination with or as a legal alternative to cocaine, ecstasy or methamphetamines.

Drug effects include impaired perception, reduced motor control, disorientation, extreme paranoia and violent episodes. Synthetic cathinones are abused mainly by snorting and oral ingestion. The U.S. Drug Enforcement Administration, the U.S. Military, and the Municipality of Anchorage have all taken action to control or prohibit use of this drug.

According to the National Council of State Legislatures, as of October 24, 2011 there are 33 states that have adopted laws or have departmental rules banning chemical compounds associated with 'bath salts.' Seven states have legislation pending.

Should SB 140 pass, it would be unlawful throughout the State of Alaska to sell, use, purchase, possess, manufacture, transport or deliver synthetic cathinones, the chemical compounds which are being marketed as 'bath salts' and synthetic cocaine.

SB140 Cathinone Bath Salts
Changes from Version B to Version I.

New Sections 1 and 2 were added to the bill to amend the penalties for the cathinone substances listed in the original bill.

In Section 1, sales, distribution, manufacture, and possession of 500 milligrams or more of the substances remain classified as Misconduct involving a Controlled Substance (MICS) in the 4th degree, a Class C felony.

In Section 2, possession of **under** 500 milligrams are classified as MICS in the 5th degree, an A misdemeanor.

In Section 3, a technical amendment was made by legislative legal drafters to transfer methicathinone from the list of Schedule 1 substances into Schedule 2, so that all the cathinone-related substances are listed in the same schedule.

Section 4 repeals the methicathinone listing in Schedule 1.

Life-threatening Necrotizing Fasciitis Due to 'Bath Salts' Injection

RUSSELL RUSSO, MD; NOAH MARKS, MD; KATY MORRIS, MD; HEATHER KING, MD; ANGELLE GELVIN, MD; RONALD ROONEY, MD

abstract

Full article available online at ORTHOSuperSite.com. Search: 20111122-36

Necrotizing fasciitis is an orthopedic emergency. The ability to quickly and accurately diagnose this rapidly spreading disease can save a patient's life and limb. However, the diagnosis is complex because necrotizing fasciitis usually manifests as a less severe cellulitis or abscess while the majority of the damages rage beneath the surface of the skin. Although the diagnosis is not new, the potential causes and vectors continually change. This article reports a new source of necrotizing fasciitis in an intramuscular injection of "bath salts," a rapidly emerging street drug that is legal in some states and evades authorities with its innocuous name.

The patient presented 2 days after injection of bath salts with extensive cellulitis extending to the mid portion of her upper arm. The cellulitis initially responded to broad-spectrum intravenous antibiotics, but rapidly deteriorated 48 hours later, leading to a forequarter amputation with radical mastectomy and chest wall debridement to obtain healthy tissue margins and control the disease. The patient made a full recovery after further minor debridements, negative pressure dressings, directed antibiotic therapy, and skin grafting.

The recent emerging popularity of this highly obtainable, injectable substance may lead to an increase in cases of necrotizing fasciitis. Orthopedic surgeons should be vigilant in diagnosing this process early and should perform an extensive debridement.

doi: 10.3928/01477447-20111122-36

The term necrotizing fasciitis originates from a report by Wilson[1] in 1952. However, what we know now as necrotizing fasciitis was described initially by Hippocrates as early as the fifth century BC. The term was repopularized by Confederate Army surgeon Joseph Jones as "hospital gangrene." In 1924, Meleney again renamed it "hemolytic streptococcal gangrene."[2] Despite the changes in nomenclature, the disease known as necrotizing fasciitis is the same spectrum of infections, ranging from superficial cellulitis to rapidly spreading myonecrosis. The pathogenesis of the disease has remained constant over time. This article describes a form of necrotizing fasciitis, a rapidly progressing streptococcal myositis, originating from an intramuscular injection of "bath salts."

Bath salts, or synthetic cathinones, have gained increasing worldwide popularity in the past few years.[3] Despite its name, bath salts have no legitimate use for bathing and are intended only for substance abuse. Its recent popularity, initiating in Western Europe in 2009, has alarmed both authorities and health care providers with its rapid emergence.[4] The first cases of bath salts intoxication were reported in August 2010 in Louisiana (n=1) and Kentucky (n=1).[3] These intoxications create a deep paranoia and recurrent delusions in users.[5] More cases have followed over the past 2 years. Unlike common illicit drugs such as cocaine, heroin, lysergic acid diethylamide, phencyclidine, and ecstasy, the dangers of bath salts are unknown and only beginning to emerge. At least 16 states so far this year have placed emergency bans on the products, which are marketed under false pretenses to evade authorities.[3]

However, as the drug's use evolves from an oral, smokable, and snortable form to an injectable version, communities need to become aware of the implications of an increase in injectable illicit substances.[5] Studies in the past outlined the dangers of dirty needle use from illegal substances ranging from anabolic steroids to heroine.[3,6] Injection risks range from local pain and swelling to peripheral nerve palsies. However, the most severe consequence is necrotizing fasciitis infection, which can initially appear innocuous but later manifest as a severe infection, culminating frequently in loss of limb and even death.[7]

The diagnosis of necrotizing infections of both muscle and subcutaneous tissue can be difficult and time sensitive. The only effective treatment is extensive debridement with intravenous antibiotics to prevent loss of life and limb. This article reports the danger of injecting bath salts intramuscularly and the difficult subsequent diagnosis and treatment.

CASE REPORT

A 34-year-old woman presented with a 2-day history of increasing right forearm pain and erythema. She reported the redness and pain began the morning after a party. She reproted no subjective fever or chills and had no documented temperatures >100.4°F. She was hemodynamically stable and well appearing with an anxious affect. She reported no symptoms other than her right arm complaints. Her erythema extended from the middle of her upper arm to her metacarpophalangeal joints. She had mild swelling compared with the contralateral extremity, and no crepitus was palpable. She was able to move her shoulder, elbow, and wrist with moderate pain. She had 1 small red puncture wound that she later admitted was a needle stick. She had no neurovascular deficits, and initial radiographs revealed no fracture, dislocation, or apparent gas or foreign body. The areas of erythema were marked with a sterile skin marker, and she was started on broad-spectrum intravenous (IV) antibiotics for cellulitis.

The next morning, the patient's erythema had receded to approximately 50% of the previous physical examination and markings. The patient reported mild resolution of pain. On further questioning, she reported injecting bath salts 2 nights prior to developing symptoms. She also reported the injection was intramuscular because she could not obtain intravascular access. The patient initially denied illicit drug use, but then reported cocaine, opiate, and benzodiazepine use in addition to the recent bath salts injection.

Figure 1: Patient at time of operative incision.

The patient remained on broad-spectrum IV antibiotics with close monitoring. She continued to be afebrile with no tachycardia. Her white blood cell count was 17.9, her erythrocyte sedimentation rate was 125, and her C-reactive protein count was 20. All other laboratory values were within normal limits. She tested positive for cocaine, opiates, and benzodiazepines prior to iatrogenic administration of those medications.

The following morning, the erythema only surrounded the needle injection site. However, the patient reported pain at the site of the injection, so an ultrasound was ordered to delineate any nonradiopaque foreign bodies and the presence of fluid or gas.

Hours later, when the patient was reexamined, she was found to have progressive erythema that had developed past the earlier skin markings and an area of skin sloughing around the injection site with a malodorous drainage. The diagnosis of a fast-spreading infection, such as necrotizing fasciitis, was assumed, and the patient immediately underwent emergent surgical debridement and exploration. She was placed on penicillin G and clindamycin for antibiotic coverage (Figure 1).

By the time surgery began, the erythema had spread farther proximally, and bullae were beginning to form at the injection mark on the dorsal forearm. An inci-

sion was made over the dorsal forearm in the Thompson approach. A large amount of pink, thin, purulent fluid was expressed with a foul odor. As the debridement continued, a large area of dark, noncontractile muscle surrounding the area of injection was present. After full dissection of the forearm, 30% of the skin and subcutaneous tissue remained viable, along with the contents of the volar forearm (Figure 2).

No clear margins proximally of healthy muscle were available, so an incision was made in the anterolateral approach to the shoulder. In the time it took to expose the anterior upper arm, muscle in the forearm that had previously been contractile and pink had turned dusky and noncontractile. We disarticulated the shoulder to obtain clear margins of the disease to prevent disease progression. The general surgery team was placed on standby to aid with further chest wall and neck debridement as indicated, and massive blood transfusion protocols were instituted.

To prevent the spread of disease and obtain healthy viable tissue, a complete forequarter amputation was performed, removing both scapula and clavicle while debriding all noncontractile, unhealthy muscle. The general surgery team also elected to perform a right radical mastectomy and further chest wall debridement to prevent further progression of the disease. All bleeding vessels were ligated, and we obtained disease-free tissue throughout the wound bed. Sterile dressings were applied, and the patient was transferred to the intensive care unit for monitoring (Figure 3).

Bacterial isolates included alpha-hemolytic *Streptococcus*, *Streptococcus viridans*, *Peptostreptococcus micros*, *Gemella morbillorum*, and *Actinomyces odontolyticus*. Recent studies indicated that 82% of these infections were polymicrobial, with the most common organisms including Gram-negative enteric bacilli, enterococci, staphylococcal, and streptococcal species.[8]

The patient underwent further debridement and negative pressure dressing changes in the following days and remained disease free, afebrile, and hemodynamically stable. She then underwent extensive split-thickness skin grafting after healthy granulatory tissue covered the expanse of the wound. She is currently undergoing rehabilitation and is in excellent health (Figure 4).

Figure 2: Photograph during forearm debridement.

Figure 3: Photograph after debridement.

Figure 4: Photograph after skin grafting.

Discussion

As bath salts gain popularity, medical centers of all disciplines must be prepared to identify the signs of intoxication while treating the potential side effects.[3] The associated trauma brought on by the drugs' psychogenic effects may lead patients to orthopedic surgeons through more common routes.

In addition to the effects of the drug, injecting these illicit substances can cause a rare, often-fatal infection. Past reports linked the injection of illicit drugs, including anabolic steroids, with similar devastating clostridial myonecrosis.[6] These infections are usually associated with crush traumas and farm injuries, but now one must also be prepared and vigilant when presented with a cellulitic patient who has a history of needle use. Even patients with their own clean needles are not immune, as evident in a report of an asthmatic patient developed necrotizing fasciitis from an injection of subcutaneous epinephrine.[9]

The key to treatment in this population is early recognition and immediate extensive surgical debridement coupled with penicillin G and clindamycin IV antibiotics. The diagnosis may be delayed due to the nature of the disease. According to a 1995 study of 65 patients, initial symptoms included fever in 60% of patients, skin blebs or bullae in 38% of patients, and minor pain in 27% of patients at presentation.[8]

Deep muscular necrosis is often masked by a nonerythematous overlying tissue bed, and surgical intervention is often delayed after hospital admission. Vigilant monitoring of patients with cellulitis who present with a history of needle use with a low threshold to an extensive debridement is the only means for treatment to cure the patient. One study noted an average time to operative procedure after admission of 45 hours (range, 1.7-312 hours), with the average time to surgery for survivors being 25 hours, whereas nonsurvivors had an average time to surgery of 90 hours.[8]

Necrotizing fasciitis has a rapid timeline to tissue destruction and loss of life. A 1995 study found the survival rate of those diagnosed with necrotizing fasciitis to be as low as 50% (range, 6%-76%). However, wide ranges of mortality exist depending on a multitude of factors.[8] Therefore, the treating orthopedic surgeon must be able to perform a full, extensive debridement

in extreme cases, in which a forequarter amputation may be indicated to prevent delay in treatment and infection progression and, ultimately, death. A similar extensive debridement was documented in a report by Brzozowski and Ross,[10] in which a rapidly progressing *Escherichia coli* forearm infection was treated by forequarter amputation to save a patient's life before the patient succumbed to the disease.

To our knowledge, our article is the first to report streptococcal necrotizing fasciitis and myonecrosis from intramuscular injection of bath salts, which are currently only banned in some US states. Despite the drug's legal status, it must be treated as illicit, and one must be suspicious when examining a patient with this clinical history because the diagnosis of flesh-eating bacteria can masquerade as abscesses and cellulitis.[7] Treatment for this virulent disease remains a swift diagnosis with extensive surgical debridement to obtain complete control of the organism and prevent death. However, the best treatment is prevention with public, street-based education and early detection.

A large retrospective study performed in California between 1984 and 1999 showed a sharp increase in necrotizing fasciitis between 1994 and 1999 in conjunction with the rise in popularity of the intravenous drug black tar heroin.[11] Hopefully, this rise in popularity of bath salts does not preclude a similar rise in necrotizing fasciitis, but surgeons must be ready to diagnose and perform extensive debridements in association with general surgeons in some instances to obtain limb salvage and function and prevent death. ◙

Dangerous new designer drugs are showing up in Alaska

'BATH SALTS': Side effects can include seizures, paranoia, death.

By ROSEMARY SHINOHARA

(11/15/11 22:07:24)

A year after Anchorage led the state in outlawing a new street drug known as Spice, K2 or Spike, another set of new so-called "designer" drugs that are at least as dangerous is appearing in Alaska, a city prosecutor says.

The Spice-type drugs are synthetic marijuana.

The new drugs are chemical stimulants that mimic the effects of cocaine, ecstasy and methamphetamine, and are peddled under names like Pure Ivory, White Rush and Synergy.

The drugs are sometimes sold under the guise of "bath salts" or "plant food." Ingesting the powders and crystals causes side effects such as delusions, seizures, teeth grinding, paranoia, heart palpitations, blue extremities and, in some cases, death, assistant city prosecutor Jennifer Messick told Anchorage Assembly members at a work session earlier this month.

The Assembly last week made it illegal to sell, use or possess the chemical compounds found in the "bath salt" group of drugs in Anchorage. The federal Drug Enforcement Administration in October added the ingredients of the synthetic drugs to a list of controlled substances that are illegal to sell or possess in the United States.

Sen. Kevin Meyer, R-Anchorage, is planning to introduce a proposed state law banning the chemicals used in bath salts too.

A state law will help because the federal government "may not prosecute many of the lower-level cases that we and the state can," said Anchorage city attorney Dennis Wheeler.

But no one thinks these laws will totally erase the threat. The new rules are difficult to enforce and fresh versions of designer drugs can appear at any time.

"In just over a year, we went from five compounds in Spice to 400-something substances out there as of July," Messick said.

ARE THE DRUGS HERE?

So what's the evidence that the bath salt drugs -- synthetic stimulants Mephedrone, Methylone and a third known as MDPV -- are actually in Alaska?

Providence Alaska Medical Center psychiatric nurse practitioner Heather Brock said this year she's seen about one person a month who is sick enough from the bath salt family of drugs to be admitted to the hospital. They've either told her what they've taken or they've brought in the package, she said.

Other users may have just been seen in the emergency room.

Dr. Jeff Baurick, who works in the emergency room at Alaska Regional Hospital, said he's had one bath salt case in the past few months and has heard of a few other patients seen by one of the nine other ER doctors there.

People snort or swallow the drugs or even put them up their rectums, Brock said.

"People are confused, agitated, they have increased heart rates, a couple cases of arrhythmia," she said. "They're very paranoid, like you would see in any kind of stimulant."

The effects only last a few hours, she said. That leads to another problem.

"Because they're fast-on, fast-off, people are more likely to re-dose, which makes it more likely to overdose," Brock said.

There's no antidote, she said. Medical providers simply treat the symptoms: "You address the heart rate, the fever, the anxiety."

In at least one case, a person mixed a bath salt drug with cocaine, causing a bad reaction, she said. She couldn't be more specific due to privacy rules.

Messick said the drugs are appearing locally "quite a bit."

She said between Anchorage police and Valley emergency and law enforcement officials, reports are made just about daily that they're dealing with people showing the symptoms of having used the bath salt compounds.

In her talks in Anchorage schools, Messick has found students are aware of the new variety of drugs. But earlier this month, a School District spokeswoman said the district has had no incidents involving students.

"We may be getting on the front end of it," Anchorage Police Chief Mark Mew said. "We're looking at a situation where the evidence is anecdotal."

WHERE TO GET THEM

Bath salts are accessible through the Internet and are believed to have been available in some tobacco shops, Messick said. When she visited a couple of tobacco shops in East Anchorage after the feds made bath salts illegal last month, though, the store representatives said they didn't have any.

"We could go to jail," one of them told her.

But both shops offered packets of material called Spice, she said. The packets could have been synthetic marijuana, which both the municipality and the state made illegal over the past year.

The fact that Spice is still on the shelves illustrates another problem: enforcement.

Whether stores that are still offering items marketed as Spice are breaking the law is "open for debate," Messick said.

The ingredients on so-called Spice packets aren't listed and it's unclear if they contain the specific ingredients banned under state or city law.

The city law "casts a wide net if you market anything with the same effect," Messick said. "I think the concern is whether it's vague and overbroad."

Another enforcement issue: The city doesn't have a field test kit for either the synthetic marijuana drugs or the latest, so-called bath salt drugs, Chief Mew said. A field test would give officers probable cause to arrest someone for use of the drugs.

Users could still be arrested for driving under the influence under a city law that makes it illegal to drive if a person is impaired by any substance, Messick said.

And test kits might become available before long. Messick said a company in the Netherlands is producing them.

Alaska lawmakers seek inexpensive crime solutions

By AUSTIN BAIRD
(01/24/12 13:23:29)

Lawmakers, prosecutors and law enforcement officers from around the state gathered Tuesday for a two-day summit that aims to identify cost-effective ways to fight crime and improve public safety across Alaska.

The Senate Judiciary Committee opened the summit with a presentation from Annie Pennucci, a researcher for the Washington State Institute for Public Policy. The institute is nonpartisan and established by the Washington Legislature to study the economic impacts of issues important to the state.

Pennucci told the bipartisan committee that a summary of 66 studies of 3- and 4-year-old low-income children she helped conduct for the Washington Legislature show a direct correlation between preschool for low-income children and lower crime rates.

Everything from high school graduation rates to out-of-home placement rates are also correlated, she said.

"It bends the curve significantly," said the committee's chairman, Sen. Hollis French, D-Anchorage, who has sponsored legislation that would expand education opportunities to pre-elementary aged children. French said early childhood education is not a cure-all but a part of an overall solution.

Other topics of discussion at the summit included how communities of varying sizes, from Anchorage to Palmer to rural villages, have fared as budget cuts have chiseled away resources available to departments.

Anchorage Police Chief Mark Mew asked the state for renewed support of community policing, for which a grant recently expired, and for other programs that he said have been effective at curtailing crime in Anchorage.

Another focus was on so-called "bath salts," which are synthetic drugs legally sold over-the-counter that mimic the highs from cocaine, ecstasy and other illicit substances. Bath salts have become a focus for lawmakers and will be the subject of a hearing before the committee Friday.

The legislature banned synthetic marijuana last year, and that was helpful, Mew said. "We have a misdemeanor ordinance (in Anchorage) for bath salts, but it really needs to be a felony," he said.

It's not clear whether any special initiatives or new legislation will result from the summit, but French has said it's important to bring together criminal justice experts to get a better sense of what is happening in the system as a way of considering catalysts for change.

The summit is scheduled to continue Wednesday, with speakers slated to include Walt Monegan, CEO of the Alaska Native Justice Center, and Nancy Haag of Stand Together Against Rape.

Designer drugs like 'plant food' and 'bath salts' exploding across Alaska

Victoria Barber and Noah Hull Diamond | The Seward Journal | Nov 07, 2011

Alaska legislation would ban smoke-shop 'incense' OTC drugs K2, Spice

Alaska law banning K2, Spice scheduled to take effect in July

In towns both large and small throughout Alaska a new class of potent designer drugs has established a foothold, sending more and more users to hospital emergency rooms while police wonder how to fight back.

Mephedrone, methylone and MDPV -- drugs commonly known as "plant food," "bath salts" and "air freshener" -- are legal under state law.

While the street names sound benign, the drugs' effects are anything but. The powerful drugs are easy to get and relatively cheap. The three drugs are marketed interchangeably and sometimes referred to as "synthetic cocaine." They are all powerful central nervous system stimulants, designed to mimic the effects of illegal drugs like meth, cocaine and ecstasy -- with some hallucinogenic properties as well.

"We're seeing a psychoactive substance that seems to be more intense than any of the stimulants -- more intense and more robust in some cases than meth, and definitely cocaine and ecstasy," said Patrick Hayes, supervisor of the outpatient substance abuse program at SeaView Community Services in Seward.

The drugs are relatively inexpensive, in part because they have been easy to get. Bath salts and plant food can be found easily on the Internet, where they are marketed under names like "Vanilla Sky," "Ivory Wave," and "Red Dove." They can come in almost banal-looking packages (bath salts are often emblazoned with images of flower petals, angels, birds and women's feet) and marked with a disclaimer that they're not for human consumption.

The drugs have also gained a following as something that won't show up on urinalysis tests. Until recently the compounds were legal -- the U.S. Drug Enforcement Administration temporarily banned the substances just last month, but the state of Alaska has yet to address the issue legally.

Hayes said that he first heard about plant food in Seward several years ago. During the last two years, he said, it seems to have caught on.

"It seemed like the people who were moving from cocaine to meth eventually starting moving on to it," Hayes said. "I think that meth is being replaced by plant food."

Effects mimic a schizophrenic breakdown

"I used, what you're calling plant food, for the first time about a year or so ago," said "Sam," a Seward resident in his early 30s who spoke on the condition of anonymity.

Sam sat down to talk at a local restaurant on a chilly evening this fall. He grew up with nice parents in a middle-class family, he said, but fell into substance abuse. It started in his teens with cigarettes and marijuana and progressed to hallucinogens, prescription drugs and cocaine.

Today, Sam is usually homeless. He said he turns to plant food as an alternative to spendier, harder-to-find drugs like heroin. "It's pretty cheap, and you get high for a while," Sam said.

Plant food, bath salts and air freshener can be ingested in a variety of ways. They come in powder or pill form and can be snorted, freebased, mixed with water and injected or atomized.

But while the drugs' effects mimic substances like cocaine or ecstasy, there isn't a lot of information about how mephedrone, methylone and MDPV affect the human body, even as users are landing in hospital emergency rooms.

"It's so new, we don't even know the half life (how long it takes the liver to detoxify half of the drug)," Hayes said. "We don't know long-term effects of chronic use. We're seeing people using it, showing up at the ER with symptoms of psychosis, rapid heart-beat, elevated heart pressure, along with delusional thinking and hallucinations, both auditory and visual."

The hallucinations described by users, Hayes said, are "more along the lines of someone who is experiencing a schizophrenic breakdown."

"I've talked to people who've used plant food -- they say it's the worst acid trip they've been on -- but as soon as they come down they want more."

'Absolutely' dangerous

"There may be users that say they've never had a bad trip. That may be," said Jennifer Messick, a traffic safety resource prosecutor with the Municipality of Anchorage who works with the Anchorage Police Department. Those aren't the users that law enforcement ends up dealing with, she said. "We find many users who say they thought it was safe -- a safe alternative to cocaine, meth or whatever, and land in the hospital."

Messick began researching designer drugs a couple years ago. As her expertise has grown, she's been inundated with requests to visit communities around the state and nation to talk with police officers about designer drugs and how to safely handle people who are on them.

Messick said users on mephedrone tend to be paranoid and delusional. They commonly report a sense of impending death or doom, seeing hallucinations of dead people.

Some drug users enter a state of "excited delirium" -- a condition often associated with cocaine or meth -- where they become extremely aggressive, temporarily insensitive to pain and display incredible strength and endurance. This poses "a huge safety risk for officers," Messick said.

It's becoming a bigger problem because use of plant food, bath salts and their kind is increasing "exponentially" across the state, Messick said. It's hit the Mat-Su Valley and Anchorage hard, but small towns have not been spared either. "I can assure you it's about everywhere in Alaska, even some of the villages," Messick said.

Messick said mephedrone, methylone and MDPV started out as party drugs in Russia and Western Europe. They have since been banned in many European nations, including the United Kingdom, but their popularity spread overseas to the U.S. on the heels of synthetic cannabinoids like "spice" and "K2."

Plant food and bath salt use appears to have exploded in the last couple years. Nationwide, there were a total of 298 calls to the American Association of Poison Control Centers about plant food in 2010. In just the first half of 2011 that number jumped to 4,137 - a 1,400 percent increase. That doesn't even include 911 calls, Messick noted.

"Unfortunately, the general public doesn't understand how absolutely dangerous these things are," Messick said.

Families on alert

"I can say I was shocked when I heard (plant food) was in Seward," said Karen Sturdy, director of the Seward Parks and Recreation Department.

Sturdy said she first heard the drug was being used in Seward last year. In a presentation before City Council, she said plant food was one of the dangers facing Seward's youth. "I think it's way more prevalent than anyone is willing to admit," said Sturdy.

The drugs are scary on their own, Sturdy said, but she's also worried that youth, upon hearing the street names, will try to snort or otherwise ingest real plant food or bath salts, thinking it will get them high. "There are kids in Seward who think they are 10 feet tall and bullet proof," Sturdy said. "So, it's frightening."

Lt. Louis Tiner said Seward police are coming into contact with more and more people who are on plant food and bath salts or admit to using them. "But more than anything we hear from concerned people about their friends and family members," Tiner said. "There are people using it and addicted to it and there are people here distributing it. It is something parents should be aware of and on the lookout for."

Illegal, and not illegal

Last month, mephedrone, methylone and MDPV became illegal under federal law. The DEA took emergency action Oct. 21 to control the substances, making the possession and sale of the

chemicals, or products containing them, illegal in the United States. It's a temporary action that will be in effect for a year while the DEA and U.S. Department of Health and Human Services study whether the drugs should be permanently controlled.

Until then, police have few tools with which to battle the use of mephedrone, methylone and MDPV. That's because while the drugs are banned under federal law, the State of Alaska has yet to take action on them. If a police officer in Seward came across someone in possession or selling plant food they could only pass the case along to the DEA for review. While the DEA could prosecute, there's also a chance they wouldn't take action on small-scale, individual cases. "There's a great need for state and local legislation," said Messick.

Anchorage Mayor Dan Sullivan introduced an ordinance last month to criminalize plant food, bath salts and the others. And state Sen. Kevin Meyer announced his intent to introduce legislation in the upcoming session to ban mephedrone and MDPV at the state level.
"What makes these substances even more dangerous is how they are being marketed . . . With names like 'Meow-Meow,' Vanilla Sky,' 'Ivory Snow' and 'Bliss', (they're) obviously aimed at kids and young adults," Meyer said in a press release.

Messick acknowledged the laws may be insufficient. Designer drugs are carefully designed to get around the law. "I tell people to think not just about these drugs, but what drug will come out next year," Messick said. The most important thing to do, he said, is to make sure people know the risks. That can help -- although some people don't care.

"Some chemist will just change the formula a little then it'll be cheap and easy again," said Sam. "I want to get high and if they make it illegal, I still will."

CLERK'S OFFICE
AMENDED AND APPROVED
Date: 11-8-11

ANCHORAGE, ALASKA
AO No. 2011-106(S)

AN ORDINANCE AMENDING ANCHORAGE MUNICIPAL CODE CHAPTER 8.35 TO PROHIBIT THE MANUFACTURE, ASSEMBLY, DISTRIBUTION, MARKETING, SALE, USE OR POSSESSION OF SUBSTANCES CONTAINING CERTAIN CHEMICAL COMPOUNDS, INCLUDING THOSE COMMONLY MARKETED AND SOLD AS "BATH SALTS", PLANT FOOD, INCENSE OR DIETARY SUPPLEMENTS AND WHICH INDUCE EFFECTS SIMILAR TO CERTAIN ILLEGAL DRUGS, TO PROHIBIT THE SALE OR POSSESSION OF PARAPHERNALIA RELATED TO THE USE OF THESE CHEMICAL COMPOUNDS, TO PROVIDE PENALTIES, AND AMENDING SECTION 14.60.030 TO PROVIDE FOR CIVIL PENALTIES.

WHEREAS, the chemical compounds 3,4-Methylenedioxy-N-methylcathinone (methylone), 3,4-Methylenedioxypyrovalerone (MDPV), 4-Methyl-N-methylcathinone (mephedrone), 3-Methoxymethcathinone, 3-Fluoromethcathinone, and 4-Fluoromethcathinone are psychoactive substances that, when introduced into the body, induce effects similar to illegal drugs;

WHEREAS, much like the marketing of Synthetic Cannabinoids (Spice/K2) as incense, these substances are commercially available and in some cases are being marketed as "bath salts" under names such as "Vanilla Sky", "Ivory Snow", "Bliss", "White Lightning", "Hurricane Charlie", and "Red Dove", and in other cases packaged or marketed as plant food, dietary supplements, insect repellent, potpourri or incense;

WHEREAS, some or all of the substances used to make "bath salts" are banned in Alabama, Arkansas, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New Mexico, New York, North Dakota, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Texas, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin, and Wyoming and municipalities throughout the United States;

WHEREAS, on **October 21** ~~**[September 8]**~~, 2011 the federal Drug Enforcement Agency issued a **one year ban on** ~~**[notice of intent, 76 FR 55616-01, to temporarily schedule]**~~ the three synthetic cathinones mephedrone, methylone and MDPV under Schedule I of the Controlled Substances Act based on findings it is necessary to avoid imminent hazard to the public safety because they have a high potential for abuse, no currently accepted medical use in treatment in the United States, and lack accepted safety for use under medical supervision;

WHEREAS, Phenazepam is an unregulated benzodiazepine drug which, as with other benzodiazepines, in case of abrupt discontinuation following prolonged use,

can induce severe withdrawal symptoms including restlessness, anxiety, insomnia, seizures, convulsions and death;

WHEREAS, Benzylpiperazine (BZP) is a recreational drug with euphoric, stimulant properties. The effects produced by BZP are comparable to those produced by amphetamine. Adverse effects have been reported following its use including acute psychosis, renal toxicity, and seizures. Its sale is banned in a few countries, including Australia, New Zealand, the United States, the Republic of Ireland, the United Kingdom, and other parts of Europe;

WHEREAS, the abuse of these substances has been increasing and law enforcement and medical professionals have indicated bath salts, in particular, are becoming increasingly popular due to the misperception that they pose a seemingly safer alternative to illegal methods of getting "high" and can be obtained at convenience stores, pawnshops, and gas stations;

WHEREAS, users of these drugs report the effects are similar to cocaine, ecstasy or methamphetamine usage, including blurred vision, extremely elevated blood pressure, irregular heart rates, hallucinations, delusions, vomiting, suicidal thoughts, "highs", and disturbing side effects including feelings of excruciating pain, agitation and loss of control. Some abusers describe the effects as similar to methamphetamine, ecstasy, and cocaine, and have referred to bath salts as "complete crank" and "fake cocaine";

WHEREAS, some users experience severe reactions, resulting in unconsciousness, seizures, and hospitalization, and in some reported cases even death;

WHEREAS, products containing the substances are not tested by the Food and Drug Administration (U.S. Department of Agriculture) or other governmental regulatory agency for human consumption and contain chemicals detrimental and dangerous to the health and welfare of those ingesting them;

WHEREAS, representatives of businesses selling the substances indicate they are available to minors as well as adults;

WHEREAS, despite packaging warning purchasers that the products are not for human consumption, the warnings are not being heeded;

WHEREAS, Alaska Statutes do not currently regulate the sale, purchase, possession, or manufacture of these substances**, but Senator Kevin Meyer intends to introduce legislation criminalizing these substances [~~or, if currently regulated, may not provide the resources to fully prosecute offenders~~]**;

WHEREAS, within the United States there is no currently sanctioned medicinal or other legitimate purpose for taking these substances; and

WHEREAS, it is in the best interest of the Municipality to prohibit the manufacture, assembly, possession, use, sale, marketing, or offering for sale of these substances

within the boundaries of the Municipality to protect the health, safety and welfare of its citizens; now, therefore,

THE ANCHORAGE ASSEMBLY ORDAINS:

Section 1. Anchorage Municipal Code chapter 8.35 is amended by adding a new section to read as follows:

8.35.110 Illegal synthetic compounds.

A. It shall be unlawful for any person or entity to knowingly manufacture, assemble, distribute, dispense, sell, attempt to sell, give, trade, barter, transfer, or to otherwise furnish in a single transaction any product or combination of products containing **[an amount in excess of 25 milligrams in the aggregate of any of the following substances]**:

1. Cathinone or substituted cathinones, including any compound, except bupropion or a compound listed in another schedule, structurally derived from 2-amino-1-phenyl-1-propanone by modification in any of the following ways:

   (a) substitution in the ring system to any extent (including alkyl, alkoxy, alkylenedioxy, haloalkyl, or halide substituents), whether or not further substituted in the ring system by other substituents;

   (b) substitution at the 3-position with an alkyl substituent; or

   (c) substitution at the 2-amino nitrogen atom with alkyl or dialkyl groups, or inclusion of the 2-amino nitrogen atom in a cyclic structure.**[;]**

2. **[By example,]** Compounds such as:

   (a) 4-Methyl-N-methylcathinone (Also known as Mephedrone)**, its salts, optical isomers, and salts of optical isomers**;
   (b) 3,4-Dimethylmethcathinone (Also known as 3,4-DMMC)**, its salts, optical isomers, and salts of optical isomers**;
   (c) 3-Fluoromethcathinone (Also known as 3-FMC)**, its salts, optical isomers, and salts of optical isomers**;
   (d) 4-Fluoromethcathinone (Also known as Flephedrone)**, its salts, optical isomers, and salts of optical isomers**;
   (e) 3,4-Methylenedioxy-N-methylcathinone (Also known as Methylone);
   (f) 3,4-Methylenedioxypyrovalerone (Also known as MDPV)

, its salts, optical isomers, and salts of optical isomers;

(g) alpha-Pyrrolidinopentiophenone (Also known as alpha-PVP);

(h) Naphthylpyrovalerone (Also known as Naphyrone);

(i) beta-Keto-N-methylbenzodioxolylpropylamine (Also known as Butylone);

(j) beta-Keto-N-methylbenzodioxolylpentanamine (Also known as Pentylone);

(k) beta-Keto-Ethylbenzodioxolylbutanamine (Also known as Eutylone); and

(l) 3,4-methylenedioxy-N-ethylcathinone (Also known as Ethylone);

(m) methcathinone, its salts, optical isomers, and salts of optical isomers;

3. Benzodiazepines, including Phenazepam;

4. Benzylpiperazine (BZP); or

5. Any other derivatives, analogues, homologues, salts, isomers, or salts of isomers with substantially similar chemical structure and pharmacological activity as the substances described above.

B. It shall be unlawful to knowingly manufacture, assemble, distribute, dispense, sell, attempt to sell, give, trade, barter, transfer, or to otherwise furnish in a single transaction any other equivalent compound, substance, or derivative, whether described as tobacco, herbs, incense, plant food, food, nutrient, dietary supplement, spice, bath salts or any blend thereof which is not regulated or approved for human consumption by the U.S. Food and Drug Administration **[~~in an amount in excess of 25 milligrams in the aggregate~~]**, and when introduced into the body, induces the effects substantially similar to that of a controlled substance, regardless of whether the substance is marketed for the purpose of human consumption.

C. It shall be unlawful for any person or entity to manufacture, assemble, distribute, sell, market, display for sale, or offer for sale within the municipality products containing the substances prohibited by subsections A and B **[~~in any amount~~]**. It shall be unlawful to attempt the conduct prohibited by this subsection.

D. It shall be unlawful to knowingly possess, attempt to possess, inject, ingest, insert rectally, burn, incinerate or ignite products containing substances prohibited by this section in the municipality. For purposes of this section, a person knowingly possesses such substances when the person knows the substance induces the effects described in this ordinance, regardless of whether the person knows whether the

chemical compounds described in subsection A are present in the product possessed.

E. **It shall be unlawful to possess, attempt to possess, inject, ingest, insert rectally, burn, incinerate or ignite products containing substances prohibited by this section in the municipality.**

F. A person or entity violating the provisions of subsections A, ~~[or]~~ B, **or D** shall be guilty of a misdemeanor and shall be punishable by a fine of not more than $5,000 or imprisonment of not more than one year, or both.

G ~~[F]~~. A person or entity violating the provisions of subsection C shall be subject to a penalty not to exceed $5,000 for each violation. For purposes of this subsection, each batch of a substance described in subsection A or B, or each day the person or entity engaged in the prohibited conduct, shall constitute a separate violation.

H~~[G]~~. A person or entity violating the provisions of subsection E ~~[D]~~ shall be subject to a penalty not to exceed **$500** ~~**[$1,000]**~~ for each violation. For purposes of this subsection, each separately packaged amount of a substance described in subsections A or B shall constitute a separate violation.

I~~[H]~~. As an alternative to the remedies, procedures and penalties provided in this title and section 1.45.010, a violation of subsection C. or E ~~[D]~~. may be charged as a civil violation subject to and prosecuted in accordance with title 14, and in such case shall be punishable by a civil penalty in accordance with chapter 14.60.

J~~[I]~~. The criminal penalties and civil fines authorized by this section are not exclusive, and the municipality may seek any other remedies provided by law or equity, including injunctive relief, for repeated violations of this section.

K~~[J]~~. It is not an offense under this section if the person or entity was acting at the direction of an authorized agent of the municipality or other authorized law enforcement agency to enforce or ensure compliance with this section.

L~~[K]~~. Any product described in subsection A or B. found by or that comes in the possession of a police officer or a municipal official may be confiscated as contraband and destroyed in accordance with chapter 7.25 as such.

M~~[L]~~. This section does not apply to drugs or substances lawfully prescribed or drugs or substances approved by the federal Food and Drug

Administration or drugs or substances otherwise specifically permitted by federal or state law.

N[M]. The use of the substances described in this section for bona fide research or educational purposes under lawful federal, state or local authority is exempt from the prohibitions of this section.

Section 2. Anchorage Municipal Code section 8.35.010 is hereby amended to read as follows (*the remainder of the section is not affected and therefore not set out*):

8.35.010 Definitions.

A. The following words, terms and phrases, when used in this chapter, shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

Analogue means a chemical compound that is structurally similar to another but differs slightly in composition (as in the replacement of one atom by an atom of a different element or in the presence of a particular functional group).

*** *** ***

Drug paraphernalia means any items whose objective characteristics or objective manufacturer's design indicate that it is intended for use in the consumption, ingestion, inhalation, injection or other method of introduction of:

1. A controlled substance into the human body or to facilitate a violation of AS 11.71; or

2. A product containing illegal synthetic cannabinoids under section 8.35.100 or an illegal synthetic compound under section 8.35.110.

*** *** ***

Homologue means one of a series of compounds distinguished by addition of a CH_2 group in successive members.

*** *** ***

(AO No. 81-219; AO No. 98-59(S), § 1, 5-19-98; AO No. 2000-95, § 11, 10-16-00; AO No. 2010-87(S), § 2, 12-7-10)

Section 3. Anchorage Municipal Code section 14.60.030 is hereby amended to add to the fine schedule (*the remainder of the schedule is not affected and therefore not set out*):

14.60.030 Fine schedule.

Code Section	Offense	Penalty/Fine
***	***	***

8.35.110 C.	Manufacture, assemble, distribute, sell, market, display for sale, or offer for sale any amount of an illegal synthetic compound	$5,000 for each separate violation
8.35.110 E[D].	Possession or use of illegal synthetic compound	**$500 [$1,000]** for each separate violation

January 24, 2012

Senator Kevin Meyer
Alaska State Capitol, Room 103
Juneau, Alaska 99801

Re: Letter of Support for SB 140

Dear Senator Meyer,

The Advisory Board on Alcoholism and Drug Abuse appreciates your recognition of the need to regulate cathinone and similar substances marketed as "bath salts." These substances pose a serious risk to the health and welfare of Alaskans and should be Schedule IIA controlled substances.

Cathinone, methcathinone, and methylenedioxypyrovalerone (MPDV) produce amphetamine-like effects. Commonly marketed as "bath salts," these drugs can be inhaled, ingested, injected, or smoked. The expected effect is a sort of euphoria, but these chemicals also have dangerous effects. "Bath salts" substances have been reported to cause extreme anxiety and paranoia, delusional thinking, visual and auditory hallucinations leading to violent outbursts, self-mutilation, and suicidal thoughts and actions.

Nationwide, there were 6,072 calls to poison centers about designer drugs labeled as "bath salts" in 2011.[1] In 2010, that number was 303 calls.[2] This reflects the rapid increase in use of these synthetic drugs in the United States. In response, the U.S. Drug Enforcement Administration invoked its emergency scheduling powers in September 2011 to make possession and sale of mephedrone, MDPV, and methylone (common "bath salts" substances") illegal. This emergency regulation will expire in September 2012. State and city governments across the country are taking similar action through emergency powers, ordinances, and legislation in an effort to protect health and safety.[3]

The Advisory Board on Alcoholism and Drug Abuse supports SB 140 and we appreciate your work on behalf of Alaskans.

Sincerely,

Robert Coghill, Jr. Chairman
Advisory Board on Alcoholism and Drug Abuse

---

[1] American Association of Poison Control Centers report on "closed human exposures calls to poison centers about exposures to bath salts as of December 31, 2011," updated January 5, 2012. Available online at http://www.aapcc.org/dnn/Portals/0/Bath%20Salts%20Data%20for%20Website%201.5.2012.pdf.

[2] *Id.*

[3] Nevada's Board of Pharmacy just restricted "bath salts" substances through its emergency powers in January, 2012. Maine, Louisiana, Kentucky, Ohio, Delaware, and nearly three-quarters of U.S. states have acted to prohibit sale and/or possession of these substances. The Municipality of Anchorage passed an ordinance in October 2011 to prohibit manufacture, sale, and possession of these substances.

administrative law judge mails a notice of his or her hearing decision.

■ 8. Amend § 416.1442 by revising paragraphs (d), (e) introductory text, (e)(1), and (f)(3) to read as follows:

§ 416.1442 Prehearing proceedings and decisions by attorney advisors.

* * * * *

(d) *Notice of a decision by an attorney advisor.* If an attorney advisor issues a fully favorable decision under this section, we will mail a written notice of the decision to all parties at their last known addresses. We will state the basis for the decision and advise all parties that they may request that an administrative law judge reinstate the request for a hearing if they disagree with the decision for any reason. Any party who wants to make this request must do so in writing and send it to us within 60 days of the date he or she receives notice of the decision. The administrative law judge will extend the time limit if the requestor shows good cause for missing the deadline. The administrative law judge will use the standards in § 416.1411 to determine whether there is good cause. If the request is timely, an administrative law judge will reinstate the request for a hearing and offer all parties an opportunity for a hearing.

(e) *Effect of an attorney advisor's decision.* An attorney advisor's decision under this section is binding unless—

(1) You or another party to the hearing submits a timely request that an administrative law judge reinstate the request for a hearing under paragraph (d) of this section;

* * * * *

(f) * * *

(3) Make the decision of an attorney advisor under paragraph (d) of this section subject to review by the Appeals Council if the Appeals Council decides to review the decision of the attorney advisor anytime within 60 days after the date of the decision under § 416.1469.

* * * * *

■ 9. Amend § 416.1448 by revising the second sentence of paragraph (a), and paragraph (b)(1)(ii), to read as follows:

§ 416.1448 Deciding a case without an oral hearing before an administrative law judge.

(a) *Decision fully favorable.* * * * The notice of the decision will state that you have the right to an oral hearing and to examine the evidence on which the administrative law judge based the decision.

(b) * * *

(1) * * *

(ii) You live outside the United States, you do not inform us that you wish to appear, and there are no other parties who wish to appear.

* * * * *

■ 10. Revise § 416.1460 to read as follows:

§ 416.1460 Vacating a dismissal of a request for a hearing before an administrative law judge.

(a) Except as provided in paragraph (b) of this section, an administrative law judge or the Appeals Council may vacate a dismissal of a request for a hearing if you request that we vacate the dismissal. If you or another party wish to make this request, you must do so within 60 days of the date you receive notice of the dismissal, and you must state why our dismissal of your request for a hearing was erroneous. The administrative law judge or Appeals Council will inform you in writing of the action taken on your request. The Appeals Council may also vacate a dismissal of a request for a hearing on its own motion. If the Appeals Council decides to vacate a dismissal on its own motion, it will do so within 60 days of the date we mail the notice of dismissal and will inform you in writing that it vacated the dismissal.

(b) If you wish to proceed with a hearing after you received a fully favorable revised determination under the prehearing case review process in § 416.1441, you must follow the procedures in § 416.1441(d) to request that an administrative law judge vacate his or her order dismissing your request for a hearing.

BILLING CODE 4191–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Part 1308

[Docket No. DEA–357]

Schedules of Controlled Substances: Temporary Placement of Three Synthetic Cathinones Into Schedule I

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final Order.

SUMMARY: The Administrator of the Drug Enforcement Administration (DEA) is issuing this final order to temporarily schedule three synthetic cathinones under the Controlled Substances Act (CSA) pursuant to the temporary scheduling provisions of 21 U.S.C. 811(h). The substances are 4-methyl-N-methylcathinone (mephedrone), 3,4-methylenedioxy-N-methylcathinone (methylone), and 3,4-methylenedioxypyrovalerone (MDPV). This action is based on a finding by the Administrator that the placement of these synthetic cathinones and their salts, isomers, and salts of isomers into Schedule I of the CSA is necessary to avoid an imminent hazard to the public safety. As a result of this order, the full effect of the CSA and its implementing regulations including criminal, civil and administrative penalties, sanctions and regulatory controls of Schedule I substances will be imposed on the manufacture, distribution, possession, importation, and exportation of these synthetic cathinones.

DATES: *Effective Date:* This Final Order is effective on October 21, 2011.

FOR FURTHER INFORMATION CONTACT: Imelda L. Paredes, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrissette Drive, Springfield, Virginia 22152; Telephone (202) 307–7165.

SUPPLEMENTARY INFORMATION:

Background

The Comprehensive Crime Control Act of 1984 (Pub. L. 98–473), which was signed into law on October 12, 1984, amended section 201 of the CSA (21 U.S.C. 811) to give the Attorney General the authority to temporarily place a substance into Schedule I of the CSA for one year without regard to the requirements of 21 U.S.C. 811(b) if he finds that such action is necessary to avoid imminent hazard to the public safety. 21 U.S.C. 811(h); 21 CFR 1308.49. If proceedings to control a substance are initiated under 21 U.S.C. 811(a)(1), the Attorney General may extend the temporary scheduling up to an additional six months. 21 U.S.C. 811(h)(2). Where the necessary findings are made, a substance may be temporarily scheduled in Schedule I if it is not listed in any other schedule under section 202 of the CSA (21 U.S.C. 812) or if there is no exemption or approval in effect under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) for the substance. 21 U.S.C. 811(h)(1). The Attorney General has delegated his authority under 21 U.S.C. 811 to the Administrator of DEA. 28 CFR 0.100.

Section 201(h)(4) of the CSA (21 U.S.C. 811(h)(4)) requires the Administrator to notify the Secretary of Health and Human Services of her intention to temporarily place a substance into Schedule I of the CSA.[1]

[1] Because the Secretary of Health and Human Services has delegated to the Assistant Secretary for

Continued

The Administrator transmitted notice of her intent to place mephedrone, methylone and MDPV in Schedule I on a temporary basis to the Assistant Secretary in a letter dated June 15, 2011. The Assistant Secretary responded to this notice by letter dated July 25, 2011, and advised that based on review by the Food and Drug Administration (FDA) there are currently no investigational new drug applications (INDs) or approved new drug applications (NDAs) for MDPV, mephedrone, or methylone. The Assistant Secretary also stated that the Department of Health and Human Services has no objection to the temporary placement of MDPV, mephedrone, and methylone into Schedule I of the CSA. DEA has taken into consideration the Assistant Secretary's comments. As MDPV, mephedrone, and methylone are not currently listed in any schedule under the CSA, as no exemptions or approvals are in effect for MDPV, mephedrone, and methylone under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355), and as this temporary scheduling is necessary to avoid an imminent hazard to the public safety, DEA believes that the conditions of 21 U.S.C. 811(h)(1) have been satisfied.

A notice of intent to temporarily place mephedrone, methylone, and MDPV into Schedule I of the CSA was published in the **Federal Register** on September 8, 2011 (76 FR 55616). The data in support of the notice of intent and additional data continue to support the necessary findings to place mephedrone, methylone, and MDPV temporarily into Schedule I of the CSA as necessary to avoid an imminent hazard to the public safety.[2] In making this finding, the Administrator is required to consider three of the eight factors set forth in section 201(c) of the CSA (21 U.S.C. 811(c)). These factors are as follows: The substance's history and current pattern of abuse; the scope, duration and significance of abuse; and what, if any, risk there is to the public health. 21 U.S.C. 811(c)(4)–(6). Consideration of these factors includes actual abuse, diversion from legitimate channels, and clandestine importation, manufacture, or distribution. 21 U.S.C. 811(h)(3).

Health of the Department of Health and Human Services the authority to make domestic drug scheduling recommendations, for purposes of this Final Order, all subsequent references to "Secretary" have been replaced with "Assistant Secretary."

[2] See "Background, Data and Analysis of Synthetic Cathinones: Mephedrone (4–MMC), Methylone (MDMC) and 3,4-Methylenedioxypyrovalerone (MDPV)" found at *http://www.regulations.gov.*

Mephedrone, methylone, and MDPV are not currently listed in any schedule under the CSA. The temporary placement of these three synthetic cathinones into Schedule I of the CSA is necessary in order to avoid an imminent hazard to the public safety. First, there has been a rapid and significant increase in abuse of these substances in the United States. As a result of this abuse, synthetic cathinones are banned in at least 37 states in the United States and several countries, and all five branches of the U.S. military prohibit military personnel from possessing or using synthetic cathinones. Second, law enforcement has seized synthetic cathinones and, based on self-reports to law enforcement and health care professionals, synthetic cathinones are abused for their psychoactive properties. Third, federal, state and local public health departments and poison control centers have issued reports describing public health consequences such as emergency department visits and deaths from the use of these synthetic cathinones. Based on scientific data currently available, these three substances have the potential to be extremely harmful and, therefore, pose an imminent hazard to the public safety.

Factor 4: History and Current Pattern of Abuse

Synthetic cathinones are designer drugs of the phenethylamine class which are structurally and pharmacologically similar to amphetamine, 3,4-methylenedioxymethamphetamine (MDMA), cathinone and other related substances. The addition of a beta-keto (β-keto) substituent to the phenethylamine core structure produces a group of substances that now have cathinone as the core structure. Synthetic cathinones, like amphetamine, cathinone, methcathinone, and methamphetamine, are central nervous system (CNS) stimulants.

The synthetic cathinones mephedrone, methylone, and MDPV have recently emerged on the United States' illicit drug market and are being perceived as being 'legal' alternatives to cocaine, methamphetamine, and MDMA. Although synthetic cathinones are new to the United States' illicit drug market, they have been popular drugs of abuse in Europe since 2007. MDPV is a derivative of pyrovalerone, which is a psychoactive drug that was used to treat chronic lethargy and fatigue. Research in anti-depressant and anti-parkinson agents resulted in the development and patenting of methylone. Methylone, however, has not been approved for these purposes. There are no currently accepted medical uses in treatment in the United States for mephedrone, methylone, or MDPV.

Mephedrone, methylone, and MDPV are falsely marketed as "research chemicals," "plant food," or "bath salts." They are sold at smoke shops, head shops, convenience stores, adult book stores, and gas stations. They can also be purchased on the Internet and mailed using the U.S. Postal Service or international mail services. The packages of products containing these synthetic cathinones usually have the warning "not for human consumption," most likely in an effort to circumvent statutory restrictions for these substances. Despite disclaimers that the products are not intended for human consumption, retailers promote that routine urinalysis drug tests will not typically detect the presence of these synthetic cathinones. However, analytical methods for the detection of mephedrone, methylone, MDPV, and other synthetic cathinones have recently been developed for these substances.

Evidence indicates that mephedrone, methylone, and MDPV are being abused for their psychoactive properties. Drug surveys found that these and other synthetic cathinones are being used as recreational drugs and are used as alternatives to illicit stimulants like MDMA and cocaine. Accordingly, mephedrone, methylone, and MDPV have been identified in human urine samples that were obtained for routine drug screenings, they have been detected in samples from drivers suspected of driving under the influence, and they have been detected by drug courts during mandatory periodic drug screens. They have also been identified in biological specimens from individuals (some exhibiting symptoms of "extreme agitation" or "excited delirium") who have been arrested for possession of a controlled substance, child endangerment, or homicide. They have been detected in samples from decedents whose causes of death were reported as drug-induced toxicity, multiple drug toxicity, or other causes (*e.g.*, blunt force trauma from a vehicular collision or suicide).

Based on studies in the scientific literature, the marketing of products that contain mephedrone, methylone, and MDPV is geared towards teens and young adults. Accordingly, reports indicate that the main users of synthetic cathinones are young male adults. These substances are also used by mid-to-late adolescents and older adults. Many of these abusers of synthetic cathinones have a previous history of drug abuse.

According to drug surveys, the reported average amount of synthetic cathinones used per dose ranged from approximately 25 to 250 milligrams and the average amount used per session (i.e., repeated administration and binging) ranged from approximately 25 milligrams to 5 grams depending on the substance consumed, duration of intake, and route of administration. The most common routes of administration of these substances are nasal insufflation by snorting the powder and oral ingestion by swallowing capsules or tablets. Other reported methods of administration include injection, rectal administration, and "bombing" (wrapping a dose of powder in a paper wrap and swallowing). Synthetic cathinones have also been reported to be used in binges. Reasons cited for binging include to prolong the duration of effects, to satisfy a "craving," or to satisfy a strong urge to re-dose.

According to information found in drug surveys, clinical case reports, and law enforcement reports, users have reported using products containing mephedrone, methylone, and MDPV with other synthetic cathinones (e.g., butylone, fluoromethcathinone, 4–MEC, etc.), pharmaceutical agents (e.g., lidocaine, caffeine, benzocaine, etc.), or other recreational substances (e.g., amphetamine, MDMA, cocaine, gamma-butyrolactone (GBL), kratom, N,N-benzylpiperazine (BZP), and 1-(3-trifluoromethylphenyl)-piperazine (TFMPP)). Chemical analyses of seized and purchased synthetic cathinone products indicate that some products contain multiple substances. Furthermore, investigative toxicology reports of drug screens in which more than one substance was detected indicate that users have ingested products composed of drug combinations (e.g., a tablet composed of MDPV and BZP) or multiple drug products (e.g., a MDPV powder product and a MDMA tablet).

Factor 5: Scope, Duration and Significance of Abuse

The popularity of synthetic cathinones as recreational drugs has increased since they first appeared on the United States' illicit drug market. According to forensic laboratory reports, the first appearance of these synthetic cathinones in the United States occurred in 2009. In 2009, NFLIS registered 15 exhibits from 8 states containing these three synthetic cathinones. In 2010, there were 574 reports from 29 states related to these substances registered in NFLIS, and in 2011 (January to August) there were 995.[3]

Based on reports to DEA from law enforcement and public health officials, synthetic cathinones are becoming increasingly prevalent and abused throughout the United States. At one United States point of entry, the U.S. Customs and Border Protection (CBP) has encountered at least 127 shipments containing primarily mephedrone, methylone, and MDPV, as well as other synthetic cathinones like 4–MEC, butylone, fluoromethcathinone, and dimethylcathinone. Most of these shipments originated in China or India and were being shipped to destinations throughout the United States such as Arizona, Alaska, Hawaii, Kansas, Louisiana, Oklahoma, Oregon, Pennsylvania, Missouri, Virginia, Washington, and West Virginia. The American Association of Poison Control Centers (AAPCC), a non-profit, national organization that represents the poison control centers of the United States, reported that in 2010, poison control centers took 303 calls about synthetic cathinones. However, in just the first eight months of 2011, poison control centers have already received 4,720 calls relating to these products. These calls were received in poison control centers representing at least 47 states and the District of Columbia. Individual state poison control centers have also reported an increase in the number of calls regarding "bath salts" from 2009 to 2011.

Concerns over the abuse of these and other synthetic cathinones have prompted many states to control these substances. As of September 15, 2011, at least 37 states have emergency scheduled or enacted legislation placing regulatory controls on some or many of the synthetic cathinones. These states include Alabama, Arkansas, Connecticut, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Texas, Tennessee, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin and Wyoming. Several countries including all members of the European Union have also placed controls on the possession and/or sale of one or more of these substances. Moreover, the use of synthetic cathinones by members of the U.S. Armed Forces is prohibited.

[3] Analyzed on September 15, 2011.

Factor 6: What, if Any, Risk There Is to the Public Health

The risks to the public health associated with the abuse of mephedrone, methylone, and MDPV relate to acute and long term public health and safety problems. These synthetic cathinones have become a serious drug abuse threat as there have been reports of emergency room admissions and deaths associated with the abuse of these substances.

Clinical case reports indicate that these synthetic cathinones produce a number of stimulant-like adverse effects such as palpitation, seizure, vomiting, sweating, headache, discoloration of the skin, hypertension, and hyper-reflexia. Adverse effects associated with consumption of these drugs as reported by abusers include nose-bleeds, bruxism (teeth grinding), paranoia, hot flashes, dilated pupils, blurred vision, dry mouth/thirst, palpitations, muscular tension in the jaw and limbs, headache, agitation, anxiety, tremor, and fever or sweating. Consequently, numerous individuals have presented at emergency departments in response to exposure incidents and several cases of acute toxicity have been reported due to the ingestion of mephedrone, methylone, or MDPV. In addition, case reports have shown that the abuse of synthetic cathinones can lead to psychological dependence like that reported for other stimulant drugs.

According to clinical case reports, investigative toxicological reports, and autopsy reports, mephedrone, methylone, and MDPV have been implicated in drug induced overdose deaths. In at least three reported deaths, one of these synthetic cathinones was ruled as the cause of death. Other deaths involved individuals under the influence of these synthetic cathinones who acted violently and unpredictably in causing harm to themselves or others. There have also been reports in the scientific literature of deaths caused by individuals who were driving under the influence of these synthetic cathinones.

A number of synthetic cathinones and their products, as identified by CBP and reported in the scientific literature, appear to originate from foreign sources. The manufacturers and retailers who make and sell these products do not fully disclose the product ingredients including the active ingredients or the health risks and potential hazards associated with these products. This poses significant risk to abusers who may not know what they are purchasing or the risk associated with the use of those products.

Based on the above data, the continued uncontrolled manufacture, distribution, importation, exportation, and abuse of mephedrone, methylone, and MDPV pose an imminent hazard to the public safety. DEA is not aware of any recognized therapeutic uses of these synthetic cathinones in the United States.

DEA has considered the three criteria for placing a substance into Schedule I of the CSA (21 U.S.C. 812), and finds that the data available and reviewed for mephedrone, methylone, and MDPV indicate that these synthetic cathinones each have a high potential for abuse, no currently accepted medical use in treatment in the United States, and lack accepted safety for use under medical supervision.

In accordance with the provisions of section 201(h) of the CSA (21 U.S.C. 811(h)) and 28 CFR 0.100, the Administrator has considered the available data and the three factors required to support a determination to temporarily schedule three synthetic cathinones (4-methyl-N-methylcathinone, 3,4-methylenedioxy-N-methylcathinone, and 3,4-methylenedioxypyrovalerone) in Schedule I of the CSA and finds that placement of these synthetic cathinones and their salts, isomers, and salts of isomers into Schedule I of the CSA is necessary to avoid an imminent hazard to the public safety.

Regulatory Requirements

With the issuance of this final order, mephedrone, methylone, and MDPV become subject to the regulatory controls and administrative, civil and criminal sanctions applicable to the manufacture, distribution, possession, importation and exportation of a Schedule I controlled substance under the CSA.

1. Registration. Any person who manufactures, distributes, dispenses, imports, exports, or possesses mephedrone, methylone, or MDPV or who engages in research or conducts instructional activities with respect to mephedrone, methylone, or MDPV, or who proposes to engage in such activities, must be registered to conduct such activities in accordance with 21 U.S.C. 823 and 958. Any person who is currently engaged in any of the above activities and is not registered with DEA must submit an application for registration and may not continue their activities until DEA has approved that application. Retail sales of Schedule I controlled substances to the general public are not allowed under the Controlled Substances Act.

2. Security. Mephedrone, methylone, and MDPV are subject to Schedule I security requirements. Accordingly, appropriately registered DEA registrants must manufacture, distribute and store these substances in accordance with 1301.71; 1301.72(a), (c), and (d); 1301.73; 1301.74; 1301.75(a) and (c); and 1301.76 of Title 21 of the Code of Federal Regulations as of October 21, 2011.

3. Labeling and packaging. All labeling and packaging requirements for controlled substances set forth in Part 1302 of Title 21 of the Code of Federal Regulations shall apply to commercial containers of mephedrone, methylone, and MDPV. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all labeling and packaging requirements.

4. Quotas. Quotas for mephedrone, methylone, and MDPV will be established based on registrations granted and quota applications received pursuant to Part 1303 of Title 21 of the Code of Federal Regulations.

5. Inventory. Every DEA registrant who possesses any quantity of mephedrone, methylone, or MDPV is required to keep inventory of all stocks of these substances on hand pursuant to 1304.03, 1304.04, and 1304.11 of Title 21 of the Code of Federal Regulations. Every current DEA registrant who desires registration in Schedule I for mephedrone, methylone, or MDPV shall conduct an inventory of all stocks of these substances. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all inventory requirements.

6. Records. All registrants who handle mephedrone, methylone, or MDPV are required to keep records pursuant to 1304.03, 1304.04, 1304.21, 1304.22, and 1304.23 of Title 21 of the Code of Federal Regulations. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all recordkeeping requirements.

7. Reports. All registrants are required to submit reports in accordance with 1304.33 of Title 21 of the Code of Federal Regulations. Registrants who manufacture or distribute mephedrone, methylone, or MDPV are required to comply with these reporting requirements and shall do so as of October 21, 2011.

8. Order Forms. All registrants involved in the distribution of mephedrone, methylone, or MDPV must comply with order form requirements of Part 1305 of Title 21 of the Code of Federal Regulations as of October 21, 2011.

9. Importation and Exportation. All importation and exportation of mephedrone, methylone, or MDPV must be conducted by appropriately registered DEA registrants in compliance with Part 1312 of Title 21 of the Code of Federal Regulations on or after October 21, 2011.

10. Criminal Liability. The manufacture, distribution, dispensation, or possession with the intent to conduct these activities: Possession, importation, or exportation of mephedrone, methylone, or MDPV not authorized by, or in violation of the CSA or the Controlled Substances Import and Export Act occurring as of October 21, 2011 is unlawful.

Pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996 (Congressional Review Act) (5 U.S.C. 801–808), DEA has submitted a copy of this Final Order to both Houses of Congress and to the Comptroller General.

List of Subjects in 21 CFR Part 1308

Administrative practice and procedure, Drug traffic control, Reporting and recordkeeping requirements.

Under the authority vested in the Attorney General by section 201(h) of the CSA (21 U.S.C. 811(h)), and delegated to the Administrator of the DEA by Department of Justice regulations (28 CFR 0.100), the Administrator hereby orders that 21 CFR Part 1308 be amended as follows:

PART 1308—SCHEDULES OF CONTROLLED SUBSTANCES

■ 1. The authority citation for Part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b), unless otherwise noted.

■ 2. Section 1308.11 is amended by adding new paragraphs (g)(6), (7) and (8) to read as follows:

§ 1308.11 Schedule I.

* * * * *

(g) * * *

(6) 4-methyl-N-methylcathinone—1248

(Other names: mephedrone)

(7) 3,4-methylenedioxy-N-methylcathinone—7540

(Other names: methylone)

(8) 3,4-methylenedioxypyrovalerone—7535

(Other names: MDPV)

* * * * *

Dated: October 14, 2011.

Michele M. Leonhart,

Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2011–0268]

RIN 1625–AA09

Drawbridge Operation Regulation; Passaic River, Harrison, NJ

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard has changed the drawbridge operation regulations that govern the operation of the Amtrak's Dock Bridge across the Passaic River, mile 5.0, at Harrison, New Jersey. The owner of the bridge has requested relief from crewing the bridge at all times because the bridge has received few requests to open during past years. It is expected that an advance notice requirement for bridge openings will provide relief to the bridge owner while continuing to meet the reasonable needs of navigation.

DATES: This rule is effective November 21, 2011.

ADDRESSES: Comments and related materials received from the public, as well as documents mentioned in this preamble as being available in the docket, are part of docket USCG–2011–0268 and are available online by going to *http://www.regulations.gov,* inserting USCG–2011–0268 in the "Keyword" box, and then clicking "Search." This material is also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or e-mail Mr. John W. McDonald, Project Officer, First Coast Guard District Bridge Branch, 617–223–8364, *john.w.mcdonald@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

On June 24, 2011, we published a notice of proposed rulemaking (NPRM) entitled Drawbridge Operation Regulations Passaic River in the **Federal Register** (76 FR 37039). We received no comments on the proposed rule. No public meeting was requested, and none was held.

Basis and Purpose

The Amtrak Dock Bridge, mile 5.0, across the Passaic River at Harrison, New Jersey, has a vertical clearance in the closed position of 24 feet at mean high water and 29 feet at mean low water. The drawbridge operation regulations are listed at 33 CFR 117.739(e).

The existing drawbridge operation regulations require the draw to open on signal; except that, from 7:20 a.m. to 9:20 a.m. and 4:30 p.m. to 6:50 p.m., Monday through Friday, except Federal holidays, the draw need not be opened. At all other times, an opening may be delayed no more than ten minutes, unless the draw tender and the vessel operator, communicating by radio-telephone, agree to a longer delay.

The Coast Guard received a request from the National Railroad Passenger Corporation (Amtrak), the owner of the bridge, for relief from crewing the bridge at all times, because the bridge has received only eight requests to open during the past three years.

Amtrak requested that a twenty four hour advance notice be required for all bridge openings, except during the existing morning and afternoon closed periods.

As a result of the fact that the bridge has received only eight requests to open during the past three years, the Coast Guard believes it is reasonable for the bridge owner to require a twenty four hour advance notice for bridge openings and that doing so would continue to meet the reasonable needs of navigation.

Discussion of Comments and Changes

The Coast Guard received no comments in response to the notice of proposed rulemaking. As a result, no changes have been made to this final rule.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Executive Order 12866 and Executive Order 13563

This final rule is not a "significant regulatory action" under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

We expect the economic impact of this proposed rule to be minimal. Although this regulation may have some impact on the public, the potential impact will be minimized for the following reasons:

The bridge has only received eight requests to open during the past three years. The bridge openings can still be obtained at any time, except the morning and afternoon closed periods, by providing at least a twenty four hour advance notice.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This final rule would affect the following entities, some of which might be small entities: The owners or operators of vessels needing to transit the bridge.

This final rule would not have a significant economic impact on a substantial number of small entities for the following reasons:

The bridge only received eight requests to open during the past three years. The bridge openings can still be obtained at any time, except during the Monday through Friday closed periods, by providing a twenty four hour advance notice.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Bulletin No.27 October 6, 2011

Psychoactive "Bath Salts" Toxicity in Alaska—A Case Series

Introduction

This Bulletin presents case reports of three adults with presumed psychoactive "bath salts" (PABS) toxicity who were cared for at an Anchorage hospital in May 2011.

"Bath salts" is a term used to describe a class of designer drugs intended to have pharmacologic effects similar to controlled substances but to be chemically distinct from them, thus avoiding legal control.[1] Sold in powder form, they may be marketed under such names as plant food, research chemicals, or pond water cleaner, and labeled "not for human consumption" in order to avoid regulation. These drugs typically contain synthetic cathinones, which include the following central nervous system stimulants: 3,4-methylenedioxypyrovalerone (MDPV), mephedrone, and methylone (bk-MDMA).[2] They generally cause a considerable sympathomimetic effect, and desired effects include increased energy, euphoria, enhanced sexual sensation, and synesthesia. Documented adverse reactions include agitation, hyperthermia, hyponatremia, myocarditis, rhabdomyolysis, psychosis, and seizures. When PABS are taken orally, intranasally, intravenously, or rectally, their effects occur with doses as low as 3–5 mg, and the average dose ranges from 5–20 mg.[3] The risk of overdose is high, since packages contain up to 500 mg, and some labels recommend increasing dosages to >50 mg.[3] Because the desired effects of these drugs peak after 1.5 hours when taken orally and then tend to wane rapidly after 3–4 hours,[3] users may re-dose frequently, potentially leading to increased toxicity. The long-term use of PABS leads to tolerance, and abstinence results in psychologic withdrawal and craving.[3]

While many states have banned the sale of select synthetic cathinones commonly found in PABS, they remain unscheduled under the Federal Controlled Substances Act, and are widely available on the Internet. The Drug Enforcement Agency is working to register these compounds as Schedule I substances under its emergency scheduling authority.[4]

Case Series

Case 1: A 24-year-old man on the general medical service was being evaluated for anxiety as a possible contributor to ongoing abdominal pain. Within 24 hours of admission, he displayed paranoia, tachycardia and restlessness. He denied substance abuse other than cannabis and hydrocodone. Laboratory results and physical examination were unremarkable, other than a resting heart rate of 115 beats per minute. A urine drug screen showed only cannabinoids and nonspecific opioids. His symptoms improved after a few hours, but then abruptly returned. A packet of "bath salts" was found when the patient went through his belongings with staff. A repeat urine drug screen 6 hours later was unchanged. The patient admitted to rectal administration of the "bath salts" a few hours prior to admission, and then insufflation during his hospital stay. Without access to this powder, no further tachycardia or restlessness were observed. He experienced no withdrawal symptoms other than fatigue and mild anhedonia. While his "bath salts" were not formally analyzed, the patient was under the impression that they contained MDPV.

Case 2: A 55-year-old woman was admitted to the critical care service following a cardiac arrest requiring defibrillation for ventricular fibrillation within 24 hours of ingesting crack cocaine and "bath salts." On admission, a urine drug screen was positive only for cocaine. On evaluation, she had an anterolateral myocardial infarction. She recovered well following thrombectomy and coronary stenting.

Case 3: A 42-year-old man on the general medical service was being evaluated for delirium and concern for serotonin syndrome. On admission, he was delirious, mildly hyponatremic (sodium: 127 mEq/L), disoriented, and swatting at the air. His temperature was elevated at 100.2 °F. His outpatient medications included fluoxetine (40 mg daily) and loratadine. He took a dextromethorphan-containing cough syrup in small amounts for 2 nights prior to admission, reportedly for "allergies." A urine drug screen was positive only for cannabinoids. Laboratory results and physical examination ruled out infection and serotonin syndrome. On interview, he admitted to regular abuse of "bath salts" labeled as containing methylone. He reported last using "bath salts" the day before admission. On discussion with the patient, the psychiatry service reviewed the possible interactions between methylone, dextromethorphan, and fluoxetine, the overlap between his lab findings, and the toxicity of methylone.

Discussion

Abuse of "bath salts" has been rapidly increasing in the United States, with 303 calls to Poison Control Centers (PCC) nationwide in 2010, and 4,720 calls through August 31, 2011.[5] The Oregon PCC reported that so far in 2011, they have received 14 calls regarding PABS toxicity concerns in Alaska.

This case series demonstrates the wide age range of persons who choose to abuse these compounds, and highlights several potential dangers of "bath salts" abuse. First, severe overdoses may require treatment and monitoring in the intensive care unit.[3] Second, they are often abused in combination with other drugs, and their effects can be quite variable, as these drugs contain unpredictable types and amounts of psychoactive synthetic substances.[3] Finally, routine drug screens do not detect PABS.

Recommendations

1. As the active substances found in "bath salts" are not detectable by standard drug screening, health care providers should always consider including "bath salts" in substance abuse screening discussions.
2. Providers should consider synthetic cathinones in the differential diagnosis for a possible sympathomimetic presentation or toxidrome, and be aware that these substances may be present in polydrug ingestions.
3. Because there is no specific antidote or reversal agent for these drugs, providers should treat these patients by appropriately managing symptoms, and remain aware that patients may need physical restraints and high doses of sedatives to prevent self-harm or harm to others.[3]
4. Providers are encouraged to call the Oregon PCC not just for medical toxicologic consultation, but also to report all "bath salts" intoxication cases they encounter (phone: 800-222-1222).

MUNICIPALITY OF ANCHORAGE

Office of the Mayor

Phone: 907-343-7100
FAX: 907-343-7180

Mayor Dan Sullivan

January 25, 2012

The Honorable Kevin Meyer
Alaska State Legislature
State Capitol
Juneau, AK 99801

Re: Senate Bill 140

Dear Senator Meyer,

Thank you for introducing Senate Bill 140, *"An Act classifying certain substances as schedule IIA controlled substances; and providing for an effective date."*

The Municipality of Anchorage fully supports the passage of SB 140. The use of cathinone and its derivatives (commonly referred to as "bath salts") has quickly become a significant health and public safety issue.

Due to the huge range in potency between the various compounds and products, municipal first responders have encountered users of these drugs having severe reactions, including from bizarre and dangerous behavior to unconsciousness. Users who operate machinery, especially motor vehicles, have had significant accidents and present a danger to others that is on par with operating under the influence of alcohol.

In response, the Municipality has enacted its own local code, but does not have the jurisdiction to deal with the influx of the drug on a state-wide basis or impose the kinds of meaningful criminal sentences that are needed to stem the manufacture, distribution, and sale of these drugs.

Thank you again for introducing this important legislation.

Sincerely,

Dan Sullivan
Mayor

FISCAL NOTE #4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 140(JUD)

Analysis

This bill classifies certain compounds commonly called "bath salts" as Schedule IIA controlled substances. This classification creates new crimes that can be charged as multiple degrees of misconduct involving a controlled substance.

These crimes range from class C felonies to unclassified felonies, with broad sentencing ranges; fourth-degree misconduct involving a controlled substance is a class C felony and carries a potential sentence of up to 5 years imprisonment; third-degree misconduct involving a controlled substance is a class B felony and carries a sentence of up to 10 years imprisonment, first-degree misconduct involving a controlled substance is an unclassified felony and carries a sentencing range of up to 99 years of imprisonment .

The Agency has no reliable method for determining how many cases will be charged under the new classification or how many individuals charged will require public counsel. Additional felony cases will, however, have a fiscal impact on the Agency. The Agency, therefore, submits and indeterminate fiscal note.

FISCAL NOTE #3

STATE OF ALASKA **BILL NO.** CSSB 140(JUD)
2012 LEGISLATIVE SESSION

Analysis

This legislation classifies certain substances as Schedule IIA controlled substances.

Currently, possession of a schedule IIA is a Class C felony with a possible sentence of 0-2 years. Manufacturing or delivering a schedule IIA controlled substance is a Class B felony with a possible sentence of 0-4 years. The current average daily cost to house an inmate is $134.90. Therefore, housing an offender could cost the department anywhere from $0.0 (no time served) to $196,954.00 (for a 4-year sentence).

DOC analyzed the impacts of similar laws passed in recent years (Example, HB 7 - Synthetic Marijuana), we have found zero convictions and therefore zero offenders being housed in DOC facilities.

The department is currently unable to quantify the fiscal impacts of this bill, as we cannot predict the number of offenses that will occur. Should this legislation pass, the department will closely monitor the potential future fiscal impacts.

(Revised 11/28/2011 OMB)

FISCAL NOTE #2

STATE OF ALASKA **BILL NO.** CSSB 140(JUD)
2012 LEGISLATIVE SESSION

Analysis

This proposed legislation would add certain synthetic substances to the Schedule IIA list of statutorily controlled substances and provide for an effective date.

The Scientific Crime Detection Laboratory (crime lab) provides analysis of suspected controlled substances, issues reports, and provides expert testimony for the State of Alaska. The crime lab currently receives an average of ten submittals each month from law enforcement referencing "suspected bath salts." If these substances become controlled, the Chemistry Section of the lab can expect some change in requests for laboratory service, but is unable to determine how significant that change will be; whether it will remain roughly ten submittals per month or if it will increase.

These substances are unlike most that have been previously criminalized in that they are not "street drugs" but legally contrived and sold online via the internet and locally over-the-counter through tobacco shops. Because actual fiscal impact is unknown and difficult to determine, the crime lab is not requesting any additional funds or positions at this time but also does not wish to leave a matter the crime laboratory cannot fully assess without the reality of possible, though not probable, future fiscal impact.

FISCAL NOTE #1

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 140(JUD)

Analysis

SB 140 adds new substances to Schedule IIA of Alaska's controlled substances. These substances are currently not controlled. They are sometimes referred to as synthetic cocaine or bath salts. It is difficult to predict the number of cases that would be filed after these substances are included in Alaska's schedules of controlled substances but the number should not be great.

Schedule IIA currently includes, among other substances, amphetamines and methamphetamines, which are fairly dangerous substances.

The fiscal impact is zero.

Senator Kevin Meyer
Senate District O

SPONSOR STATEMENT FOR SB 140

"An Act classifying certain synthetic cathinones as schedule IIA controlled substances; and providing for an effective date."

SB 140 would classify certain synthetic cathinones, commonly known as synthetic cocaine and marketed as 'bath salts,' as a schedule IIA controlled substance.

Marketed as bath salts or plant food with names like 'Meow-Meow,' Vanilla Sky,' 'Ivory Snow,' and 'Bliss,' synthetic cathinones are inexpensive, accessible, and undetectable in most drug tests. Many users of this drug use them in combination with or as a legal alternative to cocaine, ecstasy or methamphetamines.

Drug effects include impaired perception, reduced motor control, disorientation, extreme paranoia and violent episodes. Synthetic cathinones are abused mainly by snorting and oral ingestion. The U.S. Drug Enforcement Administration, the U.S. Military, and the Municipality of Anchorage have all taken action to control or prohibit use of this drug.

According to the National Council of State Legislatures, as of October 24, 2011 there are 33 states that have adopted laws or have departmental rules banning chemical compounds associated with 'bath salts.' Seven states have legislation pending.

Should SB 140 pass, it would be unlawful throughout the State of Alaska to sell, use, purchase, possess, manufacture, transport or deliver synthetic cathinones, the chemical compounds which are being marketed as 'bath salts' and synthetic cocaine.

SB140 Cathinone Bath Salts
Changes from Version B to Version I.

New Sections 1 and 2 were added to the bill to amend the penalties for the cathinone substances listed in the original bill.

In Section 1, sales, distribution, manufacture, and possession of 500 milligrams or more of the substances remain classified as Misconduct involving a Controlled Substance (MICS) in the 4th degree, a Class C felony.

In Section 2, possession of **under** 500 milligrams are classified as MICS in the 5th degree, an A misdemeanor.

In Section 3, a technical amendment was made by legislative legal drafters to transfer methicathinone from the list of Schedule 1 substances into Schedule 2, so that all the cathinone-related substances are listed in the same schedule.

Section 4 repeals the methicathinone listing in Schedule 1.

Life-threatening Necrotizing Fasciitis Due to 'Bath Salts' Injection

RUSSELL RUSSO, MD; NOAH MARKS, MD; KATY MORRIS, MD; HEATHER KING, MD; ANGELLE GELVIN, MD; RONALD ROONEY, MD

abstract

Full article available online at ORTHOSuperSite.com. Search: 20111122-36

Necrotizing fasciitis is an orthopedic emergency. The ability to quickly and accurately diagnose this rapidly spreading disease can save a patient's life and limb. However, the diagnosis is complex because necrotizing fasciitis usually manifests as a less severe cellulitis or abscess while the majority of the damages rage beneath the surface of the skin. Although the diagnosis is not new, the potential causes and vectors continually change. This article reports a new source of necrotizing fasciitis in an intramuscular injection of "bath salts," a rapidly emerging street drug that is legal in some states and evades authorities with its innocuous name.

The patient presented 2 days after injection of bath salts with extensive cellulitis extending to the mid portion of her upper arm. The cellulitis initially responded to broad-spectrum intravenous antibiotics, but rapidly deteriorated 48 hours later, leading to a forequarter amputation with radical mastectomy and chest wall debridement to obtain healthy tissue margins and control the disease. The patient made a full recovery after further minor debridements, negative pressure dressings, directed antibiotic therapy, and skin grafting.

The recent emerging popularity of this highly obtainable, injectable substance may lead to an increase in cases of necrotizing fasciitis. Orthopedic surgeons should be vigilant in diagnosing this process early and should perform an extensive debridement.

Figure: Photograph after debridement.

Drs Russo, Marks, Morris, and Rooney are from the Department of Orthopaedics, and Drs King and Gelvin are from the Department of General Surgery, Louisiana State University Health Sciences Center, New Orleans, Louisiana.

Drs Russo, Marks, Morris, Gelvin, Rooney, and King have no relevant financial relationships to disclose.

Investigation performed at Earl K. Long Medical Center, Baton Rouge, Louisiana, in conjunction with the Department of Orthopaedics, Louisiana State University Health Sciences Center, New Orleans, Louisiana.

The authors thank the anesthesia and nursing staffs, who provided superb care in the treatment of this patient and who were integral in her full recovery.

doi: 10.3928/01477447-20111122-36

The term necrotizing fasciitis originates from a report by Wilson[1] in 1952. However, what we know now as necrotizing fasciitis was described initially by Hippocrates as early as the fifth century BC. The term was repopularized by Confederate Army surgeon Joseph Jones as "hospital gangrene." In 1924, Meleney again renamed it "hemolytic streptococcal gangrene."[2] Despite the changes in nomenclature, the disease known as necrotizing fasciitis is the same spectrum of infections, ranging from superficial cellulitis to rapidly spreading myonecrosis. The pathogenesis of the disease has remained constant over time. This article describes a form of necrotizing fasciitis, a rapidly progressing streptococcal myositis, originating from an intramuscular injection of "bath salts."

Bath salts, or synthetic cathinones, have gained increasing worldwide popularity in the past few years.[3] Despite its name, bath salts have no legitimate use for bathing and are intended only for substance abuse. Its recent popularity, initiating in Western Europe in 2009, has alarmed both authorities and health care providers with its rapid emergence.[4] The first cases of bath salts intoxication were reported in August 2010 in Louisiana (n=1) and Kentucky (n=1).[3] These intoxications create a deep paranoia and recurrent delusions in users.[5] More cases have followed over the past 2 years. Unlike common illicit drugs such as cocaine, heroin, lysergic acid diethylamide, phencyclidine, and ecstasy, the dangers of bath salts are unknown and only beginning to emerge. At least 16 states so far this year have placed emergency bans on the products, which are marketed under false pretenses to evade authorities.[3]

However, as the drug's use evolves from an oral, smokable, and snortable form to an injectable version, communities need to become aware of the implications of an increase in injectable illicit substances.[5] Studies in the past outlined the dangers of dirty needle use from illegal substances ranging from anabolic steroids to heroine.[3,6] Injection risks range from local pain and swelling to peripheral nerve palsies. However, the most severe consequence is necrotizing fasciitis infection, which can initially appear innocuous but later manifest as a severe infection, culminating frequently in loss of limb and even death.[7]

The diagnosis of necrotizing infections of both muscle and subcutaneous tissue can be difficult and time sensitive. The only effective treatment is extensive debridement with intravenous antibiotics to prevent loss of life and limb. This article reports the danger of injecting bath salts intramuscularly and the difficult subsequent diagnosis and treatment.

CASE REPORT

A 34-year-old woman presented with a 2-day history of increasing right forearm pain and erythema. She reported the redness and pain began the morning after a party. She reproted no subjective fever or chills and had no documented temperatures >100.4°F. She was hemodynamically stable and well appearing with an anxious affect. She reported no symptoms other than her right arm complaints. Her erythema extended from the middle of her upper arm to her metacarpophalangeal joints. She had mild swelling compared with the contralateral extremity, and no crepitus was palpable. She was able to move her shoulder, elbow, and wrist with moderate pain. She had 1 small red puncture wound that she later admitted was a needle stick. She had no neurovascular deficits, and initial radiographs revealed no fracture, dislocation, or apparent gas or foreign body. The areas of erythema were marked with a sterile skin marker, and she was started on broad-spectrum intravenous (IV) antibiotics for cellulitis.

The next morning, the patient's erythema had receded to approximately 50% of the previous physical examination and markings. The patient reported mild resolution of pain. On further questioning, she reported injecting bath salts 2 nights prior to developing symptoms. She also reported the injection was intramuscular because she could not obtain intravascular access. The patient initially denied illicit drug use, but then reported cocaine, opiate, and benzodiazepine use in addition to the recent bath salts injection.

Figure 1: Patient at time of operative incision.

The patient remained on broad-spectrum IV antibiotics with close monitoring. She continued to be afebrile with no tachycardia. Her white blood cell count was 17.9, her erythrocyte sedimentation rate was 125, and her C-reactive protein count was 20. All other laboratory values were within normal limits. She tested positive for cocaine, opiates, and benzodiazepines prior to iatrogenic administration of those medications.

The following morning, the erythema only surrounded the needle injection site. However, the patient reported pain at the site of the injection, so an ultrasound was ordered to delineate any nonradiopaque foreign bodies and the presence of fluid or gas.

Hours later, when the patient was reexamined, she was found to have progressive erythema that had developed past the earlier skin markings and an area of skin sloughing around the injection site with a malodorous drainage. The diagnosis of a fast-spreading infection, such as necrotizing fasciitis, was assumed, and the patient immediately underwent emergent surgical debridement and exploration. She was placed on penicillin G and clindamycin for antibiotic coverage (Figure 1).

By the time surgery began, the erythema had spread farther proximally, and bullae were beginning to form at the injection mark on the dorsal forearm. An inci-

sion was made over the dorsal forearm in the Thompson approach. A large amount of pink, thin, purulent fluid was expressed with a foul odor. As the debridement continued, a large area of dark, noncontractile muscle surrounding the area of injection was present. After full dissection of the forearm, 30% of the skin and subcutaneous tissue remained viable, along with the contents of the volar forearm (Figure 2).

No clear margins proximally of healthy muscle were available, so an incision was made in the anterolateral approach to the shoulder. In the time it took to expose the anterior upper arm, muscle in the forearm that had previously been contractile and pink had turned dusky and noncontractile. We disarticulated the shoulder to obtain clear margins of the disease to prevent disease progression. The general surgery team was placed on standby to aid with further chest wall and neck debridement as indicated, and massive blood transfusion protocols were instituted.

To prevent the spread of disease and obtain healthy viable tissue, a complete forequarter amputation was performed, removing both scapula and clavicle while debriding all noncontractile, unhealthy muscle. The general surgery team also elected to perform a right radical mastectomy and further chest wall debridement to prevent further progression of the disease. All bleeding vessels were ligated, and we obtained disease-free tissue throughout the wound bed. Sterile dressings were applied, and the patient was transferred to the intensive care unit for monitoring (Figure 3).

Bacterial isolates included alpha-hemolytic *Streptococcus*, *Streptococcus viridans*, *Peptostreptococcus micros*, *Gemella morbillorum*, and *Actinomyces odontolyticus*. Recent studies indicated that 82% of these infections were polymicrobial, with the most common organisms including Gram-negative enteric bacilli, enterococci, staphylococcal, and streptococcal species.[8]

The patient underwent further debridement and negative pressure dressing changes in the following days and remained disease free, afebrile, and hemodynamically stable. She then underwent extensive split-thickness skin grafting after healthy granulatory tissue covered the expanse of the wound. She is currently undergoing rehabilitation and is in excellent health (Figure 4).

Discussion

As bath salts gain popularity, medical centers of all disciplines must be prepared to identify the signs of intoxication while treating the potential side effects.[3] The associated trauma brought on by the drugs' psychogenic effects may lead patients to orthopedic surgeons through more common routes.

In addition to the effects of the drug, injecting these illicit substances can cause a rare, often-fatal infection. Past reports linked the injection of illicit drugs, including anabolic steroids, with similar devastating clostridial myonecrosis.[6] These infections are usually associated with crush traumas and farm injuries, but now one must also be prepared and vigilant when presented with a cellulitic patient who has a history of needle use. Even patients with their own clean needles are not immune, as evident in a report of an asthmatic patient developed necrotizing fasciitis from an injection of subcutaneous epinephrine.[9]

The key to treatment in this population is early recognition and immediate extensive surgical debridement coupled with penicillin G and clindamycin IV antibiotics. The diagnosis may be delayed due to the nature of the disease. According to a 1995 study of 65 patients, initial symptoms included fever in 60% of patients, skin blebs or bullae in 38% of patients, and minor pain in 27% of patients at presentation.[8]

Deep muscular necrosis is often masked by a nonerythematous overlying tissue bed, and surgical intervention is often delayed after hospital admission. Vigilant monitoring of patients with cellulitis who present with a history of needle use with a low threshold to an extensive debridement is the only means for treatment to cure the patient. One study noted an average time to operative procedure after admission of 45 hours (range, 1.7-312 hours), with the average time to surgery for survivors being 25 hours, whereas nonsurvivors had an average time to surgery of 90 hours.[8]

Necrotizing fasciitis has a rapid timeline to tissue destruction and loss of life. A 1995 study found the survival rate of those diagnosed with necrotizing fasciitis to be as low as 50% (range, 6%-76%). However, wide ranges of mortality exist depending on a multitude of factors.[8] Therefore, the treating orthopedic surgeon must be able to perform a full, extensive debridement

in extreme cases, in which a forequarter amputation may be indicated to prevent delay in treatment and infection progression and, ultimately, death. A similar extensive debridement was documented in a report by Brzozowski and Ross,[10] in which a rapidly progressing *Escherichia coli* forearm infection was treated by forequarter amputation to save a patient's life before the patient succumbed to the disease.

To our knowledge, our article is the first to report streptococcal necrotizing fasciitis and myonecrosis from intramuscular injection of bath salts, which are currently only banned in some US states. Despite the drug's legal status, it must be treated as illicit, and one must be suspicious when examining a patient with this clinical history because the diagnosis of flesh-eating bacteria can masquerade as abscesses and cellulitis.[7] Treatment for this virulent disease remains a swift diagnosis with extensive surgical debridement to obtain complete control of the organism and prevent death. However, the best treatment is prevention with public, street-based education and early detection.

A large retrospective study performed in California between 1984 and 1999 showed a sharp increase in necrotizing fasciitis between 1994 and 1999 in conjunction with the rise in popularity of the intravenous drug black tar heroin.[11] Hopefully, this rise in popularity of bath salts does not preclude a similar rise in necrotizing fasciitis, but surgeons must be ready to diagnose and perform extensive debridements in association with general surgeons in some instances to obtain limb salvage and function and prevent death. ◙

Dangerous new designer drugs are showing up in Alaska

'BATH SALTS': Side effects can include seizures, paranoia, death.

By ROSEMARY SHINOHARA

(11/15/11 22:07:24)

A year after Anchorage led the state in outlawing a new street drug known as Spice, K2 or Spike, another set of new so-called "designer" drugs that are at least as dangerous is appearing in Alaska, a city prosecutor says.

The Spice-type drugs are synthetic marijuana.

The new drugs are chemical stimulants that mimic the effects of cocaine, ecstasy and methamphetamine, and are peddled under names like Pure Ivory, White Rush and Synergy.

The drugs are sometimes sold under the guise of "bath salts" or "plant food." Ingesting the powders and crystals causes side effects such as delusions, seizures, teeth grinding, paranoia, heart palpitations, blue extremities and, in some cases, death, assistant city prosecutor Jennifer Messick told Anchorage Assembly members at a work session earlier this month.

The Assembly last week made it illegal to sell, use or possess the chemical compounds found in the "bath salt" group of drugs in Anchorage. The federal Drug Enforcement Administration in October added the ingredients of the synthetic drugs to a list of controlled substances that are illegal to sell or possess in the United States.

Sen. Kevin Meyer, R-Anchorage, is planning to introduce a proposed state law banning the chemicals used in bath salts too.

A state law will help because the federal government "may not prosecute many of the lower-level cases that we and the state can," said Anchorage city attorney Dennis Wheeler.

But no one thinks these laws will totally erase the threat. The new rules are difficult to enforce and fresh versions of designer drugs can appear at any time.

"In just over a year, we went from five compounds in Spice to 400-something substances out there as of July," Messick said.

ARE THE DRUGS HERE?

So what's the evidence that the bath salt drugs -- synthetic stimulants Mephedrone, Methylone and a third known as MDPV -- are actually in Alaska?

Providence Alaska Medical Center psychiatric nurse practitioner Heather Brock said this year she's seen about one person a month who is sick enough from the bath salt family of drugs to be admitted to the hospital. They've either told her what they've taken or they've brought in the package, she said.

Other users may have just been seen in the emergency room.

Dr. Jeff Baurick, who works in the emergency room at Alaska Regional Hospital, said he's had one bath salt case in the past few months and has heard of a few other patients seen by one of the nine other ER doctors there.

People snort or swallow the drugs or even put them up their rectums, Brock said.

"People are confused, agitated, they have increased heart rates, a couple cases of arrhythmia," she said. "They're very paranoid, like you would see in any kind of stimulant."

The effects only last a few hours, she said. That leads to another problem.

"Because they're fast-on, fast-off, people are more likely to re-dose, which makes it more likely to overdose," Brock said.

There's no antidote, she said. Medical providers simply treat the symptoms: "You address the heart rate, the fever, the anxiety."

In at least one case, a person mixed a bath salt drug with cocaine, causing a bad reaction, she said. She couldn't be more specific due to privacy rules.

Messick said the drugs are appearing locally "quite a bit."

She said between Anchorage police and Valley emergency and law enforcement officials, reports are made just about daily that they're dealing with people showing the symptoms of having used the bath salt compounds.

In her talks in Anchorage schools, Messick has found students are aware of the new variety of drugs. But earlier this month, a School District spokeswoman said the district has had no incidents involving students.

"We may be getting on the front end of it," Anchorage Police Chief Mark Mew said. "We're looking at a situation where the evidence is anecdotal."

WHERE TO GET THEM

Bath salts are accessible through the Internet and are believed to have been available in some tobacco shops, Messick said. When she visited a couple of tobacco shops in East Anchorage after the feds made bath salts illegal last month, though, the store representatives said they didn't have any.

"We could go to jail," one of them told her.

But both shops offered packets of material called Spice, she said. The packets could have been synthetic marijuana, which both the municipality and the state made illegal over the past year.

The fact that Spice is still on the shelves illustrates another problem: enforcement.

Whether stores that are still offering items marketed as Spice are breaking the law is "open for debate," Messick said.

The ingredients on so-called Spice packets aren't listed and it's unclear if they contain the specific ingredients banned under state or city law.

The city law "casts a wide net if you market anything with the same effect," Messick said. "I think the concern is whether it's vague and overbroad."

Another enforcement issue: The city doesn't have a field test kit for either the synthetic marijuana drugs or the latest, so-called bath salt drugs, Chief Mew said. A field test would give officers probable cause to arrest someone for use of the drugs.

Users could still be arrested for driving under the influence under a city law that makes it illegal to drive if a person is impaired by any substance, Messick said.

And test kits might become available before long. Messick said a company in the Netherlands is producing them.

Alaska lawmakers seek inexpensive crime solutions

By AUSTIN BAIRD
(01/24/12 13:23:29)

Lawmakers, prosecutors and law enforcement officers from around the state gathered Tuesday for a two-day summit that aims to identify cost-effective ways to fight crime and improve public safety across Alaska.

The Senate Judiciary Committee opened the summit with a presentation from Annie Pennucci, a researcher for the Washington State Institute for Public Policy. The institute is nonpartisan and established by the Washington Legislature to study the economic impacts of issues important to the state.

Pennucci told the bipartisan committee that a summary of 66 studies of 3- and 4-year-old low-income children she helped conduct for the Washington Legislature show a direct correlation between preschool for low-income children and lower crime rates.

Everything from high school graduation rates to out-of-home placement rates are also correlated, she said.

"It bends the curve significantly," said the committee's chairman, Sen. Hollis French, D-Anchorage, who has sponsored legislation that would expand education opportunities to pre-elementary aged children. French said early childhood education is not a cure-all but a part of an overall solution.

Other topics of discussion at the summit included how communities of varying sizes, from Anchorage to Palmer to rural villages, have fared as budget cuts have chiseled away resources available to departments.

Anchorage Police Chief Mark Mew asked the state for renewed support of community policing, for which a grant recently expired, and for other programs that he said have been effective at curtailing crime in Anchorage.

Another focus was on so-called "bath salts," which are synthetic drugs legally sold over-the-counter that mimic the highs from cocaine, ecstasy and other illicit substances. Bath salts have become a focus for lawmakers and will be the subject of a hearing before the committee Friday.

The legislature banned synthetic marijuana last year, and that was helpful, Mew said. "We have a misdemeanor ordinance (in Anchorage) for bath salts, but it really needs to be a felony," he said.

It's not clear whether any special initiatives or new legislation will result from the summit, but French has said it's important to bring together criminal justice experts to get a better sense of what is happening in the system as a way of considering catalysts for change.

The summit is scheduled to continue Wednesday, with speakers slated to include Walt Monegan, CEO of the Alaska Native Justice Center, and Nancy Haag of Stand Together Against Rape.

Designer drugs like 'plant food' and 'bath salts' exploding across Alaska

Alaska legislation would ban smoke-shop 'incense' OTC drugs K2, Spice

Alaska law banning K2, Spice scheduled to take effect in July

In towns both large and small throughout Alaska a new class of potent designer drugs has established a foothold, sending more and more users to hospital emergency rooms while police wonder how to fight back.

Mephedrone, methylone and MDPV -- drugs commonly known as "plant food," "bath salts" and "air freshener" -- are legal under state law.

While the street names sound benign, the drugs' effects are anything but. The powerful drugs are easy to get and relatively cheap. The three drugs are marketed interchangeably and sometimes referred to as "synthetic cocaine." They are all powerful central nervous system stimulants, designed to mimic the effects of illegal drugs like meth, cocaine and ecstasy -- with some hallucinogenic properties as well.

"We're seeing a psychoactive substance that seems to be more intense than any of the stimulants -- more intense and more robust in some cases than meth, and definitely cocaine and ecstasy," said Patrick Hayes, supervisor of the outpatient substance abuse program at SeaView Community Services in Seward.

The drugs are relatively inexpensive, in part because they have been easy to get. Bath salts and plant food can be found easily on the Internet, where they are marketed under names like "Vanilla Sky," "Ivory Wave," and "Red Dove." They can come in almost banal-looking packages (bath salts are often emblazoned with images of flower petals, angels, birds and women's feet) and marked with a disclaimer that they're not for human consumption.

The drugs have also gained a following as something that won't show up on urinalysis tests. Until recently the compounds were legal -- the U.S. Drug Enforcement Administration temporarily banned the substances just last month, but the state of Alaska has yet to address the issue legally.

Hayes said that he first heard about plant food in Seward several years ago. During the last two years, he said, it seems to have caught on.

"It seemed like the people who were moving from cocaine to meth eventually starting moving on to it," Hayes said. "I think that meth is being replaced by plant food."

Effects mimic a schizophrenic breakdown

"I used, what you're calling plant food, for the first time about a year or so ago," said "Sam," a Seward resident in his early 30s who spoke on the condition of anonymity.

Sam sat down to talk at a local restaurant on a chilly evening this fall. He grew up with nice parents in a middle-class family, he said, but fell into substance abuse. It started in his teens with cigarettes and marijuana and progressed to hallucinogens, prescription drugs and cocaine.

Today, Sam is usually homeless. He said he turns to plant food as an alternative to spendier, harder-to-find drugs like heroin. "It's pretty cheap, and you get high for a while," Sam said.

Plant food, bath salts and air freshener can be ingested in a variety of ways. They come in powder or pill form and can be snorted, freebased, mixed with water and injected or atomized.

But while the drugs' effects mimic substances like cocaine or ecstasy, there isn't a lot of information about how mephedrone, methylone and MDPV affect the human body, even as users are landing in hospital emergency rooms.

"It's so new, we don't even know the half life (how long it takes the liver to detoxify half of the drug)," Hayes said. "We don't know long-term effects of chronic use. We're seeing people using it, showing up at the ER with symptoms of psychosis, rapid heart-beat, elevated heart pressure, along with delusional thinking and hallucinations, both auditory and visual."

The hallucinations described by users, Hayes said, are "more along the lines of someone who is experiencing a schizophrenic breakdown."

"I've talked to people who've used plant food -- they say it's the worst acid trip they've been on -- but as soon as they come down they want more."

'Absolutely' dangerous

"There may be users that say they've never had a bad trip. That may be," said Jennifer Messick, a traffic safety resource prosecutor with the Municipality of Anchorage who works with the Anchorage Police Department. Those aren't the users that law enforcement ends up dealing with, she said. "We find many users who say they thought it was safe -- a safe alternative to cocaine, meth or whatever, and land in the hospital."

Messick began researching designer drugs a couple years ago. As her expertise has grown, she's been inundated with requests to visit communities around the state and nation to talk with police officers about designer drugs and how to safely handle people who are on them.

Messick said users on mephedrone tend to be paranoid and delusional. They commonly report a sense of impending death or doom, seeing hallucinations of dead people.

Some drug users enter a state of "excited delirium" -- a condition often associated with cocaine or meth -- where they become extremely aggressive, temporarily insensitive to pain and display incredible strength and endurance. This poses "a huge safety risk for officers," Messick said.

It's becoming a bigger problem because use of plant food, bath salts and their kind is increasing "exponentially" across the state, Messick said. It's hit the Mat-Su Valley and Anchorage hard, but small towns have not been spared either. "I can assure you it's about everywhere in Alaska, even some of the villages," Messick said.

Messick said mephedrone, methylone and MDPV started out as party drugs in Russia and Western Europe. They have since been banned in many European nations, including the United Kingdom, but their popularity spread overseas to the U.S. on the heels of synthetic cannabinoids like "spice" and "K2."

Plant food and bath salt use appears to have exploded in the last couple years. Nationwide, there were a total of 298 calls to the American Association of Poison Control Centers about plant food in 2010. In just the first half of 2011 that number jumped to 4,137 - a 1,400 percent increase. That doesn't even include 911 calls, Messick noted.

"Unfortunately, the general public doesn't understand how absolutely dangerous these things are," Messick said.

Families on alert

"I can say I was shocked when I heard (plant food) was in Seward," said Karen Sturdy, director of the Seward Parks and Recreation Department.

Sturdy said she first heard the drug was being used in Seward last year. In a presentation before City Council, she said plant food was one of the dangers facing Seward's youth. "I think it's way more prevalent than anyone is willing to admit," said Sturdy.

The drugs are scary on their own, Sturdy said, but she's also worried that youth, upon hearing the street names, will try to snort or otherwise ingest real plant food or bath salts, thinking it will get them high. "There are kids in Seward who think they are 10 feet tall and bullet proof," Sturdy said. "So, it's frightening."

Lt. Louis Tiner said Seward police are coming into contact with more and more people who are on plant food and bath salts or admit to using them. "But more than anything we hear from concerned people about their friends and family members," Tiner said. "There are people using it and addicted to it and there are people here distributing it. It is something parents should be aware of and on the lookout for."

Illegal, and not illegal

Last month, mephedrone, methylone and MDPV became illegal under federal law. The DEA took emergency action Oct. 21 to control the substances, making the possession and sale of the

chemicals, or products containing them, illegal in the United States. It's a temporary action that will be in effect for a year while the DEA and U.S. Department of Health and Human Services study whether the drugs should be permanently controlled.

Until then, police have few tools with which to battle the use of mephedrone, methylone and MDPV. That's because while the drugs are banned under federal law, the State of Alaska has yet to take action on them. If a police officer in Seward came across someone in possession or selling plant food they could only pass the case along to the DEA for review. While the DEA could prosecute, there's also a chance they wouldn't take action on small-scale, individual cases. "There's a great need for state and local legislation," said Messick.

Anchorage Mayor Dan Sullivan introduced an ordinance last month to criminalize plant food, bath salts and the others. And state Sen. Kevin Meyer announced his intent to introduce legislation in the upcoming session to ban mephedrone and MDPV at the state level.
"What makes these substances even more dangerous is how they are being marketed . . . With names like 'Meow-Meow,' Vanilla Sky,' 'Ivory Snow' and 'Bliss', (they're) obviously aimed at kids and young adults," Meyer said in a press release.

Messick acknowledged the laws may be insufficient. Designer drugs are carefully designed to get around the law. "I tell people to think not just about these drugs, but what drug will come out next year," Messick said. The most important thing to do, he said, is to make sure people know the risks. That can help -- although some people don't care.

"Some chemist will just change the formula a little then it'll be cheap and easy again," said Sam. "I want to get high and if they make it illegal, I still will."

Submitted by: Chair of the Assembly at the Request of the Mayor
Prepared by: Dept. of Law
For reading: November 8, 2011

CLERK'S OFFICE
AMENDED AND APPROVED
Date: 11-8-11

ANCHORAGE, ALASKA
AO No. 2011-106(S)

AN ORDINANCE AMENDING ANCHORAGE MUNICIPAL CODE CHAPTER 8.35 TO PROHIBIT THE MANUFACTURE, ASSEMBLY, DISTRIBUTION, MARKETING, SALE, USE OR POSSESSION OF SUBSTANCES CONTAINING CERTAIN CHEMICAL COMPOUNDS, INCLUDING THOSE COMMONLY MARKETED AND SOLD AS "BATH SALTS", PLANT FOOD, INCENSE OR DIETARY SUPPLEMENTS AND WHICH INDUCE EFFECTS SIMILAR TO CERTAIN ILLEGAL DRUGS, TO PROHIBIT THE SALE OR POSSESSION OF PARAPHERNALIA RELATED TO THE USE OF THESE CHEMICAL COMPOUNDS, TO PROVIDE PENALTIES, AND AMENDING SECTION 14.60.030 TO PROVIDE FOR CIVIL PENALTIES.

WHEREAS, the chemical compounds 3,4-Methylenedioxy-N-methylcathinone (methylone), 3,4-Methylenedioxypyrovalerone (MDPV), 4-Methyl-N-methylcathinone (mephedrone), 3-Methoxymethcathinone, 3-Fluoromethcathinone, and 4-Fluoromethcathinone are psychoactive substances that, when introduced into the body, induce effects similar to illegal drugs;

WHEREAS, much like the marketing of Synthetic Cannabinoids (Spice/K2) as incense, these substances are commercially available and in some cases are being marketed as "bath salts" under names such as "Vanilla Sky", "Ivory Snow", "Bliss", "White Lightning", "Hurricane Charlie", and "Red Dove", and in other cases packaged or marketed as plant food, dietary supplements, insect repellent, potpourri or incense;

WHEREAS, some or all of the substances used to make "bath salts" are banned in Alabama, Arkansas, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New Mexico, New York, North Dakota, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Texas, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin, and Wyoming and municipalities throughout the United States;

WHEREAS, on **October 21** ~~**[September 8]**~~, 2011 the federal Drug Enforcement Agency issued a **one year ban on** ~~**[notice of intent, 76 FR 55616-01, to temporarily schedule]**~~ the three synthetic cathinones mephedrone, methylone and MDPV under Schedule I of the Controlled Substances Act based on findings it is necessary to avoid imminent hazard to the public safety because they have a high potential for abuse, no currently accepted medical use in treatment in the United States, and lack accepted safety for use under medical supervision;

WHEREAS, Phenazepam is an unregulated benzodiazepine drug which, as with other benzodiazepines, in case of abrupt discontinuation following prolonged use,

can induce severe withdrawal symptoms including restlessness, anxiety, insomnia, seizures, convulsions and death;

WHEREAS, Benzylpiperazine (BZP) is a recreational drug with euphoric, stimulant properties. The effects produced by BZP are comparable to those produced by amphetamine. Adverse effects have been reported following its use including acute psychosis, renal toxicity, and seizures. Its sale is banned in a few countries, including Australia, New Zealand, the United States, the Republic of Ireland, the United Kingdom, and other parts of Europe;

WHEREAS, the abuse of these substances has been increasing and law enforcement and medical professionals have indicated bath salts, in particular, are becoming increasingly popular due to the misperception that they pose a seemingly safer alternative to illegal methods of getting "high" and can be obtained at convenience stores, pawnshops, and gas stations;

WHEREAS, users of these drugs report the effects are similar to cocaine, ecstasy or methamphetamine usage, including blurred vision, extremely elevated blood pressure, irregular heart rates, hallucinations, delusions, vomiting, suicidal thoughts, "highs", and disturbing side effects including feelings of excruciating pain, agitation and loss of control. Some abusers describe the effects as similar to methamphetamine, ecstasy, and cocaine, and have referred to bath salts as "complete crank" and "fake cocaine";

WHEREAS, some users experience severe reactions, resulting in unconsciousness, seizures, and hospitalization, and in some reported cases even death;

WHEREAS, products containing the substances are not tested by the Food and Drug Administration (U.S. Department of Agriculture) or other governmental regulatory agency for human consumption and contain chemicals detrimental and dangerous to the health and welfare of those ingesting them;

WHEREAS, representatives of businesses selling the substances indicate they are available to minors as well as adults;

WHEREAS, despite packaging warning purchasers that the products are not for human consumption, the warnings are not being heeded;

WHEREAS, Alaska Statutes do not currently regulate the sale, purchase, possession, or manufacture of these substances**, but Senator Kevin Meyer intends to introduce legislation criminalizing these substances [~~or, if currently regulated, may not provide the resources to fully prosecute offenders~~]**;

WHEREAS, within the United States there is no currently sanctioned medicinal or other legitimate purpose for taking these substances; and

WHEREAS, it is in the best interest of the Municipality to prohibit the manufacture, assembly, possession, use, sale, marketing, or offering for sale of these substances

within the boundaries of the Municipality to protect the health, safety and welfare of its citizens; now, therefore,

THE ANCHORAGE ASSEMBLY ORDAINS:

Section 1. Anchorage Municipal Code chapter 8.35 is amended by adding a new section to read as follows:

8.35.110 Illegal synthetic compounds.

A. It shall be unlawful for any person or entity to knowingly manufacture, assemble, distribute, dispense, sell, attempt to sell, give, trade, barter, transfer, or to otherwise furnish in a single transaction any product or combination of products containing **[an amount in excess of 25 milligrams in the aggregate of any of the following substances]**:

1. Cathinone or substituted cathinones, including any compound, except bupropion or a compound listed in another schedule, structurally derived from 2-amino-1-phenyl-1-propanone by modification in any of the following ways:

   (a) substitution in the ring system to any extent (including alkyl, alkoxy, alkylenedioxy, haloalkyl, or halide substituents), whether or not further substituted in the ring system by other substituents;

   (b) substitution at the 3-position with an alkyl substituent; or

   (c) substitution at the 2-amino nitrogen atom with alkyl or dialkyl groups, or inclusion of the 2-amino nitrogen atom in a cyclic structure.**[;]**

2. **[By example,]** Compounds such as:

   (a) 4-Methyl-N-methylcathinone (Also known as Mephedrone)**, its salts, optical isomers, and salts of optical isomers**;
   (b) 3,4-Dimethylmethcathinone (Also known as 3,4-DMMC)**, its salts, optical isomers, and salts of optical isomers**;
   (c) 3-Fluoromethcathinone (Also known as 3-FMC)**, its salts, optical isomers, and salts of optical isomers**;
   (d) 4-Fluoromethcathinone (Also known as Flephedrone)**, its salts, optical isomers, and salts of optical isomers**;
   (e) 3,4-Methylenedioxy-N-methylcathinone (Also known as Methylone);
   (f) 3,4-Methylenedioxypyrovalerone (Also known as MDPV)

, its salts, optical isomers, and salts of optical isomers;

(g) alpha-Pyrrolidinopentiophenone (Also known as alpha-PVP);

(h) Naphthylpyrovalerone (Also known as Naphyrone);

(i) beta-Keto-N-methylbenzodioxolylpropylamine (Also known as Butylone);

(j) beta-Keto-N-methylbenzodioxolylpentanamine (Also known as Pentylone);

(k) beta-Keto-Ethylbenzodioxolylbutanamine (Also known as Eutylone); and

(l) 3,4-methylenedioxy-N-ethylcathinone (Also known as Ethylone);

(m) methcathinone, its salts, optical isomers, and salts of optical isomers;

3. Benzodiazepines, including Phenazepam;

4. Benzylpiperazine (BZP); or

5. Any other derivatives, analogues, homologues, salts, isomers, or salts of isomers with substantially similar chemical structure and pharmacological activity as the substances described above.

B. It shall be unlawful to knowingly manufacture, assemble, distribute, dispense, sell, attempt to sell, give, trade, barter, transfer, or to otherwise furnish in a single transaction any other equivalent compound, substance, or derivative, whether described as tobacco, herbs, incense, plant food, food, nutrient, dietary supplement, spice, bath salts or any blend thereof which is not regulated or approved for human consumption by the U.S. Food and Drug Administration **[~~in an amount in excess of 25 milligrams in the aggregate~~]**, and when introduced into the body, induces the effects substantially similar to that of a controlled substance, regardless of whether the substance is marketed for the purpose of human consumption.

C. It shall be unlawful for any person or entity to manufacture, assemble, distribute, sell, market, display for sale, or offer for sale within the municipality products containing the substances prohibited by subsections A and B **[~~in any amount~~]**. It shall be unlawful to attempt the conduct prohibited by this subsection.

D. It shall be unlawful to knowingly possess, attempt to possess, inject, ingest, insert rectally, burn, incinerate or ignite products containing substances prohibited by this section in the municipality. For purposes of this section, a person knowingly possesses such substances when the person knows the substance induces the effects described in this ordinance, regardless of whether the person knows whether the

chemical compounds described in subsection A are present in the product possessed.

E. **It shall be unlawful to possess, attempt to possess, inject, ingest, insert rectally, burn, incinerate or ignite products containing substances prohibited by this section in the municipality.**

F. A person or entity violating the provisions of subsections A, ~~[or]~~ B, **or D** shall be guilty of a misdemeanor and shall be punishable by a fine of not more than $5,000 or imprisonment of not more than one year, or both.

G ~~[F]~~. A person or entity violating the provisions of subsection C shall be subject to a penalty not to exceed $5,000 for each violation. For purposes of this subsection, each batch of a substance described in subsection A or B, or each day the person or entity engaged in the prohibited conduct, shall constitute a separate violation.

H~~[G]~~. A person or entity violating the provisions of subsection E ~~[D]~~ shall be subject to a penalty not to exceed **$500** ~~**[$1,000]**~~ for each violation. For purposes of this subsection, each separately packaged amount of a substance described in subsections A or B shall constitute a separate violation.

I~~[H]~~. As an alternative to the remedies, procedures and penalties provided in this title and section 1.45.010, a violation of subsection C. or E ~~[D]~~. may be charged as a civil violation subject to and prosecuted in accordance with title 14, and in such case shall be punishable by a civil penalty in accordance with chapter 14.60.

J~~[I]~~. The criminal penalties and civil fines authorized by this section are not exclusive, and the municipality may seek any other remedies provided by law or equity, including injunctive relief, for repeated violations of this section.

K~~[J]~~. It is not an offense under this section if the person or entity was acting at the direction of an authorized agent of the municipality or other authorized law enforcement agency to enforce or ensure compliance with this section.

L~~[K]~~. Any product described in subsection A or B. found by or that comes in the possession of a police officer or a municipal official may be confiscated as contraband and destroyed in accordance with chapter 7.25 as such.

M~~[L]~~. This section does not apply to drugs or substances lawfully prescribed or drugs or substances approved by the federal Food and Drug

Administration or drugs or substances otherwise specifically permitted by federal or state law.

N[M]. The use of the substances described in this section for bona fide research or educational purposes under lawful federal, state or local authority is exempt from the prohibitions of this section.

Section 2. Anchorage Municipal Code section 8.35.010 is hereby amended to read as follows (*the remainder of the section is not affected and therefore not set out*):

8.35.010 Definitions.

A. The following words, terms and phrases, when used in this chapter, shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

Analogue means a chemical compound that is structurally similar to another but differs slightly in composition (as in the replacement of one atom by an atom of a different element or in the presence of a particular functional group).

*** *** ***

Drug paraphernalia means any items whose objective characteristics or objective manufacturer's design indicate that it is intended for use in the consumption, ingestion, inhalation, injection or other method of introduction of:

1. A controlled substance into the human body or to facilitate a violation of AS 11.71; or

2. A product containing illegal synthetic cannabinoids under section 8.35.100 or an illegal synthetic compound under section 8.35.110.

*** *** ***

Homologue means one of a series of compounds distinguished by addition of a CH_2 group in successive members.

*** *** ***

(AO No. 81-219; AO No. 98-59(S), § 1, 5-19-98; AO No. 2000-95, § 11, 10-16-00; AO No. 2010-87(S), § 2, 12-7-10)

Section 3. Anchorage Municipal Code section 14.60.030 is hereby amended to add to the fine schedule (*the remainder of the schedule is not affected and therefore not set out*):

14.60.030 Fine schedule.

Code Section	Offense	Penalty/Fine
***	***	***

8.35.110 C.	Manufacture, assemble, distribute, sell, market, display for sale, or offer for sale any amount of an illegal synthetic compound	$5,000 for each separate violation
8.35.110 E[D].	Possession or use of illegal synthetic compound	**$500 [$1,000]** for each separate violation

January 24, 2012

Senator Kevin Meyer
Alaska State Capitol, Room 103
Juneau, Alaska 99801

Re: Letter of Support for SB 140

Dear Senator Meyer,

The Advisory Board on Alcoholism and Drug Abuse appreciates your recognition of the need to regulate cathinone and similar substances marketed as "bath salts." These substances pose a serious risk to the health and welfare of Alaskans and should be Schedule IIA controlled substances.

Cathinone, methcathinone, and methylenedioxypyrovalerone (MPDV) produce amphetamine-like effects. Commonly marketed as "bath salts," these drugs can be inhaled, ingested, injected, or smoked. The expected effect is a sort of euphoria, but these chemicals also have dangerous effects. "Bath salts" substances have been reported to cause extreme anxiety and paranoia, delusional thinking, visual and auditory hallucinations leading to violent outbursts, self-mutilation, and suicidal thoughts and actions.

Nationwide, there were 6,072 calls to poison centers about designer drugs labeled as "bath salts" in 2011.[1] In 2010, that number was 303 calls.[2] This reflects the rapid increase in use of these synthetic drugs in the United States. In response, the U.S. Drug Enforcement Administration invoked its emergency scheduling powers in September 2011 to make possession and sale of mephedrone, MDPV, and methylone (common "bath salts" substances") illegal. This emergency regulation will expire in September 2012. State and city governments across the country are taking similar action through emergency powers, ordinances, and legislation in an effort to protect health and safety.[3]

The Advisory Board on Alcoholism and Drug Abuse supports SB 140 and we appreciate your work on behalf of Alaskans.

Sincerely,

Robert Coghill, Jr. Chairman
Advisory Board on Alcoholism and Drug Abuse

---

[2] *Id.*

[3] Nevada's Board of Pharmacy just restricted "bath salts" substances through its emergency powers in January, 2012. Maine, Louisiana, Kentucky, Ohio, Delaware, and nearly three-quarters of U.S. states have acted to prohibit sale and/or possession of these substances. The Municipality of Anchorage passed an ordinance in October 2011 to prohibit manufacture, sale, and possession of these substances.

administrative law judge mails a notice of his or her hearing decision.

■ 8. Amend § 416.1442 by revising paragraphs (d), (e) introductory text, (e)(1), and (f)(3) to read as follows:

§ 416.1442 Prehearing proceedings and decisions by attorney advisors.

* * * * *

(d) *Notice of a decision by an attorney advisor.* If an attorney advisor issues a fully favorable decision under this section, we will mail a written notice of the decision to all parties at their last known addresses. We will state the basis for the decision and advise all parties that they may request that an administrative law judge reinstate the request for a hearing if they disagree with the decision for any reason. Any party who wants to make this request must do so in writing and send it to us within 60 days of the date he or she receives notice of the decision. The administrative law judge will extend the time limit if the requestor shows good cause for missing the deadline. The administrative law judge will use the standards in § 416.1411 to determine whether there is good cause. If the request is timely, an administrative law judge will reinstate the request for a hearing and offer all parties an opportunity for a hearing.

(e) *Effect of an attorney advisor's decision.* An attorney advisor's decision under this section is binding unless—

(1) You or another party to the hearing submits a timely request that an administrative law judge reinstate the request for a hearing under paragraph (d) of this section;

* * * * *

(f) * * *

(3) Make the decision of an attorney advisor under paragraph (d) of this section subject to review by the Appeals Council if the Appeals Council decides to review the decision of the attorney advisor anytime within 60 days after the date of the decision under § 416.1469.

* * * * *

■ 9. Amend § 416.1448 by revising the second sentence of paragraph (a), and paragraph (b)(1)(ii), to read as follows:

§ 416.1448 Deciding a case without an oral hearing before an administrative law judge.

(a) *Decision fully favorable.* * * * The notice of the decision will state that you have the right to an oral hearing and to examine the evidence on which the administrative law judge based the decision.

(b) * * *

(1) * * *

(ii) You live outside the United States, you do not inform us that you wish to appear, and there are no other parties who wish to appear.

* * * * *

■ 10. Revise § 416.1460 to read as follows:

§ 416.1460 Vacating a dismissal of a request for a hearing before an administrative law judge.

(a) Except as provided in paragraph (b) of this section, an administrative law judge or the Appeals Council may vacate a dismissal of a request for a hearing if you request that we vacate the dismissal. If you or another party wish to make this request, you must do so within 60 days of the date you receive notice of the dismissal, and you must state why our dismissal of your request for a hearing was erroneous. The administrative law judge or Appeals Council will inform you in writing of the action taken on your request. The Appeals Council may also vacate a dismissal of a request for a hearing on its own motion. If the Appeals Council decides to vacate a dismissal on its own motion, it will do so within 60 days of the date we mail the notice of dismissal and will inform you in writing that it vacated the dismissal.

(b) If you wish to proceed with a hearing after you received a fully favorable revised determination under the prehearing case review process in § 416.1441, you must follow the procedures in § 416.1441(d) to request that an administrative law judge vacate his or her order dismissing your request for a hearing.

BILLING CODE 4191–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Part 1308

[Docket No. DEA–357]

Schedules of Controlled Substances: Temporary Placement of Three Synthetic Cathinones Into Schedule I

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final Order.

SUMMARY: The Administrator of the Drug Enforcement Administration (DEA) is issuing this final order to temporarily schedule three synthetic cathinones under the Controlled Substances Act (CSA) pursuant to the temporary scheduling provisions of 21 U.S.C. 811(h). The substances are 4-methyl-N-methylcathinone (mephedrone), 3,4-methylenedioxy-N-methylcathinone (methylone), and 3,4-methylenedioxypyrovalerone (MDPV). This action is based on a finding by the Administrator that the placement of these synthetic cathinones and their salts, isomers, and salts of isomers into Schedule I of the CSA is necessary to avoid an imminent hazard to the public safety. As a result of this order, the full effect of the CSA and its implementing regulations including criminal, civil and administrative penalties, sanctions and regulatory controls of Schedule I substances will be imposed on the manufacture, distribution, possession, importation, and exportation of these synthetic cathinones.

DATES: *Effective Date:* This Final Order is effective on October 21, 2011.

FOR FURTHER INFORMATION CONTACT: Imelda L. Paredes, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrissette Drive, Springfield, Virginia 22152; Telephone (202) 307–7165.

SUPPLEMENTARY INFORMATION:

Background

The Comprehensive Crime Control Act of 1984 (Pub. L. 98–473), which was signed into law on October 12, 1984, amended section 201 of the CSA (21 U.S.C. 811) to give the Attorney General the authority to temporarily place a substance into Schedule I of the CSA for one year without regard to the requirements of 21 U.S.C. 811(b) if he finds that such action is necessary to avoid imminent hazard to the public safety. 21 U.S.C. 811(h); 21 CFR 1308.49. If proceedings to control a substance are initiated under 21 U.S.C. 811(a)(1), the Attorney General may extend the temporary scheduling up to an additional six months. 21 U.S.C. 811(h)(2). Where the necessary findings are made, a substance may be temporarily scheduled in Schedule I if it is not listed in any other schedule under section 202 of the CSA (21 U.S.C. 812) or if there is no exemption or approval in effect under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) for the substance. 21 U.S.C. 811(h)(1). The Attorney General has delegated his authority under 21 U.S.C. 811 to the Administrator of DEA. 28 CFR 0.100.

Section 201(h)(4) of the CSA (21 U.S.C. 811(h)(4)) requires the Administrator to notify the Secretary of Health and Human Services of her intention to temporarily place a substance into Schedule I of the CSA.[1]

[1] Because the Secretary of Health and Human Services has delegated to the Assistant Secretary for

Continued

The Administrator transmitted notice of her intent to place mephedrone, methylone and MDPV in Schedule I on a temporary basis to the Assistant Secretary in a letter dated June 15, 2011. The Assistant Secretary responded to this notice by letter dated July 25, 2011, and advised that based on review by the Food and Drug Administration (FDA) there are currently no investigational new drug applications (INDs) or approved new drug applications (NDAs) for MDPV, mephedrone, or methylone. The Assistant Secretary also stated that the Department of Health and Human Services has no objection to the temporary placement of MDPV, mephedrone, and methylone into Schedule I of the CSA. DEA has taken into consideration the Assistant Secretary's comments. As MDPV, mephedrone, and methylone are not currently listed in any schedule under the CSA, as no exemptions or approvals are in effect for MDPV, mephedrone, and methylone under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355), and as this temporary scheduling is necessary to avoid an imminent hazard to the public safety, DEA believes that the conditions of 21 U.S.C. 811(h)(1) have been satisfied.

A notice of intent to temporarily place mephedrone, methylone, and MDPV into Schedule I of the CSA was published in the **Federal Register** on September 8, 2011 (76 FR 55616). The data in support of the notice of intent and additional data continue to support the necessary findings to place mephedrone, methylone, and MDPV temporarily into Schedule I of the CSA as necessary to avoid an imminent hazard to the public safety.[2] In making this finding, the Administrator is required to consider three of the eight factors set forth in section 201(c) of the CSA (21 U.S.C. 811(c)). These factors are as follows: The substance's history and current pattern of abuse; the scope, duration and significance of abuse; and what, if any, risk there is to the public health. 21 U.S.C. 811(c)(4)–(6). Consideration of these factors includes actual abuse, diversion from legitimate channels, and clandestine importation, manufacture, or distribution. 21 U.S.C. 811(h)(3).

Mephedrone, methylone, and MDPV are not currently listed in any schedule under the CSA. The temporary placement of these three synthetic cathinones into Schedule I of the CSA is necessary in order to avoid an imminent hazard to the public safety. First, there has been a rapid and significant increase in abuse of these substances in the United States. As a result of this abuse, synthetic cathinones are banned in at least 37 states in the United States and several countries, and all five branches of the U.S. military prohibit military personnel from possessing or using synthetic cathinones. Second, law enforcement has seized synthetic cathinones and, based on self-reports to law enforcement and health care professionals, synthetic cathinones are abused for their psychoactive properties. Third, federal, state and local public health departments and poison control centers have issued reports describing public health consequences such as emergency department visits and deaths from the use of these synthetic cathinones. Based on scientific data currently available, these three substances have the potential to be extremely harmful and, therefore, pose an imminent hazard to the public safety.

Factor 4: History and Current Pattern of Abuse

Synthetic cathinones are designer drugs of the phenethylamine class which are structurally and pharmacologically similar to amphetamine, 3,4-methylenedioxymethamphetamine (MDMA), cathinone and other related substances. The addition of a beta-keto (β-keto) substituent to the phenethylamine core structure produces a group of substances that now have cathinone as the core structure. Synthetic cathinones, like amphetamine, cathinone, methcathinone, and methamphetamine, are central nervous system (CNS) stimulants.

The synthetic cathinones mephedrone, methylone, and MDPV have recently emerged on the United States' illicit drug market and are being perceived as being 'legal' alternatives to cocaine, methamphetamine, and MDMA. Although synthetic cathinones are new to the United States' illicit drug market, they have been popular drugs of abuse in Europe since 2007. MDPV is a derivative of pyrovalerone, which is a psychoactive drug that was used to treat chronic lethargy and fatigue. Research in anti-depressant and anti-parkinson agents resulted in the development and patenting of methylone. Methylone, however, has not been approved for these purposes. There are no currently accepted medical uses in treatment in the United States for mephedrone, methylone, or MDPV.

Mephedrone, methylone, and MDPV are falsely marketed as "research chemicals," "plant food," or "bath salts." They are sold at smoke shops, head shops, convenience stores, adult book stores, and gas stations. They can also be purchased on the Internet and mailed using the U.S. Postal Service or international mail services. The packages of products containing these synthetic cathinones usually have the warning "not for human consumption," most likely in an effort to circumvent statutory restrictions for these substances. Despite disclaimers that the products are not intended for human consumption, retailers promote that routine urinalysis drug tests will not typically detect the presence of these synthetic cathinones. However, analytical methods for the detection of mephedrone, methylone, MDPV, and other synthetic cathinones have recently been developed for these substances.

Evidence indicates that mephedrone, methylone, and MDPV are being abused for their psychoactive properties. Drug surveys found that these and other synthetic cathinones are being used as recreational drugs and are used as alternatives to illicit stimulants like MDMA and cocaine. Accordingly, mephedrone, methylone, and MDPV have been identified in human urine samples that were obtained for routine drug screenings, they have been detected in samples from drivers suspected of driving under the influence, and they have been detected by drug courts during mandatory periodic drug screens. They have also been identified in biological specimens from individuals (some exhibiting symptoms of "extreme agitation" or "excited delirium") who have been arrested for possession of a controlled substance, child endangerment, or homicide. They have been detected in samples from decedents whose causes of death were reported as drug-induced toxicity, multiple drug toxicity, or other causes (*e.g.*, blunt force trauma from a vehicular collision or suicide).

Based on studies in the scientific literature, the marketing of products that contain mephedrone, methylone, and MDPV is geared towards teens and young adults. Accordingly, reports indicate that the main users of synthetic cathinones are young male adults. These substances are also used by mid-to-late adolescents and older adults. Many of these abusers of synthetic cathinones have a previous history of drug abuse.

Health of the Department of Health and Human Services the authority to make domestic drug scheduling recommendations, for purposes of this Final Order, all subsequent references to "Secretary" have been replaced with "Assistant Secretary."

[2] See "Background, Data and Analysis of Synthetic Cathinones: Mephedrone (4–MMC), Methylone (MDMC) and 3,4-Methylenedioxypyrovalerone (MDPV)" found at *http://www.regulations.gov.*

According to drug surveys, the reported average amount of synthetic cathinones used per dose ranged from approximately 25 to 250 milligrams and the average amount used per session (i.e., repeated administration and binging) ranged from approximately 25 milligrams to 5 grams depending on the substance consumed, duration of intake, and route of administration. The most common routes of administration of these substances are nasal insufflation by snorting the powder and oral ingestion by swallowing capsules or tablets. Other reported methods of administration include injection, rectal administration, and "bombing" (wrapping a dose of powder in a paper wrap and swallowing). Synthetic cathinones have also been reported to be used in binges. Reasons cited for binging include to prolong the duration of effects, to satisfy a "craving," or to satisfy a strong urge to re-dose.

According to information found in drug surveys, clinical case reports, and law enforcement reports, users have reported using products containing mephedrone, methylone, and MDPV with other synthetic cathinones (e.g., butylone, fluoromethcathinone, 4–MEC, etc.), pharmaceutical agents (e.g., lidocaine, caffeine, benzocaine, etc.), or other recreational substances (e.g., amphetamine, MDMA, cocaine, gamma-butyrolactone (GBL), kratom, N,N-benzylpiperazine (BZP), and 1-(3-trifluoromethylphenyl)-piperazine (TFMPP)). Chemical analyses of seized and purchased synthetic cathinone products indicate that some products contain multiple substances. Furthermore, investigative toxicology reports of drug screens in which more than one substance was detected indicate that users have ingested products composed of drug combinations (e.g., a tablet composed of MDPV and BZP) or multiple drug products (e.g., a MDPV powder product and a MDMA tablet).

Factor 5: Scope, Duration and Significance of Abuse

The popularity of synthetic cathinones as recreational drugs has increased since they first appeared on the United States' illicit drug market. According to forensic laboratory reports, the first appearance of these synthetic cathinones in the United States occurred in 2009. In 2009, NFLIS registered 15 exhibits from 8 states containing these three synthetic cathinones. In 2010, there were 574 reports from 29 states related to these substances registered in NFLIS, and in 2011 (January to August) there were 995.[3]

Based on reports to DEA from law enforcement and public health officials, synthetic cathinones are becoming increasingly prevalent and abused throughout the United States. At one United States point of entry, the U.S. Customs and Border Protection (CBP) has encountered at least 127 shipments containing primarily mephedrone, methylone, and MDPV, as well as other synthetic cathinones like 4–MEC, butylone, fluoromethcathinone, and dimethylcathinone. Most of these shipments originated in China or India and were being shipped to destinations throughout the United States such as Arizona, Alaska, Hawaii, Kansas, Louisiana, Oklahoma, Oregon, Pennsylvania, Missouri, Virginia, Washington, and West Virginia. The American Association of Poison Control Centers (AAPCC), a non-profit, national organization that represents the poison control centers of the United States, reported that in 2010, poison control centers took 303 calls about synthetic cathinones. However, in just the first eight months of 2011, poison control centers have already received 4,720 calls relating to these products. These calls were received in poison control centers representing at least 47 states and the District of Columbia. Individual state poison control centers have also reported an increase in the number of calls regarding "bath salts" from 2009 to 2011.

Concerns over the abuse of these and other synthetic cathinones have prompted many states to control these substances. As of September 15, 2011, at least 37 states have emergency scheduled or enacted legislation placing regulatory controls on some or many of the synthetic cathinones. These states include Alabama, Arkansas, Connecticut, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Texas, Tennessee, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin and Wyoming. Several countries including all members of the European Union have also placed controls on the possession and/or sale of one or more of these substances. Moreover, the use of synthetic cathinones by members of the U.S. Armed Forces is prohibited.

[3] Analyzed on September 15, 2011.

Factor 6: What, if Any, Risk There Is to the Public Health

The risks to the public health associated with the abuse of mephedrone, methylone, and MDPV relate to acute and long term public health and safety problems. These synthetic cathinones have become a serious drug abuse threat as there have been reports of emergency room admissions and deaths associated with the abuse of these substances.

Clinical case reports indicate that these synthetic cathinones produce a number of stimulant-like adverse effects such as palpitation, seizure, vomiting, sweating, headache, discoloration of the skin, hypertension, and hyper-reflexia. Adverse effects associated with consumption of these drugs as reported by abusers include nose-bleeds, bruxism (teeth grinding), paranoia, hot flashes, dilated pupils, blurred vision, dry mouth/thirst, palpitations, muscular tension in the jaw and limbs, headache, agitation, anxiety, tremor, and fever or sweating. Consequently, numerous individuals have presented at emergency departments in response to exposure incidents and several cases of acute toxicity have been reported due to the ingestion of mephedrone, methylone, or MDPV. In addition, case reports have shown that the abuse of synthetic cathinones can lead to psychological dependence like that reported for other stimulant drugs.

According to clinical case reports, investigative toxicological reports, and autopsy reports, mephedrone, methylone, and MDPV have been implicated in drug induced overdose deaths. In at least three reported deaths, one of these synthetic cathinones was ruled as the cause of death. Other deaths involved individuals under the influence of these synthetic cathinones who acted violently and unpredictably in causing harm to themselves or others. There have also been reports in the scientific literature of deaths caused by individuals who were driving under the influence of these synthetic cathinones.

A number of synthetic cathinones and their products, as identified by CBP and reported in the scientific literature, appear to originate from foreign sources. The manufacturers and retailers who make and sell these products do not fully disclose the product ingredients including the active ingredients or the health risks and potential hazards associated with these products. This poses significant risk to abusers who may not know what they are purchasing or the risk associated with the use of those products.

Based on the above data, the continued uncontrolled manufacture, distribution, importation, exportation, and abuse of mephedrone, methylone, and MDPV pose an imminent hazard to the public safety. DEA is not aware of any recognized therapeutic uses of these synthetic cathinones in the United States.

DEA has considered the three criteria for placing a substance into Schedule I of the CSA (21 U.S.C. 812), and finds that the data available and reviewed for mephedrone, methylone, and MDPV indicate that these synthetic cathinones each have a high potential for abuse, no currently accepted medical use in treatment in the United States, and lack accepted safety for use under medical supervision.

In accordance with the provisions of section 201(h) of the CSA (21 U.S.C. 811(h)) and 28 CFR 0.100, the Administrator has considered the available data and the three factors required to support a determination to temporarily schedule three synthetic cathinones (4-methyl-N-methylcathinone, 3,4-methylenedioxy-N-methylcathinone, and 3,4-methylenedioxypyrovalerone) in Schedule I of the CSA and finds that placement of these synthetic cathinones and their salts, isomers, and salts of isomers into Schedule I of the CSA is necessary to avoid an imminent hazard to the public safety.

Regulatory Requirements

With the issuance of this final order, mephedrone, methylone, and MDPV become subject to the regulatory controls and administrative, civil and criminal sanctions applicable to the manufacture, distribution, possession, importation and exportation of a Schedule I controlled substance under the CSA.

1. Registration. Any person who manufactures, distributes, dispenses, imports, exports, or possesses mephedrone, methylone, or MDPV or who engages in research or conducts instructional activities with respect to mephedrone, methylone, or MDPV, or who proposes to engage in such activities, must be registered to conduct such activities in accordance with 21 U.S.C. 823 and 958. Any person who is currently engaged in any of the above activities and is not registered with DEA must submit an application for registration and may not continue their activities until DEA has approved that application. Retail sales of Schedule I controlled substances to the general public are not allowed under the Controlled Substances Act.

2. Security. Mephedrone, methylone, and MDPV are subject to Schedule I security requirements. Accordingly, appropriately registered DEA registrants must manufacture, distribute and store these substances in accordance with 1301.71; 1301.72(a), (c), and (d); 1301.73; 1301.74; 1301.75(a) and (c); and 1301.76 of Title 21 of the Code of Federal Regulations as of October 21, 2011.

3. Labeling and packaging. All labeling and packaging requirements for controlled substances set forth in Part 1302 of Title 21 of the Code of Federal Regulations shall apply to commercial containers of mephedrone, methylone, and MDPV. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all labeling and packaging requirements.

4. Quotas. Quotas for mephedrone, methylone, and MDPV will be established based on registrations granted and quota applications received pursuant to Part 1303 of Title 21 of the Code of Federal Regulations.

5. Inventory. Every DEA registrant who possesses any quantity of mephedrone, methylone, or MDPV is required to keep inventory of all stocks of these substances on hand pursuant to 1304.03, 1304.04, and 1304.11 of Title 21 of the Code of Federal Regulations. Every current DEA registrant who desires registration in Schedule I for mephedrone, methylone, or MDPV shall conduct an inventory of all stocks of these substances. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all inventory requirements.

6. Records. All registrants who handle mephedrone, methylone, or MDPV are required to keep records pursuant to 1304.03, 1304.04, 1304.21, 1304.22, and 1304.23 of Title 21 of the Code of Federal Regulations. Current DEA registrants shall have thirty (30) calendar days from the effective date of this Final Order to be in compliance with all recordkeeping requirements.

7. Reports. All registrants are required to submit reports in accordance with 1304.33 of Title 21 of the Code of Federal Regulations. Registrants who manufacture or distribute mephedrone, methylone, or MDPV are required to comply with these reporting requirements and shall do so as of October 21, 2011.

8. Order Forms. All registrants involved in the distribution of mephedrone, methylone, or MDPV must comply with order form requirements of Part 1305 of Title 21 of the Code of Federal Regulations as of October 21, 2011.

9. Importation and Exportation. All importation and exportation of mephedrone, methylone, or MDPV must be conducted by appropriately registered DEA registrants in compliance with Part 1312 of Title 21 of the Code of Federal Regulations on or after October 21, 2011.

10. Criminal Liability. The manufacture, distribution, dispensation, or possession with the intent to conduct these activities: Possession, importation, or exportation of mephedrone, methylone, or MDPV not authorized by, or in violation of the CSA or the Controlled Substances Import and Export Act occurring as of October 21, 2011 is unlawful.

Pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996 (Congressional Review Act) (5 U.S.C. 801–808), DEA has submitted a copy of this Final Order to both Houses of Congress and to the Comptroller General.

List of Subjects in 21 CFR Part 1308

Administrative practice and procedure, Drug traffic control, Reporting and recordkeeping requirements.

Under the authority vested in the Attorney General by section 201(h) of the CSA (21 U.S.C. 811(h)), and delegated to the Administrator of the DEA by Department of Justice regulations (28 CFR 0.100), the Administrator hereby orders that 21 CFR Part 1308 be amended as follows:

PART 1308—SCHEDULES OF CONTROLLED SUBSTANCES

■ 1. The authority citation for Part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b), unless otherwise noted.

■ 2. Section 1308.11 is amended by adding new paragraphs (g)(6), (7) and (8) to read as follows:

§ 1308.11 Schedule I.

* * * * *

(g) * * *

(6) 4-methyl-N-methylcathinone—1248

(Other names: mephedrone)

(7) 3,4-methylenedioxy-N-methylcathinone—7540

(Other names: methylone)

(8) 3,4-methylenedioxypyrovalerone—7535

(Other names: MDPV)

* * * * *

Dated: October 14, 2011.

Michele M. Leonhart,

Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2011–0268]

RIN 1625–AA09

Drawbridge Operation Regulation; Passaic River, Harrison, NJ

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard has changed the drawbridge operation regulations that govern the operation of the Amtrak's Dock Bridge across the Passaic River, mile 5.0, at Harrison, New Jersey. The owner of the bridge has requested relief from crewing the bridge at all times because the bridge has received few requests to open during past years. It is expected that an advance notice requirement for bridge openings will provide relief to the bridge owner while continuing to meet the reasonable needs of navigation.

DATES: This rule is effective November 21, 2011.

ADDRESSES: Comments and related materials received from the public, as well as documents mentioned in this preamble as being available in the docket, are part of docket USCG–2011–0268 and are available online by going to *http://www.regulations.gov,* inserting USCG–2011–0268 in the "Keyword" box, and then clicking "Search." This material is also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or e-mail Mr. John W. McDonald, Project Officer, First Coast Guard District Bridge Branch, 617–223–8364, *john.w.mcdonald@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

On June 24, 2011, we published a notice of proposed rulemaking (NPRM) entitled Drawbridge Operation Regulations Passaic River in the **Federal Register** (76 FR 37039). We received no comments on the proposed rule. No public meeting was requested, and none was held.

Basis and Purpose

The Amtrak Dock Bridge, mile 5.0, across the Passaic River at Harrison, New Jersey, has a vertical clearance in the closed position of 24 feet at mean high water and 29 feet at mean low water. The drawbridge operation regulations are listed at 33 CFR 117.739(e).

The existing drawbridge operation regulations require the draw to open on signal; except that, from 7:20 a.m. to 9:20 a.m. and 4:30 p.m. to 6:50 p.m., Monday through Friday, except Federal holidays, the draw need not be opened. At all other times, an opening may be delayed no more than ten minutes, unless the draw tender and the vessel operator, communicating by radio-telephone, agree to a longer delay.

The Coast Guard received a request from the National Railroad Passenger Corporation (Amtrak), the owner of the bridge, for relief from crewing the bridge at all times, because the bridge has received only eight requests to open during the past three years.

Amtrak requested that a twenty four hour advance notice be required for all bridge openings, except during the existing morning and afternoon closed periods.

As a result of the fact that the bridge has received only eight requests to open during the past three years, the Coast Guard believes it is reasonable for the bridge owner to require a twenty four hour advance notice for bridge openings and that doing so would continue to meet the reasonable needs of navigation.

Discussion of Comments and Changes

The Coast Guard received no comments in response to the notice of proposed rulemaking. As a result, no changes have been made to this final rule.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Executive Order 12866 and Executive Order 13563

This final rule is not a "significant regulatory action" under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

We expect the economic impact of this proposed rule to be minimal. Although this regulation may have some impact on the public, the potential impact will be minimized for the following reasons:

The bridge has only received eight requests to open during the past three years. The bridge openings can still be obtained at any time, except the morning and afternoon closed periods, by providing at least a twenty four hour advance notice.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This final rule would affect the following entities, some of which might be small entities: The owners or operators of vessels needing to transit the bridge.

This final rule would not have a significant economic impact on a substantial number of small entities for the following reasons:

The bridge only received eight requests to open during the past three years. The bridge openings can still be obtained at any time, except during the Monday through Friday closed periods, by providing a twenty four hour advance notice.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Bulletin No.27 October 6, 2011

Psychoactive "Bath Salts" Toxicity in Alaska—A Case Series

Introduction

This Bulletin presents case reports of three adults with presumed psychoactive "bath salts" (PABS) toxicity who were cared for at an Anchorage hospital in May 2011.

"Bath salts" is a term used to describe a class of designer drugs intended to have pharmacologic effects similar to controlled substances but to be chemically distinct from them, thus avoiding legal control.[1] Sold in powder form, they may be marketed under such names as plant food, research chemicals, or pond water cleaner, and labeled "not for human consumption" in order to avoid regulation. These drugs typically contain synthetic cathinones, which include the following central nervous system stimulants: 3,4-methylenedioxypyrovalerone (MDPV), mephedrone, and methylone (bk-MDMA).[2] They generally cause a considerable sympathomimetic effect, and desired effects include increased energy, euphoria, enhanced sexual sensation, and synesthesia. Documented adverse reactions include agitation, hyperthermia, hyponatremia, myocarditis, rhabdomyolysis, psychosis, and seizures. When PABS are taken orally, intranasally, intravenously, or rectally, their effects occur with doses as low as 3–5 mg, and the average dose ranges from 5–20 mg.[3] The risk of overdose is high, since packages contain up to 500 mg, and some labels recommend increasing dosages to >50 mg.[3] Because the desired effects of these drugs peak after 1.5 hours when taken orally and then tend to wane rapidly after 3–4 hours,[3] users may re-dose frequently, potentially leading to increased toxicity. The long-term use of PABS leads to tolerance, and abstinence results in psychologic withdrawal and craving.[3]

While many states have banned the sale of select synthetic cathinones commonly found in PABS, they remain unscheduled under the Federal Controlled Substances Act, and are widely available on the Internet. The Drug Enforcement Agency is working to register these compounds as Schedule I substances under its emergency scheduling authority.[4]

Case Series

Case 1: A 24-year-old man on the general medical service was being evaluated for anxiety as a possible contributor to ongoing abdominal pain. Within 24 hours of admission, he displayed paranoia, tachycardia and restlessness. He denied substance abuse other than cannabis and hydrocodone. Laboratory results and physical examination were unremarkable, other than a resting heart rate of 115 beats per minute. A urine drug screen showed only cannabinoids and nonspecific opioids. His symptoms improved after a few hours, but then abruptly returned. A packet of "bath salts" was found when the patient went through his belongings with staff. A repeat urine drug screen 6 hours later was unchanged. The patient admitted to rectal administration of the "bath salts" a few hours prior to admission, and then insufflation during his hospital stay. Without access to this powder, no further tachycardia or restlessness were observed. He experienced no withdrawal symptoms other than fatigue and mild anhedonia. While his "bath salts" were not formally analyzed, the patient was under the impression that they contained MDPV.

Case 2: A 55-year-old woman was admitted to the critical care service following a cardiac arrest requiring defibrillation for ventricular fibrillation within 24 hours of ingesting crack cocaine and "bath salts." On admission, a urine drug screen was positive only for cocaine. On evaluation, she had an anterolateral myocardial infarction. She recovered well following thrombectomy and coronary stenting.

Case 3: A 42-year-old man on the general medical service was being evaluated for delirium and concern for serotonin syndrome. On admission, he was delirious, mildly hyponatremic (sodium: 127 mEq/L), disoriented, and swatting at the air. His temperature was elevated at 100.2 °F. His outpatient medications included fluoxetine (40 mg daily) and loratadine. He took a dextromethorphan-containing cough syrup in small amounts for 2 nights prior to admission, reportedly for "allergies." A urine drug screen was positive only for cannabinoids. Laboratory results and physical examination ruled out infection and serotonin syndrome. On interview, he admitted to regular abuse of "bath salts" labeled as containing methylone. He reported last using "bath salts" the day before admission. On discussion with the patient, the psychiatry service reviewed the possible interactions between methylone, dextromethorphan, and fluoxetine, the overlap between his lab findings, and the toxicity of methylone.

Discussion

Abuse of "bath salts" has been rapidly increasing in the United States, with 303 calls to Poison Control Centers (PCC) nationwide in 2010, and 4,720 calls through August 31, 2011.[5] The Oregon PCC reported that so far in 2011, they have received 14 calls regarding PABS toxicity concerns in Alaska.

This case series demonstrates the wide age range of persons who choose to abuse these compounds, and highlights several potential dangers of "bath salts" abuse. First, severe overdoses may require treatment and monitoring in the intensive care unit.[3] Second, they are often abused in combination with other drugs, and their effects can be quite variable, as these drugs contain unpredictable types and amounts of psychoactive synthetic substances.[3] Finally, routine drug screens do not detect PABS.

Recommendations

1. As the active substances found in "bath salts" are not detectable by standard drug screening, health care providers should always consider including "bath salts" in substance abuse screening discussions.
2. Providers should consider synthetic cathinones in the differential diagnosis for a possible sympathomimetic presentation or toxidrome, and be aware that these substances may be present in polydrug ingestions.
3. Because there is no specific antidote or reversal agent for these drugs, providers should treat these patients by appropriately managing symptoms, and remain aware that patients may need physical restraints and high doses of sedatives to prevent self-harm or harm to others.[3]
4. Providers are encouraged to call the Oregon PCC not just for medical toxicologic consultation, but also to report all "bath salts" intoxication cases they encounter (phone: 800-222-1222).

MUNICIPALITY OF ANCHORAGE

Office of the Mayor

Phone: 907-343-7100
FAX: 907-343-7180

Mayor Dan Sullivan

January 25, 2012

The Honorable Kevin Meyer
Alaska State Legislature
State Capitol
Juneau, AK 99801

Re: Senate Bill 140

Dear Senator Meyer,

Thank you for introducing Senate Bill 140, *"An Act classifying certain substances as schedule IIA controlled substances; and providing for an effective date."*

The Municipality of Anchorage fully supports the passage of SB 140. The use of cathinone and its derivatives (commonly referred to as "bath salts") has quickly become a significant health and public safety issue.

Due to the huge range in potency between the various compounds and products, municipal first responders have encountered users of these drugs having severe reactions, including from bizarre and dangerous behavior to unconsciousness. Users who operate machinery, especially motor vehicles, have had significant accidents and present a danger to others that is on par with operating under the influence of alcohol.

In response, the Municipality has enacted its own local code, but does not have the jurisdiction to deal with the influx of the drug on a state-wide basis or impose the kinds of meaningful criminal sentences that are needed to stem the manufacture, distribution, and sale of these drugs.

Thank you again for introducing this important legislation.

Sincerely,

Dan Sullivan
Mayor

Senate Bill 144 Sponsor Statement

"An Act temporarily reinstating the child and adult immunization program in the Department of Health and Social Services; and providing for an effective date."

SB 144 is a stop-gap measure to reinstate the Alaska Immunization Program (AIP), which aims to prevent and control vaccine-preventable diseases in Alaska, to its former level of coverage.

Every year, Alaska commemorates a significant healthcare emergency – the serum run to Nome. What we call the Iditarod today was the "Great Race of Mercy" in 1925. Nome and the surrounding communities were in the throes of a diphtheria epidemic, and dog teams relayed the life-saving antitoxin to them. Because of vaccines, diphtheria – a disease of the throat, tonsils, and nose that restricts the airway –has been nearly eliminated from the U.S.

The late Senator Ted Stevens recognized the vulnerability of Alaska – rural communities in particular – to significant, preventable healthcare crises, such as the diphtheria outbreak in Nome. Senator Stevens provided for vaccination availability by making sure that the Alaska Immunization Program was funded to provide preventative vaccines to all Alaskans desiring them. As a result of federal funding for vaccinations, diseases that formerly killed children and adults – whooping cough, lockjaw, haemophilus influenzae, polio – have been controlled.

However, since Senator Steven's passing, federal funding has been reduced significantly, to a mere $700,000 for FY2013, down from $4.3 million in FY2010. As a result of this drastic decrease in funding, affordable vaccinations are no longer readily available to all Alaskans. The reductions in funding have forced the program to further reduce the number of eligible vaccines available to children, and completely discontinue those available to adults. SB 144 temporarily substitutes state funding for the decrease in federal funding to AIP through FY2015.

Prevention is important in ensuring a healthier future for Alaskans. I remember two little boys in my neighborhood, in Fairbanks, who died from the polio virus when I was a child. That doesn't happen anymore...because of a vaccine. Prevention programs like AIP play a vital role in maintaining optimum immunity and helping Alaskans take the best possible care of themselves and their families. SB 144 is a short term measure to ensure availability of vaccines until a more permanent solution can be reached. The health and healthcare of Alaskans is an important issue, and SB 144 provides a temporary solution for the growing problem of unnecessary exposure to and spreading of disease.

Why this fiscal note differs from previous version (If initial version, please note as such)

The CS (FIN) version R amends Section 2, subsections (f) & (g). Sec. (f) (1) would include all children's vaccines required for school attendance, plus meningococcal, human papillomavirus (HPV) and rotavirus. The original bill included all recommended vaccines except for meningococcal and HPV. Sec. (f) (2) adds zoster (shingles) to the list of adult vaccines in the original bill. The original bill included influenza, pneumococcal, and Tdap. Sec. (g) (1) allows the commissioner to add vaccines based on recommendations by the Advisory Committee on Immunization Practice and available funding. The original bill did not specify the agency making the recommendations. Sec. (g) (2) allows vaccines to be dropped only if the disease has been eradicated. The original bill allowed the commissioner to drop vaccines based on recommendations and available funding.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB144(FIN)
2012 LEGISLATIVE SESSION

Analysis

This CS (FIN) requires the Department of Health and Social Services to establish an immunization program that would purchase and distribute recommended vaccines to children and adults who do not have coverage elsewhere. The intent is to restore funding to the 2009 level before federal cuts were implemented. Limited vaccine funding for this population is available through Section 317 of the U.S. Public Health Service Act ("317") and administered by the Centers for Disease Control and Prevention. Funding has been cut 84% from $4.3 million in 2010 to $700 thousand in 2013. As a result, by January 2012, the Immunization Program has stopped supplying all adult vaccines and select childhood vaccines: influenza, pneumoccocal, rotavirus, human papillomavirus (HPV), and meningococcal.

This CS (FIN) has an immediate effective date. It is assumed that the program is implemented on July 1, 2012. Currently the department has regulations in place to implement this program immediately. These are all vaccines the department has provided in the past and the infrastructure is still in place. This bill has a sunset date of June 30, 2015.

This CS (FIN) would provide vaccine to enrolled providers for an estimated 47,000 underinsured children under the age of 19 years and about 110,000 doses of vaccines to underinsured and uninsured adults. The CS (FIN) targets underinsured children under the age of 19 years and underinsured or uninsured adults age 19 years and older that reside in Alaska. Children would receive vaccines required for school attendance, plus meningococcal, human papillomavirus (HPV), and rotavirus. The pediatric vaccines would not automatically include other vaccines not needed for school entry such as pneumoccocal and influenza vaccines. Adults would receive influenza, pneumococcal, tetanus/diptheria/pertussis (Tdap), and zoster (shingles) vaccines. The Commissioner may add vaccines based on federal Advisory Committee on Immunization Practices' recommendations and available funding. Vaccines may be dropped only if the disease has been eradicated. There is no mechanism in the CS (FIN) to drop vaccines or further limit eligibility if the costs exceed available funding.

Including HPV is particularly open ended cost-wise because not only are large numbers of females ages 12 - 26 still eligible, it is now also recommended for every male from ages 11 to 26, virtually none of whom have received the vaccine. There would be an ongoing cost to immunize the annual cohort of 11-12 year olds and then many times that amount to "catch up" those between 12-13 and the maximum 18 years of age covered in this program. The fiscal note assumes 33% of those will "catch up" for each of the 3 years until the program sunsets.

The fiscal note takes into account funds the department assumes it will have to apply toward this vaccine program. The total cost to operate the program is estimated at $6,032.7. The Division of Public Health's base budget for immunizations includes $700.0 of the Federal "317" funds. The FY2013 Governor's Budget request also includes an increment for $700.0 ($630.0 GF, $70.0 FF). The remaining $4,632.7 GF is requested in this fiscal note.

Projected costs of selected vaccines for the total eligible population are based on the CDC's forecasting model and state and national immunization data. An 80% immunization rate is assumed for most vaccines (the recommended level to maintain immunity at the community level). The estimated annual cost of the vaccines (2013 prices) are below.

Vaccines required for school attendance: $1,400.0; Rotavirus vaccine for infants: $ 409.0;
Meningococcal vaccine for adolescents: $207.0; HPV vaccine for girls and boys aged 11-12: $566.0;
HPV vaccine to "catch up" 33% ages 13-18 years: $1,120.7; Pnuemococcal for adults: $250.0;
Influenza for adults: $400.0; Tdap for adults: $700.0;
Zoster for adults (4% immunization rate): $980.0

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS GIESSEL AND OLSON, Davis, Dyson, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act temporarily reinstating the child and adult immunization program in the Department of Health and Social Services; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM; LEGISLATIVE INTENT AND PURPOSE. (a) The legislature intends, by establishing the child and adult immunization program in sec. 2 of this Act, to reinstate the program as it existed in the state and as administered by the Department of Health and Social Services in 2009 by providing additional state funding and authorization to fill the gap left by a reduction in federal funding since that time and that resulted in a "universal select" program that fails to provide children and adults who reside in the state with recommended immunizations. The purpose of this Act is to ensure that select recommended vaccines are made available to underinsured children and uninsured and underinsured adults by the state.

(b) The program established by this Act is made temporary only to better assess the need and costs to the state of extending the full reach of the former immunization program. A failure to extend the temporary reinstatement of the immunization program by future legislatures is not intended to implicitly deauthorize a state immunization program.

(c) The Department of Health and Social Services may reinstitute former immunization policies and procedures consistent with this Act.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM ESTABLISHED; CONDITIONS. (a) A child and adult immunization program is established in the Department of Health and Social Services to distribute recommended vaccines to eligible providers under the conditions established in this section.

(b) The department shall

(1) determine provider and recipient eligibility as provided under this section;

(2) adopt regulations necessary to carry out the program;

(3) apply for available federal, state, and private funding needed to support the program;

(4) maintain an enrollment, renewal, and eligibility verification procedure consistent with federal and state law.

(c) A provider of vaccinations under the program shall

(1) be licensed or exempt from licensure in the state to prescribe and administer vaccines;

(2) serve residents of the state;

(3) maintain accurate records of

(A) screening and eligibility of recipients;

(B) storage and distribution of vaccines;

(4) within 10 days, notify the department of a change in staffing, procedure, or location to maintain eligibility in the program.

(d) Notwithstanding (c) of this section, a provider of vaccinations under the program may be a federally designated rural health clinic.

(e) A person is eligible to receive from an eligible provider under the program all

recommended vaccines for the person's age group as provided in (f) of this section if the person is a resident of the state and is uninsured or underinsured for vaccinations.

(f) The recommended vaccines included in the program

(1) for a child under 19 years of age are all vaccines required for school attendance under AS 14.30.125 and meningococcal, rotavirus, and human papillomavirus vaccines;

(2) for an adult 19 years of age or older are influenza, pneumococcal, Tdap, and zoster.

(g) In addition to the vaccines listed in (f) of this section, the commissioner may

(1) add vaccines for inclusion in the program based on recommendations by the federal advisory committee on immunization practices and the availability of funding;

(2) subtract vaccines from inclusion in the program if the disease for which the vaccine is provided has been declared eradicated in the United States by the Centers for Disease Control and Prevention, United States Department of Health and Human Services.

(h) In this section,

(1) "commissioner" means the commissioner of health and social services;

(2) "department" means the Department of Health and Social Services;

(3) "program" means the child and adult immunization program established under (a) of this section;

(4) "underinsured" means a person who has health insurance, but the coverage excludes all or select vaccines or that includes a limit on vaccinations;

(5) "uninsured" means a person who is not covered by a public or private health insurance policy.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM; TRANSITION: REGULATIONS. The Department of Health and Social Services may adopt regulations necessary to implement the changes made by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the law implemented by the regulations.

* **Sec. 4.** This Act is repealed June 30, 2015.

* **Sec. 5.** This Act takes effect immediately under AS 01.10.070(c).

A BILL

FOR AN ACT ENTITLED

"An Act temporarily reinstating the child and adult immunization program in the Department of Health and Social Services; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM; LEGISLATIVE INTENT AND PURPOSE. (a) The legislature intends, by establishing the child and adult immunization program in sec. 2 of this Act, to reinstate the program as it existed in the state and as administered by the Department of Health and Social Services in 2009 by providing additional state funding and authorization to fill the gap left by a reduction in federal funding since that time and that resulted in a "universal select" program that fails to provide children and adults who reside in the state with recommended immunizations. The purpose of this Act is to ensure that select recommended vaccines are made available to underinsured children and uninsured and underinsured adults by the state.

(b) The program established by this Act is made temporary only to better assess the need and costs to the state of extending the full reach of the former immunization program. A failure to extend the temporary reinstatement of the immunization program by future legislatures is not intended to implicitly deauthorize a state immunization program.

(c) The Department of Health and Social Services may reinstitute former immunization policies and procedures consistent with this Act.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM ESTABLISHED; CONDITIONS. (a) A child and adult immunization program is established in the Department of Health and Social Services to distribute recommended vaccines to eligible providers under the conditions established in this section.

(b) The department shall

(1) determine provider and recipient eligibility as provided under this section;

(2) adopt regulations necessary to carry out the program;

(3) apply for available federal, state, and private funding needed to support the program;

(4) maintain an enrollment, renewal, and eligibility verification procedure consistent with federal and state law.

(c) A provider of vaccinations under the program shall

(1) be licensed or exempt from licensure in the state to prescribe and administer vaccines;

(2) serve residents of the state;

(3) maintain accurate records of

(A) screening and eligibility of recipients;

(B) storage and distribution of vaccines;

(4) within 10 days, notify the department of a change in staffing, procedure, or location to maintain eligibility in the program.

(d) Notwithstanding (c) of this section, a provider of vaccinations under the program may be a federally designated rural health clinic.

(e) A person is eligible to receive from an eligible provider under the program all

recommended vaccines for the person's age group as provided in (f) of this section if the person is a resident of the state and is uninsured or underinsured for vaccinations.

(f) The recommended vaccines included in the program

(1) for a child under 19 years of age are all vaccines approved by the commissioner; when approving vaccines under this paragraph, the commissioner shall approve meningococcal and human papillomavirus vaccines and consider the recommendations of the federal advisory committee on immunization practices;

(2) for an adult 19 years of age or older are influenza, pneumococcal, and Tdap.

(g) In addition to the vaccines listed in (f) of this section, the commissioner may add or subtract vaccines for inclusion in the program based on nationally recognized public health standards and the availability of funding.

(h) In this section,

(1) "commissioner" means the commissioner of health and social services;

(2) "department" means the Department of Health and Social Services;

(3) "program" means the child and adult immunization program established under (a) of this section;

(4) "underinsured" means a person who has health insurance, but the coverage excludes all or select vaccines or that includes a limit on vaccinations;

(5) "uninsured" means a person who is not covered by a public or private health insurance policy.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CHILD AND ADULT IMMUNIZATION PROGRAM; TRANSITION: REGULATIONS. The Department of Health and Social Services may adopt regulations necessary to implement the changes made by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the law implemented by the regulations.

*** Sec. 4.** This Act is repealed June 30, 2015.

*** Sec. 5.** This Act takes effect immediately under AS 01.10.070(c).

FISCAL NOTE #1

STATE OF ALASKA **BILL NO.** SB 144
2012 LEGISLATIVE SESSION

Analysis

This bill requires the Department of Health & Social Services to establish an immunization program that would purchase and distribute recommended vaccines to children and adults who do not have coverage elsewhere. The intent is to restore funding to the 2009 level before federal cuts were implemented. Limited vaccine funding for this population is available through Section 317 of the U.S. Public Health Service Act ("317") and administered by the Centers for Disease Control and Prevention. Funding has been cut 84% from $4.3 million in 2010 to $700 thousand in 2013. As a result, by January 2012, the Immunization Program has stopped supplying all adult vaccines and select childhood vaccines: influenza, pneumoccocal, rotavirus, human papillomavirus (HPV), and meningococcal.

This bill has an immediate effective date. It is assumed that the program is implemented on July 1, 2012. Currently the department has regulations in place to implement this program immediately. This bill has a sunset date of June 30, 2015.

The bill targets underinsured children under the age of 19 years and underinsured or uninsured adults age 19 years and older that reside in Alaska. Children would receive recommended vaccines with the exception of the HPV and meningococcal vaccines. Those vaccines are not required for school entry and have a lower cost/benefit. Adults would receive influenza, pneumococcal, and tetanus/diptheria/pertussis (Tdap) vaccines. The Commissioner may add or subtract vaccines based on nationally recognized recommendations and available funding. This bill would provide vaccine to enrolled providers for an estimated 47,000 underinsured children under the age of 19 years and about 110,000 doses of vaccines to underinsured and uninsured adults.

The fiscal note is based on the projected cost of selected vaccines for the total eligible population using the CDC's forecasting model. The pediatric vaccines include all vaccines needed for school entry, plus pneumoccocal and influenza vaccines. In comparison to the pediatric vaccines provided before 2009, this fiscal note does not include rotavirus, HPV , or menigococcal vaccines. With these assumptions, immunizing the total eligible population would cost $5,375.0. This total, adjusted for an 80% immunization rate (the recommended level to maintain immunity at the community level), would equal $4,300.0. This amount would allocate $2,950.0 for pediatric vaccines and $1,350.0 for adults.

Since $700.0 of the Federal "317" funds are already included in the Division of Public Health's base budget for immunizations, the total fiscal note of this bill is $3,600.0. This includes $700.0 ($630.0 GF, $70.0 FF) as part of the FY2013 Governor's Budget request and an additional $2,900.0 in General Fund. If this bill were to pass it would include the portion of vaccines in the budget proposal that are intended for underinsured children and uninsured and underinsured adults. The budget proposal overlaps with this bill although it differs somewhat in both the vaccines and age groups covered. The budget increment includes coverage for children aged 19-35 months regardless of insurance status. In the Governor's budget request adults aged 65 years and up who do not have other resources would receive influenza and pneumococcal vaccine. The small amount of federal funds in the budget proposal assumes reimbursement from Medicaid administrative claiming.

Note that this bill excludes Medicaid enrollees (they already have coverage); therefore, this bill's expenditures are not eligible for federal reimbursement.

MEMORANDUM January 24, 2012

SUBJECT: Sectional Summary (SB 144 (Work Order No. 27-LS1068\X))

TO: Senator Cathy Giessel
Attn: Sharon Long

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides a statement of legislative intent pertaining to the child and adult immunization program established in sec. 2 of the bill. Includes a summary of the past and future of the program.

Section 2. Establishes a child and adult immunization program in the Department of Health and Social Services that requires the department to determine eligibility, adopt regulations, and apply for available funds. Establishes standards for provider and recipient participation in the program and types of vaccinations covered.

Section 3. Authorizes immediate adoption of regulations by the Department of Health and Social Services.

Section 4. Establishes a delayed repeal of the Act of June 30, 2015.

Section 5. Provides an immediate effective date.

Covenant House Alaska

February 28, 2012

Honorable Cathy Giessel
State Capitol, Room 7
Juneau, AK 99801

Dear Senator Giessel:

Covenant House Alaska (CHA) would like to go on record as supporting SB 144: "An Act temporarily reinstating the child and adult immunization program in the Department of Health and Social Services".

CHA served over 4,000 Alaskan youth ages 13-21 in FY2011. The Health Program at CHA evaluates the immunization status of the youth we serve. Historically, we provided youth the missing vaccines they required. However, because the state no longer provides vaccines for persons over age 18, our efforts in this area have been curtailed. In recent years, the vaccine we provide the most is Tdap; the vaccine that provides protecting against whooping cough. This vaccine is particularly important to protect the health of infants and young children. Many of the youth we serve are pregnant, parents of young children, or friends of young people who have young children.

It costs CHA $50.00 to provide a Tdap vaccine to a young adult. Our current budget cannot support this expense, yet the young adults we serve, and the young children they are in contact with, will benefit greatly from receiving this vaccine.

We support the passage of SB 144. Please feel free to contact me with any questions. Thank you!

Sincerely,

Deirdre A. Cronin

Deirdre A. Cronin
Executive Director

February 20, 2012

Senator Cathy Giessel
State Capitol, Room 7
Juneau, AK 99801

Dear Cathy:

Thank you for taking on the charge of asking for the restoration of funding to the Alaska Vaccination Program with Senate Bill 144.

Some believe that Alaska's greatest resource might be oil and gas, timber, fishing, or tourism. I believe that our greatest resource is actually the people of Alaska; our future is dependent on the children of Alaskans. Vaccinating each child is very important! Let's take one example—that of Hepatitis A. In 1993 there were 775 reported cases of Hepatitis A in Alaska; in 2010 that number had dropped to 4. Hepatitis A became available to the public in 1996—it has had a definite and undeniable effect on lowering the number of Hepatitis A infections in the state. There is no vaccine for Hepatitis C, in Alaska we had 0 cases in 1993 and it has grown now to 726 reported cases. Without a vaccine for hepatitis C, we see it grow exponentially.

Today Alaskan children may receive between 20 to 30 vaccinations before they are 18 years old, assistance with this cost burden is very important to Alaskan families. Even small co-pays have proven to be a substantial burden to families in providing needed vaccinations for their children. Alaska had the second lowest vaccination rate in the U.S. in 2009, 56.6% compared to the national average of 70.5%. A vaccination rate approaching 95% is needed to provide a community with herd immunity and prevent disease outbreaks. One 7 year old boy in California, who was not immunized, contracted measles while traveling. He subsequently exposed 839 people and cost the public health department $177,000 to get the outbreak under control. That was just one child.

I recently took care of a woman in her late sixties that came to me suffering from post-polio syndrome—which is now causing her profound weakness and giving her mobility problems that there will be no curative answer for. I thought how dreadful it is to suffer from the effects of a disease that is so preventable. Remember that we need to emphasize prevention—these costs are much less than caring for an individual that might develop the disease with side effects that will affect their future and in some cases may even be life-threatening to the individual.

We need to do a better job of educating the general public about the benefits of vaccinations, dispel myths and rumors, and ensure that vaccinations are affordable and accessible to all Alaskans. Please let your fellow senators know that nurse practitioners in the state of Alaska support the restoration of funding to the Alaska Vaccination Program.

Warm regards,

Dianne L. Tarrant FNP-BC, APRN

Dianne L Tarrant

Alaska Representative
American Academy of Nurse Practitioners

Anchorage, AK 99504

February 8, 2012

To Senator Cathy Giessel
716 W 4th Ave
Anchorage AK, 99501

CC: Senator Donny Olson & Representative Bob Herron

Re: SB 144

I have been a nurse for seven years and am currently in my final semester of family nurse practitioner school. I am a huge proponent of immunization programs and what they do and stand for. It would be a tremendous loss for the state to lose this amount of funding and have many of these programs cut. Over the years with the increased use of vaccines we have been able to decrease the spread of disease.

There are many economic costs associated with stopping immunizations as well. There will be a rise in the number of diseases we see that we once thought were eliminated or close to eliminated. More children will become sick due to these diseases missing school and causing parents to miss work. These children will need treatment and some of them may die due to their illness. Up to 20% of people with measles are hospitalized with every 3 out of 1000 cases being fatal in the US. The World Health Organization predicts that if immunizations are stopped approximately 2.7 million deaths from measles would occur yearly. Haemophilus Influenzae type b (Hib) once killed ~600 children per year but now with the immunization the disease is rarely seen. About 5,000 people will die each year from hepatitis related liver disease costing over $700 million in medical and work expenses. Approximately 20% of reported cases of tetanus end in death. Prior to the Varicella vaccine, the majority of people in the US suffered the chickenpox causing an estimated 4 million cases per year, 11,000 hospitalizations and 100-150 deaths.

There are many people that rely on these programs for their children's immunizations and if we take that away, we are increasing their risk of these diseases. Many of these people that use these programs can not other afford immunizations and might be living in less than ideal living conditions. Why should we put them at more risk by taking away their immunity as well? I hope you reconsider and grant the funding to these much needed programs.

Thank You

Joscelyn VanDuren, BSN RN, FNP student

Subject: Support for SB 144, Temporary Reinstatement of the Child and Adult Immunization Program

Dear Chair Hoffman and Chair Stedman:
The Alaska Commission on Aging (ACoA) supports passage of SB 144, a bill to re-establish and fund the child and adult immunization program as it existed in 2009 targeting children and adults who are uninsured and underinsured. This legislation is authored by Senators Gissel and Olson and co-sponsored by Senators Davis, Dyson, and Thomas.

Preventive services, such as immunizations, are important tools for maintaining the health of all Alaskans at every stage of life. Immune systems weaken with age, which place older people at greater risk for severe illness from influenza and pneumonia. The U.S. Preventive Services Task Force (2011) recommends influenza and pneumococcal vaccinations for persons age 65 and older. The Alaska Behavior Risk Factor Surveillance System (BRFSS 2011) reports underutilization of these vaccines by seniors with more than 36 percent reporting not receiving a flu shot within the past year and 33.5 percent having never received a pneumonia vaccination. Older adults who receive immunizations from providers who do not accept Medicare reimbursement and seniors who have not contributed to Medicare would not be eligible for free immunizations, which may explain some of the underutilization by the senior population of these vaccines. In addition, seniors ages 60 to 64 who are not eligible for Medicare and are low-income, uninsured or unemployed may find the cost of obtaining flu and pneumonia vaccines prohibitive. For these reasons, SB 144 will help increase senior access to immunizations.

A growing number of Alaska seniors are grandparents raising their grandchildren on a fixed income with limited insurance coverage. They desire healthy grandchildren who have access to the recommended immunizations recognized by public health standards. Medicare does not cover the cost of childhood immunizations. Rather than seeing their grandchildren go without immunizations, which are required for admission to public schools, many grandparents will make personal and financial sacrifices to insure their grandchildren receive the recommended immunizations.

Although not on the list of select immunizations, the ACoA recommends consideration of the shingles vaccine as a qualified immunization targeting low-income uninsured/underinsured older adults. Shingles most often strikes older people, particularly those with weakened immune systems. Shingles, caused by the varicella zoster (or the "chicken pox" virus on first infection), is a debilitating and painful rash that can be accompanied by irritation and nerve inflammation. The Centers for Disease Control and Prevention recommends the vaccine for all people over the age of 60. The shingles vaccine has been shown effective in reducing the number of outbreaks by 55 percent in a recent study of 300,000 elderly patients however it is used by only 11 percent of the older adult population. While Medicare and most insurance plans cover the cost of the vaccination, some seniors may need to pay deductibles, co-pay expenses, or the full cost of the vaccine if their provider does not accept Medicare

reimbursement. These additional costs are believed to be contributing to the underutilization of the shingles vaccine by seniors.

The ACoA supports SB 144 as a temporary measure to ensure that select vaccines are made available to underinsured and uninsured Alaskans of all ages. We appreciate your consideration and support of this legislation. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information.

Sincerely,

Sharon Howerton-Clark

Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Senator Steadman:

On February 15, 2012, the Department of Health and Social Services received the following question from you, shown in bold italicized font, regarding Senate Bill 144. The Department's response follows the question below.

What would it cost to add HPV and Meningococcal Meningitis vaccines?

The human papilloma virus (HPV) vaccine is recommended for girls and boys 11 and 12 years old. The estimated cost to add HPV vaccine to the list of state-supplied pediatric vaccines for an estimated 11,000 12 year olds, assuming an 80% immunization rate is $566,000 for FY2013. It could be many times that amount to "catch-up" any older adolescents who have not already been vaccinated.

The estimated costs to add rotavirus and meningococcal vaccines for children and zoster (shingles) vaccines for adults in FY2013 are:

- Rotavirus vaccine: $409,000 for infants, assuming an 80% immunization rate.
- Meningococcal vaccine: $207,000 for adolescents, assuming an 80% immunization rate.
- Zoster (shingles) vaccine: $980,000 for adults aged 50 years and older, assuming a 4% immunization rate.

If you have additional questions regarding this issue, please contact me at 465-1630.

Sincerely,

Nancy Rolfzen

Dear Senate Finance Committee,

Please support SB 144. It is critical that children and families in our great state receive and have access to vaccinations, not only to ensure the overall health of our youngest members but also to lessen the possibility of dangerous infections ravishing our state. As a state that is working on improving our vaccine rates (we have been in the lowest 10 percent for past several years) it can only happen if we continue to have vaccines available for all of our citizens. As pediatric health care providers we know that if the Alaska vaccine program decreases or ends its subsidy, the people who will suffer are the working underinsured.

We urge you to support Senate Bill 144.

Sincerely,

The pediatricians and nurse practioneers at Glacier Pediatrics

Dear Co-Chairs Hoffman and Stedman:

RE: SB 144(Giessel and Olson)--Support

Dear Co-Chairs Hoffman and Stedman:

On behalf of the AARP members in Alaska, we encourage you and your colleagues on the Senate Finance Committee to support SB 144, authored by Senator Cathy Giessel and your Committee colleague Senator Donald Olson and co-sponsored by Senators Davis, Dyson, and your Committee colleague Thomas.

In the past, Alaska and Alaskans of all ages have benefited from a comprehensive vaccination program primarily funded by the federal government. SB 144 would provide state funding to make up the shortfall on a temporary basis.

From the standpoint of older citizens, AARP recognizes that providing free vaccines for influenza, pneumonia, and TDaP to adults is a good effective public health measure.

From the standpoint of grandparents, AARP members recognize that restoring the thirteen previously covered vaccines for children is an excellent decision for our state leadership to make.

According to the Vaccine Research Group at the Mayo Clinic, 50,000 to 70,000 Americans die each year from diseases that could be prevented by vaccines.

Vaccine-preventable diseases have many costs, both economical and social. Parents who need to stay home to take care of sick children lose time from work. Preventable diseases also result in more physician visits, hospitalizations and even death. Vaccinations work. Think of the savings for Medicaid and PERS and TRS if we can restore the vaccination program and prevent costly illnesses.

Vaccines are like seat belts. We wear them to prevent injury or death if someone decides to run a red light. We still need to have vaccines available to prevent injury or death from bacteria and viruses that exist and can still be passed on to us.

AARP requests an "AYE" vote on SB 144.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Senator Lyman Hoffman and Bert Stedman
Chairmen, Senate Finance Committee

Dear Senators,

I am writing to express Merck's strong support for Senate Bill 144, which would re-establish funding for a state immunization program. This is important legislation for the prevention of communicable disease that will also help reduce the state's overall health care expenditures.

We are concerned, however, with section 2.f.1. We believe this language unnecessarily interferes with the department of health and social services' ability to determine policy by specifically prohibiting by law any future attempt to address the spread of certain diseases and the associated costs to the state.

Therefore, we recommend the following language change to section 2.f.1:

(f) The recommended vaccines included in the program

(1) for a child under 19 years of age are all vaccines approved by the commissioner and recommended by the federal advisory committee on immunization practices.

We are not recommending that funding for the prevention of any specific disease be included in Senate Bill 144. Rather, the department should have the flexibility to consider such funding in the future.

Thank you in advance for your consideration. I can of course be reached for additional information or questions regarding our recommendation on my direct line at (267) 421.3555.

With kindest regards,

James Matteucci
Senior Manager, State Government Affairs and Policy

Dear Senator Giessel:

I am writing to applaud your introduction of SB 144.

Annually, we hear tragic stories about death and disability caused by under-immunized adults and children. This winter, there is an outbreak of pertussis in Chicago.

The decrease in federal funding for immunizations increases the probability that we will have outbreaks of diseases that I have not had to deal with in my long nursing career. The impact on children, adults and the elderly, in urban and rural Alaska could be catastrophic.

I support this bill, and thank you for moving it forward- for the health of all Alaskans.

Sincerely,

Dr Deborah Kiley DNP, FNP, FAANP

Anchorage, Alaska

February 8, 2012

Dear Senator Giessel,

I am writing to ask that funding for the State of Alaska vaccination program be fully funded. I am a Family Nurse Practitioner working full time in a Community Health Center in Skagway. We as providers work very hard to insure that vaccinations are available and apply due diligence to safety issues and education. This clinic charges for vaccination administration fee, as sliding fee scale is available for low income families, but of course, do not have to charge for pediatric immunization. We are even happier when the Public Health Nurse position is filled and patients can receive preventive care and vaccinations without charge. If immunizations are not available, the concern is that the appalling trend toward non-vaccination will not only continue but increase, resulting in loss of community immunity to commonly carried diseases, and increased morbidity and mortality in children and adults. This is especially true as we attempt to educate parents to the new HPV vaccination which prevents cancer in young women and men as well as the other vaccinations we give.

Of the funding this state provides, this is one of the most important in my opinion.
Please share this email with anyone you feel would be interested.

Thank You,

Lynne V. Cameron, Family Nurse Practitioner
Dahl Memorial Clinic
Skagway, AK 99840

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

February 6, 2012

Jack C. McRae
Senior Vice President

Senator Cathy Giessel
Alaska State Legislature
State Capitol Room 7
Juneau, AK 99801

Re: SB 144, Temporary Child and Adult Immunization Program

Dear Senator Giessel,

I am writing in support of Senate Bill 144, which seeks to *temporarily reinstate* the child and adult immunization program in the Department of Health and Social Services.

As one of the largest healthcare insurers in Alaska, Premera Blue Cross Blue Shield of Alaska provides comprehensive, tailored services to our members, including innovative programs focused on wellness and prevention. We agree with you that prevention is important in ensuring a healthier future for Alaskans. Our plans echo that sentiment: Premera currently covers all CDC recommended vaccinations for members under age 19 and certain vaccines for adults. This is provided without cost sharing.

We believe SB 144 and its temporary establishment of a state-funded immunization program is a good approach to the process of determining a permanent solution to the gap in federal funding for vaccinations that Alaska is experiencing. Other states have also realized a decrease in federal Vaccines for Children (VFC) and Section 317 funding and have created innovative, durable solutions to this funding gap to sustain full vaccination program financing. We look forward to working with you, the Department of Health and Social Services, in conjunction with the Alaska Health Care Commission, on developing a sustainable solution for the State that takes into account Alaska's needs and financial constraints.

In the meantime, we believe that the approach outlined in SB 144, to put in place a temporary, state-funded solution to vaccination access for children and adults in Alaska, is financially sensible and offers the state ample time to develop a carefully planned, fairly funded and permanent program.

Thank you for your time and consideration and please give me a call any time if you would like to discuss or need additional information.

Sincerely,

Jack C. McRae

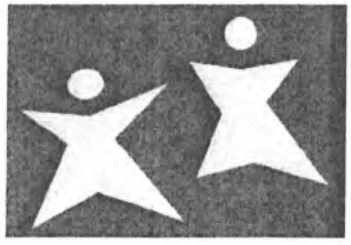
February 8, 2012

Dear Senator Giessel,



I am writing in support of SB 144. As a Family Nurse Practitioner, I spend a great deal of time education patients and parents about health promotion/disease prevention. Vaccinations are one of the main strategies to prevent many of the diseases that caused many deaths and disabilities in the past. During these difficult economic times, preventative health measures that are out of pocket, are often viewed as non-esstenial and therefore postponed or not obtained at all.

For the general health of the people in the state adequate vaccination rates are important in protecting the entire community; this is known as "heard immunity". When the percentage of the population immunized declines, we are at increased risk.

Thank you for your support in this bill.

Sincerely,

Tracy Baum, ANP

February 13, 2012

Dear Senator Hoffman and Senator Stedman and Senate Finance Committee members,

As you might be aware, for every $1 invested in prevention we save at least $10 in healthcare costs. I'm writing today to express my support for SB144. Immunization for our children and families is critical to help maintain a healthy state and protect our assets for the future.

The All Alaska Pediatric Partnership is a public private partnership committed to all children in Alaska since 1995, creating safe spaces to grow working relationships to move positive decisions forward for the health of Alaskan kids! A unique network of children's health service providers, we bring institutional perspectives to exchange ideas and develop collaborative approaches that will enhance rather than diminish Alaska's pediatric resources. We're a catalyst and quiet think tank moving systems of care through concentrated efforts on chosen initiatives.

We look forward to partnering with you to help Alaska's families!

Sincerely,

Stephanie Monahan

Feb. 12, 2012

Greetings Senators Hoffman, Stedman, Olson, Egan, Thomas, Ellis, and McGuire,

I would like to express my support of SB 144.

I have been administrating state provided immunizations in my office since returning to Soldotna in 1996. The administrative burden has become more cumbersome yearly, however we have continued to meet the requirements because it is best for our patients. Limiting the coverage of recommended childhood and adult vaccines as occurred on Jan. 1, 2012, has resulted in more children and adults walking out of my office without their recommended vaccines then ever before. This is especially frustrating for my nurse and I since we have the vaccines (state provided) they need in our office, some with expiration dates which could result in being thrown away unused. Furthermore, our administrative burden tripled, as we must figure out who qualifies for state vaccines vs. billing insurance, purchasing separate vaccine, etc. As a small business owner, in private solo practice this is stretching resources to a non-sustainable point.

I support the bill as a temporary fix and would challenge our state public health system to look at a permanent long-term solution.

Sincerely,

Katy Sheridan, MD

February 7, 2012

Dear Senator Giessel,

I am writing in support of Senate Bill 144, to restore funding for vaccinations in Alaska. I am a Family Nurse Practitioner working in an emergency room and see first-hand the results of preventable illness. Immunizations are one of the most cost-effective public health achievements in the past century.

While the costs of immunizations have increased substantially in recent years, the burden of paying to control an outbreak of a preventable disease is far greater. Immunizations for young children, such as influenza, Rotavirus and pneumococcal, may not be required for school attendance but they greatly reduce hospitalization rates and costs for treating those who would become ill. There is a synergistic effect with immunizations, if you vaccinate a mother against Pertussis, you are also protecting her newborn baby who is too young to be immunized. We need to work together to provide immunizations to all Alaskans in as cost effective a manner as possible.

Sincerely,

Eva Stassen, DNP, DCC, FNP-C

January 29, 2012

Senator Cathy Giessel
State Capitol Room 7
Juneau, AK 99801

Dear Senator Giessel:

This letter is written in support of SB 144. This past fall I worked as a Nurse Practitioner at Covenant House Alaska to fill in for their NP who was on sick leave. I was saddened to find out that I could no longer give state-provided Tdap to the Covenant House 19 and 20 year olds.

Many of the young adults that come to Covenant House become young parents, or have friends who are young parents. We have had youth come to stay with us who have been exposed to confirmed cases of whooping cough. It is important that we protect these young adults, and the young children they come in contact with, from contracting and spreading this disease.

I feel that providing vaccines is one of the best investments the State of Alaska can make in protecting the health of Alaskans of all age groups.

Sincerely,

Patricia Senner RN, ANP

January 24, 2012

RE: Letter of Support, Senate Bill 144

As a long-time Alaska pediatrician I am writing in support of Senate Bill 144 to temporarily reinstate the child and adult immunization program.

For over 30 years, the Alaska Department of Health and Social Services Immunization Program had a "universal" vaccine program – distributing all recommended childhood and adult vaccines to public and private providers in Alaska. These vaccines were supported almost entirely with 2 sources of federal funding. Vaccines for Children (VFC) Program (an entitlement program) pays for children who meet federal criteria; and Section 317 of the U.S. Public Health Service Act covered the cost for children not VFC-eligible and adult vaccines. In 2008, the federal government notified the State that the State had been "overfunded" with 317 funding compared with other states and that Centers for Disease Control would be decreasing the Section 317 funding to the State during 2010 to 2013 from $4.3 million to $0.7 million. Therefore, Alaska is losing $3.5 million dollars in federal funding for critical vaccines between 2010 and 2013.

This staged funding decrease started in 2011 –

- In 2011 the State stopped providing any adult vaccine.
- In 2012, the State Immunization Program will no longer provide the following childhood vaccines to non-VFC eligible children: *influenza, pneumococcal conjugate, rotavirus, and varicella.*
- In 2013, the State Immunization Program will no longer provide any vaccines except for VFC eligible children.

Why should we be concerned?

1. When faced with the complexities of maintaining two separate vaccine supplies for VFC and non-VFC eligible children, as well as fronting the cost for expensive vaccines, many small medical practices will stop providing vaccines to their patients.
2. This decrease in provision of vaccines will result in a critical decrease in immunization coverage (proportion of vaccinated children) in children, leading to increased risk of outbreaks from diseases like measles, mumps, pertussis, chicken pox and hepatitis A. Alaska cannot afford further downward trend in coverage – in 2009 our 2 year old vaccination rate was 49th in the nation.
3. The State could be left without an adequate vaccine supply and infrastructure to allow for timely response to outbreaks of measles, mumps, hepatitis A, pertussis, if such outbreaks were to occur in Alaska.

Senate Bill 144 is a stop-gap measure to fill the gap left by the reduction in federal funding and reinstate the Alaska Immunization Program's ability to provide vaccine for under-insured and uninsured Alaskans currently not covered by other programs. I urge Alaskans to support this bill.

Sincerely,

Rosalyn Singleton, MD MPH

January 30, 2012

Representative Reggie Joule
House Committee Members
Senate Committee Members
State Capitol Building #410
Juneau, Alaska 99801

Dear Representative Joule and Members of the House and Senate Committees:

I am writing in support of SB 144. As a village Based Counselor with an office in our village clinic, I can see first-hand the impact that vaccination can have. There are immunizations available for many potentially deadly diseases, and it is disheartening to see that some Alaskans will not have access to the vaccines they need to stay healthy because the Alaska Immunization Program is no longer adequately funded.

While only temporary, this bill helps ensure that Alaskans of all ages will have access to the vaccinations they need to remain healthy. It also provides ample time for all parties to come together and work towards a more permanent solution.

The health of Alaskans and their families is an important issue, and SB 144 helps address a growing problem. I urge your support.

Sincerely,

Barbara MacManus

December 1, 2011

Dear Ms. Erickson,

As a pediatrician in a small, solo practice, I am writing to voice my support for the Alaska Health Care Commission's recommendation that the Alaska legislature fully fund the immunization and vaccine program.

Changes in funding will lead to small practices like my own being unable to provide vaccine for our patients. I have estimated the costs for the first year to be equivalent to hiring another full-time employee. But, even more importantly, ethically, I feel medical practices should try to provide vaccines to their pediatric patients. This is part of the "medical home" model which we are being encouraged to follow, which is associated with better outcomes for children. If patients have to go to another clinic for their vaccines, some of them will forget or "be too busy". The end result will be a less immune set of children, more susceptible to infectious diseases that should be things of the past. The recent pertussis outbreak in California (10,000 case, 10 deaths) stands as a warning for what Alaska could be facing. The treatment of these diseases is much more expensive than their prevention by vaccination. At a time when Alaska is ranked 49th in vaccination rates among the United States, we really cannot afford this short-sighted approach.

Sincerely yours,

Mary Ann Jacob, M.D., F.A.A.P.

State Capitol, Room 508
Juneau, AK 99801

Dear Senators Giessel and Olson:

As physician leaders of Providence Health and Services, Alaska's largest health system, we write today to thank you for introducing SB 144, and offer our strong support for this legislation.

We recognize the individual and public health consequences of unchecked infectious disease and believe that SB 144, with the goal of temporarily reinstating funding through the Department of Health and Social Services for adult and child immunizations, is a positive step. Providence believes it is our heritage and responsibility to advocate specifically for our state's most vulnerable population; our children.

Thank you again for introducing this legislation and thank you too for your work on behalf our public's health.

Sincerely,

Richard Mandsager, MD
CEO, Providence Alaska Medical Center

Roy Davis, MD
CMO, Providence Health & Services Alaska

Michael Acarregui, MD, MBA
Medical Director, Pediatric Subspecialty Services, Providence Alaska Medical Services

January 24, 2012

Dear Committee members of the House and Senate:

As physicians who care for children and their families, we are encouraged to see SB144 introduced. This bill would reinstate the funding for underinsured children who don't have access to VFC vaccine, and for underinsured and uninsured adults. With the current gaps in payment for vaccine coverage, we risk seeing a significant drop in vaccination rates and risk consequent outbreaks of preventable illnesses in our Southeast Alaska communities. One of the most effective public health advances of the twentieth century was the development of vaccines. The vaccine coverage that has recently been cut is not for rare and obscure illnesses. The vaccines that will not be completely funded without SB 144 prevent such devastating illnesses as pneumonia, meningitis (a deadly brain infection), cervical cancer in women, and life-threatening diarrhea-causing infections in infants. By having a robust statewide vaccination program, and fully funding it, Alaskans can be proud to provide the very best of basic preventive health care to all. By leaving funding gaps and having incomplete coverage, our legislature sends the message to our communities and citizens that such basic public health care is not a priority of our state. We recognize the current economic climate requires frugality, but cutting evidence-based preventive health services will not result in long-term savings or wellness for our state. As health care providers and concerned citizens, we strongly urge you to support Senate Bill 144.

Sincerely,

SEARHC Medical Staff members:

Dr. John Baciocco MD
Dr. Suzzanne Blake MD
Dr. Elliot Bruhl MD
Dr. Thomas Conley MD
Dr. Valerie Edwards MD
Dr. H. Martin Grasmeder MD
Dr. Connie Kreiss MD
Dr. Donna Smith MD
Dr. David Vastola MD

January 26, 2012

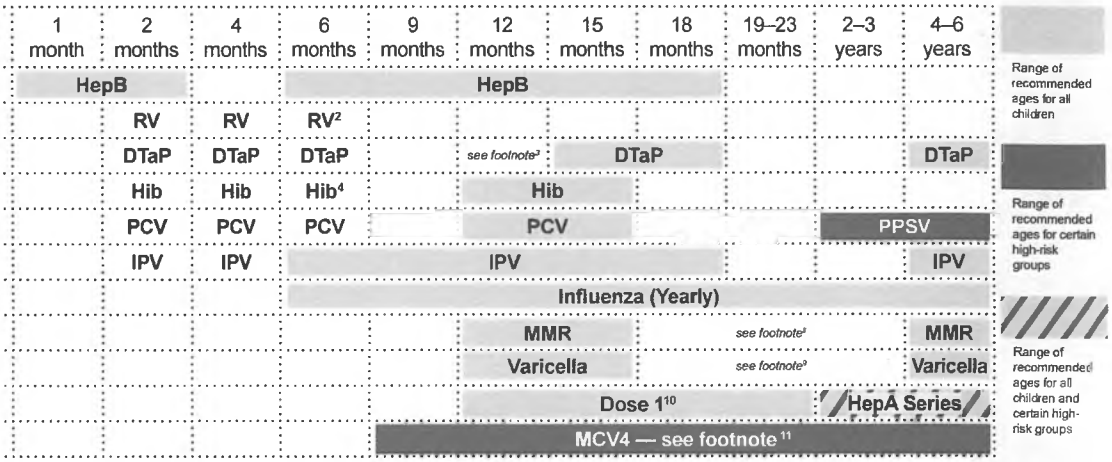
Hello Senator Giessel;

I have been a nurse in Dillingham for almost 30 years. For the past 10 years I have worked as an Immunization Program Manager within a tribal health corporation. In the two decades of nursing prior to this, I have witnessed Elimination of diseases like HIB and Hepatitis B and Hepatitis A. I can not tell you how immense the feeling is to now be vaccinating a second generation of infants whose young parents were protected from diseases that their parents (the grandparents) were not.

The confusion of multiple pay systems for vaccines, multiple classifications for Who can receive state vaccine, and the elimination of providing adult vaccine to those who do not have equitable or other resources (one of several examples would be any non native person living in rural Alaska), will continue to keep Alaska at the bottom of an immunization rate race that it is on the verge of toppling.
The new state Immunization Registry, VacTrAK has barely come on line. Once it is fully functioning and accepting records from EVERY corner of the state, our rates will naturally climb. The capture of data is elemental for accurate representation of the vaccination rate of Alaska's population.

I applaud your SB 144 to restore funding for vaccines and vaccine delivery. It will be vital to those who see Public Health Centers around the state as a source for flu vaccine every fall. As I start a new career in public health, a cut in funding to support immunization delivery is counter to one of public health's main tenets; to promote the health of All Alaskans. Believe me, I know the benefit of immunization. I have lived it.

Thank you!



Gina Carpenter, RN
Dillingham Alaska

January 24, 2012

Dear Senator Giessel,
This email is to support Senate Bill 144. As a family physician (and also medical director and clinic administrator at the Ethel Lund Medical Center, SEARHC, Juneau) I emphasize the important role in prevention that vaccines provide. The vaccines are critical to the public health of adults and children here in Alaska.
Sincerely,
Janice Sheufelt, MD

FIGURE 1: Recommended Immunization schedule for persons aged 0 through 6 years—United States, 2012 (for those who fall behind or start late, see the catch-up schedule [Figure 3])

This schedule includes recommendations in effect as of December 23, 2011. Any dose not administered at the recommended age should be administered at a subsequent visit, when indicated and feasible. The use of a combination vaccine generally is preferred over separate injections of its equivalent component vaccines. Vaccination providers should consult the relevant Advisory Committee on Immunization Practices (ACIP) statement for detailed recommendations, available online at http://www.cdc.gov/vaccines/pubs/acip-list.htm. Clinically significant adverse events that follow vaccination should be reported to the Vaccine Adverse Event Reporting System (VAERS) online (http://www.vaers.hhs.gov) or by telephone (800-822-7967).

1. **Hepatitis B (HepB) vaccine.** (Minimum age: birth)
   At birth:
   - Administer monovalent HepB vaccine to all newborns before hospital discharge.
   - For infants born to hepatitis B surface antigen (HBsAg)–positive mothers, administer HepB vaccine and 0.5 mL of hepatitis B immune globulin (HBIG) within 12 hours of birth. These infants should be tested for HBsAg and antibody to HBsAg (anti-HBs) 1 to 2 months after receiving the last dose of the series.
   - If mother's HBsAg status is unknown, within 12 hours of birth administer HepB vaccine for infants weighing ≥2,000 grams, and HepB vaccine plus HBIG for infants weighing <2,000 grams. Determine mother's HBsAg status as soon as possible and, if she is HBsAg-positive, administer HBIG for infants weighing ≥2,000 grams (no later than age 1 week).

   Doses after the birth dose:
   - The second dose should be administered at age 1 to 2 months. Monovalent HepB vaccine should be used for doses administered before age 6 weeks.
   - Administration of a total of 4 doses of HepB vaccine is permissible when a combination vaccine containing HepB is administered after the birth dose.
   - Infants who did not receive a birth dose should receive 3 doses of a HepB-containing vaccine starting as soon as feasible (Figure 3).
   - The minimum interval between dose 1 and dose 2 is 4 weeks, and between dose 2 and 3 is 8 weeks. The final (third or fourth) dose in the HepB vaccine series should be administered no earlier than age 24 weeks and at least 16 weeks after the first dose.
2. **Rotavirus (RV) vaccines.** (Minimum age: 6 weeks for both RV-1 [Rotarix] and RV-5 [Rota Teq])
   - The maximum age for the first dose in the series is 14 weeks, 6 days; and 8 months, 0 days for the final dose in the series. Vaccination should not be initiated for infants aged 15 weeks, 0 days or older.
   - If RV-1 (Rotarix) is administered at ages 2 and 4 months, a dose at 6 months is not indicated.
3. **Diphtheria and tetanus toxoids and acellular pertussis (DTaP) vaccine.** (Minimum age: 6 weeks)
   - The fourth dose may be administered as early as age 12 months, provided at least 6 months have elapsed since the third dose.
4. ***Haemophilus influenzae* type b (Hib) conjugate vaccine.** (Minimum age: 6 weeks)
   - If PRP-OMP (PedvaxHIB or Comvax [HepB-Hib]) is administered at ages 2 and 4 months, a dose at age 6 months is not indicated.
   - Hiberix should only be used for the booster (final) dose in children aged 12 months through 4 years.
5. **Pneumococcal vaccines.** (Minimum age: 6 weeks for pneumococcal conjugate vaccine [PCV]; 2 years for pneumococcal polysaccharide vaccine [PPSV])
   - Administer 1 dose of PCV to all healthy children aged 24 through 59 months who are not completely vaccinated for their age.
   - For children who have received an age-appropriate series of 7-valent PCV (PCV7), a single supplemental dose of 13-valent PCV (PCV13) is recommended for:
     — All children aged 14 through 59 months
     — Children aged 60 through 71 months with underlying medical conditions.
   - Administer PPSV at least 8 weeks after last dose of PCV to children aged 2 years or older with certain underlying medical conditions, including a cochlear implant. See *MMWR* 2010:59(No. RR-11), available at http://www.cdc.gov/mmwr/pdf/rr/rr5911.pdf.
6. **Inactivated poliovirus vaccine (IPV).** (Minimum age: 6 weeks)
   - If 4 or more doses are administered before age 4 years, an additional dose should be administered at age 4 through 6 years.
   - The final dose in the series should be administered on or after the fourth birthday and at least 6 months after the previous dose.
7. **Influenza vaccines.** (Minimum age: 6 months for trivalent inactivated influenza vaccine [TIV]; 2 years for live, attenuated influenza vaccine [LAIV])
   - For most healthy children aged 2 years and older, either LAIV or TIV may be used. However, LAIV should not be administered to some children, including 1) children with asthma, 2) children 2 through 4 years who had wheezing in the past 12 months, or 3) children who have any other underlying medical conditions that predispose them to influenza complications. For all other contraindications to use of LAIV, see *MMWR* 2010;59(No. RR-8), available at http://www.cdc.gov/mmwr/pdf/rr/rr5908.pdf.
   - For children aged 6 months through 8 years:
     — For the 2011–12 season, administer 2 doses (separated by at least 4 weeks) to those who did not receive at least 1 dose of the 2010–11 vaccine. Those who received at least 1 dose of the 2010–11 vaccine require 1 dose for the 2011–12 season.
     — For the 2012–13 season, follow dosing guidelines in the 2012 ACIP influenza vaccine recommendations.
8. **Measles, mumps, and rubella (MMR) vaccine.** (Minimum age: 12 months)
   - The second dose may be administered before age 4 years, provided at least 4 weeks have elapsed since the first dose.
   - Administer MMR vaccine to infants aged 6 through 11 months who are traveling internationally. These children should be revaccinated with 2 doses of MMR vaccine, the first at ages 12 through 15 months and at least 4 weeks after the previous dose, and the second at ages 4 through 6 years.
9. **Varicella (VAR) vaccine.** (Minimum age: 12 months)
   - The second dose may be administered before age 4 years, provided at least 3 months have elapsed since the first dose.
   - For children aged 12 months through 12 years, the recommended minimum interval between doses is 3 months. However, if the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
10. **Hepatitis A (HepA) vaccine.** (Minimum age: 12 months)
    - Administer the second (final) dose 6 to18 months after the first.
    - Unvaccinated children 24 months and older at high risk should be vaccinated. See *MMWR* 2006;55(No. RR-7), available at http://www.cdc.gov/mmwr/pdf/rr/rr5507.pdf.
    - A 2-dose HepA vaccine series is recommended for anyone aged 24 months and older, previously unvaccinated, for whom immunity against hepatitis A virus infection is desired.
11. **Meningococcal conjugate vaccines, quadrivalent (MCV4).** (Minimum age: 9 months for Menactra [MCV4-D], 2 years for Menveo [MCV4-CRM])
    - For children aged 9 through 23 months 1) with persistent complement component deficiency; 2) who are residents of or travelers to countries with hyperendemic or epidemic disease; or 3) who are present during outbreaks caused by a vaccine serogroup, administer 2 primary doses of MCV4-D, ideally at ages 9 months and 12 months or at least 8 weeks apart.
    - For children aged 24 months and older with 1) persistent complement component deficiency who have not been previously vaccinated; or 2) anatomic/functional asplenia, administer 2 primary doses of either MCV4 at least 8 weeks apart.
    - For children with anatomic/functional asplenia, if MCV4-D (Menactra) is used, administer at a minimum age of 2 years and at least 4 weeks after completion of all PCV oses.
    - See *MMWR* 2011;60:72–6, available at http://www.cdc.gov/mmwr/pdf/wk/mm6003. pdf, and Vaccines for Children Program resolution No. 6/11-1, available at http://www. cdc.gov/vaccines/programs/vfc/downloads/resolutions/06-11mening-mcv.pdf, and *MMWR* 2011;60:1391–2, available at http://www.cdc.gov/mmwr/pdf/wk/mm6040. pdf, for further guidance, including revaccination guidelines.

This schedule is approved by the Advisory Committee on Immunization Practices (http://www.cdc.gov/vaccines/recs/acip), the American Academy of Pediatrics (http://www.aap.org), and the American Academy of Family Physicians (http://www.aafp.org).
Department of Health and Human Services • Centers for Disease Control and Prevention

Recommended Adult Immunization Schedule—United States - 2012

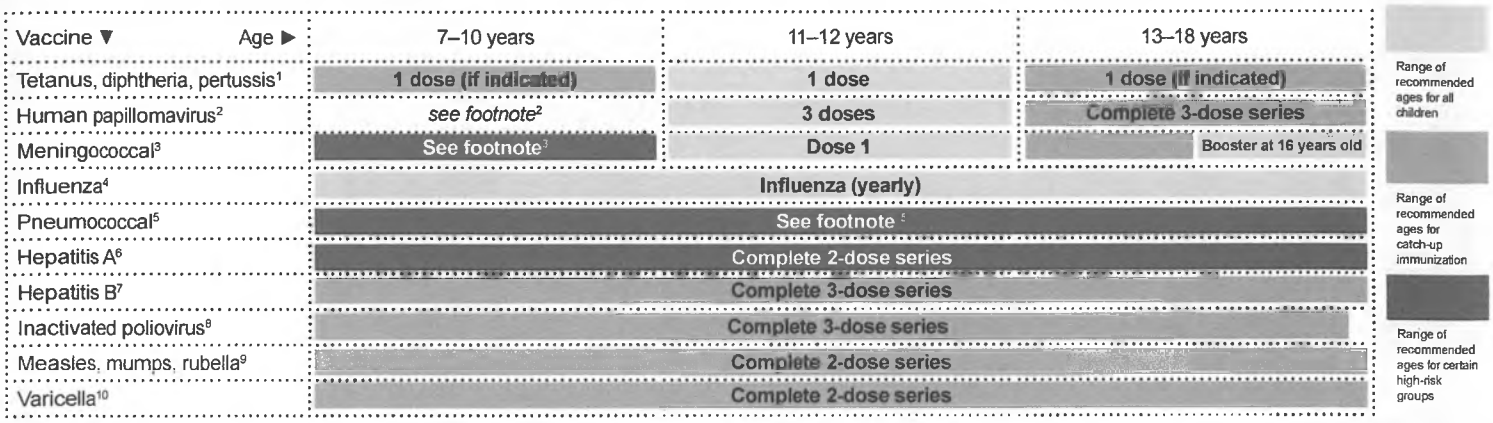
Note: These recommendations must be read with the footnotes that follow containing number of doses, intervals between doses, and other important information.

Figure 1. Recommended adult immunization schedule, by vaccine and age group[1]

VACCINE ▼ AGE GROUP ►	19-21 years	22-26 years	27-49 years	50-59 years	60-64 years	≥ 65 years
Influenza [2]	1 dose annually					
Tetanus, diphtheria, pertussis (Td/Tdap) [3,*]	Substitute 1-time dose of Tdap for Td booster; then boost with Td every 10 yrs					Td/Tdap[3]
Varicella [4,*]	2 Doses					
Human papillomavirus (HPV) Female [5,*]	3 doses					
Human papillomavirus (HPV) Male [5,*]	3 doses					
Zoster [6]					1 dose	
Measles, mumps, rubella (MMR) [7,*]	1 or 2 doses			1 dose		
Pneumococcal (polysaccharide) [8,9]	1 or 2 doses					1 dose
Meningococcal [10,*]	1 or more doses					
Hepatitis A [11,*]	2 doses					
Hepatitis B [12,*]	3 doses					

*Covered by the Vaccine Injury Compensation Program

- For all persons in this category who meet the age requirements and who lack documentation of vaccination or have no evidence of previous infection
- Recommended if some other risk factor is present (e.g., on the basis of medical, occupational, lifestyle, or other indications)
- Tdap recommended for ≥65 if contact with <12 month old child. Either Td or Tdap can be used if no infant contact
- No recommendation



Report all clinically significant postvaccination reactions to the Vaccine Adverse Event Reporting System (VAERS). Reporting forms and instructions on filing a VAERS report are available at www.vaers.hhs.gov or by telephone, 800-822-7967.

Information on how to file a Vaccine Injury Compensation Program claim is available at www.hrsa.gov/vaccinecompensation or by telephone, 800-338-2382. To file a claim for vaccine injury, contact the U.S. Court of Federal Claims, 717 Madison Place, N.W., Washington, D.C. 20005; telephone, 202-357-6400.

Additional information about the vaccines in this schedule, extent of available data, and contraindications for vaccination is also available at www.cdc.gov/vaccines or from the CDC-INFO Contact Center at 800-CDC-INFO (800-232-4636) in English and Spanish, 8:00 a.m. - 8:00 p.m. Eastern Time, Monday - Friday, excluding holidays.

Use of trade names and commercial sources is for identification only and does not imply endorsement by the U.S. Department of Health and Human Services.

FIGURE 2: Recommended immunization schedule for persons aged 7 through 18 years—United States, 2012 (for those who fall behind or start late, see the schedule below and the catch-up schedule [Figure 3])

This schedule includes recommendations in effect as of December 23, 2011. Any dose not administered at the recommended age should be administered at a subsequent visit, when indicated and feasible. The use of a combination vaccine generally is preferred over separate injections of its equivalent component vaccines. Vaccination providers should consult the relevant Advisory Committee on Immunization Practices (ACIP) statement for detailed recommendations, available online at http://www.cdc.gov/vaccines/pubs/acip-list.htm. Clinically significant adverse events that follow vaccination should be reported to the Vaccine Adverse Event Reporting System (VAERS) online (http://www.vaers.hhs.gov) or by telephone (800-822-7967).

1. **Tetanus and diphtheria toxoids and acellular pertussis (Tdap) vaccine.** (Minimum age: 10 years for Boostrix and 11 years for Adacel)
   - Persons aged 11 through 18 years who have not received Tdap vaccine should receive a dose followed by tetanus and diphtheria toxoids (Td) booster doses every 10 years thereafter.
   - Tdap vaccine should be substituted for a single dose of Td in the catch-up series for children aged 7 through 10 years. Refer to the catch-up schedule if additional doses of tetanus and diphtheria toxoid–containing vaccine are needed.
   - Tdap vaccine can be administered regardless of the interval since the last tetanus and diphtheria toxoid–containing vaccine.
2. **Human papillomavirus (HPV) vaccines (HPV4 [Gardasil] and HPV2 [Cervarix]).** (Minimum age: 9 years)
   - Either HPV4 or HPV2 is recommended in a 3-dose series for females aged 11 or 12 years. HPV4 is recommended in a 3-dose series for males aged 11 or 12 years.
   - The vaccine series can be started beginning at age 9 years.
   - Administer the second dose 1 to 2 months after the first dose and the third dose 6 months after the first dose (at least 24 weeks after the first dose).
   - See *MMWR* 2010;59:626–32, available at http://www.cdc.gov/mmwr/pdf/wk/mm5920.pdf.
3. **Meningococcal conjugate vaccines, quadrivalent (MCV4).**
   - Administer MCV4 at age 11 through 12 years with a booster dose at age 16 years.
   - Administer MCV4 at age 13 through 18 years if patient is not previously vaccinated.
   - If the first dose is administered at age 13 through 15 years, a booster dose should be administered at age 16 through 18 years with a minimum interval of at least 8 weeks after the preceding dose.
   - If the first dose is administered at age 16 years or older, a booster dose is not needed.
   - Administer 2 primary doses at least 8 weeks apart to previously unvaccinated persons with persistent complement component deficiency or anatomic/functional asplenia, and 1 dose every 5 years thereafter.
   - Adolescents aged 11 through 18 years with human immunodeficiency virus (HIV) infection should receive a 2-dose primary series of MCV4, at least 8 weeks apart.
   - See *MMWR* 2011;60:72–76, available at http://www.cdc.gov/mmwr/pdf/wk/mm6003.pdf, and Vaccines for Children Program resolution No. 6/11-1, available at http://www.cdc.gov/vaccines/programs/vfc/downloads/resolutions/06-11mening-mcv.pdf, for further guidelines.
4. **Influenza vaccines (trivalent inactivated influenza vaccine [TIV] and live, attenuated influenza vaccine [LAIV]).**
   - For most healthy, nonpregnant persons, either LAIV or TIV may be used, except LAIV should not be used for some persons, including those with asthma or any other underlying medical conditions that predispose them to influenza complications. For all other contraindications to use of LAIV, see *MMWR* 2010;59(No.RR-8), available at http://www.cdc.gov/mmwr/pdf/rr/rr5908.pdf.
   - Administer 1 dose to persons aged 9 years and older.
   - For children aged 6 months through 8 years:
     — For the 2011–12 season, administer 2 doses (separated by at least 4 weeks) to those who did not receive at least 1 dose of the 2010–11 vaccine. Those who received at least 1 dose of the 2010–11 vaccine require 1 dose for the 2011–12 season.
     — For the 2012–13 season, follow dosing guidelines in the 2012 ACIP influenza vaccine recommendations.
5. **Pneumococcal vaccines (pneumococcal conjugate vaccine [PCV] and pneumococcal polysaccharide vaccine [PPSV]).**
   - A single dose of PCV may be administered to children aged 6 through 18 years who have anatomic/functional asplenia, HIV infection or other immunocompromising condition, cochlear implant, or cerebral spinal fluid leak. See *MMWR* 2010:59(No. RR-11), available at http://www.cdc.gov/mmwr/pdf/rr/rr5911.pdf.
   - Administer PPSV at least 8 weeks after the last dose of PCV to children aged 2 years or older with certain underlying medical conditions, including a cochlear implant. A single revaccination should be administered after 5 years to children with anatomic/functional asplenia or an immunocompromising condition.
6. **Hepatitis A (HepA) vaccine.**
   - HepA vaccine is recommended for children older than 23 months who live in areas where vaccination programs target older children, who are at increased risk for infection, or for whom immunity against hepatitis A virus infection is desired. See *MMWR* 2006;55(No. RR-7), available at http://www.cdc.gov/mmwr/pdf/rr/rr5507.pdf.
   - Administer 2 doses at least 6 months apart to unvaccinated persons.
7. **Hepatitis B (HepB) vaccine.**
   - Administer the 3-dose series to those not previously vaccinated.
   - For those with incomplete vaccination, follow the catch-up recommendations (Figure 3).
   - A 2-dose series (doses separated by at least 4 months) of adult formulation Recombivax HB is licensed for use in children aged 11 through 15 years.
8. **inactivated poliovirus vaccine (IPV).**
   - The final dose in the series should be administered at least 6 months after the previous dose.
   - If both OPV and IPV were administered as part of a series, a total of 4 doses should be administered, regardless of the child's current age.
   - IPV is not routinely recommended for U.S. residents aged18 years or older.
9. **Measles, mumps, and rubella (MMR) vaccine.**
   - The minimum interval between the 2 doses of MMR vaccine is 4 weeks.
10. **Varicella (VAR) vaccine.**
    - For persons without evidence of immunity (see *MMWR* 2007;56[No. RR-4], available at http://www.cdc.gov/mmwr/pdf/rr/rr5604.pdf), administer 2 doses if not previously vaccinated or the second dose if only 1 dose has been administered.
    - For persons aged 7 through 12 years, the recommended minimum interval between doses is 3 months. However, if the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
    - For persons aged 13 years and older, the minimum interval between doses is 4 weeks.

This schedule is approved by the Advisory Committee on Immunization Practices (http://www.cdc.gov/vaccines/recs/acip), the American Academy of Pediatrics (http://www.aap.org), and the American Academy of Family Physicians (http://www.aafp.org).
Department of Health and Human Services • Centers for Disease Control and Prevention

Figure 2. Vaccines that might be indicated for adults based on medical and other indications[1]

VACCINE ▼ INDICATION ►	Pregnancy	Immunocompromising conditions (excluding human immunodeficiency virus [HIV])[4,6,7,14]	HIV infection[4,7,13,14] CD4+ T lymphocyte count		Men who have sex with men (MSM)	Heart disease, chronic lung disease, chronic alcoholism	Asplenia[13] (including elective splenectomy and persistent complement component deficiencies)	Chronic liver disease	Diabetes, kidney failure, end-stage renal disease, receipt of hemodialysis	Health-care personnel
			<200 cells/μL	>200 cells/μL						
Influenza [2]	1 dose TIV annually				1 dose TIV or LAIV annually	1 dose TIV annually				1 dose TIV or LAIV annually
Tetanus, diphtheria, pertussis (Td/Tdap) [3,*]	Substitute 1-time dose of Tdap for Td booster; then boost with Td every 10 yrs									
Varicella [4,*]	Contraindicated		2 doses							
Human papillomavirus (HPV) Female [5,*]		3 doses through age 26 yrs				3 doses through age 26 yrs				
Human papillomavirus (HPV) Male [5,*]		3 doses through age 26 yrs				3 doses through age 21 yrs				
Zoster [6]	Contraindicated				1 dose					
Measles, mumps, rubella (MMR) [7,*]	Contraindicated		1 or 2 doses							
Pneumococcal (polysaccharide) [8,9]	1 or 2 doses									
Meningococcal [10,*]	1 or more doses									
Hepatitis A [11,*]	2 doses									
Hepatitis B [12,*]	3 doses									

*Covered by the Vaccine Injury Compensation Program

The recommendations in this schedule were approved by the Centers for Disease Control and Prevention's (CDC) Advisory Committee on Immunization Practices (ACIP), the American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), American College of Obstetricians and Gynecologists (ACOG) and American College of Nurse-Midwives (ACNM).

For all persons in this category who meet the age requirements and who lack documentation of vaccination or have no evidence of previous infection

Recommended if some other risk factor is present (e.g., on the basis of medical, occupational, lifestyle, or other indications)

Contraindicated

No recommendation

These schedules indicate the recommended age groups and medical indications for which administration of currently licensed vaccines is commonly indicated for adults ages 19 years and older, as of January 1, 2012. For all vaccines being recommended on the Adult Immunization Schedule: a vaccine series does not need to be restarted, regardless of the time that has elapsed between doses. Licensed combination vaccines may be used whenever any components of the combination are indicated and when the vaccine's other components are not contraindicated. For detailed recommendations on all vaccines, including those used primarily for travelers or that are issued during the year, consult the manufacturers' package inserts and the complete statements from the Advisory Committee on Immunization Practices (www.cdc.gov/vaccines/pubs/acip-list.htm). Use of trade names and commercial sources is for identification only and does not imply endorsement by the U.S. Department of Health and Human Services.

U.S. Department of Health and Human Services
Centers for Disease Control and Prevention

Footnotes — Recommended Adult Immunization Schedule—United States - 2012

1. **Additional information**
   - Advisory Committee on Immunization Practices (ACIP) vaccine recommendations and additional information are available at: http://www.cdc.gov/vaccines/pubs/acip-list.htm.
   - Information on travel vaccine requirements and recommendations (e.g., for hepatitis A and B, meningococcal, and other vaccines) available at http://wwwnc.cdc.gov/travel/page/vaccinations.htm.
2. **Influenza vaccination**
   - Annual vaccination against influenza is recommended for all persons 6 months of age and older.
   - Persons 6 months of age and older, including pregnant women, can receive the trivalent inactivated vaccine (TIV).
   - Healthy, nonpregnant adults younger than age 50 years without high-risk medical conditions can receive either intranasally administered live, attenuated influenza vaccine (LAIV) (FluMist), or TIV. Health-care personnel who care for severely immunocompromised persons (i.e., those who require care in a protected environment) should receive TIV rather than LAIV. Other persons should receive TIV.
   - The intramuscular or intradermal administered TIV are options for adults aged 18–64 years.
   - Adults aged 65 years and older can receive the standard dose TIV or the high-dose TIV (Fluzone High-Dose).
3. **Tetanus, diphtheria, and acellular pertussis (Td/Tdap) vaccination**
   - Administer a one-time dose of Tdap to adults younger than age 65 years who have not received Tdap previously or for whom vaccine status is unknown to replace one of the 10-year Td boosters.
   - Tdap is specifically recommended for the following persons:
     — pregnant women more than 20 weeks' gestation,
     — adults, regardless of age, who are close contacts of infants younger than age 12 months (e.g., parents, grandparents, or child care providers), and
     — health-care personnel.
   - Tdap can be administered regardless of interval since the most recent tetanus or diphtheria-containing vaccine.
   - Pregnant women not vaccinated during pregnancy should receive Tdap immediately postpartum.
   - Adults 65 years and older may receive Tdap.
   - Adults with unknown or incomplete history of completing a 3-dose primary vaccination series with Td-containing vaccines should begin or complete a primary vaccination series. Tdap should be substituted for a single dose of Td in the vaccination series with Tdap preferred as the first dose.
   - For unvaccinated adults, administer the first 2 doses at least 4 weeks apart and the third dose 6–12 months after the second.
   - If incompletely vaccinated (i.e., less than 3 doses), administer remaining doses.

   Refer to the ACIP statement for recommendations for administering Td/Tdap as prophylaxis in wound management (See footnote 1).
4. **Varicella vaccination**
   - All adults without evidence of immunity to varicella (as defined below) should receive 2 doses of single-antigen varicella vaccine or a second dose if they have received only 1 dose.
   - Special consideration for vaccination should be given to those who
     — have close contact with persons at high risk for severe disease (e.g., health-care personnel and family contacts of persons with immunocompromising conditions) or
     — are at high risk for exposure or transmission (e.g., teachers; child care employees; residents and staff members of institutional settings, including correctional institutions; college students; military personnel; adolescents and adults living in households with children; nonpregnant women of childbearing age; and international travelers).
   - Pregnant women should be assessed for evidence of varicella immunity. Women who do not have evidence of immunity should receive the first dose of varicella vaccine upon completion or termination of pregnancy and before discharge from the health-care facility. The second dose should be administered 4–8 weeks after the first dose.
   - Evidence of immunity to varicella in adults includes any of the following:
     — documentation of 2 doses of varicella vaccine at least 4 weeks apart;
     — U.S.-born before 1980 (although for health-care personnel and pregnant women, birth before 1980 should not be considered evidence of immunity);
     — history of varicella based on diagnosis or verification of varicella by a health-care provider (for a patient reporting a history of or having an atypical case, a mild case, or both, health-care providers should seek either an epidemiologic link to a typical varicella case or to a
7. **Measles, mumps, rubella (MMR) vaccination (cont'd)**

   Rubella component:
   - For women of childbearing age, regardless of birth year, rubella immunity should be determined. If there is no evidence of immunity, women who are not pregnant should be vaccinated. Pregnant women who do not have evidence of immunity should receive MMR vaccine upon completion or termination of pregnancy and before discharge from the health-care facility.

   Health-care personnel born before 1957:
   - For unvaccinated health-care personnel born before 1957 who lack laboratory evidence of measles, mumps, and/or rubella immunity or laboratory confirmation of disease, health-care facilities should consider routinely vaccinating personnel with 2 doses of MMR vaccine at the appropriate interval for measles and mumps or 1 dose of MMR vaccine for rubella.
8. **Pneumococcal polysaccharide (PPSV) vaccination**
   - Vaccinate all persons with the following indications:
     — age 65 years and older without a history of PPSV vaccination;
     — adults younger than 65 years with chronic lung disease (including chronic obstructive pulmonary disease, emphysema, and asthma); chronic cardiovascular diseases; diabetes mellitus; chronic liver disease (including cirrhosis); alcoholism; cochlear implants; cerebrospinal fluid leaks; immunocompromising conditions; and functional or anatomic asplenia (e.g., sickle cell disease and other hemoglobinopathies, congenital or acquired asplenia, splenic dysfunction, or splenectomy [if elective splenectomy is planned, vaccinate at least 2 weeks before surgery]);
     — residents of nursing homes or long-term care facilities; and
     — adults who smoke cigarettes.
   - Persons with asymptomatic or symptomatic HIV infection should be vaccinated as soon as possible after their diagnosis.
   - When cancer chemotherapy or other immunosuppressive therapy is being considered, the interval between vaccination and initiation of immunosuppressive therapy should be at least 2 weeks. Vaccination during chemotherapy or radiation therapy should be avoided.
   - Routine use of PPSV is not recommended for American Indians/Alaska Natives or other persons younger than 65 years of age unless they have underlying medical conditions that are PPSV indications. However, public health authorities may consider recommending PPSV for American Indians/Alaska Natives who are living in areas where the risk for invasive pneumococcal disease is increased.
9. **Revaccination with PPSV**
   - One-time revaccination 5 years after the first dose is recommended for persons 19 through 64 years of age with chronic renal failure or nephrotic syndrome; functional or anatomic asplenia (e.g., sickle cell disease or splenectomy); and for persons with immunocompromising conditions.
   - Persons who received PPSV before age 65 years for any indication should receive another dose of the vaccine at age 65 years or later if at least 5 years have passed since their previous dose.
   - No further doses are needed for persons vaccinated with PPSV at or after age 65 years.
10. **Meningococcal vaccination**
    - Administer 2 doses of meningococcal conjugate vaccine quadrivalent (MCV4) at least 2 months apart to adults with functional asplenia or persistent complement component deficiencies.
    - HIV-infected persons who are vaccinated should also receive 2 doses.
    - Administer a single dose of meningococcal vaccine to microbiologists routinely exposed to isolates of *Neisseria meningitidis*, military recruits, and persons who travel to or live in countries in which meningococcal disease is hyperendemic or epidemic.
    - First-year college students up through age 21 years who are living in residence halls should be vaccinated if they have not received a dose on or after their 16th birthday.
    - MCV4 is preferred for adults with any of the preceding indications who are 55 years old and younger; meningococcal polysaccharide vaccine (MPSV4) is preferred for adults 56 years and older.
    - Revaccination with MCV4 every 5 years is recommended for adults previously vaccinated with MCV4 or MPSV4 who remain at increased risk for infection (e.g., adults with anatomic or functional asplenia or persistent complement component deficiencies).
11. **Hepatitis A vaccination**
    - Vaccinate any person seeking protection from hepatitis A virus (HAV) infection and persons with any of the following indications:
      — men who have sex with men and persons who use injection drugs;

laboratory-confirmed case or evidence of laboratory confirmation, if it was performed at the time of acute disease);
— history of herpes zoster based on diagnosis or verification of herpes zoster by a health-care provider; or
— laboratory evidence of immunity or laboratory confirmation of disease.

5. Human papillomavirus (HPV) vaccination

- Two vaccines are licensed for use in females, bivalent HPV vaccine (HPV2) and quadrivalent HPV vaccine (HPV4), and one HPV vaccine for use in males (HPV4).
- For females, either HPV4 or HPV2 is recommended in a 3-dose series for routine vaccination at 11 or 12 years of age, and for those 13 through 26 years of age, if not previously vaccinated.
- For males, HPV4 is recommended in a 3-dose series for routine vaccination at 11 or 12 years of age, and for those 13 through 21 years of age, if not previously vaccinated. Males 22 through 26 years of age may be vaccinated.
- HPV vaccines are not live vaccines and can be administered to persons who are immunocompromised as a result of infection (including HIV infection), disease, or medications. Vaccine is recommended for immunocompromised persons through age 26 years who did not get any or all doses when they were younger. The immune response and vaccine efficacy might be less than that in immunocompetent persons.
- Men who have sex with men (MSM) might especially benefit from vaccination to prevent condyloma and anal cancer. HPV4 is recommended for MSM through age 26 years who did not get any or all doses when they were younger.
- Ideally, vaccine should be administered before potential exposure to HPV through sexual activity; however, persons who are sexually active should still be vaccinated consistent with age-based recommendations. HPV vaccine can be administered to persons with a history of genital warts, abnormal Papanicolaou test, or positive HPV DNA test.
- A complete series for either HPV4 or HPV2 consists of 3 doses. The second dose should be administered 1–2 months after the first dose; the third dose should be administered 6 months after the first dose (at least 24 weeks after the first dose).
- Although HPV vaccination is not specifically recommended for health-care personnel (HCP) based on their occupation, HCP should receive the HPV vaccine if they are in the recommended age group.

6. Zoster vaccination

- A single dose of zoster vaccine is recommended for adults 60 years of age and older regardless of whether they report a prior episode of herpes zoster. Although the vaccine is licensed by the Food and Drug Administration (FDA) for use among and can be administered to persons 50 years and older, ACIP recommends that vaccination begins at 60 years of age.
- Persons with chronic medical conditions may be vaccinated unless their condition constitutes a contraindication, such as pregnancy or severe immunodeficiency.
- Although zoster vaccination is not specifically recommended for health-care personnel (HCP), HCP should receive the vaccine if they are in the recommended age group.

7. Measles, mumps, rubella (MMR) vaccination

- Adults born before 1957 generally are considered immune to measles and mumps. All adults born in 1957 or later should have documentation of 1 or more doses of MMR vaccine unless they have a medical contraindication to the vaccine, laboratory evidence of immunity to each of the three diseases, or documentation of provider-diagnosed measles or mumps disease. For rubella, documentation of provider-diagnosed disease is not considered acceptable evidence of immunity.

Measles component:

- A routine second dose of MMR vaccine, administered a minimum of 28 days after the first dose, is recommended for adults who
  — are students in postsecondary educational institutions;
  — work in a health-care facility; or
  — plan to travel internationally.
- Persons who received inactivated (killed) measles vaccine or measles vaccine of unknown type from 1963 to 1967 should be revaccinated with 2 doses of MMR vaccine.

Mumps component:

- A routine second dose of MMR vaccine, administered a minimum of 28 days after the first dose, is recommended for adults who
  — are students in postsecondary educational institutions;
  — work in a health-care facility; or
  — plan to travel internationally.
- Persons vaccinated before 1979 with either killed mumps vaccine or mumps vaccine of unknown type who are at high risk for mumps infection (e.g., persons who are working in a health-care facility) should be considered for revaccination with 2 doses of MMR vaccine.

8. Hepatitis A vaccination

- Vaccinate persons with any of the following indications and any person seeking protection from hepatitis A virus (HAV) infection:
  — persons working with HAV-infected primates or with HAV in a research laboratory setting;
  — persons with chronic liver disease and persons who receive clotting factor concentrates;
  — persons traveling to or working in countries that have high or intermediate endemicity of hepatitis A; and
  — unvaccinated persons who anticipate close personal contact (e.g., household or regular babysitting) with an international adoptee during the first 60 days after arrival in the United States from a country with high or intermediate endemicity. (See footnote 1 for more information on travel recommendations). The first dose of the 2-dose hepatitis A vaccine series should be administered as soon as adoption is planned, ideally 2 or more weeks before the arrival of the adoptee.
- Single-antigen vaccine formulations should be administered in a 2-dose schedule at either 0 and 6–12 months (Havrix), or 0 and 6–18 months (Vaqta). If the combined hepatitis A and hepatitis B vaccine (Twinrix) is used, administer 3 doses at 0, 1, and 6 months; alternatively, a 4-dose schedule may be used, administered on days 0, 7, and 21–30 followed by a booster dose at month 12.

12. Hepatitis B vaccination

- Vaccinate persons with any of the following indications and any person seeking protection from hepatitis B virus (HBV) infection:
  — sexually active persons who are not in a long-term, mutually monogamous relationship (e.g., persons with more than one sex partner during the previous 6 months); persons seeking evaluation or treatment for a sexually transmitted disease (STD); current or recent injection-drug users; and men who have sex with men;
  — health-care personnel and public-safety workers who are exposed to blood or other potentially infectious body fluids;
  — persons with diabetes younger than 60 years as soon as feasible after diagnosis; persons with diabetes who are 60 years or older at the discretion of the treating clinician based on increased need for assisted blood glucose monitoring in long-term care facilities, likelihood of acquiring hepatitis B infection, its complications or chronic sequelae, and likelihood of immune response to vaccination;
  — persons with end-stage renal disease, including patients receiving hemodialysis; persons with HIV infection; and persons with chronic liver disease;
  — household contacts and sex partners of persons with chronic HBV infection; clients and staff members of institutions for persons with developmental disabilities; and international travelers to countries with high or intermediate prevalence of chronic HBV infection; and
  — all adults in the following settings: STD treatment facilities; HIV testing and treatment facilities; facilities providing drug-abuse treatment and prevention services; health-care settings targeting services to injection-drug users or men who have sex with men; correctional facilities; end-stage renal disease programs and facilities for chronic hemodialysis patients; and institutions and nonresidential daycare facilities for persons with developmental disabilities.
- Administer missing doses to complete a 3-dose series of hepatitis B vaccine to those persons not vaccinated or not completely vaccinated. The second dose should be administered 1 month after the first dose; the third dose should be given at least 2 months after the second dose (and at least 4 months after the first dose). If the combined hepatitis A and hepatitis B vaccine (Twinrix) is used, give 3 doses at 0, 1, and 6 months; alternatively, a 4-dose Twinrix schedule, administered on days 0, 7, and 21–30 followed by a booster dose at month 12 may be used.
- Adult patients receiving hemodialysis or with other immunocompromising conditions should receive 1 dose of 40 μg/mL (Recombivax HB) administered on a 3-dose schedule or 2 doses of 20 μg/mL (Engerix-B) administered simultaneously on a 4-dose schedule at 0, 1, 2, and 6 months.

13. Selected conditions for which *Haemophilus influenzae* type b (Hib) vaccine may be used

- 1 dose of Hib vaccine should be considered for persons who have sickle cell disease, leukemia, or HIV infection, or who have anatomic or functional asplenia if they have not previously received Hib vaccine.

14. Immunocompromising conditions

- Inactivated vaccines generally are acceptable (e.g., pneumococcal, meningococcal, and influenza [inactivated influenza vaccine]), and live vaccines generally are avoided in persons with immune deficiencies or immunocompromising conditions. Information on specific conditions is available at http://www.cdc.gov/vaccines/pubs/acip-list.htm.

FIGURE 3. Catch-up immunization schedule for persons aged 4 months through 18 years who start late or who are more than 1 month behind —United States • 2012

The figure below provides catch-up schedules and minimum intervals between doses for children whose vaccinations have been delayed. A vaccine series does not need to be restarted, regardless of the time that has elapsed between doses. Use the section appropriate for the child's age. **Always use this table in conjunction with the accompanying childhood and adolescent immunization schedules (Figures 1 and 2) and their respective footnotes.**

Persons aged 4 months through 6 years					
Vaccine	Minimum Age for Dose 1	Minimum Interval Between Doses			
		Dose 1 to dose 2	Dose 2 to dose 3	Dose 3 to dose 4	Dose 4 to dose 5
Hepatitis B	Birth	4 weeks	8 weeks and at least 16 weeks after first dose; minimum age for the final dose is 24 weeks		
Rotavirus[1]	6 weeks	4 weeks	4 weeks[1]		
Diphtheria, tetanus, pertussis[2]	6 weeks	4 weeks	4 weeks	6 months	6 months[2]
Haemophilus influenzae type b[3]	6 weeks	4 weeks if first dose administered at younger than age 12 months 8 weeks (as final dose) if first dose administered at age 12–14 months No further doses needed if first dose administered at age 15 months or older	4 weeks[3] if current age is younger than 12 months 8 weeks (as final dose)[3] if current age is 12 months or older and first dose administered at younger than age 12 months and second dose administered at younger than 15 months No further doses needed if previous dose administered at age 15 months or older	8 weeks (as final dose) This dose only necessary for children aged 12 months through 59 months who received 3 doses before age 12 months	
Pneumococcal[4]	6 weeks	4 weeks if first dose administered at younger than age 12 months 8 weeks (as final dose for healthy children) if first dose administered at age 12 months or older or current age 24 through 59 months No further doses needed for healthy children if first dose administered at age 24 months or older	4 weeks if current age is younger than 12 months 8 weeks (as final dose for healthy children) if current age is 12 months or older No further doses needed for healthy children if previous dose administered at age 24 months or older	8 weeks (as final dose) This dose only necessary for children aged 12 months through 59 months who received 3 doses before age 12 months or for children at high risk who received 3 doses at any age	
Inactivated poliovirus[5]	6 weeks	4 weeks	4 weeks	6 months[5] minimum age 4 years for final dose	
Meningococcal[6]	9 months	8 weeks[6]			
Measles, mumps, rubella[7]	12 months	4 weeks			
Varicella[8]	12 months	3 months			
Hepatitis A	12 months	6 months			
Persons aged 7 through 18 years					
Tetanus, diphtheria/ tetanus, diphtheria, pertussis[9]	7 years[9]	4 weeks	4 weeks if first dose administered at younger than age 12 months 6 months if first dose administered at 12 months or older	6 months if first dose administered at younger than age 12 months	
Human papillomavirus[10]	9 years	Routine dosing intervals are recommended[10]			
Hepatitis A	12 months	6 months			
Hepatitis B	Birth	4 weeks	8 weeks (and at least 16 weeks after first dose)		
Inactivated poliovirus[5]	6 weeks	4 weeks	4 weeks[5]	6 months[5]	
Meningococcal[6]	9 months	8 weeks[6]			
Measles, mumps, rubella[7]	12 months	4 weeks			
Varicella[8]	12 months	3 months if person is younger than age 13 years 4 weeks if person is aged 13 years or older			

1. **Rotavirus (RV) vaccines (RV-1 [Rotarix] and RV-5 [Rota Teq]).**
   - The maximum age for the first dose in the series is 14 weeks, 6 days; and 8 months, 0 days for the final dose in the series. Vaccination should not be initiated for infants aged 15 weeks, 0 days or older.
   - If RV-1 was administered for the first and second doses, a third dose is not indicated.
2. **Diphtheria and tetanus toxoids and acellular pertussis (DTaP) vaccine.**
   - The fifth dose is not necessary if the fourth dose was administered at age 4 years or older.
3. ***Haemophilus influenzae* type b (Hib) conjugate vaccine.**
   - Hib vaccine should be considered for unvaccinated persons aged 5 years or older who have sickle cell disease, leukemia, human immunodeficiency virus (HIV) infection, or anatomic/functional asplenia.
   - If the first 2 doses were PRP-OMP (PedvaxHIB or Comvax) and were administered at age 11 months or younger, the third (and final) dose should be administered at age 12 through 15 months and at least 8 weeks after the second dose.
   - If the first dose was administered at age 7 through 11 months, administer the second dose at least 4 weeks later and a final dose at age 12 through 15 months.
4. **Pneumococcal vaccines.** (Minimum age: 6 weeks for pneumococcal conjugate vaccine [PCV]; 2 years for pneumococcal polysaccharide vaccine [PPSV])
   - For children aged 24 through 71 months with underlying medical conditions, administer 1 dose of PCV if 3 doses of PCV were received previously, or administer 2 doses of PCV at least 8 weeks apart if fewer than 3 doses of PCV were received previously.
   - A single dose of PCV may be administered to certain children aged 6 through 18 years with underlying medical conditions. See age-specific schedules for details.
   - Administer PPSV to children aged 2 years or older with certain underlying medical conditions. See *MMWR* 2010:59(No. RR-11), available at http://www.cdc.gov/mmwr/pdf/rr/rr5911.pdf.
5. **Inactivated poliovirus vaccine (IPV).**
   - A fourth dose is not necessary if the third dose was administered at age 4 years or older and at least 6 months after the previous dose.
   - In the first 6 months of life, minimum age and minimum intervals are only recommended if the person is at risk for imminent exposure to circulating poliovirus (i.e., travel to a polio-endemic region or during an outbreak).
   - IPV is not routinely recommended for U.S. residents aged 18 years or older.
6. **Meningococcal conjugate vaccines, quadrivalent (MCV4).** (Minimum age: 9 months for Menactra [MCV4-D]; 2 years for Menveo [MCV4-CRM])
   - See Figure 1 ("Recommended immunization schedule for persons aged 0 through 6 years") and Figure 2 ("Recommended immunization schedule for persons aged 7 through 18 years") for further guidance.
7. **Measles, mumps, and rubella (MMR) vaccine.**
   - Administer the second dose routinely at age 4 through 6 years.
8. **Varicella (VAR) vaccine.**
   - Administer the second dose routinely at age 4 through 6 years. If the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
9. **Tetanus and diphtheria toxoids (Td) and tetanus and diphtheria toxoids and acellular pertussis (Tdap) vaccines.**
   - For children aged 7 through 10 years who are not fully immunized with the childhood DTaP vaccine series, Tdap vaccine should be substituted for a single dose of Td vaccine in the catch-up series; if additional doses are needed, use Td vaccine. For these children, an adolescent Tdap vaccine dose should not be given.
   - An inadvertent dose of DTaP vaccine administered to children aged 7 through 10 years can count as part of the catch-up series. This dose can count as the adolescent Tdap dose, or the child can later receive a Tdap booster dose at age 11–12 years.
10. **Human papillomavirus (HPV) vaccines (HPV4 [Gardasil] and HPV2 [Cervarix]).**
    - Administer the vaccine series to females (either HPV2 or HPV4) and males (HPV4) at age 13 through 18 years if patient is not previously vaccinated.
    - Use recommended routine dosing intervals for vaccine series catch-up; see Figure 2 ("Recommended immunization schedule for persons aged 7 through 18 years").

Clinically significant adverse events that follow vaccination should be reported to the Vaccine Adverse Event Reporting System (VAERS) online (http://www.vaers.hhs.gov) or by telephone (800-822-7967). Suspected cases of vaccine-preventable diseases should be reported to the state or local health department. Additional information, including precautions and contraindications for vaccination, is available from CDC online (http://www.cdc.gov/vaccines) or by telephone (800-CDC-INFO [800-232-4636]).

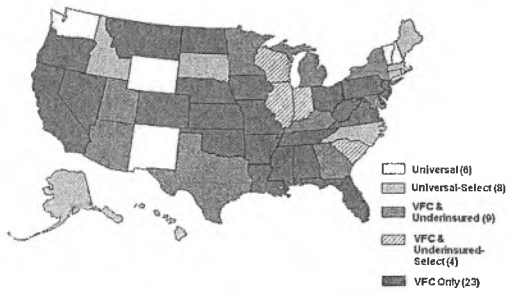
Bulletin No. 31 October 6, 2010

Only Pediatric/Adolescent Vaccines to be Supplied by State Beginning in 2011



For over 30 years the Alaska Immunization Program maintained a "universal" vaccine program, distributing at no cost all Advisory Committee on Immunization Practices (ACIP)-recommended pediatric and selected adult vaccines to public and private providers in Alaska. This vaccine distribution has been supported almost entirely with two sources of federal funding. The *Vaccines for Children (VFC) Program* pays for vaccines for children who meet certain federal criteria. *Section 317 of the U.S. Public Health Service Act (317)* covers the cost of vaccines for the approximately one-third of Alaska children who are not VFC-eligible, as well as adult vaccines. As a federal entitlement program, VFC funding increases to support newly recommended vaccines for children; however, 317 funding has not kept pace with rapidly rising vaccine costs, which have risen almost seven-fold in the last 10 years (Figure 1).

Figure 1: Alaska Immunization Program Estimated Cost to Purchase Recommended Vaccines for One Child from their Year of Birth through Age 18 Years, for Selected Years from 1985 through 2010

The rising cost and growing number of recommended vaccines has made it increasingly challenging for Alaska to maintain its vaccine distribution policy; however, these challenges are not unique to Alaska. Almost one-half (23/50) of U.S. states supply vaccines only for VFC-eligible children, i.e., vaccines are not supplied for children who do not meet program eligibility criteria or for adults. Other state vaccine supply policies include *universal purchase* (all vaccines for all children), *universal purchase select* (vaccines for all children except selected expensive vaccines available for VFC-eligibles only), and *VFC and underinsured* and *VFC and underinsured select* (varying levels of coverage for underinsured children) (Figure 2).

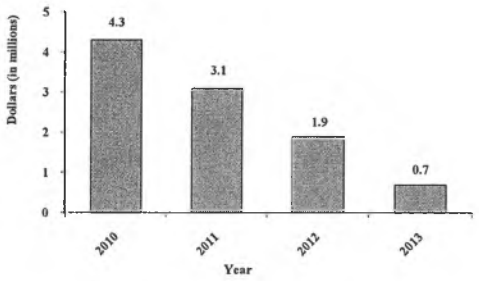


Figure 2: Public Purchase Pediatric Vaccine Supply Policy — United States, July 2010[1]

Alaska's vaccine purchases are supported almost entirely with funding from the U.S. Centers for Disease Control and Prevention (CDC). In 2008, CDC informed Alaska that the state had been "significantly overfunded" relative to other state and local immunization programs for many years, and the agency could no longer support Alaska's universal immunization program. CDC agreed to maintain 317 funding at ~$4.3 million through 2010, with the understanding that funding would decrease in subsequent years.

To meet the challenges presented by increased vaccine costs and reduced funding, Alaska has taken incremental steps to reduce vaccine expenditures while trying to maintain maximum availability of pediatric vaccines. In 2007, the Immunization Program discontinued shipments of adult influenza vaccine to private providers. In January 2009, the state limited the provision of human papillomavirus (HPV) and meningococcal conjugate vaccines to children who met the federal eligibility requirements of the Vaccines for Children (VFC) Program.[2] These program modifications helped trim vaccine costs by more than $2 million per year. However, CDC has notified Alaska that, beginning in 2011, the state's 317 vaccine dollars will be reduced by ~$1.2 million for each of the next 3 years, at which time Alaska's funding will be proportionate to that received by other immunization programs in the United States (Figure 3). Therefore, a change in Alaska's vaccine supply policy is necessary (Box).

Figure 3: Projected 317 Vaccine Funding for Alaska, 2010–2013

Box. The Alaska Immunization Program's 2011 Vaccine Supply Policy

Due to the increased cost of vaccines and federal 317 funding cuts, the following Alaska Immunization Program vaccine supply policy will become effective on **January 1, 2011**:

- All ACIP-recommended pediatric vaccines except HPV and MCV4 will continue to be supplied for all children through age 18 years. HPV and MCV4 will continue to be available for VFC-eligible children only.
- **Adult vaccines that historically have been provided by the Alaska Immunization Program (i.e., influenza, pneumococcal, tetanus/diphtheria) will no longer be supplied to public or private sector providers.**

Alternate Resources Available for Adult Vaccines

Private insurance policies and Medicare frequently support the cost of adult vaccines. Resource information related to Medicare billing and other potential funding sources is posted on the Section of Epidemiology website.[3] Manufacturer contact information for vaccine ordering also is included.

Conclusion

Although the Alaska Immunization Program regrets this policy change for adult vaccines, we are pleased that we can continue to provide pediatric vaccines at the current level throughout 2011. As the state's 317 funding levels continue to decrease over the next 3 years, this pediatric policy may need to be reconsidered. We will also continue to monitor the implementation of the Patient Protection and Affordable Care Act to determine its potential impact on vaccine funding in the future. To the greatest extent possible, we will continue our commitment to eliminate vaccine-preventable diseases in Alaska's children.

Further Cuts in State-Provided Vaccines for VFC-Ineligible Children in 2012

Background

In Alaska, state-supplied childhood vaccines are funded almost entirely through two federal funding sources. The primary source is the *Vaccines for Children (VFC) Program*, which pays for all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines for children who are Medicaid eligible, American Indian/Alaska Native, and uninsured. Underinsured children (i.e., children with private health insurance that covers no or only selected vaccines, or caps vaccine coverage at a certain amount) are also eligible to receive VFC vaccine, but only if they are seen at a specified Rural Health Clinic (RHC) or at a Federally Qualified Health Center (FQHC). FQHCs are health centers designated by the federal Health Resources and Services Administration to provide health care to medically underserved populations.

The second funding source is *Section 317 of the U.S. Public Health Service Act (317)*, which provides limited vaccine funding for VFC-ineligible persons (i.e., adults, fully insured children, and underinsured children who are not seen at a FQHC or a RHC). The number of VFC-ineligible children in Alaska is increasing steadily, as is the cost to fully vaccinate a child through age 18 years (Figure).[1,2] Of the estimated 98,689 Alaska children who will be VFC-ineligible in 2012, 46,884 (48%) will be underinsured.[1]

Figure. Number of VFC-Ineligible Children and Estimated Cost of Recommended Vaccines for One Child from Birth through Age 18 Years — Alaska, 2008–2012

On October 6, 2010, the Section of Epidemiology (SOE) published a *Bulletin* describing a $1.2 million annual decrease in Alaska's 317 federal funding for 3 years starting in 2011 (from $4.3 million in 2010 to $700,000 in 2013).[3] The rationale for the cuts was that Alaska had been "significantly overfunded" relative to other state immunization programs for many years and, due to budgetary constraints, the U.S. Centers for Disease Control and Prevention (CDC) was no longer able to support Alaska's universal immunization program.[3]

In order to absorb this enormous reduction in 317 funding, the Alaska Immunization Program has implemented mitigation measures over the past 2 years, including the following:

- Discontinuation of 317-funded adult vaccines;[3]
- Discontinuation of 317-funded meningococcal (MCV4) and human papillomavirus (HPV) vaccine for VFC-ineligible children;[3]
- Requiring dose-level accountability for state-supplied vaccine;[4] and
- Educating providers on ways to reduce vaccine wastage.[5]

Alaska's 317-funded Vaccines in 2012

Alaska's 317 budget for 2012 is $1.9 million. To meet this budget, the Immunization Program must further reduce the number of 317-funded vaccines available for Alaska's VFC-ineligible children. Factors involved in deciding which vaccines to cut in 2012 included public health impact, vaccine costs, and school/childcare compliance requirements.

In addition to HPV and MCV4, the following three vaccines will no longer be supplied by the state for VFC-ineligible children: as of January 2012, *pneumococcal conjugate (PCV 13) and rotavirus*; as of July 2012, *influenza* (Table).

Table. State-Supplied Vaccines that will be Available to VFC-Ineligible Children in Alaska in 2012

ACIP Recommended Childhood Vaccines	Estimated Cost of Vaccines for VFC-Ineligible Children in 2012	State-Supplied Vaccines Available in 2012 to VFC-Ineligible Children
DTaP	$234,038	Available
Hepatitis A	$177,755	Available
Hepatitis B	$106,463	Available
Hib	$137,498	Available
HPV	$350,307	Not available *(as of 1/09)*
Influenza	$371,881	Not available *(as of 7/12)*
MCV4	$256,695	Not available *(as of 1/09)*
MMR	$143,497	Available
PCV 13	$1,655,175	Not available *(as of 1/12)*
Polio	$152,783	Available
Rotavirus	$530,870	Not available *(as of 1/12)*
Td/Tdap	$132,449	Available
Varicella	$779,434	Available
Total Cost	**$5,028,845**	**$1,863,917** (for available vaccines)

Some Good News

In the near future, public health centers statewide will be able to provide VFC-funded vaccines to underinsured children.

Here's how: FQHCs are allowed to vaccinate underinsured children using VFC vaccine. Additionally, FQHCs are allowed to delegate their authority to (i.e., deputize) public health VFC providers (e.g., public health centers and local health departments) to vaccinate underinsured children on their behalf. On September 23, 2011, the Anchorage Neighborhood Health Center (an FQHC) signed a memorandum of agreement with SOE that authorizes the Alaska Immunization Program to administer delegation of authority to SOA public health centers statewide to vaccinate underinsured children using VFC vaccine. PHCs will implement this authority as soon as possible.

Recommendations

1. Health care providers *must screen all children for VFC-eligibility at each visit* prior to administering state-supplied vaccine;[6] VFC-ineligible children may only receive select state-supplied vaccines (Table).
2. Underinsured children may be referred to an FQHC, RHC, or public health center where they are eligible to receive all ACIP-recommended vaccines for free under the VFC Program.
3. Manufacturer contact information for vaccine ordering is posted on the SOE website to assist providers in purchasing vaccines for VFC-ineligible children.[7]

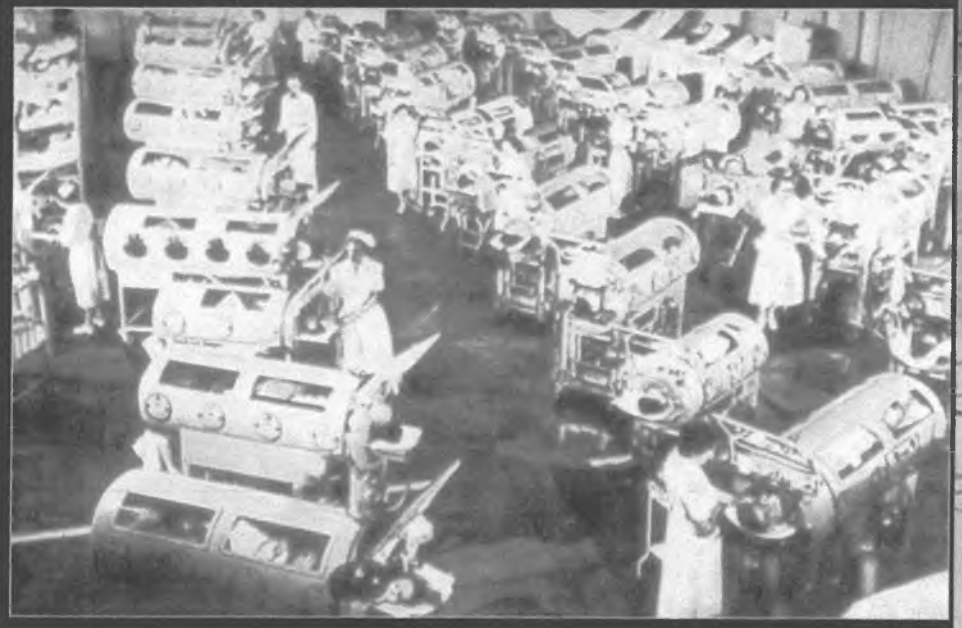
VACCINES

Vaccine Name	Why get vaccinated?	Who should get vaccine and when?
◊**DTaP** Diptheria Tetanus (Lockjaw) and Pertussis (Whooping Cough)	Diphtheria and pertussis are spread from person to person and tetanus enters the body through cuts or wounds. Diphtheria causes a thick coating in the back of the throat and can lead to breathing problems, paralysis, heart failure and even death. Tetanus (lockjaw) causes painful tightening of muscles usually all over the body. Tetanus leads to death in up to 2 out of 10 cases. Pertussis causes coughing spells so intense it is hard for infants to eat, drink and breathe. Can lead to pneumonia, seizures, brain damage, and death. 10 infants died from pertussis in California in 2010 – all were too young to be protected by vaccine.	Children should get 5 does at: 2 months, 4 months, 6 months, 15-18months, 4-6 years. Not for persons 7 years or older.
◊**Td/Tdap** Tetanus, Diphtheria (Td) or Tetanus, Diphtheria, pertussis (Tdap)	Diphtheria and pertussis are spread from person to person and tetanus enters the body through cuts or wounds. Diphtheria causes a thick coating in the back of the throat and can lead to breathing problems, paralysis, heart failure and even death. Tetanus (lockjaw) causes painful tightening of muscles usually all over the body. Tetanus leads to death in up to 2 out of 10 cases. Pertussis causes coughing spells so bad it is hard for infants to eat, drink and breathe. Can lead to pneumonia, seizures, brain damage, and death.	Children age 6 and younger are routinely vaccinated, but persons older than 6 need protection too. Vaccine can be used as a catch-up for people who didn't get all doses of **DTaP** or **TTP** when they were children, as a booster dose every 10 years, and as protection against tetanus infection after a wound.
◊**Hepatitis A**	Serious liver disease caused by hepatitis A virus found in the stool of people with the disease. Causes flu-like symptoms, jaundice, severe stomach pains, and diarrhea. 1 in 5 people have to be hospitalized, 3-6 deaths per 1000 cases. Routine hepatitis A vaccination in Alaskan children has controlled hepatitis A transmission so that cases are very rarely seen.	Children between 12 and 23 months of age and anyone who wants protection. 2 doses are needed for lasting protection at least 6 months apart.
◊**Hepatitis B**	Serious disease that affects the liver. Acute illness can lead to loss of appetite, tiredness, pain in muscles, joints and stomach, diarrhea and vomiting, and jaundice. Chronic infection can be serious and often leads to liver damage, liver cancer, and death. Chronic infection is more common in infants and children than adults and leads to about 3,000-5,000 deaths due to cirrhosis or liver cancer that is caused by the virus. Routine vaccination has nearly eliminated new hepatitis B cases among vaccinated persons.	Children should receive 1st dose at birth and have completed series by 6-18 months of age and anyone who wants protection. Given in a series of 3-4 shots.
◊**Hib** Haemophilus influenza type b	Serious disease caused by bacteria and usually strikes children under 5 years old. The germs spread from person to person. If the germs stay in the child's nose and throat, the child will probably not get sick, but sometimes the germs spread into the lungs or bloodstream. Hib disease can lead to meningitis which is an infection of the brain and spinal cord coverings, which can lead to lasting brain damage and deafness. Hib also causes pneumonia, severe swelling in the throat, infections of blood, joints, bones, and coverings of the heart, and death.	Children should get vaccine at 2 months, 4 months, 6 months and 12-15 months(depending on brand of vaccine 6 month dose may not be needed.) Children over age 5 usually do not need vaccine, but older children or adults with special health conditions should consult their doctors for consideration.

Influenza Flu	Influenza (flu) is a contagious disease and can be spread by coughing, sneezing, or nasal secretions. Symptoms typically last four or five days and include: fever/chills, cough, sore throat, headache, muscle aches, runny or stuffy nose, and fatigue. Young children, people 65 and older, pregnant women, people with certain health conditions or a weakened immune system can get much sicker. Each year thousands of people die from influenza and even more require hospitalization.	2 types of vaccine: inactivated (killed) is given by injection with a needle and live, attenuated (weakened) is sprayed into the nostrils. A high dose inactivated vaccine is available for people 65 years or older. All people 6 months of age and older are recommended to get the flu vaccine.
◊MMR Measles, Mumps & Rubella (German Measles)	Measles virus causes rash, cough, runny nose, eye irritation and fever. It can lead to ear infection, pneumonia, seizures, brain damage, and death. Mumps virus causes fever, headache, and swollen glands and can lead to deafness, meningitis, painful swelling of the testicles or ovaries and, rarely, death. Rubella virus causes rash, mild fever, and arthritis (mostly in women.) If a woman gets rubella while she is pregnant, she could have a miscarriage or her baby could be born with serious birth defects.	It is recommended for children to get 2 doses at 12-15 months of age and 4-6 years old. Children can get 2nd dose at any age as long as it's at least 28 days after 1st dose.
PCV 13 Pneumococcal Conjugate	Infection with Streptococcus pneumonia bacteria can make children very sick. It causes blood infections, pneumonia, and meningitis mostly in young children. Although it is relatively rare (less than 1 case per 100,000), it is fatal in about 1 of 10 cases. It can lead to other health problems including deafness and brain damage. Children younger than age 2 are at highest risk for serious disease, bacteria is spread from person to person through close contact, some infections are hard to treat because some strains of the bacteria have become resistant to the drugs that are used to treat them.	There are more than 90 types of pneumococcal bacteria and PCV13 protects against 13 of the most severe. It is recommended for infants and children under 2 years of age in a series of 4 doses at ages: 2 months, 4 months, 6 months, and 12-15 months. Some children over age 2 and children with certain medical conditions should receive 1 dose, but consult your doctor first for more information.
◊Polio (IVP)	Polio is a disease caused by a virus. It enters the body through the mouth and sometimes it doesn't cause serious illness, but other times it causes paralysis and even death. A 1916 polio epidemic in the US killed 6,000 and paralyzed 27,000 more. There is a world wide effort to eliminate polio, no wild polio has been reported in the US for over 20 years.	Inactive Polio Vaccine is a shot given in the arm or leg depending on age. Children are recommended to get 4 doses at ages: 2 months, 4 months, 6-18 months, and 4-6 years. Adults who have never had the vaccine should consider receiving a recommended 3 doses: 1st at any time, 2nd dose 1-2 months later and 3rd dose 6-12 months after the 2nd dose. Booster doses are available for adults.
***Rotavirus**	A virus that causes diarrhea (sometimes severe), mostly in babies and young children. Often accompanied by vomiting and fever and can lead to dehydration. Since vaccine use commenced in 2006, by 2010 the number of babies and young children needing emergency care or hospitalization for rotavirus has decreased by 85%.	Vaccine is an oral (swallowed) vaccine and not a shot. There are two brands and both are effective, your baby should get 2-3 doses depending on the brand. Doses are recommended at age 2 months, 4 months, and 6 months (if needed).

◊**Varicella** Chickenpox	Common childhood disease, usually mild, but can be serious in young infants and adults. It causes a rash, itching, fever, and tiredness. Can lead to severe skin infections, scars, pneumonia, brain damage, or death. The virus is spread from person to person through the air or by contact with fluid from chickenpox blisters. A person who has had chickenpox can get a painful rash called shingles years later. Before the vaccine about 11,000 people were hospitalized each year and about 100 people died each year a result of chickenpox in the US. Vaccine helps to prevent and decrease the severity in the chance that they do get chickenpox.	Children who have never had chickenpox should get 2 doses of the vaccine at ages 12-15 months and 4-6 years of age. People over 13 years of age and older who have never had the disease should get 2 doses of the vaccine at least 28 days apart.
***HPV** Human Papillomavirus	The most commonly sexually transmitted virus in the US. More than ½ of sexually active men and women are infected with HPV at some time in their lives. HPV infections don't cause any symptoms on their own, but can cause cervical cancer in women (2nd leading cause of cancer deaths among women in the world). In US about 10,000 women get cervical cancer every year and about 4,000 are expected to die from it. Vaccine can also prevent vaginal and vulvar cancer in females and genital warts and anal cancer in both males and females.	Vaccine recommended for girls ages 11-12 and also women 13-26 and men 9-26 years of age. Best to be vaccinated before first sexual contact. Vaccine is given in 3 doses, 1 now, 1-2 months after 1st dose, and 6 months after 1st dose.
***MCV4** Meningococcal, Meningitis	Meningococcal disease is a rare but serious bacterial illness and the leading cause of bacterial meningitis (infection of the covering of the brain and spinal cord) in children 2-18 year old in US. It also causes blood infections. Those most at risk include infants less than one year of age and people 16-21 years old, children with certain medical conditions and college freshmen living in dorms. Meningococcal infections can be treated with drugs such as penicillin, still many people who get the disease die from it and many others are affected for life.	There are 2 types of the vaccine, MCV4 is preferred for people 55 years of age and younger and MPSV4 is for people 55 and older. Both vaccines can prevent 4 types of meningococcal disease including 2 of the 3 types most common in the US and a type that causes epidemics in Africa. The other types of the disease the vaccine cannot protect against. 2 doses are recommended for adolescents 11-18 with 1st dose at 11 or 12 years old and a booster at age 16. If the 1st dose is given between ages 13-15 then booster should be given at age 18 and if 1st dose isn't given until 16th birthday a booster is not needed.

* will be NOT be covered in SB 144



◊ Vaccines that are required by Alaska Regulations for school/child care/head start/preschool (Hib under age 5 only,)

-All persons should consult with their doctors before receiving vaccinations to learn about risks and talk about their specific health needs.

-Information in this table was found on the Centers for Disease Control and Prevention Website. For more detailed information go to: http://www.cdc.gov/

What have vaccines done for you lately?

Impact of Vaccines

Comparison of disease: before vaccine and 2006

Disease	Pre-vaccine Era*	2006**	% decrease
Diphtheria	175,885	0	100
Measles	503,282	55	99.9
Mumps	152,209	6,584	95.7
Pertussis	147,271	15,632	89.4
Polio (paralytic)	16,316	0	100
Rubella	47,745	11	99.9
Congenital Rubella Syn.	823	1	99.9
Tetanus	1,314	41	96.9
H. influenzae type b and unknown (<5 yrs)	20,000+	208	99.0
Total	1,064,854	22,532	97.9

* Baseline 20th century annual morbidity

\+ Estimated because no national reporting existed in the pre-vaccine era

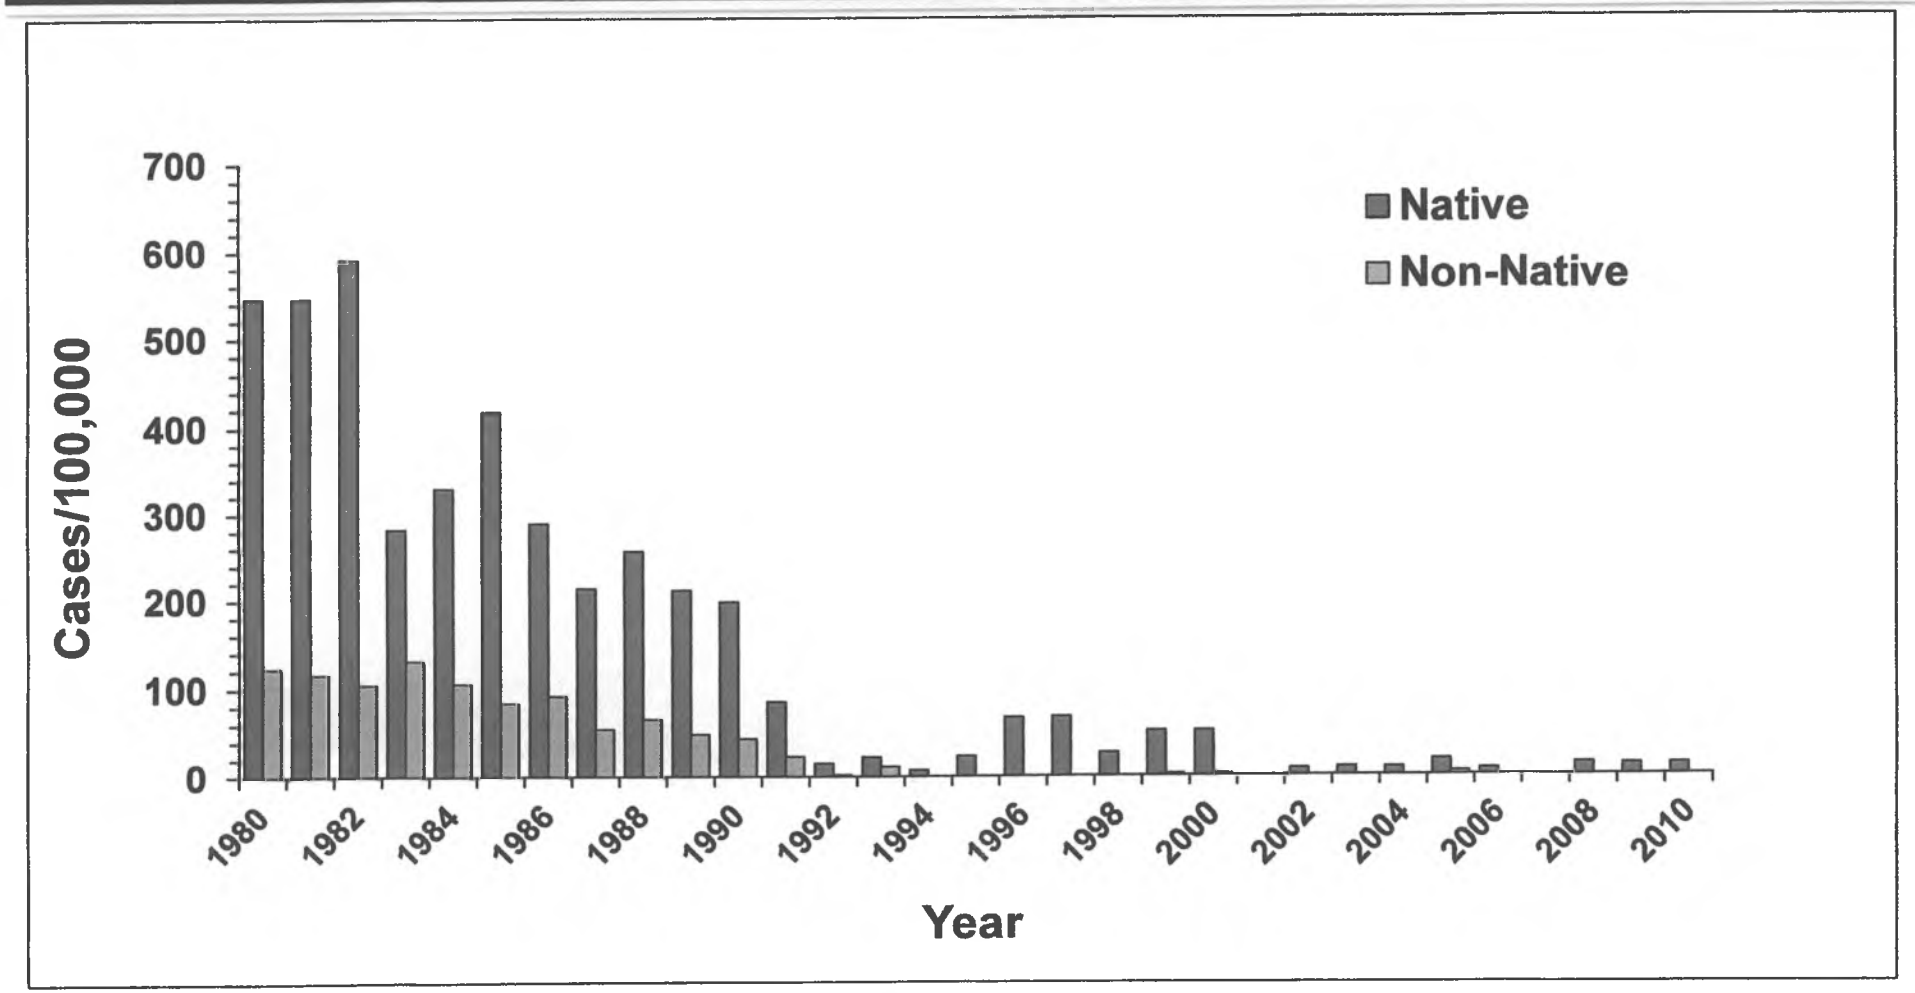
** Source: *MMWR* 2007;56(33):851-64

Herd Immunity

If enough children are vaccinated then a disease cannot spread in their community. This is known as “community” or “herd immunity”

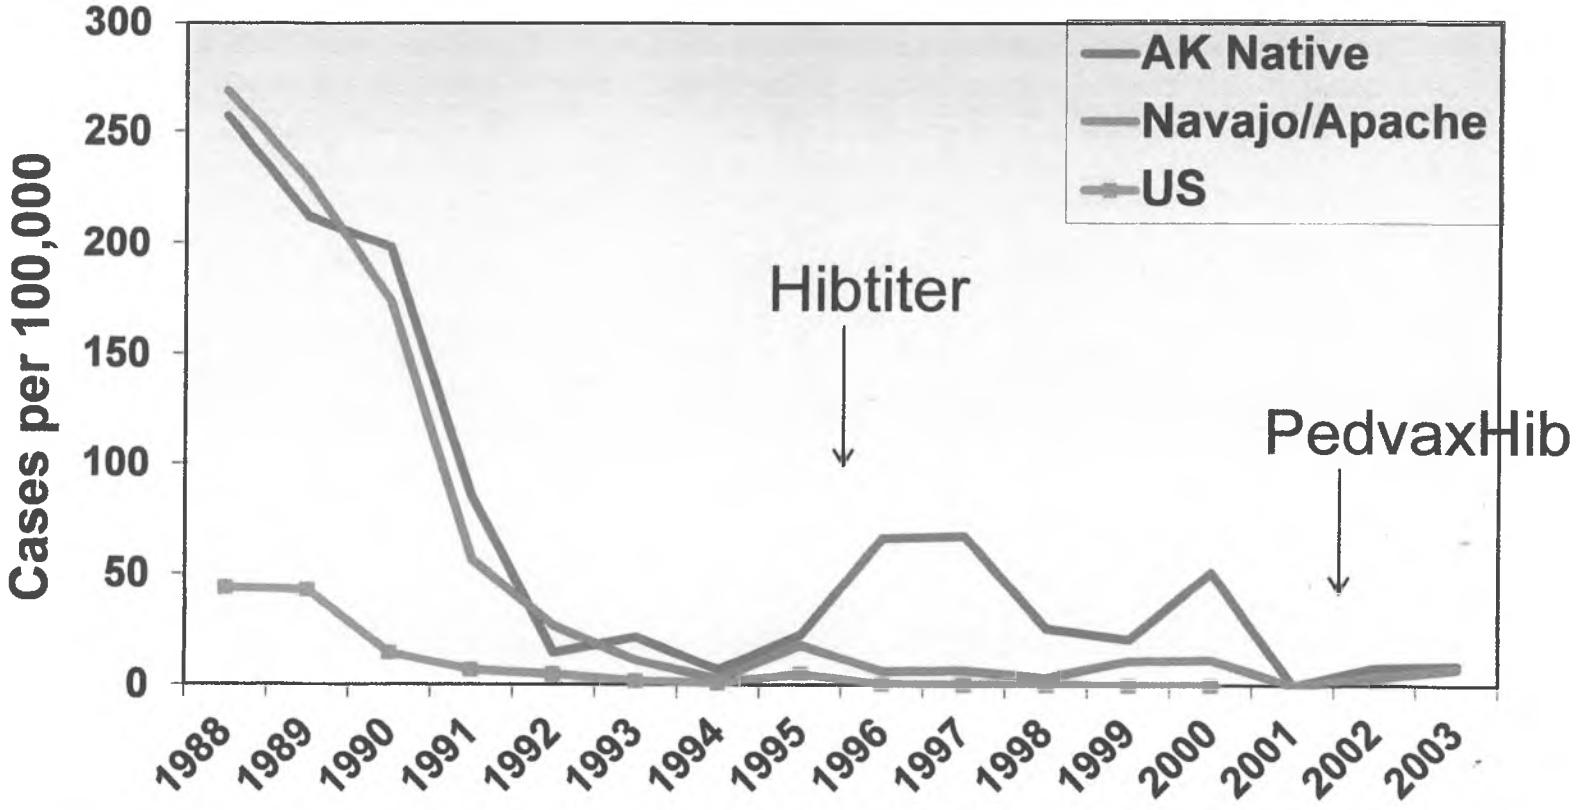
Polio

- In 1952 there were 21,000 cases of paralytic polio in the US
- The last case of polio in the US occurred in 1979
- Polio continues in India, Nigeria, Afghanistan, and Pakistan
- Polio is just one plane flight away



Diphtheria

- In 1925 a diphtheria epidemic threatened Nome. The nearest serum was in Anchorage.
- A relay of dog teams rushed the vaccine from Nenana to Nome.
- Gunnar Kaasen and his dog Balto drove the final legs into Nome
- The serum arrived in time to prevent the epidemic and save hundreds of lives.



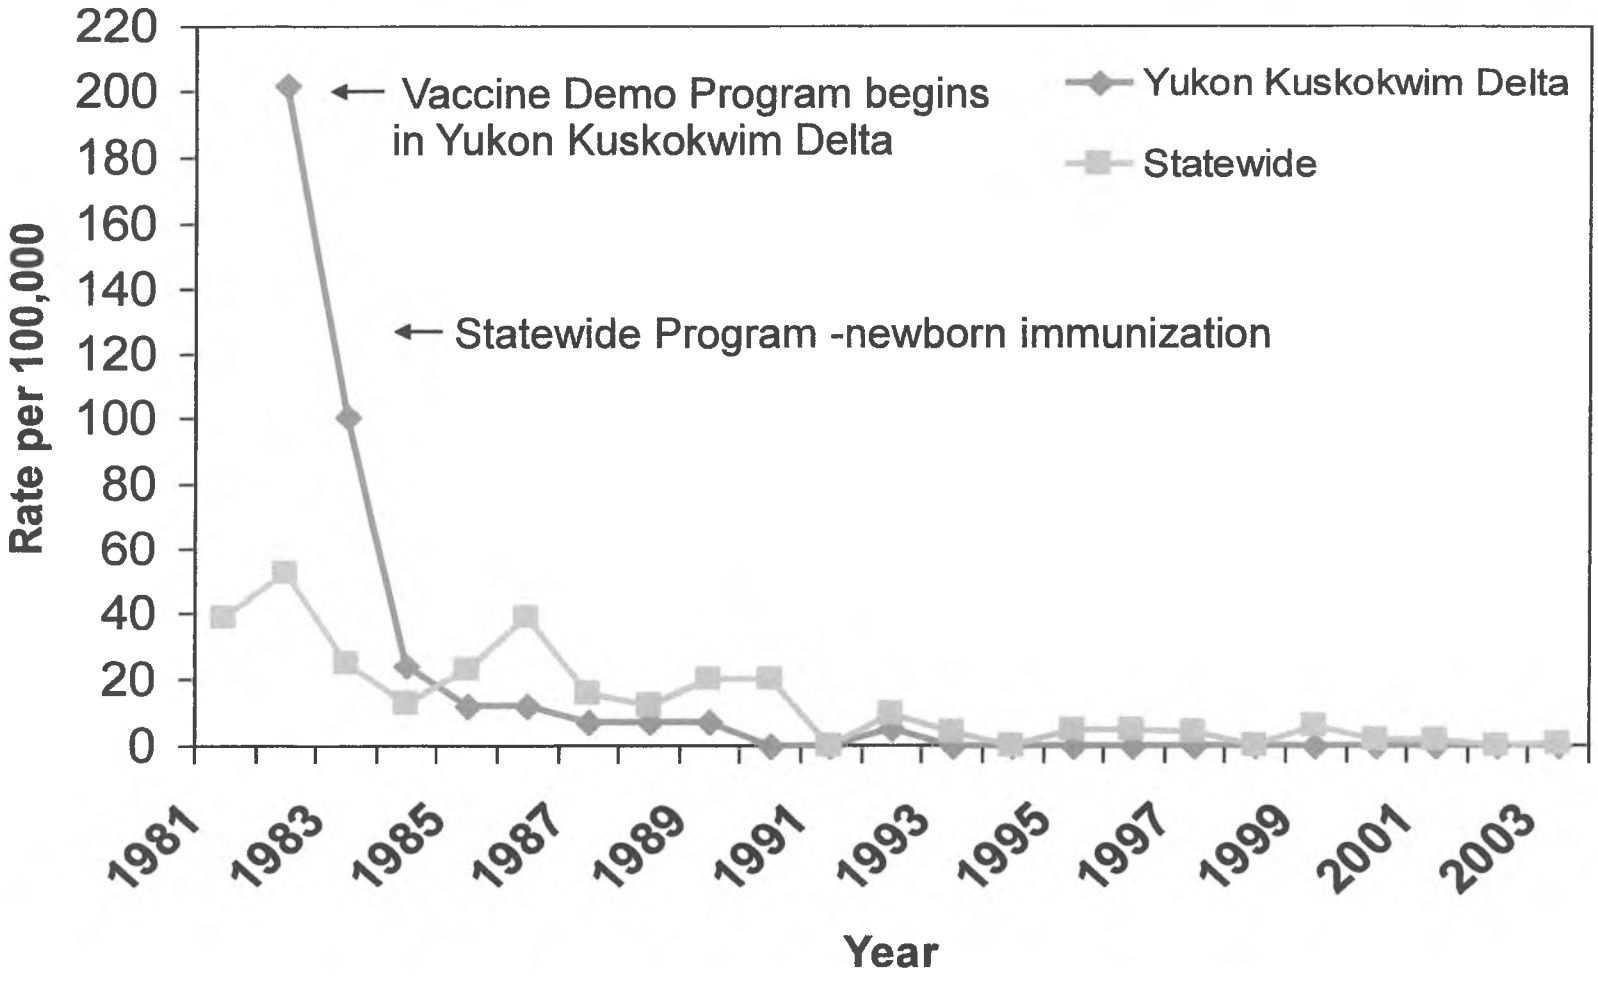
Invasive Hib Disease, Children Aged <5 yrs, Alaska, 1980-2010

Singleton, Pediatrics 2006 & CDC unpublished data

Decline in Hib Disease:
US, Navajo/ Apache, AK Native,1988-2003

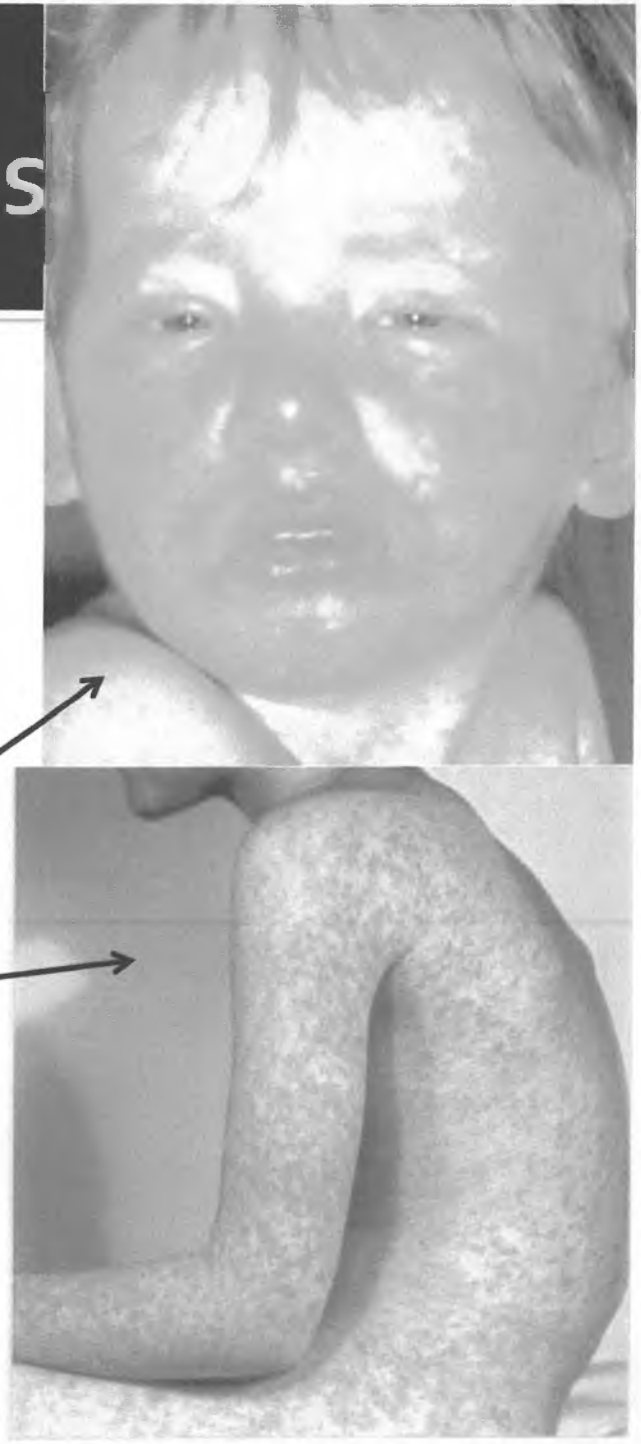
Before Hib vaccination started in 1990, Alaska Native children were 6 times More likely than other US children to get Hib meningitis. Now Hib meningitis Is rare because of routine childhood vaccination.

Millar EV, et al. Clin Infect Dis 2005; 40:823-30, CDC, AIP-CDC



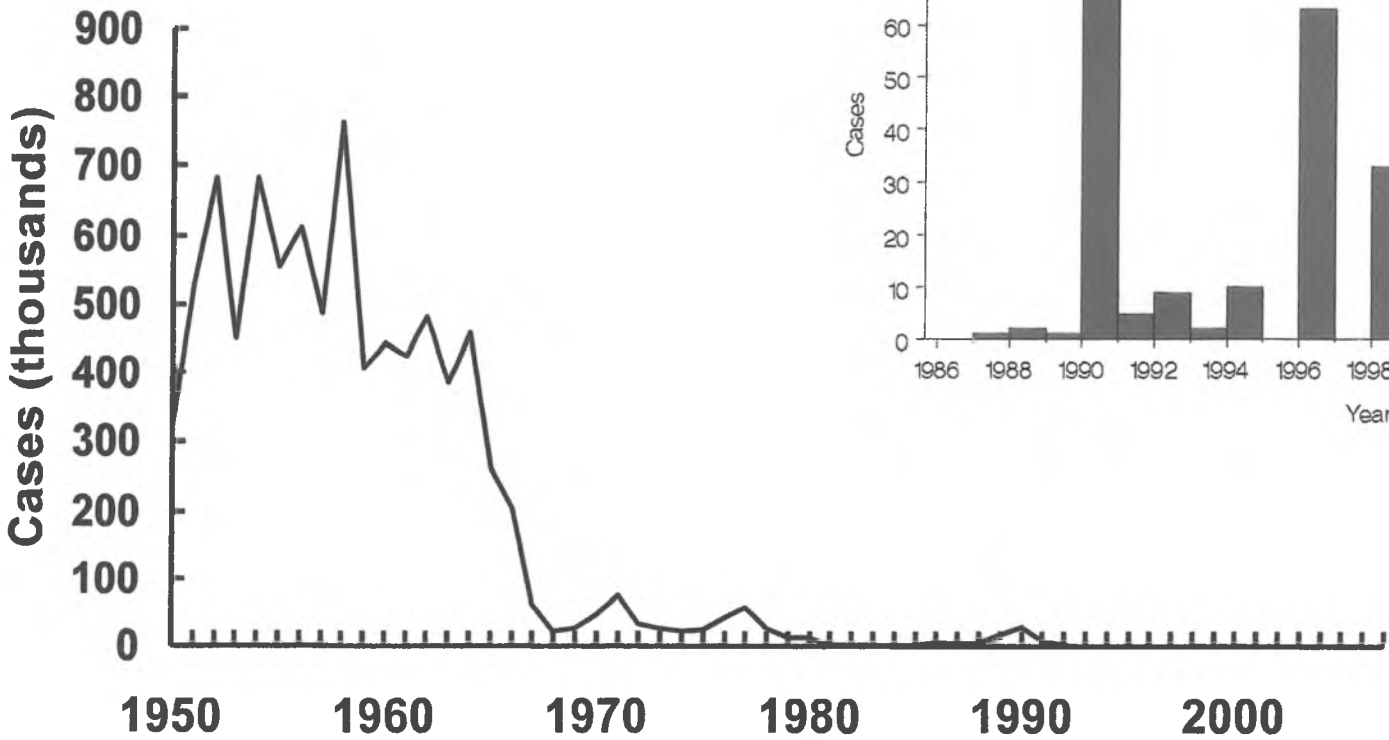
Hepatitis B in Alaska Native persons

- Before Vaccine :
  - 6% had been infected
  - 1500 hepatitis B carriers
  - Incidence 50 times the general U.S. population
- Vaccination strategies
  - universal infant & catch-up vaccination starting in 1983
- Post-Vaccine Rate
  - declined from 250 to <0.4/ 100,000
  - lowest hepatitis B incidence of any U.S. ethnicity.

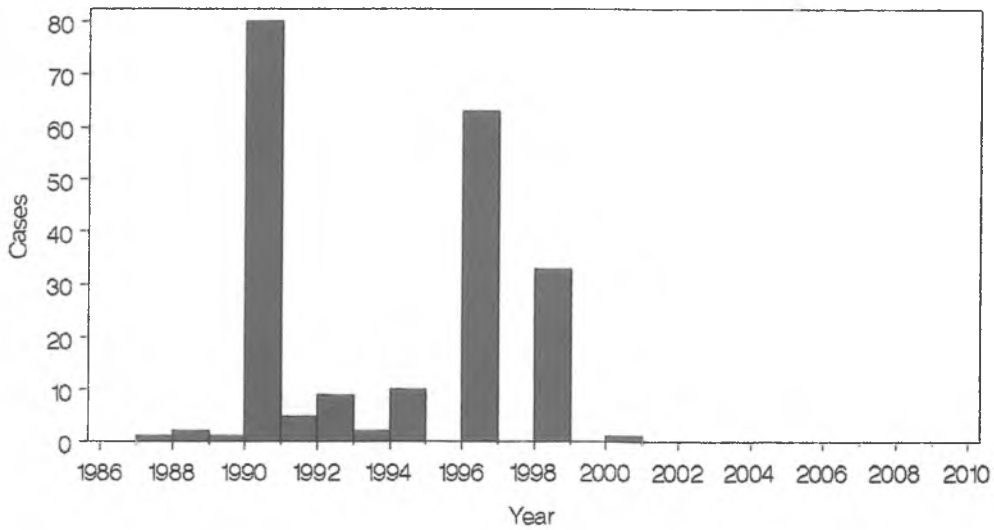


Harpaz. Elimination of new Hepatitis B infections. J Infect Dis 2000;181;413-8

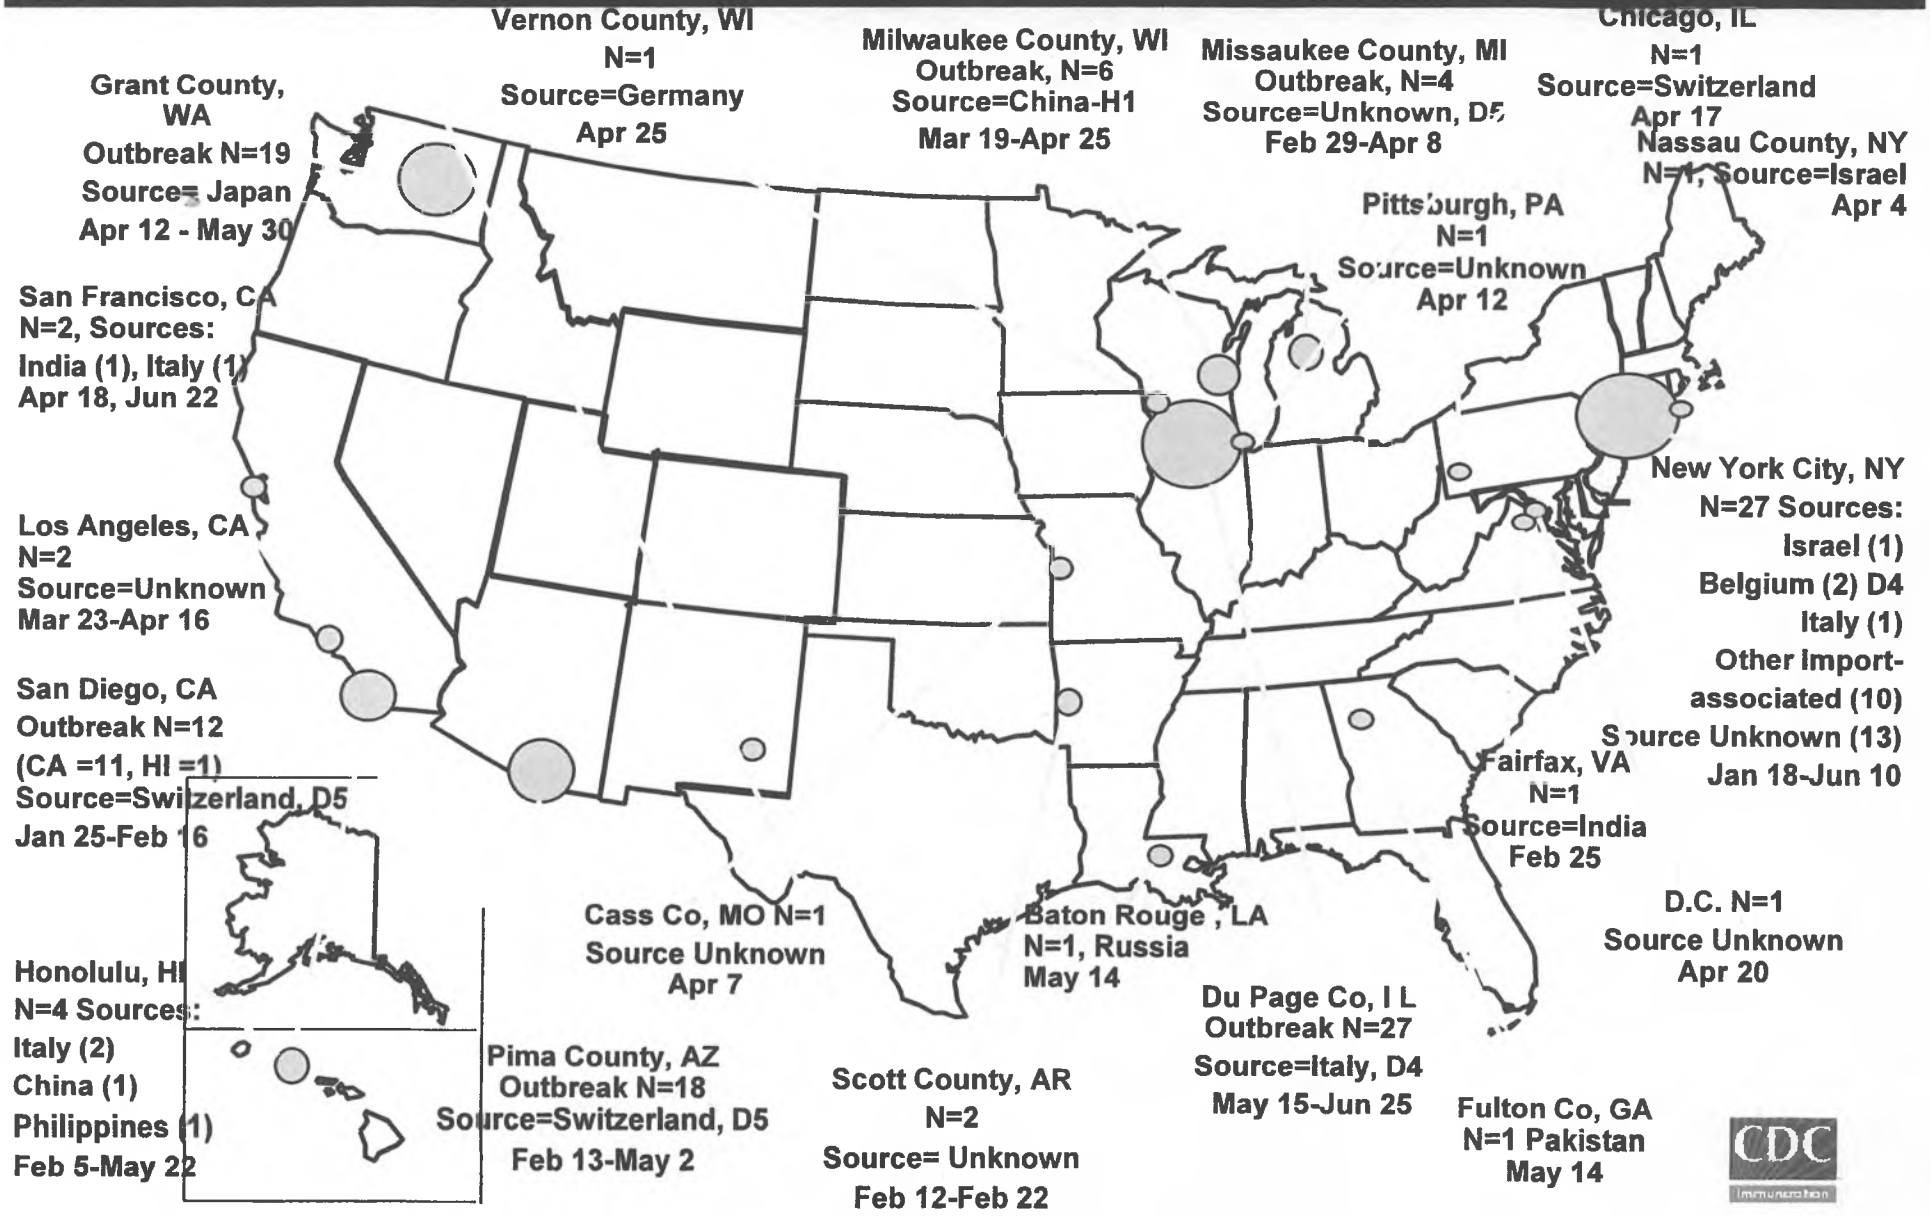
Incidence Symptomatic Hepatitis B in AK Native Persons 1981- 2003



Measles Clinical Features

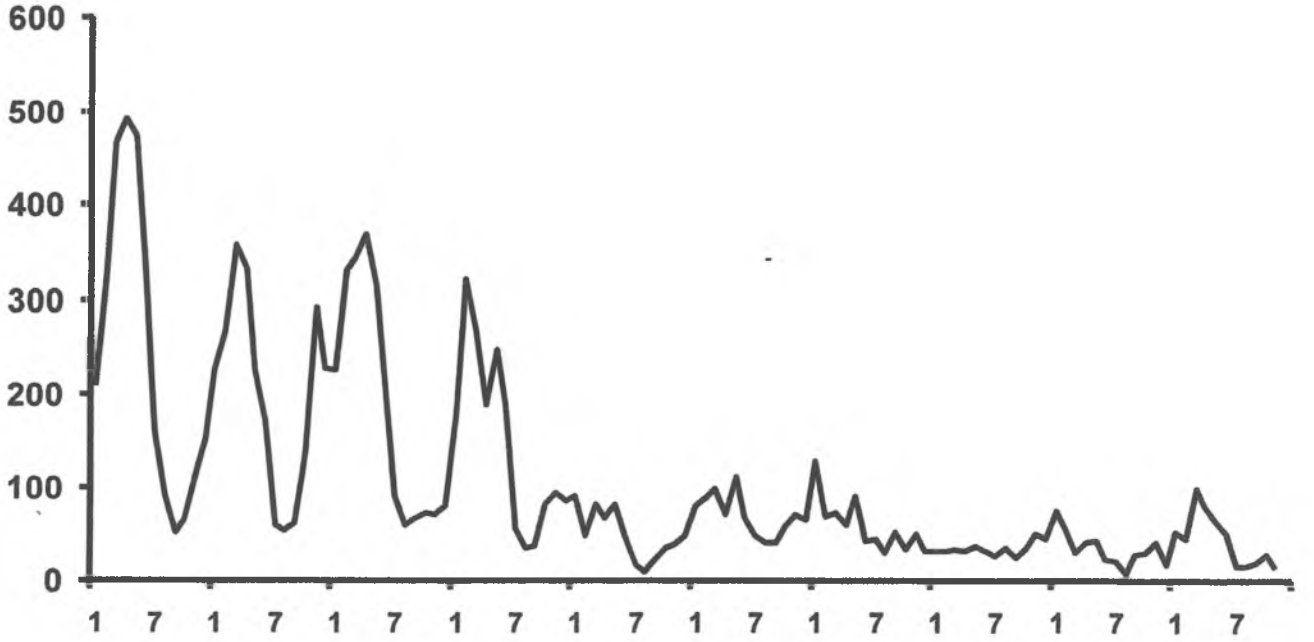


- Highly contagious viral illness
- Incubation period 10-12 days
- Prodrome
  - Stepwise increase in fever to 103°F+
  - Cough, coryza, conjunctivitis
  - Rash – maculopapular, 2-4 days after prodrome beginning face and head



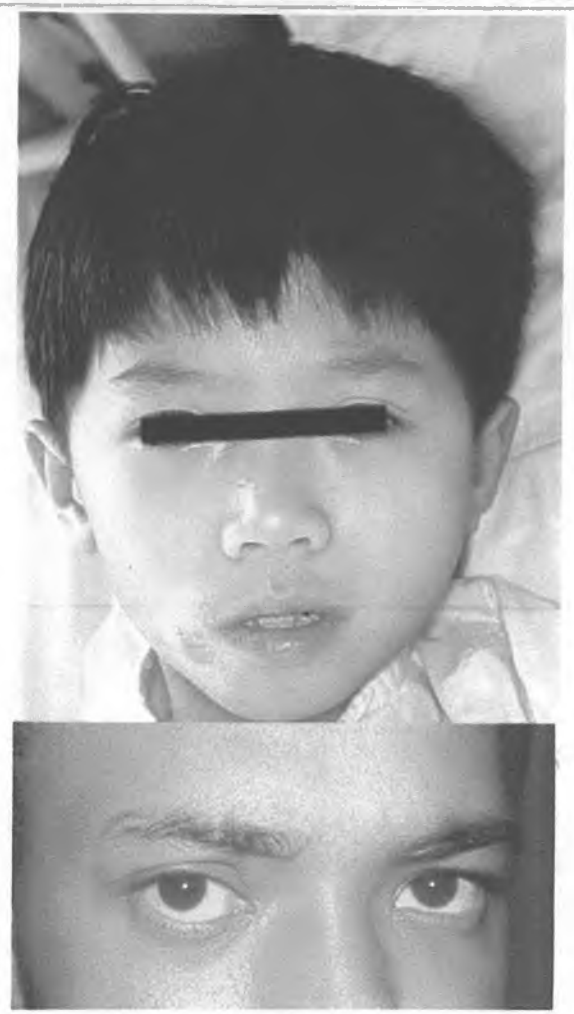
Measles - United States, 1950-2007

Measles in Alaska 1986-2010



Measles Cases Reported to CDC/NCIRD
January 1 to July 11, 2008 (N= 132)

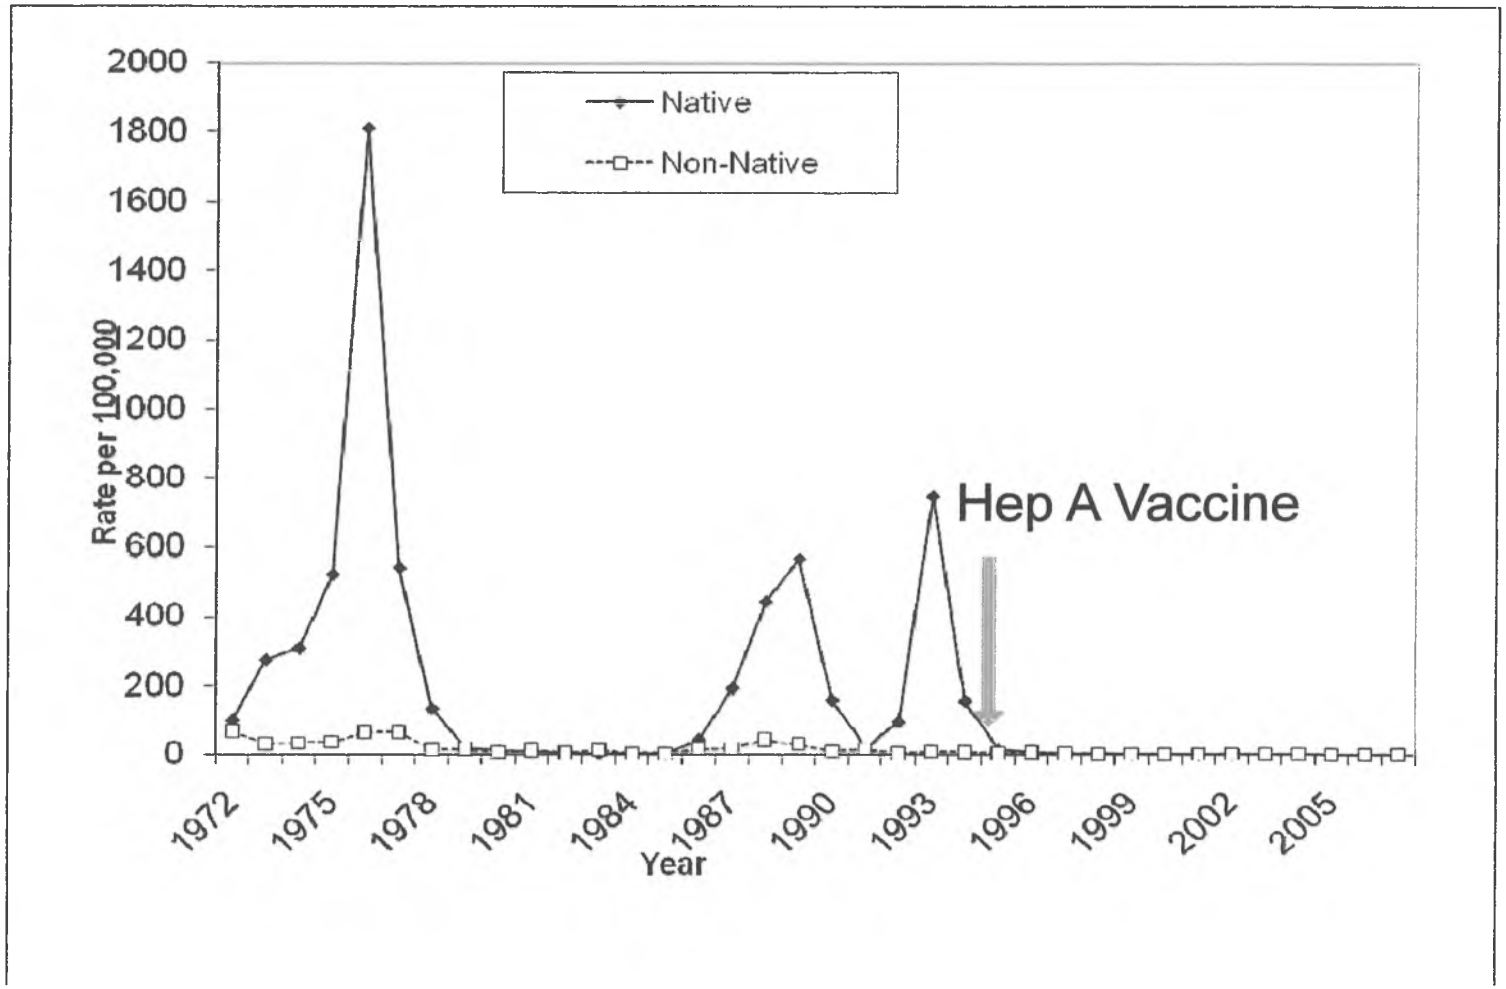
Varicella Cases by Month - Antelope Valley, CA, 1995–2004



- Varicella cases decrease in Antelope Valley, CA, 1995-2004

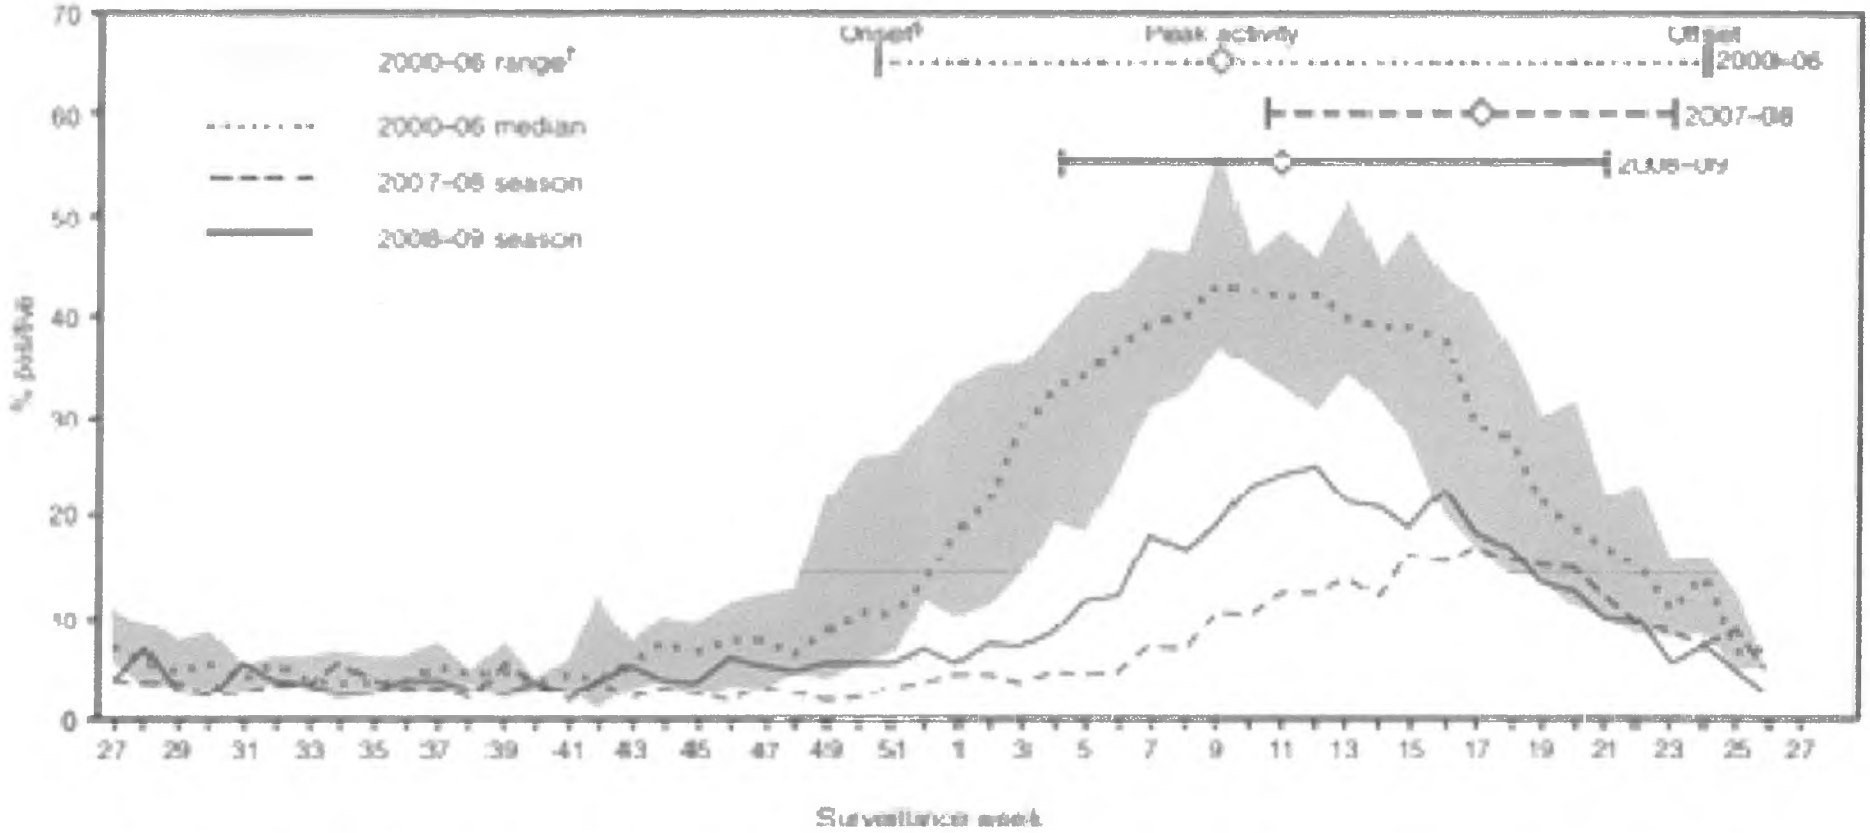
- Varicella hospitalizations decreased 80% since vaccine
- Varicella deaths have plummeted 88% since vaccine

Hepatitis A in Alaska



- Pre-Vaccine Incidence –
  - Large outbreaks
  - Lifetime risk in villages ~90%
  - 1992-3 : 4 deaths from fulminant Hep A
- Hepatitis A Vaccine (1996)
  - Universal vaccine for children
  - School requirement
- Rates have declined >99%
  - Rate now lower than US rate
  - No epidemics! – no transmission in villages

CDC MMWR 1992;41:6



Bialek. Hepatitis A in AI/AN. Am J Pub Hlth 2004;94 996-1001

Incidence of Hepatitis A infections in Alaskans,
Native and Non-Native, 1972-2007

Singleton, McMahon, Castrodale et al. Impact of vaccine program in Alaska VACCINE 2010;28:6298-304

National Rotavirus Surveillance

Percentage of rotavirus positive results, by surveillance week National Respiratory and Enteric Virus Surveillance System (NREVSS), United States, July 2000--June 2009*.

Varicella (Chickenpox): Not always a "Harmless" Childhood Disease

- Before vaccine there were 100 deaths/yr from complications of chicken pox
- Varicella deaths decreased 88% since routine vaccination
- Adolescents and adults get much sicker with natural chicken pox.
- Some breakthrough chicken pox infections after vaccine occur - usually very mild.
- Varicella vaccine is recommended at 1 year of age; second dose at school entry.

Rotavirus Disease and Rotavirus vaccine

- **Rotavirus**
  - Most common cause of diarrhea, peak at 6-24 months
  - 1/3 of diarrhea hospitalizations
  - 55,000 hospitalizations in the US
  - 550,000 clinic and ER visits in the US
- **Rotavirus vaccine - provided by the State**
  - Studies show Efficacy: 98% reduction of severe rotavirus
- **Rotavirus disease post-vaccine**
  - Significant decrease in diarrheal hospitalizations in children
  - Significant drop in all Rotavirus hospitalizations in US since Rotavirus vaccine became available ~ 2007

Senator Cathy Giessel

Senate District P

Senate Bill 146
Sponsor Statement

"An Act establishing a snow classic as an authorized form of charitable gaming."

Senate Bill 146 would allow Four Valleys Community School, Inc. to conduct a "snow classic" to raise funds for their organization. The snow classic would be operated much like other contests already allowed under statute: contestants would buy a ticket and guess the depth of snow accumulated by a specific date and time on Mount Alyeska. The winner would receive half of the net proceeds from the fundraiser.

Four Valleys Community School, Inc. (FVCS) is a nonprofit organization that annually offers more than 250 classes through the year and sponsors community events. While most of the participants are Turnagain Arm area residents, people from neighboring communities such as Anchorage, Eagle River, and Homer have participated in FVCS events. FVCS also supports athletes and local high school graduates with scholarships.

When community school funding from the Anchorage School District was eliminated, local residents supported FVCS becoming a 501c(3) nonprofit to ensure that lifelong learning and recreational opportunities remain available to the community. FVCS recruited volunteers to administer and teach, secured corporate and private donations, and fostered community involvement. Operating the snow classic will help achieve the short-term goal of self-sufficiency while keeping classes affordable and locally available. It also further the long-term goal of creating a stable fundraising opportunity to enhance the entire community.

FISCAL NOTE #1

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 146

Analysis

Bill Language:
The bill will add one more gaming activity to the authorized statutory lists, thus allowing one organization, the Four Valleys Community School in Girdwood, to conduct a snow classic. It will not affect any other organization because it is restricted to this one group. It will not affect the private sector because the private sector, outside of not-for-profit organizations, does not qualify for the permit required to conduct a gaming activity.

Revenues:
A snow classic will generate minimal revenue—under $1,000.

Expenditures:
Department of Revenue can administer the provisions of this bill utilizing existing resources.

Senate Bill 146
Snow Classic
Sectional Analysis

Section 1: Adds "snow classics" to the existing list of games of chance and skill that can be permitted by the department of revenue.

Section 2: Adds "snow classics" to the existing definition of "activity" for the purposes of AS 05.15.115(c), which limits how permittees can contract with operators.

Section 3: Adds "snow classics" to the existing list of activities that can be licensed under AS Chapter 05.15. Games of Chance and Contests of Skill.

Section 4: Defines and describes the "snow classic."

Prepared by Senator Cathy Giessel's Office 1/24/12

Alyeska Snow Classic

The Alyeska Snow Classic is a new proposed gaming fund raiser for Four Valleys Community School, Inc., a 501(c)3 nonprofit organization based in Girdwood, Alaska. Winner(s) are determined by the exact guess of the total snow accumulation on the ground at the established Measurement Station on Mount Alyeska in Girdwood, Alaska. The total snow measurement from the ground up is taken by a neutral party on the publicized date and time. The measurement is to the nearest ¼ to ½ an inch. The winner(s) are to be notified after the measurement is taken. Their names are to be announced at a designated Alyeska Resort event on the annually publicized date and time.

Tickets: All tickets are numbered and accounted for. Each ticket has the following information printed on it:

1. Name of the event: Alyeska Snow Classic
2. Date and time of measurement: To be established annually with Alyeska Resort
3. Beneficiary: Four Valleys Community School, Inc.

Participation: Tickets are sold by participating Girdwood businesses and the Four Valleys Community School, Inc. (FVCS) staff for $5 per ticket. Each ticket allows the participant one guess at the total snow accumulation from the ground at a specific day and time. Completed tickets are deposited into a sealed container at the participating businesses and FVCS office. All ticket sales close one month prior to measurement date at the end of the business day. Once the ticket sales are closed, ticket sale monies, unsold tickets and sealed containers with completed tickets are picked up from each business by FVCS monitors. Prior to the measurement, all tickets distributed for sale are accounted for by the FVCS monitors. The FVCS monitors are trained adults responsible for recruiting participating businesses, working with the business' employees on record keeping and procedure, delivering needed materials, re-supplying materials and picking up the guesses with accounting, ticket sale monies and secure container with guesses. All monitors and the measurer will be neutral persons who are unable to participate and win.

Prize: One prize is awarded equally to the winner(s) who guess the exact snow accumulation from the ground. The prize money is half the net amount. The net amount is the difference between the ticket sales and the administrative costs to run the Alyeska Snow Classic. The administrative costs include but are not limited to all printed materials, advertising, all supplies to include sealed ticket containers, accounting files for businesses, participating business earnings and staff and monitor payroll associated with this event.

Winners Announcement: Winner(s) are to be notified as quickly as possible. This notification process begins with the announcement of the snow accumulation measurement and winners on the specific publicized date at the designated Alyeska Resort event.

January 12, 2012

Senator Cathy Giessel
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, AK 99801-1182

Dear Senator Giessel:

Thank you for introducing and supporting the SB146 establishing the Alyeska Snow Classic operated and run by Four Valleys Community School, Inc. (FVCS). Our organization supports this legislation. We request your continued support to enact this charitable gaming event into law.

For 30 years FVCS has been an essential year-round educational, recreational and cultural center for Girdwood and the Turnagain Arm Communities. We offer more than 200 classes, programs and events per year. FVCS focuses on lifelong learning, community involvement and efficient use of resources. We actively engage in collaborations and partnerships with local businesses, nonprofits and private donors to provide the full spectrum of services the Four Valleys communities seek.

An Alyeska Snow Classic will strengthen Four Valleys Community School and enable us to continue to meet the needs of the residents of Bird, Indian, Girdwood and Portage. A successfully operated Alyeska Snow Classic could fund our budget without recourse to property tax dollars when combined with our fundraising efforts.

In 1981 FVCS was created by community volunteers and is still governed by a volunteer Board of Directors. Due to the strength of its volunteer base, it is a one of the very few remaining Community Schools operating in the state. Over 650 volunteers contribute their talents and time to support a wide range of activities. Whether it is individual or family growth, FVCS provides many opportunities to learn, serve and recreate.

FVCS is an integral and vital part of community life in Girdwood and Turnagain Arm because it is the only organization that brings together a diverse spectrum of people for educational, recreational and cultural opportunities in an environment that is healthy and safe year round. Our organization is in full support of the legislation establishing the Alyeska Snow Classic.

Sincerely,

Rebecca Reichlin

Rebecca Reichlin, Chair

What is Four Valleys Community School?

Four Valleys Community School (FVCS) is a local, non-profit 501c3 tax-exempt organization, whose core purpose is *community enrichment*, achieved by providing educational, recreational, and cultural activities for all ages. It serves the community members of Girdwood, Bird, Indian and Portage.

The non-profit was formed when state and school district funding was being cut. FVCS is based on the historical community education model and philosophy - which advocates processes and programs that utilize the total community environment and local resources. It promotes life long learning and emphasizes that educational, social, cultural and recreational opportunities be afforded to all residents of all ages. The community school serves as a catalytic agent by providing organization and leadership to mobilize local resources for individual and community improvement and enhancement. Based on the widely accepted components of community education, FVCS has adopted specific Goals and Objectives.

In other words, because Girdwood does not have a YMCA, a community center, a Health Club, Sylvan Learning Center and all the various other amenities afforded to those located geographically closer to Anchorage, Four Valleys Community School has largely filled that gap over the years. Four Valleys Community School has been successful in partnering with various local entities to provide space, expertise, and diverse activities for the community. Currently, and through August 2012, a Memorandum of Agreement with the Anchorage School District provides for the use of the Girdwood school building at youth nonprofit rates. We have had a positive relationship with Alyeska Resort as well, and management has been supportive.

Our business and agency partners are instrumental. Our instructor base is largely volunteer oriented, which is notably astounding each and every day. People are willing to give their time and skills in order to make their entire community a better place. We cannot do what we do without them. Four Valleys Community School is truly a community based organization, committed to providing meaningful educational, cultural, and recreational opportunities for local community members.

Four Valleys Community School, Inc.
P.O. Box 790
Girdwood, Alaska 99587
www.fourvalleys.org

Four Valleys Community School, Inc.
Program Description and Beneficiaries

Four Valleys Community School, Inc. (FVCS) offers local residents of four Turnagain Arm communities year round learning opportunities and community enhancing activities. FVCS practices the three basic components of community education, life long learning, community involvement, and efficient use of resources. The FVCS office and main facility at Girdwood School is open beyond the regular school day to provide academic, recreation, health, social service and work-preparation activities for people of all ages.

The majority of our organization's time is allocated to developing, promoting and managing community school classes. We recruit instructors, schedule the facilities, advertise programs, register students and monitor all the classes. A wide spectrum of classes is offered for all ages. Typically, 250 classes are offered yearly in three programs. Scholarships are available for anyone who cannot afford the registration fees. Please see the Fall/Winter 2011 Program attachment.

FVCS works with agencies such as the US Forest Service and the Municipality of Anchorage Parks and Recreation Department, the Girdwood Board of Supervisors and other local non-profits to provide for the needs of our communities. Interagency cooperation encourages efficient use of local resources. We help support a community health fair each year and bring a veterinarian from Anchorage to offer residents local access to health care for their pets. FVCS also organizes other community events including music concerts, a "Family Dance" event in early spring, a community wide volunteer appreciation barbeque in the spring and an annual "All Sports Swap" in the fall. Some of these gatherings double as fundraisers as well as community service events. FVCS enriches the community by financial support of activities such small theatrical productions (on the school stage), school technology upgrades, recycling efforts within the school

and a year round recreational program to get local kids engaged in regular exercise to develop a healthy lifestyle.

FVCS encourages volunteerism, promotes civic responsibility and provides leadership and service opportunities to groups and individuals. For example, we collaborate with other organizations like the Turnagain Arm Lions Club, the Girdwood Rotary Club and the Girdwood Volunteer Fire Department to provide items to needy families during the holiday season. Gifts are donated by local residents by taking an ornament off an "Angel Tree" located in the community school office. The ornament is then replaced with an age appropriate gift for a needy child. FVCS supports "The Goldstitchers", a local quilting group who creates and donates a unique quilt annually to benefit one of the local non-profit organizations.

FVCS recognizes outstanding community service by awarding two individuals with a "Community Service Award" at our annual volunteer barbeque. Together with the Lions Club, Four Valleys awards two post-secondary scholarships of $750 each to graduating local seniors who have been actively involved in our community and are attending college full time. Six scholar athlete awards are made in the fall to deserving youth who qualify, complete the application and successfully interview with a community based committee.

Our direct program beneficiaries are people of all ages from the communities of Bird Creek, Indian, Girdwood and Portage. Additional participants travel from Anchorage, Eagle River, Homer and other localities to attend some of our events and classes. Annually, FVCS serves over 6,800 participants and attracts more than 700 volunteers.

Dear Committee Members of the House and Senate;

I am writing in support of Four Valleys Community Schools in their efforts to create the Alyeska Snow Classic and I urge you to support the needed legislation to create and approve an Act establishing the Snow Classic as an authorized form of charitable gaming.

I am a long time member of the Girdwood Community. FVCS has been operating for over 30 years and I am proud to say I have been involved with them throughout this entire time in one way or another. Over the years I have worked as Coordinator, held a volunteer position on their board, and have volunteered as instructor, teaching many varied classes for the benefit of community members. I tell you this to show that I am in a unique position having been involved with the organization in every conceivable way and continue to support this non profit organization. When I say they have been instrumental in changing the face of our community through educational, cultural & recreational programming it is not an exaggeration. At this time, as a Municipality of Anchorage employee in Girdwood, I continue to work closely with the community school as they continue to provide much of the recreational programming that is typically sponsored by the municipality.

Over the years, the community school has evolved from a municipal program to a non profit organization and continues to provide vital services to the Girdwood community. The change from a municipally sponsored program to a non profit has been difficult, as funding is always an issue. The community has supported the organization with small recreational grants, however this funding is not assured. The creation of the Snow Classic would help insure that the program of much needed funding without requesting local tax dollars. If successful, this game of chance has the potential to provide FVCS with a steady income stream and the ability to help other local non profits as well.

While I know that there are often questions about the suitability of games of chance, I feel strongly that the Snow Classic would not be a problem. A event such as these occurs only once a year and participation is strictly optional. It would provide a annual revenue stream for a hard working, funding strapped non profit that has a proven track record of giving back to and improving their community since 1981.

I urge you to support legislation creating the Alyeska Snow Classic administered by Four Valleys Community Schools, Inc.

Sincerely,

Jonnie Lazarus

Subject: Alyeska Snow Classic

To Whom It May Concern:

At a meeting of the board of directors of Girdwood 2020, upon motion duly made and seconded, the board unanimously approved holding an "Alyeska Snow Classic" to be operated and administered by Four Valleys Community School, Inc. with proceeds supporting Four Valleys Community School programs.

Accordingly, we encourage legislative support for SB 146 and HB 245.

Sincerely,

Diana Stone Livingston

Dear Committee Members of the House and Senate,

This is a letter of support for the creation of the Alyeska Snow Classic administered by Four Valleys Community Schools (FVCS).

I believe that the inception of an Alyeska Snow Classic administered by FVCS would aid the organization in supporting programs offered to residents of Indian, Bird, Girdwood, and Portage, all small communities along the Turnagain Arm.

- FVCS has been operating since 1981
- FVCS is one of the last remaining Community Schools operating in the state of Alaska
- FVCS provides educational, recreational and cultural activities and operates similar to Parks & Recreation or a YMCA.

By operating the Alyeska Snow Classic, FVCS can meet the goal of funding its programs without the need of municipal tax dollars. It is also our hope that the Alyeska Snow Classic will one day allow FVCS to assist other non-profits in the Four Valleys.

I urge you to vote in favor of the legislation creating an Alyeska Snow Classic administered by Four Valleys Community Schools, Inc.

Sincerely,

Di Hiibner

Juneau, AK 99801-1182

Dear Committee Members of the House and Senate:

This is a letter of support for the creation of the Alyeska Snow Classic administered by Four Valleys Community Schools (FVCS). Little Bears Playhouse, Inc., the non-profit childcare center serving the same communities as FVCS, supports this legislation. We request your continued support to help enact this charitable gaming event into law.

The services of FVCS are essential for Girdwood and the other communities of Turnagain Arm. An Alyeska Snow Classic will strengthen FVCS and enable them to continue to meet the needs of the residents of Bird Creek, Indian, Girdwood, and Portage. A successfully operated Alyeska Snow Classic could fund the organization's budget, combined with other fundraising efforts.

Similar to Little Bears Playhouse, Inc., FVCS was created by community volunteers and is still governed by a volunteer Board of Directors. Several hundred FVCS volunteers contribute their talents and time to support a wide range of activities. FVCS provides many opportunities for people of all ages in the Turnagain Arm area. Little Bears Playhouse, Inc. would like to see that continue for many more years to come!

FVCS is a very important part of community life in Bird Creek, Indian, Girdwood, and Portage. Little Bears Playhouse, Inc. is in full support of the legislation establishing the Alyeska Snow Classic.

We urge you to vote in favor of this legislation! Thank you.

Sincerely,

Joan Lower

Dear Committee Members of the House and Senate,

I am writing to encourage you to support the creation of the Alyeska Snow Classic administered by Four Valleys Community Schools (FVCS).

For the past six years I have served the religious needs of the Catholic community of Girdwood and beyond as Pastor of the Chapel of Our Lady of the Snows, Girdwood, a mission of Saint Elizabeth Ann Seton Parish in Anchorage. I have come to deeply appreciate the volunteer spirit of the community of Girdwood, with parents and non-parents alike coming together to support the kids in their community. I believe that the inception of an Alyeska Snow Classic administered by FVCS would aid the organization in supporting programs offered to residents of Indian, Bird, Girdwood, and Portage. One of my parishioners has been affiliated with FVCS for a number of years and has told me that:

- FVCS has been operating since 1981;
- it is one of the last remaining Community Schools operating in the State.; and
- it provides educational, recreational and cultural activities and operates similar to Parks & Recreation or a YMCA.

I fully support the goals of FVCS and the opportunities it provides for children. By operating the Alyeska Snow Classic, FVCS can meet the goal of funding its programs without the need of municipal tax dollars. I urge you to vote in favor of the legislation creating an Alyeska Snow Classic administered by Four Valleys Community Schools, Inc. Please feel free to contact me personally if I may be of assistance.

Sincerely,

Father Thomas C Lilly

Dear Committee Members of the House and Senate,

I am a business owner in the Girdwood Valley and support the creation of the Alyeska Snow Classic operated and run by Four Valleys Community Schools (FVCS) HB 245 /SB 146.

FVCS has been operating since 1981 and is one of the last remaining Community Schools in the state of Alaska. It is such an important source of education, recreation and cultural enrichment to the Turnagain Arm area. I believe that the inception of an Alyeska Snow Classic HB 245 /SB 146 would aid FVCS in offering programs to residents of Indian, Bird, Girdwood, Portage, and all small communities along the Turnagain Arm.

The community has supported FVCS with small recreational grants however the funding is not assured. The creation of the Alyeska Snow Classic would help FVCS become self sufficient. By operating the Alyeska Snow Classic, FVCS can meet the goal of funding its programs without the need of municipal tax dollars.

I urge you to vote in favor of the legislation creating an Alyeska Snow Classic HB 245 /SB 146.

Sincerely,

Chris Roberts

Dear Committee Members of the House and Senate,

We are owners of a small business here in Girdwood and we would like to voice our support for the creation of the Alyeska Snow Classic administered by Four Valleys Community Schools. House bill 245 and Senate Bill 146 are currently under consideration for this purpose.

Four Valleys Community Schools has been an integral part the quality of life we enjoy here in Girdwood for our family and for the families of our employees.

The Alyeska Snow Classic will enable Four Valleys Community Schools to continue to provide the quality recreational programs that the community has come to depend on.

We believe organizations such as Four Valleys Community Schools provide the support our community needs to reach its full potential as an economic tourism center.

We hope you will support our community by voting in favor of the legislation creating an Alyeska Snow Classic administered by Four Valleys Community Schools, Inc.

With respect and gratitude for your service,

Karen Zaccaro

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 151

Analysis

SB 151 CSSB(JUD) would add as a mitigating factor at sentencing. It would allow a new mitigator if the defendant was affected by a fetal alcohol spectrum disorder that significantly affected the defendant's behavior. If proven, the court would have discretion to reduce the term of imprisonment to below the presumptive range.

The proposed new factor would not apply to persons convicted of crimes against a person (AS 11.41), or arson in the first degree (AS 11.46.400).

The fiscal impact for the Department of Law is indeterminate because it will require expert testimony on the issue of whether the person suffers from such a disorder and if so, did it significantly affect his or her behavior.

Alaska Court System

(Revised 11/17/2011 OMB)

FISCAL NOTE #2

STATE OF ALASKA **BILL NO.** CSSB 151(HSS)
2012 LEGISLATIVE SESSION

Analysis

Senate Bill 151 adds a new factor to the list of mitigating factors in AS 12.55.155(d) that the court shall consider at sentencing; if proven, the court may then impose a sentence below the presumptive range for certain crimes. Specifically, except for defendants convicted of offenses against persons , arson, and criminal mischief, and except if the defendant has any prior felony conviction, the court may consider whether the defendant committed the offense "while affected by a fetal alcohol spectrum disorder that was insufficient to constitute a complete defense . . . but that significantly affected the defendant's conduct."

The court cannot predict the number of cases in which parties will attempt to prove this factor as a mitigator at sentencing, but believes the sentencing hearings will be held and handled in the normal course without a fiscal impact. The Alaska Court System therefore submits a zero fiscal note.

FISCAL NOTE #3

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 151(HSS)

Analysis

AS 12.55.155(d) allows a sentencing court to impose a sentence less than the presumptive range where mitigating factors have been proven. This bill amends AS 12.55.155(d) by adding section 20, which allows the court to find a factor of mitigation where the defendant committed the offense while affected by fetal alcohol spectrum disorder.

The Public Defender Agency does not anticipate a fiscal impact from this change. Accordingly, the Agency submits a zero fiscal note.

FISCAL NOTE #4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 151(HSS)

Analysis

This bill would add fetal alcohol spectrum disorder to the list of mitigating factors at sentencing in a criminal trial. The burden of assessment would be on the courts and therefore would have zero fiscal impact on the Department of Corrections.

Alaska State Legislature

Interim:
716 West 4th Ave.

Senator Kevin Meyer
Senate District O

SPONSOR STATEMENT FOR CSSB 151

"An Act relating to mitigation at sentencing in a criminal case for a defendant found by the court to have been affected by a fetal alcohol spectrum disorder."

SB 151 would include Fetal Alcohol Spectrum Disorders (FASD) as a mitigating factor in sentencing. This would allow some flexibility in sentencing if the defendant is found by the court to be affected by FASD and this condition substantially impaired the defendant's judgment, behavior, and capacity to recognize reality or ability to cope with the ordinary demands of life.

Individuals diagnosed with a fetal alcohol spectrum disorder (FASD) are disproportionately represented within Alaska's criminal justice system. SB 151 does not require a judge to use the mitigating factor and it DOES NOT automatically adjust a presumptive sentence. The defense would have to provide clear and convincing evidence that the defendant's disability *significantly affected the defendant's conduct* and *substantially impaired judgment, behavior, and capacity to recognize reality* in order to apply the mitigating factor.

Evidence shows that directing people with mental illness and other brain disorders to supported services, both inside and outside of Corrections, significantly reduces the high financial and social costs associated with re-incarceration and recidivism. Felons and repeat offenders with FASD are more likely to stop committing crimes when they are given the same supports that benefit people with mental illness and other disabilities, which can include Therapeutic Court, housing and employment assistance, case management, counseling and rehabilitation.

Alaska State Legislature

CSSB 151 FASD AS A MITIGATING FACTOR IN SENTENCING
Explanation of Changes

SHSS

From version X to O

- Removal of Section 1 which set out a definition of mental disease or defect.
- Section (18) there has been some debate over previously convicted felons, how this can be applied.
- Addition of section (20) which adds FASD as a mitigating factor, defines it and sets out how it can be diagnosed.

SJUD

From version O to U

- Section (18), page 3, lines 13-14 has been deleted, which makes this mitigator applicable to felons, however crimes against a person are not eligible for a mitigating factor.

- Section (20), page 3, line 30 has been deleted. It is not outlined for other mitigating factors how mental disease or defect is determined. This can be done as it is now; through clear and convincing evidence, the court can find someone to be suffering from a mental disease or defect.

SB 151 - Inclusion of FASD as a Mitigating Factor

The Need for SB 151

Individuals diagnosed with a fetal alcohol spectrum disorder (FASD) are disproportionately represented within Alaska's criminal justice system. The intent underlying Alaska's sentencing structure – that people will modify their behaviors based on the criminal justice system's response to their crimes – is not met when applied to individuals with FASD. These disabilities manifest as deficits in executive function, resulting in impaired adaptive behavior, memory difficulties, an inability to plan, and a failure to recognize the consequences of actions. In the interest of justice, it is important to take these deficits into account during sentencing. Neither the offender nor society benefits from holding individuals with FASD to community standards that they cannot possibly attain given their impairments.

SB 151 fulfills a recommendation adopted by the Alaska Criminal Justice Assessment Commission: "The legislature should create a statutory mitigating factor for use at criminal sentencing, recognizing when the wrongful conduct was substantially affected by an organic brain disorder." [1]

A draft resolution being proposed by the Commission on Youth At Risk of the American Bar Association for consideration at this year's annual ABA meeting states: "... the American Bar Association urges lawyers and judges, as well as bar associations and law school clinical programs, to support training that includes law school law enforcement, and legal/judicial education curricula on enhanced awareness of the child and adult disability of Fetal Alcohol Spectrum Disorders (FASD) and its impact on individuals in the child welfare, juvenile justice, and adult criminal justice systems, and that they work with medical, mental health, and FASD disability experts to promote: ... (d) applying FASD as a mitigating factor in the mitigation of juvenile justice and criminal sentencing ... and consideration of alternatives to incarceration that reduce recidivism."

Overview of the changes proposed in SB 151

SB 151 proposes to allow FASD as a mitigating factor for sentencing in certain cases where there is *clear and convincing* evidence that a "defendant committed an offense while suffering from a condition diagnosed as a fetal alcohol spectrum disorder, the fetal alcohol spectrum disorder substantially impaired the defendant's judgment, behavior, capacity to recognize reality, or ability to cope with the ordinary demands of life, and the fetal alcohol spectrum disorder, though insufficient to constitute a complete defense, significantly affected the defendant's conduct."

SB 151 would, for the purposes of the subsection on mitigating factors, define fetal alcohol spectrum disorder as any "a condition of impaired brain function in the range of permanent birth defects caused

[1] Alaska Criminal Justice Assessment Commission (2000). *Final Report.* Retrieved October 12, 2010 from www.hss.state.ak.us/reports/CJAC final_004.pdf, at p.71.

by maternal consumption of alcohol during pregnancy *as determined by a physician or interdisciplinary team using current FASD diagnostic guidelines*."

The Alaska FASD Partnership and members of the Partnership's legal issues workgroup support removing limiting language from the current statute that creates an "exception" to the application of "mental disease or defect" as a mitigating factor for "offenses against a person" or if the defendant was previously convicted of a felony.

The workgroup suggests that this limiting language, which only applies to the mitigating factor related to individuals with a "mental disease or defect" could be discriminatory. None of the other 19 mitigating factors currently in statute have this limiting language.

David Fleurant, Executive Director of the Disability Law Center of Alaska, who participates in the FASD legal issues workgroup, suggests that the current statute appears to discriminate against individuals with disabilities in the application of mitigating factors "for no rational purpose. No other state which employs 'mental disease or defect' as a mitigating factor limits its application in such a manner."

In light of how FASD adversely impacts an individual's executive function, a significant percentage of the convictions against individuals with FASD involve offenses against the person and/or are committed by felons who are cycling through the criminal justice system. With the limiting language, the state is far less likely to "catch" a person with FASD who is cycling through the corrections system. Therefore, the Partnership and the legal issues workgroup of the Partnership support removing this limiting language from the statute so as to achieve the intended goal of SB 151.

The legislation *DOES NOT*:

1) *require* a judge to use the mitigating factor;
2) *automatically* adjust a presumptive sentence; the defendant would have to prove by *clear and convincing evidence* 1) that he or she has a fetal alcohol spectrum disorder and 2) that the condition "significantly affected the defendant's conduct" before the judicial officer can consider the possibility of adjusting the presumptive sentence; or
3) The goal is not a "get out of jail free" card, but an attempt to be "smarter" within the justice system to better direct people who have impaired brain function to services both within and after release from the criminal justice system.

What are mitigating factors?

The Legislature has decided in the presumptive sentencing law that judges should give jail time within certain ranges in all felonies (with the exception of "class C felonies" where the minimum presumptive term is 0 years). The amount of the presumptive term depends on the severity of the crime and whether or not a defendant has prior felonies. There are 34 statutory aggravating factors that could result in a sentence above the presumptive range, if proved by clear and convincing evidence. A judge must sentence a person to at least the minimum presumptive term unless a "mitigating factor" is shown by clear and convincing evidence. There are 19 statutory mitigating factors. With the current mental disease or defect mitigating factor, the defendant must *also* show by clear and convincing evidence that the condition "significantly affected the defendant's conduct." The proposed fetal alcohol spectrum disorder mitigating factor also requires proof by clear and convincing evidence that the condition "significantly affected the defendant's conduct" before a judge could consider it. If the required showing has been made for any mitigating factor, it is legally possible for the judge to sentence below the minimum term (but if the minimum term is more than 4 years, the lower limit is half the minimum presumptive term).

There are special rules when there is a factor in a case that does not fit within the statutory list but which is so important in a case that it would be manifestly unjust to sentence a person without considering the factor. If the sentencing judge finds that such a "non statutory mitigating factor" exists, then the judge must refer the case to a three judge sentencing panel. If at least two judges on the panel agree, the panel can sentence with the same lower limits applicable to a statutory mitigating factor. If the panel does not agree, the case is referred back to the original judge to impose at least the minimum presumptive term. The "three judge panel" method is very cumbersome, time consuming and expensive. SB 151 is a "statutory mitigating factor" and would not require any referral to a three judge sentencing panel.

What are Fetal Alcohol Spectrum Disorders?

FASD is not a medical diagnosis, but an umbrella term for the range of diagnoses associated with damage caused by maternal alcohol consumption during pregnancy. These medical diagnoses can include Fetal Alcohol Syndrome (FAS), Partial Fetal Alcohol Syndrome (PFAS), Alcohol-Related Birth Defects (ARBD), and Alcohol-Related Neurodevelopmental Disorder (ARND). Note that the term, Fetal Alcohol Effects (FAE), is no longer commonly used, having been replaced by the PFAS, ARBD and ARND diagnoses.

Each diagnosis has its own symptoms and attributes, but common among all the diagnoses is permanent, life-long brain damage – often affecting decision-making, judgment and impulse control. FASD is a brain-based disorder, similar to autism, traumatic and acquired brain injury, and other cognitive impairments.

FASDs appear in individuals differently. Some alcohol-exposed individuals may exhibit impulsivity, hyperactivity and risky behaviors. Some have difficulties with memory, while others have very good memories. Some have low IQs, while others have normal IQs.

Experts report that the different presentations are influenced by many variables, including when the mother drank, how much she drank, the genetic makeup (or genotype) of the baby, and the genotype of the mother.

Primary behavior characteristics of people with impaired brain function include: impulsiveness, memory difficulties, anger and frustration, difficulty pairing actions to consequences. Secondary behaviors that develop in reaction to or as a result of the primary disability, include substance abuse and mental health problems, anger and aggression, homelessness, involvement with the criminal justice system, and more.

Neurologist Dr. Susan Hunter-Joerns, a member of the Juneau FASD Diagnostic Team, wrote that structural brain damage "often significantly impair[s] cognitive behavior, common sense, the ability to understand right from wrong, cause-and-effect, consider consequences, ability to recognize social norm ... even though defendants may verbally seem able to talk about the issues. Making long term goals, planning appropriate actions, delaying gratification, and understanding the legal system, are often significant problems."

Who in Alaska is qualified to give a diagnosis of FAS/FASD?

Though some physicians may be qualified to diagnose all the disorders on the FASD spectrum, the preferred method of diagnosis, according to Susan Astley, Professor of Epidemiology and Pediatrics at the University of Washington and director of the Washington State FASD Diagnostic and Prevention Network, is by an interdisciplinary diagnostic team using current, rigorous FASD diagnostic guidelines. This preferred method is also advocated for nationally by the Centers for Disease Control and Prevention.

Each diagnosis on the spectrum requires evaluation and testing related to the Central Nervous System (CNS) to detect damage that cannot be measured alone by physical attributes. Interdisciplinary diagnostic teams using the 4-Digit Diagnostic Code include evaluations by a medical professional, psychologist, occupational therapist, and speech-language pathologist. These evaluations can detect the nuances of the disability.

How many diagnostic teams and/or physicians are available to give FASD diagnoses in Alaska?

Currently, through the Division of Behavioral Health FASD Diagnostic Team Provider Agreement, Alaska has eight active FASD diagnostic teams – in Bethel, Fairbanks, Mat-Su, Kenai, Juneau, Sitka, and two in Anchorage (Southcentral Foundation and ASSETS). Alaska also has a trained diagnostic team at Alaska Psychiatric Institute (API) for children who enter the service system through that door. In the past there were teams in Dillingham and Kodiak — both locations that are interested in reviving their teams at some point, but do not have the resources to do it at this time. Alaska also has had team in Nome, Copper Center, and Ketchikan. The majority of FASD diagnoses in Alaska are determined by the diagnostic teams overseen by DHSS.

How many people are diagnosed with FAS/FASD in Alaska annually?

In 2011, Alaska's FASD diagnostic teams diagnosed 179 individuals. The average per year number is around 153 per year, according to the Alaska Department of Health & Social Services.

What is Alaska's diagnostic standard based on?

In 1999, the DHSS Office of FAS, in conjunction with the statewide FASD Steering Committee, agreed to use the 4-Digit Diagnostic Code as the standard diagnostic system for Alaska's developing Diagnostic Team Network. The 4-Digit Diagnostic Code was developed at the University of Washington's FASD Diagnostic and Prevention Network by Drs. Susan Astley and Sterling Clarren. The 4-Digit Diagnostic Code measures: 1) facial features, 2) growth deficiency, 3) central nervous system damage/dysfunction, and 4) prenatal alcohol exposure. The client's diagnosis is derived after a thorough evaluation by an interdisciplinary team of professionals, which generally includes a physician (or nurse practitioner), psychologist, occupational therapist, speech-language pathologist, social worker, and family advocate. For more information on the FASD 4-Digit Code, visit: http://depts.washington.edu/fasdpn/htmls/4-digit-code.htm.

The 4-Digit Diagnostic Code is considered the "gold standard" for FASD diagnosis and provides a reliable, evidence-based diagnostic process that gives detailed information about the individual client and how best to help that person work with their disability to reach their full potential. All team members are required to complete the University of Washington FASD 4-Digit Diagnostic Code Training Course.

The economic benefits of SB 151

The cost of incarceration in Alaska's prison is about $136 per day. Over the course of five to ten years in an Alaskan prison, an inmate is expected to cost the state close to $250,000-$500,000 (not including medical, mental health or other specialized treatment while incarcerated).

According to the 2009 ISER Study, *The Cost of Crime: Could the State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?*, the cost of providing services is less than the cost of incarceration. With appropriate supports, clients with FASD, T/ABI and other brain-based disabilities can live successfully in the community as contributing citizens, *and* provide jobs for Alaskan case workers, clinicians, assisted living providers, mental health and substance abuse

counselors, psychologists and psychiatrists. Not only does SB 151 further the cause of justice for a vulnerable population, it represents a better investment of our state's resources.

Additionally, the state's movement toward "Smart Justice" will promote less crime, reduced public costs, and greater rehabilitative effect on offenders. The research behind "Smart Justice" suggests that spending money on rehabilitating offenders is more cost effective than paying the high costs associated incarceration and recidivism, including public safety, courts, prisons, alcoholism and drug abuse programs.

FASD in other jurisdictions

Judges nationwide are experiencing repeat offenders diagnosed with these disorders who, as a direct result of their disabilities, are effectively unable to understand the charges against them, or comply with the conditions of their sentence. There is a growing body of research affirming that FASDs are brain disorders effectively impairing "judgment, behavior, capacity to recognize reality, or ability to cope with the ordinary demands of life."

Kate Burkhart, attorney and executive director of the Alaska Advisory Board on Alcoholism and Drug abuse, wrote that the language in SB 151 "is commensurate with the federal sentencing guidelines and other western state laws that provide for such a mitigating factor. While none of the western states surveyed expressly include FASD in their definitions of mental defect, Utah includes a broad definition that would include FASD. The other states and federal guidelines would permit but do not mandate consideration of FASDs in sentencing unless they impair comprehension or ability to form intent."

Burkhart noted that Utah defines "mental illness" as "a mental disease or defect that substantially impairs a person's mental, emotional, or behavioral functioning. A mental defect may be a congenital condition, the result of an injury, or residual effect of a physical or mental disease that includes, but is not limited to, mental retardation" which is further defined to mean "significant sub-average general intellectual functioning, existing concurrently with deficits in adaptive behavior."

Idaho permits consideration of mental condition creating an "inability to appreciate the wrongfulness" of conduct or to conform to legal requirements at sentencing."

Washington permits the courts to consider "the defendant's capacity to appreciate the wrongfulness of his or her conduct, or to conform his or her conduct to the requirements of the law, was significantly impaired."

Nationally, advocates within the American Bar Association are proposing a resolution urging lawyers, judges, bar associations and law school clinical programs to promote "applying FASD as a factor in the mitigation of juvenile and criminal sentencing ... and consideration of alternatives to incarceration that reduce recidivism." The resolution also asks, "that state and federal laws and policies reflect the serious effects of prenatal alcohol exposure by a) including persons diagnosed with FASD, or suffering from the affects of prenatal alcohol exposure, within the statutory definition of developmental disabilities ... and b) enhancing identification and diagnosis of ... persons with FASD." Their intent is that this resolution would be approved by the ABA House of Delegates at the annual meeting in Chicago in August 2012.

Internationally, Alaska is among the forerunners in awareness, diagnosis, and prevention of fetal alcohol spectrum disorders, both nationally and internationally. However, Canada and parts of Australia are leading the world in establishing laws and practices that address FASD as a brain-based disability with specific interventions and solutions.

The Canadian Bar Association passed a resolution in 2010 acknowledging that FASDs involve a range of neurological and behavioral challenges that can include "impaired mental functioning, poor executive

functioning, memory problems, impaired judgment, inability to control impulse behavior, inability to understand the consequences of their actions, and inability to internally modify behavior control."

The resolution also acknowledged that "the criminal justice system is based on normative assumptions that a person acts in a voluntary manner, makes informed choices with respect to the decision to commit crimes, and learns from their own behavior and the behavior of others" and " these normative assumptions and sentencing principals such as specific and general deterrence, are not valid for those with FASDs.

Following are other highlights addressed in the CBA's resolution:

- sentencing options available to courts are often ineffective in changing the behavior of those with FASD and those with FASD are frequently repeat offenders
- some courts have ruled that absolutely no rehabilitative or deterrent purpose is served by incarceration of those with FASD;
- laws, programs or activities could ameliorate the disadvantages experienced by those with FASD whose behavior is judged on a standard that they are incapable of meeting because of their disability;
- the Canadian bar is resolved to urge the federal government to amend criminal sentencing laws to accommodate the disability of those with FASD.

In Heather Douglas' article, *The sentencing response to defendants with fetal alcohol spectrum disorder* (2010) published by Thomas Reuters in Australia, the author notes that "as a result of deficits in executive function resulting in memory difficulties, inability to plan and failure to recognize the consequences of actions, many of those with FASD are likely to fail to pay fines and to breach probation orders ... Suspended sentences will not be useful in a context where cause and effect is not understood. In prison, highly suggestible FASD sufferers are likely to be victimized. While FASD clients cannot be cured of all their symptoms, techniques and approaches have been identified that can be employed by professionals to help the person reach his or her potential."

Conclusion

Ira Chasnoff, M.D., an international expert on FASD, wrote in an article "Is Fetal Alcohol Spectrum Disorders a Mitigating Factor in Criminal Litigation and Sentencing?" in *Psychology Today* (2011), "We are in an ethical conundrum. Children, youth and young adults with FASD are more likely than not to end up before the court on criminal or civil charges, but the legal system has not come close to resolving how their cases should be treated. Most individuals with FASD have normal IQs, and most can relate a story as to how they ended up before the judge. Most can even state they understand the charges against them. But the truth is that neurocognitive damage that inhibits executive functioning, decision-making, and emotional and behavioral regulation has tremendous bearing on the capacity of these individuals to understand the ramifications of their actions. These people look normal, they speak normally, but they often have only a superficial understanding of the charges against them."

As noted by Canadian Judge Barry Stuart in R. v. Sam (1993), FASD takes away someone's "... ability to act within the norms expected by society." It is "manifestly unfair to make an individual pay for their disability with their freedom. Society is failed because a sentence calculated for a 'normal' offender cannot serve the same ends when imposed on an offender with FASD," he said. "Not only can traditionally calculated sentences be hopelessly ineffective when applied to FASD offenders, but the punishment itself, calibrated for a non-disabled individual, can have a substantially more severe effect on someone with the impairments associated with FASD," Judge Stuart concluded.

Re: Support for SB 151

Dear Senator Meyer:

The Disability Law Center of Alaska supports the objective of SB 151, which is to allow the courts to take into consideration during sentencing whether the defendant was diagnosed with a fetal alcohol spectrum disorder, a traumatic brain injury or an acquired brain injury. If these conditions cannot be considered as mitigating factors, then as one jurist observed, these individuals are paying for their disability with their freedom.

Thank you for your efforts in correcting this manifest injustice.

Sincerely,

DISABILITY LAW CENTER OF ALASKA

March 2, 2012

Senator Kevin Meyer
Alaska State Legislature
Juneau, Alaska 99801

Dear Senator Meyer,

It is with great pleasure that the Alaska FASD Partnership supports the proposed committee substitute for SB 151 to include FASD, Traumatic and Acquired Brain Injury, and Intellectual Disability as "impaired brain function" in the definition of "mental disease or defect."

The Partnership also supports the bill's intent to include FASD and traumatic and acquired brain injury as mitigating factors related to sentencing.

Individuals diagnosed with a fetal alcohol spectrum disorder (FASD) or a traumatic or acquired brain injury (T/ABI) are disproportionately represented within Alaska's criminal justice system. However, the intent underlying Alaska's sentencing structure – that people will modify their behaviors based on the criminal justice system's response to their crimes – is not met when applied to individuals with FASD or T/ABI. These disabilities manifest as deficits in executive function resulting in impaired adaptive behavior, memory difficulties, an inability to plan, and a failure to recognize the consequences of actions. In the interest of justice, it is important to take these deficits into account during sentencing. Neither the offender nor society benefits from holding individuals with FASD or T/ABI to community standards that they cannot possibly attain given their impairments.

The cost of incarceration in Alaska's prison is about $136 per day. Over the course of five to ten years in an Alaskan prison, an inmate is expected to cost the state close to $250,000-$500,000 (not including medical, mental health or other specialized treatment while incarcerated).

According to the 2009 ISER Study, *The Cost of Crime: Could the State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?*" the cost of providing services is less than the cost of incarceration. With appropriate supports, clients with FASD, T/ABI and other brain-based disabilities can live successfully in the community as contributing citizens, ***and*** provide jobs for Alaskan case workers, clinicians, assisted living providers, mental health and substance abuse

Re: Letter of Support for CSSB 151 – Mitigation at Sentencing for a Defendant Affected by FASD

Dear Senator Meyer,

The Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse support the committee substitute for SB 151 (CSSB 151). This bill recognizes the special needs presented by Alaskans experiencing fetal alcohol spectrum disorders (FASD) in the justice system.

It is an objective of Alaska's comprehensive mental health program that people with mental and cognitive disabilities are treated with dignity in all aspects of life. Our judges, prosecutors, defenders, and court staff work to ensure that everyone who appears in court is treated fairly and with respect. However, Alaskans experiencing FASD often present with special needs and situations that impede the course of justice. Low cognitive functioning, inability to understand and stay within accepted social norms, limited short term memory, impulsivity, and impaired judgment can all result in a person experiencing FASD not being able to explain his or her actions, understand why they resulted in a criminal charge, or understand the criminal justice process. Usually, these impairments do not rise to the level of legal incompetence – but they often make it hard for judges and juries to make decisions that serve our notions of fairness and justice.

Based on research in other jurisdictions, an estimated 60% of inmates experience an FASD, brain injury, or similar organic cognitive impairment. The cost of incarceration is very high and usually does not result in restoration or rehabilitation. In fact, according to a 2009 ISER Study,[1] the cost of prison far exceeds the cost of services. CSSD 151 allows judges – **at their discretion** – to modify presumptive sentences to take into account the defendant's disabilities and to provide the sort of sentence needed to prevent recidivism and ensure a just outcome for victims, defendants, and our communities.

We thank you for your work on behalf of all Alaskans.

Sincerely,

J. Kate Burkhart
Executive Director

The TRUST

The Alaska Mental Health Trust Authority

March 2, 2012

Senator Kevin Meyer
State Capitol Building
Juneau, Alaska 99801

Dear Senator Meyer,

The Alaska Mental Health Trust Authority is pleased to support SB 151, adding fetal alcohol spectrum disorders and traumatic and acquired brain injury as mitigating factors under "mental disease or defect" in state statute. The Trust also supports the bill's intention to use the word "intellectual disability" to describe Alaskans with developmental disabilities, rather than the archaic term "mental retardation."

This legislation is an important step in the state's recognition that people with disabilities are better served with supports and services, rather than incarceration without supports.

SB 151 fulfills a recommendation adopted by the Alaska Criminal Justice Assessment Commission that "the legislature should create a statutory mitigating factor for use at criminal sentencing, recognizing when the wrongful conduct was substantially affected by an organic brain disorder." [1]

SB 151 also supports a recommendation currently before the American Bar Association stating that the ABA "... urges lawyers and judges, as well as bar associations and law school clinical programs, to support training that includes law school law enforcement, and legal/judicial education curricula on enhanced awareness of the child and adult disability of Fetal Alcohol Spectrum Disorders (FASD) and its impact on individuals in the child welfare, juvenile justice, and adult criminal justice systems, and that they work with medical, mental health, and FASD disability experts to promote: ... (d) applying FASD as a mitigating factor in the mitigation of juvenile justice and criminal sentencing ... and consideration of alternatives to incarceration that reduce recidivism."

The Trust thanks Senator Meyer's efforts to address issues related to people with disabilities, so that the most appropriate (and cost effective) outcomes are realized.

Sincerely,

Jeff Jessee
Chief Executive Officer
Alaska Mental Health Trust Authority

FISCAL NOTE #1

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 158(L&C)

Analysis

SB 158 allows the Alaska Real Estate Commission to designate a licensee to administer closing down a real estate brokerage for misappropriation of the trust account(s), medical reasons such as broker incapacitation, or suspension of the broker's license. SB 158 clarifies the intent of the statute that licensed assistants may only work for the brokerage in which they are licensed.

This bill has zero fiscal impact.

Senate Labor and Commerce Committee

Senate Bill 158
Sponsor Statement

Senate Bill 158 aims to address several weaknesses in current law pertaining to real estate brokers.

The bill would allow the real estate commission to appoint an overseer to temporarily manage a brokerage in the event a broker is unable to for certain reasons, including a traumatic or medical event, having a license suspended, or upon an investigative finding that substantial evidence points to misappropriation of funds. This assures that trust accounts and other sensitive business affairs are handled responsibly.

The bill would also clarify that a licensed assistant can only work for the brokerage in which they are licensed. Ambiguity in current law has been interpreted to allow an assistant licensed in a brokerage to work in any other brokerage or in multiple brokerages. The intent of current law was to limit an assistant to one brokerage.

SB 158 would also allow a licensee to donate a portion of a commission to charity. It would also allow a licensee to advertise that some of their commission would be donated to a charity.

I urge your support of this clean-up measure to the real estate brokerage and licensing statutes.

RE: Senate Bill 158 - An Act relating to the Real Estate Commission; and providing for an effective date."

Dear Senator Egan,

The Alaska Association of Realtors® with over 1,600 members statewide would like to express our appreciation for your sponsoring Senate Bill 158 to address issues of concern to our members. Senate Bill 158 resolves three problems identified by our members.

First, SB 158 provides the Alaska Real Estate Commission (AREC) to designate a licensee to administer closing down a real estate brokerage for medical reasons or for violation of law. This allows the AREC to designate a licensed Realtor to manage the closing of the brokerage if there is no licensed broker available to perform the task.

Next, SB 158 clarifies the intent of the statute that licensed assistants may only work for the brokerage in which they are licensed. This resolves an untended oversight in current law that could be interpreted to permit a licensed assistant to work in multiple brokerages, which was never intended to be allowed.

Finally, this bill would allow a realtor to share a portion of their commission with a charity. This would allow a realtor to waive their commission if they are selling property of a charity or to donate a portion of their commission to a charity and not violate AS 08.88.401.

We believe these three changes will help clarify the intent of the law and promote charitable giving.

Thank you for your assistance in resolving these issues.

Sincerely,

Joni Schneider

Juneau, Alaska 99801-1182

RE: SB 158 - "An Act relating to the Real Estate Commission; and providing for an effective date."

Dear Senator Egan,

I want to personally thank you for introducing SB 158, which effectively addresses three problem areas as identified by the Alaska Association of Realtors, and the real estate brokerage community.

The bill you introduced allows the Alaska Real Estate Commission the authority to designate a licensee to manage the affairs of a broker who is unable to conduct business either due to medical reasons, or for violation of the statutes and regulations.

It also clearly defines statute, allowing licensed assistants to work only in the brokerage where they are licensed.

Finally, the proposed bill allows licensees to make charitable contributions from their commissions without violating AS 0.88.401.

I know your efforts on behalf of the real estate licensees of the State of Alaska are greatly appreciated. Thank you so much!

Sincerely,

Anita Bates

Re: SB 158- "An act relating to the Real Estate Commission; and providing for an effective date."

Dear Senator Egan,

I am writing in support of SB 158 and wish to thank you for sponsoring this important bill. I have been a real estate broker in this state for over 25 years and completed 9 years of service on the Alaska Real Estate Commission within the past year. I have experienced the need for these changes from both perspectives.

SB 158 allows for the real estate commission to appoint a temporary licensee to oversee the affairs of a real estate brokerage if certain events occur. In the recent past a broker in our state misappropriated a large amount of trust funds. The Real Estate Commission was forced to leave the broker who violated our laws in charge of the trust account and other business affairs due to their lack of ability to do otherwise. This bill will close this hole in our system.

SB 158 also clarifies a law that was written specifically to allow a licensee to pay another licensee that works for them as an assistant. Previous law mandated that only the broker could pay a licensee. This revision to the law was only intended to simplify the process inside of an office. Some in the industry are trying to interpret this change to mean it is ok to ignore other laws already in place that prohibit a licensee from performing licensed activities for another brokerage.

SB 158 will also allow a licensee to donate part of their commission to a charitable organization. Statute does not allow for a licensee to pay anyone without a license fees earned from licensed activity. While I agree with the intended purpose of this law, I feel that the many charitable organizations around our state can benefit from the sensible change offered in this bill.

Respectfully Submitted,

David B. Somers

FISCAL NOTE #1

STATE OF ALASKA **BILL NO.** CSSB 159(RES)
2012 LEGISLATIVE SESSION

Analysis

This bill would establish a new Susitna State Forest in the Matanuska and Susitna Valleys from state lands presently classified for forestry management by the two Area Plans for the region. These lands are currently managed by the Division of Forestry for timber harvest and other multiple uses. Designation of these lands as a state forest will ensure the long-term availability of a timber supply to local commercial and personal use customers , support economic opportunities for the region's communities, improve access to the parcels and retain the land in state ownership for multiple uses. The state forest will also directly support a growing interest in wood energy space heating projects by local communities. These projects require a long-term, sustainable supply of wood.

The proposed State Forest includes 33 parcels totaling approximately 763,200 acres and are located in 14 large management blocks. The Susitna State Forest would become part of the State Forest System under AS 41.17.010 - .230 and will continue to be managed under the provisions of the State Forest Resources and Practices Act (FRPA) which is designed to protect fish habitat and water quality. The forest management plan for the region would be updated via a public process per AS 41.17.230.

Implementation of this bill will not require new positions or funding.

The bill will have no short-term impact to the revenue stream, but will provide for long-term increases in forest productivity and subsequent increased timber revenues.

Alaska State Legislature

Sponsor Statement
Committee Substitute for Senate Bill 159

The Committee Substitute for Senate Bill 159 will establish a new Susitna State Forest from state lands presently used for timber harvest and exclude private in-holdings from the proposed forest. Further, this CS includes intent language that urges the governor to work to acquire or purchase forest land in the Tongass National Forest.

With a state forest designation, the Division of Forestry will be able to manage for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses. The Susitna State Forest would be the fourth state forest established in Alaska, joining the Haines State Forest, the Tanana Valley State Forest and the Southeast State Forest.

The proposed Susitna State Forest includes **33 parcels totaling approximately 763,200 acres**. The parcels are Forestry classified lands located in 14 large management blocks listed below. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

In the region where the State Forest is proposed, timber sales and personal use sales for fuelwood are growing steadily. Local mills depend on state timber for their raw material supply, and there is a growing interest in the use of wood in the form of roundwood, chips or wood pellets for both commercial and residential space heating.

The state is committed to long-term management solutions by:

- maximizing the sustainable supply of timber from the state timber base;
- developing access and encouraging a broad range of multiple uses on state forest lands including motorized uses;
- providing economic opportunities to the communities, businesses and residents of the region.

Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management and the region will retain large open spaces of public lands for the range of benefits residents of the region currently enjoy. It will also allow for mining on state forest land.

The Susitna State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities.

Re: Changes in CS SB 159(RES)

There were two changes made to Senate Bill 159 in the Senate Resources Committee:

(1) The committee substitute added exclusions for private land located within the proposed state forest boundaries. These exclusions prevent the private land from being designated state forest, and codify that in law.
(2) On page 31, intent language was added to the bill urging the governor to either acquire or purchase land in the Tongass National Forest.

MEMORANDUM January 17, 2012

SUBJECT: Sectional summary for SB 159 (Work Order No. 27-LS1179\M)

TO: Senator Linda Menard
Attn: Michael Rovito

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Designates state-owned or acquired land and water lying within the listed parcels as the Susitna State Forest. Requires the commissioner of natural resources to prepare a management plan for the forest, and authorizes the commissioner to establish transportation corridors within the forest.

Section 2. Provides a July 1, 2012 effective date for the Act.

DMB:ljw
12-019.ljw

Expanded Bullets on area plan public processes related to the new Susitna State Forest [1/30/12]

- 1985 Susitna Area Plan identified Forestry designated lands for consideration as legislatively designated areas (LDAs).

- State lands under consideration for a Susitna State Forest are addressed by two area plans: the Susitna Matanuska Area Plan (2011), and the Southeast Susitna Area Plan (2008). These two plans supersede the 1985 Susitna Area Plan.

- The Commissioner of DNR adopted the Southeast Susitna Area Plan (SSAP) on April 28, 2008, following a year-long planning process that included two rounds of public meetings. This plan applies to about 255,000 acres of state land formerly managed by the 1982 Willow Sub-Basin Area Plan and the original 1985 Susitna Area Plan. The SSAP designates 74,855 acres of state land for Forestry. The Division of Forestry actively manages these lands in the Houston and Kashwitna areas for timber production.

A recurring theme during the following processes was the idea of a Susitna State Forest.

- In 2009, DOF engaged in a revision process for the 1991 Susitna Forestry Guidelines (SFG). A citizens' advisory committee and an inter-agency planning team were established and several meetings held. In addition, the SFG process held joint public scoping meetings with the DMLW-led SMAP planning process.

- 1n 2009, DOF's planner mentioned the Susitna State Forest during his presentation to the Mat-Su Salmon Science and Conservation Symposium in Wasilla.

- During annual (2008-2011) Winter Trails User's meetings between timber operators and Willow area dog mushers, the concept of a state forest in the Susitna was discussed, with broad support for the idea expressed by those attending. Dog mushers enjoy the use of state lands and the associated improved access from logging activities.

- Following a two year planning process, the Commissioner of the Department of Natural Resources (DNR) adopted the Susitna Matanuska Area Plan (SMAP) on August 11, 2011, with a date of issuance of August 17th. The SMAP applies to nine million acres of state land formerly managed under the Susitna Area Plan. About 700,000 acres of these state lands are classified Forestry. This area plan recommends establishment of a legislatively designated State Forest for those lands designated or co-designated Forestry in the SMAP and the 2008 Southeast Susitna Area Plan. Public input received at a series of community meetings held throughout the planning area and during a three and a half month public review (February – May 2011) of the draft SMAP supported the concept of a Susitna State Forest.

- DOF coordinated the public scoping efforts for the SFG with DMLW's area plan scoping and the Matanuska-Susitna Borough's land use planning. During April of 2009, six joint open houses were held in communities in the Mat-Su area, and one in Anchorage. An

open house planned for Skwentna in late March was cancelled due to an ash fall in the area from the volcanic eruption of Mt. Redoubt. Approximately 80 people attended the public meetings, and DOF received 22 written scoping comments through the end of July. Many of the written comments supported maintaining or strengthening the Susitna Forestry Guidelines as they are presently written, and keeping its original purpose statement intact. The public comments were generally supportive of forestry. The issues most frequently mentioned were regeneration, timber road access after harvesting, harvest design, riparian standards, and herbicides. Other public outreach efforts that occurred during this period included briefings with the Alaska Outdoor Council, Friends of the Mat-Su, and WACO Trail's Committee.

- The Mat-Su Area Forester reported on the interest in the Susitna State Forest to the Board of Forestry during their August 30-31, 2011 meeting.

*Provided by Division of Forestry.

Public Briefing: SB-159
Proposed Susitna State Forest

Alaska Department of NATURAL RESOURCES

February 13, 2012

DEPARTMENT OF NATURAL RESOURCES -- DIVISION OF FORESTRY

Background. The state Department of Natural Resources manages over 9.5 million acres of forest land in the Matanuska and Susitna Valleys. Of this land, timber management is allowed on approximately 2.1 million acres. The state actively manages this timber base to supply wood to local processors. Remaining land is designated primarily for other uses including land sales, recreation, water resources, and fish and wildlife habitat, including over 3.1 million acres of legislatively designated state parks, refuges, and public use areas.

In the region, demand for state timber sales is steady and growing and personal use sales for fuelwood have also increased. Local mills depend heavily on state timber for their raw material supply and there is a growing interest in the use of wood in the form of roundwood, chips or wood pellets for commercial, public school, and residential space heating.

There is also a need to more actively manage lands and vegetation to promote a variety of forest ages to provide for diverse and healthy habitats for wildlife. At the same time, active management will also help reduce wildland fire risk by breaking up large fuel types and encouraging initial regeneration by hardwood species.

The state is committed to long-term management solutions by:

- maximizing the sustainable supply of timber from the state timber base;
- developing access and encouraging a broad range of multiple uses on state forest lands including motorized uses;
- providing economic opportunities to the communities, businesses and residents of the region.

Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management and the region will retain large open spaces of public lands for the range of benefits residents of the region currently enjoy.

Purpose. This bill would establish a new Susitna State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

Proposed State Forest Land. The proposed Susitna State Forest includes 33 parcels totaling approximately 763,200 acres (see chart). The parcels are Forestry classified lands located in 14 large management blocks listed below. The Division of Forestry worked with the Division of Mining, Land, and Water management to identify and exclude lands that are priorities for the state land disposal program.

State Forest Management. The Susitna State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. State Forest lands would be managed consistent with the management intent under the current Susitna Matanuska and the Southeast Susitna Area Plans. Changes to management intent would require public and interagency review through adoption of a State Forest Management Plan under AS 41.17.230. The States Forest Resources Practices Act (FRPA) would apply to management activities on the forest and is designed to protect both fish habitat and water quality. (AS 41.17.010 - .955.) A forestry inventory was completed in 2010 for approximately 75% of the acreage and work is ongoing to complete the project. An interim forest inventory report and maps are available at http://forestry.alaska.gov/whatsnew.htm.

SB 159
Susitna State Forest

The proposed Susitna State Forest includes 14 management blocks totaling approximately 760,000 acres. The blocks have previously been classified Forestry in the Susitna Matanuska and the Southeast Susitna Area Plans. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

The effect of legislatively designating these lands as State Forest is as follows:

Current Condition	Proposed State Forest
Lands may be designated for disposal through agency action.	This would provide for long term forest management planning. Lands would need to be withdrawn from the State Forest system through legislative action.
Revised area plans may further subdivide the existing forest.	Existing private inholdings would remain. All state land designated for settlement in the current Area Plans would remain available for purchase by the public. Any changes in land classification or use would be addressed in the Susitna State Forest Management Plan.
Reluctance by forest managers to invest public funds if the lands are subject to disposal.	Forest Managers would have the opportunity to invest in long term land management projects without having the lands converted to other uses. For example, the DOF would have the opportunity to collaborate with the Department of Fish and Game on long term wildlife enhancement projects, silvicultural treatments for stand improvement, and other activities that show benefits over time.
Lands are managed for multiple use.	No Change.
Existing mineral entry rights.	The lands would be managed for multiple use and would be open for mineral development as it currently exists.
The Susitna Forestry Guidelines, adopted over 20	The Alaska Forest Resources and Practices Act and

years ago and prior to the final revision of the Alaska Forest Resources and Practices Act (AS 41.17), are used for planning timber harvests in the Susitna Valley.	other guidelines will be incorporated into the Susitna State Forest Management Plan and after adoption will be the basis for timber harvests in the State Forest.
Forests are managed on a sustained yield.	AS 41.17.220 requires the management of State Forests occur on the sustained yield principle.
Access for recreation is limited.	A forest management plan would include a transportation plan that addresses recreational opportunities as roads are developed.
Multiple Area Plans are used for the current management of State land.	A Forest Management Plan as required under AS. 41.17.230 must be adopted within 3 years of the establishment of a state forest. The plan requires a forest inventory and must consider other uses such as mineral extraction, recreation, fish and wildlife, and other traditional uses.

Senators Joe Paskvan and Bill Wielechowski
Co-Chairs, Senate Resources Committee
Alaska State Legislature
Juneau, AK 99801

The Alaska Forest Association (AFA) is the primary timber industry association in Alaska. Our Association mission is to help sustain and restore a viable timber industry in Alaska and to insure our industry members operate their businesses in a responsible manner. We also maintain a Health Insurance program and a Pension plan for our members. AFA also sponsors the Sustainable Forestry Initiative Program for Alaska and we manage a Scholarship program.

The Alaska Forest Association supports SB 159, which establishes the Susitna State Forest.

There are several sawmills in the Anchorage area that have been struggling to maintain an adequate supply of suitable timber. Some of the mills have been idled, solely due to a lack of timber supply. The State Division of Forestry has done well managing the State Forests and the State timber sale program in Southeast Alaska. In Southeast Alaska, the Forest Service has downsized its timber sale program by about 90% and, without the State timber sales, the last remaining mills in that region would have been lost. We are confident that the State will also properly manage the Susitna State Forest lands and the new State Forest will provide ample opportunity for Alaskans to have additional wealth producing jobs.

We also believe that following the management requirements of the Alaska Forest Practices Act will insure that the water, fish and wildlife in the Susitna State Forest will be maintained and even enhanced. Further, the access that will be provided by the timber sale program will also provide additional opportunities for recreation, fire protection and additional resource development.

Thank you for the opportunity to comment.

Sincerely,

Owen Graham

February 2, 2012

Re: SB 159 – Susitna State Forest

Dear Senator Menard:

The Alaska Trappers Association is a statewide organization with nearly one thousand members. We are active in Alaska wildlife issues and other resource conservation efforts. We support a very active trapper education program.

ATA supports the CONCEPT of a fourth state forest, but we have serious concerns about how this might affect other consumptive resource use, particularly trapping. Our concern stems primarily from experience with the way that the planning process for the Tanana Valley State Forest (TVSF) in Interior Alaska was politically manipulated by Governor Knowles.

Title 41 (specifically AS 41.17.200) makes it quite clear that the primary purpose of any state forest is to provide a timber base and the opportunity for active forest management and timber harvest. We support and applaud this goal. However, the TVSF Citizens Advisory Committee (a quasi-public agency) was stacked with non-consumptive users and allowed to corrupt and control the planning process to minimize logging, hunting, trapping and motorized access. That serious and systemic problem was exactly what happened when the TVSF Management Plan was rewritten. Environmental groups (enabled, supported and encouraged by the Governor's Office) tied up the planning process for years and manipulated the process. The Governor's Office, rather than the State Forester's

Office, controlled which specific individuals were appointed to the Citizens' Advisory Committee.

Thus, before we can wholeheartedly support your bill, we would prefer to see included some language to prevent or at least minimize this type of political manipulation of the planning process and attempts to preclude the very consumptive uses the State Forest was established to protect. This might entail a slight change to AS 41.17.200. Or perhaps it could be handled with a very clear statement of legislative intent. At a minimum, public discussion during the legislative process regarding this bill should thoroughly air and review the process that took place during the rewriting of the TVSF Management Plan.

Once this concern is addressed, we will be glad to comment on specific acreages and areas proposed for inclusion. However, until we can be sure that trapping (and timber harvest, for that matter) are really protected, we support only the CONCEPT of establishing the Susitna State Forest.

Thank you for the opportunity to comment on your proposal to establish a Susitna State Forest in South-Central Alaska.

Sincerely,

Joe Letarte

January 18, 2012

The Honorable Senator Linda Menard
Alaska State Capitol
Room 9
Juneau, Alaska 99801

Dear Senator Menard,

I am very pleased to send a letter of support for Senate Bill 159 which will establish the Susitna State Forest. This bill will establish a new State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

The Mat-Su Borough and its residents will benefit from a state forest in the form of an economic boost from a sustainable supply of timber from the state timber base. The Susitna State Forest would be managed as part of the State Forest System and would be open for multiple uses, including wildlife habitat, harvest, and recreational activities.

Demand for state timber sales is steady and growing, and personal use sales for fuel wood have also increased. Local mills depend heavily on state timber for their raw material supply and there is a growing interest in the use of wood in the form of round wood, chips or wood pellets for both commercial and residential space heating. At the same time, active management will also help reduce wild land fire risk by breaking up large fuel types and encouraging initial regeneration by hardwood species.

Thank you for the opportunity to endorse this project. Should you have any questions, please do not hesitate to contact my office.

Sincerely,

John M. Moosey
Borough Manager

JM/al

HOUSTON, ALASKA
RESOLUTION 12-05

A RESOLUTION OF THE HOUSTON CITY COUNCIL SUPORTING SENATE BILL 159, ESTABLISHING THE SUSITNA STATE FOREST.

WHEREAS, the Alaska State Department of Natural Resources manages over 9.5 million acres of forest land in the Borough and timber harvesting is allowed on 2.1 million acres of this land; and

WHEREAS, Senate Bill 159 would establish a new Susitna State Forest from state lands presently used for timber harvest; and

WHEREAS, the Susitna State Forest would include 33 parcels totaling approximately 763,200 acres; and

WHEREAS, demand for state timber sales is growing and personal use sales for fuel wood have increased in this region; and

WHEREAS, the lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities; and

WHEREAS, legislatively designating a State Forest would ensure that some land will remain available for long-term forest management.

NOW, THEREFORE, BE IT RESOLVED THAT: The Houston City Council supports the adoption of Senate Bill 159 establishing the Susitna State Forest.

PASSED AND APPROVED by a duly constituted quorum of the Houston City Council, Alaska this 9th day of February, 2012.

RE: Senate Bill 159, Susitna State Forest

Dear Senators Paskvan and Wagoner:

The Resource Development Council (RDC) is writing to support Senate Bill 159, which would create the Susitna State Forest over 763,200 acres of state land west of the Parks Highway.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The Alaska Department of Natural Resources currently manages 9.5 million acres of forest land in the Matanuska and Susitna Valleys. Of this land, timber management is allowed on approximately 2.1 million acres. Remaining land is designated for other uses, including land sales, recreation, water resources, and fish and wildlife habitat. Over 3.1 million acres is protected in legislatively-designated state parks, refuges, and public use areas.

The establishment of the Susitna State Forest would ensure that some land would remain available for long-term forest management. It would allow the Division of Forestry to more actively manage lands and vegetation to promote a variety of forest ages, which in turn would maximize the sustainable supply of timber from the state timber base and provide for more diverse and healthy habitats for wildlife. In addition, active management would also help reduce wildfire risk.

The Division of Forestry would manage the state forest for a long-term supply of timber to local processors and retain land in state ownership for other multiple uses. An enhanced long-term timber supply would help support the forest products industry, provide fuel for sustainable biomass energy projects, and create new jobs. It would also benefit the recreational sector as the state intends to develop access to the new state forest and encourage a broad range of multiple uses. These multiple uses, including annual timber harvests, would provide important economic opportunities to local communities, businesses, and residents.

It is important to keep in mind that SB 159 would establish a new state forest from state lands presently designated for forest management. The Susitna State Forest would be managed consistent with the management intent under the current Susitna Matanuska and the Southeast Susitna Area Plans. Alaska's Forest Resources Practices Act would apply to management activities on the forest and is designed to protect both fish habitat and water quality.

121 West Fireweed Lane, Suite 250, Anchorage, Alaska 99503-2035
Phone: 907-276-0700 Fax: 907-276-3887 Email: resources@akrdc.org Website: akrdc.org

If established, the Susitna State Forest would be the fourth state forest in Alaska. RDC supports SB 159 and believes the proposed state forest will be of much benefit to the local economy – creating and sustaining much needed jobs in the forest products industry while providing many other opportunities. We urge the committee to pass SB 159.

Sincerely,

Carl Portman
Deputy Director

Chris Maisch, State Forester

RUFFED GROUSE SOCIETY

DEDICATED TO IMPROVING THE ENVIRONMENT
FOR RUFFED GROUSE, WOODCOCK,
AND OTHER FOREST WILDLIFE
South Central Alaska Chapter
7650 Delridge Circle, Anchorage, Alaska 99507

February 9, 2012

The Honorable Linda Menard
State Capitol Room 9
Juneau, Alaska 99801

Dear Senator Menard,

The South Central Alaska Chapter of The Ruffed Grouse Society would like to thank you for submitting Senate Bill 159, creating a State Forest west of the Susitna River. We support creation of this Forest for a multitude of reasons not the least of which is the ability to manage our forest resources for wildlife.

The area west of the Susitna is one of the last remaining large blocks of state land in Southcentral Alaska. Establishing a state forest will ensure that the ever increasing population of this area has access to the outdoor recreation for which our state is famous and that our timber, land and wildlife resources can be managed for the benefit of all Alaskans. A state forest will also help establish and solidify a timber industry for this area. Managed timber harvests benefit wildlife that needs an age diversified forest to thrive and would help reduce the potential for devastating fires such as the Miller Reach catastrophe.

Designation as a State Forest is, we believe, one of the least restrictive land categories possible. It allows for most uses, but would require planning and thought before implementing changes such as roads, mining, campgrounds, etc. The one restriction we know of is transfer of land into private ownership. In the past, the State has been able to meet the recreational needs of the Southcentral population through land transfers to individuals. However, the population is growing and most land with easy access, such as that bordering lakes and rivers, has already been transferred. The net effect is to block access to the remaining area. We realize there are access corridors reserved, but these are not particularly effective when it means parking your plane in front of someone's cabin to walk the right of way to a stream. Land owners tend to view such as an intrusion and clashes ensue. Additionally, owners of private land tend to want to manage all lands within view of their property. This leads to conflict when trying to manage resources on state land. In the Matanuska Valley it has hobbled the ability of Forestry to conduct timber sales and ADF&G to implement habitat improvement projects.

As currently described in SB 159, the State Forest is a convoluted collection of detached parcels taking 16 pages to describe the boundaries. A person out for recreation will have a difficult time trying to determine if they are in or out of the forest. Future disposal of land surrounding these parcels could complicate road development and access to proposed timber sales. Private ownership bounding the forest could result in the NIMBY problems we are already dealing with in other parts of Southcentral.

451 MCCORMICK ROAD • CORAOPOLIS, PENNSYLVANIA 15108-9377
(412) 262-4044 FAX (412) 262-9207 (888) 564-6747 TOLL FREE
Email: rgs@ruffedgrousesociety.org www. ruffedgrousesociety.org

We would encourage you to expand the proposed boundaries to incorporate all unencumbered state land west of the Susitna River, south of the Denali Park Boundaries, North of Beluga Lake/Beluga River draining into Cook Inlet. As a minimum, the forest boundaries need to be simplified and expanded to create a buffer against treats to proper forest management by private ownership and to ensure reasonable access to the forest is available. This would preserve public access, ensure multiple use of our land, and enhance our wildlife resources for all Alaskans, now and in the future, while encouraging development of a comprehensive timber industry.

This forest will complement the three other state forests that have been successfully established. We urge the legislature to expand and pass SB 159 this session.

Sincerely,

Michael W. Griffin
President, SAC RGS

Alaska Chapter SCI
PO Box 770511
Eagle River, AK 99577
(907) 980-9018

February 9, 2012

The Honorable Linda Menard
Alaska State Senate
120 4th St. Rm 9
Juneau, AK 99801

Dear Senator Menard:

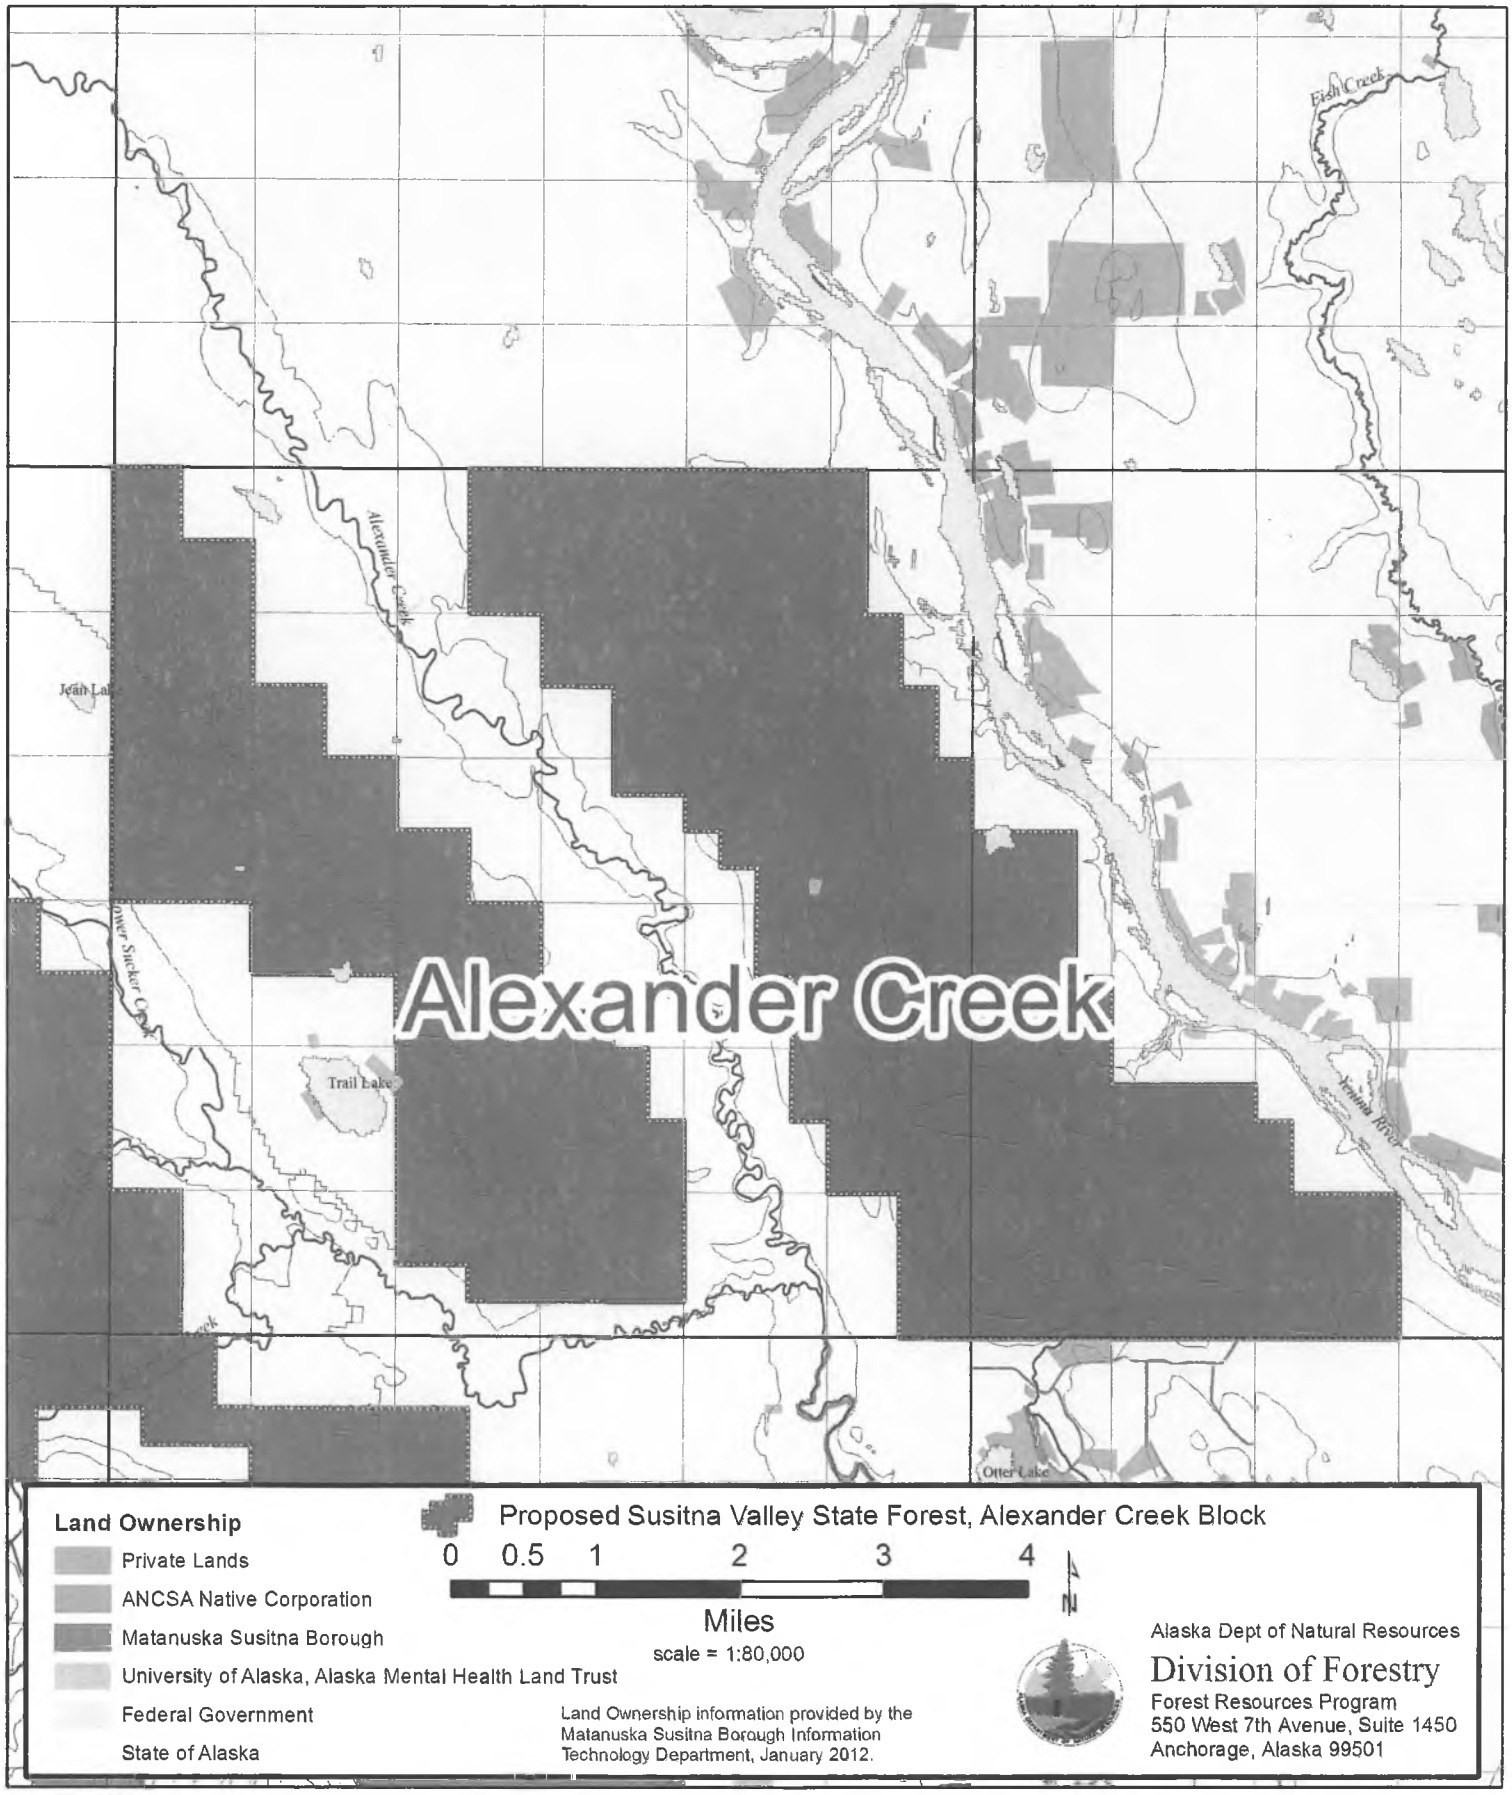
The Alaska Chapter of SCI is in support of SB 159 and commends you for your foresight in introducing this necessary piece of legislation.

As you may or may not know, SCI Alaska Chapter is not only the leading hunter-conservationist organization in Alaska, but is also SCI's leading chapter throughout the SCI network which includes over 105 countries and 260 chapters. Our mission is to protect the freedom to hunt through political advocacy and action, support for sound, science based conservation and wildlife management, and through humanitarian services.

In reviewing SB 159 and the applicable statutory guidelines in Title 41, we may wish to suggest amendments as this bill works its way through the process. We have some concerns as to whether the simple set aside of lands into a state forest will bring about desired results.

Our first concern is that suitable habitat is maintained for wildlife upon which rests one of the primary impetuses for recreation in Alaska. This concern leads us to believe that the bill does not go far enough in sequestering the necessary habitat to sustain wildlife populations through the establishment of contiguous parcels of land.

Our other major concern involves management practices. Although some lands may not be suitable for the growth of marketable timber, we maintain that those lands are nonetheless important for this state forest designation. Most of Alaska's wildlife depends heavily upon successional plant life. 'Climax forests do not provide the same level of benefit as does new forest lands. Since we do not encourage the proliferation of fire any longer in this area due to a variety of concerns, it is important that harvest of climax forests be allowed to produce suitable habitat for wildlife.



We look forward to working with you on this legislation and thank you again for introducing it.

Sincerely,

Eddie Grasser
Director of Government Affairs

Governor Sean Parnell
STATE OF ALASKA

January 13, 2012

The Honorable Gary Stevens
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Article III, Section 18 of the Alaska Constitution, I am transmitting a bill relating to the State's capital budget for Fiscal Year 2013 (FY 2013).

My budget proposal for FY 2013 continues our efforts to foster opportunity for job growth and economic opportunity for Alaskans. Our budget priorities are established in the State of Alaska's Constitution – resource development, transportation/infrastructure, education, and safe homes and communities for Alaskans.

The proposed capital budget totals $1.8 billion and includes resource development and infrastructure projects throughout Alaska such as roads to resources, State and federal highways, airports, the marine highway, ports and harbors, and water and sewer projects. The budget funds renewable energy and weatherization projects and includes two rural school construction projects and 14 school major maintenance projects. Year three of the five-year deferred maintenance program to take care of State assets is also requested.

Development of our natural resources is key to economic growth and opportunities for Alaskans. Our budget invests in access to these resources, streamlining permitting, and assessing strategic minerals potential throughout the state. Together with investments in transportation infrastructure, this budget positions Alaska for a future with more opportunity and more prosperity.

I look forward to working with the Legislature to finalize the capital budget for the upcoming fiscal year. Thank you for your consideration of this bill.

Sincerely,

Sean Parnell
Governor

Northern Region Material Site Reconnaissance (HD 7-11)		250,000	250,000	
O'Malley Trail and Sidewalk Northside Improvements (HD 17-32)		1,000,000	1,000,000	
Project Acceleration		2,500,000	2,500,000	

	Allocations	Appropriation Items	General Funds	Other Funds
Account (HD 1-40)				
Statewide - Community Bridge Rehabilitation/ Replacement (HD 1-40)		3,000,000	3,000,000	
Statewide Digital Mapping Initiative (HD 1-40)		15,936,168	3,687,030	12,249,138
Umiat - Airport Survey and Property Plan (HD 40)		250,000	250,000	
United States Army Corps of Engineers - Arctic Ports Study (HD 1-40)		1,500,000	1,000,000	500,000
Roads to Resources		**28,500,000**	**28,500,000**	
Ambler Mining District (HD 40)	4,000,000			
Klondike - Industrial Highway Ore Haul Refurbishment (HD 5)	2,500,000			
Resource Roads Program (HD 1-40)	2,000,000			
Road to Umiat - Foothills West Continued Environmental Impact Study Development (HD 40)	10,000,000			
Western Access - Road to Tanana (HD 6)	10,000,000			
Southeast Roads to Resources		**52,500,000**	**52,500,000**	
Bostwick to Valenar Bay Road (HD 1)	5,000,000			
Kake-Petersburg Road (HD 1-5)	40,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Mill Access Road Improvements (HD 1)	2,500,000			
SE Alaska Light Detection & Ranging (LIDAR) Mapping & Reconnaissance (HD 1-5)	5,000,000			
Safety		**35,530,000**	**34,030,000**	**1,500,000**
Alaska Aviation Safety Program (HD 1-40)	2,500,000			
Dalton Highway Corridor Aviation Improvements (HD 1-40)	3,000,000			
Highway Safety Corridor - Knik-Goose Bay Road Safety Corridor Improvements (HD 13-16)	10,000,000			
Highway Safety Corridor - Seward Highway - Widening to Address Congestion (HD 17-32)	10,000,000			
Highway Safety Corridor - Seward Highway at Alyeska Highway Intersection Improvements (HD 17-32)	5,000,000			
Highway Safety Corridor - Sterling Highway - Sterling to Soldotna Widening (HD 33-35)	1,730,000			
Kenai - Kalifornsky Beach Road and Bridge Access Road Pedestrian Paths (HD 33-35)	3,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Statewide - Structural Inspection of State Owned Facilities (HD 1-40)	300,000			
Municipal Harbor Facility		**23,093,100**	**23,093,100**	
Grant Fund (AS 29.60.800)				
Hoonah - Hoonah Harbor (HD 5)	207,500			
Hydaburg - Small Boat Harbor (HD 5)	2,698,000			
Juneau - Aurora Small Boat Harbor (HD 3-4)	2,000,000			
Nome - Nome Harbor (HD 39)	1,500,000			
Petersburg - North Harbor (HD 2)	3,500,000			
Seldovia - Small Boat Harbor (HD 33-35)	1,000,000			
Seward - Seward Harbor (HD 33-35)	1,180,000			
Sitka - Alaska Native Brotherhood (ANB) Harbor (HD 2)	4,250,000			
Skagway - Small Boat Harbor (HD 5)	5,000,000			
Unalaska - Robert Storrs International Harbor (HD 37)	1,757,600			
Asset Management		**46,000,000**	**29,500,000**	**16,500,000**
Aggregate Surfacing Materials (HD 1-40)	2,000,000			
Alaska Marine Highway	10,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
System - Vessel and Terminal Overhaul and Rehabilitation (HD 1-40)				
Capital Improvement Program Equipment Replacement (HD 1-40)	1,500,000			
Dalton Highway Corridor Surface Repairs (HD 1-40)	7,500,000			
Seward Highway - Milepost 75 - 90 Bridge Replacements (HD 17-32)	10,000,000			
State Equipment Fleet Replacement (HD 1-40)	15,000,000			
Regulatory Compliance		**3,000,000**	**3,000,000**	
Central Region - Sand Storage Buildings (HD 12-35)	1,000,000			
Emergency and Non-Routine Repairs (HD 1-40)	2,000,000			
Statewide Federal Programs		**88,650,000**	**2,900,000**	**85,750,000**
Alaska Mobility Coalition - Public and Community Transportation State Match (HD 1-40)	2,000,000			
Commercial Vehicle Enforcement Program (HD 1-40)	1,750,000			
Cooperative Reimbursable Projects (HD 1-40)	17,000,000			
Federal Contingency Projects (HD 1-40)	20,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Federal Emergency Projects (HD 1-40)	10,000,000			
Federal Transit Administration Grants (HD 1-40)	9,000,000			
Highway Safety Grants Program (HD 1-40)	8,000,000			
Other Federal Program Match (HD 1-40)	900,000			
Statewide Safety Program (HD 1-40)	20,000,000			
Airport Improvement Program		**227,038,158**	**11,700,000**	**215,338,158**
Federal-Aid Aviation State Match (HD 1-40)	11,700,000			
Alaska International Airport System - Contingency Funds (HD 17-32)	8,919,307			
Aniak - Airport Improvements (HD 6)	4,700,000			
Barrow - Airport Master Plan (HD 40)	500,000			
Bethel - Airport Snow Removal Equipment Building (HD 38)	1,000,000			
Chevak - Airport Runway Extension (HD 39)	14,000,000			
Cold Bay - Airport Rescue and Firefighting Building Expansion (HD 37)	600,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Cold Bay - Runway 14/32 Rehabilitation with Lighting System Replacement (HD 37)	16,000,000			
Coldfoot - Airport Improvements (HD 6)	1,900,000			
Emmonak - Snow Removal Equipment Building (HD 39)	910,000			
Fairbanks International Airport - Environmental Assessment and Cleanup (HD 7-11)	300,000			
Fairbanks International Airport - Equipment (HD 7-11)	510,000			
Galena - Airport Lighting (HD 6)	1,760,000			
Gulkana - Apron and Taxiway Pavement Rehabilitation (HD 6)	700,000			
Haines - Sand, Chemical and Snow Removal Equipment Storage Building (HD 5)	1,600,000			
Ketchikan - Airport Taxiways and Apron Rehabilitation (HD 1)	10,000,000			
King Salmon - Airport Improvements (HD 37)	2,000,000			
King Salmon - Sand Storage Building (HD 37)	1,300,000			
Kodiak - Airport	26,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Improvements (HD 36)				
Koliganek - Snow Removal Equipment Building (HD 37)	1,000,000			
Kotzebue - Airport and Runway Safety Area Improvements (HD 40)	12,415,000			
Kotzebue - Apron Expansion (HD 40)	200,000			
Little Diomede - Snow Removal Equipment Building (HD 39)	110,000			
Nome - Airport Runway Safety Area (RSA) Improvements (HD 39)	46,760,000			
Shishmaref - Airport Resurfacing (HD 40)	6,300,000			
Statewide - Aviation Preconstruction (HD 1-40)	10,000,000			
Statewide - Aviation Systems Plan Update (HD 1-40)	1,000,000			
Statewide - Various Airports Aeronautical Surveys (HD 1-40)	2,000,000			
Statewide - Various Airports Minor Surface Improvements (HD 1-40)	4,000,000			
Statewide - Various Airports Snow Removal and Safety Equipment (HD 1-40)	10,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Ted Stevens Anchorage International Airport - Equipment (HD 17-32)	5,680,693			
Ted Stevens Anchorage International Airport - Ground Transportation Lobby and Commercial Curbside Lobby Improvements (HD 17-32)	2,000,000			
Ted Stevens Anchorage International Airport - Kulis Improvements (HD 17-32)	2,550,000			
Ted Stevens Anchorage International Airport - Lake Hood Annual Improvements (HD 17-32)	5,263,158			
Ted Stevens Anchorage International Airport - Master Plan - Part 150 Noise Compatibility Study (HD 17-32)	360,000			
Ted Stevens Anchorage International Airport - Quick Turnaround Facility, Diesel Exhaust Fluid and Fuel Tracking System (HD 17-32)	2,200,000			
Ted Stevens Anchorage International Airport - Taxiway E and M	4,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Reconstruction (HD 17-32)				
Unalaska - Chemical Storage Building (HD 37)	5,000,000			
Yakutat - Airport Perimeter Fence (HD 5)	1,800,000			
Surface Transportation Program		**451,764,000**	**47,200,000**	**404,564,000**
Federal-Aid Highway State Match (HD 1-40)	47,200,000			
'6004 Program' Implementation (HD 1-40)	250,000			
Alaska Marine Highway System - Fast Vehicle Ferry Propulsion System Replacement (HD 1-40)	22,000,000			
Alaska Marine Highway System - Ferry Vessel Refurbishment (HD 1-40)	15,000,000			
Alaska Marine Highway System - Fleet Condition Survey Update (HD 1-40)	175,000			
Alaska Marine Highway System - Intelligent Transportation Systems Implementation Plan (HD 1-40)	250,000			
Alaska Marine Highway System - Terminal - Prince Rupert Ferry Terminal Acquisition and Refurbishment (HD 1-40)	9,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Aleknagik - Wood River Bridge (HD 37)	5,000,000			
Anchorage - Portage Glacier Road Embankment Stabilization (HD 17-32)	1,500,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Air Quality Public and Business Awareness Education Campaign (HD 17-32)	250,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Driftwood Bay Drive Study (HD 17-32)	150,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Eagle River Road Rehabilitation - Milepost 5.3 to 12.6 (HD 17-32)	29,800,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Pavement Replacement Program (HD 17-32)	8,202,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Regional Household Travel Survey (HD 17-32)	300,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Anchorage Metropolitan Area Transportation Solutions (AMATS) - South Anchorage Hillside Intersection Study (HD 17-32)	500,000			
Central Region - Long Term National Highway System Capital Project Planning (HD 12-35)	700,000			
Central Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 12-35)	20,000,000			
Central Region - Public Safety and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,300,000			
Central Region - Traffic Count Program (HD 12-35)	300,000			
Central Region - Travel Efficiency and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,000,000			
Cultural and Historic Resource Evaluation Streamlining (HD 1-40)	450,000			
Dalton Highway Milepost 0-9 Reconstruction (HD 1-40)	36,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Dillingham - Kanakanak Road Resurfacing (HD 37)	5,000,000			
Elliott Highway - Milepost 107.7 to 120.5 Rehabilitation (HD 6)	9,000,000			
Fairbanks - Goldstream Road Rehabilitation (HD 7-11)	17,000,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Curb Corner Upgrades (HD 7-11)	502,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Plack Road Bike/Pedestrian Facility (HD 7-11)	1,210,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Preventative Maintenance Program (HD 7-11)	1,425,000			
Geographic Information System (GIS) Development (IWAYS) (HD 1-40)	1,000,000			
Geotechnical Asset Management Program (HD 1-40)	2,250,000			
Glenn and Parks Highways Corridor Intelligent Transportation Systems	1,400,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Project (HD 13-16)				
Glenn Highway - Milepost 172 to 189 Rehabilitation (HD 12)	5,000,000			
Glenn Highway - Milepost 34 to 42 Reconstruction - Parks to Old Glenn Highway (HD 13-16)	20,000,000			
Glenn Highway - Milepost 49 Realignment (HD 13-16)	900,000			
Gustavus - Ferry Terminal Improvements (HD 5)	375,000			
Haines Highway Reconstruction - Milepost 3.5 to 21 (HD 5)	1,000,000			
Highway Data Port Enhancements (HD 1-40)	250,000			
Highway Performance Monitoring System (HPMS) Reporting (HD 1-40)	1,200,000			
Intelligent Transportation Systems Border Infrastructure (HD 1-40)	1,000,000			
Inter-Island Ferry Authority - Hollis/Clark Bay Ferry Terminal Improvements (HD 1)	500,000			
Juneau - Capital Transit Enhanced Service Plan (HD 3-4)	1,500,000			
Juneau - Glacier Highway	10,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Reconstruction - Fritz Cove to Seaview Avenue (HD 3-4)				
Juneau - Mendenhall Valley Street Dust Control (HD 3-4)	2,000,000			
Juneau - Yandukin Drive/ Shell Simmons Drive Pavement Rehabilitation (HD 3-4)	1,500,000			
Ketchikan - Waterfront Promenade (HD 1)	325,000			
King Cove to Cold Bay Corridor Road Extension (HD 37)	4,000,000			
Material Site Storm Water Management (HD 1-40)	300,000			
Nenana - Little Goldstream Creek Bridge Replacement (HD 6)	2,800,000			
Nome - Nome-Council Road - Milepost 4 to 16 (HD 39)	2,500,000			
Nordale Road - Pavement Rehabilitation (HD 7-11)	1,000,000			
Northern Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-40)	10,000,000			
Parks Highway - Milepost 237 - Riley Creek Bridge Replacement and Access	15,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Improvements (HD 7-11)				
Petersburg - Nordic Drive Refurbishment - Haugen Drive to Ferry Terminal (HD 2)	3,500,000			
Richardson Highway - Milepost 234 - Ruby Creek Bridge Replacement (HD 12)	2,000,000			
Road Weather Information System (RWIS) (HD 1-40)	1,400,000			
Safe Routes to Schools (HD 1-40)	1,000,000			
Seward Highway - Avalanche Detection Project (HD 17-32)	400,000			
Seward Highway - Corridor Study (HD 17-32)	2,400,000			
Seward Highway - Right of Way Study (HD 17-32)	1,500,000			
Shageluk - Airport Access Road Improvements (HD 6)	6,000,000			
Soldotna - Birch Street Signal at Sterling Highway (HD 33-35)	1,500,000			
Southeast Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-5)	5,000,000			
Standard Storm Water Best Management Practices (HD	100,000			

	Allocations	Appropriation Items	General Funds	Other Funds
1-40)				
State Historic Preservation Office - Oracle Database Support (HD 1-40)	300,000

(HD 1-40)				
It is the intent of the Legislature that the University of Alaska collaborate with the Federal Aviation Administration in establishing a research and development program and possible test facility for Unmanned Aerial Systems in Alaska. Unmanned Aerial Systems are already being utilized in Alaska in many ways and as the Arctic race progresses, they will become even more vital as a resource to the State and the Country.				
UAA Engineering Building Construction and Renovation (HD 17-32)		58,600,000	58,600,000	
UAF Assessing the Impacts of Ocean Acidification on Alaska's Fisheries (HD 1-40)		3,450,000	2,700,000	750,000
UAF Engineering Building Construction and Renovation (HD 7-11)		46,300,000	46,300,000	
UAF Kuskokwim Campus Maintenance, Upgrades, and Repairs (HD 36-38)		450,000	450,000	
University Receipt Authority for Capital Projects (HD 1-40)		15,000,000	15,000,000	
Deferred Maintenance				
Deferred Maintenance, Renewal, Repair and Equipment (HD 1-40)		37,500,000	37,500,000

St. Mary's Armory Courthouse Deferred Maintenance (HD 39)	40,000			
Valdez Court and Office Building Deferred Maintenance (HD 12)	144,200			

(SECTION 2 OF THIS ACT BEGINS ON THE NEXT PAGE)

* **Sec. 2.** The following sets out the funding by agency for the appropriations made in sec. 1 of this Act.

Funding Source	Amount
Department of Administration	
1004 Unrestricted General Fund Receipts	38,750,000
1005 General Fund/Program Receipts	550,000
1017 Group Health and Life Benefits Fund	374,000
1029 Public Employees Retirement Trust Fund	440,700
1034 Teachers Retirement Trust Fund	179,500
1042 Judicial Retirement System	4,600
1045 National Guard Retirement System	14,200
1147 Public Building Fund	3,000,000
*** Total Agency Funding ***	$43,313,000
Department of Commerce, Community and Economic Development	
1002 Federal Receipts	13,420,000
1003 General Fund Match	460,000
1004 Unrestricted General Fund Receipts	619,641,352
1007 Interagency Receipts	200,000
1108 Statutory Designated Program Receipts	600,000
1202 Anatomical Gift Awareness Fund	35,000
1210 Renewable Energy Grant Fund	25,870,659
1211 Cruise Ship Gambling Tax	4,500,000
*** Total Agency Funding ***	$664,727,011
Department of Corrections	
1004 Unrestricted General Fund Receipts	11,720,000
*** Total Agency Funding ***	$11,720,000
Department of Education and Early Development	
1004 Unrestricted General Fund Receipts	136,882,700
*** Total Agency Funding ***	$136,882,700
Department of Environmental Conservation	
1002 Federal Receipts	42,250,000

1003	General Fund Match	8,750,000
1004	Unrestricted General Fund Receipts	39,213,449
1052	Oil/Hazardous Release Prevention & Response Fund	750,000
1075	Alaska Clean Water Fund	2,583,400
1100	Alaska Drinking Water Fund	4,634,000
1108	Statutory Designated Program Receipts	500,000
*** Total Agency Funding ***		$98,680,849
Department of Fish and Game		
1002	Federal Receipts	9,375,000
1004	Unrestricted General Fund Receipts	12,050,000
1018	Exxon Valdez Oil Spill Trust	641,300
1024	Fish and Game Fund	825,000
1201	Commercial Fisheries Entry Commission Receipts	3,914,000
*** Total Agency Funding ***		$26,805,300
Office of the Governor		
1185	Election Fund	100,000
*** Total Agency Funding ***		$100,000
Department of Health and Social Services		
1002	Federal Receipts	7,098,400
1003	General Fund Match	1,873,150
1004	Unrestricted General Fund Receipts	17,540,090
*** Total Agency Funding ***		$26,511,640
Department of Labor and Workforce Development		
1004	Unrestricted General Fund Receipts	24,031,500
*** Total Agency Funding ***		$24,031,500
Department of Law		
1108	Statutory Designated Program Receipts	250,000
*** Total Agency Funding ***		$250,000

Corporations, Business and Professional Licensing				

It is the intent of the legislature that the Department of Commerce, Community and Economic Development proportionally distribute $3,400,000 general funds between the professional licensing boards and commissions based on the number of licenses issued for fiscal years 2007 through 2010. It is also the intent of the legislature that after the general funds are distributed, the professional licensing board's and commission's carryforward balances are made whole as of June 30, 2012 and will serve as a starting balance going forward into the future. Further, it is the intent of the legislature that the department completes an annual reconciliation of the individual professional board's and commission's carryforward balance to reports from the State's accounting system.

(SECTION 13 OF THIS ACT BEGINS ON THE NEXT PAGE)

*** Sec. 13.** FEDERAL AND OTHER PROGRAM RECEIPTS. (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as defined in AS 44.21.045(b), receipts of the University of Alaska as described in AS 37.05.146(b)(2), receipts of commercial fisheries test fishing operations under AS 37.05.146(c)(21), corporate receipts of the Alaska Housing Finance Corporation, corporate receipts of the Alaska Aerospace Corporation, Exxon Valdez oil spill trust receipts as defined in AS 37.05.146(b)(4), and receipts of the Alaska Fire Standards Council under AS 37.05.146(b)(5), that exceed the amounts appropriated by this Act are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) exceed the estimates appropriated by this Act, the appropriations from state funds for the affected program may be reduced by the excess if the reductions are consistent with applicable federal statutes.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) fall short of the estimates appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

*** Sec. 14.** FUND CAPITALIZATION. (a) The sum of $60,000,000 is appropriated from the general fund to the Alaska Gasline Inducement Act reimbursement fund (AS 43.90.400(a)) for the natural gas pipeline project construction inducement under AS 43.90.110(a)(1).

(b) The amount of federal receipts from the financial assistance award for emerging energy technology by the Denali Commission established under P.L. 105-277, estimated to be $1,700,000, is appropriated to the emerging energy technology fund (AS 42.45.375) for capital projects.

*** Sec. 15.** FUND TRANSFERS. The sum of $25,870,700 is appropriated from the general fund to the renewable energy grant fund (AS 42.45.045(a)).

*** Sec. 16.** INSURANCE CLAIMS. The amounts to be received in settlement of insurance claims for losses and the amounts to be received as recovery for losses are appropriated from the general fund to the

(1) state insurance catastrophe reserve account (AS 37.05.289(a)); or

(2) appropriate state agency to mitigate the loss.

*** Sec. 17.** NATIONAL PETROLEUM RESERVE - ALASKA IMPACT GRANT

PROGRAM. (a) The amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2012, estimated to be $4,896,872, is appropriated from that fund to the Department of Commerce, Community, and Economic Development for capital project grants under the National Petroleum Reserve - Alaska impact grant program to the following municipalities in the amounts stated:

MUNICIPALITY	PROJECT	ALLOCATION
(1) North Slope Borough	Permit tracking system	$ 242,000
(2) North Slope Borough	Mayor's job program	366,636
(3) North Slope Borough	Monitoring the subsistence fisheries in the Elson Lagoon and Kuk Inlet	109,000
(4) North Slope Borough	Meade River school counselor	243,819
(5) North Slope Borough	School counselor program	287,296
(6) City of Atqasuk	Local government and youth program	493,940
(7) City of Barrow	Local government operations and maintenance	1,600,000
(8) North Slope Borough	Land management and enforcement continuation	350,000

Improvements (HD 39)				
Shishmaref - Airport Resurfacing (HD 40)	6,300,000			
Statewide - Aviation Preconstruction (HD 1-40)	10,000,000			
Statewide - Aviation Systems Plan Update (HD 1-40)	1,000,000			
Statewide - Various Airports Aeronautical Surveys (HD 1-40)	2,000,000			
Statewide - Various Airports Minor Surface Improvements (HD 1-40)	4,000,000			
Statewide - Various Airports Snow Removal and Safety Equipment (HD 1-40)	10,000,000			
Ted Stevens Anchorage International Airport - Equipment (HD 17-32)	5,680,693			
Ted Stevens Anchorage International Airport - Ground Transportation Lobby and Commercial Curbside Lobby Improvements (HD 17-32)	2,000,000			
Ted Stevens Anchorage International Airport - Kulis Improvements (HD 17-32)	2,550,000			
Ted Stevens Anchorage	5,263,158			

	Allocations	Appropriation Items	General Funds	Other Funds
International Airport - Lake Hood Annual Improvements (HD 17-32)				
Ted Stevens Anchorage International Airport - Master Plan - Part 150 Noise Compatibility Study (HD 17-32)	360,000			
Ted Stevens Anchorage International Airport - Quick Turnaround Facility, Diesel Exhaust Fluid and Fuel Tracking System (HD 17-32)	2,200,000			
Ted Stevens Anchorage International Airport - Taxiway E and M Reconstruction (HD 17-32)	4,000,000			
Unalaska - Chemical Storage Building (HD 37)	5,000,000			
Yakutat - Airport Perimeter Fence (HD 5)	1,800,000			
Surface Transportation Program		**451,764,000**	**47,200,000**	**404,564,000**
Federal-Aid Highway State Match (HD 1-40)	47,200,000			
'6004 Program' Implementation (HD 1-40)	250,000			
Alaska Marine Highway System - Fast Vehicle Ferry Propulsion System	22,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Replacement (HD 1-40)				
Alaska Marine Highway System - Ferry Vessel Refurbishment (HD 1-40)	15,000,000			
Alaska Marine Highway System - Fleet Condition Survey Update (HD 1-40)	175,000			
Alaska Marine Highway System - Intelligent Transportation Systems Implementation Plan (HD 1-40)	250,000			
Alaska Marine Highway System - Terminal - Prince Rupert Ferry Terminal Acquisition and Refurbishment (HD 1-40)	9,000,000			
Aleknagik - Wood River Bridge (HD 37)	5,000,000			
Anchorage - Portage Glacier Road Embankment Stabilization (HD 17-32)	1,500,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Air Quality Public and Business Awareness Education Campaign (HD 17-32)	250,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Driftwood Bay	150,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Drive Study (HD 17-32)				
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Eagle River Road Rehabilitation - Milepost 5.3 to 12.6 (HD 17-32)	29,800,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Pavement Replacement Program (HD 17-32)	8,202,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Regional Household Travel Survey (HD 17-32)	300,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - South Anchorage Hillside Intersection Study (HD 17-32)	500,000			
Central Region - Long Term National Highway System Capital Project Planning (HD 12-35)	700,000			
Central Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 12-35)	20,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Central Region - Public Safety and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,300,000			
Central Region - Traffic Count Program (HD 12-35)	300,000			
Central Region - Travel Efficiency and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,000,000			
Cultural and Historic Resource Evaluation Streamlining (HD 1-40)	450,000			
Dalton Highway Milepost 0-9 Reconstruction (HD 1-40)	36,000,000			
Dillingham - Kanakanak Road Resurfacing (HD 37)	5,000,000			
Elliott Highway - Milepost 107.7 to 120.5 Rehabilitation (HD 6)	9,000,000			
Fairbanks - Goldstream Road Rehabilitation (HD 7-11)	17,000,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Curb Corner Upgrades (HD 7-11)	502,000			
Fairbanks Metropolitan Area Transportation System	1,210,000			

	Allocations	Appropriation Items	General Funds	Other Funds
(FMATS) - Plack Road Bike/Pedestrian Facility (HD 7-11)				
Fairbanks Metropolitan Area Transportation System (FMATS) - Preventative Maintenance Program (HD 7-11)	1,425,000			
Geographic Information System (GIS) Development (IWAYS) (HD 1-40)	1,000,000			
Geotechnical Asset Management Program (HD 1-40)	2,250,000			
Glenn and Parks Highways Corridor Intelligent Transportation Systems Project (HD 13-16)	1,400,000			
Glenn Highway - Milepost 172 to 189 Rehabilitation (HD 12)	5,000,000			
Glenn Highway - Milepost 34 to 42 Reconstruction - Parks to Old Glenn Highway (HD 13-16)	20,000,000			
Glenn Highway - Milepost 49 Realignment (HD 13-16)	900,000			
Gustavus - Ferry Terminal Improvements (HD 5)	375,000			
Haines Highway Reconstruction - Milepost	1,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
3.5 to 21 (HD 5)				
Highway Data Port Enhancements (HD 1-40)	250,000			
Highway Performance Monitoring System (HPMS) Reporting (HD 1-40)	1,200,000			
Intelligent Transportation Systems Border Infrastructure (HD 1-40)	1,000,000			
Inter-Island Ferry Authority - Hollis/Clark Bay Ferry Terminal Improvements (HD 1)	500,000			
Juneau - Capital Transit Enhanced Service Plan (HD 3-4)	1,500,000			
Juneau - Glacier Highway Reconstruction - Fritz Cove to Seaview Avenue (HD 3-4)	10,000,000			
Juneau - Mendenhall Valley Street Dust Control (HD 3-4)	2,000,000			
Juneau - Yandukin Drive/ Shell Simmons Drive Pavement Rehabilitation (HD 3-4)	1,500,000			
Ketchikan - Waterfront Promenade (HD 1)	325,000			
King Cove to Cold Bay Corridor Road Extension (HD 37)	4,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Material Site Storm Water Management (HD 1-40)	300,000			
Nenana - Little Goldstream Creek Bridge Replacement (HD 6)	2,800,000			
Nome - Nome-Council Road - Milepost 4 to 16 (HD 39)	2,500,000			
Nordale Road - Pavement Rehabilitation (HD 7-11)	1,000,000			
Northern Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-40)	10,000,000			
Parks Highway - Milepost 237 - Riley Creek Bridge Replacement and Access Improvements (HD 7-11)	15,000,000			
Petersburg - Nordic Drive Refurbishment - Haugen Drive to Ferry Terminal (HD 2)	3,500,000			
Richardson Highway - Milepost 234 - Ruby Creek Bridge Replacement (HD 12)	2,000,000			
Road Weather Information System (RWIS) (HD 1-40)	1,400,000			
Safe Routes to Schools (HD 1-40)	1,000,000			
Seward Highway - Avalanche Detection Project (HD	400,000			

	Allocations	Appropriation Items	General Funds	Other Funds
17-32)				
Seward Highway - Corridor Study (HD 17-32)	2,400,000			
Seward Highway - Right of Way Study (HD 17-32)	1,500,000			
Shageluk - Airport Access Road Improvements (HD 6)	6,000,000			
Soldotna - Birch Street Signal at Sterling Highway (HD 33-35)	1,500,000			
Southeast Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-5)	5,000,000			
Standard Storm Water Best Management Practices (HD 1-40)	100,000			
State Historic Preservation Office - Oracle Database Support (HD 1-40)	300,000			
Statewide - Bicycle/ Pedestrian Facilities Rehabilitation and Improvements (HD 1-40)	500,000			
Statewide - Bridge Inventory, Inspection, Monitoring, Rehabilitation and Replacement Program (HD 1-40)	8,000,000			
Statewide - Civil Rights	150,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Program (HD 1-40)				
Statewide - Highway Data Equipment Acquisition and Installation (HD 1-40)	2,000,000			
Statewide - Highway Fuel Tax Enforcement (HD 1-40)	100,000			
Statewide - Highway Safety Improvement Program (HSIP) (HD 1-40)	10,000,000			
Statewide - Long Range Transportation Policy Plan (LRTPP) Update (HD 1-40)	1,000,000			
Statewide - National Highway Institute and Transit Institute Training (HD 1-40)	750,000			
Statewide - National Highway System Passing Lanes (HD 1-40)	10,000,000			
Statewide - Planning Work Program (HD 1-40)	8,000,000			
Statewide - Research Program (HD 1-40)	1,300,000			
Statewide - Scenic Byways Grants (HD 1-40)	750,000			
Statewide - Seismic Retrofit - Bridges (HD 1-40)	2,000,000			
Statewide - Strategic Traffic Safety Plan (HD 1-40)	400,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Statewide - Urban Planning Program (HD 1-40)	1,100,000			
Statewide - Weigh-in-Motion Equipment (HD 1-40)	1,000,000			
Sterling Highway - Milepost 157 to 169 Rehabilitation - Anchor Point to Baycrest Hill (HD 33-35)	2,500,000			
Sterling Highway - Milepost 37 to 45 Resurfacing (HD 33-35)	7,350,000			
Surface Transportation Preconstruction (HD 1-40)	45,000,000			
Transportation Asset Management Program (HD 1-40)	1,500,000			
Wasilla - Lucus Road Improvements (HD 13-16)	1,100,000			
Whittier - Maintenance and Operations (HD 17-32)	2,900,000			
Deferred Maintenance, Renewal, Repair and Equipment		**27,100,000**	**27,100,000**	
Alaska Marine Highway System Deferred Maintenance (HD 1-40)	3,000,000			
Aviation Deferred Maintenance (HD 1-40)	3,500,000			
Harbors Deferred Maintenance (HD 2)	600,000			
Highways Deferred	16,900,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Maintenance (HD 1-40)				
Statewide Facilities Deferred Maintenance (HD 1-40)	3,100,000			
* * * * *		* * * * *		
* * * * * **University of Alaska** * * * * *				
* * * * *		* * * * *		
Banfield Hall Dormitory Project (HD 1-5)		6,250,000	6,250,000	
Juneau Campus Mining Workforce Development (HD 3-4)		190,000	190,000	
Kachemak Bay Campus - Pioneer Avenue Building Addition (HD 33-35)		50,000	50,000	
Research and Development of Unmanned Aerial Systems (HD 1-40)		5,000,000	5,000,000	
It is the intent of the Legislature that the University of Alaska collaborate with the Federal Aviation Administration in establishing a research and development program and possible test facility for Unmanned Aerial Systems in Alaska. Unmanned Aerial Systems are already being utilized in Alaska in many ways and as the Arctic race progresses, they will become even more vital as a resource to the State and the Country.				
UAA Engineering Building Construction and Renovation (HD 17-32)		58,600,000	58,600,000	
UAF Assessing the Impacts of Ocean Acidification on Alaska's Fisheries (HD 1-40)		3,450,000	2,700,000	750,000
UAF Engineering Building		46,300,000	46,300,000	

	Allocations	Appropriation Items	General Funds	Other Funds
Construction and Renovation (HD 7-11)				
UAF Kuskokwim Campus Maintenance, Upgrades, and Repairs (HD 36-38)		450,000	450,000	
University Receipt Authority for Capital Projects (HD 1-40)		15,000,000	15,000,000	
Deferred Maintenance				
Deferred Maintenance, Renewal, Repair and Equipment (HD 1-40)		37,500,000	37,500,000

(SECTION 3 OF THIS ACT BEGINS ON THE NEXT PAGE)

* **Sec. 3.** The following sets out the statewide funding for the appropriations made in sec. 1 of this Act.

Funding Source		Amount
Unrestricted General Funds		
1003	General Fund Match	74,682,750
1004	Unrestricted General Fund Receipts	1,387,619,421
1082	AMHS Vessel Replacement Fund	60,000,000
1139	Alaska Housing Finance Corporation Dividend	15,859,800
1140	Alaska Industrial Development and Export Authority Dividend	20,400,000
1211	Cruise Ship Gambling Tax	4,500,000
1213	Alaska Housing Capital Corporation Receipts	21,000,000
Total Unrestricted General Funds		$1,584,061,971
Designated General Funds		
1005	General Fund/Program Receipts	1,050,000
1048	University of Alaska Restricted Receipts	17,250,000
1052	Oil/Hazardous Release Prevention & Response Fund	750,000
1195	Special Vehicle Registration Receipts	250,000
1201	Commercial Fisheries Entry Commission Receipts	3,914,000
1202	Anatomical Gift Awareness Fund	35,000
1210	Renewable Energy Grant Fund	25,870,659
Total Designated General Funds		$49,119,659
Other Non-Duplicated Funds		
1017	Group Health and Life Benefits Fund	374,000
1018	Exxon Valdez Oil Spill Trust	641,300
1024	Fish and Game Fund	825,000
1027	International Airports Revenue Fund	810,000
1029	Public Employees Retirement Trust Fund	440,700
1034	Teachers Retirement Trust Fund	179,500

1042	Judicial Retirement System	4,600
1045	National Guard Retirement System	14,200
1105	Permanent Fund Gross Receipts	50,000
1108	Statutory Designated Program Receipts	16,356,000
Total Other Non-Duplicated Funds		$19,695,300
Federal Funds		
1002	Federal Receipts	807,441,918
Total Federal Funds		$807,441,918
Other Duplicated Funds		
1007	Interagency Receipts	200,000
1008	General Obligation Bonds	5,000,000
1026	Highways Equipment Working Capital Fund	15,000,000
1061	Capital Improvement Project Receipts	1,900,000
1075	Alaska Clean Water Fund	2,583,400
1100	Alaska Drinking Water Fund	4,634,000
1112	International Airports Construction Fund	13,761,678
1147	Public Building Fund	3,000,000
1185	Election Fund	100,000
Total Other Duplicated Funds		$46,179,078

(SECTION 4 OF THIS ACT BEGINS ON THE NEXT PAGE)

* **Sec. 4.** The following appropriation items are for capital projects and grants from the general fund or other funds as set out in section 5 of this Act by funding source to the agencies named for the purposes expressed and lapse under AS 37.25.020, unless otherwise noted.

	Allocations	Appropriation Items	General Funds	Other Funds

Corporations, Business and Professional Licensing				

It is the intent of the legislature that the Department of Commerce, Community and Economic Development proportionally distribute $3,400,000 general funds between the professional licensing boards and commissions based on the number of licenses issued for fiscal years 2007 through 2010. It is also the intent of the legislature that after the general funds are distributed, the professional licensing board's and commission's carryforward balances are made whole as of June 30, 2012 and will serve as a starting balance going forward into the future. Further, it is the intent of the legislature that the department completes an annual reconciliation of the individual professional board's and commission's carryforward balance to reports from the State's accounting system.

(SECTION 13 OF THIS ACT BEGINS ON THE NEXT PAGE)

*** Sec. 13.** FEDERAL AND OTHER PROGRAM RECEIPTS. (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as defined in AS 44.21.045(b), receipts of the University of Alaska as described in AS 37.05.146(b)(2), receipts of commercial fisheries test fishing operations under AS 37.05.146(c)(21), corporate receipts of the Alaska Housing Finance Corporation, corporate receipts of the Alaska Aerospace Corporation, Exxon Valdez oil spill trust receipts as defined in AS 37.05.146(b)(4), and receipts of the Alaska Fire Standards Council under AS 37.05.146(b)(5), that exceed the amounts appropriated by this Act are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) exceed the estimates appropriated by this Act, the appropriations from state funds for the affected program may be reduced by the excess if the reductions are consistent with applicable federal statutes.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) fall short of the estimates appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

*** Sec. 14.** FUND CAPITALIZATION. (a) The sum of $60,000,000 is appropriated from the general fund to the Alaska Gasline Inducement Act reimbursement fund (AS 43.90.400(a)) for the natural gas pipeline project construction inducement under AS 43.90.110(a)(1).

(b) The amount of federal receipts from the financial assistance award for emerging energy technology by the Denali Commission established under P.L. 105-277, estimated to be $1,700,000, is appropriated to the emerging energy technology fund (AS 42.45.375) for capital projects.

*** Sec. 15.** FUND TRANSFERS. The sum of $25,870,700 is appropriated from the general fund to the renewable energy grant fund (AS 42.45.045(a)).

*** Sec. 16.** INSURANCE CLAIMS. The amounts to be received in settlement of insurance claims for losses and the amounts to be received as recovery for losses are appropriated from the general fund to the

(1) state insurance catastrophe reserve account (AS 37.05.289(a)); or

(2) appropriate state agency to mitigate the loss.

*** Sec. 17.** NATIONAL PETROLEUM RESERVE - ALASKA IMPACT GRANT

PROGRAM. (a) The amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2012, estimated to be $4,896,872, is appropriated from that fund to the Department of Commerce, Community, and Economic Development for capital project grants under the National Petroleum Reserve - Alaska impact grant program to the following municipalities in the amounts stated:

MUNICIPALITY	PROJECT	ALLOCATION
(1) North Slope Borough	Permit tracking system	$ 242,000
(2) North Slope Borough	Mayor's job program	366,636
(3) North Slope Borough	Monitoring the subsistence fisheries in the Elson Lagoon and Kuk Inlet	109,000
(4) North Slope Borough	Meade River school counselor	243,819
(5) North Slope Borough	School counselor program	287,296
(6) City of Atqasuk	Local government and youth program	493,940
(7) City of Barrow	Local government operations and maintenance	1,600,000
(8) North Slope Borough	Land management and enforcement continuation	350,000
(9) City of Nuiqsut	Local government operations and maintenance	718,163
(10) City of Wainwright	Wainwright local government operations	228,000
(11) City of Nuiqsut	Youth center operations and maintenance	258,018

(b) If the amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2012, is less than the sum of the allocations made in (a) of this section, the Department of Commerce, Community, and Economic Development shall work with the

municipalities listed in (a) of this section to reduce the sum of the allocations made in (a) of this section to equal the amount received.

*** Sec. 18.** DEPARTMENT OF CORRECTIONS. The unexpended and unobligated balance, not to exceed $100,000, of the appropriation made in sec. 1, ch. 5, FSSLA 2011, page 79, lines 16 - 18 (Department of Corrections, Seward, Spring Creek Correctional Center Seward land transfer - $250,000) is reappropriated to the Department of Corrections for the combined Hiland Mountain Correctional Center land transfer.

*** Sec. 19.** DEPARTMENT OF FISH AND GAME. (a) Section 10, ch. 29, SLA 2008, page 67, lines 19 - 20, is amended to read:

	APPROPRIATION ITEMS	OTHER FUNDS
Fish and Game Licensing **Program Improvements** [POINT OF SALE SYSTEM] (HD 1-40)	200,000	200,000

(b) The unexpended and unobligated balance, estimated to be $100,000, of the appropriation made in sec. 7, ch. 43, SLA 2010, page 26, lines 20 - 22 (Department of Fish and Game, crew member fishery participation database development - $100,000) is reappropriated to the Department of Fish and Game for analyzing system requirements for integration of the commercial operator annual report data system with the department's new electronic data system for the fiscal year ending June 30, 2013.

(c) An amount equal to the proceeds from the sale conducted during the fiscal years ending June 30, 2013, June 30, 2014, or June 30, 2015, of a research vessel owned by the Department of Fish and Game, including parts and inventory, is appropriated from the general fund to the Department of Fish and Game for the repair, maintenance, or replacement of vessels or equipment.

*** Sec. 20.** DEPARTMENT OF HEALTH AND SOCIAL SERVICES. An amount equal to 50 percent of the revenue collected during the fiscal year ending June 30, 2011, from the alcoholic beverage tax (AS 43.60.010), not to exceed $19,300,400, is appropriated from the general fund to the Department of Health and Social Services for behavioral health grants under AS 47.37.030 for the fiscal years ending June 30, 2013, June 30, 2014, and June 30, 2015.

*** Sec. 21.** DEPARTMENT OF LAW. (a) Section 30(a), ch. 5, FSSLA 2011, is amended to read:

(a) The sum of **$13,550,000** [$9,000,000] is appropriated from the general fund to the Department of Law, BP corrosion, to fund the costs of outside counsel, document management, experts, and litigation in the British Petroleum Exploration (Alaska) Inc., corrosion case for the fiscal years ending June 30, 2012, and June 30, 2013.

(b) Section 10(a), ch. 5, SLA 2012, is amended to read:

(a) The sum of **$20,743,999** [$770,772] is appropriated from the general fund to the Department of Law, civil division, deputy attorney general's office, for the purpose of paying judgments and settlements against the state for the fiscal year ending June 30, 2012.

*** Sec. 22.** DEPARTMENT OF PUBLIC SAFETY. Section 1, ch. 43, SLA 2010, page 3, lines 8 - 9, as amended by sec. 12, ch. 1, FSSLA 2011, is amended to read:

	APPROPRIATION ITEMS	GENERAL FUND
Crime Lab Replacement **and Repair, Renovation, and Reuse of Existing Crime Lab Building** (HD 17-32)	70,750,000	70,750,000

*** Sec. 23.** DEPARTMENT OF REVENUE. The amount necessary for the purpose, estimated to be $3,559,200, is appropriated from the general fund to the Department of Revenue, state bond committee, to pay expenses incident to the sale and issuance of general obligation bonds for transportation projects for the fiscal year ending June 30, 2013.

*** Sec. 24.** DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES. (a) The unexpended and unobligated balances, estimated to be $4,000,000, of the appropriations made in sec. 10, ch. 29, SLA 2008, page 44, lines 18 - 19 (Anchorage, 88th Avenue upgrade (RTP) - $1,000,000), and sec. 1, ch. 5, FSSLA 2011, page 5, lines 27 - 30 (Anchorage, 88th Avenue upgrade - Spruce Brook Street to Elmore Road - $3,000,000) are reappropriated to the Department of Transportation and Public Facilities for an 88th Avenue upgrade, Spruce Brook Street to Elmore Road.

(b) The unexpended and unobligated general fund balance, estimated to be

$1,686,000, of the appropriation made in sec. 1, ch. 1, SSSLA 2002, page 49, line 11, and allocated on page 49, lines 19 - 20 (Department of Transportation and Public Facilities, statewide federal programs, federal-aid highway state match - $40,817,520) is reappropriated to the Department of Transportation and Public Facilities for construction of a sand storage building in Girdwood.

(c) The unexpended and unobligated balances, estimated to be a total of $1,570,000, of the appropriations made in sec. 1, ch. 1, SSSLA 2002, page 49, line 11, and allocated on page 49, lines 17 - 18 (Department of Transportation and Public Facilities, statewide federal programs, federal-aid aviation state match - $9,725,000) and sec. 10, ch. 29, SLA 2008, page 77, lines 11 - 13 (Department of Transportation and Public Facilities, Jim River (Dalton Highway) maintenance station replacement - $6,000,000) are reappropriated to the Department of Transportation and Public Facilities for replacement of the Seward Highway maintenance station.

* **Sec. 25.** OFFICE OF THE GOVERNOR. The sum of $1,000,000 is appropriated from the general fund to the Office of the Governor, redistricting board, for legal and other professional services relating to redistricting matters for the fiscal years ending June 30, 2012, and June 30, 2013.

* **Sec. 26.** HOUSE DISTRICTS 3 - 4. The unexpended and unobligated balance of the appropriation made in sec. 1, ch. 82, SLA 2006, page 85, lines 30 - 31, as amended by sec. 21(a), ch. 15, SLA 2009 (Gastineau Channel Crossing EIS and dredging and North Douglas Highway extension - $3,000,000) is reappropriated to the Department of Commerce, Community, and Economic Development for payment as a grant under AS 37.05.315 to the City and Borough of Juneau for the North Douglas Highway extension.

* **Sec. 27.** HOUSE DISTRICT 6. The unexpended and unobligated balance, estimated to be $43,000, of the appropriation made in sec. 7, ch. 29, SLA 2008, page 16, lines 18 - 21 (Kuskokwim Public Broadcasting Corporation, power grid extension to KSKO transmitter - $50,000) is reappropriated to the Department of Commerce, Community, and Economic Development for payment as a grant under AS 37.05.316 to the Kuskokwim Public Broadcasting Corporation for maintenance of the station power plant for the fiscal years ending June 30, 2013, June 30, 2014, and June 30, 2015.

* **Sec. 28.** HOUSE DISTRICTS 7 - 11. (a) The unexpended and unobligated balances,

estimated to be a total of $77,941, of the appropriations made in sec. 1, ch. 30, SLA 2007, page 56, lines 24 - 28 (Fairbanks North Star Borough, Volunteer Fire Department Station No. 3 exhaust and ventilation system - $96,638) and sec. 1, ch. 30, SLA 2007, page 56, lines 29 - 33 (Fairbanks North Star Borough, Volunteer Fire Department Station No. 4 exhaust and ventilation system - $105,000) are reappropriated to the Department of Commerce, Community, and Economic Development for payment as a grant under AS 37.05.315 to the Fairbanks North Star Borough for the purchase of protective equipment for volunteer fire department personnel.

(b) The unexpended and unobligated balance, estimated to be $1,675,815, of the appropriation made in sec. 43(b), ch. 43, SLA 2010, (Fairbanks North Star Borough, tourism and community development and an ice park) is reappropriated to the Department of Commerce, Community, and Economic Development for payment as a grant under AS 37.05.316 to World I.C.E. Association, Inc., dba Ice Alaska, for property purchase for development of an ice park.

'6004 Program' Implementation (HD 1-40)	250,000			
Alaska Marine Highway System - Fast Vehicle Ferry Propulsion System Replacement (HD 1-40)	22,000,000			
Alaska Marine Highway System - Ferry Vessel Refurbishment (HD 1-40)	15,000,000			
Alaska Marine Highway System - Fleet Condition Survey Update (HD 1-40)	175,000			
Alaska Marine Highway System - Intelligent Transportation Systems Implementation Plan (HD 1-40)	250,000			
Alaska Marine Highway System - Terminal - Prince Rupert Ferry Terminal Acquisition and Refurbishment (HD 1-40)	9,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Aleknagik - Wood River Bridge (HD 37)	5,000,000			
Anchorage - Portage Glacier Road Embankment Stabilization (HD 17-32)	1,500,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Air Quality Public and Business Awareness Education Campaign (HD 17-32)	250,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Driftwood Bay Drive Study (HD 17-32)	150,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Eagle River Road Rehabilitation - Milepost 5.3 to 12.6 (HD 17-32)	29,800,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Pavement Replacement Program (HD 17-32)	8,202,000			
Anchorage Metropolitan Area Transportation Solutions (AMATS) - Regional Household Travel Survey (HD 17-32)	300,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Anchorage Metropolitan Area Transportation Solutions (AMATS) - South Anchorage Hillside Intersection Study (HD 17-32)	500,000			
Central Region - Long Term National Highway System Capital Project Planning (HD 12-35)	700,000			
Central Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 12-35)	20,000,000			
Central Region - Public Safety and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,300,000			
Central Region - Traffic Count Program (HD 12-35)	300,000			
Central Region - Travel Efficiency and Reduced Maintenance Intelligent Transportation Systems Project (HD 12-35)	1,000,000			
Cultural and Historic Resource Evaluation Streamlining (HD 1-40)	450,000			
Dalton Highway Milepost 0-9 Reconstruction (HD 1-40)	36,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Dillingham - Kanakanak Road Resurfacing (HD 37)	5,000,000			
Elliott Highway - Milepost 107.7 to 120.5 Rehabilitation (HD 6)	9,000,000			
Fairbanks - Goldstream Road Rehabilitation (HD 7-11)	17,000,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Curb Corner Upgrades (HD 7-11)	502,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Plack Road Bike/Pedestrian Facility (HD 7-11)	1,210,000			
Fairbanks Metropolitan Area Transportation System (FMATS) - Preventative Maintenance Program (HD 7-11)	1,425,000			
Geographic Information System (GIS) Development (IWAYS) (HD 1-40)	1,000,000			
Geotechnical Asset Management Program (HD 1-40)	2,250,000			
Glenn and Parks Highways Corridor Intelligent Transportation Systems	1,400,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Project (HD 13-16)				
Glenn Highway - Milepost 172 to 189 Rehabilitation (HD 12)	5,000,000			
Glenn Highway - Milepost 34 to 42 Reconstruction - Parks to Old Glenn Highway (HD 13-16)	20,000,000			
Glenn Highway - Milepost 49 Realignment (HD 13-16)	900,000			
Gustavus - Ferry Terminal Improvements (HD 5)	375,000			
Haines Highway Reconstruction - Milepost 3.5 to 21 (HD 5)	1,000,000			
Highway Data Port Enhancements (HD 1-40)	250,000			
Highway Performance Monitoring System (HPMS) Reporting (HD 1-40)	1,200,000			
Intelligent Transportation Systems Border Infrastructure (HD 1-40)	1,000,000			
Inter-Island Ferry Authority - Hollis/Clark Bay Ferry Terminal Improvements (HD 1)	500,000			
Juneau - Capital Transit Enhanced Service Plan (HD 3-4)	1,500,000			
Juneau - Glacier Highway	10,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Reconstruction - Fritz Cove to Seaview Avenue (HD 3-4)				
Juneau - Mendenhall Valley Street Dust Control (HD 3-4)	2,000,000			
Juneau - Yandukin Drive/ Shell Simmons Drive Pavement Rehabilitation (HD 3-4)	1,500,000			
Ketchikan - Waterfront Promenade (HD 1)	325,000			
King Cove to Cold Bay Corridor Road Extension (HD 37)	4,000,000			
Material Site Storm Water Management (HD 1-40)	300,000			
Nenana - Little Goldstream Creek Bridge Replacement (HD 6)	2,800,000			
Nome - Nome-Council Road - Milepost 4 to 16 (HD 39)	2,500,000			
Nordale Road - Pavement Rehabilitation (HD 7-11)	1,000,000			
Northern Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-40)	10,000,000			
Parks Highway - Milepost 237 - Riley Creek Bridge Replacement and Access	15,000,000			

	Allocations	Appropriation Items	General Funds	Other Funds
Improvements (HD 7-11)				
Petersburg - Nordic Drive Refurbishment - Haugen Drive to Ferry Terminal (HD 2)	3,500,000			
Richardson Highway - Milepost 234 - Ruby Creek Bridge Replacement (HD 12)	2,000,000			
Road Weather Information System (RWIS) (HD 1-40)	1,400,000			
Safe Routes to Schools (HD 1-40)	1,000,000			
Seward Highway - Avalanche Detection Project (HD 17-32)	400,000			
Seward Highway - Corridor Study (HD 17-32)	2,400,000			
Seward Highway - Right of Way Study (HD 17-32)	1,500,000			
Shageluk - Airport Access Road Improvements (HD 6)	6,000,000			
Soldotna - Birch Street Signal at Sterling Highway (HD 33-35)	1,500,000			
Southeast Region - National Highway System and Non-National Highway System Pavement and Bridge Refurbishment (HD 1-5)	5,000,000			
Standard Storm Water Best Management Practices (HD	100,000			

	Allocations	Appropriation Items	General Funds	Other Funds
1-40)				
State Historic Preservation Office - Oracle Database Support (HD 1-40)	300,000			
Statewide - Bicycle/ Pedestrian Facilities Rehabilitation and Improvements (HD 1-40)	500,000

(HD 1-40)				
It is the intent of the Legislature that the University of Alaska collaborate with the Federal Aviation Administration in establishing a research and development program and possible test facility for Unmanned Aerial Systems in Alaska. Unmanned Aerial Systems are already being utilized in Alaska in many ways and as the Arctic race progresses, they will become even more vital as a resource to the State and the Country.

Corporations, Business and Professional Licensing				

It is the intent of the legislature that the Department of Commerce, Community and Economic Development proportionally distribute $3,400,000 general funds between the professional licensing boards and commissions based on the number of licenses issued for fiscal years 2007 through 2010. It is also the intent of the legislature that after the general funds are distributed, the professional licensing board's and commission's carryforward balances are made whole as of June 30, 2012 and will serve as a starting balance going forward into the future. Further, it is the intent of the legislature that the department completes an annual reconciliation of the individual professional board's and commission's carryforward balance to reports from the State's accounting system.

(SECTION 13 OF THIS ACT BEGINS ON THE NEXT PAGE)

*** Sec. 13.** FEDERAL AND OTHER PROGRAM RECEIPTS. (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as defined in AS 44.21.045(b), receipts of the University of Alaska as described in AS 37.05.146(b)(2), receipts of commercial fisheries test fishing operations under AS 37.05.146(c)(21), corporate receipts of the Alaska Housing Finance Corporation, corporate receipts of the Alaska Aerospace Corporation, Exxon Valdez oil spill trust receipts as defined in AS 37.05.146(b)(4), and receipts of the Alaska Fire Standards Council under AS 37.05.146(b)(5), that exceed the amounts appropriated by this Act are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) exceed the estimates appropriated by this Act, the appropriations from state funds for the affected program may be reduced by the excess if the reductions are consistent with applicable federal statutes.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) fall short of the estimates appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

*** Sec. 14.** FUND CAPITALIZATION. (a) The sum of $60,000,000 is appropriated from the general fund to the Alaska Gasline Inducement Act reimbursement fund (AS 43.90.400(a)) for the natural gas pipeline project construction inducement under AS 43.90.110(a)(1).

(b) The amount of federal receipts from the financial assistance award for emerging energy technology by the Denali Commission established under P.L. 105-277, estimated to be $1,700,000, is appropriated to the emerging energy technology fund (AS 42.45.375) for capital projects.

*** Sec. 15.** FUND TRANSFERS. The sum of $25,870,700 is appropriated from the general fund to the renewable energy grant fund (AS 42.45.045(a)).

*** Sec. 16.** INSURANCE CLAIMS. The amounts to be received in settlement of insurance claims for losses and the amounts to be received as recovery for losses are appropriated from the general fund to the

(1) state insurance catastrophe reserve account (AS 37.05.289(a)); or

(2) appropriate state agency to mitigate the loss.

*** Sec. 17.** NATIONAL PETROLEUM RESERVE - ALASKA IMPACT GRANT

PROGRAM. (a) The amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2012, estimated to be $4,896,872, is appropriated from that fund to the Department of Commerce, Community, and Economic Development for capital project grants under the National Petroleum Reserve - Alaska impact grant program to the following municipalities in the amounts stated:

MUNICIPALITY	PROJECT	ALLOCATION
(1) North Slope Borough	Permit tracking system	$ 242,000
(2) North Slope Borough	Mayor's job program	366,636
(3) North Slope Borough	Monitoring the subsistence fisheries in the Elson Lagoon and Kuk Inlet	109,000
(4) North Slope Borough	Meade River school counselor	243,819
(5) North Slope Borough	School counselor program	287,296
(6) City of Atqasuk	Local government and youth program	493,940
(7) City of Barrow	Local government operations and maintenance	1,600,000
(8) North Slope Borough	Land management and enforcement continuation	350,000
(9) City of Nuiqsut	Local government operations and maintenance	718,163
(10) City of Wainwright	Wainwright local government operations	228,000
(11) City of Nuiqsut	Youth center operations and maintenance	258,018

(b) If the amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(*l*) or former 42 U.S.C. 6508 by August 31, 2012, is less than the sum of the allocations made in (a) of this section, the Department of Commerce, Community, and Economic Development shall work with the

municipalities listed in (a) of this section to reduce the sum of the allocations made in (a) of this section to equal the amount received.

*** Sec. 18.** DEPARTMENT OF CORRECTIONS. The unexpended and unobligated balance, not to exceed $100,000, of the appropriation made in sec. 1, ch. 5, FSSLA 2011, page 79, lines 16 - 18 (Department of Corrections, Seward, Spring Creek Correctional Center Seward land transfer - $250,000) is reappropriated to the Department of Corrections for the combined Hiland Mountain Correctional Center land transfer.

*** Sec. 19.** DEPARTMENT OF FISH AND GAME. (a) Section 10, ch. 29, SLA 2008, page 67, lines 19 - 20, is amended to read:

	APPROPRIATION ITEMS	OTHER FUNDS
Fish and Game Licensing **Program Improvements** [POINT OF SALE SYSTEM] (HD 1-40)	200,000	200,000

(b) The unexpended and unobligated balance, estimated to be $100,000, of the appropriation made in sec. 7, ch. 43, SLA 2010, page 26, lines 20 - 22 (Department of Fish and Game, crew member fishery participation database development - $100,000) is reappropriated to the Department of Fish and Game for analyzing system requirements for integration of the commercial operator annual report data system with the department's new electronic data system for the fiscal year ending June 30, 2013.

(c) An amount equal to the proceeds from the sale conducted during the fiscal years ending June 30, 2013, June 30, 2014, or June 30, 2015, of a research vessel owned by the Department of Fish and Game, including parts and inventory, is appropriated from the general fund to the Department of Fish and Game for the repair, maintenance, or replacement of vessels or equipment.

*** Sec. 20.** DEPARTMENT OF HEALTH AND SOCIAL SERVICES. An amount equal to 50 percent of the revenue collected during the fiscal year ending June 30, 2011, from the alcoholic beverage tax (AS 43.60.010), not to exceed $19,300,400, is appropriated from the general fund to the Department of Health and Social Services for behavioral health grants under AS 47.37.030 for the fiscal years ending June 30, 2013, June 30, 2014, and June 30, 2015.

*** Sec. 21.** DEPARTMENT OF LAW. (a) Section 30(a), ch. 5, FSSLA 2011, is amended to read:

(a) The sum of **$13,550,000** [$9,000,000] is appropriated from the general fund to the Department of Law, BP corrosion, to fund the costs of outside counsel, document management, experts, and litigation in the British Petroleum Exploration (Alaska) Inc., corrosion case for the fiscal years ending June 30, 2012, and June 30, 2013.

(b) The sum of $20,743,999 is appropriated from the general fund to the Department of Law, civil division, deputy attorney general's office, for the purpose of paying judgments and settlements against the state for the fiscal year ending June 30, 2012.

*** Sec. 22.** DEPARTMENT OF PUBLIC SAFETY. Section 1, ch. 43, SLA 2010, page 3, lines 8 - 9, as amended by sec. 12, ch. 1, FSSLA 2011, is amended to read:

	APPROPRIATION ITEMS	GENERAL FUND
Crime Lab Replacement **and Repair, Renovation, and Reuse of Existing Crime Lab Building** (HD 17-32)	70,750,000	70,750,000

*** Sec. 23.** DEPARTMENT OF REVENUE. The amount necessary to pay expenses incident to the sale and issuance of general obligation bonds for transportation projects, estimated to be $3,559,200, is appropriated from the 2012 state transportation project fund to the Department of Revenue, state bond committee, for the fiscal years ending June 30, 2013, June 30, 2014, and June 30, 2015.

*** Sec. 24.** DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES. (a) The unexpended and unobligated balances, estimated to be $4,000,000, of the appropriations made in sec. 10, ch. 29, SLA 2008, page 44, lines 18 - 19 (Anchorage, 88th Avenue upgrade (RTP) - $1,000,000), and sec. 1, ch. 5, FSSLA 2011, page 5, lines 27 - 30 (Anchorage, 88th Avenue upgrade - Spruce Brook Street to Elmore Road - $3,000,000) are reappropriated to the Department of Transportation and Public Facilities for an 88th Avenue upgrade, Spruce Brook Street to Elmore Road.

(b) The unexpended and unobligated general fund balance, estimated to be $1,686,000, of the appropriation made in sec. 1, ch. 1, SSSLA 2002, page 49, line 11, and

CS FOR SENATE BILL NO. 192(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RESOURCES COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to the oil and gas production tax; providing for a minimum tax on oil and gas production so that the state receives a minimum production tax of 10 percent of the gross value at the point of production for certain oil and gas production; relating to that part of the monthly production tax on the gross value at the point of production of oil produced by a producer that produced oil in 2008 and 2011 and produces a volume of taxable oil for the year in excess of a defined target volume, and providing that the applicable tax rate on the gross value at the point of production for that category of oil production is 0.14 percent multiplied by the number that represents the difference between that average monthly gross value at the point of production for a barrel of oil and the base amount of $75 or, if the average gross value at the point of production is greater than $60 above the base amount of $75, that the applicable tax rate is the sum of 8.4 percent and the product of 0.03 percent multiplied by the number that represents the

difference between the average monthly gross value at the point of production for a barrel of oil and $60 above the base amount of $75, except that the tax rate applicable to that category of oil production may not exceed 10 percent; relating to that part of the tax on the gross value at the point of production of oil produced by a producer during the first 10 consecutive years after the start of sustained production or during the first 10 consecutive years of sustained production after December 31, 2012, whichever is later, from a lease or property containing land that was not or previously had not been within a unit or in commercial production before January 1, 2008, and providing that the applicable tax rate on the gross value at the point of production for that category of oil is determined by multiplying the monthly gross value at the point of production of the taxable oil produced during the month by the tax rate determined by multiplying 0.05 percent by the number that represents the difference between that average monthly gross value at the point of production for a barrel of oil and the base amount of $90, except that the tax rate determined for that category of oil production may not exceed five percent; relating to that part of the monthly production tax on the gross value at the point of production of oil produced by a producer and not otherwise described above, and providing that the applicable tax rate on the gross value at the point of production on that category of oil production is 0.27 percent multiplied by the number that represents the difference between the average gross value at the point of production for a barrel of oil and $60 or, if the average gross value at the point of production is greater than $60 above the base amount of $60, that the applicable tax rate is the sum of 16.2 percent and the product of 0.03 percent multiplied by the number that represents the difference between the average monthly gross value at the point of production for a barrel of oil and $60 above the base amount of $60, except that the tax rate applicable to

that category of oil production may not exceed 20 percent; relating to payments of the oil and gas production tax; relating to an adjustment to the base amounts of $60, $75, $90 based on an increase in the United States Consumer Price Index for all urban consumers for the most recent year; relating to the allocation of lease expenditures and adjustments to lease expenditures; relating to the duties of the Department of Revenue; relating to a petroleum information management system; relating to the duties of the Alaska Oil and Gas Conservation Commission, the Department of Natural Resources, and the Department of Labor and Workforce Development that relate to providing the Department of Revenue with certain information relating to oil and gas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under (g) of this section **on the gross value at the point of production of oil**.

*** Sec. 2.** AS 43.55.011(f) is repealed and reenacted to read:

(f) Except for oil and gas subject to (i) of this section and gas subject to (o) of this section, the provisions of this subsection apply to oil and gas produced by a producer that had average daily oil and gas production during the most recent calendar year of more than 50,000 BTU equivalent barrels. Notwithstanding any contrary

provision of law, a producer may not apply tax credits to reduce its total tax liability under (e) and (g) of this section for oil and gas produced from all leases or properties below 10 percent of the total gross value at the point of production of that oil and gas. If the amount of tax calculated by applying the tax rates in (e) and (g) of this section to the total production tax value of the oil and gas taxable under (e) and (g) of this section produced from all of the producer's leases or properties is less than 10 percent of the total gross value at the point of production of that oil and gas, the tax levied by (e) and (g) of this section for that oil and gas is equal to 10 percent of the total gross value at the point of production of that oil and gas.

*** Sec. 3.** AS 43.55.011(g) is repealed and reenacted to read:

(g) For each month of the calendar year for which the producer's average monthly gross value at the point of production for a barrel of taxable oil is above the base amount, the producer shall determine the tax for the purposes of (e)(2) of this section as follows:

(1) for oil not subject to (2) or (3) of this subsection produced by a producer that produced oil in 2008 and 2011, for oil not subject to (3) of this subsection produced by a producer who did not produce oil in 2008 and 2011, and for oil production that was subject to (3) of this subsection but is no longer subject to (3) of this subsection, the amount of tax is determined by multiplying the monthly gross value at the point of production of the taxable oil produced during the month by the tax rate calculated as follows:

(A) if the producer's average monthly gross value at the point of production for a barrel of the taxable oil for the month is not more than $60 above the base amount of $60, the tax rate is 0.27 percent multiplied by the number that represents the difference between that average monthly gross value at the point of production for a barrel of oil and the base amount of $60; or

(B) if the producer's average monthly gross value at the point of production for a barrel of taxable oil is more than $60 above the base amount of $60, the tax rate is the sum of 16.2 percent and the product of 0.03 percent multiplied by the number that represents the difference between the

average monthly gross value at the point of production for a barrel of oil and $60 above the base amount of $60, except that the tax rate determined under this subparagraph may not exceed 20 percent;

(2) for oil not subject to (3) of this subsection produced by a producer that produced taxable oil in 2008 and 2011 that is in excess of the target volume determined under (q) of this section, the amount of tax on the volume of oil above the target volume is determined by multiplying the monthly gross value at the point of production of the taxable oil produced during the month by the tax rate calculated as follows:

(A) if the producer's average monthly gross value at the point of production for a barrel of the taxable oil for the month is not more than $60 above the base amount of $75, the tax rate is 0.14 percent multiplied by the number that represents the difference between that average monthly gross value at the point of production for a barrel of oil and the base amount of $75; or

(B) if the producer's average monthly gross value at the point of production for a barrel of taxable oil is more than $60 above the base amount of $75, the tax rate is the sum of 8.4 percent and the product of 0.03 percent multiplied by the number that represents the difference between the average monthly gross value at the point of production for a barrel of oil and $60 above the base amount of $75, except that the tax rate determined under this subparagraph may not exceed 10 percent;

(3) for oil produced by a producer during the first 10 consecutive years after the start of sustained production or during the first 10 consecutive years of sustained production after December 31, 2012, whichever is later, from a lease or property containing land that was not or previously had not been within a unit or in commercial production before January 1, 2008, the amount of tax is determined by multiplying the monthly gross value at the point of production of the taxable oil produced during the month by the tax rate determined by multiplying 0.05 percent by the number that represents the difference between that average monthly gross value at the point of production for a barrel of oil and $90, except that the tax rate determined

under this paragraph may not exceed five percent; after the rate determination of this paragraph no longer applies, oil produced from a lease or property that was subject to the rate determination under this paragraph is subject to the rate determination under (1) of this subsection; in this paragraph, "sustained production" has the meaning given in AS 43.55.025(*l*).

*** Sec. 4.** AS 43.55.011 is amended by adding new subsections to read:

(p) Beginning on March 1, 2014, and on March 1 of each year thereafter, the commissioner shall adjust the base amount of $60 in (g)(1) of this section, the base amount of $75 in (g)(2) of this section, and the base amount of $90 in (g)(3) of this section by the percent increase in the annual United States Consumer Price Index for all urban consumers for the most recent year. The index for January 2013 is the reference base index. The commissioner shall publish the percent increase and the adjusted base amounts on the department's Internet website as soon as is practicable after the commissioner determines the adjusted base amounts. The adjustments made by the commissioner are retroactive to January 1 of the year in which the adjustments are made. The department shall adopt a regulation providing for the payment of the increase in an installment payment required under AS 43.55.020(a) that results from the retroactive application of the adjustments to the base amount of $60 in (g)(1) of this section, the base amount of $75 in (g)(2) of this section, and the base amount of $90 in (g)(3) of this section.

(q) When determining whether a producer is subject to (g)(1) or (2) of this section,

(1) the target volume is determined under the following formula, where V is the volume of the oil produced by the producer in 2011, D is the decline percentage calculated by taking the cube root of the ratio of the volume of taxable oil produced by the producer in 2011 to the volume of taxable oil produced by the producer in 2008, and Y is the year, expressed in four digits, for which the target volume is being determined:

Target Volume = $V \times D^{(Y - 2011)}$; and

(2) the target volume for a producer that increases its volume of production through the purchase, merger, or other acquisition of another producer is

the sum of the producer's target volume and the target volume for the producer that is purchased, merged with, or otherwise acquired; however, if the producer that is purchased, merged with, or otherwise acquired did not have production in 2008 and 2011, the volume of the increased production that is attributable to the purchase, merger, or other acquisition may not be considered for the purpose of determining whether the producer that acquired the additional production has increased the volume of production above its target volume.

*** Sec. 5.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e) **and (g)**, net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) the sum of **the tax determined under AS 43.55.011(g) on the gross value at the point of production for oil produced for the month added to the product of** 25 percent and [THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY] the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from

the leases or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the **greater** [GREATEST] of

(i) **10 percent of the gross value at the point of production for oil and gas described in AS 43.55.011(f)** [ZERO;

(ii) ZERO PERCENT, ONE PERCENT, TWO PERCENT, THREE PERCENT, OR FOUR PERCENT, AS APPLICABLE, OF THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE OIL AND GAS] produced [FROM ALL LEASES OR PROPERTIES] during the month for which the installment payment is calculated; or

(ii) [(iii)] the sum of **the tax determined under AS 43.55.011(g) on the gross value at the point of production for oil produced for the month added to the product of** 25 percent and the tax rate calculated for the month under AS 43.55.011(g) [MULTIPLIED BY] the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from those leases or properties during the month for which the installment payment is calculated;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) the sum of **the tax determined under AS 43.55.011(g) on the gross value at the point of production for the oil produced for the month added to the product of** 25 percent and [THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY] the remainder obtained by

subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil or gas, respectively, produced from the lease or property from the gross value at the point of production of the oil or gas, respectively, produced from the lease or property during the month for which the installment payment is calculated;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) **and (g)** or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as

installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 6.** AS 43.55.160(c) is amended to read:

(c) Notwithstanding any contrary provision of AS 43.55.150, for purposes of calculating **the tax due under AS 43.55.011(g)** [A MONTHLY PRODUCTION TAX VALUE UNDER (a)(2) OF THIS SECTION], the gross value at the point of production of the oil and gas is calculated under regulations adopted by the department that provide for using an appropriate monthly share of the producer's costs of transportation for the calendar year.

*** Sec. 7.** AS 43.55.160 is amended by adding new subsections to read:

(f) For purposes of (a) of this section, a lease expenditure is applicable to oil or gas produced from a lease or property, or to oil or gas produced from leases or properties in an area of the state, if the lease expenditure is

(1) a cost to explore, develop, or produce oil or gas from that lease or property, or to explore, develop, or produce oil or gas from one of those leases or properties in that area of the state, respectively; and

(2) incurred on or after the commencement of commercial production of oil or gas from the lease or property.

(g) For purposes of (a) of this section, a lease expenditure incurred during a calendar year to explore land that is not a lease or property, or to explore or develop a lease or property before commencement of commercial production of oil or gas from the lease or property, shall be allocated as provided in a regulation adopted by the department under AS 43.55.165(h) to and among oil, gas subject to AS 43.55.011(o), and gas not subject to AS 43.55.011(o) produced by the producer during that calendar year from leases or properties in the same area of the state as the land being explored or the lease or property being explored or developed, respectively.

(h) For purposes of (f) and (g) of this section, an area of the state is one of the following:

(1) land north of 68 degrees North latitude;

(2) land outside the Cook Inlet sedimentary basin not including any land north of 68 degrees North latitude; or

(3) the Cook Inlet sedimentary basin.

*** Sec. 8.** AS 43.55.165(h) is amended to read:

(h) The department shall adopt regulations that provide for reasonable methods of allocating costs between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties. **When adopting a regulation for determining a reasonable method of allocating lease expenditures between the production of oil and the production of gas, the department shall, to the extent possible, provide for the allocation of lease expenditures in proportion to the gross value at the point of production for oil produced and gas produced.**

*** Sec. 9.** AS 43.55.170 is amended by adding a new subsection to read:

(d) The department shall adopt regulations that provide for reasonable methods of allocating the adjustments to a producer's lease expenditures in (a) of this section and the payments and credits described in (b) of this section between oil and gas, between gas subject to AS 43.55.011(o) and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits, or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties. When determining a reasonable method of allocating the adjustments to a producer's lease expenditures between the production of oil and the production of gas, the department shall consider allocating the adjustments in proportion to the lease expenditures allocated to the production of oil and the production of gas under regulations adopted by the department under AS 43.55.165(h).

*** Sec. 10.** AS 44.25 is amended by adding a new section to read:

Sec. 44.25.025. Petroleum information management system. (a) The

Department of Revenue shall develop and maintain an electronic petroleum information management system to collect, secure, distribute, store, retrieve, and archive information related to oil and gas exploration, development, and production in the state. The purposes of the petroleum information management system are to improve the administration of the oil and gas production tax and to facilitate exploration, development, and production of oil and gas resources. The petroleum information management system shall be accessible by the public.

(b) To the extent the information is available and is not confidential, the petroleum information management system must include the following information:

(1) unit and joint operating agreements;

(2) state oil and gas exploration licenses and oil and gas leases;

(3) for exploration activities,

(A) exploration work programs and budgets;

(B) seismic data;

(C) drilling reports;

(D) logs;

(E) well tests;

(F) geological models and maps;

(4) for development activities,

(A) development plans with operating and capital expenditure projections;

(B) construction progress reports;

(C) drilling reports;

(D) reservoir characterization;

(5) for production activities,

(A) production work programs and budgets;

(B) oil and gas sales, revenue, and pricing;

(C) transportation agreements;

(D) production data;

(E) injection data;

(F) operating and capital expenditures;

(G) facility maps and studies;

(6) for abandonment of oil and gas wells, leases, and production and transportation facilities,

(A) abandonment plans and budgets;

(B) progress reports;

(7) for oil and gas related employment information,

(A) the number of resident and nonresident hires for each year;

(B) training opportunities; and

(8) other information the Department of Revenue determines necessary and relevant to the oil and gas production tax and to the exploration, development, and production of oil and gas resources.

(c) The Alaska Oil and Gas Conservation Commission, the Department of Natural Resources, and the Department of Labor and Workforce Development, in consultation with the Department of Revenue, shall provide information described in (b) of this section that is not confidential and within the control of the commission and each department to the Department of Revenue for inclusion in the petroleum information management system. The information provided by the Alaska Oil and Gas Conservation Commission or by a department under this subsection shall be in a form suitable for the Department of Revenue to include in the petroleum information management system.

*** Sec. 11.** AS 43.55.160(a)(2) is repealed.

*** Sec. 12.** The uncodified law of the State of Alaska is amended by adding a new section to read:

IMPLEMENTATION OF THE PETROLEUM INFORMATION MANAGEMENT SYSTEM. The Department of Revenue shall develop and implement a work plan for the development of the petroleum information management system required by AS 44.25.025, enacted by sec. 10 of this Act, so that the system is operational before January 1, 2014.

*** Sec. 13.** Sections 1 - 9 and 11 of this Act take effect January 1, 2013.

*** Sec. 14.** Except as provided in sec. 13 of this Act, this Act takes effect immediately under AS 01.10.070(c).

King Air Replacement Proposal

Alaska Department of Public Safety

Aircraft Section

3/12/2012

Introduction

The State currently owns one twin-engine Beechcraft King Air 200. Originally manufactured in 1980, the Department of Public Safety (DPS) purchased this aircraft used in 1993 for $1.26 million.

The King Air 200 is the workhorse of the department. It is the primary aircraft used to swiftly transport larger numbers of passengers and equipment for DPS and has been used in numerous missions.

The mission role of this aircraft includes high risk prisoner moves, Special Emergency Repose Team (SERT) deployment, and rapid response to high threat situations, spring flood river watches, fisheries patrols, Governor and VIP transport, and movement of personnel, equipment and freight.

KING AIR STRATEGIC MISSIONS

Rapid law enforcement response

Special Emergency Response Team (SERT) deployment

Emergency preparedness

Search and rescue operations

Bering Sea crab patrols

Off-shore fisheries patrols

Law enforcement personnel and VIP transport

Prisoner moves

Problem Statement

The King Air 200 is a 31-year-old aging aircraft that has been down 239 days – approximately 33 percent of the time – in the last two years. Unscheduled downtime due to unexpected maintenance and repairs has increased to the point that DPS can no longer depend on this aircraft being available for strategic missions or critical emergencies.

Engines

The engines are approximately 450 hours from replacement. Based on the annual flight hours for this aircraft, engine replacement will need to occur within the next twelve months at an estimated cost of $1 million.

Landing Gear/Parts

The most recent unplanned downtime for the King Air 200 was the result of a landing gear system failure. This landing gear system is no longer manufactured and certified used parts are extremely difficult to obtain. When two certified parts were located after a nationwide search, the first one failed testing.

As this airframe continues to age, downtime from increased maintenance and repairs will only increase.

Other Options Considered

DPS has explored the options of leasing a King Air 200, leasing a King Air 350, chartering aircraft, and purchasing a used aircraft.

Currently, there are no King Air 200's available for lease within the State of Alaska. Searches for an outside lease option for a King Air 200 have resulted in finding only older models:

- One available King Air 200 (a 1979 vintage) leases for $14,000 per month plus $400 per hour in engine reserves. The potential for maintenance downtime for this aircraft is just as great as it is for the King Air currently owned by DPS.
- The Hawker-Beechcraft Company has located one available King Air 200 out-of-state with a monthly lease rate of $25,000 per month plus an additional $400 per hour for engine and maintenance reserves.

There are outside lease options available for a King Air 350, the model that best fits the DPS mission profile. The cost is $35,000 per month plus $700 per flight hour for engine and maintenance reserves, meaning that the 200-hour inspections are paid for ahead of time. Crew training for the King Air 350 will cost approximately $75,000 for two pilots and is required before DPS pilots can fly the leased King Air 350.

Charter availability in Anchorage for a comparable aircraft to the King Air 200 is a Cessna Conquest from Security Aviation. This aircraft can carry eight passengers plus a crew of two, and has a useful load of approximately 1,500 pounds depending on variables such as fuel load. The hourly rate is $2,002 per hour and is subject to pilot and aircraft availability.

DPS considered the option of purchasing a newer model used King Air 350; however there are few on the market. A used aircraft would come with very little or no warranty coverage which could substantially increase the maintenance costs in the short-term, would not have the latest generation avionics installed, and would reach age-related repair and maintenance costs sooner.

Solution

DPS proposes that the best solution is to invest in a new aircraft, such as a King Air 350 or equivalent. The information presented in this proposal uses a King Air 350 for comparative purposes.

The base price of a new King Air 350 with needed options is $7.6 million.

Benefit

The benefits of purchasing a new aircraft are significant.

The King Air 350 operates at virtually the same cost as the King Air 200 and can access the same number of villages but with double the useful load and 50+ knots per hour faster in speed and increased fuel efficiency. This translates to arriving at the destination more quickly, with a larger payload, and savings in time and fuel.

The King Air 350 can accommodate up to eleven passenger seats in the cabin of the aircraft compared to eight seats in the King Air 200.

Another feature on a new King Air is RVSM or Reduced Vertical Separation Minima. This allows the aircraft to fly at higher altitudes, which means even more cost savings when it comes to fuel burn and cost.

A new aircraft would come with warranty coverage resulting in considerable cash savings over the next five years.

Additional detailed comparisons and specifications are provided on pages 4 – 6.

Implementation

Delivery date for a new aircraft is estimated at six months from date of purchase commitment.

Summary

DPS' current King Air 200 is an aging aircraft. As this airframe continues to age, considerable downtime from increased maintenance and repairs combined with the difficulty in locating certified parts make this an unreliable resource for DPS in terms of its being available when needed for strategic missions or critical emergency response.

Lease options for a King Air are not practical based on the expected length of time DPS would have this aircraft and the availability and capability of charter aircraft is unpredictable and unreliable.

A used aircraft would have little or no warranty coverage, would not have the latest generation avionics, and would reach age-related maintenance and repairs sooner.

Investment in a new aircraft, such as a King Air 350 or equivalent, would provide a more reliable, more capable, and operationally more cost effective asset, and would ensure faster, efficient response for DPS strategic missions and critical emergency response to protect the citizens of Alaska and their resources.

King Air 350 and King Air 200 Comparison

	King Air 350	King Air 200
ENGINES	PT6A-60 1,050 HP	PT6A-41 850 HP
DIMENSIONS		
Overall Length	46' 8"	43' 9"
Overall Height	14' 4" (standard gear)	15' 0" (high floatation gear)
Wing Span	57' 11"	54' 6"
Wing Area	310 sq. ft.	303 sq. ft.
Inside Cabin Length	19' 6"	16' 8"
ACCOMODATIONS		
Crew Seats	2	2
Passenger Seats	9 to 11	8

All Engines Ceiling	35,000 FT	31,000 FT^
Engine Out Ceiling	21,500 FT	14,000 FT

* Pounds per hour (one hour of jet fuel weighs 6.7 pounds)
** Feet per minute
^ 26,000 typical altitude assigned by air traffic control for the King Air 200
^^ Knots true airspeed

Benefits of King Air 350 over King Air 200

FUEL COST SAVINGS	20% LESS
TIME SAVINGS	20% FASTER
USEFUL LOAD	DOUBLE
RANGE	30% FURTHER
HORSEPOWER	25% MORE POWER
PASSENGER CAPACITY	25% MORE SEATING CAPACITY
NEW AIRCRAFT	LESS SUSCEPTIBLE TO AGE-RELATED MAINTENANCE ISSUES

Trip Comparison Time and Fuel

	King Air 350		King Air 200			
Route (One Way)	Time	Burn	Time	Burn	Difference	Fuel Cost Savings (King Air 350)*
ANC-JNU	1+42	1220#	2+08	1480#	+26/+260# (38.8 gal)	$212.62
ANC-SIT	1+46	1255#	2+12	1520#	+26/+265# (39.5 gal)	$216.46
ANC-KTN	2+16	1560#	2+49	1895#	+33/+335# (35.8 gal)	$274.00
ANC-SEA	4+10	2690#	**5+09	3175#	+59/+485# (72.3 gal)	$396.20
ANC-OME	1+36	1160#	2+00	1400#	+24/+240# (35.8 gal)	$196.18
ANC-OTZ	1+38	1175#	2+02	1420#	+24/+245# (36.7 gal)	$201.11
ANC-FAI	+50	660#	1+03	825#	+13/165# (24.6 gal)	$134.80
ANC-ODK	+51	675#	1+04	835#	+13/+160# (23.9 gal)	$130.97
ANC-CDB	1+50	1300#	2+17	1570#	+27/+270# (40.3 gal)	$219.20
ANC-DUT	2+18	1580#	2+52	1920#	+34/+340# (50.8 gal)	$278.38
ANC-ADK	3+26	2255#	**4+16	2735#	+50/+480# (71.7 gal)	$392.91
ANC-SNP	2+14	1545#	2+48	1880#	+34/+335# (50.0 gal)	$274.00
ANC-BET	1+13	930#	1+31	1115#	+18/+185# (27.6 gal)	$151.25
ANC-AKN	+55	735#	1+09	895#	+14/+160# (23.9 gal)	$130.97

* The cost of one gallon of jet fuel was $5.48 as of 07/22/2011

** The King Air 200 would require a fuel stop enroute

All times were figured at the same altitude and zero wind. The King Air 350 numbers would show even more savings at higher altitudes.

To convert fuel pounds to gallons, divide by 6.7.

Fuel savings average approximately 25 gallons/hour for the King Air 350. This is due to the more economical engines and faster speeds.

King Air 200 Five Year Maintenance Costs

Fiscal Year	Maintenance Cost	Hours/Year	Maintenance Cost/Hour
2007	$151,315	493.2	$306.80
2008	$141,006	331.7	$425.10
2009	$73,883	424.5	$174.05
2010	$81,145	489.0	$165.95
2011	$133,055	431.7	$308.21

Interior Alaska Search & Rescue and Law Enforcement Helicopter

11/28/2011

DPS Aircraft Section Proposal

The Department of Public Safety proposes to purchase a new turbine helicopter to meet the search and rescue and mission-critical operational needs in the Interior of Alaska.

Issue (statement of the problem)

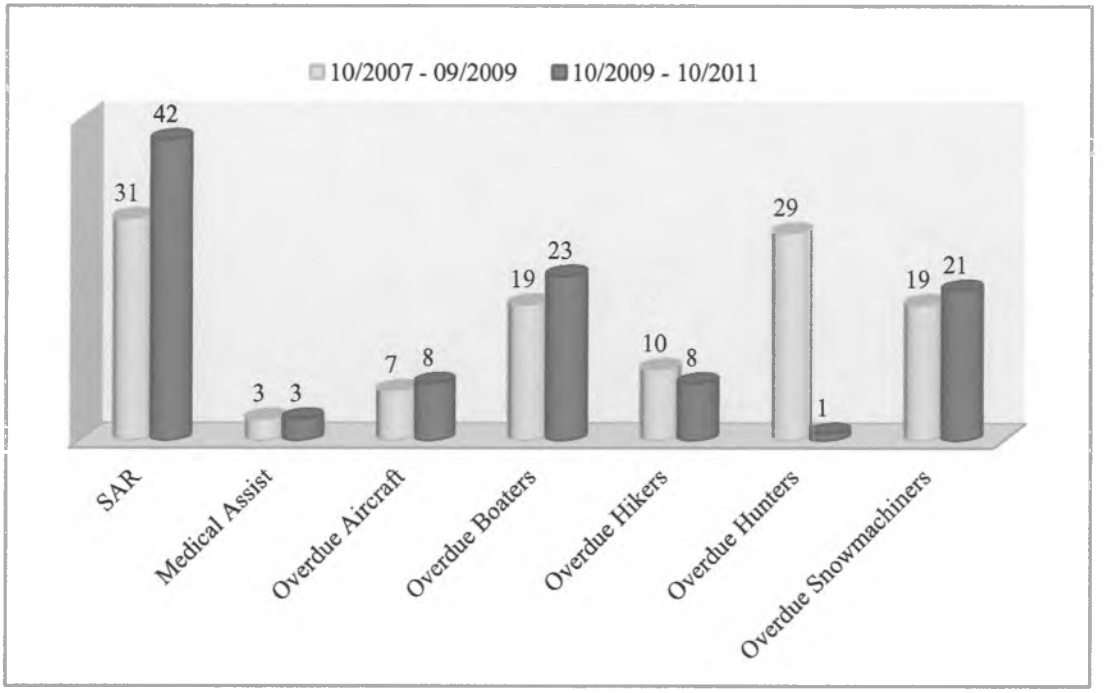
The Department of Public Safety is statutorily responsible to provide law enforcement to the citizens of Alaska. This duty includes search and rescue (SAR), emergency law enforcement response, crime detection and prevention, surveillance, narcotics interdiction, traffic management, and civil disorders/public events.

Interior and Northern Alaska's geography and extreme weather conditions create enormous challenges for the Alaska State Troopers (AST) to quickly and effectively respond to emergencies. The lack of suitable equipment can put Alaskans living in this region at dire risk. It is critical for AST to have the capability to rapidly access remote areas during adverse weather conditions with a helicopter that is adequately equipped and has the payload to fulfill its mission.

Historical Information

The Department recognized this critical operational need and purchased a turbine Bell Jet Ranger helicopter that was based in Fairbanks from 1982 to 1995. This first helicopter was used extensively but was destroyed by fire after a fuel line separated in flight. It was subsequently replaced by a used helicopter which was removed from service in 2002 due to airframe fatigue and, to date, has not been replaced.

In 2001, the Department based a piston driven helicopter (R-44) in Fairbanks to conduct wildlife patrols in the Interior. This helicopter is not equipped or performance-capable as a SAR platform because of its limited range, payload capacity, speed, and its inability to operate at high altitudes and in cold temperatures. Nevertheless, being the only Department helicopter available in the region, the R-44 is frequently utilized in SAR and routine law enforcement missions. As an example, the R-44 was used to transport SERT personnel to the scene of a shooting of the Trans-Alaska Pipeline in October 2001 which required multiple round trips to ultimately get all team members on-scene. Following this incident, the R-44 flew almost daily missions guarding the Trans-Alaska Pipeline; a nationally designated critical infrastructure. Anytime this resource is used for SAR missions, it is diverted from the operational needs of the Alaska Wildlife Trooper (AWT) division.



Fairbanks R-44

Background of Search and Rescue Operations

SAR operations continue to be one of AST's highest-risk, regularly performed missions. These activities account for a significant amount of time, money and man hours spent by detachment personnel and the consequence of failure could be life threatening. With the increasing use and availability of cell phones, SPOT beacons and satellite phones, troopers are receiving more and more calls for assistance from people who might not have been considered lost or in need of assistance in the past. Unfortunately the criticality of these calls is difficult to assess until after the fact, meaning that all SAR's must be treated as an emergency.

Virtually every report of a missing person starts a process in motion whereby troopers begin to gather information, identify resources and start to organize volunteer searchers. Oftentimes, a quick aerial search of the area is the fastest, least expensive and most effective way to locate the missing person. For this reason a significant number of the SAR or missing persons cases AST/AWT receives each year result in at least a preliminary aerial search by helicopter or fixed-wing aircraft.

The following chart represents the number of SAR and related cases undertaken by "D" Detachment *(see Figure 1 on page 6)* during the period from October 2007 through September 2009 in comparison with SAR and related cases during the period from October 2009 through October 2011.

The R-44 has conducted numerous searches for missing people, recovered bodies, and provided medical transport. Although it is capable of responding readily, it is extremely concerning to not be able to bring necessary immediate resources to help, or to be able to extract people from dangerous circumstances because the R-44 is not adequate. There have been cases where the R-44 just couldn't conduct missions because of its limitations; it was never meant to do these types of missions. For example:

- In September 2010, the R-44 responded with a medic to an ATV accident near Donnelly Dome in which the victim suffered a severely broken femur. The R-44 was not able to transport the medic with the victim due to altitude and weight restrictions. Additionally, the badly injured victim had to be loaded into the front seat of the R-44 which was very painful for the victim. A larger helicopter would have enabled medics to load the victim on a stretcher and be transported with the victim.

- In September 2011, the R-44 responded with medics to the scene of an injured hunter near Central but was not able to transport the victim due to the nature of the victim's injuries. Helo 1 was dispatched from Anchorage but was not able to arrive on scene for several hours. The victim would have been at the hospital much sooner if a larger helicopter would have been available in Fairbanks.

The lack of an adequately equipped turbine engine helicopter stationed in Fairbanks for SAR and emergency law enforcement response means that the assistance of the Alaska Air National Guard's 210th Rescue Squadron based at Joint Base Elmendorf-Richardson in Anchorage is often required to undertake search or rescue missions in Interior Alaska. Missions flown by the 210th Air National Guard routinely involve the use of HH-60 Pave Hawk helicopters or a C-130 aircraft, which requires expensive in-flight refueling. A turbine engine helicopter based in Fairbanks would provide a faster and less expensive alternative for most non-medical emergency rescues.

However, the more important concern is the length of time required to recall the National Guard assets and subsequently deploy them from Anchorage to Fairbanks. Every search and rescue is considered an emergency due to the potential loss of life. The delay in response times that result from this long distance deployment could be catastrophic.

A common question is, "Can't you charter?" Public safety operations are dramatically different from standard air charter duties. There are also significant limitations to a civilian pilot's ability to fly with Night Vision Goggles (NVGs) and to operate in a tactical environment as required with deployment of SERT personnel. This is often further exacerbated by a civilian pilot's lack of training and experience in flying rescue missions. With the downturn of the economy, the number of air transport vendors have decreased and the availability of those vendors to provide services to the Department become increasingly difficult. A pilot that flies an emergency mission for the Department at night will not be available to the vendor for their use the following day causing disruption and loss of income to those vendors.

State Troopers make efficient use of many of DPS's existing aviation assets during search and rescue operations. The most effective asset in particular is AST's sole day-and-night (IFR) capable helicopter based in Anchorage; a turbine ASTAR 350 acquired in 2002. This aircraft has more than fulfilled our mission requirements in Southcentral Alaska with saves and critical missions being performed on a near weekly basis. However, due to its flight range limits, it is unavailable in most other areas of the state. It is a helicopter with similar capabilities that is desperately needed in the Interior.

Advantages of a Turbine Helicopter

A helicopter that can operate in cold temperatures, at moderate/high altitude and that can haul a load of up to seven personnel on missions is needed. The helicopter should be large/wide enough to accommodate at least one litter patient (a "litter" is a stretcher or basket used to strap a person into for safe evacuation). The advantages of a turbine engine helicopter include:

1. Increased payload
2. Ability to carry a litter (rescue basket)
3. High altitude operations
4. Better night flight capabilities
5. Ability to install equipment such as search light, FLIR and hoist, and still have payload to carry passengers
6. Cold weather operations
7. Turbine engine reliability
8. Faster response times
9. Increased public safety
10. Enhanced officer safety
11. Improved pursuit management and a reduction in the number of dangerous high-speed pursuits

Recommendation 1: Purchase a new turbine helicopter (Approximately $3M)

There are two available manufactures of helicopters that would meet the Department's mission. They are the ASTAR B3 and Bell 407. Base price fluctuates, but the basic aircraft is priced in the range of $2.1 to $2.3 million. To equip it for our mission needs would put the price range at approximately $3.0 million. This equipment includes the following:

Required Equipment	Explanation
Airframe	
High landing gear	For landing in rough terrain/deep snow to keep tail rotor higher from the ground
Emergency pop-out floats	For emergency landings over water
Tundra pads	For landing on soft surfaces
Litter (rescue basket) kit	For transporting injured citizens
Heavy duty cargo tie down kit	Used for tying down heavy cargo
Airframe and rotor blade tie down	Used to secure rotor blades on the ground
External fuel and engine oil systems	Extra fluid filtering for arctic conditions
Tail rotor guard	Additional protection for tail rotor
All lighting FAA ANVIS certified	Night Vision Goggles requirement
DART cargo cheeks L/R sides	Expands baggage compartment
Big doors forward with high visibility doors	Enhances search visibility from cockpit
External load window in floor on right side	For sling operations
Nightsun lighting system or equivalent and mount	Bright controllable light used for searches
FLIR8500 w/laser, mount and recorder	A gyroscopically stabilized camera as well as thermal imager and laser painter
Geneva P125 pedestal	Removes push buttons and installs switches
Siren/public address system	Powerful loud speaker which allows crew to communicate with citizens on the ground
External load hook (onboard systems)	For sling operations
Avionics	
Law enforcement instrument panel	Reduced size panel so monitor can be installed flush
Cobham glass EFIS synthetic terrain w/ hover vector or standard IFR/HSI	Latest generation flight instrumentation
Garmin 430w	Global Positioning System (GPS) navigation
Technisonic 7000 ALMR/FP/UHF/second COM/NAV radio (King)	Police radio that supports different agency frequencies
Transponder	Discrete radar beacon coding device for air traffic control
Helicopter radar altimeter	Measures above ground altitude
All avionics NVG compatible	Night Vision Goggle compatible
NAT audio panel	National Aviation Technologies radio panel
Becker SAR-ADF 517	Emergency frequency monitoring system/ homing device
Altitude encoder (Blind)	Reports current altitude to air traffic control
Latest ELT 406mhz	Latest Emergency Locator Transmitter required by FAA

Recommendation 2: Civilian Pilot based in Fairbanks and operating costs ($303K)

The Department is requesting a civilian pilot PCN to fly the helicopter if it is approved. Utilization of a civilian pilot is the most cost effective method found so far. Using a trooper position, while most beneficial, requires constant training and mission time away from other law enforcement needs. It takes time and money to get a trooper up to operational needs, and after a period of time, the process starts over as the trooper moves to a different area of the state or is reassigned to a different assignment.

The combined annual operating cost of a civilian pilot PCN and turbine helicopter is estimated at $303.5 thousand, based on 237 annual flight hours.

These recommendations are inclusive of each other; they go hand-in-hand toward meeting the SAR and mission-critical operational needs in the Interior region of Alaska.

Summary

- The number of SAR missions in the Interior demonstrates the need to have a helicopter based in Fairbanks to provide a rapid and capable response to these potentially life-threatening situations.
- Utilization of Alaska Air National Guard HH-60 Pave Hawk helicopters is expensive, inefficient, hard on the aircrews and aircraft, and much less timely than would be the case if a similarly capable helicopter was based with DPS in Fairbanks.
- AST's R-44 helicopter has very limited capabilities for SAR missions and is best suited to its primary capabilities as a light-duty, backcountry patrol aircraft.
- Use of AST's Anchorage-based turbine engine helicopter for Interior SAR missions is impractical and leaves the most populous area of the state uncovered.
- A Fairbanks-based turbine engine helicopter would provide the Interior with an appropriately equipped resource to capably accomplish DPS mission-critical SAR and law enforcement operations.

FIGURE 1

The Statewide Search and Rescue office for Alaska State Troopers has statistics on 1,099 search and rescue cases from 2005 to 2012. Of the 1,099 cases, 1,002 of those incidents used some form of air, water or ground asset such as an airplane, helicopter, snowmachine or vehicle. Of 1,002 cases, 333 cases utilized a helicopter during 1,131 sorties and 1,683.18 hours spent rescuing 711 persons.

The request for additional information related to the past use of helicopters in rescues, and the likelihood of a helicopter increasing the effectiveness of a rescue, required that we know the length of time a rescue took place, the location of the rescue and whether or not a helicopter was used. 466 of the cases in the database contained enough information to gather that level of analysis. Cases that were not included: rescue ground team only responses, North Slope Borough cases, and cases where rescue call out and return times was not entered in the database.

In reviewing 466 cases, 399 cases resulted in rescuing person or persons alive with a total of 766 persons in these cases. The hours expressed on Table 1 are the number of hours 'from notification to rescue' not the hours of helicopter time. DPS has made efficient use of its present helicopter assets and responded to over 61% of the search and rescue calls of the 466 sampling reviewed. Based upon these reviewed cases, when comparing the average hours for a rescue where a helicopter has been immediately available, there is a significant increase in the speed with which DPS can respond and rescue the stranded persons versus detachments where a helicopter is not. In the 399 cases where persons were specifically rescued, the breakdown of detachment of rescues is as follows:

TABLE 1	Persons Rescued	Incidents by Detachment	Average Hours for Rescue	Rescues Assisted by Helicopter	Average Hours for Rescues Requiring Helicopter
A Detachment	112	60	14:48 Hours	27	12:00 Hours
B Detachment*	92	50	20:09 Hours	40	1:48 Hours
C Detachment	316	155	10:03 Hours	17	15:31 Hours
D Detachment	55	28	1:42 Hours	11	21:49 Hours
E Detachment	153	90	18:24 Hours	70	16:48 Hours
H Detachment	3	1	2:50 Hours	1	2:50 Hours
W Detachment	35	15	3:12 Hours	6	20:00 Hours
TOTAL/AVERAGE	**766 Persons**	**399 Cases**	**11:11 Hours**	**172 Cases**	**7:40 Hours**

The helicopter resources are tracked as follows: DPS, Military, Charter and Other. "Other" encompasses agencies that can assist Troopers with a case and are not a private party, such as National or State Parks Service helicopters. Breaking down the Helicopter hours shows a significant increase in the response time. Response time as a general rule has shown to result in a better likelihood of a live rescue.

HELICOPTER ASSISTED SEARCH & RESCUES	DPS	Military	Charter	Other
CASES	105	42	14	11
TOTAL FLIGHT HOURS	183 HOURS	50 HOURS	18 HOURS	19 HOURS
AVERAGE HOURS PER CASE TO RESCUE	**2:44 Hours**	**4:34 Hours**	**5:08 Hours**	**10:54 Hours**

*AST's Helo 1 is stationed in Anchorage and the primary helicopter asset for B Detachment. Helo 1 responds frequently to E Detachment as well.

Alaska Gasline Development Corporation

ASAP - Funding Outline thru FEL 3

Note: All projections are at a +/- 30% confidence level.

3/13/12

Capital expenditures are anticipated according to the following schedule (in thousand $; at a +/- 30% confidence level):

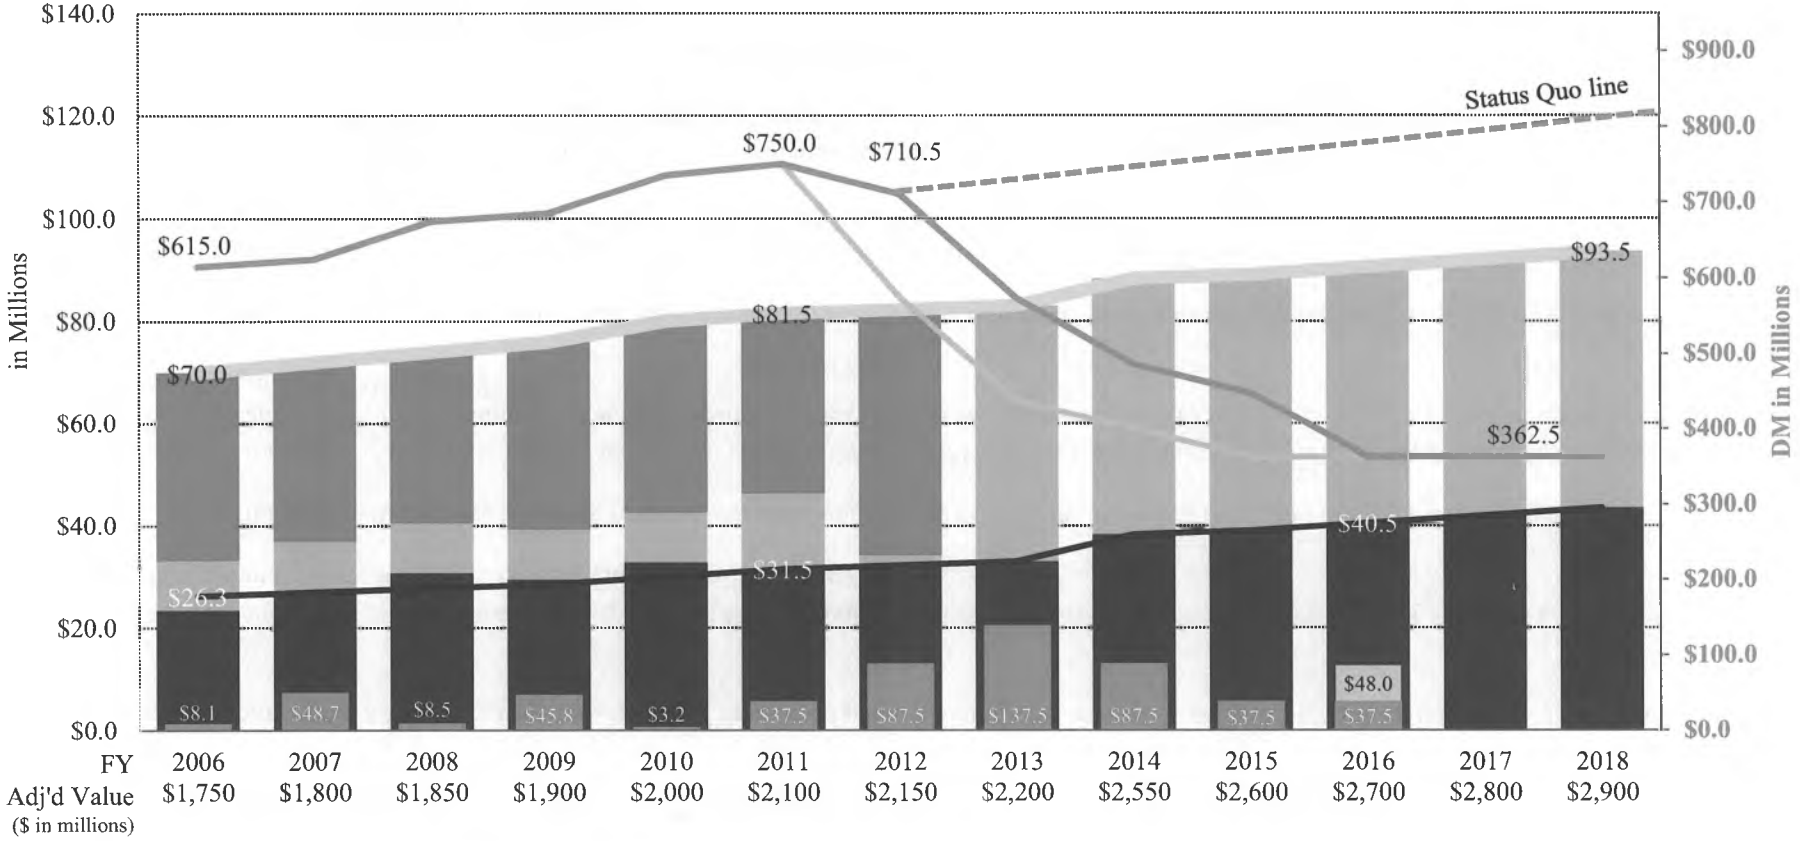
Fiscal Year	Capital Budget	Used from in state natural gas pipeline fund	Total
2009-2012	$ 50,668.2		$ 50,668.2
2013	21,000.0	$ 75,990.0	96,990.0
2014		114,810.0	114,810.0
2015	128,331.7	9,200.0	137,531.8
Total All	**200,000.0**	**200,000.0**	**$ 400,000.0**

To continue the project at that level, it is anticipated that 14 additional staff will be added during FY 2013 at an average annual fully-loaded cost of approximately $170,000 per year. The majority of these positions will be senior positions in the commercial and engineering areas.

The seven positions requested in FY2014 will be of a similar nature and will help to lead the project through open-season. The related operating budget items will be expended in support of the capital budget items in each of the subsequent fiscal years.

Total expenditures are budgeted in the following categories:

Project Plan Completion	$ 30,000,000
Commercial Operations	13,825,000
Pipeline Engineering	93,784,000
Facilities Engineering	182,962,000
Support Activities	79,429,000
Total	**$400,000,000**



Commercial Operations: Progress commercial discussions with potential shippers and markets. Develop agreements to allow for the future development of this project. Engage and work with the Prudhoe Bay operations & owners on numerous integration issues.

Pipeline Engineering, Environmental & Permitting: Progress pipeline route data collection and design, utilizing the information to upgrade project cost estimates and plans necessary for serious commercial discussions and project development approvals. Engineering work to be developed inline the industry best practices for mega-projects. Collect key environmental data necessary for permits preparation prior to construction.

Facilities Engineering, Environmental & Permitting: Conduct preliminary and front-end engineering development, utilizing the information to upgrade project cost estimates and plans necessary for serious commercial discussions and project development approvals. Engineering work to be developed inline the industry best practices for mega-projects. Prepare engineering design to be ready for placing long lead equipment and stock orders. Collect key environmental data necessary for permits preparation prior to construction.

AGDC Support Activities: Home office activities to support the commercial and engineering development of the project including all external affairs, accounting, budget, legal, records management and managerial oversight activities.

FY13 Sustainment Funding Plan for UA Facilities

Annual Sustainment Funding

- M&R Annual Expenditures (Operating Budget)
- M&R Annual Maintenance Target 1.5% of Adj'd Value (Budget Intent)
- R&R Annual Capital Expenditures (Target is approx. 2.5% of Adj'd Value)
- M&R/R&R Annual Investment Target (Approx. 4% of Adj'd Value)
- Annual Investment Target Shortfall (adds to DM backlog)

Deferred Maintenance Reduction

- Deferred Maintenance Reduction Expenditures ($37.5M for 5yrs + $200.0M)
- Additional R&R funds necessary to reach sustainment level by FY16
- Deferred Maintenance Backlog with adequate M&R/R&R funding (Reduce to approximately $360M by FY16)
- Deferred Maintenance Backlog as presented in FY12
- Deferred Maintenance Backlog without adequate R&R funding (Grows to over $800M by FY18)

3/13/12

Sustainment Funding Plan for the University of Alaska Facilities

This plan sets forth the funding strategy and requirements for preserving and achieving full utilization of the buildings, assets and infrastructure for the University system. The objectives are to reduce the University's deferred maintenance (DM) to approximately $360 million by FY16 and achieve a sustainable level of funding for annual maintenance and capital reinvestment by FY17. The assumptions used in developing the plan are below.

- Adequate funds for two streams of investment are achieved by FY16: annual routine & preventative maintenance and repair, and major repair and recapitalization (building system renewal and repurposing). Making this needed investment annually is the only way to eliminate continued increase of deferred maintenance. Status Quo (dashed green line) represents effect of not making this investment.
- Annual Maintenance & Repair (M&R) operating expenditures will continue to meet or exceed the annual target of 1.5% of adjusted facility value (black line).
- Annual requirement for Renewal & Repurposing (R&R) will level off to $50 million per year from FY11 forward, estimated at 2.5% of facilities adjusted value.
- Non-state revenue sources will continue to help support R&R activities. Sources have averaged over $9 million from FY06-FY11, and are a portion of the light blue column. Sources include: Federal Title III, and University bonding.
- State support for R&R will increase to supplement the non-state sources and provide the projected need: $50 million per year (light blue).
- State support for reducing deferred maintenance of $37.5 million through FY15, with an additional $200 million investment in deferred maintenance over FY12, FY13, and FY14 (green column). A Facility Condition Index (FCI) is being created for FY12, and will be used to demonstrate the effects of spending to reduce the DM backlog.
- In order to reach the deferred maintenance goal, any unfunded annual R&R requirement has been added to the FY16 request (grey column).
- Deferred maintenance in FY11 ($750 million) is based on the MAU's categorization of DM and R&R projects for FY11. A $360 million level of DM is approximately 12% of UA's facilities replacement value, recently estimated at $3 billion.
- Reducing deferred maintenance to $360 million by FY16 will minimize the expenditures for emergency response maintenance, which is more expensive than performing the preventative maintenance, routine maintenance, and capital reinvestment on a planned basis (green line).
- Facilities adjusted value in FY11 is based on escalation of original construction cost over time as recorded in the fall 2010 Facility Inventory publication. Replacement value is approximately 50% higher.
- FY11 General Obligation Bond projects are projected to increase the facility adjusted value by $300 million in FY14.

Alaska Association of Conservation Districts

Funding Request

The Alaska Association of Conservation Districts (AACD) respectfully request continued legislative support with funding for this year's field and administrative operations.

The AACD has leveraged millions of federal dollars, which have been used state wide to protect, restore, and enhance communities and their local natural resources. Throughout the state of Alaska the AADC has helped protect, fish habit, river banks, lands from erosion, native Alaskan species, trails, wood lands and much more.

Please support funding for the AACD which works with all Alaskans to grow communities, protect Alaska's lands and supports economy.

State Funding from 2007

2007 $750.000

2008 $350.000

2009 $0

2010 $300.000

2011 $500.000

Please Call : Pete Fellman with questions and concerns 907- 803- 3571

Project Title: Alaska Association of Conservation Districts - Provide the technical guidance and assistance in soil and water conservation

TPS Number: 57008

Priority: 1

Agency: Commerce, Community and Economic Development
Grants to Named Recipient (AS 37.05.316)

Federal Tax ID: 92-0161947

Grant Recipient: Alaska Association of Conservation Districts

FY2013 State Funding Request: $1,500,000

Future Funding May Be Requested

Brief Project Description:

Provide the technical guidance and assistance to carry out the measures for soil and water conservation and erosion control

Funding Plan:

Total Project Cost:	$4,500,000
Funding Already Secured:	($3,000,000)
FY2013 State Funding Request:	($1,500,000)
Project Deficit:	$0

Explanation of Other Funds:

FY 2008 - $750,000
FY 2009 - $350,000
FY 2010 - 0
Fy 2011 - $300,000
FY 2012 - $500,000

Detailed Project Description and Justification:

Soil and Water Conservation Districts (SWCD) serve an important role in our state by assisting landowners with natural resource management. Across the state, SWCDs help landowners develop their land responsibly, while taking into consideration such issues as air quality, soil degradation and erosion, water quality, and forestry management. Thousands of personal contacts with landowners are made each year in districts around the state.

Other key programs include soil nutrient testing, technical assistance for invasive plant management, assistance for farmers, forestry management plans, promotion of Alaska Grown products, Youth Conservation Corps programs and resource education to local schools. Districts conduct land capability surveys and investigations of potential agricultural areas and soil conservation and erosion control. Construct, improve, and maintain soil erosion control and conservation structures. Local districts work with numerous agencies, organizaitons, local government, and private citizens to deliver our programs. Working cooperatively within the community helps the district to be well imformed and provide services that are useful and timely.

Districts provide a report on activities to the Natural Resources Conservation Development Board, who,in turn, advises the Governor and the Commissioner of DNR, and the Alaska State Legislature. All reports are distributed by the 30th day of the legislative session.

The Alaska Association of Conservation Districts has leveraged thousands of dollars for natural resource projects from federal and local sources, but cannot deliver these projects statewide unless we have funding for base operations. The usual match if 6 to 1 on the funding for districts.

Project Timeline:

FY 2013 Projects will start upon receipt of funding.

Submitted to Legislature

Ken Marsh, President
Alaska Association of Conservation Districts
1700 E. Bogard Road, Suite 218
Wasilla, Alaska 99654

March 16, 2012

Dear Mr. Marsh,

I am writing in support of the Upper Susitna Soil and Water Conservation District's plans to continue their Youth Conservation Corps program. The Upper Susitna Youth Conservation Corps provides an excellent and unique way for area youth to engage in service learning outdoors for an entire summer, and their work provides meaningful benefits to local communities and resources. With our support over the past several years, these youth have done substantial work to restore salmon habitat along streams and lakes and to survey for and control invasive plants in the northern portion of the Mat-Su Borough. Based on the impressive results of this work, the quality of these experiences for participating youth, and the professionalism of the staff, we are preparing to further support the crew's work through 2013. It is clear that engaging youth in outdoor conservation efforts provides for both their improved fitness and work ethic and direct benefits to our natural resources. We hope that the Upper Susitna Soil and Water Conservation District receives enough support to retain the Youth Conservation Corps program.

Sincerely,

Jeff Heys
Habitat Restoration Biologist

--Please forward to the Finance Committee--

I am a long time resident (in Kasilof) and registered voter. I am writing to strongly urge you to provide funding for the Alaska Soil & Water Conservation Districts. Though the Districts are provided for in part through NRCS, the funding you have control over provides an absolutely essential basis for their operation. The Districts provide many essential services in support of agriculture throughout Alaska. In my own area on the Kenai Peninsula, farmers large and small old and new, are enabled to cooperate about such essential services as producing high quality fertilizer, obtaining critical equipment, exchanging valuable information, understanding and being assisted in working with state land-use guide-lines, working together to build many (50) new hi-tunnel greenhouses that have already transformed the agricultural possibilities of our difficult climate, thus greatly enhancing the hope for Alaskan food security. The members of the Conservation Districts are some of the residents most committed to the long term livability of our shared home state, I urge you to continue to fund their efforts.

Sincerely,

Fwd: Fund Conservation Districts

Subject: Fund Conservation Districts
To: Kenai_LIO@legis.state.ak.us

Please forward this message to the Senate Finance Committee.

I'm speaking in support of the Alaska Association of Conservation Districts request for funding. As a 50-year resident of the Kenai Peninsula, I am deeply concerned about our ability to grow food locally to lessen our dependence upon outside supply lines in the event of emergency, to lessen the economic impact of being so far away from our food sources, and to have quality, healthy choices available to Alaskans through sustainable agriculture within our own state.

Our Conservation District here is necessary to promote these goals, and has been very helpful in providing information, learning opportunities, and assistance to dozens of new high tunnel growers on the Peninsula. Further, since agricultural enterprises have historically been limited to a very small section of our State as well as with a relatively narrow production scope, the District has been a great resource in helping to expand options and opportunities for new growers that have heretofore not been available. I'm told that districts in our State have historically brought in 4 to 9 non-state dollars for every state dollar. Base funding received from the state via the Alaska Association of Conservations Districts is essential to keep the doors open and leverage additional sources of federal and private funding.

Please include AACD's funding request in the Capital Budget.

Thank you for your consideration.

Please forward to the Senate Finance Committee:

Dear Senators,

I'm writing to urge you to approve the Alaska Association of Conservation Districts' request for funding in this year's Capital Budget. As a resident of Kenai, I truly value what the Kenai Soil & Water Conservation District (KSWCD) brings to our community. One of my primary concerns as a citizen is local food security. While local meat and fish are relatively easy to obtain, we Alaskans are at the end of a very long supply chain when it comes to most of the produce and dairy that we consume. We need organizations such as KSWCD, which facilitate the exchange of information among local growers, connect growers with federal programs such as the USDA-NRCS high tunnel program, and provide a means of bringing federal and private grant money into our community to continue such efforts. I've also appreciated the work of the Homer Soil & Water Conservation District, which has employed a youth crew for the past few summers to control invasive plants. The existence of these Soil & Water Conservation Districts is mandated by the state, but it is an ongoing struggle for them to remain working and effective because there is no secure, yearly state funding for them. They fill a very valuable role in our communities and our state, and a small amount of state funding would allow them to maintain minimal staff and office space and leverage much more money in order to pursue such goals as local food security. Thanks for your service to our state, and please fund our Conservation Districts!

Sincerely,
Michelle Martin, Kenai

kenaiswcd@gmail.com

My name is Bryce Wrigley. I am a farmer in Delta Junction, Alaska. I would like to speak in favor of adding 1.5 million dollars to the budget for the soil and water conservation districts throughout Alaska.

The Districts work locally to enhance fisheries, improve forests, and improve trails for recreation and hunting. They are the front lines for managing noxious and invasive weeds in the state. They provide research and technical assistance for our farmers and ranchers, create and enhance wildlife habitat, and leverage large amounts of federal dollars that would otherwise be lost. They are not preservationists, but pro development, and work to see that development of our resources proceeds responsibly.

Conservation districts are the most efficient of all state agencies, but they are not funded by the state. They support the mining, oil and gas, agriculture, fishing, and tourism industries, and local quality of life issues that make Alaska a nice place to live and work.

The 1.5 million dollars is spread across 11 districts statewide with another soon to be formed district in Southeast. The money keeps their door open, provides matching funds, and helps fund all the aforementioned projects. Their work benefits residents from Nome to Tok and from Manley to Ketchikan. With permission, they have worked in those areas of the state that do not yet have a conservation district formed.

I hope the Legislature will acknowledge the valuable work performed throughout Alaska by the conservation Districts by providing the needed funds to continue their work as they support virtually every industry, and directly or indirectly, every community in Alaska.

Subject: Fund Conservation Districts
To: Senator_Hollis_French@legis.state.ak.us, Kenai_LIO@legis.state.ak.us
Cc: kenaiswcd@gmail.com

Dear Senator French and Kenai legislators:

It has just now come to my attention that the State's budget has failed to include funding for the Soil and Water Conservation District program. This program supports agricultural efforts all over Alaska. I presently reside in Senator French's district, and am also a landowner on the Kenai Peninsula. I am in the process of developing a small farm on my land there.

As Alaska's food security is becoming an ever more important issue, the SWCD program has helped people develop sustainable local food sources for all Alaskans, from Bethel to Fairbanks, from the Matanuska Valley to the Peninsula and the Panhandle. This program brings in invaluable development money for a sorely underdeveloped part of our economy, at a rate of $4 to $9 for every dollar the state contributes. By supporting local agriculture, the SWCD program is helping Alaska to free itself from the predatory pricing and shipping charges for necessities that are sent from the Lower 48.

Among the services offered is the rental of equipment that can help potential farmers open new land to agriculture. The development pressure on the open land in the Matanuska-Susitna Valley is a matter of public record. The Kenai Peninsula, as the next nearest potential agricultural area to Anchorage, would lose an incredibly valuable opportunity if the development, planning, and technical services that SWCD provides were no longer available.

Please do not let this priceless resource die simply due to an oversight or to a very misguided attempt to "save" money. The tiny amount saved pales in comparison to the huge amount lost. Penny wise is too often pound foolish - we Alaskans can't afford that!

Sincerely,

Louise Heite
Anchorage and Kenai

January 17, 2012

TO WHOM IT MAY CONCERN:

The Wasilla Soil & Water Conservation District is a valuable asset to our community. They have performed several streambank restorations, providing improved habitat for our salmon. In 2010, the Wasilla District was the recipient of the National Fish Habitat award. Other accomplishments include several rain gardens at local schools and senior centers, as well as community gardens at senior centers. They promote conservation education in our local schools and sponsor field trips to various conservation sites and projects. With the assistance of the Wasilla District, I participated in the pilot project for dog waste composting. The results were successful and after the District provided free nutrient testing of the compost, we were able to use the product on a flower garden at one of our local schools.

We are very thankful for the Wasilla Soil & Water Conservation District and appreciate the many projects and services that they offer to make our community a better place. We would encourage your support as well.

Sincerely,

Martin Buser

Anchorage, Alaska 99501

To Whom It May Concern:

On behalf of the Alaska Association of Conservation Districts, I would like to express my support for the Upper Susitna Soil and Water Conservation District's Youth Conservation Corp (YCC) program.

The YCC program offers Youth the opportunity to gain valuable work experience through hands-on training in a variety of employment fields. The youth are exposed to an environment that fosters the development of a strong work ethic that will benefit them as they move through school and enter the work force. In addition to the direct skills they acquire, these youth are given the opportunity to connect and shadow working professionals in exciting, natural resource professions.

As a partner, I have had the chance to personally work with the Upper Susitna YCC program and have seen the impact it can have on both the youth involved and the communities they work in. I would support any funding to this worthwhile program.

I would be happy to answer any questions you may have.

Sincerely,

Brianne Athearn

April 28, 2009

To whom it may concern,

Denali National Park and Preserve has partnered with Upper Susitna Soil and Water Conservation District (USSWCD) for many years on a "Denali Susitna Exploration Camp" aimed at youth and young adults in the southern portions of the national park. This youth camp has always had goals of exposing students to employability skills development as well as exposing the students to technology in an outdoor setting. The camp's duration tends to be an intensive short term work experience and is part of the much larger experience these youth have with USSWCD as Youth Conservation Corps (YCC) participants. During their overall experience with YCC through USSWCD young adults learn to pay attention to detail, communication skill and teamwork.

Please contact me at the address below if you have any questions about the specific nature of our support. The National Park Service is a formal partner in these young adult efforts of USSWCD in the Talkeetna, AK area and supports their application to the "Alaska Youth First Program" 2009.

Sincerely,

C. Denzel Anastasia

Mat-Su Health Foundation
950 E. Bogard Rd., Suite 218
Wasilla, AK 99654

Dear Mat-Su Health Foundation:

I am writing in support of the Upper Susitna Soil and Water Conservation District and their efforts at maintaining and growing their Youth Conservation Corps program. YCC has been an important part of the annual Denali-Susitna Exploration Camp co-sponsored and operated by Denali National Park and Preserve and the Conservation District. For the past five years we have together worked with local youth to enhance their connection to the nature they have all around them both inside and outside of public lands. The YCC members have experiences that support healthy lifestyle choices and introduce them to possible vocational opportunities as part of their work. During the week-long Denali-Susitna Exploration Camp, the YCC members are role models for younger adolescents attending camp. They find themselves internalizing positive behavioral choices as they model these behaviors to their younger community members. The individuals who have filled the role of YCC Director with the Conservation District are integral and essential to the planning, implementation, and ultimate success of DSEC. I have particularly enjoyed working with the USSWCD staff preparing for camp this summer. I look forward to our continued collaboration and success for the benefit of community youth. I hope Mat-Su Health Foundation will choose to support Upper Susitna Soil and Water Conservation District efforts toward this end.

Sincerely,

Bob Henry

Howard and Noelle Carbone
Alaska Nature Guides
P.O. Box 170
Talkeetna, AK 99676
(907) 733-1237

To Whom it May Concern:

We are writing in support of the Upper Susitna Soil and Water Conservation District Youth Conservation Corps' application for a work experience grant. We have worked with the YCC program and find it to be an excellent experience for the youth of our community.

We are a locally owned guided hiking business. The YCC has worked on the Talkeetna Lakes Trail and Byers Lake Trail, two of the main trails we use, and has done an excellent job. They are well organized, have outstanding leadership, and have a sterling reputation in the community. Their program gives our youth a productive outlet and teaches responsibility, strong work ethics, and how to be a good employee. The projects they do benefit the community in many ways, including the economic boost we get from being a tourist destination with well-maintained trails. Participants learn valuable skills, develop a respect for their surroundings, and come away with a sense of ownership for their community.

Please accept this letter of support and be assured that this program is a worthy recipient for a work experience grant.

Sincerely,

Howard and Noelle Carbone

The Honorable Charlie Huggins
State Senator
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, Alaska 99801-1182

Dear Senator Huggins:

I am writing this letter to show my support for the Alaska Association of Conservation Districts (AACD) and their request for funding from the State of Alaska. Over the years, the AACD has maintained an effective working relationship with the USDA Natural Resources Conservation Service (NRCS) in Alaska, in our efforts to promote efficient use and management of renewable resources. Additionally, through previous earmarks, the twelve districts have been effectively providing assistance to landowners and land users.

The earmark under which we work with AACD is project oriented and does not allow for sufficient administration funding for the districts; continuing education for staff and supervisors; and, is capped on how much the association can use for public outreach activities. Those funds have to come from another source and, as you are aware, these are critical activities for successful project completion. Furthermore, I would like to point out that AACD is following accountability and compliance procedures in accordance with proper NRCS and OMB requirements.

Respectfully,

Robert N. Jones

ROBERT N. JONES
State Conservationist

Alaska State Legislature

Please enter into the record my testimony to the SFIN
Committee name

Committee on SB160 / SB107, dated 3/22/12.
Bill/Subject

I stopped by to testify at the hearing today at the Mat-Su LIO on Senate Bill #160, but was told that I probably not be able to testify in person due to the number of people to be heard and time constraints.

A suggestion was made that I e-mail my comments to the LIO in lieu of public testimony.

I respectfully request that the Alaska Legislature approve State funding for Senate Bill #107 for new engineering buildings on the UAA and UAF campuses.

Alaska has many challenging energy projects in its future, including:

- The Watana Hydroelectric Project.
- Some version of a natural gas pipeline.
- Development of shale oil production on the North Slope.
- Development of heavy oil fields at Greater Prudhoe Bay.
- Development of offshore oil in the Chukchi Sea.

In addition to these energy projects, Alaska will need all of the other infrastructure including homes, institutional and commercial buildings, transportation systems, utilities, ports, and educational facilities to meet the needs of its citizens.

All of these projects will require engineers and engineering.

New engineering buildings at UAA and UAF will signal Alaska's commitment to educating its own citizens for those future engineering opportunities. The new facilities will also help to draw talented engineering students from elsewhere to Alaska to get educated here and help build Alaska's future.

Please pass on my respectful request for funding of Senate Bill #107.

Thank you.

Steven M Miller, PE
President, American Society of Civil Engineers, Mat-Su Branch

Committee name

Committee on SB160, dated 3/22/12
Bill/Subject

To the Senate Finance Committee;
I am expressing public interest during the SB 160 public comment period for the committee meeting tonight. I am writing in support of the **Alaska Association of Conservation Districts** (AACD). These Districts perform essential work throughout Alaskan communities that would otherwise not be accomplished. Government agencies such as DNR, NRCS, Div. of Ag, USDFW, AKDF&G, and many others rely on Conservation Districts to assist with projects that benefit the government, local businesses, local citizens, and Alaskan visitors alike.
In my community, the Conservation District builds and maintains public trails, provides nutrient management plans for farmers and gardeners, rehabilitates shoreline at valuable fish habitat sites, helps stop the spread of noxious weeds, does land capability classification data collection to determine the best sites for future agriculture use, creates GIS maps for government agriculture use, assists local citizens with flower beds and tourist attractions in Talkeetna, and much, much more. State funding is ***essential*** to obtain funding for these projects because they all require match funding. Without State funding, that match would be unavailable and these projects would not be accomplished.
The District hires local youth, ages 14-17, to accomplish most of the jobs listed above through the Youth Conservation Corps (YCC). These youth live in an impoverished community where 72% of the school kids are on the free and reduced lunch program. The jobs provided by the local Conservation District allow these kids to not only make a good wage, but learn work ethics, responsibility, and conservation practices at the same time. There are always more youth looking for a good job than there are YCC positions to fill, without State funding there may be no jobs for the local youth. The community is very upset to hear the YCC is in danger of shutting down due to a lack of State funding.
Please help our community help the conservation of natural resources. Without this, where would we be today? Please continue to fund the Conservation Districts and allow these important tasks to continue.
Sincerely,
Laura Allen
lauraleetraveler@yahoo.com

MATSU LIO Fax 907-376-6180 Mar 22 2012 04:06pm P003

Alaska State Legislature

Please enter into the record my testimony to the SFIN
Committee name

Committee on SB160, dated 3/22/12
Bill/Subject

Honorable Senators,

I am submitting the following written testimony on SB 160.

I am Tom Adams; I have lived in the Matanuska-Susitna Borough for nearly 30 years. I have been involved in Alaskan transportation projects throughout my 20 year professional career both as a civil engineering consultant and an employee of the Matanuska-Susitna Borough (MSB); I am currently a member of the MSB Planning Commission.

I support the many infrastructure projects contained within SB 160 especially those projects that improve the transportation infrastructure within the Mat-Su Borough. I was an active member of the Road Bond Yes! group that advocated passage of the recent Road Bond package; Mat-Su voters overwhelming passed this Road Bond package during last October's municipal election. The $64.0 million Bond package is to be shared 50/50 between the Borough and the State. This Bond package funds 13 important road and pathway projects that both complement and supplement the existing transportation system in the borough, including state roads. Improving these roads will provide transportation options to residents who are currently funneled on to the congested Parks and Glenn Highways.

I strongly support and am grateful for the existing $20.0 million of state match currently contained in SB 160 on page 5 lines 17 and 18. I urge you to consider adding the additional $12.0 million to fully fund the State's match as it would allow the Borough to move forward in an effective and efficient manner to implement this important road program. These 13 projects will improve connectivity, traffic flow and most importantly safety.

Thank you for your consideration.

Committee on SB 160
Bill/Subject
, dated 3/22/12

Good Morning Senators

I am submitting the following written testimony on SB 160 to add to last evening's public hearing.

My name is David Lundin. I have been a resident of the Mat-Su Borough for over 12 years. As an active member of Palmer Fire & Rescue, I see first-hand the injuries and property damage that occur due to motor-vehicle collisions on Mat-Su roadways. I am also a professional civil engineer.

I support the many infrastructure projects contained within SB 160 especially those projects that improve the transportation infrastructure within the Mat-Su. I was an active member of the Road Bonds Yes! group that help secure the passage of the most recent Mat-Su Borough Road Bond proposition. Mat-Su voters overwhelming passed this Road Bond package during last October's municipal election. This $64.0 million bond package is to be shared 50/50 between the Borough and the State. This Bond Package funds 13 important road and pathway projects that both complement and supplement the existing transportation system in the Borough. Improving these roadways will improve safety and provide transportation options to residents who currently must use congested roadways.

I strongly support and am grateful for the existing $20.0 million of state match currently contained in SB 160 on page 5 lines 17 and 18. I urge you to consider adding the additional $12.0 million to fully fund the State's match as it would allow the Borough to move forward in an effective and efficient manner to implement this important road program. These 13 projects will improve connectivity, traffic flow and most importantly safety.

Thank you for your consideration.

Committee on SB160
Bill/Subject
, dated 3/22/12

Good Morning Senators

I am submitting the following written testimony on SB 160. I attended last evening's public hearing but due to the large numbers of Alaskans testifying was not able to testify. I do appreciate the work that the Senate Finance Committee accomplishes and the efforts you make to secure public input. Here is my testimony:

I am Murph O'Brien a long time resident of the Mat-Su Borough. I have been involved in Alaskan transportation projects throughout my 35 year professional career first as an employee of the Alaska Department of Transportation, then with the Mat-Su Borough and currently as a private consultant.

I support the many infrastructure projects contained within SB 160 especially those projects that improve the transportation infrastructure within the Mat-Su. I was an active member of the Road Bond Yes group that help secure the passage of the most recent Mat Su Borough Road Bond Issue. Mat-Su voters overwhelming passed this Road Bond Package during last October's municipal election. This $64.0 million Bond package is to be shared 50/50 between the Borough and the State. This Bond Package funds 13 important road and pathway projects that both complement and supplement the existing transportation system in the borough. Improving these arterials will provide transportation options to residents who are currently funneled on to the congested Parks and Glenn Highways.

I strongly support and am grateful for the existing $20.0 million of
state match currently contained in SB 160 on page 5 lines 17 and 18.
I urge you to consider adding the additional $12.0 million to fully fund the State's match as it would allow the Borough to move forward in an effective and efficient manner to implement this important road program. These 13 projects will improve connectivity, traffic flow and most importantly safety.

Thank you for your consideration.

Bill/Subject

Dear Sirs:

I am offering written testimony for SB 160. I was not able to attend the public hearing on this last night. My name is Berkley Tilton. I have been an active citizen of the Matanuska-Susitna Borough for over 40 years. In that time I have personally financed and built over 125 miles of roads within the Borough. I sat on the Borough Transportation Planning Committee for Long Range Planning. Currently I am the Board President of the Knik-Fairview Community Council.

In the current budget there is funding to match a portion of the Road Bond issue passed last October. Thank you for that. Because of that, I would like to urge you to consider totally funding the match for the Borough in the amount of about an additional $12 million.

Thank you,

B. H. Tilton

Sen Finance Committee SB 160
Hello! Chuck Kaucic, testifying on behalf of the Wasillla Soil & Water Conservation District in support of the AK Assn of Conservation Districts (AACD) $1.5 M budget request.

I will describe the Wasilla District to give you a perspective of the variety of services Conservation Districts offer. The Wasillla District serves the largest area within the Mat-Su Borough & includes the fatest growing community in the State. We partner with "Cooperaors" (folks who have agreements with us), residents, students, tribal councils, seniors, veterans & volunteers via various projects & Programs such as:

Agriculture

1) Farm Conservation plans & services;
2) Soil, hay, & forage crop sampling for farms - large & small.

Natural Resources

1) Stream bank & Salmon habitat restoration partnerships with: USFWS, NRCS, NOAA, ADF&G, & TNC (The Nature Conservancy). State funding provides needed match money;
2) Water Quality Monitoring - in lakes, streams; as well as
3) Watershed Health - thru stream gauge projects

Education

1) Public Outreach - educating people about soil & water topics;
2) Coordinate an annual Speech & Poster Contest for school students; & host
3) Classroom visits (indoors/outdoors) - working with public, private, & home school students, teachers & parents.

Natural resources are vital to our local economy & health

* Clean water;
* Minimizing run off;
* Mitigating ATV/ORV (off road vehicle) use & damage; &
* Restoring salmon habitat & fisheries

ALL are challenging responsibilities ... WE accept!

It is estimated that Conservation Districts return from $6-$9/$1 invested. We are: local, cost-effective, resourceful, & solution-oriented. I respectfully request that you invest in us so we can in turn serve our neighbors. Thanks for considering the AACD's $1.5 M request.

On behalf of the Alaska membership of the Hawaii-Alaska Chapter of the Health Information Management and Systems Society, we request your support for the $3.8M budget request to complete the investment needed for the statewide health information exchange service for all Alaskan healthcare organizations and all Alaskans.

Information is the lifeblood of healthcare and by having a secure statewide health information exchange, putting relevant and timely health information in the hands of providers when and where they need it, this can be realized. Not only will patient safety be improved by better care coordination, but waste will be reduced by avoiding unnecessary testing and the unwieldy administration gridlock of paper-based healthcare systems.

Should you have any questions, please feel free to contact me directly.

Thanks for your consideration.

The Peak Oil Crisis: Parsing the Bakken

By Tom Whipple
Wednesday, March 21 2012 01:24:30 PM

There is a lot of talk recently that "tight oil" as found in North Dakota's Bakken and other shales in the Southwest will save America from stagnant global oil production and increasing gasoline prices. The current glut of natural gas which has brought prices to a 10-year low has forced companies drilling for gas to curtail their activity and move the crews and rigs to North Dakota and Texas where money can still be made in drilling for shale oil. New well completions in North Dakota are expected to surge again this year.

A recent pronouncement by a noted analyst says that America's "tight oil" (shale oil) production could reach 3 million barrels a day (b/d) by 2020 which will again put us among the top few global oil producers. On digging a little deeper into the issue, however, many have a problem with all the optimism.

In January 2012, oil production in North Dakota hit 546,000 b/d, up from 342,000 b/d in January 2011, 253,000 b/d in 2010, and 187,000 b/d in 2009. With more drilling crews on the way, it is easy to see why optimists are projecting that millions of barrels per day will come from the various US shale deposits by the end of the decade. If we were talking about conventional oil coming from conventional oil fields, the optimists would probably be right --- but we aren't.

It took the production from 6,617 wells to produce North Dakota's 546,000 b/d in January. Divide the daily production by the number of wells and you get an astoundingly low 82 b/d from each well. I say "astounding" because a good new offshore well can do 50,000 b/d. BP's Macondo well which exploded in the Gulf a couple of years ago was pumping out an estimated 53,000 b/d before it was capped.

Now a North Dakota shale oil well is not in the cost class of a deepwater offshore platform which can run into the billions, but they do cost about three times as much as a classic onshore oil well as they first must be drilled down 11,000 feet and then 10,000 horizontally through the oil bearing layer before the fracturing of the rock can take place. The "fracking" involves at least 15 massive pumps that inject water and other chemicals into the well. Take a Google Earth flight over northwestern North Dakota. The fracked wells are hard to miss as there are now about 9,000 of them and they are each the size of a football field.

There is still more -- fracked wells don't keep producing very long. Although a few newly fracked wells may start out producing in the vicinity of 1,000 barrels a day, this rate usually falls by 65 percent the first year; 35 percent the second; and another 15 percent the third. Within a few years most wells are producing in the vicinity of 100 b/d or less which is why the state average for January is only 82 b/d despite the addition of 1300 new wells in 2011.

It may take one oil barrel's worth of energy to produce six barrels of Bakken shale oil.

From here on the path ahead seems clear. We seem on course to drill another 2,000 or so in 2012. As long as the price of crude stays up, this pace can continue for a while. The drilling can spread into Montana and Canada until diminishing returns set in. While recently drilled wells may be producing well, the vast bulk of the wells will be close to depletion. While some predict that the Bakken will be producing a million b/d within a few years, it will not stay there long as depletion rates are simply too high.

There is a lot more to the U.S. shale oil story, however, than simply the Bakken shales in the upper Midwest. The Eagle Ford shale in southwestern Texas has been drawing considerable attention as a major source of oil and natural gas. However, it is the Monterey shale in southern California that is likely to become the biggest shale oil resource of all. Whereas the Bakken and Eagle Ford shales are estimated to contain about 3.5

million barrels each of recoverable oil, the Monterey shale with 15 billion barrels is 64 percent of the 24 billion barrels estimated to be trapped in U.S. shale formations.

While this 24 billion barrel figure sounds impressive to politicians looking for a talking point, it really is only about 9 months' worth of current global oil consumption.

As we have seen with the Bakken and the various natural gas bearing shales we have been drilling of late, it takes an awful lot of expensive wells and environmental disruption to get the oil out. One estimate of the Energy Returned on Energy Investment (EROEI) for the Bakken shale suggests that the EROEI is six. This means that it may take one oil barrel's worth of energy to produce six barrels of Bakken shale oil. This is getting very close to the theoretical point at which it really is not worth the effort and all the economic disruption.

The aspect of this "energy independence" story that the optimists continue to ignore is that, while oil production from shale may be climbing, depletion of our other sources of oil continues apace. Alaskan oil production is falling rapidly as is shallow offshore production in the Gulf and at least some of the offshore platforms are not turning out to be anywhere near as productive as planned. For its part, the EIA forecasts that U.S. shale oil production will reach a peak of about 1 million b/d around 2020, and deepwater production will increase by about another 500,000 b/d before peaking. This would put total US oil production in 2020 around 6.5 million b/d, far below the current demand of 18 million b/d.

A lot of what happens from here on out depends on the direction of oil prices during the rest of the decade. If prices climb substantially above current levels for whatever reason, there will obviously be a major economic contraction followed by a drop in prices. As we saw in 2008, if prices get below cost of production which in the case of shale oil is very high, the industry contracts in the same manner as we are witnessing with shale gas.

Shale oil is clearly nothing to bet our future on.

Tom Whipple is a retired government analyst and has been following the peak oil issue for several years.

is the 18 million b/d demand just for US or the World, dont we need to take care of the US , I thought the US used 4.5 million b/d so who do we need to look out for ? Allen

Subject: Support for Engineering Facility Funding

Dear Senator Hoffman:

I was unable to provide testimony at the hearing held on March 21 so will take this opportunity to voice my support for funding of engineering facilities at UAF and UAA. These current facilities are very crowded and completely inadequate. With growing enrollment, additional, modern facilities are badly needed and encouraged.

Best regards,

RE: SB160 – Governor's Capital Budget,
$5M Appropriation for Friends of the Jesse Lee Home (FJLH) Re-structuring Project

Senator Stedman

Dear ~~Representative Stoltze~~ and Corresponding Committee Members,

I am writing out of concern for a portion of the Governor's Budget earmarked for re-habilitating the Jesse Lee Home in Seward into the "Balto" Leadership School. My concerns aim towards the aggressive funding request on such a large project where building rehabilitation costs and school operations are yet to be accurately defined. Without the plans being thoroughly reviewed and fleshed out, this legislature could easily be allowing money to go down a black hole leaving Seward and the State with a black eye of wasteful spending and poor over-sight.

The current $5M appropriation with a potential additional request of $6M is pre-mature to answers that the public should have before a project of this magnitude is launched. Currently $16.9M is estimated for the building project, however there is nothing validating or substantiating this figure, as it is likely estimated too low given the physical status of the building.

The Jesse Lee Home has been sitting vacant for nearly 50 years. Consequently, but as expected, the structural assessment report produced by Schneider & Associates identified initial structural shoring and bracing as serious and / or critical. Such repairs are needed at minimum to make the building safe to work in, while structural calculations to determine the building's structural integrity and load-carrying capacities are still pending.

$3M of State funds have already been allocated towards the Jesse Lee Home project. Currently an RFP is out to provide a conceptual architectural plan, and provide a detailed cost estimate of re-habilitating the aged structure. From this effort more expertise will be brought in to assess, confirm and adjust the original $16.9 cost estimate for rehabilitating the building.

As a lifelong resident of Seward, and one who believes in balancing fiscal responsibility with reasonable projects, I strongly urge you to allow FJLH more time to define feasibility costs of building rehabilitation, and its operational plans for the leadership school. In order to make good fiscal decisions with our tax dollars, it should be incumbent on lawmakers and the Governor's office to request the best available information on the Jesse Lee Home developments before approving more funds towards this endeavor. Unfortunately that information is not yet available to justify the requested appropriation before you. So please be wise and allow more time and less money for the necessary information to be produced and more accurate fiscal decisions to be made.

The Methodist Mission helped and supported kids in Seward for 40 years. Their organization moved to Anchorage following the 1964 earthquake and a parent organization is still providing social services to kids with no parental support. It was not the building but the people providing the care and the life long cherished friendships that was the **life blood of the home and that lives on today. Not a broken building that has not been occupied for 48 years.** For many children, the Jesse Lee Home was **not a happy place.**

Regarding the education model for another type of Boarding High School, it appears the FJLH are "re-inventing the wheel". Here in Seward, we have the Kenai Peninsula School District providing K through 12 education; We have the Alaska Vocational Technical School; The Sealife Center; My question: HOW AND WHO IS GOING TO FUND THIS SCHOOL??? Now is the time to determine the direction and the financial viability of this whole project.

I have lived in Seward all my life and attended High School with kids from the Jesse Lee Home back in the 40's. I graduated from Seward High School in 1951. I have close friends who spent their childhood at the home, many of whom have passed on. These buildings have been condemned, vandalized, and vacant for 48 years. They are a **BLIGHT** to the community of Seward and should be razed.

March 21, 2012 – Testimony By Margaret Anderson of Seward, Ak.

To: SENATE FINANCE COMMITTEE ON
CAPITAL BUDGET **SB-160**

This testimony is with regard to the Jesse Lee Home Building Restoration Project and the "Balto School Educational Development Plan. The total budget estimate for the project is $16,900,000. Already $3,000,000. has been secured through the State and if the buildings are fully restored there is supposed to be a Federal Historic Tax Credit available of $3,400,000. There is an estimated budget gap of $11,000,000.

I am opposed to the restoration plan as well as the "Balto" School Educational Plan. First, engineering reports indicate the presence of hazardous materials and deteriorating conditions on this 90 year old structure. We do not know what the reconstruction costs are really going to be. The 2 million dollars the Friends of the Jesse Lee Home are now in the process of spending has not brought us any closer to the **ACTUAL COSTS OF THE RESTORATION OR HOW THE SCHOOL IS TO BE FUNDED.**

This project is **NOT ABOUT HELPING KIDS!!** Think of the benefits this 17 Million Dollars would have in really helping and supporting kids. Just in this session of the legislature, proposals have been brought forward to broaden the **SCHOOL MEAL PROGRAMS; EXTRA FUNDING FOR SCHOOLS THROUGH OUT THE STATE; EARLY CHILDHOOD DEVELOPMENT (PRE-KINDERGARTEN);** and other real enhancements to our education system.

Alaska State Legislature

on Bill# 160, dated 3/21/12.

Please accept the following as written testimony.

My name is Joseph Premo, and I Represent Alaska Vocational technology Education center in Seward, Alaska. As A Student here I feel that it is essential for us to Procure funds to build new dormitories, and shops for our growing Student population. The old Dorms and shops have been Run down after Decades of use. As a domestic workforce in the making I Belive that we deserve adequate facilities to learn and Live in. I appreciate your consideration.

Signed:

Alaska State Legislature

Please enter into the record my testimony to the S Committee FIN on Bill# 160, dated 3/21/12.

Please accept the following as written testimony.

My name is Andrew Edsall. I am currently attending AVTEC structural welding program. I am speaking on behalf of AVTEC students. The dorm situation is marginal. It would be great if some funding would be given for some much needed updates. AVTEC is a staple school and should be represented in a state of the art fassion. The school puts out an A grade product, so we should get A grade facilities. The product produced by AVTEC also benefit alaska by putting out skilled workers. Thank you for considering.

Signed:

Andrew R Edsall

Alaska State Legislature

Please enter into the record my testimony to the S Committee FIN on Bill# 160, dated 3/21/12.

Please accept the following as written testimony.

My name is Michael Stevenson and I am currently attending Avtec. I am wanting to talk about our 50 year old dorm that was only suppose to be in place for about 10 years. Currently in my room when It gets cold I get about 1/8" of Ice on my window even when its closed meaning my window isnot completely sealed all the way around the sliding part. The Heat is very unreliable, To point a picture my Heater is right below my window right next to my bed and desk.

Signed:

Today there is a mass call for APPlied tech the only reason Im stating this IS because Avtec IS a school that is mainly APPlied tech. Students. our dorms are full so How can Avtec supply the work force with the needed ammount of bodies to replace the people retiring.

With a new Dorm we will be able to get more students in and supply the work force with more bodies,

Alaska State Legislature

Please enter into the record my testimony to the SFIN Committee
on Bill# HB0, dated 3/21/12.

Please accept the following as written testimony.

My name is Justin Flowers and I am a student enrolled in the pipe welding course at AVTEC in Seward, Alaska. I am in support of funding for the school's purposed plan to construct new dorms. The dorms are over ~~50~~ 42 years old and have seen their days. The dorms are not properly sealed and wind gusts push doors open with ease. Heating is unreliable, showers are mostly unusable, and walkways/doorways/windows are always covered w/ Ice. The dorms contain asbestos and almost every single room have holes for conduit running through them exposing it. In short the dorms have served their purpose for over ~~50~~ 42 years. The School is expanding and we must meet the needs of students to house them. These students are the future vocational workforce for alaska, we need to be able to adequatly house them and keep them healthy during the training programs.

Signed: Justin Flowers

Thank you for your time.

I support

In addition the applied technologies department's budget. Applied Technologies are in serious disrepair. On average the pipe welding shop has serious leaks in the roof, extremely poor ventilation, and little to no heating. The room is an old heavy equipment storage room, it was never made to house a welding shop. This is a serious health issue to students, respiratory problems often arrive from welding smoke. The leaks in the roof are also pouring onto equipment including a $80,000 pipe cutter.

Alaska State Legislature

Please enter into the record my testimony to the SFIN Committee
on Bill# 160, dated 3/27/12.

Please accept the following as written testimony.

Hello, my name is Sean Oonan, I rebresent AVTEC in Seward, we are in need of new facilities, in particular new dorms and shops. The current dorms in which I live in are nearly 50 years old and are beginning to show their age. ~~are~~ as are some of the shops, what we learn here is highly beneficial to Alaska, and even more so this school has made a difference to me and is setting me up for a successful future. I feel that if we are able to procure these funds it would better the school and all the students. I may not be able to see these changes but the future generations will be able to reap the benifits. Thank you for your time.

Signed:

Committee on UAF Engineering Facilities Dated 03/21/2012
Bill / Subject

I am testifying in support of the UA Engineering Expansion initiative. I am a junior student in the UAF Civil Engineering program, taking classes full time. I also work as an engineering research assistant in the UAF engineering department, 20 hours a week.

The Duckering Building on the UAF campus, home to the Engineering department, is extremely cramped. The initiative to expand it is very exciting to me, as I spend around 50-60 hours per week there. The need to expand it is very real. The lab space that I use for both education and work are overful with equipment, preventing my fellow students and I from being able to learn and do research as thoroughly as we would like.

I serve as the president of the student chapter of the American Society of Civil Engineers, and as a senator in the UAF student government. Because of my contact with a great number of my peers, I feel justified in saying that the complaint that Duckering is too small is widespread. I would appreciate your consideration of the Engineering Expansion Initiative, as it will help me and future generations of engineering students immensely. Thanks you.

The Duckering building on Campus (UAF) is crowded at best. Personally, I am involved in the steel bridge competition, ice arch and miscellaneous research. It should be noted that the steel bridge room is used for the steel bridge, ice arch and other civil-based student projects. It was a hassle to share space, while building the arch, with the students working on the bridge. Also, student computers are always in high demand.

I am a senior in the civil Engineering department and still sometimes get confused finding my way around the poorly laid out floor plan in Duckering.

Committee on University engineering expansion Dated 2/21/2012
Bill / Subject

My name is Tripp Collier and I am an undergraduate civil engineering student at UAF. I am here to testify for the University engineering expansion. Currently I am an active member of engineering department by working on the 2012 steel bridge, ice arch, and conducting soil stabilization research for the Arctic. While we are able to accomplish great things at the duckering building at UAF it comes with increasing difficulty with our lack of room. Our current steel bridge room is used as a catch all room for any other civil engineering extra circicular activities. This clutters the room hindering the construction of the steel bridge and the other activities.

Also with research I am able to produce good results but very slowly. I have to share the lab I work in with multiple classes and other student researchers which constantly causes conflicts with more room I would be able to get much more data at a quicker pace.

I am a Senior Electrical Engineering student at the University of Alaska Fairbanks. I am testifying on my experience working on the Alaska Research Cubesat in the Alaska Space Grant Lab, Fall Semester 2011.

The Alaska Space Grant lab is extremely crowded and the number of students that work in there requires work and equipment to be set up and taken down every work session. I estimate 1/2 my time was spent setting up and taking down equipment supporting the project, to allow other students to utilize the space. The extra room additional engineering buildings would provide are desperately needed, to maintain the high standard UA students strive for.

I AM A SENIOR AT THE UNIVERSITY OF ALASKA FAIRBANKS. AND AM STUDYING CIVIL ENGINEERING. OVER THE PAST FEW YEARS I HAVE BEEN CONDUCTING LAB WORK FOR DR TOMLOLO ON RIVER VELOCITY MAPPING AND SEDIMENT TRANSPORTATION.

THE CURRENT FACILITIES ARE CROWDED AND I CAN PERSONALY SEE THAT AN EXPANSION WILL BE WELL UTILIZED.

ALSO, I BELIEVE THE ENGINEERING DEPARTMENT PRODUCES KNOWLEGABLE STUDENTS AND IMPORTANT RESEARCH. BECAUSE THE STUDENT BODY IS INCREASING IN SIZE, THIS FACILITY WILL BE REQUIRED TO MAINTAIN THIS SAME QUALITY OF EDUCATION AND RESEARCH.

Vockeroth 1 of 2

My name is Emily Vockeroth and I am the president of the Board of Directors for the North Star Imagination Library. We have requested $50,000 in the capital budget to continue to provide books free of charge to 3,450 children under five in the North Star Borough each month. This money is well spent because with a volunteer board and each book costing about $2.50, the money goes a long way!

Along with registering about 100 new kids each month, we have been raising money in the community as well. In November, we held our third annual Champions for Children dinner and raised over $12,000! On March 2, we celebrated Dr. Seuss' birthday at McDonald's signing up kids, providing activities in the play areas, and earning almost $3,000 in donations and proceeds from dinner sales. We've also had generous support from John Hill and Fairbanks Memorial Hospital along with numerous individuals. However, with books costing over$7,000 each month, we must continue to seek out funds and support.

Our volunteers are doing more than getting books in the mail to kids. This year we have provided literacy training for childcare providers and hosted two family fun nights for preschoolers and their families. We've taken our family events on the road to reach kids throughout the borough. We were at Eielson in January and will be in the Goldstream Valley this Monday. In May we'll do a program in south Fairbanks.

Thank you for considering our request. Imagination Library is the easiest and cheapest way to get books in the hands of kids before they get to school. We appreciate your support of our effort.

Committee on S.B. 160 / University of Alaska Engineering Dated 3/21/12
Bill / Subject

My name is Sean Lee and I was born in Alaska, raised in Soldotna, graduated UAF with a B.S. in Civil Engineering, and I am currently studying for a Master of Science in Environmental Engineering at U.A.F.

Knowing that the UA Board of Regents has called the UA Engineering Expansion initiative its #1 new construction priority for academic programs, that retaining qualified engineers is difficult in Alaska, that the engineering enrollment has increased significantly (53% from 2007-2011) At UofA, and that education is a priority to Alaskan Residents, I support the additional requested funds to complete Design & construction of the proposed buildings.

UA facilities are in dire need of state-of-the-art engineering buildings for research & teaching. With large projects being proposed to Develop Alaska, it is crucial that research regarding these projects is conducted in state, allowing local students learning opportunities & to invest the funds directly back into Alaska. These students would be much more likely to stay in state with their skills, and be a large incentive to stay in state for higher learning instead of heading out of state.

FNSB $1,600,000 Birch Hill Improvements

1. New Maintenance Facility Building
   - Current Building is poorly designed for current and anticipated equipment storage and maintenance.
   - Purchased new Pisten Bully PB100 for late March delivery, two new Scandic snow machines and new West Yellowstone track setter in addition to existing snow machine and grooming attachment fleet plus CAT Skidsteer. Current building is too small.
   - Located directly in skiing and competition area w/poor access to trails.
   - Plan is to turn current maintenance building into additional waxing and ski storage facility for high school teams and during large competitive events.
2. Upgrade the Birch Hill Complex electrical capabilities to 3-Phase service. Requires GVEA to run new lines and transformers from the Steese Highway to the Rec Area. Current electrical supply is maxed out.
3. Additional funding for parking and trailhead improvements.
   - Currently have parking for 160-200 vehicles. Will need to create permanent parking for a minimum of 150-200 additional vehicles. Also need to create an additional trail head for citizen skiers during large competitive events when primary trailhead is in use. These improvements need to be funded if they are to occur prior to the 2013 Junior Nationals.
   - Insulation and foundation work for the Rikke's Roadhouse race registration and bib pickup building will require additional funding if it is to be ready for the 2013 Junior Nationals. It currently has no insulation and only a temporary foundation.
   -

NSCF $82,776 Technology Upgrades for the Birch Hill Complex

1. Purchase of new network and computer technologies for the purpose of upgrading and improving the NSCF's ability to efficiently provide computer services for the administrative and competitive event needs of the club throughout the BHRA building and stadium complex.
   - Allows for fiber optic cable connectivity being installed this summer from the Birch Hill Tower.
   - Allows for area wide network to all buildings in the complex. Also allows for area wide educational and instructional displays along with weather and race info for competitive events.
   - Allows for dedicated server for live video feed to internet.
   - Allows for dedicated server and backup for administrative side of club activities.
   - Allows for new sound system for building complex and stadium area.
   - Serves a dual purpose by enhanceing the FNSB Contingency and Disaster Recovery plan which is based at the Birch Hill Building Complex.

I urge you to support the Girl Scouts Go Green Building Project in Fairbanks to make the Service Center Building more energy efficient and add renewable energy. With the high cost of energy to heat our building, we are looking for ways to save in this area. In addition to making the building more energy efficient, we would use this project as a model for other non-profit organizations around the state who want to follow our process that will be documented in detail. Finally, we will use this as an educational experience for our Girl Scouts by creating a badge program for them to learn about saving energy and how to use renewables.

Stone Soup Café

Hello, My Name is Darrell Bourne, I am the president of the Interior Alaska Building Association, and I support funding the Stone Soup Café' / Bread Line.

I am a longtime resident of the Fairbanks Community, and do confirm the services provided by this organization are needed and appreciated in Fairbanks. I am volunteering my time as a general contractor to to Stone Soup to provide leadership, so the construction phase can stay on schedule and move forward. I will be working with quite a number of distinguished subcontractors and suppliers, that are also donating time and material.

This is a community project that has proven support from many local Leaders, and one I feel strongly about. Much of the funding is already covered but I would like to see the remainder of the construction budget funded by the State of Alaska.

Please support the Stone Soup Café'.

TESTIMONY OF TONY JOHANSEN

MARCH 21, 2012 – 5:00 P.M.

LEGISLATIVE INFORMATION OFFICE

FAIRBANKS, ALASKA

Good Afternoon, Mr. Chairman and members of the Committee – Thank you for the opportunity to testify today on the proposed 2013 Capital Budget. My name is Tony Johansen with the firm of Great Northwest, Inc., a Fairbanks, Alaska civil construction company. I am also President of the Associated General Contractors of America, Alaska Chapter, however I am testifying today as a member of the Board of Directors of the Fairbanks Pipeline Training Center in support of funding for the center.

We are trying to complete our central facility project, which will provide needed additional training space. Additionally, we would like to construct a module construction camp, so that we can house rural Alaska students who attend training classes at the center. Our commitment in training Alaskans in not just limited to Alaskans living in our urban areas, we are committed in providing employment and training opportunities to rural residents of Alaska.

Thank you for consideration and thank you for your public service.

Subject: Capital Budget: Dance Theatre Fairbanks

Dear Legislators:

I am asking for your support of the Dance Theatre Fairbanks Building Insulation, Renovation, and Utility Upgrade project.

In July, 2007, DTF moved into the abandoned Fairbanks City Fire station, leasing it with an option to purchase. In January 2011 we exercised that option and purchased our permanent home. Nearly four years later, with gifts from too many organizations to mention, and over 14,000 volunteer hours we now offer a full slate of classes and a small, fully functioning black box theater.

A giving community has taken 30,000 square feet of derelict building and turned it into a downtown asset. However, we have reached the place where the work needed requires contractors with the manpower, equipment and expertise that we do not have.

At the core of the capital budget request before the committee is sustainability. Our journey is made much harder because of old inefficient lighting, and out-of-date electrical systems, walls and windows. We have proven we are capable of taking what we are given and turning it into something bigger and better than even we imagined. A more efficient building will speed us toward long-term sustainability.

Thank you for your time, attention, and support of the Dance Theatre Fairbanks Building Insulation, Renovation, and Utility Upgrade Project.

Thank you,

Marjorie Casort

To: LIO Fairbanks
Subject: Dance Theatre Fairbanks Energy Grant

Dear Sirs,

Please consider the Dance Theatre Fairbanks for an Energy grant for which they are currently applying. My 2 daughters both attended and are are still attending classes there, I have also attended classes and performed there as an adult, and we were one of the many families that put in countless volunteer hours to change an abandoned building into into a viable community asset. Dance Theatre, a non-profit organization, cannot just run on volunteer hours. It is a huge space that serves not only the DTF, but several other organizations that rent space there, including FLOT, and others, since we have the unique asset of a small auditorium, as well as 8 different dance studio floors, if you include the stage floor. And a photographer and yoga group, etc. So it is being used by many in the community, and we would really like to be able to continue in this manner. Soaring fuel prices are outpacing the tuition and rents taken in there, and we would very much appreciate some help. Thank you very much!

Sincerely,

Carol Smallwood

My name is Lissa Hughes and I'm the Legislative Liaison for the Northern Alaska Environmental Center. We have promoted conservation and sustainable resource stewardship in Interior and Arctic Alaska through education and advocacy for over 40 years and represent over 1,500 contributing members.

The Northern Alaska Environmental Center opposes the $28.5 million in total funding for the Roads to Resources program. We do not support state financing for transportation projects, while the industries that stand to benefit the most have invested the least. If the State builds the proposed roads ultimately costing anywhere from $1.7-2.3 billion, it will be Alaskans who then pay to operate and maintain them. Much like the Governor's justification for oil tax reform, the rationales for the Roads to Resources program are based largely on speculation without any guarantees for investment.

While the stated goal is to connect industry with oil, gas and mineral leases, no actual commitments for development projects have been made. So far, the state has already spent $25 million on the 100-mile long Umiat Road - $17 million to study the feasibility of building the road and $8 million for the Environmental Impact Statement process. The Governor proposes to spend another $10 million in this year's budget, while the State's North Slope Foothills Area-wide lease sale in December of 2011 received no bids, despite the proposed Road to Umiat.

Access to the Ambler Mining District, west of the Dalton Highway, would require a nearly half-billion dollar road at least 220 miles long. It would access an area that has been studied since the 1960's, for which industry interest fluctuates with copper prices. In this case, the state is gambling with a mining prospect whose future is less than guaranteed.

The first leg of the road to Nome, now called Tanana Access Road would not even reach the community of Tanana – the proposed project dead ends at the Yukon River requiring additional funds for a very expensive bridge. Moving forward only one section at a time avoids taking a hard look at the true cost of the project.

The Northern Alaska Environmental Center supports building infrastructure that strengthens our communities, not building roads to access to development projects that have zero private investment. Not one of these roads has been justified adequately based on the economic returns, so why should the state gamble with its own general funds when industry is sending a very clear message that it's too risky to finance by private means.
The Road to Resources program does nothing more than take focus and working capital away from other statewide priorities, so we ask that these funds be redirected to infrastructure projects that provide long-term, direct benefits to Alaskans.

LIO SENATE FINANCE HEARING
Wednesday, 21 March 2012
Legislative Bullets & UA/UAF Thanks

Thank you Mr. Chairman and Committee Members for this opportunity to share.

I am:

Gary A. Laursen
Sr. Research Scientist, Inst. Arcitc Biol.
Dir., UAF Honors Program
682 Lancaster Drive
Fairbanks, AK 99712
And a registered voter in Fairbanks since 1982.

Today, I've come to **thank the Legislature** for:

- Supporting the **UA System statewide**,
- Instituting the **AK Performance Scholarship**, which has + impacted so many UA programs.
- Supporting **Honors Programs** within UAA and UAF and hopefully, the new UAS HP.
- The **FY11 $100K appropriation** made to our UAF Honors Program!

Please **continue the $100K contribution** in support of UA Honors programming by establishing a **permanent budget line item** much like that in Governor Parnell's submitted FY13 Capital Budget and President Gamble's FY13 UA budget.

The FY11 $100K UAF Honors Program appropriation was applied to building energizing, and facilitating student's **academic and curricular** needs.

In so doing, this Curriculum Development appropriation assisted:

- A **219% FY11** growth during Fall term,
- In preparing for an **FY13 68% projected** growth,
- The realization of a **242% 6-yr. baccalaureate graduation rate**,
- **Leveraging** to effect **$50K/yr.** Honors Program funding by Chancellor Rogers,
- A **95%** Honors Students graduate rate with Honors distinction,
- The **90%** of Honors student who graduate and also work in Alaska,
- Prepping facilities for developing **Distance Delivery and Outreach capabilities** serving Honors students in Bethel, Nome, Kotzebue, Dillingham and CTC-Fairbanks,
- **Data and metrics** management toward maximizing accountability,
- **Building curriculum** (10 new courses with 5 developments) insuring student **retention**.

Thank you for this opportunity to testify and I will entertain questions.

Testimony for Senate Finance Committee
Submitted March 21, 2012

My name is Jenna Hertz and I'm a resident of Fairbanks Alaska. I am calling to ask the committee to cut the $10 million for the Road to Umiat from the Capital Budget.

It seems to me that the fundamental purpose of our state building a road is to serve our communities. I paddled to Umiat this summer and found one Fairbanks Resident and a superfund site. Umiat is not a community. Actual communities on the North Slope have passed 6 resolutions opposing the road. These are the people we should be listening to.

In stead of serving Alaskan communities, this road is yet another boondoggle: an example of corporate welfare for oil and gas companies. One of the largest of these is Linc Energy, an Australian company with no experience on the North Slope. Just last month another foreign oil company spilled oil on the Colville Delta and it took them an entire month to plug the spill.

I cannot see what is so compelling about the resources that are present in the Umiat area that justifies the road's enormous economic, social, and cultural cost. Gubik is estimated to 600 billion cubic feet of natural gas, small potatoes compared to the 26 trillion cubic feet that is currently being re-injected at Prudhoe bay. If the oil at Umiat justified building a road, the companies would be building it themselves, not dropping leases.

The Road to Umiat is corporate welfare at the literal cost of the state's residents, some of whom stand to lose their cultural inheritance. The state will be stuck with this bill, paying millions to study it, millions to build it, millions to maintain it, and millions to repair, as the haul road has shown. Please tell the governor to stop this wasteful spending and focus on roads our communities can afford and benefit from.

[redacted] 1753 Iniakuk, Fairbanks, AK 99701

My name is John Lysen and I am the current Chairman of the Alaska State Parks Northern Region Citizens Advisory Board. I am here to testify for the Capitol Request for Improvements for Alaska State Parks especially the Olnes Pond area.

When I arrived in Alaska one of the first places I visited was Olnes pond. I witnessed the magic of a child catching his first ever fish with his grandfather. I saw many families of multiple generations happily camping together and Families felt safe letting their kids run free playing along the pond. **At night people respected quite time and their neighbors.**

4 years ago I bought a small motor home and the first place I wanted to go was Olnes. I was shocked at the campground in such disrepair and felt like I was in the Wild West. At 2 am I heard a chain saw fire up and looked out across the pond to see a guy cut down a live spruce tree pour 5 gallons of gas on it and light a fire. When I walked over to say inquire what he was doing I notice he is very drunk with a 45 on his hip saying aggressively what you want a piece of this??? As a result I ended up on the Alaska State Park Citizens Advisory Board, hoping to make a difference.

I am retired educator and consider myself a voice for children, the disabled and seniors in Alaska State Parks. I can tell you from them all that going to Olnes Pond or the Chatanika River and catching a fish, for a day picnic or camping overnight with their family or friends very well could be the highlight of the year.

It is time to really make things safe at Olnes once again. Besides restoring the ranger position we need all new tables, Fire pits, The road has deep washouts that need repaired to prevent serious injury, the outhouses are in shambles, signs are gone, basically the entire campground needs to be rebuilt.

This truly is a matter of public health and safety at Olnes Pond and these capital improvements will help make it right.

Thank you for your time and Support of Alaska State Parks.

~~Members of our Finance Committee~~ ~

~~My name is~~ Becky Hassebroek. ~~I've resided in~~ Fairbanks resident for ~~the past~~ 36 years. ~~I~~ Here to strongly urge you to provide the necessary funding ~~to enable our Parks Department to~~ for renovate the ~~roads, outhouses and other facilities at~~ the Lower Chatanika State Recreation Area.

Just last month we found out that the State Parks Department had issued the directive to remove all of the existing improvements at the two campgrounds, Olnes Pond and Whitefish, this summer. ~~In addition~~ and, to trench and fence the roads so that vehicular access ~~was~~ is no longer allowed, ~~and to convey this recreation area back to the Division of Lands~~. The public was not made aware of this directive. In the short time since, ~~we have received over 900 signatures on a petition to save this Park,~~ in addition to the 900 petitioners we have received Resolutions of Support from the Fairbanks Convention and Visitors Bureau, the Northern Area Alaska State Parks Citizen Advisory Board ~~and the Tundra Rollers~~, and letters of concern and support from our Fairbanks North Star Borough Mayor Luke Hopkins, the Haystack Community, the Farthest North Girl Scout Council, Alaska State Garden Clubs, and ten other concerned user groups.

~~Dermot Cole~~, our ~~Fairbanks newspaper~~ Daily News-Miner columnist, ~~remembers his many family trips to Olnes Pond with his children.~~ And he just dedicated his entire column ~~in the Fairbanks Daily News-Miner voicing his concern and~~ in support ~~for~~ of active management of the Parks. ~~And,~~ our ~~Fairbanks Daily~~ News-Miner Editor ~~just~~ published ~~wrote~~ an editorial stating that these sites are important assets for the Fairbanks area ~~and that the Parnell administration and our legislators' reinstatement of active management should be a top priority~~.

~~You have been sent copies of all of these letters and articles. The petition signatures have been sent to Rep. Miller's office.~~

These public resources were originally chosen ~~as campgrounds and recreation areas~~ because of their natural beauty. They provide positive outdoor experiences to young people. They enable young working families ~~and grandparents on fixed incomes a place~~ to economically enjoy the local outdoors. Olnes Pond is idyllic with its shallow beaches safe and suitable for children.

Over the last ten years the lack of oversight and shameful neglect has resulted in vandalism and extensive damage to the improvements. Reclamation will require deferred maintenance funding for repairs. ~~The~~ Lower Chat~~anika State Recreation Area is an important natural resource that~~ deserves to be actively managed and preserved for our use and the use of our future generations. ~~Please provide the funding necessary to make these renovations and~~ repairs. Thank you!

Fairbanks resident asks legislators to save Olnes Pond park site

Dermot **Cole**

For more Dermot Cole see his blog at newsminer.com

The Anchorage leader of the state parks office wants to remove the outhouses and end public access this summer to Olnes Pond, which is about 10.6 miles from Fox on the Elliott Highway.

"Because of public safety concerns and limited resources, the division sees no alternative but to remove the structures and close the area this summer," Ben Ellis, director of the Division of Parks and Outdoor Recreation, said Friday in a memo to the Fairbanks legislative delegation.

The plan to remove six outhouses, including those at the Lower Chatanika Campground, and install a new gate would cost $56,000.

I'm happy to report that Marv Hassebroek, a retired Fairbanks contractor, has already gathered more than 500 signatures on a petition drive to stop this shortsighted move.

The 400-acre site on the Elliott Highway near the Chatanika River has all sorts of potential.

In addition to Olnes Pond, which once was an ideal picnic area and a good place for kids to learn to fish, there is a boat launch at the Whitefish Campground on the Chatanika River nearby. The boat launch on the river would remain open at the campground, but the outhouses would be removed, under the state plan.

Hassebroek plans to present the "Save Olnes Pond and Whitefish Campground" petitions to three Fairbanks legislators who are planning to meet 1-3 p.m. today at the West Valley High School Library.

The meeting, arranged by Sen. Joe Thomas and Reps. David Guttenberg and Bob Miller, is to deal with all sorts of state issues that people want to bring up. Hassebroek wants to bring up Olnes.

A decade ago, before the world oil price shot up, the state eliminated a state park ranger position in Fairbanks and curtailed its operations at four local parks, which led to an end of managing the Olnes site and the Lower Chatankia Campground.

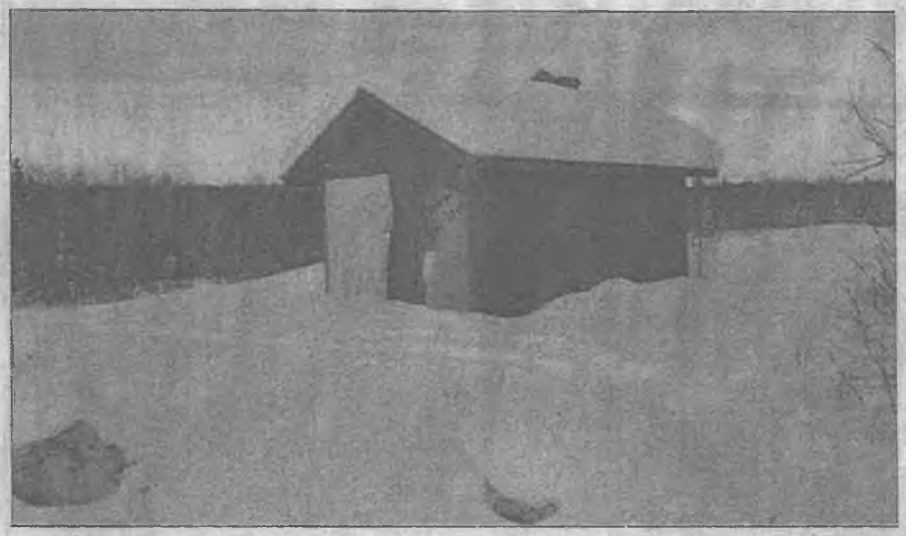

Photo courtesy of Marv Hassebroek

The outhouse at Olnes Pond needs new doors and some other repairs, but the building is sound.

"Active management" turned into "passive management," which means "no management" in English.

For the last decade, vandalism, drunks, garbage and rowdy behavior have become normal at the two sites, making it unsafe and unpleasant for families.

Hassebroek and those who have signed his petition recognize that both Olnes Pond and the Chatanika campground need to be cleaned up.

In his memo to legislators, Ellis said he could do that if a park ranger position is added to the budget and some construction funds are provided.

That seems like a reasonable step, as the ranger would help out not only with the Steese and Elliott campgrounds on the Chatanika, but also the Chena River State Recreation site off University Avenue and the Chena River Recreation Area on Chena Hot Springs Road.

Ellis outlined a series of construction projects, some of which don't appear to be necessary, such as the plan to build six outhouses, three at Olnes and three at Whitefish Campground, for a total of $340,000. (Forget outhouses. That's enough for a house.)

The $340,000 may be based on the idea that if you ask for much more than you need, you might get what you need.

Hassebroek, who worked for many years as a local contractor, inspected the Olnes facilities a few days ago and is certain the outhouses can be repaired.

"I could bid $10,000 to fix them and make a $5,000 profit," he said.

He hopes the state will find the money to provide some basic maintenance, which would include pumping out the toilets, installing litter barrels, assigning campground hosts to the areas and making both of these areas safe for families with small children.

Hassebroek, a resident for more than 55 years, says there is no place in the world he'd rather live than Fairbanks and his motivation is simple.

"When I see inattention to important details, I feel I need to help bring the facts to the attention of those who can make them right."

He has done that by reminding legislators and the public about the sorry state of affairs at Olnes Pond.

ALASKA STATE LEGISLATURE

Please enter into the record my testimony to the Senate Finance Committee
(Committee Name)

Committee on Capital Budget (Bill / Subject) Dated 3/21/12

My name is Ross Coen and I live in Fairbanks. I am president of the Alaska Historical Society. I respectfully request the Committee fully fund the State Library, Archives, and Museum project. I thank the Governor for including $20 million in his Capital Budget; now I ask the Legislature to make the full appropriation of $94.5 million for this shovel-ready project.

These buildings house documents, photographs, and other materials that are the historic and cultural legacy of our state, but in their present condition the facilities are inadequate. Leaking roofs, bursting water pipes, and structural deficiencies are putting these irreplaceable historical treasures at risk. The new State Library, Archives, and Museum, which has broad statewide support, would preserve and protect our historical heritage.

Thank you for the opportunity to comment.

SIGNED: Ross Coen

Subject: Dance Theater Fairbanks funding

I am asking for your support of the Dance Theatre Fairbanks Building Insulation, Renovation, and Utility Upgrade project.

My daughter (now 6) has been taking dance classe at DTF for nearly 3 years. It is a great organization that helps add to the quality of life in our community.

More relevant to this request is the fact that DTF has revitalized a building in downtown Fairbanks that might otherwise be sitting abandoned. However, for the sake of ongoing viability, the building needs serious updating, primarily to address the excessive energy costs of heating and lighting an old fire station.

Your support of this capital budget item would be sincerely appreciated.

Fawn Jelinek

Subject: Dance Theatre Fairbanks Building Upgrade

The message is in support of Dance Theatre Fairbanks and the building energy upgrade project funding.

I'm a volunteer and I have had a student dancer enrolled at DTF since before they moved into the old Fairbanks Fire Station Building. DTF has done a great deal to help many students and the community in this area. I have watched many of the dance students grow and mature and their experience at DTF has enriched their lives and the lives of all those around them. Many of the DTF dancers have placed very highly at the national level.

DTF supports Fairbanks in many ways, including contributing to the Fairbanks Food Bank. The building is used by many other organizations in the community including (of course) dancing but also, FLOT, FLOT Jr., fund raising for the Food Bank, and other kids courses.

A great deal of volunteer time has gone in to improving the old building housing DTF, however, a great deal more needs to be done to improve the energy efficiency of the building and this takes money. The energy bills are currently more than DTF can pay and entire program has been put in to a rather precarious position. Building improvements are what is needed to make the program stable and equipped for the future.

I have become very familiar with the building as we have used volunteers to rebuild and improve it. If there are any questions regarding the building, please do not hesitate to ask.

Please support the Dance Theatre Fairbanks Building Upgrade Project.

Thank You,
Jerry Mustard, PE

Subject: FW: Girdwood Health Clinic

From: Julia Dykstra [mailto:julia@alyeskamedia.com]
Sent: Thursday, March 22, 2012 1:00 PM
To: Sen. Lesil McGuire; Sen. Johnny Ellis; Sen. Joe Thomas; Sen. Dennis Egan; Sen. Donny Olson; Sen. Bert Stedman; Sen. Lyman Hoffman
Subject: Girdwood Health Clinic

Please consider our community health when weighing SB 160 in regards to the Girdwood Health Clinic Appropriation request. As a member of this community for over 13 years and a parent of two school-aged children I can assure you that our small community relies on the services of the Girdwood Health Clinic for all sorts of medical treatment. It is important to our community to have local, affordable health care for residents without having to drive the 40-50 minutes to Anchorage. Sometimes in a medical emergency time is a factor and the drive is impossible!

As I understand it the appropriation would cover the following services:

- expanded services and hours for Girdwood including after hours care;
- mental health screening and referral, and dental services and referral;
- Telemedicine cart will connect heatlh care personnel in Hope with Girdwood clinician;
- includes Nurse Triage Telephone System will always be available for off hours for the Turnagain Arm communities.
- Eligibility Specialist to assist patients to apply and acquire benefits through government programs;
- Additional clinicians along with financial and clerical personal will be hired;
- Health care availability in Girdwood and Hope will encourage other services and improve the quality of life in the Turnagain Arm communities.
- We have a need here in Girdwood and Hope when there are road closures for alternate care and services. The Girdwood Clinic is the only clinic in the entire Anchorage Municipality to which EMS is allowed to transfer a patient

As a community member and home owner/tax payer in Girdwood, I hope that you can consider my opinion that these services ARE necessary for our quality of life in such a unique environment, and for Girdwood to expand into the future with more jobs and opportunities for residents.

Thank you for your time
-julia dykstra

P.S. (to Sen. McGuire's office) Hi Fish. Tell 'em I'm not crazy again eh? Just a concerned community member :)

March 21, 2012

To: Members of the State of Alaska Senate Finance Committee

From: Steve Rykaczewski
P.O. Box 3853
Homer AK 99603

Senators,

Thank you for this opportunity to comment on the proposed 2012 Capital Budget.

I'm an Oyster farmer and serving Secretary of the Kachemak Shellfish Mariculture Association.

I'm asking you to support the University of Alaska's request of $2.7 million to fund the Ocean Acidification Research Initiative.

Shellfish farming holds a tremendous potential for Alaska. Many of our rural communities are not on the road system, but are located along the coast where shellfish farms can provide real jobs and economic growth for rural Alaskans. Ocean acidification threatens that potential.

You may not be aware of a West coast shortage of Oyster seed the past 4-5 years. Last year the Kachemak Shellfish Growers Cooperative was told we should only expect delivery of half the number of seed we require. The cause of the shortage is low ph levels in the seawater the seed is grown in. One hatchery in Oregon had 85% of a crop of oyster larvae literally dissolve overnight.

Oysters may well be the canary in the coalmine of Ocean Acidification. Other shell–forming species; crab, shrimp, clams etc. are equally at risk and ultimately the fish, mammals and humans who feed upon them.

Ocean Acidification could devastate the entire Alaskan Seafood Industry!

I believe that if we can see and measure what is coming at us, we have a much better chance to adapt and survive. This will require monitoring and research.

The Governors office believes the National Science Foundation will provide the necessary science Alaska needs.

I'm sure you've heard the oft-repeated Alaskan phrase, "We don't give a damn how they do it Outside". Let's not rely on Washington DC, but watch out for our own interest by funding home-grown Alaskan research.

Thank you,

Steve Rykaczewski

March 22, 2012

Dear Senate Finance Committee,

I am writing to you in strong support of funding appropriations to the Girdwood Health Clinic.

I came to the clinic in Girdwood about 12 years ago because no primary provider in Anchorage would take me because I am a Medicare recipient. I have outlived 3 of my doctors since moving here to Alaska in 1944. The Girdwood Clinic is my primary care provider, and as such they are able to do referrals to Anchorage specialists which was the case when I had to be referred for kidney evaluation. Since it was the Girdwood clinic who referred me, the specialist was able to accept my Medicare.

I was sent to the clinic in Girdwood by my dentist because I had high blood that I didn't know about. Not only did I have high blood pressure but I had developed Type II Diabetes. The clinic has taken care of me for diabetes, high blood pressure and arthritis. I raised my family in Bird and they are also patients at the clinic. The clinic was there for me when I cut my fingers with the table saw. I don't know what we would do without the Girdwood Clinic.

Sincerely,

Daniel A. Smith

Anchorage Legislative Information Office
Written Testimony

Name: Simon P. Lisiecki
Representing: Anchorage Port Commission

Bill: SB 160 Port of Anchorage Funding

Committee &
Hearing Date: Senate Finance Committee 3/21/12

Members of the Senate Finance Committee, Co-Chair Stedman and Co-Chair Hoffman. I sat for hours waiting for an opportunity to address your committee and decided that in the interests of all it would be better if I provided written testimony, which I hope you'll consider.

My name is Simon Lisiecki, and I'm speaking in support of the funding request by the Port of Anchorage.

As the former Vice President of BP Shipping and current Commissioner for the Port of Anchorage, I would like to impress upon the Finance Committee the vital importance of the Port of Anchorage. During the hearings, a tanker carrying nearly 1.5m gallons of jet fuel was safely discharging its cargo essential to keep Alaska Airlines, Fed-Ex, UPS and all the other carriers in the air. That tanker brings its essential commodity to the State of Alaska courtesy of the Port of Anchorage.

Sadly, Alaska's harsh weather has taken its toll on the jetties of the Port of Anchorage. The port is urgently in need of an upgrade, and that process was started. However, when it became apparent that there were problems with the fix and the whole project was brought to a halt.

We, as citizens of Alaska, really need a viable port and we have to do something. At the many Commissioner meetings I've attended I was skeptical when the scaled back version of the upgrade was raised, as it seemed to me that this was a drip feed exercise to extract funding over time.

So I asked one question of the management: "Will we have a viable port after the $350m scaled back version of the upgrade?" The answer is an emphatic "YES."

The management of the port, taking into account the unfortunate status of the upgrade and the current economic reality has proposed a solution that will provide us with a viable port at a price tag that we can afford. More importantly going forward the management of the port will have active oversight, responsibility and accountability for the project. This clear accountability should ensure the successful conclusion of the project.

In closing I wish to thank the Committee's previous support of this vital project and hope that you will support the Port of Anchorage's funding request.

Thank you,

Simon Lisiecki

Tanana Chiefs Conference Region
Prioritized Capital Improvement Projects FY 2013

Villages with a (*) have not received CIP funds in over three years.
Italicized villages are leveraging federal dollars.

1. **Ruby – New Clinic Match ($171,000) - No functioning clinic at Ruby. CIP will be used to leverage $1,729,000 of federal funds (HUD ICDBG and State CDBG).*
2. **Koyukuk – New Clinic Match ($150,000) – No functioning clinic at Koyukuk. CIP will be used to leverage $1,450,000 of federal funds (HUD ICDBG and State CDBG).*
3. *Tanacross – New Health New Health Care Clinic ($600,000) – Install clinic into existing multi-purpose building. CIP will be used to leverage $800,000 of federal funds (HUD ICDBG, IHS Clinic Equipment and NAHASDA).*
4. *Allakaket – Clinic Renovation ($170,000) - Dilapidated clinic at Allakaket with no water/sewer services. CIP will be used to leverage $750,000 of federal funds (HUD ICDBG and IHS Tribal Clinic Equipment funding).*
5. *Venetie – Additional New clinic Match ($150,000) – This CIP will be combined with a FY2011 $150,000 CIP to provide the required 20% match to leverage $1,700,000 of Denali Commission funds.*
6. **Nikolai – New Clinic Match ($170,000) – No functioning clinic at Nikolai, just a rented one room office. CIP will be used to leverage $1,430,000 of federal funds (HUD ICDBG and State CDBG).*
7. *Anvik – Village Roads Maintenance heavy equipment ($350,000) – The Council has BIA road maintenance funding upkeep the village's roads but has no heavy equipment to perform the work with.
8. **Minto – Independent Elder Housing Project ($170,000) – Minto has many elders who desire to stay in the village but require specialized housing. CIP will be used to leverage $1,000,000 of federal funds (HUD ICDBG and State AHFC) to build an elder 4-plex.*
9. **Grayling – Multi-Purpose Facility ($170,000) - No functioning community services building at Grayling. CIP will be used to leverage $1,280,000 of federal funds (HUD ICDBG and State CDBG).*
10. *Kaltag New Clinic Supplemental ($100,000) – The ANTHC recent cost estimate for this project has increased by $100,000. This project will be constructed in 2012 and leverages Denali Commission funds in the amount of $1,925,484.*
11. *Chalkyitsik New Clinic Supplemental ($65,000) - The ANTHC recent cost estimate for this project has increased by $65,000. This project will be constructed in 2012 and leverages Denali Commission funds in the amount of $1,565,000.*
12. **Stevens Village Heavy Equipment for new landfill ($205,000) –The CIP provides essential equipment to operate the new landfill to be constructed in 2012 and leverages $3,761,227 of USDA RD, Denali Commission and State DOT funds.*
13. ** Huslia – Multi-Purpose Building ($170,000) - No functioning community services building at Huslia. CIP will be used to leverage $1,730,000 of federal funds (HUD ICDBG, NAHASDA and State CDBG).*

14. *Nenana – Tribal Hall Renovation ($75,000) – The Village Council operates a much-used community hall that needs minor renovation as a preventative maintenance measure.
15. Arctic Village – Smart Metering Project ($80,000) – This CIP will allow the village-owned electrical utility to increase revenue collection by requiring pre-payment for usage and also stimulate energy conservation through continuous consumption information availability to residents in the homes.
16. *Beaver – Smart Metering Project ($80,000) - This CIP will allow the village-owned electrical utility to increase revenue collection by requiring pre-payment for usage and also stimulate energy conservation through continuous consumption information availability to residents in the homes.
17. Birch Creek School Conversion ($90,000) – Birch Creek lost its power and water treatment plant and community building to fire and has been given the empty school building to re-establish their functions and requires this CIP to utilize the building.
18. Tanana – Drainage Public Safety Project ($255,000) – The village is experiencing stagnant water and erosion which is degrading the village's roads. The City will contribute $54,000 of in-kind services to support this project.
19. * *Evansville – Clinic Match ($170,000) – Dilapidated clinic at Evansville with no water/sewer services. CIP will be used to leverage $1,730,000 of federal funds (HUD ICDBG, State CDBG and IHS Tribal Clinic Equipment funding).*
20. Tanana Chiefs Conference Regional Search and Rescue Equipment ($150,000) – There is no in-state under water electronic sonar and viewing equipment available to assist in search and rescue of persons lost while on water. Equipment will be shared statewide.
21. Shageluk – Multi-Purpose Building Addition ($200,000) – The Village Council is constructing a multi-purpose building during 2012 and would like to include a large gathering space addition. This CIP will leverage a $600,000 State CDBG grant.
22. *Healy Lake – Community Hall Construction Completion ($100,000) – The Village Council has been fund raising to incrementally complete its community hall. This CIP will complete the project and leverage $38,000 of funding from the Council this year.
23. *Fort Yukon* – Multi-Purpose Facility ($300,000) - The Village Council is constructing a multi-purpose building during 2012 and would like to include a large gathering space addition. This CIP will leverage an $850,000 State CDBG grant.
24. Northway – Cultural Center ($150,000) – *The Village Council is building a two-phase multi-purpose building with phase one planned for construction in 2012. This CIP would fund phase two of the project and leverage $600,000 of Federal ICDBG funding.*
25. Holy Cross - Multi-Purpose Facility Addition ($300,000) - The Village Council is constructing a multi-purpose building during 2012 and would like to include a large gathering space addition. This CIP will leverage an $850,000 State CDBG grant.
26. * Beaver – Clinton Wiehl Building Energy Efficiency Upgrade ($100,000) – Beaver has a multi-purpose building that requires energy efficiency upgrades to reduce operational expenses. The Council will be contributing $38,000 to the project.

27. Arctic Village Landfill Loader ($200,000) – The Village's landfill is full and the Council has fencing materials on-site to build a new cell but requires an end-loader to complete this project.
28. Louden Tribe (Galena) – Biomass Feller Buncher ($450,000) – The Village Council, City and School are coordinating to develop a community-wide bio-mass energy project and require "feller buncher" to supply fuel for the planned project. The overall cost of this project is $4,122,150 including this CIP request.
29. Manley Hot Springs – Distribution Station ($150,000) – The Village Council is constructing a gasoline and diesel fuel sales station and has $60,000 of its own funding to contribute to the project and requires this CIP to complete the project.
30. Fort Yukon – *Elderly Independent Living Housing Project ($300,000) – Fort Yukon has many elders who desire to stay in the village but require specialized housing. CIP will be used to leverage $1,300,000 of federal funds (HUD ICDBG and State AHFC) to build an elder 5-plex.*
31. Alatna – Transportation Improvements Heavy Equipment ($180,000) – The Village Council is planning to construct an on-shore river transportation station to support safe river crossings between Alatna and Allakaket which requires an end-loader to support construction of the project. The Council will utilize $150,000 of BIA IRRP federal funding to conduct the actual construction.
32. Chalkyitsik Heavy Equipment Purchase ($200,000) The Village Council has planned projects (new housing and clinic) to be constructed over the next two years and requires an end-loader to support these projects.
33. *Nikolai – Multi-Purpose Community Center Rehabilitation ($170,000). The Village's multi-purpose building requires renovation and the Council will utilize this CIP to leverage $1,330,000 of federal funds.*
34. *Kaltag – New Multi-Purpose Center Match ($170,000) - The Village's requires a new multi-purpose building and the Council will utilize this CIP to leverage $1,450,000 of federal funds.*
35. *Kaltag Fish Processing conveyer belt ($60,000) – The village's fish processing plant creates summertime employment for many residents and requires upgrades to become more efficient. This CIP will used to leverage $190,000 of federal funds.*
36. *Grayling Essential Housing initiative ($200,000) – Grayling has a housing crisis and the Council will utilize this CIP to leverage $1,400,000 of federal funding (HUD ICDBG and AHFC).*
37. *Stevens Village – Multi-Purpose Facility Renovation ($50,000) – The Village Council operates a much-used community hall that needs roof replacement as a preventative maintenance measure.
38. Tetlin – Biomass Community Facility Space Heating – Phase 2 ($200,000) – The Council is currently completing construction of its phase one biomass project funded by a FY2012 CIP which will heat the village's school. This phase two CIP request will add further heating capacity and extend heat conduits to the clinic, maintenance garage and multi-purpose building.

Top ten (10) projects total: $2,201,000
Federal funds leveraged: $12,064,484

Top fifteen (15) projects total: $2,796,000
Federal funds leveraged: $19,120,711

Top twenty (20) projects total: $3,541,000
Federal funds leveraged: $20,904,711

Total CIP (38) projects total: $7,021,000
Federal funds leveraged: $33,844,861

Testimony regarding Capital Budget 3-21-12

Good evening. I'm Taber Rehbaum, CEO of Big Brothers Big Sisters of Alaska, and I
thank you for this opportunity to testify in support of fully funding the Capital Request for the 3rd Grade Initiative.

The 3rd Grade standards assessment test is often the first opportunity schools have to collect hard and consistent data regarding the proficiency of their students. Many states use the results of the 3rd grade standards tests to predict how many prison beds they will need to plan for. We think that is a pretty scary commentary.

In our quest to help increase the graduation rates of Alaska students, these tests present a perfect opportunity to identify the youngsters most at risk of academic failure who are in turn most at risk for dropping out and potential incarceration.

In partnership with four school districts across the state, this initiative will change the trajectory of these children, making academic success possible for them, increasing the odds that they will be productive members of our communities, and reducing the chance that they will become a drain on our communities.

Big Brothers Big Sisters was just ranked the #1 most effective non-profit for at risk youth by Guidestar's Philanthropedia, and we have a track record of providing positive outcomes for youth in Alaska that goes back forty years.

This Initiative is a 3 year data-driven partnership with four school districts that will not only produce positive academic and social outcomes for participating students, it will provide us the opportunity to measure the impact of the program on schools as a whole.

By concentrating on matching children who score below proficiency on their 3rd grade standards tests with Big Brothers and Big Sisters, and by utilizing real-time school data to help direct match activities to target specific areas in which children are struggling, we can provide even greater impacts for youth, schools and communities.

The strong evaluation component within this Initiative will help us make a case to leverage additional funding to replicate and expand this program model after the 3 years of the pilot program. This is a proven strategy to increase our graduation rates statewide and the best way to invest in the future of our state.

Thank you again.

Taber S Rehbaum, CEO
Big Brothers Big Sisters of Alaska

WRITTEN TESTIMONY

Name: MAKO HAGGERTY

Representing: self

Bill No./Subject SB 160

Committee: Senate Finance

Date of Hearing: 21 MARCH 2012

Please restore funding for Ocean Acidification research at UAF.
Alaska is on the frontline when dealing with the impacts of Ocean Acidification, ~~and its impacts~~. Ocean Acidification impacts our commercial fisheries as well as our shellfish mariculture industry. But Alaska is not the only place that will suffer Ocean Acidification. The whole world will be watching how we deal with the impacts. At UAF we have a cutting edge research project that will have ~~international~~ → local, national and international ramifications.

Please support this very important research

Mako Haggerty

The 15-second version: ***There are traditional athletic, academic and other group activities for youth to do in Ketchikan, but the MAJORITY do not participate and the rates of minor consuming alcohol, vandalism and misdemeanors continue to escalate. Please support a skatepark and a youth community center in Ketchikan.*** **Ketchikan Youth Initiatives, Bobbie McCreary**

Testimony: LIO Office, March 21, 2012

Chairman Stedman and members of the Senate Finance Committee, I am Bobbie McCreary the Administrator of Ketchikan Youth Initiatives (KYI).

Tonight we speak in support of two projects to support our teens and young adults ages 14 to 24 and provide for them healthy, safe and skill-building activities. The MAJORITY of our young people do NOT have enough positive things to do, to occupy their time, to keep them out of trouble, to encourage them to get involved in civic engagement, to develop new skills and self-confidence, to value and complete their education and to prepare them to become valuable employees. Our rates of minor consuming alcohol, vandalism and other misdemeanors continue to escalate. Last year 27% of our ninth grader cohort of 2007 did not graduate in 2011. The State can help us improve these statistics.

First, the Ketchikan Gateway Borough has requested a matching grant of $150,000 to be applied to a professionally-design and built concrete skatepark for which total cost is estimated at $667,000 including a roof and, with in-kind services and with pledged support from the local community can be built for an estimated $367,000. KYI, through a skateboard users group, is actively supporting the Borough in developing this important athletic facility to serve our budding athletes and their families.

Second, KYI is in the process of redeveloping a 100-year old warehouse into a vibrant Youth Community Center. This Old Water Warehouse building was donated to KYI by the City of Ketchikan and will serve as a meeting place, a place to host events and activities 7 days a week until curfew, and a facility to support job readiness training and development of youth–run businesses. The total cost of this project is estimated at $467,000. The cost to complete this project is estimated at $376,000, and with projected community support can be reduced to approximately $297,000. KYI respectfully requests $60,000 to replace the roof and complete the Youth Entrepreneur Hub on the ground floor.

Any monies the State can provide to fund these projects will be put to very good use to serve our youth ages 14 to 24. Thank you for this opportunity to testify.

WRITTEN TESTIMONY

NAME: Sue Paulsen

REPRESENTING: Self

BILL#/SUBJECT: SB160: FY13 Capital Budget

COMMITTEE &

HEARING DATE: Senate Finance 21 March 2012

March 21, 2012

The new Alaska state library, archives and museum building has been making steady progress toward completion since the acquisiton of the land in 2002. Pre-planning, architectural design, and site development have been achieved with the monies appropriated to date, and now opportunity knocks from Alaskans with this vital project.

The Alaska State Library is the mother ship for all of the libraries and education endeavors in our vast and far flung state. Its leadership and support for local organizations is essential for information access for all in the digital age. Our cultural heritage in historical archives and museum holdings is seriously endangered by inadquate and deteriorating buildings.

The New Library Archives Museum building is shovel ready. The stars are in alignment. while SB 160 shows $20million for this project, the practical course of action is to fully fund the project THIS YEAR. Construction costs are favorable. Let us seize the moment. What we cannot afford is further deterioration of our archival treasures and the ability to provide the library support Alaskans should have.

Thank you for considering full funding for this vital and fullly prepared project.

Sue Paulsen

Good evening co-Chairs Stedman and Hoffman and members of the Senate finance committee.

For the record I am Captain Ron Ward
Master Mariner, Marine Pilot licensed in the State of Alaska since 1997 and a current member of the Anchorage Port Commission.

As a marine pilot I have been docking ships in the POA for the past 15 years including the largest tanker to call at the port which i docked just yesterday. As a professional pilot my stock in trade is local knowledge. I have to be aware of the tides, currents and bottom characteristics of every Alaskan port in Southcentral. Consequently I am keenly aware of the challenges involved with maintaining this infrastructure. POA has the second largest range of tide in North America in excess of 33 feet. Winter conditions require vessels to maneuver and moor in pan ice which can grow up to a thickness of two feet. Tidal currents in the POA and it's approaches can reach velocities of 6 knots. Combine the weight of the pan ice with the force of the current and you have significant stress on our 50 year old structure.

There can be no question that the POA is crucial to the future development of the State of Alaska's commerce. In conclusion I support the Port Expansion project Alaska must have a safe, viable port.

Capt. Ron Ward

To: Sen. Lyman Hoffman
Subject: Urge support of full funding for the state Library, Archives and Museum project

Senator Hoffman,

I sent the following message to Senator Stedman today and ask you to also support the SLAM project for full funding. I noted on your biographical page that Alaska history is one of you interests. Good news!
Marilyn R. Knapp, Sitka

Senator Stedman,
I know you and the Finance Committee have supported the State Library, Archives and Museum project in the past. I offer a since thank you for your support to date. Having worked in several of Alaska's museums and libraries, I have a since of pride in helping to preserve and interpret the state's history. It's been a long time coming but we are within close range of a new facility to house the state's historical archives, photographs, library materials and artifacts. What better way to celebrate this new century and an entrance into the second 50 years of statehood, than to provide for a new facility to secure the safety, security and well being of Alaska's historical materials.

Thank you again for your past support. Please let me know if you have questions.

Marilyn R. Knapp

Re: SB 160, Girdwood Health Clinic Appropriation Request

Dear Senator Hoffman,

The community of Girdwood has been working for the past 7 years to bring a community health center to Turnagain Arm. With the new not-for-profit Girdwood Health Clinic Inc we are finally in a position to bring this dream to fruition. The Girdwood Health Clinic Inc is to be commended for providing the same excellent medical care that our community has been receiving since 1999. SB 160, Girdwood Health Clinic Appropriation request contains much needed funding for the community of Girdwood and Turnagain Arm and is the next crucial step to our goal of having a community health center serving the rural needs of our population.

- Expanded services and hours for Girdwood including after hours care.
- Mental health screening and referral and dental services and referral.
- Telemedicine will connect health care personnel in Hope with Girdwood clinician.
- Nurse Triage telephone system will be available after hours for the Turnagain Arm communities.
- Eligibility Specialist to assist patients in applying for and acquiring benefits through government programs.
- Additional clinicians along with financial and clerical staff support will be hired.
- Health care availability in Girdwood and Hope will encourage other services and improve the quality of life in the Turnagain Arm communities.
- Road closures are a way of life in Turnagain Arm. That will not change. There remains only one way in and out of Girdwood. Alternate medical care and services are essential!

I am a physician who works in Anchorage and lives full time in Girdwood. I fully support the Girdwood Health Clinic appropriation request. My family along with most Girdwood families uses the services of the Girdwood Health Clinic. I can't begin to imagine the devastation to the area if we were to lose the health clinic. Expansion and support guarantees that we will not lose this fundamental resource.

I urge you to support this Senate Bill.

Sincerely,

Jeffrey G. Demain, MD, FAAAAI, FACAAI, FAAP
Director, Allergy, Asthma & Immunology Center of Alaska
Clinical Associate Professor, University of Washington

Subject: Support Senate ill 160

Dear Senators,

This letter is to support Senate Bill 160 in general, and specifically the section addressing a one time appropriation of $137,000 for the Girdwood Health Clinic as sponsored by Cathy Geissel.

This funding is critical in allowing the clinic to move to the next important step of providing services to the Girdwood community as well as providing a Telemedicine Cart to connect health care personnel in Hope. The appropriation will fund a Nurse Triage Telephone system,which will be available to the communities along Turnagain Arm at all hours. As a community resident who has had to make the drive to Anchorage along the Seward Highway in hazardous driving conditions in the middle of the night, I can assure you that this alone is a worthwhile investment.

While road improvements have helped over the years, it is a fact that driving to Anchorage still takes an hour in the best of conditions. With an injured spouse or ill child, this is just too long. And as you well know, the drive is not always possible. Road closures due to weather events, accidents, construction are still common place for this community and even if we are willing to make the drive to Anchorage for medical care, it is not always possible. Funding appropriated through Senate Bill 160 will help expand services by the hiring of additional clinicians as well as the support staff needed to make medical services available throughout the week for the Turnagain Arm communities.

I urge you to support Senate Bill 160 in its entirely.

Thank you

Subject: I support AVTEC Funding

Thank you for the opportunity to testify last night, the work being done in the Senate Finance committee is crucial to the future of Alaska.

I would just like to follow up that the funding for Alaska Vocational Technical Center in SB160 is important to the continued success and growth of this institution and our state. As an employer I have personally struggled to find skilled employes, I am currently searching for two right now. AVTEC fills the brick and mortar jobs in Alaska, the jobs that build our state and more importantly, maintain our state.

Alaska is a state that depends on people who work with their heads and their hands, AVTEC has a proven history of supplying entry level employees into the crafts.

Testimony was abbreviated last night due to the large number of Alaskans testifying, if the committee has any further questions I am available to answer them. Again, thank you for your service and time last evening.

Respectfully

I am writing in regards to the request by the Alaska Association of Conservation Districts in support of the valuable services that the Soil and Water Conservation Districts provide. Please forward my message to the State Finance Committee that is meeting to evaluate the upcoming budget.

The Kenai District, of which I am familiar, has been a very valuable resource especially to those interested in accomplishing sustainable agriculture in this area. It has been an integral part of helping the food bank in Kenai expand their production which assists many in the community who truly need it. The equipment rental program helps many local farmers annually to maintain their fields, and to increase production on newly cleared land or land that has laid fallow. It also provides the whole community with education on invasive species, erosion management, fertilizer recommendations, greenhouse pest control and a network to share such information. Without the support of the Alaska Association of Conservation Districts the local Kenai Conservation District would not be able to provide these much needed and appreciated services for our community.

Please support the funding for the Alaska Association of Conservation Districts for all the communities across the state that benefit from its services. Thank you for your time and attention to my concerns.

REPRESENTING: Self

BILL # or SUBJECT: SB 160

COMMITTEE & DATE: Senate Finance

I am a long time resident (in Kasilof) and registered voter. I am writing to strongly urge you to provide funding for the Alaska Soil & Water Conservation Districts. Though the Districts are provided for in part through NRCS, the funding you have control over provides an absolutely essential basis for their operation. The Districts provide many essential services in support of agriculture throughout Alaska. In my own area on the Kenai Peninsula, farmers large and small old and new, are enabled to cooperate about such essential services as producing high quality fertilizer, obtaining critical equipment, exchanging valuable information, understanding and being assisted in working with state land-use guide-lines, working together to build many (50) new hi-tunnel greenhouses that have already transformed the agricultural possibilities of our difficult climate, thus greatly enhancing the hope for Alaskan food security. The members of the Conservation Districts are some of the residents most committed to the long term livability of our shared home state, I urge you to continue to fund their efforts.

Sincerely,

Bill Johnson

REPRESENTING: Self

BILL # or SUBJECT: SB 160

COMMITTEE & DATE: Senate Finance

I'm writing to urge you to approve the Alaska Association of Conservation Districts' request for funding in this year's Capital Budget. As a resident of Kenai, I truly value what the Kenai Soil & Water Conservation District (KSWCD) brings to our community. One of my primary concerns as a citizen is local food security. While local meat and fish are relatively easy to obtain, we Alaskans are at the end of a very long supply chain when it comes to most of the produce and dairy that we consume. We need organizations such as KSWCD, which facilitate the exchange of information among local growers, connect growers with federal programs such as the USDA-NRCS high tunnel program, and provide a means of bringing federal and private grant money into our community to continue such efforts. I've also appreciated the work of the Homer Soil & Water Conservation District, which has employed a youth crew for the past few summers to control invasive plants. The existence of these Soil & Water Conservation Districts is mandated by the state, but it is an ongoing struggle for them to remain working and effective because there is no secure, yearly state funding for them. They fill a very valuable role in our communities and our state, and a small amount of state funding would allow them to maintain minimal staff and office space and leverage much more money in order to pursue such goals as local food security. Thanks for your service to our state, and please fund our Conservation Districts!

Sincerely,
Michelle Martin, Kenai

WRITTEN TESTIMONY

NAME: Judith Queen

REPRESENTING: Self

BILL # or SUBJECT: SB 160

COMMITTEE & DATE: Senate Finance Committee

I'm speaking in support of the Alaska Association of Conservation Districts request for funding. As a 50-year resident of the Kenai Peninsula, I am deeply concerned about our ability to grow food locally to lessen our dependence upon outside supply lines in the event of emergency, to lessen the economic impact of being so far away from our food sources, and to have quality, healthy choices available to Alaskans through sustainable agriculture within our own state.

Our Conservation District here is necessary to promote these goals, and has been very helpful in providing information, learning opportunities, and assistance to dozens of new high tunnel growers on the Peninsula. Further, since agricultural enterprises have historically been limited to a very small section of our State as well as with a relatively narrow production scope, the District has been a great resource in helping to expand options and opportunities for new growers that have heretofore not been available. I'm told that districts in our State have historically brought in 4 to 9 non-state dollars for every state dollar. Base funding received from the state via the Alaska Association of Conservations Districts is essential to keep the doors open and leverage additional sources of federal and private funding.

Please include AACD's funding request in the Capital Budget.

Thank you for your consideration.

Subject: Library expansion grant and capital funding

Dear Senate Finance Committee Members,

I am writing to express my support for full funding of the library expansion grant and capital funding. Sitka is in the midst of planning for a much-needed library expansion. As is the case for many small communities, the Sitka library plays a crucial role in supporting not only reading and literacy, but also community, education and wellbeing. By directly and indirectly supporting a wide range of programs and needs, funds allocated for libraries translate to better lives for Alaskans of all ages, education levels, backgrounds and economic status.

I attempted to testify at the hearing yesterday evening, but was placed on hold and never transferred to a real person. I hope you will consider my emailed testimony.

Thank you,
Cindy Litman

Please attach the following email of support to the capital budget this evening.

I am asking for your support of the Dance Theatre Fairbanks Building Insulation, Renovation, and Utility Upgrade project.

In July, 2007, DTF moved into the abandoned Fairbanks City Fire station, leasing it with an option to purchase. In January 2011 we exercised that option and purchased our permanent home. Nearly four years later, with gifts from too many organizations to mention, and over 14,000 volunteer hours we now offer a full slate of classes and a small, fully functioning black box theater.

A giving community has taken 30,000 square feet of derelict building and turned it into a downtown asset. However, we have reached the place where the work needed requires contractors with the manpower, equipment and expertise that we do not have.

At the core of the capital budget request before the committee is sustainability. Our journey is made much harder, because of old inefficient lighting, and out-of-date electrical systems, walls and windows. We have proven we are capable of taking what we are given and turning it into something bigger and better than imagined. A more efficient building will speed us toward long-term sustainability.

Thank you for your time, attention and support of the Dance Theatre Fairbanks Building Insulation, Renovation, and Utility Upgrade Project

Thanks you

Subject: Fairbanks Community Project for Capital Budget

I am urging you to vote for the artificial turf fields in the upcoming capital budget:

The Borough Assembly Prioritized the construction of two synthetic turf field in their legislative priorities for capital projects this fall and I FULLY SUPPORT THEIR PRIORITY and place it as a top item for improving quality of life and opportunity in the Fairbanks/North Pole area

- Looks and feels like natural grass - no matter the weather
- No need for pesticides, fertilizers, herbicides, and fungicides
- No watering - protect our natural resources
- Low maintenance and upkeep
- Reduce carbon emissions from mowing, weed-eating, and edging
- Maximizes playing time
- Increases revenue generation potential
- Provides a consistent artificial turf surface for superior all-around performance
- Minimizes abrasions, neural and joint injuries
- Contributes to less time lost to injury - compared to natural grass

1) Primary reason for need: **increased usable minutes** of youth participation outdoors [**at least a trippling** of current grass fields.] can be used 4 to 8 weeks earlier in the spring and can be used for unlimited minutes per day once they are clear of snow regardless of weather and temperature... grass fields are limited in use as they wear down and become rutted, muddy, not-level, and generally a mess]. The bottom line is we could be on fields March 25 Through Oct 10 in all weather conditions and 24 hours a day as opposed to May 15--Sept 15 with usage restricted to 3 to 5 hours per day to prevent over-use.

2) **Injury reduction.** Numerous studies have show a significant reduction in both lower extremities and head injuries on synthetic turf when compared to natural grass surfaces. The difference is even greater in subarctic environments like Fairbanks.

3) **environmental advantages** [reduction in fresh water, gas, emissions, chemicals, etc. being discharged in maintenance of grass fields]

4) **Economic Advantages** to Borough and city businesses... [attracting events like state high school soccer tournament (250+ people using hotels and restaurants for 5 days in early June), state football tournaments, major exhibition sporting

events, college clubs and possible D-II soccer teams, conferences, etc.). Chamber members, business community, and hotel associations ARE in favor of having these built so we can compete with other metro areas in hosting statewide tournaments.

5) **Cost savings** long-term (field maintenance) over grass fields.

6) **Quality of Life and attracting top notch employees** into our community. We need more recreational opportunities for our youth and adults. Synthetic fields and especially a state of the art dome would help our community recruit and keep top talent in many areas. Executives and specialists like doctors, dentists, lawyers, teachers, etc. have families and they are looking for any recreational social factors that mitigate the many days of super cold. The right kind of facilities will make families and executives more likely to locate in Fairbanks. These types of individuals play sports themselves and have children who are very involved and need development training to take it to the next level. Right now they will look at Anchorage and then the Valley and then Juneau and they will see that there are far less opportunities for training and play in Fairbanks over these communities. Add some fields and facilities and this could change.

7) **Obesity reduction and increased Youth Activity**: ANYTHING that get kids outside more and more active is a positive!

8) **JOBS** the installation projects could be bid so as to require Alaska hire for the installations. Installing full sized fields and tracks take major work forces that will produce Alaska jobs.

Testimony to Senate Finance Committee on SB160
March 21, 2012

Chairman Stedman, Co-chairman Hoffman and Committee members:

I am a longtime consulting civil engineer and fisherman--and reside in west Anchorage. Among other activities I serve on the UAA SOE Advisory Board. I'm also a former member of your committee—and appreciate the process you are going through.

I want to address two capital budget issues:

1. Funding for new engineering facilities at UAA and UAF. The need at UAA with growth in its engineering program is particularly acute. I am particularly pleased to see successful outreaches and support for Native students through ANSEP. But UAF with its traditional engineering and research programs also has huge needs. I know both of these building projects have been presented to you.

   I encourage you to provide sufficient money to advance them. Getting funding for construction would be nice—but we need at least enough money to advance design and keep these projects on schedule.

2. Port of Anchorage expansion. The MOA has asked for $350MM to complete this. I know this is a big project. It has had its share of challenges. But these are being addressed. I supported the initial phases of improvements at the Port in the early 1990s—and want to finish the job.

In closing, each of these projects has statewide impact and appeal. They have my support.

Operator of the Pioneer Museum and Big Stampede Show

Good Evening:

I am Kathleen Dalton, a member of the board of directors for the Pioneer Memorial Park Museum board. We are located at Pioneer Park, Fairbanks.

Our museum board supports funding for the expanded Alaska State Library, museum and archives, a combined facility that is projected to cost almost $95 million.

We rely on the Alaska State Library and historical archives for professional advice, loan of materials, digital copies of rare photographs, and from time to time even small museum grants for projects that meet the strict criteria set out by specialized personnel on the state level.

Our museum was conceived 50 years ago by Sourdoughs in the Interior who began an organized effort to collect mining artifacts, pioneer records, and other historic documents that reflected the rich history of the Interior of Alaska. Over the years we have advanced into the digital age and have our museum articles identified, photographed, and recorded in a computer inventory.

The only public support we receive is the museum physical facility and a city bed tax grant which we compete for annually. Through a mutual agreement, the Fairbanks North Star Borough rents us space at a minimal charge in exchange for our full time operation during the visitor season in Fairbanks. Our museum and art display serve as a major "anchor" and display on the east side of the historic park. It is one of four major attractions in the park. Another of those four is a major commercial enterprise (salmon bake) that helps attract tourists and locals to the public park and, like our museum, serves as a very significant "anchor" to the west side of the park.

Since 1967 the museum has been operating on a completely volunteer basis thanks to the generous and collective efforts of the Tanana-Yukon Historical Society, Pioneer Men's Igloo No. 4, and Pioneer Women's Igloo No. 8. Those organizations support us financially to the best of their ability. Those cumulative funds never exceed $5,000 per year. Another sporadic (but not guaranteed) source of funding is the Pioneer Foundation.

2011 Board Members: JoAnne Oehring, president; Donna Krier, vice-president; Linda Conley, secretary; Pat Doogan, treasurer; and George Lounsbury, Kathleen (Mike) Dalton, Dave Miller.

Our prized art display, valued at $1.1 million, is a 15-piece set of murals that show the two major gold stampedes into the North Country: The 1897-98 Klondike in the Yukon and Fairbanks gold

discovery in the early 1900's. The large murals were painted by the late C. Rusty Heurlin and narrated by the Ruben Gaines, named Poet Laureate for Alaska in mid 20th century. They are owned by the Fairbanks Pioneers and are arranged in a circular theater setting that is electronically controlled for maximum viewing.

We operate a small museum store, the proceeds of which go to the wages of summer time docents.

We support the expansion of the Alaska State Library and particularly the state historical archives. Without their support, our small, quality museum would be lacking.

Thank you.

Kathleen Dalton,

Dear Senate Finance Committee members:

I have been trying to call in to testify during public testimony for the Capital Budget, but am experiencing some problems due to high call volumes (according to the Anchorage LIO). I have here cc'd some of our members who had planned to call in as well. These members are from regions around the state including Fairbanks, Juneau, Anchorage, and Bethel. Below is my testimony for your convenience in case I am not able to make it through for public testimony verbally.

My name is Mary Sullivan and I'm writing you for the Alaska Primary Care Association, which represents all of Alaska's 143 Community Health Center clinics. CHCs serve the uninsured, under insured or otherwise hard to serve populations of Alaska and do not turn anyone away due to inability to pay, providing an important and vital safetynet for Alaska. We have member clinics in each district of the state, serving your constituents in rural, frontier and urban settings. Spanning both tribal and non tribal systems of care, CHCs are a major component to Alaska's overall health care delivery system.

We urge you to include and support the **Patient Centered Medical Home Implementation Planning for CHC Clinics** increment into the state Capital Budget, SB160. This increment would be routed through the Department of Health & Social Services to ultimately fund 3 CHC grantees through a competitive RFP process based on readiness. The request is in the amount of $437,500. We have been told by Commissioner Streur of DHSS that he supports this request. This money will help CHCs transform to the PCMH model, which is a model that was the number one recommendation of the Medicaid Task Force last legislative session, and one of the key recommendations of the Alaska Health Care Commission, to help control and reduce health care costs in Alaska. This model has been proven to help reduce health care costs across health care delivery systems, and to simultaneously improve patient health outcomes and satisfaction. Transformation to this model requires upfront investment, planning, and other significant technical improvements, however. Therefore, the APCA requests that this increment be included in the Capital budget to help assist CHCs with those upfront investment and other challenges as they transform to this new model of care. Grantees of this money would participate in the state's pilot PCMH project and work with the consultant hired recently by the state to assist Alaska in developing a PCMH model to fit Alaska's unique geographic and other challenges. If you include this increment, the state will reap the benefits and more importantly, so will Alaskans in your districts.

Thank you for including this important and modest increment request.

Respectfully,

Mary C. Sullivan, MSW

From: Carolyn & Don Gray <dcgray@mac.com>
Subject:
Date: March 21, 2012 10:19:21 AM GMT-08:00
To: Senate Finance Committee

Submitted to:
Alaska Senate Finance Committee
Budget Hearing / submitted at LIO, Fairbanks
March 21, 2012

We, the *Friends of the University of Alaska Museum*, urge your inclusion of $94.5 million in the proposed budget for the completion of the Alaska State Library, Archives, and Museum facility. Aware of the acquisition and maintenance of Alaska's historical, cultural and natural history, we are particularly concerned about the poor conditions of the three current separate Juneau facilities' and their responsibilities for the state's heritage.

The legacy of Alaska's Native heritage, and unique artifacts and documentation of the Russian American, Territorial and Statehood periods are precious and cannot be replaced. The State Library, Archives and Museum provide services to all regions of the state including specialized technical and conservation assistance to museums, libraries and historical societies.

The new facility will bring efficiency to the current 3 divisions and ease public access to digital collections while providing essential protection and preservation of the priceless articles of the entire state's heritage.

On behalf of our current and future generations of residents, researchers, and scholars, we urge you to include funding in your proposed FY13 capital budget to complete the State Library, Archives, and Museum facility.

Sincerely,

Don Gray, President
Friends of the University of Alaska Museum of the North

Alaska State Legislature

Please enter into the record my testimony to the Senate Finance
Committee name

Committee on SB160, dated 3/21/2012
Bill/Subject

To the Senate Finance Committee;

I am expressing public interest during the SB 160 public comment period for the committee meeting tonight. I am writing in support of the Alaska Association of Conservation Districts (AACD). These Districts perform essential work throughout Alaskan communities that would otherwise not be accomplished. Government agencies such as DNR, NRCS, Div. of Ag, USDFW, AKDF&G, and many others rely on Conservation Districts to assist with projects that benefit the government, local businesses, local citizens, and Alaskan visitors alike. In my community, the Conservation District builds and maintains public trails, provides nutrient management plans for farmers and gardeners, rehabilitates shoreline at valuable fish habitat sites, helps stop the spread of noxious weeds, does land capability classification data collection to determine the best sites for future agriculture use, creates GIS maps for government agriculture use, assists local citizens with flower beds and tourist attractions in Talkeetna, and much, much more. State funding is essential to obtain funding for these projects because they all require match funding. Without State funding, that match would be unavailable and these projects would not be accomplished.

The District hires local youth, ages 14-17, to accomplish most of the jobs listed above through the Youth Conservation Corps (YCC). These youth live in an impoverished community where 72% of the school kids are on the free and reduced lunch program. The jobs provided by the local Conservation District allow these kids to not only make a good wage, but learn work ethics, responsibility, and conservation practices at the same time. There are always more youth looking for a good job than there are YCC positions to fill, without State funding there may be no jobs for the local youth. The community is very upset to hear the YCC is in danger of shutting down due to a lack of State funding.

Please help our community help the conservation of natural resources. Without this, where would we be today? Please continue to fund the Conservation Districts and allow these important tasks to continue.

Sincerely,
Laura Allen

GREATER WASILLA CHAMBER OF COMMERCE
RESOLUTION No. 2011-03
SUPPORTING EXTENSION OF THE ALASKA RAILROAD FROM THE RAILROAD MAIN LINE TO PORT MACKENZIE

WHEREAS, bulk natural resource development and export is important to the economy of the Matanuska-Susitna Borough, the Denali Borough, the Fairbanks North Star Borough, and the State of Alaska; and

WHEREAS, the ability of the Alaska Railroad to continue to provide economical transportation of bulk commodities is vital to the economic health of Alaska; and

WHEREAS, Port MacKenzie, with its 8,940 acres of industrial development land and deep draft dock, is a developing port with capability for bulk natural resource transport; and

WHEREAS, Port MacKenzie is capable of handling panamax and cape-size vessels (the largest ships in the world); and

WHEREAS, Port MacKenzie is closer to tidewater than the existing ports of Southcentral Alaska; and

WHEREAS, a shorter distance to tidewater will make resource development in South Central and Interior Alaska more economical by lowering transportation costs; and

WHEREAS, the shorter rail distance to tidewater will further stimulate the use and export of coal from the Usibelli mine and other extracted material developments in the Denali Borough, Matanuska-Susitna Borough and Interior Alaska; and

WHEREAS, the rail extension will make development of natural resources (coal, limestone, sand and gravel, timber and metallic minerals, etc.) located in the rail belt and interior more economically feasible; and

WHEREAS, the rail spur to Port MacKenzie will create more usage of the Alaska Railroad and increase the economic viability of the railroad; and

WHEREAS, the increase in economic activity will significantly contribute to the State's economic well being, increase employment of Alaskans, and contribute to the continued economic stability of one of the fastest growing regions in the nation.

NOW THEREFORE, be it resolved that the Greater Wasilla Chamber of Commerce strongly supports construction of the Alaska Rail line Extension from the Alaska Railroad mainline to Port MacKenzie.

ADOPTED by the Greater Wasilla Chamber of Commerce this 18th day of October, 2011.

GREATER WASILLA CHAMBER OF COMMERCE

By: _____
Lyn Carden – Executive Director

By: _____
Quentin Algood – Secretary

Senate Finance Committee,

Thank you for the painstaking work on our state's oil tax structure. Until oil throughput stops declining our state needs projects other than the oilfield to supplement state revenues.
Port MacKenzie Rail is one such project.

This **32-mile rail link from the mainline to a deepwater port** may seem insignificant; but, it **provides low cost transportation for mineral development** that does not exist today. **We know that private sector development follows government infrastructure investments.**

University Alaska Fairbanks (UAF) estimates that **1,000 mineral occurrences** (of copper, lead, zinc, molybdenum, silver) **are deposited along the Railroad's mainline**.
By developing just three of those mines:

- The expected **revenues to the state are $300 million** a year over 60 years.
- The projected **economic benefits to the railbelt communities are $3 billion per year**.
- **3,000 construction-related jobs and 4,000 mining jobs will be created** along the corridor from Fairbanks to Anchorage.

Keep in mind, with the creation of jobs comes ***head of household wages*** **and often medical insurance benefits. With these jobs and insurance, comes a reduction in public assistance needs**. Work is good for we human beings; work is good for our mental and physical health, thus again, reducing the need for public assistance. I believe an infrastructure investment with public funds to **produce such jobs is a better use of public money** because when the project is complete and the construction jobs are gone we still **have a tangible asset** which will continue to bring job opportunities long in to the future.
If we as a state are looking for an industry to stimulate, it's the idle minerals and bulk resources spread along the mainline from Point MacKenzie to Fairbanks. Established mines such as Fort Knox and Pogo are already saying **the rail link will reduce their transportation costs** making even gold mines more competitive. I'm a supporter of the Wasilla Chamber of Commerce; however, I view the Port Mac Rail project as **a statewide project benefiting all Alaskans**. I urge you to support this project by approving the funding for this transportation infrastructure which will in turn provide a benefit all Alaskans. I

believe it is the purpose of government to use public money to provide infrastructure which provides for the private sector to thrive.

Thank you for your hard work and attention to this project.

Subject: SB160 Testimony
Attachments: Written Testimony to Senate Finance Committee on SB160 3.21.12.pdf

Senators Stedman, Hoffman and other members of the Senate Finance Committee:

I called in this evening to testify at 5:30 pm, when I understood you would be able to take my testimony. However, because of technical challenges, it wasn't until close to 6 pm that I was assisted by a teleconference operator—and I have been listening to testimony since then. Just in case you are unable to take my testimony during the remaining time I have available (my time window is closing rapidly), I am sending my comments in writing on two areas of the capital budget—UA engineering facilities and Port of Anchorage expansion.

Thank you for listening—and reading. Best wishes with your work.

Testimony to Senate Finance Committee on SB160
March 21, 2012

Chairman Stedman, Co-chairman Hoffman and Committee members:

I am a longtime consulting civil engineer and fisherman--and reside in west Anchorage. Among other activities I serve on the UAA SOE Advisory Board. I'm also a former member of your committee—and appreciate the process you are going through.

I want to address two capital budget issues:

1. Funding for new engineering facilities at UAA and UAF. The need at UAA with growth in its engineering program is particularly acute. I am particularly pleased to see successful outreaches and support for Native students through ANSEP. But UAF with its traditional engineering and research programs also has huge needs. I know both of these building projects have been presented to you.

   I encourage you to provide sufficient money to advance them. Getting funding for construction would be nice—but we need at least enough money to advance design and keep these projects on schedule.

2. Port of Anchorage expansion. The MOA has asked for $350MM to complete this. I know this is a big project. It has had its share of challenges. But these are being addressed. I supported the initial phases of improvements at the Port in the early 1990s—and want to finish the job.

In closing, each of these projects has statewide impact and appeal. They have my support.

Subject: Capital Budget Testimony: Support For Patient Centered Medical Home Implementation Planning for CHC Clinics Increment

Importance: High

Dear Senate Finance Committee members:

I have been trying to call in to testify during public testimony for the Capital Budget, but am experiencing some problems due to high call volumes (according to the Anchorage LIO). I have here cc'd some of our members who had planned to call in as well. These members are from regions around the state including Fairbanks, Juneau, Anchorage, and Bethel. Below is my testimony for your convenience in case I am not able to make it through for public testimony verbally.

My name is Mary Sullivan and I'm writing you for the Alaska Primary Care Association, which represents all of Alaska's 143 Community Health Center clinics. CHCs serve the uninsured, under insured or otherwise hard to serve populations of Alaska and do not turn anyone away due to inability to pay, providing an important and vital safetynet for Alaska. We have member clinics in each district of the state, serving your constituents in rural, frontier and urban settings. Spanning both tribal and non tribal systems of care, CHCs are a major component to Alaska's overall health care delivery system.

We urge you to include and support the **Patient Centered Medical Home Implementation Planning for CHC Clinics** increment into the state Capital Budget, SB160. This increment would be routed through the Department of Health & Social Services to ultimately fund 3 CHC grantees through a competitive RFP process based on readiness. The request is in the amount of $437,500. We have been told by Commissioner Streur of DHSS that he supports this request. This money will help CHCs transform to the PCMH model, which is a model that was the number one recommendation of the Medicaid Task Force last legislative session, and one of the key recommendations of the Alaska Health Care Commission, to help control and reduce health care costs in Alaska. This model has been proven to help reduce health care costs across health care delivery systems, and to simultaneously improve patient health outcomes and satisfaction. Transformation to this model requires upfront investment, planning, and other significant technical improvements, however. Therefore, the APCA requests that this increment be included in the Capital budget to help assist CHCs with those upfront investment and other challenges as they transform to this new model of care. Grantees of this money would participate in the state's pilot PCMH project and work with the consultant hired recently by the state to assist Alaska in developing a PCMH model to fit Alaska's unique geographic and other challenges. If you include this increment, the state will reap the benefits and more importantly, so will Alaskans in your districts.

Thank you for including this important and modest increment request.

STATE OF ALASKA

January 13, 2012

The Honorable Gary Stevens
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Article III, Section 18 of the Alaska Constitution, I am transmitting a bill relating to the State's operating budget for Fiscal Year 2013 (FY 2013).

My budget proposal for FY 2013 continues our efforts to foster opportunity for job growth and economic opportunity for Alaskans. Our budget priorities are established in the State of Alaska's Constitution – resource development, transportation/infrastructure, education, and safe homes and communities for Alaskans.

I am proposing a reasonable operating budget that holds the line on government spending and looks to provide a more stable and secure future for our families. With budget discipline, targeted spending, and managing our savings, Alaska's cash reserves and excellent bond rating will provide us with economic opportunities for years to come.

I look forward to working with the Legislature to finalize the operating budget for the upcoming fiscal year. Thank you for your consideration of this bill.

Sincerely,

Sean Parnell
Governor

STATE OF ALASKA

January 13, 2012

The Honorable Gary Stevens
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Article III, Section 18 of the Alaska Constitution, I am transmitting a bill relating to the State's comprehensive mental health program for Fiscal Year 2013 (FY 2013). As required by statute, it includes both operating and capital appropriations. Also, as required, the enclosed report outlines the differences between the recommendations of the Alaska Mental Health Trust Authority and my proposed budget.

The proposed mental health budget represents a cooperative effort between State agencies and the Alaska Mental Health Trust Authority. These productive working relationships make a positive difference for Alaska's mental health beneficiaries.

I am proposing a reasonable budget that holds the line on government spending and provides a more stable and secure future for our families. With budget discipline, targeted spending, and managing our savings, Alaska's cash reserves and excellent bond rating will provide us with economic opportunities for years to come.

I look forward to working with the Legislature to finalize the mental health budget for the upcoming fiscal year. Thank you for your consideration of this bill.

Dr. William Doolittle, Chair
Members of the Board of Trustees
Mr. Jeff Jessee, Executive Director
Alaska Mental Health Trust Authority
3745 Community Park Loop, Suite 200
Anchorage, AK 99508

Dear Dr. Doolittle, Members of the Board of Trustees, and Mr. Jessee,

Thank you for your continued efforts and dedication to the goals of the Mental Health Trust (Trust) and the work you do on behalf of the Trust's beneficiaries. Your efforts are of great value to beneficiaries of the Trust and the State as a whole.

The Mental Health Trust requested $39.4 million for the operating and capital mental health budget for Fiscal Year 2013 (FY 2013). The Governor included $36.7 million, which is an $8.4 million general fund operating budget increase over the current year, for a total FY 2013 mental health budget of $249.4 million.

Enclosed are reports comparing Trust recommendations to those included in the Governor's operating and capital mental health budget.

The proposed mental health budget represents a cooperative effort between State agencies and the Alaska Mental Health Trust Authority. These productive working relationships make a positive difference for Alaska's mental health beneficiaries. We look forward to working with you and the Legislature on securing passage of the FY 2013 mental health budget bill.

Sincerely,

Karen

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CS SB 163 (FIN)

Analysis

The bill authorizes the issuance of a total of $453,499,200 of general obligation bonds of the State of Alaska of which $449,900,000 is for project costs and up to $3,599,200 is for the costs associated with issuing the bonds. The bonds would carry the full faith, credit and resources pledge of the State and must be ratified in a statewide election. This is the strongest form of credit pledge available to the State and accordingly results in the lowest interest rates for borrowed funds. If the bill is approved, Alaska voters would consider the proposition in the November 2012 general election.

The bonds would be issued as either fully exempt (Non-AMT bonds) or tax exempt, subject to the Alternative Minimum Tax (AMT bonds) in a ratio estimated to be 80 percent Non-AMT and 20% subject to AMT. All of the bonds will be subject to limitations of the Federal tax code. While there are many restrictions imposed when taking advantage of tax exemption, two key limits are that an issuer must be able to track all funds to final expenditure on an allowed public capital project and that all funds resulting from the bond issuance are expended within three years of the bond sale. Due to these limitations it is anticipated that the authorization would require careful state oversight of the proposed municipal projects and result in multiple bond issues. For planning purposes six bond issues are assumed with three sale dates staggered over three years beginning with an initial issuance in February 2013 of $150 million followed by a 2014 issuance of $150 million and a 2016 issuance of the final $153,499,200. The initial bond issues would be sized based on anticipated cash-flow with subsequent issues adjusted to actual cash flow.

The first bonds would be issued in February 2013, and sold in two series anticipated to total $150 million. The current rate for a 20 year level amortization of Alaska general obligation bonds are at all time lows and estimated at 2.35% for tax exempt and 3.00% AMT bonds. The bonds would be structured to amortize AMT bonds first and followed by the Non-AMT bonds for a blended rate of 2.61%. This rate results in annual debt service of approximately $9.75 million beginning in FY 2014 for the $150 million. The borrowing rate is below the anticipated Constitutional Budget Reserve (CBRF) regular account rate of return of 3.4% and well below the assumed rate of return on the CBRF subaccount of 6.85%.

For planning purposes a more conservative, but still historically low rate of 4% was used, increasing the annual debt service estimate to $11,100,000. If interest rates have increased at the point bonds are sold there would be a similar increase in the rate of return expectations in the CBRF regular account as it is comprised of fixed income securities that are actively managed.

It is estimated that $150 million in bonds would be sold in February 2014 with estimated annual debt service of $12.5 million beginning in FY 2015 followed by $153,499,200 in February 2016 with estimated annual debt service of $12.79 million beginning in FY 2017. This proposed schedule of issuance would be modified to match the actual expenditures on the authorized projects. A more conservative 5% interest rate was used to estimate debt service on these issues.

The costs associated with issuing bonds include underwriting, rating agency, attorneys, financial advisors, marketing and disclosure services, administrative, and printing. It is estimated that these costs will be less than 0.8% of the bonds issued, or a total of up to $3,599,200 for the anticipated six series of bonds on three issue dates.

Sponsor Statement

SB 163

General Obligation Bond for Alaska Port Projects

Alaska's future rests on responsibly developing our natural resources, and creating jobs and economic opportunities for our families. The State of Alaska has more miles of coastline than any other state in the union. Combined with our remote location, Alaska's economy is reliant on waterborne commerce to receive the goods we use and to export the resources we develop.

SB 163 authorizes the State of Alaska to sell $350 million in general obligation bonds to fund infrastructure improvements for six port projects. With our AAA bond rating, Alaska receives a favorable interest rate on bond sales. With the current low cost of borrowing, the state realizes a greater rate of return on the general fund then it would have to pay when borrowing funds through a general obligation bond package.

The funds would be used to rehabilitate and expand six ports throughout the state. These ports are located in upper Cook Inlet, Bristol Bay, Kenai Peninsula, the Yukon River Delta and Ketchikan. Each of these projects has a pivotal role in Alaska's economy.

Alaska is unique in its economic dependence on ports. Very limited federal funding is available for port infrastructure. The use of general obligation bonds will help bring these projects to completion.

Governor Parnell is committed to working with the Legislature to develop Alaska's infrastructure. These projects will promote economic growth within their region, and to the economy of Alaska.

Sectional Analysis

SB 163

General Obligation Bond for Alaska Port Projects

"An Act providing for and relating to the issuance of general obligation bonds for the purpose of paying the cost of municipal port projects; and providing for an effective date."

Section 1: This section describes the amount and the purpose of the general obligation bonds. The purpose is to provide funding to pay for the cost of design and construction of identified municipal port projects. The principal amount of the bonds to be sold is not to exceed $350,000,000 and must be ratified by a majority of voters in the state. The bonds shall be issued under the provisions of AS 37.15.

Section 2: This section establishes the Port Project Fund. If the voters approve the bonds, a special fund for the state shall be established that will be known as the *2012 Port Project Fund.* The fund shall include the proceeds from the sale of the bonds, but will not include the accrued interest and premiums.

Section 3: This section establishes how the funds will be awarded to the individually identified projects. The amount of $350,000,000 will be appropriated from the 2012 Port Project Fund to the Department of Commerce Community and Economic Development to be awarded as grants under AS 37.05.315 (Grants to Municipalities).

Section 4: This section appropriates $2,965,000 from the General Fund to the state bond committee to pay expenses associated with the issuance of the bonds. The amount authorized and expended in this section will be reimbursed to the state General Fund from the proceeds of the sale of the bonds. (Estimate $900.0 in bond issuance cost in FY2013 – see fiscal note)

Section 5: This section establishes the lapse, redemption, and reimbursement of the appropriations in Section 3. Unexpended and unobligated balances of the appropriations are appropriated to the state

bond committee to redeem bonds sold. Amounts expended from the state General Fund related to pay redemption costs shall be reimbursed to the General Fund to the extent the money is not needed to redeem the bonds.

Section 6: This section establishes the ballot question that will be asked of voters to approve the general obligation bonds for the specified purpose.

Section 7: This section establishes an immediate effective date.

ALASKAN-IZING THE FLEET

Bringing the Coastal Villages Region Fund CDQ vessels home to Alaska

The Program

Coastal Villages Region Fund (CVRF) represents 20 Western Alaska communities, and with 35% of the total assets is the largest of the six Community Development Quota (CDQ) groups. Combined, the groups are a billion dollar business annually, employing 2300 people in wage and salary jobs paying $32 million, with another $25 million in ex-vessel payments to 1500 permit holders and 1700 crew.

CVRF harvests cod, pollock, crab, salmon and halibut in the Bering Sea and Aleutian Islands, and holds over $300 million in CDQ assets.

The Project

Currently, the economic benefits of homeporting largely bypass Alaska in favor of Puget Sound. Given sufficient infrastructure choices ships will follow their owners. The CVRF fleet owners desire to bring their fleet home to Alaska, and have partnered with Seward to further develop the Seward Marine Industrial Center (SMIC) support facilities including:

- Breakwater to protect mooring basin
- 2500' of moorage
- 20,000 sq. ft. of warehouse
- 5,000 sq. ft. of office
- 5-10 acres fenced storage
- Private sector vendors for fuel, provisions, training and services across marine trades.

Why Seward?

- Year round ice-free port
- Road, rail and air access
- Fleet-capable drydock and ship repair
- History of fishing businesses
- AVTEC maritime licensing, training and certification
- Access to marine trades and services across all of South-Central Alaska
- Building onto $30+ million of community bonded basic port infrastructure
- Regulatory process streamlined by adding onto currently permitted SMIC projects and activities
- Existing baseline geotechnical work

"No single port can meet all the fleet's service, supply and repair needs. Seward's location will serve as the ideal hub for access to Anchorage, Cook Inlet, Prince William Sound and Kodiak port resources for the vessels".

Cost and Funding

Initial total cost estimate is $55 million including a 31% contingency, which will be refined and lowered as the design is further developed.

Given the size of the project and the economic importance of Alaskan-izing the CDQ fleet, Seward is pursuing a combination of grant funding and debt service options, including:

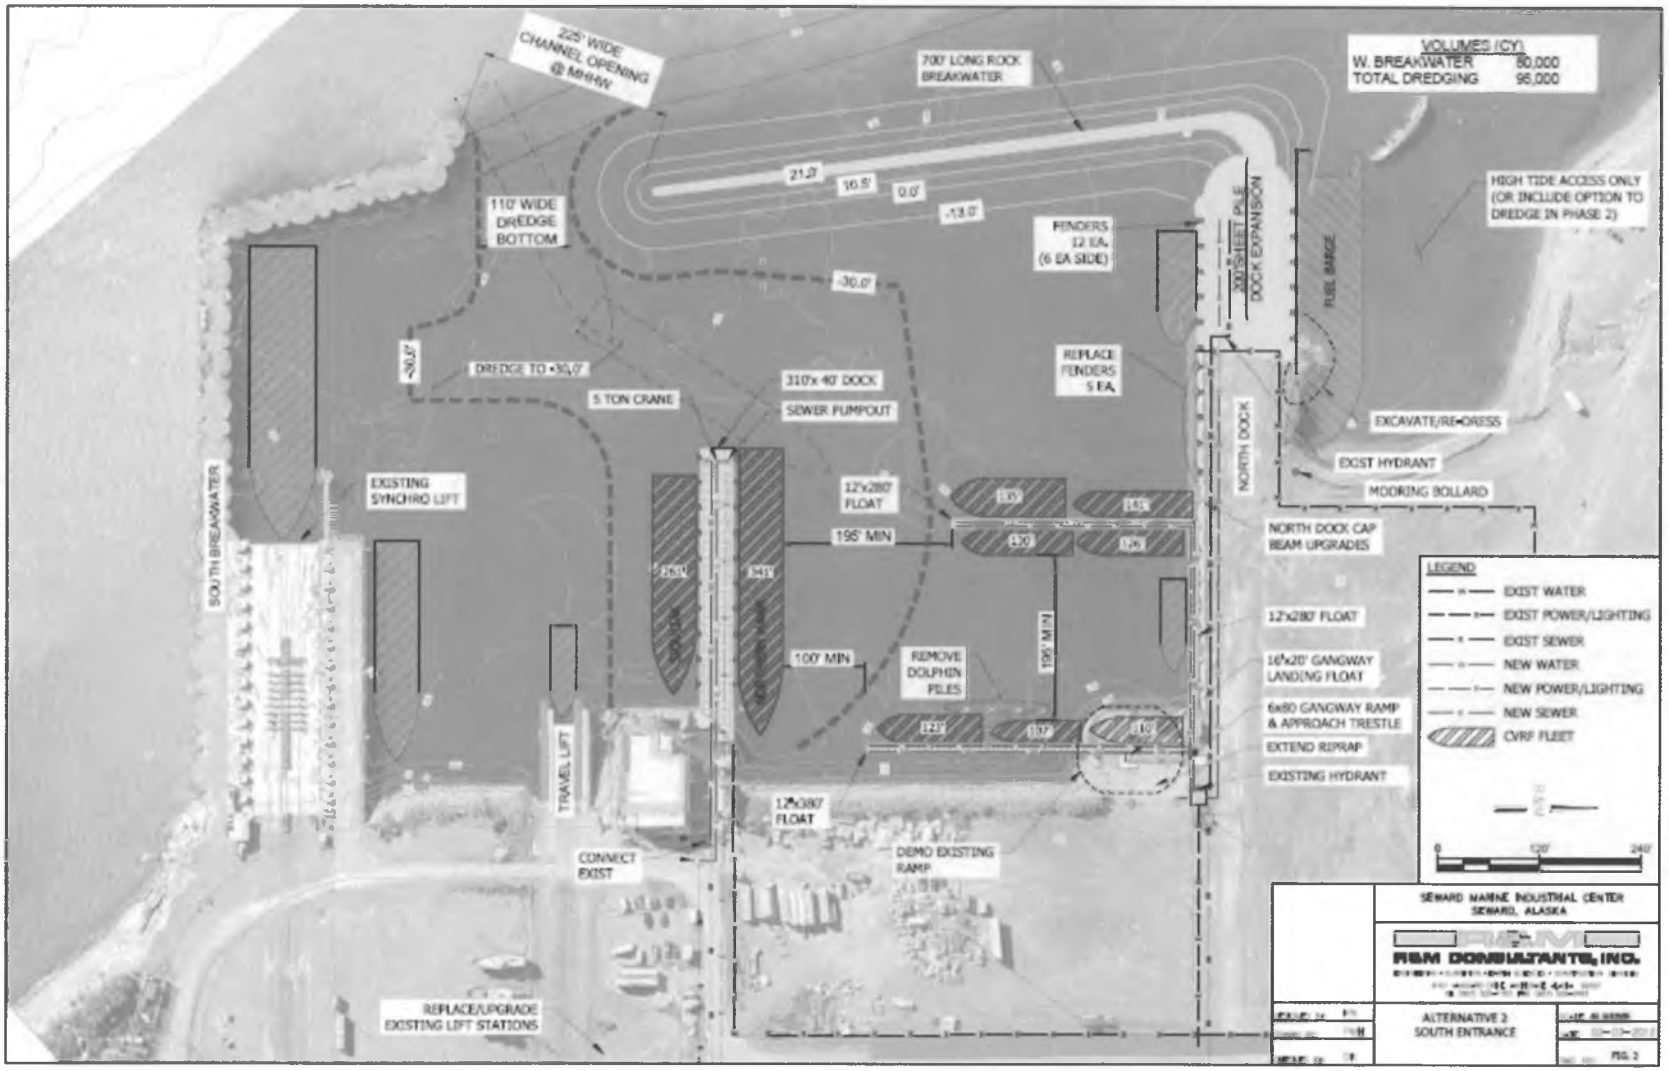
- State: AIDEA, Legislative appropriation, Statewide Port Bond Package, ADOT&PF Harbor program
- Federal: USACE, "TIGER" grant, EDA, USDA Rural
- Local bonding
- Private sector w'hse, offices, housing and vessel services

Benefits

In addition to construction jobs, the primary benefit is spending on vessel repair and maintenance and goods and services and jobs created and supported in Alaska rather than in WA.

Savings to CVRF are significant, including airfare to/from Seattle, and exemplified by average fuel savings of $75,000 per vessel per round trip to Seward rather than Seattle. Savings will more than offset the sometimes higher cost of doing business in Alaska, and are expected to increase as economies and efficiencies of scale grow with the relocation.

The harbor improvements will be critical in attracting other new business to Alaska, including exploration and support vessels for Beaufort and Chukchi O&G.



The Future

The economic activity associated with homeporting the CVRF fleet will enable private sector development to existing, new, and new-to-Alaska businesses.

Sales and property taxes and fuel excise taxes will far outweigh moorage charges. These, together with lease fees, will support debt service and ongoing operations and maintenance of the public infrastructure so that future state and federal subsidies are avoided.

This project furthers the late Sen. Steven's vision in the Magnuson-Stevens Fisheries Act and CDQ amendments of achieving sustainable and diversified economies in Western Alaska, as well as bringing significant benefits to the state as a whole.

SPONSOR STATEMENT
SB 167 – Separate Oil and Gas Production Tax

SB 167 separates oil and natural gas for the purpose of calculating their respective production tax value under AS 43.55.

Under this bill the progressivity surcharges for oil, Cook Inlet gas, and in-state gas would be calculated together, but separately from export gas, instead of the current practice on all oil and gas combined. The progressivity structure itself would be unchanged, based on 0.4% of the production value that exceeds $30 per barrel for oil, and $30 per BTU barrel of oil equivalent for gas. The base tax rate is unchanged at 25% of production tax value.

Under current law the tax rate is based on the combined BTU value of oil and gas. However, oil and gas can have vastly different values on a BTU basis. Currently a BTU of oil is worth much more than a BTU of gas. Accordingly, once a major gas sale starts, overlaying the existing oil production, the BTU value of the combined oil and gas would be much lower than it was for oil alone. This has been referred to as the dilution effect and could cause a significant reduction in oil taxes as a result of a major gas sale. The existing tax structure, in conjunction with the inherent uncertainty of future oil and gas prices, exposes the state to significant financial risk were a major gas sale to occur. The structure also creates economic instability for entities looking to participate in the development and financing of a natural gas pipeline project in Alaska. SB 167 removes the dilution effect by having the production tax calculated distinctly for oil and gas. This will result in no reduction in oil taxes from a major gas sale.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 167
2012 LEGISLATIVE SESSION

Analysis

This bill separates some oil and natural gas for purposes of calculating the progressivity portion of the production tax under AS 43.55 (also known as "decoupling"). Currently, all oil and gas are combined for purposes of calculating a single progressivity rate. Under this bill, two progressivity rates would be calculated. The first progressivity surcharge would be based on oil, Cook Inlet gas, and gas used in state. The second progressivity surcharge would be calculated based on gas other than Cook Inlet gas and gas used in state. The bill instructs the Department of Revenue , to the extent possible, to provide for the allocation of lease expenditures in proportion to the gross value at the point of production for the oil and gas produced.

For purposes of the tax calculation, exploration expenditures and development expenditures for non-producing leases or units would be allocated within geographic areas based on the gross value at the point of production of existing oil and gas production.

The base tax rate remains unchanged at 25% and the progressivity structure remains unchanged at 0.4% per $1 of production tax value over $30 per BTU-equivalent barrel, then 0.1% per $1 of production tax value over $92.50 up to a maximum total base plus progressivity rate of 75%.

Revenue Impact
There would be no revenue impact during the time period included in this fiscal note as gas that is produced in Cook Inlet or used in state is not impacted by this bill.

Under the current ACES system without the separate progressivity calculations, the state may receive less revenue with oil production and major gas sales, compared to oil production alone. This effect is due primarily to lower value gas diluting the progressivity surcharge on higher value oil under a combined tax. Under this bill, once major North Slope gas sales begin, exported gas will be subject to the separate progressivity calculation. Our modeling suggests that under this bill, and with addition of major gas sales to oil production, state revenue would be equal to or higher than revenue with oil only.

Additionally, this bill would generally increase revenue to the state, due to the increased taxes on oil, compared to the current tax system with a combined progressivity calculation, from major gas sales along with oil production. The amount of revenue increase is primarily dependent on oil and gas price and volume assumptions, along with some minor assumptions regarding expenditures and tariffs, but could be in excess of $1 billion per year.

Costs to Implement
With the change in tax structure, the department will need to develop comprehensive regulations, requiring an additional $330,000 for regulatory work and public participation in regulations. With passage of this bill in the 2012 legislative session, the workshop and public forum process would likely begin in the summer or fall of 2012, and the majority of the regulation costs would be incurred in FY 13. Aside from these one-time costs, the provisions of this bill can be implemented using existing staff and resources. Specific costs include the following:
$50,000 for contracted professional services for regulation consulting
$180,000 for regulations costs including Department of Law, public notice and registry
$100,000 for public forums for education of taxpayers and public participation, including preparation materials and legal support, and possibly travel.

SUBJECT: Sectional Summary for SB 167 (Work Order No. 27-LS1182\A)

TO: Senator Bert Stedman
Co-Chair of the Senate Finance Committee
Attn: Darwin Peterson

FROM: Emily Nauman EN
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1 amends AS 29.60.850(b) to reference the new separate progressive tax on gas as a source of money that may be appropriated to the community revenue sharing fund. (The "community revenue sharing fund" was established in AS 29.60.850(a) "for the purpose of making community revenue sharing payments to municipalities, reserves, and communities for any public purpose.")

Section 2 amends AS 43.55.011(e) to make separate references to the monthly progressive taxes on oil and gas. (The progressive tax on oil, gas produced in Cook Inlet, and gas produced elsewhere and used in the state is in AS 43.55.011(g). The progressive tax on other gas is in AS 43.55.011(p).)

Section 3 amends AS 43.55.011(g) to have the tax rate determined using the production tax values of oil and the production tax values on a BTU equivalent basis of gas produced in Cook Inlet and gas produced elsewhere and used in the state. Applies the tax rate only to that oil and gas production. Makes no change in the tax rates or the range of production tax values within which the two tax rates apply.

Section 4 adds new subsection (p) to AS 43.55.011. Provides for a progressive tax applicable to gas production that is not included in AS 43.55.011(g) as amended in sec. 3 of the bill. Provides that the tax rate is applied to the production tax value of a BTU equivalent of gas. Uses the same tax rates and ranges of production tax values as AS 43.55.011(g) under current law.

Section 5 repeals and reenacts AS 43.55.020(a) and describes the determination of the amount of a monthly installment payment for production taxes when the progressive tax

on oil, Cook Inlet gas, and other gas used in the state, and the progressive tax applicable to other gas are determined separately.

Section 6 amends AS 43.55.020(d), relating to a settlement with the royalty owner, by adding references to the progressive tax on the gas to which AS 43.55.011(p) is applicable.

Section 7 amends AS 43.55.160(a), relating to the determination of the production tax value of oil and gas, by providing the means for determining the production tax value of oil and the production tax value of gas separately. Reorders the subparagraphs so that the subparagraphs related to the production tax value of gas produced outside of Cook Inlet and other gas not used in the state are at the end.

Section 8 adds new subsections (f), (g), and (h) to AS 43.55.160. AS 43.55.160(f) defines producer's lease expenditures, for purposes of (g). AS 43.55.160(g) directs producer's lease expenditures to be allocated between the production of oil and the production of gas as directed by regulation established by the department. AS 43.55.160(h) breaks out and defines areas of the state for the purposes of (f) and (g).

Section 9 amends AS 43.55.165(h), relating to the requirement that the Department of Revenue adopt regulations for allocating lease expenditures, by requiring that the Department of Revenue consider allocating lease expenditures in proportion to the gross value at the point of production of oil produced and gas produced from each lease or property.

Section 10 adds new subsection AS 43.55.170(d), which is similar to the amendment to AS 43.55.165(h) in sec. 8 but is applicable to allocating adjustments to lease expenditures. Directs the Department of Revenue to consider allocating adjustments in proportion to the lease expenditures allocated to the production of oil and the production of gas under regulations adopted by the department under AS 43.55.165(h).

Section 11 requires a producer that underpays an installment payment after December 31, 2011 and before the effective date because of the retroactive application of the new progressive tax section to pay the amount of the underpayment on the date the first installment payment is due after the effective date of the bill.

Section 12 makes regulations related to the progressive tax provisions of the bill -- secs. 2 - 5, 7 and 8 -- retroactive to January 1, 2012.

Section 13 makes the progressive tax provisions of the bill -- secs. 2 - 5, 7 and 8 -- retroactive to January 1, 2012.

Section 14 makes the bill take effect immediately.

"Decoupling" of Oil and Gas for Production Tax Purposes

Presentation to the
Senate Finance Committee
January 27, 2012
Alaska Department of Revenue

Overview

- How Alaska's production tax works
- What is "decoupling"
- Why decouple?
- Decoupling Issues
- History: SB 305 in 2010

How Alaska's Production Tax Works

- Company specific tax
- Based on Production Tax Value (PTV)
  - Market price – Transportation Costs = Gross Value at Point of Production (GVPP)
  - GVPP – Lease Expenditures = Production Tax Value (PTV)
- Tax Rate
  - Base tax rate of 25% of "production tax value"
  - Progressivity applies when PTV is over $30 / BOE, and increases rate by 0.4% for each $1 of PTV over $30 / BOE
  - Example: At $50 / BOE PTV, tax rate is 33% *(25% + 0.4% * $20)*
  - At $92.50 / BOE progressivity changes to 0.1% per $1 of PTV

FY 11 Production Tax Calculation

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$94.49	602,723	$56.9 / day
Annual Production (bbl)			
Total Annual Production/Value		**219,993,895**	**$20,786.7**
Royalty and Federal barrels		(29,505,505)	($2,787.9)
Taxable barrels		**190,488,390**	**$17,998.8**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.45)		
TAPS Tariff	($4.02)		
Other	($0.70)		
Total Transportation Costs	**($7.17)**	**190,488,390**	**($1,365.8)**
Lease Expenditures			
Deductible Operating Expenditures	($13.22)		($2,517.4)
Deductible Capital Expenditures	($8.52)		($1,622.9)
Total Lease Expenditures	**($21.74)**	**190,488,390**	**($4,140.3)**
Production Tax Value (PTV)			**$12,492.6**
Production Tax			
Base Tax (25%*PTV)			$3,123.3
Production Tax Value per barrel	$65.58		
Progressive Tax = (14.2% * PTV)			$1,778.1
Total Tax Due before credits			**$4,901.2**
Credits Applied Against Taxes			($400.0)
Total Tax after credits			**$4,501.28**

Source: Department of Revenue Fall 2011 Revenue Sources Book, Appendix D

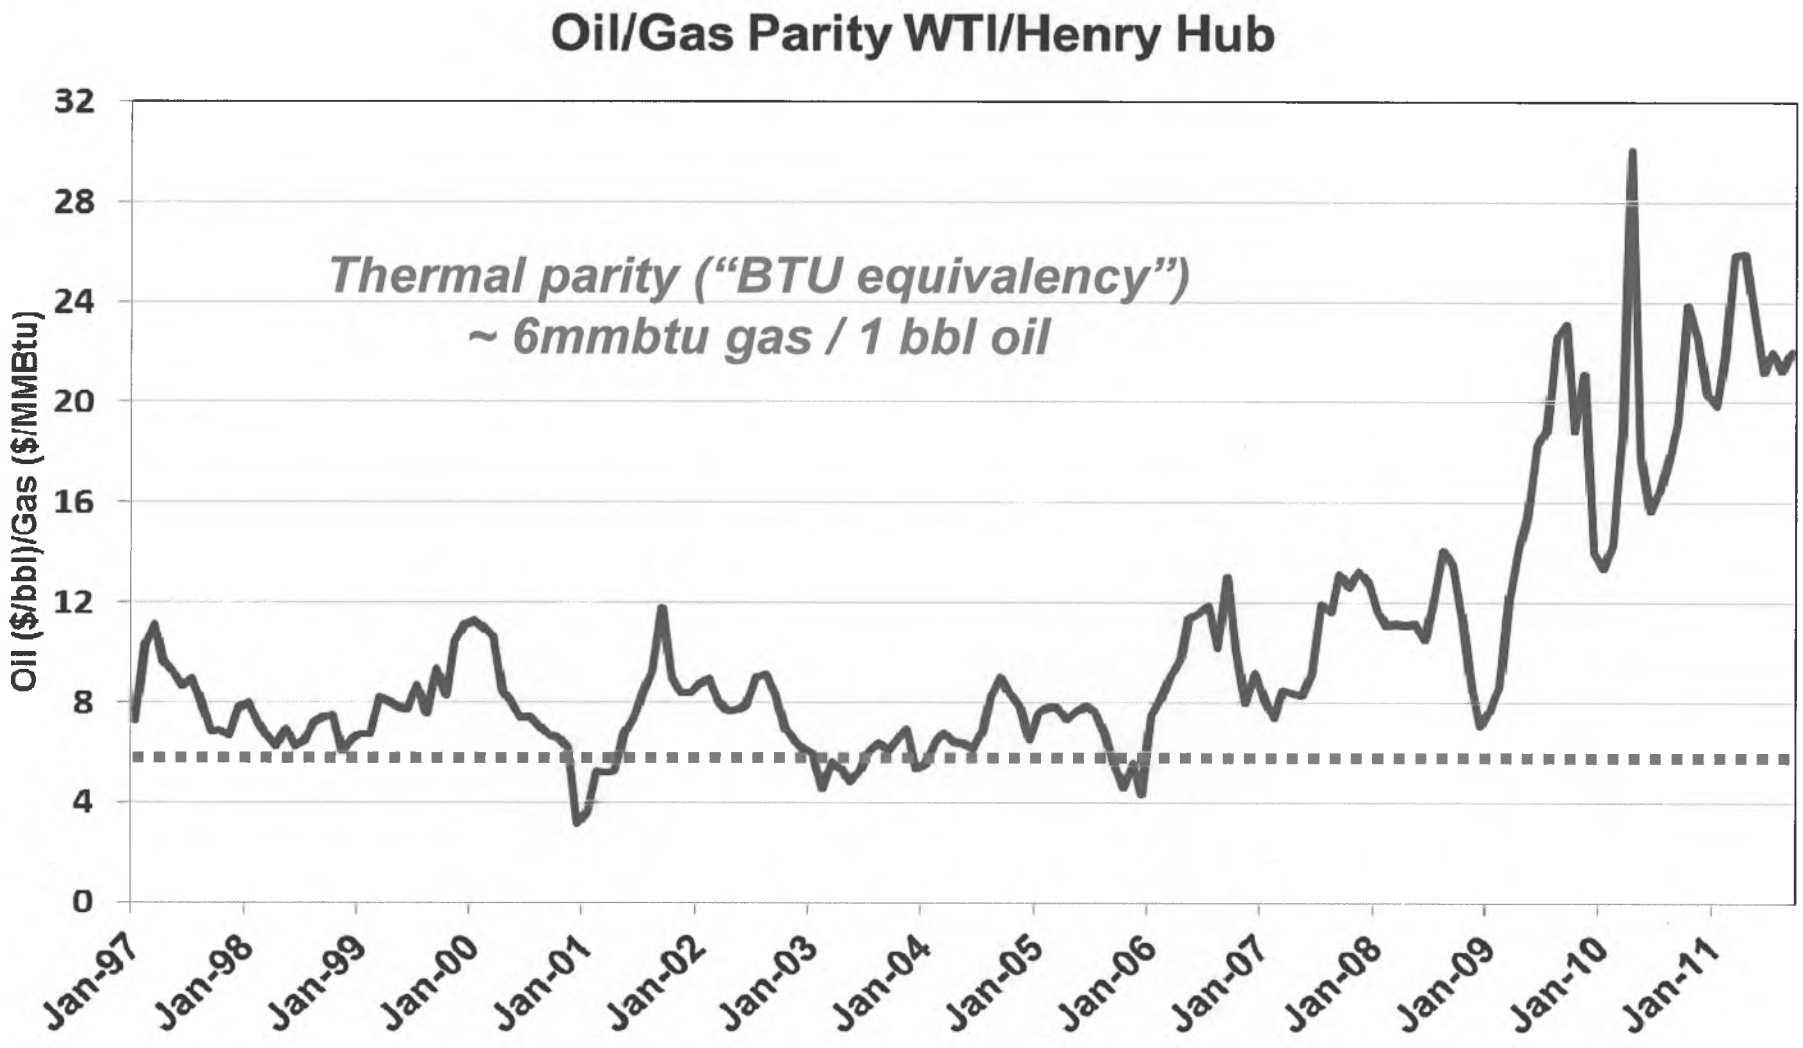
This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.

The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

What is "decoupling"

- **Under current law, gas production from major gas sales would be converted to "barrel of oil equivalent" and taxed in the same calculation as oil***
- **"Decoupling" would calculate oil and gas tax for major gas sales separately.**

***special provisions exist currently that extend special tax rates to Cook Inlet Gas, and gas for in-state use, until 2022. However these types of production are still included in the statewide "progressivity" calculation**



Conceptually, decoupling is simple…

Coupled	Decoupled	
Oil & Gas Destination Value	Oil Destination Value	Gas Destination Value
- Oil & Gas transportation costs	- Oil transportation costs	- Gas transportation costs
= Oil & Gas GVPP	= Oil GVPP	= Gas GVPP
- Oil & Gas Upstream Expenditures	- Oil Upstream Expenditures	- Gas Upstream Expenditures
= Oil & Gas Production Tax Value	= Oil Production Tax Value	= Gas Production Tax Value
X Tax Rate	X Tax Rate	X Tax Rate
= Oil & Gas Tax Liability	**= Oil Tax Liability**	**= Gas Tax Liability**

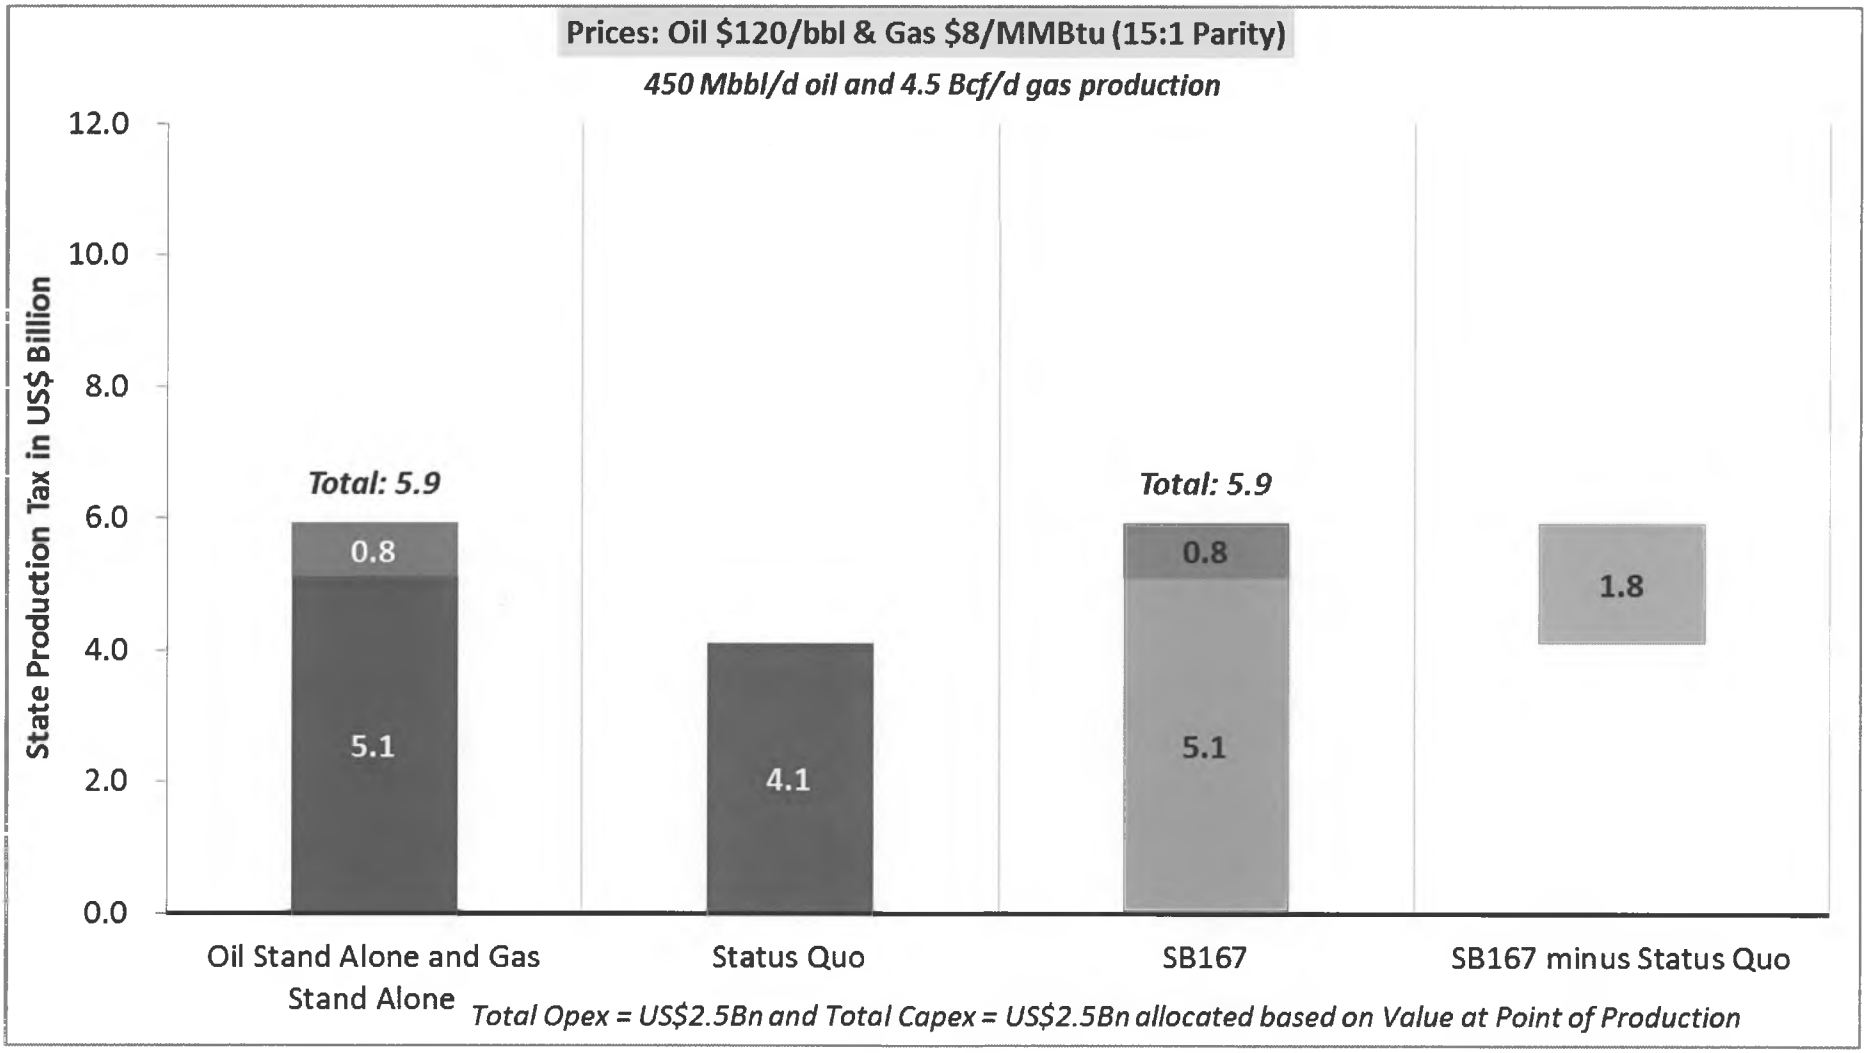
Why decouple?

- Oil is different than gas (different uses, different resource endowments, different substitutes)
- Decoupling allows tax policy to be crafted specific to oil or gas production
- Oil is currently worth more than gas (per unit of energy)
- Gas value relative to oil varies greatly over time

Oil price ≠ 6 * gas price

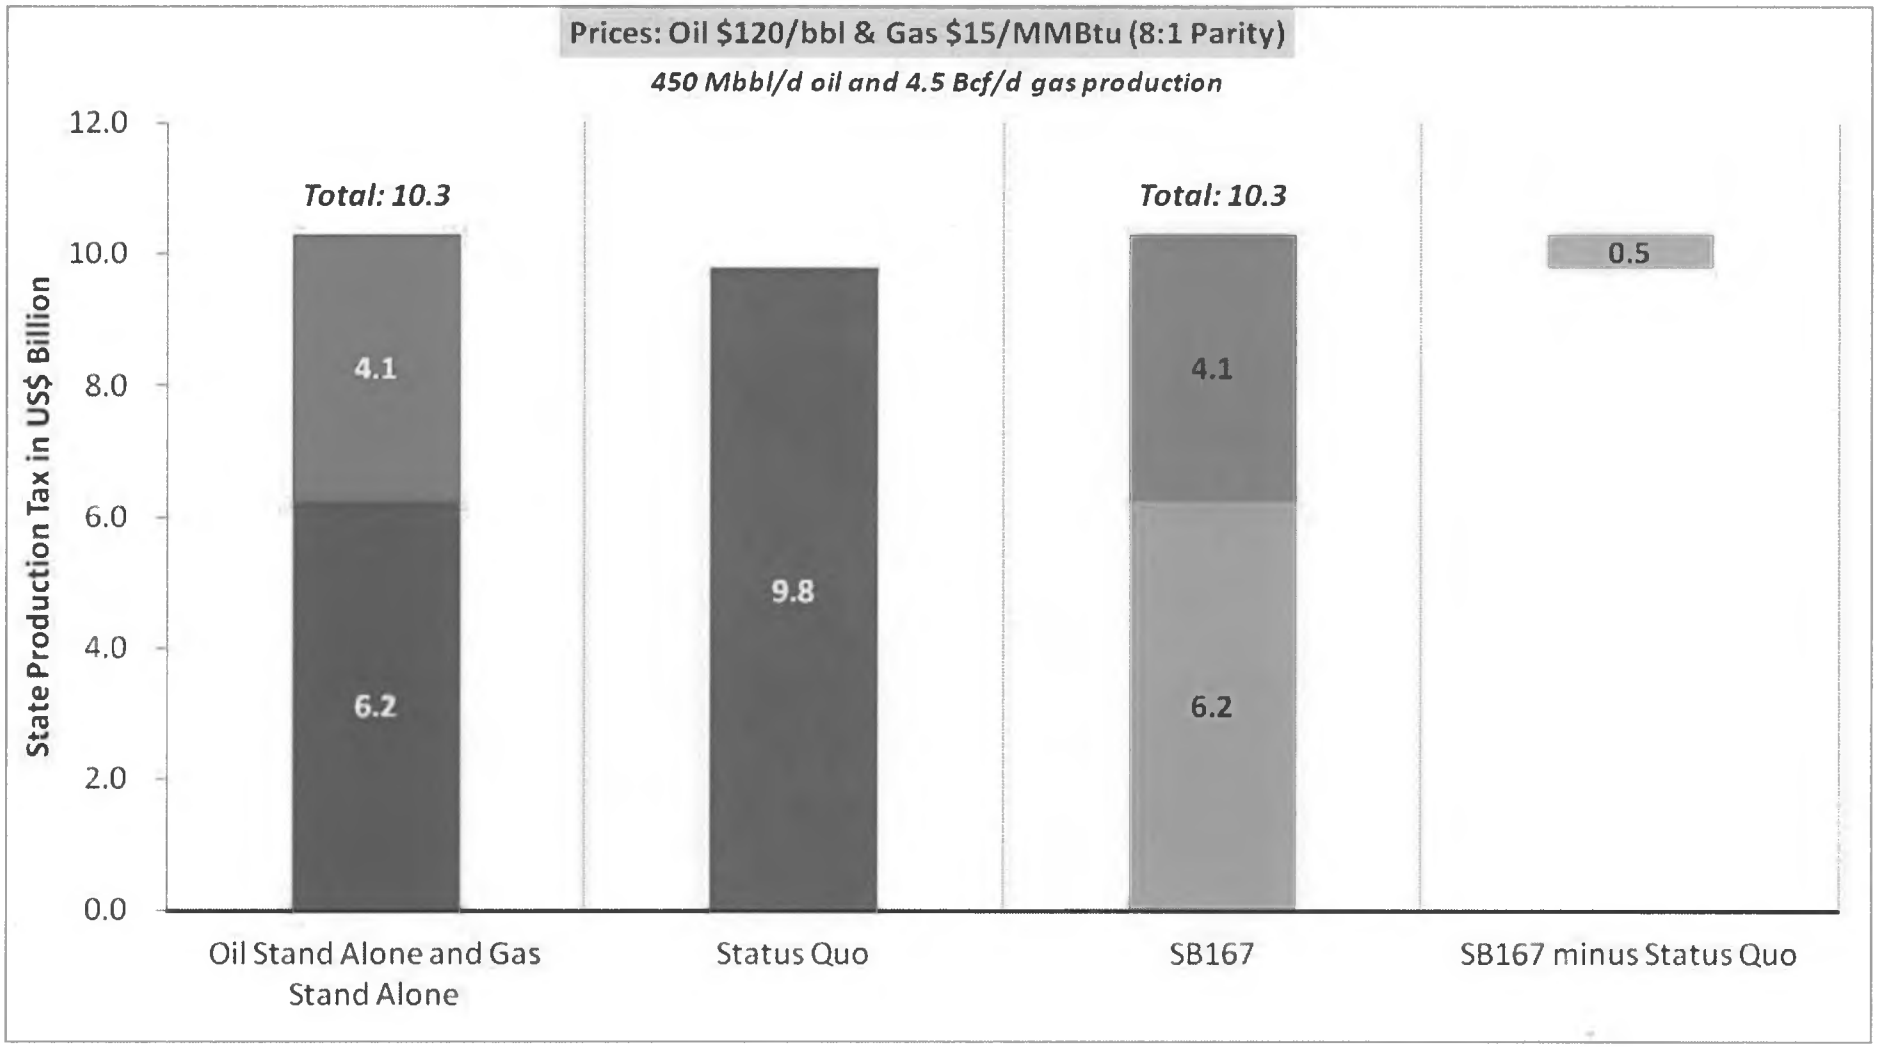
Why decouple?

- Including lower value gas in the same tax calculation as higher value oil reduces the average value per BOE and therefore reduces the progressive tax rate on oil
- By taxing oil and gas together, gas production reduces oil taxes even though oil operations are unaffected
- This has been called the "flip the switch" problem… as soon as major gas sales begin, state tax revenue could drop significantly, under certain price scenarios (including current prices!)



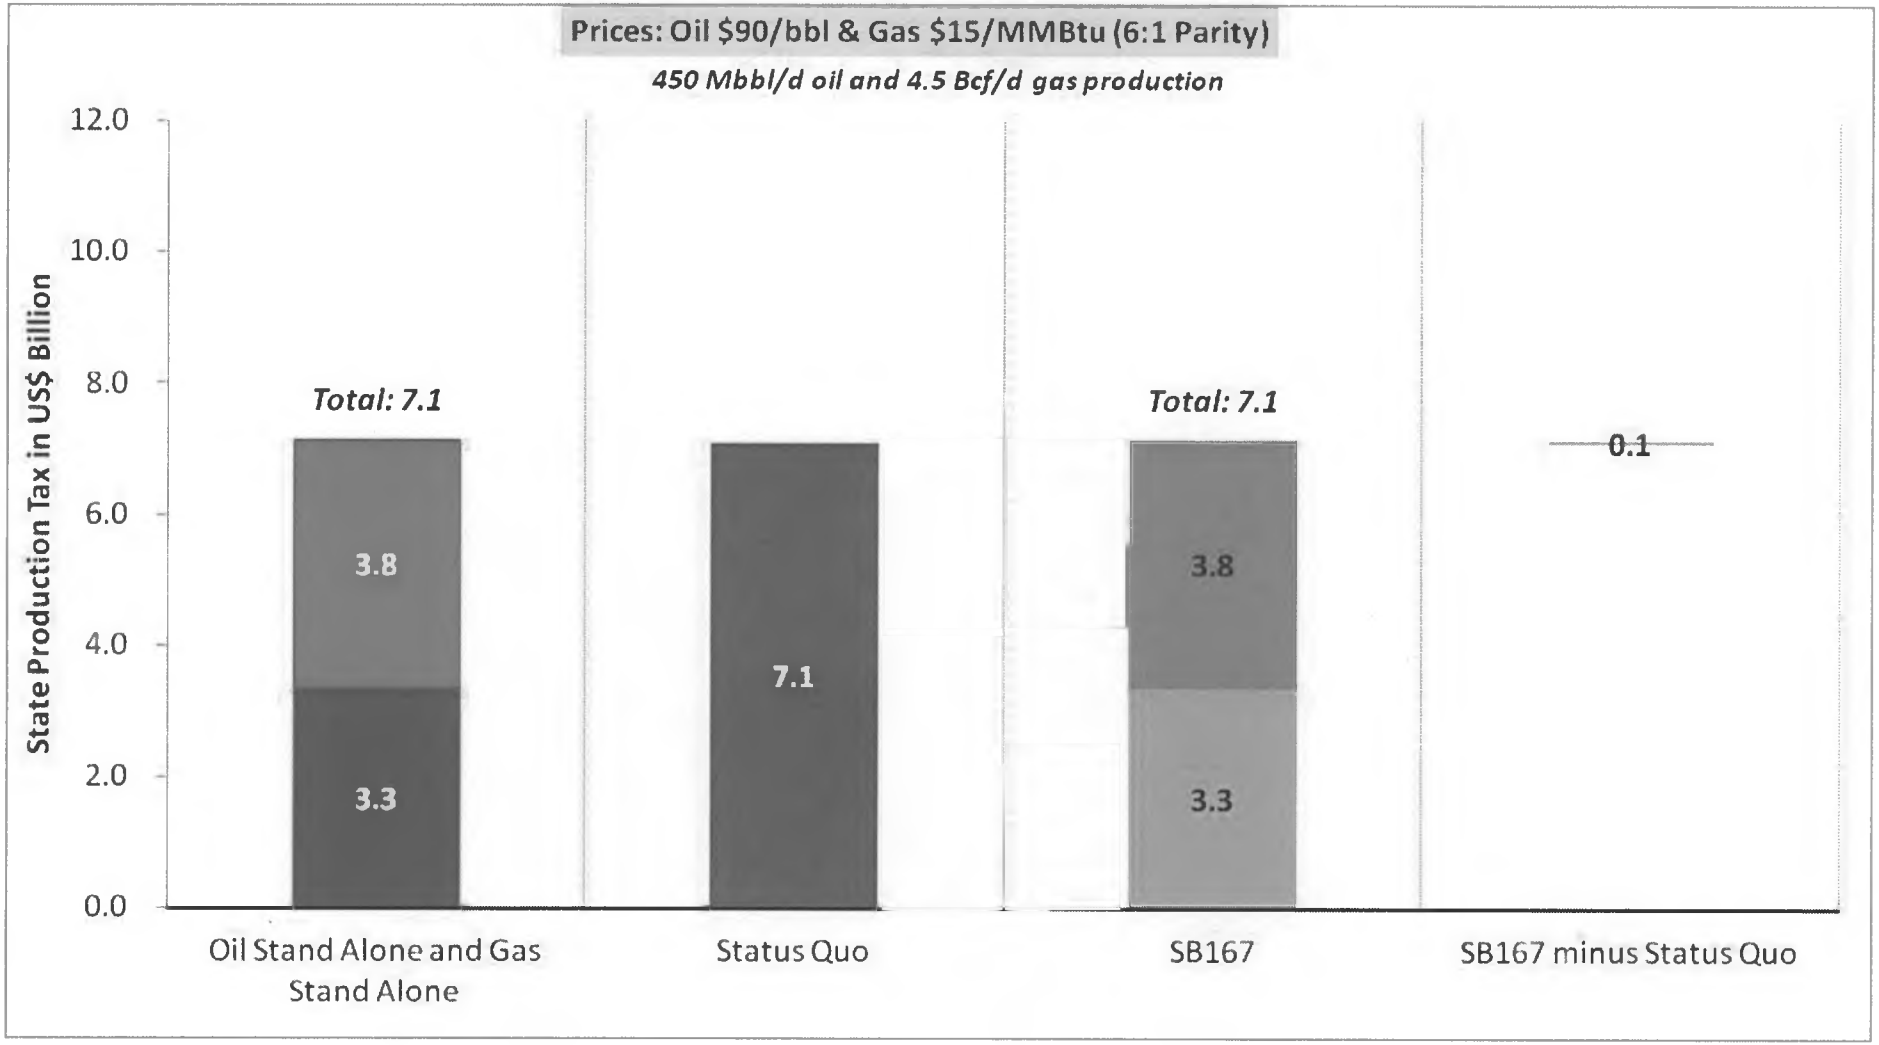
Numerical Examples : Assumptions

- One Year "Income Statement" model
- DOR 2012 Profiles
  - Oil: 450 Mbbl/d
  - Gas: 4.5 Bcf/d
- Conversion
  6 Mcf = 1 boe

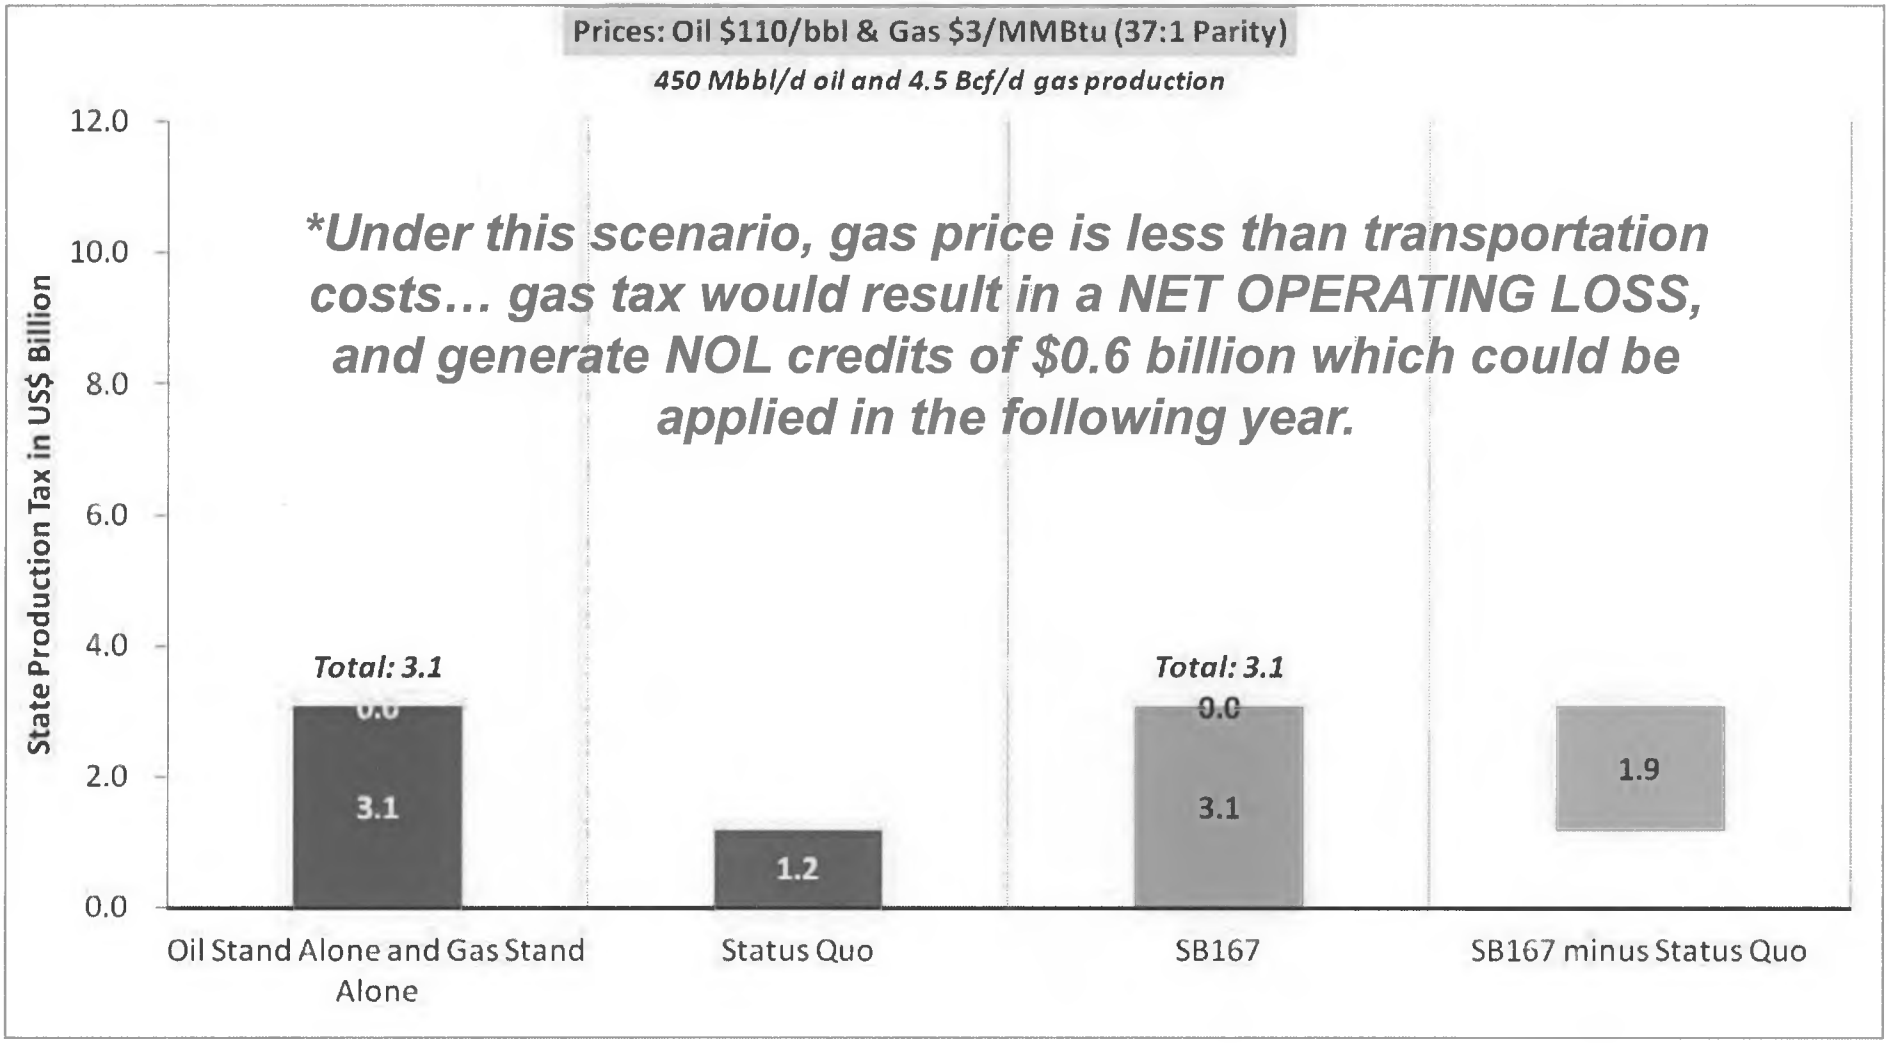


bbl/d: Barrels of oil per day
Mbbl/d: Thousand barrels of oil per day
boe: Barrel of oil equivalent
Bcf/d: Billion cubic feet per day
Mcf: Thousand cubic feet
MMBtu: Million British thermal units

- Costs allocation
  - Opex: $2,500,000,000
  - Capex: $2,500,000,000
  - Costs split on the basis of gross value at the Point of Production (PoP)
- Transportation
  - Oil: $11.00/bbl
  - Gas: $4.5/MMBtu



At high parity, SB 167 > Status Quo



At lower parity, SB 167 > Status Quo

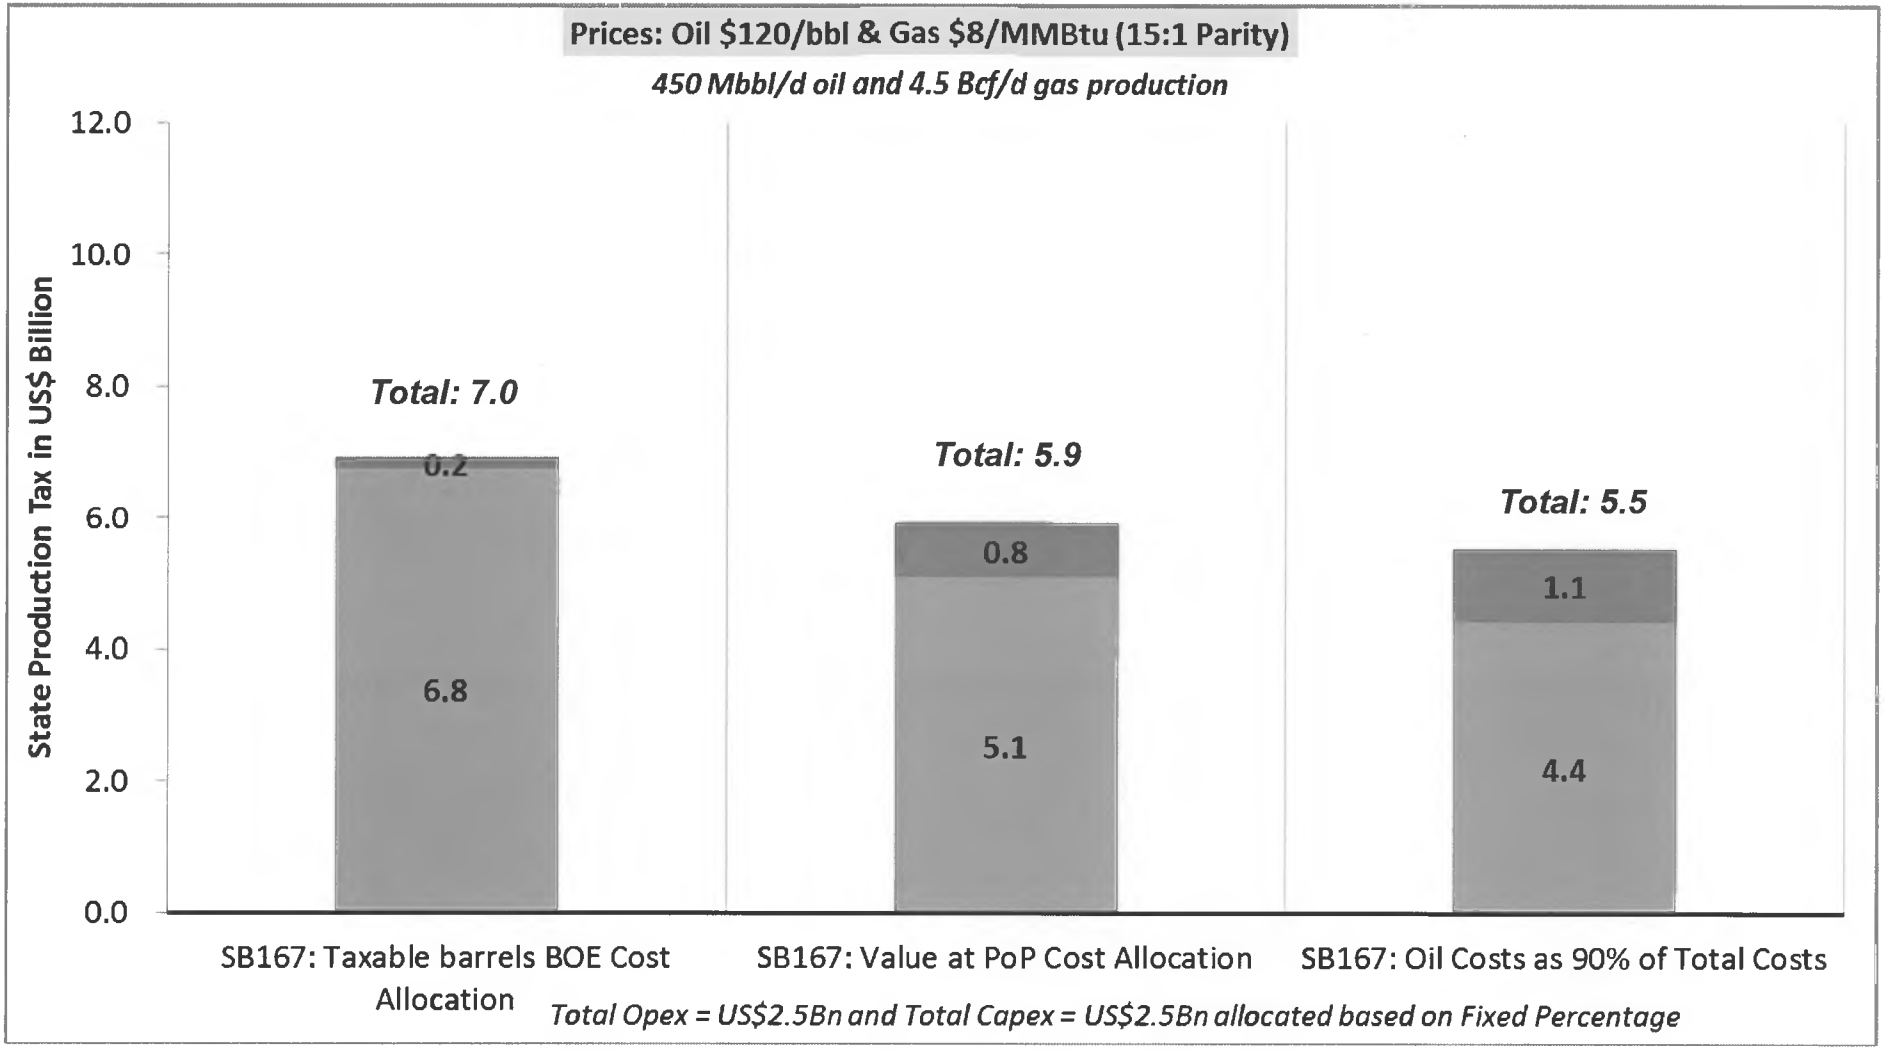
At 6:1 parity, SB 167 ≈ Status Quo

At today's prices…

Observations

- SB167 provides for a state share similar to the status quo when gas prices are relatively high (less dilution of progressivity under status quo).
- SB167 imposes a higher state share compared to the status quo when gas prices are relatively low.
- SB167 generates revenue equal to or greater than "oil stand alone" revenue in all cases
  - But at very low gas prices NOL credits are generated which can be applied against oil tax liabilities in the following year…

Decoupling Issues: Cost Allocation



- How costs are allocated between oil and gas has a significant impact on overall taxes owed
- Because oil and gas are generally produced together, it is not easy or straight forward to determine the costs "applicable to the gas [or oil] produced"
- The cost allocation method could result in uncertainty, disputes, and delays
- Cost allocation should be specified in the statute, and is a very important policy decision

Cost Allocation Examples

	Oil	Gas	Total
Production (Mmboe)	164	274	438
Gross Value at PoP (US$MM) - $120 and 15:1	17,903	5,749	23,652
Split Based on BOE (%)	38%	63%	100%
Cost Allocation (US$MM)	1,875	3,125	5,000
Split Based on Gross Value at Pop (%)	76%	24%	100%
Costs Allocation (US$MM)	3,785	1,215	5,000
Split Based on assumed "Actual" (%)	90%	10%	100%
Cost Allocation (US$MM)	4,500	500	5,000

- Assumes $120 / Bbl oil and $8 / MMBtu gas

Impact of Allocation Methods on SB167 Revenue

Some Other Decoupling Issues to Consider

- "Lock in" for gas committed at first open season
- Potential impact on current gas production
  - Cook Inlet gas
  - Gas used in state
  - Small quantities of other gas production (OCS)
- Complexity of administration for state, taxpayers
- Specify gas tax now or save for another session?
- Balance between desire for revenue and making a major gas project attractive
- Treatment of Net Operating Loss for gas

History: SB 305 in 2010

- Decoupled oil and gas for purposes of a major gas sale (solving the "flip the switch" problem)
- Held harmless most current gas production
- Provided one tax calculation for oil, Cook Inlet gas, and gas used in-state
- Provided a separate tax calculation for non-Cook Inlet gas that is exported out of state
- Specified GVPP cost allocation "to the extend possible"

- Extensive analysis by Legislature, administration, consultants
- Numerous technical issues raised and addressed
- Final bill is the basis of this year's SB 167

History: SB 305 in 2010

- Passed Senate and House, vetoed by Governor
- 3 reasons cited in veto message:
  1. Decoupling, on its own, represents an overall tax increase
  2. Changing the tax during the pipeline open seasons (AGIA, Denali) creates uncertainty
  3. Change not needed at this time because Legislature retains ability to make changes to tax laws… any tax locked in for firm commitments at the first AGIA open season only applies to gas, not oil.

- 2 years later…
  - The AGIA first open season is complete, the Denali project has been suspended
  - Decoupling has now been "on the table" for two years
  - Opportunity to reconsider decoupling in context of the broader discussion of increasing oil and gas production

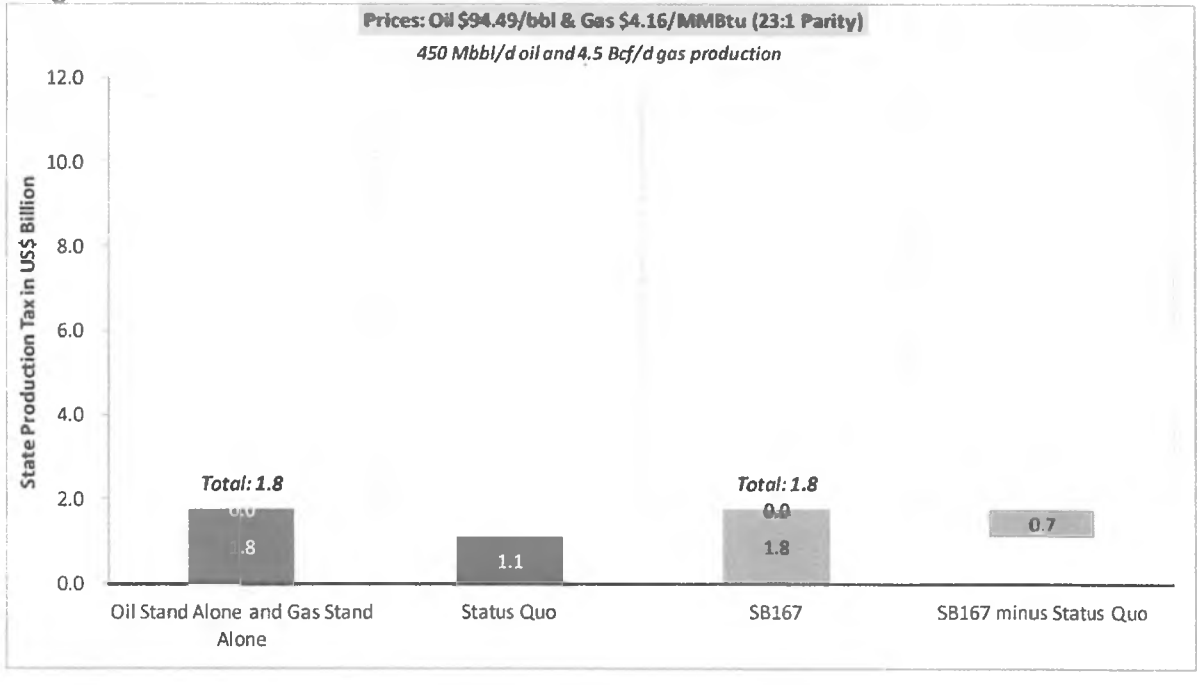
February 15, 2012

RE: Follow up questions from January 27, 2012 SB 167 Presentation

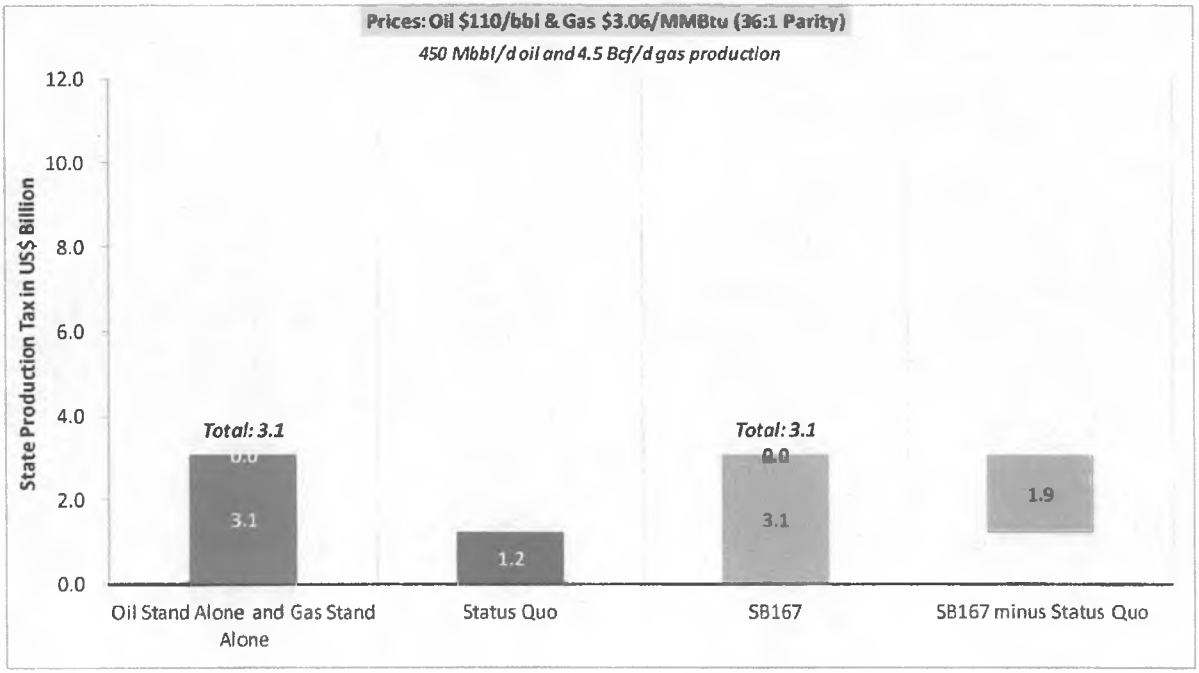
Dear Senators Stedman and Hoffman:



The purpose of this correspondence is to respond to questions raised during our January 27, 2012 presentation to the Senate Finance Committee regarding Senate Bill 167. The three follow-up questions and our responses follow.

1) Provide information about other jurisdictions that tax oil and gas together.

The discussion of decoupling oil and gas for taxation purposes becomes an issue primarily under fiscal regimes that tax net profits of oil and gas production. Further, the decoupling of oil and gas for taxation purposes is exacerbated when production tax *rate* is predicated on profit per btu-equivalent barrel. Alaska has a net profits production tax with a tax rate that is dependent on profit btu-equivalent barrel. Among a group of international peers to Alaska that have tax and royalty fiscal regimes, three countries have been identified as having a tax on net profits of production – Australia, Norway, and the United Kingdom. Of these three, all of them tax oil and natural gas together under the same fiscal terms. None of them, however, have a tax rate that is dependent on the profit per btu-equivalent barrel, such as Alaska does. Therefore, any additional profit, whether it be on oil or gas, is taxed at the tax rate determined for the country. For example, Norway assesses its hydrocarbon tax of 50% on the net profit of all oil and gas produced, regardless of the level of profit.
Based on our review of comparable jurisdictions, we did not identify any with similar oil and gas decoupling issues.

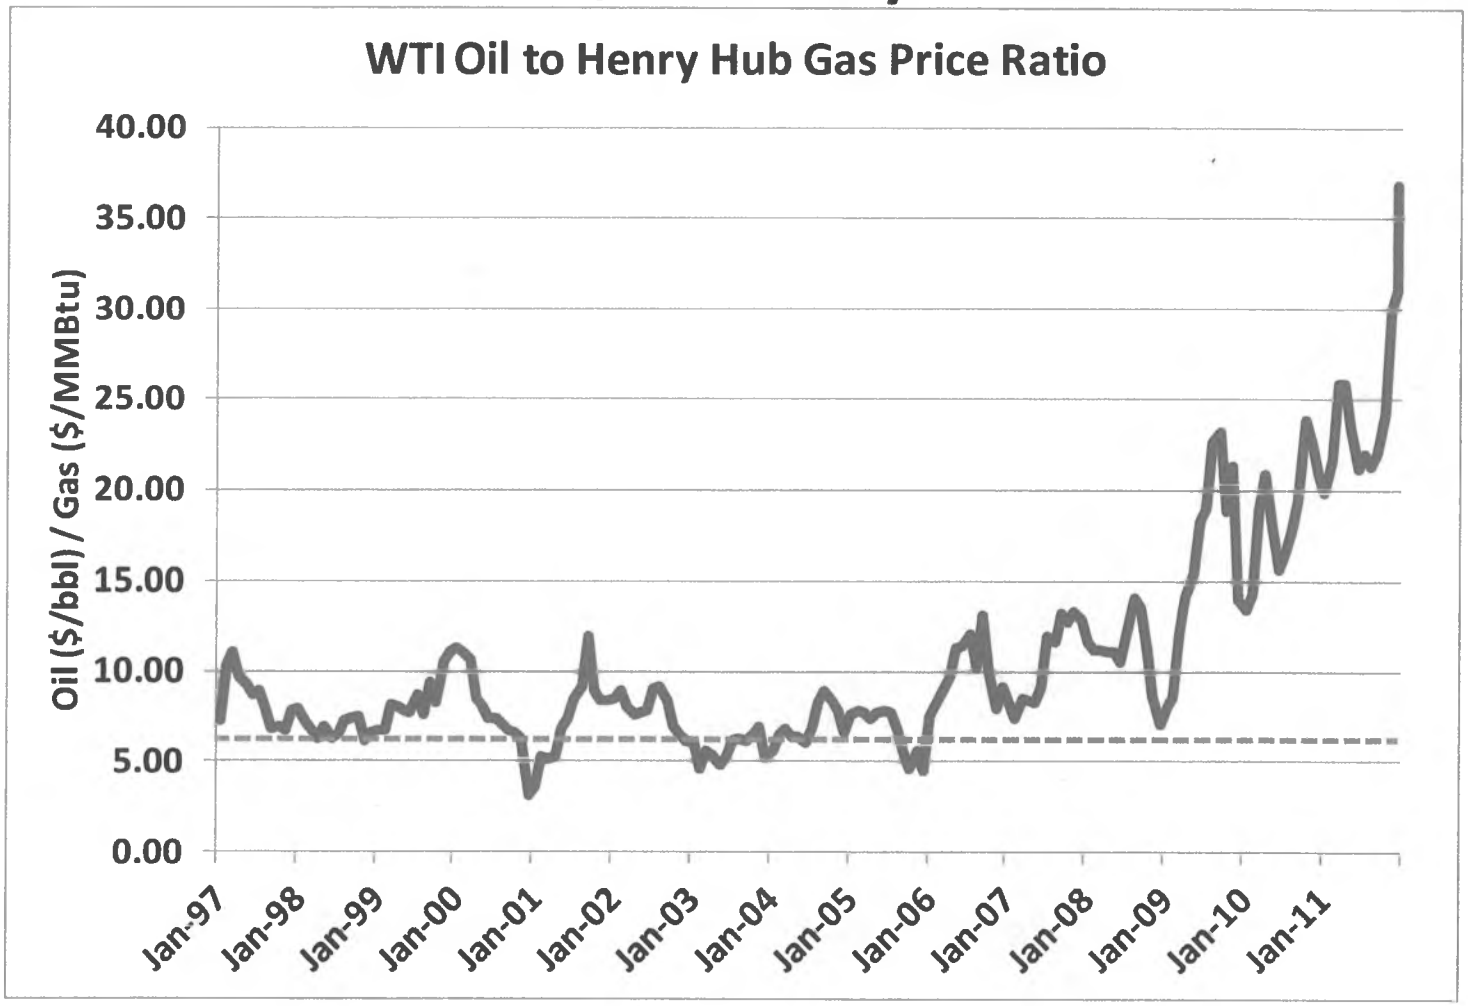


2) **Using the scenario laid out on slide 10 of the presentation, show what state revenue would have been under status quo and SB 167 using actual FY 2011 prices.**

For the following analysis we used the average FY 2011 Henry Hub gas price of $4.16 per million Btu and the average FY 2011 ANS oil price of $94.49. Similar to slide 14, as corrected, this scenario assumes a gas price that is lower than the transportation cost for the gas.

3) **Show three years of revenue estimates for slide 14.**

This question was posed as a way to clarify the treatment of the loss to the producers in a situation where gas destination value is lower than transportation costs. With the correction to slide 14 mentioned above, there is no longer a timing issue between years, and the revenue impact would be the same for all three years if prices of $110 per barrel for oil and $3 per million Btu for gas existed for all three years. The chart is shown below and would be the same for all three years.



I hope these answers fully address your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

Oil / Gas parity
WTI / Henry Hub

RE: Corrected Version of January 27, 2012 SB 167 Presentation

Dear Senators Stedman and Hoffman:

The purpose of this correspondence is to issue a corrected version of our January 27, 2012 presentation to the Senate Finance Committee regarding Senate Bill 167.

This corrected presentation removes narrative on slide 14 and slide 15 regarding treatment of losses for natural gas under SB 167 that are due entirely to transportation costs exceeding the destination value of the gas.

Slide 14 presented estimates of state revenue under status quo and SB 167, assuming a major gas sale with oil and gas prices around current prices of $110 / barrel and $3 / mmBTU, respectively. We assumed a gas tariff of $4.50 / mmBTU, and gas sales of 4.5 Bcf / day. Transportation costs (the lower of actual or reasonable) are subtracted from the destination value (netted out) to calculate the Gross Value at the Point of Production (GVPP). Under this scenario, gas does not have a positive GVPP value. The producers would realize a loss on the gas of approximately $2.46 billion, due entirely to transportation costs exceeding the destination value of the gas. Our presentation had assumed that the negative GVPP could be converted to a 25% Net Operating Loss credit under AS 43.55.023(b). However that assumption was not correct because the NOL credit under AS 43.55.023(b) is applicable only to "the amount of a producer's or explorer's adjusted lease expenditures under AS 43.55.165 and AS 43.55.170 for a previous calendar year that was not deductible in calculating production tax values for that calendar year."

We are forwarding a corrected presentation that revises slide 14 and related narrative on slide 15. This is just one example of the many technical issues that can arise when "decoupling" some oil

and gas for production tax purposes. Decoupling is a complex subject and we look forward to continued dialogue and public process on this topic.

Sincerely,

Bryan Butcher
Commissioner

Attachment: Revised SB 167 presentation from January 27, 2012

Presentation to the
Senate Finance Committee
January 27, 2012
Alaska Department of Revenue

Revised February 2, 2012 - with corrected Slide 14 and 15

Overview

- **How Alaska's production tax works**
- **What is "decoupling"**
- **Why decouple?**
- **Decoupling Issues**
- **History: SB 305 in 2010**

How Alaska's Production Tax Works

- Company specific tax
- Based on Production Tax Value (PTV)
  - Market price – Transportation Costs = Gross Value at Point of Production (GVPP)
  - GVPP – Lease Expenditures = Production Tax Value (PTV)
- Tax Rate
  - Base tax rate of 25% of "production tax value"
  - Progressivity applies when PTV is over $30 / BOE, and increases rate by 0.4% for each $1 of PTV over $30 / BOE
  - Example: At $50 / BOE PTV, tax rate is 33% *(25% + 0.4% * $20)*
  - At $92.50 / BOE progressivity changes to 0.1% per $1 of PTV

FY 11 Production Tax Calculation

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$94.49	602,723	$56.9 / day
Annual Production (bbl)			
Total Annual Production/Value		**219,993,895**	**$20,786.7**

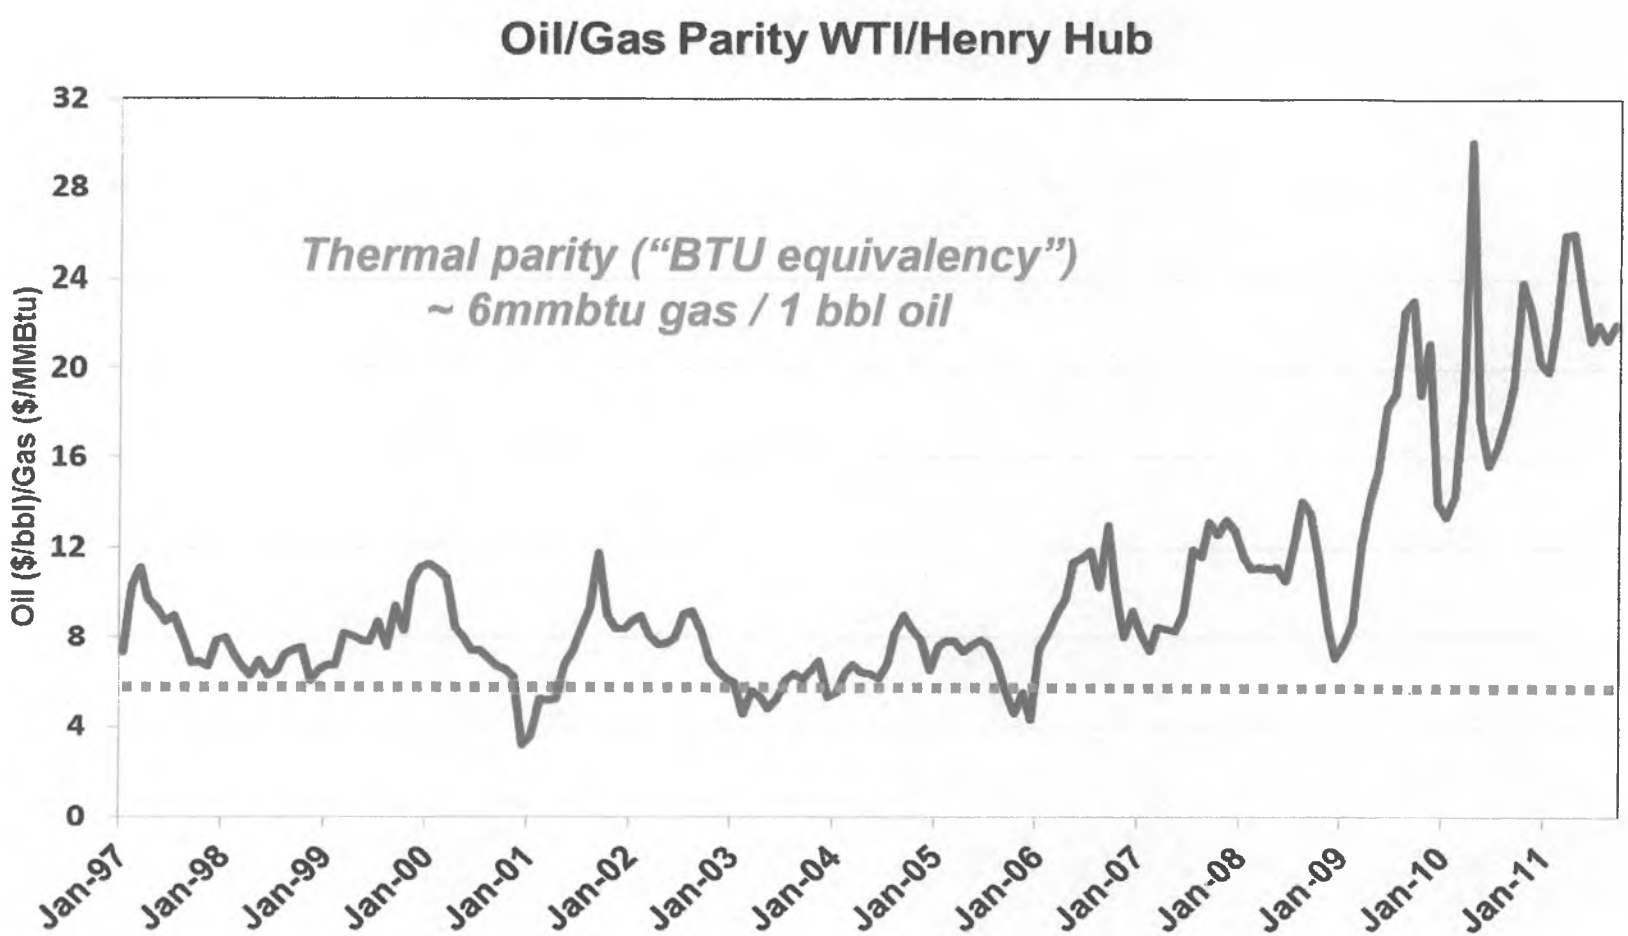
This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.
The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

What is "decoupling"

- **Under current law, gas production from major gas sales would be converted to "barrel of oil equivalent" and taxed in the same calculation as oil***
- **"Decoupling" would calculate oil and gas tax for major gas sales separately.**

***special provisions exist currently that extend special tax rates to Cook Inlet Gas, and gas for in-state use, until 2022. However these types of production are still included in the statewide "progressivity" calculation**

Conceptually, decoupling is simple…



Coupled	Decoupled	
Oil & Gas Destination Value	Oil Destination Value	Gas Destination Value
- Oil & Gas transportation costs	- Oil transportation costs	- Gas transportation costs
= Oil & Gas GVPP	= Oil GVPP	= Gas GVPP
- Oil & Gas Upstream Expenditures	- Oil Upstream Expenditures	- Gas Upstream Expenditures
= Oil & Gas Production Tax Value	= Oil Production Tax Value	= Gas Production Tax Value
X Tax Rate	X Tax Rate	X Tax Rate
= Oil & Gas Tax Liability	**= Oil Tax Liability**	**= Gas Tax Liability**

Why decouple?

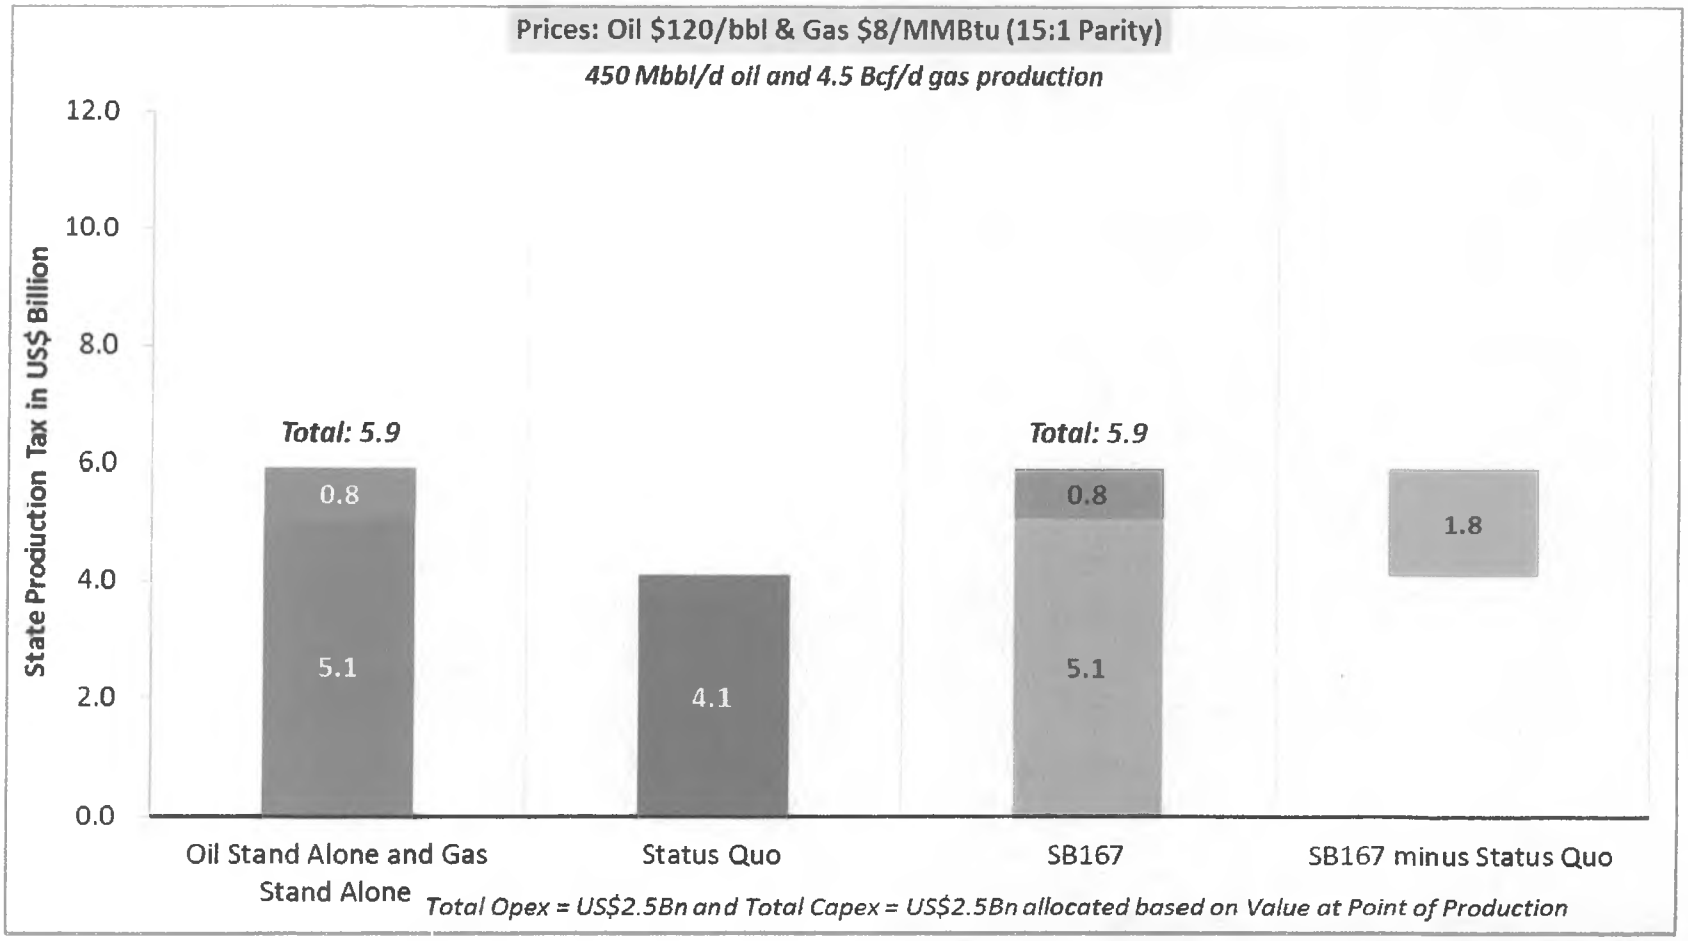
- **Oil is different than gas (different uses, different resource endowments, different substitutes)**
- **Decoupling allows tax policy to be crafted specific to oil or gas production**

- **Oil is currently worth more than gas (per unit of energy)**
- **Gas value relative to oil varies greatly over time**

Oil price ≠ 6 * gas price

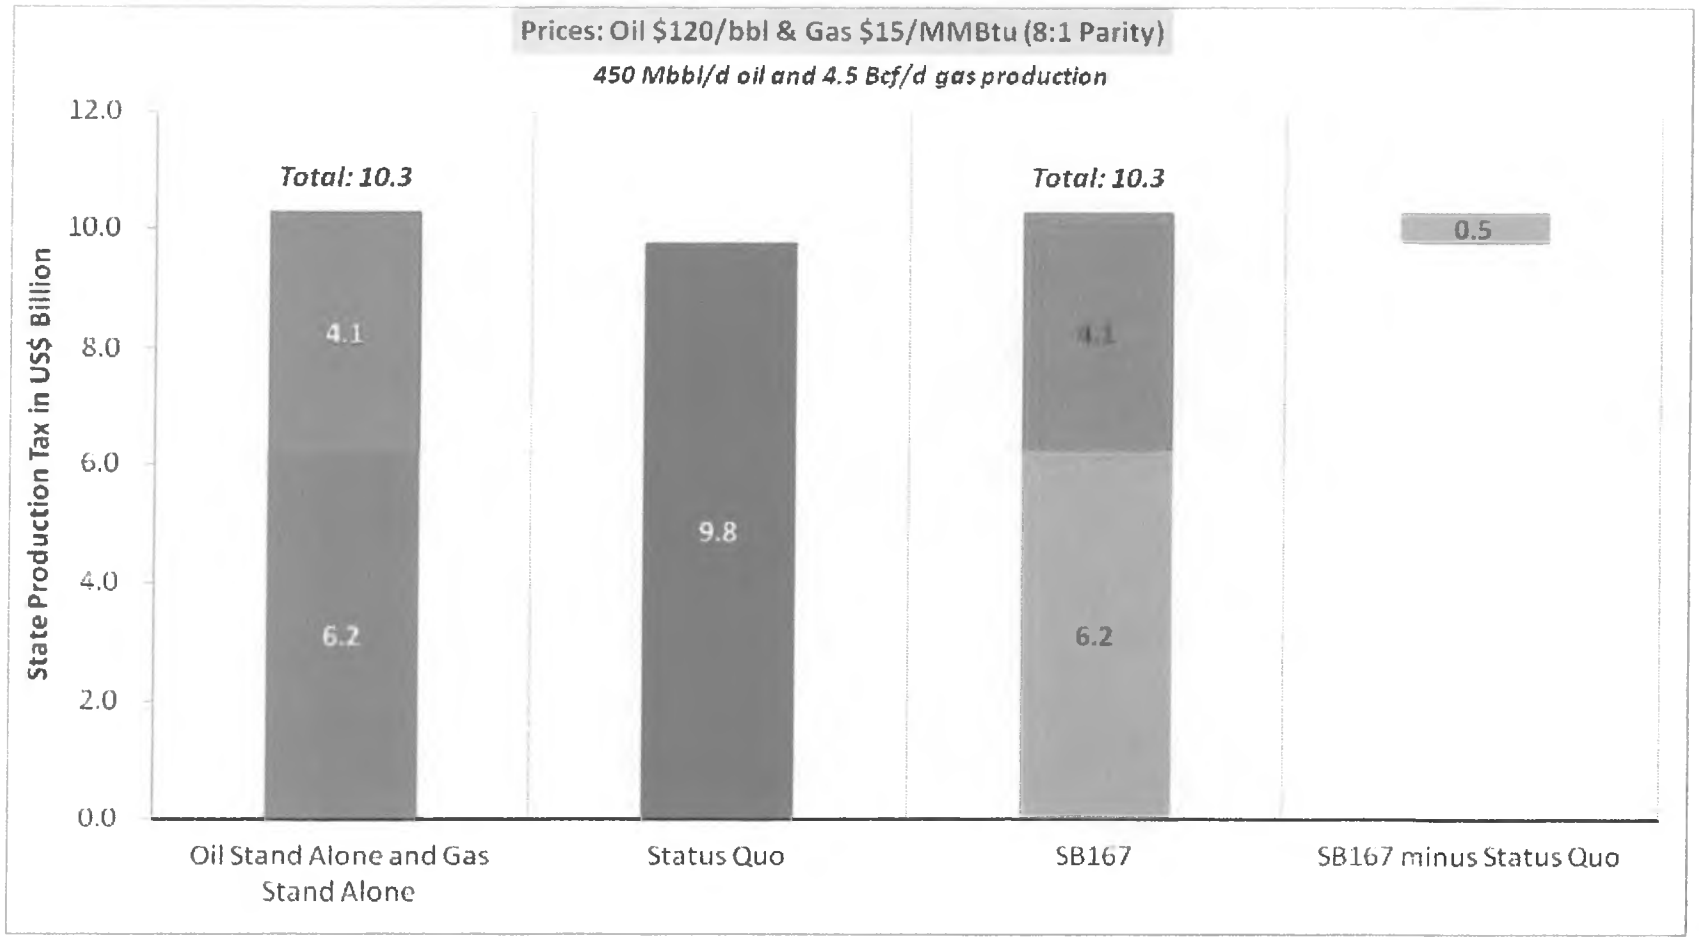
Why decouple?

- Including <u>lower value</u> gas in the same tax calculation as <u>higher value</u> oil reduces the average value per BOE and therefore reduces the progressive tax rate on oil
- By taxing oil and gas together, gas production reduces oil taxes even though oil operations are unaffected
- This has been called the "flip the switch" problem… as soon as major gas sales begin, state tax revenue could drop significantly, under certain price scenarios (including current prices!)



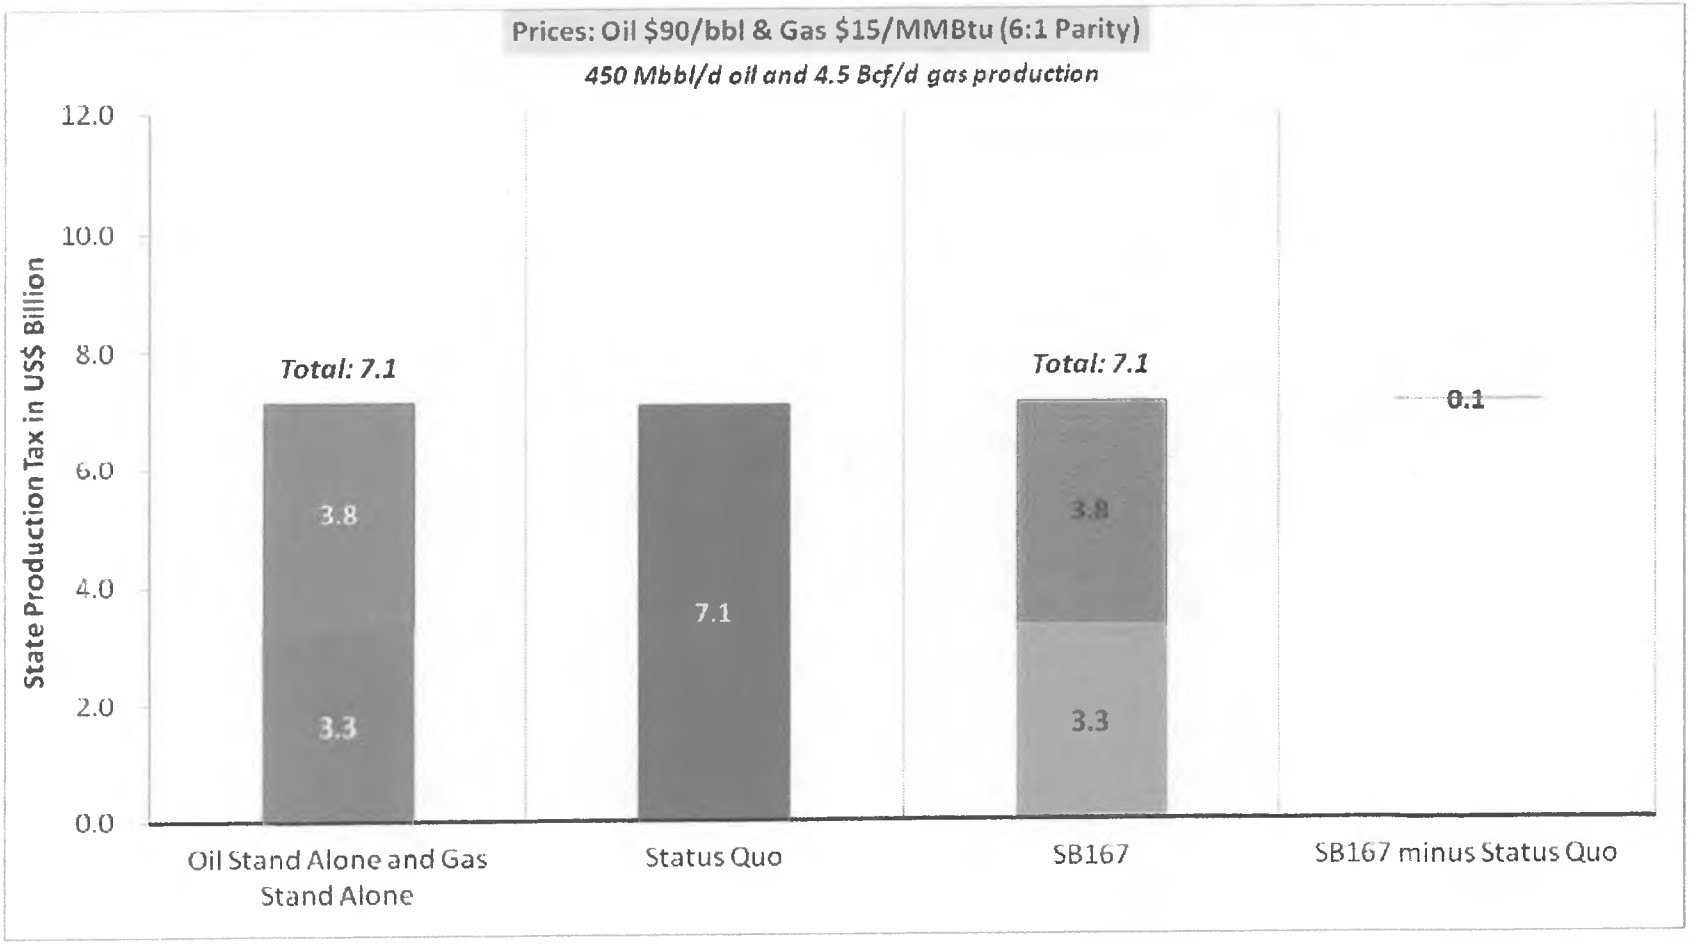
Numerical Examples : Assumptions

- **One Year "Income Statement" model**
- **DOR 2012 Profiles**
  - **Oil: 450 Mbbl/d**
  - **Gas: 4.5 Bcf/d**
- **Conversion**
  6 Mcf = 1 boe

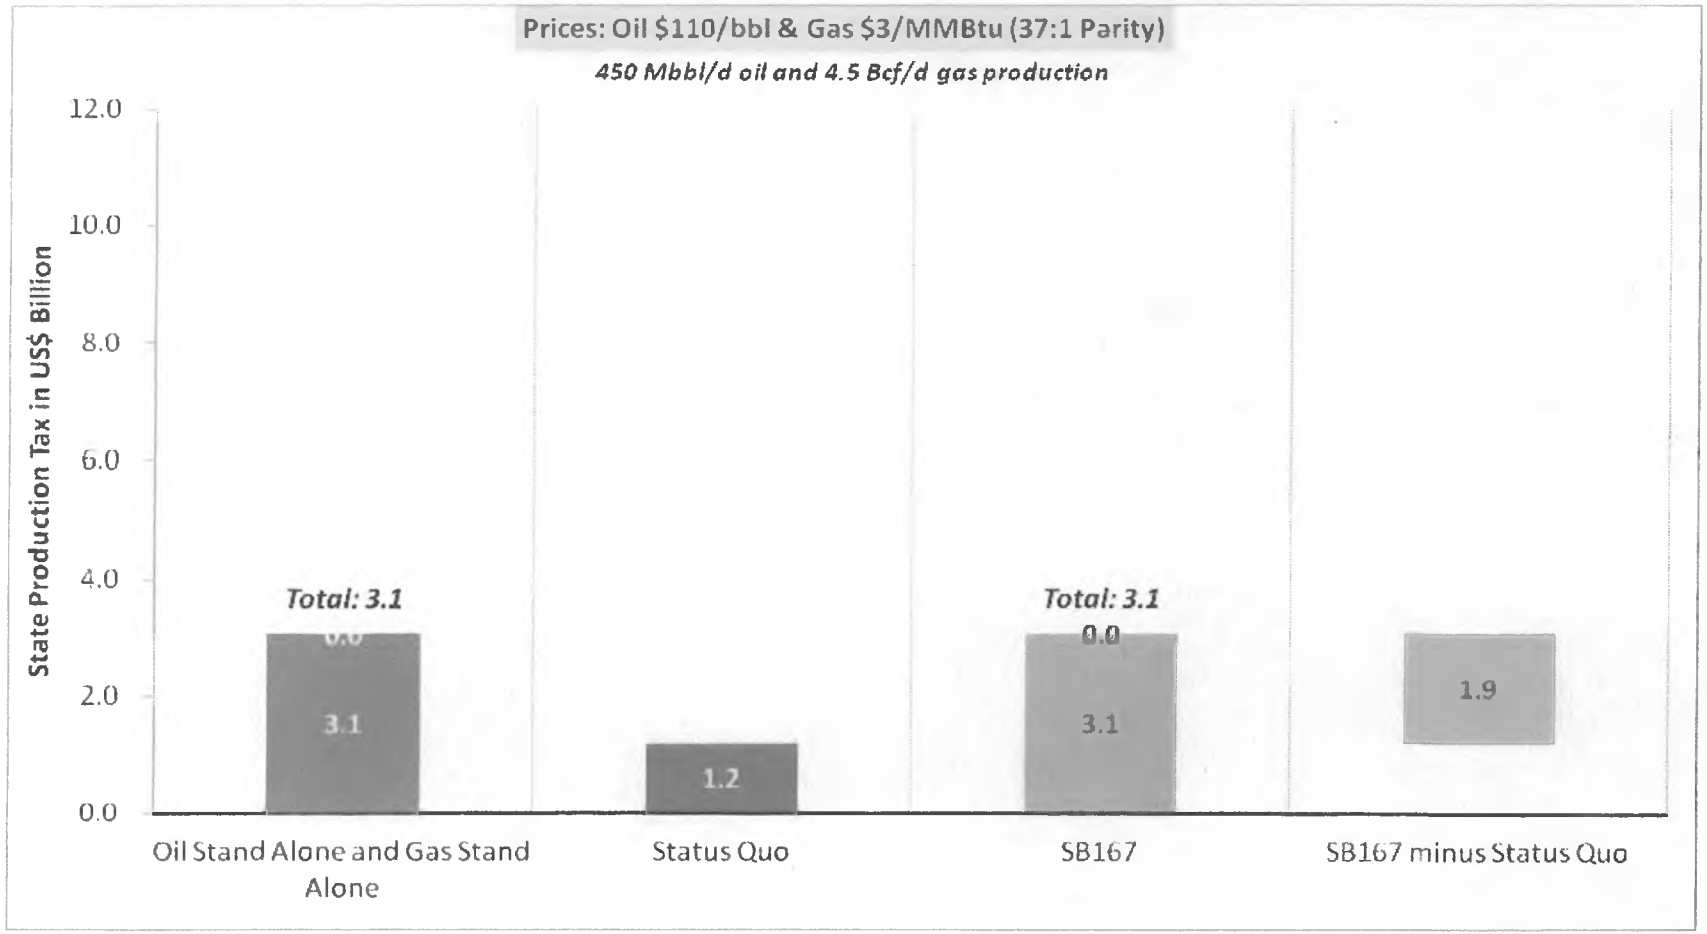


bbl/d: Barrels of oil per day
Mbbl/d: Thousand barrels of oil per day
boe: Barrel of oil equivalent
Bcf/d: Billion cubic feet per day
Mcf: Thousand cubic feet
MMBtu: Million British thermal units

- **Costs allocation**
  - **Opex: $2,500,000,000**
  - **Capex: $2,500,000,000**
  - **Costs split on the basis of gross value at the Point of Production (PoP)**
- **Transportation**
  - **Oil: $11.00/bbl**
  - **Gas: $4.5/MMBtu**



At high parity, SB 167 > Status Quo



At lower parity, SB 167 > Status Quo

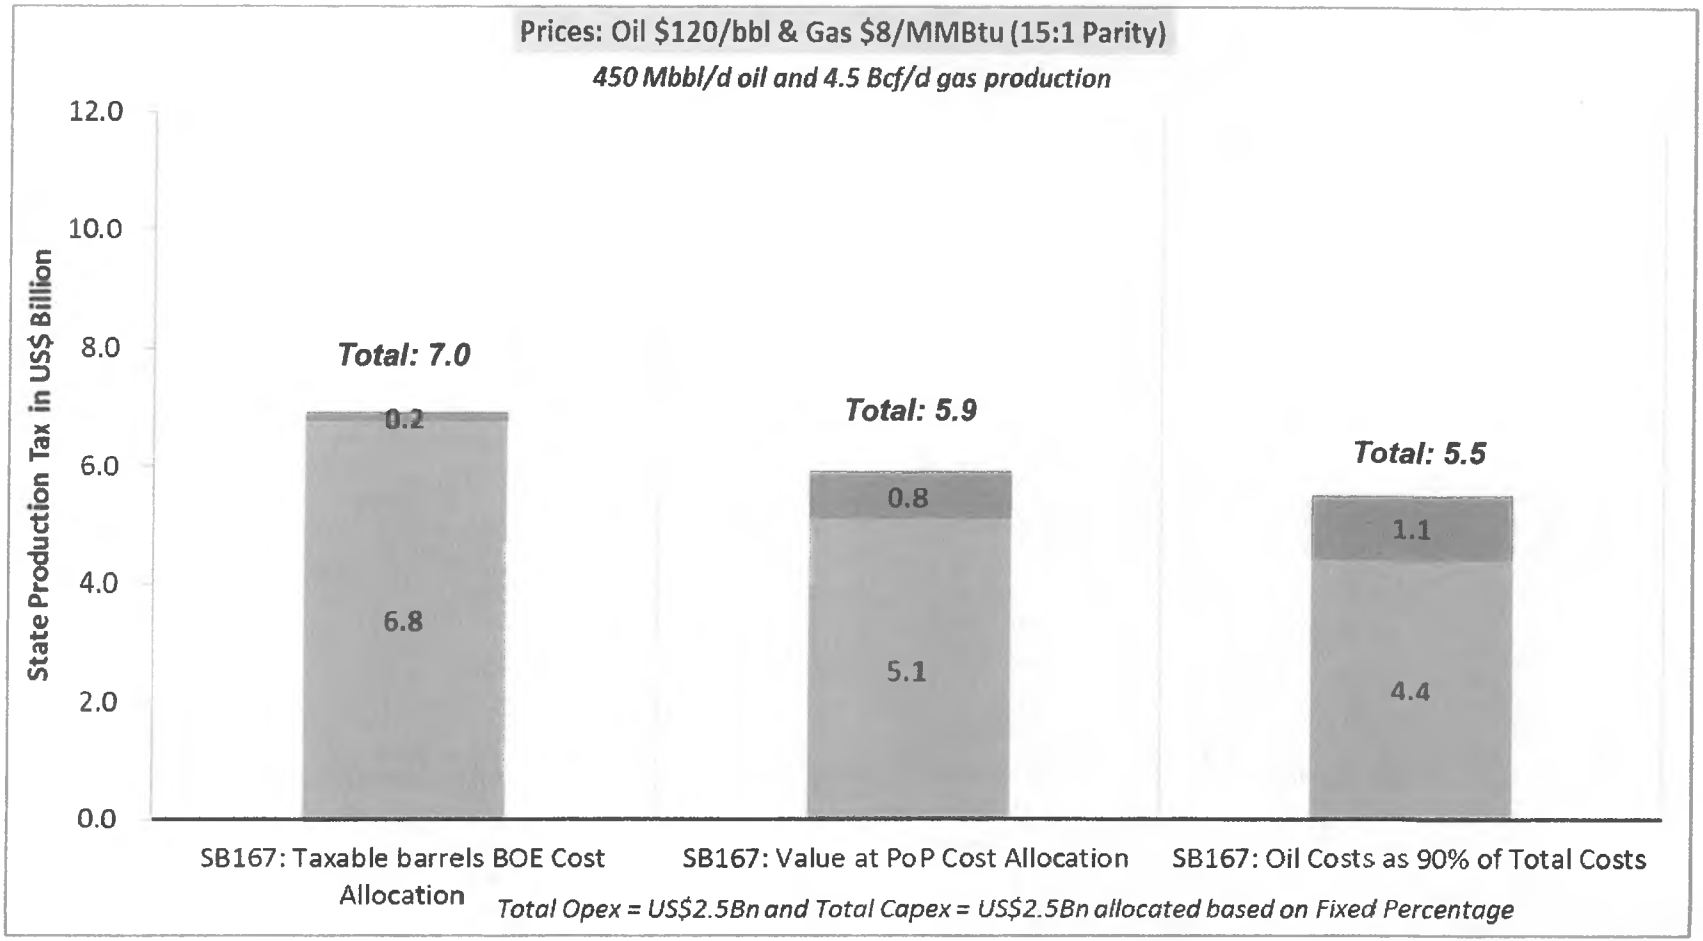
At 6:1 parity, SB 167 ≈ Status Quo

At today's prices…

Observations

- **SB167 provides for a state share similar to the status quo when gas prices are relatively high (less dilution of progressivity under status quo).**
- **SB167 imposes a higher state share compared to the status quo when gas prices are relatively low.**
- **SB167 generates revenue equal to or greater than "oil stand alone" revenue in all cases.**

Decoupling Issues: Cost Allocation



- How costs are allocated between oil and gas has a significant impact on overall taxes owed
- Because oil and gas are generally produced together, it is not easy or straight forward to determine the costs "applicable to the gas [or oil] produced"
- The cost allocation method could result in uncertainty, disputes, and delays
- Cost allocation should be specified in the statute, and is a very important policy decision

Cost Allocation Examples

	Oil	Gas	Total
Production (Mmboe)	164	274	438
Gross Value at PoP (US$MM) - $120 and 15:1	17,903	5,749	23,652
Split Based on BOE (%)	38%	63%	100%
Cost Allocation (US$MM)	1,875	3,125	5,000
Split Based on Gross Value at Pop (%)	76%	24%	100%
Costs Allocation (US$MM)	3,785	1,215	5,000
Split Based on assumed "Actual" (%)	90%	10%	100%
Cost Allocation (US$MM)	4,500	500	5,000

- Assumes $120 / Bbl oil and $8 / MMBtu gas

Impact of Allocation Methods on SB167 Revenue

Some Other Decoupling Issues to Consider

- **"Lock in" for gas committed at first open season**
- **Potential impact on current gas production**
  - **Cook Inlet gas**
  - **Gas used in state**
  - **Small quantities of other gas production (OCS)**
- **Complexity of administration for state, taxpayers**
- **Specify gas tax now or save for another session?**
- **Balance between desire for revenue and making a major gas project attractive**
- **Treatment of Net Operating Loss for gas**

History: SB 305 in 2010

- Decoupled oil and gas for purposes of a major gas sale (solving the "flip the switch" problem)
- Held harmless most current gas production
- Provided one tax calculation for oil, Cook Inlet gas, and gas used in-state
- Provided a separate tax calculation for non-Cook Inlet gas that is exported out of state
- Specified GVPP cost allocation "to the extend possible"

- Extensive analysis by Legislature, administration, consultants
- Numerous technical issues raised and addressed
- Final bill is the basis of this year's SB 167

History: SB 305 in 2010

- **Passed Senate and House, vetoed by Governor**
- **3 reasons cited in veto message:**
  1. **Decoupling, on its own, represents an overall tax increase**
  2. **Changing the tax during the pipeline open seasons (AGIA, Denali) creates uncertainty**
  3. **Change not needed at this time because Legislature retains ability to make changes to tax laws… any tax locked in for firm commitments at the first AGIA open season only applies to gas, not oil.**
- **2 years later…**
  - **The AGIA first open season is complete, the Denali project has been suspended**
  - **Decoupling has now been "on the table" for two years**
  - **Opportunity to reconsider decoupling in context of the broader discussion of increasing oil and gas production**

Re: Answer to Question & Request Raised by Senator Thomas during My Testimony (25 February 2010) – Fiscal Years 2008 and 2009

The very pertinent and perceptive question asked earlier today by Senator Thomas sought information with respect to how might the gas dilution / cross subsidy effect identified in Alaska's current production tax rules have impacted the production taxes actually paid in recent periods had a gas line been in operation at the time?

In order to provide an indicative answer to this question I have taken the data for price, volume and costs (excluding Cook Inlet Gas) for fiscal years 2008 and 2009 (i.e. July 2007 to June 2008 and July 2008 to June 2009), which are available from the Alaska Department of Revenue (DOR), Fall 2008 and 2009 Revenues Sources Books (RSB), (Dec 2008and Dec 2009). These two periods encompass the wide range of oil prices that prevailed since the ACES rules were in place. The six tables attached (three for each fiscal period) to this document provide the necessary data and calculations to establish the impact of the cross subsidy effect.

Note that in this calculation the annual figures for production volumes and costs are distributed pro rata according to days / month across each month of the year. This assumption was necessary as DOR do not publish a monthly breakdown of the production tax calculation. This approximation is responsible for the small difference between the actual production tax paid and that calculated in the tables that follow. For fiscal year 2008 the calculated production tax shown in Table 1 is 2.7% higher than the actual production tax paid ($6867.3 million). For fiscal year 2009 the calculated production tax shown in Table 1 is 4.5% higher than the actual production tax paid ($3112.0 million). These slight differences are not considered significant in the context of the purpose of this analysis.

Fiscal Year 2008

Table 1 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 7.462 billion** which is reduced by investment credits of $411.5 million to $ 7.050 billion. The calculation shown essentially reproduces the figures from the RSB (2.7% difference attributed to monthly pro rata production and cost allocations).

Table 2 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his testimony of 24 February 2010. This data computes a total production tax of **$ 1.140 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2008 (assuming 4.5 bcf /day) would be **$8.599 billion** (reduced to $8.187 billion by the deduction of $411.5 million investment credits).

Table 3 calculates the production tax by combining the revenue cost and volume streams from tables 1 and 2 to provide a combined oil and gas production tax calculation of **$6.776 billion** (reduced to $6.365 billion by the deduction of $411.5 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$6.776 billion less $8.599 billion = -$1.822 billion.

This calculation is in line with the figures of potential loss in fiscal revenue discussed during the testimonies.

Fiscal Year 2009

Table 4 calculates the production tax for oil based on actual data showing the components of that calculation. As no gas is exported the calculations are based upon oil barrels only. This results in total production tax of **$ 3.601 billion** which is reduced by investment credits of $350 million to $ 3.251 billion. The calculation shown essentially reproduces the figures from the RSB (4.5% difference attributed to monthly pro rata production and cost allocations).

Table 5 assumes a 4.5 bcf/day gas line and calculates production tax for this hypothetical gas stream on a stand-alone basis (i.e. not combined with oil). The calculation uses the U.S. wellhead natural gas prices from the EIA's records for the months in question. There would be some small differentials between these prices and AECO prices in Alberta, but I believe they are close enough for the purpose. I have also assumed gas transportation costs of $4.5/mcf ($27/boe) and field costs (capital costs plus operating costs) of $400 million ($1.46/ boe) which are those used by Commissioner Galvin in the examples he provided from the DOR in his testimony of 24 February 2010. This data computes a total production tax of **$ 0.583 billion** to which no investment credits are applied.

By adding the computed production taxes in tables 1 and 2 the stand-alone oil and gas production tax for this FY 2009 (assuming 4.5 bcf /day) would be **$4.185 billion** (reduced to $3.835 billion by the deduction of $350 million investment credits).

Table 6 calculates the production tax by combining the revenue cost and volume streams from tables 4 and 5 to provide a combined oil and gas production tax calculation of **$3.381 billion** (reduced to $3.031 billion by the deduction of $350 million investment credits).

For this period the loss to the State in production tax revenue caused by the cross subsidy effect of combining oil and gas in the production tax calculation would have amounted to:

$3.381 billion less $4.185 billion = -$0.804 billion.

This calculation indicates a lower potential loss in fiscal revenue for fiscal year 2009 compared to fiscal year 2008. This is due to the lower prices and value of oil and gas revenue streams in fiscal year 2009. However, $0.8 billion remains a substantial potential loss in a relative low price / value environment.

Sincerely,

David Wood

SB 167:

The Separation of Oil & Gas Production Taxes

Provided by Logsdon & Associates

March 9, 2010

Premise of the Bill

- Under current law oil and gas are taxed together
- Oil is worth much more than gas
- The combining mechanism materially reduces oil taxes even though oil operations are unaffected

Oil is Different than Gas

- Oil more geographically concentrated (fewer sellers: OPEC)
- Oil supplies more depleted
- Gas is more plentiful
- Oil has fewer substitutes
- Gas has more substitutes

BTU 10:1

West Coast ANS

- Market Price $80/bbl
- Less:
  - Shipping $2.07
  - TAPS $4.18
- Gross Value $73.75

North Slope Gas

- Market Price $6/mmbtu
- Less:
  - Tariff AK to AB $3.54
  - AB Hub $0.24
  - Tariff AB to L48 $0.85
- Gross Value $1.37/mmbtu
- BOE Basis (X 5.5) = $7.54
- On a straight BTU to BTU basis oil is worth nearly 10 X as much as gas

Some Things that have BTUs

- Oil
- Gas
- Coal
- Wood
- Asphalt
- Shoe Leather
- Rubber
- Coffee grounds
- Citrus rinds
- Corn cobs
- Dung

Mechanics of Current Tax

- 1) Oil gross value (market price less transport cost)
- 2) Gas gross value (market price less transport cost)
- 3) Oil + gas gross value gas = Combined gross value
- 4) Combined gross value – lease capital and operating costs = Combined oil & gas net value
- 5) Combined oil & gas net value / total oil & gas BOEs = p/BOE net value (see Slide #6)
- 6) Progressivity factor (based on per BOE net value) plus 25% base rate = tax rate
- 7) Single tax rate applied to combined oil & gas net value

Barrel of Oil Equivalents (BOEs):
Putting Oil & Gas on an Apples / Apples Basis

- 4.5 billion cubic feet per day (bcf/d) of natural gas
- A cubic foot of North Slope gas will have about 1,100 BTUs
- Natural gas is measured in millions of BTUs (mmbtu)
- 4.5 billion cubic feet per day will have 4.95 million mmbtu's (4.5 X 1,100)
- A barrel of oil has about 5,500 BTUs
- 4.5 billion cubic feet per day will have the BTU equivalence of 900,000 barrels of oil (BOEs) (4,950,000 / 5.5)
- If there are 500,000 barrels of oil, total BOEs will total 500,000 + 900,000 = 1,400,000

Progressivity Mechanics

- "Trigger" = $30 net / BOE value
- "Slope" = 0.4%*
- Progressivity surcharge = (Net per BOE value - $30) X .004
- Example: if net value = $50
  - Base tax rate = 25%
  - Progressivity = ($50 – $30) X .004 = 8%
  - Total tax of 33% on net value

* Slope changes to 0.1% after $92.50 net per BOE value

HOW GAS IMPACTS OIL TAXES

	Oil Alone (p/bbl)	Gas (p/mmbtu)	Combined Oil & Gas	
Market Price	$80.00	$6.00	Oil	
Transp cost	$5.00	$4.50	p/bbl net value	$55.00
Gross Value	$75.00	$1.50	Barrels (millions)	183
			Total oil net value ($mm)	$10,038
Costs	$20.00	$0.50	Gas	
			p/mmbtu net value	$1.00
Net (p/barrel or p/mmbtu)	$55.00	$1.00	mmbtu's (millions)	1,807
			Total gas net value ($mm)	$1,807
Base rate	25.00%			
Progressivity	10.00%		Total oil & gas net value	$11,844
Total tax rate	35.00%		Total BOEs	511
			Net value / BOE	$23.18
Daily bbls (oil) or mmbtu (gas)	500,000	4,950,000	NO PROGRESSIVITY!	
Daily BOEs	500,000	900,000		
Annual BOEs (millions)	183	329

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 170

"An Act requiring vocational education counseling in public schools."

One of the major functions of public education is to prepare our future workforce. During their school years young people make critical decisions which will ultimately affect their choice of a career later in life. Some young people have a clear idea of what they want to be doing after graduation, but many do not.

The adolescent years in particular are filled with many changes, making it a one of the critical phases of a person's life. If childhood is like traveling down a busy street, seventh grade is the junction. Recent research has specifically targeted the early adolescent years as a crucial point in development. It is a perfect time to introduce realistic career options.

Senate Bill 170 recognizes this junction in a young person's life, and provides for career counseling for every student in seventh, ninth and eleventh grades. Many schools are already offering this for all secondary students, but it should be available to every student in our state. The Department of Education and Early Development already has resources that can be directed toward this important task.

This bill would not prevent schools or districts from providing a more comprehensive program. It sets the minimum standards for career counseling, starting at seventh grade and continuing in ninth and eleventh grades. Seventh grade is when students start making important life choices. Ninth grade is the beginning of high school, when they are choosing courses which will affect their readiness for the workforce. In eleventh grade they are starting to look ahead to high school graduation, and what will come after commencement.

It is vital that we give our children the tools they need to prepare for their future, and to become a productive part of our workforce. SB 170 provides this for our students.

FISCAL NOTE #1

STATE OF ALASKA **BILL NO.** SB 170
2012 LEGISLATIVE SESSION

Analysis

This is an zero fiscal note. The amendment language in both AS 14.07.020 (a) (19) requires that: "if a school district is unable to provide vocational education and training counseling, the department shall provide additional resources and technical assistance that result in the delivery of the counseling; AS 14.14.090 (11) has similar language that states this training will occur in grades seven, nine, and eleven; if a district is unable to provide this counseling that they shall request the department to provide the resources and technical assistance necessary to deliver the counseling.

Currently web-based career guidance and counseling materials are available to all citizens of the state through the Alaska Commission on Postsecondary Education's support of AKCIS, the Alaska Career Information System. EED staff frequently recommends this resource to district and school personnel who are planning to implement Strategy 1 of the Alaska Career & Technical Education Plan.

In order to ensure this free resource meets the intent of this bill, a review of this available resource by counselors/teachers/advisors would be recommended. This review could include recommendations for specific staff training and identify how students are given sufficient time and guidance to learn its content. This review falls under the scope of allowable expenses under the current federal Career and Technical Education funding.

Green Jobs Come Into Focus

State's first comprehensive survey shows a growing role

Hearing about or reading environmental news has become a part of daily life for most of us. Environmental issues capture radio, television, magazine, and newspaper coverage not only nationally, but in Alaska too. The environment has become an economic driver, promoting research and development along with creating demand for new products and advances in technology. This "greening" effect is changing the way we live and do business.

In most states, both private and public sectors are part of this new trend, especially in the areas of renewable energy and energy efficiency. Policy makers, educators, and economists have begun asking, how important is this growing sector of the economy? How many so-called "green jobs" are there? Is there an adequate workforce trained for these jobs? What education and training will workers need to gain the skills required for future work?

Green Employment by Industry 1

Alaska, 2011

Industry	Estimated green jobs	As % of all green jobs	3rd qtr 2010 employment	As % of industry employment
Agriculture, Forestry, Fishing, and Hunting[1]	205	4.1%	1,208	17.0%
Mining, Quarrying, Oil and Gas	125	2.5%	16,156	0.8%

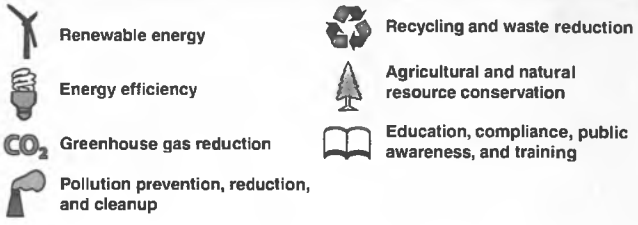
TOTAL	4,973	100.0%	294,135	

[1] Excludes the self-employed and most commercial fishermen and agricultural workers.
Note: All numbers exclude state and federal employment. Percentages won't sum due to rounding.

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section



Although Alaska has a number of renewable energy and energy efficiency projects already built and more are on the horizon, no formal study had been done to measure this emerging part of the economy, until now.

Green jobs defined

In 2010, the Alaska Department of Labor and Workforce Development's Research and Analysis Section surveyed 4,826 private and local government firms. R&A received a response from 2,979 of these firms, with 375 reporting they employed at least one worker in a green job. R&A defined a green job as providing a good or service in at least one of seven categories:

- Renewable energy
- Energy efficiency
- Greenhouse gas reduction
- Pollution prevention, reduction, and cleanup
- Recycling and waste reduction
- Agricultural and natural resources conservation
- Education, compliance, public awareness, and training

How many green jobs are there?

R&A identified 145 individual green occupations with reported employment in Alaska. Total green employment was estimated at 4,973 jobs[1] among 1,552 employers during 2010, with green work representing 1.7 percent of Alaska's private and local government employment. (See Exhibit 1.)

The results are consistent with existing research that suggests green jobs do not represent an industry of their own; rather, they are spread across all industries where employers pursue more environmentally sustainable concepts.

The seven categories

Renewable energy accounted for 13 percent (639) of all positions.[2] These jobs were found primarily in utilities and local government.

Energy efficiency accounted for 39 percent (1,954) of all positions. These jobs were found primarily in construction.

Greenhouse gas reduction accounted for 9 percent (466) of all positions. These jobs were found primarily in utilities and mostly in jobs helping the transition to power sources with less carbon pollution.

Pollution prevention, reduction, and cleanup made up 33 percent (1,620) of all green positions. These jobs were found primarily in waste management and remediation.

Recycling and waste reduction accounted for 32 percent (1,611) of all positions. These jobs were found primarily in waste management and local government, but this category spanned the largest cross-section of industries.

Agricultural and natural resources conservation accounted for 26 percent (1,313) of all positions. These jobs were found primarily in agriculture and in professional and scientific services.

Education, compliance, public awareness, and training accounted for 35 percent (1,740) of all positions. These jobs were found primarily in professional and scientific services.

Shades of green

Most workers in green jobs don't spend 100 percent of their time producing a green product or service.

Angoon residents install a solar power panel on a home as part of the Sustain Angoon Project. Photo courtesy of Central Council, Tlingit and Haida Tribes of Alaska.

Survey data support the idea of "shades of green." Many workers have accepted new environmentally conscious roles that supplement their primary workload. In other cases, workers have found themselves in essentially new occupations where the green work differs significantly from that of their nongreen counterparts.

By taking the average percentage of time workers in an occupation spend on green tasks, R&A estimated the various shades of green among industries and occupations. The results show that 8 percent of green occupations involved 50 percent or more time on average performing work in one of the green categories.

Industries

The largest concentrations of green jobs were in local government at 1,033 jobs (20.8 percent); and in professional, scientific, and technical service organizations at 1,013 jobs (20.4 percent).

Among industries, local and tribal governments have the largest number of green jobs. In a rural community, people often wear many hats in addition to their regular jobs. It is not unusual to find seemingly unlikely combinations, such as cooks who also run the community compost program.

The Environmental Protection Agency's Indian General Assistance Program had a big impact in Alaska by providing funds for tribal governments to address solid and hazardous waste management, recycling,

Green Occupations With Special Requirements 4

By training category, Alaska, 2011

Training category	% reported	Examples
Renewable Energy Certification	3.2%	Wind Turbine Operation and Maintenance (O&M), Calibrating solar panels
Cleanup and Abatement Certification	15.5%	HAZWOPER Oil Spill Response Training
Equipment Operators License/CDL	4.9%	Class A CDL Hazardous Materials Endorsement (HME)
Energy Efficient Construction/LEED (Weatherization)	16.4%	LEED Certified Building Energy Efficiency Standard (BEES)
Other Certification	10.4%	Certified Erosion and Sediment Control Lead (CESCL), Certified Forester
Prior Experience/On-the-Job Training	17.8%	Organic Farming Techniques, Knowledge of Regulations

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

and renewable energy.

Professional and scientific services came in a close second for number of green jobs. Work in this industry is broad and instrumental in development of renewable energy, energy efficiency, and sustainability education.

The highest concentration of green jobs was in the waste management and remediation industry. Its percentage of statewide employment is one of the smallest, but occupations in this sector are critical to supporting the state's environmental health. Many of this industry's jobs are fundamentally green because they deal overwhelmingly with handling waste and mitigating the effects of pollution.

Green jobs are found across almost all industries, but this survey didn't uncover any in the information industry, and found few in health care and administrative support. These results are in line with other states' research.

Occupations

R&A asked employers to identify occupations that fell into at least one of the seven green categories. Those who responded reported:

- The total number of workers in these jobs
- How many performed green work
- The percentage of time each employee spent doing green work
- The green categories of work performed

By employment numbers, the top 25 green occupations represent 66 percent of green employment in the state. Tour guides and escorts are the largest occupation by green employment. (See Exhibit 2.) Alaska has a highly seasonal tourism industry that depends on the state's natural beauty and resources. The survey shows that slightly less than 38 percent of tour guides and escorts educate the public on sustainable practices and increase public awareness of sustainability concepts.

As a major occupational group, construction and extraction occupations have the largest total employment and include eight of the top 25 green occupations. This result matches other states' data, and reflects a subset of the construction industry that focuses on home weatherization and energy efficiency upgrades.

The green occupations with the highest employment fall primarily into the energy efficiency category, which is followed closely by education.

Green score

An occupation's green score is the weighted average of the percentage of time spent on green activities within a given occupation. The numbers are rounded up and indexed between 1 and 10, with 10 representing 100 percent of work qualifying as green, 9 representing 90 percent, and so on.

Thirty-five green occupations scored greater than 2. (See Exhibit 3.) Occupations with the most time spent on green activities (for example, wind turbine technicians) often have the lowest total employment.

It is also important to look at an occupation's green employment percentage to assess whether green is prevalent throughout the group or in just a fraction, represented by a few companies producing a

specific green product. This distinction is useful for determining how to discuss and target green occupations in the state.

Carpenters and construction laborers are two occupations ranking high in green employment and low on percentage of time spent in green activities. Both are large occupation groups doing important home weatherization work; however, targeting all of these positions for training may not be the best approach. It might make more sense to focus on businesses employing carpenters or construction laborers whose primary purpose is a green product or service.

On the other end of the spectrum, a wind turbine service technician's work is 100 percent green. Even though employment in this occupation is extremely low, any training would go directly toward producing green goods and services.

When grouped by green score, occupations are primarily performing work in the agriculture and natural resources category, followed closely by pollution reduction, then education.

Taken together, the employment estimates and green scores provide a more robust look at the effects of green work in Alaska. Jobs with high employment and low green activity, as well as jobs with low employment and high activity, are both critical to development of the state's green infrastructure. Understanding their differences will increase the efficacy of developments targeting these two groups and any combination.

Training, skills, and certifications

Employers reported that 46 percent of green occupations require special skills, certificates, or licenses to perform the work. (See Exhibit 4.) This survey did not determine whether these requirements are a condition of hire.

About 3 percent of green jobs required renewable energy certification or training, and these requirements were primarily in the utilities and local government industries. Employers reported that 5 percent of green jobs required an equipment operator or commercial driver's license. A CDL was often paired with a Hazardous Materials Endorsement.

By far the most prevalent certification reported was the Hazardous Waste Operations and Emergency Response Standard, or HAZWOPER. Cleanup and abatement certification was required by 15.5 percent of green occupations, with the HAZWOPER certification accounting for approximately half of the responses within the category. Energy efficient construction and certification in Leadership in Energy and Environmental Design, or LEED, was the largest specific requirement reported, at 16 percent of all occupations.

Other certifications at 10 percent and prior experience or on-the-job training at 18 percent captured a wide breadth of requirements that did not contain enough responses to stand on their own. Other certifications included occupations requiring a bachelor's degree specific to green work. Exhibit 4 provides examples of reported requirements.

Recruiting green workers

Recruiting and retaining green workers is not currently an issue for 80 percent of all green jobs. Employers who have had difficulty cite a lack of workers in Alaska (6 percent), a lack of required green skills (4 percent), and other reasons (4 percent).

As a group, green occupations have a nonresident hire rate of 16 percent, compared to 20 percent across all private and local government employment. Occupations with the most difficulty recruiting due to lack of workers in Alaska usually reported nonresident hire rates above the rate for all green occupations.

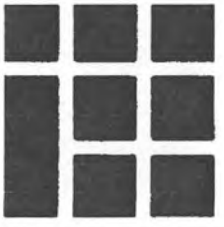
These data support the conclusion that green jobs are an emerging component across all industries and occupations in Alaska. In some cases, workers have been doing green work without that previous classification, and their industries are well established. In other cases, occupations such as power plant operators integrate investments in renewable resources while supporting existing traditional power generation infrastructure.

The Alaska Green Jobs Report is available in its entirety on R&A's Web site: http://labor.alaska.gov/research/greenjobs/greenjobs.htm. The full report includes additional information, methodology, and a complete listing of the 145 occupations in which Alaskan employers reported green employment.

Notes

[1]Except where otherwise noted, all employment references in this report only reflect private and local government employment. See the methodology appendix and the state government chapter in the full report online for a discussion of the challenges of reporting public green employment.

[2]An employer can classify workers in more than one category. The sum will exceed the total number of green jobs.



School-Based Career Development: A Synthesis of the Literature

Katherine L. Hughes
and
Melinda Mechur Karp

Institute on Education and the Economy
Teachers College, Columbia University

February 2004

Conclusion and Recommendations

In general, this review of the career guidance and academic counseling literature has produced many positive findings. Meta-analyses have found positive impacts of career guidance. Researchers have found benefits to students of comprehensive guidance programs, career courses, academic counseling and computer-based guidance systems. However, there are also limitations to these interventions and to the research methods studying them.

With regard to comprehensive guidance programs, much more research is needed. The attempts of Lapan, Gysbers and their colleagues to use statewide data to uncover relationships between the implementation of such programs and student outcomes are admirable. However, their research relies on self-report of variables such as student GPA, which would be better reported through transcripts. In addition, it would be useful to have a conceptual model explaining how the different elements of comprehensive guidance programs might impact students' grades and other variables.

Students do seem to benefit, both vocationally and academically, from participation in career courses. In particular, they seem to increase their knowledge of careers and their ability to make career-related decisions. On most career-related measures, students did see increased outcomes when compared with students not enrolled in a career course. In the one study exploring academic measures (Fouad, 1995), participants in a career course did improve academically. However, there is little evidence that any gains—either academic or career-related—are maintained over time.

The few studies on academic counseling or advising showed positive findings. It is interesting that this very common but rather low-profile intervention, helping students

plan their secondary school program, appears to be valuable according to certain academic measures. And the meta-analyses found that, of the different types of career guidance interventions, individual counseling interventions were most effective. This simple planning intervention may help students understand the connections between their goals and the necessary steps to take towards them. Thus this intervention is potentially very effective, but more research is needed.

Computer-assisted career guidance programs appear to contribute to students' career development, according to some career-focused inventories. However, these interventions were very short-term and the research tended to consist solely of pre- and post-test inventories, sometimes administered less than a week apart. As more than one author pointed out, the level of dosage of some of the interventions was quite low. With such small amounts of treatment, it is unclear what long-term benefits students might gain. It is also unclear whether computer-assisted programs alone or in combination with other interventions are most effective. Some have found that computer-based interventions by themselves fail to match outcomes produced in combination with some other intervention (Meier, 1991), while others have found that adding a computer program to a career course produces no additional benefits beyond the course alone (Garis & Niles, 1990).

One limitation found in common to many of the interventions and the research is that they focus on change in students' knowledge, and even more commonly, their attitudes. Students' actual behaviors were a minor focus, as in the studies that examined the effects of career courses on students' later course-taking, or research examining the relationship between academic counseling and later academic achievement. The element

of time was also a weakness in much of the research. Much like a history test that measures what students have learned in a half-semester of a history course, inventories were used to measure the digestion of career information, or a change in an attitude. In most cases no follow-up research was conducted over time to see the lasting nature of any knowledge gain or attitude change, or the relationship of these with actions taken later.

There is general agreement that career development is a desirable part of schooling, and there is evidence that many different types of career guidance interventions are effective, according to the measures chosen. Yet, the research overall does not help us in determining the optimum content of or method of delivery of career guidance. We have reviewed various interventions, but because of the diversity of goals, methods and measures, a clear direction for policy in this area is still unclear. We can, however, recommend the following:

Other career development activities that are more experiential in nature have been found to positively influence such variables as school attendance and completion. Compared to these types of activities, many of the guidance interventions reviewed seem inauthentic and artificial. Until additional research is done, students should engage in a variety of career development activities that complement one another.

Given the finding that career guidance and academic counseling is potentially very effective with middle school students, a greater investment in these activities in the middle schools should be made, and future research should be focused there as well.

Academic counseling appears to be a straightforward and cost-effective way to improve student outcomes. Resources should be targeted to ensure that all middle- and

high-school students have regular conferences with counselors to discuss their current and future academic programs.

Finally, research should focus on exploring the relationships between guidance interventions and positive student behaviors.
