1/25/11 DEPARTMENT OF REVENUE: FY11 AND FY12 REVENUE FORECAST

<TARGET><BILL></BILL><SUBJECT>1-25-11 DEPARTMENT OF REVENUE FY11 AND FY12 REVENUE FORECAST</SUBJECT><COMM>SFIN27</COMM></TARGET>

First Presentation

Bryan Butcher – *Commissioner, Department of Revenue*

Also here with the Commissioner to provide testimony:

- **Bruce Tangeman** – *Deputy Commissioner, DOR*
- **Johanna Bales –** *Deputy Director, Tax Division*
- **Dona Keppers** – *Audit Master, Tax Division*
- **Lennie Dees –** *Audit Master, Tax Division*
- **Dan Stickel** – *Petroleum Economist, Tax Division*
- **Cherie Nienhuis** – *Petroleum Economist, Tax Division*
- **Frank Molli** – *Production Forecast Consultant* ***(On Teleconference)***
  - Welcome Commissioner.

Chair Questions/Comments

-

Member Questions

- Do members have any additional questions?

Frank Mahle DOR

Presentation to the Senate Finance Committee January 25, 2011 Alaska Department of Revenue

Outline for Presentation

- **Fall 2010 Revenue Forecast for FY2011 and 2012**
  - Revenue Classification Changes
  - Total Revenue
  - Unrestricted Revenue
  - Non-Oil Revenue
- **10-year plan Revenue / Spending Scenario**
- **How Production Tax Is Calculated**
  - FY 2010, 2011, 2012 - "Income statement" format
- **Components of Production Tax Forecast**
  - Oil Production Forecast
  - Oil Price Forecast
  - Lease Expenditures Forecast / Oil Company Spending
  - Tax Credits

Fall 2010
Revenue Forecast
FY2011 and FY2012

Revenue Classification Changes

- **In response to Legislative Finance & OMB request, we worked with these agencies to implement new categories of revenue.**
- **In the past, 2 categories of revenue**
  - **Unrestricted Revenue**
  - **Restricted Revenue**
- **Now, 4 categories of revenue**
  - **Unrestricted General Fund Revenue**
  - **Designated General Fund Revenue**
  - **Other Restricted Revenue**
  - **Federal Revenue**

  } **Formerly grouped as "restricted"**
- **Only a couple minor changes made to unrestricted revenue**
  - **LPV Gambling Tax shown as unrestricted revenue**
  - **Dividends from component units (state corporations) shown as unrestricted revenue**
  - **These changes ensure consistency between our revenue forecast, and budget protocol**

FY 11 and FY 12 Total Revenue

Revenue Type	FY 11 ($M)	FY 12 ($M)
Unrestricted General Fund		
Oil Revenue	$ 4,673.9	$ 5,061.1
Other Sources (except Federal & Investment)	$ 480.5	$ 487.1
Investment Revenue	$ 217.4	$ 195.7
Subtotal Unrestricted	$ 5,371.8	$ 5,743.9
Designated General Fund		
Other Sources (except Federal & Investment)	$ 281.6	$ 282.3
Investment Revenue	$ 59.7	$ 42.0
Subtotal Restricted	$ 341.3	$ 324.3
Other Restricted Revenue		
Oil Revenue	$ 669.7	$ 755.3
Other Sources (except Federal & Investment)	$ 209.7	$ 190.3
Investment Revenue	$ 3,384.5	$ 3,283.4
Subtotal Restricted	$ 4,263.9	$ 4,229.0
Federal Revenue		
Oil Revenue	$ 19.5	$ 19.5
Federal Receipts	$ 3,087.0	$ 2,987.0
Subtotal Restricted	$ 3,106.5	$ 3,006.5
Total State Revenue	$ 13,083.4	$ 13,303.7

Source: Fall 2010 Revenue Sources Book

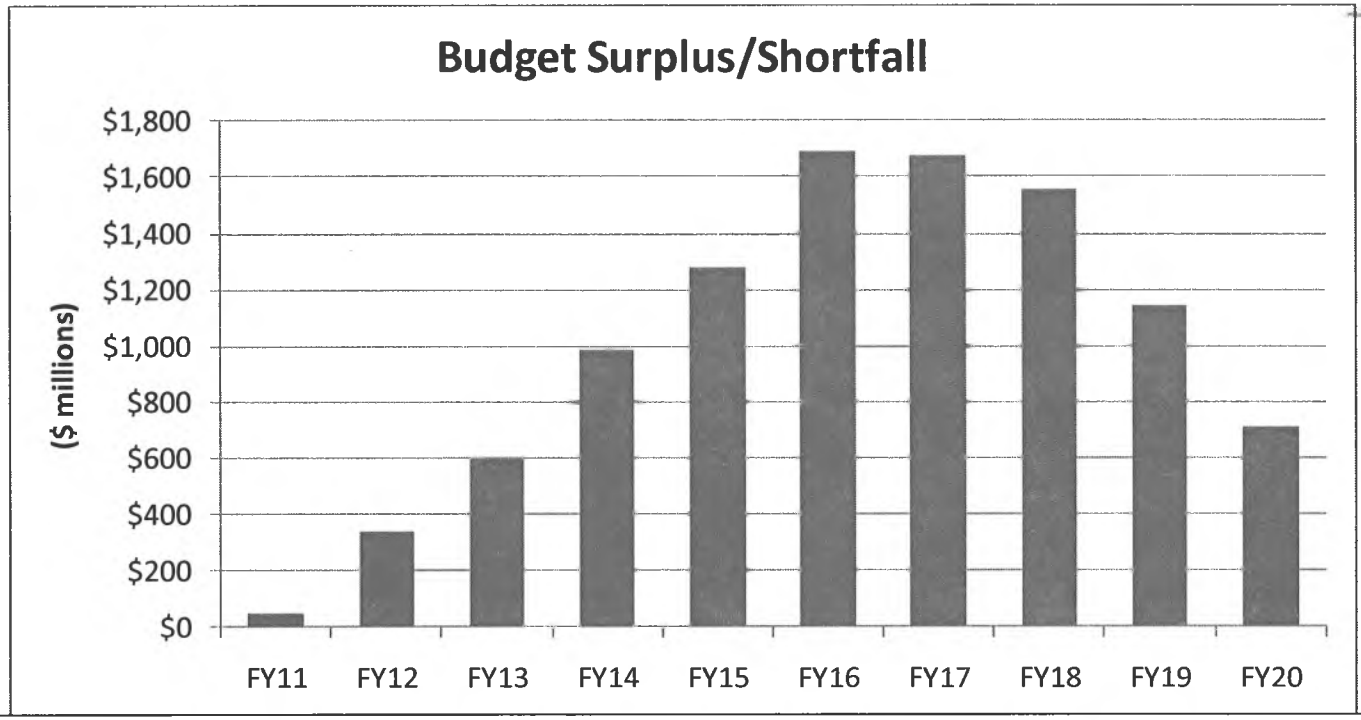
FY 11 & FY 12 General Fund Unrestricted Revenue

Revenue Type	FY 11 ($M)	% Total	FY 12 ($ M)	% Total
Royalty - Net PF / SF	$ 1,510.1	28.1%	$ 1,666.6	29.0%
Production Tax	$ 2,614.6	48.7%	$ 2,737.6	47.7%
Corp Income Tax	$ 445.0	8.3%	$ 555.0	9.7%
Property Tax	$ 104.1	1.9%	$ 101.9	1.8%
Subtotal Oil Revenue	$ 4,673.9	87.0%	$ 5,061.1	88.1%
Non-Oil Revenue	$ 697.9	13.0%	$ 682.8	11.9%
Total Revenue	$ 5,371.8	100.0%	$ 5,743.9	100.0%

Source: Fall 2010 Revenue Sources Book

FY 11 and FY 12 Unrestricted Non-Oil Revenue Detail

Revenue Type	FY 11 ($M)	% Total	FY 12 ($M)	% Total
Taxes				
Corporate Income	$ 80.0	11.5%	$ 85.0	12.4%
Mining	$ 46.7	6.7%	$ 47.0	6.9%
Insurance Premium	$ 50.1	7.2%	$ 51.6	7.6%
Tobacco	$ 44.4	6.4%	$ 44.3	6.5%
Motor Fuel	$ 38.5	5.5%	$ 38.8	5.7%
Other Taxes	$ 61.3	8.8%	$ 61.4	9.0%
Subtotal Taxes	**$ 321.0**	**46.0%**	**$ 328.1**	**48.1%**
Investments	**$ 217.4**	**31.2%**	**$ 195.7**	**28.7%**
Other *	**$ 159.5**	**22.9%**	**$ 159.0**	**23.3%**
Total Non-Oil	**$ 697.9**	**100.0%**	**$ 682.8**	**100.0%**



NOTE: This presentation only includes the portion of revenue that is included in the "Unrestricted General Fund" category.
*Other includes Charges for Services, Fines and Forfeitures, Licenses & Permits, Rents & Royalties, and Miscellaneous.

10-Year Revenue/Spending Projection

10-Year Revenue and Spending

Assumes Fall 2010 Revenue and 3% budget escalation from FY12

Revenue vs. Spending ($Millions)	FY11	FY12	FY13	FY14	FY15	FY16	FY17	FY18	FY19	FY20
General Fund Unrestricted Revenues	5,452.2	5,790.3	6,207.7	6,767.8	7,233.1	7,822.4	7,992.7	8,060.4	7,845.7	7,610.7
General Fund Expenses	5,403.6	5,446.4	5,609.8	5,778.1	5,951.4	6,130.0	6,313.9	6,503.3	6,698.4	6,899.3
Budget Surplus/Shortfall	48.6	343.9	597.9	989.7	1,281.7	1,692.4	1,678.9	1,557.1	1,147.3	711.3
Reserve Balances										
CBRF Total	10,016.8	10,589.0	11,195.2	11,837.3	12,517.8	13,239.1	14,003.7	14,814.6	15,674.6	16,587.0
Statutory Budget Reserve Balance	1,048.6	1,392.4	1,990.3	2,980.0	4,261.7	5,954.2	7,633.0	9,190.1	10,337.4	11,048.7
Total Reserve Balances	11,065.4	11,981.4	13,185.5	14,817.4	16,779.5	19,193.3	21,636.7	24,004.7	26,012.0	27,635.7

Source: OMB FY 2012 10-year plan. FY 11 and FY 12 revenues shown include adjustments for corporate dividends, reappropriations, and carry forwards and do not exactly match numbers in the RSB.

Appropriations projections do not represent a commitment by the Administration to propose spending at a particular level in FY13 or any future year. The 10 year forecast shows that unanticipated shortfalls during the period could be filled primarily through the use of reserve funds. However, other options could be used in whole, or in part. The plan will be revisited as conditions warrant.

How Production Tax Is Calculated

FY 10 Production Tax Calculation

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$74.90	643,517	$48.2 / day
Annual Production (bbl)			
Total Annual Production/Value		**234,883,705**	**$17,592.8**
Royalty and Federal barrels		(31,067,340)	($2,326.9)
Taxable barrels		**203,816,365**	**$15,265.8**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.21)		
TAPS Tariff	($3.81)		
Other	$0.00		
Total Transportation Costs	**($6.02)**	**203,816,365**	**($1,227.0)**
Lease Expenditures			
Deductible Operating Expenditures	($10.64)		($2,168.7)
Deductible Capital Expenditures	($8.55)		($1,742.0)
Total Lease Expenditures	**($19.19)**	**203,816,345**	**($3,910.7)**
Production Tax Value (PTV)	**$49.69**	**203,816,345**	**$10,128.1**
Production Tax			
Base Tax (25%*PTV)			$2,532.0
Progressive Tax Rate = ($49.69-$30) * 0.4% = **7.9%**			
Progressive Tax = (7.9% * PTV)			$797.8
Total Tax Due before credits			**$3,329.8**
Credits Applied Against Taxes			($350.0)
Total Tax after credits			**$2,979.8**

Source: Department of Revenue Fall 2010 Revenue Sources Book, Appendix D
This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.
The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

FY 11 Production Tax Projected

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$77.96	615,902	$48.0 / day
Annual Production (bbl)			
Total Annual Production/Value		**224,804,230**	**$17,525.7**
Royalty and Federal barrels		(34,100,490)	($2,658.5)
Taxable barrels		**190,703,740**	**$14,867.3**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.07)		
TAPS Tariff	($4.17)		
Other	$0.24		
Total Transportation Costs	**($6.00)**	**190,730,740**	**($1,144.2)**
Lease Expenditures			
Deductible Operating Expenditures	($12.99)		($2,477.0)
Deductible Capital Expenditures	($10.43)		($1,988.4)
Total Lease Expenditures	**($23.42)**	**190,703,740**	**($4,465.4)**
Production Tax Value (PTV)	**$48.54**	**190,703,740**	**$9,257.6**
Production Tax			
Base Tax (25%*PTV)			$2,314.4
Progressive Tax Rate = ($48.54-$30) * 0.4% = **7.4%**			
Progressive Tax = (7.4% * PTV)			$686.7
Total Tax Due before credits			**$3,001.1**
Credits Applied Against Taxes			($400.0)
Total Tax after credits			**$2,601.1**

Source: Department of Revenue Fall 2010 Revenue Sources Book, Appendix D
This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.
The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

FY 12 Production Tax Projected

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$82.67	622,182	$51.4 / day
Annual Production (bbl)			
Total Annual Production/Value		**227,096,430**	**$18,774.1**
Royalty and Federal barrels		(34,669,890)	($2,866.2)
Taxable barrels		**192,426,540**	**$15,907.9**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.05)		
TAPS Tariff	($4.67)		
Other	$0.33		
Total Transportation Costs	**($6.39)**	**192,426,540**	**($1,229.6)**
Lease Expenditures			
Deductible Operating Expenditures	($12.86)		($2,477.0)
Deductible Capital Expenditures	($13.14)		($1,988.4)
Total Lease Expenditures	**($26.00)**	**192,426,540**	**($5,002.4)**
Production Tax Value (PTV)	**$50.28**	**192,426,540**	**$9,675.9**
Production Tax			
Base Tax (25%*PTV)			$2,419.0
Progressive Tax Rate = ($50.28-$30) * 0.4% = **8.1%**			
Progressive Tax = (8.1% * PTV)			$785.0
Total Tax Due before credits			**$3,204.0**
Credits Applied Against Taxes			($450.0)
Total Tax after credits			**$2,754.0**

Source: Department of Revenue Fall 2010 Revenue Sources Book, Appendix D

This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.

The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

Components of Production Tax Calculation

- Production
- Price
- Lease Expenditures
- Tax Credits

Fall 2010
Oil Production
Forecast

Three Categories of Forecasted Production

1) Currently Producing- Includes base production and enhanced recovery production from investment in rate enhancing activities (perforations, stimulations, well workovers, gas and water injection support).
2) Currently under Development- New projects that are currently funded or awaiting project sanction in near future.

Three Categories of Forecasted Production

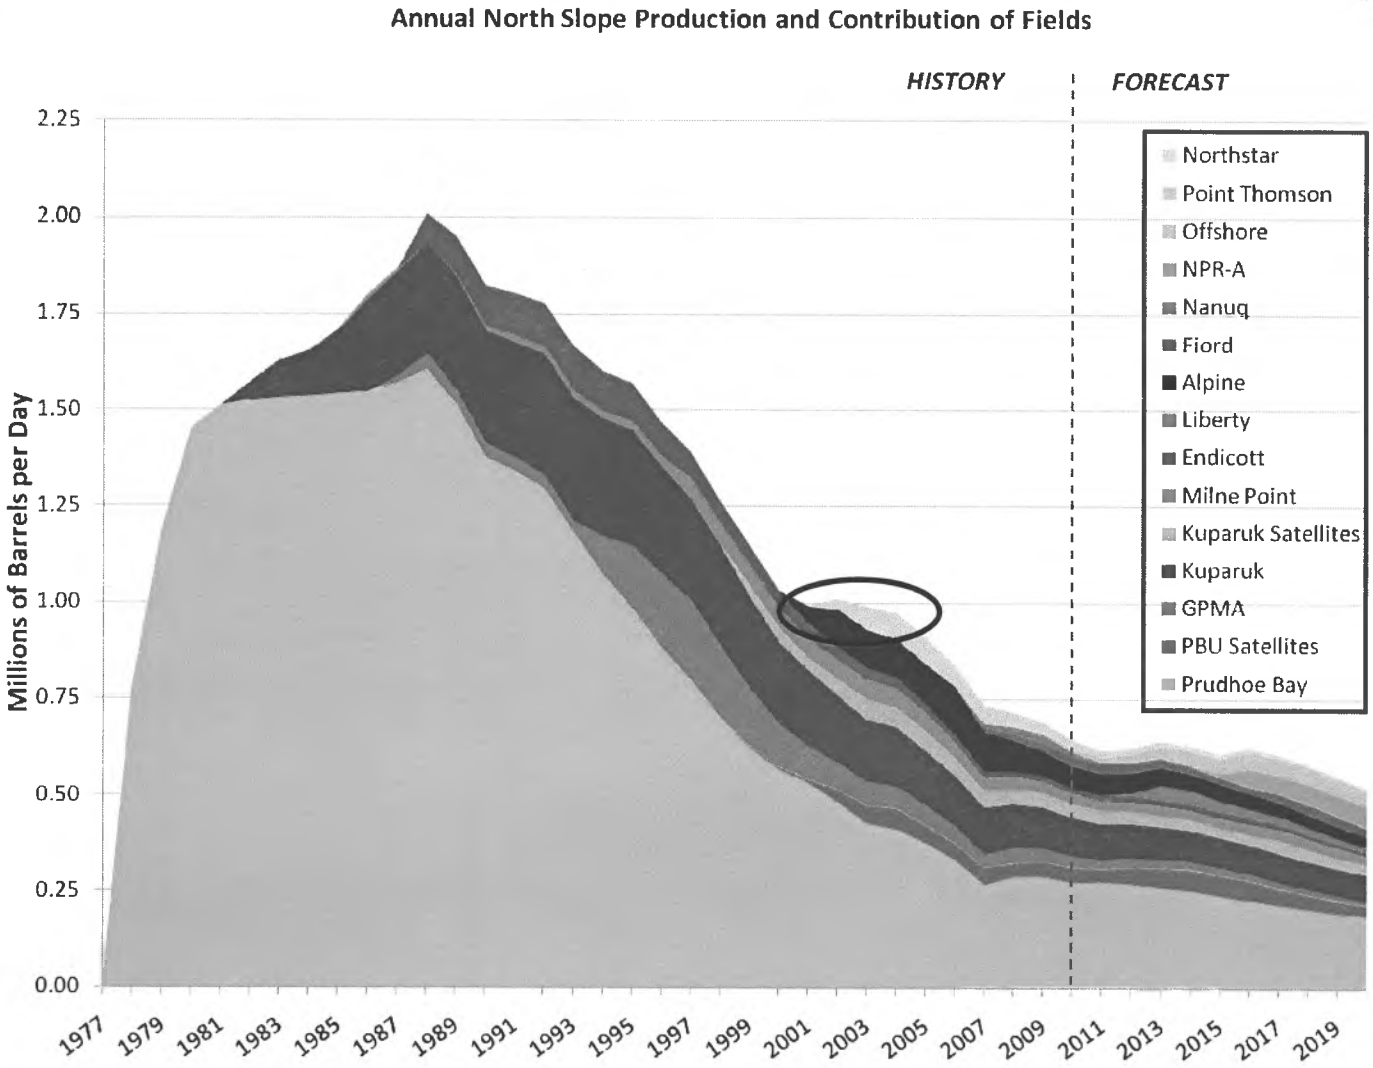
3) <u>Currently Under Evaluation</u>- Includes technically viable projects in the stage where engineering, cost, risk and reward are being actively evaluated. Unfunded but are considered to have a high chance of being brought to fruition.

Factors That Affect Production Forecasting

1. **GEOLOGY**
   - •Rock type and formation characteristics
   - •Depth, thickness, pressure
   - •Oil & gas characteristics (oil gravity, viscosity, water content, etc.)
2. **DEVELOPMENT PLAN**
   - •Well density and development rate
   - •Well bore size and completion technique
   - •Artificial lift and enhanced oil recovery
   - •Facilities & surface operations
3. **COMMERCIAL**
   - •Project economics
   - •Oil price and market conditions
   - •Government Policy: access, regulation, taxation
4. **PRODUCTION PROFILE**
   - •History, stage of depletion
   - •Use production profile to extrapolate trends
5. **TIMING!**

North Slope Production Decline

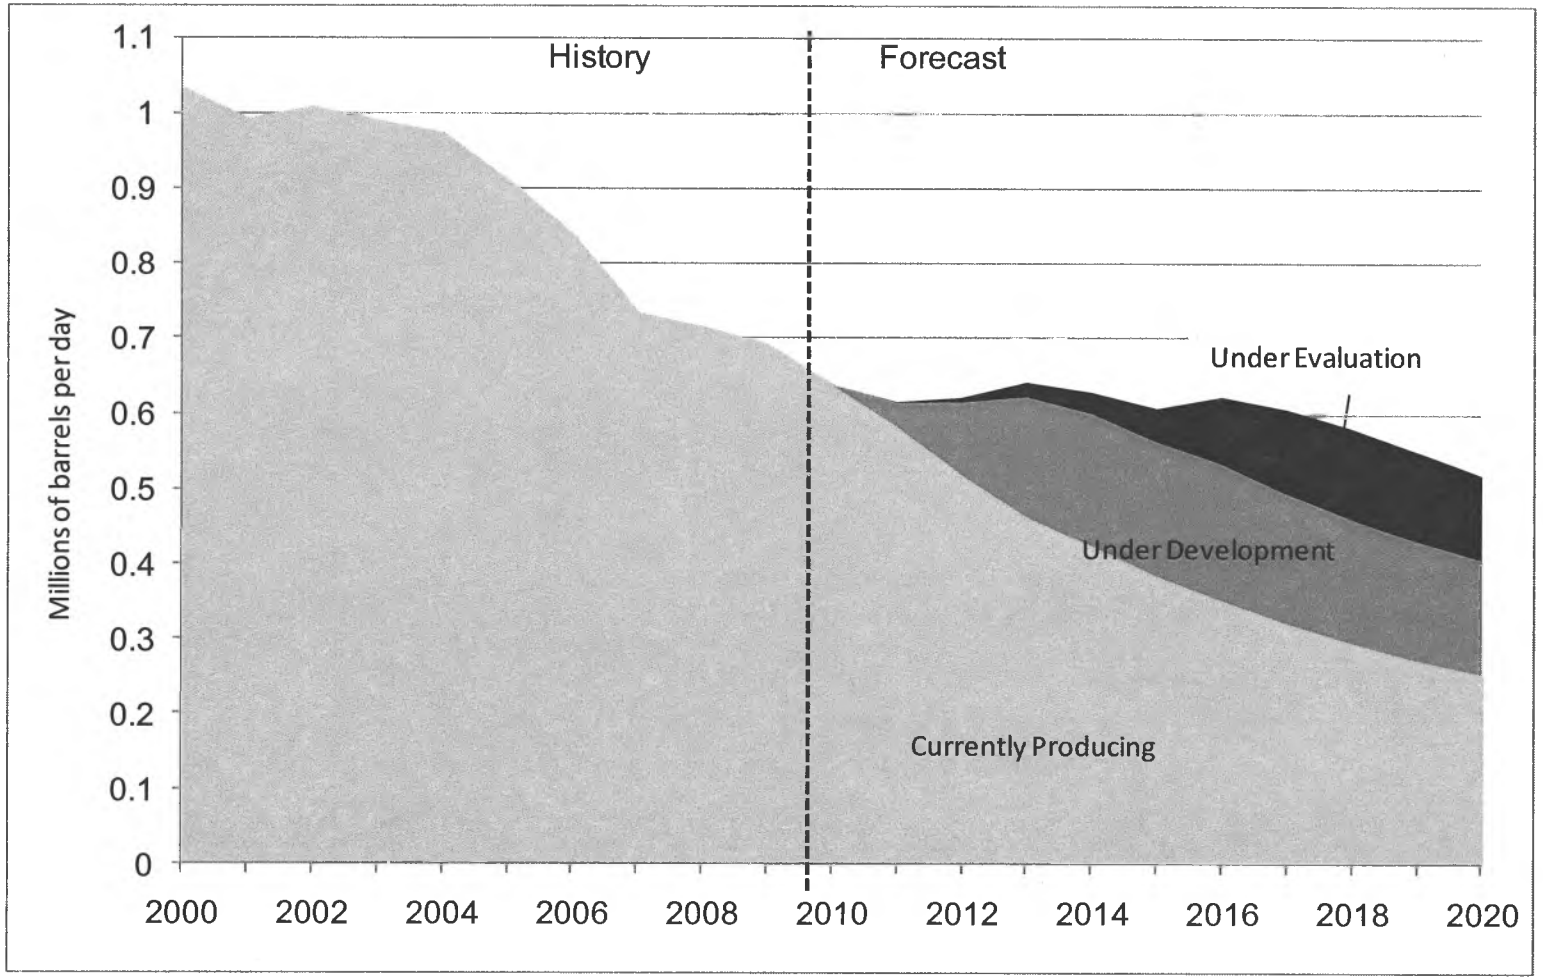
FY 1988: production peak → 2.01 million barrels per day (bpd).



FY 2010: production → 644,000 bpd, a 68% decline since peak.

FY 1988 to date: production decline rate ~ 5% per year, on average.

Over the last 10 years, production decline rate ~ 4.2% per year, on average.



We expect the decline rate to flatten out to 3.2% per year, on average, through FY 2030.

ANS Production History & Forecast

Source: Fall 2010 Revenue Sources Book

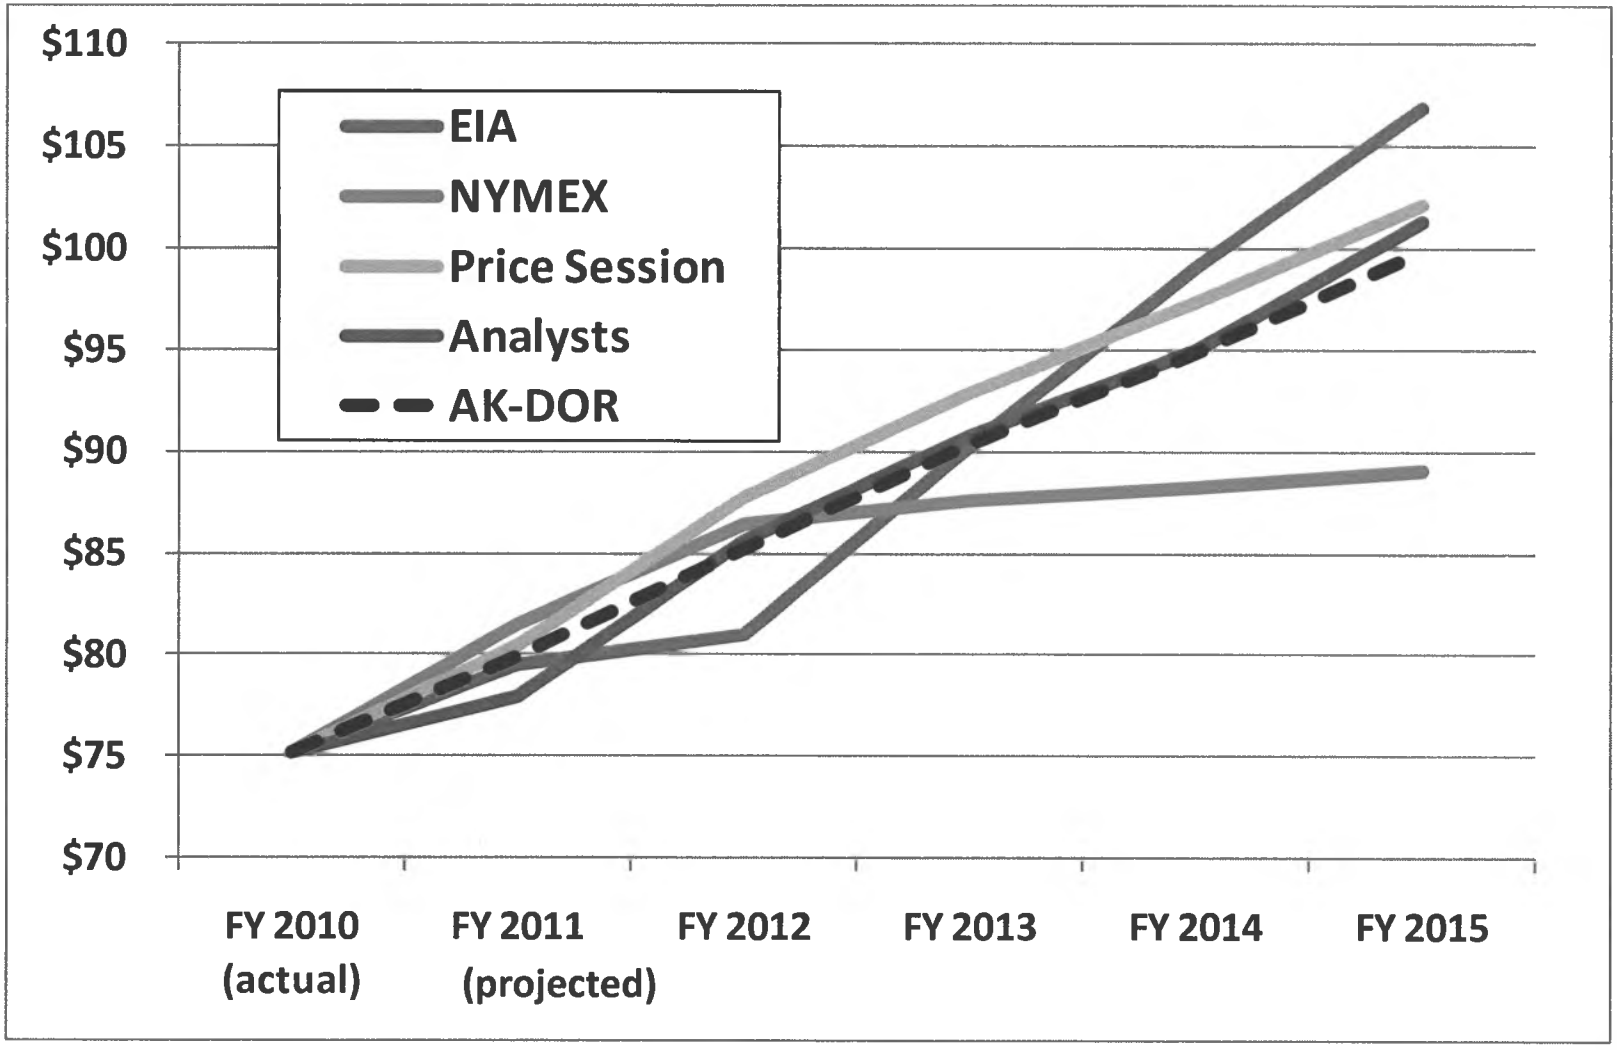
Forecasted ANS Production
FY 2010 - 2020

Source: Fall 2010 Revenue Sources Book

Conclusion on Production

- Production forecasting requires consideration of each project's geology, development plans, commerciality, production profiles, decline curves and timing.

- Department uses extensive well and field specific data acquired from producers, AOGCC, and DNR



- New field development is very important in mitigating decline rates.

Fall 2010 Oil Price Forecast

Price Forecast Methodology

- **FY 2011- 2015: Average of participant forecasts from Price Forecasting Session, and other sources**
- **27 Participants from DOR, DNR, DOL, OMB, University, Legislative Finance and outside participants**
- **Presentations: supply, demand, geopolitics, financial markets, outside expert forecasts, etc.**
- **Forecasting Session outcome blended equally with NYMEX, EIA, and analysts to derive price forecast.**
- **Beyond FY 2015: Constant real price, 2.75% inflation**

Price Forecasts as of October 2010

WTI, nominal dollars per barrel. Sources: DOR, Bloomberg, NYMEX, Energy Information Agency

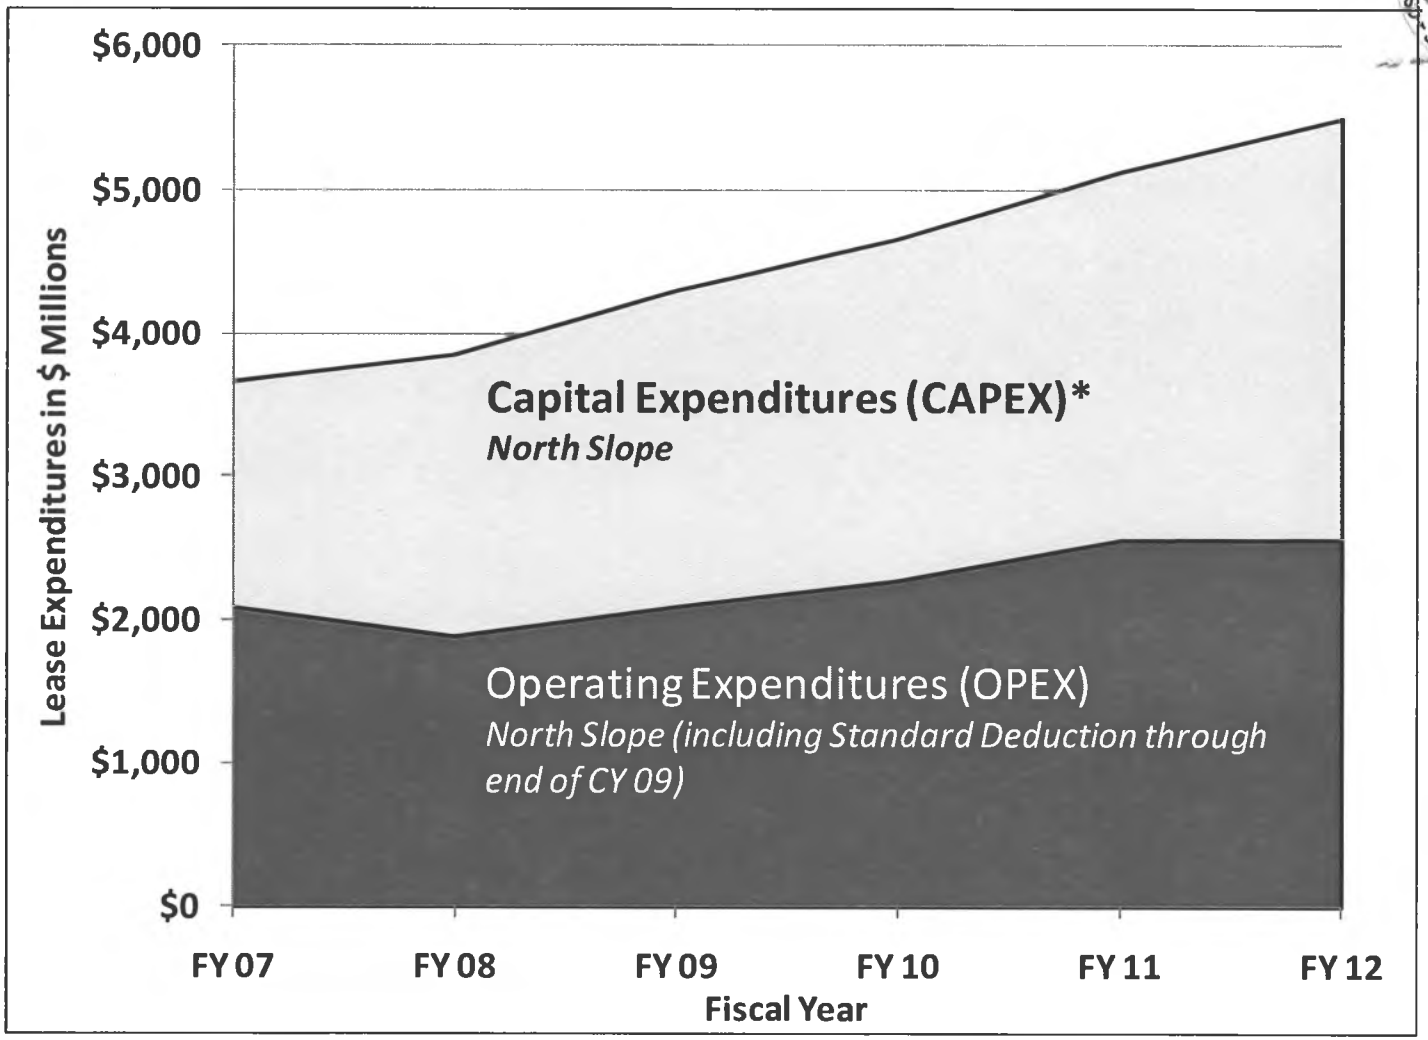
Fall 2010 DOR Oil Price Forecast

	Real $		Nominal $	
	WTI	ANS	WTI	ANS
FY 2010 (actual)	75.21	74.90	75.21	74.90
FY 2011 (projected)	77.75	75.88	79.89	77.96
FY 2012	80.67	78.30	85.17	82.67
FY 2013	83.30	80.99	90.36	87.86
FY 2014	85.15	82.90	94.91	92.41
FY 2015	87.17	84.99	99.84	97.34

*Note: FY 2011 forecast includes one quarter of actual prices.

Forecast is made in terms of Real WTI , then adjusted using 2.75% inflation rate and $2.50 nominal differential to ANS.

Source: Fall 2010 Revenue Sources Book



Fall 2010
Lease Expenditure Forecast
(Oil Company Spending)

Lease Expenditures (Costs)

- **FY 2007 – FY 2010 lease expenditures based on unaudited company reported expenditure estimates submitted on production tax monthly forms and annual returns**
- **FY 2011 – FY 2012 lease expenditure forecasts were compiled from company submitted information**
- **Under ACES, DOR requests expenditure forecast estimates and other documentation from oil companies**
- **Longer term spending – particularly capital investment - is highly uncertain**

Source: Alaska Department of Revenue

Lease Expenditures (Costs)

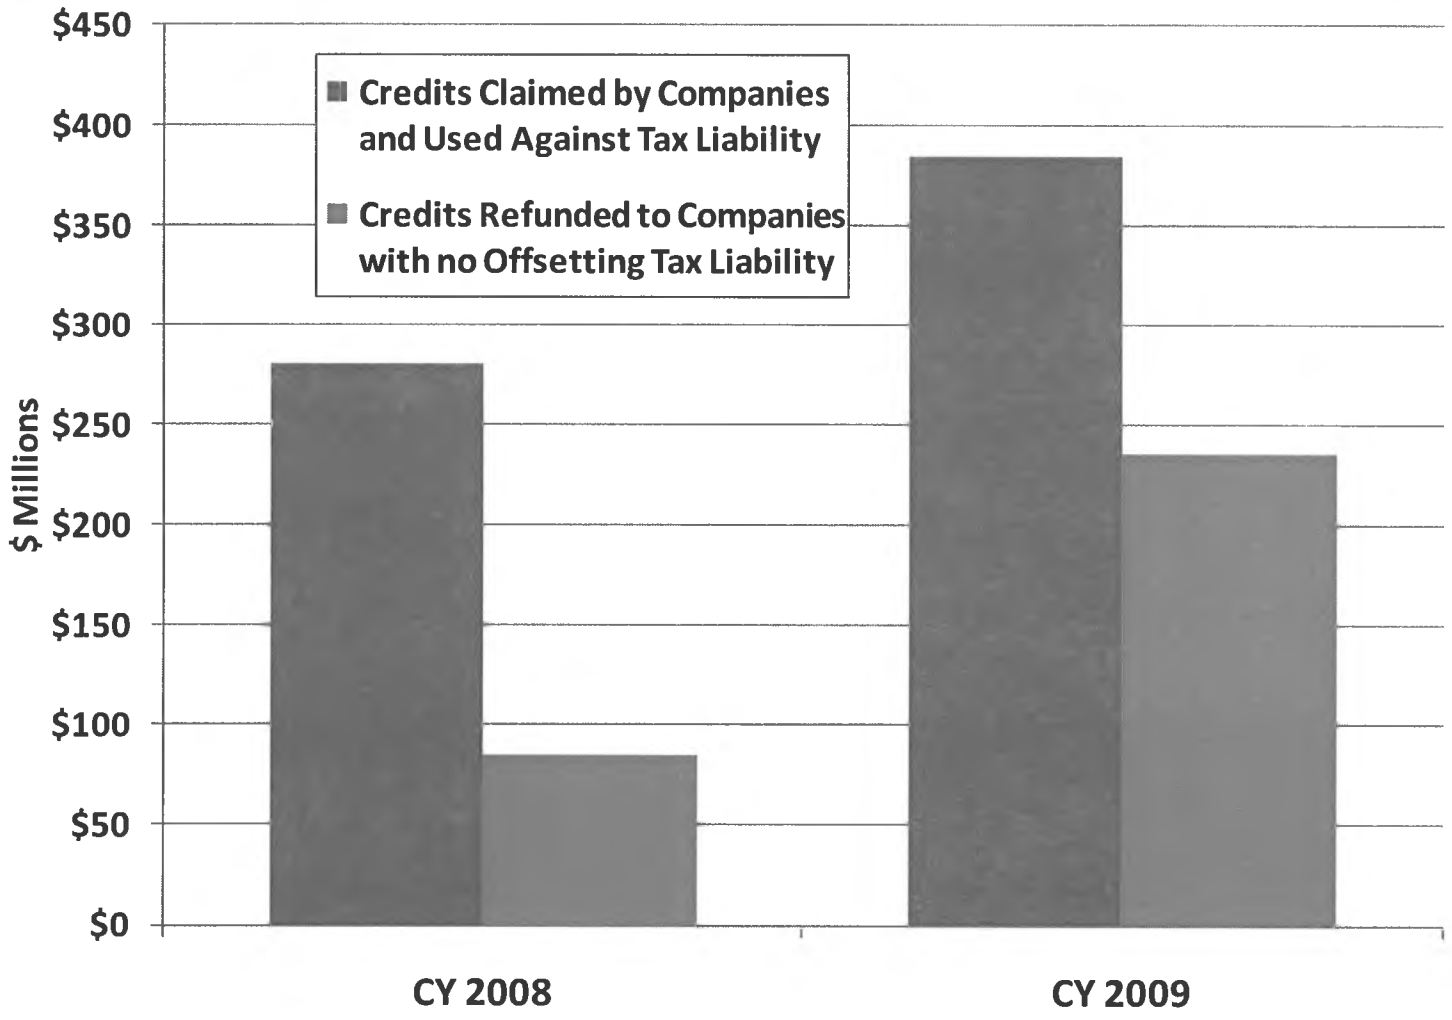
* Capital Expenditures shown are based on company reporting. Includes capital spending on new exploration, development spending, and capital spending required to maintain existing operations and production.

Source: Department of Revenue from production tax monthly information forms, annual returns, and company forecasts.

Lease Expenditures per Barrel

	FY 07	FY 08	FY 09	FY 10	FY 11	FY 12
Lease Expenditures ($ millions)						
Operating Expenditures (OPEX)	2,081	1,881	2,085	2,270	2,553	2,558
Capital Expenditures (CAPEX)	1,578	1,967	2,212	2,389	2,572	2,937
Production (bpd)	739,702	715,950	692,127	643,517	615,902	622,182
Lease Expenditures per barrel ($)						
OPEX per barrel ($)	**7.71**	**7.20**	**8.25**	**9.66**	**11.36**	**11.26**
CAPEX per barrel ($)	**5.84**	**7.53**	**8.76**	**10.17**	**11.44**	**12.93**

Source: Department of Revenue from production tax monthly information forms, annual returns, and company forecasts
Operating expenditures include "standard deduction" through end of CY 2009.



Tax Credits

Production Tax Credits

- **Qualified Capital Expenditure Credit –** 20% credit for qualified capital expenditures (40% for well lease expenditures outside North Slope).
- **Carried-Forward Annual Loss Credit –**25% credit for carried-forward annual loss.
- **Small Producer / New Area Development Credit –** Up to $12 million / year for small producers and up to $6 million / year for production outside North Slope and Cook Inlet.
- **Alternative Credit for Exploration –** 30% or 40% of eligible exploration expenditures if certain criteria are met.
- **Cook Inlet Jack-Up Rig Credit –** 80% to 100% credit for first three exploration wells drilled using jack-up rig in Cook Inlet.
- **Chapter 3 of Fall 2010 Revenue Sources Book provides detailed information about these and other tax credits**

Budget Vision

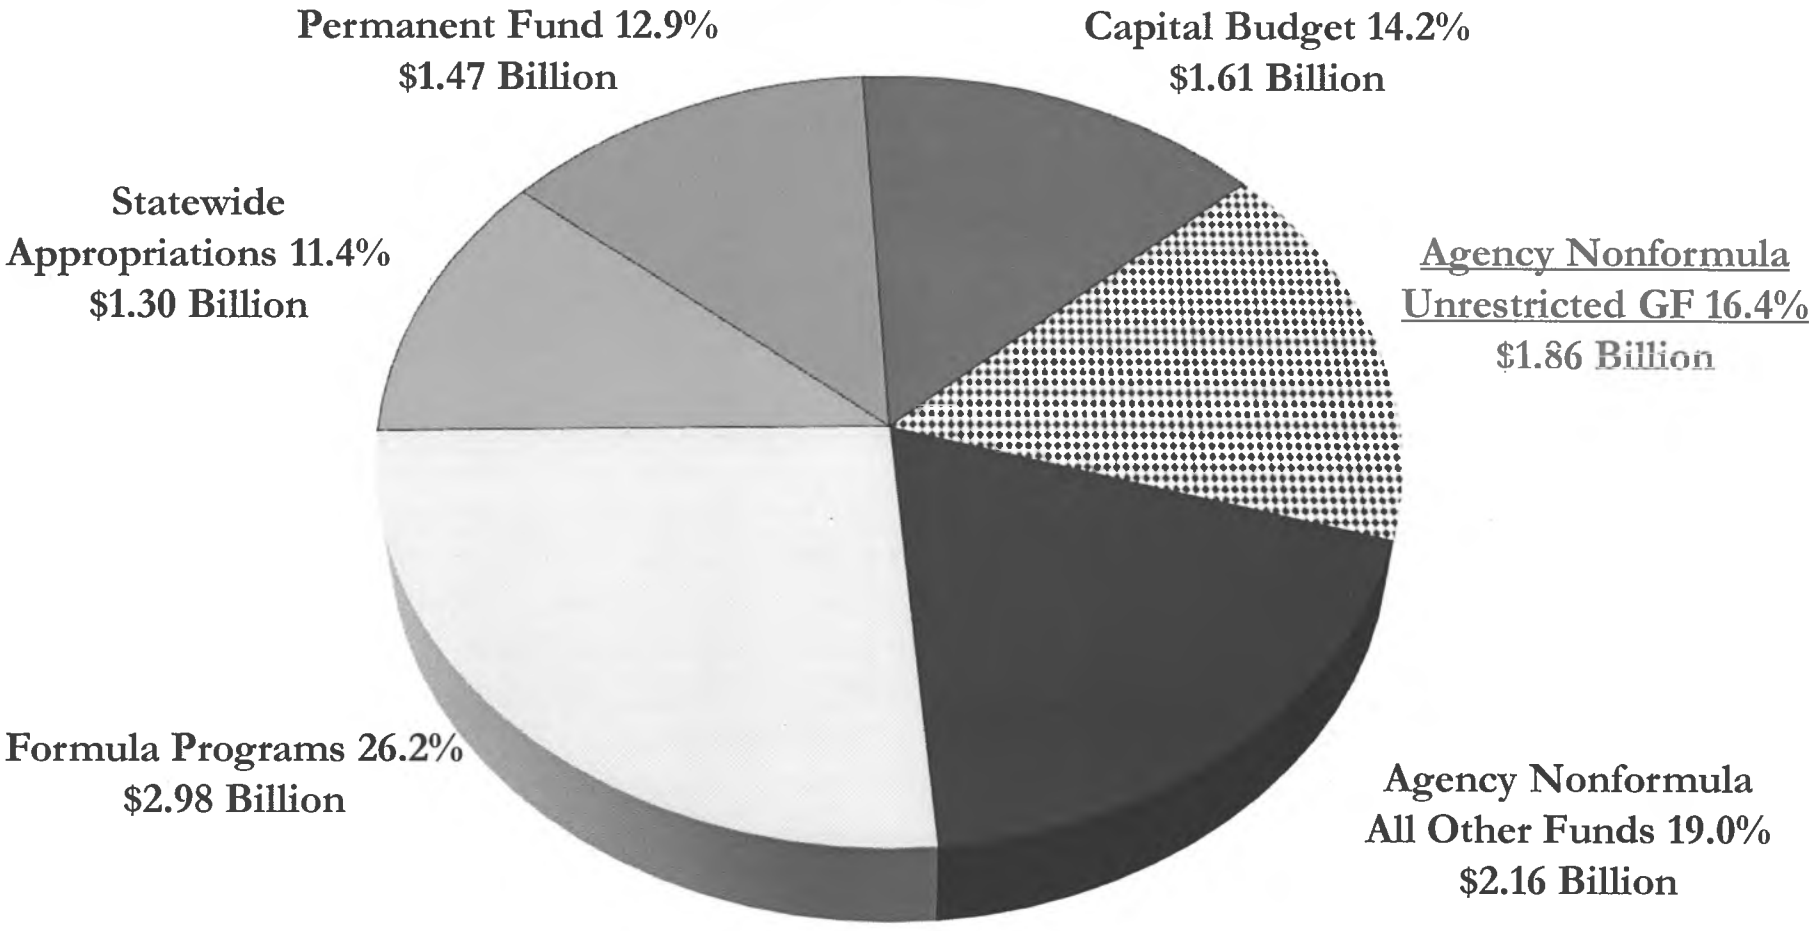
Governor Parnell's vision and mission

'Position Alaska's economy for growth and Alaska's families for opportunity.'

FY2012 Budget principles

Guiding principles

- Fiscal Restraint
- Strategic Investments
- Maintain Cash Reserves



FY2012 Budget priorities

Focus is on Alaska's constitutional priorities

- **Resource and Economic Development**
  - Energy
  - Access to resources
  - Natural gas development
- **Education**
  - Alaska Performance Scholarship
  - Full funding K-12 FY2012
  - Forward fund K-12 FY2013
- **Public Safety**
  - Prevention
  - Investigation
  - Services to Victims
  - Child Safety/Cybercrimes

FY2012 Expenditures by Category

Governor's December 15 Spending Plan

FY2012 Operating Budget-Formula

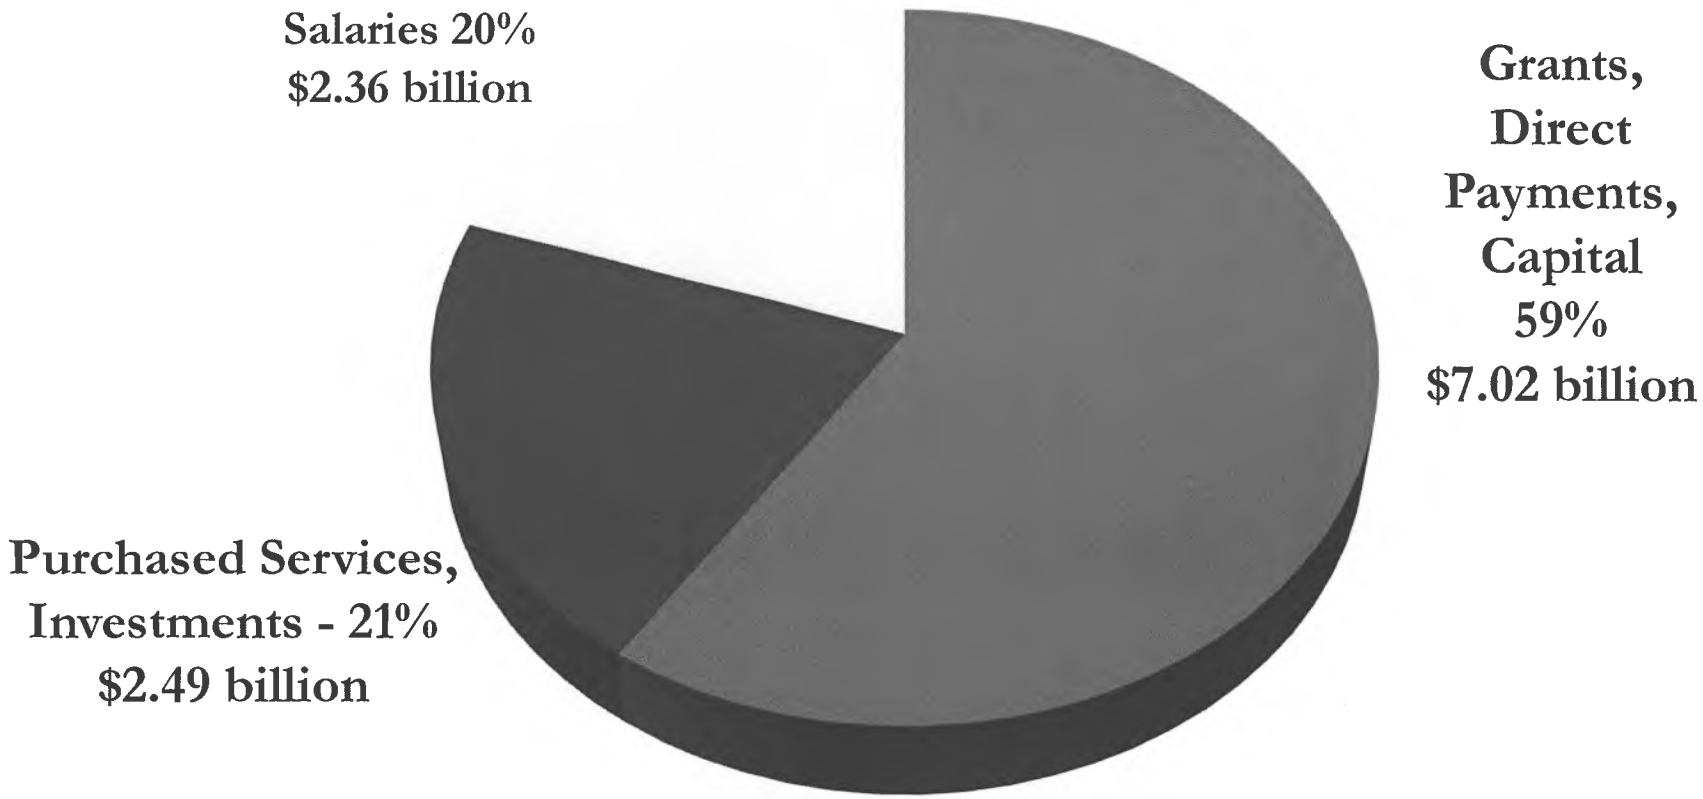
Formula growth driving FY2012 overall increase

- **Formula programs $2.98 billion**
  - K-12 and pupil transportation $1.16 billion
    - $8.2 million Alaska Performance Scholarship
    - Fully fund K-12 in FY2012 $1.13 billion
    - Forward fund K-12 for FY2013 $1.14 billion
  - Other Formula programs $1.82 billion
    - Medicaid is $1.5 billion of the total

FY2012 Operating Budget-Statewide

Retirement system, debt obligations are also drivers in FY2012 growth

- **Statewide Appropriations $1.30 billion**
  - **$479 million retirement unfunded liability**
  - **$400 million oil tax credits**
  - **$290 million debt service**
  - **$60 million Community Revenue Sharing**



FY2012 Capital Budget

Putting Alaskans to work

- $1.6 billion in capital spending proposed
- $644.9 million in state general funds
  - $160 million for AGIA gas pipeline work
  - $103 million match leverages $705 million federal funds
    - transportation, highway, aviation & water/sewer projects
  - $60 million for resource roads and ports
  - $65.7 million for Susitna hydro planning and design
  - $25 million each for Renewable Energy and Weatherization
  - $100 million year 2 deferred maintenance
  - $28.4 Quinhagak K-12 construction/renovation (#1 DEED)
  - $19.9 14 school major maintenance projects

State Budget- Another Perspective

Nearly 60% of Alaska's budget benefits communities, organizations and individuals through grants, direct payments and capital project funding

Includes duplicate funds, savings, investments and the Permanent Fund

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

Executive Summary FY2012 10-year plan

Diversification of Revenue: Plotting a course from 2011 to First Gas

Looking ahead at the next 10 years, Alaska must move toward diversification and expansion of its revenue base. The main emphasis of the 10-year plan is to facilitate Alaska's transition from a predominantly oil revenue base to an oil and natural gas revenue base. Construction of pipeline infrastructure to monetize Alaska's natural gas resource is a key element in providing for the future fiscal and economic stability of the state. Revenue generated from natural gas would help diversify Alaska's revenue sources and provide a substantial source of new revenue to offset declining oil revenue. In addition, the gas pipeline will provide economic opportunity through the provision of a stable, clean source of energy to fuel Alaskan businesses and homes for years to come. Efforts to diversify revenue cannot be solely reliant on the construction of a natural gas pipeline though- Alaska must continue to make strides to maximize production from existing oil fields and develop other economic opportunities.

Assuming the Alaska Department of Revenue's Fall 2010 forecast, Alaska can use spending discipline combined with the prudent use of reserve accounts to sustain itself through fiscal year 2021. This would achieve the goal of transitioning the state from FY2012 to first gas, which is currently estimated to occur in the 2019 to 2021 time period. Assuming the Fall 2010 forecast and a range of spending assumptions, the combined balances of the state's primary reserve accounts, the Statutory Budget Reserve and the Constitutional Budget Reserve, would remain positive during the next ten years. By the end of the period, the anticipated fall in oil production starts the overall state revenue curve on a downward trajectory; however the onset of gas revenue could potentially position the state on more solid financial footing. The 10-year forecast shows that anticipated budget shortfalls during the 10-year period could be filled through the use of reserve funds; however, other fiscal tools, including spending reductions, would likely be used in addition to, or in lieu of, reserve funds.

The plan examines a range of possible spending and revenue scenarios. Taking one scenario as an example, it assumes relatively modest spending growth of 3.0% annually beginning in FY2013, and no change to the revenue forecast that was developed in the fall of 2010. The expenditure growth rate assumption in this scenario would be challenging to meet, and implies that the delivery of state services will become more efficient over the 10-year period. Inflation is assumed at 2.75% and population growth will be slightly above 1.0% annually. That implies that state spending on a per capita basis will decline over the next ten years in real terms.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

While overall spending in this scenario is projected at an average annual growth rate of 3.0%, it is anticipated that portions of the budget will grow faster, and that would require other areas of the budget to grow at a slower rate or decline to meet the projected growth rate. One particularly challenging example of this issue in the operations portion of the budget is the state's projected Medicaid spending. In FY2011 the state's portion of the federal Medicaid program was $441 million. Over the next 10 years that figure is projected to increase at an annual rate of over 9.0% and by FY2021 is projected to require a $1.15 billion contribution from the state's general fund. This percentage change assumes that the state's participation rate in the Medicaid program reverts back to levels experienced prior to the passage of the health-care reform bill.

Among the other challenges that must be considered in the planning horizon are: financing investment expenses associated with the gas line project; the unfunded liability to the public employee and teachers retirement systems, dealing with the high cost of energy for Alaskans; shoring up aging transportation and other state-owned infrastructure; handling the effects of growing elderly and prison populations; and tackling the adverse affects of climate change. All of these issues must be considered while continuing to provide an acceptable level of government services to Alaskans.

Oil Prices and the Plan

In view of history, the possibility of oil prices falling below the Fall 2010 forecast must be considered. In that scenario, spending projections and use of the state's reserve accounts must be reevaluated. More conservative spending plans would be necessary and the ability of the state's available reserve accounts to facilitate a transition from today to the onset of revenue from a gas pipeline becomes more challenging. While alternate revenue and expenditure scenarios are not discussed extensively, they are presented as part of this document as a means to inform the public of what alternate revenue and expenditure scenarios look like in terms of the magnitude of change they could present.

The Plan's Imperative

The overarching objectives of the 10-year fiscal plan are guided by the statutory language that requires the Executive branch to produce a 10-year plan on an annual basis. Alaska Statute 37.07.020 (b) (2): says that the fiscal plan

> ***"must balance sources and uses of funds held while providing for essential state services and protecting economic stability of the state."***

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

Essentially, there are three requirements that the Executive's plan must meet:

- Balance the budget between sources and uses of finds,
- Provide for essential state services, and
- Protect Alaska's economic stability.

The Plan's Guiding Principles and Supporting Strategies

The 10-year plan meets the statutory objectives through the application of several foundational principles. The principles outlined below provide the framework and guidance for spending and savings strategies represented in the plan.

Principle: Responsibly Develop Alaska's Natural Resources

The State of Alaska's future prosperity hinges on the responsible development of its abundant natural resources. In 1959, when Alaska became a state, 99.8 percent of the land was owned by the federal government. The Alaska Statehood Act gave the State the right to select and acquire approximately 104 million of the nearly 365 million acres of federal lands in Alaska. It was envisioned that the management of this land base and the associated resources would provide the State with a viable economic foundation. That stable economic base would then enable the State to provide governmental services to the people of Alaska, and reduce the likelihood that Alaska would be a drain on the federal treasury.

To date, the strategy of building Alaska's economy on natural resources has been effective. The State takes in significant revenues from companies that lease State-owned lands for extraction of oil, natural gas and coal, gold, zinc and other minerals and shares with the federal government revenues from oil, natural gas and other assets extracted from federal lands leased by private companies. Currently, nearly 90% of the State's unrestricted General Fund revenue is generated from petroleum production activities. For the foreseeable future, the health of Alaska's fiscal system will be linked to the wealth generated from the monetization of Alaska's natural resource base.

> **Strategy: Facilitate Gas Line Development-** The Administration's highest priority is the development of the State's natural resources. The State's long-term planning is based in part on efforts to develop natural gas resources before oil resources are depleted. Currently, natural gas produced in conjunction with oil production on the North Slope is stranded from the market, and development of this critical resource has been limited because a means to transport recovered natural gas to markets

outside Alaska has not been available. To spur commercialization of Alaska natural gas, the Alaska Gasline Inducement Act ("AGIA") was enacted in 2007; and in August 2008, authorized the State to award an AGIA license to TransCanada Alaska, a wholly-owned subsidiary of the TransCanada Corporation ("TransCanada"). Along with the license, the state committed to a cost-sharing agreement with TransCanada that provided a $500 million state commitment to assist in underwriting a portion of the pre-development costs of the project. TransCanada subsequently joined forces with ExxonMobil, one of the three major North Slope producers, to form the Alaska Pipeline Project. In addition to the Alaska Pipeline Project, two of the three major North Slope producers, ConocoPhillips and BP, are pursuing their own gas pipeline project, called Denali. While the State's economic past and present is tied to oil, the state's future is dependent upon the development of its abundant natural gas resources. During the next several years the Administration will be actively pursuing a project to monetize Alaska's gas.

Strategy: Facilitate Other Oil & Gas Development- The State is also financing and promoting pre-development activities associated with production of a project plan for an in-state natural gas pipeline. House Bill 369 established the Joint In-State Gasline Development Team and Alaska Gasline Development Corporation (AGDC) to deliver a plan by July 2011 that would bring gas to Southcentral Alaska by 2016. AGDC is working in several critical areas:

- Performing market analysis and assessments to define project parameters that would allow the project to be commercially viable.
- Obtaining feedback from private pipeline construction and operating companies on their level of interest in the project.
- As necessary preparing any legislation in support of the project.

The Administration intends to pursue oil tax changes to incentivize investment and create private sector jobs. Additionally, the Administration intends to foster other oil and gas development by assuring that the State regulatory process is consistent, clear and timely. The Administration will also budget for roads to resources projects to lower the cost of access to state lands and foster additional jobs and investment.

Strategy: Facilitate Other Natural Resource Development- While oil and gas resources are the largest potential revenue sources for the state, other resource development efforts can also help diversify the state's revenue base. While they currently play smaller roles than oil and gas in terms of generating revenue to the state, mineral mining activity, fisheries and tourism also are critical contributing industries to the State's revenue stream and economic diversity.

Strategy: Invest in Hydropower and Other Cost-Effective Renewable Energy Projects- The State has an ambitious energy goal of having 50% of all of Alaska's electricity generated by renewable resources by 2025. In order to meet this goal the Administration advocates state investment in a large-scale hydroelectric power project as well as continued investment in smaller regional projects that use wind, hydroelectric and other renewable resources as the energy source for power generation. In many of these areas, high cost diesel is currently the primary fuel for electrical power generation. The Administration also proposes to continue investment in programs that provide resources for projects that promote energy conservation.

Principle: Restrain Spending

In contrast to revenue, the part of the fiscal equation that Alaska's policy makers can have the greatest impact on is the size of the State budget.

Strategy: Implement Results Based Budgeting- The Administration implemented results-based budgeting with the intention of restraining government spending. The Administration has directed agencies to focus on agency missions, core services and results expected for the current spending level. This is intended to assure Alaskans that state government dollars are being spent wisely. Within that framework, spending areas that will be a priority are those that are constitutionally mandated: natural resource development, education, and public safety. By implementing this approach the Administration has committed to promoting more efficient ways of providing and delivering government services.

Strategy: Evaluate Long term Costs of Investment Initiatives- In addition to assessing current spending for effectiveness, the Administration is committed to evaluating the long-term financial implications of proposed savings and investment initiatives. Taking a long-term view is intended to provide a framework for budget and policy decisions that promote the economic growth and fiscal stability necessary for Alaskans to prosper beyond the current budget cycle.

In order to restrain growth, the Administration will have to implement multiple strategies. Substantial reductions in state spending would require reductions in important public services and less investment in Alaska natural resource development and infrastructure. Anticipated growth in areas such as Medicaid, K-12 education and retirement system costs also make it challenging to reduce total state spending over time.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

Principle: Save for Future Generations of Alaskans

Along with resource development, the savings element of the plan meets a basic challenge facing Alaska, turning the non-recurring revenue stream produced from Alaska's resources in to a long term recurring revenue source that can help maintain Alaska's economic stability beyond the life of the resource. The primary vehicle for this effort is Alaska's Permanent Fund, and a primary objective of the plan is to continue growing the Permanent Fund. In addition to growing the Permanent Fund, when an opportunity presents itself, the plan contemplates depositing unspent unrestricted revenue in reserve accounts such as the Constitutional Budget Reserve and Statutory Budget Reserve. Continual building of Alaska's reserve accounts provides the State a means to stabilize a revenue stream that is subject to the dramatic swings of oil prices or production interruptions. The availability of reserves underpin the state government's ability to provide the services that are mandated without having to draw upon other means of revenue generation such as broad-based taxes or use of the Permanent Fund.

Strategy: Preserve and Grow The Permanent Fund - The primary vehicle for this effort is Alaska's Permanent Fund, which receives ongoing deposits of mineral royalty revenue as well as annual appropriations to inflation proof the fund. Currently, the main contribution of Alaska's Permanent Fund to the state's residents is the annual Permanent Fund dividend payment. In 2010, the dividend amounted to $822 million distributed to an estimated 641,595 dividend eligible citizens. If this distribution were added to payroll wages, it is the equivalent of a 5.5% boost to the overall wage and salary payroll in the state's economy.

Strategy: Build Reserves When Possible, Use Them Judiciously When Necessary- Beyond continuing to grow the Permanent Fund; the plan contemplates that in times of surplus unrestricted general fund revenue that a portion of that revenue be used to build reserve accounts. To date, the primary reserve account drawn upon to fund ongoing operations of state government has been the Constitutional Budget Reserve fund (CBRF). Since its inception more than $5.2 billion has been borrowed from that fund to pay for state funded services. Recent general fund revenue surpluses have allowed the CBRF to be replenished so that as of June 30, 2010 the entire borrowed balance had been repaid by the general fund. The available balance has grown to approximately $9.7 billion as of December 2010. Additionally, $1.2 billion has been placed in another savings account called the Statutory Budget Reserve.

Strategy: Forward Fund When Appropriate - Another method the plan contemplates to provide fiscal stability is forward funding programs. Examples where the state has built or plans to build reserves to fund programs in future years include:

- Public Education Fund: More than $1 billion was set aside to fund the State's projected contribution to funding K-12 education one year in advance. This fund has stabilized the funding stream for Alaska's K-12 education sector, and during the FY2010 budget cycle this fund was critical in balancing the budget at a time when oil prices were lower than forecast. The Administration proposed fully funding FY2012 projected K-12 costs with projected FY2011 revenue, and will repeat this proposal in FY2012, by proposing to forward fund projected FY2013 education costs.
- Community Revenue Sharing Fund- $180 million is set aside in an attempt to stabilize annual funding to local communities for provision of local government services. The Administration will propose to deposit $60 million in the Community Revenue Sharing fund to bring the balance of the fund to $180 million. This insures communities stable funding in FY2012 as well as a revenue sharing program through at least FY2015 given the programs current funding mechanism.
- Alaska Housing Capital Corporation Fund: More than $300 million was set aside to fund future capital projects, the Administration is proposing in FY2012 to use a portion of these funds for gas line and other important infrastructure expenditures.
- Alaska Performance Scholarships: As part of the FY2012 budget, the Administration included $8.2 million to fund performance scholarships to in-state universities or job-training programs for students who complete a rigorous academic course of study and earn higher grades. Additional work needs to occur to implement a funding mechanism for performance scholarships that will be sustainable over time.

Strategy: Focus Investment - The plan prioritizes spending according to the Administration's investment priorities of:

- Economic and Resource development
- Education
- Transportation infrastructure
- Public Safety, health and welfare

Alternate Scenarios Provide Reason for Optimism and Caution

While Alaska's current financial outlook is easily characterized as among the best in recent history one only need look at the recent past to remind Alaskans that the link between the State of Alaska's fiscal health and the price of oil can change the fiscal outlook quickly and dramatically. In view of history, the examination of different spending growth paths or lower oil

prices than forecast can temper the optimism of the state's current long term outlook. It also illustrates the dependence of the state's fiscal stability on oil.

For an illustration of possibilities that may lie ahead for Alaska, three spending scenarios and two alternate revenue and spending scenarios were modeled. A brief description and synopsis of each scenario is presented below:

Scenario 1: 2010 Forecast with flat spending: This scenario holds spending constant at FY2012 levels for the next 10 years assuming the Fall 2010 revenue forecast.

Synopsis: Budget surpluses through FY2021 while the SBR and CBR combined account balances grow to $36.8 billion by the end of FY2021.

Scenario 2: 2010 Forecast with 3% spending growth: This scenario assumes 3.0% annual spending growth beginning in FY2013 and beyond while assuming the Fall 2010 revenue forecast.

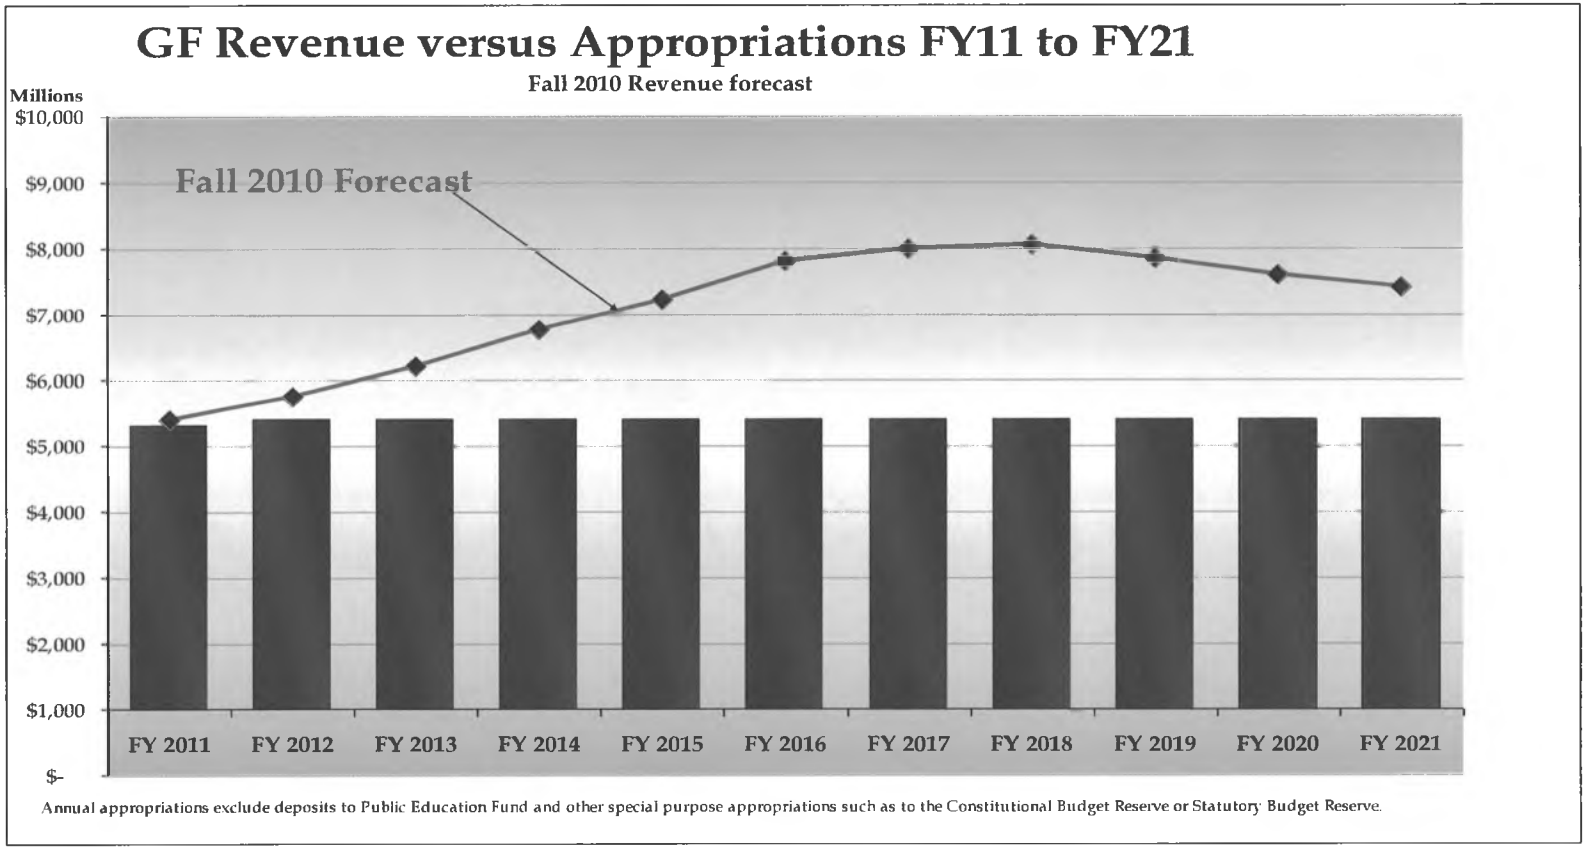
Synopsis: Budget surpluses through FY2021 while the SBR and CBR combined account balances grow to $28.9 billion by the end of FY2021.

Scenario 3: 2010 2010 Forecast with 6% spending growth: This scenario assumes 6.0% annual spending growth beginning in FY2013 and beyond while assuming the Fall 2010 revenue forecast.

Synopsis: Budget surpluses through FY2018 while the SBR and CBR combined account balances grow to $20.1 billion by the end of FY2021.

Scenario 4: $80 oil with 3% spending growth: This scenario assumes that oil prices hold steady at $80 a barrel and annual spending growth is 3.0% beginning in FY2013 and beyond.

Synopsis: Budget shortfalls begin in FY2013 while the SBR and CBR combined account balances reach nearly $12 billion in the short run but the steady draws on those two accounts erode the combined SBR and CBR balances to $3.1 billion by the end of FY2021.



Scenario 5: $70 oil with 1% spending growth: This scenario assumes that oil prices hold steady at $70 a barrel and annual spending growth is 1.0% beginning in FY2013 and beyond.

Synopsis: Budget shortfalls begin in FY2012 and the SBR and CBR reserve accounts are exhausted by the end of FY2020.

In summary, there is a wide range of possible scenarios that could lie ahead for Alaska. While the future holds the promise of fiscal stability if given steadily increasing price of oil, the past has demonstrated on numerous occasions that the state must take a cautious approach to its finances, and carefully consider the obligations that it makes today to insure that it has the means to provide essential services in the future. The challenge will remain to strike a balance between the needs of current Alaskans against the need to provide essential public services to Alaska's future generations.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

Scenario 1: FY2012 Governor's Budget with 0% Annual Expenditure Growth

Appropriations projections in the plan do not represent a commitment by the Administration to propose spending or generate revenue at a particular level in FY2011, FY2012 or any future year. The 10 year forecast shows that unanticipated budget shortfalls during the 10-year period could be filled primarily through the use of reserve funds; however, other fiscal tools including spending reductions would likely be used in addition to, or in lieu of, reserve funds.

The plan will be revisited as conditions warrant.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

1/FY 2011 and FY 2012 General Fund Revenue includes Corporate Dividends, Reappropriations and Carry Forward.

Appropriations projections in the plan do not represent a commitment by the Administration to propose spending or generate revenue at a particular level in FY2011, FY2012 or any future year. The 10 year forecast shows that unanticipated budget shortfalls during the 10-year period could be filled primarily through the use of reserve funds; however, other fiscal tools including spending reductions would likely be used in addition to, or in lieu of, reserve funds.

The plan will be revisited as conditions warrant.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

Scenario 3: FY2012 Governor's Budget with 6% Annual Expenditure Growth

Appropriations projections in the plan do not represent a commitment by the Administration to propose spending or generate revenue at a particular level in FY2011, FY2012 or any future year. The 10 year forecast shows that unanticipated budget shortfalls during the 10-year period could be filled primarily through the use of reserve funds; however, other fiscal tools including spending reductions would likely be used in addition to, or in lieu of, reserve funds.

The plan will be revisited as conditions warrant.

Note: The projections in the FY2012 plan are intended to be used as a planning tool. They do not represent a commitment by the Administration to propose spending nor bring in revenue at a particular level in FY2011, FY2012, or any future year.

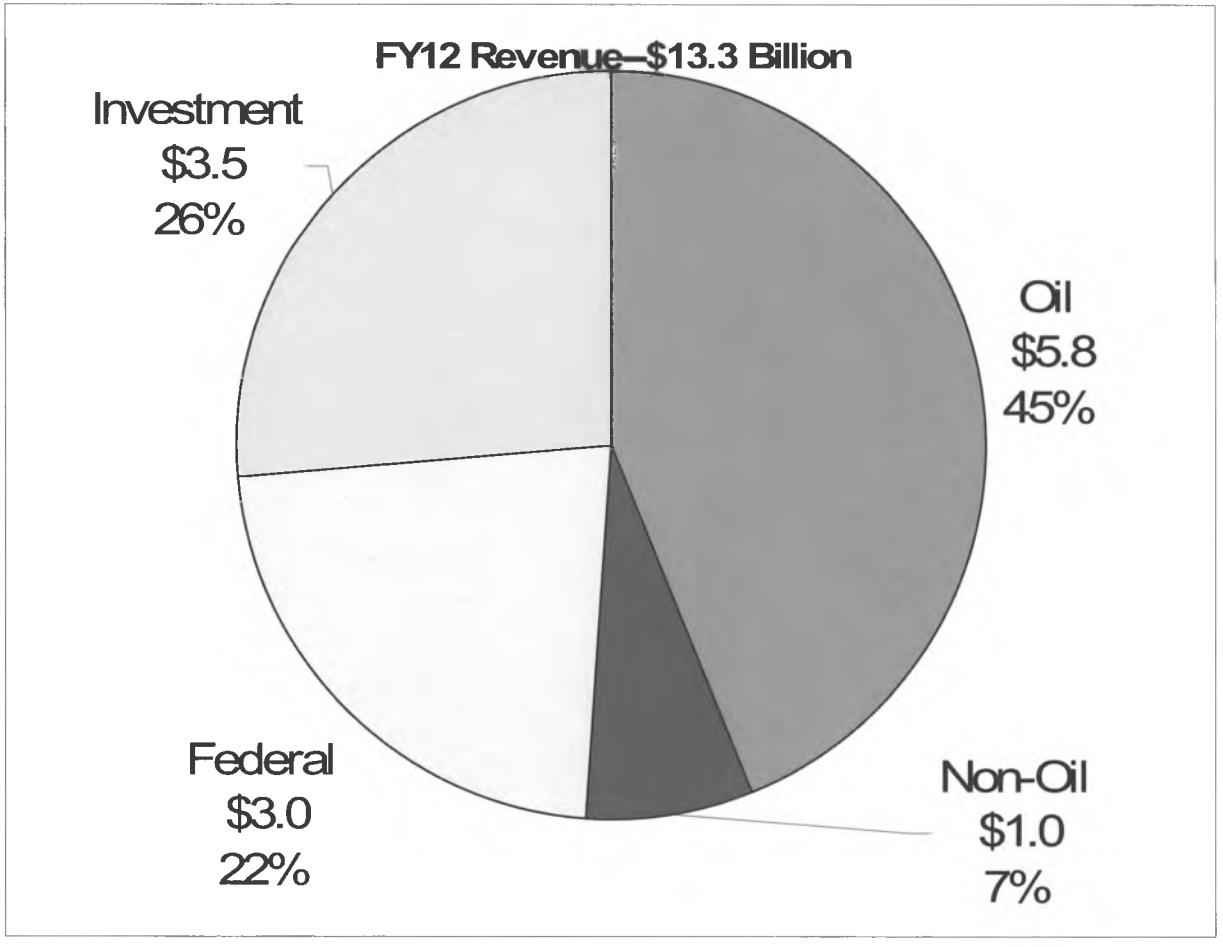
1/27/11 LEGISLATIVE FINANCE DIVISION: FY2012 BUDGET OVERVIEW AND FISCAL SUMMARY

<TARGET><BILL></BILL><SUBJECT>1-27-11 LEGISLATIVE FINANCE DIVISION FY2012 BUDGET OVERVIEW AND FISCAL SUMMARY</SUBJECT><COMM>SFIN27</COMM></TARGET>

An Overview of Alaska's Fiscal Situation

Senate Finance Committee

January 26, 2011



Legislative Finance Division

Four Elements of Budgeting

1. Revenue
2. Appropriations
3. Reserve Balances
4. A Long-Term Plan

Revenue Sources

DOR Fall 2010 Source Book

Revenue and Appropriations

- Unrestricted General Funds (UGF)
- Designated General Funds (DGF)
- Other State Funds
- Federal Receipts

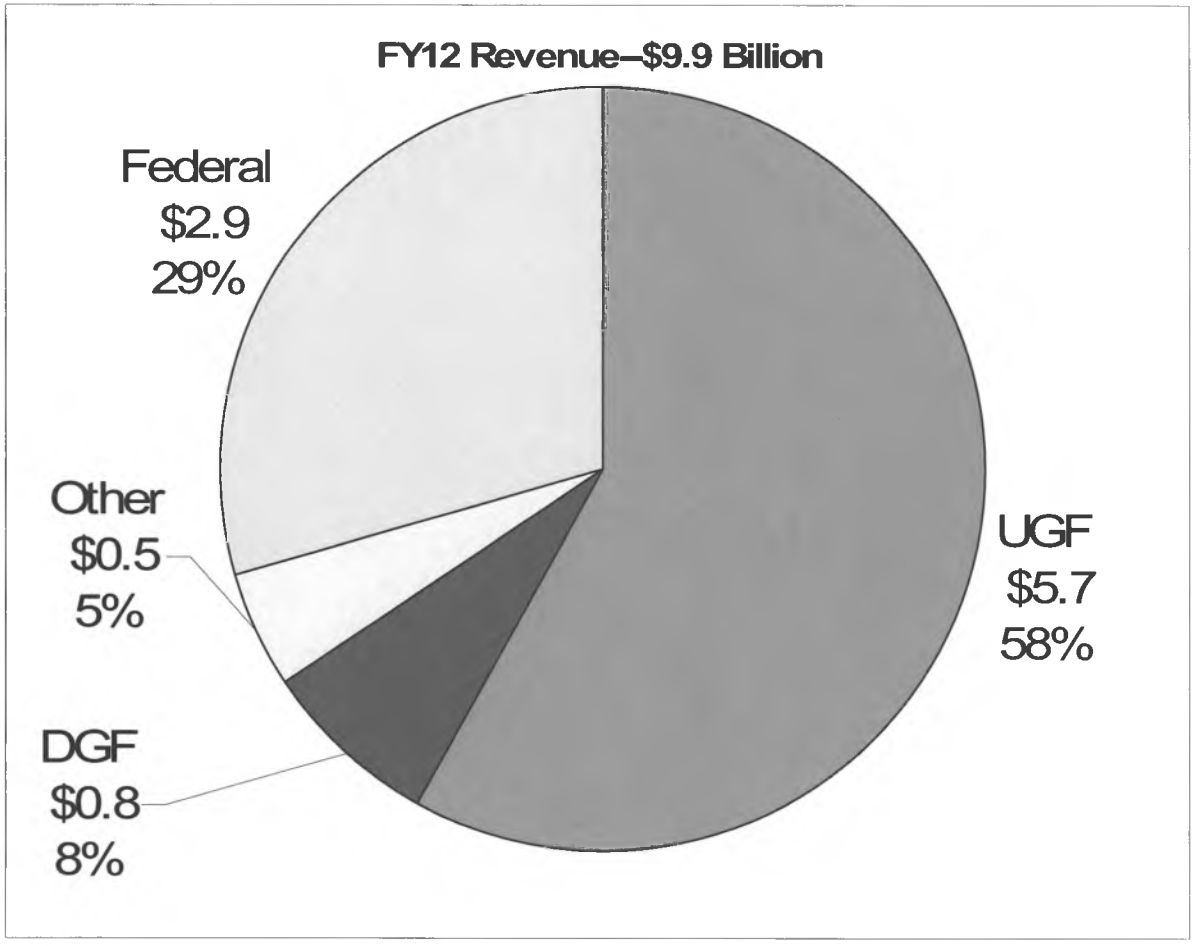
Federal Receipts

- Typically have strings attached—the legislature has very little discretion in the appropriation process
- Frequently require state matching funds
- Split pretty evenly into thirds
  - Capital budget (primarily transportation)
  - Formula programs (primarily Medicaid)
  - Agency operations (DMVA, Labor, DEED)

Other State Funds

- Before Budget Clarification Project, "other" was almost $3 billion, now is $500 million
- Now, there is very little discretion in how money is spent—the category includes
  - international airport revenue,
  - state corporation receipts (including Permanent Fund)
  - Trusts (retirement, Mental Health and others)
  - Dedicated Funds (Fish & Game and others)

Designated General Funds



- Fund sources that have been designated—not dedicated—for a special purpose in statute
- Include University Receipts, AMHS receipts and other "fees for service" that agencies charge
- The legislature typically follows statutory guidelines (the law prohibits spending program receipts outside the program that generates them)

Unrestricted General Funds

- 88% of UGF revenue is derived from oil
- Complete discretion in appropriating UGF
- Typically referenced as the measure of state spending
- Used to calculate the Fiscal Surplus or Deficit

Revenue Sources

Degree of Discretion

January 11, 2011

Notes:

(1) Although Permanent Fund earnings may be appropriated for any purpose, the legislature traditionally excludes them from the definition of available revenue. Appropriations of Permanent Fund earnings are reported in lines 48-51 of the summary. Permanent Fund earnings and balance information is reported in part 2 of the fiscal summary.

(2) The Department of Revenue's December 2010 oil forecast for FY11 is 0.616 mbd at $77.96 per barrel; the FY12 forecast is 0.622 mbd at $82.67/bbl.

(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY11 via multiyear appropriations or reappropriations. FY12 carryforward will be unknown until the close of FY11.

(4) Funds made available to the state by the boards of the Alaska Industrial Development and Export Authority (AIDEA) and Alaska Housing Finance Corporation (AHFC) are included in the revenue forecast. The amounts on this line correct estimates reported in the revenue forecast.

(5) Designated general funds include 1) program receipts that are restricted to the program that generates the receipts and 2) revenue that is statutorily designated for a specific purpose.

(6) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. Duplicated authorization also includes the expenditure of bond proceeds when debt service on bonds (which includes repayment of principal) will be reflected in future operating budgets.

(7) From an accounting perspective, unduplicated authorization is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.

Notes:

January 11, 2011

(8) "Transfers" refer to appropriations that move money from one fund to another within the Treasury. Although transfers are not true expenditures, they reduce the amount of money available for other purposes so must be included in the calculation of the surplus/deficit. For savings accounts, a positive number indicates a deposit and a negative number indicates a withdrawal. When money is withdrawn and spent, the expenditure is included in the operating or capital budget, as appropriate.

(9) Amounts shown on line 51 can be considered duplicated appropriations--they are included in the operating or capital budgets above. Amounts in the UGF column indicate earnings deposited in the Capital Income Fund; amounts in the DGF column indicate costs associated with the dividend program; and amounts in the Other column reflect gross earnings of the Permanent Fund spent for purposes other than operation of the corporation.

The Governor's capital budget request includes $19.1 million for items that Legislative Finance considers to be operating in nature. This amount has been added to agency operations (line 10) and subtracted from capital projects (line 28).

Fiscal Summary Key Points

1. FY12 revenue is $328 million above FY11 revenue
2. But spending is $400 million higher
   - Agency Operations is up $167 million (3.8%)
   - Statewide is up $122 million (11.5%)
   - Capital is up $112 million (18.4%)
3. There is a cash flow deficit of $25 million
4. The Governor removes a net of $310 million from savings accounts
5. The FY11 surplus remains a question mark

Reserves—the Third Element of Budgeting

- Alaska has reserves like no other state
- Excluding the Permanent Fund, which cannot be spent, Alaska has over $14 billion in reserves
- Some are difficult to access—PF ERA and CBRF
- No disagreement on accessible cash of about $1.5 billion

State of Alaska Fiscal Summary--FY11 and FY12

($ millions)

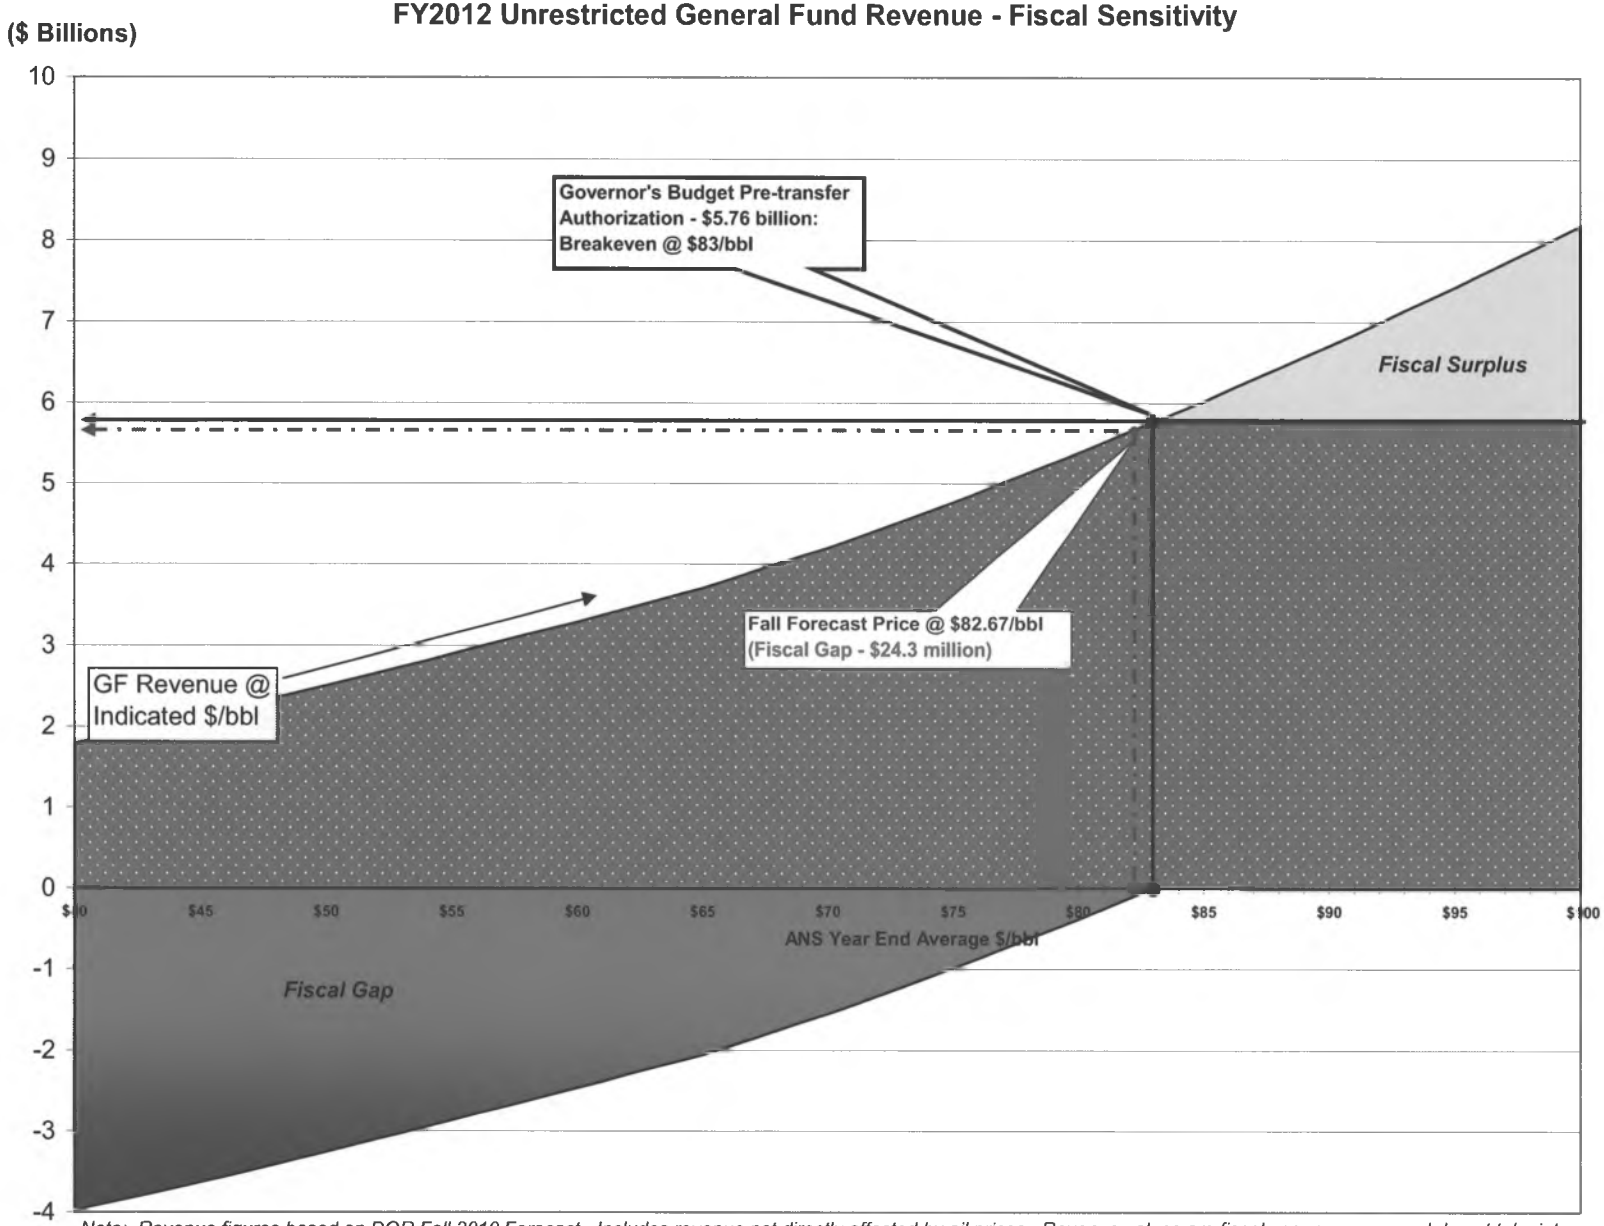
Unrestricted General Fund Appropriations				6,606.8				6,894.0
Years of Reserves (Reserves/UGF Appropriations)				2.16				2.21

The Value of Reserves

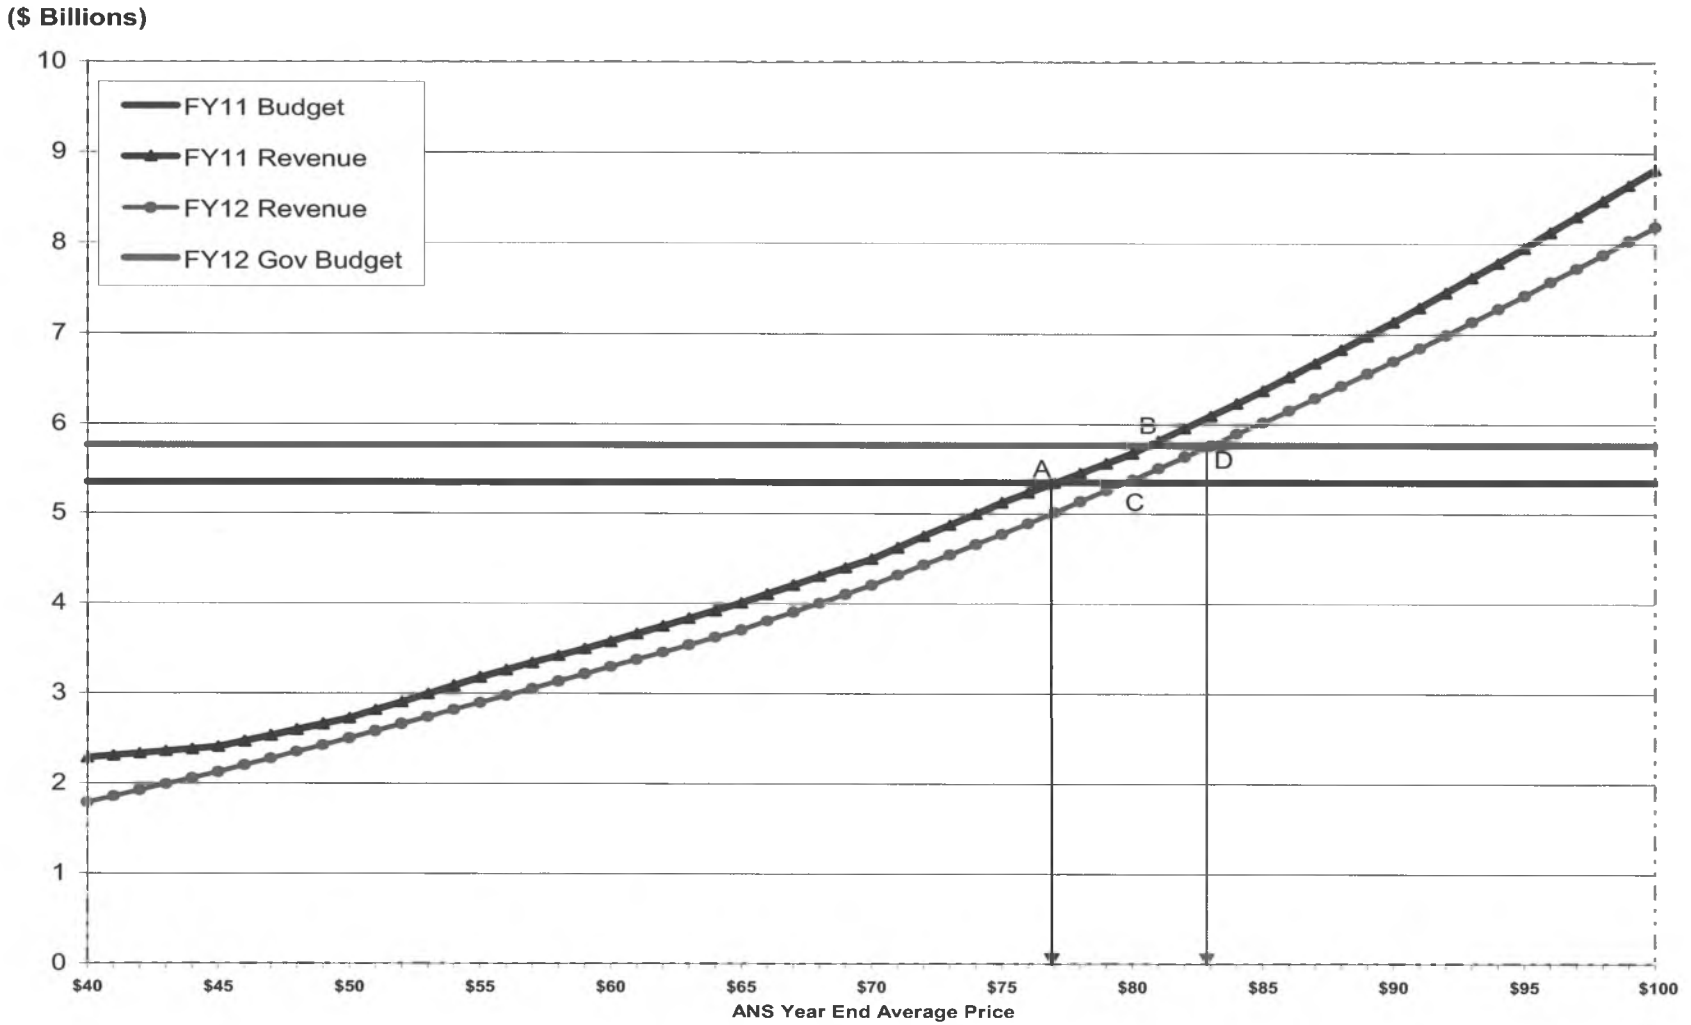


- Provide a certain level of comfort for the longer term
  - There is time to react, but not as much as many may believe
- Provide breathing room in the FY12 budget process

FY2011 Unrestricted General Fund Revenue - Fiscal Sensitivity

Note: Revenue figures based on DOR Fall 2010 Forecast. Includes revenue not directly affected by oil prices. Revenue values are fiscal year averages and do not take into account monthly price volatility that could affect the total revenue received.

FY2012 Unrestricted General Fund Revenue - Fiscal Sensitivity

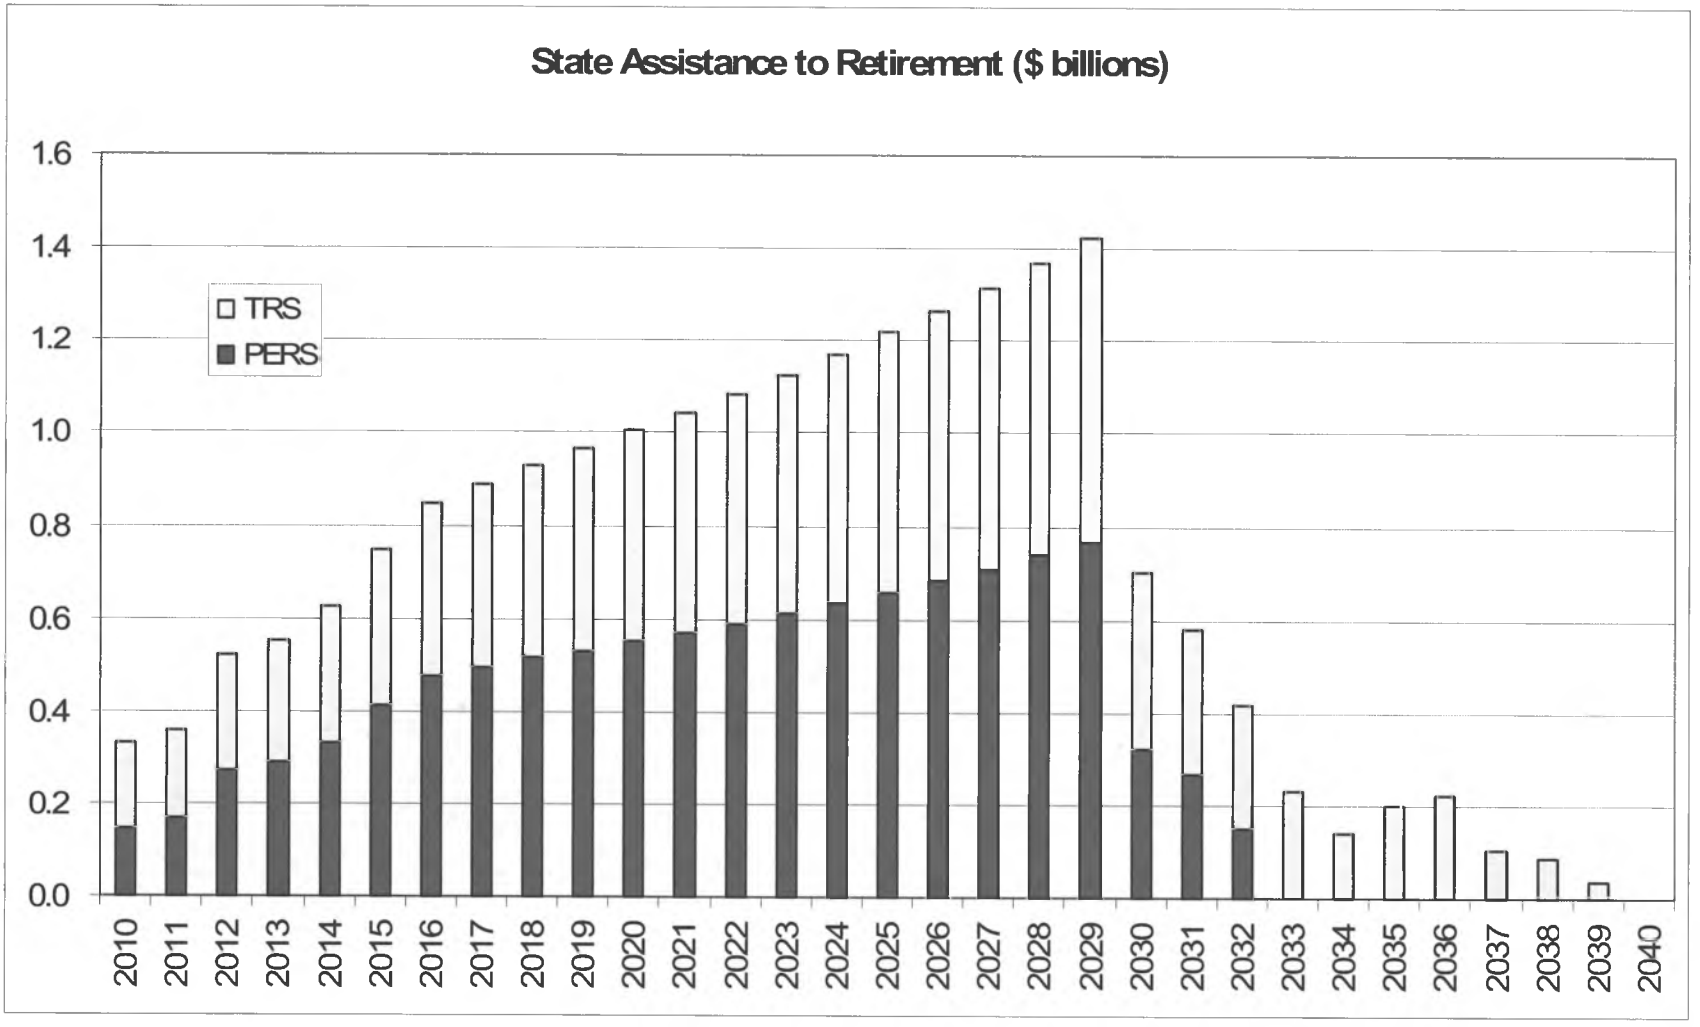


Note: Revenue figures based on DOR Fall 2010 Forecast. Includes revenue not directly affected by oil prices. Revenue values are fiscal year averages and do not take into account monthly price volatility that could affect the total revenue received.

Key Points

- An increase in spending shifts the expenditure line upward
- Declining oil production, lower tax rates, additional tax credits and/or declining profitability shifts the revenue curve downward
- A $1 change in oil price produces a $100 million change in revenue—movement along a revenue curve
- As the expenditure line shifts upward, the revenue curve shifts downward, or oil prices decline, the breakeven price of oil rises--reserves can vanish very quickly

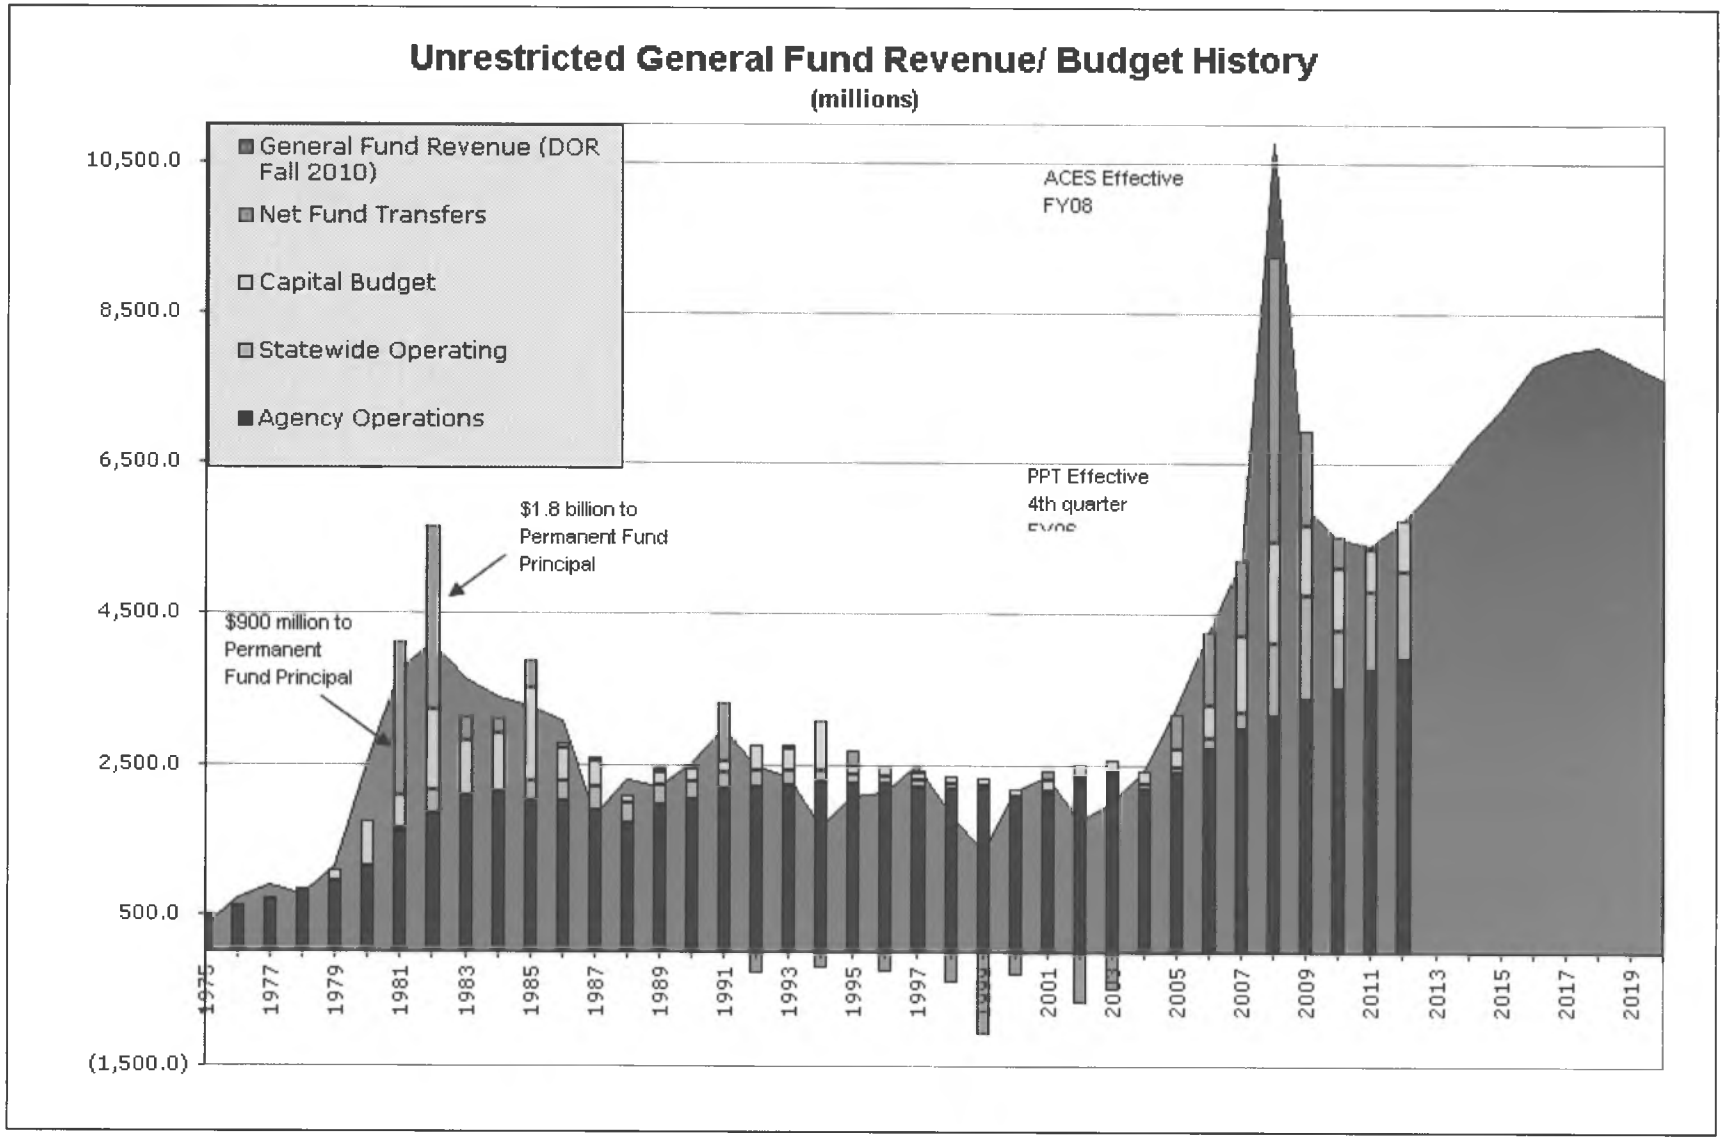
FY11/12 General Fund - Fiscal Sensitivity Overlay



Note: Revenue figures from DOR Fall 2010 Forecast. Figures include sources not directly affected by oil prices. Budget Authorization corresponds with "Pre-transfer" authorization on Fiscal Summary.

Why the Revenue Curve Shifts Downward Over Time

- Production decline
  - Typically, greatest impact in past years. But the forecast for FY12 production is *up* 1%
- Taxes
  - Rates
  - Credits—not the transferable credits—the net-out credits that we can't see
- Lower profitability



Why Expenditures Shift Upward Over Time

- **Formula programs** seemingly inexhaustible demand
- **Incremental budget process** if you simply review increments, the budget will always increase
- **Debt service and tax credits** consequences of past legislation
- **Retirement Costs** along with a review of oil tax rates, one of the big issues facing the legislature this year

The Fourth Element of Budgeting—A Plan

- FY12 looks like a good year—the Governor's budget is balanced and reserves are sufficient to handle anything but a major change in circumstances
- But what about next year? And the year after that?

Wrap Up

- The fiscal situation is strong for FY12
  - Balanced budget
  - Solid reserves
- The future is less rosy
  - Downward shifts in the revenue curve
  - Upward shifts in the expenditure curve
  - Retirement system unfunded liability
  - Reserves can vanish as quickly as they were built up

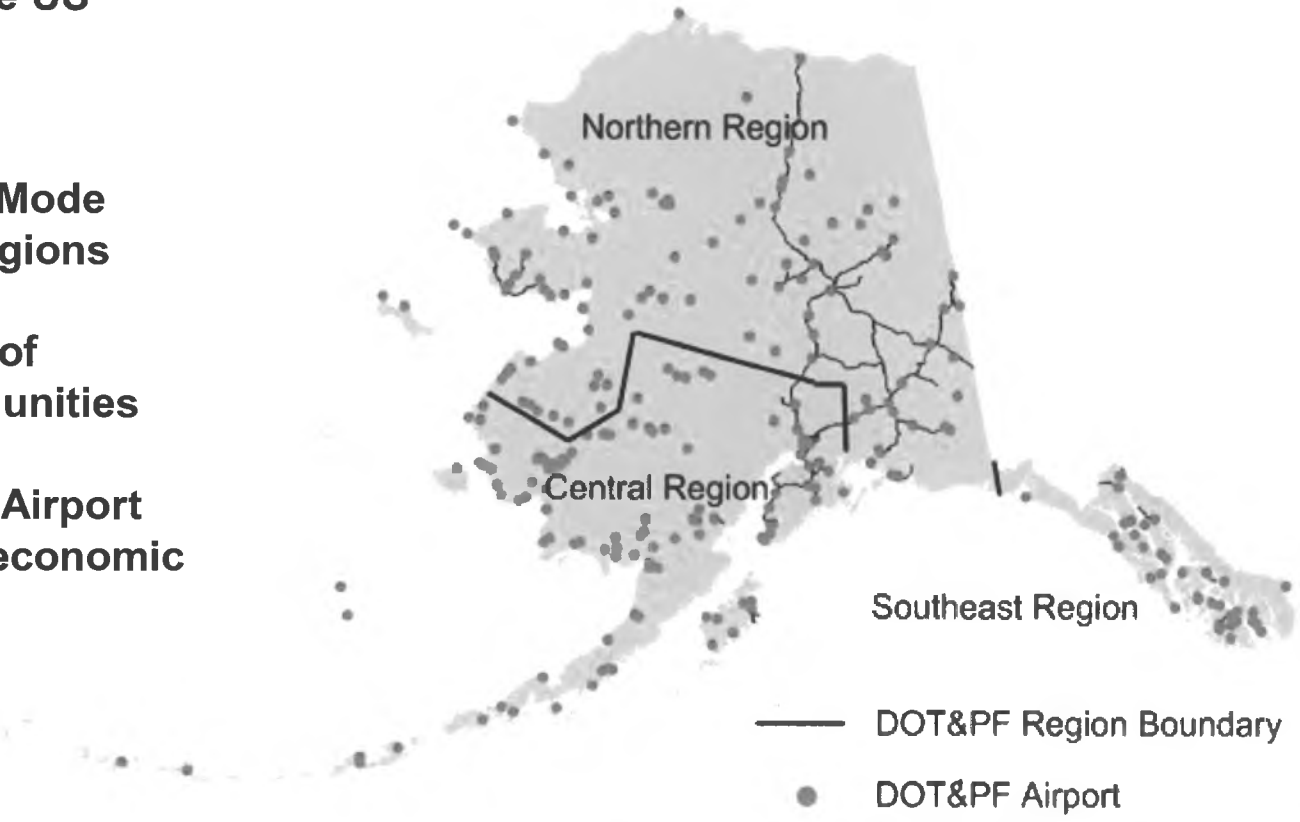
2/02/11 PRESENTATION BY DEPARTMENT OF TRANSPORTATION & PUBLIC FACILITIES: STATEWIDE TRANSPORTATION ECONOMIC INDICATORS

<TARGET><BILL></BILL><SUBJECT>2-02-11 PRESENTATION BY DEPARTMENT OF TRANSPORTATION and PUBLIC FACILITIES STATEWIDE TRANSPORTATION ECONOMIC INDICATORS</SUBJECT><COMM>SFIN27</COMM></TARGET>

Alaska Department of Transportation & Public Facilities

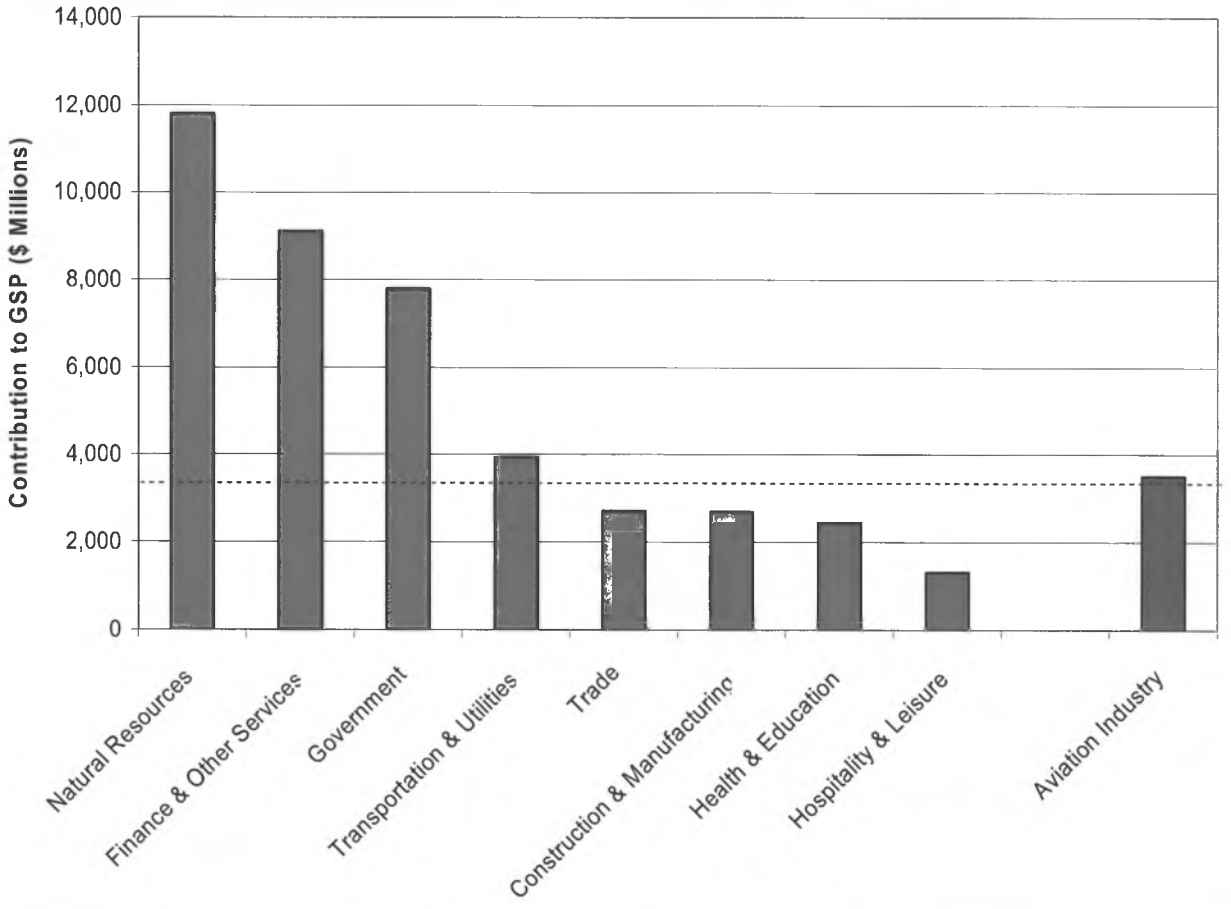
Aviation – Economic Engine for Alaska



Deputy Commissioner – Aviation
Steven D. Hatter

February 2, 2011

Alaska's Airports & Aviation



- Largest System in the US
- 255 State Airports
- Main Transportation Mode for all citizens and regions
- Airports only means of access for 169 communities
- Alaska International Airport System (AIAS) is an economic engine for the state

Aviation Industry Economic Contribution to Alaska

- 47,000 aviation jobs statewide in both rural and urban areas
- 5th largest contributor to Alaska's Gross State Product (GSP)
- Contributes $3.5B to $44B economy

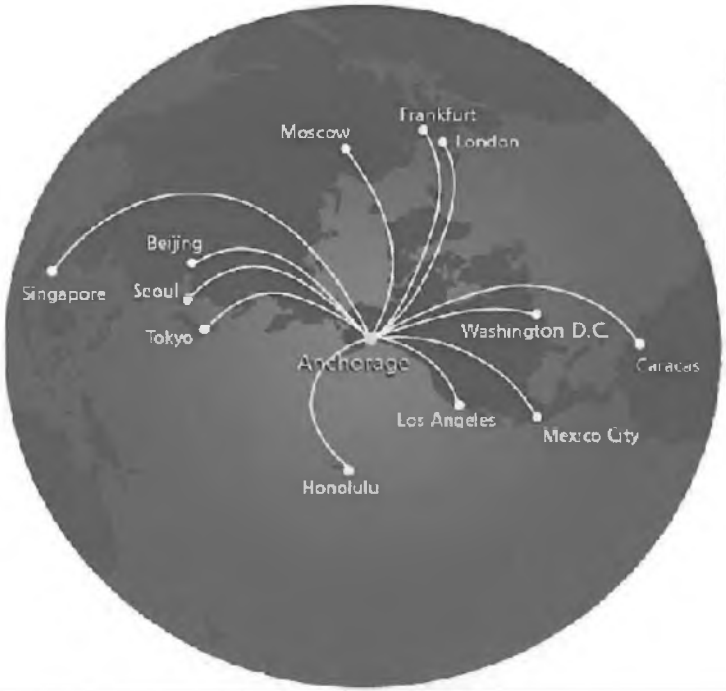
AIAS Overview

- Alaska's Major Airports are State Owned Assets
  - Established 1961
  - Comprised of Ted Stevens Anchorage International and Fairbanks International Airports
- Operate as a Single Business Enterprise
  - Shared Assets & Resources
- Serve as regional hubs for intrastate mobility
- Serve as Trans-Pacific hub for international cargo

AIAS Presentation Points

- AIAS Advantages and Strengths
- AIAS Finances, Statistics and Trends
- AIAS Close Watch Topics
  - Fuel Supply and Pricing
  - Federal Funding and Regulatory Trends
- AIAS Successes
- AIAS Future



AIAS Advantages and Strengths

Advantage: Location

AIAS Offers Unmatched Access to the World's Markets

	Nautical Miles
Bejing	3,431
Seoul	3,286
Singapore	5,792
Tokyo	2,983
Frankfurt	4,064
London	3,902
Moscow	3,778
Honolulu	2,413
Los Angeles	2,037
Washington DC	2,916
Caracas	4,646
Mexico City	3,281

AIAS is 9.5 hours to 90% of the Industrialized Northern Hemisphere

+/- 10 minutes diversion Trans-Pac

Advantage: Payload v. Range

HKG - ORD
Distance = 7,794 NM
Payload = 134,500 KG
Revenue = $228,650*

HKG - ANC - ORD
Distance = 7,927 NM
Payload = 246,900 KG
Revenue = 419,730*

Fairbanks (FAI)
Anchorage (ANC)
Chicago (ORD)
Hong Kong (HKG)

Increased Revenue with ANC stop $191,080

$191,080 X 5 days a week X 52 weeks = $49,680,800 additional revenue annually

* $2/kg +85% load factor

AIAS Cargo Traffic Standings

(Importance of AIAS to National and World Economy)

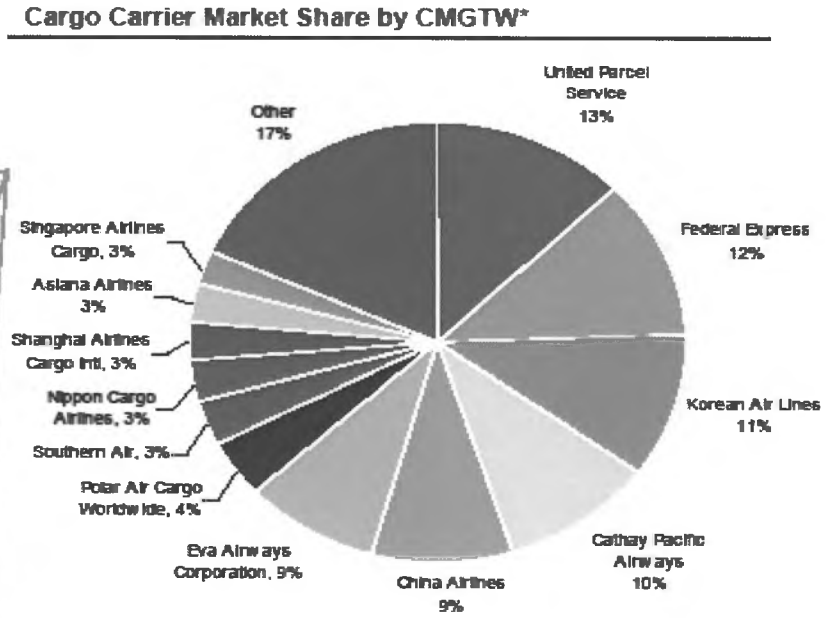
ACI World Airport Traffic ("The Top 30 Airports 2009 – Cargo Traffic" and "North American Airports Traffic 2009").



Strength: Diverse Customer Base

No Single Concentration of Cargo Carriers

- International cargo hub for FedEx, UPS, Korean Air, Nippon, China Airlines, Polar Air Cargo and Atlas Air
- Cargo-related revenues account for nearly two-thirds of AIAS revenues

* Totals may not add due to rounding

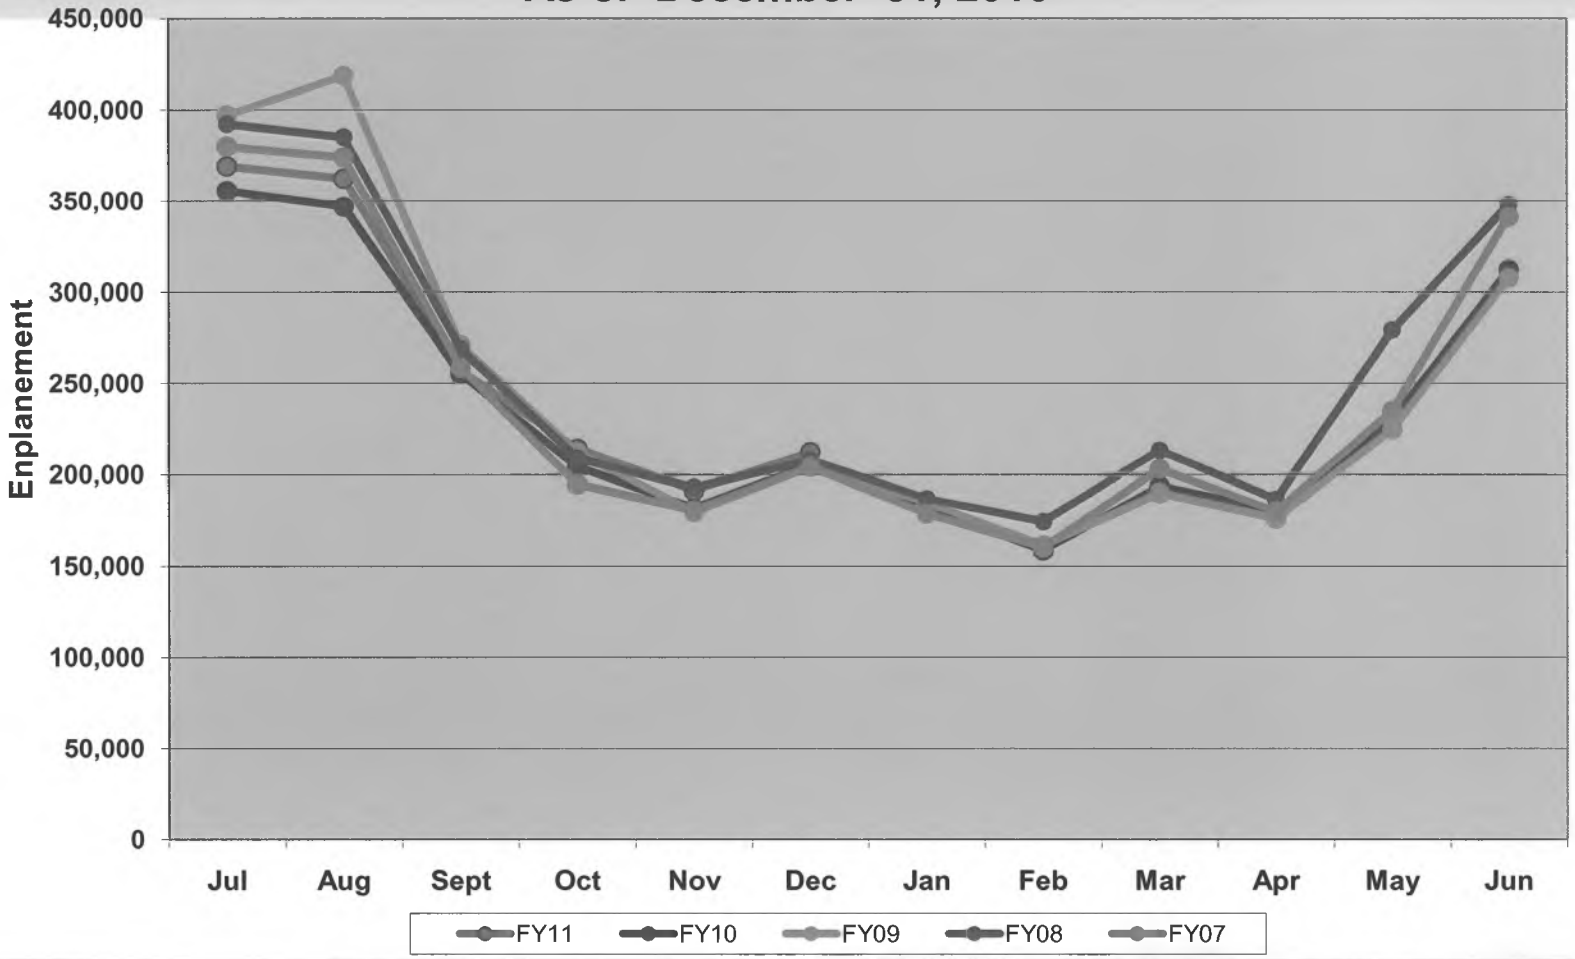
Strength: Large Cargo Anchor Tenants

UPS

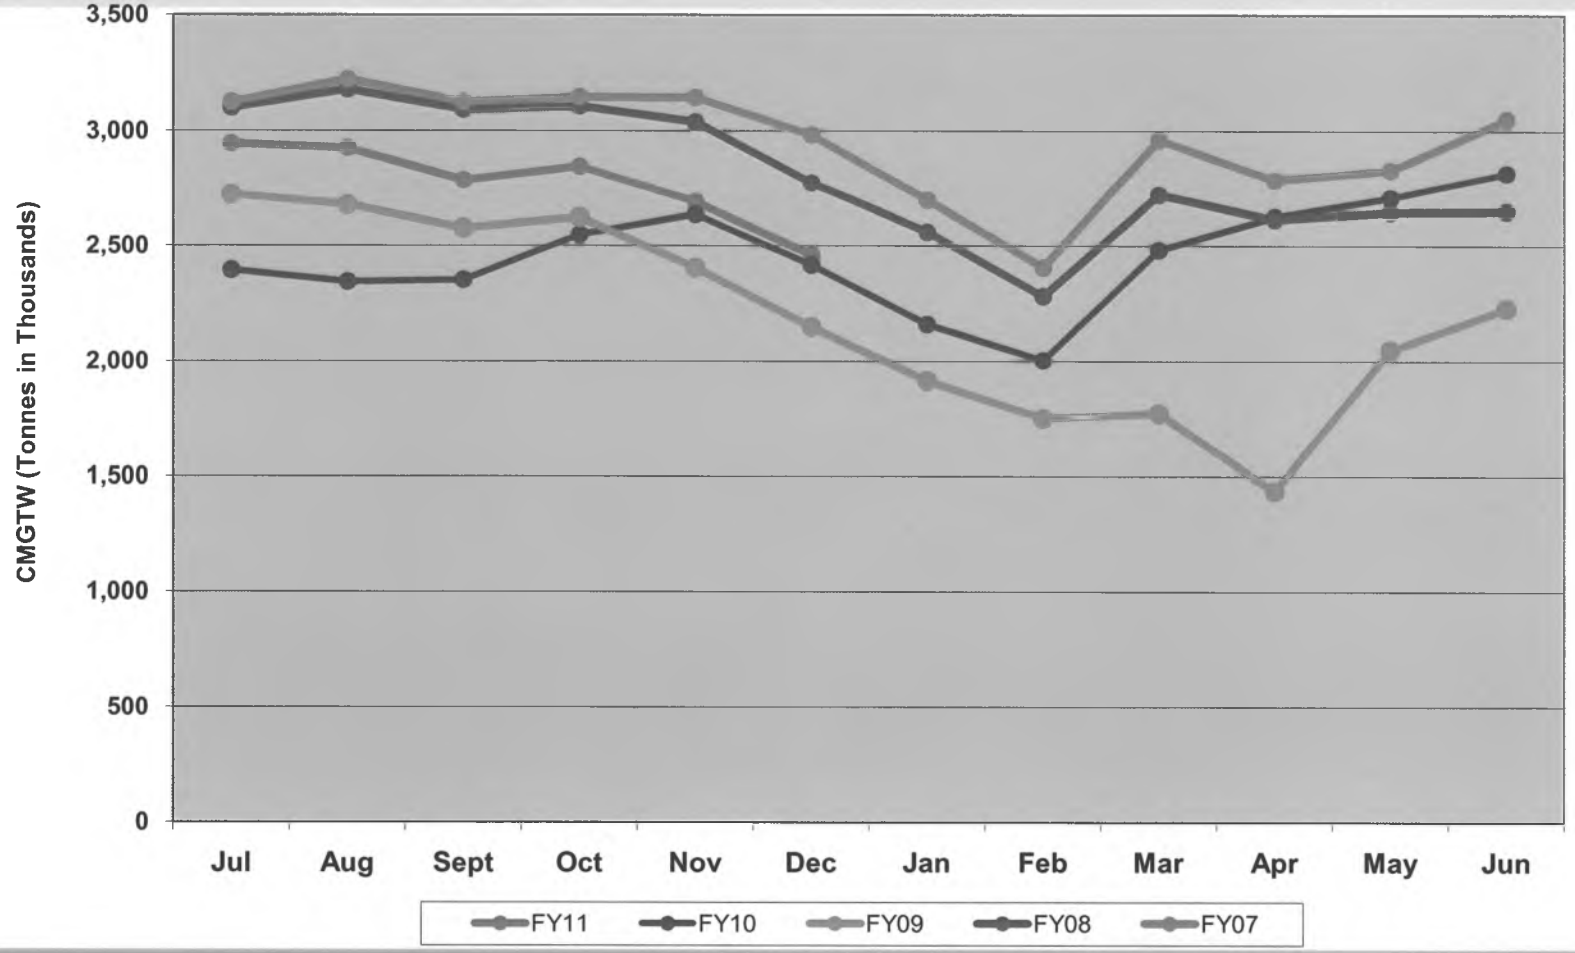
- Operates 11 wide-body aprons in a 90,000 sq.ft. facility
- Established ANC as pilot domicile in 2007
- Opened 27,000 sq.ft. pilot training facility in 2008 – $35M investment

FedEx

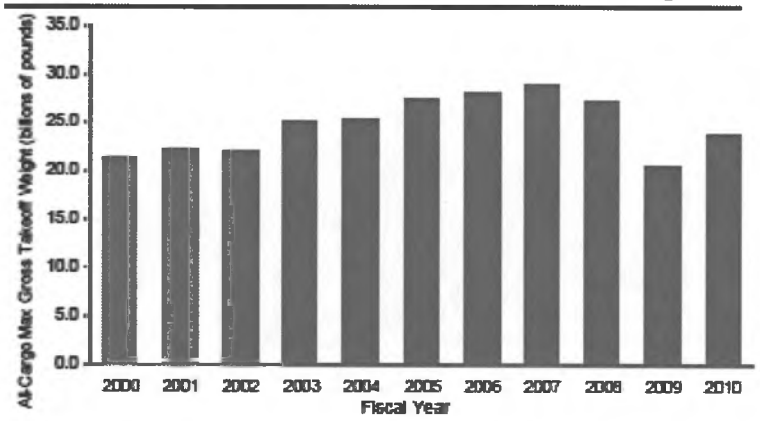
- Invested in excess of $150M in ANC facilities
- ANC serves as primary hub for
- Completed multi-phased expansion of package sorting facility in 2007



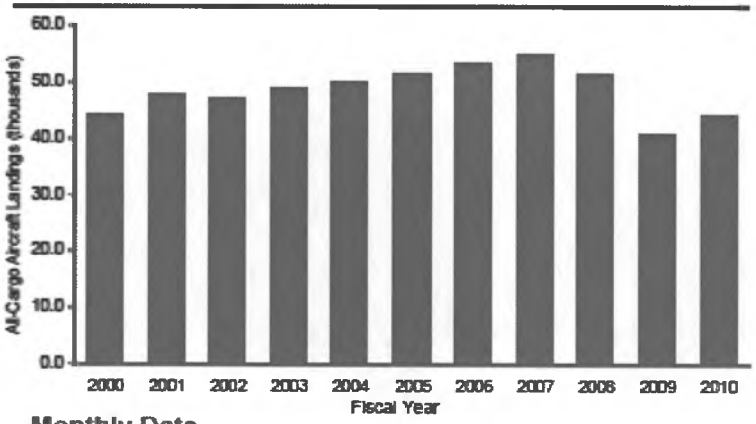
AIAS Finances, Statistics and Trends



AIAS FY07 - FY11 YTD
Monthly Enplanements
As of December 31, 2010

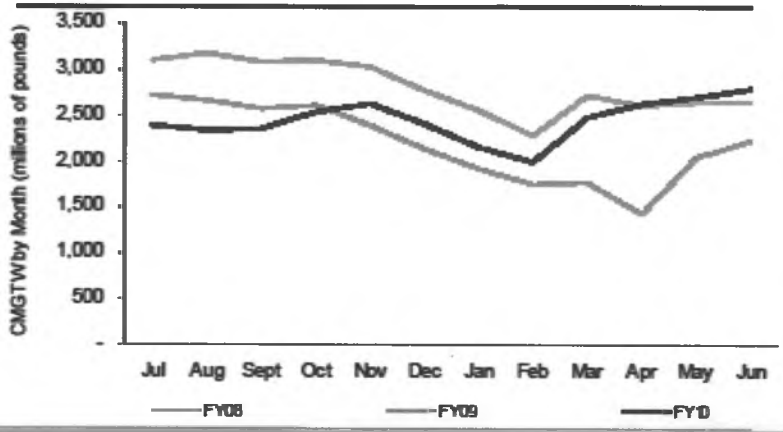


AIAS FY07 - FY11 YTD
Monthly Combined Cargo - Pax CMGTW
As of December 31, 2010



Cargo Operations

All-Cargo Aircraft Certified Max Gross Takeoff Weight



All-Cargo Aircraft Landings

- Positive trend is developing
  - All-cargo certified maximum gross takeoff weight increased 15.6% in FY 2010
  - All-cargo aircraft landings increased 8.8% in FY 2010
  - February to June increase in 2010 was 29.4%, 15% higher than the seasonal increase seen in FY06 – FY09

Monthly Data

Source: Alaska International Airports System and Federal Aviation Administration.

Impact of Global Economic Downturn

Where we were (year-over-year)

- FY 09-08
  - Total landings ↓ 13%
  - Cargo/Pax (CMGTW) ↓ 23%
  - Pax Enplanements ↓ 4%
  - Fuel Consumption ↓ 28%

Where we are (year-over-year)

- FY 10-09
  - Total landings ↑ 1.3%
  - Cargo/Pax (CMGTW) ↑ 12%
  - Pax Enplanements ↓ 4%
  - Fuel Consumption ↑ 18%

AIAS Close Watch Topics

Fuel

- **Challenge:**
  - Shortage caused by swift and unexpected recovery in air cargo market; carriers under nominated, providers under produced.
  - Air carriers overflew AK and looked for additional providers.
- **Solution:**
  - State held several meetings between all parties to increase awareness and facilitate communication.
  - Additional suppliers: Delta Western, Cosmo, Trans Montagne (pending). DEC processed requests in timely manner.
  - Supply adequate for foreseeable future with additional providers
  - Alaska Fuel Supply Consortium (AFSC) discussing additional storage options

Federal Funding and Regulation

- Carefully watching trends
- Decreases in FAA Airport Improvement Program (AIP) funding
- Increasing regulatory oversight often means unfunded mandates

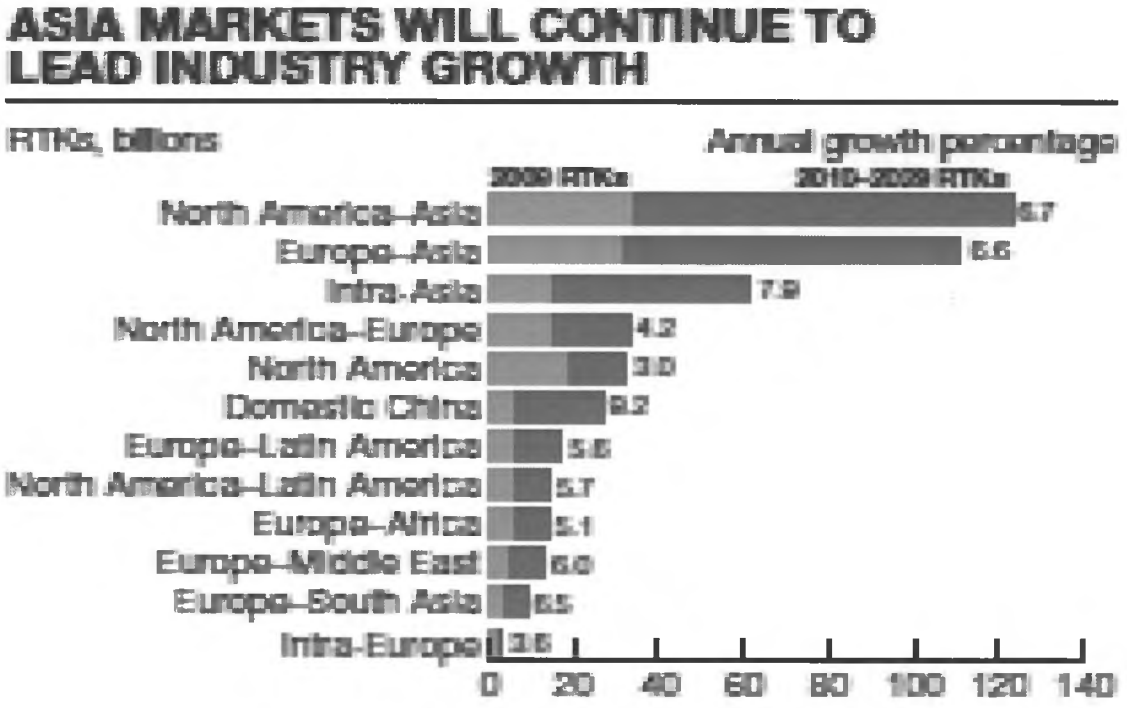
AIAS Successes

AIAS Response to Recession

Remained Competitive:

- **Proactively controlled & reduced operating costs early**
- **Worked with airlines to scale-back capital projects**
- **Managed airport debt for optimal stability**
- **Reduced Rates & Fees**
- **Conducted 3rd Party Cargo Analysis of Asian Market trends**
- **Marketed favorable regulations – Cargo Transfer Authority**

AIAS Recent (2010) Successes



- Alaska International Cargo Summit held in Anchorage, August 2010. 18 international cargo carriers attended meetings that included information on Alaska's unique air cargo transfer rights.
- Japan Airlines winter charters from Tokyo to Fairbanks increased to 15 flights – up from 10 flights the previous year.
- Frontier Airlines added seasonal non-stop service in 2010 from Denver to FAI.
- Jet Blue seasonal scheduled service to start May 24 through September 6, 2011; Anchorage – Long Beach daily flight.
- Edelweiss seasonal scheduled service to begin May 30 through September 12, 2011; Zurich – Whitehorse – Anchorage weekly flight.
- Cargolux cargo flights returned in October 2010, 10-14 stops a week.

AIAS Future

Asian Market Projected to Lead Growth

Source: Boeing World Air Cargo Forecast 2010-2011

Cargo Summit & Follow On

- Video from Summer 2010
- August, 2010: Air Cargo Summit – attended by 18 international cargo carriers
- January, 2011: Asia Trip – visited with all major international cargo carriers
- August, 2011: 2nd Annual Cargo Summit – expect large attendance and will include more groups

Strategic Planning & Marketing

- AIAS System Plan
  - Business Plan
  - Strategic Plan
  - Organizational Study
  - Marketing Plans / Branding
- Proactive Communications
  - Work with CVB's and EDC's to strategize opportunities
  - Attend pax and cargo conferences to promote AIAS

Thank you!

Deputy Commissioner – Aviation
Steven D. Hatter

Back-up Slides

Advantage: Location

Strategic Importance of AIAS to Cargo Carriers

AIAS Offers Air Carriers Cost and Operational Efficiencies

- Strategic link to Asia and the Pacific Rim
- AIAS is a major sorting and transfer hub for domestic and international carriers
- Favorable Federal Legislation specific to Alaska
- Ability to accommodate state-of-the-art Design Group VI (VLA) 747-800 / A380F aircrafts
- Economics favor refueling at AIAS with heavier payload than bypassing AIAS with lighter payload

Market	Nautical Miles (ANC)	Flight time from ANC	Nautical Miles (FAI)	Flight Time from FAI

February 11, 2011

Members of Senate Finance Committee:

Thank you for the opportunity for the Alaska Railroad Corporation (ARRC) to present to your committee on February 2nd an overview of our financial condition and outlook for the future.

At that hearing, Senator Stedman and Senator Hoffman requested follow-up information related to some of the topics discussed. In response, I offer the following:

- Financial Highlights 2005 – 2010
    - Attachment #1 provides a six-year history of ARRC financial condition, earnings, and cash flow statements in a condensed fashion. Please note that 2010 numbers are still preliminary/unaudited; we anticipate completion of our annual financial audit by late March. Greater detail on previous audits can be found in the annual report section of our website (www.AlaskaRailroad.com).
- ARRC Barge Business Composition 2001 – 2010
    - Attachment #2 shows the changes in tonnage related to oil-field activity shipped on our rail barge over the last ten years.
- Breakdown of 2009 Position Eliminations
    - As part of a corporate initiative to reduce our cost structure to address declining key revenue streams, ARRC reduced staffing markedly in 2008 and 2009. Specific statistics:
    - Positions eliminated: 192
        - Year-round positions: 115
        - Seasonal positions: 77
    - Number of layoffs (included within total positions eliminated): 57
        - Anchorage-based staff: 46
        - Fairbanks-based staff: 8
        - Other areas: 3

Please contact me at 265-2516 or Wendy Lindskoog, VP of Corporate Affairs, at 265-2498 if you have any further follow-up questions or desire more detailed information on these or other topics.

Regards,

Bill O'Leary

Report to the State of Alaska

December 2010

ARRC President: A Look Ahead

The Alaska Railroad Corporation Act (AS 42.40.290) requires the Alaska Railroad Board of Directors to annually adopt a long-range capital improvement and program plan and to forward that plan to the governor and legislature. I am pleased to present the railroad's capital plan for 2011 through 2015.

I joined the Alaska Railroad Corporation (ARRC) as the President and CEO in September 2010 and already I appreciate the railroad's significant role in the state's history and its future. While new to the Alaska Railroad, I have spent 37 years in the national and international rail industry. Through that experience I understand the importance of communicating and working with local government leaders. This report begins my dialogue with you.

CHRISTOPHER AADNESEN
PRESIDENT & CEO

The 2010 business year sets the stage for the railroad's outlook. We will emerge from 2010 better than expected even though our largest freight commodity, petroleum, underperformed based on budget forecasts. While rail passenger numbers are down from the peak a couple of years ago, 2010 passenger service revenue surpassed revenue expectations. Gravel and trailer/container businesses were both strong, and export coal volumes set another record year. Real estate lease and permit revenue continued steady growth. Incremental revenue growth coupled with tight expense control yielded total unaudited revenues at $174.2 million, total expense at $160.5 million, with corporate net income forecast to be $13.7 million. Audited results will true these numbers up by April 1, 2011.

Railroaders marked many significant accomplishments in 2010. On the transportation side, we developed a method to move export coal trains over Grandview Pass with a single train rather than breaking the train into several sections. This approach offered measurable safety gains and more efficient operations that benefit our customers and our bottom line. We also increased the length of our export coal trains to 75 cars to better serve Usibelli Coal Mine as it increases its capacity to meet demands of the growing export market.

The railroad also continued core infrastructure investments in 2010. Crews installed 43 additional miles of continuous welded rail and replaced 50,000 crossties. We completed important track realignment and retaining wall work in Healy Canyon and constructed bridge improvements along the system. Federal Stimulus funding accelerated rehabilitation work on the Anchorage Historic Depot and made passenger improvements possible at the Seward and Talkeetna depots. Stimulus funds also enabled installation of a Wheel Impact Load Detector to improve the safety of rail operations.

Improving safety was the driver behind another 2010 highlight. July 2010 marked the first time since 1983 that ARRC was allowed to use herbicides as part of an integrated vegetation management program. Without this crucial component to weed control, the Alaska Railroad was failing to live up to Federal Railroad Administration (FRA) safety standards. Thanks to a state-issued herbicide use permit and ARRC's implementation of an her-

ARRC President: A Look Ahead

bicide program on the south end of the rail corridor, the FRA has indicated it may consider suspending previously issued vegetation violations, which could save the railroad millions of dollars in fines.

Charting the course for capital spending over the next five years is a little like looking into a crystal ball. The Alaska and national economies appear to be slowly strengthening but the Alaska Railroad is not out of the woods yet. We are guardedly optimistic that improved Flint Hills Refinery forecasts will pan out. Our five-year revenue estimates hinge largely on this essential customer.

Looking forward, we will continue to improve the Alaska Railroad's safety systems, customer service, and infrastructure. This includes plans to modernize signal and train communication systems and is driven in large part by the Federal mandate to implement Positive Train Control by the end of 2015. We will pursue diversification of our revenue sources, working closely with customers and partners to identify new lines of business.

Renovating the Historic Freight Shed to Leadership Energy & EEnvironmental Design (LEED) standards is a major internally-funded project.

The information in this report provides a high-level snapshot of our long-range capital improvement plan. Particularly as the legislative session begins, I will make myself and my team available to provide a more in-depth look at our operation and our budget through one-on-one meetings, facility tours, or informational committee hearings in Juneau. Please contact our Vice President of Corporate and Government Affairs Wendy Lindskoog if you are interested in any or all of these avenues. You are always invited to stop by my office at our headquarters in Anchorage. I look forward to meeting Alaska's lawmakers and policy makers in the very near future and to working with you all to ensure the continued vitality of the state-owned Alaska Railroad.

AquaMaster herbicide is applied to the Seward Rail Yard in late July 2010.

Best regards,

Chris Aadnesen

President and CEO

Mission, Vision and Values

Alaska Railroad Mission

- Safety... Customer Service... Profitability

Alaska Railroad Vision

"Building a great Railroad across the Greatland."

An important element in fulfilling this vision is ARRC's success since 1996 in qualifying for federal funding...an entitlement afforded the railroad's public status and its passenger service mission. As a result, ARRC has been able to greatly accelerate long overdue mainline maintenance and upgrades.

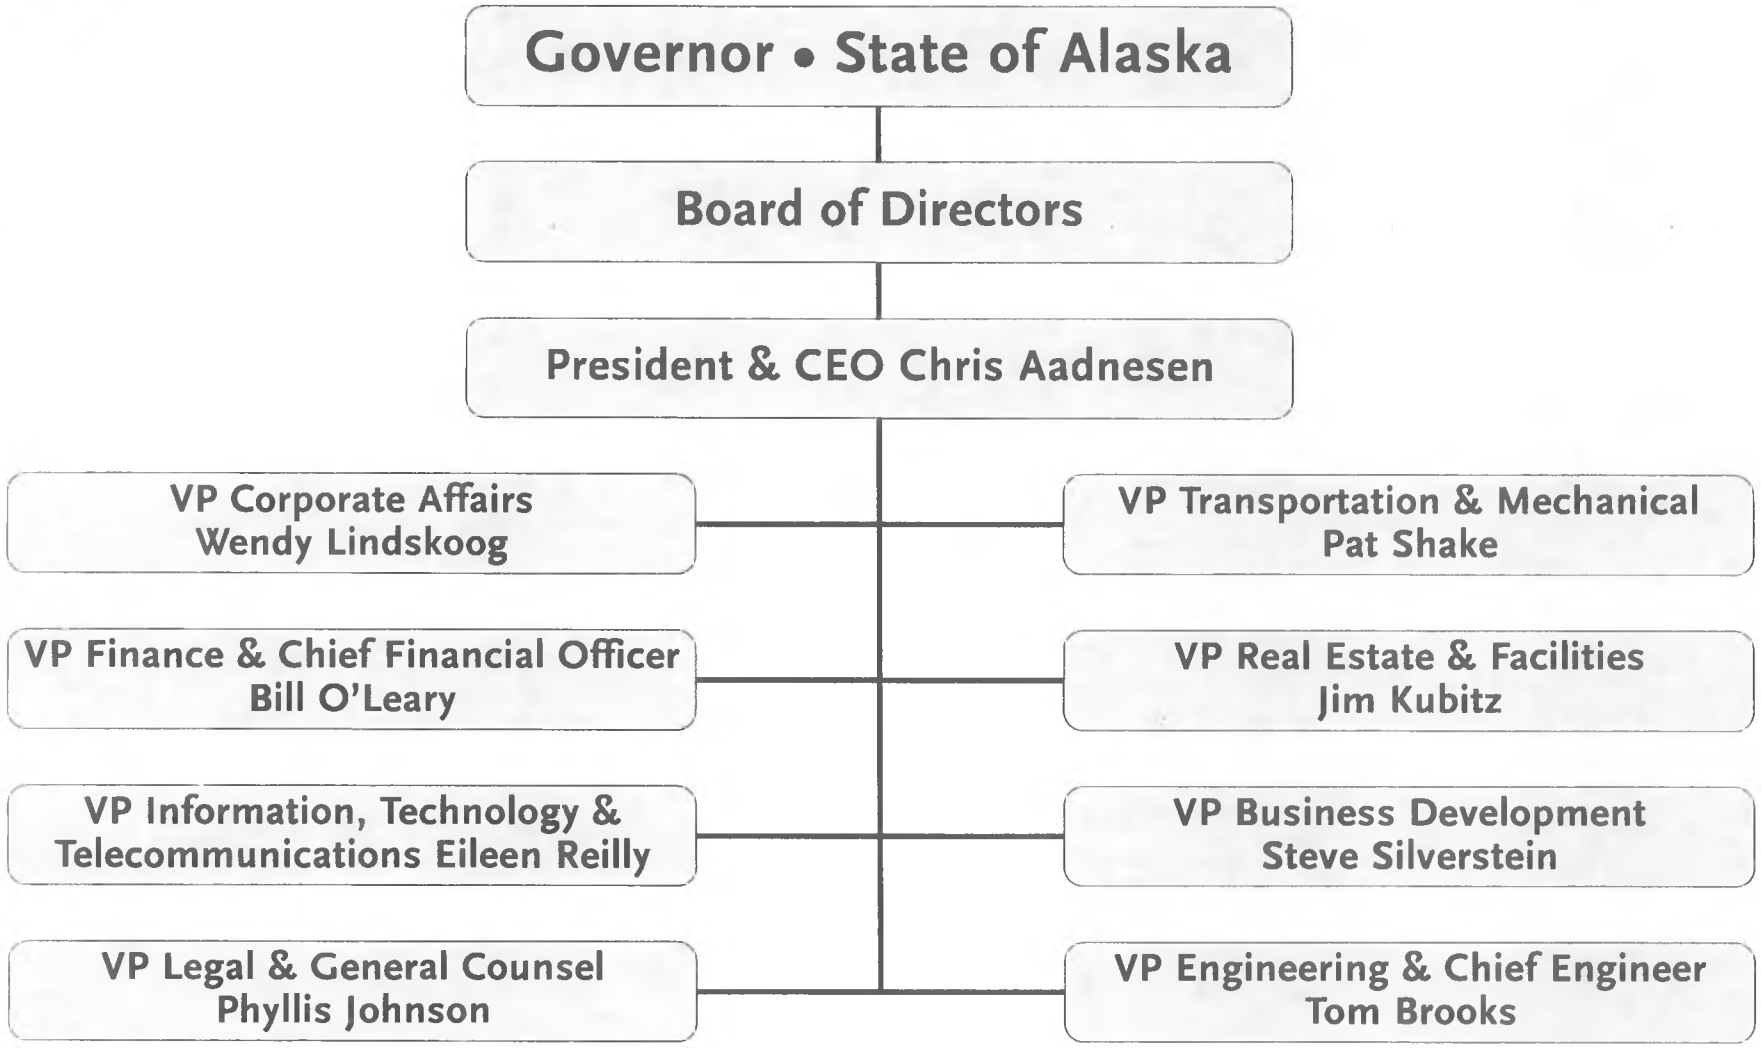
In addition, other federal grants have funded facility improvements, such as intermodal facilities and docks; technology improvements, such as the collision avoidance system; and homeland security grants. These have come to the the Alaska Railroad via recent major federal legislation.

Alaska Railroad Values

We are a values based organization. Values are all about people, not things. We are all about taking care of our people. We believe who you are is as important as what you do. Character counts. Many of our values are embodied in our corporate Code of Conduct. Our fundamental core values consist of integrity, excellence, and service.

As a responsible partner, in order to accomplish the ambitious goals we set out for ourselves in conjunction with those of others along the railbelt, the ARRC must be a safe, secure, customer responsive, financially and environmentally sound, employee friendly corporation. We must provide a stable, reliable foundation that can be counted on to enhance the future economic growth of the state and the municipalities we support. If our corporate foundation is not sound, support for further state growth and development becomes problematic at best. Values and high standards are the building blocks of that foundation.

Alaska Central Railway owners pose in Seward. Circa 1902 to 1907.



Hurricane Bridge under construction. Circa 1921.

Brace work to stiffen the Loop District trestle at mile 48.3. Circa 1948.

Alaska Railroad Organizational Chart

Alaska Railroad Quick Facts

Purchase Price (January 5, 1985)

Paid to federal government	$22.3 million
Start-up costs & contributed capital	$11.9 million
Total Investment-State of Alaska	$34.2 million

Organization (following State purchase)

- Independent corporation owned by State
- Managed by a seven-member board of directors. Position qualifications are spelled out in law, members appointed by the Governor.
- Mandated to be self-sustaining, responsible for all its own financial and legal obligations

Financial Statistics

January 1-December 31, 2010* (estimated & unaudited)

Total Assets	$ 882.0 million
Total Revenues	$ 174.2 million
Total Expenses	$ 160.5 million
Forecasted Net Income (as of October)	$ 13.7 million
Budgeted Net Income	$ 8.4 million

Operating Data

Miles of main line	467
Miles of branch line	54
Miles of yards and sidings	130
Total miles of track	651
Freight cars (owned & leased)	1,160
Passenger cars	47
Locomotives	51

Operating Statistics

January 1-December 31, 2010 (estimated & unaudited)

Passenger ridership	404,000 passengers
Freight tonnage	6.6 million tons

Employees (as of December 2010) (estimated)

Number of year-round employees	657
Average years of service	12.3
Average age	46
Male	541
Female	116

Union Membership

Most of ARRC employees are members in one of five unions:

United Transportation Union	125
Transportation Communication Union	41
International Association of Machinists	63
American Federation of Govt. Employees	254
American Train Dispatchers Department	8

Benefits

- Corporation provides a defined benefit pension plan
- Corporation provides for health and life insurance
- Corporation provides for retiree medical benefits

** ARRC audits are normally complete by March 31.*

ARRC Corporate Overview

Alaska Railroad Corporation

- Railroad built by the federal government (1914 – 1923)
- Purchased by the State of Alaska for $22 million in January 1985
- Self-supporting, State-owned corporation
- Full-service railroad serving ports and communities from the Gulf of Alaska to Interior Alaska
- 469 miles of mainline track
- Full-service passenger and freight railroad serving communities from the Gulf of Alaska to Fairbanks.

2010 Sources of Customer Revenue*

*Preliminary/unaudited

Freight Business

- Moved 6.3 million tons of freight overall in 2010, compared to 6.2 million tons in 2009 (2% increase)
- 2011: Anticipate 3.5% overall freight growth over 2010
- Heavily reliant on three primary commodities

Oilfield pipe

Petroleum

Military

Coal

Logs

Gravel

Interstate Barge

Trailers

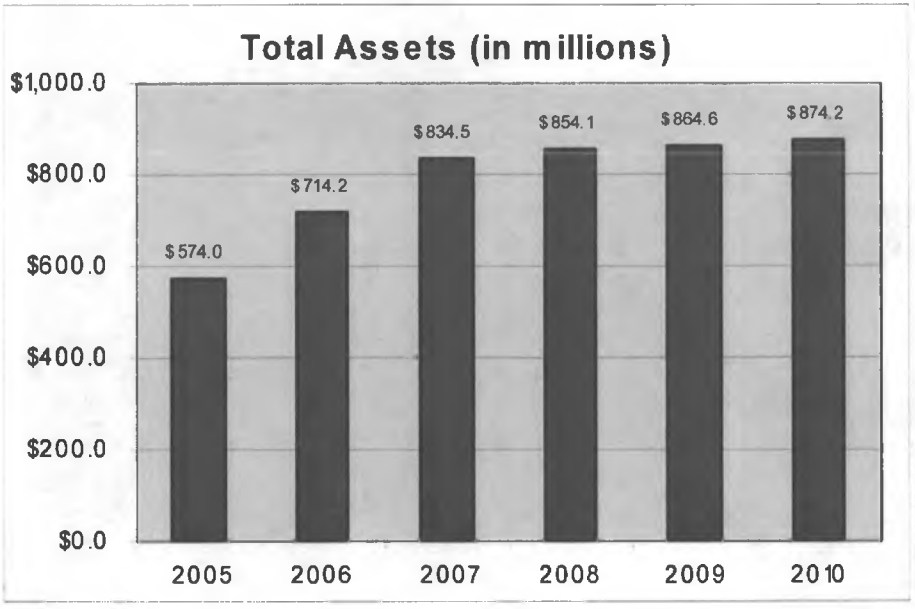
Passenger Business

- Includes both ARRC trains and cruise partner movements
- Moved 405,000 passengers in 2010, compared to 471,000 in 2009 (14% decrease)
- 2011: anticipate 3.2% passenger growth over 2010
- Makes ARRC eligible for Federal Transit Administration formula funds

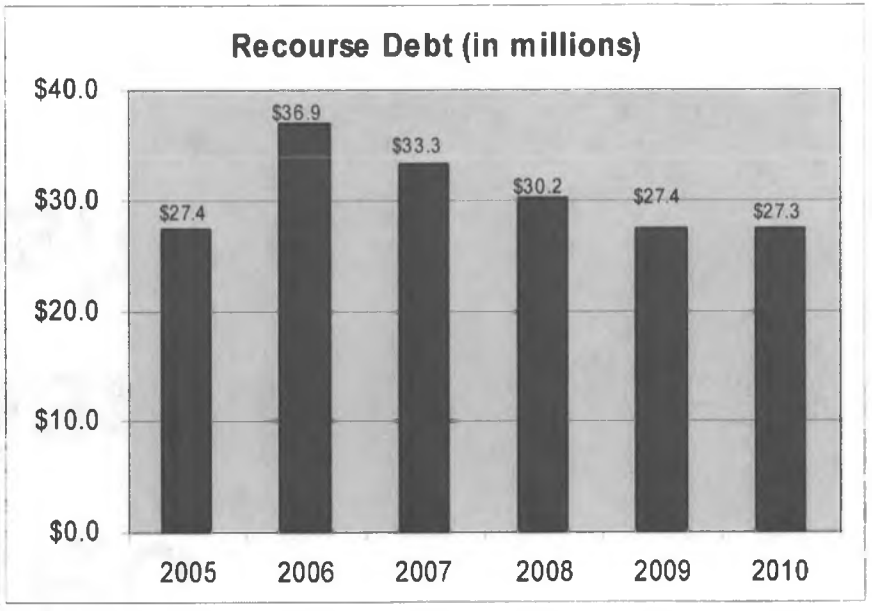
Real Estate

- Property Development
- Leases and Permits
- Dockage and Wharfage
- Facilities Maintenance and Management
- Revenue from Real Estate activities are key component to ARRC being self-sustaining
  - 2010: 69% of corporate net income derived from real estate

Top: Ship Creek basin includes highly valuable leasable land. Bottom: upland from the Seward freight dock is being developed

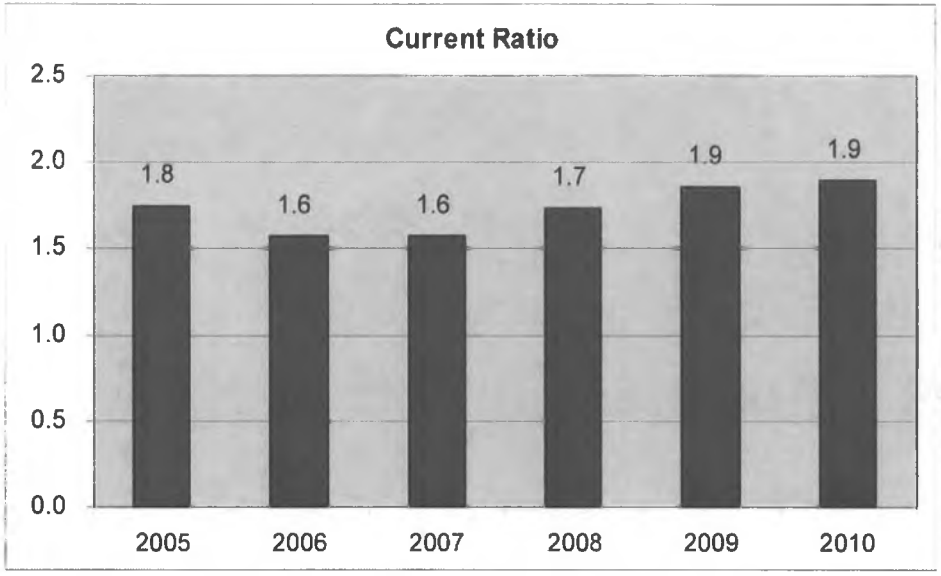


Capital Funding Sources

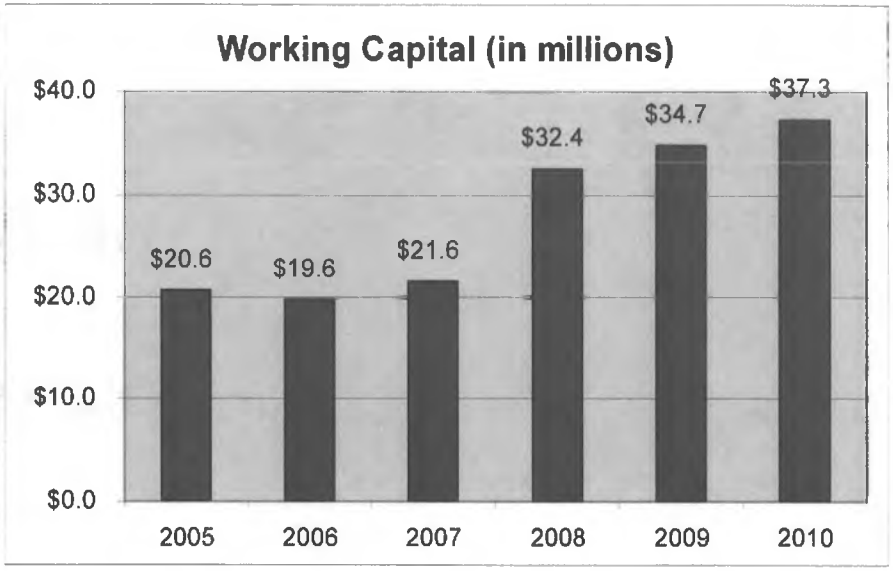


- ARRC Earnings
  - Provides required match for federal funds
  - Essential for freight-related improvements
- USDOT/Federal Transit Administration
  - Formula Funds, Grants, Repayment Source for Bonds
  - 9-20% ARRC Match Required
- Other Federal Agencies – (Dept of Defense, FEMA, FHWA, FRA, Homeland Security, etc)
- Federal funds allocated to ARRC do not affect federal funding for other state transportation projects
- ARRC federal match is *not* from State of Alaska general fund or gas tax...match is solely from ARRC earnings.

ARRC Financial Position



Balance Sheet Highlights
Assets/Debt



Conservative capital structure: At year-end 2010, ARRC's recourse debt is $27.3 million, with a debt to capital ratio of 21%, reflecting relatively modest use of debt instruments.

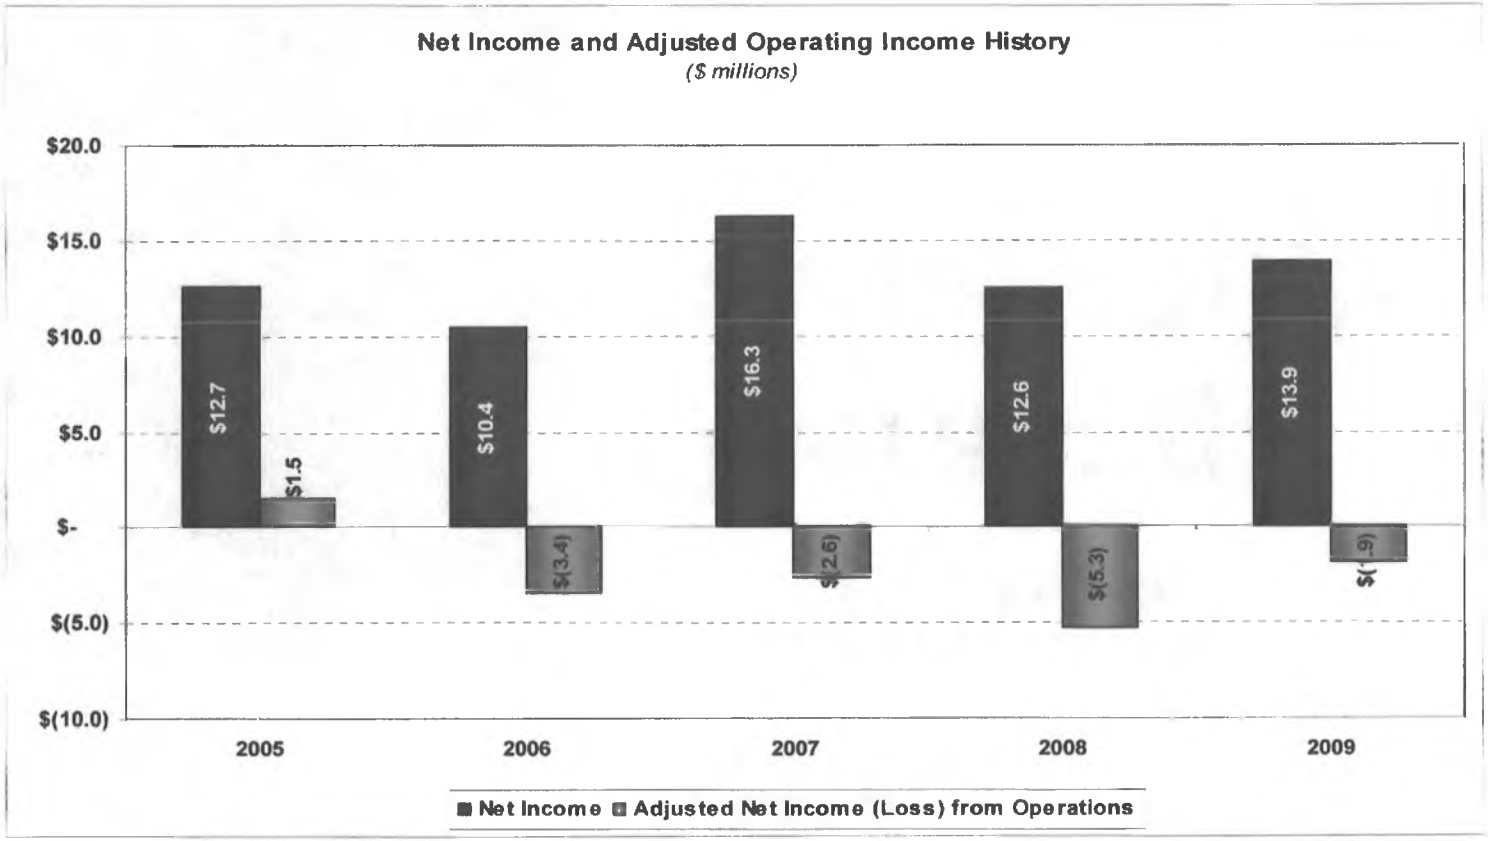
Balance Sheet Highlights
Liquidity

Current ratio is calculated by dividing current assets by current liabilities. The ratio is a measurement of an entity's liquidity and ability to meet current obligations.

Working capital is calculated by subtracting current liabilities from current assets and is a complementary measurement of an entity's liquidity.

ARRC liquidity continues to improve, despite difficult earnings environment.

Benefit Trust Funds



- ARRC is plan sponsor of two benefit trust funds
  - Defined Benefit (DB) pension fund
  - Retiree medical fund

- Both plans financially sound
  - DB pension: 99% funded as of 1/1/10
  - Retiree medical: 118% funded as of 1/1/10

ARRC Earnings/ Operating Budget Outlook

Recent History

- Solid corporate earnings; core train operations run at loss
  - Real estate earnings key to stability and sustainability
  - Non-traditional fund sources important
    - Federal grant reimbursement of operating expenses
    - Section 45G tax credit
- 2009 – Position eliminations/layoffs, significant cost structure reduction

2010 Financial Snapshot

- 2010 Plan – prepare for uncertain future
  - Petroleum haul anticipated to be half that of 2003
  - Passenger: cruise ship redeployments
  - Impact of significant 2009 ARRC personnel downsizing
- Budgeted net earnings: $8.4 million
  - $4.3 million loss from train operations budgeted

2010 Financial Snapshot

- Preliminary 2010 numbers exceed expectations
  - Petroleum performed worse than expected, offset somewhat by Trailer on Flat Car (TOFC) and Gravel hauls
  - Passenger revenue did not fall as far as anticipated
  - Solid expense control offset rising fuel costs
  - Year-end boost from tax credit legislation approved by Congress
- Preliminary, unaudited net earnings: $13.7 million
  - $700,000 loss from train operations
  - Audit to be completed March 2011

Freight & Passenger Revenues
2009 – 2011 (Budget)

	2009 Actuals	2010 Actuals*	2011 Budget
Freight Revenue	$ 84,938,713	$ 84,329,466	$101,311,645
Passenger Revenue	$ 21,455,262	$ 20,782,532	$ 21,464,033
Total	$106,393,975	$105,111,998	$122,775,678

*Preliminary/unaudited

2011 Freight Revenue Budget – Local Coal

Local Coal: Coal moved north from Healy to Clear Air Site, UAF, Aurora Energy, Ft. Wainwright and Eielson AFB

Local Coal	2009	2010	2011 Budget
Short Tons	762,547	791,286	762,954

2011 Freight Revenue Budget – Export Coal

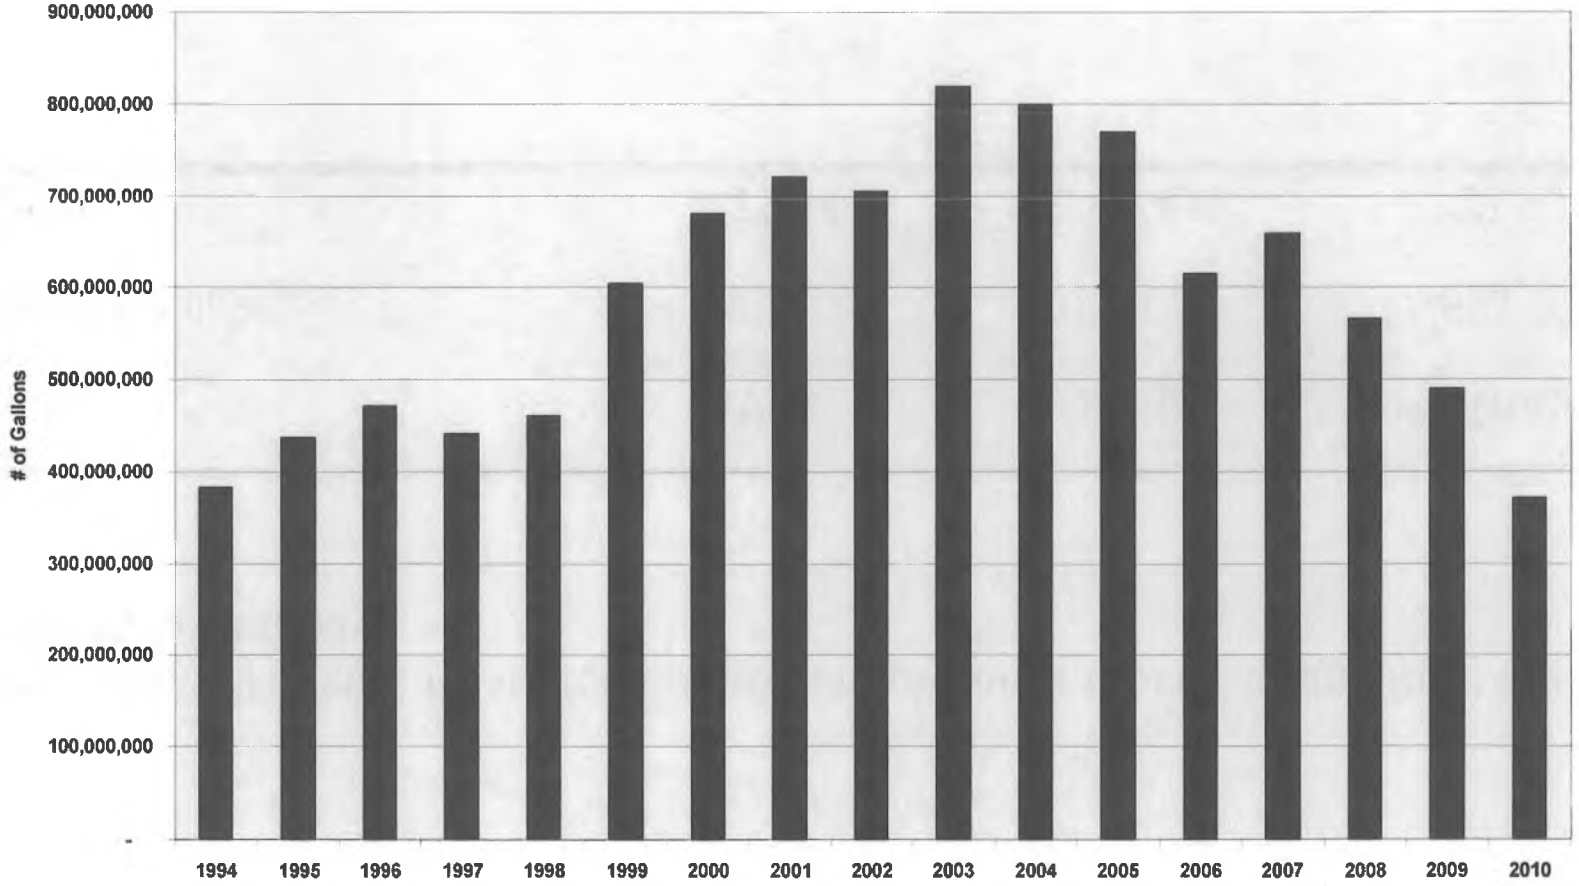
Export coal: Coal moved south from Healy to Seward for export to Chile, Japan and South Korea

Export Coal	2009	2010	2011 Budget
Metric Tonne	801,254	953,329	1,068,670

- *Strong global market – coal prices have increased for 2011*

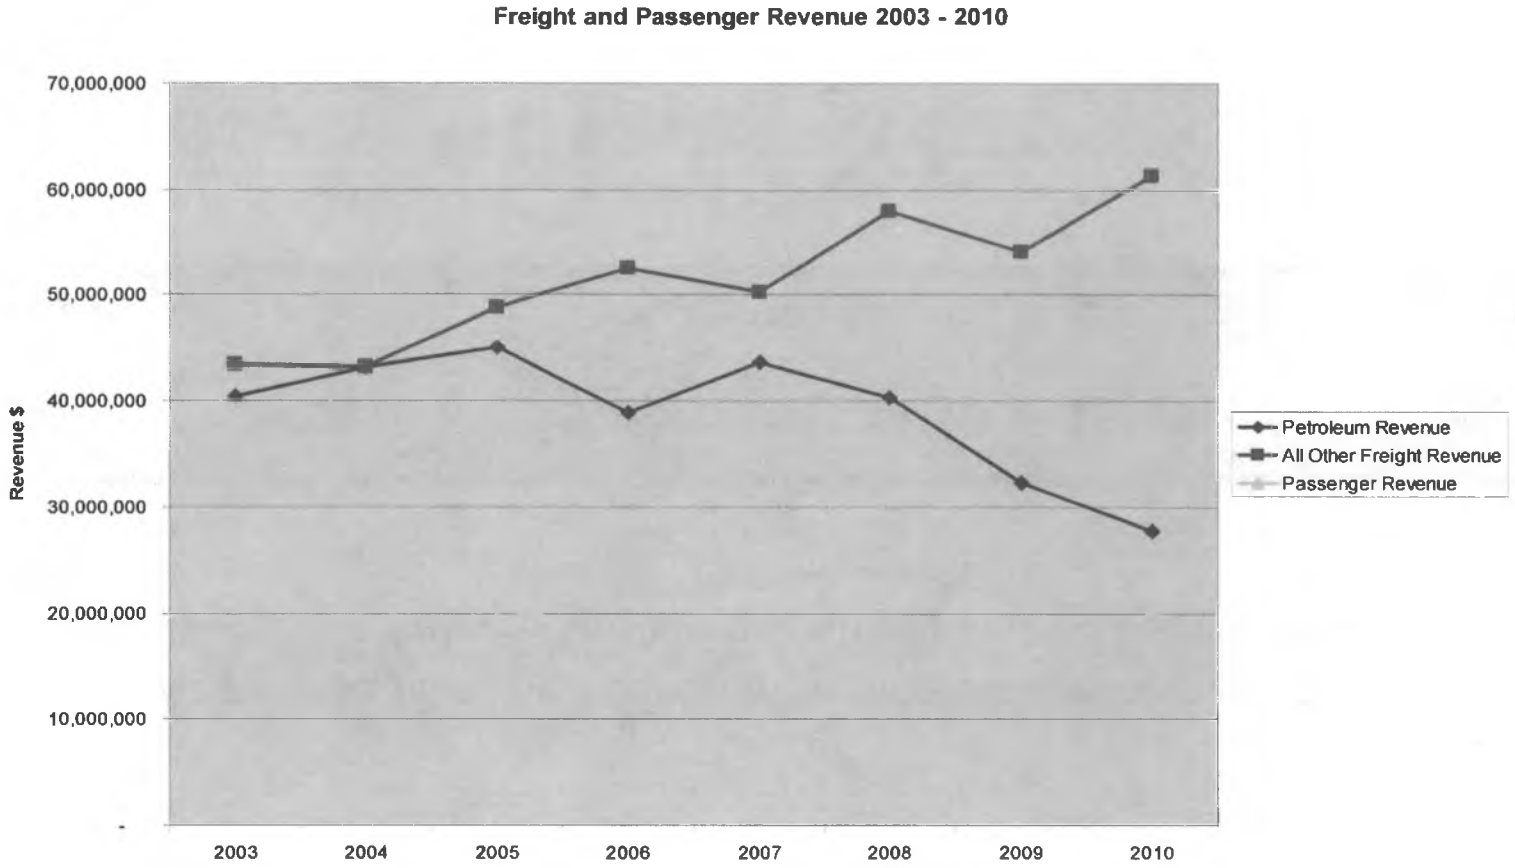
2011 Freight Revenue Budget – TOFC/COFC

TOFC (trailer on flat car) and COFC (container on flat car): Trailers and containers moved between Seward, Anchorage and Fairbanks; also includes southbound movements between Fairbanks and Whittier.



TOFC	2009	2010	2011 Budget
Trailers / Containers	11,690	13,917	13,458

2011 Freight Revenue Budget – Petroleum



Petroleum: Flint Hills Resources petroleum products moved to and from the North Pole Refinery

Petroleum	2009	2010	2011 Budget
Gallons (millions)	488.7	374.2	521.3
Railcars	21,549	16,473	22,901

Petroleum Gallons Shipped 1994 - 2010

Petroleum Revenue vs. Other Freight & Passenger Revenue

2011 Freight Revenue Budget – Gravel

Gravel: Aggregate products moved from Mat-Su Valley to Anchorage by Anchorage Sand & Gravel, Granite Construction, and Quality Asphalt Paving

Gravel	2009	2010	2011 Budget
Short Tons	2,306,075	2,613,900	2,500,000

2011 Freight Revenue Budget – ARMS Barge

ARMS Barge: Railcar shipments to and from Alaska via the Seattle Gateway

ARMS Barge	2009	2010	2011Budget
Railcars	2,090	1,952	1,974
Voyages	53	52	52
Avg Railcars / Voyage	39.4	37.5	38.0

- *Revenue depends heavily on oil and gas activity on the North Slope*

2011 Freight Revenue Budget – CN Barge

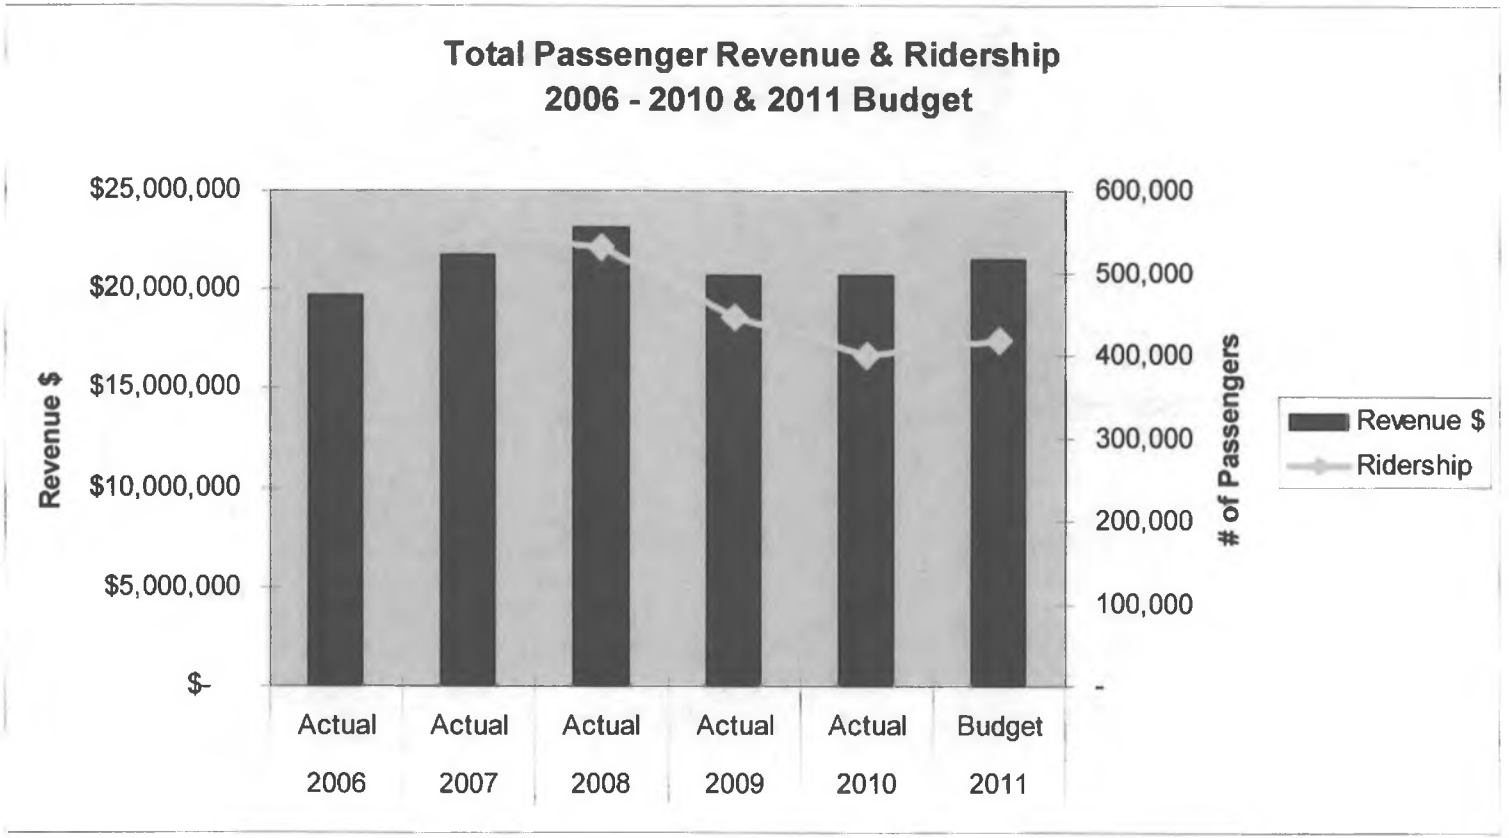
CN Barge: Railcar shipments to and from Alaska via CN's Prince Rupert Gateway

CNR Barge	2009	2010	2011 Budget
Railcars	1,138	982	931
Voyages	30	31	30
Avg Railcars / Voyage	37.9	31.7	31.0

2011 Freight Revenue Budget – ICOFC

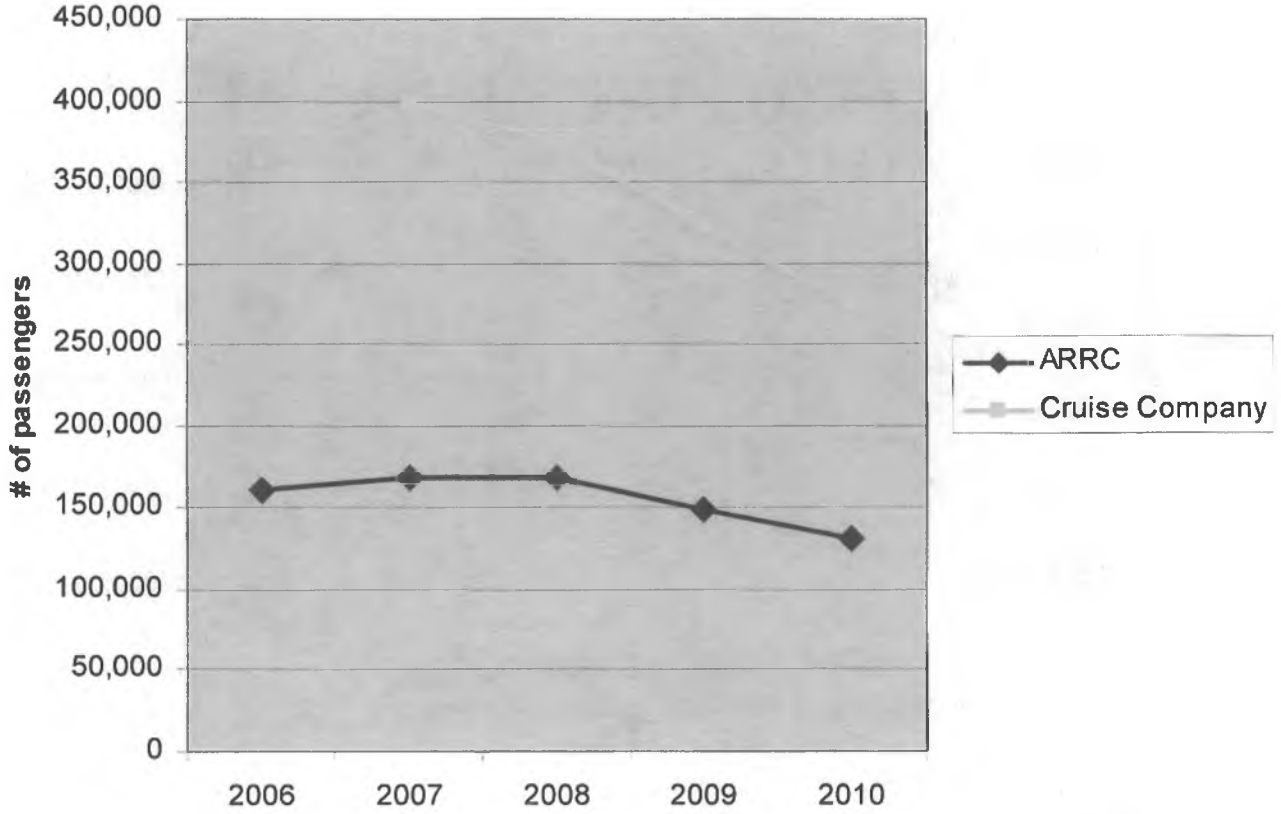
Interline COFC (container on flat car): Container shipments on ARMS Barge from Whittier to Anchorage and Fairbanks by Alaska Marine Lines

ICOFC	2009	2010	2011 Budget
Trailers / Containers	9,056	6,618	6,953



2011 Freight Revenue Budget – Misc Local

Misc Local: Generally railcar revenue and limited miscellaneous revenue that does not fit into other revenue lines



Misc Local	2009	2010	2011 Budget
Revenue including fuel surcharge	$ 1,643,268	$ 2,159,436	$ 2,036,681

- *Base industries included in this revenue line are:*
  - *Cement between Anchorage and Fairbanks*
  - *Scrap between Fairbanks and Anchorage*
  - *Conoco Phillips chemicals between Anchorage and Fairbanks*
  - *TOTE miscellaneous equipment moves, including military shipments not on TOFC*

Passenger Revenue History and 2011 Budget

Passenger Count
2006 - 2010

2011 Outlook – Operating Budget

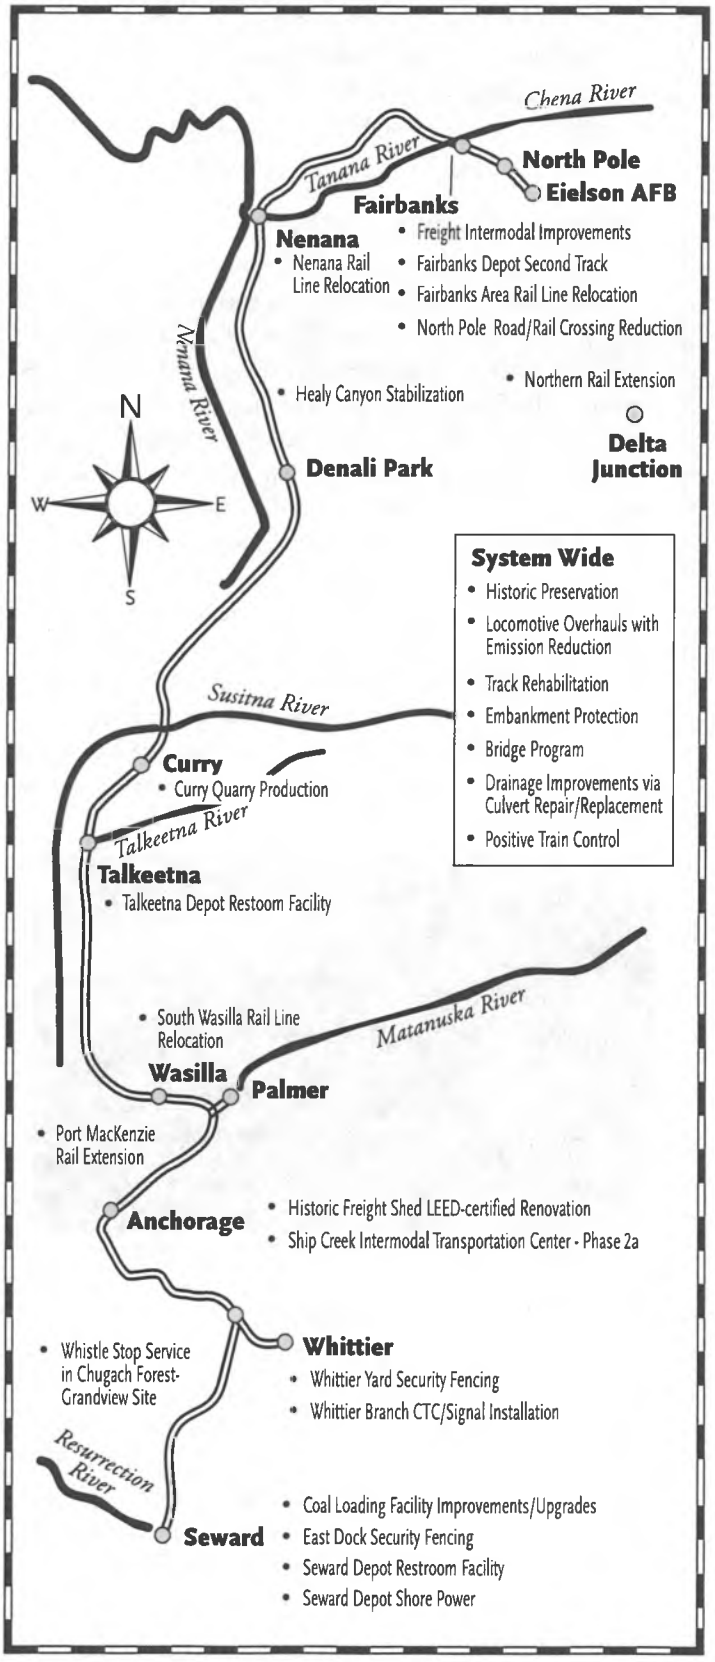
- ARRC financial situation still fragile
- Revenue growth planned, but market uncertainty/expense pressures persist
  - Flint Hills projecting growth, but off to rough start
  - Export Coal – strong global demand, tempered by environmental issues
  - Moderate passenger growth seen, more improvement coming in 2012
  - Fuel, benefit cost increases dragging on bottom line
- ARRC Board approved earnings budget of $18.2 million
  - $8.7 million net income from core train operations planned
  - Contingency plans in place if revenue does not materialize

Alaska Railroad 2011 Program of Projects

Established in 1923, the Alaska Railroad Corporation (ARRC) is the last of the full-service railroads in the United States, offering both freight and passenger services. From tidewater at Whittier and Seward to the heart of Interior Alaska, our route covers more than 500 miles. ARRC is a state-owned corporation, but it does not receive state funding to operate. ARRC relies on passenger, freight and real estate revenues to operate its trains and maintain tracks and facilities. About $55.9 million is budgeted in new spending for capital improvements in 2011. Detailed project fact sheets are also available online at **www.AlaskaRailroad.com**.

Federally-funded Projects

ARRC receives federal grant funding for capital infrastructure improvements and rehabilitation. Funding has been received from the Department of Defense (DOD), Federal Railroad Administration (FRA), Federal Transit Administration (FTA), Federal Highway Administration (FHWA), Transportation Security Administration (TSA), Federal Emergency Management Agency (FEMA), U.S. Forest Service (USFS) as well as other federal funding, such as "Stimulus" money from the American Recovery & Reinvestment Act of 2009. Most FTA, FHWA and FEMA funded projects require 9% to 25% matching funds from the Alaska Railroad. Although ARRC receives no direct funding from the state for capital or operating expenses, ARRC provides support to the Matanuska-Susitna Borough, City of Seward and Fairbanks North Star Borough to execute State of Alaska funded capital projects.



In 2011, ARRC expects to receive continuing FTA formula funding grants totaling $13.8 million (ARRC will contribute 9% of this amount). Other federal funds for 2011 include $2.93 million in FEMA-administered grants and a $1.38 million Stimulus-funded grant.

Internally-funded Projects

In addition to the match for federal funds, ARRC internal funds (funds generated by corporate freight, passenger and real estate revenues) support ARRC's ongoing expense activities as well as an annual capital program. In 2011, internal funds will provide $23.7 million toward capital improvements and capital rehabilitation activities.

Bond-funded Projects

In 2006, ARRC sold $76.1 million in revenue bonds with another $89 million bond sale in 2007. These funds are primarily used to accelerate track rehabilitation efforts. About $14.1 million will be spent in 2011. Bonds are repaid with FTA formula fund appropriations.

Frequently used acronyms:

- ARRC = Alaska Railroad Corporation
- ARRA = American Recovery & Reinvestment Act
- FEMA = Federal Emergency Management Agency
- FTA = Federal Transit Administration
- FRA = Federal Railroad Administration
- FHWA = Federal Highway Administration
- DOD = Department of Defense
- EA = Environmental Assessment
- EIS = Environmental Impact Study
- STB = Surface Transportation Board

Seward Coal Loading Facility

ARRC acquired the Seward Coal Loading Facility in 2003 and made subsequent improvements in order to increase facility efficiency, driving down the cost of operation, thus making Alaska's coal resources more competitive in the global market. ARRC completed an EA of proposed improvements and upgrades in 2004. FRA provided the original $9.54 million grant, with $8.3 million spent on acquisition and associated studies and $1.24 million used for inspections, repairs and improvements. ARRC is underwriting ongoing maintenance and capital improvements. In response to community concerns over coal dust problems resulting from unusual dry, windy weather in early 2007, ARRC and facility operator Aurora Energy Services (AES) modified operations and ARRC hired industry experts to analyze and recommend future capital improvements. Since 2007, ARRC and AES have spent more than $1 million on safety, operations and environmental improvements. $540,000 is budgeted for 2011.

A coal ship docks at the Seward Coal Loading Facility.

Seward Depot Improvements

Construction of a new restroom facility next to the Seward Depot will be complete in 2011. The 24.5-by-26-foot building houses separate men's and women's facilities. Also, a power hook-up was installed beside the track near the depot, allowing trains to plug-in to support onboard food and beverage service. This eliminates the need for locomotives to run their engines to supply power to a parked train. The $750,000 budget is funded 100% by ARRA Stimulus money via FTA.

ARRC's West (left) and East docks in Seward.

Seward East and West Dock Investments

ARRC built a new East Dock in Seward in 2000, and a section of the 640-by-200-foot East dock was expanded to 320 feet wide in 2007. Begining in 2001, the West Dock and terminal building have been substantially improved to support intermodal passenger activity. In 2010-2011 a 2,000-foot security fence is being installed around the East Dock, with $162,400 funded by ARRA Stimulus money. State revenues from the Cruise Ship Tax funded dredging around the docks in 2010 to accommodate larger ships.

Chugach National Forest Whistle Stop Service

ARRC and the U.S. Forest Service (USFS) are partners in developing a whistle stop service in the Chugach National Forest. Plans call for five recreational sites between Portage and Moose Pass that will be accessible by rail and interconnected by trail. Sites include a passenger rail platform, passenger shelter, toilets and interpretive signage. Other features may include picnic, camping and wildlife viewing facilities. The project purchased a self-propelled diesel multiple unit (DMU) rail car, which arrived spring 2009. The first stop site at Spencer was completed late summer 2007. The USFS recently completed preliminary design and engineering for the Grandview stop site and construction is scheduled in 2011. $1.8 million for Spencer funded by USFS and ARRC. The $5.35 million DMU was funded $4.7 million by USFS and $648,000 by FTA and ARRC. Construction of a pedestrian bridge over Placer River at Spencer ($1.6 million), and the Grandview site ($1.2 million) is scheduled for 2011 and funded by ARRA grants obtained by the USFS. Estimated $14 million is needed to complete all five site facilities.

The bi-level self-propelled "DMU" railcar is delivered in 2009.

Whittier Infrastructure & Master Planning

ARRC is pursuing a Whittier Master Plan to improve railroad infrastructure. Recent projects: **1)** built a pedestrian ⁻derpass (2002); **2)** built an equipment maintenance facility 02); **3)** improved Delong Dock (2002); **4)** built barge slip side-loading structures (2002); **5)** demolished the old transit shed (2003); **6)** built a cruiseship passenger spur and platform (2004); **7)** improved security with a yard office at the entrance, seasonal yard fence and video cameras (2006/07); and **8)** demolished the marginal wharf (2008). Barge Slip major modification began in 2009 with a $870,000 ramp extension and track/ground work funded by ARRC. The stern (front) unloading area was replaced in 2010 with the $4 million cost split between ARRC and Lynden. A security fence around the Whittier Yard will be installed in 2011 with a $311,224 Homeland Security grant and $82,000 from ARRC. Future actions recommended by the Master Plan include: **a)** construction of improved intermodal passenger and public use facilities; **b)** rail yard reconfiguration and track improvements to separate freight and passenger activity; and **c)** additional security measures including lighting and detection equipment for passenger facilities.

The Whittier barge slip stern (front) is replaced. The towers were removed and replaced by hydraulic devices to lower/raise the slip.

Whittier Branch CTC / Signal Installation

ARRC is incorporating the 12-mile Whittier Branch into the Centralized Traffic Control (CTC) network. Signals will be installed at sidings near Portage and at the west end of Portage Tunnel. Remote controlled power switches will be installed at the turn-around wye in Portage. $1.11 million project funded 91% by FTA and 9% by ARRC.

Ship Creek Intermodal Transportation Center

ARRC is pursuing an Intermodal Transportation Center (ITC) and associated improvements (pedestrian amenities, transit infrastructure, parking, track modifications, etc.) in the Ship Creek area. The ITC will facilitate connections from one transportation mode to another — rail, public transit, air, marine, bus, taxi, private vehicle, bicycle and pedestrian — and improve links to Anchorage's downtown business district meet passenger transit needs over the next 30 years. Phase e, completed 2007-2009, included utility relocation, new track and passenger platform construction, and track rehabilitation. Part of Phase Two (2a) began in 2010 to include Anchorage Historic Depot exterior improvements, electrical upgrades and boiler replacement. Phase 2a wraps up in 2011. Future phases will construct a service / office building, a new departure lounge over the tracks and an elevated covered walkway connecting to downtown. Approximately $23 million for conceptual and environmental work, preliminary design, and Phase One was funded 91% by the FTA and 9% by ARRC. Phase 2a cost of $7.94 million is funded by ARRA Stimulus money. ARRA Stimulus money also funded $300,000 in 2009-2010 to install an additional 1,000 feet of security fencing east of the depot. Total cost is estimated at $78 million.

Phase One of the Ship Creek ITC constructs two new tracks and a pedestrian platform next to the Anchorage Historic Depot.

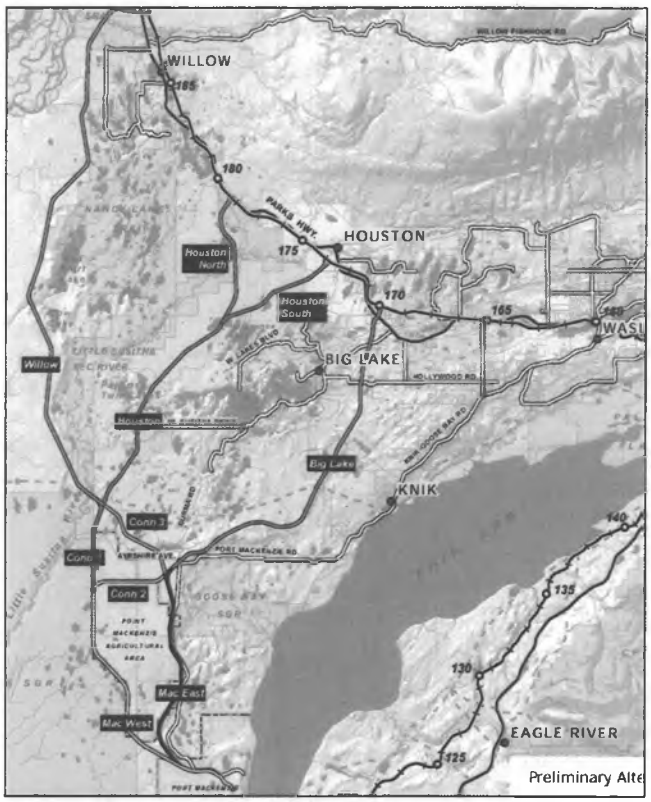
Historic Freight Shed LEED-certified Renovation

The Alaska Railroad (ARRC) is renovating a historic freight shed in Anchorage's Ship Creek District. It is Alaska's first historic building to be reconstructed with the high environmental standards established by Leadership in Energy and Environmental Design (LEED) criteria. Originally built in 1941, the 36,000-square-foot heavy timber facility offers a "green" commercial office space in lower downtown, featuring a raised heated walkway and ample parking. The building core-and-shell was completed late 2009 and site construction wrapped up in summer 2010. ARRC signed leases with two tenants in 2010 for 93% occupancy by the end of 2011. The overall facility renovation cost $10.1 million and tenant space renovations are estimated at $2 million, funded by ARRC.

The Historic Freight Shed renovation nears completion.

South Wasilla Rail Line Relocation

ARRC plans to straighten curves along the main line track in South Wasilla, between ARRC MP 154 and 158. The track relocation would eliminate five at-grade crossings, reduce derailment risk, reduce operational and maintenance costs, and allow for faster train speeds. An EA of alternative relocation routes was completed in 2005. Land acquisition should be complete in 2011. $246,000 for conceptual engineering and the EA and $2.72 million for preliminary engineering and land acquisition, funded by 91% FTA and 9% by ARRC. $2.5 million to continue right-of-way land acquisition funded 91% by FHWA and 9% by ARRC. Total cost for construction of Phase One (MP 154 to 156) is estimated at $37 million.



A large curve in the track slows train speeds in south Wasilla.

Port MacKenzie Rail Extension

The Mat-Su Borough and ARRC are partners in proposing a new rail line connecting Port MacKenzie to the existing main track at a point between Meadow Lakes and north of Willow. Three main routes were developed in 2007, ranging from 30 to 45 miles long, depending on a connection near Big Lake, Houston or Willow. Extensive public involvement activities were conducted in summer and fall 2007 to obtain citizen and agency input. In early 2008, ARRC submitted an application to the STB, the federal agency with authority over rail extensions in the United States. STB is conducting the environmental impact study (EIS) as required by the National Environmental Policy Act (NEPA). STB hired a third party contractor (ICF International) to begin the EIS in early 2008; completion is expected in 2011. The State of Alaska appropriated $27.5 million (2007/2008) to support the NEPA process and $37 million (2010) to pursue design and construction. Depending on the route selected, an additional $170 to $240 million is needed to complete design and construction.

Talkeetna Depot Restoom Facility

In 2011, construction will be completed on a 26-by-24.5-foot restroom facility about 20 feet from the existing Talkeetna Depot. The building houses separate men's and women's restrooms for passengers and employees. With modern plumbing and electrical systems, the new facility will eliminate the need to rent port-a-potties. The $500,000 budget is funded by ARRA Stimulus money.

Potential Port MacKenzie Rail Extension routes.

Curry Quarry Ballast & Riprap Production

The Alaska Railroad's track rehabilitation, embankment protection and other construction activities are supported by rock material production at the Curry Quarry. The quarry was developed 2005-2007, and a three-year production contract for ballast and riprap followed in 2007-2009. The quarry was dormant in 2010. Production resumes spring 2011.

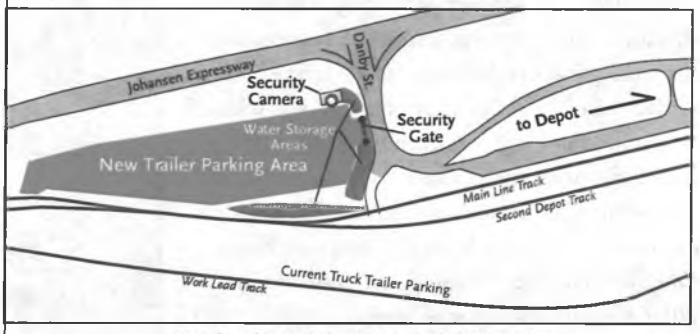
Healy Canyon Safety & Reliability Program

Healy Canyon lies between Denali Park Station and Healy. The tracks follow the Nenana River gorge on a narrow grade with two tunnels. The area has steep slopes and erosion-prone soil. ARRC proposed a series of projects to: **1)** stabilize the track bed in Healy Canyon; **2)** control the rock fall problems; **3)** "daylight" (remove the top of) Moody Tunnel; **4)** realign tracks around Garner Tunnel; and **5)** realign the tracks to straighten the corridor. Total cost is estimated at approximately $71 million. $2.9 million in FRA funds were used to address track realignment and the slide zone around Garner Tunnel in 2005. $5.2 million in FTA grants and FTA-backed revenue bonds were used to daylight Moody Tunnel, which was completed in 2009. About $5.86 million was spent in 2009/2010 to stabilize several areas (MPs 352.9, 354.1, 355.2 and 357) in the canyon, with a combination of funding from FEMA, FRA, ARRC and the Alaska Division of Emergency Services. ARRC continues to seek funding to pursue future stabilization projects, including completion of MP 352.9.

Nenana Rail Line Relocation

ARRC proposes to realign the railroad main track around downtown Nenana, following a route outside of the exist- ·g right-of-way, north of the airport and southeast of town, r the Parks Highway. The track structure through Nenana would be maintained to support port activities. ARRC completed an EA of three alternative realignment routes and a "no action" alternative in 2004. Right-of-way acquisition was complete in 2009. A hydrology study completed in 2010 will be used to pursue flood plain permits in 2011. $1 million budget for the EA funded 91% by the FTA and 9% by ARRC. $1.04 million for land acquisition funded by 91% FHWA (administered via FTA) and 9% ARRC. $350,000 for the hydrology study funded by ARRA Stimulus funding. Estimated $31 million budget for construction and land acquisition. Funding for construction has not yet been identified.

Fairbanks Depot Second Track



ARRC built a new depot in Fairbanks in 2005. Original plans called for two passenger tracks adjacent to the depot. The second track will be completed in 2011. The new 3,000-foot track will provide staging for passenger trains, improving operations efficiency and reducing equipment wear-and-tear. The second track cost of $1.2 million is funded by ARRA Stimulus money administered via an FTA grant.

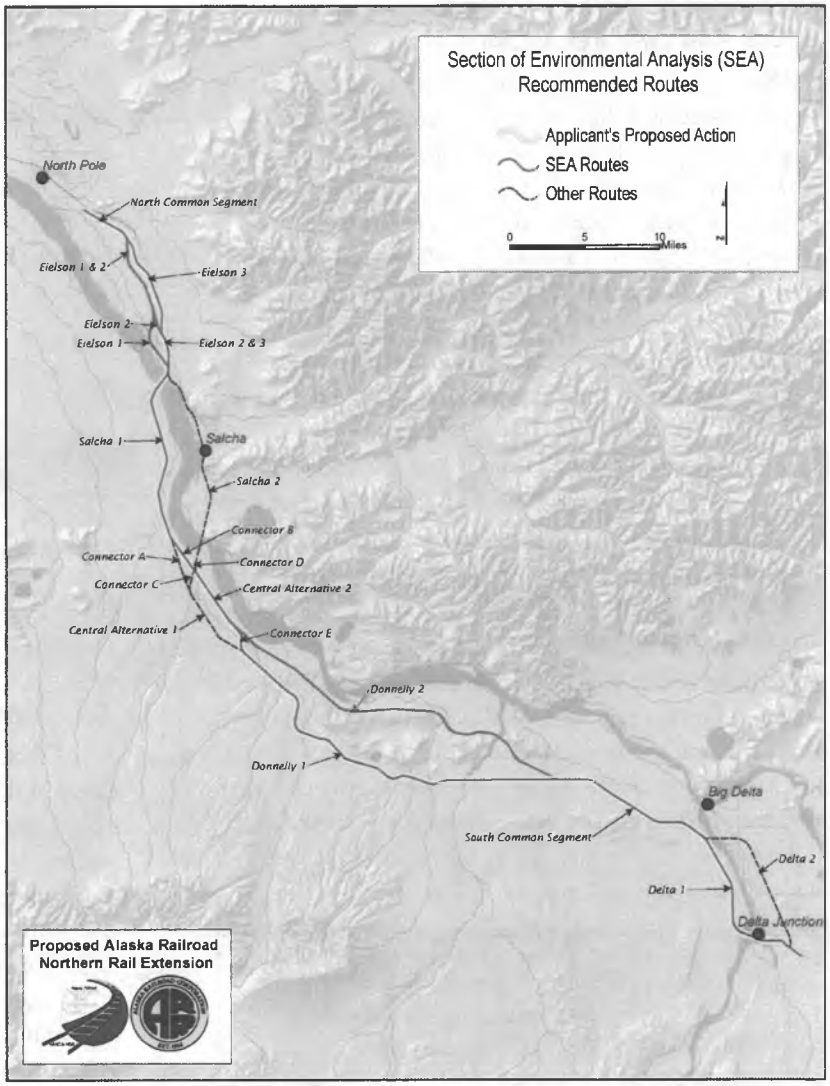
A second track is constructed parallel to the existing track by the Fairbanks Depot.

Fairbanks Freight Intermodal Improvements

ARRC and ADOT/PF are improving the freight intermodal area of the ARRC Fairbanks Rail Yard to enable faster pick-up and drop-off by truck operators, and to enhance safety and security of train/truck operations. Improvements to Danby Street intersection area include: **a)** moving and improving at-grade crossings; **b)** constructing a centralized trailer ·king area near the entrance and adjacent to Danby; **c)** ing Danby Street access; and **d)** improving drainage. Construction began in 2010 and will be complete in 2011. The $2 million budget is funded 91% by FHWA and 9% by ARRC. In 2011, the railroad also plans to install a rolling chain-link gate with ID card reader access and a video security camera at the entrance of the new trailer parking area, with funding from a FEMA-administered grant. Future improvements call for 100-foot high mast lighting to be added incrementally and funded annually by ARRC.

Fairbanks Freight Intermodal Site Plan

Fairbanks Area Rail Line Relocation



ARRC is analyzing options to: **a)** realign and improve safety of the main line and branch track, including potential realignments outside the more populated areas of Fairbanks and **b)** realign and improve the Eielson Branch, from the new Fairbanks depot to the end of the branch near Eielson AFB. The Fairbanks Area Rail Line Relocation will likely require an EIS. As a pre-cursor to the EIS, ARRC conducted an Alternatives Analysis (AA) in 2007-2008 that capitalizes on the findings of previous reconnaissance and engineering studies. The AA recommends a three-phased approach. ARRC also commissioned a *North End Rail Public Transportation Study and Operation Plan* to explore options for passenger rail and commuter service. Findings indicate low demand for Fairbanks-North Pole commuter service and results are inconclusive for Fairbanks-Denali service options. The AA and transportation study were funded by $450,000 in grants from FHWA and FTA with 9% from ARRC. Funding sources are being sought for NEPA environmental work to include an EIS.

North Pole Road/Rail Crossing Reduction

ARRC, in cooperation with the FRA, is initiating an EA and preliminary engineering for a proposed project to reduce at-grade road/rail crossings by realigning an 8-mile section of the Eielson Branch that currently runs through North Pole, between Richardson Hwy milepost 9 and the Chena River floodway. This project is essentially Phase One of the three-phased Fairbanks Area Rail Line Relocation. The EA is expected to be complete by the end of 2011. Funding of $1 million comes from FHWA funds reallocated by the Fairbanks Metropolitan Area Transportation System (FMATS) and the Alaska Department of Transportation & Public Facilities.

Northern Rail Extension

ARRC proposes to extend its main line track from North Pole / Eielson AFB, about 80 miles southeast to Delta Junction. The project would offer: **a)** commercial freight service supporting communities and commerce in the corridor; **b)** a passenger transportation alternative to the Richardson Hwy; **c)** support of military training; and **d)** support of regional tourism. ARRC initiated the conceptual development in 2004. The STB initiated an EIS in 2005. A draft EIS was released for public comment in December 2008. The final EIS was released in late 2009 and the STB approving a license to construct and operate a rail extension on January 5, 2010. Design of Phase One, Tanana River Crossing, got underway in 2010. Construction is scheduled to begin in 2011. The EIS, preliminary engineering and design was funded by $16.5 million in DOD appropriations, administered by the FRA. DOD appropriated another $44.2 million in 2007 and $60 million in 2008 for planning, engineering, environmental work, design and to begin construction on the first phase of the project. The State of Alaska appropriated $40 million toward Phase One in 2010. Entire rail line cost is estimated at $650 to $850 million; later phase funding is not yet identified.

Proposed and recommended routes identified in the Northern Rail Extension EIS.

Passenger Rail Cars and Locomotives

ARRC has 45 passenger-related railcars, including 30 coaches, six diners, six baggage cars, two business cars (charters) and one DMU. ARRC also has 53 locomotives: 28 SD70MACs (12 equipped with head-end-power to supply electricity to passenger cars), 15 GP40s, eight GP38s and two cab/power cars. ARRC upgrades older equipment and buys newer equipment to meet current and future passenger demands. In 2011, several passenger cars will be upgraded with new lighting, public address systems, batteries, signs, carpeting, wall-covering, seat upholstery and restroom refurbishment, thanks to a $530,000 grant funded 91% by FTA and 9% by ARRC. Four GP40 locomotives will be overhauled to include installation of engine idle reduction systems, and installation of a Tier-0-plus kit to improve fuel efficiency and reduce emissions; funded by a $1.4 million FTA "TIGGER" (Stimulus-funded) grant and $328,000 by ARRC.

Left to Right: GP-38-2, GP 40-2 and SD70MAC locomotive.

Positive Train Control

ARRC is developing a multi-phased program to design, develop, and implement a communication-based train control system that uses data radio communications between train dispatchers and train crews, or dispatchers and roadway workers. The Positive Train Control (PTC) project is comprised of a Computer Aided Dispatch (CAD) system, an on-board computer system, VHF packet data radio technology, and GPS locator technology. The PTC will provide improved information for decision-making, and will also detect infrastructure failure and potential operations violations quickly, and intervene when necessary. The PTC is being accomplished in phases, each achieving incremental safety benefits. The total cost is estimated to be more than $70 million. To date, FRA has funded $15.74 million; $4.48 million has come from FTA-backed revenue bonds; and FTA grants (91% FTA and 9% ARRC) account for $29 million. An additional $2 million was provided in 2009-2010, funded by ARRA Stimulus funding.

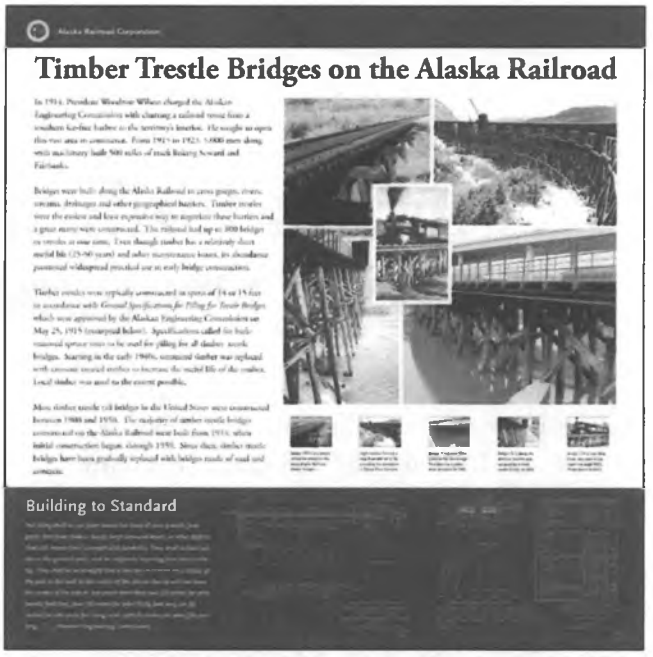
Matanuska River Bridge is undergoing rehabilitation work.

Bridge Program

ARRC's 500-plus miles of main line track include about 160 bridges that cross barriers ranging from streams to gulches. ARRC's 2011 Bridge Program calls for major maintenance, overhaul and replacement needed to maintain railroad integrity, safety and efficiency. In 2011, ARRC plans to complete replacement of two aging bridges (Little Goldstream Creek at MP 432.1 and Ship Creek at MP 115.1) and to design replacement of three culverts at Indian Creek (MP 88.1). A new bridge may be constructed over Skookum Creek Drainage (MP 59.4, near Portage). Upgrades and rehabilitation are also planned for five other bridges. In addition, a "rock shed" will be installed at the tunnel about 50 miles rth of Seward to protect against falling rock and ice. Fund- g includes $1.69 million by FTA, $1.25 million by ARRC and $1.19 by FEMA.

Drainage Improvement/Embankment Protection

ARRC will repair or replace up to nine culverts along the northern half of the rail corridor. Several culverts in this area are at risk of washout, collapse or clogging. ARRC also plans to install riprap and armor rock to fortify track embankment that is susceptible to high water events, including flooding. Culvert repair/replacement budget is $1.05 million funded by ARRC. Embankment protection work is supported by a $2.45 million grant funded 75% by FEMA and 25% by ARRC.



A culvert becomes clogged with ballast (track bed rock) leaking in.

Track Rehabilitation

ARRC continues an aggressive track rehabilitation program in 2011 that calls for replacement of rail, ties and ballast in areas of critical need. Each year, ARRC converts several miles of track into continuously welded rail, which dramatically decreases maintenance costs and improves ride quality. ARRC also replaces a portion of its nearly two million wooden ties (50,000 ties in 2011), and installs concrete ties along curves and other high-use stretches (none in 2011). ARRC also plans to resurface many miles of track using 70,000 tons of ballast rock. For 2011, $14.1 million is funded through the sale of ARRC revenue bonds backed by FTA formula funds; $8.3 million is funded by FTA grants (91% FTA; 9% ARRC); and $665,000 is funded by ARRC.

Historic Preservation

ARRC supports historic preservation efforts that are related to railroad assets and infrastructure. Some ARRC assets are historic properties and are listed on the National Register of Historic Places and more than 50 ARRC properties are eligible for listing on the National Register. ARRC often consults with state and federal historic preservation agencies to mitigate impacts from capital projects that may adversely impact historic assets. Mitigation often takes the form of educational materials, including brochures, interpretive signage, archived photos and documentation.

This interpretive sign will be posted in several common-use passenger railcars as part of a public education effort.

Integrated Vegetation Management Program

The Alaska Railroad pursues an integrated vegetation management program to protect the millions of dollars invested each year in its infrastructure. Uncontrolled weeds pose safety risks to ARRC operations and employees, including: **a)** vegetation makes track and train inspection difficult; **b)** plants hinder automated equipment operation; **c)** overgrown weeds hide walking hazards, contributing to slips, trips and falls; **d)** roots create uneven, heaving surfaces, again posing walking hazards for track workers; and **e)** vegetation accelerates rail and tie deterioration. Public safety is also impacted by uncontrolled weeds: **a)** overgrown bushes block line-of-sight; **b)** vegegation can obscure signs and signals that warn the public; **c)** plants cause heaving and slippery conditions at road/rail crossings; and **d)** dry vegetation can fuel brush fires.

The railroad has always, and wil continue to use mechanical and manual methods to clean the ballast, cut and clip brush, mow grass and weeds, saw roots and trim limbs, etc. Mechanical and manual methods achieve limited and temporary success. ARRC has also tested many alternative and experimental methods of controlling weeds (including steam, hot water, radient heat, abrasion, flaming and burning), with no lasting success. Herbicides provide an additional tool to help maintain safe operations and regulatory compliance, and to protect infrastructure investments. The railroad seeks to control vegetation with a combination of mechanical and chemical methods, using herbicides in the most critical and difficult areas.

In 2008, ARRC commissioned herbicide research to provide scientific information about use in Alaska's environment. Results indicate that herbicides behave the same as in other climates, and the glyphosate-based herbicide AquaMaster does not linger or migrate in the soil. In 2009, ARRC applied for a Department of Environmental Conservation (ADEC) permit to use herbicides in the Seward yard and along 30 miles between Seward and Indian. The permit was approved in spring 2010 and AquaMaster was applied selectively within the permitted area with good results. ARRC is currently applying for additional permits for herbicide use in the Anchorage Yard, Healy Yard, Fairbanks Yard and along the Eielson Branch.

Ineffective mechanical/manual control in Seward yard prior to herbicide application.

current as of 1/05/2011

Alaska Railroad Corporation 2011 Program of Projects

At the beginning of each calendar year, ARRC conducts project open house events in Anchorage, Fairbanks, the Mat-Su Valley and Seward to inform the public about the proposed Program of Projects (POP) for the year. While these events provide a good forum for residents to comment on any or all projects, the public is not limited to commenting at these events. Public input is accepted year-round, and in a variety of formats as outlined at the right. Detailed project descriptions are provided within fact sheets that are created for major federally-funded and internally-funded capital improvement efforts. These fact sheets are accessible at the Alaska Railroad web site **ww.AlaskaRailroad.com** (click on "Capital Projects").

Public Input:

Public comment on any or all of these projects may be submitted via:

- Mail to: Capital Projects

Alaska Airports and Aviation

Annual Report 2010

Statewide Aviation
Alaska Department of Transportation & Public Facilities
4111 Aviation Avenue • Anchorage, Alaska 99502
www.dot.alaska.gov

Message from:
Marc Luiken, Commissioner - DOT&PF

It is my pleasure to submit the Department of Transportation and Public Facilities' *Airports and Aviation Annual Report*. Our department continues its diligent work toward improving the safety and efficiency of Alaska's airports.

Nowhere in the nation is aviation more important than Alaska, since 82% of Alaska's communities are not connected to the national highway system. Many state airports still have not been improved to current FAA standards and some communities are totally reliant on very substandard airports for their only means of all season access. Even airports which have been improved to current standards require major capital investments to keep them operating in a safe and reliable manner. In addition, our state still has a need for new airports to improve basic access to some remote communities. Through the ongoing Alaska Aviation System Plan update, I am evaluating all aspects of our aviation system including the vision, planning, design and construction, as well as the management and operations of our airports.

The Alaska International Airports System (Anchorage and Fairbanks airports) is a vital gateway for trade and commerce between North America and Asia and both airports are economic engines for their respective communities and the state. A strategic plan is being developed that will identify the international airports' mission, vision and values for the next decade. We are reaching out to our customers to help them understand the economic benefits our system can provide to their companies.

As our rural airports' infrastructure is developed our need to meet maintenance and operation commitments will continue to grow. The evolution of an airport project does not stop with construction. My goal is to identify issues and funding requirements to ensure these airports receive timely maintenance and airport operators/contractors receive adequate training to improve the competence and capability of our airport staff.

I'm committed to the growth and development of our aviation system while enhancing its contribution to Alaska's economy and the quality of life of Alaska's citizens.

Safe Travels,

Marc Luiken
Commissioner

Alaska Aviation System
Largest Aviation System in North America

Tradeshows, Conferences and Public Communication Efforts

DOT&PF airports' staff can be found throughout the year at numerous trade shows and conferences with the goal of increasing communication, sharing information and providing better customer service. Aviation stakeholders and the general public can find information on airport projects, aviation policy issues, airport activity surveys, contacts, and more at these events.

One of the larger annual events is the Alaska Airmen's Aviation Trade Show and Conference held annually at the FedEx Hangar. Approximately 25,000 people attend this show with DOT&PF well represented with booths from Ted Stevens Anchorage International Airport, Alaska Division of Investments (Capstone Loan Program), ANC Airport Rescue and Firefighting recruiting officers, and Division of Statewide Aviation.

Upcoming events include the Alaska Air Carriers Association 45th Annual Conference and Tradeshow, February 14-18, 2011 and the Alaska State Aviation Trade Show and Conference, April 30—May 1, 2011.

GOV DELIVERY
NOTIFICATION
ALASKA DEPARTMENT OF TRANSPORTATION & PUBLIC FACILITIES

GovDelivery is a service offered by DOT&PF to keep the public up-to-date on the Department's latest news alerts, press releases, and more. A complete list of topics is available to choose from so you'll only receive the news you can use. Sign up for GovDelivery at *www.dot.alaska.gov*

There are many organizations in Alaska that promote and support the aviation industry. Information on these organizations and other useful aviation links can be found at *www.dot.alaska.gov/stwdav/Links.shtml*

(L-R) Jessica Semmler, Statewide Aviation Planner; Jeff Roach, Northern Region Aviation Planner and Rich Sewell, Statewide Aviation Policy Planner at the 2010 Alaska Airmen's Conference & Trade Show

Piston Aircraft put on Notice by EPA

The Alaska aviation community received an Advanced Notice of Proposed Rulemaking (ANPRM) this year from the EPA asking for comments for their evaluation of the science and research available about lead contamination from av-gas powered airplanes. Governor Parnell was quick to respond and was the only Governor to provide comments to this ANPRM. Air service to Alaskan rural communities is primarily provided by piston-engine aircraft and without a substitution, this rule would impact thousands of aircraft and would be a disaster for our communities.

As Governor Parnell addressed in his letter to the EPA, piston powered aircraft require high octane fuel that provide reliable performance at high altitude and in extreme temperatures. 100 octane low lead avgas (100 LL) aviation fuel has over 60 years of dependable proven safety. There is no substitute fuel for 100LL, which must be considered as EPA proceeds with their evaluation of this change. The entire letter can be read online:

www.dot.alaska.gov/documents/Gov-Parnell-EPA-letter.pdf

Alaska International Airports System
Air Cargo Summit

(L-R) Vice-President of Air China Cargo Dongfeng Gu with Governor Sean Parnell, and DOT&PF Commissioner Marc Luiken.

At the invitation of Governor Sean Parnell, representatives from 18 air carriers from North America, Asia and Europe gathered in Anchorage in August, for an Alaska International Air Cargo Summit. The summit was designed to spotlight the unique airline opportunities for international air cargo transfer in Alaska that have been provided to the state by U.S. Department of Transportation (USDOT) and U.S. Congress.

"Aviation is an economic force in Alaska, contributing $3.5 billion to the state's economy every year," Governor Parnell said. "Our exclusive air cargo transfer authority reinforces the business-friendly environment that we've built in our state, and keeps Alaska favorably positioned in the global market."

Aviation experts addressed specifics of the special cargo transfer authorities available to international cargo carriers operating at the state-owned and operated international airports. Scheduled speakers included: George Wellington, Chief of the Foreign Air Carrier Licensing Division of USDOT, and Jeff Shane, partner in Hogan & Lovells who previously served as USDOT's chief U.S. aviation negotiator and as an undersecretary for policy.

The Alaska International Airports System (AIAS) is working to increase the air cargo activity at both Anchorage and Fairbanks airports by helping carriers expand markets and increase revenue through the combination of Alaska's strategic location and exclusive cargo transfer rights.

Alaska is equidistant between Tokyo and New York City. Freighters carry maximum cargo payloads and refuel in Alaska, which in turn create lower costs and access to imported goods for American households. 5% of the value of all U.S. international cargo or $41 billion worth of merchandise passed through ANC in 2008. The largest aircraft in the world can land at these airports.

Aviation Advisory Board

The Governor's Aviation Advisory Board is comprised of 11 board members representing different user groups and geographic areas of Alaska. They meet three to four times annually and advise the DOT&PF Commissioner and Deputy Commissioner regarding aviation issues and concerns about the state's aviation system.

At the August meeting in Unalakleet, the Board heard comments and concerns first-hand from local residents that are totally dependent on Alaska's aviation system. Key issues that the Board is addressing include the impacts of expanding postal hubs in Alaska, maintenance and operations at rural airports, and long-term sustainability of funding rural airport improvements.

Aviation Advisory Board (AAB) members and user groups they represent:

Jim Dodson (Mayors of Fairbanks & North Star Borough)
Tom George (Statewide Organizations of Pilots, Aircraft Owners & other Aviation Supporters)
Ken Lythgoe (Non-Airline Tenants, Anchorage)
Judy McKenzie (All Cargo Air Carrier)
Frank Neitz (Unorganized Borough)
Tom Nicolos (Public)
Al Orot (Alaska Int'l. Airports System Operating Agreement Signatory Airlines)
Lee Ryan (2nd Judicial District)
Hon. Mike Salazar (Alaska Air Carriers Association)
Mike Stedman (Regional Air Carriers)
Steve Strait (Mayor of the Municipality of Anchorage)

Aviation Advisory Board in Unalakleet, Alaska.

eleasing AVIATION LEASING

Statewide Aviation Leasing

Statewide Aviation Leasing's online land use application program allows customers to apply for:

- Lease or Permit
- Building Permit
- Mobile Fuel Dispensing Permit
- Tiedown Permit

Submit reports, pay fees, and rent with a Visa or MasterCard directly online.

More information on the web at:
www.dot.alaska.gov/stwdav/leasing/shtml

Alaska Aviation System

The Alaska Aviation System is the largest system in North America. Alaska has 255 state owned airports of which 172 are gravel strips, 46 paved, 36 seaplane bases and 1 heliport. The Alaska International Airports System (Anchorage and Fairbanks) is managed as an enterprise fund of the State of Alaska.

The DOT&PF rural airport system is divided and managed by three regions: Northern, Central, and Southeast.

Each region has the responsibility for the planning, design, construction, maintenance, operations, and management of each airport.

Maintenance and operation challenges at remote village airports include spring floods with river ice, poor soil conditions, access to gravel, land acquisition and overall high costs associated with remote locations such as mobilization and material acquisition.

How Are Airport Projects Identified and Prioritized?

Airport projects are identified and submitted by DOT&PF regional planning sections with significant input from community representatives, the FAA, legislature, and aviation stakeholders.

After the airfield improvement projects have been identified they are evaluated and scored by the Airport Project Evaluation Board (APEB), a six member board that meets annually to score proposed airport projects. Each project goes through a technical scoring process of 16 different detailed quantitative criteria to help objectively prioritize which ones get the limited funding that is available each year. After projects are scored, Statewide Aviation develops the rural airport system capital spending plan and reports.

Alaska Airlines jet departing from Barrow Airport. Runway and apron paving project completed in 2010.

Stevens Village new runway as seen during spring flooding.

Rural Airport High Spot During Flooding

Stevens Village was one of the villages hit hard by spring flooding on the Yukon River last year '09. The village's new runway is only two years old and was just about the only place above water in the entire village. Many homes were under water and the road to the airport was cutoff as well. Fortunately, aircraft were still able to get in for emergency operations because of the elevation of the runway.

This airport was built on very wet land in stages over about five years. The process includes letting the main runway fill stand and settle for two years. Then going back and adding additional fill to build up the height of the runway above the max anticipated flood levels and as seen in the above photo-that worked!

Total cost of the new airport was $13.3 million and that included the new runway, snow removal equipment and building, and aeronautical survey for wide area augmentation system (WAAS) approaches. A WAAS approach can guide aircraft to as low as 250 feet above touchdown resulting in safer approaches and better airport access in poor weather.

Aviation Education Needed to Meet Growing Demand

A recent Boeing press release (Sept. 15, 2010) predicted a requirement for more than one million pilots and maintenance personnel over the next 20 years, noting there will be more than 30,000 airplanes that will be delivered by 2029. In Alaska, the aviation industry is the 5th largest employer or 10% of Alaska jobs.

Recognizing the local need and global demand, efforts are underway to develop an aviation outreach program for middle and high school students.

The FAA has been very successful educating youth through Aviation Career Education camps, and supporting projects throughout Alaska including the Build-A-Plane program. This program provides high school students classroom learning with hands-on efforts to build a real airplane. Currently there are four programs in Alaska Hooper Bay, Chevak, Anchorage and Talkeetna.

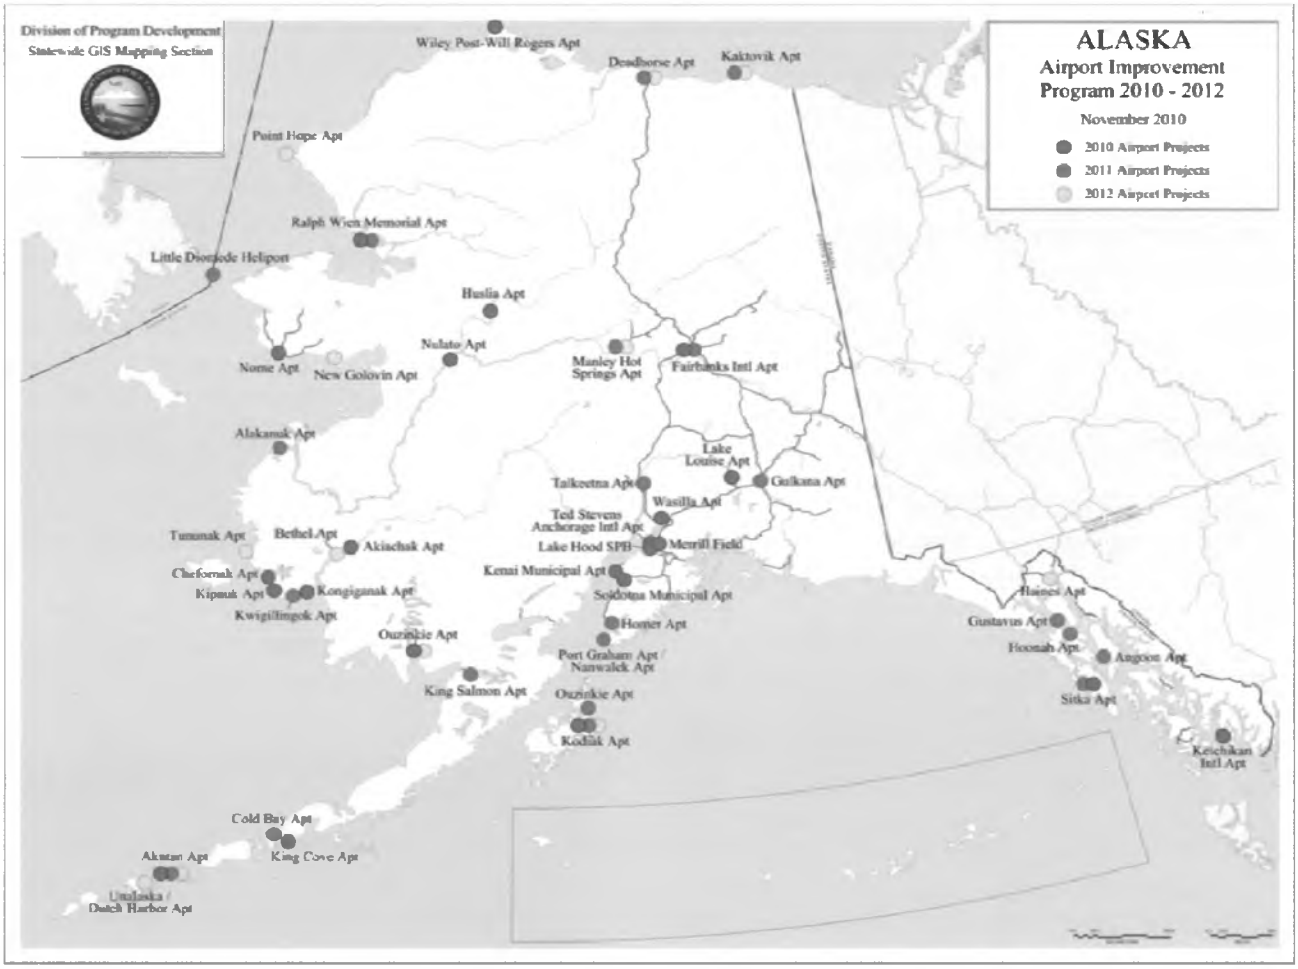
High school students will be invited to participate in an Aviation Career Day planned for February 17, 2011 from 12:00 p.m.-4:00p.m. at the Alaska Aviation Heritage Museum. For more information please call Statewide Aviation at 269-8654 or the FAA at 271-5228.

Airport Managers & Operators Receive Training

This year, 70 airport managers/operators including 58 from DOT&PF participated in airport operations training specifically designed for Alaskan airports. Five airport employees earned the Certified Member (CM) designation from the American Association of Airport Executives and one completed the Airport Certified Employee (ACE) program for operations personnel.

Training will keep the airports and state in compliance with FAA regulations as well as provide current information on maintaining and operating airports in efficient and effective methods as we keep up with the ever growing needs of an expanding aviation industry.

Within DOT&PF lies the Research, Development and Technology Transfer section (RD&T2) pro viding training, technical assistance, library, research management, and technology deployment services to ADOT&PF, local transportation agencies, and their partners. RD&T2 in partnership with the FAA produced an aviation safety video in 2009, about the challenges of performing construction activity on an active runway and the importance of communication. Landings have occurred on closed sections of runways and this video highlights what role construction can play in preventing aviation accidents. The video, *Alaska Aviation Construction Safety - Approach to Communication,* has been distributed to contractors and Alaska's flying community.



(L-R) Adam Archibald - Airport Security Coordinator for Ketchikan Airport and Mike Carney - Ketchikan Airport Manager at the August "Airport Operations Practicum".

Airport Safety Inspections

DOT&PF inspected 125 rural public airports this year, or about 1/3 of the total number of public airports in Alaska. This is part of the safety inspection program called the 5010 Airport Master Record inspections funded by the FAA. All of the public airports updated information is listed in the salmon colored *Alaska Supplement.*

The DOT&PF Airport Managers and Regional Safety Officers work with FAA inspectors to accomplish the airport inspections for the Part 139 certificated hub airports. DOT&PF owns and inspects nineteen Part 139 (jet service) airports.

Funding for Airport Improvement Projects

DOT&PF relies on federal Airport Improvement Program (AIP) funding for airport improvement projects. In general, AIP funds can be used on airfield capital improvements, repairs, or planning. Federal AIP grants cover 95% of the eligible costs for all airports except Anchorage International, which is eligible for 93.75% federal AIP funding. The funding match for the rural airport system comes from the general fund. Match funding for International Airport projects is provided through the International Airport Revenue Fund, rather than state general funds.

2010 AIRPORT PROJECTS

Akiachak Airport: Airport Relocation – Stage 2 ($11,780,074)
Akutan Airport: Airport Construction – Stage 2 ($20,000,000)
Barrow Airport: Runway and apron paving/SA Expansion Stage 4 ($7,200,000)
Chefornak Airport: Airport Relocation – Stage 2 ($21, 692,300)
Dillingham Airport: Apron and Taxiway Rehabilitation ($8,555,483)
Fairbanks International Airport: Master Plan Update ($950,000); Access Control Improvements ($950,000); Aeronautical Survey, GIS & ALP ($700,000)
Huslia Airport: Airport Improvements – Stage 2 ($800,000)
Ketchikan Airport: Runway Overlay and Safety Area Expansion – Stage 3 ($652,126—Municipal Airport)
King Cove Airport: Fencing ($1,820,936)
Kipnuk Airport: Airport Relocation - Stage 2 & 3 ($17,637,423)
Kodiak Airport: Chemical Storage Building ($2,499,922)
Kongiganak Airport: Airport Improvements ($5,685,750)
Kotzebue Airport: Runway Safety Area Improvement – Stage 1 and Rehabilitate Runway 9-27 ($17,700,000); Certification Compliance ($2,470,711)
Lake Hood Seaplane Base: Property Acquisition- Stage 1 ($1,355,517); Strip Guidance Signs ($608,255); Bank Stabilization- Stage 1 ($1,644,483)
Lake Louise Airport: Runway Rehabilitation ($2,106,833)

2010 Airport Projects (continued)

Nulato Airport: Airport Improvements ($8,200,000)
Sitka Airport: Runway Safety Area Expansion ($29,957,716)
Ted Stevens Anchorage International Airport: Residential Sound Insulation Program ($1,313,500); South Terminal Seismic & Security Upgrades - Stage 6 and 7 ($2,573,710); Upgrade Runway 6R/24L ($17,972,654); Runway 7R/25L Drainage and Embankment ($10,027,500); Snow Removal Equipment Building ($991,491); Communications and Badging Center ($1,016,551); Security and Badging Center Equipment ($2,130,626); Runway 7R/25L Extension - Phase 1 ($2,767,912); Part 150 Noise Study ($750,000)

2011 Airport Projects (Tentative Projections & Cost Estimates Only)

Akutan Airport: Airport Construction – Stage 3 ($11,000,000)
Alakanuk Airport: Airport Relocation – Stage 4 ($6,000,000); SREB ($1,100,000)
Angoon Airport: Airport Environmental Impact Statement – Stage 3($2,500,000)
Cold Bay Airport: Runway Safety Area – Stage 1 ($4,000,000); North Terminal Apron Rehab. – Stage 2 ($5,000,000)
Deadhorse Airport: Runway Rehabilitation and Lighting Replacement – Stage 1 ($18,100,000)
Fairbanks International Airport: Access Control Improvements ($950,000)
Gulkana Airport: Apron and Taxiway Repaving ($1,900,000)
Gustavus Airport: Runway Safety Area ($10,500,000)
Homer Airport: Apron and Taxiway Rehab ($3,000,000)
Hoonah Airport: Airport Improvements ($3,400,000)
King Salmon Airport: Lighting System Replacement – Stage 3 ($6,500,000)
Kodiak Airport: Rehab Runway 18/36, Taxiway B, and Parking – Stage 1 ($12,000,000)
Kotzebue Airport: Runway Safety Area Improvements – Stage 2 &3 ($23,000,000)
Kwigillingok Airport: Airport Rehabilitation ($1,100,000)
Little Diomede Heliport: Temporary Snow Removal Equipment Building ($200,000)
Manley Airport: Airport Relocation – Stage 1 ($9,000,000)
Nanwalek/Port Graham Airports: Master Plan – Stage 3 ($800,000)
Ouzinkie Airport: Relocation – Stage 2 ($3,800,000)
Talkeetna Airport: Airport Improvements – Stage 2 ($10,800,000); Runway 18/36 Pavement and Rehabilitation ($2,100,000); Apron and Taxiway Pavement Rehabilitation ($3,300,000)

2012 Airport Projects (Tentative Projections & Cost Estimates Only)

Akutan Airport: Airport Construction – Stage 4 ($5,250,000)
Bethel Airport: Parallel Runway and Other Improvements – Stage 6 (ROW acquisition) ($1,650,000); Runway, Taxiway, Commercial Apron Pavement Rehabilitation ($13,000,000)
Deadhorse Airport: Apron and Taxiway Rehabilitation and Lighting Replacement – Stage 2 ($13,400,000)
Dillingham Airport: Runway Safety Area – Stage 1 ($25,000,000)
Golovin Airport: Runway and Apron Improvements – Stage 1 ($2,000,000)
Haines Airport: Drainage, Taxiway, and Apron Rehabilitation and Fence ($7,400,000)
Kodiak Airport: Runway 7/25 Rehabilitation ($14,800,000)
Manley Airport: Relocation – Stage 2 ($6,400,000)
Point Hope Airport: Pavement Rehabilitation ($7,000,000)
Sitka Airport: Runway 11/29 Overlay ($5,000,000)
Tununak Airport: Airport Relocation – Stage 1 ($14,400,000)
Unalaska Airport: Runway Safety Area and Pavement Rehabilitation ($24,200,000); Chemical Storage Building ($2,750,000)

Municipal Airport Projects 2010/2011/2012 (Tentative Projections & Cost Estimates Only)

The following municipal airport projects have been funded or are being considered by the FAA for AIP funding:

Kenai Airport: Airport Apron and Float Plane Basin Development ($199,614) - 2010
Merrill Field Airport: Runway Rehabilitation, Snow Removal Equipment Building, VASI/ROW ($4,515,378) -2010
Soldotna Airport: Apron ($1,546,891) - 2010
Wasilla Airport: Apron ($1,139,689) - 2010
Kaktovik Airport: Airport Relocation – Stage 1 ($4,000,000) - 2011
Kaktovik Airport: Airport Relocation – Stage 2 ($23,000,000) - 2012

DIGITAL ELEVATION MAPPING CONTRIBUTES TO AVIATION SAFETY

The existing map of Alaska is over 50 years old, is widely regarded as grossly inaccurate and does not support modern requirements. In truth, Mars is more recently, extensively and accurately mapped than Alaska. The Statewide Digital Mapping Initiative (SDMI) is a collaboration of state and federal agencies to create a digital map of Alaska.

There are a multitude of mission critical requirements which rely on accurate elevation data, which are the primary component of the digital map. The benefits of accurate elevation data are significant and support a broad range of disciplines. Here are just a few examples:

Resource development, "Roads to Resources" and infrastructure development all require accurate elevation data. Elevation data are foundational to project planning and permitting, engineering and design and responsible resource management.

Modern public safety and emergency response capabilities supporting first responder situational awareness are largely unrealized in Alaska due to the absence of a digital base map. Disaster preparation, recovery and mitigation efforts are greatly impeded by the lack of accurate elevation data. Disaster response training cannot be adequately addressed without an accurate base map in a digital context. Search and rescue efforts are hindered by inaccurate elevation data; for example: when an F-22 Raptor crashed in November, rescue and recovery efforts were impeded because terrain and slopes could not be calculated to accurately predict the threat of avalanche danger to responders.

Floodplain risk and mitigation analysis, sea wall construction and coastal erosion cannot be adequately addressed without accurate elevation data. Climate change and its effects on Alaska require accurate elevation data. For example, as the tundra becomes permeable, existing safe drinking water supplies may be impacted and sewage lagoons may affect ground water. Elevation data are needed to understand these potential impacts and plan accordingly.

Advancements in Next Generation aviation safety utilize elevation data for terrain avoidance purposes, which has the promising capacity to reduce Controlled Flight Into Terrain (CFIT) fatalities from occurring. Navigational devices, survey equipment and tracking applications require accurate elevation data in order to function properly.

State and federal funds were pooled to collect elevation data over approximately ten percent of the state last summer. A cost sharing and federal outreach meeting is planned for early 2011. A public demonstration of elevation data collected in 2010 will be performed at the annual Alaska Surveyors and Mapping Conference, scheduled for February, 2011. Information about this conference is available at *www.aksmc.org*. Nick Mastrodicasa is Project Manager for the Statewide Digital Mapping Initiative and can be contacted at *nick.mastrodicasa@alaska.gov*

(L-R) Nicholas Mastrodicasa, Project Mgr.; Dr. Vicki Childers / NOAA-National Geodetic Survey (NGS) & Project Manager GRAV-D; Lt. Governor Mead Treadwell; Dr. Mark Myers (previous Director of USGS); Marc Luiken, Commissioner and Phil Thiel, Vice President Dewberry Engineering participate in "Skybreaking Ceremony" highlighting the progress being made in statewide mapping.

Alaska Aviation System Plan

With 82% of the communities in Alaska not connected to a highway or road system, it is important that the state maintain a comprehensive airport system plan that identifies the aviation facilities needed to meet air transportation needs.

The first Alaska Aviation System Plan (AASP) was adopted in 1986, updated in 1996, and currently being updated to meet the needs of today's aviation system. The AASP proposes aviation policy, and documents the existing system with published reports and studies. The AASP also includes the element of continuous planning to keep the plan current and relevant to the ever-evolving aviation system.

The AASP planning team includes members of the DOT&PF, FAA, professional consultants, airlines, and other aviation stakeholders, working together through various focus work groups to support the total system planning effort.

The AASP team has worked together over the past three years to develop numerous technical reports and studies, including the first economic impact assessment of aviation in Alaska, an economic analysis of runway extensions, and fact sheets covering Maintenance & Operations issues and air mail service in Alaska.

This past year, the AASP developed the following elements of the plan:

- A database inventory of the current aviation system
- Aviation system forecasts
- Goals, objectives, and performance measures to regularly assess the status and health of the system
- Classifications of the state's airports

More information on the AASP can be found online at *www.AlaskaASP.com*

Aviation contributes to Alaska's economy

- $3.5 Billion to the State economy
- 47,000 Jobs—represents 10% of all jobs in Alaska
- 1 in 8 Jobs in Anchorage attributable to the Anchorage Airport **AVIATION SYSTEM**

Rural Airport Lighting Program

Occasionally rural airport runway lighting fails, and DOT&PF deploys battery operated emergency runway lights to provide a safety net until M&O staff can repair lights during summer months.

This year Togiak runway lighting failed and DOT&PF shipped a set of emergency runway lights to the village. Night medevac operations require runway lights and our battery powered runway lights are a great back-up system. DOT&PF has 10 full runway sets and 50 six-packs for helicopter operations.

On a clear night lights are visible 5 miles out on approach to the airport. Emergency runway lights are easily stored and installed.

mission

To provide for the safe movement of people & goods and the delivery of State services

Alaska's Aviation Lifeline

Aviation is more important in Alaska than anyplace else in the United States.

- 255 airports are owned and operated by the State of Alaska
- Airports provide a vital link for access to food, mail, schools, medical services and travel

"If we didn't have the airport we wouldn't have anything. The airport is a fact of life for living out here in the villages. The airport is our roads, highway, ocean, our lifeline."

-Rural Alaska Resident

82% of the communities in Alaska are not connected to a highway or road system.

Three busiest airports at a glance

Ted Stevens Anchorage International Airport

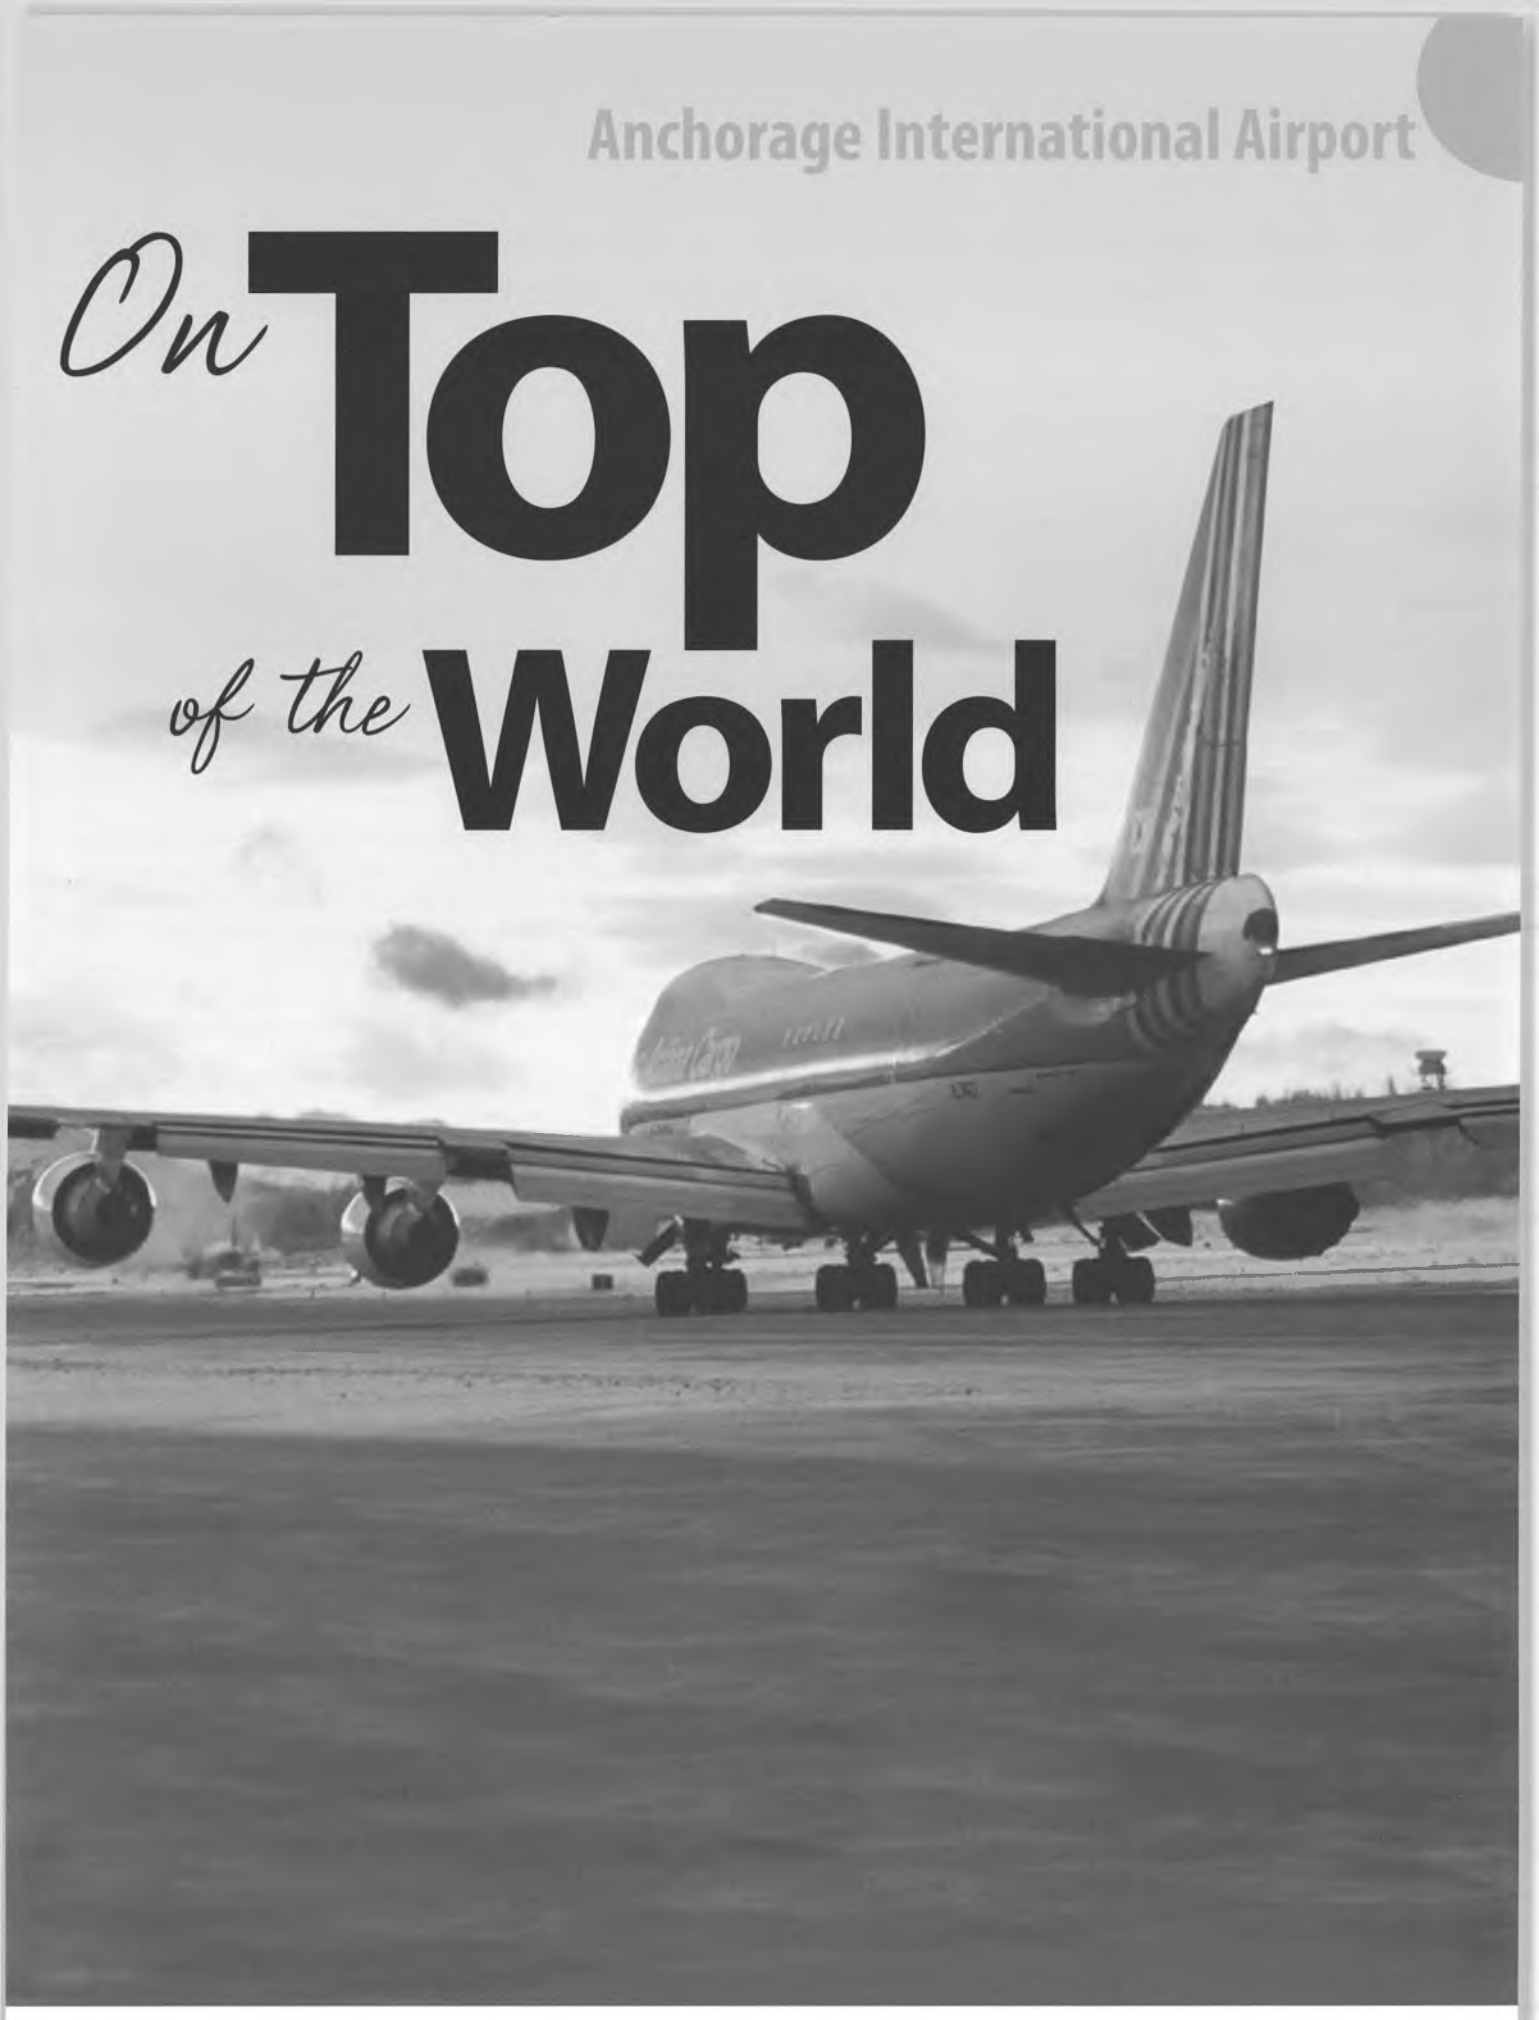
- 5 million passengers annually
- New terminal in 2009
- World's largest and busiest seaplane base
- Ranked #5 in world cargo tonnage
- #2 airport in the U.S. for landed cargo weight
- 522,000 annual flight operations

anchorageairport.com

Fairbanks International Airport

- 1 million passengers annually
- New terminal and 11,800' runway in 2009
- Seaplane base with 322 tie-downs and 185 float slips
- 118,000 annual flight operations
- Hub airport for Interior Alaska and alternate for ANC

dot.state.ak.us/faiiap



Bethel Airport

- 300,000 passengers annually
- New runway in 2009
- 2nd busiest cargo airport in Alaska
- 122,000 annual flight operations
- Serves 56 villages in Yukon-Kuskokwim Delta

On Top *of the* World

Anchorage International Airport

One of the northernmost airports in the US is continuing to evolve to meet the changing needs of the aeronautic industry. John Parrott explains.

When the first 747 airplane flew, aeronautic experts heralded a new age of nonstop flights. Some said airports like Anchorage International (ANC), which had served for years as a refueling station for cargo and passenger craft alike, would go the way of the dodo. Airport manager John Parrott said those experts had forgotten about the payload range equation.

"If you want to fill your 747 to capacity, you can't also carry enough gasoline to make it from Asia or Europe to the lower 48 states; you need to fly with less cargo to make room for the weight of more fuel," he explained. "That's why it's still extremely cost effective for carriers to stop here and refuel, which is why we're still number five in the world for cargo throughput."

In addition, the US government has granted airports in Alaska and Hawaii a special privilege: cargo in those airports can be transferred from one craft to another without the move counting as an official break in an international voyage. This allows carriers to connect international cities in one trip even with fuel limitations.

ANC, Parrott said, is about nine-and-a-half hours from 90% of the industrialized world but in addition to this fortuitous location, this airport has evolved over the years to become a perfect blend of cargo and passenger service.

The airport has 14 wide-body, pull-through parking spaces, which means even the largest aircraft don't need to park to the side and be pulled out by trucks when its time to take off. And in those parking spaces, ANC has an extensive hydro-refueling system that eliminates the need for a team of trucks to refuel the giant tanks. Parrott said whenever possible, his team arranges for planes from the same carrier company to be parked side by side to give the carrier a more efficient space to work.

For all its fame as a cargo hub, however, ANC also serves five million passengers each year. Parrott said in the summer, about one million tourists pour into the state, most through a cruise and fly package, and all of those come through ANC at least once.

"Aviation is truly the lifeblood of travel and commerce in Alaska: there are no roads west of the center of the state and only one

that traverses the length of the state north to south," Parrott said. "Alaskan's fly year round to get anywhere."

In fact, AIA supplies 10,000 direct jobs and 8,000 indirect in the city of Anchorage, meaning one out of every eight employed citizens works for the airport in some way. And Parrott said that ratio is consistent for aviation impact throughout the state.

That's one reason why the recession had a significant impact in Alaska. The airport saw a 20% drop in revenue between 2008 and 2009. Parrott said the airport had to tighten its belt like everyone else but that he and his team are cautiously optimistic that they've been through the worst of it. Parrott reported the airport is about 10% up over 2009 this year, and hopes to get back to its 2008 levels next year.

Making plans

The team at ANC has done a lot in the last few years and has a lot of big plans for the future, to fuel the airport's growth and continue its evolution as a transportation hub of the north.

For one thing, the airport just completed a 10-year renovation project to its terminals. The project included a tear down and rebuild of the original, 1950s C concourse, a complete renovation of the B concourse, and an entirely new road system for the property.

Of the 4,800 acres owned by the airport, Parrott said a significant portion is not yet developed and is suitable for aeronautic use. And amid all the turmoil last year, ANC got some additional news: as part of the Base Relocation Commission, the Department of Defense would not be renewing its lease on the 135 acres that made up its Kulis Air National Guard Base and is consolidating those operations at a nearby air force base.

Those 135 acres have hangars, garages, and runway access as well as a mess hall,

"The team at ANC has done a lot in the last few years and has a lot of big plans for the future, to fuel the airport's growth and continue its evolution as a transportation hub of the north."

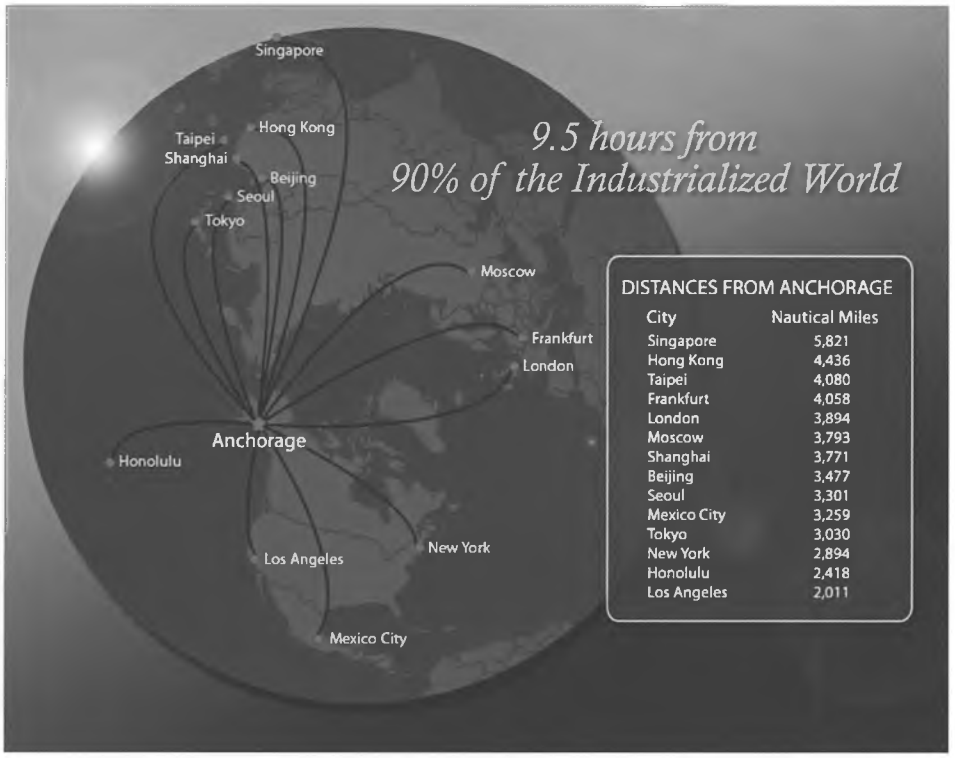
Anchorage International Airport

medical building, and ample storage. Parrott, his team, and development and real estate experts are currently assessing the best possible use of the land for the airport.

"An opportunity like this doesn't come along very often, so we want to make sure we get it right to ensure future success for the airport and beneficial economic development for the city," said Parrott.

One option the team is considering would be to add wide-body aircraft maintenance services, giving carriers and opportunity to get scheduled maintenance done on their aircraft while they stop over in Alaska for fuel anyway. Most important to the team's consideration, Parrott said, are the needs of ANC's diverse customer base.

Even with this new space and the renovation project, however, Parrott is concerned the airport will need to look at further expansion a few years from now thanks to a continuing interest in the state from tourists. In the last few months, he said a large number of US carriers requested landing rights at the airport. In addition to Alaska, Delta, Continental, and US Airways, which have a year round presence at ANC, United, American, and Frontier have added flights for the summer.



This is of course, a challenge most airport managers these days would die to have and Parrott said he and his team are excited about the opportunities to position ANC for future success.

"There's a large Asian population in Alaska, and we used to have a sizable passenger service from Europe before the former Soviet Union opened its airspace in the early 1990s," he said. "We'd like to become a new destination for those markets."

As foreboding as Alaska can seem to those who've never been there, Parrott added that the team at ANC is among the best in the world in providing a hassle-free and welcoming experience. In fact, ANC's snow removal team has won the Balchen-Post award four times for their work and Parrott said the airport hasn't closed for snow in decades.

"I'm proud of the hard work that every member of this team does every day," he said. "I've known for years that this crew can stack up to the crews at any major metropolitan airport, and it's exciting to see them get the recognition they deserve." W

—Meghan Flynn

The Economic Contribution of the Aviation Industry to Alaska's Economy

Alaska Aviation System Plan

Introduction

As an economic engine for the State of Alaska, Alaska's aviation industry contributes $3.5 billion dollars and over 47,000 jobs to the state's economy. Aviation is a critical component of the state's economy and the vitality of Alaska's communities. The Alaska Department of Transportation & Public Facilities (ADOT&PF), Aviation Division recently embarked on updating the Alaska Aviation System Plan. An important part of that update is determining the value and contribution of Alaska's aviation industry to the state's economy. This determination was accomplished through an extensive survey effort targeting all public airports managed by ADOT&PF, public airports managed by other entities, private airports throughout the state, leaseholders located on ADOT&PF airports, and 600 residents in rural Alaska and the Railbelt who have flown within the last 12 months. The study included interviews with airport managers, city officials and other community leaders in 18 selected communities in Alaska, and four western states to evaluate the importance of airports to remote, rural communities.

Contributions to Alaska's State Economy

Airports and aviation-related businesses create significant economic value within the State of Alaska. In fiscal year (FY) 2007, the Alaska aviation industry contributed $3.5 billion to the state economy and supported over 47,000 jobs statewide. The aviation industry contributed about 8 percent of Alaska's gross state product of $44 billion in 2007 and supported almost 10 percent of 2007 statewide annual average employment. If compared to the primary economic sectors the aviation industry would be the fifth largest employer in Alaska.

Economic Activity

The aviation industry contributes to Alaska's economy by supporting local businesses and employing citizens in year round operations. The value of the economic activity generated by the operation of the airports, the businesses, and agencies operating within the airport premises in FY2007 amounted to more than $2.1 billion.

This direct spending by airports, businesses located on the airports and their employees in turn creates additional employment and income in other sectors of the economy. The economic contribution of the aviation industry through those secondary (multiplier) expenditures is estimated to be $1.4 billion in FY2007 resulting in a total of $3.5 billion in economic activity. **(See Figure 1)**

This Alaska Aviation System Plan was conducted in accordance with FAA Advisory Circular 150/5070-7: The Airport System Planning Process. The economic analysis described in this brochure was conducted pursuant to Section 101.a(3) of that document.

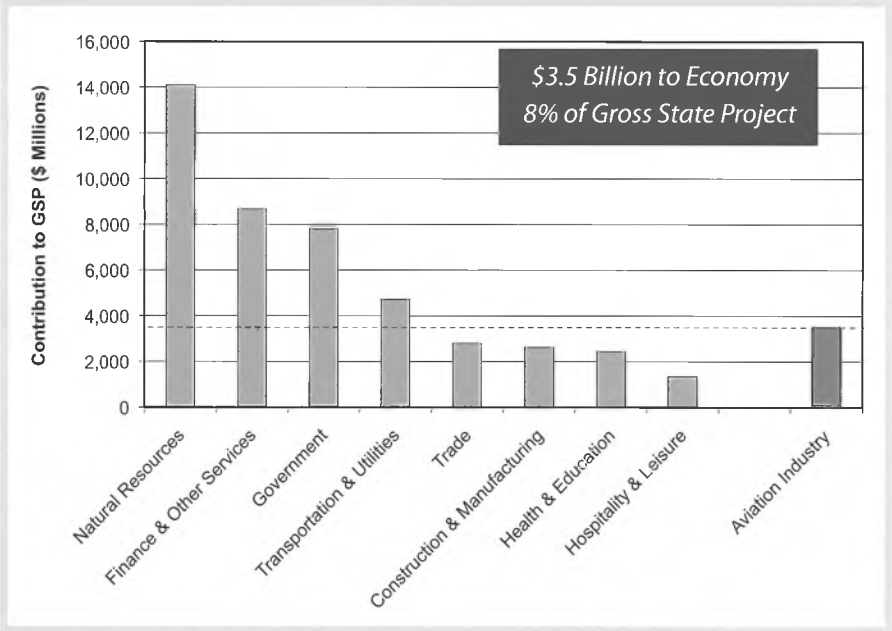


Figure 1 **The Aviation Industry's Contribution to GSP Compared to Primary Economic Sectors, 2007**

Source: Northern Economics estimates, 2008

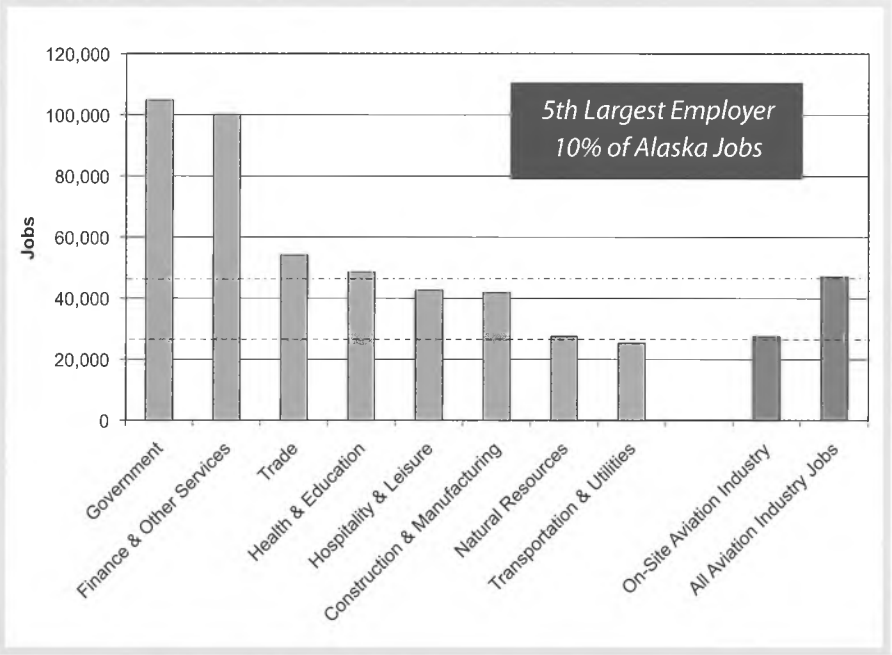

Figure 2 **The Aviation Industry's Contribution to Available Jobs Compared to Primary Economic Sectors, 2007**

Source: Northern Economics estimates, 2008

Employment

In 2007, the aviation industry provided over 47,000 on-site and off-site jobs across the state. The highest concentration of jobs are located at the international airports in Anchorage, Fairbanks, and the state's regional hubs. These jobs include more than 27,000 on-site jobs and nearly 20,000 off-site jobs created by this industry. **(See Figure 2)** The on-site jobs include more than 2,000 full-time and part-time jobs directly related to the operation and maintenance of public and private airports in Alaska as well as more than 25,000 jobs created by on-site businesses, organizations, and government agencies operating out of the airports. These businesses include commercial air carriers, fixed-base operators, fuel distributors, caterers, air taxis, charter operations, general aviation services, state agencies and other public agencies. The number of on-site jobs underscores the value of airport infrastructure in creating jobs in various businesses and communities across the state.

The nearly 20,000 off-site jobs are created when goods and services are purchased from other businesses in

EMPLOYMENT

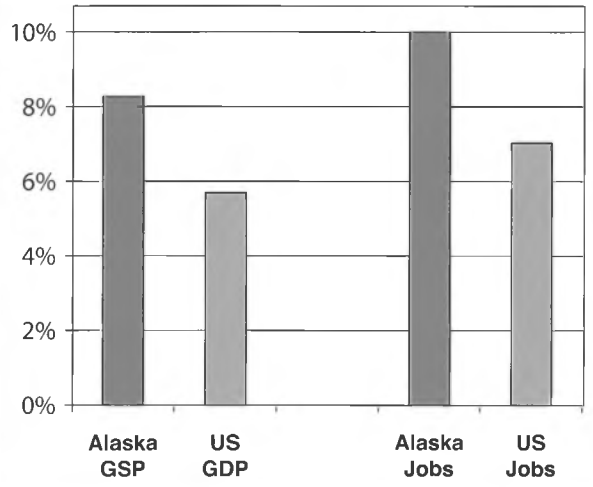
Jobs related to aviation:

2,000 jobs to operate airports statewide, full and part time

25,000 jobs due to on-site business, organizations and agencies

20,000 jobs created due to multiplier effect from aviation jobs

47,000 total jobs attributed to aviation in Alaska in 2007



This represents about **10% of all jobs** in Alaska

the state to support the operations and maintenance of airports and businesses located at airports, and when on-site employees spend their wages on goods and services within the state.

Over 47,000 jobs generated by the firms, agencies and businesses that make up the industry provided approximately 10 percent of the total jobs in Alaska's economy in 2007, including the self-employed and the military. The aggregate aviation industry was smaller than the government, finance and other services, trade, and health & education sectors, but larger than the hospitality & leisure, construction & manufacturing, natural resources, and transportation & utilities sectors.

Figure 3 shows that the aviation industry's proportional contribution to Alaska's economy is greater than the proportion the industry contributes to the national economy. In actuality, the figure underestimates the relative importance of the aviation industry to Alaska as the true difference is even greater than shown; the national data include the expenditure of visitors and this study does not include this factor in the estimates for Alaska's economy.

Figure 3 **Economy and Jobs: Importance in Alaska vs. the US**

The aviation industry's proportional contribution to Alaska's economy is greater than the proportion the industry contributes to the national economy.

Importance of Alaska's Airports to Alaska's Communities

Telephone surveys of 500 households were conducted in 18 selected communities throughout the state, 100 households within the Railbelt stretching from Fairbanks to the Kenai Peninsula, and also with airport managers, community officials, and other leaders in these communities to evaluate the importance of Alaska's airports to state residents.

The study compared the importance of Alaska's airports to remote airports in other rural, western states. Interviews were made with airport managers and community officials for airports in Idaho, Montana, Oregon and Wyoming, for a comparison of enplanements and freight volumes per capita for the 18 airports in Alaska and the airports in the western U.S. **Figures 4** and **5** show that enplanements and air freight loads are much higher per capita in Alaska than for airports in the western U.S. Enplanements for Alaska communities can exceed enplanements of other rural U.S. communities by eight times per person while air freight loads can be more than 39 times higher per person.

"If we didn't have the airport we wouldn't have anything. The airport is a fact of life for living out here in the villages. The airport is our roads, highway, ocean, our lifeline."

Rural survey respondents emphasized the importance of air travel in rural Alaska. For many communities, especially in Alaska's West and Interior, air travel is the only means to get in and out of the communities; there are no roads or ferry service. These villages rely on air travel for emergencies, family visits, work-related travel, social and vacation trips, and transportation of supplies. Some communities do not offer medical services and residents need to travel for all medical visits. This situation is especially common in small communities and the survey data indicate that community airport respondents made more than twice as many family or personal business related and medical trips than those in larger communities.

Some rural communities in Western and Interior Alaska would be completely isolated in the winter without their rural airports. In parts of Central and Southeast Alaska, ferry or road transportation may be alternatives, but communities still rely heavily on their airports for swift and reliable travel and cargo transport.

By contrast, rural communities in the Lower 48 more often commented that their community would be less attractive for people visiting or doing business but that they could likely live without an airport.

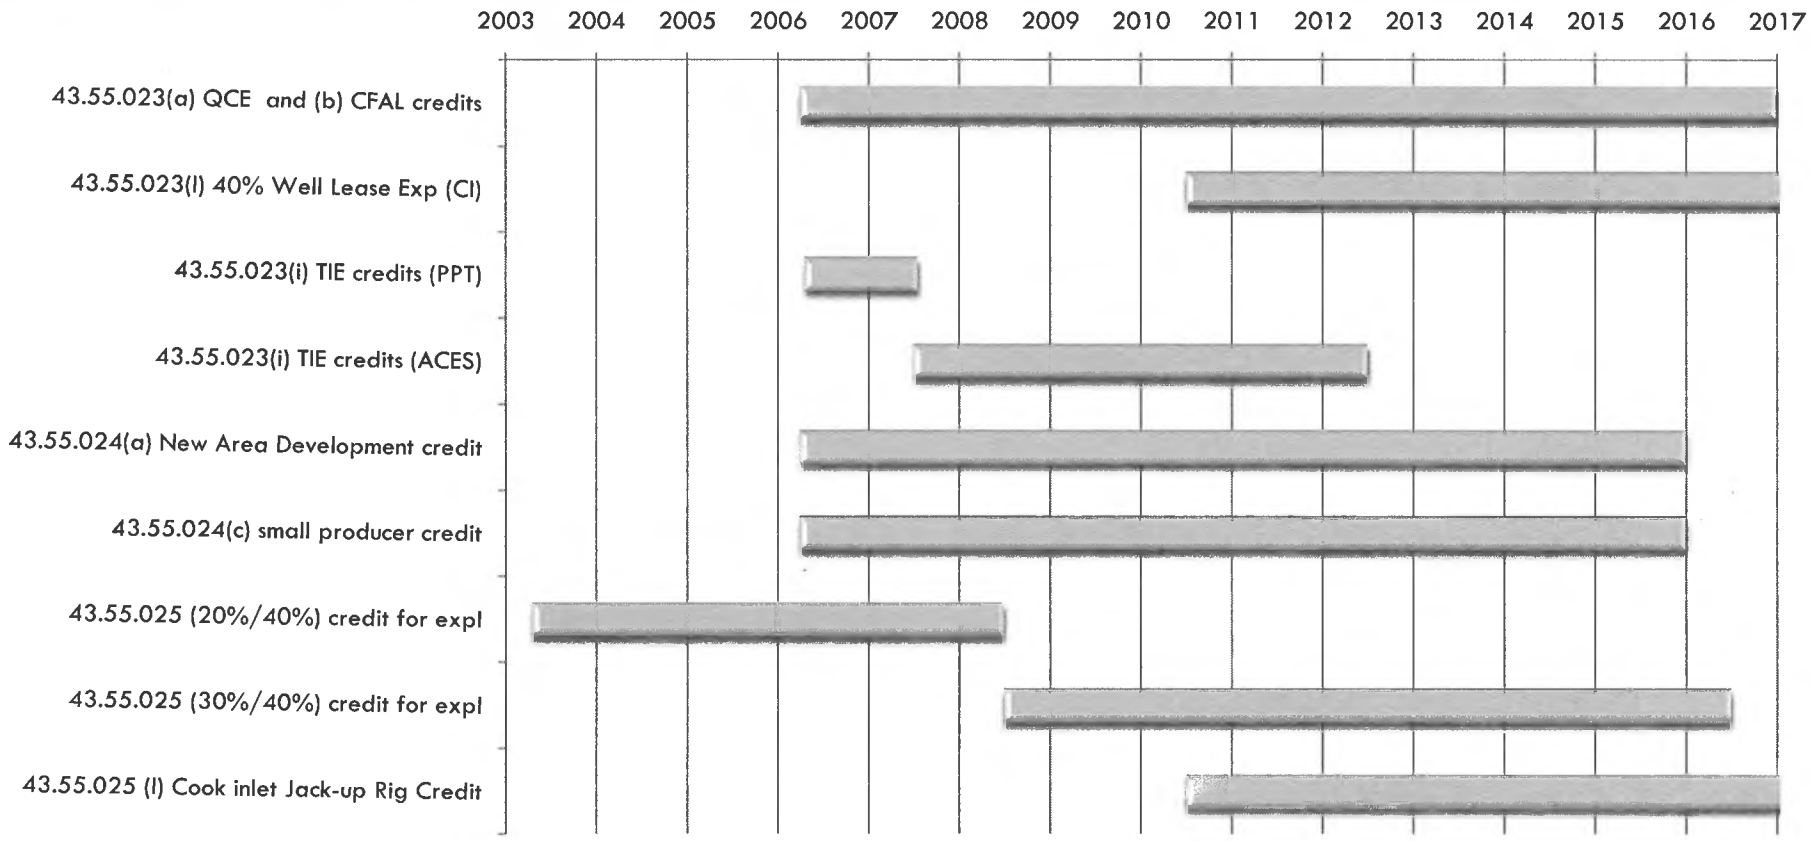
PRODUCTION TAX CREDITS

PRESENTATION TO THE
SENATE FINANCE COMMITTEE
FEBRUARY 10, 2011

Overview



- **Types of Production Tax Credits**
- Credits Applied Against Production Tax Liability
- Transferable Tax Credit Certificates
- Cash Refunds History

Types of Production Tax Credits

Credits which may be taken against oil and gas production taxes include:

- Capital Expenditure Credits
- Alternative Tax Credits for Oil and Gas Exploration
- Net Operating Loss ("NOL") Carry Forward Credits
- Transitional Investment Expenditure ("TIE") Credit
- Additional Nontransferable Tax Credits
- Well Lease Expenditures Credit
- Cook Inlet Jack-up Rig Credit

Timelines for Production Tax Credits

Types of Production Tax Credits

Capital Expenditure Credits - (AS 43.55.023(a)(1))

- **20%** of qualified capital expenditures (QCE)
- QCE include drilling, construction of facilities, new equipment, etc.
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for exploration credit
- Must be spread over 2 years (except for expenditures incurred south of 68 degrees North latitude – effective July 1, 2010)
- Credits may be cashed or transferred

Types of Production Tax Credits

Exploration Credits

- Two Main Types
  - Capital Credit for Exploration Activity 43.55.023(a)(2) **(20%)**
  - Alternative Tax Credits for Oil and Gas Exploration 43.55.025 **(30%-40%)**

Types of Production Tax Credits

Capital Credit for Exploration Activity 43.55.023(a)(2)

- **20%** of qualifying expenditures
- Qualifying expenditures related to geologic and geophysical exploration, or in connection with an exploration well
- Must be spread across 2 years (except for expenditures incurred south of 68 degrees North latitude – effective July 1, 2010)
- Same expenditures may also qualify for NOL Carry Forward Credits
- Credits may be cashed or transferred

Types of Production Tax Credits

Exploration Credits

- Two Main Types
  - Capital Credit for Exploration Activity under 43.55.023(a)(2) **(20%)**
  - Alternative Tax Credits for Oil and Gas Exploration under 43.55.025 **(30%-40%)**

Types of Production Tax Credits

Alternative Tax Credits for Oil and Gas Exploration - 43.55.025

- **30% - 40%** of qualified expenditures depending on well location and proximity to existing wells and unit boundaries
- Qualified expenditures include certain expenses associated with seismic and geophysical exploration work, and exploration well drilling
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for Capital Expenditure Credit
- To receive credit, taxpayer must provide certain well data to DNR
- Expires 2016
- Credits may be cashed or transferred

Types of Production Tax Credits

NOL Carry Forward Credit - 43.55.023(b)

- **25%** of net operating loss
- Applied against tax liability in following year
- Credit based on adjusted lease expenditures which include both operating and capital expenses
- Includes capital expenditures which also qualify for qualified capital expenditure credit under 43.55.023(a)(1) and exploration credit under 43.55.023(a)(2)
- Credits may be cashed or transferred

Types of Production Tax Credits

Transitional Investment Expenditure (TIE) Credits

43.55.023(i)

- Credit equals 20% of qualifying capital expenditures:
  - incurred between March 31, 2001 and April 1, 2006, and
  - not exceeding 10% of the capital expenditures incurred between March 31, 2006 and January 1, 2008.
- Revised under Aces to cover only producer or explorer not having production prior to January 1, 2008
- Credits are ***not*** transferable and may ***not*** be carried forward beyond 2013
- Same capital expenditures may ***not*** qualify for exploration credit under 43.55.025

Types of Production Tax Credits

Additional Nontransferable Tax Credit- 43.55.024(a)

- Referred to as "New Area Development" credit
- Up to $6 million
- Available for companies producing from leases or properties outside of Cook Inlet and North Slope
- Credit can only be applied against tax liability
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

Types of Production Tax Credits

Small Producer Credit - 43.55.024**(c)**

- Up to $12 million, depending upon level of production
- Available for companies producing less than 100,000 bbl/day of oil BTU-equivalent
- Production not restricted by region
- Credit can only be applied against tax liability
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

Types of Production Tax Credits

Well Lease Expenditure Credit - 43.55.023(l)

- 40% of well lease expenditures incurred in the state south of 68 degrees north latitude
- Must be intangible drilling costs or geological / geophysical exploration
- Credit may be applied against tax liability, or certificated and cashed or transferred to another taxpayer

Types of Production Tax Credits

Cook Inlet Jack-Up Rig Credit - 43.55.025(l)

- Credit of 100%/90%/80% of up to $25 million each of exploration expenditures for first 3 unaffiliated persons drilling wells using the same jack up rig penetrating and evaluating prospects in the pre-Tertiary zone.
- Taxpayer obtaining credit may not claim .023 credit for same expenditures
- 50% of credit to be repaid over 10 year period if well yields sustained production

Overview

- Types of Production Tax Credits
- **Credits Applied Against Production Tax Liability**
- Transferable Tax Credit Certificates
- Cash Refunds History

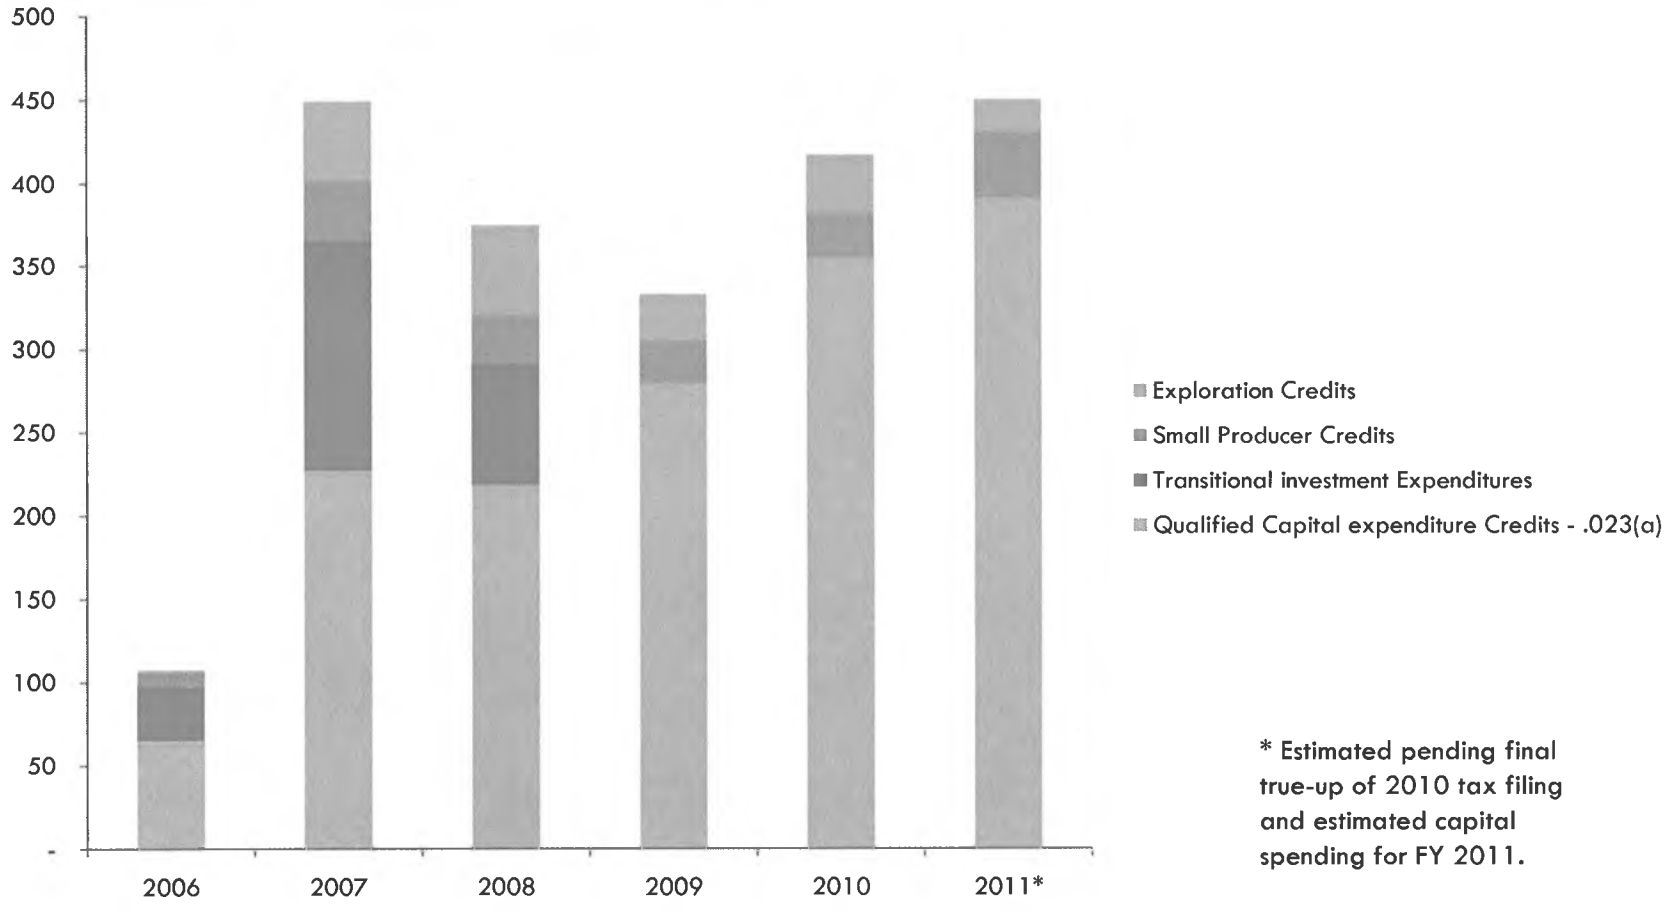
Credits Applied Against Production Tax Liability

Credits may be redeemed in two ways:

(1) All Credits may be applied against production tax liability

- Capital Expenditure and Capital Exploration Credits split over two years (except south of 68 degree North latitude – eff. July 1, 2010)
- NOL , TIE, Small Producer and Alternative Tax Credits for Oil and Gas Exploration may all be applied against tax liability in total in a single year

(2) Some Credits may be converted into a transferable Tax Credit Certificate



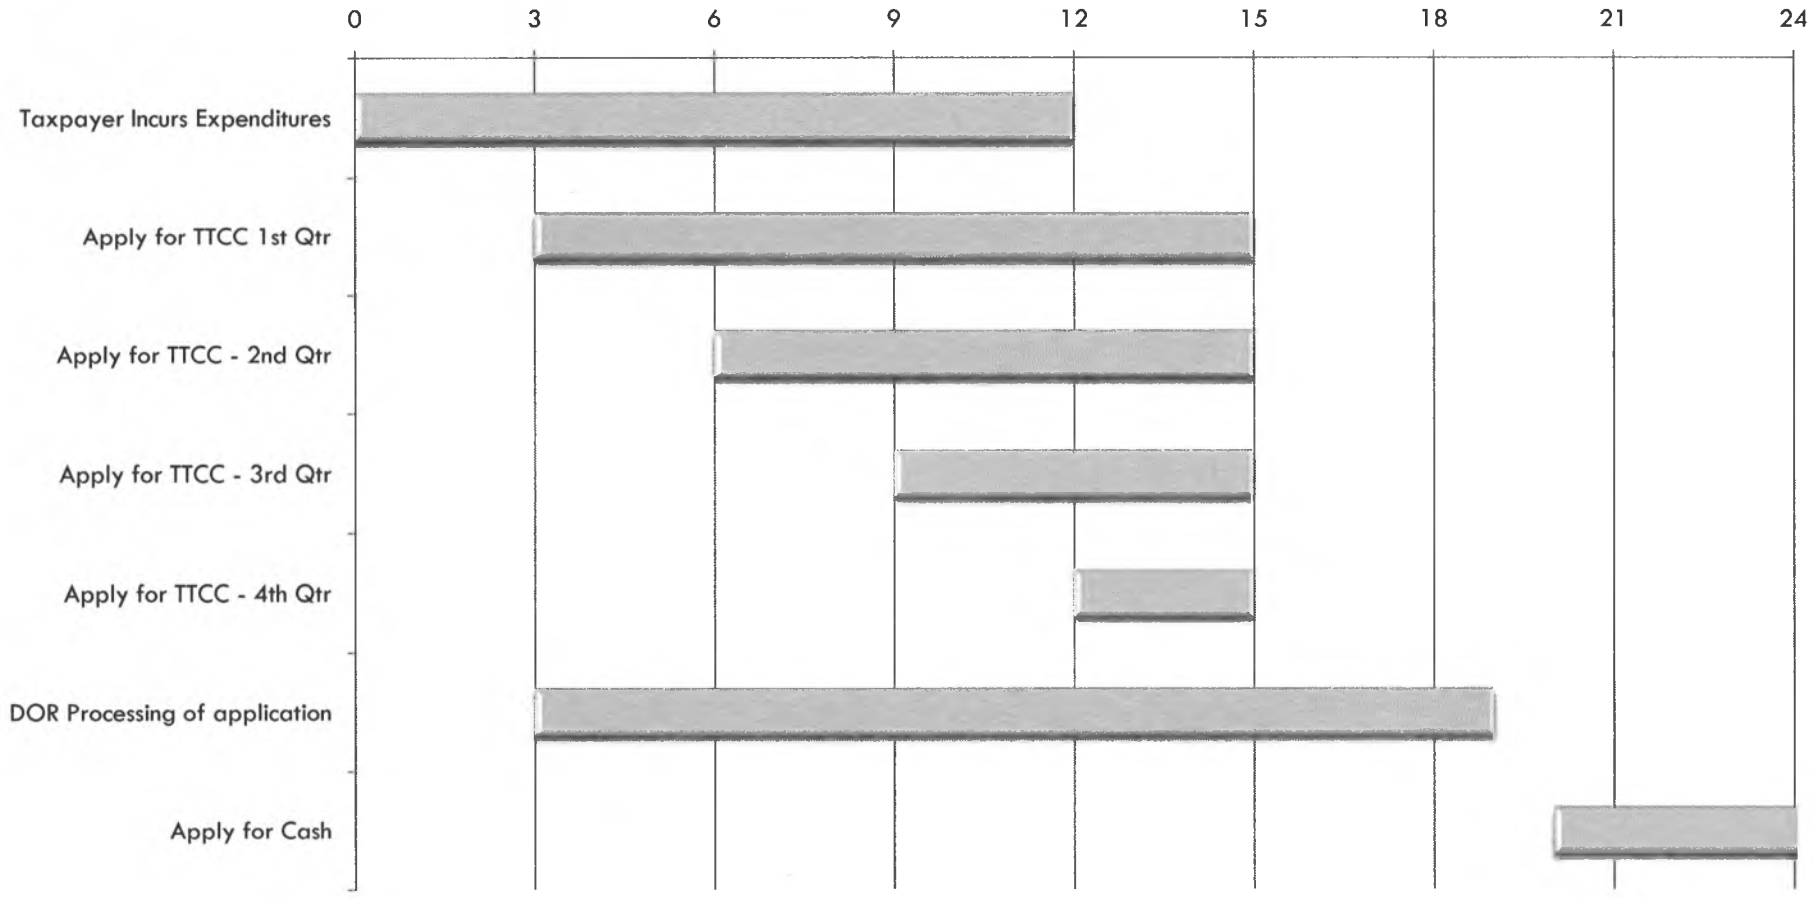
- Capital Expenditure, Capital Exploration, NOL, and Alternative Tax Credits for Oil and Gas Exploration are convertible to tax certificates
- Capital Expenditure, Capital Exploration and NOL Tax Credit Certificates must be applied over two years (except south of 68 degrees North latitude – passed 2010)
- Alternative Tax Credits for Oil and Gas Exploration Certificates can be used in single year

Production Tax Credits Applied Against Tax Liability (Fiscal Year)

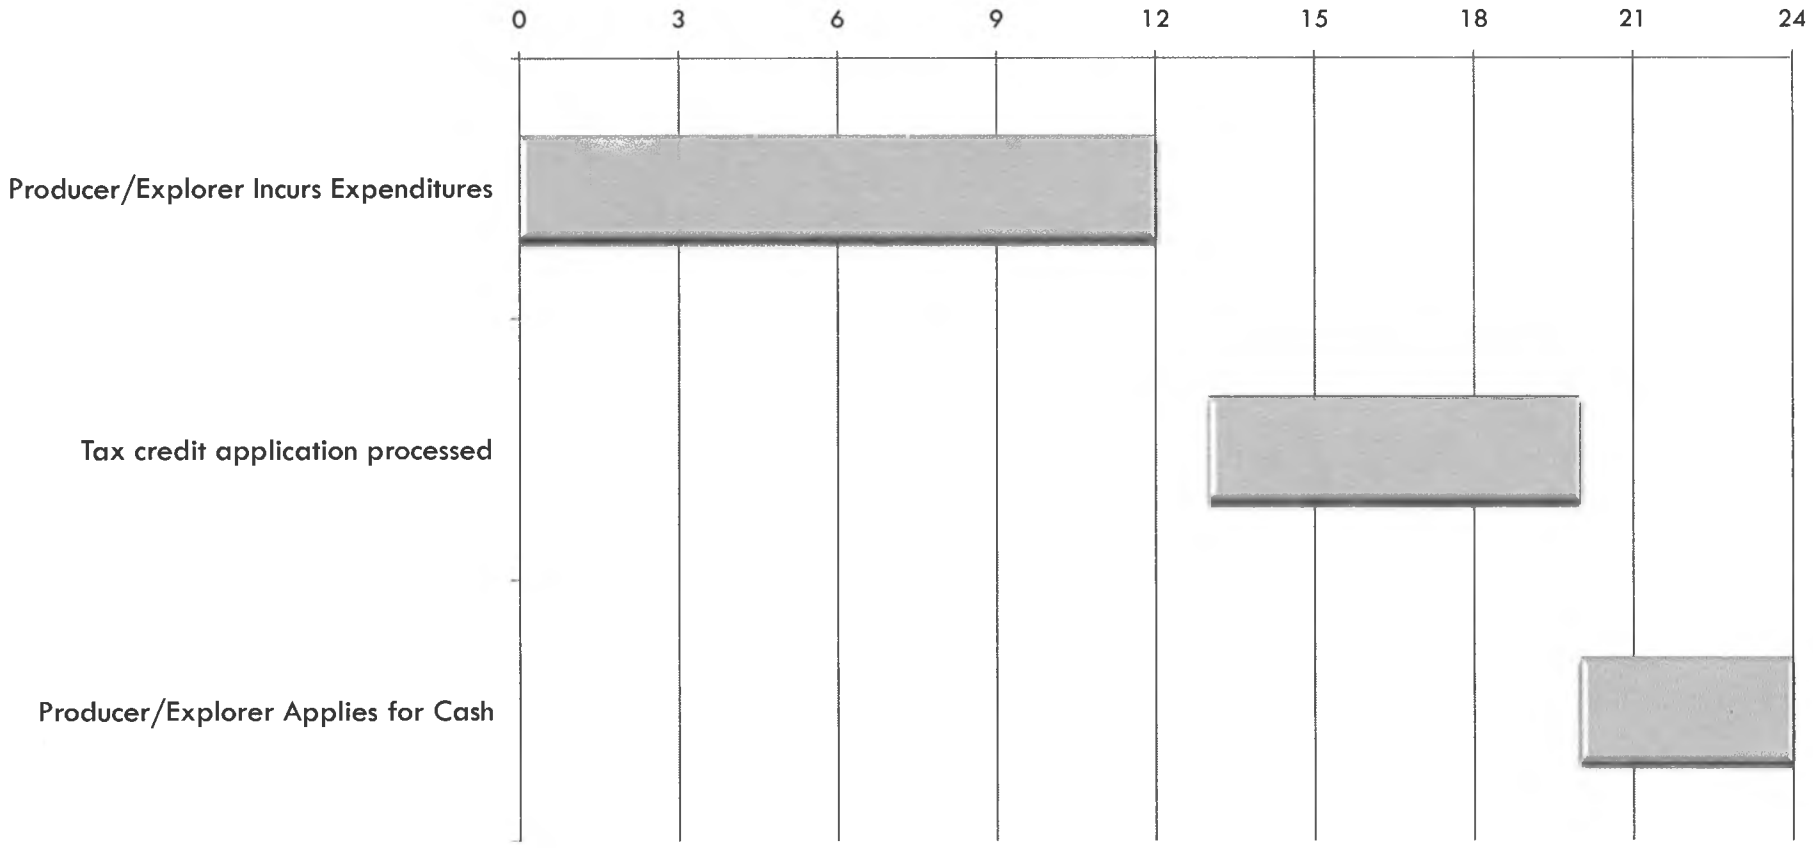
	2006	2007	2008	2009	2010	2011*	Total
Capital Expenditure Credit	65	227	219	280	349	391	1,329
TIE Credits	33	138	73	0	0	0	243
Small Producer Credits	9	37	30	26	28	40	155
Exploration Credits	1	47	55	28	34	20	169
Totals	107	449	375	333	417	450	1,896

* Estimated

Production Tax Credits Applied Against Tax Liability (Fiscal Year)

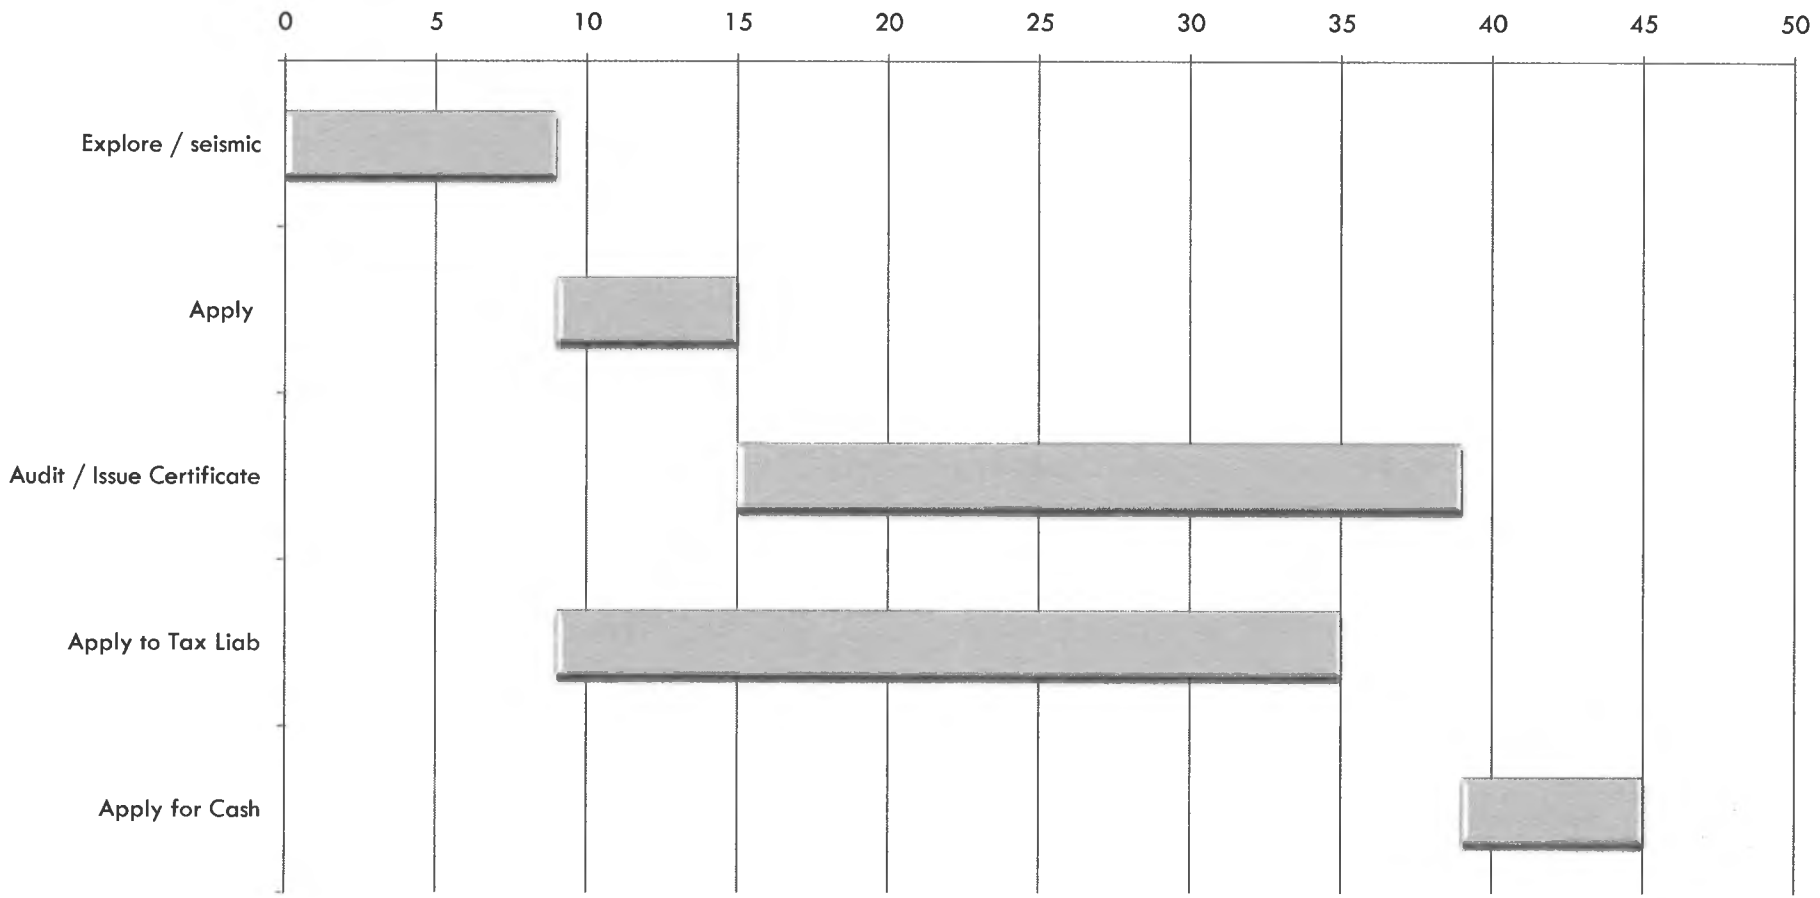


* Estimated pending final true-up of 2010 tax filing and estimated capital spending for FY 2011.



Overview

- Types of Production Tax Credits
- Credits Applied Against Production Tax Liability
- **Transferable Tax Credit Certificates**
- Cash Refunds History



Timeline for processing of Transferable Credit under AS 43.55.023 (a)

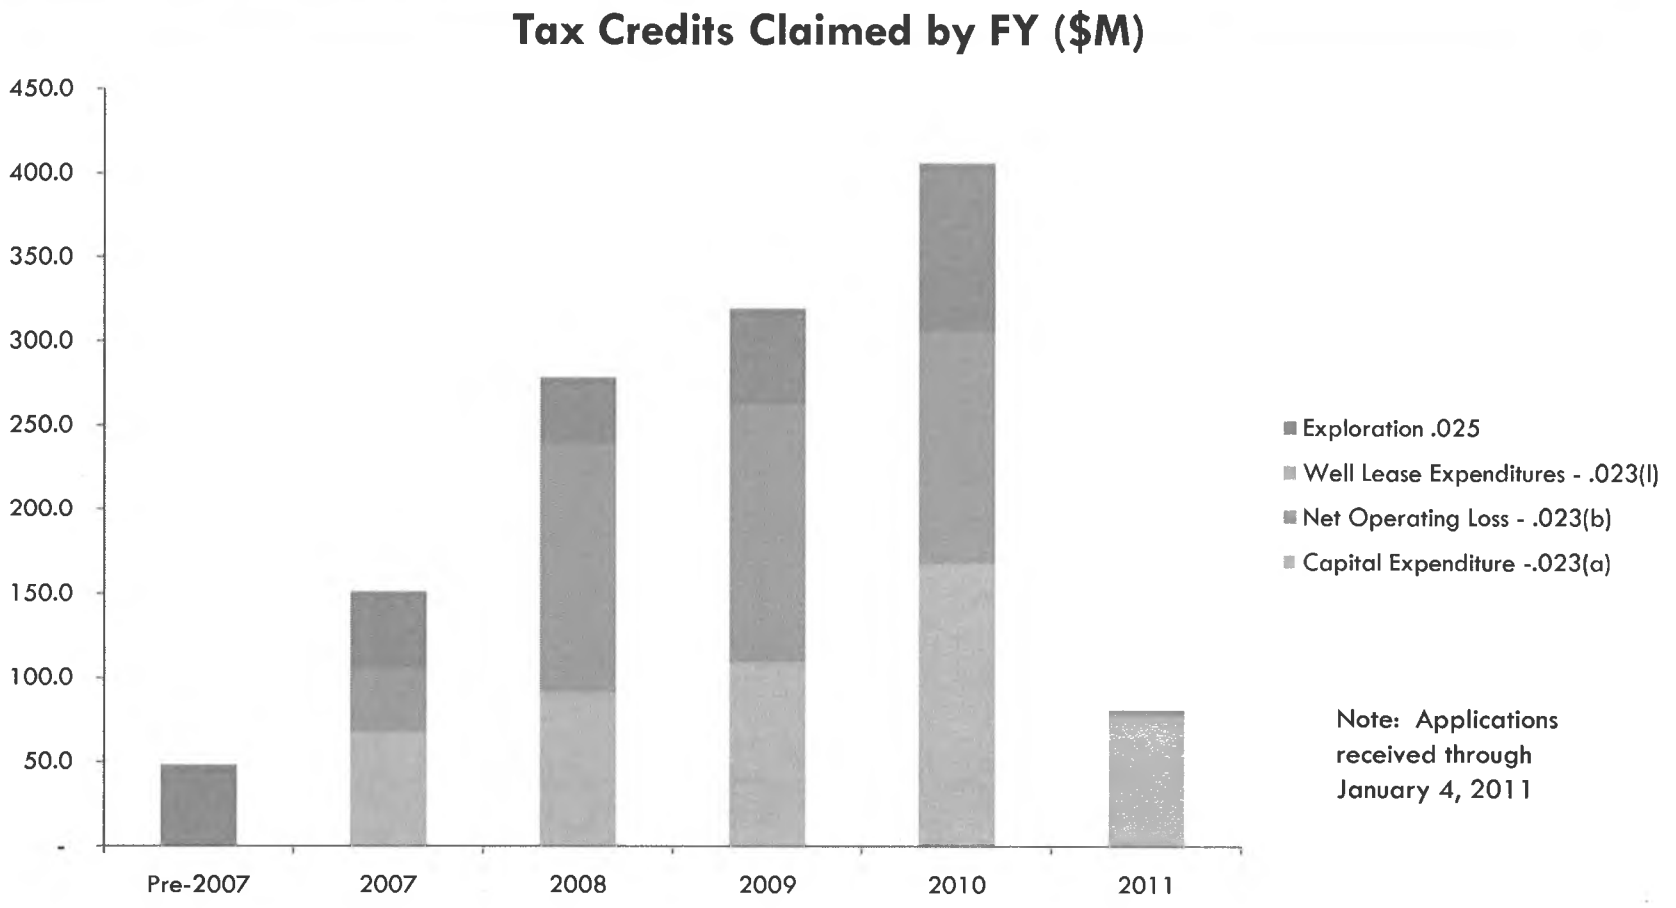
Timeline for processing a Transferable Tax Credit Certificate under AS 43.55.023(b)

Timeline for Application for AS 43.55.025 Alternative Credit for Oil and Gas Exploration

Transferable Tax Credit Certificates

Companies may also claim tax credits by applying for a Transferable Tax Credit Certificate (TTCC)

- Available to companies (explorers) with no tax liability to which credits can be applied
- Tax Credit Certificates under 43.55.023(a) and (b) must be split or applied over two years (except credits issued for expenditures incurred south of 68 degrees North latitude effective July 1, 2010)
- May be transferred to another taxpayer or cashed with the state



Production Tax Credits Under AS 43.55 Claimed by FY ($M)

Credit Type	Pre-2007	2007	2008	2009	2010	2011*	Total
Capital Expenditure - .023(a)		68.2	91.7	109.6	168.0	72.8	510.3
Net Operating Loss .023(b)		38.1	148.5	153.5	138.7	.2	479.0
Well Lease Expenditure - .023(l)						5.8	5.8

- Cash Refunds History

Cash Refunds History

Cash Refunds Governed by AS 43.55.028:

- To cash must be usable against tax liability
- Must show subsequent (24 months) QCEs or lease bids equal to cash sought (repealed in 2010)
- Have a zero tax owed in current and past years
- Have no more than 50,000 BOE/d

Co-Chairs, Senate Finance Committee
Alaska State Senate
Juneau, Alaska 99801

February 8, 2011

SUBJECT: Response to Questions asked of the Department of Revenue at the January 25, 2011 forecast overview in the Senate Finance Committee

Dear Senators Hoffman and Stedman:

The purpose of this document is to respond to several questions that were asked of the Department of Revenue during the department's overview of the Fall 2010 revenue forecast before the Senate Finance Committee on January 25, 2011. The questions are organized into five categories below: general questions, production questions, price questions, lease expenditure questions, and credits questions. The questions posed at the hearing and the answers to those questions follow.

GENERAL QUESTIONS:

The committee requested information about the status of the Chief Economist position, and a summary of our recruiting attempts.

The Chief Economist position has been vacant since March 2008. The department has recruited for the Chief Economist position five times since 2008 without a successful hire. We have experienced difficulty attracting applicants with the desired qualifications at the salary range offered.

- An Alaska-only recruitment at a Range 24 which ended in April 2008, resulted in four applicants; only one applicant met minimum qualifications, one interviewed and that individual withdrew their application.
- A national recruitment at a Range 26 which ended in February 2009, resulted in one applicant who did not meet the minimum qualifications.
- A national recruitment at a Range 26 which ended in April 2009, resulted in eight applicants; four met the minimum qualifications; four interviewed, the successful candidate declined the job offer.

- A national recruitment at a Range 26 which ended in October 2009, resulted in eight applicants; one barely met the minimum qualifications; one interviewed, an applicant not selected.
- A national recruitment at a Range 26 which ended in April 2010, resulted in eight applicants; none of the applicants met the minimum qualifications.

PRODUCTION QUESTIONS:

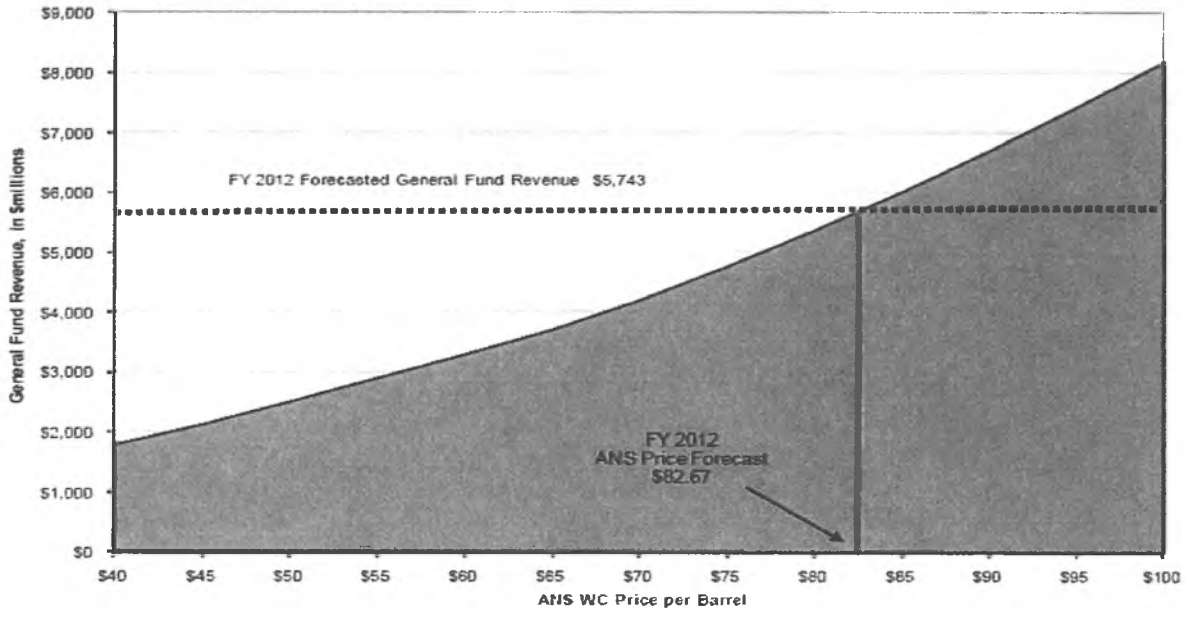
(1) The committee requested information about the status of the Liberty project and how this relates to our production forecast.

The Anchorage Daily News reported on December 1, 2010 that construction of the drilling rig at the Liberty project is being temporarily suspended to review certain systems including power, mud control, ventilation, and safety systems. A further article in the Anchorage Daily News on February 1, 2011 stated that BP is now expecting to begin production at Liberty in 2013. In the department's Fall 2010 revenue forecast, Liberty is forecast to begin production in FY 2012, with peak production of about 39,000 barrels per day in FY 2013. The department will revisit the timing of the Liberty development for the next revenue forecast. Also, it is important to note that the Liberty field is located in federal waters, not in state waters. Therefore, although delays at Liberty affect production, pipeline throughput, and employment, the impact on state revenue is much smaller than if the field were on state land and subject to production taxes and state royalties.

(2) The committee requested information about the life cycle of a typical oil basin and how Alaska compares.

A production profile typical for an oil basin in general is represented by a period of production growth, followed by a production peak, and then a long period of declining production. Oil production in Alaska peaked in FY 1988 and has declined at an average rate of about 5% annually since. Over the last 10 years, the decline rate was about 4.2% and the department forecast is for an average decline rate of about 3.2% annually through FY 2030.

Comparing Alaska's oil production profile to other oil basins is a complicated task that would require an in-depth analysis of each oil basin, including technical and geological analysis and the timing of new field developments. However, Alaska's rate of production decline does not appear to be unusual for a mature oil basin. According to data from the Energy Information Administration (EIA), oil production in the United Kingdom has declined at an average rate of 6.6% annually from the peak in 1999 through 2009. Oil production in Norway has declined at an average rate of 4.6% from its peak in 2001 through 2009, also according to the EIA.



A study recently published in the "Energy Policy" journal examined oil production declines in Norway.[1] The authors found that production from "giant" oil fields in Norway declined at an average rate of 13% annually, and for smaller "dwarf" oil fields the average decline was 21% per year. With double-digit decline rates expected for individual fields, new and incremental production is an important component of achieving a single-digit decline rate or stable production.

PRICE QUESTIONS:

The committee requested information about high and low price forecast scenarios and how those prices would affect revenue forecasts.

The department prepared an analysis of revenues across a range of oil prices and published this information in Appendix A-2 of the Fall 2010 Revenue Sources Book for FY 2011-FY 2013. The matrices provided allow the reader to estimate what General Fund Unrestricted Revenue might be under oil prices that are higher (or lower) than the department's official price forecast. The figure below shows a graphical representation of FY 2012 revenues across a range of ANS prices. For example, at the department's ANS price forecast of $82.67 per barrel, unrestricted revenue is forecast to be approximately $5.7 billion. If prices instead averaged $100 per barrel, unrestricted revenue could be about $8.2 billion. On the other hand if prices averaged $65 per barrel, expected unrestricted revenue would be about $3.7 billion.

FY 2012 General Fund Unrestricted Revenue, with Price Sensitivity

[1] Mikael Hook, Kjell Aleklett, A decline rate study of Norwegian oil production, Energy Policy, Volume 36, Issue 11, November 2008. (http://www.sciencedirect.com/science/article/B6V2W-4TF69H9-3/2/4bbba298f1d70b29e0b82b1a0f2876d4)

LEASE EXPENDITURE QUESTIONS:

(1) The committee requested information about historical operating expenditures, with and without the "standard deduction."

The department has been in consultation with the Department of Law regarding the disclosure of this information. We will report back to the committee on this issue once we have a determination from the Department of Law.

(2) The committee requested information about the share of oil company capital expenditures attributable to various types of activity such as new exploration, developing new production, and capital required to maintain existing operations. The committee was specifically interested in details of the forecasted $400 million increase in capital spending between FY 2011 and FY 2012.

The increase in capital spending forecasted for FY 2012 is based on company-reported expenditure projections as of the Fall 2010 forecast. A review of the expenditure projections shows that a majority of the increase in capital expenditures is anticipated to occur in currently producing units.

The department does not require operators to provide information about the specific uses of their projected capital expenditures, but some operators do provide that information for certain units. Also, the Production Tax Audit section of the department receives some specific information about historical capital spending as part of their auditing of capital expenditures that are claimed on tax returns. The department has been in consultation with the Department of Law regarding the disclosure of this information. We will report back to the committee on this issue once we have a determination from the Department of Law.

(3) The committee requested information about lease expenditures specific to the Point Thomson Unit, including labor expenses and credits generated.

The table below shows lease expenditure information for the Point Thomson Unit for fiscal years FY 2008 - FY 2010. Credits for qualified capital expenditures at the Point Thomson Unit are also shown, calculated as 20% of the qualified capital expenditure total. We could not show labor expenses at Point Thomson, as those have not been separately reported.

Point Thomson Unit Lease Expenditures and Credits* (in millions)

	FY 2008	FY 2009	FY 2010
Qualified Capital Expenditures	$27.9	$152.0	$419.0
Total Lease Expenditures	$29.0	$157.6	$420.0
Capital Credits (calculated)	$5.6	$30.4	$83.8

*NOTES:
Lease expenditures shown are before exclusions and are from company reported data restated to accommodate a fiscal year format.
Capital credits are calculated based on 20% of qualified capital expenditures shown above.

(4) The committee requested lease expenditure information for three units: Prudhoe Bay, Kuparuk, and Colville River (Alpine).

The table below presents lease expenditure information for Prudhoe Bay and Kuparuk units for fiscal years FY 2008- FY 2010. Colville River Unit information cannot be reported separately due to confidentiality constraints.

Total Company Reported Lease Expenditures for Prudhoe Bay and Kuparuk, FY 2008- FY 2010

	Prudhoe Bay Unit		Kuparuk Unit	
	Qualified Capital Expenditures	Total Lease Expenditures	Qualified Capital Expenditures	Total Lease Expenditures
FY 2008	$ 685	$ 1,620	$ 422	$ 854
FY 2009	$ 766	$ 1,728	$ 337	$ 779
FY 2010	$ 639	$ 1,828	$ 277	$ 732

Amounts shown are in $ Millions
Expenditures are shown before exclusions.
Total expenditures include the "standard deduction" per AS 43.55.890 through December 31, 2009
Expenditures are reported as annual expenditures and restated as fiscal year estimates.
Source: Company reported information from monthly information forms and annual tax returns.

CREDITS QUESTIONS:

The committee asked several questions relating to production tax credits.

A representative of the department is planning to be available the week of February 7 to meet with the committee and address credit-related questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

Fairbanks, AK 99775-5260

March 1, 2011

Senator Hoffman,

Below are some additional responses and attachments to the questions you had from the February 16th subcommittee meeting. I am still working on responses to the other questions.

1) Retention rate of degree seeking students at community campuses and students enrolled in high demand job area degree programs-Attached is an information sheet.

2) From page 26 of the Fischer Report: **"In FY 2009, the System spent $78.4 million on items labeled as technology; this was eleven percent of the System's total expenditures and represented a 93 percent increase since FY 1999."**

a. *The Fischer report asks about the effectiveness of this spending throughout the University system-what is the University System doing to get a better understanding of how effective technology spending is?*

The University of Alaska has been tracking total IT spend across the UA system and by MAU yearly since 1999. That information is distributed to the campuses for review and planning purposes. In the time period from 199 to 2009 while total technology spend across the UA system changed by 93.3%, total UA system spend changed by 92.5%.

In 1999 tech spend was 11% of total UA spend. In 2009 total tech spend was 11% of total UA spend. During that decade % of tech spend to total UA spend never went above 11%. Total tech spend for the UA system is on the high end of other university systems across the nation but not out of range. In Alaska telecommunications costs are significantly higher than other states.

3) Bottlenecks in accessing bandwidth in Sitka-The Sitka campus did experience a recent network outage that was due to an outage by the carrier under contract to the university (AT&T). The carrier's back-up did not work appropriately causing a longer outage than usual. The university has worked with the carrier and the situation has been addressed for future similar situations. All of this was done keeping the Sitka campus director in the communications loop.

4) Assignable space- Of the assignable space used for academic/administrative support and instruction, 76% is assigned to instruction and 24% is assigned to support. However, as e-Learning becomes more common, (34% of students are taking a least one class via e-Learning), and students are able receive instruction in places other than classrooms, i.e. dorms, the type of space considered as instruction should be re-evaluated.

5) According to the Association of University Technology Managers 2009 Survey, federally funded research at Universities led to the creation of 596 new companies, 658 new products and 12,109 patent applications. Universities also received $2.3 billion in licensing revenue from previous technology commercialization.

a. How much revenue does the University system receive from licensing revenue?

UAF has less than $20k per year in licensing/copyright/trademark revenues. At the moment, our accounting combines licensing with copyright revenue so separating those two, licensing is probably on the order of $10k per year. Increasing licensing revenue will be a focus of the newly formed Office of Intellectual Property and Commercialization at UAF.

b. How does the University compare to its peers in terms of technology commercialization?

The Office of Intellectual Property and Commercialization was formed in October so we have a lot of opportunities in this area.

c. Is there a strategic plan to improve technology commercialization and innovation at the UA system?

Technology commercialization and innovation will be part of the strategic planning effort the University of Alaska currently has underway.

6) Looking at the University's Blue Book, page 53, spending by the system is broken out by National Center for Higher Education Management Systems (NCHEMS) categories.

a. *In FY10 $210,076,000 was spent on instruction and $116,814,300 was spent on (institutional support) executive administration with another $42,365,600 on academic administration (academic support).*

i. *Can you comment on the level of administrative overhead throughout the University system?*

The definitions of each of these categories according to NCHEMS are below.

Academic Support: The academic support category includes expenditures related to academic administration and governance to the institution's academic programs; academic program advising; course and curriculum planning, research, development and evaluation, including faculty development; and academic computing, including regional academic mainframes and the student micro-computer labs.

Instruction: The instruction service category includes expenditures for all activities, which are part of the system's instruction programs. Instructional services include all credit and non-credit courses for academic and vocational instruction.

Institutional Support: The institutional support category includes expenditures related to executive services including the office of the President, chancellors' offices, and other institutional support functions including business offices, accounting, budget development, EEO/AA, educational properties management, facilities planning and construction, finance,

Michelle Rizk, Associate Vice President

human resources, information services, institutional research, internal audit, investment properties management, legal counsel, payroll, procurement, records, risk and hazardous materials management, systems maintenance, university relations and support for the assemblies and the Board of Regents.

ii. *This looks like the University spends at least $1 on administration for every $2 in instruction?*

The University allocates as much funding into instruction as possible while maintaining a reliable infrastructure to deliver the programs and meets its mission statement of "*The University of Alaska inspires learning, and advances and disseminates knowledge through teaching, research, and public service, emphasizing the North and its diverse peoples."*

Please let me know if you have any additional questions.

Sincerely,

Michelle Rizk

March 1, 2011

Office of Senator Lyman Hoffman
State Capitol Room 518
Juneau AK, 99801

Senator Hoffman:

Thank you for your recent request for information about the retention rate of degree seeking students at University of Alaska community campuses, and students enrolled in High Demand Job Area degree programs. I am pleased to provide the following information in response to your interest in this area.

Virtually all community campus first-time freshmen in fall 2009 were seeking a two-year degree or certificate, and roughly 40 percent of these students attended part-time. The tables below provide a summary of the number of first time freshmen who started at a community campus in fall 2009 and the proportion who returned anywhere in the university system in fall 2010, as well as the retention rates for the subset of students starting in a high demand job area program at a community campus in fall 2009.

University of Alaska
First-Time Freshmen Retention
Full-Time and Part-Time Students Starting At a Community Campus

		Starting Cohort Fall 2009	Percent Retained Fall 2010	High Demand Area	Starting Cohort Fall 2009	Percent Retained Fall 2010
UAA						
	Kenai	139	54.7%	Business, Finance & Mgmt	65	50.8%
	Kodiak	19	31.6%	Construction	10	50.0%
	Mat-Su	219	56.2%	Engineering	15	60.0%

	Bristol Bay	7	28.6%	Natural Resources	1	0.0%
	Interior-Aleutians	10	30.0%	Process Technology	60	53.3%
	Kuskokwim	17	29.4%	Teacher Education	11	54.5%
	Northwest	1	0.0%	Transportation	38	26.3%
	UAF CTC	240	48.8%	Grand Total - High Demand	146	47.6%
UAS						
	Ketchikan	28	42.9%			
	Sitka	12	50.0%			
Grand Total		726	48.2%			

Source : Data supplied by MAUs via UA Information Systems: UA Decision Support Database compiled from Banner SI Opening Extracts 2009-2010
Compiled by Statewide Planning and Institutional Research.

National retention rates for other, similar community colleges in the U.S. range from about 38 percent for part-time students to about 55 percent for full-time students[1]. For UA community campuses, note small starting cohort sizes can greatly impact the variability of year-to-year retention.

Sincerely,

Gwendolyn White

PORT OF ANCHORAGE
Alaska's Port. Alaska's Future.
90% of merchandise goods enter the Port of Anchorage from Tacoma, Washington.
Incoming fuel, cement and other cargo from west coast and foreign sources.

Cargo at a glance:

- **120,000 containers annually**
  - 90% of merchandise goods for the Railbelt and interior Alaska
  - 100 million pounds of by pass mail items
  - Serving more than 250 villages in rural Alaska
  - 90% of new automobiles
  - 80% of the cement for concrete along road system
- **11 million barrels of fuel annually**
  - 2/3 of the jet fuel for Ted Stevens Anchorage International Airport
  - 100% of the jet fuel for Elmendorf Air Force Base
  - 90% of fuel used by vehicles, water craft and general aviation in the Railbelt
  - 2/3^{r} of all fuel used by the military in Alaska
  - 100% of the Aviation Gasoline used in Alaska (including Southeast!)
- 1.7 million barrels of fuel are shipped from POA to rural Alaska.

PORT OF ANCHORAGE

Military Support

- Designated by the **Department of Defense** as a **Nationally Strategic Seaport.** Only 19 ports in the nation have this designation.

- What makes the POA strategically important to the Armed Forces?
  - -Connected with secure access to two major military bases
  - -Facilities open year-round
  - -Existing & efficient connection to the state's transportation infrastructure via rail, road and proximity to the airport (TSAIA)
- Supported over **20 deployments** since 2005 including Stryker Brigade deployments to Iraq and Afghanistan.
- Over **18,000** pieces of equipment and cargo have moved through the POA since 2005

- The POA provides essential fuel supplies, vehicles and almost all of the goods on a daily basis from the commissary to office supplies.
- In a 2009 letter to U.S. Secretary of Transportation, U.S. Senator Daniel Inouye wrote:

"For example, the Port of Anchorage is vital to our national defense…the Port is essential in serving the thousands of Army and Air Force personnel, that call Alaska home. Without the Port of Anchorage, these key military bases would be out of business." (April 28, 2009)

Project History

1999 The Port's 10-year Master Plan recommends an expansion program to meet future needs

2003 The Port partners with the U.S. Maritime Administration (MARAD) to implement the program.

2005 The Port and MARAD select the preferred alternative (current project design) and begin the permitting process.

2006 Terminal Road Rail Extension and Coast Guard floating dock completed.

2007 The project receives final permits.

2008 North and South Backlands filled and Port/Tidewater Rd. improvements completed.

2009 Dry Barge Berth bulkhead and mooring complete.

Funding

The expansion project is funded through a combination of port revenues, state and federal funds.

-$279 million received to date:

Federal Funds	$138.7 million
State Funds	$ 91.3 million
Port of Anchorage Funds	$ 49.1 million

- The Port of Anchorage covers all of its own operational costs and puts all of the additional revenue, $4 - $5 million annually, towards the expansion project.
- The Port also qualifies for a $75 million line of credit.

(Millions)	-	$6.6	$18.3	$19.6	$10.5	$43.7	$63.3	$63.4	$39.6	**$265**

- Baseline site assessment, scientific studies, permitting & environmental impact assessments
- Instituted environmental impact avoidance, minimization, and/or mitigation measures
- Over-water Geotechnical Program:
  -sampling, analyses, sesmicity studies, design enhancements, and optimized dredging specs
- Hydrologic & hydraulic modeling for harbor sedimentation and icing studies
- Geotechnical Analysis: Borings, Analysis, Design Changes
- Extracted, tested, sorted, transported and placed structural fill to create 70 acres of useable new land
- Completed dry barge berth bulkhead fendering and mooring
- Constructed 5 mile haul connecting POA to Joint Base Elmendorf Richardson (JBER) allowing secured military deployment, an emergency evacuation route and off-road gravel transport.
  -This road is already being used for military deployments relieving congestion on public roadways.
- Cleared land, opened and operated two gravel extraction borrow pits on JBER
- Realigned Terminal and Tidewater roads with enhanced intersections, track & fuel line crossings, & safety upgrades
- Demolished unserviceable track and installed upgraded, extended track with tie-in to the ARRC rail line
- Installed a new dedicated ultra-low sulfur diesel line
- Manufactured and installed a customized floating dock for the Coast Guard for Emergency Response
- Buried, upgraded and extended power lines and critical drainage systems

PORT OF ANCHORAGE

Budget Comparison

Area	2005* (Millions)	2010 (Millions)	+/- (Millions)	Reason
NEPA	-	$8	+8	2005 estimate specific to construction costs, no planning or permitting.
Supporting Services	$120	$207	+87	Design effort to support changed phasing, seismic criteria & other.
Corrosion Protection	$13	$66	+53	Change to hot dip galvanized steel coating, providing increased protection, reduced maintenance, extended project life.
Steel	$80	$154	+74	Steel prices increased from $1,100/ton in 2005 to $3,000/ton in 2010.
Fill	$74	$175	+101	Changes in fill composition & volume due to design changes. Diesel price swelled from $1.96/gallon in 2005 to $3.43/gallon in 2010 increasing transportation costs.
Concrete	$2	$29	+27	Design change & quantity increase from $1,000^2$ yds to $4,000^2$ yds.
Road, Rail, Drainage	$5	$66	+61	Addition of road, rail, drainage, haul road, buried power, etc. not considered in 2005.
Other Costs	$121	$233	+112	Costs associated w/inefficiencies related to regulatory restrictions, phasing changes & funding. Average in-water productivity loss is 50%.
Marine Mammals	-	$30	+30	Direct costs for Marine Mammal Monitoring, unnecessary in 2005 when the Belgua Whale were not listed as endangered.
Permit Delay	-	$34	+34	Regulatory permit issued in 2007. Lost 2 years of construction activity.
Inflation	-	$87	+87	Compounding interest rates on construction elements.
Total	$415	$1,089	+674	

*2005 Cost estimate from Marine Terminal Redevelopment Environmental Assessment, Appendix G-15

PORT OF ANCHORAGE

Marine Mammal Permit Conditions

Mitigation measures include:

- Shutting down for two hours on either end of low tide.
- Shutting down if a whale enters our "zone"
- Shutting down if the monitors cannot observe the water (fog or sun glare)
- Restrictions on the use of vibratory hammers and impact hammers
- Until the 2010 construction season we were required to shut down for two one-week periods during the summer for fish smolt.

The Marine Mammal Mitigation aspects of our construction permit greatly affects our in-water productivity. In-water productivity loss related to these permit conditions is 60% when impact driving and 35% when using a vibratory hammer.

Average in-water productivity loss is 50%.

PORT OF ANCHORAGE

Projected Expenditures & Funding

PORT OF ANCHORAGE

The Expansion Project is moving forward with clear changes in place.

- A new Project Oversight Committee has been formed to provide clear and timely direction to the Contractors and quickly address issues as the project moves forward. The Committee consists of key decision makers from MARAD, the Municipality and the Port, with participation by ICRC, the project design team PND, the Corps of Engineers and others, as needed.
- Additional financial protection will be in place to assure the work is completed on time with high quality workmanship.
- An entirely new Quality Assurance and Quality Control process will be implemented to catch problems early and guarantee high quality workmanship.
- A detailed evaluation of the contract structure between MARAD, ICRC, PND and subcontractors will be undertaken to insure there are clear lines of responsibility and accountability.
- The nature and extent of the damaged areas will be documented and analyzed and subjected to an independent/forensic review.
- The Port will implement an annual accounting of all expansion funds and associated work that will be published on our website.

Thank You

0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
Refer to the funding matrix in the project description.

Project Description/Justification:
The Port of Anchorage (POA) serves 80 percent of Alaska's population as the entry point for 90 percent of consumer goods and petroleum products that are shipped to Alaska. The POA directly impacts the quality of life and the cost of daily goods for more than 233 communities in Alaska. The POA plays an essential role in economic development, military operations, and businesses throughout the state. In terms of economic impact, the POA contributes $1.4 billion annually to local and state economies including hundreds of construction related jobs along with dozens of long term employment opportunities.

Background: The POA Intermodal Expansion Project is a federal DOT project under the Maritime Administration (MARAD). The project began in 2003 and will continue in phases until project completion, anticipated in 2021. Partners in the project include the State of Alaska, Municipality of Anchorage-Port of Anchorage and port tenants and stakeholders.

Overall, this project has four primary objectives:

- Accommodate existing customer requirements;
- Accommodate growth and demand for Port services, especially with respect to potential new customers and the new generation of vessels anticipated to call at the POA;

- Stimulate economic development for the Municipality and the region by providing marine and landside transportation system improvements; and
- Better serve the military in the Port's role as the nation's 15th Strategic Seaport. The U.S. Maritime Administration (MARAD) has been designated as the federal lead agency for POA development.

Due to the overarching goal of maintaining 100% commercial operations throughout the duration of the project, it is progressing in phases. Completed to date are the tidewater road and rail extensions and the north and south backlands. State funding in FY2011 will be used for the completion of the north extension which is part of the critical path in project implementation. Once completed, the POA will be able to move current container and general cargo operations off of the old deteriorating facility, onto the new facility, and begin demolition of the old infrastructure. Surface transportation design documents are complete, ready to competitively bid, with all authorizing permits in place.

Planned construction in 2012 includes:

- Completion of wet and dry barge berth facilities including surface improvements for barge operations and a rail extension to the north extension and barge berths.
- Completion of the bulkhead, installation of utilities, protective fender systems, docking appurtenances and cathodic protection systems to protect steel structions from corrosion.

With the completion of these facilities in 2012, the POA will be in a position to accept new customers and begin final preparations for moving current shippers from the existing dock structure to the temporary berths.

rior Funding Information:

YEAR	AMOUNT	LEGISLATION
FY11	$ 20,000,000	SLA 10, Ch 43, Pg 80, Ln 9

PORT OF ANCHORAGE
Alaska's Port. Alaska's Future.

RECEIVED
JAN 24 2011

January 21, 2011

The Honorable Bert K. Stedman
Alaska State Senate
State Capitol, Room 516
Juneau, Alaska 99801

Dear Senator Stedman:

The Port of Anchorage has received some very negative press over the past few days and I wanted to address some of the issues raised regarding this important project.

The Port first became aware of the construction problems in May of 2009 and worked diligently through the 2010 construction season to identify the full extent of the problem. As a result, we had to modify the work plan for this past construction season and did not accomplish what was hoped. These setbacks are frustrating, but they are not insurmountable. The project is moving forward and we are fixing the affected areas and will finish this phase of the project as scheduled.

Going forward, we are demanding major changes by our federal lead agency, the Maritime Administration, and the contractor charged with developing the project. These changes are summarized in the attached compass piece, but they include increased protection for the Port for faulty work, the creation of an oversight committee that can respond quickly to issues as they arise, increased oversight and accountability by project managers and additional financial protection for the Port.

This is one of the largest ongoing construction projects in Alaska and far too often the integrity of the project and the Port's value to the state are lost in the accompanying debate. The Port of Anchorage is a vital economic engine for 80% of Alaska and this project alone puts nearly 500 people to work every year. This Port and this project are too important to fail.

I recognize that you may have further questions regarding this project and I take those very seriously. Please do not hesitate to contact me directly if I can address any of your concerns. Ultimately this is about economic development, it's about jobs, and it's about investing in infrastructure today that will serve generations of Alaskans tomorrow.

Sincerely,

Bill Sheffield
Port Director

Anchorage port project too vital to fail

COMPASS: ***Other points of view***

By BILL SHEFFIELD

(01/19/11 19:30:50)

The Port of Anchorage expansion project is too important to fail. The Anchorage Daily News and I can certainly agree on that. However, I disagree with the article in Sunday's paper that implies there is a billion dollars in wasted funding and that the project is failing.

The facts are that $265 million has been spent or obligated on the port expansion to date and the majority of those dollars were spent on successful aspects of the project. It took more than 5 years, and a hefty sum, for the port to secure its permit. During this time the port was rebuilding roads, a rail line, repairing disintegrating pipelines and culverts, burying and extending power lines, installing a new pipeline, building a floating dock used by the Coast Guard, and mitigating a vexing runoff problem for Elmendorf.

To date, nearly 70 acres of new land in the north and south end have been filled. We have constructed a 5-mile haul road from Elmendorf Air Force Base to the port to transport gravel fill for this project. This road will be used for military deployments relieving congestion on public roadways. All of these projects have been successfully completed with little fanfare or acknowledgment.

In regard to leadership, let me clear up any ambiguity. Because federal funds are involved, the Municipality of Anchorage entered into a memorandum of understanding with the federal Maritime Administration (MARAD) to be the lead federal agency on this project. MARAD contracted with Integrated Concepts and Research Corporation (ICRC) to develop the Port. ICRC, in turn, contracted with design professionals and contractors. MARAD and ICRC have responsibility for quality assurance and the design professionals, PND Engineers, Inc., are responsible for providing a fully functional design for the project. The Port of Anchorage is the owner of the project, responsible for securing funding and coordinating construction phasing to fit the needs of the port and its customers.

It has become clear over the past 12 months that there are some oversight problems and protection issues not adequately addressed by this arrangement. The port has responded aggressively to these issues and has demanded that the following actions be implemented before the start of the 2011 construction season.

• The port is demanding a major review of the contract between MARAD and ICRC in anticipation of the April renewal date. The new structure must provide clear accountability and absolute protection from faulty design, construction and oversight.

• The port is ordering a forensic investigation be performed as soon as possible to establish the cause and extent of the damaged sheet pile installed prior to 2010.

• The port is requiring additional financial protection to assure the work is completed on time with outstanding workmanship.

• The port is developing an oversight committee consisting of the port, MARAD, ICRC, and

appointees from the city, U.S. Army Corps of Engineers and others.

In short, we are establishing an oversight framework with clear expectations from our project partners. We expect progress and demand change. The current construction contractor was able to successfully install sheet pile cells in areas that were discovered damaged starting in May of 2009, indicating to us that the project can be constructed as designed.

While we are frustrated with the progress to date, we remain confident in the integrity of the facility and in the need to complete its construction as soon as possible. This project is about the future of this state and the next five generations of Alaskans that will rely on it. And that's why it is simply too important to fail.

Former Gov. Bill Sheffield is director of the Port of Anchorage. He also has served as president and CEO of the Alaska Railroad, founded and owned a hotel chain and involved in various public and private enterprises.

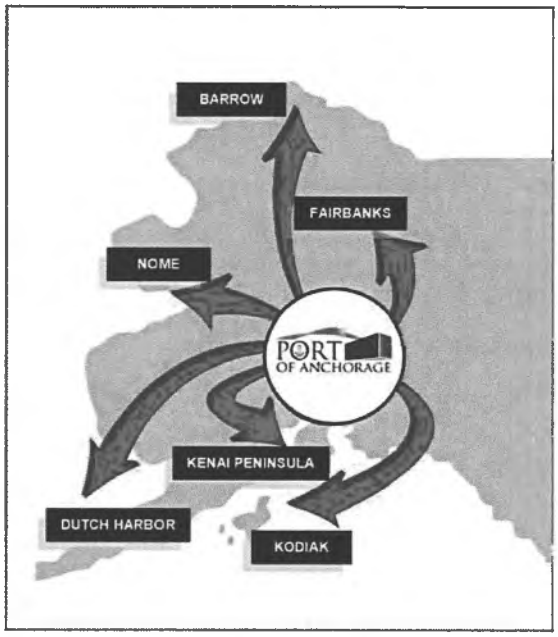
Port of Anchorage

Cost Increase Comparison

Area	2005 Estimate* (Millions)	2010 Estimate (Millions)	Difference (Millions)	Reason
NEPA and Permitting	-	8	8	Permitting process extended resulting in increased overhead and associated costs.The 2005 estimate for $415 M was not intended to be a program inclusive estimate. This estimate was published in the Environmental Assessment and was specific to construction costs and the related impact of construction spending on the local economy. The estimate was based on general concepts, was completed prior to any significant design effort, and did not consider such costs as planning, permitting and environmental assessment.
Supporting Services (Design, Project management, contingency, bond and insurance, other support services	120	207	87	Design effort to support changed phasing and schedules, seismic criteria, and other design changes. When the 2005 estimate was prepared, geotechnical, seismic, and stability analysis and modeling were not complete, nor had the initial US Army Corps of Engineers, Engineering Research and Development Center review taken place. Design development and the review process resulted in design changes. Design development following the 2005 estimate also resulted in refinements and changes to address constructability, long term stability, operations, maintenance, and other needs not recognized or considered at the conceptual development stage. Further, operational and business decisions by the Port of Anchorage resulted in changes to the overall phasing plan.
Corrosion Protection (Active system and steel coatings) 2005 included Cathodic system only	13	66	53	Change from synthetic coating on facesheets only to hot dip galvanizing for all sheets and a robust active Cathodic protection system. The Corrosion Engineer was not retained on the project until late 2006. The coatings and cathodic protection included in the 2005 estimate were based on general industry standards. After evaluating the proposed design, the operational and maintenance needs of the Port, site specific conditions, and a life cycle cost analysis, the Corrosion Engineer recommended changes in the design approach. Anticipate complete cost recovery over the project life due to reduced maintnence costs and extended project lifecycle.
Steel	80	154	74	Cost change $1100 per ton 2005 vs. $3000 per ton in 2010. Costs are spread over the project life.

Port of Anchorage
Cost Increase Comparison



Fill	74	175	101	Changes in fill composition. The bulk fill consists of two types of fill material, granular fill, and common fill each with different composition requirements. Granular fill is required within the sheet pile cells and extends beyond the end of the tailwalls. During initial design development the tailwalls were lengthened, changing the required ratio of granular fill to common fill. In addition, laboratory testing of potential fill materials from Elmendorf Air Force Base resulted in a specification change for the granular fill to provide the required engineering properties for the sheet pile structure. There was a rise in diesel fuel prices from $1.96 in 2005 to $3.43 in 2010 affecting the cost of transporting the gravel. Costs are spread over the project life
Concrete	2	29	27	2005 estimate envisioned a small 8 inch square concrete dock cap beam and no concrete pavement. 2010 estimate includes 8' by 10' for concrete utilidor/ dock cap, a concrete apron under the cranes and increased crane infrastructure. This change is again related to design development and was initially proposed to reduce the overall length of the sheet pile to be driven along the water front. Reducing the length of the sheets during design development in 2006 to no greater than 90 feet improves constructability. As the design progressed the dock cap changed to a box beam (hollow) that allows for water front utilities to be contained within an open utilitdor; this provides benefits for long term maintenance and allows for future modifications or additions to water front utilities. In addition the box beam provides additional structural strength. Quantity change from 1,000 cu yds to 41,000 cu yds to improve seismic stability. Costs are spread over the project life
Road, Rail, Floating Dock, Drainage work	5	66	61	Addition of road, rail, drainage, floating dock, extended haul road, pit management, buried power, and other work not included in the 2005 estimate. Change in scope with additional rail, road, utility, and floating dock work. During EA development, the details of how and where a rail yard would function within the port area were not developed. The larger yard and extended track came from design development and identification of Port, Tenant, and Railroad operational needs.

Port of Anchorage
Cost Increase Comparison

Other construction costs	121	233	112	Increased cost due to inefficiencies introduced by regulatory requirements, extended phasing, changes in operational requirements and seismic considerations providing increased relibalibity for cranes, sheet pile, and other elements. The project phasing has changed several times based on operational priorities of the port (such as moving TOTE and Horizon simultaneously, reducing conflict at the POL berths, potential new customer requirements), funding availability, and permit delays. In addition, the overall construction period has been effectively doubled primarily due to the regulatory restrictions that significantly reduce construction efficiency. In-water productivity loss related to marine mamal permit conditions is 60% for impact driving and 35% for Vibratory driving, resulting in reduced average in-water productivity of 50%. There may be an opportunity to lower a portion of this cost based on future re-evaluation of permit conditions as the project progresses.
Marine Mammal Monitoring and direct stand-by costs	-	30	30	Additional costs not anticipated in 2005 before the Beluga Whale was listed as endangered.
Two Year Permitting delay	-	34	34	Not anticipated in 2005 estimate. The delay cost is shown separately to illustrate the cost impact of schedule changes. The regulatory permit was granted in 2007, causing 2 years of lost productivity and incurring 2 years of overhead cost.
Inflation due to extended schedule delays, reduced efficiency etc.	-	87	87	Compounding interest rates on major construction elements caused by extending project construction from 7 years anticipate in 2005 to 15 years at present
Total	**415**	**1,089**	**674**	

2005 cost estimate based on Marine Terminal Redevelopment Environmental Assessment, Appendix G-15

Inflation 2005-2010 14.93%. Cost considerations has to be given to the difficutly of funding a project vs. phasing it over time.

90% of the merchandise goods that come into Alaska move through the Port of Anchorage.

PORT OF ANCHORAGE
Alaska's Port. Alaska's Future.

March 16, 2011

Senator Bert Stedman
Alaska State Senate
State Capitol, Room 516
Juneau, Alaska 99801

Dear Senator Stedman:

In response to the Senate Finance Committee's request for letters of customer commitment and support, we have compiled letters from a variety of different businesses and entities throughout Alaska. These letters are listed in the following pages.

Thank you again for the opportunity to present to the Senate Finance Committee. I appreciate your continued support of this important project. Please do not hesitate to contact me further with any questions.

Sincerely,

William J. Sheffield
Port Director

State Capitol, Room 516
120 4th Street
Juneau, AK 99801-1182

Dear Senator,

We recently discussed the importance of Horizon Lines partnership with the Port of Anchorage (POA) in the past, present and future.

Our history (Sea Land Service, Inc.) goes all the way back to the "good Friday Quake" whereas two days after the May 1, 1964, 8.7 magnitude earthquake, the Sea-Land vessel S. S. New Orleans made her maiden voyage to Anchorage. Then, on July 22, 1964, Sea-Land expanded the service to include Kodiak, Alaska.

On September 6, 1964, Sea-Land and the POA agreed to a twenty (20) year Preferential User Agreement (PUA). By 1975, Sea-Land upgraded the Alaska Tradelane too three (3) C-4X class ships with each being able to handle 360 – 35' containers.

In 1987, the three (3) brand new D-7 class vessels entered the Alaska trade and a third container crane was added by the POA.

On October 13, 1992, Sea-Land shipped its' millionth container to Alaska. Over time, acreage leased from the POA for container parking increased from some twenty (20) acres to forty-five (45). Today, there is not adequate useable land for expansion.

At the present, Horizon Lines continues its' partnership with the POA with a five (5) year PUA through 2016. In combination with day-to-day operational activities, the Port of Anchorage has embarked on a $1 billion Intermodal Expansion Project. When completed in 2021, there will be one (1) mile of dock face creating an additional 135 acres of useable property. Upon completion, Horizon Lines is requesting additional acreage for container parking to cover future growth needs. Additional acreage would allow vendors that support the industry to relocate on site.

Horizon Lines has worked closely with the POA staff and professionals coordinating relocation of the vessels, yard design and traffic patterns. Three (3) container cranes were purchased by Horizon Lines at a cost of $25 million and are currently stored in China due to dock construction delays. These upgraded larger cranes are essential to stevedore any larger vessels that Horizon may introduce into the trade to meet customer demands in the years to come. Without the expanded POA facility, Horizon Lines would not be able to upgrade these container cranes limiting our ability to bring in larger vessels. The expanded POA facility is necessary for common carriers such as Horizon Lines to be able to meet future cargo demands for Alaska. As Horizon moves forward in partnership with the POA, there will always be need for both dock space and property for parking and support facilities such as executive offices, administrative offices, warehouse operations and two fully staffed garages.

The POA and Horizon Lines will continue to jointly work together as we have in the past as well as moving forward on the dock construction project. Our firm plans to grow with the demands of Alaskan bound cargo. Partnering with the POA to meet these demands is essential as well as a modern facility to ensure we all do not risk future opportunity.

Regards,

HORIZON LINES OF ALASKA, LLC

Marion G. Davis
Vice President & General Manager, Alaska

AFSC

Anchorage Fueling & Service Company

The Honorable Bert K. Stedman
Senate Finance Committee Co-Chairman
120 4th Street
State Capitol, Suite 516
Juneau, AK 99801-1182

Dear Senator,

Anchorage Fueling and Service Company (AFSC), formed in 1981, is an Alaska corporation consisting of seventeen domestic and international airlines. AFSC owns and operates the primary jet fuel storage and distribution systems that provide jet fuel to airlines operating at Ted Stevens International Airport (ANC).

AFSC member airlines represent over 85% of the jet fuel demand at the ANC airport. Member airlines require between 1.8 million and 2.3 million gallons every day to ensure sustainable flight operations at the ANC airport.

AFSC depends on jet fuel provided from both local refiners and importers. As fuel demand continues to exceed local refining capacity, we anticipate that imports delivered via the Port of Anchorage will become an increasingly vital mode for supplying jet fuel and other petroleum products to the Anchorage market.

The Port of Anchorage is already a critical component in the fuel supply chain. As fuel imports increase, the Port will need additional capacity and the flexibility to ensure timely and reliable fuel supply. AFSC is encouraged that the Port is taking appropriate strategic steps to increase capacity and accommodate larger, deeper draft petroleum tankers in a safe and efficient manner.

AFSC recommends continued legislative support of the Port's expansion plans. AFSC is excited about the future of air traffic at Ted Stevens International airport and would appreciate your support for this strategic and critical piece of the fuel supply infrastructure.

Thank you for your support,

Mike Whitlatch

AFSC Chairman
6000 Dehavilland Drive
ANCHORAGE AK 99502-1081

Ted Stevens
Anchorage
International Airport

State Capitol, Suite 516
Juneau, AK 99801-1182

Re: Letter of Support for the Port of Anchorage

Dear Senator Stedman,

Approximately two thirds of the fuel used at the Ted Stevens Anchorage International Airport transits the Port of Anchorage on its way to the airport. This fuel is produced by both instate and external refineries. The fuel that transits the Port facilitates the global economy and is critical to the success of the airport as an economic engine.

Thank you for your consideration.

Sincerely,

John Parrott, A.A.E.
Airport Manager

The Honorable Senator Bert Stedman
Senate Finance Committee Co-Chair
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

RE: Alaska Basic Industries –Port of Anchorage Expansion

Alaska Basic Industries (ABI) imports Portland cement which is used throughout Alaska as an essential component in the construction of buildings, roads and in support of mining and oil field development. The cement is delivered by ocean going ships carrying upwards of 27,000 tons per load, which is unloaded at the Port of Anchorage. Each year we import between 4-6 ships, which are each unloading at the POA dock for upwards of 12 days.

ABI has been involved in the new dock design process since the POA and MARAD selected the present design. Starting in 2006, ABI personnel have provided input relating to operating requirements necessary to continue to using the dock for unloading cement based on various phases of construction. In addition, we have been involved in numerous meeting over the years with ICRC, DOWL, contractors and POA personnel relating to our operating requirements with regards to a new dock and operating upgrades necessary for future expansion that include the following:

- Starting in 2006 we have provided input relating ship draft depth requirements for servicing larger ships in the future. The Handy size ships that we presently use can carry up to 38,000 tons, however due to our storage requirements and available draft the most we can import is 28,000 tons. Plus the Handy size ships are slowly being phased out and replaced by Handy Max sized ships which can carry up to 55,000 tons. We need a dock that can handle these size ships in the future.

1040 O'MALLEY ROAD • ANCHORAGE, ALASKA 99515 • www.anchsand.com • www.fairbanksmaterials.com
PHONE: (907) 349-3333 • FAX: (907) 344-2844 • TOLLFREE: (888) 349-3133

- We have been involved in various meetings relating to both location and dock length requirements that would best fit our needs for unloading cement.

- We have provided input to the POA regarding our future plans for 30,000 – 40,000 tons of additional new storage that we plan on building. Our present cement storage facilities were built in the 1960's and are no longer sufficient to address the market.

- We have made a number of recommendations for the location and configuration of pipe necessary to pneumatically transport unloaded cement from the dock to our storage facilities. The present cement line is over 2,400 feet in length which restricts unloading. We have made recommendations for reducing the distance to pneumatically transport cement. As a matter of note, our present system is the longest pneumatic cement line in North America, which is a nice fact, but it also means it is very expensive and inefficient to operate.

- We have been working with the Port since 2002 on the new design for the POA to provide shore power versus diesel fired generators to supply electricity for unloading.

- We made numerous recommendations in meeting with ICRC personnel regarding critical dock elevations necessary to operate specialty equipment used in cement unloading.

In summary, ABI has been involved in planning since the beginning of the POA development. Although the total project cost is higher than anticipated, the Port of Anchorage is vital to the state of Alaska and this project should continue to receive the legislature's support. If you have any questions or need additional information please feel free to contact me.

Sincerely,

Dale G. Morman
President
Alaska Basic Industries, Inc.

TOTEM OCEAN TRAILER EXPRESS, INC.

PO Box 4129

March 16, 2011

Senator Bert K. Stedman
Senate Finance Committee Co-Chair
120 4th Street
State Capital, Suite 516
Juneau, AK 99801-1182

Dear Senator Stedman,

Totem Ocean Trailer Express (TOTE) is one of two shipping companies that use the Port of Anchorage on a weekly basis. TOTE contributes to the delivery of approximately 50 percent of the consumer goods that eventually make their way through the Port to customers in railbelt Alaska. We make over 100 port calls a year and have been doing so since 1975, and have a preferential user agreement with the Port effective through 2020. TOTE has completed major investments in vessels and terminals, over $400 million, and is prepared to serve Alaska efficiently for decades.

While TOTE recognizes the need for long term improvements to the Port and our berth, the expansion as envisioned is of no real value to TOTE and since 2003 we have been on record as not supporting this project. From the beginning we have been assured that this project would not adversely affect TOTE or our customers.

Currently, we are experiencing issues related to siltation in our berth as a result of the phase construction. At the present time we run the risk of being unable to remain at the dock during negative low tides. This has and continues to require TOTE to alter sailing schedules and stevedoring operations, which increases fuel and labor expenses.

At TOTE, we find ourselves in a very untenable situation; our operations are being negatively impacted by a Port expansion project that is far in excess of our needs, which we have been skeptical of from the beginning. At the same time, budgetary realities call into question the satisfactory completion of the project, even years into the future.

To be clear, it is unacceptable to leave the Port in its present unfinished condition. It is our position that a thorough review of the scope and cost of the Port of Anchorage Expansion Project is needed to ensure the completion of a reliable and efficient Port. A modern first class Port of Anchorage is vital to TOTE and the economic development for the State of Alaska.

Sincerely,

John D. Parrott
President

March 7, 2011

TESORO

Tesoro Alaska Company
1601 Tidewater Road
Anchorage , AK 99501

The Honorable Bert Stedman
Alaska State Senate
State Capitol
Juneau AK 99801-1182

Dear Senator Stedman:

Please find below a summary of our facilities and activities at the Port of Anchorage (POA).

Facilities

Tesoro leases 8.74 acres of Port land. Our fuel storage and loading facility (Terminal #2) is located on that land, and includes 676,696 barrels of storage, secondary containment for that storage, a loading rack, a warehouse, a fire suppression system, and an office building.

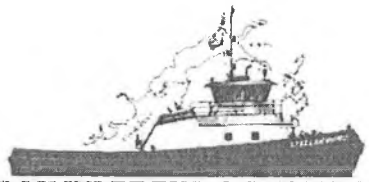
Our 10" products pipeline, which originates at the Nikiski Refinery, ends on Railroad property adjacent to Terminal #2 and Port land. That pipeline has connections to the Port of Anchorage Valve Yard (POAVY) which allows us to make pipeline deliveries to multiple fuel customers at the Port.

Terminal #1, also located on Railroad property adjacent to Terminal #2 and Port land, and Terminal #2 have connections to the POAVY. This allows for transfers between fuel customers at the Port and fuel tankers and barges tied up at the fuel loading dock.

Tesoro pays POA land lease fees, per gallon flow fees for use of the POAVY, and berthing fees.

Activities

The POA facilities noted above comprise one of Tesoro's largest fuels distribution facilities. A dedicated jet fuel pipeline to the Anchorage Airport is our largest distribution facility. Terminal #2 is a key distribution point for heating fuel, jet fuel and gasoline in the Railbelt.



The POA fuel loading dock serves as an important alternative to our Nikiski dock for both receiving fuel imports and delivering fuels to customers via barge or tanker. Because fuel custody transfers at the time of loading, we do not know the ultimate destination of those barges and tankers, however, those vessels have the ability to supply fuel to all marine locations in the state and beyond.

Finally, we sub-lease a significant quantity of fuel storage at our POA facilities to several fuel dealers.

If you have any questions, please contact me at 907-261-7221.

Sincerely,

Kip Knudson
External Affairs Manager

COOK INLET TUG & BARGE INC.

March 4, 2011

Senator Bert Stedman
Finance Committee
State Capitol, Room 516
Juneau, Alaska 99801-1182

Dear Senator Stedman,

I am writing on behalf of the Port of Anchorage in regards to funding the dock expansion project. The Port of Anchorage is the center of transportation for the State of Alaska; it is pivotal in keeping the state's economy running, and a huge supplier of jobs, including the 9 mariners at Cook Inlet Tug & Barge.

We have been docking ships at the Port of Anchorage for over 37 years. During this time we have seen many changes on the waterfront, the newest being the dock expansion. Unfortunately this project keeps getting delayed, and it is pivotal for the State of Alaska to finish the project. The condition of the dock presently does not lend itself to a growing State, and the State can't grow until the Port grows.

Every delay makes it that much harder to get cargo in and out of the State. We are not attractive to outside customers because the expansion project isn't finished, and we are upsetting the customers that use the Port every week because construction is beginning to delay their operations.

Please consider funding the Port of Anchorage, it is pivotal for this project to be finished in order for the State to continue operating efficiently.

Sincerely,

Katrina Anderson

Capt. Katrina Anderson
Operations Manager

International St. Cloud, MN, USA • 866-854-2747 • Fax: 320-255-7478

Dear Governor Sheffield.

I'd like to take this opportunity to notify of you of our company's intent to make use of your barge berth area for the shipment of materiel in support of Anchorage's Fire Island Wind Turbine project.

We would like to discuss with you the availability of up to 10 acres of lay down area for a period of 18-24 months. We anticipate having to move more than 72,000 Freight tons of wind turbine parts and 15,000 Freight tons of support equipment through the berths. We plan to begin operations in May, 2010 through August 2011.

We would appreciate you providing us a point of contact as soon as possible with whom to begin negotiations for berthing reservations and tariff rates. Thank you for your assistance.

Respectfully,

Joseph M. Goering

ASIG. AIRCRAFT SERVICE INTERNATIONAL GROUP™

BBA Aviation

The Honorable Bert K. Stedman
Senate Finance Committee Co-Chairman
120 4th Street
State Capital, Suite 516
Juneau, AK 99801-1182

Dear Senator,

Aircraft Service International Group (ASIG) is the operator of Anchorage Fueling and Service Company's (AFSC) fuel storage system in Anchorage. This system supplies 85% of jet fuel to Ted Stevens Anchorage International Airport (ANC) and consists of eighteen domestic and international airlines. Prior to the economic downturn, demand for fuel at the ANC was increasing by 5 to 8 percent annually. AFSC shareholders expect the demand for jet fuel to continue to increase as the world economy recovers (in Dec. 2010, AFSC approved a construction project that will increase their system storage capacity by 16 million gallons). Alaska refineries are unable to supply the total demand required, as their capacity is limited. Additional supply must come from outside of Alaska and enter the market via the Port of Anchorage. The port of Anchorage has been an essential source of supply for Ted Stevens Anchorage International Airport in the past and will be a critical source in the future. Limitations at the port and their ability to accommodate fuel deliveries could correlate directly with limitations in the growth at Ted Stevens Anchorage International Airport.

AFSC, along with ASIG, have taken steps to encourage supply sources from outside of Alaska to provide fuel to the Anchorage market. In the last year, 2 additional suppliers have entered the market and are supplying fuel via water borne tankers. Entities looking at the Anchorage market will be encouraged to see an expanding port, increasing capacity and the ability to accommodate larger deep draft vessels

ASIG, along with AFSC, recommends continued legislative support of the Port's expansion plans. It is vital to secure Anchorage's position as the crossroads of the world.

Thank you for your service.

Bert Mattingly

Administrative Manager
AFSC / ASIG

RECEIVED

PORT of TACOMA U.S.A.

February 25, 2011

Gov. Bill Sheffield, Executive Director
Port of Anchorage
2000 Anchorage Port Road
Anchorage, AK 99501

Dear Mr. Sheffield:

Alaskans all know the importance of the oil pipeline to the Alaska economy. But there is another pipeline that is equally important—the cargo pipeline that exists between the Port of Anchorage and the Port of Tacoma.

With regular service from two major shipping lines, Horizon Lines and Totem Ocean Trailer Express, an estimated $3.5 billion of trade moves annually between Tacoma and Alaska on this vital connection each year—everything from groceries and consumer goods to autos and military equipment. In fact, over 75% of waterborne goods in the Alaska trade move between our two ports.

In addition to the Tacoma-Alaska cargo connection, the Port of Anchorage also provides important connections and opportunities for the entire state of Alaska to compete and succeed in today's global economy.

While the current port project has had some challenges, we hope that the issues can be resolved in order to maintain and grow the cargo connections between Tacoma and Anchorage, two key strategic military and commercial ports.

Sincerely,

John Wolfe
Chief Executive Officer

Office of the Commanding General

Mr. William J. Sheffield
Director, Port of Anchorage
2000 Anchorage Port Road
Anchorage, Alaska 99501

Dear Mr. Sheffield:

Thank you for the support of the Port of Anchorage, which continues to provide US Army Alaska with the necessary resources for global projection of our mission critical forces. The Port of Anchorage is the only strategic port capable of sustaining our military deployments and operations and is a key logistics capability for current and future US Army Alaska mission requirements.

Since 2005, almost 18,000 pieces of military cargo in the form of combat vehicles, weaponry, and support equipment have passed through the port. The recent cooperation and team effort in the successful military movements through the port in December 2010 highlighted your commitment to support deployments of our Alaskan forces. With your support, we moved 835 vehicles including 308 Strykers, 767 shipping containers, and miscellaneous items for a grand total of 1659 pieces.

I anticipate continued consideration of the Army's needs in Alaska and appreciate the close working relationship US Army Alaska has enjoyed to date with the Port of Anchorage.

Sincerely,

Raymond P. Palumbo
Brigadier General, US Army
Commanding Officer

Senator Bert Stedman
Co-Chair, Senate Finance Committee
Alaska State Senate

Re: Port of Anchorage Funding

Senator Stedman,

The Alaska Trucking Association supports the Port of Anchorage's request for additional funding to continue work on the port expansion project.

The Port of Anchorage is a vital link in Alaska's freight movement system. Trucks are in and out of the port on a daily basis with Tuesday and Sunday being the highest volume days. These are the days Horizon Lines container ships and the Totem Ocean Trailers Express roll on, roll off cargo ships arrive at the port. Trucks enter and exit the port to pick up or deliver both inbound and outbound freight. Without the continued capability of the port to handle the trailers and the containers in an efficient manner, the ability of the trucking industry to deliver the freight will be lessened. It is estimated that there are more than 200,000 truck trips into and out of the port annually.

We request that you look favorably on the Port of Anchorage's request.

Thank you,

Sincerely,

Aves Thompson
Executive Director

If you got it, a truck brought it...

Carlile
CARLILE TRANSPORTATION SYSTEMS, INC.
1800 East 1st Avenue, Anchorage, AK 99501
(907) 276-7797 | TOLL - FREE (800) 478-1853 | FAX (907) 278-7301

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

I would like to express my support for the Port of Anchorage and the ongoing intermodal expansion project. Carlile Transportation depends on the Port of Anchorage for the container freight that is distributed from our company to locations throughout Alaska. The Port of Anchorage is the key entry point for the majority of our business and for the state. It is vital that the Port of Anchorage is able to provide efficient and reliable service.

Although the ongoing expansion project is based in Anchorage, it is a project of statewide significance. The Port of Anchorage is the vein to Alaska's Transportation System. The condition of the current port facilities, its limitations and inefficiencies limit shipping options and opportunities for companies transporting freight. The expanded port facility will provide an opportunity to realize new efficiencies in freight transportation that will ultimately be passed along to our company and our customers. Once complete, the expanded Port will have additional acreage, storage, and barge berths capabilities which would create opportunities to further improve and expand service. The expanded facilities would provide new options and potentially cost savings for freight shipment to and from Anchorage, Alaska's transportation hub.

I appreciate your support of this important project. The port has approached funding this project through federal and state grants in order to protect port users and ultimately their customers from shouldering the project cost. I urge you to provide the funding necessary to complete this project on schedule.

Thank you for your time, please do not hesitate to contact me for any further questions.

Sincerely,

Harry McDonald, CEO
Carlile Transportation Systems

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

We wanted to take this opportunity to express our support for the Port of Anchorage and the ongoing intermodal expansion project. The Alaska Commercial Company depends on the Port of Anchorage for the food, clothing and consumer goods that are distributed to our store locations throughout Rural Alaska. The Port of Anchorage is the entry point for the majority of all goods we sell in our stores. These items are brought in via container ships through the Port of Anchorage and then distributed from there to more than 30 store locations via air, barge, and road. The Alaska Commercial Company depends on efficient and reliable service at the Port of Anchorage to enable us to continue to serve the people of Rural Alaska.

Although the ongoing expansion project is based in Anchorage, it is a project of statewide significance. The state of the current port facilities, its limitations and inefficiencies, are passed onto users in the form of higher transportation costs. The expanded port facility will provide an opportunity to realize new efficiencies in freight transportation that will ultimately be passed along to our company and our rural customers. This is so important to the people of Rural Alaska who are already heavily burdened with very high costs associated with basic necessities such as heating fuel and food. Once complete, the expanded Port with have additional acreage, storage, and barge berths capabilities which could create opportunities to further improve and expand service to western Alaska. This increased service would provide new options and potentially cost savings for freight shipment from Anchorage to western Alaskan communities.

We appreciate your support of this important project. The port has approached funding this project through federal and state grants in order to protect port users and ultimately their customers from shouldering the project cost. To deviate from this plan would only lead to an increase in the cost of essential consumer goods and fuel throughout the state, something our communities and our business simply cannot afford.

Thank you for your time, please do not hesitate to contact either of us for any further questions.

Sincerely,

Rex Wilhelm

KNUTE ANDERSON
PRESIDENT

March 9, 2011

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman:

I wanted to take this opportunity to express my support for the Port of Anchorage and the ongoing intermodal expansion project. As Business Manager of the International Brotherhood of Electrical Workers (IBEW) 1547, I can attest to the importance of this facility, both for our members who work in various sectors at the Port, and the freight and cargo companies who utilize these facilities.

A substantial number of members of our Local union are employed in various capacities throughout the Port and the adjoining facilities. Our members play a critical role in ensuring the Port facilities are maintained to a safe degree and that Port operations continue uninterrupted.

Although the ongoing expansion project is based in Anchorage, it is a project of statewide and regional significance. The state of the current port facilities, its limitations and inefficiencies, limit shipping options and opportunities for companies transporting freight to destinations throughout the state. Once complete, the expanded Port will have additional acreage, storage, draft and berthing capabilities that will create opportunities to further improve and expand service – especially to rural Alaska. For our membership, this means better delivery of services statewide and of course, expanded job opportunities. This is good for Alaska as a whole.

Senator, this project is putting people to work now. Our members are only a small example of the jobs and employment opportunities created by this critical infrastructure project. Every construction season, around 500 people are employed from a variety of independent contractors and unions on the expansion alone. This does not account for the day-to-day needs to keep the aging infrastructure viable as well, an effort in which our members also play a critical role. This project is very important to our members, the Alaskan families they support, and the IBEW fully supports it. I urge you to provide the funding necessary to personally make sure this project moves forward without delay.

Thank you for your time and please do not hesitate to contact me at 907-777-7234 if you have any further questions.

Sincerely,

Larry Bell
Business Manager/Financial Secretary
IBEW LU 1547

Anchorage, AK 99501

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

I wanted to take this opportunity to express my support for the Port of Anchorage and the ongoing intermodal expansion project. As head of the Alaska Regional Council of Carpenters, Millwrights, Piledrivers and Divers, I can attest to the importance of this facility and the intermodal expansion project as it provides jobs for many of our Alaskan union members.

Senator, this project is putting people to work now. This important Alaskan project will require a variety of skilled labor including earthwork, pipes and drainage, extensive concrete work, sheet pile, installation of crane rails, and the construction of any support buildings.

Our members are a single example of the jobs and employment opportunities created by this critical infrastructure project. Every construction season, nearly 500 people are employed from a variety of independent contractors and unions. This project is very important to our members and we fully support it. I urge you to provide the funding necessary to make sure this project stays on track. To lose a year of construction due to funding issues would mean the loss of close to 500 construction jobs come April, 2012.

Thank you for your time, please do not hesitate to contact me for any further questions.

Sincerely,

John A. Palmatier
Executive Secretary Treasurer

RE: Laborers' Local 341's support for the Port of Anchorage intermodal expansion project.

Dear Senator Stedman;

Laborers' Local 341, and our more than 2,200 members, supports the Port of Anchorage and their intermodal expansion project. For Alaskans, increased employment opportunities should continue to be a top priority especially when dealing with the difficult realities of the current economy. Not to mention the significant impact the Port of Anchorage has throughout all of Alaska and its communities.

The port is currently handling 120,000 containers of cargo and 11 million barrels of fuel annually. The intermodal expansion project not only increases throughput, therefore contributing to the success of Alaska, but also generates an additional $20 million in annual payroll. In 2009 alone, the expansion project generated over 700,000 work hours. This is a tremendous boost to our economy.

With a projected growth of nearly 200% in annual net operating revenue from $5.8 million in 2011 to $10.6 million by the year 2021, to not complete this project due to a lack of funding would be regrettable. Laborers' Local 341 requests that the funding necessary to maintain this expansion project be approved.

Please do not hesitate to contact me with any questions or comments you may have regarding this matter.

Sincerely,

A. J. Merrick II

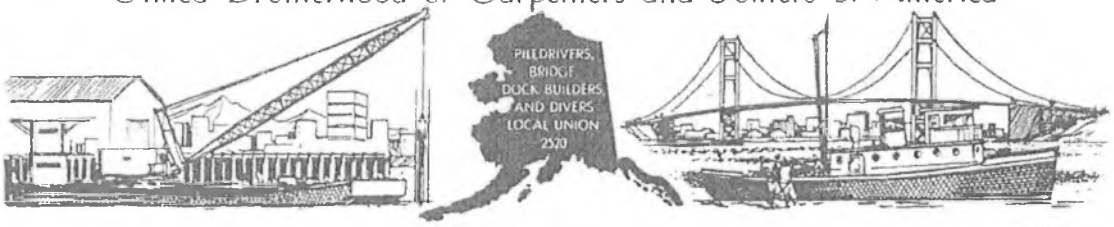
To Whom It May Concern,



I am a 37 year resident of Alaska and enjoy living in this wonderful state with my wife and six children. I work hard to provide a good life for us with hopes that there future here is as great as its past.

I would like to show my support for the Anchorage Port Expansion Project. In my opinion this should be a top priority project to get completed for the businesses and residents of Alaska. With the ever increasing shipping that comes through our port we must complete the expansion. From the fuel supply to the military and the airport or the everyday consumer of goods, the jobs that are created through expansion should not be denied. The economic effects of this project will be positive to most all Alaskans. With the completion of this project it is one more step in a great future for our children.

Respectfully,

Scott Hansen
Business Manager

Alaska State Legislature
State Capitol, Room 516
Juneau AK 99801

Dear Senator Stedman,

I want to take this opportunity to express my support for the Port of Anchorage and the ongoing intermodal expansion project. As the business manager for the Piledrivers and Divers Local Union 2520, I have seen firsthand that this type of project can be done in a cost efficient and timely manner especially with the expertise that the current contractor West Construction has at its disposal. We need this expansion now more than ever with the existing dock deteriorating and the state of the economy. This project is putting people to work now; it provides an income for a vast majority of our skilled workers and their families who would otherwise be counting on the state for support.

Senator, this project is very important to our members and we fully support it. I urge you to provide the funding necessary to make sure this project stays on track. To lose a year of construction due to funding issues would mean the loss of close to 500 construction jobs come April 2011.

Thank you for your time, if you have any questions please do not hesitate to contact me.

Sincerely,

Steve Abel
Business Manager
Piledrivers and Divers Local Union 2520

March 11, 2011

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

I wanted to take this opportunity to express my support for the Port of Anchorage and the ongoing intermodal expansion project. The Port is the center of a hub and spoke transportation system that stretches throughout the State of Alaska providing essential services to communities in western Alaska including Kotzebue. From consumer goods to fuel, our communities and businesses depend on efficient and reliable service at the Port of Anchorage to keep these goods coming in regularly.

Although the ongoing expansion project is based in Anchorage, it is really a project that has statewide significance. Consumer goods reach western Alaska through barge, air and bypass mail deliveries. According to the U.S. Postal Service, nearly 100 million pounds of goods enter Alaska through the Port of Anchorage before being shipped out as bypass mail. Additionally, over 1.7 million gallons of heating oil, gasoline, diesel fuel and other types of petroleum products are shipped from the Port of Anchorage to western Alaska annually. Expansion of the Port of Anchorage, particularly its new barge berths, provides opportunities to further improve and expand service to rural Alaska. Once complete, the expanded Port will have additional acreage, barge berths and storage capabilities all of which could lead to increased service to rural Alaska. New efficiencies resulting from improved facilities will be passed along to consumers in rural Alaska.

I appreciate your careful consideration of this important project. The Port has approached funding this project through federal and state grants in order to protect Port users and ultimately their customers from shouldering the project cost. To deviate from this plan could lead to an increase in the cost of essential consumer goods and fuel throughout the state, something our communities simply cannot afford.

Thank you for your time, please do not hesitate to contact me for any further questions. Taikuu!

Sincerely,

Marie N. Greene

March 14, 2011

Senator Bert Stedman
Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801

Dear Senator Stedman,

Please accept this expression of support for the Port of Anchorage and its ongoing intermodal expansion project. The Port is the center of a hub and spoke transportation system that stretches throughout the State of Alaska providing essential services to over 250 towns and villages in Alaska including the interior region. From consumer goods to fuel, our communities and businesses depend on efficient and reliable service at the Port of Anchorage.

Although the ongoing expansion project is based in Anchorage, it is really a project of statewide significance. Once complete, the Port will have additional acreage, barge berths and storage capabilities which will increase efficient service to the interior region.

Approximately 90% of the merchandise and consumer goods used in Fairbanks and the interior region enter the state via the Port of Anchorage. Consumer goods reach Fairbanks and surrounding communities via road, rail and air. According to the US Postal Service, nearly 100 million pounds of goods enter Alaska through the Port of Anchorage before being shipped out as bypass mail. A third of those goods are transported to Fairbanks via road and rail and then distributed as bypass mail from the Fairbanks airport to surrounding rural communities. Port facilities also support critical petroleum distribution including heating oil, gasoline, diesel fuel and other types of petroleum products. Construction projects in the region depend on the cement and supplies that come over the Port's docks. Expansion of the Port of Anchorage is vital to ensuring these services continue without disruption and it's vital to the continued growth of our economy.

I appreciate your careful consideration of this important project. The port has approached funding this project through federal and state grants in order to protect port users and ultimately their customers from shouldering the project cost. To deviate from this plan would only lead to an increase in the cost of essential consumer goods and fuel throughout the state, something our communities simply cannot afford.

Thank you for your time and please contact me if I can be of any assistance to you.

Sincerely,

KONIAG
INCORPORATED

Dear Senator Stedman:

I wanted to take this opportunity to express my support for the Port of Anchorage and the ongoing intermodal expansion project. The Port is the center of a hub and spoke transportation network that stretches throughout the State of Alaska providing essential services to communities in rural Alaska, including Kodiak Island. From consumer goods to fuel, our communities and businesses depend on efficient and reliable service at the Port of Anchorage to keep these commodities flowing regularly.

Although the ongoing expansion project is based in Anchorage, it is a project of statewide significance. The state of the current port facilities, its limitations and inefficiencies, are passed onto users in the form of higher transportation costs. The expanded port facility will provide an opportunity to realize new efficiencies in freight transportation that will ultimately be passed along to our customers. Once complete, the expanded Port will have additional acreage, storage, and barge berth capabilities which could create opportunities to further improve and expand service throughout Alaska. This increased service would provide new options and, potentially, cost savings for freight shipments from Anchorage to all Alaskan communities.

I appreciate your support of this important project. The Port has approached funding this project through federal and state grants in order to protect Port users and ultimately their customers from shouldering the project cost. To deviate from this plan would only lead to an increase in the cost of essential consumer goods and fuel throughout the state, something our communities and our businesses simply cannot afford.

Thank you for your time, please do not hesitate to contact me for any further questions.

Sincerely,

KONIAG, INC.

ANCHORAGE CHAMBER
of COMMERCE

October 25, 2010

Wayne Stevens
President/CEO
The Alaska State Chamber of Commerce
217 Second Street, Suite 201
Juneau, AK 99801

Dear Mr. Stevens:

The Anchorage Chamber of Commerce recognizes the vital strategic importance of the Port of Anchorage and fully supports the Port's Intermodal Expansion Project and the legislature's funding of the appropriation request. The Port serves a critical economic role for Alaska and is estimated to annually contribute $1.4 billion to the state's economy. From retail to resource development, from construction to health care, it is difficult to identify any industry that does not depend on the Port's operations.

The Port of Anchorage is a statewide transportation hub, moving 90 percent of Alaska's consumer goods. Moreover, the Port serves as a strategic gateway for the U.S. Military and has been named a "National Strategic Port" by the Department of Defense. Notably, 100 percent of the jet fuel used by Elmendorf Air Force Base and Fort Richardson Army Post arrives via the Port.

The Port expansion project will upgrade facilities, many of which are now 45 years-old. It will add much needed berthing space; provide improved capabilities and new industrial real estate; and importantly, will lower overall facility maintenance costs and allow the Port to operate with greater efficiency well into the future. The timing of the Port expansion is also fortuitous. The project will provide much needed jobs as our economy continues to fight off the lingering effects of the worldwide recession.

The expansion project represents the largest single-infrastructure project in the state. It requires both leadership and vision in order to ensure its successful completion. The Anchorage Chamber of Commerce represents over 1,200 members employing over 70,000 workers and unequivocally supports full funding of the project, essential to project completion and limiting cost increases, while meeting our growing statewide needs.

Sincerely,

William J. Evans, 2010-11 chair
Anchorage Chamber of Commerce

Alaska State Chamber of Commerce
2011 Position

Port of Anchorage Intermodal Expansion Project

The Alaska State Chamber of Commerce strongly supports the Port of Anchorage Intermodal Expansion Project and urges the legislature to fund a major appropriation for this critical piece of statewide transportation infrastructure. The Port of Anchorage is undergoing a major Intermodal expansion and renovation of its current port infrastructure, most of which is more than 45 years old and in a deteriorated condition. Ninety percent of the consumer goods for all of Alaska north of Cordova, move through the Port of Anchorage, along with critical fuel supplies and military deployments making this a vital and significant statewide project to businesses throughout Alaska.

PORT OF ANCHORAGE

Alaska's Port. Alaska's Future.

March 13, 2011

Senator Bert K. Stedman
Co-Chair, Senate Finance Committee
120 4th Street
State Capitol, Suite 516
Juneau, AK 99801-1182

Dear Senator Stedman,

I'm writing to you in my capacity as Chair of the Anchorage Port Commission. On behalf of the entire Port Commission, I express our support for the Port's ongoing intermodal expansion project and urge you and the Finance Committee to provide the funding necessary to complete this project on schedule and without delays.

As you know, the Port of Anchorage serves more than the Anchorage bowl, it is a project of statewide significance. Goods that cross the Anchorage docks are destined to locations around the state. In addition, the Port employs 650 for its day to day operations. This figure swells to 3500 on "ship days". Additionally the Port employs around 500 people every season from various independent contractors and unions during this expansion project.

The Commission is very aware of the current port facilities' limitations and inefficiencies. These detriments have an impact on shipping options and opportunities for companies transporting freight to grow and expand their businesses. Not only will the expanded Port facilities provide new options and opportunities for existing Port customers, but also, once completed, the expanded Port will have additional acreage, storage and barge berth capacity that will create the potential for new customers and possible cost savings for freight shipments.

This is an exciting project for ALL Alaska and we encourage your support.

Thank you for your time and please do not hesitate to contact me if you have further questions.

Sincerely,

Sue Linford

Washington, DC 20510-0201

Dear Senator Murkowski

I would like to take this opportunity to inform you of the key role the Port of Anchorage plays in our national security and its importance to Alaska's five major military installations.

In 2004, the Maritime Administration designated the Port of Anchorage as one of America's 19 National Strategic Ports. The Port of Anchorage supports our mission and requirement to receive and deploy combat forces stationed in Alaska. Alaska is now home to an Army Stryker brigade, an airborne brigade, and a combat aviation brigade, with the likelihood of additional forces being home-stationed here in the future. Since 2005, almost 18,000 pieces of military cargo in the form of combat vehicles, weaponry, and support equipment have passed through the Port. Over 33 million gallons of military aviation fuel is received annually by barge and tankers offloading via the Port. Our ability to project this power to combat theaters around the globe depends heavily upon sealift through the Port of Anchorage.

The Port of Anchorage's commitment under the Strategic Port program to provide at least 25 acres of land area within its boundaries during a deployment is key to the efficient staging and loading of our combat equipment. Due to the high worldwide operations tempo, we have executed several large military movements through the Port recently.

The Port of Anchorage is not only the strategic hub for military deployments and operations, it is also one point of throughput for the commodities we stock in our base exchanges, commissaries, and troop stores in support of 55,000 military and family members in Alaska.

I look forward to continuing the long and successful partnership between the Port and Alaskan Command forces for many years to come.

Respectfully

Dana T. Atkins

UNITED STATES TRANSPORTATION COMMAND
508 SCOTT DRIVE
SCOTT AIR FORCE BASE, ILLINOIS 62225-5357

23 June 2009

The Honorable Raymond H. LaHood
Secretary
United States Department of Transportation
1200 New Jersey Ave SE
Washington DC 20590

Dear Secretary LaHood

I am writing to request the Department of Transportation award Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grants to our Nation's commercial seaports for intermodal and other port infrastructure improvements.

The Department of Defense (DoD) relies heavily on the Nation's commercial freight transportation system to support military operations worldwide. Fifteen commercial seaports in the continental United States and Alaska are designated as Strategic Seaports, based on their ability to support military surge operations.

We collaborated with the U.S. Maritime Administration to assess Strategic Seaport infrastructure. The results are summarized in the enclosed "DoD Report to Congress on Projected Requirements for Military Throughput at Strategic Seaports." Since we rely on commercial infrastructure to support Defense needs, infrastructure projects that improve the capability to receive, stage, and load commercial freight onto ocean-going vessels tend to also benefit DoD. Table 2 of the report provides examples of port infrastructure projects that could mitigate projected military throughput constraints.

As you and your Department consider these grant requests, respectfully request that to the extent possible you make funding available to those seaports whose ready-to-execute projects not only provide long-term commercial and economic benefit, but also enhance our Nation's defense posture. Thank you in advance for your consideration.

Sincerely

DUNCAN J. McNABB
General, USAF
Commander

April 28, 2009

The Honorable Raymond LaHood
Secretary
United States Department of Transportation
1200 New Jersey Avenue, S.E.
Washington, D.C. 20590

Dear Secretary LaHood:

Public Law 111-5, the American Recovery and Reinvestment Act of 2009 (ARRA), provided the Department of Transportation with $1.5 billion to be awarded through a new surface transportation competitive grant program. This new program provides the Department and the nation with a unique opportunity to competitively finance significant transportation infrastructure projects, regardless of transport mode, that will enhance national, regional, or metropolitan mobility, while putting Americans back to work.

This program is particularly important to addressing the diverse needs and unique transportation demands of the states and territories in the non-contiguous trades. These states and territories heavily depend on maritime and intermodal transportation infrastructure which has, historically, received little federal investment when compared to federal spending for our nation's highway or aviation infrastructure. I urge you to ensure that the maritime and intermodal needs of these states and territories will be given significant consideration in this new grant program, both on the water side as well as the land side of the ports. Additionally, I hope that this grant program will be used, in part, to fund port projects which traditionally have received little federal investment, despite their significant economic and military importance to our nation.

For example, the Port of Anchorage is vital to our national defense. The expansion project that is underway will provide future economic opportunities and further strengthen the military and diplomatic mission of the United States. The Port of Anchorage is one of only 19 ports designated by the Department of Defense as a Strategic Port. There are five military bases strategically located in Alaska (Elmendorf AFB, Ft. Richardson, Eielson AFB, Ft. Wainwright, and Ft. Greely),

S10-090505-022

and the Port is essential in serving the thousands of Army and Air Force personnel, that call Alaska home. Alaska is playing a larger role in the training of military personnel with more than 2 million acres of training grounds, where troops can train with close air support in live fire exercises. Without the Port of Anchorage, these key military bases and activities would be out of business.

As the focus of the strategic location of our military forces changes, we must ensure that states have the critical infrastructure necessary to support military movement. The State of Hawaii and the Port of Anchorage are each seeking $179 million in stimulus funds for their port and intermodal expansion plans. I fully support these requests for improvements on the water side as well as the land side of the ports, and hope that you will agree these projects are worthy investments.

Your efforts and those of your agencies are essential to the ARRA's effectiveness in creating jobs and promoting our nation's economic recovery. Investments in key ports such as those in Hawaii and Alaska will provide long term economic and strategic benefits.

Aloha,

DANIEL K. INOUYE
United States Senator

DKI:vl

THE SECRETARY OF TRANSPORTATION
WASHINGTON, D.C. 20590

September 27, 2004

The Honorable Don Young
Chairman
Committee on Transportation and Infrastructure
U.S. House of Representatives
Washington, DC 20515

Dear Mr. Chairman:

Thank you for your letter of July 30 requesting the U.S. Department of Transportation (DOT) support for the Port of Anchorage Intermodal Expansion Project (Port Expansion).

DOT has been and continues to be a committed partner of the Port Expansion. The Port Expansion presents a new way for government and industry to partner on projects. I am committed to facilitating the development and planning of major freight and passenger projects like the Port Expansion.

The Department is encouraged by the leadership and responsible coordination between the Municipality of Anchorage and the Port of Anchorage in working with DOT to develop an innovative public/private partnership to solve a serious transportation and throughput bottleneck in this critical hub. DOT recognizes the important national contribution of the port as a strategic facility for military deployments, including the Stryker Brigade Combat team. As you are aware, the port serves as Alaska's center for homeland security by its status as homeport for the U.S. Coast Guard Marine Safety and Security Team and it is also an important national economic driver because of its critical commercial location.

The Department, through the U.S. Maritime Administration (MARAD), is currently engaged in the successful implementation of the Port Expansion. Similar to the Chicago Region Environmental and Transportation Efficiency (CREATE) project, we have established a DOT Intermodal Project Facilitation Team to coordinate Port Expansion support activities among the various Federal, State and other agencies. Our Port of Anchorage Team includes representatives from MARAD headquarters as well as field personnel working in collaboration with the Federal Highway Administration, Federal Railroad Administration, Federal Transit Administration, and my immediate office. The team also coordinates with the U.S. Army and its Corps of Engineers, the U.S. Air Force, the Alaska Department of Transportation, the Alaska Department of Environmental Conservation, and the Municipality of Anchorage Department of Transportation and Planning.

DOT looks forward to continuing the excellent working relationship between our respective staffs.

If I can provide further information or assistance, please feel free to call me.

Sincerely yours,

Norman Y. Mineta

Alaska's Lifeline

Cargo Distribution Patterns from the Port of Anchorage to Southcentral, Northern, Western and Southeast Alaska

University of Alaska Anchorage
College of Business & Public Policy
Department of Logistics
&
Port of Anchorage
Municipality of Anchorage

February 2011

EXECUTIVE SUMMARY
PORT OF ANCHORAGE CARGO DISTRIBUTION STUDY

The sources for the data in this executive summary are extensively referenced in the body of this study.

Goods shipped through the Port of Anchorage (POA) reach almost every Alaska community making the POA arguably one of the most important infrastructure facilities in the State of Alaska. The data presented in this report shows the entry points and distribution channels of critical cargoes that drive Alaska's economy and bring Alaskans the consumer goods and business supplies essential to the state's economy and daily life.

For the vast majority of Alaskans, the Port of Anchorage **is** Alaska's Port. The annual cargo entering the Port of Anchorage accounts for 90% of the merchandise goods used by Alaskan communities west of Cordova. This study will help inform public policy decision at the state and federal level to determine the level of public support that is justified for the Port expansion project.

Nearly all of the container goods that make up the day-to-day items used by Alaskans originate in shipments from the Port of Tacoma to the Port of Anchorage (POA). These shipments represent a critical lifeline for Alaska and amount to nearly 30 percent of Tacoma's total cargo activity. The total value of these goods is estimated to be well over $1 billion annually according to a study by the Port of Tacoma and the Seattle Chamber of Commerce.

Once these cargos enter Alaska through the Port of Anchorage, they are distributed throughout the Railbelt by truck, train, and to rural Alaska by air and barge. Ninety percent of the goods delivered to Fairbanks and the Mat-Su area originate in shipments through the Port of Anchorage as do seventy-five percent of the goods consumed in Western and Northern Alaska. A substantial amount of POA originated cargo is shipped via air freight to Southeast Alaska and 28.5 million pounds of US Postal Service Standard mail arrives in the state annually through the Port.

The POA is also a major entry point for fuel. On average, two-thirds of the fuel for air carriers at Ted Stevens Anchorage International Airport, and two-thirds of the fuel used by the US military and federal government agencies in Alaska, are delivered through the Port. This includes 100 percent of the jet fuel for Elmendorf Air Force Base and Fort Richardson- now Joint Base Elmendorf-Richardson (JBER). Smaller aircraft around the state are particularly dependent on Port operations because all in-state aviation gasoline (avgas) passes through the Port. Additionally 90 percent of the fuel Alaskans use to operate their vehicles and water craft originates in POA deliveries.

The Port of Anchorage is the only port in Southcentral that has the capability to offload bulk cement in unsacked powder form. As a result, over 80 percent of the cement used for concrete construction in the state comes into the Port annually, enough to build a four foot wide sidewalk from Homer to Barrow and back.

The Port is essential to the Armed Forces and was designated one of only 19 National Strategic Seaports by the Department of Defense. The US Armed Forces have staged over 20 military deployments through the Port of Anchorage in the past 10 years, including Stryker Brigade deployments to Iraq and Afghanistan. In a 2009 letter to the U.S. Secretary of Transportation, Raymond LaHood, U.S. Senator Daniel Inouye calls the Port of Anchorage "vital to our nation's defense" citing its service to all five military bases saying "the port is essential in serving the thousands of Army and Air Force personnel that call Alaska home." He continues on to say that "without the Port of Anchorage, these key military bases and activity would be out of business."

The Port of Anchorage makes a substantial contribution to Alaska's economy not only through the goods and cargoes which enter the port, but also through jobs and associated payroll. Total payroll at the Port for direct operations exceeds $53 million per year. An additional $20 million dollars per year in construction wages supports around 500 jobs and is expected to continue through 2021. The associated railroad, trucking and air cargo operations (delivering Port of Anchorage sourced goods at the regional air hubs of Fairbanks, Bethel, Nome, Dillingham, Kotzebue and Barrow) also make a significant contribution to many local economies.

Four container ships per week supply the vast majority of consumer goods and business supplies to Alaskans. In the course of this study we discovered that most retail companies, non-profits and government agencies reported that they would reach a crisis mode within two weeks if service was disrupted.

This study also identifies some of the issues that could substantially increase operating costs within the distribution system, and ultimately, the cost of goods to Alaska consumers. One example is increased fees and tariffs to pay for the Port of Anchorage Intermodal Expansion Project should local bonding be required. Federal issues include proposed changes to the bypass mail system, elimination or reduction of the Essential Air Service Program, new requirements for marine vessels to use ultra-low sulfur diesel, and any initiation of federal container taxes. Each of these issues could have a significant impact on the cost of goods to Alaskans.

STUDY PURPOSE AND METHODOLOGY

The purpose of this study is to describe the distribution patterns of goods which enter the Port of Anchorage (POA) and are delivered to Southcentral, Interior, Northern, Western and Southeast Alaska. The information from this study is intended to inform the general public and public policy makers on the importance of the Port's operations to Alaska's people and businesses.

The study methodology was to collect all available and relevant data on incoming volumes of cargo entering the Port of Anchorage utilizing published documents, port data and interviews with port operators. The final cargo destinations within Alaska and the patterns of freight distribution were further determined through interviews with freight forwarders, trucking, railroad and air freight operators along with retail and government related customers.

To better illustrate the patterns of freight distribution, the data was arranged according to the following tiers:

I. The first tier consists of shipping companies and operators who deliver cargo to the POA including containerized cargoes of consumer goods and business supplies, fuel, cement, construction materials, military equipment, building materials, automobiles and commercial vehicles.

II. The second tier is made up of trucking and rail operations which move goods from the POA to a secondary location. There they are either delivered directly to retail markets or consolidated and shipped via a third tier transporter to a further destination.

III. The third tier is comprised of air cargo carriers and barge operators who ship consolidated freight to hub airports and local harbors via bypass mail, air freight and barge operations. Once received at a hub airport or harbor, the freight is then further broken down for delivery by smaller air carriers or barge shippers for final delivery to rural villages.

IV. The fourth tier includes those goods delivered to the Port of Anchorage and then transshipped to Kodiak, Dutch Harbor and Western and Northern Alaska by container ship and barge. This includes consumer goods and business supplies, fuel, construction materials, automobiles and commercial vehicles.

Data on incoming fuel, cement and military supplies were also analyzed to determine their sources and patterns of distribution.

The Port is committed to treating any proprietary data in a confidential manner and informed study participants that such data would be aggregated to ensure confidentiality. As a result, much of the data is described in overall terms or percentages, nevertheless it clearly indicates the patterns of distribution.

The total payroll of Port stakeholders was collected from operators to help illustrate the economic impact of direct Port operations on Alaska's economy. This data was aggregated into a total payroll amount and was interpreted by Dr. Darren Prokop, UAA Professor of Logistics. The Alaska Trucking Association and the Alaska Association of Air Carriers provided additional information to help assess the value of trucking and air cargo operations to Alaska's economy.

In the course of interviewing participants in the distribution chain, issues of concern were raised that could affect the cost of delivery of goods throughout Alaska including the costs of developing the Port if local bonding were required, changes or reductions in the bypass mail system, requirements for marine vessels to use ultra-low sulfur diesel fuel, and any change in container taxes. These concerns are addressed at a cursory level towards the end of this study.

Participants also identified several inefficiencies in current Port operations that could be improved as a result of the new Port design. This information is contained in *Commodity Details and Port Efficiency Issues* on page 15.

Participants were asked to identify the impact on their businesses should there be any disruptions to Port of Anchorage operations. A summary of their responses is contained on page 18 under *Interruption of Service.*

This study was sent in draft form to all participants for review to identify any omissions or errors. A complete list of companies interviewed for this study can be found on page 25.

ABOUT THE AUTHORS

This study was conducted under the supervision of Dr. Darren Prokop, Professor of Logistics at the College of Business and Public Policy at the University of Alaska, Anchorage (UAA). Primary research for the project was conducted by Paul Fuhs under the supervision of the Port of Anchorage. The project was assisted by University of Alaska Anchorage student interns Duke Kahumoku (majoring in Political Science) and Grigory Kalugin (majoring in Logistics).

A NOTE FROM THE AUTHORS

The authors would like to thank all the companies who participated in this study. Their cooperation was freely given and their support is very much appreciated. Too often this sector of our economy is taken for granted as essential items appear each week on the shelves without any thought as to how they got there.

This study contains data and statistics, which when taken together, are quite remarkable. As different sectors of the industry were interviewed, it became apparent that behind the numbers there are very real Alaskans, all pulling their weight in a complex and sometimes dangerous system that requires each leg to work all the time, every time, in order to be successful. This silent, steady system is what keeps Alaska's economy alive, its what keeps food in the house and pencils on the desks. This study is a way of recognizing what these companies and people do for the citizens of Alaska every day.

BACKGROUND ON CURRENT PORT OPERATIONS AND PORT REDEVELOPMENT PLANS

The current Port facility has four ship berths and a published draft depth of -35 ft mean lower low water (MLLW) which easily accommodates ships requiring 30 feet of draft. The two northern berths are container ship berths used primarily by Horizon Lines and Totem Ocean Trailer Express (TOTE). A container ship from each of these companies travels from the Port of Tacoma to call on the POA twice a week on Tuesdays and Sundays. TOTE offloads their cargo via Roll-on/Roll-off (RO/RO) facilities while Horizon Lines uses three 38-foot gauge container cranes to lift containers on and off their ships. These container berths are also used to accommodate cruise ship vessels during summer months and other vessels as needed. The two berths on the south end of the dock are for bulk cargo (cement) and petroleum oil and lubricants (POL). These berths accommodate fuel tankers, fuel barges, and dry bulk carriers.

The Port occupies 129 acres with 81 acres leased to long-term users and 31 acres used as transit storage for cargo including fuel tanks and cements silos. These same areas are occasionally designated for use by the Department of Defense to stage military deployments. The Alaska based U.S. Coast Guard Maritime Safety and Security Team is home ported at the POA with 75 personnel and multiple emergency response vessels.

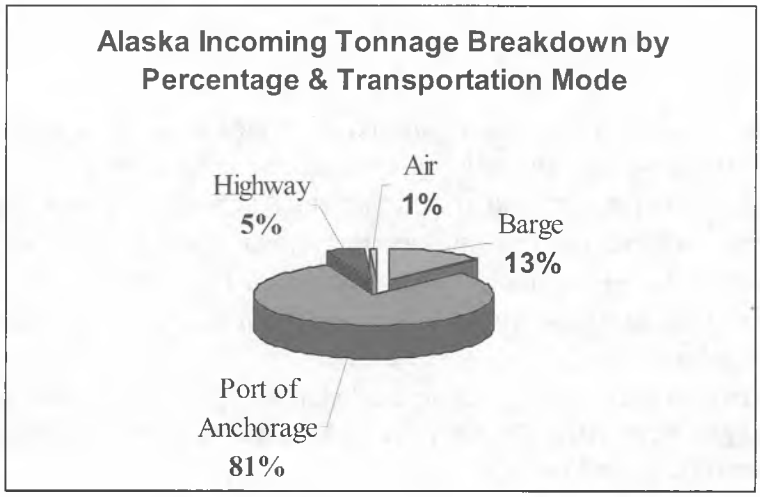
The POA is involved in a major project to replace aging and deteriorated facilities that were built up to 50 years ago and are at risk of catastrophic failure in the event of a major earthquake[1]. The Port of Anchorage Intermodal Expansion Project began in 2002 and upon completion will add 1,700 ft of linear dock space, creating 7 functioning ship berths, two public barge berths, and an additional 135 acres of land which can accommodate industrial development activities. The project increases the operating depth of the Port to -45' MLLW and is expected to reduce dredging costs. The expansion project must be constructed in phases with new operational sections completed before abandoning the current facilities to ensure that there is no disruption of service.

Several areas of the new facilities are constructed to withstand the worst case expected earthquakes based on past history of seismic activity. They are designed to operate for 50 years without any major maintenance and an overall useful life of 75 to 100 years. The expanded facilities will also address a number of inefficiencies inherent to the current facilities which are described in this report.

[1] R&M Consultants, Inc. *Seismic Vulnerability Report.* (2009).

The Port of Anchorage operates on a self-sustaining basis. Port tariffs and fees pay for all operations and maintenance of the facility, along with a small reserve fund. This steady fiscal performance qualifies the Port for a $75 million line of credit used as part of the Port's match to state and federal funds in the ongoing expansion project.

FINDINGS OF THE STUDY



TIER I: ANNUAL INCOMING CARGO AND ORIGIN OF SOURCES

In 2009, the baseline year for complete data, the Port of Anchorage received 4,370,000 tons of cargo (8.74 billion pounds) comprised of containerized consumer goods and business supplies, US mail, fuel, construction materials, drill pipe, cement for concrete, automobiles, and military equipment.[2]

An additional 706,000 tons of annual cargo deliveries, most by barge, do not pass through the POA, but enter Southcentral Alaska through the Alaska Railroad Corporation's rail barge operations in Seward and Whittier and through barge deliveries to North Star Terminal and Stevedoring and the Swan Bay dock. These are primarily outsized and overweight loads and bulk construction supplies.[3] Around 325,000 tons of goods enter the Railbelt through trucking and airfreight.

Railbelt Alaska Incoming Tonnage Breakdown: Percentage by Facilities[4]

There are four ways of delivering goods to the Alaska Railbelt: container ship, barge, trucks, and air freight. Each delivery method is displayed by percentage in the following chart according to data from the Alaska Rail Road Corporation.

[2] Port of Anchorage, 2009 Annual Port Tonnage Report
[3] Personal Interview, September, 2010, Alaska Rail Road Corporation
[4] Personal Interview, September, 2010, Alaska Rail Road Corporation & 2009 Annual Port Tonnage Report

POA LO/LO and RO/RO Operations

Container crane lift on/lift off (LO/LO), and roll-on/roll-off (RO/RO) operations account for 1,820,000 tons annually, (120,000 incoming containers annually, or about 10,000 containers per month.)[5] TOTE's RO/RO operations also allow for the delivery of oversized loads, or just about anything that can be put on wheels.

POA container crane and RO/RO cargo is primarily comprised of consumer goods and business supplies, construction materials, and vehicles. This represents 90 percent of Railbelt and interior merchandise cargo and business supplies shipped to Fairbanks, Mat-Su and the Kenai Peninsula.[6] **Origin of Cargo:** Port of Tacoma

Non POA Barge Cargoes

Around 706,000 tons of annual cargo does not pass through the POA, but is instead transported by barge to Seward, Whittier, and private docks in Anchorage. These cargoes are mostly bulk but can also be containerized and are primarily materials such as chemicals, sack cement, grain products, construction goods, heavy industrial loads, oversized items and fuels. There are several different types of barges that use the facilities listed above including rail barges, with regular weekly service between Seattle or Price Rupert depending on the company, and fuel barges. **Origin of Cargo:** Seattle, Prince Rupert, BC

Fuel

Eleven million barrels[7] (or 462 million gallons) of refined petroleum products move through the Port of Anchorage annually on a regular basis including:

- Two-thirds of the jet fuel used at Ted Stevens Anchorage International Airport
- Two-thirds of all fuel used by military and federal agencies in Alaska
- 100 percent of the jet fuel used by Elmendorf Air Force Base
- 90 percent of the fuel used by vehicles, watercraft and general aviation aircraft in Railbelt Alaska
- 100 percent of the aviation gasoline used statewide (including Southeast Alaska)

Origin of Cargo: Flint Hills Refinery, Tesoro Refinery, Petrostar Refinery, domestic and international ships and vessels.

[7] Port of Anchorage, Annual Dock Tonnage 2001 - 2010

Cement

An estimated eighty percent of the cement for manufacturing the concrete used in Anchorage, Fairbanks, Mat-Su, the Kenai Peninsula and the road system is delivered through the Port of Anchorage by the company Alaska Basic Industries, a division of Anchorage Sand and Gravel (AS&G).[8] Other barge operations deliver an additional 20,000 tons per year. In some cases, cement is distributed from the POA to rural areas via air freight from Ted Stevens Anchorage International Airport. To date, 78 Alaskan communities throughout the State, including the North Slope, have received cement through this distribution method.

Origin of Cargo: Korea, China, Thailand

Automobiles and Commercial Vehicles

About ninety-five percent of new private, commercial, and military automobiles and trucks bound for the Railbelt come through Port of Anchorage. On average, 50,000 vehicles pass through the POA annually.[9] **Origin of Cargo:** Port of Tacoma

Military Cargo

In addition to the fuel, military operating supplies and equipment, commissary groceries, and base/post exchange consumable and durable goods items provided through the Port of Anchorage. In a 2011 letter to Alaska's Congressional delegation, Lieutenant General Dana Atkins, Commander of Alaska Command wrote "The Port of Anchorage is not only the strategic hub for military deployments and operations, it is also one point of throughput for the commodities we stock in our base exchanges, commissaries and troop stores in support of 55,000 military and family members in Alaska."

In the past ten years the Port has supported over 20 military deployments, including deployments to Iraq and Afghanistan. Lieutenant General Atkins writes "Since 2005 almost 18,000 pieces of military cargo in the form of combat vehicles, weaponry, and support equipment have passed through the Port. Our ability to project this power to combat theaters around the globe depends heavily upon sealift through the Port of Anchorage."[10]

USPS Mail

Twenty-eight and a half (28.5) million pounds of US "standard mail" is delivered annually through the Port of Anchorage.[11] **Origin of Cargo:** Port of Tacoma

Bulk Shipments and Construction Materials through POA

These include general construction materials, drill pipe for the North Slope and industrial structural elements. If Cook Inlet Region Incorporated (CIRI) moves forward with it planned wind energy project on Fire Island, the towers are expected to arrive in Cook Inlet by ship and be delivered to the POA for transfer by barge to Fire Island. This will be facilitated by the Port's dry barge landing facility.
Origin of Cargo: Seattle, Tacoma and International sources.

TIER II: PRIMARY DISTRIBUTION TO ANCHORAGE, INTERIOR AND RAILBELT ALASKA

Trucking operations make deliveries directly to large and small retail stores in the Anchorage bowl. Trucks also deliver containers to freight consolidators and warehouses in Anchorage who further break down the cargo for smaller deliveries.[12]

Nearly 90 percent of consumer goods and business supplies for Fairbanks, Mat-Su, and the Kenai Peninsula first enter through the Port of Anchorage. The goods are primarily transported as follows:

- 60 percent intermodal transfer to ARRC for rail transport
- 40 percent delivered by trucking operations[13]

Standard US mail shipped through the Port of Anchorage is delivered by truck to the USPS sort operation near the Ted Stevens Anchorage International Airport. After sorting, it is delivered locally by mail carriers and statewide by truck and air operations. Fuel and cement are delivered directly by truck and railcar to customers throughout the state while cement is also delivered to remote locations by air freight. Construction materials and automobiles are delivered directly by truck.

These trucking operations have a substantial impact on Alaska's economy. The American Transportation Research Institute reports that in 2008, 603 Alaska trucking companies provided 19,955 jobs.[14]

[12] Personal Interview, Alaska Trucking Association, November, 2010.
[13] Personal Interview, Alaska Rail Road Corporation, September, 2010.
[14] American Transportation Research Institute & Alaska Trucking Association, *Alaska Fast Fact.,* (2011)

TIER III: SECONDARY DISTRIBUTION OF CONSUMER GOODS AND BUSINESS SUPPLIES FROM THE PORT OF ANCHORAGE TO RURAL AND SOUTHEAST ALASKA

Surface and Air Transport of Goods

Goods designated for shipment to rural Alaska are transported primarily by trucks to distribution warehouses as stated under the second distribution tier. These warehouses and distribution centers consolidate the goods which are then further distributed to air freight and bypass mail carriers for transport to rural areas. The volume of consumer goods transported through this method is significant. According to a 2006 Northern Economics study, 75 percent of total goods move to rural Alaska through bypass mail.[15]

Air cargo and related passenger flight operations make a substantial contribution to Alaska's economy. According to the Alaska Air Carriers Association, there are 304 commercial operators in Alaska with 47,000[16] people employed in Alaska aviation. The amount of airfreight per person in Alaska is 39 times higher than the US average, amounting to almost one ton per person per year.[17] Air cargo shipments of POA originating goods are also made year round to resource development projects such as Red Dog Mine, Donlin Creek Mine, the North Slope, etc.

According to Alaska Airlines Air Freight, a "substantial" amount of POA originating cargo is sent to the Southeast Alaska communities of Cordova, Juneau, Wrangell, Petersburg, Sitka and Ketchikan. Once the cargo is delivered to these hub communities, smaller air carriers further distribute this Anchorage originating cargo to more remote villages in Southeast.[18]

Bypass Mail

Bypass mail plays a crucial role in delivering consumer goods to Western and Northern Alaska. Cargoes originating from the Port of Anchorage are delivered by truck or rail to the primary air cargo hubs of Anchorage, Fairbanks and Deadhorse. From there this cargo is flown either to the regional hubs of Bethel, Nome, Kotzebue, Dillingham, and Barrow, or flown directly to the villages. The U.S. Postal Service reports that these shipments total almost 100 million pounds per year, with 1.5 million pounds of bypass mail being shipped from Anchorage and 750,000 lbs shipped from Fairbanks every

---

[15] Northern Economics, *Port of Anchorage Consolidation & Distribution Study,* 2006.

[16] Alaska Department of Transportation & Public Facilities Commissioned Study, *The Economic Contribution of the Aviation Industry to Alaska's Economy,* 2008.

[17] Alaska Air Carriers Association, *Alaska Aviation Facts*, 2009.

[18] Specific cargo amounts and percentages are not available since one carrier, Alaska Airlines, flies almost all of this cargo and to publish it would reveal proprietary information.

week.[19] An additional 10 percent of cargo is flown at the full tariff air freight rate. Standard US Mail shipped through the Port of Anchorage is also delivered by air to rural Alaska.

Bypass mail provides a lower cost to consumers since air cargo is charged at "postage stamp rates" which means that cargo moves at $0.38 per pound regardless of which community it is shipped to, similar to the way a letter is charged the same rate regardless of where you are sending it. To send that same freight from Anchorage to Bethel via air freight or at standard postal rates for instance, would cost nearly twice that much. To send it to the outlying villages could cost up to 6 times that amount. The USPS pays for the difference in those prices which amounts to a "subsidy" of over $100 million per year.[20]

Bypass mail is organized into two categories:

1. Service to hubs; in planes fully loaded with cargo, or by combi service (a Boeing 737 configured for half freight in totes and half passengers) as offered by Alaska Airlines. These hubs are a legacy of the old postal hub communities. The number of providers is limited to those carriers who have provided this service in the past and have the capacity for hauling a minimum of 7,500 pounds.

2. Service to villages: Cargo is flown in conjunction with passenger flights on smaller aircraft that have at least 20 percent of the passenger market in those communities. In many cases the revenues from bypass mail are what keep these airlines serving these communities.

There is discussion within USPS of moving these hubs to communities that they estimate would be more efficient locations for them. However, this would require significant state expenditures to upgrade these airports, while current hubs have seen substantial improvements in their capabilities. Airports like Bethel, the second busiest airport in Alaska, are considering moving to a 24/7 schedule to accommodate all of their nighttime traffic in a safe and efficient way.[21] Any reductions in bypass mail service would impose a significant burden on people living in the villages who are already struggling to make ends meet due to the high cost of goods and energy.

[19] Phone Interview, USPS, October 2010.
[20] Personal Interview, Alaska Commercial Company, October, 2010.
[21] Personal Interview, Airport Manager, Bethel Airport, November, 2010.

TIER IV: CARGO TRANSHIPPED VIA WATER TO RURAL ALASKA

A significant amount of Western Alaska bound cargo is shipped by container vessel to Anchorage and then loaded to barges destined for Western Alaska. One of the barge operators serving western Alaska estimates that 25 percent of their cargo is transshipped via the Port of Anchorage. The remaining 75 percent of barge cargo is sourced directly out of Seattle.[22]

Horizon Lines has direct container service to Kodiak and Dutch Harbor/Unalaska. These ships carry cargo from the Port of Tacoma, discharge most of their cargo in Anchorage, take on additional cargo for Kodiak and Dutch Harbor and then return to Tacoma after making those port calls. They take Asian destination frozen fish from Southcentral and Kodiak to Dutch Harbor where it is loaded onto container ships headed for foreign destinations. Frozen fish from Kodiak and Dutch Harbor are backhauled to Tacoma for distribution to domestic markets.

Several consolidators and large scale retailers, such as Alaska Commercial, repackage cargo from the Port of Anchorage and then reload these containers on the Horizon vessels or Northland barges headed for Kodiak, Dutch Harbor and Western Alaska ports.

Fuel to Rural Alaska

Annually, 1.7 million barrels of refined petroleum product are shipped out of the Port of Anchorage to rural Alaska via barge[23].

Cargo Backhaul to the Port of Tacoma

On average, about 2 out of 10 containers is loaded with cargo for container ship return voyages to the Port of Tacoma. This cargo is comprised of: recycled items, frozen fish, household goods and vehicles for people moving out of Alaska, automobile and truck trade-ins, and rental car fleet inventories being returned to the West Coast.[24] As an example of how backhauled goods can have a strong impact on shipping rates, it is estimated that the backhaul of fisheries products alone can help reduce the cost of shipping goods to Alaska.[25]

COMMODITY DETAILS AND PORT EFFICIENCY ISSUES

"As Is" LO/LO and RO/RO Container Service

The current container service operated by Horizon Lines and TOTE is highly efficient. Four vessels a week supply around 90 percent of the

[22] Phone Interview, Northland Services, December, 2010.
[23] Port of Anchorage, 2009 Annual Tonnage Report
[24] Personal Interview, Horizon Lines, Totem Ocean Trailer Express, November, 2010.
[25] Personal Interview, Lynden Inc. 2010

merchandise goods and business supplies to Alaskans living west of Cordova. It is so efficient, particularly when combined with the capability for just-in-time delivery, that many retail outlets have drastically reduced, or even eliminated, their need for warehousing services. Coupled with bar code inventory systems, the products in many containers are taken from the vans and put directly on store shelves. These efficiencies allow retailers to offer a wide range of food and other commodities at a price that is little different from those in Seattle.

"To Be" LO/LO and RO/RO Container Service

When completed, the modernized Port of Anchorage will contribute to even greater efficiencies. The draft (depth) at the current dock is -35 feet, restricting the size of vessels that can call on the Port, while the three LO/LO container cranes on the current dock only have a nine container reach. A modern container ship is 16 containers wide and requires a deeper draft and larger cranes at port facilities.

The design of the new facility will provide seven berths of nearly 1,000 feet each that are capable of supporting either RO/RO or LO/LO operations, 49 feet of draft, and placement of the dock face farther out into the channel where it will be self-scouring. New container cranes will be able to reach across PANAMAX container ships, now the industry standard. These upgrades will improve the efficiency of container, commodity, RO/RO and automobile operations. Additional staging areas immediately behind the LO/LO and RO/RO operations will improve efficiencies there while construction of a railroad intermodal loading facility at the back of the port will make transfer operations to flat cars more efficient and reduce the need for drayage operations.

"As Is" Fuel Details

Fuel deliveries have been steadily increasing at the Port of Anchorage. The startup of the ultra-low sulfur diesel towers at the Petrostar facility in Valdez will further increase these deliveries to the POA. Currently about 7.7 million barrels of fuel are delivered to the Anchorage area by rail car annually.[26] An additional 4.5 million barrels come across the Port's dock.[27] ASIG operates the tank farm and valve manifolds that facilitate deliveries of jet fuel to the Ted Stevens Anchorage International Airport by pipeline.[28]

The tank farm at the airport is a subzone of the Foreign Trade Zone at the Port of Anchorage. Since most of this fuel is burned out of the US, there is a significant tax advantage to imported fuel. The crude oil refined at the Tesoro refinery in Nikiski is

[26] Port of Anchorage, Annual Tonnage Report 2010
[27] Port of Anchorage, *Annual Dock Tonnage 2001 – 2010*
[28] Personal Interviews, Petrostar Refinery, Alaska Rail Road Corporation, ASIG, October, 2010.

sourced out of Russia and UK. They also import substantial quantities of refined jet fuel from Korea.[29]

Currently, all general aviation gas (avgas) for Alaska comes through the Port of Anchorage which typically receives four or five tanker deliveries per year and are stored at the Port's tank farms. It is then distributed to Fairbanks, Mat-Su, and the North Slope by truck, and to Western and Southeast Alaska by barge. The Southeast Alaska trade in avgas is facilitated by favorable prices in Anchorage. If Southeast communities were to rely on direct tug and barge deliveries of avgas, these barges would have to travel as far as San Francisco to get avgas from the West Coast. Instead, they are serviced by tugs and fuel barges that are demobilizing from their Western Alaska trades and returning south in the fall. These tugs and barges make this return trip profitable by loading avgas at the POA and making deliveries to Southeast Alaska as they continue their return voyage.[30]

"To Be" Fuel Infrastructure Benefits

Fuel operations are also constrained by the current, limited draft at the Port of Anchorage. Larger petroleum product carriers, given the ability to make larger bulk deliveries, can potentially reduce the overall cost of fuel to consumers. Petroleum operators at the Port who supply fuel to Ted Stevens Anchorage International Airport have indicated the need for increased storage tanks to ensure deliveries of adequate volumes to cover peak periods of demand at the airport. Two dedicated POL berths with new environmentally friendly and state-of-the-art offload headers at the future petroleum docks provide opportunities for new storage capability and the ability to handle a wider variety of refined petroleum products. The newly added acreage behind the POL berths could be a siting source for additional tankage.

"As Is" Cement Offload and Storage Infrastructure

Cement is used in almost every construction project in the state, large and small. The Port of Anchorage is one of the only facilities in Alaska with bulk offloading capacity for cement ships. The ships arrive with dry cement carried in segregated hold compartments and are offloaded via a vacuum and pump system. The cement is transferred through a pipeline to storage tanks on railroad property. Trucks are used to transport the cement from the storage tanks to its final destination. Due to the limited draft at the port, the current bulk cement carrier can only load and receive 24,000 tons at a time despite the vessel's capacity of 40,000 tons.

---

[29] Ostherimer, David. *Annual Report For Foreign-Trade Zone No. 160; October 1, 2008-September 30, 2009*

[30] Personal and Phone Interviews, Tesoro Alaska, September, 2010. PetroMarine, Delta Western Fuels, December, 2010.

"To Be" Cement Offload and Storage Infrastructure

Completion of the south replacement and extension phase of the intermodal expansion project will provide both a deeper depth of -45ft and new acreage for the construction of additional cement storage tanks. This could create a cost savings benefit to the shipper as they would be able to double their capacity, transporting 40,000 tons at a time while experiencing the same operational and crew cost with only a modest increase in fuel. The operators of the bulk cement facility at the Port have indicated that if they could utilize these efficiencies, they would construct additional cement silos at the Port on the newly added backlands created by the Port expansion. This would eliminate their current need to truck cement across town to a different storage facility.[31]

"As Is" Military Support

The Port of Anchorage currently serves all five military bases in Alaska through fuel, supplies, vehicles and deployments. In a 2009 letter to the U.S. Secretary of Transportation Ray LaHood, U.S. Senator Daniel Inouye (HI) wrote:

> For example, the Port of Anchorage is vital to our national defense. The Expansion project that is underway will provide further economic opportunities and further strengthen the military and diplomatic mission of the United States. The Port of Anchorage is one of only 19 ports designated by the Department of Defense as a Strategic Port. There are five military bases strategically located in Alaska (Elmendorf AFB, Ft. Richardson, Eielson AFB, Ft. Waignright, and Ft. Greely), and the Port is essential in serving the thousands of Army and Air Force personnel, that call Alaska home. Alaska is playing a larger role in the training of military personnel with more than 2 million acres of training grounds, where troops can train with close air support in live fire exercises. Without the Port of Anchorage, these key military bases would be out of business. (April 28, 2009)

As part of its designation as a Strategic Seaport, the Port of Anchorage must be able to provide enough dock space and acreage to support a military deployment within 72 hours notice. Currently, the Port has successfully demonstrated the ability to provide one 1,000-foot berth without ceasing normal commercial dock operations, and 25 acres of non-contiguous/non-adjacent staging, however this does not meet the military's stated needs.

"To Be" Military Support

The U.S. Transportation Command's Surface Deployment and Distribution Command, through the U.S. Maritime Administration, has indicated a new need for the Port to be able to provide 2,000 feet of berthing space with an adjacent 25 acres of staging area in support of a more expedited major unit deployment[32]. Upon completion of the expansion project, two

[31] Personal Interview, Alaska Basic Industries, October, 2010.
[32] US Department of Administration, Maritime Administration, *Port Planning Order*. (August 31, 2010)

1,000-foot berths and 25 acres of adjacent contiguous staging area can easily be provided with room for growth if needed. This future footprint further provides an easily secured and monitored area decreasing security costs for military users.

The gravel fill for the expansion project, 11 million cubic yards, will all be mined on Elmendorf Air Force Base and transported down a haul road to the Port. This arrangement has proved mutually beneficial to both parties. The Port benefits because the short transit distance generates a large cost savings for the project while the Air Force benefits as hills are removed at the end of the north-south runway creating land that can be developed and used as needed. Once the project is complete, the road that is currently used to transport gravel will be used for deployment, providing the military with direct access to a secured facility and avoiding the associated congestion on public roadways.

Interruption of Service

The efficiencies of the Port have significant advantages, but only so long as port operations remain uninterrupted. During the course of our surveys, businesses were asked how quickly their operations would be affected if operations at the Port were disrupted. Most businesses said they would feel the consequences within a week, two weeks at most. Beyond that time period, they indicated that the interruption would develop into a full blown crisis[33]. This highlights the seriousness of concerns about the stability of the current deteriorated Port structure in the event of a major earthquake.

Once completed the expanded facilities would significantly decrease this risk. The facilities are designed to withstand normal to moderate earthquakes with little to no damage. Given the past seismic history of the region, the design includes two berths designated as "essential facilities." These berths feature increased structural reinforcements and are designed to remain operational following a maximum level earthquake of equal or greater magnitude than the 1964 earthquake.

Manufacturing and Increased Backhaul Opportunities

The Port's newly added acreage can provide much needed industrial space for the manufacture of modules for the North Slope or for the construction of the Alaska gas pipeline. Potential developers of the gas line have already visited the Port to explore these opportunities. A recent report by Anchorage Economic Development Corporation (AEDC) indicates that industrial development lands in Anchorage that are suited for development are limited and dispersed.[34] The new uplands at the Port can help provide space for industrial development and staging.

[33] See list of retail businesses interviewed in reference section

[34] Anchorage Economic Development Corporation, *Industrial Land Needs – The Outlook for Anchorage 2010-2030*. (2009)

Nearly 90 percent of the backhauled containers from the POA are empty. This is a potential area for increased economic activity that would have an additional benefit of reducing the cost of shipping. Although this has yet to be realized, value added processing of natural gas liquids from an Alaskan gas line could provide manufactured products for export. For example, ethylene processed into polyethylene beads, and butane processed into butyl rubber cants is the feedstock for plastic products such as automobile tires.[35]

POTENTIAL COST INCREASE DRIVERS

As previously mentioned, the efficiency of the existing distribution system is quite impressive. So much so that there is a large portion of the state's population that gives no real thought as to how things get on the store shelves. It is the efficiency of this transportation system that has contributed significantly to the ability to stabilize consumer prices for Alaskans. That being said, the balance is delicate. Here are a few potential sources of cost increases that, if realized, could easily upset that balance.

EPA Emissions Control Area

The requirements of this mandate, which are slated to take effect in 2015, would force Alaska-bound ship operators to use ultra-low sulfur diesel fuel in and near the Alaska coast. This fuel is much more expensive and safety concerns have been raised related to the low lubricating characteristics of this fuel. Once in effect, this could dramatically increase the cost of providing service to Alaska.[36]

Changes in Bypass Mail System

Reductions in the bypass mail system would have devastating effects on rural Alaska resulting in increased air shipping costs to rural villages by up to 500 percent. The recent proposal by U.S. Senator John McCain to eliminate the Essential Air Service program could increase the cost of air transportation including the transportation of consumer goods and other items to rural areas.

Proposed Container Tax

The states of Washington and California have both proposed container taxes to provide funds for transportation projects in their states. Alaska would be particularly and unfairly burdened with these fees since the bulk of our cargo arrives by container. The State of Alaska and the Alaska transportation industry rose up to vigorously oppose these measures and they were defeated. However, this issue may surface again and if adopted would significantly increase the cost of shipping goods to Alaska.

---

[36] Personal Interviews, Horizon Lines, Totem Ocean Trailer Express, November, 2010.

Port Expansion Financing Plan

The Port of Anchorage secures funds for its intermodal expansion project from the federal government, the State of Alaska, and through contributions from its own annual profits. If the Port were required to bond completely for this project, to make the required payments towards those bonds would require substantial increases in port surcharge fees, from 3 to 8 times higher than current rates[37]. This would increase the cost of every single item, bulk or containerized, that passes through the POA. State and federal grants for the project negate the need to consider this option.

CONCLUSION

A modern, safe, survivable Port of Anchorage is critical to the lives of Alaskans. It is an economic driver that provides the needed commodities and business supplies Alaskans use in their everyday lives. It provides essential supplies to Alaska's construction and resource development industries and delivers the cars we use to get around in. The Port also provides jobs for Alaskans both through its direct operations and through the extensive web of transporters and facilitators that ultimately deliver the goods to Alaskans. It truly is the Port of Alaska.

[37] Based on tax-exempt bonding for capital costs of $300 to $750 million.

Fuel Distribution Map

Fuel Distributed from Port of Anchorage

Jet Fuel: used at the Ted Stevens Anchorage Int'l Airport and in small part in rural Alaska.

AK Regions using fuel:

AV Gas: 100% used state wide comes through Port.

AK Regions using fuel:

ULSD (Diesel): used in the Railbelt and rural Alaska.

AK Regions using fuel:

Unleaded (Gasoline): used in the Railbelt and rural Alaska.

AK Regions using fuel:

HSD (Heating Oil): Used in the railbelt and rural Alaska.

AK Regions using fuel:

Jet Fuel, ULSD, and Unleaded comes in from Nikiski to the Port of Anchorage via pipeline & barge.

Jet Fuel, HSD, and Unleaded comes in from North Pole by rail car to the Port of Anchorage.

Jet Fuel comes in from Valdez via barge to the Port of Anchorage.

AV Gas comes in from outside sources and is distributed by fuel barges to western & southeastern Alaska.

2/23/11 OVERVIEW: STATEWIDE PORT AND HARBOR PROJECTS, PORT MACKENZIE RAIL EXTENSION

<TARGET><BILL></BILL><SUBJECT>2-23-11 OVERVIEW STATEWIDE PORT AND HARBOR PROJECTS, PORT MACKENZIE RAIL EXTENSION</SUBJECT><COMM>SFIN27</COMM></TARGET>

Responses to Senate Finance Committee Questions
Regarding Port MacKenzie Rail Extension

Q1: Senator Stedman requested letters of support from potential customers.

R1: Letters are being requested and will be forwarded upon receipt from current port lessees:

- Alutiiq Manufacturing (module construction),
- Klondike Concrete (cement import),
- NPI (bulk natural resource export),
- PacArctic/Koniag (transportation logistics), and
- Central Alaska Energy (fuel farm)

Q2: Past and future capital costs for the Port itself (not the rail extension).

R2: The table presented below provides this information.

Project Name	Status	Cost (in millions)	Funder
Deep Water Draft Dock	Complete	$14.7	State/Private/Borough
Barge Dock/Access Road	Complete	$7.2	State
Electricity/Communication	Complete	$2.5	State
Conveyor System	Complete	$7	Private
Terminal Office Building Well/Septic	Complete	$4.5	Federal, FTA
Port Road Grade Reduction and Paving	Complete – Fall of 2011	$5.2	Federal FHA and AKDOT&PF
Barge Dock Expansion	Complete Spring of 2011	$3.9	Federal EDA and MSB
Future Port Projects			
Improve/Replacement of Conveyor System	Planning Stage	$1.5	Private
Deep Water Draft Extension (after rail extension is complete)	Permitted	$35	Funding to be requested from Federal and State
Ferry Dock	Permitted	$17 (partially Funded)	Federal FTA with 20% State/MSB Match

Q3: Senate McGuire wanted to know how much it would cost to bring the existing infrastructure up to code for maintenance.

R3: The existing port structures are already up to code and would not need significant maintenance for many years. The structures have been constructed within the last 10 years, and most would have a 50 year life. For example, the deep draft dock is five years old and is expected to last 50 years. In approximately seven years, MSB will be spending up to $1 million on dock preservation and maintenance.

Q4: Senator Hoffman asked how much the tonnage by potential customer (type of product) is, and the expected revenue.

R4: Dr. Paul Metz, University of Alaska Fairbanks, has provided an updated chart laying out the tonnages of different products expected to be carried over the rail extension during the first 5, 10, 20, and 30 year periods. This chart is entitled, "Estimated Port MacKenzie Extension Freight Tonnages During First 30 Years of Operations, February 23, 2011." This was provided as a final page in Dr. Metz's presentation to the Senate Finance Committee during the February 23rd hearing. The chart indicates that the products to be exported would include coal, aggregates (sand and gravel), lime, wood products, petroleum products, possibly natural gas pipeline, military logistics, and mineral concentrates. The attached chart sets forth the tonnages for each of these products expected during the different periods of development. Examples of interested customers are:

- Usibelli Coal
- Exxon
- ConocoPhillips
- British Petroleum
- Trans Alaska Pipeline Company
- JP Power – Japan
- NANA
- CH2MHill
- Fort Knox – Gold Mine
- Shorty Creek – Copper Mine
- Livengood Gold
- Prospect Copper
- Nenana Native Corporation
- Doyon Ltd.
- U.S. Military
- State of Alaska

The Institute of Social and Economic Research (ISER) completed a study regarding the expected fiscal return associated with the new mines that would be stimulated by the transportation cost savings associated with the rail extension. This study concluded that a combination of the

three mines, limestone production, and potential cement production, could generate about $2.5 billion per year of additional in-state spending. It would also generate about 1,000 jobs by 2017 and increase to about 5,500 jobs by 2023. It is also expected that over the next 30 years, additional revenue to the State of Alaska could reach $57 million per year in the early years, and $267 million per year by 2040.

Q5: Mr. Perkins said that no dredging will be required at the port because the current prevents siltation. Senator Stedman asked for a letter from the Army Corps of Engineers to support that assertion.

R5: A letter is attached from the Army Corps of Engineers.

Estimated Port MacKenzie Extension Freight Tonnages
During First 30 Years of Operation
February 23, 2011

This information was taken from Table 3 on page 26 of the Economic Analysis of Rail Link Port MacKenzie to Willow, Alaska, Phase II – Possible Rail Extension Users Analysis by Paul A. Metz, Ph.D., DIC, P.G., November 2007. The information was updated by Dr. Metz in February, 2011.

Product	Annual Tonnages in Years (1-5)	Annual Tonnages in Years (6-10)	Annual Tonnages in Years (10-20)	Annual Tonnages in Years (20-30)
Coal Exports	1,000,000 – 2,000,000	2,000,000 – 3,000,000	3,000,000	3,000,000
Aggregates (sand and gravel)	100,000	100,000	100,000	100,000
Lime	50,000	50,000	50,000	50,000
Wood Products	60,000	60,000	60,000	60,000
Petroleum Products	200,000	300,000	400,000	400,000
Natural Gas Pipeline	0	960,000**	0	0
USARAK Logistics	Not Available	Not Available	Not Available	Not Available
Mineral Concentrates	365,000	365,000	1,679,000	1,879,000
Total	1,775,000 – 2,775,000	3,835,000 – 4,835,000	5,289,000	5,489,000

* Non-metallic freight tonnages remain the same in the second and third decade, though it is expected that these tonnages would grow significantly. Freight tonnages do not include coal tonnages associated with the Agrium Coal Gasification Project.

** Assume 960,000 tons of pipe and construction materials for each of two years during the five year period

Subject: Port McKenzie Rail Extension Funding Letter

Ms. Elizabeth Gray
Acting Matanuska-Susitna Borough Manager
350 E. Dahlia Avenue
Palmer, Alaska 99645

Dear Ms. Gray,

I am the Director of Operations for the Construction Division of Alutiiq Manufacturing Contractors, LLC. We are currently leasing 31.5 acres of property from the Matanuska-Susitna Borough at Port MacKenzie. Alutiiq Manufacturing is currently utilizing our manufacturing plant on this property to construct modular building for shipment throughout the state of Alaska.
The purpose of this letter is to voice Alutiiq's strong support for the Rail Extension Project at Port MacKenzie, and to urge the Governor and State legislature to provide funding in this year's Capital Budget for the rail extension.

The rail extension would become a great asset to our current operations, as well as help to develop the importing & exporting of materials and goods to Interior Alaska.
We also anticipate that with the development of this rail project, Alutiiq will be able to provide additional services to the North Slope oil companies with our Alutiiq Oilfield Solutions side of our company.

Again, we urge the legislature and governor to provide funding to move ahead with this project.

Sincerely,

W. Jake Garner
Director of Operations
3909 Arctic Blvd. Suite 400
Anchorage, AK. 99503
(907) 440-7657

Palmer, Alaska 99645

RE: Funding for Port MacKenzie Alaska Railroad Extension

Dear Ms. Gray:

I support a State funding appropriation of the full $55 million requested this year for the project to extend the Alaska Railroad to Port MacKenzie. I understand the current appropriation under consideration is only $20 million.

As you know, I hope to site a $5 billion coal-to-liquids project in West Cook Inlet. For Port MacKenzie to be considered for this project, it needs rail access from the Interior to supply up to 6 million tons of coal annually as feedstock to the facility, and for the delivery of produced fuels and chemicals to the Interior's refineries, military, and commercial aviation users. The full $55 million appropriation can be considered an industrial development investment.

By the State's providing the requested $55 million for rail access to Port MacKenzie, it will indicate State's intent to complete the rail extension project, which will reassure my project's investors that they can consider Port MacKenzie as a viable location. One for which the complete transport infrastructure for the coal-to-liquids production facility will be in place, reducing capital costs for our project and thus improving its economic feasibility.

Let me know what else I can do to help obtain your full funding request for this year,

JDM Consultants, LLC

John D. McClellan, P.E.
Principal

KONIAG
INCORPORATED
4300 B Street Suite 407 Anchorage, AK 99503

Ms. Elizabeth Gray
Acting Matanuska-Susitna Borough Manager
350 E. Dahlia Avenue
Palmer, Alaska 99645

Dear Ms. Gray,

I am director of Logistics and Marketing Resource Development for Koniag, Incorporated, and our company is leasing property from you at Port MacKenzie. We will be using this property to run a transportation logistics operation to convey goods between the Port MacKenzie rail extension and the Port MacKenzie dock for both bulk export and import. The purpose of this letter is to voice Koniag's strong support for the Rail Extension Project, and to urge the Governor and state legislature to provide $55 million in this year's Capital Budget for the rail extension.

The importance of the rail extension to our operation is critical. We are specifically leasing more expensive land between Port MacKenzie Road and the rail extension so that we can provide a direct service between the port dock and the rail extension. We expect to be carrying everything from bulk natural resources such as riprap to general mining camp supplies, construction materials, and other forms of support materials required for resource development. Being 147 miles closer to tide water at Port MacKenzie greatly reduces the transportation costs for moving the type of bulk supplies, machinery, and natural resources that need to be moved to Interior Alaska.

Again, we urge the legislature and governor to provide $55 million to move ahead with this project as part of the governor's Fiscal Year 2012 Capital Budget.

Sincerely,

King R Hufford III
Director of Logistics and Marketing
Koniag Inc.

NPI
A Shareholder Investment Development Company
BOX 870213, WASILLA, ALASKA 99687
(907) 357-3722 OFFICE
(907) 357-3822 FACSIMILE

Ms. Elizabeth Gray
Acting Matanuska-Susitna Borough Manager
350 E. Dahlia Avenue
Palmer, Alaska 99645

Dear Ms. Gray, 4 March 2011

NPI, LLC has been the primary tenant at Port MacKenzie from the very beginning of Port operations and hopes to continue to grow and develop new opportunities though Port MacKenzie.

In the past six years, NPI has exported wood chips and lumber, facilitated gravel movement and has imported bulk steel and cement. We foresee a bright future at Port MacKenzie and the rail extension is vital to the continued growth and prosperity South Central Alaska and the Interior.

Rail access to the deep water dock at Port MacKenzie will allow bulk commodities to be more readily available to the world market and continue to build our economy. Port MacKenzie is unique amongst available ports in Alaska as it designed for industrial use and has adequate room to grow. Rail service will expedite more rapid growth and provide jobs to the local area.

This letter is in support of the continuation of the rail extension project to Port MacKenzie. This rail extension project adds much needed infrastructure to Alaska, giving all Alaskans the benefit of expanded economic opportunity.

NPI strongly supports the rail extension project and urges the legislature and the Governor to include the full $55 million for this project in the FY 2012 Capital Budget.

Sincerely,
Dane Crowley
COO

Subject: Port MacKenzie Rail Extension

Ms. Elizabeth Gray
Acting Matanuska-Susitna Borough Manager
350 E. Dahlia Avenue
Palmer, AK 99645

Dear Ms. Gray,

Klondike Concrete has been operating a warehouse at Port MacKenzie for the last several years for the purpose of importing bulk materials to be used in the local construction market. The proposed rail extension would greatly improve the ability to move bulk commodities in and out of Port MacKenzie.

Port MacKenzie is a very promising location but is very limited at this time due mostly to lack of access. The rail extension is one major step in making Port MacKenzie a viable port and bolstering the economy of South Central Alaska.

Thank you for your time.

Sincerely,

Steve Siegel
Klondike Concrete Co.

CENTRAL ALASKA ENERGY LLC

03/05/11

Elizabeth Gray
Acting Borough Manager
Matanuska-Susitna Borough
350 E. Dahlia Ave.
Palmer, AK 99645

Dear Mrs. Gray,

I would like to express my strong support for the Port MacKenzie rail extension project. Our plan at Central Alaska Energy is to construct a fuel terminal at Port MacKenzie. The terminal would hold primarily unleaded and diesel fuel for South-Central and Interior Alaska. Having access to the railroad lowers the cost of transportation which results in lower fuel prices to the consumer. Alaska needs to be prepared to deal with increased demand for ultra low sulfur diesel which is currently produced in limit quantities. Connecting the railroad to Port MacKenzie will provide access to other fuel markets (lower 48 or international) to a greater number of Alaskans than will be possible without the railroad.

I urge the legislature and governor to provide the $55 million needed to move ahead with this project as part of the Fiscal Year 2012 Capital Budget.

Sincerely,

Justin Charon

Dear Ms. Gray;

Recently I was asked whether the U.S. Army Corps of Engineers has ever dredged at or near Port MacKenzie. The answer is that the Corps has not conducted any dredging operation, either new work or maintenance dredging, at Port MacKenzie.

Should you or your staff have any similar question, please contact me at 907-753-5799.

Sincerely,

Stephen C. Boardman, P.E.
Chief, Civil Project Management Branch

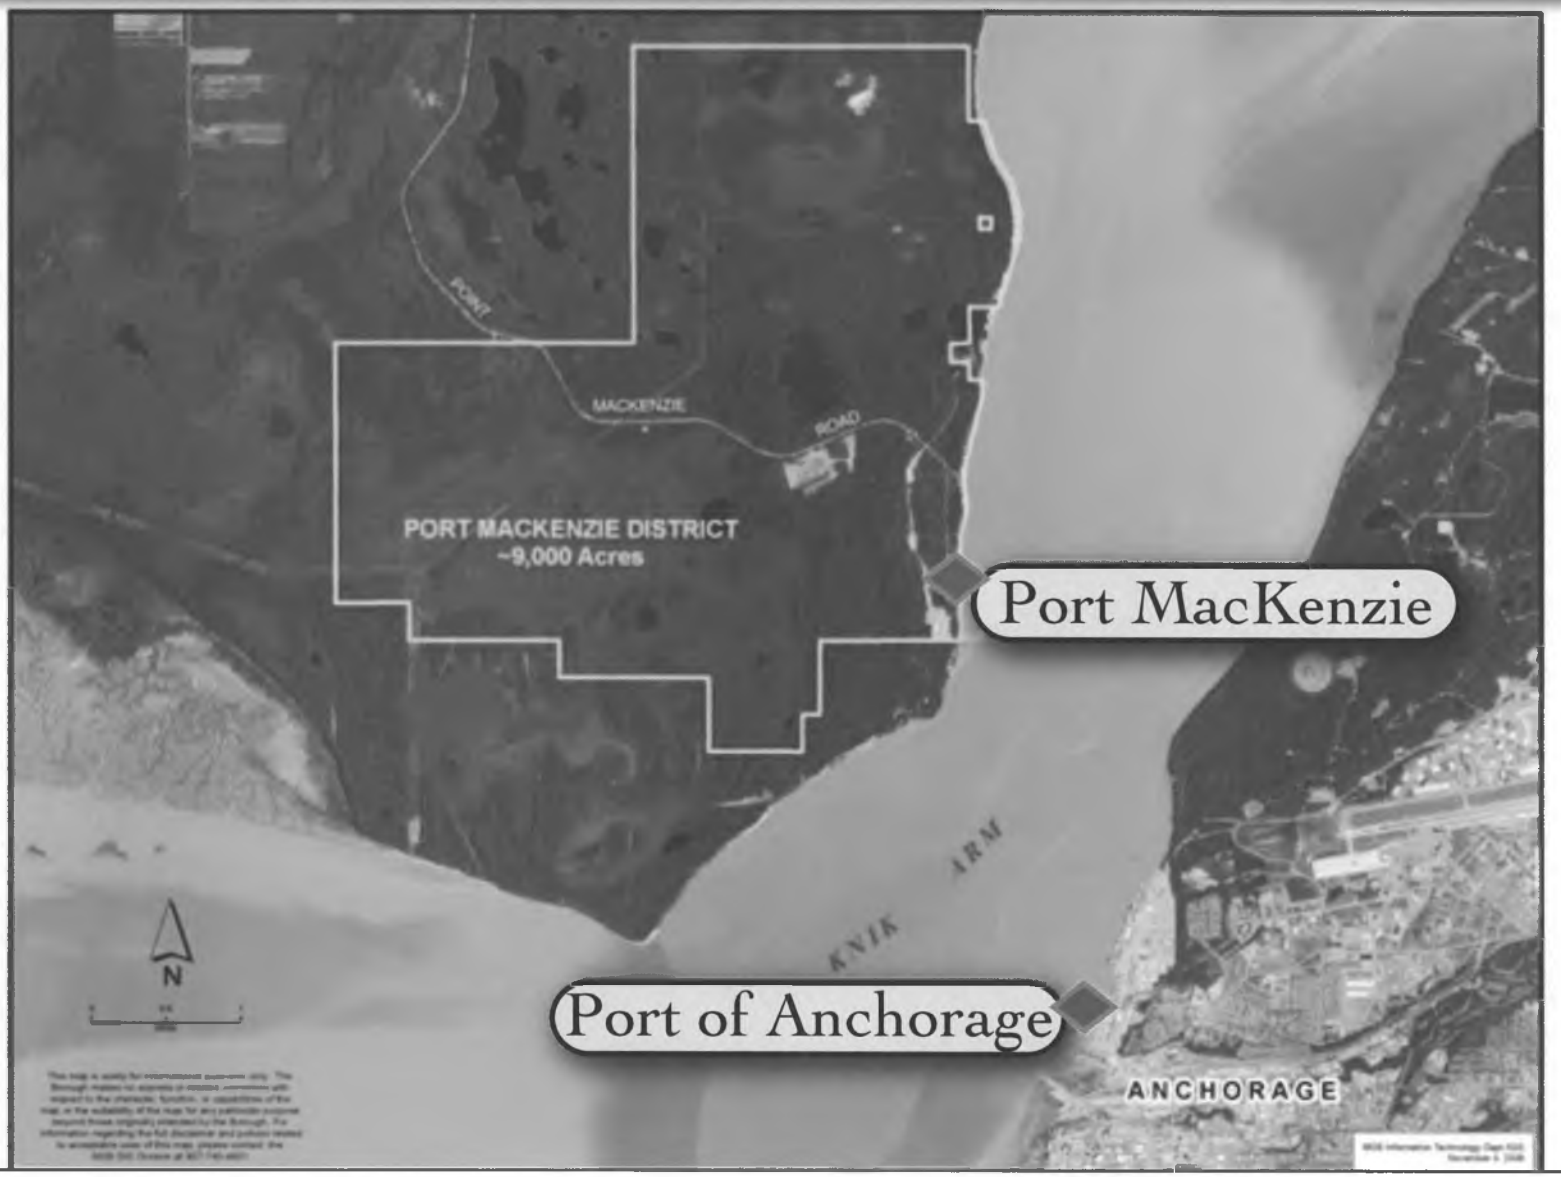
Rail Extension Project

Economic Benefits to the Alaska Economy

Thursday, January 27, 2011

What the Rail Extension means to Alaska's economy

- **Opens up the Interior to resource development**
- **Creates a development corridor along the Railbelt for exploration and extraction of strategic minerals (lead, zinc, copper, molybdenum and silver)**
- **Facilitates the development of a world class limestone deposit between Livengood and Fairbanks**



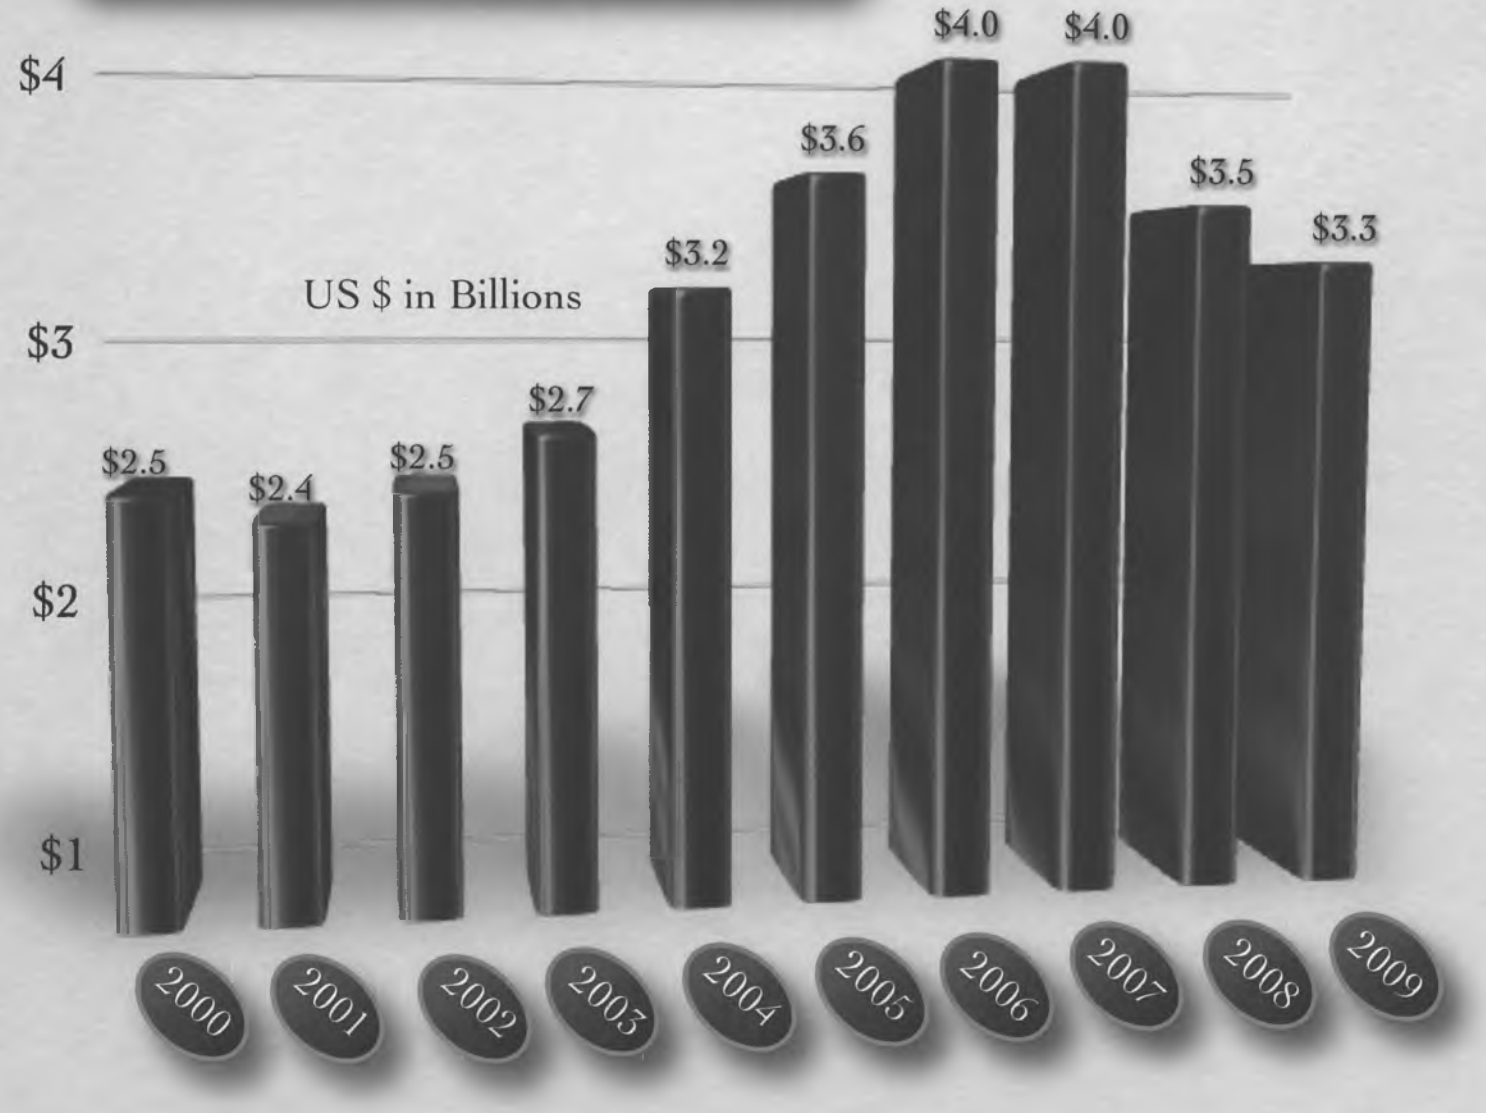
- Facilitates the development of a cement production facility in or near Fairbanks
- Dramatically improves the world competitiveness of Alaska coal
- Significantly reduces transportation and staging cost for the Alaska Gas Pipeline construction
- Increases employment in the Mat-Su Borough, the Denali Borough, the Fairbanks North Star Borough and Anchorage

Port MacKenzie and the Rail Extension working together

- Port MacKenzie is a bulk commodities port for the export of minerals, cement and coal
- Provides for the import, storage and staging of bulk fuel and pipe
- Is not a consumer goods or container port like the Port of Anchorage

Port MacKenzie

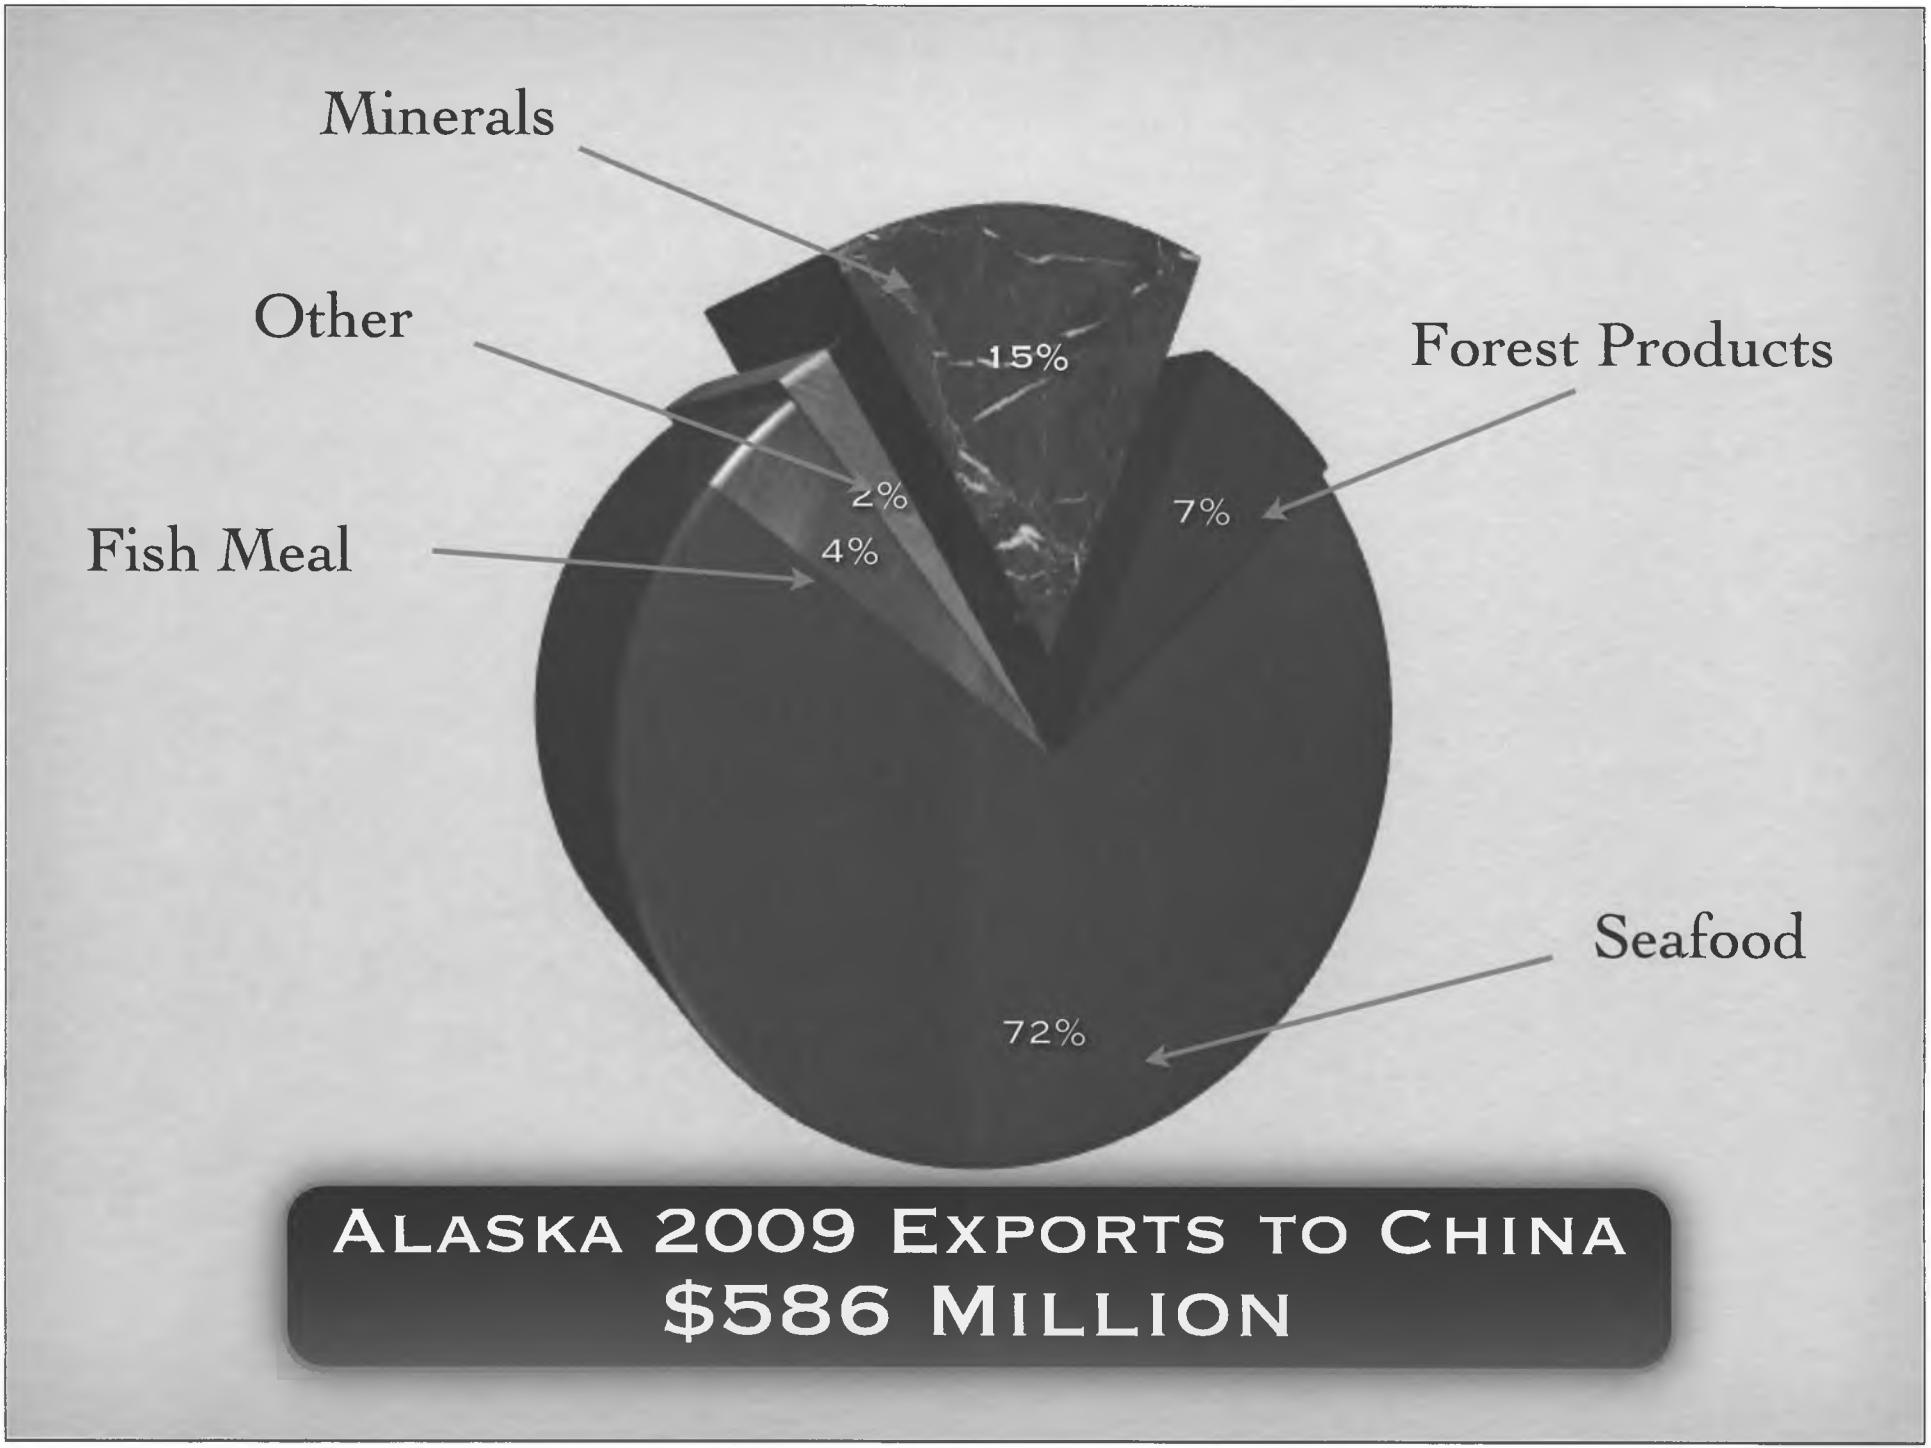
a port with 14 square miles of industrial land



4

Advantages of Rail to Port Mac

- Shorter rail distance to tidewater for mineral exports
- Only Alaska port with 100 rail car loop
- Efficient product transfer from train to ship
- Avoids the most congested portion of Alaska RR mainline
- Deep draft port that operates year-round



- 14 square miles of industrial area
- Will make **Alaska's minerals more competitive** on the world market (molybdenum, copper, lead, zinc, coal)
- Port MacKenzie Rail Extension is a **great opportunity to grow our export economy**

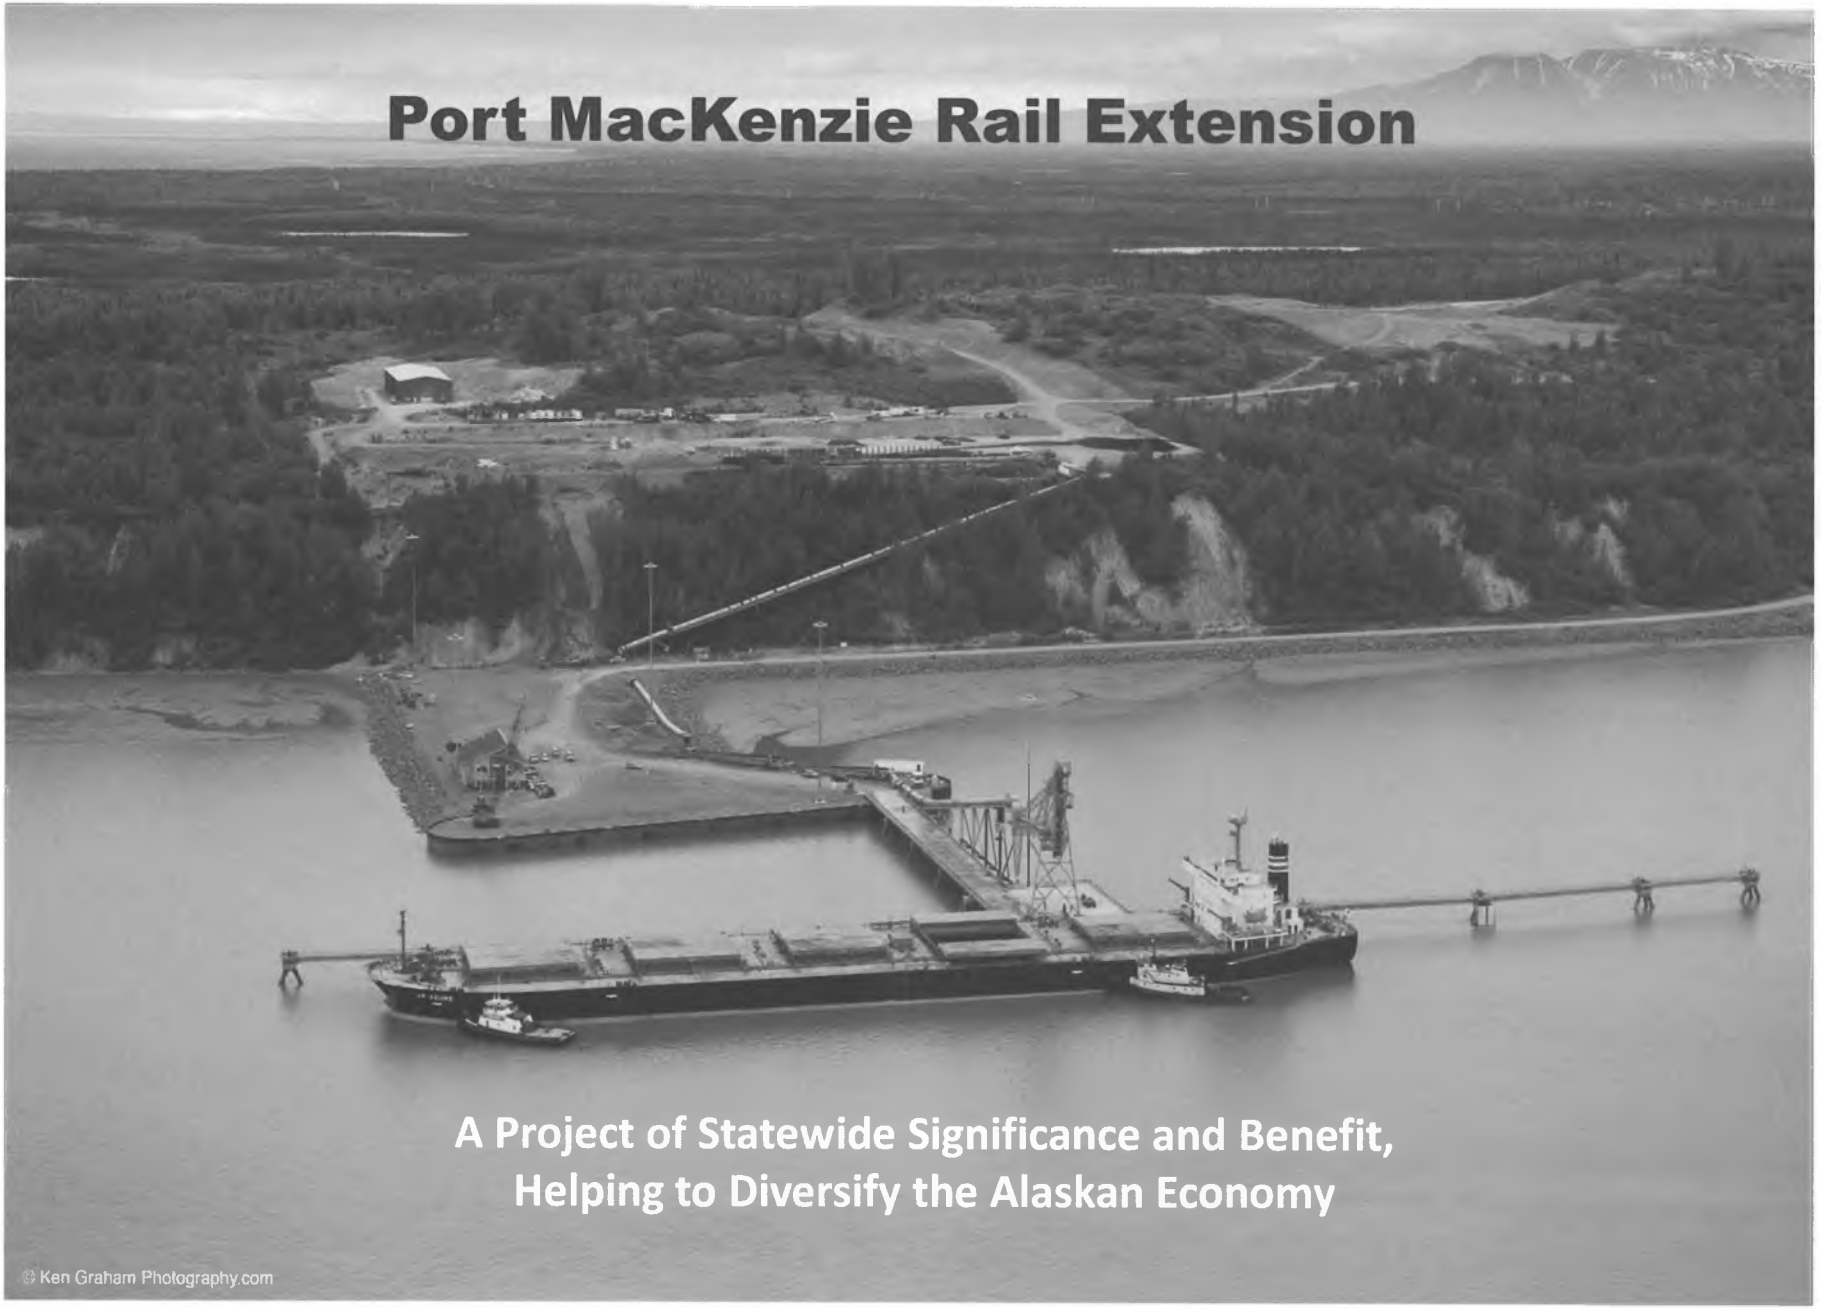
What's underway for the Rail Extension?



- Completion of the Environmental Impact Study (Fall 2010)
  $10 Million
- Construction of the truck route & rail loop
  $17 M
- Begin construction of Rail Extension (2010-2011)
  $35 M

What's Next?

- Continued construction of Rail Extension (fall 2011) $55M
- Complete railbed to Alaska main line (2013) $60 M
- Lay rail and complete Rail Extension (2014) $41 M

Port MacKenzie Rail Extension
A Project of Statewide Significance and Benefit,
Helping to Diversify the Alaskan Economy
© Ken Graham Photography.com

MISSION

- Contribute to diversification of Alaska's economy.
- Provide Interior Alaska with a closer, less expensive outlet to tidewater for export of natural resources.
- Develop a new industrial and economic engine for the Alaska economy.

HOW TO IMPLEMENT MISSION

- Provide less expensive, more efficient rail transportation to deep water port, 147 miles closer to tidewater
- Effectively use rail loop, road, conveyor, barge dock, deep water dock, terminal/offices building infrastructure to provide for export of bulk materials
- Wisely use and develop the Port Mackenzie Industrial District
  - 8,940 acres of industrial zoned land adjacent to 1,130 acres of Borough owned tidelands for commodity transport, storage and related services

Port MacKenzie

a port with 14 square miles of industrial land

BUSINESS OBJECTIVES

- Develop infrastructure to support Mission
  - Deep Water Draft Dock: complete
  - Barge Dock Expansion (doubled the acreage): complete spring 2011
  - Conveyor System: complete
  - Terminal/Office Building: complete
  - Road Improvements (grade reduction & paving):complete fall of 2011
  - Electricity, fiber optics and potable water to Port: completed
  - Rail Loop: complete Fall of 2011
  - Rail Extension (only infrastructure left to complete): Fall of 2014
- Complete Port Master Plan
  - Assembly adopted Master Plan in January 2011
  - Streamlined Lease Procedure complete June 2011

BARGE DOCK EXPANSION

BUSINESS OBJECTIVES

(continued)

- Market Port & Develop Customer Base
  - Targeted marketing continues (presentations, port meetings & tours, video, You-Tube, brochures, radio, etc.)
  - Two new lease applications, PacArctic (Transportation Logistics) and Central Alaska Energy (Tank Farm)
- Establish Solid Export Base by Rail through Port
  - First 5 Years: 1.8-2.8 million tons/year
  - 6-10 Years: 3.8-4.8 million tons/year
  - 10-20 Years: 5.3 million tons/year
  - 20-30 Years: 5.5 million tons/year

IMPORTS & EXPORTS
WINTER/SUMMER OPERATIONS

EXISTING CUSTOMERS

- Alutiiq Manufacturing – Module Construction
- Klondike Concrete – Cement Import
- NPI – Bulk Natural Resource Export
- Tri-Metal International – Metal Export
- PacArctic/Koniag – Transportation Logistics
- Central Alaska Energy – Fuel Farm

CURRENT BUSINESSES

PORT MACKENZIE RAIL EXTENSION

- Examples of Interested Customers

- Usibelli Coal
- Exxon
- Conoco Phillips
- British Petroleum

DEEPEST DRAFT VESSEL EVER IN COOK INLET
Spring of 2010 - test shipment of coal from Port MacKenzie to Japan for Usibelli Coal Mine Inc.

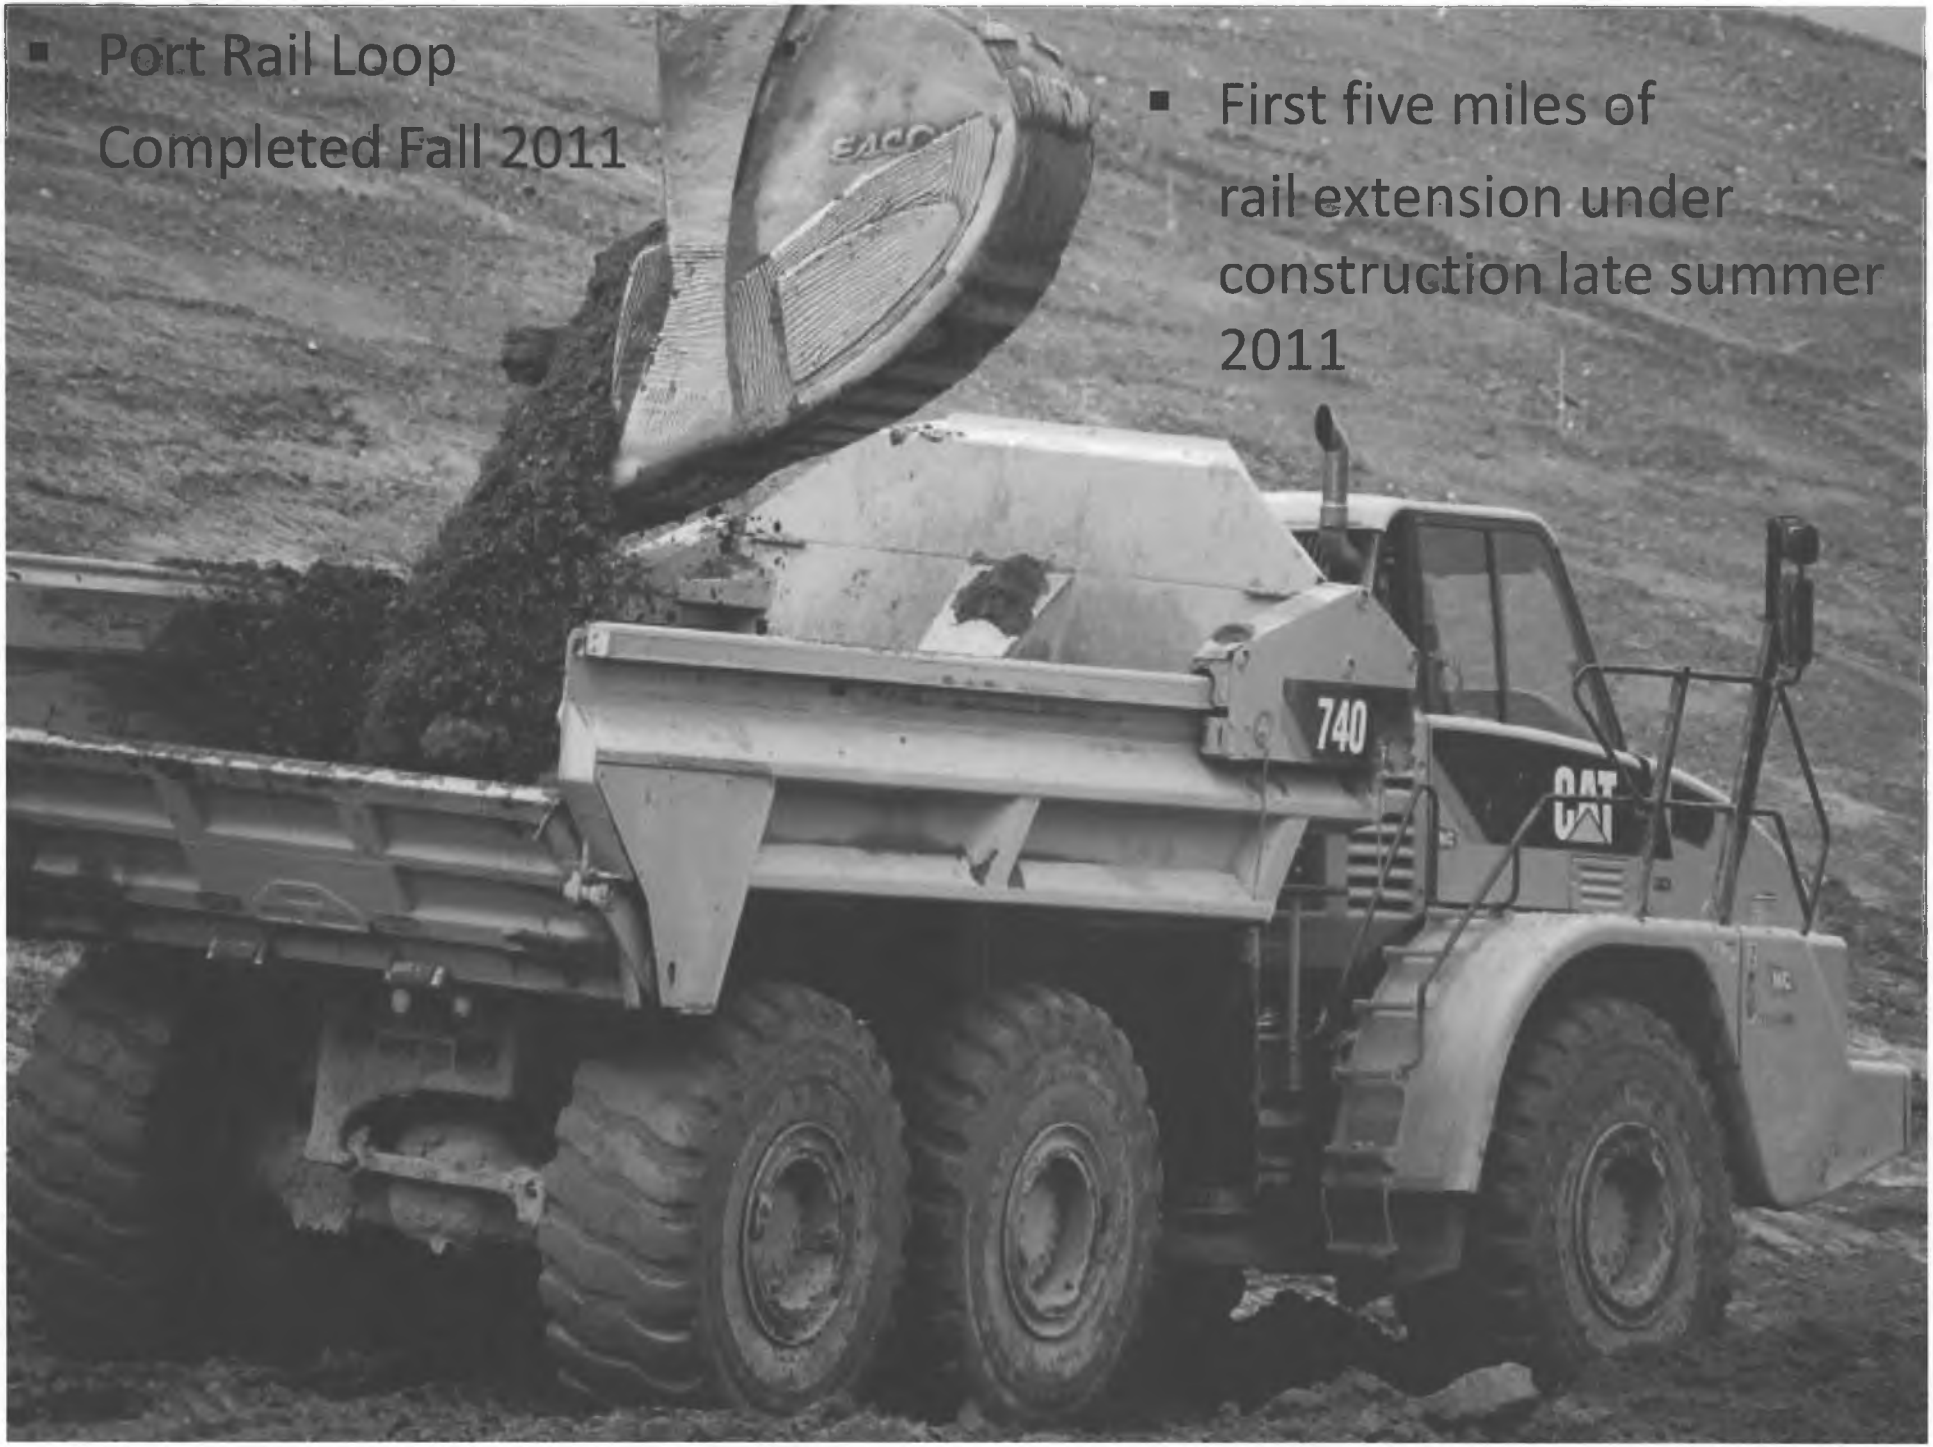
RAIL EXTENSION USES DURING FIRST DECADE

- Coal Exports
- Sand and Gravel Aggregates
- Petroleum Products
- Natural gas Pipeline
- Lime
- Wood Products
- Military Transport
- Minerals

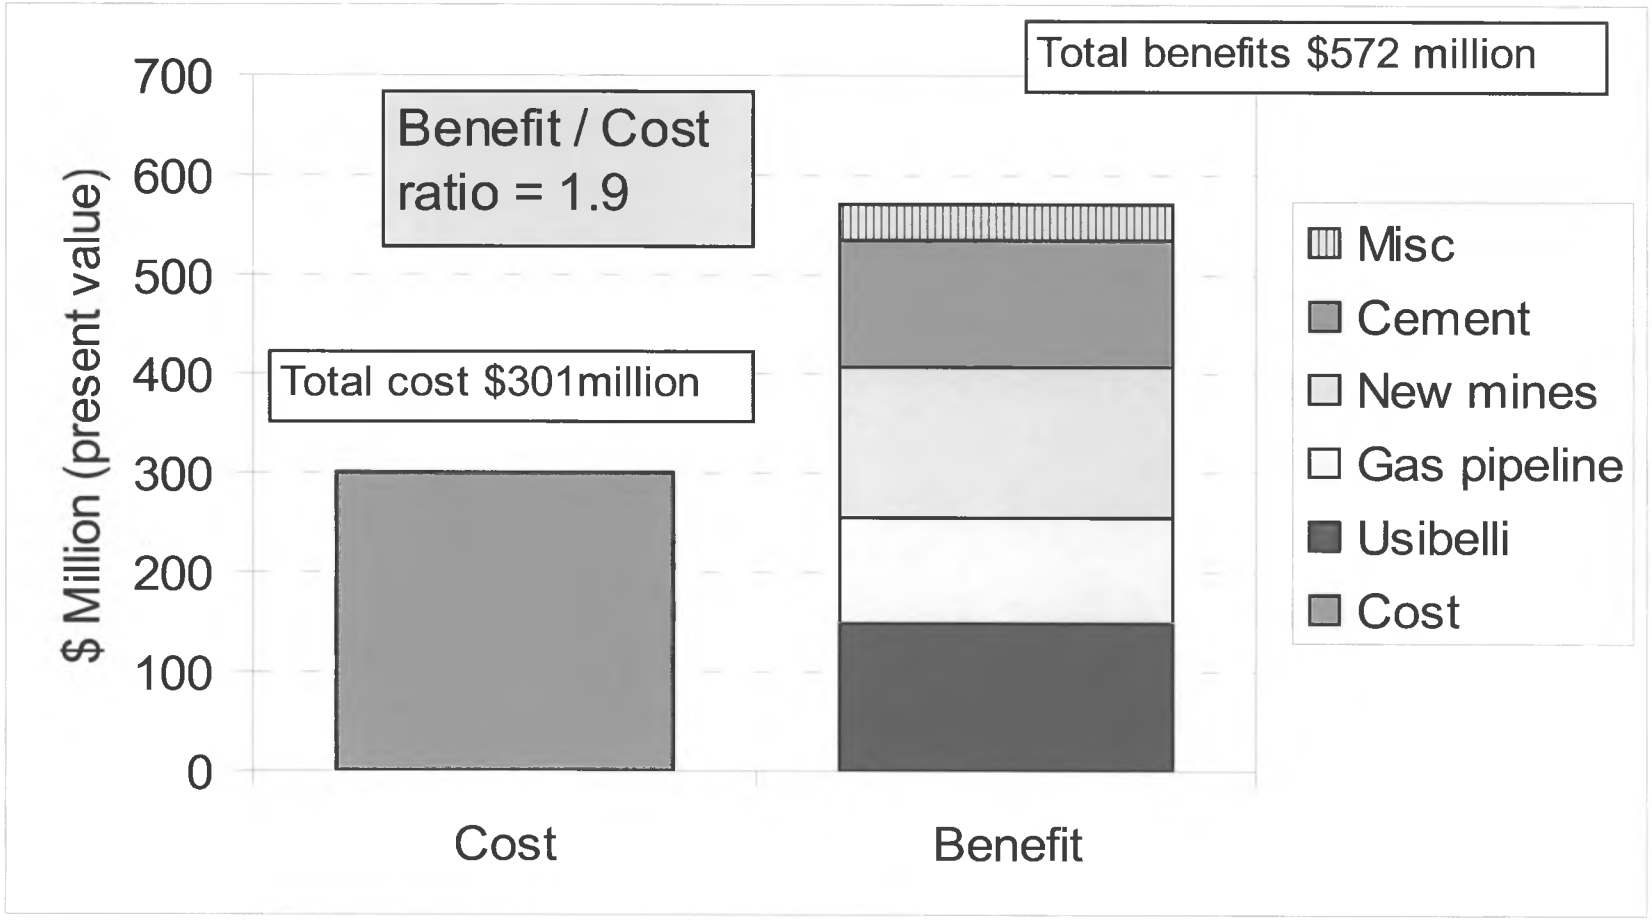
PROMINENT ALASKA PROJECTS
Supported By The
Port MacKenzie Rail Extension

- Susitna Dam
- World Class Fairbanks/Livengood Cement Plant
- Any Natural Gas Pipeline Alternative
- Upgrade to Interior and South Central Railbelt Intertie

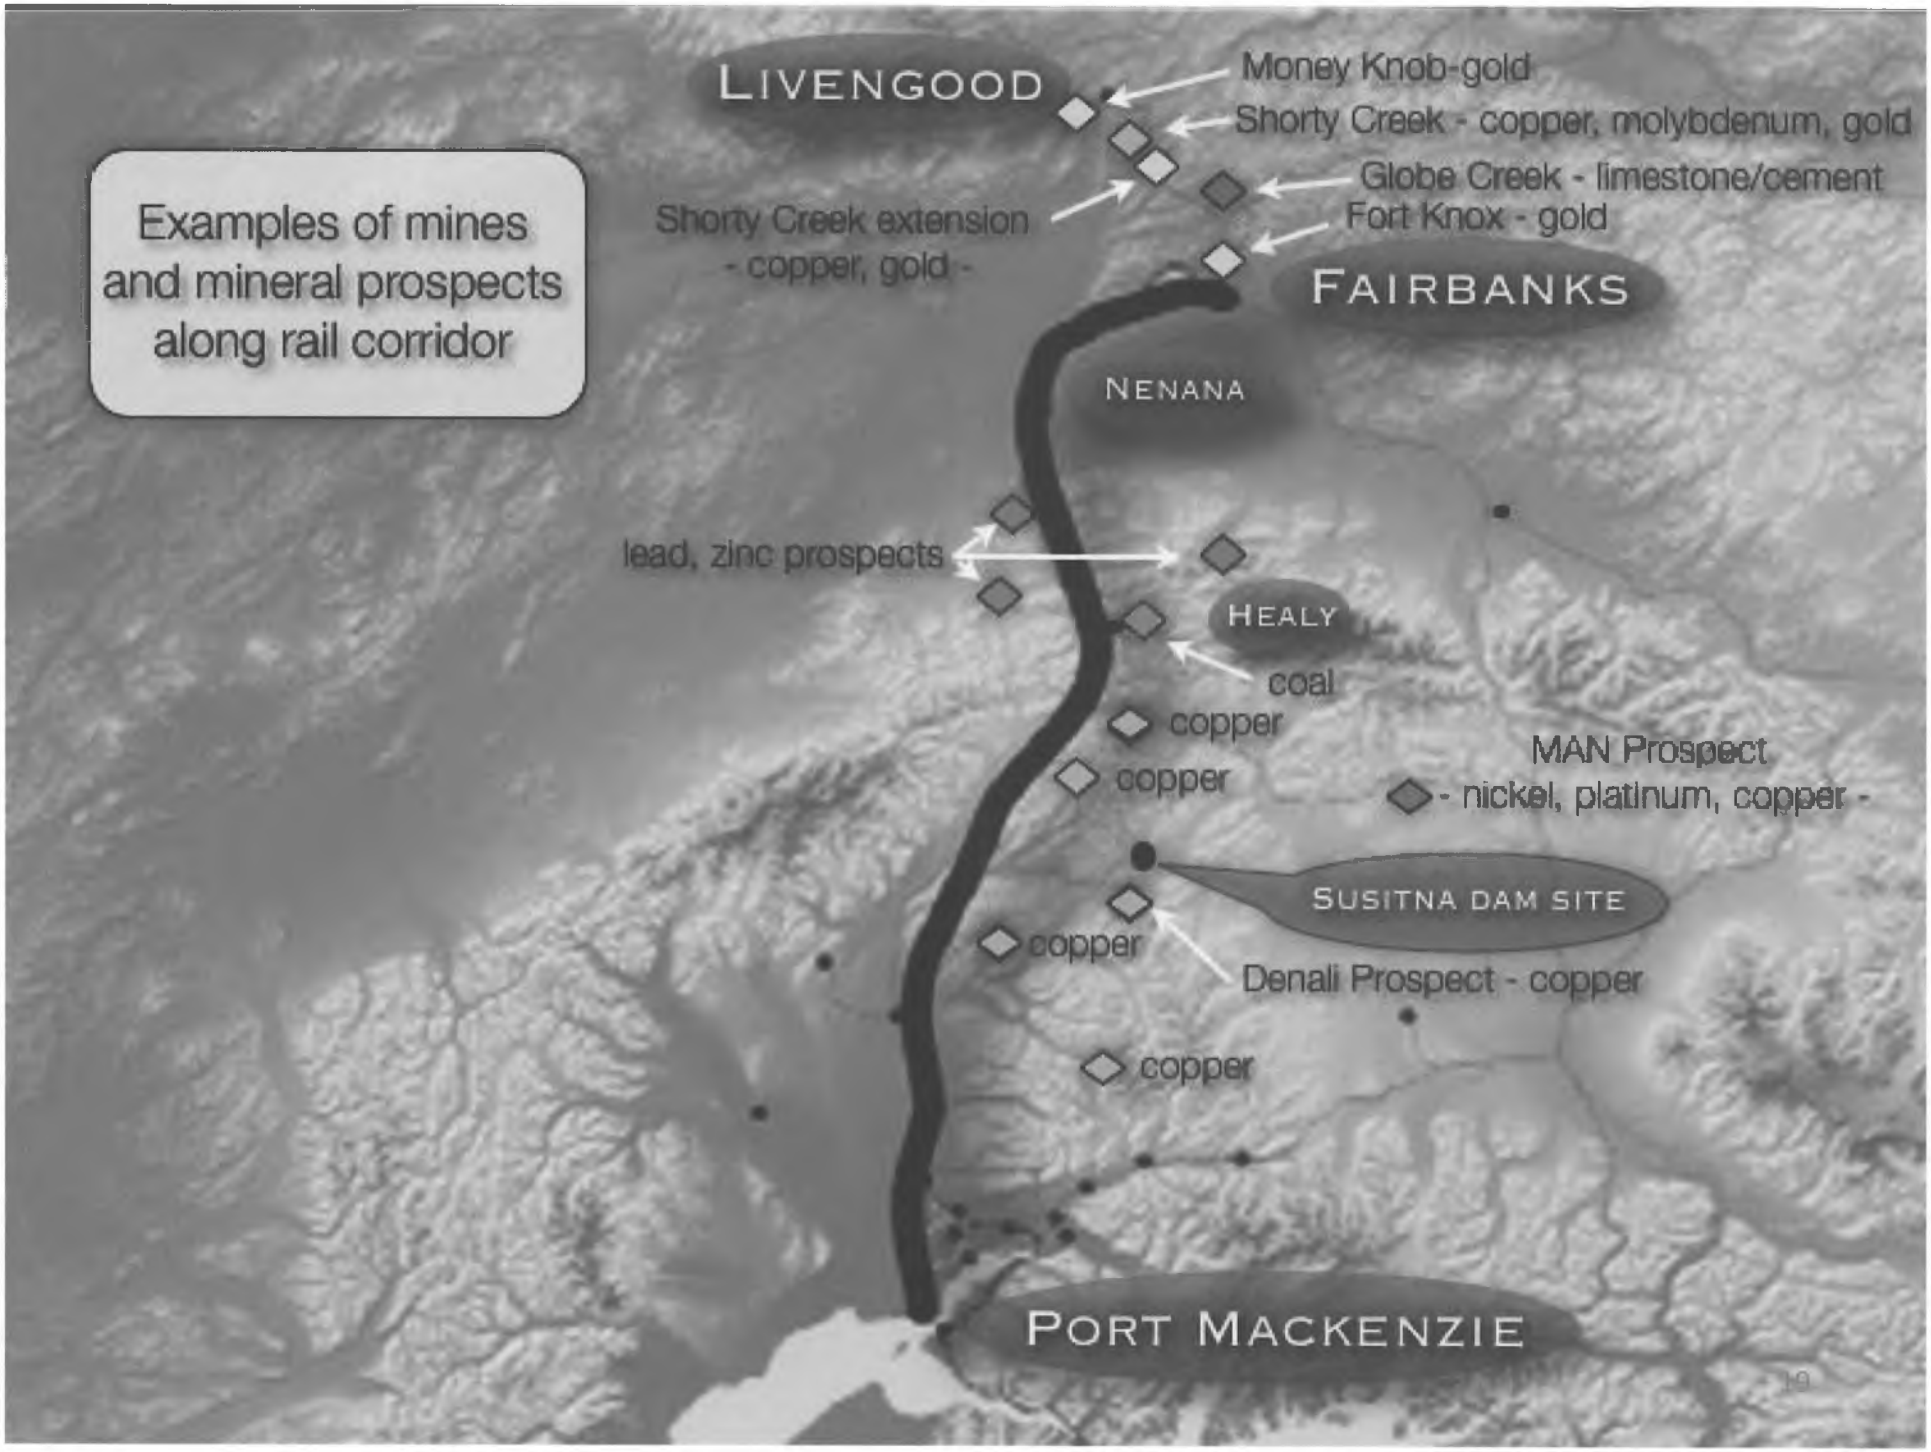
"A second port facility would allow us to increase our export market," Usibelli Coal Mine Inc. Representative



PROJECT IS ON SCHEDULE & UNDER BUDGET



- Total Capital Invested: $62.5 million (from 3 appropriations)
- Funds needed this year: $55 million



- Estimated Funds Needed to Complete the Rail Extension Project: $ 156 million (includes this year's $55M Request
- Total Estimated Cost of Rail Extension: $218.5 million with a potential return to the State of over $16 Billion (from the development of only three mineral deposits analyzed by Dr. Metz.)

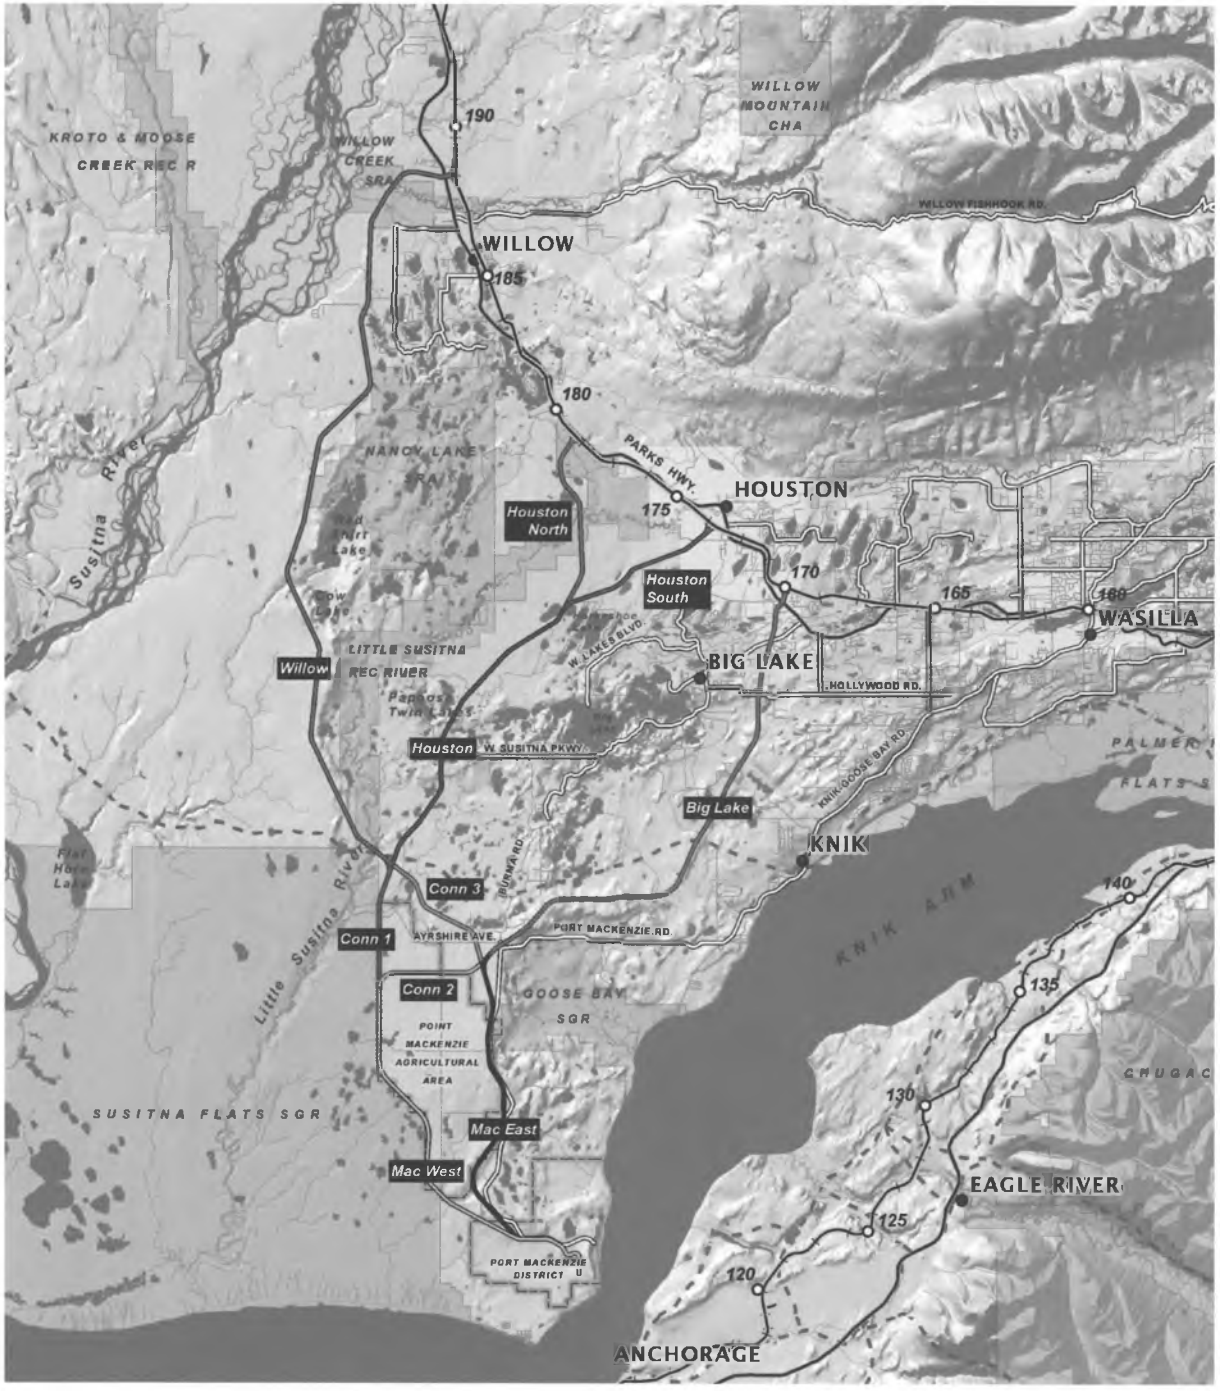
PORT MACKENZIE

RAILROAD TRANSPORTATION

- Railroads generally have a significant cost per ton-mile advantage over other surface transportation modes
  - Fuel efficiency
    - trains move 1 ton of freight, 480 miles, on one gallon of fuel; trucks move that same ton only 130 miles
  - Labor efficiency
    - 16,000 ton train with three man crew replaces 200 trucks and drivers
  - "Clean and Green"
    - Less impact on roads, reduces congestion

PORT MACKENZIE RAIL EXTENSION COSTS



- Fixed costs
  - $150,000 per year - baseline maintenance costs
- Variable Costs
  - Generally covered by freight rate
- Capital Replacement Costs
  - Properly constructed, capital costs will be low in initial years on new track structure
  - Capital renewal cycle will begin in 20-30 years for ties, longer for rail depending on traffic volume

ARRCs SUPPORT FOR PORT MACKENZIE

- ARRC supports the Port MacKenzie Rail Extension Project
- Railroads are catalysts for port development
- Alaska's Potential for Coal – South Central
  - 1.1 MM tonnes per year current, we are working with Usibelli coal mine to determine the path to triple export volumes
  - ARRC is encouraging Usibelli to utilize the rail extension to move product to Port MacKenzie
  - Both Usibelli and the ARRC see a probable sharing of increasing export coal volumes between Seward and Port MacKenzie
- Port MacKenzie Potential
  - The ARRC has the capacity to absorb increased rail traffic, we are eager for it
  - ARRC supports the long-term possibilities associated with Livengood and other mineral sources

Port MacKenzie Rail Extension

Ken Graham

Symbols show mineral deposits

A rail link from the Alaska Railroad mainline to the deep draft dock at Port MacKenzie will significantly boost the export of Alaska's strategic minerals, coal, cement, and other natural resources, helping diversify the Alaska economy.

Patty Sullivan/MSB

Photos: the ship, the deepest draft vessel ever in Upper Cook Inlet at Port MacKenzie; Above: 2010 haul road and rail loop construction at Port Mac moved 1.9 million cubic yards of dirt.

Funding Plan:

ON SCHEDULE
UNDER BUDGET

Already funded-$62 million

2011 Governor's budget-$20 million
2011 Requested appropriation-$55 million, pays for half of rail embankment
2012 Appropriation request-$63.5 million, build rest of embankment
2013 Appropriation request-$43 million, placement of rails, completes project
2014 Ribbon cutting

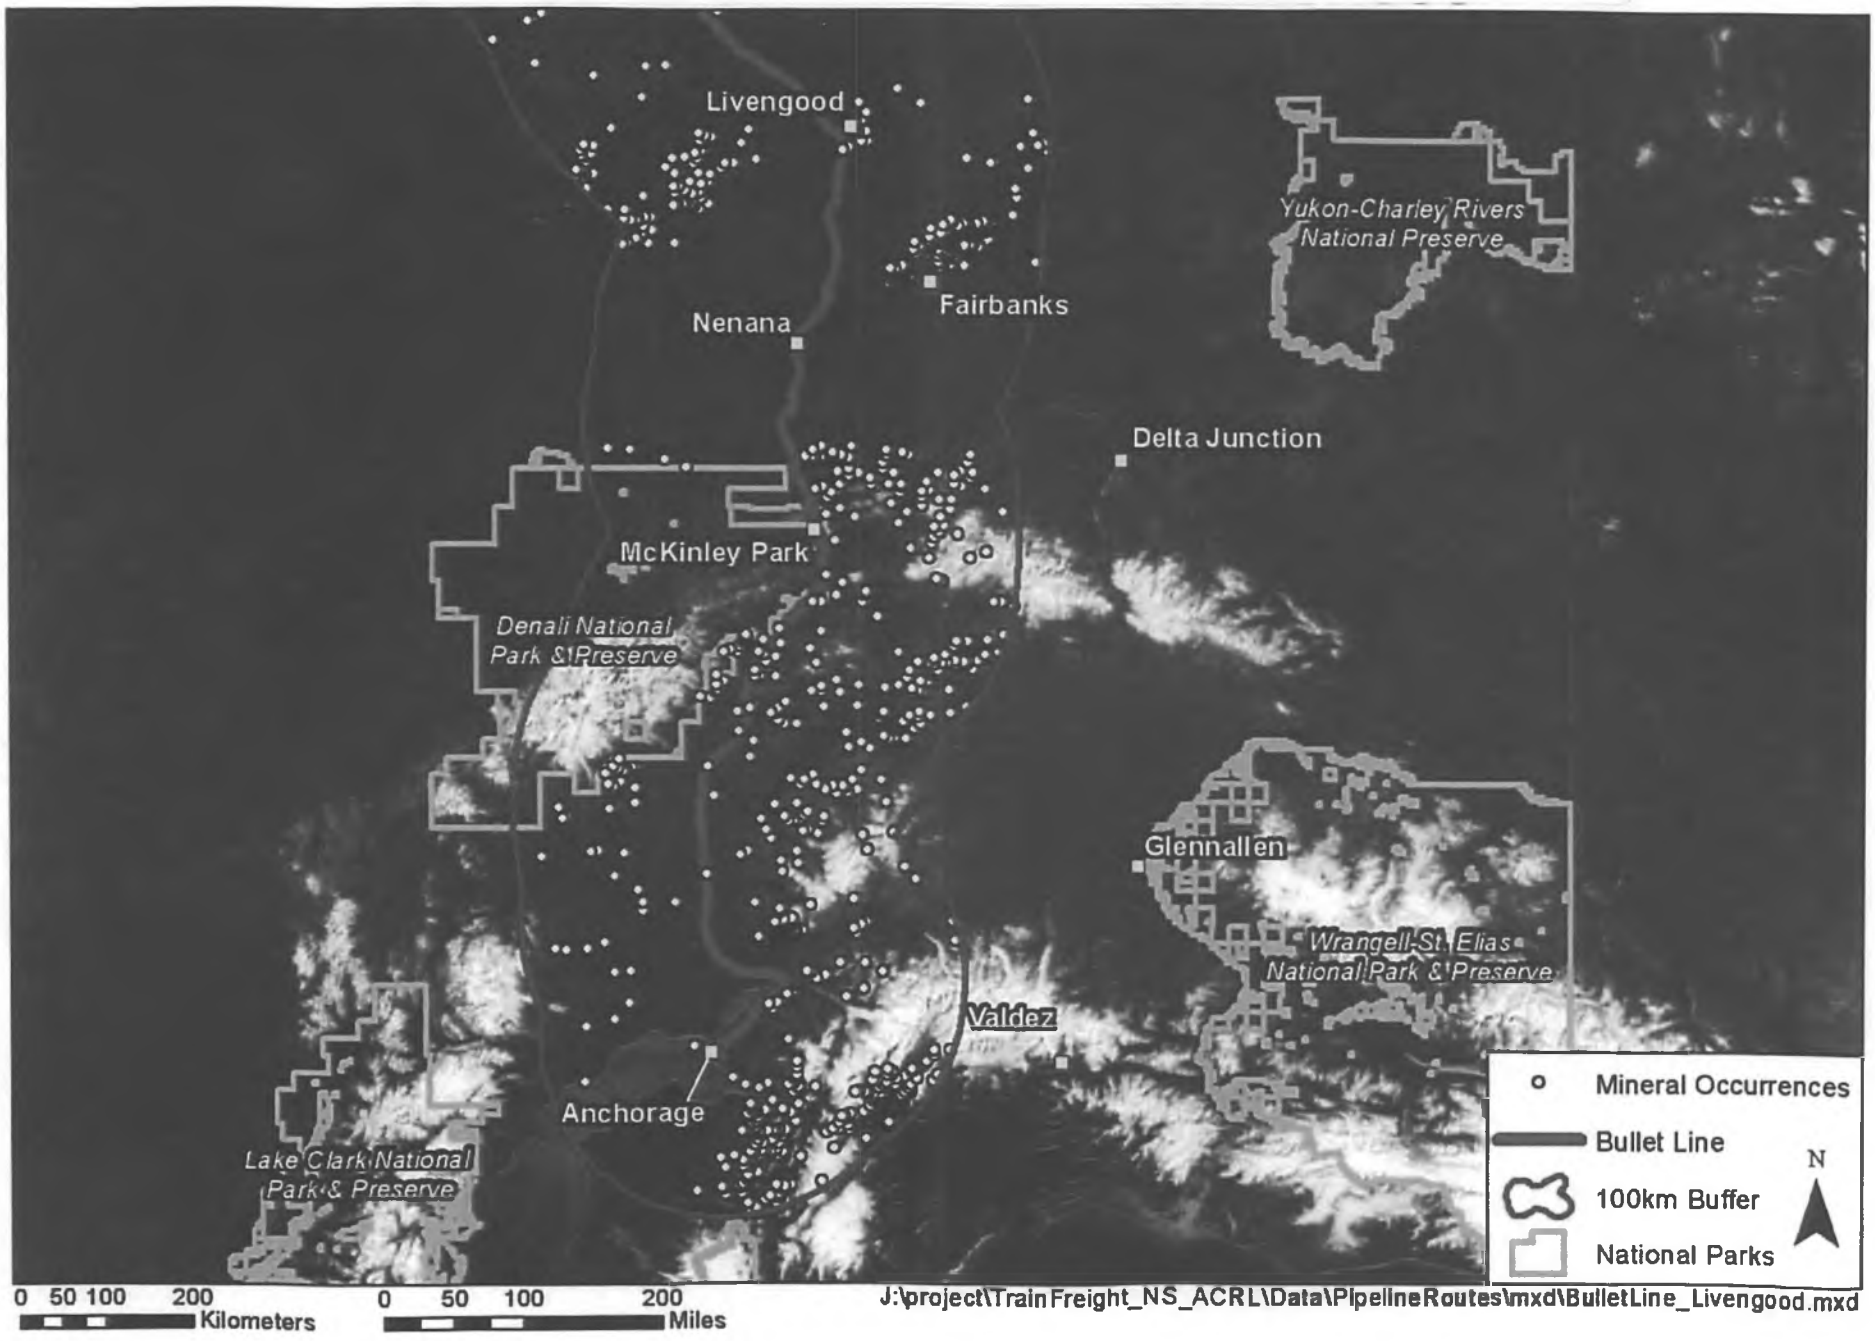
Port MacKenzie is an exporting port for bulk natural resources. Port MacKenzie complements the Port of Anchorage, where consumer goods are imported.

Description & Justification: $55 million

The Port MacKenzie Rail extension will bring tremendous economic benefit to Alaska through economic diversification, state revenues, and new jobs. The production of bulk resources is heavily dependent on low transportation costs. This new rail link will shorten the distance to tidewater and lower transport costs to such an extent that minerals now idle will be profitable to mine and export. The value of mineral production is projected to be nearly $1 billion a year over 100 years, according to ISER, Institute of Social & Economic Research. Three mining companies say the Asian market is poised now for Alaska minerals such as molybdenum, lead, zinc, and copper. Also, a 1.5 billion ton limestone deposit near Livengood could be mined to produce a new export: Portland cement. A world-class cement manufacturing plant would be built in the Interior. Alaska would supply up to 15 percent of our nation's demand for cement. With the rail link, Alaska coal becomes more competitive on the world market. Usibelli Coal Mine estimates it will likely export up to 4 million tons of coal a year through Port MacKenzie. State revenues are estimated to reach $300 million annually in taxes, royalties, and fees. Some 3,000 construction related jobs and 4,000 mining jobs will be created. The Alaska Pipeline project will gain $100 million in transport savings by shipping heavy pipe north through Port MacKenzie.

Elizabeth.Gray@matsugov.us

Natural Resource Development and The Port MacKenzie Rail Extension



Presentation to the Senate Finance Committee

February 23, 2011

By

Additional Information / Prior Funding History:
Refer to the funding matrix in the project description.

Project Description/Justification:
This request is for continued development and construction of the Matanuska-Susitna Borough Port MacKenzie Rail Extension Project. The rail extension will promote the diversification of Alaska's economy. Savings will be provided by the rail extension for transporting bulk materials like coal from the Usibelli coal mines to tidewater from Interior Alaska, and will make Alaskan natural resources significantly more competitive in Pacific Rim markets. The rail extension is expected to quadruple coal exports, stimulate development of new mineral mines, development of limestone deposits and related cement industry, and new opportunities for timber exports. An expected 4,000 jobs will be created along the rail line and in Interior Alaska due to new mining ventures and development efforts. South Central Alaska is expected to gain 2,000 permanent jobs over the first 10 years following rail construction, and up to 3,500 jobs over the longer term.

Background: The Port MacKenzie Rail Extension will bring tremendous economical and employment benefits to Alaska. The project will create jobs, lower transport costs and increase economic development. Extension of the rail line will connect the Alaska Railroad Mainline to Port MacKenzie, resulting in a shorter distance to tidewater from the interior that will save more than $100 million over existing ports for the State's proposed natural gas pipeline. Less expensive bulk transport costs will also help stimulate the development of natural resources and mines.

The lower costs created by the proposed rail extension coupled with this limestone deposit will create a major new export related manufacturing opportunity for the production of cement. With the rail extension, Alaska will be able to produce up to 15% of the nation's annual need for cement. In addition, the shorter distance to tidewater will reduce the cost of transporting coal by approximately 6 dollars per ton, making coal from Alaska's interior competitive on the world market. Representatives of the Alaska coal industry indicate that once the rail line is completed, it can quadruple annual coal exports from one million tons to four million tons.

An independent study by the University of Alaska-Fairbanks estimates the revenue to the State from new mines averages $300 million per year over the next 100 years. According to a study by the Institute of Social and Economic Research, the Port MacKenzie Rail Extension Project will create up to 3,400 new jobs over a three year period in construction (currently in progress), 35 jobs in annual operations and another 640 direct and indirect jobs.

Planned FY12 Construction at a total of $55 million will add 15 miles of rail bed commencing from the end of the 5-mile rail bed segment being constructed in 2011. It will also provide funding for project engineering, environmental permitting, and project management.

Construction will be comprised of three separate construction contracts. Each contract includes clearing and grubbing, excavation of unsuitable material and placement and compaction of various types of fill material.

Engineering will encompass design support and the design for the separate 2014 contract for placement of ties, ballast and rail on the entire extension will also be completed. Work includes all permitting and mitigation measures required for construction of these three segments.

Funding is also required for Alaska Railroad Corporation (ARRC) and the Matanuska-Susitna Borough (MSB) support for project management, including contract administration, planning, stakeholder coordination, agency coordination, federal regulatory coordination and contracted construction management for all construction contracts.

With full funding, the project will be 53% complete when the FY12 work is complete. The remaining project work, approximately ten miles of rail bed and placement of ties, ballast, and rail, is targeted for completion in 2014.

Prior funding history:

YEAR	AMOUNT	LEGISLATION
FY11	$ 35,000,000	SLA 10, Ch 43, Pg 99, Ln 27
FY09	$ 17,500,000	SLA 08, Ch 29, Pg 129, Ln 19
FY08	$ 10,000,000	SLA 07, Ch 30, Pg 88, Ln 8

Port MacKenzie Rail Extension
Funding it now makes sense

- In light of the national recession, the faster the rail is completed, the faster we are able to add up to 4,000 permanent mining and logistics jobs to the Alaska economy.

- Additionally, construction will provide up to 3,000 jobs, beginning December 2011.

- Due to the economic downturn, bids for railbed construction work have been coming in significantly below engineering estimates. By avoiding a construction delay, we can take advantage of this window, building more rail miles for less money.

- With Alaska's rapidly declining oil production, the need to diversify our economy is urgent. The rail extension will provide less expensive transport for bulk materials and minerals from Interior Alaska to tidewater. This transportation link will lower the transport costs to such an extent that new mineral areas will become economic to mine.

- The construction of the Susitna Dam could utilize the rail extension for most of its construction materials.

- Leading Alaska mining companies indicate that Pacific Rim markets exist now for increased Alaska exports, and the prices are right. The sooner the rail line is completed, the sooner Alaska exports can increase to new record levels. This will also be beneficial for the national debt payments and increasing American exports.

- The Alaska coal industry indicates that the markets are ripe for coal exports. As soon as the rail line is completed, the coal industry can quadruple Alaska coal exports from one million tons to four million tons per year. Any funding lag, delays these benefits and puts at risk new markets that seek dependable suppliers.

- Timely funding will enable the rail extension to be completed and operational for 2014. This is the earliest possible start date for construction of a gas line from the North Slope, and the rail line will enable the construction effort to save more than $100 million.

- Any funding delay will mean the loss of a summer construction season and a year-long delay in completing the rail extension.

Port MacKenzie: A major bulk materials terminal for Alaska

In June, a vessel, too large to fit through the Panama Canal, tied up easily at Port MacKenzie and loaded 1,250 tons of coal as a test-run. The test went smoothly and was a harbinger of bigger things to come. Up to 4 million tons of coal annually could be exported through Port MacKenzie, once a rail link is in. And this is just one of the projected exports. Aggregate minerals, limestone, cement, and timber all show promise. These developments emphasize how important Port MacKenzie will be in providing income, commerce, and jobs to the Matanuska-Susitna Borough and Alaska.

With a coming rail link, an existing deep draft dock, and even a coming ferry connection, Port MacKenzie will become the major bulk materials export and import terminal for Alaska. It will also evolve into the largest industrial development grounds in the state.

Its natural amenities, large land resource, deep draft dock, and expanding infrastructure make it ideal. Nowhere else in the state is there a 100-rail car loop for the efficient offloading of bulk materials from rail to ship. Construction got underway on this loop last summer. The rail line will shorten the distance to tidewater making idle minerals profitable to mine and export. The value of mineral production is estimated to rise to nearly $1 billion a year over 100 years, according to ISER, Institute of Social and Economic Research. A 1.6 billion ton limestone deposit in the Interior will introduce a new industry to Alaska, the production of Portland cement. Up to 15 percent of our nation's cement could go through Port MacKenzie in the future. Such development will bring tremendous revenues to the Borough.

The nearly 9,000 acres of public lands in the Port District provide abundant land for stockpiling commodities, manufacturing products and processing petrochemicals. The port's deep water dock, a large expanded barge dock, terminal building, paved road access, and natural resources conveyor system from the uplands to the port, all contribute to the port's value and potential.

The development of the Port MacKenzie will also result in a large number of high paying, temporary and permanent jobs for Borough residents. It is estimated that more than 3,500 direct jobs will be created over the next 10 – 20 years

Natural scouring occurs in front of the deep draft dock so costly dredging is never needed.

As the planned terminus for the Knik Arm Bridge from Anchorage, Port MacKenzie will become a main transportation hub for the region.

Port MacKenzie is an exporting port for bulk natural resources. It complements the Port of Anchorage, where consumer goods are imported.

2

Port MacKenzie Rail Extension
Funding: On schedule and under budget

Funds appropriated to date:

- $10 million – to complete Environmental Impact Statement (EIS)
- $17.5 million – to complete bi-modal rail/road loop
- $35 million – build first 5 – 6 miles of rail line embankment, design rail route selected by EIS, and buy right-of-way *(Project completion at 28%)*

Total funds appropriated to date: **$62.5 million**

Estimated Funds Required to Complete Rail Extension

- $55 million (first year) – complete next 10 – 11 miles of rail route embankment, and buy remainder of right-of-way [$20 million currently in Governor's Budget – additional $35 million needed] *(Project completion at 53%)*

- $60 million (second year) – to complete construction of remaining rail embankment to the Alaska Railroad mainline. *(Project completion at 81%)*

- $41 million (third year) – to purchase and lay rail, and complete rail extension construction *(Project completion 100%, Fall 2014 ribbon cutting)*

Total estimated additional funds needed: **$156 million**

Total estimated cost of rail extension cost: $218.5 million

COMPASS: *Other points of view*

Big capital budget can boost quality of life

By RICK MYSTROM

Is the capital budget proposed by the Legislature too high? Will it overheat the economy? Was it a "spending spree"? Or ... will it stimulate a slowing economy? Will it stop the job losses predicted by the state's economists? Will it improve the quality of life for Alaskans?

Every state government in America would like the opportunity to stimulate its economy. Only Alaska has that ability.

ALASKA'S CAPITAL BUDGET IS DIFFERENT

In every other state in the U.S., a large capital budget means that you take money out of the private sector to pay for the projects. Usually it's through state income tax increases, property tax increases or, in some cases, sales tax or fee increases.

Alaska is different. We've already taken the money out of the private sector. With billions and billions of dollars of surplus, the question for Alaska is do we want to use the taxes we've already collected to pay for the capital projects or are we better off leaving the money in one of the state's surplus accounts?

THE LEGISLATURE GOT IT RIGHT

Put me on the side of those who think the Legislature got it right. Probably not perfect, but generally right. At this time in Alaska's economic history we should have a large capital budget as long as those projects can either grow the economy or improve Alaskans' quality of life or both. Here's why I think this capital budget is good for Alaska's economy:

• **This is a very uncertain time for Alaska's economy.** Many unknowns are out there concerning future oil exploration, the future of a gas line or lines, the future of Alaska Native contracting legislation at the federal level, the high cost of energy, etc.

• **Economists are predicting a loss of about 1,000 jobs over this next year.** In effect, the economy is frozen. The private sector, with the exception of health care, is shrinking. This is exactly the time that the state should be investing in capital projects. While I don't presume to know the specifics of all of the capital budget projects, I do believe that the amount is very appropriate for this time in Alaska's history.

• **A capital budget of $3 billion will not overheat the economy.** It will keep the economy from shrinking and allow healthy growth. Every state government in America would like the opportunity to stimulate its economy. Only Alaska has that ability. Any conclusion that this amount would overheat the Alaska economy is not correct and not substantiated historically. Two other times in the past 30 years our economy was in danger of decline as it is today. Once the decline was avoided by capital projects. Once it was not.

• **In 1979-80 the construction of the trans-Alaska pipeline was completed and workers were moving out.** Gov. Jay Hammond realized the importance of creating jobs through the capital budget. With the support of the Legislature, he implemented a plan that gave every community in Alaska $1,000 per person to develop capital projects. That meant about $650 million a year for three years in 1980 dollars. This was in addition to the state's direct capital budget for roads, schools, public buildings, etc. Hammond's action was correct. It saved the Alaska economy from a post-pipeline decline.

• **In 1986 the economy dropped again.** This was caused by a 75 percent plunge in oil prices following five years of loose real-estate lending practices. It was also exacerbated by the tax reform act of 1986, which devalued real estate. None of those issues is in play today. While capital spending could not have stopped that major decline in the economy, it could have mitigated it somewhat. Gov. Steve Cowper chose to hold back money for capital spending and save the money for the tough times. The rest is history.

The measure of a state's economic health is not the amount of money in a state's savings accounts. It's the growth of the economy, the prosperity and quality of life of its citizens and the opportunities for its young people. If projects in the capital budget meet these criteria, they should not be vetoed.

Rick Mystrom served as mayor of Anchorage from 1994 to 2000 and is currently an economic development adviser to the Mat-Su Borough.

DENALI BOROUGH, ALASKA
RESOLUTION NO. 10-01

A RESOLUTION SUPPORTING THE PORT MACKENZIE RAIL EXTENSION

WHEREAS, natural resource development is vital to the economy of the entire State of Alaska; and

WHEREAS, Port MacKenzie, with a vast amount of industrial development land and a deep draft dock, is capable of processing and handling bulk resource commodities; and

WHEREAS, Port MacKenzie is strategically located and has available land and space to stage bulk resources for export; and

WHEREAS, Port MacKenzie can accommodate Panamax and Cape-size vessels and does not require annual dredging; and

WHEREAS, the distance to tidewater at Port MacKenzie from the Interior Alaska offers lower transportation costs and the Port MacKenzie Rail Extension will stimulate the use and export of coal and other minerals from the Interior; and

WHEREAS, the rail extension will eliminate congestion from shipping high-volume export materials on the southern rail end from Wasilla to Anchorage, and will eliminate the need for more costly upgrades to the rail system south of Big Lake; and

WHEREAS, off-loading, staging, and rail transportation of north bound materials for construction of a gas pipeline and other large projects from Port MacKenzie would be less costly than rail shipment from Anchorage or Seward; and

WHEREAS, the first two phases of rail extension development, the Environmental Impact Statement and the construction of a bi-modal road/rail loop at the port, are due to be completed during the next six to nine months.

NOW THEREFORE BE IT RESOLVED: the Denali Borough Assembly supports the Matanuska-Susitna Borough in their efforts to extend the Alaska Railroad to Port MacKenzie.

BE IT FURTHER RESOLVED: that the Denali Borough Assembly requests the Governor and the Alaska State Legislature support all phases of construction and rail extension development;

BE IT FURTHER RESOLVED: that the Denali Borough Assembly supports state funding of $57 million for phase III of the project so construction can begin on the first 11 miles of rail line, and design and engineering can be completed on the connection route selected by the Environmental Impact Study.

AND BE IT FURTHER RESOLVED, that this resolution be distributed to:

Governor Sean Parnell
Commissioner Annette Kreitzer, Administration
Commissioner Emil Notti, DCCED
Commissioner Larry Hartig, ADEC
Commissioner Denby Lloyd, ADF&G
Commissioner Click Bishop, ADOL
Commissioner Tom Irwin, ADNR
Commissioner Patrick S. Galvin, ADOR
Commissioner Leo Von Scheben, ADOT
Director Karen Rehfeld, OMB
Sen. Gary Stevens, Senate President
Rep. Mike Chenault, House Speaker
Sen. Albert Kookesh, Senate Transportation Chair
Sen. Linda Menard, Senate Transportation Vice-chair
Rep. Peggy Wilson, House Transportation Chair
Rep. Craig Johnson, House Resources Chair and Transportation Vice-chair
Rep. Mark Neuman, House Resources Co-chair
Sen. Lesil McGuire, Senate Resources Co-chair
Sen. Bill Wielechowski, Senate Resources Co-chair
Sen. Bert Stedman, Senate Finance Co-chair
Sen. Lyman Hoffman, Senate Finance Co-chair
Rep. Mike Hawker, House Finance Co-chair
Rep. Bill Stoltze, House Finance Co-chair
Interior Delegation
Talis Colberg, Matanuska-Susitna Borough Mayor
Luke Hopkins, Fairbanks North Star Borough Mayor

PASSED AND APPROVED by the Denali Borough Assembly on this 13TH day of January, 2010.

David M. Talerico, Borough Mayor

ATTEST _____
Gail Pieknik, Borough Clerk

PASSED UNANIMOUSLY

Adopted: October 12, 2010

Resolution No. 2010-34

Relating to Supporting Funding of
the Port MacKenzie Rail Extension

WHEREAS, The Alaska Railroad is a powerful economic engine and backbone for Alaska's transportation infrastructure, hauling millions of tons of freight per year and providing critical support for resource industries such as coal, petroleum, and gravel; and

WHEREAS, the State of Alaska needs to diversify and strengthen its economy and an effective transportation system facilitates such diversification; and

WHEREAS, the Matanuska-Susitna Borough is building a rail extension from Port MacKenzie to the Alaska Railroad mainline and the Alaska Railroad is assisting in this effort by serving as a contractor and applicant to the Surface Transportation Board for the project; and

WHEREAS, the new rail line will shorten the distance for transporting minerals and freight from the interior to tidewater and the Alaska Railroad expects the rail extension will lead to additional bulk resource rail transport opportunities in the future; and

WHEREAS, the Alaska Railroad serves ports in Seward, Whittier and Anchorage and the connection to Port MacKenzie, with it 9,000 acres of industrial zoned land and deep-draft dock, is a logical next step in enhancing the State's transportation capacity for bulk natural resources; and

WHEREAS, the rail extension also provides an additional rail route to tidewater that can serve both our military logistics and national security needs; and

WHEREAS, this project is expected to create thousands of new jobs for Alaskans and is a project of statewide benefit and significance.

NOW THEREFORE BE IT RESOLVED that the Alaska Railroad Board of Directors supports the inclusion of $55 million in the Governor's Fiscal Year 2012 Capital Project Budget to complete Phase Four construction of the rail extension between Port MacKenzie and the Alaska Railroad mainline.

This is to certify that I am the Secretary of the Board of Directors of the Alaska Railroad Corporation, and the above Resolution No. 2010-34 is a true and correct copy of the resolution adopted by the Alaska Railroad Corporation's Board of Directors at its regular meeting on October 12, 2010.

November 15, 2010

Honorable Sean Parnell
Governor
State of Alaska
Capitol Building
Juneau, Alaska 99811

Re: Railroad Extension from Port MacKenzie to the Alaska Railroad Main Line

Dear Governor Parnell,

We are writing to urge continued funding for the extension of the railroad from the port at Point MacKenzie to the Alaska Railroad main line north of Wasilla.

The completion of this rail connection is needed for the export shipment of bulk commodities from existing and future mines in Southcentral and Interior Alaska. This project will provide important diversification and new opportunities for the state and will help stimulate new mineral development projects.

Mines producing coal, base metal (copper, zinc, lead, iron) concentrates, and many industrial minerals depend on reasonable transportation costs and this project has the opportunity to do just that. This extension, when combined with the results from the current western Alaska transportation study, will provide the best opportunity for concentrates from Interior Alaska to reach a deep water port.

Furthermore, this extension would allow current sand and gravel producers that are on the Alaska Railroad to export a portion of their production. In some cases, sand and gravel from these mines will provide the most economical sources for construction projects around the coast of Alaska.

We appreciate your consideration of this funding.

Sincerely,

Steven C. Borell, P.E.
Executive Director

GREATER FAIRBANKS CHAMBER OF COMMERCE

Introduced By:	Transportation Committee
Date Introduced:	September 27, 2010
Date Passed:	September 27, 2010
Date Transmitted:	September 27, 2010

RESOLUTION 10-0927

A RESOLUTION BY THE GREATER FAIRBANKS CHAMBER OF COMMERCE SUPPORTING PORT MACKENZIE RAIL EXTENSION PROJECT

WHEREAS, the State of Alaska needs to diversify its statewide and regional economies and develop an efficient and effective transportation system to support such diversification; and

WHEREAS, the rail extension being built from Port MacKenzie to the Alaska Railroad mainline will greatly stimulate such economic diversification by reducing the cost of transportation from Southcentral and Interior Alaska for bulk natural resources to tidewater; and

WHEREAS, the Greater Fairbanks Chamber of Commerce supports the need for economic diversification on both a statewide and regional basis as well as the need for significant transportation infrastructure improvements; and

NOW THEREFORE BE IT RESOLVED that the Greater Fairbanks Chamber of Commerce supports the inclusion of funding to continue construction of the rail extension between Port MacKenzie and the Alaska Railroad Mainline in the Governor's Capital Project Budget.

BE IT FURTHER RESOLVED that this resolution be distributed to:

RESOLUTION SERIAL NO. 10-009

A RESOLUTION OF THE MATANUSKA-SUSITNA BOROUGH ASSEMBLY SUPPORTING THE PORT MACKENZIE RAIL EXTENSION AS A STATEWIDE, ECONOMIC DIVERSITY, STIMULUS PROJECT.

WHEREAS, the Port Mackenzie Rail Extension project connecting the Alaska Rail Road mainline will greatly reduce the distance for transporting bulk materials to and from Southcentral and Interior Alaska to tidewater; and

WHEREAS, reduced transport distance translates to reduced transportation costs which leads to an increase in volume of freight and the stimulation of resource development projects near the rail corridor; and

WHEREAS, the State currently relies on the petroleum industry for 85 percent of its revenue; and

WHEREAS, by stimulating resource development, the project would diversify and stabilize the State and local economies; and

WHEREAS, the construction and operation of the rail extension and the increased development it would stimulate along the rail corridor will provide thousands of jobs for Alaskans.

NOW, THEREFORE, BE IT RESOLVED, that the Matanuska-Susitna Borough Assembly supports the Port Mackenzie Rail Extension as a project which will provide Statewide benefits, economic diversity, and jobs for Alaskans.

ADOPTED by the Matanuska-Susitna Borough Assembly this 2 day of February, 2010.

TALIS J. COLBERG, Borough Mayor

ATTEST:

DONNIE R. McKECHNIE, CMC, Borough Clerk

(SEAL)

PASSED UNANIMOUSLY: Woods, Houston, Arvin, Ewing, Bettine, Colver and Halter.

GREATER WASILLA CHAMBER OF COMMERCE RESOLUTION No. xx

A RESOLUTION OF THE GREATER WASILLA CHAMBER OF COMMERCE SUPPORTING EXTENSION OF THE ALASKA RAILROAD FROM THE RAILROAD MAIN LINE TO PORT MACKENZIE.

WHEREAS, bulk natural resource development and export is important to the economy of the Matanuska-Susitna Borough, the Denali Borough, the Fairbanks North Star Borough, and the State of Alaska; and

WHEREAS, the ability of the Alaska Railroad to continue to provide economical transportation of bulk commodities is vital to the economic health of Alaska; and

WHEREAS, Port MacKenzie, with its 8,940 acres of industrial development land and deep draft dock, is a developing port with capability for bulk natural resource transport; and

WHEREAS, Port MacKenzie is capable of handling panamax and cape-size vessels (the largest ships in the world); and

WHEREAS, Port MacKenzie is closer to tidewater than the existing ports of Southcentral Alaska; and

WHEREAS, a shorter distance to tidewater will make resource development in South Central and Interior Alaska more economical by lowering transportation costs; and

WHEREAS, the shorter rail distance to tidewater will further stimulate the use and export of coal from the Usibelli mine and other extracted material developments in the Denali Borough, Matanuska-Susitna Borough and Interior Alaska; and

WHEREAS, the rail extension will make development of natural resources (coal, limestone, sand and gravel, timber and metallic minerals, etc) located in the rail belt and Interior more economically feasible; and

WHEREAS, the rail spur to Port MacKenzie will create more usage of the Alaska Railroad and increase the economic viability of the railroad; and

WHEREAS, the increase in economic activity will significantly contribute to the State's economic well being, increase employment of Alaskans, and contribute to the continued economic stability of one of the fastest growing regions in the nation.

NOW THEREFORE, be it resolved that the Greater Wasilla Chamber of Commerce strongly supports construction of the Alaska Rail line Extension from the Alaska Railroad mainline to Port MacKenzie.

ADOPTED by the Greater Wasilla Chamber of Commerce this ___ ___day of December,2009.

CITY OF PALMER, ALASKA

RESOLUTION NO. 10-009

A RESOLUTION OF THE CITY OF PALMER COUNCIL SUPPORTING EXTENSION OF THE ALASKA RAILROAD FROM THE RAILROAD MAIN LINE TO PORT MACKENZIE

WHEREAS, bulk natural resource development and export is important to the economy of the Denali Borough, Matanuska-Susitna Borough and its cities, the Fairbanks North Star Borough, and the State of Alaska; and

WHEREAS, the Usibelli Coal Mine is the main developed source of coal in Alaska; and

WHEREAS, Usibelli Coal Mine has offices and employees residing in Palmer; and

WHEREAS, Port MacKenzie with its 8,940 acres of industrial development lands and deep draft dock, is a developing port with potential for bulk natural resource transport; and

WHEREAS, Port MacKenzie is capable of handling panamax and cape size vessels (the largest ships in the world); and

WHEREAS, Port MacKenzie is closer to tide water than the existing ports of Southcentral Alaska; and

WHEREAS, a shorter distance to tide water will make resource development in Interior and Southcentral Alaska more economical, by lowering transport costs; and

WHEREAS, the shorter rail distance to tide water will further stimulate the use and export of coal from the Usibelli mine and other mineral developments in the Denali Borough, Matanuska-Susitna Borough, and Interior Alaska; and

WHEREAS, the rail extension will make development of various natural resources (coal, limestone, sand and gravel, timber and metallic minerals, etc.) located in the rail belt and Interior more feasible; and

WHEREAS, the economic activity will contribute to the Matanuska-Susitna Borough economy, tax base, and employment.

NOW THEREFORE, be it resolved that the City of Palmer strongly supports construction of the Alaska Rail line Extension from the Alaska Railroad mainline to Port MacKenzie.

Passed and approved by the City Council of the City of Palmer, Alaska this twelfth day of January 2010.

Kevin W. Brown II, Mayor Pro-Tempore

Janette M. Bower, MMC, City Clerk

ALASKA STATE CHAMBER OF COMMERCE

Business to Business

December 2010

Lawmakers discuss Alaska's economic future

By Jedediah R. Smith

On the cusp of an election, and with $12 billion in budget reserve accounts, five of Alaska's 60 legislators participated in a panel discussion before the State Chamber of Commerce, not to campaign, but to share their experiences and thoughts on strategies for filling the Trans-Alaska Pipeline, the state's regulatory regime, public employee retirement systems and ways the Legislature can create a more friendly investment climate.

At times, politics crept into the discussion. But the panel generally focused on the issues at hand. Chamber executive board chair Kip Knudson moderated the discussion and first asked lawmakers whether and how the state should spend the $12 billion available in reserve accounts.

Responses were varied, from Sen. Kevin Meyer's belief that the money shouldn't be touched until the economy improves, to Rep. Anna Fairclough's reminder that the state has a $12 billion liability to PERS/TRS retirement accounts.

"We made a promise to those that came before us," Fairclough (R-Eagle River) said.

"I think we have to be very careful," said Rep. Bill Stoltz (R-Chugiak), who noted the state has invested money in important infrastructure projects in Southcentral Alaska, such as the Port McKenzie rail spur. Prioritizing infrastructure projects is critical in choosing the best projects that will prove a return on investment for the state. But once open, that valve can be difficult to control with 60 legislators all vying for a piece of the action, Stoltz said.

The response highlighted the subtle differences on the political landscape among the business-friendly legislators, whose dis-

Chair's message: How to Create Jobs

By Kip Knudson

Knudson

In last quarter's newsletter I expressed dismay with candidates who claim they will create jobs.

Most of our elected officials have lost track of the fact that the private sector creates two-thirds of Alaska's jobs, and pays the taxes that fund the remaining third. If they haven't forgotten this fact, then they are afraid to talk about it in public forums.

During the State Chamber's priority-setting Tie-In, we heard from Scott Cohn about how Alaska finished dead-last in the CNBC's 2010 Business Ranking. He told us about our bottom-of-the-pack rankings on things like road quality (not quantity), litigiousness, high taxes (our world-beating oil and gas taxes weren't even factored in) and low-outcome, high-cost education system.

My dismay at politicians talk about "creating jobs," and Mr. Cohn telling us everything-we-know-but-wish-we-didn't spurred a fantastic conversation among the State Chamber's Board of Directors on a central question: How can the State Chamber convince our elected officials to focus on policies and programs that encourage the private sector to create more jobs?

The first step is to sharpen our strategic plan, and below is a proposal that I intend to forward to the State Chamber Board.

Tag Line:
The Voice of Alaska Business

Vision (What does the future look like?): A top ranking in "Best Places to Do Business" lists.

Mission (Why do we exist?): Advocate for public policies that encourage private sector investment and job growth.

Values (How do we operate?): Results-driven. We will focus on measurable improvement of the Alaska business climate. Be a statewide, all-business-sector advocate. "The Voice of Alaska Business" grows stronger when all businesses are represented.

Strategy (What will we do?): The State Chamber will achieve progress through three initiatives aimed at creating a robust business climate – and thus job growth - in Alaska. These initiatives provide focus both to members and to government officials. Success on these initiatives can be measured and will result in private sector growth.

Perhaps most important to note is that the discreet action items within each initiative are generated by our membership. The more your business participates in State Chamber priority setting, the more likely the entire business community will benefit from collective ideas to grow our economy.

The State Chamber's strategy will:

Reduce Government Burden

Our state government can either help or hinder business growth and

anti-development, on budget issues and Alaska's dependence on resource development for operating revenue.

"Students were saying 'Anna, we need to give the university tens of millions of more dollars,' and I would say, 'I'd love to do that, can you tell me what we should cut?"

"We need to engage Alaskans in understanding where the economy is coming from and where it is going," Fairclough said.

In the short-term, the members of the panel, which also included Sen. Charlie Huggins (R-Wasilla) and Sen. Kevin Meyer (R-Anchorage) said they didn't think changes in the state's retirement system, from a defined benefit to a defined contribution (Tier 3 to Tier 4) had a significant impact on recruiting well qualified workers.

Public employee unions have continued to confound legislators who have attempted to solve the state's entitlement obligations though.

"You can't say you want to go back to a system of defined benefits that will bankrupt our state and also want to enshrine the dividend," Stoltz said. "Every year there is a bill and a lot of pressure to radically reverse the system. This is one of the most political issues. Some of us stuck our finger in the electric pencil sharpener that is that union. I still have a little bit of a nub left. I'm willing to do it again."

Attracting highly qualified state employees to run the permitting system continues to be a concern among resource development industries, said Jason Brune, executive director of the Resource Development Council. The current litigious climate makes hiring good state employees all the more important for industry, as regulators are charged with writing permits that will ultimately hold up in a court of law. Brune challenged the panel to find alternatives to avoid the "lawsuit first" strategy pursued by many environmental groups opposing resource development projects.

Johnson said he'd tried a number of different things during the last session, notably introducing a bill to freeze the timeline of a permit once a lawsuit is filed.

"If you can stretch it out in court so that a permit expires, you just wasted a bunch of time and expense," Johnson said. Even if the developer prevails, the project may have to reapply for another permit or even go through the costly Environmental Impact Statement process again. His legislation would allow the clock on the permit to resume only after the lawsuit was settled.

"I'm not confident we're going to get away from the public litigant way of doing business for awhile," said Johnson, who hopes to introduce the legislation again this year. "It isn't a big fix, but might be something on the table to help."

Other steps the legislature must take, according to Johnson, are to leverage existing funds to attract money for large scale hydroelectric projects like the Susitna Dam or Chackachamna, not necessarily by building them, but perhaps by providing loan guarantees. He said the state missed the opportunity 20 years ago to build a project like Susitna, and that, "We need to vision," Johnson said. "I dread 15 years from now, having people say, 'why didn't you do something?"

job creation. Therefore, the State Chamber will lobby to:

- Reform oil and gas tax;
- Continue the existing coast zone program,
- Continue effective administration of the state's strong mining regulations;
- Review RCA regulations;
- Adopt tax incentives for new economic sectors;
- Lower workers compensation costs
- Privatize public services that compete with the private sector;
- Reduce litigation costs and delays;
- Reform state procurement code;
- Create, and then follow, a strategic plan for economic development; and
- Reduce state GF spending to FY10 levels.

Improve and Expand Infrastructure

- Create an infrastructure endowment to reliably fund renewal and expansion;
- Renew the Port of Anchorage;
- Construct a rail spur to Pt. McKenzie; and,
- Advocate for a long-range energy plan and then identify all barriers to that long-range plan

Communicate and Educate

Advocacy on the above two initiatives can be leveraged through a solid communication and education program, including:

- In cooperation with all the trade associations in Alaska, create a scorecard to clearly communicate our expectations to lawmakers;
- Support the Board of Trustees Alaska Business Political Action Committee in their efforts to support candidates who commit to grow the private sector;
- Immerse high school students in entrepreneurship and leadership through the Alaska Business Week summer program;
- Empower our partners in local chambers to affect statewide change, in addition to supporting local chambers focus on growing their community and regional economies;
- Provide timely updates to membership on progress on the initiatives through print and electronic media;
- Educate member companies on how to engage employees to participate in the government's progress on these initiatives; and,
- Connect members with their legislators to drive home the in-district impact of adopting the initiatives
- Consistent, valuable communication both internal and external to the State Chamber

I welcome your feedback on this strategic plan at kip.c.knudson@tsocorp.com.

Make a plan and work the plan.

Executive Summary

Costs

We assume that the Port MacKenzie rail extension would cost $275 million to construct.[1] This is a conservative estimate based on a range of between $200 million and $300 million for different route options. The time horizon runs 50 years from 2012 to 2061. O&M costs are assumed to be $1.5 million per year, with a net present value of $26.1 million. The net present value of all costs using a 5% real discount rate[2] and a base year of 2010 is $301.1 million.

Benefits

The rail extension would provide two distinct types of benefits: 1) It reduces the cost of rail transportation; and 2) It is likely to stimulate significant new mines and other major development. These benefits come from a diverse mix of potential projects – thus a strength of the rail extension is that its economic viability does not depend on any one project.

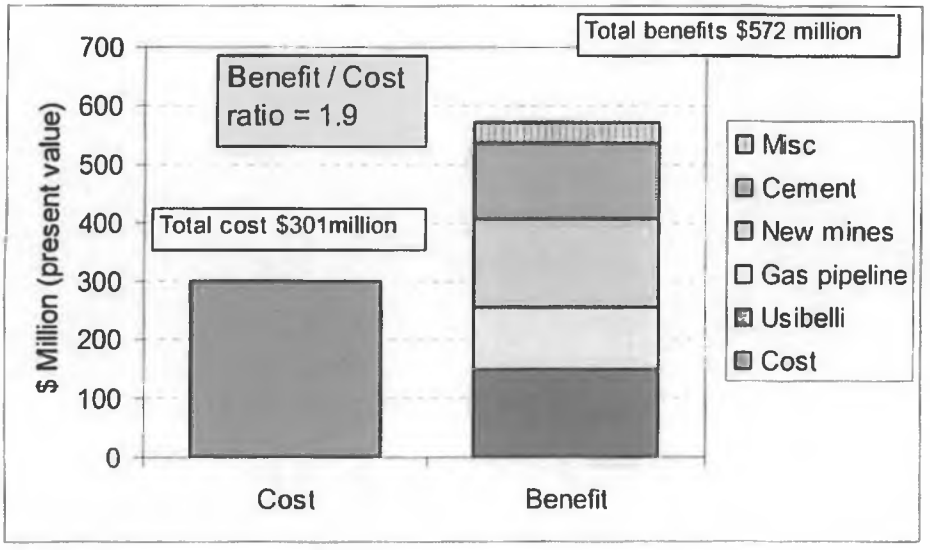
Reduced transportation costs

Relative to Seward, using the extension would save 140.7 miles per one-way trip.[3] Assuming an average cost savings of 6 cents per ton-mile and a 5.0% real discount rate, we estimate that using the extension would save $572 million in avoided rail costs, avoided port costs, and avoided railroad and road upgrades. These savings are shown in the table and figure on the following page.

In addition to the above, we estimate that about 22,000 train crossings of Pittman Road and other roads would be avoided by the extension, saving motorists up to 64,000 vehicle-hours of travel time delay between now and 2061.

---

[1] AK Railroad submission to Federal Surface Transportation Board requesting license to build rail extension. January 2008.



[2] "real discount rate" means adjusted for inflation. This rate is based on the real rate of return from the Alaska Permanent Fund.

[3] Paul Metz, Economic Analysis of Rail Link Port MacKenzie to Willow, Alaska. February 2007

Benefits of Port MacKenzie rail extension from reduced transportation costs
(Present value in year 2010 @ 5.0%; does not include motorist time savings)

	Tons per year	Years of operation		Benefits from reduced rail and port cost NPV at 5%	Notes
Usibelli Coal	1,000,000	2012 - 2061	$	148,711,175	
Gas pipeline materials	N/A	2013 - 2015	$	105,838,887	1
Ore from new mines	1,879,750	2017 - 2056	$	151,038,111	2
Cement plant	1,095,000	2020 - 2061	$	130,031,810	3
Misc commodities	250,000	2012 - 2061	$	36,694,410	4
Total benefits			**$**	**572,314,393**	
Construction cost			$	275,000,000	
O&M cost (NPV of $1.5 million/yr)			$	26,079,894	
Total cost			**$**	**301,079,894**	
Benefit / Cost ratio from transportation savings				**1.9**	

Notes: 1. Gas pipeline savings includes $82 million NPV of avoided rail and road upgrade costs
2. Mines would commence operation in various years; the tonnage number in this table is peak production reached after 2037. The analysis of benefits is based on the actual time profile of tonnage produced.
3. Assumes 3,000 tons per day output shipped to tidewater for export.
4. Assumes a combination of gravel, wood chips, additional fuel imports to meet growing demand, and other miscellaneous bulk commodities.

Direct fiscal return to State of Alaska

Because much of the savings from reduced rail transportation costs would flow through to increased taxable income, we estimate that direct annual fiscal returns to the State of Alaska

would have a present value of between $107 million (tied to rail cost savings) and $4.4 billion (including all mineral revenues from new mines). These break down as follows:

- Between $1 million and $3 million per year in additional corporate income taxes, with a present value of $32.7 million
- About $7 million per year in additional oil and gas revenue due to lower pipeline construction cost reflected in lower pipeline tariffs, with a present value of $33 million.
- A direct saving to the state of $41.2 million from avoided railroad and road upgrades[4]
- Assuming new mineral development and attributing it to the rail extension, $42 million per year increasing to $602 million per year from mining license taxes, royalties, and corporate income taxes. The present value of all these mineral revenues is $4.3 billion.

Economic development from new mineral activity

According to a detailed analysis by Paul Metz (Metz, 2007a), the rail extension would provide a significant stimulus to new mineral developments within a 120-mile wide corridor surrounding the existing railroad. Metz projects likely minerals development with a cumulative gross metal value of $173 billion. This value would generate taxes and royalties to the State of Alaska starting at $42 million per year (in 2017) and increasing to $543 million per year in 2027 and to $602 million per year beginning in 2037. In addition these developments could generate up to $3 billion per year in additional economic activity in Railbelt communities.

Conclusion

This project provides a benefit/cost ratio ranging from 1.9 (based only on transportation cost savings) up to about 40 (assuming that additional mineral activity is attributable to the rail extension). In addition, there will be community benefits -- jobs and income -- that we have not explicitly considered here. These are extraordinarily good returns on an infrastructure investment in Alaska.[5]

[4] We have assumed that the state would pay half of these upgrades and pipeline builders would pay half.
[5] By comparison, the Bradley Lake hydroelectric project now appears to have a B/C ratio of less than 1.5, even when based on high and rising natural gas prices. Most public projects in Alaska have not been subjected to formal cost-benefit analysis.

Benefits of the Southcentral Rail Extension to the Municipality of Anchorage

prepared for:

Matanuska – Susitna Borough
Economic Development Department

prepared by:

Steve Colt and Nick Szymoniak

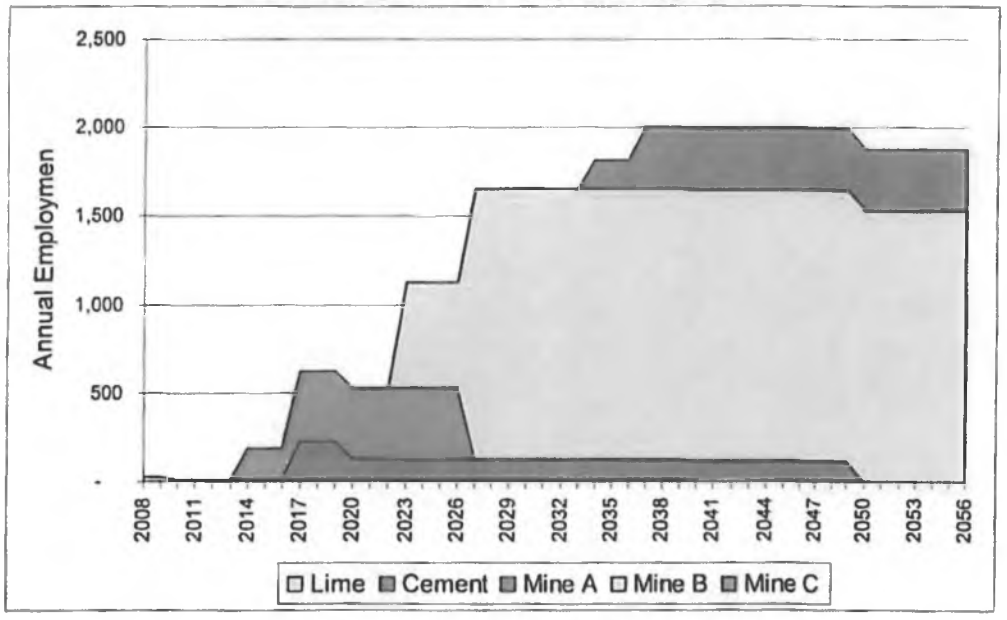
907-786-1753

Benefits of the Southcentral Rail Extension to the Municipality of Anchorage



Summary of Findings

The proposed Southcentral rail extension to Port MacKenzie is likely to generate significant economic benefits for the residents of Anchorage. These benefits are due to a combination of reduced transport costs, the ability to ship bulk commodities over shorter distances, and economical access to industrial land. We considered and analyzed these benefits under a set of assumptions about job creation, transportation costs, land use considerations and future mineral development. Our major findings include the following:

Jobs

- **Port MacKenzie.** The rail extension will generate new jobs for Anchorage workers by stimulating industrial development and jobs at Port MacKenzie. Under a base case scenario with a rail extension and ferry service, Anchorage residents would gain 730 average annual jobs and $50 million of annual income during the period of 2013 -2017 from industrial development at Port MacKenzie. Hundreds more jobs would be gained after 2017. The rail extension will play an important role in this process. For example, it will allow coal exports through the port as early as 2013, generating more than 100 jobs.
- **New Mines.** Major new mines shipping concentrate via the rail extension would generate thousands of new jobs, and a significant fraction of these jobs would be held by Anchorage residents. Our detailed analysis of the potential employment from five specific mining projects indicates that more than 2,000 average annual jobs would be created in Anchorage or held by Anchorage residents once the mines are fully developed. Most of these jobs would be in mining and in professional sectors that pay good wages. Also, during initial mine development, many of the jobs would be in construction and fabrication.

Projected average annual employment of Anchorage residents due to new mining activity and multiplier effects, by mining project

- **Rail Construction.** The construction of the rail extension would generate up to 3,000 total jobs, and ongoing operations would generate up to 150 total jobs. It is likely that many of these jobs would be held by Anchorage residents.
- **State Revenues.** State mining taxes generated from new mines will boost the Anchorage economy. Estimated tax revenues and royalties would grow steadily, reaching $267 million per year by 2040. A large share of these potential tax revenues, roughly proportional to Anchorage's share of state population, would likely flow into the Anchorage economy, sustaining hundreds of direct jobs and reducing property tax burdens that would otherwise stifle private sector job creation.

Regional Competitiveness

- **New Economic Opportunities.** Port MacKenzie and the rail extension, operating together, are a significant new strategic asset for the entire regional economy. This infrastructure will create expanded opportunities for mineral, timber, and energy resource development, and the export of bulk commodities by rail through Port MacKenzie constitutes a new economic sector for the Southcentral regional economy. As the region's commercial and financial hub, Anchorage will gain jobs and income from all of this activity.
- **More Efficient Land Use.** The rail extension allows for higher-valued use of land in Anchorage. The rail extension will allow for railroad-dependent industrial development to take place at Port MacKenzie. This development would allow limited existing industrial-zoned land throughout Anchorage to be used for other, higher-value uses such as commercial development, while still meeting the regional economy's need for industrial land.

Fiscal Benefits

- **New State Revenues.** As noted above, revenues to the State of Alaska from new resource development would grow steadily, reaching $267 million per year by 2040. These revenues will reduce the need for other taxes, stimulating capital formation and job creation by the private sector.
- **Higher Local Tax Base.** Local governments will also see higher tax revenues from a higher-valued property tax base. The stimulated new development will increase the tax base and reduce the need to raise taxes on homeowners or existing businesses.

Other Benefits

- **Port of Anchorage.** The industrial and mineral development stimulated by the rail extension to Port MacKenzie will likely increase both the volume and the value of cargo going through the Port of Anchorage. For example, if large mines are developed, the goods and equipment used by the mines for development and operations will flow through Anchorage.
- **Rail Shipping Costs.** The unit cost of shipping on the Alaska Railroad is likely to fall as fixed costs of roadbed maintenance and administration are spread over a higher volume of shipments.

Final Report

Economic Analysis of Rail Link

Port MacKenzie to Willow, Alaska

By

Paul A. Metz, Ph.D., DIC, P.G.
Consulting Economic and Mining Geologist
P.O. Box 73795
Fairbanks, Alaska 99707

Submitted to:

Matanuska-Susitna Borough

February 2007

Executive Summary

A railroad link of 43 miles from Willow to Port MacKenzie will result in rail freight savings for bulk commodities and heavy freight transported to and from the Rail Belt area of interior Alaska. Tidewater access at Port MacKenzie from interior Alaska is 26.4, 89.1, and 140.7 miles shorter than the Ports of Anchorage, Whittier, and Seward respectively. Bulk freight from metallic and industrial mineral development, coal and petrochemical production, and forest products are estimated. These bulk freight quantities are then multiplied times a per mile cost for the number of miles saved by using Port MacKenzie versus other ports. This results in an annual monetary savings. The net present value of these savings is calculated at a public tax-free bond interest rate of 4.5%, for payback periods of 25 and 30 years.

Metallic mineral and other natural resource freight loads are estimated from a probabilistic analysis of the known mineral and resource occurrences within a 120-mile wide transportation corridor in three separate segments. The primary economic analysis is on the existing Alaska Railroad from Port MacKenzie to the northeastern end of the Alaska Railroad at Eielson AFB. A secondary analysis is conducted on a planned railroad extension from Eielson AFB to Delta Junction and tertiary analysis is conducted on a potential railroad extension from Delta Junction to the Canadian Border.

The primary analysis indicates that the net present value of rail freight savings from the proposed rail link relative to the Ports of Whittier and Seward greatly exceeds the capital cost of the proposed project. The net present value of the rail freight savings for Port MacKenzie relative to the Port of Anchorage over a 30 year period equals 92% of the capital cost of the project.

The economic benefits to the State of Alaska from the development of the metallic mineral occurrences in the rail corridor from Port MacKenzie to Eielson, AFB, assisted by the line extension, greatly exceed the capital cost of the project. These benefits are estimated to range between $61 and $773 million per year for a 100 year time period. Industrial minerals, coal, petrochemicals, and forest products will add significantly to the economic benefits of metallic mineral production.

The citizenry of the state will be the prime beneficiaries of the proposed rail extension addition to the infrastructure of the state that will reduce bulk transportation costs, increase economic development, decrease transportation congestion in the Anchorage area, and decrease the adverse impact of natural disasters on the surface transportation systems in central and south-central Alaska.

Final Report

Economic Analysis of Rail Link

Port MacKenzie to Willow, Alaska

Phase II - Possible Rail Extension Users Analysis

By

Paul A. Metz, Ph.D., DIC, P.G,
Consulting Economic and Mining Geologist
P.O. Box 73795
Fairbanks, Alaska 99707

Submitted to:

Matanuska-Susitna Borough

November 2007

Executive Summary

This economic analysis examines possible business activities that will be induced or enhanced in Southcentral and Interior Alaska by the rail extension from Port MacKenzie to the Alaska Railroad mainline. The possible business activities include: coal exports, mineral aggregate (sand and gravel) exports, lime and portland cement exports, forest product exports, refined petroleum product exports and imports, the Alaska Natural Gas Pipeline logistics and metallic mineral development. This is also a preliminary investigation of the economic benefits provided by these uses and whether these benefits justify the capital investment needed to build the rail extension. The analysis does not include the coal tonnage that would likely be transported on the rail extension, if the Agrium Coal Gasification Project moves forward.

Background: Metallic and non-metallic mineral and solid fuel (coal) resource development is a major source of freight for most railroads worldwide. These bulk commodities must be transported to worldwide markets by the most economical method available. Thus, railroads either transport the materials from mines and quarries directly to manufacturing and population centers or to ocean vessels via the nearest port facilities. Alaska is no exception.

Alaska has abundant mineral and energy resources that can supply both North American and worldwide markets. In the absence of a railroad connection to the contiguous states and major manufacturing in Alaska, these resources must be exported through deepwater port facilities. Connecting the mines to the ports via railroads greatly reduces transportation costs. This increases the competitive advantage of Alaskan resources, and results in maximum returns to the State in the form of jobs, corporate income taxes, and mineral rents and royalties. Estimating the mineral and energy resource potential of Alaska is a necessary step in the planning, design, financing, and construction of infrastructure.

Part I: Part I examines possible exports and imports of products, other than metallic minerals, over the rail extension during the first ten years of rail extension operation. The analysis provides information on expected rail extension use during the first five years (2012-2017) and the second five years (2017-2022) of operation. During the first five years, 1.4 million tons of freight is expected to be annually transported over the rail extension. For the second five year period, 2.4 to 3.4 million tons are expected to be annually transported. *The five year and ten year freight tonnage projections in this investigation may be very conservative. These expected annual tonnages are over and above the 3.3 million tons of coal annually required for the Agrium Coal Gasification Project at Nikiski.*

Part II: Part II focuses on new metallic mineral developments that will be enabled by the proposed 25-40 mile rail extension. The Part II analysis examines the feasibility of developing one small, one large, and one medium metallic mineral deposit inland from the port over the first, second, and third decades of rail extension operation. In addition, the analysis includes a forecast of the tonnage of rail freight for each mine over the initial

mine life; the mining license taxes, royalties, and corporate income taxes expected to accrue to the State of Alaska; and the expected economic benefits that will accrue to the communities along the rail belt from the mine developments.

Metallic mineral deposits and coal in the railbelt corridor have the greatest potential for generating additional rail freight revenues and additional revenues to the State of Alaska as well as additional economic benefits to the railbelt communities. Other potential sources of rail freight loads are relatively small or short term. During the first thirty years of rail extension operation, it is expected that the annual metallic mineral development tonnages transported will be at least 365,000 tonnes in the first decade, 1.7 million tonnes in the second decade and 1.9 million tonnes during the third decade.

The expected annual rail freight revenues from metallic mineral production for the first, second, and third decades of the rail extension operation are expected to increase by $7.8, $33, and $45.1 million respectively The expected revenue streams to the State of Alaska over a sixty year period in the form of corporate income taxes, mining license taxes, and mining royalties from metallic minerals alone are estimated at $18.1 billion or $300 million per year. The economic benefits that will accrue to the railbelt communities from metallic mining over the same period are estimated at $185 billion or $3 billion per year. These amounts far exceed the estimated $225 - $330 million capital cost of providing the rail connection between Port MacKenzie and the rest of the Alaska Railroad system.

Conclusion: The combined Part I and Part II results of estimated metallic and non-metallic annual freight tonnages over the first thirty years of rail extension operation are conservatively expected to range up to 3.7 million tonnes in the first decade, 4.1 million tonnes in the second decade and 4.3 million tonnes in the third decade. Most of the origin or destination of the freight would be the interior of Alaska thus the average haul distances are expected to be approximately 350 miles. At an average freight rate of $0.06 per ton mile, four million tonnes of freight per year along this route would generate annual gross revenues of $84 million.

Cost Savings Related to Use of the Port MacKenzie Rail Extension to Support Alaska Gas Pipeline Construction

Revised Executive Summary Including Additional Scenarios from Appendices

This report was commissioned by the Matanuska-Susitna Borough (MSB) in January 2008. The report's purpose is to examine the transportation savings and other economic advantages of using Port MacKenzie and a proposed rail extension to provide logistical support for construction of a natural gas pipeline connecting Alaska North Slope (ANS) gas reserves to markets in Canada and the Lower 48, as well as a natural gas spur line that will serve Southcentral Alaska markets. This revised executive summary includes a discussion of scenarios included in the appendices showing estimated transportation costs from Anchorage and Whittier.

Transporting gas pipeline construction materials by rail from Port MacKenzie appears to generate significant savings when compared to the costs and foregone savings associated with the transportation of the same materials by rail from Seward, Whittier or Anchorage, or by truck from Valdez. This report estimates that $122 million in cost savings and foregone spending (compared to the use of Port of Seward) could be realized with the full development and use of Port MacKenzie and a rail extension linking the port with the ARRC mainline. Savings are significantly higher—$165 to 176 million—when compared to using the Port of Valdez and using trucks as the primary mode of land transportation. Savings are lower—$107 to $111 million—when compared to using the Port of Anchorage with rail or the Port of Whittier with rail.

Table ES–1 provides a summary of the transportation costs associated with moving pipe, supplies, equipment and other materials for the construction of the ANS main gas pipeline and a gas spur line from Fairbanks to Wasilla. The results are shown for various scenarios developed in this report and in the appendices.[1]

Land Transportation Costs

The summary table shows estimated transportation costs using rail from Seward, using rail from Port MacKenzie, using trucks from Valdez, and using rail from Anchorage and Whittier. The estimated costs of moving material by rail from Port MacKenzie are $23 to $30 million less than the costs of moving the material from the Port in Seward. Moreover, the estimated costs of moving the material by truck from Valdez are significantly higher than any of the rail-based scenarios. The Port MacKenzie transportation costs are up to $58 million less than the Valdez truck option. The rail-based costs from Port MacKenzie are from $5 to $11 million less than estimated rail-based costs from Anchorage and $14 to $20 million less than estimated rail-based costs from Whittier.

Marine Transportation Costs

The summary table also provides comparisons of marine transportation costs to each of the ports including the port fees. In general, the differences in marine transportation costs among ports (up to $5 million), are small relative to the differences in land-based transportation costs. Due to its higher tariff cost, it is estimated that marine costs to Anchorage are highest ($19 million) among the ports considered, while marine costs to Whittier are lowest ($14 million). Marine costs to both Seward and Port MacKenzie are both estimated at $16 million, while marine costs to Valdez are estimated at $15 million.

[1] Land transportation estimates in the main body of the report focus on costs from Port MacKenzie, Seward and Valdez. Appendix B provides additional detail of land-based transportation costs and includes estimates of moving material by rail from Anchorage and from Whittier.

Infrastructure Improvement Costs

The summary table also addresses infrastructure improvement costs related to pipe and pipeline material transport including road and bridge improvements, at-grade rail crossings, and module transport-related road improvements.

Assuming that the pipe and other gas pipeline materials will be transported by truck from Valdez, the road and bridge improvements needed to support gas pipeline construction-related transportation from Delta to Valdez will be no less than $90 million. If the pipe preparation plant is in Valdez, the Glennallen to Tok Highway segment could be used in addition to the Delta to Valdez highway segment. In that case, the road and bridge improvements needed to support gas pipeline construction will be no less than $100 million. The road improvements considered include bridges, passing lanes, turning lanes, safety pull-outs, weigh station upgrades, and other highway improvements. This would be considered a minimum level of investment with no significant pre-construction pavement and sub-base rehabilitation.

Under a second scenario, where you presume that the substandard road segments, with less than ideal geometric standards (lane width, shoulders, curvature and grade) as well as substandard pavement condition need to be brought up to a high standard, the pre-construction investment would rise significantly to the $225 million range with an additional $50 million needed for the Tok Highway section. These improvements do not include pipeline construction related "road wear and tear" repairs (Ottesen, 2008). These road improvement costs are assumed for the Valdez truck transportation options.

It is estimated that the cost of improvements to at-grade rail crossings in and around Wasilla is approximately $73 million (Brooks, 2008). This analysis assumes that this expense would be foregone given the construction of the rail extension to Port MacKenzie since pipeline materials would not go through Wasilla and a significant portion of future freight traffic would use the rail extension. To capture these foregone expenditures if the rail line to Port MacKenzie is built, the analysis shows the $73 million as a cost that would need to be incurred if any of the other ports are used for transporting pipeline materials.

Furthermore, Flour (2003) estimated that $20 million in highway improvements would be required to move modules by road from Kenai. If Port MacKenzie is used to construct some of the large modules and support structures that might otherwise be constructed on the Kenai Peninsula or in Anchorage, and assuming that these modules and structures can be transported by rail, then the need to spend $20 million on improvements to the Glenn and Parks Highway could be eliminated. The $20 million in costs are assumed to occur if Port MacKenzie is not used.

Table ES-1. Summary of Costs Related to the Transport of Pipeline Materials under Different Scenarios

Description	Scenario 1: Seward by Rail	Scenario 2: Port Mackenzie by Rail	Scenario 3: Valdez by Truck	Scenario 4: Valdez by Truck with Coating Plant	Scenario 5: Anchorage by Rail	Scenario 6: Whittier by Rail
Total Tons of Materials to Transport for ANS Gas Mainline (tons)	1,275,383	1,275,383	1,275,383	1,275,383	1,275,383	1,275,383

Differential from Adjusted Port Mackenzie Costs ($)	122,000,000	-	165,000,000	176,000,000	107,000,000	111,000,000

Source: Estimates were generated by Northern Economics.

Notes:

1. Details regarding these estimates can be found in Appendix B.
2. Costs are rounded to the nearest million—rounding errors account for apparent inconsistencies.
3. All estimates for land transport include rail or trucking costs to staging areas.
4. This adjusts Port MacKenzie rail costs by including $6 million in "difficult to quantify" savings due to congestion costs and higher per mile maintenance costs on the existing ARRC track between Houston and Seward. More details on these adjustments are found in the main report.
5. Otteson (2008) indicates that $90 million in road improvements would be required on the Richardson Highway between Valdez to Delta Junction, with an additional $10 million required if 80-ft double joint sections of pipe will be moved from Valdez.
6. Brooks (2008) estimates the costs to upgrade crossings at $73 million. This report assumes the crossing upgrades would not be required if the rail extension to Port MacKenzie is constructed.
7. Flour (2003) estimates that the $20 million in improvements would be required to move modules from Kenai. These costs could be foregone with a rail extension to Port MacKenzie.

Economic Effects of the Southcentral Rail Extension

HDR Alaska, Inc.

Executive Summary

The proposed plan to expand the transportation infrastructure in the Point MacKenzie area by creating a rail link between Port MacKenzie and the Alaska Railroad Corporation's (ARRC) mainline is expected to generate significant economic benefits to the region and the state. This study evaluates the potential economic effects of the construction and operations of the proposed Southcentral rail extension project and some of the anticipated development that may occur as a result of the rail extension. In particular, this study evaluates the direct, indirect, and induced economic effects of the following project components and associated development:

- Construction and operations of the rail extension
- Construction and operations of a new dock at Port MacKenzie
- Construction and operations of loading and unloading facilities from the rail terminal to the dock
- Expansion of coal production at the Usibelli Coal Mine

The economic benefits of the project were measured according to the direct, indirect, and induced jobs and industry output or sales that would be generated by the local spending for construction and operations of various facilities associated with the project. The direct effects estimates of local spending (or in-state spending) were generated using preliminary cost estimates of construction and operating costs for the various facilities. The indirect and induced economic effects (or the multiplier effects) within the state were estimated using an input-output model of the Alaska economy.

Table ES-1 and Table ES-2 summarize the direct and the multiplier effects of the proposed project and associated development.

Table ES-1. Estimated Direct, Indirect, and Induced Industry Output/Sales Associated with the Proposed Southcentral Rail Extension and Associated Development (in million $)

Facility	Direct Local Spending	Additional Business Sales	Total
Rail Extension			
Construction	$193	$164	$357
Operations (annual)	$1.5 - $2	$1.25 - $1.67	$2.75 - $3.67
Uplands Development			
Construction	$8	$6	$14
Operations (annual)	$12	$9.80	$21.80
Port MacKenzie Dock			
Construction	$23 - $26	$19.5 - $22	$42.5 - $48
Operations (annual)	$0.99	$0.80	$1.00
Usibelli Coal Mine (expansion)			
Operations	$15 -$20	$11	$26 - $31
Total Construction			**$413.50 - $419.00**
Total Operations			**$51.55 - $57.47**

If the construction of the rail extension takes two years to complete, then the number of jobs in any year would depend on the expenditures made in each year. If the expenditures in both years of

construction were equal, then the number of total construction-related jobs would be about 1,600 to 1,700 full-time and part-time jobs.

Table ES-2. Estimated Direct, Indirect, and Induced Jobs Associated with the Proposed Southcentral Rail Extension and Associated Development

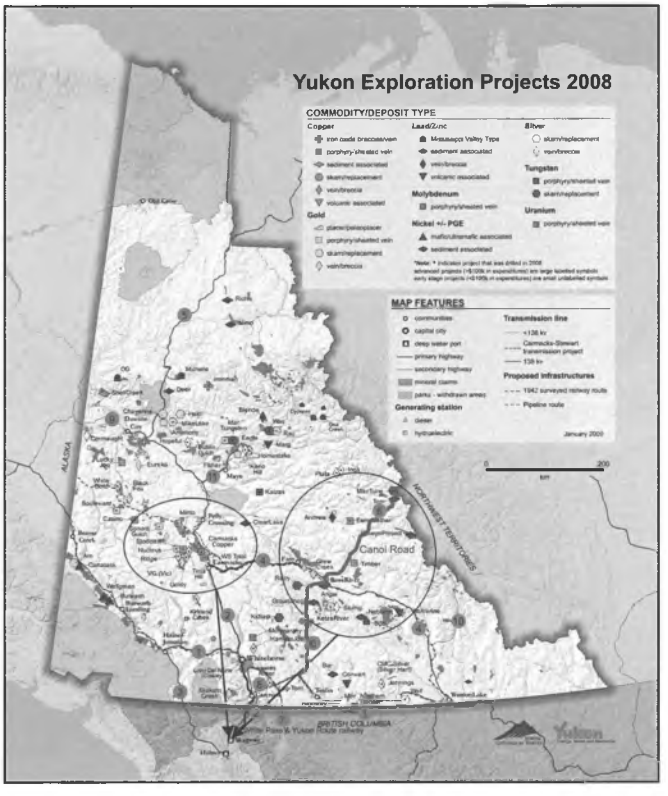
Facility	Direct	Indirect + Induced	Total
Rail Extension			
Construction	1,700 to 1,900	1,500	3, 200 to 3,400
Operations (annual)	10 to 20	10 to 15	20 to 35
Uplands Development			
Construction	80	45	125
Operations (annual)	25 to 35	80	105 to 115
Port MacKenzie Dock			
Construction	230 to 260	145 to 165	375 to 425
Operations (annual)	10	<10	< 20
Usibelli Coal Mine (expansion)			
Operations	60 to 70	115	175 to 185
Total Construction			**3,600 to 3,950**
Total Operations			**320 to 355**

2/23/11 OVERVIEW: STATEWIDE PORT AND HARBOR RROJECTS, SKAGWAY YUKON GATEWAY PROJECT

<TARGET><BILL></BILL><SUBJECT>2-23-11 OVERVIEW STATEWIDE PORT AND HARBOR RROJECTS, SKAGWAY YUKON GATEWAY PROJECT</SUBJECT><COMM>SFIN27</COMM></TARGET>

Skagway's Yukon Port Project

Photo courtesy of Paul Murray



A. Introduction

Over the past four years, the Government of the Yukon and then the Municipality of Skagway has completed a series of assessments of port developments that will best serve the interests of Skagway and its economic hinterland.

This document provides a summary of the previous assessments and concludes with a status update on port development plans.

B. Yukon Port Access Strategy

In June 2006, KPMG completed a study for Yukon Economic Development that examined the potential demand for port infrastructure to serve the Yukon, assessed the capacity and condition of existing port and related infrastructure and identified feasible alternatives for infrastructure improvement. KPMG examined a number of port options including Skagway, Haines, Stewart and other more distant ports.

The study concluded that Skagway was potentially the most viable option due to its existing role in the movement of freight and passengers bound to and from the Yukon, the availability of an existing terminal for handling bulk products, its history in moving mineral products, good road infrastructure connecting the port to the Yukon and proximity to potential mining developments in the Yukon (compared to Stewart and Haines).

The study included a recommended implementation plan for the short, medium and long term to ensure that the strategy could be realized. The key elements of the short term implementation plan were as follows:

1. Create an implementation organization
2. Review funding options
3. Develop communications strategy/program
4. Develop full project description
5. Engage regulatory agencies
6. Identify and undertake the appropriate environmental baseline studies
7. Clarify all issues related to land ownership/rights
8. Determine governance model

C. Skagway Port Development Plan

In September 2008, KPMG, CH2M Hill and Sandwell completed the Skagway Port Development Plan. The Plan included:

- A detailed examination of the condition of existing road, rail and port infrastructure in Skagway
- An assessment of potential demand for the port (passenger, re-supply, project and bulk commodity traffic)

- A competitive assessment of Skagway versus other ports and modes of transport for the delivery of goods to and from the Yukon
- An assessment of potential options for the redevelopment of the port
- An examination of port governance options
- A discussion of implementation considerations for the Plan

The proposed Port Development Plan focused on separation of the cruise and industrial port traffic to the greatest extent, with further development of ore handling facilities at the old ore dock (including reconstruction of the shiploading system and existing berth.

One of the key findings of the Plan was the identification and quantification of the **Skagway Advantage**. Simply stated, the **Skagway Advantage** arises from a significantly shorter distance from major mining areas to Skagway, compared to Stewart; hence significantly lower transportation costs. The **Skagway Advantage** is illustrated below.

THE SKAGWAY ADVANTAGE

Origin	Destination	Routing	One-Way Distance (km)	Cost Per Tonne
Carmacks	Skagway	Hwy 2	350	$33.95
	Stewart	Hwy 2/1/37	1,218	$134.14
	The Skagway Advantage		**868 km**	**$100.19**
Ross River	Skagway	Hwy 4/6/1/8/2	435	$42.20
		Hwy 4/6/1/2	495	$48.02
		Hwy 4/2	579	$56.16
	Stewart	Hwy 4/1/37	1,017	$112.00
	The Skagway Advantage		**438 – 532 km**	**$55.84 to $69.80**
Watson Lake	Skagway	Hwy 1/8/2	513	$49.76
		Hwy 1/2	573	$55.58
	Stewart	Hwy 37	648	$71.37
	The Skagway Advantage		**75 – 135 km**	**$15.79 to $21.61**

D. TIGER II Grant Application

In September 2010, the Municipality of Skagway submitted an application for a Transportation Investment Generating Economic Recovery (TIGER) grant to the US Department of Transportation. The purpose of the grant application, the purpose of the application is to find partial funding for Skagway's Yukon Gateway Project (illustrated and described on the following page). The Municipality asked for a grant of up to $11.5 million and was not successful. Consequently the Municipality engaged in discussions with the State of Alaska. These latter efforts have borne fruit in the amount of $10.0 million being included in the State's budget fort he project. The municipality is taking steps to issue a $5 million bond and AIDEA is taking additional steps to finance $27 million of improvements to the Ore Facility.

The Gateway Project will encourage application of the most efficient modes of transportation by gathering freight at coastal seaports, providing barge service to Skagway and truck service northward to the Yukon from Skagway, as well as possible reactivation of rail service into Yukon.

Yukon Gateway Project – Conceptual Plan

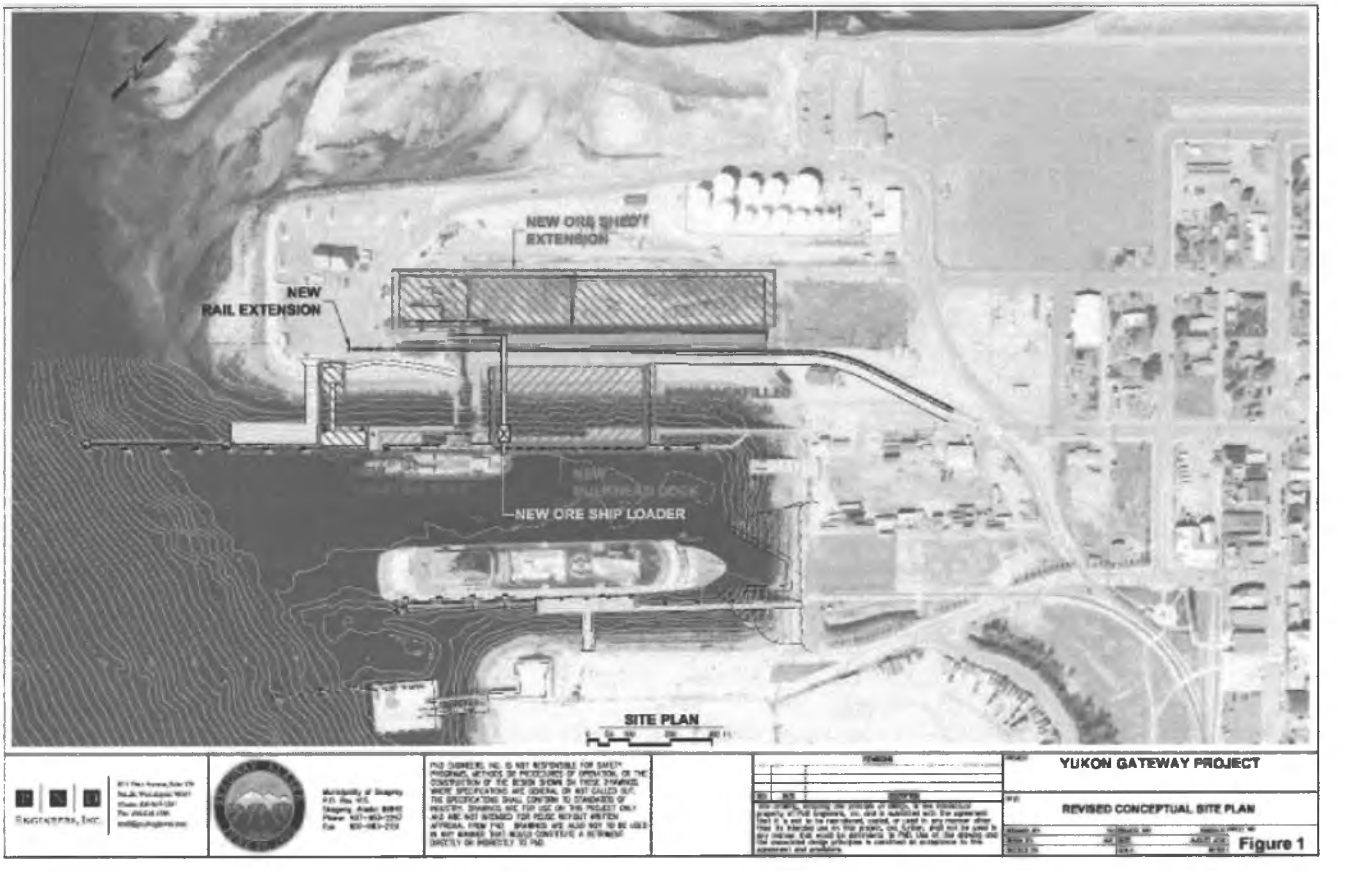


Figure 1

- **Phase I**: Completion of the ore storage facility, the rehabilitation to the feed conveyor, the feed reclamation conveyor, the upgrading of the dust control system and modification to the power supply. This will double capacity, increase efficiency and lower the operating costs at the port.
- **Phase II**: Expansion of port site by creation of uplands with a new bulkhead structure will increase ore dock capacity to accommodate ore vessels and cruise ships at the same time.
- **Phase III**: Replace existing ship ore loader with a new ship ore loader built within the new sheet pile bulkhead area. This will place the loader in a structurally more desirable location for long term support of this essential machine.

The principal benefits of the Gateway Project include a stimulus to economic development in the Yukon, creation of local jobs in Skagway, a reduction of greenhouse gases compared to the movement of goods via other ports and modes

E. Status Update

The following table provides an update on the implementation plan initially prepared during the Yukon Port Access Strategy:

	Implementation Plan Item	Status
1	Create an implementation organization	A new Port Department has been created within the Municipality of Skagway through a revision to the Skagway Municipal Code
2	Review funding options	The Municipality is currently engaged in discussions with other partners about project funding
3	Develop communications strategy/program	Outreach to other governments and agencies has resulted in significant support for the Yukon Gateway Project
4	Develop full project description	A respected engineering firm has been hired to complete all necessary project drawings and technical specification required for permits and selection of a contractor.
5	Engage regulatory agencies	Skagway has completed all environmental permit applications as required in order to obtain complete environmental review and approval. Skagway has been in contact with US Army Corp of Engineers, Alaska Department of Natural Resources, U.S. Coast Guard, Federal Aviation Administration and Alaska Department of Fish and Game.
6	Identify and undertake the appropriate environmental baseline studies	Will be undertaken as required by the terms of permits applied for with the various regulatory agencies.
7	Clarify all issues related to land ownership/rights	Ongoing, including active negotiations between tidelands owner (Municipality of Skagway) and the lessee (White Pass and Yukon Route).
8	Determine governance model	The governance model has been developed and is reflected in a revision to the Skagway Municipal Code

Skagway City Dock Improvements **FY2012 Request: $10,000,000**
Reference No: 51263

AP/AL: Appropriation
Category: Development
Location: Skagway
House District: Cordova/Southeast Islands (HD 5)
Estimated Project Dates: 07/01/2011 - 06/30/2016

Project Type: Renovation and Remodeling
Recipient: City of Skagway
Contact: JoEllen Hanrahan
Contact Phone: (907)465-2506

Brief Summary and Statement of Need:
This project provides improvements to the Port of Skagway to accommodate both the tourism industry and the expanding mining activity in the Yukon Territory. This project contributes to the Department mission of promoting healthy economies.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
AHCC Rcpts	$10,000,000						$10,000,000

Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
No prior funding history.

Project Description/Justification:
The improvements to the Port of Skagway will accommodate both the tourism industry and the expanding mining activity in the Yukon Territory. In partnership with the City of Skagway and the White Pass and Yukon Railroad, the Alaska Industrial Development and Export Authority is also improving the ore handling facility at the Port. Recent mining activity at large Canadian mines such as the Selwyn mine and increased shipments of ore through the Skagway port facilities will provide new jobs and economic growth.

As the Yukon's economy continues to expand, along with the number of operational mines, Yukon ore will increasingly contribute to a year round industry for the Port of Skagway. Yukon's mineral potential is also dependent on cost-effective access to adequate port facilities. Skagway is the most economical port for most Yukon mines, however, it cannot handle the demand coming from the Yukon much longer. Enhanced port infrastructure is of strategic interest to both Alaska and the Yukon. The movement of people and goods between the two regions has existed for over a century, benefiting both of these communities and economies.

The Municipality of Skagway, strategically partnering with the Alaska Industrial Development and Export Authority and the White Pass and Yukon Route has recently submitted a competitive application for federal transportation funding (TIGER II grant) outlining a $44.4 million port

development plan. Critical to the success of this endeavor is support from the state of Alaska. Specifically, this request is for construction of an intermodal cell dock at the Ore Terminal. This request forms the cornership component within the Ore Terminal Improvement Phase. The proposed dock facility will allow for multiple cruise vessels berthing at the Ore Terminal and allow for the larger class cruise vessels that are likely to arrive in Alaska over the next few years. Additional benefits of this investment will accrue to the movement of the ore product and increased lay down for shipment of large scale material such as pipeline or bulk goods.

Governor Sean Parnell
Alaska State Capitol Building
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell:

Re: Letter of Support – Application of Municipality Skagway– Gateway Project

We write in support of the application of the Municipality of Skagway Borough to the State of Alaska for $10 million in funding to enable the Municipality to proceed with its Gateway Project to expand and improve the facilities at the Port of Skagway. We understand that this application will be considered at a meeting of the Senate Finance Committee in Juneau that is scheduled for Wednesday, February 23, 2011.

Selwyn Chihong Mining Selwyn Project

Selwyn Chihong Mining Ltd. (SCML) is a Canadian joint venture company. It is beneficially owned in equal parts by Selwyn Resources Ltd., a base metals exploration and development company headquartered in Vancouver, B.C., and Yunnan Chihong Mining Ltd., a fully integrated zinc-lead mining and smelting company based in the Yunnan province of southern China. The mission of SCML is to bring the Selwyn Project in east-central Yukon, one of the largest undeveloped zinc-lead resources in the world, into production.

SCML is committed to doing so as rapidly as possible, in order to avail itself of a "window of opportunity" for zinc and lead concentrates that is expected to open within the next few years. Our goal is to complete permitting, financing and construction in order to commission the mining and milling facilities at the project by the end of 2013. SCML is working closely with the Yukon Government, Yukon and Northwest Territories First Nations, the Municipality of Skagway, the Alaska Industrial Development and Export Authority and others toward this objective. If we achieve it, commercial production, and therefore the shipment of zinc and lead concentrates, could commence as early as the first or second quarter of 2014.

Port of Skagway and Gateway Project

Given its geographic location, business environment and existing infrastructure, the Port of Skagway is viewed as a highly attractive option for the overseas shipment of concentrates from the Selwyn Project. With this in mind, SCML has engaged in extensive discussions with the

2/...

Municipality and AIDEA over the past year, to determine the potential of the Port of Skagway to serve as this essential link in the transportation chain for the mine.

Our discussions thus far have been encouraging. However, all three parties acknowledge that the existing facilities must be expanded and modernized in order to handle the anticipated volumes of concentrates, meet or exceed current environmental and operating standards, and ensure harmonious relationships among all port users. The Gateway Project represents an essential element of this overall initiative. Moreover, it will allow the expansion and upgrades of the AIDEA-owned facilities at the port, which are currently undergoing close consideration, to achieve their full potential.

Economic Benefits for Alaskans
The mining operation that provides the basis for this proposal is situated in Canada. Nonetheless, Alaskans will be well positioned to enjoy significant benefits through employment and business opportunities if Skagway is allowed to fulfill its natural destiny as the port of choice for the oceanic shipment of products generated from Yukon's significant mineral resources. However, it is essential for the underlying facilities to be constructed and operational at Skagway within a time-frame that will be in synchrony with the needs of the port's potential customers.

Recommendation
With these considerations in mind, we respectfully submit that the application of the Municipality in order to proceed with the Gateway Project deserves the full support and approval of the Alaska government within the context of the current State budget.

We have enclosed a brief summary of the Selwyn Project by way of additional information, and would be glad to respond to any questions or the need for further details.

Thank you for considering this submission.

SELWYN CHIHONG
MINING LTD.

SELWYN CHIHONG MINING LTD. INFORMATION SHEET

Corporate Overview

Selwyn Chihong Mining Ltd. ("SCML") is a Canadian Joint Venture Company based in Vancouver, B.C. It is equally owned by Selwyn Resources Ltd., an exploration and mining company whose principal initiative is the Selwyn Project, and Chihong Canada Mining Ltd., a wholly owned subsidiary of Yunnan Chihong Zinc and Germanium Co. Ltd. Based in Qujing, China. Yunnan Chihong is a fully integrated zinc-lead mining and smelting company.

SCML is advancing the Selwyn Project located in the Howard's Pass district along the Yukon-Northwest Territories boundary, the project is situated at a distance of approximately 200 air miles northeast of Whitehorse. In aggregate, Selwyn and SCML have spent more than $100 million in advancing exploration, permitting, engineering and feasibility work. This work has clearly established the Selwyn Project as one of the largest undeveloped zinc-lead deposits in the world.

Anticipated Project Timetable

Under the joint venture agreement, Yunnan Chihong will invest $100 million in the project. SCML has therefore initiated programs in order to complete a bankable feasibility study and obtain the licences, permits and other authorizations required to advance to the construction and production stage. SCML is currently approximately mid way in an $85 million program to undertake work that involve definition drilling, engineering, initial underground development and permitting.

These initiatives are intended to ensure that, by the fourth quarter of 2012, the company will have:

(a) obtained the permits, licences and other forms of authority required for construction and operations;
(b) completed a bankable feasibility study; and
(c) confirmed the terms and conditions for project financing,

all of which are required in order to make a production decision. In the interim, the bankable feasibility study, as presently envisaged, is targeted for completion early in the third quarter of 2011.

If the project proceeds on this basis, construction could commence as early as the third quarter 2012, with the goal of commissioning the mining and milling facilities by the end of 2013. Under this scenario, commercial production, and therefore the shipment of zinc and lead concentrates, could start in the first or second quarter of 2014.

Management is fully committed to advancing the project according to this schedule. Nonetheless, it should be recognized that the proposed timeline is aggressive, and that unexpected delays may therefore take place, particularly in relation to securing the required financing and with regard to satisfying governmental requirements for permitting and licenseing.

Key Parameters for Concentrate Shipment Facilities

SCML intends to adopt engineering, technical, environmental and commercial standards for all aspects of the Selwyn Project that will meet or exceed regulatory requirements, minimize potential liability, protect the interests of its shareholders, foster mutually rewarding relationships with its employees, suppliers and customers, and ensure that the Company is welcome in all of the communities in which it operates.

Volume and Frequency of Shipments

We presently estimate the annual rates of production for the Selwyn Project at 400,000 dry metric tonnes of zinc concentrate and 120,000 dry metric tonnes of lead concentrate. The combined daily rate for the two products is estimate at 1500 dry metric tonnes. Taking into account the cargo capacity of the ocean-going vessels that we anticipate will be required, up to 20 ships per year utilizing the Skagway port facilities, amounting to one ship every 20 days, on average.

Attention: Governor Parnell

Dear Governor Parnell:

RE: LETTER OF SUPPORT
APPLICATION OF MUNICIPALITY SKAGWAY – GATEWAY PROJECT

Western Copper Corporation is submitting this letter of support in connection with the application of the Municipality of Skagway Borough of the State of Alaska. We are in support of $10 Million funding to enable the Municipality to proceed with its Gateway Project to improve and expand the facilities at the Port of Skagway.

Western Copper Corporation is a Vancouver based exploration and development company directly engaged in advancing its mineral properties to production. Western Copper holds significant gold, copper and molybdenum resources and reserves in four Canadian properties. Two of these properties; Casino Project and the Carmacks Copper Project are located in the Yukon Territory. Western Copper's key asset is the Casino Project which is located approximately 380 kilometers north of Whitehorse and given its location, business environment and infrastructure, the Port of Skagway is a highly attractive option for shipping of concentrates this project. It is anticipated that the Casino project will ship up to 500,000 tonnes of copper concentrate and 16,000 tonnes of molybdenum concentrate per year though the Port of Skagway. Significant quantities of materials will be imported through the Port of Skagway to support the project development beginning as early as 2014.

Casino is an advanced stage project. A pre-feasibly study was completed in 2008, which is currently being updated, and Western Copper expects to issue a feasibility study and enter the permitting process in 2012. First shipment of concentrates through the port would be anticipated to commence in 2018-2019.

The Gateway Project is essential in order to handle the expected volumes not only from our projects, but also many other mining projects in and around the area and we feel that Alaska will benefit from the significant benefits of employment as well as the business opportunities that will follow if this project is allowed to move forward.

Thank you for considering this submission.

Yours sincerely,

Dale Corman
Chairman & CEO
Western Copper Corporation

Re: Letter of Support, Skagway Gateway Project

Dear Governor Parnell:

We write in support of the application of the Municipality of Skagway to the State of Alaska for $10 million in funding to support the Municipality's Gateway Project to expand and improve the facilities at the Port of Skagway.

Eagle Industrial Minerals is developing a project to reprocess the tailings at the old Whitehorse Copper Mine in Whitehorse, Yukon, to remove the magnetite in the tailings to produce iron ore. The iron ore will be shipped to steel companies in Japan and/or China. Given where we are currently in the Yukon permitting process, we expect to begin operating in mid-2012, and expect to produce approximately 300,000 tons of iron ore concentrate per year. Skagway is the closest deep-water port to Whitehorse, and we would like to ship through Skagway, although it is clear that the facilities there are currently quite limited and will need upgrading, especially if the Port wants to attract shipments of concentrates from other mining operations in future years.

Eagle's operations will create economic activity and jobs in both Yukon and Alaska, as will shipments from other mining operations in future years. The Gateway Project will help the Port of Skagway capture its share of that economic activity and those jobs, and we urge your support for the Gateway Project. Please do not hesitate to contact us if we can provide any additional information.

Thank you.

Dear Governor Parnell

RE: Application of Municipality Skagway – Gateway Project

Overland Resources Limited is an Australian listed exploration and development company with a geographic focus in Canada and particularly the Yukon Territory.

The Company's flag ship project is it's Yukon Base Metal Project. The Project hosts a mineral resource in excess of 11 million tonnes of high grade zinc. It is the Company's intention to develop this resource to produce both zinc and lead concentrates that would be shipped via the port of Skagway, Alaska, to a final destination for processing into zinc and lead metal.

The Company's current development plan and timeline would see approximately 60,000 tonnes of zinc concentrate and 20,000 tonnes of bagged lead concentrate per annum flowing through the port of Skagway from 2014- 2015. This would equate to approximately one additional ship per month through the port on a year round basis.

This addition to the current port utilisation will provide better capital utilisation of the facility and more importantly stable employment for the citizens of Skagway beyond the summer tourist season.

Overland Resources Limited is pleased to support the Municipality of Skagway Borough of the State of Alaska in its application for $10 million in funding to advance the Gateway Project. I would be pleased to address any queries you or the Alaskan Legislature may have in relation to Overland or its projects. I can be contacted on +1 604 632 9915.

Yours faithfully

Dear Governor Parnell:

Thank you for the opportunity to express the City of Whitehorse support for the proposed expansion of the Port of Skagway.

Expansion of the port facilities will be a major incentive for mining interests in the Yukon. Of course as mining activity grows in the Yukon, the City of Whitehorse benefits as well.

Thank you for the opportunity to express support for the proposed expansion project.

Sincerely,

Bev Buckway

RE: SUPPORT FOR FY 2012 CAPITAL BUDGET PRIORITY REQUEST: $10 MILLION CRUISESHIP DOCK IMPROVEMENTS AT THE PORT OF SKAGWAY

Dear Governor Parnell:

Enhanced port infrastructure at the Port of Skagway is of strategic interest to both Alaska and Yukon. The movement of people and goods, including ores, between the two regions has existed for over a century, benefiting both our communities and economies.

As Yukon's economy continues to expand, along with the number of operational mines, Yukon ore will increasingly contribute to a year round industry for the Port of Skagway. Yukon's mineral potential is also dependant on cost-effective access to adequate port facilities. Skagway is the most economical port for most Yukon mines; however, it cannot handle the demand coming from Yukon much longer.

Yukon has actively supported the Municipality of Skagway's submissions for U.S. stimulus money under the Transportation Investment Generating Economic Recovery Discretionary Grant to upgrade the ore handling facility and dock in Skagway. We see this as part of a larger, critical port development project. As such, Yukon fully supports and encourages Mayor Cochran's $10 million Capital Budget Priority Request for Cruiseship Dock Improvements at the Port of Skagway.

The long history, and similar economic interests in tourism and mining, has resulted in an integrated relationship of mutual benefit between our two regions. Expansion of the economic benefits associated with this relationship, will be greatly assisted by access to enhanced port infrastructure in Skagway.

Yukon looks forward to continuing to work with our Alaskan partners to help realize our shared visions.

Yours truly,

Dennis Fentie
Premier

III. Recent Assumption Changes

PERS / TRS
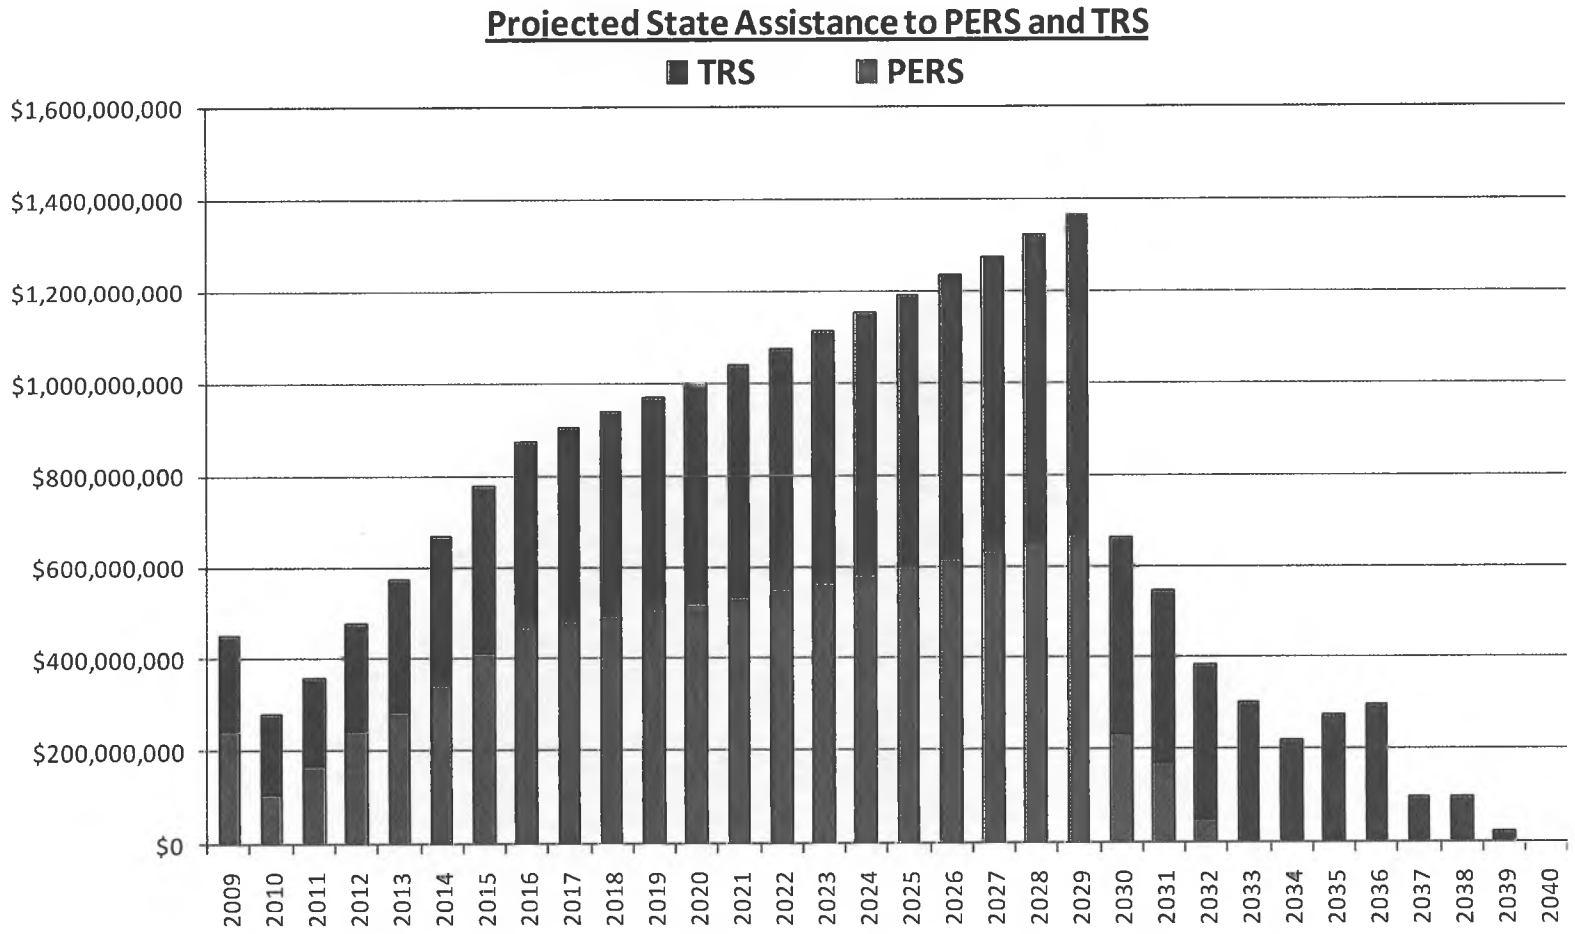
Recent Assumption Changes

- AS 37.10.220(a)(9) requires a review of actuarial assumptions every four years
- Buck Consultants performed the experience study
- Gabriel Roeder Smith & Co. reviewed and certified the Buck experience study
- Based on the Buck and GRS reports, the ARM Board modified some of its actuarial assumptions

PERS / TRS
Recent Assumption Changes – Investment Returns



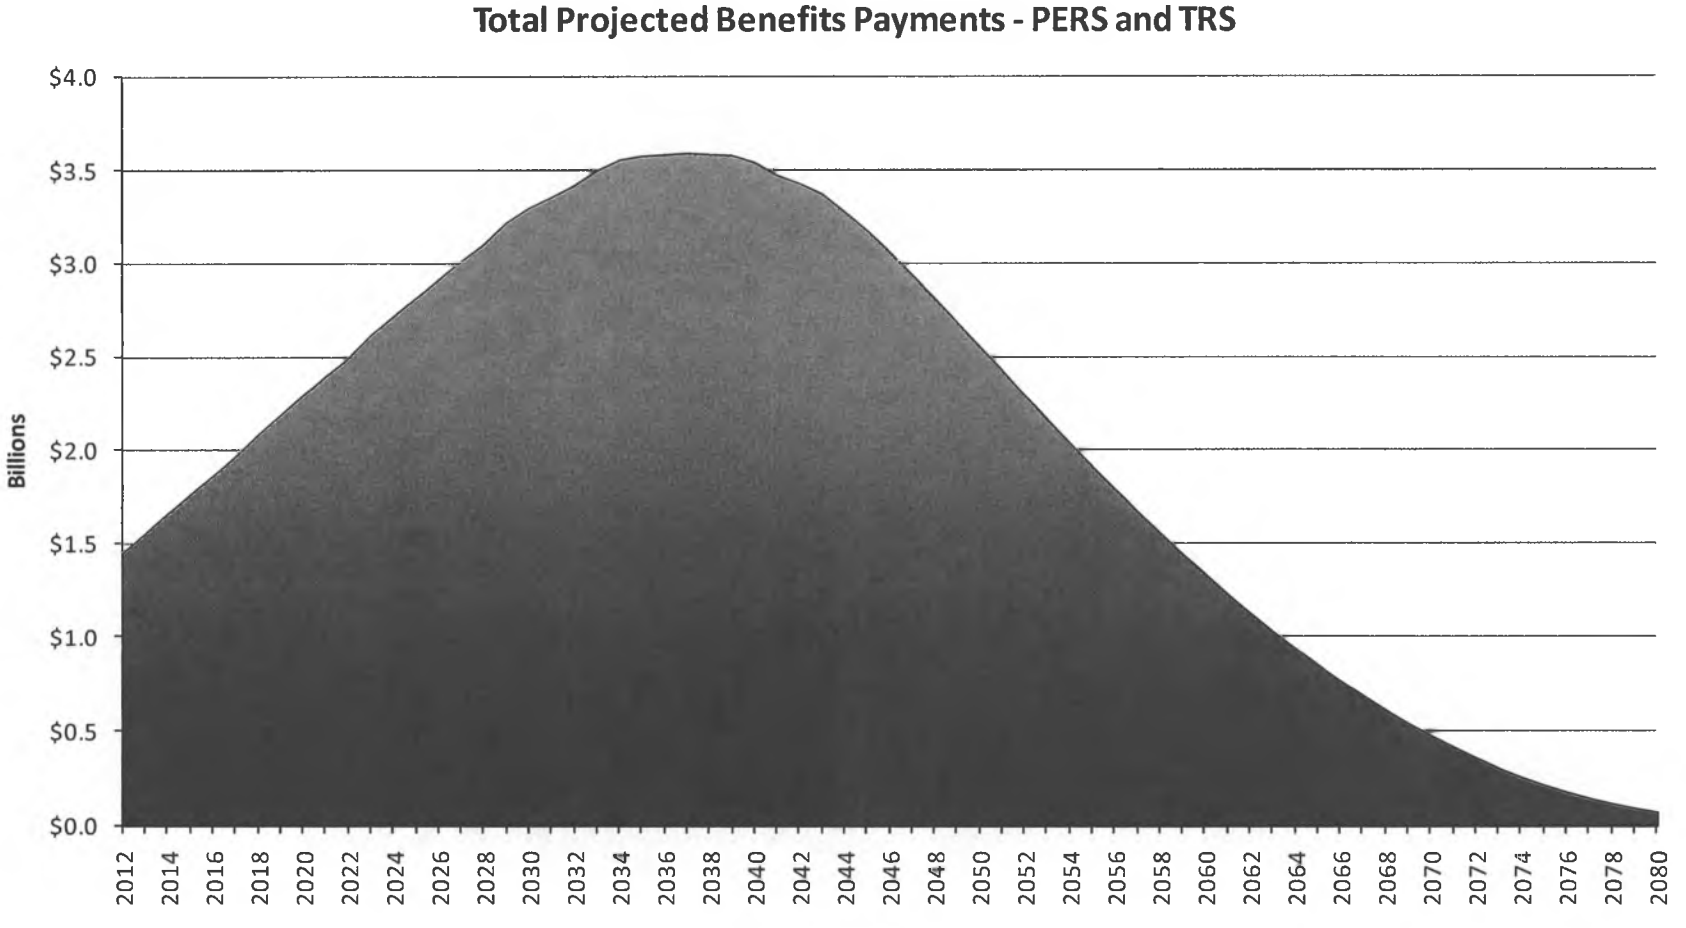
- Investment Return Assumption reduced from 8.25% to 8.00%
  - 4.88% real return assumption
  - 3.12% inflation assumption

PERS / TRS
Recent Assumption Changes – Contribution Rate Impact

	PERS	TRS
FY 2012 Employer Contribution Rate	30.76%	42.61%
Change in Demographics (net) (post termination mortality)	1.25%	5.55%
Change in Earnings Assumption	1.53%	1.77%
Total Change in Employer Contribution	2.78%	7.32%
FY2012 Employer Contribution Rate - Revised	33.54%	49.93%

IV. SB 125 State Assistance

PERS / TRS
SB125 State Assistance



Source: Buck Consultants

V. Future

PERS / TRS
Future

- ARM Board held work session in September 2010 at the request of legislative finance.
  - Discussed how to best address unfunded liability
  - Modeled different approaches and scenarios
  - Discussion and modeling is ongoing

PERS / TRS
Future

PERS / TRS
Future

Long term observations:

- Sharply declining petroleum revenues post-2030
- Other obligations (schools and Medicaid) will compound fiscal situation – paying now versus paying more later is in sharp tension
- Paying more now and reducing state savings accounts could reduce budgeting flexibility post-2030 at a time when state savings account may be necessary to "keep the lights on"
- Paying less now increases expenses in the long term
- More critical thinking and discussion about a global approach to structuring state finances and budgeting including a long term plan for PERS/TRS funding is needed

VI. Other Issues

PERS / TRS
Other Issues – Termination Studies

2/24/11 PRESENTATION BY DEPARTMENT OF CORRECTIONS: GOOSE CREEK CORRECTIONAL CENTER

<TARGET><BILL></BILL><SUBJECT>2-24-11 PRESENTATION BY DEPARTMENT OF CORRECTIONS GOOSE CREEK CORRECTIONAL CENTER</SUBJECT><COMM>SFIN27</COMM></TARGET>

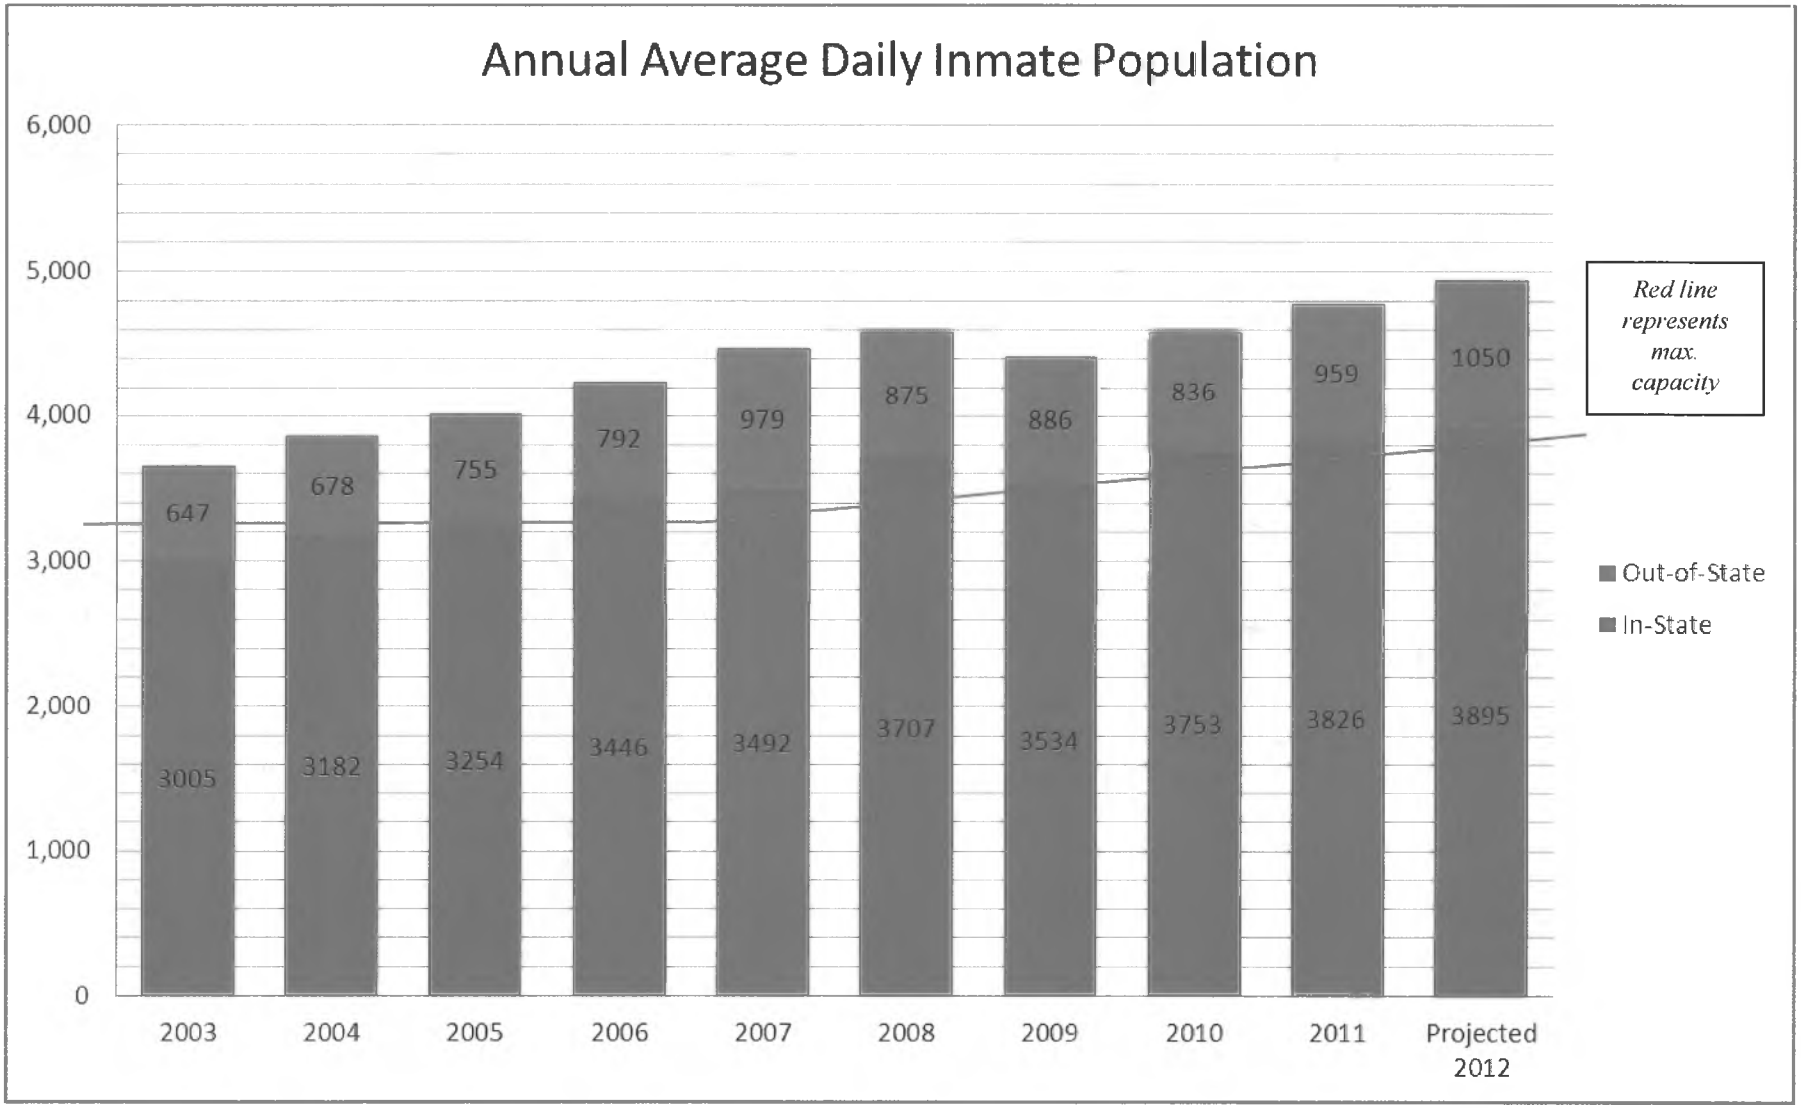
Department of Corrections

Presentation on Goose Creek Correctional Center

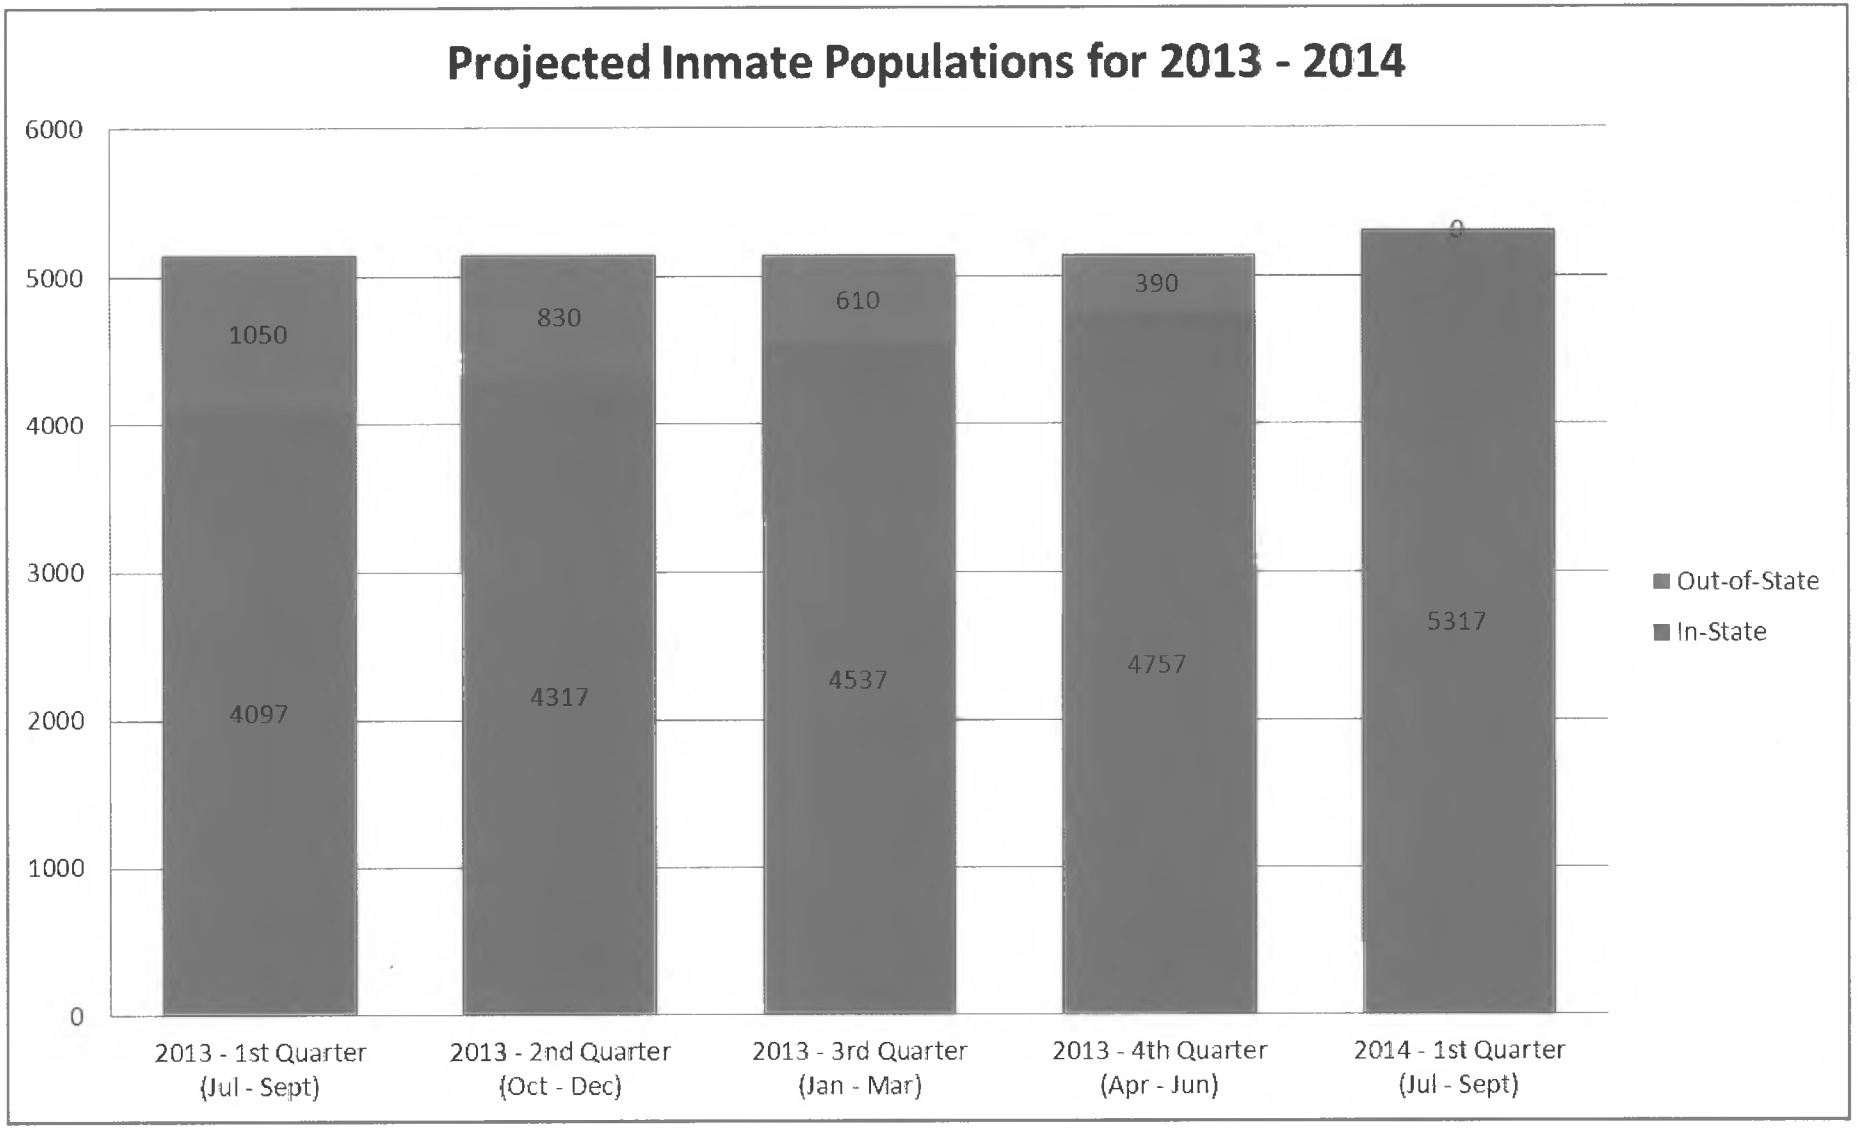
Senate Finance Committee

February 24, 2011

Goose Creek Correctional Center



Goose Creek at a Glance



- Consist of five buildings with 435,000 square feet on 150 acres.
- Maximum security-like perimeter.
- Provide 1,536 beds for medium security sentenced inmates.
  - *1,280 General Housing*
  - *128 Special Management Unit*
  - *56 Administrative Segregation*
  - *56 Punitive Segregation*
  - *16 Medical Segregation*
- Employ a staff of up to 345.
- Inmates participate in the everyday responsibilities and operations of the facility (Mail, kitchen, laundry, etc.).
- On-site medical clinic.

Opening of Goose Creek Correctional Center

- Ready for occupancy March, 2012 … the last four months of FY 2012.
- Open with approximately 30 selected prisoners, small staff contingent.
- Prisoners will move from mod-to-mod testing electronic systems, intercoms, doors, run kitchen, laundry.
- Full ramp-up will begin July 1, 2012 – September 30, 2013 (FY13 – FY14). Transfer of prisoners and staff recruitment and training paced over 15 months.
- Experienced department staff will have an opportunity to transfer to Goose Creek Correctional Center (GCCC) when it opens.
- Staff will be recruited and hired to backfill vacancies. Hiring will occur at institutions throughout the state.

History of Goose Creek Correctional Center

- February 2003 – SB 65 was introduced.
  - This bill was introduced as a financing mechanism to expand correctional facilities within the state.
  - Mandated local governments to bond for construction of a prison.
    - Fairbanks 80 bed expansion
    - Bethel 120 bed expansion
    - Seward 144 bed expansion
    - Unidentified Region, 1200-2251 bed facility (Mat-Su selected, Goose Creek site selected)
    - Kodiak Community Jail, 6 bed expansion
    - Dillingham Community Jail, 17 bed expansion
- May 2004 – SB 65 passed unanimously.
- July 2004 – Memorandum of Understanding between Mat-Su Borough, Alaska Housing Finance Corp. (AHFC), and Department of Corrections (DOC) with the agreement to develop the prison in the Mat-Su Borough.
- June 2006 – Site selection process began.
  - With a plan to construct a 2,250 bed facility.
  - 800,000 square feet all under one roof.
  - Capable of housing close/max prisoners.
  - Public hearing and open houses were held.
- June 2007 – MOA with AHFC expires, effectively removing AHFC from project involvement.
- June 2007 – The decision was made by DOC to downsize GCCC to 1,536 beds and change the classification level to medium security.
  - To build a 2,250 bed facility was projected to cost $490M.
  - It would mitigate DOC's ability to spread resources across the state.
  - The largest prisoner population is medium security.

History of Goose Creek Correctional Center Continued…

- February 2008 – Mat-Su Borough and DOC execute an MOU to plan and finance a prison.
- June 2008 - Mat-Su Borough issues design/build request for proposal (RFP) for the prison.
- August 2008 - Mat-Su Borough published request for qualification (RFQ) to design, build, operate & finance a water/waste water facility for GCCC.
- October 2008 – Deputy AG Tillery issues a legal opinion that CPI for Construction Inflation can be applied for services received during subsequent time period; this does not violate SB65 per bed formula.
- December 2008 – DOC requests $20 Million for FY10 Capital Budget.

History of Goose Creek Correctional Center Continued…

- December 2008 - State of Alaska Lease Revenue Bonds sold by Mat-Su Borough provided $240,073.2 to fund GCCC.
- May 2009 – Mat-Su Borough publishes a RFP for a contract to design, build, operate and finance the water/waste water facility to support GCCC.
- July 2009 – DOC secures $6M appropriation in FY10 Capital Budget for utilities and infrastructure.
- March 2010 – Valley Utility proposes to finance the water/waste water facility using tax exempt private activity bonds issued by the Mat-Su Borough.
- April 2010 – The State of Alaska Department of Revenue expresses concern about issuing state supported debt that exceeds the authority of SB65.
- April 2010 – DOC formulates a three pronged strategy to reduce the annual fees for the water/waste water facility. (detail of strategy on next slide)

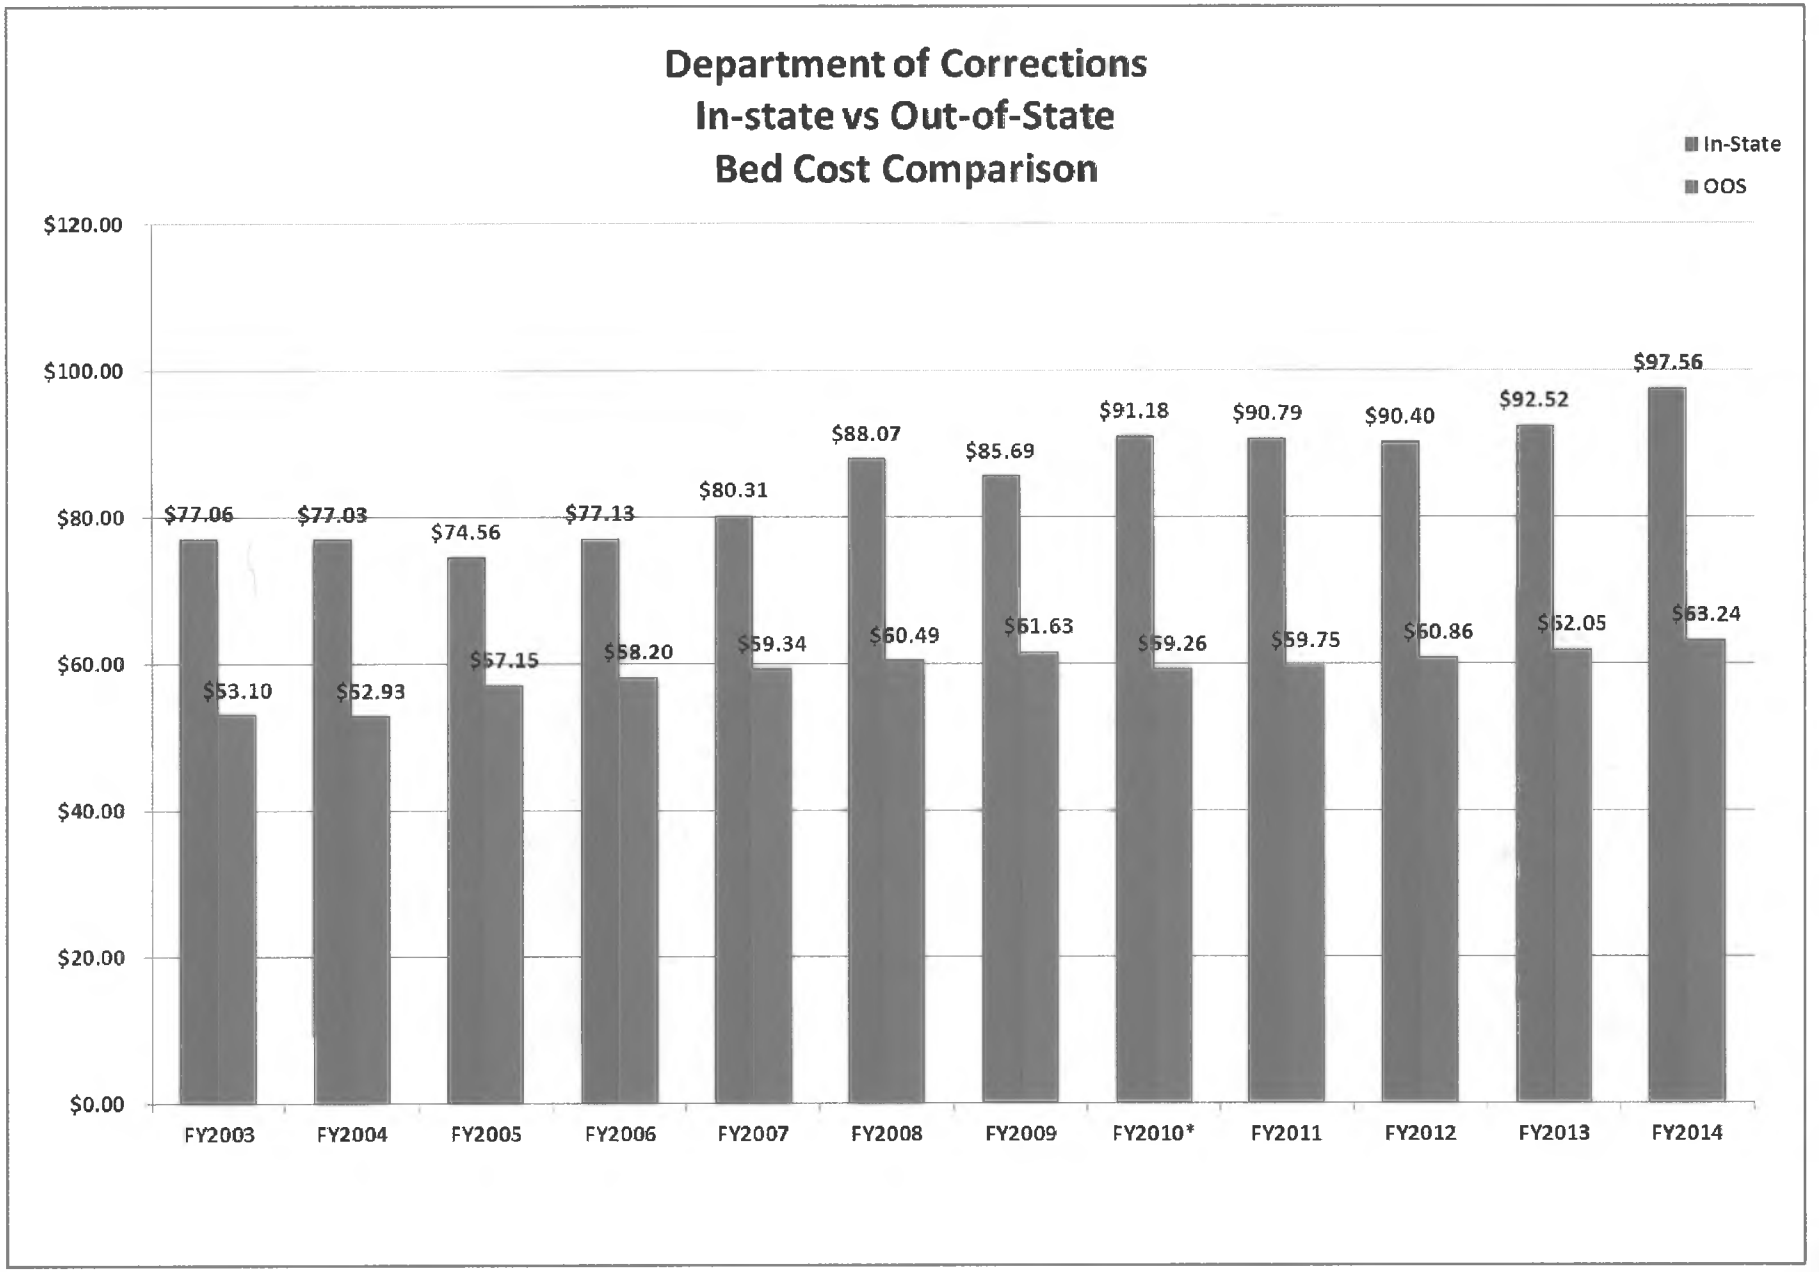
Three Pronged Strategy

1.) Value Engineering of the water and waste water facility. These efforts have resulted in cost reductions of approximately $2,000,000.

2.) Use of alternative funding sources. The DOC and Valley Utilities agreed to break the project into four segments. One of the segments was funded by DOC from existing appropriations; one segment was incorporated into the prison itself and funded from surplus proceeds from Mat-Su Borough's prison bonds; a third segment from Valley Utilities equity contributions; leaving only the wastewater treatment plant to be financed. The amount financed will be about ½ of the original estimate.

Segment	Pay Estimate Schedule Costs	Funding Source
Pipeline	$1,693,477.00	DOC Existing Approp. FY10 GF
Water	$5,109,130.28	GCCC Bonds
Well Field	$1,447,842.04	Valley Utilities Equity Contributions
Waste Water	$14,264,367.58	AIDEA

3.) Seek alternative funding sources to reduce cost of debt service. In addition to the private placement of the sale, several alternatives were evaluated including direct appropriation.



History of Goose Creek Correctional Center Continued…

- April 2010 – GCCC Project Committee authorized the use of up to $5,400,000 in GCCC contingency fund for construction of the water/waste water treatment plant.

- October 2010 – Valley Utilities requested permission to proceed with the private placement bond sale at a total interest cost between 8-9%. DOC rejected this proposal and began exploring financing alternatives through Department of Environmental Conservation and ultimately AIDEA in an effort to reduce the State's future debt services component of operating costs.

- December 2010 – AIDEA Board approved financing.

- December 2010 – AIDEA sold AA-rated bonds publically that achieved a total interest rate of 5.13%. The bonds are supported by a general obligation pledge of AIDEA rather than the State's credit. By acting expeditiously, AIDEA achieved an interest rate that is approximately 1 to 1.5% lower than it would be in the market of late-January 2011.

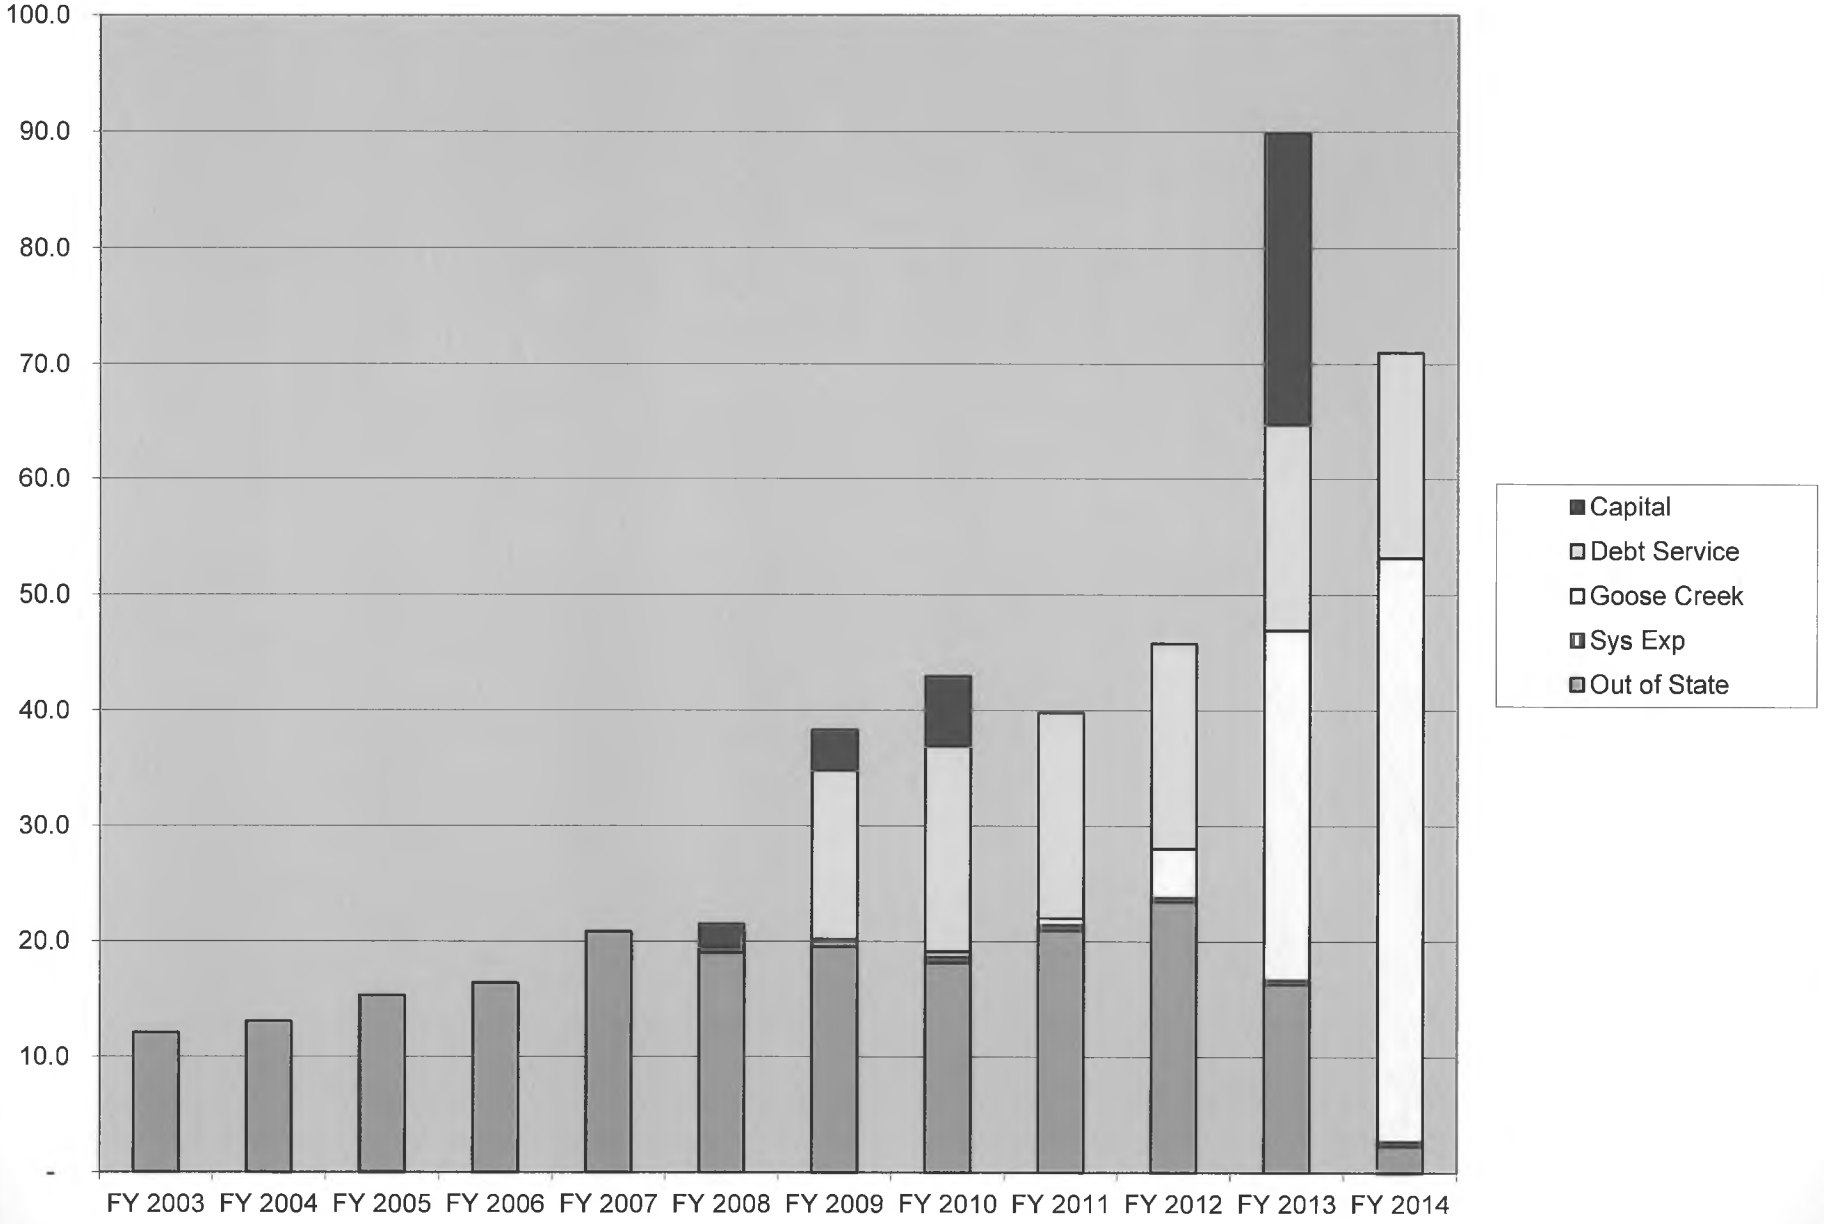
BONDING & FINANCES

Net Present Value – Qualification and Assumptions



- Rate of returns for FY 2011 – 2014 are assumed to be 3%.
- Assumes capital funding was used in full the year of appropriation.
- NPV – cost of out-of-state (OOS) is estimated in order to calculate; however, the DOC will revisit it's population management plan if OOS is used for FY 2012 – 2014. Assumes population for OOS will remain at 1,050 as it is uncertain what DOC will have to do in order to house inmates in excess of 1,050.
- State will continue all bond payments.
- Assumes no additional changes to OOS contract.
- This is subject to change in the event the population management plan changes or there are significant changes to the prison inmate population.
- For NPV calculation, assumes that if GCCC is not opened, OOS inmate population will continue to increase. DOC will revisit it's population management plan.

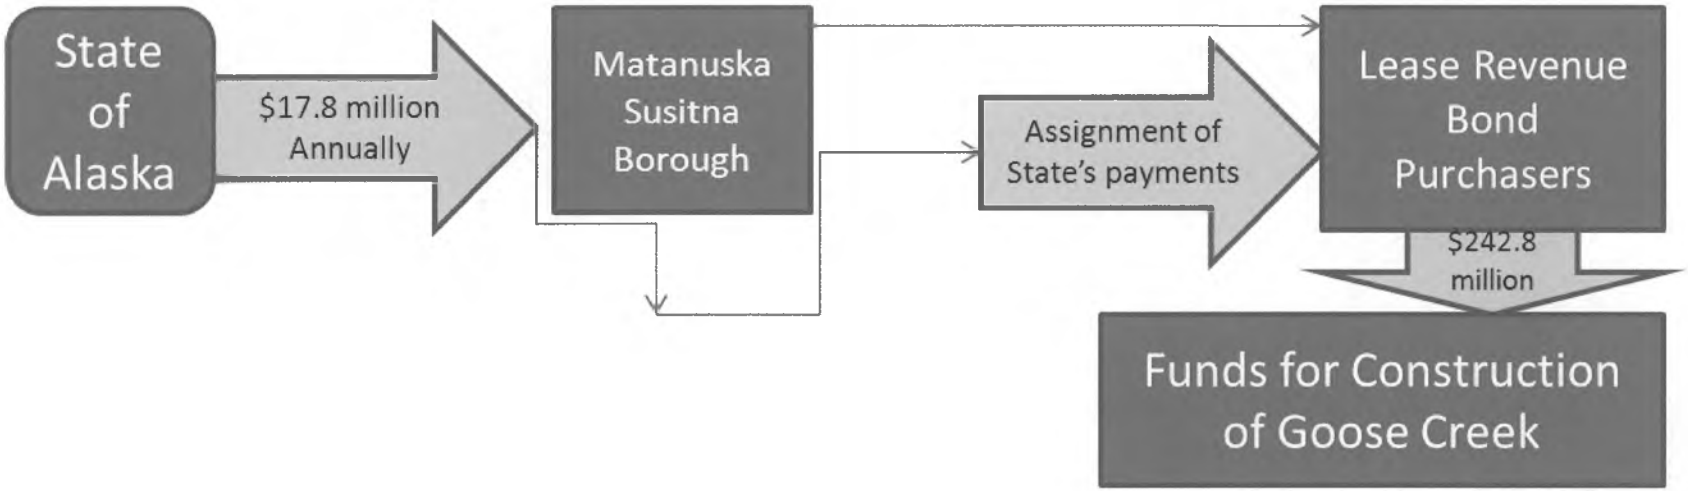
Dollars in Millions

Net Present Value (NPV)

Comparison of GCCC Phase-in vs. Continuation of Out-of-State

- NPV of GCCC phase-in = $317.0
- NPV of Out-of-State = $177.3



Timeframe comparison is FY03 – FY14.

2008 Matanuska-Susitna Borough Goose Creek Bonds Security and Legal Structure

- Lease purchase agreement and ground lease executed in which the State leases the facility from the Borough in exchange for annual lease payments and "additional rent" equal to debt service on the bonds plus operations and maintenance costs
  - State will own the facility once the bonds are retired and lease agreement terminated
  - The Land on which the facility is constructed is currently owned by the Borough
- Right to receive lease payments assigned to trustee who acts on behalf on bond purchasers
  - State pays appropriated funds directly to the trustee five days prior to each payment date
- Lease agreement represents an absolute net lease/triple net lease in which the State is responsible for all rent payments, additional rent and operations and maintenance
- Funds for repayment of bonds are appropriated annually by the Legislature - principal payments made to the State are structured semi-annually
- Agreements are subject to early termination due to an event of non-appropriation or event of default
  - Should the Legislature fail to appropriate funds, the State may vacate the facility and be released of its obligations to make all future payments. The trustee would pursue remedies under the lease agreement including attempting to re-let the property. The State's credit rating would be downgraded

Financing Structure

- Par amount of $244.3 million of Lease Revenue Bonds priced December 19, 2008
- Twenty-five year level debt service with a final maturity in FY 2033
  - Annual lease payment approximately $17.8 million per year
- All in TIC 5.955391%
- Cost of issuance $400,000, underwriting cost $1,172,847.70 ($4.80 per bond), cost of bond insurance $1,105,431.27, net original issue discount $1,533,570.95, resulting in project fund deposit of $240,073,150.08
- Yields 35 to 100 basis points over Municipal Market Data Aaa scale of 12/19/2010
- Standard 10-year call feature

GCCC Future Financials…

- Serviceable life of the prison is 50-75 years
- The Mat-Su Borough owns the asset and the land until the last payment is made by DOC on the 25 year bonds at which time the asset and land is transferred to DOC
- DOC will assume control of the asset when Construction is complete—between August and December of 2011

Thank you!

SB65

AN ACT

Relating to the qualifications of correctional officers, parole officers, and probation officers; authorizing the Department of Corrections to enter into lease-purchase agreements with municipalities for new or expanded public correctional facilities in the Fairbanks North Star Borough, the Matanuska-Susitna Borough, Bethel, the Municipality of Anchorage, and the City of Seward; relating to the development and financing of privately operated correctional facility space and services; authorizing the Department of Corrections to enter into a lease-purchase agreement with the City of Whittier for the confinement and care of prisoners in privately operated correctional facility space if the state cannot provide the same level of services required in state law or regulation for the same or less cost; giving notice of and approving, and authorizing the entry into and issuance of certificates of participation for, the upgrade, expansion, and replacement of certain jails in Dillingham and Kodiak; and providing

for an effective date.

---

* **Section 1.** AS 18.65.290(2) is amended to read:

(2) "correctional officer" means a person

(A) appointed by the commissioner of corrections whose primary duty under AS 33.30 is to provide custody, care, security, control, and discipline of persons charged or convicted of offenses against the state or held under authority of state law; **or**

(B) employed in a correctional facility in this state whose primary duty is to provide custody, care, security, control, and discipline of persons charged or convicted of offenses or held under authority of law;

* **Sec. 2.** AS 18.65.290(5) is amended to read:

(5) "parole officer" means a person appointed by the commissioner of corrections **or employed by a correctional facility in this state** to perform the duties of supervising the parole of prisoners under AS 33.16;

* **Sec. 3.** AS 18.65.290(7) is amended to read:

(7) "probation officer" means a person appointed by the commissioner of corrections **or employed by a correctional facility in this state** to perform the duties of a probation officer under AS 33.05.

* **Sec. 4.** AS 18.65.290 is amended by adding a new paragraph to read:

(8) "correctional facility" means a prison or jail owned, leased, or operated by the state that is designated by the commissioner of corrections for the custody, care, security, control, and discipline of prisoners.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

AUTHORIZATION TO LEASE CORRECTIONAL FACILITY SPACE WITH MUNICIPALITIES. (a) To relieve overcrowding of existing correctional facilities in the state and the extensive use of out-of-state correctional facilities, the Department of Corrections, not later than July 1, 2009, may enter into lease-purchase agreements with the following municipalities for new or expanded correctional facilities:

(1) Fairbanks North Star Borough - expansion of existing facility by up to 80 beds;

(2) Matanuska-Susitna Borough - construction of new facility with a minimum of 1,200 beds up to a maximum of 2,251 beds;

(3) Bethel - expansion of existing facility by up to 120 beds;

(4) Municipality of Anchorage - expansion of Anchorage Jail by up to 200 beds;

(5) City of Seward - expansion of existing Spring Creek Correctional Center by up to 144 beds.

(b) The authorizations given by (a) of this section are subject to the following conditions:

(1) the average capital cost for all beds may not exceed $135,000 a bed for (a)(1), (2), (4), and (5) of this section and $155,000 a bed for (a)(3) of this section, adjusted for inflation each year at a rate equal to the percentage increase in the Consumer Price Index for urban wage earners and clerical workers for Anchorage, Alaska, during the previous calendar year as determined by the Bureau of Labor Statistics, United States Department of Labor;

(2) if construction of a new facility is authorized, the municipality shall initially own the facility, and the state may enter into a long-term lease-purchase agreement not to exceed 25 years with the municipality to operate the facility and the state to own the facility at the end of the lease term; the annual lease payment for a new facility may not exceed $11,600 a bed;

(3) if expansion of an existing facility is authorized, the state shall enter into a joint ownership agreement with the municipality of the expanded facility, enter into a long-term lease-purchase agreement not to exceed 25 years of the municipality's interest in the facility, and operate the facility and own the facility at the end of the term of the agreement; payments under the lease-purchase agreement may not exceed $16,700 a bed for the Bethel facility and $14,600 a bed for the Fairbanks, Anchorage, and Seward facilities;

(4) the agreement to lease-purchase must contain terms providing that the commissioner of corrections may terminate for cause any contract for operating the facility;

(5) the commissioner may not enter into an agreement under (a) of this section

if any bonds issued for projects under (a) of this section are rated below investment grade.

(c) The authorization given by (a)(4) of this section is subject to the following condition: expansion of the facility may only occur if the expansion is funded by up to $30,000,000 in federal receipts.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

AUTHORIZATION TO CONTRACT FOR CORRECTIONAL FACILITY SPACE AND SERVICES WITH THIRD-PARTY CONTRACTOR FOR OPERATION. (a) To relieve overcrowding of existing correctional facilities in the state and the extensive use of out-of-state facilities, the Department of Corrections, not later than July 1, 2007, is authorized to enter into a lease-purchase agreement with the City of Whittier for the purpose of acquiring correctional facility space for a term not to exceed 25 years and services for contractual periods of not greater than five years for persons who are committed to the custody of the commissioner of corrections. Before entering into an initial contract for correctional space or services with the City of Whittier under this section, the Departments of Corrections and Administration shall first contract with an independent entity to conduct a feasibility study to determine whether the state can provide the same level of services required in state law or regulation for the same or less cost than a third-party operator. An agreement may be entered into under this section only if the feasibility study determines that the state cannot provide the same level of services required in state law or regulation for the same or less cost in a facility of the same capacity.

(b) The lease-purchase agreement entered into under this section is predicated on and must provide for an agreement between the City of Whittier and one or more private third-party contractors under which private, for profit or nonprofit third-party contractors construct and operate the facility by providing for custody, care, and discipline services for persons committed to the custody of the commissioner of corrections under authority of state law. The state shall own the facility at the end of the term of the lease-purchase agreement. In an agreement with the City of Whittier, the commissioner of corrections shall require that the city procure one or more private third-party operators through a competitive bid process. The City of Whittier shall follow state procurement procedures for procurement of land, design, construction, and operation of a facility. The commissioner of corrections shall approve the

facility design before entering into an agreement.

(c) The authorization given by (a) of this section is subject to the following conditions:

(1) the agreement must cover a minimum of 1,200 beds and a maximum of 2,251 prison beds, and, subject to (2) of this subsection, the payments by the Department of Corrections must be sufficient to cover all capital and operating costs, not including inmate transportation, based on per diem operating charges for a minimum 1,200 prison beds;

(2) the agreement must provide that the obligation of the Department of Corrections to make payments under the agreement is subject to annual appropriation of funds by the legislature;

(3) the agreement must contain terms providing that the commissioner of corrections may direct the City of Whittier, after notice and reasonable opportunity to cure, to terminate its contract with a private third-party contractor operating the facility in accordance with the provisions of (b) of this section, and to procure a replacement third-party contractor if the commissioner finds that the private third-party contractor has failed to provide or cause to be provided the degree of custody, care, and discipline required by terms of the agreement and that the private third-party contractor has been given notice and reasonable opportunity to cure as provided in the third-party contractor's agreement with the city;

(4) the commissioner's authority to enter into the agreement is subject to the condition that the contract between the City of Whittier and the operator requires the operator to provide culturally relevant reformation services to incarcerated Alaska Natives;

(5) the commissioner may not enter into the agreement if any bonds issued for the project are rated below investment grade.

(d) Nothing in this section is intended to prevent the City of Whittier from issuing bonds as permitted for municipalities under state law, including AS 29.47.390, to finance construction of the facility. The bonds may be secured by and payable from revenues of the facility, including those described in (c) of this section. Revenues of the facility are not revenues of the City of Whittier for purposes of AS 29.47.390.

*** Sec. 7.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NOTICE OF THE ISSUANCE OF CERTIFICATES OF PARTICIPATION AND

OTHER FINANCING. (a) The state bond committee is authorized to provide for the issuance of certificates of participation in one or more series in the aggregate principal amount of $4,000,000, plus costs of required reserves and costs of issuance, to pay for the costs for expansion of municipal jails described in sec. 8 of this Act. The estimated total cost of construction, acquisition, and equipping the projects is $4,000,000, which shall be paid from the proceeds of the certificates of participation issued under this section. The estimated aggregate annual amount of rental obligations under the lease-financing agreements is $400,000. The total payments for the full term of the certificates of participation are estimated to be $6,000,000. In this subsection, "cost of construction" includes credit enhancement and underwriting expenses, rating agency fees, bond counsel fees, financial advisor fees, printing fees, trustee fees, advertising fees, capitalized interest, interest earnings used for lease payments, and other costs of issuance, and costs of required reserves.

(b) The state bond committee may contract for credit enhancement, underwriting, credit ratings, bond counsel, financial advisor, printing, advertising fees, and trustee services that the committee considers necessary in financing the projects described in sec. 8 of this Act.

(c) The state bond committee may not authorize the issuance of certificates of participation as provided in (a) of this section if the issuance lowers the state's credit and the certificates are rated below investment grade.

*** Sec. 8.** The uncodified law of the State of Alaska is amended by adding a new section to read:

MUNICIPAL JAIL FACILITIES. (a) Each of the following projects is approved to receive $2,000,000 of the proceeds of the certificates of participation authorized under sec. 7 of this Act, on condition that the municipality in which the project is located contributes a matching share of at least $1,500,000, to be used for the upgrade, expansion, or replacement of the jail facilities:

(1) Dillingham Community Jail in the Municipality of Dillingham to replace the existing eight-bed facility with a new 25-bed facility;

(2) Kodiak Community Jail in the Municipality of Kodiak to replace the existing 16-bed facility with a new 22-bed facility.

(b) Subject to appropriation, the Department of Corrections is authorized to pay the

annual operating costs associated with the addition of new beds at the municipal jail facilities to the municipalities listed in (a) of this section. The anticipated annual operating costs for the new beds authorized in (a) of this section are:

(1) Dillingham Community Jail - $750,000 (17 new beds);

(2) Kodiak Community Jail - $188,000 (six new beds).

* **Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPROVAL. This Act constitutes the notice and approval of the projects described in secs. 5 - 8 of this Act required by AS 36.30.085.

* **Sec. 10.** Sections 1 - 3, ch. 32, SLA 2001, are repealed.

* **Sec. 11.** This Act takes effect July 1, 2004.

ANALYSIS: *(Attach a separate page if necessary)*

This bill authorizes the Department of Corrections to enter into twenty-five year lease agreements with the Fairbanks North Star Borough, Matanuska-Susitna Borough, Bethel, Municipality of Anchorage, and the City of Seward for up to a total of 1,744 beds at state correctional facilities and a new state correctional facility.

The above contractual line has been reduced by the current cost of the Out of State Contract. The $43,582,400 increased annual costs of incarceration and lease payments can be further offset by moving any remaining prisoners housed at the out of state contract facility (Florence Correctional Center) back to Alaska and housing them in the new beds created by this bill. Assuming that in FY09, 500 additional prisoners, at $70.00 per day x 365 days = $12,775,000 of savings that can be applied to the cost of new beds. **The FY2009 estimated annual net cost of these projects is $30,807,400.**

(continued on page 2 of 2).

Prepared by: Jerry D. Burnett, Director — Phone (907) 465-3339

Approved by: Portia C.K. Parker, Deputy Commissioner — Date 4/29/2004
Agency: Department of Corrections

STATE OF ALASKA
2004 LEGISLATIVE SESSION

BILL NO. CSSB 65(FIN)

ANALYSIS CONTINUATION

Assume that the local government agencies will fund the costs of the new or expanded correctional facilities construction through local/AIDEA bond sales backed by the state leases. Costs of construction for Fairbanks, Anchorage, Seward, and Mat-Su facilities not to exceed $135,000 per bed. Annual lease payments not to exceed $14,600 per bed for Fairbanks, Anchorage, and Seward and not to exceed $11,600 for Mat-Su. The Bethel facility costs of construction are not to exceed $155,000 per bed and annual lease costs payments not to exceed $16,700.

DOC will require three project management positions during the planning and construction phase.

Annual Lease Costs, by Facility (shown in miscellaneous line):
Fairbanks Correctional Center: 80 new beds = $1,076,000
Matanuska-Susitna Borough: 1,200 new beds = $10,172,000
**Matanuska-Susitna Borough alternate option of 2,251 new beds = $15,261,200*
Spring Creek Correctional Center: 144 beds = $1,076,000
Yukon-Kuskokwim Correction Center: 120 beds = $1,853,000
Anchorage Jail: no lease payment (if appropriated, federal funds used for construction)
Dillingham Community Jail expansion of 17 beds = $149,100
Kodiak Community Jail expansion of 6 beds = $149,100

Additionally, security and life/safety staff and institutional staffing necessary to support the 1,744 new prisoner beds in Alaska is based on about 5 prisoners per 1 staff. Thus, 327 new staff will be needed to support these additional prisoner beds statewide.

The bill provides for federal receipt authority for up to $30,000,000. The authorization to expand the Anchorage Jail facility by 200 beds may only occur if federal funds are received and the Alaska State Legislature appropriates the funds.

For the purposes of this fiscal note, it is assumed that a private option would only be built if less costly than the public option. It is also assumed that the 2251 bed facility would be built only if operating costs reduced from other facilities would allow for the option to be built without total departmental costs exceeding the 1200 bed option.

End.

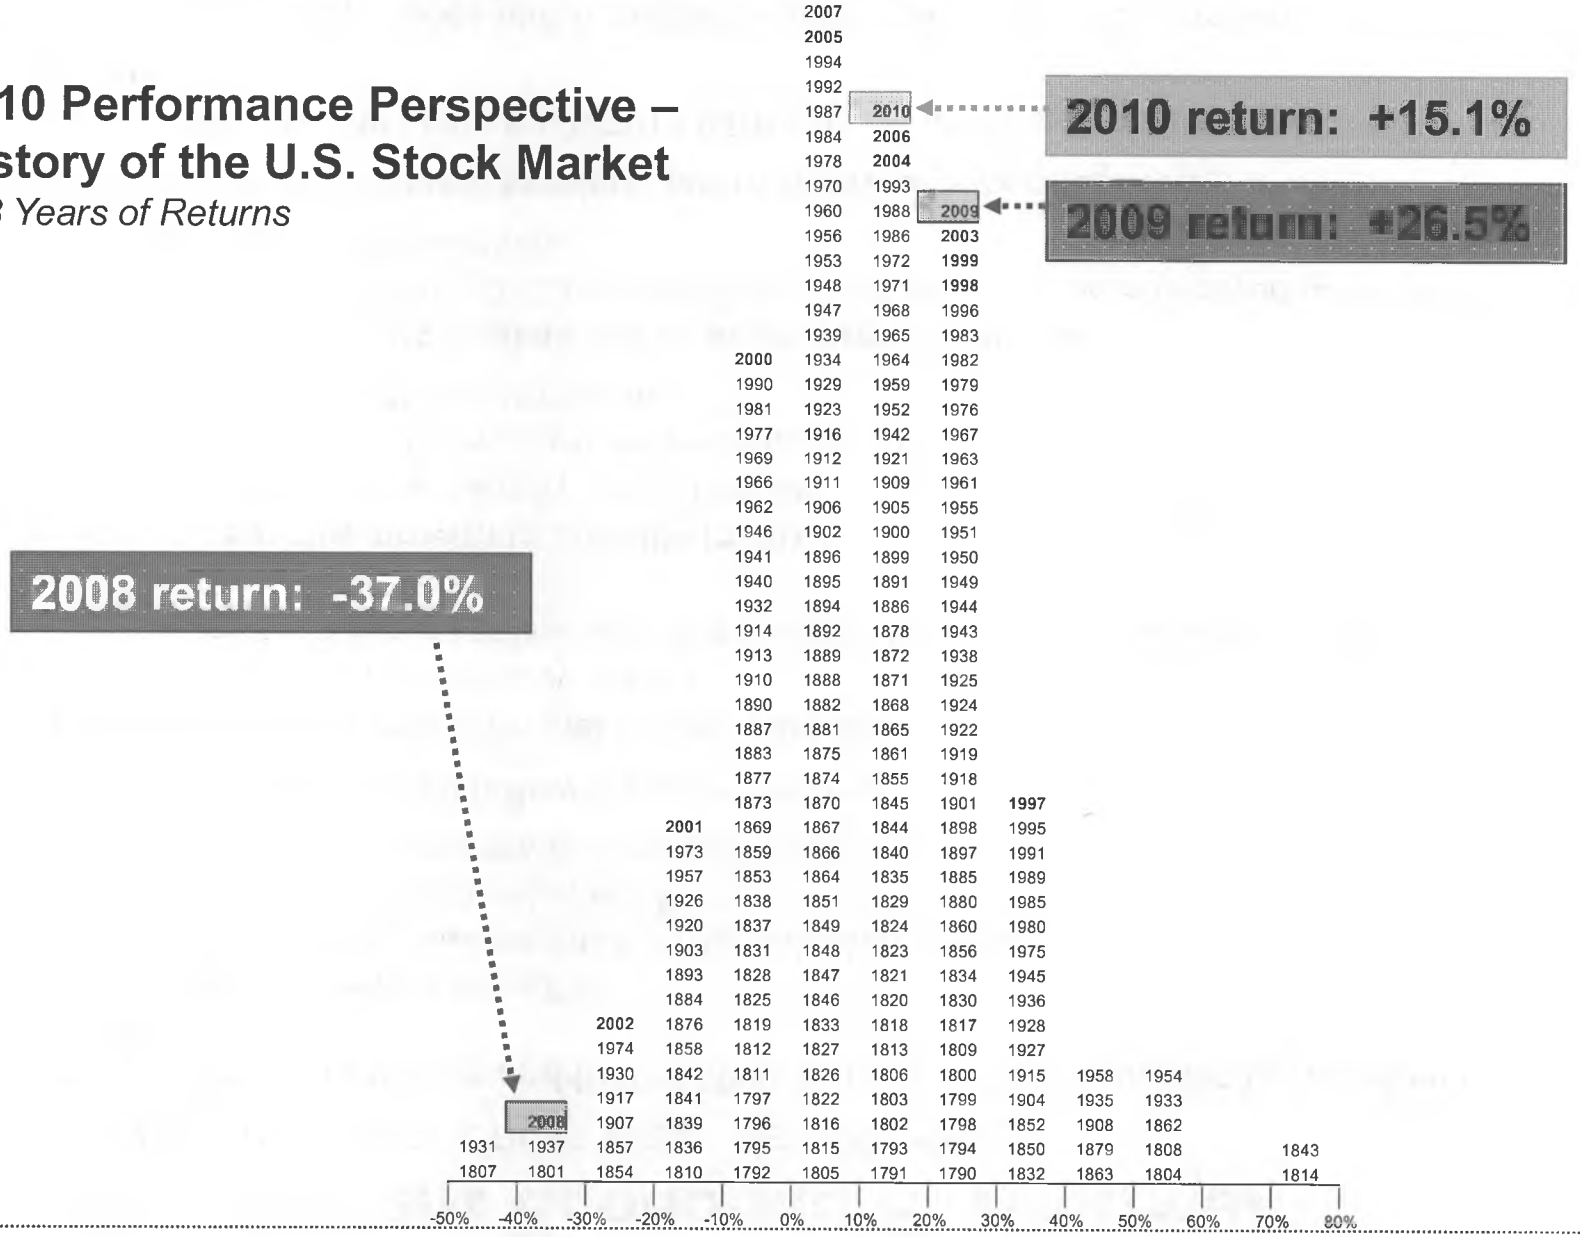
Callan's Capital Market Projection Process



Economic outlook drives our projections.

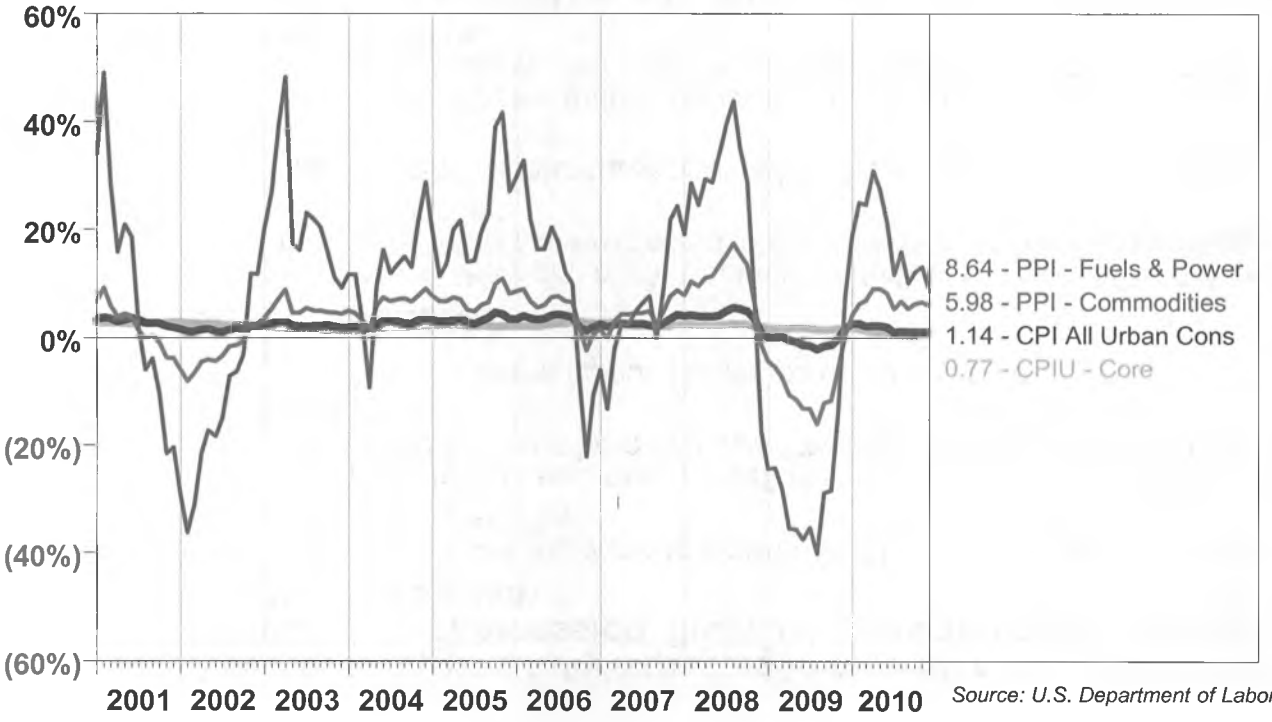
- **Evaluate the current environment and economic outlook for the U.S. and other major industrial countries:**
  - Business cycles, relative growth, inflation.
- **Examine the relationships between the economy and asset class performance patterns.**
- **Examine recent and long-run trends in asset class performance.**
- **Apply market insight:**
  - Consultant experience - Plan Sponsor, Manager Search, Specialty
  - Industry consensus
  - Client Policy Review Committee
- **Test the projections for reasonable results.**

Stock Market Returns by Calendar Year

2010 Performance Perspective – History of the U.S. Stock Market

223 Years of Returns

The Current Economic Environment



Modest Recovery Under Way, Markets Wary

- **Growth returned in the second half of 2009, but job market struggles to revive well into 2011.**
  - Unemployment remains above 9%.
  - Wealth has been hit, consumers de-levering, savings are rebuilding.
  - QE II the "last" round of monetary stimulus.
  - Tax compromise provides new fiscal stimulus in 2011-12.
- **Steep recoveries usually follow steep recessions.**
- **However, recoveries after financial crises are slow.**
  - Financial stress has been greatly reduced…
  - …but private credit is still contracting – banks reluctant to lend, households and businesses reluctant to borrow
- **Everyone expected growth to subside in 2010…**
  - Stimulus fades and the inventory cycle is complete.
  - Europe struggles with slow growth and sovereign debt crisis.
  - Emerging markets wait on our recovery.
- **But the capital markets freaked out as projections come true.**
  - Equity hammered through Q3 2010, retail investors fled risk, bond inflows remained substantial.
  - Interest rates headed even lower.
- **Q4 saw signs of economic stability, return of investor confidence.**
- **Tax compromise will likely push 2011 GDP growth to 3%, a year ahead of expectations.**
- **Federal government faces harsh budget realities. Defense, social security, Medicare/Medicaid and Interest dominate spending.**

Is Rising Inflation an Emerging Threat?

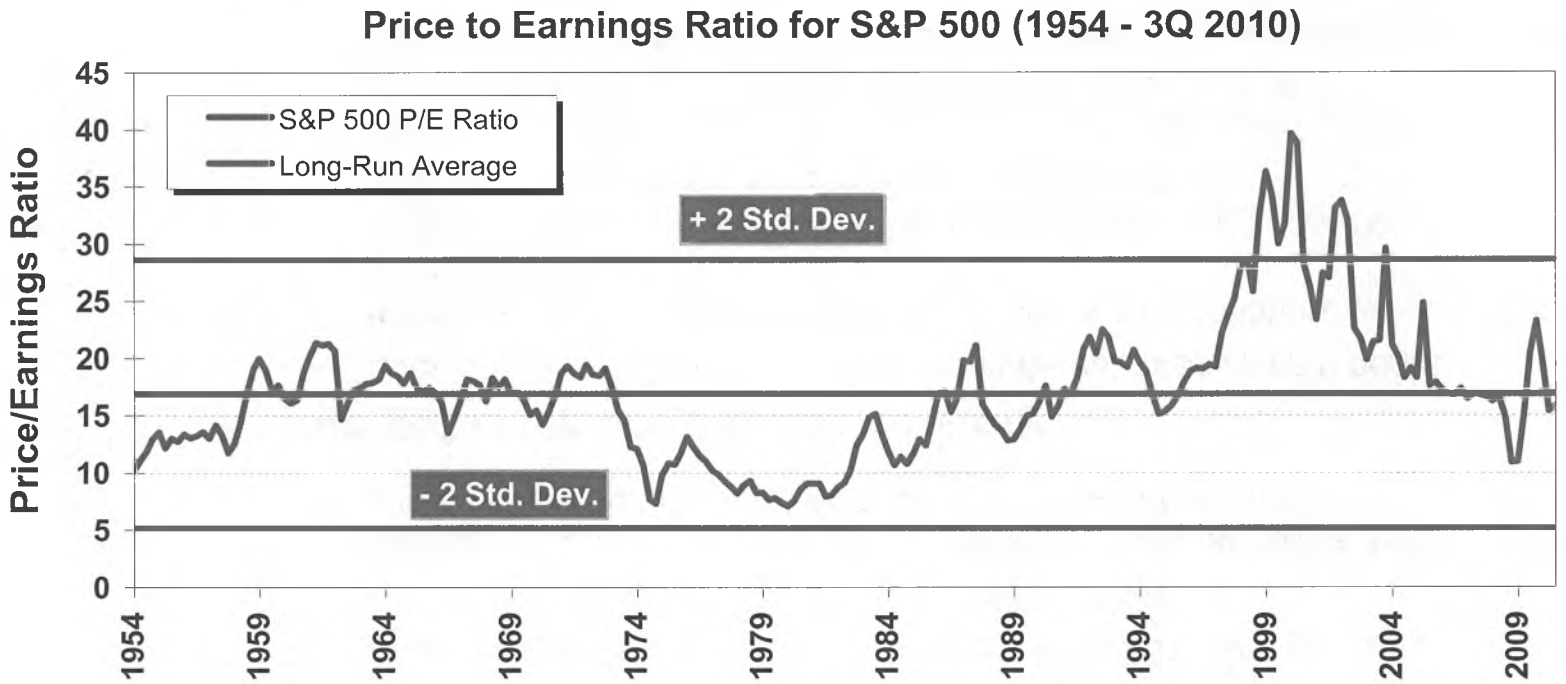
Consumer Prices

Year-Over-Year Change

Source: U.S. Department of Labor

- **"Radical" short-term volatility in recent inflation expectations.**
- **Heads have been turned by producer prices, commodities and particularly energy, but overall CPI and core inflation much more benign.**

The Economy and the Capital Markets



- **The economy was fully expected to meander through a weak recovery, as the combination of recession, financial crisis and deleveraging required time to work through the system.**
  - GDP growth was expected to slacken in 2011, but tax compromise may boost growth to the long-term trend (3%) .
  - Inflation is in the headlines, but deflation remains the real concern to the Fed. Inflationary pressures stemming from Fed and Treasury actions are less of a concern in the short to medium term.
  - Double-dip is possible, but not the expected outcome.
- **Callan's outlook:**
  - Inflation will likely drift higher, but not immediately. Painfully low interest rates may persist through 2011, but are expected to rise after that, as the Fed eventually removes accommodation.
  - Historic nominal return averages will be hard to achieve over the short, medium and even the longer run.
  - Stocks rallied in the fourth quarter of 2010 and turned in a good year. However, prospects for above-trend growth are weak; companies are strong enough to attain trend profit growth, but not a lot more.
  - The housing market has yet to truly hit bottom, despite mortgage rates at an all-time low. The "shadow inventory" of homes yet to foreclose hangs heavy over the market.
  - The chance that we could see another leg down on housing is the greatest risk to the economy, and to a deflationary spiral.
  - The dollar should face substantial downward pressure as a result of U.S. policy. The problem, of course, is what other currency can take the dollar's place?
  - The path to a rational set of long-term capital market outcomes is likely through an ugly shorter term period of rising interest rates, capital losses in fixed income, and volatile equity markets.

Starting asset valuations dominant return expectations

- **Equity valuations, both domestic & international, appear reasonable (not cheap but not expensive)**
  - Analyst expectations already envision decent 2011 eps growth
  - Corporate balance sheets provide good flexibility
  - Developing countries are expected to enjoy strong absolute growth which should offset soft demand in much of the developed world
- **Interest rates are a different story**
  - Even with low inflation real short-term interest rates remain negative
  - Inflationary pressures could build (e.g. commodity inflation, excess demand in emerging world)
  - Rates are so low across the curve that the "income cushion" to rising rates is minimal (see Q4 2010 bond returns for perspective)
  - Equity earnings yield versus Treasury or Corporate bond yields look attractive but spread could be narrowed quickly with a rise in rates.
  - Our conclusion is that rates will rise and limit P/E expansion opportunities
- **Major theme is nominal returns for both stocks and bonds will be positive but limited for the short-intermediate term.**

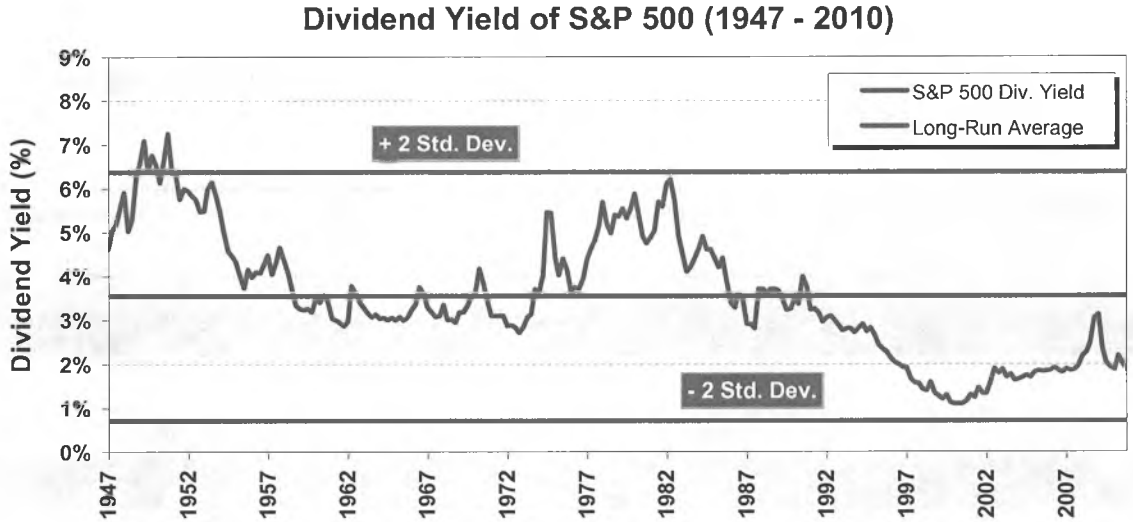
Equity Is More Reasonably Priced

Trailing P/E At Its Long Run Average

Trailing earnings as reported for the fiscal year; includes negative earnings from 1998 onward.
Source: Standard & Poor's and Callan Associates

Absolute valuation measures indicate that stocks are "reasonably" valued

Global Stock Fundamentals



Valuation	S&P 500	MSCI EAFE	MSCI Emerging Markets
P/E (last fiscal year reported earnings)	15.3	14.0	14.1
P/E (next fiscal year estimated earnings)	14.5	12.9	13.2
P/E (second fiscal year forward estimated earnings)	12.9	11.5	11.5
Price to Book Ratio	2.2	1.5	2.1
Price to Cash Flow Ratio	8.6	6.8	8.3
Price to Sales Ratio	1.3	0.9	1.5
Profitability			
Return on Equity (ROE)	10.8	14.2	17.0
Balance Sheet Strength			
Long Term Debt to Capital Ratio	34.0	33.8	24.8

Note: Valuation and Profitability figures are weighted harmonic averages, a statistical technique that reduces the effects of extreme outlying data on the average. Long Term Debt to Capital figures are weighted averages.

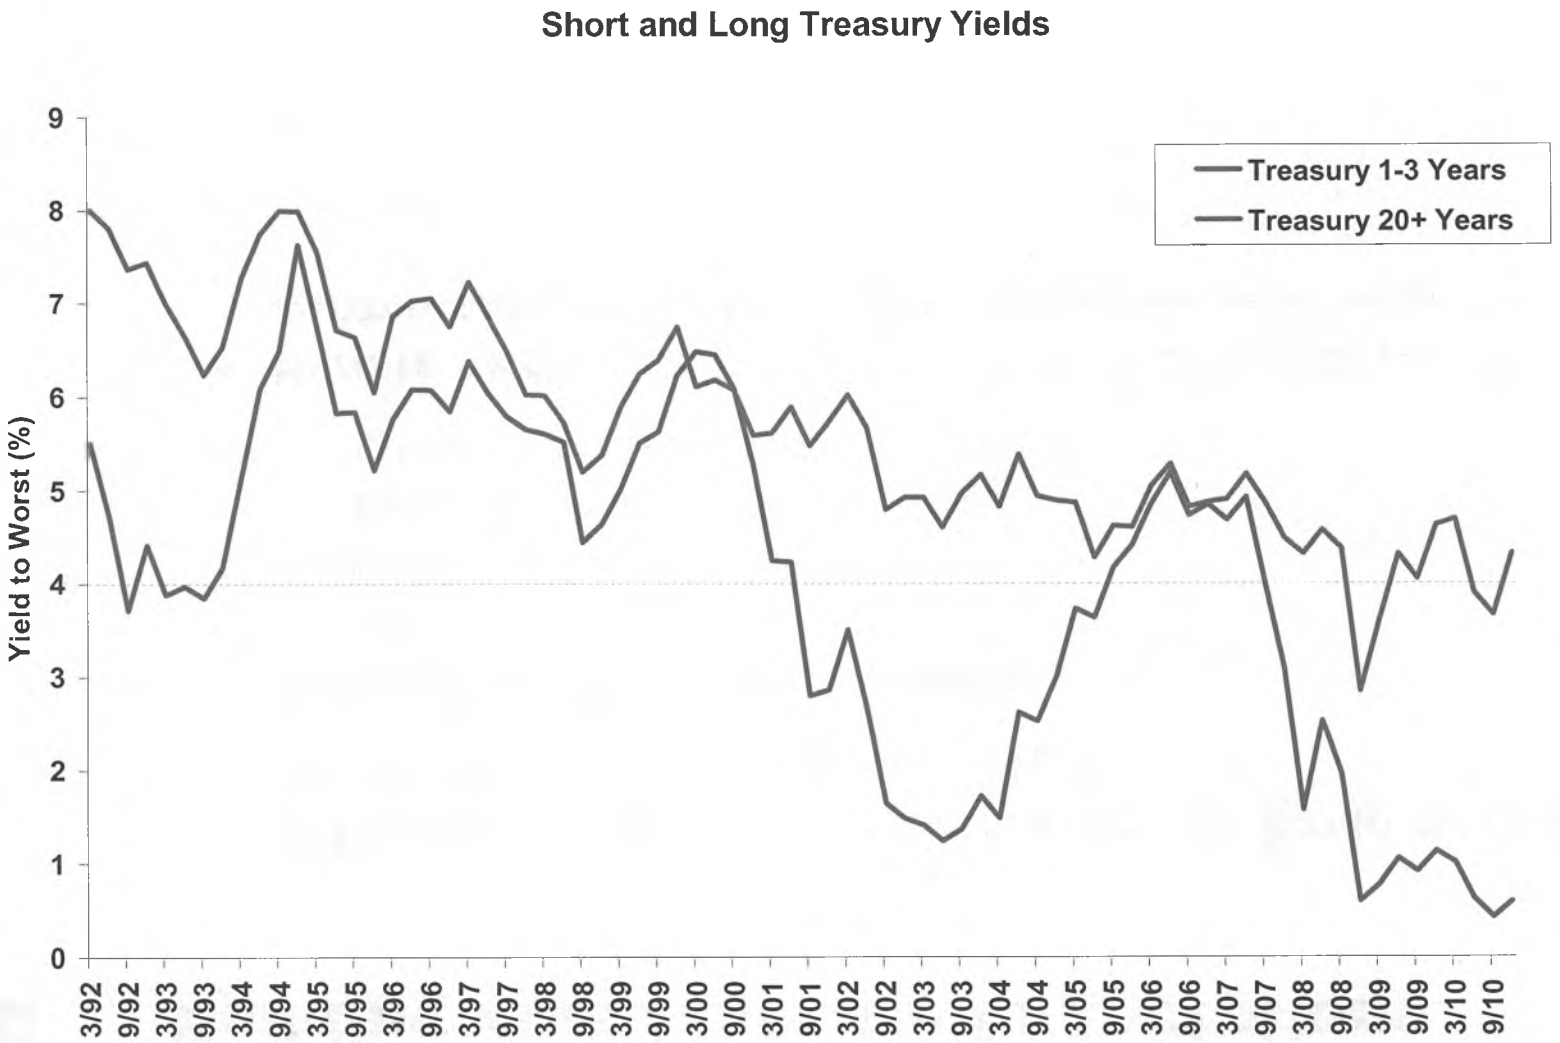
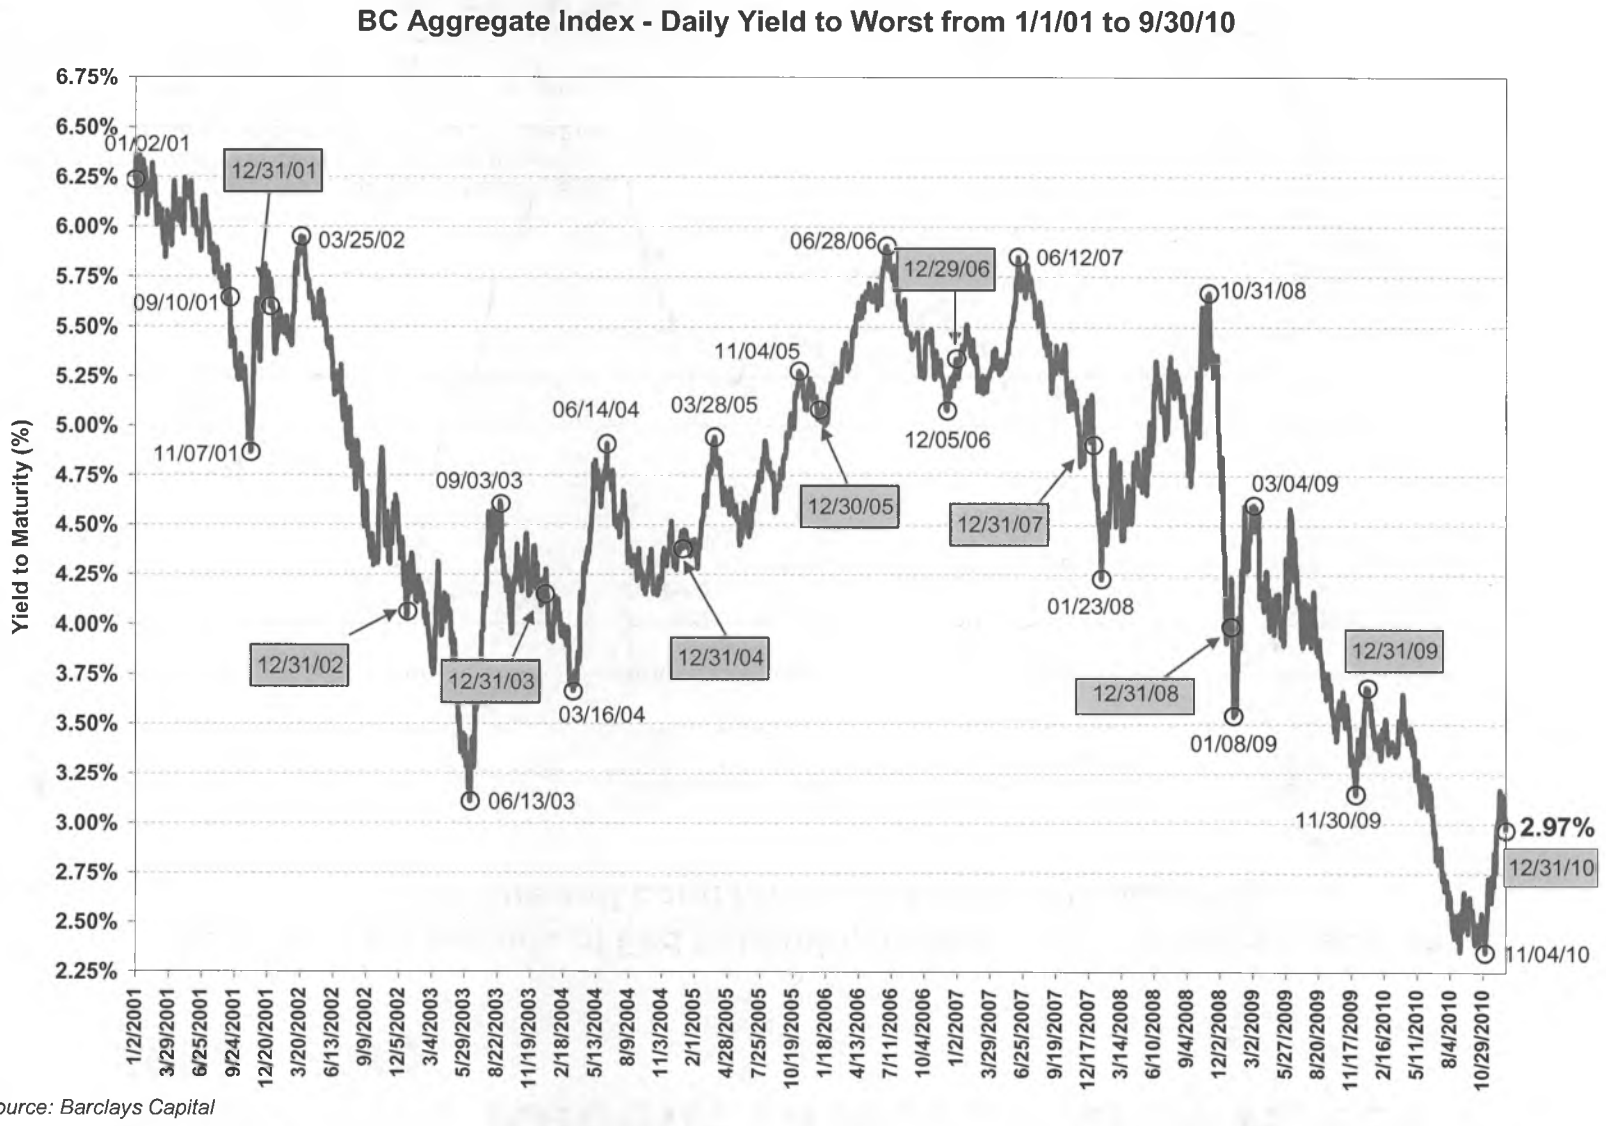
36

- Reproduced from ING Global Perspectives Q42010

Dividend yields are in line with recent experience but not high.



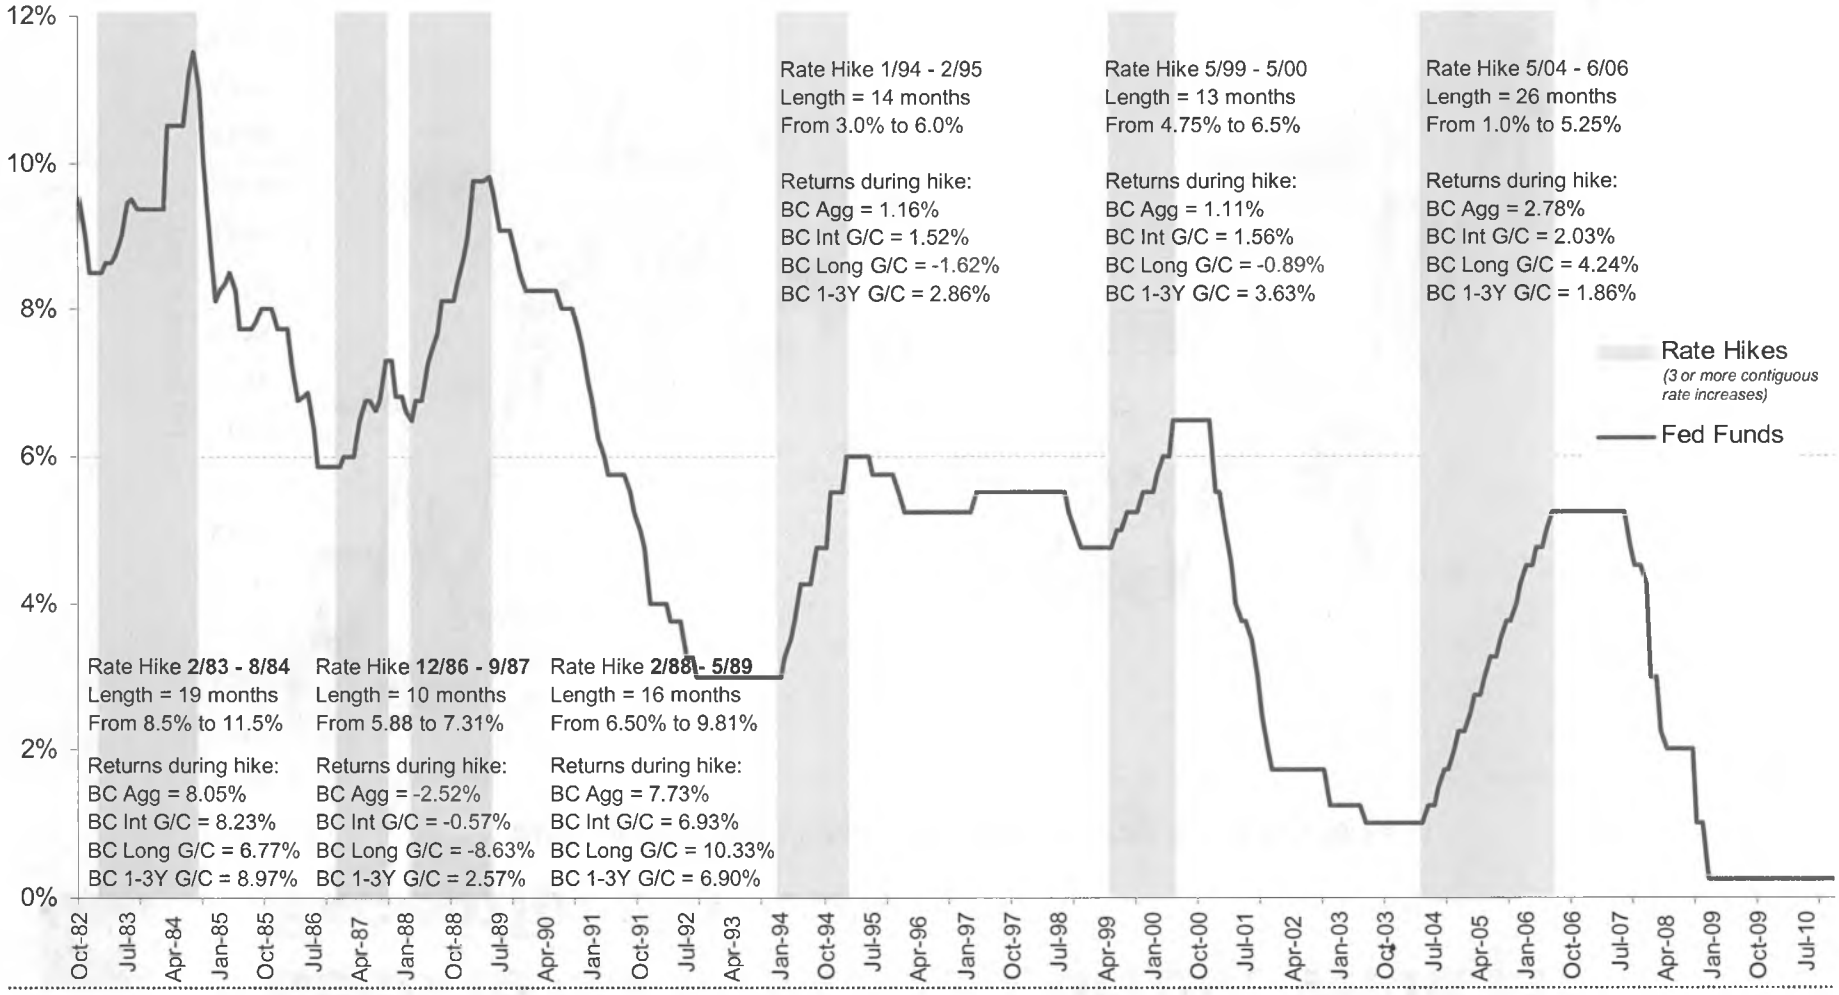
- But earnings yield is attractive relative to bonds



Building Fixed Income Expectations

- **2010 results a surprise – interest rates fell, broad market generated 6.5% return (BC Aggregate).**
- **The path to future return matters:**
  - Inflation
  - Composition of the market
  - Expected spreads and risk premiums
  - Current yields – level, slope of the yield curve.
- **Hard to be enthusiastic about fixed income returns given current environment and likely economic path to growth.**

Yield curve is extraordinarily steep



Despite Q4 Increase Current Yield is Exceptionally Low

Inflow and outflow

Risk based asset allocation

As of May, 2009

Risk allocation groups

Interest rates
Purpose: Securities with low credit risk usually perform better than other investments in times of deflation or market crises.

Components: U.S. Treasury bonds and non-U.S. government bonds.

Company exposure
Purpose: When the economy is performing well, most public and private companies are performing well. Investing in these corporations allows the Permanent Fund to benefit in times of growth and prosperity.

Components: U.S. and non-U.S. stocks, Corporate investment grade and high yield bonds, bank loans and private equity

Real assets
Purpose: The value of real assets hedges inflation risk, helping protect the Fund's real value over time.

Components: Real estate, infrastructure and TIPS

Special opportunities
Purpose: This allocation allows the Permanent Fund to invest in special opportunities and to take advantage of dislocations in the markets.

Components: Absolute return, distressed debt, commercial mortgage backed bonds, other strategies as they arise.

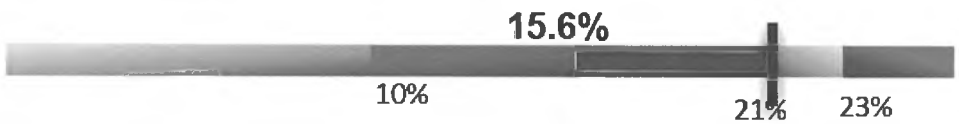
Cash
Purpose: The cash allocation is designed to let the Fund build up reserves over the course of the year to meet its expected liabilities, primarily the annual dividend payment each July.

Components: liquid investments with durations of less than 12 months.

Dollar Allocation Limits by Risk Class (1/31/2011)

Cash (2%)

Interest Rates (6%)



Company Exposure (53%)

March 1, 2012

The Honorable Bert Stedman
The Honorable Lyman Hoffman
Co-Chairs, Senate Finance Committee
Alaska State Senate
Juneau, AK 99801

Dear Senators Stedman and Hoffman:

During the Senate Finance Committee hearing on February 22, I was asked what the value of the PERS and TERS funds would have grown to had they achieved the annual estimated return rate adopted by the Alaska Retirement Management Board (ARMB) and its predecessor board, the Alaska State Pension Investment Board. The calculation is more complex than would initially be expected because of the hundreds of cash flows into and out of the funds due to multiple employer receipts as well as pension and health care payments.

We have attempted to provide a fair estimate of the calculation you requested by using fund balances at the beginning of the fiscal year and adjusting for net cash flows throughout the fiscal year. The attached table is the result of our computations.

Please advise me if I can be of further assistance.

Sincerely,

Angela Rodell

Angela Rodell
Deputy Commissioner

Enclosure

cc: Darwin Peterson, Senate Finance Committee Aide

PERS	Starting 6/30/01 Balance ($MM):	$ 8,081.5	TRS	Starting 6/30/01 Balance ($MM):	$ 4,076.1
	Target Return	Actual Return		Target Return	Actual Return
FY02	$ 8,493.70	$ 7,411.60	FY02	$ 4,225.42	$ 3,686.71
FY03	$ 8,883.59	$ 7,399.29	FY03	$ 4,345.38	$ 3,609.95
FY04	$ 9,248.80	$ 8,172.60	FY04	$ 4,450.83	$ 3,908.93

Roads to Resources

Senate Finance Presentation

Patrick Kemp, P.E.
Deputy Commissioner

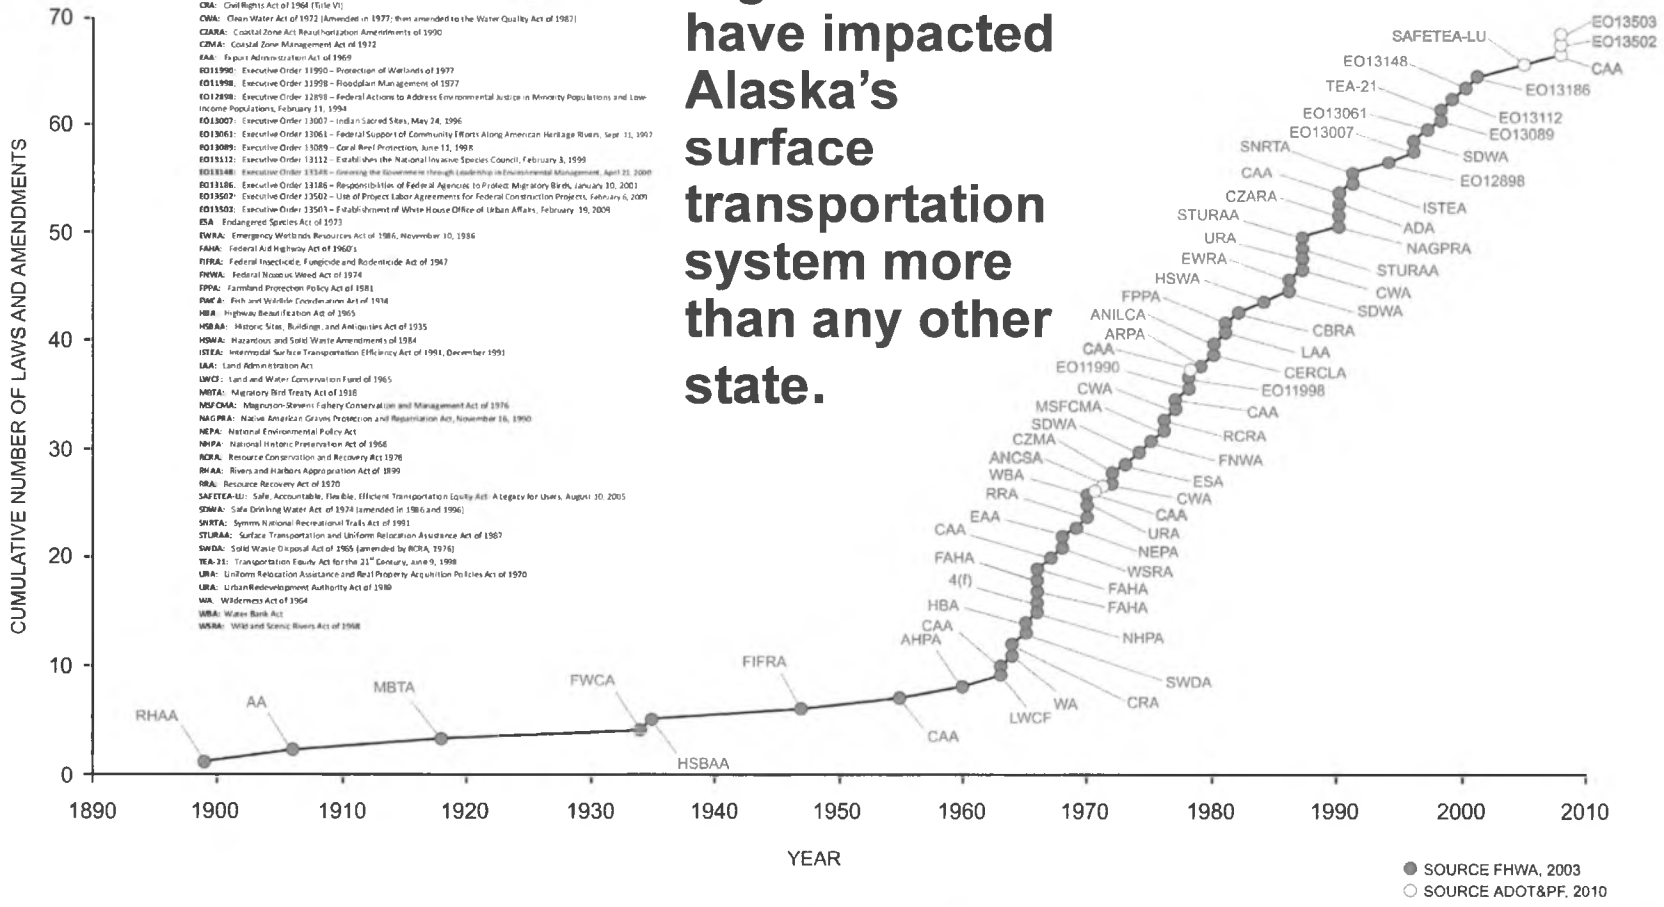
Al Clough, P. Geo.
Project Manager

March 25, 2011

Roads to Resources Program

- Alaska has exceptionally diverse natural resource base
- Surface access to most potential sites is non-existent
- Alaska has been unable to fully develop a surface transportation system to enhance resource development & community access

Evolution of the Alaska Highway System



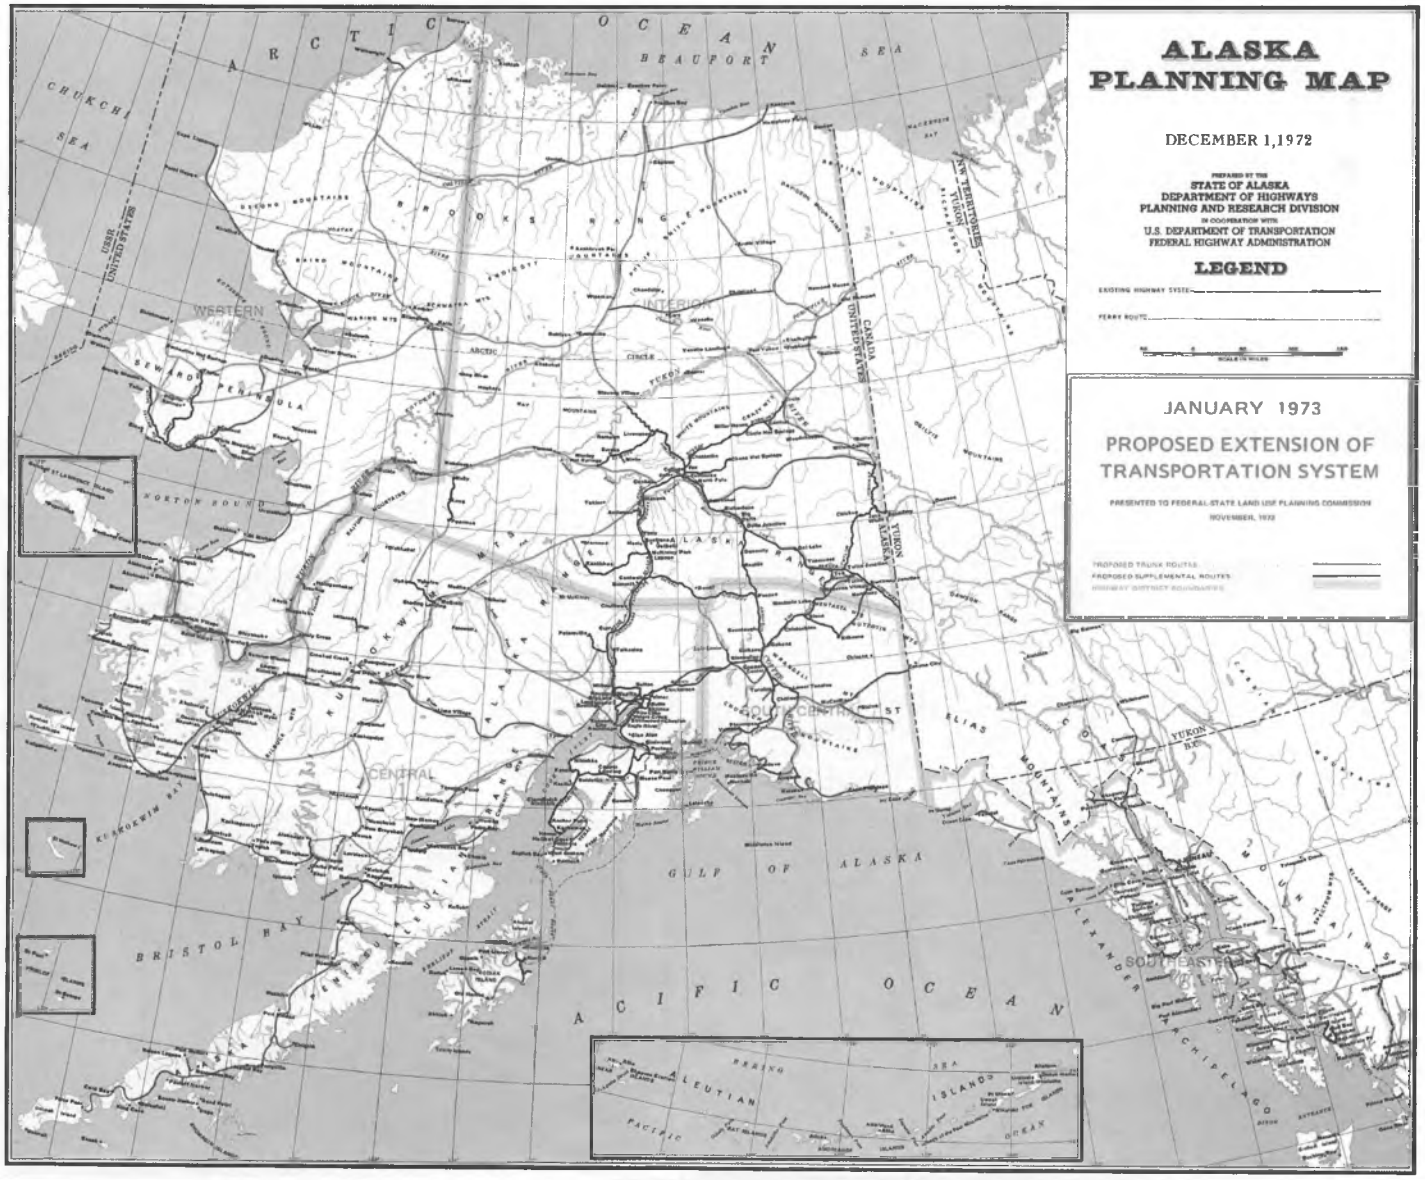
- Alaska Road Commission & Bureau of Public Roads construct initial roads in territorial days
- Newly created Department of Highways started developing a highway network to access Alaska communities & resources
- A transportation policy to connect all communities with population of 2,000 or more was adopted
- 1964 Earthquake and 1967 flood resulted in capital dollars used to repair and not expand the surface transportation system
- 1968 Federal Highway Act shifted policy towards funding urban areas rather than rural
- 1969 Rapid expansion of federal environmental laws including NEPA
- Cost to develop new roads versus need to improve existing roads
- Last significant public road built in Alaska was Klondike Highway in 1978

Alaska's Environmental Permitting Challenges

Acronym – Description

4(f): Section 4(f) of the Department of Transportation Act of 1966
AA: American Antiquities Act of 1906
ADA: Americans with Disabilities Act of 1990 (also ADA Amendments Act of 2008)
AHPA: Archeological and Historic Preservation Act of 1974 (Expansion of Reservoir Salvage Act of 1960)
ANCSA: Alaska Native Claims Settlement Act, 1971
ANILCA: Alaska National Interest Lands Conservation Act, 1980
ARPA: Archaeological Resources Protection Act of 1979
CAA: Air Pollution Control Act of 1955 (later replaced by Clean Air Act of 1963, amended in 1970, 1977, 1990; Endangerment finding regarding greenhouse gases, 2009)
CBRA: Coastal Barrier Resources Act of 1982
CERCLA: Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (Superfund)
CRA: Civil Rights Act of 1964 (Title VI)
CWA: Clean Water Act of 1972 (Amended in 1977; then amended to the Water Quality Act of 1987)
CZARA: Coastal Zone Act Reauthorization Amendments of 1990
CZMA: Coastal Zone Management Act of 1972
FAA: Export Administration Act of 1969
EO11990: Executive Order 11990 – Protection of Wetlands of 1977
EO11998: Executive Order 11998 – Floodplain Management of 1977
EO12898: Executive Order 12898 – Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, February 11, 1994
EO13007: Executive Order 13007 – Indian Sacred Sites, May 24, 1996
EO13061: Executive Order 13061 – Federal Support of Community Efforts Along American Heritage Rivers, Sept 11, 1997
EO13089: Executive Order 13089 – Coral Reef Protection, June 11, 1998
EO13112: Executive Order 13112 – Establishes the National Invasive Species Council, February 3, 1999
EO13148: Executive Order 13148 – Greening the Government through Leadership in Environmental Management, April 21, 2000
EO13186: Executive Order 13186 – Responsibilities of Federal Agencies to Protect Migratory Birds, January 10, 2001
EO13502: Executive Order 13502 – Use of Project Labor Agreements for Federal Construction Projects, February 6, 2009
EO13503: Executive Order 13503 – Establishment of White House Office of Urban Affairs, February 19, 2009
ESA: Endangered Species Act of 1973
EWRA: Emergency Wetlands Resources Act of 1986, November 10, 1986
FAHA: Federal Aid Highway Act of 1960's
FIFRA: Federal Insecticide, Fungicide and Rodenticide Act of 1947
FNWA: Federal Noxious Weed Act of 1974
FPPA: Farmland Protection Policy Act of 1981
FWCA: Fish and Wildlife Coordination Act of 1934
HBA: Highway Beautification Act of 1965
HSBAA: Historic Sites, Buildings, and Antiquities Act of 1935
HSWA: Hazardous and Solid Waste Amendments of 1984
ISTEA: Intermodal Surface Transportation Efficiency Act of 1991, December 1991
LAA: Land Administration Act
LWCF: Land and Water Conservation Fund of 1965
MBTA: Migratory Bird Treaty Act of 1918
MSFCMA: Magnuson-Stevens Fishery Conservation and Management Act of 1976
NAGPRA: Native American Graves Protection and Repatriation Act, November 16, 1990
NEPA: National Environmental Policy Act
NHPA: National Historic Preservation Act of 1966
RCRA: Resource Conservation and Recovery Act 1976
RHAA: Rivers and Harbors Appropriation Act of 1899
RRA: Resource Recovery Act of 1970
SAFETEA-LU: Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users, August 10, 2005
SDWA: Safe Drinking Water Act of 1974 (amended in 1986 and 1996)
SNRTA: Symms National Recreational Trails Act of 1991
STURAA: Surface Transportation and Uniform Relocation Assistance Act of 1987
SWDA: Solid Waste Disposal Act of 1965 (amended by RCRA, 1976)
TEA-21: Transportation Equity Act for the 21st Century, June 9, 1998
URA: Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970
URA: Urban Redevelopment Authority Act of 1989
WA: Wilderness Act of 1964
WBA: Water Bank Act
WSRA: Wild and Scenic Rivers Act of 1968

Ever growing federal regulations have impacted Alaska's surface transportation system more than any other state.



Statutory Purpose of DOT/PF

- *AS 19.05.125 - The purpose of AS 19.05- AS 19.25 is to establish a highway department capable of carrying out a highway planning, construction, and maintenance program that will provide a common defense to the United States and Alaska, a network of highways linking together cities and communities throughout the state (thereby contributing to the development of commerce and industry in the state, and aiding the extraction and utilization of its resources), and otherwise improve the economic and general welfare of the people of the state.*

Early Surface Transportation Goals

The development of Alaska's surface transportation has been a goal since before statehood.

Roads to Resources Program

- Working closely with Department of Natural Resources and other state agencies along with the private sector to identify resource areas
- Road standards and unit costs are being instituted through discussions with development entities, contractors and Alaska General Contractors
- Develop a matrix-based system that identifies decision factors for access roads/infrastructure & named projects
- Prioritize the list for possible inclusion in the annual capital budget

Resources Road Decision Matrix

Project Details, Benefits/Costs

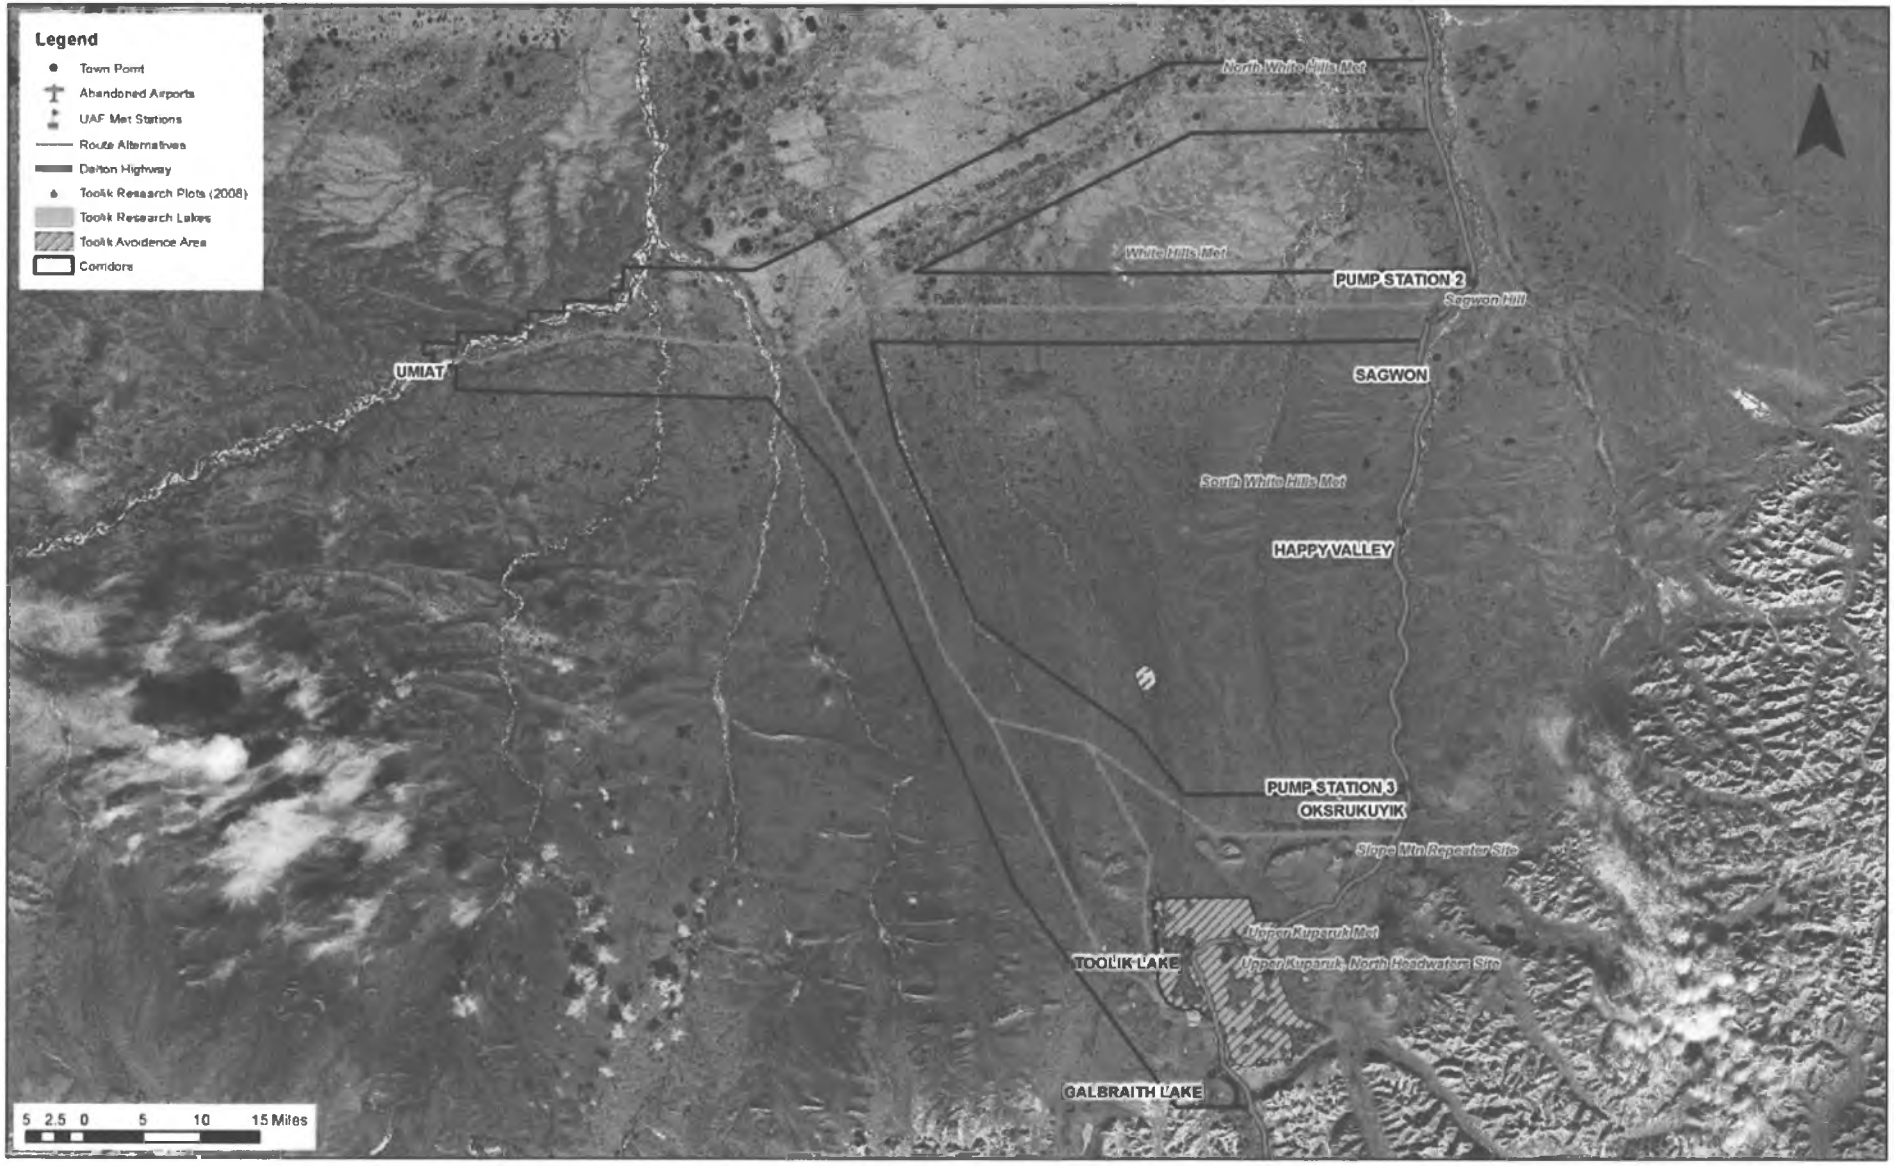
PROJECTS

	Resource Type	Estimated Road Cost	Road Length	Direct Jobs	Indirect Jobs	Revenue to State	Life of Resource Project	Number of Communities Accessed	Other Resource Opp	Community Energy Opp	Candidate for PPP
Project A											
Project B											
Project C											
Project D											

- Matrix is an example of how various projects may be evaluated

Phased Funding

- Environmental permitting & design accomplished by the DOT&PF
- Construction will likely be funded jointly by the State & the developer (private/public partnership)
- Roads will be constructed "long and skinny" for industrial use. Upgrade to public road standards would be considered after revenues began flowing
- State would recover investment through a number of methods, IUH, AIDEA, Bonds, GF, etc.

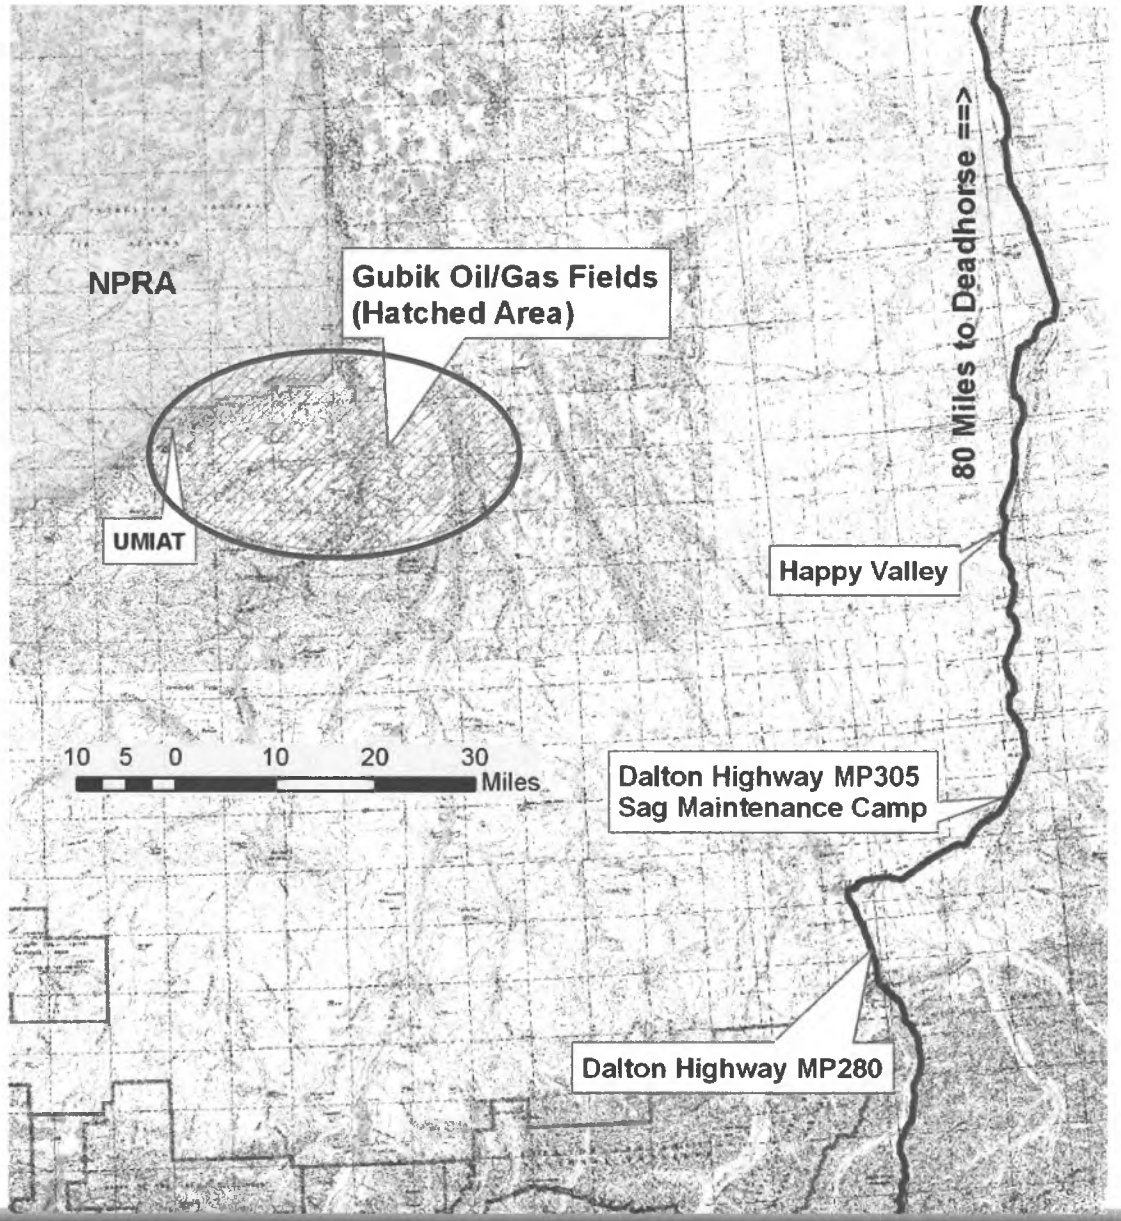


Current Roads to Resources Projects

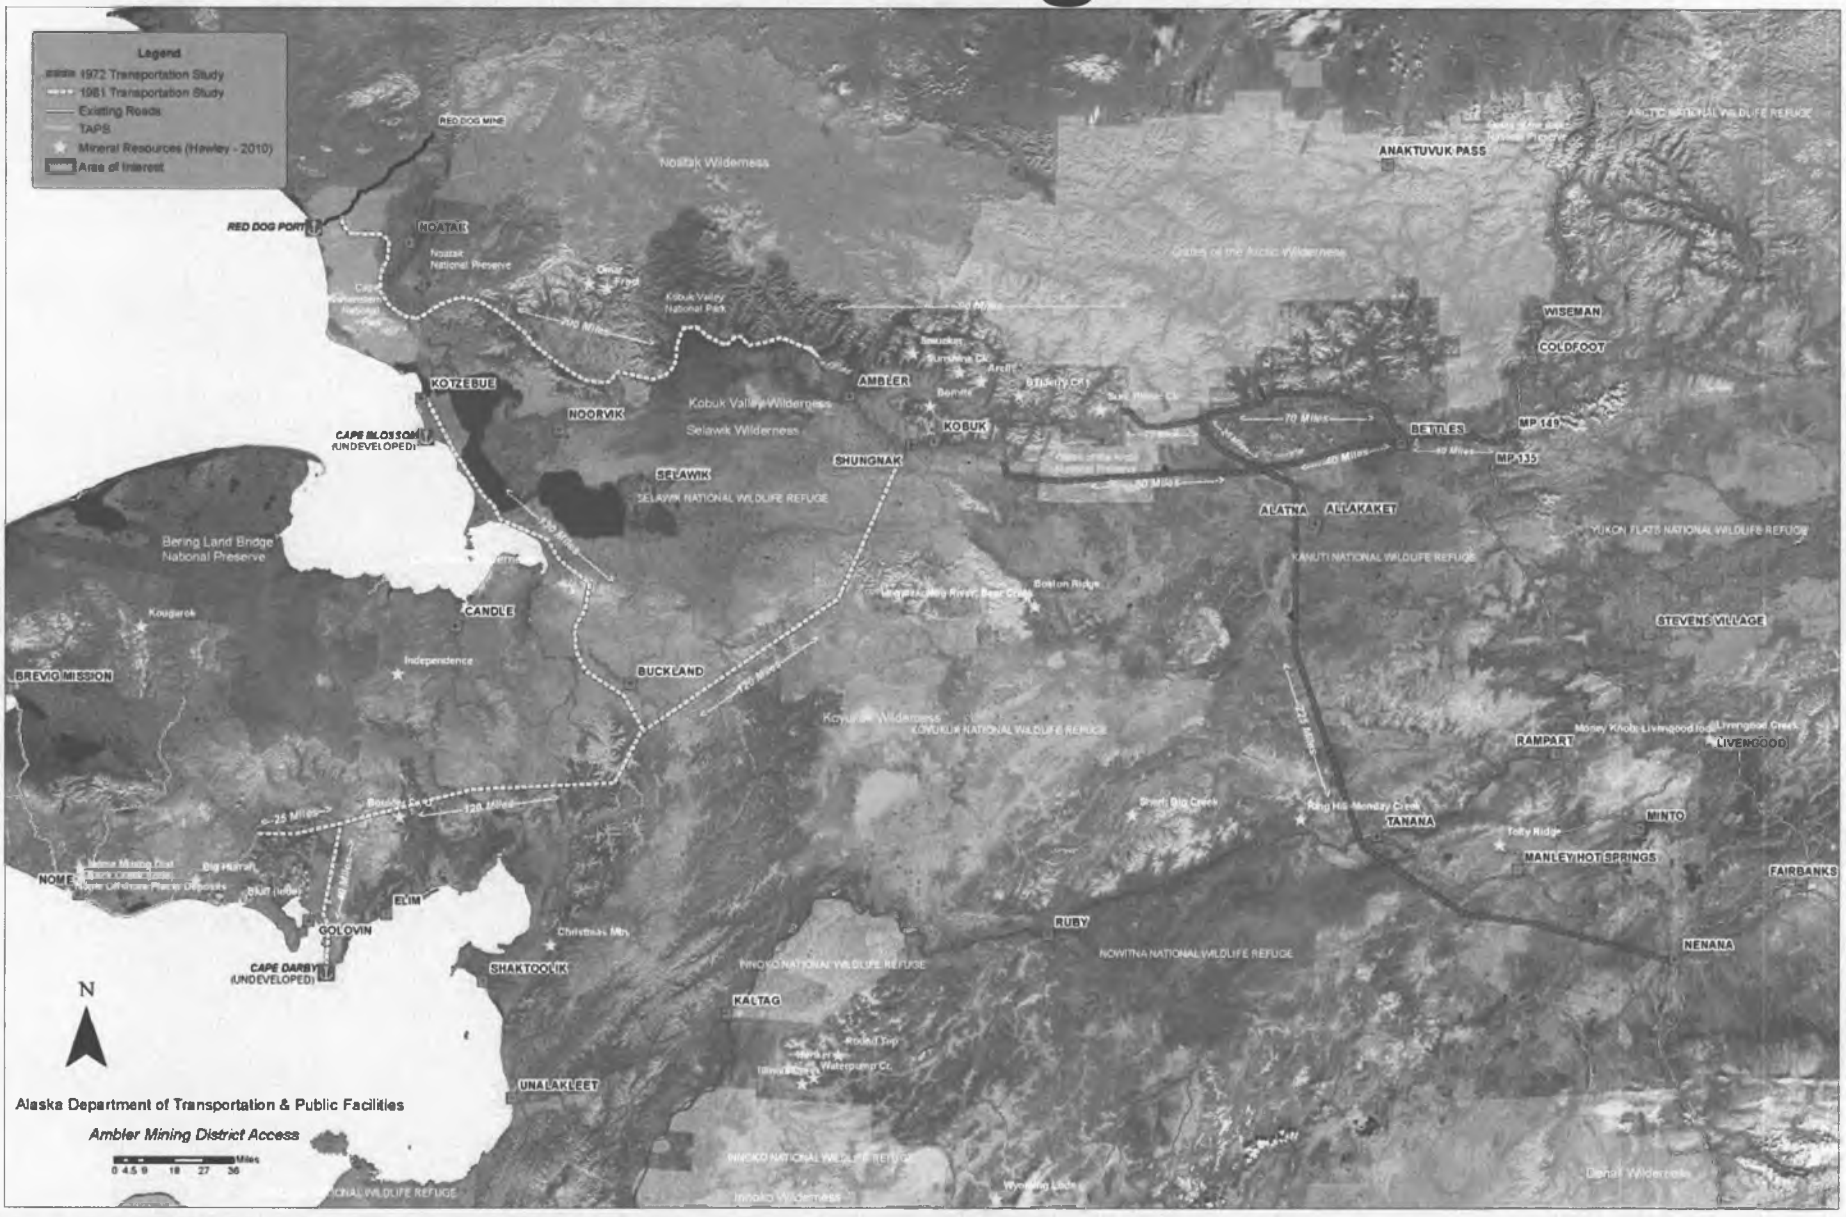
DOT&PF's projects:

- Foothills West Transportation Access (Umiat Oil & Gas)
- Ambler Mining District
- Western Alaska Access (Road to Nome)

Foothills West Transportation - Road to Umiat



Alaska Department of Transportation and Public Facilities

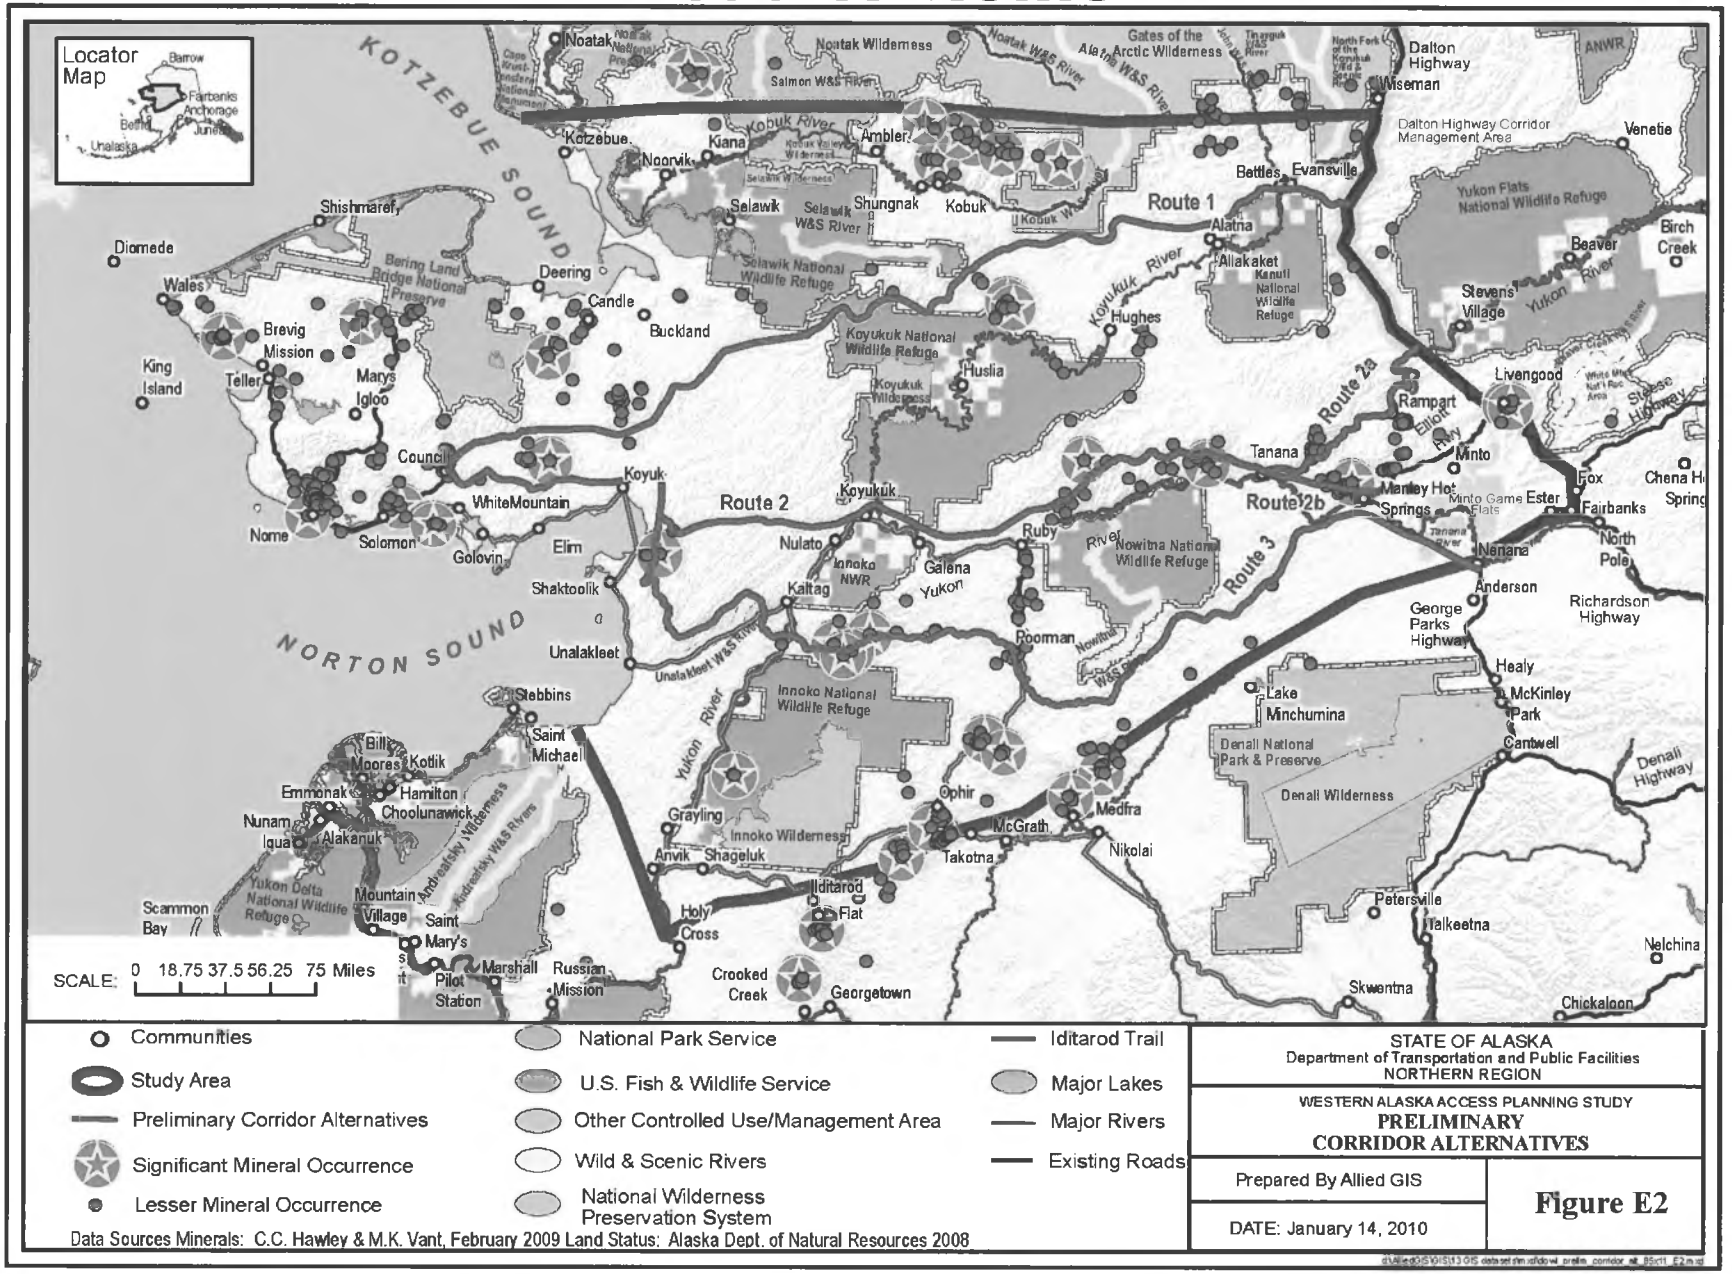


Foothills West Project

Umiat Oil & Gas Fields

- Currently only ice road or air access
- Access corridor extends 90 miles NW of Dalton Hwy, starting at Galbraith Lake
- Provides access to 580 mm bbl oil and 7 trillion cubic feet of natural gas
- Opens adjacent lands for cost effective exploration
- Provides access portal into NPRA
- Aggressive timeline for Spring 2013 construction start
- Project EIS and specific permitting work begins with FY12 funding request

Ambler Mining District



Ambler Mining District

- Contains over 120 million tons: Cu, Zn, Pb, Ag, Au resources
- Upside exploration potential is outstanding
- Ongoing active exploration in district
- Development of Arctic deposit would create over 300 direct jobs for Nova Gold proposal
- FY12 Funding request will provide detailed subsistence studies and research with communities in region to be used for corridor selection and refinement

Road to Nome

- Long term project to access resources and connect communities to Alaska's highway system
- Fund & develop in phases because of independent utility
- Benefits commerce to all of western Alaska
- FY12 Funding request will be for survey, mapping and refined cost estimates

Other Potential Projects

- Site access to Niblack Copper and Bokan Mtn. - rare earth element deposits on Prince of Wales Island
- Flat mining district in Upper Kuskokwim
- Nixon Fork Mine
- Pebble – Cu, Au
- Donlin Creek – Au
- Chuitna – Coal
- Deadfall Syncline – Coal
- Man – Cu, Ni, PGE
- Others

Capital Needs For FY12

- **Roads to Resources:**
  - Foothills West Access - $8 M
  - Ambler - $1.25 M
  - Western Alaska Access - $1.25 M

Why General Funds

- **General funds provide:**
  - Most flexibility – usually only one NEPA process
  - Leverage other funding sources
  - Opportunities for Public-Private Partnerships

Benefits Summary

- Umiat access will put oil into TAPS
- Ambler Mining District access will allow for development of world class Cu, Zn, Pb, Au, Ag sulfide deposits
- Western Alaska Access will allow connectivity for mineralized areas along the corridor
- Projects will provide jobs and expansion of local economies

Senate Finance Committee,

Please use this set of questions during the Department of Transportation's presentation on the Roads to Resources hearing on Thursday, March 31. Many communities in the area of the proposed road to Umiat have brought concerns and questions to the DOT. We look forward to the DOT's presentation, and hope these following questions are addressed:

1. Will there be more public participation in the DOT process to come?
2. Will comments raised in past public hearings in Anaktuvuk Pass, Nuiqsut, and Barrow be addressed and relayed back to the communities? If so, how?
3. What is the proposed timeline for the $8 million included in Governor Parnell's fiscal year 2012 Capital Budget? Is there a timeline DOT is currently working under for this road project?
4. Why was the Galbraith route selected as the preferred alternative? Which alternative route might have the least impact on subsistence activities and harvests?
5. Each proposed route for the road to Umiat cross critical migratory corridors for Central Arctic Caribou Herd (CAH) and at times the Teshekpuk Caribou Herd (TCH) and the Western Arctic Herd (WAH). Subsistence harvest of caribou is critical to physical, cultural, and spiritual health of numerous Alaska Native communities. How have roads and resource development projects throughout the state impacted caribou migration routes?
6. Communities also rely on the harvest of furbearers and other migratory and resident fish and game resources.
7. Will the road be opened to the public? Because funding for the road is from the State, might we encounter a similar situation like the Haul Road where it was private for some time and then finally opened to the public?
8. A public road can increase sport hunters as well as create public access to the Colville River and other rivers important to subsistence activities and harvests. Are there plans to keep hunting a certain distance from the road?
9. An increase of sport hunting of caribou may increase the resources and staff needed for the management of the wildlife. Is there a plan to fund these needs?
10. What is the long-term plan for funding the road and maintaining it?

Anaktuvuk Pass

Naqsragmiut Tribal Council

P.O. Box 21065, Anaktuvuk Pass, Alaska 99721

4/31/2011

RESOLUTION NO. 2011-02

A RESOLUTION OF THE NAQSRAGMIUT TRIBAL COUNCIL AND NAQSRAGMIUT TRIBAL RESIDENTS OPPOSING COAL DEVELOPMENT IN THE NANUSHUK AREA.

WHEREAS: the Naqsragmiut Tribal Council is the federally recognized tribal government for the village of Anaktuvuk Pass, and

WHEREAS: the Naqsragmiut Tribal Council seeks to accurately represent the concerns of the tribe, and

WHEREAS: the Naqsragmiut Tribal Council has determined that tribal residents have long depended on, and will continue to depend on, the caribou, fish, edible plants, moose, bear and clean air and water found in the Nanushuk Area for their subsistence and traditional way of life, and

WHEREAS: the Naqsragmiut Tribal Council has determined that development of coal resources, including the development of an open pit mine, subsurface mine, underground coal gasification or any associated infrastructure, will have considerable adverse effects on the quality of life enjoyed by tribal residents, the subsistence and traditional lifestyle, the social well-being of the community, and the local and regional water resources, and

WHEREAS: the Naqsragmiut Tribal Council has determined that tribal residents overwhelmingly oppose any proposed coal mining developments, and

WHEREAS: the Naqsragmiut Tribal Council has determined that even if any proposed mining developments are permitted to move forward by state or federal process, the Tribal Council will stand firm in its commitment to represent these tribal concerns and ensure that all measures are taken by any participating mining companies and responsible state and federal agencies to avoid and mitigate any impacts to the Tribe's subsistence and traditional way of life,

NOW THEREFORE BE IT RESOLVED: that because of the potential damage to the environment, potential threat to cultural heritage, potential disruption to the subsistence lifestyle as we know it, the Naqsragmiut Tribal Council hereby strongly opposes the development of any open pit coal mine, subsurface coal mine, underground coal gasification or any other coal development activities in the Nanushuk Area.

BE IT FURTHER RESOLVED: that the Naqsragmiut Tribal Council requests that the Governor of the State of Alaska and his administration halt all plans to develop coal in the Nanushuk Area.

BE IT FURTHER RESOLVED: that the Naqsragmiut Tribal Council will do all that it can to preserve our subsistence and traditional way of life for current and future generations by opposing coal development.

CERTIFICATION: The foregoing resolution was duly adopted at the official meeting of the Naqsragmiut Tribal Council this 31 day of January 2011, at which a quorum of tribal residents eligible to vote was present. This resolution supersedes any resolution which may have been passed on this issue.

January 14, 2010

RESOLUTION 2010-01

A RESOLUTION OPPOSING CONSTRUCTION OF AN INDUSTRIAL ROAD FROM THE JAMES DALTON HIGHWAY TO THE GUBIK NATURAL GAS FIELD AND UMIAT OIL FIELD

WHEREAS, Alaska Governor Sean Parnell announced in December 2009 a transportation plan to build a four-season gravel road from the James Dalton Highway to the Gubik gas complex and beyond to the Umiat oil field; and

WHEREAS, Governor Parnell's budget for Fiscal Year 2011 will include $8 million for the Department of Transportation and Public Facilities to aggressively pursue permitting to build the road; and

WHEREAS, current cost estimates to complete the project would be approximately $350 million; and

WHEREAS, state transportation planners have preliminarily proposed three alternate routes for the planned road; and

WHEREAS, each of the three proposed alternate routes serves as a critical migratory corridor for the Central Arctic Caribou Herd (CAH) and at times for the Teshekpuk Caribou Herd (TCH) and Western Arctic Herd (WAH); and

WHEREAS, the subsistence harvest of caribou from the CAH, TCH, and WAH is critical to the physical cultural, and spiritual health of the residents of numerous Alaska Native communities within the region; and

WHEREAS, these communities also rely heavily on the harvest of furbearers and other migratory and resident fish and game resources beyond caribou; and

WHEREAS, the example of the forced opening of the James Dalton Highway to public access would seem to indicate that the proposed road would also have to be open to public access if constructed with public funds; and

WHEREAS, the proposed road would therefore allow increased sport hunter and other public access to the surrounding land ,the Colville River area, and other river systems critical to regional subsistence activities and harvests; and

WHEREAS, increased access for urban hunters and sport hunters would impact the true subsistence harvest of caribou, furbearers, and other resources critical to full-time North Slope residents who depend most directly on these resources; and

WHEREAS, increased sport hunter access via the proposed road would result in increased hunting pressure on the Central Arctic, Teshekpuk, and Western Arctic Caribou Herds, the management of which have required the commitment of considerable staff and financial resources from numerous agencies and private entities; and

WHEREAS, far more intensive management and oversight of these herds would be required, along with an associated commitment of substantial additional financial resources, if the road is constructed and public access is permitted; and

WHEREAS, with a declining budget and no mandate or direct management authority over any of the wildlife resources involved, the North Slope Borough would be hard-pressed to commit to any financial role in the intensified fish and game management and monitoring that would be required upon construction of road; and

WHEREAS, it is also relevant that pending House Bill 267 would allow the use of snow machines in the Dalton Highway Corridor (Corridor) that extends for five miles on either side of the James Dalton Highway (Highway), and is presently closed to travel by motorized vehicles; and

WHEREAS, if House Bill 267 becomes law, greater access to the Corridor would further tax the already strained ability of state law enforcement to protect both the public and its resources at large given that the lone trooper seasonally stationed in Coldfoot already must patrol an area larger in size than many of the Lower 48 states; and

WHEREAS, greater access off the Highway and the lure of access along the proposed road would certainly increase the traffic on the Highway, with commensurate increased needs for sanitary facilities, signage, air-based search and rescue and other emergency response capabilities, many which would likely be borne by the North Slope Borough; and

WHEREAS, increased public traffic would mean increased risks to the industrial traffic that is necessary to maintain the smooth and uninterrupted operation of oilfields that are the economic assets of the state; and

WHEREAS, North Slope communities are already experiencing, and are likely to increasingly see, cumulative impacts associated with industrial expansion in both onshore and offshore areas, and a variety of pressures associated with ecological changes resulting from arctic warming, and changing wildlife numbers and distributions.

NOW, THEREFORE BE IT RESOLVED, that the North Slope Borough Fish and Game Management Committee strongly opposes the construction of a road from the James Dalton Highway to the Gubik Natural Gas Field and the Umiat Oil Field.

ADOPTED by a duly called quorum of the North Slope Borough Fish & Game Management Committee at Barrow, Alaska on this 14th day of January 2010.

Governor Sean Parnell
State of Alaska
PO Box 110001
Juneau, AK 99811

Re: Resolution of the Naqsragmiut Tribal Council Opposing Coal Development in the Nanushuk Area

Dear Governor Parnell,

The Naqsragmiut Tribal Council respectfully requests that the State of Alaska halt all plans for the permitting and development of coal resources in or near the Nanushuk Area. As the federally recognized tribal government for the Village of Anaktuvuk Pass, the Naqsragmiut Tribal Council has the best interest of the people at heart.

The Village of Anaktuvuk Pass is located a mere 35 miles south-southwest of the proposed Nanushuk coal prospecting permits. Village residents have long depended on, and will continue to depend on, the rich subsistence resources found in the Nanushuk Area to support their traditional lifestyle and cultural heritage. Caribou, fish, edible plants, moose, bear, and clean air and water found in the Nanushuk Area all play key roles in maintaining the quality of life enjoyed by tribal residents and the social well-being of the community. It is in the best interest of the people to protect these important subsistence and cultural resources for current and future generations.

The proposed Nanushuk coal prospecting permits would be the first step toward coal exploration and development activities on over 116,000 acres of important subsistence lands. If issued, these permits would risk untold harm to local communities, our cultural heritage and the historic and cultural uses of the land. Coal prospecting and its related activities are not compatible with ongoing uses of the land. Because of the potential damage to the environment, and the threat coal development would pose to our culture and lifestyle, tribal residents overwhelmingly oppose the proposed coal prospecting permits.

The Naqsragmiut Tribal Council is determined to stand firm in its commitment to the people and represent the people's interests by strongly opposing any coal permits, leases or other coal-related activities in the Nanushuk Area. With the best interests of the people in mind, on January 31, 2011, the Naqsragmiut Tribal Council adopted the appended resolution. It expresses the will of the people to protect subsistence and cultural uses of the Nanushuk Area and calls on the State to halt all plans to issue coal permits or otherwise authorize coal-related activities in the Nanushuk Area. We respectfully request that you honor the best interests of the people by not

issuing the Nanushuk coal prospecting permits and halting all plans for the leasing, exploration or development of coal resources in the Nanushuk Area.

Thank you for your attention to this important matter. We look forward to hearing from you and hope your office and the State of Alaska will halt all plans to develop coal in the Nanushuk Area.

Sincerely,

Timothy Ahgook Sr.

Timothy Ahgook Sr.

Foothills West **FY2012 Request: $8,000,000**
Reference No: 50844

AP/AL: Allocation
Project Type: Construction
Category: Transportation
Location: Ambler
Contact: Frank Richards, Deputy Commissioner
House District: Arctic (HD 40)
Contact Phone: (907)465-3900
Estimated Project Dates: 07/01/2011 - 06/30/2016
Appropriation: Roads to Resources

Brief Summary and Statement of Need:
The Foothills West Transportation Access project proposes to construct a road from the Dalton Highway to Umiat. The purpose of the Foothills West Transportation Access Project is to provide access to oil and gas resources both along the northwestern foothills of the Brooks Range and within the National Petroleum Reserve- Alaska (NPRA). The road would provide both exploration and development opportunities for the area as well as facilitate a more economically feasible NPRA development. This second installment will complete the environmental impact survey (EIS).

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
AIDEA Div	$8,000,000						$8,000,000

Total:	$8,000,000	$0	$75,000,000	$78,000,000	$81,120,000	$0	$242,120,000

☐ State Match Required ☐ One-Time Project ☐ Phased - new ☑ Phased - underway ☐ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
$8,000,000 - Ch 43 SLA 2010 Sec 7 Pg 38 Ln 15; $4,000,000 - Ch 3 SLA 2005 Sec 58 Pg 136 Ln 28; $5,119,971 - Ch 159 SLA 2004 Sec 1 Pg 48 Ln 17.

Project Description/Justification:
The current project is being proposed as multi phased. The first phase of the project would construct an approximately 85 mile long all season road to the Gubik Gas Fields vicinity, in order to capitalize on potential exploration and development within the project study area. The second phase would continue the construction of the road for an additional 15 miles to Umiat, and would include a bridge across the Colville River. This second phase would achieve a long term goal of all season access to the National Petroleum Reserve – Alaska.

During the summer of 2009 DOT&PF performed and contracted for engineering and environmental studies of potential road corridors within the project study area. Preliminary assessments resulted in studies focusing on a potential road corridor from the Galbraith Lake area to Umiat. Subsequent engineering field studies focused on collecting the following information: imagery and survey data; hydrology data along the Itkillik, Anaktuvuk, and Chandler rivers; geotechnical data focusing on potential material sites within the corridor; and the potential road alignment routing options within the

corridor. Environmental studies were also conducted within the project corridor and focused on baseline wetlands mapping, fish and wildlife species and habitats, cultural and archeological resources, and identifying subsistence resources and use patterns. Fieldwork continues in 2010, focusing on environmental baseline studies in preparation to begin the formal NEPA documentation process.

Previous funding for the project is $17,119,971. The requested funding will be used to advance the project through the preliminary engineering phase and produce an environmental impact statement (EIS). This project has the potential to create numerous private sector jobs in the oil and gas industry. Future maintenance costs will depend on how the project is developed (public highway, public-private partnership, private transportation facility).

Western Access Project **FY2012 Request: $1,250,000**
Reference No: 50843

AP/AL: Allocation
Project Type: Research / Studies / Planning
Category: Transportation
Location: Nome
Contact: Frank Richards, Deputy Commissioner
House District: Bering Straits (HD 39)
Contact Phone: (907)465-3900
Estimated Project Dates: 07/01/2011 - 06/30/2016
Appropriation: Roads to Resources

Brief Summary and Statement of Need:
The Western Alaska Access Study Project (WAASP) will continue the development of a transportation corridor connecting the existing road system with the Nome area road system. The project would provide economic development opportunities, create jobs and lower the cost of living for the residents of western Alaska.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
AIDEA Div	$1,250,000						$1,250,000
Gen Fund		$15,000,000	$15,600,000	$30,000,000	$31,200,000	$32,448,000	$124,248,000
Total:	$1,250,000	$15,000,000	$15,600,000	$30,000,000	$31,200,000	$32,448,000	$125,498,000

☐ State Match Required ☐ One-Time Project ☐ Phased - new ☑ Phased - underway ☐ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
$1,000,000 - Ch 43 SLA 2010 Sec 7 Pg 38 Ln 18; $1,000,000 - Ch 82 SLA 2006 Sec 1 Pg 108 Ln 11.

Project Description/Justification:
The current study is analyzing road corridors from the contiguous highway to the Seward Peninsula. The requested funding will be used to continue the project to the preliminary engineering phase. Operating cost estimates were derived from the existing costs to maintain the Dalton Highway, a similar type of roadway. Additional highway maintenance staff would have to be hired to maintain the facility.

Corridor Planning Report was completed January 2010 and DOT&PF is moving into the next stages of the project to obtain broad public input on the alternatives considered in the WAAPS Corridor Planning Report, conduct additional limited analysis of selective new options proposed or refinements of existing options proposed during the public review, and identify a proposed staging plan and alternative construction techniques.

The current estimate of this phase of the project is $5,000,000. This project funding would advance crucial elements of work to proceed beyond the current Western Access Planning Study to the preliminary engineering phase. Additional work would include advanced field engineering analysis

such as detailed construction recommendations, satellite imagery, GIS work, necessary advanced field studies, in-depth cost estimates, and earlier development of permits.

Department of Transportation & Public Facilities
Responses to Roads to Resources Overview Questions at Senate Finance 3/31/11

Dated 4/6/11

In response to questioned posed by Senate Finance Committee members during the Department of Transportation & Public Facilities Overview on Roads to Resources projects and FY12 capital budget requests, the following information is provided.

- ***Why are Maintenance and Operating (M&O) costs not included in the scoring matrix example on page 8 of the handout, or in the FY2012 project back-up?***

As discussed at the hearing, the scoring matrix provided in the handout is a starting point for discussion, and the department agrees that it will be important to include an estimate of future ongoing M&O costs; however, at this time project funding is focusing on the planning and EIS stages. An EIS will impact any future cost calculations for design, construction, and ongoing maintenance and operations. Lastly, it is the intent of this program to have toll revenues paid by industrial users to fund M&O annual costs.

- ***How much of funding request is for Right-of-Way acquisition?***

None of the FY12 funding request is for Right of Way acquisition. The current focus of the projects is to perform enough engineering work to support the EIS and permitting. Included in the engineering work to support the EIS will be right of way base mapping which will describe property boundaries, easements, etc. From that mapping initial appraisal of properties can occur.

- ***Who are the private landowners on the map on page 15 of handout (Road to Nome)?***

Landowners include state, federal, Doyon Ltd., Bering Straits, NANA, potential private ownership, and potential native allotments. Specific ownership information will take place after a corridor is selected for study. Again, accurate base mapping and title searches will be employed to determine accurate land ownership.

- ***How much do corporations benefit from each phase?***

Corporation's benefits related to the construction of a road would include factors such as savings in exploration, development, and production cost due to transportation infrastructure being in place to support those actions. It is not possible to quantify how much each corporation will benefit, but it is our hope that road construction will affect their ability to start production is earlier which translates to jobs and state revenue. Lastly, it is the department's intent to recoup capital costs as the development realizes revenues.

- ***Was there a public hearing in Anaktuvuk Pass? When and where?***

A formal public hearing has not yet taken place in Anaktuvuk Pass. This will occur in the scoping phase of the EIS for the Foothills West project, expected in June, 2011. Three informational meetings have been conducted by DOT&PF in Anaktuvuk Pass since January, 2009, relating specifically to the Foothills project. The dates of these meetings, as well as the meeting notes, are available on the project website: http://foothillsroad.alaska.gov.

- ***Provide a list of where and when public hearings on these proposals have taken place or planned.***

As described previously, no formal public hearings for these projects have taken place.

- A list of informational public meeting dates for the Foothills project is available on the project website at http://foothillsroad.alaska.gov. The Foothills meetings consisted of 3 rounds of public informational meetings at Anaktuvuk Pass, Nuiqsut, and Barrow.

- Informational public meetings related to the Ambler Mining District Access project have taken place at Ambler, Shungnak, and Kobuk in January, 2011.

- Informational public meetings for the Western Alaska Access Project have been held in most communities along the Yukon River Corridor between October 2010 and March 2011. A list of the community meetings and notes are available on the project's website: http://www.dowlhkm.com/projects/westernalaskaaccess/Documents.htm

- ***How were expenditures to-date spent in terms of actual construction work project(s), as opposed to planning, study, design, etc.?***

As presented at the hearing, earlier year appropriations for Industrial Development Roads were part of a prior Administration, and were not as focused on specific projects and/or areas as the funding requested in and appropriated in FY11 for Roads to Resources and the three FY12 funding requests for Roads to Resources. As a result, the expenditures for prior year projects include funding for a variety of projects as provided in Attachment # 1.

- ***How are amounts of prior year appropriations that are encumbered being spent or planned to be spent?***

The information below is provided as an update to the current Roads to Resources projects' FY2011 capital funding. See prior response and attachment for information on prior year appropriations.

Foothills West Transportation Access:
Foothills prior year encumbrances are dedicated to the following activities:

- On-going hydrology studies including 2011 spring break up and river gauging studies to be conducted in May, 2011- $1,303,000.
- Contract environmental 2010 field studies completing technical reporting activities in 2011 - $1,075,000.
- Contract 3rd Party Environmental EIS work through EIS scoping - $586,000.
- State agency coordination activities related to EIS development - $37,000.

Total encumbrances (3/23/2011) - $3,001,000.

All remaining encumbrances are funded by AR 65472 / LA Citation Ch 43/10/38/15.

Ambler Mining District Access:
Ambler prior year encumbrances are dedicated to ongoing route analysis office studies scheduled to be completed in May, 2011 - $826,000.

Remaining encumbrances are funded by AR 65470 / LA Citation Ch 43/10/38/12.

Western Alaska Access:
Western Alaska Access Planning Study developed planning and economic analysis of alternatives for transportation corridors between central Alaska and the Seward Peninsula. Project completed in January of 2010 - $1,000,000 Ch 82/06/108/11 (Industrial Roads)

Western Access Project Phase 1 includes public involvement, construction staging and funding alternatives which will be completed in May 2011- $677,537 Ch 43/10/38/18 (Roads to Resources Western Access Project Phase 1).

The balance of this funding will be used for advanced route mapping, field studies, engineering analysis and implementation planning.

- ***Provide an overlay of map on page 15 of handout that shows where wells have been drilled, i.e. Renaissance, etc.***

In terms of drilled wells, the focus of the discussion was on the area of development by Renaissance Corp., which focused in the Foothills West area. The Foothills West slide is on slide 11 of the Roads to Resources handout provided to the committee. Please see Figure # 1, titled Exploratory Well Sites in the Vicinity of the Project Study Area, on page six of this document as an overlay to slide 11 for the Foothills West area.

The following questions were posed by Senator Olson in a handout during the committee meeting.

- ***Will there be more public participation in the DOT process to come?***

Yes, each of the projects will go through a rigorous public participation process as follows:

- The Foothills West project is beginning the formal EIS NEPA process. As part of this process the USACE will conduct formal scoping meetings and public hearings in Anaktuvuk Pass, Barrow, Nuiqsut, Fairbanks, and Anchorage. The scoping meetings are anticipated to occur in May-June 2011.

- The Ambler Mining District Access project will continue to conduct informal public informational meetings in the upper Kobuk communities of Ambler, Kobuk, and Shungnak in April/May 2011, and expand community outreach efforts as potential corridors are better defined.

- The Western Alaska Access project has conducted thirty public informational meetings in communities over the past several months. The public report will be available online in April 2011.

Everyone who provided contact information on the public meeting sign in sheets will be notified of the completion of the study and where the results can be found. There will be more publications, newsletters and visits dependant on which route is chosen.

- ***Will comments raised in past public hearings in Anaktuvuk Pass, Nuiqsut, and Barrow be addressed and relayed back to the communities? If so, how?***

There have been no formal public hearings to date. All comments raised in past public informational meetings are available on the project website: http://foothillsroad.alaska.gov. These comments will be considered in the development of project conceptual design elements, as well as brought forward in the project EIS to help better understand environmental impacts.

- ***What is the "proposed timeline for the $8 million included in Governor Parnell's fiscal year 2012 Capital Budget? Is there a timeline DOT is currently working under for this road project?***

The $8 million will fund environmental and preliminary engineering activities to allow for a completed EIS Record of Decision anticipated in the Spring of 2013. DOT&PF is working with the agencies to accelerate this schedule to Fall/Winter 2012. Once a Record of Decision and permits are in hand the department will vigorously pursue construction so that additional oil can be added to TAPS.

- ***Why was the Galbraith route selected as the preferred alternative? Which alternative route might have the least impact on subsistence activities and harvests?***

The Galbraith Route is considered the State of Alaska's recommended study area. The "preferred alternative" will be developed as part of the EIS process – expected to take between 18 and 24 months to complete. The State selected the Galbraith Route based on exploration potential in the Foothills region, as well as a variety of engineering and environmental factors (construction costs, avoidance of major watersheds, etc.). DOT&PF, through a Contractor, is currently completing 2 years of subsistence studies. The results of these studies will be available in May of 2011.

- ***Each proposed route for the road to Umiat. cross critical migratory corridors for, Central Arctic Caribou Herd (CAH) and at times the Teshekpuk Caribou Herd (TCH) and the Western Arctic Herd (WAH). Subsistence harvest of caribou is critical to physical, cultural, and spiritual health of numerous Alaska Native communities. How have roads and resource development projects throughout the state impacted caribou migration routes?***

Caribou migration routes and subsistence harvests will be analyzed in detail as part of the Foothills West EIS process. DOT&PF has provided detailed project information to, and solicited the expertise of, the Alaska Department of Fish and Game, the Western Arctic Caribou working group, the North Slope Borough Wildlife Division, and US Bureau of Land Management. The department does not have an exact number of roads in the state that have impacted migration routes but knows it is an extensive number and many highways have multiple crossings.

- ***Communities also rely on the harvest of furbearers and other migratory and resident fish and game resources.***

DOT&PF has put significant effort into subsistence studies to identify and better understand fish, game, and other subsistence resources. More information will be derived from social and environmental studies conducted as part of the EIS process.

- ***Will the road be opened to the public? Because funding for the road is from the State, might we encounter a similar situation like the Haul Road where it was private for some time and then finally opened to the public?***

DOT&PF is aware of the community concerns related to public access in this region. Public/Industry safety concerns in relation to an industrial use road will be further evaluated in the EIS process for this project. In very general terms the facility will not be open to the public until it is brought to a highway design standard. This is for safety reasons. The amount of time it would take to bring this highway to an acceptable safety standard will be a function of how quickly the developer brings their venture into production. For instance, the Umiat road may be opened in a quicker time frame because an oil line will need to be buried in a finished embankment.

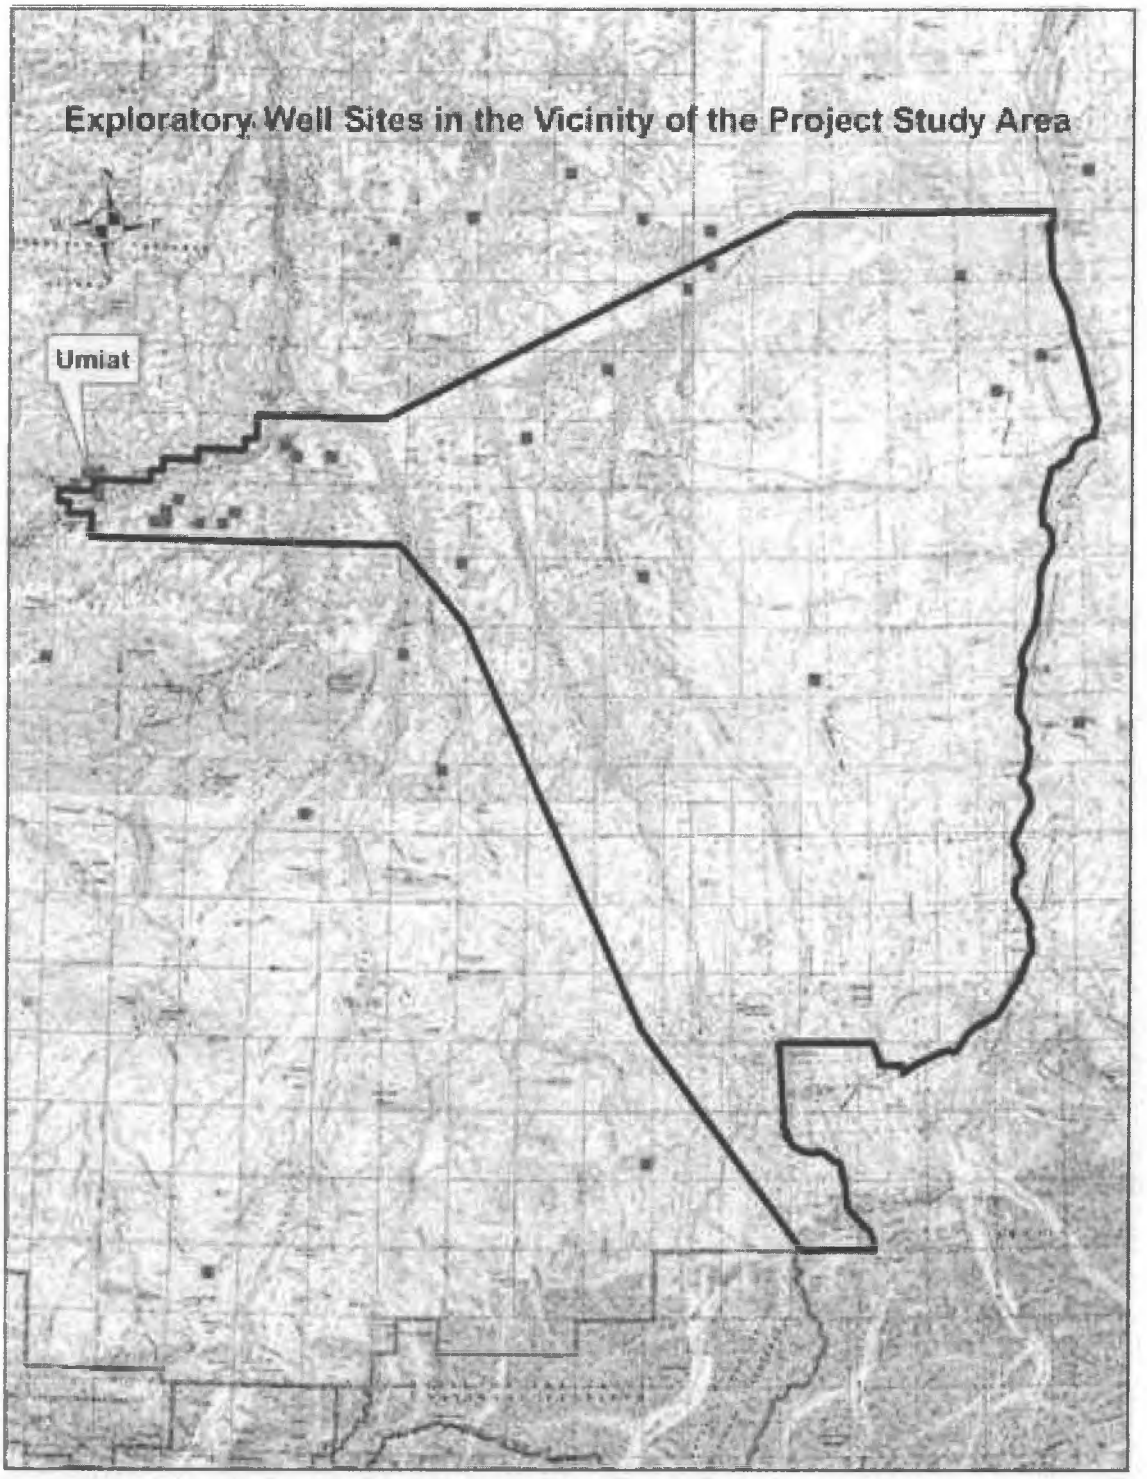
- ***A public road can increase sport hunters as well as create public access to the Colville River and other rivers important to subsistence activities and harvests. Are there plans to keep hunting a certain distance from the road?***

All state land in townships within the Umiat Meridian require a permit for motorized vehicle use, unless that use is for subsistence purposes or is on a graveled road. Additional evaluations of the Dalton Highway Corridor Management Area as related to road access will be conducted as part of this project. In addition, the impacts of hunting and public access to the Colville, and other rivers will be evaluated in the project's EIS process.

- ***An increase of sport hunting of caribou may increase the resources and staff needed for the management of the wildlife. Is there a plan to fund these needs?***

The EIS will thoroughly discuss the wildlife management needs, the potential for more protection, subsistence uses and all other aspects of game management. This information will be used by other agency staff to consider environmental mitigation.

- ***What is the long-term plan for funding the road and maintaining it?***



The long term plan for funding and maintaining industrial designated roads to Ambler and Umiat would include:

- Environmental and permitting work will be funded by state general funds.
- Initial pioneer road construction will be funded by either the state or the state and the private developer.
- Road improvements to bring the highway to a higher design standard will be funded by developers.
- The staff will enter private/public partnerships to minimize state costs and to seek a return of the state's initial investment.
- Maintenance costs will be returned to the state via industrial use highway tolls.

The long term funding for the Western Access route would vary from those constructed strictly for industrial uses.

- The initial pioneer road will be constructed with state general funds.
- Subsequent widening and improvement projects will more than likely be funded with federal aid funds.
- Construction of this roadway will more than likely be a long term process dependent upon community access needs and resource development.
- The Roadway would be designated as an industrial use highway for the collection of tolls from industry users.
- Maintenance costs (approximately $12,000.00/per mile at today's cost) will be returned to the state via industrial tolls.

April 6, 2011

The Honorable Bert Stedman
Co-Chair Senate Finance Committee
Alaska State Legislature
State Capitol, Room 516
Juneau, AK 99801-1182

Dear Senator Stedman:

Thank you very much for the recent opportunity to present and discuss the Governor's Roads to Resources program before the Senate Finance Committee. The Committee's interest and input into this program is most appreciated.

A number of questions were posed by various committee members; Senator Olson in particular provided a list of written questions and issues which required staff consultation to fully answer. Other follow-up questions from your staff have also been provided to the department. Enclosed you will find specific responses to the committee member and staff questions.

There also appears to have been some miscommunication between the department and the Finance Committee concerning potential benefits to the State of Alaska should the natural resource exploration projects in the Ambler Mining District and the Umiat oil field continue to development and production.

The purpose of the resource roads into the Ambler Mining District and the Umiat oil fields are to accelerate exploration, development, and ultimately production of these valuable resources to the State of Alaska.

Although the Ambler Mining District has seen significant exploration dating back to the late 1950's none of this exploration is detailed enough to provide a precise mineral reserve. However, the sum total of exploration does clearly show the Ambler District to be highly mineralized and to have the potential for hosting several massive sulfide mineral deposits similar in size to the Greens Creek Mine near Juneau. (The Greens Creek Mine has been in operation for over 25 years and employs 325 people.) The two best known massive sulfide deposits in the Ambler District (Arctic and Bornite) are both an order of magnitude larger than what was known for the Greens Creek Mine at the time it was developed. An all-weather pioneer road will greatly enhance the exploration, facility construction and eventual operation of the mining district.

Similar to the Ambler Mining District, the data currently available for the Umiat oil field only allows for the estimation of a broad range of oil and gas resources. The Alaska Department of Natural Resources (ADNR) estimates for Umiat range from 70-300 million bbl oil in place. Information provided by Renaissance Corporation suggests Umiat may contain an estimated 250 million bbl's of recoverable oil. Considerable exploration, delineation drilling, and production testing is necessary to refine these resource estimates to what could then be represented as actual reserves. Exploration work, supporting infrastructure, and eventual production drilling will begin much quicker with the availability of an all-weather pioneer road to support those work activities.

In regards to road construction and maintenance, we are proceeding in the following manner:

- The initial pioneer road, constructed with state or a combination of state and private funds, will be built to the lowest road standards required to provide basic access for exploration and site development. The pioneer road will only be available for industrial users; the embankment thickness will only be that required to support construction equipment building the road; the width will be no more than 16' on top; temporary floating bridges, temporary pre-manufactured bridges or other low cost methods will be used for the two river crossings for the Umiat Road. In short, the initial road constructed will only be an access road to enhance the developer's ability to perform exploration work, to begin building infrastructure, and to begin producing their product to bring in revenues that would support constructing the roadway to a higher design standard.

- Prior to construction of the pioneer road, the State and the developer(s) will enter into an agreement to bring the roadway to a higher design standard. The initial agreement will be based on a Private-Public Partnership (3P) concept. The 3P model would be developed to accommodate the developer's stream of revenue; for instance with the Umiat Road the developer needs a buried pipeline to connect to TAPS and the roadway would need to be completed to a high standard quickly for pipeline support. On the other hand perhaps the road to Ambler could be brought to a highway standard along the same timeline that new mine sites come on line.

- Participatory to the initial construction funding techniques, in all cases, the department would designate the roadways as an Industrial Use Highway (IUH). An IUH designation means the department can impose industrial tolls which would at least fund the annual maintenance cost.

- The department is working with the Alaska Industrial Development and Export Authority (AIDEA) on the development 3P concepts as well as examining financing methods for industrial roads.

- If the roadway is eventually improved to a high enough design standard, the department will support opening it for public use.

The department fully realizes the committee's desire for more information regarding the costs of constructing and maintaining the road, the funding sources for the road, the size of the potential

sites, the revenues to the state, and other information to ensure that compiling a complex Environmental Impact Statement (EIS) is a good use of public funds.

We cannot emphasize more that the iterative nature of the EIS process will answer many of the questions the committee brought forward in the hearing. The EIS will be a summary document that considers natural environment impacts, social and cultural environment impacts, road costs, the purpose and need to access these resource rich areas, and a host of other information required through the NEPA and regulatory processes required by federal and state law.

Finally, if the Roads to Resources funding requests contained within the Governor's FY12 capital budget are not approved we will have to stop work on all three projects beginning July 1. A stoppage of work will severely hamper the ability of the private developers to create jobs and bring their products to market. A stoppage will also leave many of the very questions asked by committee members to remain unanswered.

Again, thank you for the opportunity to testify and answer the written questions provided. Please feel free to contact me should you or the committee require additional information or clarification.

Sincerely,

Patrick Kemp
Deputy Commissioner
for Highways and Public Facilities

1/23/12 OFFICE OF MANAGEMENT AND BUDGET: FY2013 BUDGET OVERVIEW AND FISCAL SUMMARY

<TARGET><BILL></BILL><SUBJECT>1-23-12 OFFICE OF MANAGEMENT AND BUDGET FY2013 BUDGET OVERVIEW AND FISCAL SUMMARY</SUBJECT><COMM>SFIN27</COMM></TARGET>

FY2013 Budget Overview

Senate Finance Committee

January 23, 2012

Office of Management and Budget

Budget Vision

Governor Parnell's vision

Economic Growth and Strengthening Families

Budget Principles

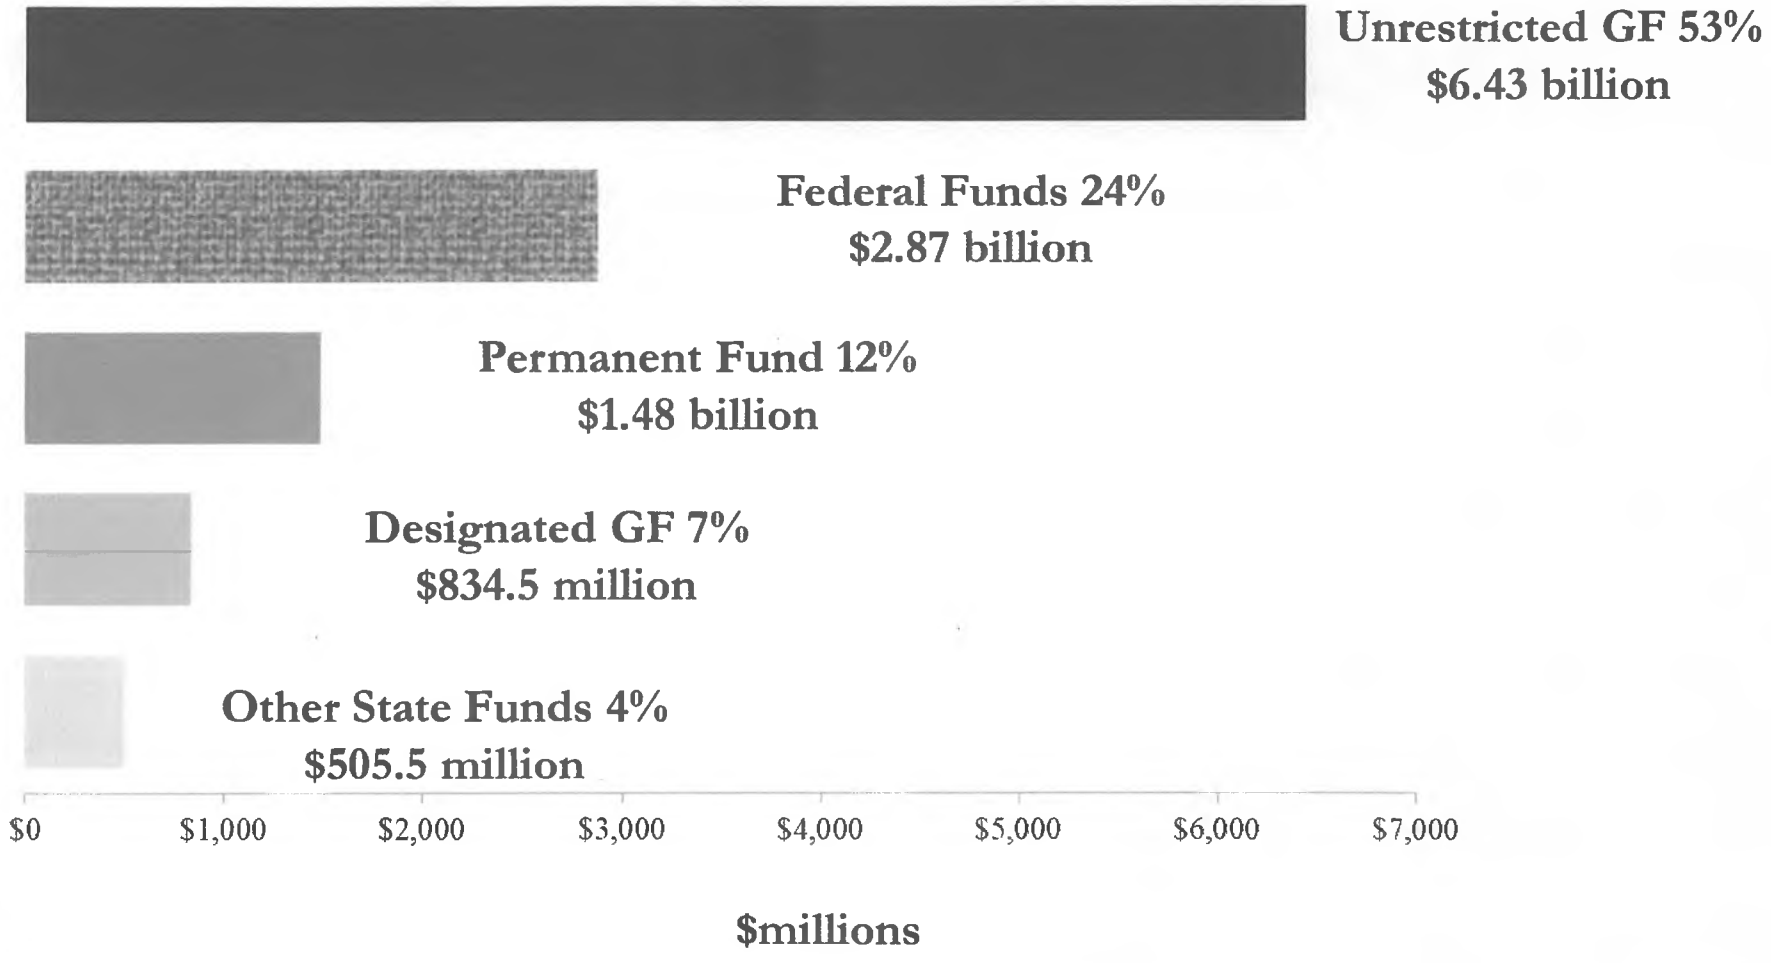
Guiding principles

- Fiscal Restraint
- Strategic Investments
- Cash Reserves
- Focus on Results

Budget Priorities

Focus on Administration's strategic investment priorities

- Resource Development
- Education
- Public Safety
- Transportation/Infrastructure
- Military Support



FY2012/2013 Revenue

Budget Restraint = Surplus

Unrestricted General Funds	FY2012	FY2013
Revenue (FY12 includes $53.6 reapprop./carry forward)	$8,981.5	$8,217.7
Spending	-$7,041.8	-$6,430.2
Projected Balance	$1,939.7	$1,787.5
Opportunity to Save		$3,727.2

FY2013 Budget Sources of Funds

Total FY2013 Budget $12.1 Billion

FY2013 Budget Priorities

Jobs for Alaskans

- Resource Development
  - –Roads to Resources $28.5 million
  - –Streamline Permitting $3.3 million
  - –Strategic Minerals/Shale Oil Assessment $3.8 million

FY2013 Budget Priorities

Preparing Alaska's Students for Success

- **Education**
  - Full funding & forward funding for K-12 education and pupil transportation $1.17 B
  - TRS Assistance payment $302.7 million
  - Alaska Performance Scholarships $8.0 million
  - School Construction $61.0 million (2 projects)
  - Major Maintenance $23.9 million (14 projects)

FY2013 Budget Priorities

Safe Homes and Strong Families

- **Public Safety**

Choose Respect

- Prevention and Intervention $3.3 million
- Support for Survivors $3.2 million
- Law Enforcement $5.3 million

Disaster Preparedness

- Emergency Food Supplies $4.9 million
- Interior Search & Rescue Helicopter $3.0 million

FY2013 Budget Priorities

Build and Maintain Alaska's Infrastructure

- **Transportation/Infrastructure**

  Over $1 billion for Statewide infrastructure projects

  - Highways and Aviation $938.3 million
  - Municipal Water & Sewer $32.0 million
  - Municipal Harbor Grants $23.1 million
  - Port GO Bond package $350.0 million

  Energy

  - Renewable Energy Grant Fund $25.0 million
  - Weatherization/Home Energy $51.5 million
  - Bulk Fuel & Rural Power System upgrades $15.0 million
  - Power Cost Equalization $38.2 million

  Deferred Maintenance $100.0 million

FY2013 Budget Priorities

Strengthen Military Missions and Support Alaska's Military families

- **Military Support**
  - Army and Air Guard Facilities $4.0 million
  - Veteran's Services and Outreach $0.7 million
  - Veteran's Cemetery $2.0 million
  - Alaska Aerospace Corporation $8.0 million

FY2013 Expenditures by Category

K-12 Formula 9.7%
$1.17 Billion
(includes pupil trans.)

Agency Nonformula
All Other Funds 16.8%
$2.03 Billion

Other Formula 16.2%
$1.96 Billion

Agency Nonformula
Unrestricted GF 18.2%
$2.21 Billion

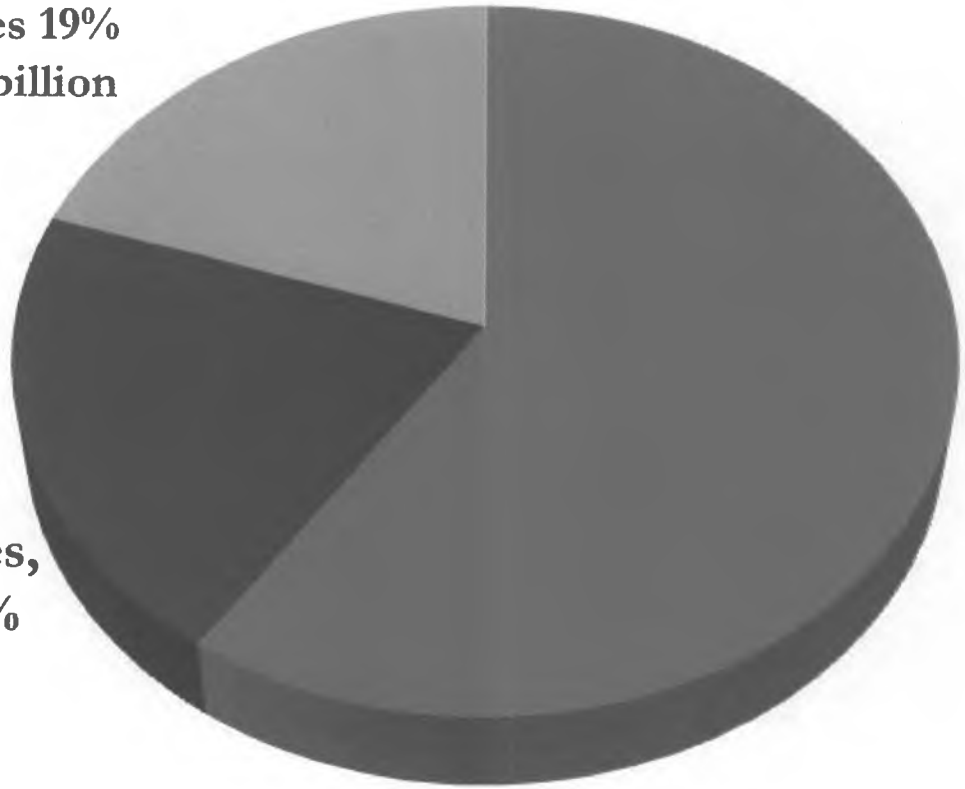
Statewide
Appropriations 11.9%
$1.44 Billion

Capital Budget 14.9%
$1.80 Billion

Permanent Fund 12.2%
$1.48 Billion

Total Funds = $12,120.6 million

Net Transfers/Savings = $9.6 million



FY2013 Operating Budget Highlights

Restrain growth

- Deleted 288 positions
- Fully fund K-12 Education and Pupil Transportation $1.17 billion
- Medicaid growth $130.5 million
- Salary & Benefit increases $66.0 million
- Goose Creek $29.1 million
- Tourism Marketing $16.0 million

FY2013 Budget- Another Perspective

60% of Alaska's budget benefits communities, organizations and individuals through grants, direct payments and capital project funding

Includes duplicate funds, savings, investments and the Permanent Fund

Notes

A Total Unrestricted General Fund Revenue: Line 2 is based on information from the Department of Revenue Fall 2011 Revenue Forecast.

Unrestricted General Fund Revenue	FY2012	FY2013
Oil Price (ANS West Coast Spot per barrel)	$109.33	$109.47
Average ANS oil production (bbl, per day)	0.574	0.555
Unrestricted General Fund Revenue	**$8,927.9**	**$8,217.7**

Corporate Dividends	FY2012	FY2013
Alaska Industrial Development and Export Authority (AIDEA)	$29.4	$20.4
Alaska Housing Finance Corporation for Projects	$17.0	$16.5
Total as Unrestricted General Funds	**$46.4**	**$36.9**
Total AHFC Dividend for Capital Projects and Debt Service	$23.1	$27.3

B Reappropriations and Carry Forward: Includes fund sources for reappropriations and other appropriations (typically roll-forwards of prior year authorizations - including American Recovery and Reinvestment Act of 2009 (ARRA) Federal Receipts) that do not require additional FY2012 or FY2013 revenue.

C Restricted Revenue: Other revenue not included as Unrestricted General Fund Revenues in the Revenue Sources Book, such as Federal Receipts and University Receipts.

D Public Education Fund: Legislation in 2005 established the Public Education Fund (PEF). One of the effects of this legislation was to remove expenditures for K-12 Public Education from Agency Operations (Formula) on line 11. The FY2012 and FY2013 proposed total K-12 Foundation Program and Pupil Transportation expenditures are shown on line 10. The table below shows the amount of K-12 Foundation Formula and Pupil Transportation being expensed from the Public Education Fund, since expenditures from the fund do not require appropriation.

Public Education Fund Expenditures	FY2012	FY2013	FY2014
K-12 Foundation Formula	$1,074,840.1	$1,077,513.3	$1,077,513.3
Pupil Transportation	$62,665.8	$62,202.7	$62,202.7
Total	**1,137,505.9**	**1,139,716.0**	**1,139,716.0**

E Duplicated Authorizations: These appropriations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. The most significant examples of these type of expenditures include operating payments from Interagency Receipts, Capital Improvement Project Receipts and General Obligation Bonds.

F Debt Service: The Debt Service line includes actual payment of debt obligations, primarily General Obligation Bonds, State debt reimbursement programs such as School Debt reimbursement, Certificates of Participation (lease-financing), and International Airports Revenue Bonds.

G Fund Capitalizations: Operating Fund Capitalizations includes fund transfers to the Alaska Children's Trust Grant Account, Disaster Relief Fund and the Crime Victim Compensation Fund on line 16. Line 30 consists of the Emerging Technology Fund transfers.

H GO Bond Package: The Governor proposes a General Obligation (GO) Bond package for port projects, subject to voter approval in November, 2012.

I Renewable Energy Grant Fund: The Renewable Energy Grant Fund is capitalized with $26.6 million Unrestricted General Funds in FY2012, and $25 million Unrestricted General Funds in FY2013. $36.6 million in FY2012, and $25 million in FY2013, in grants are appropriated from the Renewable Energy Grant Fund in line 25 in the Designated General Funds column.

J AHFC Subsidiary Account -- Education Grants and In-State Gasline Fund Transfers: In the FY2012 column - The Legislature appropriated $400.0 million from the General Fund to the Alaska Housing Capital Corporation account (aka AHFC Subsidiary Account) in FY2011 (SLA 2011, Chapter 5 (SB46), Section 20(d)), and $200.0 million from the General Fund to the Alaska Housing Capital Corporation account in FY2012 (Id., Section 20(c))(line 48). Those fund transfers were then appropriated from the Alaska Housing Capital Corporation account; $200.0 million to an In-State Gasline Fund (Id., Section 20(e)), and $400.0 million to an Education Grants/Performance Scholarships Fund (Id., Section 20(f)). Each of those appropriations is contingent on the passage of legislation establishing the respective funds by the Twenty-Seventh Alaska State Legislature. Those contingent appropriations are included in this summary on lines 40, 41, 49 and 50. In the FY2013 column (line 50), the Governor proposes using $21.0 million in AHCC Receipts for capital projects and $8.0 million for Alaska Performance Scholarships.

K Cruise Ship Gambling Tax: The unspent balance of Cruise Ship Gambling Tax, prior to FY2012, appropriated for capital projects in line 25.

L Other Transfers: Includes capitalization of various State funds, such as the Fish and Game Fund, Oil and Hazardous Substance Release Prevention and Response Accounts, and others.

M PF Dividends / PFD Division Operations: Line 55 includes both the amounts for Permanent Fund Dividend (PFD) checks and other State operating costs of the PFD.

Permanent Fund Dividend Fund Other Expenditures	FY2012	FY2013
Department of Revenue, Division of Permanent Fund Dividend operations	$8.1	$8.2
Department of Health and Social Services, Public Assistance PFD Hold Harmless	$16.3	$16.8
Total	**$24.4**	**$25.0**

The financial information for the Permanent Fund section (lines 54-58) is from the Alaska Permanent Fund Corporation Fund Financial History & Projections as of October 31, 2011. These financial statements are available on the Alaska Permanent Fund website: www.APFC.org.

N Alaska Capital Income Fund: The Alaska Capital Income Fund is authorized by AS 37.05.565. The fund consists of income earned on money awarded as a result of the State vs. Amerada Hess royalty case, estimated to be $28-29 million per year, plus other appropriations. Those projections have been reduced in the FY2012 and FY2013 columns per the Alaska Permanent Fund Corporation Fund Financial History & Projections as of October 31, 2011.

Office of Management & Budget Contacts

Court Plaza Building, 240 Main St. Suite 802, Juneau, AK 99801

P.O. Box 110020, Juneau, Alaska 99811-0020 - Phone (907) 465-4660, Fax (907) 465-3640

Director

- **Karen J. Rehfeld**
  (907) 465-4660, (907) 465-3640 fax
- **Lynn Castle, Administrative Assistant**
  (907) 465-4660, (907) 465-3640 fax: Director and Policy Analyst Support

Policy Analysts

- **John Boucher, Senior Economist**
  (907) 465-4677: Long Range Fiscal Plan, Revenue Outlook, Financing Options, Permanent Fund Division/Corporation, Economic Resource Development (Gas-line), and Statewide Administrative Issues (PERS/TRS, Information Technology, Broadband, AIDEA).
- **Arnold Liebelt, Senior Policy Analyst**
  (907) 465-4676: Legislative Liaison, Fiscal Notes, Deferred Maintenance, Energy (Alaska Energy Authority, AHFC, Energy Performance), Transportation Infrastructure (Roads, Harbors, Ports, Alaska Marine Hwy System) and Criminal Justice (Public Safety, Law, Corrections).
- **Craig Kahklen, Management Analyst**
  (907) 465-3559: Performance Framework, Denali Commission, Federal Requests, Community Development (Revenue Sharing, Climate Change, Coastal Zone Management, Village Safe Water) and Heath/Education/Workforce (K-12 Education, University, Labor, and DHSS).

Internal Audit

- **Diane Burnham, Internal Auditor**
  (907) 465-4663 – (907) 465-3640 fax – Program/Performance-Audits, ARRA 2009 – Reporting, Indirect/Cost Allocation Plans, ARRA Coordinator

Budget Analysts

- **Kelly O'Sullivan, Chief Budget Analyst**
  (907) 465-4681, (907) 465-2090 fax – Governor, Legislature, Instructions, Operating Bills and Amendments, Operating ABS Scenarios, MH Bill and Amendments, Capital Bill and Amendments, Statewide Rates, LB&A
- **Linda Schauwecker, Admin Support Tech**
  (907) 465-4699, (907) 465-2090 fax – Budget Analysts and Audit Support
- **Brook Larson, Budget Analyst**
  (907) 465-4787 – Corrections, Law, Public Safety, Alaska Court System, DVSA Lead, Final Authorized and Actuals, Capital AR Status Report (CASR), Accounting System and ALDER Lead
- **Tyson Gallagher, Budget Analyst**
  (907) 465-4693 – Transportation, Capital Budget Instructions, Capital Reports, Capital ABS Scenarios

- **Karen Elliott, Budget Analyst**
  (907) 465-2178 – Education & Early Development, University, Public Education Fund, Auto AB, Fiscal Notes tracking, Community Funding
- **Lena Simmons, Budget Analyst**
  (907) 465-4697 – Military & Veterans Affairs, Natural Resources, Salary/Labor Costs, Disaster Policy Cabinet, Operating Budget Instructions
- **Sarah Brinkley, Budget Analyst**
  (907) 465-4690 – Health & Social Services, Mental Health Budget, Surveys, Revised Program Manual
- **Kym Mauseth, Budget Analyst**
  (907) 465-4684 – Fish & Game, Environmental Conservation, Fiscal Summary, Debt Service, Fund Transfers, Bill Sectionals, Ratifications, RP Log Reports
- **Tom Narvaez, Budget Analyst**
  (907) 465-8235 – Commerce, Labor & Workforce Development, Appropriation Log
- **Steve Ricci, Budget Analyst**
  (907) 465-4698 – Administration, Revenue

Alaska Budget System

- **Will Belknap**
  (907) 465-4674 – Project Manager, Programmer/Analyst
- **Heather Crondahl**
  (907) 465-4694 – Programmer

2/02/12 DEPARTMENT OF REVENUE: FY12 AND FY13 REVENUE FORECAST

<TARGET><BILL></BILL><SUBJECT>2-02-12 DEPARTMENT OF REVENUE FY12 AND FY13 REVENUE FORECAST</SUBJECT><COMM>SFIN27</COMM></TARGET>

Presentation to the
Senate Finance Committee
February 2, 2012
Alaska Department of Revenue

Outline for Presentation

- **Fall 2011 Revenue Forecast for FY2012 and 2013**
  - **Total Revenue**
  - **Unrestricted Revenue**
  - **Non-Oil Revenue**
- **Components of Production Tax Forecast**
  - **Oil Production Forecast**
  - **Oil Price Forecast**
  - **Lease Expenditures Forecast / Oil Company Spending**
  - **Tax Credits**

Fall 2011
Revenue Forecast
FY2012 and FY2013

FY 12 and FY 13 Total Revenue

Revenue Type	FY 12 ($M)	FY 13 ($M)
Unrestricted General Fund		
Oil Revenue	$ 8,215.3	$ 7,496.0
Other Sources (except Federal & Investment)	$ 535.7	$ 539.1
Investment Revenue	$ 176.9	$ 182.6
Subtotal Unrestricted	$ 8,927.9	$ 8,217.7
Designated General Fund		
Other Sources (except Federal & Investment)	$ 307.9	$ 308.1
Investment Revenue	$ 12.4	$ 41.8
Subtotal Restricted	$ 320.3	$ 349.9
Other Restricted Revenue		
Oil Revenue	$ 958.0	$ 891.9
Other Sources (except Federal & Investment)	$ 203.1	$ 203.2
Investment Revenue	$ 2,991.8	$ 3,746.0
Subtotal Restricted	$ 4,152.9	$ 4,841.0
Federal Revenue		
Oil Revenue	$ 4.0	$ 4.0
Federal Receipts	$ 3,102.5	$ 3,102.5
Subtotal Restricted	$ 3,106.5	$ 3,106.5
Total State Revenue	$ 16,507.7	$ 16,515.1

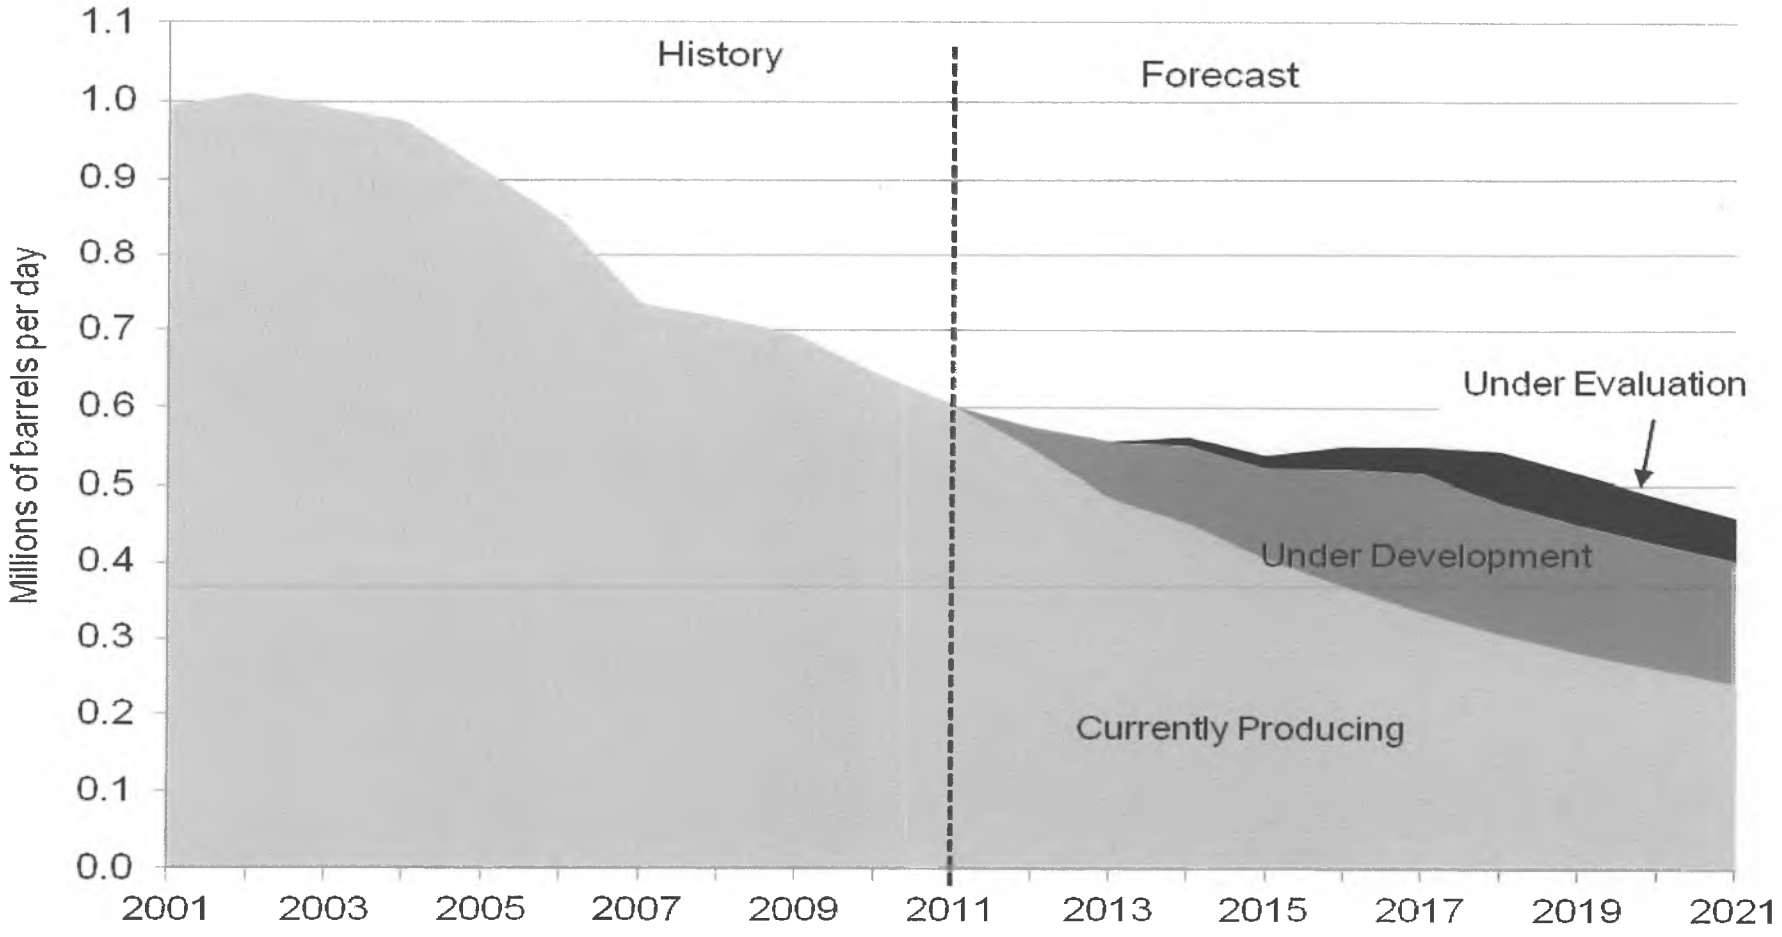
Components of Production Tax Calculation

- Production
- Price
- Lease Expenditures
- Tax Credits

Fall 2011
Oil Production
Forecast

Three Categories of Forecasted Production

1) Currently Producing- Includes base production and enhanced recovery production from investment in rate enhancing activities (perforations, stimulations, well workovers, gas and water injection support).
2) Currently under Development- New projects that are currently funded or awaiting project sanction in near future.



Three Categories of Forecasted Production

3) <u>Currently Under Evaluation</u>- Includes technically viable projects in the stage where engineering, cost, risk and reward are being actively evaluated. Unfunded but are considered to have a high chance of being brought to fruition.

Factors That Affect Production Forecasting

1. **GEOLOGY**
   - Rock type and formation characteristics
   - Depth, thickness, pressure
   - Oil & gas characteristics (oil gravity, viscosity, water content, etc.)
2. **DEVELOPMENT PLAN**
   - Well density and development rate
   - Well bore size and completion technique
   - Artificial lift and enhanced oil recovery
   - Facilities & surface operations
3. **COMMERCIAL**
   - Project economics
   - Oil price and market conditions
   - Government Policy: access, regulation, taxation
4. **PRODUCTION PROFILE**
   - History, stage of depletion
   - Use production profile to extrapolate trends
5. **TIMING!**

Forecasted ANS Production

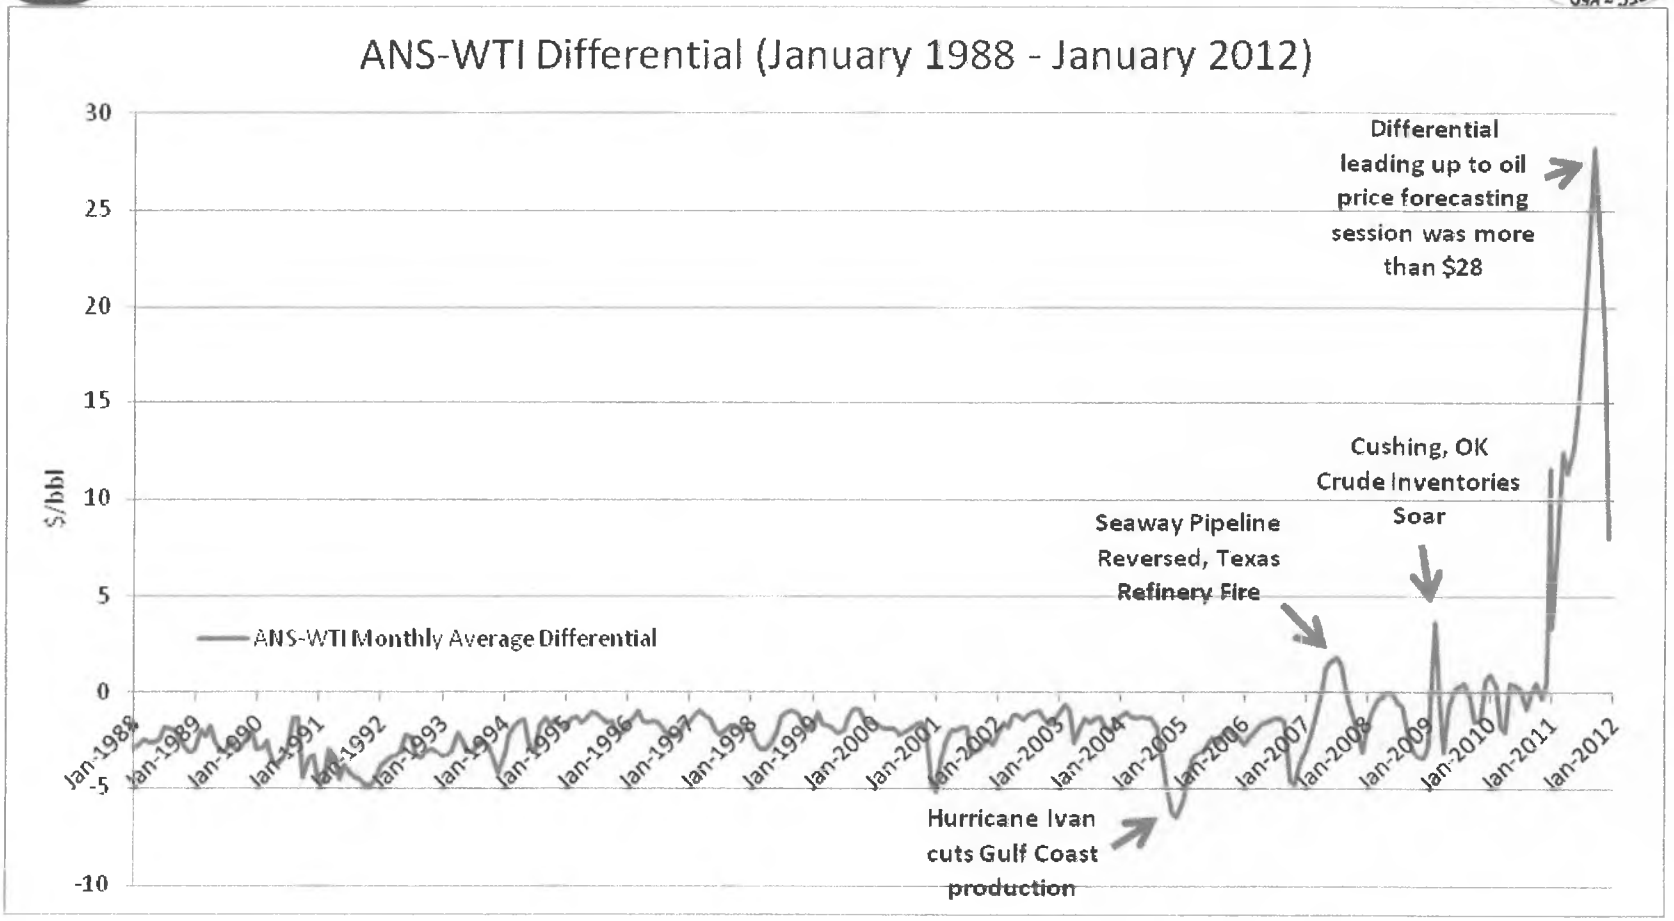
Production Forecast – Improvements in Methodology

- Created standardized reporting forms for production and reserve forecasting information.
- Petroleum Engineer and Petroleum Economists compiled the forecast information instead of reinterpreting data previously received.
- For first time, department received down time estimates requested historically and never provided.
- Followed up and met second time with industry to confirm department's assumptions and ensure forecast results were reasonable with the companies' projections.
- Production forecasting requires consideration of each project's geology, development plans, commerciality, production profiles, decline curves and timing.
- Department uses extensive well and field specific data acquired from producers, AOGCC, and DNR.
- New field development is very important in mitigating decline rates.

Conclusion on Production

- Production forecasting requires consideration of each project's geology, development plans, commerciality, production profiles, decline curves and timing.

- Department uses extensive well and field specific data acquired from producers, AOGCC, and DNR



- New field development is very important in mitigating decline rates.

Fall 2011 Oil Price Forecast

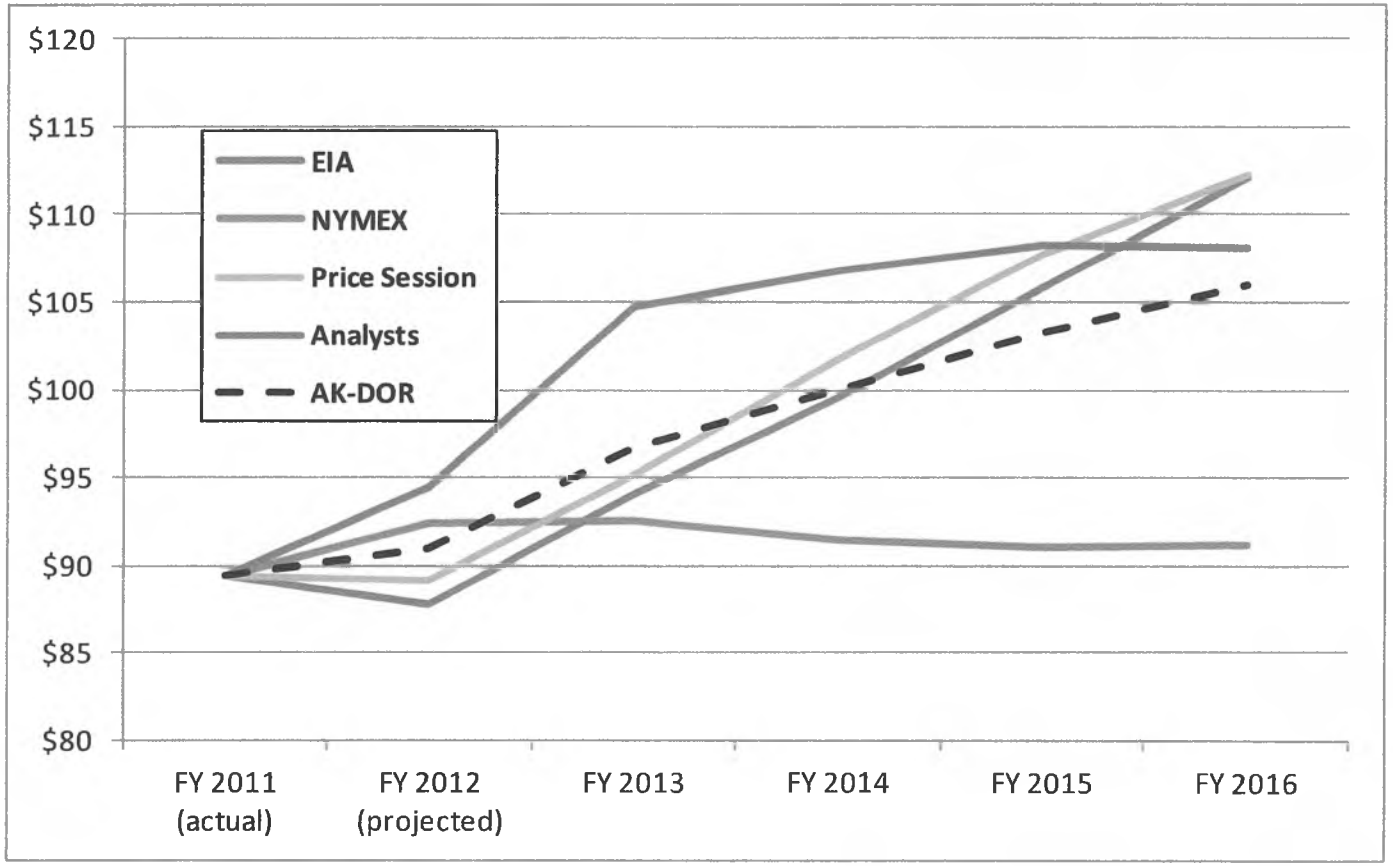
Price Forecast Methodology

- **Oil Price Forecasting Session held October 3, 2011, included 26 Participants from DOR, DNR, DOL, OMB, University, Legislative Finance and outside participants**
- **Forecasting Session Presentations included supply, demand, geopolitics, financial markets, outside expert forecasts, etc.**
- **FY 2011-2016: Average of participant forecast from Forecasting Session blended equally with NYMEX, EIA, and analysts to derive price forecast.**
- **Beyond FY 2016: Constant real price, 2.5% inflation**
- **Change in ANS-WTI differential methodology due to widening differential**

ANS-WTI Oil Price Differential

WTI, nominal dollars per barrel. Sources: DOR, Bloomberg, NYMEX, Energy Information Agency

ANS-WTI Oil Price Forecast Differential Methodology



Forecast the Brent-WTI Differential using futures

- Use the Brent-WTI futures spread

- Forecast the ANS-Brent Differential using history
  - Use an assumption based on the historical ANS-Brent differential
- Taken together these make the ANS-WTI Forecast
  - (Brent-WTI) + (ANS-Brent) = ANS-WTI
  - Brent-WTI = $26, ANS-Brent = -$1
  - $26 + -$1 = $25
- This differential narrows over time (currently $16 per barrel) averaging $18.41 for FY2012

- Differential peaked at ~$29 during Sept 2011; dropped to a low of ~$7 for a few days at end of December 2011; has climbed to ~$13 today
- RSB uses a differential of $18.41 for FY12 and as of January 30, 2012 the average differential FY-to date was $18.22

Price Forecasts as of October 2011

WTI, nominal dollars per barrel. Sources: DOR, Bloomberg, NYMEX, Energy Information Agency

Fall 2011 DOR Oil Price Forecast

	Real $		Nominal $	
	WTI	ANS	WTI	ANS
FY 2011 (actual)	89.39	94.49	89.39	94.49
FY 2012 (projected)	88.71	106.66	90.92	109.33
FY 2013	91.97	104.20	96.62	109.47
FY 2014	92.75	101.29	99.88	109.08
FY 2015	93.50	98.52	103.21	108.75
FY 2016	93.60	95.27	105.90	107.79

*Note: FY 2012 forecast includes one quarter of actual prices.

Forecast is made in terms of Real WTI , then adjusted using 2.5% inflation rate and a forecast differential to ANS.

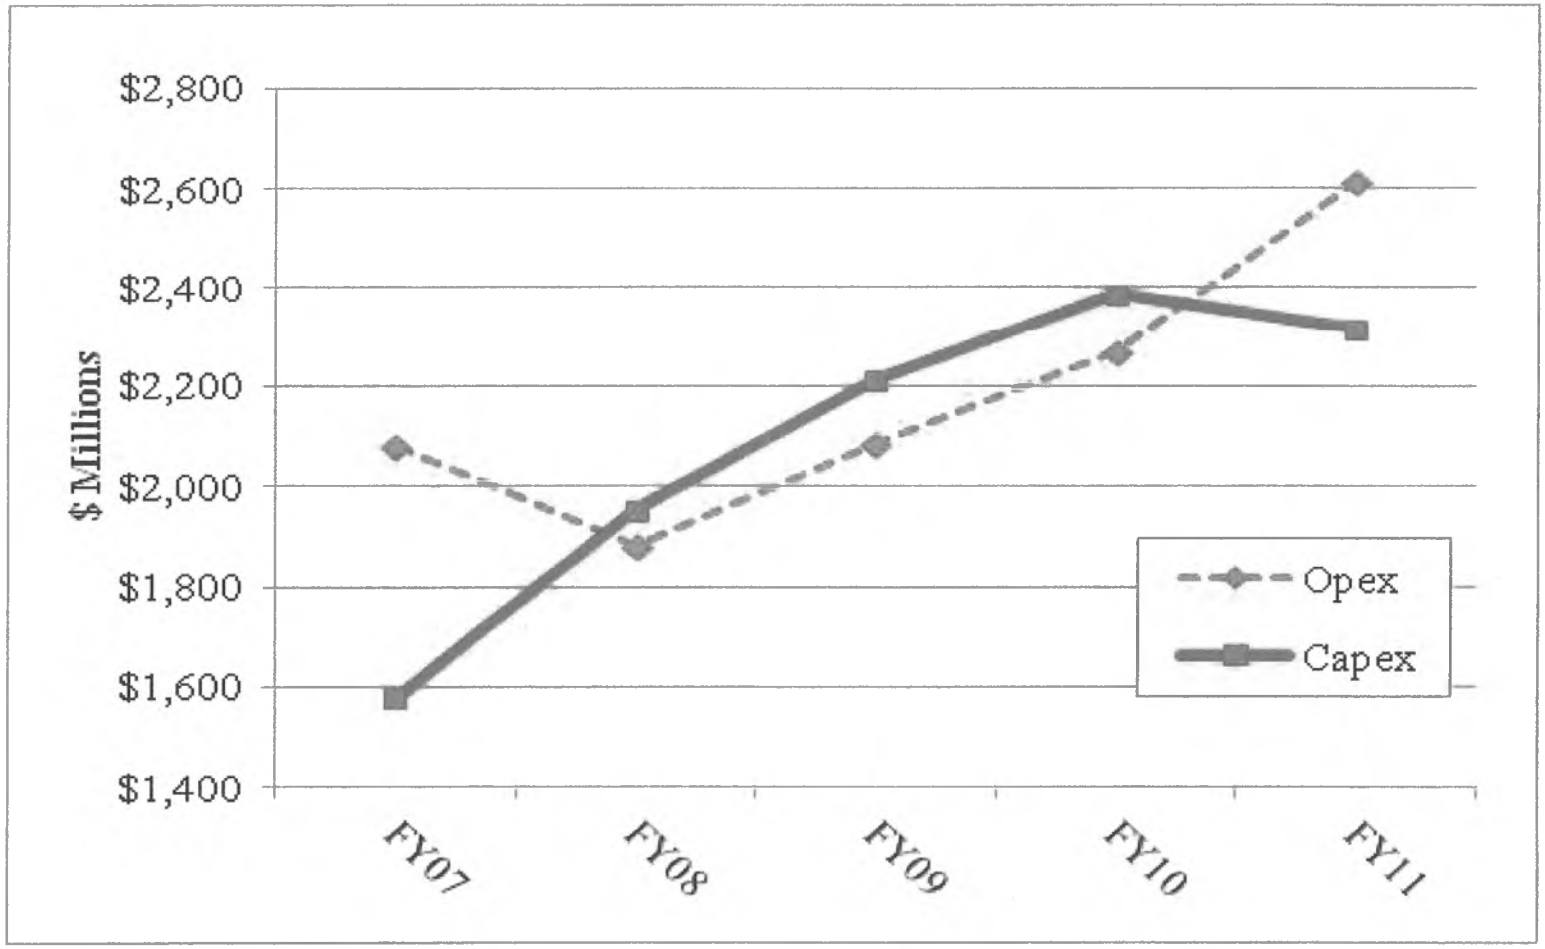
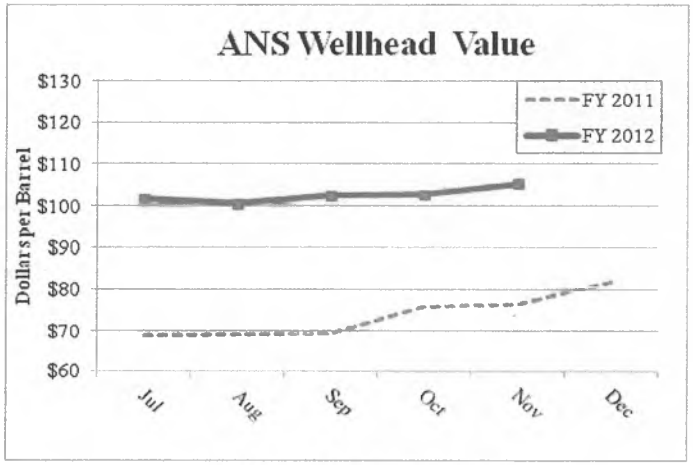
Fall 2011
Lease Expenditure Forecast

Lease Expenditure Forecast Methodology

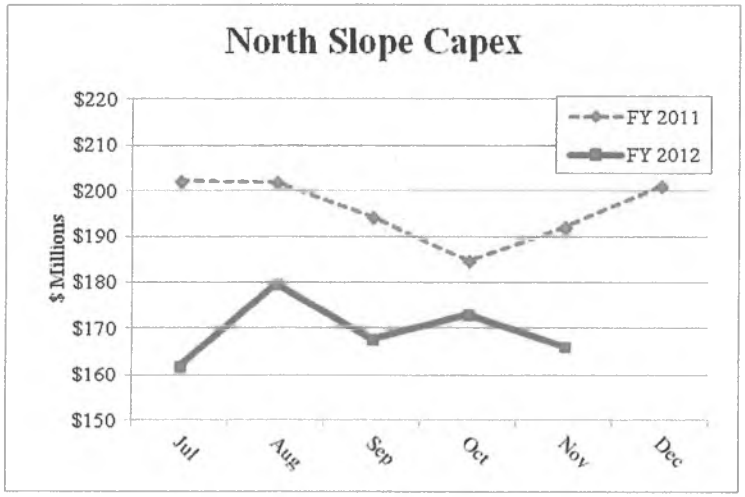


- **Request capital and operating lease expenditure projections from North Slope unit operators in the fall and the spring of each year in writing for the next five years from the current year**
- **Meet with and request spending projections from companies that are not currently producing but have announced drilling and/or development plans**
- **Review and coordinate with production forecast regarding anticipated developments outside the five-year time horizon received from operators**
- **Update long-term capital and operating expenditure projections based on new information**

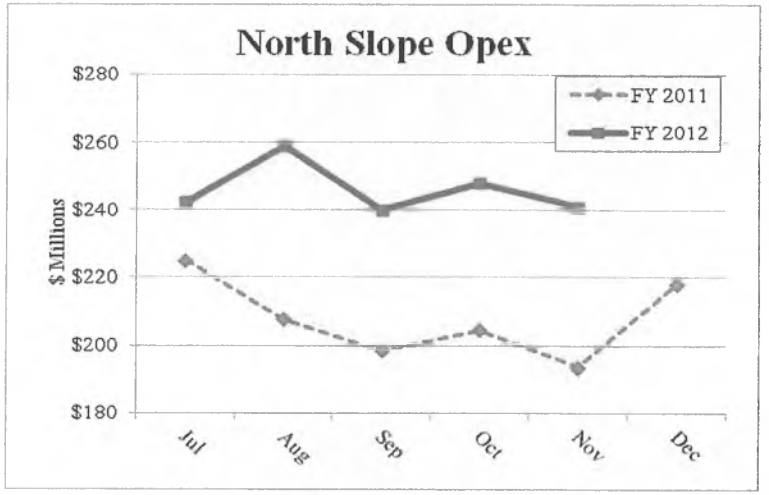
Forecasted North Slope Expenditures, FY 2012 – FY 2016



Source: Fall 2011 Revenue Forecast



Historical Actual Expenditures, FY 2007 – FY 2011



FY 2011 & FY 2012 Wellhead Values, North Slope Capex and Opex

FY12 avg up 43% through 5 months

FY12 down 11% through 5 months

FY12 up 19% through 5 months

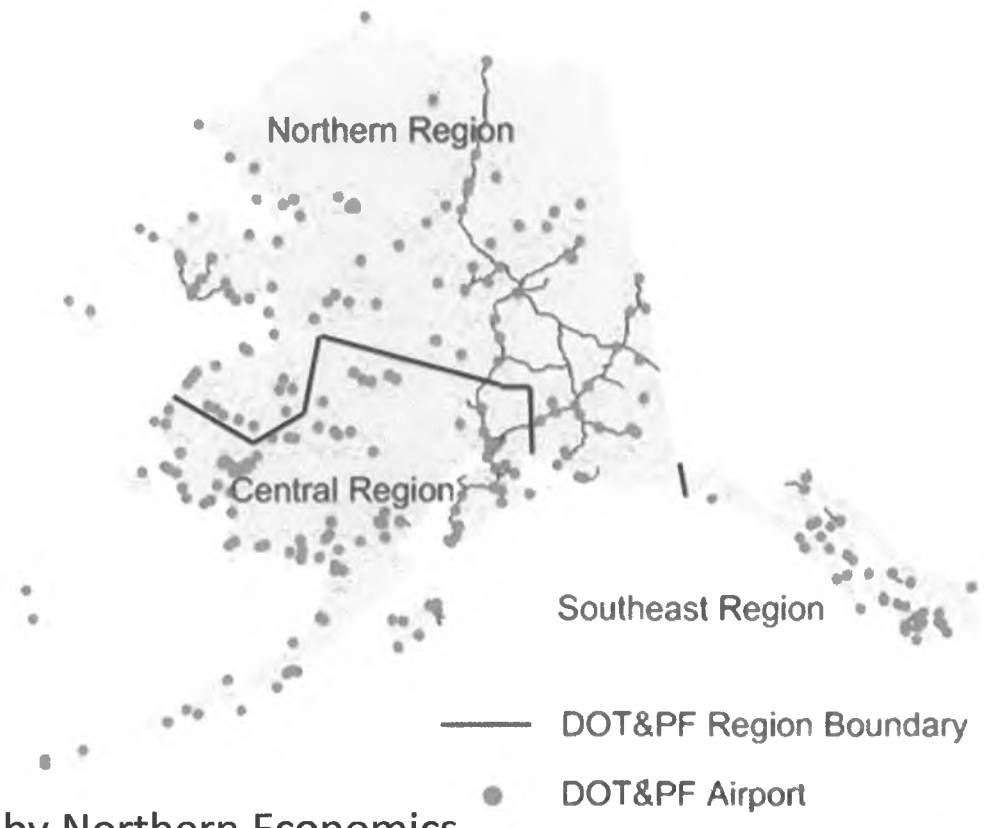
2/10/12 PRESENTATION BY DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES: STATEWIDE TRANSPORTATION ECONOMIC INDICATORS

<TARGET><BILL></BILL><SUBJECT>2-10-12 PRESENTATION BY DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES STATEWIDE TRANSPORTATION ECONOMIC INDICATORS</SUBJECT><COMM>SFIN27</COMM></TARGET>

Alaska Department of Transportation & Public Facilities

Aviation – Economic Engine for Alaska

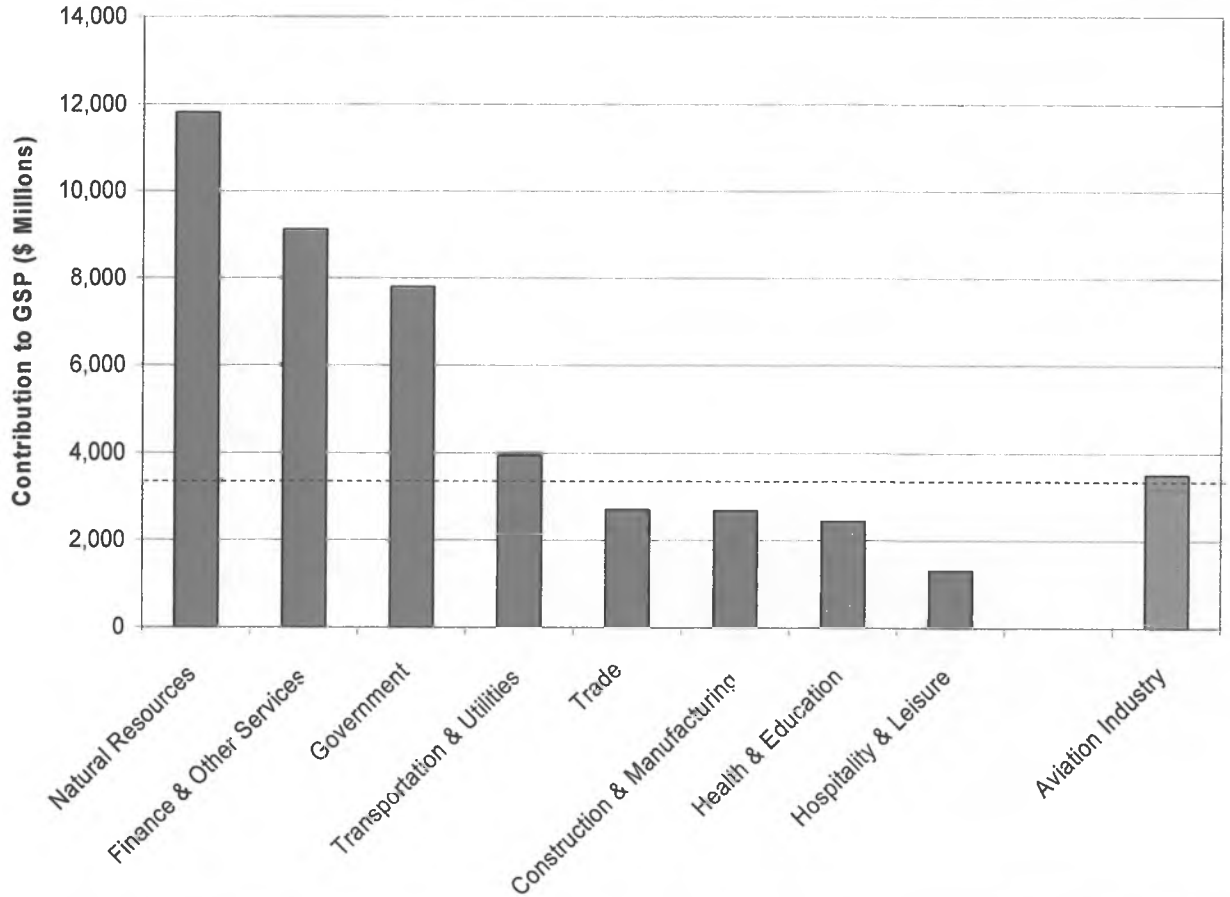


Steven Hatter
Deputy Commissioner--Aviation

February, 2012

Alaska's Airports & Aviation

- **Largest System in the US**
- **254 State-owned Airports**
- **Lifeline Transportation Mode for all citizens and regions**
- **Airports only means of year round access for 169 communities**
- **Alaska International Airport System (AIAS) is an economic engine for the state**



*Source: 2008 Statewide Aviation Study by Northern Economics

Aviation's Contribution to Alaska

- 47,000 aviation jobs statewide in both rural and urban areas
- 5th largest contributor to Alaska's Gross State Product (GSP)
- Contributes $3.5B to $44B economy

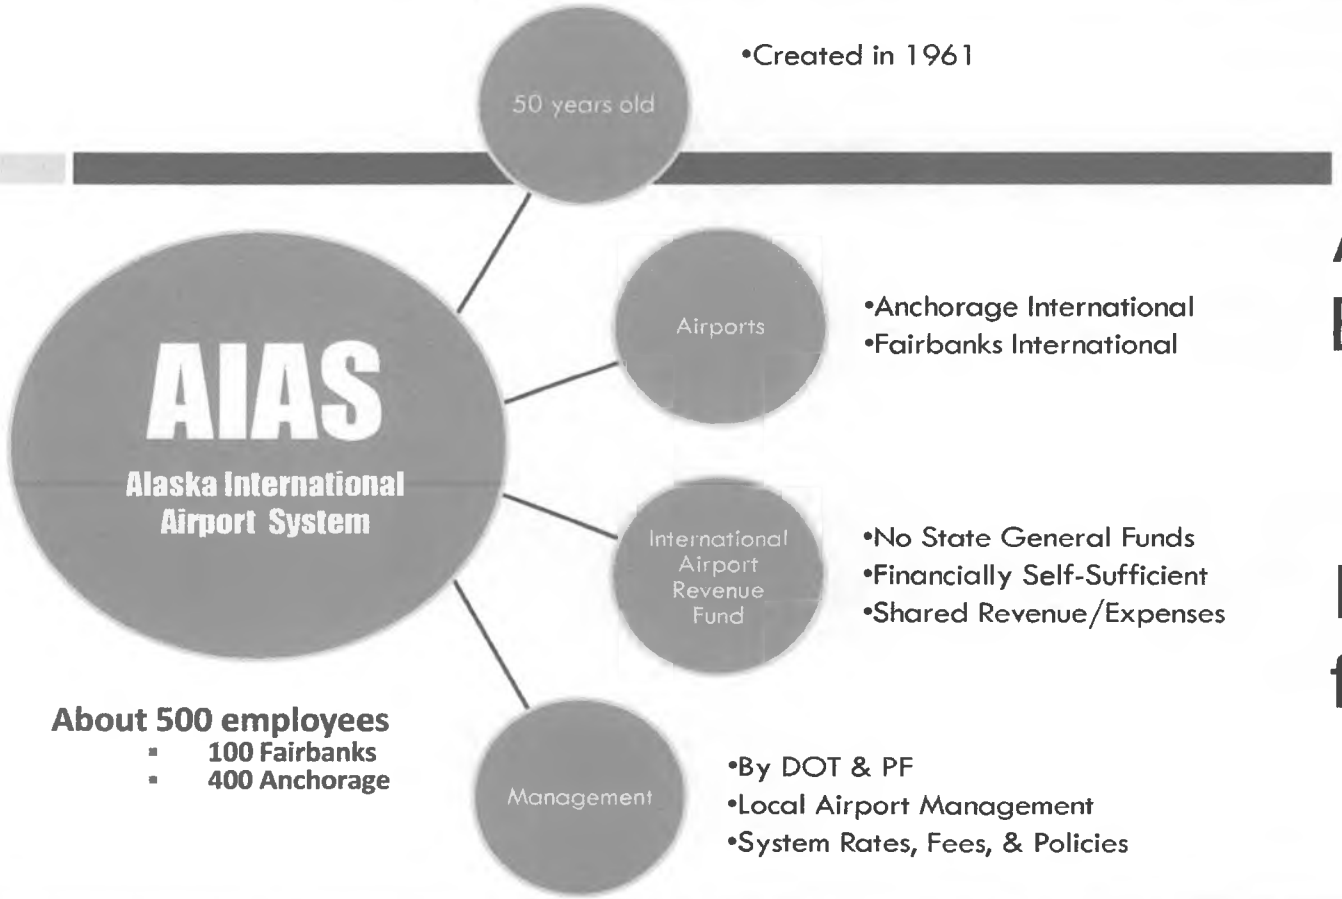
Alaska International Airport System

Who We Are and How it Works

Two Airports – One System

Ted Stevens Anchorage International Airport

+

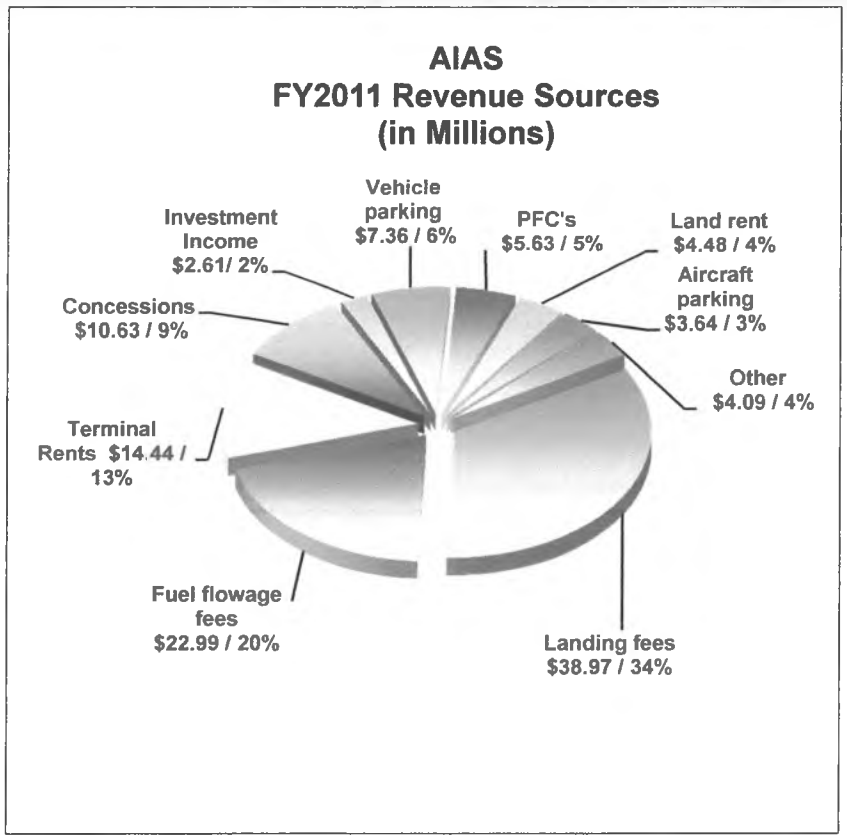


Fairbanks International Airport

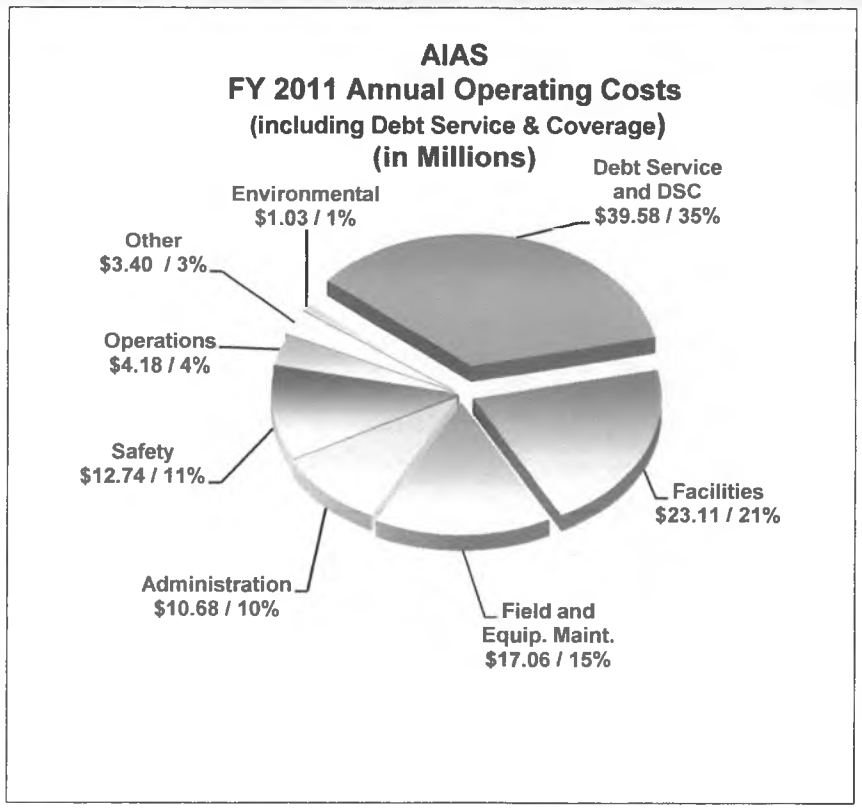
= **Alaska International Airport System (AIAS)**

Created Fifty Years ago by Ch88
SLA 1961 - (AS 37.15.410-550)

Self-Sustaining



Alaska's largest Enterprise Fund



Funded by user fees rather than State general revenues

AIAS Revenues and Costs

$101M in Operating Revenues

Costs are covered by adjustments to rates and fees – self sustaining system

AIAS Assets

Operating Agreement with Carriers

- Residual Cost Model
- Renew at "agreed to" term—last Operating Agreement term: 5 years
- Authority to Issue Revenue Bonds

Economic Engine

Anchorage Int'l. Airport

- 15,577 Jobs – one in ten jobs in Anchorage
- About $724 million in direct annual payroll
- Another $303 million in annual payroll for jobs in the community
- #2 Airport in North America for landed cargo weight

*Source: 2011 McDowell Group Study

Fairbanks Int'l. Airport

- 1,900 Jobs - one in twenty jobs in Fairbanks attributable to the airport
- $225 million in statewide economic output
- Ranked 85th in the nation in weight of total mail and freight (2010)

*Source: 2011 Alaska Aviation System Plan Study

Asia Centric Cargo Market

- **Over 99% of cargo through AIAS -- five Asian origins (China, Taiwan, Korea, Japan, Hong Kong)**
- **N. America - Asia cargo through AIAS expected to grow ~ 1-2%**
- **71% of all Asia-bound air cargo from U.S. goes through ANC**
- **82% of all U.S.-bound air cargo from Asia goes through ANC**
- **All Asia-North America carriers have flights through Anchorage**
- **Approximately 80% of AIAS carrier generated revenue is cargo**

*Source: 2011 McDowell Group Study

A Global Player

#2 in North America

North American Cargo Rankings 2010

## RANK	CITY (AIRPORT CODE)	TOTAL CARGO (metric tonnes)
1	MEMPHIS TN (MEM)	3 916 811
2	ANCHORAGE AK (ANC)*	2 646 695
3	LOUISVILLE KY (SDF)	2 166 656
4	MIAMI FL (MIA)	1 835 797
5	LOS ANGELES CA (LAX)	1 747 629
6	CHICAGO IL (ORD)	1 376 552
7	NEW YORK NY (JFK)	1 344 126
8	INDIANAPOLIS IN (IND)	1 012 589
9	NEWARK NJ (EWR)	855 594
10	ATLANTA GA (ATL)	659 129

#5 in the World

World Cargo Rankings 2010

Rank	City (Airport)	Total Cargo
1	Hong Kong, HK (HKG)	4,165,852.00
2	Memphis TN, US (MEM)	3,916,811.00
3	Shanghai, CN(PVG)	3,228,081.00
4	Incheon, KR(ICN)	2,684,499.00
5	Anchorage AK, US*(ANC)	2,646,695.00
6	Paris, FR(CDG)	2,399,067.00
7	Frankfurt, DE(FRA)	2,275,000.00
8	Dubai, AE(DXB)	2,270,498.00

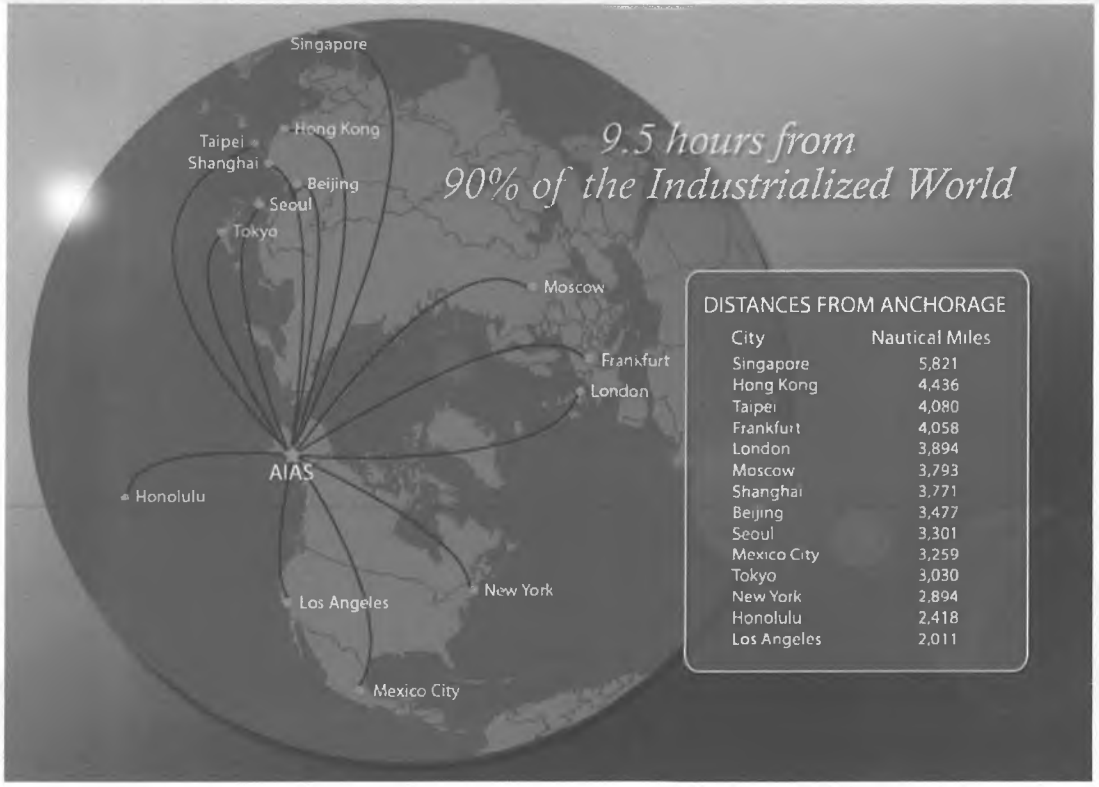
10	Louisville KY, US(SDF)	2,166,656.00

Statistics provided by Airports Council International

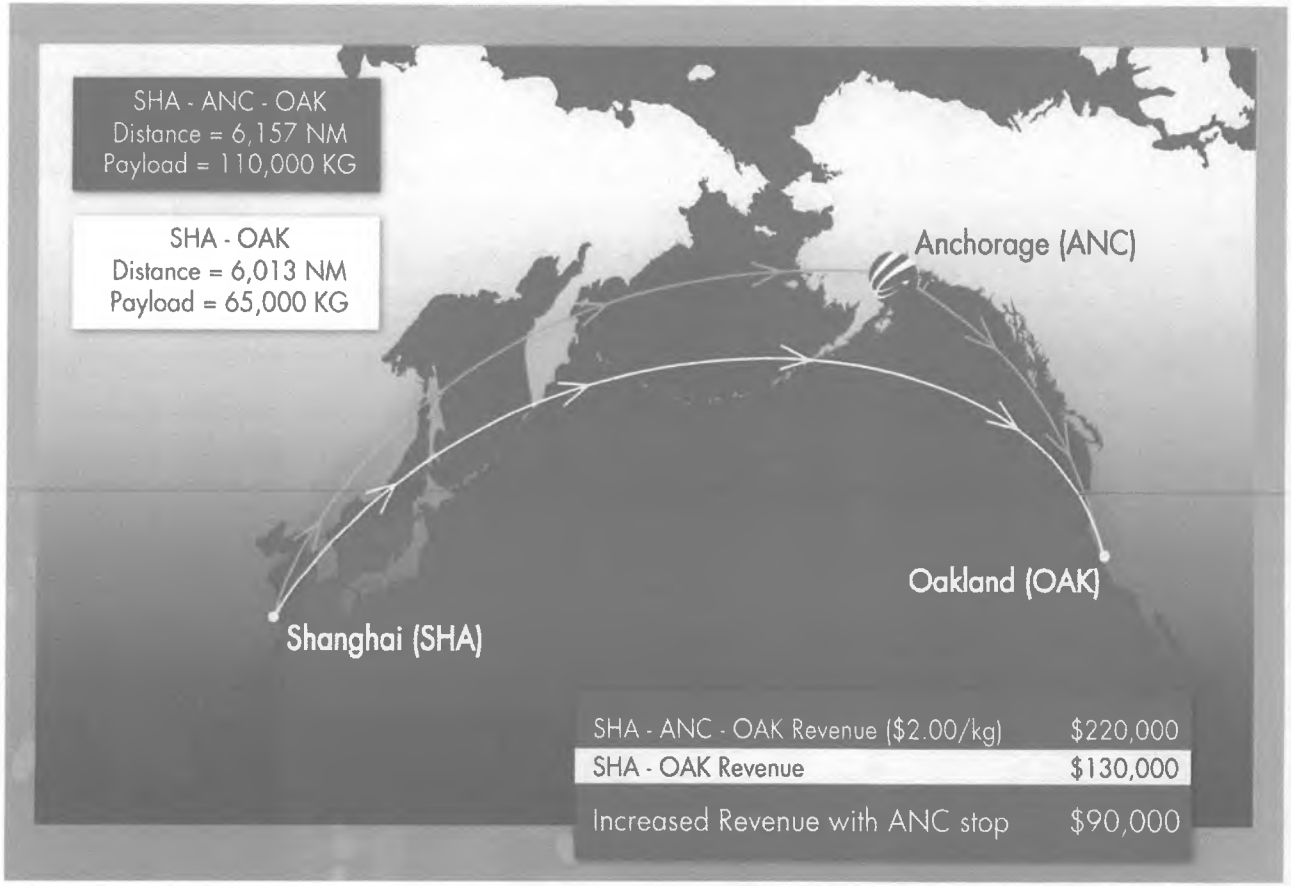
Alaska International Airport System
The Alaska Advantage



Location and Two Airports

- 9.5 hours from 90% of Industrialized World
- Never a same day closure (except 9/11)

+/- 10 minutes diversion Trans-Pac



Payload Versus Range

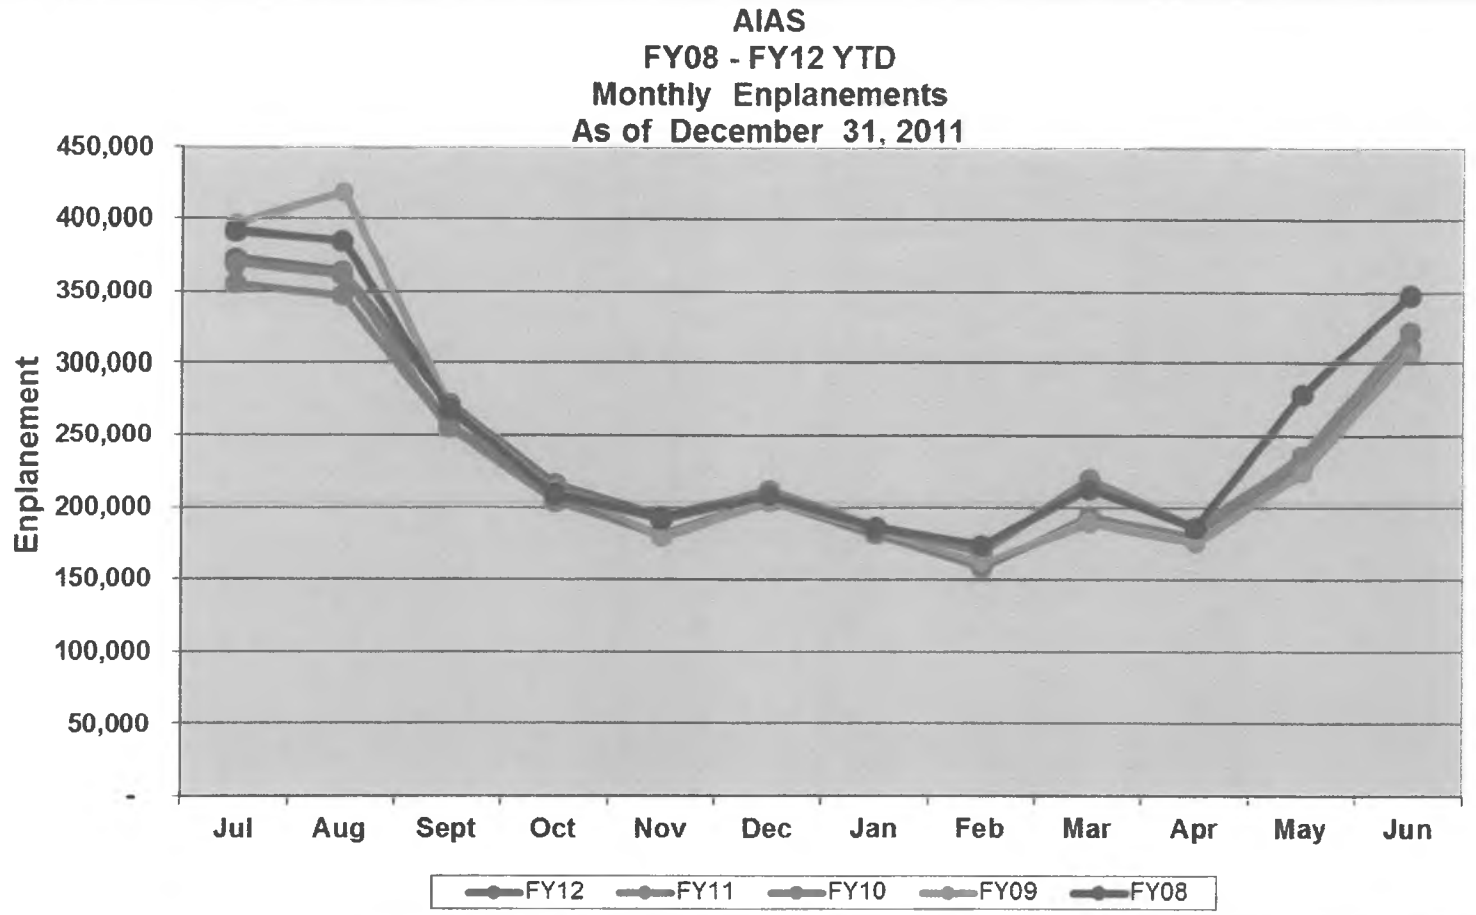
Example:
SHA-ANC-OAK
Distance = 6157 NM
Payload = 110,000 KG

SHA-OAK
Distance = 6013 NM
Payload = 65,000 KG

At $2.00/kg:

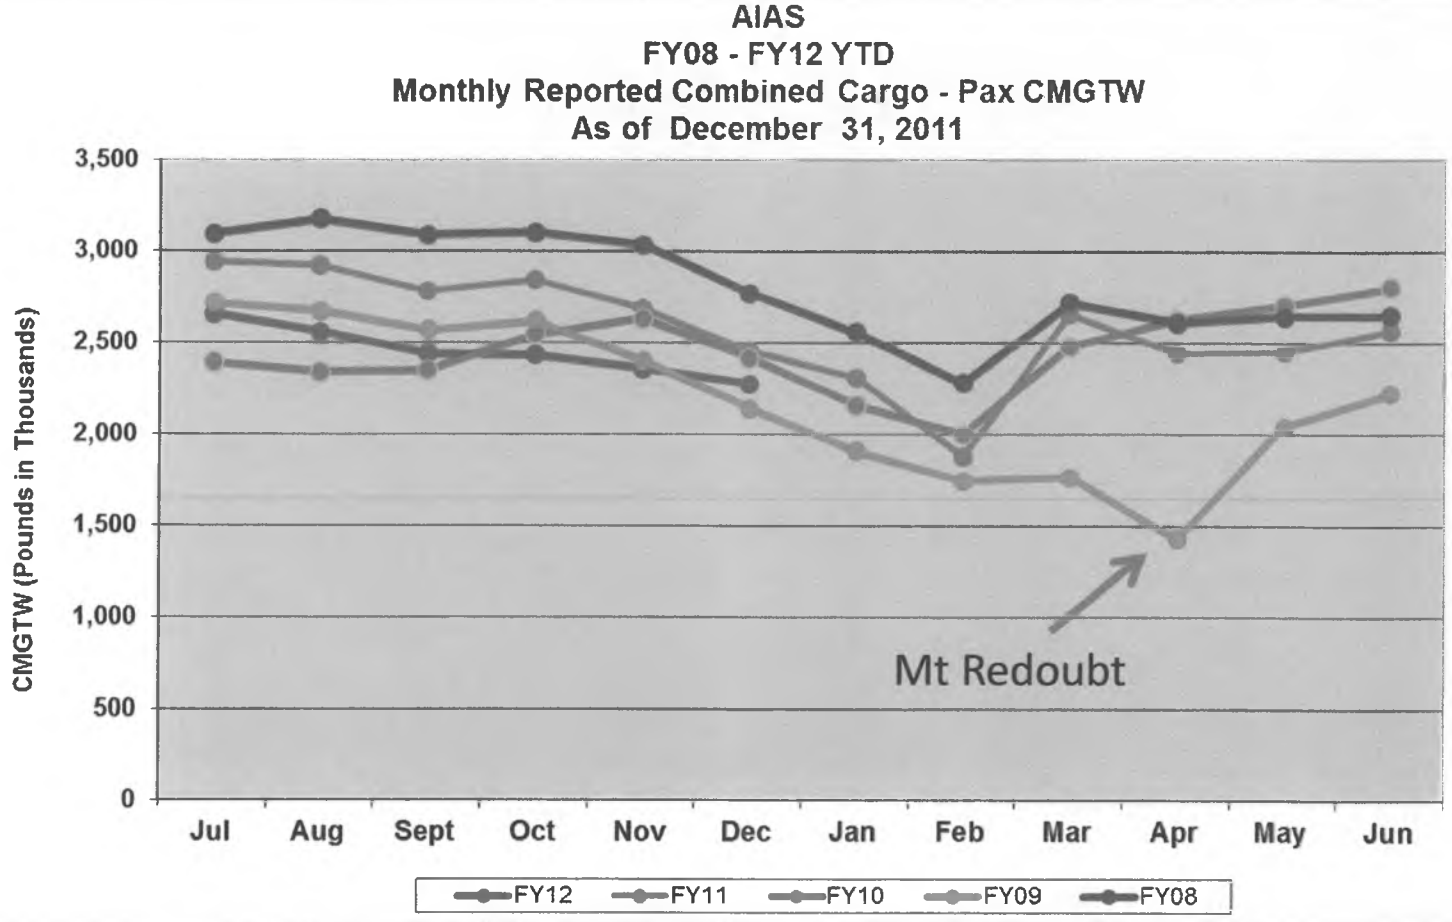
SHA-ANC-OAK = $220,000
SHA-OAK = $130.000
ANC Stop = +$90,000

Large and Diverse Customer Base



Alaska International Airport System

By the Numbers



Passenger Activity: +1.3% Ytd FY12

Cargo Activity: -12% Ytd FY12

What Causes Decreased Activity?

- **The global economy……..**

- **Other risk factors:**
  - **Fleet mix**
  - **Potential competitor airports**
  - **Perceptions that operating at/through AIAS doesn't "pencil"**

- **We aggressively and collaboratively manage those factors within our control, while also proactively marketing and myth busting**

Alaska International Airport System
Close Watch Topics

Fuel Supply

- Fuel market is entirely private
- 2009 fuel shortage caused by swift and unexpected recovery in air cargo market
- Some carriers opted to overfly AIAS lacking confidence in fuel supply
  - Fuel price and supply a large part of airline routing decisions
- New suppliers entered the market
- Private industry is increasing storage
- Status today: low risk of a repeat of 2009

Competitor Airports

- **Tough for competitors to overcome our location**
- **We have liberal cargo transfer options**
- **However……Portland, Seattle, Vancouver, Prince George, other US West Coast airports have all visited Asia in efforts to recruit cargo business**
- **We are "right sizing" our response to competition—emphasize competitive advantage; retain and attract**

Alaska International Airport System
Focus Areas

Preserving/Increasing Cargo Activity

- Working cooperatively with airlines
- Held Alaska Cargo Summits in 2010, 2011
- Followed up with Asia trips
  - Build relational equity and market Alaska advantages
- Comprehensive AIAS Strategic Planning in 2011
- Implemented Cargo Incentive Program

Collaborative Relationships

We're working closely with airline partners to get through recent traffic downturn. The following is AAAC's written response to AIAS's November 2011 rate increase:

"The State worked collaboratively with the AAAC Chairs…to determine the most prudent course to take."

"The State has been very collaborative in their approach…to address the needs of both the Airlines and the Airport." AAAC Co-Chairs

Passenger Activity

- 550,000 out-of-state and int'l visitors transited ANC; 85,000 through FAI in 2011
- Japan Airlines winter charters
- Jet Blue initiated ANC-Long Beach
- United announced new Fairbanks-Denver for 2012
- Working with Alaska "Coalitions of the Willing"
- Implemented Passenger Incentive Program

Strategic Planning & Marketing

- System planning/responses to previous management reviews
  - Strategic Plan (2011)
  - Business Plan (2012)
  - Human Resources Study (2011/12)
  - Marketing Plans / System Branding (Ongoing)

- Proactive communications
  - Work with CVB's and EDC's to strategize opportunities
  - Attend passenger and cargo conferences to promote AIAS
  - Pursue Asian carriers

New Operating Agreement

- Negotiate Operating Agreement with Signatory Airlines
- Existing OA expires June, 2013
- New Capital Improvement Program
- Review rates and fees model
- Review next OA term

FY13 Aviation Capital Request

FAA Airport Improvement Program (AIP) Legislative Authority - Totals $200.7 M

- AIAS = $14.1M
- Central Region = $75.1M
- Northern Region = $63.1M
- Southeast Region = $13.4M
- Statewide = $35M

Non – Federal Funding

- AIAS Airport Revenue Funds = $.8M
- AIAS Construction Bond Funds = $16.8M
- GF Match for AIP Projects = $11.7M
- GF Deferred Aviation Maintenance = $3.5M
- GF for Umiat Airport Survey & Planning = $.25M

State – Federal Partnerships

- Statewide Digital Mapping Initiative = $12.2M Fed / $3.7M GF
- Alaska Aviation Safety Project / Flight Simulation Training = $1.5M Fed / $1M GF

Takeaways

- Two Airports - One System
- Self-sustaining - no general funds
- Business-centric: rates and fees and self-supporting bonds
- Economic engine of regional, state, and global significance
- Critical aviation enabler in our nation's most aviation-centric state
- Working cooperatively with the airlines – they shoulder the financial risk - unilateral state action puts this relationship at risk
- Aggressive strategic planning to protect and enhance our system
- Great people doing great things for our state

Keeping Alaska flying and thriving!

Thank you!

Questions?

Deputy Commissioner – Aviation
Steven D. Hatter

What is Strategic Planning and Why is it Important?

"Companies that enjoy enduring success have core values and core purpose that remain fixed while their business strategies and practices endlessly adapt to a changing world"

"Core ideology provides the glue that holds an organization together through time"

***Core Ideology** = Core Purpose + Core Values*

Vision is built on Core Ideology

***Vision** = a "BHAG" + "We wills" + accountability methods*

***Strategic Agenda** = Prioritized projects*

***Projects/Initiatives** = The vehicles or mechanisms to go forward*

- Program of Projects Summary

ARRC Corporate Overview

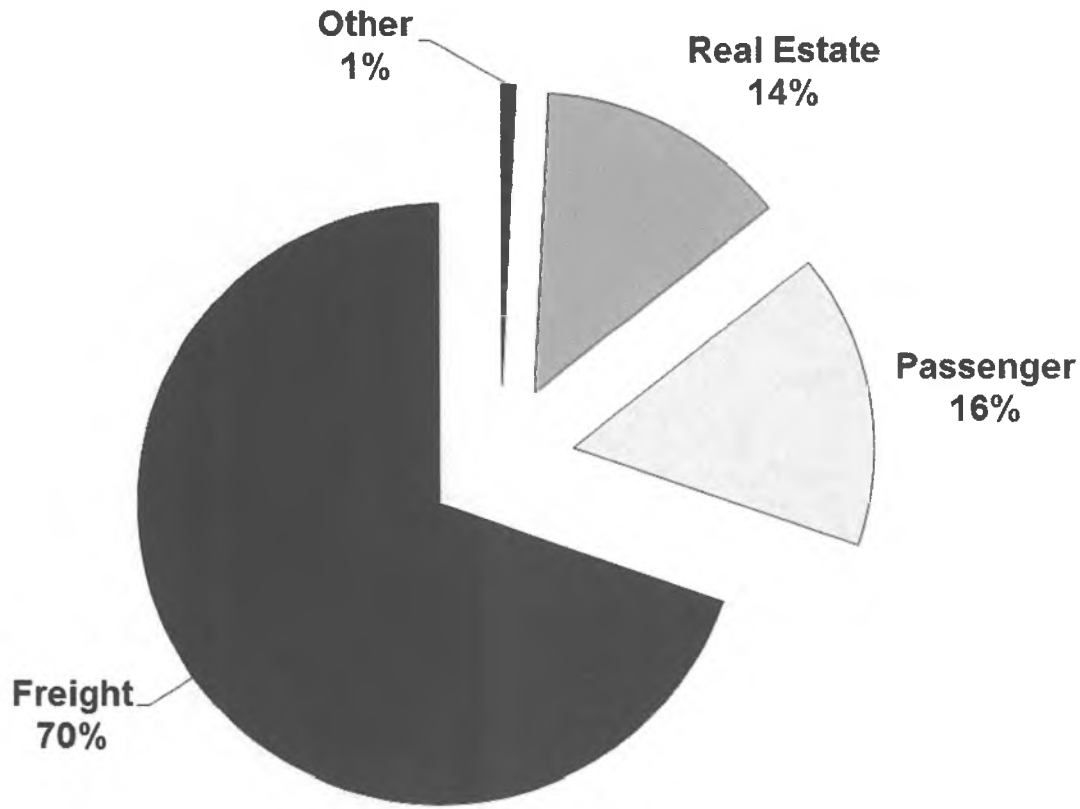
Alaska Railroad Corporation

- Railroad built by the federal government (1914 – 1923)
- Purchased by the State of Alaska for $22 million in January 1985
- Self-supporting, State-owned corporation
- Seven-member Board of Directors appointed by Governor
- Full-service passenger and freight railroad serving ports and communities from the Gulf of Alaska to Fairbanks

Supports 3,000 jobs and $150 million in payroll across the State

Alaska Railroad Quick Facts

Operating Data	
Miles of main line	467
Miles of branch line	54
Miles of yards and siding	135
Total miles of track	656
Freight cars (owned & leased)	1,254
Passenger cars	45
Locomotives	51



Employees (as of December 2011)	
Year-round employees	685
Average years of service	12
Average age	46
Male	571
Female	114

Unions

Most ARRC employees are members in 1 of 5 unions:

United Transportation Union	132
Transportation Communications Workers Union	39
International Brotherhood of Teamsters	61
American Federation of Govt. Employees	274
American Train Dispatchers Association	8

2011 Sources of Customer Revenue*

*Preliminary/unaudited

Freight Business

- Moved 6.2 million tons of freight overall in 2011, compared to 6.3 million tons in 2010 (1.6% decrease)
- 2012: Anticipate 8.5% overall freight growth over 2011
- Heavily reliant on three primary commodities

Oilfield pipe

Petroleum

Military

Coal

Logs

Gravel

Interstate Barge

Trailers

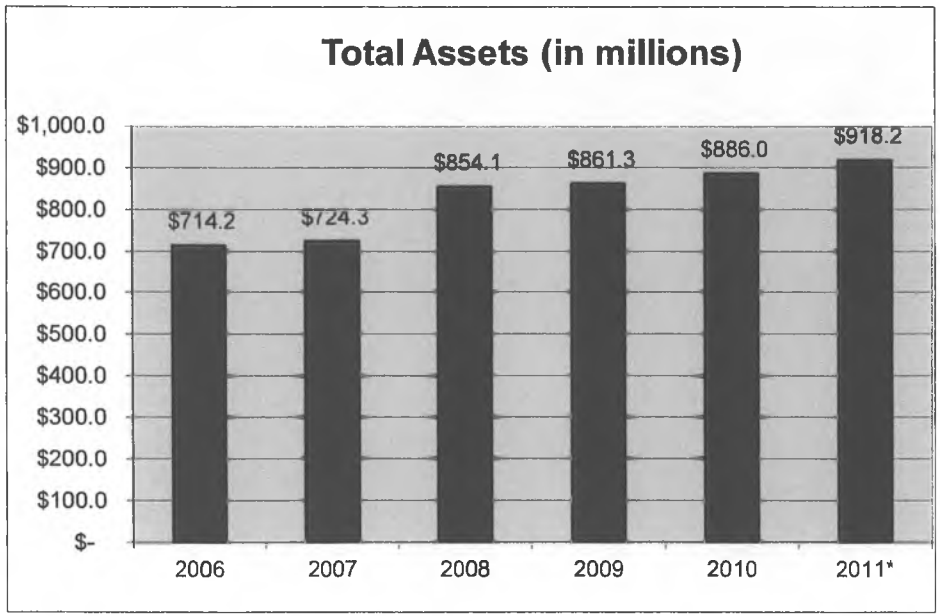
Passenger Business

- Moved 412,000 passengers in 2011, compared to 405,000 in 2010 (2% increase)
  - Includes both ARRC trains and cruise partner movements
- 2012: Anticipate 9.6% passenger growth over 2011
- Makes ARRC eligible for Federal Transit Administration formula funds

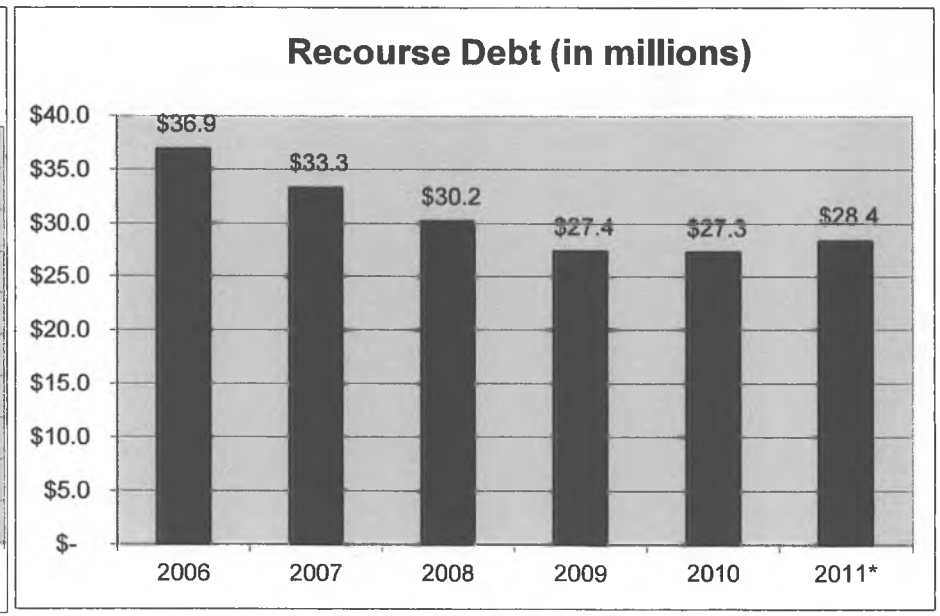
Real Estate

- Property Development
- Leases and Permits
- Dockage and Wharfage
- Facilities Maintenance and Management
- Revenue from Real Estate activities are key component to ARRC being self-sustaining
  - 2011: 62% of corporate net income derived from real estate (preliminary/unaudited)

Top: Ship Creek basin includes highly valuable leasable land. Bottom: upland from the Seward freight dock is being developed



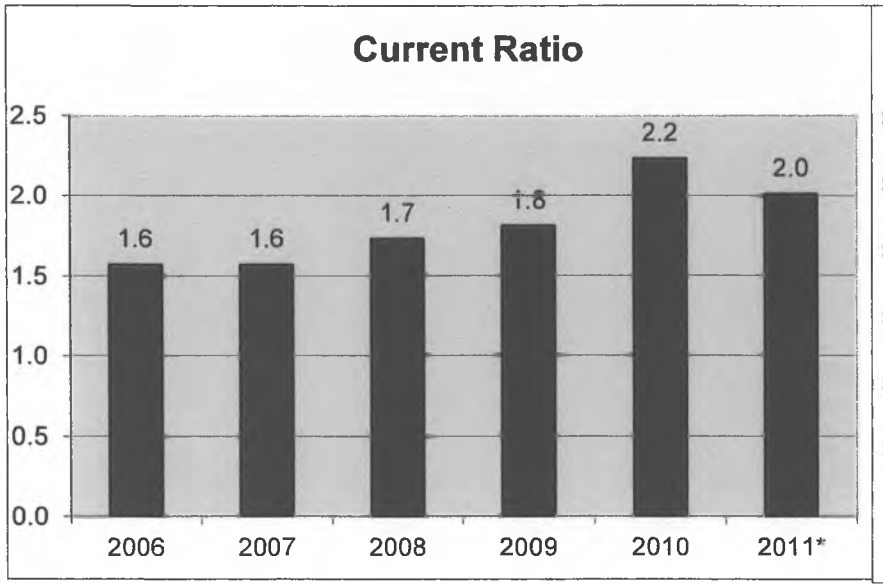
Capital Funding Sources

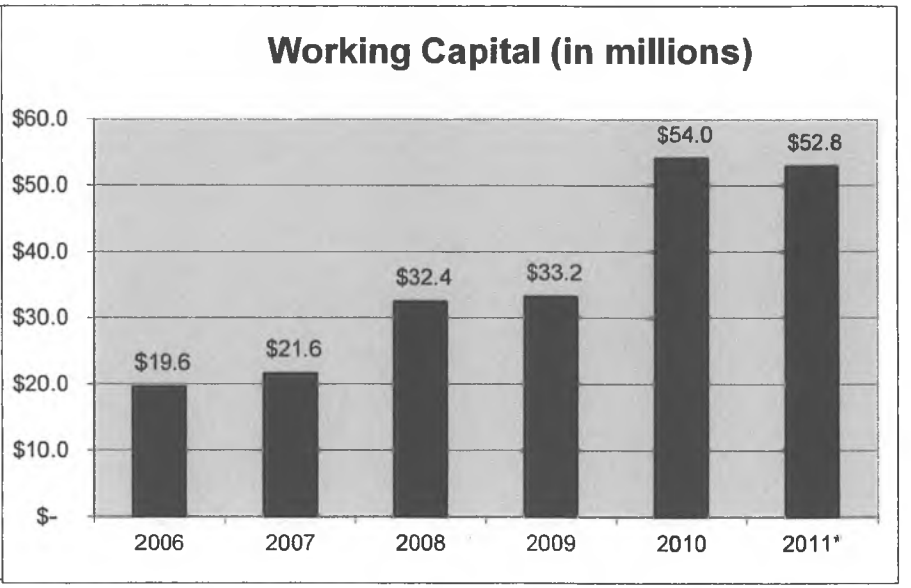


- ARRC Earnings
  - Provides required match for federal funds
  - Essential for freight-related improvements
- USDOT/Federal Transit Administration
  - Formula Funds used for projects and bond repayment
  - 9-20% ARRC Match Required
- Other Federal Agencies – (Dept. of Defense, FEMA, FHWA, FRA, Homeland Security, etc.)
- Federal funds allocated to ARRC do not affect federal funding for other state transportation projects
- ARRC federal match is *not* from State of Alaska general fund; match derived solely from ARRC earnings

ARRC Financial Position

Balance Sheet Highlights
Assets/Debt





Conservative capital structure: At year-end 2011, ARRC's recourse debt is $28.4 million, with a debt to capital ratio of 19%, reflecting relatively modest use of debt instruments.

*Preliminary/unaudited

Balance Sheet Highlights
Liquidity

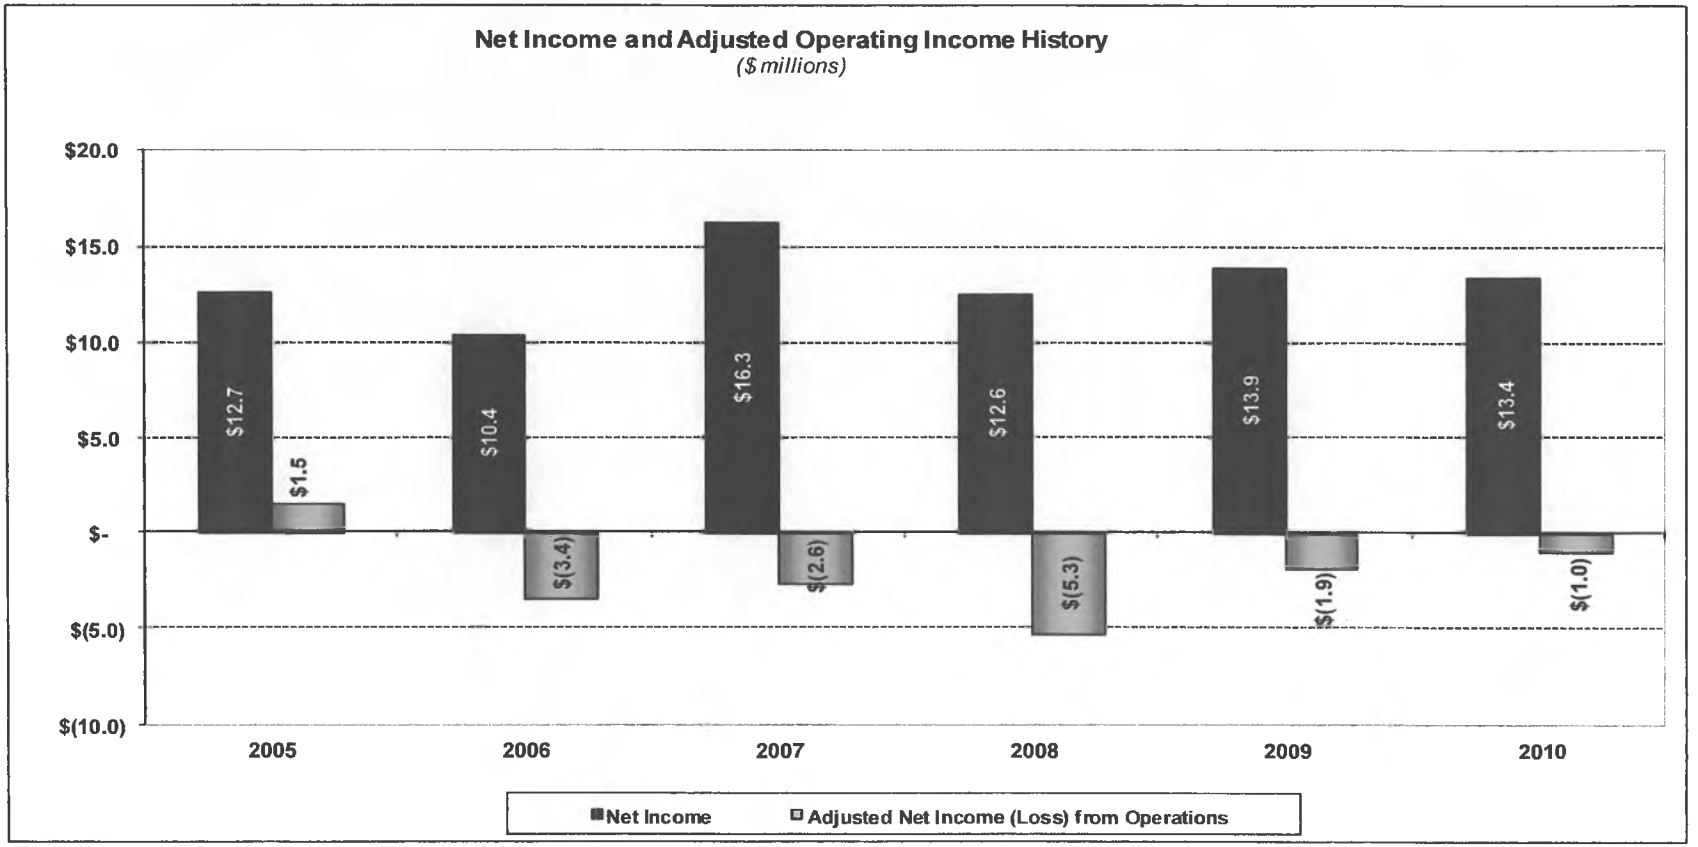
Current ratio is calculated by dividing current assets by current liabilities. The ratio is a measurement of an entity's liquidity and ability to meet current obligations.

Working capital is calculated by subtracting current liabilities from current assets and is a complementary measurement of an entity's liquidity.

ARRC liquidity continues to remain adequate, despite difficult earnings environment.

*Preliminary/unaudited

Benefit Trust Funds



- ARRC is plan sponsor of two benefit trust funds
  - Defined Benefit (DB) pension fund: ~$95 million assets
  - Retiree medical fund: ~$35 million assets

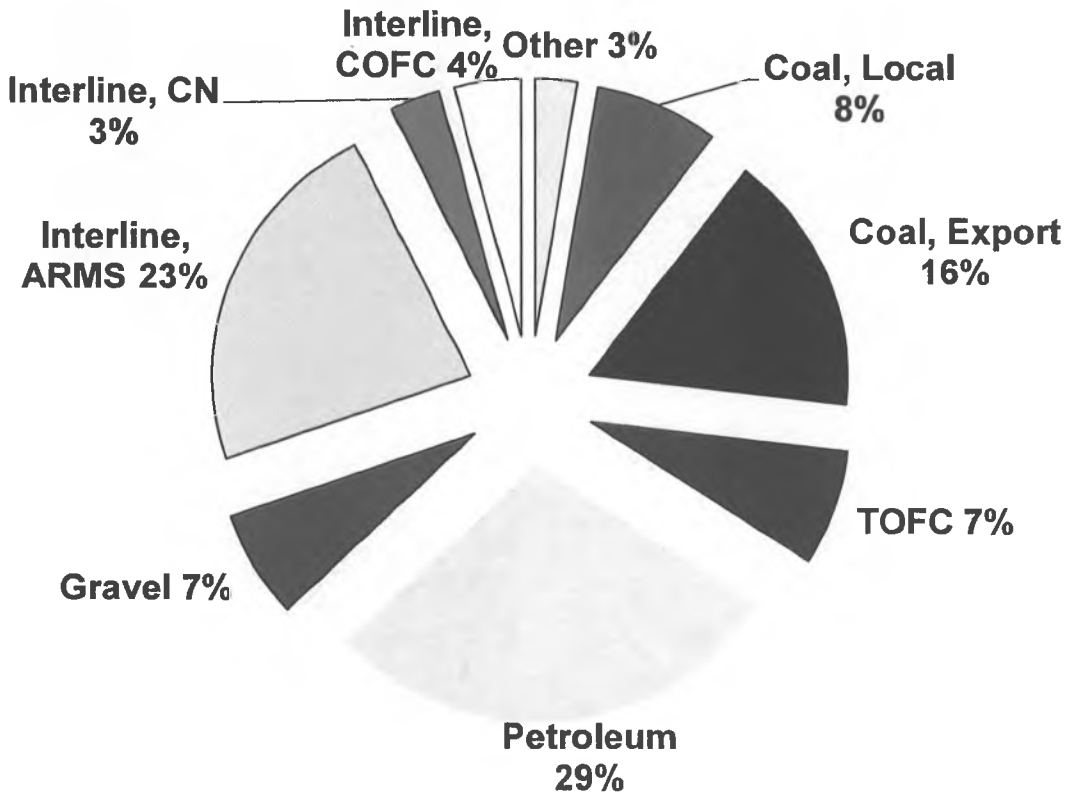
- Both plans financially sound
  - DB pension: 96% funded as of 1/1/11
  - Retiree medical: 135% funded as of 1/1/11

ARRC Earnings/ Operating Budget Outlook

Recent History

- Solid corporate earnings; core train operations run at loss
  - Real estate earnings key to stability and sustainability
  - Non-traditional fund sources important
    - Federal grant reimbursement of operating expenses
    - Section 45G tax credit
- 2009 – Position eliminations/layoffs, significant cost structure reduction
- 2010/2011 – Increased focus on operating efficiency

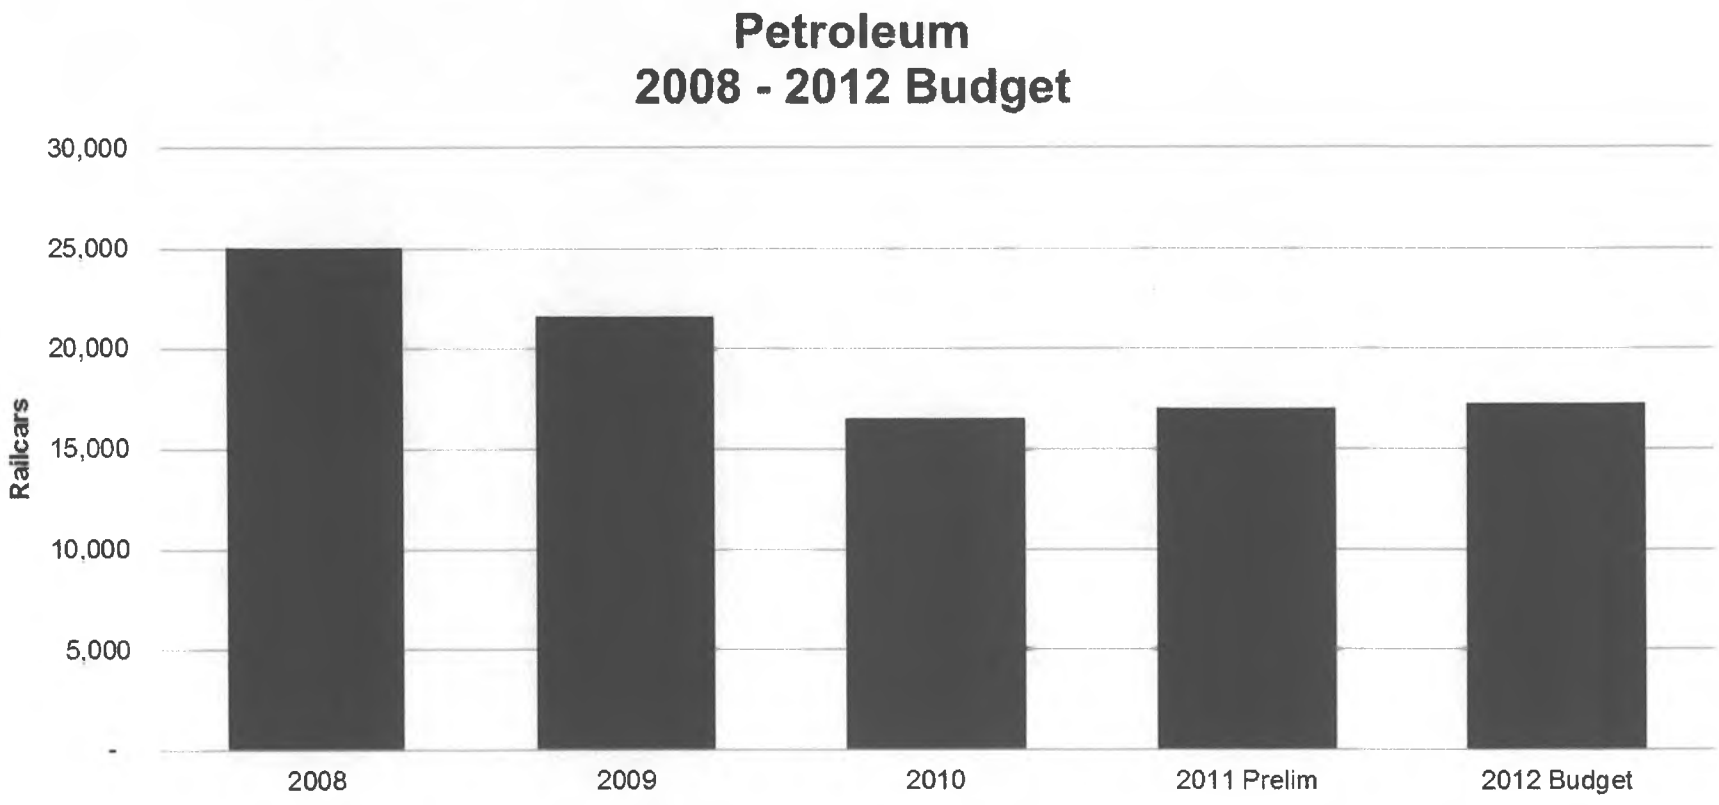
2011 Financial Snapshot



- 2011 Plan – guarded optimism about revenue recovery
- 2011 Actuals did not meet early expectations
  - Petroleum growth did not materialize, offset somewhat by coal, Trailer on Flat Car (TOFC) and Interline Barge hauls
  - Passenger revenue performed better than anticipated
  - Solid expense control partially offset rising fuel costs
  - Boost from tax credit legislation approved by Congress
- Still closing 2011's books – preliminary numbers expected mid-February
  - Corporate net earnings not anticipated to be markedly different than 2010
  - Positive earnings from train operations anticipated
    - Not seen since 2005
  - Audit to be completed March 2011

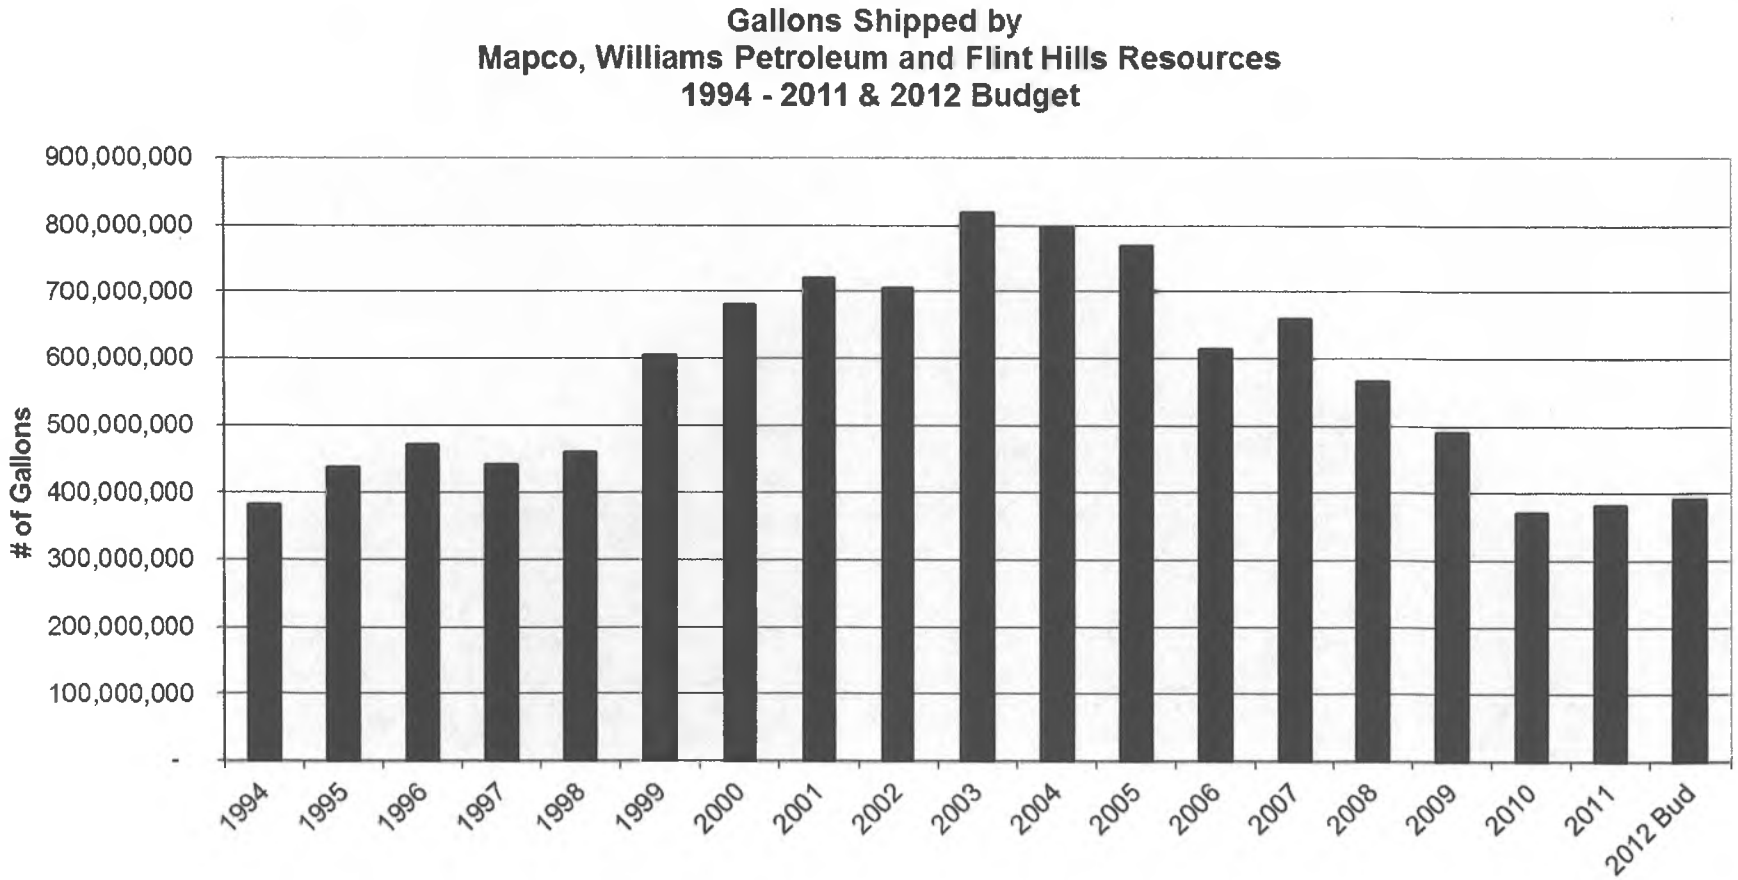
Freight & Passenger Revenues
2010 – 2012 (Budget)

	2010 Actuals	2011 Actuals*	2012 Budget
Freight Revenue	$ 87.0	$ 98.1	$105.5
Passenger Revenue	$ 20.8	$ 22.4	$ 24.9
Total	$107.8	$120.5	$130.4



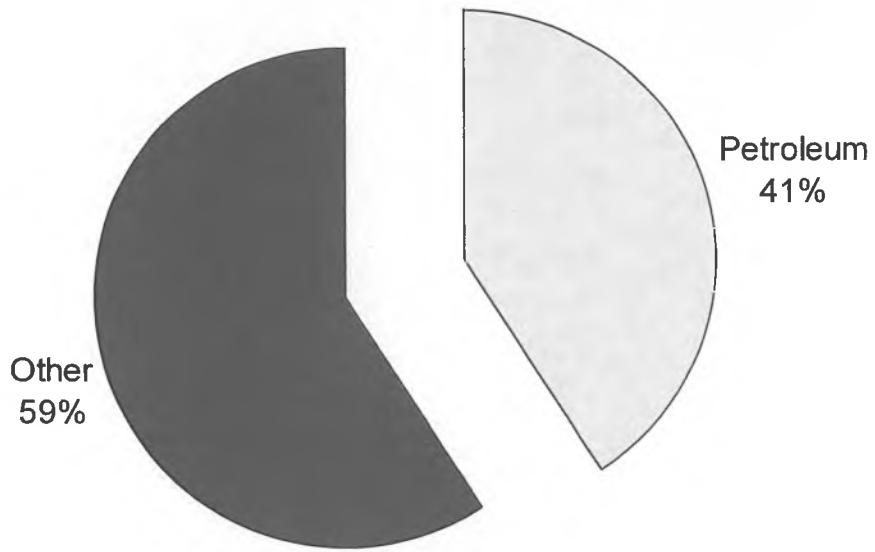
*Preliminary/unaudited

2012 Sources of Freight Revenue*



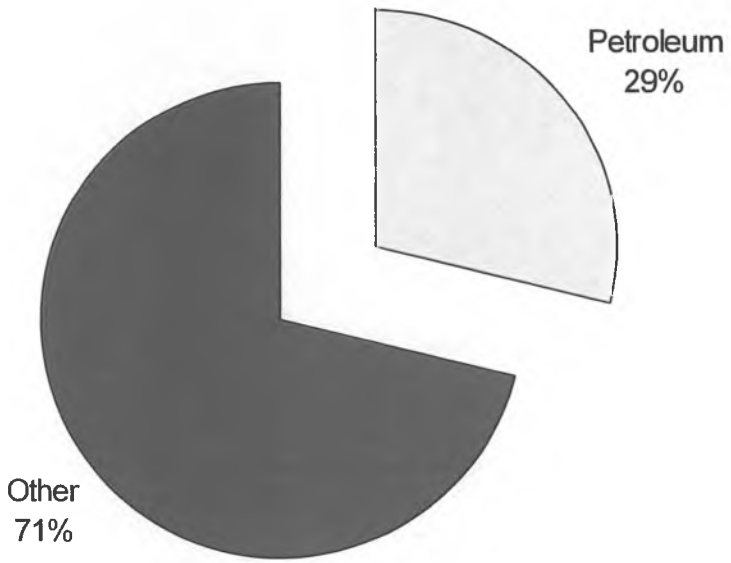
* Board Approved Budget

Freight Revenue – Petroleum



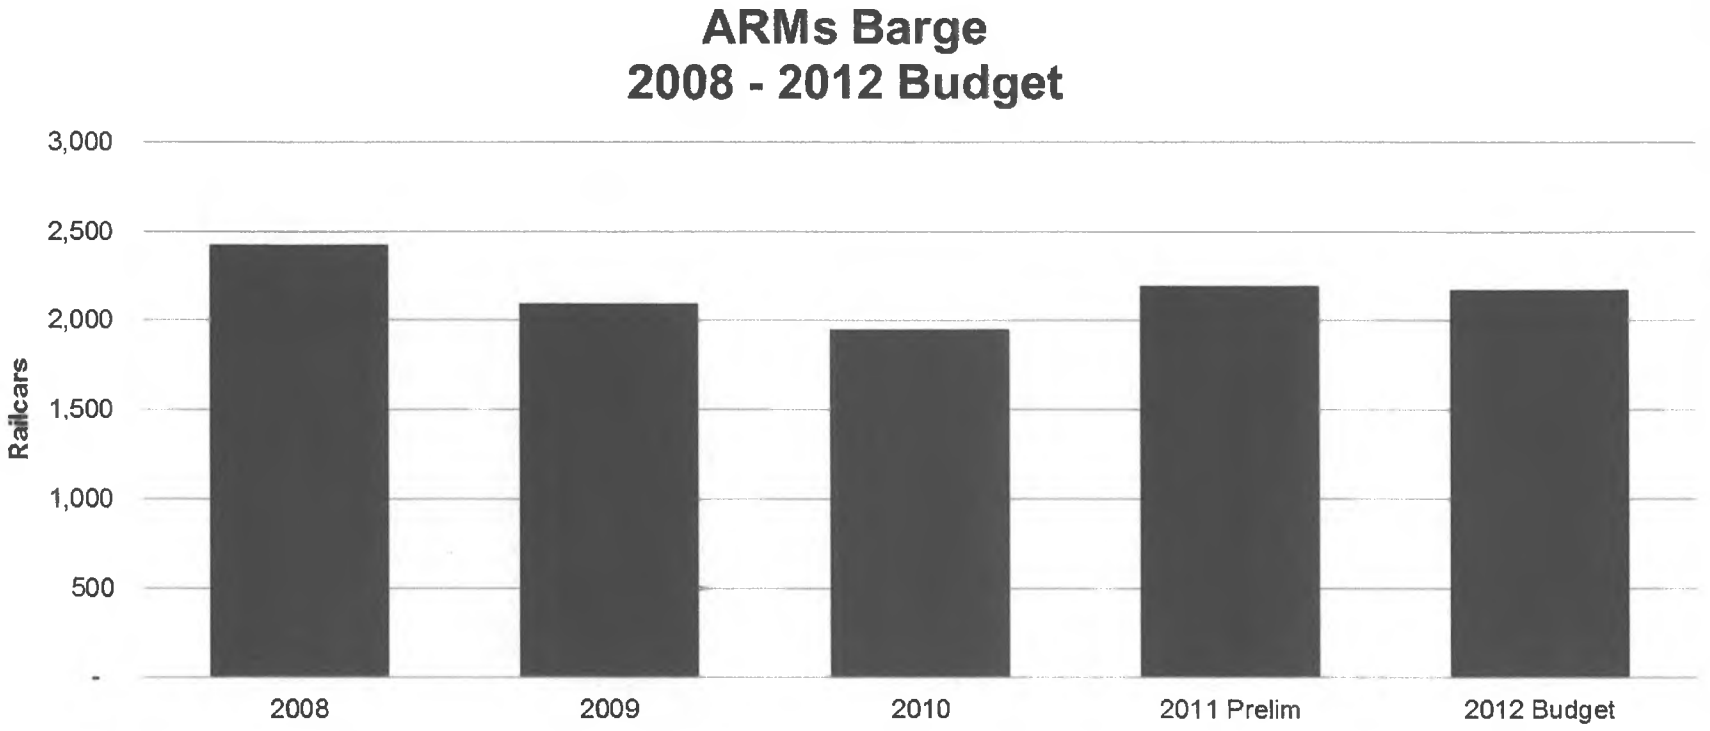
Petroleum: Flint Hills Resources petroleum products moved to and from the North Pole Refinery

Petroleum Gallons Shipped 1994 – 2012 Budget



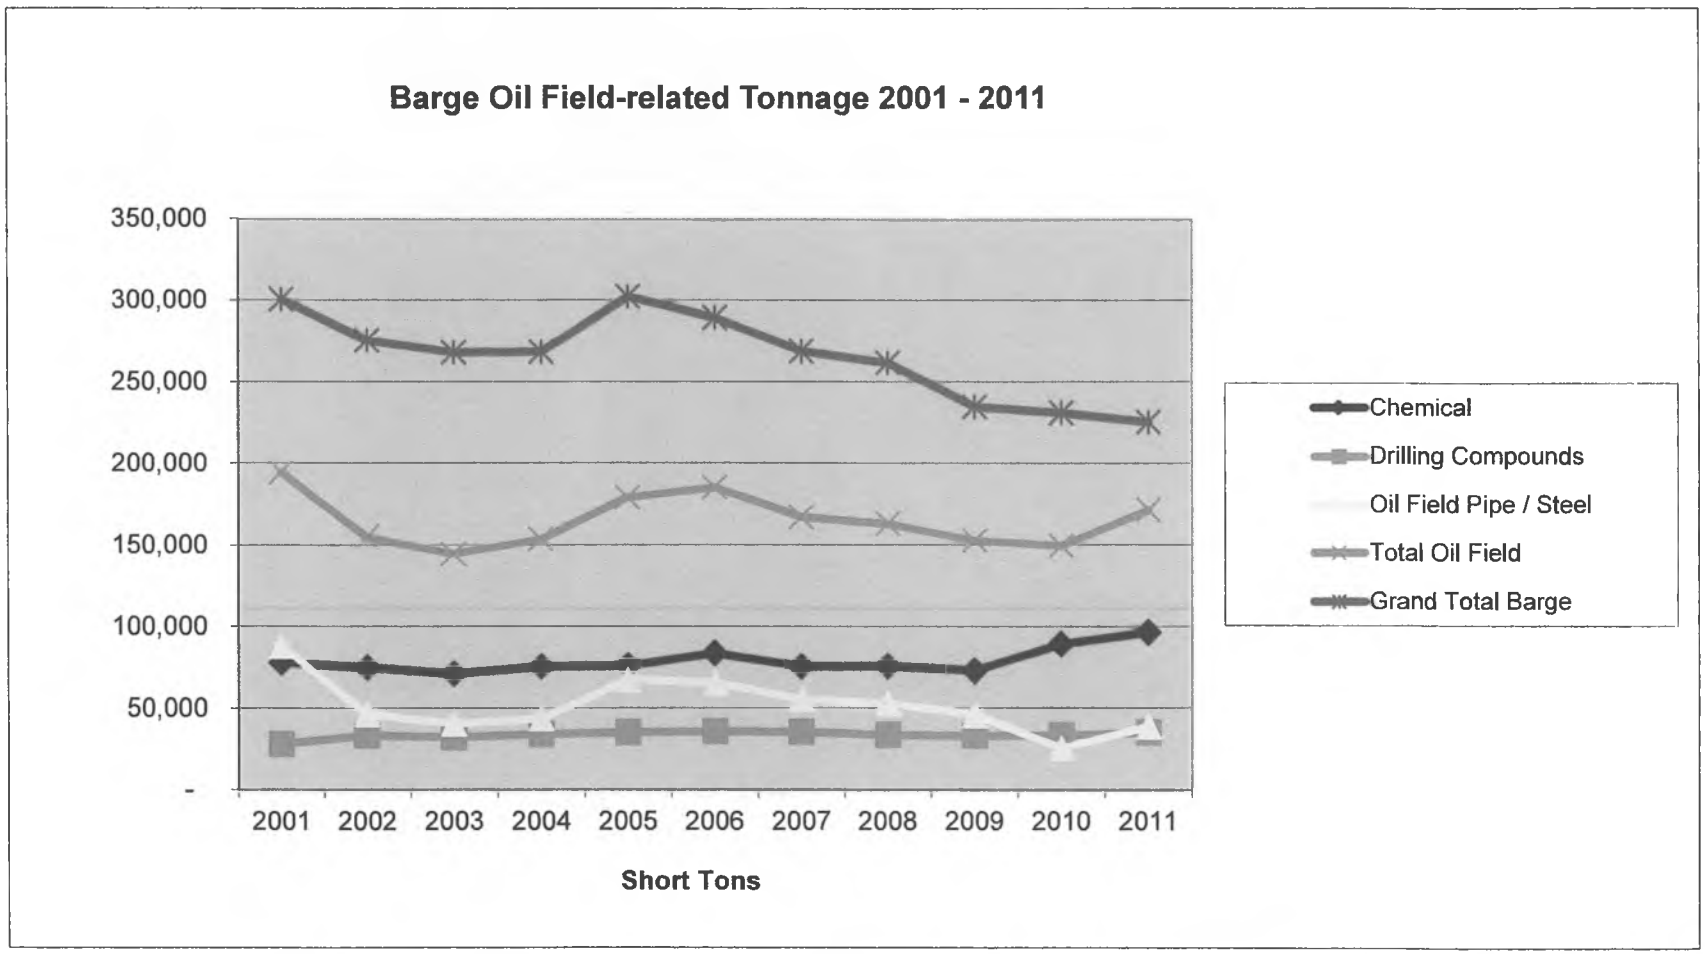
Changing ARRC Dependence on Petroleum Haul

2008

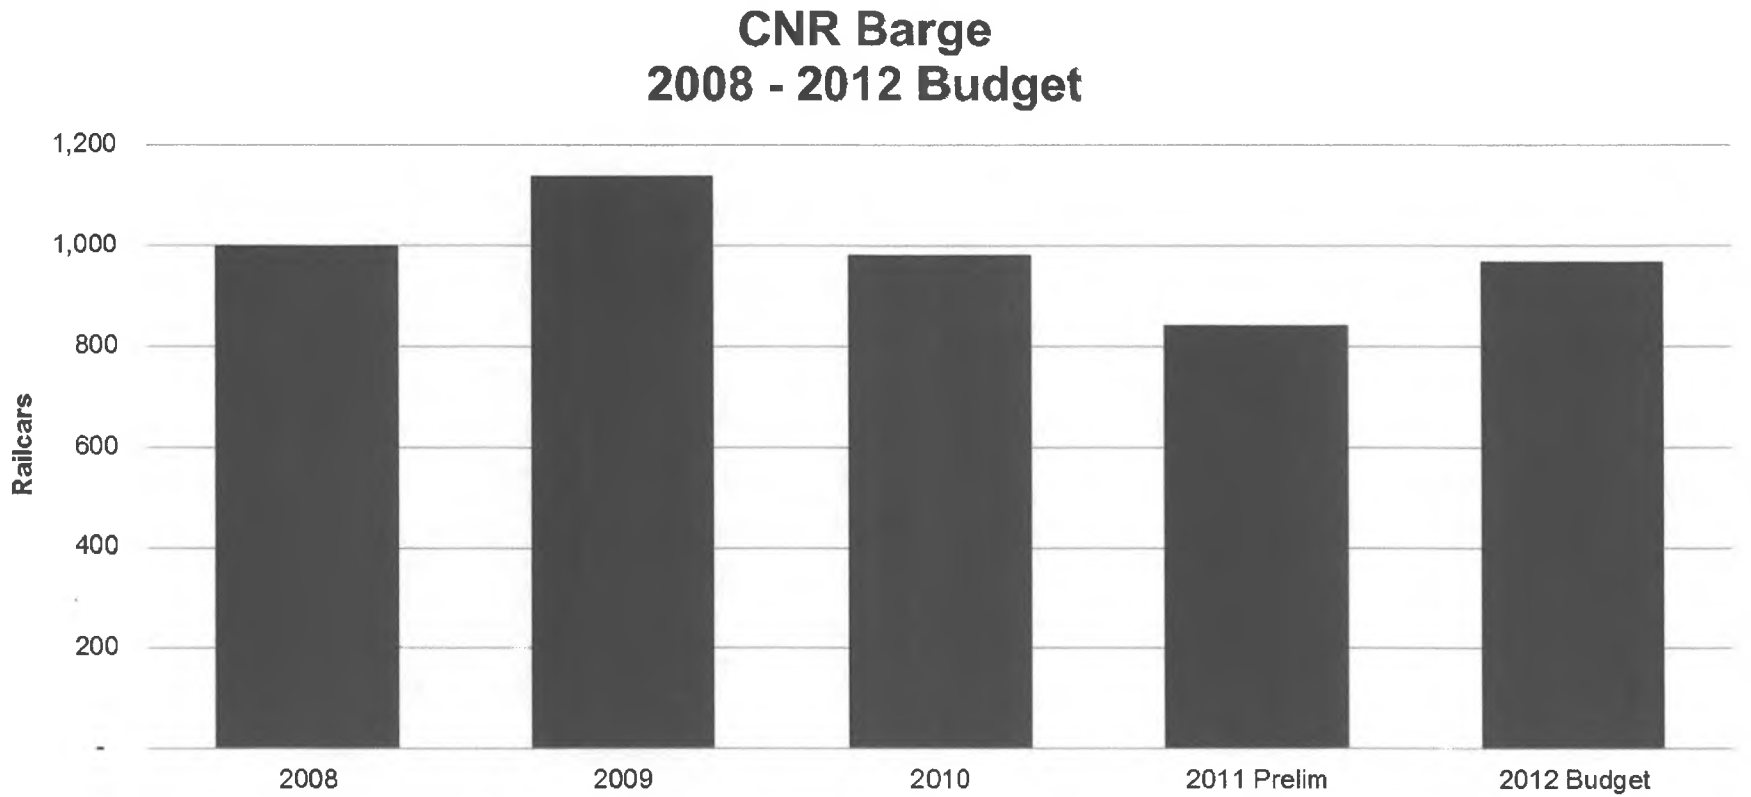


2012

$98,900,000 Freight Revenue $105,500,000



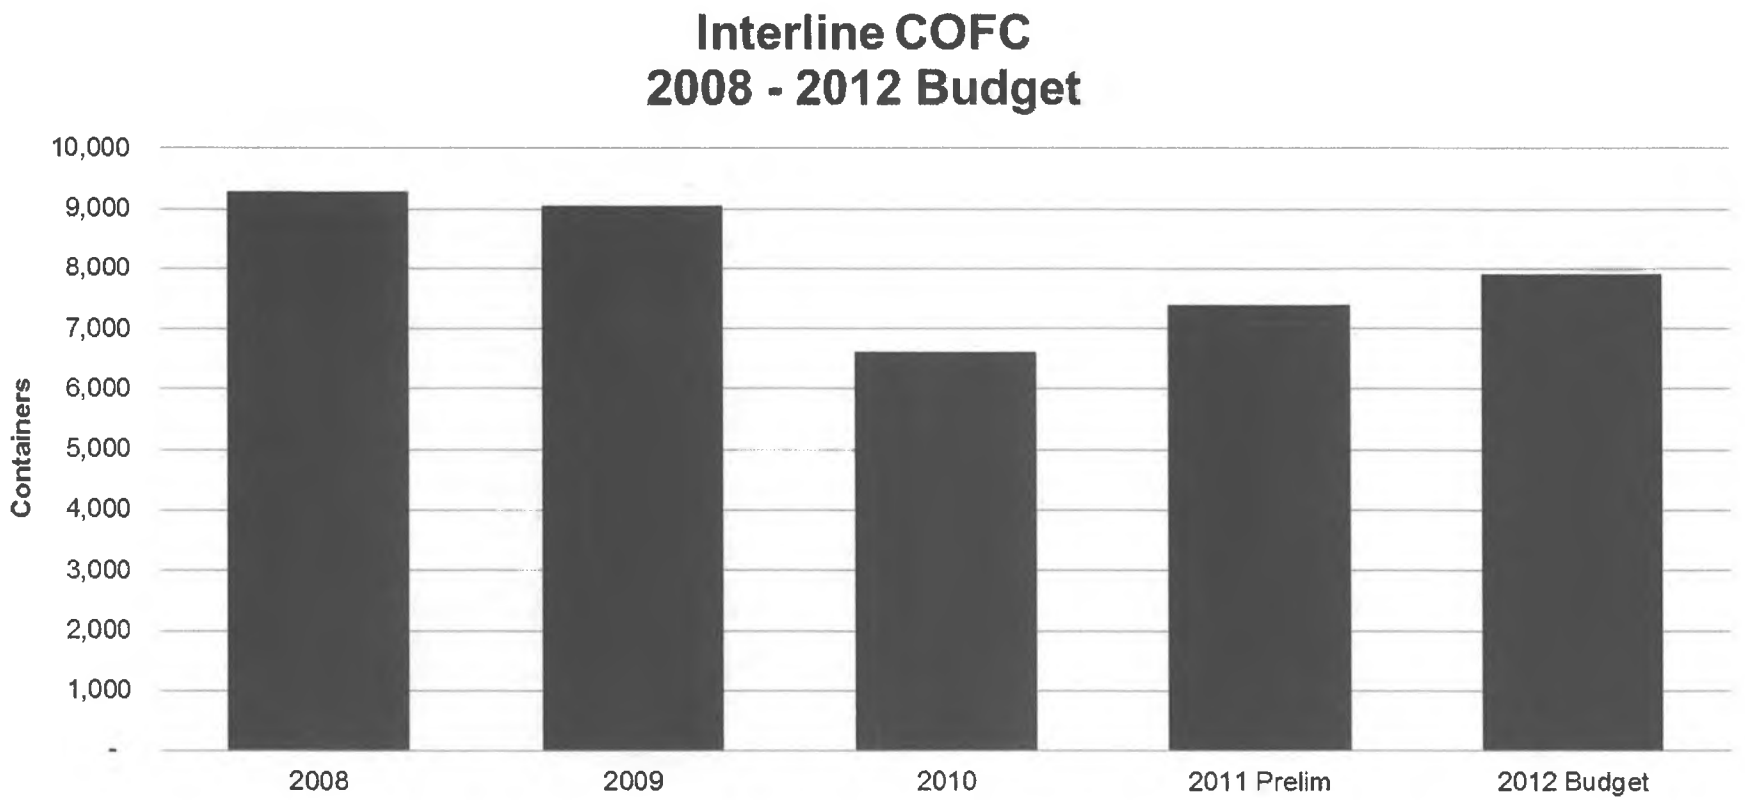
Freight Revenue – ARMS Barge



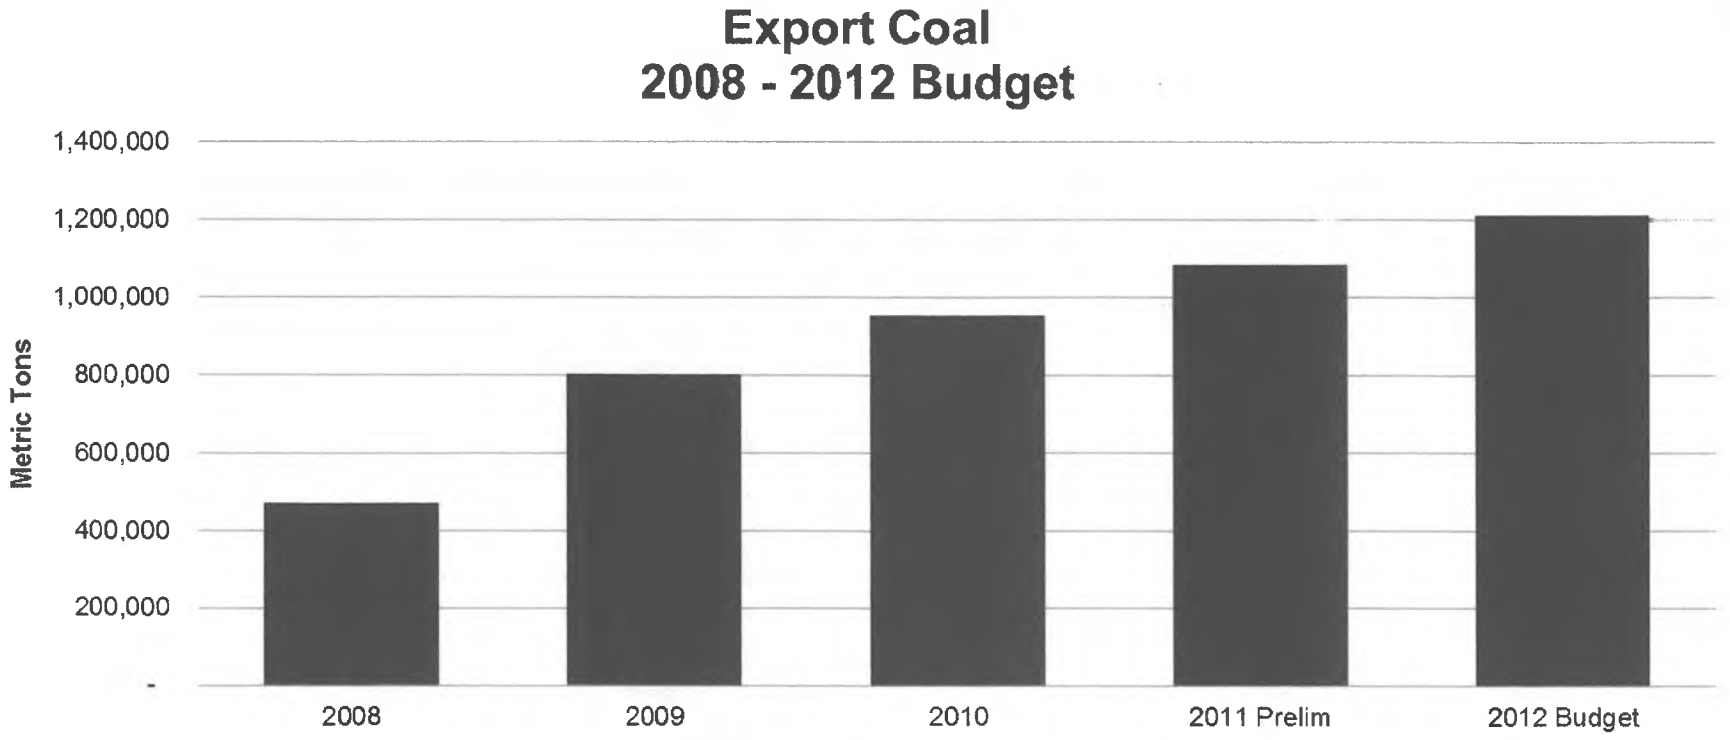
ARMS Barge: Railcar shipments to and from Alaska via the Seattle Gateway

- *Revenue depends heavily on oil and gas activity on the North Slope*

Barge Oil Field-related Tonnage 2001 - 2011



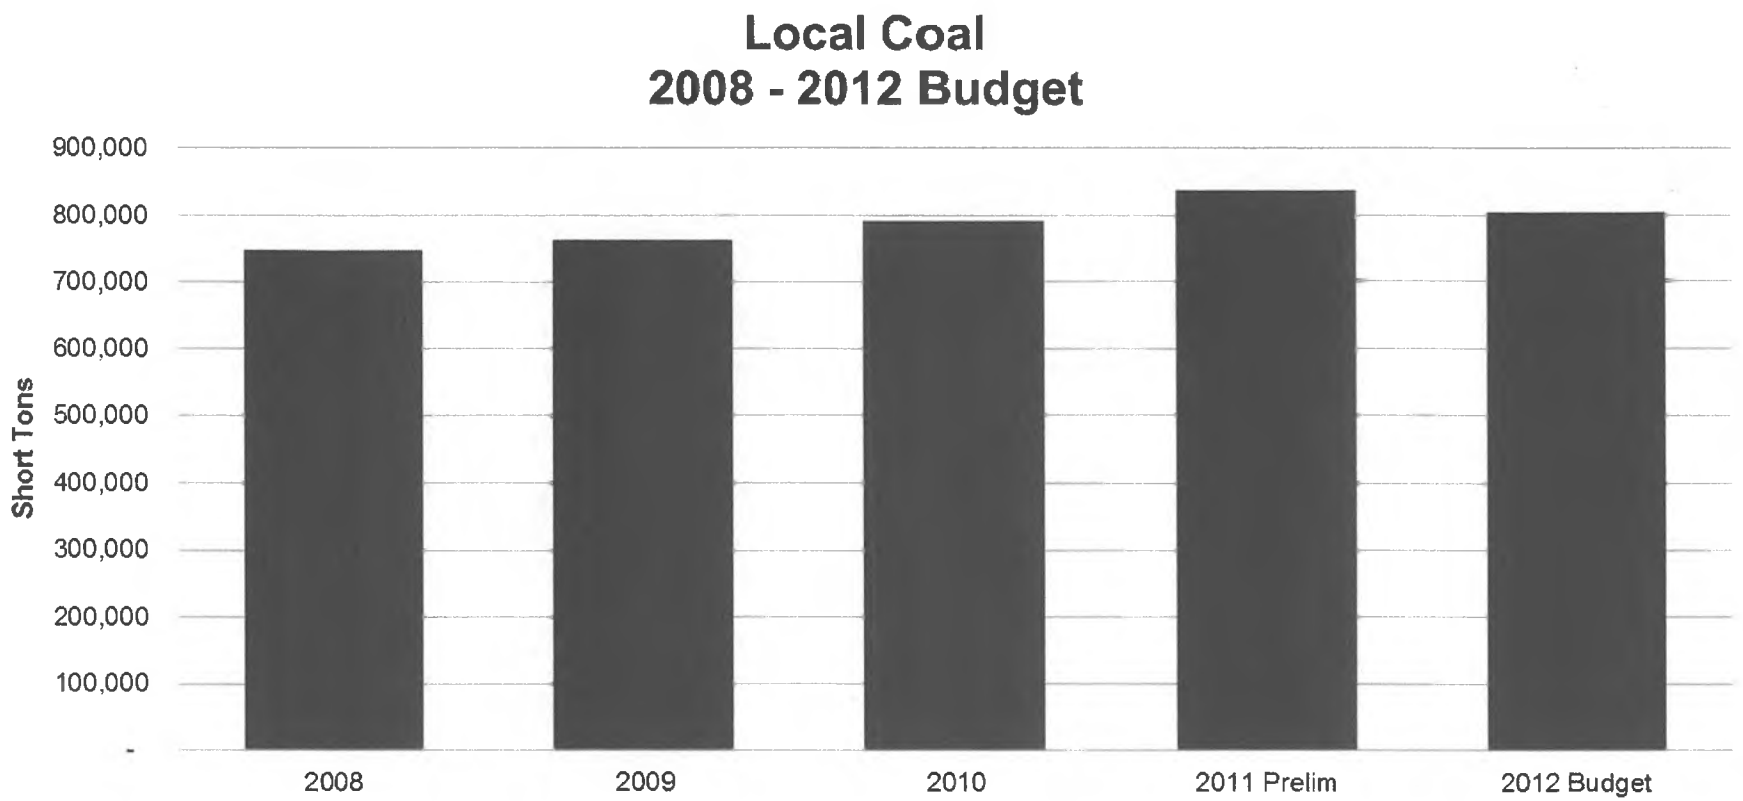
Freight Revenue – CN Barge



CN Barge: Railcar shipments to and from Alaska via CN's Prince Rupert Gateway

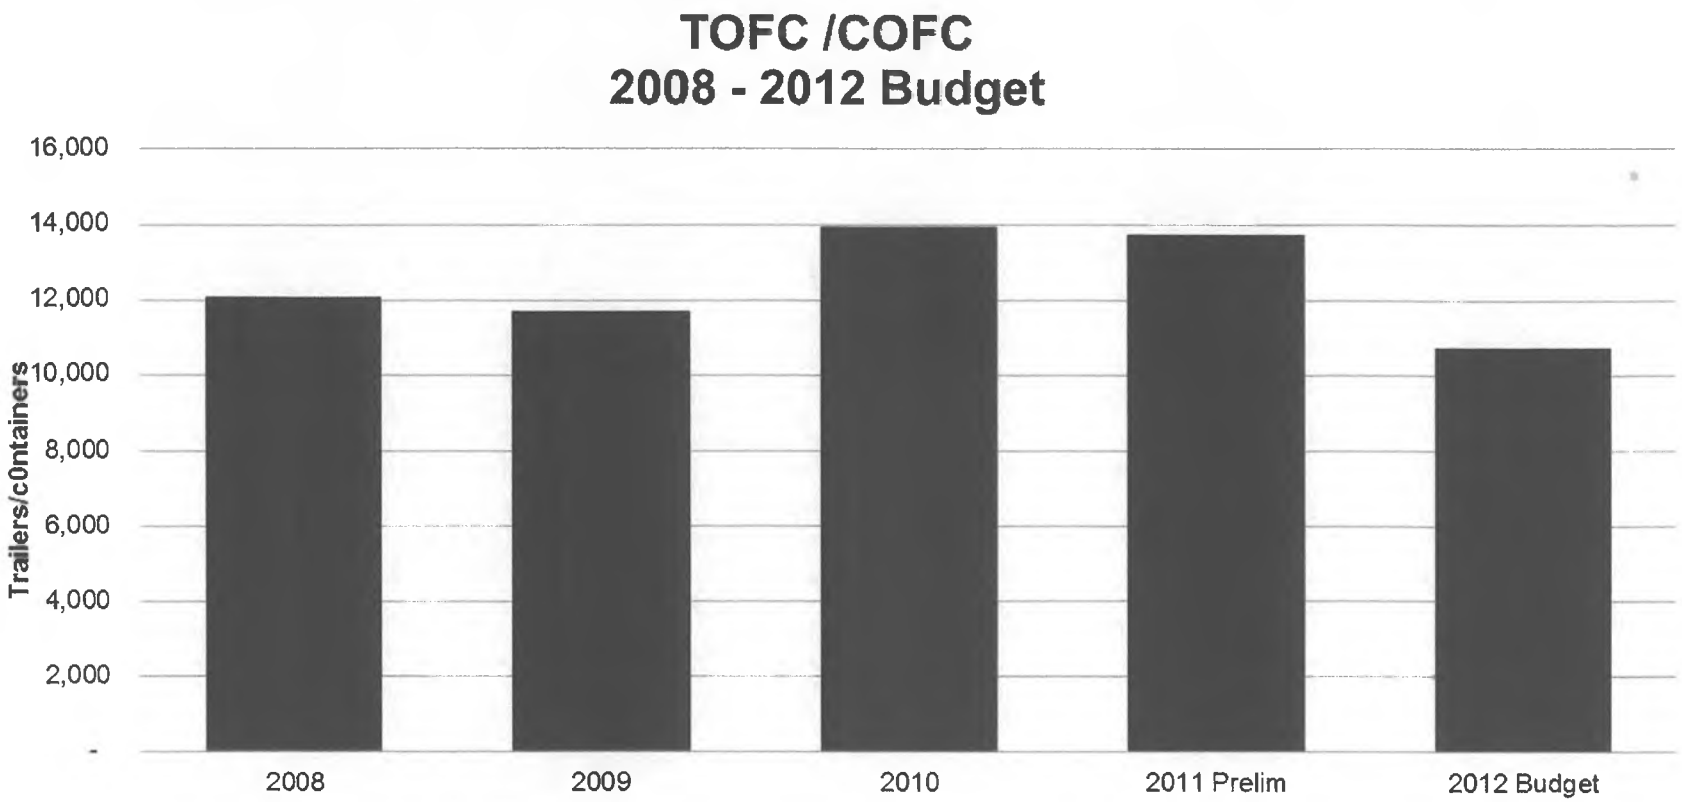
Freight Revenue– ICOFC

Interline COFC (container on flat car): Container shipments on ARMS Barge from Whittier to Anchorage and Fairbanks



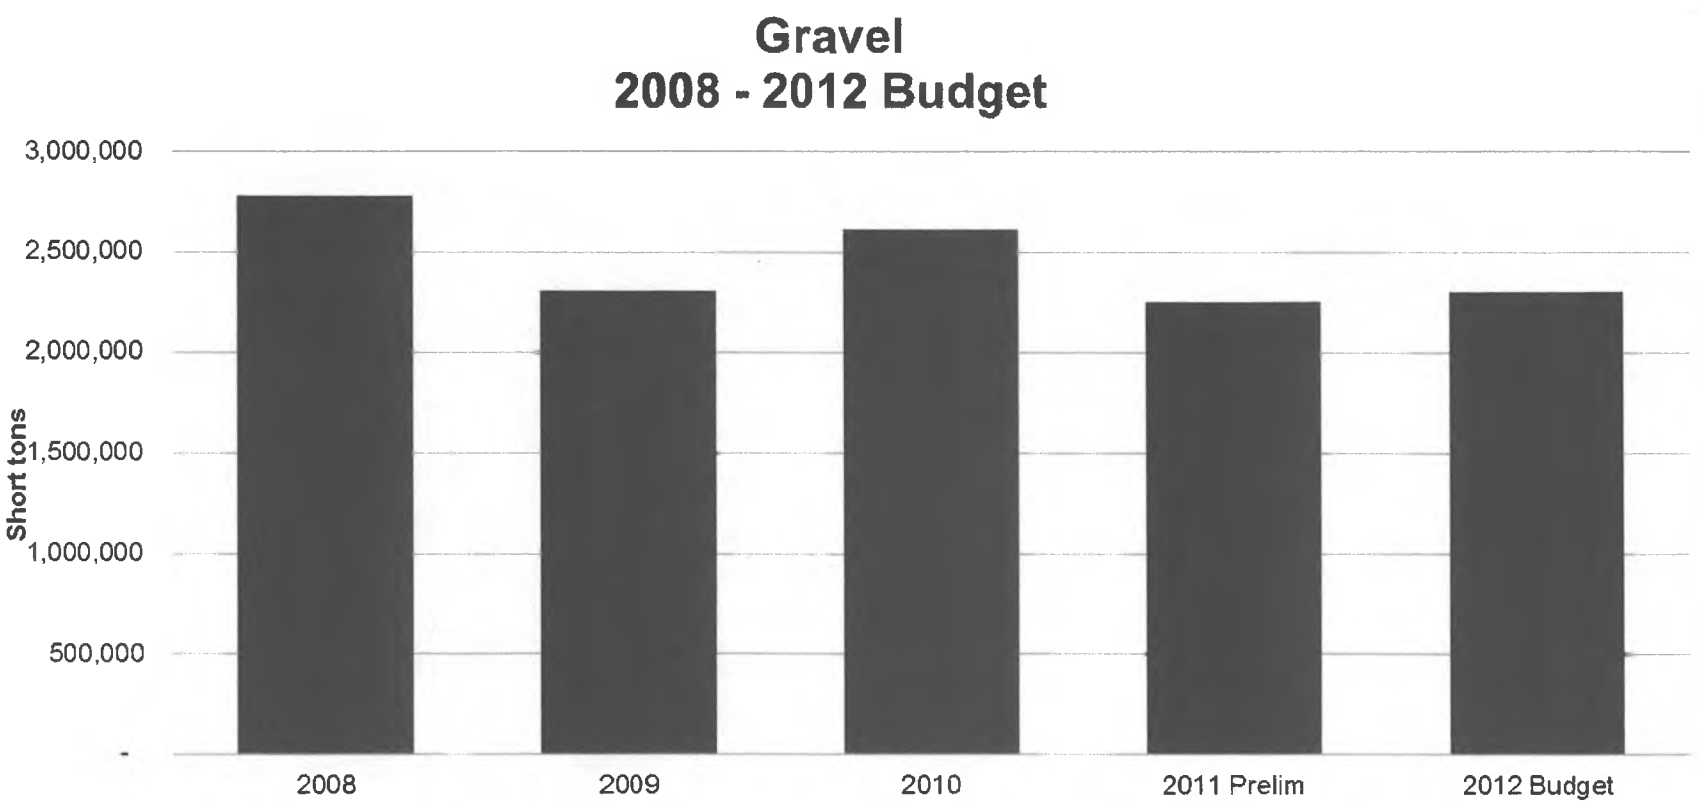
Freight Revenue – Export Coal

Export coal: Coal moved south from Healy to Seward for export to Chile, Japan and South Korea



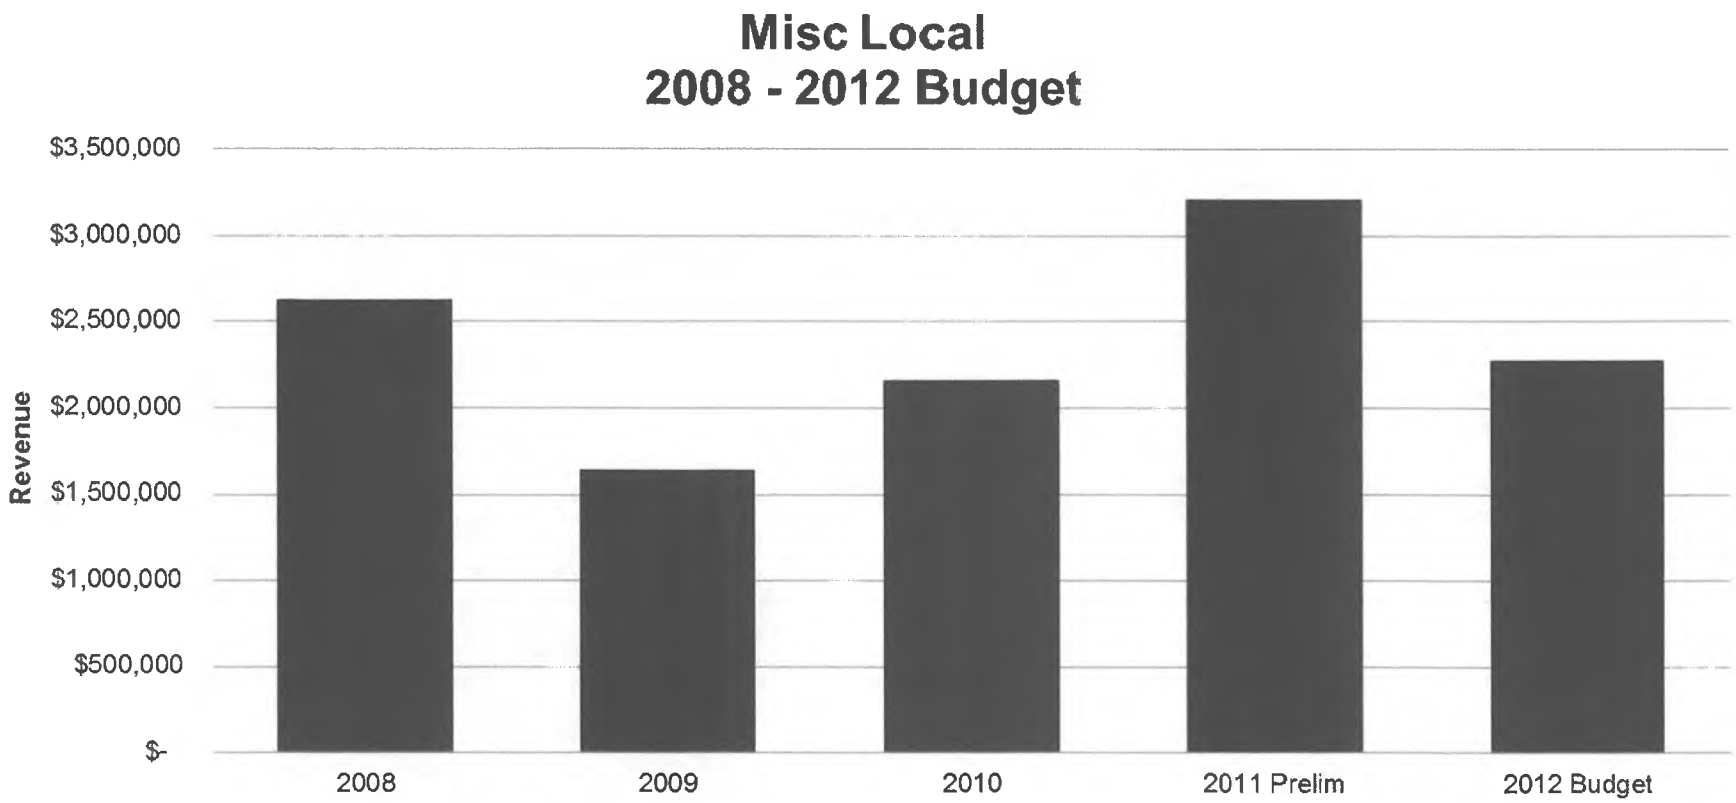
- *Strong global market – coal prices have increased for 2012*

Freight Revenue – Local Coal



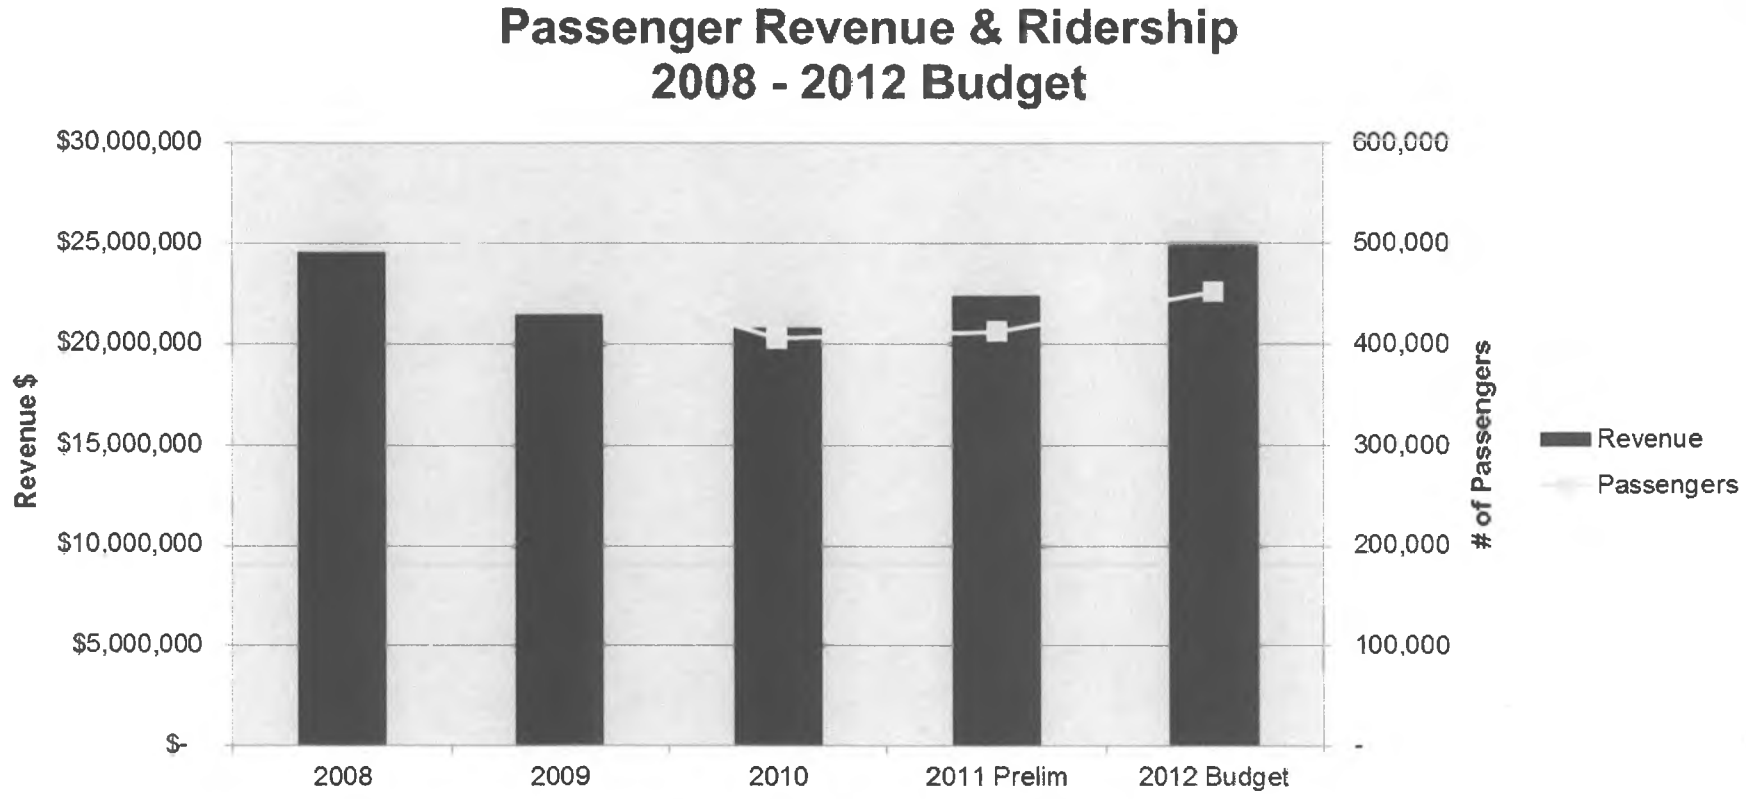
Local Coal: Coal moved north from Healy to Clear Air Site, UAF, Aurora Energy, Ft. Wainwright and Eielson AFB

Freight Revenue – TOFC/COFC



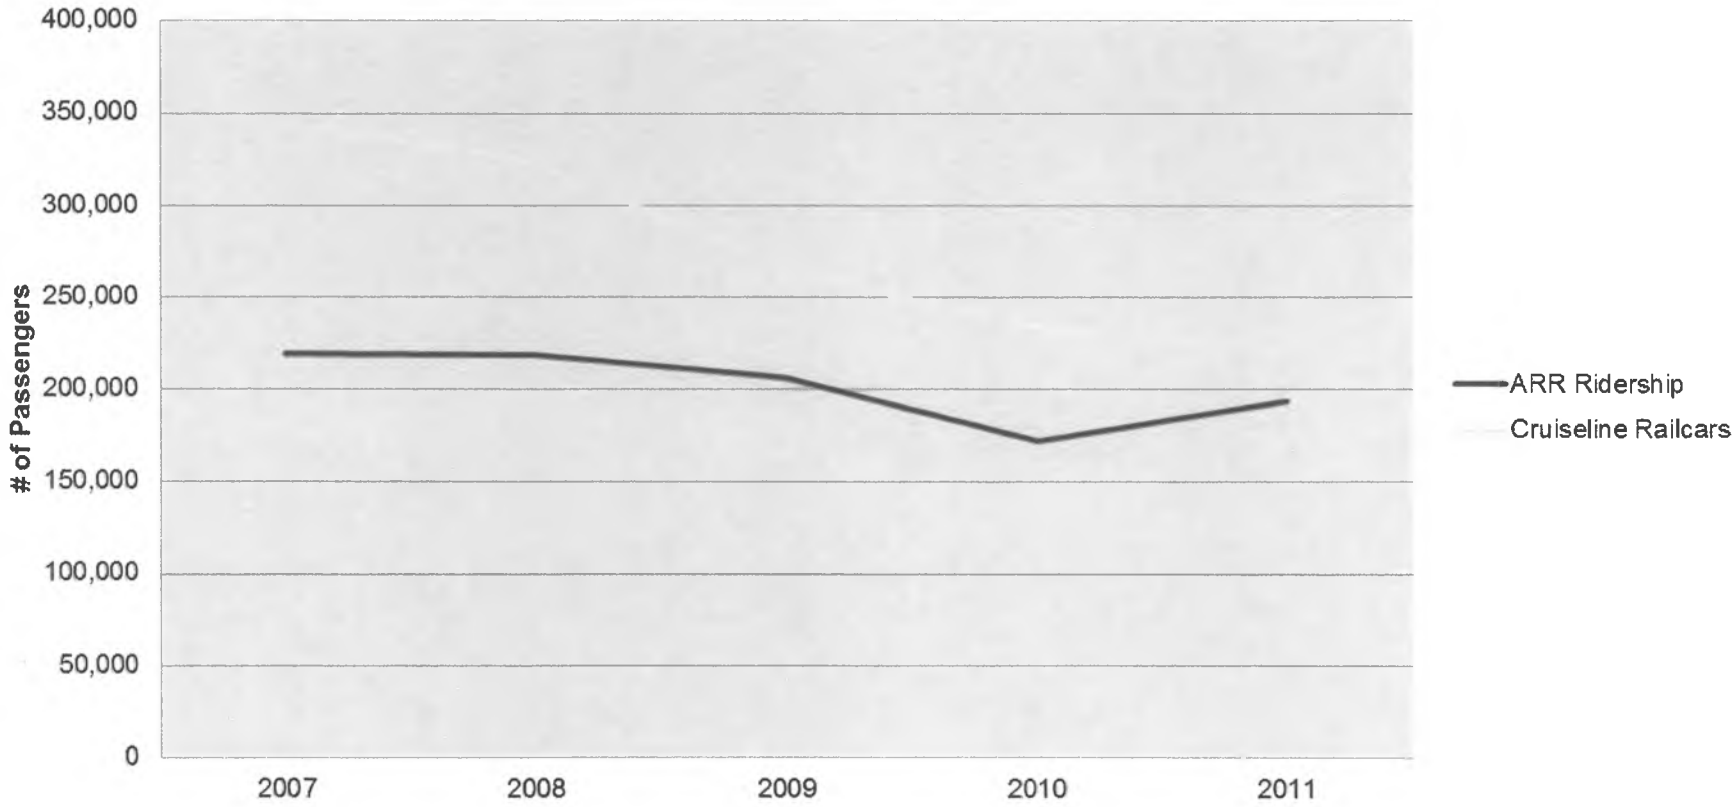
TOFC (trailer on flat car) and COFC (container on flat car): Trailers and containers moved between Seward, Anchorage and Fairbanks

Freight Revenue – Gravel



Gravel: Aggregate products moved from Mat-Su Valley to Anchorage by Anchorage Sand & Gravel, Granite Construction, and Quality Asphalt Paving

Freight Revenue – Misc. Local



Misc Local: Generally railcar revenue and limited miscellaneous revenue that does not fit into other revenue lines

Passenger Revenue

Passenger Count
2007 - 2011

2012 Outlook – Operating Budget

- ARRC financial situation still fragile
- Revenue growth planned, but market uncertainty/expense pressures persist
  - Export Coal – strong global demand, tempered by environmental issues, and capacity constraints
  - Interline business growth potential
  - Flat-line petroleum haul level planned
  - Moderate passenger growth seen: independents and return of Princess ship
  - Fuel, benefit cost increases dragging on bottom line
- ARRC Board approved earnings budget of $15.4 million
  - $6.4 million net income from core train operations planned
  - Contingency plans in place if revenue does not materialize

2012 Outlook – Capital Budget

- Approximately $55.4 million in total funding planned for capital projects
  - Federal Formula and Bond funds: $26.3 million
  - Other Federal funds/litigation settlement: $5.7 million
  - Cash flow from earnings: $23.4 million

- Program primarily maintains/upgrades existing infrastructure
  - Concludes seven-year accelerated track rehabilitation program: $31 million
  - Continues the development of Positive Train Control technology: $5 million
  - Continues vehicle and equipment replacement program: $3.3 million
  - Continues bridge rehabilitation program: $3 million

Challenges/Risks

- Federal Surface Transportation Reauthorization/FTA Formula Funds
  - ~$36 million annually at risk
  - Key fund source for ARRC's continued viability in current form
  - Sole security for $137 million in outstanding bonds
  - Draconian changes to corporation necessary should certain proposals in Congress move forward
- Positive Train Control
  - Unfunded federal mandate with remarkably aggressive implementation timeline requirements
  - Over $45 million spent to-date, with at least another $70 million to go
  - Technology development program designed to prevent collisions, unauthorized train movements, and other human factor errors
- Strategic initiatives developed and in various stages of implementation to address these and other identified challenges/risks
  - Joint Board/management strategic planning process

Strategic Initiatives

- Integrated Safety Management Initiative
- Maintain Eligibility for Federal Transit Administration Formula Programs
- Protect Existing Revenue Base and Grow our Business
- Customer and Community Relationships
- Economic Development of State
- Cost Containment Initiatives and Technology Initiatives
- Mitigate Impact of Spend-Out of Federal Transit Administration Bond Funds

2012 Alaska Railroad Corporation Report to the State

Strategic

Leadership's Outlook

In accordance with state law (Alaska Statute 42.40.290), the Alaska Railroad Corporation (ARRC) annually adopts a long-range capital improvement plan and shares this with the governor and Legislature each year. We are pleased to present our outlook for capital investment and self-sustained operations, 2012 - 2016.

The railroad's five-year capital project and operating budgets are influenced by a strategic plan that outlines how we execute our company mission and measure supporting goals. Defined within two governing statutes (Alaska Railroad Corporation Act and Alaska Railroad Transfer Act), ARRC's mission is to provide safe, profitable, high-quality service to our freight, passenger and real estate customers and to foster the development of Alaska's economy. The Alaska Railroad Strategic Plan is revised annually to reflect changes in the business climate, workforce, community planning and other influences. Our current five-year plan defines eight strategic initiatives that were developed by the railroad's management team in concert with the ARRC Board of Directors. Initiatives include:

- Establish integrated safety management programs
- Protect existing revenue base and seek new business opportunities
- Enhance customer communication and relationships
- Maximize impact of federal grant spending to include capital bond repayment
- Maintain eligibility for federal formula funds related to passenger services
- Contain costs and improve operating ratio
- Maximize technology resources and investments
- Ensure the value of rail transportation is recognized and used as an economic driver

As the initiatives suggest, we understand the railroad's strength relies on a successful mix of assets — capital, people and reputation. That's why our corporate values put employees and customers first. It's why we strive to provide a safe working environment, operate trains safely, run a business in a financially sound manner, partner with Alaska's communities and protect our environment.

While this report outlines capital improvement plans, we also mention other accomplishments, such as recent honors received from Alaska's business community and anticipated rail business gains. These illustrate how ARRC benefits from the skill of a seasoned workforce, cooperation from long-term relationships with communities and business partners and a commitment to customer service. With this solid foundation, we fully expect to realize our potential as an essential transportation service and reliable economic partner for Alaska.

Chris Aadnesen

Board Chair

History

The Alaska Railroad was built by the U.S. government between 1914 and 1923. Operated by the federal government until January 1985, it was then purchased by the State of Alaska for $22.3 million to serve Alaska businesses and communities as an engine of community development and economic growth. The Alaska State Legislature created the Alaska Railroad Corporation (ARRC) in 1984 as the entity to own and operate the railroad and to manage railroad property after transfer.

The Legislature appropriated $11.9 million to the new corporation for start-up costs because the U.S. government retained control of the railroad's bank accounts at the time of transfer (Jan. 5, 1985). The legislative appropriation was sufficient to cover two payrolls and the costs of several ongoing capital projects.

Unlike other state business enterprises (such as the Alaska Housing Finance Corporation and the Alaska Industrial Development and Export Authority), ARRC's enabling statute specifically requires that all revenue earned by the railroad is retained by the railroad. The federal transfer act also contains this requirement. The intent was to ensure the railroad had the money it needed to meet basic maintenance and capital needs, improve safety and increase profitability, thereby avoiding dependence on the state general fund. The corporation's annual earnings are invested entirely back into the corporate capital program.

The state-owned corporation is governed by a seven-member board of directors appointed by the governor. The president and CEO of the corporation reports to the board.

OPERATING DATA AND PLANS

Operating Statistics

• Miles of main line:	467
• Miles of branch line:	54
• Miles of yards and sidings:	135
• Total miles of track:	656
• Freight cars (owned/leased)*:	1,254
• Passenger cars:	45
• Locomotives:	51

* *961 revenue cars and 293 maintenance cars; not including 420 tanker cars owned by Flint Hills Resources*

•Ridership**:	411,000 passengers
• Freight tonnage**:	6.3 million tons

** *Jan. 1 - Dec. 31, 2011, Projected*

Employees *(November 2011)*

• Year-round employees:	685
• Additional seasonal employees:	~100
• Average years of service:	12.1
• Average age:	46.2
• Male:	571
• Female:	114

A majority of employees are members of five unions:

• United Transportation Union:	132
• Transportation Communication Union:	39
• International Brotherhood of Teamsters Local 959:	61
• American Federation of Gov't Employees:	274
• American Train Dispatchers Department:	8

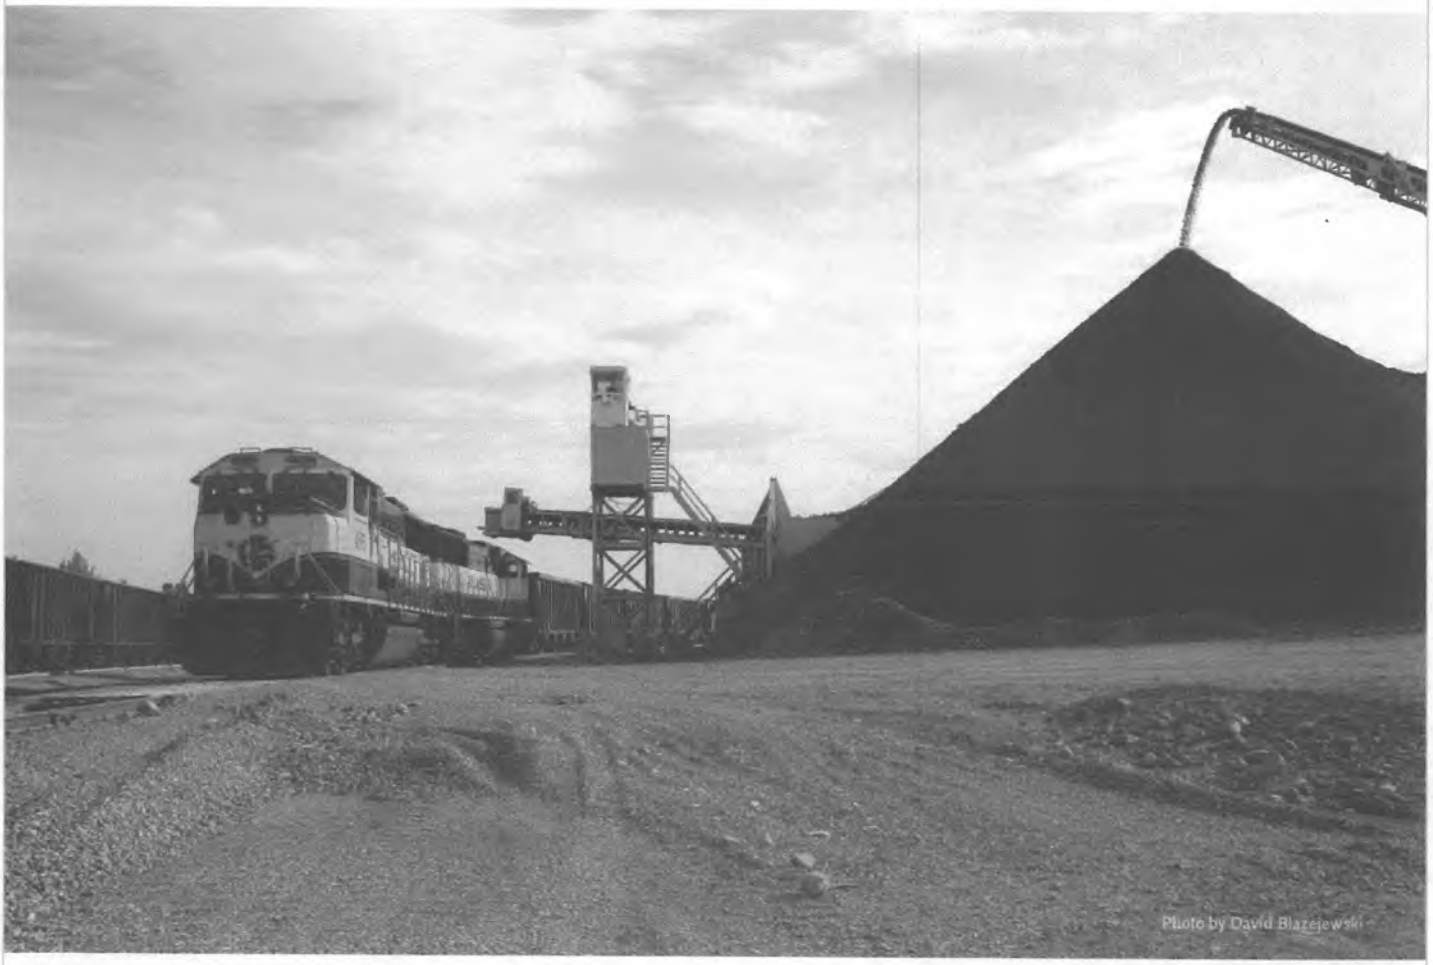
2012 Budget Real Estate Revenues

(in millions of dollars)



ARRC funded renovation of its freight shed, Alaska's first historic building to be reconstructed to Leadership in Energy and Environmental Design (LEED) standards. The 36,000 square-foot facility will be 93 percent occupied by early 2012 once the U.S. Forest Service moves in.

Five-Year Operating Plan

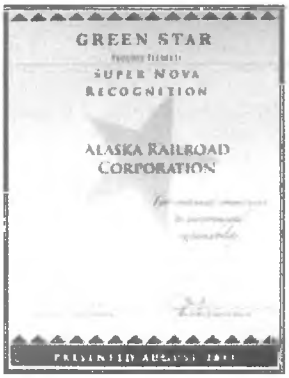
(in millions)	2012	2013	2014	2015	2016
Operating Revenue	$131.20	$139.41	$148.54	$153.80	$156.39
Operating Expense	123.31	130.17	138.87	142.64	145.40
Net Operating Income	7.89	9.24	9.67	11.16	10.99
Net Real Estate Income	9.11	9.95	10.44	10.61	12.54
Net Other Income (Expense)	(1.56)	(1.01)	(0.81)	(0.29)	(0.09)
Net Income	$15.44	$18.18	$19.30	$21.48	$23.44

A gravel train being loaded in Birchwood.

Ground was broken on the Northern Rail Extension Phase One, a Tanana River bridge near Salcha. Funding: $104 million from the Department of Defense; $84 million from the State of Alaska.

RECOGNITION ROUND-UP

Three organizations presented the Alaska Railroad with annual awards in 2011, recognizing ARRC's ongoing community service and environmental stewardship efforts:



- In April, the Alaskans for Litter Prevention and Recycling (ALPAR) named the railroad its 2010 Contributor of the Year for ARRC's steady support of recycling backhaul efforts benefitting ALPAR and Alaska communities. ARRC helped affordably move 5.8 million pounds of recyclable materials in 2010.
- In September, the Anchorage Chamber of Commerce presented ARRC with its 2011 Distinguished Community Service Award (Large Business/Organization category). ARRC was honored for participation in the school-business partnership program, charitable giving, environmental stewardship, infrastructure investments and employee volunteerism.
- In October, Green Star, Inc. presented ARRC with its new Super Nova award, acknowledging a higher level of leadership and commitment to doing business in an environmentally responsible manner. Impressed with ARRC's recertification effort, Green Star plans to use the railroad's recertification submission as a "best practices" standard for other organizations seeking to recertify.

Alaska Railroad 2012 Program of Projects

Established in 1923, the Alaska Railroad Corporation (ARRC) is the last of the full-service railroads in the United States, offering both freight and passenger services. From tidewater at Whittier and Seward to the heart of Interior Alaska, our route covers more than 500 miles. ARRC is a state-owned corporation, but it does not receive state funding to operate. ARRC relies on passenger, freight and real estate revenues to cover expenses to operate trains and maintain tracks and facilities. About $49 million is budgeted in new spending for capital improvements in 2012. An additional $68 million is budgeted for two special rail extension projects. Detailed project fact sheets are online at **www.AlaskaRailroad.com -> Capital Projects.**

Federally-funded Projects

Since 1996, ARRC has received federal funds for infrastructure improvements. Funding has come from the Department of Defense (DOD), Federal Railroad Administration (FRA), Federal Transit Administration (FTA), Federal Highway Administration (FHWA), Transportation Security Administration (TSA), Federal Emergency Management Agency (FEMA), U.S. Dept. of Homeland Security (DHS), U.S. Forest Service (USFS) and other federal sources, such as "Stimulus" money from the American Recovery & Reinvestment Act of 2009. Most FTA, FHWA and FEMA funded projects require 9% to 25% matching funds from ARRC.

In 2012, ARRC expects to receive FTA formula funding to support an estimated $11.76 million in capital projects; ARRC will contribute 9% of this amount. Other federal funds include $1.26 million in FEMA-administered grants, $1.43 million from the FRA, and $295,000 from DHS. A $2.7 million settlement will repair deficient track work originally paid by federal grants.

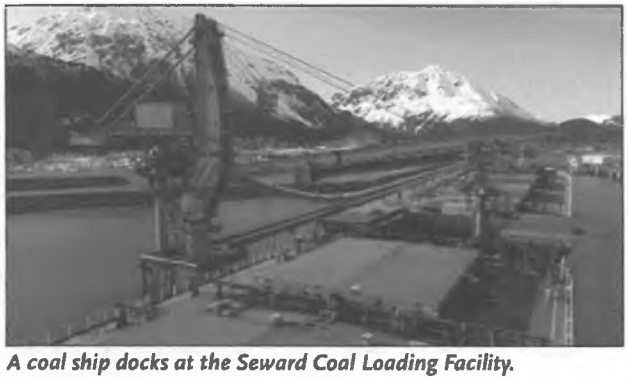
Internally-funded Projects

In addition to the match for federal grants, ARRC internal funds (funds generated by corporate freight, passenger and real estate business revenues) support ARRC's ongoing expense activities as well as an annual capital program. In 2012, internal funds will provide $23.5 million toward capital projects that are not eligible or selected for federal funding support.

Bond-funded Projects

In 2006, ARRC sold $76.1 million in revenue bonds and another $89 million in 2007. These funds are primarily used to accelerate track rehabilitation efforts. About $8 million will be spent in 2012. Bonds are repaid with FTA formula funds.

Special Rail Extension Projects



The State of Alaska appropriated FY2012 funds to support two major rail extensions. $44 million was approved mid-2011 to close the funding gap for Phase One of the Northern Rail Extension. ARRC will manage $24 of the $30 million the State approved mid-2011 to pursue Port MacKenzie Rail Extension construction.

Frequently used acronyms:

- ARRC = Alaska Railroad Corporation
- ARRA = American Recovery & Reinvestment Act
- FEMA = Federal Emergency Management Agency
- FTA = Federal Transit Administration
- FRA = Federal Railroad Administration
- FHWA = Federal Highway Administration
- DOD = Department of Defense
- EA = Environmental Assessment
- EIS = Environmental Impact Study
- STB = Surface Transportation Board

Seward Coal Loading Facility

ARRC acquired the Seward Coal Loading Facility in 2003 and made subsequent improvements in order to increase facility efficiency, driving down the cost of operation, thus making Alaska's coal resources more competitive in the global market. ARRC completed an EA of proposed improvements and upgrades in 2004. FRA provided the original $9.54 million grant, with $8.3 million spent on acquisition and associated studies and $1.24 million used for inspections, repairs and improvements. ARRC is underwriting ongoing maintenance and capital improvements. In response to community concerns over coal dust problems resulting from unusual dry, windy weather in early 2007, ARRC and facility operator Aurora Energy Services (AES) modified operations and ARRC hired industry experts to analyze and recommend future capital improvements. Since 2007, ARRC and AES have spent more than $1.5 million on safety, operations and environmental improvements. $720,000 is budgeted for 2012.

A coal ship docks at the Seward Coal Loading Facility.

Seward East and West Dock Investments

ARRC built a new East Dock in Seward in 2000, and a section of the 640-foot long by 200-foot wide East Dock was expanded to 320 feet wide in 2007. Since 2001, the West Dock and its terminal building have been substantially improved to support intermodal passenger activity. In 2011, a 1,600-foot security fence with three roller gates was installed around the East Dock. In 2012, two of the three gates will be upgraded with card-reader control access and surveillance cameras. A security fence and card-reader access gates (with surveillance cameras) will also be installed on either side of the West Dock terminal building. 2012 fencing and gate upgrades funded by a $295,000 Port Security Grant.

ARRC's West (left) and East docks in Seward.

Chugach National Forest Whistle Stop Service

ARRC and the U.S. Forest Service (USFS) are partners in developing a whistle stop service in the Chugach National Forest. Plans call for five recreational sites between Portage and Moose Pass that will be accessible by rail and interconnected by trail. Sites include a passenger rail platform, passenger shelter, toilets and interpretive signage. Other features may include picnic, camping and wildlife viewing facilities. The project purchased a self-propelled diesel multiple unit (DMU) railcar, which arrived spring 2009. The first site was completed at Spencer in late summer 2007. Construction on the Grandview site began in 2011 and will be completed in 2012. Construction of a pedestrian bridge over Placer River at Spencer also began in 2011; it will be installed in 2012. $1.8 million for Spencer site funded by USFS and ARRC. The $5.35 million DMU was funded $4.7 million by USFS and $648,000 by FTA and ARRC. The pedestrian bridge at Spencer ($1.6 million), and the Grandview site ($1.2 million) funded by ARRA grants obtained by the USFS. Estimated $14 million is needed to complete all five sites and facilities.

Whittier Infrastructure & Master Planning

ARRC is pursuing a Whittier Master Plan to improve railroad infrastructure. Recent projects: **1)** built a pedestrian underpass (2002); **2)** built an equipment maintenance facility (2002); **3)** improved Delong Dock (2002); **4)** built barge slip side-loading structures (2002); **5)** demolished the old transit shed (2003); **6)** built a cruiseship passenger spur and platform (2004); **7)** improved security with a yard office at the entrance, seasonal yard fence and video cameras (2006/07); **8)** demolished the marginal wharf (2008); and **9)** extended barge slip ramp and replaced the stern (front) unloading area to include hydraulic lifts and pass/pass features (2009-2011). A security fence around the Whittier Yard will be installed in 2012 with a $311,224 Homeland Security grant and $82,000 from ARRC. Future actions recommended by the Master Plan include: **a)** construction of improved intermodal passenger

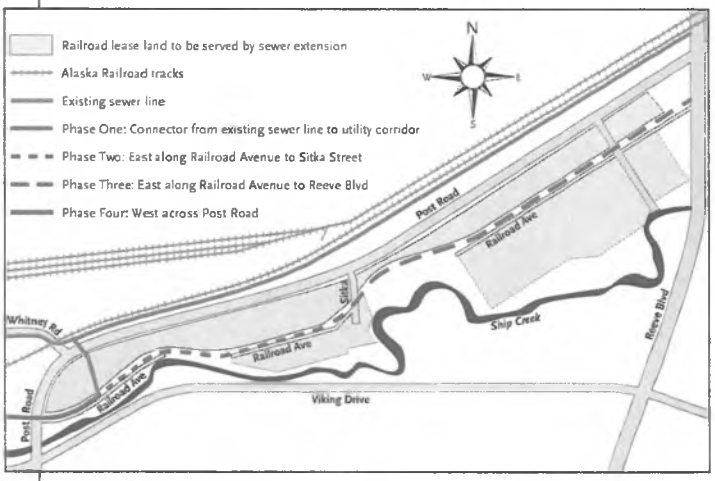
and public use facilities; **b)** rail yard reconfiguration and track improvements to separate freight and passenger activity; and **c)** additional security measures including lighting and detection equipment for passenger facilities.

Portage Section Maintenance Facility

ARRC plans to build up to six section maintenance facilities. These steel-framed heated buildings house a shop area to store / maintain rail equipment and trucks, small office space, restroom and utility room. The prototype was constructed in Cantwell in 2006. Construction of a 47-by-65-foot facility at Portage began in 2011 (Phase 1: site prep). Phase 2 — building with shop area — will be complete in 2012. A final phase will add offices and restrooms at a later date. Phases 1 and 2 are budgeted to cost $1.25 million, funded by ARRC.

The prototype section maintenance facility built in Cantwell.

Ship Creek Intermodal Transportation Center



ARRC is pursuing an Intermodal Transportation Center (ITC) and associated improvements (pedestrian amenities, transit infrastructure, parking, track modifications, etc.) in the Ship Creek area. The ITC will facilitate connections from one transportation mode to another — rail, public transit, air, marine, bus, taxi, private vehicle, bicycle and pedestrian — and improve links to Anchorage's downtown business district to meet passenger transit needs over the next 30 years. Phase 1, completed 2007-2009, included utility relocation, new track and passenger platform construction, and track rehabilitation. Part of Phase 2 (2a) began in 2010 to include Anchorage Historic Depot exterior improvements, electrical upgrades and boiler replacement. Phase 2a was completed in 2011. Future phases will construct a service / office building, a new departure lounge over the tracks and an elevated covered walkway connecting to downtown. Approximately $23 million for conceptual and environmental work, preliminary design, and Phase 1 was funded 91% by the FTA and 9% by ARRC. Phase 2a budget of $7.94 million funded by ARRA Stimulus money. ARRA money also funded $300,000 in 2009-2010 to install 1,000 feet of security fencing east of the depot. Conceptual design for Phase 2b (replace annex building with smaller crew facility and improve pick-up /drop-off and other areas surrounding the depot) was complete in 2011. ARRC is seeking funding for 2b. Total cost for all phases is estimated at $78 million.

Phase 2a included installation of a paved-system roof along with more insulation for better energy conservation.

Ship Creek Area Sewer System Extension

ARRC plans to extend the existing Anchorage Water & Wastewater Utility sewer system to provide sewer service to railroad leased land on the east side of the Anchorage Railroad Reserve, located south of Post Road and north of Viking Drive. Phase 1 of the four-phase project would construct a connector from the existing sewer line to a proposed utility corridor along an old right-of-way parallel to, and south of, Post Road. Phase 1 design complete in 2011 and construction will begin in 2012. Phase 1 cost of $400,000 funded by ARRC. All four phases are estimated to cost nearly $2 million; funding for later phases is not yet identified.

Proposed sewer extension project in Anchorage Railroad Reserve.

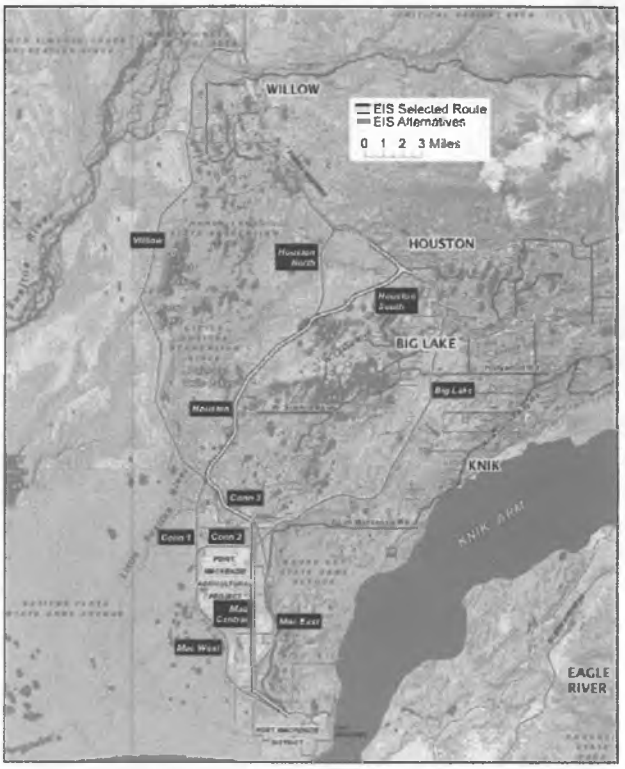
Anchorage Locomotive Fueling/Servicing Facility

ARRC plans to replace an existing 1970s-era locomotive fueling delivery system in the Anchorage Yard. Plans call for a new facilty to provide fueling, sand loading, inspection and minor maintenance of locomotives. First considered in 2003, conceptual planning and design resumed in 2011 to include a cost/benefit analysis of a stationary fueling/serving facility versus mobile fueling by truck. Efforts to optimize the design continue. Preliminary design first budgeted at $200,000 in 2003; followed by $100,000 in 2010 and $150,000 in 2011. Funded by ARRC.

Curve Realignment / Improvement near Eklutna

ARRC plans to reduce the curvature of the mainline track and parallel siding track along a curve at ARRC MP 142, near Eklutna. The project will relocate a maintenance spur track from the north end of the curve to the south, and lengthen the spur from 130 to 1,000 feet. The timber road/rail crossing across the mainline and siding will be upgraded to concrete, improving drivability access to Eklutna Inc. land. Design began in 2011, and construction will begin 2012. Funding 80% U.S. Department of Transportation and 20% ARRC.

South Wasilla Rail Line Relocation



ARRC plans to straighten curves along the mainline track in South Wasilla, between ARRC MP 154 and 158. The track relocation would eliminate five at-grade crossings, reduce derailment risk, reduce operational and maintenance costs, and allow for faster train speeds. An EA of alternative relocation routes was completed in 2005. Land acquisition will be complete in 2012. $246,000 for conceptual engineering and the EA and $2.72 million for preliminary engineering and land acquisition, funded by 91% FTA and 9% by ARRC. $2.5 million to continue right-of-way land acquisition funded 91% by FHWA and 9% by ARRC. Total cost to construct Phase 1 (MP 154 to 156) is estimated at $37 million.

A large curve in the track slows train speeds in south Wasilla.

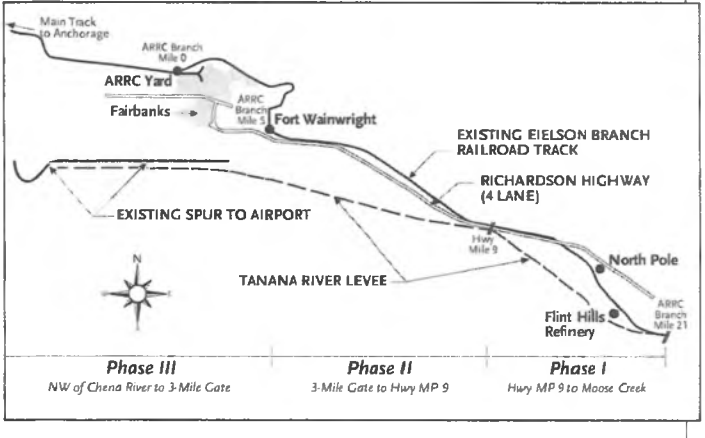
Port MacKenzie Rail Extension

The Matanuska-Susitna Borough and ARRC are partners in proposing a new 32-mile rail line connecting Port MacKenzie to the existing mainline track near Houston. Extensive public involvement activities were conducted in summer and fall 2007 to obtain citizen and agency input. In early 2008, ARRC submitted an application to the Surface Transportation Board (STB), the federal agency with authority over rail extensions in the United States. The STB conducted an EIS which was complete in spring 2011. The STB's record of decision to approve construction came in late November 2011. The State of Alaska appropriated $27.5 million (2007/2008) to support the EIS and supporting studies, and to construct a bulk commodities road loop. The State appropriated $35 million in 2010 and $30 million in 2011 to pursue design and construction of the first two phases. An estimated additional $180 is needed to complete design and construction.

Potential Port MacKenzie Rail Extension preferred route selected.

Healy Canyon Safety & Reliability Program

Healy Canyon lies between Denali Park and Healy. The tracks follow the Nenana River gorge on a narrow grade, originally through two tunnels. The area has steep slopes and erosion-prone soil. ARRC proposed a series of projects to: **1)** stabilize the track bed in Healy Canyon; **2)** control the rock fall problems; **3)** "daylight" (remove the top of) Moody Tunnel; **4)** realign tracks around Garner Tunnel; and **5)** realign the tracks to straighten the corridor. Total cost is estimated at approximately $71 million. $2.9 million in FRA funds were used to address the slide zone and realign track around Garner Tunnel in 2005. $5.2 million in FTA grants and FTA-backed revenue bonds were used to daylight Moody Tunnel, which was completed in 2009. About $5.86 million was spent in 2009-2011 to stabilize several areas (MPs 352.9, 354.1, 355.2 and 357) in the canyon, with a combination of funding from FEMA, FRA, ARRC and the Alaska Division of Emergency Services. MP 352.9 will be complete in 2012. ARRC continues to seek funding to pursue future stabilization.



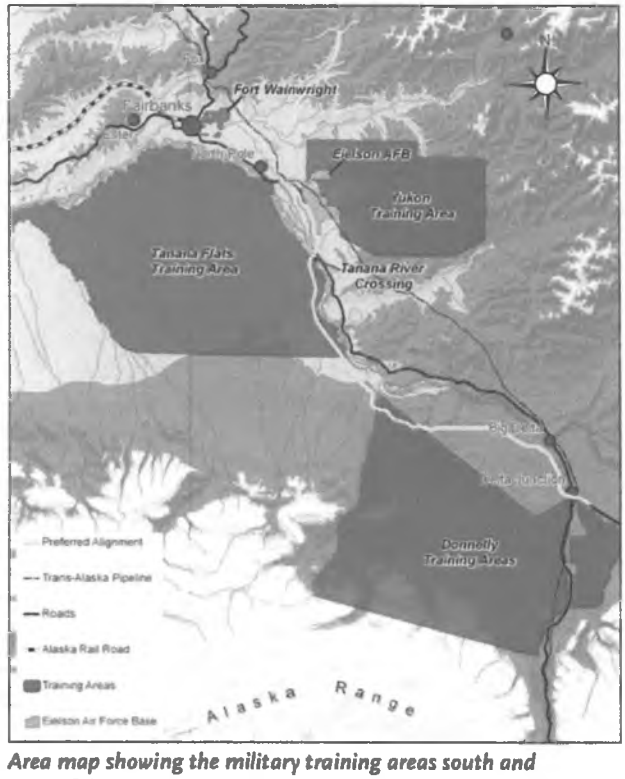
Nenana Rail Line Relocation

ARRC proposes to realign the railroad mainline around downtown Nenana, following a route outside of the existing right-of-way, north of the airport and southeast of town, over the Parks Highway. The track structure through Nenana would be maintained to support port activities. ARRC completed an EA of three alternative realignment routes and a "no action" alternative in 2004. Right-of-way acquisition

was complete in 2009. A hydrology study completed in 2010 is being used to obtain flood plain permits. One such permit was approved by the City of Nenana in 2011. A $1 million budget for the EA was funded 91% by the FTA and 9% by ARRC. $2 million for land acquisition funded by 91% FHWA (administered via FTA) and 9% ARRC. $225,000 for the hydrology study funded by ARRA Stimulus funding. Estimated $37.7 million to complete final design and construction. Funding for construction has not yet been identified.

Fairbanks Area Rail Line Relocation

ARRC is analyzing options to: **a)** realign and improve safety of the main line and branch track, including potential realignments outside the more populated areas of Fairbanks and **b)** realign and improve the Eielson Branch, from the Fairbanks Depot to the end of the branch near Eielson AFB. The Fairbanks Area Rail Line Relocation will likely require an EIS. As a pre-cursor to the EIS, ARRC conducted an Alternatives Analysis (AA) in 2007-2008 that capitalizes on the findings of previous reconnaissance and engineering studies. The AA recommends a three-phased approach. In 2007-2009, ARRC also commissioned a *North End Rail Public Transportation Study and Operation Plan* to explore options for passenger rail and commuter service. Findings indicate low demand for Fairbanks-North Pole commuter service and results are inconclusive for Fairbanks-Denali service options. The AA and public transportation study were funded by $450,000 in grants from FHWA and FTA with 9% match from ARRC. Funding has been secured to pursue environmental work for Phase I, the North Pole area *(see separate project description below)*. Funding sources are being sought for National Environmental Policy Act (NEPA) environmental work to include an EIS for Phases II and III.

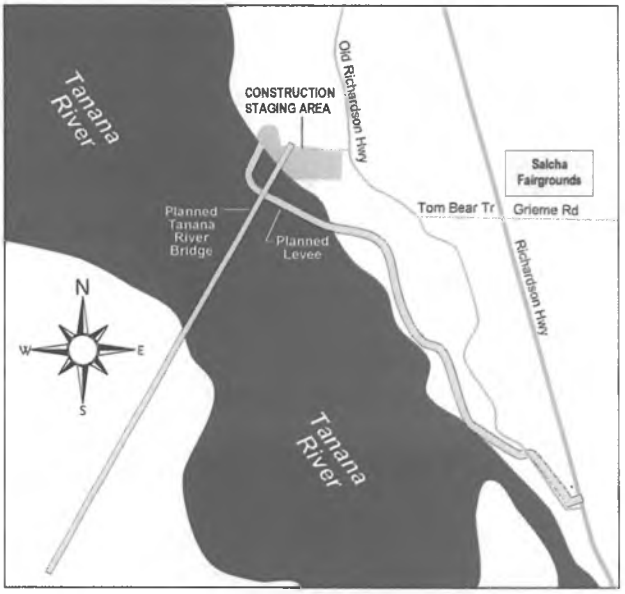


North Pole Road/Rail Crossing Reduction

In cooperation with the FRA, FHWA and Fairbanks Metropolitan Area Transportation System (FMATS), the ARRC initiated an EA and preliminary engineering for a proposed project to reduce at-grade road/rail crossings by realigning an 8-mile section of the Eielson Branch that runs through North Pole, between Richardson Hwy milepost 9 and the Chena River floodway. This project is essentially Phase I of the three-phased Fairbanks Area Rail Line Relocation. The EA is expected to be complete and ready for public review in early 2012. Funding of $1 million comes from FHWA funds re-allocated by FMATS and the Alaska Department of Transportation & Public Facilities. Cost for final design and construction will be determined through the EA process.

Northern Rail Extension

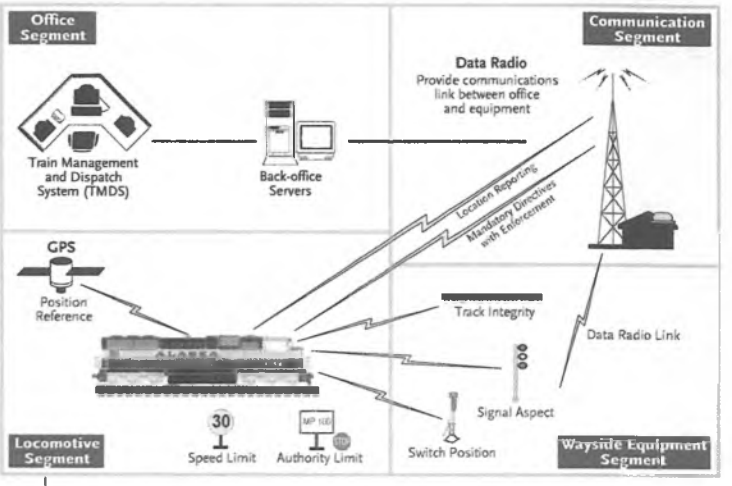
ARRC proposes to extend its mainline track from North Pole / Eielson AFB, about 80 miles southeast to Delta Junction. The project would offer: **a)** commercial freight service supporting communities and commerce in the corridor; **b)** a passenger transportation alternative to the Richardson Hwy; **c)** support of military training; and **d)** support of regional tourism. ARRC initiated the conceptual development in 2004. The STB initiated an EIS in 2005. The final EIS was released in late 2009 and the STB approving a license to construct and operate a rail extension on January 5, 2010. The EIS, preliminary engineering and design was funded by $16.5 million in DOD appropriations, administered by the FRA. DOD appropriated another $44.2 million in 2007 and $60 million in 2008 for planning, engineering, environmental work, design and to begin construction on the first phase of the project *(see project description below)*. The project is expected to be built in four phases, beginning with the river bridge, followed by rail construction from the bridge to the end of the Eielson Branch. Later phases will continue the extension



Area map showing the military training areas south and west of the Tanana River.

to Delta Junction. Cost of all phases is estimated at $650 to $850 million. Phase 1 is funded *(see below)*. Funding for later phases is not yet identified.

NRE Phase 1: Tanana River Crossing



Design of the Northern Rail Extension Phase 1, Tanana River Crossing, got underway in 2010, after the STB had granted authority with a record of decision in January. Design includes a bridge over the Tanana River at Salcha as well as a levee to control river flow in the area. Kiewit was hired as Construction Management / General Contractor and construction on Phase 1 began in 2011. The bridge and levee are scheduled for completion in 2014. Budget is $188.2 million, funded with $104.2 million from the DOD and $84 million from the State of Alaska.

Phase One: Tanana River Crossing - Construction area map.

Positive Train Control

ARRC is pursuing a multi-phased program to design, develop and implement a communication-based train control system that uses data radio communications between train dispatchers and train crews, or dispatchers and roadway workers. The Positive Train Control (PTC) project is comprised of a replacement Computer Aided Dispatch (CAD) system, an on-board computer system, VHF packet data radio technology, and Global Positioning System (GPS) locator technology. The PTC will provide regulatory-mandated safety enhancements to prevent train-to-train collisions, to detect infrastructure failure and potential operations violations quickly, and to intervene when necessary. To date, ARRC has spent $53 million (1999-2011) on communications and preparational work, funded by FRA, FTA, ARRA and ARRC sources. An additional $70 million is estimated to complete the PTC system. For 2012, $5 million is funded $4 million by FTA grants (91% FTA; 9% ARRC) and $1 million by ARRC.

Positive Train Control System Overview.

Passenger Rail Cars and Locomotives

ARRC has 45 passenger-related railcars, including 30 coaches, six diners, six baggage cars, two business cars (charters) and one DMU. ARRC also has 53 locomotives: 28 SD70MACs (12 equipped with head-end-power to supply electricity to passenger cars), 15 GP40s, eight GP38s and two cab/power cars. ARRC upgrades older equipment and buys newer equipment to meet current and future passenger demands. In 2012, several passenger cars will be upgraded with new lighting, public address systems, batteries, signs, new flooring, wall-covering, seat upholstery and galley modification. $600,000 budget is funded by ARRC. Four SD70MAC locomotives and one or two GP40 locomotives will be overhauled to include installation of tier-plus kits to improve fuel efficiency, and installation of engine idle reduction systems (GP40s). SD70MACs funded by $1.23 million from ARRC. GP40s funded by a $1.4 million FTA "TIGGER" (Stimulus-funded) grant and $328,000 by ARRC.

Left to Right: GP-38-2, GP 40-2 and SD70MAC locomotive.

Bridge Program

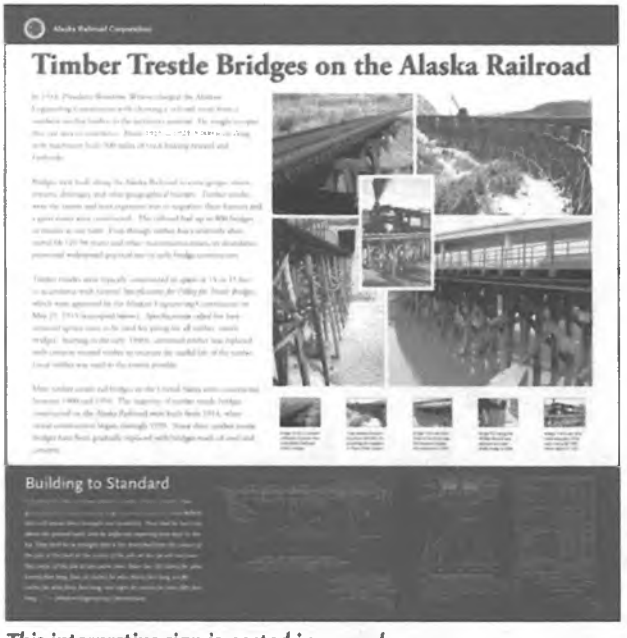
ARRC's 500-plus miles of mainline track include about 160 bridges that cross barriers ranging from streams to gulches. ARRC's Bridge Program calls for major maintenance, overhaul and replacement needed to maintain railroad integrity, safety and efficiency. In 2012, ARRC plans to complete design for a structure to replace three culverts at Indian Creek (MP 88.1). Drainage and embankment work will be completed for a new bridge that was built over Skookum Creek Drainage (MP 59.4, near Portage) in 2011. Upgrades and

Timber piling and caps were replaced with steel pipe and pile caps on the bridge at MP 29.5 in 2011. In 2012, timber beams and ties will be replaced to complete bridge rehabilitation.

rehabilitation are also planned for 10 other bridges. In addition, a "rock shed" will be designed for the tunnel about 50 miles north of Seward to protect against falling rock and ice. Funding includes $2.95 million by ARRC plus $500,000 in FTA grants (funded 91% FTA; 9% ARRC).

Track Rehabilitation

ARRC continues an aggressive track rehabilitation program in 2012 that calls for replacement of rail, ties and ballast in areas of critical need. Each year, ARRC converts several miles of track into continuously welded rail, which dramatically decreases maintenance costs and improves ride quality. ARRC also replaces a portion of its nearly two million wooden ties (45,000 ties in 2012). ARRC also plans to resurface many miles of track using 50,000 tons of ballast rock. For 2012, $14.2 million is funded by current and prior year FTA grants (funded 91% FTA; 9% ARRC); $8 million is funded through the sale of ARRC revenue bonds backed by FTA formula funds; $6.3 million is funded by ARRC, and a $2.7 million legal settlement will repair deficient work originally paid for by federal grants.



A tie crane operator positions a new tie during tie replacement operations in spring 2011.

Drainage Improvement/Embankment Protection

ARRC will repair or replace up to 15 culverts along the northern half of the rail corridor. Several culverts in this area are at risk of washout, collapse or clogging. ARRC also plans to install riprap and armor rock to fortify track embankment that is susceptible to high water events, including flooding. Culvert repair/replacement budget is $500,000, funded by ARRC. Embankment protection work is supported by $2.52 million in grants funded 75% by FEMA and 25% ARRC; and $446,000 in grants funded 80% by FRA and 20% ARRC.

Historic Preservation

ARRC supports historic preservation efforts that are related to railroad assets and infrastructure. Some ARRC assets are historic properties and are listed on the National Register of Historic Places and more than 50 ARRC properties are eligible for listing on the National Register. ARRC often consults with state and federal historic preservation agencies to mitigate impacts from capital projects that may adversely impact historic assets. Mitigation often takes the form of educational materials, including brochures, interpretive signage, archived photos and documentation.

This interpretive sign is posted in several common-use passenger railcars as part of a public education effort.

Integrated Vegetation Management Program

The Alaska Railroad pursues an integrated vegetation management program to protect the millions of dollars invested each year in its infrastructure. Uncontrolled weeds pose safety risks to ARRC operations and employees, including: **a)** vegetation makes track and train inspection difficult; **b)** plants hinder automated equipment operation; **c)** overgrown weeds hide walking hazards, contributing to slips, trips and falls;

d) roots create uneven, heaving surfaces, again posing walking hazards for track workers; and **e)** vegetation accelerates rail and tie deterioration. Public safety is also impacted by uncontrolled weeds: **a)** overgrown bushes block line-of-sight; **b)** vegegation can obscure signs and signals that warn the public; **c)** plants cause heaving and slippery conditions at road/rail crossings; and **d)** dry vegetation can fuel brush fires.

The railroad has always, and will continue to use mechanical and manual methods to clean the ballast, cut and clip brush, mow grass and weeds, saw roots and trim limbs, etc. Mechanical and manual methods achieve limited and temporary success. ARRC has also tested many alternative and experimental methods of controlling weeds (including steam, hot water, radient heat, abrasion, flaming and burning), with no lasting success. Herbicides provide an additional tool to help maintain safe operations and regulatory compliance, and to protect infrastructure investments. The railroad seeks to control vegetation with a combination of mechanical and chemical methods, using herbicides in the most critical and difficult areas.

In 2008, ARRC commissioned herbicide research to provide scientific information about use in Alaska's environment. Results indicate that herbicides behave the same as in other climates, and the glyphosate-based herbicide AquaMaster® does not linger or migrate in the soil. In 2009, ARRC applied for a Department of Environmental Conservation (ADEC) permit to use herbicides in the Seward yard and along 30 miles between Seward and Indian. The permit was approved in spring 2010 and AquaMaster® was applied selectively within the permitted area with good results. ARRC applied for additional permits in 2011 for herbicide use in the Anchorage Yard, Healy Yard, Fairbanks Yard and along the Eielson Branch. These were approved by ADEC and were used in July 2011. In 2012, ARRC is applying for three new permits covering 12 miles of track in the Palmer-Wasilla area, 38 miles of track between Gold Creek (34 miles north of Talkeetna) and Broad Pass, and 60 miles of track between Clear and Fairbanks. The ADEC will accept public comment through March 12, 2012. Public hearings are scheduled for January 31 in Fairbanks, February 1 in Wasilla and February 2 in Talkeetna.

Post herbicide control near Seward. Note clear distinction at control area boundary at the end of the ties.

current as of 01/11/2012

Alaska Railroad Corporation 2012 Program of Projects

At the beginning of each calendar year, ARRC conducts project open house events in Anchorage, Fairbanks, the Mat-Su Valley and Seward to inform the public about the proposed Program of Projects (POP) for the year. While these events provide a good forum for residents to comment on any or all projects, the public is not limited to commenting at these events. Public input is accepted year-round, and in a variety of formats as outlined at the right. Detailed project descriptions are provided within fact sheets that are created for major federally-funded and internally-funded capital improvement efforts. These fact sheets are accessible at the Alaska Railroad web site **ww.AlaskaRailroad.com** (click on "Capital Projects" and then select the geographica area of interest).

Public Input:

Public comment on any or all of these projects may be submitted via:

- Mail to: Capital Projects
  Alaska Railroad Corporation
  P.O. Box 107500
  Anchorage, AK 99510-7500
- E-mail to *public_comment@akrr.com*
- Fax to (907) 265-2365

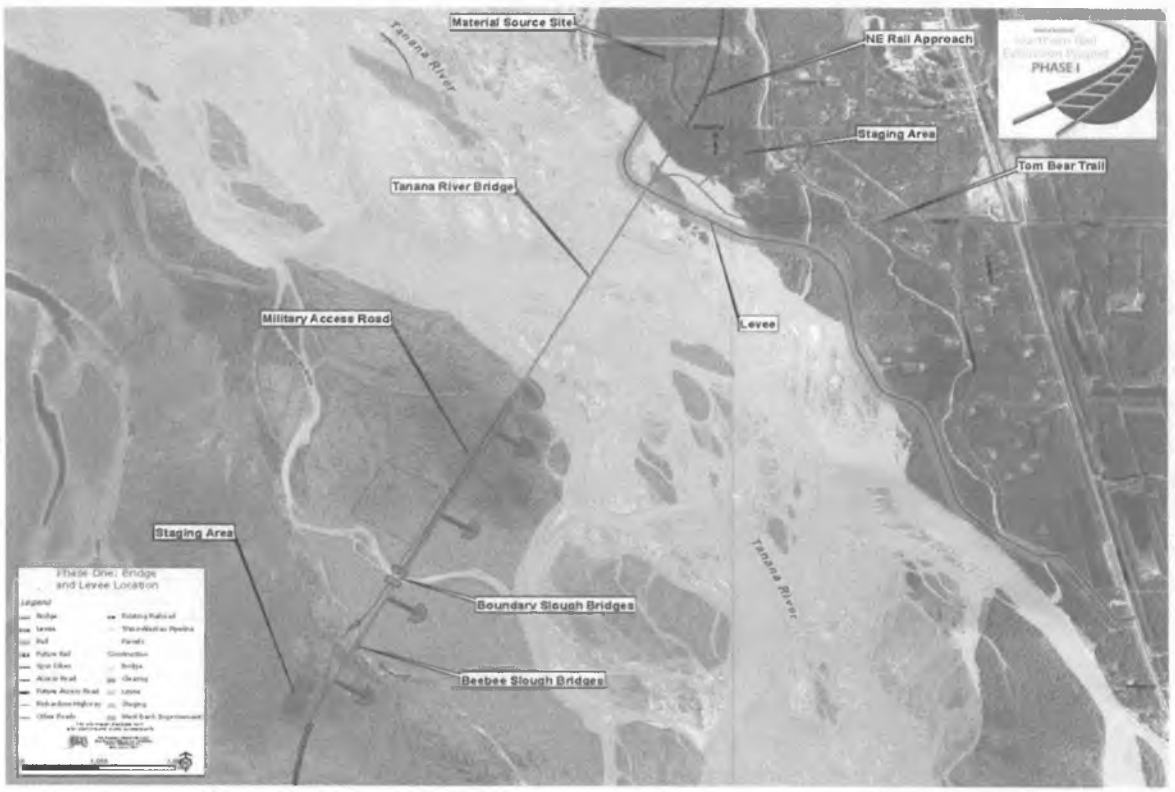
Alaska Railroad Corporation
Status Update February 6, 2012

NORTHERN RAIL EXTENSION

- Project is in winter shut-down until the end of February
- Coast Guard permit public notice has closed. Permit is expected in time for bridge construction.
- ***Site Work Summary***:

    - Site offices are operational. Occupancy is expected by spring as project resumes from the winter dormancy.
    - Noise and Vibration study posted on website on the Phase 1 link.
    - An ice bridge permit has been received by Kiewit to provide access to the south bank allowing for continued tree clearing and grubbing. Work on the ice bridge is progressing and access to the south bank should be available later in February.
    - Weekly project meetings are held to discuss "Requests for Information" on design drawings, schedule, product submittals, Quality Control plans etc.



PORT MACKENZIE

- Alaska Survival/Cook Inlet Keeper/Sierra Club filed a Petition for Judicial Review of the STB decision in the 9th Circuit of Appeals on Friday, January 20th claiming that the STB violated NEPA in rendering their decision. Lacking an injunction or restraining order, project activities are continuing. Our ongoing efforts are being closely coordinated with the MSB. We are presently awaiting MSB Assembly approval to intervene (expected approval the evening of Feb 7th)
- Corps is finalizing permit decision. Meeting with COE to discuss mitigation on Feb 21st.
- STB Submittals:
    - Draft mitigation report submitted to STB for review
    - Additional resource-specific mitigation plans for STB submission in final review.
- Right-of-way acquisition on-going by MSB.
- Final Design continues.
- MSB working with local groups and assembly members regarding trails and access concerns.

Northern Rail Extension Phase 1

Tanana River Bridge
Quarterly Progress Report
January 15, 2012

This report covers the period:
October 1, 2011 through December 31, 2011

www.northernrailextension.com

Northern Rail Extension Phase 1

Project Summary

The Northern Rail Extension (NRE) project proposes to construct and operate an approximately 80-mile-long rail extension from Fairbanks to Delta Junction. The NRE project will begin at the existing rail line located on the Eielson Branch line at the Chena Overflow Bridge just south of the community of North Pole and be extended to the community of Delta Junction, with the ability to service Fort Greely.

The project phases are as listed:

- **Phase 1: Bridge, approach road, and levee associated with the crossing of the Tanana River near Salcha. (Current Phase)**
- Phase 2: Approximately 13 miles of rail from Fairbanks to the Tanana River crossing.
- Phase 3: Approximately 30 miles of rail from the west side of the Tanana River crossing to the Tanana Flats Training Area,
- Phase 4: Approximately 38 miles of rail between the Tanana Flats Training Area and Delta Junction.

Current Status

Fourth quarter 2011 included the completion of utility relocations, completion of site office erection and lay down storage areas. Additionally, tree clearing and ground grubbing on the north bank was completed and approximately 2500' of levee construction on the north bank were accomplished. Rip rap was produced and stock piled on site for levee construction. Future track embankment approach work also continued in the beginning of the fourth quarter.

Northern Rail Extension Phase 1

Next Quarter Outlook

First quarter of 2012 activities will include:

- Levee construction will start up again the first week of March with anticipated completion on the north bank in July.
- Production of project piling and girder fabrication is expected to begin in March.
- Construction of an ice bridge across the Tanana for access to the south side to complete tree clearing activity

Introductory Comment

The objective of Governor Parnell is to achieve a TAPS throughput of 1 million barrels per day.

Can this objective be achieved from State of Alaska resources by 2025? Yes

How?

It will require major policy and fiscal changes as will be discussed during the seminar.

These changes need to induce an increase in investment of about $ 7.5 billion per year over current levels.

Introductory Comment

Such major policy and fiscal changes could also induce significant exports of LNG prior to 2025.

Four Sessions

The seminar will develop in four sessions:

1. **New policy framework required**
2. **International competitive environment**
3. **Proposed terms for existing and new light oil**
4. **Proposed terms for heavy oil, shale oil and natural gas**

Session 1

New policy framework required

World Rating of Oil and Gas Terms

Much of the material to be presented during the seminar is derived from a large international study being done by Van Meurs Corporation entitled:

World Rating of Oil and Gas Terms

In this study oil and gas fiscal systems of more than 140 countries and jurisdictions, such as Alaska, are being compared and analyzed in order to determine their favorability for investors.

Information about the study is available on:

www.petrocash.com

World Rating of Oil and Gas Terms

The 2011-2012 ratings of fiscal terms will cover 6 volumes.

Four volumes have been completed:

- **North American wells and shale plays**
- **Deep water**
- **Arctic**
- **Shallow water**

Two volumes still to be completed:

- **Onshore fields and shale plays**
- **Summary**

Alaska fiscal terms

During the seminar specific new fiscal terms will be proposed for Alaska oil and gas.

The purpose of these terms is to demonstrate how a new fiscal system can be created and to indicate the order of magnitude of the amounts and rates that would need to be adopted.

Concept of Government Take

During the seminar the concept of "government take" will be used frequently. Following is an example of the calculation of the government take for a 10% royalty.

Gross Revenues	**$ 100 per barrel**
Costs	**$ 20 per barrel**
Divisible Income	**$ 80 per barrel**
Royalty 10%	**$ 10 per barrel**

Government Take: ($ 10 / $ 80) x 100% = 12.5%

The Government Take in this seminar is presented on an undiscounted and real basis using an escalation and inflation rate of 2% and is based on price and cost data as contained in Volume 3 of World Rating of Oil and Gas Terms.

Policy Change required

Alaska will not be able to reverse the decline in oil production from State of Alaska leases unless Alaska encourages major investment in:

- **Heavy oil,**
- **Potentially Shale Oil, if technically and economically viable, and**
- **Maybe some GTL production**

Policy Change required

If Alaska wants to attract investment in a major way for the important new resources (heavy oil, gas and potentially shale oil), significant political change is required in Alaska.

These changes are:

1. **Alaska has to define competitive fiscal terms for the entire range of oil and gas resources, so investors know what the terms are.**
2. **Alaska has to offer fiscal stability on these terms for large new projects, so investors know that Alaska will honor these terms for a significant duration.**

Policy Change required

Alaska is only jurisdiction in the world without defined fiscal terms for major oil and gas resources within its jurisdiction.

Alaska has no fiscal terms designed for heavy oil.

Alaska has no fiscal terms designed for shale oil.

Alaska has no implementable fiscal terms for natural gas.

This is a major obstacle for new investment.

Alaska political climate

It will be very difficult to introduce such changes in the current somewhat unfavorable political climate in Alaska.

The unfavorable political climate in Alaska is "structural"; in other words it is unlikely to change.

It is created by two factors:

- **The small size of the Alaska population creates a particular way of developing fiscal policy, and**
- **An dependency relationship of Alaska on three major oil companies for most of their government budget, which creates resentment among some Alaskans. "Standing up for Alaska" is politically popular.**

Political climate:

Small size of population

Jurisdictions with small populations (<2 million) develop oil and gas fiscal systems differently than jurisdictions with large populations (> 2 million) .

Small jurisdictions are often "project driven". They tend to wait for someone to propose a project before deciding on detailed terms. Often terms are complex because many local interests need to be dealt with and terms are tailored for specific conditions.

Examples with population in millions: Alaska (0.7), Newfoundland & Labrador (0.5), Trinidad and Tobago (1.3), Equatorial Guinea (0.7) and Qatar (1.7).

Political climate:

Large populations

Jurisdictions with large populations of have generic petroleum codes and tax laws which deal with all petroleum resources. Terms are identical for all investors. Terms may be adjusted for each bid round. Often petroleum fiscal terms are relatively simple.

Examples with population in millions: United States (Federal onshore and OCS) (312.1), Norway (5.0), Alberta (3.7), the United Kingdom (62.3) and Australia (22.8).

Competitive Framework for Alaska: 1997

Petroleum economic environment:

- **Oil price low**
- **European and Asian gas prices low**
- **LNG trade limited**
- **Focus on conventional oil and gas**
- **Conventional oil production in US declining**

Competitors of Alaska:

- **Latin American, African and Asian developing countries**
- **Main LNG competitor: Qatar**

Method of determining fiscal terms by competitors:

- **Negotiations of production sharing contracts resulting typically in tough terms**

Competitive Framework for Alaska: 2012

Petroleum economic environment:

- **High oil prices**
- **High European and Asian gas prices**
- **Booming LNG trade**
- **Focus on unconventional oil and gas**
- **Oil production in US and Canada increasing**

Competitors of Alaska:

- **Lower 48 USA, Canada, Russia and Brazil**
- **Main LNG competitor: Australia**

Method of determining fiscal terms by competitors:

- **Fixed and usually attractive fiscal terms.**

Alaska Political climate:

Negative experience

The fact that fiscal terms in Alaska are being defined once a project is identified has already resulted twice in the loss of a major gas export project:

- **Under Governor Knowles in 1996 there were realistic opportunities for LNG exports to Asia. Yet, the process of having first to develop the "Stranded Gas Development Act" in order to enter in negotiations resulted in a situation where Asian buyers went elsewhere.**
- **Under Governor Murkowski in 2003 there was a significant opportunity to built a gas line to Alberta. Yet, strong opposition within government and from Alaskans delayed negotiations and resulted in a disapproval of the project.**

These experiences create a negative environment for the proposal of new projects by major companies in Alaska.

Policy change required

If Alaska wants to attract major new investment in the new competitive environment of 2012 and achieve a million bopd target and LNG exports, it has to establish competitive and fixed terms for all its resources:

- **Existing light oil**
- **New light oil**
- **Heavy oil**
- **Ultra heavy oil**
- **Shale oil**
- **New natural gas**
- **Associated natural gas**

What Alaska needs is a "we are open for business" brochure that sets out all terms for investing in oil and gas in Alaska.

Implementation of new terms.

With respect to light oil for existing and new production it seems that no particular implementation measures need to be taken. It is likely that investors will respond positively to the new terms and make the necessary investments, unless the project involves major new investments, such as the development of Point Thomson.

With respect to heavy oil, shale oil, natural gas and GTL it is unlikely that investors will commit to large multi-billion dollar programs unless there is a degree of fiscal stability in a contractual framework.

Contractual relationship.

If investors feel that fiscal stability is required for their investments, the Government of Alaska should be authorized to sign contracts, without further legislative approval. In other words the process would be similar to the approval of an oil sands plant in Alberta.

The fiscal stability period could range from 10 – 25 years from the start of the contract, depending on the nature of the investment.

In exchange for being offered fiscal stability, the investor would have to commit to a substantive work program.

It is understood that the matter of whether or not Alaska can offer fiscal stability, is an issue to be decided by the Alaska Supreme Court.

Difficulties in achieving Alaska production increases

Increasing Alaska oil production and initiation of gas exports will face other major difficulties.

The main difficulty is that the three major oil companies are in a "harvesting mode", which means their main objective is drawing cash out of Alaska to invest elsewhere. The reasons for this are:

- **No large and attractive projects available in Alaska under current fiscal terms for major oil companies**
- **Attractive opportunities outside Alaska.**

No attractive projects in Alaska
for major oil companies

Current fiscal terms are designed for *low cost light oil*.

There is possibly about one billion barrels of new *high cost light oil* production available through:

- **Discoveries as a result of new exploration**
- **Small discovered fields, which have not yet been brought on stream**
- **Infill drilling of existing fields.**

Major oil companies are already infill drilling, other projects do not compare well in attractiveness with international opportunities.

As a result, the main focus of major oil companies is to draw cash out of Alaska for investment elsewhere.

SESSION 2

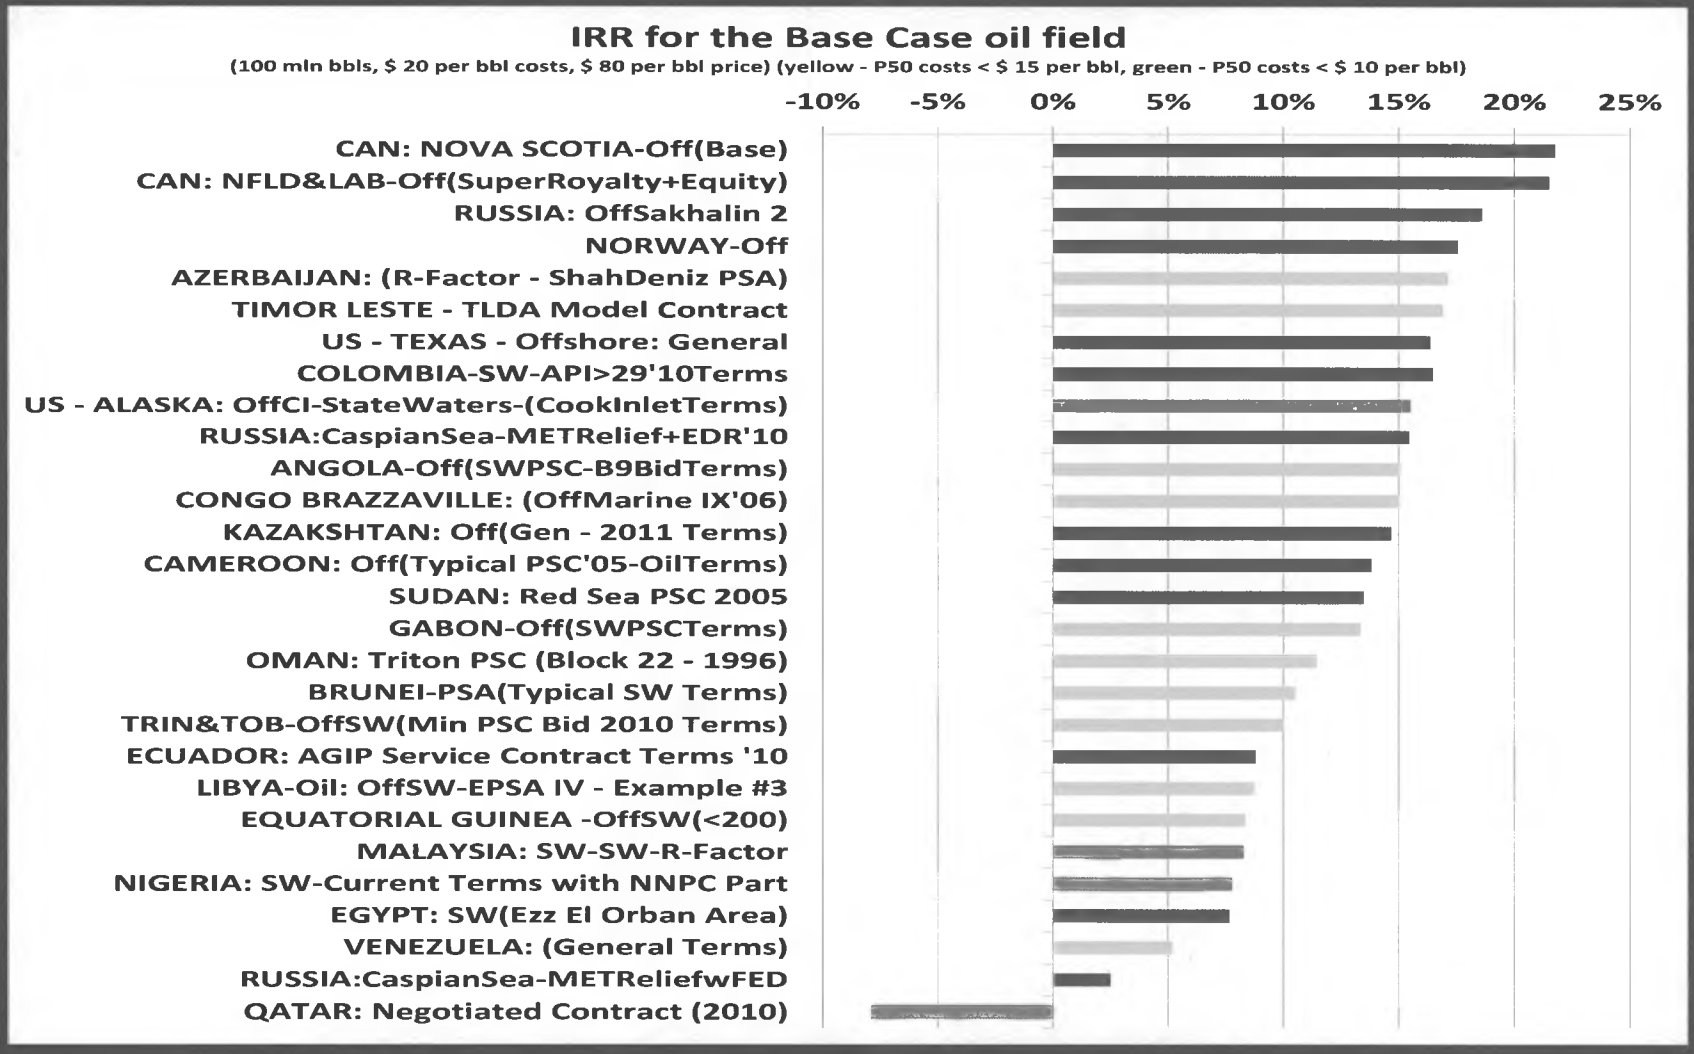
Session 2

International competitive framework

Attractive terms outside Alaska
for major oil companies

In the following slides the international competitive position for Alaska will be evaluated for the following resources:

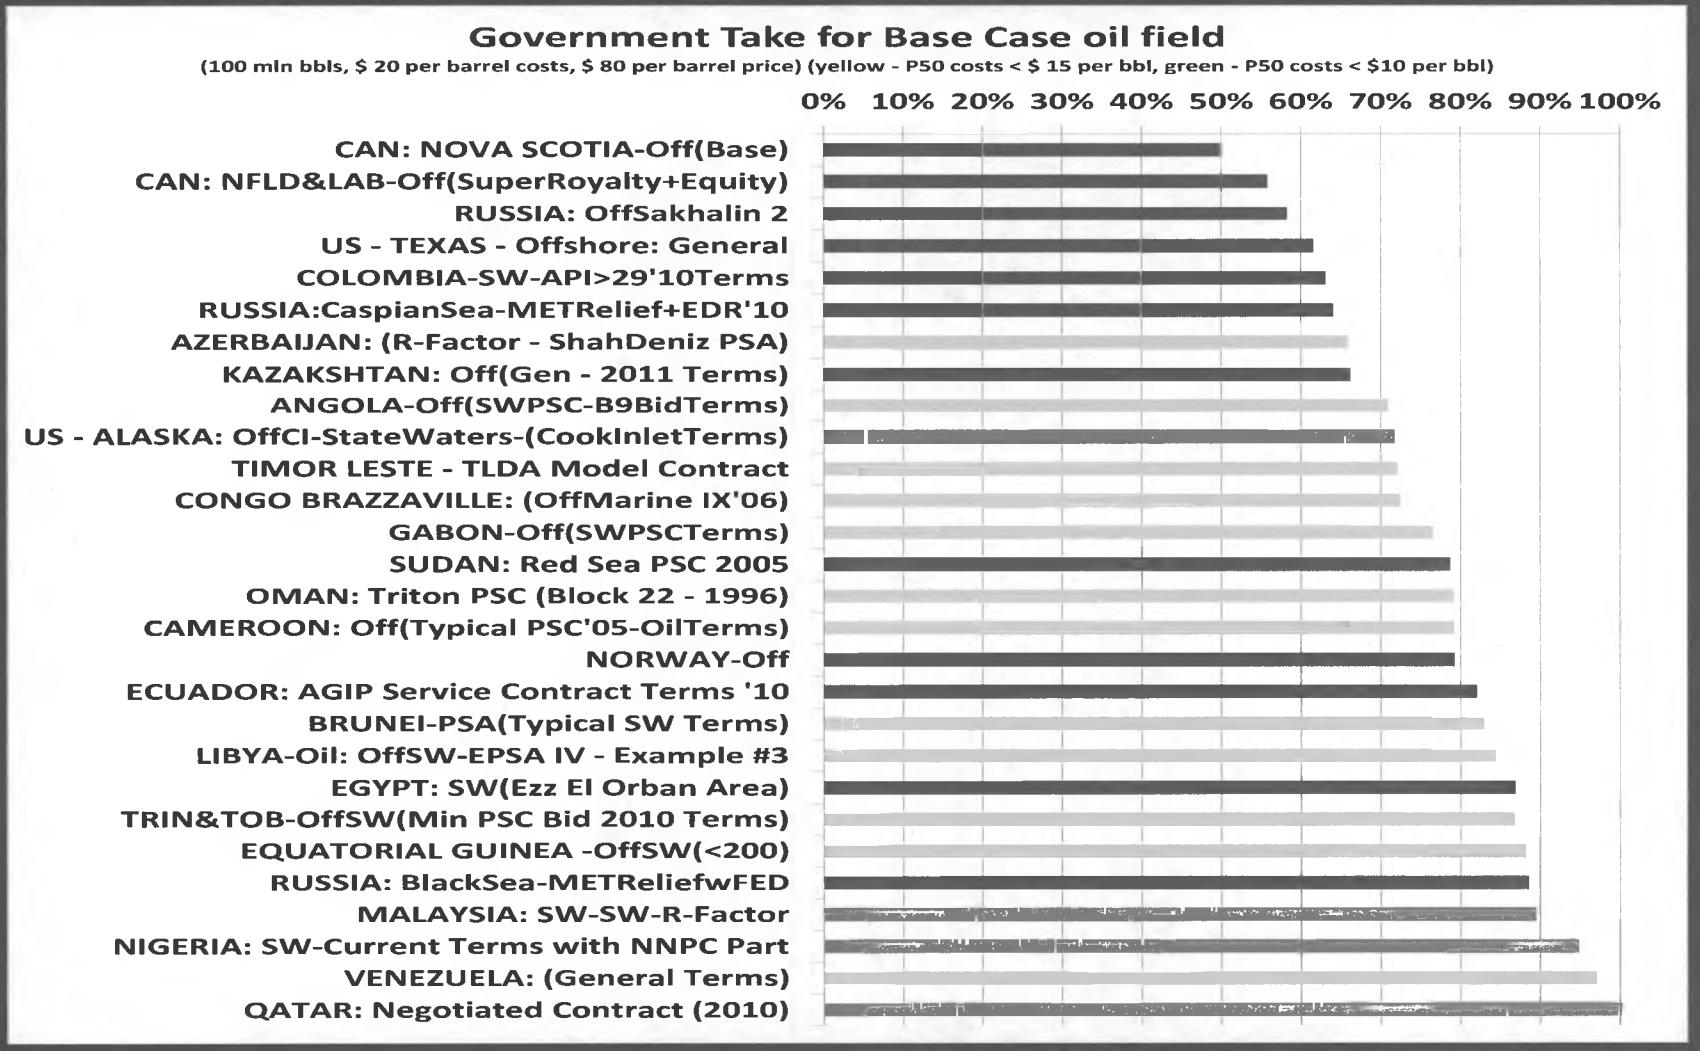
- **Existing light oil production**
- **New light oil production**
- **Heavy oil**
- **Shale oil, and**
- **Natural Gas**



International competition:
Existing oil production

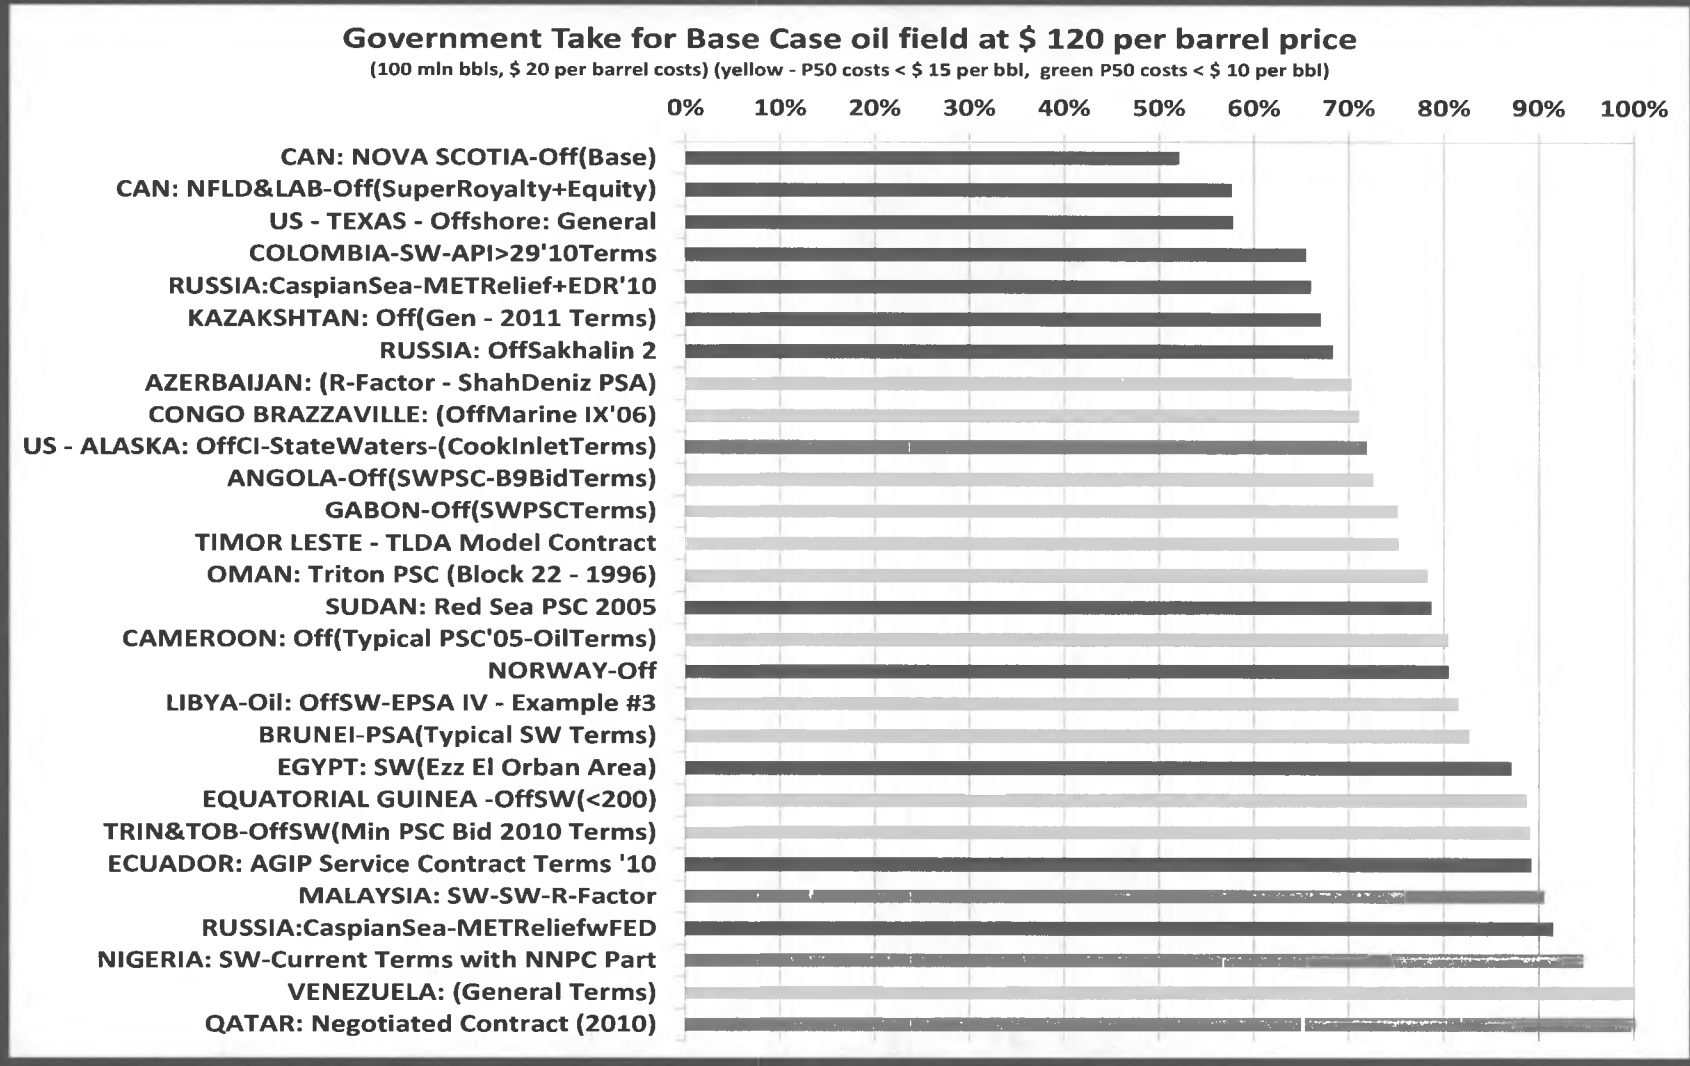
The Shallow Water results of World Rating of Oil and Gas Terms permit a comparison with the largest "peer group". The largest peer group for Alaska are the exporting jurisdictions. The following charts provide the results for a selection of 28 exporters of oil.

The Arctic Report permits a comparison with other Arctic jurisdictions.



Following is an overview of the results.

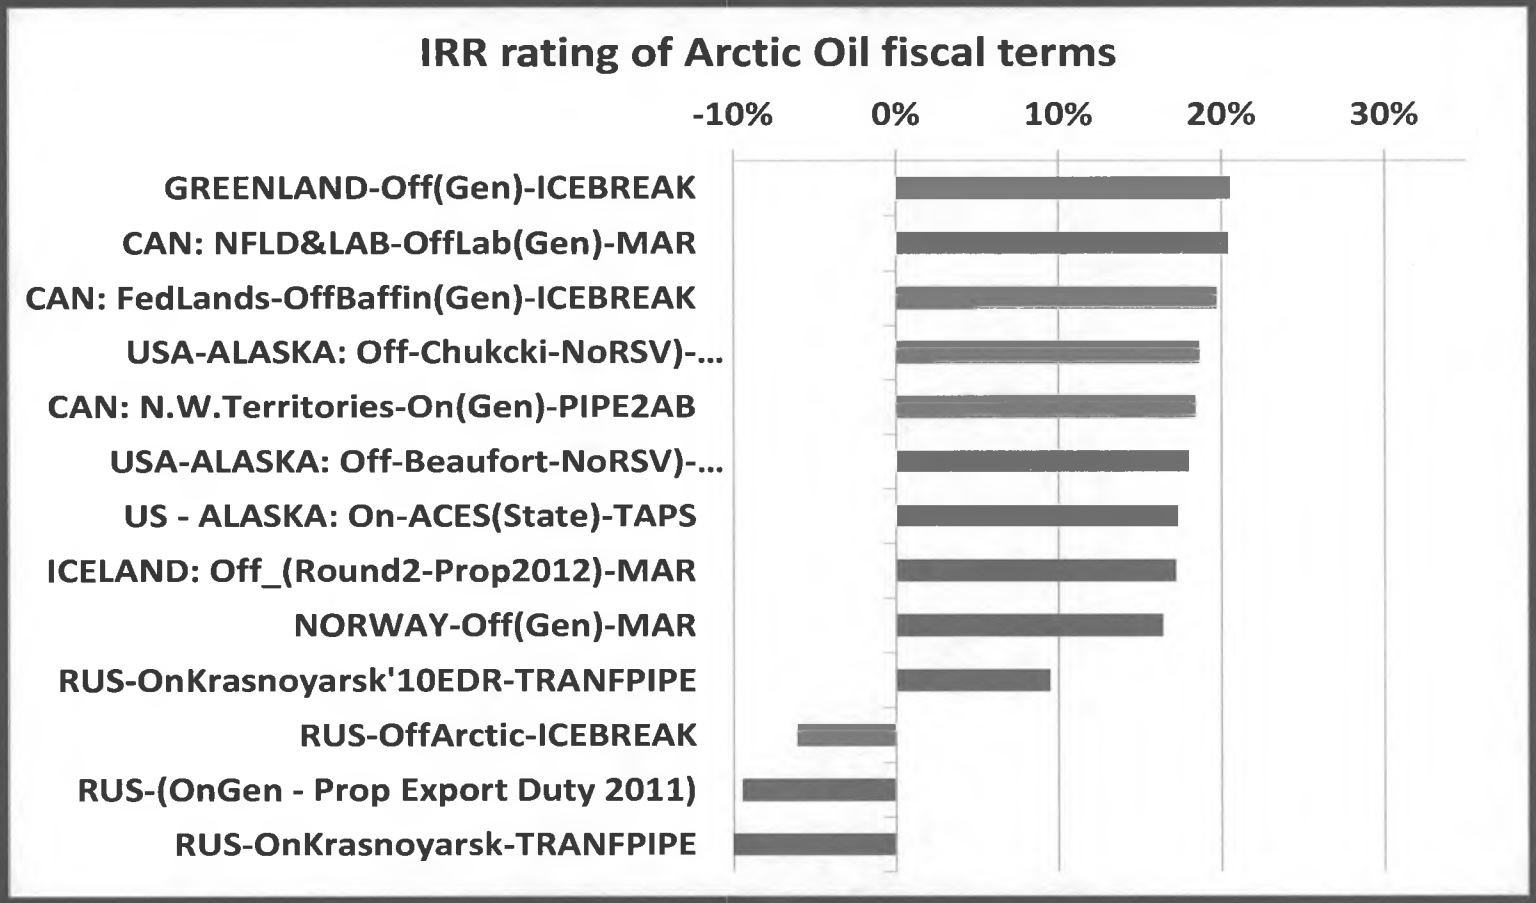
Shallow water exporters (Oil)



IRR: Alaska terms rate # 9 out of 28 exporters.

Shallow water exporters (Oil) - $ 80

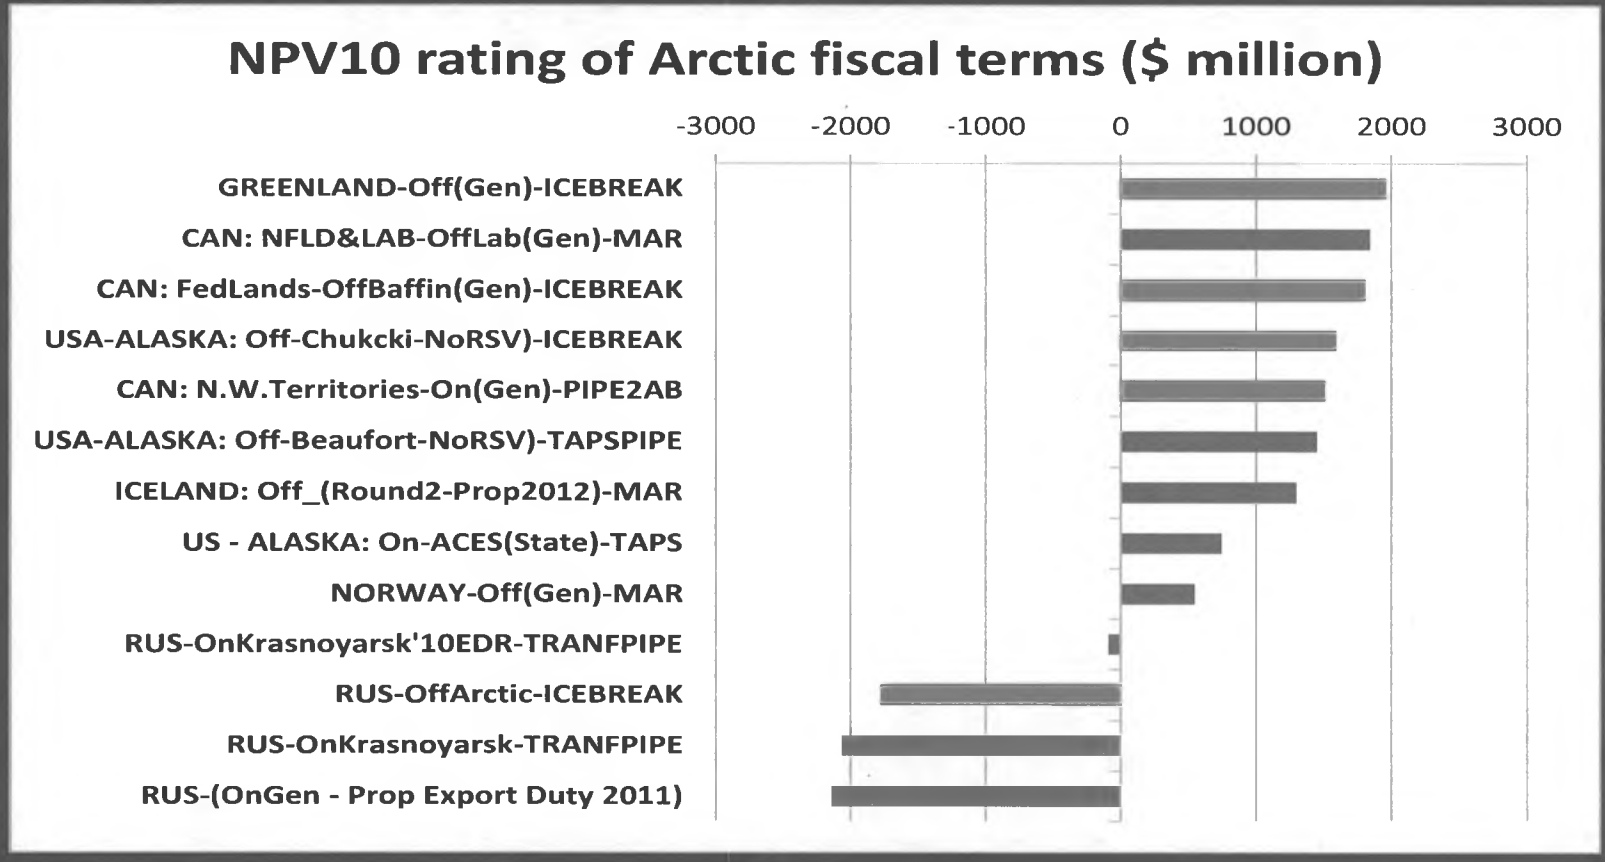
Undiscounted Government Take: Alaska terms rate # 10 out of 28 exporters.



Shallow water exporters (Oil) - $ 120

Undiscounted Government Take at $ 120 per barrel: Alaska terms also rate # 10 out of 28 exporters.

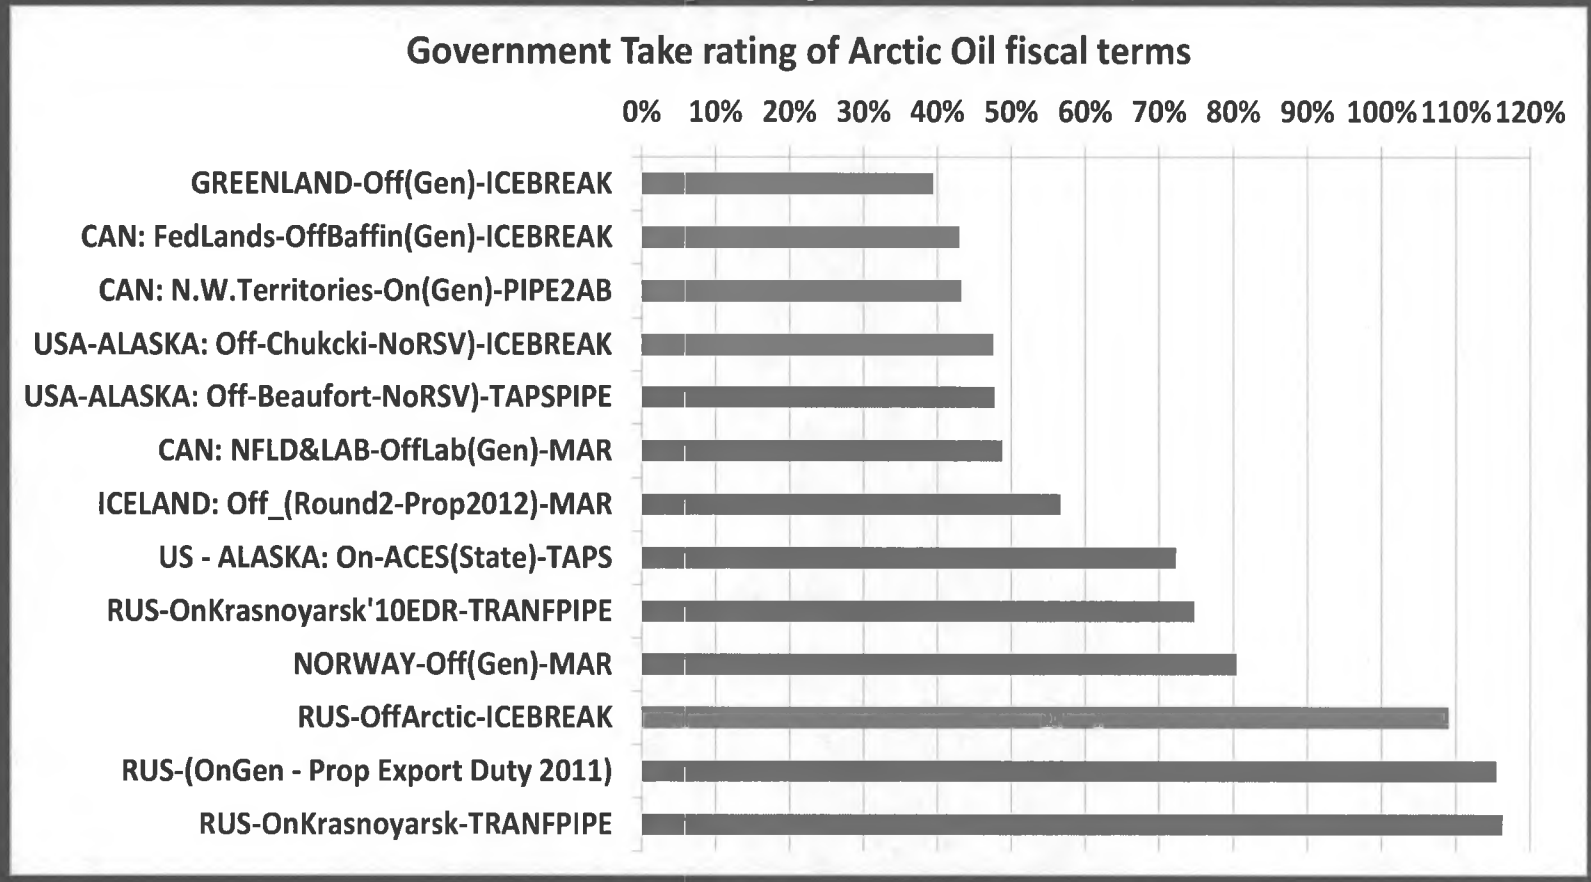
Arctic (Oil)



(red – no transport system available)

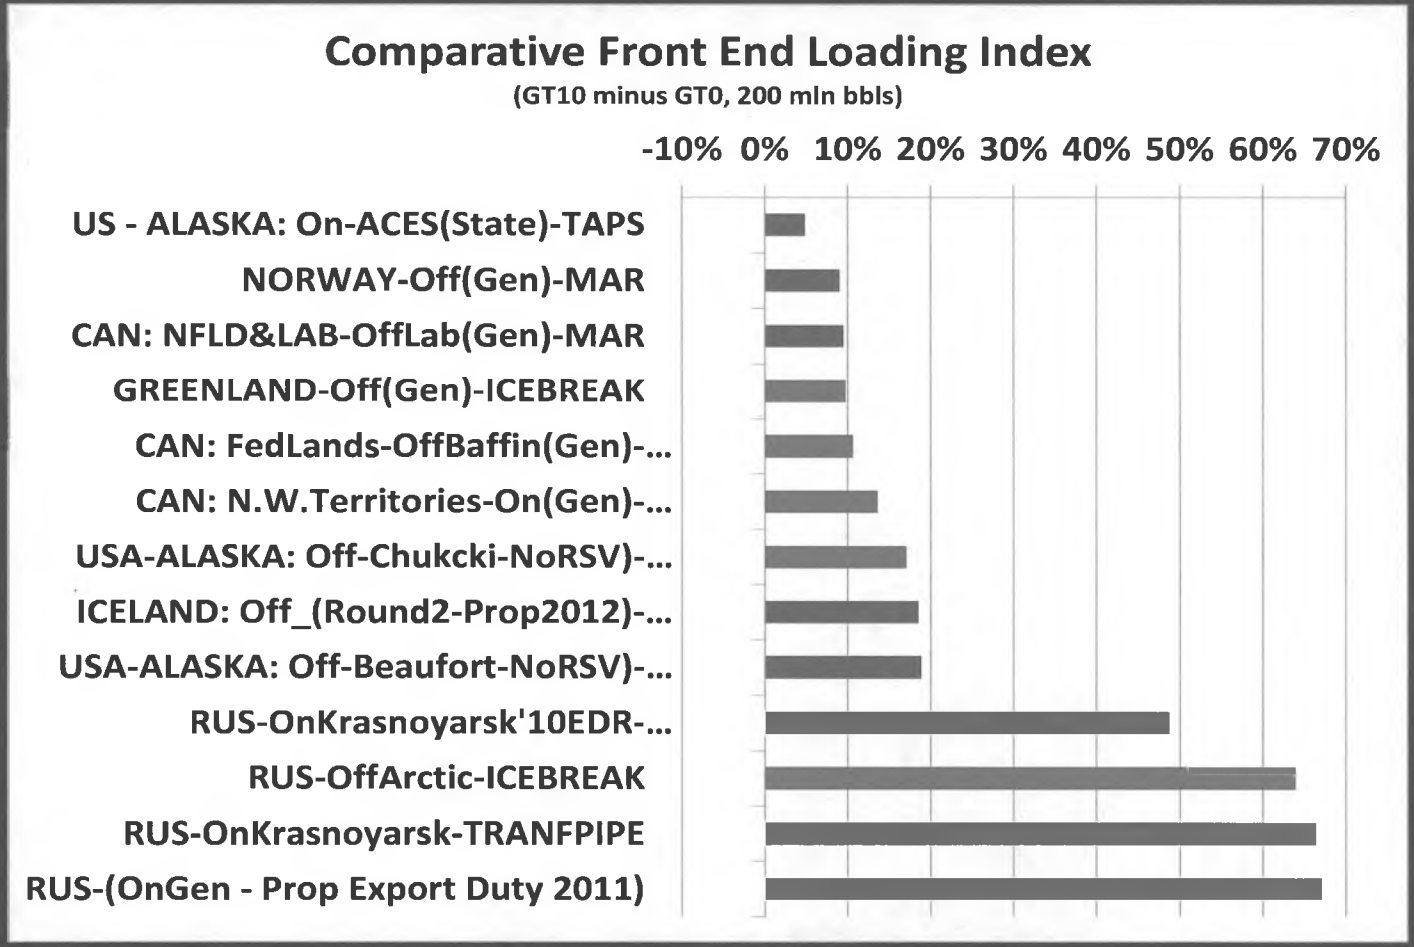
Alaska ACES IRR compares favorably with other Arctic jurisdictions. Russia still very tough under high cost and slow development conditions. Russian terms are rather attractive under lower cost conditions.

Arctic (Oil)



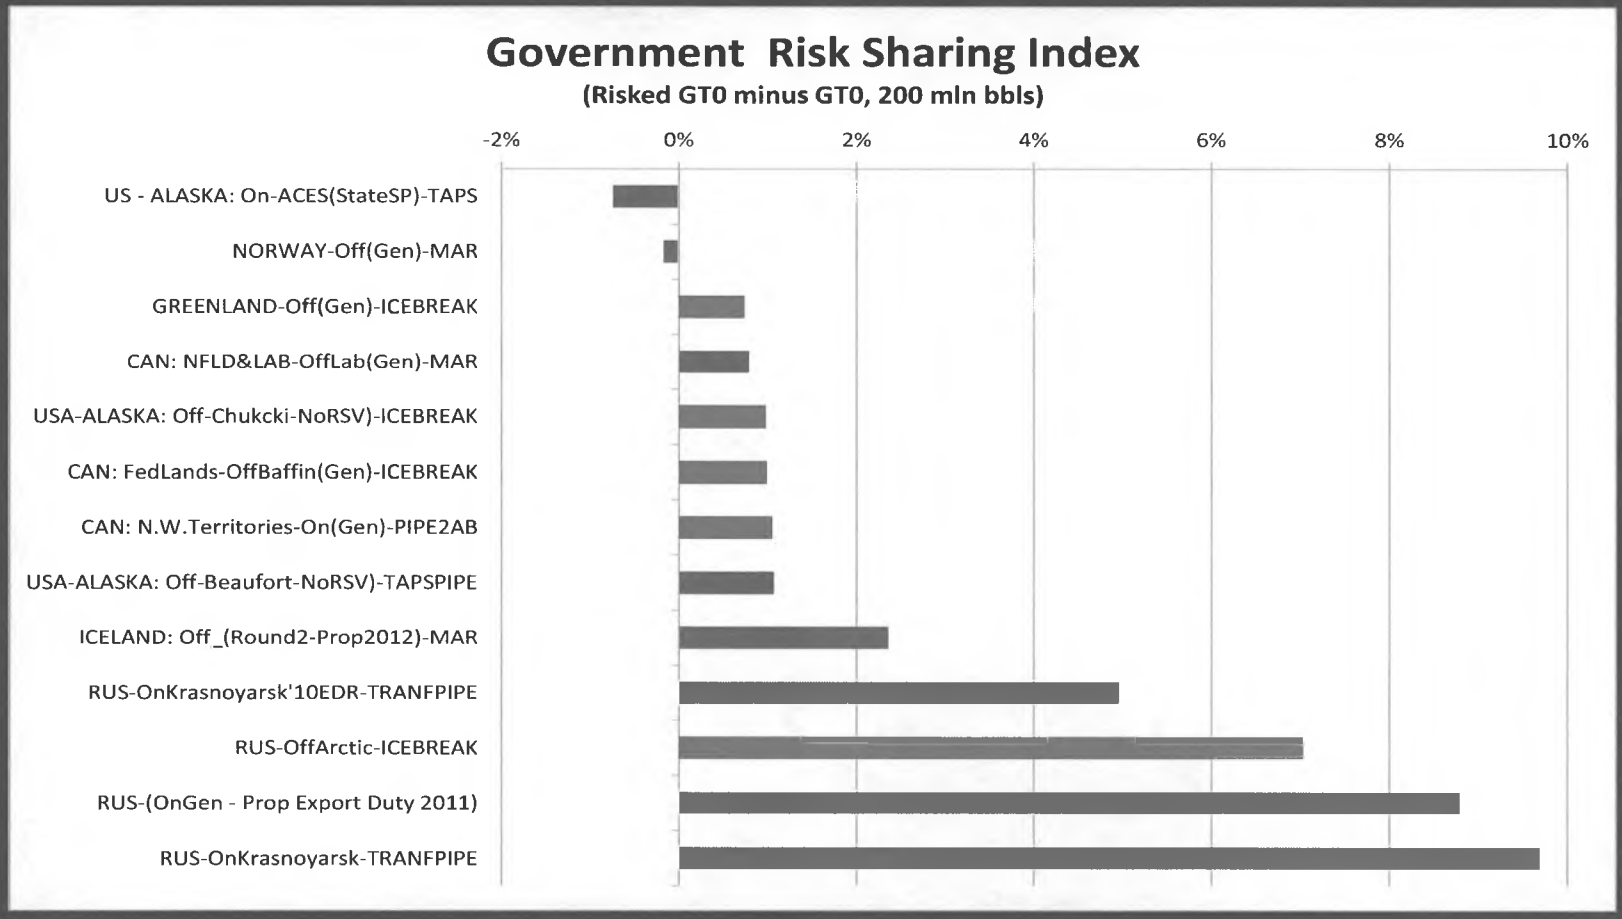
(red – no transport system available)

Alaska ACES NPV10 seems OK compared to other jurisdictions, but is somewhat meager. Note how Federal Beaufort and Chukchi acreage is attractive. Russia still very tough.



Arctic (Oil)

(red – no transport system available)



Alaska ACES government take is attractive from a government point of view and approximately at the right level for existing operations for investors. Interestingly new Russian terms compare with Alaska and Norway government take.

Arctic (Oil)

Alaska ACES government take is relatively well balanced compared to other Arctic jurisdictions in terms of the time distribution of the government take.

Arctic (Oil)

Under Alaska ACES the Alaska government is one of the few governments which shares disproportionately in the geological risk, indicating very strong support for exploration. In fact, with South Africa, Alaska rates the highest in the world in this respect.

International competition
Existing Production

The government take of about 70%-75% for Alaska is reasonable compared to the other exporters for existing operations. It is maybe slightly on the high side.

Alaska also offers a favorable time distribution of the government take and very favorable sharing of geological risk.

International competition
Existing Production

Both House Bill proposals lower the government take below 65% for existing as well as for new operations.

Although some improvements could be made in the existing terms, the results of the reports indicate that a significant lowering of government take (below the 70 – 75% range) for existing operations is not necessary.

SB 192 retains significant revenues on existing production in the 74 – 76% government take range.

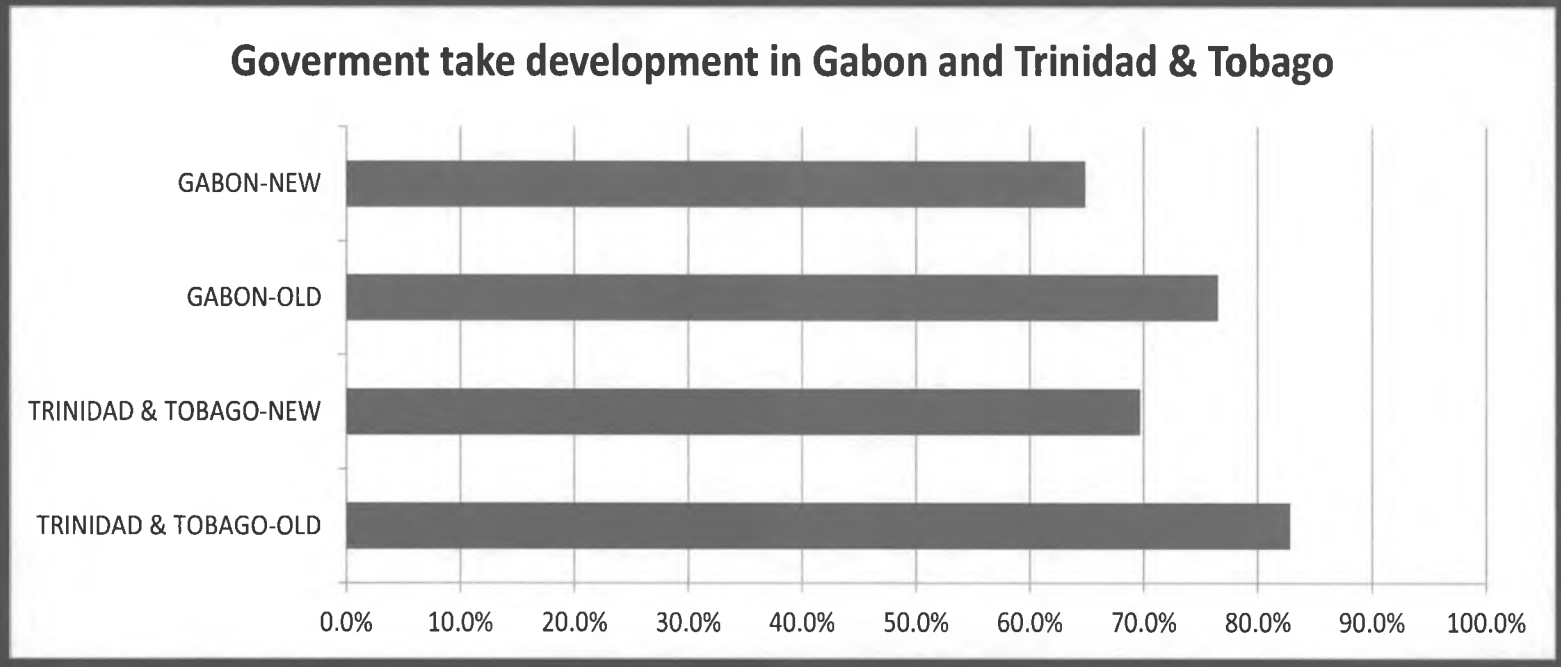
International competition
New Production

The Alaska light oil production is rapidly declining at about 5% per year.

As stated earlier, there may be about one billion barrels of possible new production under more favorable fiscal terms. The production costs of this new oil is likely high on a per barrel basis.

The World Rating for Oil and Gas Terms provides information as to a reasonable government take for new production from the Deep Water report and the North American report.

Deep Water results



An important "peer group" for Alaska would be exporting jurisdictions with a declining conventional oil production.

There are not many jurisdictions in this group, but examples are Alberta, Gabon, Trinidad & Tobago, Malaysia.

Both Gabon and Trinidad applied about a 12 percent drop in order to attract new investment in an effort to offset declining production.

Both in Gabon and Trinidad this only applies to new blocks. Terms and conditions on old blocs remain unchanged.

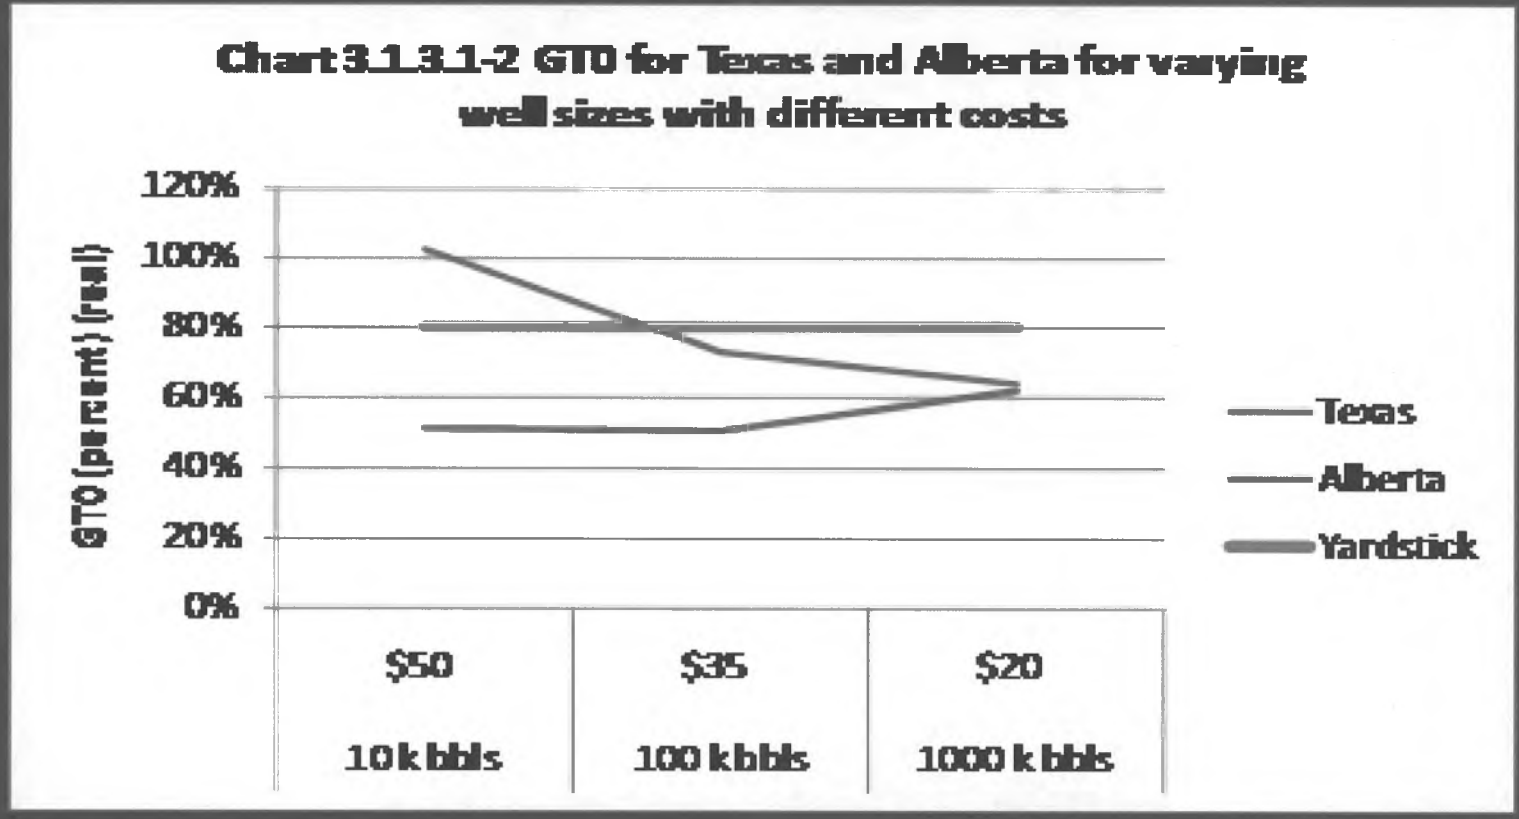
Deep Water results

Gabon and Trinidad and Tobago are exporters with a declining oil production and have recently reduced their terms by about 12 percentage points.

North American Wells

Fiscal terms

Another way of competing with a fiscal system is to design the system for a wide range of economic conditions.

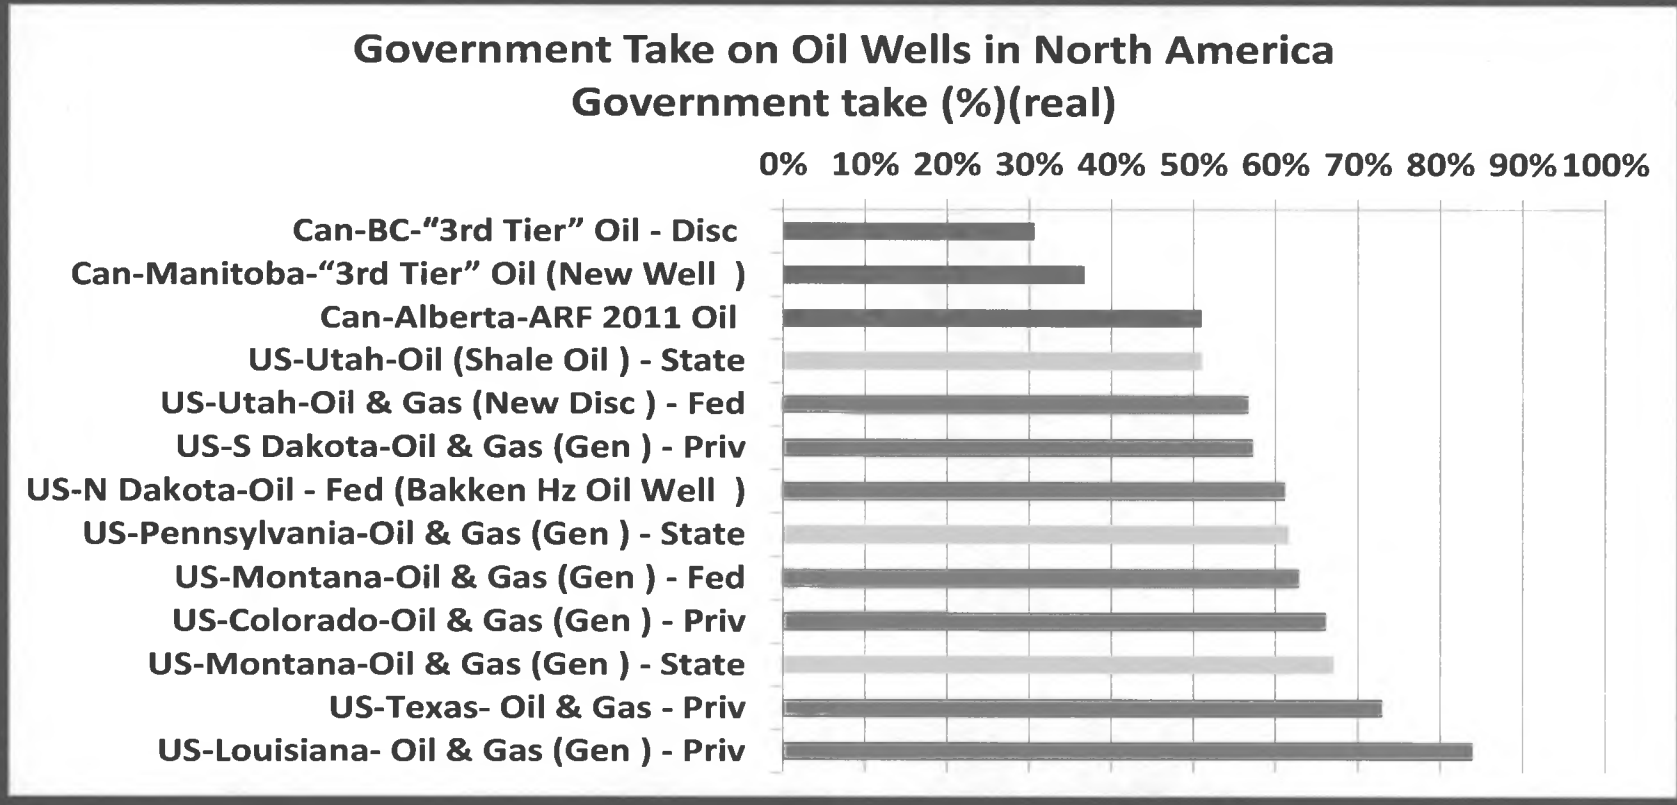


In Canada the fiscal systems consist of:

- **Royalties, based usually on formulas**
- **Federal and provincial corporate income tax**

In the United States the fiscal systems consist of:

- **Royalties, usually a fixed percentage**
- **Federal and often state corporate income tax**
- **Severance (production) taxes**
- **Property taxes**



North American Wells (Oil)

In Canada the government take usually goes up and in the United States the government take goes down with higher level of production per well or with higher prices (or both).

North America Wells (Oil)

Typical Well: 100,000 barrels, $ 35 costs, $ 80 price

The government take on oil wells varies between 30% and 83% in North America and depends very much on the resource owner: Canadian provinces (blue), US Federal lands (green), US State lands (yellow) and US private lands (red)

North American Wells

Fiscal terms

Since 1997 Canada has lowered government take considerably, while the government take in the United States stayed the same.

The combined federal- provincial tax rate in Canada declined from about 45% to 25%.

Due to declining conventional oil production, the major Canadian oil producing provinces promote strongly new activity with more attractive royalties formulas which compete over a wider cost range.

International competition
New Production

International examples indicate that dropping the government take by about 10% for new production is reasonable once the jurisdiction faces a declining production.

The experience of Alberta, which faces a declining conventional oil production, indicates that designing lower fiscal terms in the 50 to 65% range of government take for higher cost resources is a viable strategy to increase investment.

International competition
New Production

The 60 – 65% government take for more costly "new" light oil resources as proposed in HB 110 and HB 17 is a reasonable level from an international perspective.

SB 192 terms are to tough to encourage costly new production.

International competition
Heavy Oil

Heavy Oil can be separated in two groups:

- **Heavy Oil: 15 – 22 degrees API. This oil can typically be produced with conventional production methods, since oil flows to the wells. The oil can also be transported by pipeline and in marine tankers**
- **Ultra Heavy Oil or Bitumen: 8 – 15 degrees API. This oil which needs to be produced with special production methods. The oil cannot be transported by pipeline or marine tanker. It needs to be mixed with condensate or it needs to be converted in an upgrader to synthetic crude oil.**

Heavy Oil

Alaska has significant heavy oil potential, probably in excess of 5 billion barrels. Alaska heavy oils range from 10 to 22 degrees API.

The most important deposits are:

- **Heavy Oil - 15 – 22 degrees API – West Sak, Schrader Bluff, Orion, Polaris, Nikaitchuq.**
- **Ultra Heavy Oil – 10 – 15 degrees API – Ugnu**

Separate fiscal terms are required for these two groups.

Alberta Oil Sands

The most important competitor for heavy oils in North America is Alberta with the oil sand deposits which may well contain in excess of 500 billion barrels of recoverable oil.

For Alberta oil sands, at 10 degrees API, government takes are in the range of 43% - 55% depending on the oil price.

In order to compete the government take for ultra heavy oil in Alaska may has to be similar to Alberta.

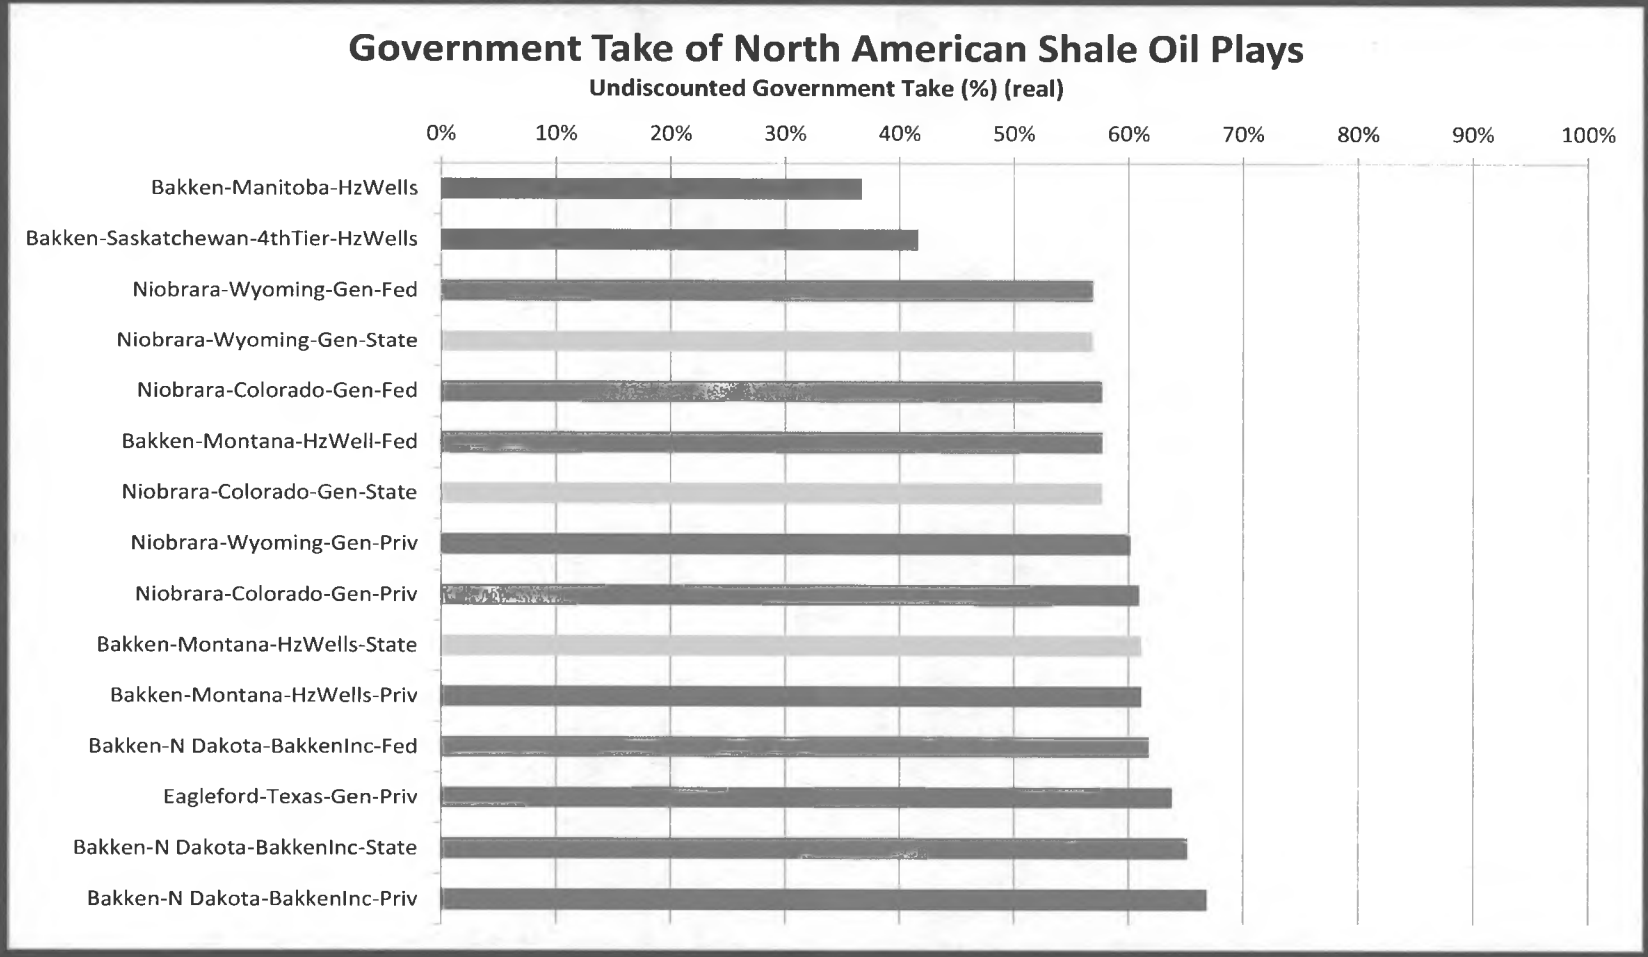
For heavy oil the terms could be between ultra heavy oil and new light oil production.

International competition
Heavy Oil

In order to be competitive Alaska would have to offer the following government takes for heavy oil:

- **Heavy oil: 55 – 60%**
- **Ultra heavy Oil: 45 – 55%**

International Competition
Shale Oil



At this time it is not known whether shale oil production will be possible in Alaska. Pilot projects will be required to identify whether reservoir characteristics are of a nature that would permit fracking and would result in a sufficient flow of oil to make shale oil economic.

If shale oil would be economic, the resources may be quite considerable, for instance, in excess of several billion barrels. It is therefore very important for Alaska to identify whether shale oil is economic or not.

New shale oil developments will likely require major new infrastructure. The Federal permitting of this infrastructure and related environmental concerns could be a major stumbling block.

North American Wells (Shale Oil)

Government Take

Shale Oil plays in the United States are typically subject to a government take of about 60% and in Canada 40%.

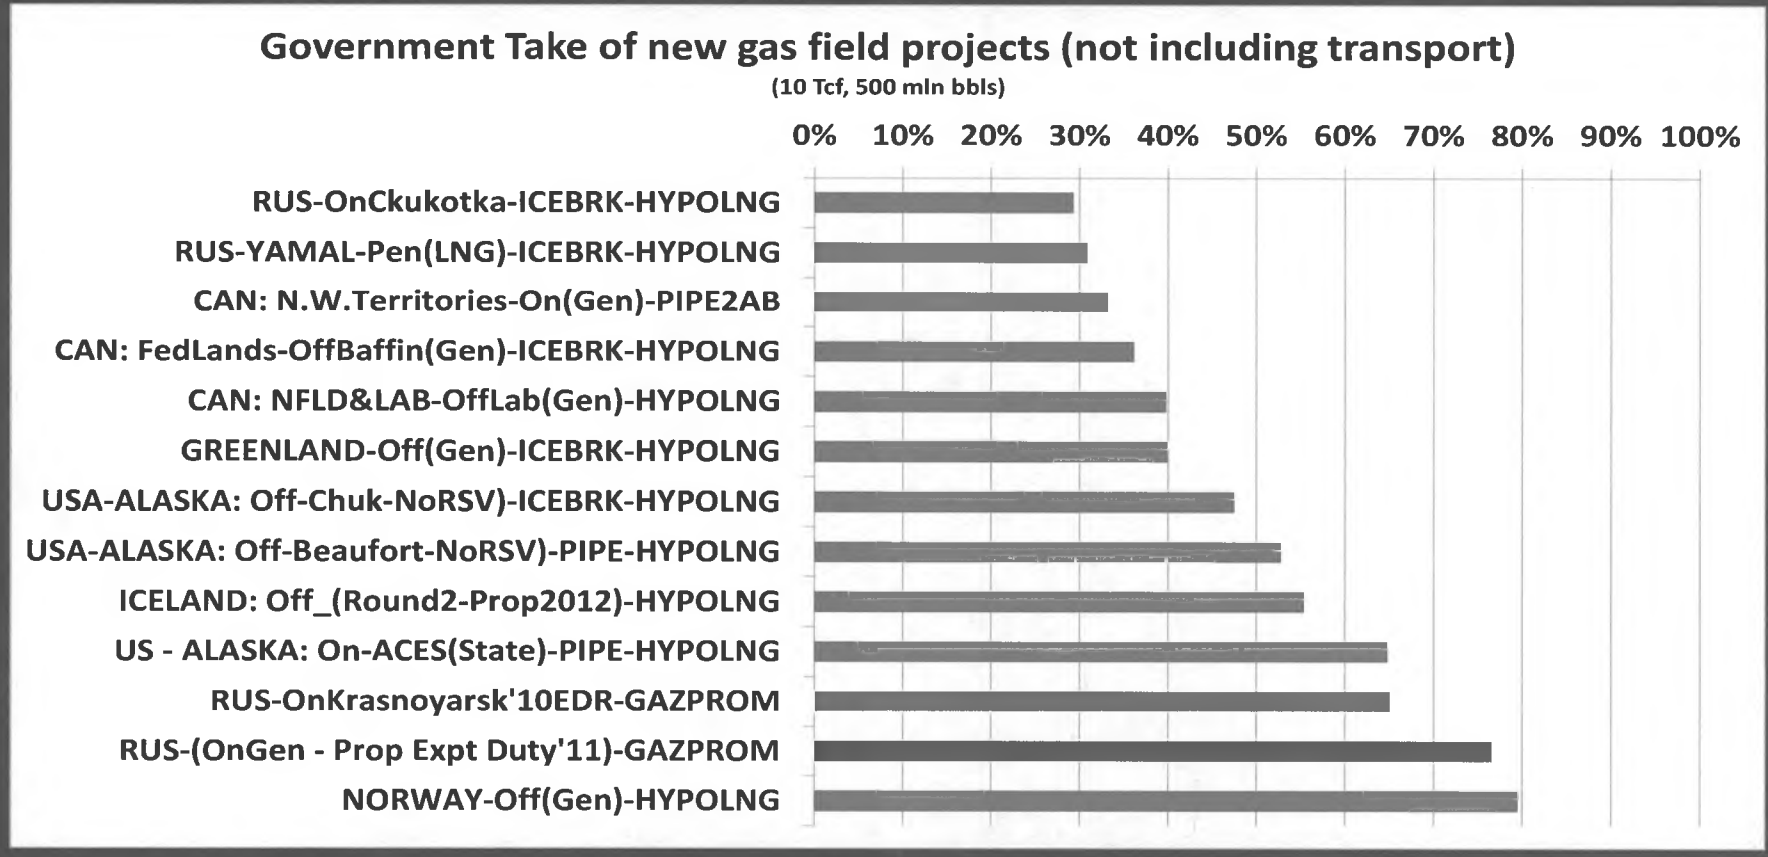
International competition
Shale Oil

Alaska may have significant shale oil potential.

However, given the fact that the formations are relatively deep, operating conditions are severe and infrastructure is lacking, the costs per barrel would very likely be higher than in Canada and the Lower 48 States.

It is unlikely that large capital investments can be attracted unless the government take is in the 45 – 55% range.

International competition
Natural Gas



The Pacific market is very competitive

Current major *new* LNG suppliers in the Pacific LNG market are Australia and Papua New Guinea. Government take is less than 50% for dry gas.

Offshore and onshore conventional gas production in China is also significant. Chinese owned companies often benefit from a system where China does not participate on a carried basis, resulting in a government take of 42% for dry gas.

In addition to the conventional gas resources, China has in situ 1300 Tcf of coal bed methane gas and 1100 Tcf of shale gas.

Arctic (Gas)

Alaska government take for gas aimed at Pacific LNG markets is about 25% to 30% too high compared to strong Russian competition.

International competition
Natural Gas

Given the strong challenges of Russia, Australia, PNG and Chinese producers themselves, Alaska would have to offer a government take in the range of 45-55% in order to be competitive for the production of gas from new gas fields such as Point Thomson.

For gas from Prudhoe Bay, whereby most of the production costs have already been absorbed by oil production, a government take in the range of 55 – 60% may be appropriate.

International competition
Summary

In order to be competitive, Alaska needs to develop a fiscal system that offers the following government takes for the various resources:

- **Existing light oil production: 70 – 75%**
- **New light oil production: 60 – 65%**
- **Heavy Oil: 55 – 60%**
- **Ultra Heavy Oil: 45 – 55%**
- **Shale Oil: 45 – 55%**
- **Natural Gas – new gas fields: 45 – 55%**
- **Natural Gas – Prudhoe Bay: 55 – 60%**

SESSION 3

Session 3

Proposed terms for existing and new light oil

Overall framework for a new PPT

A new PPT should preferably structured in such a manner that it deals with the following important issues:

1. **The current ACES system has serious deficiencies. A new PPT should remove these problems.**
2. **A new "architecture" for the PPT needs to be created to permit a greater variety of terms for the different oil and gas resources.**
3. **The system should be made simpler.**

Complexity

An important other issue is complexity.

The production tax is far too complex - The current complexity of the production tax is a strong disincentive for investment.

It can be strongly recommended to review the tax to see what changes can be made to reduce complexity.

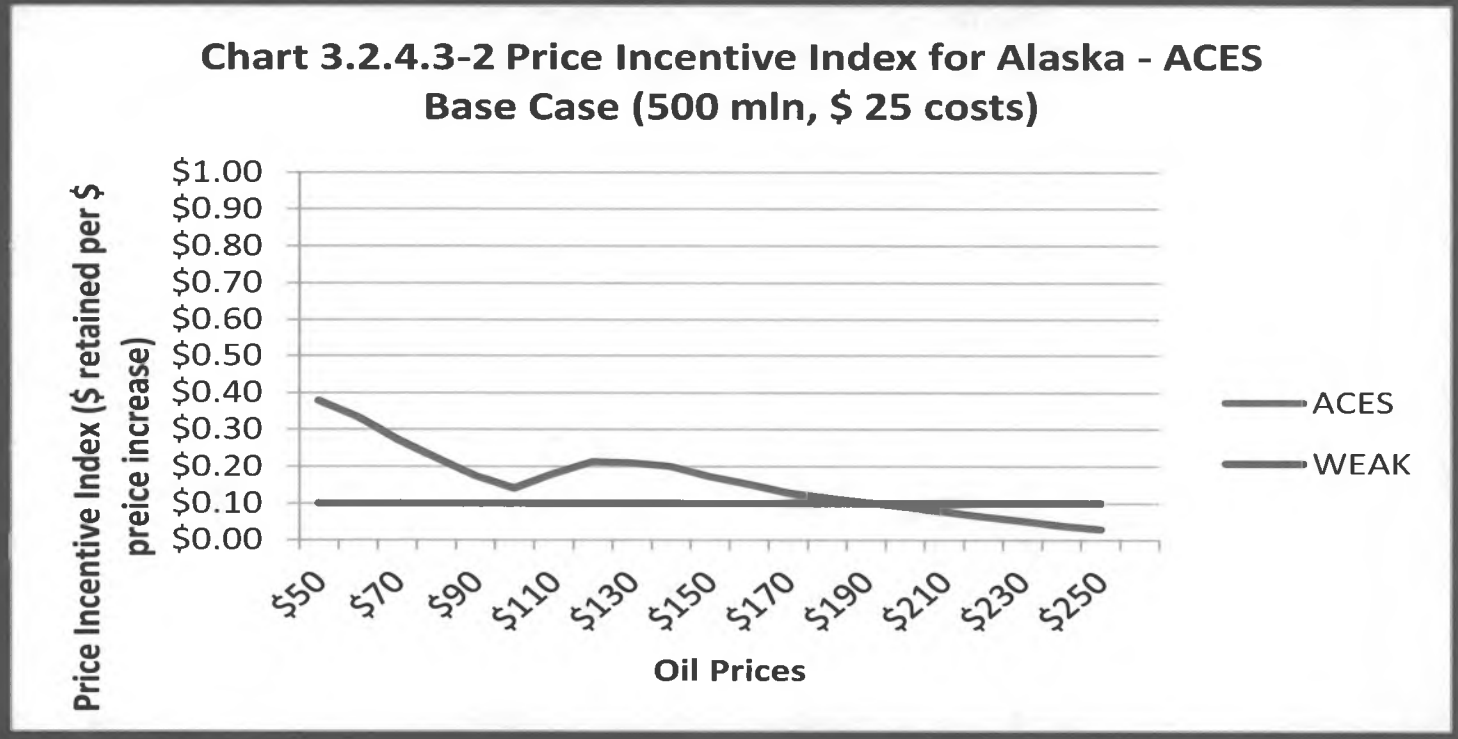
Deficiencies in the current ACES system

The current ACES system has five main deficiencies:

1. **PPT tax rates up to 75% in addition to 41% corporate income tax are too high to stimulate efficiency in operations.**
2. **The price based sliding scales and result in a situation where under high prices the producer is actually better off with a lower price.**
3. **The excessive tax credits result in a situation where Alaska may pay all of the costs of a well.**
4. **The BOE concept results in a situation where new gas production could lead to massive losses of oil based revenues.**
5. **Under marginal circumstances the ACES system actually creates a negative PPT, in other words the government will loose PPT on certain fields.**

Deficiencies

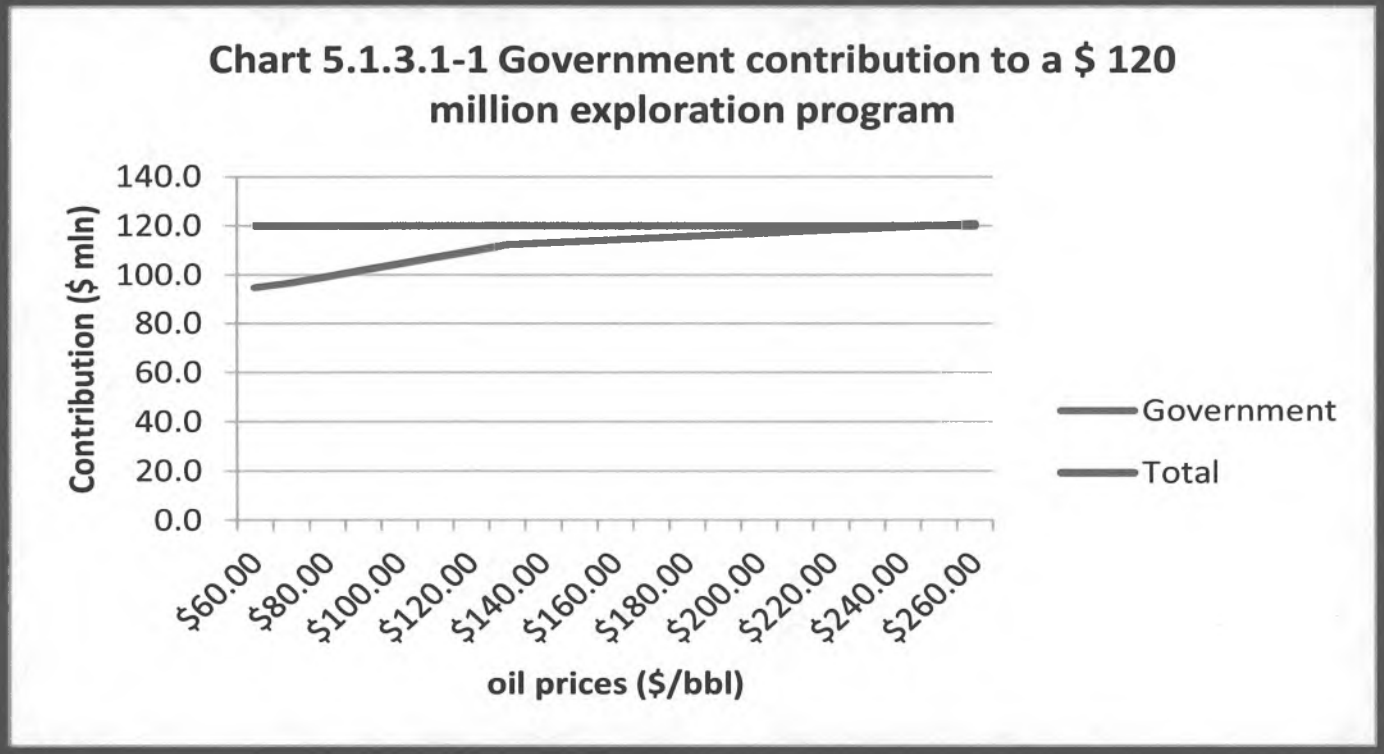
Excessive Tax rates



The combination of the maximum ACES rate of 75% and the normal corporate income tax rate (state and federal) of 41% creates a combined tax rate of 85.25% under high prices.

Such an excessive tax rate reduces significantly the incentive for companies to be efficient because they can only keep $ 0.1475 of every dollar saved. This means the cost savings index is only 14.75%.

This is well below the cost savings index of most countries. Usually, it is recommended to have a cost savings index well over 20%.



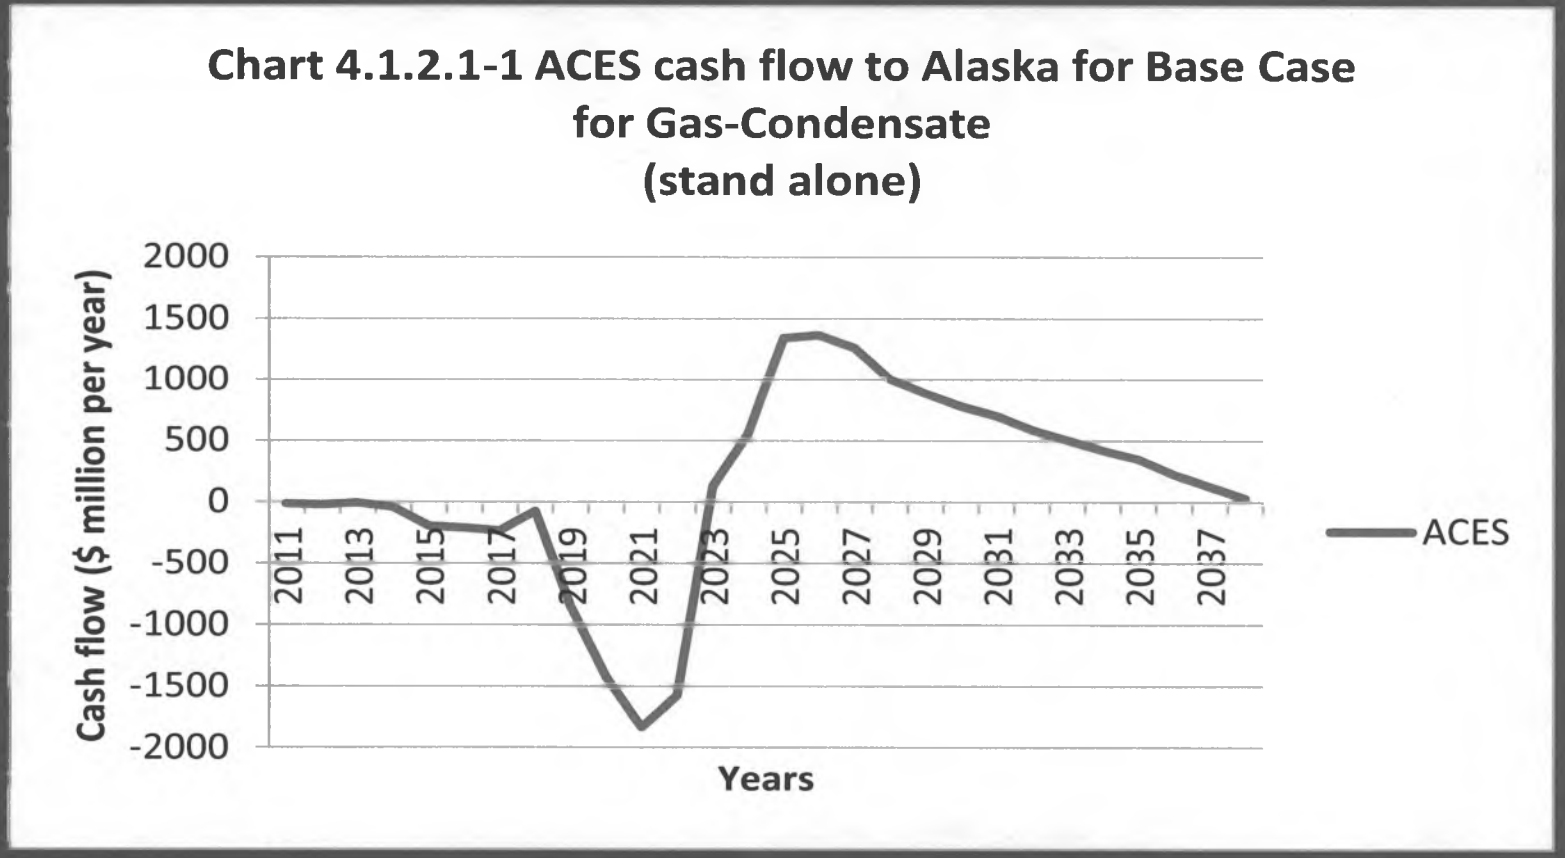
It should be noted that the combined tax rate of 85.25% is in addition to the regular royalties.

Deficiencies
Excessive price progressivity

For ACES, at high prices, the combined tax rate becomes so high that there is the price incentive performance becomes very weak by international standards. This leads to lack of interest in achieving the highest prices on an arms length basis and strong incentives to try to "transfer price".

Deficiencies
Excessive exploration support

Existing producers under ACES are entitled to the 40% tax credit as well as all normal deductions of the exploration expenditures. This means that at $ 111 per barrel, the Alaska contributes 90% of the exploration costs. At $ 245 per barrel Alaska contributes 100%.



Deficiencies

Nonsensical cross subsidization of gas

Table 5.1.3.1-1 Incremental Gas Economics for ACES in Alaska (Country Incremental, Real)	Oil only	Oil + Gas	Incremental
Oil production (mln bbls)	500	500	0
Gas production (Bcf)	0	10000	10000
Oil price ($/bbl) North Slope	100	100	100
Gas Price ($/MMBtu) North Slope		1.0	1.0
Gross Revenues ($ mln)	50000	60000	10000
Total Production (Mln BOE)	500	2167	1667
Capital Expenditures ($ mln)	7500	11000	3500
Operating Expenditures ($ mln)	5000	7500	2500
Divisible Income ($ mln)	37500	41500	4000
Royalties ($ mln)	6250	7500	1250
Property Tax, other	852	1504	652
Production Tax Value	30398	32496	2098
Production Tax Value per BOE	60.80	15.00	-46
PPT ($ mln)	15186	6900	-8286
Corp Income Tax (State) ($ mln)	1466	2474	1008
Total State Revenues ($ mln)	23754	18378	-5376
Corporate Income Tax (Fed) ($ mln)	4942	8340	3398
Total Government Revenues ($ mln)	28696	26719	-1977
Undiscounted Government Take	76.50%	64.40%	-49.3%
IRR	21.10%	19.30%	17.3%

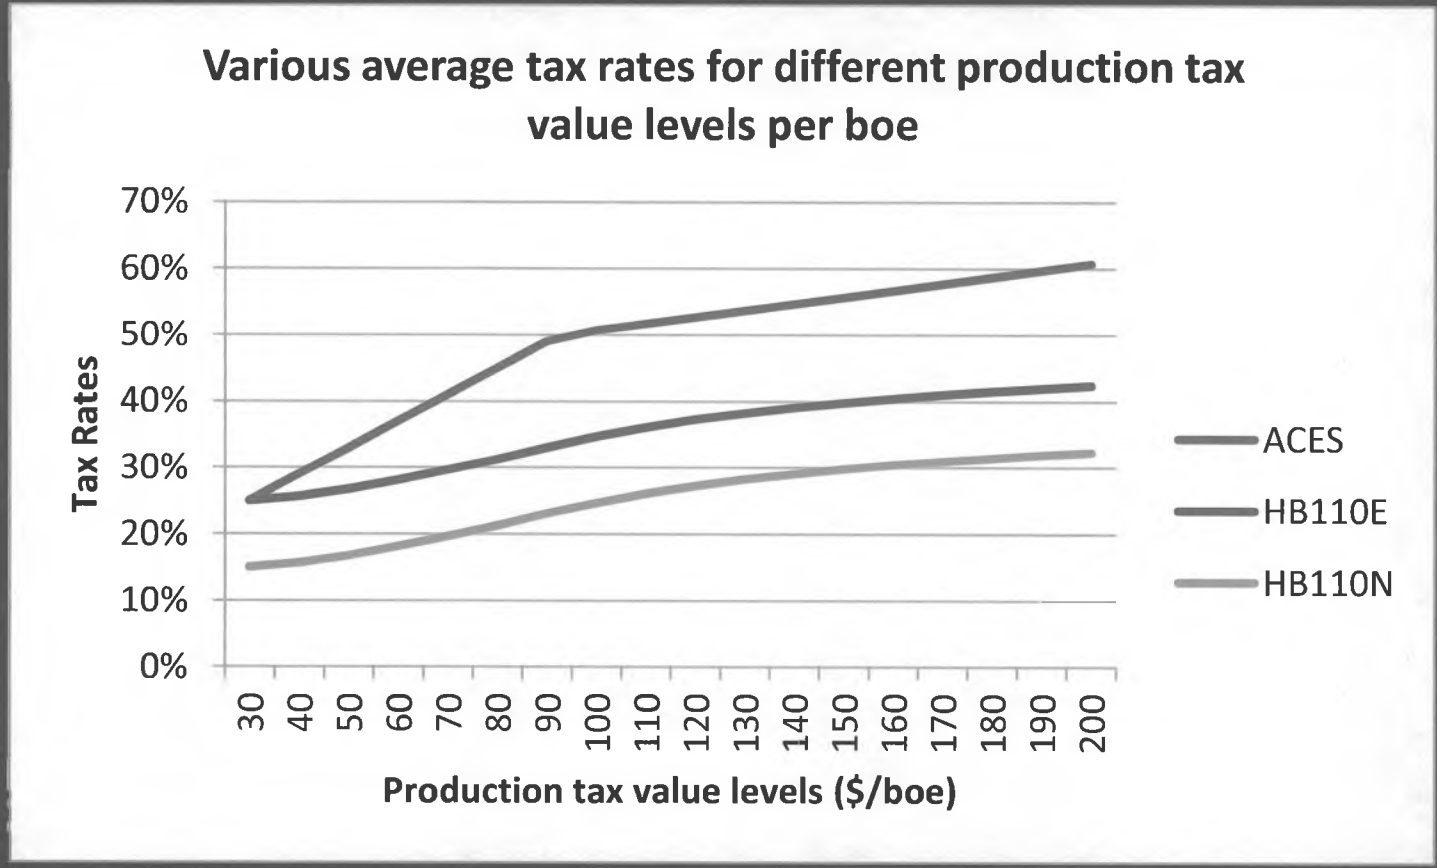
The BOE concept would result in massive government revenue losses on oil production if incrementally also gas would be developed. This does not make any sense. It is clear that Alaska would not accept such unnecessary losses. This in turn impedes gas project development.

Deficiencies
Negative PPT

By definition, for a marginal project the total negative ACES cash flow to government as a result of tax credits and tax deductions becomes (almost) identical to the positive cash flow. In other words the net government receipts are low or even negative.

Deficiencies
Negative PPT

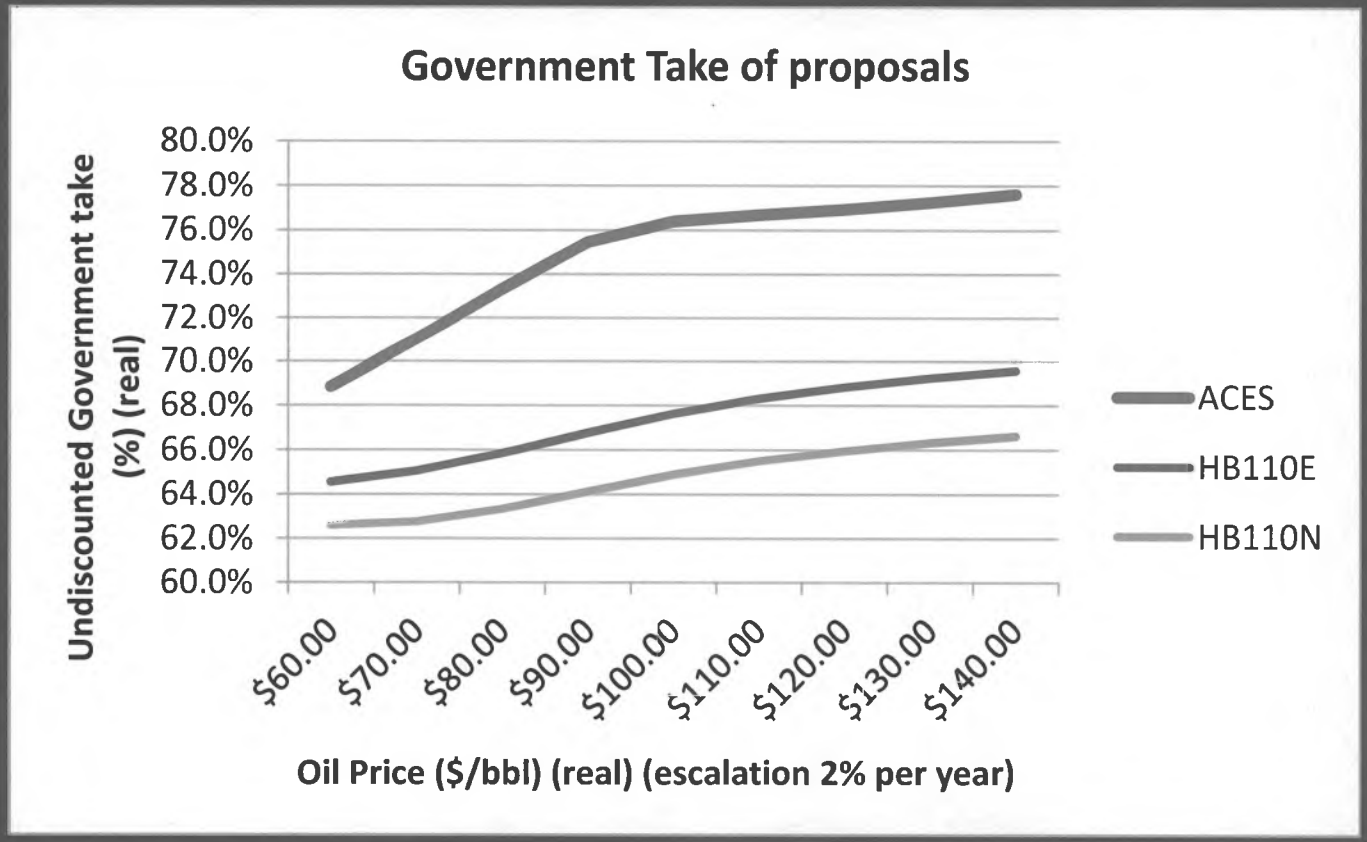
With the existence of a tax credit, there are always economic conditions under which the government may loose more in credits and deductions than it receives in income.



However, this effect should be minimized in the fiscal design. This is not done under ACES.

Proposals for light oil

Proposals for light oil production will be discussed first, based on this discussion the variation for other resources can be introduced



HB 110 has been introduced modify ACES.

Proposals for light oil: HB110Analysis: PPT rates

The bracketing procedure creates a significant lowering of the average PPT rates. The HB 110 N rates apply only for 7 years from the start of production for new production.

Proposals for light oil: HB110 Analysis: Government take

At $ 100 per barrel, the government take of ACES would be 76.4%, HB 110 (Existing) 67.6% and HB 110 (New) 64.9%

HB 110: Existing Production

The HB 110 proposal is relatively complex. It is based on so-called "bracketing". Following is the scale:

< $ 30.00	25.0%
< $ 42.50	27.5%
< $ 55.00	32.5%
< $ 67.50	37.5%
< $ 80.00	42.5%
< $ 92.50	47.5%
> $ 92.50	50%

Bracketing means that the final average rate is based on the weighted average of all the brackets. This means the rate will never be 50%.

HB 110: New production

For new production the rates will be lowered by 10% for the first 7 years of production.

This means that new production has to be "ring fenced". All production and all revenues and costs will have to be allocated to "existing" and to "new" production.

This is complex from an administrative point of view.

Deficiencies in HB 110

HB 110 deals with only two of the deficiencies of ACES:

1. **PPT tax rates up to 75% in addition to 41% corporate income tax are too high to stimulate efficiency in operations.**
2. **The price based sliding scales and result in a situation where under high prices the producer is actually better off with a lower price.**
3. **The excessive tax credits result in a situation where Alaska may pay all of the costs of a well.**
4. **The BOE concept results in a situation where new gas production could lead to massive losses of oil based revenues.**
5. **Under marginal circumstances the ACES system actually creates a negative PPT, in other words the government will loose PPT on certain fields.**

Deficiencies in HB 110

In addition HB 110 creates an entirely new problem.

Specifying different tax rates for Existing and New Production requires tax payers to submit different tax returns for these two classes of production. This is called ring fencing.

This in turn means that all revenues and costs need to be allocated to "existing" and "new". This is complex to administer and could lead to significant revenue losses for the State. HB 110 does not specify how this process would have to take place.

HB 110 is therefore not a viable alternative to ACES.

BOE complications

An important drawback of ACES is the BOE problem.

This means that in case major oil companies would propose a new Alaska LNG export project to the Pacific, the entire fiscal system has to be revised again. This is an unnecessary obstacle to the introduction of a new gas project.

It is therefore essential that in any revision of ACES this problem is also dealt with in advance. This would permit to add gas terms to the package later (or immediately) without having to change oil terms again.

PVM Proposal: Existing and New Production

The PVM Proposal is going further than merely creating new levels of government take for existing and new production. The proposal also:

- **Creates a new "architecture" to which terms for heavy oil , shale oil and natural gas can be easily added, and**
- **Resolves <u>all</u> the deficiencies associated with ACES.**

PVM Proposal for New Production

At $ 100 per barrel, the HB 110 for New Production is equal to a much simpler concept, which is:

- **25% flat PPT**
- **20% tax credit, plus a**
- **2.25% severance feature.**

The severance tax feature is no different from the way the severance tax used to be calculated in Alaska. The severance tax is a percentage of the value of the gross production less the royalty. For instance, with a royalty of 12.5% and an oil price of $ 100, a 2.25% severance feature would be equal to:

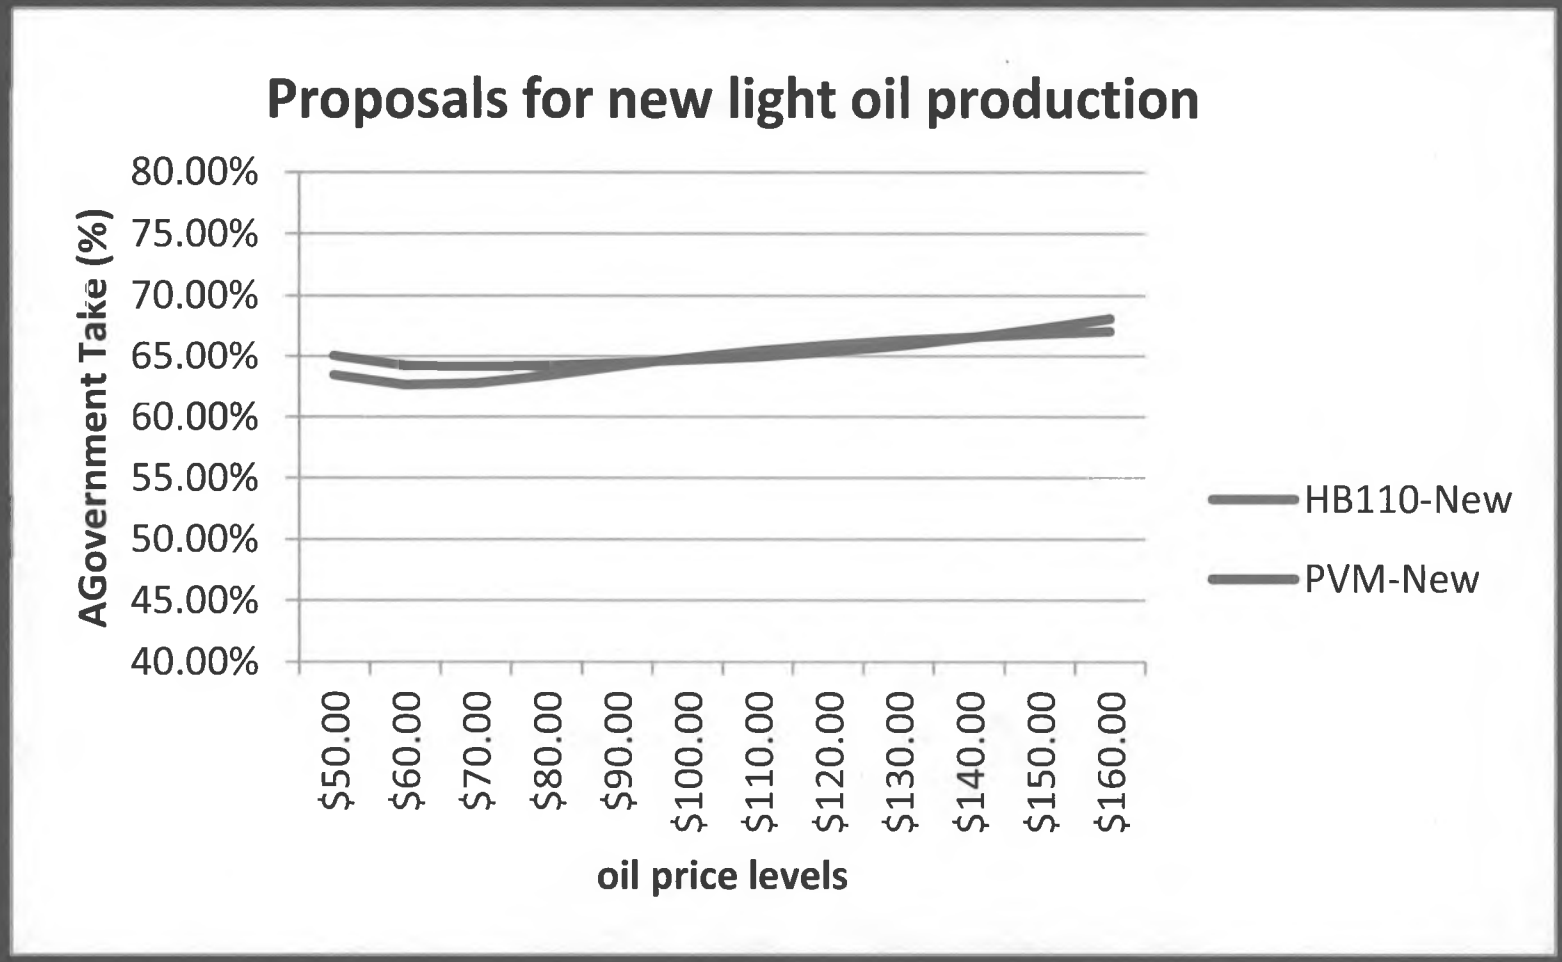
2.25% * 87.5% * $ 100 = $ 1.96875 per barrel

PVM Proposal for New Production

In order to make the severance feature match the government take of HB 110 for new production, the following price sensitive sliding scale is proposed:

- **The sliding scale starts at an oil price of $ 60 per barrel,**
- **Between an oil price of $ 60 and $ 180 per barrel, the severance feature would increase with 0.05% per dollar increase, reaching a value of 6% at $ 180 per barrel**
- **Thereafter, the sliding scale would increase 0.1% in order to reach a maximum of 15% at $ 270 per barrel.**

New "architecture"



The PVM Proposal creates a new "architecture" which is not BOE based. The severance feature is simply gross revenue based for oil (after the royalty) and therefore it does not apply to gas.

As a result PPT revenues from oil remain the same if also gas is produced. This solves a major deficiency of ACES.

Also excessive exploration support is eliminated because:

- **It is proposed to limit tax credits to 20% and not increase tax credits to 40% for certain exploration expenditures, and**
- **By creating a maximum PPT tax rate of 25% and corporate income tax rate of 41.1%, for a total maximum of 55.75%.**

PVM Proposal for New Production

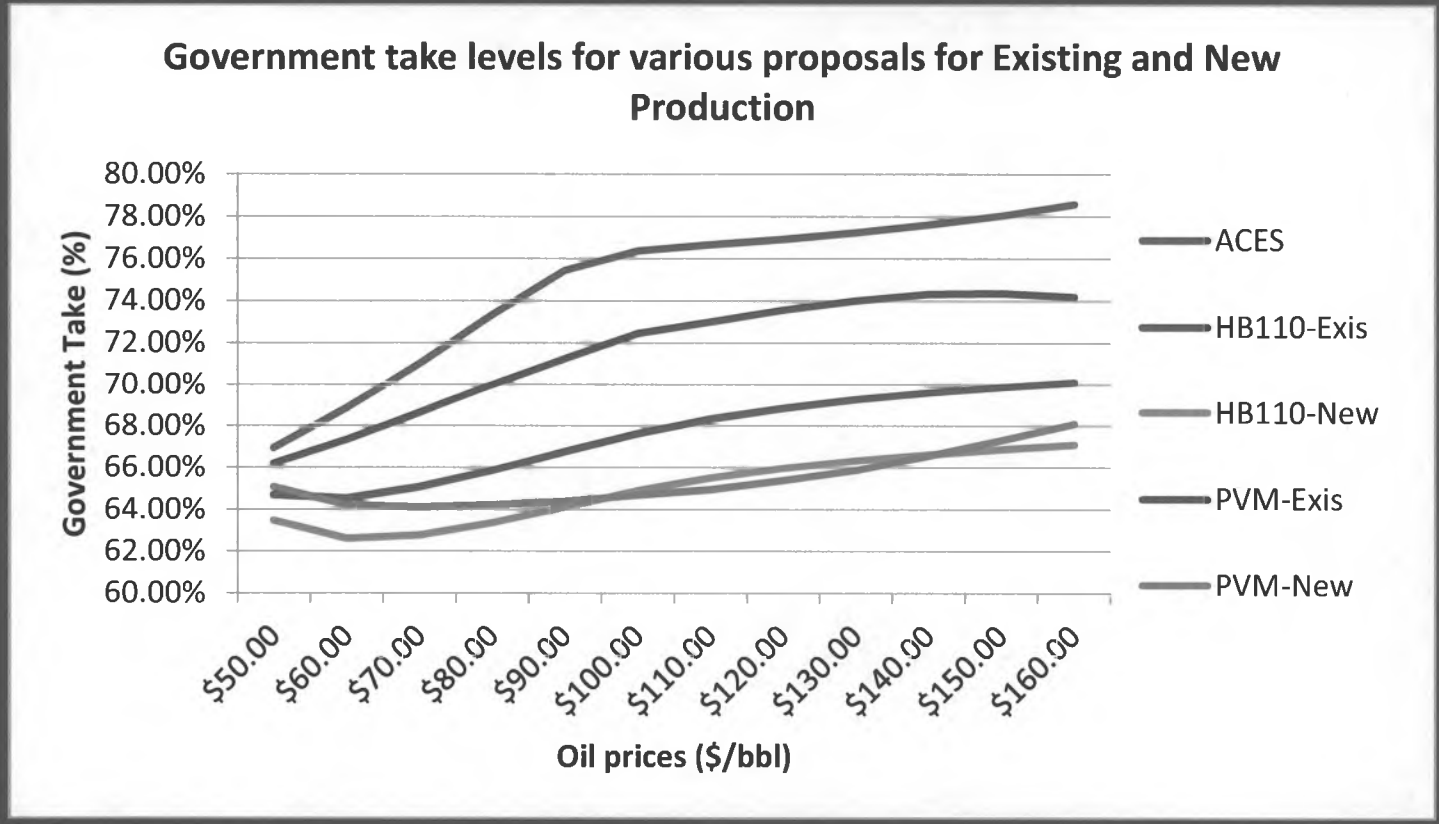
The PVM proposal results in almost exactly the same government take as HB 110 for new production for the entire price range from $ 60 to $ 160.

PVM Proposal for New Production

The main advantages of the PVM Proposal are:

- **Much easier to administer**
- **Can be consolidated with existing production, so no need for ring fencing**
- **An "architecture" which permits other resources to be added to the fiscal terms**
- **No excessive tax rates, in fact a combined rate of 55.75%.**
- **No excessive price progressivity**
- **No excessive exploration support**
- **No nonsensical cross subsidization of gas based on BOE values**
- **Reduced negative PPT characteristics**

Alternative Proposal for Existing Production



It is now easy to add a proposal for existing production.

Terms for existing production could be close to the current government take levels of ACES. It is not necessary to give up significant revenues.

Existing production terms could also be based on:

- **A flat 25% PPT**
- **20% tax credits**
- **A severance feature starting a $ 60 with 0.2% increases per dollar increase in price up to $ 130 per barrel and from there 0.1% up to a maximum of 20%.**

All Proposals for Existing and New Production

The PVM Proposal for existing production would be result in a much higher government take than HB 110 for existing production. The PVM proposal for new production is about equal to HB 110 for new production.

Old and New Production

HB 110 does not determine how to distinguish between new oil and existing oil. It is proposed to use the following methods:

Decline curve method.

With the decline curve method Alaska would establish the average production for each company in 2011. An exponential decline curve would be established per company. For instance one could use 6% per year for all companies for light production. Any production over the decline curve per company would qualify as "new".

The main advantage of the method is that is goes to the essence of the problem in Alaska. It also strongly stimulates investment by new companies. It is easy to administer. The main disadvantage is that existing companies may be rather differently affected. Therefore, this method needs to be complemented with other options.

Old and New Production

New non-producing lease method.

Another simple method is to consider "new" production, as production from leases which were not in production prior to December 31, 2011.

The main advantage of the method is that it is easy to administer and is a well established international practice. It would encourage new investment in new leases with fields which maybe more expensive.

New approved program method.

In principle it is possible for existing producers to make specific comprehensive proposals to the Alaska Government for new investments that will increase production from existing fields. This would relate to programs that would be in excess of ongoing investments.

Old and New Production

These programs could include:

- **The drilling of new more expensive deeper or shallower reservoirs,**
- **Enhanced recovery projects**
- **Horizontal well drilling projects in thin reservoirs,**
- **Extensive new infill drilling beyond current rates, or**
- **Any application of new technology.**

DNR would establish the base line production above which production would be considered "new" on a year by year basis, based on reservoir and other studies.

Old and New Production Summary

"New" light oil production (higher than 22 degrees API) would be:

- the higher off:
  - New production from programs specifically approved by the administration, and
  - New production above a pre-determined decline curve for light oil production of 6%.
- production from non-producing leases.

Based on these definitions it is easy to apply the differences in the severance features between existing and new production.

SESSION 4

Session 4

Proposed terms for heavy oil, shale oil and natural gas

Terms for Heavy Oil
General

Major heavy oil development may face significant challenges, since a mixture in the TAPS line of too much heavy oil may cause operational problems.

Major heavy oil development may have to be stimulated in conjunction with expansion of light oil projects, with possible condensate and liquid stripping projects from gas fields (such as Point Thomson) and/or a construction of GTL plant(s) (with subsequent cracking of waxy components).

Alternatively, one could build upgraders fueled by cheap natural gas on the North Slope in order to upgrade heavy crudes to lighter crudes. It is not known at this time whether construction of upgraders would be a viable possibility.

Terms for Heavy Oil
Proposed Terms

With the new "architecture" in place for light oil production it is now easy to add terms for heavy oil.

At this point in time only 40,000 bopd of heavy oil is being produced.

It is not recommended to divide heavy oil in "existing" and "new".

Firstly, because it would be difficult to determine a fair decline curve at this time.

Secondly, the volume is too small to make unnecessary complications in the fiscal terms.

Terms for Heavy Oil
Proposed Terms

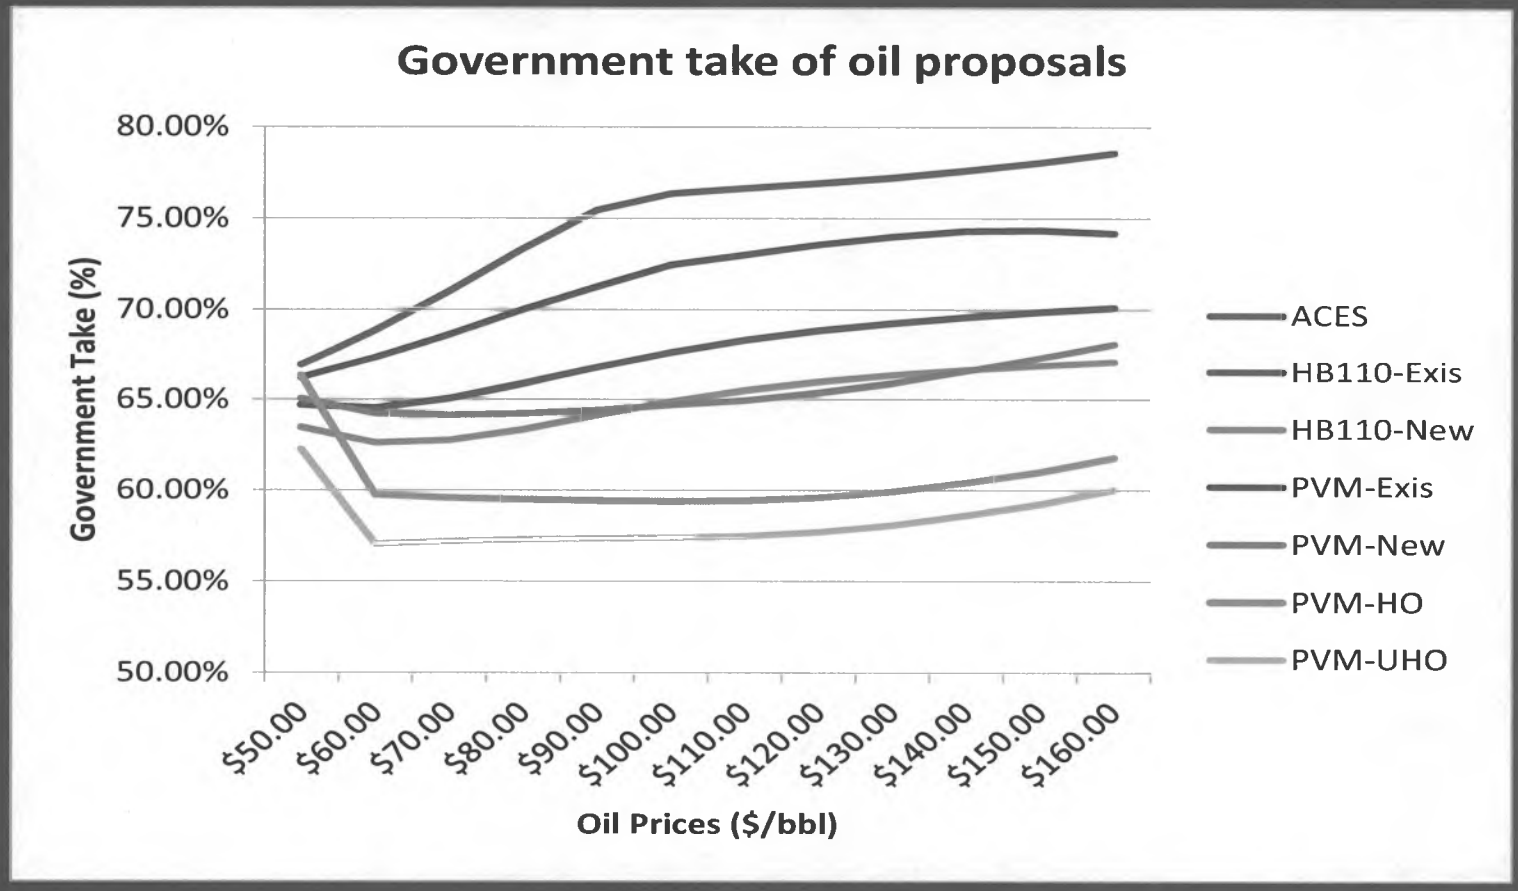
For heavy oil the fiscal system could be based on the same PPT as follows:

- **PPT based on a flat rate of 25%**
- **20% tax credit**
- **A 15% allowance based on the gross value of the heavy oil as special deduction for the determination of the PPT**
- **A severance feature starting at $ 160 per barrel at 0.05% per barrel increase up to $ 200 and thereafter 0.1% per barrel increase up to a maximum of 10%**
- **A floor price for the purpose of calculating PPT of $ 55 per barrel escalated with inflation.**

Terms for Ultra Heavy Oil
Proposed Terms

For heavy oil the fiscal system could be based on the same PPT as follows:

- **PPT based on a flat rate of 25%**
- **20% tax credit**
- **A 25% allowance based on the gross value of the heavy oil as special deduction for the determination of the PPT**
- **A severance feature starting at $ 160 per barrel at 0.05% per barrel increase up to $ 200 and thereafter 0.1% per barrel increase up to a maximum of 10%**
- **A floor price for the purpose of calculating PPT of $ 55 per barrel escalated with inflation.**



Terms for Ultra Heavy Oil
Proposed Terms

It is very important for Alaska to upgrade ultra heavy oil. This would create additional value added in the State and would make the operations of the oil line much easier.

It can therefore be suggested that producers are given the option to have a "feed price" into the upgrader for ultra-heavy oil which would be equal to 65% of the value of the synthetic oil that would be produced. The feed price would be the basis for royalties and PPT.

It would allow companies to only pay corporate income tax on the upgrader, since this is in fact a mid-stream type operation. This same concept is applied in Alberta for oil sands or refineries in Alaska.

Terms Overview

The PVM terms for existing light oil, new light oil, heavy oil and ultra heavy oil would be a simple overall scheme that would be easy to administer and implement and would not have the deficiencies of the current ACES system.

Terms for Shale Oil

The Shale Oil terms could be the same as the terms for ultra heavy oil.

However, there is a small probability that the shale oil operations may turn out to be rather profitable if fracking operations are very successful and primarily light oil is being produced.

So, it is possible to make the allowance of 20% more flexible and reduce the percentage in case shale oil production proves to be rather profitable.

This can be done with a so-called R-factor. The 20% could be reduced if the ratio between cumulative revenues and cumulative costs for a project become very profitable.

Terms for Natural Gas
New Gas Fields

Any condensates and other liquids from natural gas production could be dealt with as new light oil production.

For gas the fiscal package could be:

- **Flat 25% PPT**
- **20% tax credit**
- **25% allowance of the gross value of the gas revenues**
- **Severance feature starting at $ 8/MMBtu at 0.05% per $1 per MMBtu, and after $ 20/MMBtu at 0.1% (which means that on a Btu equivalent the severance feature is much stronger for gas than for oil)**
- **A floor net back gas price of $ 3.00 per MMBtu for PPT purposes and a floor price for liquids and condensates of $ 70 per barrel.**

Terms for Natural Gas
Gas from fields with existing oil production

Any condensates and other liquids from natural gas production could be dealt with as new light oil production.

For gas the fiscal package could be:

- **Flat 25% PPT**
- **20% tax credit**
- **15% allowance of the gross value of the gas revenues**
- **Severance feature starting at $ 8/MMBtu at 0.05% per $1 per MMBtu, and after $ 20/MMBtu at 0.1% (which means that on a Btu equivalent the severance feature is much stronger for gas than for oil)**
- **A floor net back gas price of $ 3.00 per MMBtu for PPT purposes and a floor price for liquids and condensates of $ 70 per barrel.**

Government Take issues

As a first step it can be recommended to bring the government take down to higher levels than indicated by international competition for:

- **Ultra heavy oil**
- **Shale oil**
- **Natural gas**

The reason is that international competitive levels cannot be reached unless Alaska would lower the royalties. It seems prudent to first "test the market" on the packages proposed in this seminar.

New fiscal terms

	Light-Exist	Light-New	HO	UHO	Shale Oil	Gas-Exist	Gas-New
PPT Rate	25%	25%	25%	25%	25%	25%	25%
Tax Credit Rate	20%	20%	20%	20%	20%	20%	20%
Sev Feature - Base Price	$60	$60	$160	$160	$160	$8	$8
Sev Feature - Initial Increment	0.20%	0.05%	0.05%	0.05%	0.05%	0.05%	0.05%
Sev Feature - Change Price	$130	$180	$200	$200	$200	$20	$20
Sev Feature - Increment 2	0.10%	0.10%	0.10%	0.10%	0.10%	0.10%	0.10%
Sev Feature - Max Rate	20%	15%	10%	10%	10%	15%	15%
Allowance - % gross rev	0	0	15%	25%	25%	15%	25%
Floor price - oil	no	no	$55	$55	$55	$70	$70
Floor price - gas	no	no	no	no	no	$3	$3
R-factor	no	no	no	no	yes	no	no

The proposed fiscal terms would provide for a simple to administer overall system and would set terms for all possible oil and gas investments. Significant investment may occur as a result of these terms.

Failure to achieve goals

What would happen if Alaska adopts these terms and no significant new investment takes place in Alaska, while oil production continues to decline:

1. **Alaska would not have lost anything compared to the current situation.**
2. **A very valuable benchmark would be established as to how fiscal terms may have to be changed further in order to eventually attract the investment in these resources.**

Summary

With the appropriate fiscal and contractual framework Alaska can achieve:

- **1 million barrel per day throughput through the TAPS line, and**
- **Significant LNG exports to the Pacific market**

However major political and fiscal change is required.

The sooner the process starts to encourage these changes the better the future of Alaska will be secured.

ADDENDUM
1A

Addendum 1A to "Policy Options for Alaska Oil and Gas"

Pedro van Meurs

Monday – Tuesday, February 13-14, 2012

Presentation
Alaska Senate Finance Committee

e-mail: info@vanmeurs.org

Possible Senate Bill

If all the Senate wants to do is make minor modifications to ACES in order to create a better bill than HB 110, the following easy proposal would achieve these goals:

- **Change the current ACES to:**
  - **0.35% per dollar increases to $ 90 and thereafter 0.1% increases to a maximum additional rate of 25% at $ 130 per barrel,**
- **Establish a 25% of gross revenues allowance for new oil production for the purposes of calculating PPT, and**
- **Limit tax credits to 20% on exploration and development.**

Possible Senate Bill

The results show that this achieves the recommended government take ranges at $ 100 per barrel.

Possible Senate Bill

This proposal would achieve the following improvements relative to HB 110:

- **It does not create the "give away" on revenues from existing production as proposed under HB 110.**
- **It provides the same stimulus for new production as proposed under HB 110.**
- **It does not require ring fencing**
- **It solves four deficiencies of ACES:**
  - **excessive tax rates,**
  - **excessive price progressivity,**
  - **excessive exploration support,**
  - **the negative PPT issues**

Possible Senate Bill

The proposal would not achieve:

- **Dealing with the nonsensical BOE cross subsidization and therefore, in case of any proposal by the major oil companies on a Pacific LNG project, the PPT would have to be significantly modified again to make such a proposal work,**
- **Creating an "architecture" to which new Alaska resources can be added, such as heavy oil, shale oil and natural gas,**
- **The stimulus of investment in heavy oil, oil shale or natural gas and thereby the achievement of the one million bopd goal.**

Break down of Government Take in individual revenue items: Comprehensive Proposal-Existing Production

EXISTING PRODUCTION: PVM PROPOSALS FOR COMPREHENSIVE CHANGE							
GOVERNMENT REVENUE ITEMS IN AMOUNTS AND PERCENT OF DIVISIBLE INCOME FOR THREE FISCAL ALTERNATIVES							
(Undiscounted) (Real)($100 per barrel oil price)		ACES		HB-110 Existing		PVM Existing	
TOTAL OIL PRODUCTION	(MMbbls)	500		500		500	
TOTAL GAS PRODUCTION	(Bcf)	0		0		0	
TOTAL GROSS REVENUES	(MM$)	47500		47500		47500	
TOTAL CAPEX	(MM$)	7500		7500		7500	
TOTAL OPEX	(MM$)	5000		5000		5000	
TOTAL DIVISIBLE INCOME	(MM$)	35000		35000		35000	
BONUSES, RENTALS	(MM$)	0	0.0%	0	0.0%	0	0.0%
ROYALTIES	(MM$)	5938	17.0%	5938	17.0%	5938	17.0%
PETROLEUM PROFITS TAX	(MM$)	13910	39.7%	8708	24.9%	5597	16.0%
PROPERTY TAX	(MM$)	834	2.4%	834	2.4%	834	2.4%
MISC REVENUES AND SEVERANCE FEATURE	(MM$)	18	0.1%	18	0.1%	5996	17.1%
CORPORATE INCOME TAX	(MM$)	6034	17.2%	8171	23.3%	6993	20.0%
GOVERNMENT INCOME	(MM$)	26733	76.4%	23669	67.6%	25358	72.5%

The PVM proposal at $ 100 per barrel would be slightly under the ACES levels for existing production (please note that the petroleum profits tax and severance feature income are listed separately).

Break down of Government Take in individual revenue items: Comprehensive Proposal-New Production

NEW PRODUCTION: PVM PROPOSALS FOR COMPREHENSIVE CHANGE GOVERNMENT REVENUE ITEMS IN AMOUNTS AND PERCENT OF DIVISIBLE INCOME FOR THREE FISCAL ALTERNATIVES (Undiscounted) (Real)($100 per barrel oil price)		ACES		HB-110 New		PVM New	
TOTAL OIL PRODUCTION	(MMbbls)	500		500		500

TAKE	5%	%	78.3%	76.6%	65.1%
	10%	%	81.6%	80.1%	66.9%

ACES and proposals result in a modest difference between the discounted government take and undiscounted government take.

Repsol Anecdote

Subsequent to providing the Repsol anecdote about the complexity of ACES to the Senate Finance Committee, I was contacted by DOR.

DOR has no record of questions being asked by Repsol. Furthermore, DOR is of the view that they have an efficient system in place to respond to questions.

I have promised DOR to see whether I can get further clarifications from my contacts in Repsol on this matter. Repsol is an important new investor in Alaska. Their experiences are therefore of importance to see what can be learned from this to better attract new investors.

ADDENDUM

Addendum 2 to "Policy Options for Alaska Oil and Gas"

Pedro van Meurs

Monday – Tuesday, February 13-14, 2012

Presentation
Alaska Senate Finance Committee
COMMENTS ON DOR PRESENTATION OF FEBARY 13, 2012

Van Meurs Corporation
Nassau, Bahamas
Tel: (242) 324-4438
e-mail: info@vanmeurs.org

Re-investment by major oil companies

Slide 13 of the DOR presentation indicates that major oil companies reinvested $ 1544 million in 2010 in capital expenditures. Comments:

- This is about $ 8 per barrel produced
- DOR includes capital maintenance expenditures and work overs in these capital expenditures
- It is likely that about $ 4 per barrel relates to these type of expenditures. These are non-discretionary. They have to be done to continue operations normally
- It seems that the remaining $ 4 per barrel is largely infill drilling with the goal of accelerating cash flow
- This $ 4 per barrel is about $ 1 on an after tax basis.
- It is therefore clear that the three major companies are "harvesting" at the maximum rate. During the last 5 years there was "near zero" interest in investments in new projects.

Investor impact of high marginal rates related to higher prices

There may be some confusion as to the impact on investors of high marginal rates related to higher prices.

There is no direct impact of marginal rates on investment. Investments decisions are being made on the basis of the total average incremental NPV and IRR, not the marginal NPV or IRR.

For instance, Pakistan has in their production sharing contracts a price cap of $ 100. Over $ 100 all higher revenues go to government. So the marginal rate is 100%. Yet, investments are taking place because the take below $ 100 is relatively modest and therefore the NPV and IRR are acceptable.

Investor impact of high marginal rates related to higher prices

There are two important impacts of very strong price progressivity:

- **Strong price progressivity means that the average rates increase to higher levels under higher prices. In the case of Alaska this means that that Alaska will rapidly become less attractive than some of the main competitors with regressive systems, such as the Lower 48, Australia, Russia and Brazil.**
- **New investors, will look negatively on very strong price progressivity because it removes the "upside" of the possible outcome of investments. This is a strong impediment for new investment. Even if price progressivity is less strong for new production, new investors will still evaluate how current producers are being treated by Alaska since this is an indication of the fiscal policy of the jurisdiction.**

For these reasons one would not recommend price progressivity that is too strong.

Fiscal design criteria for Alaska

From an international perspective a number of design criteria can be recommended in order to optimize fiscal terms for Alaska:

- Price progressivity should not be so strong that the price incentive index drops below $ 0.10. For ACES this level is reached at a price of about $ 190 per barrel
- Cost progressivity based on average blended costs should not be so strong that the cost savings index drops below $ 0.20. For ACES this level is reached at a price of about $ 180 per barrel (assuming $ 25 per barrel costs)
- Government take should not be uncompetitive: For Alaska it should not be higher than 75%. For ACES this is reached at a price level of about $ 90 per barrel.

Fiscal design criteria for Alaska

(continued):

- **Exploration support: Government should not contribute more than 80% of the exploration costs through tax credits and tax deductions. For ACES this level is reached at $ 60 per barrel.**
- **Negative PPT: Whenever tax credits or uplifts are being provided the tax income on a consolidated basis could become negative. Sensitivity analysis should be done to ensure that negative PPT only occurs under unlikely conditions. ACES is deficient under certain high cost – low price conditions.**

Oil and Gas Production Tax
Status Report to the Legislature
Alaska Department of Revenue

January 18, 2011

Report Purpose

In August 2006, the 24th Alaska state legislature approved House Bill 3001, which represented a major restructuring of the state's oil and gas production tax. As part of the legislation, lawmakers asked that the Department of Revenue study the impact of the production tax changes on several criteria and produce a report on or before the first day of the 2011 legislative session on the findings of that study.[1] This report summarizes those findings.

Executive Summary

This report evaluates six elements of Alaska's production tax system since implementation of the Petroleum Profits Tax (PPT) in 2006 and Alaska's Clear and Equitable Share (ACES) in 2007. The six elements and our key findings with respect to each of them are described briefly below.

1. **Revenue Generation/Tax Rate** – State revenues under PPT and ACES exceeded the amount that would have been received under ELF for each of the four fiscal years since implementation of a net profits tax. Although the production tax rate under ACES may be as high as 75%, tax rates in each of the

[1] ***AS 43.55.180 Required Report. (a)*** *The department shall study*
(1) *the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011 , the tax credits provided under AS 43.55.023 - 43.55.025, and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and*
(2) *the effects of the tax rates under AS 43.55.011 (i) on state revenue and on oil and gas exploration, development, and production on private land, and the fairness of those tax rates for private landowners.*
(b) *The department shall prepare a report on or before the first day of the 2011 regular session of the legislature on the results of the study made under (a) of this section, including recommendations as to whether any changes should be made to this chapter. The department shall notify the legislature that the report prepared under this subsection is available.*

four years were much lower than the maximum rate.

The oil tax rate of 5% of the gross value at the point of production at AS 43.55.011(i) for private landowners has not raised any significant concerns that have been communicated to the Department of Revenue.

2. **Industry Investment** – Investment in the form of capital expenditures has increased in each of the four fiscal years since implementation of the net profits tax, however, it is unclear how much of the capital expenditures were drilling or well-related and how much were maintenance or facilities-related.

3. **Impact on Exploration, Development, and Production –** Exploration has generally increased from 2003, when the EIC credit was implemented, but has dropped off in 2010. Development continues in three relatively new North Slope projects, yet production continues to decline.

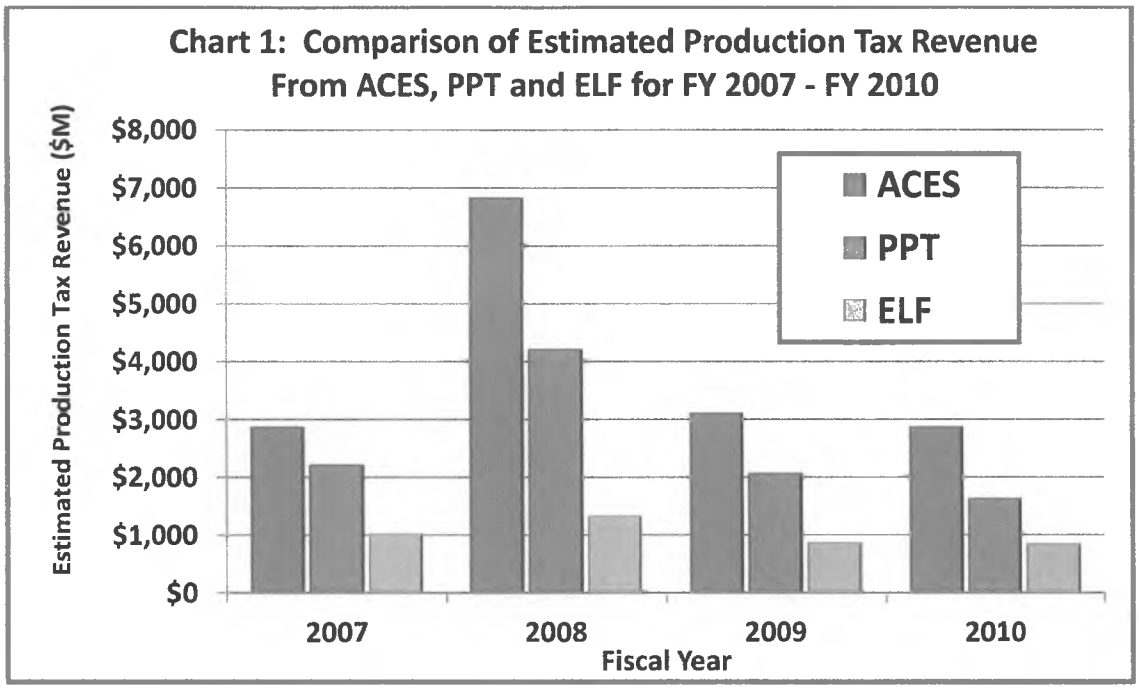
4. **Industry Employment and New Entrants –** Industry employment rose steadily from 2006 through 2009, but dipped slightly in 2010. The number of companies filing annual tax returns doubled between 2006 and 2009, indicating interest by companies that are either new or returning to the Alaska oil and gas industry.

5. **Use and Expansion of Tax Credits –** The amount of credits used has increased annually since 2006 and we expect the trend to continue as new credit programs were added in the 2010 legislative session.

6. **Tax Administration and Compliance –** The department continues to write regulations for the new tax system, and the first audits under the net profits tax have been completed. The department has, however, been hampered in its tax reporting and compliance efforts by the lack of a centralized database to house and manage the large volumes of oil and gas data it receives.

7. **Conclusions and Recommendations –** Based on the multiple changes to the tax laws over the past few years, drawing any conclusion about their effect on Alaska's investment climate is difficult. However, what is clear is that production continues to decline. The state should continue to monitor its competitiveness with other oil and gas jurisdictions worldwide and be prepared to change its tax structure as needed.

Overview



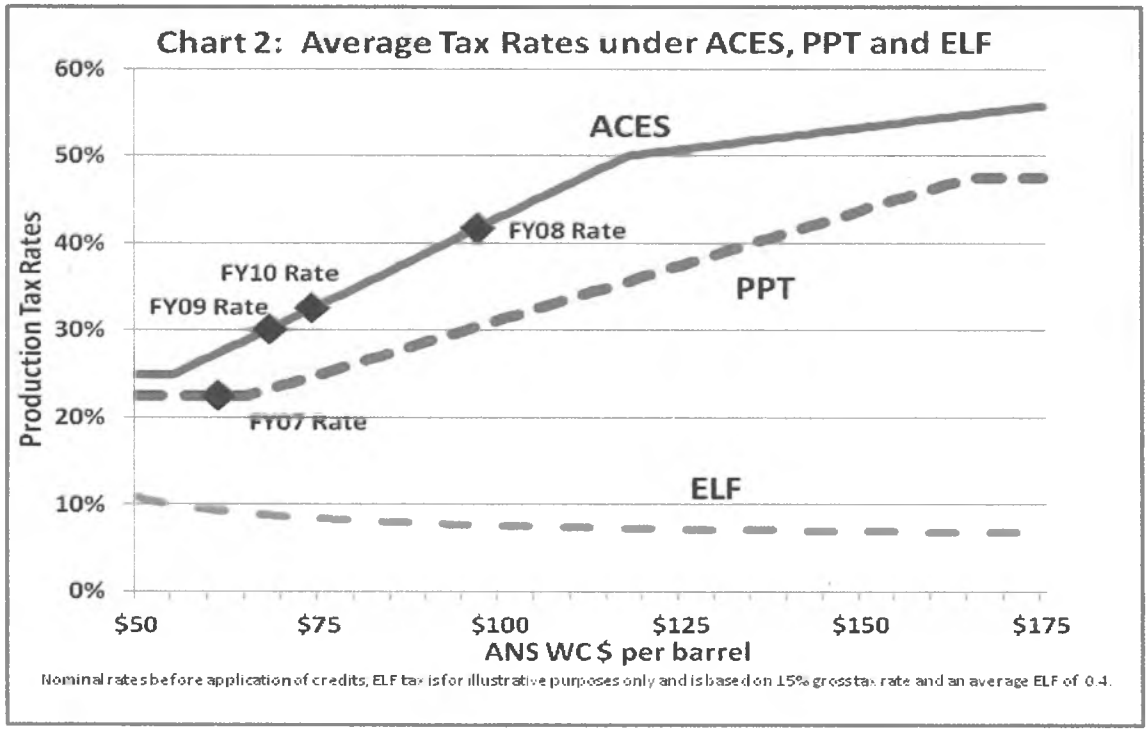
This report reviews and summarizes information gathered over the approximate five-year period since the implementation of the Petroleum Profits Tax (PPT) in 2006, and in 2007, Alaska's Clear and Equitable Share (ACES). The report covers six critical elements for evaluation and a section with conclusions and recommendations, as follows:

1. Revenue Generation/Tax Rate
2. Industry Investment
3. Impact on Exploration, Development and Production
4. Industry Employment and New Entrants
5. Use and Expansion of Tax Credits
6. Tax Administration and Compliance
7. Conclusions and Recommendations

Revenue Generation/Tax Rate

Both PPT and ACES have generated more production tax revenue for the State than would have been received under the previous production tax system, which used the Economic Limit Factor (ELF). In the one year that PPT was in place, FY 2007, the production tax totaled $2.2 billion. That year, the ANS West Coast oil price averaged $61.60 and production on the North Slope averaged 734,000 barrels per day. In contrast, the average oil price one year earlier, in FY 2006, was $62.12, production averaged 840,000 barrels per day, and the production tax under ELF totaled $1.2 billion--$1 billion, or 45% less than collected under PPT. It should be noted that PPT became effective on April 1, 2006, adding two months of tax collections to the FY 2007 total, making FY 2007 effectively a 14-month fiscal year. Regardless, the level of PPT collections above those that would have been collected under ELF, at least at moderately high prices, is significant.

In the three years that ACES has been in place, production tax revenues have increased to higher levels than under PPT. This is largely because ACES has higher base and progressivity tax rates than did PPT, and because one of the credits under PPT – the transition investment expenditure credit – was reduced substantially. The chart below shows production tax revenue collections under PPT and ACES as compared to how production tax revenue collections would have looked under two tax systems that were not in place during those years.



Production tax under both PPT and ACES is calculated on the net profits of oil and gas production, whereas ELF production tax was calculated on the gross profits of oil and gas production. Relative to taxes based on the gross value of production, net profit tax systems generally provide more tax revenue when oil prices are high and less tax revenue when prices are low. The progressive tax mechanism, designed to increase the total tax rate when per-barrel profit exceeds a pre-determined threshold, can increase the tax rate substantially. In addition to the progressive tax rate, the per-barrel profit level where the progressive tax is triggered is important. In the case of ACES, the progressive tax trigger is $30 net profit per barrel, whereas with PPT, the progressive tax trigger was $40 net profit per barrel.

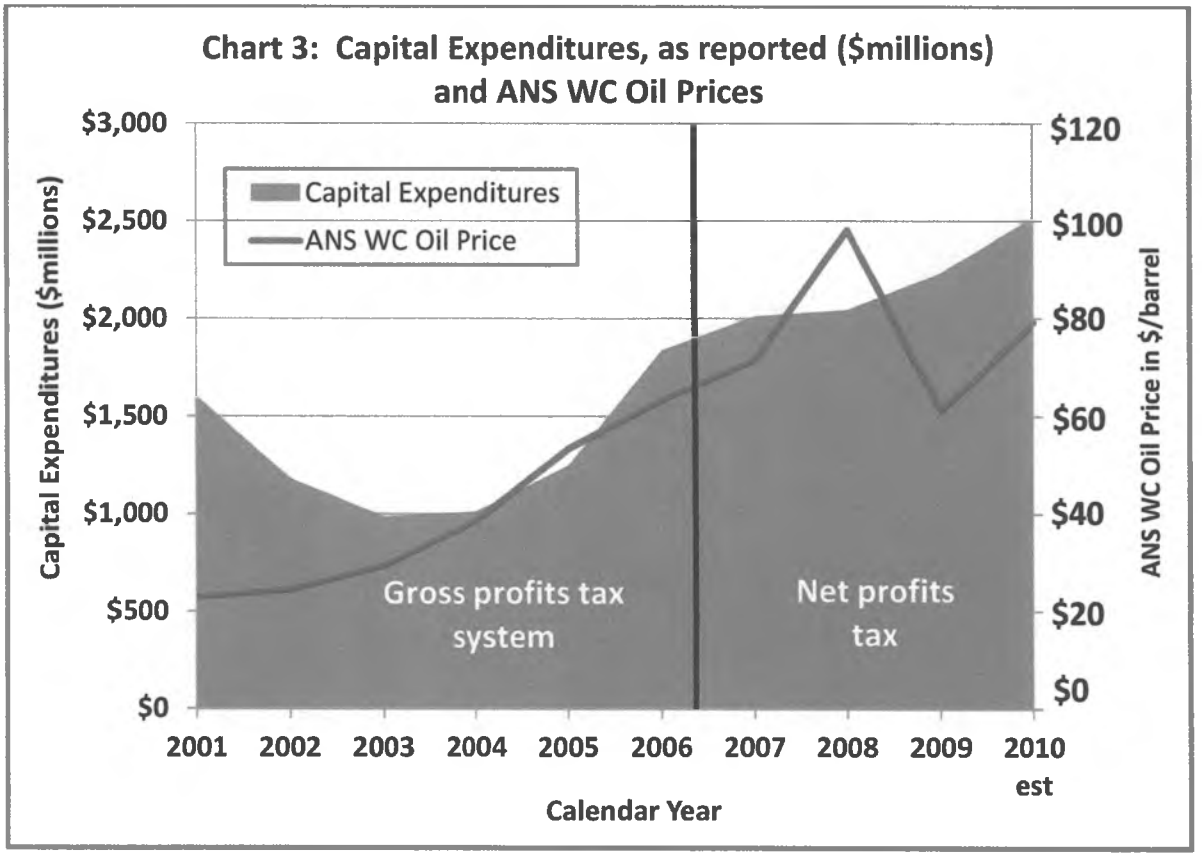
Alaska North Slope (ANS) oil prices over the past four fiscal years were high relative to previous fiscal years. ANS crude prices over the four fiscal years of 2007 through 2010 averaged about $75 per barrel compared to $42 per barrel for the fiscal years of 2003 through 2006. Under ACES, an average price of $75 per barrel would yield an average profit of $50 per barrel, producing a combined base and progressivity tax rate of 33% (25% + [($50-$30)*.004]). The tax under this scenario before credits would be $16.50 per barrel. In contrast, the tax rate under ELF of 15% of the gross value at the point of production, even if the ELF calculated to 1, would yield a production tax of $10.50 per barrel, assuming transport costs of $5 per barrel.

When oil prices are low, however, a net profits-based tax structure would likely provide less production tax revenue than a gross profits-based tax. For example, a tax of 15% on the gross value, regardless of profit, could create a loss for companies producing oil

if profits were equal to or less than the tax. Because PPT and ACES recognize the costs of production in their calculation, a company with no profit would not pay any production tax and would likely get tax credits to offset future tax liabilities. Low oil prices experienced late in the year 2008 and early 2009 generated tax liabilities for many companies operating on the North Slope that were lower than they would have been under the ELF system.

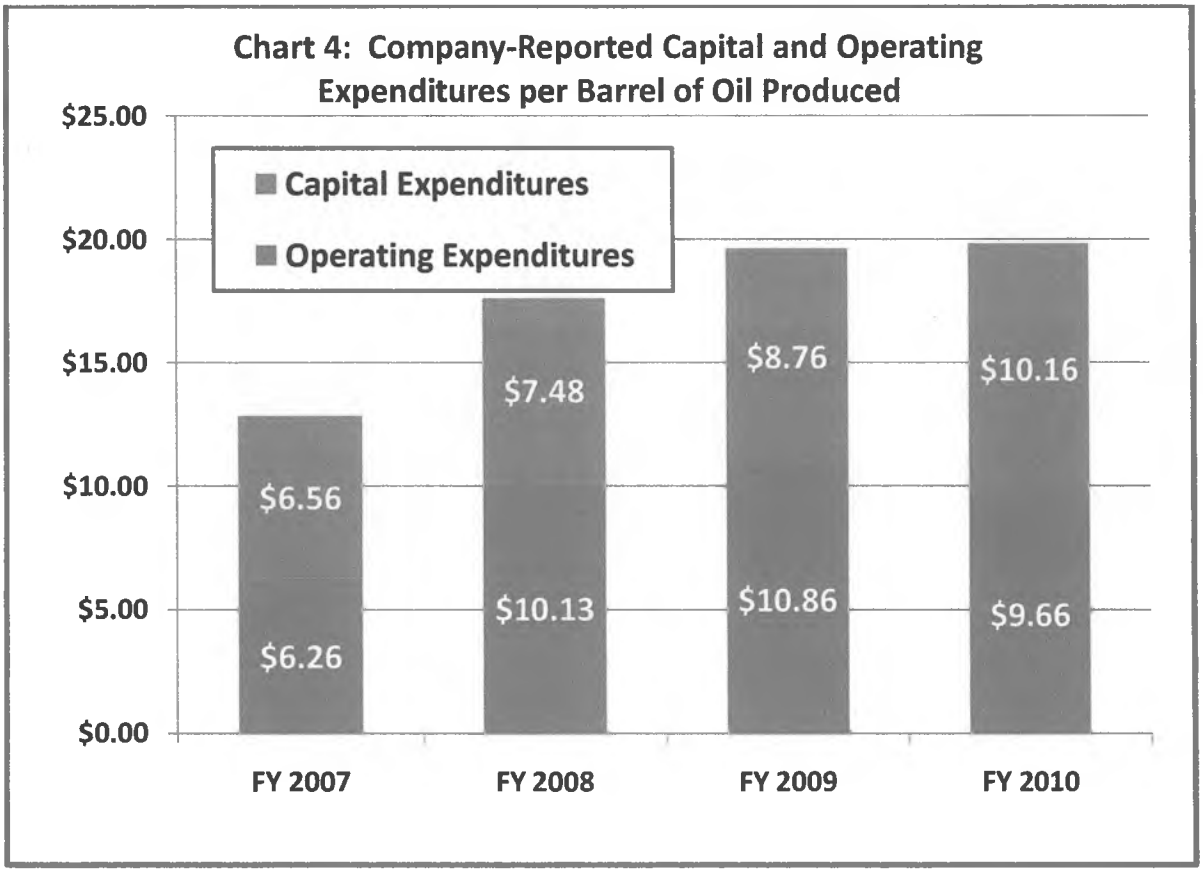
Chart 2 below shows the average tax rates of PPT, ACES and ELF under a range of oil prices. Also shown is the average tax rate in each of the years that a net profits tax has been in place.

The department was also asked to review the tax rate for oil produced from private land of 5% of the gross value at the point of production.[2] The department is not aware of any concerns expressed on behalf of industry or private landowners as to the fairness of this tax.



Industry Investment

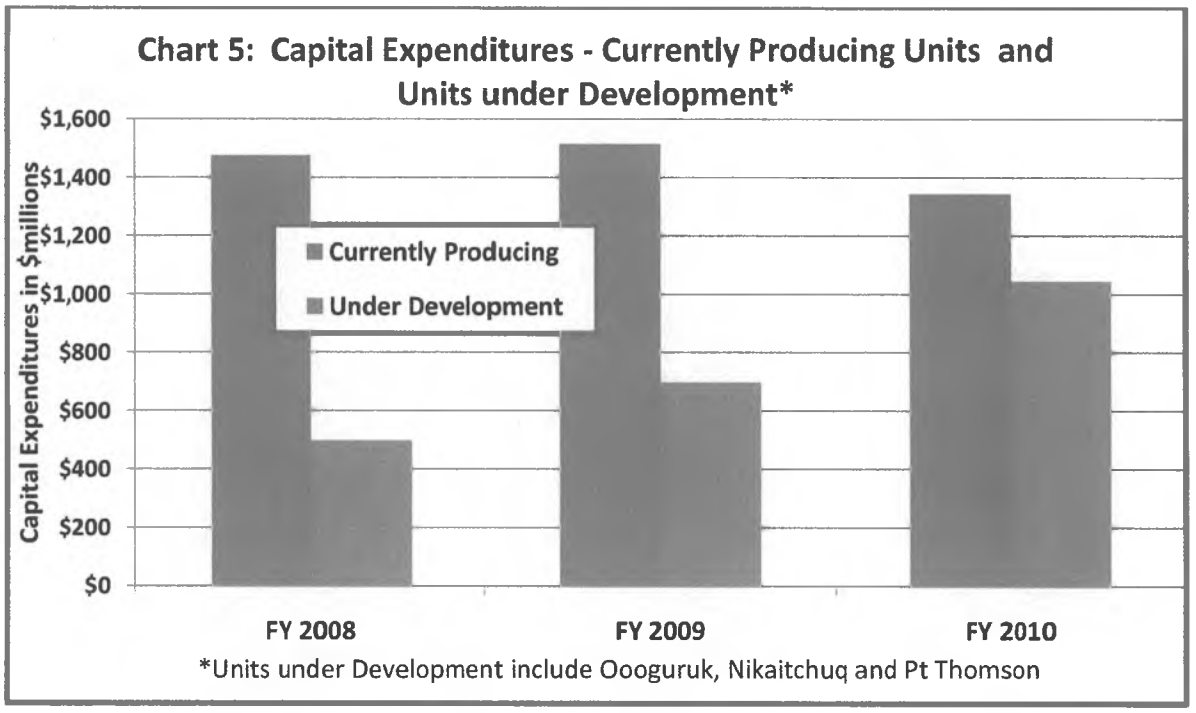
Investment is an important component in Alaska's oil and gas industry. Producing oil, especially in an arctic environment, requires substantial financial outlays before, during



[2] AS 43.55.011(i)

and after producing the oil. In massive oil fields such as Prudhoe Bay, which has been operating for more than 30 years, maintaining and upgrading equipment and facilities is key to continued undisrupted oil production. Companies must also invest in research and new technologies in order to achieve the maximum recoverability of petroleum from the reservoirs they have developed. Because the companies that invest in petroleum projects can and do operate in areas outside of Alaska and the country, Alaska oil projects must compete with other petroleum opportunities throughout the world for those investment dollars.

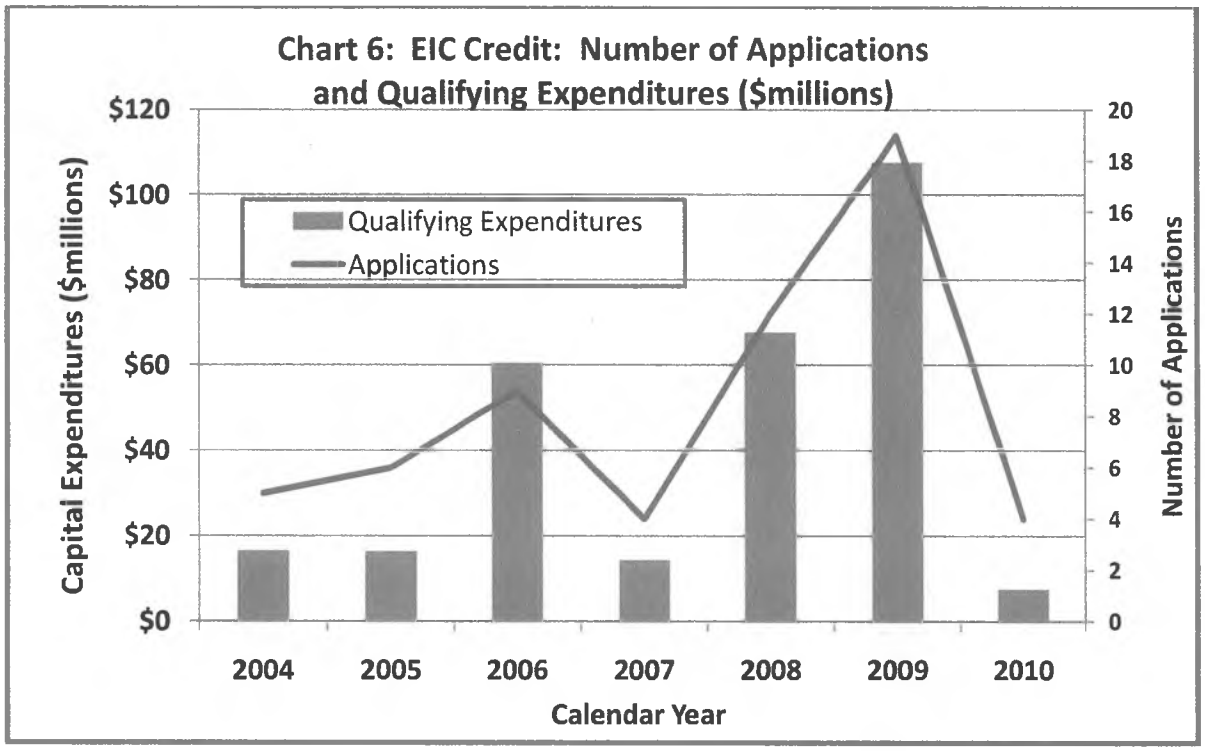
Industry investment is generally reflected in capital expenditures, as opposed to operating expenditures, which are normally considered day-to-day expenditures for producing oil and gas. Alaska's fiscal system, which gives credits for capital expenditures, theoretically encourages these types of investments. Our review of the past 10 years of data appears to bear this out. Chart 3 below shows company-reported data from tax filings from calendar year 2001 through calendar 2010 (estimated). While capital expenditures over the five-year period (2006 through 2010) since the implementation of a net profits tax with credits for capital expenditures have increased each year, we have limited data as to the nature of the expenditures.



In the context of petroleum basin operations, capital expenditures are generally an indicator of expanding production or enhancing or extending the life of facilities or equipment. Expenditures for drilling wells normally fall into the category of capital expenditures as do expenditures for building housing or processing facilities. The Department of Revenue has extremely limited data from which to determine the nature of the capital expenditure increases. Given the age of North Slope facilities and infrastructure, it is quite possible that much of the capital investment in currently producing properties such as Prudhoe Bay is to extend the life of the facilities or infrastructure. Production on the North Slope continues to decrease, with a 7% decline rate between FY 2009 and FY 2010. The end result is that capital expenditures per barrel of oil produced are rising, while operating expenditures per barrel have leveled off and even decreased somewhat, as shown in Chart 4 below.[3]

[3] The slight decline in capital expenditures per barrel between FY 2007 and FY 2008 can be explained by the fact that FY 2007 included 14 months of expenditures, due to the effective date of the tax change of April 1, 2006.

One trend that has been observed in annual capital expenditures figures is that the proportion of capital spending in units under development has been increasing relative to the total capital expenditures spent on the North Slope. Chart 5 below shows expenditures by currently producing units and units under development over the past three fiscal years.

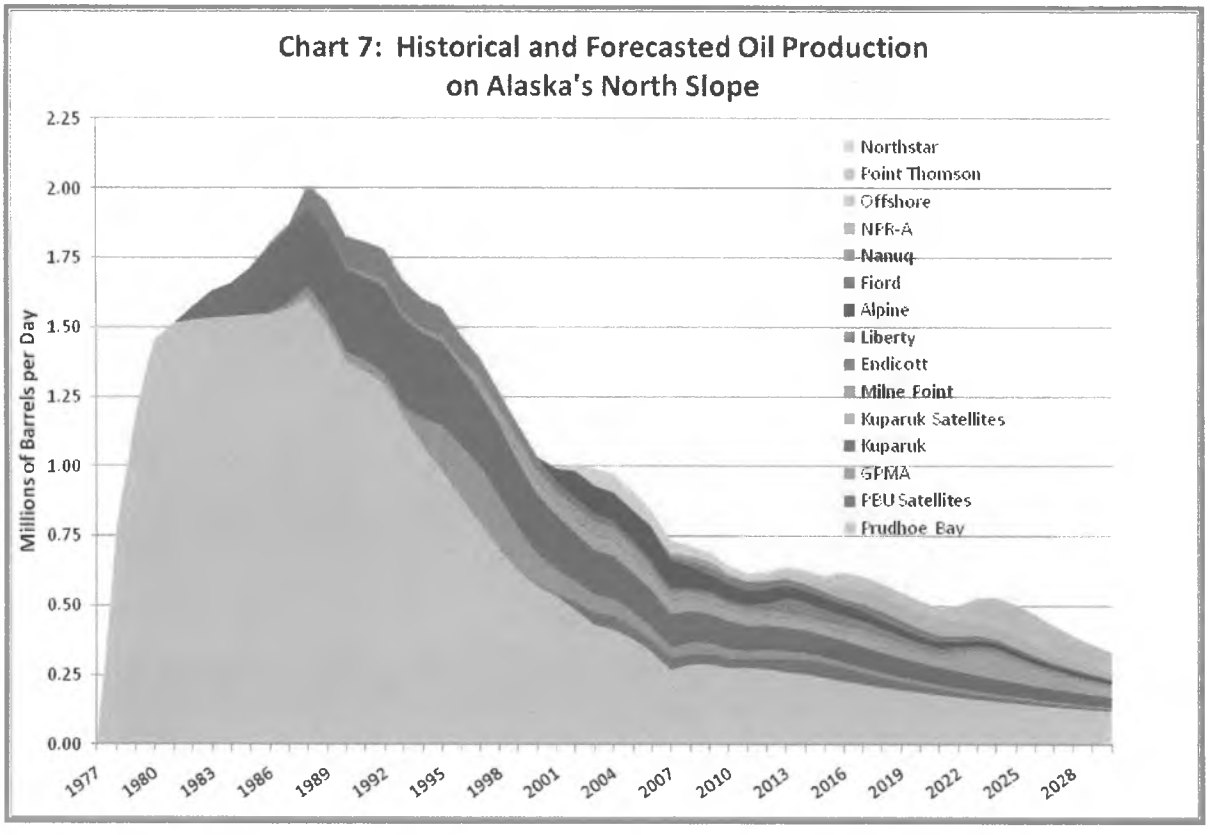


Capital expenditures also earn credits under the new production tax system. The credit system for capital expenditures on the North Slope does not distinguish between types of capital expenditures in existing units. The legislature in 2010 expanded the credit program in Cook Inlet to include an additional 20% credit (total of 40% credit) for lease expenditures related to wellwork. A credit increase of this nature may also prove beneficial to incentivize capital expenditures on drilling and increased wellwork on the North Slope.

Impact on Exploration, Development and Production

As discussed in the previous section, the net profits tax system includes credits for capital expenditures, without distinction as to the nature of the expenditure. The tax system also includes credits for exploration expenditures through its exploration incentive credit (EIC) at AS 43.55.025. This credit was implemented in 2003 and was expanded with the ACES tax changes. If a project meets certain exploration criteria, it may be eligible for 40% credit under the EIC program.

The department began receiving applications under the EIC program in 2004, and the number of applications and amount of qualifying expenditures has generally increased each year peaking in the winter of 2008/2009[4]. The number of applications for EIC credit decreased significantly in 2010, reflecting a decrease in activity for the winter of 2009/2010. Chart 6 shows the number of applications and the expenditures that qualify under the EIC program from 2004 through 2010.

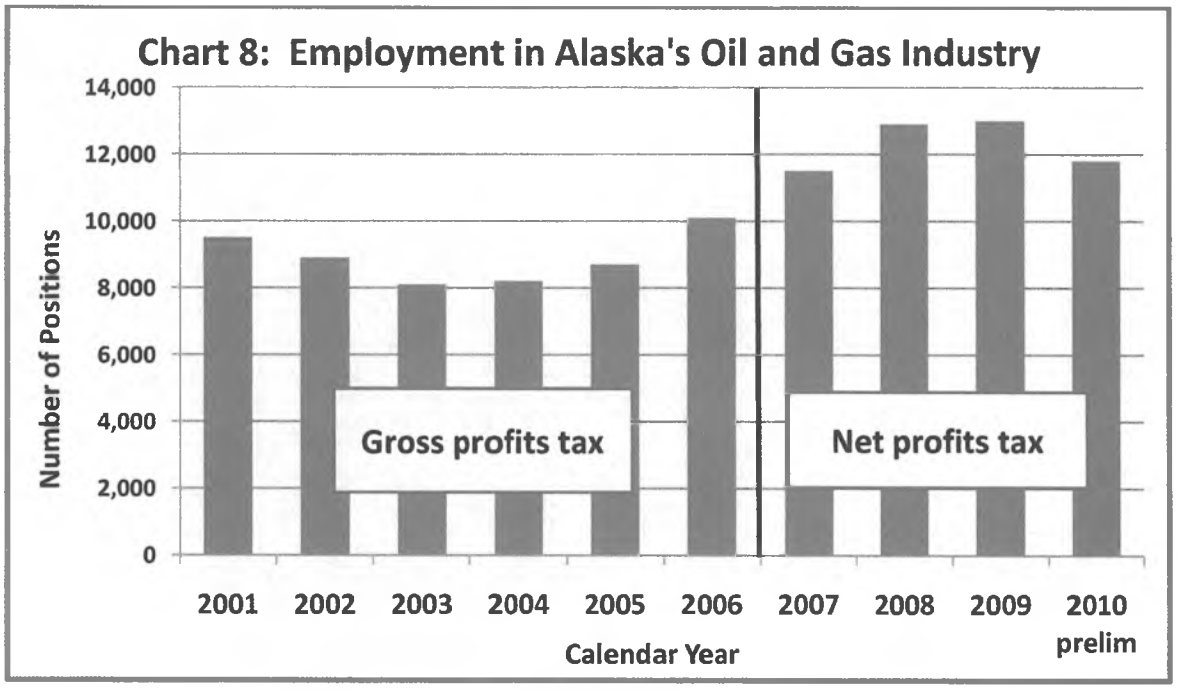


It is much more difficult to measure a tax system's impact on oil development and production from existing fields. The department's production forecasters twice annually create production profiles from limited information about an area's geology, drilling results, and other information exchanged in confidential discussions with operators. The compilation of production profiles for each North Slope field is a challenging task, employing the use of an engineering consultant, generally accepted engineering principles, and special software. The results of this compilation are subject to further revision as projects face delays that are typical in the petroleum industry such as reservoir challenges, permitting difficulties or lack of project funding.

New commercial developments on the North Slope include the Oooguruk Unit, which began production in 2009, and the Nikaitchuq Unit, which is expected to begin production in 2011. The Point Thomson Unit is also under development, expected to

[4] The sharp decrease in 2007 may be due to the tax change to the PPT, which at the time provided credit equal to the lower credit rate of the EIC program, without the reporting requirements.

begin production in 2015. Despite the addition of these developments, North Slope production continues to decline. From FY 2009 to FY 2010, oil production declined 7%; another 4% decline is projected between FY 2010 and FY 2011. Chart 7 below shows historical and projected oil production from the North Slope.

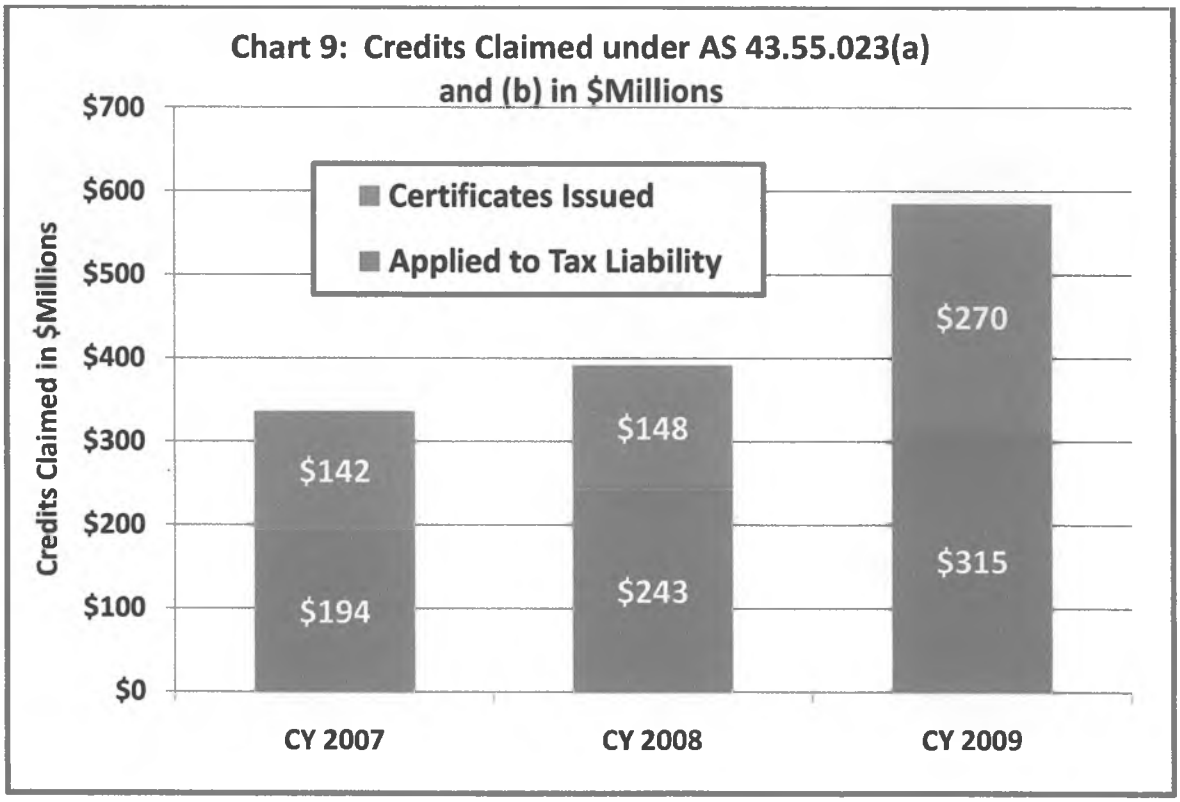


Industry Employment and New Entrants

Employment in the oil and gas sector is another important measure of the health of the oil and gas industry in Alaska. Although oil and gas employment is not the largest category in the state, it is among the most sought-after employment, due to high wages. The Alaska Department of Labor and Workforce Development (DOLWD) reports that in 2009, the average earnings for a person employed in the oil and gas extraction industry was close to $14,000 per month. These earnings are more than 3 times higher than the average earnings for all industries and government in the state of about $4,000 per month.

The department also reports number of employees by industry. Oil industry employment in the state includes jobs with duties that would fall into one of three categories: (1) oil and gas extraction; (2) drilling oil and gas wells; and (3) support activities for oil and gas operations. Officials at DOLWD acknowledge that the definition

is fairly narrow, leaving out important oil-related employment, such as jobs at Alyeska Pipeline Service Company and at refineries in the state. Employment in the oil and gas industry has increased in the years since PPT was implemented, although the department projects a slight decrease in 2010. These data are shown in Chart 8 below.



The state has seen new entrants into the Alaska oil and gas industry since the implementation of a net profits production tax. At the most recent lease sale held in October of 2010, a company new to Alaska successfully bid on over 100 tracts of oil and gas property. The steadily increasing number of production tax returns filed annually also indicates companies' new or renewed interest in Alaska's oil and gas opportunities. In 2006, the first year that filings were made under a net profits tax, there were 19 companies filing annual returns. In 2007, the number of companies filing production tax returns totaled 26, and in 2008, 36 companies filed annual production tax returns. The filing for 2009 increased only slightly from 2008, with 39 companies filing returns.

Use and Expansion of Tax Credits

Tax credits have played and continue to play an important role in the net profits production tax system. There are currently five credit programs specific to the oil and gas production tax, and each of the programs have had substantial interest, and in most cases, use from taxpayers. Alaska's tax credit programs are intended to steer spending to certain in-state activities.

The most widely used credits under the production tax system are the qualified capital expenditure credits at AS 43.55.023(a). Tax credits under this program may be applied to production tax to reduce a taxpayer's tax liability. If an oil and gas company has no tax liability, the credit may be carried forward, transferred to another company, or sold to the state. AS 43.55.023(b), credits for carried-forward net operating losses, are also widely used and may also be carried forward, transferred to another company, or sold to the state. Combined, these credits made up over 80% of the credits issued by the DOR Tax Division over the past three years.

Chart 9 below shows the total number of tax credits claimed under AS 43.55.023(a) and (b), categorized by the number of tax credits applied against a tax liability and the number of credits that were issued credit certificates for future use. We note that credits increased in each of the three years shown. The forecast for increased capital expenditures will translate to more credits applied against tax liabilities as well as more credits certificated.

Other credits include Small Producer/New Area Development credits (AS 43.55.024(a) and (c)) and Alternative Credit for Exploration (AS 43.55.025). These credits have seen less use than the credits under .023.

Credits have been expanded – both in credit rate and number of credits available – over the past year. The credit rate under the Qualified Capital Expenditure credit (AS 43.55.023) was increased for well lease expenditures relative to projects in Cook Inlet from 20% to 40%. Credit under the corporate income tax was also increased and extended (AS 43.20.043) for exploration and development of natural gas in Cook Inlet. The credit rate increased from 10% of qualified capital expenditures and qualified services to 25% of these costs and the credit program was extended from 2013 to 2016. For a complete listing of tax credits available against the production tax and other taxes, see the Fall 2010 *Revenue Sources Book*, at:
http://www.tax.alaska.gov/programs/documentviewer/viewer.aspx?2126f

Tax Administration and Compliance

The numerous changes associated with the shift from a tax on gross value to a tax on profits have been a challenge for the Department of Revenue in a few specific areas. The first order of business under a tax system with a new, different way of calculating the tax is to define the inputs. This has taken place over the past several years in the process of creating, vetting, and implementing regulations. The regulations writing process for the production tax change has been extraordinarily interactive with the taxpayers, incorporating their input in all phases of development. Although this process may have slowed the pace of development, it resulted in more clarity in a complex set of regulations. The regulations writing process continues to date.

The change to a production tax on net profits also posed challenges for the audit staff in the areas of hiring qualified auditors and training auditors for the new demands of the position. The department has had difficulties attracting qualified auditors under the state pay schedule. New and expanded credit programs have also added to their workload. Despite these challenges, the audit staff has completed most of the audits under the PPT system.

The greatest difficulties faced by the department since the implementation of a net profits production tax system are the collection, use, and storage of the huge amounts of data received monthly and annually. As an example, the department receives monthly information from each active oil and gas company regarding the amount of oil and gas produced, the amount spent in operating and capital expenditures, the amount of credits earned and used, and the payment submitted. The department also receives documents pertaining to petroleum sales and netback calculations, most of which are submitted in Adobe Acrobat pdf format, which is not a suitable format for data storage or use. Assembling this data in a useable format is time-intensive and subject to error, as the data are cut and pasted into spreadsheets manually. Further compilations and changes subject the data to additional error and distortion.

The department's access to and use of this important data would be substantially improved if the information were housed in a central database, with access provided to all users of the data. The department believes securing a database will assist in operating more efficiently and effectively as an interface with both taxpayers and the public.

Conclusions and Recommendations

A government's fiscal regime is just one element for oil and gas companies to consider when weighing options for where to invest. Many other elements, such as resource risk, political risk, environmental factors, and availability of labor and equipment, also play a part in companies' decisions about where to invest. It is very difficult to separate these factors in order to determine the extent to which a government's fiscal system influences investment choices.

While it is untenable to blame a tax system for the lack of industry investment, it is equally untenable to claim that the tax system is the reason increased activity or investment occurs. The past three years have seen dramatic swings in oil prices from a high of $134 per barrel to a low of $38 per barrel just 6 months later. An economic recession stifled investment and business activity in the United States and much of the developed world for over a year. The economic activity of the past three years may not have been the best benchmark by which to judge the impact of a tax system.

Nevertheless, it is prudent for state officials to monitor praise for and criticisms of its fiscal systems from both industry and the general population that they serve. High oil prices of recent years have swelled state bank accounts and some have suggested that the state is in the best financial position since statehood. Business periodicals and industry journals report that state is benefitting at the expense of a single industry – petroleum – and that the tax rate under ACES is too high and "takes away the upside" for the oil and gas producers. Criticism is often centered around the marginal tax rate under ACES, under which the government share of each additional dollar of profit may be as high as 93%.

State officials also make efforts to stay informed on the global oil and gas markets and opportunities in other jurisdictions, including how Alaska ranks competitively against them. Among the recent events in government taxation was the royalty modification undertaken by the Canadian province of Alberta. Studies conducted for the Alberta government showed that the royalty changes made in 2007, combined with the recession, the changes in natural gas markets, and other jurisdictions' efforts to attract investment, were making Alberta less competitive for limited petroleum investment

capital. The government responded to this information by changing its royalty structure in a way that the government's share of oil and gas profits would be lower.

The State of Alaska depends heavily on the oil industry, with more than 80% of its unrestricted revenue coming from oil taxes and royalties. State officials should continue to monitor the state's competitiveness in oil and gas opportunities, and be prepared to modify it as the need arises.

FY2012 SUPPLEMENTAL REQUESTS

Scope Change: Anchorage Armory Roof Replacement and G-Wing Preparation | **FY2012 Request:** $0 | **Reference No:** 45205

AP/AL: Appropriation
Project Type: Deferred Maintenance
Category: Public Protection
Location: Joint Base Elmendorf - Richardson
House District: Military (HD 18)
Impact House District: Anchorage Areawide (HD 17-32)
Contact: McHugh Pierre
Estimated Project Dates: 04/15/2012 - 06/30/2013
Contact Phone: (907)428-6003

Brief Summary and Statement of Need:
A scope change is requested on an existing $4 million appropriation titled "Anchorage Armory Roof Replacement" to expand the language to allow the Department of Military and Veterans Affairs to provide needed site preparation for the G-Wing at the same facility.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
G/F Match	$-380,500						$-380,500
Gen Fund	$380,500						$380,500
Total:	$0	$0	$0	$0	$0	$0	$0

☐ State Match Required ☑ One-Time Project ☐ Phased - new ☐ Phased - underway ☐ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
Original appropriation: SLA 2008 Chapter 29 (SB221), Section 13, Page 151, Line 27.

Project Description/Justification:
The original appropriation provided funding for a life cycle replacement of the Anchorage Armory roof. $4,000,000 was appropriated for the project and included a 50% general fund match (GFM) requirement. The project was completed in FY2011 under budget. There is remaining authorization of $380,500 in general fund match.

The requested language change expands the title from "Anchorage Armory Roof Replacement" to "Anchorage Armory Roof Replacement and G-Wing Preparation". This project will provide for site preparation work associated with Anchorage Armory expansion at Camp Denali. Site prep work may include but is not limited to land clearing, construction access road development, sidewalk and asphalt demolition, communications tower and utility relocation. The department wishes to amend the funding source from general fund match to general fund.

Federal Energy Projects | **FY2012 Request:** $0 | **Reference No:** 50957

AP/AL: Appropriation with Allocations | **Project Type:** Energy
Category: Public Protection
Location: Statewide | **House District:** Statewide (HD 1-40)
Impact House District: Statewide (HD 1-40) | **Contact:** McHugh Pierre
Estimated Project Dates: 04/15/2012 - 06/30/2016 | **Contact Phone:** (907)428-6003

Brief Summary and Statement of Need:
This request will provide additional matching funding for federal energy projects at Kenai, Ketchikan, and Kodiak. The federal funding ratio has changed due to federal regulations regarding funding and armory use. The total request for the federal energy projects remains $490,000. The funding split is amended to from $10,000 general funds and $480,000 federal funds to $17,500 general funds and $472,500 federal funds.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
Fed Rcpts	$-7,500						$-7,500
G/F Match	$7,500						$7,500
Total:	$0	$0	$0	$0	$0	$0	$0

☐ State Match Required ☐ One-Time Project ☐ Phased - new ☐ Phased - underway ☑ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
Original appropriation and allocations: Chapter 5, Section 1, FSSLA 2011 (SB46), page 88, line 21 - page 89, line 4

Project Description/Justification:
The federal funding ratio for armory maintenance and renovation has changed due to federal regulations regarding funding and armory use. Three projects appropriated in Chapter 5 FSSLA 2011 now require additional state match.

The project scope and total project costs remain the same.

Allocations Affected	General Fund Match	Federal Funds
Kenai Replace Exterior Lights with LEDs	2.5	(2.5)
Ketchikan Replace Exterior Lights with LEDs	2.5	(2.5)
Kodiak Replace Exterior Lights with LEDs	2.5	(2.5)

Deferred Maintenance Projects **FY2012 Request:** **$0**

Estimated Project Dates: 04/15/2012 - 06/30/2014
Contact Phone: (907)428-6003

Brief Summary and Statement of Need:
Funding is requested to provide the required match for the Kodiak, Ketchikan, and Kenai projects from the FY2010 Deferred Maintenance Supplemental Request. The project description/justification of the individual allocations within this appropriation request for Deferred Maintenance Projects is amended. These projects repair state facilities to improve the life of state assets.
This total request remains $10,300,000. The funding split is amended to $4,712,500 General Funds and $5,587,500 Federal Funds.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total

Change Record Detail with Description

Department of Natural Resources

Scenario: FY2012 Supplemental (9721)
Component: Gas Pipeline Project Office (2947)
RDU: Administration and Support (600)
Title: Extend Lapse Date for Gas Pipeline Permitting Ch. 1 FSSLA2011

Trans Type	Totals	Personal Services	Travel	Services	Commodities	Capital Outlay	Grants, Benefits	Miscellaneous	Positions PFT	PPT	NP
Suppl	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0

The Department of Natural Resources (DNR) requests approval to extend the lapse date to June 30,2013 for the remaining general funds balance (estimated to be $1,177.3) for Gas Pipeline Permit (AR 37998).

Appropriation History:
Original appropriation: SLA2004 ch.159 Sec 24 page 82 line 6 Lapse: June 30, 2009
Reappropriated for the same purpose:SLA2009 ch. 14 Sec 12 page 18 lines 6-12
Lapse date: SLA2009 ch. 14 Sec 22 page 30 line 10 Lapse: June 20, 2011
Lapse extensions:
FSSLA2010 ch. 1 Sec11 page 36 line 2 Lapse: June 30, 2012

The intent of the appropriation is to fund the permitting and application processes related to gasline right-of-way work needed to bring North Slope natural gas to market. Industry will pay for much of the permitting and application processing. However, there is demand for work which will not be reimbursed by private industry.

Costs which are not covered through reimbursement by non-state agencies include:
- Legal counsel on a variety of items such as contaminated sites, authorities and responsibilities, opinions on actions taken by the state and general analysis of federal law as it relates to the DNR leasing process.
- Analysis of material site demands for infrastructure development at all stages of construction.
- Identification of infrastructure sites for construction and operations.
- Training staff on issues relating to project adjudication which include, but are not limited to engineering, environmental issues, and construction and operation of a pipeline.
- Contracting of independent engineering services to advise DNR to protect state interests.
- Field studies which expand the scope of work on an existing study and serve to maximize the benefit for the participating agency.
- General administrative costs.
- In-state and out-of-state travel to gather information relating to pipeline construction.
- Technical analysis of specific engineering issues in the early project stages.

This work will require the use of the remaining balance of the appropriation. It is expected that these funds will be expended or obligated by June 30, 2013. To date, $2,005.8 has been encumbered to support the continuing light detection and range data collection project along potential gas pipeline right of ways. This data will serve multiple purposes, but are primarily being collected to (1) evaluate active faulting, slope instability, thaw settlement, erosion, and other engineering constraints along the proposed pipeline routes and (2) provide a base layer for the state-federal GIS database that will be used to evaluate permit applications and-construction plans.

Change Record Detail with Description

Debt Service

Scenario: FY2012 Supplemental (9721)
Component: International Airport Revenue Bonds (2284)
RDU: Debt Service (251)
Title: Fund Source Changes for FY2012 Alaska International Airport System Debt Service Payments

	Trans Type	Totals	Personal Services	Travel	Services	Commodities	Capital Outlay	Grants, Benefits	Miscellaneous	Positions PFT	PPT	NP
	Suppl	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0	0	0
1027 Int Airprt	-13,500.0											
1112 IntAptCons	10,000.0											
1179 PFC	3,500.0											

The Alaska International Airport System (AIAS) requests fund source changes relating to FY2012 International Airport debt service in order to increase the amount of Passenger Facility Charges (PFC) currently approved, and to use a portion of existing AIAS Construction Funds for FY2012 debt service payments. As with previous supplemental requests in years' past, this request utilizes amounts deemed by AIAS as surplus and available in order to help minimize the amount of revenue needed to be collected from airport customers while meeting debt service coverage ratios required under the bond resolution rate covenant.

The AIAS proposes increasing the use of PFC previously collected under the provisions of an Federal Aviation Administration PFC application for the payment of FY2012 annual debt service in the amount of an additional $3.5 million and Construction Funds in the amount of $10.0 million in order to help ensure FY2012 debt service covenants are met without raising rates and fees to AIAS customers in excess of the increased landing fee revision implemented November 1, 2011.

The use of these particular funds in lieu of the International Airports Revenue Fund also allows the AIAS to provide debt service payments from funds on hand, net of the additional 25% debt service coverage which would otherwise be required to be collected through current fiscal year operating revenue rate and fee increases to AIAS customers.

These appropriation changes will allow AIAS to meet the technical requirements of their bond resolution rate covenant while also minimizing the need for rate and fee changes to customers. Both are required to meet fiscal obligations and maintain fiscal integrity.

Change Record Detail with Description

Fund Capitalization

Scenario: FY2012 Supplemental (9721)
Component: Disaster Relief Fund (2497)
RDU: Fund Capitalization (OpSys) (608)
Title: Supplemental Disaster Funding

	Trans Type	Totals	Personal Services	Travel	Services	Commodities	Capital Outlay	Grants, Benefits	Miscellaneous	Positions PFT	PPT	NP
	Suppl	3,000.0	0.0	0.0	0.0	0.0	0.0	3,000.0	0.0	0	0	0
1004 Gen Fund	3,000.0											

Current disasters are expected to exhaust the available general funds in the Disaster Relief Fund. In addition to fall and winter storms, traditionally there are springs floods that have been eligible for expenditures from the Disaster Relief Fund.

The impact of this supplemental request is being considered for a FY2013 budget amendment.

Roads to Resources
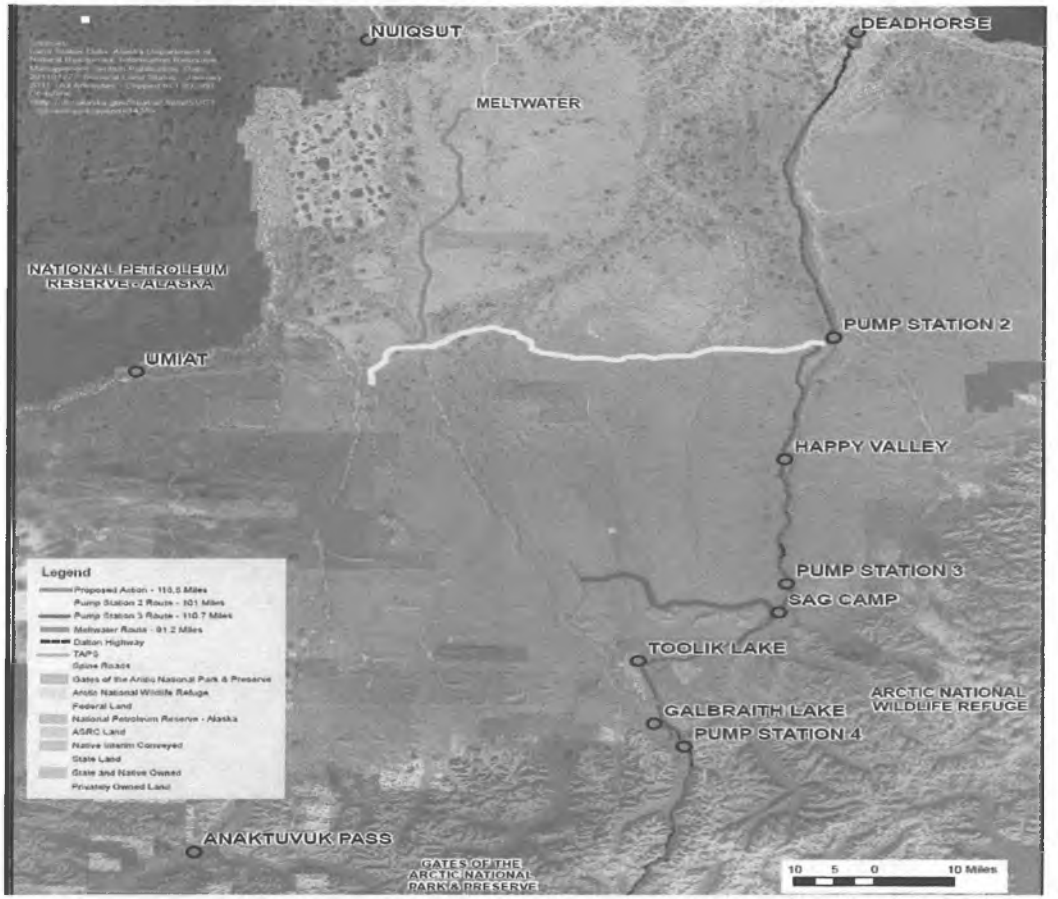
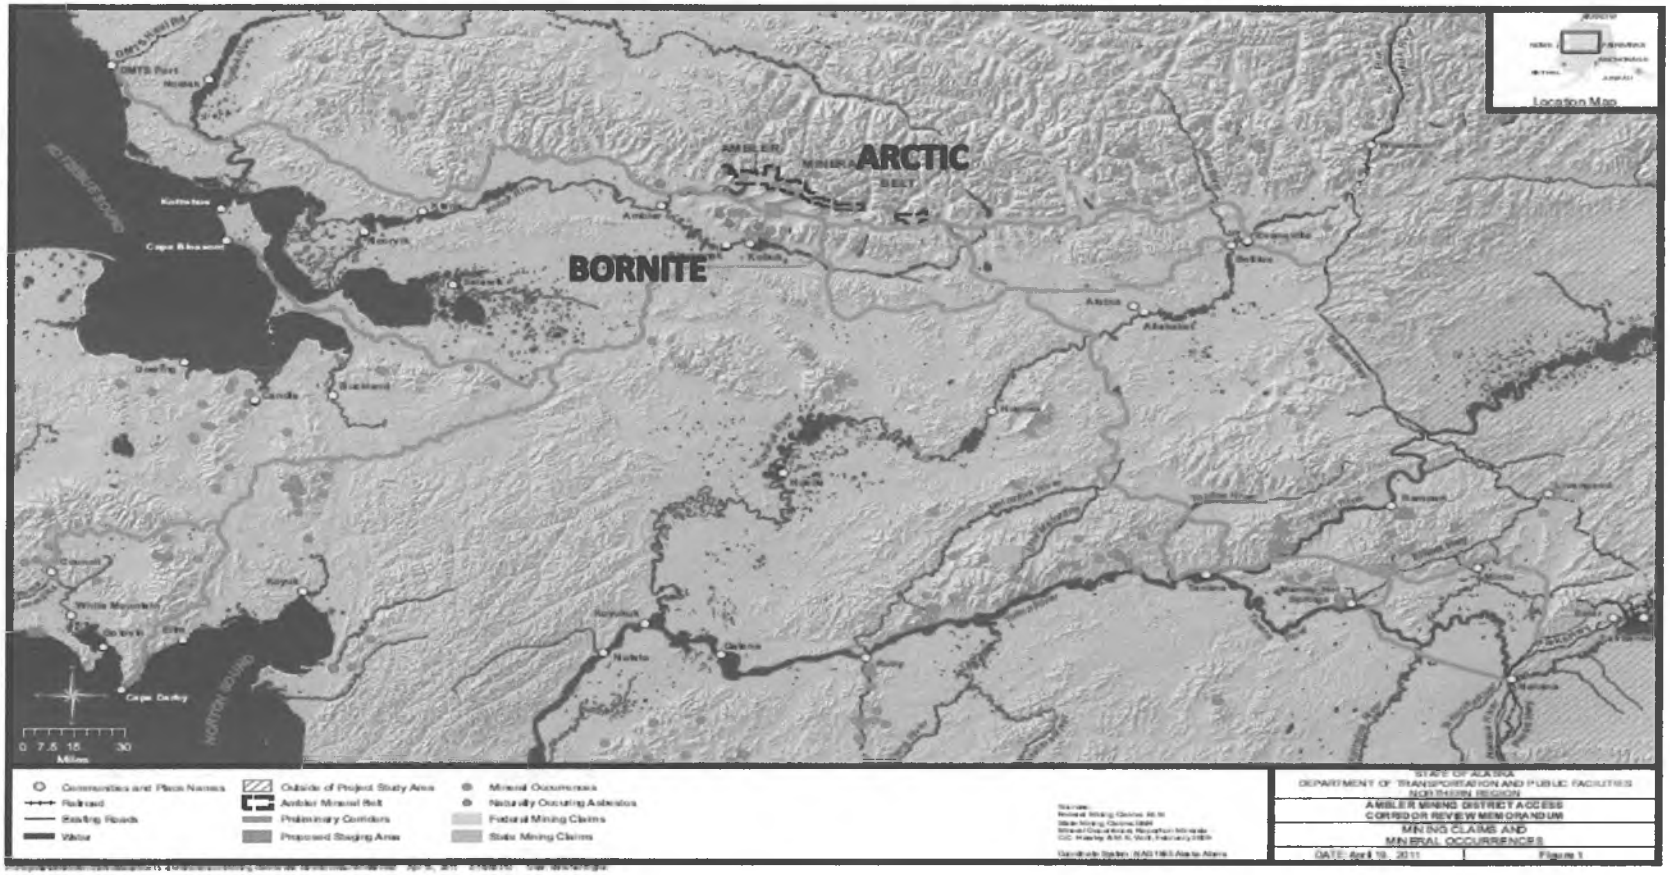
2013 Capital Budget Request



★ **Statewide Roads to Resource Program Development and Small Projects Evaluation $2,000**

(numbers in thousands)

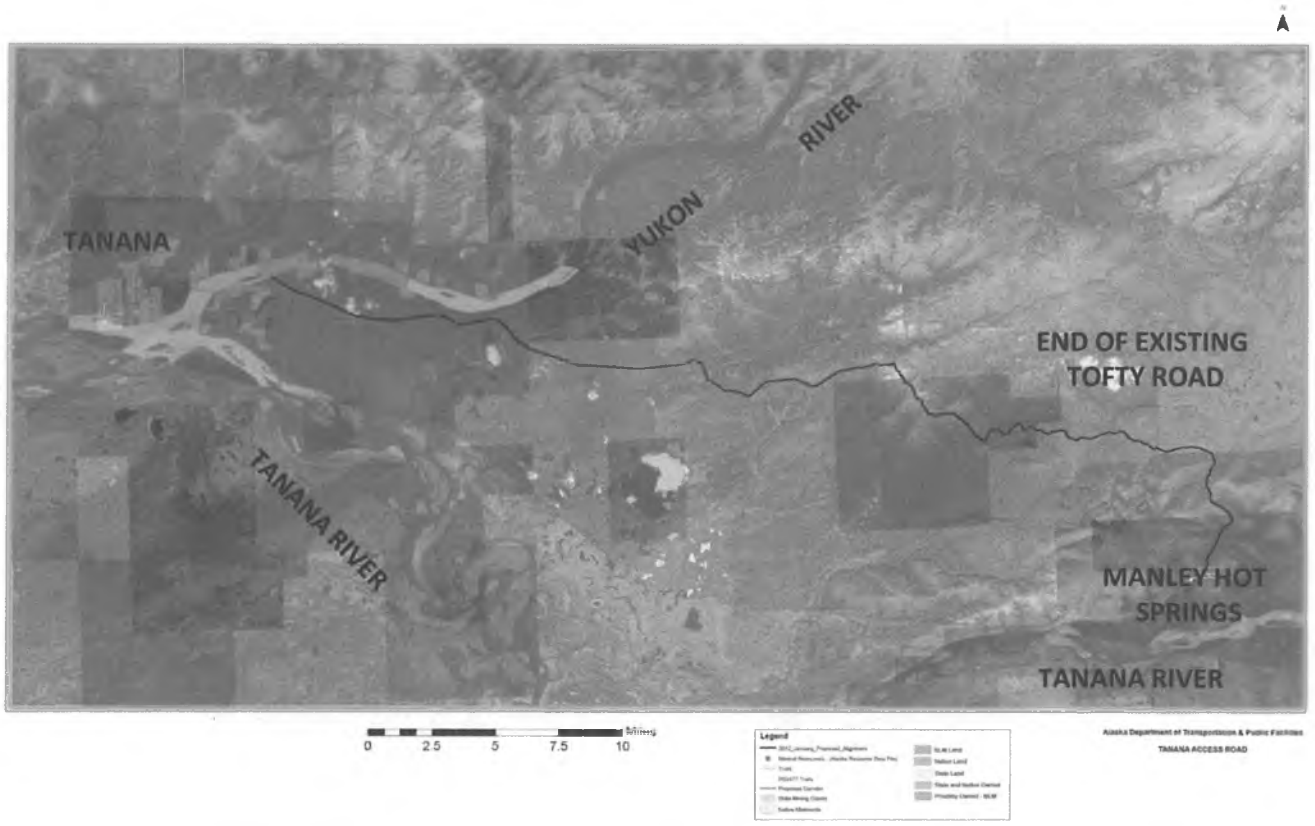
Road to Umiat - Foothills West



Road to Umiat – Foothills West

- Umiat is a petroleum rich area, 200 to 300 million barrels of oil, and over 31 trillion cubic feet of gas
- 18’ wide road with inner-visible turnouts
- $200 million to $300 million construction estimate for road and bridges
- Draft EIS scheduled for December 2012, with R.O.D. in mid-2013

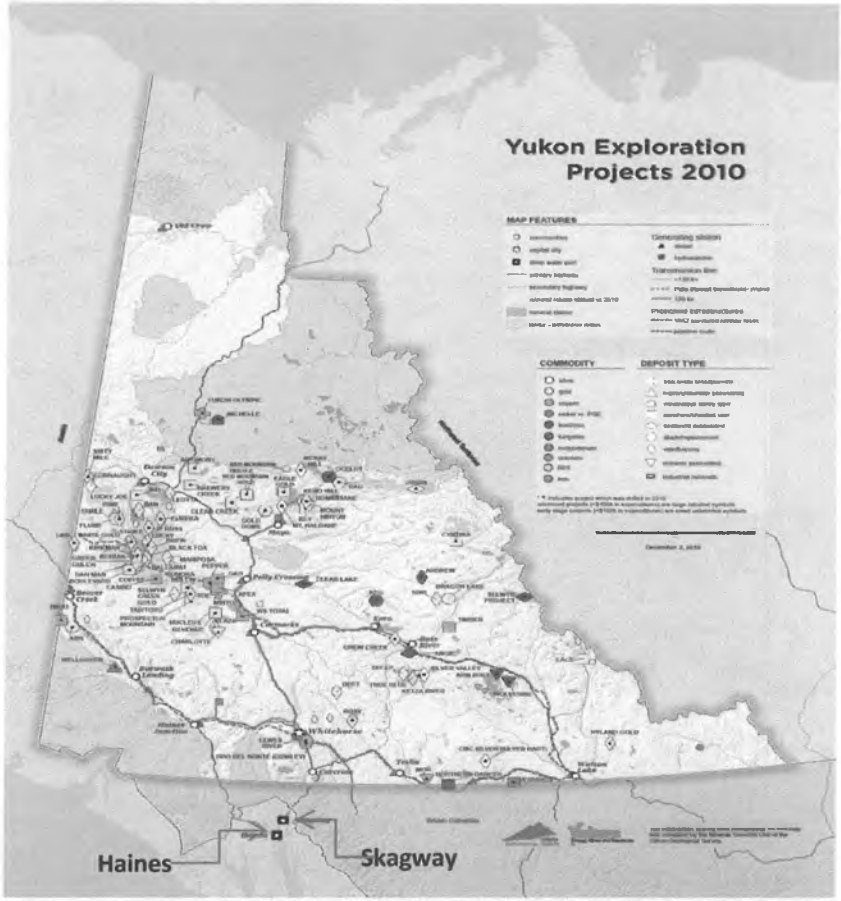
Ambler Mining District Access



Roads to Resources
Ambler Mining District Access

- Ambler Mining District is a mineral rich area (Cu, Zn, Pb, Ag, and Au)
- 300 direct jobs for development of NovaCopper's Arctic deposit
- NovaCopper and NANA Corp. have entered into a partnership to develop mineral resources
- Road and rail alternatives being considered

Tanana Access Road Map



Road to Tanana

- Mineral rich area with mines in production
- Added benefit of providing road access to the community of Tanana
- 18’ wide road with inner-visible turnouts
- Begin construction in 2013

Klondike Industrial Use Highway (IUH)

Klondike Industrial Use Highway (IUH)

- Yukon ore haul volumes to Skagway are projected to significantly increase due to Canadian mine industry growth
- The Klondike IUH is the only Industrial Use Highway in Alaska
- Tolls collected since 1985
- Replace bridge and strengthen pavement to support heavy haul ore trucks

Other Potential Projects

- Road to Beluga (gas and coal)
- Niblack Mine Access- Prince of Wales (Au, Ag, Cu, Zn, Pb)
- Bokan Mtn. Mine Access- Prince of Wales (REE)
- Totchaket Road- Nenana (agriculture/ timber/ potential gas & minerals)
- Granduc Mine- Hyder Salmon Road (Cu)
- Katlian Quarry – Baranof Island
- Marshall Quarry – Yukon River

Title: Road to Umiat – Foothills West Access

Location: The Foothills West Access study area ranges from a northern limit at Franklin Bluffs along the Dalton Highway at Milepost 376, south to Galbraith Lake near Dalton Highway Milepost 278, and from those points west to converge on the state owned airport at Umiat. Umiat is located approximately 90 miles west of the Dalton Highway and TAPS Pump Station 2. The access study area is approximately 3,940 square miles. See attached Resource Areas map – Foothills West Transportation Access EIS, June 2011.

Purpose: The State of Alaska proposes to improve access to known Gubik gas and Umiat oil accumulations, and optimize exploration and development of hydrocarbon resources, within the Foothills Areawide Lease Sale area. To facilitate this proposal, the State of Alaska, through the DOT&PF, proposes to construct an all-season gravel road from the Dalton Highway to Umiat, Alaska. Road access would optimize and expand oil and gas exploration and development of known hydrocarbon resources in the Foothills Areawide Lease Sale area, as well as facilitate a more economically feasible development of the NPR-A. The Foothills West Transportation Project is considered an important investment by the State of Alaska to further oil and gas resource development opportunities to benefit Alaska's economy.

Project Description: The proposed road would be designed to safely accommodate industrial traffic in arctic conditions. Construction components of the road corridor would include an all-season gravel road, associated bridges, pull-outs, maintenance facilities, temporary construction camps, and material sites.

The road will be initially constructed to Industrial Access Road standards as defined by AASHTO classification, "Special Resource Recover Roads", to include:

- Single lane industrial access road
- 18' wide roadway with 2'shoulders to accommodate thermal degradation
- Gravel embankment: minimum 6' depth at centerline
- 9" crushed rock surfacing with palliatives for dust control
- 200' long x 25' wide inter-visible vehicle turnouts

Estimated Cost of Construction = $200 to $400 million for road and bridges, depending on selected alternative.

Schedule Status: EIS schedule from ACOE project webpage (2/15/12)

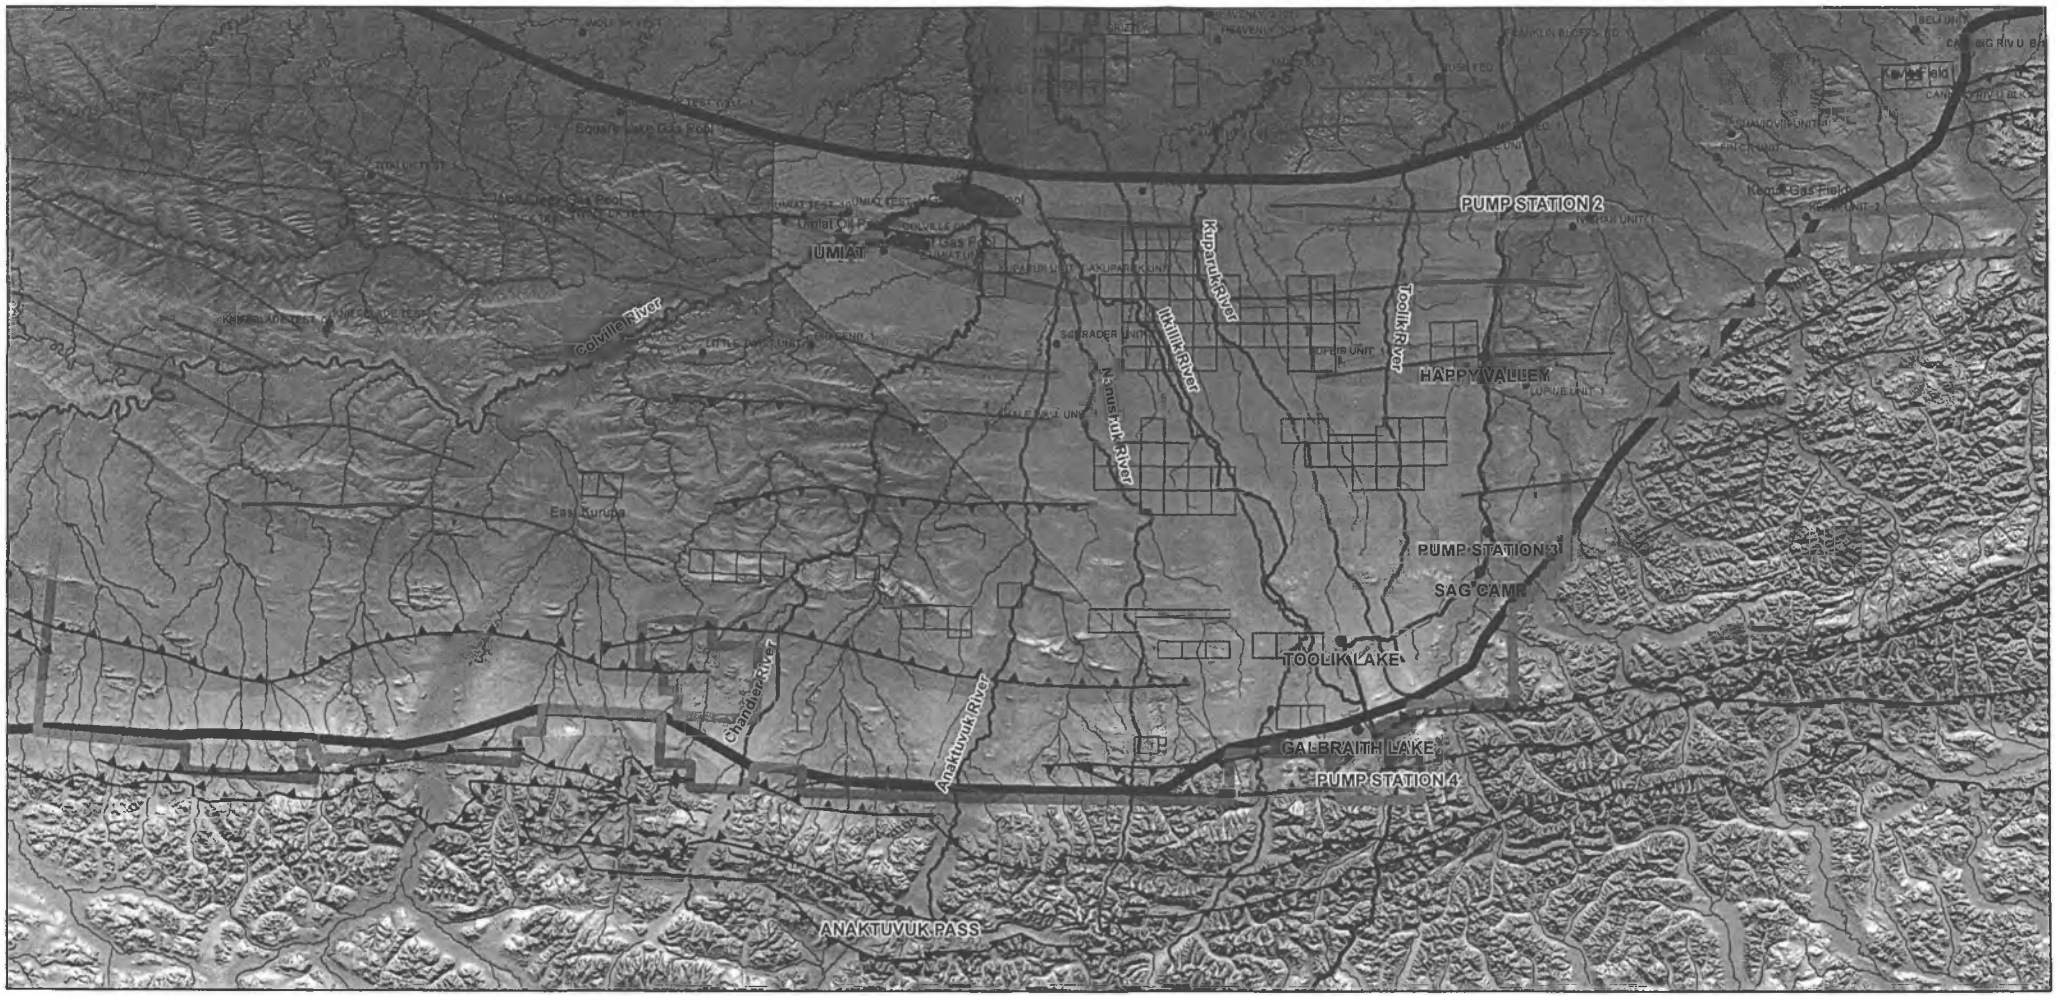
Notice of intent Published:	May 20, 2011
Public Scoping Period:	May 20 – July 26, 2011
Public Scoping Meetings:	June 8 – 16, 2011
Scoping Report published:	Winter 2012 (February)
Draft EIS published:	Fall 2013
Public Comment on Draft EIS & ANILCA §810 Hearings:	Fall 2013
Final EIS published:	Fall 2014
Record of Decision:	Winter 2014

Funding Sources: FY2013 Governor's Budget Proposal = $10 million

Issues:

- The project is currently in the NEPA phase with the Army Corp of Engineers as the lead federal agency. The ACOE has hired AECOM as their EIS consultant. The Alaska Department of Natural Resources and the Bureau of Land Management are cooperating agencies in the NEPA process. ADOT&PF is the permit applicant for the State of Alaska.

- Human Impact Assessment (HIA) work currently underway is coordinated through ADNR-OPMP, is being managed by the ADH&SS HIA group, and has contracted with the consultant NewFields of Denver CO. The work is to be completed by summer 2012 for inclusion with the Preliminary Draft EIS as an appendix.



- Caribou Survey Studies and a Subsistence Impact Assessment are being conducted by the Alaska Department of Fish & Game. This work is to be completed by summer 2012 for inclusion in the Preliminary Draft EIs as an appendix.

- The Umiat and Foothills Areawide Lease Sales area is a petroleum rich region with an estimated 200 to 300 million barrels of oil, and over 31 trillion cubic feet of gas.

Resource Areas

Title: Ambler Mining District Access

Location: The project study area extends from the Ambler mineral belt south to Nenana and from the Dalton Highway to the west coast of Alaska. Eight potential corridors were initially identified within the project study area.

Purpose: Provide all-season transportation access to promote exploration, development, and production of known mineral resources in the Ambler mineral belt. The project will assess, identify, permit, design, and develop a transportation corridor from the Ambler mineral belt to either a port location on the west coast of Alaska or the surface transportation system in Alaska's Interior. Both road and rail options are being evaluated. The selected corridor is intended to provide surface transportation access to state, private, and native corporate lands to facilitate exploration and development of mineral resources in the region.

Project Description: Conduct a transportation corridor feasibility and preliminary engineering assessment to determine an optimal transportation mode and corridor, proceed with permitting and environmental documentation, and establish a right-of-way. Thereafter, some form of public-private partnership (3P) would be structured to proceed with private financing, final design, construction, operations and maintenance; relying on user commitments to repay capital investments.

Eight transportation corridors have been evaluated and the Brooks East Corridor option refined for further evaluation due to ranking scores. The corridor matrix criteria were evaluated and scored based on 1) corridor length, 2) Federal Conservation System Unit impact, 3) wild & scenic river impact, 4) salmon/shee fish river impact, 5) caribou habitat impact, 6) threatened & endangered species/critical habitat area impact, 7) availability of material sites, 8) large bridges requirements, 9) construction costs, 10) maintenance costs, and 11) special considerations.

The Brooks East Corridor is the shortest option, measuring 220 miles from the Ambler mineral belt to the Dalton Highway. The corridor leaves the Ambler mineral belt and travels east to the Dalton Highway, staying primarily in the foothills of the Brooks Range and crossing the lower portion of the Gates of the Arctic National Park and Preserve and the Kobuk Wild & Scenic River. The corridor connects to the Dalton Highway at Prospect Creek.

Corridor Length =	220 miles
Material site availability =	100% of length
Total bridges =	13 totaling 5000 lf
Estimated construction cost =	$430 million

The roadway construction costs assume construction of a narrow industrial access road with clearing, embankment, gravel surfacing, and inner-visible turnouts.

Schedule Status:

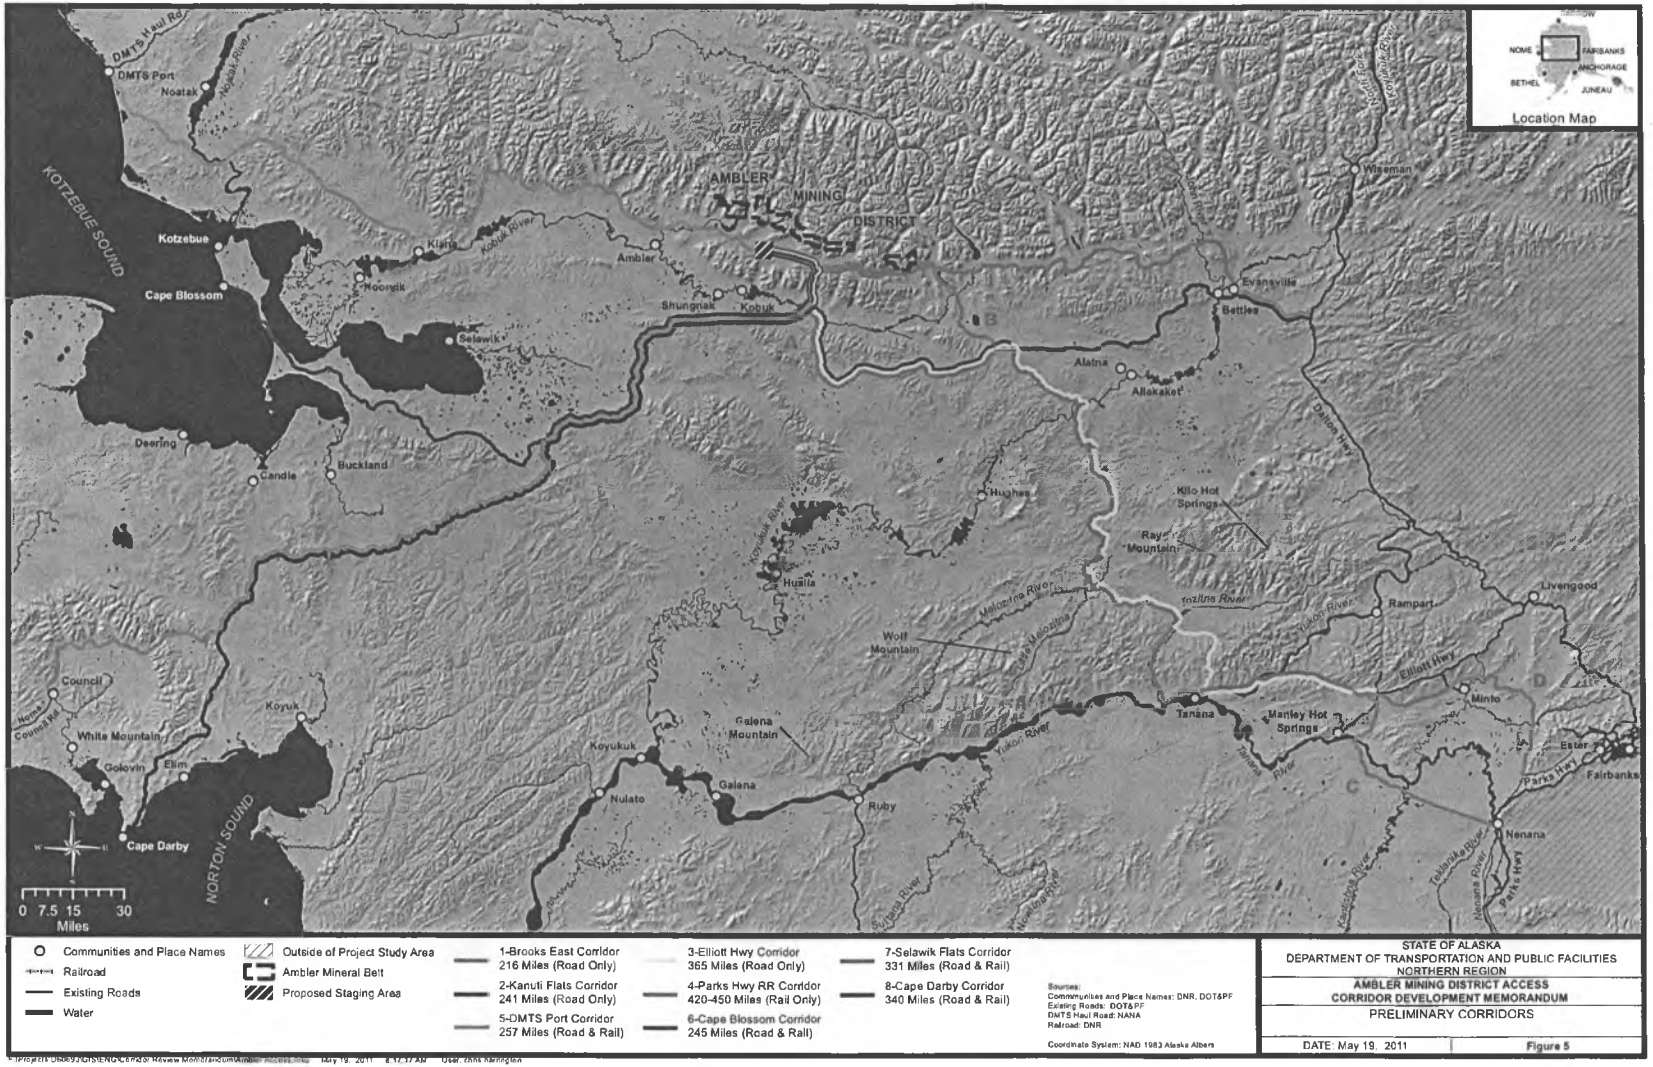
Public outreach w/ 9 communities:	December 2011 to January 2012
Develop Proposed Action:	January 2012 to December 2012
EIS Initiation:	February 2013
Engineering Baseline Studies:	March 2012 to November 2012

Environmental Baseline Studies:	February 2012 to December 2013
EIS	April 2013 to August 2016
ROD	December 2016

Funding Sources: FY2013 Governor's Budget Proposal = $4 million

Issues:

- Meetings with the Upper Kobuk Valley communities were held in January, April, May, December 2011, and January, February 2012 to provide information on this study, and to gather information and feedback from the communities on potential access to the Ambler mineral belt. Information from these meetings was incorporated into the evaluations and will inform the engineering and environmental processes as the project moves forward. Meetings were also held with the National Park Service to discuss considerations related to corridors that cross through the Gates of the Arctic National Park and Preserve.



- Comprehensive subsistence mapping by contractor is scheduled to begin in spring of 2012 for the Upper Kobuk region. This work may be extended to Lower Kobuk depending on initial findings.

- Hydrological studies are being planned for selected rivers for spring 2012.

- Continuing overall engineering and environmental evaluations related to developing a proposed action.

Title: Road to Tanana

Location: Extension of Tofty Road, between Manley Hot Springs and Tanana.

Purpose: Provide improved road access to known mineral developments in the Serpentine Ridge/Rough Top Mountain mineral belt to support mining opportunity expansion and resource exploration. The road will improve access between remote communities and connect to existing Elliot Highway near Fairbanks. The project would support regional and community sustainability by reducing the cost of living and providing greater opportunities for employment and commerce.

Project Description: The proposed road would be 54 miles in length, including the existing 15 miles of Tofty Road. The road will take advantage of existing pioneer roads alignments to minimize additional impacts to the environment. The road would be designed to safely accommodate public, commercial and industrial traffic.

The road will be constructed to Industrial Access Road Standards as defined by AASHTO classification, "Special Resource Recovery Roads", to include:

- Single lane industrial access road
- 18' wide roadway with 2' shoulders
- Gravel embankment – 6' min. depth at centerline
- 9" crushed rock surfacing with palliatives for dust control
- 200' x 25' inter-visible vehicle pullouts

The FY2013 project funding will be used for environmental permitting, design, and construction of a pioneer road to the east bank of the Yukon River

Schedule Status:

Preliminary Engineering & Field Work:	March 2012 to November 2012
Environmental Documentation & Permitting:	June 2012 to March 2013
R/W Acquisitions and Clearing Plans:	November 2012 to March 2013
Design & Pioneer Road Construction:	April 2013 to January 2015

Funding Sources: FY2013 Governor's Budget Proposal = $10 million

Issues:

- Mineral data is well documented – numerous mining claims along route (Au, Ag, base metals Cu, Pb, Zn, REE, U, Th).
- Road would lower costs for mineral exploration, development and production.
- Anticipate potential to enhance intermodal transportation system (Yukon River barges basing operations out of Tanana).
- Project will greatly reduce the cost of getting goods into Tanana
- Improved access to public services (education, health care, emergency and safety services)

Title: Klondike - Industrial Highway Ore Haul Refurbishment

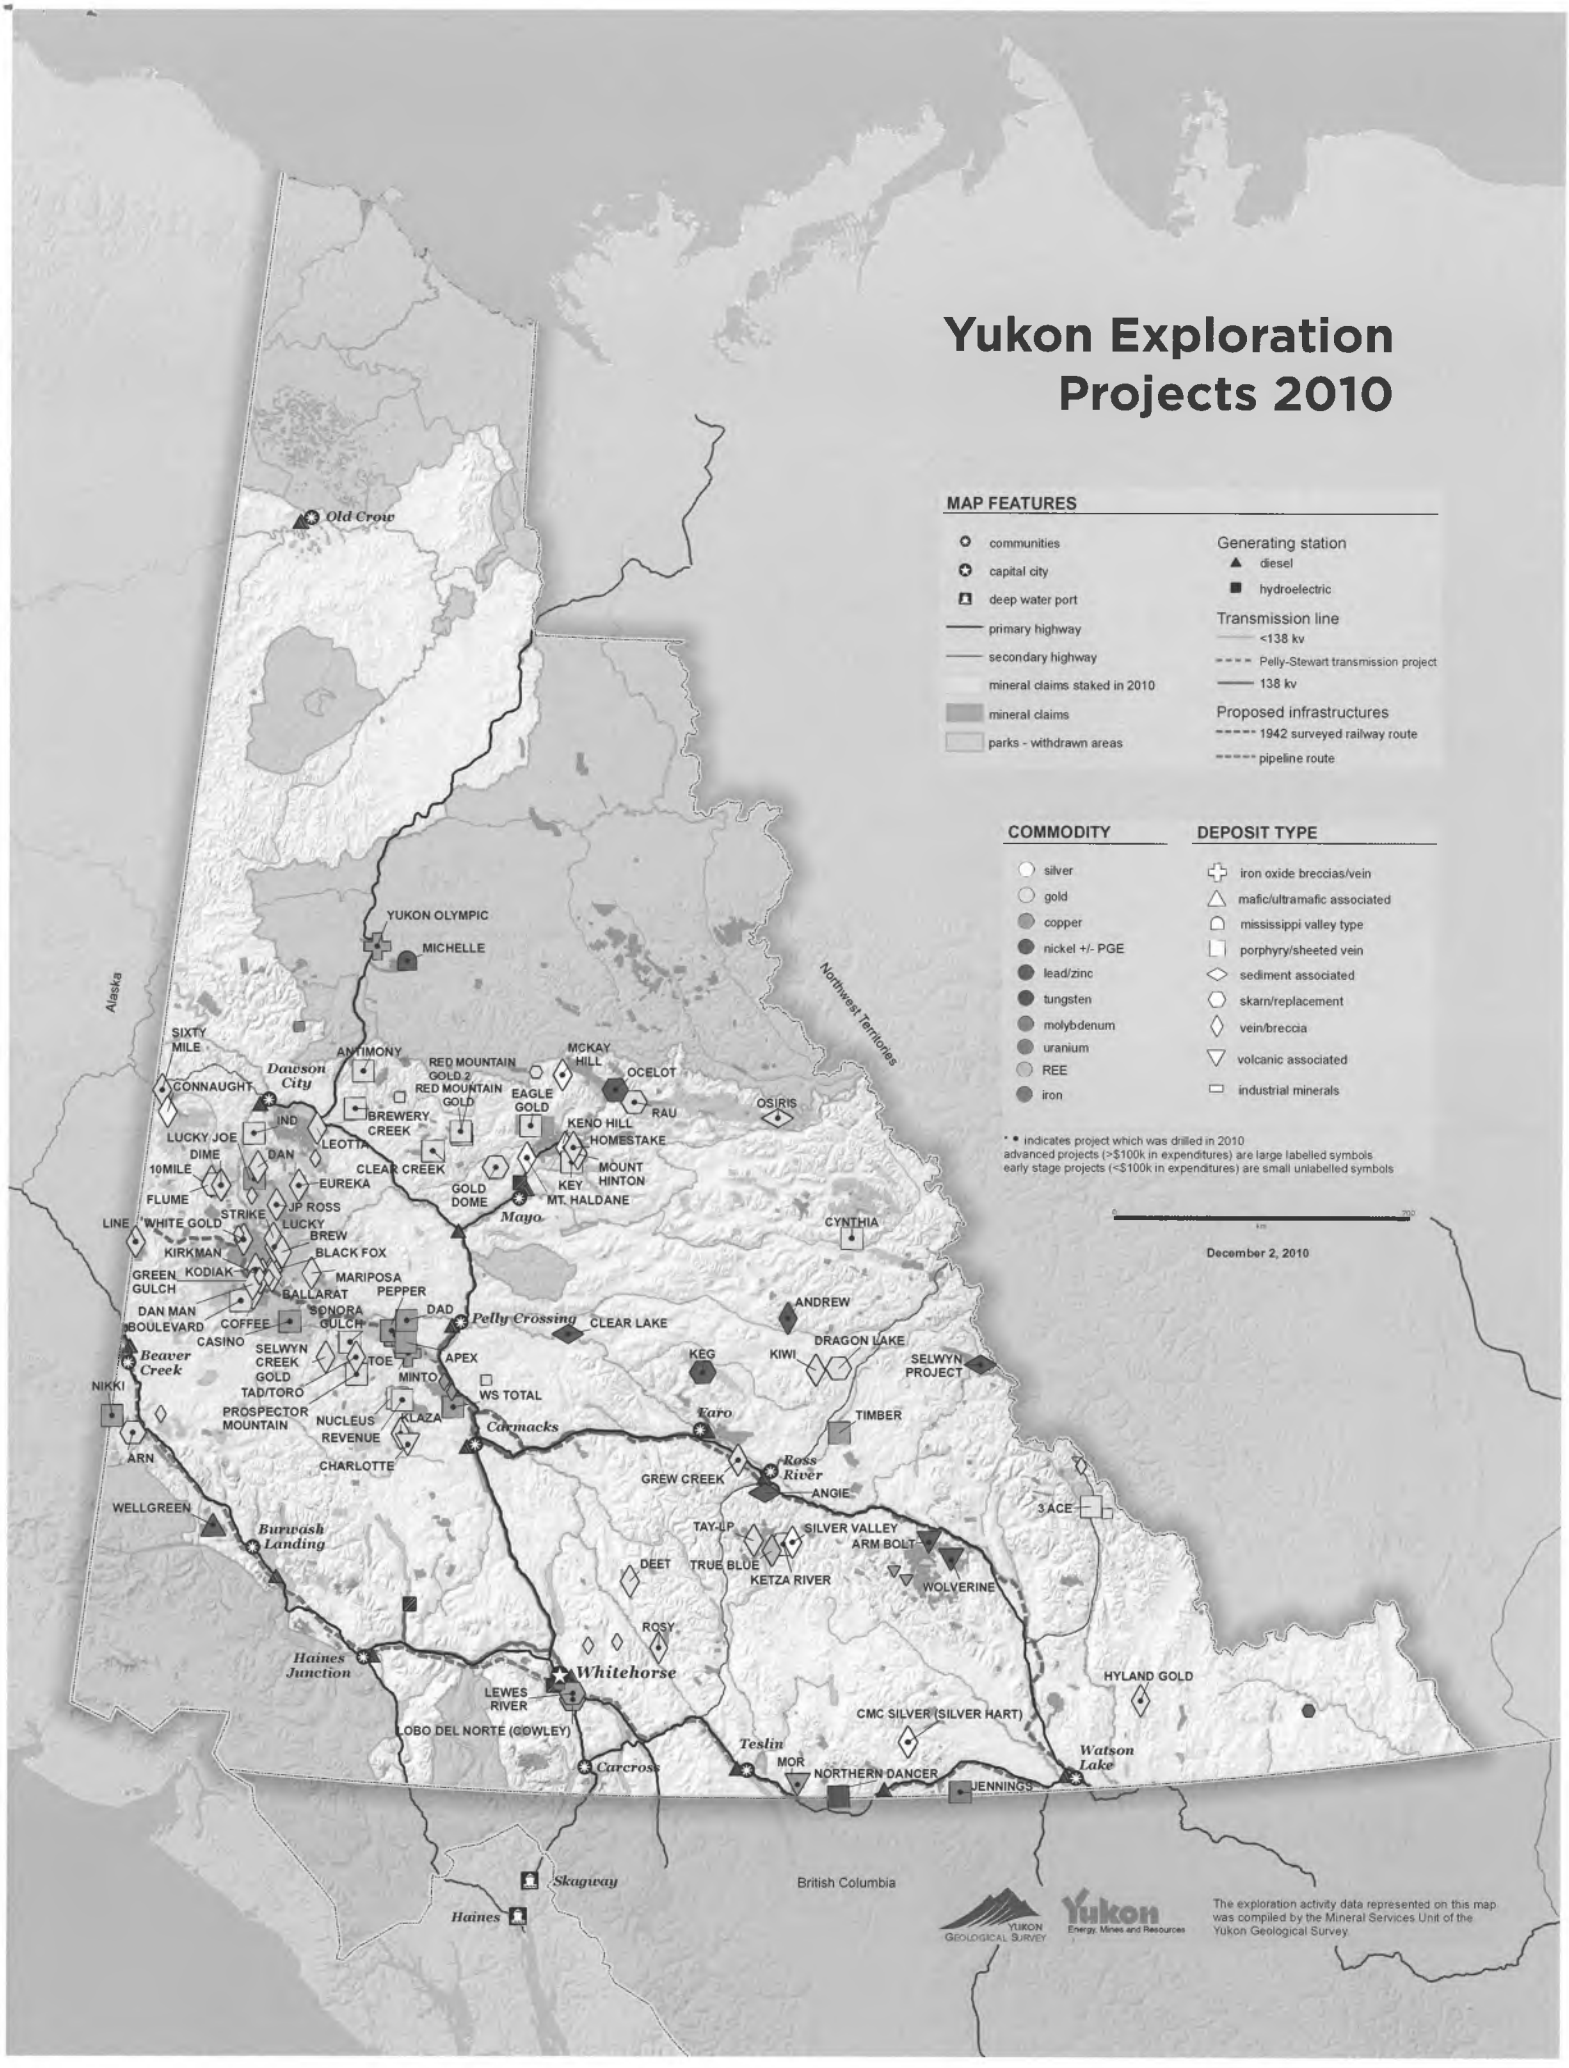
Location: South Klondike Highway from Skagway to Alaska-Canada border.

Purpose: Refurbish and strengthen the Klondike Highway pavement to accommodate increased ore and freight demands from Yukon mining industry. Replace the Capt. William Moore Bridge with a structure capable of supporting 80 to 100 ton heavy haul truck loads.

Project Description: The South Klondike Highway is 98 miles from Skagway to Alaska Highway MP874.4 outside Whitehorse YT. The portion within Alaska is approximately 14 miles in length from Skagway to the Alaska-Canada border at White Pass.

Estimated construction cost for road and bridge improvements are $39 million.

The FY2013 project funding will be used for design, environmental permitting, and a portion of the construction cost.



Schedule Status:

Design & Permitting: July 2012 to December 2013

Funding Sources: FY2013 Governor's Budget Proposal = $2.5 million

Issues:

- Adjust toll fee for industrial haul truck to recoup capital investments.
- Assess border crossing and weigh station infrastructure and develop improvement plan to accommodate increased industrial truck traffic on Klondike IUH.
- Canadian mines haul ore to the Port of Skagway for shipment to ore smelters around the world. AIDEA is in the process of replacing their ship loader and expand their ore storage facility at the Port of Skagway to accommodate increasing ore shipping demands - including ore shipments from the Selwyn Mine (Pb/Zn).
- The Klondike IUH currently levies fees on industrial truck loads in excess of legal highway loads. Existing haul fees are set to recover the cost of capital investment and road maintenance for ore haul over the service life of the improvement.

2/21/12 OVERVIEW: CAPITAL MARKETS OUTLOOK AND PERMANENT FUND PERFORMANCE REVIEW

<TARGET><BILL></BILL><SUBJECT>2-21-12 OVERVIEW CAPITAL MARKETS OUTLOOK AND PERMANENT FUND PERFORMANCE REVIEW</SUBJECT><COMM>SFIN27</COMM></TARGET>

2012 Economic Environment and Capital Markets Review Senate Finance Committee

Callan Associates Inc.
Michael J. O'Leary CFA
Executive Vice President
February 21,2012

Callan's Capital Market Projection Process

Economic outlook drives our projections.

- **Evaluate the current environment and economic outlook for the U.S. and other major industrial countries:**
  - Business cycles, relative growth, inflation.
- **Examine the relationships between the economy and asset class performance patterns.**
- **Examine recent and long-run trends in asset class performance.**
- **Apply market insight:**
  - Consultant experience - Plan Sponsor, Manager Search, Specialty
  - Industry consensus
  - Client Policy Review Committee
- **Test the projections for reasonable results.**

Themes Explored in Setting the 2012 Expectations

- **What the heck happened in 2011? Are we back on track? What are the prospects for growth in the short term?**
- **Did inflation disappear as a risk?**
- **Bond market surprised yet again in 2011, with rates going down rather than up. Did anyone call the 2011 fixed income market? Is THIS finally the end of the road for bonds? Do rising rates doom the return expectations for fixed income?**
- **Has the long term trend for GDP growth changed?**
- **Sharp contrast between a long term, strategic vision for an investor (10+ years), the short term (1-3 years) reality, and the path from the current conditions to the long term expectations.**
- **Scenarios beyond the expected case:**
  - Threat of double dip.
  - Stagnation and deflation.
  - The recovery reignites and inflation takes hold.

The Capital Markets in 2011

Fixed Income Surprises, Equity Markets Suffer Loss of Confidence

							Average Annual Return

* CPI-U data are measured as year-over-year change through 12/31/11.

- Results for 2011 showed a sharp slump in all equity segments. Domestic equity returns were down almost 10% through September 2011; a strong fourth quarter brought returns back above zero. International markets were not so fortunate.
- Five-year equity returns through 2011 are essentially zero. Ten-year returns are weak as the tech bubble has rolled out of the calculations, and include two downturns. Fifteen-year returns are still below long-run averages, and are back below those of fixed income.

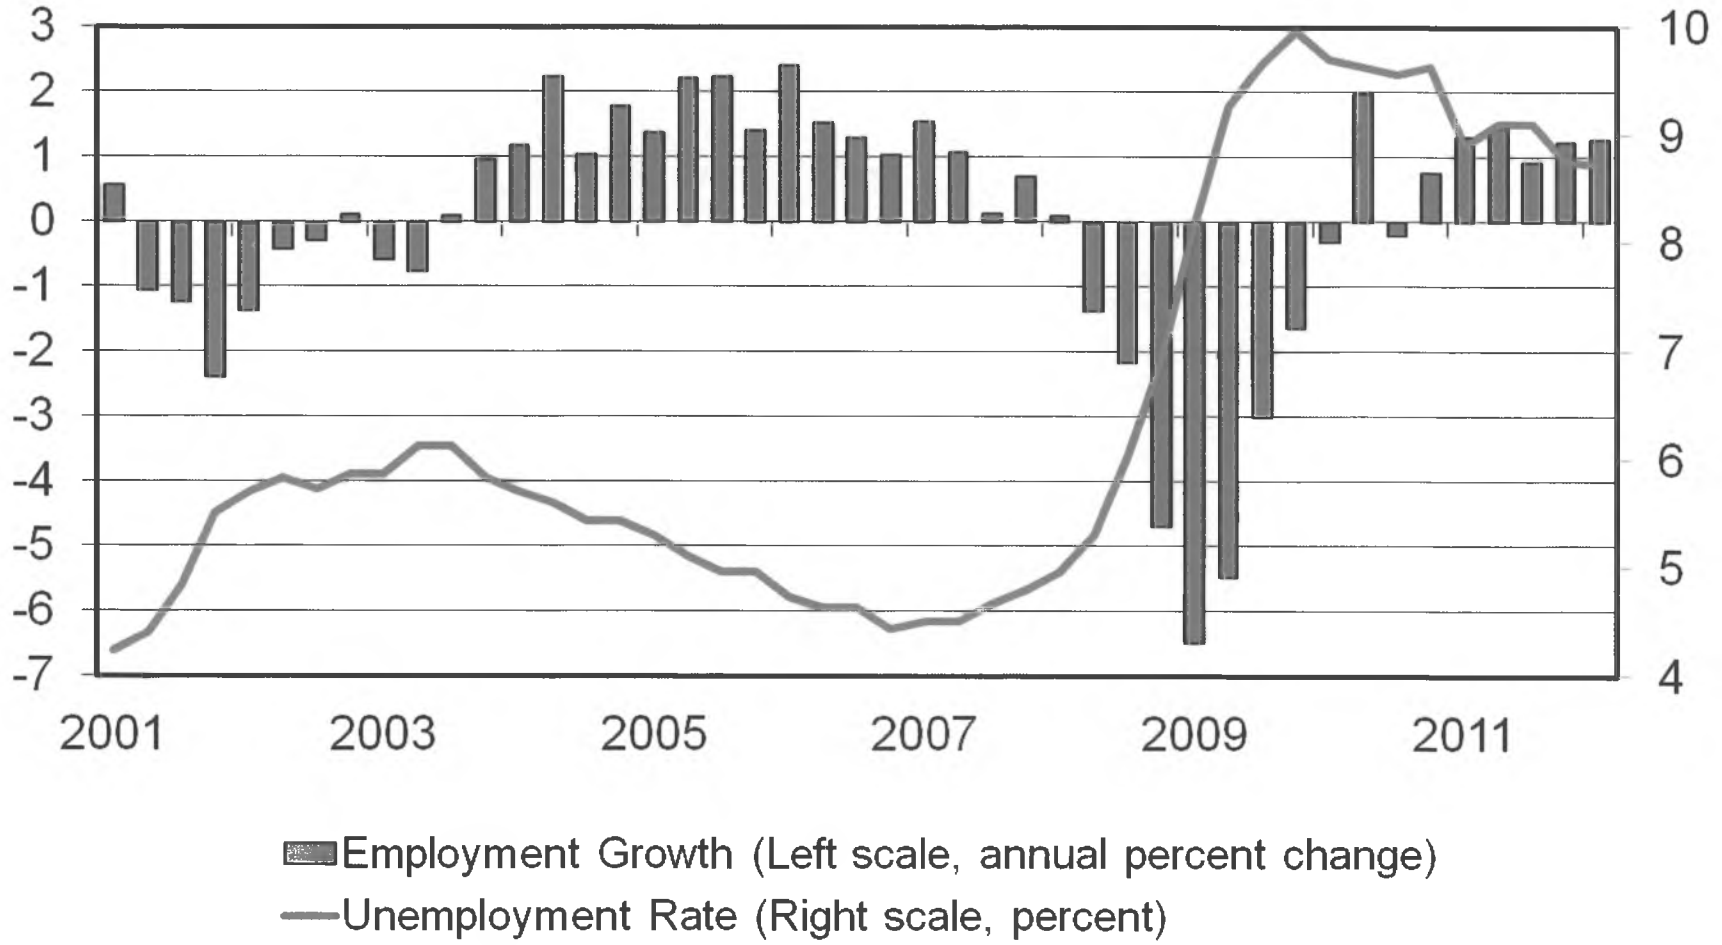
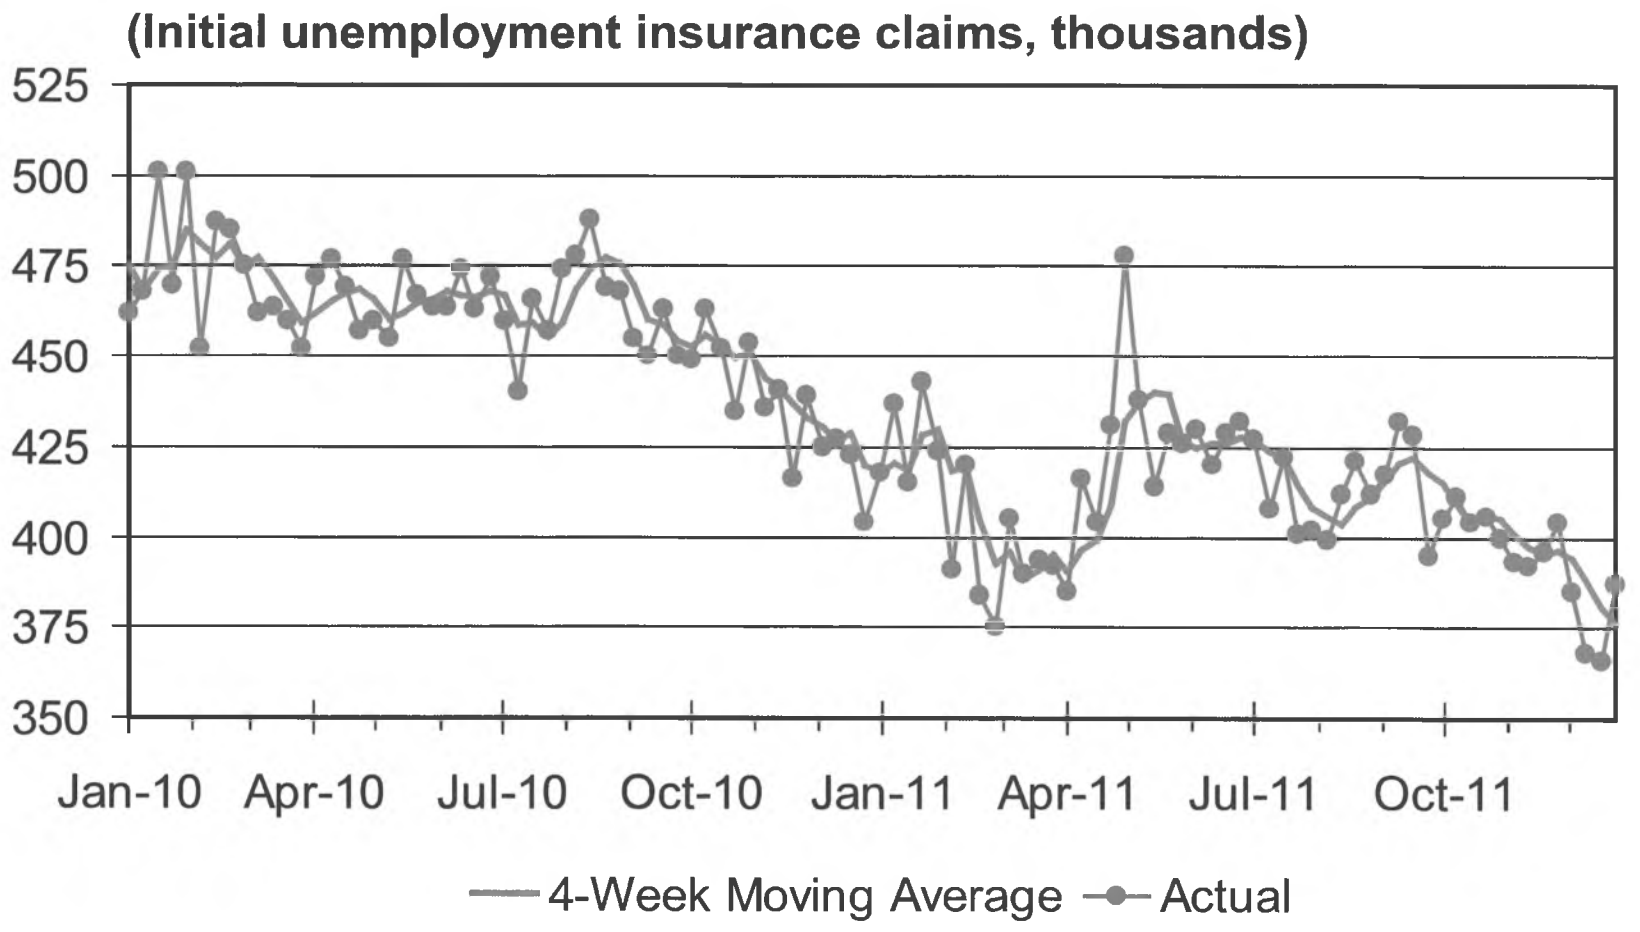
Will We Fall Back Into Recession?



Why?

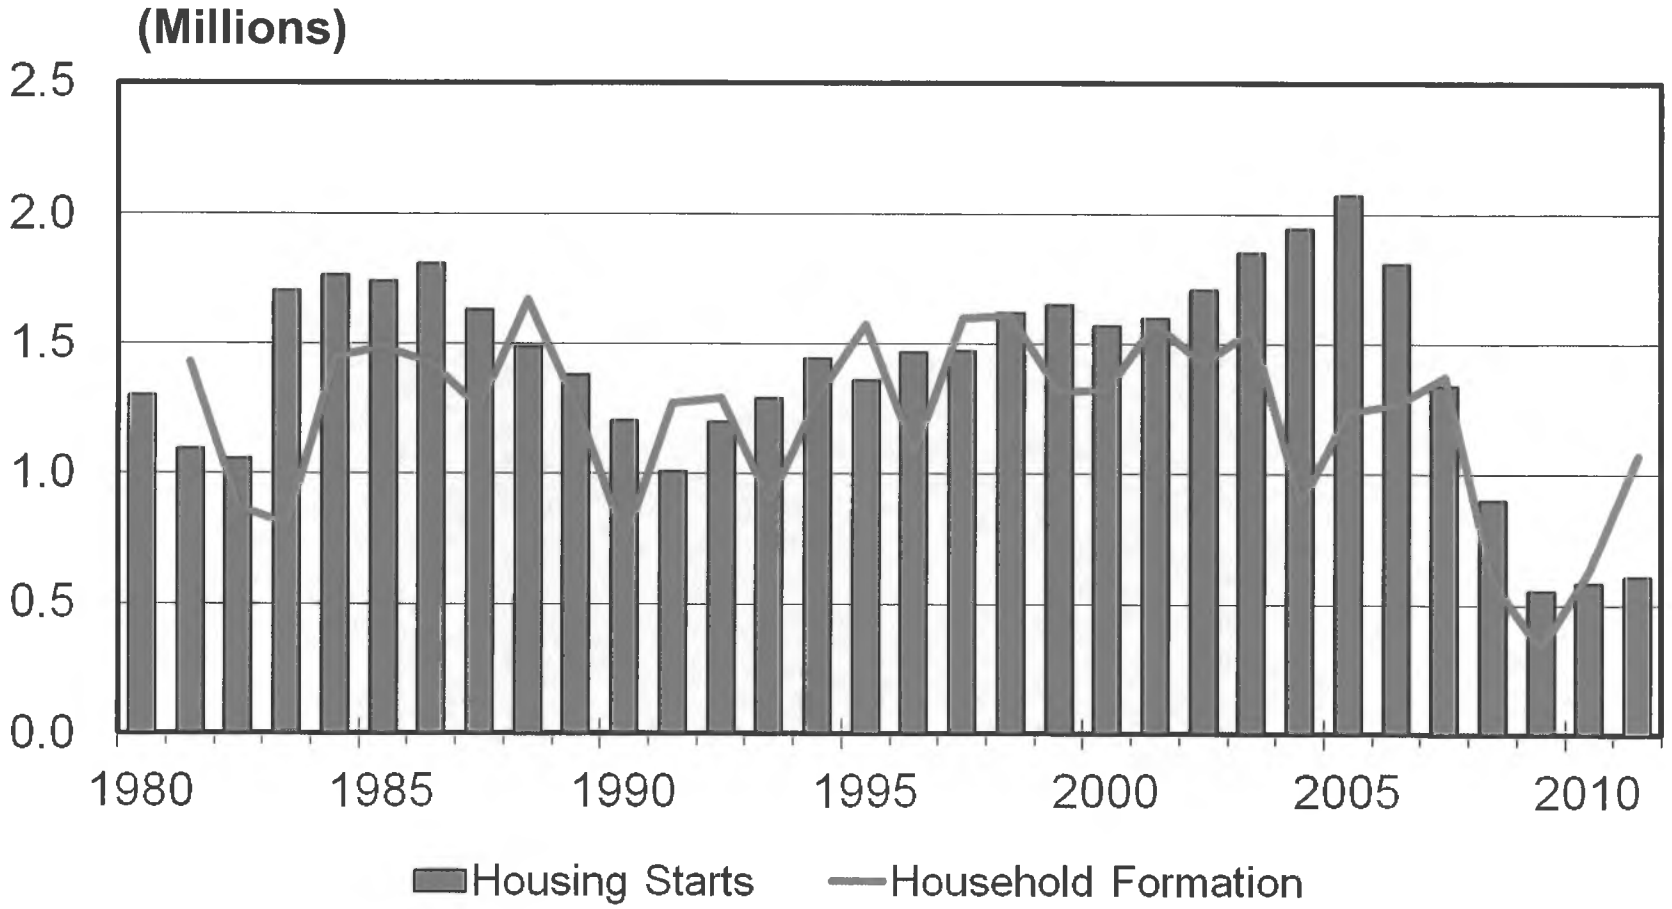
- **An economy near stall speed is vulnerable to shocks.**
- **Fed can't help much.**
- **Risks of policy mistakes**
  - Premature fiscal tightening
  - Policy paralysis.
- **Eurozone is the immediate risk.**
- **Oil shocks are a perennial threat.**



Why Not?

- **U.S. banks in better shape than 2008.**
- **Nonfinancial corporations balance sheets are strong.**
- **Exposures to Eurozone sovereign debt are better understood than were the exposures to sub-prime debt.**
- **Europe unlikely to allow a major institution to collapse similar to Lehman.**

Modest Employment Growth and High Unemployment Sapped Confidence



Good News: Initial Unemployment Insurance Claims Are Edging Down

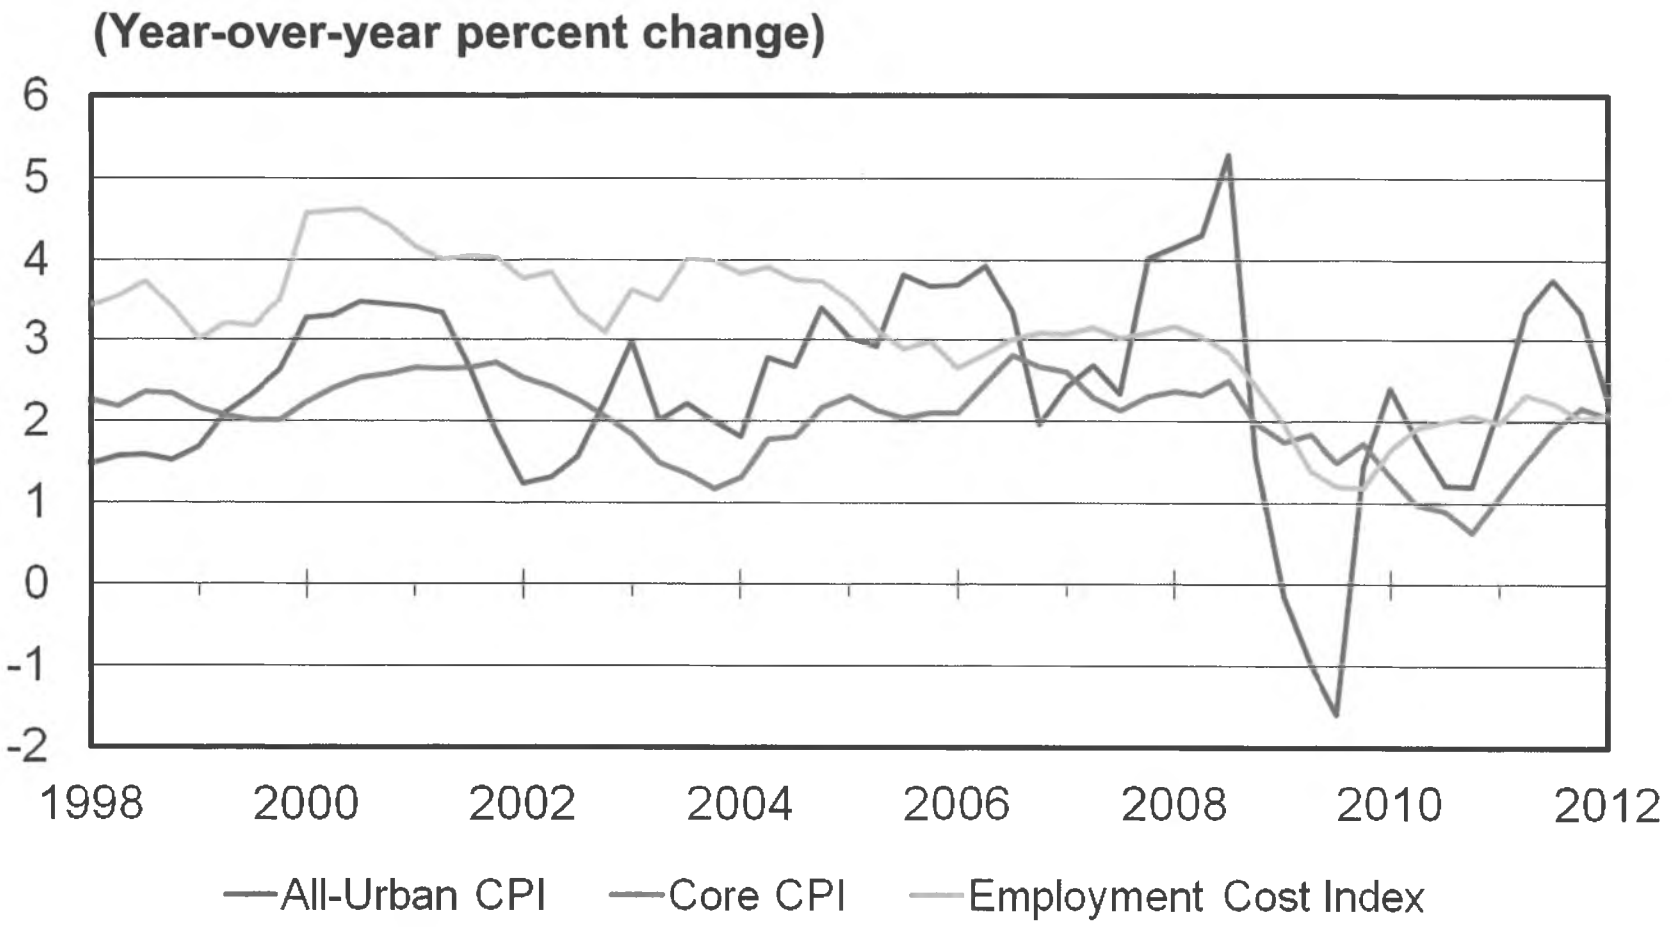
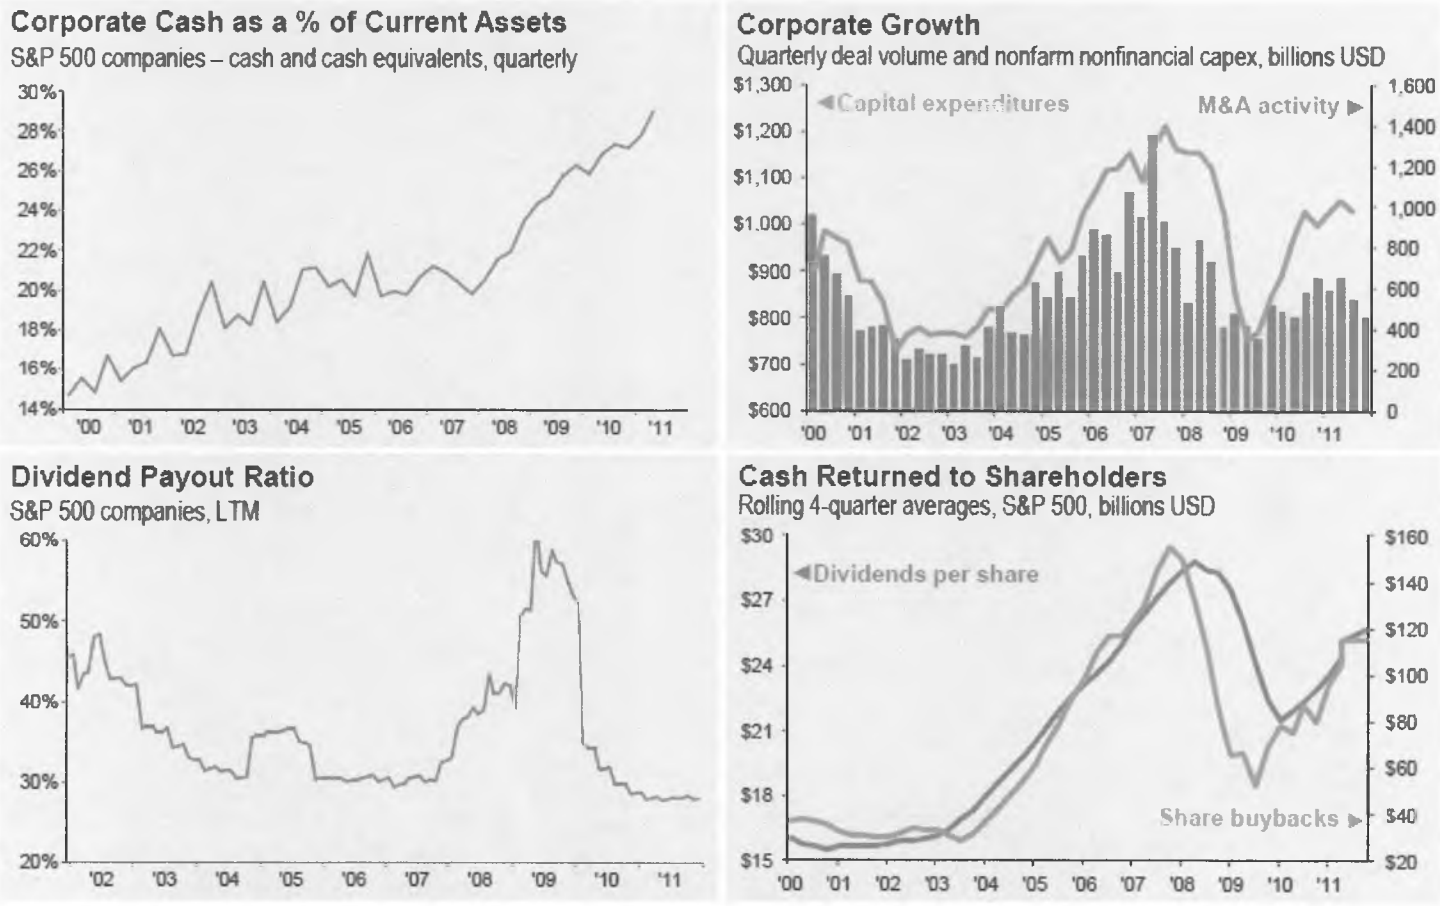
Pent-up Demand for Durable Goods Drives Growth in Consumer Spending



Source: Global Insight

So Is Rising Inflation an Emerging Threat?



- **Economic theory says inflation HAS to take off:**
  - Unprecedented, synchronized global monetary stimulus.
    - Interest rates at historic lows.
  - Unprecedented fiscal stimulus.
    - Corresponding unprecedented federal budget deficit.
    - Inflation beneficial to debtors—moral hazard?
  - Commodity prices itching to rise at the first sign of growth.
  - Dollar must weaken, furthering pressure on inflation.
- **Practical reality:**
  - The U.S. and the rest of the world face very slow recoveries:
    - Fiscal and monetary stimulus kept us out of a longer, deeper recession, but
    - Aggregate demand is weak, no post-recession surge as fiscal stimulus fades.
    - Capacity utilization has plummeted in the U.S.; we are awash in new capacity overseas, and still importing deflationary pressure.
    - Weak job market, no wage pressures.
  - Interest rates may rise sharply without a surge in inflation.
  - Inflation a very real threat, but it may be up to five years off.
  - Commodity prices represent a wildcard threat in the shorter term, particularly a supply-side disruption.
    - Commodity spike more likely to trigger another slowdown than a general price spiral.

Consumer Price Inflation Expected to Ease in 2012

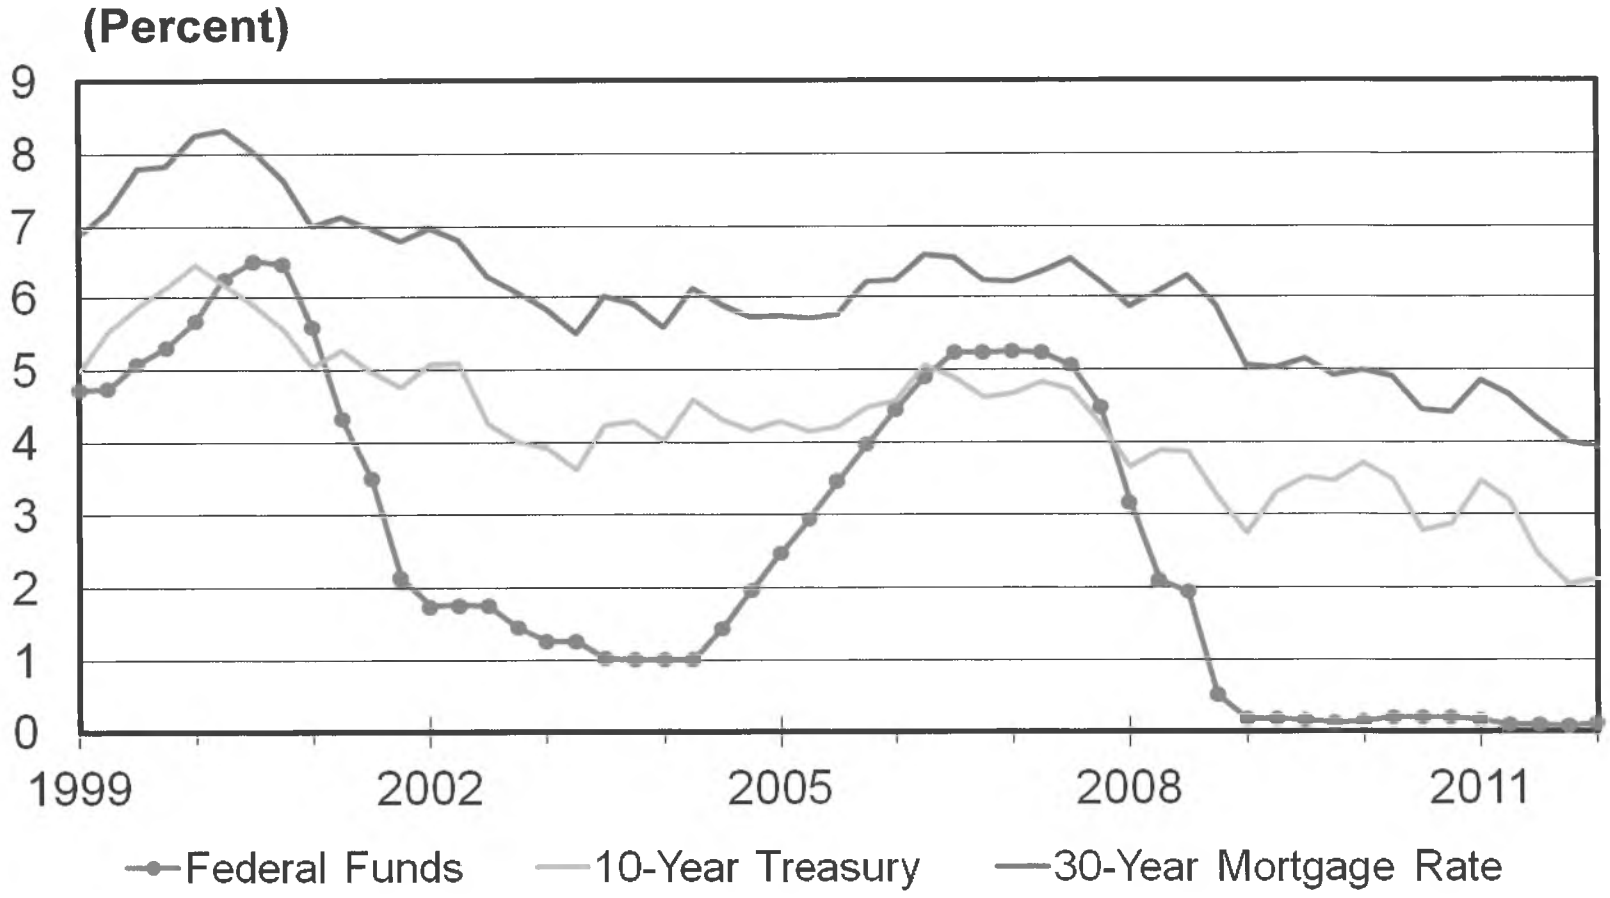
- **GDP hit bottom in Q2 2009. After inventory and stimulus boost, economy was fully expected to slow in second half of 2010 and through 2011, but the bottom seemed to fall out of economic growth, particularly during the first half of 2011.**
- **As confidence deteriorated with the European debt crisis and the US budget impasse over the summer, concerns rose for a return to recession,**
- **However, data on the U.S. economy began to surprise, notching solid growth in the 3rd and 4th quarters. Indicators ranging from orders to jobs to consumer spending all strengthened in direct contrast to depressed reports on consumer and business confidence.**
- **Note: Imports are a negative number in the calculation of GDP.**



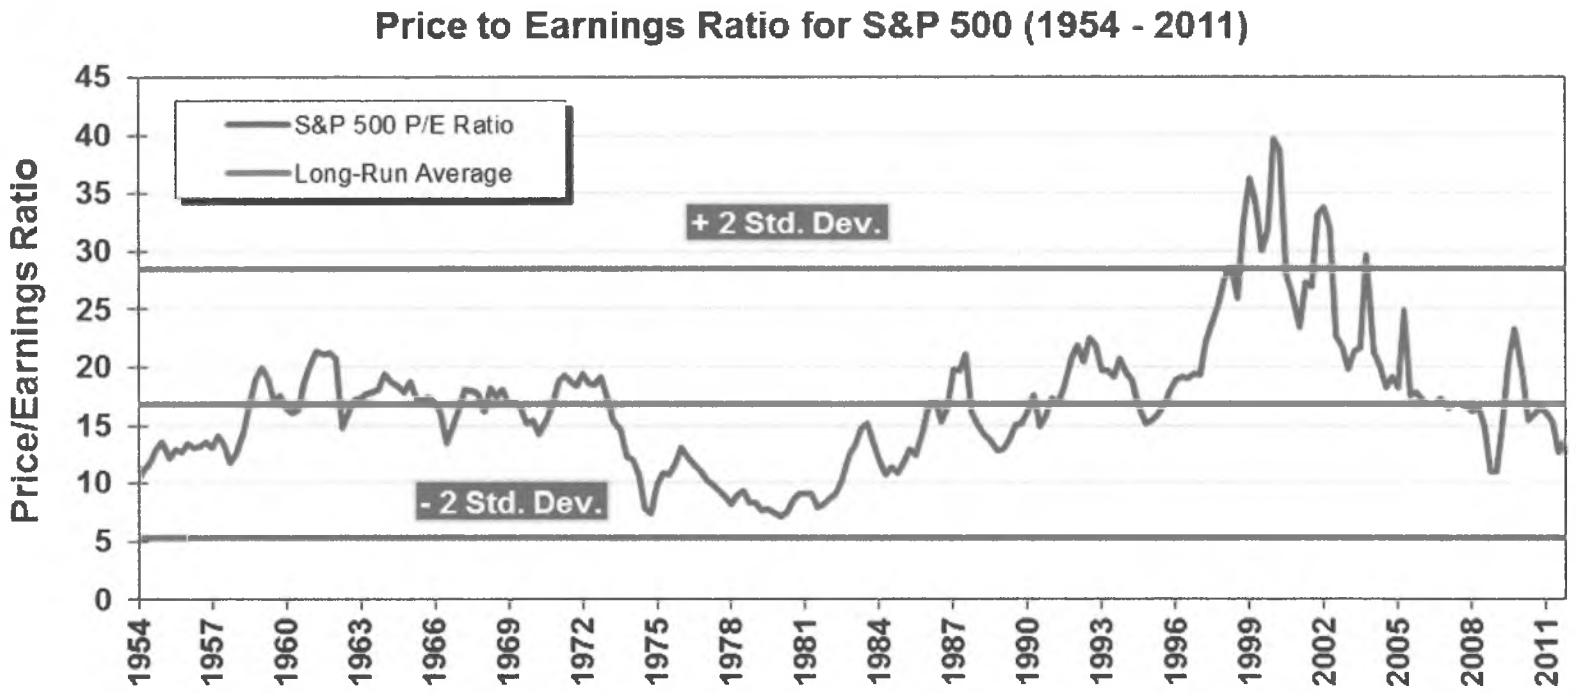
Source: Global Insight

What Will The Fed Do?

- The Fed is worried; it had expected 2.7%-2.9% growth for 2011, 3.3%-3.7% for 2012.
- 2011 came in at 1.8%.
- Global Insight (and consensus) forecast now: 2.0% (2012), 2.4% (2013).
- Fed has used its prime ammunition already.
- No rate hike till mid-2013 "promised".
- Market assumes no hike before 2014.
- Hurdle for QE III is high – but we may clear it.

Federal Funds Rate Near Zero Until 2014

Long Rates Will Also Stay Low; Steep Yield Curve



Source: Global Insight

The Economy and the Capital Markets

- **The economy was fully expected to meander through a weak recovery, as the combination of recession, financial crisis and deleveraging required time to work through the system.**
  - GDP growth was expected to slacken in 2011, but events and emotions combined to spur investors into a series of risk on/risk off trades that drove market volatility.
  - Economic data suggest the economy continues to grow, but such growth will remain modest.
  - Double-dip recession is possible, but not the expected outcome.
- **Callan's outlook:**
  - Inflation will likely drift higher, but not immediately. Painfully low interest rates will persist, now that the Fed has "guaranteed" low rates through 2013. We expect interest rates to rise gradually after 2013.
  - Historic nominal return averages will be hard to achieve over the short, medium and even the longer run.
  - Stocks rallied in the fourth quarter of 2011, saving the results for the year. However, prospects for above-trend growth are weak; companies are strong enough to attain trend profit growth, but not a lot more.
  - The housing market has yet to truly hit bottom, despite mortgage rates at an all-time low. The "shadow inventory" of homes yet to foreclose still hangs over the market.
  - The chance that we could see another leg down on housing is the greatest risk to the economy, and to a deflationary spiral.
  - The dollar should face substantial downward pressure as a result of U.S. policy. The problem, of course, is what other currency can take the dollar's place?
  - **The path to a rational set of long-term capital market outcomes is likely through an ugly shorter term period of rising interest rates, capital losses in fixed income, and volatile equity markets.**

Equity Is More Reasonably Priced

Trailing P/E Below Its Long Run Average

Trailing earnings as reported for the fiscal year; includes negative earnings from 1998 onward.

Building US Equity Expectations

- **Dividend Yields Likely to Stay Near Current Levels.**
  - Financing uncertainty continues so cash unlikely to be returned to investors.
  - Fixed income yields expected to remain low.
- **Equity Valuations Currently Moderate to Attractive After Market Angst During 2010 and 2011.**
- **Corporate Profits Near Long-Term Growth Rate.**
  - Companies may be able to sustain trend or above trend profit growth even in a weak recovery.
- **Company Balance Sheets Are Strong, But No One is Eager to Spend. Large Cash Holdings a Drag on ROE.**
- **Consumption Still Dominates Economic Growth.**
  - Unemployment high but finally declining,
  - Wealth depleted,
  - Deleveraging continues,
  - Savings replenished.
- **Exports Remain Strong, in Spite of Strengthening Dollar but Impact Muted by Size of Economy.**
- **Have We Entered a New Era of Lower Trend Growth in GDP?**

Current Yield is Exceptionally Low

BC Aggregate Index - Daily Yield to Worst from 1/2/01 to 12/30/11

Source: Barclays Capital and Callan

Treasury Rates Fell With Fears of a Faltering Recovery

Source: Federal Reserve and Callan

Building Fixed Income Expectations

- **2011 results yet another surprise – interest rates fell, broad market generated 7.8% return (BC Aggregate).**
  - Credit event of 2011: downgrade of U.S. Treasury debt by S&P.
  - Result of downgrade: a flight to quality. Treasuries rallied. The market speaks.
- **The path to future return matters:**
  - Inflation
  - Composition of the market
  - Expected spreads and risk premiums
  - Current yields – level, slope of the yield curve.
- **Hard to be enthusiastic about fixed income returns given current yields, environment and likely economic path to growth.**
  - Calling the bottom of the "long term" interest rate cycle has been perilous. Nevertheless, the risk that rates will move higher is likely greater than the potential for rates to move lower.

2012 Capital Market Expectations

- Bond returns reduced to 3.25%. We expect interest rates to rise, likely after 2013, resulting in capital loss before higher yields kick in. We expect cash yields to reach 3.0% and 10-year Treasury yields to reach 5% over the ten-year projection.
- Project an upward sloping yield curve, with a slim risk premium for bonds over cash (1.0%).
- Building equity returns from long-term fundamentals, we find it hard to get to 8%: 2.5-3.0% real GDP growth, which means 5-5.5% nominal earnings growth, 2% dividend yield. Nothing expected from the "buyback yield". Equity suffered in the broad flight to quality in 2011, particularly outside the U.S., and looks reasonably priced, but is it "cheap"? Broad U.S. equity expectations are reduced 25 bps, from 8.0% to 7.75%. Broad non-U.S. equity returns are decreased by a similar amount.
- Real estate return reduced to 6.4% from 6.75%, reflecting income returns holding up at 5-6% but reduced expectations for appreciation.
- Hedge fund expectations of T-bill plus 2.75% suggests a return of 5.5%.

Fallout of 2012 Capital Market Expectations

- **What happened in 2011? The economic recovery appeared to lose steam, investors lost faith, the equity market took beating through Q3, and interest rates fell sharply, from already-low levels. Strong fourth quarter pushed U.S. equities back up, but only enough to end the year flat sharply; non-U.S. markets were not so fortunate. Bonds recorded yet another (unexpected) stellar year as interest rates dropped in the flight from risk.**
- **Bond returns going forward– not a lot of room for optimism. Interest rates have no where to go but up, right?**
- **Cash cannot sustain a negative real yield over the longer term. Or can it? We project an upward sloping yield curve, with very a slim risk premium for bonds over cash.**
- **Building equity returns from long-term fundamentals:**
  - Earnings growth – **outlook now in jeopardy.**
  - Real GDP – **how slow can we go?**
  - Dividends & other returns on free cash flow – **can dividends surpass Treasury yields? For how long?**
  - Valuation – **cheaper, but cheap enough?**
- **How to make investors very unhappy in 3 easy numbers:**
  - Bonds = 3%, or less
  - Stocks = 8%, or less
  - 60/40 = 7%, or less…
  - Our 2012 numbers reflect our ***optimism*** for the economy, for inflation, and for the capital markets.
  - The challenge: to refrain from translating these expectations into a need to take on more risk in pursuit of return.
  - How does one keep invested in fixed income – a prudent investor's anchor to windward -when we all KNOW it's going to lose money while interest rates rise?

Appendix

10-Year vs. 30-Year Capital Market Expectations

- **Over a 30-year time horizon, our capital market expectations would reference long-term historical mean results, with an overlay of informed judgment. Key elements to consider:**
  - Nominal returns
  - Inflation
  - Real returns
  - Risk premia – bonds over cash, stocks over bonds, long duration over short
  - Long term underlying economic growth (real GDP).
- **Current expectations:**
  - Stocks: 7.75% nominal, 5.25% real, 4.50% premium over bonds
  - Bonds: 3.25% nominal, 0.75% real, 0.50% premium over cash
  - Cash: 2.75% nominal, 0.25% real
  - Inflation: 2.5%
  - Underlying economic growth (real GDP) – 2 to 3% per year.
- **Long-term (30-year) expectations:**
  - Stocks: 9.5% nominal, 6.5% real, 4.5% premium over bonds
  - Bonds: 5% nominal, 2% real, 1% premium over cash
  - Cash: 4% nominal, 1% real
  - Inflation: 3.0%
  - Underlying economic growth (real GDP) – 3 to 3.5% per year.

10-Year vs. 30-Year Capital Market Expectations

- **Under Callan's current 5-10 year expectations, a typical institutional policy target mix is not expected to generate an annual return anywhere near 8.0%; even 7.0% will be a challenge.**
  - Assumed returns for pension valuations and endowment/foundation spending are usually between 7% and 8%.
- **Substantially greater exposure to risk assets than the typical policy mix would be required to generate an 8% return over the 5-10 year horizon, potentially in conflict with many investors' expressed tolerance for risk.**
- **Appealing to expectations with a 30-year time horizon, a typical institutional policy mix may indeed be expected to generate an 8% return. However, long-term perspective must be maintained. The path to a long-term 8% return will include extended periods of returns above the 8% (the 1990s, 2003-2007) and periods below the 8%.**

(Based on Valuation Assets)

PERS / TRS
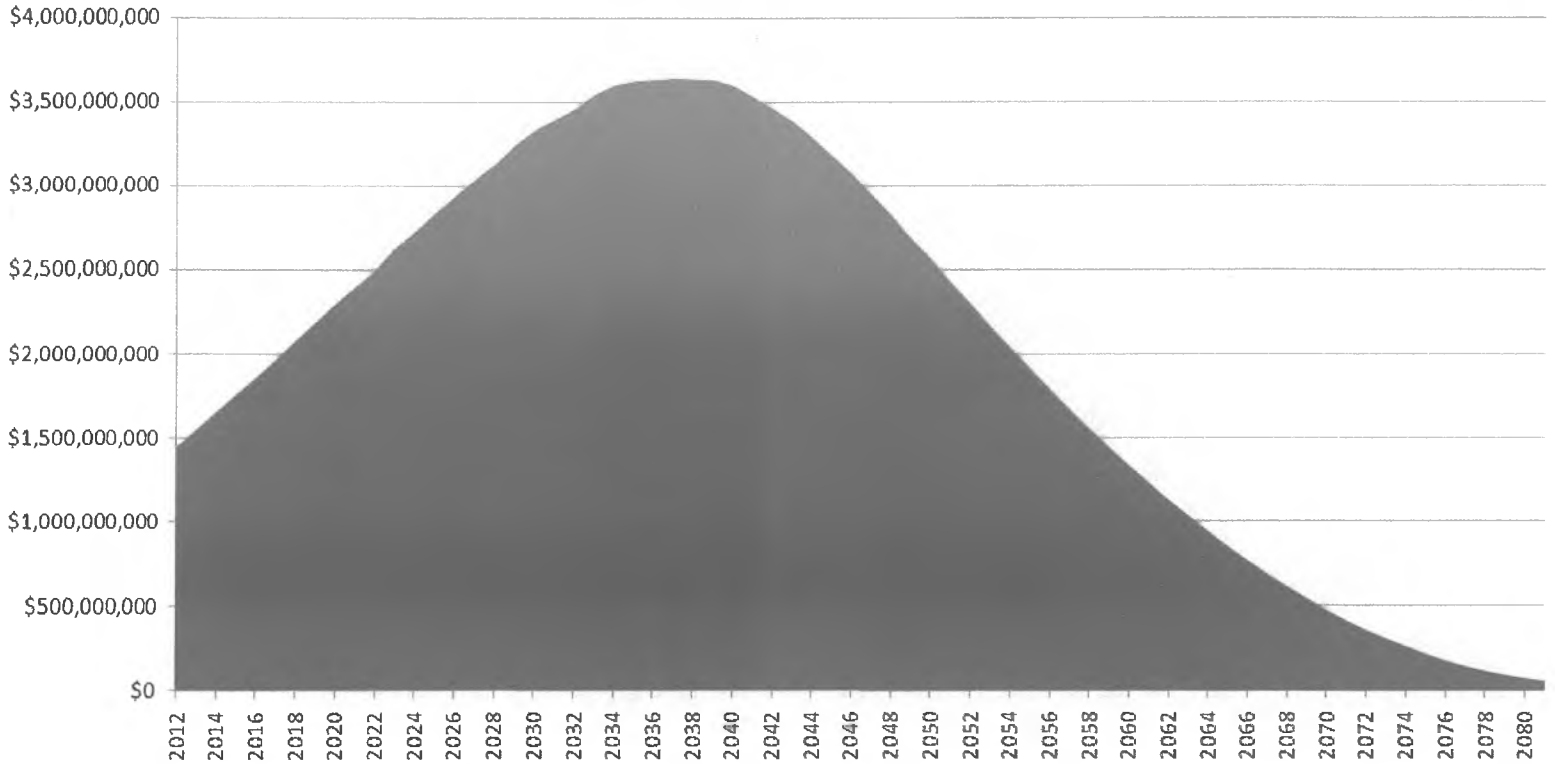
Basic Facts – Contribution Rates



SB 125 capped PERS employer contribution rates at 22% and TRS employer contribution rates at 12.56% beginning in FY 2009.

Projected Retirement Population Growth

Big Picture Budget Issues
PERS and TRS promises made

Pay $141 billion in benefits payments over next 70 years

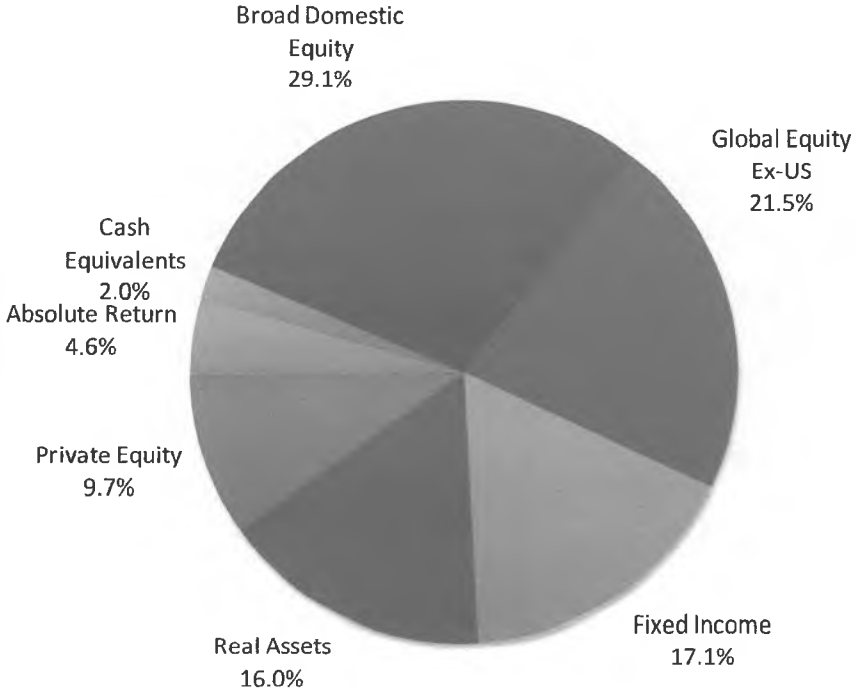
Current PERS/TRS account balance: $15.4 billion

Unfunded Liability: $11.1 billion

II. Investments

PERS / TRS
Investments – ARMB Assets Under Management

Public Employees' Retirement System (PERS)	**$11,151,649,032**
Retirement Trust	5,917,565,533
Retirement Health Care Trust	4,955,522,364
Defined Contribution Retirement Plan - PERS	196,812,142
Health Reimbursement Arrangement	60,926,595
Retiree Medical Plan	13,150,689
Occupational Death and Disability - PERS	5,564,236
Occupational Death and Disability - Police & Fire	2,107,473
Teachers' Retirement System (TRS)	**$4,658,169,352**
Retirement Trust	2,963,021,793
Retirement Health Care Trust	1,582,214,904
Defined Contribution Retirement Plan - TRS	85,559,937
Health Reimbursement Arrangement	19,503,399
Retiree Medical Plan	5,685,067
Occupational Death and Disability	2,184,252
Judicial Retirement System (JRS)	**$123,485,239**
Defined Benefit Plan Retirement Trust	103,962,599
Defined Benefit Retirement Health Care Trust	19,522,640
National Guard/Naval Militia Retirement System (MRS)	**$32,214,362**
Supplemental Annuity Plan - SBS	**$2,527,247,292**
Deferred Compensation Plan	**$585,232,928**



As of 12/31/2011, the ARMB managed $19 billion across 18 plans:

Total units complete	7,681

Projected totals	March 31,2013
Total expended	$245m
Total units complete	10,500

Weatherization Program

Benefits

- Resident health and safety
- Fire safety
- Improves building stock
- Job creation
- Invests in local communities
- **Energy Savings**

Home Energy Rebate Program

- Open to all Alaskans not participating in the Weatherization program
- No income requirements
- Owner-occupied, year-round residences
- Homeowners pay upfront and are then rebated
- "As-Is & Post" energy ratings

Home Energy Rebate Program

State Funding Levels

SFY 2008	$100 million
SFY 2009	$60 million
SFY 2011	$37.5 million
Total	$197.5 million

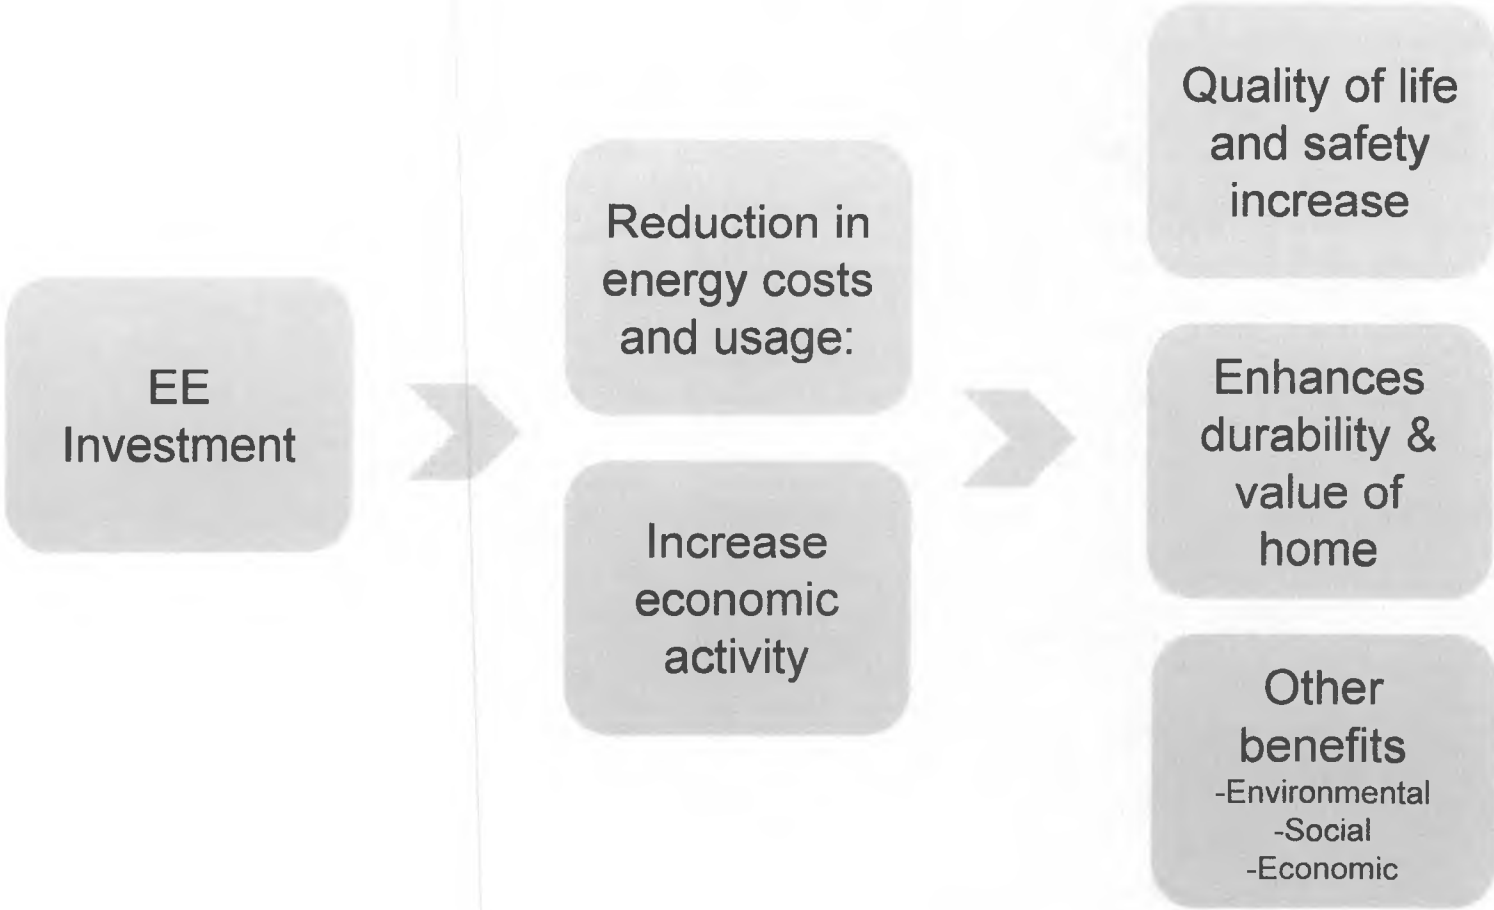
Updated 12/28/11

Alaska Energy Efficiency Revolving Loan Fund (AEERLF)

$250m available for energy efficiency improvements for:

-Schools	-State facilities
-University of Alaska	-Municipal facilities

Savings from energy efficiency improvements are used to pay off the loan



Alaska Energy Efficiency Revolving Loan Fund (AEERLF)

- Benchmarked 1200+ facilities
- Over 300 Investment Grade Audits to be completed
- One loan application submitted to AHFC

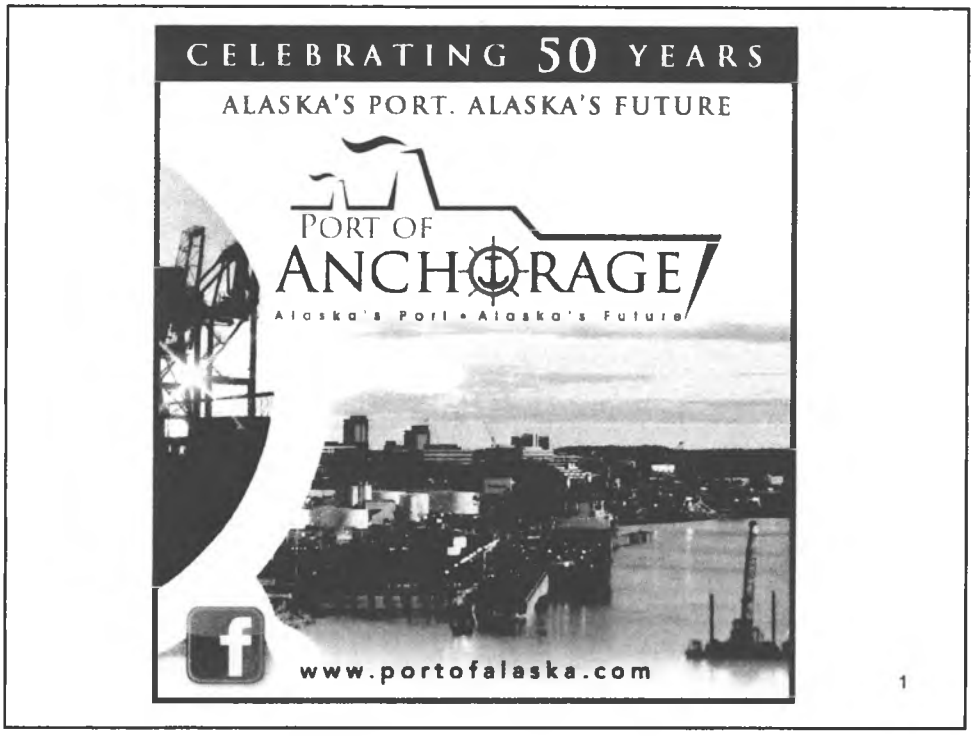
1. Includes projects in operation in January 2011 or before.
2. Tok Wood Heating project shut down June-Dec for steam turbine installation.
3. Nome Banner Peak wind project is privately owned. The RE Fund paid only for the intertie.

Challenges/Opportunities

- Focus on the entire energy system
  - Reliable, efficient diesel systems first
  - Reduce demand through EE
- Deliverables
  - Reduce and stabilize costs to residents
  - Displace diesel
  - Assist in project development
- Monitor technical and economic performance



Thank you.

2/28/12 OVERVIEW BY DEPARTMENT OF TRANSPORTATION: PORT OF ANCHORAGE

<TARGET><BILL></BILL><SUBJECT>2-28-12 OVERVIEW BY DEPARTMENT OF TRANSPORTATION PORT OF ANCHORAGE</SUBJECT><COMM>SFIN27</COMM></TARGET>

SLIDE 1 – Introduction Slide

Good Morning, for the record my name is Steve Ribuffo, I am the Interim [redacted] Director at the Port of Anchorage.

Here today with me is Emily Cotter.

I believe that Mayor Sullivan is on the line and would like to make some introductory comments.

The Municipal Manager, George Vakalis is also on the phone along with Bob Ownes in the Municipal Attorney's office.

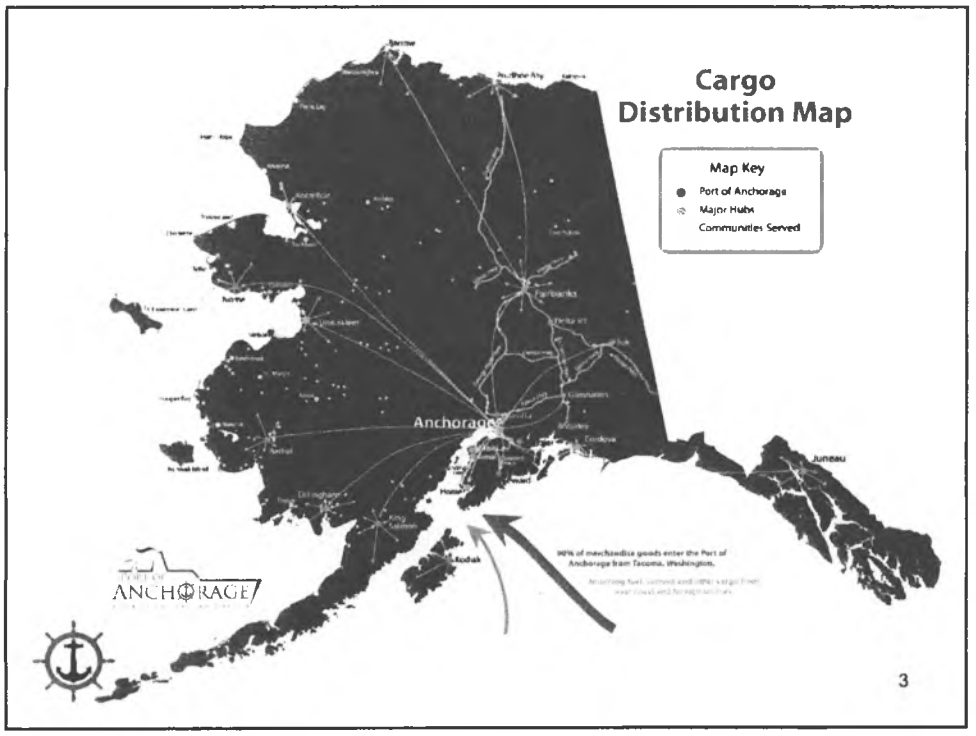
I would like to thank you Mr. Chairman, Senator Hoffman, and the rest of the committee members for inviting me to come and speak here today.

I especially want to thank the committee for their support of this project over the years and their continued foresight in investing in our state's infrastructure.

I will provide a very brief overview of the services the Port of Anchorage provides and then quickly move into the project update and finances.

Facts about the Port

- The major point of entry for containerized cargo in Alaska
- Services support over 200 rural communities in the State
- Annually, 240,000 containers move through the Port
- Since 2000, an average 4 million tons of goods and materials pass through the Port's facilities annually
- 90% of merchandise goods for the Railbelt and interior Alaska.\
- 100 million pounds of bypass mail items
- 52,000 vehicles processed annually on average
- 80% of the cement for concrete

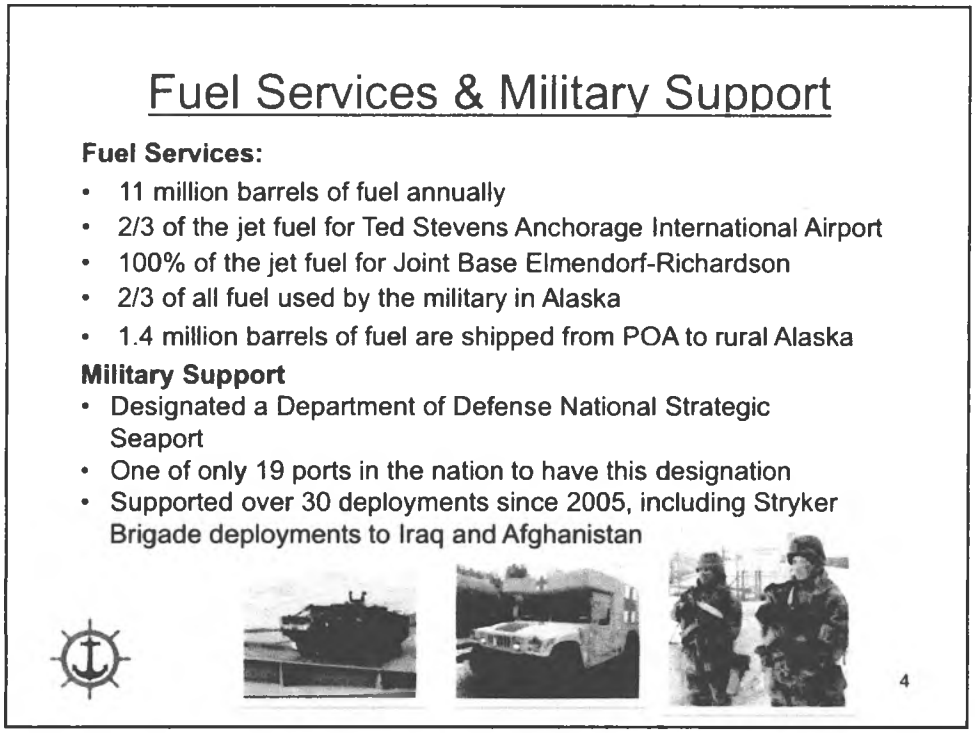


2

SLIDE 2 – Facts About the Port

I realize that the committee members are well aware of the statewide services the Port of Anchorage provides, so I will not spend time going through each of these bullets.

Our facilities serve as the gateway for containerized cargo with an average of 240,000 containers passing through Port annually.

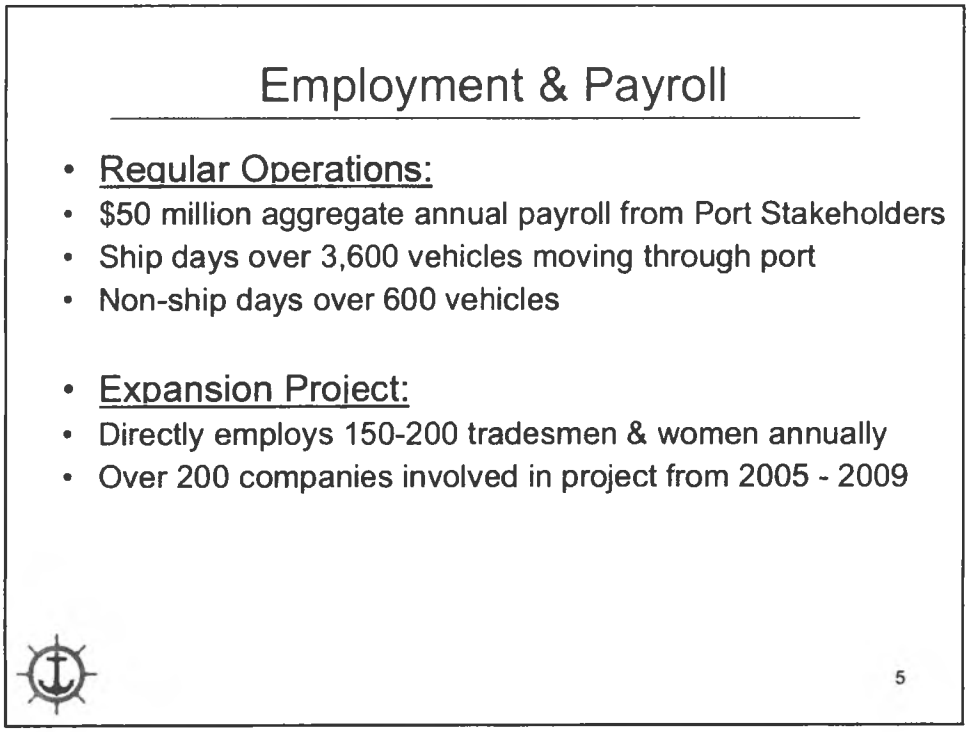


This includes an estimated 90% of the merchandise goods used in interior Alaska.

SLIDE 3 –Cargo Distribution Map

Once cargo passes through your Port, it is distributed across the state by road, rail, barge and plane as illustrated in this distribution map.

This distribution pattern supports over 200 rural communities with fuel and bypass mail deliveries.



SLIDE 4 – Fuel & Military Support

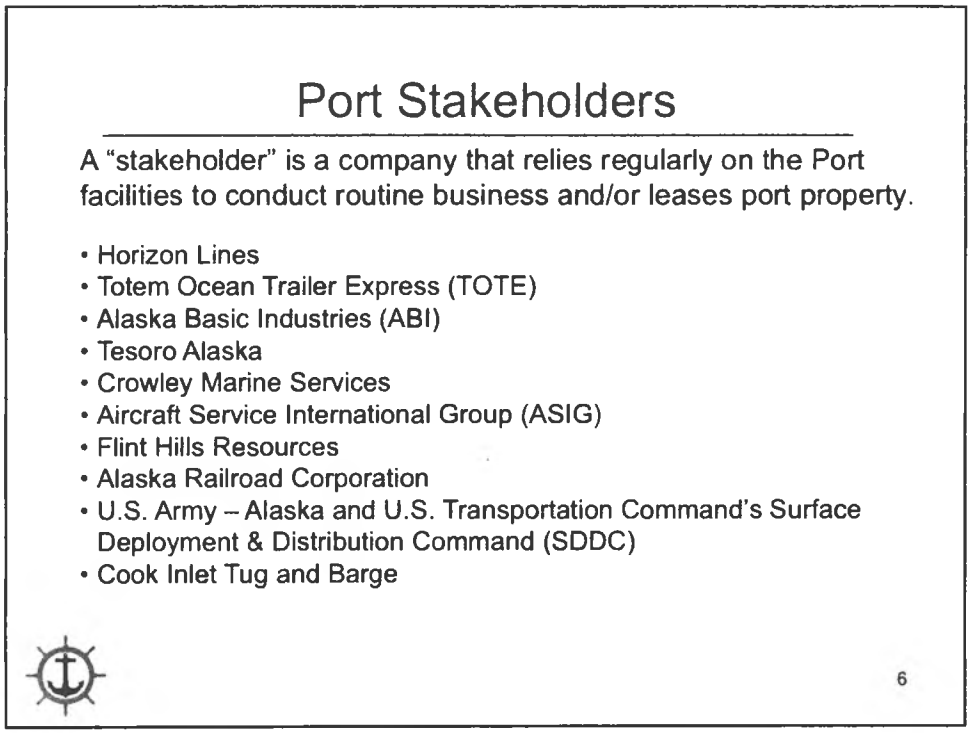
The Port of Anchorage is also a major provider of jet fuel unleaded gasoline, heating oil, diesel, and aviation gasoline for the southcentral area, rural communities, and the state at large.

The Port provides over two thirds of the jet fuel used at Ted Stevens International Airport and all of the jet fuel used at Joint Base Elmendorf-Richardson.

The Port also provides critical services to Alaska's Armed Forces and was designated a National Strategic Seaport by the Department of Defense—one of only 19 ports in the nation to have such a designation.

We routinely support the deployment of army brigades and are pleased to have been selected to host the commissioning of the naval warship, Anchorage in Spring 2013.

SLIDE 5 – Employment and Payroll



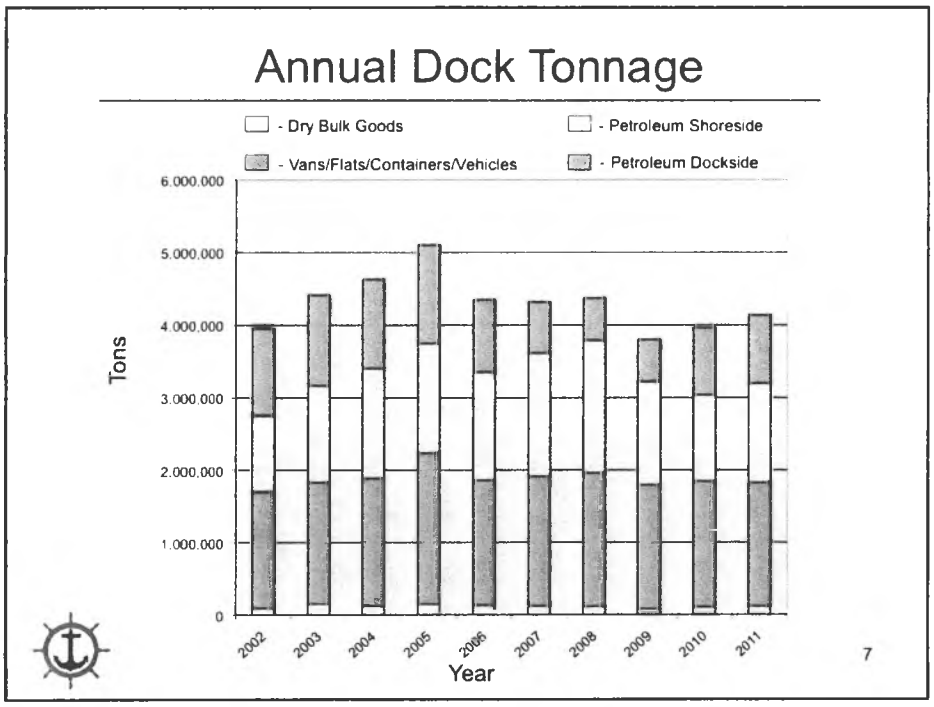
The Port of Anchorage is a major economic engine for Alaska contributing over $750 million to the economy, with some higher estimates reaching over one billion dollars annually.

The facility not only plays an important role in Alaska's economy, but it plays an important role in the regional economy as Port of Anchorage-related commerce accounts for thirty percent of the business at the Port of Tacoma.

As you can see on the slide, the aggregate payroll of port stakeholders in 2010 was $50 million dollars.

Regular port operations create jobs for a variety of trade industries including union members such as longshoremen, operating engineers, and teamsters.

When our project is in full swing, it will create 150-200 direct jobs in construction-associated trades.



SLIDE 6 – Port Stakeholders

You can see here a list of port stakeholders.

These are companies that either lease land from the Port or rely regularly on port facilities to conduct their business operations.

The first two companies, Horizon Lines and Totem Ocean Trailer Express, are the two container shippers that call on the Port twice weekly. I will be referencing them later on in the presentation.

SLIDE 7 – Annual Tonnage

This slide depicts the Port's annual tonnage for the past 10 years.

As you can see, we average around 4 million tons per year.

Let me clarify what those categories are because a couple of them are not very self-explanatory.

Dry bulk goods consist of commodities such as cement and steel.

Petroleum - Shoreside refers to petroleum products that pass through our valve yard enroute to either an on-Port storage facility or over the dock, but which were initially delivered by pipeline or rail car.

Petroleum Dockside refers to those petroleum products that pass through our valve yard while entering or leaving the port and which were transported by a fuel tanker or barge.

Revenue & Operating Projections

(in Millions)

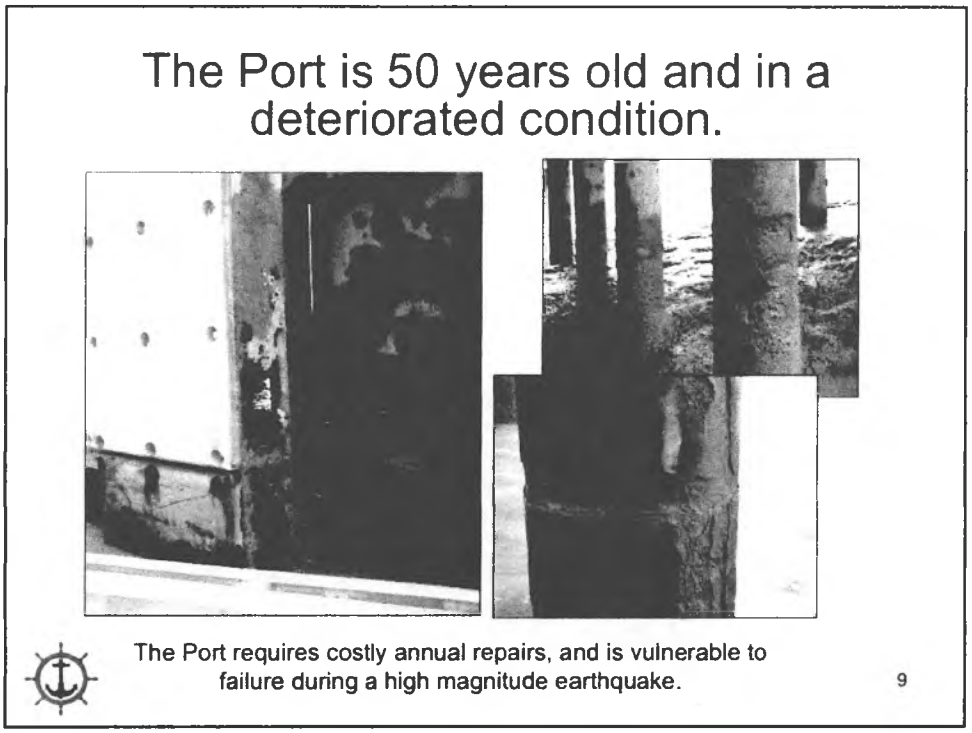
	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Revenue	$12.3	$13.6	$15.4	$15.5	$16.5	$16.8	$16.9	$17.3	$17.4	$17.8	$18.9
Expenses	$11.1	$12.0	$12.0	$14.3	$14.5	$14.4	$14.6	$14.7	$14.8	$15.6	$15.9
Projected Net Income	$1.2	$1.6	$3.3	$1.1	$2.0	$2.4	$2.4	$2.7	$2.6	$2.2	$3.0
Plus Depreciation	$4.3	$4.7	$4.7	$7.0	$7.1	$7.2	$7.3	$7.3	$7.4	$7.5	$7.6
Projected Cash Flow	**$5.5**	**$6.3**	**$8.1**	**$8.1**	**$9.2**	**$9.6**	**$9.6**	**$10.0**	**$10.0**	**$9.7**	**$10.6**

The expenses and revenue projections include projected maintenance costs for the newly constructed areas.

NOTE: The Port of Anchorage covers all of its own operational costs and reserves its profits for the project.

8

SLIDE 8 - Revenue & Operating Projections



This slide depicts the Port's actual revenue and operating expenses for 2011, and our projections for 2012 through 2021.

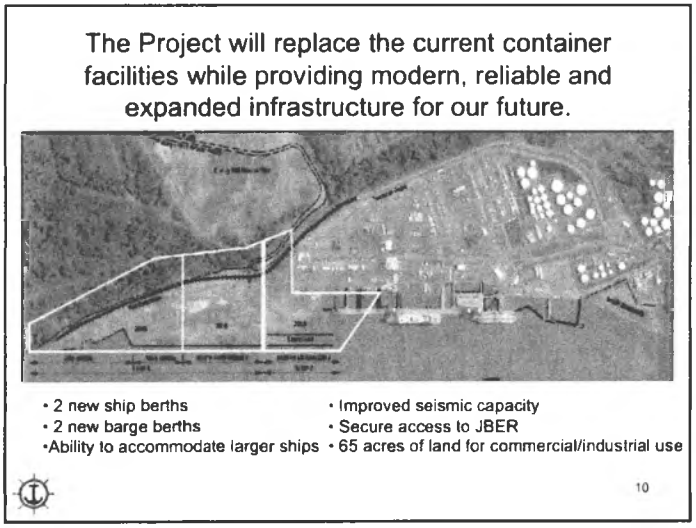
These include the projected revenue increases associated with completion of the new berths and the projected new revenues from anticipated business changes for existing tenants.

The operational costs take into account the addition of the new and expanded facilities and their associated grounds maintenance needs.

I think it is especially important to point out that we have a stable customer base in a facility near a population center upon which we will expand.

We are also very proud to state that the port generates enough revenue to cover all of its operational costs with no burden placed on property taxpayers, and will continue to do so upon completion of the project.

SLIDE 9 – Deteriorated Condition



In 2011, the Port celebrated its 50th anniversary, and while we are excited about that milestone, it also underscores the reality that our facilities are in a deteriorating condition.

The cathodic protection system has exceeded its useful life and there is severe corrosion found throughout the facility.

A 2011 memo from R&M Consultants estimated that there are 1,300 pilings requiring repairs due to age and corrosion.

Since 2004, we have repaired 111 pilings. That averages 16 pilings a year.

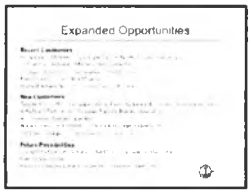
Even if we were to quadruple our efforts, it would take 15 years to complete all of the necessary repairs and would not add any increased seismic protection or provide for the modernization of our facilities.

SLIDE 10 – Phasing Plan

The objective of the project is to provide reliable, modern and expanded facilities for future generations of Alaskans.

The project area is outlined in yellow on this slide.

It has been scaled back from its original vision and is now focused on completing two barge berths and two ship berths in the north area of the Port.



When completed, the new facilities will allow our current container ship tenants, Totem Ocean Trailer Express and Horizon Lines, to move their ships off of the old, deteriorated facility into new, larger and modern berthing spaces built to a higher level of seismic stability and operational safety.

The two barge berths will provide new economic and business opportunities for shippers in the region, and ready access to a rail line that extends the full length of the Port.

Additional benefits of the project include access to 65 acres of commercial or industrial land with immediate access to intermodal connections and waterborne transportation.

The combination of increased berthing space and acreage will allow us to better facilitate military deployments, accommodate larger vessels with a deeper draft, and support resource development projects in the state and the region.

Perhaps most importantly, the new dock will be built to a higher degree of seismic stability ensuring that the Port will remain operational following an earthquake.

SLIDE 11 – Expanded Opportunities

This slide briefly lists some of the recent non-tenent customers that have used Port facilities within the last 18 to 24 months.

Under "New Customers," we have listed businesses that have formally indicated intent to use port facilities.

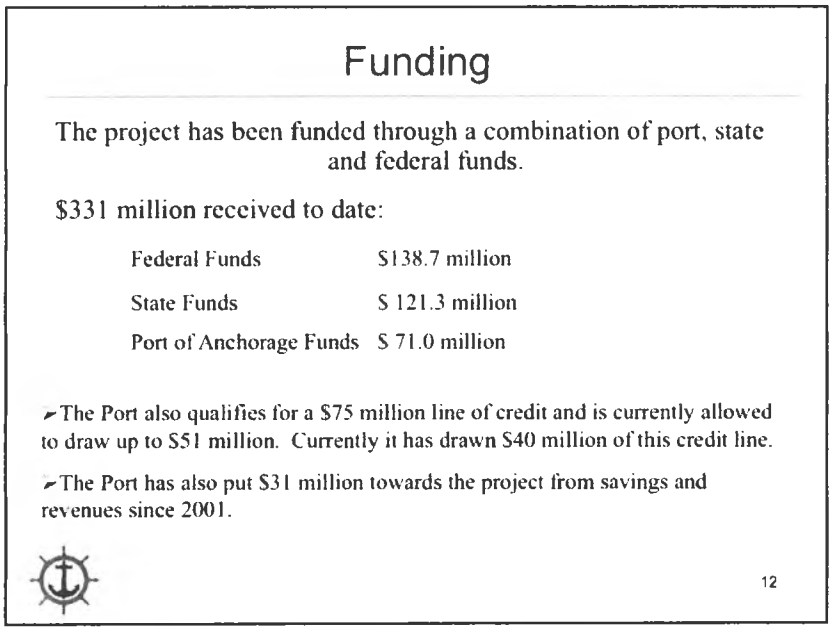
We cannot disclose the name of these businesses due to the proprietary nature of the discussions, however we have provided a generic description of how they would use the facility.

The last section describes potential opportunities in the future, but we have differentiated them from the other column due to the lack of formal intent.

Additionally, it is very important to note that while we have managed in the past to provide for new customer use, it is growing increasingly more difficult due to space constraints.

Thanks to the close and cooperative relationships we have with our primary lessees, we can accommodate transient customer requests.

We collectively use the phrase "Cooperate and Graduate."



We are basically counting on short-term access to their leased land in order to accommodate larger shipping requests such as that of ML&P with extremely large pieces of infrastructure they brought through for their new power generation project.

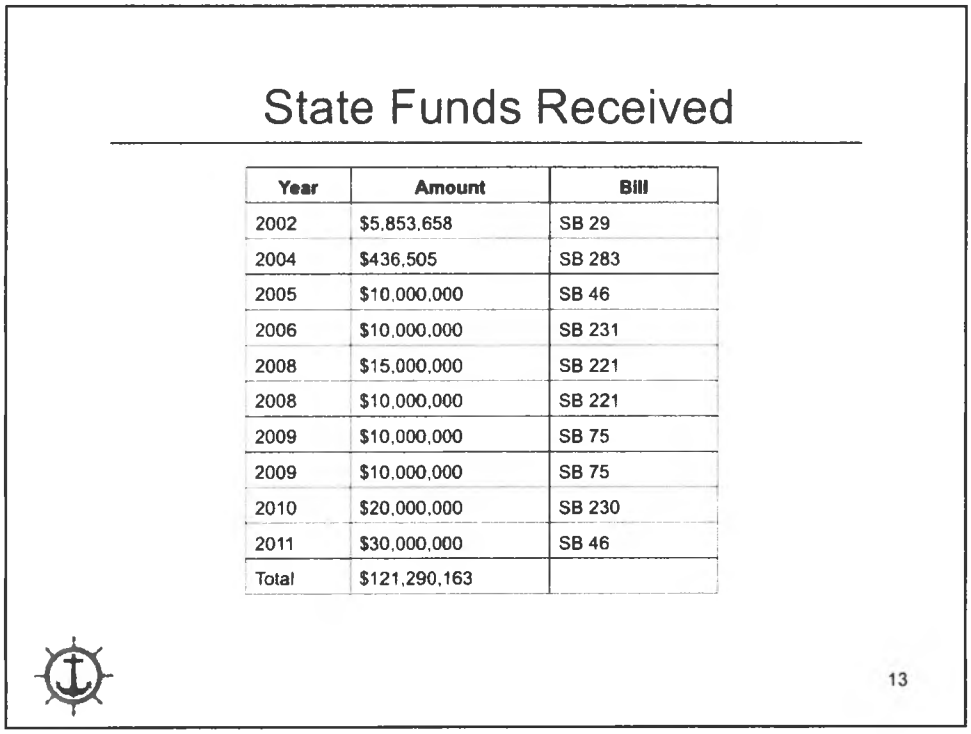
While there isn't anything financial in it for those lesees, everyone recognizes the importance of making logistics operations at the Port a success.

If we succeed as a team, we all benefit as one.

Also, while the project is not complete, there are 65 acres of new lay down area have already been used to store transient cargo..

In short, we have a lot of new opportunities, but we need more finished space.

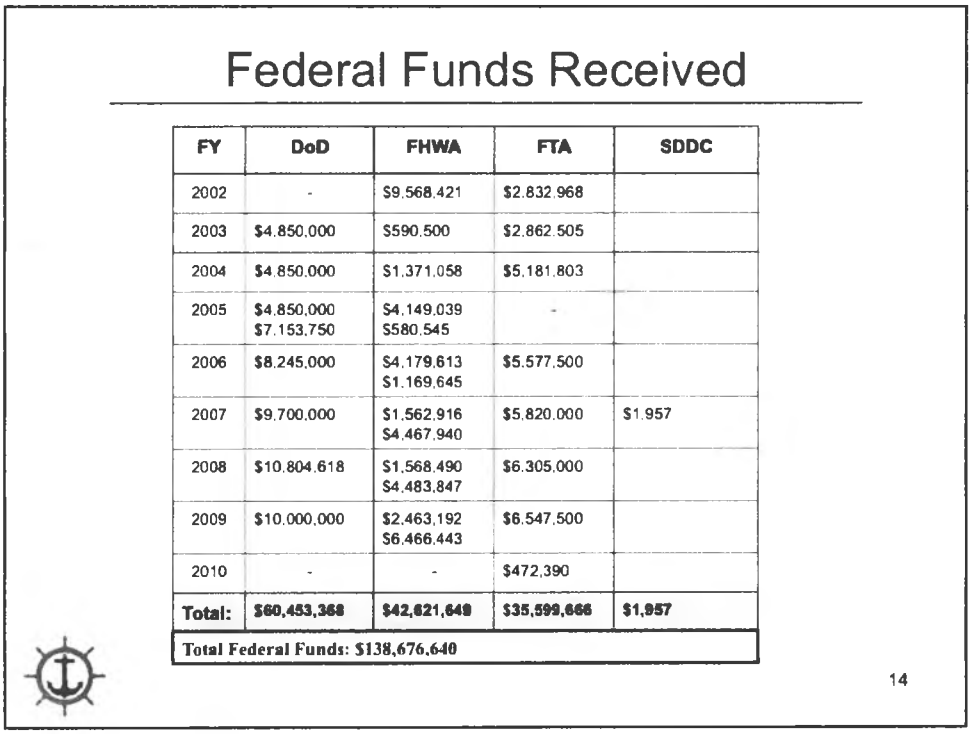
SLIDE 12 – Funding



Here you can see the funding the project has received from state and federal appropriations along with Port contributions.

The Port has invested 71 million dollars to date.

This is comprised of 40 million dollars from a commercial paper line of credit from which we can access up to $51 million; and 31 million dollars in port funds from savings and revenues.



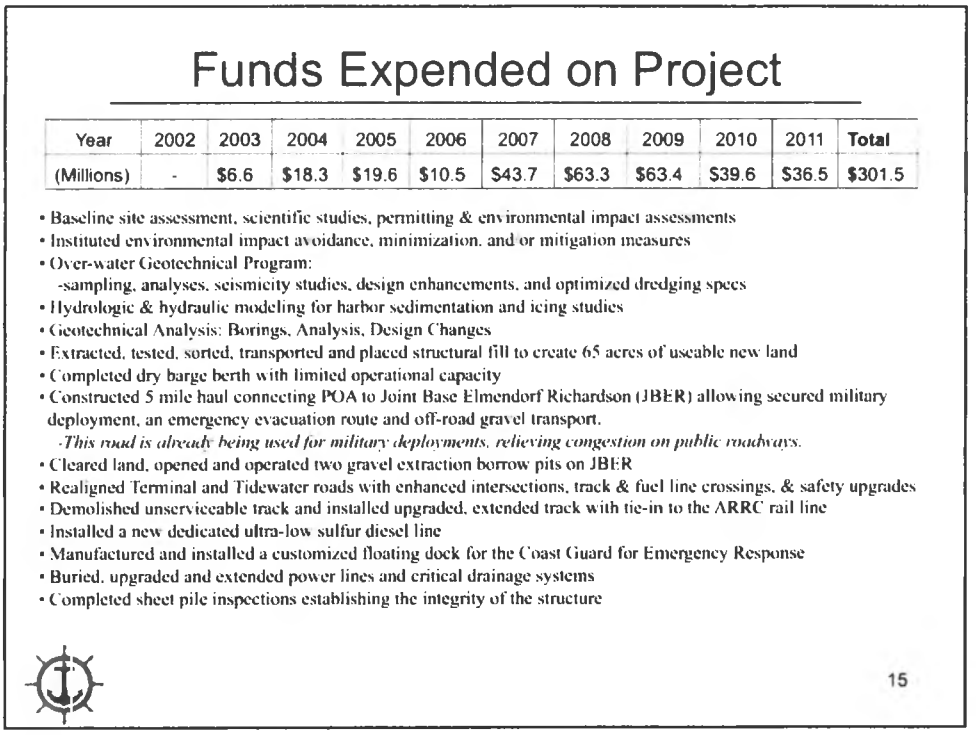
We currently have $29 million in uncommitted appropriations and can draw another $11 million on our line of credit.

So, if need be we currently have access to up to $40 million.

SLIDE 13 – State Funds Received To Date

This is a listing of the state funds that the project has received to date totaling $121 million.

SLIDE 14 – Federal Funding Received

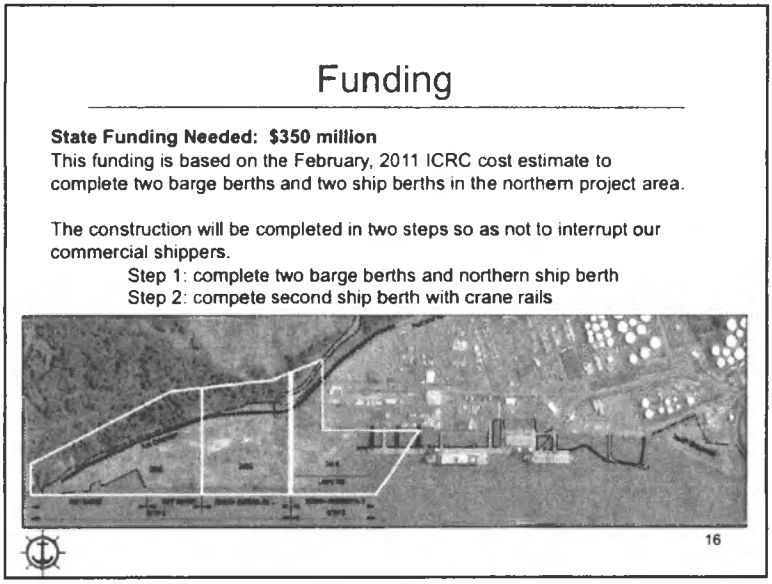


This is a listing of the federal funds that the project has received totaling $138.7 million.

Federal funding was the primary source of funding for the early years of the project.

However like other organizations around the country and the state, we have seen our federal funds dry up; and we have not received any funding for the past two years.

We now also pursue funding at the federal level through competitive grants such as the TIGER Discretionary Grant program and we will continue to do so.



However, it is pretty clear that future federal funding will be at significantly lower levels.

SLIDE 15 – Funds Expended on the Project

This is a listing of the funds expended on the project since its inception.

We have spent and/or obligated $301 million dollars to date in the areas listed.

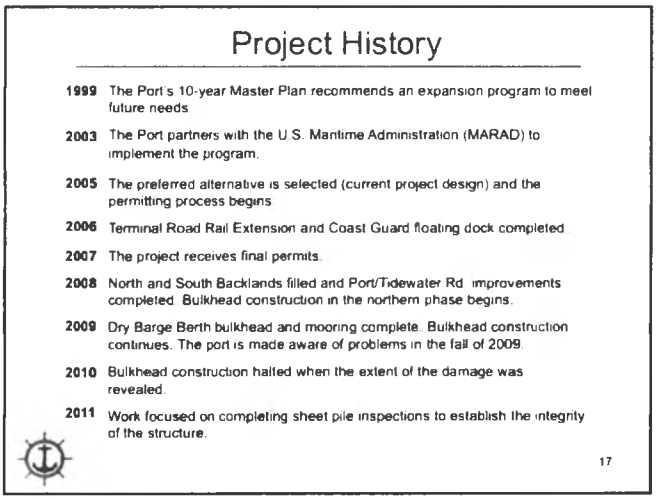
SLIDE 16 – Funding

As previously outlined, in the past this project has received funding from state and federal grants combined with port funds.

This has allowed the project to progress.

However, receiving piecemeal funding for a large, multi-year project has proven to be extremely inefficient.

In order to successfully move forward, to plan more efficiently, and to be able to exploit economies of scale to better control costs, we need to have complete funding up front.



In our annual request to the Legislature, the Municipality's highest priority was to secure $350 million for this project.

This is based on a 2011 cost estimate with an added contingency.

It is our intent to construct this project with $350 million in state funds and not to return to the legislature for further funding.

Full, up front funding, will allow us to create multi years bids that provide an efficiency we do not currently enjoy.

It would eliminate the need to pay for the constant mobilization and demobilization of construction contractors, it would allow the contractors to purchase materials at the best available prices, and it eliminates the risk of further increasing the project cost through delays due to lack of funding or from inefficiencies created by constantly changing the contractor of record.

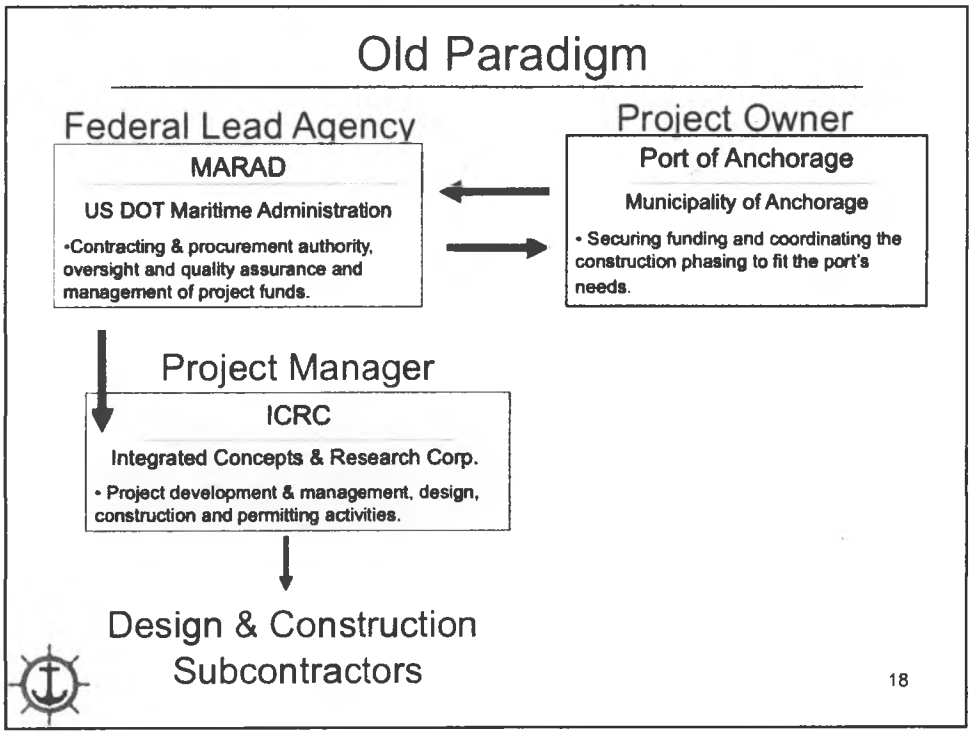
SLIDE 17 – Project History

We have put together a brief overview of the project in order to provide a context for understanding both the project history and expenditures.

The project began in 2001 following the recommendation for an expansion in the 1999 Master Plan.

In 2003, the Municipality of Anchorage signed a Memorandum of Understanding with the U.S. Maritime Administration to develop the Port of Anchorage Intermodal Expansion Project.

In 2005, the design was selected and the permitting process began.



I'm going to jump ahead to August 2007, when the project received its final permits for in-water construction.

In-water work on the bulkhead sheet pile structure began in 2008 and continued through 2009.

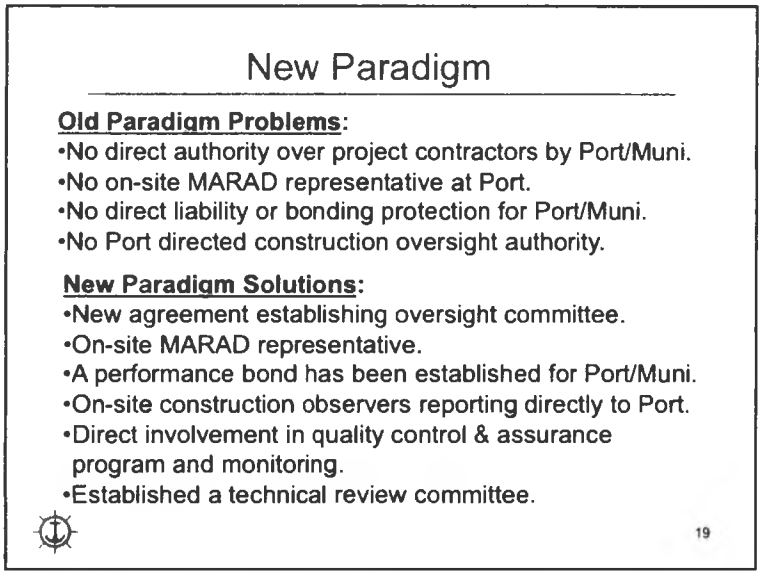
In the spring of 2009, the Port became aware that there had been reported problems with the sheet pile installation.

However, it was not until 2010 that the full extent of the damage was revealed.

The construction plans for 2010 were then altered in response to the discovered damage and work in 2011 was focused on completing further inspections of the sheet pile, specifically in the tail wall sections, to establish the integrity of the structure.

SLIDE 18 – Old Paradigm

This is a flow chart depicting how the project was managed in the past.



You can see the different relationships and responsibilities of each project partner.

The Port was responsible for securing funding and coordinating construction phasing with our operational needs.

The U.S. Maritime Administration, or MARAD, was the lead federal agency for the project and was responsible for contracting and procurement, oversight, quality assurance and control, and managing the project funds.

MARAD hired ICRC to manage and develop the project. ICRC in turn relied on a variety of sub-contractors to design and construct the project.

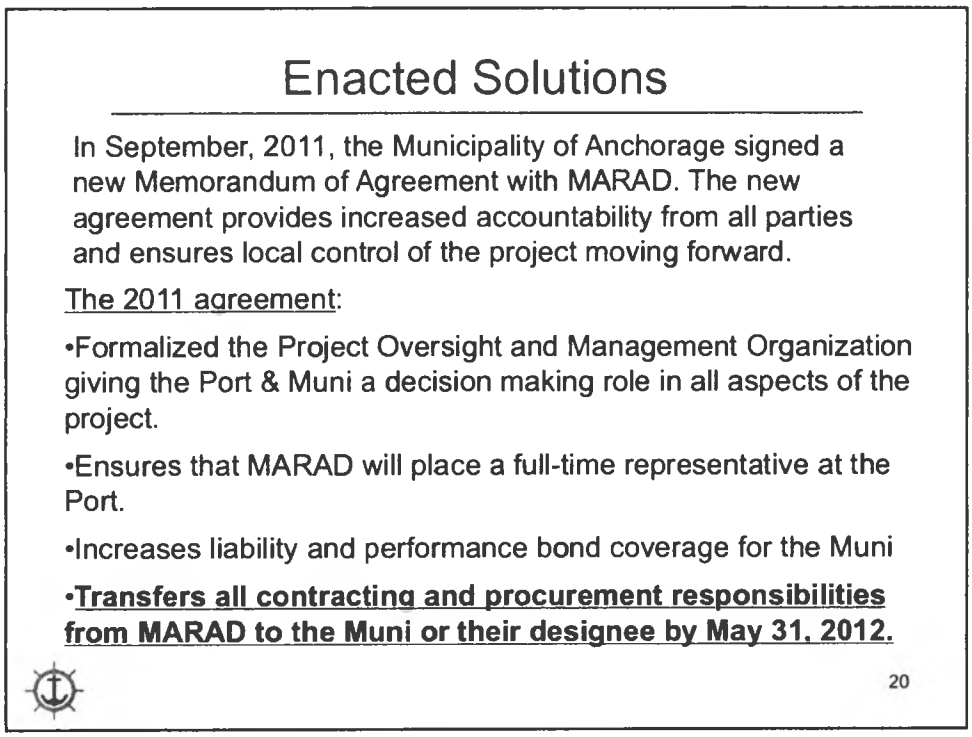
This arrangement was based on that 2003 Memorandum of Understanding between MARAD and Municipality, which in retrospect, had some very serious problems

SLIDE 19 – New Paradigm

Specifically, there was no established relationship between the Port, and ICRC or their subcontractors.

The Port had a relationship with MARAD, but they had no direct authority over the project construction.

MARAD had a contractual relationship with ICRC, and ICRC in turn had contractual relationships with their subcontractors, but the port had no direct relationship or authority over either ICRC or their subcontractors.



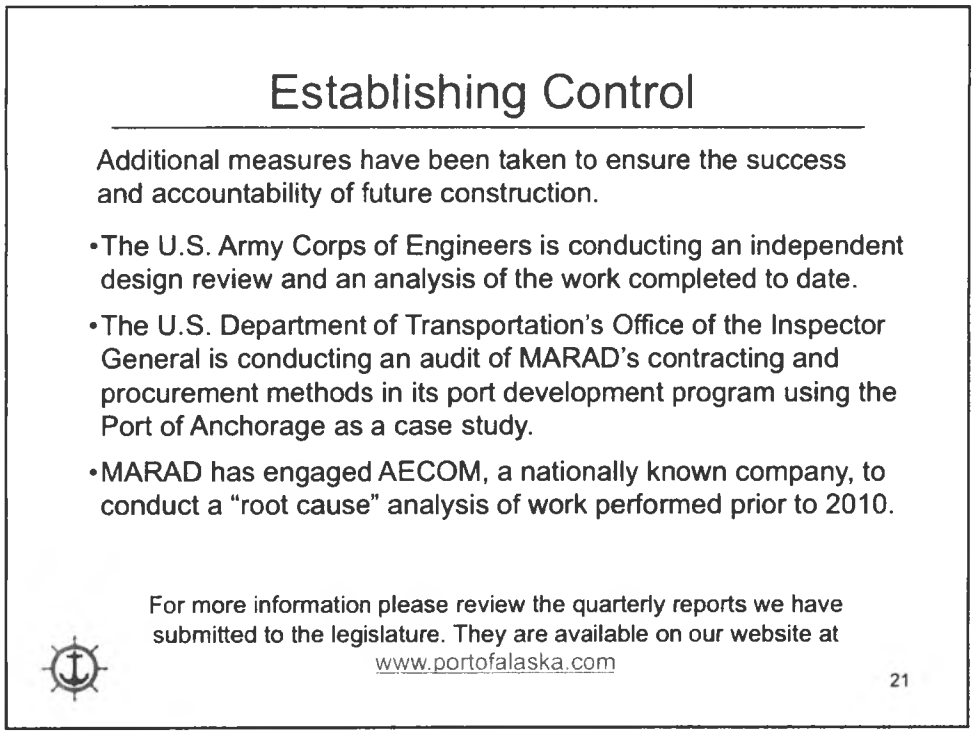
Further, the Port and the Municipality were not protected as a named party on construction bonds, nor were we even authorized to speak directly to the contractors on the ground.

Major changes have been enacted to address these problems and to ensure local control of the project moving forward.

Today, we have a project oversight and management organization, which gives the port a strong voice in all aspects of the project.

A performance bond has been established for the Municipality for all construction work.

MARAD has assigned an on-site representative to the project, and the Port employs construction observers who report directly to Port officials.



SLIDE 20 – Enacted Solutions

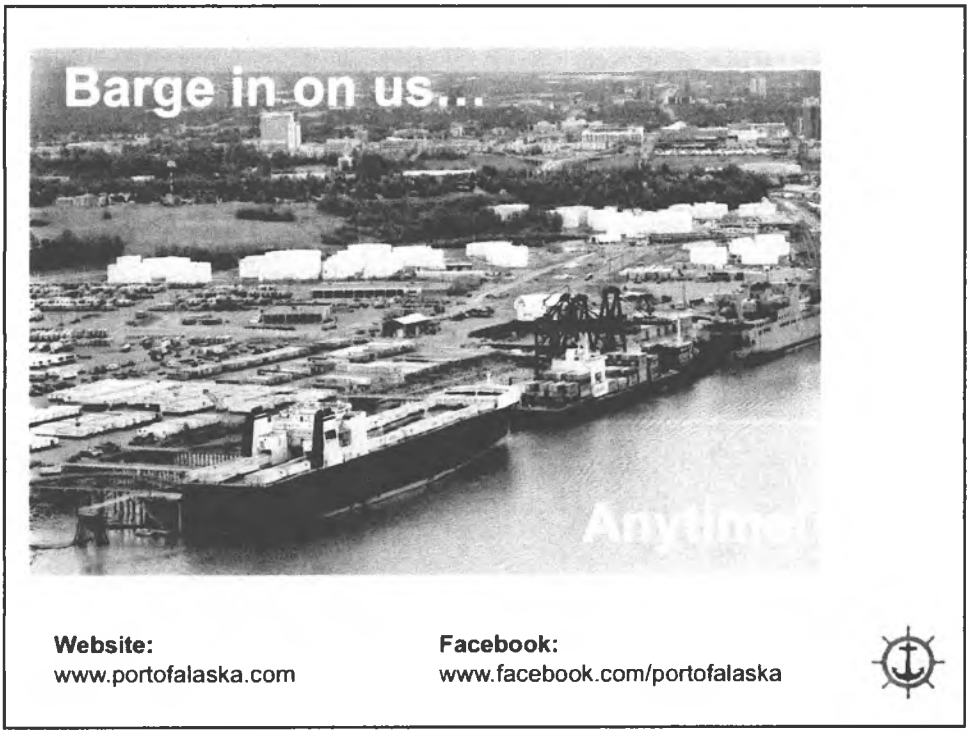
Perhaps the most significant change was a new Memorandum of Agreement signed last fall between the Municipality and MARAD.

This agreement formalizes the oversight committee, calls for a dedicated onsite representative from MARAD, and increases liability and performance bond coverage for the Port and Municipality.

Most importantly, it arranges for the transfer of all contracting and procurement responsibilities to the Municipality or our designee effective May 31, 2012.

This ensures local control of the project moving forward and represents a new direction for the project.

SLIDE 21 – Establishing Control



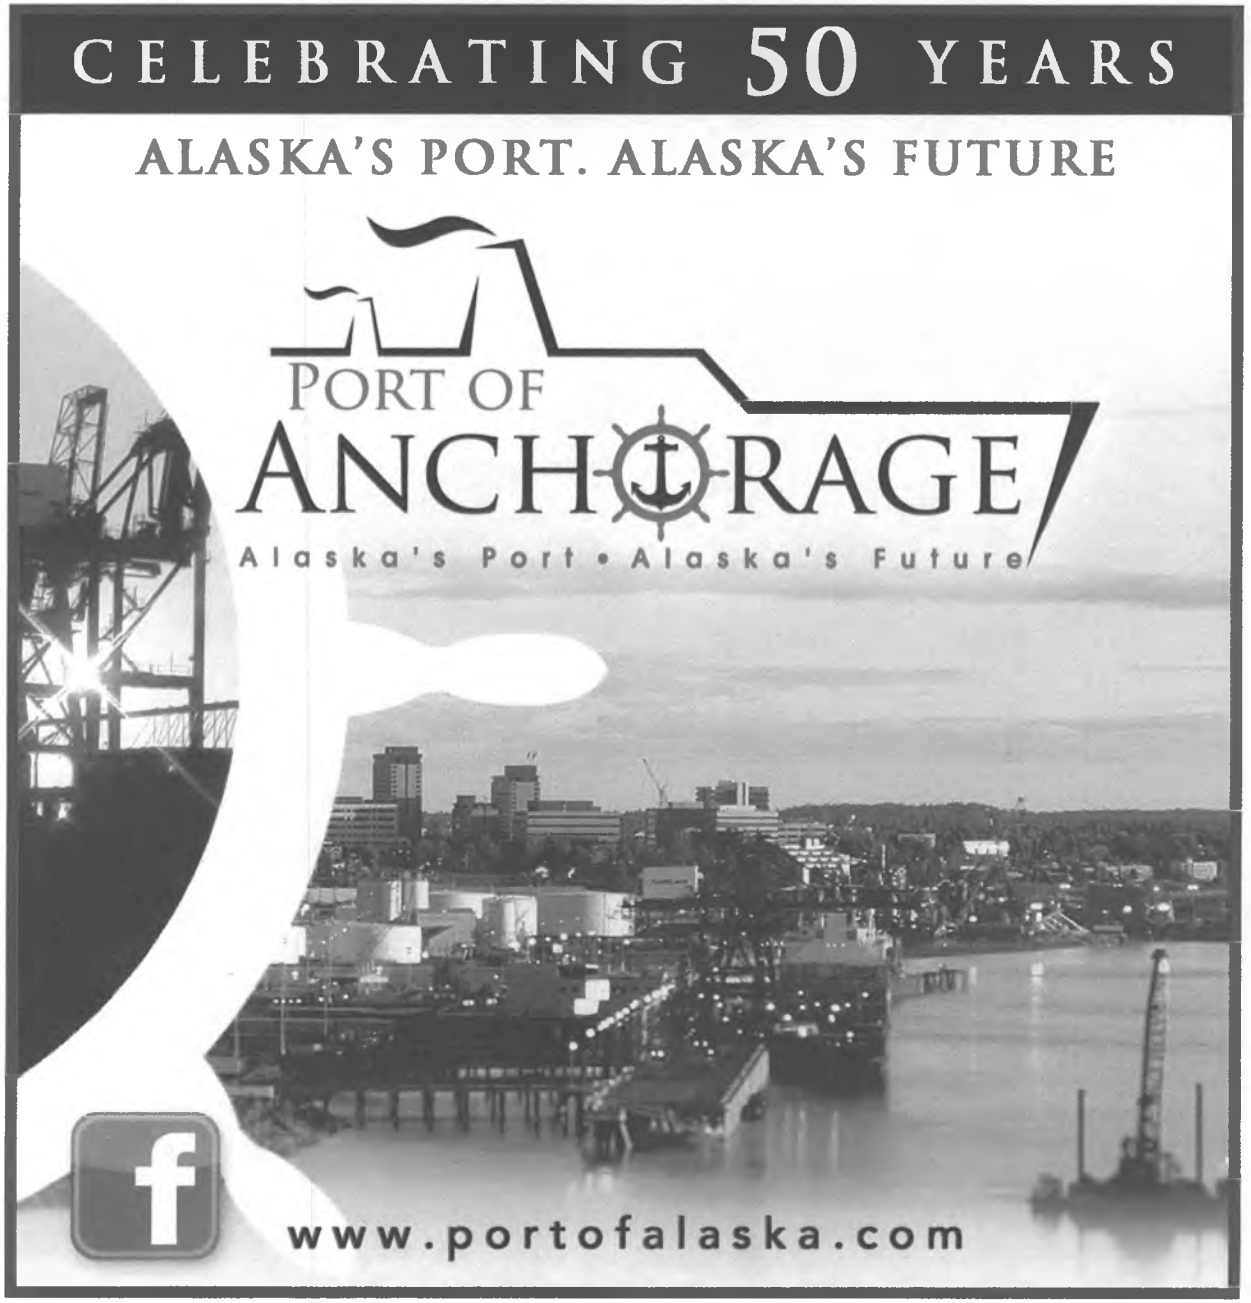
The Port and the Municipality are confident that this project will move forward successfully and have taken steps to determine the cause of the damage and to establish accountability.

MARAD has hired AECOM, a nationally renown firm, to conduct a root cause analysis of the work performed prior to 2010.

The U.S. Department of Transportation Office of the Inspector General is conducting an audit of MARAD's Port construction program using the Port of Anchorage as a case study.

In addition, the U.S. Army Corps of Engineers is currently conducting both a design suitability study and a project analysis to inform the project moving forward and provide possible improvements or enhancements to both design and construction management processes.

The Corps has engaged CH2MHill to aid in this process and results are expected in late April or May and will be made public.



SLIDE 22 – End

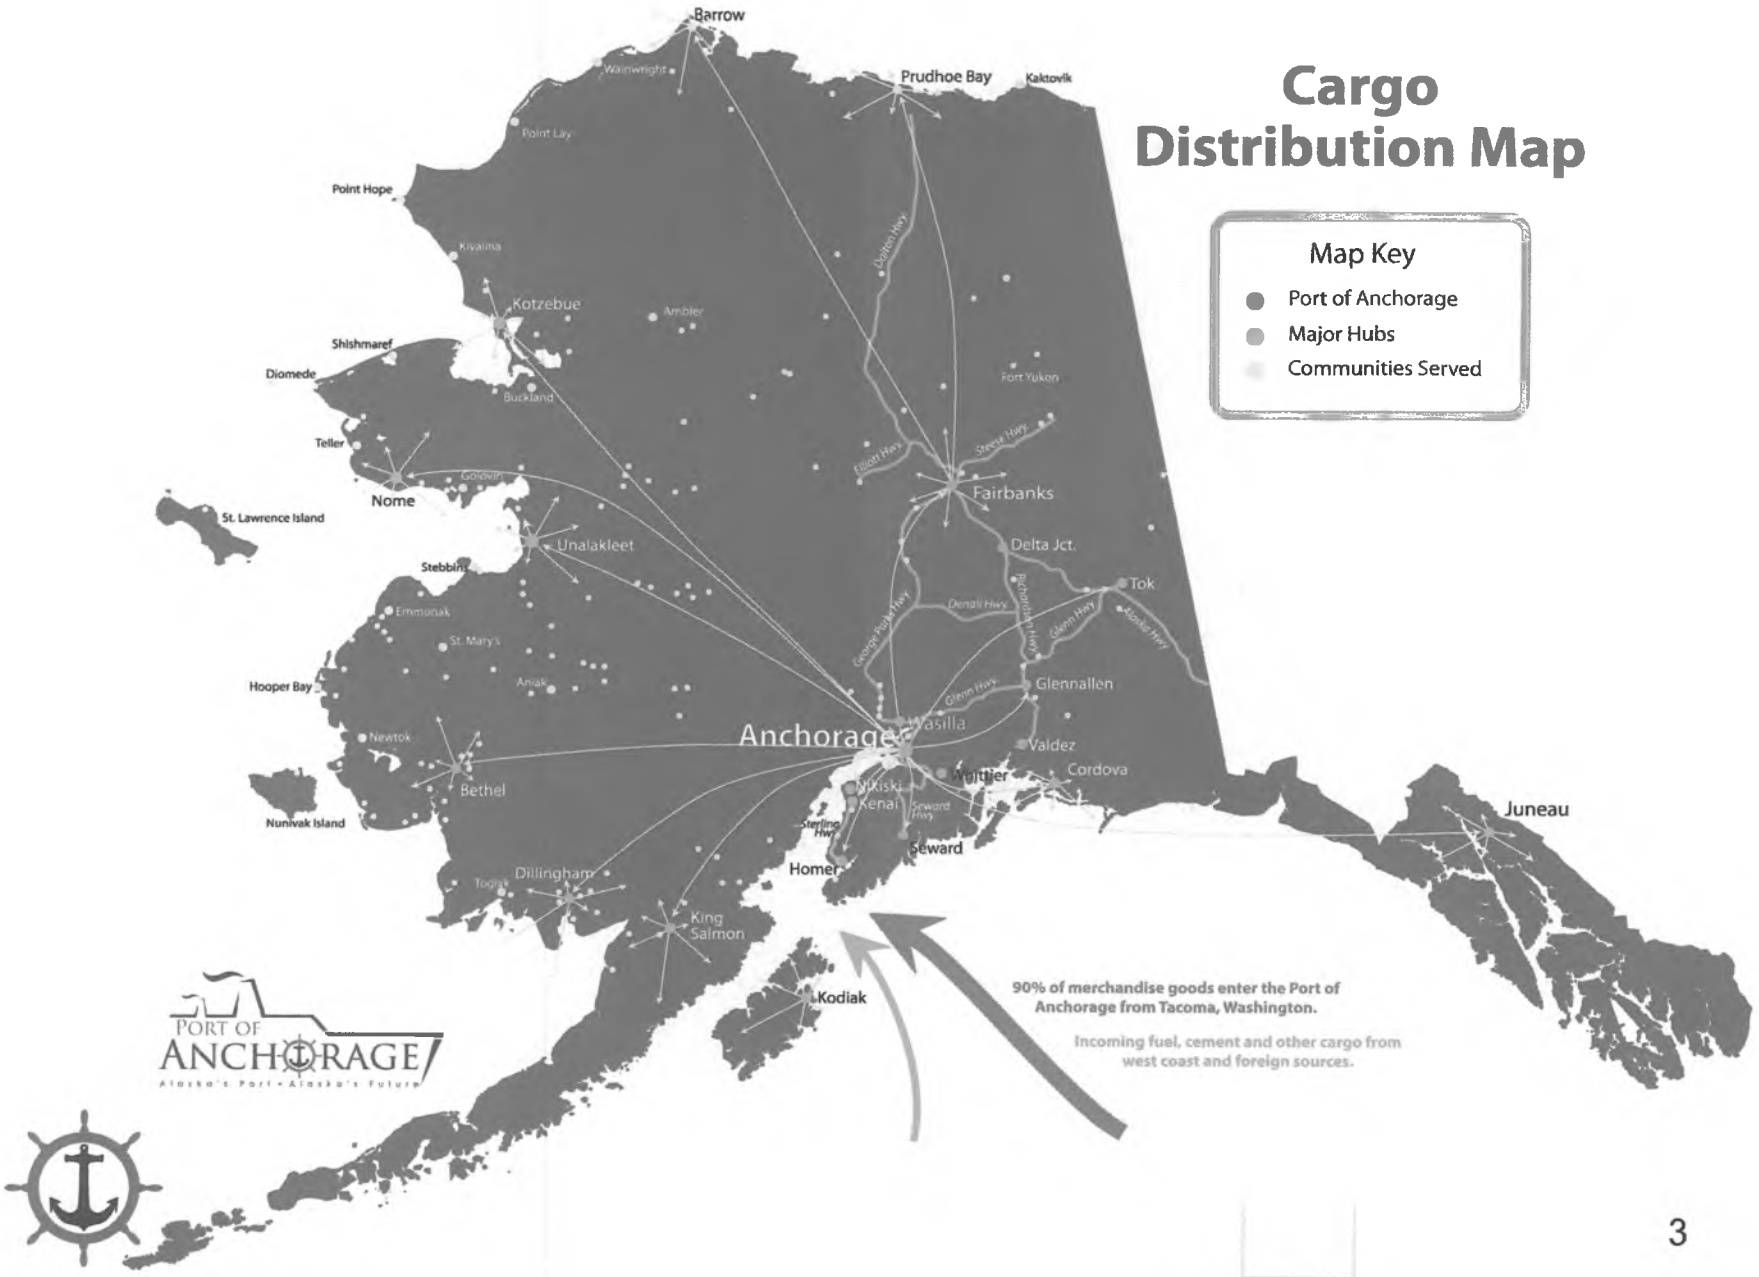
In conclusion, I want to again thank Chairmen Stedman and Chairmen Hoffman and the full committee for providing me with the opportunity to speak here today.

The Port and the Municipality appreciate the past and the continued support of the state and the legislature for this important project.

Again, this is the highest priority of the Municipality and with the commitment of full funding and the measures we have enacted we are confident that this project will move forward successfully with local control and increased accountability.

Thank you.

CELEBRATING 50 YEARS
ALASKA'S PORT. ALASKA'S FUTURE
PORT OF
ANCHORAGE
Alaska's Port • Alaska's Future
www.portofalaska.com



Facts about the Port

- The major point of entry for containerized cargo in Alaska
- Services support over 200 rural communities in the State
- Annually, 240,000 containers move through the Port
- Since 2000, an average 4 million tons of goods and materials pass through the Port's facilities annually
- 90% of merchandise goods for the Railbelt and interior Alaska.\
- 100 million pounds of bypass mail items
- 52,000 vehicles processed annually on average
- 80% of the cement for concrete

Cargo Distribution Map

Fuel Services & Military Support

Fuel Services:

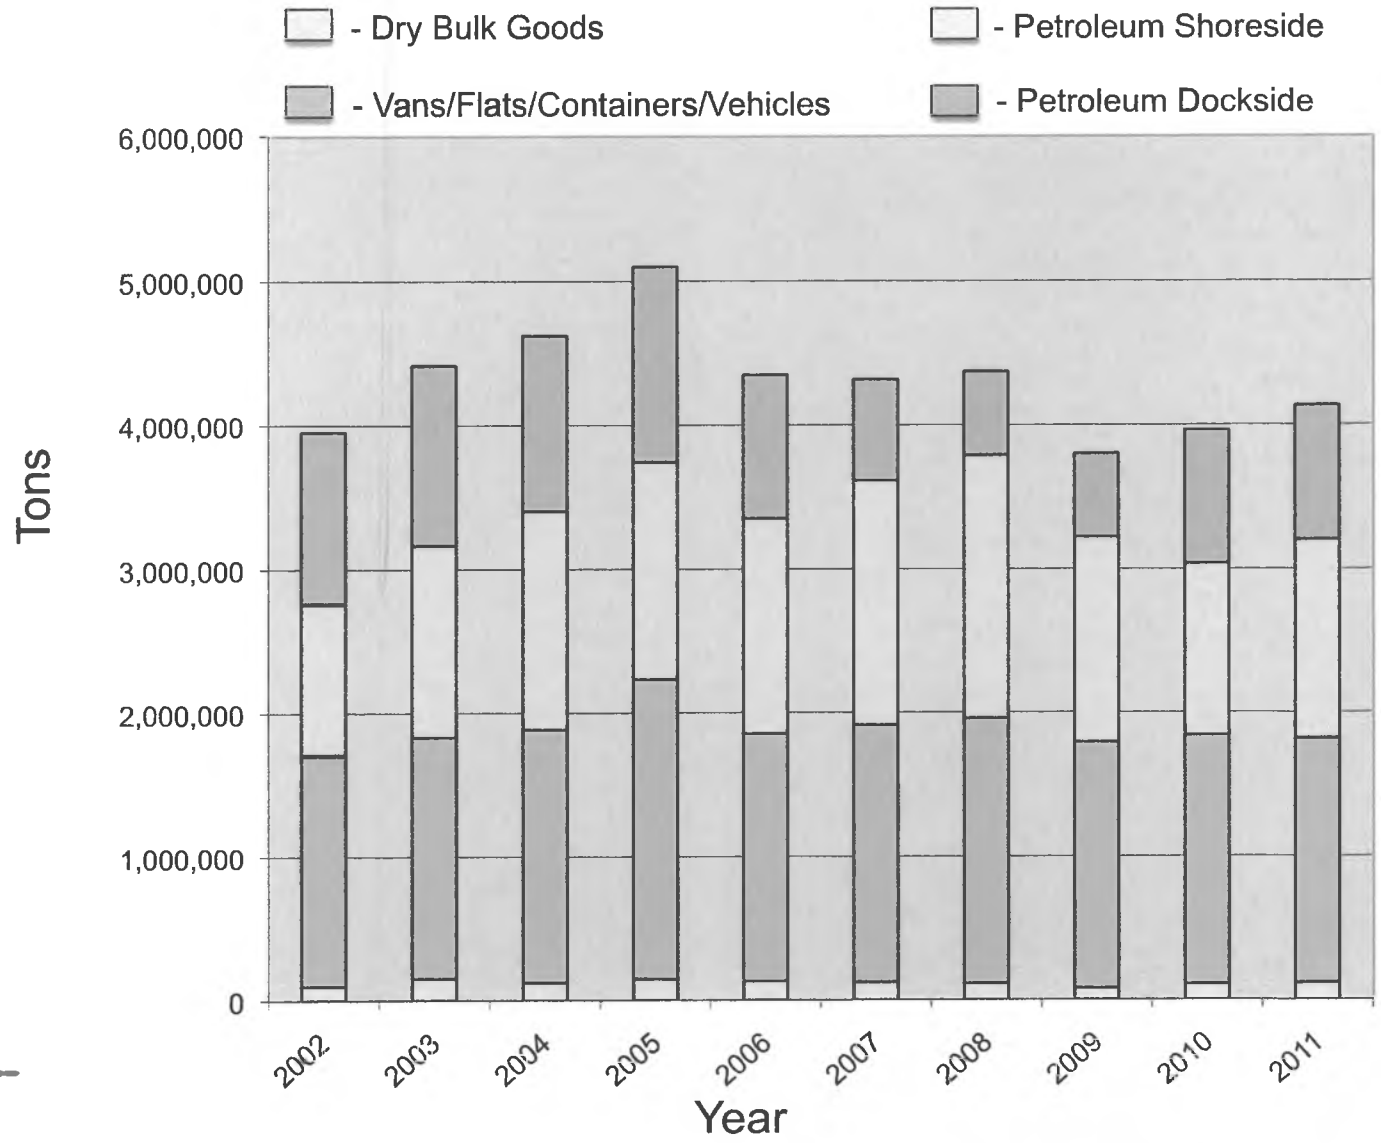
- 11 million barrels of fuel annually
- 2/3 of the jet fuel for Ted Stevens Anchorage International Airport
- 100% of the jet fuel for Joint Base Elmendorf-Richardson
- 2/3 of all fuel used by the military in Alaska
- 1.4 million barrels of fuel are shipped from POA to rural Alaska

Military Support

- Designated a Department of Defense National Strategic Seaport
- One of only 19 ports in the nation to have this designation
- Supported over 30 deployments since 2005, including Stryker Brigade deployments to Iraq and Afghanistan

Employment & Payroll

- Regular Operations:
- $50 million aggregate annual payroll from Port Stakeholders
- Ship days over 3,600 vehicles moving through port
- Non-ship days over 600 vehicles



- Expansion Project:
- Directly employs 150-200 tradesmen & women annually
- Over 200 companies involved in project from 2005 - 2009

Port Stakeholders

A "stakeholder" is a company that relies regularly on the Port facilities to conduct routine business and/or leases port property.

- Horizon Lines
- Totem Ocean Trailer Express (TOTE)
- Alaska Basic Industries (ABI)
- Tesoro Alaska
- Crowley Marine Services
- Aircraft Service International Group (ASIG)
- Flint Hills Resources
- Alaska Railroad Corporation
- U.S. Army – Alaska and U.S. Transportation Command's Surface Deployment & Distribution Command (SDDC)
- Cook Inlet Tug and Barge

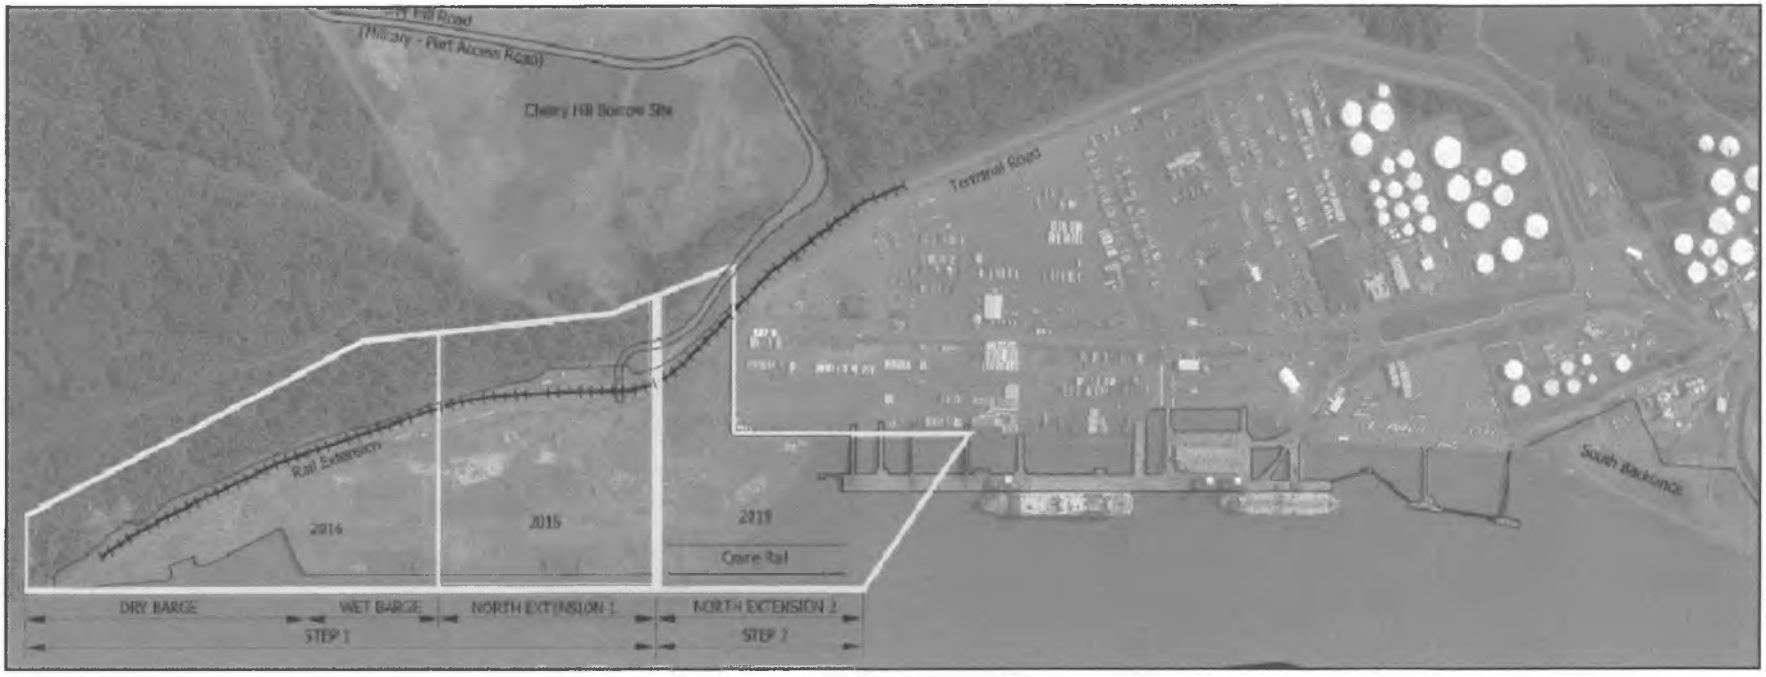
Annual Dock Tonnage

Revenue & Operating Projections

(in Millions)

	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Revenue	$12.3	$13.6	$15.4	$15.5	$16.5	$16.8	$16.9	$17.3	$17.4	$17.8	$18.9
Expenses	$11.1	$12.0	$12.0	$14.3	$14.5	$14.4	$14.6	$14.7	$14.8	$15.6	$15.9
Projected Net Income	$1.2	$1.6	$3.3	$1.1	$2.0	$2.4	$2.4	$2.7	$2.6	$2.2	$3.0
Plus Depreciation	$4.3	$4.7	$4.7	$7.0	$7.1	$7.2	$7.3	$7.3	$7.4	$7.5	$7.6
Projected Cash Flow	**$5.5**	**$6.3**	**$8.1**	**$8.1**	**$9.2**	**$9.6**	**$9.6**	**$10.0**	**$10.0**	**$9.7**	**$10.6**

The expenses and revenue projections include projected maintenance costs for the newly constructed areas.



NOTE: The Port of Anchorage covers all of its own operational costs and reserves its profits for the project.

The Port is 50 years old and in a deteriorated condition.

The Port requires costly annual repairs, and is vulnerable to failure during a high magnitude earthquake.

The Project will replace the current container facilities while providing modern, reliable and expanded infrastructure for our future.

- 2 new ship berths
- 2 new barge berths
- Ability to accommodate larger ships
- Improved seismic capacity
- Secure access to JBER
- 65 acres of land for commercial/industrial use

Expanded Opportunities

Recent Customers

BP & ExxonMobile – Drill Pipe for the North Slope Operations
U.S. Army - Alaska - Military Deployments
Chugach Electric – Sub-station infrastructure
Film Productions – Big Miracle
Holland America – 7 to 9 summer port calls

New Customers

Tetrotech – CIRI Fire Island Wind Farm turbines & construction equipment
A Refined Petroleum Storage Facility/Barge Operator
A Container Barge Operator
Alaska Basic Industries – Planned storage expansion
USS Anchorage – Commissioning ceremony

Future Possibilities

Current Petroleum Tenant – Addition of a new product line
Film Productions
Resource development projects – Gasline, dam, etc.

Funding

The project has been funded through a combination of port, state and federal funds.

$331 million received to date:

Federal Funds	$138.7 million
State Funds	$ 121.3 million
Port of Anchorage Funds	$ 71.0 million

- The Port also qualifies for a $75 million line of credit and is currently allowed to draw up to $51 million. Currently it has drawn $40 million of this credit line.
- The Port has also put $31 million towards the project from savings and revenues since 2001.

State Funds Received

Year	Amount	Bill
2002	$5,853,658	SB 29
2004	$436,505	SB 283
2005	$10,000,000	SB 46
2006	$10,000,000	SB 231
2008	$15,000,000	SB 221
2008	$10,000,000	SB 221
2009	$10,000,000	SB 75
2009	$10,000,000	SB 75
2010	$20,000,000	SB 230
2011	$30,000,000	SB 46
Total	$121,290,163	

Federal Funds Received

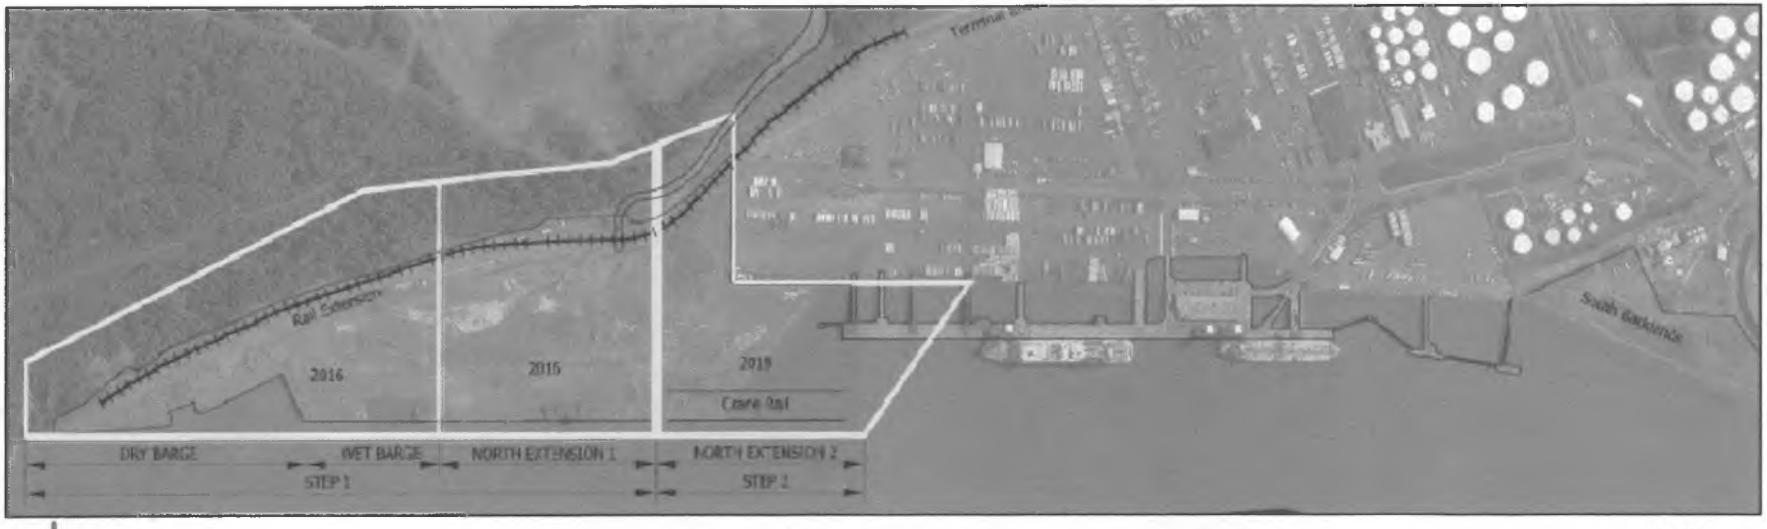
2008	$10,804,618	$1,568,490 $4,483,847	$6,305,000	
2009	$10,000,000	$2,463,192 $6,466,443	$6,547,500	
2010	-	-	$472,390	
Total:	**$60,453,368**	**$42,621,649**	**$35,599,666**	**$1,957**
Total Federal Funds: $138,676,640				

Funds Expended on Project

Year	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	**Total**
(Millions)	-	$6.6	$18.3	$19.6	$10.5	$43.7	$63.3	$63.4	$39.6	$36.5	**$301.5**



- Baseline site assessment, scientific studies, permitting & environmental impact assessments
- Instituted environmental impact avoidance, minimization, and/or mitigation measures
- Over-water Geotechnical Program:
  -sampling, analyses, seismicity studies, design enhancements, and optimized dredging specs
- Hydrologic & hydraulic modeling for harbor sedimentation and icing studies
- Geotechnical Analysis: Borings, Analysis, Design Changes
- Extracted, tested, sorted, transported and placed structural fill to create 65 acres of useable new land
- Completed dry barge berth with limited operational capacity
- Constructed 5 mile haul connecting POA to Joint Base Elmendorf Richardson (JBER) allowing secured military deployment, an emergency evacuation route and off-road gravel transport.
  -This road is already being used for military deployments, relieving congestion on public roadways.
- Cleared land, opened and operated two gravel extraction borrow pits on JBER
- Realigned Terminal and Tidewater roads with enhanced intersections, track & fuel line crossings, & safety upgrades
- Demolished unserviceable track and installed upgraded, extended track with tie-in to the ARRC rail line
- Installed a new dedicated ultra-low sulfur diesel line
- Manufactured and installed a customized floating dock for the Coast Guard for Emergency Response
- Buried, upgraded and extended power lines and critical drainage systems
- Completed sheet pile inspections establishing the integrity of the structure

Funding

State Funding Needed: $350 million
This funding is based on the February, 2011 ICRC cost estimate to complete two barge berths and two ship berths in the northern project area.

The construction will be completed in two steps so as not to interrupt our commercial shippers.

Step 1: complete two barge berths and northern ship berth
Step 2: compete second ship berth with crane rails

Project History

1999 The Port's 10-year Master Plan recommends an expansion program to meet future needs.

2003 The Port partners with the U.S. Maritime Administration (MARAD) to implement the program.

2005 The preferred alternative is selected (current project design) and the permitting process begins.

2006 Terminal Road Rail Extension and Coast Guard floating dock completed.

2007 The project receives final permits.

2008 North and South Backlands filled and Port/Tidewater Rd. improvements completed. Bulkhead construction in the northern phase begins.

2009 Dry Barge Berth bulkhead and mooring complete. Bulkhead construction continues. The port is made aware of problems in the spring of 2009.

2010 Bulkhead construction halted when the extent of the damage was revealed.

2011 Work focused on completing sheet pile inspections to establish the integrity of the structure.

Old Paradigm

Federal Lead Agency

MARAD

US DOT Maritime Administration

•Contracting & procurement authority, oversight and quality assurance and management of project funds.

Project Owner

Port of Anchorage

Municipality of Anchorage

• Securing funding and coordinating the construction phasing to fit the port's needs.

Project Manager

ICRC

Integrated Concepts & Research Corp.

• Project development & management, design, construction and permitting activities.

Design & Construction Subcontractors

New Paradigm

Old Paradigm Problems:

- No direct authority over project contractors by Port/Muni.
- No on-site MARAD representative at Port.
- No direct liability or bonding protection for Port/Muni.
- No Port directed construction oversight authority.

New Paradigm Solutions:

- New agreement establishing oversight committee.
- On-site MARAD representative.
- A performance bond has been established for Port/Muni.
- On-site construction observers reporting directly to Port.
- Direct involvement in quality control & assurance program and monitoring.
- Established a technical review committee.

Enacted Solutions

In September, 2011, the Municipality of Anchorage signed a new Memorandum of Agreement with MARAD. The new agreement provides increased accountability from all parties and ensures local control of the project moving forward.

The 2011 agreement:

- Formalized the Project Oversight and Management Organization giving the Port & Muni a decision making role in all aspects of the project.
- Ensures that MARAD will place a full-time representative at the Port.
- Increases liability and performance bond coverage for the Muni
- **Transfers all contracting and procurement responsibilities from MARAD to the Muni or their designee by May 31, 2012.**

Establishing Control

Additional measures have been taken to ensure the success and accountability of future construction.

- The U.S. Army Corps of Engineers is conducting an independent design review and an analysis of the work completed to date.
- The U.S. Department of Transportation's Office of the Inspector General is conducting an audit of MARAD's contracting and procurement methods in its port development program using the Port of Anchorage as a case study.
- MARAD has engaged AECOM, a nationally known company, to conduct a "root cause" analysis of work performed prior to 2010.

For more information please review the quarterly reports we have submitted to the legislature. They are available on our website at www.portofalaska.com

February 2011

EXECUTIVE SUMMARY
PORT OF ANCHORAGE CARGO DISTRIBUTION STUDY

The sources for the data in this executive summary are extensively referenced in the body of this study.

Goods shipped through the Port of Anchorage (POA) reach almost every Alaska community making the POA arguably one of the most important infrastructure facilities in the State of Alaska. The data presented in this report shows the entry points and distribution channels of critical cargoes that drive Alaska's economy and bring Alaskans the consumer goods and business supplies essential to the state's economy and daily life.

For the vast majority of Alaskans, the Port of Anchorage **is** Alaska's Port. The annual cargo entering the Port of Anchorage accounts for 90% of the merchandise goods used by Alaskan communities west of Cordova. This study will help inform public policy decision at the state and federal level to determine the level of public support that is justified for the Port expansion project.

Nearly all of the container goods that make up the day-to-day items used by Alaskans originate in shipments from the Port of Tacoma to the Port of Anchorage (POA). These shipments represent a critical lifeline for Alaska and amount to nearly 30 percent of Tacoma's total cargo activity. The total value of these goods is estimated to be well over $1 billion annually according to a study by the Port of Tacoma and the Seattle Chamber of Commerce.

Once these cargos enter Alaska through the Port of Anchorage, they are distributed throughout the Railbelt by truck, train, and to rural Alaska by air and barge. Ninety percent of the goods delivered to Fairbanks and the Mat-Su area originate in shipments through the Port of Anchorage as do seventy-five percent of the goods consumed in Western and Northern Alaska. A substantial amount of POA originated cargo is shipped via air freight to Southeast Alaska and 28.5 million pounds of US Postal Service Standard mail arrives in the state annually through the Port.

The POA is also a major entry point for fuel. On average, two-thirds of the fuel for air carriers at Ted Stevens Anchorage International Airport, and two-thirds of the fuel used by the US military and federal government agencies in Alaska, are delivered through the Port. This includes 100 percent of the jet fuel for Elmendorf Air Force Base and Fort Richardson- now Joint Base Elmendorf-Richardson (JBER). Smaller aircraft around the state are particularly dependent on Port operations because all in-state aviation gasoline (avgas) passes through the Port. Additionally 90 percent of the fuel Alaskans use to operate their vehicles and water craft originates in POA deliveries.

The Port of Anchorage is the only port in Southcentral that has the capability to offload bulk cement in unsacked powder form. As a result, over 80 percent of the cement used for concrete construction in the state comes into the Port annually, enough to build a four foot wide sidewalk from Homer to Barrow and back.

The Port is essential to the Armed Forces and was designated one of only 19 National Strategic Seaports by the Department of Defense. The US Armed Forces have staged over 20 military deployments through the Port of Anchorage in the past 10 years, including Stryker Brigade deployments to Iraq and Afghanistan. In a 2009 letter to the U.S. Secretary of Transportation, Raymond LaHood, U.S. Senator Daniel Inouye calls the Port of Anchorage "vital to our nation's defense" citing its service to all five military bases saying "the port is essential in serving the thousands of Army and Air Force personnel that call Alaska home." He continues on to say that "without the Port of Anchorage, these key military bases and activity would be out of business."

The Port of Anchorage makes a substantial contribution to Alaska's economy not only through the goods and cargoes which enter the port, but also through jobs and associated payroll. Total payroll at the Port for direct operations exceeds $53 million per year. An additional $20 million dollars per year in construction wages supports around 500 jobs and is expected to continue through 2021. The associated railroad, trucking and air cargo operations (delivering Port of Anchorage sourced goods at the regional air hubs of Fairbanks, Bethel, Nome, Dillingham, Kotzebue and Barrow) also make a significant contribution to many local economies.

Four container ships per week supply the vast majority of consumer goods and business supplies to Alaskans. In the course of this study we discovered that most retail companies, non-profits and government agencies reported that they would reach a crisis mode within two weeks if service was disrupted.

This study also identifies some of the issues that could substantially increase operating costs within the distribution system, and ultimately, the cost of goods to Alaska consumers. One example is increased fees and tariffs to pay for the Port of Anchorage Intermodal Expansion Project should local bonding be required. Federal issues include proposed changes to the bypass mail system, elimination or reduction of the Essential Air Service Program, new requirements for marine vessels to use ultra-low sulfur diesel, and any initiation of federal container taxes. Each of these issues could have a significant impact on the cost of goods to Alaskans.

STUDY PURPOSE AND METHODOLOGY

The purpose of this study is to describe the distribution patterns of goods which enter the Port of Anchorage (POA) and are delivered to Southcentral, Interior, Northern, Western and Southeast Alaska. The information from this study is intended to inform the general public and public policy makers on the importance of the Port's operations to Alaska's people and businesses.

The study methodology was to collect all available and relevant data on incoming volumes of cargo entering the Port of Anchorage utilizing published documents, port data and interviews with port operators. The final cargo destinations within Alaska and the patterns of freight distribution were further determined through interviews with freight forwarders, trucking, railroad and air freight operators along with retail and government related customers.

To better illustrate the patterns of freight distribution, the data was arranged according to the following tiers:

I. The first tier consists of shipping companies and operators who deliver cargo to the POA including containerized cargoes of consumer goods and business supplies, fuel, cement, construction materials, military equipment, building materials, automobiles and commercial vehicles.

II. The second tier is made up of trucking and rail operations which move goods from the POA to a secondary location. There they are either delivered directly to retail markets or consolidated and shipped via a third tier transporter to a further destination.

III. The third tier is comprised of air cargo carriers and barge operators who ship consolidated freight to hub airports and local harbors via bypass mail, air freight and barge operations. Once received at a hub airport or harbor, the freight is then further broken down for delivery by smaller air carriers or barge shippers for final delivery to rural villages.

IV. The fourth tier includes those goods delivered to the Port of Anchorage and then transshipped to Kodiak, Dutch Harbor and Western and Northern Alaska by container ship and barge. This includes consumer goods and business supplies, fuel, construction materials, automobiles and commercial vehicles.

Data on incoming fuel, cement and military supplies were also analyzed to determine their sources and patterns of distribution.

The Port is committed to treating any proprietary data in a confidential manner and informed study participants that such data would be aggregated to ensure confidentiality. As a result, much of the data is described in overall terms or percentages, nevertheless it clearly indicates the patterns of distribution.

The total payroll of Port stakeholders was collected from operators to help illustrate the economic impact of direct Port operations on Alaska's economy. This data was aggregated into a total payroll amount and was interpreted by Dr. Darren Prokop, UAA Professor of Logistics. The Alaska Trucking Association and the Alaska Association of Air Carriers provided additional information to help assess the value of trucking and air cargo operations to Alaska's economy.

In the course of interviewing participants in the distribution chain, issues of concern were raised that could affect the cost of delivery of goods throughout Alaska including the costs of developing the Port if local bonding were required, changes or reductions in the bypass mail system, requirements for marine vessels to use ultra-low sulfur diesel fuel, and any change in container taxes. These concerns are addressed at a cursory level towards the end of this study.

Participants also identified several inefficiencies in current Port operations that could be improved as a result of the new Port design. This information is contained in *Commodity Details and Port Efficiency Issues* on page 15.

Participants were asked to identify the impact on their businesses should there be any disruptions to Port of Anchorage operations. A summary of their responses is contained on page 18 under *Interruption of Service.*

This study was sent in draft form to all participants for review to identify any omissions or errors. A complete list of companies interviewed for this study can be found on page 25.

ABOUT THE AUTHORS

This study was conducted under the supervision of Dr. Darren Prokop, Professor of Logistics at the College of Business and Public Policy at the University of Alaska, Anchorage (UAA). Primary research for the project was conducted by Paul Fuhs under the supervision of the Port of Anchorage. The project was assisted by University of Alaska Anchorage student interns Duke Kahumoku (majoring in Political Science) and Grigory Kalugin (majoring in Logistics).

A NOTE FROM THE AUTHORS

The authors would like to thank all the companies who participated in this study. Their cooperation was freely given and their support is very much appreciated. Too often this sector of our economy is taken for granted as essential items appear each week on the shelves without any thought as to how they got there.

This study contains data and statistics, which when taken together, are quite remarkable. As different sectors of the industry were interviewed, it became apparent that behind the numbers there are very real Alaskans, all pulling their weight in a complex and sometimes dangerous system that requires each leg to work all the time, every time, in order to be successful. This silent, steady system is what keeps Alaska's economy alive, its what keeps food in the house and pencils on the desks. This study is a way of recognizing what these companies and people do for the citizens of Alaska every day.

BACKGROUND ON CURRENT PORT OPERATIONS AND PORT REDEVELOPMENT PLANS

The current Port facility has four ship berths and a published draft depth of -35 ft mean lower low water (MLLW) which easily accommodates ships requiring 30 feet of draft. The two northern berths are container ship berths used primarily by Horizon Lines and Totem Ocean Trailer Express (TOTE). A container ship from each of these companies travels from the Port of Tacoma to call on the POA twice a week on Tuesdays and Sundays. TOTE offloads their cargo via Roll-on/Roll-off (RO/RO) facilities while Horizon Lines uses three 38-foot gauge container cranes to lift containers on and off their ships. These container berths are also used to accommodate cruise ship vessels during summer months and other vessels as needed. The two berths on the south end of the dock are for bulk cargo (cement) and petroleum oil and lubricants (POL). These berths accommodate fuel tankers, fuel barges, and dry bulk carriers.

The Port occupies 129 acres with 81 acres leased to long-term users and 31 acres used as transit storage for cargo including fuel tanks and cements silos. These same areas are occasionally designated for use by the Department of Defense to stage military deployments. The Alaska based U.S. Coast Guard Maritime Safety and Security Team is home ported at the POA with 75 personnel and multiple emergency response vessels.

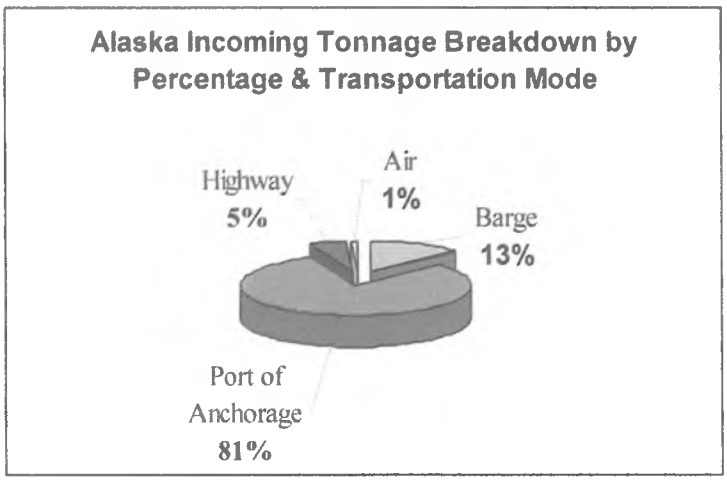
The POA is involved in a major project to replace aging and deteriorated facilities that were built up to 50 years ago and are at risk of catastrophic failure in the event of a major earthquake[1]. The Port of Anchorage Intermodal Expansion Project began in 2002 and upon completion will add 1,700 ft of linear dock space, creating 7 functioning ship berths, two public barge berths, and an additional 135 acres of land which can accommodate industrial development activities. The project increases the operating depth of the Port to -45' MLLW and is expected to reduce dredging costs. The expansion project must be constructed in phases with new operational sections completed before abandoning the current facilities to ensure that there is no disruption of service.

Several areas of the new facilities are constructed to withstand the worst case expected earthquakes based on past history of seismic activity. They are designed to operate for 50 years without any major maintenance and an overall useful life of 75 to 100 years. The expanded facilities will also address a number of inefficiencies inherent to the current facilities which are described in this report.

[1] R&M Consultants, Inc. *Seismic Vulnerability Report.* (2009).

The Port of Anchorage operates on a self-sustaining basis. Port tariffs and fees pay for all operations and maintenance of the facility, along with a small reserve fund. This steady fiscal performance qualifies the Port for a $75 million line of credit used as part of the Port's match to state and federal funds in the ongoing expansion project.

FINDINGS OF THE STUDY



TIER I: ANNUAL INCOMING CARGO AND ORIGIN OF SOURCES

In 2009, the baseline year for complete data, the Port of Anchorage received 4,370,000 tons of cargo (8.74 billion pounds) comprised of containerized consumer goods and business supplies, US mail, fuel, construction materials, drill pipe, cement for concrete, automobiles, and military equipment.[2]

An additional 706,000 tons of annual cargo deliveries, most by barge, do not pass through the POA, but enter Southcentral Alaska through the Alaska Railroad Corporation's rail barge operations in Seward and Whittier and through barge deliveries to North Star Terminal and Stevedoring and the Swan Bay dock. These are primarily outsized and overweight loads and bulk construction supplies.[3] Around 325,000 tons of goods enter the Railbelt through trucking and airfreight.

Railbelt Alaska Incoming Tonnage Breakdown: Percentage by Facilities[4]

There are four ways of delivering goods to the Alaska Railbelt: container ship, barge, trucks, and air freight. Each delivery method is displayed by percentage in the following chart according to data from the Alaska Rail Road Corporation.

[2] Port of Anchorage, 2009 Annual Port Tonnage Report
[3] Personal Interview, September, 2010, Alaska Rail Road Corporation
[4] Personal Interview, September, 2010, Alaska Rail Road Corporation & 2009 Annual Port Tonnage Report

POA LO/LO and RO/RO Operations

Container crane lift on/lift off (LO/LO), and roll-on/roll-off (RO/RO) operations account for 1,820,000 tons annually, (120,000 incoming containers annually, or about 10,000 containers per month.)[5] TOTE's RO/RO operations also allow for the delivery of oversized loads, or just about anything that can be put on wheels.

POA container crane and RO/RO cargo is primarily comprised of consumer goods and business supplies, construction materials, and vehicles. This represents 90 percent of Railbelt and interior merchandise cargo and business supplies shipped to Fairbanks, Mat-Su and the Kenai Peninsula.[6] **Origin of Cargo:** Port of Tacoma

Non POA Barge Cargoes

Around 706,000 tons of annual cargo does not pass through the POA, but is instead transported by barge to Seward, Whittier, and private docks in Anchorage. These cargoes are mostly bulk but can also be containerized and are primarily materials such as chemicals, sack cement, grain products, construction goods, heavy industrial loads, oversized items and fuels. There are several different types of barges that use the facilities listed above including rail barges, with regular weekly service between Seattle or Price Rupert depending on the company, and fuel barges. **Origin of Cargo:** Seattle, Prince Rupert, BC

Fuel

Eleven million barrels[7] (or 462 million gallons) of refined petroleum products move through the Port of Anchorage annually on a regular basis including:

- Two-thirds of the jet fuel used at Ted Stevens Anchorage International Airport
- Two-thirds of all fuel used by military and federal agencies in Alaska
- 100 percent of the jet fuel used by Elmendorf Air Force Base
- 90 percent of the fuel used by vehicles, watercraft and general aviation aircraft in Railbelt Alaska
- 100 percent of the aviation gasoline used statewide (including Southeast Alaska)

Origin of Cargo: Flint Hills Refinery, Tesoro Refinery, Petrostar Refinery, domestic and international ships and vessels.

[5] Port of Anchorage, 2008 Annual Tonnage Report
[6] 1999 VZM TranSystems Corp/Northern Economics, *Port Master Plan*, Page 1.C 14
[7] Port of Anchorage, Annual Dock Tonnage 2001 - 2010

Cement

An estimated eighty percent of the cement for manufacturing the concrete used in Anchorage, Fairbanks, Mat-Su, the Kenai Peninsula and the road system is delivered through the Port of Anchorage by the company Alaska Basic Industries, a division of Anchorage Sand and Gravel (AS&G).[8] Other barge operations deliver an additional 20,000 tons per year. In some cases, cement is distributed from the POA to rural areas via air freight from Ted Stevens Anchorage International Airport. To date, 78 Alaskan communities throughout the State, including the North Slope, have received cement through this distribution method.

Origin of Cargo: Korea, China, Thailand

Automobiles and Commercial Vehicles

About ninety-five percent of new private, commercial, and military automobiles and trucks bound for the Railbelt come through Port of Anchorage. On average, 50,000 vehicles pass through the POA annually.[9] **Origin of Cargo:** Port of Tacoma

Military Cargo

In addition to the fuel, military operating supplies and equipment, commissary groceries, and base/post exchange consumable and durable goods items provided through the Port of Anchorage. In a 2011 letter to Alaska's Congressional delegation, Lieutenant General Dana Atkins, Commander of Alaska Command wrote "The Port of Anchorage is not only the strategic hub for military deployments and operations, it is also one point of throughput for the commodities we stock in our base exchanges, commissaries and troop stores in support of 55,000 military and family members in Alaska."

In the past ten years the Port has supported over 20 military deployments, including deployments to Iraq and Afghanistan. Lieutenant General Atkins writes "Since 2005 almost 18,000 pieces of military cargo in the form of combat vehicles, weaponry, and support equipment have passed through the Port. Our ability to project this power to combat theaters around the globe depends heavily upon sealift through the Port of Anchorage."[10]

USPS Mail

Twenty-eight and a half (28.5) million pounds of US "standard mail" is delivered annually through the Port of Anchorage.[11] **Origin of Cargo:** Port of Tacoma

Bulk Shipments and Construction Materials through POA

These include general construction materials, drill pipe for the North Slope and industrial structural elements. If Cook Inlet Region Incorporated (CIRI) moves forward with it planned wind energy project on Fire Island, the towers are expected to arrive in Cook Inlet by ship and be delivered to the POA for transfer by barge to Fire Island. This will be facilitated by the Port's dry barge landing facility.
Origin of Cargo: Seattle, Tacoma and International sources.

TIER II: PRIMARY DISTRIBUTION TO ANCHORAGE, INTERIOR AND RAILBELT ALASKA

Trucking operations make deliveries directly to large and small retail stores in the Anchorage bowl. Trucks also deliver containers to freight consolidators and warehouses in Anchorage who further break down the cargo for smaller deliveries.[12]

Nearly 90 percent of consumer goods and business supplies for Fairbanks, Mat-Su, and the Kenai Peninsula first enter through the Port of Anchorage. The goods are primarily transported as follows:

- 60 percent intermodal transfer to ARRC for rail transport
- 40 percent delivered by trucking operations[13]

Standard US mail shipped through the Port of Anchorage is delivered by truck to the USPS sort operation near the Ted Stevens Anchorage International Airport. After sorting, it is delivered locally by mail carriers and statewide by truck and air operations. Fuel and cement are delivered directly by truck and railcar to customers throughout the state while cement is also delivered to remote locations by air freight. Construction materials and automobiles are delivered directly by truck.

These trucking operations have a substantial impact on Alaska's economy. The American Transportation Research Institute reports that in 2008, 603 Alaska trucking companies provided 19,955 jobs.[14]

[12] Personal Interview, Alaska Trucking Association, November, 2010.
[13] Personal Interview, Alaska Rail Road Corporation, September, 2010.
[14] American Transportation Research Institute & Alaska Trucking Association, *Alaska Fast Fact.*, (2011)

TIER III: SECONDARY DISTRIBUTION OF CONSUMER GOODS AND BUSINESS SUPPLIES FROM THE PORT OF ANCHORAGE TO RURAL AND SOUTHEAST ALASKA

Surface and Air Transport of Goods

Goods designated for shipment to rural Alaska are transported primarily by trucks to distribution warehouses as stated under the second distribution tier. These warehouses and distribution centers consolidate the goods which are then further distributed to air freight and bypass mail carriers for transport to rural areas. The volume of consumer goods transported through this method is significant. According to a 2006 Northern Economics study, 75 percent of total goods move to rural Alaska through bypass mail.[15]

Air cargo and related passenger flight operations make a substantial contribution to Alaska's economy. According to the Alaska Air Carriers Association, there are 304 commercial operators in Alaska with 47,000[16] people employed in Alaska aviation. The amount of airfreight per person in Alaska is 39 times higher than the US average, amounting to almost one ton per person per year.[17] Air cargo shipments of POA originating goods are also made year round to resource development projects such as Red Dog Mine, Donlin Creek Mine, the North Slope, etc.

According to Alaska Airlines Air Freight, a "substantial" amount of POA originating cargo is sent to the Southeast Alaska communities of Cordova, Juneau, Wrangell, Petersburg, Sitka and Ketchikan. Once the cargo is delivered to these hub communities, smaller air carriers further distribute this Anchorage originating cargo to more remote villages in Southeast.[18]

Bypass Mail

Bypass mail plays a crucial role in delivering consumer goods to Western and Northern Alaska. Cargoes originating from the Port of Anchorage are delivered by truck or rail to the primary air cargo hubs of Anchorage, Fairbanks and Deadhorse. From there this cargo is flown either to the regional hubs of Bethel, Nome, Kotzebue, Dillingham, and Barrow, or flown directly to the villages. The U.S. Postal Service reports that these shipments total almost 100 million pounds per year, with 1.5 million pounds of bypass mail being shipped from Anchorage and 750,000 lbs shipped from Fairbanks every

---

[15] Northern Economics, *Port of Anchorage Consolidation & Distribution Study,* 2006.
[16] Alaska Department of Transportation & Public Facilities Commissioned Study, *The Economic Contribution of the Aviation Industry to Alaska's Economy,* 2008.
[17] Alaska Air Carriers Association, *Alaska Aviation Facts*, 2009.
[18] Specific cargo amounts and percentages are not available since one carrier, Alaska Airlines, flies almost all of this cargo and to publish it would reveal proprietary information.

week.[19] An additional 10 percent of cargo is flown at the full tariff air freight rate. Standard US Mail shipped through the Port of Anchorage is also delivered by air to rural Alaska.

Bypass mail provides a lower cost to consumers since air cargo is charged at "postage stamp rates" which means that cargo moves at $0.38 per pound regardless of which community it is shipped to, similar to the way a letter is charged the same rate regardless of where you are sending it. To send that same freight from Anchorage to Bethel via air freight or at standard postal rates for instance, would cost nearly twice that much. To send it to the outlying villages could cost up to 6 times that amount. The USPS pays for the difference in those prices which amounts to a "subsidy" of over $100 million per year.[20]

Bypass mail is organized into two categories:

1. Service to hubs; in planes fully loaded with cargo, or by combi service (a Boeing 737 configured for half freight in totes and half passengers) as offered by Alaska Airlines. These hubs are a legacy of the old postal hub communities. The number of providers is limited to those carriers who have provided this service in the past and have the capacity for hauling a minimum of 7,500 pounds.

2. Service to villages: Cargo is flown in conjunction with passenger flights on smaller aircraft that have at least 20 percent of the passenger market in those communities. In many cases the revenues from bypass mail are what keep these airlines serving these communities.

There is discussion within USPS of moving these hubs to communities that they estimate would be more efficient locations for them. However, this would require significant state expenditures to upgrade these airports, while current hubs have seen substantial improvements in their capabilities. Airports like Bethel, the second busiest airport in Alaska, are considering moving to a 24/7 schedule to accommodate all of their nighttime traffic in a safe and efficient way.[21] Any reductions in bypass mail service would impose a significant burden on people living in the villages who are already struggling to make ends meet due to the high cost of goods and energy.

[19] Phone Interview, USPS, October 2010.
[20] Personal Interview, Alaska Commercial Company, October, 2010.
[21] Personal Interview, Airport Manager, Bethel Airport, November, 2010.

TIER IV: CARGO TRANSHIPPED VIA WATER TO RURAL ALASKA

A significant amount of Western Alaska bound cargo is shipped by container vessel to Anchorage and then loaded to barges destined for Western Alaska. One of the barge operators serving western Alaska estimates that 25 percent of their cargo is transshipped via the Port of Anchorage. The remaining 75 percent of barge cargo is sourced directly out of Seattle.[22]

Horizon Lines has direct container service to Kodiak and Dutch Harbor/Unalaska. These ships carry cargo from the Port of Tacoma, discharge most of their cargo in Anchorage, take on additional cargo for Kodiak and Dutch Harbor and then return to Tacoma after making those port calls. They take Asian destination frozen fish from Southcentral and Kodiak to Dutch Harbor where it is loaded onto container ships headed for foreign destinations. Frozen fish from Kodiak and Dutch Harbor are backhauled to Tacoma for distribution to domestic markets.

Several consolidators and large scale retailers, such as Alaska Commercial, repackage cargo from the Port of Anchorage and then reload these containers on the Horizon vessels or Northland barges headed for Kodiak, Dutch Harbor and Western Alaska ports.

Fuel to Rural Alaska

Annually, 1.7 million barrels of refined petroleum product are shipped out of the Port of Anchorage to rural Alaska via barge[23].

Cargo Backhaul to the Port of Tacoma

On average, about 2 out of 10 containers is loaded with cargo for container ship return voyages to the Port of Tacoma. This cargo is comprised of: recycled items, frozen fish, household goods and vehicles for people moving out of Alaska, automobile and truck trade-ins, and rental car fleet inventories being returned to the West Coast.[24] As an example of how backhauled goods can have a strong impact on shipping rates, it is estimated that the backhaul of fisheries products alone can help reduce the cost of shipping goods to Alaska.[25]

COMMODITY DETAILS AND PORT EFFICIENCY ISSUES

"As Is" LO/LO and RO/RO Container Service

The current container service operated by Horizon Lines and TOTE is highly efficient. Four vessels a week supply around 90 percent of the

[22] Phone Interview, Northland Services, December, 2010.
[23] Port of Anchorage, 2009 Annual Tonnage Report
[24] Personal Interview, Horizon Lines, Totem Ocean Trailer Express, November, 2010.
[25] Personal Interview, Lynden Inc. 2010

merchandise goods and business supplies to Alaskans living west of Cordova. It is so efficient, particularly when combined with the capability for just-in-time delivery, that many retail outlets have drastically reduced, or even eliminated, their need for warehousing services. Coupled with bar code inventory systems, the products in many containers are taken from the vans and put directly on store shelves. These efficiencies allow retailers to offer a wide range of food and other commodities at a price that is little different from those in Seattle.

"To Be" LO/LO and RO/RO Container Service

When completed, the modernized Port of Anchorage will contribute to even greater efficiencies. The draft (depth) at the current dock is -35 feet, restricting the size of vessels that can call on the Port, while the three LO/LO container cranes on the current dock only have a nine container reach. A modern container ship is 16 containers wide and requires a deeper draft and larger cranes at port facilities.

The design of the new facility will provide seven berths of nearly 1,000 feet each that are capable of supporting either RO/RO or LO/LO operations, 49 feet of draft, and placement of the dock face farther out into the channel where it will be self-scouring. New container cranes will be able to reach across PANAMAX container ships, now the industry standard. These upgrades will improve the efficiency of container, commodity, RO/RO and automobile operations. Additional staging areas immediately behind the LO/LO and RO/RO operations will improve efficiencies there while construction of a railroad intermodal loading facility at the back of the port will make transfer operations to flat cars more efficient and reduce the need for drayage operations.

"As Is" Fuel Details

Fuel deliveries have been steadily increasing at the Port of Anchorage. The startup of the ultra-low sulfur diesel towers at the Petrostar facility in Valdez will further increase these deliveries to the POA. Currently about 7.7 million barrels of fuel are delivered to the Anchorage area by rail car annually.[26] An additional 4.5 million barrels come across the Port's dock.[27] ASIG operates the tank farm and valve manifolds that facilitate deliveries of jet fuel to the Ted Stevens Anchorage International Airport by pipeline.[28]

The tank farm at the airport is a subzone of the Foreign Trade Zone at the Port of Anchorage. Since most of this fuel is burned out of the US, there is a significant tax advantage to imported fuel. The crude oil refined at the Tesoro refinery in Nikiski is

[26] Port of Anchorage, Annual Tonnage Report 2010
[27] Port of Anchorage, *Annual Dock Tonnage 2001 – 2010*
[28] Personal Interviews, Petrostar Refinery, Alaska Rail Road Corporation, ASIG, October, 2010.

sourced out of Russia and UK. They also import substantial quantities of refined jet fuel from Korea.[29]

Currently, all general aviation gas (avgas) for Alaska comes through the Port of Anchorage which typically receives four or five tanker deliveries per year and are stored at the Port's tank farms. It is then distributed to Fairbanks, Mat-Su, and the North Slope by truck, and to Western and Southeast Alaska by barge. The Southeast Alaska trade in avgas is facilitated by favorable prices in Anchorage. If Southeast communities were to rely on direct tug and barge deliveries of avgas, these barges would have to travel as far as San Francisco to get avgas from the West Coast. Instead, they are serviced by tugs and fuel barges that are demobilizing from their Western Alaska trades and returning south in the fall. These tugs and barges make this return trip profitable by loading avgas at the POA and making deliveries to Southeast Alaska as they continue their return voyage.[30]

"To Be" Fuel Infrastructure Benefits

Fuel operations are also constrained by the current, limited draft at the Port of Anchorage. Larger petroleum product carriers, given the ability to make larger bulk deliveries, can potentially reduce the overall cost of fuel to consumers. Petroleum operators at the Port who supply fuel to Ted Stevens Anchorage International Airport have indicated the need for increased storage tanks to ensure deliveries of adequate volumes to cover peak periods of demand at the airport. Two dedicated POL berths with new environmentally friendly and state-of-the-art offload headers at the future petroleum docks provide opportunities for new storage capability and the ability to handle a wider variety of refined petroleum products. The newly added acreage behind the POL berths could be a siting source for additional tankage.

"As Is" Cement Offload and Storage Infrastructure

Cement is used in almost every construction project in the state, large and small. The Port of Anchorage is one of the only facilities in Alaska with bulk offloading capacity for cement ships. The ships arrive with dry cement carried in segregated hold compartments and are offloaded via a vacuum and pump system. The cement is transferred through a pipeline to storage tanks on railroad property. Trucks are used to transport the cement from the storage tanks to its final destination. Due to the limited draft at the port, the current bulk cement carrier can only load and receive 24,000 tons at a time despite the vessel's capacity of 40,000 tons.

---

[29] Ostherimer, David. *Annual Report For Foreign-Trade Zone No. 160; October 1, 2008-September 30, 2009*

[30] Personal and Phone Interviews, Tesoro Alaska, September, 2010. PetroMarine, Delta Western Fuels, December, 2010.

"To Be" Cement Offload and Storage Infrastructure

Completion of the south replacement and extension phase of the intermodal expansion project will provide both a deeper depth of -45ft and new acreage for the construction of additional cement storage tanks. This could create a cost savings benefit to the shipper as they would be able to double their capacity, transporting 40,000 tons at a time while experiencing the same operational and crew cost with only a modest increase in fuel. The operators of the bulk cement facility at the Port have indicated that if they could utilize these efficiencies, they would construct additional cement silos at the Port on the newly added backlands created by the Port expansion. This would eliminate their current need to truck cement across town to a different storage facility.[31]

"As Is" Military Support

The Port of Anchorage currently serves all five military bases in Alaska through fuel, supplies, vehicles and deployments. In a 2009 letter to the U.S. Secretary of Transportation Ray LaHood, U.S. Senator Daniel Inouye (HI) wrote:

> For example, the Port of Anchorage is vital to our national defense. The Expansion project that is underway will provide further economic opportunities and further strengthen the military and diplomatic mission of the United States. The Port of Anchorage is one of only 19 ports designated by the Department of Defense as a Strategic Port. There are five military bases strategically located in Alaska (Elmendorf AFB, Ft. Richardson, Eielson AFB, Ft. Waignright, and Ft. Greely), and the Port is essential in serving the thousands of Army and Air Force personnel, that call Alaska home. Alaska is playing a larger role in the training of military personnel with more than 2 million acres of training grounds, where troops can train with close air support in live fire exercises. Without the Port of Anchorage, these key military bases would be out of business. (April 28, 2009)

As part of its designation as a Strategic Seaport, the Port of Anchorage must be able to provide enough dock space and acreage to support a military deployment within 72 hours notice. Currently, the Port has successfully demonstrated the ability to provide one 1,000-foot berth without ceasing normal commercial dock operations, and 25 acres of non-contiguous/non-adjacent staging, however this does not meet the military's stated needs.

"To Be" Military Support

The U.S. Transportation Command's Surface Deployment and Distribution Command, through the U.S. Maritime Administration, has indicated a new need for the Port to be able to provide 2,000 feet of berthing space with an adjacent 25 acres of staging area in support of a more expedited major unit deployment[32]. Upon completion of the expansion project, two

[31] Personal Interview, Alaska Basic Industries, October, 2010.
[32] US Department of Administration, Maritime Administration, *Port Planning Order*. (August 31, 2010)

1,000-foot berths and 25 acres of adjacent contiguous staging area can easily be provided with room for growth if needed. This future footprint further provides an easily secured and monitored area decreasing security costs for military users.

The gravel fill for the expansion project, 11 million cubic yards, will all be mined on Elmendorf Air Force Base and transported down a haul road to the Port. This arrangement has proved mutually beneficial to both parties. The Port benefits because the short transit distance generates a large cost savings for the project while the Air Force benefits as hills are removed at the end of the north-south runway creating land that can be developed and used as needed. Once the project is complete, the road that is currently used to transport gravel will be used for deployment, providing the military with direct access to a secured facility and avoiding the associated congestion on public roadways.

Interruption of Service

The efficiencies of the Port have significant advantages, but only so long as port operations remain uninterrupted. During the course of our surveys, businesses were asked how quickly their operations would be affected if operations at the Port were disrupted. Most businesses said they would feel the consequences within a week, two weeks at most. Beyond that time period, they indicated that the interruption would develop into a full blown crisis[33]. This highlights the seriousness of concerns about the stability of the current deteriorated Port structure in the event of a major earthquake.

Once completed the expanded facilities would significantly decrease this risk. The facilities are designed to withstand normal to moderate earthquakes with little to no damage. Given the past seismic history of the region, the design includes two berths designated as "essential facilities." These berths feature increased structural reinforcements and are designed to remain operational following a maximum level earthquake of equal or greater magnitude than the 1964 earthquake.

Manufacturing and Increased Backhaul Opportunities

The Port's newly added acreage can provide much needed industrial space for the manufacture of modules for the North Slope or for the construction of the Alaska gas pipeline. Potential developers of the gas line have already visited the Port to explore these opportunities. A recent report by Anchorage Economic Development Corporation (AEDC) indicates that industrial development lands in Anchorage that are suited for development are limited and dispersed.[34] The new uplands at the Port can help provide space for industrial development and staging.

[33] See list of retail businesses interviewed in reference section

[34] Anchorage Economic Development Corporation, *Industrial Land Needs – The Outlook for Anchorage 2010-2030*. (2009)

Nearly 90 percent of the backhauled containers from the POA are empty. This is a potential area for increased economic activity that would have an additional benefit of reducing the cost of shipping. Although this has yet to be realized, value added processing of natural gas liquids from an Alaskan gas line could provide manufactured products for export. For example, ethylene processed into polyethylene beads, and butane processed into butyl rubber cants is the feedstock for plastic products such as automobile tires.[35]

POTENTIAL COST INCREASE DRIVERS

As previously mentioned, the efficiency of the existing distribution system is quite impressive. So much so that there is a large portion of the state's population that gives no real thought as to how things get on the store shelves. It is the efficiency of this transportation system that has contributed significantly to the ability to stabilize consumer prices for Alaskans. That being said, the balance is delicate. Here are a few potential sources of cost increases that, if realized, could easily upset that balance.

EPA Emissions Control Area

The requirements of this mandate, which are slated to take effect in 2015, would force Alaska-bound ship operators to use ultra-low sulfur diesel fuel in and near the Alaska coast. This fuel is much more expensive and safety concerns have been raised related to the low lubricating characteristics of this fuel. Once in effect, this could dramatically increase the cost of providing service to Alaska.[36]

Changes in Bypass Mail System

Reductions in the bypass mail system would have devastating effects on rural Alaska resulting in increased air shipping costs to rural villages by up to 500 percent. The recent proposal by U.S. Senator John McCain to eliminate the Essential Air Service program could increase the cost of air transportation including the transportation of consumer goods and other items to rural areas.

Proposed Container Tax

The states of Washington and California have both proposed container taxes to provide funds for transportation projects in their states. Alaska would be particularly and unfairly burdened with these fees since the bulk of our cargo arrives by container. The State of Alaska and the Alaska transportation industry rose up to vigorously oppose these measures and they were defeated. However, this issue may surface again and if adopted would significantly increase the cost of shipping goods to Alaska.

[36] Personal Interviews, Horizon Lines, Totem Ocean Trailer Express, November, 2010.

Port Expansion Financing Plan

The Port of Anchorage secures funds for its intermodal expansion project from the federal government, the State of Alaska, and through contributions from its own annual profits. If the Port were required to bond completely for this project, to make the required payments towards those bonds would require substantial increases in port surcharge fees, from 3 to 8 times higher than current rates[37]. This would increase the cost of every single item, bulk or containerized, that passes through the POA. State and federal grants for the project negate the need to consider this option.

CONCLUSION

A modern, safe, survivable Port of Anchorage is critical to the lives of Alaskans. It is an economic driver that provides the needed commodities and business supplies Alaskans use in their everyday lives. It provides essential supplies to Alaska's construction and resource development industries and delivers the cars we use to get around in. The Port also provides jobs for Alaskans both through its direct operations and through the extensive web of transporters and facilitators that ultimately deliver the goods to Alaskans. It truly is the Port of Alaska.

[37] Based on tax-exempt bonding for capital costs of $300 to $750 million.

Mayor Dan Sullivan

October 24, 2011

Honorable Gary Stevens
Senate President
Alaska State Legislature
State Capitol Room 111
Juneau, AK 99801

Honorable Mike Chenault
Speaker of the House
Alaska State Legislature
State Capitol Room 208
Juneau, AK 99801

To Senate President Stevens and House Speaker Chenault:

Included with this letter is the quarterly report for the third quarter of 2011 from the Municipality of Anchorage regarding the Port of Anchorage Intermodal Expansion Project (PIEP) submitted in accordance with the reporting requirement pursuant to Section 1, Chapter 5 FSSLA 2011 (pg. 20, line 16-18). This section requires the Municipality of Anchorage to submit quarterly progress reports detailing cost overruns and significant project scope changes.

This report addresses both of those requirements while explaining some of the major changes underway with the project. Additional information is available on www.muni.org/departments/port or by request. Please do not hesitate to contact me if you require any further assistance. For more information, or to schedule a tour of the Port of Anchorage please contact Port Director Bill Sheffield at (907) 343-6200.

Sincerely,

Dan Sullivan
Mayor

INTRODUCTION

The Port of Anchorage is Alaska's Lifeline. It supports bi-weekly shipments of goods transported on container ships from the Port of Tacoma to the Port of Anchorage. These goods account for an estimated 90% of the merchandise goods used in 85% of Alaska's populated areas. In addition to merchandise cargo, the Port is a major fuel hub providing critical supplies of jet fuel, gasoline, heating oil, diesel and aviation gas to communities throughout the state. It also serves as a source of concrete and other building materials.

The Port is celebrating its 50th anniversary this year, and although the facilities remain operational, the dock has surpassed its life expectancy and is in a deteriorated condition. In 2003, the Port of Anchorage and the Municipality of Anchorage along with the U.S. DOT Maritime Administration (MARAD) undertook the Port of Anchorage Intermodal Expansion Project in an effort to replace and expand the existing facility to provide modern, efficient and reliable marine infrastructure for Alaskans. The project is currently focused on construction of facilities to the north of the existing dock (Phase 1), scheduled for completion in 2019[1]. For a detailed history of the project please refer to the July 2011 PIEP Quarterly Report.

Since July 2011, construction work has continued while project partners have been focusing on initiating long-term changes resulting in increased protection, improved project management structure, enhanced oversight, and an independent review of the work done to date.

Several major developments have occurred over the past few months, each of which are further discussed in the document:

- The Municipality of Anchorage recently concluded negotiations for a new Memorandum of Agreement with the U.S. Department of Transportation Maritime Administration (MARAD). This further clarifies the roles and responsibilities of each entity through May, 2012, at which time all contracting and construction management will be the responsibility of the POA, the Municipality, or their designee.
- The Port of Anchorage (POA), the Municipality and MARAD have engaged the U.S. Army Corps of Engineers to conduct an independent design review and an analysis of the project work to date.
- The U.S. DOT Office of the Inspector General is conducting an audit of MARAD and its contracting and procurement methods in its port development program using the Port of Anchorage Intermodal Expansion Project as a case study.
- The Municipality of Anchorage filed a lawsuit against the Federal Highways Administration's Record of Decision for the Knik Arm Crossing because its access route into Anchorage would traverse port property and negatively affect Port operations in a specific area. A settlement agreement is being finalized and the lawsuit will be withdrawn.
- MARAD has engaged AECOM to conduct a "root cause" analysis of work performed prior to 2010 to facilitate resolution of claims.

[1] Appendix A: Port of Anchorage Intermodal Expansion Project Phasing Plan

MEMORANDUM OF AGREEMENT

In 2003, the Municipality of Anchorage signed a Memorandum of Agreement with MARAD to develop the Port of Anchorage Intermodal Expansion Project. As the project progressed, it became clear that the original agreement did not sufficiently address or define each entities' roles and responsibilities. All parties recognized the need for a more extensive, detailed, and updated document which is reflected in the agreement approved by the Anchorage Assembly on Tuesday, September 27, 2011.

The most significant item in this document is the transfer of construction and contract management responsibilities from MARAD to the POA, the Municipality of Anchorage (MOA), or another agent designated by the Municipality by May 31, 2012. MARAD has been responsible for these items in the past and this represents a new direction for the project. This document also permits the potential for subsequent agreements to be negotiated between MARAD, the Municipality, and the U.S. Army Corps of Engineers to serve as the design and construction agent for the project.

The U.S. Army Corps of Engineers has increased its involvement in the project and is conducting an independent suitability study and an in-progress review that evaluates the work completed to date. The contract for the suitability study was let to CH2MHill in late September with a target completion date of March 31, 2012.

The agreement also formalizes the Project Oversight and Management Organization (POMO) team, which has been in place since January, 2011. The POMO consists of high-level representatives from the MOA, POA, MARAD and Port who meet weekly, or as needed, to act as a leadership body determining policies, vision, strategic objectives and priorities for the expansion project. The POMO is supported by the technical advisory committee consisting of project managers and engineers from the POA, MOA, MARAD, and Project Contractors (Integrated Concepts and Research Inc., PND Inc. etc.). The technical advisory committee provides recommendations to the POMO and keeps them informed of construction progress and developments.

Some additional items in the agreement are designed to emphasize effective project planning. This includes a project master plan requirement and an annual project management and financial planning requirement. In order to increase day-to-day communication and coordination between the project partners, MARAD is required to provide a full-time, on-site representative.

This new Memorandum of Agreement represents the initial formal step in making significant changes and improvements to the existing management structure of the expansion project.

MARAD PORT PROGRAM AUDIT

In May 2011, the U.S. DOT Office of the Inspector General (OIG) announced that it had initiated an audit focusing on MARADS's coordination and oversight of port

infrastructure projects using the Port of Anchorage Intermodal Expansion Project as a case study. The audit has two objectives, "to evaluate MARAD's oversight and risk management of port development projects and to evaluate MARAD's oversight of port infrastructure projects' contract awards and administration[2]."

Under the current project management structure, MARAD has contracting and procurement responsibilities and acts as a central procurement agency with all funds, federal, state and local, being sent to MARAD for administration. Officials from the OIG visited Alaska this fall in order to meet with, and interview, entities involved in the project including Port and Municipal officials. The OIG has authority of the audit and no release date has been announced yet.

FHWA RECORD OF DECSION LAWSUIT

On July 5, 2011, the Municipality of Anchorage filed a lawsuit against the Federal Highways Administration (FHWA) stating that the Record of Decision (ROD) issued to the Knik Arm Bridge and Toll Authority did not adequately consider its affect on the expanding Port of Anchorage. The proposed route would have negatively impacted the port by eliminating operational use of the newly constructed dry barge berth. The lawsuit was not intended to stop or impede bridge development, but was initiated in order to protect port and municipal assets. A settlement agreement is being finalized.

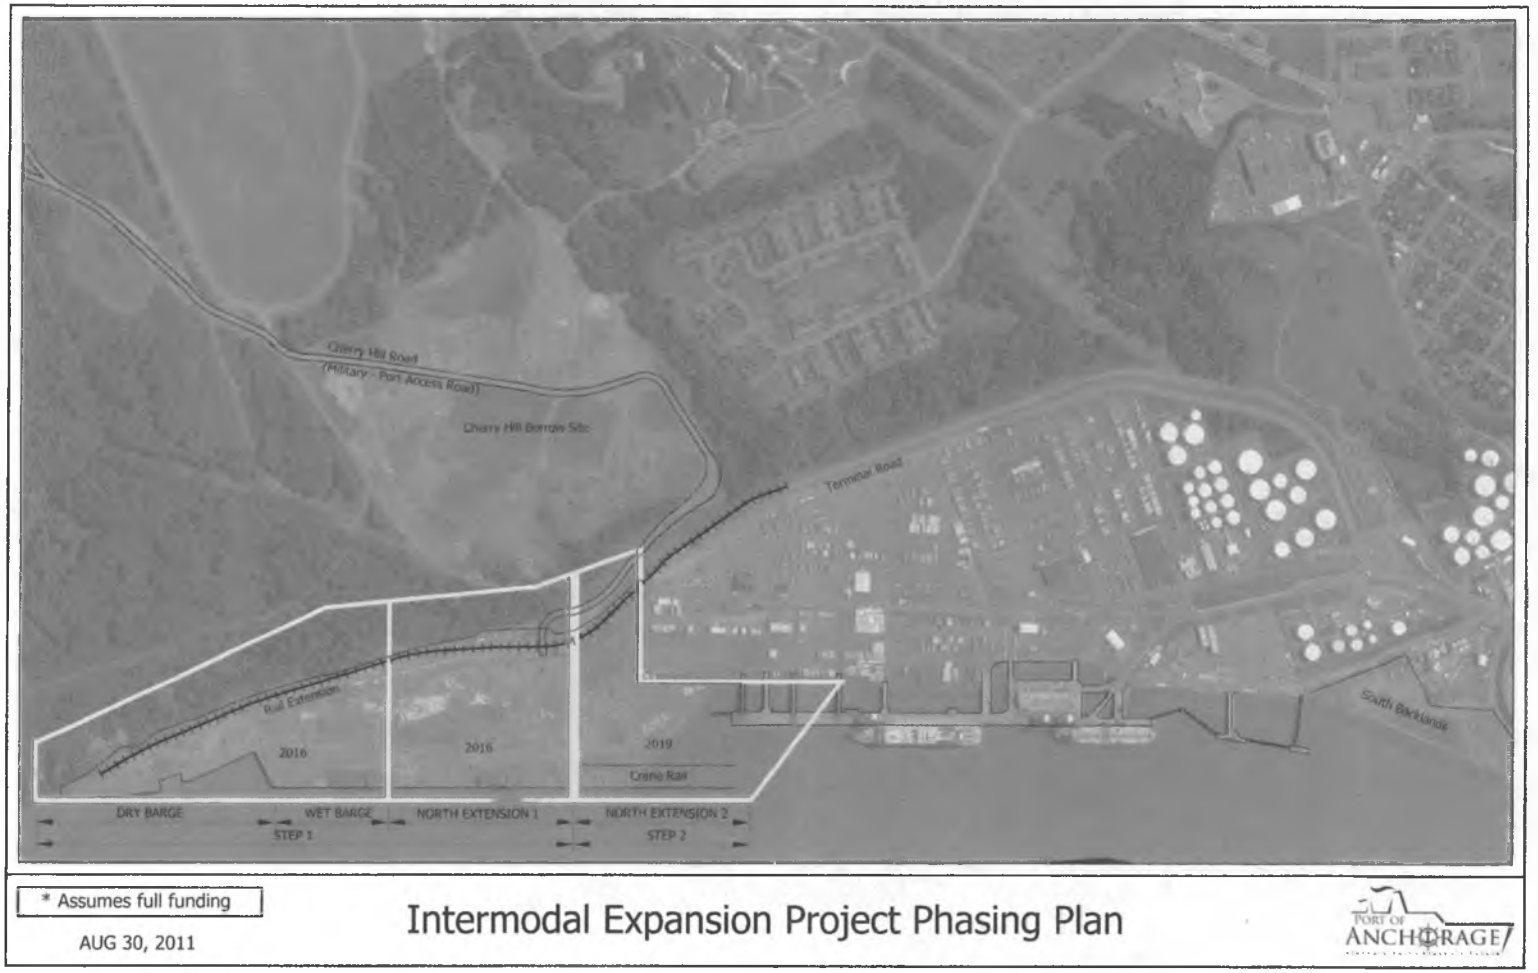
2011 CONSTRUCTION STATUS

Work for the 2011 construction season included dismantling a section of damaged sheet pile in the wet barge berth area and completing tail wall inspections in the ship berthing areas in order to establish the integrity of the current structure. The projected budget for project related work including construction, design and support services is $37.4 million.

The construction contractor, West Construction, successfully completed removal of a section of sheet pile in the damaged wet barge berth. Tail wall inspections were completed in a portion of the North Extension 1 ship berth area and no damage was found in the areas inspected. Ongoing work involves backfilling inspected areas and re-establishing the site. The construction work for this season is on schedule and within budget.

Table 2: Funding Snapshot as of October 11, 2011

Total funds received	$332 million
Total funds transferred to MARAD	$302 million
Total funds obligated	$287 million
Total Funds Pending obligation	$14 million



For a summary of the Expansion Project's funding to date please see Appendix B.

[2] May 9, 2011 Memo from the U.S. DOT OIG to the Maritime Administrator

CONCLUSION

The past few months have produced significant changes to the project, best illustrated in the new Memorandum of Agreement. These changes are both necessary and substantial. This document creates a structure under which the project can transition from its previous form of contract management and oversight to a new team, one experienced in delivering marine infrastructure projects. As the transition process develops, our goal is that it will result in improved project delivery, cost effective design, and financial protection that will assure all parties involved that their investments are well managed and protected.

APPENDIX A: Port of Anchorage Intermodal Expansion Project Phasing Plan (highlighted area indicates Phase 1)

APPENDIX B: FUNDING SUMMARY

Of the $332 million received, $302 million have been transferred to MARAD. Currently all federal funds appropriated to the PIEP are transferred directly to MARAD, however state and port funds are transferred to the project as needed so the remaining balance of funds in MARAD's account is not necessarily an accurate indicator of the state and port funds available at any given time.

Table 2: Funding Snapshot as of October 11, 2011

Total funds received	$332 million
Total funds transferred to MARAD	$302 million
Total funds obligated	$287 million
Pending 2011 obligations	$14 million

Table 3: State funds received to date

Year	Amount	Legislation
2002	$5,853,658	SB 29
2004	$436,505	SB 283
2005	$10,000,000	SB 46
2006	$10,000,000	SB 231
2008	$25,000,000	SB 221
2009	$20,000,000	SB 75
2010	$20,000,000	SB 230
2011	$30,000,000	SB 46
Total	121,290,163	

Table 4: Federal funds received to date

Year	DoD	FHWA	FTA	SDDC
2002	-	$9,568,421	$2,832,968	
2003	$4,850,000	$590,500	$2,862,505

MUNICIPALITY OF ANCHORAGE

Office of the Mayor

Phone: 907-343-7100
FAX: 907-343-7180

Mayor Dan Sullivan

January 13, 2012

Honorable Gary Stevens
Senate President
Alaska State Legislature
State Capitol Room 111
Juneau, AK 99801

Honorable Mike Chenault
Speaker of the House
Alaska State Legislature
State Capitol Room 208
Juneau, AK 99801

To Senate President Stevens and House Speaker Chenault:

Included with this letter is the quarterly report for the fourth quarter of 2011 from the Municipality of Anchorage regarding the Port of Anchorage Intermodal Expansion Project (PIEP) submitted in accordance with the reporting requirement pursuant to Section 1, Chapter 5 FSSLA 2011 (pg. 20, line 16-18). This section requires the Municipality of Anchorage to submit quarterly progress reports detailing cost overruns and significant project scope changes.

This report addresses both of those requirements while explaining some of the major changes underway with the project. Additional information is available on www.portofalaska.com or by request. Please do not hesitate to contact me if you require any further assistance.

Sincerely,

Dan Sullivan
Mayor

INTRODUCTION

The Port of Anchorage (POA) is Alaska's Port and serves as a critical lifeline to the state. The Port supports twice-weekly shipments of goods transported on container ships, whose cargo accounts for an estimated 90% of the merchandise goods used in 85% of Alaska's populated areas. In addition to merchandise cargo, the Port is a major fuel hub providing critical supplies of jet fuel, gasoline, heating oil, diesel and aviation gas to communities throughout the state. It also serves as a major source of cement and other building materials.

The Port celebrated 50 years of service in 2011, and although the facilities remain operational, the dock has surpassed its life expectancy and is in a deteriorated condition. In 2003, the POA and the Municipality of Anchorage (MOA) along with the U.S. Department of Transportation Maritime Administration (MARAD) undertook the Port of Anchorage Intermodal Expansion Project (PIEP) in an effort to replace and expand the existing facility to provide modern, efficient and reliable marine infrastructure for Alaskans. The project is currently focused on construction of facilities to the north of the existing dock (Phase 1)[1]. For a detailed history of the project please refer to the 2011 Second Quarter Report.

During the third and fourth quarters, significant efforts towards initiating long-term changes were formally implemented by the MOA/POA, MARAD, and the U.S. Army Corps of Engineers (USACE). These efforts include:

- The MOA/POA executed a new Memorandum of Agreement with MARAD. This agreement further clarifies the roles and responsibilities of each entity through May 31, 2012, at which time all design and construction will be the responsibility of the MOA/POA, or their designee.

- The MOA/POA and MARAD have engaged the USACE to conduct a suitability study and analysis of the project work to date.

MEMORANDUM OF AGREEMENT

In October 2011, the MOA signed a Memorandum of Agreement with MARAD to develop the Port of Anchorage Intermodal Expansion Project. This agreement was designed to improve upon an earlier agreement signed in 2003. The details of this agreement were provided in the 2011 Third Quarter Report and include the transfer of design and construction management responsibilities from MARAD to the MOA/POA, or their designated agent, by May 31, 2012; the formalization of the Project Oversight and Management Organization (POMO) team; and additional items designed to emphasize effective project planning and execution.

SUITABILITY STUDY AND PROJECT ANALYSIS

MARAD has funded the USACE to review the design for the ongoing Intermodal Expansion Project. Ultimately this review is composed of an independent study of the

[1] Appendix A: Port of Anchorage Intermodal Expansion Project Phasing Plan

foundation design and a review by USACE of the planning, design, permitting and construction with a focus on evaluating what has been accomplished and recommendations for moving forward.

The USACE selected CH2MHill in September to conduct an independent study of the foundation system designed to support the Port's expansion efforts, and this effort is underway. In analyzing the foundation design, the study will assess the effects of hydrologic, geotechnical, structural and seismic conditions. CH2MHill is bringing together a strong team of port design experts and finite element modeling capabilities to accomplish the analysis.

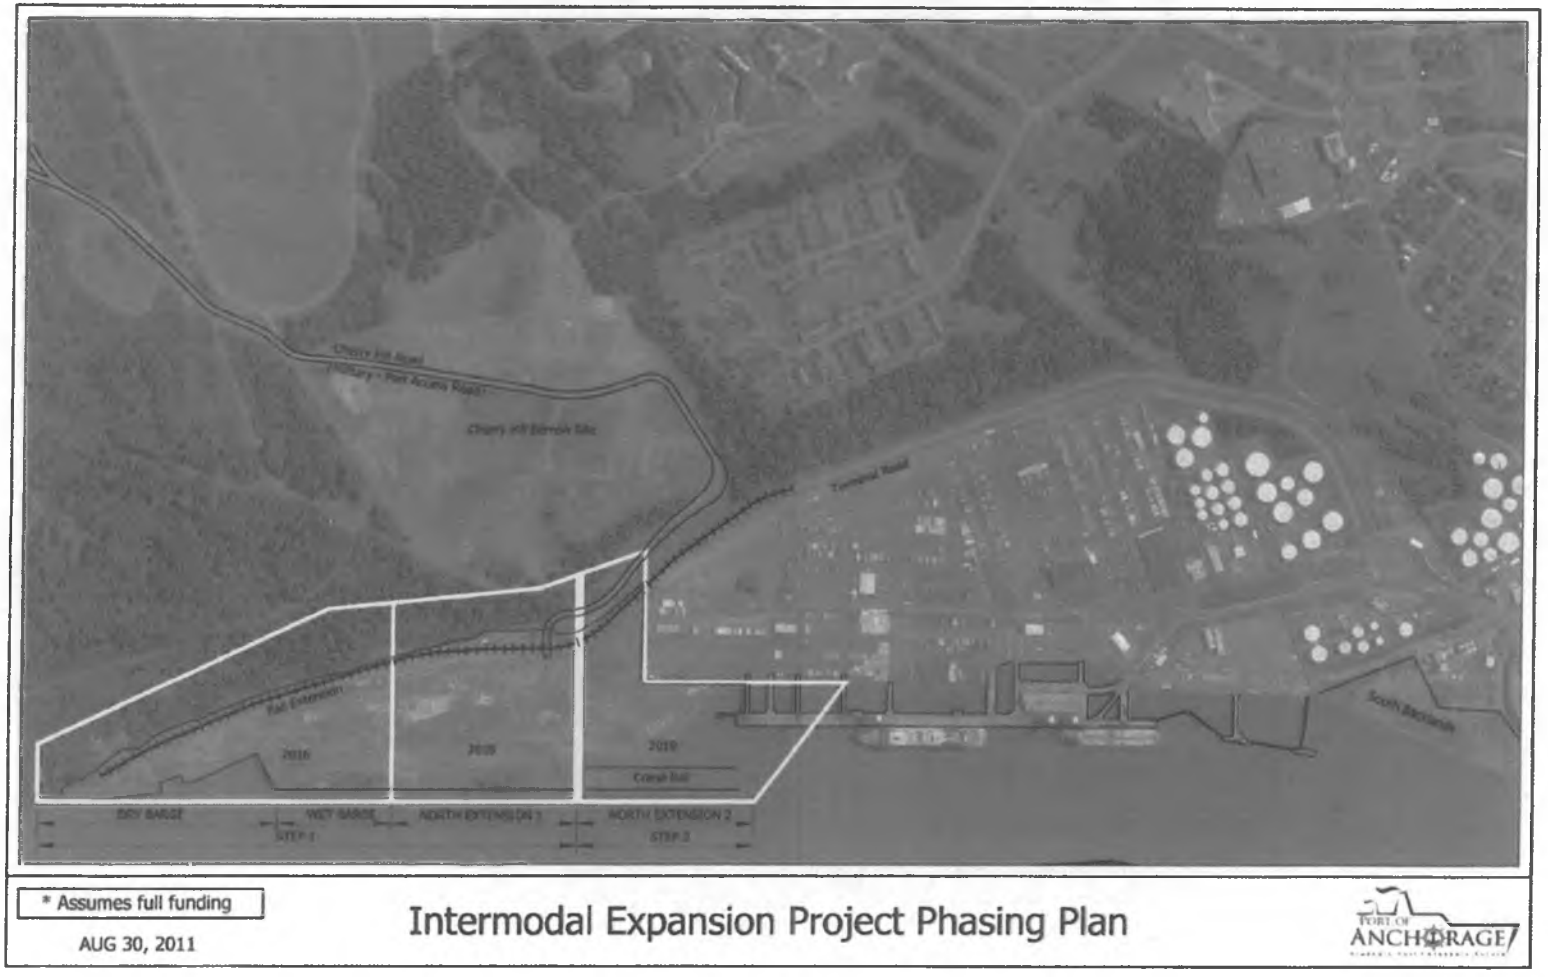
So that the project can move forward as expeditiously as possible, the suitability study and project analysis is expected to be complete in April, 2012.

2011 CONSTRUCTION STATUS

Like other areas within the state, most construction activities are limited to early spring, summer and fall seasons with regular shutdowns scheduled for the winter months. Earlier work in the 2011 construction season included dismantling a section of damaged sheet pile in the wet barge berth area and conducting tail wall inspections in the ship berthing areas in order to establish the integrity of the current structure. The projected budget for project related work including construction, design and support services is $37.4 million.

The construction contractor, West Construction, successfully completed removal of a section of sheet pile in the damaged wet barge berth. Tail wall inspections were completed in a portion of the North Extension 1 ship berth area and no damage was found in the areas inspected. The site is being re-established by conducting vibracompaction in the areas disturbed.

Table 1: Funding Snapshot as of November, 2011



Total funds received	$332 million
Total funds transferred to MARAD	$302 million
Total funds obligated	$289 million
Total Funds Pending obligation	$13 million

For a summary of the Expansion Project's funding to date please see Appendix B.

CONCLUSION

Significant changes were initiated this fall to transition the project from its previous form of contract management and oversight to a new team experienced in delivering marine infrastructure projects. Work has been focused on the planning and review efforts necessary to implement these changes in 2012. These changes will improve project delivery and ensure future success.

APPENDIX A: Port of Anchorage Intermodal Expansion Project Phasing Plan (highlighted area indicates Phase 1)

APPENDIX B: FUNDING SUMMARY –

Of the $332 million received, $302 million have been transferred to MARAD. Currently all federal funds appropriated to the PIEP are transferred directly to MARAD, however state and port funds are transferred to the project as needed so the remaining balance of funds in MARAD's account is not necessarily an accurate indicator of the state and port funds available at any given time.

Table 1: Funding Snapshot as of November 30, 2011

Total funds received	$332 million
Total funds transferred to MARAD	$302 million
Total funds obligated	$289 million
Pending 2011 obligations	$13 million

Table 2: State funds received to date

2/28/12 OVERVIEW BY DEPARTMENT OF TRANSPORTATION: ARCTIC PORTS STUDY UPDATE

<TARGET><BILL></BILL><SUBJECT>2-28-12 OVERVIEW BY DEPARTMENT OF TRANSPORTATION ARCTIC PORTS STUDY UPDATE</SUBJECT><COMM>SFIN27</COMM></TARGET>

Alaska Department of Transportation & Public Facilities

Arctic Port(s) Study Update

Jeff Ottesen, Alaska DOT&PF

February 28, 2012

Study History

- January 2008 Port and Harbor Conference sparked wide interest in focusing attention on Alaska's ports
- November 2010 Port and Harbor Conference built on this and identified a long list of ongoing and new needs including an Arctic port.
- May 2012 Arctic Port Kickoff Meeting (charette) was held with numerous stakeholders
- December 2012 Army Corps of Engineers and Alaska DOT&PF execute $3 million Alaska Deep-Draft Arctic Ports Study Feasibility Study Cost Sharing Agreement.

2012 Funding Purpose

- "Study and identify potential arctic deepwater port sites. A deepwater Arctic port would be a long-term vital asset to national security and to the State's economy.
- It would provide a new, northernmost port for the US Coast Guard to protect and patrol the State's arctic waters. Such vessels require a minimum of -35 feet."

Army Corps Partnership Schedule

- Use multi-criteria decision analysis technique to screen potential sites
- Identify Potential Sites Final List by September 2012.
- Evaluate Public-Private Partnership (P3) finance mechanism
- 2013-2014 Site Specific Feasibility Phase

Ports Vital to Many Needs

- Sovereignty/Homeland Protection
- Resource protection
- Offshore oil and gas exploration/development
- Search and rescue/incident response
- Onshore resources export
- Community supply and economic activities
- Fisheries

Port Needs Vary

- Different needs, require different port characteristics:
  - Mining export: very deep draft, proximity to resource
  - Oil and gas services: intermediate depth, proximity to on-shore services, and off-shore leases
- Potentially, no one port site ideal for all needs

Natural Harbor Sites Scarce

- Few natural harbors with wind and wave protection
  - Marine structures must withstand significant ice forces
- Water depth is generally shallow in Arctic shore areas
  - Dredging will likely be necessary, on-going

Linking Need to Funding

- Funding should relate to overall purpose:
  - Sovereignty/Homeland – federal
  - Resource protection – federal and state
  - Search and rescue – federal and state
  - Off-shore resources – federal
  - On-shore resources – state/private
  - Community/Economic development – state/local
  - Fisheries – state/local

Funding Issue

- Little *National Economic Benefit* as measured by federal rules
  - Corps, other federal agencies reluctant to participate
- Despite strong federal nexus, federal funding in doubt
- Public Private Partnership (P3) tool being evaluated

P3's – Public Private Partnerships

- Increasingly common means to achieve public goods, typically infrastructure
- General characteristics:
  - Contract between public-sector and private party for a public service or good
  - Substantial private sector role; typically design, finance, build and operations involved
  - Costs borne by users rather than public
  - Requires robust economics to cover risks
  - Private entity often a new special purpose company

Why the Trend to P3's?

- Someone else's money involved
- Off books of government spending or debt
- Brings private sector expertise and management skills
- Possible tax advantages to private investors
- Aligns risk and reward to single entity
- What's old is new again
  - Early American toll roads, continental railroad were P3's by another name
- Canada currently uses P3's at far greater level
  - British Columbia requires P3 consideration for all public projects

Fitting P3's to Alaska

- Many Alaska projects require government help
  - Thin economics due to low user base
  - High costs due to environment, geography
  - Other ways to tap into private expertise
- AIDEA has long been in business to assist beneficial quasi-public projects
  - Skagway ore terminal
  - Red Dog road and terminal
  - Ketchikan Shipyard and Drydock

Related Efforts

- Congressional Delegation working on several fronts to help: icebreakers, hydrographic surveys, federal port funds, international interest
- Statewide digital mapping effort will focus on northwest Alaska this year to update onshore mapping information in Arctic port study area
  - (Some mapping costs eligible as state match)

2013 Appropriation Request

- Governor's capital budget request:
  - #54074 $1 million GF to continue the Arctic Ports Study
  - Matched by $0.5 million federal funds
  - Based on the 2012 effort, carry on the site specific port feasibility investigation.

Canada's "Northern Strategy"

- Sovereignty
  - Deepwater port, vessels and year round military base
- Environment
  - Monitor and protect on- and off-shore resources
- Social and Economic Development
  - Improve circumstances of residents
  - Enable resource development for jobs and tax base
- Governance
  - Working for sustainable local governance

Key Take-Aways

- Multiple ports likely necessary to serve many needs
- No single governmental entity likely to cover full costs of arctic port: federal, state or local.
- Resource user(s), may bring economies of scale to help finance.
  - Today's push for minerals and energy could expand opportunities
  - Some form of private participation seems desirable (AIDEA, P3's or ?).
- Need to shift federal focus to national security need versus economic purpose

US Army Corps
of Engineers
Pacific Ocean Alaska

22 February 2012

INFORMATION PAPER

SUBJECT: Alaska Deep-Draft Arctic Ports Study.

1. BLUF: The State of Alaska and the U.S. Army Corps of Engineers, Alaska District (Alaska District) executed a $3M Feasibility Cost Sharing Agreement (FCSA) to study the feasibility of implementing Alaska Deep-Draft Arctic Ports (minimum -35 feet depth). The State is very interested in resource extraction from western and northern Alaska, and the diminishing sea ice is making development more economically viable. The Alaska Congressional delegation has sponsored legislation highlighting the need for U.S. Arctic ports to support national sovereignty, environmental stewardship and life safety. The U.S. Navy (USN), U.S. Coast Guard (USCG), and National Oceanographic and Atmospheric Administration (NOAA) all have an increasing mission in the Arctic, but so far have not been a contributing partner for developing a deep-draft port. The State would welcome Federal participation in selecting, funding, and designing deep-draft port(s) in the Arctic that would incorporate the Federal mission.

2. Background: The Alaska District initiated the Alaska Regional Ports Reconnaissance Study in 2003. In 2008, they determined there was Federal interest in participating in cost-shared feasibility studies addressing regional ports and harbors in the state of Alaska. On 21 September 2009, the State of Alaska and the Alaska District executed an FCSA for the Alaska Regional Ports Feasibility Study. Two Statewide Ports and Harbor Conferences were conducted in January 2008 and November 2010. As a result of the November 2010 Conference, Gov. Sean Parnell requested a more specific effort to evaluate Deep-Draft Arctic Port(s) primarily focused on the extraction of resources. On 16-17 May 2011, the State and the Alaska District conducted a "planning charrette," which has led to the development of a specific FCSA and Project Management Plan (PMP) for the Alaska Deep-Draft Arctic Port(s) Feasibility Study. The documents were signed by both parties on 8 December 2011. The Corps has $350K+/- and State of Alaska has $300K+/- to initiate the estimated $3M three year study. The study was not in the President's budget for FY11 or 12.

Sen. Murkowski unsuccessfully introduced legislation in 2009 for the study of an Arctic Deepwater Port. She reportedly reintroduced it in 2010. Sen. Begich obtained Legislative Drafting Assistance in 2010 for an Arctic Deep Water Port. So far we have not seen evidence that it was introduced. Congressman Young successfully introduced legislation in February 2010 that provided funding for hydrographic surveys to support safe navigation and deep draft studies in the Arctic. It has been suggested that Congress is interested to have DoD study and construct a Deep-Draft Port in the Arctic, but nothing has been formalized.

During the Planning Charrette, the terms Arctic Deepwater and Arctic Deep-Draft were discussed. The differentiation is that Deep-Draft implies we can create the depth of water as compared to it occurring naturally. There are few naturally occurring deep water sites in the US Arctic. The Planning Charrette helped define "arctic" (north of Nunivak Island even though many official definitions go all the way to the Aleutian Chain) and "deep-draft" (greater than or

equal to -35 feet MLLW). However, these definitions have not been vetted by the public at large. It was discussed that mineral exporters would be the primary users, and therefore, the mining industry should be the primary proponent of port selection instead of the public sector. However, if vessel activity in the Arctic increases as much as projected, it will result in a significantly increased Federal mission. Representatives from the Alaska Delegation attended all of the mentioned conferences or charrette.

The results from the two Statewide Conferences and the Planning Charrette are posted on the Alaska District website (http://www.poa.usace.army.mil/en/cw/AKPortsStudy.htm).

Potential Future Actions:

Civil Works – The primary purpose of the Alaska Deep-Draft Arctic Ports study is to investigate the alternatives for developing deep-draft Arctic ports in Alaska to best serve state and national interests for generations to come. Considerations during the study are preferably a direct shipping point for resources developed in western and northern regions in Alaska, a strategic military and commercial port as vessel traffic increases, and a major infrastructure asset to any future endeavors for oil and gas operations. While it is recognized that industry will drive the future development, the study must incorporate the efforts and needs of other agencies and organizations, and to consider how they can play into a Private Public Partnership. The study has two distinct phases. In the first phase, all potential sites north of Nunivak Island will be identified and evaluated. A Multi- Criteria Decision Analysis will be used to evaluate each site based on established criteria and potential scenarios. Stakeholder input will be obtained through public meetings and interviews, and after a year the study will be re-scoped. The last two years of the Feasibility Study will focus on specific site development, harbor master planning, cost, benefits, and environmental coordination.

The study must incorporate the region's stakeholder concerns, especially those of the Native Alaskans to preserve their culture and subsistence activities, and the effects of climate change and increased vessel traffic and industry impacts on the environment. There are numerous marine and Arctic species of special interest that congregate in this region.

Military – The USN, USCG, and NOAA have "participated" in the two statewide conferences and planning charrette. Specifically, the USN and USCG have said in our conferences they do not require an Arctic Deep-Draft Port; however, if one were to be developed they would be interested in using it occasionally. The USCG has provided the dimensions of their ice breakers. NOAA has expressed some interest but has no funding towards such a project at this time.

International Considerations - The United States has been reluctant to ratify the United Nations Convention on the Law of the Sea Treaty, which governs national maritime boundaries and international maritime operations. Russia meanwhile is investing heavily in the Northeast Passage to support cargo traffic, where in 2010 four ships traversed the route. In 2011 thirty-four ships made the journey. Russia has four nuclear powered icebreakers and are constructing at least one more. The United States has one icebreaker.

2. SCHEDULE & MILESTONES

Name	Start	Finish
Task 1: Develop Work Plan		
Execute Tier 1 Amendment to FCSA	9/20/11	12/05/11
Kick-off Meeting		10/27/11
Establish Steering Committee		11/30/11
Task 2: Define Study Area		
Establish Study Area Working Definition	12/15/11	
Confirm Definition w/Steering Committee		12/30/11
Task 3: Identify Other Agency Efforts		
Initial Write-up of Agency Efforts		1/25/12
Final Compilation of Agency Efforts	2/22/12	
Task 4: Evaluate Public/Private Partnerships (PPP)		
Evaluate PPP Approach and Potential	1/25/12	2/22/12
Task 5: Periodic PDT and Steering Committee Meetings		
Meetings to occur the last Wednesday every month		
Task 6: Examine Problems and Opportunities		
Draft Write-up Problems/Opportunities	1/25/12	2/22/12
Final Write-up Problems/Opportunities	2/22/12	3/30/12
Task 7: Establish Criteria		
Draft Scenario Analysis	3/30/12	4/25/12
Final Criteria Established	4/25/12	5/30/12
Task 8: Conduct Scenario Analysis		
Scenario Analysis Developed by PDT	5/30/12	6/27/12
Scenario Analysis vetted thru Stakeholders	6/27/12	7/25/12
Task 9: Identify Potential Sites		
Potential Sites Preliminary List	7/25/12	8/08/12
Potential Sites Final List	8/08/12	8/22/12
Final Site Selection Document	8/08/12	9/26/12
Task 10: Engage Public		
Public Meetings around the State	10/03/12	10/31/12
Task 11: Rescope Study Plan for 2013		
Draft Scope	11/01/12	11/14/12
Final Scope	11/14/12	11/28/12
FY13 and FY14: Site Specific Feasibility Phase	11/28/12	11/03/14
Conduct Feasibility Study	11/28/12	04/25/14
Value Engineering Study	03/01/13	07/01/13
Feasibility In-House Review		04/28/14
Alternative Formulation Briefing		05/16/14
Feasibility Review Conference		06/18/14
Finalize Feasibility Report		09/16/14
Division Commander Notice		10/03/14

Arctic Ports Study

Contact Phone: (907)465-3901
Estimated Project Dates: 07/01/2011 - 09/01/2018

Brief Summary and Statement of Need:
This is a new capital request to fund the study and mapping of potential arctic deepwater port sites, in conjunction with the United States Army Corps of Engineers (USACE). A deepwater arctic port would be a long-term vital asset to national security and to the State's economy. It would provide a new, northernmost port for the United States Coast Guard (USCG) to protect and patrol the State's arctic waters. USCG icebreakers and other vessels require a minimum of -35 feet. Additional funding to complete the study would be required in FY2013 and FY2014.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
Fed Rcpts		$500,000	$500,000				$1,000,000
Gen Fund	$972,000	$500,000	$500,000				$1,972,000
Total:	$972,000	$1,000,000	$1,000,000	$0	$0	$0	$2,972,000

Additional Information / Prior Funding History:
This project is focused on studying and mapping the Arctic coast in conjunction with the Army Corps of Engineers for a deepwater port site. A separate statewide digital mapping project has received prior capital funding: DNR: $6,000,000 GF total, $7,000,000 federal receipts. DMVA also received $11.4 million in federal receipts in FY06 for this project under what was known as the Alaska Aviation Safety Program.

Project Description/Justification:
The Arctic coast is approximately 927 miles long or 1,492 kilometers, and a high priority for the State of Alaska and all federal agencies. It is in our interest to learn as much as we can about the region and its potential deepwater (-35 feet or greater) port sites by working with the Army Corps of Engineers conducting a combination of research and mapping in order to develop a list of potential port sites on the State's arctic coastline. An arctic port in Alaska would serve as a major infrastructure asset as the State, nation, and world continue to evolve. In the short term, this would serve as the northernmost port for the USCG, the US Navy (USN), and the National Oceanic and Atmospheric Administration (NOAA) in order for them to protect and patrol this region, and to develop a greater understanding of the factors involved in the potential economic development of the region. In the long term, a potential arctic port could be expanded upon to allow for greater utilization to the state. It could help further diversify the state's economy in many ways. Including:

- The possibility of an arctic port becoming a direct shipping point for resources developed in the western and northern regions of Alaska.
- A major strategic American commercial and military port along the Arctic Coast as vessel traffic increases.
- A major infrastructure asset to any future potential endeavors to produce oil and gas from deepwater reserves in the Arctic Ocean.

Vital information that could potentially be gathered through digital mapping and studies in collaboration with the USACE includes, but is not limited to: depth of water, size and number of vessels, security requirements, hydrographic surveys, ice thickness and movement, operational needs, maintenance requirements, social, economic, and environmental impacts, potential arctic infrastructure development, coastal erosion, storm surge analysis, tsunami inundation analysis, sea rise, disaster preparedness, mitigation and recovery, climate change research, and an understanding of the capabilities of other arctic nations.

Attached are two digital mapping charts, one illustrating existing legacy IFSAR elevation data while the other illustrates the 2010 elevation collection. The legacy data is sporadic (i.e. mountain passes and etc.) and with exception of the northern oil and gas regions, the digital data is old and inadequate.

Accurate elevation data supports all types of resource, infrastructure and economic development through the streamlining of permitting and construction of supporting networks. This is accomplished through a thorough understanding of the terrain and how the terrain will impact engineering, construction and supply. It also impacts the mitigation of spills, contamination and cleanup.

Butcher, Bryan
Commissioner - Department of Revenue

Commissioner Bryan Butcher

Commissioner Bryan Butcher was appointed to this position beginning in January, 2011 by Governor Sean Parnell. Mr. Butcher was the Director of Governmental Relations and Public Affairs for the Alaska Housing Finance Corporation (AHFC) for the last eight years and in a dual role was also Vice President of the recently formed Alaska Gasline Development Corporation (AGDC) since 2010. In 2009 Mr. Butcher served as a Special Assistant working on Economic Development issues for Governor Parnell. Mr. Butcher also served as a member of former Governor Sarah Palin's gasline team through the AGIA process.

Before joining AHFC in 2003, Mr. Butcher previously worked for the Alaska State Legislature as a Finance Committee Aide for the House and Senate Finance Committees for 12 years.

Mr. Butcher is also currently serving as the coordinator for Governor Sean Parnell's statewide transition team.

A lifelong Alaskan born and raised in Anchorage, Mr. Butcher holds a Bachelor of Science degree in Speech Communications from the University of Oregon.

BRYAN D. BUTCHER

VICE PRESIDENT — Anchorage, AK

Alaska Gasline Development Corporation — **2010**

Worked as the Vice President for the newly established Alaska Gasline Development Corporation that was tasked with developing a plan on how an in-state gas pipeline can be designed, financed, constructed and made operational by December 31, 2015. This plan is due to be submitted to the legislature by July 1, 2011. Was in charge of the Corporation's budget, as well as working on the financing and outreach aspects of the task. Worked in concert with the Commercial Manager in meeting with gas pipeline construction companies, investment banks and gas producers to gauge interest in this project as required by state statute.

LEAD COORDINATOR — Alaska

The Transition Team of Alaska Governor Sean Parnell — **2010-2011**

In charge of putting together eight policy transition teams that included over 100 Alaskans in developing a transition team report on recommendations in the policy areas of Education, Health Care, Science and Technology, Public Safety and Justice, Resources, Energy and the Environment, Infrastructure, Financial Services and Business Investment and the Military.

SPECIAL ASSISTANT — Anchorage, AK

Alaska Governor Sean Parnell — **2009-2010**

Worked on issues in the broad policy area of economic development for the Governor, including the establishment of policy teams that met to advise the Governor on issues of importance to that particular sector of the economy.

DIRECTOR OF GOVERNMENTAL RELATIONS AND PUBLIC AFFAIRS

Anchorage, AK

Alaska Housing Finance Corporation — **2005-2010**

Responsibilities include all communications with the Governor, Legislature, Congress and the federal government on issues affecting the Corporation. Accomplishments include getting more flexibility for the Public Housing Division by having Congress include Alaska in the Moving to Work program and establishment of the Weatherization and Home Energy Rebate programs in the Corporation. Responsibilities included preparing and giving presentations on the Corporation's fiscal health and outlook to the credit rating agencies on Wall Street and assisting in virtually all areas of the Corporation's policy management, including Finance, Public Housing and Mortgage Operations. Also was responsible for all marketing, press relations and public outreach, including the successful educational campaign for the 2010 Veterans mortgage loan program general election vote.

Responsible for successful legislation passed including the establishment of the Alaska Housing Capital Corporation for the funding of future capital projects, expansion of the Teachers and Nurses Housing Loan program to include all health care professionals and expanding the Corporation's statutes to allow it to do more for homeless Alaskans.

MEMBER — Alaska

Governor Sarah Palin's AGIA Gas Pipeline Team — **2007-2008**

Worked on the evaluation aspects of the team focused on the financing and bonding proposals included in the applications received during the AGIA process.

CHAIR — Alaska

Department of Revenue Transition Team — **2006**

Was in charge of developing and compiling the recommendations for the Department of Revenue transition team document for the Administration of Alaska Governor Sarah Palin.

LEGISLATIVE LIAISON — Anchorage, AK

Alaska Housing Finance Corporation — **2003-2005**

Was in charge of relationship with the Governor and the Legislature in all communications, including passing of AHFC transfer plan legislation that resulted in an upgrade in the Corporation's credit rating from Standard and Poor's. Also successfully worked to get a $25 million AHFC bond bill passed by the legislature to fund sewer and water projects.

SENATE FINANCE COMMITTEE AIDE — Anchorage and Juneau, AK

Alaska State Senator Pete Kelly, Co-Chair — **2001-2003**

Senate Finance Committee

- Worked on the development of the $227 million transportation bond bill and $237 million education bond bill for the Senate Finance Committee that passed the legislature and was approved by voters in the November 2002 election.
- Was the Finance Committee staff person responsible for the development of the $1.4 billion state capital and public works budget, including road, port, school construction and public sanitation projects.
- Fiscal analysis and oversight of $2.3 billion State of Alaska operating budget, including the preparation of State Senate versions of state agency budgets for the $151 million Department of Community and Economic Development and the $134 million Department of Fish and Game.

Policy Development

- Development of strategy resulting in the successful passage of the State's operating and capital budgets by the legislature and subsequent signature into law by the Governor.

HOUSE FINANCE COMMITTEE AIDE — Anchorage and Juneau, AK

Alaska State Representative Gene Therriault, Co-Chair — **1999-2001**

House Finance Committee

- Was the Finance Committee staff person responsible for the development of the $1 billion state capital and public works budget, including road, port, school construction and public sanitation projects.
- Fiscal analysis and oversight of $2.3 billion State of Alaska operating budget, including the preparation of the State House version of the state budget for the $1.07 billion Department of Health and Social Services.
- Developed the missions and measures for the Department of Health and Social Services for the legislature. This included better defining the missions of the divisions in the department

and generating measures that would allow for the increase in the effectiveness and the efficiency of those divisions.

CHIEF OF STAFF — **Anchorage and Juneau, AK**
Alaska State Representative Terry Martin — **1998**
House Finance Committee

- Fiscal analysis and oversight of $2.3 billion State of Alaska operating budget, including the preparation of State House versions of state agency budgets for the $140 million Department of Revenue and the $28 million Department of Law.

Policy Development

- Development of legislation in the area of public finance, intended to produce a more "honest" budgetary method of accounting for the state's general fund.

Public Affairs Management

- Development of public outreach programs targeting constituents, community councils, trade organizations and special interest advocacy groups using direct mail, contact with the press and public appearances.

MANAGER OF CLIENT DEVELOPMENT — **Los Angeles, CA**
Global Stratagem Group — **1997**

Led efforts to develop private sector clients for strategic planning consulting firm, with an emphasis in infrastructure development and public affairs advocacy. Clients included Montgomery Watson Americas, Inc., Nelson NamePlate Co. and the City of Vernon, CA.

LEGISLATIVE COORDINATOR — **Anchorage, AK**
American Cancer Society/American Heart Association — **1997**
Public Affairs Management

Worked with executive directors of the American Cancer Society, the American Heart Association and their lobbyists to develop and execute a strategic plan to pass legislation that would fund children's programs by substantially increasing the tobacco tax in the State of Alaska. A primary component in executing the plan was targeting individuals who had strong relationships with individual legislators in order to gain those legislators' support. Activities included direct contact with influential political and community leaders in order to get them to personally lobby for the legislation. After unsuccessful attempts in the prior three legislative sessions, the legislation was successfully passed and signed into law by the Governor during the 1997 legislative session.

CHIEF OF STAFF — **Anchorage and Juneau, AK**
Alaska State Senator Steve Rieger — **1993-1997**
Senate Finance Committee

- Fiscal analysis and oversight of $2.6 billion State of Alaska operating budget, including the preparation of State Senate versions of state agency budgets for the $425 million Department of Health and Social Services, the $370 million University of Alaska, the $320 million Department of Transportation and the $91 million Department of Public Safety.
- Assisted in the development of the yearly state capital budget, ranging in size from $100 million to $325 million general funds.

Policy Development

- Development of legislation in areas of health and social services and public safety, including legislation reducing the overpayment of welfare amounts, a budget cutting matter, and a bill to extend state police protection coverage to parts of Senator Rieger's district not covered at the time.
- Oversight of the development of legislation dealing with the prioritization of the investments of the Alaska Permanent Fund, the Senator's top priority, a fund of approximately $24 billion.

LEGISLATIVE ASSISTANT — **Anchorage and Juneau, AK**
Alaska State Senator Rick Uehling — **1989-1993**
Senate Finance Committee

- Fiscal analysis and oversight of the $3.1 billion State of Alaska budget, including the preparation of State Senate version of the state agency budget for the $102 million Department of Corrections budget and assisted in the development of the state senate version of the $760 million Department of Education budget.
- Assisted in the development of the yearly state capital budget, ranging in size from $100 million to $500 million general funds.

Policy Development

- Development of legislation in areas of health and social services, natural resources and revenue, including passage of legislation dealing with the protection of workers from sexual harassment in the workplace. Also worked on a resolution urging Congress to open the Arctic National Wildlife Refuge to oil and gas exploration. Worked on legislation that came through the Senate Finance Committee for the Senator.

EDUCATION

UNIVERSITY OF OREGON — **Eugene, OR**
Bachelor of Science degree, Speech: Rhetoric and Communication, 1987.

WEST ANCHORAGE HIGH SCHOOL — **Anchorage, AK**
Graduated 1982.

The Honorable Gary Stevens
President of the Senate
Alaska State Capitol, Room 111
Juneau Alaska 99801-1182

Dear President Stevens:

I am required by the Public Employment Relations Act (AS 23.40.070-260) to report the monetary terms of any agreement reached with an employee organization. By copy of my memorandum to Karen Rehfeld, Director of the Office of Management and Budget (enclosed), please accept my report of the monetary terms of the collective bargaining agreement reached between the State and Teachers Education Association of Mount Edgecumbe. Also enclosed is a copy of the collective bargaining agreement.

The monetary terms of this agreement must be submitted to the Legislature for approval pursuant to AS 23.40.215. In the interest of maintaining harmonious relations, I respectfully request that the Legislature approve the monetary terms of this agreement pursuant to AS 23.40.215(b), subject to ratification by a majority of union members.

If I can answer any questions or provide additional information please call.

Sincerely,

Becky Hultberg

Subject: Monetary terms of the July 1, 2012 to June 30, 2015, Collective Bargaining Agreement between the State and the Teachers' Education Association of Mt. Edgecumbe

The Administration has concluded negotiations with the Teachers' Education Association of Mt. Edgecumbe (TEAME). If approved by the Legislature the monetary terms of this agreement become effective July 1, 2012 and remain in effect through June 30, 2015.

I. Terms Requiring Appropriation.

Current Legislative session

Effective July 1, 2012, the employer health premium contribution shall increase to a total of one thousand three hundred and thirty dollars ($1330) per month, per member. This amounts to an increase of $80.00 per month, per member.

Effective July 1, 2012, the wage schedule in effect on June 30, 2012, shall increase by two (2%) percent.

Future Legislative sessions

Effective July 1, 2013, the employer health premium contribution shall increase by the amount of money not exceeding that necessary to maintain the Select Benefits Default plan.

Effective July 1, 2013, the wage schedule in effect on June 30, 2013, shall increase by one percent (1%).

Effective July 1, 2014, the employer health premium contribution shall increase by the amount of money not exceeding that necessary to maintain the Select Benefits Default plan.

Effective July 1, 2014, the wage schedule in effect on June 30, 2014, shall increase by one percent (1%).

II. Change in State Revenues.

No term of this agreement would result in a change to State revenues.

III. Change in Productive Work Hours.

There is no change in productive work hours.

This report of monetary terms is consistent with the requirements of the Public Employment Relations act. Please forward these monetary terms to the Legislature in accordance with AS 23.40.215.

ARTICLE 1
GENERAL PROVISIONS

Section 1: Nondiscrimination

P.F. 2/10/12 TA

The State and the Association agree that there shall be no discrimination concerning terms and conditions of employment or TEAME admission or representation on the basis of race, creed, color, religion, age, national origin, sex, domicile, marital status, change in marital status, genetic information, physical or mental disabilities, pregnancy, parenthood, membership or participation in Association activities.

Section 2: Management Rights
Except – and only to the extent – that specific provision of this Agreement expressly provide otherwise, it is hereby mutually agreed that the Employer has, and shall continue to retain, regardless of the frequency of exercise, rights to operate and manage its affairs in each and every respect.
Nothing in this Article shall be considered as superseding those rights granted to the Association in the articles and/or amendments of this Agreement.

Section 3: Savings and Separability

If any article, section, or subsection of this Agreement or any application of this Agreement to any employee or group of employees is held to be contrary to law, then such provision or application shall not be deemed valid or subsisting, except to the extent permitted by law, but all other provisions or applications shall continue in full force and effect. Furthermore, the State and Association shall within ten (10) calendar days enter into negotiations to replace any provision found to be contrary to law.

Section 4: Reproduction of Agreement
Copies of this Agreement shall be supplied by the State within ninety (90) calendar days after the Agreement is signed and presented to all teachers now employed, or hereafter employed. The State shall furnish five (5) additional copies of this Agreement to the Association for its use.

TA PMP 2/10/12 at 12:45pm P.F. 2/10/12

ARTICLE 2
NEGOTIATIONS PROCEDURE AND ASSOCIATION SECURITY

Section 1: Recognition

The State recognizes, in accordance with AS 23.40.070-23.40.260, the Teachers' Education Association of Mt. Edgecumbe as the exclusive representative for all teachers in the bargaining unit for the purpose of negotiating to achieve mutually satisfactory agreements on matters pertaining to their employment and the fulfillment of their professional duties.

Section 2: Inaugurating Negotiations

The parties agree to meet at a mutually agreeable time in August, 2011, to discuss establishment of a time to begin negotiations for a successor agreement.

- need to address when agreed on art. 14

P.F. 2/10/12

Section 3: Impasse Resolution

If no agreement is reached despite implementation of the foregoing procedures and the best efforts of the negotiating teams, the mediation procedure in AS 23.40.200(g) for resolving impasse shall be followed.

Section 4: Agency Fee

A. The National Education Association (NEA) shall fulfill its duty to represent all TEAME teachers without respect to membership in the Association.
B. For the life of the Agreement, all teachers covered by this agreement shall, as a condition of continued employment, either be or become a member of NEA and pay NEA dues, or pay a monthly agency fee to the NEA equal to the dues assessment made of all members of TEAME. The fee shall be subject to all legal requirements of the bargaining agent.
C. Teachers who are members of the NEA shall remain members for the duration of this Agreement, except that teachers may withdraw from membership during an annual thirty (30) day period immediately prior to September 30th. Any teacher who withdraws from membership shall be obligated to pay a monthly agency fee to NEA as a condition of continued employment.

P.F. 2/10/12

Section 5: Dues

A. Upon receipt by the Employer of a check off authorization dated and executed by the teacher which includes the bargaining unit member's ~~social security number~~ Employee Identification Number, the Employer shall deduct from the teacher's wages the amount of NEA membership dues or agency fee owed. The Employer will forward the monies so deducted to NEA together with a list of teachers from whose wages such monies were deducted not later than fifteen (15) working days after deduction. The Employer shall deduct from a teacher's wages only the amount of money which the NEA has certified in writing is the amount of monthly dues or agency fees.
If, for any payroll period in which the Employer is obligated to make deductions pursuant to this section, the wages owed a teacher after mandatory deductions are less than the authorized dues or fees to be deducted pursuant to this Article, the Employer shall withhold the amount from the second semi-monthly pay period.
B. Payroll deduction authorizations for dues or agency fees may be canceled by the teacher upon thirty (30) days written notice to the Employer, who shall notify NEA prior to the cessation

TA

P.F. 2/10/12

of the deduction. Such cancellations may be processed only during an annual thirty (30) day period immediately preceding September 30. The cancellation of payroll deduction does not relieve that teacher from the requirement of agency fee payment.

C. The TEAME/NEA president shall notify the Director of the Division of Finance in writing of any increase or decrease in authorized dues or agency fees at least thirty (30) days prior to the effective date of the rate changes.

TA BMP 2/10/12 @ 12:46

P.F. 2/10/12

ARTICLE 3
DURATION OF AGREEMENT

Section 1

This Agreement shall become effective July 1, 2012, upon ratification by TEAME and approval of the Legislature and TEAME. This Agreement shall continue in full force and effect through June 30, 2015.

bmertl-posthumus 3/16/12 9:36 AM

Section 2

Either party may, by written notice, initiate negotiations for a successor agreement as provided in Article 2, Section 2.

Section 3

The terms set forth herein shall be included by reference in the contracts of all teachers employed by MEHS. This Agreement shall be made a part of the teacher's individual comprehensive contract with the same force and effect as though fully set forth therein, and it shall remain in full force and effect up to and including June 30, 2015. This Agreement shall be altered, changed, added to, deleted from or modified only through the voluntary, mutual consent of the State and TEAME. Agreement to the commitments contained herein will have full force and effect.

P.F. 3/16/12

ARTICLE 4
ASSOCIATION RIGHTS

Section 1: Access to Buildings

Duly authorized representatives of the Association shall be permitted to transact official Association business on school property outside the normal work day (8:00a.m. – 4:30p.m.) provided such right is not abused and does not disrupt normal school activities.

Section 2: Communication

The Association shall have the right to use MEHS mails both traditional and electronic and MEHS mailboxes to distribute Association material outside the normal workday (8:00a.m. – 4:30p.m.). Electronic use will be in accordance with the State's Technology Policy.

Section 3: Use of Facilities and Equipment

The Association shall have the right to use school facilities and equipment including, but not limited to, typewriters, computers, photocopy machines, other duplication equipment, calculating machines, local telephone and audiovisual equipment when such equipment is not otherwise in use, provided such right is not abused and does not disrupt normal school activities. The Association shall pay for incidentals to such use. Allegations of abuse of this right shall be resolved pursuant to Article 5. The Association shall have the right to use school buildings for meeting at no charge.

Section 4: Access to Information

The State agrees to furnish to the Association, upon request, information relevant to the Association's responsibilities as the recognized bargaining agent.

Section 5: Exclusive Rights

The rights granted to TEAME shall not be granted or extended to any other organization claiming to represent teachers at MEHS during the life of this Agreement.

Section 6: Steward Leave

The Union President or the President's designee shall be allowed to handle complaints and grievances under this Agreement during working hours. The President or designee shall suffer no loss in compensation for time spent handling complaints and grievances for up to eight (8) hours per month. All time spent in such activities shall be recorded on a State form which clearly identifies the activity as release time. Release from work to perform steward functions will normally be pre-approved and will not be unreasonably denied.
The State form will be prepared and submitted to administration for recording purposes. If possible the form will be submitted in advance; however, when not feasible, the form will be prepared and submitted to administration within a reasonable period of time within the affected pay period.

Section 7: Union Leave Bank

P.F. 2/10/12

P.F. 2/10/12

TA

Union leave will be used by request of the Association President. A leave ~~slip~~ request with the name of the member shall be submitted to management for accounting purposes.
Each bargaining unit member shall be charged with four (4) hours of leave annually on or before November 1st. If the Union Leave Bank has one hundred sixty (160) hours on November 1st there will be no assessment of the unit members' leave in that school year.

P.F. 2/10/12

ARTICLE 5
GRIEVANCE PROCEDURE

Section 1: Definitions

A. A grievance shall be defined as any controversy or dispute involving the application or interpretation of the terms of this Agreement arising between the Association or any teacher(s) and the Employer.

B. The grievant(s) is the teacher(s) or the Association pursuing the controversy or dispute through the grievance-arbitration procedure.

Section 2: Purpose

The parties agree that they will promptly attempt to adjust grievances arising between them. The purpose of the procedure described herein is to secure, at the lowest possible level, mutually agreeable solutions to the grievances that may, from time to time, arise between the parties. The parties agree that these proceedings will be kept as confidential as may be appropriate at any level of the procedure.

Within the framework of this Agreement, the grievant and/or the Association shall use the following procedure as the sole means of settling said grievances. It is further agreed that the parties covered herein shall be bound, consistent with the terms of this Article, by any written decisions, determinations, agreements, or settlements that may be effectuated through this grievance-arbitration procedure.

Section 3: General Provisions

A. Any grievance must be brought to the attention of the Employer, consistent with the procedures set forth in this Article, within thirty (30) working days of the date the teacher first knew of or first received notice of the disputed action or inaction upon which the grievance is based, whichever is later, to receive use of the grievance procedure.

A dismissal, demotion, or suspension grievance must be brought to the attention of the Employer through the Association within fifteen (15) working days of the effective date of the action, or the date the teacher becomes aware of the action, whichever is later, to received the use of the grievance procedure.

It is agreed that all grievances resulting from dismissal, demotion or single suspension in excess of thirty (30) calendar days of a teacher covered by this Agreement shall be entered into the procedure at Level Three.

B. Throughout the grievance procedure, the number of days indicated at each level should be considered as a maximum and every effort should be made to expedite the process. The time limits specified may be extended by mutual agreement. The time limits for submission of a grievance at Level Two shall be counted from the date of receipt of the response from the Employer or the date the response is due, whichever is earlier. The time limits for a response to a grievance shall be counted from the date of receipt of the grievance from the Association or the grievant.

P.C. 3/16/12

Date of receipt of a grievance or response shall be seven (7) calendar days following the date of postmark or the date of a signed verification or receipt, whichever is earlier.

C. If the Employer does not comply in rendering a decision within the time allotted after the grievance is submitted, such failure shall entitle the Association to take the grievance to the next level of the grievance procedure. Grievances not advanced within the time frames provided or altered by mutual agreement will not be considered active.

D. If a designated representative of the Association attends an arbitration during the working day, s/he will, upon notice to the Employer, be granted reasonable accommodation for release time, in order to permit participation in the arbitration. A teacher, whose appearance in such proceedings as an Employer witness is necessary, will be accorded the same right.

E. If in the judgment of the Association, a grievance affects two or more teachers in the same manner, the Association may file a class action grievance within thirty (30) calendar days after learning of the action or inaction upon which the grievance is based. The processing of such grievance will commence at Level Two.

F. All copies and originals of documents, exhibits, written communications, and records dealing with the processing of a grievance shall be filed in a separate grievance file and will not be kept in the personnel file of any of the participants.

G. Forms for use in processing grievances shall be jointly developed and/or approved by the Association and the Employer.

Section 4: Grievance Steps

A. Level One

Within 30 days of the disputed action or inaction or within 30 calendar days from the date the teacher is made aware of the action or inaction, whichever is later, the grievant shall first present a grievance in writing to his/her first level supervisor outside the bargaining unit. The supervisor shall attempt to resolve the matter and report his/her decision in writing to the grievant within ten (10) working days of its presentation.

B. Level Two

If the grievant is not satisfied with the disposition of his/her grievance at Level One, the Association may file a written grievance with the Superintendent within ten (10) working days after the written response at Level One is due or received, whichever is earlier. The written appeal shall state specifically which Article(s) and/or Section(s) of the Agreement the Employer may have violated. The Superintendent shall submit his/her decision and the reasons therefore in writing to the Association within ten (10) working days after receipt of the grievance at Level Two.

C. Level Three

If the grievant is not satisfied with the disposition of his/her grievance at Level Two, the Association may file a written grievance with the Senior Management Consultant for the General Service Team within ten (10) working days after the written response at Level Two is due or

P.F. 3/16/12

received, whichever is earlier. The written appeal shall state specifically which Article(s) and/or Section(s) of the Agreement the Employer may have violated. The Senior Management Consultant shall submit his/her decision and the reasons therefore in writing to the Association within twenty (20) working days after receipt of the grievance at Level Two.

Settlements reached at Level One or Level Two shall be binding only if such settlements are consistent with the provisions of this Agreement and policies and regulations of the Employer. Grievances settled at Level One or Level Two found to be inconsistent with this Agreement may be reopened by the Employer through a written notice to the Association within fifteen (15) working days from the date of the settlement.

D. Level Four

If the Association is not satisfied with the disposition of the grievance at Level Three, the Association may appeal in writing the Level Three decision to the Commissioner of the Department of Administration within twenty (20) working days after the decision at Level Three is due or received, whichever is earlier. The written appeal shall state, when appropriate, specifically which Article(s) and Section(s) of the Agreement the Employer may have violated. The Commissioner of the Department of Administration, or designee, shall submit his/her decision and the reasons therefore in writing to the Association within twenty (20) working days after receipt of the grievance at Level Four.

E. Arbitration

If the Association is not satisfied with the disposition of a grievance at Level Four, the Association may appeal in writing the Level Four decision binding arbitration within fifteen (15) working days after the decision at Level Four is due or received, whichever is earlier. Within twenty (20) working days after the written appeal to arbitrate is received, the Employer and the Association will meet to select an arbitrator from the current panel of arbitrators by alternately striking names from the panel until only one name remains. The remaining name shall serve as the arbitrator. If the selected arbitrator cannot serve within a reasonable period of time, the parties will mutually agree upon another arbitrator. The first strike shall be determined by a coin toss.

Section 5: Board of Arbitrators

The panel of arbitrators will be seven (7) Pacific Northwest arbitrators jointly requested by the Association and the Employer from the United States Federal Mediation and Conciliation Service (USFMCS) within thirty (30) working days of the signing of the Agreement. If either the Employer or Association so desires, a new panel of seven (7) arbitrators may be requested at the end of each six month period. This does not preclude the parties from compiling a mutually agreeable list without the assistance of the USFMCS.

The selected arbitrator will be jointly contacted by the parties promptly to schedule a mutually satisfactory hearing date, time, and place for the arbitration. The arbitrator will issue his/her decision not later than thirty (30) working days from the date of the close of the hearings, or from the date the final statements and/or briefs are submitted to him/her. The written decision of the arbitrator will be submitted to the Employer and to the Association and will be final and binding upon the parties. The arbitrator shall have no authority to rule contrary to, to amend, add to, subtract from, or eliminate any of the terms of this Agreement. The arbitrator shall have the power to return a grievant to employee status with or without restoration of back pay, or

P.F. 3/16/12

mitigate the penalty as equity suggests under the facts. Should either party fail or refuse to abide by the decision of the arbitrator, the prevailing party shall be free to take whatever action it deems necessary within the confines of this agreement.

Section 6: Authority of Arbitrator

The parties agree that any question of arbitrability in a dispute will be heard by the arbitrator at the same hearing that the merits of the dispute are heard, unless upon the request of either party, the arbitrator decides otherwise. The arbitrator will first rule on the arbitrability issues in his/her decision and, if appropriate, on the merits of the dispute.

The costs of the services for the arbitrator, and his/her travel and subsistence expenses and the cost of any hearing room will be borne as designated by the arbitrator. Normally, the losing party shall be expected to pay the arbitrator's expenses. If neither party can be considered the losing party, the arbitrator shall apportion expenses using the arbitration decision as a guide.

Section 7: Arbitration Witnesses

A teacher who is required to appear as a witness for an arbitration proceeding for the Association shall be considered in pay status.

P.F

ARTICLE 6
STANDARD TEACHER CONTRACT

The Standard teacher's contract shall consist of one hundred and eighty-eight (188) teaching and/or in-service days plus holidays. When necessary the Superintendent may assign the academic counselor to work outside the standard contract above and he may request that teachers work outside the standard contract above in order to work on the scheduling of students prior to the beginning of the school year. The teachers' per diem rate shall be calculated at 1/188 of their contracted annual salary.

ARTICLE 7
TEACHER RIGHTS

Section 1: Student Evaluation

The teacher shall maintain the right and responsibility to determine grades and other evaluations of students within the grading policies of the State based upon his/her professional judgment of available criteria pertinent to any given subject area or activity for which the teacher is responsible. No grade or evaluation shall be changed without prior notification to the teacher.

Section 2: Academic Freedom

Teachers will have full freedom in instruction and the selection of instructional materials and methodology within the outlines of the appropriate course content, within the planned instructional program as determined by normal instructional development and administrative procedures subject to approval of the superintendent or his designee and within budgetary constraints.

Section 3: Personal Freedom

The off-duty conduct of a teacher shall not be a concern of the Employer unless it impairs the teacher's fulfillment of job responsibilities.

The teacher is free to express to administrators or other teachers professional opinions or suggestions that are in disagreement with those of the administrators or other teachers without fear of disciplinary action, unless or until such expression becomes abusive or harassing in nature.

In the exercise of their private affairs teachers shall enjoy the rights guaranteed within this section.

The State may not directly or indirectly:

A. Require or coerce any teacher to participate in any way in any activity or undertaking unless the activity or undertaking is related to the performance of official duties;

B. Require or coerce any teacher to make any report concerning any of his/her activities or undertakings unless the activity or undertaking is related to the performance of his/her official duties;

C. Except as directly related to the performance of his/her official duties, require or coerce any teacher to submit to any interrogation or examination or psychological test that is designed to elicit from him/her information concerning:

1. his/her personal relationship with any person connected with him/her by blood or marriage,

2. his/her religious beliefs or practices,

P.F. 3/16/12

3. sexual matters,

4. his/her political affiliation or philosophy;

D. Coerce any teacher to invest or contribute his/her earnings in any manner or for any purpose;

E. Restrict or attempt to restrict after-working-hour statements, pronouncements, or other activities, not otherwise prohibited by law or rule, of any teacher, if the teacher does not purport to speak or act in an official capacity. The provisions of this Section do not diminish the authority of an authorized law enforcement agency to conduct criminal investigations of teachers suspected to being involved in criminal activity.

Section 4: Political Activity

Teachers may be active politically. For the purposes of the Section, "active politically' means that teachers may be a member of a national, state, or local political party; may take part in a political campaign; and may exercise his/her right as a citizen to express his/her opinion, register his/her party preference, serve as a delegate to party conventions, and cast his/her vote. Teachers may also be appointed, nominated, or elected to nonpartisan public office in a local government unit.

For the purposes of this Section, "active politically' does not include:

A. Running for and serving in State or national partisan public office;

B. Being politically active while in work status;

C. Purporting to act on behalf of the Employer;

D. Taking an active part in the management of a political party above the precinct level;

E. Giving, rendering, paying, offering, soliciting, or accepting money, service, or other valuable thing in connection with an appointment, promotion, or advantage in State employment;

F. Requiring an assessment, subscription, contribution, or service for a political party from a teacher or any other State employee;

G. Seeking or attempting to use a political party endorsement in connection with an appointment or promotion as a teacher or to a position in the classified or partially-exempt services.

Section 5: Workday

The standard workday for teachers is eight (8) hours exclusive of a meal period.

Section 6: Meal Periods

P.F 3/16/12

Teachers shall normally have a daily duty-free meal period of at least thirty (30) minutes free of assigned responsibilities.

Section 7: Preparation Time

Each teacher who is assigned to teach a full curriculum and who is not assigned to the residential program shall have, in addition to his/her meal period, equivalent to one full class period daily preparation time during which the teacher shall not be assigned to any other duties. If the school schedule is modified, preparation time will match the modified schedule for that day. Preparation time will not be unnecessarily divided and it will be during the student day.

Section 8: Legal Assistance

A. Eligibility for Legal Assistance

To be eligible for legal assistance, both of the following conditions must be met:

1. Timely Request. The teacher must request in writing to the Commissioner of the Department of Education and Early Development that the Employer provide the legal defense services available under this Article within ten (10) calendar days of service of summons and complaint on the employee. The postmark on the teacher's request shall be deemed the date of the request. Failure to submit a written request within the required ten (10) calendar days relieves the Employer of any obligation under this Article.

2. Good Faith Performance. The Employer must determine that the teacher was acting in good faith and with reasonable care and diligence in the performance of the assigned duties before the teacher is entitled to legal assistance under this Article. Determinations made by the Employer in connection with this subsection are final. The Department of Law shall be responsible for making such determinations.

B. Legal Assistance to be Provided

1. If the Employer determines that a teacher did not engage in conduct beyond the scope of the teacher's authority or which constituted willful misconduct or gross negligence in the performance of the teacher's duties, upon request the Employer agrees to provide for the legal defense of the teacher in any civil legal action brought against the teacher as a result of the performance of the teacher's duties.

2. The teacher must request in writing that the Employer provide the legal defense services available under this Article within five (5) working days of service of summons and complaint on the teacher. The summons and complaint shall accompany the request. The postmark on the bargaining unit member's request shall be accepted as the date of the request by the Employer. Failure to submit a written request within the required five (5) working days relieves the Employer of any obligation under this Article.

3. The Employer shall have the right to determine which attorney shall represent the teacher. If the bargaining unit member objects to the attorney provided by the Employer, the teacher may request that the Employer appoint another attorney. The teacher may make only one (1) such request.

P.F. 3/16/12

4. If the Employer determines that the teacher did not engage in conduct beyond the scope of the teacher's authority or which constituted willful misconduct or gross negligence, the Employer agrees to compensate the teacher at the teacher's normal rate of pay including per diem without loss of any benefits or seniority to the teacher; upon a reasonable showing by the teacher of need, an absence from work will be allowed to prepare the teacher's case for negotiation or trial. The Employer also agrees to pay any judgment rendered against the teacher if the Employer has provided legal services to the teacher pursuant to this Article.

5. The Employer may undertake the defense of a teacher pursuant to this Article with reservation. If the Employer has provided legal services under reservation, the obligation to pay a judgment against the teacher is not operative until final determination is made by the Employer of the teacher's eligibility for legal services under this Article. If the Employer has undertaken the defense of a teacher with reservation, and if a court of competent jurisdiction deems that the teacher acted beyond the scope of the teacher's authority or with willful misconduct or gross negligence, then the Employer has no liability whatsoever to the teacher or any other person as a result of such determination. In such cases as this, the judgment, costs and fees will be borne by the teacher as in any other instance where the court determines that the teacher acted beyond the scope of the teacher's authority or with willful misconduct or gross negligence.

6. For purposes of this Article, "Employer" means the State of Alaska or designated representative of the State or an agency of the State. Consistent with past practice, decisions of the Employer pursuant to this Article shall not be subject to the grievance-arbitration procedure.

P.F. 3/16/12

ARTICLE 8
DISMISSALS, NON-RETENTION, DISCIPLINE, AND REDUCTION IN FORCE

Section 1: Dismissal

The Employer agrees not to dismiss, non-retain or suspend a tenured teacher without just cause. Any tenured teacher who is suspended, non-retained, or dismissed shall be notified of the reason(s) for said dismissal in writing. If a teacher so requests, s/he may appeal his/her dismissal starting at Level Two of the grievance procedure.

Section 2: Discipline

The Employer agrees to notify the teacher, in writing, when it becomes known that he/she has a deficiency so serious as to have a possible effect on his/her continued employment but that does not require the immediate removal or disciplining of the teacher.

The written notice required by this Section shall include the nature of the deficiency and the standard against which future performance will be evaluated. Discussions of said deficiency and possible means to overcome the same shall be held upon request from the teacher. The teacher shall normally be given a reasonable period of time to effect remedial action after receiving this written notice.

Warnings, reprimands, and other forms of discipline shall only be for just cause and, whenever possible, administered in private. A copy of written disciplinary action(s) shall be provided to TEAME and one shall be placed in the teacher's personnel file, along with the teacher's response, if one is made and is not part of a grievance.

Discipline shall be administered in a prompt, fair, and equitable manner.

If a teacher has been notified in advance, or if the teacher has reason to believe that discipline is being or will be administered, the teacher may request, and is entitled to receive, a reasonable period of time to secure the presence of a TEAME representative during the disciplinary action.

Section 3: Layoff

A layoff of a teacher(s) may occur by reason of abolition of position, shortage of work or funds, or another reason outside the teacher's control that does not reflect discredit on the services of the teacher(s).

P.F
3/16/12

ARTICLE 9
VACANCIES, ASSIGNMENT, AND TRANSFERS

Section 1: Vacancies

Definitions

"Qualified" is defined as an endorsement, or a major or minor in a subject field from an accredited college or university. The Superintendent may designate a teacher otherwise not qualified by this definition as being qualified.

"Assignment" is defined as a specified teaching duty(ies) in terms of subject matter and/or grade level(s), and teaching stations.

"Transfer" is defined as the movement of an employee to a different assignment, grade level, subject area or teaching station.

Section 2: Procedures

Each teacher shall be given written notice of assignments for the school year not later than August 1 of the school year. Assignments are subject to change due to the needs of the incoming students.

The State shall deliver to the Association and post a list of teaching vacancies that occur during the year and for the following school year upon knowledge of such vacancies. Said vacancies shall be posted for not less than fifteen (15) school days prior to being filled, unless such posting is impractical under the circumstances.

If a current teacher wants to fill a vacant position for which s/he is qualified, the teacher is entitled to first consideration based on seniority. If a teacher wishes to change assignment for a full school year, the teacher shall notify the Superintendent by March 1 of the previous school year.

Section 3: Involuntary Transfers and Reassignment

Reassignments of teaching positions will be completed by the Superintendent, so long as the teacher to be reassigned is properly certified and highly qualified for the reassignment. A teacher occupying a position through an involuntary transfer shall be given first consideration to fill any subsequent vacancy that occurs for which the teacher is certified or highly qualified by the No Child Left Behind state/federal requirements.

Notice of involuntary transfer shall be given in writing to employees as soon as possible and in no case later than thirty (30) calendar days before the effective date of the transfer, except in case of a teacher resignation after August 1.

The State shall provide upon written request a written statement of the reason(s) for a teacher's assignment being involuntarily changed.

Involuntary transfers shall not be used for disciplinary actions.

B.F 3/16/2

Section 4: Student Discipline

When, in the judgment of the teacher, a student requires the attention of the principal, counselor, psychologist, physician or other specialist, s/he shall so inform the principal or immediate supervisor in writing. The principal or immediate supervisor shall arrange as soon as possible for a conference composed of appropriate parties to discuss the problem and to decide appropriate steps for its resolution.

P.F. 3/16/12

ARTICLE 10
EVALUATIONS

Section 1: Instrument/Criteria

The evaluation instrument and related criteria shall be bilaterally developed by the Employer and TEAME, and shall be available to all members of TEAME and shall be consistently and equitably applied.

Section 2

Evaluations and post-evaluation conferences between the employee and principal shall be arranged according to the following schedules:

Non-tenured employees shall have a minimum of two (2) formal evaluations and post-evaluation conferences annually prior to March 1. The first evaluation and conference shall be no later than November 1. There shall be at least a thirty (30) working day period between each observation unless requested sooner by the employee. Additional post-evaluation conferences shall be scheduled as needed in order to provide new employees with maximum assistance in strengthening and improving of teaching performance.

P.F. 2/10/12

Tenured employees shall have a minimum of one (1) evaluation every ~~three~~ one years or as often as deemed necessary by the principal. The evaluation and post-evaluation conference shall be completed prior to February 15. Additional post-observation conferences shall be scheduled as needed in order to provide intensive and maximum assistance in the strengthening and improvement of teacher performance.

Should the evaluation procedure reveal a performance deficiency, it is the responsibility of the building supervisor to inform the teacher in writing of the specific deficiency and provide in cooperation with the teacher a positive written step-by-step prescription for improvement (i.e., recommended course work, other staff advice, conferences, classroom visitations, books or articles). Such a prescription shall take into consideration both short- and long-term goals. The teacher shall have the option to request that the evaluator model correct teaching methods for specified deficiencies.

After a three (3) month period of remediation the employee shall be evaluated again in accordance with the procedures in this Article.

When a classroom teacher is to be evaluated, the academic principal shall make at least three (3) informal classroom visitations of twenty (20) minutes or longer duration and one (1) formal classroom visitation of fifty (50) minutes in length prior to completion of the evaluation instrument. Residential teachers will be evaluated according to standard State procedures by their immediate supervisor.

The evaluation instrument must be signed by the academic principal as the evaluator and by the teacher acknowledging that the post-evaluation conference was held and that the teacher is aware of the contents of the evaluation instrument. The teacher shall be allowed to affix to the instrument a rebuttal of any portion of the instrument that s/he feels is inaccurate, unfair or incomplete. This rebuttal shall be made within ten (10) working days following receipt of the evaluation instrument.

P.F. 2/10/12

The subjective judgment of the evaluator shall be subject to review according to the terms of this Agreement.

A signed copy of the evaluation instrument shall be provided to the teacher at the time of evaluation conference.

The evaluation instrument shall be considered confidential.

Section 3: Teacher Evaluation of Administrators

Forms for the evaluation of the principal and superintendent shall be provided for staff by the administration for completion and return to the appropriate administrators being evaluated by March 15 of the school term.

Completion of these evaluations by the teacher is at the teacher's option and forms shall be signed by the teacher. Copies of the signed evaluations shall be forwarded to the State Board of Education and the Commissioner of the Department of Education and Early Development.

Section 4: Personnel Files

Official personnel files shall contain only materials and records related to the employment history with the employer of the teacher, and shall be maintained under conditions which insure integrity and safekeeping. Teachers shall be advised as to the physical location of these files. File information shall be furnished upon request.

A. Teacher Access

Teachers shall have the right to examine their own official personnel files during the normal business hours of the office in which the files are kept. A copy of any non-routine material placed in a teacher's personnel file shall be forwarded to that teacher at the time it is placed in the file.

A teacher may make reasonable entries to the file and may make timely comments to material in the file that is not the subject of a grievance.

No anonymous material shall be placed in a teacher's personnel file.

A TEAME representative, with the teacher's written permission, shall have the right to examine the teacher's personnel file upon prior written notification to the Employer. The Employer will make available original material, or copies of the original material, for examination by the TEAME representative at the place where the personnel file is kept.

Confidential pre-hire information shall not be a part of the official personnel files, but may be maintained in separate files.

B. Secret Files

There shall be no secret personnel files.

In a specific personnel action no use may be made of any material that has not been properly and in a timely manner placed in a teacher's personnel file.

P.F. 2/10/12

Before the record of any complaint by a parent or by a student is placed in the teacher's personnel file, the teacher shall be afforded the opportunity to confront the complainant and to reply to the same. No derogatory materials, letter or report of complaint shall be placed in the teacher's file without the teacher's knowledge and without affording the teacher an opportunity to make a written statement of defense or explanation to be attached thereto. Any material referred to shall also be subject to the grievance procedure.

C. Copies

A teacher or designee may make a reasonable number of copies of the contents of his/her file.

ARTICLE 11
CONTINUING EDUCATION

In-Service Education

Recognizing the importance of an in-service education program that meets the needs of teachers, the administration shall establish the in-service needs of teachers and also the kinds and costs of in-service programs that may be used to meet those needs.

P.F.
3/16/12

P.F.
2/10/12

ARTICLE 12
LEAVE

Section 1: Personal Leave

Teachers are entitled to personal leave with pay that accrues as follows:

Two (2) days for each full monthly pay period in the case of teachers with less than two (2) years of service;

Two and one-quarter (2.25) days for each full monthly pay period in case of teachers with two (2) but less than five (5) years of service.

Two and one-half (2.5) days for each full monthly pay period in the case of teachers with five (5) or more years of service.

Upon appointment, accrued personal leave is available for use by a member following the successful completion of thirty (30) consecutive calendar days of leave eligible employment.

Section 2: Use of Personal Leave

A teacher may take personal leave any time business permits with permission of the immediate supervisor.

A teacher may take personal leave for medical reasons, regardless of whether business permits, with permission of the immediate supervisor. The supervisor shall grant personal leave for medical reasons if the supervisor is satisfied that the teacher is absent for medical reason. The taking of personal leave for medical reasons shall be reduced by the amount of wage continuation payments made under the Alaska Workers' Compensation Act (AS 23.30). The following constitute "medical reasons" and are subject to the conditions noted: Medical disability of teacher is medical reason for taking personal leave. A supervisor may require a doctor's certificate showing the disability if the absence exceeds three (3) consecutive working days.

Medical disability of a member of a teacher's immediate family is a medical reason for taking personal leave if the disability is such that the attendance of the teacher is required. A supervisor may require a doctor's certificate showing the disability if the absence exceeds three (3) consecutive working days.

A medical condition of a teacher that makes presence at work a danger to the health of fellow employees or students is a medical reason for taking personal leave. A supervisor may require a doctor's certificate showing the condition if the absence exceeds three (3) consecutive working days.

Death of a member of a teacher's immediate family is a medical reason for taking personal leave. No more than ten (10) days of personal leave may be taken for this purpose.

Each teacher shall, during the school year, take at least five (5) days of personal leave. If the teacher does not take at least five (5) days of personal leave during the school year, the difference between five (5) days and the amount of personal leave taken shall be canceled

without pay unless the superintendent certifies in writing that the teacher was denied the opportunity to take five (5) days of personal leave during the school year. Except in unusual circumstances, and when approved by the superintendent, leave will not be granted the last two (2) weeks the school is in operation or the week before or after Christmas break.

Section 3: Family and Medical Leave

Bargaining unit members shall be covered by the provisions of the Federal Family and Medical Leave Act (FMLA) CFR Title 29 Part 825 and the Alaska Family Leave Act (AFLA) AS 39.20.500 and for qualified employees the benefits of the two acts will run concurrently.

A. Health Coverage

During the time that an employee is on leave under this section, the Employer shall maintain coverage under the group health plan. However, the Employer may require that the employee pay all or part of the costs for maintaining health insurance coverage during a period of unpaid leave.

Section 4: Accumulation of Personal Leave

Personal leave accrued but not used shall accumulate to a maximum of seven-hundred twenty (720) hours on June 30 of any calendar year. If a teacher has, as of June 30, an amount of personal leave in excess of seven-hundred twenty (720) hours, the excess shall be deducted from the employee's personal leave balance and paid as cash. (For informational purposes only: the Teachers have deferred comp options available to address tax liability on leave cash-in).

Section 5: Donation of Leave

Employees covered by this Agreement shall be allowed to donate personal leave to and receive donations of annual or personal leave from employees in this unit or those represented by a different union or non-covered employees subject to the following conditions.

1. Each employee wishing to donate personal leave will ~~fill out, date and sign a leave slip~~ complete a leave request showing the amount of leave to be donated subject to a minimum of four hours. The leave ~~slip~~request will have written along the bottom, or in the space provided, "Leave donated to (employee name, ~~social security number~~Employee Identification Number)."

P.F. 2/10/12

2. The recipient's union will be responsible for gathering all leave donations to be forwarded to the Division of Finance for processing. Leave donations will be posted by the Division of Finance to the recipient's account during the pay period in which received (1 through 15, or 16 though the end of the month) for use from that pay period forward. Donation shall not be posted for use in a pay period prior to that in which received.

3. The Division of Finance will convert the donated leave to dollars at the annualized hourly rate of the donor. That dollar amount will be converted to leave at the annualized hourly rate of the recipient and the appropriate hours of leave will be added to the recipient's donated leave account for use as sick leave. The total amount of leave credited to the recipient's donated leave account shall not exceed 300 hours during the life of the current agreement. Donated leave may not be used until all accrued sick and annual leave has been exhausted.

P.F. 2/10/12

4. Once the Division of Finance has completed the above process, the State will not be obligated for further processing or liabilities resulting therefrom. Once the donation has been transferred to the recipient, the donation cannot be withdrawn, modified or otherwise returned to the donor's leave account. Leave donations will not reduce the mandatory leave usage requirements established in the collective bargaining agreement. Upon the death of an employee, any unused donated leave shall be paid in cash to the employee's beneficiaries at the employee's annualized hourly rate.

A teacher may donate one or more days of personal leave a year to the memorial scholarship revolving loan fund, or to a scholarship account in the fund, under AS 14.42.250-14.43.325. The Commissioner of the Department of Administration shall pay to the account of the memorial scholarship revolving loan fund, or to a scholarship account in the fund, an amount equal to the value of the day or days or personal leave contributed by the teacher.

Section 6: Terminal Leave

1. Any teacher who is separated from State service for any reason including layoff shall receive within ten (10) days from the date of receipt of final time record, a lump sum payment, minus any required deductions, for any unused personal leave

2. If a teacher who resigned from State service returns to State service prior to the end of the period covered by the terminal leave, the employee may, at his/her option, refund to the State an amount equal to the compensation covering the period between the date of reemployment and the expiration of terminal leave. The hours of leave represented by this refund shall then be re-credited to the teacher's personal leave account.

Section 7: Sick Leave

1. Effective July 1, 1989, the provisions of AS 14.14.105-107 do not apply to teachers in the bargaining unit except as expressly provided herein. All sick leave accrued prior to that date by a teacher shall be transferred to a medical leave bank, and may only be taken in accordance with this section.

2. A teacher may not take any banked medical leave unless the teacher:

a. Has no accrued personal leave; and

b. Has a medical disability exceeding ten (10) consecutive working days in duration; or

c. Has a medical disability exceeding thirty (30) consecutive working days in duration.

3. Once the requirements of 2 and 4 of this Section have been met, a teacher may take banked medical leave until the medical disability is terminated or the banked medical leave is exhausted. If a teacher qualifies for banked medical leave under 2.c of this Section, the banked medical leave may be taken for all working days of the medical disability following the tenth (10th) working day of the disability.

4. When leave is taken under 2.a and b of this Section, the superintendent may require a doctor's certificate showing the disability. When leave is taken under 2.c of this section, the teacher must submit a doctor's certificate showing the disability.

P.F. 2/10/12

5. The taking of leave under this Section shall be reduced by the amount of wage continuation payments made under the Alaska Workers' Compensation Act (AS 23.30).

6. Upon a teacher's separation from State service, the teacher's banked medical leave shall be canceled without pay, unless transferred under the terms of AS 14.14.107.

Section 8: Professional Improvement

Professional improvement days may be used for professional improvement in the employee's subject area with prior approval of the superintendent. The administration will make every reasonable effort to see that as many employees as possible attend professional conferences each year.

Section 9: Leave Cash-In

A teacher who has at least thirty (30) days of accrued leave may cash in up to eight (8) days of personal leave in a leave year. Additional days of leave may be cashed in at the discretion of the superintendent. The teacher's leave balance will be reduced by the number of days of personal leave cashed in. Leave cash-ins must not reduce a teacher's leave balance to less than five (5) days.

Section 10: Sabbatical Leave

A. The Employer may grant a total of one sabbatical leave to a qualified TEAME applicant in any fiscal year. The leave may be for up to one full year and shall count as a year's service for salary placement at MEHS. If the Employer determines a sabbatical leave is appropriate, the Employer and teacher agree to make TRS contributions for the period of sabbatical leave in accordance with AS 14.20.330 [C]. The Employer shall pay a teacher's employer-sponsored health insurance premium while the teacher is on sabbatical leave.

P.F.
2/10/12

B. If the Employer determines a sabbatical leave may be taken during the following school year, a Sabbatical Leave Committee composed of three representatives appointed by the Association and three representative appointed by the Employer will meet during the first week of February to review applications submitted prior to February 1 for Sabbatical leave consideration. In the event the committee's vote is a tie, the Superintendent shall make the final decision among the tied candidates. The teacher will be notified of his/her selection on or before February 15 of each year.

C. To qualify to apply for a sabbatical, a teacher must have served with the Employer as a teacher at MEHS for at least seven (7) continuous years. The sabbatical leave shall be granted only for educational purposes. The educational purposes must be directly related to the teacher's MEHS position. The criteria to be considered for each applicant shall be: 1) benefit to the educational program of MEHS, and 2) educational improvement of the teacher; and 3) the quality of educational program chosen by the teacher to enter.

D. Upon return from a sabbatical leave a teacher shall be assigned to the position s/he previously held unless that position has been eliminated in which case the teacher shall be assigned by the Employer to a similar position after consultation between the teacher and the Superintendent. If no similar position is available or if the similar position is filled, layoff procedures as provided for in Article 8 shall be invoked.

Section 11: Medical Leave Bank

Any team member may become a member of the Medical Leave Bank by authorizing the donation of fifteen (15) hours of leave to the Bank on the form provided by the Employer.

Newly-hired bargaining unit members must donate within the first one hundred (100) days of employment.

Existing bargaining unit members may join by donating during an annual enrollment window of November 1 to December 15 each calendar year. Failure of the bargaining unit member to join by notification to the Employer during this period renders the bargaining unit member ineligible for use of the Medical Leave Bank for the following year.

Thereafter, members of the Bank shall donate to the Bank a leave day (8.0 hours) the first pay period of each year until the Bank reaches a maximum balance of 120 days (960 hours). Except for new participants, no more leave donations will be deducted until the Bank is depleted to 60 days (480 hours).

When the 60 day (480 hours) minimum is reached, each member of the Bank will again contribute one leave day (8.0 hours) each December 16 until the Bank again reaches a maximum of 120 days (960 hours).

P.F.
2/10/12

Section 12: Medical Leave Bank Use

A Medical Leave Bank Committee will be established by TEAME to implement, administer and oversee the Bank. The decision(s) of the Medical Leave Bank Committee shall be final.

Medical leave days can only be withdrawn from the Bank for injuries or illnesses.

If the Medical Leave Bank is disbanded the accumulated medical leave in the bank will be distributed equally to all the bargaining unit members who are Medical Leave Bank members at the time. This leave will be deposited into their personal leave account. A report of the balance of the Medical Leave Bank will be provided to the TEAME president upon request.

TA BMP 2/10/12 @ 12:49

P.F. 2/10/12

ARTICLE 13
SALARY

Section 1: Alaska Geographic Differential Pay

A. Effective July 1, 2010, all members working in Sitka shall receive a Sitka Alaska geographical differential of 5% to the TEAME wage scale.

Section 2: Compensation

Contracted teachers serving a school term of one hundred and seventy two (172) contract days or more shall be credited with a year of teaching service.

A. TEAME Salary Schedule effective 7/1/

For the purposes of this proposal the table has been removed. After this Article has been TA'd the tables will be added back in showing the agreed upon wages.

bmerti-posthumus 2/10/12 11:18 AM
Deleted: 2009

The State proposes that effective July 1, 2012 the wages in effect on July 1, 2011 will be increased by two percent (2 %).

Effective July 1, 2013 the wages in effect on July 1, 2012 will be increased by one percent (1 %).

Effective July 1, 2014 the wages in effect on July 1, 2013 will be increased by one percent (1 %).

The parties further agree that should the State enter into a voluntary agreement with the Labor, Trades and Crafts unit or the Alaska Correctional Officer Association that provides for an increase in wages for the July 1 2012 through June 30, 2015 timeframe in excess of that provided for in this Agreement, upon request of the Union, this Agreement will be promptly reopened for the sole purpose of negotiating equivalent terms for this Agreement.

Section 3: Placement on Column

Each teacher shall be placed on the highest numbered row and column step for which s/he qualifies from the time the teacher received his/her teaching certificate issued by a state.

The total creditable years of teaching experience shall be the sum of:

A. Each year of teaching experience in an Alaska public school, whether operated by a school district, REAA, the State or the Bureau of Indian Affairs (BIA); and
Each year of teaching experience in a nationally, regionally or state-accredited public school outside Alaska, including over-seas schools; to a maximum of five (5) years.

B. Each year of certificated, international teaching experience up to a maximum of two (2) additional years with the approval of the superintendent.
Employees on the Teachers Salary Schedule who advance from one vertical column to another at any time shall move to the corresponding eligible step on the higher column, if s/he has filed notice of additional educational credit with the superintendent no later than November 1 of the current year.

Salary placement credit will be allowed for:

P.F. 3/16/12

A. Applicable education courses, including all credits earned by a teacher for supervising a student teacher or intern teacher to a maximum of 6 credits out of every 15 credits recognized for movement from column to column on the salary schedule. This limitation on the counting of credits for supervising student or intern teachers becomes effective on July 1, 1998.

B. Courses applicable to the teacher's current teaching assignment.

C. Courses in the teacher's major or minor field.

D. Certain workshops will be allowed to the same extent as they are allowed with prior approval by the Department of Education and Early Development for renewal of a teaching certificate.

E. Any professional educational hours earned to secure an initial teaching certificate shall not be allowed for any additional range on the salary schedule unless the teacher is teaching in his/her major field.

The superintendent may approve substitutions for the above requirements if the circumstances are unique.

All certificated teaching staff who are assigned night duty and or weekend duty shall be paid at their regular rate plus an additional 3.75 percent of their daily rate.

All certificated teaching staff who are assigned to work school holidays or school vacation days shall be paid at a rate one and one-half (1 ½) times that of their normal per diem.

Section 4: Health Insurance

Employer Provided Health Insurance

The Employer will continue to provide a flexible benefits program for the provision of health insurance. Eligible employees will pay, by payroll deduction, any difference between the Employer's contribution and the total premium required to provide the coverage elected by the employee under the flexible benefits program. The Employer will seek to maintain a plan with prudent reserves and minimal cost shifting. This article will in no way limit the Commissioner's authority under AS 39.30.095B. Effective July 1, 2012 the Employer's health insurance contribution shall be increased to one thousand three hundred thirty dollars ($1330) for each eligible employee per month. Effective July 1 of each subsequent year this agreement is in effect, the Employer's health insurance premium contribution will increase by the amount of money, for all employees, that is necessary to fund comparable coverage under the "Select Benefits Economy Medical/Audio/RX/Dental Plan". The eligibility of the employees and their dependents for coverage and the precise benefits to be provided will be as set forth in the insurance plan documents, consistent with AS 39.30.090.

bmertl-posthumus 3/5/12 1:19 PM
Deleted: Effective July 1, 2010, through the the duration of this agreement, insurance will be provided in whole or in part by the Employer as follows:

bmertl-posthumus 3/5/12 1:20 PM
Deleted: Effective July 1, 2010, through the duration of this agreement, insurance will be provided in whole or in part by the Employer as follows:

Deleted: 0

bmertl-posthumus 3/5/12 1:26 PM
Deleted: and

The Employer will provide written notice to the Association of changes to the level of health insurance benefits at least sixty (60) days prior to implementation. The Employer expressly waives its right to require the Association to bargain collectively and the Association expressly waives its right to require the Employer to bargain collectively over all matters relating to the provision of a group health insurance plan established pursuant to AS 39.30.090 and AS

P.F 3/16/12

39.30.095. The Employer agrees to continue to require the provider under the Employer plan to provide a toll-free number for the purpose of handling inquiries and complaints to the provider.

Section 5: Contract Extensions

Compensation for contract extensions within the regular school year shall be calculated at the employee's per diem rate. Compensation for contracts extended beyond the regular school year shall be at the per diem rate unless mutually agreed otherwise. The teacher's per diem rate shall be calculated by dividing the teacher's total salary by one hundred and eighty-eight (188) days. However, as of July 1 any change in the per diem will be reflected on new or continuing contracts.

Section 6: Student Activity Sponsorship

All Teacher sponsors will be compensated in accordance with the following provisions.

The employer shall annually review the extra curricular program to determine which activities shall be included.

If the administration cannot find a viable volunteer for a vacant student activity sponsorship, TEAME agrees to provide a viable candidate.

Student activity sponsorship is defined as direct supervision outside the work day for an activity club, or sport.

Ability to perform an activity sponsorship shall have no bearing on continued classroom teaching assignment or formal evaluation.

A copy of the completed, signed contract shall be given to the activity sponsor prior to the beginning of the activity.

A teacher may be released from any activity sponsorship contract for reasons of health, just cause, or for any reason which is mutually agreed to by the teacher and the employer. Termination initiated by the employer before completion of the contract is subject to the grievance procedure.

A. Authorized activities will be compensated by assignment to one of the seven (7) salary ranges each of which has four (4) experience steps. The percentages outlined are percentages of the BA /0 level, which includes the Geographic Differential Pay as a value on the salary schedule in effect at the time the activity is sponsored.

Range

Experience Steps	1	2	3	4	5	6	7
0	.0200	.0400	.0480	.0560	.0640	.0880	.1280
1	.0210	.0420	.0504	.0588	.0672	.0924	.1344
2	.0220	.0440	.0528	.0616	.0704	.0968	.1408
3	.0230	.0460	.0552	.0644	.0736	.1012	.1472

P.F. 3/16/12

4	.0240	.0480	.0576	.0672	.0768	.1056	.1536

B. Five (5) experience steps shall be allowed providing that:

1. All experience is gained in the activity for which compensation is being considered.

2. Only experience at MEHS will be credited.

3. The attached schedule of activities and ranges shall be implemented for the duration of the agreement unless changes are mutually agreed to.

C. Prior to the beginning of the activity the Employer shall make the final decision as to whether the activity will be authorized for compensation. Teachers shall not be required to perform activities from this schedule that have not been compensated.

D. Teachers will be eligible for the allowable per diem for required travel. Other expenses will be reimbursed only if pre-authorized,

E. Known activity sponsorship positions for the upcoming school year will be posted ten (10) working days prior to the conclusion of the academic school year. Whenever possible, activity sponsorships will be assigned prior to the end of the school year.

Section 8: Payroll Deductions

P.F 3/16/12

Within thirty (30) days after receipt of written authorization from the teacher, the State shall deduct from the salary of the employee and make appropriate remittance for: NEA-AK and NEA dues. Such authorization shall continue in effect from year to year. Pursuant to such authorization, the State shall deduct one-tenth (1/10) of such dues form the regular semi-monthly pay warrant of the affected employee each month for the ten (10) months beginning in September and ending in June of each year. Amounts to be deducted shall be supplied to the State through a schedule established by the Association. Any balance due upon the employee's termination of employment shall be deducted from such individual's final pay warrant.

bmertl-posthumus 2/10/12 11:50 AM
Deleted: salary check

bmertl-posthumus 2/10/12 11:50 AM
Deleted: check

The employee also reserves the right to authorize the State to deduct the entire amount from any designated paywarrant. Prior authorizations existing on the effective date of this Agreement shall continue in full force and effect into this and successor agreements unless and until revoked in writing by the employee between August 15 and September 15 of any school year. The State shall transmit to the Association the total semi-monthly deduction for the professional dues within ten (10) school days following each regular pay period with a listing of the employees for whom the deduction was made.

bmertl-posthumus 2/10/12 11:50 AM
Deleted: check

Deductions for tax sheltered annuities, and retirement or investment programs shall be authorized at the employee's request.

Direct deposits of paywarrant will be made upon request of the employee.

bmertl-posthumus 2/10/12 11:51 AM
Deleted: checks

Paywarrants will be distributed over a twelve (12) month period in order to ensure year-round insurance coverage for MEHS teachers. The annual salary will be paid on a semi-monthly basis, consisting of twenty-four (24) approximately equal payments for the school year.

bmertl-posthumus 2/10/12 11:51 AM
Deleted: checks

(Semi-Monthly Salary = Annual Salary)
24

Teacher Travel

Authorized travel, per diem and meal allowances will be paid in accordance with the State Administrative Manual AAM 60.010 - AAM 60.380, as revised.

Activities Expenses
Authorized travel expenses incurred in conjunction with student activities which exceed the per diem advanced will be reimbursed upon the submission of receipts. This section applies only to expenditures on behalf of students and does not otherwise affect the travel and per diem entitlements of teachers.

The parties agree that if a bi-weekly pay schedule becomes available in the future, it will be implemented at the State's convenience. Leave accrual and any other conditions or benefits calculated based on a semi-monthly pay cycle will be recalculated to ensure that the conditions or annual benefits are not reduced by a conversion to a bi-weekly pay cycle.

P.F. 3/16/12

ARTICLE 14
CONCLUSION OF COLLECTIVE BARGAINING

This Agreement is the entire Agreement between the Employer and TEAME. The parties acknowledge that they have fully bargained with respect to terms and conditions of employment and have settled them for the duration of this Agreement. This Agreement terminates all prior agreements and understandings and concludes all collective bargaining for the duration of this Agreement.

Prior to enacting any change in the terms and conditions of employment, as established by a specific provision of this Agreement, the Commissioner of the Department of Administration will obtain the approval of TEAME in the form of a Letter of Agreement. Prior to enacting any change in any mandatory subject of bargaining which is not established by a specific provision of this Agreement, or a subject of written negotiations proposal, TEAME will be notified in advance of the proposed change thereby enabling them to negotiate on that change.

In the event of any enactment by the Legislature that creates conditions not specifically covered by this Agreement, the parties agree to immediately negotiate a mutually satisfactory supplement covering such operations.

Dear President Stevens and Speaker Chenault:

I am required by the Public Employment Relations Act (AS 23.40.070-260) to report the monetary terms of any agreement reached with an employee organization. By copy of my memorandum to Karen Rehfeld, Director of the Office of Management and Budget (enclosed), please accept my report of the monetary terms of the collective bargaining agreement reached between the State and Public Employees Local 71 representing the Labor, Trades and Crafts bargaining unit. Also enclosed is a copy of the collective bargaining agreement.

The monetary terms of this agreement must be submitted to the Legislature for approval pursuant to AS 23.40.215. In the interest of maintaining harmonious relations, I respectfully request that the Legislature approve the monetary terms of this agreement pursuant to AS 23.40.215(b), subject to ratification by a majority of union members.

If I can answer any questions or provide additional information please don't hesitate to call.

Sincerely,

Becky Hultberg

Office of the Governor

Date: March 16, 2012

From: Becky Hultberg BH

Phone: 465-2200

Subject: Monetary terms of the July 1, 2012 to June 30, 2015, Collective Bargaining Agreement between the State and the Public Employees Local 71

The Administration has concluded negotiations with the Public Employees Local 71 representing the Labor, Trades and Crafts bargaining unit (LTC). If approved by the Legislature the monetary terms of this agreement become effective July 1, 2012 and remain in effect through June 30, 2015.

I. Terms Requiring Appropriation.

Current Legislative Session

Effective July 1, 2012, the employer health premium contribution shall increase by an amount of money necessary to fund comparable coverage to maintain the AlaskaCare Economy plan. This amounts to an increase of $80.00 per member, per month.

Effective July 1, 2012, the wage schedule in effect on July 1, 2011, shall increase by two percent (2%).

Future Legislative Sessions

Effective July 1, 2013, the employer health premium contribution shall increase by an amount of money not exceeding that necessary to maintain comparable coverage under the current AlaskaCare Economy Plan.

Effective July 1, 2013, the wage schedule in effect on July 1, 2012, shall increase by one percent (1%).

Effective July 1, 2014, the employer health premium contribution shall increase by an amount of money not exceeding that necessary to maintain comparable coverage under the current AlaskaCare Economy Plan.

Effective July 1, 2014, the wage schedule in effect on July 1, 2013, shall increase by one percent (1%).

II. Change in State Revenues.

No term of this agreement would result in a change to State revenues.

III. Change in Productive Work Hours.

There is no change in productive work hours.

IV. Terms Addressing Employee Compensation Not Requiring an Appropriation.

There are no new terms addressing compensation and not requiring appropriation.

This report of monetary terms is consistent with the requirements of the Public Employment Relations act. Please forward these monetary terms to the Legislature in accordance with AS 23.40.215.

RL 2-15-2012

ARTICLE 1 - PURPOSE

It is the objective of the parties that the obligation of the Employer for the successful conduct of its business and the fulfillment of its responsibilities to the employees covered by this Agreement be carried on without interference arising from differences between the parties.

The Union, representing the employees of the Employer, and the Employer desire to establish and maintain, through harmonious cooperation, a standard of conditions and procedures to provide for orderly collective bargaining relations, prompt and equitable disposition of grievances, and fair wages, hours, and working conditions for the employees covered by this Agreement.

Public Employees Local 71 Proposal

Date 2/15/12 **Time**_____

ARTICLE 2 - RECOGNITION

The Employer recognizes, during the term of this Agreement, the Union as the sole and exclusive collective bargaining representative for all employees working in the classifications in the Labor, Trades and Crafts Unit and as the representative of all such employees in interpreting this Agreement and adjusting disputes.

ARTICLE 4 - EMPLOYMENT REFERRAL PROCEDURES

4.01 - REFERRAL SERVICES

The Union agrees to maintain preferential referral procedures for the purpose of soliciting qualified workers in order to fill all Employer referral requests. Except for promotions, demotions, transfers and emergency appointments, the Employer agrees to use such referral services and will call upon the Union to furnish all qualified workers required. The Employer further agrees to notify the employee and the Union of all promotions, demotions, transfers and emergency appointments.

4.02 - NONPERMANENT TO PERMANENT

The Employer may elect to appoint a nonpermanent employee into a permanent position if the position to be filled is at the entry level at that duty station; provided, however, that any qualified permanent part-time employees in that duty station are offered first rights of refusal to the position. The Employer shall notify the Union of such appointments in accordance with Section 6.

4.03 - REFERRAL COMMITTEE

The Union shall create a preferential referral committee within thirty (30) days of the signing of this contract, composed of not more than three (3) individuals appointed by the Union, to supervise and control the operation of the job referral system herein.

4.04 - APPLICATION FORMS/NONDISCRMINIATION

The Union agrees to accept and review applications, on forms provided by the Employer, from all those wishing to apply for possible openings with the State. Selection of applicants for referral to jobs shall be nondiscriminatory and shall not be based on nor affected by race, creed, color, age, sex, national origin or political affiliation or activity. The Union agrees that it will not discriminate against non-Union workers in referring applicants to the Employer, and the Employer agrees that it will not discriminate against Union workers in selecting job applicants referred by the Union.

4.05 - PREFERENTIAL CATEGORIES

A. The parties recognize the primary importance to employ residents of Alaska. Both the Union and the Employer shall give first preference to qualified residents of Alaska. Also, preference shall be given to qualified residents in the immediate area of the job call.

B. It is understood the Employer will have need for employees with special skills and abilities. The Union agrees to refer persons possessing such skills and abilities and to honor all such bona fide requests.

C. The parties recognize the need to hire people with disabilities. A person with a disability is one so specified under regulations issued by the Vocational Rehabilitation Division of the Department of Labor and Workforce Development.

D. Pursuant to the parties mutual recognition of the principles of Equal Employment Opportunity and Affirmative Action, the parties agree that selective certification by referral will be made to satisfy the State's affirmative action objectives. When a specific request is made for a referral to fill a position with an applicant in a protected category, the Union will make every effort to honor such request, providing such underutilization has been specified and approved by the Office of Equal Employment Opportunity. In such cases, the Union will have seventy-two (72) hours, rather than forty-eight (48) hours, to make the referral.

E. The criteria expressed in the subsections above may be used as justification for an appointment from other than the top qualified and available candidates; provided, however, the individual is registered with the Union.

4.06 - REJECTION OF APPLICANTS

The Employer retains the right to reject any job applicant, but the applicant and the Union shall be entitled to the reason for such rejection.

4.07 - REFERRAL TIME FRAME REQUIREMENTS

In the event the Union is unable to supply the Employer with three (3) qualified workers within forty-eight (48) hours (Saturdays, Sundays and holidays excluded) when called upon by the Employer, the Union and the Employer will coordinate efforts to advertise such openings for job vacancies to reach the largest pool of applicants. The Employer may procure workers from other sources; provided, however, that in such instances the Employer shall promptly furnish the Union with the names of such workers, their classification and date of hiring. In any emergency resulting from an act of God or natural disaster, the Employer may temporarily procure workers from any source.

4.08 - UNION MEMBERSHIP - NEW EMPLOYEES

It is further agreed that all workers employed by the Employer who are not already members shall become members of the Union or make the uniformly required payments on or before the thirty-first (31st) calendar day following the beginning of employment or the effective date of this Agreement, whichever is later, and all employees shall maintain membership in the Union as a condition of employment during the life of this Agreement. Membership means to tender the initiation fees and the periodic dues or fees uniformly required as a condition of acquiring or retaining membership in the Union. All requests by the Union for dismissal of any employee for failure to comply with this provision shall be in writing.

The Union shall defend, indemnify, and save the Employer harmless against any and all claims, demands, suits, grievances, or other liability (including attorney's fees incurred by the Employer) that arise out of or by reason of actions taken by the Employer pursuant to this section, except those actions caused by the Employer's negligence.

4.09 - UNION STEWARD - NEW EMPLOYEE NOTICE

Within a five (5) day period after reporting to work, each new employee within the bargaining unit shall be informed as to the identity of the Union steward, chief job steward, or a Union representative by the supervisor in the activity to which such employee will be regularly assigned. Each employee transferred from a section or shift shall likewise be informed.

4.10 - O.S.C.O. EXEMPTION FROM UNION REFERRAL

It is agreed between the parties that the Occupational Safety Compliance Officers under the Agreement shall be required to meet minimum qualifications established by the State as well as being required to pass any examinations to be considered for employment. The recruitment and selection procedures for Occupational Safety Compliance Officers shall be determined by the Employer.

Tentative Agreement:

Local 71	State of Alaska
Date	Date

Public Employees Local 71 Proposal

Date 2/15/12 **Time**_____

ARTICLE 5 - UNION RESPONSIBILITY

5.01 - NONDISCRIMINATION

The Union assumes all obligations and responsibility for the continued membership of its members and the Union shall retain the right to discipline its members. No worker shall be discriminated against for the upholding of Union principles, and any employee who works under the instructions of the Union, provided such instructions are in compliance with the Agreement, or who serves on a committee, shall not lose their position or be discriminated against for this reason.

5.02 - BINDING EFFECT OF AGREEMENT

The Union agrees that this Agreement is binding on each and every member of this bargaining unit and that its members, individually or collectively, accept full responsibility for carrying out all the provisions of this Agreement.

5.03 - HARMONIOUS RELATIONSHIP

It is the responsibility of the Employer to manage the work force. It is the responsibility of the parties to promote such practices as will improve the quality of service provided and the working conditions of the members. The Union agrees that it will actively dissuade excessive absenteeism and other practices which may hamper the Employer's operation and that the Union will support the Employer's efforts to eliminate waste and inefficiency, to improve the quality of work, and to promote harmonious relations between the Employer and employees.

5.04 - EMPLOYER RULES AND REGULATIONS

The Union agrees to make every effort to see that the members working under this Agreement obey all reasonable rules, instructions, and regulations prescribed by the Employer.

ARTICLE 6 - RECOGNITION OF RIGHTS AND FUNCTIONS OF MANAGEMENT

TAKD 3/8/12 11:4[illegible] MJ 3-8-12

6.01 - MANAGEMENT'S AUTHORITY

Except as provided in this Agreement, nothing herein limits the Employer in the exercise of the rights of ownership and management. Accordingly, the Employer has, among others, the right to: select its supervisory personnel (supervisors as defined by the Alaska State Labor Relations Agency); to hire new employees; to discipline, suspend, or discharge employees for just cause; to decide and determine and designate all occupational classifications it has to offer its employees, to assign duties and responsibilities to employees, to make such rules and regulations as the Employer considers necessary or advisable for the orderly and efficient conduct of its operations and to require employees to observe such rules and regulations; provided, however, the exercising of the aforementioned rights is not inconsistent with the provisions of this Agreement.

6.02 - AUTHORITY RETENTION

All of the functions, rights, powers, and authority of the Employer not specifically abridged, delegated, or modified by this Agreement are recognized by the Union as being retained by the Employer.

6.03 - EXEMPTION TO WORK STOPPAGE

The Union recognizes that the continuity of certain work is imperative to the public service mission of the Employer, and if a work stoppage should occur, management and all other personnel not covered by this Agreement, including guards, firefighters, and other protectors of public safety and health, shall be permitted to perform their respective functions without interference by the Union or its members.

BK hand
Rf. 2-15-2012

ARTICLE 8 - SEPARATION FROM STATE SERVICE/DISCIPLINE

8.01 - DISCIPLINE

The Employer retains the right to discipline or suspend an employee for just cause but agrees that the Union steward or a paid Union representative shall be notified in writing concurrent with written notice to the employee. The Employer further agrees that the Union steward or representative shall be present, if requested by the employee, during all stages of conduct of hearings determining such matters.

The following provision shall apply only to employees in positions that require the employee to possess a commercial driver's license (CDL) and who are subject to testing for drugs and alcohol under the provisions of title 49, Code of Federal Regulations.

A. Employees who test positive for illegal drugs as defined in the Code of Federal Regulations shall be suspended for a minimum of ninety (90) days without pay as discipline. More severe discipline is subject to the just cause standard.

B. Employees who test positive a second time for illegal drugs will be considered for immediate dismissal, subject to the just cause standard.

C. The Union reserves the right to challenge the validity of the urinalysis and reporting under the provisions of Article 9.

8.02 - DISCHARGE

The Employer retains the right to discharge a permanent employee for just cause such as incompetence, unsatisfactory performance of duties, and unexcused absenteeism. The Employer further agrees that the Union steward and the Union office in the employee's district shall be notified immediately by copy of the written notice to the employee giving the reason(s) for such discharge. The Employer further agrees that with the exception of intoxication, substance abuse, dishonesty, gross disobedience,- physical assault, abandonment of duties, lewd behavior, theft, fraud, or accessing or viewing pornography all permanent employees shall be given two (2) weeks notice or two (2) weeks pay prior to discharge. Employees other than permanent employees discharged or terminated under the provisions of this section shall have appeal rights through Step Three of the grievance procedure.

8.03 - RESIGNATION

A bargaining unit member may resign from the State by presenting the resignation in writing (including fax or email) to the member's first level supervisor outside of the bargaining unit. To resign in good standing the bargaining unit member must give the supervisor at least fourteen (14) calendar days notice. A bargaining unit member may resign in good standing with less than fourteen (14) calendar days notice when there is an emergency, as determined by management.

8.04 - TERMINATION/LAYOFF SLIPS

It shall be mandatory that the Employer furnish each employee a termination or layoff slip showing the actual reason for termination or layoff. Employees in year-round service will receive two (2) weeks notice prior to layoff or two (2) weeks pay in lieu thereof. The Employer will make every effort to provide employees in seasonal service with two (2) weeks notice prior to layoff.

ARTICLE 9 - GRIEVANCE PROCEDURES

9.01 - GRIEVANCES

A grievance shall be defined as any controversy or dispute arising between the Union or an employee of the bargaining unit and the Employer. Having a desire to create and maintain labor relations harmony, the parties agree that they will promptly attempt to adjust all complaints, disputes, controversies, or other grievances arising between them involving questions of interpretation or application of the terms and provisions of this Agreement, or other controversy or dispute having occasion to arise between the parties. If differences or disputes of any kind arise between the Union or the employee covered herein and the Employer, the Union or the aggrieved employee, as the case may be, shall use the following procedure as the sole means of settling said grievance. Deadlines may be extended by mutual agreement.

Disciplinary Grievances: Any grievance resulting from a dismissal, demotion for cause, or suspension in excess of thirty (30) days shall be entered into the procedure at Step Two and must be brought to the attention of the Employer through the Union within ten (10) working days of the effective date of the action or the date the employee is made aware of the action, whichever is later, to receive the assistance of the Union and the use of this grievance procedure.

Step One: Except for disciplinary grievances described above, any dispute must be brought to the attention of the Employer through the Union, consistent with the procedures set forth in this Article, within thirty (30) working days of the effective date of the disputed action or the date the employee is made aware of the action, whichever is later, to receive the attention of the Union and the use of this grievance procedure. The employee may report in writing to the Steward or designated representative of the Union any grievance that arises between the employee and the Employer. The written grievance will be filed with the employee's first line supervisor outside of the Labor, Trades and Crafts bargaining unit by the designated representative for investigation and resolution. The supervisor, with whom the grievance is filed, will provide an answer in writing, any corrective action taken and whether the grievance is denied or granted in total or in part within ten (10) working days.

Step Two: If the grievance is not resolved at Step One, the grievance shall be referred in writing to the designated Human Resource representative ~~Manager of the Management Services Group~~ for the department or agency in which the grievant(s) is (are) employed within ten (10) working days after receipt of a response or the date response is due, whichever is earliest. The designated Human Resource Manager for that department or agency shall answer the Union representative within fifteen (15) working days in writing.

Step Three: If the grievance is not resolved at Step Two, the grievance may be submitted by the Union for settlement to the Commissioner of the Department of Administration within ten (10) working days after receipt of a Step Two response or the date the response is due, whichever is earliest. If the grievance has not been settled in writing within twenty (20) working days after receipt by the Commissioner, either party may proceed to Step Four of this Article if the nature of the grievance falls within the scope of Step Four. Date of receipt shall constitute date of answer or date the response is due, whichever is earliest. In the event the matter is settled by written agreement between the Union representative and the Commissioner of the Department of Administration, such written agreement shall have the same force and effect as a decision or award of the arbitrator and shall be final and binding on each of the parties and they will abide thereby. Should either party fail or refuse to abide by the written agreement, the prevailing party shall be free to take whatever action it deems necessary and such action will not be considered in violation of this Agreement.

Step Four: Arbitration. Any grievance which involves the application or interpretation of the

terms of this Agreement or is an appeal from demotion or dismissal of a permanent employee, or an appeal from dismissal of a probationary employee holding permanent status in another classification, which is not settled at Step Three may be submitted to arbitration for settlement. The Union shall state which Article(s) and section(s) the State may have violated. If either party desires to demand arbitration, the request must be received in writing within twenty (20) days of the receipt of the completed Step Three grievance. The parties will meet within ten (10) days to strike names.

9.02 - BOARD OF ARBITRATION

Within thirty (30) days of the signing of this Agreement the Employer and the Union will jointly request from the United States Federal Mediation and Conciliation Service (USFMCS) the names of thirty (30) qualified arbitrators. Each party may add up to three (3) names of arbitrators to the list provided from the USFMCS. From the list of thirty-six (36) arbitrators the employer and the Union shall alternately strike from the list one (1) name at a time until eleven (11) names remain on the list. This list of eleven (11) arbitrators shall be used by the parties to select individual arbitrators for arbitration. Either party may, at any time, request a new list of arbitrators during the life of this Agreement.

In the event that arbitration becomes necessary, the arbitrator will be selected by the Union and the Employer by alternately striking names from the list one name at a time until only one name remains on the list. The name of the arbitrator remaining on the list shall be accepted by the parties and arbitration shall commence within sixty (60) calendar days, unless otherwise mutually agreed to by both parties.

During the process of the above procedure, there shall be no strike or lockout which is in any manner related to this grievance. The parties agree that the decision or award of the arbitrator shall be final and binding on each of the parties and as they will abide thereby. The authority of the arbitrator shall be limited to questions directly involving the interpretation or application of specific provisions of this Agreement and no other matter shall be subject to arbitration hereunder. The arbitrator shall have no authority to add to, subtract from, or change any of the terms of this Agreement, to change an existing wage rate, or to establish a new wage rate. Should either party fail or refuse to abide by the arbitrator's decision, the prevailing party shall be free to take whatever action it deems necessary, and such action will not be considered in violation of the Agreement.

The arbitrator shall render a decision within thirty (30) days following the final day of the arbitration hearing unless mutually agreed to by both parties. Expenses incident to the services of the arbitrator shall be borne by the losing party. If, in the opinion of the arbitrator, neither party can be considered the losing party, then such expenses shall be apportioned as in the arbitrator's judgment is equitable.

9.03 - GRIEVANCE - MEDIATION

Nothing in this article shall preclude the parties from mutually agreeing to submit any grievance(s) not resolved at Step Three to mediation. The mediation agreement shall provide that:

1. Within thirty (30) days of the signing of this Agreement the Employer and the Union will jointly request from the United States Federal Mediation and Conciliation Service (USFMCS) the names of twenty-one (21) qualified mediators. From the list of twenty-one (21) mediators the employer and the Union shall alternately strike from the list one name at a time until eleven (11) names remain. This list of mediators shall be used by the parties to select individual mediators. This does not prohibit the parties from compiling a mutually acceptable list without the assistance of the USFMCS. A member of the arbitration panel may also serve on the mediation panel; however, if mediation does not resolve the dispute(s), the mediator shall not be selected

to hear and decide the matter at Step Four.

2. The parties agree only to have as many people present at the mediation as necessary.

3. The taking of oaths and the examination of witnesses shall not be permitted nor shall any written or electronic record of the proceeding be made. There shall be no formal evidentiary rules and the mediator shall decide any questions of procedure or of the admissibility of facts or arguments. Documents and other evidence submitted to the mediator shall be returned to the presenting party at the conclusion of the mediation meetings.

4. Comments, opinions, admissions and settlement offers of the parties or of the mediator shall be confidential and shall not be admissible or in any manner referred to in any future arbitration, hearing or other matter.

5. If the grievance(s) remain unresolved at the conclusion of the mediation meeting, the mediator will provide an oral statement to each party regarding how he/she would rule in the case based upon the evidence and argument presented.

6. Expenses incident to the services of the mediator shall be borne equally by the Employer and the Union. Except for the expenses of the mediator, each party shall be responsible for its own costs and fees.

7. Any mediation agreement shall provide for a specific extension of the time frames of Step four of this article, which may be modified by mutual agreement. Except as extended under authority of this provision, all time frames shall apply.

8. The parties may agree to such other provisions as they deem proper and necessary to facilitate resolution of the dispute.

Public Employees Local 71 Proposal

Date 2/15/12 **Time**_____

ARTICLE 10 - UNION REPRESENTATIVES

10.01 - UNION REPRESENTATIVES

The Union shall have representatives, as designated by the Business Manager, who shall be authorized to speak for the Union in all matters governed by this Agreement and shall be permitted to visit any work area at any time with advance notice and mutual consent to the person in charge, so long as such visits do not disrupt the work or the employees doing such work.

10.02 - SHOP STEWARDS

In addition to the above, the Union may, upon written notice to the Director of the Division of Personnel and Labor Relations, authorize Shop Stewards from among the employees of the Employer to carry out the intent and purposes of this Agreement. Where practical, the shop steward shall notify their immediate supervisor prior to performing their union duties while at work. Stewards shall suffer no loss in compensation for time spent handling complaints and grievances for up to ten (10) hours per month. All time spent in such activities shall be recorded on a State form which clearly identifies the activity as release time. The Union shall provide to the Director of the Division of Personnel and Labor Relations a current list of all shop stewards every six (6) months.

ARTICLE 11 - EXAMINATION OF RECORDS

Any bargaining unit member or Union representative shall have the right to examine the employee's records pertaining to wages, hours and conditions covered by this Agreement subject to the following:

A. An employee's employment records, other than those considered confidential under AS 39.25.080, shall be made available by the Employer for inspection by the authorized Union representative upon two (2) working days written or email notice by the Union to the State office where the records are maintained.

B. Reasonable requests for copies of records as specified in this Article will be honored. The parties recognize that it may become necessary to charge for copies requested at the rate of twenty-five cents ($.25) per page.

Public Employees Local 71 Proposal

Date 2/15/12 **Time**_____

ARTICLE 12 - CHECKOFF

12.01 - MEMBERSHIP - UNION DUES

Whenever an employee coming under the terms of this Agreement executes and delivers to the Union, who will deliver to the Employer, a proper written assignment for the deduction of Union dues/fees and initiation fees from the employee's wages, and the Secretary/Treasurer of the Union notifies the Employer that such Union dues/fees are due, the Employer agrees to make such deductions within thirty-one (31) days from the date of the notification and to remit to the Union the amount so deducted from each. All employees in the bargaining unit on the Employer's payroll on the effective date of this Agreement who have previously executed a proper written assignment shall continue to have their assigned dues/fees and initiation fees deducted from their wages. Upon receipt of a proper written assignment, the Employer shall deduct from the pay of each new employee in the unit such assigned dues and fees for the period specified so long as the employee remains in the unit. Such deductions shall commence not later than the pay period following the first full pay period after proper authorization is received by the State.

"Proper written assignment" shall mean an authorization executed by the employee for deductions of dues and fees in an amount as specified by the Secretary/Treasurer of the Union. The amount of dues and fees to be deducted shall be those amounts as specified to the Directors of the Divisions of Labor Relations and Finance by the Union Secretary/Treasurer. The Secretary/Treasurer of the Union shall notify the Directors of the Divisions of Labor Relations and Finance in writing of any change in dues or fees which require payroll programming changes at least sixty (60) days prior to the effective date of the change. The union shall provide written notice at least thirty (30) days prior to the effective date of any other change in dues or fees.

The Employer agrees to provide to the Union, each pay period, a list of employees showing the amounts deducted from each. This list will also include all employees and their classifications working under the jurisdiction of this Agreement. No other employee organization shall be accorded payroll deduction privileges with regard to this bargaining unit.

All dues and initiation fee assignments executed by employees shall be effective for as long as such employee is employed by the Employer in a position coming within the purview of this Agreement. However, assignments may be canceled by an employee who gives notice in writing to the Employer during the month of July

p 232

each year.

12.02 –VOLUNTARY DONATIONS

It is agreed between the parties that, following the signing of the collective bargaining agreement, a unit member may authorize and the State will deduct a specified amount to be forwarded to the Union for the Public Employees Local 71 Supporting League. The Union will obtain the payroll deduction authorization from each employee who wishes to participate and forward such authorization to the State so that the deduction can be made.

Deleted: #

Deleted: , AFL-CIO

It is agreed that an employee cannot revise the amount to be deducted once the authorization has been received by the State except during the month of January each year. However, an employee may withdraw the authorization at any time by notifying the Division of Personnel in writing at least thirty (30) days prior to the last intended deduction.

The Union will furnish the payroll deduction authorization forms as approved by the State.

KD
2-22-2012

ARTICLE 15 - TRAVEL AND MOVING

15.01 - TRAVEL STATUS

An employee shall be considered in travel status from the time an authorized trip begins until it ends. For purposes of interpretation, travel status will begin and end when the employee leaves and returns to his/her duty station if travel begins and ends during assigned working hours, or when the employee leaves and returns to his/her home if travel begins and ends outside assigned working hours.

No employee shall be required to travel for more than forty-eight (48) hours from the employee's duty station without prior authorization and travel advanced funds, based on the travel status requested by the Employer and applicable per diem rates.

Travel entitlements shall be paid in accordance with the Fair Labor Standards Act, except as provided in this section. However, if travel is outside of an employee's regularly scheduled hours of work and not in conjunction with the day's work, the employee shall be paid straight time for all such travel up to a maximum of two (2) hours. If travel on a regularly scheduled day off is outside the employee's normal work hours, the employee shall receive straight time for all such travel up to a maximum of two (2) hours.

Article 14.03 (Call Back) and Article 14.04 (On Call) do not apply during travel time; however, employees may be required to work as necessary for vehicle loading, unloading or repositioning during time in travel status.

15.02 - LODGING ALLOWANCE

When an employee is in travel status overnight on State business away from their duty station and quarters are not furnished, the Employer shall provide a lodging allowance in accordance with the following schedule. As to any one location assignment, the first thirty (30) days will be at the short-term rate and the day after that at the long-term rate.

		Peak Season Rates 05/16 - 09/15		Off Season Rates 09/16 - 05/15	
Region	Location	Short -Term	Long-Term	Short-Term	Long-Term
1	Southeast Alaska	$74.00	$44.40	$64.00	$38.40
2	Southcentral Alaska	79.00	47.40	59.00	35.40
3	Interior Alaska	64.00	38.40	54.00	32.40
4	Southwest Alaska	64.00	38.40	60.00	36.00
5	Barrow, Kotzebue	64.00	38.40	60.00	36.00

A bargaining unit member may request advance approval of the department head or his/her designee to receive a higher lodging allowance (consisting of actual hotel cost) on a trip-by-trip basis whenever the circumstances of travel are such that the established rate is not adequate to obtain lodging. Such requests will normally contain bulletins, agendas, etc., denoting prearranged lodging, and shall not be unreasonably denied.

When employees are assigned to temporary duty stations where a bunkhouse with heat, light, adequate cooking, sleeping and lavatory facilities is available and utilized by the employee, the lodging allowance shall be reduced by ten dollars ($10) per day. This does not apply to Article 21.08.

B. An employee, who is assigned to work a distance of more than fifty (50) miles away from their permanent duty station, is entitled to a commuting allowance in lieu of a lodging allowance if they choose to return to their residence on their own time rather than obtaining overnight

lodging at their travel destination. The commuting allowance shall be equal to ninety percent (90%) of the applicable lodging allowance (short-term or long-term depending on the duration of the assignment).

The Meal and Incidental Expense Allowance for that day shall be paid in accordance with Article 15.03.

No mileage or travel pay will be paid for an employee's travel to or from their residence except for the initial assignment to and final return from a temporary work site.

C. An employee shall receive a lodging allowance for all travel outside the State of Alaska in accordance with the Alaska Administrative Manual.

15.03 - MEAL & INCIDENTAL EXPENSE ALLOWANCE

When an employee is traveling between work assignments or is temporarily assigned to work a distance of more than fifty (50) road miles away from their regularly assigned work location, the employee is entitled to a meal and incidental expense (M&IE) allowance in accordance with section 60.250 of the Alaska Administrative Manual. In no event will the M&IE rates be less than the following schedule:

	Short-term Rate	Long-term Rate
Breakfast	$12.00	$7.00
Lunch	16.00	9.00
Dinner	32.00	17.00
Daily Allowance	$ 60.00	$ 33.00

On the day of departure and return, the employee is entitled to a prorated M&IE allowance if the employee is in travel status at least three consecutive hours during a normal meal period. Normal meal periods are:

Breakfast	midnight to 10:00 a.m.
Lunch	10:00 a.m. to 3:00 p.m.
Dinner	3:00 p.m. to midnight.

Employees in travel status for less than twenty-four (24) hours but more than ten (10) hours who return to their residence and/or duty station rather than obtaining overnight lodging at their travel destination are entitled to a M&IE allowance of one-half the daily M&IE allowance for the destination.

An employee shall receive an M&IE allowance for all travel outside the State of Alaska in accordance with the Alaska Administrative Manual.

15.04 - REIMBURSABLE TRAVEL EXPENSES
Whenever an employee is required to change their place of residence because of a change in assignment, promotion or other reasons related to the employee's duties, the employee shall be reimbursed for transportation expenses in accordance with Section 60.360 of the Alaska Administrative Manual.

In cases of new hires to duty stations not on the connected highway system or ferry system, one-way airfare for the employee only will be furnished.

15.05 - REIMBURSABLE MOVING EXPENSES
Employees shall be reimbursed for moving expenses in accordance with Section 60.350 of the Alaska Administrative Manual. Transfer between duty stations and travel in exercising retention rights at the employee's option will be at the employee's expense.

15.06 - TRAVEL INSURANCE
The Employer shall insure the life of every employee against accidental death while in travel status away from their duty station in the amount of one hundred thousand dollars ($100,000.00) at no cost to the employee. The employee shall name the beneficiary.

15.07 - PRIVATE VEHICLE USE
Any reimbursement for mileage for the use of the employee's privately owned vehicle shall be made pursuant to the Alaska Administrative Manual at the time of travel.

15.08 - PRIVATELY OWNED AIRCRAFT
From time-to-time it is mutually beneficial to have employees use their private aircraft in the course of State business. When the use of an employee's privately owned aircraft is authorized in advance by the Employer, reimbursement shall be one dollar-seven cents ($1.07) per mile or such higher amount authorized in accordance with Section 60.090 of the Alaska Administrative Manual at the time of travel.

TA KD
30-K hearing
2/15/12
2-15-2012

ARTICLE 16 - TIME CARDS

A. Corrections to the time-card hours and subsequent pay adjustments may be made and bargaining unit members will be notified by a copy of any alterations of their time card. All alterations will be made in a manner that does not obliterate or obscure the original time as reported by the employee. Copies of the employee's time cards shall be made available by the Employer for inspection by the employee or authorized Union representative upon eight (8) working hours written notice by the Union to the State office where the records are maintained.

B. If the employer implements an electronic timekeeping system, corrections to time cards and subsequent pay adjustments will be made using that system, and Section A of this article will not apply. Employees who are using the electronic timekeeping system will have access to review their time card on the system. If the employee is not able to access their time card on the system, then the employer will make available a copy upon eight (8) working hours written notice by the employee or the authorized Union representative.

C. The Employer shall not be required to keep time cards over sixty-five (65) days. Employees having a discrepancy on their time card must bring same to the attention of the Union within thirty (30) days after such discrepancy.

TA KD 2/23/12 2-23-2012

ARTICLE 17 - PAY PROCEDURES

17.01 - PAYDAY

Payday shall be the fifteenth (15th) day of the month and the last day of the month. If the employee's payday falls on a Saturday, Sunday, or holiday, then the last working day before said Saturday, Sunday, or holiday shall be the payday. The parties agree that if a bi-weekly pay schedule becomes available in the future, it will be implemented at the State's convenience. Leave accrual and any other conditions or benefits calculated based on a semi-monthly pay cycle will be recalculated to ensure that the conditions or annual benefits are not reduced by a conversion to a bi-weekly pay cycle.

Need - Bob No objection to reducing amount LOA ~~Draft~~ 12/4/12 KD

The parties agree that if a new program becomes available to the State where paychecks are no longer mailed (because of mandatory direct deposit), then the language regarding the mailing of paychecks in this section is no longer valid. If an employee does not receive their direct deposit within twenty-four (24) hours of the close of business on payday or if the employee who elects to receive their paycheck at home or at work does not receive their paycheck on payday, the employee shall be entitled to penalty pay of forty dollars ($40.00) per day for each day the payment or check is late excluding Saturdays, Sundays and holidays to a maximum of four hundred dollars ($400.00), provided the employee files notice with the Employer on forms provided by the State within the next regular day of business. Failure to provide notice to the Employer within the specified time period will forfeit claim for penalty pay until the date of written complaint to the Employer.

A. The Employer shall itemize all deductions except deferred compensation on pay advices or regular paychecks so employees can clearly determine the purposes for which amounts have been withheld and shall include the number of straight-time hours, overtime hours, dues deductions and basic rate per hour paid.

B. All mailed checks shall be considered paid timely if postmarked three (3) days prior to the due date.

17.02 - PAY SHORTAGES

Verified pay shortages shall be paid promptly after receipt of the employee's complaint in accordance with Section 17.01 and no later than fifteen (15) days after the written complaint is received on forms provided by the State.

It is agreed that pay shortages of twenty-five dollars ($25.00) or less are exempt from this provision. However, it is agreed that such verified pay shortages will be paid by the next regular payday following receipt of the notice by the Employer or within the fifteen (15) days described above, whichever is later. If not paid within the prescribed period, the penalties as set forth in Section 17.01 shall apply. Date of mailing of the verified pay shortage shall constitute date of payment.

17.03 - TERMINATION PAY

When an employee is terminated, the employee's wages less terminal leave and retirement contributions, become due immediately and shall be paid during business hours no later than the ~~fourth (4th)~~third (3rd) working day after termination. If not paid within the prescribed period, the penalties shall be seven and one-half (7.5) hours per day straight-time rate of pay for any day thereafter that the payment or check is late, provided that the employee files notice with the Employer on the next regular day of business. Failure to provide notice to the Employer within the specified time period will forfeit claim for penalty until such notice is given. Provided, however, if the employee voluntarily terminates without two (2) weeks prior notice, the late pay penalty shall not apply until after the following pay period. Date of electronic distribution or date

of mailing the paycheck shall constitute date of payment. Employees shall be entitled to penalty pay only from the date of written complaint to the Employer.

17.04 - REMOTE LOCATION EXEMPTION

The parties agree that the Employer is exempt from penalty pay under Section 17.01 and Section 17.03, for those employees assigned to duty stations at remote locations where United States mail delivery is not available, except when the regular or termination pay warrant is not mailed to the warrant address of record in accordance with the provisions referenced herein.

The Employer will make every effort, within available means, to forward or deliver mail to employees in such remote locations.

17.05 - LAYOFF

When an employee is placed on layoff, including seasonal layoff, the employee's wages earned through the date of layoff become due and shall be paid on the regular payday for the period in which the wages were earned. If not paid within the prescribed period, the penalties shall be seven and one-half (7.5) hours per day straight-time rate of pay for any day thereafter that the payment or check is late, provided that the employee files notice with the Employer on the next regular day of business. Failure to provide notice to the Employer within the specified time period will forfeit claim for penalty pay until such notice is given. Date of the electronic distribution or date of mailing of paycheck shall constitute date of payment. Employees shall be entitled to penalty pay only from the day of written complaint to the Employer. Pay shortages shall be handled as provided in Section 17.02.

ARTICLE 19 - LEAVE

19.01 - PERSONAL LEAVE ACCRUAL
During the term of this Agreement, personal leave shall be earned and used in lieu of all sick and annual leave except as specified in this Article.

A. Rate of Accrual. An employee shall accrue personal leave as follows:

Years of Service	Hours Per Pay Period
0 - 2	7.50
2 - 5	8.44
5 - 10	9.38
10 +	11.25

In determining years of service for the purpose of computing personal leave, all permanent/probationary service with the State of Alaska is included.

Personal leave accrual for partial pay periods of service will be prorated.

Employees who work less than full-time shall accrue personal leave on a prorated basis according to the above schedule and hours in pay status.

B. Changes of Accrual Rate. Accrual rate changes will become effective the sixteenth (16th) day of the month following the pay period in which the employee completes the service requirement and becomes eligible for the higher accrual rate. The leave anniversary date must be moved one month later for each twenty-three (23) days of leave without pay in a leave year (December 16 through December 15).

19.02 - USE OF PERSONAL LEAVE
Accrued personal leave is available for use after an employee has completed thirty (30) continuous calendar days of employment.

A. Personal leave may be granted at any time business permits with the prior approval of the employee's supervisor. Employees desiring personal leave should submit a request at least forty-five (45) calendar days in advance. The Employer shall respond to the request within fifteen (15) working days. Requests for personal leave will not be unreasonably denied. Once leave has been approved, the approval may not be rescinded unless the Commissioner of the Department declares that a situation exists which requires the employee's presence on the job.

B. An employee may take personal leave for medical reasons, regardless of whether business permits, upon permission of the employee's supervisor. The Employer shall grant personal leave if satisfied that the employee is absent for medical reasons. The taking of personal leave for medical reasons shall be reduced by the amount of wage continuation payments made under the Alaska Workers' Compensation Act (AS 23.30). The following constitute "medical reasons" and are subject to the conditions noted:

1. Medical disability of an employee is a medical reason for taking personal leave.

2. Medical disability of a member of an employee's immediate family is a medical reason for taking personal leave if the disability is such that the attendance of the employee is required.

3. A medical condition of an employee that makes presence at work a danger to the health of fellow employees is a medical reason for taking personal leave.

4. Pregnancy and childbirth is a medical reason for an employee to take personal leave.

5. Death of a member of an employee's immediate family is a medical reason for taking personal leave. An employee is entitled to five (5) days of personal leave for this purpose; additional personal leave may be granted at the Employer's discretion.

The Employer may require a doctor's certificate to substantiate any medical reason for taking leave which exceeds three (3) consecutive working days or if malingering is suspected. An employee who falsely claims a medical use of personal leave is subject to disciplinary action.

C. Family Medical Leave (Federal). Qualified employees will be entitled to coverage under the Family Medical Leave Act (FMLA). Health insurance contributions will be made on behalf of qualified employees during the twelve (12) week period of family leave (including periods of personal, sick or donated leave, or periods of leave without pay).

When taking leave under the FMLA, a qualified employee must exhaust all accrued sick, personal, and donated leave (in that order) before entering leave without pay. When taking leave due to pregnancy, childbirth, foster care placement or adoption, the leave entitlement must be taken consecutively.

The twelve (12) month period for utilizing leave entitlements shall commence with the first day leave is taken under the FMLA. Approved leave without pay taken under the provisions of the FMLA shall have the same effect as any other period of approved leave without pay on the employee's terms and conditions of employment, except as provided herein.

An employee may be required to re-certify the qualifying reason for remaining on family leave. An employee may be required to provide a fit-for-duty statement prior to returning to work.

The parties recognize that if leave provisions in this Article are found to be in conflict with the FMLA, FMLA entitlements prevail.

D. Family and Health Leave (State). The parties recognize that qualified employees may be entitled to up to eighteen (18) workweeks of leave during a twenty-four (24) month period pursuant to AS 39.20.305, and that such entitlements may run concurrently with FMLA entitlements.

19.03 - MANDATORY LEAVE USAGE

Each employee shall use at least thirty-seven and one-half (37.5) hours of personal leave during each leave year beginning December 16 and ending December 15 of the succeeding year. If the employee does not use at least thirty-seven and one-half (37.5) hours of personal leave during the leave year, the difference between thirty-seven and one-half (37.5) hours and the amount of personal leave used shall be canceled without pay unless the department or agency head certifies in writing that the employee was denied the opportunity to use thirty-seven and one-half (37.5) hours of personal leave during the leave year. Should circumstances cause the Employer to refuse the employee the opportunity to use the full thirty-seven and one-half (37.5) hours, any unused portion of the thirty-seven and one-half (37.5) hours mandatory leave shall be deducted from the employee's leave balance at the end of the leave year and paid at the employee's regular hourly rate. Part-time employees shall have the mandatory leave requirement prorated based upon the number of hours the employee is regularly scheduled to work.

19.04 - LEAVE CASH-IN

Upon written request to the Employer, an employee shall receive payment for the employee's personal leave. Leave shall be paid at the employee's regular hourly rate. Additional hours of

personal leave may be granted at the Employer's discretion. The employee's leave balance will be reduced by the number of hours of personal leave for which payment is made. In no case may an employee's leave balance be reduced to less than thirty-seven and a half (37.5) hours through cash-in.

Withdrawals under this section shall not eliminate the employee's obligation to use personal leave as provided in Section 19.03, nor shall the hours withdrawn take the place of leave which an employee is required to use.

19.05 - TERMINAL LEAVE

An employee, who is separated from State service except by seasonal layoff, shall receive within thirty (30) days a lump sum payment of the cash value of the employee's accrued personal leave. An employee who is placed on seasonal layoff may choose to: 1) receive within thirty (30) days a lump sum payment of the cash value of the employee's entire accrued personal leave, or 2) elect to retain up to one-hundred and fifty (150) hours of personal leave for use upon return to work. The cash value of leave in excess of one-hundred and fifty (150) hours will be paid in a lump sum payment. Retained leave may not be cashed out while on seasonal layoff, however, if a determination is made that the employee will not return or be returned from seasonal layoff the cash value of any retained leave will be paid as a lump sum at that time.

19.06 - LEAVE DONATIONS

Members of this bargaining unit shall be allowed to donate personal leave to and receive personal or annual leave from employees in this unit or those represented by a different union or non-covered employees subject to the following conditions:

A. Each employee wishing to donate personal leave will fill out, date, and sign a leave slip showing the hours of personal leave he or she wishes to donate in increments subject to a minimum of two (2) hours. The leave slip will have written or typed along the bottom, or in the space provided, "Leave donation to: (employee name, employee identification number)."

B. Donors will submit leave slips for a particular donee to the Division of Personnel Payroll Supervisor of the department in which the donee is employed. Leave donations will be posted in date and order received to the recipient's Donated Leave Account during the pay period in which personal and sick leave is exhausted, for use from that pay period forward.

C. The Employer will convert the donated leave hours to dollars at the regular (annualized) hourly rate of the donor. The dollars will then be converted to hours of leave at the regular (annualized) hourly rate of the recipient, and the resulting number of hours will be added to the recipient's Donated Leave Account for use in accordance with the requirements of this Article. The total amount of leave credited to the recipient's Donated Leave Account shall not exceed three hundred (300) hours during the life of the agreement.

D. Once the Employer has completed the above process, the State will not be obligated for further processing or liabilities resulting therefrom. Once the donation has been transferred to the recipient's account, the donation cannot be withdrawn, modified or otherwise returned to the donor's account.

E. Donations of leave under this section will not reduce the mandatory leave usage requirements established in Section 19.03.

F. Donated leave may not be used unless and until all accrued personal leave and all sick leave has been exhausted. Donated leave may only be used for those purposes described in Sections 19.2.B, C, and D. Upon termination, any balance in the Donated Leave Account shall be canceled without pay. Upon the death of an employee, the balance of the Donated Leave

Account will be paid to the employee's beneficiaries at the employee's regular hourly rate.

19.07 - CASH DONATIONS

Members of this bargaining unit shall be allowed to donate personal leave to and receive donations of personal or annual leave from employees in this unit, those represented by a different unit and non-covered employees. The Employer will convert the leave to earnings at the regular (annualized) hourly rate of the donor and appropriate deductions required by law will be made. The net sum of donations after deductions will be combined into a single check and delivered to the Division of Personnel Technical Services Manager for distribution to the employee. An individual letter of agreement between the State and the recipient's union will be required for each recipient.

19.08 - SICK LEAVE

In the event of serious illness or injury within the employee's immediate family which requires the attendance of the employee for emergency care or when the employee's presence on the job would jeopardize the health of fellow employees, the employee shall be entitled to the use of sick leave provided that a physician's certificate may be required by the Employer that the presence of the employee was required or that the illness or injury would jeopardize the health of other employees. Immediate family shall be defined as father, mother, husband, wife, sons, daughters, brothers and sisters.

A. **Doctor's Certificate.** Employees using three (3) days sick leave or less shall not be required to furnish a doctor's certification before returning to work unless there is reason to believe malingering is involved. Any employee with more consecutive sick leave days than specified above may be required to furnish a doctor's certificate to the Employer, certifying that the employee was physically unable to perform their duties. Any employee who abuses the sick leave privilege is subject to disciplinary action.

B. **Dental Appointments.** The employee shall be allowed time off without loss of pay for time spent off the job while under the care of a dentist, for such treatment as provided under the health and welfare plan. Such time off shall be deducted from the employee's accumulated sick/personal leave credit account. The employee shall notify the Employer not less than one (1) day in advance of such appointment. However, in cases of emergency, the employee need not give notice to the Employer, but must show evidence of such emergency upon return to work if requested by the Employer. Upon completion of such appointment or series of appointments, the employee shall provide the Employer with a dentist's certificate, in a form acceptable to the Employer, that shall contain the date and hour of when such appointment or series of appointments were scheduled and completed.

19.09 - FUNERAL LEAVE

Following the death of a member of an employee's immediate family, an employee is entitled to five (5) working days of leave; additional days may be granted at the Employer's discretion. Immediate family shall be defined for purposes of this section only as spouse, son, daughter, mother, father, sister, brother, grandparents, including in-law and step-relation equivalents. Funeral-leave time shall be deducted first from accumulated sick leave, then from personal leave.

19.10 - DEATH OF AN EMPLOYEE

Upon the death of an employee, any unused sick leave balance shall be paid in cash to the employee's beneficiaries at the employee's base pay rate.

SOA Proposal

Date: _____ **Time:** _____

ARTICLE 21 - SAFETY AND LIABILITY

21.01 - UNSAFE EQUIPMENT

No employee shall be discriminated against or disciplined in any manner because of refusal to work with, operate, or ride in unsafe equipment. Such refusal must be evidenced by a written report of the unsafe condition by the employee. If subsequently the equipment is deemed to be safe by the Safety Committee, disciplinary action may be taken by the Employer.

21.02 - WORK SAFETY

All work should be executed in a safe manner. The "Alaska State Safety Code" and OSHA regulations shall serve as minimum standards.

21.03 - SAFETY AND FIRST-AID EQUIPMENT

Safety devices and first-aid equipment, as may be needed for safety and proper emergency medical treatment, shall be provided for by the Employer. Each employee shall be responsible to account for the tools, protective clothing and equipment so supplied, ordinary wear and tear excepted. Non-expendable tools or protective clothing which become lost, damaged or stolen through the employee's proven negligence or deliberate act shall be replaced or paid for by the employee.

The Employer shall furnish such safety equipment and protective clothing as is necessary for the safety of the employees. Accordingly, the Employer agrees to furnish coveralls to employees working as equipment operators and their foreman, and mechanics and servicemen in an automotive shop and their foreman. The Employer may elect to provide coveralls to automotive shop mechanics, servicemen and foremen, which are of a color other than orange and which are fabricated of cotton or other fire resistant material. Each employee will be responsible for cleaning their own issued coveralls. However, in locations where washers and/or dryers are made available for such cleaning, such washers or dryers shall continue to be available for that purpose but there is no requirement to furnish washers or dryers in other locations, unless the State discontinues a practice of having them commercially cleaned during the term of this Agreement.

21.04 - SAFETY AND FIRST AID PROGRAM

A safety and first-aid program as required by the State Safety Code, shall be instituted, and regular safety meetings at each duty station shall be scheduled by the Employer during working hours once each month in a "tool box" or "lunch" area.

21.05 - FIRST AID TRAINING

The Union will cooperate with the Employer in order to have at least one (1) person in each ten (10) employed who is a trained first aid person.

21.06 - SPECIAL FIRST-AID REQUIREMENTS

A. The Employer will keep and maintain fully-equipped standard first-aid kits (as prescribed by the National Safety Council). For crews who are working remote areas, a first aid kit shall be provided and accessible on each machine or for each crew.

KD M

B. Every foreman or leadman in the bargaining unit ~~employed at locations outside of a 911 emergency response service area~~ shall have a current State-approved first-aid card.

C. Blankets and stretchers shall be maintained for the use of employees who may be injured.

D. Employees whose injuries require the use of a stretcher or ambulance shall be accompanied to the hospital by an attendant.

E. Immediate transportation must be provided for seriously injured or ill employees, and such transportation must have precedence over all other transportation.

F. The Employer shall also notify the Union, as promptly as possible, of lost-time accidents and shall furnish the Union with a copy of the Employer's accident report at the time such report is furnished to the insurance company.

21.07 SANITARY REQUIREMENTS

A. Where temporary camp housing is furnished, each employee shall be allowed housing of approximately sixty (60) square feet of floor area and shall be furnished bedding and a weekly change of linen. Shelter-wells and similar structures shall require approximately ninety (90) square feet of floor area per employee. Adequate closet or locker space shall be provided each employee, and where more than two (2) employees are housed in a single room, a locker and keys or lockable closet shall be provided each employee. There shall be no more than four (4) employees housed in a standard 16' x 24' shelter-well. Living quarters, toilets, showers and laundry rooms shall be kept clean. The Employer shall furnish an adequate number of washers and dryers, both in camp and in facilities arranged for through a third (3rd) party. However, employees covered by this Agreement shall be entitled to as favorable camp conditions as other employees employed on the project. Alberta or equal quality trailer camps are acceptable, providing the patented or similar covered walkways are installed.

B. Those employees handling, preparing, or serving food will not be utilized during the same shift in cleaning toilets and urinals, and will not be used to wash or clean floors, beds, walls, and the garments of patients. This does not apply to the employee's assigned work area.

C. It shall not be considered a violation of this Agreement where employees refuse to work in facilities that are not being maintained in a sanitary condition.

21.08 - SHELTER REQUIREMENTS

Warm and adequate shelter shall be provided for employees by the Employer in which to dry their clothes and eat their meals.

21.09 - EQUIPMENT REQUIREMENTS

To insure safety and to eliminate unnecessary occupational accidents, the Employer agrees that all equipment shall be properly cabbed and screened.

21.10 - DRINKING WATER

Clean and sanitary drinking water will be provided in adequate supply in close proximity to workers at all times.

21.11 - TOILETS AND URINALS

On all projects covered by this Agreement there shall be provided by the Employer at all times during construction, sanitary facilities consisting of a reasonable number of toilets and urinals.

21.12 - MONITORED HEALTH PROGRAM

The parties recognize that certain employees may come in contact with toxic chemicals, radioactive materials and/or work with and around asbestos. Upon the signing of this Agreement, the Employer and the Union agree to establish a labor-management committee

consisting of two (2) representatives of the Union and two (2) representatives of the Employer to review the medical examination needs of employees who may have been exposed during the course of their employment with the Employer. The purpose of the committee shall be to determine a set of criteria which establish the circumstances under which employees exposed on the job are entitled to an in-depth medical examination at the Employer's expense.

21.13 - FIRE DUTY

It is recognized that circumstances associated with fire suppression activities under the control of the Department of Natural Resources precludes management from maintaining camp requirements as outlined in Section 21.08.A. It is therefore agreed and understood that the following provisions shall apply to fire suppression activities:

A. When an employee is assigned to fire duty on a fire line, or in related duties at or near the fire line, camp requirements need not be met nor is per diem payable except that per diem will be payable, consistent with Article 15, for each day after twenty-three (23) consecutive days of initial assignment to fire suppression activities, or twenty-three (23) consecutive days for each reassignment to the fire suppression activities.

B. When an employee is assigned to supply or support activity related to a fire, but they are retained in a city, town, or village distant from the fire, per diem will be paid per Article 15 if commercial facilities are present in the community and the employee can procure such facilities for the employee's use, and the department has not provided for those commercial facilities.

If such facilities are not available or cannot be procured, the Department of Natural Resources will provide other facilities to include sleeping and lavatory needs, a light source, heat where needed, and a means of heating or preparing the food provided by the department.

Facilities provided by the Department of Natural Resources will be equal to facilities provided to all other employees similarly assigned and per diem is not payable.

Should it become necessary for support personnel to travel to or near the fire line, the provisions of subsection A herein shall apply for the duration of that stay.

2/23/12 State Proposal
TA KD 2/29/12
2-29-12

ARTICLE 22 - SENIORITY

For purposes of layoff, recall, and promotions, seniority shall be established by the date of entry by a probationary/permanent employee into an established or new duty station. Employees who are on leave without pay for layoff, subject to recall, or on leave in pay status, shall continue to have the same seniority date as original entry into the duty station. Employees who are on leave without pay for under thirty (30) consecutive days shall maintain their same seniority date. Employees on leave without pay for over thirty (30) consecutive days shall have their seniority date adjusted according to the days over thirty (30) in leave without pay status, except as specifically provided in other sections of this Agreement.

The Employer shall also notify the Union, in writing, of all layoffs and recalls and their effective dates concurrent with the notice to the affected employees. The Employer will also furnish every six (6) months, by duty station, lists of all employees by seniority date including their classification. Such seniority lists shall be forwarded to the Business Manager no later than March 1 and September 1 of each year.

22.01 - DUTY STATION SENIORITY

Duty Station seniority shall be established for the purposes of ranking employees for promotion or layoff and recall from layoff. Duty stations shall be determined by location. These locations will be categorized by department, by divisions within that department. For purposes of this section, location shall mean the city, town, village or job site.

Within the Department of Transportation and Public Facilities, the divisions of Maintenance and Operations, and the State Equipment Fleet, will be combined into one duty station at each location for determining duty station seniority. For the Southeast Region, because the Division of Maintenance and Operations is also combined with Construction, Construction shall be considered a separate duty station from Maintenance and Operations and the State Equipment Fleet for determining duty station seniority.

It has further been understood that if an employee is temporarily reassigned from their permanent duty station for a period not to exceed one (1) year, or as mutually agreed by the parties, the employee's seniority at their permanent duty station will not be affected.

Duty station seniority shall not in any way affect the employee's overall seniority with the Employer for purposes of vacation, holiday and/or other fringe benefits.

A. It is agreed that this subsection covers only design and construction employees within this bargaining unit employed in the Department of Transportation and Public Facilities, and the Department of Natural Resources, Division of Parks, who are assigned to work on-site at pre-construction or construction projects. Accordingly, Article 15 and Article 22 of this Agreement are modified to meet the working conditions of employees so employed. Those sections or subsections of the Collective Bargaining Agreement not modified herein will remain in full force and effect.

Each employee will be assigned by the Employer upon hire to a permanent duty station which will be an area of fifty (50) road miles from a focal point in a city, town, or village which has a population large enough to reasonably expect local hires for jobs within that duty station. Once assigned to a duty station, that duty station shall be the designated, permanent duty station of the employee unless and until the employee elects to fill a position in another duty station in accordance with Article 4 or Article 22.03. There shall be only one (1) permanent duty station for each employee.

The Employer will designate duty stations and determine the focal point of each duty station. That designated duty station shall be used to compute duty station seniority. However, if a dispute arises regarding the focal point, both parties agree to meet and confer on the issue.

For the purposes of determining compensation, the focal point for each duty station will be considered point zero and the project office will be considered as the job assignment for determining miles from the focal point.

When an employee is assigned to work at a project with the project office between the focal point and twenty-five (25) road miles from the focal point, the employee will not be entitled to per diem, meal allowances, travel pay or any other compensation in lieu thereof.

When an employee is assigned to work at a project with the project office between twenty-five (25) road miles and fifty (50) road miles from the focal point, the employee will be entitled to ten dollars ($10.00) for each day worked at the project.

When an employee is assigned to work at a project with the project office beyond fifty (50) road miles from the focal point of their designated, permanent duty station, the employee will be entitled to meal allowances in accordance with Article 15.03. When the employee is required to stay overnight for an assignment beyond fifty (50) road miles from the focal point of their designated, permanent duty station, the employee shall be entitled to lodging and meal allowances in accordance with Articles 15.02 and 15.03.

Each employee shall be entitled to report to the project office each workday and shall be entitled to travel time or work time, as appropriate, for the time required to transport themselves to the work site. In the event that the employee and their supervisor mutually agree that the employee will report directly to the work site, the employee shall be entitled to travel time or work time, as appropriate, for actual time spent traveling, but no more than that which it takes to travel from the project office to the work site.

22.02 - PROMOTION

For the purposes of this section, promotion means the movement from a permanent position in any classification to a permanent position in any classification at a higher range. It is recognized by the parties that promotions usually occur within an occupational series consisting of one (1) or more classifications. However, it is also recognized that promotions from one (1) occupational series to another occupational series shall be allowed providing the promotional candidate is qualified and competent for the position to be filled and the employee satisfies the other conditions of this section.

A. When an opening occurs, promotions shall be initiated by posting of a job announcement at the duty station where the opening occurs. Such job announcements shall be posted in a location or locations where all eligible candidates could reasonably be expected to be aware of the opening. Such job announcements will be posted for four (4) working days and will be retained by the Employer for six (6) months.

B. Promotions shall be made from among the three (3) employees signing the job announcement with the highest duty station seniority, provided each employee is qualified and competent for the higher classification and is qualified and competent to perform the duties of the position to be filled. If the Employer determines that any of the three most senior employees signing the job announcement are not qualified or competent for the higher level position, the Employer may consider other employees, in order of their seniority, until three qualified and competent employees are under consideration for the position. If an employee other than one of the three most senior is selected for promotion, the Union and Employer will meet and confer.

C. When Sections A and B above have been complied with but no employee at the duty station is found qualified and competent for the promotional vacancy, the Employer may promote an employee from another duty station. When an employee is promoted as a result of a transfer from one (1) duty station to another duty station, the duty station seniority of the employee will not be a determining factor, but such a promotional transfer will be determined by whether or not the candidate is qualified and competent for the position to be filled.

22.03 - TRANSFERS

A. An employee will not be compelled to accept a transfer from one (1) duty station to another duty station or from the employee's classification to another classification at the same wage group. When an employee accepts a transfer from one (1) duty station to another duty station, the employee's duty station seniority at the duty station the employee left will be terminated and the employee will begin accruing duty station seniority at the employee's new duty station effective on the date of the transfer.

B. When an employee accepts a transfer from one (1) classification to another classification of the same wage group at the same duty station, the employee's duty station seniority shall be retained for purposes of ranking for promotion.

C. When an employee applies for transfer to another duty station and it is accepted by the Division Director, the employee will receive a duty station seniority credit that will be calculated at a rate of 50% of current duty station seniority. For purposes of Article 22.03(C), a transfer shall be considered any movement from one LTC position to another from one duty station to another without a break in service, regardless of the job class or wage grade.

22.04 - LAYOFF

A. Layoffs, including reduction in force, shall be made in reverse order of duty station seniority from among those in the classification in which the layoff occurs.

B. An employee may exercise bumping rights to a lower classification in the employee's class series at the employee's duty station, provided the employee is qualified to perform the tasks of the lower classification and is not the least senior in the lower classification, and will assume the wage level of the lower classification to which the employee is moved.

C. When an employee is promoted, voluntarily demoted in lieu of layoff or transferred outside of the employee's occupational series at the employee's duty station, the employee retains seniority in the classification the employee left for two (2) years. If the employee does not return to the classification the employee left within two (2) years, the employee loses all accumulated seniority in that classification.

22.05 - RECALL

A. Recalls shall be made in order of duty station seniority from among those employees laid-off in the classification in which the recall occurs.

B. Employees who exercise their bumping rights in accordance with Section 22.04.B of this Article shall retain their recall rights to the classification from which they were laid off, for a period of two (2) years.

C. Employees who voluntarily demote or transfer outside their classification series to another classification at the same duty station shall retain recall rights to the classification they vacated for a period of two (2) years.

22.06 - TERMINATION OF SENIORITY

Seniority shall be terminated and the Employer-employee relationship shall be severed by the

following conditions:

A. Discharge in accordance with Article 8.

B. Layoff of twenty-four (24) months duration.

C. Resignation.

D. Failure to return from leave of absence on agreed date unless approval has been obtained from the Employer.

E. Failure to return from layoff when recalled, except under unique and unusual circumstances.

ARTICLE 24 - PENSION AND RETIREMENT

The employee shall enjoy the retirement benefits as outlined in the applicable statutes relating to the Public Employees' Retirement System.

TA BK Lacey

2/15/12
KJ 2-15-2012

TA Bookkeeping KI 2/15/12 RJ 2-15-201

ARTICLE 26 - SEPARABILITY AND SAVINGS

26.01 - SAVINGS CLAUSE

If an Article or section of this Agreement should be decided by a court of competent jurisdiction, or by mutual agreement of the parties, to be in violation of any Federal, State or local law, or if adherence to or enforcement of an Article or part of an Article should be restrained by a court of law, or if any Article or section should be found not in compliance with Federal regulations where compliance is required as a condition for the receipt and expenditure of Federal funds, the remaining Article and sections of the Agreement shall not be affected and the parties shall convene within thirty (30) days for the purpose of negotiating a satisfactory replacement.

26.02 - WAIVER OF BARGAINING

The parties acknowledge that during the negotiations which resulted in this Agreement, each had the unlimited right and opportunity to make demands and proposals with respect to any subject or matter not removed by law from the area of collective bargaining and that this Agreement is the entire Agreement and concludes all collective negotiations during its term.

The parties further agree that notwithstanding the above section, maintenance of contract matters, should they develop, may be negotiated under a written supplemental agreement.

26.03 - MERIT SYSTEM PRINCIPLES

The parties agree that it is their mutual intent to strengthen the merit principles in the bargaining unit, and pursuant to AS 23.40.070(3) shall use all due diligence to maintain merit principles among public employees.

Should this Agreement or any section or Article be found in violation of Federal regulations where compliance is required for receipt or expenditure of federal funds, the parties agree to convene within fifteen (15) days and re-negotiate the section or Article to comply with such regulations.

26.04 - GRANT- AIDED AGENCIES

Employees subject to Federal provisions regarding merit system requirements for Grant-in-Aid Agencies shall be subject to regulations developed by the referral committee provided for in Article 4.03. Regulations will be developed and implemented for those employees governing appointment, promotion and layoff in accordance with Federal merit system standards.

26.05 - AVAILABILITY OF PARTIES TO EACH OTHER

The State of Alaska and Public Employees Local 71 hereby agree to meet at reasonable times for a discussion of this Agreement, its interpretation, continuation and/or modification.

Therefore, there shall be established a labor/management committee comprised of representative(s) of both labor and management who will meet periodically for the purpose of discussing matters relative to the administration of the Agreement between the parties. Meeting agendas and location will be mutually agreed to in advance of the meeting. It is agreed that the location shall be rotated between Anchorage, Fairbanks and Juneau. This agreement is established for the purpose of facilitating two-way communication. Both parties agree that an obligation to meet in good faith exists.

KDFA 12/29/15
2:05
2-29-2012

ARTICLE 27 - STATE-OWNED/CONTROLLED HOUSING

The parties agree that the following is the rental schedule for Bargaining Unit Members living in State-owned or State-controlled housing.

27.01 - FACTORS TO BE USED IN DETERMINING RENT

The following factors are to be used in the rental formula for assessing rental charges for State housing units:

Rental Base - The typical rent for an unfurnished unit in Anchorage with a particular number of bedrooms.

Facility Condition - The index of facility condition in terms of "Good," "Fair," or "Poor."

Adjusted Rent - The figure derived from application of the facility condition index to the rental base. The adjusted rent figure will be used for the calculation of the amenities lacking and the imposition-on-privacy deductions.

Required-to-Live - A deduction of twenty-five (25) percent allowed for protection of property or for the convenience of the State where applicable.

Imposition-on-Privacy - A deduction of ten (10) percent of the adjusted rent allowed for the use of a portion of the facility for State business if applicable.

Amenities Lacking - Percentage of the adjusted rent to be deducted due to lack of fire and/or police protection.

Geographic Differential - The coefficient used to adjust an Anchorage-based rent to a level appropriate for a specific location outside of Anchorage. See Section 27.09 for list of coefficients by election district.

Travel Allowance - Deduction allowed for locations involving unusual transportation costs.

27.02 - RENTAL FORMULA

The rental formula is as follows:

[[[((RB x CI) - (AL + IP)) GDF] - TA] RTL] + UC = FCR

Or Calculated FCR is:

RB
xCI
Subtotal 1

Subtotal 1
-(Subtotal 1 x AL) + (Subtotal 1 x IP)
Subtotal 2

Subtotal 2
xGDF
Subtotal 3

Subtotal 3
-TA

Subtotal 4

Subtotal 4
xRTL
Subtotal 5

Subtotal 5
+UC
FCR

GDF is the geographical differential factor for a particular location.

CI is the facility condition index:

1.0 = Good
0.8 = Fair
0.6 = Poor

RB is the typical rental base for an unfurnished unit in Anchorage with a particular number of bedrooms.

RTL is the reduction for required-to-live; when used in the formula the RTL equals three-quarters (.75).

AL is the deduction for amenities lacking.

IP is the deduction for imposition-on-privacy.

TA is the allowance for excessive travel.

UC is the utility charge for all units except bunkhouses.

FCR is the formula calculated rent.

AND:

Amount of rent to be paid will be the lesser of the following:

1. twenty-five percent (25%) of employee's gross income (standby and overtime compensation excluded) as an employee of the State of Alaska, or

2. "FCR" resulting from exercise of formula.

27.03 - RENTAL BASE SCHEDULE

	NUMBER OF BEDROOMS			
ALL TYPES OF STRUCTURES	0	1	2	3 or more
(Mobile Homes, Apartments or Houses)	$359	$454	$532	$588

Rental Base Unit Notes:

A. Units are assumed to be unfurnished. All units are to include one (1) refrigerator, one (1)

stove, one (1) washer, one (1) dryer and window coverings.

B. Units are assumed to be in "Good" condition. A lesser condition shall be compensated for by application of the "condition index."

27.04 - FACILITY CONDITION
State housing units are classified into the following three (3) condition categories:

"Good" - Wear and tear may be evident and/or is in need of minor repairs; insulation for winter use is adequate or heating plant capacity is able to compensate for inadequate insulation; water is reliable, adequate and safe for household use; reliable and adequate electrical service; reliable and adequate fuel available for heating, hot water and cooking needs.

"Fair" - Wear and tear is evident and/or unit is in need of significant repair; insulation for winter use is adequate or heating plant capacity is able to compensate for inadequate insulation.

"Poor" - Unit is marginally habitable and is in serious need of repair or insulation for winter use is less than adequate. The heating plant is not able to compensate for lack of insulation.

27.05 - REQUIRED TO LIVE
In cases where the Commissioner of a department requests and the Commissioner of the Department of Administration approves an employee to occupy a State-owned or State-controlled facility for either the protection of State property or for the convenience of the State a deduction of twenty-five percent (25%) is allowable. In no case will the total deductions reduce the rental base more than fifty percent (50%).

27.06 - IMPOSITION ON PRIVACY
In cases where the head of a department requests the use of a portion of the facility for the purpose of accommodating official visitors, for use as office space, or for the general convenience of the public, a deduction of ten percent (10%) of the adjusted rent is allowable. Only one (1) deduction is allowed per agency per location. In no case will the total deductions reduce the rental base more than fifty percent (50%).

27.07 - AMENITIES LACKING
A deduction from the adjusted rent equal to two percent (2%) shall be allowed for lack of fire and/or police protection up to a maximum of four percent (4%) for the unit in question. In no case will the total deductions reduce the rental base more than fifty percent (50%).

27.08 - TRAVEL ALLOWANCE
In some cases the State supplies quarters to its employees in locations where minimal community services are available only at some distance from the location of the quarters. In this situation the Department of Administration will grant a deduction from the chart listed below, to offset the direct economic effects of the unusual transportation costs incurred. The nearest established community as defined in this section is to be used as the base community for calculating the deduction. A community must be deficient in more than one (1) of the listed services if a town farther away is to be selected as the base for calculating the distance deduction.

Distance in miles, one (1) way for surface travel or air travel if surface travel not available	Maximum Monthly Deduction
Less than 10 miles	No deduction
10 but less than 20	$15.00

20 but less than 30	25.00
30 but less than 40	35.00
40 but less than 50	45.00
50 but less than 60	55.00
60 but less than 70	65.00
70 but less than 90	80.00
90 but less than 110	95.00
110 and more miles	110.00

For purposes of calculating a deduction under this section, an established community is a population center offering the minimal community services listed below on a year round basis, or alternatively, approximately the same seasonal basis as the occupancy of the State rental quarters under consideration. Conformity with this definition, without regard to population size or other criteria, is the sole basis for identification of an established community.

Services	Minimum
Medical	Physician, one (1) dentist
Educational	Public elementary and high school (unless transportation is provided without charge, to a borough, or district school)
Shopping	Grocery, drugs, clothing, hardware and general household needs
Religious	Congregation of two (2) faiths, or denominations
Public Transportation	Connection with at least one (1) major town or city by common carriers (i.e., trucking, airport, bus)

In no case will total deductions reduce the rental base more than fifty percent (50%).

27.09 - GEOGRAPHIC DIFFERENTIAL FACTORS

Election District in Which Facility is Located	Applicable Geographical Differential Factor
1	1.0000
2	1.0375
3	1.0375
4	1.0000
5	1.0750
6a excluding Valdez Duty Station	1.1500
6b Valdez Duty Station	1.1875
7	1.0375
8	1.0000
9	1.0750
10	1.0750
11	1.0750
12	1.2625
13	1.2625
14	1.3000
15a excluding Nenana Duty Station	1.3375
15b Nenana Duty Station	1.3000
16a South of Arctic Circle	1.1500
16b North of Arctic Circle	1.3375
17	1.3375

18	1.2625
19	1.2625

These ratios are derived from AS 39.27.020. If AS 39.27.020 is amended by the Legislature, the parties agree to reopen Article 27.09 for thirty (30) days for the sole purpose of bargaining the geographic differential factors.

27.10 - UTILITY CHARGE
The utility charge shall be two hundred dollars ($200.00) per month for all units.

27.11 - MOBILE HOME PAD RENTAL RATES
The rental rate for mobile home pads shall be fixed at one hundred and forty-two dollars ($142.00) per month.

27.12 - DAMAGE DEPOSIT
A damage deposit of two hundred and fifty dollars ($250.00) is required for each unit. This deposit is refundable in full or part based on the condition of the unit, allowing for reasonable wear and tear, at the time of final inspection.

27.13 - CLEAN-UP DEPOSIT (MOBILE HOME PADS ONLY)
A clean-up deposit of two hundred and fifty dollars ($250.00) for each mobile home pad is required for utility disconnect and pad clean-up. This deposit is refundable if upon inspection the pad is found to be clean and free of debris. This provision shall apply to new tenants only.

27.14 - PAYROLL DEDUCTIONS; DISPUTED AMOUNTS
Rent and utilities shall preferably be paid by payroll deduction. If a dispute between the State and an employee develops concerning the unit's condition as provided for in the Landlord-Tenant Act, payment will continue and the State agrees to establish a separate account into which monthly rent will be deposited until the dispute is resolved. When a settlement is reached the disputed funds will be disbursed appropriately.

27.15 - BUNKHOUSE RENTAL RATES
The standard bunkhouse room rental rate shall be one hundred and five dollars ($105.00) a month for each occupant. There will be no charge for utilities to bunkhouse residents. All bunkhouse units will be furnished. No damage deposit will be required of bunkhouse residents.

27.16 - PET LIMITATION
Employee occupants who own pets shall ensure that their pets are not nuisances and do not create unsanitary conditions in/around quarters. All pets must be leashed or otherwise under direct control of their owners while on State-owned or State-controlled premises. Ownership of kennels, dog teams, livestock, horses and other exotic pets is prohibited on State-owned or State-controlled premises. Owners of pets are responsible and liable for injury, damage or loss caused by their pets.

Extent of limitation - ER can reg 15 2AAC.

TA Book Long

RJ 2-15-2012

ARTICLE 28 - MISCELLANEOUS

28.01 - BULLETIN BOARDS

The Union shall have the right to use reasonable bulletin board space for the purpose of posting Union information. Whenever practical, the Employer shall designate an area at each work site which may be used for the purpose of posting Union notices. The Union, its agents and members, shall not post partisan political materials or advertisements in partisan political elections, on bulletin boards.

28.02 - REMOTE AREAS

The parties recognize that the terms prescribed by this Agreement may not be satisfactory for all permanent work assignments and duty stations for all employees, particularly in remote areas where climate, geography and specific duties may impose unique conditions which require modification to the terms. The parties therefore agree that either party may propose, on a situation-by-situation basis, modifications to the express terms of this Agreement throughout its term. Such proposed modifications may include, but are not limited to, such conditions as Employer-provided housing, transportation, shift schedules, overtime, etc. In the absence of mutual agreement on the proposed modification(s) the terms of this Agreement shall prevail.

3-16-12

ARTICLE 7 - PROTECTION OF RIGHTS

7.01 - PICKET LINES
It shall be a violation of this Agreement and it shall be cause for disciplinary action in the event an employee refuses to go through or work behind any primary picket line unless such line is sanctioned by Public Employees Local #71, AFL-CIO, and the participating International Union (Laborers International Union of North America). The Employer specifically retains all of its rights under AS 23.40.200.

7.02 - STRUCK GOODS
It shall not be a violation of this Agreement and it shall not be cause for discharge or disciplinary action if any employee refuses to perform any service which the Employer undertakes to perform as an ally of any Employer or person whose employees are on strike, and which service, but for such strike, would be performed by the employees of the Employer or person on strike. Nor shall the exercise of any rights permitted by law be a violation of this Agreement, unless such exercise is precluded by this Agreement.

7.03 - LOST OR DAMAGED PROPERTY
Employees shall not be responsible for lost, stolen, or damaged property except in case of proven negligence or deliberate act. This shall include the use of credit cards for any purpose or any other method of giving credit. The Employer shall provide an adequate checking system to protect the Employer and employee.

7.04 - CONTRACTING OUT
The following shall govern contracting and subcontracting, involving the performance of work of classifications covered by this Agreement, which would directly result in the layoff of permanent or probationary employees covered by this Agreement.

Formatted: Left

A. Prior to the contracting or subcontracting of any work covered by this Agreement which would result in the layoff of permanent or probationary employees, the Employer agrees to conduct a cost efficiency study. Unless the study shows that the work can be performed by the contractor or subcontractor with less cost to the Employer, no permanent/probationary employee shall be laid off and replaced by contracted or subcontracted work.

The Employer shall require the contractor or subcontractor to pay the hourly wage rates established in the Agreement for all such work, plus an additional two dollars and fifty-five cents ($2.55) for each compensable hour worked as "in lieu of" benefits. It is agreed that the above-mentioned "in lieu of" amount will be reduced only by the amount of actual cost of benefits paid by the contractor or subcontractor. To insure compliance with this section, the Employer will require the contractor or subcontractor to furnish a certification of wages and/or any certified cost of benefits paid upon written request. Such certified information shall be furnished to the Union upon reasonable written showing of suspected noncompliance. In addition, the Employer shall furnish to the Union, a copy of each new or renewal contract. If the contractor or subcontractor is found to be out of compliance, the Employer agrees to take all reasonable steps to enforce the requirements of this section, including without limitation, terminating the contract or subcontract if compliance cannot be otherwise obtained.
All work performed on motor vehicles which is typically associated with work done by private service stations (e.g. tires, lights, fan belts, wipers, etc.) shall be free from the requirements of this section. Other vehicle repair and overhaul service work shall be performed in State facilities except in extreme emergencies. All State-owned vehicles shall contain a maintenance/repair instruction packet outlining the foregoing language.

KD 3/16/12
RJ 3-16-12

B. Nothing in this Agreement will invalidate nor supersede AS 35.15.010 or AS 19.10.170.

7.05 - Overloads
In the event an employee is arrested with an overload, the Employer shall pay all fines upon conviction, and the employee shall be paid for the time spent in service of the Employer, provided the employee has not loaded the cargo contrary to the instructions of the supervisor.

7.06 - REVOCATION OF LICENSES
In the event an employee suffers a revocation of his/her license because of violations of any Federal, state, or city law by the Employer, the Employer shall provide suitable and continued employment for such employee, at not less than the employee's hourly rate of pay at the time of revocation of the employee's license, for the entire period of revocation of the license. The employee shall be reinstated to the seniority the employee held prior to revocation of the employee's license, after the employee's license is restored.

7.07 - NO STRIKE/LOCKOUT
The parties agree that there will be no strikes or lockouts during the life of this Agreement.

7.08 - LICENSES
Each employee shall be responsible for obtaining and retaining all mandatory licenses and certifications necessary to perform the duties of his/her position. If a new licensing or certification provision is imposed by statute or regulation on current employees, the State shall pay for the initial license/certification fee provided the employee obtains the license or certification prior to the deadline established by statute or regulation. All future renewals shall be the sole responsibility of the employee.

Employees who were grandfathered under the 1992/94 agreement and had licenses or certifications paid for by the Employer, shall continue to have those licenses or certifications paid for so long as they remain in their current position or a position which requires the license or certification.

The parties recognize that there are certain licenses/certifications which are required for the convenience of the Employer. In such cases, the Employer shall pay for necessary training and license/certification fees.

ARTICLE 13 - CLASSIFICATION AND WAGES

13.01 - DAILY UPGRADES, TEMPORARY AND SUBSTITUTE APPOINTMENTS

A. **Daily Upgrades.** When the Employer directs an employee to work in a classification other than that held, the employee shall be paid at the higher wage group for the entire shift, provided the employee works at the higher-rated wage group for at least three (3) hours.

B. **Working in a Lower Classification.** When an employee is directed to temporarily work in a lower wage group, the employee shall receive his/her regular rate of pay for all lower rated work performed.

C. **Temporary Appointments.** Selection for appointments for less than thirty (30) consecutive days will be the right of management, other provisions of this contract notwithstanding. Temporary performance by an employee in a higher-rated classification shall not result in a change in classification of a position, unless such temporary work is approved in writing by the Division Director prior to performing the duties and is in excess of thirty (30) consecutive days. In such cases, the change to a permanent classification will be made in accordance with Article 22.02.

D. **Substitute Appointments.** When an employee is temporarily substituting for another employee who is absent from a position in a higher-rated classification and it is known or becomes known that the appointment will exceed thirty (30) consecutive days, the substitute appointment will be made in accordance with Article 22.02, from current employees.

13.02 - WAGE SCHEDULE & STEP PLACEMENT

The wage table shown in Section 13.02.A is the base wage schedule in effect June 30, 2012. ~~and 13.04 will be in effect on July 1, 2010, as specified in the table.~~ The wage schedule is found on and derived from the Division of Finance Website.

A. Wage Schedule. ~~Effective July 1, 2010, the following wage schedule will apply to employees in this bargaining unit.~~

The base wage schedule in effect June 30, 2013 will increase by 1% effective July 1, 2013.

Formatted: Font: Italic

The base wage schedule in effect June 30, 2014 will increase by 1% effective July 1, 2014.

13.03 (NOTE: SEPARATE PROPOSAL MADE FOR CLASSIFICATION DISPUTES FOR 13.03)

13.04 - PAY INCREMENTS

Pay increments, beginning at Step J, computed at the rate of 3.75 percent of the employee's wage rate, shall be provided after an employee has remained at Step F within a given Wage Grade for two years, and every two years thereafter, if, at the time the employee becomes eligible for the increment, the employee's current annual rating by the employee's supervisor is designated as mid-acceptable or better. Movement between Pay Increments shall be extended by one (1) month for every twenty-three (23) working days leave without pay each year.

Formatted: Font: Italic

~~Beginning on January 1, 2011, p~~ Pay increments will only be awarded through a performance evaluation in which the employee is considered to have a mid-acceptable or better commencing on the first day of the pay period following the fulfillment of the service requirement. If a pay increment is delayed due to an untimely performance evaluation, upon receipt of the evaluation with an annual rating of mid-acceptable or better, the pay increment will be granted retroactive to the employee's anniversary date.

13.05 13.05 - SUBSISTENCE

Subsistence shall be calculated as a daily rate according to geographic location and only at permanent work locations at two dollars and thirty-eight cents ($2.38) per day times step due district for eligible employees in Wage Groups 61 through 56 and two dollars and fifty-three cents ($2.53) per day times step due district for those eligible employees in Wage Groups 55 through 49. It is agreed that the rate of two dollars and twenty-five cents ($2.25) per day shall remain in effect for those employees stationed outside Alaska.

Further, subsistence will be converted to an hourly rate and added to the employee's hourly rate as determined by Sections 13.02 and 13.04. The conversion shall be as follows:

KD 3/16/12
M 3-16-12

	daily rate
x (times)	steps due district
x (times)	7
/ (divided by)	37.5.

The Election Districts used below are those designated by the Proclamation of Reapportionment Redistricting of December 7, 1961, and retained for the House of Representatives by proclamation of the Governor September 3, 1965.

KD 3/14/12
BJ 3-16-12

~~for thirty (30) days for the sole purpose of bargaining Article 13.05.~~ The parties agree to reopen this Article for a period not to exceed 30 calendar days between *December* through February 2013 for the sole purpose to negotiate Article 13.05. The parties recognize any change to monetary terms in Article 13.05 are subject to legislative approval and funding according to AS 23.40.215. In the absence of mutual agreement for change to Article 13.05 or funding by the legislature, the original 13.05 terms will carry forward unchanged for the duration of the agreement.

Formatted: Indent: Left: 0"

13.06 - PREMIUM PAY

13.06 PREMIUM PAY

A. Overtime. ~~It is the policy of the Employer to distribute overtime in the most economical manner, insofar as possible~~, the Employer shall equalize the distribution of overtime among the bargaining unit members who desire to work overtime, and those not desiring to work overtime shall preferably not be assigned to work overtime. This does not preclude the Employer from assigning and requiring overtime work of bargaining unit members based on reasons such as the qualifications of the members and the amount of work to be accomplished. Compulsory overtime may be necessary when the Employer determines it is in the public's best interest, such as natural disasters or weather related emergencies.

An employee shall be paid overtime for all work in excess of eight (8) hours of work in any one day and forty (40) hours of work in any one (1) week, at one and one-half (1.5) times the basic rate of pay.

~~For all work performed on the employee's first or second scheduled day off, one and one-half (1.5) times the basic rate of pay shall be allowed for that shift~~. For purposes of clarification it is agreed that the employee's first and second scheduled days off follow the employee's five (5) scheduled work days of their work schedule.

Overtime and holiday pay shall not be pyramided or duplicated. Hours paid at an overtime rate shall only be credited once in the calculation of hours in the workweek for overtime purposes.

~~A. Overtime. An employee shall be paid overtime for all work in excess of eight (8) hours of work in any one day and forty (40) hours of work in any one (1) week, at one and one-half (1.5) times the basic rate of pay.~~

For all work performed on the employee's first or second scheduled day off, one and one-half (1.5) times the basic rate of pay shall be allowed. However, for all work on the seventh (7th) consecutive day of work, two (2) times the basic rate of pay shall be allowed.

Formatted: Font: Not Bold, Font color: Auto, Not All caps

~~For purposes of clarification it is agreed that the employee's first scheduled day off begins twenty four (24) hours following the scheduled start time of the employee's last shift of work for that workweek and the employee's second day off begins forty eight (48) hours following the scheduled start of the employee's last shift of work for their workweek. An employee shall~~

KD 3/16/12
NJ 3-16-12

~~receive two (2) times the basic rate of pay for all hours of work performed between the forty-eighth (48th) hour described herein and the start of the employee's next regularly scheduled shift, provided the employee is working a standard workweek of five (5) consecutive days followed by two (2) days off and the employee worked on the employee's first scheduled day off.~~

~~Overtime shall not be compulsory (except in dire emergency) and shall be distributed as evenly as possible among those employees desiring to work the overtime. Overtime and holiday pay shall not be pyramided or duplicated. Hours paid at an overtime rate shall only be credited once in the calculation of hours in the workweek for overtime purposes.~~

B. **Holiday Pay.** All work performed on holidays shall be paid at one and one-half (1.5) times the basic rate of pay in addition to holiday pay. Overtime and holiday pay shall not be pyramided or duplicated. Hours paid at an overtime rate shall only be credited once in the calculation of hours in the workweek for overtime purposes.

C. **Shift Differential.** All bargaining unit members who work a swing shift beginning between 11 a.m. and 7:59 p.m. are entitled to three and three quarters percent (3.75%) of the employee's base hourly rate for each hour worked on that daily shift.

All bargaining unit members who work a graveyard shift beginning between 8 p.m. and 5:59 a.m. are entitled to seven and one-half percent (7.50%) of the employee's base hourly rate for each hour worked on that daily shift.

For the purposes of this section, the starting time of the employee's regular shift, excluding overtime hours, shall determine eligibility for shift differential. All hours worked from the beginning of the employee's regular shift until the starting time of the employee's following regular shift shall be paid shift differential at the same differential rate including those hours worked on the employee's regular scheduled days off.

D. **Hazard Pay.** Employees who are required to work under dangerous conditions shall receive hazard pay of seven and one-half percent (7.50%) in four (4) hour increments so worked. Dangerous conditions shall be defined as:

1. Working at heights more than twenty-five (25) feet above ground on towers, bridgework, and antennas.

2. Handling explosives so designated by the Employer or involved in some related activity which has been so designated by the Employer.

3. Transportation by or working under a helicopter required by the Employer.

4. Direct involvement in the clearing of an avalanche from the roadway (limited to equipment operators and spotters).

13.07 - **PROBATIONARY PERIODS**

For employees starting in a position after July 1, 2010 the probationary period for classifications in this bargaining unit shall be one (1) year, except that the parties may mutually agree to extend the probationary period by up to two (2) additional months. The probationary period will be extended one (1) month for each accumulation of twenty-three (23) working days of leave without pay within a leave year.

KD 3/16/12
MJ 3-16-12

A. Each new employee appointed to a permanent position shall be hired as a probationary employee. Upon completion of the probationary period, the employee shall be considered a permanent employee and shall have seniority from the date of hire. Accrual and use of personal leave, holiday pay, retirement benefits, health and welfare coverage and other conditions of employment shall be subject to other provisions of this Agreement.

B. A permanent employee who is promoted to a classification in a higher wage group or appointed to a different classification at the same wage group or a different class series at a lower wage group will serve a probationary period in the new classification. Such employee, however, will retain permanent status in the class the employee left.

C. A probationary employee who is promoted to a classification in a higher wage group or is appointed to a different classification at the same wage group will serve a probationary period in the new classification with the time in the previous class not being considered toward permanent status in either case.

D. If an employee is notified of failure to complete the new probationary period, he/she shall be returned to a vacant position in the previous classification. If there is no vacant position the Employer intends to fill, the provisions of Section 22.04 shall apply.

13.08 - NONPERMANENT EMPLOYEES

The Employer may elect to appoint a full-time or part-time nonpermanent employee subject to AS 39.25.195-39.25.200. If a nonpermanent employee is appointed to a permanent position, the duty station seniority shall be counted from the original date of hire providing such combined service is continuous. Nonpermanent employees shall be entitled to step placement in accordance with Section 13.02(C). Nonpermanent employees shall be entitled to subsistence in accordance with Section 5 of this Article. Time served as a nonpermanent employee shall not count towards probationary credit.

A nonpermanent employee is not entitled to accumulate or use paid leave, health and accident insurance, pension benefits or other benefits except when other benefits are expressly provided for nonpermanent employees in this Agreement. In lieu of such entitlements, each nonpermanent employee shall receive one dollar and sixty-five cents ($1.65) for each compensable hour worked.

Nonpermanent employees shall be covered by the holiday and overtime provisions of this Agreement. If a nonpermanent employee is in work status on a designated floating holiday, then the employee is entitled to either another scheduled day off with pay, or an additional day's pay at the straight-time rate for the employee's regularly scheduled hours of work on the holiday.

Nonpermanent part-time employees working five (5) days per week will be paid holiday pay as provided by Article 18.03 according to the hours they are normally scheduled to work. Nonpermanent part-time employees working less than five (5) days per week will be paid holiday pay according to the hours they are normally scheduled to work on the day on which the holiday falls.

Nonpermanent employees reporting to work and not put to work shall receive four (4) hours pay or their regular shift, whichever is less, at their regular straight-time rate unless notified not to report at the end of their previous shift or two (2) hours prior to the start of the shift. If the second half is started, then a whole shift shall be allowed or their

KD 3/14/12
MJ 3-16-12

regular shift, whichever is less.

13.09 - PERMANENT PART-TIME EMPLOYEES

The Employer may establish a fixed reduced work schedule for an employee on a continuing basis when the employee accepts such employment or agrees in writing to the reduced work schedule in advance.

Increases or decreases to this fixed reduced work schedule may be made with fifteen (15) days written notice to the affected employee. If the affected employee is unable to accept a reduction to his/her part-time work schedule, a layoff in accordance with Article 22 may result.

Permanent part-time employees working five (5) days per week will be paid holiday pay as provided by Section 18.03.B according to the hours they are normally scheduled to work. Permanent part-time employees working less than five (5) days per week will be paid holiday pay according to the hours they are normally scheduled to work on the day on which the holiday falls.

Benefits for personal leave and retirement pensions pursuant to pertinent statutes and regulations shall accrue proportionate to the benefits for full-time service.

Permanent part-time employees will be covered by the overtime provisions of this Agreement. Work in excess of the permanent part-time employee's regular schedule shall not be compulsory (except in dire emergency) and shall be distributed as evenly as possible among those employees desiring to work the additional hours.

13.10 - EMERGENCY EMPLOYEES

An emergency employee is one who is employed for not more than thirty (30) calendar days. The emergency employee is entitled to be paid the hourly rate specified in this Agreement. Emergency employees may be employed directly by the Employer with notice to the Union office of the names and locations of the employees. Emergency employees are not subject to other terms and conditions of this Agreement, except for overtime provisions.

Appointments of emergency employees shall be governed in accordance with AS 39.25.195-39.25.200, and the rules, regulations, policies and procedures adopted under the authority provided therein.

13.11 - TRAINING

It is understood and agreed that both parties will consider each training program individually and reach mutual agreement on wages and conditions implemented.

It is understood and agreed that the parties will meet within thirty (30) days of the signing of this Agreement to identify training needs and establish a policy and procedure for training employees in this bargaining unit.

13.03 - JOB CLASSIFICATIONS

A. **Classifications**. Management retains the exclusive right to establish the specifications of job classifications regarding skills, abilities, experience, work requirements and duties of job classifications. The job classifications as of the effective date of this Agreement are as follows:

Wage Group 49
International Airport Foreman

KD 3/16/12
MJ 3-16-12

This list is subject to modification during the life of this Agreement.

It is the obligation of the employer to maintain and establish a classification system and a pay plan. Classification disputes are not subject to the grievance and arbitration provisions of Article 9 ~~except as provided in Sections B and D below~~. The procedures outlined below will be the only method of settling any dispute concerning substantive classification matters.

B. **Bargaining Unit Placement and New Classifications.** It is recognized that all new positions (PCNs) and classifications created by the Employer should be placed in the appropriate bargaining unit.

Subsequent to the effective date of this Agreement, the Union Business Manager shall be notified of all new classifications created within ten (10) working days of such action and such notifications shall include the class specifications and wage grade assignment. If the Union disagrees with the wage grade assignment of a new job class, it must notify the Director of Personnel and Labor Relations in writing of its objections within thirty (30) calendar days. The notice must include an analysis and rationale of the disagreement and detailed information regarding the duties, responsibilities and wage rates of comparable classifications in the public or private sector in Alaska or the Pacific Northwest. Within fifteen (15) working days of receipt of the Union's objections, the parties shall meet and confer. If disputes regarding the wage grade assignments of job classes are not resolved within thirty (30) calendar days, ~~the Union may request arbitration. The arbitrator shall be selected from the panel provided in Article 9. The arbitrator shall have no authority to establish a new wage grade; the arbitrator's authority shall be limited to a determination of the proper wage grade assignment for specific job classes. The arbitrator's award shall be consistent with merit system principles as articulated at AS 39.25.010.~~ the Director shall issue a decision in writing to the Union.

Both parties recognize that the Labor Relations Agency shall retain its usual authority to make determinations of unit classification assignments. No filled position (PCN) shall be changed to a bargaining unit outside this bargaining unit without written notification to Local 71 of such action concurrent with the notification to the department. If the Union does not notify the Employer within ten (10) working days from the receipt of notification of its intent to challenge, the Employer will be free to take the proposed action. If the Employer changes a vacant position (PCN) to a bargaining unit outside this bargaining unit, Local 71 shall be notified concurrently with such action.

C. Reallocation of a Position.

An employee occupying a position that is reallocated to a lower classification which carries a lower pay range and who continues in the same position shall be placed at the most advanced step providing an equal or lesser wage rate, but the salary will remain frozen at the former rate until earned step advancements or adjustments to the wage schedule cause the rate to exceed the frozen rate. For purposes of this paragraph, an employee may not be placed at a pay increment unless they have earned such step in that wage group or higher classification. Time served at Step F or a pay increment of the higher classification shall be counted as time served at Step F or a pay increment of the lower classification.

An employee occupying a position that is reallocated to a classification at the same pay range shall remain at the same step assignment

An employee occupying a position that is reallocated to a higher classification which carries a higher pay range and who continues in the same position shall have their step placement determined in accordance with Article 13.02.D.

As the result of a reallocation action from outside the bargaining unit, the incumbent of the position shall be appointed to the position as of the effective date of the reallocation action.

KD 3/16/12
MJ 3-16-12

D. Classification Reviews.

1. When the Union believes a position is improperly classified, the Union shall submit an updated position description and information regarding the duties and responsibilities of the position to the departmental Division of Personnel and Labor Relations Classifications Manager with a copy to the Director of the Division of Personnel and Labor Relations. Within thirty (30) calendar days of receipt the department shall submit its written analysis and recommendation to the Director with a copy to the Union. If the department fails to respond within thirty (30) calendar days, the Union may advance the request to the Director within five (5) working days of the due date. If the Union does not agree with the department's recommendation, it must notify the Director of its specific disagreement within twenty (20) working days of the date the recommendation was received.

2. Within thirty (30) calendar days from receipt of the department's recommendation or thirty (30) calendar days from the date the request was advanced by the Union, the Director shall review the position description in conjunction with existing class specifications, and issue a decision. ~~If the Union does not agree with the Director's decision, it must request arbitration within ten (10) working days of the date the decision was due or received, whichever is earlier. Absent a notice of objection from the Union, any change in job class allocation shall be effective the pay period following the Director's decision.~~

~~The arbitrator shall be selected from the panel provided in Article 9. The parties shall make every effort to schedule arbitration within sixty (60) calendar days of the arbitrator's selection. The arbitrator has no authority to establish a new wage group or a new job class. The arbitrator's authority shall be limited to a determination of the proper job class allocation. The arbitrator's award shall be consistent with the merit system principles at AS 39.25.010. Any change in job class allocation shall be effective the pay period following receipt of the arbitrator's award.~~

3. No more than one (1) request may be submitted for a position in any twelve (12) month period unless substantial changes in duties have occurred.

4. The time frames contained herein may be altered by mutual agreement of the parties.

KD 3/16/12 MJ 3-16-12

ARTICLE 14 - WORKING RULES

14.01 - WORKWEEK
The workweek shall consist of thirty-seven and one-half (37.5) hours within five (5) consecutive days, and all permanent full-time employees shall be guaranteed a full workweek provided they are ready, willing and able to work, unless suspended, on layoff or leave without pay.

It is understood and agreed between the parties that at a duty station where workweek schedule changes are necessary, the requirement of five (5) consecutive days shall be invalid for a fourteen (14) day period provided, however, that the employee shall be guaranteed seventy-five (75) hours of work in that fourteen (14) day period. This provision applies only during a workweek schedule change period. However, in no instance will an employee be required to work more than seven (7) consecutive days at straight-time as a result of workweek schedule changes.

When shift changes are required, the affected employees will receive reasonable notice of the shift change.

14.02 - STARTING TIMES
The Employer shall establish regular starting times for each operation and may adjust those starting times up to two (2) hours without discussion or agreement of the parties. The Employer will not make such changes more frequently than twice per month without mutual agreement.

14.03 - CALL BACK
A. When an employee is called back to work within four (4) hours after the completion of the employee's regular shift, the employee shall be paid for such hours worked at the appropriate overtime rate. If the employee is called back to work later than four (4) hours after the completion of the employee's shift, the employee is entitled to a minimum of four (4) hours pay at the appropriate overtime rate. If the hours worked exceed four (4), the employee shall be entitled to overtime pay for all such hours worked. If the employee is called out more than once in one four (4) hour period, a new call-out shall not be established.

B. When an employee is called to work within four (4) hours prior to the start of the employee's regular shift, the employee shall be paid for such hours worked at the appropriate overtime rate. If the employee is called to work more than four (4) hours prior to the start of the employee's regular shift, then 14.03(A) applies.

C. Minimum call back guarantees do not apply when the additional work assignment has been scheduled and the employee has been notified prior to the completion of the employee's shift. In such cases, the employee shall be paid for all hours worked at the appropriate rate of pay.

14.04 - ON CALL
When employees are ordered to remain at home, or periodically report their whereabouts, and be available for immediate recall, their name shall be placed on an on-call roster. Assignments to an on-call roster shall be, insofar as it is possible, equitably rotated among employees normally required to perform the anticipated duties. Nothing in this Article shall preclude the assignment of an individual to an on-call roster whose knowledge, skills and abilities makes that employee the most logical choice for the call out tasks. An employee who is assigned to an on-call roster, for each calendar day or portion of a calendar day of such assignment, shall be paid one (1) straight-time hour at the employee's base hourly rate. The daily rate of compensation shall be in addition to pay for hours worked.

14.05 - STANDBY
When employees are required to standby because of temporary breakdown or shortage of

14

materials, temporary weather conditions, or for any other cause beyond their control, no time shall be deducted from this period and the finishing time or shift shall not be extended to make up the lost time.

14.06 - TIDAL OPERATIONS

When it is necessary to work with the tide, any such working hours may be changed at the option of the Employer to meet tidal conditions; however, when these conditions make it impossible for full shift operations, the employees shall be paid for a full shift regardless of whether a full shift is worked. No split shift which extends into the next tide shall be worked except at the overtime rate.

14.07 - ORDERS

A. Authority for orders to employees covered by this Agreement will be to the employees by a management representative through a foreman or leadman, where there is a foreman or leadman as required by paragraphs B and C of this section.

B. When four (4) or more employees, except for laborers (includes laborers, custodians and helpers in a variety of job classifications performing unskilled and semiskilled work) in public buildings, are employed on the same shift as a crew, one (1) shall be selected by the Employer as a working leadman and shall be paid seventy-five cents ($0.75) per hour above the employee's base hourly rate for all such hours of supervision. Management may appoint a working leadman in situations where there are less than four (4) employees and the leadman shall be paid according to this section.

C. When eight (8) or more employees are employed on the same shift as a crew in an immediate area, one (1) shall be selected as a foreman to direct the work and shall be paid an additional one dollar and fifty cents ($1.50) per hour above the employee's base hourly rate for all such hours of supervision provided that the designated employee does not currently hold a foreman position.

D. The appointment of such foreman or leadman will be the right of management, other provisions of the contract notwithstanding, and shall not result in a permanent wage change.

3/16/12
3-16-12
17

ARTICLE 18 - CONDITIONS

18.01 - MEAL BREAK
A meal period of not less than thirty (30) minutes or more than one (1) hour shall be allowed approximately midway of each shift. If the employee is scheduled to work twelve (12) hours in a day, the employee may request a second (2nd) meal period after eight (8) hours of work, and a third (3rd) meal period if the employee is expected to work beyond twelve (12) hours. The employee shall be relieved of all work-related duties and responsibilities during such meal periods.

18.02 - RELIEF PERIODS
All employees shall be allowed one (1) relief break not to exceed fifteen (15) minutes in duration during the first (1st) half of the shift and fifteen (15) minutes during the second (2nd) half of the shift. When working other than the regular shift, relief breaks shall be taken consistent with the above schedule.

18.03 - HOLIDAYS
Holidays recognized are:

1. The first (1st) of January, known as New Year's Day,
2. The third (3rd) Monday of January, known as Martin Luther King, Jr. Day,
3. The third (3rd) Monday in February, known as President's Day,
4. The last Monday in March, known as Seward's Day,
5. The last Monday in May, known as Memorial Day,
6. The fourth (4th) of July, known as Independence Day,
7. The first (1st) Monday in September, known as Labor Day,
8. The eighteenth (18th) of October, known as Alaska Day,
9. The eleventh (11th) of November, known as Veterans' Day,
10. The fourth (4th) Thursday in November, known as Thanksgiving Day,
11. The twenty-fifth (25th) of December, known as Christmas Day,
12. Every day designated by public proclamation by the Governor of Alaska as a legal holiday.

A designated holiday will normally be observed on the calendar day on which it falls except that if the holiday falls on an employee's first regularly scheduled day off it will be observed on the preceding day. If the holiday falls on the employee's second regularly scheduled day off it will be observed on the following day.

Holidays may be rescheduled to another day in the workweek or in the work schedule in which the holiday was to be observed with mutual agreement between the employee and supervisor.

1. Employees in the bargaining unit working for the Department of Military and Veterans' Affairs will not observe October 18, Alaska Day, but will observe Columbus Day, during the same month, to coincide with the Federal employees attached to the Department of Military and Veterans' Affairs.

2. Any of the holidays provided above may be converted to a floating holiday for any designated group of employees upon mutual agreement of the parties.

18.04 - PERFORMANCE EVALUATIONS
A. Performance Evaluation Reports will be discussed with an employee by the rater. An employee who disagrees with a performance evaluation may submit written comments within ten (10) working days. The written comments shall be attached to the performance evaluation and become a part of the employee's personnel file. Following the discussion of the performance

evaluation with the employee, the evaluation will be signed by both the employee and the rater. The signed evaluation, together with any employee comments, shall constitute the evaluation. The employee shall receive a copy of the finalized evaluation.

KD 3/16/12 3-16-12

B. For an employee who is denied a Pay Increment increase under Article 13.04, the following process shall be the sole and exclusive method for resolution:

Level One: Within thirty (30) calendar days after receipt of a copy of the finalized evaluation, the employee must submit through the Union a written request to the director of the employee's division asking that the director investigate allegations that the evaluation includes factual inaccuracies, or that in the preparation of the evaluation management has been arbitrary or capricious, or has been motivated by discrimination or bias. The written request must state specifically the allegations to be investigated and, to the degree that information in support of those allegations is known, identify the facts surrounding the controversy. The list of allegations to be investigated shall not be expanded after the initial submission to the Employer except by written mutual agreement of the parties. The division director or section manager shall have thirty (30) calendar days to assign an investigator outside the complaint's direct chain of command to investigate and make written recommendations to the Director regarding revision of the evaluation, with a copy to the Union.

Level Two: In the event the dispute is not resolved by the recommendations at Level 1, the employee through the Union shall submit a written request for informal hearing to the Director of the Division of Personnel and Labor Relations within ten (10) working days after receipt of the recommendations. Absent such a request, the Director shall adjust the evaluation in accord with the recommendations, provided that those recommendations are not in violation of law or regulation. If a hearing is requested, every reasonable effort shall be made to schedule the hearing within thirty (30) calendar days of the request and in no case later than sixty (60) calendar days. Hearings shall be conducted by an individual outside the employing department and bargaining unit assigned by the Director of Personnel and Labor Relations. The employee and the employing department shall have one (1) hour each to present additional testimony and documentary evidence, which shall be considered by the Hearing Official together with the employee's initial request and the Level One recommendations. The Hearing Official shall issue a final decision within fifteen (15) working days after the close of the informal hearing revising those contested facts found to be inaccurate. Other contested portions of the evaluation shall be revised upon a finding by the Hearing Official that in the preparation of the evaluation management has been arbitrary or capricious, or was motivated by discrimination or bias.

C. Former employees who are evaluated following termination, or are otherwise not available to discuss their evaluation, will be mailed their copy of the completed evaluation at the last address of record. Upon receipt of their evaluation, former employees may, at their option, request to meet with the rater to discuss the evaluation and may submit written comments which will be attached to the evaluation and placed in the personnel file.

19

Former Art 5 State proposal 3/12/12 14:10

3/14/12

Y: 3-16-12

ARTICLE 20 - LEAVES OF ABSENCE

20.01 - APPLICATION FOR LEAVES OF ABSENCE

No application for a leave of absence, as described in this Article, will be considered, unless it is applied for in writing or electronically, if electronic option is available and presented to the employee's immediate supervisor for approval in advance whenever possible.

20.02 - TEMPORARY ABSENCE DUE TO DISABILITY, ILLNESS OR INJURY

A permanent employee who shall be found and certified by a medical doctor to be unable to perform his or her regular or alternate duties within this bargaining unit because of disabling illness or injury shall use all accumulated leave prior to requesting extended leave without pay.

Leave of absence without pay will be granted up to a maximum of twelve (12) months, with service bonus credit and seniority accumulating, subject to the following conditions:

A. Requests for leave of absence without pay shall be in writing in accordance with Section 1 of this Article.

B. Requests for leave of absence without pay shall be submitted to the Employer no less than ten (10) days prior to the effective date of the request or ten (10) days before the employee exhausts accumulated paid leave. Reasonable extensions to the application shall be granted by the Employer upon a good faith showing by the affected employee.

C. The employee signs a release that will allow the Employer to obtain additional medical information when deemed necessary by the Employer.

A leave of absence without pay may be granted for a period of time up to twelve (12) months, depending on the extent of illness or disability. The Employer may require a certificate from a medical doctor of the Employer's choice at any time, although not more frequently than once every thirty (30) days, should there exist any questions with regard to the illness or injury as related to the employee's ability to perform their expected duties. This examination shall be performed at no cost to the employee.

D. If the disability continues beyond twelve (12) months and the employee has not returned to work, the employee's service bonus credit and seniority will be broken and terminated, unless otherwise mutually agreed by the Union and Employer.

20.03 - OTHER APPROVED ABSENCE

Upon written approval of the employing department, permanent employees may be granted a leave of absence without pay.

20.04 - MILITARY LEAVE

A. An employee who is ordered by the United States Selective Service System to report for a pre-induction physical examination is entitled to a leave of absence without loss of pay, time or performance rating. The leave of absence shall not exceed three (3) working days.

B. An employee of the State who is a member of a reserve component of the United States Armed Forces, National or Alaska Guard or Naval Militia, is entitled to a leave of absence without loss of pay, time or performance rating on all days during which the employee is ordered to training duty, as distinguished from active duty, with troops or at field exercises or for instruction, or when under direct military control in the performance of a search and rescue mission. The leave of absence may not exceed sixteen and one-half (16.5) working days in any calendar period beginning December 16 and ending December 15

KD 3/14/12
4 3-14-12

20.05 - JURY/COURT LEAVE
An employee who is called for jury duty or who is subpoenaed to appear in court in Alaska as a witness will be compensated by the Employer for the difference between payment received for such compulsory jury duty or court appearance and the payment the employee would have received for the straight-time hours the employee was thereby required to lose from their regular work schedule but not to exceed thirty-seven and one half (37.5) hours per week, computed at the employee's established basic hourly wage rate. However, when subpoenaed by a party other than the Employer, the employee will not be compensated if the employee, the Employer or the Union is a party in the case, or if the employee has any direct interest or financial interest in the case. Differential payment shall be made so long as such jury duty or court appearance continues only upon presentation of documentary proof of jury duty or court appearance and the payment received therefore. Continuous service bonus credit and duly-established seniority privileges will accumulate during such leave.

20.06 - TIME OFF TO VOTE
If the Employer has so placed an employee that the employee is unable to vote on off-duty time, it shall be the responsibility of the Employer to provide time and transportation during normal working hours, without loss of pay to the employee, for each employee to vote in Federal, State, city, borough elections and Union elections held on the employee's job site.

20.07 - UNION BUSINESS LEAVE
There is hereby created a Union Business Leave Bank which shall be administered by the State with a monthly report of the balance and withdrawals provided to the Union Business Manager. The Bank shall be established by a transfer of one (1) day of personal leave from each employee on the payroll of the Employer. Employees shall donate one (1) day of personal leave when the employee's balance is at least one (1) day or more and such leave shall be transferred to the Bank. Existing employees who have donated leave during their current employment shall be exempt from this section.

Withdrawal requests from the Bank will be for purposes of compensation of bargaining unit members for absences due to contract negotiations and formulation, executive meetings, conventions, training sponsored by the Union, attendance at arbitration or other hearings as a witness for the Union and other like purposes as may be determined by the Union Business Manager. Requests for withdrawals from the Bank shall be made only by the Business Manager of the Union to the Director of the Division of Personnel on forms mutually agreed by the parties and furnished by the Union. Personal leave transferred to the Bank is final and not recoverable for re-credit to an individual's leave account.

In addition, the parties agree that a cash business leave bank may be established at any time by mutual agreement.

The release of employees for Union leave from duty shall be handled on the same basis as release from duty for personal leave, however, such release shall not be unreasonably withheld by the supervisor. No one employee may be absent for longer than twelve (12) months during the life of this Agreement.

Unless otherwise mutually agreed in writing, should a promotional opportunity arise while an employee is on Union Business Leave, they shall be deemed eligible for the promotion. Should an employee accept such a promotion, their leave shall be canceled and they shall be ineligible for Union Business Leave during the succeeding six (6) months, unless specifically approved by the Director of the Division of Personnel and Labor Relations.

KD 3/16/12
MF 3-16-12

ARTICLE 23 - HEALTH AND SECURITY

23.01 - EMPLOYEE HEALTH INSURANCE

The terms and conditions of the Public Employees Local 71 Health and Welfare Trust established by Letters of Agreement 93-LL-027 (as amended) and 98-LL-030 shall continue during the term of this Agreement.

Effective July 1, 2012~~0~~, the Employer shall contribute ~~$1030~~ $1330 per month to the Union's health insurance trust for each eligible employee. Effective July 1, for each year after this Agreement, the Employer health insurance contribution will increase by an amount of money not exceeding that necessary to maintain comparable coverage under the current Select Benefits Default/Economy Plan.

Upon sixty (60) days written notice to the Commissioner of Administration, the Union may increase the monthly contribution of eligible employees.

~~By July 9, 2012, the State will make a payment to the Public Employees Local 71 Health and Welfare Trust. The payment will be determined by the State and will be calculated based on the number of employees eligible for health insurance receiving $42 per month for July 1, 2009 to June 30, 2010.~~

23.02 - EMPLOYEE LIFE INSURANCE

The Employer shall insure the life of every employee in the principle amount of two thousand dollars ($2,000.00).

23.03 - HEALTH INSURANCE RATE ADJUSTMENTS

The Union agrees to provide the State with an actuarial analysis of the Trust by May 1 of each year of this agreement. The State, at its own expense, reserves the right to perform its own review and analysis of the Trust.

23

KD 3/16/12
BY 3-16-12

ARTICLE 25 - TOOL ALLOWANCE

All permanent Mechanics (Automotive) in Wage Group 53 and 54, Mechanics (Aircraft) in Wage Group 53, and Mechanic (Automotive) Foreman I in Wage Group 52 will be required to furnish their own hand tools up to but not including socket sets of 3/4-inch drives. The employees will receive a tool allowance of thirty dollars ($30.00) each pay period. Maintenance Specialist (Electronics) Journey I and Lead will be paid twenty dollars ($20.00) each pay period and furnish all hand tools exclusive of complex testing equipment consistent with this section. Mechanic (Automotive) - Sub-journey, Wage Group 56, will receive twenty dollars ($20.00) each pay period and furnish all hand tools necessary to work within this class specification.

Department of Corrections employees who are provided all tools and not allowed to bring personal tools into the facility are excluded from the tool allowance provision in this article. However, any Department of Corrections employee who received a tool allowance as of July 1, 2010 will continue to receive the tool allowance as long as it would otherwise be permitted under this article.

If the Employer adopts new or revised class specifications which fall within the automotive mechanical or electronic technician fields, the parties agree to negotiate the amount of tool allowance which might be appropriate for the new or revised class specification. In the event such negotiations do not produce an agreement, the dispute shall only be resolved pursuant to Article 9, Section 9.02.

Senator Bettye Davis

SB 1 - "An Act requiring the state Board of Education and Early Development to provide an annual report to the legislature."

SPONSOR STATEMENT

This bill requires that the Alaska State Board of Education shall prepare and present to State Legislature not later than the 30th day of each regular session an annual report that describes the efforts of the Board to develop, maintain, and continuously improve a comprehensive quality public education system as provided for under the bylaws of the Board.
The report to the Legislature must include:

1. a summary of resolves and rationales provided in support of policy decisions;
2. program and curriculum changes made, discussed, or recommended in meetings; and
3. additional information relevant to efforts made to improve and maintain the public education system.

This bill is intended to create a greater dialogue among Alaska legislators, Department of Education and Early Development (DEED), and the Board of Education which meets at least quarterly. Since Alaska legislators appropriate over $1 billion per year for state public education which a significant portion of the state budget, they must be at the center of the state's efforts to identify strengths and weaknesses of the current system, help determine a public agenda, set clear goals for K-12 and higher education, and hold institutions accountable for performance. The only way to achieve this is through cooperation and communication with the Board and the Department.

Legislators take great pride and tremendous amounts of time and effort every session in trying to provide the best possible education, scholarships, and funding for Alaska students. The annual report required by this bill will assist both DEED and legislators early in each session in assessing new programs, curriculum changes, goals and priorities which may require more information or administrative and legislative action during session.

Why this fiscal note differs from previous version (if initial version, please note as such)

This fiscal note reflects two changes made in the Senate Finance Committee Substitute: 1) the CS removes the annual Consumer Price Index adjustment to the base amount and; 2) sunsets the program on June 30, 2014.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB3

Analysis

This legislation will establish a state school and breakfast program to assist districts in offsetting the costs of providing free and reduced breakfast and lunch meals under 42 U.S.C. 1771-1784 for eligible students. School districts will be eligible for 35 cents for each breakfast and 15 cents for each lunch served plus an additional amount generated by applying the specified formula to the district cost factors under AS 14.17.460.

FOR AN ACT ENTITLED

"An Act providing for funding for school lunch and breakfast; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

STATE FUNDING FOR SCHOOL LUNCH AND BREAKFAST. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the Department of Education and Early Development shall provide funding to a school district of 15 cents for lunch and 35 cents for breakfast to each eligible student. For each meal, the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole number.

(b) In this section, "district" has the meaning given in AS 14.17.990.

* **Sec. 2.** Section 1 of this Act is repealed June 30, 2014.

* **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

AMENDMENT 2

OFFERED IN THE SENATE BY SENATOR MCGUIRE

TO: CSSB 3(FIN), Draft Version "D"

Page 1, line 6:

Delete "To"

Insert "Except as provided in (b) of this section, to"

Page 2, following line 2:

Insert a new subsection to read:

"(b) The department may not pay a school district that has a cost factor under AS 14.17.460 of 1.07 or less a supplement for a school lunch or breakfast as provided under (a) of this section unless the district has demonstrated to the satisfaction of the department that the district, to the extent practicable, gives a preference in purchasing food to food grown or harvested in the state."

Reletter the following subsection accordingly.

Alaska Preference: AS 36.15.050

Sec. 36.15.050. Use of local agricultural and fisheries products required in purchases with state money.

(a) When agricultural products are purchased by the state or by a school district that receives state money, only agricultural products harvested in the state shall be purchased whenever priced no more than seven percent above products harvested outside the state, available, and of like quality compared with agricultural products harvested outside the state.

(b) When fisheries products are purchased by the state or by a school district that receives state money, only fisheries products harvested or processed within the jurisdiction of the state shall be purchased whenever priced no more than seven percent above products harvested or processed outside the jurisdiction of the state, available, and of like quality compared with fisheries products harvested or processed outside the jurisdiction of the state.

(c) A solicitation for the purchase of agricultural or fisheries products shall specify the requirement that products harvested in the state shall be used where possible. If the state or a school district that receives state money purchases agricultural or fisheries products harvested outside the state, the officer responsible for the purchase shall certify in writing the reasons that products harvested in the state were not purchased.

(d) If a contractor fails to comply with this section, the purchasing agency shall withhold payment until the contractor complies. If a school district fails to comply with this section, the department responsible for disbursing state money to the school district shall withhold the money until the school district complies.

(e) An interested party, as defined in AS 36.30.699 , may seek administrative or judicial review of the award of a contract in violation of this section.

(f) Compliance with this section is not required if an exception to this section is mandated for participation in a federal program.

(g) In this section,

(1) "agricultural products" includes dairy products, timber and lumber, and products manufactured in the state from timber and lumber;

(2) "school district" includes a regional educational attendance area established under AS 14.08;

(3) "state money" includes state reimbursement to school districts for school or related construction, foundation funding for education, municipal assistance, revenue sharing, and state funds for capital projects.

DATE: February 1, 2011

MEMO CODE: SP_18 - 2011

SUBJECT: Procurement Geographic Preference Q&As

TO: Regional Directors
Special Nutrition Programs
All Regions

State Directors
Child Nutrition Programs
All States

In light of recent Farm to School efforts to connect schools with local or regional farmers and the need for guidance and technical assistance on the State and local levels, we have created Q&As to further explain the geographic preference option. The purpose of this memorandum is to provide Q&As on the application of the geographic preference option in procurement of unprocessed locally grown or locally raised agricultural products.

We encourage State agencies to share these Q&As with their counterparts at other State Departments (e.g., Department of Agriculture or Department of Health) that are involved in Farm to School activities.

Original Signed

Cynthia Long
Director
Child Nutrition Division

AN EQUAL OPPORTUNITY EMPLOYER

Geographic Preference

Applying Geographic Preference

Q1: The 2008 Farm Bill amended the Richard B. Russell National School Lunch Act (NSLA) to direct the Secretary of Agriculture to encourage institutions operating Child Nutrition Programs to purchase unprocessed locally grown and locally raised agricultural products. Does USDA define the geographic area that is considered to be local?

A: No, USDA does not define the geographic area that is considered to be local; the decision is left to the purchasing institution, such as a school food authority (SFA) making the purchase or the State agency (SA) making purchases on behalf of SFAs. In other words, the purchasing institutions, such as SAs, SFAs, child care institutions and Summer Food Service Program (SFSP) sponsors, may specifically identify the geographic area within which unprocessed locally raised and locally grown agricultural products will originate. The purchasing institution must not define local in a manner that unnecessarily restricts free and open competition.

Q2: Does the geographic preference option for the procurement of unprocessed agricultural products apply to all Federal Child Nutrition Programs?

A: Institutions receiving funds through the Federal Child Nutrition Programs may apply an optional geographic preference in procurement of unprocessed locally grown or locally raised agricultural products, including the National School Lunch Program (NSLP), School Breakfast Program (SBP), Fresh Fruit and Vegetable Program (FFVP), Special Milk Program (SMP), Child and Adult Care Food Program (CACFP) and Summer Food Service Program (SFSP).

Q3: Can an SFA issue a solicitation that states, "We will only accept locally grown agricultural products from a State"?

A: No, the Federal laws allow institutions receiving funds through the Child Nutrition Programs to apply a geographic preference when procuring locally grown or locally raised agricultural products, as noted in the preamble of the geographic preference rule. The exclusion of all non-locally grown agricultural products is not a preference but rather a requirement of bidding and therefore is overly restrictive.

Q4: An SFA defined "local" as the entire State and issued a Request for Proposal (RFP). Can the SFA give a bidder geographic preference points if the bidder is incorporated outside of the State with its principal place of business outside of the State?

A: Yes, geographic preference in a procurement does not preclude a bidder from outside the specified geographic area from competing for, and possibly being awarded, the contract subject to geographic preference. The geographic preference applies to the unprocessed locally grown and locally raised agricultural product; it is irrelevant whether the bidder's business is incorporated or has a principal place of business in the State.

Q5: An SFA wants to issue an Invitation for Bid (IFB). How does an SFA incorporate geographic preference points into an IFB?

A: An IFB doesn't generally include preference points; instead, an SFA determines who is responsive based on the solicitation, and then from the responsive bidders the SFA awards the contract to the bidder with the lowest price. Therefore, it may not be feasible to incorporate "points" into an IFB in the same way as is done with an RFP. However, an SFA could write in the specifications that, for example, an apple must have been picked within one day of delivery or must have been harvested within a certain time period.

Additionally, the solicitation document must clearly outline how all bids will be evaluated, including the application of geographic preference in the scoring criteria. The following is an example of one approach on how to incorporate geographic preference points in an IFB:

> Geographic preference points in an IFB would be applied after the SFA determined the three bidders with the lowest price. The three bidders with the lowest price would be given a total of ten geographic preference points if those bidders met the geographic preference. In order to determine the winning bidder, the scoring criteria would clearly state that one point would equal one cent; in other words, ten points would translate into ten cents. If one or more of the responsive bidders with the lowest price met the geographic preference, ten cents would be taken off of their respective prices and that bidder could potentially win the bid. Note: Deducting ten cents from the prices of responsive bidders that met the geographic preference only applies to determining the winning bidder and would not affect the actual price paid to a bidder.
>
> In the following example, Bidder 2 meets the geographic preference and is given ten points which translates into deducting ten cents from Bidder 2's price. In this example, Bidder 2 still doesn't win the bid because Bidder 1 has a lower price.

	Bidder 1	Bidder 2	Bidder 3
Price	$1.97	$2.10	$2.03
Meets geographic preference?	No	Yes (10 points)	No
Price with preference points	$1.97	**$2.00**	$2.03

Q6: An SFA would like to prescribe geographic preference as a percentage in their solicitation (IFB or RFP). For example, the SFA would like to give a ten percent price

preference to bidders offering unprocessed locally grown and locally raised agricultural products. Can an SFA prescribe geographic preference as a percentage in their solicitation?

A: Yes, an SFA may prescribe geographic preference in their solicitation in terms of actual percentage (e.g., ten percent price preference). Geographic preference can be prescribed in terms of points or percentages. The solicitation document must clearly outline the scoring criteria and the method in which the criteria will be evaluated.

Q7: How many geographic preference points can an SFA assign to geographic preference? What is the maximum price percentage an SFA can assign to geographic preference?

A: The Federal regulations do not prescribe the number of preference points or maximum price percentage an SFA can assign to geographic preference. Generally speaking, any price preference (prescribed as points or percentage) impacts free and open competition. However, geographic preference may have a greater or lesser impact on free and open competition depending on the characteristics of the market. The SFA's application of the geographic preference option must leave an appropriate number of qualified firms, given the nature and size of the procurement, to compete for the contract, as it is imperative that the SFA does not unnecessarily restrict free and open competition.

Q8: Can SFAs split up large purchases into smaller amounts and thereby fall under the small purchase threshold?

A: SFAs cannot intentionally split purchases in order to fall below the Federal, State, or local small purchase threshold in an effort to avoid more rigorous procurement practices. However, there may be some instances in which the characteristics of a product or market support the need to separate selected products from the overall food procurement. For example, milk and bread are commonly procured separately because there are fundamental differences between them and other food products, such as shorter shelf-life, specialized pricing mechanisms, and durability. Similarly, an SFA may find that fresh produce may be considered a

separate market given that it shares similar characteristics as bread and milk, and may want to separate this procurement from their overall food procurement.

Q9: An SFA would like to conduct a procurement under the small purchase threshold. Can the SFA procure unprocessed locally grown or locally raised agricultural products directly from a local farmer?

A: Yes; however, the procurement must be conducted in a manner that maximizes full and open competition. According to the Federal regulations, the SFA can conduct a procurement under the small purchase threshold if the procurement is under $100,000 in value. States or localities may set a lower small purchase threshold and thereby impose more formal procedures. The SFAs should put the number, quality and type of goods in writing before contacting any potential offerors. When using the small purchase threshold, we recommend that at least three sources be contacted who are eligible, able and willing to provide the unprocessed locally grown or locally raised agricultural product. Contacting a minimum of three sources ensures that an adequate number of potential offerors will be afforded the opportunity to respond to the solicitation.

Q10: An SFA would like to conduct a procurement under the small purchase threshold. Can the SFA procure unprocessed locally grown or locally raised agricultural products directly from a teacher that works for one of the schools in the SFA's school district?

A: The procurement must be conducted in a manner that maximizes full and open competition. The Federal regulations prohibit an employee, officer or agent of the grantee or subgrantee (i.e., SA or SFA) to participate in the selection, award or administration of a contract if a conflict of interest, real or apparent, would be involved. A contract award to a teacher in an SFA's school district creates an appearance of impropriety and generates the question of whether or not free and open competition has been circumvented. Therefore, a conflict of interest, real or apparent, may be involved if a teacher that works for one of the schools in the SFA's school district is awarded a contract.

Q11: May an SFA give geographic preference to farmers in a neighboring country (i.e., Mexico or Canada) for foreign unprocessed agricultural products when procuring unprocessed locally grown or locally raised agricultural products?

A: An SFA must adhere to the Buy American clause which requires SFAs to purchase domestically grown foods to the maximum extent possible. An SFA may purchase foreign goods only if the two rare exceptions to the Buy American provision are met: (1) the product is not produced or manufactured in the U.S. in sufficient and reasonable available quantities of a satisfactory quality; and (2) competitive bids reveal the costs of a U.S. product is significantly higher than the foreign product.

Q12: A State regulation requires State governmental entities to give geographic preference to local State farmers and prescribes a method on how geographic preference can be incorporated in the State governmental entities' solicitation. Is an SFA required to follow the State's regulation on geographic preference?

A: No. Under the principles of federalism, a State has the right to create a regulation of this nature; however, the application of the State's regulation to the Federal Child Nutrition Programs is an entirely different matter. Please keep in mind that States cannot mandate through law or policy that institutions apply a geographic preference when conducting procurements for the Federal Child Nutrition Programs, because the National School Lunch Act (NSLA) grants this authority directly to the purchasing institution (i.e., SFA or SA making purchases on behalf of the SFA).

Q13: Where does an SFA go to obtain help in developing bid sheets that use geographic preference? Does USDA have examples of solicitations that use geographic preference?

A: An SFA should start by contacting its SA for assistance in developing bid sheets and for examples of solicitations that use geographic preference. USDA is in the process of creating

tools that will assist in this area. USDA has created an online training on procurement, *State Agency Guidance on Procurement*, that can be found at http://www.nfsmi.org. Additionally, the USDA Farm to School website (http://www.fns.usda.gov/cnd/f2s/) provides information on the procurement requirements, as well as Q&As directly related to local food purchases.

Unprocessed Agricultural Product

Q14: Can an SFA apply the geographic preference option in the procurement of ground beef?

A: As we stated in our policy memo dated November 13, 2009, we further amended the previous guidelines regarding what is to be considered to be unprocessed locally grown or locally raised agricultural products. In our view, for the purpose of applying a geographic procurement preference in the Child Nutrition Programs, unprocessed agricultural products means only those agricultural products that retain their inherent character. Size adjustment made by grinding does not change an agricultural product into a product of different kind or character. Therefore, an SFA can apply the geographic preference option in the procurement of ground beef if no other items such as additives or preservatives are added to the ground beef.

Q15: Can an SFA give geographic preference when procuring a frozen bag of combination local vegetables (e.g., broccoli, cauliflower and carrots) from a bidder?

A: Yes, the inherent character of the vegetables is retained and not modified by freezing or combining vegetables in a bag.

Q16: Can an SFA give geographic preference when procuring fresh local vegetables in portion sized or single serving bags (e.g., small bags of carrots) from a bidder?

A: Yes, the inherent character of the vegetables is retained and not modified by placing vegetables in portion sized or single serving bags.

Q17: Can an SFA give geographic preference when procuring canned local vegetables from a bidder?

A: No, the inherent character of the vegetables is not retained because the heating process involved in canning changes the agricultural product into a product of a different kind or character.

District Cost Factors

Prepared by the Office of Senator McGuire
February 21, 2011

Sec. 14.17.460. District cost factors.

(a) For purposes of calculating a district's adjusted ADM under AS 14.17.410 (b)(1), the district cost factor for a school district is (1) for the fiscal year ending June 30, 2009, the factor set out under column (A) of this subsection, (2) for the fiscal year ending June 30, 2010, the factor set out under column (B) of this subsection, (3) for the fiscal year ending June 30, 2011, the factor set out under column (C) of this subsection, (4) for the fiscal year ending June 30, 2012, the factor set out under column (D) of this subsection, and (5) for fiscal years ending on or after June 30, 2013, the factor set out under column (E) of this subsection:

Alaska School Nutrition Association

ATTENTION DARWIN PETERSON:

Office of Honorable Senator Bert Stedman:

We wish to thank the Senator for any and all kind help with the support for Alaska children as reflected in Senate Bill 3.

This school meal assistance is a big deal for those of us tasked with providing the 11 million USDA school meals each year to Alaska Children.

The $.35 per Breakfast in SB 3 will be partnered with the well established USDA support of $2.36 per breakfast for students qualifying as free.

The $.15 per Lunch in SB 3 will be partnered with the well established USDA support of $4.43 per lunch for students qualifying as free.

The long time successful USDA staffers serving students in Petersburg- Sitka- and all across Alaska need the SB 3 help for supporting school meals.

It turns out, that successful school meal programs are a big deal for success in Alaska classrooms.

The USDA school meal programs in Alaska very successfully comply with and exceed the criteria for appropriate nutrition for student health.

The accountability practices for per meal service are well established for finances and nutrition support.

Audits and trainings and documentation criteria are all well in place for school meal purchases, service, and reimbursement claims.

School Meal providers can be trusted with funding responsibility.

We take great pride in what we do for Alaska kids.

MEMORANDUM – School Meals Numbers

Alaska is a diverse state and the additional funds for school meals will help schools in different regions and different economic situations differently. Here are the three ways these funds should help schools:

Help Schools Which Are Dipping Into Operating Budgets.

- Thirty-seven Alaska school districts are currently dipping into their operating budgets for a total of $7.8 million.
- SB3 should allow some schools to defray part of these costs, allowing them to use more of their operating budgets for classroom needs.

Operating Budget Expenditures 2010

School	Percent of students **who qualify for low or reduced** price meals	Money taken from the **operating budget** to support the school meals
Bering Strait	87%	$1,021,950
Kashunamiut	75%	$50,000
Lower Yukon	67%	$1.7 million
Northwest Arctic	72%	$805,430
Southwest Region	91%	$305,000
Yukon-Koyukuk	82%	$94,091

Help Schools Increase Low Student Participation

- Currently, many schools are underachieving when it comes to participation of students in the free or reduced-price meals program.
- The additional funds provided by SB3 should allow some schools room to increase participation in their programs.

Breakfast Examples 2010

School	% of student body **qualifying** for free/reduced breakfast	% of qualifying free/reduced students **NOT participating** in breakfast program
Anchorage	37%	77%
Bering Strait	87%	64%
Bristol Bay Borough Schools	43%	80%
Chatham School District	70%	94%
Dillingham	71%	80%
Fairbanks	28%	69%
Kashunamiut	75%	53%
Kenai Penninsula	37%	80%
Lower Kuskokwim	72%	61%
Lower Yukon	67%	53%
Matanuska/Susitna Borough	66%	66%
Sitka Borough	27%	90%
Total	**41%**	**74%**

Help Schools Increase Food Quality, Nutrition

- These extra funds should allow some schools to increase the nutritional quality of meals.
- Under new USDA standards for school meals (which go into effect in the Fall of 2012) schools are encouraged to add more fresh fruits, vegetables, whole grains, low-fat dairy products and lower sodium. (Sample menu attached.)
- There is also a great opportunity to involve our state agriculture more in our school meals programs with the Farm to School project (HB70) which went into effect last year. Alaska's first farm to school summit was held on Jan. 12th, with over 50 people from around the state in attendance. An outcome of this summit was the establishment of an advisory team to assist with development of a strategic plan and assessment method.

Re: Comments Regarding ASD Support of SB3

Dear ~~Senator Wielechowski~~ Bill,

The Anchorage School District Student Nutrition Department has been able to weather the difficult financial challenges over the last five years thanks to the support of the Anchorage School Board.

In 2005-2006 the School Board approved a ten cent increase in all meal prices and a twenty-five cent increase in 2007-2008 and in 2008-2009. The sixty cent increase in that short period of time made it difficult for many families to pay for meals for their children.

In May of 2008 the School Board approved the transfer of $1.123 million from the general fund to the Student Nutrition fund to cover losses from previous years and help the department for the next few years from increasing meal costs for parents/students.

The Student Nutrition Department has reduced staff to the point that further reductions are no longer possible. Truck and equipment replacement purchases have been severely reduced since 2007. Some equipment parts were taken from units to keep other equipment operational. That only worked until there were no more units available for parts. The School Board has approved use of the Student Nutrition fund balance to offset the need for replacement trucks and equipment. That only works until the fund balance is gone.

Since 2005 food costs have escalated as shown below and it is predicted that food costs will go up another three to ten percent over the next few years. The new dietary guideline will require ever higher costs especially in Alaska because most fresh fruits and vegetables are not grown in colder climates. According to our records annual expenditures for food products since 2005-2006 are as follows:

2005-2006	$4,379,194
2005-2007	$5,076,974
2005-2008	$4,991,302
2005-2009	$5,152,219
2005-2010	$5,328,019

Student Nutrition has done everything possible to control food costs but much of that effort is lost through increases in employee benefits, salaries, and retirement costs.

State reimbursement will help offset increased food costs associated with the new dietary guidelines. Every district in the state will be impacted. The addition of breakfast reimbursement will allow Anchorage School District to evaluate schools not currently served. The additional state funding for breakfast may allow the ASD to provide meals at schools for which it was not previously economically possible.

Sincerely,

Carol

Carol Comeau

February 14, 2011

The Honorable Bert Stedman, Co-Chair
The Honorable Lyman Hoffman, Co-Chair
Senate Finance Committee
Alaska State Senate
State Capitol, Room 532
Juneau, AK 99801

Dear Senators Stedman and Hoffman:

This letter includes responses to follow-up questions asked during the Senate Finance Committee hearing on Monday, February 7, 2011, related to SB3, "An Act providing for funding for school lunch and breakfast."

- ***Is 35% of the food offered through NSLP wasted by the students at the table?***

Child Nutrition Staff review between 15 to 20 district meal programs per year. Direct observation by the review staff has never observed this level of waste. If students do not care for a particular food component they may discard a portion of the meal. When schools serve a meal students do not care for, the school lunch staff remedies the problem.

A sampling of districts garnered the following varied responses:

"It is difficult to measure waste; the hot entrées seldom get thrown out, and when it is it's because the student didn't have time to finish it; mainly the cold items like fruits and veggies tend to get thrown out more often."

"Custodial and other food service staff over the last couple of years tell me that the amount thrown out continues to decrease as offer vs. serve was implemented, food service lines speed up, and quality of food improves."

"We have very little waste due in a large part to our experienced cooks and our stable participation rate."

printed on recycled paper

"It is difficult for us to document waste since all of our elementary schools eat their lunch in the classroom. Custodians will tell us when a meal isn't popular based upon waste. Most of the time, the kids don't seem to want the fruits and vegetables."

- ***More detailed numbers on student population (compared to the total, how many get reduced-price meals, how many get free meals, how many pay, how many don't eat school meals at all, etc).***

Attachment I provides the free and reduced-price lunch eligibility for each school district and individual school sites participating in the National School Lunch Program. The six districts that do not participate are not on this report. (They are: Aleutian Region, Chugach, Denali, Pelican, Pribilof, and Tanana.) This eligibility information includes the total student enrollment (nearly equal to average daily membership). The last two columns of this report show which sites participate in lunch and which sites participate in breakfast as designated with an "X."

Attachment II is a recent compilation using actual FY2010 monthly claims and other reports to break out the free, reduced-price and paid participation compared to the total population, by district. This calculation uses NSLP eligibility for total population, which is consistent with the department's enrollment data and average daily membership.

- ***Various methods employed by schools to identify students in the free and reduced-price meal program without embarrassing those students.***

Most schools have a student identification card that either scans or has a 4-digit number the school uses to record meals served to students. In the schools where a card is not used, a roster of all students is available for the school lunch staff, who check the student's name to record who received a meal. Both processes only identify the student as enrolled in the school. Authorized school district staff who prepare the monthly meal claims by category have access to the student's eligibility status of Free, Reduced or Paid. Releasing information to unauthorized staff about a student's eligibility is prohibited by federal statute.

- ***School revenues from breakfast and lunch programs from students: Total amount of revenue per school and overall AK total for money brought in through paid and reduced-price meals.***

Attachment III provides the annual audited activity from each school district's food service special revenue fund for FY2010 and FY2009. This spreadsheet provides revenues, expenditures, the net difference, and amount of funds transferred from the district's general operating fund to cover food service program deficits.

Sincerely,

Elizabeth Nudelman
Director, School Finance

SEAN PARNELL, GOVERNOR

Department of Education & Early Development

Office of the Commissioner

Goldbelt Place
801 West Tenth Street, Suite 200
P.O. Box 110500
Juneau, Alaska 99811-0500
(907) 465-2800
(907) 465-4156 Fax

February 10, 2011

The Honorable Bert Stedman, Co-Chair
The Honorable Lyman Hoffman, Co-Chair
Senate Finance Committee
Alaska State Senate
State Capitol, Room 532
Juneau, AK 99801

Dear Senators Stedman and Hoffman:

This letter includes responses to questions asked by Senators Stedman and McGuire in Senate Finance Committee hearing on Monday, February 7, 2011 related to SB3, "An Act providing for funding for school lunch and breakfast."

- ***Will more districts offer programs?***
- ***Will students be added?***

The funding in SB3 will not necessarily add programs or increase the number of students served.

Lunch: Currently 47 of 53 districts participate in the National School Lunch Program (NSLP) representing 99.6% of the average daily membership in the state. Districts serving lunch provide lunch at nearly all individual school sites within the district, the exceptions being some alternative schools, and a few schools with very small populations that may meet meal requirements in other ways rather than NSLP.

The six small districts that do not participate in NSLP report that there are hurdles to participating in NSLP such as: lack of affordability for up to date kitchens that meet health standards, staff salaries, and required paperwork required for implementing NSLP. In summary, Alaska is overwhelmingly making available NSLP lunches in our schools each day.

Breakfast: Currently 37 of 53 districts participate in the NSLP breakfast program representing 96.6% of the average daily membership in the state. The 17 districts that do not have an NSLP

printed on recycled paper

breakfast program account for 4,096 average daily membership. A sampling of the 17 districts not participating in breakfast identified the following hurdles: We can't even afford lunch and our bus routes are too long to accommodate delivering students for breakfast. The percent of paid students is too high and our bus routes would need to be changed which would cost money in order to accommodate breakfast.

Districts serving breakfast generally serve breakfast at all sites; there are two major exceptions, one being Anchorage. Anchorage has approximately 28 sites, many elementary, where there is lunch but not breakfast. Anchorage surveys parents for potential participation before making a decision to add breakfast programs at individual sites.

If breakfast participation was added at the 28 Anchorage sites and in the 17 districts, the fiscal note impact would be approximately $130,000 annually.

The department continues to encourage and support districts in participating in NSLP breakfast and lunch programs.

- ***Can state agriculture be more involved for better food?***

Yes. The National School Lunch Program (NSLP) is administered at the Department of Education and Early Development (EED) within the Teaching and Learning Support division by the Child Nutrition Services (CNS) section. CNS promotes and supports the use of local food in a number of ways. Two years ago the department communicated with a local company and the outcome has been a locally produced salmon wrap that is now provided in the school lunch program. Other similar collaborative efforts are under way.

Multiple school lunch programs are actively using Alaskan fish in school meals. Training and information are provided to schools for the safe use of donated game meats in school meals where wild game is a common resource.

The CNS staff attended the first federal Farm to School Summit in January in order to learn new approaches to bringing local foods to school food programs. The CNS staff is discussing outreach and other program components with the Alaska Department of Natural Resources (DNR), as the DNR Farm to School Coordinator implements HB70 the farm to school program established in law in 2010.

Sincerely,

Elizabeth Nudelman

Elizabeth Nudelman

Action for Healthy Kids®

Because healthy kids learn better

RECEIVED
FEB - 7 2011

Senate Finance Committee
VIA FAX

February 7, 2011

Senators Hoffman and Steadman,

I am writing on behalf of the Alaska Action for Healthy Kids team, a coalition of Alaskan organizations, agencies and individuals who support ways to fight children obesity through changes in school policies.

We support SB 3!

Lack of adequate nutrition affects the cognitive and behavioral development of children. Research shows that school breakfast
(1) improves student performance; (2) increases school attendance; (3) decreases school violence; and (4) fights obesity and improves nutrition

* 42% of Alaska students qualify for free/reduced school meals (over 51,000 students)

* 15% of the students that qualify for free/reduced school meals do not attend schools that offer a breakfast program (over 7,000 missed meals) Over 23,000 Alaska students attend a public school that does not offer a school breakfast program.

We urge Alaska join 25 other states that provide state funds to supplement the federal reimbursement so that all Alaskan children have access to healthy meals at school.

"Childhood Obesity: The Preventable Threat to America's Youth" follows this fax. We invite you to www.actionforhealthykids.org to find more fact sheets.

If I can provide more information, please contact me at mary.grisco@elmendorf.af.mil.

Thanks for your support,

Mary Grisco, Acting Chair
Alaska Action For Healthy Kids Team
And Executive Director, All Alaska Pediatric Partnership

Fact Sheet

Action for Healthy Kids®

Childhood Obesity
The Preventable Threat to America's Youth

The majority of American youth are sedentary and do not eat well. The resulting poor nutrition and lack of physical activity has created an epidemic of childhood obesity that is preventable, yet shows no sign of decreasing. Action for Healthy Kids helps schools make changes that will make their students healthier, which in turn will improve their achievement.

Prevalence and Trends

Overweight and obesity impairs or threatens the health of millions of American children.

- Thirty-two percent of American children and adolescents are overweight or obese, with a 16% of youth 2-19 falling into the obese category
- Rates of overweight and obesity remain high with 31.9% of children and adolescents aged 2-19 years at or above the 85th percentile of the 2000 BMI-for-age growth charts. [1]
- For children aged 2-19 11% are above the 97th percentile, 15% above the 95th percentile, and 30% above the 85th percentile. About 2/3 of those with BMIs above the 95th percentile have BMIs above the 97th percentile, indicating much severe obesity. [1]

Racial/Ethnic Populations

Although overweight has increased for all children and adolescents over time, data indicate disparities among racial/ethnic groups.

- 28% of African-American girls aged 12 to 19 are obese, as are 20% of Mexican-American girls. [1]
- 18.5% of African-American and 22% of Mexican-American boys are overweight or obese. [1]
- Among 12-19 year olds, those above the 97th percentile BMI included 20% of non-Hispanic black girls, 18% of Mexican American boys, and 9% of white girls. [1]

Contributing Factors

Poor eating habits and lack of physical activity are root causes of overweight and obesity.

- Only 2% of school-aged children consume the recommended daily number of servings from all five major food groups, and only 30% consume the suggested amount of milk. [2]
- Caloric contribution from sugar sweetened beverages increased significantly from 204 kcal/day in 1988–1994 to 224 kcal/day in 1999–2004. [3]
- 35% of students watch television 3 or more hours per average school day. [4]
- Only 35% of students are physically active for 60 minutes at least 5 days per week. [4]

Health Consequences

Childhood obesity is a medical concern, not a cosmetic issue.

- An obese 4-year-old has a 20% chance of becoming an obese adult, and an obese teenager has up to an 80% chance of becoming an obese adult. [5]

- Overweight children and teens have been found to have risk factors for cardiovascular disease (CVD), including high cholesterol levels, high blood pressure, and abnormal glucose tolerance.[6]
- Among 5- to 17-year-olds, almost 60% of overweight children had at least one CVD risk factor while 25 percent of overweight children had two or more CVD risk factors.[7]
- Severely overweight and obese children often suffer from depression, anxiety disorders, isolation from their peers, low self-esteem, and eating disorders.[8]

Academic Consequences

A growing body of evidence indicates that poor nutrition, physical inactivity and obesity are associated with lower student achievement.

- The psychological stress of social stigmatization can cause low self-esteem which, in turn, can hinder academic and social functioning, and persist into adulthood.[9]
- Hunger, physical and emotional abuse, and chronic illness can lead to poor school performance.[10]
- Overweight kindergartners had significantly lower math and reading test scores at the beginning of the year than did their non-overweight peers, and these lower scores continued into first grade.[11,12]

Economic Consequences

- Childhood obesity is estimated to cost $14 billion annually in health expenses.[13,14]
- Severely overweight children miss four times as much school as normal-weight kids.[8] If such health problems keep children out of school just one day per month, this could cost a large school district like Los Angeles about $15 million each year. An average size school district could likely forfeit $95,000 to $160,000 annually.[15]
- Obesity-associated annual hospital costs for children increased more than threefold from $35 million during 1979-1981 to $127 million during 1997-1999.[16]

Explanation of Changes

Senate Bill 3 – Funding for School Meals

"An Act providing for funding for school lunch and breakfast."

The original legislation specified "the department shall provide a base amount of 15 cents for each lunch **OR** 35 cents for each breakfast" (emphasis added).

In order to ensure schools can receive funding for both lunches and breakfasts served, the Committee Substitute now reads "the department shall provide funding to a school district of 15 cents for lunch **AND** 35 cents for breakfast to each eligible student" (emphasis added).

Sponsor Statement

Senate Bill 3 – Funding for School Meals

"An Act providing for funding for school lunch and breakfast."

Senate Bill 3 will provide a state match for schools participating in the federal Free and Reduced Price School Breakfast and Lunch Program. This legislation will encourage more schools to provide nutritious meals for underprivileged children and allow schools that already do so to improve their programs. Currently in Alaska, twenty percent (20%) of schools participating in the school lunch program do not offer school breakfast, impacting 22,253 Alaskan children, 6,850 of whom are children from low income families who qualify for free or reduced price meals. For many children, these are the only nutritious meals they will get on a regular basis. Alaska is one of the only states that does not help supplement the program.

This legislation will provide school districts with a base amount of 35 cents for each breakfast served and 15 cents per lunch. To compensate for higher costs, rural schools will receive additional assistance through a funding formula based on the applicable School District Cost Factor for each district.

In addition to fighting childhood hunger, investing in school meals has been shown to improve school attendance and performance, reduce violence, and combat childhood obesity.

This legislation was requested by the Food Bank of Alaska, The Alaska Food Coalition, and the Alaska School Nutrition Association; and currently has been endorsed by the Yakutat Board of Education, the Petersburg Indian Association, the Petersburg School District, the Lower Kuskokwim School District, the Bering Strait School Board, the Cordova School District, the Yupiit School District, the Kenai Peninsula School District, the Chugach School District, the Anchorage School District, the Homer Food Pantry and the AARP.

Fast Facts: Alaska's School And Lunch Program

Alaskan Children In Need:

- **One out of every 8 Alaska** families struggles to put enough food on the table.[USDA]
- According to Hunger in America 2010, **74,000 Alaskans seek food assistance each year**.The study also showed that 43% of households visiting food pantries in Alaska have a child under the age of 18. [Hunger In America]
- An estimated **42% of Alaska students**, more than 51,000 children, are eligible for free or reduced-cost school meals.

School Meals Programs In Need

- The school meal program costs the schools **$58 million in output**. Currently, the federal government funds the majority of the school meal program **at $32.5 million**. Alaska students pay approximately **$23.4 million**, leaving our schools with **at least a $2.1 million shortfall**.
- Alaska is **one of only twelve states** in the country that does not have any state legislative support for their school meals programs. [Alaska Food Coalition Hunger Data]
- In Alaska, the school lunch program **feeds over 36,000 students** at a free/reduced rate for lunch. School breakfast participation **is over 18,000 with 14,000** of those being free/reduced price. [FRAC scorecard]
- Currently in Alaska, **twenty percent (20%) of schools** participating in the school lunch program do not offer school breakfast, impacting 22,253 Alaskan children, 6,850 of whom are children from low income families who qualify for free or reduced price meals.
- There are **six school districts educating 927 students** in Alaska that do not offer the lunch program or the school breakfast program.
- For many children, these are the only nutritious meals they will get on a regular basis.

Alaska Missing Out On $1.9 Million

- Alaska is **in the bottom 10 states** for lowest participation in the School Breakfast Program in the nation.
- Our state is not taking advantage of a large amount of potential federal funding that would come to the state on a per-meal basis.
- If Alaska lifted breakfast participation **from 38.3% to 60%,** the state would receive an **additional $1.9 million in federal funds**.
- Raising the rate to 60% would entail feeding approximately 8,006 additional free and reduced-price students.[FRAC scorecard]

Payment Chart

The following chart illustrates the lunch National Average Payment Factors with the sections 4 and 11 already combined to indicate the per lunch amount; the maximum lunch reimbursement rates; the reimbursement rates for afterschool snacks served in afterschool care programs; the breakfast National Average Payment Factors including "severe need" schools; and the milk reimbursement rate. All amounts are expressed in dollars or fractions thereof. The payment factors and reimbursement rates used for the District of Columbia, Virgin Islands, Puerto Rico and Guam are those specified for the contiguous States.

Who can get free or reduced-price meals?

Free & reduced participant applications must be submitted annually

- Children from households whose size and income is at or below the criteria in the charts below are eligible to receive free or reduced-price meals for the school year effective July 1, 2010 – June 30, 2011. Income plus Permanent Fund Dividend information will be totaled and annualized.
- A household or family is defined as a group of related or unrelated individuals who are living as one economic unit.
- Children who are members of households that are approved for Food Stamps or Alaska Temporary Assistance Program (SNAP), or Temporary Assistance to Native Families (TANF) are automatically eligible for free meals, but we must have an application or an electronic import.
- Foster children, as the legal responsibility of a welfare agency or court, may also be eligible for benefits regardless of the household income where they reside. Again, an application is required.

Income Eligibility Guidelines, 2010-11

Frequently Asked Questions

Where do I obtain meal applications?
Applications are located at all schools, at the ASD Education Center and Student Nutrition, or it may be completed and downloaded from the district website. Click here to download a PDF of the application.

Do I need to fill out an application for each child?
No. Use one application for all elementary, middle school and high school students in your household for whom you are applying except for foster children.

Who can get free or reduced-price meals?
Children in households getting food stamps or public assistance (SNAP/TANF) and foster children can get free meals regardless of the household income, though we must have an application or receive an electronic import. We now receive electronic imports from State of Alaska Public Assistance Office as well as Migrant Education advising us of students qualified for free school meals under those programs. Student Nutrition sends households a letter confirming status at that time. Food stamp/public assistance families may alternately receive written

Do I have to complete a new application if my child transfers from one district school to another?
No, unless a child has been at one of the special provision schools mentioned above, and transfers to a non-provision school, which are all other district schools.

How long does it take to process an application?
Allow 10 working days for processing.

May I apply if someone in my household is not a U.S. citizen?
Yes, you or your children do not have to be US citizens to qualify for the program.

Who should I include as members of my household?
You must include all people living in your household, related or not (such a grandparents, other relatives, or friends). You must include yourself and all children who live with you.

What if my income is not always the same?

Meals Menu

Free & Reduced Price Meals
Student Nutrition FAQ

And Justice For All
Our facilities are operated in accordance with U.S. Department of Agriculture policy, which does not permit discrimination because of race, color, gender, age, disability, or national origin. More information may be obtained here or from the Office of Equal Opportunity, USDA, Washington, D.C. 20250 -Secretary of Agriculture

verification and submit same in place of an application or list their case number on a regular application form. Also if your household income is within limits on the Federal Income Chart for Alaska, along with Permanent Fund Dividend income, your children can get free or reduced-price meals.

If we are notified that our child is free through the electronic import method, do we still need to complete an application?
No.

Can homeless, runaway and migrant children get free meals?
Please contact Child in Transition/Homeless Project at 742-3833 or Migrant Education at 742-4275 to see if your children qualify if you have NOT been informed that they will get free meals.

My child was on the lunch program last year. Won't her free status carry over to this year?
It will carry over for the first 30 school days if the child's status was via application. However, if the child attended a provision school, where children are automatically approved free, this will not be the case. We need a new application for each school year.

Our income this year is identical to last year when the children were free. Why are they reduced this year?
This is very common. The Federal Income Guidelines change every year, as do the Permanent Fund Dividend amounts, should they apply.

Will the information I give be checked?
Yes, and we may also ask you to send written proof.

If I don't qualify now, may I apply later?
Yes, you may apply at any time during the school year.

Why is student income a requirement?
We must have income for the entire household. Many children have income from estates, trusts, survivor benefits, etc. besides any real wages.

Why are applications returned to households?
Usually because the application is not completed as required. Illegible applications must also be returned; also if any child on the application is not in the school registration system, the application is delayed.

Why are there some schools that feed children free automatically?
These are special provision schools determined by government requirements. These schools are: Alaska Native Charter, Clark Middle School, Fairview, Mount Iliamna, Mountain View, Muldoon, North Star, Ptarmigan, Russian Jack, Tyson, Whaley, Willlwaw, Willow Crest and Wonder Park.

List the amount that you normally get. For example, if you normally get $1000 per month, but you missed some work last month and only got $900, list the $1,000 per month. If you normally get overtime, include it, but not if you get it only sometimes.

We are in the military, do we include our housing allowance as income?
If your housing is part of the Military Housing Privatization Initiative, do not include your housing allowance as income. All other allowances must be included in your gross income.

My spouse is deployed to a combat zone. Is their combat pay counted as income?
No, if the combat pay is received in addition to their basic pay because of their deployment, and it wasn't received before they were deployed, combat pay is not counted as income. Contact Student Nutrition for more information.

What do I do with my completed application?
You may turn it in at any school's front desk or mail to Student Nutrition (see back of application). NOTE: Our new scanning equipment will not read faxed applications or applications downloaded from the district website. These applications will be delayed in processing.

What if I disagree with the status my application determines?
Your application will be processed according to Federal Guidelines. If you wish to ask for a hearing, you may call or write to Dr. Brent Rock, Director, Student Nutrition, 1307 Labar Street, Anchorage, AK 99515.

What if my child has special dietary needs?
If your child has been determined by a doctor to have a condition that would result in a disability that prevents your child from eating the regular meals, the school may make substitutions prescribed by a doctor.

Are there any additional benefits our family may be eligible for?
Yes, health insurance, Women, Infants and Children Nutrition Program (WIC), and the district's Child in Transition Program.

Denali KidCare: Call 1-888-318-8890 or (Anchorage) 269-6529 for information and an application for free health insurance for children, teens and pregnant women.

WIC: Call 1-800-478-2221 for information on how to apply for free food benefits and nutrition education for pregnant, postpartum/ breastfeeding women, infants and children under 5 years. If approved for free or reduced-price meals, you may take your approval letter with you to WIC for documentation for benefits.

Anchorage School District Child in Transition/Homeless Project: Call 742-3833 for assistance.

Funding For Alaska's School Meals SB3

1

SEN. WIELECHOWSKI PRESENTATION TO SENATE FINANCE COMMITTEE (02/07/11)

Prime Sponsors
Senators Wielechowski, Ellis, Thomas, Kookesh, McGuire, French, Davis, Egan, Menard and Paskvan

Three Goals
For The School Meals Bill

- More schools serving meals
- More kids in each school fed
- More nutritious meals served

Problem 1

KIDS IN NEED

One out of every eight Alaska families struggles to put enough food on the table each year.

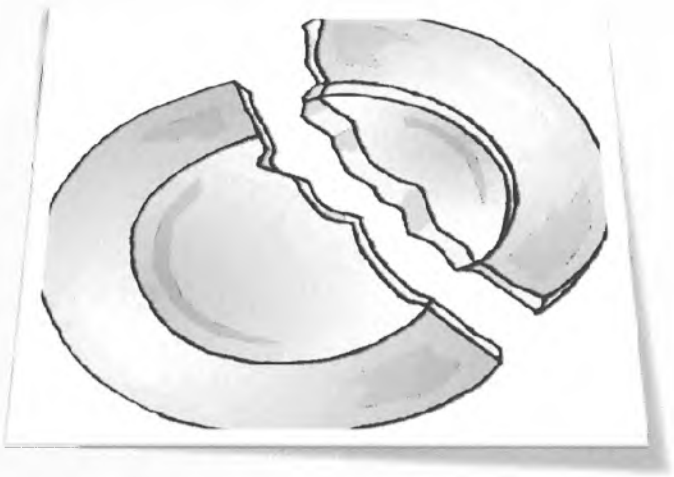
•USDA, 2010

Hunger In Alaska 2010

74,000 Alaskans seek food assistance each year.

43% of households visiting food pantries in Alaska have a child under the age of 18.

•Alaska Food Coalition



Students In Need Not Being Reached

51,000 Alaskan children are eligible for reduced or free lunch. However:

Six school districts do not offer breakfast or lunch.

15% of schools that do participate in the school lunch program do not offer breakfast.

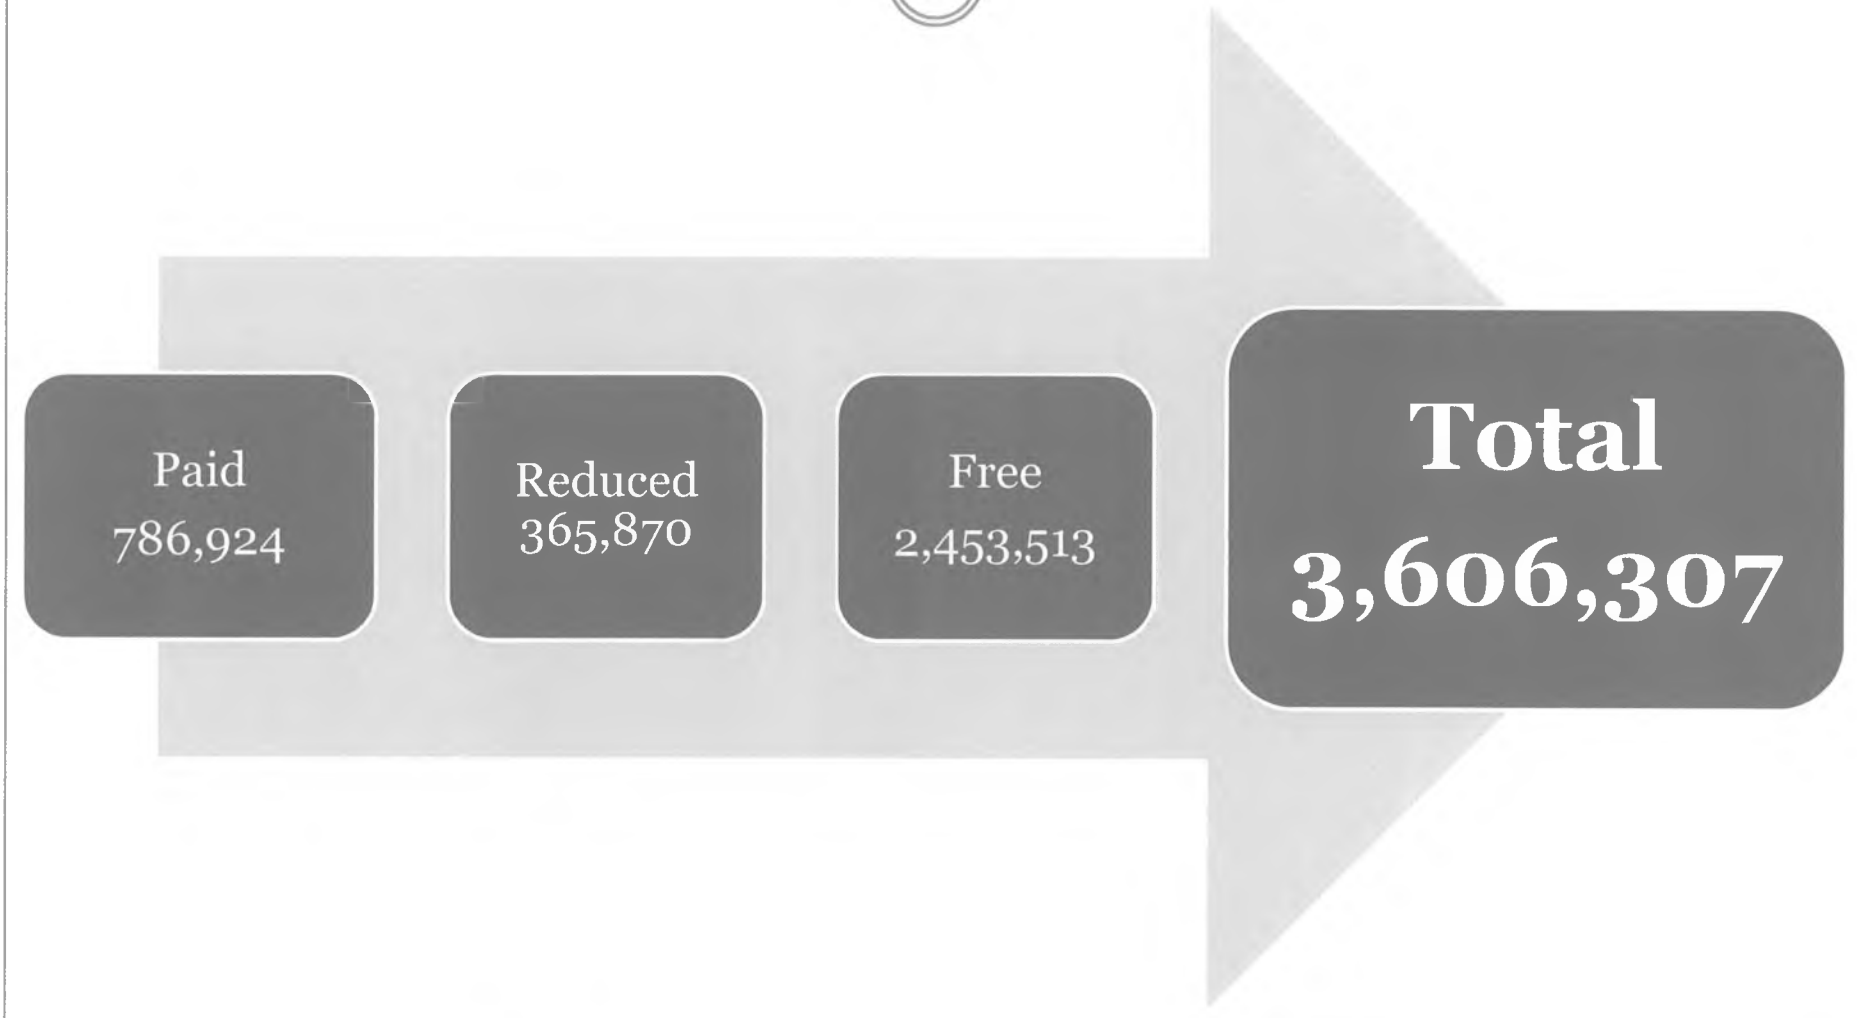
Overall, 60% of lower-income kids **are not being reached by the school meals program.**

Alaska In Bottom 10 For Participation

Alaska ranks ninth from the bottom of all 50 states in the participation of low-income children in the school meal programs.

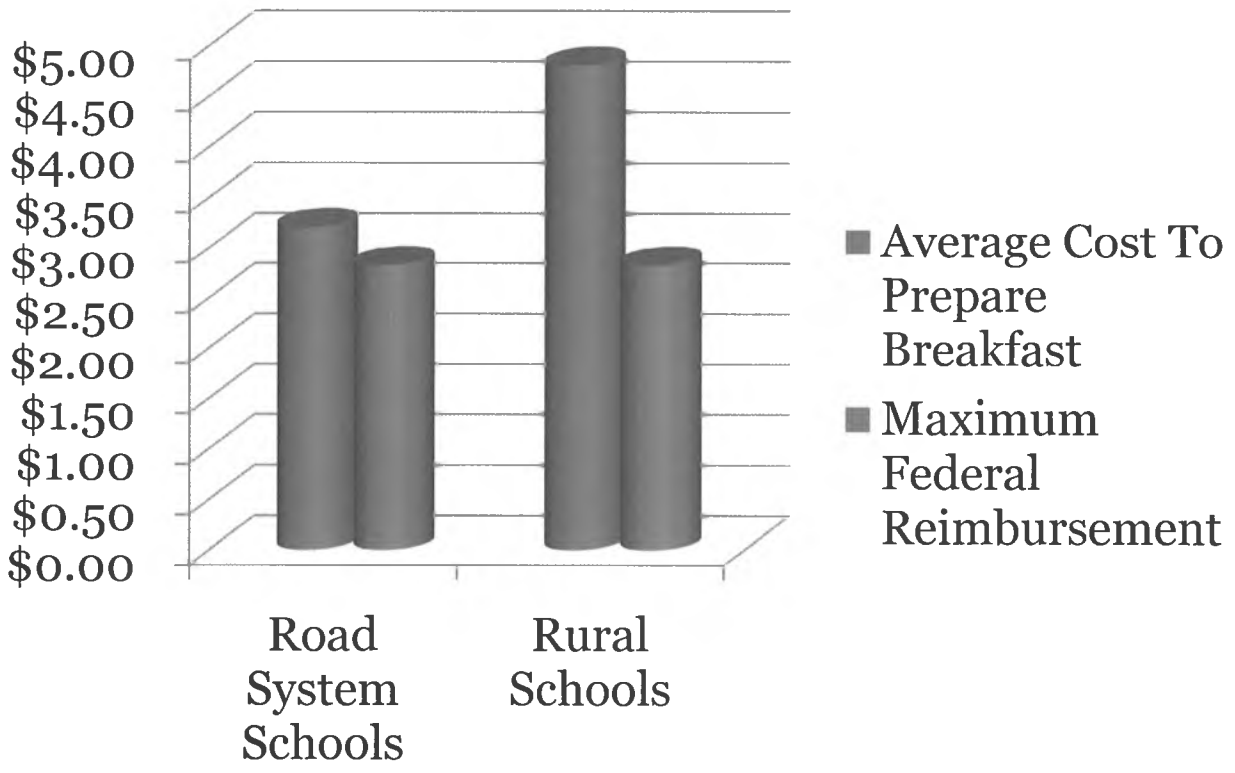
Bottom 10 States	% Participation
Connecticut	38.9
Alaska	**38.3**
Colorado	38.2
Illinois	38.0
New Jersey	37.6
Nebraska	37.1
Iowa	36.8
New Hampshire	36.7
Nevada	34.9
Utah	33.7

•School Breakfast Scorecard 2009-2010
Food Research & Action Center



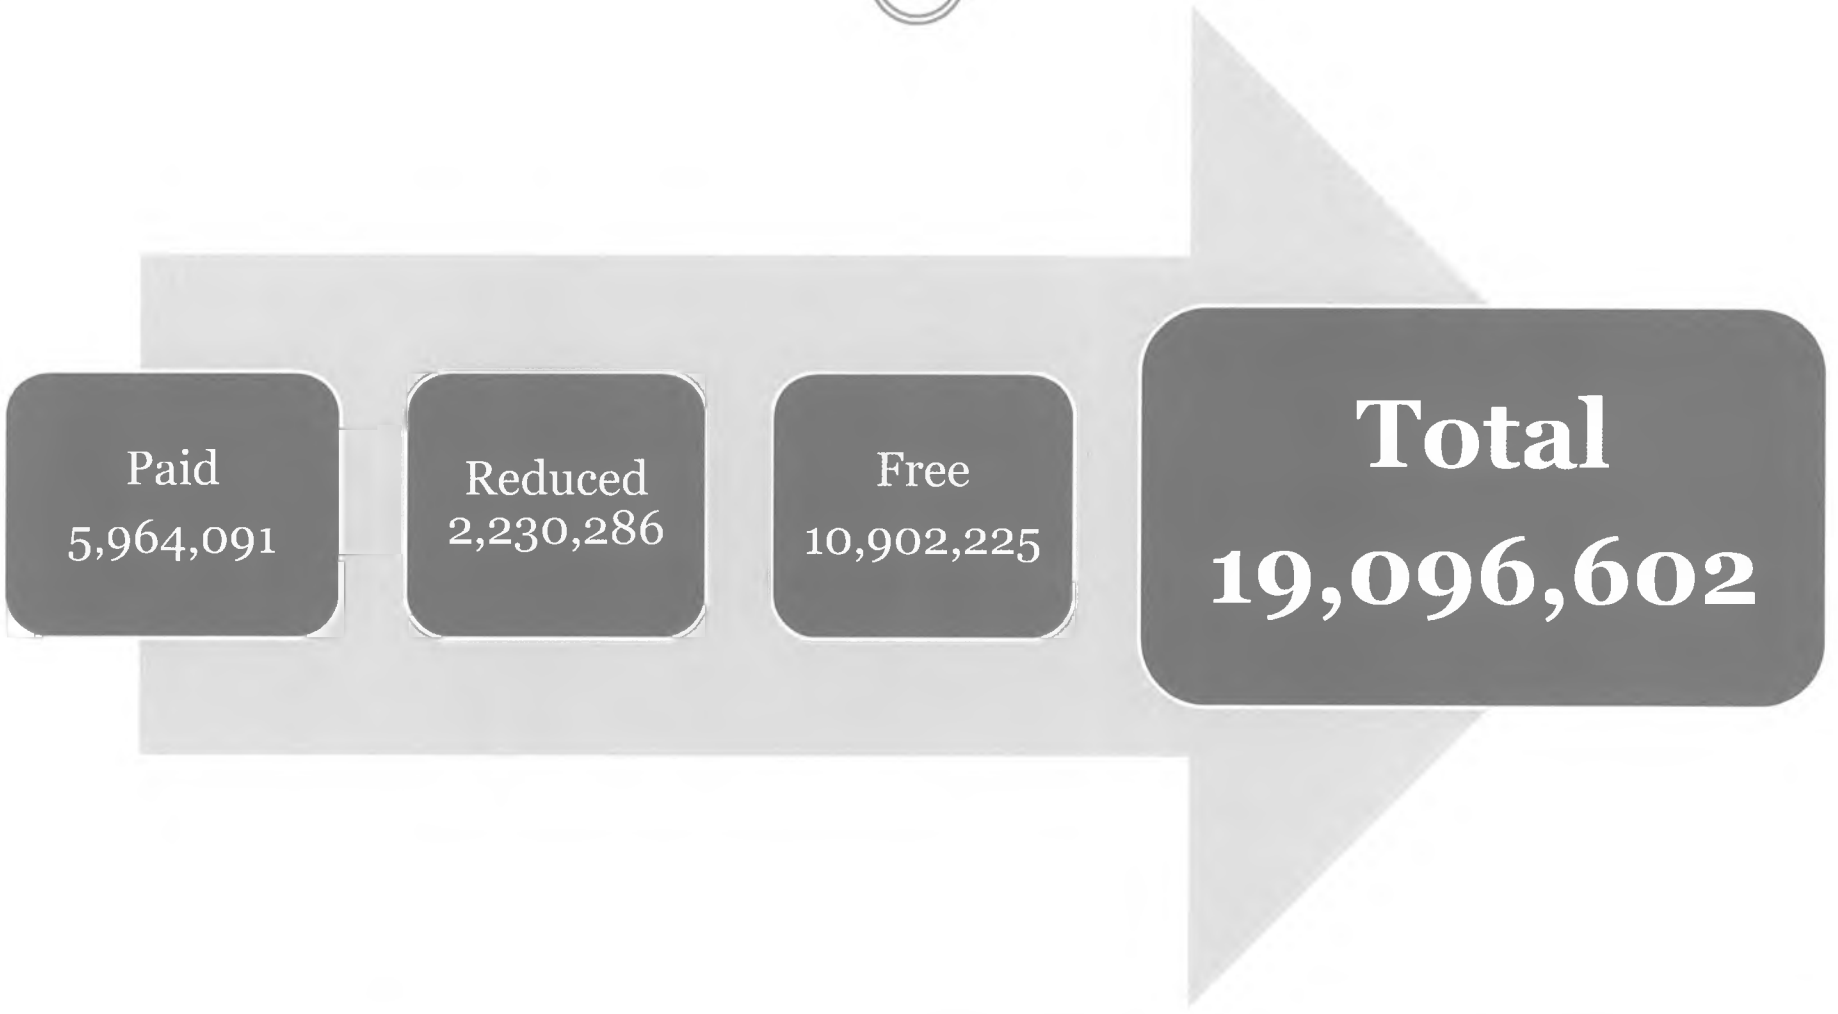
"How many sleeps before we can have meals at school again?"

--An elementary school student in the Kenai Peninsula to her teacher, just before a long weekend. (ADN, 3/8/10)

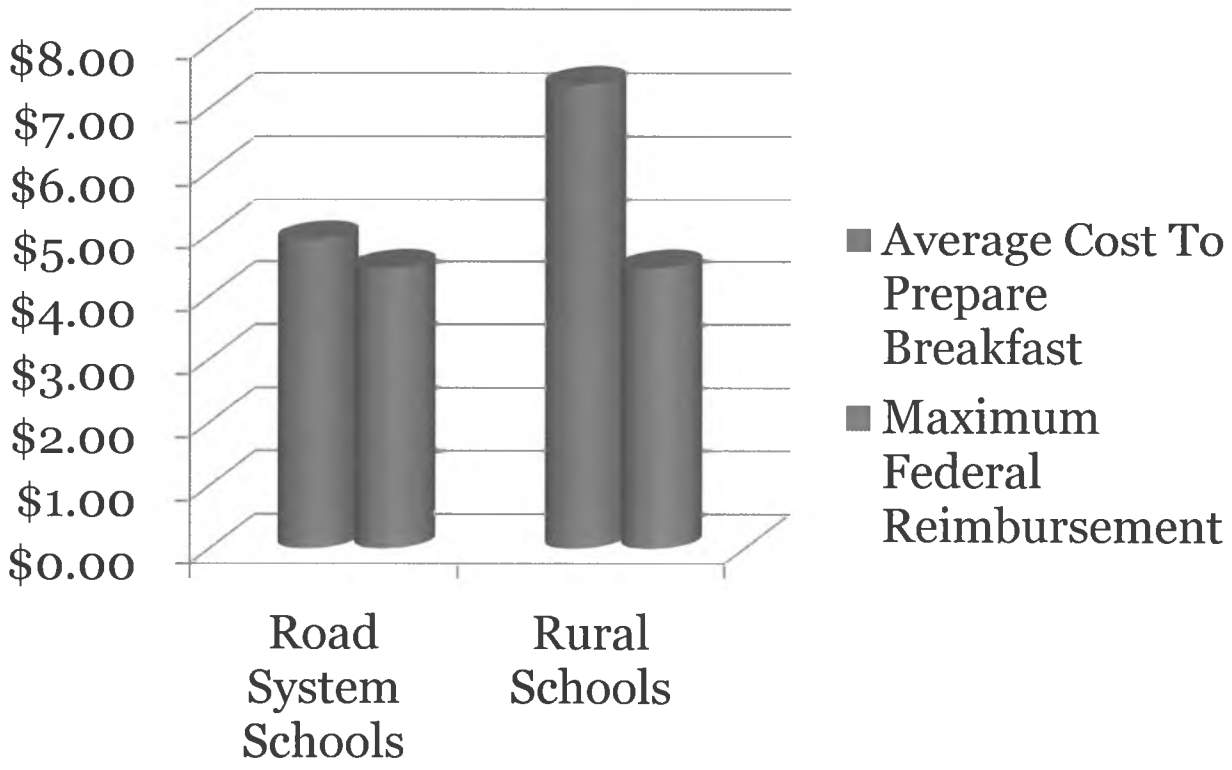


Problem #2

SCHOOLS IN NEED



Alaskan School Breakfasts Served FY 09-10



Current Breakfast Reimbursement Rates

Alaskan School Lunches Served FY 09-10

Current Lunch Reimbursement Rates

The Need

Even with federal subsidies, Alaska schools fall $9 million short.

This money comes out of their operating budgets.

School Meal Money 2009-2010

- Federal Subsidies - $32.5 million
- Student Payments - $16.5 million *
- School Operating Budget - $9 million

* Extrapolated from Department of Education & Early Development figures

Smart Investment

ENSURING ALASKAN KIDS ARE FED IS A SOLID INVESTMENT IN ALASKA'S FUTURE.

Investing in School Meals Provides a "Two-Fer" in Returns

Short-Term

- Better academic performance
- Better behavior
- Better attendance
- Better health

Long-Term

- Better attendance= lower dropout rates
- Lower dropout rates= lower prison populations
- Higher graduation rates= higher incomes
- Lower obesity rates= lower health care costs

SB3 Short-Term Effects

BETTER ACADEMIC PERFORMANCE

Better Academic Performance

Improved School Achievements

A review of 18 studies showed students who ate breakfast consistently showed improvement in **verbal fluency, arithmetic, tests of attention, memory, creativity, physical endurance, and general tests** of academic achievement and cognitive functioning.

--"Nutrition and Student Performance at School." The Journal of School Health 2005

Improved Standardized Test Scores

Scores on the Comprehensive Test of Basic Skills improved significantly in schools that had larger participation in their school breakfast programs.

-- "School Breakfast Program and School Performance." American Journal of Diseases of Children 1989

Better Academic Performance

Improved Scores in Language, Reading, Math

Low-income students in a breakfast test program in the United States improved their combined scores in **language, reading and math.**

--"Breakfast and Cognition: An Integrative Summary." American Journal of Clinical Nutrition 1998

Improved Math Scores, Participation

Researchers found students who ate breakfast **improved math scores** and **participated more** in class.

--"Diet, Breakfast, and Academic Performance in Children." Annals of Nutrition & Metabolism 2002

Better Academic Performance

Improved Memory, Listening Skills

A Tufts University study showed elementary school students who ate breakfast listened better and had both **better spatial memory and short-term memory** than students who skipped breakfast.

-- "Effect of Breakfast Consumption on Cognitive Processes in Elementary School Children." Physiology & Behavior 2005

Skipping Breakfast = Slower Brain Function

A study conducted by the University of California Davis showed **skipping breakfast alters brain function** and had an adverse affect on the speed and accuracy with which children were able to retrieve information from memory.

-- "Does Breakfast Make a Difference in School?" Journal of the American Dietetic Association 1995

SB3 Short-Term Effects

BETTER BEHAVIOR

Better Behavior In School

22

Calmer, More Obedient

Researchers noted a **significant decrease in behavioral "oppositional scores"** for students eating school breakfast. "Oppositional scores" measure whether or not students are likely to break the rules, have problems with authority or are quick to anger than most individuals in their age groups.

-- "Evaluation of the School Breakfast Program Pilot Project: Findings from the First Year of Implementation." U.S. Department of Agriculture, Food and Nutrition Service 2002.

Better Behaved

Researchers found low-income students who ate meals at school were **less likely to be hyperactive and had fewer behavioral or attention problems** than their hungry peers.

-- "Relationship Between Hunger and Psychosocial Functioning in Low-Income American Children." Journal of the American Academy of Child & Adolescent Psychiatry 1998

Better Behavior In School

23

Fewer Disciplinary Referrals Needed

Researchers conclude that classroom breakfast works and that a pilot program in New York resulted in decreased hunger and **improvements** in factors critical to student learning such as tardiness and **disciplinary referral rates**.

-- "Academics & Breakfast Connection Pilot: Final Report on New York's Classroom Breakfast Project." Nutrition Consortium of New York State. Albany, New York. July 2005.

Fewer Emotional Problems

Increased school breakfast participation is associated with **fewer emotional or behavioral problems.** Teachers at schools that increased participation in their school breakfast programs reported a positive change in student behavior (60%) and improved in student attentiveness (63%).

--"The Boston Public Schools Universal Breakfast Program: Final Evaluation Report." Massachusetts General Hospital, Boston, MA, 2000

SB3 Short-Term Effects

BETTER ATTENDANCE

Better Attendance

25

Higher Rates Of Attendance

Studies show that universal school breakfast program participation is associated with **higher rates of attendance and declines in tardiness**.

--"Universal-Free School Breakfast Program Evaluation Design Project. Review of the Literature on Breakfast and Learning. Final Report." Mathematica Policy Research 1999

Lower Rates Of Tardiness

Schools with increased participation in school breakfast programs had their proportion of **children chronically tardy decreased by 67%.**

-- "Evaluation of a Universally-Free School Breakfast Program Demonstration Project, Central Falls, Rhode Island," Tufts University, 1996

SB3 Short-Term Effects

BETTER HEALTH

Better Health

Lower Obesity Rates

Girls from "food insecure" households are **significantly less likely to become overweight** (68 percent) if they participate in school lunch and breakfast programs.

-- "Lower Risk of Overweight in School-aged Food Insecure Girls Who Participate in Food Assistance: Results from the Panel Study of Income Dynamics Child Development Supplement." Archives of Pediatric and Adolescent Medicine 2003.

More Physically Active

Students who ate breakfast daily were **more likely to participate in physical activity** three or more times a week than breakfast skippers.

--"Smoking, Physical Activity and Breakfast Consumption among Secondary School Students in a Southwestern Ontario Community." Canadian Journal of Public Health 2003

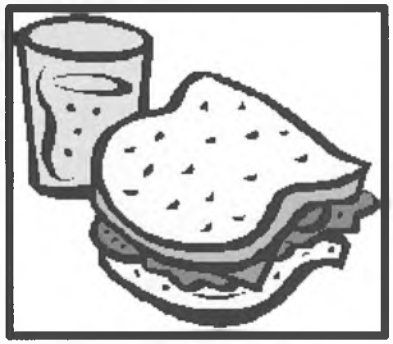
Better Health

Alaskan Obesity

25.4% of Alaskans are currently considered "obese."

-- America's Health Rankings 2010

The High Cost Of Obesity



Recent studies project that, if our national weight problem continues as it has been, obesity will cost the USA about **$344 billion in medical-related expenses by 2018**, eating up about 21% of health-care spending.

-- USA Today, 11/17/09

School Meals Legislation

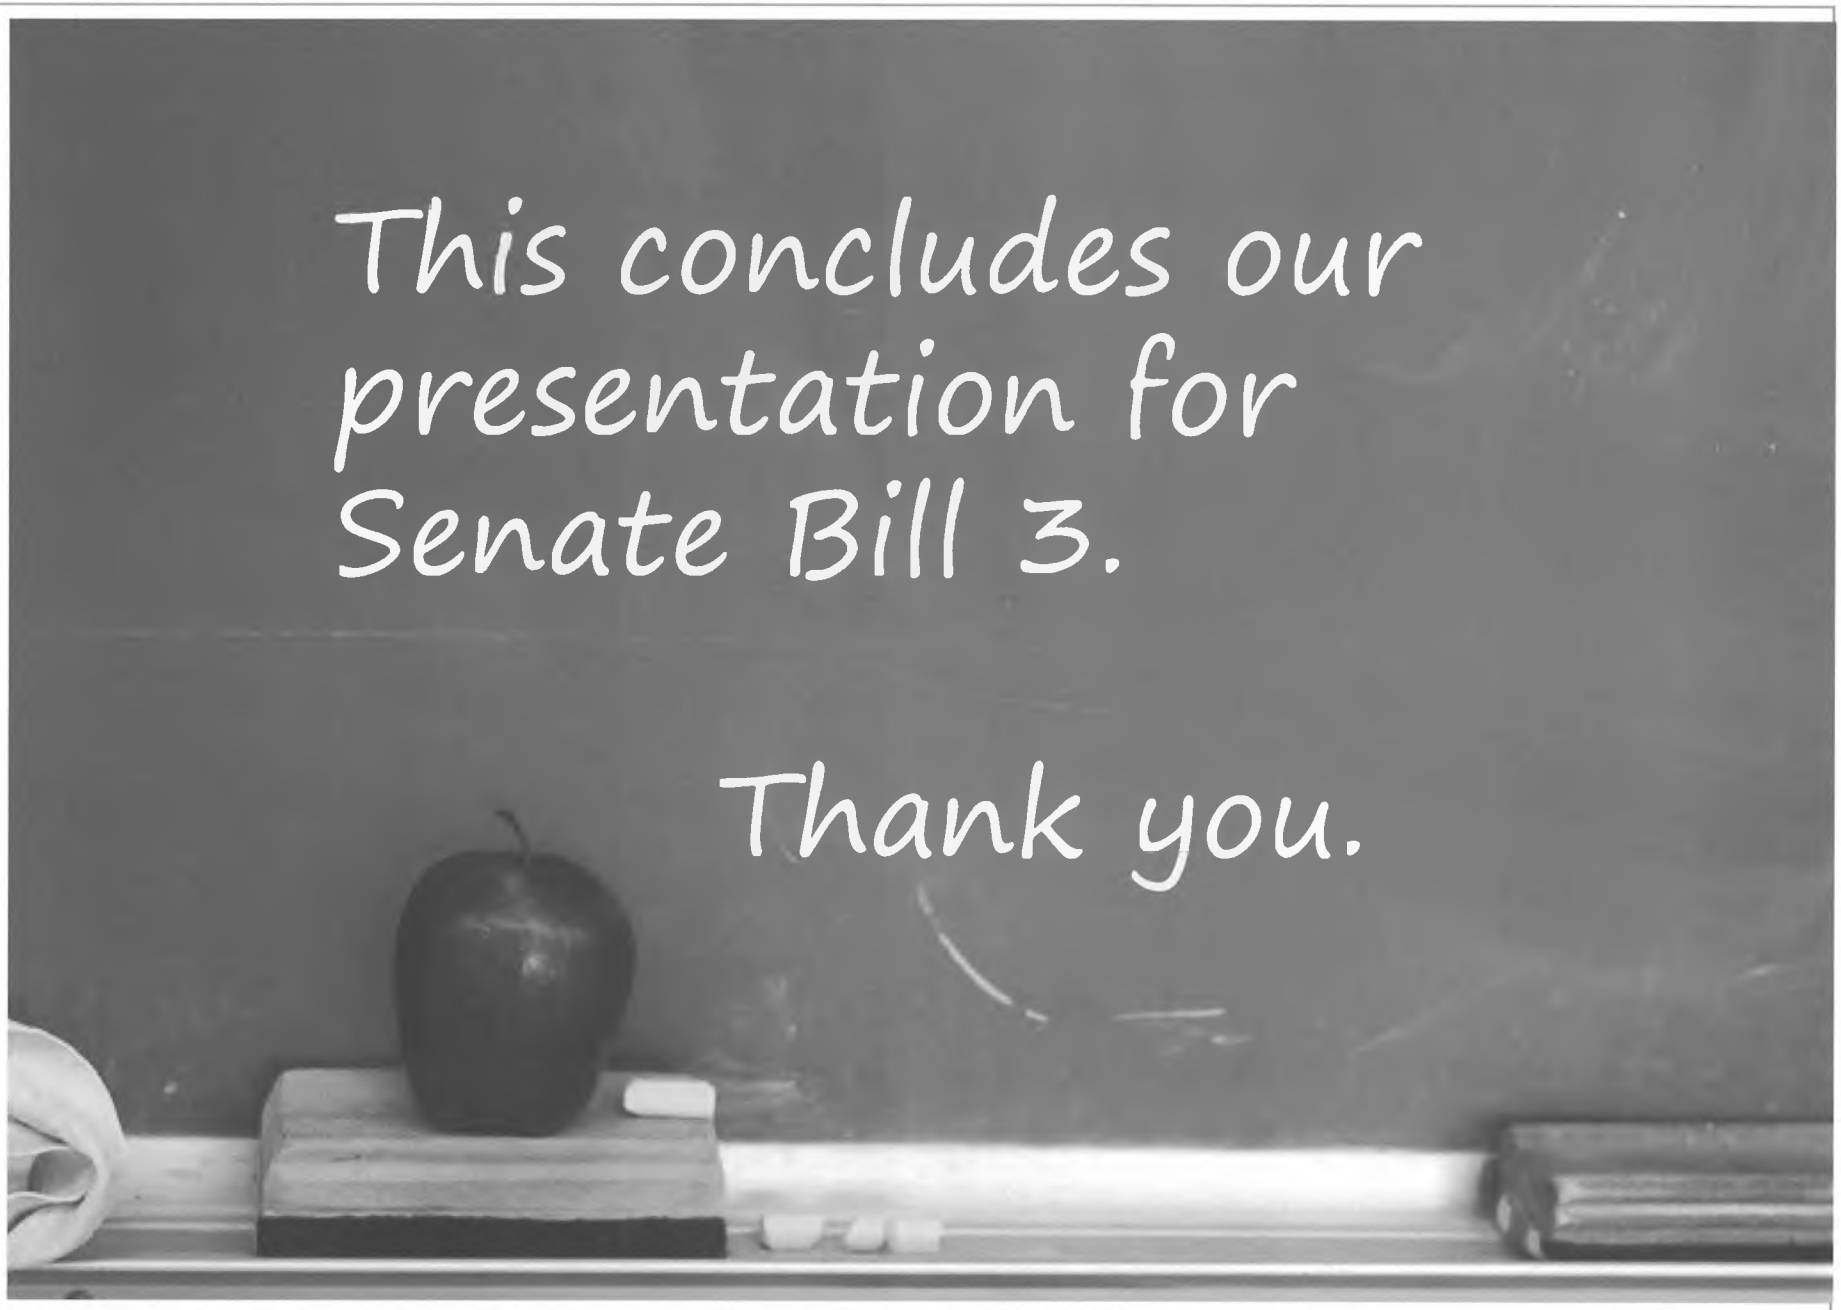
THE PROPOSAL

State Supplement to Federal Funding

Breakfast	Lunch
	
$0.35	$0.15

Examples of Support

Schools	• Cordova School District • Kenai Peninsula School District • Chugach School District • Yupiit School District • Petersburg City Schools • Lower Kuskokwim School District
School Boards	• Anchorage School Board • Fairbanks School Board • Yakutat Board of Education • Association of Alaska School Boards
Assistance Groups	• Alaska Food Coalition • Food Bank of Alaska • Alaska School Nutrition Association • AARP



School Meals Legislation

THE BOTTOM LINE

Senate Bill 3 is a **solid investment** in Alaska's future, providing both short-term and long-term payoffs for Alaska's students.

We spend a great deal of money on education in Alaska. This comparatively small investment will help our students **reap the maximum benefits** from our schools.

By setting our kids up for success now, we may be **able to avoid costly problems** in the future.

This concludes our presentation for Senate Bill 3.
Thank you.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 5

Analysis:

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare(DKC) program was originally created.

This fiscal note represents the additional administrative costs needed to support the increased eligibility determination workload resulting from more pregnant women and children applying for medical assistance, using the assumptions from the companion fiscal notes for the Division of Health Care Services and the Division of Behavioral Health.

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2011. We estimate two additional Eligibility Technician II (Range 14) positions will be needed to manage this additional work in FY2012.

Total Administrative Costs for Two ET II Positions:

Personal Services: Two Eligibility Technician II Range 14 at a cost of $187.0, including benefits, for 12 months.
Contractual: Annual cost for office space, phones, etc. will be $19.4.
Commodities: Annual cost for the office supplies will be $1.0.

Additional Cost of FY2012:
Equipment/Supply: A one-time cost of $14.4 for desktop computer, software, printer, and work stations will be needed for the new positions.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 5

Analysis:

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2012, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match).

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated at 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2012 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2012 and 2017. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2012 and 2017.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2010. Behavioral Health paid about 15% of the costs for affected DKC children in 2010. No charges for services for DKC pregnant women were paid by this component in 2010.

FISCAL NOTE #1

STATE OF ALASKA **BILL NO.** SB 5
2011 LEGISLATIVE SESSION

Analysis:

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2012, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match).

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY2012 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Cost projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XXI rates , Title XIX, or State General Fund only (for abortions) during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2012 and 2017. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2012 and 2017.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2010. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about 85% of the costs for affected DKC children in 2010.

Senator Bettye Davis

SB 5 - "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

Senate Bill 5 increases and restores to original levels established 14 years ago the qualifying income eligibility standard to 200% of the Federal Poverty Level (FPL) for the State Children's Health Insurance Program (SCHIP) called Denali KidCare (DKC) in Alaska. Alaska as one of the nation's wealthiest states is only one of four states which funds its SCHIP program below 200% FPL. This bill makes health insurance accessible to an estimated 1277 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an enhanced Medicaid reimbursement program receiving up to 70% federal matching funds.

Denali KidCare serves an estimated 7900 Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental care, which is about 20% of the cost of adult senior coverage. Early intervention and preventative care will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated per the Kaiser Foundation that the 24,000 uninsured children in Alaska with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

A similar bill was overwhelmingly passed with bipartisan support by the Legislature in 2010. Governor Parnell subsequently vetoed the bill over concern that increased eligibility to Denali KidCare would require an increase in state-funded induced terminations of pregnancies. Medicaid funds 51% of all births in Alaska. In order to continue to receive federal funding for the state Medicaid program of which Denali KidCare is part, and in order to comply with state law, constitutional provisions, and Alaska Supreme Court rulings, the state must provide medical services for pregnant women including medically necessary terminations, as well as prenatal and postpartum care.

The Alaska Department of Health and Social Services (DHSS) estimated that no more than 10% or 22 more induced terminations would result with minimal expense from the increase in eligibility for Denali KidCare to 200% FPL. Induced terminations under Denali KidCare cost about $384,000 annually or less than 0.18% or 1/5 of 1% of the $217 million of the DKC budget.

While the Governor understandably is concerned about the mushrooming cost of the state Medicaid program, Denali KidCare which is about 18% of the $1.2 billion total state Medicaid budget should not be among his first cuts at the expense of Alaska's most vulnerable children and pregnant women. Increasing eligibility for DKC to 200% FPL under Senate Bill 5 is uncomplicated, manageable, and could take effect immediately with prompt implementation by DHSS.

Alaska State Legislature

Interim: (May - Dec.)

Senator Bettye Davis

SB 5 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Background of SCHIP/Denali Kid Care

- State Children's Health Insurance Program (SCHIP), which is administered in Alaska through the Denali KidCare Program was created in 1997 to reduce the number of uninsured children by providing subsidized insurance to children of those parents who are too poor to afford insurance but make too much to receive Medicaid coverage. About 1/3 of all children in America get health services through Medicaid or the SCHIP program.
- The Denali KidCare Program is 70% funded by the federal government up to the state's allocated funding level. After that, the reimbursement rate declines to slightly over 50%.
- Denali KidCare provides health insurance for children up to age 18 and pregnant women who meet income guidelines. There is no cost to eligible children, teens and pregnant women. However, youth who are 18 may be required to contribute a limited amount for some services.
- Roughly 7,900 children were covered by Denali KidCare in 2009.
- The cost per child of Denali KidCare is about $1,700 annually, compared to over $12,000 for an elderly person who qualifies for federal aid.
- By comparison, private health insurance for a family of three, *e.g.,* a pregnant woman with two children, is estimated at $8,000-$17,000 annually. Unlike Denali KidCare, this insurance may require a substantial deductible, 20% co-pay, and no vision, dental or hearing benefits.

Why Coverage for Pregnant Women is Important In Alaska

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are at increased risk of pregnancy-related death.

- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.
- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk fro pregnancy-related mortality and complications of childbirth (DHSS).
- The average cost of hospital care for a premature baby was $75,000 in 2001, compared with $1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about $13.1 billion annually.

Senator Bettye Davis

SB 5 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Repercussions of the Unmet Health Care Needs of Alaska's Uninsured Children

- The number of uninsured children in Alaska is estimated to be about 24,100 or 19% of the uninsured population (Kaiser Family Foundation, 2008-2009).
- Over the last 10 years Alaska has seen a 31% decline in the number of children covered by private health insurance (Robert Wood Johnson Foundation).
- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).
- Uninsured children have much higher health risks than do covered children. They receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser, *supra*).
- Uninsured children are more likely to develop throat, eye, and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than five times as likely as insured children to have an unmet need for medical care and nine times more likely not to be examined by a regular doctor. They are also four times more likely to use emergency rooms which are much more costly than care in physicians' offices (*Pediatrics* 105, 113; "Care for Children," *New England Journal of Medicine*, 330).
- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (*Health Affairs* 23, no. 5, September-October 2004).
- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund, Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of $65-$130 billion annually.

MEMORANDUM January 24, 2011

SUBJECT: Sectional Summary (SB 5; Work Order No. 27-LS0057\B)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the medical assistance eligibility provisions for persons under 19 years of age and for pregnant women by increasing the household income limit from 175 to 200 percent of the federal poverty line.

Section 2. Increases the household income limit from 175 to 200 percent of the federal poverty line for requiring premiums and cost-sharing contributions from medical assistance recipients who are under 19 years of age.

Section 3. Provides for an immediate effective date.

MEMORANDUM March 29, 2011

SUBJECT: Discussion points relating to medical necessity
(SB 5 (Work Order No. 27-LS0057\B))

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have provided a March 28, 2011 memorandum from the Department of Health and Social Services and comments from the Planned Parenthood of the Greater Northwest pertaining to the above-referenced bill and the concept of medical necessity as it relates to Medicaid funding of abortions.

I understand the basis for the Department of Health and Social Services memorandum relates at least indirectly to my own memorandum on the concept of medical necessity dated November 18, 2010. The department appears, however, to be interested in clarifying its own undated fact sheet presented to you that contains the following statement:

> "Medically necessary" as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court decision.

My memorandum on the subject provided a survey of the several instances in state regulation, and in federal and state court cases in which the concept is or was defined. 7 AAC 105.100(5), I pointed out, provides that the department will pay for medical assistance, including Denali KidCare and abortion services, that are

> medically necessary as determined by criteria established under 7 AAC 43 and 7 AAC 105 - 7 AAC 160 or by the standards of practice applicable to the provider.

In the same memorandum, I also explained that a statutory definition of medical necessity that was limited only to abortion services funding was vetoed in 2002, that the general relief assistance program contains a regulatory definition for abortion funding, and that a former regulatory definition (7 AAC 43.140(a)) was found to be unconstitutional by the

Alaska Supreme Court, resulting in the state's current lack of a clear definition of the phrase as it applies to medical assistance funding for abortion services. (November 18 memorandum at page 5). I also explained that although the phrase is "not clearly defined in Alaska" the regulations that pertain to all covered services and to other specified types of services provide "some guidance" (November 18 memorandum at page 8). The memorandum further described several court cases in which the concept is analyzed and described.

In this context, the March 28, 2011 memorandum from the department is confusing. While admitting that current and unrepealed (the lack of funding for one of the programs is not relevant to the existence of the regulation) definitions of the phrase exists in several sections of state regulations, the department stated that

> . . . the Department believes its previous statement that there is no statute, regulation, or court decision that defines medical necessity as it applies to abortions paid for under Denali KidCare is accurate.

My understanding of the purpose of the November 18 memorandum by my office and the discussion in committee, was to come to some agreement on the meaning of the concept of medical necessity and to discern which definition is currently applied by the department for medical assistance funding of abortions in this state and elsewhere. The department doesn't answer that question except to refer to a definition in the regulations for all medical assistance funding. So the department's position becomes quite circular.

In any event, the legislature could provide a definition in statute of the phrase "medical necessity" that allows for consideration of physical, mental, and age of a patient by a physician. In so doing, the concept must in my opinion be consistent for all reproductive services covered by medical assistance payments. The current regulatory definition in 7 AAC 105.100(5) acknowledges the applicability of standards of medical practice to covered services but confuses the issue by cross-referencing medical necessity considerations for mental health and other services that may or may not be relevant to other types of services.

Another option that would allow for an increase in income eligibility limits include raising the limit only as it pertains to persons under 19 years of age and not for pregnant women. The difficulty with that option is that the state plan combines children and pregnant women and the federal law also treats them similarly. A separation would require federal approval.

A third option, proposed by Planned Parenthood in various ways, is to introduce a separate bill to address family planning services for both men and women, including adoption services. That, of course, would also necessitate a state plan amendment and approval as well as additional funding.

As a modification of this third option, it is possible to amend the informed consent provisions for abortion under AS 18.16.060(b)(1) to require a physician's office to provide the information contained on the state website (currently it is one of two options for consent) and to amend AS 18.05.032 to provide additional information about adoption services and costs.

If I may be of further assistance, please advise.

MEMORANDUM November 18, 2010

SUBJECT: Medicaid funding of "medically necessary" abortions
(Work Order No. 27-LS0175)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the meaning of "medical necessity" as it relates to medical assistance (Medicaid) funding of abortions. State and federal statutes fail to define the phrase, although the concept forms the basis for coverage of all services under the jointly funded Medicaid program and is defined for purposes other than abortion services in regulation.

Despite a federal exclusion for most abortion services known as the "Hyde Amendment," upheld by the United States Supreme Court, the Alaska Supreme Court in 2001 specifically held that the equal protection guarantee under our state constitution requires the state to cover medically necessary abortion services, as it does for all other medical services covered under state Medicaid funding. The standard for "medical necessity" in Alaska appears to be similar for all Medicaid services and includes services that are broader than life saving services but less than elective services, as discussed below.

FEDERAL LAW DRAWS A DISTINCTION BETWEEN ABORTION SERVICES FUNDING AND OTHER TYPES OF COVERED SERVICES

The federal purpose of the Medicaid program established the medical necessity standard under 42 U.S.C.S. § 1396-1 as follows:

> For the purpose of enabling each State, as far as practicable under the conditions in such State, to furnish (1) medical assistance on behalf of families with dependent children and of aged, blind, or disabled individuals, whose income and resources are insufficient to meet the costs of *necessary medical services*, and (2) rehabilitation and other services to help such families and individuals attain or retain capability for independence or self-care, there is hereby authorized to be appropriated for each fiscal year a sum sufficient to carry out the purposes of this title. The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Secretary, State plans for medical assistance.

(Emphasis added.) Since 1976, Congress has prohibited, either by an amendment to the annual appropriations bill for the United States Department of Health and Human Services, or by joint resolution, the use of any federal funds to reimburse the cost of abortions under the Medicaid program except under certain specified circumstances. The "Hyde Amendment" provides that:

> [N]one of the funds provided by this joint resolution shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest when such rape or incest has been reported promptly to a law enforcement agency or public health service.

Pub. L. 96-123.

After the passage of the Hyde Amendment, federal courts wrestled with questions about whether state and federal governments are required to pay for an indigent woman's exercise of a fundamental constitutional right when a "medically necessary" abortion is involved. In several close decisions, the U.S. Supreme Court determined that the federal constitution does not require public financial support of the right to choose an abortion in cases that do not involve rape or incest or a threat to the mother's life. Beal v. Doe, 432 U.S. 438 (1977); Maher v. Roe, 432 U.S. 464 (1977); Harris v. McRae, 448 U.S. 297 (1980); Webster v. Reproductive Health Services, 492 U.S. 490 (1989). It is instructive to note the trial court definition in the McRae case of the phrase "medically necessary" for purposes of abortion funding was "a professional judgment for the physician that may be exercised in the light of all factors--physical, emotional, psychological, familial and the woman's age--relevant to the well-being of the patient."

The federal courts ruled in these cases that governments are not required to provide money to assist in the exercise of constitutional rights; governments are only prohibited from placing obstacles in the way of exercising those rights. Withholding funding, said the federal courts, is not an obstacle to the indigent woman who seeks an abortion. Her poverty may be an obstacle, but the government did not create the poverty. She is still free to have an abortion, but not with public money. The federal courts suggested other private money might be available. In light of these federal decisions, it is clear that public funding for abortions, even when "medically necessary," is not required under the federal constitution.

ALASKA LAW REQUIRES A MORE UNIFORM BUT INEXACT STANDARD FOR STATE MEDICAID FUNDING OF ALL TYPES OF SERVICES COVERED, INCLUDING ABORTION SERVICES

In the early 1990's, the state attempted to adopt the federal distinction for funding of abortion services and disregarded the general medical necessity definition adopted in regulation for other types of services. In a direct challenge to the state regulation that provided only for public funding of abortion services to preserve the life of the mother or

in cases of rape or incest, the Alaska Supreme Court held that the state must pay for medically necessary abortions for participants in the Medicaid program as it does for other types of services. State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001). The Alaska Supreme Court determined then that the "rape, incest, and to prevent the death of the mother" restrictions of the Hyde Amendment are too narrow to satisfy the requirements of the Alaska state constitution.

The Alaska constitution has been consistently interpreted to provide broader protections than the federal constitution. For instance, in Valley Hospital Ass'n v. Mat-Su Coalition for Choice, 948 P.2d 963, 969 (Alaska 1997), the Alaska Supreme Court held that "reproductive rights are fundamental . . . [and] include the right to an abortion." Later, in State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001), the Alaska Supreme Court, although basing its decision on due process considerations rather than the privacy clause used by the lower court, came to the same conclusion the lower court had. The conclusion was that if the state Department of Health and Social Services (DHSS) restricted abortion coverage for Medicaid-eligible women to only those covered by the exceptions in the Hyde Amendment, it would result in unconstitutional implementation of Medicaid in Alaska.

There is language in the Planned Parenthood of Alaska, Inc. case (cited above; see 28 P.3d at 913) strongly suggesting that the Alaska Supreme Court considers women who carry their pregnancy to term to be similarly situated with women who have an abortion (in that they are both exercising their constitutional freedom of reproductive choice). If the court continues to hold that position when faced with a renewed public abortion funding challenge, there is a possibility that the court will find that the state may not be able to burden the right to abortion services under the state Medicaid program unless a similar burden is placed on medical services to continue a pregnancy, and in the absence of comparable burdens on continuation of a pregnancy the state cannot burden the right to abortion services.

The consequence of having a more broadly interpreted right to public funding of abortions for Medicaid recipients in Alaska than what is allowed under federal law is that DHSS must cover some Medicaid abortions with 100% state money (no federal match).[1] The federal government does not prohibit states from using their own funds.

Over the years, language has appeared in Alaska budget acts that purport to prohibit DHSS from using any of its appropriated money for abortions outside the scope of the

---

[1] Alaska is reportedly not alone in using purely state funds for some Medicaid abortions that the federal government will not fund. I do not have an up-to-date list and I have not double-checked the cases cited, but the ACLU says that 17 states fund abortions outside the Hyde Amendment restrictions, 4 voluntarily and 13 under court order. I have attached the relevant information, as reported by the ACLU, excerpted from http://www.aclu.org. I cannot vouch for the accuracy of the ACLU website, but if you require further information about public funding of abortions in other states, please let the office know.

Hyde Amendment. However, DHSS has been under court order to continue to pay for medically necessary abortions and has complied with the state attorney general's advice to do so.[2]

---

[2] For instance, with regard to the 2007 fiscal year operating budget, the attorney general wrote the following:

> This year's budget, as did the prior four years' budgets, contains the following language regarding abortion funding:
>
> > No money appropriated in this appropriation may be expended for an abortion that is not a mandatory service required under AS 47.07.030(a). The money appropriated for Health and Social Services may be expended only for mandatory services required under Title XIX of the Social Security Act and for optional services offered by the state under the state plan for medical assistance that has been approved by the United States Department of Health and Human Services . . . .
>
> [citation omitted]. As we opined before, this language is intended to prevent expenditures from these appropriations for therapeutic or medically necessary abortions. DHSS, however, is under a superior court order to operate its Medicaid program in a constitutional manner by providing payment for them. That superior court order has been upheld by the Alaska Supreme Court, which specifically rejected an argument that the separation-of-powers doctrine precluded the superior court from ordering the state to pay. State, Dept. of Health & Social Services v. Planned Parenthood of Alaska, 28 P.3d 904 (Alaska 2001). Thus, the DHSS is faced with a ruling from the state's highest court that the limit on payment for abortion services results in the operation of the Medicaid program in an unconstitutional manner, while DHSS is ostensibly without the money available to pay for services to operate the program legally. . . . Five years ago, the plaintiffs in the Planned Parenthood case asked the superior court to clarify how similar budget restrictions impacted its judgment. The superior court, three days after the supreme court affirmed the judgment, issued an opinion ordering the DHSS not to comply with the restrictions. To date, therefore, DHSS has obeyed the superior court's order and we must advise DHSS to continue to obey it; i.e., to continue to pay for these medically necessary abortions, until such time as a court reverses the order that is now in effect.

2007 Alas. AG LEXIS 21, 7 - 8.

According to DHSS, the money used for Medicaid abortions not covered by the Hyde Amendment (i.e., abortions for which the federal government will not contribute federal money), comes from the appropriation made by the legislature to DHSS for Medicaid.[3]

Other attempts to narrow the definition of "medical necessity" for purposes of abortion services funding have similarly failed. In 2002, for example, the Alaska Legislature passed and the governor vetoed a bill (SB 364, 22nd Legislature) that added a new section to AS 47.07 to provide that the state Medicaid program may only pay for medically necessary abortions and for abortions to terminate pregnancies resulting from rape or incest. The bill prescribed what is a medically necessary abortion and established requirements for submitting claims for payment for abortions. (See SB 364, attached). That bill provided as follows:

> (b) A claim for payment for a medically necessary abortion that is submitted to the department must be accompanied by a written certification by the treating physician that the abortion is medically necessary to treat a serious
>
> (1) adverse physical condition of a pregnant woman that
>
> (A) either is caused by the pregnancy or would be significantly aggravated by continuation of the pregnancy; and
>
> (B) would seriously endanger the physical health of the woman if the pregnancy were not terminated by an abortion; or
>
> (2) psychological illness of a pregnant woman who requires medication for treatment of the illness if
>
> (A) the medication required to treat the illness would be highly dangerous to the fetus; and
>
> (B) the health of the woman would be endangered if the mediation was not taken during pregnancy.

Since the bill was vetoed and the definition of "medical necessity" for purposes of abortion services funding contained in former 7 AAC 43.140(a) was held to be unconstitutional in 2001 and has recently been repealed but not reenacted, the state currently lacks a clear definition of the phrase as it applies to abortion services. The repealed regulatory definition provided that:

> (a) Payment for an abortion will, in the department's discretion, be covered under Medicaid if the physician services invoice is accompanied by certification that the (1) life of the mother would be endangered if the pregnancy were carried to term; or (2) pregnancy is the result of an act of rape or incest.

---

[3] If the physician submitting the Medicaid claim for costs associated with an abortion does not provide the information that would allow DHSS to document to the federal government that a particular abortion falls within the Hyde Amendment exceptions, then DHSS does not seek a federal match for the costs associated with that abortion.

What remains in the regulations for abortion services funding are the terms "elective" and "therapeutic" (a term that appears to be used as a substitute in the regulations for "medical necessity"), defined in 7 AAC 47.290, along with the general concept of "medically necessary" for all covered services under 7 AAC 105.100.

For general relief funding,[4] 7 AAC 47.290 provides as follows:

> . . .
> (7) "elective abortion" means a procedure, other than a therapeutic abortion, to terminate a pregnancy;
> (8) "therapeutic abortion" means the termination of a pregnancy;
> (A) certified by a physician as medically necessary to prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health; or
> (B) that resulted from actions that would constitute a crime of sexual assault under AS 11.41.410 - 11.41.425, a crime of sexual abuse of a minor under AS 11.41.434 - 11.41.440, or the crime of incest under AS 11.41.450.

For state funding under Medicaid, 7 AAC 105.100 describes "covered services" to include the general concept of "medically necessary" with cross-references to specified types of services as follows:

> The department will pay for a service only if that service
> (1) is identified as a covered service in accordance with AS 47.07, 7 AAC 43, and 7 AAC 105 - 7 AAC 160;
> (2) is provided to an individual who is eligible for Medicaid under 7 AAC 100 on the date of service;
> (3) is ordered or prescribed by a provider authorized to order or prescribe that service under applicable law;
> (4) is provided by a person who is enrolled as a Medicaid provider or rendering provider under 7 AAC 105.210, or otherwise eligible to receive payment for services under 7 AAC 43 and 7 AAC 105 - 7 AAC 160;
> *(5) is medically necessary as determined by criteria established under 7 AAC 43 and 7 AAC 105 - 7 AAC 160 or by the standards of practice applicable to the provider;*
> (6) has received prior authorization from the department, if prior authorization is required under 7 AAC 43 or 7 AAC 105 - 7 AAC 160; and

---

[4] Like the Medicaid program, the general relief program is designed to meet "medical needs." While some abortions are termed "elective" by some observers, they still meet a medical need, as determined by the physician who performs the abortion procedure. Distinguishing among types of abortions in the general relief program would infringe the same privacy and equal protection interests as courts have determined are infringed when abortion funding restrictions are imposed under the Medicaid program.

(7) is not specifically excluded as a noncovered service under 7 AAC 43 or 7 AAC 105 - 7 AAC 160.

(Emphasis added.) The phrase "medically necessary" is defined for purposes of mental health services and other purposes such as vision, hearing, and dental screening funding under Medicaid as follows:

7 AAC 43.486. Medical necessity determinations for mental health rehabilitation services

(a) The division will, in its discretion, periodically review the recipient's clinical record to determine whether the services requested are medically necessary. A medically necessary mental health rehabilitation service is a service designed to

(1) screen recipients for the presence of a mental or emotional disorder;

(2) assess the nature and extent of the mental or emotional disorder and its impact upon the recipient's ability to meet the demands of daily living, social, occupational, or educational functioning;

(3) diagnose the mental or emotional disorder;

(4) treat the mental or emotional disorder;

(5) provide rehabilitation for the mental or emotional disorder;

(6) prevent the relapse or deterioration of the recipient's condition due to the mental or emotional disorder.

(b) In making its determination as to whether the proposed services are medically necessary, the division will consider the following:

(1) the recommendations of the referring physician, mental health professional clinician, or interdisciplinary team organized under 7 AAC 43.470 that prescribed, ordered, recommended, or approved the service;

(2) the recipient's diagnosis and level of functioning;

(3) the risk of danger from the recipient to self or other individuals;

(4) the appropriateness of the level of care and the need for inpatient or residential care;

(5) whether the intervention targets specific symptoms and behavioral and social dysfunction, and logically derives from the assessments and diagnosis;

(6) whether the proposed services in the individualized treatment plan are consistent with generally accepted community-based treatments and practices for the treatment of the specific symptoms and behavioral and social dysfunction;

(7) whether the recipient agrees with the referring physician, mental health professional clinician, or interdisciplinary team under (1) of this subsection that the focus of the treatment will be the symptoms and behavioral and social dysfunction targeted for intervention;

(8) the extent to which past and current treatment has been successful in treating the symptoms and behavioral and social dysfunction;

(9) if the recipient is under 21 years of age, whether the recipient has, as indicated by the American Psychiatric Association's Diagnostic

and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, an Axis V Global Assessment of Functioning (GAF) rating at admission of 50 or less, or the recipient has an Axis V Global Assessment of Functioning (GAF) rating at admission of more than 50, but exhibits specific mental, behavioral, or emotional disorders that place the recipient at imminent risk for out-of-home supervision or protective custody of state or local authorities; the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, is adopted by reference;

(10) the extent to which a less restrictive or intrusive alternative treatment is not available;

(11) the extent to which a less expensive alternative is not available;

(12) the extent to which the units of service requested are no more than are necessary to meet the treatment or rehabilitation needs of the recipient;

(13) the extent to which the duration of services requested are no more than are necessary to reach the recipient-approved goals outlined in the individualized treatment plan;

(14) if the requested services are intended to prevent the relapse or deterioration of a mental disorder, the extent to which social functioning is improved through interventions provided as active treatment, targeted in specific therapeutic goals, and included in the individualized treatment plan;

(15) the likelihood that the recipient will benefit from any therapy provided on the same day as the recipient has received crisis intervention services.

(c) Payment for services determined not to be medically necessary under this section is subject to recovery under 7 AAC 105.260.

The limitation on abortion services funding is, as for other Medicaid covered services "medical necessity," a phrase that is not clearly defined in Alaska. The regulations that pertain to other types of covered services provide some guidance. Because the right to state funding for medically necessary abortions under the current state Medicaid program is protected by the Alaska constitution, the term "medically necessary abortion" has acquired a constitutional component of unknown scope. The relatively few Alaska cases involving abortion rights do not provide guidance as to how broadly the term "medically necessary abortion" is to be construed. There is a possibility that the Alaska courts may find that there are additional situations other than those described in the vetoed bill that fall within the scope of a medically necessary abortion and thus must be covered under the state Medicaid program.

What follows is a brief overview of how other states have handled the issue after the federal exception was rejected under those state's constitutional protections.

CASE LAW FROM STATES OTHER THAN ALASKA

Other states have dealt with the issue of state funding of abortion services in various ways. After the federal decisions of the 1970's that upheld restrictions on public abortion funding, courts in a number of states were required to analyze the issue under their own laws and constitutions to see if they supported the same conclusion. In contrast with the federal decisions, several state decisions determined that funding for abortions could not be singled out under public assistance programs. See Moe v. Sec'y of Admin. and Fin., 417 N.E.2d 387 (Mass. 1981); Comm. to Defend Reproductive Rights v. Myers, 625 P.2d 779 (Cal. 1981); Right to Choose v. Byrne, 450 A.2d 925 (N.J. 1982); Planned Parenthood Ass'n v. Dep't of Human Res., 663 P.2d 1247 (Or. App. 1983), affirmed at 687 P.2d 785 (Or. 1984); and Doe v. Maher, 515 A.2d 134 (Conn. Super. 1986); contra, Fischer v. Dep't of Pub. Welfare, 502 A.2d 114 (Pa. 1985).

Except for the Pennsylvania case, these state courts weighed the private and state interests involved with abortions and struck a different balance than the federal courts. They considered the state's desire to save money, state policies to promote childbirth, state claims that poor women can still choose to find private money to fund their abortions, state interests in protecting unborn life, and state arguments that they are not required to provide money for the exercise of constitutional rights. Most of these arguments had been successful in federal courts. Not so in the state courts of Massachusetts, California, New Jersey, Oregon, and Connecticut.

In Moe v. Secretary of Administration and Finance, supra, the highest state court in Massachusetts determined that the Massachusetts constitution afforded a greater degree of protection for the right to choose an abortion than the federal constitution.[5] In upholding the right of Medicaid recipients to have their abortions paid for, the court observed:

> [T]he Legislature need not subsidize any of the costs associated with child bearing, or with health care generally. However, once it chooses to enter the constitutionally protected area of choice, it must do so with genuine indifference. It may not weigh the options open to the pregnant woman by its allocation of public funds; in this area, government is not free to "achieve with carrots what [it] is forbidden to achieve with sticks." (citation omitted). We are therefore in agreement with the views expressed by Justice Brennan, writing in dissent to Harris v. McRae, [when he wrote] "In every pregnancy, [either medical procedures for its termination, or medical procedures to bring the pregnancy to term are] medically necessary, and the poverty-stricken woman depends on the Medicaid Act to pay for the expenses associated with [those] procedure[s]. But under [this restriction], the Government will fund only those procedures incidental to childbirth. By thus injecting coercive financial incentives favoring childbirth into a decision that is constitutionally

[5] Moe, 417 N.E.2d at 400.

> guaranteed to be free from governmental intrusion, [this restriction] deprives the indigent woman of her freedom to choose abortion over maternity, thereby impinging on the due process liberty right recognized in Roe v. Wade."[6]

In Committee to Defend Reproductive Rights v. Myers, supra, the highest court in California made a determination similar to Massachusetts'. The court noted that the state had no constitutional obligation to provide medical care to the poor or to fund the exercise of all constitutional rights, but held:

> Once the state furnishes medical care to poor women in general, it cannot withdraw part of that care solely because a woman exercises her constitutional right to choose to have an abortion.[7]

In Right to Choose v. Byrne, supra, the highest court in New Jersey also came to a similar conclusion, using an equal protection analysis. The court struck down a restrictive abortion funding statute, stating:

> [T]he Legislature need not fund any of the costs of medically necessary procedures pertaining to pregnancy. . . . Once it undertakes to fund medically necessary care attendant upon pregnancy, however, government must proceed in a neutral manner. Given the high priority accorded in this State to the rights of privacy and health, it is not neutral to fund services medically necessary for childbirth while refusing to fund medically necessary abortions. . . . The statute affects the right of poor pregnant women to choose between alternative necessary medical services. No compelling state interest justifies that discrimination, and the statute denies equal protection to those exercising their constitutional right to choose a medically necessary abortion.[8]

In Planned Parenthood Ass'n v. Department of Human Resources, supra, the court struck down an Oregon Medicaid regulation that would have restricted funding of abortions, saying:

> [I]t is difficult to understand the rational basis for denying one medically necessary surgical procedure to a pregnant woman solely because it involves an abortion while, at the same time, funding all other medically necessary services relating to pregnancy.[9]

---

[6] Id. at 402.

[7] Myers, 625 P.2d at 798 and footnote 31 accompanying the text.

[8] Byrne, 450 A.2d at 935 - 936.

[9] Planned Parenthood, 663 P.2d at 1255.

In Doe v. Maher, supra, a Connecticut court struck down a state Medicaid regulation that prohibited funding for medically necessary abortions, saying:

> This court is unable to reconcile the mandate and logic of the United States Supreme Court in Roe v. Wade . . . with the McRae . . . decision. Medicaid reimbursement funds are made available for all the health care costs of women, including the medical costs necessary to carry the fetus to term, but not for the medically necessary abortion. Surely, this constitutes infringement on the right to an abortion. . . . In adopting the regulation, . . . the state has ceased to preserve its neutrality at least under our state constitution. . . . And since that one exception also is a subject of a woman's constitutional rights, the regulation impinges upon those constitutional rights to the same practical extent as if the state were to affirmatively rule that poor women were prohibited from obtaining an abortion.[10]

In each of the state cases quoted in this section, the state court struck down an abortion funding restriction that would have been upheld by a federal court. These cases clearly demonstrate that state courts can find independent state grounds to strike down an abortion restriction that might be upheld in federal court. Unfortunately, the cases do not provide a standard definition of "medical necessity" for purposes of all covered services.

CONCLUSION

The concept of "medical necessity" provides the baseline for Medicaid and other types of public funding of covered health care services. Under the federal law, the United States Supreme Court upheld an exemption for coverage of abortions services that was narrower than the standard for all other types of covered services. Many states, including Alaska, found an equal protection and liberty interest violation in drawing a distinction among various types of service coverage.

Current Alaska legislation and regulations defer to the treating physician to determine whether a service is medically necessary for the physician's patient under the applicable standard of practice for most covered services, including abortion services.

If I may be of further assistance, please advise.

MEMORANDUM

DATE: March 28, 2011

TO: Senator Bettye Davis, Chair, Senate HSS Committee

FROM: Jon Sherwood, DHSS Medical Assistance Administrator

SUBJECT: Denali KidCare

Senator Davis, below is the Department's response to two issues that came up in the hearing on SB 5 on March 23, 2011.

First, we believe there may have been some confusion regarding regulations defining medical necessity as it related to abortion and the definition of therapeutic abortion. There are regulations defining therapeutic abortion at 7 AAC 47.290; however, these regulations only apply to the General Relief Medical program. This program was defunded by the Alaska Legislature in 1998. Prior to that time, abortions for Medicaid eligible women were covered under the General Relief Medical program. This defunding of the program that covered abortions for Medicaid eligible women is what triggered the court cases that currently govern state-funded abortions. Nothing in those court decisions applies the definition at 7 AAC 47.290 to the current requirement to pay for abortions nor provides a separate definition of medical necessity.

There is no specific definition of medical necessity for abortions in 7 AAC 105.100 or elsewhere in 7 AAC 105, the regulations that govern Medicaid services. Under 7 AAC 105.100(5), the general criteria for medical necessity if there is no specific definition for a service is "by the standards of practice applicable to the provider".

Given these facts, the Department believes its previous statement that there is no statute, regulation, or court decision that defines medical necessity as it applies to abortions paid for under Denali KidCare is accurate.

Second, questions arose about how the Department uses coding to determine that services are abortion-related, and if services for miscarriages or stillbirths might be included.

The Division of Health Care Services determines whether a claim is for an abortion related service based on a combination of procedure codes and diagnosis codes as follows:

If a claim comes in with one of several ICD-9 diagnosis codes related to pregnancy, the claim is pended for review. The reviewer then identifies the procedure code and determines if the procedure code - diagnosis code combination is an abortion-related service. If so, the claim is assigned a collocation code that will be charged against state funds only. In some cases, the reviewer may request medical case notes to make the final determination of whether or not the claim is for an abortion-related service.

While a multitude of procedure codes may be included in abortion-related services, use of diagnosis codes directs the reviewer to correctly exclude services related to miscarriage, stillbirths, or other circumstances not related to abortions when we identify abortion-related services.

Cc: William Streur, DHSS Commissioner

Re: Alaskan Options for Expanding Coverage for Pregnant Women
Date: November 4, 2010

During a recent trip to Alaska to participate in the Kids First Alaska meeting on October 19, 2010 at the invitation of the All Alaska Pediatric Partnership and the Mat Su Health Care Foundation, I was asked to provide clarifying information on opportunities to expand federally supported medical coverage to pregnant women in Alaska. This memo outlines current coverage in Alaska and provides an overview of federal options and requirements for expanding coverage.

Current Coverage for Pregnant Women and Children in Alaska

Currently, Alaska provides traditional Medicaid coverage to pregnant women with income up to 175% of the Federal Poverty Level (FPL) who are citizens or immigrants lawfully residing in the U.S. for at least five years. Additionally, the state provides, as federally required, emergency medical coverage for labor and delivery services to any uninsured pregnant woman who meets the Medicaid guidelines, regardless of citizenship or immigration status.

While the purpose of this memo is to identify options for expanding coverage to pregnant women, certain options are related to coverage for children. Alaska uses its Medicaid program for covering both children and pregnant women. Currently, the State provides Medicaid coverage for children up to 150% FPL and coverage between 150% and 175% FPL for children through a Medicaid expansion funded through the Children's Health Insurance Program (CHIP) called Denali Kid Care. The CHIP-funded Medicaid expansion for children qualifies for a higher financial participation rate. In Alaska the federal participation rate for Medicaid is 50%[1] and for CHIP is 65%.

Options for Expanding Coverage for Pregnant Women with Federal Financial Participation

- *Expand Medicaid Coverage*

  Federal Requirements and Options - States with Medicaid programs are required to cover pregnant women who are citizens with income up to 133% of the federal poverty level (FPL). States may expand income eligibility through Medicaid to pregnant women who are citizens and, at the state option, lawfully-residing immigrants up to an income level approved by the federal government. States are

also required to cover labor and delivery cost of all uninsured women under emergency Medicaid services if they otherwise meet Medicaid income and asset requirements.

Alaska Options – Alaska may expand Medicaid coverage for pregnant women with incomes higher than the current limit of 175% FPL. Under this option, the state may also elect to provide coverage for lawfully residing immigrant pregnant women. An expansion of eligibility requires a Medicaid State Plan Amendment (SPA). Federal financial participation under this option is 50%.

- *Expand CHIP Coverage to Pregnant Women*

Federal Requirements and Options – The 2009 federal reauthorization of the CHIP program (CHIPRA) expanded options for states to cover pregnant women. Under CHIPRA, states may provide coverage to pregnant women who are citizens and, at the state option, lawfully residing immigrant pregnant women, through CHIP up to 300% FPL, if certain conditions are met. Among those conditions, the state must cover children under Medicaid/CHIP up to at least 200% FPL and cover pregnant women through Medicaid up to 185% FPL. Pregnant women cannot be covered at a higher income level than children.

Alaska Options – To expand coverage to pregnant women under CHIPRA, the state would first have to expand Denali Kid Care coverage to children from the current income level of 175% FPL up to at least 200% FPL or higher, depending on the proposed income limit for pregnant women. Additionally, the state would have to expand Medicaid coverage to pregnant women between 175% and 185% FPL. With those coverage levels, the state may expand coverage for pregnant women above 185% FPL drawing down the higher 65% CHIP federal match.

This option would require a Medicaid SPA to raise the income eligibility level for pregnant women to 185% FPL. Additionally, Alaska must submit a CHIP SPA to expand income eligibility for children up to 200% FPL (or higher depending on the proposed income limit for pregnant women) and to provide CHIP coverage to pregnant women above 185% FPL.

The SPA establishes what is technically a separate CHIP program for low-income pregnant women rather than a CHIP-funded Medicaid expansion program as is Denali Kid Care. However, it can be operated as a "Medicaid look-alike" program using the existing Medicaid administrative structure and health care delivery system. The expansion to pregnant women between 175% and 185% FPL would qualify for the 50% federal Medicaid match, while expanded coverage for children above 175% FPL and for pregnant women above 185% would qualify for the higher federal CHIP match of 65%.

- *Expand Coverage Under the CHIP Unborn Child Option*

  Federal Requirements and Options - States may provide prenatal care, labor, and delivery services to pregnant women through the unborn child option in CHIP. Sixty days of postpartum care can also be funded if services are provided under a global capitation arrangement, which bundles payment for all prenatal, labor, delivery, and postpartum care. Through this option, coverage is provided without regard to the pregnant woman's immigration status. While it is the unborn child who is eligible, services are directed to the pregnant woman to ensure the delivery of a healthy newborn, including medical and dental services for the mother deemed necessary to promote the health of the unborn child.

  Alaska Options - The state may expand coverage under the CHIP unborn child option for the unborn child of pregnant women who do not otherwise qualify for Medicaid, as well as pregnant women above the current income limit of 175% FPL. Like the previous option, this would require a CHIP State Plan Amendment to create a separate CHIP program to establish coverage for the unborn child.

  Currently eligible children, ages 0 - 18 would continue to be covered under Denali Kid Care while the pregnant women receiving services based on the eligibility of their unborn child would be covered under the separate CHIP program. In this case, Alaska may also wish to design its CHIP unborn child coverage as a "Medicaid look-alike" program as described above. Services provided to pregnant women under the unborn child option qualify for a 65% federal financial participation in Alaska.

Summary

Several options exist for Alaska to expand coverage to pregnant women directly through Medicaid and/or CHIP. Financial participation depends on the option(s) chosen. This overview of provisions in CHIPRA to cover pregnant women may be helpful. Stakeholders may wish to review additional information provided to states by the Centers for Medicaid and Medicare (CMS) in these relevant State Health Official (SHO) letters of guidance and Q & A memos:

State Health Official Letter on the Unborn Child Option

State Health Official Letter on Lawfully Residing Children and Pregnant Women

State Health Official Letter on Covering Pregnant Women through CHIP

State Health Official Letter on Frequently Asked Questions about Covering Pregnant Women

[1] The 50% federal participation is the traditional matching rate for Alaska. During the period July 2008 through June 2011, the American Recovery and Reinvestment Act (ARRA) provides a higher match to help states deal with the increased need for services during the economic downturn.

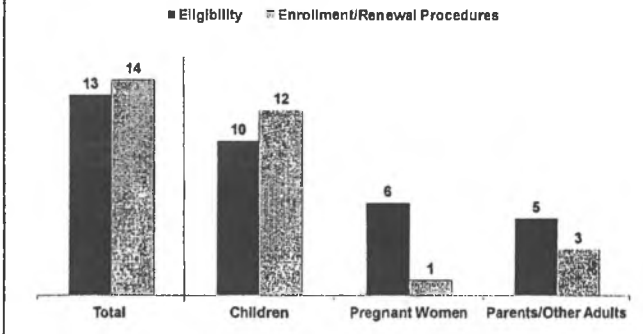
Executive Summary



Introduction

Over the past year, as the nation's attention was focused on the country's continuing economic problems and the debate over the passage of broader health care reform, Medicaid and the Children's Health Insurance Program (CHIP) continued to play their central role of providing coverage to millions of people who otherwise lack affordable coverage options. In 2010, this role was more pronounced than ever as families losing their jobs and access to employer-based coverage turned to public programs in growing numbers. Without Medicaid and CHIP, many more individuals would have become uninsured, adding to the 50 million currently without coverage. Based on a survey of state officials in all 50 states and the District of Columbia conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, this tenth annual report provides an overview of state actions on eligibility rules, enrollment and renewal procedures, and cost sharing practices in Medicaid and CHIP during 2010, as well as the status of coverage as of January 1, 2011, for children, parents, pregnant women, and other non-disabled adults.

As the survey findings illustrate, families could turn to Medicaid and CHIP because nearly all states "held steady" or made targeted improvements in their eligibility and enrollment rules in 2010, with a total of 13 states expanding eligibility and 14 states making improvements in enrollment and renewal procedures (Figure 1). This striking stability in public programs can be directly attributed to the federal government's decision both to provide temporary Medicaid fiscal relief to states through June 2011, and to require states to maintain their Medicaid and CHIP eligibility rules and enrollment procedures until broader health reform goes into effect.

Figure 1

Number of States Improving Access to Health Care Coverage, January 2010 – January 2011

SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

During 2010, states also were starting to look ahead to implementation of the Affordable Care Act (ACA) and, in some instances, to take advantage of early options to improve Medicaid coverage. Health reform provides a broad expansion in coverage that will take effect in 2014, including extending Medicaid to a new national eligibility floor of 133 percent of the federal poverty level ($24,352 for a family of three and $14,404 for an individual in 2010). However, it is important for states to begin taking steps now to address the technological changes necessary to develop the online, consumer-friendly enrollment process envisioned under the ACA. Although there has been some progress in 2010, the survey highlights that states still have a significant amount of work to be prepared in 2014. Looking ahead, it will be important for state policymakers to continue moving forward on implementation while sustaining the gains and progress made in coverage to date.

Key Findings on Eligibility and Enrollment Procedures

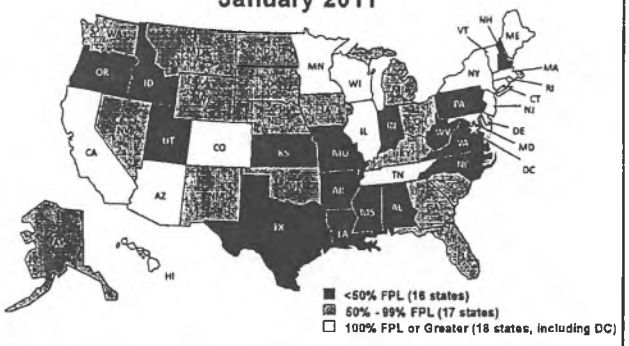
Nearly all states (49, including DC) held steady or made targeted improvements in their Medicaid and CHIP eligibility rules and enrollment procedures in 2010. By doing so, they maintained the central role of Medicaid and CHIP in providing affordable coverage to children and, to a lesser extent, their parents and other adults, many of whom lost jobs and their access to employer-based coverage in the ongoing economic downturn. This stability can be directly attributed to provisions in the American Recovery and Reinvestment Act (ARRA) adopted in February 2009, that required states to maintain their Medicaid eligibility rules and enrollment procedures as a condition of receiving a significant, temporary increase in the federal Medicaid matching rate. The ACA also included a maintenance-of-effort (MOE) requirement designed to keep Medicaid coverage steady for adults until broader reform goes into effect in 2014 and for children until 2019, as well as to extend these protections to children covered by CHIP. Without the MOE requirements and enhanced federal funding, many states almost certainly would have needed to turn to cutbacks in coverage in 2010 as a result of continuing budget pressures. Two states (AZ and NJ) did make coverage reductions that were not subject to the MOE. States also made other changes such as cuts to provider reimbursement rates and benefits to reduce Medicaid spending growth in 2010.

Despite significant budget challenges, 13 states went beyond maintaining coverage to implement targeted eligibility expansions for children, pregnant women, and adults in 2010. These expansions varied in size and scope. Most of the expansions focused on providing increased coverage to uninsured children, and in a many cases, also produced some state savings by allowing the state to draw down federal matching funds for previously fully state-funded coverage.

Building on progress made over the past decade, 3 states (CO, KS, and OR) increased income eligibility in Medicaid/CHIP for children in 2010. As such, as of January 1, 2011, 25 states, including DC, cover children in families with income at least up to 250 percent of the federal poverty level ($45,775 for a family of three in 2010), although enrollment remains heavily concentrated among the lowest-income children (Figure 2). Oregon also added a buy-in program in 2010 that enables families with incomes above Medicaid and CHIP thresholds to buy into coverage.

Figure 2

Children's Eligibility for Medicaid/CHIP by Income, January 2011



Notes: The federal poverty line (FPL) for a family of three in 2010 is $18,310 per year. IL uses state funds to cover children up to 300% of the FPL; OK has a premium assistance program for select children up to 200% of the FPL. AZ's CHIP program is currently closed to new enrollment.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

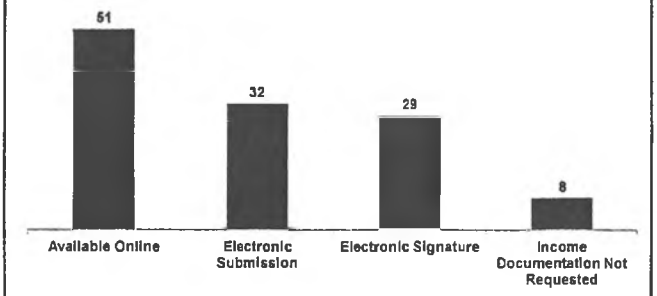
In 2010, states continued to take advantage of the option to cover lawfully-residing immigrant children and pregnant women during their first five years residing in the country. The Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) allowed states to draw down federal funding to cover these populations without imposing a 5-year waiting period. Six (6) states (DE, MN, MT, NE, NC, and WI) adopted the option for lawfully-residing immigrant children in 2010, resulting in a total of 21 states having eliminated this barrier for children as of January 1, 2011. In 15 of these states, coverage had previously been provided to these children with state-only dollars. In addition, in 2010, 5 states (DE, MN, NE, NC, and WI) adopted this option for lawfully-residing pregnant women, bringing the total number eliminating the "five-year bar" for pregnant women to 17. In 9 of these states, coverage had previously been provided with state-only dollars.

While states have made significant progress in expanding coverage for children, eligibility for their parents continues to lag far behind. In 2010, only one state (CO) expanded Medicaid coverage for parents. As of January 1, 2011, 33 states do not cover parents up to 100 percent of the federal poverty level ($18,310 for a family of three in 2010). The median eligibility threshold for parents remains at 64 percent of the federal poverty level and 16 states limit eligibility to below 50 percent of the federal poverty level ($9,155 for a family of three in 2010). In the absence of further expansions, these restrictive eligibility levels will leave most uninsured, low-income parents without an affordable coverage option until the health reform expansion goes into effect in 2014 (Figure 3).

Figure 3

Medicaid Eligibility for Working Parents by Income, January 2011

Notes: The federal poverty line (FPL) for a family of three in 2010 is $18,310 per year. Several states also offer coverage with a benefit package that is more limited than Medicaid at higher income levels.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.



Low-income adults without dependent children remain ineligible for Medicaid in the vast majority of states. Under the ACA, Medicaid eligibility will be expanded to a minimum of 133 percent of the federal poverty level, ending the historic exclusion of non-disabled, non-pregnant adults without dependent children from the program. While this change is not required to be in effect until January 1, 2014, states have the option of moving early to cover these adults. In 2010, Connecticut and the District of Columbia took advantage of this option and moved low-income adults they had previously served through state-funded programs to Medicaid. Further, California received approval in 2010 for a waiver to continue and expand county coverage initiatives serving low-income adults. However, even with these expansions, as of January 1, 2011, only seven states (AZ, CT, DE, DC, HI, NY, and VT) provide Medicaid or Medicaid-equivalent benefits to adults without dependent children. Additional states offer more limited coverage to these adults, but in most states, low-income adults without children do not have access to public coverage regardless of their income.

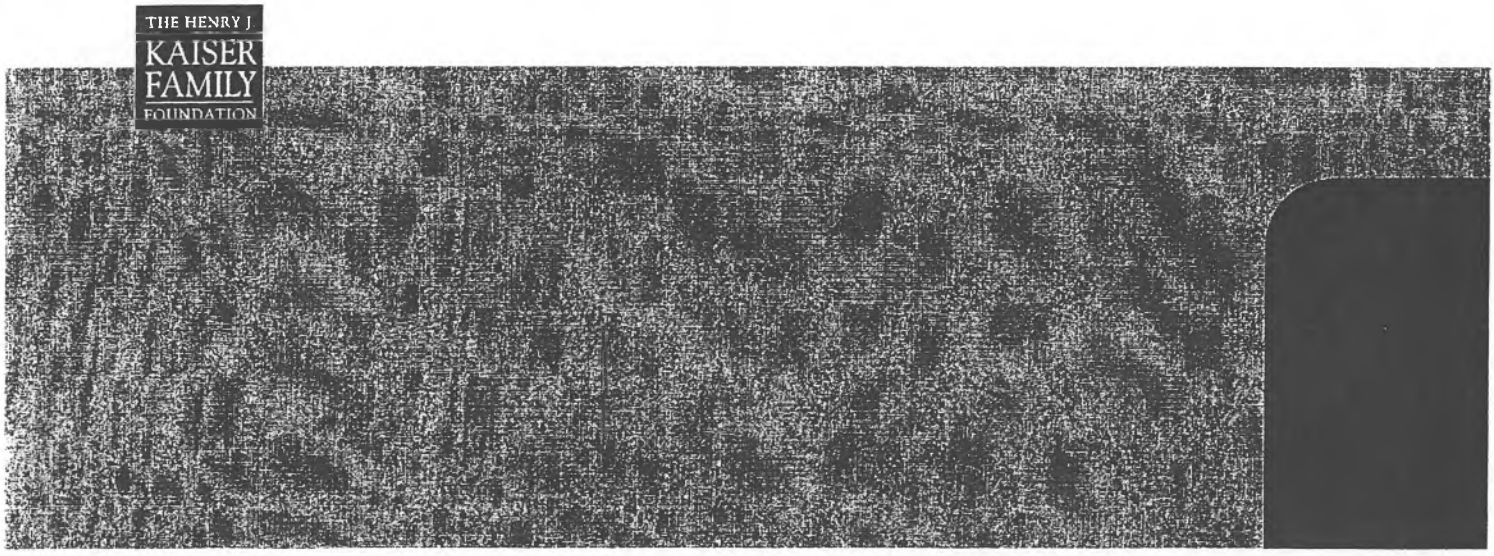
States adopted improvements in their enrollment and renewal procedures in 2010 that helped to reduce burdens on families, streamline administrative processes, and achieve program efficiencies. In making these improvements, states often turned to options provided by CHIPRA. Specifically, 29 states took advantage of the CHIPRA option to more efficiently and accurately verify citizenship status by relying on an electronic data match with the Social Security Administration (SSA). A smaller, but still notable number of states, moved ahead with other simplification measures including the CHIPRA "Express Lane Eligibility" option, as well as long-standing strategies such as presumptive eligibility and continuous eligibility for children. Many appear to have done so at least in part to qualify for the Medicaid performance bonuses included in CHIPRA. These bonuses provide a financial reward and recognition to states that have implemented at least 5 of 8 simplification policies and that have reached specific enrollment targets for children in Medicaid. The Administration encouraged states in their efforts by launching the *Connecting Kids to Coverage Challenge*, a partnership of national and state organizations committed to enrolling all five million uninsured but eligible children in public programs.

States continued work to modernize their programs and begin preparing for health reform implementation by focusing on technological improvements. A number of states made program improvements such as offering applications that can be submitted online. Despite this early work, the survey findings highlight that states have a long way to go to develop the integrated, technology-driven, web-based eligibility systems for Medicaid, CHIP, and subsidized Exchange coverage that are envisioned and required under reform. For example, all states, including DC, post their Medicaid applications online, but only 32 accept the electronic submission of those applications. Among the 32 that accept electronic submission, 29 allow for the use of an electronic signature, but only 8 do not routinely ask families to submit paper documentation of information via mail or fax before checking other data sources to verify eligibility (Figure 4). In light of a rule proposed by the Administration at the end of 2010 to provide states with a 90 percent matching rate to prepare their Medicaid eligibility systems for health reform and the likelihood of additional guidance and funding opportunities in the months ahead, it can be expected that next year's survey will show more developments in this area.

Figure 4

Status of Online Applications for State Medicaid Programs, January 2011

Notes: In some states the online application is only available for children applying for coverage.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.



Conclusion

As implementation of broader health reform moves forward, the findings of this survey describe the foundation for coverage of low-income families and individuals through Medicaid and CHIP. These programs will play an even more substantial role in the years to come, particularly with the expansion in coverage for low-income adults. Valuable lessons can be learned from how states have streamlined and simplified their enrollment and renewal procedures in these programs, and while additional improvements will be necessary to further transform Medicaid and CHIP in order to fulfill the promise of reform, they provide a sound platform on which to begin.

Looking ahead, states face the challenge of implementing reform while at the same time dealing with significant budget pressures due to the nation's continuing economic problems and the corresponding increased need for Medicaid and CHIP. To continue forward progress on reform and keep the foundation solid, it will be important to focus on sustaining the coverage gains and progress made to date even in the face of these challenges. Health reform has the potential to markedly reduce the number of uninsured and provides states new opportunities to modernize, streamline, and continue to improve their Medicaid programs. While some of the most significant changes in health reform do not go into effect until 2014, it is important for states to lay the groundwork now. In 2010, there were initial signs of state Medicaid agencies preparing for health reform implementation, but more activity can be expected in 2011.

FOCUS on Health Reform

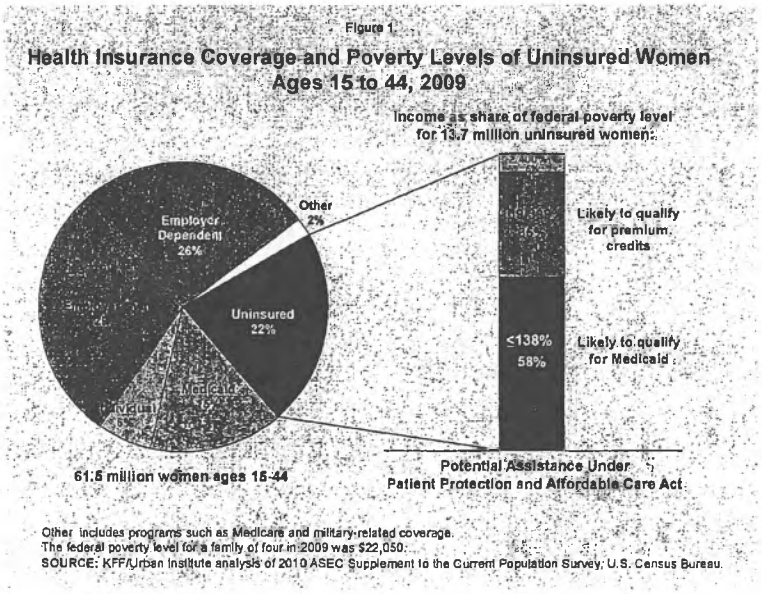
THE HENRY J. KAISER FAMILY FOUNDATION

NOVEMBER 2010

Access to Abortion Coverage and Health Reform

The Patient Protection and Affordable Care Act (ACA) will make significant changes to health coverage for women, expanding their access to coverage and broadening the health benefits that many will receive. Coverage for abortion services, however, was addressed separately under health reform. As result, the extent of abortion coverage that women will receive once ACA is fully implemented in 2014 will depend largely on policies enacted at the state level as well as choices that plans and consumers will make in terms of coverage of abortion services. This brief summarizes the major insurance coverage provisions of the ACA that are relevant for women of reproductive age, reviews current federal and state policies on abortion coverage and how they may be modified under health reform, and discusses the potential impact of the federal legislation on women's access to abortion coverage.

How does the Patient Protection and Affordable Care Act affect overall coverage for women of reproductive age?



Signed into law on March 23, 2010, the ACA is a federal law aimed at ensuring that almost all U.S. citizens and legal residents have health insurance by requiring that most individuals obtain a minimum level of insurance coverage by 2014. This is to be achieved through a combination of public and private insurance expansions. By 2014, Medicaid will be available to cover many more of the nation's poorest uninsured, employers will be more likely to offer affordable coverage to their employees, and small businesses and other uninsured individuals will have access to state-based exchanges that will offer a variety of plans from which they can purchase insurance. The scope of benefits, including abortion, covered under these different avenues will vary.

The ACA will expand health care coverage to many of the nation's uninsured by extending Medicaid eligibility to all qualifying individuals with incomes up to 138% of the federal poverty level (FPL).[1] Uninsured individuals with incomes above 138% FPL will be able to purchase coverage in new state-based insurance exchanges that will act as marketplaces, open to all qualifying, uninsured individuals and small businesses with up to 100 employees. These state-based exchanges are to offer multiple insurance plans that uninsured individuals can choose from to purchase coverage. To help with the costs of insurance, the federal government will provide subsidies (in the form of premium credits) to eligible individuals and families with incomes from 139% to 399% FPL or if their share of premiums exceeds 9.5% of their income.[2]

It is estimated that 13.7 million women ages 15 to 44 are uninsured currently, 93% of whom would qualify for federal assistance under the health reform law, based on their income. The act would potentially extend Medicaid to 58% or 8 million women, and an estimated 4.8 million women (35%) would qualify for federal premium credits[3] to purchase coverage as shown in Figure 1.

What are current federal and state laws regarding abortion coverage and financing?

Federal law bans the use of any federal funds for abortion, except when the pregnancy is a result of rape, incest, or if it is determined to endanger the woman's life. In effect since 1977, this rule known as the Hyde Amendment is not a permanent law; rather it has been attached annually to Congressional appropriations bills, and has been approved every year by the Congress. The Hyde Amendment initially affected only funding for abortions under Medicaid, but over the years, its reach broadened to limit federal funds for abortion for federal employees, women in the Indian Health Service, and in the military.

State level policies also have a large impact on abortion coverage, particularly since states are responsible for operation of Medicaid programs. The Medicaid program serves millions of low-income women and is a major payor of reproductive health services. It is estimated that two-thirds of adult women on Medicaid are in their reproductive years.[4] As discussed earlier, the federal Hyde Amendment restricts state Medicaid programs from using federal funds to cover abortions beyond the cases of life endangerment, rape, or incest. However, if a state chooses to, it can use its own funds to cover abortions in certain other circumstances, and states will continue to have this option under health reform. Currently, 17 states and the District of Columbia use state-only funds to cover abortions beyond the federal limitations for women on Medicaid.[5] In the other 33 states, Medicaid programs do not pay for any abortions beyond the Hyde restrictions (Figure 2). Currently, in these 33 states, an estimated 4.6 million women ages 15 to 44 are uninsured and have incomes less than 138% FPL, and would meet the income eligibility criteria to qualify for Medicaid under health reform (Table 2).[6]

Figure 2

Abortion Financing Under Medicaid, 2010

Source: Guttmacher Institute, State Policies in Brief, "State Funding of Abortion Under Medicaid," November 2010

States also have authority over the scope of benefits for public employees. Currently, 13 states restrict abortion coverage in insurance plans for public employees. These restrictions range from states that provide coverage only under the Hyde limits to states that prohibit coverage for all abortions, regardless of circumstances.[7] States also regulate benefits covered by private insurance plans. Currently, at least four states (Idaho, Kentucky, Missouri, and North Dakota) prohibit private insurance coverage for abortions except in the case of rape, incest, or to save the woman's life. These states allow insurers to sell riders for abortion coverage, but there is little evidence about their availability and no documentation of their cost or impact on access.

How will abortion coverage be handled by Medicaid and plans in the exchanges under health reform?

Medicaid: The ACA reinforces current federal restrictions, limiting federal funds to be spent on abortions only to cases when the pregnancy endangers the life of the woman or results from rape or incest. This will not change for Medicaid under health reform; state Medicaid programs will continue to have the option to cover other medically necessary abortions using only state funds and no federal funds. President Obama issued an executive order as part of health reform that restated the federal limits specifically for Medicaid and community health centers.[8]

Plans in the Exchange: Plans participating in state-based exchanges will be required to cover a minimum set of services, defined as "essential health benefits, and the ACA explicitly prohibits states from including abortion in any essential benefits package. Therefore, no state or insurer offering a plan in an exchange will be required to offer abortion coverage, and each exchange must include at least one plan that does not cover abortions beyond those permitted by current federal law. Furthermore, states can bar all plans participating in the state exchanges from covering abortions, which at least five states (Arizona, Louisiana, Mississippi, Missouri, and Tennessee) have already elected to do since the health reform law's passage.[9]

If the state does not bar coverage of abortions, private insurers can offer a plan that covers abortions beyond the federal limitations within an exchange. The ACA outlines a methodology for states to follow to ensure that no federal funds are used towards coverage for abortions beyond Hyde. Any plan that covers abortions beyond Hyde limitations must estimate the actuarial value of such coverage by taking into account the cost of the abortion benefit (valued at least $1 per enrollee per month). This estimate cannot take into account any savings that might be achieved as a result of the abortions. Furthermore, plans that receive federal subsidies (it is believed that all plans in the exchanges will receive at least some federal subsidies) would have to collect two premium payments from all enrollees, including men and women of all ages. One payment would be for the value of the abortion benefit and the other payment would be for all other services. The funds would be deposited in separate allocation accounts, overseen and managed by state health insurance commissioners. Both the federal Office of Management and Budget and the Department of Health and Human Services are expected to publish guidelines in 2010 that states must follow to ensure that exchanges are adhering to these requirements.[10] The health reform law prohibits plans in the exchanges from discriminating against any provider because of "unwillingness" to provide abortions. It does not preempt other current state policies regarding abortion, such as parental notification and waiting period laws.

Currently, most (55%) women of reproductive age are covered through employer-sponsored plans from their own job or their husbands. Many of these plans do cover abortion currently and will be allowed to continue once health reform is fully implemented. Table 1 summarizes the ACA's major provisions on abortion coverage.

Table 1: Summary of Abortion Provisions in the Patient Protection and Affordable Care Act (P.L. 111-148)

Benefit Design	Prohibits abortion coverage from being required as part of the federally established essential benefits package. States can prohibit coverage for any abortions by all plans in their state-based exchange. At least one plan within a state exchange must not cover abortions beyond those permitted by federal law (to save the life of the woman and in cases of rape and incest). Private Plans: Can provide a plan in the exchanges that covers abortions beyond those permitted by federal law as long as they comply with requirement to segregate federal funds. All states' Pre-existing Condition Insurance Plans cannot cover abortions beyond those permitted by federal law.
Financing	Prohibit federal subsidies (for premiums or cost sharing) from being used to purchase a health plan in the exchanges that includes coverage for abortions beyond those permitted by federal law. In order to segregate funds, plans that choose to offer coverage for abortions beyond Hyde limitations must estimate the actuarial value of covering abortions by taking into account the cost of the abortion benefit (valued at least $1 per enrollee per month) and cannot take into account any savings that might be reaped as a result of the abortions. Any exchange plan that covers abortions and includes enrollees that receive federal subsidies must collect two separate premium payments from all enrollees – one payment for value of abortion benefit and one payment for all other covered services.
State Role	Law will have no effect on state laws regarding coverage, funding or procedural requirements on abortions, such as parental notification/consent laws. States can use state-only funds to pay for "medically necessary" abortions beyond federal requirements under Medicaid or to pay for abortion coverage in plans offered in an exchange. States can prohibit plans in new exchanges from covering any abortions. State-level health insurance commissioners will monitor and oversee payment segregation requirements for the purchase of plans within their respective exchanges.
Discrimination/ Protection	Prohibit plans participating in the exchanges from discriminating against any provider because of an unwillingness to provide, pay for, provide coverage of, or refer for abortions.

How much does an abortion cost?

The ACA's complex combination of restrictions means that under health reform, many currently uninsured women will obtain coverage either through Medicaid or an exchange; however, many of these women will not be covered for abortions and will have to pay out-of-pocket if they seek one. The cost of an abortion varies depending on factors such as location, facility, timing, and type of procedure. A clinic-based abortion at 10 weeks' gestation is estimated to cost between $400 and $550, whereas an abortion at 20-21 weeks' gestation is estimated to cost $1,250-$1,800 or more.[11] Though the vast majority (~90%) of abortions are performed early in pregnancy, the costs could still be economically challenging for many low-income women.[12]

What is the impact of the federal abortion provisions on women in high-risk pools?

The new health insurance exchanges will become operational in 2014. Prior to that time, some uninsured individuals will be able to buy coverage in new state-based, federally subsidized high-risk pools. Separate from states' currently operating high-risk pools, these new federally funded, Pre-existing Condition Insurance Plans (PCIP) will be open to individuals who have been uninsured for at least six months with existing health conditions, and will provide temporary coverage until exchanges become fully operational in 2014. States can operate the PCIPs or request the federal government to operate them, but all are financed with federal funds.

In July 2010, the Department of Health and Human Services issued a federal directive prohibiting all of these new PCIPs from covering abortions, effectively extending the Hyde Amendment to these plans as well.[13] Women who enroll in these temporary high-risk pools will not be able to use their own private dollars to purchase abortion coverage. Since many women eligible for PCIPs have more health problems than average, they could be more likely to encounter medical complications should they become pregnant. It is estimated that an additional 200,000 to 400,000 individuals are expected to enroll in the temporary PCIPs.[14] This order does not preempt states' policies on abortion coverage in their existing high-risk pools, nor does it prohibit women from paying a provider directly should they seek an abortion.

* * * * *

As a result of health reform, many more women will gain health insurance coverage. The decisions that the federal government, states, insurance companies, and policymakers will make over the next few years will determine the extent of abortion coverage that will be available to women across the nation once health reform is fully implemented in 2014.

Table 2: State Level Estimates of Percent of Uninsured Women Ages 15-44 Likely to Qualify for Federal Assistance under the Patient Protection and Affordable Care Act

		Uninsured Women, 2008-2009		Percent of Currently Uninsured Women Ages 15-44 Potentially Eligible for Federal Assistance in 2014

SHO # 09-006
CHIPRA #2

May 11, 2009

Dear State Health Official:

The Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA), Public Law 111-3, ensures that States are able to provide necessary health coverage for low-income uninsured children eligible under the Children's Health Insurance Program (CHIP). Section 111 of CHIPRA adds a new section 2112 to the Social Security Act (the Act) which gives States the option to provide necessary prenatal, delivery, and postpartum care to low-income uninsured pregnant women through an amendment to its State child health plan (CHIP plan) (as described in section 2112). This letter provides general information concerning the new option and guidance on amending your CHIP plan to reflect the coverage of pregnant women, should your State wish to take advantage of this option.

Background

Prior to CHIPRA, States could provide services to pregnant women either through a Section 1115 demonstration program or under the CHIP State plan by covering unborn children. CHIPRA allows States to continue providing coverage through these two options or through a new option of covering pregnant women under the CHIP plan. This letter outlines the differences between options to assist States in adopting coverage for pregnant women.

Continuation of Existing Section 1115 Pregnant Women Demonstrations

The CHIPRA allows States to continue existing section 1115 demonstrations that provide coverage for pregnant women with title XXI funds. These States may continue demonstrations or modify their CHIP plans to include pregnant women as described below.

Continuation of Coverage for Unborn Children Under the CHIP Plan

States will continue to have the option of considering an unborn child to be a targeted low-income child and therefore eligible for coverage under CHIP, if other applicable eligibility criteria are met. This permits States to provide health care services to promote healthy pregnancies, regardless of the mother's eligibility status. States may continue to pay for pregnancy and delivery services through a bundled payment or global fee method, under which a single payment is made for prenatal care, labor, delivery, and postpartum care.

New Option to Cover Targeted Low-Income Pregnant Women Under the CHIP Plan

The CHIPRA also allows States the option of providing health care coverage for uninsured, low-income pregnant women under the CHIP plan. Under this option, the pregnant woman is eligible for coverage, rather than the unborn child.

States that choose to cover pregnant women under the CHIP plan are eligible to receive enhanced Federal Medical Assistance Payments (FMAP) for such expenditures and have the option of providing presumptive eligibility to pregnant women.

As established in CHIPRA (Section 111), in order to cover pregnant women through the State plan option under CHIP, States must meet the following criteria:

- States may only provide coverage under the CHIP plan for pregnant women who were not eligible under the Medicaid State plan as of July 1, 2008;
- States must cover pregnant women under Medicaid up to the minimum income level of 185 percent of the Federal poverty level (FPL). Any State that currently does not provide Medicaid coverage for pregnant women up to this income level, can only claim regular FMAP for pregnant women covered under a Medicaid expansion whose family income is at or below 185 percent of the FPL;
- States may not establish a higher income eligibility level for pregnant women than the State's eligibility level for targeted low-income children;
- States must cover children under 19 years of age under Medicaid or CHIP, up to a minimum income level of 200 percent of the FPL;
- States must not apply an effective income level for pregnant women under CHIP that is lower than the Medicaid effective income level and cannot cover higher income pregnant women without covering lower income pregnant women;
- States must not apply any preexisting condition exclusion or waiting period for CHIP coverage of pregnant women;
- States must not impose any cap or limitation on the enrollment of targeted low-income children, and must not have any waiting list or any procedures designed to delay applications for enrollment; and
- States may not require enrollee cost sharing for preventive or pregnancy-related services.

Benefits

States have the flexibility to offer coverage that meets the requirements of section 2103 of the CHIP statute under the new CHIP option for pregnant women, including in most cases, benefits during a 60-day postpartum period.

Coverage of Both the Unborn Child and Pregnant Women

States may opt to cover both the unborn child and pregnant women under the CHIP plan. If States elect both options, we want to emphasize that States will need to uniquely identify

enrollees so that there is no duplication of payment for services. Eligibility under either category is subject to screening for Medicaid eligibility, and payment is not available under CHIP for services that would be covered under Medicaid.

Submitting a CHIP Plan Amendment

States wishing to adopt any of the options described above and be eligible for funds under title XXI, must submit a CHIP plan amendment, which must be approved by the Secretary. States adopting such an expansion will be able to amend their CHIP plan by submitting the enclosed addendum to the CHIP plan and budget form. The addendum sections correspond to the relevant sections in your current State Child Health Plan Template.

States that have implemented CHIP through a Medicaid expansion program, but wish to extend coverage to unborn children and/or pregnant women under a separate child health program, may do so by submitting the same CHIP plan amendment above. Such States would then continue to cover children from birth through age 18 under Medicaid expansion programs, and would operate separate CHIP programs only for pregnant women and/or unborn children.

To incorporate either of these provisions into the CHIP plan, the State, through the appropriate State official, should submit these pages electronically to both the Centers for Medicare & Medicaid Services (CMS) Central and Regional Offices. Once approved, these pages will be added to the current State Child Health Plan as an addendum describing coverage for pregnant women. Before submitting such an amendment, please review the current approved CHIP plan to determine if it is necessary to amend additional sections simultaneously (e.g., if a new benefit package is being adopted, if cost sharing is being modified just for this eligibility group, if different service delivery type is being used, if different enrollee protections apply, or if the State has not previously implemented a separate child health program). Note that if a State does not choose to use the same benefit type and package of services for pregnant women or unborn children, the State needs to submit a revised section 6 of the State plan with its amendment. Questions or assistance may be provided by your Central Office or Regional Office project officer.

In addition to offering the option of covering targeted low-income pregnant women under the CHIP plan, CHIPRA requires that children born to a woman receiving pregnancy-related assistance shall be deemed on the date of the child's birth to have applied for coverage under CHIP or Medicaid, and shall be found eligible for the appropriate program, and until the child reaches age one (as described in section 2112(e) of the Act). During this deemed eligibility period, the new law stipulates that the child health or medical assistance eligibility identification number of the mother shall also serve as the identification of the child. Additionally, during this period, all claims shall be submitted and paid for the child under the mother's identification number (unless the State issues a separate identification number for the child before the child reaches age one).

Draft State plan template pages to implement these options are enclosed. CMS is in the process of obtaining the required Office of Management and Budget (OMB) clearance under the Paperwork Reduction Act for the State plan amendment (SPA) templates. Given that States may need considerable time to complete these templates, CMS is sharing in draft the SPA template at

this time. Until such time when this SPA template is assigned an OMB clearance number, States are not obligated to respond.

It is well established that access to prenatal services and care throughout a mother's pregnancy improves health outcomes for both the mother and child. Therefore, we encourage States to consider these options to establish eligibility for this vulnerable population.

Sincerely,

/s/

Subject: FW: SB 5, DKC eligibility, Friday April 8th, 9AM Senate Finance

Dear Senate Finance Committee,

The purpose of this correspondence is to ask that you please support Sentate Bill 5 to increase Denali KidCare eligibility back to 200%. United Way of Mat-Su believes that every child should have health coverage and there are an estimated 18,000 uninsured children in Alaska.

I understand the concerns about funds being used to pay for abortions. Personally, I am a pro-life advocate who seeks to reduce the prevalence of abortions; furthermore, I completely disagree with legislation that uses tax money to fund abortions. I had my son when I was 19 years old and a major reason why I chose to raise him (rather than choose adoption) was that I was able to get him medical coverage through Denali Kid Care. In my opinion, the benefits of increased childcare for children in our state outweigh the costs associated with a minor percentage of these funds being used to fund abortions. I also speculate that the decision to veto the bill could will not reduce the prevalence of abortions and could potentially have the opposite effect as less women would qualify for health care coverage during their pregnancy for their child; thus, they may feel that abortion is the only affordable option. If the end goal is reduced prevalence's of abortion, I would advise that you attend to issues around informed consent to ensure that women are being adequately informed about their options and have had sufficient time in counseling to process their options prior to making a final decision. If a woman has made the decision to terminate her pregnancy, a lack of public funding for the operation is hardly a deterrent compared to the idea of completing a pregnancy and raising a child with no medical coverage. If this bill passes more pregnant women get a chance to deliver a healthy child through covered prenatal appointments and treatment.

Over 80% of the children receiving Denali Kid Care are from working families, but their employers either can't afford or simply don't provide employee health insurance Many of the parents in these families work more than one job. A simple examination of the numbers demonstrates that a family of four (Mat-Su's average family size) with an income of $55,140 a year (200%) with usual expenses cannot afford to purchase stand-alone health insurance for their kids. Denali Kid Care is an Alaskan solution that supports families, and helps parents raise healthy kids.

Children and teens covered by Denali KidCare receive a full range of prevention and treatment services, including doctor's visits, health check-ups and screenings, vision exams and eyeglasses, dental check-ups, cleanings and fillings, hearing tests and hearing aids, hospital care, speech therapy, physical therapy, mental health therapy, substance abuse treatment, laboratory tests, prescription drugs and medical transportation. Medicaid-enrolled children who are up-to-date on their well-child check-ups through 2 years of age are 48% less likely to experience an avoidable hospitalization. Children with incomplete care are 60% more likely to visit an emergency room compared to children who are up-to-date on their well-child care.

The bottom line is that increased federal support for state programs like Denali KidCare improves Alaska's ability to provide better health for more of Alaska's children. I urge you to pass this bill; furthermore, I would like to recommend that our legislators look into ideas such as regulating the services covered by Denali Kid Care, instituting co-pays and assets tests, and other ideas during the interim when there is adequate time for analyses and good discussions.

Sincerely,

Desiree Compton, MS

Addendum to State Child Health Plan Describing Coverage of Pregnant Women

Section 1. General Description and Purpose of the State Child Health Plans and State Child Health Plan Requirements. (Section 2101)

1.1 The State will use funds provided under Title XXI primarily for (Check appropriate box) **(42 CFR 457.70)**:

1.1.1 ☐ Obtaining coverage that meets the requirements for a separate child health program (Section 2103); or

1.1.2. ☐ Providing expanded benefits under the State's Medicaid plan (Title XIX); or

1.1.3. ☐ A combination of both of the above.

1.2 ☐ Please provide an assurance that expenditures for child health assistance will not be claimed prior to the time that the State has legislative authority to operate the State plan or plan amendment as approved by CMS. (42 CFR 457.40(d))

1.3 ☐ Please provide an assurance that the State complies with all applicable civil rights requirements, including title VI of the Civil Rights Act of 1964, title II of the Americans with Disabilities Act of 1990, section 504 of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975, 45 CFR Part 80, Part 84, and Part 91, and 28 CFR Part 35. (42 CFR 457.130)

1.4 ☐ Please provide the effective (date costs begin to be incurred) and implementation (date services begin to be provided) dates for this plan or plan amendment (42 CFR 457.65):

Effective date:

Implementation date:

Section 2. General Background and Description of State Approach to Child Health Coverage and Coordination. (Section 2102 (a)(1)-(3) and Section 2105)(c)(7)(A)-(B))

2.2. Describe the current State efforts to provide or obtain creditable health coverage for uncovered children by addressing: (Section 2102(a)(2) and 42 CFR 457.80(b))

2.2.1. The steps the State is currently taking to identify and enroll all uncovered children who are eligible to participate in public health insurance programs (i.e., Medicaid and State-only child health insurance):

Section 4. Eligibility Standards and Methodology. (Section 2102(b))

4.1. The following standards may be used to determine eligibility of targeted low-income children for child health assistance under the plan. Please note whether any of the following standards are used and check all that apply. If applicable, describe the criteria that will be used to apply the standard. (Section 2102(b)(1)(A), 42 CFR 457.305(a), and 457.320(a))

4.1.1. ☐ Geographic area served by the Plan:

4.1.2. ☐ Age:

4.1.3. ☐ Income:

4.1.4. ☐ Resources (including any standards relating to spend downs and disposition of resources):

4.1.5. ☐ Residency (as long as residency requirement is not based on length of time in State) :

4.1.6. ☐ Disability Status (so long as any standard relating to disability status does not restrict eligibility):

4.1.7. ☐ Access to or coverage under other health coverage:

4.1.8. ☐ Duration of eligibility:

4.1.9. ☐ Other standards (identify and describe):

4.1-P. ☐ The State includes eligibility for one or more populations of targeted low-income pregnant women under the plan. ***Please describe the population of pregnant women that the State proposes to cover in this section. Please include any criteria, such as the above categories (e.g., income and resources) that will be applied to this population. Please use the same reference number system for those criteria (for example, 4.1.1-P for a geographic restriction).***

4.2. The State assures that it has made the following findings with respect to the eligibility standards in its plan: (Section 2102(b)(1)(B) and 42 CFR 457.320(b))

4.2.1. ☐ These standards do not discriminate on the basis of diagnosis.

4.2.2. ☐ Within a defined group of covered targeted low-income children, these standards do not cover children of higher income families without covering children with a lower family income. ***Please confirm that this applies to pregnant women as well as targeted low-income children.***

4.2.3. ☐ These standards do not deny eligibility based on a child having a pre-existing medical condition. ***Please confirm that this applies to pregnant women as well as targeted low-income children.***

4.3. Describe the methods of establishing eligibility and continuing enrollment. (Section 2102(b)(2) and 42 CFR 457.350)

4.3.1 Describe the State's policies governing enrollment caps and waiting lists (if any). (Section 2106(b)(7) and 42 CFR 457.305(b))

☐ Check here if this section does not apply to your State.

Please note that this box should be checked as related to children because States may not have an enrollment cap or waiting list for children and cover pregnant women.

4.4. Describe the procedures that assure that:

4.4.1. Through the screening procedures used at intake and follow-up eligibility determination, including any periodic redetermination, that only targeted low-income children who are ineligible for Medicaid or not covered under a group health plan or health insurance coverage (including access to a State health benefits plan) are furnished child health assistance under the State child health plan. (Sections 2102(b)(3)(A), 2110(b)(2)(B), 42 CFR 457.310(b), 42 CFR 457.350(a)(1), and 457.80(c)(3))

Please confirm that the State does not apply a waiting period for pregnant women.

Section 8. Cost Sharing and Payment. (Section 2103(e))

8.1. Is cost-sharing imposed on any of the children covered under the plan? (42 CFR 457.505) ***Please indicate if this applies for pregnant women also.***

8.1.1. ☐ YES

8.1.2. ☐ NO, skip to question 8.8.

8.2. Describe the amount of cost-sharing, any sliding scale based on income, the group or groups of enrollees that may be subject to the charge, and the service for which the charge is imposed or time period for the charge, as appropriate. (Section 2103(e)(1)(A), 42 CFR 457.505(a), 457.510(b) and (c), and 457.515(a) and (c))

8.2.1. Premiums:
8.2.2. Deductibles:
8.2.3. Coinsurance or copayments:
8.2.4. Other:

Please include a statement that no cost sharing will be charged for pregnancy-related services.

9.9. Describe the process used by the State to accomplish involvement of the public in the design and implementation of the plan and the method for ensuring ongoing public involvement. (Section 2107(c) and 42 CFR 457.120(a) and (b))

9.9.1 Describe the process used by the State to ensure interaction with Indian Tribes and organizations in the State on the development and implementation of the procedures required at 42 CFR section 457.125. (Section 2107(c) and 42 CFR 457.120(c))

States should provide notice and consultation with Tribes on proposed pregnant women expansions.

9.10. Provide a 1-year projected budget. (Section 2107(d) and 42 CFR 457.140)

The budget must describe:

- Planned use of funds, including:
  - Projected amount to be spent on health services;
  - Projected amount to be spent on administrative costs, such as outreach, child health initiatives, and evaluation; and
  - Assumptions on which the budget is based, including cost per child and expected enrollment.
- Projected sources of non-Federal plan expenditures, including any requirements for cost-sharing by enrollees.

Please include a separate budget line to indicate the cost of providing coverage to pregnant women.

Mat-Su Health Foundation Resolution in Support of Increased Denali KidCare Income Eligibility Level

WHEREAS the Mat-Su Health Foundation's mission is to enhance the health of Alaskans living in Mat-Su, and where health is in part determined by access to primary, behavioral, and dental care and preventive services;

WHEREAS the provision of health insurance is a key component of healthcare access;

WHEREAS the Mat-Su Borough is the fastest growing area of Alaska, growing from 5,188 in 1960 to 82,515 in 2008 due to both positive birth and in-migration rates; and the AK Department of Labor projects that all Mat-Su age groups will continue to grow through 2020;[i]

WHEREAS in 2006, of the 22,868 children in Mat-Su, approximately 12.9% or 2,949 were uninsured;[ii]

WHEREAS in 2006, approximately 19.5% or 1,530 children in Mat-Su living at or below 200% Federal Poverty Level (FPL) were uninsured;[iii]

WHEREAS the Average Monthly Medicaid Enrollment *decreased* from 12,073 in 2006 to 11,671 in 2007 in Mat-Su despite a *rising* rate of uninsured coupled with significant population growth;[iv]

WHEREAS in Mat-Su nearly a quarter (23.5%) of all female headed households fell below the poverty level, 51.9% of those with children under 5 years of age were living in poverty compared to 32% of similar households in AK;[v]

WHEREAS 11.3% of families with related children in Mat-Su and 11.2% of families with related children in AK have lived below the poverty level in the last 12 months;[vi]

WHEREAS 37% of Mat-Su Borough School District students ages five to 17 live in households receiving Public Assistance;[vii]

WHEREAS Mat-Su Regional Medical Center, the sole community acute care provider in Mat-Su, supplied $339,554,984 in uncompensated care from 2007 through 2009 and saw uncompensated care rates rise 10% between 2007 and 2008 and 5% between 2008 to 2009;

WHEREAS the rate of uninsured children under age 18 in Alaska is increasing—from 8.4% in 2005 to 10.3% in 2006 to 11.4% in 2007 to 13.2% in 2008;[viii]

WHEREAS results of the 2007 National Survey of Children's Health 2007 reflect that

- 46% of Alaska's children live at or below 200% FPL as compared to 40.6% nationwide;
- 12.8% of Alaskan children under age 18 were uninsured at the time of the survey versus 9.1% nationwide; and only four states have lower rates than AK
- 18% of Alaskan children under age 18 were currently uninsured or had periods of no coverage during the year versus 15.1% nationwide
- 21% of Alaskan children living at or below 99% FPL were uninsured at the time of the survey versus 15% nationwide
- 28.8% of Alaskan children living at or below 99% FPL had periods of no coverage during the year versus 24.2% nationwide

- 17% of Alaskan children living at or below 199% FPL had no coverage at the time of the survey versus 13.9% nationwide
- 25.1% of Alaskan children living at or below 199% FPL had periods of no coverage during the year versus 24.3% nationwide;[ix]

WHEREAS approximately 10,000 Alaskan children 18 years or younger and below 200% FPL are uninsured,[x] and 36,000 Alaskan children 19 years or younger and below 200% FPL rely on government health insurance to provide access to health care services;[xi]

WHEREAS Alaska has seen a 31% decline in the number of children covered by private health insurance in the past decade; [xii]

WHEREAS the cost of caring for uninsured children is passed on to other Alaskans and businesses, raising premiums and out-of-pocket expenses for everyone;[xiii]

WHEREAS uninsured children are nine times less likely to have a regular doctor, four times more likely to be taken to emergency rooms, and 25% more likely to miss school than insured children;[xiv]

WHEREAS the Denali KidCare upper income eligibility guideline was decreased in 2007 to 175% FPL from 200% FPL;

WHEREAS increasing Denali KidCare income eligibility levels to at least 200% FPL will increase health care access for children and families that meet this criterion;

WHEREAS expanding the Denali KidCare income eligibility levels would result in improved public health and overall health outcomes throughout the state for Alaskan children;

WHEREAS the Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) reauthorized and expands the State Children's Health Insurance Program of 1997 to allow states to implement coverage up to 300% FPL and also provides for Performance Bonuses for states enrolling additional children in Medicaid;

BE IT THEREFORE RESOLVED that the Mat-Su Health Foundation supports and advocates for the Denali KidCare income eligibility level to be increased to *at least* 200% FPL and that a cost-sharing option is considered between 200% and 300% FPL.

Approved by the Mat-Su Health Foundation Board of Directors on February 15, 2010 *(date)*

KidCare funded 664 'medically necessary' abortions in '09

DENALI KIDCARE: Physicians determine what is "medically necessary."

By SEAN COCKERHAM
scockerham@adn.com

(06/18/10 11:47:08)

The Alaska Department of Health and Social Services says 664 abortions were funded last year through Denali KidCare, the state health care program for low-income children and pregnant women.

Gov. Sean Parnell this month vetoed money to expand Denali KidCare to serve more Alaskans, saying he did it because some of the money pays for abortions.

Parnell said at the time that Denali KidCare funded "hundreds" of abortions. Anchorage Democratic Sen. Bettye Davis had disputed that, saying she'd previously spoken to the state health department and that a "very small number" of abortions are funded through Denali KidCare.

The health department couldn't answer for nearly two weeks exactly how many abortions were actually funded through the program. But a department spokeswoman sent out the figures Thursday showing Denali KidCare had paid for between 636 and 689 abortions every year for the past five years.

Last year's 664 is a substantial portion of the total abortions received by Alaskans. The Bureau of Vital Statistics reports 1,875 abortions in Alaska as a whole last year, although that doesn't count Alaskans who had the procedure performed out of state.

Davis didn't return a phone call Thursday seeking comment. But others were not ready to accept the state's numbers at face value.

"I am waiting for clarification about those numbers, but the bottom line is this -- Denali KidCare only pays for medically necessary abortions," said Hollis French, a Democratic state senator who is running against Parnell for governor. "Standing between a woman and her doctor is irresponsible, particularly when the stance also includes denying 1,200 children access to affordable medical care."

Denali KidCare is required to fund "medically necessary" abortions because of a 2001 Alaska Supreme Court ruling. The court ruled that "if the state undertakes to fund medically necessary services for poor Alaskans, it may not exclude from that program women who medically require abortions."

The state does not define what is "medically necessary," leaving that to the treating physician.

"I've been doing this for thirty-some years, not just abortions but health care. And early on I learned that only a physician can determine medical necessity," Bill Streur, deputy commissioner of the state health department, said earlier this month.

Jim Minnery, president of the anti-abortion group Alaska Family Council, said on Thursday that the

definition of "medically necessary" needs to be tightened.

He questioned how many abortions funded by Denali KidCare are related to the health of the mother, saying doctors are free to determine it's "medically necessary" to have an abortion if the birth would interfere with the mother's work or education.

Clover Simon, vice president of Planned Parenthood of Alaska, which provides abortions, said there was a court order during the 2001 case over state-funded abortions that set out what "medically necessary" is about. She said the term refers to "abortions certified by a physician to prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health, as determined by the treating physician performing the abortion services, in his or her professional judgment."

The state health department said $384,000 out of Denali KidCare's $217 million budget went to pay for "abortion related services." That's 0.18 percent of the total.

It adds up to about $580 for each abortion. The state and Planned Parenthood said that figure sounds about right, noting that the reimbursement to physicians through Denali KidCare is less than it would be with private insurance.

There were 55,754 Alaskans enrolled in Denali KidCare last year to receive help from the state with their health care costs, including 7,947 pregnant women.

The $3 million that Parnell vetoed would have allowed 1,300 more children and 218 more pregnant women on Denali KidCare, according to state estimates.

The money would have expanded eligibility of the program to cover households with income up to 200 percent of the federal poverty level, a threshold that's about $55,150 for a family of four. Proponents of the expansion said most states fund at that level while Alaska is currently at about 175 percent.

Ethan Berkowitz, another Democrat running against Parnell for governor, has said the issue is about health care and not abortion. If the issue for Parnell was really abortion he would have opposed all the Denali KidCare money, Berkowitz said, instead of just saying people can get health services if they are up to 175 percent of the poverty line but not between 175 and 200 percent.

Parnell spokeswoman Sharon Leighow said the governor had nothing to add Thursday to what he said when he vetoed the money. Parnell said he was acting to "make sure we don't expand state government funding of abortions here in Alaska."

Parnell cites abortion in KidCare funds veto

CUTS: Governor axes over $300 million in state spending.

By SEAN COCKERHAM
scockerham@adn.com

(06/04/10 14:34:15)

Gov. Sean Parnell vetoed more than $300 million in state spending Thursday, including money for renewable energy and to expand Denali KidCare for low-income children and pregnant women.

Parnell vetoed nearly $3 million aimed at letting more Alaskans have health care costs covered under Denali KidCare. It's an increase he supported when it overwhelmingly passed the Legislature. But the governor said he reversed his position after recently finding out some Denali Kid Care money goes to fund abortions.

"My intention here today is to make sure we don't expand state government funding of abortions here in Alaska," Parnell said in announcing the veto.

His administration could not say how much Denali KidCare money is going to fund abortions, and critics of the decision say he's denying help to more than 1,000 children.

The Denali KidCare veto was the only significant cut Parnell made to the $8 billion budget that funds state agencies and services. But the governor axed $300 million from the separate $3.1 billion state budget for construction and maintenance projects, which is among the largest capital budgets the state has seen. The Legislature approved the budgets before adjourning for the year in April.

Parnell vetoed money for about 150 projects throughout the state, from roads to sewers to a new house for polar bears Ahpun and Louie at the Alaska Zoo. In many cases the governor reduced funding for projects instead of zeroing them out. He halved the $50 million intended for renewable energy grants, saying most of the money appropriated in the past for such projects still hasn't been spent. He cut $250,000 of the $1 million for deferred maintenance at the governor's mansion.

His veto of Denali KidCare money drew by far the strongest reaction, with Democrats saying it was outrageous. Anchorage Democratic Sen. Bettye Davis, who sponsored the Denali Kid Care money, said it would have allowed 1,300 children and 225 pregnant women to receive care.

Ethan Berkowitz, one of Parnell's Democratic opponents for governor, called the decision cold-hearted. "If you want to be tough, you don't be tough by slapping kids around," he said.

Hollis French, a Democratic state senator who is also running against Parnell, said the decision was depriving hundreds of children of coverage "because you're afraid a few women might make a choice you don't agree with." The courts made it clear the state has to pay for "medically necessary" abortions for poor women and the program doesn't fund elective abortions, he said.

Officials with AARP Alaska and the Central Council of Tlingit and Haida Head Start program said the governor's veto will hurt people struggling to raise children.

Parnell said he wanted to offer the health care to more women and children. But he said he couldn't bring himself to do it after recently discovering Denali Kid Care also funded abortions. Parnell said he couldn't believe it when he found out.

"I want to be able to provide those services. But if your governor doesn't stand for life and liberty, as he understands it in his conscience, then you don't have a governor," Parnell said.

Parnell said there are "hundreds of abortions being paid for by these funds." But state Sen. Davis said that's not true and only a "very small number" of abortions are funded. She said that's what the Alaska Department of Health and Social Services, which administers the program, told her when she inquired last year.

The Department of Health and Social Services was not answering any questions about it Thursday, even after Parnell referred reporters to the agency when he was asked how much Denali KidCare money is going for abortions. The agency said it could not answer that question, nor could it say how many abortions were funded or how it made the decisions on which abortions it should pay for.

Agency spokeswoman Cathy Stadem said the answers had to be run past the governor's office and she hoped to give them the next day. "Everything is having to be vetted through (the Alaska Department of Law) and through the governor's office," she said.

The $2.9 million Parnell vetoed would have expanded eligibility of the Denali KidCare program to cover households with income up to 200 percent of the federal poverty level, a threshold that's about $55,150 for a family of four. Proponents said most states fund at that level while Alaska is currently at about 175 percent.

BUILDING PROJECTS AXED

Sitka Republican Sen. Bert Stedman said he didn't realize Denali Kid Care money went to abortions and understands Parnell's reasoning on the veto. But Stedman said there was no financial reason for Parnell to chop hundreds of millions of dollars from the state budget for construction and maintenance projects.

"It's a political decision, not a financial one," said Stedman, who helped craft the budget.

The state has $12 billion in cash reserves on top of the Alaska Permanent Fund, Stedman said, and if the projects aren't funded now, they might never happen.

Parnell said the state has a surplus from high oil prices but it's not going to last forever. He said the amount of spending he approved will create jobs but not break the bank.

"These vetoes for the most part don't represent projects I do not like. They represent projects I think should be deferred to another time because of the fiscal situation," the governor said.

Ralph Samuels, a Republican running for governor, criticized Parnell for not cutting more. He said Parnell didn't do nearly enough at a time when oil production is declining.

There were about $70 million in road and drainage money vetoes in Anchorage. The mayor's office said nearly $10 million more was axed from the budget in planned upgrades for the Loussac Library, Sullivan Arena, the Ben Boeke and Dempsey Anderson ice arenas, and recreation centers in Spenard and Fairview.

But Anchorage Mayor Dan Sullivan said "a healthy list of road, public safety and other priority

projects remains, and will lead to a robust level of economic activity for Anchorage."

Parnell cut the biggest project in the budget for the Mat-Su Borough. He vetoed $22 million of the $57 million that the Legislature appropriated for work toward an extension of the Alaska Railroad from north of Willow to Port MacKenzie. Mat-Su Economic Development Director David Hanson said the remaining money will go to design and engineer the route, buy right of way and begin construction.

Mat-Su borough officials said they were mostly happy with the $137 million in projects they kept.

Scenarios show emergency room visit is no cure-all for many children

COMPASS: ***Other points of view***

By SEN. BETTYE DAVIS

(07/23/10 21:23:29)

While stories of the governor's veto of Senate Bill 13 and the funding for the expansion of the state's Denali KidCare program fade from the media, just under 1,300 children and over 200 pregnant women will be faced with the daily reality of not having basic insurance coverage. That is why I sponsored this legislation, and that is where my interest in this remains.

Some may argue that they still have the ability to seek treatment at an emergency room. While that is true, let's look at some scenarios that Denali KidCare would cover with a less costly visit to a doctor's office.

Try taking your 6-month-old to an emergency room for checkups that include hearing or vision tests, immunizations and other various well-baby screenings instead of a pediatrician's office. They can't help you with that at the emergency room.

Perhaps while talking to your 2-year-old child, you notice he can only imitate speech or actions but doesn't produce words or phrases spontaneously. Without speech language therapy, his speech could fall further behind his peers' as he grows older. You can't get speech therapy in an emergency room.

We all know smart children who seem to lose interest or can't follow things in class, who we later learn couldn't see the visuals the teacher used because they didn't know they needed glasses. You can't get glasses in an emergency room.

How about not being able to eat or concentrate during school or at home because of a toothache? The emergency room doesn't offer dental checkups, cleanings and fillings.

Your 14-year-old breaks her leg while engaged in sports and goes to the emergency room for treatment. In this instance she will no doubt receive outstanding care, but what about follow-up physical therapy? You can't get that in an emergency room.

There are many other great services offered through Denali KidCare, such as mental health therapy, substance abuse treatment, chiropractic services, foot doctor's services and the fundamentally important but many times forgotten medical transportation services. I haven't even touched upon the prenatal services available to pregnant women that are critical to the wellbeing of the mother and birth of a healthy child.

Let me make it clear that I believe that we have some of the most highly trained, caring and compassionate professionals staffing our emergency rooms statewide and I am highly supportive of them. But an emergency room is designed for just what it pronounces itself to be: a place to treat people during emergencies. While either a doctor or an emergency room visit for your child can provide you with laboratory tests, prescription drugs or, in a worst-case scenario, hospitalization for a major traumatic event, the costs for these services could easily be a financial nightmare for any family. If the family cannot pay most or any of the bills, those costs are spread throughout the health care system to

those with insurance, whose premiums go up accordingly. And if those services are done exclusively at an emergency room, the costs are even higher.

So while some individuals want to take this valuable program and use it as a touchstone for their opinions on government spending or philosophical battles, I remain focused on helping to bring health care to those who have no real interest in politics but just need assistance to see a doctor. For those women and children, the fact that the veto of SB 13 is no longer headline news doesn't change their needs.

Sen. Bettye Davis, an Anchorage Democrat, has represented District K in the state Senate since 2001.

Senate Bill 5 and Denali Kid Care Expansion

March 21, 2011

The Alaska Chapter of the American Academy of Pediatrics is in support of SB 5 and expansion of Denali Kid Care to 200% FPL.

Every child has medical needs that cannot be ignored. Denying coverage to a family in poverty does not change this fact. Alaska's huge size and minimally developed wilderness present a challenge in medically caring for its children. Denali KidCare (DKC) is the only means for many of these children to have access to local primary care, and when needed, the ability to reach specialty care in Anchorage. The federal government pays 64% of the cost of the State Children's Health Insurance Program (SCHIP/DKC) for non-Alaska Native children and 100% for Alaska Native children. Alaska has some of the most stringent eligibility requirements in the United States, 175% Federal Poverty Limit, placing us at 48th out of the 50 states in covering our poorest children. Senate Bill 13 was overwhelmingly passed with bipartisan support during the last legislative session. It expands DKC back to 200% of the Federal Poverty Line, its original level when instituted in 1998, and more in line with the rest of the United States. The cost of this expansion is estimated to add less than $1M to the annual State budget. Many legislators from both parties, including Governor Parnell, publically pledged support for this bill and claimed to recognize the importance of taking care of the basic health needs of our children. Suddenly, the Governor, who is a former finance committee chairman, reversed his support claiming he did not understand DKC funding and the potential for covering selective abortion services. The Alaska Department of Health and Social Services reports that 0.18% of DKC funding went to abortion related services last year. The service is permissible if deemed a medical necessity.

Prior to last year, expansion of children's healthcare was never once an abortion issue until Governor Parnell faced re-election and the republican primary. The Governor vetoed DKC expansion arguing that it was morally wrong to spend state funds on a medical plan with an abortion benefit. The Governor and his family are covered under the state workers plan called AlaskaCare (Wells Fargo Insurance Services). A call to the AlaskaCare benefits line reveals "abortion services are a covered benefit for employees and their dependents when deemed medically indicated." It appears the Governor is unconcerned with state funds paying for a healthcare plan with an abortion benefit, if the plan is for himself, his family, administration and staff. For Governor Parnell to claim that DKC expansion is an abortion bill simply does not ring true. Nearly every healthcare plan in the state has an allowance for some sort of abortion service, including the Governor's own. If the Governor truly believes that state funding should not be used towards a plan with abortion services, then he has the opportunity to take a stand with himself, his own family, his staff and administration. Not with the poor and vulnerable.

Alaska ranks at the bottom of the country in regards to domestic violence, rape and once again, children's healthcare coverage. This is not an abortion issue. It is an issue of social justice, of doing what is right. As a State, we cab do better.

The Honorable Bettye Davis
State Capitol, Room 30
Juneau, AK 99801

RE: Support for Senate Bill 5 pending in the House Health and Social Services Committee

Dear Senator Davis:

I am writing to you to express the support of March of Dimes for **Senate Bill 5.** The mission of March of Dimes to improve maternal and child health by preventing birth defects, premature birth and infant mortality can best be achieved if all women of childbearing age, infants and children have access to comprehensive health coverage.

Senate Bill 5 reinstates Medicaid and Denali KidCare (DKC) for children and pregnant women in Alaska up to 200% of Federal Poverty Level (FPL). This was the original eligibility level when DKC was established in 1997. The eligibility threshold was reduced and frozen at 175% FPL by the Legislature in 2003. This bill will help reinstate eligibility to many of Alaska's 24,000 uninsured children as well as provide maternity coverage for several of Alaska's 34,000 women of childbearing age who have no health insurance.

The Institute of Medicine has found that health coverage is the single most important factor in determining whether or not a child receives needed health services. Coverage also plays a key role in access to maternity care services for pregnant women.

Women who receive maternity care are more likely to have access to screening and diagnostic tests that can help to identify problems early; services to manage developing and existing problems; and education, counseling, and referral to reduce risky behaviors like substance use and poor nutrition. Such care may thus help improve the health of both mothers and infants. For example, singleton infants born to mothers who received late or no prenatal care in 2004 were nearly twice as likely to be low birth weight (less than 5 1/2 pounds) as infants born to mothers who received early prenatal care —9.9 percent compared with 5.9 percent.

In addition to pregnant women, health insurance status is the single most important influence in determining whether health care is accessible to children when they need it, according to another Institute of Medicine study. Though uninsured newborns are more likely than insured babies to be sick, they receive fewer hospital services.

Uninsured children are the most likely to have no usual source of medical care - 28.8 percent, compared with only 2.3 percent of privately insured youngsters and 4.6 percent of children in public insurance programs.
March of Dimes is a leading nonprofit organization for maternal, infant and child health. With chapters nationwide and its premier event, March for Babies, March of Dimes works to improve the health of women, infants and children. **I urge you bring Senate Bill 5 before the House Health and Social Services Committee for a vote and ensure passage of this important piece of legislation.**

Sincerely,

Janie Odgers

Re: Letter of Support for SB 5

Dear Senator Davis:

On behalf of our member programs that provide safety and resources for women and children throughout Alaska, and the women and children for whose safety we advocate, thank you for introducing SB 5. The Alaska Network on Domestic Violence and Sexual Assault fully supports SB5. An increase in the maximum income Medicaid eligibility requirements to 200% of the Federal Poverty Level will provide many additional women and children critical and oftentimes lifesaving medical services.

It is common for instances of abuse to be first detected by medical providers, who then refer women and children to appropriate services in their communities. In this regard, access to regular medical care is one of our first screening and referral tools. But beyond increasing knowledge of and referrals to community resources, an increase in Medicaid eligibility will allow women to make safe choices. When women know they have the resources to adequately provide for their children, they are more likely to take steps to leave abusive situations. An increase to the maximum eligibility requirement will afford such security to scores of working mothers.

The Network is in full support of SB 5. Thank you for advocating for women and children in our state, and if I may be of any assistance or provide you any information, please let me know,

Sincerely,

Peggy Brown

March 24, 2011

The Honorable Kevin Meyer
Alaska State Senate

Dear Senator Meyer,

With respect to the following:

1) potential expansion of insurance coverage under Denali KidCare;

2) the fact that there is no statutory definition of 'medically necessary'; and

3) your quoted comment that it's one thing for a woman to have an abortion if her life is in danger and another if she feels having a baby will leave her depressed, I ask you to consider the following.

It is an incredible insult to women to suggest they are not capable of selecting a competent doctor and that said doctor is not competent to determine whether a given procedure is medically necessary.

As you certainly know, there is already a lot of incomprehensible language in our statutes; I shudder to think of the outcome should there be an effort to reduce something so complex as medical necessity to a laundry list of conditions that are the only things that merit insurance coverage. How detailed do you think such a list should be?

For example, common sense (which is not so common after all) might conclude that plastic surgery for breast reduction is not medically necessary. I suggest that absent some competence in medicine and knowledge of the specifics of a given case, such a conclusion would be foolish.

I know a woman whose breasts were so disproportionately large for her small body frame, that she suffered debilitating pain in her shoulders and back. Plastic surgery was indeed medically necessary and having the surgery freed her of a condition that was seriously undermining her ability to work and to care for her family.

I'm confident that intelligent men who genuinely care about health care can come to understand that abortion is a subject best left to a woman, her doctor, her spiritual advisor and any others that she personally invites to assist her with a decision.

A careful reading of Roe v. Wade will inform one that it does not sanction abortion without limitations. The time and money and anguish that has taken place since its passage because people have used laws and courts in an effort to impose their personal views on the rest of us is total nonsense. That much maligned decision is both clear and excellent public policy.

Please work to eliminate the demeaning of women and doctors when considering decisions related to women's reproductive health.

Yes, there are quack doctors and yes, there are women who – for a variety of reasons may have an abortion when a condom or a morning after pill might have help avoid that situation altogether.

But in a society where some people consider using contraception as on a level with murder, it seems clear that this subject will require calm, thoughtful, educated discussion rather than the present efforts across the states to return women to the subservient position some think they deserve simply because they are women.

Respectfully,

Theda Pittman

Re: Support for SB 5

Dear Senator Davis,

I am writing on behalf of both Juneau Youth Services and the Alaska Association of Homes for Children. Thank you for once again introducing legislation (SB 5) to raise the eligibility threshold for Denali KidCare from 175% to 200% of the Federal Poverty Level (FPL).

As you know, Alaska is one of the strictest states in the country when it comes to eligibility for Children's Medicaid (Denali KidCare). The estimate last year was that raising the eligibility criteria to 200% of the FPL would result in an additional 1,200 children and 200 pregnant women being covered under Denali KidCare. With a high rate of federal matching funds, this increase could take place with a minimal increment in state operating funds.

It is important to recognize that Denali KidCare is a major funding source for children's behavioral health and residential services in Alaska. Approximately 75% of the children and youth served by Juneau Youth Services access these services through Medicaid/Denali KidCare. Denali KidCare is also a major factor in ensuring that Alaska's children and youth receive services as close to their home communities as possible.

Raising the threshold for Denali KidCare is a wise investment in the health and wellbeing of Alaska's children. Thank you for your leadership on this critical issue.

Sincerely,

Walter Majoros

I support SB 5.

Investing in kids' health gives the biggest bang for the healthcare buck. For example, preventing one case of childhood obesity and subsequent diabetes could save Medicaid $5 million over that kid's lifetime. Diabetes is hugely expensive what with chronic medication, dialysis, amputations, and blindness.

Treating as many children as need medical and preventive care as possible leads to healthier moms and healthier families as well.

Many middle class families can't afford private health insurance.

What is the point of all of our oil money if we don't take care of our children?

Please insist on SB 5 passing this month.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB009
2012 LEGISLATIVE SESSION

Analysis

This bill lowers the compulsory age for attendance by one year, from age 7 to 6; and extends the age of required attendance by two years, from age 16 to 18. The exception is if a student completes the 12th grade or graduates from a secondary school.

In FY2010 there were approximately 1,406 students between the ages of 16 and 18 that dropped out of public school after the October student count period. The average cost of a student run through the FY12 foundation formula is $10,568. 1,406 x $10,568 = $14,858,608.

Senator Bettye Davis

SB 9 27-LS0085 "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor."

SPONSOR STATEMENT

This bill changes the Alaska compulsory school attendance ages from 7-16 to 6-18. At the same time it necessarily amends the criminal statute of contributing to the delinquency of a minor from the maximum age 16 to 18. The legislative intent of this bill is to require all students to start school earlier when their brains are growing and developing at a dramatic rate from birth to age 7 and to stay in school long enough to graduate. This bill allows earlier identification of children with learning disabilities and more time to take successful corrective action. This bill will not preclude parents from homeschooling children, or using charter or alternative schools, or any other of the twelve enumerated exceptions to compulsory education under AS 14.30.010(b), including completion of grade 12 or graduation from a secondary school before age 18.

The Alaska compulsory school age statute is out of date with modern educational practice and thinking. The law has not changed since territorial days when few children attended school beyond 8th grade or bothered to graduate, because most jobs did not require much education. The majority of Alaskan students today are already in school by age six and many by the minimum age five. Head Start and prekindergarten programs are growing in popularity. The state already funds a pilot pre-kindergarten program and SB 6 this year proposes funding such a program statewide.

In 1852 Massachusetts became the first state to pass compulsory school attendance laws, and by 1918 all states required children to receive an education. Today every state and territory requires children to enroll in public or private education or to be home-schooled. Thirty-two states require students to begin their education by age 6 or 5 and to remain in school until 16 or older. Twenty-four states and American Samoa set the minimum at age 6, and eight states and the District of Columbia, Puerto Rico and the Virgin Islands set the minimum at age 5. All children are required to continue their education into their high school years, with twenty states setting the compulsory cutoff age at age 18; eleven at age 17; and nineteen states including Alaska and the Virgin Islands at age 16.

By increasing the school attendance age to 18, this bill should discourage earlier dropouts and reduce juvenile crime, teen pregnancy and other at risk behaviors. Studies have found that students without a diploma earn less than 75% of those with a diploma; they are more likely to live in poverty, go to jail, and have health problems.

The Alaska Department of Education and Early Development reported 8,245 students or 67.7% graduated in 2010 while 3,186 dropped out. The graduation rate of Alaska Native students was 55.4%, a group which experienced twice the dropout rate of all students. These rates remain well below the national average. The National Education Association's first priority two years ago in its "12-Point Action Plan for Reducing the School Dropout Rat" was to "*mandate high school graduation or equivalency as compulsory for everyone below the age of 21.*" It reported:

"Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of 'dropping out' before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education."

Opponents to increasing compulsory school age who are concerned about forcing students to be in the classroom against their will argue that these students may become disruptive and require more time and expense on behavior and truancy problems. This bill, however, is directed at more than just "seat time." It is to become part of a larger plan to motivate rather than to punish or ignore students. It aims to help students stay in school long enough to graduate and go on to college or better-paying jobs. Students will want to come to school, stay in school, and graduate, if academic problems are identified early and they helped long before they dropout. For those students who want to work or are not as academically inclined, school districts are encouraged to continue accredited alternative schools and work-study programs to help students earn credits toward a diploma if they must work at the same time. Coupled with early efforts to retain, train, and graduate, this bill can bring hope and success to thousands of Alaskan students who otherwise might not stay in school long enough to graduate or develop to the best of their potential.

MEMORANDUM January 31, 2012

SUBJECT: Revised Sectional Summary of SB 9
(Work Order No. 27-LS0085\M)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Raises the age from 16 to 18 for the crime of contributing to the delinquency of a minor for repeated absences from school.

Section 2. Adjusts the compulsory school age from 7 to 16 to 6 to 18 years of age.

Section 3. Amends an exception to the compulsory school attendance age to provide for graduation for a secondary school.

Subject: SB 9
Importance: High

Dear Senators:
I am not able to call in to testify today on Senate Bill 9 (Raise the Compulsory Age/Truancy), but I did want to comment on this important legislation. The Anchorage School Board, and administration, have had a long-time legislative priority regarding this issue. Our community has testified many times as to the importance of giving all of our students the best chance to earn a high school diploma, and not a GED. Our students need to hear loud and clear that students should get that high school diploma, and that it is not right to drop out of high school at 16 just because the current law says they can!!! **We support SB 9.**

Over the years, our School Board has prioritized school attendance and its impact on student achievement. Most of Anchorage's students enter kindergarten during a child's fifth year, at age 5, some at age 6. We know that if the current law for compulsory education remains at seven (7), that this is far too late for a student to be able to achieve on a "level playing field" with their peers. We believe that law should be revised downward to age six (6) as proposed in SB 9 because the vast majority of Alaska's students enter when eligible to enter kindergarten.

We strongly support revising the compulsory education age to age 18, or graduating from high school with a diploma, as the best way to insure that more of our young people are career and college ready. Many in our community, especially newly arrived in Anchorage from rural Alaska and from overseas, feel that their children do not need to continue in school past their sixteenth year; many are asked to go into the work force to help their families financially since the law doesn't require them to attend school. We think this is the wrong message.

The increased opportunities for Career and Technical Education (C and TE) due to the increase in funding by the Alaska legislature last year will have a very positive impact for many of our students. One of the arguments against raising the compulsary age is that we don't want "unengaged students in our schools causing trouble for those who want to learn". I believe that we are making our classes more engaging and appropriate for today's students and the future workforce.

We know that all students, in this day and age, need a high school diploma at a minimum! We have been notified by the US Army, and the other branches of the military, that they will not accept students into the voluntary military without a high school diploma, except in very specialized areas. In addition, even though the University of Alaska accepts students with a GED, we believe that the lack of entry requirements of a diploma and a minimum GPA, increases the probability that entering students have to take remedial classes. We believe that the vast majority of our students in Alaska, will benefit from increased years of high school.

Additionally, we believe that the name of the High School Graduation Qualifying Exam (HSGQE), should change. Too many of our sophomores pass all three sections of this test and think that they can leave high school. This is an essential skills test only and certainly does not prepare a student for entry into college or the work force, etc.

We support SB 9 as the right thing to do for our students!

Thank you for your attention to this important matter.

Obama Wades Into Issue of Raising Dropout Age

By TAMAR LEWIN

President Obama's State of the Union call for every state to require students to stay in school until they turn 18 is Washington's first direct involvement in an issue that many governors and state legislators have found tough to address.

While state legislative efforts to raise the dropout age to 18 have spread in recent years, many have had trouble winning passage. Last year, for example, such legislation was considered in Alaska, Illinois, Kentucky, Maryland and Rhode Island — but only Rhode Island actually changed its law.

"Efforts to raise the age usually come up against the argument that requiring students to stay in school when they no longer want to be there is disruptive to other students and not fair to the teacher," said Sunny Deye, a senior policy analyst at the National Conference of State Legislatures. "Home-school groups often oppose raising the compulsory attendance age, and especially now, in this budget crunch, there are major concerns about the fiscal impact."

In Kentucky, where the dropout age of 16 was set in 1934, legislation to move the age to 18 has failed twice. Gov. Steven L. Beshear's State of the State message this month made another push.

The dropout age, historically set at 16 in most of the nation, has been edging up. Currently, 21 states and the District of Columbia have compulsory attendance until 18, and 11 others require attendance until age 17.

Given that Washington provides only about 10 percent of education financing, the federal government's effort to dictate policy in an area that has always been left to the states may raise hackles.

"I will concede that having the federal government decree this, that's going to stick hard with some people," said Bob Wise, president of the Alliance for Excellent Education, which supports the proposal. "But with almost a third of our students dropping out of high school,

we have an economic crisis and we need to be sending a stronger message about the importance of education."

And, he said, it would not be hard for the federal government to incentivize the higher age requirement by making it a condition of states' getting Race to the Top grants or other federal education money.

Several economists, over two decades, have found that higher dropout ages improve not only graduation rates but entrance to higher education and career outcomes. "The evidence is quite robust that raising the school-leaving age increases educational attainment," said Philip Oreopoulos, an economics professor at the University of Toronto, whose study found, however, that exceptions to the law, lenience in enforcement and weak consequences for truancy could all interfere with an increase. "Ideally, you use both a carrot and stick approach, so that if students have to stay in school longer you're also providing wider curriculum options that might interest them."

In a 2010 report on the dropout problem, Robert Balfanz, a research scientist at Johns Hopkins University, found that of the six states that increased the compulsory school age from 2002 to 2008, two — Illinois and South Dakota — experienced increases in their graduation rates, and one, Nevada, had a decline.

"It's symbolically and strategically important to raise the age to 18, but it's not the magical thing that in itself will keep kids in school," Dr. Balfanz said.

Most policy experts warn that to prevent dropouts, schools need a broad range of supports for struggling students, as far back as the middle grades.

"There's a whole array of reasons students drop out: teen pregnancy, financial obligations, detachment from the school environment, boredom, feeling the curriculum has no relevance in the real world," said Jennifer Dounay Zinth, a senior policy analyst at the Education Commission of the States. "Schools need to intervene quickly if there are warning flags."

Section 1. Raises the age from 16 to 18 for the crime of contributing to the delinquency of a minor for repeated absences from school.

Section 2. Raises the compulsory school age from 16 to 18.

Section 3. Amends an exception to the compulsory school attendance age to provide for graduation for a secondary school.

JMM:ljw
11-057.ljw

Graduation Rates in Alaska
Fact Sheet

The Graduation Rate is reported as a fraction. The numerator is the sum of the number of graduates receiving a regular diploma before June 30. The denominator is the sum of the number of graduates, plus the number of dropouts in grade nine three school years prior, plus the number of unduplicated dropouts in grade ten two school years prior, plus the number of unduplicated dropouts in grade eleven in the prior school year, plus the number of unduplicated dropouts in grade 12 during the current year, plus the number of grade 12 continuing students.

A **graduate** is defined as a student who has received a regular diploma from a state- or district-approved education program, as evidenced by receipt of a secondary school diploma from school authorities. Any student who receives a diploma under a waiver from the competency examination required under AS 14.03075 (a), as specified by the state board is considered to be a graduate. This does not include an individual who:

- receives a certificate of completion;
- receives a certificate of attendance;

The statewide Graduation Count has increased significantly over the last five years.

School Year	Graduation Rate	Graduate Count
2004	62.9%	7,290
2005	61.4%	6,905
2006	61.6%	7,361
2007	63.0%	7,666
2008	62.6%	7,855
2009	67.5%	8,008
2010	67.7%	8,245

The Alaska Native/American Indian Graduation Rate has shown improvement over the same five year time period:

School Year	Graduation Rate	Graduate Count
2004	46.1%	1,327
2005	43.2%	1,233
2006	45.1%	1,442
2007	51.2%	1,689
2008	48.1%	1,523
2009	55.4%	1,508
2010	55.4%	1,616

Please note that the new Graduation Rate required by the Final Title 1 Regulations under NCLB will use a different calculation. The new Graduation Rate, also known as the Four-Year Adjusted Cohort Rate, will follow an actual group of students across four

years of high school. Alaska will no longer be incorporating prior years' counts of dropouts to calculate the Graduation Rate.

Dropout Rates in Alaska
Fact Sheet

The Dropout Rate is computed by dividing the number of dropouts in the current school year by the number of students enrolled in grades 7-12 on October 1 of the current school year. School year is defined as the12-month period beginning with July 1 and ending June 30.

A **Dropout** is defined as a student who was enrolled in the district at some time during the school year and whose enrollment terminated. This does not include an individual who:

- graduated from high school or completed a state or district approved education program, as evidenced by receipt of formal recognition from school authorities;
- transferred to another public school, private school or state or district approved education program;
- is temporarily absent due to suspension;
- is absent due to illness or medical condition;
- died.

The statewide Dropout Rate has decreased as well as the number of dropouts for three consecutive years:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	6.0%	3,791
2006	5.8%	3,642
2007	5.5%	3,434
2008	5.2%	3,232
2009	5.2%	3,146

The Alaska Native/American Indian Dropout Rate has not reflected the proportionate decrease over the same time period:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	8.2%	1,276
2006	8.4%	1,333
2007	8.3%	1,299
2008	8.5%	1,224
2009	8.5%	1,172

In 2007-2008 Alaska showed a wide range in difference with district by district comparisons of Dropout Rates. Four districts reported 0 dropouts. Two districts reported over 25% Dropout Rates. Both districts with the highest rates, Delta/Greely School District and the Nenana City School District, had a large percentage of dropouts reported in the statewide correspondence schools.

Compulsory School Age Requirements

Updated by Melodye Bush

Last Updated June 2010

Summary

Compulsory school attendance refers to the minimum and maximum age required by each state in which a student must be enrolled in and attending public school or some equivalent education program defined by the law.

The vast majority of states include an added clause providing for pupils to be released from compulsory attendance requirements upon graduation of high school, regardless of their age.

Arizona, **Vermont** and **Wyoming** all exempt children from compulsory attendance requirements upon completion of the 10th grade.

Five states – Virginia, South Dakota, Nevada, Maryland **and** Connecticut – **allow the minimum compulsory age to be extended by at least one year if the parent(s) obtain a waiver from their assigned school.**

Nearly half of all states allow children ranging from age 14 to 18 to be exempt from the compulsory attendance requirement if they meet one or more of the following stipulations: are employed, have a physical or mental condition that makes the child's attendance infeasible, have passed the 8th-grade level, have their parents' permission, have the permission of the district court or the local school board, meet the requirements for an exit interview, or have arranged alternative education such as vocational or technical school. Endnotes are provided for Indiana, Louisiana, Massachusetts and Virginia as examples of such legislation.

Part I: Age Ranges

Minimum compulsory age and corresponding number of states:

- Age 5: 8 states and the District of Columbia, Puerto Rico and Virgin Islands
- Age 6: 24 states and American Samoa
- Age 7: 16 states
- Age 8: 2 states

Maximum compulsory age and corresponding number of states:

- Age 16: 19 states and the Virgin Islands
- Age 17: 11 states
- Age 18: 20 states and the District of Columbia, American Samoa, and Puerto Rico

Notes:

[1] Arkansas: "Any parent, guardian, or other person residing within the state and having custody or charge of any child may elect for the child not to attend kindergarten if the child will not be age six on September 15 of that particular school year."

[2] Connecticut: "The parent or person having control of a child five years of age shall have the option of not sending the child to school until the child is six years of age and the parent or person having control of a child six years of age shall have the option of not sending the child to school until the child is seven years of age.

[3] Indiana: An individual is required to stay in school until he or she: graduates; is between 16 and 18 and meets the requirements for an exit interview; or reaches at least 18 years of age. Withdrawal before 18 requires parent/guardian's and principal's written permission.

[4] Louisiana: "A child between the ages of seventeen and eighteen may withdraw from school prior to graduation if both the following circumstances exist: (a) The written consent of his parents, tutor, or legal guardian. (b) An exit interview is conducted where the student and his parent, tutor, or legal guardian provide written acknowledgment that withdrawal from school shall likely reduce the student's future earning potential and increase the student's likelihood of being unemployed in the future. During such exit interview, a student who is withdrawing from school shall be given information that has been prepared and supplied by the Louisiana Workforce Commission regarding available training and employment opportunity programs, provided such information is available."

[5] Massachusetts: "Every child between the minimum and maximum ages established for school attendance by the board of education, except a child between fourteen and sixteen who meets the requirements for the completion of the sixth grade of the public school as established by said board and who holds a permit for employment in private domestic service or service on a farm, under section eighty-six of chapter one hundred and forty-nine, and is regularly employed thereunder for at least six hours per day, or a child between fourteen and sixteen who meets said requirements and has the written permission of the superintendent of schools of the town where he resides to engage in non-wage-earning employment at home, or a child over fourteen who holds a permit for employment in a cooperating employment, as provided in said section eighty-six, shall, subject to section fifteen, attend a public day school in said town, or some other day school approved by the school committee, during the number of days required by the board of education in each school year, unless the child attends school in another town, for said number of days, under sections six to twelve, inclusive, or attends an experimental school project established under an experimental school plan, as provided in section one G of chapter fifteen, but such attendance shall not be required of a child whose physical or mental condition is such as to render attendance inexpedient or impracticable subject to the provisions of section three of chapter seventy-one B or of a child granted an employment permit by the superintendent of schools when such superintendent determines that the welfare of such child will be better served through the granting of such permit, or of a child who is being otherwise instructed in a manner approved in advance by the superintendent or the school committee."

[6] Montana: requires that a child shall remain in school until the latter of either the child's 16th birthday or the date of completion of the work of the eighth grade.

[7] New Hampshire: The superintendent, may grant waivers upon proof that the pupil is 16 years of age or older and has an alternative learning plan for obtaining either a high school diploma or its equivalent. This law takes effect July 1st, 2009.

[8] New York: Both New York City and Buffalo require minors to attend school from the age of 6 until the age of 17. Each district in the state is authorized to require minors between 16 and 17 who are not employed to attend school. The board of education of the Syracuse city school district is authorized to require minors who are five years of age on or before December first to attend kindergarten instruction.

[9] South Carolina: In South Carolina, kindergarten is mandatory. However, state statutes permit parental waiver for kindergarten at age five.

[10] Tennessee: "A parent or guardian who believes that such parent's or guardian's child is not ready to attend school at the designated age of mandatory attendance may make application to the principal of the public school which the child would attend for a one semester or one year deferral in required attendance.

[11] Texas: School districts may require persons who voluntarily enroll in school or voluntarily attend school after their 18th birthday to attend school until the end of the school year.
[12] Virginia: "For a student who is at least 16 years of age, there shall be a meeting of the student, the student's parents, and the principal or his designee of the school in which the student is enrolled in which an individual student alternative education plan shall be developed in conformity with guidelines prescribed by the Board..."

Part II: Statutory Excerpts

Alabama – "Every child between the ages of **7** and **16** . . . ."

Alaska – "Every child between **7** and **16** years of age . . . ."

American Samoa – " . . . the age of **six** through **eighteen** . . . ."

Arizona – "Every child between the ages of **6** and **16** years . . ." or " . . . has completed the high school course of study necessary for completion of grade ten as prescribed by the State Board of Education . . ."

Arkansas – ". . . age **5** through **17** years on or before September 15th of that year...."

California – "Each person between the ages of **6** and **18** . . . ."

Colorado – "Every child who has attained the age of **6** years on or before August 1st of each year and is under the age of **17** years . . . ."

Connecticut – ". . . a child **five** years of age and over and under **eighteen** years of age . . ."

Delaware – ". . . a child between **5** years of age and **16** years of age . . . ."

District of Columbia – ". . . a minor who has reached the age of **5** years or will become **5** years of age on or before December 31st of the current school year . . . until the minor reaches the age of **18** years."

Florida – "All children who have attained the age of **6** years or who will have attained the age of **6** years by February 1 of any school year or who are older than **6** years of age but who have not attained the age of **16** years . . . ."

Georgia – ". . . between their **sixth** and **sixteenth** birthdays . . . ."

Hawaii – ". . . all children who will have arrived at the age of **6** years, and who will not have arrived at the age of **18** years, by January 1 of any school year . . . ."

Idaho – ". . . any child resident in this state who has attained the age of **7** years at the time of commencement of school in his district, but **not the age of 16** years . . . ."

Illinois - ". . . any child between the ages of **7** and **17** years . . . ."

Indiana – ". . . the individual becomes **7** years of age until . . . reaches at least **16** years of age but who is less than **18** years of age and the requirements under subsection (j) concerning an exit interview are met enabling the individual to withdraw from school before graduation; or . . . the individual reaches at least **18** years of age . . . ."

Iowa – "A child who has reached the age of **6** and is under **16** years of age by September 15 . . . ."

Kansas – ". . . any child who has reached the age of **7** years and is under the age of **18** years . . . ."

Kentucky – ". . . any child between the ages of **6** and **16** . . . A child's age is between **6** and **16** when the child has reached his **6**th birthday and has not passed his **16**th birthday. . . ."

Louisiana – ". . . from that child's **seventh** birthday until his **eighteenth** birthday . . . ."

Maine – "Persons . . . who are at **7** and under **17** years of age . . . ."

Maryland – ". . . each child who . . . is **5** years old or older and under **16** . . . ."

Massachusetts – "Each child must attend school beginning in September of the calendar year in which he or she attains the age of **six**." (Language for the maximum age found in MASS. GEN. LAWS ANN. 76 § 1.)

Michigan – ". . . a child from the age of **6** to the child's **16**th birthday . . . ."

Minnesota – ". . . every child between **7** and **16** years of age...A parent may withdraw a child under the age of 7 from enrollment at any time."

Mississippi – ". . . a child who has attained or will attain the age of **6** years on or before September 1 of the calendar year and who has not attained the age of **17** years on or before September 1 of the calendar year...and any child who has attained or will attain the age of 5 years on or before September 1st and has enrolled in a full-day public school program."

Missouri – ". . . a child between the ages of **7** and the compulsory attendance age for the district...Any parent, guardian or other person who enrolls a child between the ages of 5-7 years in a public school program of academic instruction shall cause such a child to attend the academic program on a regular basis." The school board of a metropolitan school district ". . .may adopt a resolution to establish a compulsory attendance age of **17** to take effect no later than the school year next following the school year during which the resolution is adopted." In all other cases, compulsory attendance shall mean "Seventeen years of age or having successfully completed sixteen credits towards high school graduation. The school board of a metropolitan school district for which the compulsory attendance age is 17 years may adopt a resolution to lower the compulsory attendance age to sixteen years; provided that such resolution shall take effect no earlier than the school year next following the school year during which the resolution is adopted. "

Montana – ". . . any child who is **7** years of age or older prior to the first day of school in any school fiscal year . . . until . . . the child's **16**th birthday . . . ."

Nebraska – ". . . a child is of mandatory attendance age if the child (i) will reach **six** years of age prior to January 1 of the then-current school year. . . .and (iii) **has not reached eighteen** years of age."

Nevada – ". . . any child between the ages of **7** and **18** years..."

New Hampshire – ". . . any child at least **6** years of age and under **18** years of age . . . ."

New Jersey – ". . . a child between the ages of **6** and **16** years . . . ."

New Mexico – ". . . *is at least five years of age prior to 12:01 a.m. on September 1 of the school year; . . .* until the school age-person is at least 18 years of age unless that person has graduated from high school or received a general educational development certificate."

New York – ". . . each minor from **6** to **16** years of age . . . ."

North Carolina – ". . . a child between the ages of **7** and **16** years . . . ."

North Dakota – ". . . child of an age of **7** years to **16** years. . ..and if a person enrolls a child of age 6 in a public school, the person shall ensure that the child is in attendance for the entire school year."

Ohio – "A child between **6** and **18** years of age is 'of compulsory age'..."

Oklahoma – ". . . a child who is over the age of **5** years, and under the age of **18** years . . . ."

Oregon – ". . . all children between the ages of **7** and **18** years who has not completed the 12th grade. . ."

Pennsylvania – ". . . not be later than at the age of **8** years, until the age of **17** years."

Puerto Rico – ". . . all children between the ages of five (**5**) and eighteen (**18**) . . . ."

Rhode Island – "Every child who has completed or will have completed **6** years of life on or before September 1st of any school year and has not completed **16** years of life . . . ."

South Carolina – ". . . the child or ward is **5** years of age before September first until the child or ward attains his **17**th birthday . . . ."

South Dakota – ". . . a child who is **6** years old by the first day of September and who has not exceeded the age of 18..."

Tennessee – ". . . any child or children between **six** years of age and **seventeen** years of age. . . ."

Texas – ". . . a child who is at least **6** years of age . . . and who has completed the academic year in which the child's **18**th birthday occurred . . . ."

Utah – ". . . a minor between **6** and **18** years of age . . . ."

Vermont – ". . . a child between the ages of **six** and **16** years . . ." or " . . . has completed tenth grade . . . " or " . . . is excused by the superintendent or a majority of the school directors . . . ."

Virgin Islands – "All children shall commence their school education . . . in the calendar year in which they reach their **5**th birthday . . . until the expiration of the school year nearest their **16**th birthday . . . ."

Virginia – ". . . any child who will have reached the **fifth** birthday on or before September 30 of any school year and who has not passed the **eighteenth** birthday . . . ."

Washington – ". . . any child **8** years of age and under **18** years of age . . . ."

West Virginia – "Compulsory school attendance shall begin with the school year in which the **6**th birthday is reached prior to the first day of September of such year . . . and continue to the **16**th birthday."

Wisconsin – ". . . a child who is between the ages of **6** and **18** years old . . . ."

Wyoming – " . . . a child . . . whose **7**th birthday falls on or before September 15 of any year and who has not attained his **16**th birthday . . ." or " . . . completed the tenth grade . . . . "

Employment Related Provisions in State Compulsory School Attendance Laws - January 1, 2009

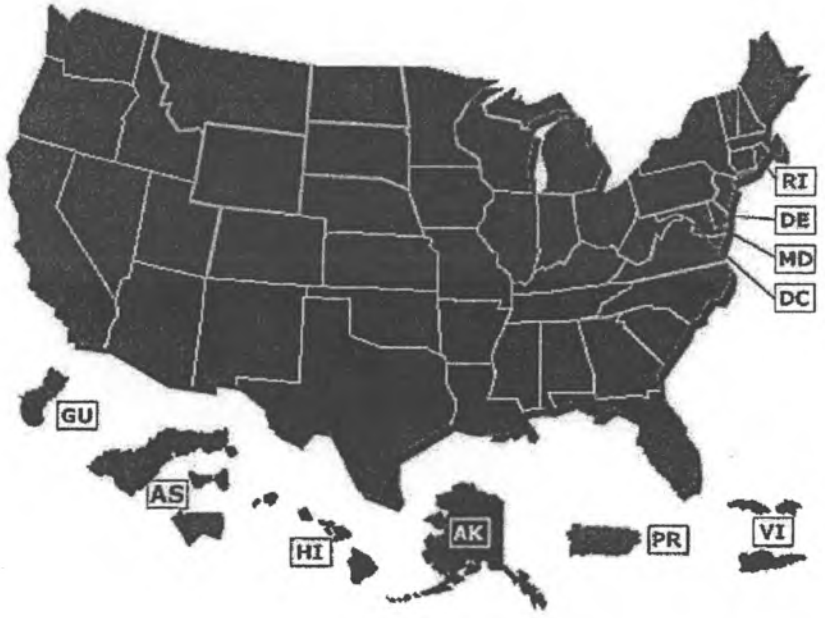

Table of Employment Related Provisions in State Compulsory School Attendance Laws By State

State	Age of Required School Attendance		Exemptions 1/ Employed		High School Graduate
	from	to	Age	Completion of Grade	
Alabama	7	16	legally and regularly employed under child labor law.	---	X
	3	21	permitted for special education students.		
Alaska	7	16	---	---	X
			14 with parental		

Arizona	6	16	consent and gainfully employed.	---	---
Arkansas	5	17 must complete school year.	---	---	X
California	6	18	---	---	X
Colorado	7	16	has current age and school certificate or work permit.	---	X
Connecticut	5	18	16 with parental consent.	---	---
Delaware	5	16	---	---	---
District of Columbia	5	18	children who are age 5 by September 30 are required to be enrolled in kindergarten.	---	---
Florida	6	17	may terminate attended at 16 with parental consent.	---	---
Georgia	6	16	---	---	X
Hawaii	6	18	15	---	X
Idaho	7	16	---	---	---
Illinois	7	17	employed and excused by school official.	---	---
Indiana	7	18	16 with consent of parent and principal. 14 if a parent agrees and State Labor bureau issues a certificate. must go back to school within 5 days of termination of employment for which certificate was issued.	---	X
Iowa	6	16	---	---	X
Kansas	7	18	17 or 16 with parental consent.	---	---
Kentucky	6	16	---	---	X
Louisiana	7	18 or 17 with parental consent.	---	---	X
Maine	7	17	15 or	9	X
Maryland	5	16	---	---	---
Massachusetts	6	16	14	---	---
Michigan	6	16	---	---	---
Minnesota	7	16	---	---	X

Mississippi	6	17	5 years of age if in public kindergarten.	---	---
Missouri	7	16	14	---	---
Montana	7	16 or completion of 8th grade, whichever is later.	---	---	---
Nebraska	7	18	14 and16 with parental consent; special legislation for home schooling.	8 ---	X
Nevada	7	upper age limit has been changed to 18 unless the child has graduated from high school.	14 and excused by board of trustees. 14 if work is necessary for own or parents' support.	8 ---	X
New Hampshire	6	16 presently; however, effective July 2009, upper age limit will change to 18 or the student must have received diploma or qualifies for exception. With passage of NH House Bill 927, all districts are making plans to offer kindergarten.	---	---	---
New Jersey	6	16	---	---	---
New Mexico	5, or 8 if parents and school board agree	effective July 1, 2007, neither school districts or state chartered school districts shall excuse a student from attending school except as provided by law or for parent-authorized medical reasons.	---	---	X
New York	6	17 in cities with 4,500 or more population and union-free school districts, otherwise 16 if approved by local school board.	---	---	X
North Carolina	7	16	---	---	---
North Dakota	7	16	necessary to support of family.	---	X

Ohio	6	18	16 with parents' and superintendents permission.	---	X
Oklahoma	5	18 or 16 if excused by written joint agreement.	---	---	X
Oregon	7	18 or excused by district school board; 16 with consent of school administration and parent; 21 for a child with a disability.	16	---	X
Pennsylvania	8	17	16 if regularly engaged in employment with a certificate. 15 in farm work or domestic service in private home with permit. Or, 14 employed as above if completed elementary school with permit recommended by district superintendent of schools or principal of private school.	---	X
Rhode Island 2	6	18	16 with written parental consent. Dropout Prevention Act of 2007.	---	---
South Carolina	5	17	16 further attendance is determined by court to be disruptive, unproductive or not in best interest of child.	8th grade completed and employment is necessary for maintenance of home.	X
South Dakota	6	16 or completion of 8th grade if member of certain religious organizations. effective July 1, 2009, the upper limit of the compulsory age law changes to	---	---	---

		18.			
Tennessee	6	18th birthday.	---	local exemptions at 17th birthday for discipline problems.	X
Texas	6	18; person 18 years of age may enroll but failure to attend can result in permanent revocation if 5 or more unexcused absences occur in a semester. Students suspected of violating school attendance laws when apprehended must be taken into custody and delivered to their school campus.	---	---	---
Utah	6	18	16 and 8th grade completed. home schooled minors has exempt from attendance.	8th for employment purposes.	X
Vermont	6	16	15 and completed 6th grade and services needed for support of family.	---	---
Virginia	5	18	exempt any pupil with parent's consent along with that of principal or superintendent or a court which believes the minor cannot benefit from education at school.	---	X
Washington	8	18 16 and parent agrees that child should not be required to attend, or child is emancipated, or child has received certificate of competence.	16	---	X and age 16
West Virginia	6	16	---	---	X
Wisconsin	6	18	---	---	X

Wyoming	7	16	---	---	---

1 Nearly all States exempt those whose physical or mental condition precludes attendance. Other exemptions not directly related to employment include those because of distance from school or school transportation; expulsion, suspension or determined to be disruptive; marriage; excused by court or judge; and receiving religious education.

2 The Dropout Prevention Act is a comprehensive program to have all the schools within the state make an attempt to keep students in school. There were no changes to the age limits for school attendance, but the establishment of a state-wide program is a major effort to prevent students from leaving school early - for any reason.

Legislation & Laws

News Articles

Overview

More than 150 years have passed since Horace Mann helped Massachusetts establish a statewide system of education that eventually led to the requirement that all children attend public school. In 1852, Massachusetts became the first state to pass compulsory school attendance laws, and by 1918, all states required children to receive an education.

Compulsory Education Requirements

Today, every state and territory requires children to enroll in public or private education or to be home-schooled. More than half—32 states—require students to begin their education by age 6. Some states' set their age requirements as low as age 5 and as high as age 8. All children are required to continue their education into their high school years, with 26 states setting the cutoff age at 16. The remaining states require students to stay in school through age 17 or 18.

Compulsory education laws vary greatly from state to state. While some states use a student's date of birth to determine the beginning and ending dates for compulsory education, other states require a student to begin school if he or she will turn 6 during the school year and require a student to remain in school until completion of the school year in which he or she turns 17. Four states—Arizona, Montana, Vermont and Wyoming—require students to remain in school through a specified grade. Most states allow parents to petition their local school board or principal for a waiver of these requirements under certain circumstances, such as enrollment in a vocational education program or an institution of higher education or early completion of required coursework.

Kindergarten Enrollment

States and territories also set a minimum age for children to enroll in kindergarten, which is typically one or two years earlier than the compulsory education age. Every state or territory with a policy on this issue has established age 5 as the minimum age. However, six states—Colorado, Massachusetts, New Hampshire, New Jersey, New York and Pennsylvania—leave this decision up to local education agencies. In addition to the age requirement, each state also sets a date by which students must have attained the specified age in order to attend kindergarten. The cutoff dates range from August 1 in Indiana and Missouri to Jan. 1 in Connecticut and Vermont.

The School Age Debate

School attendance ages are often controversial. Many early childhood experts argue that if policymakers establish early cutoff dates for kindergarten, they should also establish aggressive school readiness programs to ensure students' success. Others argue that because there has been an increased emphasis on early childhood development and school readiness, we should continue to challenge children at a younger age. Some experts assert that age may be an arbitrary indicator or measure of a child's ability to succeed in school and should not be used at all. Others point out that when a state considers legislation, such as Nebraska, allowing younger children to enter kindergarten, policymakers must understand that there is likely to be a large increase in the number of children entering kindergarten during the first year of the new policy, thereby straining already tight school district budgets and increasing the need for teachers.

The age through which students must attend school can also be controversial. To encourage more students to attend institutions of higher education and to decrease dropout rates, juvenile crime and teen pregnancy, some state legislatures have increased the school attendance requirement to age 17 or 18. Opponents are concerned about forcing students to be in the classroom against their will. They say that these students may become disruptive and may require teachers and principals to spend more time and resources disciplining such students for disruptive or violent behavior and truancy. They also point out that there probably will be a greater need for funding, teachers and classrooms for alternative education.

State Action

Many state legislatures continue to debate school attendance policies. During the 2005 legislative session, Indiana changed their kindergarten enrollment date from July 1st to August 1st. During the 2004 legislative session, at least seven states enacted legislation regarding compulsory education. Alaska extended the required school age for a child who is six years of age on or before Sept. 1 following the beginning of the school year, and who is under the age of 20 and has not completed the 12th grade. Illinois increased the compulsory school age from 16 to 17 years of age, with certain exceptions. Kansas and Kentucky will both, under specific circumstances, grant exemptions from compulsory attendance. Nebraska changed the mandatory ages for compulsory education beginning in the 2005-06 school year to age of 6 by Jan. 1 of the current school year through the age of 17, with certain exceptions. In New York, local school districts will have the power to require minors from 16 to 17 years of age to attend full time day instruction. Finally, Virginia strengthened the mechanisms for enforcement of the compulsory school attendance law.

NEA-ALASKA

Affiliated with the National Education Association

February 18, 2011

RECEIVED

FEB 21 2011

Sen. Bettye Davis
Room 30, State Capitol
Juneau, AK 99801

Dear Senator Davis:

Thank you for your introduction of Senate Bill 9, "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor."

On behalf of NEA-Alaska's nearly 13,000 public school employees and retired members I am privileged to offer this letter of support for the passage of Senate Bill 9.

Each January, for the past 55 years, elected NEA-Alaska delegates from Ketchikan to Barrow gather in Anchorage to set policy for the year. A few weeks ago, those 400 elected delegates affirmed their support for legislation to expand the age of compulsory school attendance and to address the problem of truancy in Alaska's public schools. As president of NEA-Alaska and as a 30 year teacher in Western Alaska I know firsthand the issue of children deciding to end their education on their 16th birthday. In this global economy, a high school diploma is a minimum for Alaska's children entering adulthood.

This legislation will help keep children in school and tracking towards their graduation. NEA-Alaska urges passage of Senate Bill 9 by the 27th Alaska Legislature.

NEA-Alaska applauds your efforts to improve K-12 education in Alaska.

Sincerely,

Barb Angaiak
President

NEA's 12-Point Action Plan for Reducing the School Dropout Rate

To address the nation's school dropout crisis, NEA has developed a 12-point action plan that includes the most promising actions supported by experience and data.

1. Mandate high school graduation or equivalency as compulsory for everyone below the age of 21. Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of "dropping out" before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education.

2. Establish high school graduation centers for students 19-21 years old to provide specialized instruction and counseling to all students in this older age group who would be more effectively addressed in classes apart from younger students.

3. Make sure students receive individual attention in safe schools, in smaller learning communities within large schools, in small classes (18 or fewer students), and in programs during the summer, weekends, and before and after school that provide tutoring and build on what students learn during the school day.

4. Expand students' graduation options through creative partnerships with community colleges in career and technical fields and with alternative schools so that students have another way to earn a high school diploma. For students who are incarcerated, tie their release to high school graduation at the end of their sentences.

5. Increase career education and workforce readiness programs in schools so that students see the connection between school and careers after graduation. To ensure that students have the skills they need for these careers, integrate 21st century skills into the curriculum and provide all students with access to 21st century technology.

6. Act early so students do not drop out with high-quality, universal preschool and full-day kindergarten; strong elementary programs that ensure students are doing grade-level work when they enter middle school; and middle school programs that address causes of dropping out that appear in these grades and ensure that students have access to algebra, science, and other courses that serve as the foundation for success in high school and beyond.

7. Involve families in students' learning at school and at home in new and creative ways so that all families-single-parent families, families in poverty, and families in minority communities-can support their children's academic achievement, help their children engage in healthy behaviors, and stay actively involved in their children's education from preschool through high school

graduation.

8. Monitor students' academic progress in school through a variety of measures during the school year that provide a full picture of students' learning and help teachers make sure students do not fall behind academically.

9. Monitor, accurately report, and work to reduce dropout rates by gathering accurate data for key student groups (such as racial, ethnic, and economic), establishing benchmarks in each state for eliminating dropouts, and adopting the standardized reporting method developed by the National Governors Association.

10. Involve the entire community in dropout prevention through family-friendly policies that provide release time for employees to attend parent-teacher conferences; work schedules for high school students that enable them to attend classes on time and be ready to learn; "adopt a school" programs that encourage volunteerism and community-led projects in school; and community-based, real-world learning experiences for students.

11. Make sure educators have the training and resources they need to prevent students from dropping out including professional development focused on the needs of diverse students and students who are at risk of dropping out; up-to-date textbooks and materials, computers, and information technology; and safe modern schools.

12. Make high school graduation a federal priority by calling on Congress and the president to invest $10 billion over the next 10 years to support dropout prevention programs and states who make high school graduation compulsory.

Quick Stats Fact Sheet

High School Dropout: A Quick Stats Fact Sheet

By Maggie Monrad, National High School Center at AIR

Each year almost one-third of public high school students fail to graduate from high school.[1] The high school dropout problem is a crisis for the United States, in part because it impacts not only individuals and their education, but also because the economic and social costs are so dramatic. Globally, the United States ranks seventeenth in high school graduation rates and fourteenth in college graduation rates among developed nations.[2] Domestically, the nation and its communities suffer from a lack of productive workers and higher costs associated with incarceration, health care, and other social services.[3] As the 21st century United States moves towards an increasingly global economy, more individuals are discovering that higher levels of education are critical to their own and their nation's ability to compete and thrive – in fact, about 90 percent of the fastest growing jobs will require some postsecondary education.[4] Understanding the magnitude of the dropout problem and the forces that impact dropout rates is critically important to developing dropout prevention strategies.

Who drops out?

- Secretary of Education Margaret Spellings' testimony to the U.S. House of Representatives Appropriations Subcommittee on Labor, HHS, and Education estimated that approximately one million students drop out every year.[5]
- High school dropouts are more likely to be unemployed, earn lower wages, have higher rates of public assistance, are more likely to be single parents, and have children at a younger age.[6]
- Every school day 7,000 U.S. students leave high school never to return.[7] In 2004, approximately 3.8 million 16- through 24- year olds were not enrolled in high school and had not earned a high school diploma or alternative credential, such as a GED.[8]
- Based on calculations per school day (180 days of school, seven hours each day), one high school student drops out every nine seconds.[9]
- The dropout rate for students with emotional/behavioral disabilities is approximately twice that of general education students.[10]
- Research has confirmed that the lowest-performing readers are most at risk of dropping out of high school. Those achieving in the lowest quartile are 3.5 times more likely to drop out than students in the next highest quarter of academic achievement, and 20 times more likely to drop out than top-performing students.[11]

Race/Ethnicity/Socioeconomic Status

- Male students are consistently eight percent less likely to graduate than female students, and the gap is as large as 14 percent between male and female African-American students.[12]

- Among minorities, only about 52 percent of Hispanic students and 56 percent of African-American students will graduate in four years, compared with 78 percent of white students.[13]

- High school students from low-income families (the lowest 20 percent) were six times more likely to drop out than students from higher income families. Ultimately, about one half of all dropouts never receive a high school credential.[14]

Students with Disabilities Aged 14 and Older Who Dropped Out, by Race/Ethnicity

Race/Ethnicity	Percent of Group who Dropped Out
American Indian/Alaska Native	52.2%
Black	44.5%
Hispanic	43.5%
White	33.9%
Asian/Pacific Islander	28.0%

Source: U.S. Department of Education, Office of Special Education Programs, Data Analysis System (DANS), 2003.These data are for the 50 states, DC, Puerto Rico and the four outlying areas. This is based on a cumulative 12-month count.

Impact: Crime

- Estimates indicate that approximately 30 percent of federal inmates, 40 percent of state prison inmates, and 50 percent of persons on death row are high school non-completers. Moreover, non-completers are 3.5 times more likely than high school completers to be imprisoned at some point during their lifetime.[15]

- Raising the high school completion rate one percent for all men ages 20- through 60- would save the US $1.4 billion annually in crime related costs.[16] Each class of high school dropouts costs the U.S. economy more than $8 billion in incarceration expenses and lost wages *per year.*[17] If the male graduation rate was increased by only five percent, the U.S. could save $7.7 billion a year through reducing crime related costs and increasing earnings.[18]

Impact: Economy

- A single 18-year-old dropout earns $260,000 less over a lifetime and contributes $60,000 less in federal and state income taxes. Combined income and tax losses for one cohort of 18-year-olds who drop out is $192 billion which is 1.6 percent of the GDP.[19] America loses more than $26 billion in federal and state income taxes each year from the 23 million high school dropouts aged 18 to 67.[20]

- Almost 1.3 million students didn't graduate from US high schools in 2004, costing more than $325 billion in lost wages, taxes, and productivity over their lifetimes.[21] The Alliance for Excellent Education has estimated that the more than 12 millions students who will drop out over the next decade will cost the nation $3 trillion dollars.[22]

Unemployment and Earnings for Full-time Wage and Salary Workers Age 25 and Over, by Educational Attainment

Unemployment Rate in 2005 (Percent)	Education Attained	Median Weekly Earnings in 2005 (Dollars)
1.6	Doctoral degree	$1,421
1.1	Professional degree	1,370
2.1	Master's degree	1,129
2.6	Bachelor's degree	937
3.3	Associate degree	699
4.2	Some college, no degree	653
4.7	High-school graduate	583
7.6	Some high-school, no diploma	409

Impact: Personal Income and Employment

- A male high school graduate who works until age 65 will earn, on average, nearly $333,000 more than a dropout; a worker with some college will earn $538,000 more. According to a recent report published by Teachers College at Columbia University, male high school graduates earn up to $322,000 more over the course of their lifetimes than dropouts, while college graduates earn up to $1.3 million more.[23] In total, there is more than $309 billion lost wages over the students' lifetimes.[24]

- In 1964, a high school dropout earned 64 cents for every dollar earned by an individual with at least a high school degree. In 2004, the high school dropout earned only 37 cents for each dollar earned by an individual with more education.[25]

- The median income of high school dropouts aged 18 and over was $12,184 in 2003. By comparison, the median income of those aged 18 and over who completed their education with a high school credential (including GED) was $20,431.[26]

Law urged to make teens stay in school

The Boston Globe

By James Vaznis, Globe Staff | October 21, 2009

Massachusetts students would be required to stay in school until age 18 under an ambitious proposal, part of a broader effort to halve the state's high school dropout rate, to be announced today by a special state commission.

With approximately 10,000 Massachusetts students quitting school each year, some as young as 14 years old, commission members say the state can no longer afford to ignore the dropout crisis, especially when striving to develop a more highly educated and skilled workforce.

For more than a decade, the state's dropout rate has remained stagnant. According to the most recent data available, 3.4 percent of students statewide quit school during the 2007-08 academic year, while several urban districts have rates nearly triple that. Under current state law, students can legally drop out by choice at age 16, and students as young as 14 can withdraw from school with permission from the superintendent for medical reasons, employment, or to do nonwage work at home.

If these dropouts never return to receive a diploma, they can become a huge drain on the state's economy. They are less likely to have a job and are far more likely to go to jail or depend on public assistance than residents who have graduated from high school, according to the commission's report, which is being released this afternoon.

"This whole report is a call to action," said Paul Reville, the secretary of education and chairman of the commission, which was created under a 2008 law to develop dropout prevention strategies. "It's critical work. We can ill afford the waste, loss, and tragedy these persistent rates represent."

In the coming months, the Patrick administration plans to put together legislation to raise the compulsory school age, a measure that will be tied to creation of an array of programs aimed at preventing students from dropping out and reaching out to those who have. By April this year, 19 states required students to stay in school until 18, according to the Education Commission of the States. The group includes New Hampshire, where the change took effect this year.

Some strategies recommended by the commission include hiring case managers to make the school experience more personal for these students, creating internships so students clearly see the connection between the classroom and potential careers, and using standardized test scores and other data to gauge, as early as elementary school, whether a student runs the risk of not finishing high school.

Given the state's dire budget predicament, Reville said, gaining the funding needed to push the effort forward could be a challenge. Already, sluggish state revenues have forced a sharp reduction in funding for dropout prevention this year.

But Reville emphasized that fighting for these students is worthwhile. "We are not going to hold back because of a budget crisis and say this problem doesn't exist," he said.

While the commission did not put a pricetag on its proposals, the report pointed out that overall enrollment in alternative education programs at local high schools would more than double, from 4,500 to 12,000, as more students stay in school.

Some members of the Legislature have expressed skepticism in the past about raising the age of school leaving, worried about the cost associated with creating programs for these students or further exacerbating problems that many districts already have with truancy. Those concerns led to passage of the bill that created the commission.

But others in the Legislature strongly support raising the attendance age. Representative Garrett Bradley, Democrat of Hingham, has already filed a bill to raise the maximum attendance age, which will be the subject of a hearing next month.

Reville said he has not examined that legislation yet, but anticipates that it will need to be reworked to encapsulate all the panel's recommendations.

Representative Martha M. Walz, a Boston Democrat who cochairs the Joint Committee on Education, has not yet taken a position on Bradley's bill, but said she was encouraged that the commission had given the age change a favorable recommendation and had suggested other programs and resources that could help these students succeed in school.

"My gut instinct tells me keeping students in school until age 18 is the right way to go if we can address underlying reasons that cause them to drop out and create programs that address their need," Walz said.

Students drop out of school for a wide array of reasons. Some grow frustrated because of consistently poor academic performance in school, particularly those not fluent in English and those who require special education, according to the report. Other students say they don't have time for school because they need to help their families earn income.

The commission also found that some students said they did not stick with school simply because no one seemed to care whether they did.

Compared with the national average, Massachusetts loses a smaller share of students. According to the most recent federal data available, from 2007, the national high school dropout average was 8.7 percent.

But rates in several Massachusetts urban districts often exceed or hover around the national average. In the 2007-08 school year, Lawrence lost 12.9 percent of its students; Fall River, 12.5 percent; Holyoke, 11.6 percent; Springfield, 9.7 percent; and Boston, 7.6 percent.

Reducing dropout rates is one part of the state's strategy to boost the state's high school graduation rate, which for the class of 2008 stood at about 81 percent. Dropouts accounted for about half of the students who did not earn a diploma in four years, while most of the others in that group opted for a fifth year of school.

Each dropout, over his or her lifetime, costs more than $118,000 in government expenditure and other benefits, according to research conducted a few years ago by Northeastern University's Center for Labor Market Studies.

Some districts are already working on reducing dropout rates. Boston opened a "re-engagement center" last month where high school dropouts can receive extra support as they resume their quest for a diploma.

Thomas Scott, executive of the Massachusetts Association of School Superintendents, said that decreasing the dropout rate is a good goal, but that the state needs to put money behind the policy. "You have to invest in this population for them to stay in school," said Scott. ■

Setting the Stage for the Discussion...

"Most students don't wake up on a single morning and decide to drop out of school. Rather, dropping out is the end of a long-term process of disengagement, as students find school to be disconnected from — even at odds with — the rest of their lives."

—Geoff Garin, President, Peter D. Hart Research Associates

"No problem can be solved by the same level of consciousness that created it."

—Albert Einstein

"More of the same ... will not work.... Intensifying efforts that have repeatedly failed is not a route to success. However, the necessary first step toward success is not very complicated: it lies in simply recognizing that, when it comes to schools, one size cannot possibly fit all. Thus, if a student has demonstrated she's not going to make it in one kind of school, we should let her try another. And it can't reasonably be another that is essentially the same as the one she left. Let her try a different kind of school."

—Mary Anne Raywid, Professor Emeritus, Hofstra University

"Contrary to popular belief, most dropouts demonstrate remarkable persistence and drive to achieve their education goals. In search of a second chance, they find and enter a wide variety of "second chance" programs in pursuit of a high school credential."

Acknowledgements

The Task Force would like to recognize all those who shared their time and expertise. Your contributions were invaluable to our work and instrumental in helping us complete this report. Thank you.

Patricia Alvey, Section Chief, Maryland State Department of Education: GED Exam.

Mark Goldstein, Maryland Department of Planning: Enrollment.

Gary Heath, Assistant Superintendent, Maryland State Department of Education: Calculating the dropout percentage.

Barbara Bice, Branch Chief, Maryland State Department of Education: School construction.

John Smealie, Assistant Superintendent, Maryland State Department of Education: Highly qualified teachers and the teacher shortage.

Catherine Pugh, State Senator: Alternatives to dropping out.

Stuart Bounds, President, Chesapeake Community College: Alternatives for at-risk students.

Note From the Chair

On behalf of the Task Force to Study Raising the Compulsory Public School Attendance Age to 18, I am pleased to submit this report. It reflects the hard work, experience, and thoughtfulness of the more than 50 people involved in our deliberations over the past year.

Youth are society's greatest resource. Thus, one of society's greatest interests must be to empower youth through education, allowing them to realize their human potential. This imperative is moral, economic, and social and requires leadership at every level.

Schools need to create cultures in which every student is valued, and generate a menu of creative approaches to engage each student. We must engage all students at a very early age, set high expectations for them, and inspire and motivate them to learn. We must strive toward the ideal that every student succeeds, eliminating those barriers to success where we can. Globalization and automation require us to alter traditional thinking and exercise creativity in engaging students. Additionally, Maryland's student demographics have changed dramatically over the past 20 years, underscoring the need for culturally competent and diverse teachers.

While schools can and must play an integral role in shaping the lives of young people, they are not a panacea for the family, social, environmental, and other societal forces that can impact a student's ability to achieve. There are myriad factors this Task Force had neither the time nor specific mandate to address, but are germane in determining whether to raise the compulsory public school attendance age. We urge the Maryland General Assembly and Governor to consider all relevant issues in determining how we can most effectively and efficiently empower Maryland's young people to achieve their potential. There is no greater investment we can make than the investment in children. We urge the State of Maryland to invest the resources required to promote the success of all Maryland students.

It has been a pleasure to serve as Task Force Chair. The Task Force is deeply indebted to Marcia Lathroum, Ann Chafin, and other members of the Maryland State Department of Education who provided invaluable input. The Task Force also appreciates the input provided by the 24 local school systems. I am most thankful for this opportunity to serve Maryland's youth.

Sincerely,
Ranjit S. Dhindsa, President, Maryland Leadership Workshops, Inc.

Message From the State Superintendent of Schools

During the Maryland General Assembly Session 2006, House Bill (HB) 36 was amended to establish a task force that would study raising the age of compulsory attendance from 16 to 18 years of age. The Bill was signed into law by Governor Robert L. Ehrlich on May 16, 2006.

The Task Force convened in December 2006 and concluded in December 2007. The work and recommendations of this Task Force could impact current law and have implications for many State and local agencies. Also impacted by the outcome of this work are the children of Maryland, their families, schools, and the State of Maryland.

This is a complicated topic, and this Task Force was charged with studying all aspects of the issue. Maryland prides itself on its diversity. That diversity is also found in the students of Maryland. There are some students, despite myriad interventions, that find it impossible to continue in a comprehensive school setting. Although it is sometimes behavioral, just as often it is a result of family obligations, financial needs, and personal commitments. Engaging some children and young adults in the learning process is a challenge for instructional leaders and teachers. This committee looked at not only engaging 16-year-old students in school, but exposing students at an early age to a positive learning experience.

The Maryland State Department of Education is committed to providing a safe and orderly environment that is conducive to learning and high achievement for all students. The work of this committee is yet another effort to move forward. Although the Task Force has completed its work, we must now take these recommendations to our legislators and collaborate with our elected State and national officials to address the needs of our students who are leaving schools without high school diplomas. We are committed to establishing an educational system that will ensure that all students can graduate.

Sincerely,
Nancy S. Grasmick, Maryland State Superintendent of Schools

Task Force Membership

History and Charge

The General Assembly has introduced bills for the last four years that would, if passed, amend §7-301 of the Annotated Code of Maryland by raising the age of compulsory attendance from 16 to 18. Although these bills have not been signed into law, interest in the topic and concerns related to students who drop out of school without a high school diploma have not waned. Therefore, during the 2006 Maryland General Assembly session, House Bill 36 was amended to create a task force that would study this issue from a variety of perspectives.

House Bill 36 succinctly outlined membership and questions to which the Task Force was required to respond. These questions covered a broad perspective of issues surrounding the act of raising the age of compulsory attendance. The Task Force was charged with evaluating the impact of extending the compulsory public school attendance age to 18, and providing the General Assembly and Governor with an impact statement, recommendations, and an action plan for guidelines and resources needed to effectively implement such a change in statute. The overarching charge posed to the Task Force had to do with examining the *impact* of raising the age of compulsory attendance, and what issues would need to be addressed if this change were to occur, rather than making a recommendation on whether to raise the age. It was incumbent among the members of this Task Force to research, brainstorm, evaluate, and reach consensus on myriad topics. Experts in each of the areas to be studied were invited to the Task Force meetings to share existing practices, policies, and data on dropouts, enrollment, existing facilities, staffing, best practices, and alternatives to comprehensive or "traditional" high school. During their last full meeting, the Task Force members crafted recommendations.

The main Task Force oversaw the work of four subcommittees, which were organized around the following categories: laws of other states; best practices in Maryland and strategies to motivate and engage students in school; the practical implications of raising the age of compulsory attendance and resources needed to effect the change; and the impact of changing the age of compulsory attendance on special populations. Additional members who could bring expertise to the subcommittees were invited to join the Task Force. Each subcommittee was asked to focus its work primarily on the statutory provisions of House Bill 36 that pertained to its area of study. Subcommittees met periodically throughout the process, and reported to the full Task Force at each of the four Task Force meetings.

The following are the mandates that the Task Force addressed from House Bill 36:

1. "Gather and review data on relevant best practices related to extended learning opportunities for teens between the ages of 15 and 18, including recommendations put forth under the federal No Child Left Behind legislation (P.L. 107-110);"
2. "Examine the adequacy of facilities, staffing, programming, instructional time, and resources to accommodate raising the compulsory public school attendance age to 18;"
3. "Project the impact on student attendance and achievement outcomes, and assess the fiscal and social benefits to the students and to the State, of raising the compulsory public school attendance age to 18;"
4. "Develop an action plan to implement, provide professional development opportunities, and foster partnerships among governmental agencies, county boards of education, and the business community to support the successful implementation of an initiative to raise the compulsory public school attendance age to 18 throughout the State;"
5. "Examine the implications for raising the compulsory public school attendance age to 18 on standards-based outcomes, students with disabilities, and students with limited English proficiency;" and
6. "Provide any other guidance and make any other recommendations the Task Force deems appropriate."

Although the work of the Task Force is complete, the Maryland State Department of Education realizes its responsibility to continue to work toward engaging all students in the educational process, ensuring that all students achieve and graduate with a Maryland High School Diploma. The Department hopes to continue to work collaboratively with State and federal legislators to promote this end.

Executive Summary

The motivation for virtually all education initiatives—such as House Bill 36 and No Child Left Behind—is to enable children to succeed, maximize their human potential, and lead productive lives. Research tells us that young people in Maryland can achieve these objectives by staying in school, mastering a body of work through grade 12, and earning a Maryland High School Diploma.

FRAMING THE PROBLEM

The high school diploma is a prerequisite for self-sufficiency in America, and yet in the 2005-06 school year alone, 1.2 million students nationally ("Diplomas Count," 2007), and 11,058 in Maryland (Maryland State Department of Education, 2006), left high school before earning one.

"Most students don't wake up on a single morning and decide to drop out of school. Rather, dropping out is the end of a long-term process of disengagement, as students find school to be disconnected from—even at odds with —the rest of their lives."
—Geoff Garin, President, Peter D. Hart Research Associates

These students face a harsh future. Without diplomas, young adults earn lower salaries and face reduced earning potential. It is estimated that American adults without diplomas earn 27 percent less than those with diplomas (Day & Newburger, 2002). High school dropouts are also disproportionately represented in prison. In 2004, dropouts made up 41 percent of the nation's prison inmates (Harlow, 2003). Dropouts can even expect a shorter life span and more instances of heart disease, diabetes, and obesity (Belfield & Levin, 2007).

Beyond individual consequences, the problem of high school dropouts affects everyone. Less education is associated with an increased dependency on public assistance (Heckman, 2000). Further, research indicates that low educational achievement directly correlates to crime committed by juveniles and adults (Bonczar, 2003). It costs Maryland from $8,237 to $11,740 per year to educate a student (Maryland State Department of Education, "The Fact Book," 2006). Consider the costs of incarceration. In FY 2004, the average daily population in a secure detention facility under the Maryland Department of Juvenile Services Administration was 291 children. The average daily cost in FY 2004 for children was $243. The State spends over $70,000 per day for children incarcerated in a secure facility. This does not represent children in alternative placements or programs (Maryland Department of Juvenile Services, 2004).

CONTRIBUTING FACTORS

As Geoff Garin, President of Peter D. Hart Research Associates puts it: "Most students don't wake up on a single morning and decide to drop out of school." On the contrary, the cycle of habitual truancy begins as early as elementary school. Poverty, dysfunctional families, learning disabilities, emotional issues, environmental issues, substance abuse, lack of parental engagement, language barriers, and low expectations on the part of the student or society—all of these factors and more lead students to abandon their education.

When asked, students who drop out of school tell us that schools did not motivate them to work hard, were not sufficiently demanding, and did not provide necessary academic and personal supports. Other students stated that as they grew older, increased freedom and other distractions drew them away from school. Significant reasons given by students for dropping out included not being sufficiently challenged, and feeling unmotivated, bored, and unsupported. Other, more personal reasons, were also significant: needing a job, becoming a parent, taking care of a sick family member (Bridgeland, DiJulio, & Morison, 2006).

EVERY CHILD NEEDS A CARING ADULT

The family is likely the most important factor in determining a child's educational success. Children need daily encouragement and validation. But not all parents are engaged or even interested in their children's education. While parent and family involvement is not within the purview of this Task Force, it is inextricably linked to student success. Therefore, the Task Force must emphasize that successfully reducing the dropout rate hinges upon children having a parent or other responsible adult, which includes a qualified mentor, to support and encourage them. Knowing this, the school community should confirm that each child has at least one responsible adult in his life encouraging him to be successful in school. If that adult cannot be confirmed, then one must be found for him. That adult should stress to the student the importance of schoolwork, and should help the family understand that allowing the child too much access to distractions (television, video games, etc.) will thwart her learning.

When parents talk to their children about school, expect them to do well, help them plan for college, and make sure that out-of-school activities are constructive, their children do better in school.
—A New Wave of Evidence: The Impact of School, Family and Community Connections on Student Achievement, National Coalition for Parent Involvement in Education.

Title I schools currently require a "School-Parent Compact," which is an effective tool for describing how schools and parents will share the responsibility for improved student academic achievement. Compacts, developed jointly between parents and school staff, describe

the responsibilities of both parties as they relate to academic, attendance, and behavioral standards, and serve as a basis for productive, two-way communication. It would be beneficial to expand this practice to every student who does not have an adult in his or her education life.

NO SINGLE REMEDY

Studying the impact of changing the age of compulsory attendance from age 16 to age 18 has been the focus of the Task Force. Some states have instituted a compulsory attendance age of 17 or 18, though most have included exceptions to allow principals and superintendents the latitude to continue to remove students who prove disruptive or habitually truant. This Task Force has explored the complexities of raising the compulsory attendance age and ensuring student success. Fundamental to our consideration is recognizing that students who drop out of school are diverse and thus there is no single remedy for the ills that lead them to drop out.

Education is the first step in breaking the cycle of poverty that is exacerbated by the lack of opportunity that dropping out of high school brings. Engaging students in a positive learning environment is critical whether or not students are legally allowed to leave at 16 or 18.

INTERVENTIONS ENGAGE STUDENTS AND KEEP THEM IN SCHOOL

There is a spectrum of interventions that would engage students who leave school prior to graduation. These interventions could include anything from more effectively engaging students within the traditional classroom and school, to offering alternative and creative solutions to educate students outside of the traditional classroom or school. Since there is no standard definition for "alternative programming" in Maryland, the framework on which these interventions can be created is limited only by resources. There are certain factors or characteristics, however, that any program designed to effect change in the at-risk student should include. These are: (1) effective organization and administration (program design that supports low student/adult ratios or alternative education with supports); (2) safe school climate (family atmosphere, cultural sensitivity); (3) student-centered service and instruction delivery (targeted interventions and monitoring); (4) appropriate content/curriculum (combination of academic and work-based learning); and (5) a staff culture of high expectations and commitment to knowing students as individuals. In addition to program needs, it is also important that students feel a sense of support and empowerment (from family, neighborhood, school); positive values/identity (character, sense of purpose); boundaries/expectations (role models, family, positive peer influence); commitment to learning (life-long learning); and social competency and constructive use of time (decision-making skills, conflict resolution, youth programs and activities).

> *"No problem can be solved by the same level of consciousness that created it"*
>
> *—Albert Einstein*

There are currently programs aimed at providing students with skills and assistance to graduate high school or complete a GED program, attain post-secondary education, and develop entry-level job skills. These programs enable students to feel a sense of purpose and connection to their learning environments. Students feel connected in a variety of ways. Connectedness can take the form of an individual relationship with a staff member, participation in an extracurricular activity, a positive peer group, or recognition for academics. Model programs tend to enable students to meaningfully connect their education to the work world and emphasize the importance of relationships. These programs address the diversity of reasons that precipitate students leaving high school early. Because students leave high school early for a wide variety of reasons, we must consider a multi-faceted approach in exploring ways to foster and guarantee student success. All Marylanders benefit when Maryland youth realize their human potential and lead productive lives as members of our community.

THE FISCAL IMPACT OF INCREASED INTERVENTIONS

Although the overall socioeconomic impact of these programs is significant, substantial resources are needed to successfully implement them. Assessing the fiscal impact on the State and local governments seems imperative as families, business leaders, politicians, and educators consider raising the compulsory age of attendance from 16 to 18 years of age.

"More of the same ... will not work.... Intensifying efforts that have repeatedly failed is not a route to success. However, the necessary first step toward success is not very complicated: it lies in simply recognizing that, when it comes to schools, one size cannot possibly fit all. Thus, if a student has demonstrated she's not going to make it in one kind of school, we should let her try another. And it can't reasonably be another that is essentially the same as the one she left. Let her try a different kind of school."
—Mary Anne Raywid, Professor Emeritus, Hofstra University

Based on figures from the Maryland State Department of Education, the average number of students dropping out of Maryland's public schools each year is approximately 10,500. For calculation purposes we projected that this number would remain unchanged so that a two-year total would be approximately 21,000 students. Facility analysis was based on an assumption that students would return to a typical classroom with 20–25 students. Based on the present Public School Construction Program facilities capacity formula (25 students per teaching station at 85 percent utilization), we assumed 21.25 students per classroom. The committee took into account each system's present overall high school capacity without regard for the fact that some geographical areas of a local school system might be more heavily impacted by returning students than other neighborhoods. Statewide usage capacity is already at 100 percent with 11 systems above 100 percent. The number of high school students is projected to decline in the state

through 2014, but the total public school enrollment in Maryland in 2015 is trending upward.

To calculate the staffing needs, we used the statewide average of one instructor for every 19 students. Recognizing that "new construction" often takes years to come to fruition, the subcommittee decided to provide both the cost to provide newly constructed classroom space and the cost to provide portable classrooms to expand facility capacity in the short term. New construction costs and portable classroom costs are based on current Public School Construction Program budget estimates. New construction was calculated at $247 per square foot. The purchase and installation of portable classrooms is estimated at $80,000 per unit. The more likely approach of purchasing portable classrooms to accommodate the additional 21,000 students totals approximately $46 million. Additional space is required in 15 of the 24 school systems.

The total additional costs for providing educational and related services to the additional students exceed $200 million per year. (See the "State Summary of Additional Costs" table below.) This figure varies in the projected impact on local jurisdictions, from a low of $385,000 in Talbot County to a high of $60 million in Baltimore City. (For specific district information, see tables 1–6 in the report of Subcommittee Three: Practical Implications and Resources.)

The State Summary of Additional Costs table is based on data currently collected by the Maryland State Department of Education. The State Summary of Additional Costs table does not include certain other potential costs, including costs associated with: alternative education programs for students ages 17 or 18; alternative education programs associated with early interventions at much younger ages; professional development; or costs associated with enforcing daily attendance and monitoring truancy of students.

STATE SUMMARY OF ADDITIONAL COSTS	
Additional Pupils (17 and 18 year olds)	*21,044*
Additional Instructional Staff	*1,108*
Additional Classrooms Needed	*571*
Cost for Additional Pupils (rounded, annual)	*$200,015,000*
Cost for Additional Portable Classrooms	*$45,660,000*

Numbers are rounded, one time.

STAFFING AND PROFESSIONAL DEVELOPMENT CONSIDERATIONS

An action plan to implement a change in the age of compulsory attendance must address both the critical shortage of highly qualified teachers in Maryland—17.8 percent of classes in core academic subjects are presently *not* taught by highly qualified teachers, as defined by the No Child Left Behind Act of 2001—and the need for professional development opportunities to train teachers to more effectively engage students at risk of dropping out of school (Maryland

Report Card, 2007). This is particularly important given the potential additional strain on the existing teacher shortage that may be precipitated by military base realignment. Additionally, the move toward all-day kindergarten will likely further deplete the availability of highly qualified teachers in Maryland. The challenge is underscored by the fact that Maryland institutions of higher education cannot meet Maryland's current demand for highly qualified teachers. While the above figures include the total number of teachers needed to fill the positions created by the additional students, assuming the current teacher-student ratio remains the same, it does not include costs associated with professional development needs.

Educators must use diverse and, in some cases, nontraditional pedagogical methods to engage potential dropouts. Moreover, educators must identify and engage these students at ages much younger than 16 with creative and nontraditional strategies to enable these students to become successful. We must create professional development opportunities to train teachers to more effectively engage the increasingly diverse students which are withdrawing from the traditional high school.

CHRONICALLY DISRUPTIVE STUDENTS

One subset of students that leaves school early is those who are chronically disruptive and leave either by choice or by invitation. The potential benefits to students who would otherwise drop out of Maryland public schools by requiring them to attend beyond the age of 16 must be weighed against the potential detriment to their peers in cases of highly disruptive students. However, with appropriate professional development training, perhaps some of these chronically disruptive students could be better managed within the traditional classroom setting. Appropriate alternative programming could be the remedy for those who can't be managed within the regular classroom setting.

"Contrary to popular belief, most dropouts demonstrate remarkable persistence and drive to achieve their education goals. In search of a second chance, they find and enter a wide variety of "second chance" programs in pursuit of a high school credential."
—Making Good on a Promise: What Policymakers Can Do to Support the Educational Persistence of Dropouts, Double the Numbers, a Jobs for the Future Initiative.

GED IS AN EXISTING ALTERNATIVE ROUTE TO A DIPLOMA

The General Educational Development (GED) Program offers students an alternative route to earning a high school diploma. In FY 2007, 5,720 GEDs were awarded in Maryland (Maryland State Department of Education, 2007). Although students who are awarded a high school diploma through the GED Tests are eligible to attend community colleges, those students are not considered high school completers under No Child Left Behind. A recipient who earns a High School

Diploma by Assessment is nevertheless deemed a high school dropout. As a result, this viable alternative is not counted as a positive educational outcome for local school systems.

THOUGHTS ON SPECIAL POPULATIONS

Students with disabilities receive special education and related services designed specifically to meet their unique needs. These services and specialized instruction are provided to the student at no cost to the parents. The Individuals with Disabilities Education Act (IDEA 2004) is the federal law mandating that all children with disabilities between the ages of 3 and 21 are entitled to a free appropriate public education, sometimes referred to as FAPE. Additionally, the Annonated Code of Maryland, §7-701, mandates that all individuals 5 years or older and under 21 shall be admitted, free of charge, to the public schools of Maryland.

Another special student population is that of Limited English Proficient (LEP) students. These students have a primary or home language other than English, and have been assessed as having no ability, or limited ability, to understand, speak, read, or write English. LEP students are also entitled to a public education between the ages of 3 and 21 (COMAR 13A.01.04.02 (11)). Some research and data indicate, however, that being entitled to FAPE until age 21 does not necessarily result in a higher rate of school completion for these special populations.

To meet the needs of these diverse subgroups of students, appropriate educational program options, services, and supports are necessary. As the discussion of raising the compulsory attendance age continues, policymakers and educators must be sure to consider the unique needs and concerns of these students.

NEXT STEPS

This Task Force urges consideration of this report in concert with the work of other groups that have been convened to address ways for students to achieve, including Maryland's Parent Advisory Council, the Task Force on the Education of Maryland's African-American Males, and the Task Force on Universal Preschool Education. The research and recommendations of these other groups, coupled with this Task Force's work: (1) elucidate the complexities impacting student success; and (2) underscore the importance of identification and early intervention with students who are at risk for dropping out or otherwise failing to realize their academic potential and potential to become successful community members. Additionally, creating partnerships with local business leaders and workforce development organizations will enable local school systems to create and tailor educational programming to meet the workforce needs of their local communities. Further, this will engage the business community in education.

We must identify students at risk for dropping out at very early ages; create and make accessible sustained interventions to prevent them from dropping out; encourage and provide alternative routes to success for those students who ultimately drop out notwithstanding all

efforts; provide professional development; and allocate the resources, both financial and otherwise, to ensure that all Maryland students maximize their educational potential.

Recommendations

The Task Force believes that Maryland must do more to engage children and keep them in school. However, the Task Force agrees that in isolation, a change in the compulsory attendance age will not reduce the dropout rate. The reality is a policy change can require students to attend school, but it can't make them learn. Whether the students benefit from being in school depends largely upon the programs and support they receive there. Accordingly, the Task Force supports the implementation of these recommendations, and the engagement of students at an earlier age, in order to address the needs of children at risk of dropping out of school. In the context of strengthened, expanded supports for ~~the~~ students who would be affected, students who would otherwise drop out, would, of their own volition, choose to remain in school and earn a diploma. Thereby, addressing the issue of legally mandating students to remain in school would become unnecessary.

Recommendation One

Establish a statewide initiative that will:

a) Be flexible while maintaining a consistent approach to meeting the needs of 16- to - 18 year old dropouts and potential dropouts, regardless of where they live or attended school;

b) Expand the data collection work on existing dropout-prevention and re-entry programs that has been done, and design and implement a program to analyze the effectiveness of these dropout-prevention programs;

c) Establish pilot model programs based on proven or promising approaches, and evaluate their success prior to statewide implementation. (Consideration should be given to geographic location, size, and diversity of school systems.);

d) Provide an infrastructure (people, organization, time of day, location, resources, community and family involvement), and identify reallocation of funding and new funding that guarantee effective interagency services and assure increased numbers of students will stay in school and graduate; and,

e) Examine articulation and funding agreements and formulas among agencies and institutions to determine which of these enhance students' opportunities and which serve as barriers.

Rationale

If the compulsory attendance age is raised, Maryland will immediately need to put in place a system of supports and services for students who under the previous requirement would have dropped out, and for those young adults who have already dropped out but will be required to return to school. A statewide framework must be built to accommodate these students; this multi-faceted recommendation can serve as the blueprint.

Before Maryland puts dropout prevention and intervention programs and practices in place, devoting staff, resources, and time, we must know that these programs and practices will be effective.

Task Force research on current practices and programs included collecting data from school systems on existing programs. Members analyzed the evidence shared by districts, and examined the findings of national longitudinal dropout studies. This process revealed weaknesses in data collected on programs across the state. Task Force findings in this area included the following:

- There is a significant discrepancy among districts in what is identified as an alternative education or dropout-prevention program.
- The data evaluating these programs are inconsistent.
- It is difficult, if not impossible, to compare the costs per student of these programs.

Better data collection is essential to confirming programs' success before statewide implementation. It is also essential for reasons of accountability. Although there are programs that address at-risk students, there have been limited studies done on the effectiveness of these programs. This lack of robust data has inhibited the Task Force from making more specific recommendations regarding the designs of ideal dropout-prevention and re-entry programs. Scant data has also constrained this Task Force's analysis of the need for alternative programming, the additional years to educate students, and the associated costs. Before moving forward with costly initiatives, it is imperative that evidence-based decisions be made that support both the need for change, as well as the justification for funding.

A review of promising practices in other states indicated a significant expense (around $200 million dollars per year) to simply raise the compulsory age requirement to 18 under the present school environment and current instructional delivery systems. The additional expenses associated with truly alternative programs—over and above the school systems' commitment to the typical child served—should be based on research that has taken place in Maryland, with Maryland children, ideally in multiple settings. The analysis of these pilot programs would then

inform further discussion of the fiscal support needed for an alternative program to meet the needs of Maryland's students, teachers, businesses, and families.

Recommendation Two

Support and promote the awarding of a High School Diploma by Assessment as a valid credential, and work with the federal government to remove any disincentives for recognizing a high school diploma earned by passing the national GED Tests.

Rationale

The traditional route to the diploma must remain the preferred pathway. However, Maryland must acknowledge that the traditional, four-year high school experience is an unrealistic expectation for some children. Alternatives, including the awarding of a High School Diploma by Assessment through the GED Tests, must be provided, supported, and promoted. Maryland must support and promote alternative pathways for those students for whom it is appropriate. Certainly, these pathways should not be promoted to every child at risk of dropping out.

INCREASE ACCESS TO GED INSTRUCTION AND TESTING

GED instructional programs should be more effectively publicized and more widely available. Schools should be encouraged to distribute accurate information about local GED instructional programs, including the cost of testing, both to students who have already dropped out of school and to students at risk of dropping out. Students also need to know that a High School Diploma by Assessment is a valid credential to enter Maryland community colleges. They also need to know that without a college degree their future income potential is limited compared to that of a college graduate. One opportunity for providing this information is the exit interview that COMAR requires of all students who withdraw from Maryland public schools. In order to implement this recommendation, instructional programs and testing services would need to be expanded. For example, demand for GED instruction exceeds current capacity.

IMPLEMENT THE "GED OPTION" PROGRAM

Maryland students wishing to attempt the GED Tests must first drop out of school to conform to the American Council on Education (ACE) requirement. ACE does offer an alternative for targeted students who remain in school. The GED Option program targets students who are able to complete high school requirements, but who, for a variety of circumstances, are behind in the credits needed to graduate with their class. With the GED Option, the student remains enrolled and attends high school for at least 15 hours of instruction per week. This

instruction includes not only GED preparation, but also workforce development skills and/or career and technology education. As the GED Tests are a valid method of earning a diploma, Maryland should consider implementing the GED Option program, which has been adopted in 11 states, including New York and Virginia. To implement a similar GED Option in Maryland, the State Board of Education would need to amend COMAR to recognize the GED Option program as an approved pathway leading to a Maryland high school diploma.

REMOVE DISINCENTIVES

The GED Tests are a valid route to the diploma and should be promoted as such, regardless of how the federal government categorizes GED Tests under No Child Left Behind (NCLB). Currently, NCLB requires Maryland to count its graduates with a High School Diploma by Assessment as dropouts. As a result, these students negatively affect the school, school system, and state graduation rates, which are used in the determination of Adequate Yearly Progress. There is much at stake here for schools and school systems. Those not making Adequate Yearly Progress are subject to a series of escalating consequences that include corrective actions and complete restructuring of the school or school system. It is easy to see why a school or school system might not promote the GED program as positively or as often as it should. This is a damaging disincentive to meeting students' needs, and it must be eliminated. This Task Force urges the Maryland Congressional delegation to work with the Congress and the President to amend No Child Left Behind to allow students who earn a GED to be counted as high school graduates. Implementing this recommendation would increase Maryland's high school graduates by five percent (based on FY 2006 data).

CHOOSE DIPLOMA PATHS INDIVIDUALLY

Identifying the GED Tests as the most appropriate path for a student to earn a diploma must be done with careful consideration for each student. However, the GED Tests are not appropriate or attainable for every child. Some students, including some English Language Learners and some students with special needs, would not be successful on the GED Tests. Together, parents, school personnel, and the student must review the student's skills, needs, and future goals against all of the diploma routes and choose the best one for the student.

Recommendation Three

Create multiple pathways to the Maryland High School Diploma for students with disabilities and English Language Learners. These diploma pathways should include these options: work study beginning in grade 9; a five-year high school program; and instruction at times outside of the traditional school schedule.

Rationale

Raising the compulsory attendance age alone will not produce more high school graduates. Indeed, whether the compulsory attendance age is raised or not, other actions and new alternatives to help students complete a path to graduation are needed. Particularly in need of alternatives to traditional high school programs are students with disabilities and students with little or no English language skills, referred to as English Language Learners.

Flexible, alternative routes to the Maryland High School Diploma will provide these students additional opportunities to be successful. Allowing five-year high school programs, for example, will allow more time for remediation for students having difficulty passing the High School Assessments. The additional time may also be used to meet the requirements for a Maryland High School Diploma. Another consideration in creating these diploma pathways is the age of English Language Learners at the time of enrollment. For example, an English Language Learner may enroll in high school at age 17 speaking no English. To be successful, some students may need to be enrolled for a period of time past age 18.

An alternative route to the Maryland High School Diploma that offers instruction outside of the traditional school schedule is also essential. It is not unusual for some families to place obligations (e.g., working to support the family or supervising siblings) on students that make it difficult for the students to fully participate in school. A flexible schedule with opportunities for learning in the evening, on the weekend, or during the summer would allow these students to attend school while still fulfilling their familial responsibilities.

Based on student feedback on a Maryland school district survey (Cecil County Public Schools, 2007), a five-year high school program could address the special needs of students at risk by providing:

- Additional help in academic subjects;
- Work-study opportunities that can be built into student schedules beginning at an earlier age; and,
- Additional time to meet graduation requirements, including the High School Assessments.

Alternate formats and creative solutions for instruction may enable students to complete their education. For example, school schedules may use part-time day classes; combine part-time day classes with night school; and/or include work study and technical post-secondary education.

Recommendation Four

The State Board of Education must adopt a definition of alternative education that addresses different modes of instruction and appropriate strategies for current dropouts and for children and young adults at risk of dropping out.

Rationale

Unlike several other states, Maryland has no formal definition of alternative education. This omission must be addressed promptly. Adopting a formal definition in state regulations is necessary: to ensure that alternative education programs deliver instruction that meets content standards; to offer appropriate, targeted courses that enable students to reintegrate into a comprehensive school when ready; to address individual learning styles of students; and generally to meet standards for education as set forth by the Maryland State Board of Education. The Task Force must emphasize that flexible schedules should be considered for these programs to meet the needs of students with personal obligations such as job responsibilities and other family obligations.

A review of the literature and current practices for alternative education programs across the nation revealed common types of program locations and common elements of quality practice and programming, summarized below.

Alternative Education Program Locations

- Separate room or teacher within a comprehensive high school where additional services are provided
- School within a comprehensive high school
- Separate facility

(Source: State of Wisconsin, Department of Public Instruction)

Elements of Quality Practice and Programming

- Low student/teacher ratio
- Accredited
- Authority to grant credentials (High School Diplomas or GED)

- Credit recovery (allowing students the opportunity to make up credits that were lost due to failure)
- Certified teachers
- Flexible scheduling
- Strong relationships with the district office and other high schools
- Private funding and/or public-private partnerships

(Source: State of Wisconsin, Department of Public Instruction)

To support students, alternative education models need to offer a range of services and instruction, including anger management; small group instruction; some individualized instruction; computerized, self-paced instruction; guidance services; and study skills. Strong, consistent and persistent support services are critical to students' success.

In crafting a regulatory definition for alternative programs, the State Board of Education should consider the aforementioned program locations, elements of quality practice and programming, and range of services and instruction. Also important to the process is encouraging and considering the input of stakeholders, such as local school systems, higher education, community organizations, experts in alternative programs, parents, and students.

During the process of developing the alternative program definition, the State Board of Education and/or Maryland State Department of Education should also work to change perceptions of alternative programs. Too often, alternative education programs carry a reputation in their respective communities as programs for "bad kids." This view must be changed as an alternative program infrastructure is put into place. While these programs do serve some students with behavioral problems, they also serve many other students who do not have behavior issues but do require an alternative educational setting in order to be successful. Alternative programs have great potential for helping children achieve success; communities must understand this so they can get involved with and support the school and its students.

Recommendation Five

Should the compulsory age of attendance be raised to 18, Maryland should provide the adequate financial support to raise the age of compulsory attendance to age 18.

Rationale

This Task Force has identified many, but not all, of the costs that would be associated with an increase in the compulsory attendance age. Raising the compulsory attendance age can be done responsibly and effectively only by providing the resources necessary to engage all students at a young age and keep them engaged until they successfully complete high school.

While it is not the job of this Task Force to identify specific funding sources necessary to support an increase in the compulsory attendance age, or otherwise implement these recommendations, students will not benefit from an unfunded mandate. The subcommittee recognized that much more than an infusion of money would be necessary to effect this legislated change should it come to fruition. Preparation time would need to be built into the implementation date to allow systems to hire and professionally develop additional teachers, build additional classrooms, purchase and outfit relocatable classrooms, order needed textbooks and supplies, redraw school boundaries, analyze transportation needs, account for the special needs of the physically and educationally disabled students returning or remaining, and include the appropriate amount of money in the local school boards' funding requests to the local political jurisdictions in time to meet all of the deadlines for adequate consideration in the budgetary process. Public-private partnerships may need to be explored as the State and local school systems attempt to marshal sufficient resources to implement any changes to the compulsory age of attendance.

Recommendation Six

Appoint a group to study Maryland's existing truancy courts, examine their structure, assess their effectiveness, and, if appropriate, make a recommendation for expanding truancy courts statewide.

Rationale

Currently, Maryland lacks an established system of support and consequences for frequently truant students. And while Maryland has established consequences for parents/guardians, they are rarely enforced. Without enforcement in place, the compulsory attendance law is insignificant, and raising the compulsory attendance age will have little or no influence on keeping students in school. Therefore, the State should consider a truancy court system in each county to instill hope, improve student attendance, enhance achievement, and reduce delinquent behavior through a proactive partnership of schools, courts, and families.

Truancy courts currently exist in several Maryland counties, but data on their effectiveness is not known. Truancy courts have been used with strong success in several states, including North Carolina, where a newly developed truancy court has successfully transformed truant elementary and middle school students in two counties into perfect or nearly perfect attendance students. According to Judge Richard Chaney of Durham, North Carolina, only one student failed to graduate high school out of the students who regularly came into his courtroom. In St. Louis County, Missouri, a three-year evaluation of the truancy court showed 60 percent of students significantly improved their attendance rates, reducing absences by an average of 44

percent (St. Louis County Truancy Court, 2005). Additionally, in Ingham County, Michigan, approximately 63 percent of the 600 students referred to truancy court in the first two years have improved their attendance (Burton, 2003). Dramatic successes have also been found in Delaware. In 2003, 55 percent of the 739 students with cases closed achieved overall compliance with the truancy court; 94 percent of the students achieving full compliance remained in school at the end of the year; 70 percent of all students were still in school at the end of the year; and, 66 percent of all 2002 students involved with the truancy court continued to remain in school more than a year later (State of Delaware Justice of the Peace Court, 2003).

Should truancy courts be established, Maryland should consider a system whereby each truancy court works closely with the local State's Attorneys office, Sheriff's department, Department of Social Services, local leaders, and local boards of education to ensure compliance with compulsory attendance laws.

A statewide truancy court system should consider targeting students who were absent between 10 and 30 times. One judge, volunteer or appointed, per court could handle truancy cases once a week before or after school. The truancy judge would review a student's attendance, behavior, and academic performance. After an accumulation of multiple absences, the student would be placed on probation. If there is no improvement, the student might face community service, juvenile detention, or parental supervision in school.

The court would also intervene with issues underlying a student's truancy, including depression and drug and/or alcohol abuse, and make the appropriate referrals and placements.

Suggestions for keeping students in school through the truancy court system include transportation assistance; parent participation; counseling; parenting classes; support groups; and positive reinforcement, such as praise for small accomplishments and rewards for attendance and compliance with the truancy system.

Subcommittee Reports

The following subcomittee reports represent the work, findings, recommendations, and opinions of the individual committees. These reports were considered by the entire Task Force, along with the Task Force's charge set forth in House Bill 36, in generating the consensus recommendations discussed previously. The content of the subcommittee reports does not necessarily represent the opinions of the entire Task Force.

Subcommittee One: Research From Other States

Subcommittee Charge

During the 2006 Legislative Session, Senator Nathaniel J. McFadden introduced legislation which established a task force to study the effects of raising the compulsory attendance age from 16 to 18 years of age and to provide guidance and recommendations to the Maryland General Assembly on its findings.

This Subcommittee of the Task Force was charged with:

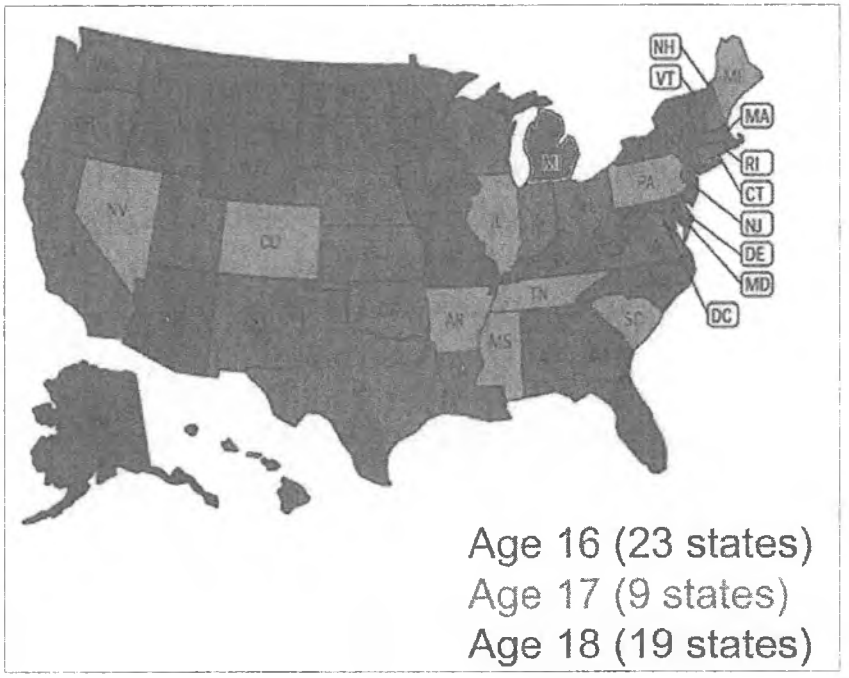
- Researching, studying, and evaluating the laws of other states that raised or attempted to raise the compulsory attendance age;
- Identifying and evaluating the best practices for educating students between the ages of 16 and 18;
- Gathering data and other rationales to justify the existing laws and practices;
- Determining any fiscal impact due to a change in compulsory attendance;
- Unveiling outcomes of changes made in other states' laws; and,
- Analyzing how changes were implemented.

To accomplish its assignment, Subcommittee One researched graduation rates, dropout rates, economic statistics—including the earning power of a dropout as compared to a high school graduate—incarceration rates, truancy penalties, legislative exemptions to compulsory attendance, factors contributing to dropping out of school, and alternative programs for students and for high school dropouts.

In a review of states' legislative actions to raise the compulsory age of attendance, the Subcommittee found that the compulsory age is 16 in 23 states, 17 in nine states, and 18 in 19 states. (See Nationwide Snapshot on page 24.) Since 1996, eight states have raised the age of compulsory attendance to either 17 or 18 years of age; and in nine states, legislation was defeated or died in committee. (See Appendix F: State Legislative Comparisons.)

Findings

The Subcommittee was charged with researching, studying, and evaluating the laws of other states regarding the compulsory attendance age. Interviews were conducted with representatives from the state legislature or board of education to determine the outcome and rationale of recent attempts to change compulsory attendance laws. (See Appendix A: Summary of Interviews With State Representatives or Boards of Education.) In surveying the states that



recently increased or attempted to increase the age of attendance, representatives of the legislature or state board of education indicated there were various rationales for the change, including a moral obligation, a desire to increase the graduation rate, an attempt to reduce the dropout rate, and an attempt to affect academic standing by increasing standardized scores.

Those states that were unsuccessful in attempting to change the compulsory attendance age cited such reasons as opposition from home school educators, parents, students, business/industry, legislature and local school systems or advocacy groups; being unable to determine if an increase in graduation and attendance rates or decrease in the dropout rate can be attributed to increasing the compulsory attendance age or the No Child Left Behind Act; and the fiscal estimate would increase financial burden on schools and community.

The Subcommittee charge also included identifying and evaluating some of the best practices for educating students between the ages of 16 and 18. A body of educational literature, commonly known as effective schooling research, documents educational practices in classrooms, schools, and local educational agencies. The literature studies student academic performance and behavior in educational settings. Effective schooling research compares and contrasts students, classrooms, and schools where students reach high academic achievement and demonstrate appropriate behavior to those where students are not successful.

NATIONWIDE SNAPSHOT

Compulsory attendance ages

Many educational agencies, labs, and other enterprises have engaged in collecting and reviewing effective schools research. For example, the Northwest Regional Educational Laboratory, Office of Educational Research and Improvement Clearinghouse (ERIC), National Dropout Prevention Center/Network at Clemson University, and the Center for Research of Students Placed at Risk at Johns Hopkins and Howard University have devoted time to reviewing and writing promising practices in education.

An overview of promising practices specifically targeted to students 16 to 18 years of age is provided in this document. The results are positive when schools acknowledge and incorporate best practices in the curriculum creating a positive and inviting climate where personal relationships are stressed. Also appearing in the literature is the need for proactive collaboration with families, students, and community, beginning in the early ages through high school.

Additionally, Subcommittee One researched data and reviewed other rationales to justify the existing laws and practices of compulsory attendance. A review of the literature and data from governmental organizations and agencies demonstrates the apparent correlation between dropping out of school, fiscal earning, and crime. State representatives indicated that some motivating reasons to increase the compulsory age of attendance were influenced by national research that including the following:

- **Education and Crime**—Broadly speaking, crime research indicates that higher educational achievement reduces crime committed by juvenile and adults. The clearest correlation can be drawn when examining the relationship between dropout status and incarceration:
    - Dropouts constitute less than 20 percent of the overall population.
    - Over 50 percent of the inmate population are dropouts (Bonczar, 2003).
    - Dropouts make up a disproportionately higher percentage (41 percent) of the nation's prison inmates (U.S. Department of Justice, 2004).

- **Education and Welfare**—According to Heckman (2000), higher education is associated with a decreased dependency on public assistance payments or subsidies. The relationship may directly result from lower rates of single motherhood or teenage pregnancy commensurate with high school graduation. High school graduation is also associated with higher incomes, better health, lower crime activity, and fewer welfare recipients.

- **Fiscal Impact**—According to a 2006 U.S. Bureau of Labor Statistics report, in October 2005, 68.6 percent of high school graduates from the class of 2005 were enrolled in colleges or universities. This enrollment rate was a historical high dating back to 1959.

    The report also provides that the unemployment rate for those students not enrolled in college was 20.6 percent in October 2005. After examining approximately 400,000 young people who dropped out of school during this same period of time, the report indicates participation in the labor force for these dropouts (52.7 percent) was considerably lower than the participation rate for recent high school graduates who had not enrolled in college (78.5 percent).

The unemployment rates for dropouts were lower than those with higher education. Males without a high school diploma had unemployment rates of 15.3 percent and females had a rate of 21.2 percent. Thus, dropping out of high school correlates to the following outcomes:

- The median income of high school dropouts ages 18 and over was $12,184 in 2003; and
- The median income of those ages 18 and over who completed their education with a high school/GED certificate was $20,431 (U.S. Census Bureau 2005).

Further, in reviewing the literature and conducting personal interviews, committee members investigated how changes were implemented as statutes were changed. As stated previously, several states changed the compulsory attendance age to 18. However, most statutes provide for various exceptions allowing for a student to leave school earlier than the required age. The majority of states have an exception for students who have completed the high school graduation requirements and received a high school diploma or its equivalent. For example, in Ohio, a student is exempted from compulsory attendance if he/she has received a high school diploma, completed the high school curriculum, completed an education program or received a schooling certificate. Additionally, there are exceptions for students with temporary illness or injury or with a physical, mental, and/or emotional disability. Students in a number of states, such as Connecticut, Nebraska, and New Mexico, are also not required to attend school if they have parental consent to drop out. A number of states (Colorado, Hawaii) and the District of Columbia also allow students to leave school early for employment or higher education purposes. In rural areas of the country, such as Alaska, Pennsylvania, and Virginia, students are exempt if they live a certain distance from a school, bus stop, or public highway. Also, a few states, like Illinois and Oklahoma, have a religious exception. Thus, raising the compulsory attendance age is not a bright-line rule; exemptions can be added to accommodate special circumstances. (See Appendix G: Exemptions and Penalties.)

Also, several states incorporate criminal penalties to force parents to ensure their child attends school. The vast majority of states inflict a monetary fine ranging from $25 to $1,000. A number of states, such as Louisiana, Mississippi, New Mexico, Oklahoma, Pennsylvania, South Carolina, and Wisconsin, impose incarceration up to one year. Community service may be ordered in lieu of a fine or incarceration in some states like Ohio, Oklahoma, Pennsylvania, and Wisconsin. There are also provisions allowing for alternative penalties to be imposed on parents, including parent education and counseling programs, such as in California and Pennsylvania.

A handful of states, including Arkansas, Mississippi, New Mexico, and Pennsylvania, impose penalties upon truant students. In Arkansas, students may be denied course credit,

promotion, or graduation and face suspension of their driver's license. In New Mexico, truant students may also lose their driving privileges for up to one year. (See Appendix G: Exceptions and Penalties.)

Subcommittee Recommendations

RECOMMENDATION ONE

Create a model program devoted to helping students stay in school.

RATIONALE

Based on the research conducted by Subcommittee One, it became apparent that the State and/or the local boards of education should create model programs aimed to keep students in school. An underlying structural system targeted toward students can assist in raising graduation rates, lowering dropout rates, and providing a positive future.

Our research indicated that model programs have positive results.

The JAG Model is aimed at providing students grades 9 through 12 with skills and assistance to graduate high school or complete a GED program and/or to obtain postsecondary education and/or entry level job. The program's success rates for the class of 2002 are: graduation rate, 84.56 percent; positive outcomes rate, 72.28 percent; aggregate job placement rate, 52.4 percent; full-time jobs rate, 65.89 percent; full-time placement rate, 88.13 percent; and further education rate, 19.88 percent.

The Stanley Hall Enrichment Center in Evansville, Indiana, was created in 1988 as an open-concept alternative school program focusing on empowering students to earn a high school diploma and advance to post-secondary education or gainful employment. During the 1999-00 school year, 60 of the 89 seniors received a high school diploma. The remaining students reported attaining their identified goals. In 2004–05, 74 of the 103 seniors completed graduation requirements.

Kalamazoo Communities in School (KCIS) was created to meet the physical, social, and emotional needs of students to help them learn and, ultimately, to create a strong workforce and strong leaders, parents, and communities. The vast majority of teachers and mentors participating in a recent survey saw improvements in the academic achievement and conduct of students in the program. Many students surveyed liked their mentors so much they wanted to spend more time with them.

The Coca-Cola Valued Youth Program is devoted to helping students stay in school by giving personal and academic responsibility to Valued Youth tutors, who develop self-discipline and self-esteem. Results show that tutors stay in school, increase academic performance,

improve school attendance, and advance to higher education. Since its inception in 1984, the program has helped schools keep 98 percent of program participants in school, more than 12,300 young people who were previously at risk of dropping out. The program has positively impacted over 220,000 children, families, and educators. Research results indicate that the Coca-Cola Valued Youth Program had a statistically significant impact on the dropout rate, reading grades, self-concept, and attitudes toward school. Only one tutor out of 101 (one percent) dropped out of school toward the end of the second year of the program, compared to 11 students of the 93 comparison group students (12 percent). Similar results were found for reading grades, self-concept, and attitudes toward school.

Check and Connect is a data-driven program grounded in research on resiliency and home-school collaboration. After two years, participants showed dramatic decreases in tardiness and truancy. A study of students ages 11 to 17 found a reduction in absenteeism and a school attendance rate of 95 percent after two years in the program.

Funding for these programs varies and is provided by a variety of sources. The Check and Connect Model is approximately $1,100 per student, and the Coca-Cola Valued Youth Program ranges from $150-$250. KCIS is funded through a grant by the Kalamazoo Chamber of Commerce. The JAG Model is approximately $1,500; however, full-time employed graduates or completers repay the cost through payroll or sales taxes within 14 months. The programs may be funded through the local boards of education, local or state government, or business community. While there may be a fiscal impact with the implementation of a model program, the overall socio-economic impact is far greater. (See Appendix E: Model Programs to Address School Dropouts.)

RECOMMENDATION TWO

Create a truancy court.

RATIONALE

Currently, Maryland lacks an established punishment system for frequently truant students. Also, even though penalties are established for parents/guardians, they are rarely enforced. Thus, Maryland should institute a system to strictly enforce the penalties. Accordingly, we recommend a truancy court system in each county. Truancy courts would instill hope, improve student attendance, enhance achievement, and reduce delinquent behavior through a proactive partnership of schools, courts, and families. Specifically, each truancy court would work closely with the local State's Attorneys office, Sheriff's department, Department of Social Services, local leaders, and local boards of education to ensure compliance with compulsory attendance laws.

The truancy court system would target students who were absent between 10 and 30 times. Truancy courts would have one judge, who either volunteers or is appointed, to handle truancy cases once a week before or after school. The truancy judge would review the student's attendance, behavior, and academic performance. After an accumulation of multiple absences, the student would be placed on probation. If there is no improvement, the student faces community service, juvenile detention, or parental supervision in school.

The court also intervenes with issues underlying a student's truancy, including depression and substance abuse, and makes the appropriate referrals and placements into programs.

Suggestions for keeping students in school through the truancy court system include:

- Positive reinforcement
- Praise for small accomplishments
- Rewards for attendance and compliance with truancy system
- Transportation assistance
- Parent participation
- Counseling
- Parenting classes
- Support groups
- Parents and students signing an agreement to abide by the conditions of the truancy court. Upon successful completion, the student's truancy case is dismissed.

RATIONALE

Throughout the Subcommittee's work, the necessity for a structural system to ensure and enforce compulsory attendance laws was evident. Without enforcement in place, the compulsory attendance law is insignificant; students and parents must take compulsory attendance seriously. It is necessary for parents to take an active role in their children's education.

The research compiled by the Subcommittee demonstrates the negative impacts on society when students drop out or are excessively truant. There is a direct correlation between students who are not in school and crime. Students who are not in school are more likely to be involved in gang activity, vandalism, substance abuse, and other crimes. Additionally, students who are not in school are more likely to commit crimes as adults. Students who are not in school also have lower incomes, higher unemployment rates, and higher dependency on public assistance payments or subsidies. Also, students who are not in school have lower academic achievement and are less likely to graduate from high school or go to college.

The success rates for truancy court systems are evident in several states. In North Carolina, specifically in Durham and Mecklenburg counties, a newly developed truancy court has successfully transformed truant elementary and middle school students into perfect or nearly

perfect attendance students. Judge Richard Chaney of Durham, North Carolina, stated that only one student failed to graduate high school out of the students who regularly came into his courtroom (Administrative Office of the Courts of North Carolina, 2001). Also, in St. Louis County, Missouri, a three-year evaluation concluded that 60 percent of students significantly improved their attendance rates, reducing absences by an average of 44 percent (St. Louis County Truancy Court, 2005). In Ingham County, Michigan, approximately 63 percent of the 600 students referred to truancy court in the first two years have improved their attendance (Burton, 2003).

Most significantly is the truancy court in Delaware. Between the 1995-96 and 2002-03 school year, there was a 41 percent decrease in the average number of unexcused absences. Recently, in 2003, 55 percent of the 739 students with closed cases achieved overall compliance with the truancy court; 94 percent of the students achieving full compliance remained in school at the end of the year; 70 percent of all students were still in school at the end of the year; and 66 percent of all 2002 students involved with the truancy court continued to remain in school more than a year later (State of Delaware Justice of the Peace Court, 2003).

Thus, our subcommittee feels a truancy court system will lower truancy rates and raise graduation rates. Most importantly, parents and students will be complying with compulsory attendance laws and bettering themselves and their community.

RECOMMENDATION THREE

Increase the age of compulsory school attendance from 16 to 18.

RATIONALE

Legislators and the public are demanding increased accountability from the nation's educational system. (Just one example of this demand is the Alliance for Excellent Education.) Often the word crisis describes the state of education in America. States are being asked to address this crisis since it is predicted to have devastating effects on our national economy and ability to compete internationally. The data below highlight aspects of the crisis in education and provide insight into what some states are doing to address the crisis.

- Currently, 26 states and the District of Columbia have compulsory education laws for students over the age of 16. Of these, 17 have compulsory attendance to age 18 (or until high school graduation) and nine require students to attend school until the age of 17. Compulsory education is historically imposed on students and families for the public good and their individual rights as citizens.
- Baltimore, the largest city in Maryland, has a dropout rate that exceeds neighboring cities such as Washington, D.C., and Philadelphia.

- The average income of persons ages 18 through 65 who have not completed high school was approximately $20,100 in 2005 (U.S. Department of Commerce, 2006).
- By comparison, the average income of persons aged 18 through 65 who completed their education with a high school credential, including a General Educational Development (GED) certificate, was nearly $29,700 (U.S. Census Bureau, 2006).
- Dropouts are less likely to participate in the labor force than those with a high school credential or higher (U.S. Bureau of Labor Statistics, 2004).
- Dropouts make up a disproportionately higher percentage (41 percent) of the nation's prison inmates (Harlow, 2003).
- Unemployed youth spend time on the streets, create families they cannot support, or participate in anti-social activities. It costs from $8,237 to 11,740 per year to educate a student (Maryland State Department of Education, 2006). In FY 2004, the Average Daily Population (ADP) in a secure detention facility under the Maryland Department of Juvenile Services Administration was 291 children. The Average Daily Cost (ADC) in FY 2004 for these children was $243. The State spends over $70,000 per day for children incarnated in a secure facility. This does not represent children in alternative placements or programs (Maryland Department of Juvenile Services, 2004).
- Those who cannot earn an adequate living often resort to welfare to support their families.
- Of the 12 million new jobs created nationally in the past decade, only 700,000 of those did not require a college education. Many high-paying jobs in manufacturing, telecommunications, and other industries have been eliminated. Technology has replaced people in recent years, spawning layoffs and the elimination of countless jobs that require minimal education (Mariani, 1999).
- Based on the comments from interviews conducted by Subcommittee One, interview subjects from 19 states that recently increased the compulsory attendance age stated that there was no foreseeable fiscal impact at the state or local boards of education, since all local school systems have alternative programs to address the needs of students between 16 and 18 years old.
- Representatives from 20 states interviewed by Subcommittee One identified rationales such as moral obligation, desire to increase graduation rate, attempt to reduce the dropout rate, and attempt to affect academic standing by increasing standardized scores for increasing the compulsory attendance age.

Appendix A: Summary of Interviews with State Representatives or Boards of Education

Alabama: No response

Alaska: Currently, the compulsory attendance age is 17. The Alaska State Department of Education is submitting a bill to the Legislature to raise the age to 18. Past attempts have failed, and strong opposition from the Legislature, local school systems, and several advocacy groups remains. At this time, there is no completed fiscal note. The Legislature is in session until May; the State Department of Education will develop a fiscal note later in the session.

Colorado: No response.

Connecticut: No response.

Hawaii: Hawaii has had a compulsory education age of 18 since its addition to the Union in 1959. Statistics place the graduation rate at 80 percent and dropout rate at 14 percent. The Hawaii State Department of Education, however, believes the information is inaccurate because the state has a high transient population that is difficult to track.

Illinois: No response.

Iowa: Last year, an introduced bill received an unfavorable report from the legislative committee. The current House Bill is attempting to raise the age to 18. If passed, the law will take effect in 2009 to allow the State Department of Education an opportunity to study the fiscal and academic impact, among other issues. However, the Department estimates they have 825 students in the range of 16 to 18 years of age. Because the current per student cost totals $5,700 for over 1,000 school districts, there should not be a financial hardship for any school district. Currently, all school districts have alternative programs and resources to address any students needing assistance. However, there are many other issues to study if the law is passed.

Kansas: The Legislature raised the age to 18 in 1996. No study has been conducted before or after the legislation. The Legislature felt it was in the best interest of the State and the students to raise the compulsory attendance age. At age 16, students can withdraw with parental permission. There has been no significant cost to the local school systems. There are 296 districts that have implemented various interventions, such as alternative programs, a virtual high school curriculum, and positive behavioral programs.

Kentucky: During the 2007 legislative sessions, two bills were introduced to raise the compulsory attendance age. One bill would raise the age to 17, and the other would raise it to 18. Neither bill received a hearing, effectively ensuring that neither became law. A similar bill introduced in previous years suffered the same fate. Opponents of the bills argued strongly against the estimated $30 million in costs. Proponents argued that dropouts cost the State billions of dollars in lost wages, uncollected taxes, and productivity.

Louisiana: In 2001, the Louisiana State Legislature increased the compulsory age from 17 to 18. In 1999, similar legislation failed, presumably because of the estimated $30 million cost associated with the increase. The 2001 fiscal note did not contain a cost estimate, but rather the possibility that in a given year there could be a reduction of state-level general fund expenditures. For example, if the number of dropouts decreased, there could be a resulting decrease in the number of students in the custody of the Department of Corrections and a decrease in the number of students dependent on assistance programs, such as welfare and food stamps.

A review of available data suggests that the graduation rate in Louisiana has improved. The rate went from 63.7 percent during 2000–01, the year prior to the change, to 69.4 percent in 2003–04, according to the latest data available through NCES. Dropout data suggests an improvement the year following the change, but none thereafter. The dropout rate fell from 9.2 percent in 2000-01 to 6.6 percent the year following the change. Since then, it has ranged between 7.0 and 7.4 percent.

Michigan: In Michigan, the following two bills were introduced: Senate Bill 4 in 2006 and Senate Bill 11 in 2007. There have been eighteen bills in the past several legislative sessions; however, until last year, no bill was ever scheduled for a hearing. The bill received an unfavorable report due to financial reasons and a concern for the impact of disruptive students on school staff.

Minnesota: Minnesota changed its compulsory attendance age in 1998, though it was delayed for several years due to financial reasons. Minnesota offers two types of diplomas: a district-issued diploma and a state-issued GED.

Missouri: In 2001, Senate Bill 363, which provides that the compulsory attendance age shall be 16 years, or 17 years in the Board of St. Louis Public Schools, was introduced. The Board of St. Louis Public Schools may also adopt a resolution lowering the compulsory attendance age to 16. In 2006, House Bill 1277 was introduced, which would have raised the compulsory attendance age from 16 to 18. A student's parent or guardian could withdraw a student and had to agree in writing to excuse students from school for work or drop from school rolls. A religious exemption to compulsory school attendance was also added. The Bill stated that students who successfully completed all elementary and secondary grade levels before the age of 18 were exempt from the compulsory school age.

House Bill 1277 was not scheduled for a hearing; therefore, the bill died in committee. Support for the bill was present because it addressed what was perceived as the "gray area" of students ages 16 to 18—too old to be forced to attend school by their parents, but too young to make the decision as an adult. No known opposition was present; however, the Bill failed due to the perceived increase in costs and the competition for funding by other legislation. A fiscal note was not completed, but increased costs at both the state and local levels were foreseeable. (The Bill was not re-introduced this year.)

Nebraska: In 2004, Nebraska passed Legislative Bill 868, which raised compulsory attendance from age 16 to age 18 beginning in the 2005–06 school year. The Bill would not apply to any child who obtained a high school diploma and allows for any child over the age of 16 to attend alternative educational programs. According to conversations with representatives from Nebraska, there were six proponents of the Bill, and four of those were from school boards. There were eight opponents, who did not represent a particular group, to the Bill. The fiscal note projected minimal financial increases, but did not specify a figure.

New Hampshire: New Hampshire has attempted to raise the compulsory attendance from age 16 to age 18 several times over the past 10 years, most recently in 2006 and 2007. In 2007, a bill was passed that raised the age to 18 and exempted home-schooled children, physically or mentally handicapped children, and children who obtained a high school diploma. The fiscal note states a possible increase in local expenditures by an indeterminable amount.

New York: Under New York State Education Law § 3205, the compulsory attendance age ranges from 6 to 16 years of age. The law requires students to attend school until the end of the school year in which they turn 16. The law also permits city school districts and union-free school districts with a population over 4,500 to require unemployed minors from 16 to 17 years of age to attend school. In April 2007, § 4686 was introduced,

but defeated. If § 4686 had passed, it would have required students in all districts to attend school until the end of the school year in which they turn 18. The State Education Department estimates that up to 8,500 additional 16 year olds would have been impacted by this bill. The total annual cost was between $59 million and $89 million. The State would have funded $27 million to $41 million. Furthermore, the cost estimate assumes that these students did not require more expensive programs and services than would be covered by the average per-pupil expenditure in New York. To the extent that this population of disaffected students required even more intensive services, costs would have increased accordingly.

Texas: In 1996, the State legislature passed a bill to raise the compulsory attendance age from 17 to 18. The legislation was unsuccessful, but only received minor opposition. The Bill did not provide financial assistance to the local school systems (LSS). Some of the LSS have hired Dropout Prevention Specialists to assist in having students re-enter school, but the expense for additional staff is the responsibility of the LSS. In contrast to the State, the LSS have instituted alternative interventions, such as additional programs and alternative schools. Attendance cases are referred to juvenile court, which has cooperated extensively to compel students to return to school. The increase in the age requirement and the cooperation of the juvenile court has contributed to increasing the graduation and attendance rates in Texas. Additionally, Texas' dropout rate continues to decline.

Utah: A law requiring compulsory education until age 18 was passed in 1919 with amendments in 1999. There has been no significant fiscal burden to the State.

Wyoming: A bill failed last legislative session due to lobbying by the home-schooling community and organization. There were many new legislators who did not understand the lobbying was from a "group," not individual voters. This year, the Bill is being introduced with the following additional provision: the State will pay full funding for each of the 48 school districts to establish programs for "at-risk" students. The district will need to create/provide after-school programs, summer school, tutors, and alternative high schools. There are three caveats for the funding: 1. The school district is accountable for demonstrating how the money for at-risk students is spent; 2. The parent/guardian must meet with school officials to withdraw underage students; and, 3. The student is accountable for demonstrating proficiency in reading, writing, and math. Students with an Individualized Education Program (IEP) must meet the goals of the plan. The State will provide a refund to all 48 school districts in the amount of the cost-per-pupil. There was no fiscal note taken into consideration.

Appendix B: Who is at risk of dropping out?

Reports from the United States Department of Education and the National Center for Education Statistics calculate the event dropout rate, which estimates the percentage of both private and public high school students who left high school between the beginning of one school year and the beginning of the next without earning a high school diploma or its equivalent. Looking at national event dropout rates, the following facts emerge during the period of October 2002 to October 2003:

- Four out of every 100 students enrolled in high school left school before October 2003.
- Hispanic high school students are more likely to drop out than students of other races/ethnicities. The event dropout rate for Hispanics was 7.1 percent compared with rates of 3.2 percent for Whites and 2.4 percent for Asians.
- African-American students and students who indicate more than one race had event dropout rates of 4.8 percent and 6.1 percent, respectively.
- Students living in low-income families were approximately 5 times more likely than their peers in high-income families to drop out of school.

Appendix C: Why do students drop out?

Dropping out of school is not a sudden act, but a gradual disengagement process. "The Silent Epidemic: Perspectives of High School Dropouts" (Bridgeland, Dijulio, & Morison, 2006) presents the central message that most students drop out for one of the following reasons:

- Significant academic challenges
- Lack of connection to the school environment
- Lack of interest in school
- Employment
- Pregnancy
- Ailing/unhealthy family member

Other significant elements that influence students with disabilities to leave school include:

- Failing in school
- Being poorly prepared for high school
- Repeating at least one grade
- Being truant
- Having too much freedom
- Lacking parental involvement in school

At the 2006 National State Education Agency Forum in Clemson, South Carolina, Dr. Jay Smink and Dr. Terry Cash discussed National Dropout Prevention Center studies that revealed status factors and other variables associated with students dropping out of school, including:

Status Factors

Age	Native language	Parental involvement
Gender	Region of the country	School size
Socioeconomic background	Academic ability	Family structure
Ethnicity	Disability	Mobility

Other variables associated with dropouts

Grades	School climate	Educational support in the home
Disruptive behavior	Parenting	
Absenteeism	Attitudes toward school	Retention
School policies	Sense of belonging	Stressful life events

Appendix D: Research Findings on Dropout Prevention

What can we do to prevent students from dropping out of school? What are some of the key components that will keep students in school and be successful in their endeavor to obtain a high school diploma? The research of Dynarski (2001), Slavin and Fashola (1998), Schargel and Smink (2001), and Smink and Cash (2006) leads us in the right direction:

- Creating small school communities with small classes.
- Allowing teachers to build relationships and enhanced communication [creating personal bonds between students and teachers].
- Providing individual academic and behavioral assistance [early intervention includes comprehensive family involvement, early childhood education and strong reading and writing programs].
- Focusing on helping students address personal and family issues through counseling and access to social services.
- Recognizing the importance of families in school success.
- Developing problem solving skills to meet the demands of the school environment.

The work of Jay Smink and Franklin P. Schargel describes fifteen strategies identified through nationwide research reviewed by the National Dropout Prevention Center/Network at Clemson University, including:

School and Community Perspective

- Systemic renewal
- School-community collaboration
- Safe learning environments

Basic Core Strategies

- Mentoring/Tutoring
- Service learning
- Alternative schooling
- After school opportunities

Early Interventions

- Family engagement
- Early childhood education
- Early literacy development

Making the Most of Instruction

- Professional development
- Active learning
- Educational technology
- Individualized instruction
- Career and technical education

Dr. E. Gregory Woods, from the Northwest Regional Educational Laboratory, reviewed the research findings regarding the characteristics of effective dropout-prevention programs, including:

Organization/Administration: Program design and administration have an effect on the retention of at-risk students. Research has shown that schools-within-schools, low student-teacher ratios and alternative schools have had some success in lowering dropout rates.

School Climate: Safe, orderly, non-threatening environments contribute to dropout prevention. Staff training to build cultural sensitivity and developing "family" atmospheres have also proven to be effective strategies.

Service Delivery/Instruction: Instruction needs to be student-centered. Students at risk of dropping out should be identified as early as possible so that the appropriate intervention can be implemented. Research shows that early identification, family involvement, clear instructional objectives and monitoring student progress are effective in dropout prevention.

Instructional Content/Curriculum: A combination of academic and work-based learning has been shown to be beneficial.

Staff/Teacher Culture: Staff members in successful programs are committed to the program and have high standards for all students.

Appendix E: Model Programs to Address School Dropouts

Agora Cyber Charter School

The Agora Cyber Charter School is a tuition-free public virtual school that gives parents the curriculum, tools, and support to provide students a high-quality, well-rounded education. The newest public education option in Pennsylvania is modeled by curriculum experts at K12 Inc. and professional teachers and administrators to form a virtual public school for students in grades K-12.

TARGETED POPULATION

Agora Cyber Charter School focuses on students from kindergarten through grade 12. Students are placed in the curriculum per assessment data in reading, mathematics, and writing. Experts in the special education area are available to assist those students who have an Individualized Education Program (IEP).

MAJOR COMPONENTS

Extensive instructional materials—including textbooks, workbooks, art supplies, science equipment, and maps—to support the learning environment are provided. Desktop computers, printers, and internet reimbursements are also available. Clearly defined mastery objectives are monitored daily and recorded on students' daily sheets. Students are required to keep accurate attendance by noting the hours spent on each course. Online, synchronous teacher conferences with other students in the class are a major component of the Agora Cyber Charter Schools. Agora Cyber Charter Schools also offers foreign-language opportunities, online clubs, and extracurricular activities. Also, part of the success of the Cyber Charter Schools is attributed to workshops for parents that address specific needs of students and lessons paced for student success.

EVIDENCE OF EFFECTIVENESS

- Increase in students' grades
- Positive feedback from students, including pace is a factor in success and more time allotted to acquire the knowledge presented for success

COST PER STUDENT

Agora Cyber Charter School is based on the cost per student in the district in which the parent/guardian resides and is paid by the State Department of Education. In Pennsylvania, Agora Cyber Charter School is funded through the tax base of each district.

SUMMARY

http://www.agora.org/

Check and Connect Model

Check and Connect is a model of sustained intervention for promoting students' engagement at school and with learning. Demonstrated outcomes include:

- Decrease in truancy
- Decrease in dropout rates
- Increase in obtaining credits
- Increase in school completion
- Impact on literacy

TARGET POPULATION

Check and Connect is data-driven and grounded in research on resiliency and home and school collaboration. The model was first developed in Minneapolis for urban middle school students with learning and behavioral disabilities. Today, it has been replicated for all students, grades K-12.

MAJOR COMPONENTS

Check and Connect promotes student engagement with school using seven components:

1. Relationship building
2. Routine monitoring and alterable indicators
3. Individualized and timely intervention
4. Long-term commitment
5. Persistence plus
6. Problem-solving
7. Affiliation with school and learning

A key factor in the Check and Connect model is the "monitor," who ensures a student "connects" with school and learning. An effective monitor must be persistent, willing to work closely with families using a non-blaming approach, and able to work well in different settings. Additionally, a successful monitor must believe that all children have abilities, advocate for the student, commit to documenting the intervention, and work well in different settings. The monitor must establish trust with the students and their families.

The monitor regularly checks on student attendance and academic performance, talks to the families, and listens to students, which establishes a strong connection throughout the year. The monitor periodically checks student engagement by using several indicators, including attendance, social/behavior performance and academic performance. Using these indicators, the monitor can "connect" with the student by using either basic or intensive interventions.

All students receive basic interventions, which primarily comprise purposeful conversations with the monitors once a month for secondary students and once a week for elementary students. The monitor talks to the student about progresses made in school, the connection to graduation, and possible conflicts or concerns and the resolutions.

The intensive intervention is triggered by a student exhibiting early warning signs of dropping out of school (e.g., attendance, academic performance, behavior). The monitor taps existing support services when necessary and increases the degree of interaction with the student, including calling the student and parent in the morning to ensure the student attends school.

EVIDENCE OF EFFECTIVENESS

Check and Connect has been used in grades K through 6. Participants included students with and without disabilities and their families. After two years, participants showed dramatic decreases in tardiness and truancy. A study of students ages 11 to 17 found a reduction in absenteeism and a school attendance rate of 95 percent after two years in the program.

COST

Cost per student is approximately $1,100.

Coca-Cola Valued Youth Program

The Coca-Cola Valued Youth Program is devoted to helping students stay in school by giving personal and academic responsibility to Valued Youth tutors. The program also provides schools with the ability to change longstanding philosophy and practices of devaluing at-risk students. Results show that tutors stay in school, have increased academic performance, have improved school attendance, and advance to higher education.

TARGETED POPULATION

First developed by the Intercultural Development Research Association (IDRA) in 1984, this cross-age tutoring program takes students at risk of dropping out of school and places them as tutors for younger students.

MAJOR COMPONENTS

Seven important tenets express the philosophy of the Coca-Cola Valued Youth Program. They are:

1. All students can learn;
2. The school values all students;
3. All students can actively contribute to their own education and to the education of others;
4. All students, parents, and teachers have the right to participate fully in creating and maintaining excellent schools;
5. Excellence in schools contributes to individual and collective economic growth, stability, and advancement;
6. Commitment to educational excellence is created by including students, parents, and teachers in setting goals, making decisions, monitoring progress, and evaluating outcomes; and,
7. Students, parents, and teachers must be provided extensive, consistent support in ways that allow students to teach, teachers to teach, and parents to be involved.

FIVE INSTRUCTIONAL COMPONENTS

CLASSES FOR TUTORS: Tutors meet with their secondary school teacher/coordinator once a week in order to: Develop tutoring skills; Reflect on and celebrate successes and contributions; and, Improve reading, writing, and other subject matter skills, enabling the students to teach these skills to elementary school students. The class for tutors and the tutoring sessions, which occur four times a week during the same class period, is offered as an elective or as a state or local course credit.

TUTORING SESSIONS: There is a minimum of four hours of tutoring per week—one class period a day. The student tutors earn a minimum wage stipend for their efforts and are expected to adhere to the employee guidelines of their host school. The tutors' primary responsibility is to work in a one-to-three ratio with tutees. Tutoring young children (at least a four-year grade level difference) forces the tutors to use their own experiences and apply them to the difficult task of teaching.

EDUCATIONAL FIELD TRIPS: Between two and three times throughout the year, students are invited to explore economic and cultural opportunities in the community. The field trips are an opportunity for career awareness by exposing the students to a variety of professional environments. The students can make connections among school, career, and being a professional.

MENTORS AND ROLE MODELS: Career and leadership awareness is developed through five guest speakers who model a variety of professions and experiences. Adults, who are considered successful in their fields and who represent students' ethnic background(s), are invited to participate. A person who has overcome serious barriers can also be a powerful role model.

STUDENT RECOGNITION: Students are acknowledged for their efforts and contributions while fulfilling their responsibilities as tutors. Throughout the year, students receive certificates of merit and appreciation, are invited on field trips with their tutees, receive media attention, and are honored at a luncheon or supper. These events help students understand the importance of their tutoring within their school, district, and community.

SUPPORT COMPONENTS

CURRICULUM: A primary goal of the curricular framework is to prepare secondary school students to tutor elementary school students. The objectives of the curricular framework include improving the students' self-concept, tutoring skills, and literacy skills.

COORDINATION: Periodic meetings are held to coordinate all activities, facilitate communication among personnel, and provide first-hand information for monitoring the program. Coordination is formalized through the Coca-Cola Valued Youth Program implementation team at each participating site. The team includes the teacher coordinators at the secondary school, the secondary school counselor, the evaluation liaison, the family liaison, an elementary school receiving teacher representative, and the principals of the participating schools.

STAFF ENRICHMENT: Training and other instructive or enriching experiences strengthen the individual program components. The Coca-Cola Valued Youth Program includes training and technical assistance in response to the participants' needs assessments. Staff enrichment is achieved through technical assistance and training.

PARENT INVOLVEMENT: Great efforts are taken to involve the tutors' families in the Coca-Cola Valued Youth Program. The goal of family involvement is to show that the school takes the children's education seriously and values the families' contributions. Empowering minority and disadvantaged families requires vigorous outreach and meaningful school activities. Parent meetings and sessions, a minimum of four per year, are conducted partially or fully in the language of the parents.

EVIDENCE OF EFFECTIVENESS

Since its inception in 1984, the program has helped schools keep 98 percent of program participants in school, more than 12,300 young people who were previously at risk of dropping out. The program has positively impacted over 220,000 children, families, and educators.

The key to the program's success is valuing students who are considered at risk of dropping out of school and sustaining the students' efforts with effective, coordinated strategies. The program is flexible and readily adaptable to individual schools. Its careful design and assessment have shown that certain elements are critical, such as paying tutors for the work accomplished and having experienced content-area teachers serve as the program's teacher coordinators.

The Coca-Cola Valued Youth Program was extensively researched in 1989 using a longitudinal, quasi-experimental design with data collected for the treatment and comparison group students before tutoring began, during implementation, and at the end of the first and second program years. The results from the research showed that the Coca-Cola Valued Youth Program had a statistically significant impact on the dropout rate, reading grades, self-concept, and attitudes toward school. Only one tutor out of 101 (one percent) dropped out of school toward the end of the second year of the program, compared to 11 students of the 93 comparison group students (12 percent). Similar results were found for reading grades, self-concept, and attitudes toward school.

The research unveiled critical elements of the program's implementation and success, allowing for replication as the program expanded across the country. The research also served as the basis for the evaluation design, which continues to be one of the most rigorous dropout-prevention models.

The research and ongoing program evaluation indicates the strength of the program. It continues to be acknowledged as one of only a few proven dropout-prevention programs in the country. In fact, the Coca-Cola Valued Youth Program was identified as an effective program in "Show Me the Evidence! Proven and Promising Programs for America's Schools" (Slavin & Fashola, 1998). The article states that the Coca-Cola

Valued Youth Program is one of only two programs in the country designed to increase the high school graduation rates of at-risk students.

The program has also been recognized by the U.S. Department of Education's Program Effectiveness Panel for Inclusion in the National Diffusion Network, the Corporation for National and Community Service, the Secretary of the U.S. Department of Education, and President George Bush. Also, it has been featured as an educational model in books by the American Council on Education, the Committee for Economic Development, the Hamilton Fish National Institute on School and Community Violence, Jobs for the Future, the National Center for Service-Learning in Early Adolescence, and the Urban Institute.

COST

Cost per student/user (based on 25 tutors and 75 tutees) ranges from $150-$250, which includes tutor stipends, and recognition awards, staff training, technical assistance and evaluation.

Kalamazoo Area Academic Achievement Program (KAAAP) Kalamazoo Communities in Schools!

In 1992, the Kalamazoo Chamber of Commerce created the Kalamazoo Area Academic Achievement Program (KAAAP). The business community's goal was to create goal-oriented students and graduates who would join the business community and contribute to economic development.

Recently, KAAAP has merged with two similar programs to form the Kalamazoo Communities in Schools (KCIS). KCIS is a compilation of major service providers, school officials, community volunteers, business leaders, and other concerned citizens. The purpose of KCIS is to meet the physical, social, and emotional needs of students to help them learn and, ultimately, to create a strong workforce, leaders, parents, and community in the future. By creating partnerships within the community, KCIS is able to assist schools with a wider variety of services.

TARGETED POPULATION

KCIS focuses on all students, K through 12, to help them successfully learn, stay in school, and prepare for life.

MAJOR COMPONENTS

KCIS repositions community resources into schools so students can access needed services. There are 10 full-service schools with on-site coordinators who have full access to dental services, mental health services, career exposure, and other support services to promote excellence in education and high achievement. The on-site coordinators are in contact with teachers, students, and families and make direct connections between community partners and students referred for services.

Activities and services offered by full-service schools are varied and include:

- Academic and emotional support through mentoring and tutoring services
- Behavioral health that includes mental health, substance abuse, grief counseling, and peer mediation
- Service learning and academic enrichment
- Health services that include health education, nutrition, dental screening, x-rays, cleaning, sealants and referral, a nurse pilot project and nurse interns, vision checks and eyeglasses
- Food pantry projects

- Coats, boots, hats, and mittens
- Housing support services
- Academic enrichment
- Parent outreach and support
- Internships and volunteer support from AmeriCorps VISTA

Additionally, KCIS offers a mentoring program, which pairs students with adult mentors who model strong lifestyles and work ethics and provide scholastic support. The mentors meet with the students at least once a week. KCIS also offers grants and scholarships to students and staff to further training in projects directly involving students and academic achievement.

EVIDENCE OF EFFECTIVENESS

The vast majority of teachers and mentors participating in a recent survey saw improvements in the academic achievement and conduct of students in the program. Many students surveyed liked their mentors so much they wanted to spend more time with them.

Stanley Hall Enrichment Center

The Stanley Hall Enrichment Center in Evansville, Indiana, was created in 1988 as an open-concept alternative school program focusing on empowering students to earn a high school diploma and advance to post-secondary education or gainful employment.

TARGETED POPULATION

High school students who are experiencing difficulty staying in school.

MAJOR COMPONENTS

The Center maintains a success-oriented program designed to assist students to build self esteem, develop and apply desired work habits, gain computer skills and career information, and increase awareness of the importance of high school graduation.

To meet the needs of diverse students, the program uses:

- Self-paced curricula
- Technology
- Student-operated branch bank
- Job shadowing
- Internships
- Service learning
- Service programs

All students must achieve a letter grade of "C" or higher for assignments and courses. Frequent conferences keep students, faculty, and families informed of academic progress. In addition, student achievement is recognized daily at Stanley Hall. Each time a student earns a credit, the teacher and class offer congratulations, and the student calls a family member to share his/her success.

The Center promotes a strong connection with the community through guest speakers, college field trips, contests, and presentation opportunities. By participating in these activities, students are encouraged to be active in the community, remain in school, and assume responsibility for their future.

Additionally, the Center has partnered with the Department of Natural Resources and Vanderburgh County Soil and Water Conservation to establish a seasonal wetland at Angel Mounds State Historic Site and Nature Preserve. Students use the site as a lab facility and have planted native grasses and cypress trees, designed a walkway for visitors to view wildlife, and installed signage. As a reward for their efforts, the students have received an environmental stewardship award and have been nominated for a National Wetlands competition. Each year, the students also participate in the United Way's Day of Caring and spend the day at the food bank getting supplies ready for distribution.

Center students are also involved with building financial literacy among students at Lodge Elementary. As a result, students strengthen their communication and organizational skills by facilitating group activities and class discussions to improve financial skills. Center students also speak one-on-one with elementary and middle school students regarding problems they encountered during their school years. During these talks, students stress attendance, citizenship, bullying, and staying in school.

EVIDENCE OF EFFECTIVENESS

During the 1999-00 school year, 60 of the 89 seniors received a high school diploma. The remaining students reported attaining their identified goals. The success of the Stanley Hall Enrichment Center Program has been judged by the number of students who are retained in high school, graduate from high school, earn a GED, and secure legitimate employment. In 2004-05, 150 students attended Stanley Hall, and 74 of the 103 seniors completed graduation requirements.

THE BUDDY SYSTEM PROJECT

The Buddy System is a mentoring program designed to improve participants' academic and social behaviors and promote interaction between youth and older role models. The program is based on individual and group mentoring and encouraging positive behaviors through financial incentives.

TARGETED POPULATION

Children ages 10 to 17 and multi-ethnic children

MAJOR COMPONENTS

Component	Provided by	Duration	Description
One-on-one mentoring	Community resident	Less than 1 year for most participants	Weekly meetings engaging in social activities; mentors are trained to establish warm, trusting relationships and to create a plan to change targeted behaviors.
Group mentoring	Community resident		When appropriate, mentors met with their mentees in group activities.
Financial incentive	Program		Students were given $10/month if their behaviors improved.

EVIDENCE OF EFFECTIVENESS

STUDY 1: *The Buddy System: Effects of community intervention on delinquent offenses. Behavior Therapy*, 6, 522-524. Fo, W. S., & O'Donnell, C. R. (1975).

Evaluated population: Youth referred to program; treatment n=264 and control group n=178.

Objective: To determine the effects of the program on delinquent acts.

Measurement instrument: Records on the delinquent offenses of participants and control group.

Evaluation: *Type:* Experimental, random assignment, treatment n=264 and control group n=178. *Statistical techniques:* Z test, Significance Level=.05.

Outcome: For youth who had committed major offenses in the year prior to entering the project, program youth were significantly less likely to have committed major offenses during the Buddy System year (37.5 percent) than were the youth in the control group (64 percent). The pattern was opposite, however, for youths with no record of major offenses in the preceding year; in this case, program youth were significantly more likely to have committed major offenses (15.7 percent) than the control youth (7.2 percent).

STUDY 2: *The Buddy System: Review and follow-up. Child Behavior Therapy*, 1, 161-169. O'Donnell, C. R., Lydgate, T., & Fo, W. S. (1979).

Evaluated population: 335 youths (206 boys and 129 girls) in the experimental group. 218 youths (151 boys and 67 girls) in the control group. In the experimental group 255 were in the program for one year, 73 for two years, and seven for three years. In the control group 195 were assigned to one year, 23 for two years and none for three years.

Objective: To evaluate the effectiveness of the program based on the arrest data (for major offenses only) of participants over a three-year span.

Measurement instrument: Arrest records of participants and control group one year before participation, the year(s) of participation, and two years after the initial year of participation.

Evaluation: *Type:* Experimental *Statistical techniques:* Two tailed Z tests, Significance Level=.05.

Outcome: The Buddy System was most effective for youth who had been arrested for major offenses in the year preceding participation in the program: 56 percent of these participants vs. 78 percent of the control group ($p<.04$) were arrested for a major offense in the program year or two years after. Of participants without prior arrests, those in the treatment group were more likely to commit a major offense than those in the control group: 22.5 percent vs. 16.4 percent ($p<.05$).

COST PER STUDENT

Not provided. Funding provided through the U.S. Department of Housing and Urban Development's Model Cities and the U.S. Department of Health, Education, and Welfare's Office of Juvenile Delinquency and Youth Development.

THE JAG MODEL

The JAG Model has several purposes, including:

- Keeping program participants in school through graduation or passing the GED and assisting graduates to obtain an entry-level job that would lead to a career
- Assisting graduates or GED passers in pursuit of a postsecondary education and/or an entry-level job that would lead to a career
- Extending program services to participants for 12 months after graduation or completion of a GED
- Delivering services to non-graduates and to those who did not pass the GED during the 12-month follow-up period to attain a GED or a high school diploma

TARGETED POPULATION

Students, grades 9–12, and dropouts in alternative school programs or community-based programs leading to a high school diploma or GED

MAJOR COMPONENTS

The JAG Model provides performance standards and best practices for serving students ages 15–21. Examples of program applications include: School-to-Career Program (grade 12); Multi-Year Dropout Prevention Program (grades 9–12); and, Out-of-School Program (dropouts and alternative schools).

EVIDENCE OF EFFECTIVENESS

Program outcome goals include: graduation (90 percent), positive outcomes (80 percent), employment (60 percent), full-time employment (60 percent), and full-time placement (80 percent).

For the class of 2002, the JAG Network's performance outcomes were:

- Graduation Rate, 84.56 percent
- Positive Outcomes Rate, 72.28 percent
- Aggregate Job Placement Rate, 52.40 percent
- Full-time Jobs Rate, 65.89 percent
- Full-time Placement Rate, 88.13 percent
- Further Education Rate, 19.88 percent
- Average Wage, $7.54

COST PER STUDENT

The average cost per participant is $1,500 for the in-school phase of the program. Full-time employed graduates or completers repay the cost within 14 months after leaving school through payroll or sales taxes.

SUMMARY

Since its inception in 1980, JAG achieved extraordinary success in achieving the objectives of a JAG Model Program. This model operates in 29 states, including the East Coast and Midwest, as well as Washington, D.C.

Middle College High Schools

Middle College High Schools are alternative high schools located on college campuses aimed to help and encourage at-risk students complete high school and attend college. The schools offer a project-centered, interdisciplinary curriculum with an emphasis on team teaching, individualized attention, and development of critical thinking skills. Students are also offered support services, including specialized counseling, peer support, and career experience opportunities. As recently as December 2006, the Middle College High Schools program was operating in 31 school districts in 12 states.

TARGETED POPULATION

Dropouts or students at risk of dropping out

MAJOR COMPONENTS

- Small schools (fewer than 100 students per grade) with substantially lower student-to-staff ratios
- Career-oriented courses, internships, and community service, which connects what is learned to real-world experiences
- Alternative assessment strategies, such as portfolios and oral presentations

EVIDENCE OF EFFECTIVENESS

The What Works Clearinghouse (WWC) examined six studies on the effectiveness of the Middle College High Schools. Only one study, a randomized controlled trial, met WWC evidence standards. The program was found to have no discernible effects on staying in school.

COST PER STUDENT

Researchers estimated the cost of educating a student in a Middle College High School to be about 50 percent higher than the cost of educating a student in a regular school within the district.

Career Academies

Career Academies are school-within-school programs operating in high schools. The program offers career-related curricula based on a career theme, academic coursework, and work experience through partnerships with local employers. Currently, the National Career Academy Coalition (NCAC) reports that at least 1,500 Career Academies are operable. A registry by the Career Academy Support Network (CASN) includes more than 1,600 Career Academies.

TARGETED POPULATION

Career Academies were originally developed over 30 years ago as a dropout-prevention strategy, targeting students at risk of dropping out of high school. Recently, Career Academies have broadened to serve all categories of students.

MAJOR COMPONENTS

- School-within-school organization with a career theme (health care, business and finance, technology, communications)
- Academic and vocational curricula related to career themes and taught by a core group of teachers
- Partnerships with local employers who provide internship opportunities and mentoring to students

EVIDENCE OF EFFECTIVENESS

The What Works Clearinghouse (WWC) examined seven studies on the effectiveness of the Career Academies. Only one study met WWC evidence standards. The program was found to have potentially positive effects on progressing and remaining in school and no discernible effects on completing school.

COST PER STUDENT

The cost of Career Academies is approximately $600 per pupil more than the average expenditure per pupil in the district. No information is available on the cost of delivering services to high-risk youth within the Career Academies.

Appendix G: Exceptions and Penalties

State	Exceptions	Penalties
Alabama		
Alaska	Physical or mental disability; Legal custody; Temporary illness/injury; Suspension/Expulsion; Lives more than two miles from school; Completed 12th grade; Enrolled in State boarding school/district correspondence program/centralized correspondence study program/other alternative educational experience approved by board, upon written request from parent; Home school	Parent: $500 fine for every five days of unlawful absence Student: N/A
Arizona		
Arkansas	Received high school diploma or equivalent; Enrolled in postsecondary vocational-technical institution/community college/two-year or four-year institution of higher education; Enrolled in an adult education program; Enrolled in Arkansas National Guard Youth Challenge Program	Parent: $500 fine (# unlawful absence determined by school board) Student: Denial of course credit/promotion/graduation; Suspension of driver's license
California	None mentioned in statute	Parent: N/A Student: Four unexcused absences in one month or 10 unexcused absences during school year
Colorado		
Connecticut	Graduated high school; Receiving equivalent instruction; Parental consent	Parent: $25 per day Student: N/A
Delaware		
*D. C.	Received diploma or equivalent; Flexible hours for students ages 17 to 18 for work purposes	Parent: $100 fine, jail, community service for every two unlawful absences Student: N/A
Florida		
Georgia		
Hawaii	Physical/mental disability; Employment if over 15 and approved by superintendent; Family Court; Graduated high school; Enrolled in alternative education program; Home school; Enrolled in alternative education program due to behavior issues and/or poor attendance (over 16)	Parent: Guilty of misdemeanor Student: N/A
Idaho		
Illinois	Physical/mental disability; Employment; Confirmation; Religious holidays	Parent: N/A Student: N/A
Indiana		
Iowa		
Kansas	For students 16-17, enrolled in alternative educational program; Enrolled postsecondary educational institution; Attends final counseling session at which a disclaimer to encourage the child to remain in school or to pursue	Parent: N/A Student: N/A

State	Exceptions	Penalties
	educational alternatives is presented to and signed by the child and the parent	
Kentucky		
Louisiana	Written consent by parent; If over 16, enrolled in alternative education program/vocational-technical education program/adult education program; Attending National Guard Youth Challenge Program	Parent: $250 and/or 30 days in jail—penalty for violation of compulsory attendance; $100 and/or 10 days in jail—penalty for enticing/soliciting children to be absent from school Student: N/A
Maine	Enrolled in alternative education; Graduated high school before age 17; If over 15 and completed grade 9, work/home school; Habitual truancy	Parent: For every 10 full days of unexcused absences or seven consecutive school days of unexcused absences, a parent is guilty of a civil violation; May be ordered to take specific action to ensure the student's attendance at school, enjoin offender from engaging in specific conduct which interferes with student's attendance at school, or, undergo counseling Student: N/A
Maryland	Home school; Severe illness; Age 16 and lack of academic success, continual disciplinary problems, or lack of interest; Employment; Marriage; Military service; Court action; Age 16 to support family; Expulsion; Special cases with superintendent's approval; Pregnancy/parenthood—if under age 16, must enroll in appropriate educational program; Completed high school diploma/equivalent requirements; Early college admission; Disabled students, completed requirements for a Maryland High School Certificate; Physical/mental/emotional handicap; Dangerous students	Parent: If induces or harbors absent student, $500 fine and/or 30 days in jail; If fails to see child attends, first offense, $50 fine per day and or 10 days in jail, and, second and subsequent offenses, $100 fine per day and/or 30 days in jail; Court may suspend sentence and establish terms and conditions to promote attendance Student: Discretion of school system/staff
Massachusetts		
Michigan		
Minnesota		
Mississippi	Physical/mental/emotional disability; Enrolled in special education/remedial education/education for handicapped; Home School; NOTE: Certificate of Enrollment must be completed to participate in these programs	Parent: If child is absent within 18 days after the first day of school or 12 unlawful absences during school year, parent subject to $1,000 fine and/or 1 year in jail Student: Subject to youth court discretion to order child to enroll or re-enroll in school; superintendent may assign child to alternative school program
Missouri		
Montana		

State	Exceptions	Penalties
Nebraska	Met graduation requirements; Ages 16 to 17 to attend alternative education programs; Age 16 with parental permission	Parent: Class III misdemeanor Student: N/A
Nevada	Obtained permission to take GED; Juvenile court may release child who has completed grade 8; Age 14 if written evidence shows child needs to support himself or family; Age 14 to 17 and completed grade 8 may be excused from full-time school attendance for employment	Parent: N/A Student: N/A
New Hampshire		
New Jersey		
New Mexico	Graduated; Age 17 and employed w/parental consent; Parental consent	Parent: $25–$100 fine or community service; second and subsequent violations, $500 fine and/or 6 months in jail Student: For 10 or more unexcused absences, 90 days suspended driving privileges; second and subsequent violations, 1 year suspended driving privileges
New York		
North Carolina		
North Dakota		
Ohio	Received diploma; Completed high school curriculum; Completed education program; Received an age and schooling certificate; Special Education; Physical/mental disability; Home school; Age 14 for employment to support himself or family	Parent: $500 fine or 70 hours community service Student: N/A
Oklahoma	Physical/mental disability; Emergency; Age 16 with consent of parent and school administrator; Religious holy days	Parent: First offense, $25-$50 fine and/or 5 days in jail; Second offense, $50-$100 fine and/or 10 days in jail; Third and subsequent offenses, $100-$250 fine and/or 15 days in jail; Community service may be ordered in lieu of fine/jail; Court may order as a condition of a deferred sentence or as a condition of sentence, the following: 1. Verifying attendance of the child with the school; 2. Attending meetings with school officials; 3. Taking the child to school; 4. Taking the child to the bus stop; 5. Attending school with the child; 6. Undergoing an evaluation for drug, alcohol, or other substance abuse and following the recommendations of the evaluator; and 7. Taking the child for drug, alcohol, or other substance abuse evaluation and following the

State	Exceptions	Penalties
		recommendations of the evaluator, unless excused by the court. Student: N/A
Oregon	Acquired equivalent study of grades 1–12; Home school; Legal; Age 16-17 for employment, community college or alternative education; Emancipated minors	Parent: Class C Violation Student: N/A
Pennsylvania	Physical/mental disability; Home school; Age 16 and employed; Age 15 and engaged in farm work/domestic service; Age 14 and engaged in farm work/domestic service and completed elementary school; Resides two miles from nearest public highway	Parent: $300 fine or parent education program or 5 days in jail; 6 months community service Student: Age 13 and absent 3 or more days, $300 fine; suspended driving privileges
Rhode Island	2007 Legislature changed to 18 years of age	
South Carolina	Graduated; Received equivalent high school education; Physical/mental disability; Completed grade 8 and employed for necessity of home; Pregnancy/parenthood; Age 17 and disruptive/unproductive/not in best interest—court determined	Parent: $50 fine or 30 days in jail Student: N/A
South Dakota		
Tennessee	Received diploma/certificate; Enrolled/completed GED courses; Home school; Parent withdraws; Physical/mental disability; Age 17 and detriment to good order/discipline of other students	Parent: Class C misdemeanor; Fines placed in public school fund Student: N/A
Texas	Enrolled in special education; Physical/mental disability; Expelled; Age 17 and attending GED courses, required by court to attend course, established residence apart from parents, homeless or received GED/equivalent; Age 16 and attending GED courses if court ordered or enrolled in Job Corps; Enrolled in Texas Academy of Mathematics and Science/Texas Academy of Leadership in the Humanities/Texas Academy of Mathematics and Science at The University of Texas at Brownsville/Texas Academy of International Studies	Parent: N/A Student: N/A
Utah	Age 16 and completed grade 8 for employment—partial release; Completed graduation requirements; Physical/mental disability; Employment; Age 16 and negative attitude toward school/unprofitable experience; Home school	Parent: Class B misdemeanor Student: N/A
Vermont		
Virginia	Age 16 to 18 in adult correctional facility attending GED classes; Obtained high school diploma/equivalent; Religion; Students who cannot benefit from education at school; Children suffering from contagious/infectious diseases; Children without immunizations against communicable diseases; Age 10 and live more than one mile from public transportation to school; Age 10 to 17 and live more than 1.5	Parent: Class 3 misdemeanor; Subsequent offenses and offenses committed knowingly and willingly constitute Class 2 misdemeanor Student: N/A

State	Exceptions	Penalties
	miles from public transportation to school	
Washington	Home school; Physical/mental disability; Age 16 and employed with parent consent, met graduation requirements, or received certificate of educational competence	Parent: N/A Student: N/A
West Virginia		
Wisconsin	Age 16 to 17 and attending technical college or GED courses with written parental consent and written agreement with school board agreeing to completion of high school—part time; Age 17 in juvenile correctional facility completing GED courses; Physical/mental disability; Written parental consent; Home school; Parent may request board-approved modification, including but not limited to: work training/study program, alternative education, private school, home school, school outside district	Parent: First offense, $500 fine and/or 30 days in jail; Second and subsequent offense, $1,000 fine and/or 90 days in jail; Community service; Counseling; Attend school with child Student: N/A Other: Any school district administrator, principal, teacher, or school attendance officer who violates this section shall forfeit not less than $5 nor more than $25.

Subcommittee Two: Maryland Programs and Motivation/ Engagement Strategies

Subcommittee Charge

Subcommittee Two was charged with generating recommendations to ensure students stay in and complete school. The recommendations were developed as a result of Subcommittee members' review of literature, surveys, and student feedback.

The Subcommittee had one area of focus from House Bill 36: "(e) (3) project the impact on student attendance and achievement outcomes, and assess the fiscal and social benefits to the students and the State, of raising the compulsory public school attendance age to 18."

Throughout the recommendations are references to risk and protective factors for students at risk of dropping out. Other states have raised the compulsory attendance age with some retention success; however, they have added community services for students at risk of dropping out.

Findings

The recommendations presented by the subcommittee evolved through a process that included information gathering, surveys, brainstorming, and reaching consensus. Through a facilitated process, the subcommittee was able to engage in a meaningful and candid dialogue on the topic. Surveys were submitted to a variety of local school systems, local management boards, social service agencies, and the court system. In addition, numerous articles, journals, and reports were used to determine what the best course of action is to provide extra supports and safety nets for those students at risk of dropping out.

In the 2005–06 school year, Maryland had 11,058 dropouts (Maryland State Department of Education, 2006). The problem of school dropouts disproportionately affects African-American males. The problem also disproportionately affects urban youth, with the two most urban districts in the state (Baltimore City and Prince George's County) ranking first and second respectively in terms of dropout rates. Several large-scale longitudinal studies have shown that dropping out significantly increases the risk for subsequent economic (unemployment), behavioral (crime, drug involvement), and social (family instability) problems. Consequently, dropout prevention is a significant priority, both locally and nationally.

Dropping out is not a single event, but a process that is often triggered by disengagement from school and early academic problems. There are multiple factors at different levels (individual, family, community, school) which contribute to a student's withdrawal from school. Below we briefly summarize some of the most commonly cited risk factors for dropout.

A study of school dropouts found that the most commonly cited reason for dropping out of school is disliking school, followed by poor academic performance, and the availability of work opportunities. Students who feel disconnected from others in the school are at greater risk for dropping out of school. Similarly, students who feel disengaged from the educational process tend to receive lower grades and have less positive attitudes toward school—two predictors of school dropout.

A related risk factor for early school leaving is lacking interest in school and low motivation for education attainment. In the survey done for the "Silent Epidemic" report for the Bill and Melinda Gates Foundation (Bridgeland, DiJulio, & Morison, 2006), 69 percent of the respondents cited they were not motivated or inspired to work hard, 80 percent did one hour or less of homework each day in high school, 66 percent would have worked harder if more was demanded of them (higher academic standards and more studying and homework) Furthermore, several of the students who dropped out of school reported that their classes were not interesting and that they did not understand the relevance of their coursework to the real world. Other studies indicate that youth who drop out of school tend to perceive that they have limited control over their future, set only short-term professional goals, and have a difficult time planning for the future. They also tend to make poor decisions related to their future and are more interested in immediate rather than long-term rewards.

Truancy is another common risk factor for early school leaving. Truancy is defined by the State of Maryland as a student meeting the following criteria:

1) The student was between the ages of 5 and 20 during the school year;

2) The student was in membership in a school for 91 or more days;

3) The student was unlawfully absent for 20 percent or more of the school days in membership.

Truant students miss the opportunity to gain fundamental skills necessary to successfully navigate the educational system. Many truancy problems can be traced back to disengagement in education, poor academic achievement, and grade retention in elementary school.

Another related risk factor for dropping out is academic problems. Findings from a recent study of Chicago Public Schools (Roderick, 2006) indicate that students who failed a core course, such as Algebra or English, had an 80 percent chance of dropping out of school. Academic problems can lead to frustration and disengagement from school. A recent report about Boston Public Schools ("Too Big to Be Seen," 2006) reported that many youth cited the pace of instruction (not feeling challenged, falling behind) or not being on track to graduate as

primary reasons for leaving schools. Interestingly, some students reported that they felt frustrated by too slow a pace, while others were frustrated because they were so far behind they could not catch up.

Youth with a history of behavior problems are at increased risk for displaying problems in school and leaving school early. More specifically, youth with substance abuse problems and who are involved in gang or other criminal activity are at risk for dropping out of school. These behavior problems can also contribute to disciplinary problems at school, such as office discipline referrals and suspensions, both of which are also risk factors for dropping out. Similarly, affiliation with deviant peers has also been identified as a precursor to academic failure and early dropout (Battin-Pearson et al., 2000).

Common family-level risk factors include parents' low expectations for their children's success and lack of parental engagement in the educational process. Other family risk factors include low parental monitoring and poor parental discipline. Furthermore, youth who lack positive adult role models—family or non-family—tend to be at greater risk for delinquent behaviors, including dropping out. Family demographic factors that are associated with an increased risk for early school leaving include poverty, parents' educational history (i.e. dropout), and parental unemployment (Marcus & Sanders-Reio, 2001).

Subcommittee Recommendations

RECOMMENDATION ONE

Maryland will provide adequate financial support to raise the age of compulsory attendance to age 18 in FY 2011.

RATIONALE

Providing adequate financial support will reduce the societal costs of incarceration, social services, and other services. The "opportunity cost" to implement and manage the increased student population in Maryland high schools may initially be significant. Nevertheless, the long-term return on this investment is discernable. Increased tax revenues from a more educated workforce will be evident. Past reports indicate that the "lower annual earnings of dropouts cost the federal government $158 billion or more in lost revenue each year" (U.S. Department of Commerce, 2002). Based on research from Moretti (2005) and Muenning (2005), Melville tells us in "The School Dropout Crisis" (2006) that "a one-percent reduction in the dropout rates would reduce the number of crimes by 100,000 annually. Increasing graduation rates by 10 percent would correlate with a 20 percent reduction in murder and assault rates." Moreover, the impact of high school dropouts on crime statistics is considerable: "Each youth who drops out

and enters a life of drugs and crime costs the nation between $1.7 – 2.3 million dollars in crime control and health expenditures."

RECOMMENDATION TWO

Students passing the GED will become completers of Maryland high school graduation requirements and will not be counted as dropouts; MSDE will monitor districts to ensure that GED rates reflect appropriate use of this alternative path to a diploma.

RATIONALE

Since GED counts as a diploma, students passing the GED should receive the same opportunities and benefits that accrue to persons holding a diploma, at a lesser cost to the local school systems. However, we believe that completion of a comprehensive high school program provides social and educational benefits beyond those available via the completion of the GED. After careful review, this Subcommittee supports raising the compulsory school attendance age from 16 to 18, or until graduation requirements are met. Students should be expected to follow the standard academic programs until age 16; however, from ages 16 to 18 the local school system may offer other program options for earning a high school diploma or GED tailored to meet individual students' needs. A legitimate effort must be made to ensure student success in earning a high school diploma and offering options to those students aged 16 to 18 who need added flexibility and options. The most significant aspect of the success of any new opportunity is leadership. Leadership provides the framework for developing a vision, making the commitment needed for success, and ensuring the shared responsibility for student success. Local school systems should develop diploma options that will allow all students the opportunity to earn a high school diploma. Maryland State Department of Education personnel should support local school systems' efforts and assist with the coordination of professional development for teachers and administrators.

Many school systems in Maryland have supports and programs currently in place to serve high school students who are not successful in the regular school program. Systems responded to a survey regarding such supports and programs. These include alternative programs, individual academic success plans, and career centers. A summary of these is listed in the Appendix to the Subcomittee report.

Currently, students completing a GED program earn a Maryland high school diploma. However, to participate, they must first drop out of school. The GED is a viable option for some students, and participation in this program should not first require students to drop out of high school. Eleven states have implemented the GED Option, including New York and Virginia. It is designed to target a subgroup of students who have the ability to complete high school requirements, but are behind in the credits needed to graduate with their class. The GED Option

involves the student remaining enrolled, attending high school, and receiving a minimum of fifteen hours of instruction per week. This instruction includes not only GED preparation, but also workforce development skills and/or career and technology education. To implement the GED Option program, COMAR Regulations must be amended to recognize the GED as an approved program leading to a Maryland high school diploma.

The impact of increasing the age of compulsory school attendance will vary from district to district, school system size, location, and current dropout rate. Smaller, more rural systems may be limited in the number and types of options they can offer. Larger school systems may be significantly impacted by the increase in the high school population.

Changing the compulsory attendance age should have a positive effect upon student achievement as measured by the attainment of a Maryland high school diploma or GED. The longer students are required to remain in school, the more likely they will complete their education. More students earning this credential will result in a better trained workforce, improved potential for participation in post-secondary education and/or training, and the development of lifelong learners. A more educated populace will result in more involved and active citizenry.

RECOMMENDATION THREE

Public and private local school systems share resources and collaborate to support at-risk youth, improve dropout prevention and intervention programs and services, address risk and protection factors, and use strategies associated with effective dropout prevention programs.

RATIONALE

An example of effective intervention is the alternative education program. Many students who are sent to alternative learning environments enjoy an atmosphere that is conducive to learning and improve academically. Students in alternative education schools report higher levels of satisfaction and confidence that their schools will meet their needs than do students in traditional schools (Smith, Gregory, & Pugh, 1981). Students are encouraged by the staff-to-student ratio, and the structure allows students to build productive and positive relationships with adults. As has been seen with most studies on dropouts, the need to feel like there is one adult in the school that you can talk to and that will advocate for you is immense and cannot be devalued.

Alternative education students excel behaviorally and academically because they are a part of a smaller community. Staff are sensitive to the environment and subsequently can be hyper-vigilant about safety and security. Alternative schools report reduced discipline problems and violence (Butchart, 1986). Students feel safe and can focus on their class work or focus on their behavior issues through an assigned therapist or social worker. A recent study done by the State of Oklahoma (Storm & Storm) addressed the success of its alternative schools. Students

responded to the survey question, "What is the best thing about alternative school?" Comments included:

1. "Teachers care about us."
2. "The class sizes are smaller."
3. "You can get the help you need."
4. "I feel safe here, while I didn't at the other school."

Alternative programs have smaller student-to-staff ratios that allow teachers to focus on specific interventions and targeted instruction for students lacking the basic skills necessary to compete in today's global economy. Smaller classrooms and program sizes also allow the teacher or staff member to target specific behavioral interventions to behavioral challenges. Smaller program and classroom sizes permit the teachers and program staff to provide different learning opportunities and experiences for students.

SUMMARY

Our subcommittee believes in supporting the increase in raising the compulsory attendance age from 16 to 18 years of age; however, it is imperative that if the law is changed, there are resources devoted to its success. The education of children is a broad experience from the home, community, and schoolhouse. That experience must be made relevant and substantial for all students.

Appendix: Maryland Programs

Anne Arundel County

Program	Population served
Attendance Contracts: Developed by counselors and administrators for students with attendance concerns.	Students with attendance concerns
Attendance Letters: Sent to parents of students with excessive absences.	Students with excessive absences
Attendance Review Committee: Committee composed of administrators, counselors, school psychologists, pupil personnel workers, school nurses, and other assigned staff. The committee meets on a regular basis to discuss, monitor, and work with students with excessive absences. They also gather teacher input and meet at the end of each semester to determine whether students will be granted credit for courses taken.	Students with excessive absences, both excused and unexcused
Closing the Gap Action Plan: Based on ASCA domains, standards and competencies are developed and implemented. Activities are delivered through classroom, small group, and individual counseling.	Targets groups of at risk and/or minority student populations
Evening High School: Alternative instructional program offered in the evening at four county high schools.	Targeted groups of at risk and/or minority student populations
Summer School Program: Offered in various locations throughout the county during the month of July.	All students needing to make up classes
Twilight School: After-school credit recovery opportunity offered at each high school.	Ninth-graders in all high schools
Procedures for Prevention and Notification of Senior Failures: Prescribed steps taken by counselors, teachers, and administrators in working with juniors and seniors. Steps include meeting with and reviewing the credits of every student; providing every senior a copy of his/her transcript and the High School Graduation Notification Agreement during the month of September; reviewing student interim reports and meeting with students in danger of failing classes needed for graduation; contacting by phone and mail the parents of seniors in danger of failing classes needed for graduation; arranging parent/ teacher conferences; and meeting with all seniors in need of interventions and/or alternative programs in order to meet graduation requirements.	Juniors and seniors in all high schools
Smaller Learning Communities (SLC): Restructure four high schools into smaller units called career clusters. The goals of the project are to enhance academic achievement, increase academic rigor, and create a better school climate. The SLC schools include Arundel, Glen Burnie, Meade, and Old Mill high schools.	Implemented for ninth graders at selected schools

Anne Arundel County Public Schools pays for all students, grades 9 through 11, to take the PSAT. This gives students access to personalized college and career planning with My Road. Advanced Placement potential data is a tool used to facilitate the enrollment of students in rigorous classes.	All high school students, grades 9 through 11
Centers of Applied Technology North and South: Vocational-technical centers that provide students the opportunity to earn a high school diploma while gaining skills, employment, and certification in over 20 career programs in the areas of engineering and mechanical technology, health and human services, and information technology.	Students in all county high schools who apply, meet criteria, and are accepted into the program
Mentorship Programs: Variety of programs offered at each high school to address the needs of the student population. Mentors include staff members who volunteer to work with individual students referred to them and students, who include peer helpers, mediators, and tutors. Programs are organized by the individual high schools. Some schools also work with community agencies to provide mentorship opportunities	Students who request the services or who have been referred by staff members
Teacher Advisory Programs: Offered at most high schools on a daily, weekly, or monthly basis depending on the school. Teacher advisory lessons are developed and implemented to meet the needs of students in each grade level. Teacher advisors present the lessons and serve as another adult to assist students in their school adjustment success.	All high school students
Consent Form: A form authorizing Anne Arundel County Public Schools to provide public/nonprofit programs or agencies directory information for students planning to withdraw from school. These agencies will provide students with information on education and career opportunities to assist them in completing their high school diploma, earning a GED, or gaining skills for employment.	Students withdrawing from school
