Bill to ban PBDEs would protect Alaskans

COMPASS: ***Other points of view***

By FRANK VON HIPPEL

(02/20/11 17:16:56)

The Alaska State Legislature is considering a bill backed by Sen. Bill Wielechowski and Rep. Lindsay Holmes that would ban the import of furniture and electronics containing a class of toxic flame retardants known as PBDEs (polybrominated diphenyl ethers).

PBDEs are man-made chemicals produced for the manufacture of fire-resistant products. As products break down or release PBDEs into the atmosphere, the PBDEs find their way into the environment. PBDEs are highly persistent; they may remain unchanged for many decades or break down into daughter compounds that are also toxic.

Unfortunately, they are fat soluble and bioaccumulate in the fatty tissues of exposed animals. As these animals are consumed by predators, the PBDEs biomagnify up the food web, resulting in the highest levels in the top carnivores. Many of these top carnivores, such as fish and marine mammals, are important subsistence foods in Alaska.

People are exposed to PBDEs in multiple ways, including through the ingestion of fatty foods as well as contact with household dust. PBDEs have been found in human breast milk and in the blood of mothers and their babies. A Centers for Disease Control and Prevention study found that over 93% of Americans had detectable levels of PBDEs in their bodies, some at levels that are associated with health problems in laboratory animals. PBDEs have been found to disrupt the hormone system of numerous animals and have widespread effects on neurodevelopment and reproductive development.

The laboratory animals chosen for these studies have proven to be excellent models for human medical research time and time again. The hormone system of other vertebrates is almost exactly the same as the hormone system of humans. Therefore, disruption of hormone pathways in laboratory animals indicates that PBDEs likely cause similar developmental and health effects in humans.

PBDEs interfere with thyroid hormone, which regulates many aspects of development, and male and female sex steroids, which regulate sexual development and behavior. For example, PBDE exposure may cause undescended testes in newborn boys and reduced testosterone and sperm counts in men. Some PBDEs may be carcinogens. Although we do not fully understand the mechanisms by which PBDEs disrupt multiple hormone pathways, the evidence is sufficient to take a prudent approach and ban their import to Alaska where feasible.

Washington became the first state to ban all forms of PBDEs in 2007, with key support coming from firefighter associations. Firefighters advocated against PBDEs because when products containing PBDEs burn, they release highly toxic dioxins and furans. Associations of nurses and doctors also supported the legislation.

Maine, Oregon, Vermont, Rhode Island, Illinois and Massachusetts also have banned some or all of the PBDEs, and similar legislation is under consideration in other states. Similar bans are in effect in Canada and most European nations.

The Washington law required that safer and technically feasible alternatives to PBDEs be identified before the ban would go into effect. These alternatives, which meet fire-safety standards, were identified by Washington state agencies in December 2008; the identification of alternative flame

retardants allowed restrictions on the use of PBDEs in electrical products and furniture to take effect Jan. 1, 2011.

Many companies have taken a proactive approach in phasing out PBDE use. For example, Intel, IBM and Ericsson no longer produce products with PBDEs, and Hewlett-Packard, Sony, Motorola, Panasonic, NEC, Samsung and Toshiba are all working to phase out PBDEs.

Alaskans experience unusual levels of PBDE exposure for three reasons: The Arctic is a global sink for persistent pollutants that settle out of the atmosphere in cold temperatures; Alaskans who rely on a subsistence diet eat fish and marine mammals that accumulate PBDEs because of their position at the top of the food web; and we spend most of the winter sealed in our homes, where we are exposed to household dust containing PBDEs.

Therefore, Alaska has extraordinary cause to ban the importation of products containing these chemicals. We cannot control the atmospheric deposition of PBDEs into the Arctic or their delivery by ocean currents, but we can control their importation in consumer products.

Frank von Hippel is a professor of biological sciences at the University of Alaska Anchorage.

Product Safety and Regulatory Notice

Certain Polybrominated Diphenyl Ethers (PBDEs) Banned

URGENT

BANNED! Certain Chemical Flame Retardants Banned
Pentabrominated diphenyl ether (pentaBDE); Octabrominated diphenyl ether (octaBDE); Decabrominated diphenyl ether (decaBDE)

ATTENTION:

- **Merchants and Suppliers of hardware, infant/toddler, electronics, cameras, toys, pet toys and pet supplies, sporting goods, cosmetics and skincare products, electrical appliances, furniture, luggage, outdoor living, home furnishings, impulse merchandise, wireless products, curtains and drapes, and bedding for Walmart, Walmart.com, Sam's Club and Samsclub.com**
- **Global Sourcing**

December 28, 2010

ACTION NEEDED:

Merchants and Global Sourcing – Please forward this notice to any suppliers of the applicable products. In addition, you will need to review this notice and ensure that all requirements are met for all new and replenishable inventories of the applicable products.

Suppliers – Review this notice and ensure that all requirements are met for all new and replenishable inventories of the applicable products.

BACKGROUND:

All consumer products must comply with applicable federal, state, and industry fire safety regulations of the specific product. Several states (including California, Hawaii, Maine, Maryland, Oregon, Vermont, and Washington) have established restrictions on the use of specific chemical flame retardants (polybrominated diphenyl ethers or PBDEs) in all consumer products, and many other states have introduced similar legislation.

GENERAL REQUIREMENTS:

Beginning **June 1, 2011**, Walmart will enhance its testing of the use of polybrominated diphenyl ethers in all consumer products.

ALTERNATIVE SUBSTANCES:

Halogenated flame retardants, other than the above-mentioned PBDEs, are involved in legislative debate and suppliers should evaluate alternatives for halogenated flame retardants (other than PBDEs, which are already prohibited). Halogenated flame retardants, other than the above-specified PBDEs, are not currently banned from use, and this Notice will be updated if the status changes in the future.

PRODUCT TESTING REQUIREMENT:

Testing should be performed to verify that Pentabrominated diphenyl ether (pentaBDE), Octabrominated diphenyl ether (octaBDE), and Decabrominated diphenyl ether (decaBDE) are not detected in consumer products.

AUTHORITY:

Various federal, state, and industry fire safety regulations.

QUESTIONS OR COMMENTS:

Suppliers may submit questions or comments by emailing them to gmcomply@wal-mart.com.

http://www.epa.gov/dfe/pubs/projects/flameret/index.htm

Furniture Flame Retardancy Partnership

About This Project | Milestones | Publications | Partners

The Furniture Flame Retardancy Partnership is a joint venture between the Furniture Industry, Chemical Manufacturers, Environmental Groups and the Environmental Protection Agency to better understand fire safety options for the furniture industry.

Publications

The report, "Environmental Profiles of Chemical Flame-Retardant Alternatives for Low-Density Polyurethane Foam," is now available. This report contains a summary of the environmental and human health attributes of selected flame retardants as alternatives to pentabromodiphenyl ether (pentaBDE).

The primary flame retardant historically used in low-density flexible polyurethane foam (pentabromodiphenyl ether - pentaBDE) was voluntarily phased out of production by the sole U.S. manufacturer on December 31, 2004. PentaBDE, with its ability to delay ignition of materials, has saved lives, but there are concerns over its use. Studies worldwide have found pentaBDE to be widespread in the environment and in human tissue and breast milk. More information is available on the polybrominated diphenyl ethers (PBDEs) webpage.

The Consumer Product Safety Commission is also considering more stringent fire safety standards for residential furniture. These new standards could result in more flame retardants being used in furniture foam and fabric in the future.

The decisions the industry must make now on flame retardant alternatives offer a real opportunity to protect public health and the environment. Through the Furniture Flame Retardancy Partnership, EPA and its partners are working to identify and move toward environmentally safer approaches to meeting fire safety standards. The partnership's first objective has been to provide up-to-date toxicological and environmental information on flame retardants used in furniture foam so that furniture manufacturers and suppliers can make informed decisions about which chemicals to use. This work is captured in the partnership's report: "Environmental Profiles of Chemical Flame-Retardant Alternatives for Low-Density Polyurethane Foam," which focuses on flame retardants in furniture foam as alternatives to pentaBDE.

Next, the partnership plans to develop and implement a process to identify additional toxicological data needed for adequately assessing the flame-retardant alternatives reviewed in this report. In the future, the partnership intends to evaluate additional chemical flame retardants and other materials that may be necessary to meet planned national fire safety standards.

Find out more from our pamphlet, Environmentally Preferable Approaches for Achieving Furniture Fire Safety Standards.[2 p., 210 Kb PDF] For more information about the Furniture Flame Retardancy Partnership, contact DfE

Flame-Retardant Alternatives for DecaBDE Partnership

About This Project | Milestones | Participants

DfE has convened a multi-stakeholder partnership to explore the human health and environmental profiles of functional and viable alternatives to decabromodiphenyl ether (decaBDE), a chemical of potential concern. Participation of all interest groups is aimed at ensuring that the full range of views are considered from the start of the project and that they are incorporated appropriately into the project objective and methodology. The goal is for the resulting information to help inform the process of substituting to safer alternatives, with reduced health and environmental concerns, for decaBDE.

DecaBDE is a flame retardant used widely in a number of materials to meet flammability standards. Uses of DecaBDE include electronics, wire and cable, building materials, automotive and aviation parts, shipping pallets, and textile coatings.

Why is DfE conducting an alternatives assessment?

EPA is concerned that certain polybrominated diphenyl ethers (PBDEs), are persistent, bioaccumulative, and toxic to both humans and the environment. This concern extends to decaBDE, which breaks down into other PBDE congeners. Various PBDEs have been studied for ecotoxicity in mammals, birds, fish, and invertebrates. In some cases, current levels of PBDE exposure for wildlife may be at or near adverse effect levels. Human exposure to decaBDE can occur through the diet, at the workplace, and in the home. In December 2009, the largest commercial producers and suppliers of decaBDE in the United States agreed to phase out use of the chemical by 2012.

How do I get more information?

If you are interested in participating in this partnership, or if you would like more information, please contact Emma Lavoie of DfE at 202-564-0951 or Lavoie.Emma@epa.gov.

Report on Greening Consumer Electronics with case studies on electronic manufacturers who eliminate the use of halogenated flame retardants including PBDEs. Apple eliminated the use of halogenated chemicals completely. Full report is online at: http://www.cleanproduction.org/library/GreeningConsumerElectronics.pdf

PREFACE

Electronics manufacturers, standards bodies, and legislators have begun to take notice of the human health and environmental concerns associated with the use of brominated and chlorinated compounds in electronic products. An array of conflicting definitions and policies have emerged to address these concerns at various levels. This report is intended to show the feasibility of re-engineering consumer electronic products to avoid the use of these compounds and recommends a definition to address human health and environmental concerns that is implementable by industry.

CPA and ChemSec have compiled case studies that provide examples of seven companies that have removed most forms of bromine and chlorine from their product lines. The purpose of this report is to allow parties outside the industry to see the level of conformance that can be met today, as well as provide a tool for engineers designing the next generation of greener electronic devices.

Report about evaluating alternatives to decaBDE in television casings. Executive summary from: http://www.cleanproduction.org/library/Green_Screen_Report.pdf

Executive Summary

The Green Screen for Safer Chemicals defines a path to chemicals that are safer for humans and the environment. It is a rigorous, hazard-based screening method that is designed to inform decision making by businesses, governments, and individuals concerned with the risks posed by chemicals and to advance the development of green chemistry. The Green Screen defines four benchmarks on the path to safer chemicals, with each benchmark defining a progressively safer chemical:

- Benchmark 1:
  Avoid—Chemical of high concern
- Benchmark 2:
  Use but search for safer substitutes
- Benchmark 3:
  Use but still opportunity for improvement
- Benchmark 4:
  Prefer—Safer chemical

Each benchmark includes a set of criteria that a chemical, along with its known and predicted breakdown products and metabolites, must pass. To progress from Benchmark 1 to Benchmark 2, a chemical (and its breakdown products and metabolites) must pass all the criteria specified under Benchmark 1. For example, a chemical (along with its breakdown products and metabolites) that is persistent, bioaccumulative and toxic would not pass beyond Benchmark 1. Similarly, to progress from Benchmark 2 to Benchmark 3 and from Benchmark 3 to Benchmark 4, the chemical (along with its breakdown products and metabolites) must pass all criteria specified under each respective benchmark. The criteria become increasingly more demanding for environmental and human health and safety for each benchmark, with the hazard criteria of Benchmark 4 representing the safest chemical. All of the hazard and benchmark criteria developed for the Green Screen are presented in this report, along with information on government and other precedents for classification that were used to help establish the thresholds.

In order to test the Green Screen, three flame retardants that currently meet performance criteria for use in the external plastic housing of televisions (TVs) were evaluated. With the European Union restricting decabromodiphenyl ether (decaBDE) in electronics and with similar legislative initiatives under consideration at the state level in the United States, a recurring question emerges: are the alternative flame retardants safer than decaBDE from the perspective of human and environmental health and safety? Flame retardant use in TVs is of particular interest

because TVs represent the largest end use for decaBDE.

We use the Green Screen to evaluate three flame retardants: decaBDE and two phosphorous-based alternatives, resorcinol bis (diphenylphosphate) (RDP), and bisphenol A diphosphate (BAPP or BPADP). Of the three flame retardants, RDP was the only flame retardant to pass all criteria under Benchmark 1 of the Green Screen. An integral element of the Green Screen is taking into account potential degradation products and metabolites. This is important given that chemicals in the environment are not static, they integrate into human and natural environments. Both decaBDE and BPADP scored lower on the Green Screen because of their degradation products. While RDP is not a "green chemical" per se, based on assessment via the Green Screen for Safer Chemicals, it achieves a higher level of human and environmental health and safety than the alternatives. Thus RDP (and its breakdown products), based upon a Green Screen assessment, is a safer chemical.

Version 1 of the Green Screen is intended for public use and dissemination. We hope that as the Green Screen is applied, further refinements and improvements will be made. The Green Screen for Safer Chemicals represents a needed building block on the path to sustainable material flows in our economic and ecological systems. It is our goal that companies, government agencies, academia, and nonprofits will use the Green Screen to select inherently safer chemicals, thereby reducing the risks of exposure to toxic chemicals and increasing the availability of safer, healthier products.

February 17, 2011

Senator Bill Wielechowski
State Capitol
Juneau, AK 99801

Dear Senator Bill Wielechowski:

The Alaska Inter-Tribal Council is writing in support of SB 27, a bill that would prohibit the manufacture and sale of toxic flame retardants in common consumer products. The Alaska Inter-Tribal Council is a tribally-governed organization advocating on behalf of 232 Federally Recognized tribal governments throughout Alaska. We recognize increasing evidence that flame retardants, such as polybrominated diphenyl ethers (PBDEs) named in SB 27, are being found in the Arctic. We are concerned about PBDEs leaving a lasting toxic legacy in people and the environment.

PBDEs are potent toxins that persist in the environment and bioaccumulate in the food chain and in human tissues. They can travel long distances and move readily between the water, soil and air. PBDEs are associated with a variety of negative toxic effects including memory impairment, learning and behavioral problems, the disruption of thyroid hormone balance and reproductive health issues. In Alaska, PBDEs have been detected in seabird eggs, marine mammals, otters, and polar bears. The presence of such chemicals in wildlife is cause of concern, not only for the survival and well-being of wildlife, but for the human consequences of bioaccumulative exposure through the food we eat.

We need to enact legislation to phase out PBDEs from consumer products. Fortunately, fire safety can be achieved without the use of toxic chemicals because there are safe, economical, and effective alternatives to PBDEs currently in widespread use.

Eliminating most uses of PBDE flame retardants is possible and an important step to protecting public health.

Thank you for sponsoring this bill,

David Harrison

David Harrison

February 16, 2011

Senator Bill Wielechowski
State Capitol
Juneau, AK 99801

Dear Senator Wielechowski:

The Arc of Anchorage would like to thank you for introducing SB 27, *"An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to bioaccumulative toxic chemicals; and providing for an effective date."* The Arc of Anchorage is a private not-for-profit organization that serves people with developmental disabilities and mental health issues so they can lead rich and productive lives. The Arc looks forward to a day when it is no longer needed because all preventable disabilities have been prevented, but we need legislative help to address prevention.

Learning and developmental disabilities influence the quality of life for affected children and their families, and also impose a heavy financial burden on the state through required Special Education, increased health care costs, lost work time for parents, and a lifelong loss of work productivity for severely affected children. Scientific evidence has demonstrated that some chemicals, including decaBDE, can cause learning and developmental disorders. We must not expose our children to toxicants that we know or suspect can harm their developing brains and bodies. We know safe alternatives can replace the need for these toxic chemicals without compromising fire safety.

Developing children are more susceptible to toxic exposures than adults. When certain exposures occur at certain times, sometimes even at very low doses, the development of children's brains, other organs, and reproductive, hormonal, and immune systems can be permanently altered. Recent evidence has shown children who had higher cord blood concentrations of polybrominated diphenyl ethers (PBDEs) scored lower on tests of mental and motor development at 1–4 and 6 years of age. This work was initiated based on a large body of research indicating that prenatal PBDE exposure has the potential to disrupt neurodevelopment.

PBDE residues, particularly highly brominated PBDEs such as deca-BDE, have been found consistently in tissue samples of both new mothers and their newborn infants, as well as in mothers' breast milk. Ingestion of contaminated milk is one of the two major routes of PBDE exposure in children, and there are concerns about the high concentrations ingested, given the

susceptibility of newborns. This trend has been found to occur around the globe. Yupik women from the Yukon Kuskokwim Delta of Alaska have the highest known concentrations of PBDEs in human populations in the Arctic.

Children rely on adults to keep them safe from harm. Therefore, it is up to us to do everything we can to keep them safe and to minimize their exposures to toxics. SB 27 is important legislation that will help protect children from needless exposures to this persistent, toxic chemical.

Thank you,

Patti J. Saunders

Patti Saunders
Director of Development
The Arc of Anchorage

Alaska Nurses Association (AaNA)
2010 Resolution #7
Resolution on Polybrominated Diphenylethers (PBDEs)
10/17/2010

Whereas, PBDEs are toxic, endocrine-disrupting flame retardant chemicals added to plastics, foam products and textiles; and

Whereas, prenatal exposures to PBDEs at levels commonly found in households have been shown in studies to be associated with adverse neurodevelopmental effects in young children; and

Whereas, people living in North America have levels of PDBEs that are 10-40 times higher than individuals living in Europe or Japan and people living in northern regions are particularly vulnerable to PBDE exposure; and

Whereas, safer and economically viable alternatives are available and are already being used by some manufacturers of computers and other products; and

Whereas, the American Public Health Association and International Association of Fire Fighters have urged the phase-out of PDBEs and other harmful chemicals when safe alternatives are readily available;

Therefore be it resolved, that the Alaska Nurses Association supports the passage of SB295.

Alaska Conservation Alliance

"A Strong Economy and Healthy Environment Go Hand in Hand"

2/17/11

Senator Bill Wielechowski
State Capitol, Rm. 101
Juneau, AK 99801-1182

Dear Sen. Wielechowski:

The Alaska Conservation Alliance supports SB 27, which phases out the sale and manufacture of a dangerous class of chemicals in Alaska, and selected the issue as one of three legislative priorities for the 2011 Legislative Session. The Conservation Alliance is an umbrella group for approximately 40 member organizations with a combined membership of over 38,000 Alaskans. We serve as a powerful voice to advance conservation with decision-makers in Alaska. The Conservation Alliance believes that a healthy environment and a strong economy go hand in hand.

Alaskans deserve safe homes for their families. Unfortunately, many common household items including mattresses, textiles, and plastic casings for electronics (primarily in TVs and computers) contain a dangerous class of chemicals known as PBDEs. PBDEs are used as flame retardants but cause cancer and developmental disabilities in our children. Other flames retardants are safer and cost effective. In fact, a number of manufacturers already use these safer flame retardants voluntarily.

The risk posed to Alaskans by PBDEs is higher than people in other parts of the country. Studies show that Alaskans have the highest concentrations of PBDEs in their bodies of any state population due, in part, to us spending more time indoors during our long winters. SB 27 is a smart first step to solving this problem.

SB 27 is a well-balanced approached to make our homes safer and allowing businesses to smoothly transition from selling harmful products to safer ones. Thank you for bringing this legislation forward.

Sincerely,

Caitlin Higgins

Caitlin Higgins

Representative Lindsey Holmes
State Capitol
Juneau, AK 99801

February 18, 2011

Dear Representative Holmes:

I am writing to you in support of HB 63, which would ban polybrominated fire retardants in consumer products, while giving the Department of Environmental Conservation additional powers and encouraging cooperation with other states in such activities. Rather than elaborating on the rationale for this legislation, which is effectively presented in your sponsor statement, I'll describe the issue of PBDE toxicity as it relates to the burn injury community. This is in order because the brominated flame retardant (BFR) chemical industry often seeks our support when their products are challenged by such legislation

I support HB 63 in my role as a founding director (in 1985) and emeritus Board member of the Federation of Burn Foundations (FBF), and as a former major committee chair, honoree (twice) and member of the Board of Trustees of the American Burn Association (ABA).

It is understandable that anyone who treats severely burned patients or works closely with both care providers and survivors, as I have for 35 years, would be inclined to support any action which might save a life or prevent such an injury. That was my own position until four years ago, when I first became aware of the increasing public health and environmental threat posed by the accumulating presence of toxic frame retardant chemicals in the environment and human tissue, --along with the lack of any data supporting their effectiveness. Many of us in the ABA share such concerns,

I have also felt a special responsibility to monitor fire and burn injury statistics, as the ABA member trusted with updating the Association's annual burn incidence fact sheet. In tracking the steady decline in fire and burn death and injury over the past 30 years, I have noted the many reasons for those trends. These include numerous safety efforts, such as smoke alarms, more public education, stronger building codes and safer designs of cigarettes, cigarette lighters and candles. Unlike PBDEs, none of these influences on fire casualties have negative side effects, and they have had a far greater positive impact than any that can be claimed for these chemicals.

Other recent changes in society which are not motivated by fire safety have also helped reduce fire casualties. These include the major decline in smoking, the transition in cooking from the stove to the microwave and our growing reliance on restaurants and fast food outlets.

For these reasons, I strongly encourage support for HB 63 in this session of your legislature.

Sincerely,

Peter A. Brigham

Cc: Sen. Bill Wielechowski; Rep. Cathy Munoz; Rep. Beth Kerttula
Subject: SB 27...

Hello, Senator Egan.

I am writing to ask you to support SB 27 to reduce our exposure to household toxins. These toxic fire-retardants are "kissing cousins" to PCBs and has been used in large quantities, up to 5-7% by weight, in foams in upholstered furniture. It flakes off in microscopic particles which are then ingested. Kids are at particular risk of exposure and ingestion because many of them eat close to the floor... the one second rule isn't fast enough to avoid picking up the toxins when eating food off the floor or with greasy fingers that touched the sofa.

Thank you for your consideration.

Justine Bishop
Lifelong Juneau Resident

NATIVE VILLAGE OF SAVOONGA • P.O. BOX 120, SAVOONGA, AK 99769 • PHONE 984-6414 • FAX 984-6027

March 11, 2010

To: Honorable Senators and Representatives of the Alaska Legislature

From: Native Village of Savoonga

Regarding: Support of HB 385 and SB 295

Dear Legislator:

The Native Village of Savoonga is submitting this letter in support of HB 385 and SB 295, legislation to phase out the manufacturing, sale, and distribution of products that contain polybrominated biphenyl ethers (PBDEs). We believe that action on this class of persistent toxic chemicals is necessary to protect the health and well-being of our people and future generations. We must do everything we can to protect the health of our children who are especially vulnerable because exposure to these chemicals can harm their developing brain and their ability to learn. We know that there is also increasing evidence that links exposure to PBDEs with other serious health problems such as permanent developmental disorders, reproductive harm, thyroid disease, and certain types of cancer.

We are aware that PBDEs are transported on wind and ocean currents into our region and are accumulating in the north/Artic at an alarming rate. PBDEs are now found in our traditional foods, including fish, seabird eggs, and marine mammals. Our people are also at risk because of the presence of PBDEs in products that we use in our homes and that we may be experiencing higher exposures because our homes are closed in for a greater part of the year than in lower latitudes. We are concerned that in a recent study of the Arctic Monitoring and Assessment Program, Yupik women from the Yukon-Kuskokwim Delta had the highest levels of PBDEs of any human population of the circumpolar Arctic. It is necessary to take action to prevent exposures to PBDEs and other persistent, bioaccumulative and toxic chemicals.

We urge you to take this opportunity to pass this important piece of legislation in order to protect our health and the health of all Alaskans. Thank you for your attention to our

concerns.

Sincerely, Verna Emmingham Vice President

For Kenneth Kingeekuk

President, IRA Council, Native Village of Savoonga

Subject: support for SB 295

Senator Bettye Davis and Members of the Committee
Senate Health and Social Services Committee
State Capitol
Juneau, AK 99801-1182

March 16, 2010

Dear Chair Davis and Members of the Senate Health and Social Services Committee:

Thank you for taking the opportunity to hear testimony on SB 295, an important bill to phase out octa-, penta-, and decaBDE from certain uses, for which safer, effective alternatives are in widespread, successful use. I am unable to attend the hearing scheduled on Wednesday, March 17, 2010 but appreciate the opportunity to submit written support of this bill. I urge that the Committee support this bill.

My name is Roxanne Chan and I am a Registered Nurse and Licensed Acupuncturist currently residing in Anchorage. Since moving to Alaska in 2005, I have had the opportunity to practice nursing in communities such as Barrow, Nome,Â and Anchorage. I also recently had the opportunity to participate in a biomonitoring study where my blood was tested for PBDEs.

In October of 2009, the report *Hazardous Chemicals in Health Care: A Snapshot of Chemicals in Doctors and Nurses* (

http://www.psr-la.org/files/hazardous-chemicals-in-health-care.pdf), was released documenting the levels of different chemicals of twelve doctors and eight nurses from around the country including myself and a physician from Alaska. My results showed that I have at least 19 different PBDEs in my body including the ones this bill aims to phase out.

As someone who is generally aware of chemical exposure from consumer products, I was alarmed to see my results showing that these chemicals were found in my blood. PBDEs have been linked to a wide range of health problems and it made me wonder if my exposure to chronic low levels due to consumer products could result in adverse health in the future.

As I am sure you are aware, a central tenant of health care isâ€"put simplyâ€"first, do not harm. Allowing chemicals on the market which are correlated to adverse health effects is contrary to this principal. Reducing chemical exposures, through policy measures such as SB 295, is an important primary prevention measure to help improve the health of our state overall.

I hope that you will join me and others in supporting SB 295, an important step in reducing Alaskans exposure to toxic chemicals and creating an environment where people can be healthier.

Sincerely,

ã€€

Roxanne Chan, RN, LAc

Subject: Senate Bill 295 support

Dear Senators,

I am writing regarding this important piece of legislation that Sen Wielechowski has submitted for approval. I live in Nome and have for most of my life. My family moved here when I was 4 years old and I graduated from Nome Beltz High School in 1984. I continued my education to the Masters level in Nursing Science and am now back in Nome teaching Community Health Aides so we can have medical services in our remotest villages. As health care providers we are acutely aware of the health hazards that toxins have in our environment and how they get there.

We have the highest rates of cancers in Alaska. I have seen many, many thyroid cancers and gastrointestinal types of cancers as well. It is my belief that toxins in our Native people's environment play a part in these high rates as does tobacco use.

SB 295 would require the phase out of polybrominated diphenyl ethers (PBDEs). PBDEs are toxic flame retardant chemicals added to plastics, foam products, and textiles to make them difficult to burn. The EPA is concerned that certain PBDEs are persistent, bioaccumulative, and toxic to both humans and the environment. The American Public Health Association and International Association of Fire Fighters have urged the phase out of PBDEs. Safer and economically viable alternatives are available and are already being used by some manufacturers of computers and other products.

Please think about the affects this particular toxin has on the health of our people and vote to phase it out of use.

Thank you for your help,

Karen McLane FNP-BC

Subject: Senate Bill 295

Senators:

On behalf of Planned Parenthood of the Great Northwest, our thousands of supporters in Alaska and the more than 9,000 women and men we provide services to I am writing to urge you to support and pass SB 295. Providing Alaskans with a safe environment in which to raise their children is paramount to our mission and will help ensure that when families do plan to have children they will be the healthiest possible. With safe alternatives that still provide excellent fire protection there is no reason not to pass this important legislation. PPGNW is a proud member of the Healthy Families Alliance with many other agencies across Alaska, formed to promote fundamental reform to current chemical laws to protect children, workers, communities and the environment. As PPGNW 'goes green' in our health centers we hope that we can help promote cleaner, toxic free environments for everyone in the State. This bill is the first step.

PBDEs are toxic, endocrine-disrupting flame retardant chemicals added to plastics, foam products, and textiles. They leach from household products and we are exposed through foods, indoor air, and household dust.

A brand new study conducted by researchers at Columbia University showed that prenatal exposure to PBDEs at levels commonly found in households is associated with adverse neurodevelopmental effects in young children. The researchers found that "children with higher concentrations of PBDEs in their umbilical cord blood at birth scored lower on tests of mental and physical development between the ages of one and six. Developmental effects were particularly evident at four years of age, when verbal and full IQ scores were reduced 5.5 to 8.0 points for those with the highest prenatal exposures. "

Thank you for hearing this important legislation and please do not hesitate to contact me directly if you would like further information on our position.

CSPA®
Representing Household & Institutional Products
Aerosol - Air Care - Cleaners - Polishes
Automotive Care - Antimicrobial - Pest Management

February 18, 2011

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
State Capitol
Juneau, AK 99801-1182

Re: SB 27 - Development of PBT Chemicals List – OPPOSE

The Consumer Specialty Products Association must respectfully oppose SB 27 (Wielechowski), which would, among other things, direct the Department of Health and Social Services to establish, and update every three years a list of "persistent bioaccumulative toxic chemicals (PBTs)" that occur or are used in products used by human beings.

The Consumer Specialty Products Association (CSPA) is the premier trade association representing the interests of some 250 companies engaged in the manufacture, formulation, distribution and sale of $80 billion annually in the U.S. of hundreds of familiar consumer products that help household and institutional customers create cleaner and healthier environments. Our products include disinfectants that kill germs in homes, hospitals and restaurants; candles, and fragrances and air fresheners that eliminate odors; pest management products for home, garden and pets; cleaning products and polishes for use throughout the home and institutions; products used to protect and improve the performance and appearance of automobiles; aerosol products and a host of other products used every day.

CSPA members are committed to manufacturing and marketing safe products that are protective of human health and the environment while providing essential benefits to consumers. CSPA has adopted its members' commitment into the CSPA Principles for Chemicals Management Policy, available online at http://www.cspa.org/infocenter/our-issues/principles-for-chemicals-management-policy/.

CSPA supports programs that are risk based and use sound science. Programs should be governed by an advisory panel in which all stakeholders have a voice. CSPA supports programs that encourage resource pooling and build on existing statutory and regulatory structures, voluntary initiatives and data development efforts.

We are unclear why a PBT list is being drafted and how the list will be used in the future. SB 27 should include specific language that clearly describes the intent and future plans for creating and utilizing a state-specific PBT list.

To provide consistency with other regulatory structures, the PBT screening criteria used by the United States Environmental Protection Agency (USEPA) should be adopted. As currently drafted, Section 18.31.680 does not contain a clear set of definitions for the characteristics of P or B or T that is consistent with generally accepted PBT screening criteria. Though the bill does ask the Department to consider other sources of PBT information (e.g. Washington State PBT program, USEPA high production volume challenge program), CSPA believes that the bill should establish a clear definition to help ensure a focus on priority substances.

In addition, CSPA believes the bill should include language that directs the Department to develop and implement a stakeholder process through which interested parties can participate and provide input into the development and potential use of any PBT lists or potential alternative chemicals. A formal stakeholder process will help ensure that the overall process is informed by the best available scientific information.

SB 27 could be appreciably improved with the addition of language that provides transparent and objective parameters for selecting the best available scientific information. An example is the European Chemicals Agency's (ECHA)'s guidance document titled "Guidance on Information Requirements for Chemical Safety Assessment." The ECHA's guidance provides four specific parameters for selecting the best available scientific information based on relevance, reliability, and adequacy. The fundamental importance of having screening parameters is embodied in a quote by the ECHA, which stated "[t]he knowledge of how a study was carried out and consequently its relevance and reliability, is a prerequisite for the subsequent evaluation [and use] of [the] information."

For the reasons expressed above, we must oppose SB 27. Please contact me at (916) 838-3587 or kpower@cspa.org if you have questions regarding CSPA's concerns.

Sincerely,

Kristin Power

Alternatives to Deca-BDE in Televisions and Computers and Residential Upholstered Furniture

Implementation of RCW 70.76: Identifying safer and technically feasible alternatives to the flame retardant called Deca-BDE used in the electronic enclosures of televisions and computers and in residential upholstered furniture

Final Report

December 29, 2008

Department of Ecology Publication No. 09-07-041
Department of Health Publication No. 334-181

Executive Summary

This report fulfills the requirements of RCW 70.76, signed into law by Governor Gregoire in 2007. This law restricts the manufacture, sale and distribution of products containing a type of chemical flame retardant called PBDEs (polybrominated diphenyl ethers). The three types of PBDEs used in consumer products are Penta-BDE, Octa-BDE and Deca-BDE. The prohibition became effective for all products containing Penta-BDE and Octa-BDE, and for mattresses containing Deca-BDE in January, 2008. At the time the law was passed, safer alternatives for Deca-BDE had not been identified for other products, specifically, residential upholstered furniture, and electronic enclosures used in televisions and computers. RCW 70.76 lays out a process for identifying the availability of safer, technically feasible alternatives to Deca-BDE that meet fire safety standards for these applications. When safer alternatives are identified, the manufacture, sale or distribution of upholstery and electronic enclosures containing Deca-BDE will be prohibited two years from the date of identification.

As required by RCW 70.76, the Departments of Ecology (Ecology) and Health (DOH) reviewed risk assessments, scientific studies, and other relevant findings regarding alternatives to the use of Deca-BDE in residential upholstered furniture, televisions, and computers.

The agencies identified a safer, technically feasible alternative chemical flame retardant for TVs and computers. Non-chemical alternatives were identified for upholstered furniture. These alternatives were presented to a committee of fire safety experts appointed by the governor to determine if they can provide appropriate fire retardant capacity. The Fire Safety Committee met on November 7, 2008 and found that the identified alternatives meet applicable fire safety standards. The Fire Safety Committee reported its findings to the Office of the State Fire Marshal who, on November 18, 2008, determined that the identified alternatives meet applicable fire safety standards.

Ecology posted the draft report on its web page and notified the public and stakeholders about its availability. Public comment was accepted from November 20 until December 17, 2008. A notice was placed in the State Register on December 3, 2008 as well. A response to these comments in included in Appendix 6.

Alternatives Assessment Approach

RCW 70.76 requires that Ecology and DOH review risk assessments, scientific studies and other relevant findings to determine if a safer and technically feasible alternative to Deca-BDE is available. The statute requires that the agencies assure that at least one safer alternative is available. The agencies interpret "safer and technically feasible" as including:

- A chemical alternative to Deca-BDE that is less toxic, less persistent or less bioaccumulative than Deca-BDE, and that is currently being used in products, or

- A technology, material or other design strategy, currently in use and reasonably available, that provides fire safety for televisions, computers or upholstered furniture without the addition of chemical flame retardants. For example, while some electronic enclosures achieve fire protection through the use of metal instead of plastic, Ecology believes that requiring redesign to this extent may go beyond the definition of "feasibility" in the statute.

The agencies did not evaluate every option and therefore this report makes no assertion as to the relative safety of flame retardants or technologies we did not evaluate. Ecology and DOH do not have the regulatory authority to dictate what method furniture manufacturers select to maintain fire safety.

The statute does not require that the identified safer alternative be a direct substitute for Deca-BDE but does require that the alternative be "technically feasible". Ecology determined that a good indicator of technical feasibility is the presence and reasonable availability of the product on the market using the alternative. For example, if Ecology demonstrates that currently available computers are employing the identified alternative to Deca-BDE, then that alternative is considered technically feasible.

Electronic Enclosures for TVs and Computers

There are many available chemical flame retardants that can be used to provide fire safety for televisions and computers. In evaluating alternatives to the use of Deca-BDE in electronic enclosures, Ecology and DOH focused on non-halogenated flame retardants which are less likely to persist in the environment and to bioaccumulate in organisms. Non-halogenated alternatives also have the added benefit of being much more easily degraded than their halogen equivalents, thereby reducing their potential long-term impact on human health and the environment.

Technical feasibility was evaluated using indirect information because manufacturers do not generally reveal which chemicals are actually being used to provide fire safety in their electronic products. Ecology looked first to Europe, where Deca-BDE has been banned in electronic products since July, 2008. Ecology assumed that if these products can be made cost effectively and sold in Europe they can be made cost effectively and sold in the U.S. as well. Several European studies demonstrate that resorcinol bis(diphenyl phosphate) (RDP) has been used in electronic enclosures for televisions and computers sold in Europe. Also, the computer industry has largely moved away from use of halogenated flame retardants. Ecology and DOH did not identify technically feasible design options for televisions and computers that do not require the use of added flame retardants so these alternatives were not considered feasible.

After reviewing recent studies, reports and other information, most of which became available after the PBDE Chemical Action Plan was completed, Ecology and DOH identified two possible phosphate-based flame retardants: resorcinol bis diphenyl phosphate (RDP) and triphenyl phosphate (TPP), as technically feasible alternatives.

The agencies then conducted a review of information available on these two flame retardants to determine if both could be recommended as safer alternatives to Deca-BDE. This review included a comparison of toxic effects levels observed in animal studies and an evaluation of aquatic toxicity information.
Based upon this evaluation, the agencies found that RDP is a safer and technically feasible alternative to Deca-BDE. TPP was eliminated due to concerns related to its aquatic toxicity.

Plastics used in electronic products are rated for their flame retardation capacity using a voluntary standard identified by the National Fire Protection Association (NFPA) in conjunction with the Underwriters Laboratory (UL), which defines the specific method. The agencies presented information to the Fire Safety Committee on the performance of RDP compared with Deca-BDE when used in electronic enclosures. RDP performs as well as Deca-BDE, although a different type of plastic has to be used. As required by RCW 70.76, the Fire Safety Committee voted on whether or not RDP provides appropriate fire protection. The committee unanimously found that RDP meets applicable fire safety standards.

FINDING
A safer, technically feasible alternative to Deca-BDE, which meets applicable fire safety standards, is available for use in televisions and computers.

Residential Upholstered Furniture

For residential upholstered furniture, Ecology and DOH relied on information from the Consumer Product Safety Commission (CPSC) about the current use of Deca-BDE in furniture sold in the U.S. and the availability of furniture design options that do not require the addition of chemical flame retardants. Ecology and DOH decided to focus on design alternatives that use inherently flame resistant materials, rather than evaluate options that use added chemical flame retardants. Since there are currently available design options that can be used to achieve fire safety, the agencies focused on these instead of evaluating the safety of other chemical flame retardants that could be used to comply with the proposed standards.

The CPSC recently published a proposed flammability standard for residential upholstered furniture. Under the CPSC's proposed standard, fire safety in upholstered furniture can be achieved through the use of compliant cover materials (fabrics) or internal barrier layers. The proposed standard does not rely on the addition of chemical flame retardants, such as Deca-BDE, for compliance although flame retardants could be used. If the proposed standard is finalized as such, furniture manufacturers will have the option to meet fire safety requirements through several currently available design options that use inherently flame resistant cover fabrics or internal barriers. For example, many existing cover materials, especially those made from synthetic fibers, can meet the proposed standard without the addition of chemical flame retardants.

Furniture manufacturers could also comply with the CPSC proposed standard by using internal barrier materials, some of which may require the addition of chemical flame retardants. Inherently flame retardant barrier technologies that do not require the addition of chemical flame

retardants are available similar to those currently being used to achieve fire safety in mattresses. The CPSC estimates that the use of barrier materials in general as a method to comply with these standards is not a popular choice among manufacturers and would likely be used in only about 5 percent of upholstered furniture. Chemical flame retardants are most likely to be used in internal barriers under the CPSC proposed standard, but they are not expected to be widely used because many cover fabrics will comply. Although the CPSC flammability standard for residential furniture has not been finalized, it is expected that design options will be available to meet any additional requirements in a final standard.

California is the only state that currently has a flammability standard for residential upholstered furniture and Deca-BDE has not been used to meet this standard. According to CPSC staff, Deca-BDE is currently not being used by furniture manufacturers to comply with the California standards nor would it be used to comply with the proposed CPSC standards. Therefore, any ban on the use of Deca-BDE for this purpose in Washington would not impose new costs or require manufacturers to retool their processes or redesign their products in order to comply with this prohibition.

Based on furniture design options that are already available, the agencies concluded that the safer, technically feasible alternative to Deca-BDE in residential furniture is non-chemical design options. The Fire Safety Committee voted on whether or not these non-chemical design changes can provide appropriate flame retardation. The committee unanimously found that non-chemical alternatives meet the proposed federal CPSC fire safety standards for residential upholstered furniture.

FINDING

Safer, technically feasible alternatives to the use of Deca-BDE, which meet the current and proposed applicable fire safety standards, are available for use in residential upholstered furniture.

CONCLUSIONS

Safer, technically feasible alternatives to the use of Deca-BDE in TVs, computers and residential upholstered furniture are available and meet applicable fire safety standards. The restrictions on the use of Deca-BDE in these products as defined by RCW 70.76 will take effect on January 1, 2011.

NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

GO

State Regulation of PBDEs

Updated February 2011

Polybrominated diphenylethers (PBDEs) are used widely as flame retardants in a number of consumer products, including mattresses, furniture foam, consumer electronics, wire insulation, draperies and upholstery. However, there is concern about the potential environmental and human health effects of PBDEs. Studies have shown that PBDEs accumulate in the environment and living organisms. These compounds have also been associated with liver toxicity, thyroid toxicity, and neurodevelopmental toxicity in humans.

State legislative activity has focused on three types of PBDEs: pentaBDE, octaBDE and decaBDE. Twelve states regulate pentaBDE and octaBDE in certain consumer products. Of these, eight states also regulate decaBDE or have authorized studies into its environmental or human health effects. Illinois, Indiana, Minnesota, New York and Rhode Island require manufacturers of certain electronic products to notify the state if their products exceed the European Union's maximum concentration values for PBDEs. Minnesota also requires that PBDE-free equipment, supplies and products be made available for purchase and use by state agencies.

For state legislation addressing PBDEs, visit NCSL's Environmental Health Legislation Database.

State Statutes Regulating PBDEs

State	Citation	Summary
California	West's Ann.Cal.Health & Safety Code § 108920 to 108923	Prohibits a person from manufacturing, processing or distributing a product, or a flame- retarded part of a product, containing more than one-tenth of 1 percent of pentaBDE or octaBDE, except for products containing small quantities of PBDEs that are produced or used for scientific research on the health or environmental effects of PBDEs.
Hawaii	HRS § 332D-1 to 332D-3	Prohibits a person from manufacturing, processing or distributing a product, or a flame-retarded part of a product, containing more than one-tenth of one per cent, by mass, of pentaBDE, octaBDE, or any other chemical formulation that is part of these classifications. This prohibition does not apply to the processing of metallic recyclables containing pentaBDE or octaBDE.
Illinois	410 ILCS 48/1 to 48/99	Prohibits a person from manufacturing, processing or distributing a product, or a flame- retarded part of a product, containing more than one-tenth of 1 percent of pentaBDE or octaBDE. Exempts used products and the processing of recyclable material containing pentaBDE or octaBDE. Authorizes a study of the health and environmental effects of decaBDE.

Maine	38 M.R.S.A. § 1609	Prohibits a person from selling or distributing a product containing more than 0.1% of the "penta" or "octa" mixtures of polybrominated diphenyl ethers. Prohibits a person from manufacturing, selling or distributing certain products containing the "deca" mixture of polybrominated diphenyl ethers. These products include mattresses, mattress pads, upholstered furniture, shipping pallets, televisions, and computers. Exempts transportation vehicles and parts, parts and equipment used in industrial manufacturing, and electronic cable and wiring used in power transmission. Requires manufacturers of products containing PBDE to notify retailers of prohibitions.
Maryland	MD Code, Environment, § 6-1201 to -1205	Prohibits a person from manufacturing, processing or distributing a product, or a flame- retarded part of a product, containing more than one-tenth of 1 percent of pentaBDE or octaBDE. Prohibits the manufacture, lease, sale or distribution of certain products containing decaBDE. Makes certain exemptions.
Michigan	M.C.L.A. 324.14721 to .14725	Prohibits the manufacturing, processing or distribution of products or materials containing than 1/10 of 1% of penta-BDE or octa-BDE. Authorizes PBDE advisory committee to study human health and environmental risks of PBDEs.
Minnesota	M.S.A. § 325E.385 and .386	Prohibits a person from manufacturing, processing or distributing a product or flame-retardant part of a product containing more than one-tenth of one percent of pentabromodiphenyl ether or octabromodiphenyl ether by mass. Makes certain exemptions.
	M.S.A. § 325E.387	Requires state to review the commercial use and health and environmental risks of decaBDE.
New York	McKinney's ECL § 37-0111	Prohibits a person from manufacturing, processing or distributing a product, or a flame-retardant part of a product, containing more than one-tenth of one per centum of pentabrominated diphenyl ether or octabrominated diphenyl ether, by mass. Makes certain exemptions.
Oregon	O.R.S. § 453.005	Lists pentaBDE, octaBDE and decaBDE as hazardous substances and therefore subject to labeling and product restrictions under O.R.S. §§ 453.005 to 435.185.
Rhode Island	Gen.Laws 1956, § 23-13.4-1	Codifies legislative finding that the state should develop a precautionary approach regarding the production, use, storage, and disposal of products containing brominated fire retardants. Prohibits a person from manufacturing, processing or distributing a

		product or a flame-retardant part of a product containing more than one-tenth (1/10 %) of one percent (1%) of pentaBDE or octaBDE. Makes certain exemptions. Authorizes a study of the health and environmental effects of decaBDE.
Vermont	9 V.S.A. § 2971	Prohibits a person from manufacturing, processing or distributing a product, or a flame- retarded part of a product, containing greater than 0.1 percent of pentaBDE or octaBDE by weight. Prohibits a person from manufacturing, selling or distributing certain products containing the deca BDE. These products include mattresses, mattress pads, upholstered furniture, televisions, and computers. Exempts motor vehicles and parts, and the sale or resale of used products. Requires manufacturers of products containing decaBDE to notify retailers of prohibitions. Requires decaBDE be replaced with safer alternatives.
Washington	West's RCWA 70.76.005 to .110	Prohibits a person from manufacturing, selling or distributing noncombustible products containing pentaBDE and octaBDE. Makes certain exemptions. Prohibits a person from manufacturing, selling or distributing mattresses containing the deca BDE. This prohibition extends to upholstered furniture, televisions, and computers if the state, in consultation with a fire safety committee, finds that a safer and technically feasible alternative to decaBDE is available. Requires manufacturers of products containing PBDEs to notify retailers of the prohibitions.

Other State Statutes Addressing PBDEs

State	Citation	Summary
Illinois	415 ILCS 150/30	Requires certain electronic manufacturers to submit registration to the state that discloses whether any covered electronic device exceeds the maximum concentration values established for lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEEs) under the European Union standards.
Indiana	IC 13-20.5-1-1	Requires video display device manufacturers to submit registration to the state that discloses whether any covered video display device exceeds the maximum concentration values established for lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEEs) under the European Union standards.
Minnesota	M.S.A. § 115A.1312	Requires video display device manufacturers to submit registration to the state that discloses whether any covered

		video display device exceeds the maximum concentration values established for lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEEs) under the European Union standards.
	M.S.A. § 325E.387	Requires that the commissioner of administration make available for purchase and use by all state agencies equipment, supplies, and other products that do not contain polybrominated diphenyl ethers.
New York	McKinney's ECL § 27-2605	Requires certain electronic manufacturers to submit registration to the state that discloses whether any covered electronic device exceeds the maximum concentration values established for lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEEs) under the European Union standards.
Rhode Island	Gen.Laws 1956, § 23-24.10-9	Requires video display device manufacturers to submit registration to the state that discloses whether any covered video display device exceeds the maximum concentration values established for lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEEs) under the European Union standards.

Existing Chemicals

Polybrominated Diphenyl Ethers (PBDEs) Action Plan Summary

- What chemicals are addressed in the Action Plan?
- Why is EPA concerned about these chemicals?
- What action is EPA taking?
- Previous Actions
- Current Actions

Download the complete Polybrominated Diphenyl Ethers (PBDEs) Action Plan (PDF), (16 pp., 170KB, About PDF)

Access the public comment docket for the Polybrominated Diphenyl Ethers (PBDEs) Action Plan (Docket ID EPA-HQ-OPPT-2010-0146) on Regulations.gov.

What chemicals are addressed in the action plan?

Polybrominated diphenyl ethers (PBDEs) include the commercial versions of pentabromodiphenyl ether (c-pentaBDE), octabromodiphenyl ether (c-octaBDE), and decabromodiphenyl ether (c-decaBDE). Each of these commercial products is a mixture composed of several PBDE congeners. PBDEs are used as flame retardants in a number of applications, including textiles, plastics, wire insulation, and automobiles.

Why is EPA concerned about these chemicals?

EPA is concerned that certain PBDE congeners are persistent, bioaccumulative, and toxic to both humans and the environment. The critical endpoint of concern for human health is neurobehavioral effects. Various PBDEs have also been studied for ecotoxicity in mammals, birds, fish, and invertebrates. In some cases, current levels of exposure for wildlife may be at or near adverse effect levels.

PBDEs are not chemically bound to plastics, foam, fabrics, or other products in which they are used, making them more likely to leach out of these products. Despite the United States having phased out the manufacture and import of penta- and octaBDE in 2004, their component congeners are being detected in humans and the environment. Some reports indicate that levels are increasing. One potential source is imported articles to which these compounds have been added. Another is the possible breakdown of decaBDE in the environment to more toxic and bioaccumulative PBDE congeners.

EPA has concerns with decaBDE's hazards as well as its potential to be transformed to other PBDE congeners. DecaBDE was included in EPA's Voluntary Children's Chemical Evaluation Program (VCCEP), which identified a number of tests needed to better understand decaBDE's potential for transformation.

What action is EPA taking?

On the basis of existing information, the Agency believes that the following actions would be

warranted:

EPA intends to initiate rulemaking in autumn 2010 to add these commercial PDBE mixtures and/or the congeners they contain to the Concern List under TSCA section 5(b)(4) as chemicals that present or may present an unreasonable risk of injury to health or the environment.

EPA intends to initiate rulemaking to propose a TSCA section 5(a)(2) significant new use rule (SNUR) requiring notice to the Agency prior to the manufacture or import of articles to which c-pentaBDE or c-octaBDE have been added. A notice of proposed rulemaking is intended to publish in 2010.

EPA also intends to support and encourage the voluntary phase-out of manufacture and import of c-decaBDE. EPA has received commitments from the principal manufacturers and importers of c-decaBDE to initiate reductions in the manufacture, import and sales of c-decaBDE starting in 2010, with all sales to cease by December 31, 2013. EPA intends to encourage other importers of c-decaBDE to join this initiative. As part of this encouragement, EPA intends to develop Design for the Environment and Green Chemistry alternatives analysis for c-decaBDE to aid users in selecting suitable alternatives. The alternatives analysis is intended to begin in spring 2010

EPA also intends to initiate rulemaking to propose a simultaneous SNUR and the previously announced test rule for c-decaBDE. The significant new use would be manufacture, (including import) of c-decaBDE or articles to which c-decaBDE has been added. The TSCA section 4 test rule would require development of information necessary to determine the effects of manufacturing, use or other activities involving c-decaBDE on human health or the environment. If the Agency determines that manufacture (including import) of c-decaBDE or of articles to which c-decaBDE has been added has not ceased, EPA intends to promulgate the test rule. Notices of proposed rulemaking for the SNUR and the test rule are intended to publish in 2010.

Previous Actions:

Read about the previous phase-out and existing significant new use rule on penta- and octaBDE.

Read about commercial decaBDE in VCCEP.

Current Actions:

Download the complete Polybrominated Diphenyl Ethers (PBDEs) Action Plan (PDF), (16 pp., 170KB, About PDF)

Access the public comment docket for the Polybrominated Diphenyl Ethers (PBDEs) Action Plan (Docket ID EPA-HQ-OPPT-2010-0146) on Regulations.gov.

Read about the commitments to phase-out commercial decaBDE.

Read the EPA report, An Exposure Assessment of Polybrominated Diphenyl Ethers (Final Report), released May 24, 2010.

San Antonio Statement on Brominated and Chlorinated Flame Retardants

doi:10.1289/ehp1003089

The authors declare they have no actual or potential competing financial interests.

The statement is signed by the individual scientists and other professionals listed separately below. Please note that the views expressed are those of the authors and signatories; institutional affiliations are provided for identification purposes only. Abbreviations and an Annotated Statement are available as Supplemental Material (doi:10.1289/ehp.1003089).

We, scientists from a variety of disciplines, declare the following:

1. Parties to the Stockholm Convention have taken action on three brominated flame retardants that have been listed in the treaty for global elimination. These substances include components of commercial pentabromodiphenyl ether and commercial octabromodiphenyl ether, along with hexabromobiphenyl. Another brominated flame retardant, hexabromocyclododecane, is under evaluation.
2. Many commonly used brominated and chlorinated flame retardants can undergo long-range environmental transport.
3. Many brominated and chlorinated flame retardants appear to be persistent and bioaccumulative, resulting in food chain contamination, including human milk.
4. Many brominated and chlorinated flame retardants lack adequate toxicity information, but the available data raise concerns.
5. Many different types of brominated and chlorinated flame retardants have been incorporated into products even though comprehensive toxicological information is lacking.
6. Brominated and chlorinated flame retardants present in a variety of products are released to the indoor and outdoor environments.
7. Near-end-of-life and end-of-life electrical and electronic products are a growing concern as a result of dumping in developing countries, which results in the illegal transboundary movement of their hazardous constituents. These include brominated and chlorinated flame retardants.
8. There is a lack of capacity to handle electronic waste in an environmentally sound manner in almost all developing countries and countries with economies in transition, leading to the release of hazardous substances that cause harm to human health and the environment. These substances include brominated and chlorinated flame retardants.
9. Brominated and chlorinated flame retardants can increase fire toxicity, but their overall benefit in improving fire safety has not been proven.
10. When brominated and chlorinated flame retardants burn, highly toxic dioxins and furans are formed.

Therefore, these data support the following:

11. Brominated and chlorinated flame retardants as classes of substances are a concern for persistence, bioaccumulation, long-range transport, and toxicity.
12. There is a need to improve the availability of and access to information on brominated and chlorinated flame retardants and other chemicals in products in the supply chain and throughout each product's life cycle.
13. Consumers can play a role in the adoption of alternatives to harmful flame retardants if they are made aware of the presence of the substances, for example, through product labeling.
14. The process of identifying alternatives to flame retardants should include not only alternative chemicals but also innovative changes in the design of products, industrial processes, and other practices that do not require the use of any flame retardant.
15. Efforts should be made to ensure that current and alternative chemical flame retardants do not have hazardous properties, such as mutagenicity and carcinogenicity, or adverse effects on the reproductive, developmental, endocrine, immune, or nervous systems.
16. When seeking exemptions for certain applications of flame retardants, the party requesting the exemption should supply some information indicating why the exemption is technically or scientifically necessary and why potential alternatives are not technically or scientifically viable; a description of potential alternative processes, products, materials, or systems that eliminate the need for the chemical; and a list of sources researched.
17. Wastes containing flame retardants with persistent organic pollutant (POP) characteristics, including products and articles, should be disposed of in such a way that the POP content is destroyed or irreversibly transformed so that they do not exhibit the characteristics of POPs.
18. Flame retardants with POP characteristics should not be permitted to be subjected to disposal operations that may lead to recovery, recycling, reclamation, direct reuse, or alternative uses of the substances.
19. Wastes containing flame retardants with POP properties should not be transported across international boundaries unless it is for disposal in such a way that the POP content is destroyed or irreversibly transformed.
20. It is important to consider product stewardship and extended producer responsibility aspects in the life-cycle management of products containing flame retardants with POP properties, including electronic and electrical products.

ERRATUM

NOTE: The competing financial interest declaration was not included in this editorial published in the December issue of *Environmental Health Perspectives*; the statements is provided below.

J. DiGangi, A. Blum, A. Bergman, C. deWit, D. Lucas, D. Mortimer, A. Schecter, M. Scheringer, S Shaw, and T Webster, authors of the "San Antonio Statement on Brominated and Chlorinated Flame Retardants" [Environ Health Perspect 118:A516 (2010)], declare they have no actual or potential competing financial interests.

This omission has been corrected in the PDF version of this article.

Prenatal exposure to flame-retardant compounds affects neurodevelopment of young children

January 19th, 2010 in Medicine & Health / Health

Prenatal exposure to ambient levels of flame retardant compounds called polybrominated diphenyl ethers (PBDEs) is associated with adverse neurodevelopmental effects in young children, according to researchers at the Columbia Center for Children's Environmental Health (CCCEH) at Columbia University's Mailman School of Public Health.

The study is online in *Environmental Health Perspectives* and will be released in the April 2010 print issue.

PBDEs are endocrine-disrupting chemicals and widely used flame-retardant compounds that are applied to a broad array of textiles and consumer products, including mattresses, upholstery, building materials, and electronic equipment. Because the compounds are additives rather than chemically bound to consumer products, they can be released into the environment. Human exposure may occur through dietary ingestion or through inhalation of dust containing PBDEs.

The researchers found that children with higher concentrations of PBDEs in their umbilical cord blood at birth scored lower on tests of mental and physical development between the ages of one and six. Developmental effects were particularly evident at four years of age, when verbal and full IQ scores were reduced 5.5 to 8.0 points for those with the highest prenatal exposures.

"The neurodevelopmental effects of prenatal exposure to PBDEs have not previously been studied among children in North America, where levels are typically higher than in Europe or Asia," said Julie Herbstman, PhD, first author on the paper and a research scientist in Environmental Health Sciences at the Mailman School of Public Health. "The findings are consistent with effects observed in animal studies and, if replicated in other North American populations, they could have important public health implications."

Frederica Perera, DrPh, professor of Environmental Health Sciences at the Mailman School, CCCEH Director, and coauthor added, "These findings are of potential concern, because IQ is a predictor of future educational performance; and the observed reductions in IQ scores are in the range seen with low level lead exposure." This research underscores the need for preventive policies to reduce toxic exposures occurring in utero."

The investigators controlled for factors that have previously been linked to neurodevelopment in other studies, including ethnicity, mother's IQ, child's sex, gestational age at birth, maternal age, prenatal exposure to environmental tobacco smoke, maternal education, material hardship, and breast feeding.

The study is part of a broader project examining the effects of chemicals released by the World Trade Center's destruction on pregnant women and their children. However, residential proximity to the World Trade Center site did not affect levels of PBDE exposure.

Study links reduced fertility to flame retardant exposure

January 26th, 2010 in Medicine & Health / Health

Women with higher blood levels of PBDEs, a type of flame retardant commonly found in household consumer products, took longer to become pregnant compared with women who have lower PBDE levels, according to a new study by researchers at the University of California, Berkeley.

The study, to be published Jan. 26 in the journal *Environmental Health Perspectives*, found that each 10-fold increase in the blood concentration of four PBDE chemicals was linked to a 30 percent decrease in the odds of becoming pregnant each month.

"There have been numerous animal studies that have found a range of health effects from exposure to PBDEs, but very little research has been done in humans. This latest paper is the first to address the impact on human fertility, and the results are surprisingly strong," said the study's lead author, Kim Harley, adjunct assistant professor of maternal and child health and associate director of the Center for Children's Environmental Health Research at UC Berkeley's School of Public Health. "These findings need to be replicated, but they have important implications for regulators."

PBDEs, or polybrominated diphenyl ethers, are a class of organobromine compounds that became commonplace after the 1970s when new fire safety standards were implemented in the United States. The flame retardants are used in foam furniture, electronics, fabrics, carpets, plastics and other common items in the home.

Studies have found widespread contamination of house dust by PBDEs, which are known to leach out into the environment and accumulate in human fat cells. Studies also suggest that 97 percent of U.S. residents have detectable levels of PBDEs in their blood, and that the levels in Americans are 20 times higher than in their European counterparts. According to the researchers, residents in California are among those experiencing the highest exposures, most likely due to the state's relatively stringent flammability laws.

The researchers measured PBDE levels in blood samples from 223 pregnant women enrolled in a longitudinal study at the Center for the Health Assessment of Mothers and Children of Salinas (CHAMACOS) that examines environmental exposures and reproductive health.

The median concentrations of the four PBDE chemicals in the analysis were slightly lower in this study population than in the general U.S. population, possibly because many of the participants had grown up in Mexico where PBDE exposures are limited, said the authors of the study. The median number of months it took to get pregnant was three, with 15 percent of the participants taking longer than 12 months to conceive.

When the analysis was limited to women who were actively trying to become pregnant, the researchers found that they were half as likely to conceive in any given month if they had high levels of PBDE in their blood. "We aren't looking at infertility, just subfertility, because all the women in our study eventually became pregnant," said Harley. "Had we included infertile couples in our study, it is possible that we would have seen an even stronger effect from PBDE exposure."

It is not entirely clear how PBDEs might impact fertility. A number of animal studies have found that PBDEs can impair neurodevelopment, reduce thyroid hormones, and alter levels of sex hormones. Both high and low thyroid hormone levels can disrupt normal menstrual patterns in humans, but this study did not find a link between PBDE exposure and irregular menstrual cycles.

Because the participants were mostly young, Mexican immigrant women who lived in an agricultural community, the researchers controlled for exposure to pesticides in their analysis. The researchers also controlled for other variables known to impact fertility, such as irregularity of menstrual cycles, frequency of intercourse, pre-pregnancy body mass index, use of birth control pills in the year before conception, smoking, and alcohol and caffeine consumption.

There are some 209 different possible formulations of PBDEs, but only three mixtures - pentaBDE, octaBDE and decaBDE - have been developed for commercial use as flame retardants. The mixtures are distinguished by the average number of bromine atoms attached to each molecule. Like many other studies, the most prevalent PBDEs in the blood of women participating in the UC Berkeley study were four components of the pentaBDE mixture.

Penta- and octaBDE have both been banned for use in several U.S. states, including California, but they are still present in products made before 2004. Last month, the U.S. Environmental Protection Agency (EPA) announced an agreement with three major manufacturers of decaBDE to phase out its production by 2013.

"Although several types of PBDEs are being phased out in the United States, our exposure to the flame retardants is likely to continue for many years," said the study's principal investigator, Brenda Eskenazi, UC Berkeley professor of epidemiology and of maternal and child health at the School of Public Health. "PBDEs are present in many consumer products, and we know they leach out into our homes. In our research, we have found that low-income children in California are exposed to very high levels of PBDEs, and this has us concerned about the next generation of Californians."

Keeping up with the ever-expanding range of chemicals in our environment is challenging, the researchers noted. As PBDEs are being phased out, they are being replaced with other brominated compounds. "We know even less about the newer flame retardant chemicals that are coming out," said Harley. "We just don't have the human studies yet to show that they are safe."

A 2007 state assembly bill that would have banned all brominated and chlorinated chemical flame retardants from household furniture and bedding sold in California failed to pass.

Flame retardant linked to altered thyroid hormone levels during pregnancy

June 21st, 2010 in Medicine & Health / Health

Pregnant women with higher blood levels of a common flame retardant had altered thyroid hormone levels, a result that could have implications for fetal health, according to a new study led by researchers at the University of California, Berkeley.

"This is the first study with a sufficient sample size to evaluate the association between PBDE flame retardants and thyroid function in pregnant women," said the study's lead author, Jonathan Chevrier, a UC Berkeley researcher in epidemiology and in environmental health sciences. "Normal maternal thyroid hormone levels are essential for normal fetal growth and brain development, so our findings could have significant public health implications. These results suggest that a closer examination between PBDEs and these outcomes is needed."

PBDEs, or polybrominated diphenyl ethers, are a class of organobromine compounds found in common household items such as carpets, textiles, foam furnishings, electronics and plastics. U.S. fire safety standards implemented in the 1970s led to increased use of PBDEs, which can leach out into the environment and accumulate in human fat cells.

Studies suggest that PBDEs can be found in the blood of up to 97 percent of U.S. residents, and at levels 20 times higher than those of people in Europe. Because of California's flammability laws, residents in this state have some of the highest exposures to PBDEs in the world.

"Despite the prevalence of these flame retardants, there are few studies that have examined their impact on human health," said the study's principal investigator, Brenda Eskenazi, UC Berkeley professor of epidemiology and of maternal and child health. "Our results suggest that exposure to PBDE flame retardants may have unanticipated human health risks."

The new study, to be published June 21 in the journal *Environmental Health Perspectives*, is the second study to come out this year from Eskenazi's research group linking PBDEs to human health effects. Eskenazi was the principal investigator on the earlier study that found that women with higher exposures to flame retardants took longer to get pregnant.

In the new study, the researchers analyzed blood samples from 270 women taken around the end of their second trimester of pregnancy. The women in the study were part of a larger longitudinal study from the Center for the Health Assessment of Mothers and Children of Salinas (CHAMACOS) that examines environmental exposures and reproductive health.

The researchers measured concentrations of 10 PBDE chemicals, two types of thyroxine (T4) and thyroid-stimulating hormone (TSH). They controlled for such factors as maternal smoking, alcohol

and drug use, and exposure to lead and pesticides.

Analysis focused on the five PBDE chemicals that were detected most frequently and are components of a mixture called pentaBDE. The researchers found that a 10-fold increase in each of the PBDE chemicals was associated with decreases in TSH ranging from 10.9 percent to 18.7 percent. When the five PBDEs were analyzed together, a tenfold increase was linked to a 16.8 percent decrease in TSH.

The study did not find a statistically significant effect of PBDE concentrations on levels of T4. With one exception, all the women in the study with low TSH levels had normal free T4 levels, which corresponds to the definition of subclinical hyperthyroidism. The study found that odds of subclinical hyperthyroidism were increased 1.9 times for each tenfold increase in PBDE concentrations.

"Low TSH and normal T4 levels are an indication of subclinical hyperthyroidism, which is often the first step leading toward clinical hyperthyroidism," said Chevrier. "Though the health effect of subclinical hyperthyroidism during pregnancy is not well understood, maternal clinical hyperthyroidism is linked to altered fetal neurodevelopment, increased risk of miscarriage, premature birth and intrauterine growth retardation."

Exactly how flame retardants influence TSH levels is unclear, the researchers said, but animal studies have shown that certain PBDEs can mimic thyroid hormones.

In addition to the commercial mixture pentaBDE, octaBDE and decaBDE have been developed for use as commercial flame retardants. PentaBDE and octaBDE have both been banned for use by the Stockholm Convention on Persistent Organic Pollutants, the European Union and eight U.S. states, including California, but they are still present in products made before 2004.

The production of decaBDE by major manufacturers is scheduled to be phased out in the United States by 2013. However, pentaBDE and decaBDE are being replaced by new brominated and chlorinated compounds whose impact on human health is not yet clear, the researchers noted.

Alaska lawmakers target toxin used to fireproof electronics, furniture

by Christopher Eshleman / ceshleman@newsminer.com
02.12.11 - 12:15 am

JUNEAU — Four Alaska legislators last month joined policymakers around the world in trying to eliminate a toxic chemical compound used to fireproof household electronics and furniture.

Scientists link the fire retardant to cancer and other health problems. People and animals can ingest it while eating food or breathing household dust. Environmental groups in Alaska have unanimously asked lawmakers this year to ban companies from selling electronics and furniture that contain more than trace amounts of the chemical.

Industry and governmental leaders around the world have already targeted the chemical, polybrominated diphenyl ether, for elimination. Roughly a dozen U.S. states have already banned PBDEs, which are used in bromine-based flame retardants.

Four Democrats last month sponsored measures in the state House and Senate. Rep. Scott Kawasaki, D-Fairbanks and one of the sponsors, cited scientific study that strongly suggests the compounds can cause neurological harm, cancer and hormone and endocrine disruption. He said legislators are still digging into the science behind the issue but suggested the scientific community's call for caution merits action.

"It boils down to community health ... I think it's a step in the right direction," he said of the bill.

The measures would also direct the state Departments of Environmental Conservation and Health and Social Services to draft and update a larger list of chemicals considered toxic by other state and federal agencies. It does not call for regulation beyond PBDEs, only that the list be updated every three years.

Scientists have studied the health implications of the fire retardant since at least the 1990s. The chemical is stored and carried in body fat and moves upward through the food chain, with concentrations compounding with each step and cresting in seals and other animals near the peak. That puts subsistence hunters and fishermen at greater risk than other people, said Frank von Hippel, a University of Alaska Anchorage biologist.

Von Hippel said PBDEs are shed by electronics and household products to become part of common dust, something the measures' proponents say is particularly relevant in Alaska given the need to keep doors and windows shut for much of the year.

The bills list three specific subtypes of the chemical. Companies in the United

States have generally stopped making two, but the third, called deca-PBDE, is still commonly manufactured, von Hippel said. He said they're generally banned in Europe as well.

The chemicals carry great significance for arctic communities. Von Hippel said atmospheric currents carry PBDEs and other persistent organic pollutants toward the poles and into arctic regions through a natural atmospheric process known as the "grasshopper effect." Cold weather then force the chemicals from their gaseous state and leave them to settle into the environment.

Greater concentrations here mean greater exposure to northern species of animals and to Alaskans, and von Hippel said it leaves Alaska on the front line in ongoing international discussion of how to regulate or eliminate the use of persistent organic pollutants, or POPs.

Von Hippel said mothers pass accumulated chemicals such as PBDEs to children during pregnancy and breast feeding. Pam Miller, with the Alaska Community Action on Toxics, cited a recent study that suggests women in the Yukon-Kuskokwim Delta had the highest PBDE levels of any population in the arctic.

Critics of full PBDE bans say the science behind the policy discussion falls short of justifying total prohibition, at least until substitutes are easily available. One critic is Dr. David Heimbach, a Seattle burn doctor who said he regularly saw Alaska patients over a three-decade career. He said policymakers in California voted to ban the chemical without collecting enough input from doctors first.

Heimbach said by phone Friday he'd prefer that governments phase out PBDEs instead of banning them, as Alaska's bills would do. He said the chemical's safety value should not be discounted.

"There's no question they work as fire retardants," he said.

Late last year, 145 scientists from around the world agreed to the "San Antonio Statement" outlining health hazards from exposure to bromine- and chlorine-based flame retardants. Some are already addressed in international environmental laws such as the Stockholm Convention on Persistent Organic Pollutants, but Congress is one of a handful of national legislatures or parliaments that have yet to ratify that convention. Even if Congress did adopt the treaty, it would still fall to federal and state government agencies to implement a ban.

The Alaska bills are House Bill 63 and Senate Bill 27, proposed by lead sponsors Sen. Bill Wielechowski and Rep. Lindsey Holmes, both Anchorage Democrats. They await hearings in committees focused, respectively, on commerce and health.

State lawmakers propose ban on PBDE flame retardants

by Maria Downey

Channel 2 News

12:21 PM AKST, January 27, 2011

ANCHORAGE, Alaska

advertisement

While there's no question among safety advocates that flame retardants save lives, renewed health concerns about some retardants are causing Alaska to join states across the nation in trying to ban PBDE chemicals.

PBDEs are invisible but they're used in the manufacturing of countless everyday objects like furniture , electronics and appliances.

Two state Legislature bills introduced late last session to ban PBDEs by 2012 -- House Bill 63 and Senate Bill 27 -- are now in committee.

"I don't think that most people realize that when they put a child to bed at night, they probably put them on a bed that is full of dangerous toxins," said Sen. Bill Wielechowski. "I don't think most people realize when they're using their microwave, their cell phone, TV, their toaster -- even walking across their carpet -- they're being exposed to, they're exposing their family to very dangerous toxins."

The Environmental Protection Agency's website reports that traces of PBDEs have been found in breast milk, along with fish and other wildlife.

Health issues linked to the chemicals include thyroid problems, learning and memory disabilities, behavioral changes, delayed puberty and other reproductive issues.

"Another thing about these toxins are, they are getting into our food chain," said Rep. Lindsey Holmes, co-sponsor of House Bill 63. "They have been shown to have particularly high rates in the Yukon-Kuskokwim region of the state in Western Alaska, because they're getting into our salmon, they're getting into out other animals."

Holmes and other state lawmakers are trying to do what 12 other states have already done and get PBDEs out of people's homes.

"Because currently, there are some safe alternatives out there and no reason to be using these," Holmes said. "And the problem with these types of toxins, they're in our homes, which means our children are exposed to

them -- it also means if there's a fire, firefighters are exposed to the toxic chemicals."

"Chemicals that can cause cancer, chemicals that can cause developmental disabilities -- and I think as lawmakers we have an obligation to stand up and say, 'This is not something we want brought into our state,'" Wielechowski said.

"We want to do everything we can to protect families, protect the kids, protect the food chain," Holmes said. "And we want to make sure it's out there and protect everyone to the best of our ability."

According to lawmakers, firefighters across the country are supporting PBDE bans.

While some manufacturers are lobbying against the ban, some furniture companies like IKEA have already discontinued the use of PBDEs in their products.

The Dutch Harbor Fisherman

Legislation would minimize impact of dangerous chemicals

Published on January 20th, 2011 5:32 pm

By MARGARET BAUMAN

Two bills introduced in the current Alaska Legislature session would phase out certain toxic flame retardant chemicals known to cause health problems which are found in consumer products such as furniture and electronics.

House Bill 63, introduced by Rep. Lindsey Holmes, D-Anchorage, and Senate Bill 27, introduced by Sen. Bill Wielechowski, D-Anchorage, target polybrominated diphenyl ethers, also known as PBDEs, which disrupt thyroid function and affect learning, memory and behavior.

The legislation would apply to mattresses, mattress pads and upholstered furniture containing plastic fibers that contain flame retardants and electronic products with plastic housing that contains flame retardants. It would not apply to transportation vehicles or products used in such equipment, nor products used in an industrial, mining or manufacturing process.

The legislation also calls for the state to develop a program to assist retailers in identifying products in their inventories that violate the chemical restrictions.

Children are particularly vulnerable to these flame retardant chemicals and safer and economical alternatives are available to replace the unnecessary use of hazardous flame retardants, according to Safer Chemicals Healthy Families and Safer States Coalitions, of which Alaska Community Action on Toxics is a member.

Similar legislation was introduced three years ago by former Alaska legislator Andrea doll of Juneau, but never made it out of committee, said Pam Miller of Alaska Community Action on Toxics.

"We think this legislation is extremely important, especially in Alaska, because people are exposed to these chemicals through atmospheric transport," Miller said.

In addition to toxic chemicals which may be contained in the manufacture of furniture and electronics, Alaskans are already being exposed to higher levels of toxic chemicals because of prevailing atmospheric and oceanic conditions, which transport such toxics through the air and water to polar points of the planet, said Bob Shavelson, executive director of Cook Inletkeeper. It has to do with the Coriolis effect, caused by the rotation of the earth, which can carry toxic particles produced thousands of miles away into Alaska's atmosphere.

"We think that wildlife and people living in the north are getting a double whammy," said Miller, in part because of the atmospheric conditions that draw toxics to the Arctic, and in part because homes in Alaska are closed in for a great proportion of the year, and well insulated. Many studies show that people are exposed through indoor air and dust to flame retardant chemicals leaching out into the atmosphere and found in household air and dust, she said.

Miller also pointed to a 2009 study done by the Arctic Monitoring Assessment Program, which showed that women of childbearing age in Alaska's Yukon-Kuskokwim Delta had the highest levels of toxics in the circumpolar Arctic, Miller said.

The study, online at http://epa.gov/osp/tribes/pres/webinar091210 shows how high levels of toxins are introduced into traditional subsistence foods.

Another study in the Gulf of Alaska found that orca whales have some of the highest concentrations of these toxic chemicals in the world, she said. Several studies have shown that the main environmental toxins of concern for populations of marine mammals are primarily persistent organic pollutants such as polychlorinated biphenyls, or PCBs, polybrominated diphenyl ethers, or PBDEs and dioxins and furans, closely related chemicals that are produced when organic material is burned in the presence of chlorine. One common source of dioxins and furans is from coal fired utilities.

30 state consider legislation

Similar legislation to rid furniture and electronics of toxic chemicals being considered in a total of 30 states includes bans on BPA and hazardous flame retardants in consumer products, requirements that children's product manufacturers use only the safest chemicals, and resolutions urging Congress to overhaul the 1976 Toxic Substances Control Act, the federal law that allows dangerous and untested chemicals to be used in everyday products and materials.

BPA is an abbreviation for Bisphenol A, an organic compound used to make polycarbonate plastic and epoxy resins. For more than two years now, several government reports have questioned its safety, particularly when fetuses, infants and young children are exposed to products containing BPA.

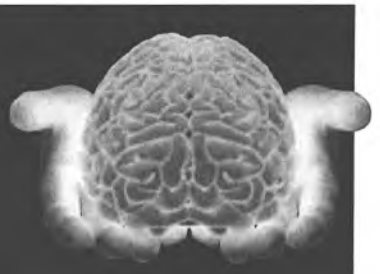
MIND, DISRUPTED

How toxic chemicals change how we think and who we are



Polybrominated Diphenyl Ethers (PBDEs)

What Are PBDEs?

Polybrominated diphenyl ethers, or PBDEs, are a class of flame retardant chemicals added to many consumer products found in the home, office, automobiles, and airplanes.[1] Three mixtures used widely—penta-BDE, octa-BDE, and deca-BDE—made up 14%, 6%, and 80% of the 1999 worldwide production of PBDEs, respectively.[2] Usually found in electronics, such as TVs, and used in some furniture foams, fabrics, and kitchen appliances, the industry voluntarily ended production in the United States of the formulations of penta and octa in 2004 after high levels were found in breast milk. However, North America made up a large percentage of global demand for these PBDEs, 97.5 % for penta and 35.9% for octa, and there is still a large reservoir of products containing these PBDEs in the US.[3] The deca formulation is currently produced and used primarily in plastic electronics such as televisions and computer casings. It is also used in the upholstery covers of items such as furniture and car seats.[4,5]

PBDEs are part of a larger chemical class called polyhalogenated aromatic hydrocarbons (PHAHs) which include other highly toxic chemicals such as polychlorinated biphenyls (PCBs) and dioxins.[2] PHAHs are intrinsically hazardous because of their chemical make-up: (1) they are stable, meaning they persist in the environment and do not break down easily; (2) they are lipophilic, meaning they build up in fatty tissues of living organisms; and (3) they have toxic properties, including the potential to act as endocrine disruptors.[6] Their persistence and fat solubility allow them to both biomagnify and bioaccumulate, meaning they build up in the bodies of animals and humans as they move through the food chain. While not all PBDEs meet these criteria, a significant portion have been found to exhibit these characteristics. Although the main component in deca-BDE, BDE-209, has a relatively short half-life in people,[1] animal studies show that the liver breaks down BDE-209 into the more persistent and bioaccumulative forms of hepta-BDE, octa-BDE, and nona-BDE.[7,8] There are relatively few data available concerning the extent to which this occurs in humans.

How Are We Exposed?

There are many ways that humans are exposed to PBDEs, including ingestion of contaminated foods and incidental intake of PBDE-contaminated dust.[8] PBDEs are not permanently bound to the products in which they are used. Some PBDEs are semi-volatile and may be released from PBDE containing products. Other PBDEs are released from furniture, electronics and other products as they physically degrade. It is not entirely clear how deca is released from products, though some think it might be released from physical abrasion or deterioration of the product. Deca-BDE breaks down into more toxic by-products and may volatize when exposed to ultraviolet (UV) light.[9] Although penta-BDE and octa-BDE are no longer produced in the United States, exposure continues from old computers, furniture, fabrics, and other consumer sources that were made before the discontinuation.[10]

Occupational exposure may also occur for workers in electronics recycling, computer repair, and rubber manufacturing facilities.[11] PBDEs are found in sewage sludge used as agricultural fertilizers and may be a source of exposure for workers applying contaminated fertilizers.[11]

Ingestion of PBDEs in fatty foods such as meat and dairy products is thought to be a major route of exposure,[12] as PBDEs are fat-seeking and build up in the food web. Indoor exposures to dust and contaminated air are also thought to be major routes, as well as direct absorption through the skin from dust or products.[13] Relatively little is known about the routes of deca-BDE exposure. It is estimated that the highest intake of deca-BDE results from household dust.[13,14,15]

People may also be exposed through consumption of fish and other marine animals, because these organisms have been found to contain high levels of deca-BDE.[16] The high levels in marine environments may be due to atmospheric deposition (when contaminants from the air come down to the earth's surface through rain, snow, falling particles, and the absorption of gas) of deca-BDE as well as sewage discharge into the oceans.[16]

For infants, breast milk is a major source of PBDEs. The PBDEs that have accumulated in women may be passed to children through breastfeeding.[17] It is important to note that breastfeeding is still considered best for a baby's health.

PBDEs in Our Bodies

Due to their widespread use, persistence and bioaccumulative properties, PBDEs have been found in humans at high levels. A recent study by scientists from the U.S. Centers for Disease Control and Prevention (CDC) found PBDEs in nearly all 2,040 participants in a sample representative of the 2003–2004 U.S. population.[18] In this study, 3 congeners were found in over 90% of the participants: 97% had levels of BDE-47 (2,2′,4,4′-hexabromodiphenyl ether), 93% had levels of BDE-100 (2,2′,4,4′,6-pentabromodiphenyl ether), and 93% had levels of BDE-153 (2,2′,4,4′,5,5′-hexabromodiphenyl ether) above the limit of detection.[18] Another study showed that 5 percent of American women have levels of PBDEs that are close to the levels linked to reproductive problems in animals.[1] PBDEs have been found in mothers' breast milk and in the blood of mothers and their babies.[19,20] People of the Arctic may experience an even higher risk of exposure due to their traditional subsistence diet rich in fat from marine mammals.[21,] Concentrations of PBDEs have grown over the years in marine mammals due to atmospheric transport of chemicals into the north (transported long distances from areas of production and use via air and ocean currents) and bioaccumulation.[2]

What Does Exposure to PBDEs Mean for Our Health?

The presence of environmental chemicals in the human body does not necessarily imply that they are causing adverse health effects; however, environmental chemical exposures can and do affect human health. It is important to note that both the dosage and the timing of exposure have significant effects on any potential health outcome.

The following information is intended to inform the reader about the current state of knowledge on the health effects of PBDEs, including both human and animals studies.

Relatively little is known about the health effects of PBDEs. Overall there are few studies on health effects in the general population; however, health effects have been detected in rigorous animal based studies. Nevertheless, research has found associations between PBDEs and many adverse health effects, including:

Neurodevelopmental Effects

There are few published human studies on the health effects of environmental exposure to PDBEs. One study on Dutch children found that prenatal PBDE exposure affected childhood development. Exposed children had worse fine motor skills and

Reducing Your Exposure

You can minimize your exposure to PBDEs by taking the following steps:

PBDE-free Furniture

- Before purchasing furniture, find out which companies offer PBDE-free products. The following websites can help:
  - Clean Production Action: *www.cleanproduction.org/Flame.Alternatives.php*
  - Pollution in People: *www.pollutioninpeople.org/safer/products*
- Contact the company directly if you cannot figure out if the manufacturer uses PBDEs.
- Choose furniture made with less flammable fabrics like leather, wool and cotton.

PBDEs in Foam Padding

- Foam items purchased before 2005 can potentially contain PBDEs. Completely covering these items in fabric can limit potential exposure.
- Avoid reupholstering foam furniture.
- Be very careful when removing old carpet. Try to keep your work area separated from the rest of the house and thoroughly clean up the area.

Reduce Your Dust Exposure

- Wash your hands often to remove dust particles that your hands pick up throughout the day on everything you touch.
- Use a wet rag or cloth while dusting to avoid kicking up the dust in the air.
- If possible, use a vacuum fitted with a HEPA filter. These vacuums can trap smaller particles of dust and will be more likely to remove contaminants from your home.
- Vehicles have been exempt from recent PBDE laws and high levels have been found inside cars.[5] Removing dust with a wet cloth and keeping car seat cushions in good repair will help to reduce your exposure.

PBDE-free Electronics

- Many companies are beginning to make electronics with alternatives to PBDEs. Certain PBDE-free products are available from Canon, Dell, HP, Intel, Erickson, Apple, Acer, Nokia, Motorola, LG Electronics, and Sony.

Consider Eating Less Fat:

- Consider choosing leaner meat and poultry cuts.
- Consider removing fat that you see on meat and fish whenever possible.
- Choose cooking methods that remove excess fat such as broiling, grilling, and roasting.

attention, but better coordination, visual perception and behavior. The mothers in this study had serum PBDE concentrations in the low ppb range.[22] Another study of children prenatally exposed to PDBEs showed decreases in mental and physical development. PBDEs 47, 99 and 100 were correlated with lower developmental scores, while PBDE 153 was not. The most highly exposed children had significantly lower developmental scores than the less exposed children.[23]

A recent peer-reviewed scientific consensus statement by the Collaborative on Health and the Environment's Learning and Developmental Disabilities Initiative states, "Recent studies have left little doubt that PBDEs are developmental neurotoxicants in animals and lead to changes in motor activity and reduced performance on learning and memory tests."[24,25,26] Numerous studies on rodents suggest that neonatal exposure to PBDEs permanently affects learning and memory functions, impairs motor activity, and is linked to aberrations in spontaneous motor behavior and hyperactivity.[27,28,29,30,31,32,33]

Researchers have also found that some of the developmental effects of exposure become worse over time. In a study of PBDE exposure in mice, spontaneous behavior and habituation capability (both indicators of the ability of individuals and the species to survive in the wild) were permanently damaged by neonatal exposure to PBDEs and worsened with age.[27] Exposure to hexa-BDE has been linked to other developmental neurotoxic effects in mice, including changes in spontaneous behavior and impairments in learning and memory, which also appear to worsen with age.[34] A recent study in adult mice found consistent results which show that deca-BDE can be just as toxic to neurodevelopment as other PBDEs. In this study, exposure to deca-BDE was linked to hyperactivity and reduced or lack of habituation, also worsening with age.[35]

Thyroid Problems

Some PBDE congeners are structurally similar to thyroid hormone and have been shown to disrupt (by decreasing, increasing, or mimicking) the biological action of thyroid hormone.[36] In a study of newborn babies, high PBDE levels in cord blood were associated with decreased levels of thyroid hormones. PBDE concentrations ranged from below 10 ppb to several hundred ppb in the blood.[37] In a recent study of adult men who consume sport fish, researchers found that exposure to PBDEs at levels similar to those found in the general US population were associated with increased thyroid hormone T_4 (thyroxine).[38] Men in this study with the highest body burdens of PBDEs also showed increased thyroid antibodies, a risk factor for thyroid diseases such as chronic autoimmune thyroiditis and Graves' disease.[38] PBDE exposure has also been linked to hypothyroidism in adults. In an occupational exposure study at a deca-BDE and decabromobiphenyl manufacturing plant, 4 out of 35 exposed workers showed clinical hypothyroidism, while none of the 89 unexposed workers exhibited thyroid dysfunction.[39]

Corresponding animal studies have also shown that PBDE exposure is linked to decreased circulating concentrations of thyroid hormone[14,40] and decreased thyroid weight in adult rodent offspring.[12] Exposure to deca-BDE has been linked to thyroid hyperplasia in rodent studies. In a 2-year study by the National Toxicology Program, deca-BDE was found to increase the incidence of follicular cell hyperplasia (proliferation of follicular cells, which are responsible for making thyroid hormones) in the thyroid gland in male and female mice.[41]

Reproductive Effects

PBDEs can be both mildly estrogenic[42] and anti-androgenic compounds.[43,44] They have been correlated to cryptorchidism (undescended testes), in newborn boys exposed through breast milk with a median concentration of 4.16 ppb(lw) vs. 3.16 ppb(lw) for controls.[45] PBDEs have been shown to permanently impair sperm development in rodent studies.[14] Exposure to BDE-153, has been associated with a decrease in testicle size and the sperm concentration in humans.[46] Exposure to PBDEs in household dust at levels commonly encountered in the US has been linked with lower levels of androgens (male hormones) in adult men.[47] PBDEs have also been associated with delay of puberty in both male and female rodents and changes in sexual development and gender-specific sexual behavior.[48] Exposure to PBDEs has been linked to low birth weight, birth defects, reduced weight gain during pregnancy, changes in ovary cells and reduced sperm count.[49,50] The breakdown products of PBDEs may inhibit human aromatase, an enzyme important in the formation of androgens and estrogens (male and female hormones), and in skeletal development. However, these results were found at concentrations above current human exposure levels. [51]

Cancer

One study suggests that *in utero* exposure to PBDE concentrations is associated with an increased risk of testicular cancer in men, although the study has limitations and further studies would help to shed light on this association.[52] The Agency for Toxic Substances and Disease Registry (ATSDR) lists deca-BDE as a possible human carcinogen based on the development of liver tumors in rats.[8]

Regulation of PBDEs

There have been many steps forward in the regulation of PBDEs in recent years, but much more is needed to ensure the safety of public health. Internationally, Sweden was the first to initiate a phase-out of PBDEs in the late 1990s, followed by the European Union—first phasing out penta-BDE and octa-BDE in 2003 and then deca-BDE in 2006.[53] In 2008, Norway banned the use of deca-BDE in new consumer products.[54] Although no production occurred there, Canada prohibited the future manufacture of all PBDEs and placed resrictions on the import of certain PBDEs.[55]

The Stockholm Convention on Persistent Organic Pollutants, a United Nations treaty on persistent bioaccumulative substances, placed tetra-, penta-, hexa- and hepta-PBDEs under provisions

of the Convention for global phase-out after determining they posed a risk to environmental and human health.

In the United States, industry voluntarily ended production of penta-BDE and octa-BDE in 2004, but deca-BDE is still permitted for use in consumer products.[20] In December, 2009 two U.S. producers of deca-BDE and the largest U.S. importer announced commitments to end production, importation, and sales of deca-BDE for most uses by December, 2012.[56] Washington, Maine, Oregon, and Vermont are currently discontinuing the use and manufacture of deca-BDE,[57,58] and 12 states have banned penta- and octa-BDE, with other states across the nation aiming for similar legislation.

Fire Fighter Organizations across the U.S. Support Banning or Restricting Toxic Flame-Retardant Deca-BDE

Michigan Network for CHILDREN'S Environmental HEALTH

Fire Fighters and their professional organizations across the country have expressed their support for restricting the use of deca-BDE (deca-brominated diphenyl ether), a flame retardant commonly used in consumer products. HB 4699 would ban the sale in Michigan of any product containing deca-BDE by 2014. Fire fighters have expressed concerns about their occupational exposures when deca burns, particularly given the widespread use of cost-effective alternatives that can help prevent fires. Eleven states, including Michigan, have banned or restricted the only other polybrominated diphenyl ethers (PBDEs) that were in commercial use, penta- and octa-BDE, and these compounds have now been withdrawn by industry throughout the U.S. Four states have already banned or restricted deca-BDE.

INTERNATIONAL

International Assocation of Fire Fighters (IAFF)

- "Our union is concerned about the health and safety of our members as well as the health and safety of all of our citizens. Accordingly, the IAFF believes that the passage of legislation banning brominated flame retardants (Polybrominated diphenyl ethers (PBDEs) including Penta-, Octa-, and Deca-BDEs) is a step in the right direction for improving the health and safety of our fire-fighters and the citizens who are exposed to these chemicals."

  Source: Letter from Richard M. Duffy, Assistant to the General President, Occupational Health, Safety, and Medicine, IAFF, to Matthew Vinci, President, Professional Fire Fighters of Vermont, March 23, 2009.

- "Unlike other flame retardants, when PBDEs burn, they release dense fumes and black smoke that reduce visibility and a highly corrosive gas known as hydrogen bromide. In addition, PBDEs produce highly toxic byproducts of incomplete combustion. Although use of flame retardants saves lives and property, there have been unintended consequences. There is evidence that PBDEs persist in the environment and accumulate in living organisms, as well as toxicological testing that indicates these chemicals may cause liver toxicity, thyroid toxicity, and neurodevelopmental toxicity."
- "Many studies involving fire fighters exposed to these and other toxic gases during active fire fighting, overhaul, and long term exposure from these chemicals penetrating protective gear, have found that fire fighters have a much greater risk of contracting cancer, heart and lung disease, and other debilitating diseases. While we support the concept of flame retardant chemicals, there are alternatives that do not contain bromine or chlorine and are much safer for fire fighters than PBDEs."

  Source: Letter from Richard M. Duffy, Assistant to the General President, Occupational Health, Safety, and Medicine, IAFF, to Kelly Fox, President, Washington State Council of Fire Fighters, January 26, 2007.

MICHIGAN

Michigan Association of Fire Chiefs

- "The Executive Board of the Michigan Association of Fire Chiefs has passed a resolution supporting House Bill 4699, a bill banning DECA-BDE."
- "Deca-BDE and its family of flame retardant chemicals known as polybrominated diphenyl ether (PBDE) have been identified as having adverse physiological and developmental impact on humans."
- "When PBDE compounds are exposed to fire they burn and release dense fumes and a highly corrosive gas known as hydrogen bromide which exposes firefighters to additional chemical hazards."

  Source: Letter from David Peterson, President, Michigan Association of Fire Chiefs, to Michigan State Representative Deborah Kennedy, May 29, 2009.

ILLINOIS

Associated Fire Fighters of Illinois
Illinois Fire Fighters Association

- "Our organizations are concerned with ensuring public health and safety, preventing fires by maintaining high fire safety standards, and protecting our firefighters from harm in their working environments. We support the phase-out [of] PBDEs—including penta-, octa-, and deca-BDEs—because it will help accomplish all of these goals."
- "The elimination of deca-BDE will not compromise fire safety, but we believe it will be a step in the right direction for improving the health and safety of our firefighters."

Source: Memorandum from Eddy Crews, Associated Fire Fighters of Illinois, and Margaret Vaughn, Illinois Fire Fighters Association, to the Members of the Illinois Legislature, March 20, 2007.

MAINE

Professional Firefighters of Maine

- "If passed, the law would see these bromide based chemicals, commonly referred to as DECA, phased out and replaced with phosphorus-based retardants that provide fire prevention capabilities comparable to bromides but have none of the negative health dangers associated with DECA."

Source: Press release issued by the Professional Firefighters of Maine, April 10, 2007.

Portland Fire Fighter, Bobby Reynolds
Professional Fire Fighters of Maine

- "Maine's firefighting community stands with one voice in support of [restricting deca-BDE]. With safer alternatives readily available that meet the same fire safety standards, phasing out deca should be a no-brainer."

Source: Bobby Reynolds in phone communication with Matt Prindiville, Natural Resources Council of Maine, April 3, 2007.

MARYLAND

Baltimore Fire Chief James Clack

- "There are plenty of alternative nontoxic flame retardants available today, and some manufacturers have voluntarily switched to using them. Firefighters face risks every day, even without the added health threats posed by the use of unnecessary toxic chemicals in products we all use in our homes."

Source: Letter from James Clack, Baltimore Fire Chief, printed in the Baltimore Sun, April 9, 2009.

MINNESOTA

Minnesota Professional Fire Fighters

- "While flame retardants in general save lives and property, the continued use of deca is unnecessary, as safer alternatives that don't persist and accumulate in the environment and in the human body are available. As professional fire fighters we support effective fire safety standards and are convinced that phasing out the use of deca will not compromise fire safety in any way."

Source: Memorandum from Tom Thornberg, President, Minnesota Professional Fire Fighters, to the Members of the Minnesota State Legislature, January 2008.

NEW YORK

Firemen's Association of the State of New York (FASNY)

- "We are concerned with providing the safest working environment for these [first] responders and the need to maintain the highest safety standards; a big step toward achieving these goals can be made by banning the use of polybrominated diphenyl ethers (PBDEs)."

Source: Memorandum from the Firemen's Association of the State of New York in Support of A7977 and S5244 to restrict the use of deca-BDE, June 20, 2007.

WASHINGTON

Washington State Council of Fire Fighters
Washington Fire Chiefs
Washington State Fire Fighters' Association

- "Providing the safest working environment for firefighters, and the need to maintain the highest safety standards are of the utmost concern; it is clear that we can achieve both of these goals by banning the use of PBDEs."

Source: Letter from Keven E. Rojecki, Legislative Liaison, Washington State Council of Fire Fighters; Mike Brown, Executive Director, Washington Fire Chiefs; and T.J. Nedrow, Washington State Fire Fighters' Association, March 27, 2007.

Washington State Council of Fire Fighters

- "Many studies involving firefighters exposed to these and other toxic gases during active firefighting, overhaul, and long-term exposure from these chemicals penetrating protective gear have found that fire fighters have a much greater risk of contracting cancer, heart and lung disease, and

other debilitating diseases. While we clearly support the use of flame retardant chemicals, there are alternatives already in use that do not contain bromine or chlorine and are much safer for firefighters than PBDEs."

Source: Memorandum from Keven E. Rojecki, Legislative Liaison, Washington State Council of Fire Fighters, to the Members of the Washington Legislature, February 9, 2007.

VERMONT

Professional Fire Fighters of Vermont

- "Banning Deca will not affect fire safety."
- "Vermont needs fire safety without toxic chemicals."

Source: Burlington Free Press, February 18, 2009, quoting Matt Vinci, President, Professional Fire Fighters of Vermont.

MICHIGAN LEGISLATORS CAN PROTECT CHILDREN, FIRE FIGHTERS AND OUR GREAT LAKES FROM DECA-BDE!

Support HB 4699 to ban deca-BDE in all products sold in Michigan by 2014

Network Members:

American Academy of Pediatrics (Michigan Chapter) • Arab Community Center for Economic and Social Services (ACCESS) • Association for Children's Mental Health • Autism Society of Michigan • Citizens for Alternatives to Chemical Contamination • Clean Water Fund • Clinton County Family Resource Center • Detroiters Working for Environmental Justice • East Michigan Environmental Action Council • Ecology Center • Healthy Homes Coalition of West Michigan • Learning Disabilities Association (LDA) of Michigan • LocalMotionGreen • Michigan Chapter of the National Association of Pediatric Nurse Practitioners • Michigan Coalition for Children and Families • Michigan Environmental Council • Michigan League of Conservation Voters Education Fund • Michigan Nurses Association • Science and Environmental Health Network • Sierra Club Michigan Chapter • Voices for Earth Justice.

The Michigan Network for Children's Environmental Health is a coalition of health professionals, health-affected groups, environmental organizations, and others dedicated to a safe and less toxic world for Michigan's children. Through education, outreach, and advocacy, we seek to protect Michigan's children from adverse impacts caused by exposure to widespread hazardous chemicals.

For more information, contact Rebecca Meuninck, Environmental Health Campaign Director, at 734-761-3186 ext. 119 or Mike Shriberg, Ph.D., Policy Director, at 734-761-3186 ext. 108.

Citizens for Fire Safety

EXPOSED

A Chemical Industry Front Group for Manufacturers of Toxic Flame Retardants (PBDEs)

Front group \ FRUHNT groop \ *n* **:** An organization that purports to be independent voluntary association or charitable organization, but actually serves the interest of the sponsoring party whose identity is often hidden. Certain front groups are seemingly grassroots-based coalitions that are actually funded by an industry trade association or public relations firm.

PBDEs are polybrominated diphenyl ethers, toxic flame retardants added to products such as televisions, computers, textiles, building materials, infant car seats and strollers. Laboratory studies show that PBDEs may harm the developing brain, impair sperm development, and impair thyroid function.[1,2,3] Washington State and Maine have banned three of the most widely used PBDEs and many states are considering following suit, based upon evidence that these chemicals are persistent, bioaccumulative and toxic.[4] Chemical manufacturers of PBDEs have a direct financial interest in preventing limits on the use of their product. They have organized themselves to oppose policies to require non-toxic fire safety through PBDE restrictions that are advancing across the U.S.

The Industry Players

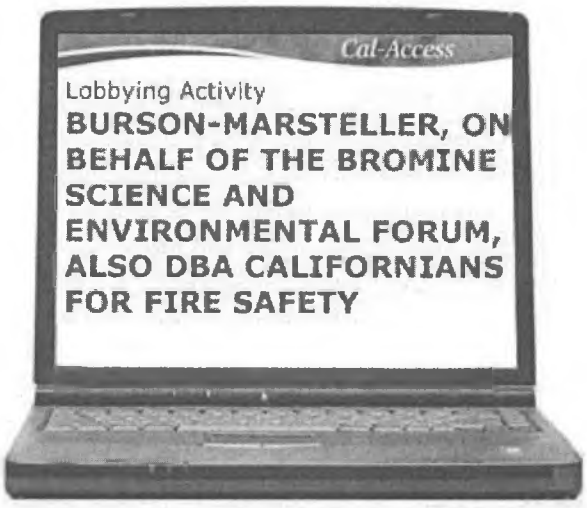
Four principal corporations that manufacture PBDEs are Albemarle, Israel Chemicals Limited (ICL), Chemtura, and Tosoh. When they saw that some of their flame retardant products were coming under regulatory pressure, they contracted with Burson-Marsteller, the giant global public relations firm, to change public and legislative perceptions about the hazards associated with PBDEs. Burson-Marsteller represents major chemical and oil companies such as Exxon-Mobil and Monsanto, as well as controversial businesses such as Blackwater and foreign military juntas.[5] Burson-Marsteller also represented Union Carbide, whose facility in India was responsible for the Bhopal Disaster.[6] It helped organize the Bromine Science and Environmental Forum (BSEF), as the neutral-sounding public relations arm of the four principle PBDE-producing companies. Lawrie McLaren, the BSEF Program Director,[7] is also European Practice Leader Public Affairs for Burson-Marsteller.[8]

In Burson-Marsteller, PBDE manufacturers picked a partner with vast experience in creating and managing front groups. Previously, Burson-Marsteller created the "National Smoker's Alliance" as a front group for the tobacco industry to fight against Clean Indoor Air acts and other anti-smoking legislative initiatives.[9] In Europe, the Merck pharmaceutical company engaged Burson-Marsteller to create a so-called "Coalition to Prevent Deep-Vein Thrombosis"[10] to market a product for that condition, and the star-studded "European Women for HPV Testing" was set up for the company that made the HPV tests.[11]

Front Group Formed: Citizens for Fire Safety

Just as in other campaigns to promote and defend its bottom line, industry has developed a strategy relying on a front group called "Citizens for Fire Safety" (CFFS) to campaign against state legislative initiatives regulating PBDE flame retardants, while attempting to influence state regulatory policy either by lobbying directly or paying firms who also lobby for the American Chemistry Council (ACC), Albemarle, Chemtura or BSEF. CFFS has formed "chapters" in a number of states where it actively lobbies, including Connecticut, Illinois, Maine, Maryland, Massachusetts and Minnesota. In California, a related organization called "Californians for Fire Safety" was created by the public relations consulting firm Jacobson Communications, and is explicitly listed on the lobbyist registration website. "Burson-Marsteller, on behalf of the Bromine Science and Environmental Forum, Doing Business As Californians for Fire Safety," spent $6,673,215.90 over the 4 quarters at the start of the

published Oct. 16, 2008



2007–2008 legislative session. It terminated its lobbying firms at the end of January 2008, and those firms picked up Citizens for Fire Safety Institute on Feb 1, 2008.[12]

Citizens for Fire Safety – Truth in Advertising?

Citizens for Fire Safety[13] describes itself as "... a coalition of fire professionals, educators, burn centers, doctors, fire departments and industry leaders..." but in fact is moving a special interest corporate agenda for a handful of actors. The primary purpose of CFFS is to work at the behest of PBDE manufacturers to defeat legislative initiatives calling for the prohibition of PBDE flame retardants. CFFS builds its membership list by attracting the support of organizations

Coming Soon to a Statehouse Near You – Key Personnel

"Time and time again, I've seen good bills die because we are overwhelmed with corporate lobbyists. There are a finite number of us, and an increasing number of them. We're outgunned and outnumbered when it comes to passing policies to protect the environment and public health."

—Maryland State Delegate James W. Hubbard, President, National Caucus of Environmental Legislators

Kelley Cawthorne

In Michigan, CFFS hired the firm of Kelley Cawthorne, which retains several lobbyists, including David Ladd, once a staffer in former Governor John Engler's administration. Engler came under fire while in office for not holding Dow Chemical (another ACC member) accountable for dioxin and other contamination in Michigan. Dennis Cawthorne himself was in Engler's administration, and is currently active in Michigan politics.

Grant Gillham

Grant Gillman is the signatory to state lobbying forms for CFFS. Gillham is a former employee of R.J. Reynolds who also worked for lobbyist Joe Schumate under contract with the tobacco industry. Grant Gillham has said he is working in "15-20" state legislatures. Featured on CFFS's website are notices about:

- Alaska HB 271
- Maryland HB 1
- Maine LD 2048 (signed into public law April 15, 2007)
- Illinois HB 298 (now 1421)
- Minnesota HB 934
- Connecticut HB 5805

Seth Jacobson

Seth Jacobson, through his public relations firm Jacobson Communications, developed Californians for Fire Safety, which used false and misleading information to defeat AB 706, a bill to protect people from chlorinated and brominated flame retardants including PBDEs. Prior to creating Californians for Fire Safety, Jacobson created "Santa Monicans for Sensible Priorities" and "Santa Monicans for Change," an effort funded by hotel business interests. According to campaign documents, ET Whitehall Seascape LLC and Edward Thomas Management Co. (Casa Del Mar and the Shutters Hotels) made payments to SMSP for "public relations and consulting work," designed to gain control of city government. Prior to that, Jacobson was a spokesperson for "Fighting Against Irresponsible Regulation (FAIR), an anti-living wage group that was widely criticized for distributing false and misleading election mailers.[15]

George A. Morris

George Morris is Hawaii's chief lobbyist for CFFS. Morris is also the major lobbyist for the American Chemistry Council.

Laura Ruiz

Laura Ruiz is Albemarle's Corporate Director for Consumer Advocacy. She gives testimony opposing controls on PBDEs on behalf of CFFS at legislative hearings. She also signed a letter to California State Senator Ridley-Thomas opposing AB 706 as the Chair of the American Fire Safety Council in 2007.[16]

Peter Sparber

Peter Sparber is BSEF liaison and public relations specialist of Sparber and Associates. He was formerly a vice president at the Tobacco Institute, which supported fire experts to address other problems and deflected attention from the effort to make cigarettes more fire-safe. Cigarettes are a major source of house fires. BSEF supported tactics to oppose fire safe cigarettes, because reducing cigarette-caused fires would reduce the risk for fires, which would also reduce the market share for their flame retardant products.[17] Sparber devised the concept of creating fake grassroots groups to front tobacco industry lobbying objectives.[18]

Personnel in Connecticut

In Connecticut, many lobbying firms work to oppose legislation that restricts PBDEs. BSEF is represented by Hughes & Cronin Public Affairs Strategies. Albemarle Equity, a subsidiary of Albemarle Corporation, is represented by M.P. Guinan Associates. Citizens for Fire Safety Institute, (another name for CFFS), is represented by Capitol Strategies Group, which specializes in brokering deals between corporations and government. It has offices in Connecticut, Texas, Florida, New York and California.

continued from page 2

and individuals who may be unaware of its chemical industry motives by using misrepresentation of what a given proposed policy would accomplish.[14] The front group seeks to blunt the rising influence of actual citizen coalitions—of environmental health and justice communities working with physicians, "moms" groups, firefighters, children's health advocates and others—that have formed to support restricting brominated flame retardants, due to the environmental and public health concerns they pose, and the ready availability of safer, cost- and performance-effective alternatives.

Often the public face of CFFS is not what it appears to be. Sometimes, PBDEs manufacturers present themselves in public hearings as representatives of CFFS. For example, at a Minnesota hearing on brominated flame retardants, Ms. Laura Ruiz entered herself into testimony as being from CFFS, although she is Albemarle's Corporate Director for Consumer Advocacy. Albemarle is a founding member of BSEF.

The funding for CFFS is not described on their website. Although CFFS presents itself as a grassroots group, it does not appear to solicit funding from the communities it purports to represent. However, it spends significant resources to defeat legislation restricting flame retardants. For example, in California, CFFS reported spending $190,740.06 for the 2007–2008 legislative season with professional state lobbyists, who also lobby for Californians for Fire Safety (see above), the American Chemistry Council (which includes the four BSEF bromine corporations), the Bromine Science and Environmental Forum (BSEF), Albemarle and Chemtura. CFFS pays lobbying firms in California, Colorado, Connecticut, Hawaii, Illinois, Maine, Maryland, Massachusetts, Minnesota, Mississippi, New York, Texas, and Vermont. Another member of the ACC, ExxonMobil, lobbies for "fire safety" in New York.

Toxic Flame Retardants Hurt Firefighters

BSEF/Burson-Marstellar/CFFS has tried very hard to get firefighters to join their campaign. Their main strategy has been to get politically appointed fire and insurance commissioners on board. But the International Association of Firefighters, the organization which represents career firefighters in the U.S. and Canada, fully understands the risks posed by brominated flame retardants. Firefighters in Canada and in every state where bills restricting PBDEs have been introduced have gone on record to support those restrictions.

Firefighters have good reason to act in their own interests: In November 2006, the Journal of Occupational and Environmental Medicine published an analysis of 32 studies that found that fire fighters have significantly elevated rates of four types of cancer: multiple myeloma, non-Hodgkin's lymphoma, prostate, and testicular cancer, likely resulting from chemical exposures.[19]

In a recent letter to the International Electrotechnical Commission (IEC) signers representing many firefighter and other related organizations protested the industry push for adding brominated flame retardants to the television casing standards, including:

- International Association of Fire Fighters, Washington, D.C.
- John F. Hanley, San Francisco Fire Fighters Local 798,
- Tony Stefani, Executive Director and Founder San Francisco Firefighters Cancer Prevention Foundation
- Bob Shewbrooks, President, Hospital Fire Marshals Association, Philadelphia, PA
- Andrew McGuire, Executive Director Trauma Foundation, San Francisco General Hospital
- Elizabeth McLoughlin, Associate Director Ret.,Trauma Foundation, San Francisco General Hospital
- Peter A. Brigham, Founding and Emeritus Board Member, Federation of Burn Foundations.

In the letter, they state: "While the fire risk is very low, the health risk, especially for fire fighters, is very high. The proposed standard would lead to considerable levels of fire retardant chemicals in plastic TV housings. When these fire retardant chemicals burn, large amounts of toxic and cancer-causing brominated dioxins and furans can form. These combustion products present a significant health hazard for fire fighters.... The accumulation and health problems from the fire retardant chemicals, especially to fire fighters, have been documented in many dozens of peer-reviewed scientific research papers."[20]

This letter and others like it successfully defeated attempts by the chemical industry to mandate brominated flame retardants in the IEC television casing standard.

Conclusion

Everyone agrees we must protect people from fires, and do what we can to prevent them. Fortunately, we do not need to make the false choice between toxic chemical exposure and fire safety. If past is prologue, we can expect that this will not be the last front group the bromine industry uses to obscure its motives, manipulate public opinion and disrupt proposed legislative action. While the bromine industry attempts to use front groups like Citizens for Fire Safety to legitimize their profit-driven agenda, fire fighters, health professionals and truly grassroots organizations are taking a stand to protect people from fires *and* protect their health.

ACAT
Alaska Community Action on Toxics

**Testimony of Pamela Miller, Executive Director,
Alaska Community Action on Toxics**

**For a Hearing of the
Alaska State Senate Health and Social Services Committee
Concerning Senate Bill 27—An Act Relating to Flame Retardants
and Other Bioaccumulative Toxic Chemicals**

February 21, 2011

I would like to begin by thanking Chair Davis and Members of the Senate Health and Social Services Committee for this opportunity to provide testimony on SB 27. My name is Pamela Miller, Biologist and Executive Director of Alaska Community Action on Toxics (ACAT). ACAT is a statewide environmental health organization that conducts research and provides educational programs, technical assistance, and training. Alaska Community Action on Toxics urges your support of SB 27, "*An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to bioaccumulative toxic chemicals; and providing for an effective date.*"

SB 27 is an important measure to protect public health and especially the health of particularly vulnerable populations, including children as well as firefighters who are on the front lines of exposure to these dangerous chemicals. Polybrominated diphenyl ethers or PBDEs are similar in structure to the banned chemicals known as PCBs, polychlorinated biphenyls, and thus can have similar harmful effects on the body. PBDEs accumulate and are long-lasting, and we are concerned about them because they interfere with proper thyroid function in laboratory studies, cause problems with brain development and disrupt learning, memory, and behavior.

People are exposed to PBDEs through contaminated air, household dust, and foods. These chemicals leach out of products and we are exposed through indoor air and dust. PBDEs harm childhood brain development, and can contribute to learning disabilities that last into adulthood. Exposure to deca- and its breakdown products can harm women and children because they are passed to infants through

breast milk and to children through contact with household dust. Levels in wildlife and people are increasing exponentially. PBDEs in human breast milk are increasing and doubling every 2-5 years. Levels in the U.S. are the highest of all countries for which there are data and about 10-100 times greater than human tissue levels in Europe. PBDEs are persistent and can travel long distances via wind and ocean currents—PBDEs are now ubiquitous and found in northern air, sediments and wildlife. Alaskans are more vulnerable to exposures due to our higher levels of consumption of fish and marine mammals. Women of child-bearing age in the Yukon-Kuskokwim region of Alaska have the highest levels of any human population in the circumpolar Arctic.

Over the past year, new scientific evidence about the health effects of brominated flame retardants compels urgent action. Dr. Julie Herbstman of the Columbia University Center for Children's Environmental Health found that children who had higher prenatal exposures to PBDEs scored lower on tests of mental and physical development at ages 1, 4, and 6. Developing children are exposed to these toxic chemicals before they are born and this affects their learning and development throughout childhood and perhaps permanently. Concentrations of cord blood PBDEs in this study are similar to developing children throughout the U.S. As with public policy measures to reduce childhood exposure to lead, actions that we take now to reduce and eliminate exposure to PBDEs will have immeasurable benefits in preventing intellectual deficits in generations of children.

Also in the past year, more than 150 prominent scientists signed a consensus statement known as the San Antonio Statement on Brominated and Chlorinated Flame Retardants published in the December 2010 issue of Environmental Health Perspectives, the peer-reviewed journal of the National Institute of Environmental Health Sciences. The statement names brominated flame retardants as a class of substance of concern for persistence, bioaccumulation, long-range transport and toxicity. Among the twenty points, the scientists state: "Brominated and chlorinated flame retardants can increase fire toxicity, but their overall benefit in improving fire safety has not been proven."

The American Public Health Association recognizes the public health threat presented by the prevalence of toxic PBDE flame retardants and passed a resolution stating: "*In light of the emerging science on the inherent toxicity and persistence of PBDEs, evidence of adverse health effects on animals, and the prevalence and rising levels in fish, biota, and human breast milk, immediate action is needed to prevent further environmental contamination and to protect public health. The American Public Health Association urges state and federal*

governments to require the use of all PBDE flame retardants be phased out in all products manufactured and sold in the U.S. by a date certain."

No one disputes the importance of fire prevention and safety, however, with the availability and economic viability of safer alternatives, it does not make sense to expose people to these toxic chemicals. In summary, we urge you to pass SB 27 in order to protect health, particularly the health of vulnerable populations including pregnant women, developing children, fire fighters and other workers. Thank you.

Dear Senator Davis,

Thank you for hearing SB 27, a bill to phase out the sale of PBDEs in Alaska, in Senate Health and Social Services. Alaskans deserve safe homes for their families and this piece of legislation is a smart first step to solve this problem. Thank you for your longtime support of this bill.

Sincerely,

Chris Maack

RE: SB 27 – OPPOSE

Dear Chair Davis:

On behalf of the Grocery Manufacturers Association (GMA[1]) I am writing to express our opposition to Senate Bill 27 because of its vagueness. As such, SB 27 appears to establish unfettered regulatory authority to the State to develop a potentially infinite list of bioaccumulative chemicals based on any number of potentially questionable authorities.

In reviewing SB 27 its ambiguity makes it difficult to assess the potential impacts to GMA members and their respective products. Therefore, it is impossible to provide substantive comments or specific amendments for consideration. For example, Section 18.31.680 assigns broad authority in the Departments of Environmental Conservation and Health and Social Services to establish "a list of persistent bioaccumulative toxic chemicals ["BTC"] that occur or are used in products used by human beings." Prior to granting such broad authority, GMA believes it would be helpful to know:

---

[1] Based in Washington, D.C., the Grocery Manufacturers Association is the voice of more than 300 leading food, beverage and consumer product companies that sustain and enhance the quality of life for hundreds of millions of people in the United States and around the globe.

Founded in 1908, GMA is an active, vocal advocate for its member companies and a trusted source of information about the industry and the products consumers rely on and enjoy every day. The association and its member companies are committed to meeting the needs of consumers through product innovation, responsible business practices and effective public policy solutions developed through a genuine partnership with policymakers and other stakeholders.

In keeping with its founding principles, GMA helps its members produce safe products through a strong and ongoing commitment to scientific research, testing and evaluation and to providing consumers with the products, tools and information they need to achieve a healthy diet and an active lifestyle.

The food, beverage and consumer packaged goods industry in the United States generates sales of $2.1 trillion annually, employs 14 million workers and contributes $1 trillion in added value to the economy every year.

Sen. Bettye Davis

Re: SB 27 - Development of PBT Chemicals List – OPPOSE

The Consumer Specialty Products Association must respectfully oppose SB 27 (Wielechowski), which would, among other things, direct the Department of Health and Social Services to establish, and update every three years a list of "persistent bioaccumulative toxic chemicals (PBTs)" that occur or are used in products used by human beings.

The Consumer Specialty Products Association (CSPA) is the premier trade association representing the interests of some 250 companies engaged in the manufacture, formulation, distribution and sale of $80 billion annually in the U.S. of hundreds of familiar consumer products that help household and institutional customers create cleaner and healthier environments. Our products include disinfectants that kill germs in homes, hospitals and restaurants; candles, and fragrances and air fresheners that eliminate odors; pest management products for home, garden and pets; cleaning products and polishes for use throughout the home and institutions; products used to protect and improve the performance and appearance of automobiles; aerosol products and a host of other products used every day.

CSPA members are committed to manufacturing and marketing safe products that are protective of human health and the environment while providing essential benefits to consumers. CSPA has adopted its members' commitment into the CSPA Principles for Chemicals Management Policy, available online at http://www.cspa.org/infocenter/our-issues/principles-for-chemicals-management-policy/.

CSPA supports programs that are risk based and use sound science. Programs should be governed by an advisory panel in which all stakeholders have a voice. CSPA supports programs that encourage resource pooling and build on existing statutory and regulatory structures, voluntary initiatives and data development efforts.

We are unclear why a PBT list is being drafted and how the list will be used in the future. SB 27 should include specific language that clearly describes the intent and future plans for creating and utilizing a state-specific PBT list.

To provide consistency with other regulatory structures, the PBT screening criteria used by the United States Environmental Protection Agency (USEPA) should be adopted. As currently drafted, Section 18.31.680 does not contain a clear set of definitions for the characteristics of P or B or T that is consistent with generally accepted PBT screening criteria. Though the bill does ask the Department to consider other sources of PBT information (e.g. Washington State PBT program, USEPA high production volume challenge program), CSPA believes that the bill should establish a clear definition to help ensure a focus on priority substances.

In addition, CSPA believes the bill should include language that directs the Department to develop and implement a stakeholder process through which interested parties can participate and provide input into the development and potential use of any PBT lists or potential alternative chemicals. A formal stakeholder process will help ensure that the overall process is informed by the best available scientific information.

SB 27 could be appreciably improved with the addition of language that provides transparent and objective parameters for selecting the best available scientific information. An example is the European Chemicals Agency's (ECHA)'s guidance document titled "Guidance on Information Requirements for Chemical Safety Assessment." The ECHA's guidance provides four specific parameters for selecting the best available scientific information based on relevance, reliability, and adequacy. The fundamental importance of having screening parameters is embodied in a quote by the ECHA, which stated "[t]he knowledge of how a study was carried out and consequently its relevance and reliability, is a prerequisite for the subsequent evaluation [and use] of [the] information."

For the reasons expressed above, we must oppose SB 27. Please contact me at (916) 838-3587 or kpower@cspa.org if you have questions regarding CSPA's concerns.

Sincerely,

Kristin Power

Kristin Power
Director, State Affairs – West Region

cc: Senator Wielechowski
Members, Senate Health and Social Services Committee
CSPA State Government Affairs Advisory Committee

- Does this list apply to BTC's at any level in a product (e.g., parts per million, parts per billion, etc)?
- Will this list include BTC's that are naturally occurring?
- Would this list include the packaging that accompanies the product?

SB 27's vagueness is also problematic because it provides the Departments of Environmental Conservation and Health and Social Services discretion to include "other sources the department determines are relevant" in establishing their list. As such, some additional questions that come to mind include, but are not limited to:

- What are the minimum scientific credentials required to be considered as a source?
- Can the Department rely on non peer-reviewed materials?
- Will the Department disclose the "other sources" it deems are relevant and will the public be allowed to question the scientific validity of these unnamed "sources".

Consumer safety is paramount to GMA and its members because it is the foundation of consumer trust and this consumer trust is built on providing safe and reliable products. Unfortunately, despite SB 27's laudable goal of consumer protection it creates more questions than it answers. As such, the Grocery Manufacturers Association must respectfully oppose SB 27.

Sincerely,

/s/

John Hewitt
Western Region Director
Grocery Manufacturers Association

American Chemistry Council

February 20, 2011

To: The Honorable Bettye Davis, Chair
Members, Alaska Senate Health & Social Services Committee

From: Tim Shestek, Senior Director
State Affairs

Re: **SB 27 – OPPOSE, AS DRAFTED**

The American Chemistry Council (ACC) must respectfully oppose as drafted SB 27, legislation that would, among other things, direct the Department of Health and Social Services to establish, and update every three years a list of "persistent bioaccumulative toxic chemicals (PBTs)" that occur or are used in products used by human beings.

ACC shares the objective of protecting human health and the environment from any significant risks associated with chemicals with PBT properties. PBT substances represent a very small percentage of chemicals in the United States. Many are either strictly regulated, are not currently in production, or are the by-products of human and natural activity. PBTs encompass a range of substances, including some metals and a variety of organic compounds.

DEFINITION OF PBT SHOULD BE CONSISTENT WITH RECOGNIZED STANDARDS

As currently drafted, Section 18.31.680 does not contain a clear set of definitions for the characteristics of P or B or T that is consistent with generally accepted PBT screening criteria. Though the bill does ask the Department to consider other sources of PBT information (e.g. Washington State PBT program, USEPA high production volume challenge program), ACC believes that the bill should establish a clear definition to help ensure a focus on priority substances.

ACC encourages you to consider the PBT screening criteria used by the United States Environmental Protection Agency (USEPA) as an example of specific criteria used to determine whether a chemical meets the generally recognized criteria for being a PBT. Information about the USEPA "PBT Profiler" can be found at: http://www.pbtprofiler.net/criteria.asp

FUTURE USE OF PBT LIST UNCLEAR

As drafted, the bill does not answer the question of why the PBT list is being created, nor does the bill provide any insight into the long-range plans for how the Department intends to utilize the list. SB 27 should include specific language that clearly describes the intent and future plans for creating and utilizing a state-specific PBT list.

In addition, ACC believes the bill should include language that directs the Department to provide a formal process by which stakeholders can participate and provide input into (1) the development and potential use of any PBT list and (2) any regulation or review by the Department of brominated flame retardants or potential alternative chemicals. Establishing a formal process – prior to implementing any regulatory action - will help ensure that the overall process is informed by the best available scientific information.

BEST AVAILABLE SCIENTIFIC INFORMATION

ACC believes that SB 27 could be significantly improved by adding a section that provides transparent and objective parameters for selecting the best available scientific information. One example of such parameters is the European Chemicals Agency's (ECHA)'s guidance document titled "Guidance on Information Requirements for Chemical Safety Assessment."

The ECHA's guidance provides four specific parameters for selecting the best available scientific information based on relevance, reliability, and adequacy. The fundamental importance of having screening parameters is embodied in a quote by the ECHA, which stated "[t]he knowledge of how a study was carried out and consequently its relevance and reliability, is a prerequisite for the subsequent evaluation [and use] of [the] information." Attached is the ECHA's guidance document for reference.

PREFACE

This document describes the information requirements under REACH with regard to substance properties, exposure, use and risk management measures, and the chemical safety assessment. It is part of a series of guidance documents that are aimed to help all stakeholders with their preparation for fulfilling their obligations under the REACH regulation. These documents cover detailed guidance for a range of essential REACH processes as well as for some specific scientific and/or technical methods that industry or authorities need to make use of under REACH.

The guidance documents were drafted and discussed within the REACH Implementation Projects (RIPs) led by the European Commission services, involving stakeholders from Member States, industry and non-governmental organisations. These guidance documents can be obtained via the website of the European Chemicals Agency (http://echa.europa.eu/reach_en.asp). Further guidance documents will be published on this website when they are finalised or updated.

This document relates to the REACH Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006[1]

1 Corrigendum to Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC (OJ L 396, 30.12.2006); amended by Council Regulation (EC) No 1354/2007 of 15 November 2007 adapting Regulation (EC) No 1907/2006 of the European Parliament and of the Council on the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) by reason of the accession of Bulgaria and Romania (OJ L 304, 22.11.2007, p. 1).

R.4 EVALUATION OF AVAILABLE INFORMATION

This chapter aims to provide guidance on how to evaluate available information gathered in the context of REACH Annex VI-XI. The information should be evaluated for its *completeness* and *quality* for the purpose of REACH to assess whether:

1. it fulfils the specific requirements triggered by tonnage as described in REACH Annex VII-X, including application of REACH Annex XI.
2. it is appropriate for hazard classification and risk assessment, including CMR, PBT and vPvB assessment.

Practically, this assessment is usually performed by an evidence-based approach to determine whether the information requirements are already met by the available information. If this is not the case, the information gaps should be defined and appropriate action(s) taken to address these.

The evaluation of *data quality* includes assessment of *adequacy* of the information for hazard/risk assessment and C&L purposes (see above) and furthermore the two basic elements of *relevance* and *reliability*. These terms were defined by Klimisch *et al* (1997) as follows (see also OECD, 2005a):

> *"**Relevance** - covering the extent to which data and tests are appropriate for a particular hazard identification or risk characterisation.*
>
> ***Reliability** - evaluating the inherent quality of a test report or publication relating to preferably standardised methodology and the way the experimental procedure and results are described to give evidence of the clarity and plausibility of the findings. Reliability of data is closely linked to the reliability of the test method used to generate the data (see Section R.4.2).*
>
> ***Adequacy** - defining the usefulness of data for hazard/risk assessment purposes. Where there is more than one study for each endpoint, the greatest weight is attached to the studies that are the most relevant and reliable. For each endpoint, robust summaries need to be prepared for the key studies."*

The terms *relevance* and *reliability* are also used in the context of test methodology (see OECD GD 34 (OECD, 2005b)). The knowledge of how a study was carried out and consequently its relevance and reliability, is a prerequisite for the subsequent evaluation of information.

The *completeness* of the information refers to the conclusion on the comparison between the available information and the information that is required under the REACH registered for the tonnage level of the substance.

Available information on the individual substance should be evaluated in relation to the level of certainty and accuracy needed to meet the regulatory requirement under REACH; it should be considered whether generation of new data would impact such regulatory decision making. In other words, all information has to be *adequate for the purpose*.

A *Weight of Evidence* approach, mentioned in Annex XI Section1.2 of REACH, integrates available information from guideline tests, non-guideline tests, and other types of information which may justify adaptation of the standard testing regime.

R.4.1 Relevance of information

In order to evaluate the relevance of the available data the following aspects could for example be considered:

- Was the substance tested representative for the substance as being registered?
- Has the appropriate species been studied?
- Is the route of exposure relevant for the population?
- Were appropriate doses/concentrations tested?
- Were the critical parameters influencing the endpoint considered adequately?

Human data is in principle the most relevant source of information on human toxicity. Since there may be limitations with regard to the reliability of these studies, they are normally considered together with animal, *in vitro* and other information in order to be able to reach a conclusion about the relevance of the effects to humans.

The evaluation of the relevance for humans of data from studies in laboratory animals is aided by use of information (when available) on the toxicokinetics of the substance in both humans and the animals species used in the toxicity tests, even when such information is relatively limited. Further guidance on the value and use of toxicokinetics is given in Section R.7.12.

Normally, for human health hazard assessment, a *no* or *lowest observed (adverse) effect level* (NO(A)EL, LO(A)EL), or a *benchmark dose* (BMD) for adverse effects in laboratory animals are extrapolated to an exposure level (DNEL) below which it is assumed that adverse effects are unlikely to occur in humans exposed to the substance. For substances evoking effects that have no definable threshold, e.g. genotoxic carcinogens, it may not be possible to identify an exposure level without effects; in such cases, extrapolation is made to an exposure level that represents a risk level of very low concern for humans (DMEL). For more guidance on the derivation and application of these indices in the chemical safety assessment, see Chapter R.8.

For environmental compartments such as surface water, sediment and soil, a *predicted no effect concentration* (PNEC) is obtained by extrapolation based on the lowest *no observed effect concentration* (NOEC) or *effect concentration* causing marginal effects (ECx) by application of assessment factors. For more guidance on the derivation and application of these indices in the chemical safety assessment, see Chapter R.10.

When data are available, dose-response relationships in the animal studies (or the severity of the effect, when only a single dose has been tested) are also assessed as a part of the risk assessment process. Both aspects are taken into account at the risk characterisation stage when a judgement is made of whether adverse effects in humans or the environment would occur at a particular level of exposure.

Where the data suggest that an effect might be species specific, i.e. that the effects observed in the studies of one species are not likely to occur in a different species, specifically humans, clear, well-documented evidence is necessary (e.g. light hydrocarbon-induced nephropathy in the kidney of male rats) to justify the conclusion that a particular effect is not expected to occur in humans exposed to the substance.

In general, the results of *in vitro* tests provide supplementary information which may be used *inter alia* to facilitate the interpretation of the relevance of animal data for humans, or to gain a better understanding of the mechanism of action of a substance. Depending on the type of *in vitro* data and its predictivity for effects *in vivo*, such data may be also used as an alternative to test data on laboratory animals or as an important part of the basis for deciding whether such tests may be warranted.

R.4.2 Reliability of information

The quality of the study, the method, the reporting of the results, and the conclusions that are drawn, must be evaluated carefully. Reasons why existing study data may vary in quality include the use of outdated test guidelines, the failure to characterise the test substance properly (in terms of purity, physical characteristics, etc.), the use of crude techniques/procedures that have since become refined, and the fact that certain endpoint information, now recognised as being important, may have not been recorded or measured. Moreover, other reasons could be poor reporting of information and poor quality assurance.

Klimisch *et al* (1997) developed a scoring system to assess the reliability of data, particularly from toxicological and ecotoxicological studies, that may be extended to physico-chemical and environmental fate and behaviour studies:

> **1 = reliable without restrictions:** *"studies or data [...] generated according to generally valid and/or internationally accepted testing guidelines (preferably performed according to GLP) or in which the test parameters documented are based on a specific (national) testing guideline [...] or in which all parameters described are closely related/comparable to a guideline method."*
>
> **2 = reliable with restrictions:** *"studies or data [...] (mostly not performed according to GLP), in which the test parameters documented do not totally comply with the specific testing guideline, but are sufficient to accept the data or in which investigations are described which cannot be subsumed under a testing guideline, but which are nevertheless well documented and scientifically acceptable."*
>
> **3 = not reliable:** *"studies or data [...] in which there were interferences between the measuring system and the test substance or in which organisms/test systems were used which are not relevant in relation to the exposure (e.g. unphysiological pathways of application) or which were carried out or generated according to a method which is not acceptable, the documentation of which is not sufficient for assessment and which is not convincing for an expert judgment."*
>
> **4 = not assignable:** *"studies or data [...] which do not give sufficient experimental details and which are only listed in short abstracts or secondary literature (books, reviews, etc.)."*

The use of such scoring tools, e.g. the mentioned *Klimisch codes,* allows ranking the information, and organising it for further review. This implies focussing on the most relevant ones, taking into account the endpoint being measured or estimated. The evaluation of the reliability is performed considering certain formal criteria using international standards as references. The scoring of information, e.g. according to Klimisch codes, should not exclude all unreliable data from further consideration by expert judgement because of possible pertinence of these data related to the evaluated endpoints.

In general, some types of data that are not reliable (i.e. those where insufficient documentation exist for making an assessment) and data for which it is not possible to assign reliability, may only be used as supporting data.

For many existing substances, at least some of the available information could have been generated prior to the requirements of GLP and the standardisation of testing methods. While such information may still be usable for REACH purposes, both the data and the methodology used must be evaluated in order to determine their reliability. Such an evaluation needs evidence based decision making following established criteria and must be transparent to justify the use of a particular data set. For some substances, information may be available from tests conducted according to the methods included in EU Annex V of Directive 67/548/EEC or to OECD Test Guidelines (or other standards like CEN, ISO, ASTM, OSPAR methods, national standard methods), and in compliance with the principles of GLP or equivalent standards. REACH Article 13.3 states that any new tests should be "*conducted in accordance with the test methods laid down in a Commission Regulation or... other international test methods recognised by the Commission or the Agency as being appropriate.... Information on intrinsic properties may also be generated using other test methods provided they meet the conditions set out in Annex XI.*"

Furthermore, new ecotoxicological and toxicological tests shall be carried out in compliance with the principles of GLP (see Directive 2004/10/EC) or equivalent international standards. This does not apply to tests for physico-chemical properties.

The following are key points that an assessor should consider when evaluating data reliability:

- The proven ability of the laboratory to perform the test method
- The purity/impurities and origin of the test substance, as well as the reference substances, must be reported;
- The availability of the raw data from the study
- There must be an adequate description of the study e.g. a complete test report, or a sufficiently detailed description of the test procedure, which must be in accordance with generally accepted scientific standards. In these cases, the information may be considered reliable;
- When the test procedure used to generate the test data is found to differ significantly from that described by the recognised test method or generally accepted scientific standards, or the reliability of the data cannot be established fully, the assessor must decide if and how the information can be used, e.g. as supporting information where a reliable study already exists.

- The following factors, inter alia, can be used to support the view that these data may be acceptable for use in meeting the requirements of REACH:
  - there are other studies or calculations available on the substance, and the data under consideration are consistent with them,
  - other studies are available, for example on isomers with similar structure activity profile, homologues, relevant precursors, breakdown products or other chemical analogues, and the data under consideration are consistent with them,
  - an approximate value is sufficient for taking a decision on the endpoint of interest for the conclusion required by REACH;
- Where critical supporting information is not reported (e.g. species tested, substance identity and dosing procedure) the test data should be considered to be unreliable for the purposes of REACH.

In principle, the same criteria apply to test data reported in the published literature; the extent of the information provided will provide the basis for deciding upon the reliability of the data reported. In general, publications in peer-reviewed journals are preferable to those which are not. High-quality reviews, summaries or abstract publications may be used as supporting information.

R.4.3 Adequacy of information

Adequacy defines the usefulness of information for the purpose of hazard and risk assessment, in other words whether the available information allows clear decision-making by the registrant about (a) whether the substance meets the criteria for classification, (b) whether it is a potential PBT/vPvB and (c) whether appropriate DNEL/PNEC values can be derived for risk assessment purposes. The evaluation of adequacy of test results and documentation for the intended purpose is particularly important for substances under REACH where there may be (a number of) test results available for each effect, but where some or all of them have not been carried out according to current standards. Where there is more than one study for each endpoint, the greatest weight is attached to the studies that are the most relevant and reliable. For each endpoint, robust summaries need to be prepared for the key studies. Sound scientific judgement is an important principle in considering the adequacy of information and determining the key study.

The type of information that may be available consists of non-testing data, (the latter refer to (Q)SAR predictions or data on structurally-related substances, obtained by grouping approaches), *in vitro* data, data on living organisms, including data on laboratory animals, on humans or other data on (parts of) ecosystems.

R.4.3.1 Non-human data

The guidance given above on the evaluation of the adequacy (relevance and reliability) of information relates predominantly to information generated in tests on physico-chemical properties, animal studies, plant and micro-organism studies. Some specific guidance is given below for data generated *in vitro* systems.

R.4.3.1.1 In vitro data

When considering the adequacy of *in vitro* information it is important to distinguish between the suitability of the methodology per se and the adequacy of data that have been produced by such methods.

Use of *in vitro* methods within REACH

Suitable in vitro test methods are at least those that are sufficiently well developed according to internationally agreed test development criteria, e.g. fulfilling the ECVAM criteria for entry of the method into the pre-validation process (see details in Table R.4-2). In the frame of the Community Action Plan on the Protection and Welfare of Animals, a reference laboratory (CORRELATE) has been established at JRC-IHCP-ECVAM that assesses proposed *in vitro* test methods with regard to suitability and validation for the intended purpose.

At present the following two categories of *in vitro* methods are referred to within REACH as suitable:

- validated methods (e.g. *in vitro* tests for skin corrosion and *in vitro* genotoxicity tests, e.g. Ames salmonella typhimurium mutagenicity test) and
- those *in vitro* tests that meet the internationally agreed pre-validation criteria (e.g. meeting the ECVAM criteria of entering the pre-validation process).

There are clear definitions on what constitutes a fully validated *in vitro* assay. These criteria are detailed in OECD GD 34 (OECD, 2005b; see details in Table R.4-1) and were initially established by ECVAM and ECB and later refined by ECVAM (Hartung *et al*, 2004).

Use of adequate information derived from *in vitro* methods

Adequate information from *in vitro* studies can be used in two ways: first, the existing information from a validated and accepted *in vitro* test may fully or partly replace animal testing, and second, information derived from suitable *in vitro* methods can be used for adapting the standard testing regime as set out in Annex XI.

Information from validated in vitro tests may fully or partly replace an animal test

Article 25 (1) of the REACH Regulation states that testing on vertebrate animals shall only be performed as a last resort. Once scientifically validated according to internationally agreed validation principles (OECD GD 34 (OECD; 2005b)) *in vitro* test may fully or partly replace an *in vivo* test depending on the purpose for which the test method was validated and adopted. One of the main criteria for acceptance is the adequacy of the information generated using such a test(s) for the purpose of classification and labelling and/or risk assessment.

Information derived from suitable in vitro methods

Annex XI Section 1.4 opens the way for the use of results of *in vitro* methods that have not yet been scientifically validated but are identified as being *suitable*, meaning that the methods are sufficiently well developed according to internationally agreed test development criteria e.g. the ECVAM criteria for entry of the method into the pre-validation process (see Table R.4-2 and Section R.5.2.1.4 for a discussion of the use of *in vitro* testing to adapt the standard testing regime).

Table R.4-1: The criteria for validation derived from the OECD GD 34

Concerned items	Decision criteria to be considered
Rationale for the test method	Clear statement of: - scientific basis - regulatory purpose - need for the test method
Relationship between the test method's endpoint and (biological) phenomenon of interest	Description of the scientific relevance of the measured effects Mechanistic (biological) or empirical (correlative) relationship to the specific type of effect or toxicity of interest
Detailed protocol for the test method	Detailed protocol and SOP including: - description of materials - what is measured - how it is measured - how data will be analysed - decision criteria for evaluation - criteria for acceptable test performance
Test method performance using reference substances (accuracy assessment)	Sufficient number of reference substances measured in coded procedure Reference data and reference results for reference substances established
Performance evaluation	Performance evaluation in relation to: - relevant information from the species of concern - existing relevant toxicity testing data
Intra- and Inter-laboratory reproducibility	Data available on - Repeatability and reproducibility - Robustness (variability)
Relevance	- Demonstration of the predictive capacity of the method - Precise definition of the applicability domain
Test method data quality	Evidence that all data supporting the validity are gained under quality conditions, e.g. GLP, GCCP
Data availability	- All raw data should be available for expert review - Detailed method protocol public available

Information from in vitro test may provide mechanistic insight

Information from advanced *in vitro* assays may provide valuable information that aid and inform the risk assessment process. For example, with the growth of new technologies such as toxicogenomics, new possibilities are emerging that allow designer cell lines to assess specific mode of action (molecular pathways) of the potential toxicity of a substance or substance class. Such information is likely to be increasingly important in the future.

Adequacy of information from in vitro testing

The assessment of alternative testing data (to decide whether and how they can be used) in terms of adequacy for fulfilling the information requirements of REACH will follow the general criteria already discussed, e.g. applied quality measures, i.e. how they take into account the relevance, reliability and completeness of the information with regard to the regulatory decision to be taken. This includes how well the study is reported, how well the test substance is characterised and to what extent the information requirements have been met for the endpoint under consideration.

Table R.4-2: The criteria for suitability assessment according to the ECVAM criteria for entering the pre-validation study, (Curren *et al*, 1995).

Concerned items	**Decision criteria to be considered**
Purpose and proposed use	- Description of intended purpose and scientific basis - Fit of intended purpose with intended use - Position of the method in the context of regulatory testing and/or 3Rs
Evidence of the need for the test in comparison with other *in vivo/in vitro* test, state of the art	Complete and concise presentation of state of the art, human data, *in vivo*, non-testing and *in vitro* data Weighed judgment about the contribution of the proposed test method compared to state of the art, including weaknesses and limitations e.g.: improved reliability: accuracy, sensitivity, specificity, robustness, defined performance e.g. improved relevance: predictive capacity, applicability domain
Addressed endpoint described	- Demonstration of relevance for the *in vivo* situation - Description of data analysis and interpretation
Availability of a written procedure detailed enough to allow performance in another laboratory	Method protocol: - complete and readable - feasible and transferable - SOP standardised with respect to selected model and measurement performance
Reference substances, test materials and related results	- Description of reference substances, test materials and controls - Selection, identity, use in the measurement process including calibration and data interpretation
Data derived from the test using an appropriate set of test materials	- Data gained by measuring above reference substances or test materials - Test performance evaluation
Development of method according to GLP and GCCP conditions	Statement about data quality
Summary of how method has been derived and the biological basis for its relevance	- List of any additional documentation, which contributes to the above items - Statement about intellectual property rights and search for existence of any protection of intellectual property rights

R.4.3.2 Non-testing data

Non-testing data refers to data obtained by applying computational methods, such as SARs and QSARs (collectively referred to as (Q)SARs) as well as data obtained by grouping approaches (analogue and chemical category approaches).

R.4.3.2.1 (Q)SAR data

According to Article 13 (1) of REACH, information on intrinsic properties of substances may be generated by means other than tests, provided that the conditions set out in Annex XI are met. In particular for human toxicity, information shall be generated whenever possible by means other than vertebrate animal tests, through the use of alternative methods, for example, *in vitro* methods or qualitative or quantitative structure-activity relationship models or from information from structurally related substances (grouping or read-across) [see also REACH Article 25 (1)].

REACH Annex XI allows for the results of (Q)SARs to be used instead of testing when the following conditions are met:

- results are derived from a (Q)SAR model whose scientific validity has been established,
- the substance falls within the applicability domain of the (Q)SAR model,
- results are adequate for the purpose of classification and labelling and/or risk assessment, and,
- adequate and reliable documentation of the applied method is provided.

REACH Annex XI also indicate that the Agency in collaboration with the Commission, Member States and interested parties shall develop and provide guidance in assessing which (Q)SARs will meet these conditions and provide examples. In the meantime, a database has been developed to provide information on QSAR models and their validity (JRC QSAR Model Database (QMDB) http://qsardb.jrc.it). In addition to replacing the need for testing, (Q)SAR results may also in some cases indicate the need for further testing.

To apply the conditions of REACH Annex XI, it is important to distinguish between the validity of the (Q)SAR model, and the reliability and adequacy of an individual (Q)SAR estimate, and the appropriateness of the documentation associated with models and their predictions (see Section R.6.1 for detailed explanation).

The extent to which valid (Q)SARs are available for the different REACH endpoints is variable and is an evolving situation, as an increasing number of models are being characterised and documented according to the OECD validation principles described below. Information on the status of (Q)SARs for specific endpoints is given in Chapter R.7.

Valid (Q)SARs should be assessed for their applicability to the substance of interest, to determine the reliability of the QSAR estimate, and for their relevance to the regulatory purpose, to determine the adequacy of the (Q)SAR estimate. The adequacy of a (Q)SAR estimate (see Section R.6.1.5.4) takes into account the relevance and reliability of the (Q)SAR model and its prediction for the substance of interest as well as completeness of the information generated by the model.

A valid (Q)SAR is a model that has been characterised and documented according to the internationally agreed OECD Principles for the validation of (Q)SAR models. According to these principles, a (Q)SAR model that is proposed for regulatory use should be associated with a defined endpoint (principle 1), an unambiguous algorithm to ensure transparency in the model algorithm (principle 2), a defined domain of applicability (principle 3), and appropriate measures of internal performance and predictivity (principle 4). If possible, a mechanistic interpretation should also be provided, to add to the confidence in the model (principle 5).

Taken together, these five principles form the basis of a conceptual framework for characterising (Q)SAR models.

Preliminary guidance on how to characterise (Q)SARs according to the OECD validation principles is provided in this document (see Section R.6.1) This report was subsequently adopted, with minor revisions, by the OECD Member Countries and the Commission, as an OECD GD (OECD, 2007).

Whether the prediction from a scientifically valid QSAR model is reliable depends, *inter alia*, on whether the substance is within the applicability domain (see also Section R.6.1.5.3). Consideration of the applicability domain may include: 1) descriptor domain - do the descriptor values of the chemical fall within defined ranges; 2) structural fragment domain - does the chemical contain fragments that are not represented in the model training set; 3) mechanistic domain - does the chemical of interest act according to the same mode or mechanism of action as other chemicals for which the model is applicable; and 4) metabolic domain - does the chemical of interest undergo transformation or metabolism, and how does this affect reliance on the prediction for the parent compound.

The QSAR Model Reporting Format (QMRF) has been developed to provide a means of documenting (Q)SAR model characteristics in a transparent and consistent manner, in accordance with the OECD validation principles. Further information on QMRFs is given in Section R.6.1.9. In particular, the JRC QSAR Model Database (JRC QMDB) is being developed as a repository of quality-reviewed information on QSAR models and their validity. In this database, QSAR models will be linked with their corresponding QMRFs. Before developing a QMRF, the registrant should check whether it is already included in the JRC QMDB or other suitable source (e.g. OECD QSAR Toolbox[2]). If the appropriate QMRF for a given model is not already available, it will be necessary to develop one by applying the five validation principles and documenting the results. Since the general format of the QMRF is already defined, it is sufficient to fill this in with the appropriate information on the model. The ECB has developed a QMRF editor as a tool to facilitate the generation of new QMRFs.

To be used as a replacement for experimental data, it is necessary, but not sufficient, for a (Q)SAR model to be valid. The (Q)SAR model should also be shown to be applicable to the substance of interest, to determine whether the model estimate is reliable for the intended purpose. Whereas the (Q)SAR model should be reported in the form of a QMRF, individual model predictions should be documented according to the (Q)SAR Prediction Reporting Format (QPRF). Further information on QPRFs is given in Section R.6.1.10, and in the JRC QMDB.

QMRFs and QPRFs are important tools for documenting and reporting information on (Q)SARs and their estimates, respectively. It should be noted that these reporting formats are likely to evolve as experience is gained.

---

[2] http://www.oecd.org/dataoecd/33/41/37850114.pdf

The information in the QMRF and QPRF should be used when assessing whether a prediction is adequate for the purpose of classification and labelling and/or risk assessment. The assessment will also need to take into account the regulatory context. This means that the assessments of QSAR validity and QSAR estimate reliability need to be supplemented with an assessment of the relevance of the prediction for the regulatory purposes, which includes an assessment of *completeness*, i.e. whether the information is sufficient to make the regulatory decision, and if not, what additional (experimental) information is needed. The decision will be taken on a case-by-case basis (firstly by industry and then by the authorities working via an Agency committee). See Section R.6.1 for more detailed guidance.

(Q)SAR predictions may be gathered from databases (in which the predictions have already been generated and documented) or generated *de novo* through the applicable of available models. In the latter case, specialised expertise may be required.

Up to date information on QSAR models, QMRF, QPRF, editors, and examples is available in the JRC QMDB http://qsardb.jrc.it.

R.4.3.2.2 Data obtained by grouping approaches

Conclusions about the likely properties of a substance can also be based on the knowledge of the properties of one or more similar substances, by applying *grouping methods*. More details of such methods are provided in Section R.6.2.

REACH Annex XI contains under 1.5 a section on the use of grouping of substances and read-across approaches.

In this guidance, the terms *category approach* and *analogue approach* are used to describe techniques for grouping chemicals, whilst the term *read-across* is reserved for a technique of filling data gaps in either approach. The term *analogue approach* is sometimes used when the grouping is based on a very limited number of chemicals. A chemical category is a group of chemicals whose physico-chemical and human health and/or environmental toxicological properties and/or environmental fate properties are likely to be similar or follow a regular pattern as a result of structural similarity (or other similarity characteristic). In principle, more members are generally present in a chemical category, enabling the detection of trends across endpoints.

As with (Q)SARs, grouping approaches can be used to indicate either the presence or the absence of an effect.

Grouping approaches avoid the need to test all members of the group for all endpoints of interest, thereby reducing costs and animal testing. Additional benefits are described in Section R.6.2.

The assessment of chemicals by using a category approach differs from the approach of assessing them on an individual basis, since the effects of the individual chemicals within a category are assessed on the basis of the evaluation of the category as a whole, rather than based on measured data for any one particular substance alone.

The category approach has been applied successfully under the EU classification system, where all *similar* substances (sometimes identifying all the individual substances, sometimes leaving them as a generic group) are expected to have the same property as the substance[3]. Categories have also been developed in the context of the OECD HPV Chemicals Programme (http://www.oecd.org/document/21/0,3343,en_2649_34379_1939669_1_1_1_1,00.html Within a chemical category, data gaps may be filled by applying one or more of three general approaches: a) read-across; b) trend analysis (i.e. use of internal models, purposefully developed from the underlying data of the category); and c) use of external models (e.g. QSARs, Quantitative Activity-Activity Relationships (QAARs) and expert systems that were not specifically developed in the context of the category).

Read-across is a technique for data gap filling in which information for one or more *source* chemicals is used to make a prediction for a *target* chemical, which is considered to be *similar* in some way. Read-across can be used to fill data gaps in the context of both the analogue approach and the wider category approach.

The chemical category approach is, by its very nature, a *Weight of Evidence* approach, since it integrates estimated and experimental data, and involves expert judgement. The category approach also provides a means of strategic testing. The biggest challenge in this approach lays in defining the category itself (its underlying rationale/mechanistic basis) and in particular its boundaries.

The wider category approach is considered to be more robust than simple analogue approaches, which are more limited, ad-hoc ways of comparing small numbers of substances. As the number of possible chemicals being grouped into a category increases, the potential for developing hypotheses for specific endpoints and making generalisations about the trends within the category will also increase, and hence increase the robustness of the evaluation.

When applying the category approach, the robustness of the overall category is assessed, rather than the reliability for an individual substance (since in some cases, individual substances may display exceptional behaviour). Thus, the adequacy (relevance and reliability) of the approach needs to be assessed for individual substances of interest.

Grouping approaches can be used directly to fulfil information requirements in REACH, provided a number of conditions are met. Although REACH makes no explicit reference to the need for validation for grouping approaches, it will be necessary for the industry registrant making use of a grouping method to provide a scientific justification and to demonstrate that the grouping approach used is adequate for the regulatory purpose (classification and labelling and/or risk assessment). Guidance on how to demonstrate the adequacy of grouping approaches is provided in Section R.6.2.4.1. Furthermore, appropriate documentation of the grouping approach must be provided in the form of a suitable reporting format, as also described in Section R.6.2.6.

[3] Under EU legislation, these *categories* are the *group entries* in Annex I of Directive 67/548/EEC.

R.4.3.3 Human data

The evaluation and use of information derived from studies in humans usually requires more elaborate and in-depth critical assessment of the reliability than animal data (WHO, 1983). Four major types of human data may be submitted (1) analytical epidemiology studies on exposed populations, (2) descriptive or correlation epidemiology studies, (3) case reports and (4) in very rare, justified cases controlled studies in human volunteers.

Analytical epidemiology studies (1) are useful for identifying a relationship between human exposure and effects such as biological effect markers, early signs of chronic effects, disease occurrence, or mortality and may provide the best data for risk assessment. Study designs include:

- **Case-control (case-referent) studies**, where a group of individuals with (cases) and without (controls/referents) a particular effect are identified and compared to determine differences in exposure in the recent or more distant past;
- **Cohort studies**, where groups of variously exposed and *non-exposed* individuals are identified and differences between the groups in effect occurrence over time are studied;
- **Cross-sectional studies**, where a population (e.g. a workforce) is studied, so that morbidity at a given point in time can be assessed in relation to concurrent exposure.

The strength of the epidemiological evidence for specific health effects depends, among other things, on the type of analyses and on the magnitude and specificity of the response. Confidence in the findings is increased when comparable results are obtained in several independent studies on populations exposed to the same agent under different conditions. In general, cohort studies provide stronger evidence than case-control studies, because exposure is assessed independently of the health status or outcome of the subjects in the study. Other characteristics that support a causal association are presence of a dose-response association, a consistent relationship in time and (biological) plausibility.

Criteria for assessing the adequacy of epidemiology studies include the proper selection and characterisation of the case and control groups (in case-control studies), adequate characterisation of exposure, sufficient length of follow-up for disease occurrence (in cohort studies), valid ascertainment of effect, proper consideration of biases and confounding factors. Assessment of adequacy of the studies should be conducted by epidemiologists by training.

Due to both uncertainties in epidemiological studies and true variability in the association between exposure and health outcomes within and among human populations, the available body of epidemiological evidence should be systematically reviewed and, if possible, combined. A *Weight of Evidence* approach is essential for risk assessment based on epidemiological data to (a) assess (sources of) heterogeneity across the studies and (b) increase statistical stability of the risk estimates. The best option to combine and summarise epidemiological data is a pooled analysis of the original data sets of the contributing studies. A meta-analysis based on published study results is a good, but somewhat more restricted alternative.

A comprehensive guidance of both the evaluation and use of epidemiological evidence for risk assessment purposes is provided by Kryzanowski *et al* (WHO 2000).

Descriptive epidemiology studies (2) examine differences in disease rates among human populations in relation to age, gender, race, and differences in temporal or environmental conditions. These studies are useful for identifying areas for further research but are not very useful for risk assessment. Typically these studies can only identify patterns or trends in disease occurrence over time or in different geographical locations but cannot ascertain the causal agent or degree of human exposure.

Case reports (3) describe a particular health condition in an individual or a group of individuals who were exposed to a substance. They may be particularly relevant when they demonstrate effects which cannot be observed in experimental animal studies. In many such studies, information is lacking on critical aspects such as substance identity and purity, exposure, health status of the persons exposed and even the symptoms reported; thorough assessment of the reliability and relevance of case reports is therefore necessary. Case reports also trigger analytical studies.

When they are already available, well-conducted controlled human exposure studies (4) in volunteers, including low exposure toxicokinetics studies, can also be used in risk assessment. However, few human experimental toxicity studies are available due to the practical and ethical considerations involved in deliberate exposure of individuals. Such studies, e.g. studies carried out for the authorisation of a medical product, have to be conducted in line with the World Medical Association Declaration of Helsinki, which describes the general ethical principles for medical research involving human subjects (World Medical Association, 2000).

Criteria for a well-designed experimental study include the use of a double-blind study design, inclusion of a randomised control group, sufficient duration of exposure and an adequate number of subjects to detect an effect. A meta-analysis of available similar, even small, studies is a good option.

It is emphasised that testing with human volunteers is strongly discouraged, but when there are good quality data already available they should be used as appropriate, in well justified cases.

R.4.4 Evaluation and Integration of all available Information including Weight of Evidence

Within the REACH legislation, the so-called *Weight of Evidence* (WoE) approach is a component of the decision-making procedure on substance properties and thus an important part of the chemical safety assessment.

The term WoE does neither constitute a scientifically well-defined term nor an agreed formalised concept characterised by defined tools and procedures (Weed, 2005). Nevertheless, from daily life everybody is familiar with the essence of *Weight of Evidence* reasoning and its basic mechanism may be regarded as a matter of commons sense.

An evidence based approach involves an assessment of the relative values/weights of different pieces of the available information that has been retrieved and gathered in previous steps. To this end, a value needs to be assigned to each piece of information. These weights/values can be assigned either in an *objective* way by using a formalized procedure or by using expert judgement. The weight given to the available evidence will be influenced by factors such as the quality of the data, consistency of results/data, nature and severity of effects, relevance of the information for the given regulatory endpoint. In all cases the relevance and reliability and adequacy for the purpose have to be considered.

Examples of tools to identify the quality include the Klimisch scores (for toxicological studies, see also Section R.4.2), Hills criteria for evaluation of epidemiological data in Hill (1965), ranking of chemicals on their endocrine potential (Calabrese *et al*, 1997), evaluation of ecologic risk (Menzie *et al*, 1996).

An evidence based approach may imply formalised decision schemes where explicit rules for weighing information elements have been established. After having assessed/ranked the quality of the individual components the next step should be the integrating, comparing and putting together all information pieces with their relative values or weights and drawing a conclusion. This often includes expert judgement.

In the GHS, an evidence based approach is given a prominence for classification. All available information that can contribute to the determination of classification for an endpoint is considered together. Included is information such as epidemiological data and case reports in humans, and specific studies along with the sub-chronic, chronic and special study results in animals that provide relevant information, etc.

In REACH there will also be cases where data from sources other than tests specifically addressing an endpoint can provide valuable information. In addition, it is reasonable to expect that there will be cases where several pieces of *inadequate* data on a given REACH endpoint may exist. For example there may be several repeated dose studies available on a chemical, none of which would be acceptable by itself due to some deficiency (e.g. small group sizes, insufficient number of dose groups, insufficient parameters, etc). Collectively, however, the different studies show effects in the same target organ at approximately the same dose and time. If a rationale is given to show that such data adequately describe the REACH endpoint of concern, further information on that particular endpoint may not be necessary.

The way the *Weight of Evidence* is implemented is case-dependent. It is influenced by the relation between the amount of information needed and the importance of the decision to be taken and also by the likelihood of, and consequences for, the decision based on that information being wrong. It is important to document and communicate how the evidence based approach was used in a reliable, robust and transparent manner.

CS FOR SENATE BILL NO. 27( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR WIELECHOWSKI

A BILL

FOR AN ACT ENTITLED

"An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to a multistate chemicals clearinghouse; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 18.31 is amended by adding new sections to read:

Article 4. Chemicals in Products.

Sec. 18.31.600. Prohibitions. (a) A person may not manufacture, sell, or distribute a product if one or more components of the product contains more than 0.1 percent by mass of pentaBDE, octaBDE, or a combination of pentaBDE and octaBDE.

(b) A person may not manufacture, sell, or distribute a mattress, a mattress pad, or upholstered furniture if one or more components of the mattress, mattress pad, or upholstered furniture contains more than 0.1 percent by mass of decaBDE.

(c) A person may not manufacture, sell, or distribute an electronic product if the electronic product has a plastic housing or other external component that contains

more than 0.1 percent by mass of decaBDE.

(d) A person may not manufacture, sell, or distribute a product that is prohibited by the department under AS 18.31.610.

Sec. 18.31.610. Prohibition by department. (a) The department may prohibit by regulation the manufacture, sale, and distribution of a product that contains a flame retardant that is not already prohibited under AS 18.31.600(a) - (c), if the department determines that

(1) the flame retardant is harmful to public health or the environment; and

(2) an alternative to the flame retardant exists, is safer for the public health or the environment, and is available on a nationwide basis.

(b) Before establishing a prohibition under (a) of this section, the department shall consult with the Department of Health and Social Services, and the state fire marshal shall determine that the flame retardant alternative identified in (a)(2) of this section satisfies applicable fire safety standards.

(c) In this section, "product" means

(1) a mattress, a mattress pad, or upholstered furniture if the mattress, mattress pad, or upholstered furniture contains plastic fibers that contain the flame retardant; or

(2) an electronic product that has a plastic housing that contains the flame retardant.

Sec. 18.31.620. Exemptions. The prohibitions in AS 18.31.600 do not apply if the product that is prohibited is part of

(1) a transportation vehicle or a product or part used in a transportation vehicle or transportation equipment;

(2) a product or equipment used in an industrial, mining, or manufacturing process;

(3) electronic wiring or cable used for power transmission;

(4) a used item that is resold; or

(5) a new item that is brought into the state before the effective date of this section.

Sec. 18.31.630. Notification by manufacturer. A person who manufactures products whose sale and distribution are prohibited by AS 18.31.600 shall inform its retailers in the state of the prohibitions under AS 18.31.600 and the penalty under AS 18.31.650.

Sec. 18.31.640. Enforcement. If the department determines that there are grounds to suspect that a retailer is selling a product in violation of AS 18.31.600, the department may request that, within 10 days, the manufacturer of the product

(1) provide the department with a sworn certificate indicating that the sale of the product does not violate AS 18.31.600; or

(2) notify each retailer who sells the product in the state that the sale of the product is prohibited by AS 18.31.600 and provide the department with a list of the names and addresses of the retailers notified.

Sec. 18.31.650. Civil penalty. A person who violates AS 18.31.600 - 18.31.640 is liable to the state for a civil penalty of up to $1,000 for each violation.

Sec. 18.31.660. Multistate chemicals clearinghouse. The department shall participate in a multistate chemicals clearinghouse to

(1) build governmental capacity to identify and promote safer chemicals and products;

(2) avoid duplication of state initiatives on chemicals and enhance the efficiency and effectiveness of state initiatives on chemicals through collaboration and coordination;

(3) ensure that state agencies, businesses, and the public have easy access to high quality and authoritative information on chemicals.

Sec. 18.31.670. Regulations. In addition to the regulations allowed under AS 18.31.610, the department may adopt regulations to implement AS 18.31.600 - 18.31.690. The department shall adopt the regulations for AS 18.31.600 - 18.31.690 under AS 44.62 (Administrative Procedure Act).

Sec. 18.31.690. Definitions for AS 18.31.600 - 18.31.690. In AS 18.31.600 - 18.31.690, unless the context indicates otherwise,

(1) "congener" means a specific polybromodiphenyl ether molecule;

(2) "decaBDE" means decabromodiphenyl ether or a technical mixture

in which decabromodiphenyl ether is the predominant congener;

(3) "department" means the Department of Environmental Conservation;

(4) "distribution" means distribution for sale or for a commercial purpose;

(5) "electronic product" means a television, a computer, or another piece of electronic equipment;

(6) "flame retardant" means a chemical that is added to plastic, foam, or a textile to inhibit flame formation;

(7) "manufacture" means manufacture for sale;

(8) "manufacturer" means a person who

(A) manufactures a product or whose brand name is affixed to the product; or

(B) imports or distributes a product in the United States if the person who manufactured or assembled the product or whose brand name is affixed to the product does not do business in the United States;

(9) "octaBDE" means octabromodiphenyl ether or a technical mixture in which octabromodiphenyl ether is the predominant congener;

(10) "pentaBDE" means pentabromodiphenyl ether or a technical mixture in which pentabromodiphenyl ether is the predominant congener;

(11) "sell" includes an offer to sell;

(12) "technical mixture" means a mixture that is named for the predominant congener and that is not exclusively composed of the predominant congener;

(13) "transportation vehicle" means a mechanized vehicle that is used to transport goods or individuals, and includes an airplane, an automobile, a motorcycle, a truck, a bus, a train, and a ship.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Environmental Conservation may adopt regulations necessary to implement this Act. The regulations take effect under

AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. Wherever "chapter" appears in AS 18.31.010 - 18.31.500, the revisor of statutes shall substitute "AS 18.31.010 - 18.31.500."

*** Sec. 4.** AS 18.31.660, enacted by sec. 1 of this Act, and sec. 2 of this Act take effect immediately under AS 01.10.070(c).

*** Sec. 5.** Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2013.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB27

Analysis

The prohibition and regulation of products containing flame retardants will require significant outreach because we do not regulate or interact with these businesses currently. In addition, a public campaign to educate the public about brominated flame retardants and the risks associated with them would be necessary. A publication specialist will manage the outreach process and a toxicologist will evaluate the data and develop the regulations and list of persistent bioaccumulative toxic chemicals and update that list every three years. The research analyst will maintain statewide statistical information on those toxins.

(Revised 1/27/2011 OMB)

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB027
2011 LEGISLATIVE SESSION

Analysis:

This bill requires the Department of Environmental Conservation (DEC) to work with the Department of Health & Social Services (DHSS) to establish a list of persistent bioaccumulative toxic chemicals that occur or are used in products used by human beings. DEC would seek consultation from DHSS in two situations when: (1) proposing to prohibit a flame retardant under Section 18.31.610; and (2) establishing a list every three years of persistent bioaccumulative toxic chemicals that occur or are used in products used by human beings, under Section 18.31.680. Additionally, DHSS and DEC would perform a one-time review of brominated flame retardants under Section 18.31.670. These environmental health efforts will require a total appropriation of $26.5 GF. This will not require a new position, as the work will be done by an existing position that is only partially funded. Personal Services for 0.25 FTE Health Program Manager III will be $26.0. The additional cost of $0.5 is for office supplies. No travel or equipment costs are expected. It is anticipated this project will not take more than two years to complete.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB027

Analysis

If passed, this legislation requires the state fire marshal ensure the flame retardant alternative satisfies applicable fire safety standards.

Passage of this legislation will have no fiscal impact on the division of Fire and Life Safety.

CS FOR SENATE BILL NO. 27(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATOR WIELECHOWSKI

A BILL

FOR AN ACT ENTITLED

"An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to a multistate chemicals clearinghouse; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 18.31 is amended by adding new sections to read:

Article 4. Chemicals in Products.

Sec. 18.31.600. Prohibitions. (a) A person may not manufacture, sell, or distribute a product if one or more components of the product contains more than 0.1 percent by mass of pentaBDE, octaBDE, or a combination of pentaBDE and octaBDE.

(b) A person may not manufacture, sell, or distribute a mattress, a mattress pad, or upholstered furniture if one or more components of the mattress, mattress pad, or upholstered furniture contains more than 0.1 percent by mass of decaBDE.

(c) A person may not manufacture, sell, or distribute an electronic product if the electronic product has a plastic housing or other external component that contains

more than 0.1 percent by mass of decaBDE.

(d) A person may not manufacture, sell, or distribute a product that is prohibited by the department under AS 18.31.610.

Sec. 18.31.610. Prohibition by department. (a) The department may prohibit by regulation the manufacture, sale, and distribution of a product that contains a flame retardant that is not already prohibited under AS 18.31.600(a) - (c), if the department determines that

(1) the flame retardant is harmful to public health or the environment; and

(2) an alternative to the flame retardant exists, is safer for the public health or the environment, and is available on a nationwide basis.

(b) Before establishing a prohibition under (a) of this section, the department shall consult with the Department of Health and Social Services, and the state fire marshal shall determine that the flame retardant alternative identified in (a)(2) of this section satisfies applicable fire safety standards.

(c) In this section, "product" means

(1) a mattress, a mattress pad, or upholstered furniture if the mattress, mattress pad, or upholstered furniture contains plastic fibers that contain the flame retardant; or

(2) an electronic product that has a plastic housing that contains the flame retardant.

Sec. 18.31.620. Exemptions. The prohibitions in AS 18.31.600 do not apply if the product that is prohibited is part of

(1) a transportation vehicle or a product or part used in a transportation vehicle or transportation equipment;

(2) a product or equipment used in an industrial, mining, or manufacturing process;

(3) electronic wiring or cable used for power transmission;

(4) a used item that is resold; or

(5) a new item that is brought into the state before the effective date of this section.

Sec. 18.31.630. Notification by manufacturer. A person who manufactures products whose sale and distribution are prohibited by AS 18.31.600 shall inform its retailers in the state of the prohibitions under AS 18.31.600 and the penalty under AS 18.31.650.

Sec. 18.31.640. Enforcement. If the department determines that there are grounds to suspect that a retailer is selling a product in violation of AS 18.31.600, the department may request that, within 10 days, the manufacturer of the product

(1) provide the department with a sworn certificate indicating that the sale of the product does not violate AS 18.31.600; or

(2) notify each retailer who sells the product in the state that the sale of the product is prohibited by AS 18.31.600 and provide the department with a list of the names and addresses of the retailers notified.

Sec. 18.31.650. Civil penalty. A person who violates AS 18.31.600 - 18.31.640 is liable to the state for a civil penalty of up to $1,000 for each violation.

Sec. 18.31.660. Multistate chemicals clearinghouse. The department shall participate in a multistate chemicals clearinghouse to

(1) build governmental capacity to identify and promote safer chemicals and products;

(2) avoid duplication of state initiatives on chemicals and enhance the efficiency and effectiveness of state initiatives on chemicals through collaboration and coordination;

(3) ensure that state agencies, businesses, and the public have easy access to high quality and authoritative information on chemicals.

Sec. 18.31.670. Regulations. In addition to the regulations allowed under AS 18.31.610, the department may adopt regulations to implement AS 18.31.600 - 18.31.690. The department shall adopt the regulations for AS 18.31.600 - 18.31.690 under AS 44.62 (Administrative Procedure Act).

Sec. 18.31.690. Definitions for AS 18.31.600 - 18.31.690. In AS 18.31.600 - 18.31.690, unless the context indicates otherwise,

(1) "congener" means a specific polybromodiphenyl ether molecule;

(2) "decaBDE" means decabromodiphenyl ether or a technical mixture

in which decabromodiphenyl ether is the predominant congener;

(3) "department" means the Department of Environmental Conservation;

(4) "distribution" means distribution for sale or for a commercial purpose;

(5) "electronic product" means a television, a computer, or another piece of electronic equipment;

(6) "flame retardant" means a chemical that is added to plastic, foam, or a textile to inhibit flame formation;

(7) "manufacture" means manufacture for sale;

(8) "manufacturer" means a person who

(A) manufactures a product or whose brand name is affixed to the product; or

(B) imports or distributes a product in the United States if the person who manufactured or assembled the product or whose brand name is affixed to the product does not do business in the United States;

(9) "octaBDE" means octabromodiphenyl ether or a technical mixture in which octabromodiphenyl ether is the predominant congener;

(10) "pentaBDE" means pentabromodiphenyl ether or a technical mixture in which pentabromodiphenyl ether is the predominant congener;

(11) "sell" includes an offer to sell;

(12) "technical mixture" means a mixture that is named for the predominant congener and that is not exclusively composed of the predominant congener;

(13) "transportation vehicle" means a mechanized vehicle that is used to transport goods or individuals, and includes an airplane, an automobile, a motorcycle, a truck, a bus, a train, and a ship.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Environmental Conservation may adopt regulations necessary to implement this Act. The regulations take effect under

AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. Wherever "chapter" appears in AS 18.31.010 - 18.31.500, the revisor of statutes shall substitute "AS 18.31.010 - 18.31.500."

* **Sec. 4.** AS 18.31.660, enacted by sec. 1 of this Act, and sec. 2 of this Act take effect immediately under AS 01.10.070(c).

* **Sec. 5.** Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2013.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB052

Analysis:

Health plans have often treated mental health and substance abuse treatment services differently than they have medical and surgical benefits. This bill defines medical care to include mental health care or care for an alcoholism or substance abuse disorder and requires parity between health care insurance coverage for mental health, alcoholism, substance abuse benefits and other medical care benefits in order to prohibit benefit or service limitations that are more restrictive or financially burdensome.

Assumptions:

The Division of Behavioral Health believes that although the State Medicaid programs under our supervision will experience some minor relief as services are covered through private insurance rather than the state's Medicaid Program, the effect would be offset by increased premiums for group health insurance. Responses to this increase would include reductions in the number of employers offering insurance to their employees and in the number of employees enrolling in employer-sponsored insurance, changes in the types of health plans that are offered (including eliminating coverage for mental health benefits and/or substance benefits), and reductions in the scope of generosity of health insurance benefits, such as increased deductibles or higher copayments.

SB 27

An Act Relating to Flame Retardants

Changes from 27-LS0300\M to version _____

The first changes make enforcement easier by clarifying the limit of PBDE by mass applies to each individual component. Technology exists to quickly test components of products without damage to identify if any bromines are present at the stated 0.1 percent.

Page 1, line 8 clarifies that **no component of a product** may contain more than 0.1 percent by mass

line 12 changes "a textile component" to "any component"

line 14 changes to: "a plastic housing or other external component that contains..." to account for parts of an electronic product, not just the housing, that someone may come into contact with in the routine use of the product, such as handles and knobs.

Page 3, lines 5-6. Deletes **Sec. 18.31.640. Retailer Assistance.**

Lines 17-23. Deletes **Sec. 18.31.670. Review by departments.**

Lines 24-Page 4, line 4. Deletes **Sec. 18.31.680. List of Toxic Chemicals.**

Page 4, lines 5-11. **Sec. 18.31.690. Interstate clearinghouse.** Requires the department to participate in the interstate clearinghouse and provides reasons.

The department shall participate in a multi-state chemicals clearinghouse to:

- Avoid duplication and enhance efficiency and effectiveness of agency initiatives on chemicals through collaboration and coordination
- Build governmental capacity to identify and promote safer chemicals and products
- Ensure that agencies, businesses, and the public have ready access to high quality and authoritative chemicals data, information, and assessment methods

The new bill provides for an immediate effective date for participation in the Interstate Clearinghouse.

The new bill renumbers sections to account for changes.

Prepared by Karla Hart, Aide to Senator Wielechowski, 2/24/2011

SB 27

An Act Relating to Flame Retardants

Changes from 27-LS0300\M to version B

➔ The first changes make enforcement easier by clarifying the limit of PBDE by mass applies to each individual component. Technology exists to quickly test components of products without damage to identify if any bromines are present at the stated 0.1 percent.

Page 1, line 8 and 12[1] clarifies that **no component of a product** may contain more than 0.1 percent by mass

line 14 changes to: "a plastic housing or other external component that contains..." to account for parts of an electronic product, not just the housing, that someone may come into contact with in the routine use of the product, such as handles and knobs.

➔ Three sections are deleted:

Page 3, lines 5-6. **Sec. 18.31.640. Retailer Assistance.**

Lines 17-23. **Sec. 18.31.670. Review by departments.**

Lines 24-Page 4, line 4. **Sec. 18.31.680. List of Toxic Chemicals.**

➔ And replaced with required participation in an interstate chemical clearinghouse which will more efficiently accomplish some of the review and list functions deleted above.

Page 4, lines 5-11. **Sec. 18.31.690. Interstate clearinghouse.** The department shall participate in a multi-state chemicals clearinghouse to:

- Avoid duplication and enhance efficiency and effectiveness of agency initiatives on chemicals through collaboration and coordination

SB 52 27-LS0081 - The Alaska Mental Health Insurance Parity Act

TITLE: "An Act requiring health care insurers to provide coverage for treatment of mental health conditions, and requiring parity between health care insurance coverage for mental health, alcoholism, and substance abuse benefits and other medical care benefits; eliminating different treatment for mental health conditions from the minimum benefits of the state health insurance plan; removing an exclusion for mental health services or alcohol or drug abuse from the definition of 'basic health care services' in the law relating to health maintenance organizations; repealing a definition of 'mental health benefits' that excludes treatment of substance abuse or chemical dependency; and providing for an effective date."

SPONSOR STATEMENT

This bill amends several sections of Alaska's health insurance code to require that health care insurers provide full "parity," *i.e.,* equal insurance coverage, or the same financial and treatment coverage for mental health conditions including alcohol and substance abuse as other physical illnesses. This bill expands on state compliance under HB 222 in 2009 with newly enacted federal parity law, the "*Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act*" of 2008. That Act also applies to all Children's Health Insurance Programs and became effective April 1, 2009.

Historically, health insurers have been reluctant to cover mental health and substance abuse services on the same basis as general medical and surgical services. During the 1980s many states required insurers to provide coverage for mental health services and to offer freedom of choice among providers. However, concerns about the adequacy of this coverage persisted because insurers imposed increased cost sharing or restrictive benefit limits. This led to more federal and state intervention on behalf of consumers.

While current federal law does not mandate that group plans must provide mental health coverage, if they do, they must provide the same financial and treatment coverage offered for other physical illnesses. This bill differs from federal law in that it does mandate that "*a health care insurer which offers, issues for delivery, delivers, or renews a health care insurance plan to an employer or individual on a group or individual basis shall provide coverage for treatment of a mental health condition.*" Coverage of mental health conditions includes alcoholism and drug abuse as defined in the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*.

This bill also requires parity with respect to all financial aspects including lifetime or annual limits, deductibles, copayments, coinsurances, benefits limitations with a $1,500 yearly maximum plus the deductible. It does not provide similar federal small business and business cost exemptions.

Self-funded health care plans are not state-regulated private "insurance" company plans and they usually are entirely exempt from state regulation because they are preempted by the federal ERISA law. Self-funded plans include the largest employers and the "Alaska Care" state health plan. The State Division of Insurance reportedly has not enforced insurance laws on the Alaska's union health trusts, and the Division's ability to do so is subject to legal debate. State laws generally do not apply to federally funded public programs such as Medicaid, Medicare and the Veterans Administration.

While the private insurers in Alaska have complained that insurance mandates only apply to about 40% of the insured in Alaska, voluntary compliance by large self-funded plans greatly increases this number. The self-funded state health plan historically has matched state mandates for private insurers, even though the state is not legally required to do. Currently, 46 states have passed some type of parity laws, the majority of which go beyond the federal mandate, including 28 that require full parity for mental health benefits. 38 states include coverage for substance abuse, alcohol or drug addiction.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB052

Analysis:

Health plans have often treated mental health and substance abuse treatment services differently than they have medical and surgical benefits. This bill defines medical care to include mental health care or care for an alcoholism or substance abuse disorder and requires parity between health care insurance coverage for mental health, alcoholism, substance abuse benefits and other medical care benefits in order to prohibit benefit or service limitations that are more restrictive or financially burdensome.

Assumptions:

The Division of Behavioral Health believes that although the State Medicaid programs under our supervision will experience some minor relief as services are covered through private insurance rather than the state's Medicaid Program, the effect would be offset by increased premiums for group health insurance. Responses to this increase would include reductions in the number of employers offering insurance to their employees and in the number of employees enrolling in employer-sponsored insurance, changes in the types of health plans that are offered (including eliminating coverage for mental health benefits and/or substance benefits), and reductions in the scope of generosity of health insurance benefits, such as increased deductibles or higher copayments.

MEMORANDUM September 10, 2010

SUBJECT: Mental Health Parity (Work Order No. 27-LS0081\A)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey DCB
Legislative Counsel

This memorandum accompanies the draft bill relating to mental health parity that you requested. Please note the following issues that have come to my attention during drafting.

In 2009, the legislature repealed and reenacted AS 21.54.151 to require a health care insurer that offers a health care insurance plan in the group market to comply with the mental health or substance abuse benefit requirements established under 42 U.S.C. 300gg-5. Sec. 6, ch. 55, SLA 2009. However, 42 U.S.C. 300gg[1] of the Public Health Service Act, including 42 U.S.C. 300gg-5, which addresses mental health parity, was significantly amended and rearranged by the Patient Protection and Affordable Care Act.[2] 42 U.S.C. 300gg-5 was re-designated as 42 U.S.C. 300gg-26.[3] Copy enclosed. The Patient Protection and Affordable Care Act also amended former sec. 300gg-26 to include individual health insurance coverage under the policies.[4] The changes to 42 U.S.C. 300gg, et seq. are effective for plan years beginning on or after September 23, 2010.[5]

---

[1] Part A of Title XXVII of the Public Health Service Act (42 U.S.C. 300gg, et seq.) [see note preceding 42 U.S.C. 300gg].

[2] P.L. 111-148, Title 1, Subtitle A, Sec. 1001, 124 Stat. 130, March 23, 2010. It is not entirely clear whether this effective date was intended to apply to the amendments to sec. 300gg-26.

[3] See Explanatory note to current 42 U.S.C. 300gg-5.

[4] See Amendment note to 42 U.S.C. 300gg-26.

[5] P.L. 111-148, sec. 1004(a), 42 U.S.C. 300gg-11 note.

The current draft of the bill repeals and replaces AS 21.54.151. It removes the current reference adopting 42 U.S.C. 300gg-5 (the current reference) and eliminates the need to refer to 42 U.S.C. 300gg-26, the new reference as of September 23, 2010. However, the federal standards for parity for the treatment of mental health conditions under these federal statute sections remain effective. Subject to certain exceptions, the provisions of 42 U.S.C. 300gg et seq. do not supersede state law relating to health insurance issuers except to the extent that a state standard or requirement prevents the application of a requirement under 42 U.S.C. 300gg et seq. See 42 U.S.C. 300gg-23. Preemption; State flexibility; construction. Copy enclosed.

Note that the parity requirements for mental health benefits set out in AS 21.54.151(b), as repealed and reenacted by bill sec. 2, refer to "a mental health condition" but do not specifically refer to treatment for alcoholism or substance abuse. "Mental health condition" is defined in AS 21.54.151(c)(3) by reference to the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders. You should confirm that the designated manual adequately defines alcoholism or substance abuse as a mental health condition so that the parity provisions apply as you intend.

If I may be of further assistance, please advise.

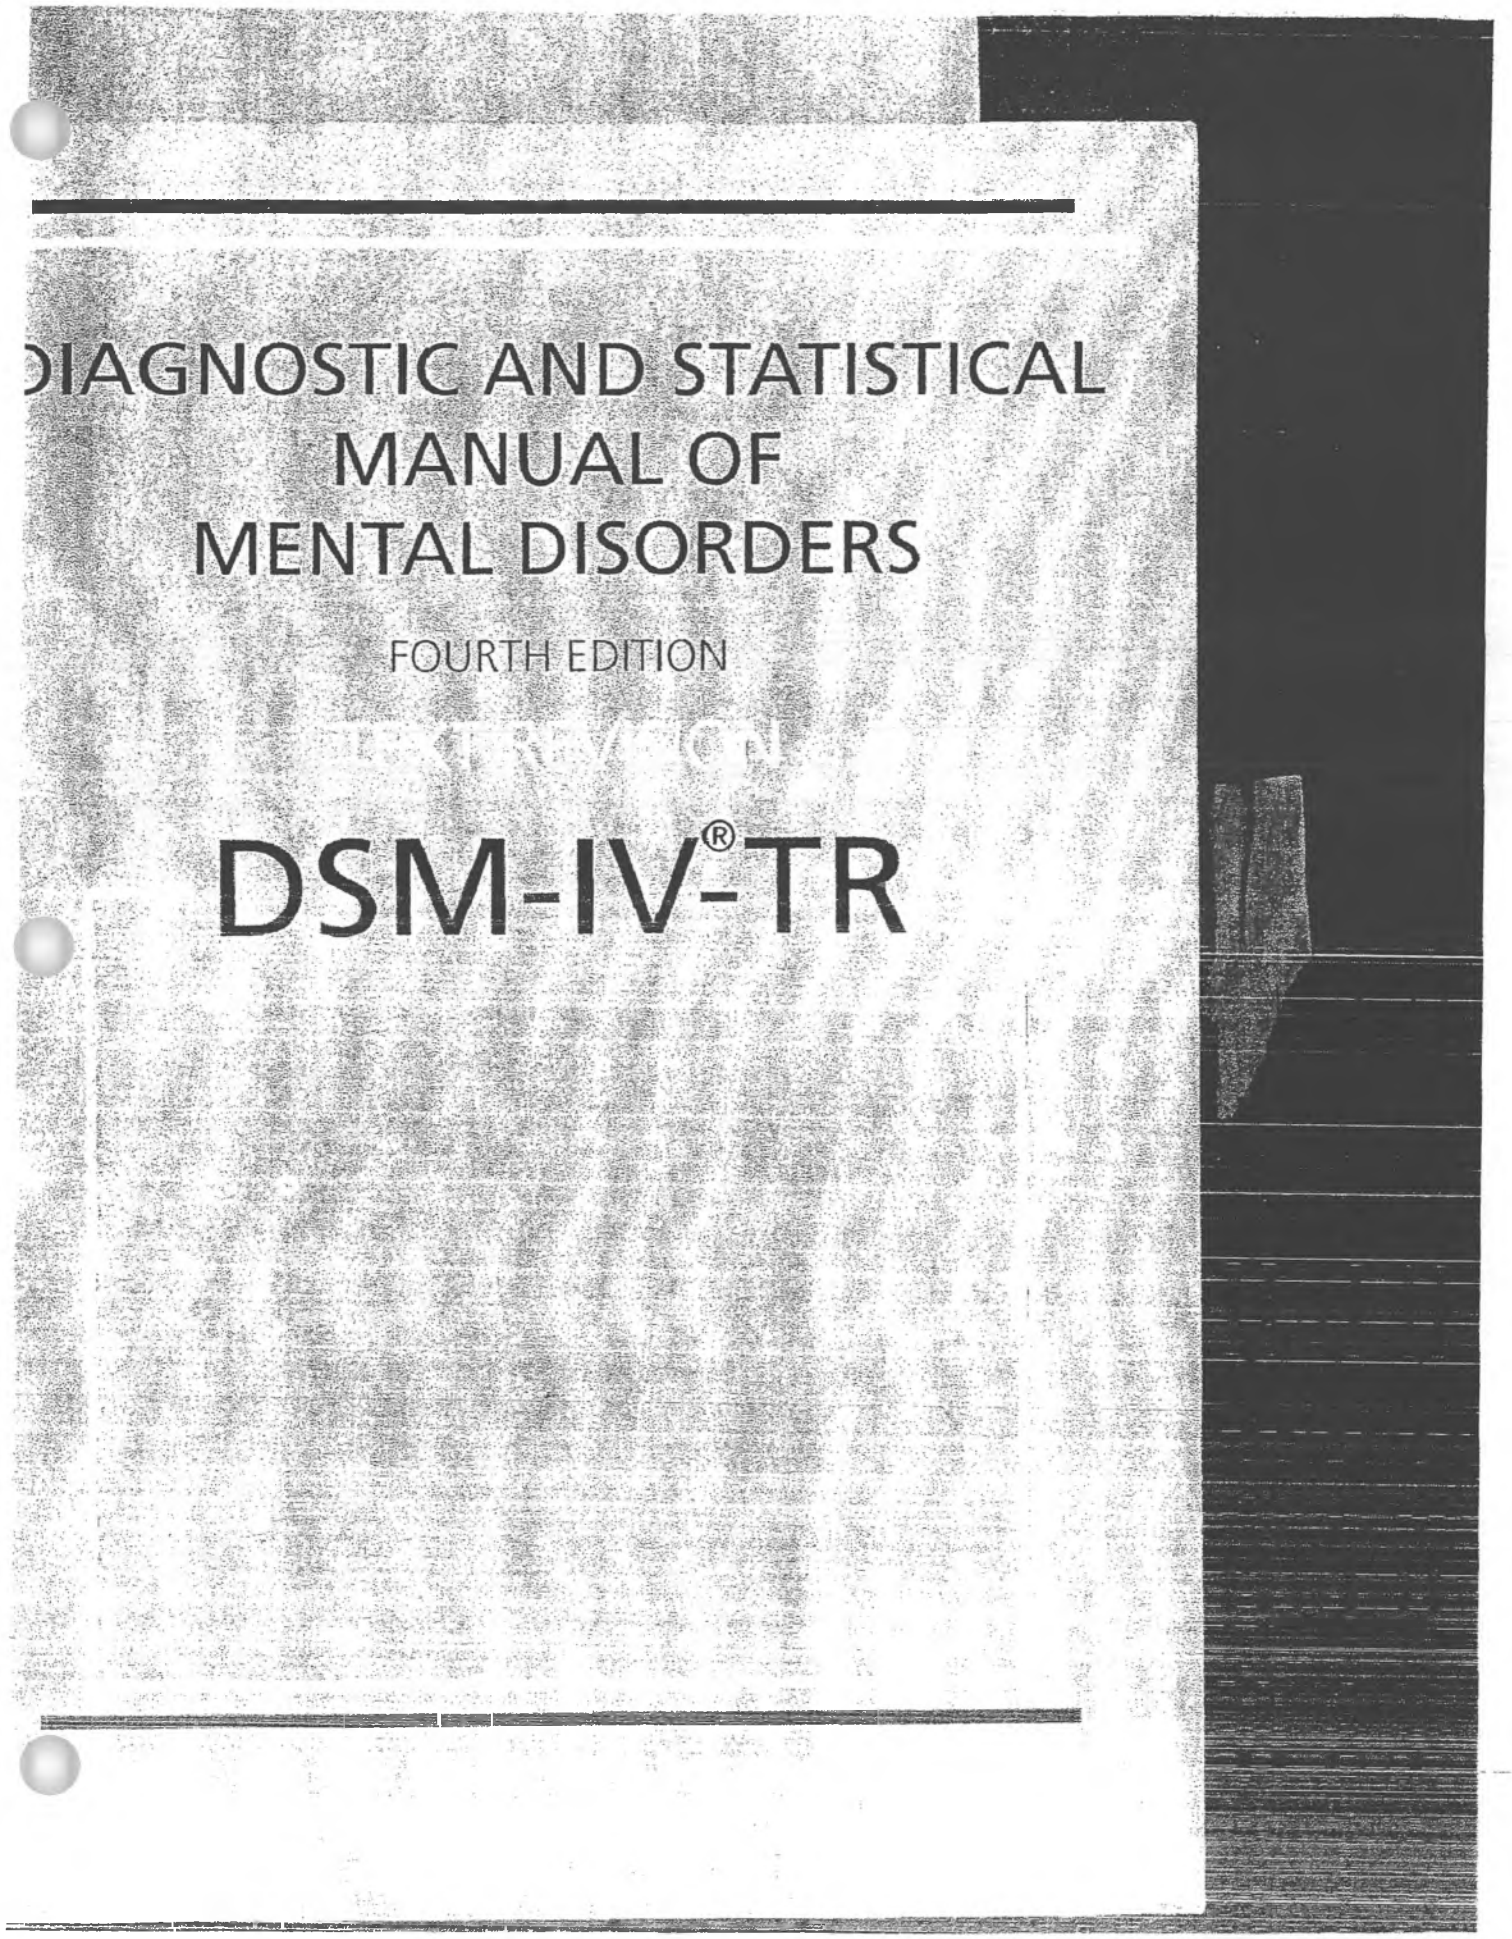
Subject: RE: Mental health parity bill - definitions for 27-LS0081\A
Attachments: Substance Abuse_Dependence.pdf

Mr. Obermeyer,

Please find attached scanned pages of the DSM IV TR manual. You will note that pages 191 to 201 provide an overview of substance abuse disorders and subsequent pages list all of the various substance specific diagnoses. My approach was to, perhaps, provide more information than might be needed rather than less.

Do not hesitate to contact me if I can provide additional information,

Richard



DIAGNOSTIC AND STATISTICAL
MANUAL OF
MENTAL DISORDERS
FOURTH EDITION
DSM-IV®-TR

Substance-Related Disorders

The Substance-Related Disorders include disorders related to the taking of a drug of abuse (including alcohol), to the side effects of a medication, and to toxin exposure. In this manual, the term *substance* can refer to a drug of abuse, a medication, or a toxin. The substances discussed in this section are grouped into 11 classes: alcohol; amphetamine or similarly acting sympathomimetics; caffeine; cannabis; cocaine; hallucinogens; inhalants; nicotine; opioids; phencyclidine (PCP) or similarly acting arylcyclohexylamines; and sedatives, hypnotics, or anxiolytics. Although these 11 classes appear in alphabetical order, the following classes share similar features: alcohol shares features with the sedatives, hypnotics, and anxiolytics; and cocaine shares features with amphetamines or similarly acting sympathomimetics. Also included in this section are Polysubstance Dependence and Other or Unknown Substance-Related Disorders (which include most disorders related to medications or toxins).

Many prescribed and over-the-counter medications can also cause Substance-Related Disorders. Symptoms generally occur at high doses of the medication and usually disappear when the dosage is lowered or the medication is stopped. Medications that may cause Substance-Related Disorders include, but are not limited to, anesthetics and analgesics, anticholinergic agents, anticonvulsants, antihistamines, antihypertensive and cardiovascular medications, antimicrobial medications, antiparkinsonian medications, chemotherapeutic agents, corticosteroids, gastrointestinal medications, muscle relaxants, nonsteroidal anti-inflammatory medications, other over-the-counter medications, antidepressant medications, and disulfiram.

Exposure to a wide range of other chemical substances can also lead to the development of a Substance-Related Disorder. Toxic substances that may cause Substance-Related Disorders include, but are not limited to, heavy metals (e.g., lead or aluminum), rat poisons containing strychnine, pesticides containing nicotine, or acetylcholinesterase inhibitors, nerve gases, ethylene glycol (antifreeze), carbon monoxide, and carbon dioxide. The volatile substances (e.g., fuel, paint) are classified as "inhalants" (see p. 257) if they are used for the purpose of becoming intoxicated; they are considered "toxins" if exposure is accidental or part of intentional poisoning. Impairments in cognition or mood are the most common symptoms associated with toxic substances, although anxiety, hallucinations, delusions, or seizures can also result. Symptoms usually disappear when the individual is no longer exposed to the substance, but resolution of symptoms can take weeks or months and may require treatment.

The Substance-Related Disorders are divided into two groups: the Substance Use Disorders (Substance Dependence and Substance Abuse) and the Substance-Induced Disorders (Substance Intoxication, Substance Withdrawal, Substance-Induced Delirium, Substance-Induced Persisting Dementia, Substance-Induced Persisting Am-

nestic Disorder, Substance-Induced Psychotic Disorder, Substance-Induced Mood Disorder, Substance-Induced Anxiety Disorder, Substance-Induced Sexual Dysfunction, and Substance-Induced Sleep Disorder). The section begins with the text and criteria sets for Substance Dependence, Abuse, Intoxication, and Withdrawal that are applicable across classes of substances. This is followed by general comments concerning associated features; culture, age, and gender features; course; impairment and complications; familial pattern; differential diagnosis; and recording procedures that apply to all substance classes. The remainder of the section is organized by class of substance and describes the specific aspects of Dependence, Abuse, Intoxication, and Withdrawal for each of the 11 classes of substances. It should be noted that the Prevalence sections of the substance-specific texts contain survey data indicating rates of substance use in various age groups, as well as the lifetime and 1-year prevalence of Dependence and Abuse. To facilitate differential diagnosis, the text and criteria for the remaining Substance-Induced Disorders are included in the sections of the manual with disorders with which they share phenomenology (e.g., Substance-Induced Mood Disorder is included in the "Mood Disorders" section). The diagnoses associated with each specific group of substances are shown in Table 1.

Substance Use Disorders

Substance Dependence

Features

The essential feature of Substance Dependence is a cluster of cognitive, behavioral, and physiological symptoms indicating that the individual continues use of the substance despite significant substance-related problems. There is a pattern of repeated self-administration that can result in tolerance, withdrawal, and compulsive drug-taking behavior. A diagnosis of Substance Dependence can be applied to every class of substances except caffeine. The symptoms of Dependence are similar across the various categories of substances, but for certain classes some symptoms are less salient, and in a few instances not all symptoms apply (e.g., withdrawal symptoms are not specified for Hallucinogen Dependence). Although not specifically listed as a criterion item, "craving" (a strong subjective drive to use the substance) is likely to be experienced by most (if not all) individuals with Substance Dependence. Dependence is defined as a cluster of three or more of the symptoms listed below occurring at any time in the same 12-month period.

Tolerance (Criterion 1) is the need for greatly increased amounts of the substance to achieve intoxication (or the desired effect) or a markedly diminished effect with continued use of the same amount of the substance. The degree to which tolerance develops varies greatly across substances. Furthermore, for a specific drug, varied degrees of tolerance may develop for its different central nervous system effects. For example, for opioids, tolerance to respiratory depression and tolerance to analgesia develop at different rates. Individuals with heavy use of opioids and stimulants can

*Also Hallucinogen Persisting Perception Disorder (Flashbacks).

Note: X, I, W, I/W, or P indicates that the category is recognized in DSM-IV. In addition, *I* indicates that the specifier With Onset During Intoxication may be noted for the category (except for Intoxication Delirium); *W* indicates that the specifier With Onset During Withdrawal may be noted for the category (except for Withdrawal Delirium); and *I/W* indicates that either With Onset During Intoxication or With Onset During Withdrawal may be noted for the category. *P* indicates that the disorder is Persisting.

develop substantial (e.g., 10-fold) levels of tolerance, often to a dosage that would b lethal to a nonuser. Alcohol tolerance can also be pronounced, but is usually less e› treme than for amphetamine. Many individuals who smoke cigarettes consume mor than 20 cigarettes a day, an amount that would have produced symptoms of toxicit when they first started smoking. Individuals with heavy use of cannabis or phencycl dine (PCP) are generally not aware of having developed tolerance (although it ha been demonstrated in animal studies and in some individuals). Tolerance may be dif ficult to determine by history alone when the substance used is illegal and perhap mixed with various diluents or with other substances. In such situations, laborator tests may be helpful (e.g., high blood levels of the substance coupled with little evi dence of intoxication suggest that tolerance is likely). Tolerance must also be distin guished from individual variability in the initial sensitivity to the effects of particula substances. For example, some first-time drinkers show very little evidence of intox ication with three or four drinks, whereas others of similar weight and drinking his tories have slurred speech and incoordination.

Withdrawal (Criterion 2a) is a maladaptive behavioral change, with physiologica and cognitive concomitants, that occurs when blood or tissue concentrations of a sub stance decline in an individual who had maintained prolonged heavy use of the sub stance. After developing unpleasant withdrawal symptoms, the person is likely t take the substance to relieve or to avoid those symptoms (Criterion 2b), typically us ing the substance throughout the day beginning soon after awakening. Withdrawa symptoms, which are generally the opposite of the acute effects of the substance, var greatly across the classes of substances, and separate criteria sets for Withdrawal ar provided for most of the classes. Marked and generally easily measured physiologi cal signs of withdrawal are common with alcohol, opioids, and sedatives, hypnotics and anxiolytics. Withdrawal signs and symptoms are often present, but may be les apparent, with stimulants such as amphetamines and cocaine, as well as with nicotin and cannabis. No significant withdrawal is seen even after repeated use of hallucino gens. Withdrawal from phencyclidine and related substances has not yet been de scribed in humans (although it has been demonstrated in animals). Neither tolerance nor withdrawal is necessary or sufficient for a diagnosis of Substance Dependence However, for most classes of substances, a past history of tolerance or withdrawal i associated with a more severe clinical course (i.e., an earlier onset of Dependence higher levels of substance intake, and a greater number of substance-related prob lems). Some individuals (e.g., those with Cannabis Dependence) show a pattern o compulsive use without obvious signs of tolerance or withdrawal. Conversely, som general medical and postsurgical patients without Opioid Dependence may develo a tolerance to prescribed opioids and experience withdrawal symptoms withou showing any signs of compulsive use. The specifiers With Physiological Dependenc and Without Physiological Dependence are provided to indicate the presence or ab sence of tolerance or withdrawal.

The following items describe the pattern of compulsive substance use that is char acteristic of Dependence. The individual may take the substance in larger amounts o over a longer period than was originally intended (e.g., continuing to drink until se verely intoxicated despite having set a limit of only one drink) (Criterion 3). The in dividual may express a persistent desire to cut down or regulate substance use. Often there have been many unsuccessful efforts to decrease or discontinue use (Criterion 4)

he individual may spend a great deal of time obtaining the substance, using the substance, or recovering from its effects (Criterion 5). In some instances of Substance Dependence, virtually all of the person's daily activities revolve around the substance. mportant social, occupational, or recreational activities may be given up or reduced ecause of substance use (Criterion 6). The individual may withdraw from family activities and hobbies in order to use the substance in private or to spend more time vith substance-using friends. Despite recognizing the contributing role of the substance to a psychological or physical problem (e.g., severe depressive symptoms or amage to organ systems), the person continues to use the substance (Criterion 7). he key issue in evaluating this criterion is not the existence of the problem, but rather the individual's failure to abstain from using the substance despite having evidence of the difficulty it is causing.

pecifiers

olerance and withdrawal may be associated with a higher risk for immediate general medical problems and a higher relapse rate. Specifiers are provided to note their resence or absence:

With Physiological Dependence. This specifier should be used when Substance Dependence is accompanied by evidence of tolerance (Criterion 1) or withdrawal (Criterion 2).

Without Physiological Dependence. This specifier should be used when there is no evidence of tolerance (Criterion 1) or withdrawal (Criterion 2). In these individuals, Substance Dependence is characterized by a pattern of compulsive use (at least three items from Criteria 3–7).

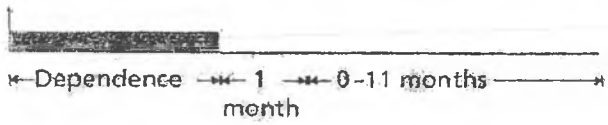
Course Specifiers

ix course specifiers are available for Substance Dependence. The four Remission pecifiers can be applied only after none of the criteria for Substance Dependence or Substance Abuse have been present for at least 1 month. For those criteria that require ecurrent problems, a remission specifier can apply only if no aspect of the criterion as been present (e.g., one incident of driving while intoxicated would suffice to disqualify the individual from being considered in remission). The definition of these our types of Remission is based on the interval of time that has elapsed since the cesation of Dependence (Early versus Sustained Remission) and whether there is continued presence of one or more of the items included in the criteria sets for Dependence or Abuse (Partial versus Full Remission). Because the first 12 months following Dependence is a time of particularly high risk for relapse, this period is designated Early Remission. After 12 months of Early Remission have passed without relapse to Dependence, the person enters into Sustained Remission. For both Early Remission and Sustained Remission, a further designation of Full is given if no criteria for Dependence or Abuse have been met during the period of remission; a designation of Partial is given if at least one of the criteria for Dependence or Abuse has been met, intermittently or continuously, during the period of remission. The differentiation of Sustained Full Remission from recovered (no current Substance Use Dis-

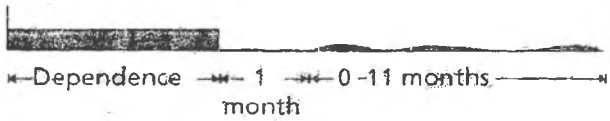
order) requires consideration of the length of time since the last period of disturbance, the total duration of the disturbance, and the need for continued evaluation. If, after a period of remission or recovery, the individual again becomes dependent, the application of the Early Remission specifier requires that there again be at least 1 month in which no criteria for Dependence or Abuse are met. Two additional specifiers have been provided: On Agonist Therapy and In a Controlled Environment. For an individual to qualify for Early Remission after cessation of agonist therapy or release from a controlled environment, there must be a 1-month period in which none of the criteria for Dependence or Abuse are met.

The following Remission specifiers can be applied only after no criteria for Dependence or Abuse have been met for at least 1 month. Note that these specifiers do not apply if the individual is on agonist therapy or in a controlled environment (see below).

Early Full Remission. This specifier is used if, for at least 1 month, but for less than 12 months, no criteria for Dependence or Abuse have been met.



Early Partial Remission. This specifier is used if, for at least 1 month, but less than 12 months, one or more criteria for Dependence or Abuse have been met (but the full criteria for Dependence have not been met).



Sustained Full Remission. This specifier is used if none of the criteria for Dependence or Abuse have been met at any time during a period of 12 months or longer.

Sustained Partial Remission. This specifier is used if full criteria for Dependence have not been met for a period of 12 months or longer; however, one or more criteria for Dependence or Abuse have been met.

The following specifiers apply if the individual is on agonist therapy or in a controlled environment:

On Agonist Therapy. This specifier is used if the individual is on a prescribed agonist medication such as methadone and no criteria for Dependence or Abuse have been met for that class of medication for at least the past month (except tolerance to, or withdrawal from, the agonist). This category also applies to those being treated for Dependence using a partial agonist or an agonist/antagonist.

In a Controlled Environment. This specifier is used if the individual is in an environment where access to alcohol and controlled substances is restricted, and no criteria for Dependence or Abuse have been met for at least the past month. Examples of these environments are closely supervised and substance-free jails, therapeutic communities, or locked hospital units.

Criteria for Substance Dependence

A maladaptive pattern of substance use, leading to clinically significant impairment or distress, as manifested by three (or more) of the following, occurring at any time in the same 12-month period:

(1) tolerance, as defined by either of the following:
   (a) a need for markedly increased amounts of the substance to achieve intoxication or desired effect
   (b) markedly diminished effect with continued use of the same amount of the substance

(2) withdrawal, as manifested by either of the following:
   (a) the characteristic withdrawal syndrome for the substance (refer to Criteria A and B of the criteria sets for Withdrawal from the specific substances)
   (b) the same (or a closely related) substance is taken to relieve or avoid withdrawal symptoms

(3) the substance is often taken in larger amounts or over a longer period than was intended

(4) there is a persistent desire or unsuccessful efforts to cut down or control substance use

(5) a great deal of time is spent in activities necessary to obtain the substance (e.g., visiting multiple doctors or driving long distances), use the substance (e.g., chain-smoking), or recover from its effects

(6) important social, occupational, or recreational activities are given up or reduced because of substance use

(7) the substance use is continued despite knowledge of having a persistent or recurrent physical or psychological problem that is likely to have been caused or exacerbated by the substance (e.g., current cocaine use despite recognition of cocaine-induced depression, or continued drinking despite recognition that an ulcer was made worse by alcohol consumption)

Criteria for Substance Dependence *(continued)*

Specify if:

With Physiological Dependence: evidence of tolerance or withdrawal (i.e., either Item 1 or 2 is present)
Without Physiological Dependence: no evidence of tolerance or withdrawal (i.e., neither Item 1 nor 2 is present)

Course specifiers (see text for definitions):

Early Full Remission
Early Partial Remission
Sustained Full Remission
Sustained Partial Remission
On Agonist Therapy
In a Controlled Environment

Substance Abuse

Features

The essential feature of Substance Abuse is a maladaptive pattern of substance use manifested by recurrent and significant adverse consequences related to the repeated use of substances. In order for an Abuse criterion to be met, the substance-related problem must have occurred repeatedly during the same 12-month period or been persistent. There may be repeated failure to fulfill major role obligations, repeated use in situations in which it is physically hazardous, multiple legal problems, and recurrent social and interpersonal problems (Criterion A). Unlike the criteria for Substance Dependence, the criteria for Substance Abuse do not include tolerance, withdrawal, or a pattern of compulsive use and instead include only the harmful consequences of repeated use. A diagnosis of Substance Abuse is preempted by the diagnosis of Substance Dependence if the individual's pattern of substance use has ever met the criteria for Dependence for that class of substances (Criterion B). Although a diagnosis of Substance Abuse is more likely in individuals who have only recently started taking the substance, some individuals continue to have substance-related adverse social consequences over a long period of time without developing evidence of Substance Dependence. The category of Substance Abuse does not apply to caffeine and nicotine. The term *abuse* should be applied only to a pattern of substance use that meets the criteria for this disorder; the term should not be used as a synonym for "use," "misuse," or "hazardous use."

The individual may repeatedly demonstrate intoxication or other substance-related symptoms when expected to fulfill major role obligations at work, school, or home (Criterion A1). There may be repeated absences or poor work performance related to recurrent hangovers. A student might have substance-related absences, suspensions, or expulsions from school. While intoxicated, the individual may neglect children or household duties. The person may repeatedly be intoxicated in situations that are

physically hazardous (e.g., while driving a car, operating machinery, or engaging in risky recreational behavior such as swimming or rock climbing) (Criterion A2). There may be recurrent substance-related legal problems (e.g., arrests for disorderly conduct, assault and battery, driving under the influence) (Criterion A3). The person may continue to use the substance despite a history of undesirable persistent or recurrent social or interpersonal consequences (e.g., marital difficulties or divorce, verbal or physical fights) (Criterion A4).

Criteria for Substance Abuse

A. A maladaptive pattern of substance use leading to clinically significant impairment or distress, as manifested by one (or more) of the following, occurring within a 12-month period:

(1) recurrent substance use resulting in a failure to fulfill major role obligations at work, school, or home (e.g., repeated absences or poor work performance related to substance use; substance-related absences, suspensions, or expulsions from school; neglect of children or household)

(2) recurrent substance use in situations in which it is physically hazardous (e.g., driving an automobile or operating a machine when impaired by substance use)

(3) recurrent substance-related legal problems (e.g., arrests for substance-related disorderly conduct)

(4) continued substance use despite having persistent or recurrent social or interpersonal problems caused or exacerbated by the effects of the substance (e.g., arguments with spouse about consequences of intoxication, physical fights)

B. The symptoms have never met the criteria for Substance Dependence for this class of substance.

Substance-Induced Disorders

Substance Intoxication

Diagnostic Features

The essential feature of Substance Intoxication is the development of a reversible substance-specific syndrome due to the recent ingestion of (or exposure to) a substance (Criterion A). The clinically significant maladaptive behavioral or psychological changes associated with intoxication (e.g., belligerence, mood lability, cognitive impairment, impaired judgment, impaired social or occupational functioning) are due to the direct physiological effects of the substance on the central nervous system and develop during or shortly after use of the substance (Criterion B). The symptoms are not due to a general medical condition and are not better accounted for by another

mental disorder (Criterion C). Substance Intoxication is often associated with Su stance Abuse or Dependence. This category does not apply to nicotine. Evidence f recent intake of the substance can be obtained from the history, physical examinati (e.g., smell of alcohol on the breath), or toxicological analysis of body fluids (e. urine or blood).

The most common changes involve disturbances of perception, wakefulness, a tention, thinking, judgment, psychomotor behavior, and interpersonal behavior. Th specific clinical picture in Substance Intoxication varies dramatically among indivi uals and also depends on which substance is involved, the dose, the duration or chr nicity of dosing, the person's tolerance for the substance, the period of time since th last dose, the expectations of the person as to the substance's effects, and the enviro ment or setting in which the substance is taken. Short-term or "acute" intoxicatior may have different signs and symptoms from sustained or "chronic" intoxication For example, moderate cocaine doses may initially produce gregariousness, bu social withdrawal may develop if such doses are frequently repeated over days c weeks.

Different substances (sometimes even different substance classes) may produc identical symptoms. For example, Amphetamine and Cocaine Intoxication can bot present with grandiosity and hyperactivity, accompanied by tachycardia, pupillar dilation, elevated blood pressure, and perspiration or chills. Also, alcohol and sub stances from the sedative, hypnotic, or anxiolytic class produce similar symptoms o intoxication.

When used in the physiological sense, the term *intoxication* is broader than Sub stance Intoxication as defined here. Many substances may produce physiological o psychological changes that are not necessarily maladaptive. For example, an individ ual with tachycardia from excessive caffeine use has a physiological intoxication, bu if this is the only symptom in the absence of maladaptive behavior, the diagnosis o Caffeine Intoxication would not apply. The maladaptive nature of a substance induced change in behavior depends on the social and environmental context. The maladaptive behavior generally places the individual at significant risk for adverse effects (e.g., accidents, general medical complications, disruption in social and family relationships, vocational or financial difficulties, legal problems). Signs and symptoms of intoxication may sometimes persist for hours or days beyond the time when the substance is detectable in body fluids. This may be due to continuing low concentrations of the substance in certain areas of the brain or to a "hit and run" effect in which the substance alters a physiological process, the recovery of which takes longer than the time for elimination of the substance. These longer-term effects of intoxication must be distinguished from withdrawal (i.e., symptoms initiated by a decline in blood or tissue concentrations of a substance).

Criteria for Substance Intoxication

A. The development of a reversible substance-specific syndrome due to recent ingestion of (or exposure to) a substance. **Note:** Different substances may produce similar or identical syndromes.

B. Clinically significant maladaptive behavioral or psychological changes that are due to the effect of the substance on the central nervous system (e.g., belligerence, mood lability, cognitive impairment, impaired judgment, impaired social or occupational functioning) and develop during or shortly after use of the substance.

C. The symptoms are not due to a general medical condition and are not better accounted for by another mental disorder.

Substance Withdrawal

Diagnostic Features

The essential feature of Substance Withdrawal is the development of a substance-specific maladaptive behavioral change, with physiological and cognitive concomitants, that is due to the cessation of, or reduction in, heavy and prolonged substance use (Criterion A). The substance-specific syndrome causes clinically significant distress or impairment in social, occupational, or other important areas of functioning (Criterion B). The symptoms are not due to a general medical condition and are not better accounted for by another mental disorder (Criterion C). Withdrawal is usually, but not always, associated with Substance Dependence (see p. 192). Most (perhaps all) individuals with Withdrawal have a craving to readminister the substance to reduce the symptoms. The diagnosis of Withdrawal is recognized for the following groups of substances: alcohol; amphetamines and other related substances; cocaine; nicotine; opioids; and sedatives, hypnotics, or anxiolytics. The signs and symptoms of Withdrawal vary according to the substance used, with most symptoms being the opposite of those observed in Intoxication with the same substance. The dose and duration of use and other factors such as the presence or absence of additional illnesses also affect withdrawal symptoms. Withdrawal develops when doses are reduced or stopped, whereas signs and symptoms of Intoxication improve (gradually in some cases) after dosing stops.

42 USCS § 300gg-23

§ 300gg-23. Preemption; State flexibility; construction

(a) Continued applicability of State law with respect to health insurance issuers.

(1) In general. Subject to paragraph (2) and except as provided in subsection (b), this part [42 USCS §§ 300gg et seq.] and part C [42 USCS §§ 300gg-91 et seq.] insofar as it relates to this part [42 USCS §§ 300gg et seq.] shall not be construed to supersede any provision of State law which establishes, implements, or continues in effect any standard or requirement solely relating to health insurance issuers in connection with individual or group health insurance coverage except to the extent that such standard or requirement prevents the application of a requirement of this part [42 USCS §§ 300gg et seq.].

(2) Continued preemption with respect to group health plans. Nothing in this part [42 USCS §§ 300gg et seq.] shall be construed to affect or modify the provisions of section 514 of the Employee Retirement Income Security Act of 1974 [29 USCS § 1144] with respect to group health plans.

(b) Special rules in case of portability requirements.

(1) In general. Subject to paragraph (2), the provisions of this part [42 USCS §§ 300gg et seq.] relating to health insurance coverage offered by a health insurance issuer supersede any provision of State law which establishes, implements, or continues in effect a standard or requirement applicable to imposition of a preexisting condition exclusion specifically governed by section 701 which differs from the standards or requirements specified in such section.

(2) Exceptions. Only in relation to health insurance coverage offered by a health insurance issuer, the provisions of this part [42 USCS §§ 300gg et seq.] do not supersede any provision of State law to the extent that such provision--

(i) substitutes for the reference to "6-month period" in section 2701(a)(1) [42 USCS § 300gg(a)(1)] a reference to any shorter period of time;

(ii) substitutes for the reference to "12 months" and "18 months" in section 2701(a)(2) [42 USCS § 300gg(a)(2)] a reference to any shorter period of time;

(iii) substitutes for the references to "63" days in sections 2701(c)(2)(A) and 2701(d)(4)(A) [42 USCS § 300gg(c)(2)(A), (d)(4)(A)] a reference to any greater number of days;

(iv) substitutes for the reference to "30-day period" in sections 2701(b)(2) and 2701(d)(1) [42 USCS § 300gg(b)(2), (d)(1)] a reference to any greater period;

(v) prohibits the imposition of any preexisting condition exclusion in cases not described in section 2701(d) [42 USCS § 300gg(d)] or expands the exceptions described in such section;

(vi) requires special enrollment periods in addition to those required under section 2701(f) [42 USCS § 300gg(f)]; or

(vii) reduces the maximum period permitted in an affiliation period under section 2701(g)(1)(B) [42 USCS § 300gg(g)(1)(B)].

(c) Rules of construction. Nothing in this part [42 USCS §§ 300gg et seq.] (other than section 2704 [42 USCS §

300gg-4]) shall be construed as requiring a group health plan or health insurance coverage to provide specific benefits under the terms of such plan or coverage.

(d) Definitions. For purposes of this section--

(1) State law. The term "State law" includes all laws, decisions, rules, regulations, or other State action having the effect of law, of any State. A law of the United States applicable only to the District of Columbia shall be treated as a State law rather than a law of the United States.

(2) State. The term "State" includes a State (including the Northern Mariana Islands), any political subdivisions of a State or such Islands, or any agency or instrumentality of either.

History:

(July 1, 1944, ch 373, Title XXVII, Part A, Subpart 2[4][3], § 2724 [2737] [2723], as added Aug. 21, 1996, P.L. 104-191, Title I, Subtitle A, Part 1, § 102(a), 110 Stat. 1971; Sept. 26, 1996, P.L. 104-204, Title VI, § 604(a)(2), (b)(2), 110 Stat. 2939, 2941; March 23, 2010, P.L. 111-148, Title I, Subtitle A, § 1001(4), Subtitle G, § 1563(c)(14) [1562(c)(14)], Title X, Subtitle A, § 10107(b)(1), 124 Stat. 130, 269, 911.)

History; Ancillary Laws and Directives:

1. Amendments
2. Redesignation
3. Other provisions

1. Amendments:

1996. Act Sept. 26, 1996 (applicable with respect to group health plans for plan years beginning on or after 1/1/98, which appears as 42 USCS § 300gg-4 note), in subsec. (c), inserted "(other than section 2704)".

2010. Act March 23, 2010, in subsec. (a)(1), inserted "individual or".

2. Redesignation:

Subpart 3 of Part A of Title XXVII of Act July 1, 1944, ch 373, was redesignated Subpart 4 of such Part by Act Sept. 26, 1996, P.L. 104-204, Title VI, § 604(a)(2), 110 Stat. 2939. It was further redesignated Subpart 2 of such Part by Act March 23, 2010, P.L. 111-148, Title I, Subtitle G, § 1562(c)(11), 124 Stat. 268.

This section, enacted as § 2723 of Part A of Title XXVII of Act July 1, 1944, ch 373, was redesignated § 2737 of such Part by Act March 23, 2010, P.L. 111-148, Title I, Subtitle A, § 1001(4), 124 Stat. 130. It was further redesignated § 2724 of such Part by § 1562(c)(14)(B) of the 2010 Act.

Section 1562 of Act March 23, 2010, P.L. 111-148, which amended this section, was redesignated § 1563 of such Act by § 10107(b)(1) of the Act.

3. Other provisions:

Applicability of section. Subject to certain exceptions, Part A of title XXVII of the Public Health Service Act (42 USCS §§ 300gg et seq.) shall apply with respect to group health plans, and health insurance coverage offered in connection with group health plans, for plan years beginning after June 30, 1997, pursuant to § 102(c) of Act Aug. 21, 1996, P.L. 104-191, which appears as 42 USCS § 300gg note.

42 USCS § 300gg-26

§ 300gg-26. Parity in mental health and substance use disorder benefits

(a) In general.

(1) Aggregate lifetime limits. In the case of a group health plan or a health insurance issuer offering group or individual health insurance coverage that provides both medical and surgical benefits and mental health or substance use disorder benefits--

(A) No lifetime limit. If the plan or coverage does not include an aggregate lifetime limit on substantially all medical and surgical benefits, the plan or coverage may not impose any aggregate lifetime limit on mental health or substance use disorder benefits.

(B) Lifetime limit. If the plan or coverage includes an aggregate lifetime limit on substantially all medical and surgical benefits (in this paragraph referred to as the "applicable lifetime limit"), the plan or coverage shall either--

(i) apply the applicable lifetime limit both to the medical and surgical benefits to which it otherwise would apply and to mental health and substance use disorder benefits and not distinguish in the application of such limit between such medical and surgical benefits and mental health and substance use disorder benefits; or

(ii) not include any aggregate lifetime limit on mental health or substance use disorder benefits that is less than the applicable lifetime limit.

(C) Rule in case of different limits. In the case of a plan or coverage that is not described in subparagraph (A) or (B) and that includes no or different aggregate lifetime limits on different categories of medical and surgical benefits, the Secretary shall establish rules under which subparagraph (B) is applied to such plan or coverage with respect to mental health and substance use disorder benefits by substituting for the applicable lifetime limit an average aggregate lifetime limit that is computed taking into account the weighted average of the aggregate lifetime limits applicable to such categories.

(2) Annual limits. In the case of a group health plan or a health insurance issuer offering group or individual health insurance coverage that provides both medical and surgical benefits and mental health or substance use disorder benefits--

(A) No annual limit. If the plan or coverage does not include an annual limit on substantially all medical and surgical benefits, the plan or coverage may not impose any annual limit on mental health or substance use disorder benefits.

(B) Annual limit. If the plan or coverage includes an annual limit on substantially all medical and surgical benefits (in this paragraph referred to as the "applicable annual limit"), the plan or coverage shall either--

(i) apply the applicable annual limit both to medical and surgical benefits to which it otherwise would apply and to mental health and substance use disorder benefits and not distinguish in the application of such limit between such medical and surgical benefits and mental health and substance use disorder benefits; or

(ii) not include any annual limit on mental health or substance use disorder benefits that is less than the applicable annual limit.

(C) Rule in case of different limits. In the case of a plan or coverage that is not described in subparagraph (A) or (B) and that includes no or different annual limits on different categories of medical and surgical benefits, the

Secretary shall establish rules under which subparagraph (B) is applied to such plan or coverage with respect to mental health and substance use disorder benefits by substituting for the applicable annual limit an average annual limit that is computed taking into account the weighted average of the annual limits applicable to such categories.

(3) Financial requirements and treatment limitations.

(A) In general. In the case of a group health plan or a health insurance issuer offering group or individual health insurance coverage that provides both medical and surgical benefits and mental health or substance use disorder benefits, such plan or coverage shall ensure that--

(i) the financial requirements applicable to such mental health or substance use disorder benefits are no more restrictive than the predominant financial requirements applied to substantially all medical and surgical benefits covered by the plan (or coverage), and there are no separate cost sharing requirements that are applicable only with respect to mental health or substance use disorder benefits; and

(ii) the treatment limitations applicable to such mental health or substance use disorder benefits are no more restrictive than the predominant treatment limitations applied to substantially all medical and surgical benefits covered by the plan (or coverage) and there are no separate treatment limitations that are applicable only with respect to mental health or substance use disorder benefits.

(B) Definitions. In this paragraph:

(i) Financial requirement. The term "financial requirement" includes deductibles, copayments, coinsurance, and out-of-pocket expenses, but excludes an aggregate lifetime limit and an annual limit subject to paragraphs (1) and (2).

(ii) Predominant. A financial requirement or treatment limit is considered to be predominant if it is the most common or frequent of such type of limit or requirement.

(iii) Treatment limitation. The term "treatment limitation" includes limits on the frequency of treatment, number of visits, days of coverage, or other similar limits on the scope or duration of treatment.

(4) Availability of plan information. The criteria for medical necessity determinations made under the plan with respect to mental health or substance use disorder benefits (or the health insurance coverage offered in connection with the plan with respect to such benefits) shall be made available by the plan administrator (or the health insurance issuer offering such coverage) in accordance with regulations to any current or potential participant, beneficiary, or contracting provider upon request. The reason for any denial under the plan (or coverage) of reimbursement or payment for services with respect to mental health or substance use disorder benefits in the case of any participant or beneficiary shall, on request or as otherwise required, be made available by the plan administrator (or the health insurance issuer offering such coverage) to the participant or beneficiary in accordance with regulations.

(5) Out-of-network providers. In the case of a plan or coverage that provides both medical and surgical benefits and mental health or substance use disorder benefits, if the plan or coverage provides coverage for medical or surgical benefits provided by out-of-network providers, the plan or coverage shall provide coverage for mental health or substance use disorder benefits provided by out-of-network providers in a manner that is consistent with the requirements of this section.

(b) Construction. Nothing in this section shall be construed--

(1) as requiring a group health plan or a health insurance issuer offering group or individual health insurance coverage to provide any mental health or substance use disorder benefits; or

(2) in the case of a group health plan or a health insurance issuer offering group or individual health insurance coverage that provides mental health or substance use disorder benefits, as affecting the terms and conditions of the plan or coverage relating to such benefits under the plan or coverage, except as provided in subsection (a).

(c) Exemptions.

(1) Small employer exemption. This section shall not apply to any group health plan and a health insurance issuer offering group or individual health insurance coverage for any plan year of a small employer (as defined in section 2791(e)(4) [42 USCS § 300gg-91(e)(4)], except that for purposes of this paragraph such term shall include employers with 1 employee in the case of an employer residing in a State that permits small groups to include a single individual).

(2) Cost exemption.

(A) In general. With respect to a group health plan or a health insurance issuer offering group or individual health insurance coverage, if the application of this section to such plan (or coverage) results in an increase for the plan year involved of the actual total costs of coverage with respect to medical and surgical benefits and mental health and substance use disorder benefits under the plan (as determined and certified under subparagraph (C)) by an amount that exceeds the applicable percentage described in subparagraph (B) of the actual total plan costs, the provisions of this section shall not apply to such plan (or coverage) during the following plan year, and such exemption shall apply to the plan (or coverage) for 1 plan year. An employer may elect to continue to apply mental health and substance use disorder parity pursuant to this section with respect to the group health plan (or coverage) involved regardless of any increase in total costs.

(B) Applicable percentage. With respect to a plan (or coverage), the applicable percentage described in this subparagraph shall be--

(i) 2 percent in the case of the first plan year in which this section is applied; and

(ii) 1 percent in the case of each subsequent plan year.

(C) Determinations by actuaries. Determinations as to increases in actual costs under a plan (or coverage) for purposes of this section shall be made and certified by a qualified and licensed actuary who is a member in good standing of the American Academy of Actuaries. All such determinations shall be in a written report prepared by the actuary. The report, and all underlying documentation relied upon by the actuary, shall be maintained by the group

health plan or health insurance issuer for a period of 6 years following the notification made under subparagraph (E).

(D) 6-month determinations. If a group health plan (or a health insurance issuer offering coverage in connection with a group health plan) seeks an exemption under this paragraph, determinations under subparagraph (A) shall be made after such plan (or coverage) has complied with this section for the first 6 months of the plan year involved.

(E) Notification.

(i) In general. A group health plan (or a health insurance issuer offering coverage in connection with a group health plan) that, based upon a certification described under subparagraph (C), qualifies for an exemption under this paragraph, and elects to implement the exemption, shall promptly notify the Secretary, the appropriate State agencies, and participants and beneficiaries in the plan of such election.

(ii) Requirement. A notification to the Secretary under clause (i) shall include--

(I) a description of the number of covered lives under the plan (or coverage) involved at the time of the notification, and as applicable, at the time of any prior election of the cost-exemption under this paragraph by such plan (or coverage);

(II) for both the plan year upon which a cost exemption is sought and the year prior, a description of the actual total costs of coverage with respect to medical and surgical benefits and mental health and substance use disorder benefits under the plan; and

(III) for both the plan year upon which a cost exemption is sought and the year prior, the actual total costs of coverage with respect to mental health and substance use disorder benefits under the plan.

(iii) Confidentiality. A notification to the Secretary under clause (i) shall be confidential. The Secretary shall make available, upon request and on not more than an annual basis, an anonymous itemization of such notifications, that includes--

(I) a breakdown of States by the size and type of employers submitting such notification; and

(II) a summary of the data received under clause (ii).

(F) Audits by appropriate agencies. To determine compliance with this paragraph, the Secretary may audit the books and records of a group health plan or health insurance issuer relating to an exemption, including any actuarial reports prepared pursuant to subparagraph (C), during the 6 year period following the notification of such exemption under subparagraph (E). A State agency receiving a notification under subparagraph (E) may also conduct such an audit with respect to an exemption covered by such notification.

(d) Separate application to each option offered. In the case of a group health plan that offers a participant or beneficiary two or more benefit package options under the plan, the requirements of this section shall be applied separately with respect to each such option.

(e) Definitions. For purposes of this section--

(1) Aggregate lifetime limit. The term "aggregate lifetime limit" means, with respect to benefits under a group health plan or health insurance coverage, a dollar limitation on the total amount that may be paid with respect to such benefits under the plan or health insurance coverage with respect to an individual or other coverage unit.

(2) Annual limit. The term "annual limit" means, with respect to benefits under a group health plan or health insurance coverage, a dollar limitation on the total amount of benefits that may be paid with respect to such benefits in a 12-month period under the plan or health insurance coverage with respect to an individual or other coverage unit.

(3) Medical or surgical benefits. The term "medical or surgical benefits" means benefits with respect to medical or surgical services, as defined under the terms of the plan or coverage (as the case may be), but does not include mental health benefits.

(4) Mental health benefits. The term "mental health benefits" means benefits with respect to services for mental health conditions, as defined under the terms of the plan and in accordance with applicable Federal and State law.

(5) Substance use disorder benefits. The term "substance use disorder benefits" means benefits with respect to services for substance use disorders, as defined under the terms of the plan and in accordance with applicable Federal and State law.

History; Ancillary Laws and Directives:

1. Explanatory notes
2. Amendments
3. Redesignation
4. Other provisions

∓ 1. Explanatory notes:
This section formerly appeared as 42 USCS § 300gg-5.

∓ 2. Amendments:

2002. Act Jan. 10, 2002, in subsec. (f), substituted "December 31, 2002" for "September 30, 2001".
Act Dec. 2, 2002, in subsec. (f), substituted "December 31, 2003" for "December 31, 2002".

2003. Act Dec. 19, 2003, in subsec. (f), substituted "December 31, 2004" for "December 31, 2003".

2004. Act Oct. 4, 2004 (effective on enactment, as provided by § 302(d) of such Act, which appears as 26 USCS § 9812 note), in subsec. (f), substituted "after December 31, 2005" for "on or after December 31, 2004".

2005. Act Dec. 30, 2005, in subsec. (f), substituted "December 31, 2006" for "December 31, 2005".

2006. Act Dec. 20, 2006, in subsec. (f), substituted "2007" for "2006".

2008. Act June 17, 2008, in subsec. (f), substituted "services furnished--" and paras. (1) and (2) for "services furnished after December 31, 2007".
Act Oct. 3, 2008 (effective on 1/1/2009, as provided by § 512(e) of such Act, which appears as a note to this section), deleted subsec. (f), which read:
"(f) Sunset. This section shall not apply to benefits for services furnished--
"(1) on or after January 1, 2008, and before the date of the enactment of the Heroes Earnings Assistance and Relief Tax Act of 2008, and
"(2) after December 31, 2008.[.]".
Act Oct. 3, 2008 (applicable with respect to group health plans for plan years beginning after the date that is 1 year after enactment, as provided by § 512(e) of such Act, which appears as a note to this section), substituted the section heading for one which read: "Parity in the application of certain limits to mental health benefits"; in subsec. (a), in para. (1), in the introductory matter, and, in subpara. (A), substituted "mental health or substance use disorder benefits" for "mental health benefits", in subpara. (B), in cl. (i), substituted "mental health and substance use disorder benefits" for "mental health benefits" in two places, and, in cl. (ii), substituted "mental health or substance use disorder benefits" for "mental health benefits", in subpara. (C), substituted "mental health and substance use disorder benefits" for "mental health benefits", in para. (2), in the introductory matter, and, in subpara. (A), substituted "mental health or substance use disorder benefits" for "mental health benefits", in subpara. (B), in cl. (i), substituted "mental health and substance use disorder benefits" for "mental health benefits" in two places, in cl. (ii), substituted "mental health or substance use disorder benefits" for "mental health benefits", and, in subpara. (C), substituted "mental health and substance use disorder benefits" for "mental health benefits", and added paras. (3)-(5); in subsec. (b), in para. (1), substituted "mental health or substance use disorder benefits" for "mental health benefits", substituted para. (2) for one which read: "(2) in the case of a group health plan (or health insurance coverage offered in connection with such a plan) that provides mental health benefits, as affecting the terms and conditions (including cost sharing, limits on numbers of visits or days of coverage, and requirements relating to medical necessity) relating to the amount, duration, or scope of mental health benefits under the plan or coverage, except as specifically provided in subsection (a) (in regard to parity in the imposition of aggregate lifetime limits and annual limits for mental health benefits)."; in subsec. (c), in para. (1), inserted "(as defined in section 2791(e)(4), except that for purposes of this paragraph such term shall include employers with 1 employee in the case of an employer residing in a State that permits small groups to include a single individual)", substituted para. (2) for one which read: "(2) Increased cost exemption. This section shall not apply with respect to a group health plan (or health insurance coverage offered in connection with a group health plan) if the application of this section to such plan (or to such coverage) results in an increase in the cost under the plan (or for such coverage) of at least 1 percent."; and, in subsec. (e), substituted paras. (4) and (5) for para. (4) which read: "(4) Mental health benefits. The term 'mental health benefits' means benefits with respect to mental health services, as defined under the terms of the plan or coverage (as the case may be), but does not include benefits with respect to treatment of substance abuse or chemical dependency.".

2010. Act March 23, 2010, in subsecs. (a) and (b), substituted "or a health insurance issuer offering group or individual health insurance coverage" for "(or health insurance coverage offered in connection with such a plan)" wherever occurring; and in subsec. (c), in para. (1), substituted "and a health insurance issuer offering group or individual health insurance coverage" for "(and group health insurance coverage offered in connection with a group health plan)", and in para. (2)(A), substituted "or a health insurance issuer offering group or individual health insurance coverage" for "(or health insurance coverage offered in connection with such a plan)".

3. Redesignation:

This section, enacted as § 2705 of Part A of Title XXVII of Act July 1, 1944, ch 373, was redesignated § 2726 of such Part by Act March 23, 2010, P.L. 111-148, Title I, Subtitle A, § 1001(2), 124 Stat. 130.)

Section 1562 of Act March 23, 2010, P.L. 111-148, which amended this section, was redesignated § 1563 of such Act by § 10107(b)(1) of the Act.

4. Other provisions:

Applicability of section. Act Sept. 26, 1996, P.L. 104-204, Title VII, § 703(b), 110 Stat. 2950, provides: "The amendments made by this section [adding this section] shall apply with respect to group health plans for plan years beginning on or after January 1, 1998.".

Act Oct. 3, 2008; regulations. Act Oct. 3, 2008, P.L. 110-343, Div C, Title V, Subtitle B, § 512(d), 122 Stat. 3891, provides: "Not later than 1 year after the date of enactment of this Act, the Secretaries of Labor, Health and Human Services, and the Treasury shall issue regulations to carry out the amendments made by subsections (a), (b), and (c) [amending 26 USCS § 9812, 29 USCS § 1185a, and 42 USCS § 300gg-5], respectively.".

Application of Oct. 3, 2008 amendments. Act Oct. 3, 2008, P.L. 110-343, Div C, Title V, Subtitle B, § 512(e), 122 Stat. 3891; Dec. 23, 2008, P.L. 110-460, § 1, 122 Stat. 5123, provides:

"(1) In general. The amendments made by this section [for full classification, consult USCS Tables volumes] shall apply with respect to group health plans for plan years beginning after the date that is 1 year after the date of enactment of this Act, regardless of whether regulations have been issued to carry out such amendments by such effective date, except that the amendments made by subsections (a)(5), (b)(5), and (c)(5) [deleting 26 USCS § 9812(f), 29 USCS § 1185a(f), and 42 USCS § 300gg-5(f)], relating to striking of certain sunset provisions, shall take effect on January 1, 2009.

"(2) Special rule for collective bargaining agreements. In the case of a group health plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers ratified before the date of the enactment of this Act, the amendments made by this section [for full classification, consult USCS Tables volumes] shall not apply to plan years beginning before the later of--

"(A) the date on which the last of the collective bargaining agreements relating to the plan terminates (determined without regard to any extension thereof agreed to after the date of the enactment of this Act), or

"(B) January 1, 2010.

For purposes of subparagraph (A), any plan amendment made pursuant to a collective bargaining agreement relating to the plan which amends the plan solely to conform to any requirement added by this section shall not be treated as a termination of such collective bargaining agreement.".

Assuring coordination. Act Oct. 3, 2008, P.L. 110-343, Div C, Title V, Subtitle B, § 512(f), 122 Stat. 3892, provides:

"The Secretary of Health and Human Services, the Secretary of Labor, and the Secretary of the Treasury may ensure, through the execution or revision of an interagency memorandum of understanding among such Secretaries, that--

"(1) regulations, rulings, and interpretations issued by such Secretaries relating to the same matter over which two or more such Secretaries have responsibility under this section (and the amendments made by this section [for full classification, consult USCS Tables volumes]) are administered so as to have the same effect at all times; and

"(2) coordination of policies relating to enforcing the same requirements through such Secretaries in order to have a coordinated enforcement strategy that avoids duplication of enforcement efforts and assigns priorities in enforcement.".

State Laws Mandating or Regulating Mental Health Benefits

Updated: February 2009; reposted with additions February 11, 2010. NEW

Mental health services have been one significant part of medical care for a number of years. However, the costs, coverage and availability of such services have been the object of policy discussions and a variety of state legislation. There is not a general consensus that state government should require coverage for mental health. 49 states and D.C. currently have some type of enacted law but these laws vary considerably and can be divided roughly into three categories:[1]

1. **mental health "parity" or equal coverage laws** [definition]
2. **minimum mandated mental health benefit laws** [definition]
3. **mental health "mandated offering laws".** [definition]

Note that some laws apply primarily to "serious mental illness" and may not assure coverage for particular individual diagnoses or circumstances. Many private market health plans include some type of mental health benefits on a voluntary commercial basis, not necessarily required by state or federal laws. Note that grief counseling may not be considered a covered benefit under some state laws, although it may be offered by insurers as part of a standard mental health benefit package. Laws in at least 38 states include coverage for substance abuse, alcohol or drug addiction.

CMS Guidance Regarding Mental Health Parity Requirements in CHIPRA, Medicaid and Group Insurance NEW

The federal Centers for Medicare & Medicaid Services (CMS) issued a State Health Official letter on November 4, 2009 regarding the mental health parity requirements under the Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA). The letter provides general guidance on implementation of section 502 of CHIPRA, Public Law 111-3, which imposes mental health and substance use disorder parity requirements on all Children's Health Insurance Program (CHIP) State plans under title XXI of the Social Security Act (the Act). This letter also provides preliminary guidance to the extent that mental health and substance use disorder parity requirements apply to State Medicaid programs under title XIX of the Act.

In summary the letter addresses specific requirements in the measure as follows:

1. Qualifying financial requirements and treatment limitations applied to mental health or substance use disorder benefits may be no more restrictive than those applied to medical surgical benefits.
2. No separate qualifying criteria may be applied to mental health or substance use disorder benefits.
3. When out-of-network coverage is available for medical surgical benefits, it must also be available for mental health or substance use disorder benefits.

Medicaid and Group Health Insurance:

Requirements from the Paul Wellstone and Pete Dominici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) became effective for group health insurance plans on October 3rd of 2009. These same requirements will only apply to Medicaid insofar as the state's Medicaid agency contracts with one or more managed care organizations (MCOs) or Prepaid Inpatient Health Plans (PIHPs). In these cases the MCOs or PIHPs must be in compliance. A state Medicaid plan is not subject to these requirements otherwise. The MHPAEA applies to all CHIP programs and became effective April 1 of 2009. State CHIP plans are deemed in compliance if they provide coverage of Early and Periodic, Screening, Diagnosis and Treatment (EPSDT) benefits.

States Requiring Legislative Action for Compliance

The letter also specifies that if a state requires legislation in order to be in compliance with the requirements, a state will not be found to be in violation before its next legislative session as long as it notifies the Secretary of HHS and she concurs that legislation is needed. They ask that states in the circumstances submit a letter to the Center for Medicaid and State Operations to that effect as soon as possible and include information as follows:

1. the provisions in question,
2. the reason the state requires legislative action for compliance, and
3. the date the state will begin implementing the provision.

Federal Law Requiring Parity in Some Circumstances - in effect 2010

On October 3, 2008, the Emergency Economic Stabilization Act (HR 1424) passed Congress and was signed into law. It included a major mental health provision - known as the "*Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act*," which was attached to the economic bill and also became law. This federal mental health law requires health insurance plans that offer mental health coverage to provide the same financial and treatment coverage offered for other physical illnesses. It does not mandate that group plans must provide mental health coverage. [Parity Section 512 full text]

This legislation expands parity by requiring equality for deductibles, co-payments, out-of-pocket expenses, coinsurance, covered hospital days, and covered out-patient visits. The measure also includes a small business exemption for companies with fewer than 50 employees, as well as a cost exemption for all businesses if it will result in a cost increase of 2% in the first year and 1% in each subsequent year. The bill builds on the current 1996 federal parity law, which already requires parity coverage for annual and lifetime dollar limits. The current HIPAA preemption standard applies. This standard is extremely protective of state law. Only a state law that "prevents the application" of this Act will be preempted, which means that stronger state parity and other consumer protection laws remain in place. It will require the Comptroller General to inform Congress on health plans' and health insurers' coverage and exclusion rates, patterns, and trends of mental health and substance use disorder diagnoses. The new law exempts businesses with 50 or fewer employees from its mental health parity requirements.

Major provisions go into effect in 2010. Now that the federal government has released their long-awaited rules for complying with the Mental Health Parity Law (Fed. Register, Feb. 2), health plans and employers must act immediately to ensure compliance. Employers have until the first plan year beginning on or after July 1, 2010, to meet the requirements. With benefit design decisions needing to be made a few short months from now, health plans and sponsors need to take immediate steps to understand what is required and prepare for this major change in health insurance.

News Article: "Lawful Boost to Mental Health Coverage" Los Angeles Times, October 13, 2008.

Recent State Law History

In **2002** laws were added in **Alabama, Colorado, Kentucky, New Hampshire** and **New Jersey**.

In **2003**, "barebones" laws allowing exceptions to mandated coverage, were enacted in **Colorado, Montana and Texas. Maine** expanded categories of illnesses covered; **Hawaii** and **Kansas** extended dates of existing coverage laws.

In **2005**, **Washington** enacted a full mental health parity law, applying to health insurance, but exempting policies for individuals and small group employers with 50 or fewer employees. It will take effect in phases between 2006 and 2010. **Oregon** also enacted a full parity law that took effect January 1, 2007.

In **2006-07**, four additional states passed variations of full parity laws. **Idaho's** law provides parity, but only for state employee and family insurance policies. **New York's** former Gov. George Pataki signed Timothy's Law, named for a 12-year-old boy who committed suicide in 2001. The law requires that all private insurance policies have the same deductibles, number of office visits, number of inpatient visits and co-payments for mental health disorders as for other illnesses. The statute also requires that private plans provide at least 30 days of inpatient and 20 days of outpatient mental health care per year. In **Ohio**, outgoing Gov. Bob Taft signed his state's first mental health parity law (SB 116) on Dec. 29, 2006. The Mental Health Parity Act mandates that coverage provided for seven "biologically based mental illnesses," such as schizophrenia and bipolar disorder be on par with those for physical conditions. In July 2007 The **North Carolina** legislature enacted a measure covering nine conditions. See "TWO MORE STATES ENACT PARITY LAWS," State Health Notes, 1/22/07.

State Laws and Federal Limits: The state laws noted below generally do not apply to federally funded public programs such as Medicaid, Medicare, the Veterans Administration, etc. In addition, "self-funded" health insurance plans, often sponsored by the largest employers, usually are entirely exempt from state regulation because they are preempted by the federal ERISA law.

All of the state laws listed in this report were written and applied prior to the October 2008 passage of the Mental Health Parity and Addiction Equity Act, so coordination and interpretation of how state and federal laws combine or potentially conflict is a likely task for 2009.

> See ERISA and the States, a 2008 online resource guide by NCSL.

A Comment from the Commercial Sector

"Every client that I work with will have to make some plan-design changes to conform to the [new behavioral health parity provisions signed into law on Oct. 3]."

— Chip Kirby, an employee benefits attorney with Liberte Group LLC in Washington, D.C.,

told AIS's Health Plan Week., 10/24/2008

Mental Health Parity Laws
Parity, as it relates to mental health and substance abuse, prohibits insurers or health care service plans from discriminating between coverage offered for mental illness, serious mental illness, substance abuse, and other physical disorders and diseases. In short, parity requires insurers to provide the same level of benefits for mental illness, serious mental illness or substance abuse as for other physical disorders and diseases. These benefits include visit limits, deductibles, copayments, and lifetime and annual limits.
Parity laws contain many variables that affect the level of coverage required under the law. Some state parity laws--such as Arkansas'--provide broad coverage for all mental illnesses. Other state parity laws limit the coverage to a specific list of biologically based or serious mental illnesses. The state laws labeled full parity below provide equal benefits, to varying degrees, for the treatment of mental illness, serious mental illness and biologically based mental illness, and may include treatment for substance abuse. The newly enacted federal parity law affects insurance policies that already provide some mental health coverage; there is no federal law directly mandating parity to the same extent as state laws; also see background on unsuccessful federal parity legislation below the state table.

Minimum Mandated Benefit Laws
Many state laws require that some level of coverage be provided for mental illness, serious mental illness, substance abuse or a combination thereof. They are not considered full parity because they allow discrepancies in the level of benefits provided between mental illnesses and physical illnesses. These discrepancies can be in the form of different visit limits, copayments, deductibles, and annual and lifetime limits. Some mental health advocates believe these laws offer a compromise to full parity that at least provides some level of care. Others feel that anything other than full parity is discrimination against the mentally ill. Some of these laws specify that copayments and deductibles must be equal to those for physical illness up to the required level of benefits provided. If a law does not specify, the copayment could be as much as 50 percent of the cost of the visit and require a separate deductible to be met before mental health visits will be covered.

Mandated Offering Laws
Mandated offering laws differ from the other two types of laws in that they do not require (or mandate) benefits be provided at all. A mandated offering law can do two things. First, it can require that an option of coverage for mental illness, serious mental illness, substance abuse or a combination thereof, be provided to the insured. This option of coverage can be accepted or rejected and, if accepted, will usually require an additional or higher premium. Second, a mandated offering law can require that **if** benefits are offered **then** they must be equal.

Mandated offering ----- Mandated Offering.	Comparable deductibles and copays ------ Not specified.
D.C.	D.C. Code §31-3102			Mandated mental health coverage; specified minimum benefits	

NOTES for state mental health statute table:
A) The *Diagnostic and Statistics Manual of the American Psychiatric Association* (DSM) includes universally accepted definitions and descriptions of mental illnesses and conditions. There are 13 DSM diagnoses commonly referred to as biologically-based mental illnesses by mental health providers and consumer organizations. Between 3 and 13 of these diagnoses are referred to in various state parity laws. For example, in Alabama, mental illness is defined as: 1) schizophrenia, schizophrenia form disorder, schizo-affective disorder; 2) bipolar disorder; 3) panic disorder; 4) obsessive-compulsive disorder; 5) major depressive disorder; 6) anxiety disorders; 7) mood disorders; 8) Any condition or disorder involving mental illness, excluding alcohol and substance abuse, that falls under any of the diagnostic categories listed in the mental disorders section of the International Classification of Disease, as periodically revised.

B) **NAIC Mental Illness Treatment tally.** The National Association of Insurance Commissioners lists 46 states with mandated requirements, not mentioning AK, AZ, MI and WY, as of February 2008.

C) Examples of "Barebones" exception laws:

Colorado H 1164
Texas S 541 of 2003
Montana H 384of 2003

of 2003 allows small employers to purchase a basic health benefit plan that does not include mental health and substance abuse treatment mandates. allows insurers and HMOs to offer policies without mandates for the treatment of mental illness and chemical dependency, with an exception for serious mental illnesses if the plan is issued to a large employer. An insurer that offers such policy must also offer at least one policy with state-mandated health benefits. allows for a 12-month demonstration project that in some cases, permits a limited coverage plan or managed care plan without mandates for mental illness

Federal Parity Amendment
In 1996 a federal parity amendment was signed into law as part of the VA-HUD appropriations bill. The law, otherwise

known as the Mental Health Parity Act of 1996 (Public Law 104-204, see text online), prohibits group health plans that offer mental health benefits from imposing more restrictive annual or lifetime limits on spending for mental illness than are imposed on coverage of physical illnesses. This law expired on September 30, 2001 due to a "sunset" provision, but was extended through December 31, 2002 when President Bush signed Public Law 107-116. The Mental Health Parity Act of 1996 offers limited parity for the treatment of mental health disorders. The statute does not require insurers to offer mental health benefits, but states that if mental health coverage is offered, the benefits must be equal to the annual or lifetime limits offered for physical health care. It also does not apply to substance use disorders, and businesses with fewer than 26 employees are exempt..

On October 30, 2001 the U.S. Senate passed a broader parity bill, which was sent to the House. On December 18, in a House-Senate negotiating meeting, the House members rejected the Senate bill by a 10n-7y vote. The *New York Times* reported that sponsors Senators Domenici and Wellstone "said they wanted to requires health plans and insurance companies to provide equivalent coverage, or parity for mental and physical illness. House Republicans, employers and insurance companies objected to the proposal, saying it would increase costs for employers in a recession, when many businesses are already cutting health benefits because of a resurgence in medical inflation."[6]

9-11: Terrorism Impacts on Mental Health

The events of September 11, 2001 and related bio-terrorism scares had a profound effect on Americans in every part of the United States. In 2003, the war with Iraq brought the potential for new psychological and mental health concerns, according to the American Psychological Association. Yet the issues raised have been a part of health policy for more than two decades.

The nation, through the actions of federal, state and local governments, and citizens in innumerable roles, united and moved forward. However, the medical traumatic effects of those events impacted many people, for months or even years. *USA Today* reported it this way: "The terrorist strikes and their devastating aftermath are triggering the largest mental health challenge ever faced by employers and straining the USA's army of grief counselors, not just at the attack sites but in workplaces across the country. The emotional fallout was expected to be so widespread that some health insurers are loosening restrictions on employees' use of mental health services." [1] The impact could be far larger than the numbers directly affected. For example, just in Arlington County, Virginia, "some 20,000 to 40,000 of the county's 200,000 residents could experience a traumatic stress reaction from the attacks, officials estimate, pointing to an earlier Surgeon General's report on mental health and disasters." [2]

Mental Health Benefits and Hurricane Katrina Victims

The widespread harm inflicted by Hurricane Katrina includes health impacts and longer-term mental and emotional harm. People who are displaced, injured, have lost loved ones, homes, property, belongings, jobs, family stability, pets, and those with friends, relatives or coworkers affected, may need or seek counseling and medical help. Some, but not all, of the varying state health insurance mandate laws may require coverage of either emergency or longer-term mental health services.

The list below is a general survey of these laws. It provides a quick comparison among states, but it is not intended as a consumer guide to services, since coverage varies even further based on employer and individual contracts, including services offered above or beyond the minimum required by state law. Also public programs including Medicaid, Medicare, local health departments have separate standards of coverage - sometimes more extensive -- than private market health policies.

The Voice of Small Business®

ALASKA

SB 52

February 28, 2011

The Honorable Bettye Davis
Alaska State Senate
State Capitol Building
Juneau, Alaska 99801-1182

RE: Senate Bill 52

Dear Senator Davis,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to Senate Bill 52. The National Federation of Independent Business is the largest small-business advocacy group in the Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

For many small employers in Alaska insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term. Much of the increase is driven by the additions to coverage by state mandates

Unfortunately, SB 52 mandates specified coverage of mental health, alcoholism and substance abuse that may not fit employee's needs but for which small employers providing health insurance bear the cost. Increased mandates force employers to consider whether they can afford to continue coverage or are forced by increased prices

to eliminate health insurance for their employees. Mandates prevent small employers from providing affordable insurance programs tailored to its specific work force.

Estimates from the *Health Insurance Mandates in the States 2010* by the Council for Affordable Health Insurance, suggest that this mandate will increase premium by 5% t0 10%. With such a premium increase, clearly many small businesses will be forced to drop health insurance coverage for their employees.

SB 52 is discriminatory against small employers as the mandate applies to those who provide coverage regulated by state insurance statutes, but not programs offered by the state and other governmental entities or large employers who typically offer ERISA programs. Thus it creates a less fair business environment for small employers.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

Senator Bettye Davis

SB 55 -"An Act relating to a mental health patient rights, notifications, and grievance procedures."

SPONSOR STATEMENT

SB 55 amends the one-paragraph mental health grievance procedure provided under AS 47.30.847. This bill governs due process and grievance procedures in all state and private mental health hospitals, clinics, and units which receive public funds. Prompted by the 8,000-10,000 admissions to mental health facilities and units in Alaska each year where there are relatively few formal grievances filed, this bill requires adequate notice, forms, advocate assistance, rapid written administrative response, right to appeal, and telephonic access to a state monitored call center to lodge a complaint immediately.

Mental health patients are among the most vulnerable in Alaska. Among the thousands of individuals civilly committed or brought into locked hospital psychiatric units for forced evaluations each year, some are in handcuffs, shackles or strapped to a gurney, involuntarily medicated without consent of family or legal representative, or court ordered to receive or continue psychiatric treatment in public, private, or non-profit psychiatric clinics. There are hundreds of patient assaults and staff injuries each year. There are also thousands of children who are voluntarily committed each year usually in private facilities. Although sometimes treated with psychotropic drugs, children are considered better protected by the state, family members, legal representatives, and attorney advocates.

Current statutes and regulations do little to protect psychiatric patients civilly committed 30 to 60 days, individuals detained for forced evaluation up to 7 days, or individuals detained in a jail or in a psychiatric emergency room or private unit while waiting for space in a psychiatric hospital. State and federal courts have consistently ruled that individuals who have not committed a crime and are locked up for psychiatric evaluation and treatment should not be treated like criminals and their rights are to remain intact to the greatest extent possible. Ironically, prisoners in Alaska's correctional system are afforded a much more comprehensive grievance procedure with due process rights and protections under the law than mental health patients.

Upon admission to a mental health facility patients often experience an immediate loss of liberty and freedom, arbitrary exercise of authority, and may be institutionally traumatized in the process. Because of the exceptional circumstances under which mental health patients are admitted and treated, due process requires special safeguards in transparent, readily available grievance procedures and more state oversight. This bill will reduce unnecessary patient trauma, assaults, unintentional injury or death, and attendant liability and litigation experienced in other states before statutory reform.

New grievance procedures under SB 5 require detailed complaint forms, three levels of administrative review requiring written answers by within 5 days by supervisory and executive staff at levels one and two, including response to urgent grievances within 24 hours. A level three final administrative appeal to the commissioner must be answered within 14 days after filing or by default is denied. A commissioner's final decision may be appealed to Superior Court within 30 days. A grievance may be filed at any time, but there is a statutory limitation of one year after being discharged from the facility or unit. All grievances filed shall become part of the patient's permanent record. Mental health facilities and units must file periodic reports of the number and type of grievances and resolutions, including litigation. The bill allows for a personal representative to act in the interest of the patient in the grievance process, as well as providing a patient advocate appointed in the mental health facility or unit.

Although it is counterintuitive that more verbal and written complaints are not reported to the state or documented each year, including an estimated 250 at the Alaska Psychiatric Institute which may treat an estimated 1200 to 1500 patients per year, many facilities in this rapidly growing area of mental health are privately held and not presently compelled to report to the state Division of Behavioral Health. Private hospitals presently may only report mental health complaints to the Joint Commission for the Accreditation of Hospital Organizations (JCAHO), not the state. Furthermore, JCAHO reportedly may only review grievance procedures in participating hospitals every 2-3 years. Also, many grievances in the past have been handled verbally without creating a patient record and in-patient stays are often very short from a couple of days up to a week or two. Passage of SB 55 will improve mental health treatment, grievance reporting, and state oversight.

CS FOR SENATE BILL NO. 55( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR DAVIS

A BILL

FOR AN ACT ENTITLED

"An Act relating to mental health patient rights, notifications, and grievance procedures."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.30.840(a) is amended to read:

(a) A person undergoing evaluation or treatment under AS 47.30.660 - 47.30.915

(1) may not be photographed without the person's consent and that of the person's guardian if a minor, except that the person may be photographed upon admission to a facility for identification and for administrative purposes of the facility; all photographs shall be confidential and may only be released by the facility to the patient or the patient's designee unless a court orders otherwise;

(2) at the time of admission to an evaluation or treatment facility, shall have reasonable precautions taken by the staff to inventory and safeguard the patient's personal property; a copy of the inventory signed by the staff member making it shall

be given to the patient and made available to the patient's attorney and any other person authorized by the patient to inspect the document;

(3) shall have access to an individual storage space for the patient's private use while undergoing evaluation or treatment;

(4) shall be permitted to wear personal clothing, to keep and use personal possessions including toilet articles if they are not considered unsafe for the patient or other patients who might have access to them, and to keep and be allowed to spend a reasonable sum of the patient's own money for the patient's needs and comfort;

(5) shall be allowed to have visitors at reasonable times;

(6) shall have ready access to letter writing materials, including stamps, and have the right to send and receive unopened mail;

(7) shall have reasonable access to a telephone, both to make and receive confidential calls;

(8) has the right to be free of corporal punishment;

(9) has the right to reasonable opportunity for indoor and outdoor exercise and recreation;

(10) has the right, at any time, to have a telephone conversation with or be visited by an attorney;

(11) may not be retaliated against or subjected to any adverse change of conditions or treatment solely because of assertion of rights under this section;

(12) has the right to be treated with dignity and respect;

(13) has the right to confidentiality of and access to the person's evaluation and treatment records maintained by the facility;

(14) has the right to an individualized treatment plan, and the right to be involved in developing the treatment plan, while residing at the facility;

(15) has the right to informed consent by the person or the person's legal representative;

(16) has the right to freedom from seclusion and restraint;

(17) has the right to file a grievance under AS 47.30.847;

(18) has the right to a designated staff member clearly identified by a treatment facility to act as a patient advocate and to assist in the filing of a grievance under AS 47.30.847;

(19) has the right to consult with a patient advocate or representative of the patient's choosing.

* **Sec. 2.** AS 47.30.847 is repealed and reenacted to read:

Sec. 47.30.847. Patient grievance procedure. (a) A person undergoing evaluation or treatment at a public or private evaluation facility or unit or designated treatment facility or unit under AS 47.30.660 - 47.30.915 has the right to bring a grievance concerning the patient's treatment, care, or rights.

(b) The department shall establish one or more impartial call centers for the purpose of receiving, referring, and tracking grievances filed under this section. The call center shall maintain an electronic database and hard copies of all grievances filed under this section. The call center shall be made available to a grievant at no charge and at all times and shall process a grievance immediately as provided in this section. The call center shall assist a grievant in filing a grievance and shall provide procedural information but may not advise a grievant.

(c) A facility or unit shall provide a formal grievance procedure, which must include referral to a call center established under (b) of this section, for all patient grievances on any subject brought under (a) of this section, regardless of the availability of a less formal procedure for comments and suggestions. Once filed to the best of the grievant's knowledge and ability, all grievances shall be processed on a single form. The grievance procedure must include

(1) written notice on admission to the facility of the availability of the formal grievance procedure and facility rules pertaining to the grievance procedure;

(2) a form for submission of a grievance, access to a call center, and a secure box for deposit of grievance reporting forms; the contents of the box must be reviewed each day patients are being treated or evaluated; the form must be readily accessible to the patient and understood by the patient or easily explained by a staff member in a language and method understandable to the patient; the original of a completed form submitted to the facility must be kept in the patient's record; the form

must contain the heading "Alaska Department of Health and Social Services, Mental Health Grievance Reporting Form," and include

(A) the name of the grievant and the grievant's contact information, including the grievant's address and telephone number;

(B) the date and time of the completion of the grievance form;

(C) the name and physical location of the service provider;

(D) the date on which the event giving rise to the grievance took place;

(E) the names of persons involved in the event giving rise to the grievance, if known;

(F) a narrative description of the event giving rise to the grievance;

(G) the specific issue to be addressed;

(H) the grievant's suggested resolution of the grievance;

(I) the investigative steps taken to formulate the facility's or unit's response;

(J) the response and date of response by the facility or unit;

(K) the signature of the grievant at each level, including the initial grievance;

(L) the signature of the reviewer and date of review for each level of review; and

(M) options for the grievant to check following each response by the facility or unit, as follows:

(i) I agree;

(ii) I do not agree;

(iii) submit to level two review;

(iv) submit to level three review;

(3) a written list showing contact information for available advocacy agencies, including the department, facility accrediting bodies, the ombudsman, and the Disability Law Center of Alaska;

(4) three levels of review, as follows:

(A) level one, an initial review and written decision by a supervisory staff member to determine whether a grievant's treatment, care, or rights have been adversely affected, a written record of that determination, and, if the grievant's rights have been aversely affected, implementation of a mutually agreed upon resolution of the grievance;

(B) level two, if a resolution is not agreed upon or implemented under a level one review, a grievant may initiate a review within 20 calendar days after the determination is made under level one; a chief executive officer or the commissioner's designee for a facility shall make written findings and issue a decision within five business days after initiation of a level two review; if the level two review results in a finding of no adverse effect, no additional review is necessary, but the decision may be appealed under (C) of this paragraph by a grievant, and the written decision must include notice of the availability of a level three appeal;

(C) level three, a grievant may appeal the final written decision made under level two to the commissioner within 30 calendar days after receipt of the findings of the level two review; the commissioner shall make a final written decision on or before the 14th calendar day after the appeal is filed; if the commissioner fails to enter a timely decision, the appeal shall be considered denied; the commissioner may deny an appeal for substantial failure to follow the procedures set out in this section; a denial or decision by the commissioner may be appealed to the superior court within 30 calendar days;

(5) maintenance of a complete and confidential record, available on request by the grievant or the grievant's designated representative, of all documents, including the grievance and appeals and responses to the grievance and appeals;

(6) delivery, within 24 hours, of a copy of the initial grievance and of all documents maintained under (5) of this subsection to the call center established under (b) of this section, which shall promptly provide all necessary information to

(A) the grievant or the grievant's representative;

(B) the department; the department shall maintain

confidentiality over the grievant's health and personal information;

(C) the person responsible for the next level of review; and

(D) the person in charge of the facility or unit; and

(7) in addition to the three levels of review and procedures available under criminal and other laws provided under (4) of this subsection, an urgent level of review and expedited decision, available at all times to a current patient of a facility or unit, to be conducted immediately by the chief executive officer at the facility and referred to a call center and reviewed by the department not later than 24 hours after receipt of a grievance that alleges

(A) sexual abuse;

(B) physical abuse; or

(C) denial of

(i) lifesaving treatment or procedures;

(ii) lifesaving medications; or

(iii) basic care or human rights, as defined by the commissioner.

(d) Except as provided in (c)(7) of this section, unless an extension of time of not more than five business days is agreed upon by a patient or the patient's representative, an evaluation facility or unit or a designated treatment facility or unit shall mail or hand deliver a written response to a call center within five business days after receipt of a grievance or request for additional review. The response must include the reasons for the decision and a description of the appeal process. The grievant may request review at the next level if a written response is not timely.

(e) An evaluation facility or unit and a designated treatment facility or unit shall have a designated staff member who is trained in mental health consumer advocacy who shall, on a patient's request, serve as an advocate to assist the patient in bringing grievances or pursuing other redress for complaints concerning care, treatment, and rights.

(f) A grievant may not file a grievance later than one year after the incident giving rise to the grievance. The facility or unit shall make a good faith effort to mail a response to a grievant who has been discharged from the facility.

(g) The burden of proof required for all grievance reviews shall be on the facility or unit against which a grievance is filed to prove, by substantial evidence, compliance or remedial action with applicable laws and procedures.

(h) The department shall review all grievances and responses to grievances for compliance with this section.

(i) A facility or unit shall prepare and file a quarterly report with the department that describes the

(1) number of grievances submitted;

(2) general issue raised in each grievance; and

(3) resolution, including litigation, of all grievances submitted.

(j) The department shall compile the information provided under (i) of this section and provide a quarterly report to be posted for public review that describes the number and types of grievances filed against each facility in the previous quarter.

(k) Nothing in this section shall be interpreted to prohibit informal dispute resolution or mediation by the written agreement of the grievant, the facility or unit, and the department at any time during the grievance process but before a lawsuit concerning the subject of the grievance is filed by a grievant.

(*l*) A facility may not discourage or delay a patient's access to an advocate or representative of the patient's choosing.

(m) In this section,

(1) "facility" has the meaning given to "designated treatment facility" or "evaluation facility" in AS 47.30.915; and means a unit of a hospital in which patients receive mental health evaluation or treatment and for which public funds are provided;

(2) "grievance" means a complaint made by a grievant concerning a patient's treatment, care, or rights at a facility;

(3) "grievant" means a patient of a public or private mental health treatment or evaluation facility or unit or the patient's representative;

(4) "unit" means a discrete portion of a facility dedicated to the treatment or evaluation of mental health patients.

* **Sec. 3.** AS 47.30.855 is amended by adding new subsections to read:

(b) The department shall provide to a facility for posting and distribution a standardized notice that is designed to be easily understood and that separately describes patient rights, available assistance, and the grievance procedure provided under AS 47.30.847.

(c) A person in charge of a facility shall ensure that each patient or patient's representative receives a written copy of the standardized notice provided by the department under (b) of this section and of the formal grievance procedure described in AS 47.30.847(c).

(d) In this section, "facility" has the meaning given in AS 47.30.847.

MEMORANDUM February 11, 2012

SUBJECT: Sectional Summary for CSSB 55( )
(Work Order No. 27-LS0082\T)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds eight rights to the list of rights of a person undergoing mental health evaluation or treatment in the state under specified provisions of state law, including involuntary commitments. The additional rights include the right to be treated with dignity and respect and the right to file a grievance under the procedures established by sec. 2 of the bill.

Section 2. Establishes a grievance procedure, including varying levels of review and appeal, for a person undergoing evaluation or treatment at a public or private evaluation facility or unit or at a designated treatment facility or unit. Defines "grievance" to mean a complaint concerning a patient's treatment, care, or rights at a mental health evaluation or treatment facility or unit in the state.

Section 3. Requires the Department of Health and Social Services to provide to mental health evaluation and treatment facilities and units in the state a standardized notice of patient rights, assistance, and grievance procedures. Also requires the person in charge of the facility or unit to provide a written copy of the notice to each patient or their representative.

STATE OF ALASKA
2 LEGISLATIVE SESSION

BILL NO. SB055

Analysis

This bill would provide mental health patients with a grievance process concerning patient treatment, care or rights. The process would include a right to an administrative appeal heard on behalf of the Commissioner of Health and Social Services by the Office of Administrative Hearings (OAH). OAH does not anticipate that addition of this licensure category would increase the office's caseload beyond OAH's capacity to provide the hearing-related services with existing authorized personnel. The cost to OAH of performing the services would be recovered from the Department of Health and Social Services through interagency receipts, based on the time commitment required for the necessary proceedings.

Senator Bettye Davis **February 7, 2012**
Chair—Hess Committee

Re: Senate Hess Committee—Sen. Bill 55 needs to pass

Approximately 1000 complaints are filed verbally or in writing by psychiatric patients each year in Alaska. The current state rules do very little to protect these patients.

Over the last 50 years state and Federal courts have consistently ruled that any individuals who have not committed a crime and are locked up for psychiatric treatment cannot be treated like a criminal and their rights are to remain intact to the greatest extent possible.

As a state we are failing miserably. We give psychiatric patients a right by law to file a complaint but we don't give the right to due process or the right to file an appeal within the psychiatric facilities or to a state agency or an agency authorized by the state; Alaska may be the only state that does not protect psychiatric patients in that respect.

Most psychiatric patients need the protection a state can give, specifically psychiatric patients civilly committed 30 or 60 days, individuals detained for forced evaluation up to 7 days, individuals detained in a jail or in a Psychiatric Emergency Room while waiting for space in a psychiatric hospital.

As a state we don't keep readily available statistics of the number of complaints filed by psychiatric patients. We don't give patients a state office they can file an appeal to with due process, etc. On the other hand, individuals in prison are given all of those rights.

As a state we should be embarrassed for not protecting psychiatric patients in the grievance appeal process as numerous courts have suggested—Maine, Georgia, etc. We can fix that by giving Sen. Bill a hearing and passing the bill.

Reference Information

Senate Bill 55

Approximately 250 complaints are filed by patients at state-run Alaska Psychiatric Institute each year according to public records. That is from a patient population of approximately 1,200 per year.

The other hospitals that do forced evaluations and civil commitments do not make their numbers of psychiatric patient complaints available to the general public and those statistics are not kept separately by the state.

Providence Hospital and its satellites treat approximately 3000 psychiatric patients per year. A large number are forced evaluations—they may arrive in handcuffs, they are detained, etc.

North Star treats approximately 4,000 patients per year, some of them in locked facilities.

Fairbanks and Juneau hospitals do forced evaluations and civil commitments—combined, approximately 800 per year.

Numerous other hospitals do forced evaluations—Ketchikan and Kodiak, Also, patients are detained in jails, Psych ER's waiting for transfer, etc.

Psychiatric patients are court ordered to continue psychiatric treatment in private clinics through Mental Health Diversionary Court, etc.

Estimated number of complaints—1,000. Subject matter, anything from sexual assault, denial of rights to going outdoors, medication errors, mistreatment, physical assault, denied medical treatment, conflicts with staff, inability to file a complaint or an appeal in a fair way, etc.

<u>Psychiatric patients are complaining about the grievance appeal process.</u>

Letter to the Editor or Comment Piece **1/28/2012**

In January it was reported that the State Senate held a "Crime Summit." The Committee goal: identify issues and offer solutions.

Conspicuously absent from the Senate Committee's review was a serious, in-depth assessment of individuals with a severe mental illness who commit crimes or have crimes committed against them and how the state can make improvements.

Ninety percent of females with a mental illness who live on the street (shelters, tents, etc.) will or have at some point become a victim of sexual assault which will in itself damage the individual and will also hinder or prevent recovery from the underlying mental illness.

Men and women with a severe mental illness commit crimes or become victims in higher numbers than the average public. The costs of transportation and one day in a Psych ER can be upwards of a thousand dollars.

Approximately 10,000 individuals in Alaska because of a mental illness will come in contact with law enforcement or a locked psychiatric facility in the next 12 months. Many will be forcibly transported to Psych ER's in handcuffs for forced evaluations, civil commitment or diversionary mental health court.

When a state improves psychiatric patient rights it translates to better care and better recovery. In our opinion, Alaska as a young state has some of the worst patient rights and government oversight of psychiatric patient rights and care in the nation.

Psychiatric patient rights in Alaska need to be improved. If we had the opportunity that is the message we would convey to the state Senate "Crime Summit" Committee.

1/20/2012

Give / Send to:

Sen. Bettye Davis,
Attn: Tom Obermeyer,

Please give Sen. Bill 55 a hearing in the HESS Committee this year.

Detained psychiatric patients have a right to file a grievance, but as of now do not have a right to file an appeal by law, state regulations or JCAHO rules. (Alaska may be the only state that does not give that right to detained psychiatric patients.)

Detained psychiatric patients must be given a state right to file an appeal with due process within a psychiatric facility or unit and to the state.

Thank you,

Faith Myers
Dorrance Collins

Senator Hollis French, **January 13, 2012**

We read your letter 1/13/2012 in the Anchorage Daily News. The questions you raise have a large scope—We would like to add a small piece to the puzzle. Writing new laws is important, but just as important "society must change how it deals with individuals who need help."

One Society needs to change how money, support and spare time is given to any individual with a drug or alcohol problem, i.e.—payee, oversight, work or school program, etc.

Two A large number of individuals in prison have a severe mental illness. The assessment is they cannot receive proper treatment that promotes recovery in a prison setting. Detained individuals should be given at least a small amount of time in a forensic unit in a psychiatric hospital so they have a better chance for recovery. Forty years ago, state-run Alaska Psychiatric Institute (API) had a 10 bed forensic unit. API still has a 10 bed forensic unit in 2012.

Three Thousands of individuals who have not broken any laws are transported to locked psychiatric units each year for forced evaluation or commitment, many in handcuffs. Too often, individuals who may not have broken any laws are treated like criminals, both when they are transported to a psychiatric unit, or when they are in a psychiatric unit. When society treats an honest person like a criminal, sometimes they become a criminal.

Four Too often individuals with psychiatric disorders who may not have broken any laws are held in jails and hospital ER's while waiting for space at state-run API. Disability Law Center filed a law suit against DHSS concerning that issue.

Five Almost without exception, when society improves the quality of psychiatric patient rights, the quality of patient care improves and the opportunity for recovery. Sen. Bill 55 when passed will improve the psychiatric patient grievance procedures and needs to be supported and passed by the Senators.

We would be willing to testify telephonically to your committee on these issues.

Mental Health Advocates,

Cc: Open Letter

Testimony to the HESS Committee **January 1, 2012**

Chairperson, Committee members,

My name is Faith Myers. I volunteer as a psychiatric patient advocate. I support the passage of Senate Bill 55.

Psychiatric patients are complaining about the current grievance procedure laws. In 2009 I performed a survey of 30 former psychiatric patients. In 2011, Disability Law Center produced a 9-page report which showed 3 patients at state-run Alaska Psychiatric Institute (API) were unsatisfied with the grievance procedure process. Also, I have personally reviewed the grievance procedures from numerous hospitals with psychiatric units from Fairbanks, to Juneau, to Kodiak. The reviewed grievance procedures are inadequate to protect an individual detained in a psychiatric unit.

In 2003, I spent 4 months in Alaska Psychiatric Institute (API) which is run by the Department of Health and Social Services (DHSS). I was never allowed to file a grievance. A grievance must be answered in writing. I never could receive a written response to my complaints or file an appeal.

In 2006 as an advocate I received records from API which showed no patient in the middle of 2005/2006 was allowed to file a grievance and receive a written response. (And possibly for years.)

The current psychiatric patient grievance procedure law (AS47.30.847) is poorly written and does not properly protect detained psychiatric patients that file a complaint. Also, the current law does not cover all detained psychiatric patients according to DHSS.

Currently the only due process rules for a detained patient's complaint come from the Joint Commission for the Accreditation of Hospital Organizations (JCAHO) and hospital policy. JCAHO gives psychiatric hospitals and units 14 days to resolve a patient's complaint and there is no appeal process mandated. Most psychiatric patients are detained less than 14 days. There is nothing in state law and very little in state regulations concerning due process for a patient's complaint or appeals.

If Sen. Bill 55 does not pass, then psychiatric institutions can go back to business as usual. When psychiatric institutions have a right to say when psychiatric patients can file a grievance and set due process rights, eventually institutions will say that no patient has a right to file a grievance.

In closing, I am asking you to pass Sen. Bill 55 which will improve in law a psychiatric patient's right to file a grievance.

Faith Myers

Testimony to the Senate HESS Committee **January 1, 2012**

Chairperson, Committee members,

My name is Dorrance Collins. I volunteer as a psychiatric patient advocate. I support the passage of Sen. Bill 55.

I would like to establish who will be protected by Sen. Bill 55.—thousands of individuals civilly committed or brought into locked hospital psychiatric units for forced evaluations each year, sometimes in handcuffs, shackles or strapped to a gurney and individuals court-ordered to receive or continue psychiatric treatment in private or non-profit psychiatric clinics.

Over the last 20 years, the state of Alaska has authorized private hospitals and units to detain psychiatric patients, but the state has never established a sufficient grievance procedure law or regulation for detained patients in those private hospitals.

As of now, Alaska may be the only state that does not give by law or state regulations appeal process rights and due process rights to detained psychiatric patients when they file a complaint. And that needs to change.

Several state agencies are required by law to investigate psychiatric patient complaints. Psychiatric patients are not given their number and there is now no requirement to do so.

Psychiatric patients are one of the most vulnerable groups in our society and need a grievance procedure law that will provide protection. Patients need to be given appeal process rights, due process rights and an appeal process to the state.

In closing, I am asking that you pass Sen. Bill 55.

Thank you,

Mental Health Advocate,
Dorrance Collins

Re: Concerning current draft of Sen. Bill 55

Our concern is to close the loopholes in the proposed bill—loopholes that are all too often used to deny patients a reasonable opportunity to file a grievance.

We have underlined our suggested additions:

Page 2, line 31—it should be stated "patients have a right to file a grievance at any time."

Page 2, line 32—Add have the right to due process with regard to grievances.

Page 3, line 4—"Patient has a right any day to consult with a patient advocate or representative of a patient's choosing during reasonable hours.

Page 3, line 9—"has a right anytime to bring a grievance."

Page 3, line 25—"formal grievance procedure and appeal process."

Add to page 6, line 6—"review, such grievances must be reviewed by the chief administrative officer, the Director or designee, who shall either arrange to hear the grievance within one working day or immediately refer the grievance to Level 1 for response."

David Fleurant, **September 28, 2011**
Exe. Dir.—Disability Law Center,

It was not that long ago when not a single patient at state-run Alaska Psychiatric Institute could file a formal grievance or appeal and receive a written response. A written response to a patient's grievance in a timely manner is a Federal / JCAHO requirement, but the requirement is not in state law.

Approximately 250 detained (locked-up) patients voice a complaint about treatment or care each year at API. In 2005 we found out patients could not file a grievance or appeal at API in a fair way. We pushed API management to improve their one page patient grievance procedure and they did in 2007.

Several months later we asked API's patient advocate how the new 6 page patient grievance procedure was working. We were told API management in practice had not changed in any significant way how patient complaints or appeals were handled.

A recent 9 page report by your organization, at least by inductive reasoning, also shows API has not improved how patient grievances and appeals are resolved.

Numerous psychiatric facilities and units in Alaska detain psychiatric patients. (Approximately 10) After reviewing their grievance procedures and appeal process it is easy to conclude they are not doing any better than API at letting psychiatric patients file a grievance or appeal in a fair way.

Psychiatric institutions and units tend to operate in self-interest so much so it can present a clear danger to patients. The Alaska Supreme Court reminded all of us of that fact in '06. But as a state, we are still giving the job of writing the psychiatric patient appeal process to the institutions, time frame for completion, etc.

AS47.30.847, psychiatric patient grievance procedure law needs to be revised: a patient appeal process needs to be added, time frame for completion of grievance and appeals, reasonable oversight, all necessary to protect psychiatric patients and currently not in state law.

We are asking Disability Law Center to help improve the grievance procedure law and also to provide a report outlining why the law needs to be improved. Please contact us.

State of Alaska
Department of Health and Social Services
Behavioral Health

Policy & Procedure

Topic: State Behavioral Health Requirements for Grantee Grievance Procedures

Policy: All Behavioral Health (BH) grantee treatment organizations are required to develop grievance procedures by which all clients, without regard to services used or funding source, including those clients denied services, may seek redress of grievances. The procedures, written in plain language, should be developed with meaningful consumer participation utilizing the general guidelines established by State Behavioral Health. A copy of the procedures must be filed with BH and should also be posted at the grantee organization's facility(s).[1]

Intent: The Department of Health and Social Services (DHSS) by law is required to adopt regulations to assure patient rights[2], to establish standards for treatment facilities and to keep related records[3], and to investigate complaints made by a patient[4]. This policy outlines the DHSS BH guidelines for grantee grievance procedures, explains BH's role in response to grievances, and lists relevant policy clarifications and all related references of the Alaska Statutes and the Alaska Administrative Code.

Grievance Procedure Guidelines: Grantee consumer grievance procedures must, at a minimum, meet the following criteria:

1. Provision(s) that ensure the right of consumers to file a grievance without intimidation
2. Provision(s) that ensure there is NO retaliation perpetrated against consumers who have filed a grievance
3. Provision(s) that outline a process by which consumers may easily file a grievance, to include:

[1] 7 AAC 13.135 Grievance procedures; 7 AAC 71.220 Grievance procedures
[2] AS 47.30.590 Comprehensive services
[3] AS 47.37.030 Powers of Department; AS 47.37.140 Public and Private Treatment Facilities
[4] AS 47.30.660 (b) (12) Powers and duties of department

a. A simple form written in plain language that also provides for an optional waiver of confidentiality which consumers may complete and submit,
b. Procedure(s) that allow consumers to submit a grievance orally
c. Procedure(s) that allow consumers to submit a grievance over the phone or via email

4. Explanation of agency's grievance procedure / policy provided to ALL consumers upon entry to services, to include the following:
   a. Copy of agency procedure / policy
   b. A form for consumers to sign, which shall be maintained in the consumer's clinical record, that declares their receipt and understanding of the agency procedure / policy
5. Provision(s) for consumers to designate a representative or advocate to assist them with all steps of the grievance process
6. Procedure(s) for the agency, upon consumers request, to assist the consumer with filing a grievance, which should include either:
   a. Identifying specific agency staff to provide assistance
   b. Written referral to other consumer advocacy resources such as the Disability Law Center and NAMI-Alaska
7. Step-wise procedures, limited to the following, for resolving ALL grievances:
   a. **Resource and means for commonly resolving consumer disputes to minimize the need to invoke the grievance process**
   b. Communication with consumer upon receipt of grievance that the agency has begun the process to resolve the grievance
   c. Direct resolution through dialogue with the agency staff member involved or with the staff member's supervisor, or with both as consumer requests
   d. Resolution through the agency Executive Director
   e. Resolution through the agency Governing or Advisory Board
   f. Referral of grievances unresolved at the agency's highest level to DHSS Behavioral Health for technical assistance
8. Established time frames to include the following that ensure prompt hearing of grievances:
   a. Initiation of resolution (according to the procedures noted in # 7 above) within 5 days of receiving a grievance
   b. If agency is unable to adequately initiate resolution within 5 days, a written notification shall be sent to the consumer by the end of 5 days from receipt of grievance explaining why and identifying when the grievance process will initiate
   c. Satisfactory resolution to grievances within 30 days of receipt of grievance
   d. Referral to BH, within 5 business days, for technical assistance with grievances that remain unresolved after 30 days.
9. Provision(s) for immediately elevating to the Governing or Advisory Board level any grievances that involve abuse, neglect or unnecessary seclusion or restraint.
10. Procedure(s) that provide for the creation, maintenance and storage of files for each individual grievance which shall contain all related documents, records, actions and communications.

11. Provision(s) that address maintenance of consumer confidentiality throughout the grievance process

BH Role & Responsibility:

DHSS BH shall initially represent the Department of Health and Social Services for any grievance referred for technical assistance involving BH grantee treatment organizations. BH shall take the following steps to assist with these grievances:

1. **Exercise the primary responsibility of DHSS BH to orient consumers, or other individuals calling on behalf of consumers, to the grievance process and procedures available thru the involved grantee organization**
2. For questions regarding grievances which have been heard according to the involved grantee organization's grievance procedures, BH may:
   a. Review any written response from the involved grantee organization regarding their findings and resolution to the grievance.
   b. Investigate whether the involved grantee organization complied with the following, as indicated, in regards to processing the consumer grievance:
      i. Alaska Statute / Behavioral Health Regulations
      ii. Medicaid Regulations
      iii. Special Conditions of Grant Award
   c. Determine if resolution of the grievance is reasonable based on resources available to the grantee organization
   d. Share BH findings with both the consumer and the involved grantee organization
3. In the course of providing technical assistance for any consumer grievance BH may:
   a. Communicate with any involved party to seek clarification of information, or to obtain access to supporting documents
   b. Consult with other Department or division resource
   c. Refer case to other Department or division resource for continued technical assistance or action
   d. Take any other action deemed prudent or necessary to assist consumer and / or grantee organization

Policy Clarifications:

1) The Department of Health and Social Services is authorized to review, obtain, and copy confidential and other records and information about clients, including services requested or furnished, to evaluate a grantee organization's compliance with statutes (AS 47.30.520 – 47.30.620)[5]

2) For substance abuse treatment facilities and programs, DHSS has adopted by reference the standards contained in the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) *Standards for*

[5] AS 47.30.590 (b) Patient rights and the confidential nature of records and information

Behavioral Health Care, 2004 – 2005.[6] The Department also provides for exemption from the provisions regarding substance abuse facilities or programs established by the State of Alaska Administrative Code for those private and public treatment facilities currently certified by JCAHO or the Commission on Accreditation of Rehabilitation Facilities (CARF).[7] Therefore:

a. All substance abuse grantee organizations are also obligated to comply with JCAHO standards regarding client Ethics, Rights, and Responsibilities (RI.2.120 – RI.2.130)[8] OR
b. If certified by CARF are obligated to also comply with the CARF standards for rights of persons served (Section 1. Business Practices: Criterion D. Rights of Persons Served)[9]

February 14, 2011

The Honorable Bette Davis
State Capitol Building
Juneau, AK 99801

Dear Senator Davis,

I appreciated your meeting with me to discuss issues related to North Star Behavioral Health. You hear thousands of different issues during the course of the year related to the needs of many constituents. I thank you for your time and consideration of issues related to the mental health needs of our community.

One such issue related to Senate Bill 66. As in our conversation, I support the need to protect client rights. Currently, we have many such avenues, both internal and external, to ensure such rights are protected. Our facility has patient advocates who accept complaints and grievances that can be resolved on the units and/or taken to senior leaders for resolution. Our medical staff and senior leadership review all grievances each month for systemic issues and individual staff trends that need to be addressed. External agency phone numbers are posted for patients and families to make complaints to numerous organizations if they desire (The Joint Commission, the Department of Health, the Office of Children's Services, the Center for Medicaid and Medicare Services, the Disability Law Center and others). Additionally, we are surveyed by many of these organizations at least annually. Clearly, patient and families have numerous avenues to address issues as they arise.

I have several concerns about adding to this level of oversight:

1.) The impetus of this bill was not related to children and adolescents. Children and adolescents have numerous adults (i.e., parents, step-parents, grandparents, custodians, and agencies) who ensure proper care and thus have advocates who make many primary decisions on their behalf.

2.) This population, by its nature, often exhibits poor judgment and boundaries (some of the reasons for admission). Adolescents in particular, would use such a system to distract from care and tie up staff time with unfounded complaints. This related to another concern: What makes a valid complaint to be addressed by such a group? Children and adolescents complain about such things as healthy food, phone privileges (the right to talk with peers with whom they have numerous

unhealthy boundaries) and whom we restrict visitation (previously agreed upon with guardians). This population in particular would not appear appropriate for such regulation. The amount of staff time alone would be prohibitive, both to our facility and on the part of the state.

3.) As a private psychiatric facility, we are not holding committed patients such as in the state facility. Our patients can be discharged by the guardian at any time and thereby represent no ability for involuntary commitment or confinement. Thus any grievance that would be seen by the patient or family as infringing on patient rights could be addressed simply by refusing care or treatment (in addition to external and internal reporting mentioned above).

4.) The Federal Health Care Quality Improvement Act allows certain information to be protected in order to protect privacy, promote honest disclosure and encourage facilities to address systemic issues that lead to improved outcomes. There are several issues with this. One, grievances that involve multiple patients would not be allowed to be discussed. For example: If the grievance involves one patient being treated differently than another or another patient committing an unwanted act. This prevents the facility from defending itself. Also, grievances associated with unfounded complaints could lead to potential frivolous lawsuits.

I would appreciate your consideration of these issues, either by considering removal of your support or by limiting the scope of the bill to patient populations and/or organizations in which you feel need such a system to protect clients. The bill could be limited to those patients above 18.

Sincerely,

Dr. Andrew Mayo, CEO
North Star Behavioral Health

Re: SB 55 Draft Version 27-LS0082\D

Dear Senator Davis:

In response to your request to offer feedback on SB 55 Draft Version 27-LS0082\D, I offer the following comments. Some of these comments are a repetition of my initial concerns sent on August 3, 2009 to your attention.

As in our conversation, I support the need to protect client rights. Currently, we have many such avenues, both internal and external, to ensure such rights are protected. Our facility has patient advocates who accept complaints and grievances that can be resolved on the units and/or taken to senior leaders, for resolution. Our medical staff and senior leadership review all grievances each month for systemic issues and individual staff trends that need to be addressed. External agency phone numbers are posted for patients and families to make complaints to numerous organizations if they desire (The Joint Commission, the Department of Health, the Office of Children's Services, the Center for Medicaid and Medicare Services, the Department of Licensure, the Disability Law Center and others). Additionally, we are surveyed by some of these organizations annually and the others routinely or upon patient complaint. Clearly, patient and families have numerous avenues to address issues as they arise. I believe this bill will add to the cost of healthcare without adding an improved benefit. At times healthcare facilities have to respond to several of these agencies concerning one complaint, often with differing opinions. This will add another such group in which agencies must allocate resources.

As a private psychiatric facility, we are not holding committed patients such as in the state facility. Our patients can be discharged by the guardian at any time and thus represent no ability for involuntary commitment (patients for which commitment would be initiated are transferred to the state facility. The vast majority grievances that would be seen by the patient or family as infringing on patient rights could be addressed simply by refusing care or treatment (in addition to external and internal reporting mentioned above).

North Star
Behavioral Health System

2530 DeBarr Road • Anchorage, Alaska 99508
(907) 258-7575 • Fax (907) 277-7844
1-800-478-7575

The impetus of this bill was not related to children and adolescents. Children and adolescents have numerous adults (i.e., parents, step parents, grandparents, custodians, and agencies) who ensure proper care and thus have advocates who make many primary decisions on their behalf. Further, these parents and guardians have access to the child through visits, family therapy and phone calls. Such guardians have time and access to file complaints with any of the agencies mentioned above. This population, by its nature, often exhibits poor judgment and boundaries (some of the reasons for admission). Adolescents in particular, would use such a system to distract from care, avoid dealing with issues that precipitated admission and tie up staff time with unfounded complaints. It would be unrealistic to believe that this population would not over whelm the agency with grievances. Youth often make complaints about food (due to dietary requirements that limit unhealthy foods), inability to visit/phone with peers (often peers who may be unhealthy due to age differences, drug using partners, dealers, etc…), not wanting to attend therapy (to avoid dealing with painful issues or to avoid responsibility) which detract from effective treatment. Allowing three tiers of grievance levels, unless the youth believe it fair, in reality should be described as dealing with each grievance three times as well as with multiple agencies in some cases. This population in particular would not appear appropriate for such regulation. The amount of staff time alone would be prohibitive, both to our facility and on the part of the state.

The Federal Health Care Quality Improvement Act allows certain information to be protected in order to protect privacy, promote honest disclosure and encourage facilities to address systemic issues that lead to improved outcomes. There are several issues with this. One, grievances that involve multiple patients would not be allowed to be discussed with identifiers or necessarily outcome of the issue with that patient.. For example: If the grievance involves one patient being treated differently than another or another patient committing an unwanted act. This prevents the facility from defending itself. Also, grievances associated with unfounded complaints could lead to potential frivolous law suits. Item 7 (g) notes that the burden of proof shall be on the facility. Often grievances result in false accusations that cannot be disproven as it is difficult to prove something did not occur.

I would appreciate your consideration of these issues, either by considering removal of your support or by limiting the scope of the bill to patient populations and/or organizations in which you feel need such a system to protect clients. The bill could be limited to those patients above 18.

Anchorage, Alaska 99501

BY FIRST CLASS MAIL, EMAIL

Re: Mental Health Patient Grievance Procedure Bill, Work Draft 10/10/11

Dear Mr. Obermeyer,

Thank you for requesting written comment on the current draft of a bill Senator Davis is considering regarding psychiatric patient grievances. The members of the Alaska Mental Health Board are committed to ensuring that mental health consumers have access to a fair and equitable patient grievance process. **We are grateful for your commitment to protecting mental health consumers' security and dignity.**

We agree that patients who have lost the right to make health care decisions themselves and who are forced to accept mental health treatment under Title 47 require additional protections to ensure their dignity and safety. We do not support the imposition of a single grievance procedure on both hospital based involuntary psychiatric treatment and community based voluntary mental health services. The treatment environments are unique, as are the levels of patients' personal authority. This draft of the bill continues to impose the same statutory grievance procedure on community mental health providers as on involuntary hospital services.

As we have commented on all the previous drafts, we again recommend that the bill be amended to state: "**Sec 47.30.847. Patient grievance procedure.** (a) A person undergoing evaluation or treatment at a designated treatment facility has the right at any time to. . ." (page 2 line 31) or that the application to patients receiving services pursuant to AS 47.30.700 – A.S. 47.30.795 be explicit in the language of the bill.

The definition of "facility" (page 7 line 22) is better, but we still advise that, to be very clear about the scope and applicability of the bill, it be clarified to state "'designated treatment facility' is defined as a hospital, clinic, institution, center or other health care facility that has been designated by the department for the treatment or rehabilitation of mentally ill persons under AS 47.30.670 - 47.30.915 but does not include correctional institutions."

I. Grievances Defined

Thank you for defining a "grievance" (page 7 line 24) as a "complaint" and removing the language including "concerns" and "suggestions." This definition limits grievances to complaints made via a "form."

As with previous versions, this draft bill goes into great detail about what must be in the form. This leads to the construction that the statute prohibits a patient from making a grievance in person, by telephone, by email, or through a family member or designated representative/advocate. As we commented on earlier drafts, this actually narrows the procedure from what currently exists. This section contains so many specific requirements, it seems to contradict the earlier requirement that a grievance be processed on "a single form" (page 3 line 24). We recommend that this discrepancy be corrected so the law, if enacted, can be applied appropriately by treatment providers.

II. Crimes Against the Disabled

We renew our concern that, as proposed, AS 47.30.847(c)(8) (page 6 lines 6-17) minimizes serious crimes committed against our constituents. This section provides an "urgent level of review" for grievances involving sexual or physical abuse, denial of "lifesaving" medical care, or denial of "basic care or human rights." Were these acts to be committed against a patient by anyone (including a mental health treatment provider), they would be criminal acts. As such, they should not be minimized or reduced to "grievances." They should be considered crimes and reported to law enforcement immediately for investigation and prosecution if appropriate. Crimes against persons with disabilities often go unaddressed. Either the victim is blamed or they are undervalued to the point where crimes committed against them no longer matter. To codify this attitude in statute is unacceptable.

III. The Impact of Duplication

Providers of Medicaid-reimbursed services must comply with the grievance procedure requirements established by CMS. Hospitals accredited by the Joint Commission must also comply with grievance procedure standards. It is important that legislation address gaps without adding complexity. We recommend that the bill be reviewed in the context of these other requirements, and amended to provide uniformity across the grievance procedure requirements. The cross walk previously prepared for you and your staff is again attached for your reference.

IV. Call Center

The Alaska Mental Health Board does not support the creation of a "call center." This is an added level of complexity for patients and cost to the system. Trained patient advocates as called for by AS 47.30.847(d) provide this support and assistance to patients.

V. Hearing and Decision

AS 47.30.847(c)(5)(B) (page 5 line 11 *et seq.*) refers to review of a grievance by the "commissioner's designee" (line 14). The Commissioner of Health and Social Services cannot designate a hearing officer within a private hospital or other designated treatment facility – and since all of the providers of involuntary psychiatric treatment are private non-profit organizations except for API, this does not make sense.

We also again point out that administrative review of grievances against non-state entities, such as the private non-profit hospitals providing psychiatric treatment to Title 47 patients, is not possible. The administrative appeal process is limited to review of administrative actions – actions taken by

governmental agencies. Thus, the third level of review (page 5 lines 20-26) is irrelevant to all but API patients.

Having had no additional information about whether a third level of review by an administrative hearing officer results in additional burden on the attorneys appointed to represent individuals in Title 47 commitment hearings, we renew our concerns/questions on this section:

1. Are patients who are receiving care involuntarily (and therefore have been found unable to make important decisions for themselves) able to represent themselves at these hearings?
2. Must counsel be appointed to ensure that the individual has meaningful access to the administrative appeal process?

Since the bill requires the Department of Health and Social Services to intervene in all grievances that reach this level of review (page 7 line 6), there will be an assistant attorney general appearing on the agency's behalf. There will be either an administrator or attorney appearing on the hospital's behalf. So it would only seem fair that the patient have counsel.

1. If that counsel is required, who pays for it?
2. How is counsel appointed?
3. Can an administrative hearing officer even appoint counsel?

On the issue of the required intervention in level three grievance reviews by the Department of Health and Social Services, it is patently unfair to require (or even permit) such intervention in those instances involving grievances against API. That would create an imbalanced proceeding where two parties – represented by attorneys -- stand against a (potentially *pro se*) patient.

As with previous versions, this draft of AS 47.30.847(g) shifts the burden of proof to the treatment provider. This contradicts the usual course of these sorts of proceedings. This draft still denies the treatment providers due process, by limiting them to proving "compliance or remedial action" (page 7 lines 3-4) — presupposing that the facts alleged in all grievances are true.

We remind you of our caution that the financial ramifications of having patient grievances (at least as so broadly defined in the current draft) heard by the office of administrative hearings will require a DHSS fiscal note of not inconsequential size, and potentially a fiscal note for Public Defender and/or Office of Public Advocacy services. That should in no way prevent attempts to improve the grievance process for psychiatric patients, but should be something for which the sponsor is prepared.

VI. Timelines

We appreciate the effort to alter the grievance process in AS 47.30.847(c)(5)(A) to create a timeline to better fit the context of a treatment model that is designed to stabilize the patient and either transition him home or to a more appropriate acute care setting within a very short timeframe. However, the five (5) day deadline set by AS 47.30.847(d) for a response to a grievance conflicts with the former sections requirement of "immediate" review (page 5 line 6). This conflict should be resolved to ensure that patient grievances are resolved prior to discharge.

VII. Errata

The draft bill still refers to a "Alaska Department of Health and Social Services, Division of Mental Health, Grievance Reporting Form." As we have commented in the past, there is no such division. Page 4, lines 3-4 should be amended to state "Alaska Department of Health and Social Services, Division of Behavioral Health, Grievance Reporting Form."

AS 47.30.847 does not define a mental health "facility," so the reference in the draft AS 47.30.855(d) to this section as a source of clarification of what a facility is under this statute is not helpful. I think a more appropriate reference is AS 47.30.915(4).

VIII. Conclusion

We thank you again for the opportunity to continue to work with you and Senator Davis on this issue. This draft bill has been improved greatly, thanks to your hard work, and we look forward to continuing dialogue on the aspects we have identified herein.

Sincerely,

J. Kate Burkhart
Executive Director

			email *Interpretive Guidelines* §482.13(a)(2) (8/18/05 revision and clarification) Not for informal complaints (see above) *Interpretive Guidelines* §482.13(a)(2)
Oversight	Patient Rights and Ethics Team P& P PRE030-03 Procedure ¶ VI. D.	Governing body oversees quality and patient safety LD 1.20, EP6	Hospital governing body (or grievance committee) 42 CFR §482.13(a)(2)

Give / Send to: Tom Obermeyer,

Follow-up to our conversation. (Sen. Bill 55)

Attached are 2 pages of criticism of North Stars patient grievance procedure.

Regretably their grievance procedure does not properly protect psychiatric patients.

Thank you,

Dorrance Collins/
Faith Myers
929-0532

Mental Health Advocates, Faith Myers / Dorrance Collins,
3240 Penland Pkwy, Sp.35, Anchorage, AK. 99508 (907) 929-0532

+ Attn: Tom Obermeyer

North Star—Behavioral Health System

Treats approximately 4,000 or more psychiatric patients per year—Operates locked psychiatric facilities.

Criticism:
Grievance procedure not sufficient to protect a vulnerable population.

Patients, family are asked to go through an informal complaint process, but there is no time frame of how long that will take.

It is not clear that patients or family members can file a grievance at the time of their choosing.

There is only one level to the grievance procedure—there is no appeal process for patients to use.

There is no clear way for patients to appeal an adverse resolution to a grievance past the walls of the institution (to the state, etc.)

Con.

There is no impartial body to hear a patient's grievance. (An impartial body with the authority to reverse or influence the resolution of a patient's grievance.)

Hospital can request open-ended extensions of time before resolving a patient's grievance.

Dorrance Collins/
Faith Myers

Senator Bettye Davis

Senate Bill 55 – Mental Health Grievance Procedure

****

Explanation of Changes in CSSB 55( ) Version "R"

(Compares Committee Substitute "R" vs T with blue/red line changes)

---

1. **Page 1, lines 2-3: Title was changed to reflect amendment of Alaska Court Rules limiting attorney fees in certain cases.**
2. **Page 3, line 1: Allows filing a grievance at any time during operating hours.**
3. **Page 3, line 7: Allows consulting a patient advocate on "any day during reasonable hours."**
4. **Page 6, line 6: Clarifies that there are "parallel" procedures available under administrative decisions and criminal and other laws.**
5. **Page 6, line 8: The urgent level of review requires an expedited "administrative" decision.**
6. **Page 6, lines 11-12: Limits an urgent grievance to "an immediate threat to the health or welfare of a grievant," removing specific language previously limited to sexual abuse, physical abuse, denial of lifesaving treatment, procedures, or medications; and basic care or human rights.**
7. **Page 7, lines 4-6: Removes the burden of proof previously shifted to mental health facilities or units which had to prove by substantial evidence compliance or remedial action with applicable laws and procedures.**
8. **Page 7, lines 23-25: Creates a presumption that if a grievance is appealed to a court under this section, the imposition of attorney's fees on a grievant would inflict a substantial hardship.**
9. **Page 8, lines 16-21: Section 4 limits the court's discretion in awarding attorney's fees in certain cases by amending court rules, and rules of civil and appellate procedure**
10. **Page 8, lines 22-26: Section 5 requires a 2/3 vote of each house to change the court and procedural rules in Section 4.**

MEMORANDUM March 20, 2012

SUBJECT: Sectional Summary CSSB 55( ) (Work Order No. 27-LS0082\R)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds eight rights to the list of rights of a person undergoing mental health evaluation or treatment in the state under specified provisions of state law, including involuntary commitments. The additional rights include the right to be treated with dignity and respect and the right to file a grievance under the procedures established by sec. 2 of the bill.

Section 2. Establishes a grievance procedure, including varying levels of review and appeal, for a person undergoing evaluation or treatment at a public or private evaluation facility or unit or at a designated treatment facility or unit. Defines "grievance" to mean a complaint concerning a patient's treatment, care, or rights at a mental health evaluation or treatment facility or unit in the state. Includes a presumption that imposition of attorney's fees on a grievant for an appeal under this section would inflict an undue hardship.

Section 3. Requires the Department of Health and Social Services to provide to mental health evaluation and treatment facilities and units in the state a standardized notice of patient rights, assistance, and grievance procedures. Also requires the person in charge of the facility or unit to provide a written copy of the notice to each patient or their representative.

Section 4. Provides that the presumption added in sec. 2 of this version has an indirect effect on Rule 82, Alaska Rules of Civil Procedure.

Section 5. Provides a conditional effect of the presumption added in sec. 2 regarding attorney's fees takes effect only if sec. 4 receives a two-thirds majority vote.

CS FOR SENATE BILL NO. 55( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): ~~SENATOR~~SENATORS DAVIS, Wielechowski, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act relating to mental health patient rights, notifications, and grievance procedures; and amending Rule 82, Alaska Rules of Civil Procedure and Rule 508, Alaska Rules of Appellate Procedure."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.30.840(a) is amended to read:

(a) A person undergoing evaluation or treatment under AS 47.30.660 - 47.30.915

(1) may not be photographed without the person's consent and that of the person's guardian if a minor, except that the person may be photographed upon admission to a facility for identification and for administrative purposes of the facility; all photographs shall be confidential and may only be released by the facility to the patient or the patient's designee unless a court orders otherwise;

(2) at the time of admission to an evaluation or treatment facility, shall have reasonable precautions taken by the staff to inventory and safeguard the patient's

personal property; a copy of the inventory signed by the staff member making it shall be given to the patient and made available to the patient's attorney and any other person authorized by the patient to inspect the document;

(3) shall have access to an individual storage space for the patient's private use while undergoing evaluation or treatment;

(4) shall be permitted to wear personal clothing, to keep and use personal possessions including toilet articles if they are not considered unsafe for the patient or other patients who might have access to them, and to keep and be allowed to spend a reasonable sum of the patient's own money for the patient's needs and comfort;

(5) shall be allowed to have visitors at reasonable times;

(6) shall have ready access to letter writing materials, including stamps, and have the right to send and receive unopened mail;

(7) shall have reasonable access to a telephone, both to make and receive confidential calls;

(8) has the right to be free of corporal punishment;

(9) has the right to reasonable opportunity for indoor and outdoor exercise and recreation;

(10) has the right, at any time, to have a telephone conversation with or be visited by an attorney;

(11) may not be retaliated against or subjected to any adverse change of conditions or treatment solely because of assertion of rights under this section;

(12) has the right to be treated with dignity and respect;

(13) has the right to confidentiality of and access to the person's evaluation and treatment records maintained by the facility;

(14) has the right to an individualized treatment plan, and the right to be involved in developing the treatment plan, while residing at the facility;

(15) has the right to informed consent by the person or the person's legal representative;

(16) has the right to freedom from seclusion and restraint;

(17) has the right to file a grievance any time during operating hours under AS 47.30.847;

(18) has the right to a designated staff member clearly identified by a treatment facility to act as a patient advocate and to assist in the filing of a grievance under AS 47.30.847;

(19) has the right to consult with a patient advocate or representative of the patient's choosing, on any day during reasonable hours.

*** Sec. 2.** AS 47.30.847 is repealed and reenacted to read:

Sec. 47.30.847. Patient grievance procedure. (a) A person undergoing evaluation or treatment at a public or private evaluation facility or unit or designated treatment facility or unit under AS 47.30.660 - 47.30.915 has the right to bring a grievance concerning the patient's treatment, care, or rights.

(b) The department shall establish one or more impartial call centers for the purpose of receiving, referring, and tracking grievances filed under this section. The call center shall maintain an electronic database and hard copies of all grievances filed under this section. The call center shall be made available to a grievant at no charge and at all times and shall process a grievance immediately as provided in this section. The call center shall assist a grievant in filing a grievance and shall provide procedural information but may not advise a grievant.

(c) A facility or unit shall provide a formal grievance procedure, which must include referral to a call center established under (b) of this section, for all patient grievances on any subject brought under (a) of this section, regardless of the availability of a less formal procedure for comments and suggestions. Once filed to the best of the grievant's knowledge and ability, all grievances shall be processed on a single form. The grievance procedure must include

(1) written notice on admission to the facility of the availability of the formal grievance procedure and facility rules pertaining to the grievance procedure;

(2) a form for submission of a grievance, access to a call center, and a secure box for deposit of grievance reporting forms; the contents of the box must be reviewed each day patients are being treated or evaluated; the form must be readily accessible to the patient and understood by the patient or easily explained by a staff

member in a language and method understandable to the patient; the original of a completed form submitted to the facility must be kept in the patient's record; the form must contain the heading "Alaska Department of Health and Social Services, Mental Health Grievance Reporting Form," and include

(A) the name of the grievant and the grievant's contact information, including the grievant's address and telephone number;

(B) the date and time of the completion of the grievance form;

(C) the name and physical location of the service provider;

(D) the date on which the event giving rise to the grievance took place;

(E) the names of persons involved in the event giving rise to the grievance, if known;

(F) a narrative description of the event giving rise to the grievance;

(G) the specific issue to be addressed;

(H) the grievant's suggested resolution of the grievance;

(I) the investigative steps taken to formulate the facility's or unit's response;

(J) the response and date of response by the facility or unit;

(K) the signature of the grievant at each level, including the initial grievance;

(L) the signature of the reviewer and date of review for each level of review; and

(M) options for the grievant to check following each response by the facility or unit, as follows:

(i) I agree;

(ii) I do not agree;

(iii) submit to level two review;

(iv) submit to level three review;

(3) a written list showing contact information for available advocacy agencies, including the department, facility accrediting bodies, the ombudsman, and

the Disability Law Center of Alaska;

(4) three levels of review, as follows:

(A) level one, an initial review and written decision by a supervisory staff member to determine whether a grievant's treatment, care, or rights have been adversely affected, a written record of that determination, and, if the grievant's rights have been aversely affected, implementation of a mutually agreed upon resolution of the grievance;

(B) level two, if a resolution is not agreed upon or implemented under a level one review, a grievant may initiate a review within 20 calendar days after the determination is made under level one; a chief executive officer or the commissioner's designee for a facility shall make written findings and issue a decision within five business days after initiation of a level two review; if the level two review results in a finding of no adverse effect, no additional review is necessary, but the decision may be appealed under (C) of this paragraph by a grievant, and the written decision must include notice of the availability of a level three appeal;

(C) level three, a grievant may appeal the final written decision made under level two to the commissioner within 30 calendar days after receipt of the findings of the level two review; the commissioner shall make a final written decision on or before the 14th calendar day after the appeal is filed; if the commissioner fails to enter a timely decision, the appeal shall be considered denied; the commissioner may deny an appeal for substantial failure to follow the procedures set out in this section; a denial or decision by the commissioner may be appealed to the superior court within 30 calendar days;

(5) maintenance of a complete and confidential record, available on request by the grievant or the grievant's designated representative, of all documents, including the grievance and appeals and responses to the grievance and appeals;

(6) delivery, within 24 hours, of a copy of the initial grievance and of all documents maintained under (5) of this subsection to the call center established under (b) of this section, which shall promptly provide all necessary information to

(A) the grievant or the grievant's representative;

(B) the department; the department shall maintain confidentiality over the grievant's health and personal information;

(C) the person responsible for the next level of review; and

(D) the person in charge of the facility or unit; and

(7) in addition to the three levels of review and parallel procedures available under criminal and other laws provided under (4) of this subsection, an urgent level of review and expedited administrative decision, available at all times to a current patient of a facility or unit, to be conducted immediately by the chief executive officer at the facility and referred to a call center and reviewed by the department not later than 24 hours after receipt of a grievance that alleges an immediate threat to the health or welfare of a grievant.

~~(A) sexual abuse;~~

~~(B) physical abuse; or~~

~~(C) denial of~~

~~(i) lifesaving treatment or procedures;~~

~~(ii) lifesaving medications; or~~

~~(iii) basic care or human rights, as defined by the commissioner.~~

(d) Except as provided in (c)(7) of this section, unless an extension of time of not more than five business days is agreed upon by a patient or the patient's representative, an evaluation facility or unit or a designated treatment facility or unit shall mail or hand deliver a written response to a call center within five business days after receipt of a grievance or request for additional review. The response must include the reasons for the decision and a description of the appeal process. The grievant may request review at the next level if a written response is not timely.

(e) An evaluation facility or unit and a designated treatment facility or unit shall have a designated staff member who is trained in mental health consumer advocacy who shall, on a patient's request, serve as an advocate to assist the patient in bringing grievances or pursuing other redress for complaints concerning care, treatment, and rights.

(f) A grievant may not file a grievance later than one year after the incident giving rise to the grievance. The facility or unit shall make a good faith effort to mail a response to a grievant who has been discharged from the facility.

~~(g) The burden of proof required for all grievance reviews shall be on the facility or unit against which a grievance is filed to prove, by substantial evidence, compliance or remedial action with applicable laws and procedures.~~

(~~h~~g) The department shall review all grievances and responses to grievances for compliance with this section.

(~~i~~h) A facility or unit shall prepare and file a quarterly report with the department that describes the

(1) number of grievances submitted;

(2) general issue raised in each grievance; and

(3) resolution, including litigation, of all grievances submitted.

(~~j~~i) The department shall compile the information provided under (~~i~~h) of this section and provide a quarterly report to be posted for public review that describes the number and types of grievances filed against each facility in the previous quarter.

(~~k~~j) Nothing in this section shall be interpreted to prohibit informal dispute resolution or mediation by the written agreement of the grievant, the facility or unit, and the department at any time during the grievance process but before a lawsuit concerning the subject of the grievance is filed by a grievant.

(~~l~~k) A facility may not discourage or delay a patient's access to an advocate or representative of the patient's choosing.

(*l*) If a grievance decision made under this section is appealed to a court, the court shall presume that the imposition of attorney's fees on a grievant would inflict a substantial and undue hardship on the grievant under AS 09.60.010(e).

(m) In this section,

(1) "facility" has the meaning given to "designated treatment facility" or "evaluation facility" in AS 47.30.915; and means a unit of a hospital in which patients receive mental health evaluation or treatment and for which public funds are provided;

(2) "grievance" means a complaint made by a grievant concerning a

patient's treatment, care, or rights at a facility;

(3) "grievant" means a patient of a public or private mental health treatment or evaluation facility or unit or the patient's representative;

(4) "unit" means a discrete portion of a facility dedicated to the treatment or evaluation of mental health patients.

* **Sec. 3.** AS 47.30.855 is amended by adding new subsections to read:

(b) The department shall provide to a facility for posting and distribution a standardized notice that is designed to be easily understood and that separately describes patient rights, available assistance, and the grievance procedure provided under AS 47.30.847.

(c) A person in charge of a facility shall ensure that each patient or patient's representative receives a written copy of the standardized notice provided by the department under (b) of this section and of the formal grievance procedure described in AS 47.30.847(c).

(d) In this section, "facility" has the meaning given in AS 47.30.847.

* **Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

INDIRECT COURT RULE AMENDMENT. AS 47.30.847(*l*), added by sec. 2 of this Act, has the effect of changing Rule 82, Alaska Rules of Civil Procedure, and Rule 508, Alaska Rules of Appellate Procedure, by limiting the court's discretion in awarding attorney's fees in certain cases.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. AS 47.30.847(*l*), added by sec. 2 of this Act, takes effect only if sec. 4 of this Act receives the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

CS FOR SENATE BILL NO. 55(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Wielechowski, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act relating to mental health patient rights, notifications, and grievance procedures; and amending Rule 82, Alaska Rules of Civil Procedure, and Rule 508, Alaska Rules of Appellate Procedure."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.30.840(a) is amended to read:

(a) A person undergoing evaluation or treatment under AS 47.30.660 - 47.30.915

(1) may not be photographed without the person's consent and that of the person's guardian if a minor, except that the person may be photographed upon admission to a facility for identification and for administrative purposes of the facility; all photographs shall be confidential and may only be released by the facility to the patient or the patient's designee unless a court orders otherwise;

(2) at the time of admission to an evaluation or treatment facility, shall have reasonable precautions taken by the staff to inventory and safeguard the patient's

personal property; a copy of the inventory signed by the staff member making it shall be given to the patient and made available to the patient's attorney and any other person authorized by the patient to inspect the document;

(3) shall have access to an individual storage space for the patient's private use while undergoing evaluation or treatment;

(4) shall be permitted to wear personal clothing, to keep and use personal possessions including toilet articles if they are not considered unsafe for the patient or other patients who might have access to them, and to keep and be allowed to spend a reasonable sum of the patient's own money for the patient's needs and comfort;

(5) shall be allowed to have visitors at reasonable times;

(6) shall have ready access to letter writing materials, including stamps, and have the right to send and receive unopened mail;

(7) shall have reasonable access to a telephone, both to make and receive confidential calls;

(8) has the right to be free of corporal punishment;

(9) has the right to reasonable opportunity for indoor and outdoor exercise and recreation;

(10) has the right, at any time, to have a telephone conversation with or be visited by an attorney;

(11) may not be retaliated against or subjected to any adverse change of conditions or treatment solely because of assertion of rights under this section;

(12) has the right to be treated with dignity and respect;

(13) has the right to confidentiality of and access to the person's evaluation and treatment records maintained by the facility;

(14) has the right to an individualized treatment plan, and the right to be involved in developing the treatment plan, while residing at the facility;

(15) has the right to informed consent by the person or the person's legal representative;

(16) has the right to freedom from seclusion and restraint;

(17) has the right to file a grievance any time during operating hours under AS 47.30.847;

(18) has the right to a designated staff member clearly identified by a treatment facility to act as a patient advocate and to assist in the filing of a grievance under AS 47.30.847;

(19) has the right to consult with a patient advocate or representative of the patient's choosing on any day during reasonable hours.

*** Sec. 2.** AS 47.30.847 is repealed and reenacted to read:

Sec. 47.30.847. Patient grievance procedure. (a) A person undergoing evaluation or treatment at a public or private evaluation facility or unit or designated treatment facility or unit under AS 47.30.660 - 47.30.915 has the right to bring a grievance concerning the patient's treatment, care, or rights.

(b) The department shall establish one or more impartial call centers for the purpose of receiving, referring, and tracking grievances filed under this section. The call center shall maintain an electronic database and hard copies of all grievances filed under this section. The call center shall be made available to a grievant at no charge and at all times and shall process a grievance immediately as provided in this section. The call center shall assist a grievant in filing a grievance and shall provide procedural information but may not advise a grievant.

(c) A facility or unit shall provide a formal grievance procedure, which must include referral to a call center established under (b) of this section, for all patient grievances on any subject brought under (a) of this section, regardless of the availability of a less formal procedure for comments and suggestions. Once filed to the best of the grievant's knowledge and ability, all grievances shall be processed on a single form. The grievance procedure must include

(1) written notice on admission to the facility of the availability of the formal grievance procedure and facility rules pertaining to the grievance procedure;

(2) a form for submission of a grievance, access to a call center, and a secure box for deposit of grievance reporting forms; the contents of the box must be reviewed each day patients are being treated or evaluated; the form must be readily accessible to the patient and understood by the patient or easily explained by a staff

member in a language and method understandable to the patient; the original of a completed form submitted to the facility must be kept in the patient's record; the form must contain the heading "Alaska Department of Health and Social Services, Mental Health Grievance Reporting Form," and include

(A) the name of the grievant and the grievant's contact information, including the grievant's address and telephone number;

(B) the date and time of the completion of the grievance form;

(C) the name and physical location of the service provider;

(D) the date on which the event giving rise to the grievance took place;

(E) the names of persons involved in the event giving rise to the grievance, if known;

(F) a narrative description of the event giving rise to the grievance;

(G) the specific issue to be addressed;

(H) the grievant's suggested resolution of the grievance;

(I) the investigative steps taken to formulate the facility's or unit's response;

(J) the response and date of response by the facility or unit;

(K) the signature of the grievant at each level, including the initial grievance;

(L) the signature of the reviewer and date of review for each level of review; and

(M) options for the grievant to check following each response by the facility or unit, as follows:

(i) I agree;

(ii) I do not agree;

(iii) submit to level two review;

(iv) submit to level three review;

(3) a written list showing contact information for available advocacy agencies, including the department, facility accrediting bodies, the ombudsman, and

the Disability Law Center of Alaska;

(4) three levels of review, as follows:

(A) level one, an initial review and written decision by a supervisory staff member to determine whether a grievant's treatment, care, or rights have been adversely affected, a written record of that determination, and, if the grievant's rights have been aversely affected, implementation of a mutually agreed upon resolution of the grievance;

(B) level two, if a resolution is not agreed upon or implemented under a level one review, a grievant may initiate a review within 20 calendar days after the determination is made under level one; a chief executive officer or the commissioner's designee for a facility shall make written findings and issue a decision within five business days after initiation of a level two review; if the level two review results in a finding of no adverse effect, no additional review is necessary, but the decision may be appealed under (C) of this paragraph by a grievant, and the written decision must include notice of the availability of a level three appeal;

(C) level three, a grievant may appeal the final written decision made under level two to the commissioner within 30 calendar days after receipt of the findings of the level two review; the commissioner shall make a final written decision on or before the 14th calendar day after the appeal is filed; if the commissioner fails to enter a timely decision, the appeal shall be considered denied; the commissioner may deny an appeal for substantial failure to follow the procedures set out in this section; a denial or decision by the commissioner may be appealed to the superior court within 30 calendar days;

(5) maintenance of a complete and confidential record, available on request by the grievant or the grievant's designated representative, of all documents, including the grievance and appeals and responses to the grievance and appeals;

(6) delivery, within 24 hours, of a copy of the initial grievance and of all documents maintained under (5) of this subsection to the call center established under (b) of this section, which shall promptly provide all necessary information to

(A) the grievant or the grievant's representative;

(B) the department; the department shall maintain confidentiality over the grievant's health and personal information;

(C) the person responsible for the next level of review; and

(D) the person in charge of the facility or unit; and

(7) in addition to the three levels of review and parallel procedures available under criminal and other laws provided under (4) of this subsection, an urgent level of review and expedited administrative decision, available at all times to a current patient of a facility or unit, to be conducted immediately by the chief executive officer at the facility and referred to a call center and reviewed by the department not later than 24 hours after receipt of a grievance that alleges an immediate threat to the health or welfare of a grievant.

(d) Except as provided in (c)(7) of this section, unless an extension of time of not more than five business days is agreed upon by a patient or the patient's representative, an evaluation facility or unit or a designated treatment facility or unit shall mail or hand deliver a written response to a call center within five business days after receipt of a grievance or request for additional review. The response must include the reasons for the decision and a description of the appeal process. The grievant may request review at the next level if a written response is not timely.

(e) An evaluation facility or unit and a designated treatment facility or unit shall have a designated staff member who is trained in mental health consumer advocacy who shall, on a patient's request, serve as an advocate to assist the patient in bringing grievances or pursuing other redress for complaints concerning care, treatment, and rights.

(f) A grievant may not file a grievance later than one year after the incident giving rise to the grievance. The facility or unit shall make a good faith effort to mail a response to a grievant who has been discharged from the facility.

(g) The department shall review all grievances and responses to grievances for compliance with this section.

(h) A facility or unit shall prepare and file a quarterly report with the department that describes the

(1) number of grievances submitted;

(2) general issue raised in each grievance; and

(3) resolution, including litigation, of all grievances submitted.

(i) The department shall compile the information provided under (h) of this section and provide a quarterly report to be posted for public review that describes the number and types of grievances filed against each facility in the previous quarter.

(j) Nothing in this section shall be interpreted to prohibit informal dispute resolution or mediation by the written agreement of the grievant, the facility or unit, and the department at any time during the grievance process but before a lawsuit concerning the subject of the grievance is filed by a grievant.

(k) A facility may not discourage or delay a patient's access to an advocate or representative of the patient's choosing.

(l) If a grievance decision made under this section is appealed to a court, the court shall presume that the imposition of attorney fees on a grievant would inflict a substantial and undue hardship on the grievant under AS 09.60.010(e).

(m) In this section,

(1) "facility" has the meaning given to "designated treatment facility" or "evaluation facility" in AS 47.30.915; and means a unit of a hospital in which patients receive mental health evaluation or treatment and for which public funds are provided;

(2) "grievance" means a complaint made by a grievant concerning a patient's treatment, care, or rights at a facility;

(3) "grievant" means a patient of a public or private mental health treatment or evaluation facility or unit or the patient's representative;

(4) "unit" means a discrete portion of a facility dedicated to the treatment or evaluation of mental health patients.

*** Sec. 3.** AS 47.30.855 is amended by adding new subsections to read:

(b) The department shall provide to a facility for posting and distribution a standardized notice that is designed to be easily understood and that separately describes patient rights, available assistance, and the grievance procedure provided under AS 47.30.847.

(c) A person in charge of a facility shall ensure that each patient or patient's representative receives a written copy of the standardized notice provided by the department under (b) of this section and of the formal grievance procedure described in AS 47.30.847(c).

(d) In this section, "facility" has the meaning given in AS 47.30.847.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

INDIRECT COURT RULE AMENDMENT. AS 47.30.847(*l*), added by sec. 2 of this Act, has the effect of changing Rule 82, Alaska Rules of Civil Procedure, and Rule 508, Alaska Rules of Appellate Procedure, by limiting the court's discretion in awarding attorney fees in certain cases.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. AS 47.30.847(*l*), added by sec. 2 of this Act, takes effect only if sec. 4 of this Act receives the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

SENATOR JOHNNY ELLIS
RULES COMMITTEE CHAIR

SPONSOR STATEMENT – SENATE BILL 74

SB 74 – An act requiring insurance coverage for autism spectrum disorders

Autism is a devastating disorder affecting at least 1 in 110 American children. Despite being treatable, many children diagnosed with an Autism Spectrum Disorder (ASD) never receive the treatment they need. In fact, most insurance plans explicitly exclude treatment of ASDs, even when the service is otherwise covered by the health plan.

SB 74 would require insurance coverage for autism spectrum disorders, including the behavior therapies that after 30 years of study have shown to be the only effective treatment of these disorders. One of the nation's foremost actuarial firms has studied the cost of providing insurance coverage for autism spectrum disorders, and concluded that the cost to policy holders in Alaska would be minimal (estimated at between 0.28% and 0.68%, or $2.58 per month). This legislation allows Alaska to start this process on our own terms, without a federal mandate, and gives the state the needed time to build capacity to meet the demands created by SB 74.

Treatment has been shown to improve, often significantly, the symptoms of ASD. In some cases, effective treatment eliminates the need for special education services for a child with ASD. The cost savings in special education alone amounts to approximately $208,500 per capita while the child is in school. This number rises to over $1.08 million over the autistic person's lifespan. Furthermore, the incremental societal cost of not treating autism has been estimated to be approximately $3.2 million per capita.

Coverage of ASDs by insurers would not only provide a needed service to those families suffering directly from the affects of a child with autism, but saves the state and taxpayers exponentially over the lifespan of those diagnosed with autism. Though there is no cure for ASDs, this legislation would help significantly to treat individuals and families suffering from these disorders. Prompt passage of this legislation would allow the state to reap the health and economic benefits that would result from covering ASDs.

I respectfully ask for your careful consideration and support of SB 74.

MEMORANDUM March 28, 2011

SUBJECT: Sectional summary; insurance for autism spectrum disorders (SB 74, Work Order No. 27-LS0443\A)

TO: Senator Johnny Ellis
Chair of the Senate Rules Committee
Attn: Amory Lelake

FROM: Dennis C. Bailey
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Requires a health care insurer to provide coverage for the costs of the diagnosis and treatment of autism spectrum disorder under a treatment plan prescribed by a physician or psychologist. Coverage is required only for individuals under 21 years of age; must not limit the number of visits for treatment; is subject to the same copayment, deductible and coinsurance terms applicable to other health care services; and may be coordinated with an education program. The health care insurer may not refuse to cover an individual or terminate coverage because the individual is diagnosed with autism spectrum disorder.

Section 2. The Act applies to a health care insurance policy effective after January 1, 2012.

Section 3. Provides for an immediate effective date.

SENATOR JOHNNY ELLIS
RULES COMMITTEE CHAIR

SB 74
Insurance Coverage for Autism Spectrum Disorders

Sectional Analysis

Section 1 of this bill amends AS 21.42 by creating a new section AS 21.42.397 relating to insurance coverage for autism spectrum disorders.

Subsection (a) requires insurance plans to cover medically necessary treatment for autism spectrum disorders, and exempts plans offered by fraternal benefit societies.

Subsection (b) further defines the coverage that must be provided.

Subsection (c) establishes that this section does not limit coverage already provided.

Subsection (d) prohibits an insurance company from denying coverage to someone because they have an autism spectrum disorder

Subsection (e) defines "autism service provider," "autism spectrum disorders," health care insurance plan", "health care insurance," and "medically necessary."

Section 2 of the bill establishes that the provisions of section 1 only apply to insurance policies issued after January 1st, 2012.

Section 3 of this bill establishes an immediate effective date for this act.

Autism Spectrum Disorder

- Curable? No
- Treatable? Yes

- Impaired Communication
- Impaired Social Interaction
- Repetitive or Stereotyped Patterns of Behavior
- Narrow Range of Interests

- Four times more common in boys than girls
- Average age of diagnosis: 5-1/2

Applied Behavior Analysis (ABA Therapy)

- One-on-one therapy based on principles of repetition, reinforcement, and extinction.

- When an environment supports a set of behaviors, they increase. When an environment does not support behaviors, they tend to extinguish and fade away.

ABA Therapy Is Not Experimental

- "Thirty years of research demonstrated the efficacy of applied behavioral methods in reducing inappropriate behavior and in increasing communication, learning, and appropriate social behavior."

  Report of the Surgeon General of the United States, 1999

- "ABA therapy is not experimental or investigational in nature."

  McHenry v. PacificSource Health Plans (D. Oregon, Jan. 5, 2010)

- "The effectiveness of ABA-based intervention in ASDs has been well documented through 5 decades of research . . . . Children who receive early intensive behavioral treatment have been shown to make substantial, sustained gains in IQ, language, academic performance, and adaptive behavior as well as some measures of social behavior, and their outcomes have been significantly better than those of children in control groups."

  American Academy of Pediatrics

Applied Behavior Analysis: Sample Therapy Structure

- Consultant
  - Highly educated and trained
  - Board certified
  - Evaluates, designs, trains
  - 3-6 hours per month

- Mid-level supervisor (lead therapist)
  - Highly educated and trained
  - Updates programming; trains; oversees
  - 6 hours per week

- Line therapists
  - Trained & supervised by above
  - Provide 40 hours per week of direct therapy, usually in 3-hour shifts

Applied Behavior Analysis: Cost of a Sample Therapy Program

- Consultant
  - 3-6 hours per month
  - $100-$150/hour
  - 6 hours x $150 = $900/month
  - $900 x 12 months = **$10,800**

- Mid-level supervisor (lead therapist)
  - 6 hours per week
  - $30-$60/hour
  - 6 hours x $60 = $360/week
  - $360/week x 52 weeks = **$18,720**

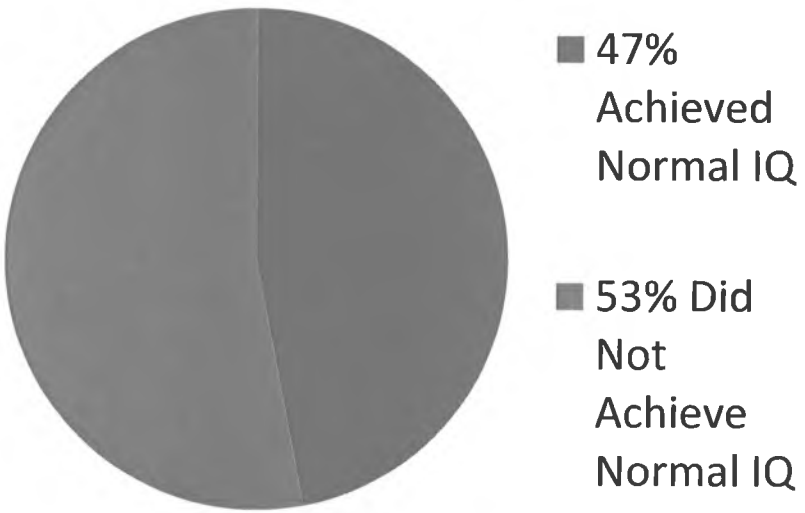
- Line therapists
  - 40 hours per week
  - $10 - $30/hour
  - 40 hours x $20 = $800/week
  - $800/week x 52 weeks = **$41,600**

- $10,800 + $18,720 + $41,600 = **$71,120**

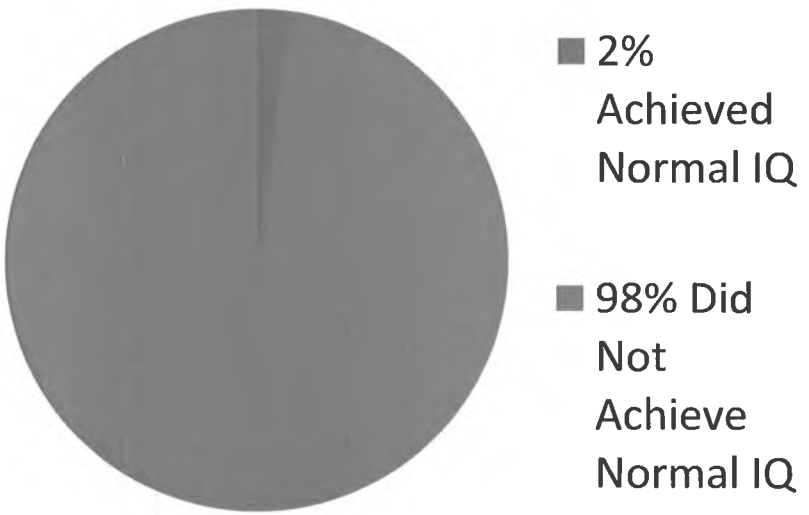
Savings to the State: Special Education

Outcome of 1987 UCLA Study on Efficacy of ABA

ABA Group



Other Intervention (Control) Group



Societal Costs of Autism

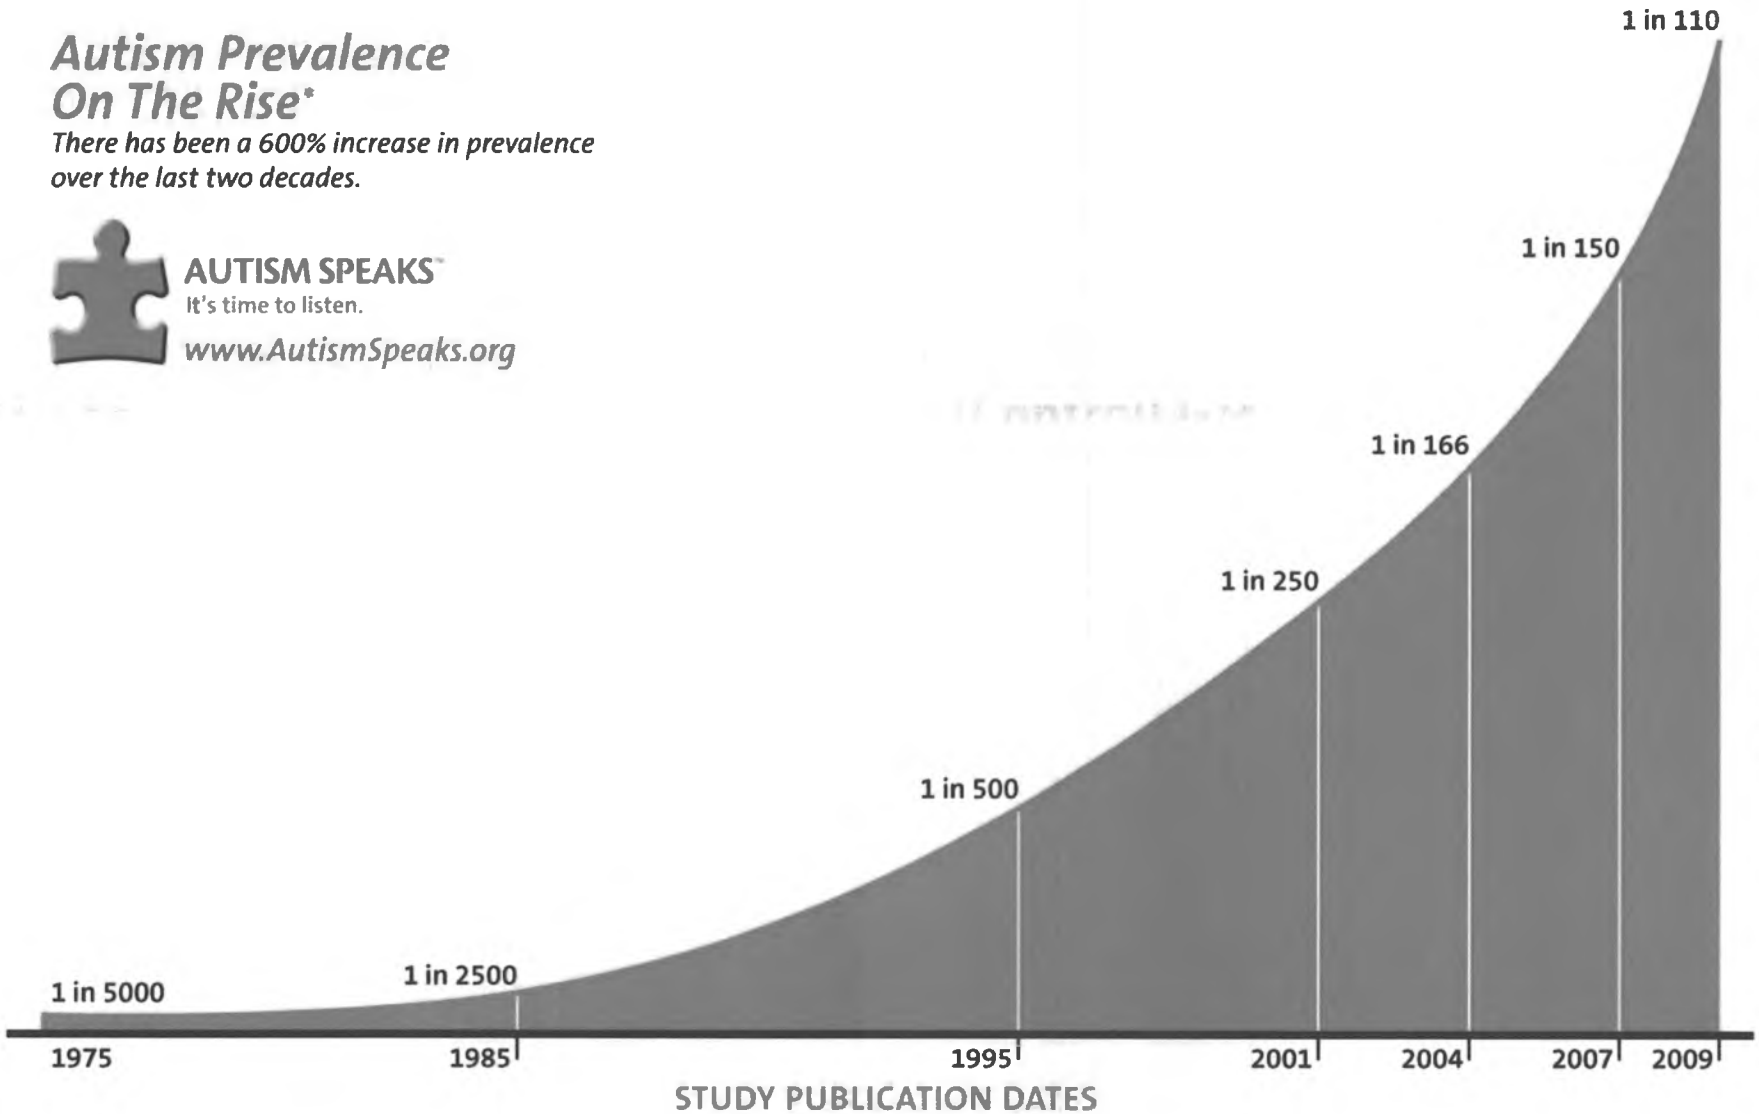
- Harvard School of Public Health (Ganz, 2006)
- $3.2 million per person over lifetime
  - Includes direct and indirect costs, such as lost productivity

- Pennsylvania (Green, Jacobson & Mulick, 1998)
- Over $1 million per person

Autism Prevalence On The Rise*

There has been a 600% increase in prevalence over the last two decades.

AUTISM SPEAKS™
It's time to listen.
www.AutismSpeaks.org



*Recent research has indicated that changes in diagnostic practices may account for at least 25% of the increase in prevalence over time, however much of the increase is still unaccounted for and may be influenced by certain unidentified factors.

South Carolina

APS HEALTHCARE
Healthy Together

State of South Carolina
State Health Plan Autism Spectrum Disorder Benefit

Effective with the 2009 Plan Year, the State Health Plan began covering Applied Behavior Analysis (ABA) for children diagnosed with an Autism Spectrum Disorder. The Employee Insurance Program (EIP) asked APS Healthcare to develop guidelines for administering the new benefit. Just like other services covered by APS for behavioral health diagnoses, the new Autism Spectrum Disorder (ASD) benefit services must be pre-authorized as medically necessary by APS, and providers must be contracted with APS as in-network providers. Only ABA providers fully certified by the Behavior Analyst Certification Board will be part of the network and be able to file claims for ABA services. All reimbursements for ABA services will be made by APS directly to ABA providers.

Board Certified Behavior Analysts (BCBA's) contracted with APS must provide direct supervision to their staff, including Board Certified Associate Behavior Analysts and/or any non-certified ABA therapists. Direct supervision includes the observation and oversight of the delivery of "hands on" ABA therapy by behavioral therapy staff.

The new benefit became effective on **January 1, 2009.** Following is a summary of requirements for coverage under the new benefit.

Eligibility Requirements:

1) Member must be covered by the State Health Plan and under sixteen (16) years of age with no pre-existing condition exclusions.

2) Member must be diagnosed by age eight (8) with Autistic Disorder, Asperger's Disorder or Pervasive Developmental Disorder Not Otherwise Specified by a Physician or Certified Registered Nurse Practitioner.

3) Diagnosis by age 8 must be confirmed by the following diagnosis-specific tests/screening tools:
   a. Autistic Disorder using one of the following:
      1. Checklist for Autism in Toddlers (CHAT); or
      2. Modified Checklist for Autism in Toddlers (M-CHAT); or
      3. Screening Tool for Autism in Two-Year Olds (STAT); or
      4. Social Communication Questionnaire (SCQ) (recommended for children four-years of age or older)
   b. Asperger's Syndrome using one of the following (recommended for school-age children):
      1. Autism Spectrum Screening Questionnaire (ASSQ); or
      2. Childhood Asperger Syndrome Test (CAST); or
      3. Krug Asperger's Disorder Index (KADI)
   c. Pervasive Development Disorder, NOS using the following:
      1. One of the previously mentioned tools to rule out Autism and Asperger's; and
      2. DSM-IV Diagnostic Criteria/Pervasive Developmental Disorder Not Otherwise Specified (PDD-NOS)

4) Member must be evaluated by an appropriate diagnostician to rule out the following as a sole explanation for symptoms of Autism Spectrum Disorder:
   a. Neurological Disorder (must be by an MD)
   b. Lead Poisoning (must be by an MD),
   c. Primary Speech Disorder, and
   d. Primary Hearing Disorder.

5) Member must be evaluated by a licensed Psychologist within the last 6 months for current validation of the ASD Diagnosis, using:
   a. Autism Diagnostic Observation Schedule (ADOS); or
   b. Autism Diagnostic Interview (ADI-R); or
   c. Childhood Autism Rating Scale (CARS); or
   d. A DSM-IV Diagnostic Criteria which validates one of the three ASD diagnoses

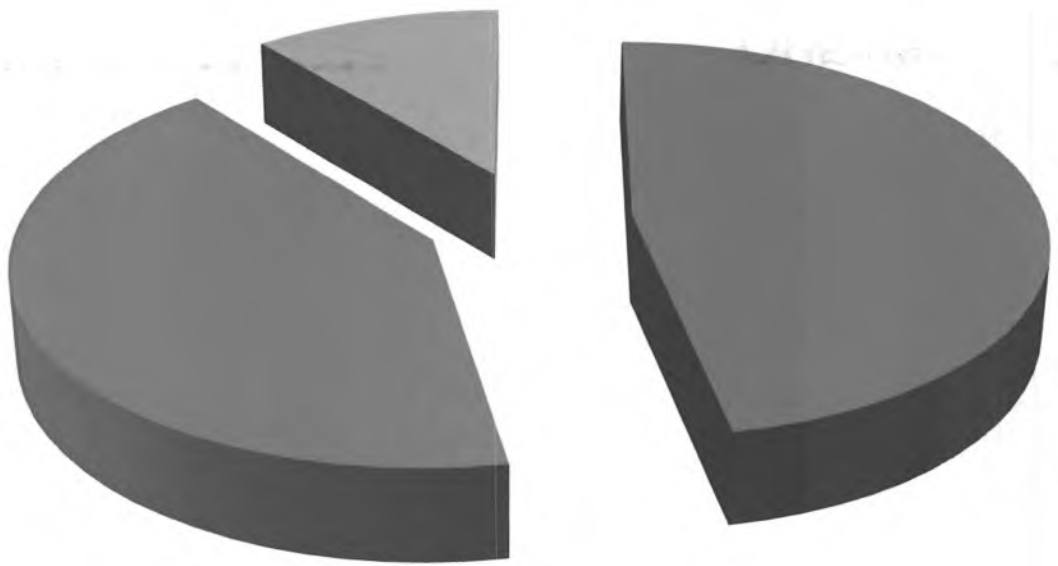
Outcome of 1987 UCLA Study

Educational Placements for Group That Received ABA



- 47% = Mainstreamed with No Support
- 42% = Low-Intensity Special Education Placement (for language delay)
- 11% = High-Intensity Special Education Placement (for autism or intellectual disability)

Savings to the State: Special Education

"A study published in a national journal found that Pennsylvania could save an average of $187,000 to $203,000 on each child who received three years of EIBI relative to one who received special education services until age 22. The Pennsylvania study also suggested that cost savings would likely continue to accrue after children exit the school system. The study found that the state could save from $656,000 to $1.1 million per child if expenditures up to age 55 are included.

Another study published in a national journal found that Texas could save an average of $208,500 in education costs for each student who received three years of EIBI relative to a student who received 18 years of special education from ages four to 22. Applied to the estimated 10,000 children with ASDs in Texas, it was estimated that the state could save almost $2.1 billion by implementing intensive treatment programs."

"Educational in Nature"?

- False choice
- What does "educational in nature" mean?
- *Schools provide?*
- *Schools would provide if adequate resources?*
  - No obligation under IDEA or state law to <u>treat</u> medical condition
    - Schools are required to accommodate the disabling condition, not remedy it.
- Is speech therapy "educational in nature"? AAP report.
- *Provided by school personnel?*
- Academic goals
- ASD is diagnosed by a doctor, not a principal
- Argument du jour
  - Rejected in 23 states
  - Rejected in federal court

"Educational in Nature"?

- *McHenry v. PacificSource Health Plans (D. Oregon, Jan. 5, 2010)*
- "While ABA therapy may have beneficial effects on an autistic child's social and academic skills, its defining characteristic is application of techniques to modify behavior in every area of an autistic child's life. In this regard, a sports analogy is instructive. While participation in sports can benefit a student's academic and social skills, no one would classify sports as academic or social skills training.
- Similarly, the incidental benefits in these areas resulting from ABA therapy, while real, do not dictate that it be classified as either academic or social skills training.
- . . . While aimed at improving social and academic functioning, it does this by specifically addressing behavioral deficits possessed by autistic children that interfere with every area of their life, not by educating kids on social norms or teaching study skills or other tools specific to academic success."

Impact of Federal Health Care Reform

- 2009 Amendments by Rep. Doyle (Pa.) & Sen. Menendez (NJ)
- Changed "**Mental health and substance use disorder services**", one of ten required benefits, to "**Mental health and substance use disorder services*, including behavioral health treatments***".
- Applies to plans issued through Exchanges as well as small group and individual plans.
- N/A to existing coverage, large groups, self-funded
- Starts in 2014.
- http://www.autismvotes.org/site/apps/nlnet/content2.aspx?c=frKNI3PCImE&b=3930723&ct=7522291

The Essential Benefits Package

- Ambulatory patient services
- Emergency services
- Hospitalization
- Maternity and newborn care
- Mental health and substance use disorder services, including behavioral health treatment
- Prescription drugs
- Rehabilitative and habilitative services and devices
- Laboratory services
- Preventive and wellness services and chronic disease management
- Pediatric services, including oral and vision care

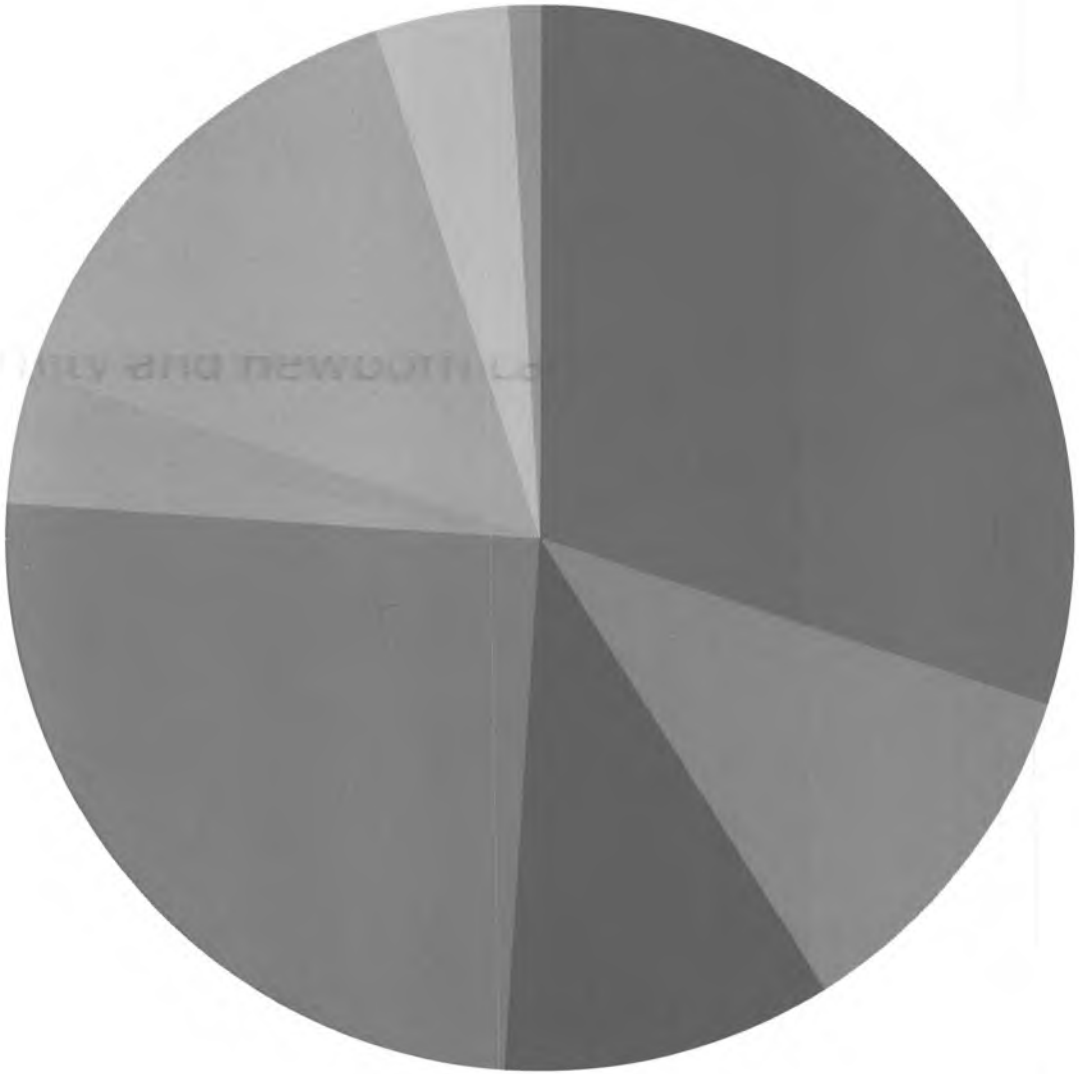
Impact of 2008 Federal Mental Health Parity Law

- 2008 Wellstone-Domenici Act prohibits **treatment limitations** and **financial requirements** on "mental health benefits" if not on physical health benefits.

- Wellstone MHP law applies only to large group fully-funded and self-funded policies.

- Illinois, Iowa, Maine, Montana, New Hampshire, New Jersey explicitly and Connecticut, Florida, Kansas, Kentucky, Missouri implicitly include autism within their state definition of mental illness.
- All of these states except Florida have passed capped autism mandates since the passage of the Wellstone federal MHP law.

Sources of Health Care Coverage



- Medicaid - 20%
- Medicare - 10%
- Uninsured - 11%
- State Health Plan - 10%
- ERISA - ASO - 25%
- Federal Tricare - 2%
- Federal Civilian - 2%
- Other Insured - Large Group - 15%
- Other Insured - Small Group - 4%
- Other Insured - Individual - 1%

Self-Funded ERISA Plans

- "Overall, self-funded plans voluntarily cover 86% of the cost of mandated services."

Why Our Job Is Not Done

- May 27, 2010 at 5:08pm
- Subject: thanks
- I just wanted to say thank you for accomplishing what many people would not have attempted. I live in Charleston, SC. My husbands insurance is self funded so we are having to give up custody of our autistic 2 year old to my parents because their insurance is better. ABA is really helping and there is nothing I wouldn't do for him. You are inspirational to me and a hero. God bless you.

"[N]o disability claims more parental time and energy than autism."

Arguments in favor of a legislative mandate for coverage of autism:

Page 6	***Argument 1:*** **Mandated private health insurance coverage will provide services that are desperately needed by children with autism, who have greater health care needs than children without autism.**
Page 7	***Argument 2:*** **Treatments for autism are difficult to access, often inadequate, and frequently delayed. Denied coverage by private group health insurance companies, parents are often forced either to pay out-of-pocket or forego the treatments their children need.**
Page 10	***Argument 3:*** **Mandated private insurance coverage will bring effective autism services within the reach of children who need them. The efficacy of Applied Behavior Analysis (ABA), the centerpiece of this legislative mandate's benefits, has been established repeatedly.**
Page 12	***Argument 4:*** **Government and scientific organizations have endorsed Applied Behavior Analysis (ABA) and other structured behavioral therapies.**
Page 14	***Argument 5:*** **To combat the difficulty many families face in accessing Applied Behavior Analysis (ABA) and other structured behavioral treatments through public insurance, three states have passed autism insurance mandates that specifically require private insurance companies to provide coverage of these therapies, thus creating a public-private partnership for the provision of care.**
Page 16	***Argument 6:*** **The costs of this insurance reform are small and will have very little impact on the cost of health insurance premiums for the individual consumer.**

Page 17	***Argument 7:*** **By improving outcomes for children with autism, mandated private insurance coverage will decrease the lifetime costs of treating and providing services and will actually result in an overall cost savings in the long-run.**
Page 19	***Argument 8:*** **Without passage of legislation requiring private health insurance coverage for autism, the costs associated with autism will continue not only to affect families, but will have far reaching social effects as well.**
Page 21	**Conclusion**
Page 22	**References**

Executive Summary

Autism is a complex neurobiological disorder and is the fastest-growing serious developmental disability in the U.S. The Centers for Disease Control estimates that 1 in 150 children have autism. These children require extensive services from medical professionals. Early intervention is critical to gain maximum benefit from existing therapies. Most private health insurance plans do not provide coverage for Applied Behavioral Analysis (ABA) and other autism-related services.

This document contains eight arguments in favor of requiring private health insurance policies to cover the diagnosis and treatment of autism spectrum disorders for individuals under the age of 21. These arguments are based on epidemiological, social, and economic studies of the children and families affected by autism and prove the significant long-term financial and public health benefits of this requirement.

We first point out that children with autism have substantial medical needs and have a difficult time accessing necessary treatments through Medicaid and private health insurance. Most insurance policies contain specific exclusions for autism. This is a hardship for many families, who are often forced to cope with delayed, inadequate, and fragmented care through the Medicaid system. Often, families must pay for costly treatments out-of pocket or forego them.

We then review some of the many studies and reports that document the effectiveness of intensive behavioral therapies in the treatment of autism. An autism insurance mandate should specifically target coverage of Applied Behavior Analysis (ABA) and other structured behavioral therapies, which are the most effective forms of treatment and have the best outcomes, both in human costs and in long-term economic benefits.

We then comment on the experiences of several states with insurance reform. Their experiences show that the policy holder costs resulting from the passage of legislation requiring comprehensive autism services have been relatively small.

Finally, we point out that the mandate offers hope that children with autism will need less intensive care in the future. They will, in short, have a better chance at a normal life.

What is Autism Speaks?

Autism Speaks is an organization dedicated to increasing awareness of autism spectrum disorders, to funding research into the causes, prevention, treatments, and cure for autism, and to advocating for the needs of affected families. The organization was founded in February 2005 by Suzanne and Bob Wright, the grandparents of a child with autism. Bob Wright is Vice Chairman, General Electric, and served as chief executive officer of NBC for more than twenty years. Autism Speaks has merged with both the National Alliance for Autism Research (NAAR) and Cure Autism Now (CAN), bringing together the nation's three leading autism advocacy organizations.

What is Autism?

Autism is a complex neurobiological disorder that typically lasts throughout a person's lifetime. It is part of a group of disorders known as autism spectrum disorders (ASD). Today, 1 in 150 individuals is diagnosed with ASD, making it more common than pediatric cancer, diabetes, and AIDS combined. It occurs in all racial, ethnic, and social groups and is four times more likely to strike boys than girls. Autism impairs a person's ability to communicate and relate to others. It is also associated with rigid routines and repetitive behaviors, such as obsessively arranging objects or following very specific routines. Symptoms can range from very mild to quite severe.

***Argument 1*: Mandated private health insurance coverage will provide services that are desperately needed by children with autism, who have greater health care needs than children without autism.**

Children with autism have a tremendous need for services from trained medical professionals. These children are at risk for a range of other medical conditions, including behavioral or conduct problems, attention-deficit disorder or attention-deficit/hyperactivity disorder, stuttering, stammering, and other speech problems, depression and anxiety problems, bone, joint, or muscle problems, ear infections, hearing and vision problems, allergies (especially food allergies), and frequent and severe headaches. These problems greatly affect their overall health and their need for and use of health care services.

A recent study by James G. Guerney and others[1] highlights the broad medical needs of children with autism. Using data from the National Survey of Children's Health, Guerney showed that relative to children without autism, children with autism require more services for physical, occupational, and speech therapy. Children with autism are also much more likely to have poor health, to require medically necessary care for behavioral problems, and to be using medications. As evidenced in the chart below taken from the study, parents of children with autism were more likely to report the presence of a variety of concurrent medical conditions and the need for more visits to a range of medical service providers than parents of children without autism.

Table 2. Parental Description of Health Status and Therapy and Services Use, From the National Survey of Children's Health

Variable	Children With Autism (n = 324 000)*	Children Without Autism (n = 61 100 000)*	OR (95% CI)†
Would you say your child's health is			
Excellent	33.7	60.2	1.0
Very good	22.8	23.5	1.9 (1.2-2.7)
Good	32.7	13.0	5.0 (3.0-8.1)
Fair	7.4	2.0	7.7 (4.3-13.8)
Poor	3.5	0.4	21.1 (10.3-47.9)
Does the child use more medical care, mental health or educational services than is usual for most children of the same age?	90.6	11.8	52.8 (34.7-80.4)
Is the child limited or prevented in the ability to do the things most children the same age can do?	68.5	5.7	36.2 (24.0-52.6)
Does the child get special therapy, such as physical, occupational, or speech therapy?	76.0	6.3	44.4 (31.0-61.9)
Does the child have any emotional, developmental, or behavioral problem for which she needs treatment or counseling?	75.4	7.0	36.0 (25.7-53.1)
Does the child currently need or use medicine prescribed by a doctor, other than vitamins?	54.7	21.1	3.5 (2.6-4.7)
If yes, is this for a condition expected to last 12 mo or longer?	51.4	14.5	11.0 (1.6-76.0)

Abbreviations: CI, confidence interval; OR, odds ratio.
*Data are given as the percentage of each group and are based on sampling fractions and weighted extrapolation from parent report of 483 children with autism and 64 789 children without autism.
†Data are adjusted for sex, primary language, age, insurance, and household educational attainment.

This reform of private health insurance coverage will address the broad medical needs of children with autism. It will ensure that these children will receive the full range of therapies necessary to ameliorate their condition.

***Argument 2*: Treatments for autism are difficult to access, often inadequate, and frequently delayed. Denied coverage by private group health insurance companies, parents are often forced either to pay out-of-pocket or forego the treatments their children need.**

Children with autism face barriers in accessing early intensive behavioral treatments and other therapies. According to the Institute of Medicine, the term "access" is defined as "the timely use of personal health services to achieve the best possible health outcomes."[2] For a child with autism, lack of access to services can be the cause of inconsistent and uncoordinated care. Children with autism often experience barriers to access with even greater frequency than children with other special health care needs. In fact, one study found that "over one-third of the children with autism were reported to have experienced an access problem with respect to specialty care from a medical doctor in the preceding 12 months." [3] A study of the Tennessee Medicaid system, TennCare, found that for children with autism, "the rate of service use was only one tenth what should be expected based on prevalence rates." The chart below illustrates these results and the significantly lower rates of service access for children with autism.

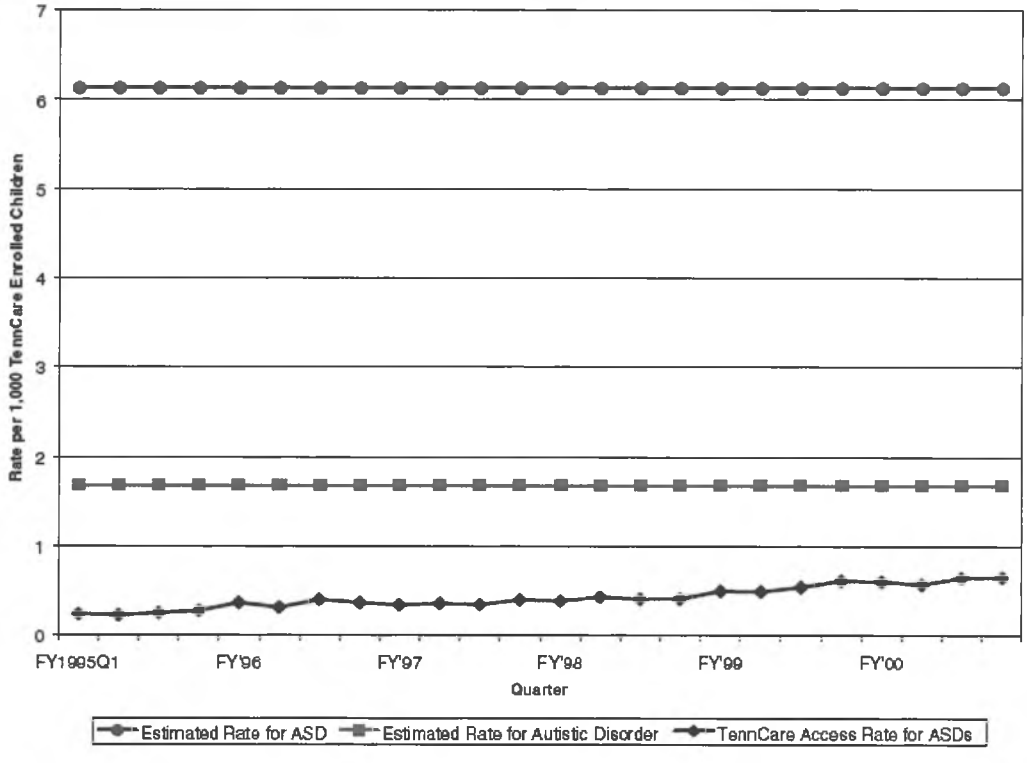

Fig. 1. Estimated incidence rates vs. service rates of autism spectrum disorders (ASDs) in TennCare for children ages 0–17 years, by quarter.

Within the Medicaid system, the amount of public money spent for services for developmental disabilities including autism is now eight times the rate of spending just a few decades ago.[4] Medicaid accounts for 75% of all funding for services for the developmentally disabled, making it the largest single public payer of behavioral health services.[5] Children with disabilities comprise a significant portion (15%) of all Medicaid recipients, and an even more significant portion (31%) of disabled children use the Medicaid system as their primary insurer.

Medicaid suffers from very low reimbursement rates that make it difficult for many locations to retain service providers. Moreover, services that can be accessed through the Medicaid system are often inadequate at meeting the specific needs of a child with autism. The system operates as a short-term service provider, tending to push children through treatment as quickly as possible. The success of the Applied Behavior Analysis, however, depends in part, on the amount of time the child with autism spends with the provider of the therapy.[6]

The failings of Medicaid point to the importance of the private health care system in providing services to children with autism. But nationwide there are very few private insurance companies or other employee benefit plans that cover Applied Behavior Analysis and other behavioral therapies. Most insurance companies designate autism as a diagnostic exclusion, "meaning that any services rendered explicitly for the treatment of autism are not covered by the plan, even if those services would be covered if used to treat a different condition."[7] A 2002 study by Pamela B. Peele and others of 128 behavioral health plans administered by one of two large managed behavioral health organizations found that all the plans had some type of limit on benefits for behavioral therapies – over half of the plans had limits on the number of annual outpatient sessions and 65 percent of the plans imposed limits on the number of inpatient days covered per year. [8]

Families that refuse to allow their children to suffer through the inadequate Medicaid system and are denied coverage by their private health insurance carriers often end up paying for therapies out of their own pockets. For these families, the financial burden is immense. Without the negotiating powers of an insurance company behind them, out-of-pocket prices are extremely high. Parents can often spend upwards of $50,000 per year on autism-related therapies, often being forced to wager their own futures and the futures of their non-autistic children to pay for necessary autism-related therapies. Children whose parents cannot afford to pay for behavioral and other therapies and who cannot access adequate therapies through the Medicaid system simply go without these interventions.

***Argument 3*: Mandated private insurance coverage will bring effective autism services within the reach of the children who need them. The efficacy of Applied Behavior Analysis (ABA), the centerpiece of this legislative mandate's benefits, has been established repeatedly.**

Private health insurance coverage of autism services will allow children with autism to access Applied Behavior Analysis (ABA), a proven treatment for their condition. Several studies have shown that as many as 47 percent of the children that undergo early intensive behavioral therapies achieve higher education placement and increased IQ levels. A significant portion of children who receive ABA are placed into mainstream educational settings. Children who begin their treatment with minimal IQ levels end treatment with substantially higher levels of intellectual functioning. These results have been shown to last well beyond the end of treatment. As such, the effectiveness of ABA therapy has allowed many children to forego costly intensive special education in the future.

Lovaas:

The most famous study of the effectiveness of behavioral modification treatments was conducted in 1987 by O. Ivar Lovaas. [9] Lovaas's study showed that when compared with other treatment programs that provide minimal therapy, Applied Behavior Analysis is extremely effective in helping many children struggling with autism, providing gained capacity for intellectual functioning and allowing a child to progress educationally.

Lovaas conducted his study of the effectiveness of behavioral modification treatments on very young children affected by autism. For his study, Lovaas split his 38 subjects into two groups: 19 subjects were put into an intensive-treatment experimental group that received more than 40 hours of one-to-one treatment per week, and 19 subjects were place in a minimal-treatment control group that received 10 hours or less of one-to-one treatment per week. Both groups were identical at intake in terms of intellectual functioning abilities, and both received their assigned treatment for 2 or more years.

Upon follow-up at age 7, the experimental group attained significantly higher results on education placement and IQ levels than the control group. According to the results of Lovaas's study, the 19-subject experimental group showed nine children (47%) who successfully passed through normal first grade in a public school and obtained an average or above average score on IQ tests.

McEachin:

Lovaas's landmark 1987 study was followed in 1993 by another study of these same 38 subjects. The objective of John J. McEachin's study was to discover the long-term effects of Lovaas's early intensive behavioral treatment and to find out if the results of the experimental group were preserved over time. [10]

For this study, Lovaas's original subjects were evaluated at a mean age of eleven-and-a-half years. The study was presented in two parts: the first examined whether the experimental group had maintained its treatment gains, the second part focused on the nine subjects who had achieved the greatest gain in the original study and examined the extent to which they "could be considered free of autistic symptomology."

McEachin's follow-up resulted in findings in three different categories: school placement, intellectual functioning, and presence of adaptive and maladaptive behaviors. In terms of class placement, the study found that "the proportion of experimental subjects in regular classes did not change from the age 7 evaluation (9 of 19, or 47%). In the control group, none of the 19 children were in a regular class, as had been true at the age 7 evaluation." (McEachin, *supra* note 10) In terms of intellectual functioning, the study found that "the experimental group at follow-up had a significantly higher mean IQ than did the control group… indicating that the experimental group had maintained its gains in intellectual functioning between age 7 and the time of the current evaluation." Finally, in terms of presence of adaptive and maladaptive behaviors, "the findings indicate that the experimental group showed more adaptive behaviors and fewer maladaptive behaviors than did the control group." (McEachin, *supra* note 10)

Based on these findings, the effectiveness of ABA and other structured behavioral programs, as provided by the proposed benefit, would be experienced in the short-term as well as the long-term.

Argument 4: **Government and scientific organizations have endorsed Applied Behavior Analysis (ABA) and other structured behavioral therapies.**

ABA is the treatment of choice for autism. Its efficacy has been recognized in a number of prominent reports, including the following:

- **The 2001 U.S. Surgeon General's Report on Mental Health**, which states, "Among the many methods available for treatment and education of people with autism, applied behavior analysis (ABA) has become widely accepted as an effective treatment. Thirty years of research demonstrated the efficacy of applied behavioral methods in reducing inappropriate behavior and in increasing communication, learning, and appropriate social behavior." [11]

- **The New York State Department of Health** assessed interventions for children ages 0-3 with autism, and recommended that "behavioral interventions for reducing maladaptive behaviors be used for young children with autism when such behaviors interfere with the child's learning or socialization or present a hazard to the child or others." [12]

- **The Maine Administrators of Services for Children with Disabilities** notes in their report that "There is a wealth of validated and peer-reviewed studies supporting the efficacy of ABA methods to improve and sustain socially significant behaviors in every domain, in individuals with autism. Importantly, results reported include 'meaningful' outcomes such as increased social skills, communication skills academic performance, and overall cognitive functioning. These reflect clinically-significant quality of life improvements. While studies varied as to the magnitude of gains, all have demonstrated long term retention of gains made." [13]

- **The National Institute of Mental Health** reports, "The basic research done by Ivar Lovaas and his colleagues at the University of California, Los Angeles, calling for an intensive, one-on-one child-teacher interaction for 40 hours a week, laid a foundation for other educators and researchers in the search for further effective early interventions to help those with ASD attain their potential. The goal of behavioral management is to reinforce desirable behaviors and reduce undesirable ones." [14]

- **The National Institute of Child Health and Human Development** lists Applied Behavior Analysis among the recommended treatment methods for Autism Spectrum Disorders. [15]

- **The National Research Council's** 2001 report on Educating Children with Autism acknowledged, "There is now a large body of empirical support for more contemporary behavioral approaches using naturalistic teaching methods that demonstrate efficacy for teaching not only speech and language, but also communication." [16]

- **The Association for Science in Autism Treatment** recommends ABA-based therapies, stating, "ABA is an effective intervention for many individuals with autism spectrum disorders." [17]

Argument 5: **To combat the difficulty many families face in accessing Applied Behavior Analysis (ABA) and other structured behavioral treatments through public insurance, three states have passed autism insurance mandates that specifically require private insurance companies to provide coverage of these therapies, thus creating a public-private partnership for the provision of care.**

While there are several states that have passed autism specific private insurance mandates, very few states specifically mandate coverage for ABA and other structured behavioral therapy programs. Without coverage of these crucial, medically necessary, evidence based therapies, the effectiveness of most mandates is severely diminished. For this reason, we have concluded that only the following states have passed autism insurance legislation:

South Carolina:

Senate Bill 20, better known as Ryan's Law, was passed by both the South Carolina House of Representatives and Senate on May 31, 2007. [18] The bill was then vetoed by Governor Mark Sanford on June 6. On June 7, the bill was brought back to the House and Senate floors, and unanimous votes in both chambers overrode the Governor's veto. This law goes into effect in July 2008.

> **Coverage Includes:** Treatments, including behavioral therapies, which are prescribed by the individual's treating medical doctor in accordance with a treatment plan.
>
> **Age Range:** An individual must be diagnosed with autistic spectrum disorder at age eight or younger. The coverage must be provided to any eligible person less than sixteen years of age.
>
> **Dollar Cap:** Coverage for behavioral therapy is subject to a $50,000 maximum benefit per year.

Texas:

On June 15, 2007, Texas enacted House Bill 1919, effective September 1, 2007. [19] While the Texas bill limits the ages for children who can benefit from coverage, it goes further than some other states in spelling out exactly what kinds of services are covered. The bill's text specifically cites which kinds of autism-related services are examples of treatments that must be covered.

> **Coverage Includes:** Evaluation and assessment services, A BA, behavior training and behavior management, speech therapy, occupational therapy, physical therapy, medication or nutritional supplements used to address symptoms of autism spectrum disorder.
>
> **Age Range:** An individual must be between ages three and five to receive this

coverage.

Dollar Cap: Same as afforded to physical illnesses

Indiana:

In 2001, the Indiana enacted House Bill 1122, requiring insurers that issue accident and sickness insurance policies on an individual basis to provide coverage for the treatment of autism spectrum disorders. [20]

Coverage Includes: Treatment that is prescribed by the insured's treating physician in accordance with a treatment plan. The statute thus allows many different professionally accepted therapies, such as ABA, speech therapy, occupational therapy, physical therapy, and medications to address symptoms of autism.

Age Range: All ages are allowed coverage

Dollar Cap: Same as afforded to physical illnesses

Argument 6: **The costs of the proposed benefit are small and will have very little impact on the cost of health insurance premiums for the individual consumer.**

Earlier this year, The Council for Affordable Health Insurance, a research and advocacy association of insurance carriers, released its annual report on state health insurance mandates, *Health Insurance Mandates in the States 2007*. [21] The report defined a mandate as "a requirement that an insurance company or health plan cover (or offer coverage for) common – but sometimes not so common – health care providers, benefits and patient populations." (Bunce, *supra* note 21) Using this definition, the report identified legislative mandates for autism benefits in ten states: Colorado, Delaware, Georgia, Iowa, Indiana (which, as we have noted, provides comprehensive benefits), Kentucky, Maryland, New Jersey, New York, and Tennessee. The report assessed the incremental cost of state mandated benefits for autism in these ten states *as less than one percent.*

The Council's modest estimate of incremental premium costs is consistent with state government estimates across the country. Prior to enactment of Indiana's sweeping legislation, the Indiana Legislative Services Agency estimated additional premium costs as ranging from $.44 per contract per month to $1.67 per contract per month. [22] In vetoing Ryan's Law in South Carolina, Governor Mark Sanford estimated that the bill, with its $50,000 maximum yearly benefit for behavioral therapy, would add $48 annually to insurance policies.[23] And in Wisconsin, where pending Assembly Bill 417 would provide the same broad coverage Indiana's statute mandates, the Department of Administration estimates policy increments of between $3.45 and $4.10 per month – about the same as Governor Sanford's estimate for Ryan's Law. [24]

The cost estimates for Indiana, South Carolina, and Wisconsin – all states whose legislation allows a maximum benefit that can be considered high – suggest that an average autism insurance coverage mandate will cost approximately $50 annually per policy holder. For only a modest effect on premium cost, this insurance reform holds the promise of significantly improving the lives of thousands of children.

Argument 7: **By improving outcomes for children with autism, mandated private insurance coverage will decrease the lifetime costs of treating and providing services and will actually result in an overall cost savings in the long-run.**

A 1998 study by John W. Jacobson and others titled, *Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case,* examined the cost/benefit relationship of early intensive behavioral intervention treatment at varying levels of treatment success.[25] The study used estimates of costs for early intensive behavioral interventions (EIBI) from childhood (age three) through adulthood (age 55) based on prices in the Commonwealth of Pennsylvania and compared these costs with the expected amount of income the child would earn later in life to arrive at an estimated cost savings.

With a success rate of 47 percent for early intensive behavioral intervention therapy (as determined by Lovaas), Jacobson's study found that cost savings per child served are estimated to be from $2,439,710 to $2,816,535 to age 55.

Table 6. Financial benefits at different levels of effectiveness, age 3–55 years, per 100 children served and per child served—Pennsylvania model

Net	281,653,520	108,198,360	2,816,535	1,081,984

Note: This table presents a comparison of financial benefits at different levels or rates of achievement of normal skills or functioning achieved by EIBI, for people ages 3–55 years, ranging from 20% of children achieving normal range skills or functioning (an assumed minimal rate) to 50% of children. At each level of effectiveness, differing rates of normal range functioning, as well as partial benefit are estimated. Costs are shown in terms of the aggregate of 100 children served, and averages per person served, with inflation and in 1996 dollars.

The study also accounts for the initial investment in early intervention by concluding that, with an initial annual cost of $32,820, the total cost-benefit savings of EIBI services per

child with autism or PDD for ages 3-55 years averages from $1,686,061 to $2,816,535 with inflation.

According to a 2005 Government Accounting Office (GAO) report, "the average per pupil expenditure for educating a child with autism was more than $18,000 in the 1999-2000 school year. This amount was almost three times the average per pupil expenditure of educating a child who does not receive any special education services."[26] With this insurance reform in place, more children would be able to access the early intervention services they need. That investment will, in the long run pay benefits, both economic and social, to the greater population.

Argument 8: **Without passage of legislation requiring private health insurance coverage for autism, the costs associated with autism will continue not only to affect families, but will have far reaching social effects as well.**

The cost of autism is borne by everyone. Michael L. Ganz's study of the societal costs of autism, *The Lifetime Distribution of the Incremental Societal Costs of Autism*, examined how the large financial burdens of autism affect not only families with an autistic child but society in general. [27]

Ganz broke down the costs associated with autism into two distinct categories, direct costs and indirect costs. Direct costs include direct medical costs, such as physician, outpatient, clinic services, dental care, prescription medications, complementary and alternative therapies, behavioral therapies, hospital and emergency services, allied health, equipment and supplies, home health, and medically related travel, as well as direct nonmedical costs, such as child care, adult care, respite and family care, home and care modification, special education, and supported employment. Indirect costs include productivity losses for people with autism (calculated by combining standard average work-life expectancies for all men and women with average income and benefits and estimated age and sex specific labor force participation rates).

According to Ganz's study, direct medical costs reach their maximum during the first five years of life, averaging around $35,000. As the child ages, direct medical costs begin to decline substantially and continue to decline through the end of life to around $1,000. Ganz goes on to report, "The large direct medical costs early in life are driven primarily by behavioral therapies that cost around $32,000 during the first 5-year age group and decline from about $4,000 in the 8-to 12-year age group to around $1,250 for the 18- to 22-year age group." (Ganz, *supra* note 27)

In terms of direct medical costs "the typical American spends about $317,000 over his or her lifetime in direct medical costs, incurring 60% of those costs after the age of 65 years. In contrast, people with autism incur about $306,000 in incremental direct medical costs, which suggests that people with autism spend twice as much as the typical American over their lifetimes and spend 60% of those incremental direct medical costs after age 21 years." (Ganz, *supra* note 27)[27]

The study also found the indirect costs of autism to be significant as well. While in the first 22 years of life, indirect costs are mostly associated with lost productivity for the parents of a child with autism, the costs from age 23 on are associated with lost productivity of the actual individual with autism as depicted in the chart below taken from the study. The impact of this lost productivity can have enormous ramifications for the tax base of an entire society and the future of the older generation as their children with autism transition into adult care.

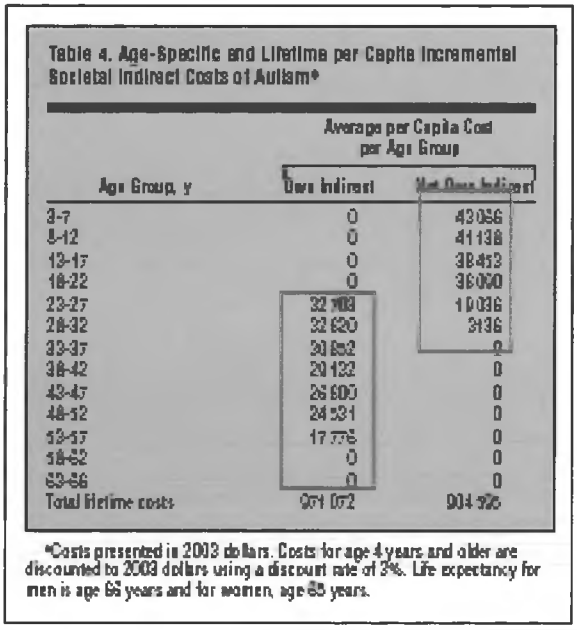

Table 4. Age-Specific and Lifetime per Capita Incremental Societal Indirect Costs of Autism*

Age Group, y	Average per Capita Cost per Age Group	
	Own Indirect	Net Own Indirect
3-7	0	42 056
8-12	0	41 138
13-17	0	38 453
18-22	0	36 060
23-27	32 703	19 036
28-32	32 620	3136
33-37	30 852	0
38-42	29 122	0
43-47	26 600	0
48-52	24 531	0
53-57	17 776	0
58-62	0	0
63-66	0	0
Total lifetime costs	971 072	904 926

*Costs presented in 2003 dollars. Costs for age 4 years and older are discounted to 2003 dollars using a discount rate of 3%. Life expectancy for men is age 68 years and for women, age 85 years.

Ganz posited that direct medical costs "combined with very limited to non-existent income for their adult children with autism combined with potentially lower levels of savings because of decreased income and benefits while employed, may create a large financial burden affecting not only those families but potentially society in general."(Ganz, *supra* note 27)

Without the help of private insurance coverage, families affected by autism may never be able to pull their heads above water and provide their children with the medically necessary, evidence- based treatments that they need. It is to the advantage of these families, to the 1 in 150 children affected by autism, and to all of society that private health insurance coverage is provided for these services.

Conclusion

A legislative mandate for coverage of autism asks private insurance companies to make a limited, but significant, contribution to help pay for medically necessary, evidence- based treatments that have been established to be of the greatest impact in fighting this terrible disorder.

Unbelievably, it is not uncommon for insurance carriers to have line- item exclusions for treatment of individuals diagnosed with autism. Across the nation, children with autism are routinely denied insurance benefits for treatment of their disorder. We believe that private insurance companies must contribute their fair share and partner in the financial burdens with these families.

With every new child diagnosed with autism costing an estimated $3 million over his or her lifetime, the current practices are both unfair and not cost effective in the long run for states and their citizens. Autism Speaks is confident that many more state governments will recognize the significant long-term cost benefits found in these legislative measures, will do what is right for their constituents, and will pass legislation requiring private health insurance coverage of autism services.

Autism's origins lie hidden in a perplexing maze of behaviors and biology. Step by step, researchers are finding their way inside.

Breaking Through

Ricardo Dolmetsch was studying the basic biology of nerve cells when two events propelled him into autism research. In 2004, a mutation in one of the proteins he specialized in was pinpointed as the cause of Timothy syndrome, a rare ▶

by Kristin Sainani

Illustrations by Timothy Archibald

Eli Archibald, photographed by his father, from the book *Echolilia*.

genetic disorder associated with autism. Then in 2006, Dolmetsch's oldest son, who was 4, was diagnosed with autism.

"At the time, we were very worried. We didn't know what was happening," says Dolmetsch, PhD '97, assistant professor of neurobiology. "So I went home and sat down with my wife, [Asha Nigh, '93,] who is also a scientist, to try to figure out what we could do."

There was solid research in psychology and behavioral treatments for autistic patients. But except for some progress in genetics, the biology of autism was virtually unknown, Dolmetsch says. "It was a little bit shocking that there was very little in the way of really good basic research."

Dolmetsch was in a unique position to do something about this gap. "I decided to shift the focus of my lab completely."

He is among a group of researchers at Stanford who are trying to untangle the root causes of autism. Some have been in the field for decades; others, like Dolmetsch, are newcomers, spurred by personal and professional motivations to understand a disorder that affects 1 in every 110 kids. (The rate is 1 in 70 for boys and 1 in 315 for girls.)

Autism is a spectrum of disorders that share three core features—language deficits, social deficits, and repetitive interests and movements. On one end of the spectrum are people with Asperger's syndrome, who are socially awkward but who often have above-average intelligence. Dolmetsch's son has this diagnosis: He was late to speak and when he did speak, he talked in a stilted and peculiar way—more like a little adult than a child; and he has problems socializing. The most serious autism cases involve severe mental disabilities (about 40 percent of children with autism have IQs below 70) and behavioral problems. Between these two extremes, children may have normal intelligence but pronounced language and social impairments.

J.C. Flores, '87, has 15-year-old identical twins with autism. Lomasi can speak, but she avoids talking and gives mostly one-word answers. Marielle can say only a few words and has no functional communication system. "They're sweet and they like to hang around people," Flores says. "But they don't really feel the need to communicate. They don't see why you have to."

In about 10 percent of cases, autism is secondary to a more pervasive genetic disorder, such as fragile-X syndrome or another chromosomal abnormality. But the vast majority of cases are unexplained, or idiopathic. Awareness about autism is at an all-time high, but public discussion has largely been dominated by questions such as: What accounts for the rapid increase in cases? Or is something in the environment causing autism? Though these questions are important (see sidebar), Dolmetsch and others at Stanford and elsewhere are trying to answer a more fundamental question: What is the underlying biology of autism? It's only by answering this question that they believe they can achieve real breakthroughs—the kinds that lead to cures.

A GENETIC PUZZLE: Flores's identical twin daughters both have autism but have different capabilities.

COURTESY J.C. FLORES

Autism is a CATCH-ALL DIAGNOSIS that likely includes a host of DISTINCT DISORDERS.

One of the biggest challenges is that autism is not one thing: It's a catchall diagnosis that likely includes a host of biologically distinct disorders. Though children with autism share a set of symptoms, these symptoms are quite varied and may have many, diverse biological origins. "Autism is incredibly heterogeneous. We've been lumping everyone together under this name autism, and unfortunately it makes it very difficult to study the biological features when we are treating multiple groups as one," says Sophia Colamarino, '90, vice president of research for Autism Speaks—a science and advocacy group—

and consulting associate professor of psychiatry and behavioral science. To get a toehold into the biology, researchers will need to identify unique subgroups of autism, she says. Researchers across the globe are defining subgroups based on genes, molecular pathways, or signatures in the brain and blood.

Another impediment: access to the brain. Scientists can slice cancer cells out of a tumor and study them directly, but they can't just scoop cells out of the brain. Stanford is on the forefront of solving this problem—in fact, Dolmetsch's solution seems straight out of a science fiction novel.

Although much remains unknown, these efforts are giving the world its first glimpses into the biology of autism.

JOACHIM HALLMAYER describes himself as a "grandfather in the field of autism." He's been chasing down the genes for the disorder for 20 years, beginning as a postdoctoral fellow in genetics at Stanford. At that time, the disease was considered rare (4 out of 10,000 kids). "I knew in a snap everybody in the Bay Area who ever diagnosed a child with autism," says Hallmayer, associate professor of psychiatry and behavioral science.

Hallmayer joined the field because of a parent: Carmen Pingree, the mother of an autistic boy in Utah, who approached his mentors at Stanford, urging them to study the disease. Hallmayer collaborated with Pingree, who used her ties in the Mormon community to assemble pedigrees for 146 families with multiple cases of autism. It was the largest genetic study of the disease at the time. The parents of children with autism continue to motivate him, he says.

Autism is particularly heartbreaking because it colors the most fundamental social bond—that between a parent and a child. Even children with milder forms of autism may have trouble displaying or returning affection. "Autistic children are as emotional as other children; I'm very convinced of this. But they don't show it," Hallmayer says. "They show it in a different way. And it's a very, very hard learning process for most parents."

Studies of twins have shown that autism has a large genetic component, but it's not all genes. Identical twins have the same DNA, but sometimes only one twin gets autism. In other cases, as with Flores's daughters, Lomasi and Marielle, the severity of the disorder differs. The genetics are also complex. Different genes may be involved in different people; and, in

Why the Increase? (No, it's not vaccines.)

Twenty years ago, people diagnosed with autism were relatively rare, and the public's awareness of the disorder was chiefly limited to Hollywood depictions such as that in the 1988 Academy Award-winning movie *Rain Man*. Today, many people know a neighbor, friend or classmate who is dealing with autism—prevalence has risen about twenty-fold since 1990. But what's behind this startling increase? Scientists agree that some of it is due to changes in diagnosis and awareness, but just how much is hotly debated.

"The best papers I've seen suggest that there is a genuine increase," Ricardo Dolmetsch says. "But it's not as big as it seems. A big, big contribution is societal awareness and changes in diagnostic criteria."

There have been at least two shifts in diagnosis, Dolmetsch says. First, some kids who might have once been diagnosed as mentally retarded now are recognized as autistic. Second, children with autism display some of the same characteristics as those who have attention-deficit hyperactivity disorder (ADHD). When the diagnosis is ambiguous, doctors in California tend to diagnose autism rather than ADHD, because the state pays for services (such as behavioral therapy) for autism but not ADHD, Dolmetsch says.

Moreover, the medical establishment's thinking about what constitutes abnormal behavior has shifted, Joachim Hallmayer says. "There's no doubt that what we diagnose as autism is different than what we diagnosed 20 years ago." Autism has been on the rise globally, but the explosion of cases occurs at different times in different countries, which points to a large role for societal awareness, Hallmayer says.

Some of the increase is definitely real, though, according to Antonio Hardan. He cites two contributors. More premature babies are surviving, and preemies are at high risk of autism (about 10 percent will develop it), and more couples are having babies when they're older, which increases the risk of genetic errors that can lead to autism.

Could something in the environment also be a factor? Maybe, the researchers say, but there is little scientific evidence to back any such claim. Despite widespread concerns about a link between pediatric vaccinations and autism, vaccines have been soundly exonerated, they say.

Paula Gani, '91, says her 4-year-old son Marcus, who has a milder form of autism, "is one of those kids who would not have been diagnosed 20 years ago." But the diagnosis and early intervention he's received are likely rewriting his future. He made limited eye contact and didn't engage socially when he was diagnosed two years ago, but "yesterday, we were going out to pizza with another mom and her kid. And he took the other little boy's hand and started singing 'The more we get together, together, together . . . '," she recounts. "It's a huge difference."

Dolmetsch is using an astonishing NEW TISSUE MODEL. 'We're making little pieces of BRAIN IN A DISH.'

any given individual, the disease may arise from changes in one gene, changes in several genes, or a combination of genetic and environmental factors. (Though no specific environmental triggers have been identified, researchers are testing everything from exposure to heavy metals and pesticides to TV watching.) Tackling this complexity requires large studies.

Hallmayer has spearheaded several massive, multisite collaborations. He chairs the committee of senior investigators for the Autism Genome Project, an international consortium of more than 50 universities that has collected data on 2,000 families with multiple cases. He also has assembled a study of 220 pairs of twins from California in which at least one twin has autism.

In the past decade, geneticists have discovered a handful of genes that when mutated or missing can cause autism. Though rare, these genes have given scientists some of their best clues about the disease's biological underpinnings. "I think it's very exciting, even if it's rare cases. We can at least get a better understanding of one piece of the puzzle and then we can branch out from there," Hallmayer says. For example, several of these genes are involved in communication between neurons. In a 2010 paper in *Nature*, Hallmayer and his colleagues from the Autism Genome Project greatly expanded this list of genes—reporting hundreds of rare genetic events that may be involved in autism.

It's long been known that about 5 percent of autistic kids have a chromosomal abnormality that can be seen under a microscope—part of a chromosome is missing, duplicated or in the wrong place. Because these changes affect a large number of genes, the children often have many problems in addition to autism. What wasn't known until recently is that we all have slight imperfections in our chromosomes—small regions of DNA that are duplicated or deleted. When these stretches of DNA contain genes, people can end up with one or three copies of the genes instead of the standard two. Technological advances have made it possible to detect these "copy-number variants," or CNVs. And it turns out they're important in autism and some psychiatric disorders. For example, a region of chromosome 16—containing about 25 genes, some involved in brain function and development—is deleted or duplicated in 1 to 2 percent of people with autism (and some with schizophrenia). Scientists are beginning to study these patients as an autism subgroup.

Hallmayer and his colleagues scanned the genomes of thousands of people with autism and 2,000 healthy individuals looking for rare CNVs. They found that children with autism had more rare CNVs that overlapped genes, including genes previously implicated in autism. Some CNVs were inherited from a parent, but some arose spontaneously in the child, likely due to a genetic error in the sperm or egg. They identified disruptions in hundreds of genes that occurred only in autism cases, never in controls. Not all of the genes will turn out to be relevant to autism, but the ones that are could explain maybe 10 to 15 percent of cases, Hallmayer says.

DOLMETSCH IS STUDYING several subtypes of autism defined by genes, including Timothy syndrome and the chromosome 16 CNV, using an astonishing new tissue model. Essentially, he says, "We're making little pieces of brain in a dish."

In 2007, scientists in Japan figured out how to genetically reprogram adult cells into pluripotent stem cells—which, like embryonic stem cells, can give rise to any other cell type in the body. Using this technology, Dolmetsch's team recreates human neural development. They take skin cells from patients with autism, turn them into stem cells, and then, using a cocktail of proteins, coax these cells to form a neural tube. A neural tube is the earliest neural structure to form and later grows into the brain at one end and the spinal cord on the other. The researchers then take slices of cells from the neural tube and direct them to become specific parts of the brain, such as the cortex. "It sounds like science fiction. It's kind of incredible this even works," Dolmetsch says. "Nobody had ever actually made neurons from autistic people before."

Timothy syndrome is caused by a defect in calcium channels, which play a critical role in electrical activity in the brain and heart. Because Timothy patients often have life-threatening heart arrhythmias, Dolmetsch's team is also making "little pieces of heart."

Sitting in his office on the second floor of the Fairchild Research Building, Dolmetsch shows movies of the hearts on his computer. The ball of cells looks like one chamber of a fetal heart beating on an ultrasound. Those laboratory hearts--

FROM TOP: PHOTOS COURTESY STANFORD SCHOOL OF MEDICINE (4); JENNY PEGG

developed from the cells of a healthy subject—beat just like the real thing, 60 times per minute. When grown from the cells of Timothy patients, however, the hearts beat erratically—they miss a beat, or have a double beat. Dolmetsch's team has already used the models in a practical way: They screened 20 different drugs that correct heart arrhythmias and found the one that works best for Timothy patients. "You can't give a child 50 drugs and see which one works, but you can do that with these cells," Dolmetsch says.

He also shows movies of thousands of lab-created neurons firing. When given an electric pulse, the blue-colored cells light up in a sudden flash of green, like fireworks going off, and then they flicker and shimmer in a fallout of electrical activity. He is studying these neurons to figure out what is different in the autistic brain, starting with Timothy patients. The results so far: In addition to abnormal calcium signaling, kids with Timothy syndrome have too many cells that produce the neurotransmitters dopamine and norepinephrine. They also have too few cells that form long-distance connections and too many that form local connections.

"This may help to explain why children with autism often have problems integrating lots of different classes of information, but they can often perform quite well in one domain," Dolmetsch says. (In other words, the wiring that impairs, say, the ability to discern symbolism in Shakespeare, might enable an extraordinary ability to memorize a scene from *Hamlet*.) "This is the first time that anybody has ever seen any cellular defects associated with any psychiatric disease, much less autism." A group from UC-San Diego also has adopted this technology—they recently reported specific defects in neurons created from patients with Rett syndrome, another genetic anomaly that can cause autism.

Dolmetsch's team has grown brain cells from 20 patients with Timothy syndrome or other known mutations. Their ultimate goal, however, is to grow brain cells from patients with autism who have no known genetic defect and then to classify these patients according to their cellular and molecular defects—such as problems with neural communication or problems with calcium channels.

Dolmetsch plans to use these models to screen for treatments that can reverse or overcome the biological defects. He also could use them to screen potential environmental contributors to autism. Some environmental agents may injure developing neurons in ways that mimic known genetic hits, he says.

LIKE DOLMETSCH, Thomas Südhof was a basic biologist working on fundamental questions about the brain when he was drawn into autism research a few years ago. Südhof is an expert in synapses, the junctions between neurons. He played an instrumental role in working out the molecular details of how messages travel across synapses—work for which he shared the $1 million Kavli Prize in neuroscience in 2010. Serendipity brought Südhof, professor of molecular and cellular physiology, to autism research. A number of autism cases were traced to rare mutations in synapse pro-

teins, including two that Südhof discovered in the 1990s—neurexins and neuroligins.

These proteins bind to each other across the synapse to help neurons connect and communicate; they also are believed to play a role in "synaptic plasticity"—changes in the ability of the synapse's chemistry and structure that underlie learning and memory. What's interesting about autism, Südhof says, is that the brain is not globally impaired—for example, kids who are unable to speak have normal motor skills. "You really need a pretty good brain for that," he says. Thus, autism is likely due to subtle changes in the brain's wiring, such as how neurons connect physically, or how they communicate.

In a 2007 paper in *Science*, Südhof and his colleagues reported the first mouse model of idiopathic autism. They took a mutated form of the neuroligin gene that was discovered in two brothers, one with autism and the other Asperger's, and inserted it into mice. The mice showed some features of both autism and Asperger's. (They were less inclined to hang out with other mice, but faster at learning a water maze.) In 2009, Südhof engineered mice to have a neurexin deletion that, in humans, is associated with 1 in 200 autism cases. The mice had increased repetitive behaviors, such as excessive self-grooming, but no obvious changes in social behavior. The neurons of both sets of mice had altered synaptic signaling.

The mice aren't a perfect replica of human autism (animal models are inherently limited—after all, mice don't have language), but they have yielded important insights. Südhof's team has begun testing many other genes that have been implicated in autism in mouse models to see if they also affect synapse function. "One thing is clear: Anything in the brain involves the synapse, so the synapse is a good bet," he says.

Once you pinpoint molecular pathways that underlie autism, such as problems with calcium channels or problems with synapses, then you can develop targeted treatments. Recent advances in fragile-X syndrome are a perfect example, Colamarino says. Patients with fragile-X (about one-third of whom also have autism) are missing a protein that helps regulate synaptic function. Without this protein, there is an excess of synaptic signaling, which scientists believe could lead to intellectual disabilities. Several companies have begun testing drugs that dampen the noise. In mice with fragile-X, the drugs can reverse some neurological symptoms. It's too early to say if the drugs can reverse mental disabilities in people with fragile-X, but they have eased behavioral symptoms in short-term trials of affected adults.

No one thought it was possible to reverse symptoms of a neurodevelopmental disorder in adulthood, Colamarino says. "The idea that you can do this has completely reinvigorated the field of autism treatment research."

AT 10 P.M. on a Friday night at the Lucas Center, postdoctoral fellow Kari Berquist, doctoral student Grace Lee and senior research assistant Sweta Patnaik are waiting in a darkened MRI control room. The silhouettes on the other side of the glass window finally appear motionless. There's a moment of breathless anticipation as the father sneaks away from his sleeping son on the MRI table. Then 4-year-old Joshua (patients' names have been changed) wakes up again. They won't be able to get the scan done tonight. The father emerges from the MRI room; Joshua, who cannot yet speak, cries, kicks and clings to his dad, making *bbb* and *mmm* sounds. Joshua's mother buckles her other son—a healthy 11-month-old who already says

The 'cuddle hormone' may yield important clues

Oxytocin is the hormone that promotes social bonding, so it makes sense that defects in oxytocin might play a role in some cases of autism. Karen Parker is exploring whether changes in oxytocin levels in the blood or cerebrospinal fluid could be a marker of the disorder. "My work is thinking about the biology of social functioning," says Parker, an assistant professor of psychiatry and behavioral sciences. Oxytocin is sometimes called the cuddle hormone or the love hormone, because it's released during physical contact and sex; it also plays a role in social interaction, trust and empathy, as well as monogamy in certain animals. A behavioral neuroscientist, Parker studied the role of oxytocin in voles and monkeys before moving to autism research.

Parker has collected blood from children with autism, their healthy siblings (who sometimes show more subtle social deficits) and normal controls to try to detect differences in their oxytocin levels. She also is setting up one of the first studies in the cerebrospinal fluid (CSF). Studies in monkeys show that blood oxytocin may be normal even when brain levels, reflected in the CSF, are low. It's difficult to obtain CSF because it requires a spinal tap. Her team is investigating genetic variation in the oxytocin receptor and other genes involved in the oxytocin pathway. If Parker's and Hardan's studies show an oxytocin deficiency, patients could receive replacement oxytocin.

It's promising research because low oxytocin is treatable, Parker says. In a recent study, when 13 autistic adults were given an oxytocin nasal spray (which delivers the drug straight to the brain), they had significant improvements in reading social cues and in making eye contact. "I think it's actually fascinating that you can apply oxytocin once and see these pretty acute social changes," Parker says. "Oxytocin is the only drug that's been shown to alter social functioning. There's nothing else that touches the social deficits."

The wiring that impairs, say, the ability to DISCERN SYMBOLISM in Shakespeare, might enable an extraordinary ability to MEMORIZE A SCENE FROM *HAMLET*

"bubble" and "mama"—into his car seat for the ride home.

MRI machines are noisy and require the patient to lie perfectly still for several minutes at a time, so most children—especially those with autism—cannot tolerate them while awake. So the idea is to bring them in already sleeping. However, the next study participant also arrives awake. But 4-year-old Padma, who has autism but is high-functioning, surprises everyone by agreeing to be scanned, enticed by the promise that she will get pictures of her brain. It's a partial success: The team gets one usable scan before they finally give up at 11:30 p.m. Padma proudly tells the researchers that she is going to post her brain pictures on Facebook.

Antonio Hardan is studying these brain pictures looking for signatures of autism and of subgroups of autism. Unlike others on campus who are working from the genes up, Hardan is working backward from the brain to the underlying biology. Hardan, who sees patients in addition to conducting research, has been involved with autism since he began volunteering to work with autistic patients in medical school. "And 27 years later, that's my life in a way, my research life," says Hardan, associate professor of psychiatry and behavioral science. "When you connect with something emotionally, then that's what you want to do."

It's long been known that children with autism have larger-than-normal brains early in their development. Hardan has refined this observation, showing that some (but not all) children with autism have an increase in the thickness of the cortex—the part of the brain responsible for complex functions such as language and social behavior—that disappears as they grow. It might be possible to link this back to genetics, says Hardan, who frequently collaborates with Hallmayer. We know some of the genes that contribute to cortical thickness, he says.

Hardan is exploring new brain imaging technologies that offer an unprecedented level of detail. For example, diffusion tensor imaging (DTI) shows the individual axons (the elongated parts of neurons) that connect different parts of the brain. And MRI spectroscopy measures the levels of specific chemicals in various parts of the brain. DTI studies from several universities suggest that autistic children have abnormal long-distance brain connections, an observation that dovetails with Dolmetsch's studies in neurons. Using MRI spectroscopy, Hardan also has detected specific chemical imbalances in the brains of children with autism. He's looking for treatments that can normalize these imbalances.

Hardan's team is involved in about 15 different clinical studies. Whenever possible, he tries to link treatment responses to changes in brain images and to a subgroup of people with autism. For example, Joshua and Padma were being re-scanned after they'd received a behavioral intervention that can improve language. These images may give clues as to how the treatment is working in the brain and what subgroups of patients are likely to respond. Hardan also is collaborating with Karen Parker, who is looking for biomarkers of autism in the blood and cerebraospinal fluid. (See sidebar, page 52.)

The commitment of parents keeps him going, Hardan says. "It's amazing what they would do for their kids. My admiration of these parents fuels what I do."

WHILE AUTISM remains largely a mystery, scientists are making inroads, bit by bit.

As a parent, Dolmetsch says he's been very fortunate. When faced with his son's diagnosis, there was something concrete he could do. Thanks in part to behavioral therapy, his son, now 8, is doing well. "He's at the edge between character and dysfunction. And some days it's very dysfunctional; other days it's just character."

Having a child with autism has changed the way he thinks about science. "You always want to publish findings that are correct, but the bar is higher when your own child is involved, he says. "You don't want to do anything to mislead the field when they are trying to find a cure for your kid."

He also cares less about doing things first. "I just want somebody to do it," he says. "I just want somebody to come up with some plausible biological explanations, so we can convince people that it's worth developing treatments." ■

ARTICLE

The Lifetime Distribution of the Incremental Societal Costs of Autism

Michael L. Ganz, MS, PhD

Objective: To describe the age-specific and lifetime incremental societal costs of autism in the United States.

Design: Estimates of use and costs of direct medical and nonmedical care were obtained from a literature review and database analysis. A human capital approach was used to estimate lost productivity. These costs were projected across the life span, and discounted incremental age-specific costs were computed.

Setting: United States.

Participants: Hypothetical incident autism cohort born in 2000 and diagnosed in 2003.

Main Outcome Measures: Discounted per capita incremental societal costs.

Results: The lifetime per capita incremental societal cost of autism is $3.2 million. Lost productivity and adult care are the largest components of costs. The distribution of costs over the life span varies by cost category.

Conclusions: Although autism is typically thought of as a disorder of childhood, its costs can be felt well into adulthood. The substantial costs resulting from adult care and lost productivity of both individuals with autism and their parents have important implications for those aging members of the baby boom generation approaching retirement, including large financial burdens affecting not only those families but also potentially society in general. These results may imply that physicians and other care professionals should consider recommending that parents of children with autism seek financial counseling to help plan for the transition into adulthood.

Arch Pediatr Adolesc Med. 2007;161:343-349

AUTISM IS A VERY EXPENSIVE disorder costing our society upwards of $35 billion in direct (both medical and nonmedical) and indirect costs to care for all individuals diagnosed each year over their lifetimes.[1] Given the financial and nonfinancial costs we face and given increasingly more options for treatment and possibly for prevention, information on the distribution of costs is needed to help us decide on how to best allocate scarce resources to support individuals with autism and their families. Because the complementary (or competing) treatment and prevention strategies currently available, or yet to be developed, vary in effectiveness or implementation costs, understanding how total costs due to autism are distributed across the life cycle is important to make better decisions.

Relatively little is known about the societal costs of autism, in total and at different points across the life cycle. In earlier work, the per capita and total societal costs for individuals with autism were described.[1] Although the per capita and societal costs were described overall and across 17 components of direct medical, direct nonmedical, and indirect costs, age-specific costs were not. Because certain categories are more relevant and more costly and because these costs are borne by different parties at different ages, presenting the age distribution of the costs of autism can provide policy makers information that is helpful for cost-utility analyses and for current and future resource planning activities. The focus of this study is to present estimates of the costs of autism along with some detail on how the estimates were constructed. Although no clinical data are presented, these data should be useful to health care professionals, families, and agencies in planning for future care, especially with respect to nonmedical costs.

Author Affiliations: Abt Associates Inc, Lexington, and Harvard School of Public Health, Boston, Mass.

METHODS

A detailed description of the sources of data and computational methods used to compile the costs of autism has been presented elsewhere.[1] Briefly, cross-sectional cost data from different age groups were used to create prevalence-based cost estimates that approximate incidence-based estimates (ie, those constructed by longitudinally tracking an incident cohort over time). A prevalence-based cohort, also known as a synthetic, or hypothetical, cohort,[2] allows us to approximate the lifetime experiences of a single incident cohort by using the prevalence-based cost patterns as if

Downloaded from www.archpediatrics.com on March 22, 2011
©2007 American Medical Association. All rights reserved.

they were observed longitudinally from an incident cohort. Although an incidence-based cost-of-illness approach is more appropriate because it captures the full experience of autism, including any comorbid conditions, formidable data requirements preclude it.[3]

The total costs of autism equal the sum of its direct and indirect costs. Direct costs measure the value of goods and services used and indirect costs measure the value of lost productivity due to autism. These direct and indirect costs represent the value of other activities that these resources could have purchased (ie, opportunity costs).[4,5] Physician and other professional services, hospital and emergency department services, drugs, equipment and other supplies, and medically related travel and time costs are typical components of direct medical costs. Direct medical costs were obtained either from the literature or from an analysis of the Medical Expenditure Panel Survey (MEPS)[6] and the National Health Interview Survey (NHIS).[7] Special education, transportation, child care and babysitting, respite care, out-of-home placement, home and vehicle modifications, and supported employment services are typical components of direct nonmedical costs. Nonmedical costs were obtained from the literature. Multiple cost estimates within categories were averaged to obtain a single cost estimate for each category. Indirect costs are the value of lost or impaired work time (income), benefits, and household services of individuals with autism and their caregivers because of missed time at work, reduced work hours, switching to a lower-paying but more flexible job, or leaving the workforce. Indirect costs were computed using a human capital approach[3,8] that combines average earnings, benefits, and household services with information on average work-life expectancies and labor force participation rates for men and women at different ages.

In the analyses that follow, the incremental costs of autism are presented, which are defined as those additional costs that are due exclusively to autism. For example, costs due to use of medical services for periodic well-child preventive care or care related to the common cold are not considered herein because those costs are common to children with and without autism; however, costs specifically due to autism are considered herein. When incremental costs were not available or otherwise specifically presented in the source materials, they were computed by subtracting national average costs calculated from the MEPS from the costs reported in the source documents. For example, if a source document presented an average cost of $\$X$ for all children with autism and the national average for all children for that same category was $\$Y$, then the incremental cost was computed as $\$(Y-X)$. Because of the broad impact of autism on families, insurers, taxpayers, and society and because of the considerable public autism funding, a societal perspective was used, as recommended by the Panel on Cost-effectiveness in Health and Medicine.[8]

The Harvard School of Public Health Human Subjects Committee had previously exempted this study from institutional approval.

DIRECT COSTS

Literature Review

An in-depth targeted literature review concentrating on US-based studies was conducted to obtain data on use and costs. British and Canadian studies were also used when data were otherwise unavailable. Data on physician, outpatient, clinic services, dental care,[9] prescription medications,[9-11] complementary and alternative therapies,[12-18] behavioral therapies,[19-22] hospital and emergency services,[9,23] allied health, equipment and supplies, home health,[9] and medically related travel[9] were classified as direct medical. Data on child care,[9,19] adult care,[19,20] respite and family care,[9,19,20] home and care modifications,[9,24] special education,[19,20,25-27] supported employment,[20,28-34] and other costs[9,24] were classified as direct nonmedical. Although some dimensions of care may be misclassified between direct medical and direct nonmedical (for example, many special education programs provide behavioral therapies), because the degree of misclassification is not known, no corrections were made. Costs, as reported in the source materials, were inflated to 2003 US dollars using the all-item consumer price index.[35] State-specific costs were transformed to national averages[36] and foreign costs were converted to US costs using the latest available Federal Reserve exchange rates.[37] Use measures were translated to costs by multiplying the use measures by age group–specific survey-adjusted average costs from the MEPS.[6] More in-depth information on how the cost estimates were constructed from these sources is available elsewhere[1] and in a technical appendix available on request.

Survey Analysis

Data from the NHIS[7] and the MEPS[6] were also used to supplement data on costs of autism and to also compute average costs for use in deriving the incremental costs of autism. Because confidentiality concerns constrain the MEPS to only report the first 3 digits of diagnosis codes, individuals with an *International Classification of Diseases, Ninth Revision* (*ICD-9*) diagnosis code of 299, which includes autism diagnoses (299.0*x*) as well as disintegrative psychoses (299.1*x*) and early childhood psychoses (299.8*x*/299.9*x*), were used as proxies for individuals with autism. Specific autism questions were available in the NHIS during 1997-2000. Information from those questions was combined with an *ICD-9* diagnosis code of 299 in the NHIS and was linked to the MEPS to increase the number of usable cases. Survey-adjusted means for expenditures were then computed as described earlier. Further information is available elsewhere[1] and from the technical appendix.

INDIRECT COSTS

Productivity losses for people with autism were estimated by combining standard average work-life expectancies for all men and women taken from the economics literature (ages 23-57 years for men and 23-53 years for women),[34] with average income and benefits (from Tables 696 and 628 of the *Statistical Abstract of the United States*[36]) and estimates of age- and sex-specific labor force participation rates.[38] Average incomes are projected for future years based on estimated productivity growth rates[35] to estimate average total earnings and benefits at each age. These estimates are adjusted for the fact that while some adults with autism are unable to work, others are (35% of adults with lower levels of disability and 10% of adults with higher levels of disability work in supported work environments). Finally, the lost value of sex-specific household services is added.[3,39] These estimates do not account for the effects of taxes or lost leisure time. Similar methods were used to estimate productivity for parents. Fathers of children with lower levels of disability were assumed to be unemployed 10% of the time (and working full-time during the remaining 90%) and mothers were assumed to be unemployed 55% of time (and were working half-time 25% of the time and full-time, 20%).[40,41] Fathers of children with higher levels of disability were assumed to be unemployed 20% of the time and mothers were assumed to be unemployed 60% of time (and were working half-time 30% of the time and full-time, 10%). These assumptions were combined with the same average earnings, benefits, productivity growth, labor force participation rates as used for individuals with autism, and the appropriate work-life expectances. These estimates assumed households in which both a mother and a father care for 1 child with autism. These estimates will differ based on different family configurations.

*Costs presented in 2003 dollars. Costs for age 4 years and older are discounted to 2003 dollars using a discount rate of 3%. Life expectancy for men is age 66 years and for women, age 65 years.

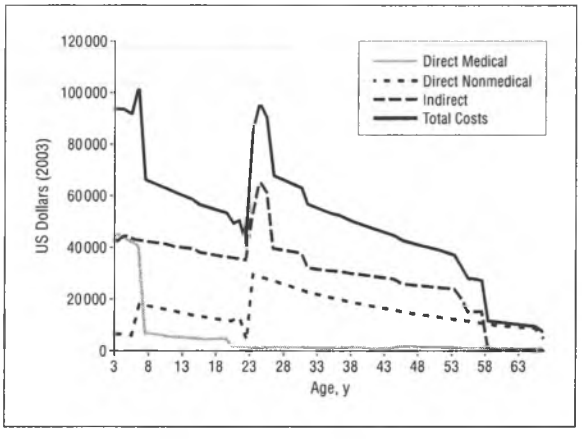

Figure 1. Age distribution of incremental societal costs of autism (present value).

CALCULATING COSTS

To the extent possible, cost estimates were derived for higher- and lower-functioning individuals as they were presented in the literature. Semidependent, independent, or those individuals described as having high-functioning autism were classified in the higher-functioning category. Dependent individuals or those not described as having high-functioning autism were classified in the lower-functioning category. Based on data presented in Fombonne,[42] the prevalence of higher-functioning autism is assumed to be 54%. The male-female ratio is assumed to be 4:1. Weighted average per capita costs were computed based on the assumed distribution of lower- and higher-functioning status and the male-female ratio. Age 3 years was considered to be the baseline age (age at diagnosis) and 2003 was the baseline year. Because there is some evidence that people with autism have reduced life expectancies,[43-46] costs were tabulated through age 66 years for males and through age 65 years for females. Costs were discounted to present value (to age 3 years) using a discount rate of 3% as recommended by the Panel on Cost-effectiveness in Health and Medicine.[8] Costs in future years were discounted, or deflated, to reflect the time value of money: a dollar today is worth more than a dollar in the future. In doing so, all costs were adjusted for the different periods in which they were incurred. In other words, dollars at different ages become comparable. Because health care resource investments, such as in the case of autism research and treatment budgets, incur costs in the present and potentially realize the benefits in the future, it is common to discount future flows of costs (and benefits) to present value. Although 3% is the currently used standard for a discount rate, this rate is varied in the sensitivity analyses described in the next subsection.

SENSITIVITY ANALYSES

In previous work, the robustness of the overall cost estimates was assessed using 1-way sensitivity analyses and conclusions were mostly robust to changes in many key parameters.[1] However, the total costs were found to be most sensitive to changes in the discount rate and to changes in the assumed level of indirect costs. Because variations in indirect costs will not substantially change the pattern of costs over the life cycle, herein focus is placed on the discount rate.[8] The discount rate is varied between 2% and 5% as suggested by Gold et al.[8]

DEFINITION OF AUTISM

Many of the sources of data simply used the term *autism* and did not differentiate between the different autism spectrum disorders. Reflecting the literature, the term *autism* herein is used in an inclusive manner to mean all disorders in the spectrum. Given the nature of many of the nonmedical and indirect costs, it is likely that those costs are more representative of more disabled individuals. Older sources[9] may have only included lower-functioning children and individuals in their definitions of autism. However, varying the proportions of lower- and higher-functioning individuals does not substantially change conclusions about overall lifetime costs.[1]

RESULTS

In the Tables that follow, the average per capita costs by category are presented in 5-year intervals (the full Tables

are available as eTables 1-4 at http://archpediatrics.com). **Table 1** and **Figure 1** display the incremental societal direct medical, direct nonmedical, and indirect costs. Direct medical costs are quite high for the first 5 years of life (average of around $35 000), start to decline substantially by age 8 years (around $6000), and continue to decline through the end of life to around $1000. Direct nonmedical costs vary around $10 000 to approximately $16 000 during the first 20 years of life, peak in the 23- to 27-year age range (around $27 500), and then steadily decline to the end of life to around $8000 in the last age group. Indirect costs also display a similar pattern, decreasing from around $43 000 in early life, peaking at ages 23 to 27 years (around $52 000), and declining through the end of life to $0.

Table 2 displays the individual components of the incremental societal direct medical costs. Considered over the entire life span, direct medical costs make up 9.7% of total discounted lifetime costs. Behavioral therapies, which are the largest component of direct medical costs, make up 6.5% of total discounted lifetime costs.[1] However, behavioral therapies, as presented herein, are only relevant for children 19 years or younger. The large direct medical costs early in life are driven primarily by behavioral therapies that cost around $32 000 during the first 5-year age group and decline from about $4000 in the 8- to 12-year age group to around $1250 for the 18- to 22-year age group. Physician and dental costs are initially high, then decrease, but increase again in later life. Prescription drugs, complementary and alternative therapies, and hospital and emergency services are also relatively

high initially but steadily decline. Some costs decline less smoothly than others because of different availability of cost-by-age estimates in the literature.

Table 3 displays the individual components of the incremental societal direct nonmedical costs. Nonmedical costs, except during ages 3 to 7 years, are more expensive than direct medical costs and make up 31% of total discounted lifetime costs.[1] Different costs become relevant at different ages, which contributes to the dips and spikes in the direct nonmedical line in Figure 1. Child care and respite costs, which average about $5700 in early ages to around $3600 at ages 18 to 22 years, contribute far less (3% of total discounted lifetime costs) than adult care costs (21% of total discounted lifetime costs), which range from around $25 000 at ages 23 to 27 years to around $7400 at ages 63 to 66 years. Special education costs, which make up 4.8% of total discounted lifetime costs, range from around $12 000 at age 6 years (costs for ages 3-5 years are assumed to be zero) to around $6200 at ages 18 to 22 years, and supported employment costs range from around $800 at ages 23 to 37 years to around $300 at ages 53 to 57 years (age 57 years is the assumed end of working life).

Table 4 displays the components of the incremental societal indirect costs. Indirect costs are by far the largest component of the total incremental societal costs of autism (59.3% of total discounted lifetime costs).[1] Own indirect costs, which make up 30.7% of total discounted lifetime costs, range from around $33 000 at ages 23 to 27 years to around $18 000 at ages 53 to 57 years. Not own (assumed herein to be parents') indirect costs, which make up 28.6% of total discounted lifetime costs, range from around $43 000 at ages 3 to 7 years, when parents are assumed to be about 33 to 37 years of age, to around $19 000 at ages 23 to 27 years, when parents are assumed to be 53 to 57 years of age, to around $3000 per year for the next 5 years until the end of the average work life. Although total indirect costs spike at ages 23 to 27 years, because of the overlapping own and not own indirect costs, as **Figure 2** indicates, at any given time from age 3 years through age 57 years, there is a substantial and smoothly declining level of indirect costs. Figure 2 also dramatically illustrates, at least for this model, the transition from exclusive parental lost productivity almost immediately to lost own productivity.

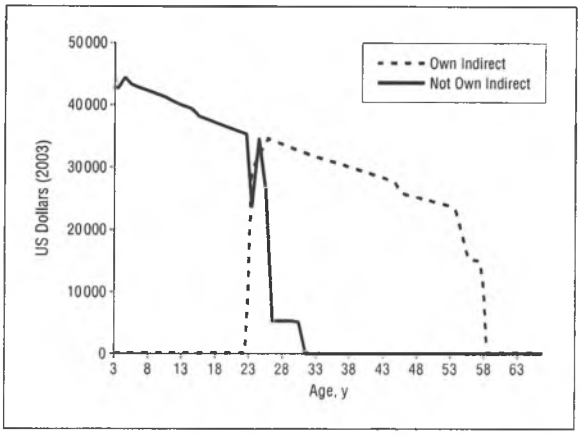

Figure 2. Age distribution of own and not own indirect incremental costs (present value).

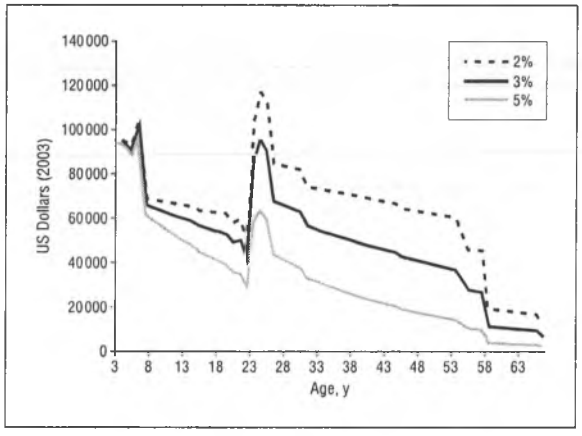

Figure 3. Age distribution of total incremental societal costs of autism computed at different discount rates.

SENSITIVITY ANALYSES

Sensitivity analyses using 2% and 5%, which are common upper and lower bounds, reveal that the patterns of age-specific expenditures are similarly shaped. **Figure 3** displays total costs using 2%, 3%, and 5% as the discount rates. There is an inverse relationship between the discount rate and the weight placed on future costs: lower discount rates place greater weight on future costs and higher rates place less weight on future costs. As a result, total present value costs will be larger the smaller the discount rate. The maximum difference in total costs between the 5% scenario and the 2% scenario (about $53 000) occurs at age 24 years and the average difference in costs between the 5% and 2% scenarios is about $31 000.

COMMENT

This article presents the first description, to my knowledge, of the societal costs of autism in the United States across all ages of the life span and contributes not only to the literature on the costs of autism but also to the literature on age-specific health care costs in general. As was previously reported, the total annual societal per capita cost of caring for and treating a person with autism in the United States was estimated to be $3.2 million and about $35 billion for an entire birth cohort of people with autism.[1] Sensitivity analyses revealed that these lifetime costs could range from $13 billion to $76 billion depending on the underlying assumptions of the model. Although those estimates are highly conservative because they exclude a number of important elements (such as legal costs that families incur to secure services[47,48]; lost productivity of those other than parents; the costs of genetic testing; the full costs of alternative therapies, including diets; the costs of adverse outcomes of potentially dangerous treatment modalities; and costs associated with immunization-avoidance behaviors[48]), they are valuable because they add information to a relatively underdeveloped literature. As treatment and, perhaps prevention, strategies are developed, knowledge of when costs are incurred relative to when benefits are expected is important for clinical decision-making and cost-effectiveness analysis efforts.

Knowledge about age-specific per capita incremental societal costs is particularly important because, as opposed to the summary lifetime data presented previously,[1,25,47] age-specific data illuminate the relative magnitudes of different types of costs at different ages. Given that at different ages different segments of society are responsible for absorbing these costs, this detailed disaggregation of costs can provide even more valuable information to planners, policy makers, and even to families making decisions that can affect current and future financial health, especially as they consider the fact that at various points in the life cycle different costs are more germane than others.

Although autism is typically thought of as a disorder of childhood, its costs can be felt well into adulthood. Adult care, which has the largest lifetime cost of all direct costs, is typically more than 5 times larger than the next 3 largest costs, which include care incurred during childhood (behavioral therapies, child/respite care, and special education). Alemayehu and Warner[49] reported that the typical American spends about $317 000 over his or her lifetime in direct medical costs, incurring 60% of those costs after age 65 years. In contrast, people with autism incur about $306 000 in incremental direct medical costs, implying that people with autism spend twice as much as the typical American over their lifetimes and spend 60% of those incremental direct medical costs after age 21 years.

These results, especially on the substantial costs resulting from lost productivity of both individuals with autism and their parents and from rather large adult care costs, have important implications for those aging members of the baby boom generation approaching retirement. As those individuals retire, many of their adult children with autism will be transitioning into adult care settings. Those costs, combined with very limited to nonexistent income for their adult children with autism combined with potentially lower levels of savings because of decreased income and benefits while employed, may create a large financial burden affecting not only those families but potentially society in general. Perhaps physicians and other care professionals should consider recommending that parents of children with autism seek financial counseling to help plan for the transition into adulthood.

Although this study is limited by a number of factors, it is the first of its kind, to my knowledge, and can shed insight into the lifetime distribution of autism costs and also motivate future, more rigorous studies. The cost model presented herein is based on a number of simplifying assumptions and relies on sometimes incomplete and old information. These caveats should be kept in mind when using these estimates for policy or practice decision making. The results presented herein for direct medical costs are consistent with recently published data on health care use and costs for children with autism. Gurney et al[50] reported that, relative to children without autism, children with autism, as reported by their parents, experience a significantly higher number of preventive visits and emergency and nonemergency hospital visits. Croen et al[51] reported, based on administrative data from the Northern California Kaiser Permanente Medical Care program, that children with autism incurred 2.5 times as much outpatient costs, 2.9 times as much inpatient costs, and 7.6 times as much medication costs as randomly selected children without autism. Pursuing a research agenda of both carefully and systematically documenting the costs of autism in the United States can be helpful in improving these estimates. Prospectively tracking the life experiences of individuals with autism and their families and obtaining a wide variety of data on the different sources of services for people with autism can provide this more complete picture. Prospectively collected clinical and quality-of-life data combined with cost data will be even more useful for understanding the societal costs, both financial and nonfinancial, of caring for those members of our society with autism at every age of the life course.

1

Executive Summary

Oliver Wyman Actuarial Consulting, Inc. (Oliver Wyman) has been engaged by Autism Speaks to develop a cost model in order to analyze and estimate the impact of insurance benefits for autism spectrum disorders (ASD) under Alaska House Bill 79 and Senate Bill 74, which are identical bills that will be referred to as "HB 79 / SB 74" throughout this report.

The most significant class of treatments covered under HB 79 / SB 74 are behavioral health treatments, which are referred to as applied behavior analysis, or "ABA" throughout this document since ABA is one of the most common behavioral health treatments and the general approach and costs for ABA are assumed to be similar to those of other behavioral health treatments. The key provisions of HB 79 / SB 74 are explained further in Section 4 of this report.

Our analysis involved developing a robust model that reflects the likely behavior of consumers, providers and insurers of ABA services, and includes Alaska demographic and insurance market information. Key assumptions, including the treated prevalence of ASD, the age of diagnosis, ABA program utilization by age, ABA annual costs by age, and additional other (i.e., not ABA) medical costs, as well as the modeling methodology are explained in detail in Sections 5 and 6 of this report and summarized through graphs in the Appendix.

Our analysis included scenario testing to develop cost estimates under a range of assumptions. Our "Middle" estimate is that, in the long-term, costs would increase by about 0.39% of premiums and premiums would increase about 0.45% should HB 79 / SB 74 be enacted. Our estimated range of long-term premium increases is 0.28% to 0.68% based on our "Low" and "High" estimates.

We expect that premium increases would be lower in the years immediately following the passage of a law consistent with the provisions of HB 79 / SB 74, with first year cost increases in the range of 0.09% to 0.45% percent of premiums. Our expectation of lower first year costs is based on experiences in other states that have seen low initial costs when

ASD benefits are first covered. These lower costs can be expected due to the lags typically seen in accessing new benefits and the limited supply of ABA providers.

The estimated cost increases for our "Middle" scenario, along with some statistics for the individual, small, and large group markets, are shown in the table below.

Long-Term Cost Estimates - "Middle" Cost Scenario

	Market			
	Individual	Small Group	Large Group	All
Covered Persons	25,000	39,000	52,000	116,000
Average Premium per Person	$2,800	$5,500	$4,700	$4,559
Annual Claim Cost per Covered Person	$17.60	$17.60	$17.60	$17.60
Claim Cost as a Percentage of Premium	0.63%	0.32%	0.37%	0.39%
Estimated Premium Increase with Admin @ 15%	$20.70	$20.70	$20.70	$20.70
Premium Increase as a Percentage of Premium	0.74%	0.38%	0.44%	0.45%

For our scenario testing we varied the assumptions that drive cost estimates. The assumptions under the "Low," "Middle," and "High" scenarios and premium increase estimates are summarized in the table below.

Scenario	% Autistic Disorder Diagnosed Under Age 6 Starting ABA	Program Cost - Autistic Disorder (Ages 0-6)	Avg. Annual non-ABA Cost	Premium Increase per Covered	Premium Increase (% of Premium)
Low	50.0%	$50,000	$2,350	$12.80	0.28%
Middle	65.0%	$65,000	$3,525	$20.70	0.45%
High	80.0%	$83,718	$4,700	$30.90	0.68%

While this analysis focused primarily on estimating the insured costs of covered medical benefits associated with HB 79 / SB 74, in Section 8 we summarize information related to the lifetime costs of ASD, which include the costs associated with medical services, education, custodial care and the lost productivity and wages of individuals affected by ASD, as well as their family caregivers.

Based on the results of several studies, we expect that the costs of ABA treatments covered under HB 79 / SB 74 could be recovered through reductions in educational and medical expenditures alone. We also expect that benefits associated with successful treatments would reduce future costs of caring for individuals with ASD, and improve both the productivity and the quality of life for individuals with ASD, as well as their family caregivers.

2

Background

Oliver Wyman Actuarial Consulting, Inc. (Oliver Wyman) has been engaged by Autism Speaks to develop a cost model in order to analyze and estimate the impact of legislation providing for additional insurance benefits for autism spectrum disorders (ASD) on insurance premiums. As part of this work, Oliver Wyman has developed a range of independent estimates of the impact of HB 79 / SB 74 on insurance premiums, which provides coverage for the diagnosis and treatment of autism spectrum disorders.

Oliver Wyman is a part of the Marsh & McLennan family of companies. With over 60 members of the American Academy of Actuaries, Oliver Wyman is one of the largest actuarial practices in North America. Oliver Wyman's health practice, which has fourteen credentialed actuaries, advises insurers, regulators, governments, interest groups, and others.

This report, along with its supporting analysis, was developed by Marc Lambright, a Principal and consulting actuary in Oliver Wyman's Philadelphia office. Marc is a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries and is professionally qualified to analyze the cost impact of HB 79 / SB 74 and provide the estimates shown in this report. As part of Oliver Wyman's quality assurance process, the underlying analysis and this report were independently peer reviewed by another credentialed Oliver Wyman actuary.

3

Scope and Limitations

The intent of this analysis is to provide a reasonable range of estimates for the incremental insured costs of the ASD benefits provided for in HB 79 / SB 74 and the associated premium impact on the individual, small group, and large group markets affected by HB 79 / SB 74. This analysis also identifies and partially quantifies identified offsetting cost savings associated with successful ASD treatment.

We note that cost estimates associated with autism coverage legislation have varied widely state to state based on state specific differences in legislation and the methods and assumptions used in estimating costs, though typically independent estimates show premium increases due to legislation covering additional autism benefits of less than 1%. A March 2009 report by The Council for Affordable Health Insurance (CAHI) states: "CAHI's actuarial working team estimates that an autism mandate increases the cost of health insurance by about 1 percent."[1] The reason for this variability is that the largest component of the increase in costs under HB 79 / SB 74 is due to the coverage of behavioral therapies, including applied behavior analysis (ABA), which is almost universally excluded from health coverage, and therefore very little mature insured data exists for use in developing credible utilization and unit cost estimates for ABA.

The reader is further cautioned that the ultimate cost of covering ABA benefits is uncertain; however, this analysis reflects the likely behavior of consumers, providers and insurers of ABA services in developing the assumptions underlying the cost estimates. Likewise, the additional costs for medical services other than ABA are uncertain. Insurance policies often cover some services for children diagnosed with an ASD, although the legislation could cause the insured costs for certain services to increase because ASD exclusions or limitations are common, and certain services that may have been initially denied or terminated following utilization review or benefit limitations might be covered due to HB 79 / SB 74.

4

Description of Key HB 79 / SB 74 Provisions and their Impact on Covered Benefits

Insurance Markets Covered by HB 79 / SB 74

The Bills state: *"Except for a fraternal benefit society, a health care insurer that offers, issues for delivery, delivers, or renews a health care insurance plan in this state shall provide coverage for the costs of the diagnosis and treatment of autism spectrum disorders."*

In our modeling we are assuming that this means that HB 79 / SB 74 applies to health insurance contracts in the individual, small group, and large group markets.

Covered Benefits

HB 79 / SB 74 provides for the diagnosis and treatment for autism spectrum disorders, where covered services are outlined in the following language:

"*Covered treatment may include medically necessary pharmacy care, psychiatric care, psychological care, habilitative or rehabilitative care, and therapeutic care.*"

"'habilitative or rehabilitative care' means professional counseling, guidance services, and treatment programs, including applied behavior analysis or other structured behavioral therapies necessary to develop, restore, and maintain the functioning of an individual to the maximum extent practicable; in this paragraph, 'applied behavior analysis' means the design, implementation, and evaluation of environmental modifications, using behavioral stimuli and consequences, including direct observation, measurement, and functional analysis of the relationship between environment and behavior, to produce socially significant improvement in human behavior or to prevent the loss of an attained skill or function"

The inclusion of applied behavior analysis (ABA), and other behavioral therapies is especially important, and the coverage of these types of programs has the most significant impact on the cost of covered benefits under HB 79 / SB 74.

ABA may include 30-40 hours of therapy a week, though many programs would not utilize that level of resources. Key assumptions underlying our ABA cost estimates which also consider costs of other intensive programs are outlined in Section 6.

5

Modeling Methodology

The following discussion outlines the general modeling methodology used to develop our cost estimates. Estimates were developed both on a per covered person per year basis and as a percentage of average annual premiums, as shown in Section 7. Details of key assumptions are discussed in Section 6 and illustrated graphically in the exhibits shown in the Appendix.

Modeling Perspective

Our model was developed to produce costs under a range of assumptions, but generally assumes that a sufficient supply of providers would be available to meet the demand for autism services, especially with regard to ABA services. It also assumes that there would be sufficient awareness of autism and motivation (primarily by parents) to seek treatment so that the diagnosis and treatment of ASDs would be more in line with CDC diagnosed prevalence estimates. We would expect that it would take a minimum of several years for both the supply of providers to meet the demand for ASD services and for parents of autistic children to aggressively seek treatment of their children's disorders.

In spite of these real limitations that will likely limit short-term costs associated with autism benefits covered due to HB 79 / SB 74, we feel that it is appropriate from a public policy perspective to look at the costs over a longer term and assume that both awareness of ASDs will increase and that supply and demand for ASD services would eventually be in balance. We have developed our estimates with this in mind.

Acknowledging that short-term costs are also important to policymakers, in the following discussion outlining our cost estimates, we have included illustrative exhibits showing the possible progression of costs for additional covered benefits by assuming that initial costs would be roughly one-half of the long-term estimates. We also assumed that it would take five years for costs to reach their ultimate levels, although these assumptions varied by cost scenario.

Emerging Cost Experience for Autism Coverage

While actual cost experience is limited, there have been some examples of emerging experience reported in various forums that are indicative of the costs of autism insurance laws being modest. These examples of emerging experience are not inconsistent with the cost estimates in this report.

South Carolina State Health Plan – Calendar year 2010 costs of approximately $2 million for 350,000 to 390,000 members. This represents an increase of about 0.1% to 0.2% in medical costs.[2]

The Ohio State University[3]
Percentage of Claim Cost Experienced by OSU Managed Health Care Systems Inc. (MHCS) for Autism Treatment:

2006 0.15%
2007 0.15%
2008 0.12%

Aetna Texas- Comments to press indicated increased costs equal to approximately 0.1% of premium in the year after the Texas autism law was enacted. Aetna noted in December 2008 that it had tracked the cost of the autism coverage legislation in Texas for its first year of existence and found that it increased costs for policyholders who filed autism-related claims by $379 a month. A total of 235 policyholders had filed autism claims in the state as of the time the data was released. At that time, the company had not decided whether to pass those costs on to the policyholders because the cost of the legislation might change after the first year.[4] While this is only first year experience for a single insurer, it illustrates that initial costs after the passage of autism insurance legislation are likely low. Aetna's Texas block of business is quite large (approximately $1.5 - 2.0 billion in premium[5]), so the statistics provided indicate a cost of less than 0.1% of premium.

General Modeling Process

The modeling process employed to develop our cost estimates was as follows:

1. A treated prevalence estimate for Alaska was developed based on the Center for Disease Control and Prevention's (CDC) Mortality and Morbidity Weekly Report (MMWR) on autism prevalence dated December 18, 2009.
2. Prevalence rates by diagnostic subtype (Autistic Disorder, PDD-NOS, and Asperger's Syndrome) were estimated separately, since diagnosis patterns and service utilization could reasonably be expected to vary by how severely affected an individual with ASD is and by diagnostic subtype.
3. The percentage of children diagnosed by age for each diagnostic subtype was estimated so that the average ages of diagnosis implicit in the modeling are consistent with publicly available age at diagnosis statistics.[6]
4. The percentage of diagnosed children who could be expected to have an ABA program was estimated for each age based on assumptions regarding the percentage of children that would start a program and typical program continuance.
5. A distribution of the number of annual hours for ABA by age was developed based on ABA provider input and an assumption that utilization review by insurers would impact utilization to some degree.
6. Based on the assumed treatment prevalence, likelihood of having an ABA program, assumed distribution of ABA program hours, and estimated ABA program cost per hour of therapy, ABA cost estimates by age were developed.
7. Non-ABA costs were estimated based upon studies of medical costs for children diagnosed with ASD, and the potential increase in costs that could be expected due to HB 79 / SB 74 benefits.
8. Based on Census demographic data and the cost estimates associated with HB 79 / SB 74's coverage of ASD services by age as outlined in 1-7 above, an annual cost per covered person was developed.
9. The cost of services was increased to reflect administrative and other insurer costs or profit charges.
10. The estimated size of the covered market was developed based on Census, Medical Expenditure Panel Survey (MEPS) enrollment and premium information for Alaska, and Kaiser Family Foundation coverage data. These assumptions are further explained and documented in Section 6.
11. The incremental costs of the ASD services per covered person and as a percentage of premiums were calculated based on the model cost estimates and market data under a range of assumptions to develop "Low," "Middle," and "High" cost scenario estimates.

6

Summary of Key Assumptions

Key assumptions underlying the cost estimates for the proposed HB 79 / SB 74 covered benefits are summarized in this section. In order to better illustrate the sensitivity of costs to various assumptions, we developed assumptions for "Low," "Middle," and "High" cost scenarios. Appendix 1 further illustrates these assumptions for the "Middle" scenario.

Treated Prevalence and Age at Diagnosis

The December 18, 2009 CDC MMWR[7] report included the following information related to the prevalence of ASD:

1. *Children aged 8 years with a notation of an ASD or descriptions consistent with an ASD were identified through screening and abstraction of existing health and education records containing professional assessments of the child's developmental progress at health-care or education facilities. Children aged 8 years whose parent(s) or legal guardian(s) resided in the respective areas in 2006 met the case definition for an ASD if their records documented behaviors consistent with the Diagnostic and Statistical Manual of Mental Disorders, 4th edition, text revision (DSM-IV-TR) criteria for autistic disorder, pervasive developmental disorder–not otherwise specified (PDD NOS), or Asperger disorder. Presence of an identified ASD was determined through a review of data abstracted from developmental evaluation records by trained clinician reviewers.*[8]

2. *In 2006, the overall identified ASD prevalence per 1,000 children aged 8 years varied across ADDM sites ...The average across all 11 sites was 9.0 (CI = 8.6–9.3) per 1,000 children.*[9] A prevalence rate of 9 per 1,000 is approximately 1 in 110.

[7] Centers for Disease Control and Prevention. Morbidity and Mortality Weekly Report. December 18, 2009. http://www.cdc.gov/mmwr/PDF/ss/ss5810.pdf. Accessed February 2011.

[8] Ibid, p. 1.

[9] Ibid, p. 7.

3. *In general, estimated ASD prevalence was lower in ADDM sites that relied solely on health sources to identify cases (mean: 7.5 per 1,000 population; CI = 7.0 – 7.9) compared with sites that also had access to education sources.*[10]

4. *Among all children meeting the ADDM ASD surveillance case definition, approximately 77% had a documented ASD classification in their records.*[11]

5. *All children initially identified for screening were first stratified by two factors highly associated with final case status: information source (education only, health only, or both types of sources) and the presence or absence of either an ASD ICD-9 code (299.0 or 299.8) or an autism special education eligibility. The potential number of cases missed because of missing records, and the impact on prevalence, was estimated on the assumption that within each of the strata, the proportion of children with missing records who ultimately would be confirmed as having ASD cases would have been similar to that of children for whom no records were missing.*[12]

In estimating treated prevalence, which drives medical services utilization and costs, we used the population prevalence as a starting point, and then made adjustments based on details in the MMWR study which would indicate that treated prevalence could be expected to be lower than population prevalence. Treated prevalence rates would be expected to be lower than population prevalence rates for several reasons:

1. As noted in 4. above, approximately 77% of children meeting the ADDM ASD surveillance case definition had documented ASD classification in their records. Without a documented ASD diagnosis, it is not likely that someone would receive treatments for ASD covered by insurance. Note 77% of the 9.0/1,000 population prevalence means a documented diagnosis prevalence rate of approximately 1 in 144.

2. There is a reasonable expectation that covered medical ASD services would be supported by documentation in health records. Based on a review of health records only, the population prevalence of ASD is approximately 7.5/1,000, or 1 in 133.

3. The CDC methodology assumed that where records and information were missing, the proportion of children with missing records who ultimately would be confirmed as having ASD would have been similar to that of children for whom no records were missing. There is a reasonable likelihood that records would be less likely to be missing for children with documented ASD diagnoses who would seek treatment.

4. With ASD, as with any other disease or disorder, there will be some subset of the diagnosed population that will not seek treatment for any number of reasons.

Based on our analysis of the CDC report, including the key items from the report noted above, a reasonable assumption for the treated prevalence of ASD is 1 in 150.

[10] Ibid, p. 7.

[11] Ibid, p. 9.

[12] Ibid, p.7.

Prevalence by diagnostic subtype was estimated based on an academic study published in the American Journal of Psychiatry.[13] As noted in the previous section, the percentage of children diagnosed by age for each diagnostic subtype was estimated so that the average age of diagnosis implicit in the modeling is consistent with publicly available age at diagnosis statistics.

The treated prevalence and age at diagnosis assumptions for Alaska are shown below:

Alaska Treated Prevalence

Diagnostic Subtype	Ultimate Prevalence	Average Age of Diagnosis
Autistic Disorder	1 in 450	3
PDD-NOS	1 in 300	3
Asperger's	1 in 900	6
All ASD	**1 in 150**	

The average age of diagnosis stated in the 2009 CDC MMWR report is 53 months,[14] which is higher than the average age used in our cost modeling of about 42 months. We believe that this difference is reasonable and explainable in that we are using parent reported data that is likely provided by the same parents who would most likely utilize insured benefits. Note, a lower age of diagnosis results in higher cost estimates, all other things being equal.

ABA Program Utilization and Cost

ABA Program Utilization by Age

ABA programs require a significant commitment from affected children, as well as their families. It is likely that a significant number of ASD children will not have an ABA program regardless of the availability of a provider, and many others diagnosed with ASD may have difficulty accessing a provider. We also note that the most severely affected children with the diagnostic subtype of Autistic Disorder will be more likely to have behavioral programs than those with PDD-NOS or Asperger's and will also, on the whole, have more intensive programs.

For this reason, we have assumed that 50% to 80% of children with Autistic Disorder (50% for "Low" scenario, 65% for "Middle" and 80% for "High") diagnosed under age six will begin an ABA program. Based on discussions with ABA providers and researchers, actual utilization of ABA programs has been lower in many cases due to the lack of providers, the lack of coverage, and to some extent the limited understanding of ABA programs and their efficacy. As noted later, we make an adjustment to reflect lower cost estimates for PDD-NOS and Asperger's. Implicit in that adjustment is an expectation of lower ABA utilization for these two diagnostic subtypes.

[13] Fombonne, E. and S. Chakrabarti. American Journal of Psychiatry. June 2005.

[14] Centers for Disease Control and Prevention. Morbidity and Mortality Weekly Report. December 18, 2009. p. 9.

In Minnesota, a state that is widely regarded as having some of the most extensive ABA coverage and services in the nation, provider data indicates ABA utilization of approximately 20% of diagnosed three to six year olds[15], which is lower than assumed in each of the scenarios in our modeling. While our range of assumptions for ABA utilization may appear conservative, and likely is conservative in the near-term, we feel that the range is reasonable since insurers will likely have some conservatism in their cost estimates and premium rates. Private insurance utilization will also likely be higher than under the public/private programs in Minnesota, and utilization could increase over time due to increased awareness of ASD, and potentially, an increased supply of ABA providers.

In addition to the likelihood of starting a program, program continuance assumptions have a very significant impact on overall ABA utilization and cost estimates. ABA programs are generally geared towards addressing deficits in younger children and are not intended to be continued indefinitely. For this reason, we have assumed that no programs would terminate prior to school age, that a large percentage of ABA programs would terminate at ages six and seven, when an autistic child could be expected to enter elementary school, and annually thereafter a large percentage of remaining programs would terminate until only a very small percentage of children have ABA programs by the time they reach their teenage years. Programs would be expected to terminate if a child has experienced sufficient progress such that a program is no longer necessary or if the insurer or family sees no progress, as well as for other reasons.

The assumed percentage of children diagnosed with Autistic Disorder that have an ABA program by age for our "Middle" scenario is shown in the table below:

	% of Diagnosed Children with Autistic Disorder with ABA
Under 6	65.0%
6	48.8%
7	32.5%
8	21.7%
9	14.4%
10	9.6%
11	6.4%
12	4.3%
13 to 21	3.3%

ABA Program Annual Number of Hours

In developing the assumed annual ABA program hours, we discussed typical ABA programming with ABA providers, and reviewed benefit materials from one of the large self-insured employer who offers ABA benefits.[16] We developed a distribution of expected hours for a child with Autistic Disorder that resulted in the annual averages shown in the following table:

[15] Discussion with Dr. Eric Larsson Executive Director, Clinical Services, The Lovaas Institute for Early Intervention. Midwest Headquarters regarding ABA utilization research in Minnesota. February 2009.
[16] Autism Therapy Reference- Microsoft Corporation (administered by Premera Blue Cross).

Average Annual ABA Program Hours for a child with Autistic Disorder	
Ages Under 8	1,500
Ages 8 to 12	671
Ages 13 to 21	401

The general assumption is that pre-school aged children will have programs for 20 to 40 hours a week, averaging about 30 hours a week. This time will be reduced by over half by age eight, when children would be expected to be in school and the school system would be required to provide services during the school day. It would then again be reduced significantly at age 13, as the child ages and ABA programs would be expected to be less time consuming and address a smaller number of behavioral deficits.

Cost per Hour of ABA Service

In developing the costs per hour, we reviewed ABA program staffing information and ABA provider wage and overhead cost assumptions. We developed an average cost for the entire United States and then adjusted this for Alaska, based on Bureau of Labor Statistics[17] health care wage data. The resulting average cost per hour of ABA therapy in Alaska is about $56 for a program based on the assumption that staffing will be in line with what best practices might recommend. This is the cost underlying our "High" assumption, though we note that costs would vary based on the mix of professionals and technicians providing the services, and likely would be lower if less experienced ABA practitioners need to be employed to meet the increasing demands for services. Costs will vary, as well, depending upon the degree of care management employed by a given payer.

Range of Annual ABA Program Costs for Scenario Estimates

Given the actual cost of an ABA program could vary significantly for many reasons, we have assumed annual average program costs by scenario for a child with Autistic Disorder being treated with an intensive ABA program as follows:

"Low" cost scenario - assumes average ABA program cost is $50,000 per year.
"Middle" cost scenario - assumes average ABA program cost is $65,500 per year.
"High" cost scenario - based on the assumptions outlined in this section for the continuance of ABA programming, 1,500 annual hours for ABA programming for children younger than age 8, and an hourly rate of slightly under $56, the calculated average annual cost for an ABA program for all ages is $83,718.

After developing cost estimates for ABA for children diagnosed with Autistic Disorder, we assumed that for children diagnosed with PDD-NOS or Asperger's, ABA costs would be one-third of the Autistic Disorder costs. The basis for this adjustment is that children with these two diagnoses can be expected to utilize ABA programs at a significantly lower rate than those with Autistic Disorder, and have less intensive programs (i.e., programs with fewer weekly and annual therapy hours). The one-third factor applied to overall costs reflects the combination of lower utilization and fewer therapy hours.

[17] BLS wage data. http://www.bls.gov/guide/geography/wages.htm. Accessed January 2011.

Other (than ABA) Medical Costs

Based on several studies[18], we estimated that children with ASDs had costs covered by insurers of approximately three times the average for non-inpatient medical services under current benefit programs. It is also clear that under HB 79 / SB 74 some services that an insurer could currently deny or exclude would now be covered. In our range of estimates, we assumed that this additional coverage would result in increased insured medical costs of 50% to 100% of the current level of estimated covered non-inpatient costs for services to all children diagnosed with an ASD, which we assumed are currently three times higher than the population costs in the absence of the benefits under HB 79 / SB 74 for children/dependents under age 21 diagnosed with an ASD.

The estimated annual cost for additional non-ABA services (note many non-ABA medical services are already provided to individuals with ASD) that would be covered as a result of HB 79 / SB 74 are shown for each scenario in the table below:

Scenario	Non-ABA Costs
Low	$2,350
Middle	$3,525
High	$4,700

(Amounts in 2011 dollars)

Administrative Costs

Typically, medical claim costs could be expected to be 80% to 90% of premiums, meaning 10% to 20% of premiums are available for administration, profit, or other costs, often collectively referred to as "retention." We have estimated the incremental retention charge to be 15% of premium.

Alaska Market Data

The MEPS survey provides average premiums, enrollees, offer rates, take-up rates, and self-insured percentages by employer size for healthcare coverage sponsored by privately insured employers. From this data we can estimate the size of the privately insured small group, insured large group, and self-insured markets. State-specific premium data for Alaska was available for 2009[19], so we trended this data based on average recent employer premium increases provided in the Kaiser Family Foundation HRET[20] survey to estimate the 2011 average annual premium per member necessary to compute the cost of HB 79 / SB 74 benefits as a percentage of annual premiums.

To estimate average premiums for the individual market, we reviewed the 2009 individual premium and membership experience found in the regulatory filings for insurers in Alaska.

---

[18] Mandell, Cao, Ittenbach, & Pinto-Martin, 2006. Croen, Najjar, Ray, Lotspeich, & Bernal, 2006. Liptak, Stuart, & Auinger, 2006.

[19] MEPS state survey data. http://www.meps.ahrq.gov/mepsweb/data_stats/state_tables.jsp?regionid=-1&year=2009. Accessed January 2011.

[20] Kaiser Family Foundation and Health Research Educational Trust. Employer Health Benefits- 2010 Annual Survey.

We calculated the average individual premium for 2009 in Alaska, and again trended this amount to estimate 2011 premiums.

As part of our development of premiums and membership estimates, we completed reasonableness tests by reviewing Alaska insurer regulatory filings to ensure that the premium estimates were not unreasonable.

7

Cost Estimates

Long-Term Cost Estimates - "Middle" Cost Scenario

The table below summarizes our "Middle" scenario average annual cost estimates and premium increases on a per covered person basis, and as a percentage of the annual premiums. Our "Middle" estimate is that, in the long-term, the premium increase associated with the additional benefits provided by HB 79 / SB 74 would be about 0.45% of insured premiums across all markets. However, we expect that costs would be lower in the years immediately following the passage of HB 79 / SB 74 based on experiences in other states that have passed legislation providing for the coverage of additional ASD benefits, lags typically seen in accessing new benefits, and the limited supply of ABA providers.

The estimated cost increases by market are shown in the table below. The annual claim cost per covered person estimate of $17.60 and premium increase estimate of $20.70 are in 2011 dollars.

	Market			
	Individual	Small Group	Large Group	All
Covered Persons	25,000	39,000	52,000	116,000
Average Premium per Person	$2,800	$5,500	$4,700	$4,559
Annual Claim Cost per Covered Person	$17.60	$17.60	$17.60	$17.60
Claim Cost as a Percentage of Premium	0.63%	0.32%	0.37%	0.39%
Estimated Premium Increase with Admin @ 15%	$20.70	$20.70	$20.70	$20.70
Premium Increase as a Percentage of Premium	0.74%	0.38%	0.44%	0.45%

We expect that state government programs covering state employees would have claims costs and claims cost increases comparable to insured large groups.

Scenario Estimates

As discussed in Section 3, limited insurance data exists that can be used to directly estimate the costs of ABA benefits under HB 79 / SB 74. This causes uncertainty in developing actuarial assumptions and cost estimates. Due to this uncertainty, it is useful to develop cost estimates for scenarios using optimistic and pessimistic assumptions.

Cost estimates are very sensitive to various assumptions, especially those related to ABA utilization and costs. Therefore, we varied our assumptions to develop estimated costs for ASD services under "Low," "Middle," and "High" cost scenarios, as shown in the table below:

Scenario	% Autistic Disorder Diagnosed Under Age 6 Starting ABA	Program Cost - Autistic Disorder (Ages 0-6)	Avg. Annual non-ABA Cost	Premium Increase per Covered	Premium Increase (% of Premium)
Low	50.0%	$50,000	$2,350	$12.80	0.28%
Middle	65.0%	$65,000	$3,525	$20.70	0.45%
High	80.0%	$83,718	$4,700	$30.90	0.68%

Short-Term Cost Estimates by Scenario

In addition to the uncertainty associated with long-term cost estimates, how quickly costs could reach their ultimate level is also uncertain. We have provided the table below to illustrate the potential short-term increases in premiums, and how they could grade into the long-term estimates over time.

Estimated Increase in Premiums due to HB 79 / SB 74						
Scenario	Year 1	Year 2	Year 3	Year 4	Year 5	Years 6 and Beyond
Low	0.09%	0.13%	0.17%	0.21%	0.24%	0.28%
Middle	0.23%	0.27%	0.32%	0.36%	0.41%	0.45%
High	0.45%	0.50%	0.54%	0.59%	0.63%	0.68%

Individual Market Comment

Completing an assessment of the potential for anti-selection to increase premium rates in the individual market under HB 79 / SB 74 is complicated for several reasons. Notably, the recent passage of Federal health care reform legislation has guaranteed issue provisions that would impact the coverage of individuals with ASD in the individual market. Therefore, a detailed analysis of the individual market is complicated by several matters, and is beyond the scope of this review.

8

Cost – Benefit Analysis for ASD Treatments

There have been several studies related to the efficacy of ABA treatment programs, and the costs associated with ASD treatments, care, and supports. In this section, we summarize some of these studies.

Societal Costs of Autism- Ganz Report

One of the most often cited reports explaining the financial costs of ASD is *The Lifetime Distribution of the Incremental Societal Costs of Autism* by Michael Ganz, MS, PhD which was published in 2007. This report summarized the modeled costs of a hypothetical cohort of children born in 2000 and diagnosed with autism in 2003. A study result is that the incremental societal cost of autism is $3.2 million per capita in 2003 dollars.[21] The report is very helpful in identifying specific costs of ASD, and in providing a framework for quantifying these costs, as well as providing actual cost estimates.

Direct Medical

- Other

Indirect

- Own Indirect- lost productivity and lower wages
- Not Own Indirect - lost productivity and lower wages of others (typically family)

Cost Savings to State and Local Governments

The Ganz study is probably the most comprehensive in terms of assessing the breadth of the financial costs associated with caring for individuals with ASD. Several other studies have attempted more limited quantifications of costs and savings to governments associated with providing early intensive behavioral interventions (EIBI) or ABA programs for young children. In summary, the studies quantify the costs of EIBI, assume success rates associated with EIBI based on efficacy studies, and then assume cost savings to educational and other government financed programs, like Medicaid, associated with these treatments.

Virginia's independent Joint Legislative Audit and Review Commission (JLARC) issued a report in August 2009: *Report of the Joint Legislative Audit and Review Commission To the Governor and The General Assembly of Virginia - Assessment of Services For Virginians With Autism Spectrum Disorders.* As part of this report, JLARC reviewed several studies related to the efficacy of EIBI, and potential cost savings to State and Local governments associated with effective EIBI treatments. The JLARC report outlines their assessment of the cost savings associated with EIBI as follows[22]:

"A study published in a national journal found that Pennsylvania could save an average of $187,000 to $203,000 on each child who received three years of EIBI relative to one who received special education services until age 22. The Pennsylvania study also suggested that cost savings would likely continue to accrue after children exit the school system. The study found that the state could save from $656,000 to $1.1 million per child if expenditures up to age 55 are included. Another study published in a national journal found that Texas could save an average of $208,500 in education costs for each student who received three years of EIBI relative to a student who received 18 years of special education from ages four to 22. Applied to the estimated 10,000 children with ASDs in Texas, it was estimated that the state could save almost $2.1 billion by implementing intensive treatment programs.

By applying the methodology used in the Pennsylvania and Texas studies to Virginia-related data, JLARC staff estimate that the Commonwealth could save approximately $137,400 in special education costs per student with an ASD if EIBI was consistently provided. In fact, the analysis

[22] Report of the Joint Legislative Audit and Review Commission To the Governor and The General Assembly of Virginia - Assessment of Services For Virginians With Autism Spectrum Disorders, p. 15. http://jlarc.virginia.gov/reports/Rpt388.pdf. Accessed December 2009.

indicates that Virginia could realize savings as long as at least 42 percent of students with ASDs who received EIBI make moderate improvements (require less intensive services and fewer supports), which is a substantially more conservative outcome than the outcomes reported in the research literature."

The actual success rates of EIBI treatments will drive the benefits derived from these treatments. Also, as noted in the JLARC report, moderate improvements in functioning could also lead to significant financial savings. The JLARC report also discusses various studies of the efficacy of EIBI and Table 3 on page 15 of the report summarizes the findings on the efficacy of EIBI of three research studies. This table is reproduced below:

Table 3: Multiple Studies Demonstrate Children Who Receive Intensive Treatment Fare Better Than Those Who Receive Less Intensive Services

	Outcomes	
Group	**Average Change in IQ Points**	**Educational Placement**
EIBI compared to less intensive public school special education (2006 study)		
Treatment	+25	• 29% in general class without supports • 52% in general class with supports
Comparison	+14	• 5% in general class
EIBI compared to less intensive parent-training model (2000 study)		
Treatment	+16	• 27% in general class without supports
Comparison	-1	• No children in general class without supports
EIBI compared to less intensive treatment (1987 study)		
Treatment	• 47% achieved IQ in normal range (94-120)	• 47% in general class without supports • 42% in less intensive special education class for language delayed • 11% in intensive special education class for children with autism or intellectual disability (ID)
Comparison	• 2% achieved IQ in normal range	• 2% in general class without supports • 45% in less intensive special education class for language delayed • 53% in intensive special education class for children with autism or ID

Note: A more detailed table on the results of these studies can be found in Appendix C.

While a complete cost-benefit analysis is beyond the scope of this review, under the assumption that the costs of ASD services and efficacy of EIBI are in line with those indicated in the studies noted, we expect that the costs of ABA treatments covered under HB 79 / SB 74 could be recovered through reductions in educational and medical expenditures, alone.

We also expect that benefits associated with successful treatments would be realized in the areas noted in the beginning of this section through reducing other costs of care and improving the productivity of individuals with ASD and their caregivers, in addition to non-economic or quality of life benefits.

HOUSE BILL NO. 79

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY REPRESENTATIVES PETERSEN AND KAWASAKI, Gruenberg, Gara, Kerttula, Holmes

Introduced: 1/18/11
Referred: Health and Social Services, Labor and Commerce

A BILL

FOR AN ACT ENTITLED

"An Act requiring insurance coverage for autism spectrum disorders, describing the method for establishing a covered treatment plan for those disorders, and defining the covered treatment for those disorders; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 21.42 is amended by adding a new section to read:

Sec. 21.42.397. Coverage for autism spectrum disorders. (a) Except for a fraternal benefit society, a health care insurer that offers, issues for delivery, delivers, or renews a health care insurance plan in this state shall provide coverage for the costs of the diagnosis and treatment of autism spectrum disorders. Coverage required by this subsection must include treatment prescribed by a licensed physician or psychologist, provided by or supervised by an autism service provider, and as identified in a treatment plan developed following a comprehensive evaluation. Covered treatment may include medically necessary pharmacy care, psychiatric care, psychological care, habilitative or rehabilitative care, and therapeutic care. In this subsection,

(1) "habilitative or rehabilitative care" means professional counseling, guidance services, and treatment programs, including applied behavior analysis or other structured behavioral therapies necessary to develop, restore, and maintain the functioning of an individual to the maximum extent practicable; in this paragraph, "applied behavior analysis" means the design, implementation, and evaluation of environmental modifications, using behavioral stimuli and consequences, including direct observation, measurement, and functional analysis of the relationship between environment and behavior, to produce socially significant improvement in human behavior or to prevent the loss of an attained skill or function;

(2) "therapeutic care" means services provided by or under the supervision of a speech-language pathologist licensed under AS 08.11 or an occupational therapist or physical therapist licensed under AS 08.84.

(b) Coverage under this section

(1) is required to be provided only to individuals under 21 years of age;

(2) may not limit the number of visits to an autism service provider for treatment;

(3) is subject to copayment, deductible, and coinsurance provisions, and other general exclusions or limitations included in a health insurance policy to the same extent as other health care services covered by the policy; and

(4) must cover medically necessary treatment that is coordinated with an education program, but may not be contingent on the coordination of treatment with an education program.

(c) This section does not limit benefits that are otherwise available to an individual under a health care insurance plan.

(d) A health care insurer may not refuse to deliver, execute, issue, amend, or renew coverage to an individual or terminate coverage because the individual is diagnosed with or received treatment for autism spectrum disorders.

(e) In this section,

(1) "autism service provider" means an individual who is licensed, certified, or registered by the applicable state licensing board or by a nationally

recognized certifying organization and who provides direct services to an individual with an autism spectrum disorder;

(2) "autism spectrum disorders" means pervasive developmental disorders, or a group of conditions having substantially the same characteristics as pervasive developmental disorders, as defined in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders-IV-TR, as amended or reissued from time to time;

(3) "health care insurance plan" has the meaning given in AS 21.54.500;

(4) "health care insurer" has the meaning given in AS 21.54.500;

(5) "medically necessary" means any care, treatment, intervention, service, or item prescribed by a licensed physician or psychologist in accordance with accepted standards of practice that will, or is reasonably expected to,

(A) prevent the onset of an illness, condition, injury, or disability;

(B) reduce or ameliorate the physical, mental, or developmental effects of an illness, condition, injury, or disability;

(C) assist to achieve or maintain maximum functional capacity in performing daily activities, taking into account both the functional capacity of the individual and the functional capacity of other persons of the individual's age.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. AS 21.42.397, enacted by sec. 1 of this Act, applies to a health insurance policy that is offered, issued for delivery, delivered, or renewed on or after January 1, 2012.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

FOR IMMEDIATE RELEASE

AUTISM SPEAKS ENDORSES ALASKA AUTISM INSURANCE REFORM BILL

House Bill 79 Would End Health Care Discrimination Against Children with Autism by Requiring Coverage of Diagnosis and Treatment

NEW YORK, NY (January 27, 2011) – Autism Speaks, the nation's largest autism advocacy organization, today announced its support for House Bill 79, the autism insurance reform bill. The legislation would require private health insurance companies to cover the diagnosis, testing, and treatment of autism spectrum disorder (ASD).

Sponsored in the Alaska State House by State Representative Pete Petersen, HB 79 includes coverage of behavioral health treatments, such as Applied Behavior Analysis (ABA), an evidence-based, medically-necessary autism therapy, for individuals with autism under the age of 21. HB 79 has been referred to the House Health & Social Services Committee, which may hear the bill next month.

"We applaud and thank Representative Petersen for his leadership again this year on this issue of critical concern to thousands of Alaska's families," said Peter Bell, Autism Speaks executive vice president for programs and services. "Autism Speaks joins Alaska's autism community in calling on the legislature to pass HB 79 and join the growing number of states that have ended healthcare discrimination against children with autism."

Many states do not require private insurance companies to cover even essential autism treatments and services. In the absence of coverage, families often pay as much as they can out-of-pocket for services that can cost upwards of $50,000 per year. In the process, many risk their homes and the educations of their unaffected children – essentially mortgaging their entire futures.

To date, twenty-three states – Arizona, Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Missouri, Montana, Nevada, New Hampshire, New Jersey, New Mexico, Pennsylvania, South Carolina, Texas, Vermont, and Wisconsin – have enacted autism insurance reform legislation. Several other state legislatures will introduce similar legislation during the current 2011 session.

About Autism
Autism is a complex neurobiological disorder that inhibits a person's ability to communicate and develop social relationships, and is often accompanied by behavioral challenges. Autism spectrum disorders are diagnosed in one in 110 children in the United States, affecting four times as many boys as girls. The prevalence of autism increased 57 percent from 2002 to 2006. The Centers for Disease Control and Prevention have called autism a national public health crisis whose cause and cure remain unknown.

About Autism Speaks
Autism Speaks is North America's largest autism science and advocacy organization. Since its inception only five short years ago, Autism Speaks has made enormous strides, committing over $142.5 million to research and developing innovative new resources for families through 2014. The organization is dedicated to funding research into the causes, prevention, treatments and a cure for autism; increasing awareness of autism spectrum disorders; and advocating for the needs of individuals with autism and their families. In addition to funding research, Autism Speaks also supports the Autism Treatment Network, Autism Genetic Resource Exchange and several other scientific and clinical programs. Notable awareness initiatives include the establishment of the annual United Nations-sanctioned World Autism Awareness Day on April 2 and an award-winning "Learn the Signs" campaign with the Ad Council which has received over $210 million in donated media. Autism Speaks' family resources include the Autism Video Glossary, a 100 Day Kit for newly-diagnosed families, a School Community Tool Kit, a community grant program and much more. Autism Speaks has played a critical role in securing federal legislation to advance the government's response to autism, and has successfully advocated for insurance reform to cover behavioral treatments. Each year *Walk Now for Autism Speaks* events are held in more than 80 cities across North America. To learn more about Autism Speaks, please visit www.autismspeaks.org.

About the Co-Founders
Autism Speaks was founded in February 2005 by Suzanne and Bob Wright, the grandparents of a child with autism. Bob Wright is Senior Advisor at Lee Equity Partners and served as vice chairman, General Electric, and chief executive officer of NBC and NBC Universal for more than twenty years. He also serves on the boards of the Polo Ralph Lauren Corporation, RAND Corporation and the New York Presbyterian Hospital. Suzanne Wright has an extensive history of active involvement in community and philanthropic endeavors, mostly directed toward helping children. She serves on the boards of several non-profit organizations and is also Trustee Emeritus of Sarah Lawrence College, her alma mater. Suzanne has received numerous awards such as

the CHILD Magazine Children's Champions Award, Luella Bennack Volunteer Award, Spirit of Achievement award by the Albert Einstein College of Medicine's National Women's Division and the Weizmann Institute of Science. In 2008, the Wrights were named to the *Time* 100 list of the most influential people in the world for their commitment to global autism advocacy.

Sean Parnell, Governor
State of Alaska

GOVERNOR'S COUNCIL ON DISABILITIES AND SPECIAL EDUCATION

P.O. Box 240249 • Anchorage, Alaska 99524-0249 • Phone: 907-269-8990 • Fax: 907-269-8995 • Toll Free 888-269-8990

March 24, 2011

Senator Johnny Ellis
State of Alaska
Alaska State Legislature
State Capitol, Room 119
Juneau, AK 99801

Re: SB 74 Insurance Coverage for Autism Spectrum Disorders

Dear Senator Ellis:

Thank you for sponsoring SB 74, which provides private insurance coverage for Autism Spectrum Disorders. The Governor's Council on Disabilities and Special Education strongly supports SB 74, which will provide coverage for the diagnosis and treatment of autism spectrum disorders, including but not limited to applied behavioral analysis, the leading evidence-based intervention for autism.

As you know, many families struggle when their child is diagnosed as being on the spectrum, because many insurance policies specifically exclude treatments for Autism Spectrum Disorders (even if those treatments are routinely covered otherwise). This bill would put services for people with autism on the same footing as other health issues when it comes to insurance coverage of treatment and prevention services. Otherwise, families often go into debt in order to secure needed services, or go without them.

In addition, 40 years of research clearly shows that 50 percent of children with severe autism who receive early intervention and treatment do not require lifelong services and supports. According to a study conducted by Michael Ganz, a Harvard University Economist, with treatment, the state will see savings of $208,500 per person in avoided or reduced special education costs and lifetime savings of $1.8 million. Without treatment it is estimated lifetime costs to the State of Alaska will exceed $3.2 million per person.

Thank you again for your support on this important issue.

Respectfully,

Donna Swihart

Donna Swihart, Chair

Key Campaign XXIV Priority IV:

Autism Insurance Reform

BACKGROUND:

Autism is a disorder affecting at least 1 in 110 children with approximately 1 in 500 requiring significant clinical treatment. Alaska currently has around 1,512 children and youth under the age of 21 who have autism; approximately 454 need significant clinical treatment.

It is recommended that private, state employee and university employee insurance policies provide coverage for the diagnosis and treatment of autism spectrum disorders, including, but not limited to applied behavior analysis, the leading evidence-based intervention for autism.

URGENCY:

- Most insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan.
- Because Alaska law does not require insurance coverage for autism services, families that do not qualify for DHSS services pay out-of-pocket, often as j\much as $50,000 per year or more; in some instances, bearing this burden results in divorce or bankruptcy.
- Autism is treatable. Ro years of research shows that with treatment, many children overcome the severe symptoms of their disorder.
- The earlier the diagnosis, the more effective the treatment.
- Treatment equals savings. Without treatment it is estimated that it will cost the state $3.2 million per capita.
- Coverage of medically necessary autism treatment in Alaska will enable many children to access the services they need and live more productive lives.
- The costs of this insurance reform are small and will have very little impact on the cost of health insurance premiums for the individual consumer.

ACTION REQUESTED

The Key Coalition of Alaska asks the Alaska State Legislature to:

Pass HB79 and SB94 requiring insurance coverage for autism spectrum disorders.

From: David Flynn <dflynn@tdxpower.com>
Date: March 25, 2011 4:03:20 PM AKDT

Subject: SB 74: Autism Insurance Coverage

My family and I live in Delta Junction , AK.

Our 3.5yr old son has autism and it is a struggle for him...and our family...to cope with the challenges of this condition.

I can be contacted as an advocate for these children and families and believe that anything that we can do to assist these special people and their families is worth doing. This bill's passing would be one way to help.

Please do what you can to see that this Bill passes.

Much appreciation in advance for your efforts in this regard...

On Mar 27, 2011, at 5:26 PM, "Joanne Healy" <jhealy7@alaska.edu> wrote:

By supporting this now you will be saving the states millions over the long run. Early Intervention WORKS!!!!

The Council supports this bill with the intent to better support and treat Alaskans experiencing autism. The Centers for Disease Control estimates that one in every 110 children, with one in every 70 boys, are diagnosed annually. These children require extensive services from medical professionals and other providers. Most insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan.

On Mar 27, 2011, at 1:12 PM, "Paul & Robin Barrett" <robinbarrett@gci.net> wrote:

Please support this bill. Money spent for early autism treatment will be a mere drop in the bucket when compared to the later cost of lifetime institutionalism. Our son is age 10 and severely autistic. Our insurance does not pay for the therapy he desperately needs. We have been selling our retirement assets to pay for his treatment. In the past 5 years we are out-of-pocket more than $136,000.00. Most families cannot afford such expenses (nor can we, over time) so their children are untreated and likely doomed to a lifetime of dependence on society. Again, please support this bill.

Paul and Robin Barrett

GOVERNOR'S COUNCIL ON DISABILITIES AND SPECIAL EDUCATION

Autism Insurance Reform

(The Council supports HB 79, Requiring Insurance Coverage for Autism Spectrum Disorders)

- **The earlier the diagnosis, the more effective treatment is.** The diagnostic process involves a comprehensive assessment (neuro-developmental pediatrics, psychology, speech, occupational and physical therapy, ophthalmology, audiology) by a multidisciplinary team. Only those children who meet specific medical criteria are diagnosed with autism.

- **Treatment equals savings.** With treatment, Alaska will see savings of $208,500 per capita in avoided special education costs and lifetime savings of $1.08 million per capita. Treatment may include the following medically necessary services.
  - ✓ Pharmacy, psychiatric, psychological, rehabilitative and therapeutic care.
  - ✓ Habilitative care includes applied behavior analysis (the design, implementation and evaluation of environmental modifications to produce socially significant improvement in human behavior or to prevent the loss of an attained skill or function.

- **Without treatment it is estimated that it will cost the state $3.2 million per capita.** (Michael Ganz, Harvard economist)

- **Coverage of medically necessary autism treatment in Alaska will enable many children to access the services they need and live more productive lives.**

- **The costs of this insurance reform are small and will have very little impact on the cost of health insurance premiums for the individual consumer.**
  - ✓ **According to a February 9, 2010 actuarial study conducted by Oliver Wyman Actuarial Consulting, Inc.** the "Middle" estimate is that, in the long-term, the premium increase associated with the mandated benefits for private insurance plans would be about 0.39% of insured premiums across all markets or $1.34 per policyholder per month. **Note:** the original estimate was 0.02% or $3.60 per policyholder per month; it was revised based on the actual experiences of states that have enacted autism insurance reform.
  - ✓ **The Council estimates** government programs such as the State of Alaska and/or the university system would have cost increases comparable to large insured groups. This would translate into an increased cost to the State of Alaska of $1.34 per state employee per month. **Note:** the Division of Insurance's actuarial consultants, Buck Consultants, estimated a rate of 1-3% or $3.20 per member per month based on the nationwide trends of children being diagnosed with autism over the past 10 years. However, the actual experiences of government insurance programs that implemented autism insurance reform were closer to the $1.34 per member per month figure cited above.
  - ✓ South Carolina's State Employee Health Plan experience has been far less than $1.34. In year one it was 20 cents per member per month and in year two it was 44 cents per member per month.

PO Box 240249, Anchorage, AK 99524-0249

GOVERNOR'S COUNCIL ON DISABILITIES AND SPECIAL EDUCATION

Autism Insurance Reform

(The Council supports HB 79, Requiring Insurance Coverage for Autism Spectrum Disorders)

WHAT:

- **Autism is a disorder affecting at least 1 in 110 children with approximately 1 in 500 requiring significant clinical treatment.** Alaska currently has around 1,512 children and youth under the age of 21 who have autism; approximately 454 need significant clinical treatment.

RECOMMENDED INSURANCE REFORM

- **The Governor's Council on Disabilities and Special Education recommends that private, state employee and university employee insurance policies provide coverage for the diagnosis and treatment of autism spectrum disorders, including but not limited to applied behavior analysis, the leading evidence-based intervention for autism.**
  - ✓ Must be prescribed by a licensed physician, psychologist or advanced nurse practitioner.
  - ✓ Must be provided by an autism service provider as identified in a treatment plan developed following a comprehensive evaluation.
  - ✓ Must identify the medically necessary pharmacy care, psychiatric care, psychological care, rehabilitative care and therapeutic care.

WHY:

- **Most insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan.**

- **Because Alaska law does not require insurance coverage for autism services, families that do not qualify for DHSS services pay out of pocket, often as much as $50,000 per year or more; in some instances, bearing this burden results in divorce or bankruptcy.** Families that cannot afford to do so, go without crucial intervention.

- **Autism is treatable.** 40 years of research shows that with treatment, many children overcome the severe symptoms of their disorder.
  - ✓ About half the children who receive intensive early intervention achieve normal functioning after 2-3 years of treatment
  - ✓ There is an average gain of 22 IQ points
  - ✓ 1/3 gained 45 IQ points
  - ✓ Nearly 50% of those receiving intensive early intervention do not require lifelong services and supports

APPLIED BEHAVIOR ANALYSIS (ABA)-BASED INTERVENTIONS FOR YOUNG CHILDREN WITH AUTISM SPECTRUM DISORDERS

As research and services are evolving relative to understanding and meeting the needs of young children with autism, several practices have emerged as being key to success. First, rarely do methods other than those that are evidence-based work with these children (i.e., shown effective with this population of children and then replicated through additional rigorous research). Second, when one examines the body of strategies that have been scientifically validated, one sees that the vast majority of these interventions have one common characteristic – each has been designed on, and to later adhere to, core principles of Applied Behavior Analysis, or ABA. A large number of ABA-based strategies have been developed, tested and employed, with some designed to have a generalized impact on the child's functioning, while other methods intended to address specific language, social or behavioral needs of these children. Lastly, evidenced-based methods have generally been shown to be far more effective the sooner and more intensively they are employed.

ABA is a scientifically-driven and validated approach to learning and/or change of behavior. The core ABA principles are based on Operant Learning Theory, which states that new behaviors will happen more frequently if they are regularly reinforced, while previously demonstrated behaviors or skills will diminish if they are not. Applied Behavior Analysis is often employed within a highly structured context and in a systematic manner, relying heavily on the regular observation of overt behaviors as a first step to individualization of intervention. Key to the child's success is s/he developing the ability to discriminate (recognize) when and how to respond (behave). For a young child with ASD, this typically first means responding consistently and quickly to simple cues and directions provided by an adult. This requires teaching the child, on a 1:1 basis, to attend or jointly attend with the adult, to specific objects or actions. The interventionist chooses and delivers cues, directions or actions precisely, and consistently uses positive reinforcement to strengthen and shape the child's correct responses. Doing so increases the child's ability to participate in typical social, home, and school settings as a function of his/her regular demonstration of those skills or behaviors that are contextually applicable or appropriate there. Progress is monitored through data collected on each target skill or behavior, with performance graphed over time.

While a Behavior Analyst who uses ABA tends not to speculate on the non-overt, internalized changes taking place with children with autism, the fact is that successful intervention often results in increased fluency and duration of responding to both verbal and visual cues (i.e., natural characteristics of an object, item or setting such as the shape of a letter, color of a ball, or correspondence of a top button to a top button hole). Doing so increases the probability of independent performance by the child in the future (maintenance of acquired skills), and tends to promote his/her use of these acquired skills in new and different settings (generalization).

There are a large number of tested interventions based on the principles of Applied Behavioral Analysis. While many have been validated for use with children with challenging behaviors and/or autism, others have been developed for behavior change by different populations, such as for parenting, weight loss, cessation of smoking, and the such. An effective Behavior Analyst systematically selects from different ABA assessment, data analysis, and planning methods as tools in the delivery of services, so as to ensure that the match between the interventions, schedule of service activities, the delivery of services and the child's home, school and community environments are optimal for learning. While many practitioners employ ABA methods, quality is controlled through a national process of certification, through the Behavior Analyst Certification Board, Inc, (BACB), an organization with roots within the Association for Behavior Analysis, International. The graduate level certification standards and credentialing from BACB is endorsed by the Association of Professional Behavior Analysts, the Association for Behavior Analysis International and Division 25 (Behavior Analysis) of the American Psychological Association.

The Governor's Council on Disabilities and Special Education

Diagnosis of Autism Spectrum Disorders

Autism Spectrum Disorders (ASD) covers a wide range of symptoms from very mild to severe. ASD affects social skills, communication and cognitive development. ASD affects the individual's ability to convey or interpret others' emotions. Children may engage in restricted and/or repetitive play and have unusual attachments to objects. People with ASD might not seem interested in other people and prefer to be alone. People with ASD might not seem interested in other people and prefer to be alone. Some children with ASD do not like to be held or cuddled, and many do not make eye contact with others. Individuals with ASD also show varied degrees in impairment in their verbal and nonverbal communication. Some individuals with ASD may be nonverbal, while others may not have any difficulty speaking. Some repeat something previously heard or use stock phrases or learned scripts to communicate. Cognitively, individuals with ASD develop differently from others. Many people with ASD have difficulty processing sensory stimuli and verbal input, and this affects their understanding of the world around them.

It is important to note that some people without an ASD might also have some of these symptoms. But for people with an ASD, the impairment is bad enough to make life very challenging in terms of interacting with others, communicating, learning or holding down a job.

The Governor's Council on Disabilities recommended that the state establish universal screening for ASD during well-child exams to identify children who have behaviors that could indicate a disorder. The American Academy of Neurology recommends immediate referral for a diagnostic evaluation for any of the following:

- No babbling by 12 months
- No gesturing by 12 months
- No single words by 16 months
- No 2 work spontaneous phrases by 24 months
- Any loss of any language or social skills at any age

ASD screenings identify those children who require a comprehensive assessment across developmental and physical domains. Professionals from multiple disciplines then conduct a complete assessment (i.e. neurodevelopmental pediatrics, psychology, speech, occupational and physical therapy, ophthalmology, audiology). For young children, it is especially critical to conduct a differential diagnosis to rule out any other possible genetic or medical disorders.

The diagnosis focuses on determining to what extent the child has:

- Irregularities and impairments in communication
- Engagement in repetitive activities and stereotyped movements

- Resistance to environmental change or change in daily routines
- Unusual responses to sensory experiences

In order to receive a diagnosis of ASD, the child must show qualitative impairment in reciprocal social interaction, qualitative impairment in communication and repetitive, stereotypical behaviors that interfere with his or her ability to develop, communicate and learn compared to typically developing peers.

In order to qualify for special education with an ASD, a child must

- exhibit a developmental disability significantly affecting verbal and non-verbal communication and social interaction, generally evident before age three, that adversely affects educational performance; and
- require special facilities, equipment, or methods to make the child's educational programs effective; and
- be diagnosed as having an autism spectrum disorder by a psychiatrist, physician, licensed psychologist or advanced nurse practitioner; and
- be certified by a group consisting of qualified professional and a parent of the child as qualifying for and needing special education services

CENTERS FOR DISEASE CONTROL AND PREVENTION

AUTISM SPECTRUM DISORDERS

Treatment

There is no single best treatment for all children with ASDs. However, well-planned, structured teaching of specific skills is very important. Some children respond well to one type of treatment while others have a negative response or no response at all to the same treatment. Before deciding on a treatment program, it is important to talk with the child's health care providers to understand all the risks and benefits.

It is also important to remember that children with ASDs can get sick or injured just like children without ASDs. Regular medical and dental exams should be part of a child's treatment plan. Often it is hard to tell if a child's behavior is related to the ASD or is caused by a separate health condition. For instance, head banging could be a symptom of the ASD, or it could be a sign that the child is having headaches. In those cases, a thorough physical exam is needed. Monitoring healthy development means not only paying attention to symptoms related to ASDs, but also to the child's physical and mental health, as well.

Early Intervention Services

Research shows that early intervention treatment services can greatly improve a child's development.[1],[2] Early intervention services help children from birth to 3 years old (36 months) learn important skills. Services include therapy to help the child talk, walk, and interact with

others. Therefore, it is important to talk to your child's doctor as soon as possible if you think your child has an ASD or other developmental problem.

Even if your child has not been diagnosed with an ASD, he or she may be eligible for early intervention treatment services. The Individuals with Disabilities Education Act (IDEA) says that children under the age of 3 years (36 months) who are at risk of having developmental delays may be eligible for services. These services are provided through an early intervention system in your state. Through this system, you can ask for an evaluation.

In addition, treatment for particular symptoms, such as speech therapy for language delays, often does not need to wait for a formal ASD diagnosis. While early intervention is extremely important, intervention at any age can be helpful.

Types of Treatments

The National Institute of Mental Health and the Autism Society of America suggest a list of questions parents can ask when planning treatments for their child.

There are many different types of treatments available. For example, auditory training, discrete trial training, vitamin therapy, anti-yeast therapy, facilitated communication, music therapy, occupational therapy, physical therapy, and sensory integration.

The different types of treatments can generally be broken down into the following categories:

- Behavior and Communication Approaches
- Dietary Approaches
- Medication
- Complementary and Alternative Medicine

Behavior and Communication Approaches

According to reports by the American Academy of Pediatrics and the National Research Council, behavior and communication approaches that help children with ASDs are those that provide structure, direction, and organization for the child in addition to family participation.

Applied Behavior Analysis (ABA)

A notable treatment approach for people with an ASD is called applied behavior analysis (ABA). ABA has become widely accepted among health care professionals and used in many schools and treatment clinics. ABA encourages positive behaviors and discourages negative behaviors in order to improve a variety of skills. The child's progress is tracked and measured.

There are different types of ABA. Following are some examples:

- **Discrete Trial Training (DTT)**
  DTT is a style of teaching that uses a series of trials to teach each step of a desired behavior or response. Lessons are broken down into their simplest parts and positive reinforcement is used to reward correct answers and behaviors. Incorrect answers are ignored.

- **Early Intensive Behavioral Intervention (EIBI)**
  This is a type of ABA for very young children with an ASD, usually younger than five, and often younger than three.

- **Pivotal Response Training (PRT)**
  PRT aims to increase a child's motivation to learn, monitor his own behavior, and initiate communication with others. Positive changes in these behaviors should have widespread effects on other behaviors.

- **Verbal Behavior Intervention (VBI)**
  VBI is a type of ABA that focuses on teaching verbal skills.

Other therapies that can be part of a complete treatment program for a child with an ASD include:

Developmental, Individual Differences, Relationship-Based Approach (DIR; also called "Floortime")
Floortime focuses on emotional and relational development (feelings, relationships with caregivers). It also focuses on how the child deals with sights, sounds, and smells.

Treatment and Education of Autistic and related Communication-handicapped CHildren (TEACCH)

TEAACH uses visual cues to teach skills. For example, picture cards can help teach a child how to get dressed by breaking information down into small steps.

Occupational Therapy
Occupational therapy teaches skills that help the person live as independently as possible. Skills might include dressing, eating, bathing, and relating to people.

Sensory Integration Therapy
Sensory integration therapy helps the person deal with sensory information, like sights, sounds, and smells. Sensory integration therapy could help a child who is bothered by certain sounds or does not like to be touched.

Speech Therapy
Speech therapy helps to improve the person's communication skills. Some people are able to learn verbal communication skills. For others, using gestures or picture boards is more realistic.

The Picture Exchange Communication System (PECS)
PECS uses picture symbols to teach communication skills. The person is taught to use picture symbols to ask and answer questions and have a conversation.

Visit the Autism Speaks or Easter Seals website to read more about these therapies.

Dietary Approaches

Some dietary treatments have been developed by reliable therapists. But many of these treatments do not have the scientific support needed for widespread recommendation. An unproven treatment might help one child, but may not help another.

Many biomedical interventions call for changes in diet. Such changes include removing certain types of foods from a child's diet and using vitamin or mineral supplements. Dietary treatments are based on the idea that food allergies or lack of vitamins and minerals cause symptoms of ASDs. Some parents feel that dietary changes make a difference in how their child acts or feels.

If you are thinking about changing your child's diet, talk to the doctor first. Or talk with a nutritionist to be sure your child is getting important vitamins and minerals.

Medication

There are no medications that can cure ASDs or even treat the main symptoms. But there are medications that can help some people with related symptoms. For example, medication might help manage high energy levels, inability to focus, depression, or seizures. Also, the U.S. Food and Drug Administration approved the use of risperidone (an antipsychotic drug) to treat 5- to 16-year-old children with ASDs who have severe tantrums, aggression, and cause self-injury.

To learn more about medications and ASDs go to National Institute of Mental Health autism website.

Complementary and Alternative Treatments

To relieve the symptoms of ASDs, some parents and health care professionals use treatments that are outside of what is typically recommended by the pediatrician. These types of treatments are known as complementary and alternative treatments (CAM). They might include special diets, chelation (a treatment to remove heavy metals like lead from the body), biologicals (e.g., secretin), or body-based systems (like deep pressure).[3]

These types of treatments are very controversial. Current research shows that as many as one third of parents of children with an ASD may have tried complementary or alternative medicine treatments, and up to 10% may be using a potentially dangerous treatment.[4] Before starting such a treatment, check it out carefully, and talk to your child's doctor.

Additional Treatment Resources

The National Institute on Deafness and Other Communication Disorders has a website to help individuals with an ASD who have communication challenges.

The National Institute of Dental and Craniofacial Research has a website to help health professionals with the oral health care needs of patients with an ASD.

Clinical Trials.Gov lists federally funded clinical trials that are looking for participants. If you or someone you know would like to take part in an autism study, go to the website and search "autism."

The Autism Treatment Network (ATN) seeks to create standards of medical treatment that will be made broadly available to physicians, researchers, parents, policy makers, and others who want to improve the care of individuals with autism. ATN is also developing a shared national medical database to record the results of treatments and studies at any of their five established regional treatment centers.

State of Alaska > Health & Social Services > Autism Awareness

Overview of Autism Spectrum Disorders

- Autism spectrum disorders are a group of developmental disabilities that can cause social, communication and behavioral challenges for affected children and adults. Autism's effects vary person to person, so these challenges can be mild or significant.
- About 1 percent of all babies born in Alaska each year will develop an autism spectrum disorder, according to CDC nationwide estimates. In other words, about 11,000 Alaskans will be born this year, and 110 of them will be diagnosed with an autism disorder by the age of eight.
- In 2008, more than 600 children were receiving services related to an autism diagnosis in Alaska schools.
- Current research indicates that autism spectrum disorders are present at birth and last throughout a person's life, although symptoms can improve over time. Some children with autism disorders show hints of future problems within the first few months of life. In others, symptoms might not develop until 24 months or later. In still others, the children may develop normally until 18 months or 24 months, and then they stop gaining new skills or they lose the skills they once had.

A person with an autism spectrum disorder may exhibit some or all of the following:

- Not respond to his or her name by 12 months old
- Not point at objects to show interest by 14 months old (such as pointing at an airplane flying overhead)
- Not play "pretend" games by 18 months old (such as pretend to feed a doll)
- Avoid eye contact and want to be alone
- Have trouble understanding other people's feelings or talking about his or her own feelings
- Have delayed speech and/or language skills
- Repeat words or phrases over and over (often called "echolalia")
- Give unrelated answers to questions
- Get upset by minor changes
- Have obsessive interests
- Flap hands, rock his or her body or spin in circles
- Have unusual reactions to the way things sound, smell, taste, look or feel

Types of Autism Spectrum Disorders

There are three types of autism spectrum disorders:

Autistic Disorder

This is sometimes called "classic" autism. It is what most people think of when hearing the word "autism". People with autistic disorder usually have significant language delays, social and communication challenges, and unusual behaviors and interests. Many people with autistic disorder also have intellectual disability.

Asperger Syndrome

People with Asperger syndrome usually have milder symptoms of autistic disorder. They might have social challenges and unusual behaviors and interests. However, they typically do not have problems with language or intellectual disability.

Pervasive Developmental Disorder – Not Otherwise Specified

This is sometimes called "atypical autism," or PDD-NOS. People who meet some of the criteria for autistic disorder or Asperger syndrome, but not all, may be diagnosed with atypical autism. These people usually have fewer and milder symptoms than those with autistic disorder. The symptoms might cause only social and communication challenges

NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

GO

Insurance Coverage for Autism

November 2010

The Centers for Disease Control and Prevention (CDC) estimate that an average of one in 110 children have an autism spectrum disorder (ASD). More children than ever before are being classified as having autism spectrum disorders. The CDC estimates that up to 730,000 people between the ages of 0 and 21 have an ASD.

There is no cure for autism, but it is a treatable condition. Most health professionals agree that early intervention treatment programs are important. Treatment options may include behavioral and educational interventions, complementary and alternative medicine, dietary changes or medications to manage or relieve the symptoms of autism. These treatments may be costly. Some families may spend more than $50,000 per year on autism-related therapies, such as applied behavior analysis. A study in 2006 by the Harvard School of Public Health estimated that it costs $3.2 million to take care of an individual with autism over his or her lifetime and that it costs society an estimated $35 billion each year to care for all individuals with autism.

Some states require insurers to provide coverage for the treatment of autism. However, opponents to this approach argue that care for individuals with autism is the responsibility of parents and/or the responsibility of school systems. Others have raised concerns that mandating coverage for autism will significantly increase insurance premiums. According to the Council for Affordable Health Insurance, an autism mandate increases the cost of health insurance by about 1 percent. However, if the incidence of autism continues to increase and as more services are covered, the cost of insurance may increase 1 to 3 percent. This debate has intensified in recent years and states are taking a variety of approaches to meet the needs of children and adults with autism.

- NCSL's State Laws Mandating or Regulating Mental Health Benefits webpages

A total of 35 states and the District of Columbia have laws related to autism and insurance coverage. At least 23 states—Arizona, Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Missouri, Montana, Nevada, New Hampshire, New Jersey, New Mexico, Pennsylvania, South Carolina, Texas, Vermont and Wisconsin—specifically require insurers to provide coverage for the treatment of autism. Other states may require limited coverage for autism under mental health coverage or other laws.

In the past few years, the debate over autism and insurance coverage has heated up in state legislatures. Most of the legislation to provide coverage for autism has been enacted in the last three years.

During the 2007-2008 legislative session, nine states passed legislation related to autism and insurance coverage. Arizona, Florida, Illinois, Louisiana, Pennsylvania, South Carolina and Texas enacted legislation specifically requiring coverage for autism. In addition, Massachusetts enacted legislation in 2008 to specify that autism shall be covered under mental health parity laws on a nondiscriminatory basis. Connecticut enacted legislation in 2008 that requires insurers to provide coverage for physical, speech and occupational therapy services for the treatment of autism spectrum disorders to the extent that such services are a covered benefit for other diseases and conditions under such policy. A summary of this legislation is included in the two tables below.

In 2009, Colorado, Connecticut, Montana, Nevada, New Jersey, New Mexico and Wisconsin enacted legislation requiring insurance coverage for autism. Illinois enacted legislation requiring insurance coverage for habilitative services for children with a congenital or genetic disorder, including autism.

In 2010, Iowa, Kansas, Kentucky, Maine, Massachusetts, Missouri, New Hampshire and Vermont enacted legislation requiring insurance coverage for autism. In addition, in April 2010, Oklahoma enacted legislation to specify that health insurance policies must provide the same coverage and benefits to children who have been diagnosed with autism as children who have not been diagnosed with the disorder.

In 2009, the Federal Autism Treatment Acceleration Act of 2009 (S 819 and HR 2413), was introduced which provides for enhanced treatment, support, services and research for individuals with autism spectrum disorders and their families. One component of the bill requires health insurance coverage for the diagnosis and treatment of autism spectrum disorders under group health plans.

Statutes specifically requiring insurance coverage of autism

State	Statute Summary
Arizona	Ariz. Rev. Stat. Ann. § 20-826.04, § 20-1057.11, § 20-1402.03 and § 20-1404.03 (2008 Ariz. Sess. Laws, Chap. 4; HB 2847 of 2008) Require policies issued by certain health insurers, beginning July 1, 2009, to provide coverage for the diagnosis and treatment of autism spectrum disorders, with some limitations. Coverage for autism treatment may not be excluded or denied and dollar limits, deductibles and coinsurance cannot be imposed based solely on the diagnosis of an autism spectrum disorder. Coverage for medically necessary behavioral therapy services may not be excluded or denied and is subject to a $50,000 maximum benefit per year for an eligible person up to the age of 9 and a $25,000 maximum benefit per year for an eligible person who is between the ages of 9 and 16 years.
Colorado	Colo. Rev. Stat. § 10-16-104 (1.3)(q), § 10-16-104 (1.4) and § 25.-5-8-107 (a)(IV) (2009 Colo., Sess. Laws, Chap. 391; SB 244 of 2009, Fiscal Note, Commission on Mandated Health Insurance Benefits Review of SB 244) Require that all health benefit plans provide coverage for the assessment, diagnosis and treatment of autism spectrum disorders for a child. Treatment for autism spectrum disorders is defined to include treatments that are medically necessary, appropriate, effective or efficient and shall include evaluation and assessment services; behavior training and management and applied behavior analysis; habilitative or rehabilitative care, including occupational, physical or speech therapy; pharmacy care and medication; psychiatric care; psychological care; and therapeutic care. Colo. Rev. Stat. §10-16-104.5 (1993 Colo., Sess. Laws, Chap. 211, amended by 2009 Colo., Sess. Laws, Chap. 391; SB 244 of 2009) Specified sickness and accident insurance policies providing indemnity for disability due to sickness and specified individual policies that provide coverage for autism shall provide such coverage in the same manner as for any other accident or sickness, other than mental illness, otherwise covered under such policy.
Connecticut	Conn. Gen. Stat. § 38a-514b (2009 Conn. Acts, P.A. 115; SB 301 of 2009, Summary, Fiscal Note) Requires specified group health insurance policies to provide coverage for the diagnosis and treatment of autism spectrum disorders. Treatments shall be medically necessary and identified and ordered by a licensed physician, psychologist or clinical social worker in accordance with a treatment plan. Treatments may include behavioral therapy, prescription drugs, psychiatric services, psychological services, physical therapy, speech and language pathology services and occupational therapy. This law repealed the previous version of § 38a-514b (2008 Conn. Acts, P.A. 132; HB 5696, Fiscal Note), which specified that each individual and group health insurance policy is required to provide coverage for physical, speech and occupational therapy services for the treatment of autism spectrum disorders to the extent such services are a covered benefit for other diseases and conditions under such policy.
Florida	Fla. Stat. § 627.6686 and § 641.31098 (2008 Fla. Laws, Chap. 30; SB 2654 of 2008, Bill Analyses) Requires health insurance plans and health maintenance contracts to provide coverage to eligible individuals for well-baby and well-child screening for diagnosing the presence of autism spectrum

Statutes specifically requiring insurance coverage of autism	
State	**Statute Summary**
	disorders, treatment of autism spectrum disorders through speech, occupational and physical therapy and applied behavior analysis. Coverage is limited to treatment that is prescribed by the insured's treating physician in accordance with a treatment plan and is limited to $36,000 annual and may not exceed $200,000 in total lifetime benefits.
Illinois	Ill. Rev. Stat. ch. 215, § 5/356z.14 (2008 Ill. Laws, P.A. 95-1005, SB 934 of 2008; and 2009 Ill. Laws, P.A. 95-1049, SB 101 of 2008) Requires all individual and group accident and health insurance or managed care plans to provide coverage for the diagnosis and treatment of autism spectrum disorders for individuals less than 21 years of age. Coverage is to include applied behavioral analysis and other treatments with a maximum benefit of $36,000 per year. The law was amended in 2009 by 2009 Ill. Laws, P.A. 95-1049 (SB 101 of 2008) to require insurance coverage for habilitative services for children less than 19 years of age with a congenital, genetic or early acquired disorder, including autism spectrum disorders. Habilitative services includes occupational therapy, physical therapy, speech therapy and other services prescribed by the insured's treating physician pursuant to a treatment plan to enhance the ability of a child to function with a congenital, genetic or early acquired disorder. ► For more information, please see Illinois' fact sheet on insurance coverage for autism.
Indiana	Ind. Code § 27-8-14.2-1 et seq. and § 27-13-7-14.7 (HB 1122 of 2001; Fiscal Impact Statement) Requires an accident and sickness insurance policy that is issued on a group basis and a group contract with a health maintenance organization to provide coverage for the treatment of a pervasive developmental disorder. Coverage is limited to treatment that is prescribed by the insured's treating physician in accordance with a treatment plan. An insurer may not deny or refuse to issue coverage, or otherwise terminate or restrict coverage on an individual under an insurance policy solely because the individual is diagnosed with a pervasive developmental disorder. An insurer that issues an accident and sickness insurance policy on an individual basis or a health maintenance organization that enters into an individual contract that provides basic health care services must offer to provide coverage for the treatment of a pervasive developmental disorder of an enrollee. ► For additional information about the law, please visit the Indiana Resource Center for Autism's webpage.
Iowa	Iowa House File 2531 of 2010 (Fiscal Analysis) Requires state employee health care plans to provide coverage for the diagnosis and treatment of autism spectrum disorders for individuals under 21 years of age. Treatment is defined as pharmacy care, psychiatric care, psychological care, rehabilitative care and therapeutic care. The law also establishes a $36,000 annual maximum benefit on coverage for children with autism spectrum disorder. The coverage plan cannot limit the number of visits to an autism service provider for treatment. Coverage must be provided in coordination with requirements established in Iowa Code § 514c.22. Iowa Code § 514c.22 (2005 Iowa Acts, Chap. 91; HF 420 of 2005) Requires specified insurers to provide coverage benefits for treatment of a biologically based mental illness, including pervasive developmental disorders and autistic disorders.
Kansas	2010 Kan. Sess. Laws, Chap. 120 (HB 2160 of 2010; Supplemental Note) Requires state employee health insurance plans to provide coverage for the diagnosis and treatment of autism spectrum disorder for any covered individual up to 19 years old. Covered services are defined to include applied behavioral analysis and evidence-based services. The annual benefit cap for children up to age 7 is $36,000 and for children at least 7 years old and up to age 19, the annual cap is $27,000. The law also requires the state employees health care commissioner to submit a report to the legislature that includes information on the impact of the mandated coverage for autism spectrum disorder on the state health care benefits program, data on the utilization of coverage and the cost of providing such coverage, and recommendations for whether such coverage should continue. 2009 Kan. Sess. Laws, Chap. 136 (HB 2214 of 2009) The law amends Kan. Stat. Ann. § 40-2,105a (HB 2033 of 2001) to require any group health insurance policy, medical service plan, contract, hospital service corporation contract, hospital and medical service corporation contract, fraternal benefit society or health maintenance organization, which provides medical, surgical or hospital expense coverage to include coverage for the diagnosis and treatment of mental illness. The law re-defines mental illness to include any disorder defined in the DSM-IV.

Statutes specifically requiring insurance coverage of autism	
State	**Statute Summary**
Kentucky	2010 Ky. Acts, Chap. 150; (HB 159 of 2010) Requires large group health benefit plans to provide coverage for the diagnosis and treatment of autism spectrum disorders for individuals between the ages of one through 21 years of age. For individuals between the ages of one through their seventh birthday, the maximum annual benefit amount is $50,000, and the maximum benefit for individuals between the ages of seven through 21 is $1,000 per month. Coverage may not be subject to any limits on the number of visits an individual may make to an autism services provider. Treatment of autism spectrum disorders is defined to include medical care, pharmacy care (if covered by the plan), psychiatric care, psychological care, therapeutic care, applied behavior analysis, and rehabilitative and habilitative care. This law also amends Ky. Rev. Stat. § 304.17A-143 (1998 Ky. Acts, Chap. 106; SB 63 of 1998), to require individual and small group market health benefit plans to provide coverage for pharmacy care (if covered by the plan), psychiatric care, psychological care, applied behavioral analysis, and habilitative care for the treatment of autism spectrum disorders, in addition to the law's existing coverage for therapeutic and rehabilitative care. The law increases the maximum benefit per month from $500 to $1000. Additional definitions related to this law are included in Kentucky Regulations 806 KAR 17:460. The law also amends Ky. Rev. Stat. § 18A.225 to require state employee health benefit plans to provide coverage for the diagnosis and treatment of autism spectrum disorder consistent with the requirement for coverage under large group health benefit plans.
Louisiana	La. Rev. Stat. Ann. § 22:1050 (2008 La. Acts. P.A. 648; HB 958 of 2008: Fiscal Note) Requires health insurance policies, including health maintenance organizations, to provide coverage for the diagnosis and treatment of autism spectrum disorders in individuals less than 17 years of age. Coverage is subject to a maximum benefit of $36,000 per year and a lifetime maximum benefit of $140,000. Treatment of autism spectrum disorders is defined to include habilitative or rehabilitative care (including applied behavior analysis), pharmacy, psychiatric, psychological and therapeutic care. 2009 House Bill 406 amended the statute (La. Acts, P.A. 419) to exclude individually, underwritten, guaranteed renewable limited benefit health insurance policies from the provisions in this law.
Maine	2010 Me. Laws, Chap. 635 (LD 1198; SB 446 of 2010; Fiscal Note) Requires all individual health insurance policies and contracts, group health insurance policies, and all individual and group health maintenance organization contracts to provide coverage for the diagnosis and treatment of autism spectrum disorders for individuals five years of age and under. Treatment is defined as habilitative or rehabilitative care, applied behavior analysis, counseling services and therapy services, including speech, occupational and physical therapy. The policy or contract may limit coverage for applied behavior analysis to $36,000 per year, and the insurance policy or contract may not include any limits on the number of visits. The law also requires the Department of Professional and Financial Regulation, Bureau of Insurance to review and evaluate the financial and social impact and medical efficacy of this mandated health insurance benefit, and submit a report to the Legislature by February 1, 2015. Me. Rev. Stat. Ann. tit. 24 § 2325-A; tit. 24-A § 2749-C, § 2843 and § 4234-A Requires specified group contracts to provide, at a minimum, benefits for a person receiving medical treatment for specified mental illnesses, including pervasive developmental disorders. Other specified individual and group insurance contracts or policies must make available benefits for the treatment and diagnosis of specified mental illnesses, including pervasive developmental disorder or autism, under terms and conditions that are no less extensive than the benefits provided for medical treatment for physical illnesses. 2009 Me. Acts, Chap. 33 (SB 226 of 2009) Requires the Department of Health and Human Services to amend the rules of reimbursement for the provision of supervisory services by board-certified behavior analysts in the MaineCare programs for home and community benefits for persons with mental retardation or autistic disorders, developmental and behavioral clinical services, day habilitation services for persons with mental retardation, early intervention services, community support benefits for persons with mental retardation or autistic disorders, day treatment services, intermediate care facilities for persons with mental retardation and school-based rehabilitative services. The law also requires the Department of Health and Human Services to pursue amendment to the federally approved Medicaid state plan on a timely basis and, after approval, amend the MaineCare rules to provide for reimbursement of board-certified behavior analysts for supervision only.

Statutes specifically requiring insurance coverage of autism	
State	**Statute Summary**
Massachusetts	2010 Mass. Acts, Chap. 207 (HB 4935 of 2010) Requires specified individual, group and state employee health plans and health maintenance contracts to provide benefits on a nondiscriminatory basis for the diagnosis and treatment of autism spectrum disorder. Treatment is defined to include habilitative or rehabilitative, pharmacy, psychiatric, psychological and therapeutic care. The health plan may not contain an annual or lifetime dollar or unit of service limitation on coverage for autism which is less than the limitations imposed on coverage for physical conditions. The plan may not limit the number of visits an individual may make to an autism services provider. The law allows for exemptions from providing coverage under certain circumstances. Mass. Gen. Laws Ann. ch. IV § 32A-22 (2008 Mass. Acts, Chap. 256; HB 4423) Requires an individual policy and a group blanket or general policy of accident and sickness insurance or a health maintenance contract that provides hospital and surgical insurance to provide mental health benefits on a nondiscriminatory basis for the diagnosis and treatment of specified biologically-based mental disorders, including autism. Requires the group insurance commission to provide to any active or retired employee of the commonwealth who is insured under the group insurance commission coverage on a nondiscriminatory basis for the diagnosis of treatment of specified biologically-based mental disorders, including autism.
Missouri	Missouri House Bill 1311 and House Bill 1341 of 2010 (HB 1311 Fiscal Note) Requires all group health benefit plans to provide coverage for the diagnosis and treatment of autism spectrum disorders. Coverage is limited to medically necessary treatment that is ordered by the insured's treating physician or psychologist, in accordance with a treatment plan. Treatment for autism spectrum disorder is defined to include psychiatric, psychological, habilitative or rehabilitative care, applied behavior analysis, therapeutic care and pharmacy care. Coverage for applied behavior analysis is subject to a maximum benefit of $40,000 per year for individuals through 18 years of age. However, this limit may be exceeded, with approval by the health benefit plan, if the applied behavior analysis services are medically necessary for an individual. The health benefit plan may not place limits on the number of visits an individual makes to an autism service provider. The law requires the department of insurance and other institutions to submit a report to the legislature regarding the implementation of this coverage, including specified costs of this coverage.
Montana	Mont. Code Ann. § 33-22-515 (2009 Mont. Laws, Chap. 359, SB 234 of 2009, Fiscal Note) Requires specified disability policies, certificates of insurance and membership contracts to provide coverage for the diagnosis and treatment of autism spectrum disorders for a covered child 18 years of age or younger. Coverage must include habilitative or rehabilitative care, medications, psychiatric or psychological care, therapeutic care and other specified care. Coverage for treatment of autism spectrum disorders may be limited to a maximum benefit for $50,000 per year for a child 8 years of age and younger and to $20,000 per year for a child 9 years of age through 19 years of age. Mont. Code Ann. § 33-22-706 Requires a policy or certificate for health insurance or disability insurance to provide a level of benefits for the necessary care and treatment of severe mental illness, including autism, that is no less favorable than that level provided for other physical illness generally. Benefits for treatment of severe mental illness include but are not limited to inpatient services, outpatient services, rehabilitative services, medication and other specified treatments. The law was amended in 2009 by Mont. Laws, Chapter 359 to specify that coverage for a child with autism who is 18 years of age or younger must comply with § 33-22-515.
Nevada	Nev. Rev. Stat. § 689A.0435 (2009 Nev. Stats., Chap. 331, AB 162 of 2009, Health and Human Services Fiscal Note | Public Employees' Benefits Program Fiscal Note) Requires an individual health benefit plan to provide the option of coverage for screening, diagnosis, and treatment of autism spectrum disorders for persons covered by the policy under the age of 18, or if enrolled in high school, until the person reaches the age of 22. Requires health insurance for small employers and group and blank health insurance benefit plans and health care plans issued by a health maintenance organization to provide coverage for screening, diagnosis and treatment of autism spectrum disorders to persons covered by the policy of group health insurance under the age of 18, or if enrolled in high school until the person reaches the age of 22. Treatment of autism spectrum disorders must be identified in a treatment plan and may include medically necessary habilitative or rehabilitative care, prescription care, psychiatric care, psychological care or behavior therapy.

Statutes specifically requiring insurance coverage of autism	
State	**Statute Summary**
New Hampshire	2010 N.H. Laws, Chap. 363 (House Bill 569 of 2010) Clarifies and defines treatment of pervasive developmental disorder or autism, as required under N.H. Rev. Stat. Ann. § 417-E:1, to include professional services and treatment programs, including applied behavioral analysis, prescribed pharmaceuticals (subject to the terms and conditions of the policy), direct or consultative services provided by specified licensed professionals, and services provided by licensed speech, occupation or physical therapists. The policy, contract or certificate may limit coverage for applied behavior analysis to $36,000 per year for children 0 to 12 years of age, and $27,000 from ages 13 to 21. N.H. Rev. Stat. Ann. § 417-E:1 Requires specified insurers that provide benefits for disease or sickness to provide benefits for treatment and diagnosis of certain biologically-based mental illness, including pervasive developmental disorder or autism, under the same terms and conditions and which are no less extensive than coverage provided for any other type of health care for physical illness.
New Jersey	N.J. Rev. Stat. § 17:48-6ii, § 17:48A-7ff, § 17:48E-35.33, § 17B:26-2.1cc, § 17B:27-46.1ii, § 17B:27A-7.16, § 17B:27A-19.20, § 26:2J-4.34, § 52:14-17.29p and § 52:14-17.46.6b (2009 N.J. Laws, Chap. 115, AB 2238 of 2009) Require specified health insurance policies and health benefit plans to provide coverage for expenses incurred in screening and diagnosing autism or another developmental disability. When the covered person's primary diagnosis is autism or another developmental disability, coverage must be provided for expenses incurred for medically necessary occupational therapy, physical therapy, and speech therapy, as prescribed through a treatment plan. When the covered person is under 21 years of age and the person's primary diagnosis is autism, coverage must be provided for expenses incurred for medically necessary behavioral interventions based on the principles of applied behavioral analysis and related programs, as prescribed through a treatment plan. N.J. Rev. Stat. § 17:48-6v, § 17:48A-7u, § 17:48E-35.20, § 17B:26-2.1s, § 17B:27-46.1v, § 17B:27A-7.5, § 17B:27A-19.7 and § 26:2J-4.20 Require specified insurers that provide hospital or medical expense benefits to provide coverage for biologically-based mental illness, including pervasive developmental disorder or autism, under the same terms and conditions as provided for any other sickness under contract.
New Mexico	N.M. Stat. Ann. § 59A-22-49, § 59A-23-7.9, § 59A-46-50 and § 59A-47-45 (2009 N.M. Laws, Chap. 74, SB 39 of 2009, Fiscal Impact Report) Requires specified insurance policies, health care plans, certificates of health insurance or contracts to provide coverage to an eligible individual who is 19 years of age or younger, or an individual who is 22 years of age or younger and is enrolled in high school for well-baby and well-child screening for diagnosing the presence of autism spectrum disorder and the treatment of autism spectrum disorder through speech therapy, occupational therapy, physical therapy and applied behavioral analysis. Coverage is limited to $36,000 annually and shall not exceed $200,000 in total lifetime benefits.
Pennsylvania	Pa. Cons. Stat. tit. 40, § 764h (Pa. Laws, Act 2008-62; HB 1150 of 2008; Mandated Benefits Review by the Pennsylvania Health Care Cost Containment Council; Autism Spectrum Disorders Mandated Benefits Review Panel Report by Abt Associates Inc.; Pennsylvania Department of Public Welfare "Where to Get Help with PA's Autism Insurance Law" webpage) Requires a health insurance policy or government program to provide coverage for individuals less than 21 years of age for the diagnostic assessment and treatment of autism spectrum disorders. Maximum benefit of $36,000 per year.
South Carolina	S.C. Code Ann. § 38-71-280 (2007 S.C. Acts, Act 65; SB 20 of 2007: Fiscal Impact Statement) Requires a health insurance plan to provide coverage for the treatment of autism spectrum disorders. Coverage is limited to treatment that is prescribed by the insured's treating medical doctor in accordance with a treatment plan. To be eligible for coverage, an individual must be diagnosed with autism spectrum disorder at age eight or younger and be less than 16 years of age.
Texas	Tex. Insurance Code § 1355.015 (2007 Tex. Gen. Laws, Chap. 877; HB 1919 of 2007:, Fiscal Note) Requires a health benefit plan to provide coverage for all generally recognized services prescribed in relation to autism spectrum disorder by the enrollee's primary care physician in the treatment plan recommended by the physician. The law defines "generally recognized services" to include applied

Statutes specifically requiring insurance coverage of autism	
State	**Statute Summary**
	behavior analysis; speech, occupational and physical therapy; medications or nutritional supplements; and other treatments. This coverage may be subject to annual deductibles, copayments and coinsurance that are consistent with annual deductibles, copayments and coinsurance required for other coverage under the health benefit plan. 2009 Tex. Gen. Laws, Chap. 1107 (House Bill 451) amended the law to specify that a health benefit plan must provide coverage to an enrollee who is diagnosed with autism spectrum disorder from the date of diagnosis until the enrollee completes nine years of age. The law previously required coverage to an enrollee older than two years of age and younger than six years of age.
Vermont	2010 Vt. Acts, Act 127 (SB 262 of 2010, Vermont Legislative Joint Fiscal Office Analysis) Requires health insurance plans to provide coverage for the diagnosis and treatment of autism spectrum disorders, including applied behavior analysis for children beginning at 18 months of age and continuing until the child reaches age six or enters first grade, whichever occurs first. Treatment of autism spectrum disorders is defined to include habilitative or rehabilitative care, pharmacy care, psychiatric care, psychological care and therapeutic care. A plan may not limit the number of visits an individual may have with an autism services provider. The law requires specified agencies to evaluate the feasibility and budget impacts of requiring health insurance plans, including Medicaid and the Vermont health access plan, to provide coverage for autism spectrum disorders for children under the age of 18.
Wisconsin	Wis. Stat. § 632.895(12m) and Wis. Stat. § 609.87 (Assembly Bill 75 of 2009; 2009 Wis. Laws. Act 28) Requires specified disability insurance policies and self-insured health plans to provide coverage for treatment for autism spectrum disorder if the treatment is prescribed by a physician, including specified therapies. The statute defines intensive-level and nonintensive-level services. The law was amended in 2010 by Wis. Laws. Act 282 (SB 667) to create Wis. Stat. § 632.895 (12m) (b) 3m. which adds behavior analysts licensed under § 440.312 to the list of professionals qualified to provide intensive-level and nonintensive-level services. Wis. Stat. § 51.01(5a) Defines autism as a developmental disability. Admin. Code, Insurance Commissioner 6.54(3)(a) et seq. specifies that no insurance company may refuse, cancel or deny insurance coverage solely on the basis of the applicant's or insured's physical condition or developmental disability.

Statutes that may require limited insurance coverage of autism	
State	**Statute Summary**
California	Cal. Insurance Code § 10144.5 Requires every policy of disability insurance that covers hospital, medical, or surgical expenses in this state to provide coverage for the diagnosis and medically necessary treatment of severe mental illnesses, including autism, for a person of any age under the same terms and conditions applied to other medical conditions. A March 2009 letter issued by the California Department of Managed Health Care clarifies that health plans must cover all basic health care services required under the Knox-Keene Act, including speech, physical and occupational therapies for persons with autism spectrum disorders, when those health care services are medically necessary.
District of Columbia	D.C. Code Ann. § 31-3271 and § 31-3272 (2007 D.C. Stat., Act 16-0493; B16-711 of 2007) Defines habilitative services as occupational, physical and speech therapy for the treatment of a child with a congenital or genetic birth defect to enhance the child's ability to function. Congenital or genetic birth defect is defined as a defect existing at or from birth, including a hereditary defect; includes autism or an autism spectrum disorder. Requires health insurers to provide habilitative services for children less than 21 years of age. The coverage shall not be more restrictive than coverage provided for any other illness, condition or disorder. A health insurer shall not be required to provide reimbursement for habilitative services delivered through early intervention or school services.

Statutes that may require limited insurance coverage of autism	
State	**Statute Summary**
Georgia	Ga. Code § 33-24-59.10 (HB 565 of 2001) An insurer that provides benefits for neurological disorders shall not deny providing benefits for neurological disorders because of a diagnosis of autism.
Maryland	Md. Insurance Code Ann. § 15-835 (2002 Md. Laws, Chap. 382; HB 692) Requires insurers, nonprofit health service plans and health maintenance organizations to provide coverage of habilitative services for children less than 19 years of age. Habilitative services include occupational, physical and speech therapy for the treatment of a child with a congenital or genetic birth defect to enhance the child's ability to function. The definition of congenital or genetic birth defect includes autism spectrum disorder.
New York	N.Y. Insurance Law § 3216 Requires every policy that provides coverage for hospital, surgical or medical care coverage to not exclude coverage for the diagnosis and treatment of medical conditions otherwise covered by the policy solely because the treatment is provided to diagnose or treat autism spectrum disorder.
Oklahoma	2010 Okla. Sess. Laws, Chap. 166 (SB 2045 of 2010) Requires all individual and group health insurance policies that provide medical and surgical benefits to provide the same coverage and benefits to any individual under the age of 18 years who has been diagnosed with an autistic disorder as it would provide coverage and benefits to an individual who has not been diagnosed with an autistic disorder.
Oregon	Or. Rev. Stat. § 743A.190 (2007 Or. Laws, Chap. 872; HB 2918) Requires specified health benefit plans to provide coverage for an enrolled child less than 18 years of age who is diagnosed with a pervasive developmental disorder or autism all medical services, including medical and rehabilitative services, that are medically necessary and are otherwise covered under the plan. Rehabilitative services include physical, occupational or speech therapy services to restore or improve function.
Tennessee	Tenn. Code Ann. § 56-7-2367 (2006 Tenn. Pub. Acts, Chap. 894; SB 2719) Defines autism spectrum disorder as a neurological disorder. Requires that contracts and policies that provide benefits for neurological disorders to provide benefits and coverage for treatment of children less than 12 years of age with autism.
Virginia	Va. Code § 38.2-3412.1:01 (1999 Va. Acts, Chap. 941; SB 430) Requires specified insurers that provide coverage for health care services to provide coverage for biologically based mental illnesses, including autism. Va. Code § 2.2-2818 and § 2.2-2818.2 (2009 Va. Acts, Chap. 317, SB 1351, Fiscal Impact Statement and 2009 Va. Acts, Chap. 247, HB 2557, Fiscal Impact Statement) Require the Department of Human Resource Management to establish a plan for providing health insurance coverage for state employees and retired state employees. The plan is required to include coverage for biologically based mental illness, including autism.

The TRUST

The Alaska Mental Health Trust Authority

February 7, 2011

Senator Johnny Ellis
Room #119
State Capitol
Juneau, AK 99801

RE: SB 74 – Private Autism Insurance Coverage

Dear Senator Ellis,

I am writing in support of **SB 74 – Private Autism Insurance Coverage**

The Alaska Mental Health Trust Authority (The Trust) appreciates your efforts to ensure that children in Alaska who experience autism receive the supports they need to be active members of our Alaskan communities. The Trust supports SB 74, which mandates that private insurance companies include coverage for treatment of autism spectrum disorders.

The Trust advocates for a robust continuum of healthcare opportunities for its beneficiaries, those experiencing developmental disabilities, mental illness, Alzheimer's disease and other related dementias and chronic alcoholics with psychosis. In Alaska today 1,512 children and young people have autism, approximately 454 of whom need significant clinical treatment. In response to these numbers, The Trust has partnered with the *Governor's Council on Disabilities and Special Education* to identify and develop treatment options for persons diagnosed with a disorder on the autism spectrum.

Thirty years of research demonstrates that with intensive early intervention, children on the autism spectrum could gain a significant number of IQ points, and half of them could achieve normal functioning within 2-3 years of treatment. With early intervention and treatment, Alaska will see a savings of $208,500 per capita in avoided special education costs and a lifetime savings of $1.08 million per capita. According to economists, without treatment it is estimated it will cost the state $3.2 million per capita. Requiring that private insurance policies include coverage for treating autism, we can help many children access the services they need, and live more productive lives.

We appreciate your advocacy on behalf of Trust beneficiaries; specifically, beneficiaries diagnosed with autism and their families, and look forward to continuing to work with you on this issue.

Sincerely,

Jeff Jessee, CEO

ALASKA
PRIMARY CARE ASSOCIATION

The Honorable Johnny Ellis
State Capitol, Room 119
Juneau, Alaska 99801

March 28, 2011

RE: SB 74 Insurance Coverage: Autism Spectrum Disorder

Dear Senator Ellis:

The Alaska Primary Care Association (APCA) recognizes that insurance coverage often dictates access to health care for individuals. And because access greatly increases the likelihood of positive health outcomes, the APCA is supportive of efforts to expand access. In fact, the mission of the APCA is to work to promote access to health care for all Alaskans. With this goal in mind, the APCA supports access to services for Alaskans experiencing autism. SB 74 would empower these Alaskans to receive services and help ensure early identification of challenges and appropriate intervention. As a result, SB 74 would promote both a higher quality of life for these individuals and a savings to the State of Alaska and to families.

While it is difficult to predict the long term costs or consequences of the bill to the overall health system in Alaska, the positive impact the bill would have on individual Alaskans with autism and on the costs specific to these individuals is clear. The Alaska Primary Care Association thus supports SB 74 as it pertains to access to care and services for Alaskans with autism.

The Centers for Disease Control estimates that one in every 110 children is diagnosed with autism annually, and estimates a higher rate for boys at one in 70. Although these children require services from medical professionals and other providers specific to this condition, most insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan. SB 74 would help to address this disparity in coverage and help ensure that these Alaskans receive necessary services.

Thank you for your work on behalf of Alaskans and your work on this specific issue.

Sincerely,

Marilyn Kasmar
Executive Director

supporting Alaskans' health care homes

March 29, 2010

Alaska Senators and Representatives,

Please add my support for the Autism Insurance Coverage Bill. I have a 16 year old son with autism who was diagnosed when he was 4 years old by Dr. Brennan in Anchorage. When he was little my pediatrician told me to expect nothing from him, he would never be functional. Fortunately, a mother does not always listen to such advice.

He started receiving services before he was three at the Infant Learning Program. They gently guided me to the special ed preschool program at the school district. They set me up with a private speech therapist who came to the house twice a week. Speech therapy cost $150/hour and occupational therapy (we used it for sensory therapy) cost $57.50/15 minutes. Our private insurance had a maximum lifetime limit of $10,000 for these therapies. Caleb was maxed out by age 5 on our insurance.

We were able to gain coverage through TEFRA which is a part of Medicaid that covers autism if they have another physical disability. It was always iffy if he was going to qualify because he was a healthy child, other than the autism. I appealed several times through TEFRA to keep his services. At times in his young life he received therapy almost daily. The bill would have been over $500/week without state help.

With the help of Fairbanks Resource Agency (respite care, who because my part time therapists), TEFRA help, family help, school help, church help, adaptive rec help, speech and OT help, my son now goes to Lathrop High School on his own. He has one special ed class – study skills. We are approaching the end of his high school life and we have so much more to go.

Autism is a medical disability. It should be covered by insurance. The state can no longer afford to shoulder the entire bill for autism. This disability affects all of us. We should all pay.

Sincerely,

Amber Cheney

Stone Soup GROUP

Supporting families who care for children with special needs

March 7, 2011

Senator Johnny Ellis
Alaska State Legislature
State Capitol Room 119
Juneau AK, 99801

Dear Sen. Ellis,
I'm writing on behalf of families served by Stone Soup Group to thank you for your leadership in sponsoring Senate Bill 74, the Autism Insurance Reform Bill. Stone Soup Group is a nonprofit agency that provides support services to families caring for children and youth with special health care needs and disabilities. With the increased incidents of autism and related disorders in the past decade, Stone Soup Group has grappled with how to assist families in accessing therapeutic interventions not covered by private insurance programs. The ability to use private insurance to access those services opens doors for thousands of families.

Autism is a complex neurobiological disorder and is the fastest-growing serious developmental disability in the U.S. The Centers for Disease Control estimates that one in every 110 children, with one in every 70 boys are diagnosed annually. These children require extensive services from medical professionals. Early intervention is critical to gain maximum benefit from existing therapies. Most private health insurance plans do not provide coverage for Applied Behavioral Analysis (ABA) and other autism-related services.

Stone Soup Group full supports Senate Bill 74 and the companion House Bill 79 sponsored by Rep. Petersen. Thank you for all of your hard work for Alaska's families.

Respectfully,

K Donnelly

Kelly Donnelly
Executive Director

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

Jack C. McRae
Senior Vice President

Senator Bettye Davis
State Capitol Room 30
Juneau, AK 99801-1182

Dear Senator Davis:

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you to express our concerns with SB 74 which mandates coverage for autism spectrum disorders (ASD) for children up to age 21.

We are concerned with the challenges faced by children with autism and want to approach this issue in a manner that is in their best interest balanced by the interests of all the members we serve. Our concerns relate to the coverage of predominantly educational therapies under health insurance and increased costs, particularly for specific segments of health insurance purchasers- individuals and small employers.

Coverage for Educational and Unproven Therapies under a Medical Plan
Health insurance is a means to pay for effective healthcare services and treatments, not educational therapies or unproven interventions. Under SB 74, applied behavior analysis (ABA) treatment would be required to be covered under the medical plan. The outcomes expected from ABA therapy more closely mirror social programs than medical coverage and may be considered investigational when applied to the treatment of autism.

Coverage for autism services should be considered in a comprehensive manner that accounts for the responsibilities of the public education system and should not shift the cost burden to purchasers of private health coverage. Provisions in the federal Individuals with Disabilities in Education Act (IDEA) which guarantees "free and appropriate public education" require school districts to conduct outreach to pre-school children who may be disabled and need special services. IDEA requires districts to establish individual education programs for disabled children ages 3-21 and provide special services to such children. Insurance coverage should not duplicate services that are provided through such programs, and any private coverage should not result in schools shifting responsibilities under federal and state laws to insurers.

Increased Costs for Members
Of serious concern to us is the cost impact of this benefit mandate on employers and families who are struggling to afford coverage. Our analysis of this mandate projects a premium increase of at least 3% to Alaska consumers. Excluded from this are children of employees in a self-funded plan as these plans are exempt from state mandates.

A very similar bill to mandate autism benefits was before the Washington State Legislature this session. The fiscal impact to the state as prepared by the Office of Financial Management was estimated at over $140 million for the biennium, growing to over $200 million in subsequent years. The bill has not advanced this session.

Every benefit mandate adds to the overall cost of healthcare and insurance premiums. We believe employers should have the flexibility to choose their own benefit plans without the burden of additional state mandates. An increasing load of mandates may force employers to drop health insurance altogether. We urge you to strongly consider the financial impacts for this benefit mandate proposal, especially given the current economic conditions, and in light of additional benefit requirements resulting from federal healthcare reform.

P.O. Box 327
Seattle, WA 98111

fax 425.918.5635
jack.mcrae@premera.com

www.premera.com

An Independent Licensee of the
Blue Cross Blue Shield Association

While this proposed mandate would provide some financial relief to families impacted by ASD, whose employers can continue to afford coverage, there will be an unfortunate tradeoff for those families who would no longer be able to afford medical coverage at all, including families with ASD affected children.

Children with a diagnosis of autism spectrum disorder receive the same comprehensive medical coverage under Premera plans available to any other member. This proposal will add to the overall cost of healthcare and would be borne by insured members.

Thank you for considering our concerns on this issue.

Sincerely,

Jack C. McRae

Jack C. McRae

Sen. Bettye Davis

m: Joanne Healy [marshallhealy@gmail.com]
nt: Wednesday, March 30, 2011 8:24 AM
To: Sen. Bettye Davis; Sen. Dennis Egan; Sen. Johnny Ellis; Sen. Kevin Meyer; Sen. Fred Dyson
Subject: SB 74

I urge you to support SB 74 This is a classic example of pay a little now and save a millions in the future for our state. Early intervention works for children who are affected by autism and helps them become contributing members of our community. 37 other states support autism insurance bills for a reason it saves them money it is fiscally responsible and makes a huge difference in the lives of the families involved.

Thanks for your support,

Joanne Healy

Sen. Bettye Davis

From: Linda Robertson [stepinbcba@yahoo.com]
Sent: Wednesday, March 30, 2011 6:05 AM
To: Sen. Bettye Davis
Subject: Autism Insurance Bill

Dear Senator Davis:

I am a Board Certified Behavior Analyst, recently retired special educator (after over 35 years teaching preschool, infant learning, resource, intensive resource and admininistrative work), and half owner of a new business, "Step-In Autism Services of Alaska". While we are a for-profit business, since my young partner (a Board-Certified Assistant Behavior Analyst working on her Masters and BCBA) and I, need to pay our bills and support or help support our families, we are primarily concerned about providing effective, and quality services that can make a real difference to children with autism and their families.

We know, as evidenced by many, many, years of research, that behavior based programs can truly make a difference in the lives of both families and their autistic children. We are working with a number of children referred to us through Tri-West, military insurance. We have several children referred by local service agencies who currently work with us to provide services paid for through Medicaid. This is a lengthy, and sometimes fruitless process for families who are already stressed beyond what most of us would consider our "stress capacity" despite the best intentions of our local non-profit service providers.

Please, please do anything you can to support the services these families so desperately need. They need to more easily access the Medicaid funding or private insurance necessary to provide the services that their children and young adults require to allow them to become independent or as independent as possible. This is absolutely a case where if we pay early up front we will pay much less later as these individuals will be able to assume all or more of their own care and are allowed to become contributing members of society.

Thank you so much for your attention to this very important matter,

Linda Robertson, M.Ed, BCBA

nt: Monday, March 28, 2011 9:31 AM
To: Sen. Bettye Davis
Subject: Please support SB 74: Autism Insurance Coverage

Dear Senator Davis,

Please support SB 74 with the intent to better support and treat Alaskans experiencing autism. The Centers for Disease Control estimates that one in every 110 children, with one in every 70 boys, are diagnosed annually. These children require extensive services from medical professionals and other providers. Most insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan. Thank you for you time and consideration. Sincerely,

Jaye Keener

To: Sen. Bettye Davis
Subject: SB 74

Please support this bill. Money spent for early autism treatment will be a mere drop in the bucket when compared to the later cost of lifetime institutionalism. Our son is age 10 and severely autistic. Our insurance does not pay for the therapy he desperately needs. We have been selling our retirement assets to pay for his treatment. In the past 5 years we are out-of-pocket more than $136,000.00. Most families cannot afford such expenses (nor can we, over time) so their children are untreated and likely doomed to a lifetime of dependence on society. Again, please support this bill.

Paul and Robin Barrett

Subject: SB 74: Autism Insurance Coverage

My family and I live in Delta Junction , AK.

Our 3.5yr old son has autism and it is a struggle for him...and our family...to cope with the challenges of this condition.

I can be contacted as an advocate for these children and families and believe that anything that we can do to assist these special people and their families is worth doing. This bill's passing would be one way to help.

Please do what you can to see that this Bill passes.

Much appreciation in advance for your efforts in this regard...

Senator Bettye Davis

Senate Bill 82 "An Act relating to the procedures and jurisdiction of the Department of Health and Social Services for the care of children who are in state custody; relating to court jurisdiction and findings pertaining to children who are in state custody; and modifying the licensing requirements for foster care."

SPONSOR STATEMENT

Senate Bill 82 modifies various provisions in Title 47 by making small, but very significant changes that better prioritize the needs of foster children. This legislation seeks to:

1. **Achieve Permanency for Older Children in Foster Care** – Permanency for children in OCS custody is best achieved through reunification with the child's parent, or failing that option, through adoption or guardianship. If these three options are not available, another form of permanency is through APPLA ("Another Planned Permanent Living Arrangement"). This bill seeks to make sure the APPLA option is not chosen unnecessarily by providing guidelines for both OCS and the court as to when APPLA should be used.
2. **Presumption to Keep Siblings Together** – Although OCS attempts to keep siblings together when they enter foster care, this bill creates a statutory presumption that siblings be placed in the same home when possible and when such a placement is in the siblings' best interest. When the children cannot be in the same home, this bill requires an OCS supervisor to document in the file the efforts made and the reason for the separation.
3. **Early Release of Custody** - When OCS files a motion to release a child from state custody before the custody order expires, this bill requires OCS and the court to take extra steps to ensure the child and Guardian ad Litem have ample notice of the motion and that the release is in the child's best interest.
4. **Foster Home Licensing Variance Process** - If a potential foster home cannot meet the building codes required to be a licensed foster home, this bill allows a variance to be granted if the home is consistent with construction of other homes in the community and is otherwise a safe environment for the child.
5. **Streamlining Application Process for Foster Parents**
   This bill requires that paperwork required for foster parent licensing be streamlined as much as possible.
6. **Housekeeping** – The bill includes some minor changes to a statute to make it consistent with last year's legislation to extend foster care to age 21.

CS FOR SPONSOR SUBSTITUTE FOR SENATE BILL NO. 82(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATOR DAVIS

A BILL

FOR AN ACT ENTITLED

"An Act relating to the procedures and jurisdiction of the Department of Health and Social Services for the care of children who are in state custody; relating to court jurisdiction and findings pertaining to children who are in state custody; and modifying the licensing requirements for foster care."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Foster Family Protection Act.

*** Sec. 2.** AS 47.10.080(*l*) is amended to read:

(*l*) Within 12 months after the date a child enters foster care as calculated under AS 47.10.088(f), the court shall hold a permanency hearing. The hearing and permanent plan developed in the hearing are governed by the following provisions:

(1) the persons entitled to be heard under AS 47.10.070 or under (f) of this section are also entitled to be heard at the hearing held under this subsection;

(2) when establishing the permanent plan for the child, the court shall make appropriate written findings, including findings related to whether

(A) and when the child should be returned to the parent or guardian;

(B) the child should be placed for adoption or legal guardianship and whether a petition for termination of parental rights should be filed by the department; and

(C) **there is a compelling reason that the most appropriate placement for** the child **is** [SHOULD BE PLACED] in another planned, permanent living arrangement **and the department has recommended the arrangement under AS 47.14.100(p); the findings under this paragraph must include the steps that** [AND WHAT STEPS] are necessary to achieve the new arrangement;

(3) if the court is unable to make a finding required under (2) of this subsection, the court shall hold another hearing within a reasonable period of time;

(4) in addition to the findings required by (2) of this subsection, the court shall also make appropriate written findings related to

(A) whether the department has made the reasonable efforts required under AS 47.10.086 to offer appropriate family support services to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(B) whether the parent or guardian has made substantial progress to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(C) if the permanent plan is for the child to remain in out-of-home-care, whether the child's out-of-home placement continues to be appropriate and in the best interests of the child; and

(D) whether the department has made reasonable efforts to finalize the permanent plan for the child;

(5) the court shall hold a hearing to review the permanent plan at least annually until successful implementation of the plan; if the plan approved by the court

changes after the hearing, the department shall promptly apply to the court for another permanency hearing, and the court shall conduct the hearing within 30 days after application by the department.

*** Sec. 3.** AS 47.10.080 is amended by adding a new subsection to read:

(w) The court shall recognize a presumption that maintenance of a sibling relationship, including with a sibling who is related by blood, marriage, or adoption through one parent, is in a child's best interest.

*** Sec. 4.** AS 47.10.100 is amended to read:

Sec. 47.10.100. Retention of jurisdiction over child [MINOR]. (a) The court retains jurisdiction over the case and may at any time stay execution, modify, set aside, revoke, or enlarge a judgment or order, or grant a new hearing, in the exercise of its power of protection over the **child** [MINOR] and for the **child's** [MINOR'S] best interest, for a period of time not to exceed two years or in any event extend past the day the **child reaches** [MINOR BECOMES] 19 **years of age**, unless sooner discharged by the court, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. An application for any of these purposes may be made by the parent, guardian, or custodian acting in behalf of the minor, or the court may, on its own motion, and after reasonable notice to interested parties and the appropriate department, take action that it considers appropriate.

(b) If the court determines at a hearing authorized by (a) of this section that **the department has complied with the requirements for release of a child under AS 47.14.100(q) and that** it is **in** [FOR] the best interests of the **child** [MINOR] to be released to the **child's own custody, or to the** care or custody of the **child's** [MINOR'S] parent, guardian, or custodian, it **shall** [MAY] enter an order to that effect and the **child** [MINOR] is discharged from the control of the department.

(c) If a **child** [MINOR] is adjudicated a child in need of aid before the **child's** [MINOR'S] 18th birthday, the court may retain jurisdiction over the **child** [MINOR] after the **child's** [MINOR'S] 18th birthday for the purpose of supervising the **child**

[MINOR], but the court's jurisdiction over the minor under this chapter never extends beyond the **child's** [MINOR'S] 19th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. The department may retain jurisdiction over a child [BETWEEN THE CHILD'S 18TH AND 19TH BIRTHDAYS FOR THE PURPOSE OF SUPERVISING THE CHILD,] if the child has been placed under the supervision of the department before the child's 18th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it.

*** Sec. 5.** AS 47.14.100(m) is amended to read:

(m) Prima facie evidence of good cause not to place a child with an adult family member or family friend under AS 47.10.088(i) or under (e) of this section includes the failure to meet the requirements for a foster care license under AS 47.32 and regulations adopted under AS 47.32**, taking into account a waiver, variance, or exemption allowed under AS 47.32.030(a)(3) and 47.32.032**. Prima facie evidence of good cause not to place a child with an adult family member or adult family friend does not include poverty or inadequate or crowded housing. If the department denies a request for placement with an adult family member or a family friend, the department shall inform the adult family member or family friend of the basis for the denial and the right to request a hearing to review the decision. A non-party adult family member or family friend requesting a review hearing under AS 47.10.088(i) or under (e) of this section is not eligible for publicly appointed legal counsel.

*** Sec. 6.** AS 47.14.100 is amended by adding new subsections to read:

(o) Except as provided in (p) and (q) of this section, the department shall continue to search for a suitable adoptive or permanent legal guardianship for a child who is in the custody of the state and who is under 18 years of age.

(p) The department may recommend to the court another planned permanent

living arrangement for a child who is in state custody only if

(1) the child is 16 years of age or older;

(2) the department has unsuccessfully made intensive efforts to find a permanent placement for the child; and

(3) the department, after considering reunification, adoption, legal guardianship, or permanent placement with a fit and willing relative, determines that there is a compelling reason that the most appropriate permanency plan for the child is placement in another planned permanent living arrangement, and the department documents for the court the compelling reason for the alternate plan.

(q) Unless the child, department, and guardian ad litem agree to a release from custody without a motion and with less than 30 days' notice, the department may release from state custody a child who is under 19 years of age who has been committed to the custody of the department only if

(1) the child, if the child is available, and the guardian ad litem are notified not less than 30 days before a motion for release is filed;

(2) the department files a motion with the court for release of state custody that describes the reasons the release is in the best interest of the child; and

(3) a court makes a written finding that release from state custody is in the best interest of the child.

(r) The department shall make reasonable efforts to place siblings in the same placement if the siblings are residing in the same home when taken into the custody of the department. If siblings are not placed together after reasonable efforts have been made, the case supervisor for the division with responsibility over the custody of children shall document in the file the efforts that were made and the reason separating the siblings for placement purposes is in the best interest of the children. In this subsection, "sibling" means two or more persons who are related by blood, adoption, or marriage as a child of one or both parents.

(s) As used in (p) of this section, "compelling reason" may include circumstances in which

(1) the child has specifically requested that emancipation be established;

(2) a parent and child have a significant bond, but the parent is unable to care for the child because of an emotional or physical disability, and the child's foster parents have committed to raising the child to the age of majority and to facilitating visitation with the disabled parent.

(t) In this section, "another planned permanent living arrangement" means a permanent living arrangement for a child who is committed to the custody of the department under AS 47.10.080(c)(1) that is an alternative to permanent placement with an adult family member, and to reunification, adoption, and legal guardianship.

* **Sec. 7.** AS 47.32 is amended by adding a new section to read:

Sec. 47.32.032. Foster care license; variance. (a) The department shall streamline the application and licensing paperwork necessary for a person to be approved as a foster parent or relative placement to the extent consistent with federal law.

(b) The department shall approve a variance of the applicable building code requirements for licensure of a foster care home to the extent permitted by federal law if an applicant does not meet the requirements at the time of inspection and

(1) the home design and construction is consistent with homes located in the community; and

(2) the home is otherwise a safe environment for a child.

A BILL

FOR AN ACT ENTITLED

"An Act relating to the procedures and jurisdiction of the Department of Health and Social Services for the care of children who are in state custody; relating to court jurisdiction and findings pertaining to children who are in state custody; and modifying the licensing requirements for foster care."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Foster Family Protection Act.

*** Sec. 2.** AS 47.10.080(*l*) is amended to read:

(*l*) Within 12 months after the date a child enters foster care as calculated under AS 47.10.088(f), the court shall hold a permanency hearing. The hearing and permanent plan developed in the hearing are governed by the following provisions:

(1) the persons entitled to be heard under AS 47.10.070 or under (f) of this section are also entitled to be heard at the hearing held under this subsection;

(2) when establishing the permanent plan for the child, the court shall make appropriate written findings, including findings related to whether

(A) and when the child should be returned to the parent or guardian;

(B) the child should be placed for adoption or legal guardianship and whether a petition for termination of parental rights should be filed by the department; and

(C) **there is a compelling reason that the most appropriate placement for** the child **is** [SHOULD BE PLACED] in another planned, permanent living arrangement **and the department has recommended the arrangement under AS 47.14.100(p); the findings under this paragraph must include the steps that** [AND WHAT STEPS] are necessary to achieve the new arrangement;

(3) if the court is unable to make a finding required under (2) of this subsection, the court shall hold another hearing within a reasonable period of time;

(4) in addition to the findings required by (2) of this subsection, the court shall also make appropriate written findings related to

(A) whether the department has made the reasonable efforts required under AS 47.10.086 to offer appropriate family support services to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(B) whether the parent or guardian has made substantial progress to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(C) if the permanent plan is for the child to remain in out-of-home-care, whether the child's out-of-home placement continues to be appropriate and in the best interests of the child; and

(D) whether the department has made reasonable efforts to finalize the permanent plan for the child;

(5) the court shall hold a hearing to review the permanent plan at least annually until successful implementation of the plan; if the plan approved by the court

changes after the hearing, the department shall promptly apply to the court for another permanency hearing, and the court shall conduct the hearing within 30 days after application by the department.

*** Sec. 3.** AS 47.10.080 is amended by adding a new subsection to read:

(w) The court shall recognize a presumption that maintenance of a sibling relationship, including with a sibling who is related by blood, marriage, or adoption through one parent, is in a child's best interest.

*** Sec. 4.** AS 47.10.100 is amended to read:

Sec. 47.10.100. Retention of jurisdiction over child [MINOR]. (a) The court retains jurisdiction over the case and may at any time stay execution, modify, set aside, revoke, or enlarge a judgment or order, or grant a new hearing, in the exercise of its power of protection over the **child** [MINOR] and for the **child's** [MINOR'S] best interest, for a period of time not to exceed two years or in any event extend past the day the **child reaches** [MINOR BECOMES] 19 **years of age**, unless sooner discharged by the court, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. An application for any of these purposes may be made by the parent, guardian, or custodian acting in behalf of the minor, or the court may, on its own motion, and after reasonable notice to interested parties and the appropriate department, take action that it considers appropriate.

(b) If the court determines at a hearing authorized by (a) of this section that **the department has complied with the requirements for release of a child under AS 47.14.100(q) and that** it is **in** [FOR] the best interests of the **child** [MINOR] to be released to the **child's own custody, or to the** care or custody of the **child's** [MINOR'S] parent, guardian, or custodian, it **shall** [MAY] enter an order to that effect and the **child** [MINOR] is discharged from the control of the department.

(c) If a **child** [MINOR] is adjudicated a child in need of aid before the **child's** [MINOR'S] 18th birthday, the court may retain jurisdiction over the **child** [MINOR] after the **child's** [MINOR'S] 18th birthday for the purpose of supervising the **child**

[MINOR], but the court's jurisdiction over the minor under this chapter never extends beyond the **child's** [MINOR'S] 19th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. The department may retain jurisdiction over a child [BETWEEN THE CHILD'S 18TH AND 19TH BIRTHDAYS FOR THE PURPOSE OF SUPERVISING THE CHILD,] if the child has been placed under the supervision of the department before the child's 18th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it.

* **Sec. 5.** AS 47.14.100(m) is amended to read:

(m) Prima facie evidence of good cause not to place a child with an adult family member or family friend under AS 47.10.088(i) or under (e) of this section includes the failure to meet the requirements for a foster care license under AS 47.32 and regulations adopted under AS 47.32**, taking into account a waiver, variance, or exemption allowed under AS 47.32.030(a)(3) and 47.32.032**. Prima facie evidence of good cause not to place a child with an adult family member or adult family friend does not include poverty or inadequate or crowded housing. If the department denies a request for placement with an adult family member or a family friend, the department shall inform the adult family member or family friend of the basis for the denial and the right to request a hearing to review the decision. A non-party adult family member or family friend requesting a review hearing under AS 47.10.088(i) or under (e) of this section is not eligible for publicly appointed legal counsel.

* **Sec. 6.** AS 47.14.100 is amended by adding new subsections to read:

(o) Except as provided in (p) and (q) of this section, the department shall continue to search for a suitable adoptive or permanent legal guardianship for a child who is in the custody of the state and who is under 18 years of age.

(p) The department may recommend to the court another planned permanent

living arrangement for a child who is in state custody only if

(1) the child is 16 years of age or older;

(2) the department has unsuccessfully made intensive efforts to find a permanent placement for the child; and

(3) the department, after considering reunification, adoption, legal guardianship, or permanent placement with a fit and willing relative, determines that there is a compelling reason that the most appropriate permanency plan for the child is placement in another planned permanent living arrangement, and the department documents for the court the compelling reason for the alternate plan.

(q) ~~The~~ Unless the Child ... department may release from state custody a child who is under 19 years of age who has been committed to the custody of the department only if

(1) the child, if the child is available, and the guardian ad litem are notified not less than 30 days before a motion for release is filed;

(2) the department files a motion with the court for release of state custody that describes the reasons the release is in the best interest of the child; and

(3) a court makes a written finding that release from state custody is in the best interest of the child.

(r) The department shall make reasonable efforts to place siblings in the same placement if the siblings are residing in the same home when taken into the custody of the department. If siblings are not placed together after reasonable efforts have been made, the case supervisor for the division with responsibility over the custody of children shall document in the file the efforts that were made and the reason separating the siblings for placement purposes is in the best interest of the children. In this subsection, "sibling" means two or more persons who are related by blood, adoption, or marriage as a child of one or both parents.

(s) As used in (p) of this section, "compelling reason" may include circumstances in which

(1) the child has specifically requested that emancipation be established;

(2) a parent and child have a significant bond, but the parent is unable to care for the child because of an emotional or physical disability, and the child's

foster parents have committed to raising the child to the age of majority and to facilitating visitation with the disabled parent.

(c) In this section, "another..."

* **Sec. 7.** AS 47.32 is amended by adding a new section to read:

Sec. 47.32.032. Foster care license; variance. (a) The department shall streamline the application and licensing paperwork necessary for a person to be approved as a foster parent or relative placement to the extent consistent with federal law.

(b) The department shall approve a variance of the applicable building code requirements for licensure of a foster care home to the extent permitted by federal law if an applicant does not meet the requirements at the time of inspection and

~~(1) the variance serves the best interest of a child intended to be placed in that home;~~

~~(2) the placement is preferable to other placement options;~~

(1) the home design and construction is consistent with homes located in the community; and

~~(3)~~ (2) the home is otherwise a safe environment for a child.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 82

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR DAVIS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to the procedures and jurisdiction of the Department of Health and Social Services for the care of children who are in state custody; relating to court jurisdiction and findings pertaining to children who are in state custody; and modifying the licensing requirements for foster care."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Foster Family Protection Act.

*** Sec. 2.** AS 47.10.080(*l*) is amended to read:

(*l*) Within 12 months after the date a child enters foster care as calculated under AS 47.10.088(f), the court shall hold a permanency hearing. The hearing and permanent plan developed in the hearing are governed by the following provisions:

(1) the persons entitled to be heard under AS 47.10.070 or under (f) of this section are also entitled to be heard at the hearing held under this subsection;

(2) when establishing the permanent plan for the child, the court shall make appropriate written findings, including findings related to whether

(A) and when the child should be returned to the parent or guardian;

(B) the child should be placed for adoption or legal guardianship and whether a petition for termination of parental rights should be filed by the department; and

(C) **there is a compelling reason that the most appropriate placement for** the child **is** [SHOULD BE PLACED] in another planned, permanent living arrangement **and the department has recommended the arrangement under AS 47.14.100(p); the findings under this paragraph must include the steps that** [AND WHAT STEPS] are necessary to achieve the new arrangement;

(3) if the court is unable to make a finding required under (2) of this subsection, the court shall hold another hearing within a reasonable period of time;

(4) in addition to the findings required by (2) of this subsection, the court shall also make appropriate written findings related to

(A) whether the department has made the reasonable efforts required under AS 47.10.086 to offer appropriate family support services to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(B) whether the parent or guardian has made substantial progress to remedy the parent's or guardian's conduct or conditions in the home that made the child a child in need of aid under this chapter;

(C) if the permanent plan is for the child to remain in out-of-home-care, whether the child's out-of-home placement continues to be appropriate and in the best interests of the child; and

(D) whether the department has made reasonable efforts to finalize the permanent plan for the child;

(5) the court shall hold a hearing to review the permanent plan at least annually until successful implementation of the plan; if the plan approved by the court

changes after the hearing, the department shall promptly apply to the court for another permanency hearing, and the court shall conduct the hearing within 30 days after application by the department.

* **Sec. 3.** AS 47.10.080 is amended by adding a new subsection to read:

(w) The court shall recognize a presumption that maintenance of a sibling relationship, including with a sibling who is related by blood through one parent, is in a child's best interest.

* **Sec. 4.** AS 47.10.100 is amended to read:

Sec. 47.10.100. Retention of jurisdiction over child [MINOR]. (a) The court retains jurisdiction over the case and may at any time stay execution, modify, set aside, revoke, or enlarge a judgment or order, or grant a new hearing, in the exercise of its power of protection over the **child** [MINOR] and for the **child's** [MINOR'S] best interest, for a period of time not to exceed two years or in any event extend past the day the **child reaches** [MINOR BECOMES] 19 **years of age**, unless sooner discharged by the court, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. An application for any of these purposes may be made by the parent, guardian, or custodian acting in behalf of the minor, or the court may, on its own motion, and after reasonable notice to interested parties and the appropriate department, take action that it considers appropriate.

(b) If the court determines at a hearing authorized by (a) of this section that **the department has complied with the requirements for release of a child under AS 47.14.100(q) and that** it is **in** [FOR] the best interests of the **child** [MINOR] to be released to the **child's own custody, or to the** care or custody of the **child's** [MINOR'S] parent, guardian, or custodian, it **shall** [MAY] enter an order to that effect and the **child** [MINOR] is discharged from the control of the department.

(c) If a **child** [MINOR] *is adjudicated a child in need of aid before the* **child's** [MINOR'S] 18th birthday, the court may retain jurisdiction over the **child** [MINOR] after the **child's** [MINOR'S] 18th birthday for the purpose of supervising the **child**

[MINOR], but the court's jurisdiction over the minor under this chapter never extends beyond the **child's** [MINOR'S] 19th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it. The department may retain jurisdiction over a child [BETWEEN THE CHILD'S 18TH AND 19TH BIRTHDAYS FOR THE PURPOSE OF SUPERVISING THE CHILD,] if the child has been placed under the supervision of the department before the child's 18th birthday, except that the department may apply for and the court may grant [AN] additional one-year **periods** [PERIOD] of supervision past [AGE] 19 **years of age that do not extend beyond the person's 21st birthday** if continued supervision is in the best interests of the person and the person consents to it.

*** Sec. 5.** AS 47.14.100(m) is amended to read:

(m) Prima facie evidence of good cause not to place a child with an adult family member or family friend under AS 47.10.088(i) or under (e) of this section includes the failure to meet the requirements for a foster care license under AS 47.32 and regulations adopted under AS 47.32**, taking into account a waiver, variance, or exemption allowed under AS 47.32.030(a)(3) and 47.32.032**. Prima facie evidence of good cause not to place a child with an adult family member or adult family friend does not include poverty or inadequate or crowded housing. If the department denies a request for placement with an adult family member or a family friend, the department shall inform the adult family member or family friend of the basis for the denial and the right to request a hearing to review the decision. A non-party adult family member or family friend requesting a review hearing under AS 47.10.088(i) or under (e) of this section is not eligible for publicly appointed legal counsel.

*** Sec. 6.** AS 47.14.100 is amended by adding new subsections to read:

(o) Except as provided in (p) and (q) of this section, the department shall continue to search for a suitable adoptive or permanent legal guardianship for a child who is in the custody of the state and who is under 18 years of age.

(p) The department may recommend another planned permanent living

arrangement for a child who is in state custody only if

(1) the department has unsuccessfully made intensive efforts to find a permanent placement for the child;

(2) the department, after considering reunification, adoption, legal guardianship, or permanent placement with a fit and willing relative, determines that there is a compelling reason that the most appropriate permanency plan for the child is placement in another planned permanent living arrangement, and the department documents for the court the compelling reason for the alternate plan; and

(3) the court, at a permanency hearing under AS 47.10.080(*l*), has approved the placement of the child to another permanent planned living arrangement.

(q) The department may release from state custody a child who is under 19 years of age who has been committed to the custody of the department only if

(1) the child and the guardian ad litem are notified not less than 30 days before a petition for release is filed;

(2) the department files a petition with the court for termination of state custody and release that describes the reasons the release is in the best interest of the child; and

(3) a court makes a written finding that release from state custody is in the best interest of the child.

(r) The department shall make all reasonable efforts to place siblings who are in the custody of the department in the same placement. If siblings are not placed together after reasonable efforts have been made, the state or regional director of the division with responsibility over the custody of children shall provide a written explanation in the file of the efforts that were made and the reason separating the siblings for placement purposes is in the best interest of the children. In this subsection, "sibling" means two or more persons who are related by blood or marriage as a child of one or both parents.

(s) As used in (p) of this section, "compelling reason" may include circumstances in which

(1) the child is more than 15 years of age and has specifically requested that emancipation be established;

(2) a parent and child have a significant bond, but the parent is unable to care for the child because of an emotional or physical disability, and the child's foster parents have committed to raising the child to the age of majority and to facilitating visitation with the disabled parent;

(3) a tribe has identified another planned permanent living arrangement for the child.

* **Sec. 7.** AS 47.32 is amended by adding a new section to read:

Sec. 47.32.032. Foster care license; variance. (a) The department shall ensure that the application and licensing paperwork necessary for a person to be approved as a foster parent or relative placement is not unduly complex and is as short and straightforward as necessary to protect a child's best interests.

(b) The department shall approve a variance of the applicable building code requirements for licensure of a foster care home if an applicant does not meet the requirements at the time of inspection and

(1) the variance serves the best interest of a child intended to be placed in that home;

(2) the placement is preferable to other placement options;

(3) the home design and construction is consistent with homes located in the community; and

(4) the home is otherwise a safe environment for a child.

MEMORANDUM March 10, 2011

SUBJECT: Comparison of versions "A" and "M" (SSSB 82 (Work Order No. 27-LS0500\M))

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked for an outline of the differences in the sponsor substitute and the original version of SB 82. The sponsor substitute, version "M", enclosed, modifies the authority and duties of the Department of Health and Social Services when another planned permanent living arrangement for or release of a child in the custody of the department is recommended. The sponsor substitute also deletes the enrollment in a reading program requirement for low income children.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSSSSB082(HSS)

Analysis:

CSSSSB082 has zero fiscal impact on DHSS. This bills addresses permanent planning for children in custody under "Another Planned, Permanent Living Arrangement (APPLA)"; modifies licensing procedures; outlines court requirements for release or termination of custody by the courts; outlines "compelling reason" standards for youth with APPLA permanency goals; and provides a provision to support placement of siblings into the same foster home.

Subject: Another Planned Permanent Living Arrangement

Following is information on state legislation around Another Permanent Planned Living Arrangement as a permanency goal for children in foster care. Also, below is information on states that allow for the reinstatement of parental rights (a strategy states may use to reduce the use of APPLA as a permanency option).

- **State Legislation**

New York:

2005 N.Y. Laws, SB 5805, Chap. 3: Specifies the required contents of permanency hearing reports to the court. Describes acceptable permanency goals. Provides that the permanency goal of "another planned permanent living arrangement" must include a significant connection to an adult who is willing to be a permanency resource for the child.

2007 N.Y. Laws, SB 4551, Chap. 327: Clarifies that the plan of "another planned permanent living arrangement" must include documentation of the child's significant connection to an adult who is willing to be a permanency resource for the child.
New York FCA §§1089(c)(1)(v), 1089(d)(2)(i)(E) can be retrieved at:

Alabama:

Section 12-15-315 of the Alabama Code: States that if the juvenile court determines the permanent plan shall be placement in another planned permanent living arrangement, the Department of Human Resources must document to the juvenile court a compelling reason for determining that it would not be in the best interests of the child to return home, be placed for adoption with no identified resource or with the current foster parent, or be permanently placed with a relative, with a transfer of legal and physical custody to the relative or with a transfer of physical custody to the relative but with the Department of Human Resources retaining legal custody, be placed with a kinship guardian, or be placed in adult custodial care.

Website www.ncsl.org
Email info@ncsl.org

Connecticut:

Sec. 4. Section 46b-129 of the Connecticut Code: Orders that at a permanency hearing the court shall approve a permanency plan that is in the best interests of the child or youth and takes into consideration the child's or youth's need for permanency. Another Planned living arrangement can be ordered by the court, provided the Commissioner of Children and Families has documented a compelling reason why it would not be in the best interest of the child or youth for the permanency plan to include a different permanency goal. (Sec. 4. Section 46b-129 of the 2010 supplement to the general statutes)

West Virginia:

Section 49-6-5 of West Virginia Code: Orders that a child may be placed in another planned permanent living arrangement, but only in cases where the department has documented to the circuit court a compelling reason for determining that it would not be in the best interests of the child to follow one of the other permanency options. (Section 49-6-5. Disposition of neglected or abused children)

- **Reinstatement of Parental Rights**

Several states have also passed legislation that allows for the reinstatement of parental rights following termination of parental rights. The laws were developed in response to children who were aging out of the foster care system and re-establishing ties with parents and family members.

Legislation for Reinstatement following Termination of Parental Rights

State	Statute or Code	Who Can File Motion or Petition	Who Must Be Notified
Alaska	Alaska Stat. § 47.10.089	A person who has voluntarily relinquished the child.	
California	Cal. Welfare and Institutions Code § 366.26	Child for whom court has determined that adoption is no longer the permanent plan.	Social worker or probation officer, child's attorney, child's tribe, if applicable, former parent
Hawaii	Act 135, 2010 Session Laws	Child who is 14 or older; child's GAL; department	Former parent; child's GAL; department; child's resource family
Illinois	705 Ill. Comp. Stat. 405/2-28 and 705 Ill. Comp. Stat. 405/2-34	Dept of Child and Family Services on behalf of 13 years or older child	Parties to the Juvenile Court proceeding

Louisiana	La. Child. Code Ann. art. 1051	Child in foster care over the age of 15.	Parents, foster parents, CASA volunteer.
Nevada	Nev. Rev. Stat. Ann. § 128.160, 128.170	Child or legal custodian or guardian of child	Parents, child's legal custodian or guardian, person or entity that petitioned for TPR, child's attorney
New York	N.Y. Fam. Ct. Act, §§ 635-637	Attorney, Guardian of child age 14 or older	Court may issue summons to child, guardian and custodian, respondent in TPR proceeding.
Oklahoma	Okla. Stat. Ann. tit. 10 A, § 1-4-909	Child 15 or older	Department, child's attorney, child, former parent, foster parent or relative guardian, GAL, child's tribe
Washington	Wash. Rev. Code Ann §13.34.215	Child 12 or older, or younger if good cause is shown	Department, child's attorney, child, former parent, existing parent, current caregiver, child's tribe.

Please let us know if we can be of further assistance!

RE: SB 82: Stability and Opportunity for Foster Youth

Dear Senator Davis,

Alaska Association of Homes for Children (AAHC) thanks you for introducing legislation to improve the service delivery of foster care. Several agencies within our association provide foster care and many of the youth we serve benefit from this critical service.

Unfortunately, we all have witnessed children on long waiting lists for a viable foster care placement for various reasons. The intent of SB 82 provides concrete solutions to streamline the process for foster parents, develop resources for children, and reinforce the goals related to permanency planning.

Placing children in rural areas poses additional challenges related to numerous licensing issues. It can be extremely difficult finding foster homes that meet state licensing requirements. Licensing variances for homes failing to meet specific codes when indicated would provide opportunities for families to open up their homes to provide care for foster children.

Foster care provides for a very cost effective way of helping children. Allowing more families to commit to the many Alaskan children waiting for a quality home creates a win win opportunity for all. AAHC truly appreciates your continued efforts to assist with the foster care system in Alaska.

The provisions within your bill would provide a wise investment in the health and wellbeing of Alaska's children.

Thank you,

Brad Ohs
AAHC President

Re: Support for HB 33

Dear Representative Gara,

On behalf of the Alaska Mental Health Board and the Advisory Board on Alcoholism and Drug Abuse, I would like to express our thanks and appreciation for the commitment that you and your co-sponsors have made to improving the lives of Alaskan children in foster care. HB 33 continues that process of system improvement, and we support the small but very significant changes that better prioritize the needs of foster children.

Being removed from your home, even when that home is not a safe or healthy environment, is traumatic. Being removed from your home and then separated from your brothers and sisters compounds the initial harm caused by abuse or neglect exponentially. While we know this from research and study, the Boards recognized fully the devastating effect this separation has on foster children when we heard from youth involved in the 2011 Youth Policy Summit. No child should have to beg, plead and fight for years to see a brother or sister, and yet we heard how this is the case for far too many youth who grow up in foster care.

HB 33 also prioritizes family connections as an important source of strength, support and resiliency for children and youth who experience abuse or neglect by making family placements easier in rural Alaska. Too often children in rural Alaska are placed with foster parents in urban communities rather than with relatives in villages, with the justification that the rural homes fail to meet foster care licensing standards. How can an aunt in a village where no one has running water ever hope to care for a niece or nephew who is in need, if there is no reasonableness standard in determining a safe physical environment for placement? HB 33 provides that element of reason to family placement decisions.

We are grateful for your continued advocacy for Alaska's children and are glad to be able to support HB 33.

Sincerely,

J. Kate Burkhart
Executive Director

January 2nd, 2011

Representative Les Gara
State of Alaska
State Capitol, Room 500
Juneau, Alaska 99801-1182

Dear Representative Gara:
The National Association of Social Workers (NASW) – Alaska Chapter, a membership organization that represents over 500 social workers across the State of Alaska, supports The Alaska Foster Family Protection Act.

The mission of NASW is to enhance the effective functioning and well-being of individuals, families, and communities through its work and through its advocacy. The Alaska Foster Family Projection act upholds this mission by ensuring that Alaska's most vulnerable children can more easily transition into safe and permanent homes. The increase in the number of rural foster care placements is especially crucial so youth in rural Alaska can continue to live in their home communities. Research demonstrates that youth from rural communities, and specifically Alaska Native youth, have more promising futures when they are able to maintain connection with their communities and tribes.

Thank you for your consistent attention to child welfare issues in Alaska. We look forward to working with you on behalf of children and families in our state.

Sincerely,

M. Loomis

Meg Loomis, MSW
Executive Director

RE: HB 33: Stability and Opportunity for Foster Youth

Dear Representative Gara,

The members of the Alaska Behavioral Health Association would like to inform you of their support for this legislation. It's intent is consistent with the goals and values of the members that provide services in our state and also provides opportunities to expand a system that is currently incapable of meeting the needs of youth.

Our providers have experienced tremendous difficulties in placing children and youth back in their home communities when a foster home is required due to the home situation of the biological parents. Frequently, homes may be available but they don't meet the more ridged codes and standards that govern construction in metropolitan areas. While no one would ever want a child placed in an unsafe environment, we are aware that minor code violations can be prohibitively expensive to repair and a foster home can be lost.

We hear reports from providers that it often takes up to six months or more from the time a family begins the application process and they are finally able to accept a child in their home. We appreciate the careful attention to ensure that a child is placed in a safe environment; however, redundancy and over-attention can become a barrier rather than a safe guard.

Thank you for your commitment to foster children and working to make their lives better.

Sincerely,

Donn Bennice

Donn Bennice, Ph.D.
President

Alaska Children's Services

The Honorable Les Gara
Alaska House of Representatives
State Capitol
Juneau, AK 99801-1182

RE: HB 33: Stability and Opportunity for Foster Youth

Dear Representative Gara:

This letter is to inform you of the strong support the Administration and Board of Directors have for the above-mentioned bill. It's intent is consistent with the goals and values of the Treatment Foster Care Program operated by Alaska Children's Services and provides opportunities to expand a system that is currently incapable of meeting the needs of youth.

We are particularly appreciative of the section regarding permanency placement. As you have stated the ultimate goal in foster care is to place a child in a good, stable, permanent home through adoption, guardianship, or reunification. Frequently, however, in our haste to find a child a bed or a roof over their head, we lose sight of this goal. By adding additional oversight to the permanency planning process, this goal can be reached.

Alaska Children's Services has experienced tremendous difficulties in placing children and youth back in their home communities when a foster home is required due to the home situation of the biological parents. Frequently, homes may be available but don't meet the more rigid codes and standards that govern construction in metropolitan areas. While no one would ever want to place a child in an unsafe environment, we are aware that minor code violations can be prohibitively expensive to repair and a foster home can be lost.

Alaska Children's Services has three full-time professional staff who comprise the treatment foster care licensing department. They report that it frequently takes up to six months or more from the time a family begins the application process and they are finally able to accept a child in their home. We appreciate the careful attention to ensure that a child is placed in a safe environment; however, redundancy and over-attention can become a barrier rather than a safeguard.

Overall, thank you very much for your continued commitment to one of our most vulnerable populations, our foster children, and please advise if there is more we can do to support this legislation.

Regards,

Jim Maley,
President & CEO

COA

February 8, 2011

Representative Les Gara
Alaska State Legislature
Juneau, Alaska 99801

Dear Representative Gara:

I am writing in support of HB33, the legislation you have proposed relating to foster care in Alaska. Denali Family Services (DFS) is a community mental health agency that provides therapeutic foster care to many children in the custody of the State / Office of Children's Services. DFS is also a child placement agency and in that role, processes foster home applications and licenses foster home in cooperation with OCS (i.e., the license is still a State foster care license). As an agency licensing foster homes, we support using the variance for homes in rural communities as long as the home is a safe environment and there are adequate ways to exit the home in case of a fire.

Denali Family Services serves many adolescents who are moving from care to independence and I am especially pleased to see the language changes that will make extending foster care to age 21 easily accessible for youth who want to take advantage of that opportunity. For youth who do not have a support system in place, those additional three years can make a huge difference in their maturity and readiness to survive on their own.

With regard to the application process for foster parents, DFS has significantly reduced our paperwork requirements in the last two years. In addition, effective this fiscal year, DFS will be utilizing a new foster parent training curricula (Presley Ridge). This curricula offers foster care providers in-depth, specialized training and OCS has agreed that DFS' foster parents who complete the Presley Ridge training will not have to take the OCS CORE training. This change will provide foster parents with more specialized training while maintaining the total hours at a number (per year) that is manageable.

On behalf of Denali Family Services, I am writing in support of HB33. Should you need additional information, please feel free to contact me at 907-222-2322.

Sincerely,

Yvonne M. Chase, PhD, LCSW

November 19, 2010

The Honorable Les Gara
Alaska House of Representatives
716 W. 4th Ave. Suite 310
Anchorage AK, 99501-2133

Dear Representative Gara,

In light of the postponement of our scheduled meeting regarding the status of 2010 foster care reform efforts I wanted to update you on the issues. I look forward to meeting with you in the near future, and to working with you to further improve the lives of Alaska's children and youth in foster care.

In advance of a meeting, I want to touch on some of the points you raised and inform you of some of the progress that has been achieved since your letter of October 12.

Regarding the implementation of the provisions of HB 126, a small number of youth in the past have been released from foster care when continued care would have been to their benefit. Changes in our IL procedures, effective October 1, 2010 have made Regional Independent Living Specialists (RILS) responsible for developing transition plans for all youth age 17 and older. In light of HB 126, transition plans will be revised to include a thorough review of continued support and future requirements if the youth chooses to re-enter custody at a later date.

Recent federal changes to the Fostering Connections Act, allows states to pursue federal reimbursements for foster care for youth to age 21. However, the federal requirements indicate that should states choose to accept reimbursement for youth to age 21, the states must also open this option to youth to age 21 for the adoption and guardianship subsidy programs as well. HB 126 is currently funded with general fund and anticipated federal reimbursement amounts. OCS will implement HB 126 extended foster care using only general funds until it can be determined whether or not existing general fund will adequately support the program or extended adoption and guardianship subsidies will be pursued.

It has been, and continues to be the policy of OCS to utilize transportation funds to allow foster youth who move between placements to stay in their original school for the remainder of the school term. The additional $80,000 for FY 11 will assist us in implementing this policy further.

SEAN PARNELL, GOVERNOR

FAX: (907) 465-2204

DEPT. OF HEALTH AND SOCIAL SERVICES
DIVISION OF HEALTH CARE SERVICES

Since we received your letter an RFP, *Mentoring for Independent Living* was posted on November 4, 2010. Although the service area is statewide, the proposal evaluation committee will favor those proposing to serve two or more population centers. The deadline for proposals has been extended to December 10, 2010.

In the Fall, 2010 40 youth received funding to attend the University of Alaska, AVTEC and other colleges out of state. Through coordination with the University of Alaska, nine supplemental tuition waivers were issued to youth attending the University of Alaska. This was in addition to the 10 Presidential Tuition Waivers, for a grand total of 19 tuition waivers.

Additional waivers will be issued for the Spring, 2011 semester. Regional Independent Living Specialists contacted all youth who received a waiver and are providing case management services. The RILS are utilizing the additional funds to provide occupational and post secondary training opportunities to youth both in and out of custody. We currently have youth utilizing these funds at UAF Community & Technical College and in UAF's Nurse Aide Program. Meetings have taken place with the Department of Labor and Workforce Development to create coordination of services to utilize funds for Career Exploration and to provide for Apprenticeship and On-the-Job training opportunities for foster care youth.

I understand your concern with the case load of the four RILS and share your belief that two additional staff will positively impact the outcomes of youth coming out of care. Posting of these jobs is anticipated to take place in the near future.

Regarding the housing assistance funds, to date a total seven youth have utilized these funds for a total of 28 months of housing assistance. We are continuing to make efforts to promote this assistance and are contacting all youth out of care, in each region of the state.

With respect to the formal *FosterWear* cards, they have been printed and sent out to all licensed providers. Cards for unlicensed providers have been sent to the field offices as well. We regularly print *FosterWear* information in the Alaska Center For Resource Families (ACRF) newsletter and Izabel Bower's is currently working on a "print mailer" that will be sent out after the holidays.

I am also looking forward to working with you on the new initiatives you outlined in your letter. Dee Pearson and Mike Sobosinski of UAA have discuss peer mentorship in general and will be meeting again to discuss this service delivery more in depth. Dee is exploring a pilot project for peer mentorships for youth attending the University Fall, 2011.

SPONSOR STATEMENT

SENATE BILL 118-*"An Act providing medical assistance reimbursement for the services of licensed marital and family therapists."*

SB118 adds counseling services provided by a licensed marital and family therapist to the list of optional services covered by the medical assistance program in the state.

Currently, licensed marriage and family therapists are only allowed to provide Medicaid services in community mental health clinics or physician mental health clinics. Including licensed marital family therapists to the provider list of independent licensed practitioners avails more licensed behavioral health professionals to help address the shortage of Medicaid eligible mental health providers in the state.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB118

Analysis

If enacted, this bill would amend AS 47.07.030(b) to include Licensed Marriage and Family Therapists (LMFT) as providers eligible to render and bill for Medicaid funded services as independent practitioners.

Assumptions and Cost Analysis
Whenever a program expansion or redesign occurs the State must assign staff to oversee the program design, development, and implementation, and to maintain on-going operations. Initial efforts involved are primarily directed at training new Medicaid eligible providers regarding the billing and documentation requirements for proper Medicaid claiming.

No additional salary is requested. Behavioral Health staff will provide coordination, support, and oversight as part of their normal and usual duties.

Travel
It is expected that additional travel will be required to meet the goals of this project. Travel will be required for training purposes and for oversight of provider billing processes until the group becomes comfortable with the program requirements. Inadequate training of new providers often results in denied claims or audit exceptions requiring repayment of federal funds.

Year One: A planning team will hold at least two, 2-day meetings in Anchorage to talk about the needs and expectations for the project, review existing training modules, and begin formulating initial ideas and strategies. The second meetingswill provide an opportunity to make final recommendations and training strategies.
$4,000

Year One through Three: Additional travel costs are expected to be incurred for the training phases of this project. Six on-site trainings throughout Alaska are assumed per year.
$20,000

Training - Year one through Three:
Funding will support technical assistance and training from contractors. Duties would include: activities related to the design, planning, and implementation of the program; developing a comprehensive plan for related provider training; developing and conducting evaluations to assess effectiveness of project initiatives; and, developing program, policy or system changes to improve overall program performance. The contract will cover travel costs for the trainers.
$100,000

50% FMAP is assumed.

Date/Time 12/16/11 5:00 PM
Date 12/16/2011

(Revised 8/17/2011 OMB)

Analysis

If enacted, this bill would amend AS 47.07.030(b) to include Licensed Marriage and Family Therapists (LMFT) as providers eligible to render and bill for Medicaid funded services as independent practitioners.

Independent licensed practitioners currently eligible by Statute to provide behavioral health services and directly bill Medicaid are:

- Physicians and advanced nurse practitioners - current regulations mandate that all services must be provided directly by the licensed professional
- PhD psychologists - services limited to testing and assessment services based on appropriate referrals
- Licensed clinical social workers (LCSW) - although included in Statute since 1991, funding has never been authorized; currently not a State Plan service

Clinic providers approved to provide behavioral health services and bill Medicaid are:

- Community mental health centers (CMHC) - must be approved grantees of the Division of Behavioral Health
- Physician mental health clinics - require the supervision of an on-site psychiatrist
- Rural health clinics and federally qualified health centers (FQHC) - allowed to bill for services provided by the federally mandated professionals: physicians, nurse practitioners, physician assistants, PhD psychologists, and LCSWs.
- Designated tribal outpatient clinics - limited to services provided directly by physicians, nurse practitioners and physician assistants.

Licensed Marriage and Family Therapists are allowed to provide Medicaid services only in Community Mental Health Clinics or Physician Mental Health Clinics.

Assumptions and Cost Analysis:

- DBH has established a prevalence rate of 25% of the population that has a need for a behavioral health service under the current "medical necessity" definition.
- In FY2010 approximately 120,000 individuals were eligible for Medicaid and approximately 23,000 Medicaid recipients received at least one behavioral health service.
- Based on the prevalence rate, about 30,000 Medicaid clients (25% of 120,000) are actually in need of behavioral health services which indicates approximately 7,000 recipients (30,000 less 23,000) have an unmet need.
- Based on current CMHS rates, the cost would be approximately $1,000 per client per year.
- There are currently 93 Licensed Marriage & Family Therapists. If all 93 licensed LMFTs enrolled and increased their case load to serve 50 clients per year, they would serve 4,650 clients (93 x 50). At a rate of $1000 per recipient the increase in program costs would be $4,650,000 annually.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB118

Analysis

The Division of Health Care Services projects a one time only cost of $275.0 to cover programming costs in the legacy Medicaid Management Information System (MMIS) associated with providing medical assistance reimbursement for the services of licensed marital and family therapists. The division plans to use programming staff of Affiliated Computer Services (ACS), the current State of Alaska MMIS Medicaid contractor responsible for the disbursement of Medicaid payments. The programming staff of ACS have extensive experience making programming adjustments to the legacy MMIS.

Medicare Coverage of Marriage and Family Therapists

Issue

Improving access to Medicare-covered mental health benefits by recognizing state licensed Marriage and Family Therapists.

Background

In order for a mental health service to be covered by Medicare, the service must be for the diagnosis and treatment of mental illness. In addition, the mental health service must be delivered by a "covered" practitioner who is legally authorized to perform that service under state law. The covered mental health professionals recognized by Medicare presently include psychiatrists, psychologists, mental health clinical nurse specialists and Clinical Social Workers (CSWs). Marriage and Family Therapists (MFTs) are not listed as Medicare-covered providers despite the fact that MFTs have education, training and practice rights equivalent to or greater than existing covered providers.

Several recent reports have indicated that limited access to mental health services is a serious problem in the Medicare program. This is particularly true in rural areas, which have historically had difficulty attracting and retaining health professionals. According to a recent Surgeon General's report, 37% of seniors display symptoms of depression in a primary care environment. Equally striking is that fact that this depression often goes unrecognized and therefore untreated. The failure to treat depression often leads to more primary care visits and higher Medicare expenditures. The unavailability of qualified mental health professionals compounds the mental health crisis among the elderly population and increases the costs to the program.

Currently, the federal government recognizes five mental health disciplines as core mental health professionals. These are psychiatrists, psychologists, mental health clinical nurse specialists, clinical social workers and marriage and family therapists. Of these five groups, only marriage and family therapists are not recognized by Medicare.

The cost of adding MFTs to Medicare is modest. According to the Congressional Budget Office (CBO), the cost of adding both MFTs and Licensed Professional Counselors (LPCs) to the Medicare program would be 18 million dollars per year. Assuming generously that MFTs account for half those costs, the total outlay will still be a nominal 9 million dollars per year for recognition of MFTs in Medicare.

The U.S. Senate has twice approved legislation recognizing MFTs under Medicare, in 2003 (S. 1) and 2005 (S. 1932). Further, there is bipartisan legislation in the House and Senate to expand Medicare to include MFTs as covered mental health professionals.

Discussion

MFTs are legally authorized through state licensing laws to treat mental illness. MFTs are required to obtain a master's degree in a mental health discipline and two years post-graduate supervised clinical experience, much like existing covered mental health providers, such as clinical social workers. This legislation will not change the mental health benefit or modify the MFT scope of practice, but will merely allow Medicare beneficiaries who need medically necessary covered mental health services to obtain those services from a marriage and family therapist. In essence, our proposal increases the pool of qualified providers that Medicare beneficiaries can choose from without change the services.

Significant shortages of mental health professionals continue to exist in many areas of the country, and rural counties suffer disproportionately. Among 1253 rural counties with 2,500 to 20,000 people, nearly three-fourths lack a psychiatrist, 58 percent have no clinical social worker, and 50 percent are missing a master's or doctoral psychologist. The supply of all these professionals is far lower in the 769 counties with fewer than 2,500 people. Further, the Health Resources Services Administration indicated that 90% of psychiatric and mental health nurses with graduate degrees were in metropolitan areas. There are many counties where only a marriage and family therapist may be present to serve the elderly population. A targeted study of licensed professionals in a sampling of states found many counties with no Medicare mental health providers, but with a marriage and family therapist: including Clayton, Iowa; Hamilton, Florida; Hutchinson, Texas; and Brunswick, Virginia; to name a few.

Federal government agencies also understand the valuable role MFTs play in increasing access to mental health services. The advisory committee to the Secretary of Health and Human Services recently encouraged inclusion of MFTs in the Medicare program. **The National Advisory Committee on Rural Health and Human Services specifically recommended "that the Secretary expand the range of certified mental health providers under Medicare to include marriage and family therapists" in its 2004 report.**

The Health Resources and Services Administration (HRSA) further recognizes MFT's participation in caring for underserved populations. One of HRSA's responsibilities is to identify areas of the country with mental health shortages. The purpose of this designation is to identify communities with unmet mental health service needs and pursue opportunities to recruit qualified mental health professionals to those communities.

Ironically, HRSA counts marriage and family therapists among the "core" providers qualified to deliver necessary mental health services. The failure of the Medicare program to recognize marriage and family therapists leaves many elderly beneficiaries without access to care and creates a conflict in federal law. For example, in communities where the only mental health professional available is a marriage and family therapist, the Health Resources and Services Administration may count that MFT and consider the community well-served. In fact, the elderly of that community have no access to the MFT because Medicare will not recognize the provider. Consequently, the government doesn't even know that there is an access problem because the two federal programs don't have consistent criteria.

Marriage and family therapists are not seeking to expand the scope of mental health services covered by Medicare, nor are they seeking to expand their own scope of practice. Instead, MFTs are simply trying to correct an inequity that restricts beneficiaries' access to a particular type of qualified mental health provider.

Furthermore, MFTs are not seeking higher payments for their services than are currently paid to clinical social workers. Under our proposal, marriage and family therapists would be paid at the same rate as clinical social workers (75% of the psychologists rate) for mental health services already covered by Medicare, which the MFT is legally authorized to provide in the state in which the service was delivered.

The importance of increasing the number of qualified Medicare mental health professionals by including MFTs is supported by many health organizations, including but not limited to the Depression and Bipolar Support Alliance, the National Council for Community Behavioral Healthcare, the National Rural Health Association and the California Primary Care Association.

Recommendation

Improve access to Medicare-covered mental health services by including marriage and family therapists among the list of providers who can deliver covered mental health services and pay for those services at the same rate as clinical social workers.

Medicaid

Overview

While the majority of health care is provided through the private market, and the largest programs are administered by the federal government, state governments also play a critical role in how healthcare is delivered. There are many health programs that are common across the states, and ensuring MFT recognition and participation by these programs is key to the success of the profession. AAMFT and our divisions have been advocating for MFT inclusion in these critical programs for many years and have made great progress, but there is much work to be done. The following are some of the largest and most influential state healthcare programs and the status of MFT reimbursement. read more (pdf) >

Medicaid is the largest provider of mental health services in the United States. Medicaid is the primary source of health care for low-income families with children, the low-income elderly, and people with disabilities. In 2006, 45 million people were enrolled in Medicaid. Excluding prescription drugs, behavioral healthcare costs amount to 10% of all Medicaid spending.

Medicaid is a joint federal-state partnership in both funding and administration. The federal government funds a majority of all Medicaid spending in almost each state, with poorer states receiving a higher percentage of federal funding. On average, state spending on Medicaid accounts in 2008 accounted for approximately 22% of total spending by the states. Medicaid provides coverage for more than 40% of non-elderly persons living in poverty and 25% of all children.

Medicaid is overseen by the Centers for Medicare and Medicaid Services (CMS), an agency within the United States Department of Health and Human Services. Although federal guidelines require all states to cover specific categories of people and types of benefits, each state administers its own Medicaid program. In each state, the program is administered by an agency designated by the governor as the state Medicaid agency. Most states have a traditional Medicaid program, as well as managed care plans.

Some people confuse the Medicaid program with Medicare, because both were established by federal statute and because there is some overlap in their purpose and beneficiary populations. Both Medicaid and Medicare provide health insurance to the low-income elderly and people with disabilities. Approximately 1 in 6 Medicare beneficiaries are "dual eligibles" who are enrolled in both programs. However, Medicare is purely a federal program, funded and administered at the federal level, in contrast to Medicaid's federal-state partnership.

Medicaid covers a variety of services. State Medicaid programs are required to cover mandatory services, such as physician and hospital services. Additionally, states may cover certain optional services, such as family therapy. Medicaid mental health benefits are covered through several mandatory and optional service categories, such as physician and psychologist services, outpatient services provided in hospitals and clinics, rehabilitation services, and personal care services. Although the states are required to provide mandatory services, the states have discretion in determining the duration and scope of coverage for services.

MFT Recognition in Medicaid

Federal rules allow for the use of MFTs as providers, but do not mandate recognition of MFTs. After many years of advocacy, approximately thirty-eight states now have at least some reimbursement or recognition of Family Therapists in their Medicaid programs. As the largest provider of mental health benefits in a state, comprehensive Medicaid recognition of MFTs is crucial to the success of the profession. The level of recognition is currently varied as many states have multiple Medicaid products and MFTs are covered by some Medicaid products and not others. In some states, MFTs and other Master's level providers can only receive Medicaid reimbursement if their services are performed in a clinic or other institutional setting.

Most states describe the details of their Medicaid services and provider qualifications in a Medicaid provider manual. An examination of this manual is usually the easiest way to determine which mental health benefits are offered and within which service category, and whether MFTs may provide these benefits. Most of these manuals are now available online. Since mental health and substance abuse benefits are provided through several service categories and different provider settings, it is important to examine the entire manual to determine if MFTs are eligible providers in all of the relevant service categories.

State Chart

MFT Recognition in State Medicaid Plans

Community Health Clinics
Physician Mental Health Clinics

State	MFTs included in Medicaid plans?	State	MFTs included in Medicaid plans?
Alaska	Partly	Montana	No
Alabama	Partly	North Carolina	Yes
Arkansas	Yes	North Dakota	No
Arizona	Partly	Nebraska	Yes
California	Yes	New Hampshire	Yes
Colorado	No	New Jersey	Yes
Connecticut	Yes	New Mexico	Yes
District of Columbia	No	Nevada	Yes
Delaware	Yes	New York	No
Florida	Yes	Ohio	Yes

Georgia	Yes	Oklahoma	Yes
Hawaii	Yes	Oregon	Yes
Iowa	Yes	Pennsylvania	No
Idaho	Yes	Rhode Island	Partly
Illinois	Yes	South Carolina	Yes
Indiana	Partly	South Dakota	No
Kansas	Yes	Tennessee	Yes
Kentucky	Partly	Texas	Partly
Louisiana	No	Utah	Yes
Massachusetts	Partly	Virginia	Yes
Maryland	Partly	Vermont	Yes
Maine	Yes	Washington	No
Michigan	No	Wisconsin	Yes
Minnesota	Yes	West Virginia	No
Missouri	No	Wyoming	Yes
Mississippi	No		

Based on data collected by AAMFT staff and reports from AAMFT division leaders. Data represents AAMFT's best estimate of the status of MFT recognition in Medicaid plans for each state. "Partly" means that some, but not all, Medicaid mental health programs, or Medicaid managed care plans recognize MFTs. Even plans that appear to broadly recognize MFTs might not recognize MFTs as providers in each service category or health plan. Since MFT status with these plans is subject to change, AAMFT does not guarantee that these plans will recognize MFTs.

SEHP Fact Sheet

All states offer some form of health benefits for eligible state employees and their dependents. Approximately 3.4 million state employees and retirees are covered by a state employee health plan. The AAMFT has developed the following fact sheet concerning these plans and the role of MFTs within these plans.

TherapistLocator

Over 15,000 marriage and family therapists are listed in TherapistLocator.net. The therapists are Clinical Members of the AAMFT, and as such must meet stringent training and education requirements established by the AAMFT. All AAMFT Clinical Members have agreed to abide by the AAMFT Code of Ethics. This Directory will assist you in locating a marriage and family therapist in your area. When seeking the services of a marriage and family therapist be sure to ask if your potential therapist is a Clinical Member of the AAMFT or look for the following logo identifying a Clinical Member of the AAMFT.

Visit the AAMFT TherapistLocator.net, a public service of the AAMFT. There you will find information about a range of problems facing today's families, and you can search for a qualified family therapist in your area.

read more >

Vendorship Fact Sheet

In a majority of states, MFTs have achieved recognition under state Freedom of Choice (Vendorship) and Any Willing Provider laws. These laws require certain health plans to reimburse MFTs for providing mental health services covered by the plan. The following fact sheet developed by AAMFT provides an overview of MFT recognition under these laws in each state.

Governor Sean Parnell
Governor of the State of Alaska
Juneau, Alaska

Dear Governor Sean Parnell,

I am writing to you on behalf of the Board of the Alaska Division of the American Association for Marriage and Family Therapy.

We have been a part of the Alaska Mental, Behavioral, and Family Health system for many years. Our profession is recognized throughout the United States and in Alaska. Alaska has its own licensing Board of Marriage and Family Therapy in the Division of Professional Licensing. Our scope of practice includes most all mental health issues with a specialized perspective involving relationships (AS 08.63.900(5)(A) (B)). From this perspective, our colleagues are trained and treat all manner of mental health issues from a systems approach/awareness.

It has come to our attention through colleagues and Department of Health and Human Services publications that Alaska has a significant decrease in mental health providers. It appears that the State paradigm overlooks available and capable therapists already within the State. This can easily be corrected by amending AS47.07.030 to include licensed marriage and family therapists (LMFTs) and by changing the Medicaid regulations to pay fee for services to those professionals acknowledged on AS47.07.030.

We implore you to support the necessary changes to include LMFTs. The following is based on our research and analysis of the issues:

- Psychologists and licensed clinical social workers (LCSWs) are already acknowledged.
- The reimbursement rate for LMFTs would be the same as LCSWs.
- If there was an increase of beneficiary services by LCSWs the fiscal impact would be the same as if LMFTs were added to the State Medicaid Provider List.
- There are already LMFTs in State granted programs that currently bill Medicaid for acknowledged services rendered. This margin appears to represent two-thirds of current LMFTs.

- Of the total number of LMFTs in Alaska, many would not elect to become providers for a variety of reasons. It could be due to low reimbursement rates, a large number of existing clients, paperwork hassle, etc. It would be good to know the percentage of total LCSWs who are Medicaid eligible. For instance, in one state that I looked at last month, only 24% of the total number of licensed professional counselors (LPCs), who are Medicaid eligible in this state, elected to participate in Medicaid. Many LMFTs will elect not to participate in Medicaid.

- Almost all of the LMFTs would be treating clients who would receive treatment anyway even if LMFTs were not in the plan. In other words, most MFT services would merely be in substitution for the services of another provider type. Russell Crane, Ph.D. at Brigham Young University describes this "substitution effect" in terms of MFT access to Medicare (see supplemental attachment). This study conservatively estimates the substitution effect at 50%. I could argue that this percentage would actually be higher than 50%.

- The administrative cost of adding LMFTs would be zero or very minimal. LMFTs would be performing the same services as LCSWs. There would not be expansion of Medicaid services, but merely the addition of a new profession that enrollees would be allowed to access.

- Also, according to State Statute AS21.36.090(d) it is unfair discrimination to a beneficiary of a group health insurance policy to exclude providers who are recognized State licensed providers, which includes LMFTs.

- In addition, the Governor's office has taken a stance against domestic violence (DV). The etiology of DV is complex, involving more than the issue of anger. The common thread in DV is relational conflict learned through multi-generational patterns. What professional therapist is better equipped to help with mental health/relational issues of DV than a LMFT.

Now is the time to fix this dilemma. The need is current, the problem is real, the desire to change is echoed throughout the State, and the fiscal impact is minimal compared to other more intrusive interventions that result without inclusion (e.g., law enforcement, hospitalization, court involvement, etc). Therefore, we of the Board of the Alaska Association for Marriage and Family Therapy encourage supporting any Bills or Regulation changes to avail all LMFTs to serve Medicaid Beneficiaries whether it be in an agency or private practice setting.

Re: SB118

To Senator Davis

I am a licensed Marriage and Family Therapist in the state of Alaska (Lic#- 235), and I have been a practicing therapist for 30 years both in Alaska and in Washington State. I am writing in support of SB118 which would reimburse LMFTs in Alaska for serving Medicaid clients. I currently work as an outpatient therapist at The Center in Homer with therapists who have MSW, LPA, LPC, designations, and I have found that we all have had a similar level of training and supervision. There isn't one type of therapy degree that is better, more rigorous, or more competent than another. By granting reimbursement to LMFTs, citizens of Alaska will be given a greater selection of competent therapists to choose from which will lead to better outcomes for all. Thank you for your support of this legislation.

Sincerely,

Bruce Bardwell, LMFT

Dear Senator Davis,

I am a licensed marriage and family therapist practicing in the Anchorage area for over 20 y ears. I am writing for your support to include me and my fellow marriage and family therapists in AS47.07.030. I feel that this will give the Medicaid recipients in Alaska seeking behavioral health services more choice and availability when their need is greatest. I also feel that it expresses parity among the licensed mental health providers.

Thank you so much for you interest and attention to this important legislation.

Dear Senator Bettye Davis,

It was nice to meet you and thank you personally for your sponsorship and support of HB118 recently at Baxter Elementary. We feel that it is important that our profession is recognized as one of the key providers of family therapy in Alaska. It is also important that our clientele who have Medicaid insurance have options when they are in need of mental health care. Due to the shortage of Medicaid providers available, they are often met with long waiting lists or in some cases fly to other locations in the state to receive care at an even greater cost.

Thank you for your support of HB118.

Sincerely,

Vicki Heinz LMFT

Attention: Senator Davis

Regarding: AS47.07.030.

First I want to thank you for authoring legislation that incorporates Licensed Marriage and Family Therapists As Eligible Medicaid Providers under Statute AS47.07.030. It is important that consumers have the right to choose from those Alaska licensed professionals who are qualified to provide the services they need.

Licensed Marriage and Family Therapists have been a part of the Alaska Mental Health System for many years. Our scope of practice includes treating most all mental health issues, as do Licensed Clinical Social Workers and Psychologists, who are already acknowledged in AS47.07.030.

From my experience of talking with prospective clients there is a shortage of Medicaid Eligible Mental Health Providers in the state. Since I am not authorized to see Medicaid clients I always try to refer those folks to qualified professionals who are authorized. I find this pool of available providers to be very small and I hear the frustration of those inquiring clients. Including LMFTs to the list of eligible Medicaid providers will help correct this shortage and better serve our Alaskan Mental Health Consumers.

Sincerely,

Mercy Dennis

Dear Senator Davis,

I am writing to you on behalf of the Board of the Alaska Division of the American Association for Marriage and Family Therapy and as a clinician.

I am the clinical supervisor for Cornerstone Clinic in Anchorage. For years we have been fighting the battle of not being able to see Medicaid clinics. We have pursued several psychiatrists with no success. We are unique clinic that includes family practice medical facility and a counseling center. Two years ago equipped a play therapy room to better serve children. We have two therapists who have received extra training in play therapy. Every week we turn away children who desperately could use our services because we cannot take Medicaid. These children are referred to agencies with waiting list and are eventually seen. The Medicaid dollar is being spent on many of these children, but unfortunately it takes our qualified therapists out of the loop because they don't choose to work for one the few agencies available to these clients.

Please seriously consider putting Marriage and Family Therapist on the Statute AS47.07.030.

Sincerely,

Linda R. King, LMFT

Subject: Include MFTs in SB118

Dear Senator Davis,

I am writing to support including Marriage and Family Therapists (MFTs) in the SB118 bill. I live in Ketchikan and am in graduate school to become a licensed marriage and family therapist in Alaska. There is such a need for holistic care of children, parents and couples here in Ketchikan and all over the state. Please include MFTs in the bill so everyone has the opportunity to access support for their family and relationships. Often times a child will be referred for services and progress will occur, however, the child is sent right back to the hurting environment of the family. Children, parents and couples need support as a group as well as individually. Please include MFTs in the SB118 bill to support Alaska's families.

On a side note. When choosing marriage and family therapy I was shocked that the masters program was 92 credit hours versus a masters in counseling psychology was only 52 credits. MFTs are the 'newest kid on the block' and have extensive training and supervision and have earned equal status within licensed mental health professionals.

Thank you for the work you do on behalf of Alaskan families,

3/10/11

Bettye Davis
Senator
Juneau, Alaska

Dear Senator Betty Davis,

Thank you for serving our community in Anchorage and this Great State of Alaska. Senator Stevens knows about this issue. Senator Stevens is informed and interested in this issue but as the President of the Senate does not believe that it is his role to present a bill at this time. The proposal is amending AS 47.07.030 to include Licensed Marriage Family Therapists to the list of eligible, viable professionals to serve Alaskans who are beneficiaries of Medicaid.

The problem is Medicaid and the current State Statutes and Regulations that avail Medicaid benefits. The problem is providers and not having enough of them who are willing to take Medicaid payments and demands. The problem is State Statutes that currently disqualify licensed professional therapist because of their license, though such licenses are recognized by the State of Alaska, but not recognized on a Statute "role call." The problem is State regulations that inhibit professional therapists from even being a candidate to serve Medicaid beneficiaries even if their name is on the "Statute role call list."

In October 2010, according a representative of the Department of Behavioral Health (D.B.H.) that there is a 28% decline in therapists throughout the State. When asked if that decline is due to funding the answer was no, rather due to the inability to find qualified therapists. The current system with the D.B.H. appears to exclusively serve agency recipients who qualify under their selective criteria. This process eliminates providers throughout the State that can fill the need.

I am a licensed Marriage Family Therapist in Kodiak. I came to Kodiak to direct / team lead a D.B.H. authorized agency. I was asked to come to integrate mental health and substance treatments. In March of 2009 I departed the agency and was led to start a private practice named Discovery Cove. Over the nearly two years I had multiple requests from constituents in Kodiak if I could see them for counseling. Their funding source was Medicaid. The consistent theme was these individuals did not want to go to the "only Medicaid service center in town." I explored avenues to be a Medicaid provider but to no avail. I was told on several occasions by D.B.H. that these constituents do have options...the single service center in town. To have only one place to be served is not an option.

In February 2010 Discovery Cove began the medicated assisted treatment (Suboxone) for those addicted to opiates. The efficacy of the program is in the collaboration of medication and psycho-social group / individual treatment. We are the only provider in Kodiak that is doing this treatment. The psychiatrist who serves Discovery Cove flies in monthly to serve these clients. The psycho-social groups occur twice a week for beginning clients and once a month for those in continuing care clients. To date we have served 23 clients. Discovery Cove can bill Medicaid for services with the psychiatrist but we cannot bill for services for the psycho-social groups and individual sessions, as they are conducted by licensed professionals not on the "roll call list." The D.B.H. approved agency refuses to do this treatment and even proclaims the treatment ineffective. The D.B.H. endorses the treatment and this year the State of Alaska Annual School of Addiction Conference theme is Rx Treatment, which I have been honored again as a guest speaker. Therefore, those constituents who are Medicaid beneficiaries who cannot afford "out-of-pocket" treatment are flown to Anchorage by Medicaid for their treatment.

The D.B.H. has informed me that Discovery Cove is the only private practice agency in the State of Alaska that is offering a comprehensive (physician / mental health) program for clients. I have tried to help other private practice facilities and agencies establish similar programs but they have not been able to duplicate what we have created. The week of Thanksgiving 2010 I received a telephone call from the Anchorage Neighborhood Health Clinic informing me that they were shutting down their Suboxone program for various reasons, none of which was the ineffectiveness of the treatment. I have been asked by several entities in Anchorage if I could come and create a treatment center, like Kodiak's Discovery Cove. I am courting the idea. The problem again is with treating the Medicaid beneficiaries. I already have a Licensed Professional Counseling (LPC) who is experienced in substance treatment, who is eager to help. I have been looking for offices near The People Mover stops. The need is great. There are few treatment providers and those in existence are already at their maximum capacity to receive clients. The Anchorage Neighborhood Health Clinic just let go of some 70 people this past year who were in their program. Opportunity to serve exists but the Statute and Regulation guidelines are thwarting that service. Even this week as we move forward to establishing another office in Alaska in the Anchorage area I have been receiving call throughout Alaska of people willing to fly in for services.

The issue that I am present does not exclusively affect Ken McCarty and Discovery Cove. I know of providers in Fairbanks, Talkeetna, Nome, Anchorage, and Juneau who are willing to be Medicaid providers but because of D.B.H. rules of being a private practice provider and/or having the "wrong" professional license they cannot serve. I believe that the 28% void of therapist can be easily filled without soliciting outside of Alaska. Over 2,000 years ago a saying was made of "the harvest is plentiful the workers are few, pray to the Lord of the harvest for more workers." It is my belief that just as in the case then as it is now that the issue is not that there are an insufficient amount of workers to help in the harvest rather restrictive paradigms that inhibit. I implore you to change the paradigm and unleash the workers.

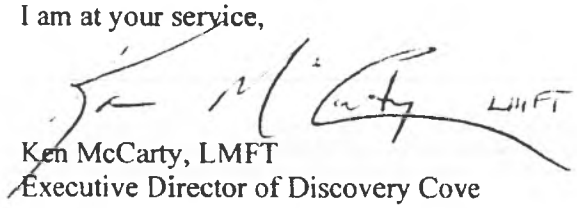
Necessity to resolve the lack of licensed mental health professionals:

- Amend Statute AS 47.07.030 to include licensed Marriage Family Therapists (LMFT) and Licensed Professional Counselors (LPC)
- Amend State of Alaska Medicaid Regulations to pay private providers who are acknowledged in the amended State Statute
- Amend the Department of Behavioral Health to acknowledge and be more provider friendly with private providers who are willing to receive Medicaid

- Allow for Fee for Service paradigms with allowance of multiple available providers in a given area thus availing true options and stimulation of healthy professionalism.

I have been blessed with a thriving private practice to serve and bring healing to the community of Kodiak. I am a provider for many managed care insurance programs. I am frequently solicited by the military to come provider services in Anchorage and Fairbanks. I am honored to serve those who have the means to pay and have done pro-bono work for those who cannot. I am honored to serve on the Governor Board of Marriage Family Therapists. And, as you have read, I am grieved by those Medicaid beneficiaries who are restricted to receive appropriate health services whether it be for mental health or substance treatment.

I am at your service,



Ken McCarty, LMFT
Executive Director of Discovery Cove
(9070) 487-2223

MAUREEN CHRISTENSEN, M.ED.

Licensed Marital and Family Therapist

April 7, 2011

Attention: Senator Davis
Senator Egan
Senator Ellis
Senator Meyer
Senator Dyson

Regarding: SB1118

Thank you for your support of SB118. Licensed Marriage and Family Therapists are qualified to be providers of mental health services for individuals and families who are Medicaid eligible.

I appreciate your support for this legislation.

Sincerely,

Maureen Christensen

Briefing: Consideration for Adding Licensed Marriage and Family Therapists As Eligible Medicaid Providers

Introduction

The Department of Health & Social Services is providing this brief in response to an inquiry received asking for the inclusion of Licensed Marriage and Family Therapists as providers eligible to render and bill for Medicaid funded services as independent practitioners.

Background

Currently, the **independent licensed** practitioners eligible by Statute to provide behavioral health services and directly bill Medicaid are:

- Physicians and advanced nurse practitioners - current regulations mandate that all services must be provided directly by the licensed professional
- PhD psychologists - services limited to testing and assessment services based on appropriate referrals
- Licensed clinical social workers (LCSW) - although included in Statute since 1991, funding has never been authorized; currently not a State Plan service.

Clinic providers approved to provide behavioral health services and bill Medicaid for are:

- Community mental health centers (CMHC) - must be approved grantees of the Division of Behavioral Health
- Physician mental health clinics - require the supervision of an on-site psychiatrist
- Rural health clinics and federally qualified health centers (FQHC) - allowed to bill for services provided by the federally mandated professionals: physicians, nurse practitioners, physician assistants, PhD psychologists, and LCSW's.
- Designated tribal outpatient clinics - limited to services provided directly by physicians, nurse practitioners and physician assistants.

Within the clinic categories listed above, Licensed Marriage and Family therapists are allowed to provide Medicaid services only in Community Mental Health Clinics or Physician Mental Health Clinics.

Issues

For years, the department has received requests to expand the scope of behavioral health services from individual practitioners, professional organizations and advocacy groups. These requests and the related issues below should be considered in this program expansion discussion:

1. Cost. Initial service cost projections and numbers of people served are included below.

2. Medicaid State Plan. Changes to the Medicaid program require submission of an Amendment to the State Plan for consideration and approval by CMS.

3. Program Coverage. When a new eligible provider group is added, regulations must be developed which outline scope of services, service definitions and documentation requirements, place of service requirements, service limits, service authorization requirements and rates.

4. Access to care. Addition of new or revised Medicaid benefits improves access to care for beneficiaries who have more options for care or more available service providers.

5. Medical Necessity. Coverage and services descriptions must support "medical necessity". The practice of marital and family therapy is defined as: "the diagnosis and treatment of mental and emotional disorders that are referenced in the standard diagnostic nomenclature for marital and family therapy, whether cognitive, affective, or behavioral, within the context of human relationships, particularly marital and family systems"[1]. Very often, the diagnostic codes referenced are the V-Codes[2] which describe factors influencing health status and are generally not approved diagnoses for Medicaid coverage. If the State were to revise the "medical necessity" definition to account for the scope of practice of LMFT's all other qualified behavioral health providers would also be eligible to similarly expand services. This would allow for the provision of services to recipients who do not currently qualify for services.

6. Medicaid Management Information System (MMIS). The MMIS must be redesigned.

7. Rates. The development of a rate methodology including a concurrent rate review is required.

8. Service Authorization/Service limits. If program coverage guidelines include service limits or the need for service authorization, the department must develop the clinical guidelines for use in approving services.

9. Staff. Whenever a program expansion or redesign occurs the State must assign staff to oversee the program design, development, and implementation, and to maintain on-going operations.

10. Workforce. One possible effect of adding a new provider group is the potential migration of employees from grant funded non-profit agencies to the private sector

[1] AS 08.63.900(5)
[2] Diagnostic and Statistical Manual of Mental Disorders, 4th Ed., Text Revision; Relational Problems (pg.736 – 743)

11. Eligible providers. A primary concern regarding the addition of a new provider type is the consequent inclusion of other licensed providers. As noted above, LCSW's have not been included as providers though they have requested coverage. Likewise psychologists have requested to expand the type of services they may provide. Independent physicians have requested the ability to bill for services provided under their direction by psychologists, LCSW's, LMFT's and licensed professional counselors (LPC). FQHC's have also requested the ability to add both LMFT's and LPC's as eligible practitioners. In general, approving one or more new licensed professional groups would in all likelihood stimulate other licensed professional groups to question why they were not considered.

12. Impacts to other initiatives. Any modifications to the State Medicaid Plan will affect and be affected by system related projects

13. Transportation/telemedicine. Changes in program coverage always have some impact on Medicaid transportation costs. Because savings in the transportation budget historically have not offset costs associated with new programs, transportation has generally not been used as a primary factor in support of new services. Medicaid coverage (with few exceptions) allows practitioner services to be provided via telemedicine. The department continues to support the use of telemedicine as an alternative to transportation whenever possible.

Impact and Cost Analysis

- DBH has established a prevalence rate of 25% of the population that has a need for a behavioral health service under the current "medical necessity" definition.
- In FY 10 approximately 120,000 individuals were eligible for Medicaid and approximately 23,000 Medicaid recipients received at least one behavioral health service.
- Based on the prevalence rate, about 30,000 Medicaid clients are actually in need of behavioral health services which indicates approximately 7,000 recipients have an unmet need.
- **If all licensed LMFT's (93) enrolled and increased their case load to serve 50 clients per year, they would serve 4,650 clients. At a rate of $1000 per recipient the increase in program costs would be $4,650,000.**

Conclusion

Based on the complicating factors listed and budget impact the department is not proposing the addition of LMFT's at this time.

Briefing: Consideration for Adding Licensed Marriage and Family Therapists As Eligible Medicaid Providers

Introduction

The Department of Health & Social Services is providing this brief in response to an inquiry received asking for the inclusion of Licensed Marriage and Family Therapists as providers eligible to render and bill for Medicaid funded services as independent practitioners.

Background

Currently, the **independent licensed** practitioners eligible by Statute to provide behavioral health services and directly bill Medicaid are:

- Physicians and advanced nurse practitioners - current regulations mandate that all services must be provided directly by the licensed professional
- PhD psychologists - services limited to testing and assessment services based on appropriate referrals
- Licensed clinical social workers (LCSW) - although included in Statute since 1991, funding has never been authorized; currently not a State Plan service.

Ken McCarty 1/31/11 7:22 PM
Comment: I hear from the psychologists in the State that currently they are being denied acknowledgement from Alaska Medicaid

Clinic providers approved to provide behavioral health services and bill Medicaid for are:

- Community mental health centers (CMHC) - must be approved grantees of the Division of Behavioral Health
- Physician mental health clinics - require the supervision of an on-site psychiatrist
- Rural health clinics and federally qualified health centers (FQHC) - allowed to bill for services provided by the federally mandated professionals: physicians, nurse practitioners, physician assistants, PhD psychologists, and LCSW's.
- Designated tribal outpatient clinics - limited to services provided directly by physicians, nurse practitioners and physician assistants.

Within the clinic categories listed above, Licensed Marriage and Family therapists are allowed to provide Medicaid services only in Community Mental Health Clinics or Physician Mental Health Clinics.

Issues

For years, the department has received requests to expand the scope of behavioral health services from individual practitioners, professional organizations and advocacy groups. These requests and the related issues below should be considered in this program expansion discussion:

1. Cost. Initial service cost projections and numbers of people served are included below.

2. Medicaid State Plan. Changes to the Medicaid program require submission of an Amendment to the State Plan for consideration and approval by CMS.

3. Program Coverage. When a new eligible provider group is added, regulations must be developed which outline scope of services, service definitions and documentation requirements, place of service requirements, service limits, service authorization requirements and rates.

4. Access to care. Addition of new or revised Medicaid benefits improves access to care for beneficiaries who have more options for care or more available service providers.

5. Medical Necessity. Coverage and services descriptions must support "medical necessity". The practice of marital and family therapy is defined as: "the diagnosis and treatment of mental and emotional disorders that are referenced in the standard diagnostic nomenclature for marital and family therapy, whether cognitive, affective, or behavioral, within the context of human relationships, particularly marital and family systems"[1]. Very often, the diagnostic codes referenced are the V-Codes[2] which describe factors influencing health status and are generally not approved diagnoses for Medicaid coverage. If the State were to revise the "medical necessity" definition to account for the scope of practice of LMFT's all other qualified behavioral health providers would also be eligible to similarly expand services. This would allow for the provision of services to recipients who do not currently qualify for services.

6. Medicaid Management Information System (MMIS). The MMIS must be redesigned.

7. Rates. The development of a rate methodology including a concurrent rate review is required.

8. Service Authorization/Service limits. If program coverage guidelines include service limits or the need for service authorization, the department must develop the clinical guidelines for use in approving services.

9. Staff. Whenever a program expansion or redesign occurs the State must assign staff to oversee the program design, development, and implementation, and to maintain on-going operations.

Ken McCarty ..., 1/31/11 7:35 PM
Comment: This is already in existence.

Ken McCarty ..., 1/31/11 7:23 PM
Comment: This statement is inaccurate. MFT's can diagnose most all DSM nomenclature. V-Codes are not acceptable for Medicaid but they are not the only diagnostic code MFT's use. In fact I rarely use them for my clients, as many are not V-code clients. There is no desire to change the "Medical Necessity." This comment is a distractive statement with the appearance to illicit fear and confusion rather then truth!

Ken McCarty ..., 1/31/11 5:31 PM
Comment: This comment too seems with error as new providers do not alter a data base. If it is referring to AKAIMS that data base system is considered a joke in the provider community and is a waste of tax payers money. Those who support it are the ones who are getting paid by the State.

Ken McCarty ..., 1/31/11 7:25 PM
Comment: There is no need for a special rate review. A CPT code of 90806 is the same for all providers / clinicians

Ken McCarty ..., 1/31/11 7:30 PM
Comment: This is another inaccurate statement. Current Medicaid leaves an open ended number of client sessions for Community Mental Health Centers and does not question the potential gouging of the system. For a private provider referral is based on success and success is based on healing and limited time needed for counseling.

Ken McCarty ..., 1/31/11 7:34 PM
Comment: The State already has people doing these things. This is not requiring a major development of a bureaucratic agency

[1] AS 08.63.900(5)
[2] Diagnostic and Statistical Manual of Mental Disorders, 4th Ed., Text Revision; Relational Problems (pg.736 – 743)

10. Workforce. One possible effect of adding a new provider group is the potential migration of employees from grant funded non-profit agencies to the private sector

11. Eligible providers. A primary concern regarding the addition of a new provider type is the consequent inclusion of other licensed providers. As noted above, LCSW's have not been included as providers though they have requested coverage. Likewise psychologists have requested to expand the type of services they may provide. Independent physicians have requested the ability to bill for services provided under their direction by psychologists, LCSW's, LMFT's and licensed professional counselors (LPC). FQHC's have also requested the ability to add both LMFT's and LPC's as eligible practitioners. In general, approving one or more new licensed professional groups would in all likelihood stimulate other licensed professional groups to question why they were not considered.

12. Impacts to other initiatives. Any modifications to the State Medicaid Plan will affect and be affected by system related projects

13. Transportation/telemedicine. Changes in program coverage always have some impact on Medicaid transportation costs. Because savings in the transportation budget historically have not offset costs associated with new programs, transportation has generally not been used as a primary factor in support of new services. Medicaid coverage (with few exceptions) allows practitioner services to be provided via telemedicine. The department continues to support the use of telemedicine as an alternative to transportation whenever possible.

Ken McCarty 1/31/11 7:42 PM
Comment: Is this statement suggesting that the State's Medicaid is trying to control employee choices through fiscal threats? There are State supported agencies who are refusing to do State of the Industry treatment and keep therapists from providing those services that are Evidenced Based; and the employee compromises client treatment and their ethics due to a State assured paycheck. Availing Fee for Service places competency into competition which is a win / win with the loser being the agency who doesn't want to change and is expecting the entitlement of the State.

Ken McCarty 1/31/11 7:44 PM
Comment: This is a "Baby with the Bathwater Statement." LCSW's, LMFT's, and LPC's are already recognized to be paid by Medicaid when in an State authorized agency. The proposal is to recognize them in private practice settings too.

Ken McCarty 1/31/11 7:48 PM
Comment: Physicians are under scrutiny and value their privileged license. Telemedicine is a too as exception but behavioral health / substance client care has been best accomplished through one-on-one evaluation and update. I do telemedicine with my clients and the psychiatrist when he is not available, but there are things he cannot assess on a screen compared to in person.

Ken McCarty 2/1/11 9:00 PM
Comment: MFT's are already working for Medicaid accepted agencies. There are currently 78 licensed MFT's, which is a reduction of 17 from last year...due to license fee increase. Not all private practice MFT's are interested in the bureaucratic paperwork of Medicaid. Therefore, the calculation suggested are greatly exaggerated. I am doing a data search to determine how many current private practice MFT's exist to suggest a calculation.

Impact and Cost Analysis

- DBH has established a prevalence rate of 25% of the population that has a need for a behavioral health service under the current "medical necessity" definition.
- In FY 10 approximately 120,000 individuals were eligible for Medicaid and approximately 23,000 Medicaid recipients received at least one behavioral health service.
- Based on the prevalence rate, about 30,000 Medicaid clients are actually in need of behavioral health services which indicates approximately 7,000 recipients have an unmet need.
- **If all licensed LMFT's (93) enrolled and increased their case load to serve 50 clients per year, they would serve 4,650 clients. At a rate of $1000 per recipient the increase in program costs would be $4,650,000.**

Conclusion

Based on the complicating factors listed and budget impact the department is not proposing the addition of LMFT's at this time.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 119

Analysis

SB 119 creates a new program within the Department of Commerce, Community and Economic Development for the professional licensing of Athletic Trainers.

Current language in the bill states that the biennial fee for a license may not exceed $100. According to the sponsor, about 45 Athletic Trainers will require licensing which calculates to $4,500 biennially. However, under AS 08.01.065, the program will be required to cover its costs with licensing fees. This will result in fees that are substantially higher than the $100 limit cited in the bill. The costs identified in this fiscal note will result in an initial biennial fee of $2,276 with subsequent biennial fees at $1,450.

The work of implementing and maintaining this program cannot be absorbed by the current licensing staff that are already 100 % allocated and saturated with the work of licensing other occupations. This fiscal note requests a part time Occupational Licensing Examiner (OLE) Range 13 to assist in developing and maintaining regulations, procedures and providing other licensing services. This fiscal note also includes Services costs for printing of applications, communications, advertising, legal and the initial IT costs to configure, program and implement the licensing program. Commodities costs consist of standard operating supplies.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 119\M

Analysis

This bill provides for regulation and licensure of athletic trainers by the Department of Commerce, Community and Economic Development under a new chapter in AS title 8. Under AS 44.64.030(a)(6), the office of administrative hearings (OAH) conducts hearings in licensing matters, including disciplinary actions, arising under AS title 8, and in some cases provides administrative law judges to serve as mediators in the cases. OAH does not anticipate that addition of this licensure category would increase the office's caseload or the cost of providing hearings for this function beyond OAH's capacity to handle the cases at currently approved staffing levels. The cost to OAH of performing the services would be recovered from the department through interagency receipts, based on the time commitment required for hearings and mediations.

CS FOR SENATE BILL NO. 119( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS MEYER, McGuire, Ellis, Menard

A BILL

FOR AN ACT ENTITLED

"An Act relating to athletic trainers."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 08.01.010 is amended by adding a new paragraph to read:

(39) regulation of athletic trainers under AS 08.07.

*** Sec. 2.** AS 08 is amended by adding a new chapter to read:

Chapter 07. Athletic Trainers.

Sec. 08.07.010. License required. (a) An individual may not practice or offer to practice athletic training, or allow another person to offer athletic training by the individual, in the state without being licensed under this chapter, unless the individual

(1) is a student in an accredited athletic trainer program;

(2) is present in the state for not more than 90 days for a specific athletic event or series of athletic events with an individual or group not based in the state; or

(3) is authorized to practice athletic training under another provision of Alaska law.

(b) This section does not prohibit a person licensed under another chapter of this title from performing functions defined as athletic training if those functions are within the scope of that person's license and the person does not use a title listed in (c) of this section.

(c) Unless licensed under this chapter, an individual may not use the titles "athletic trainer," "licensed athletic trainer," "A.T.," or any combination of those terms to indicate that the individual is a licensed athletic trainer.

Sec. 08.07.020. Qualifications for license; fee; renewal. (a) The department shall issue an athletic trainer license to an individual who

(1) applies to the department on a form provided by the department;

(2) pays the fees established by the department; and

(3) provides proof of certification by the National Athletic Trainers' Association Board of Certification, Inc.

(b) Notwithstanding AS 08.01.065, the biennial fee for a license may not exceed $100.

(c) An athletic trainer license may be renewed on proof of certification by the National Athletic Trainers' Association Board of Certification, Inc., and as provided in AS 08.01.100.

Sec. 08.07.030. Definition. In this chapter, "athletic training" means the treatment of an individual under the direction of a physician licensed under AS 08.64 to manage risk of injury and prevent injury, evaluate clinically, assess, and treat an individual's injury or illness, and rehabilitate and recondition that individual.

*** Sec. 3.** AS 09.65.300(c) is amended to read:

(c) In this section,

(1) "health care provider" means a state licensed physician, physician assistant, dentist, dental hygienist, osteopath, optometrist, chiropractor, registered nurse, practical nurse, nurse midwife, advanced nurse practitioner, naturopath, physical therapist, occupational therapist, marital and family therapist, psychologist, psychological associate, licensed clinical social worker, **athletic trainer,** or certified direct-entry midwife;

(2) "health care services" means services received by an individual in

order to treat or to prevent illness or injury;

(3) "nonprofit organization" means an organization that qualifies for exemption from taxation under 26 U.S.C. 501(c)(3) or (4) (Internal Revenue Code).

Senator Kevin Meyer
Senate District O

SPONSOR STATEMENT FOR SB 119

"An Act relating to the licensing and regulation of athletic trainers"

SB 119 would amend current statutes to establish licensing and regulation of athletic trainers in the State of Alaska.

Athletic Trainers are certified, health care professionals who practice in the field of sports medicine. This profession plays a significant role in the management, prevention, recognition and rehabilitation of injured athletes under the supervision of a licensed physician. As people become increasingly more active, athletic trainers are a vital resource in administering immediate emergency care as well as injury prevention and treatment programs.

The National Athletic Trainer's Association (NATA), which was founded in 1950, is the professional membership association for certified athletic trainers. According to NATA, Alaska is one of the few states that do not currently license athletic trainers. Should SB 119 pass, athletic trainers would be required to have a license to practice in the State of Alaska.

MEMORANDUM April 9, 2011

SUBJECT: Sectional summary of SB 119: licensing of athletic trainers (Work Order No. 27-LS0732\M)

TO: Senator Kevin Meyer
Attn: Christine Marasigan

FROM: Lisa Moritz Kirsch
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1 Adds athletic trainers to the list of occupations subject to regulation under chapter AS 08.01.

Section 2
Sec. 08.07.010 Requires a license to practice athletic training in Alaska unless you are a student in a training program, temporarily in state for an athletic event, or authorized to practice athletic training under another Alaska law. This section also limits the use of titles containing the terms "athletic trainer" or the abbreviation "A.T."

Sec 08.07.020 Sets out the general qualifications for a license, establishes a $100 cap on the biennial license fee, and invokes the procedure for renewal in AS 08.01.100.

Sec. 08.07.030 Authorizes the Department of Commerce, Community, and Economic Development to adopt regulations setting specific standards for licensing as an athletic trainer based on nationally recognized professional standards.

Sec. 08.07.040 Defines "athletic training."

Section 3 Adds athletic trainers to the list of practitioners who are immune to liability for civil damages when they provide free health care services, so long as the practitioner complies with the requirements of AS 09.65.300, and does not commit gross negligence, reckless misconduct, or intentional misconduct.

ATHLETIC TRAINING EDUCATION OVERVIEW

This document provides a brief overview of the education and credentialing process for entry-level athletic trainers. Athletic Training programs typically fall into three categories: a baccalaureate degree in Athletic Training; a baccalaureate degree with a major in athletic training; or graduate-level program with a major in athletic training. Academic programs are accredited by the Commission on Accreditation of Athletic Training Education (CAATE). The minimum entry point into the profession of Athletic Training is at the baccalaureate level; by 2014-2015, all accredited education programs in Athletic Training will lead to a degree in Athletic Training. Upon completion of a CAATE-accredited Athletic Training education program, students become eligible to obtain national certification granted by the NATA Board of Certification, Inc. (BOC).

ENTRY-LEVEL EDUCATION

Entry-level athletic training education uses a competency-based approach in both the classroom and clinical settings. Using a medical-based education model, Athletic Training students are educated to provide comprehensive preventive services and care in six domains of clinical practice: prevention; clinical evaluation and diagnosis; immediate care; treatment, rehabilitation and reconditioning; organization and administration; and professional responsibility. The educational requirements for CAATE-accredited Athletic Training Education Programs include not only cognitive (knowledge) and psychomotor (skill) content, but also a broad scope of foundational behaviors of professional practice, as well as a comprehensive clinical learning requirement that is embodied in the clinical proficiencies (professional, practice-oriented outcomes) as identified in the *Athletic Training Educational Competencies and Clinical Proficiencies*.

Students must receive formal instruction in the following specific subjects

Basic and Applied Sciences	Professional Content
• Human anatomy • Human physiology • Biology • Statistics and research design Rehabilitation • Exercise Physiology • Kinesiology/Biomechanics • Chemistry* • Physics* **Recommended but not required by some ATEP*	• Risk Management and Injury Prevention • Pathology of Injuries and Illnesses • Orthopedic Clinical Examination and Diagnosis • Medical Conditions and Disabilities • Acute Care of Injuries and Illnesses • Therapeutic Modalities • Conditioning, Rehabilitative Exercise & Pharmacology • Psychosocial Intervention and Referral • Nutritional Aspects of Injuries & Illnesses • Health Care Administration

CLINICAL EDUCATION

Students are required to participate in a minimum of two years of academic clinical education. Through these experiences, students gain clinical experiences associated with a variety of different patient populations defined but not limited to: gender, varying levels of risk, utilization of protective equipment, and general medical conditions (e.g. diabetes, asthma) that address the continuum of care.

Clinical experiences provide students with opportunities to practice, under the direct supervision of qualified Clinical Instructors (i.e., Certified Athletic Trainer [ATC®] or other credentialed health care professionals).

THE ATC® CREDENTIAL

The ATC® credential and the BOC requirements are currently recognized by 46 states for eligibility and/or regulation of the practice of athletic trainers. The credibility of the BOC program and the ATC® credential it awards are supported by three pillars: (1) the BOC certification examination; (2) the BOC Standards of Professional Practice, and Disciplinary Guidelines and Procedures; and (3) continuing competence (education) requirements.

BOC certification is recognized by the National Commission for Certifying Agencies and is the only accredited certification program for athletic trainers. To be certified, an individual must demonstrate that he/she is an athletic trainer capable of performing the required duties without threat of harm to the public. The BOC traditionally conducts annual examination development meetings during which certified athletic trainers and recognized experts in the science of athletic training develop, review and validate examination items and problems. The knowledge, skills, and abilities required for competent performance as an entry-level athletic trainer fall into three categories:

1. Understanding, applying, and analyzing;
2. Knowledge and decision-making;
3. Special performance abilities.

BOC certified athletic trainers are educated, trained and evaluated in six major practice domains:

1. Prevention
2. Clinical Evaluation and Diagnosis
3. Immediate Care
4. Treatment, Rehabilitation and Reconditioning
5. Organization and Administration
6. Professional Responsibility

***Standard** Definition includes prevention, education, recognition, evaluation, treatment and rehabilitation of an athletic injury or illness, and organization and administration of exercise, conditioning, and athletic training programs

States in **BOLD** have no statutory language.

F:data/governmentaffairs/StatesGovernmentAffairs Activity/

[12] Includes illness ("injuries or illnesses") and adds "sustained while participating in physical activity." Rehabilitating and physically reconditioning that 'impede or prevent the individual from returning to participation in physical acvitiiy, if the individual recently participated in, and intends to return to participating in, physical activity.'

ALASKA ATHLETIC TRAINERS ASSOCIATION

April 1st, 2011

Alaska Athletic Trainers Association
PO Box 872710
Wasilla, AK 99687

The Alaska Athletic Trainers Association, on behalf of Alaska athletic trainers, is working toward professional licensure in Alaska. Legislation will be introduced in the 2011 session with sponsorship by Senator Kevin Meyer.

- The language of the bill states that anyone calling themselves *an athletic trainer* must be licensed by the state of Alaska Division of Occupational Licensing.
- The requirements for licensure are exactly the same as those required by the Board of Certification. The BOC is the postgraduate certification program for the National Athletic Trainers Association. The state of Alaska will not add to the already rigorous requirements of the BOC.
- The fees imposed by the Alaska Division of Occupational Licensing are not cost prohibitive. They have given us a quote of $100.00 bi-annually ($50.00 a year to be licensed in Alaska).
- Alaska is one of only 3 states that does not license athletic trainers.
- Presently, athletic trainers are not covered by the Alaska Statue 09.65.300 *Immunity for Providing Free Health Care Services* (Alaska's version of *the Good Samaritan Law)*. This prevents athletic trainers from volunteering their services at schools, community or nonprofit events.

I support the role of the athletic trainer in Alaska and sign this document in support of licensure.

- The language of the bill states that anyone calling themselves *an athletic trainer* must be licensed by the state of Alaska Division of Occupational Licensing.
- The requirements for licensure are exactly the same as those required by the Board of Certification. The BOC is the postgraduate certification program for the National Athletic Trainers Association. The state of Alaska will not add to the already rigorous requirements of the BOC.
- The fees imposed by the Alaska Division of Occupational Licensing are not cost prohibitive. They have given us a quote of $100.00 bi-annually ($50.00 a year to be licensed in Alaska).
- Alaska is one of only 3 states that does not license athletic trainers.
- Presently, athletic trainers are not covered by the Alaska Statue 09.65.300 *Immunity for Providing Free Health Care Services* (Alaska's version of *the Good Samaritan Law)*. This prevents athletic trainers from volunteering their services at schools, community or nonprofit events.

I support the role of the athletic trainer in Alaska and sign this document in support of licensure.

- The language of the bill states that anyone calling themselves *an athletic trainer* must be licensed by the state of Alaska Division of Occupational Licensing.
- The requirements for licensure are exactly the same as those required by the Board of Certification. The BOC is the postgraduate certification program for the National Athletic Trainers Association. The state of Alaska will not add to the already rigorous requirements of the BOC.
- The fees imposed by the Alaska Division of Occupational Licensing are not cost prohibitive. They have given us a quote of $100.00 bi-annually ($50.00 a year to be licensed in Alaska).
- Alaska is one of only 3 states that does not license athletic trainers.
- Presently, athletic trainers are not covered by the Alaska Statue 09.65.300 *Immunity for Providing Free Health Care Services* (Alaska's version of *the Good Samaritan Law)*. This prevents athletic trainers from volunteering their services at schools, community or nonprofit events.

I support the role of the athletic trainer in Alaska and sign this document in support of licensure.

SPONSOR STATEMENT FOR SB 127

"An Act establishing September 9th each year as Fetal Alcohol Spectrum Disorders Awareness Day."

SB 127 would proclaim September 9th each year as Fetal Alcohol Spectrum Disorders Awareness Day (FASD).

Alaska has the highest known incidence of FASD in the United States. This is a condition caused by prenatal exposure to alcohol, which can result in permanent brain damage, birth defects, learning disabilities, behavioral problems and most tragically, the loss of individual potential.

While FASD affects all racial and socioeconomic groups, it is a 100% preventable condition. FASD Awareness Day is observed internationally on September 9th. This serves as a reminder on the ninth day of the ninth month of the year that during the nine months of pregnancy a woman should abstain from alcohol.

SB 127 would observe FASD Awareness Day by promoting the awareness of the effects of prenatal exposure to alcohol.

SB82

TEN THINGS YOU SHOULD KNOW ABOUT FAS

1. Drinking during pregnancy can cause permanent damage to a developing fetus.

2. FAS is one of the most common causes of mental retardation, and is the only cause that is entirely preventable.

3. According to recent State of Alaska DHSS surveillance data, more than 126 children are born at risk for FASD each year in Alaska.

4. Prenatal exposure to alcohol can cause brain damage and other permanent birth defects.

5. Obtaining an FAS diagnosis can improve an individual's ability to function in the world, and may reduce secondary disabilities like depression and school failure.

6. FASD is found in all races and all socio-economic groups – wherever women drink alcohol FASD exists.

7. There is no safe level of alcohol consumption during pregnancy.

8. Women should stop drinking prior to trying to conceive – alcohol can cause damage to a developing fetus even before a woman knows she is pregnant.

9. FASD is 100 percent preventable.

10. With the right diagnosis, support and understanding, many individuals with FASD are living happy and full lives.

Re: SB 127 — Fetal Alcohol Spectrum Disorders Awareness Day

Dear Senator Meyer,

The Advisory Board on Alcoholism and Drug Abuse and the Alaska Mental Health Board express their appreciation and support for SB 127 permanently establishing September 9 as Fetal Alcohol Spectrum Disorders Awareness Day each year. As you know, fetal alcohol spectrum disorders are 100% preventable. Raising awareness and recognition of this fact will help prevent more Alaskan children from being born affected by prenatal alcohol exposure.

Even more importantly, an annual day of FASD awareness and prevention will increase understanding of the special, and often very individual, needs of individuals diagnosed with fetal spectrum disorders. Too often the services and supports they need to thrive – at home, at school, and in their communities – are not available. By designating a day to focus on the unique issues of fetal alcohol spectrum disorders and their impact on Alaska, we can not only support Alaskans with FASD but also prevent future Alaskans from experiencing FASD.

Thank you for your continued work on this important issue.

Sincerely,

J. Kate Burkhart
Executive Director

Sponsor Statement

SB 134

SB 134 puts the Child Support Civil Rule 90.3 guidelines into statute. In 1987, the Alaska Supreme Court enacted Civil Rule 90.3. The Supreme Court admitted this was a substantive law that the Legislature could replace at any time. In the 25 years since then, the Legislature has not replaced civil rule 90.3 with an actual law. This bill proposes to correct that long-standing deficiency.

One of the major problems with having the child support guidelines set by a court rule is the people affected by current guidelines have not had the opportunity to speak to the individuals with the power to make changes. Instead every four years they are encouraged to write letters or testify before a review committee made up of lawyers and judges who then submit their recommendations to the Supreme Court Justices who make the final decisions. With the rule in statute, individuals will have the opportunity to speak to lawmakers who have the power to make changes. Proposals to amend can be made in the future through the legislative process.

The bill proposes enactment of the current rule into statute with the exception of how the child support obligation is calculated. Currently the non-custodial parent's support obligation is based solely on his or her income, without regard to what the other parent makes. With this bill it will be changed to an income shares model which calculates support as the share of each parent's income estimated allocation to the child, if the original household were intact.

According to 2005 statistics (Legislative Research Report, November 2010)

- Twenty four (24) states establish their child support guidelines statutorily through their legislature while 16 states use court rule only, and 11 states use a combination of rule, commission and or agency.
- Thirty five (35) states consider the income of both parents in determining child support payments.

35 States

SB 134 changes the word court to tribunal in some cases back to court and adds number (6) to definition in Sec. 25.28.300 (page 18) to read "tribunal" means the superior court or the child support services agency created in AS 25.27.010. It also includes changes made by SB 96 addressing medical support.

The Child Support Services Division has no objections to the bill. I would appreciate your prompt and favorable action on this bill.

A BILL

FOR AN ACT ENTITLED

"An Act relating to child support awards; repealing Rule 90.3, Alaska Rules of Civil Procedure; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 25 is amended by adding a new chapter to read:

Chapter 28. Child Support Awards.

Sec. 25.28.010. Guidelines; primary physical custody. (a) A tribunal shall calculate a child support award in a case in which one parent is awarded primary physical custody as an amount equal to the presumptive support obligation calculated under (d) of this section multiplied by the noncustodial parent's proportionate income share of combined monthly net income.

(b) To calculate the basic support obligation, the tribunal shall add together the monthly net income of both parents and determine the basic support obligation from the economic table as follows:

ECONOMIC TABLE

MONTHLY BASIC SUPPORT OBLIGATION
FOR EACH CHILD
KEY: A = AGE 0-11 B = AGE 12-18

COMBINED MONTHLY NET INCOME	ONE CHILD FAMILY		TWO CHILDREN FAMILY	
	A	B	A	B
For income less than $1,000, the obligation is based on the resources and living expenses of each household

(c) The economic table in (b) of this section is presumptive for up to five children and for combined monthly net incomes up to and including $12,000. When support is awarded for more than five children in the physical custody of one parent, the tribunal shall add the column for five children to the column equal to the additional children over five. When combined monthly net income exceeds $12,000, on written findings of fact, the tribunal may exceed the presumptive amount of support set for combined monthly net incomes of $12,000.

(d) The tribunal shall calculate a presumptive support obligation by adding average monthly expenditures for child health care expenses allowable under

AS 25.28.040 to the basic support obligation in (b) of this section.

(e) The tribunal may allow the obligor parent to reduce child support payments by up to 75 percent for a period in which the obligor parent has extended visitation of more than 27 consecutive days. The order must specify the amount of the reduction that is allowable if the extended visitation is exercised.

(f) The tribunal may calculate child support based on a determination of the potential income of a parent who voluntarily and unreasonably is unemployed or underemployed. A determination of potential income may not be made for a parent who is physically or mentally incapacitated or who is caring for a child under two years of age to whom the parents owe a joint legal responsibility. Potential income shall be based on the parent's work history, qualifications, and job opportunities. The tribunal may also consider potential income from assets that are not producing income or are producing low income.

(g) In this section, "monthly net income" means one-twelfth of the parent's total annual income from all sources less

(1) mandatory deductions, including

(A) federal, state, and local income tax;

(B) social security tax or the equivalent contribution to an alternate plan established by a public employer, and self-employment tax;

(C) Medicare tax;

(D) mandatory union dues;

(E) mandatory contributions to a retirement or pension plan;

(2) voluntary contributions to a retirement or pension plan or account in which the earnings are tax-free or tax-deferred, except that the total amount of these voluntary contributions plus any mandatory contributions under (1)(E) of this subsection may not exceed 7.5 percent of the parent's gross wages and self-employment income;

(3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid;

(4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; and

(5) work-related child care expenses for the child who is the subject of the child support order.

Sec. 25.28.020. Child support guidelines for shared, divided, and hybrid custody awards. (a) The tribunal shall calculate shared, divided, and hybrid physical custody awards as provided in this section.

(b) The tribunal shall calculate a child support award in a case in which the parents are awarded shared physical custody by

(1) calculating the annual amount each parent would pay to the other parent under AS 25.28.010 assuming the other parent had primary custody; in this calculation, the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d) apply;

(2) multiplying the amount determined under (1) of this subsection for each parent by the percentage of time the other parent has physical custody of the child; however, if the tribunal finds that the percentage of time each parent will have physical custody does not accurately reflect the ratio of funds each parent will directly spend on supporting the child, the tribunal shall vary this percentage to reflect its findings;

(3) determining which parent has the greater amount under (2) of this subsection; the parent with the greater amount under (2) of this subsection is the obligor parent, and the annual award is equal to the difference between the two amounts under (2) of this subsection; however, if the amount is greater than the amount of support calculated under AS 25.28.010 assuming the obligor parent has primary custody, the annual support is the amount calculated under AS 25.28.010.

(c) The child support award for shared custody under (b) of this section must be paid in 12 equal monthly installments, except that if

(1) shared custody is based on the obligor parent's having physical custody for periods of 30 consecutive days or more, the total annual award may be paid in equal installments over those months in which the obligor parent does not have physical custody; or

(2) the obligor parent's income is seasonal, the tribunal may order unequal monthly support payments as provided in AS 25.28.030(e) and (f).

(d) The child support order must state that failure to exercise sufficient physical custody to qualify for shared physical custody under (b) or (c) of this section is grounds for modification of the child support order. Denial of visitation by the custodial parent is not cause to increase a child support award.

(e) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded divided custody by determining the amount each parent would pay to the other parent for support of a child for whom that parent has primary physical custody under AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), and offsetting those amounts; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

(f) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded hybrid custody by

(A) applying AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), to determine support for a child in the primary physical custody of each parent;

(B) applying (b) of this section to determine support for a child in the shared physical custody of the parents;

(C) adjusting pro rata the percentages provided in AS 25.28.010(b) based on the number of children to which each type of custody applies; and

(D) combining the amounts to determine the net obligation; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

Sec. 25.28.030. Exceptions to support awards. (a) Notwithstanding the requirements in AS 25.28.010 and 25.28.020, the tribunal may vary the award for the reasons stated in this section.

(b) The tribunal may vary the child support award as calculated under the

other provisions of this chapter for good cause on proof by a preponderance of the evidence that manifest injustice would result if the support award were not varied. The tribunal shall specify in writing the reason for the variation, the amount of support that would have been required but for the variation, and the estimated value of any property conveyed instead of support calculated under the other provisions of this chapter. Good cause may include a finding that unusual circumstances exist that require variation of the award in order to award an amount of support that is just and proper for the parties to contribute toward the nurture and education of their children. The tribunal shall consider the custodial parent's income in this determination.

(c) The calculation for primary physical custody under AS 25.28.010 does not apply to the extent that the supporting parent has an annual net income of more than $105,000. The tribunal may make an additional award only if it is just and proper, taking into account the needs of the child, the standard of living of the child, and the extent to which that standard should reflect the supporting parent's ability to pay.

(d) Except as provided in AS 25.28.010(d) and 25.28.020, the minimum child support amount that may be ordered is $75 a month or $900 a year for one child and, for each additional child, $50 a month.

(e) If the noncustodial parent's income is seasonal, the tribunal may order that the annual support amount be paid in unequal monthly payments, with higher payments during the months the parent expects to receive higher income and lower payments in other months; the tribunal may not make an unequal payment order unless

(1) the tribunal finds that the burden of budgeting for periods of unequal income should be placed on the obligee rather than the obligor; and

(2) the obligee agrees.

(f) An order of the tribunal for unequal payments under (e) of this section must specify the annual support amount, the average monthly support amount, and the amount due for each month. The order must provide that variations from the average monthly amount begin with monthly payments in excess of the average monthly amount so that a deficit situation cannot occur. Until the excess payments begin, the tribunal shall order payment of the average monthly amount.

Sec. 25.28.040. Health care expenses. (a) The tribunal shall include in the

order coverage of the child's health care needs and require health insurance for the child if insurance is available to either parent or both parents at a reasonable cost. The tribunal shall consider whether the child is eligible for services through the Indian Health Service, any other entity, or other insurance coverage before ordering either parent or both parents to provide health care coverage through insurance, cash medical support, or other means. A court shall find that health insurance is available only if the dependent child has reasonable geographic access to the covered services or the insurance includes the coverage of transportation needed for the services.

(b) The tribunal shall allocate equally the cost of insurance between the parents unless the tribunal orders otherwise for good cause. An obligor's child support obligation shall be decreased by the amount of the obligee's portion of health insurance payments ordered by the tribunal and actually paid by the obligor. The tribunal shall increase a child support award by the obligor's portion of health insurance if the obligee is ordered to, and actually does, obtain and pay for insurance.

(c) The cost of insurance is the cost attributable to the child for whom support is paid. If the cost to the employee of covering the employee alone is the same as the cost to the employee of covering the employee and dependents, then there is no additional cost to the employee for adding the child and no portion of the cost of coverage may be allocated to the child. If dependent coverage can be added for a single cost, rather than for each dependent, and the dependent coverage covers dependents in addition to the child subject to the order, the cost of the dependent coverage shall be allocated equally among the dependents covered. If there is reason to believe that there is an incremental cost to the employee for insuring dependents but evidence of that incremental cost is unavailable, the cost of insurance is determined by dividing the total cost of coverage by the number of family members covered and multiplying that amount by the number of children subject to the order.

(d) The tribunal shall allocate equally between the parties the cost of reasonable health care expenses not covered by insurance unless the tribunal orders otherwise for good cause. A party shall reimburse the other party for the party's share of the uncovered health care expenses within 30 days after receipt of the bill for the health care, payment verification, and, if applicable, a health insurance statement

indicating what portion of the cost is uncovered. The tribunal shall allocate the reasonable, uncovered health care expenses exceeding $5,000 in a calendar year based on the parties' relative financial circumstances when the expenses occur.

(e) For the purpose of establishing a monthly support obligation for monthly health care expenses, a tribunal shall apply a rebuttable presumption that the cost of health insurance is reasonable under this section if the cost of purchasing health insurance does not exceed five percent of the responsible parent's net income.

(f) In this section,

(1) "cash medical support" means an amount ordered to be paid toward the cost of health insurance provided by a public entity or by another parent through employment or otherwise, or for other health care expenses not covered by insurance;

(2) "health care expenses" includes medical, dental, vision, and mental health counseling expenses.

Sec. 25.28.050. Child support affidavit and documentation. (a) Subject to the confidentiality requirements of Rule 90.1(f), Alaska Rules of Civil Procedure, each parent in a proceeding of a tribunal at which child support is involved shall file a statement under oath, accompanied by documentation verifying the statement, that states the parent's monthly net income and the components of monthly net income as defined in AS 25.28.010. This statement and documentation must be filed with a party's initial pleading in superior court, including the dissolution petition, divorce complaint or answer, motion to modify, and any response to a motion to modify. The documents must be redacted to delete social security numbers and to provide only partial financial account information as provided in Rule 90.1(f), Alaska Rules of Civil Procedure. The statement must state whether the parent has access to health insurance for the children and, if so, the additional cost to the parent of the children's health insurance.

(b) While there is an ongoing monthly support obligation, each party shall provide to the other party, within 30 days after a written request, documents such as tax returns and pay stubs showing the party's income for the prior calendar year. The party making the request shall provide documentation of the party's annual income for the same period at the time the request is made. A request under this section may not

be made more than once a year. This section does not preclude discovery under the Alaska Rules of Civil Procedure.

(c) Unless the information has already been provided to the tribunal under Rule 90.1(f), Alaska Rules of Civil Procedure, a statement under (a) of this section must be accompanied by a confidential information sheet as described in Rule 90.1, Alaska Rules of Civil Procedure. Once a complete confidential information sheet has been submitted to the tribunal listing names, dates of birth, and social security numbers as required, the parties shall omit or redact social security numbers from documents subsequently filed in the action unless otherwise ordered by the tribunal.

(d) The tribunal may withhold or assess costs or attorney fees for a violation of this section as the circumstances and discouragement of like conduct in the future may require. Costs and attorney fees may be imposed on offending attorneys or parties.

Sec. 25.28.060. Travel expenses. After determining an award of child support under this chapter, the court shall allocate between the parties reasonable travel expenses that are necessary to exercise visitation as may be just and proper for the parties to contribute.

Sec. 25.28.070. Modification; defense against arrearages. (a) A tribunal may modify a final child support award on a showing of a material change of circumstances as provided by state law. A material change of circumstances shall be presumed if support as calculated under this chapter is more than 15 percent greater or less than the outstanding support order. An award may be modified to require cash medical support regardless of whether insurance is available to either parent if neither parent has purchased health insurance. In this subsection, "support" includes health insurance payments or cash medical support made under AS 25.28.040.

(b) A tribunal may not modify a child support arrearage retroactively, except as authorized by AS 25.27.166(d). A modification that is effective on or after the date that a motion for modification, or a notice of petition for modification by the child support services agency, is served on the opposing party is not considered a retroactive modification.

(c) The tribunal may find that a parent and a parent's assignee are precluded

from collecting arrearages for support of a child that accumulated during a time period exceeding two months for which the parent agreed or acquiesced to the obligor exercising primary custody of the child. A finding that preclusion is a defense must be based on clear and convincing evidence.

Sec. 25.28.080. Third-party custody. (a) When the state, or another third party entitled to child support, has custody of all children of a parent, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d). If the third party has custody of some but not all children, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d) for the total number of the parent's children in third-party custody and divided by the total number of the parent's children. In this subsection, the number of the parent's children includes only children of the parent who live with the parent, are substantially supported by the parent, or are in custody of the third party entitled to support.

(b) If, in addition to a support obligation to a third party, one or both parents retain primary or shared physical custody of at least one of their children, the support obligation between the parents is calculated under the other provisions of this chapter, without consideration of the third-party custodian or any children in the custody of the third-party custodian, except that the parent's prorated presumptive support obligation under AS 25.28.010(d) must be adjusted pro rata for the number of children in the primary custody of a parent, or shared custody of the parents, compared to the total number of children. After that calculation is completed, any support owed may be offset with support owed to a third-party custodian under (a) of this section in order to minimize transactions.

Sec. 25.28.090. Dependent tax deduction. The court may allocate the dependent tax deduction for each child between the parties as is just and proper and in the child's best interests. The allocation must be consistent with AS 25.24.152 and federal law.

Sec. 25.28.095. Review of guidelines. The child support services agency established in AS 25.27.010 shall notify the legislative committees with jurisdiction

over matters involving child support awards of the need for a compliance review of the guidelines established in this chapter every four years as provided in federal law. The compliance review must include a determination of whether the application of the guidelines consistently results in a determination of appropriate child support awards in the state.

Sec. 25.28.300. Definitions. In this chapter,

(1) "child support" and "child support obligation" have the meaning given "duty of support" in AS 25.27.900;

(2) "divided custody" means that one parent has primary physical custody of one or more children of the relationship and the other parent has primary custody of one or more other children of the relationship, and the parents do not share physical custody of any of their children;

(3) "hybrid custody" means that at least one parent has primary physical custody of one or more children of the relationship, and the parents have shared physical custody of at least one child of the relationship;

(4) "primary physical custody" or "primary custody" means that a child resides with the other parent for a period, specified in the custody order, of less than 25 percent of the year;

(5) "shared physical custody" or "shared custody" means that a child resides with one parent for a period, specified in writing in the custody order, of at least 25 percent but not more than 75 percent of the year, regardless of the status of legal custody;

(6) "tribunal" means the superior court or the child support services agency created in AS 25.27.010.

*** Sec. 2.** AS 47.10.120(a) is amended to read:

(a) When a child in need of aid is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the child. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL

PROCEDURE].

*** Sec. 3.** AS 47.12.230(a) is amended to read:

(a) When a delinquent minor is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the minor. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPEAL OF COURT RULE. Rule 90.3, Alaska Rules of Civil Procedure, is repealed.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NONAPPLICABILITY OF TWO-THIRDS VOTE REQUIREMENT. Because the rule repealed in sec. 4 of this Act is a substantive rule rather than a rule of practice or procedure, the repeal of the rule takes effect even if sec. 4 of this Act does not receive the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; CHILD SUPPORT SERVICES AGENCY. The child support services agency established in AS 25.27.010 may proceed to adopt regulations necessary to implement the changes made by AS 25.28, enacted by sec. 1 of this Act, but the regulations may not take effect before the effective date of sec. 1 of this Act.

*** Sec. 7.** Section 6 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 8.** Except as provided in sec. 7 of this Act, this Act takes effect July 1, 2013.

CS FOR SENATE BILL NO. 134( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY ~~SENATOR KOOKESH~~

~~Introduced~~Offered:
Referred:

Sponsor(s): SENATOR KOOKESH

A BILL

FOR AN ACT ENTITLED

"An Act relating to child support awards; ~~and~~ repealing Rule 90.3, Alaska Rules of Civil Procedure; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 25 is amended by adding a new chapter to read:

Chapter 28. Child Support Awards.

Sec. 25.28.010. Guidelines; primary physical custody. (a) A tribunal shall calculate a child support award in a case in which one parent is awarded primary physical custody as an amount equal to the presumptive support obligation calculated under (d) of this section multiplied by the noncustodial parent's proportionate income share of combined monthly net income.

(b) To calculate the basic support obligation, the tribunal shall add together the monthly net income of both parents and determine the basic support obligation from the economic table as follows:

ECONOMIC TABLE

MONTHLY BASIC SUPPORT OBLIGATION
FOR EACH CHILD
KEY: A = AGE 0-11 B = AGE 12-18

COMBINED MONTHLY NET INCOME	ONE CHILD FAMILY		TWO CHILDREN FAMILY	
	A	B	A	B
For income less than $1,000, the obligation is based on the resources and living expenses of each household				
1,000	220	272	171	211
1,100	242	299	188	232
1,200	264	326	205	253
1,300	285	352	221	274
1,400	307	379	238	294
1,500	327	404	254	313
1,600	347	428	269	333
1,700	367	453	285	352
1,800	387	478	300	371
1,900	407	503	316	390
2,000	427	527	331	409
2,100	447	552	347	429
2,200	467	577	362	448
2,300	487	601	378	467
2,400	506	626	393	486
2,500	526	650	408	505

(c) The economic table in (b) of this section is presumptive for up to five children and for combined monthly net incomes up to and including $12,000. When support is awarded for more than five children in the physical custody of one parent, the tribunal shall add the column for five children to the column equal to the additional children over five. When combined monthly net income exceeds $12,000, on written findings of fact, the tribunal may exceed the presumptive amount of support set for combined monthly net incomes of $12,000.

(d) The tribunal shall calculate a presumptive support obligation by adding average monthly expenditures for child health care expenses allowable under

AS 25.28.040 to the basic support obligation in (b) of this section.

(e) The tribunal may allow the obligor parent to reduce child support payments by up to 75 percent for a period in which the obligor parent has extended visitation of more than 27 consecutive days. The order must specify the amount of the reduction that is allowable if the extended visitation is exercised.

(f) The tribunal may calculate child support based on a determination of the potential income of a parent who voluntarily and unreasonably is unemployed or underemployed. A determination of potential income may not be made for a parent who is physically or mentally incapacitated or who is caring for a child under two years of age to whom the parents owe a joint legal responsibility. Potential income shall be based on the parent's work history, qualifications, and job opportunities. The tribunal may also consider potential income from assets that are not producing income or are producing low income.

(g) In this section, "monthly net income" means one-twelfth of the parent's total annual income from all sources less

(1) mandatory deductions, including

(A) federal, state, and local income tax;

(B) social security tax or the equivalent contribution to an alternate plan established by a public employer, and self-employment tax;

(C) Medicare tax;

(D) mandatory union dues;

(E) mandatory contributions to a retirement or pension plan;

(2) voluntary contributions to a retirement or pension plan or account in which the earnings are tax-free or tax-deferred, except that the total amount of these voluntary contributions plus any mandatory contributions under (1)(E) of this subsection may not exceed 7.5 percent of the parent's gross wages and self-employment income;

(3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid;

(4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; and

(5) work-related child care expenses for the child who is the subject of the child support order.

Sec. 25.28.020. Child support guidelines for shared, divided, and hybrid custody awards. (a) The tribunal shall calculate shared, divided, and hybrid physical custody awards as provided in this section.

(b) The tribunal shall calculate a child support award in a case in which the parents are awarded shared physical custody by

(1) calculating the annual amount each parent would pay to the other parent under AS 25.28.010 assuming the other parent had primary custody; in this calculation, the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d) apply;

(2) multiplying the amount determined under (1) of this subsection for each parent by the percentage of time the other parent has physical custody of the child; however, if the tribunal finds that the percentage of time each parent will have physical custody does not accurately reflect the ratio of funds each parent will directly spend on supporting the child, the tribunal shall vary this percentage to reflect its findings;

(3) determining which parent has the greater amount under (2) of this subsection; the parent with the greater amount under (2) of this subsection is the obligor parent, and the annual award is equal to the difference between the two amounts under (2) of this subsection; however, if the amount is greater than the amount of support calculated under AS 25.28.010 assuming the obligor parent has primary custody, the annual support is the amount calculated under AS 25.28.010.

(c) The child support award for shared custody under (b) of this section must be paid in 12 equal monthly installments, except that if

(1) shared custody is based on the obligor parent's having physical custody for periods of 30 consecutive days or more, the total annual award may be paid in equal installments over those months in which the obligor parent does not have physical custody; or

(2) the obligor parent's income is seasonal, the tribunal may order unequal monthly support payments as provided in AS 25.28.030(e) and (f).

(d) The child support order must state that failure to exercise sufficient physical custody to qualify for shared physical custody under (b) or (c) of this section is grounds for modification of the child support order. Denial of visitation by the custodial parent is not cause to increase a child support award.

(e) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded divided custody by determining the amount each parent would pay to the other parent for support of a child for whom that parent has primary physical custody under AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), and offsetting those amounts; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

(f) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded hybrid custody by

(A) applying AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), to determine support for a child in the primary physical custody of each parent;

(B) applying (b) of this section to determine support for a child in the shared physical custody of the parents;

(C) adjusting pro rata the percentages provided in AS 25.28.010(b) based on the number of children to which each type of custody applies; and

(D) combining the amounts to determine the net obligation; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

Sec. 25.28.030. Exceptions to support awards. (a) Notwithstanding the requirements in AS 25.28.010 and 25.28.020, the tribunal may vary the award for the reasons stated in this section.

(b) The tribunal may vary the child support award as calculated under the

other provisions of this chapter for good cause on proof by a preponderance of the evidence that manifest injustice would result if the support award were not varied. The tribunal shall specify in writing the reason for the variation, the amount of support that would have been required but for the variation, and the estimated value of any property conveyed instead of support calculated under the other provisions of this chapter. Good cause may include a finding that unusual circumstances exist that require variation of the award in order to award an amount of support that is just and proper for the parties to contribute toward the nurture and education of their children. The tribunal shall consider the custodial parent's income in this determination.

(c) The calculation for primary physical custody under AS 25.28.010 does not apply to the extent that the supporting parent has an annual net income of more than $105,000. The tribunal may make an additional award only if it is just and proper, taking into account the needs of the child, the standard of living of the child, and the extent to which that standard should reflect the supporting parent's ability to pay.

(d) Except as provided in AS 25.28.010(d) and 25.28.020, the minimum child support amount that may be ordered is $75 a month or $900 a year for one child and, for each additional child, $50 a month.

(e) If the noncustodial parent's income is seasonal, the tribunal may order that the annual support amount be paid in unequal monthly payments, with higher payments during the months the parent expects to receive higher income and lower payments in other months; the tribunal may not make an unequal payment order unless

(1) the tribunal finds that the burden of budgeting for periods of unequal income should be placed on the obligee rather than the obligor; and

(2) the obligee agrees.

(f) An order of the tribunal for unequal payments under (e) of this section must specify the annual support amount, the average monthly support amount, and the amount due for each month. The order must provide that variations from the average monthly amount begin with monthly payments in excess of the average monthly amount so that a deficit situation cannot occur. Until the excess payments begin, the tribunal shall order payment of the average monthly amount.

Sec. 25.28.040. Health care expenses. (a) The tribunal shall include in the

order coverage of the child's health care needs and require health insurance for the child if insurance is available to either parent or both parents at a reasonable cost. The tribunal shall consider whether the child is eligible for services through the Indian Health Service, any other entity, or other insurance coverage before ordering either parent or both parents to provide health care coverage through insurance, cash medical support, or other means. A court shall find that health insurance is available only if the dependent child has reasonable geographic access to the covered services or the insurance includes the coverage of transportation needed for the services.

(b) The tribunal shall allocate equally the cost of insurance between the parents unless the tribunal orders otherwise for good cause. An obligor's child support obligation shall be decreased by the amount of the obligee's portion of health insurance payments ordered by the tribunal and actually paid by the obligor. The tribunal shall increase a child support award by the obligor's portion of health insurance if the obligee is ordered to, and actually does, obtain and pay for insurance.

(c) The cost of insurance is the cost attributable to the child for whom support is paid. If the cost to the employee of covering the employee alone is the same as the cost to the employee of covering the employee and dependents, then there is no additional cost to the employee for adding the child and no portion of the cost of coverage may be allocated to the child. If dependent coverage can be added for a single cost, rather than for each dependent, and the dependent coverage covers dependents in addition to the child subject to the order, the cost of the dependent coverage shall be allocated equally among the dependents covered. If there is reason to believe that there is an incremental cost to the employee for insuring dependents but evidence of that incremental cost is unavailable, the cost of insurance is determined by dividing the total cost of coverage by the number of family members covered and multiplying that amount by the number of children subject to the order.

(d) The tribunal shall allocate equally between the parties the cost of reasonable health care expenses not covered by insurance unless the tribunal orders otherwise for good cause. A party shall reimburse the other party for the party's share of the uncovered health care expenses within 30 days after receipt of the bill for the health care, payment verification, and, if applicable, a health insurance statement

indicating what portion of the cost is uncovered. The tribunal shall allocate the reasonable, uncovered health care expenses exceeding $5,000 in a calendar year based on the parties' relative financial circumstances when the expenses occur.

~~(~~e(e) For the purpose of establishing a monthly support obligation for monthly health care expenses, a tribunal shall apply a rebuttable presumption that the cost of health insurance is reasonable under this section if the cost of purchasing health insurance does not exceed five percent of the responsible parent's net income.

(f) In this section,

(1) "cash medical support" means an amount ordered to be paid toward the cost of health insurance provided by a public entity or by another parent through employment or otherwise, or for other health care expenses not covered by insurance;

(2) "health care expenses" includes medical, dental, vision, and mental health counseling expenses.

Sec. 25.28.050. Child support affidavit and documentation. (a) Subject to the confidentiality requirements of Rule 90.1(f), Alaska Rules of Civil Procedure, each parent in a proceeding of a tribunal at which child support is involved shall file a statement under oath, accompanied by documentation verifying the statement, that states the parent's monthly net income and the components of monthly net income as defined in AS 25.28.010. This statement and documentation must be filed with a party's initial pleading in superior court, including the dissolution petition, divorce complaint or answer, motion to modify, and any response to a motion to modify. The documents must be redacted to delete social security numbers and to provide only partial financial account information as provided in Rule 90.1(f), Alaska Rules of Civil Procedure. The statement must state whether the parent has access to health insurance for the children and, if so, the additional cost to the parent of the children's health insurance.

(b) While there is an ongoing monthly support obligation, each party shall provide to the other party, within 30 days after a written request, documents such as tax returns and pay stubs showing the party's income for the prior calendar year. The party making the request shall provide documentation of the party's annual income for the same period at the time the request is made. A request under this section may not

be made more than once a year. This section does not preclude discovery under the Alaska Rules of Civil Procedure. ~~If a party has made a reasonable demand for documentation under this subsection, a tribunal may modify a child support arrearage retroactively.~~

(c) Unless the information has already been provided to the tribunal under Rule 90.1(f), Alaska Rules of Civil Procedure, a statement under (a) of this section must be accompanied by a confidential information sheet as described in Rule 90.1, Alaska Rules of Civil Procedure. Once a complete confidential information sheet has been submitted to the tribunal listing names, dates of birth, and social security numbers as required, the parties shall omit or redact social security numbers from documents subsequently filed in the action unless otherwise ordered by the tribunal.

(d) The tribunal may withhold or assess costs or attorney fees for a violation of this section as the circumstances and discouragement of like conduct in the future may require. Costs and attorney fees may be imposed on offending attorneys or parties.

Sec. 25.28.060. Travel expenses. After determining an award of child support under this chapter, the court shall allocate between the parties reasonable travel expenses that are necessary to exercise visitation as may be just and proper for the parties to contribute.

Sec. 25.28.070. Modification; defense against arrearages. (a) A tribunal may modify a final child support award on a showing of a material change of circumstances as provided by state law. A material change of circumstances shall be presumed if support as calculated under this chapter is more than 15 percent greater or less than the outstanding support order. An award may be modified to require cash medical support regardless of whether insurance is available to either parent if neither parent has purchased health insurance. In this subsection, "support" includes health insurance payments or cash medical support made under AS 25.28.040.

(b) A tribunal may not modify a child support arrearage retroactively, except as authorized by AS 25.27.166(d~~) and AS 25.28.050(b).~~). A modification that is effective on or after the date that a motion for modification, or a notice of petition for modification by the child support services agency, is served on the opposing party is

not considered a retroactive modification.

(c) The tribunal may find that a parent and a parent's assignee are precluded from collecting arrearages for support of a child that accumulated during a time period exceeding two months for which the parent agreed or acquiesced to the obligor exercising primary custody of the child. A finding that preclusion is a defense must be based on clear and convincing evidence.

Sec. 25.28.080. Third-party custody. (a) When the state, or another third party entitled to child support, has custody of all children of a parent, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d). If the third party has custody of some but not all children, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d) for the total number of the parent's children in third-party custody and divided by the total number of the parent's children. In this subsection, the number of the parent's children includes only children of the parent who live with the parent, are substantially supported by the parent, or are in custody of the third party entitled to support.

(b) If, in addition to a support obligation to a third party, one or both parents retain primary or shared physical custody of at least one of their children, the support obligation between the parents is calculated under the other provisions of this chapter, without consideration of the third-party custodian or any children in the custody of the third-party custodian, except that the parent's prorated presumptive support obligation under AS 25.28.010(d) must be adjusted pro rata for the number of children in the primary custody of a parent, or shared custody of the parents, compared to the total number of children. After that calculation is completed, any support owed may be offset with support owed to a third-party custodian under (a) of this section in order to minimize transactions.

Sec. 25.28.090. Dependent tax deduction. The court may allocate the dependent tax deduction for each child between the parties as is just and proper and in the child's best interests. The allocation must be consistent with AS 25.24.152 and federal law.

Sec. 25.28.095. Review of guidelines. The child support services agency established in AS 25.27.010 shall notify the legislative committees with jurisdiction over matters involving child support awards of the need for a compliance review of the guidelines established in this chapter every four years as provided in federal law. The compliance review must include a determination of whether the application of the guidelines consistently results in a determination of appropriate child support awards in the state.

Sec. 25.28.300. Definitions. In this chapter,

(1) "child support" and "child support obligation" have the meaning given "duty of support" in AS 25.27.900;

(2) "divided custody" means that one parent has primary physical custody of one or more children of the relationship and the other parent has primary custody of one or more other children of the relationship, and the parents do not share physical custody of any of their children;

(3) "hybrid custody" means that at least one parent has primary physical custody of one or more children of the relationship, and the parents have shared physical custody of at least one child of the relationship;

(4) "primary physical custody" or "primary custody" means that a child resides with the other parent for a period, specified in the custody order, of less than 25 percent of the year;

(5) "shared physical custody" or "shared custody" means that a child resides with one parent for a period, specified in writing in the custody order, of at least 25 percent but not more than 75 percent of the year, regardless of the status of legal custody;

(6) "tribunal" means the superior court or the child support services agency created in AS 25.27.010.

*** Sec. 2.** AS 47.10.120(a) is amended to read:

(a) When a child in need of aid is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in

full or in part the maintenance and care of the child. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 3.** AS 47.12.230(a) is amended to read:

(a) When a delinquent minor is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the minor. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPEAL OF COURT RULE. Rule 90.3, Alaska Rules of Civil Procedure, is repealed.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NONAPPLICABILITY OF TWO-THIRDS VOTE REQUIREMENT. Because the rule repealed in sec. 4 of this Act is a substantive rule rather than a rule of practice or procedure, the repeal of the rule takes effect even if sec. 4 of this Act does not receive the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: CHILD SUPPORT SERVICES AGENCY. The child support services agency established in AS 25.27.010 may proceed to adopt regulations necessary to implement the changes made by AS 25.28, enacted by sec. 1 of this Act, but the regulations may not take effect before the effective date of sec. 1 of this Act.

*** Sec. 7.** Section 6 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 8.** Except as provided in sec. 7 of this Act, this Act takes effect July 1, 2013.

SENATE BILL NO. 134

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY SENATOR KOOKESH

Introduced: 1/17/12
Referred: Health and Social Services, Judiciary

A BILL

FOR AN ACT ENTITLED

"An Act relating to child support awards; and repealing Rule 90.3, Alaska Rules of Civil Procedure."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 25 is amended by adding a new chapter to read:

Chapter 28. Child Support Awards.

Sec. 25.28.010. Guidelines; primary physical custody. (a) A tribunal shall calculate a child support award in a case in which one parent is awarded primary physical custody as an amount equal to the presumptive support obligation calculated under (d) of this section multiplied by the noncustodial parent's proportionate income share of combined monthly net income.

(b) To calculate the basic support obligation, the tribunal shall add together the monthly net income of both parents and determine the basic support obligation from the economic table as follows:

ECONOMIC TABLE

MONTHLY BASIC SUPPORT OBLIGATION
FOR EACH CHILD
KEY: A = AGE 0-11 B = AGE 12-18

COMBINED MONTHLY NET INCOME	ONE CHILD FAMILY		TWO CHILDREN FAMILY	
	A	B	A	B
For income less than $1,000, the obligation is based on the resources and living expenses of each household

(c) The economic table in (b) of this section is presumptive for up to five children and for combined monthly net incomes up to and including $12,000. When support is awarded for more than five children in the physical custody of one parent, the tribunal shall add the column for five children to the column equal to the additional children over five. When combined monthly net income exceeds $12,000, on written findings of fact, the tribunal may exceed the presumptive amount of support set for combined monthly net incomes of $12,000.

(d) The tribunal shall calculate a presumptive support obligation by adding average monthly expenditures for child health care expenses allowable under

AS 25.28.040 to the basic support obligation in (b) of this section.

(e) The tribunal may allow the obligor parent to reduce child support payments by up to 75 percent for a period in which the obligor parent has extended visitation of more than 27 consecutive days. The order must specify the amount of the reduction that is allowable if the extended visitation is exercised.

(f) The tribunal may calculate child support based on a determination of the potential income of a parent who voluntarily and unreasonably is unemployed or underemployed. A determination of potential income may not be made for a parent who is physically or mentally incapacitated or who is caring for a child under two years of age to whom the parents owe a joint legal responsibility. Potential income shall be based on the parent's work history, qualifications, and job opportunities. The tribunal may also consider potential income from assets that are not producing income or are producing low income.

(g) In this section, "monthly net income" means one-twelfth of the parent's total annual income from all sources less

(1) mandatory deductions, including

(A) federal, state, and local income tax;

(B) social security tax or the equivalent contribution to an alternate plan established by a public employer, and self-employment tax;

(C) Medicare tax;

(D) mandatory union dues;

(E) mandatory contributions to a retirement or pension plan;

(2) voluntary contributions to a retirement or pension plan or account in which the earnings are tax-free or tax-deferred, except that the total amount of these voluntary contributions plus any mandatory contributions under (1)(E) of this subsection may not exceed 7.5 percent of the parent's gross wages and self-employment income;

(3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid;

(4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; and

(5) work-related child care expenses for the child who is the subject of the child support order.

Sec. 25.28.020. Child support guidelines for shared, divided, and hybrid custody awards. (a) The tribunal shall calculate shared, divided, and hybrid physical custody awards as provided in this section.

(b) The tribunal shall calculate a child support award in a case in which the parents are awarded shared physical custody by

(1) calculating the annual amount each parent would pay to the other parent under AS 25.28.010 assuming the other parent had primary custody; in this calculation, the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d) apply;

(2) multiplying the amount determined under (1) of this subsection for each parent by the percentage of time the other parent has physical custody of the child; however, if the tribunal finds that the percentage of time each parent will have physical custody does not accurately reflect the ratio of funds each parent will directly spend on supporting the child, the tribunal shall vary this percentage to reflect its findings;

(3) determining which parent has the greater amount under (2) of this subsection; the parent with the greater amount under (2) of this subsection is the obligor parent, and the annual award is equal to the difference between the two amounts under (2) of this subsection; however, if the amount is greater than the amount of support calculated under AS 25.28.010 assuming the obligor parent has primary custody, the annual support is the amount calculated under AS 25.28.010.

(c) The child support award for shared custody under (b) of this section must be paid in 12 equal monthly installments, except that if

(1) shared custody is based on the obligor parent's having physical custody for periods of 30 consecutive days or more, the total annual award may be paid in equal installments over those months in which the obligor parent does not have physical custody; or

(2) the obligor parent's income is seasonal, the tribunal may order unequal monthly support payments as provided in AS 25.28.030(e) and (f).

(d) The child support order must state that failure to exercise sufficient physical custody to qualify for shared physical custody under (b) or (c) of this section is grounds for modification of the child support order. Denial of visitation by the custodial parent is not cause to increase a child support award.

(e) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded divided custody by determining the amount each parent would pay to the other parent for support of a child for whom that parent has primary physical custody under AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), and offsetting those amounts; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

(f) The tribunal shall

(1) calculate a child support award in a case in which the parents are awarded hybrid custody by

(A) applying AS 25.28.010, taking into account the income limit in AS 25.28.030(c) and the minimum support amount in AS 25.28.030(d), to determine support for a child in the primary physical custody of each parent;

(B) applying (b) of this section to determine support for a child in the shared physical custody of the parents;

(C) adjusting pro rata the percentages provided in AS 25.28.010(b) based on the number of children to which each type of custody applies; and

(D) combining the amounts to determine the net obligation; and

(2) consider whether the amount determined under (1) of this subsection should be varied under AS 25.28.030(b).

Sec. 25.28.030. Exceptions to support awards. (a) Notwithstanding the requirements in AS 25.28.010 and 25.28.020, the tribunal may vary the award for the reasons stated in this section.

(b) The tribunal may vary the child support award as calculated under the

other provisions of this chapter for good cause on proof by a preponderance of the evidence that manifest injustice would result if the support award were not varied. The tribunal shall specify in writing the reason for the variation, the amount of support that would have been required but for the variation, and the estimated value of any property conveyed instead of support calculated under the other provisions of this chapter. Good cause may include a finding that unusual circumstances exist that require variation of the award in order to award an amount of support that is just and proper for the parties to contribute toward the nurture and education of their children. The tribunal shall consider the custodial parent's income in this determination.

(c) The calculation for primary physical custody under AS 25.28.010 does not apply to the extent that the supporting parent has an annual net income of more than $105,000. The tribunal may make an additional award only if it is just and proper, taking into account the needs of the child, the standard of living of the child, and the extent to which that standard should reflect the supporting parent's ability to pay.

(d) Except as provided in AS 25.28.010(d) and 25.28.020, the minimum child support amount that may be ordered is $75 a month or $900 a year for one child and, for each additional child, $50 a month.

(e) If the noncustodial parent's income is seasonal, the tribunal may order that the annual support amount be paid in unequal monthly payments, with higher payments during the months the parent expects to receive higher income and lower payments in other months; the tribunal may not make an unequal payment order unless

(1) the tribunal finds that the burden of budgeting for periods of unequal income should be placed on the obligee rather than the obligor; and

(2) the obligee agrees.

(f) An order of the tribunal for unequal payments under (e) of this section must specify the annual support amount, the average monthly support amount, and the amount due for each month. The order must provide that variations from the average monthly amount begin with monthly payments in excess of the average monthly amount so that a deficit situation cannot occur. Until the excess payments begin, the tribunal shall order payment of the average monthly amount.

Sec. 25.28.040. Health care expenses. (a) The tribunal shall include in the

order coverage of the child's health care needs and require health insurance for the child if insurance is available to either parent or both parents at a reasonable cost. The tribunal shall consider whether the child is eligible for services through the Indian Health Service, any other entity, or other insurance coverage before ordering either parent or both parents to provide health care coverage through insurance, cash medical support, or other means. A court shall find that health insurance is available only if the dependent child has reasonable geographic access to the covered services or the insurance includes the coverage of transportation needed for the services.

(b) The tribunal shall allocate equally the cost of insurance between the parents unless the tribunal orders otherwise for good cause. An obligor's child support obligation shall be decreased by the amount of the obligee's portion of health insurance payments ordered by the tribunal and actually paid by the obligor. The tribunal shall increase a child support award by the obligor's portion of health insurance if the obligee is ordered to, and actually does, obtain and pay for insurance.

(c) The cost of insurance is the cost attributable to the child for whom support is paid. If the cost to the employee of covering the employee alone is the same as the cost to the employee of covering the employee and dependents, then there is no additional cost to the employee for adding the child and no portion of the cost of coverage may be allocated to the child. If dependent coverage can be added for a single cost, rather than for each dependent, and the dependent coverage covers dependents in addition to the child subject to the order, the cost of the dependent coverage shall be allocated equally among the dependents covered. If there is reason to believe that there is an incremental cost to the employee for insuring dependents but evidence of that incremental cost is unavailable, the cost of insurance is determined by dividing the total cost of coverage by the number of family members covered and multiplying that amount by the number of children subject to the order.

(d) The tribunal shall allocate equally between the parties the cost of reasonable health care expenses not covered by insurance unless the tribunal orders otherwise for good cause. A party shall reimburse the other party for the party's share of the uncovered health care expenses within 30 days after receipt of the bill for the health care, payment verification, and, if applicable, a health insurance statement

indicating what portion of the cost is uncovered. The tribunal shall allocate the reasonable, uncovered health care expenses exceeding $5,000 in a calendar year based on the parties' relative financial circumstances when the expenses occur.

(e) In this section,

(1) "cash medical support" means an amount ordered to be paid toward the cost of health insurance provided by a public entity or by another parent through employment or otherwise, or for other health care expenses not covered by insurance;

(2) "health care expenses" includes medical, dental, vision, and mental health counseling expenses.

Sec. 25.28.050. Child support affidavit and documentation. (a) Subject to the confidentiality requirements of Rule 90.1(f), Alaska Rules of Civil Procedure, each parent in a proceeding of a tribunal at which child support is involved shall file a statement under oath, accompanied by documentation verifying the statement, that states the parent's monthly net income and the components of monthly net income as defined in AS 25.28.010. This statement and documentation must be filed with a party's initial pleading in superior court, including the dissolution petition, divorce complaint or answer, motion to modify, and any response to a motion to modify. The documents must be redacted to delete social security numbers and to provide only partial financial account information as provided in Rule 90.1(f), Alaska Rules of Civil Procedure. The statement must state whether the parent has access to health insurance for the children and, if so, the additional cost to the parent of the children's health insurance.

(b) While there is an ongoing monthly support obligation, each party shall provide to the other party, within 30 days after a written request, documents such as tax returns and pay stubs showing the party's income for the prior calendar year. The party making the request shall provide documentation of the party's annual income for the same period at the time the request is made. A request under this section may not be made more than once a year. This section does not preclude discovery under the Alaska Rules of Civil Procedure. If a party has made a reasonable demand for documentation under this subsection, a tribunal may modify a child support arrearage retroactively.

(c) Unless the information has already been provided to the tribunal under Rule 90.1(f), Alaska Rules of Civil Procedure, a statement under (a) of this section must be accompanied by a confidential information sheet as described in Rule 90.1, Alaska Rules of Civil Procedure. Once a complete confidential information sheet has been submitted to the tribunal listing names, dates of birth, and social security numbers as required, the parties shall omit or redact social security numbers from documents subsequently filed in the action unless otherwise ordered by the tribunal.

(d) The tribunal may withhold or assess costs or attorney fees for a violation of this section as the circumstances and discouragement of like conduct in the future may require. Costs and attorney fees may be imposed on offending attorneys or parties.

Sec. 25.28.060. Travel expenses. After determining an award of child support under this chapter, the court shall allocate between the parties reasonable travel expenses that are necessary to exercise visitation as may be just and proper for the parties to contribute.

Sec. 25.28.070. Modification; defense against arrearages. (a) A tribunal may modify a final child support award on a showing of a material change of circumstances as provided by state law. A material change of circumstances shall be presumed if support as calculated under this chapter is more than 15 percent greater or less than the outstanding support order. An award may be modified to require cash medical support regardless of whether insurance is available to either parent if neither parent has purchased health insurance. In this subsection, "support" includes health insurance payments or cash medical support made under AS 25.28.040.

(b) A tribunal may not modify a child support arrearage retroactively, except as authorized by AS 25.27.166(d) and AS 25.28.050(b). A modification that is effective on or after the date that a motion for modification, or a notice of petition for modification by the child support services agency, is served on the opposing party is not considered a retroactive modification.

(c) The tribunal may find that a parent and a parent's assignee are precluded from collecting arrearages for support of a child that accumulated during a time period exceeding two months for which the parent agreed or acquiesced to the obligor

exercising primary custody of the child. A finding that preclusion is a defense must be based on clear and convincing evidence.

Sec. 25.28.080. Third-party custody. (a) When the state, or another third party entitled to child support, has custody of all children of a parent, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d). If the third party has custody of some but not all children, the parent's support obligation to the third party is an amount equal to the parent's prorated presumptive support obligation specified in AS 25.28.010(d) for the total number of the parent's children in third-party custody and divided by the total number of the parent's children. In this subsection, the number of the parent's children includes only children of the parent who live with the parent, are substantially supported by the parent, or are in custody of the third party entitled to support.

(b) If, in addition to a support obligation to a third party, one or both parents retain primary or shared physical custody of at least one of their children, the support obligation between the parents is calculated under the other provisions of this chapter, without consideration of the third-party custodian or any children in the custody of the third-party custodian, except that the parent's prorated presumptive support obligation under AS 25.28.010(d) must be adjusted pro rata for the number of children in the primary custody of a parent, or shared custody of the parents, compared to the total number of children. After that calculation is completed, any support owed may be offset with support owed to a third-party custodian under (a) of this section in order to minimize transactions.

Sec. 25.28.090. Dependent tax deduction. The court may allocate the dependent tax deduction for each child between the parties as is just and proper and in the child's best interests. The allocation must be consistent with AS 25.24.152 and federal law.

Sec. 25.28.300. Definitions. In this chapter,

(1) "child support" and "child support obligation" have the meaning given "duty of support" in AS 25.27.900;

(2) "divided custody" means that one parent has primary physical

custody of one or more children of the relationship and the other parent has primary custody of one or more other children of the relationship, and the parents do not share physical custody of any of their children;

(3) "hybrid custody" means that at least one parent has primary physical custody of one or more children of the relationship, and the parents have shared physical custody of at least one child of the relationship;

(4) "primary physical custody" or "primary custody" means that a child resides with the other parent for a period, specified in the custody order, of less than 25 percent of the year;

(5) "shared physical custody" or "shared custody" means that a child resides with one parent for a period, specified in writing in the custody order, of at least 25 percent but not more than 75 percent of the year, regardless of the status of legal custody;

(6) "tribunal" means the superior court or the child support services agency created in AS 25.27.010.

* **Sec. 2.** AS 47.10.120(a) is amended to read:

(a) When a child in need of aid is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the child. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

* **Sec. 3.** AS 47.12.230(a) is amended to read:

(a) When a delinquent minor is committed under this chapter, the court or the child support services agency created in AS 25.27.010 shall, after giving the parent a reasonable opportunity to be heard, require that the parent pay to the department in a manner that the court or the child support services agency directs a sum to cover in full or in part the maintenance and care of the minor. The support obligation shall be calculated under **AS 25.28** [RULE 90.3(i) OF THE ALASKA RULES OF CIVIL PROCEDURE].

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPEAL OF COURT RULE. Rule 90.3, Alaska Rules of Civil Procedure, is repealed.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

NONAPPLICABILITY OF TWO-THIRDS VOTE REQUIREMENT. Because the rule repealed in sec. 4 of this Act is a substantive rule rather than a rule of practice or procedure, the repeal of the rule takes effect even if sec. 4 of this Act does not receive the two-thirds majority vote of each house required by art. IV, sec. 15, Constitution of the State of Alaska.

(Revised 11/17/2011 OMB)

Analysis

SB 134 will repeal Civil Rule 90.3, the court rule that contains the current child support guidelines, and replace it with a new chapter in the statutes setting out the method for calculating child support awards. The formula for calculating the amount to be awarded will change from the current "percentage of income" approach, in which a set percentage of the non-custodial parent's income is presumed to be the appropriate support amount, to an "income shares" approach, in which a set dollar amount that depends on the parents' incomes is the presumptive support obligation. The bill also makes other changes to the current method for establishing the appropriate support amounts.

Under AS 25.14.170(b), the adoption of child support award guidelines or a significant amendment to guidelines is a material change in circumstances such that a party to an existing order would have grounds to seek modification of that order. The Child Support Services Division (CSSD) has estimated that it is enforcing about 20,000 child support orders, and an additional unknown number of court orders are in existence in which the parties opted not to use the CSSD for enforcement. It is estimated that 10,000 modification requests could be made after the bill takes effect; about half of the requests (5,000) are likely to be handled by the CSSD directly without court involvement, and about half (5,000) could come to the court for consideration and resolution.

The Court System estimates that, on average, each of the predicted 5,000 requests for modification of child support orders would require three hours of a judge's time to consider and resolve. The motions are expected to be filed by parties over a two-year period following the effective date of the bill. To handle these motions, the court will hire 3.8 temporary (pro tem) judges (NPP FTE), as well as 3.8 (NPP FTE) court clerks to assist those judges with paperwork and case management during FY 13 and FY 14. The court allocated these positions to the different court locations based on the prior two fiscal years' statistics that show where similar motions have been filed statewide. The personal service costs for these pro tem judges who will be assigned to the courts with the highest predicted number of these motions amounts to $760,000 for each of the two years, as shown on page three.

In addition, the pro tem judges and clerks will be required to travel to other courts locations to handle the motions in the courts in which the parties file them; it is estimated that travel costs would amount to $63,000 for each of the two years.

Finally, the court's Family Law Self-Help Center, which is the court's free statewide service to help people represent themselves in family law cases, anticipates that the number of requests for assistance would rise significantly, requiring two additional full-time temporary facilitators for each year over a two-year period.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB134

Analysis

SB 134 will establish Alaska child support guidelines in statute and repeal the court Civil Rule 90.3 child support guidelines. The bill changes child support calculation formulas from the current percentage approach that only takes into account the non-custodial parent's income to an income shares model that considers the income of both parents. Additionally, the bill increases the minimum support amount required of the non-custodial parent and decreases the percentage of time required for a finding of shared custody.

AS 25.24.170(b) and AS 25.27.190(e) consider the adoption, enactment or significant modification to the guidelines a material change of circumstance for the purpose of a modification of the order. This would allow the custodial or non-custodial parents to request a modification of their existing order(s). 45 CFR 303.8(e) requires a modification to be completed 180 days from receipt of the request. Failure to meet this requirement could result in the loss of federal funds. There are approximately 20,000 child support orders that would be eligible for modification. The division conservatively anticipates 10,000 modification requests will be submitted in the first six months. The modification section currently completes an estimated 3,000 modifications/year with a staff of 14. The anticipated increase in modification requests and the increased time required to perform the calculations will require 24 non-permanent staff. The five permanent staff will be needed because of the additional work required to determine the awards under the income shares approach.

Every four years as required by 45 CFR 302.56(e) the state must review the guidelines and revise if appropriate. Currently this is done by the Supreme Court. If the guidelinse are placed in statute then another process would be required to satisfy this requirement.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 134

Analysis

SB 134 will establish Alaska child support guidelines in statute and repeal the court Civil Rule 90.3 child support guidelines. The bill changes child support calculation formulas from the current percentage approach that only takes into account the non-custodial parent's income to an income shares model that considers the income of both parents. Additionally, the bill increases the minimum support amount required of the non-custodial parent and decreases the percentage of time required for a finding of shared custody.

AS 25.24.170(b) and AS 25.27.190(e) consider the adoption, enactment or significant modification to the guidelines a material change of circumstance for the purpose of a modification of the order. This would allow custodial and non-custodial parents to request a modification of their existing order(s). Federal law, 45 CFR 303.8(e), requires the Child Support Services Division (CSSD) to complete modification requests within 180 days from receipt of the request. CSSD could lose significant federal funds if it cannot meet this requirement. CSSD estimates it is enforcing approximately 20,000 child support orders that would be eligible for modification. CSSD conservatively anticipates 10,000 modification requests will be submitted in the first six months, with about ½ of the requests on court orders. The Attorney General's Office, Collections & Support Unit, represents CSSD in court when the agency requests modification of a court-issued child support order. The Collections & Support Section currently processes about 700 modification requests a year with 3.5 attorneys. The anticipated increase in modification requests from 700 to 5,000 in one year will require non-permanent positions of 12.5 attorneys, 2 paralegals, and 5 support positions to meet the anticipated initial demand.

LEGISLATIVE RESEARCH REPORT

NOVEMBER 22, 2010

REPORT NUMBER 11.076

CHILD SUPPORT GUIDELINES IN OTHER STATES

PREPARED FOR SENATOR ALBERT KOOKESH

BY TIM SPENGLER, LEGISLATIVE ANALYST

You were interested in child support guidelines in other states. Specifically, you wanted to know if other states codify their child support guidelines in statute. Additionally, you wanted to know how many states consider the income of *both* parents when deciding child support payment amounts. Briefly, about half of the states have established guidelines in statute, and most (35) states take into consideration both parents' incomes when deciding child support award amounts.[1]

Background on Federal Guidance and Mandates

Historically, the rationale and methodology behind calculating child support payments developed differently across the country's legal jurisdictions.[2] As a result, divorcing couples and their children were subject to child support award processes that were often amorphous and inconsistent, which often times led to inadequate financial support from the obligor parent (the payer of the support). In the 1930s, recognizing that federal entitlement programs for the impoverished were being burdened by the victims of insufficient support awards, the federal government began providing guidance to the states. Federal involvement through legislation increased over subsequent years, culminating in the Child Support Enforcement Amendments of 1984 (P.L. 98-378), the Family Support Act of 1988 (P.L. 100-485), and subsequent amendments to those laws, which collectively provide the child support mandates under which modern state child support guidelines have been developed.

States comply with federal mandates through the adoption of child support guidelines in statue, regulation, court rule, or some combination of the three. The federal mandates seek to address the problems of earlier child support regimes by accomplishing the following four main goals:

---

[1] Much of the background information in this report was taken from a previous report from our agency.

[2] Information in this section is summarized from Laura W. Morgan, "Child Support Guidelines," National Legal Research Group, 1999; accessed through the FindLaw online library at *http://library.findlaw.com/1999/Jan/1/241469.html#consistent*. Ms. Morgan served as the Chair of the Child Support Committee of the Family Law Section of the American Bar Association from 1997 to 2003. She maintains the website "Support Guidelines.com" (*http://www.supportguidelines.com/*), which provides extensive information on child support matters.

(1) increase the adequacy of child support awards;

(2) increase the consistency and predictability of child support awards;

(3) increase compliance through perceived fairness of child support awards; and

(4) increase the ease of administration of child support cases.

Pursuant to federal regulations, at a minimum, state guidelines must accomplish the following:

- Consider all earnings and income of the absent parent;
- Be based on specific descriptive and numeric criteria and result in the computation of the support obligation;
- Provide for the health care needs of the children, through health insurance coverage or other means; and
- Provide that in any judicial or administrative proceeding for the award of child support, there shall be a rebuttable presumption that the amount of the award, which would result from the application of the state's guideline, is the correct amount of child support to be awarded.[3]

Under federal law, the child support awards resulting from state guidelines enjoy a "rebuttable presumption" of correctness. That is, in order to deviate from the guideline amounts, the party challenging the award must establish that the application of the guideline is somehow unreasonable or unjust to their particular circumstances. Courts also must extensively record and justify deviation from the guidelines.

States with Child Support Guidelines in Statue

According to the National Conference of State Legislatures, the following 24 states establish their child support guidelines statutorily through their legislatures: California, Colorado, Florida, Georgia, Illinois, Kentucky, Louisiana, Maine, Maryland, Minnesota, Mississippi, Nevada, New Hampshire, New Mexico, New York, Ohio, Oklahoma, South Dakota, Texas, Utah, Virginia, Washington, West Virginia, and Wyoming.[4] Some of these states also concurrently establish guidelines in regulation (often through a child support commission).

The remaining 26 states (including Alaska) establish their child support guidelines by court rule or agency regulation. These states are Alabama, Alaska, Arizona, Arkansas, Connecticut, Delaware, Hawaii, Idaho, Indiana, Iowa, Kansas, Massachusetts, Michigan, Missouri, Montana, Nebraska, New Jersey, North Carolina, North Dakota, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, and Wisconsin. In Alaska, child support guidelines are provided in the Alaska Court Rules, Rules of Civil Procedure 90.3. We provide, as Attachment A, a table from the National Conference of State Legislatures that details which branch of government establishes child support guidelines in each state. The table includes relevant statutory and court rule citations from all states.

---

[3] 45 C.F.R § 302.56 and 45 C.F.R. § 302.56(f-g).

[4] We corresponded with Rochelle Finzel, children and families program manager, National Conference of State Legislators, at (303) 364-7700. The information NCSL provided on this matter was compiled in 2005, so some changes may have occurred since then.

Thirty-five (35) States Consider the Income of Both Parents in Determining Child Support Payments

In order to meet both federal requirements and the goal of providing adequate support, states have largely implemented two basic child support calculation models, respectively known as the *income shares* and the *percentage of income*. These models are used for calculating the amount of a child support award to be paid by the obligor parent.

The *income shares* model is used in 35 states and is based on the income of both parents. Alaska, along with 11 other states, employs the *percentage of income* model, which (usually) bases the award only on the non-custodial parent's income.[5] Three states (Delaware, Hawaii, and Montana) use the *Melson Formula* to calculate child support awards. This formula is generally thought to be more complex than the other models.[6]

The ***income shares*** model is based on the concept that a child should receive the same proportion of parental income that he or she would have received if the parents lived together. In an intact household, the income of both parents is generally pooled and spent for the benefit of all household members, including any children. Thus, the *income shares* model **calculates support as the share of each parent's income** estimated to have been allocated to the child if the original household were intact.

Using the *income shares* model, computation of child support is basically a four-step process:

(1) The income of the parents (gross or net) is determined and added together.[7]

(2) A "basic child support obligation" is computed based on the combined income of the parents, using a table or grid in the guidelines. The amounts in the table are derived from economic data on household expenditures on children.

(3) A "presumptive child support obligation" is then computed by adding expenditures for work-related child care expenses and extraordinary medical expenses to the basic child support obligation. Other add-ons and deductions may also be calculated.

(4) The presumptive child support obligation is prorated between each parent based on his or her proportionate share of total income. The obligor's share is payable as child support, while the obligee's share is retained and presumed to be spent directly on the child.

Distinguishing features of the income shares model include the following:

- It embodies the underlying economic assumption that as income increases, the proportion of income spent on child support decreases.
- It illustrates that both parents are sharing in the support of the child, thereby potentially increasing the perception of fairness to both parents.
- Compared to the *percentage of income* model, the *income shares* model can more easily take into consideration adjustments for shared and split custody, health care

[5] The states that the employ the *percentage of income* model are Alaska, Arkansas, Georgia, Illinois, Massachusetts, Minnesota, Mississippi, Nevada, North Dakota, Tennessee, Texas, and Wisconsin.

[6] The Melson Formula was developed by a Delaware Family Court judge; additional information on the formula can be found online at *http://courts.delaware.gov/Help/Support/SupportChapter8.pdf*.

[7] Whether the calculation is based on gross or net income varies among states.

needs, child care expenses, other children (previous or subsequent) needing support, and children's ages by the manipulation of income, add-ons and deductions and then allocating these costs between the parents. Because these factors can be built into the *income shares* formula, there is less reason for deviation from the guidelines' presumptive award. Limiting deviation meets the ideal of perceived fairness, as well as the federal requirement that the number of cases in which deviation is granted be limited. Limited deviation also meets the goals of consistency and predictability.

The ***percentage of income*** model (used in Alaska and 11 other states), stipulates that in *primary custody* arrangements—those in which the custodial parent has physical custody for over 70 percent of the year—**support amounts are based solely on the income of the non-custodial spouse** (obligor) and the number of children involved. In Alaska, and a number of other states, in *shared custody* situations—those in which each parent has custody for at least 30 percent of the year—the calculation includes the income of both parents, with the *percentage of income* model applied separately to each, then adjusted for the time each has physical custody. The parent with the higher calculation in this scenario becomes the obligor.

Proponents of the *percentage of income* model argue that both parents are assumed to contribute to the child's upbringing in the same proportion as the obligor. The custodial parent is making the contribution in the manner he or she would have made had the parties not divorced. Thus, there is no need to adopt a more complex formula. Many have argued, however, that it is inherently unfair for the custodial parent's income not to affect the presumptive amount. Typically, under this model, only a large disparity between the custodial parent's income and the non-custodial parent's income will be viewed as a justifiable factor upon which to base a deviation. Some states, including Alaska, address this concern in part by considering the income of both parents in shared custody situations. Those incomes are multiplied by the percentage of time each parent has physical custody, and, as we noted earlier, the role of obligor is assigned to the parent with the larger calculated amount.

Opponents of the *percentage of income* model also argue that it generally does not directly adjust for child care, extraordinary medical expenses, or whether other children are being supported in the obligor's household. Most states using this model have attempted to address a number of the above concerns by explicitly identifying these issues as factors for courts to consider as exceptions or deviations, or as expenses to be shared equally or reimbursed by one of the parties.

Despite their differences, child support guideline models have certain aspects in common. First, most of the guidelines incorporate a "self-support" reserve for the obligor.[8] Second, all the guidelines have a provision relating to imputed income.[9] Third, by federal regulation, all the guidelines take into consideration the health care expenses for the children, by insurance or other means. Lastly, most guidelines have incorporated into the presumptive child support formula special additions for child care expenses, special formulas for shared custody, split custody, and extraordinary visitation, and special deductions for the support of previous and subsequent children.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

---

[8] A self-support reserve means that the obligor is allowed to retain a certain amount of income below which level, support is minimal. For example, under the Washington state *income shares* model, the formula is not applied for obligors with net earnings of less than $500 per month.

[9] Imputed income is benefits that accrue even though no money is received. For example, an employee receives imputed income when an employer offers free health insurance and life insurance coverage or the use of a company car.

MEMORANDUM April 20, 2011

SUBJECT: Child support obligation when children of obligor are living separately (Work Order No. 27-LS0671\A)

TO: Senator Albert Kookesh
Attn: Dorothy Shockely

FROM: Jean M. Mischel
Legislative Counsel

You have asked whether the above-referenced draft bill takes into account all children of an obligor, whether or not all are subject to a support order. The income share approach does account for a child or children of an obligor who may be living with the obligor and not subject to a separate order of support by inferring a portion of income for that child or children.

The calculation of child support is made by multiplying the presumptive support obligation by the noncustodial parent's proportionate income share of combined monthly net income with the other parent of the child under sec. 25.28.010(a). Monthly net income, as defined under sec. 25.28.010(g) at page 10 of the bill draft, excludes the following in relation to other children:

> (3) child support and alimony payments arising from previous relationships that are required by another tribunal and actually paid; [and]
> (4) child support for children from prior relationships living with the parent, calculated by using the formula under this chapter; . . . .

Therefore, a child not subject to an order and living with a noncustodial parent of another child, is treated as if the child were the subject of a support order under the bill draft in terms of calculating net income from which a share for the noncustodial parent's support obligation is derived. However, children from a subsequent relationship are not considered in the calculation of the parent's net income. In "unusual circumstances" a court may vary an award if the award would result in "manifest injustice" under sec. 25.28.030 at pages 12 and 13 of the bill draft.

If I may be of further assistance, please advise.

October 5, 2005

Ms. Beth Adams
Alaska court System
820 W. 4th Avenue
Anchorage, AK 99501

Dear Ms. Adams,

I am writing to make comments on the current Alaska child support guidelines (Civil Rules 90.3) I have worked for Senator Albert Kookesh for the past three years as his Legislative Aide. In the scope of my job I take calls from constituents, usually when our office is contacted people are out of options in resolving their situation(s).

First of all I would like to say I do appreciate what this department does. On the other hand we have taken many calls from frustrated obligors in the Child Support Services Division (CSSD). I have read the complex civil rule so I am somewhat aware of how it is suppose to work, unfortunately that is not the case with the people we hear from.

We have heard of peoples saving accounts zeroed out!

75% of wages deducted!

Drivers Licenses taken so the person can not drive to work!

No consideration given to present family; when 2/3 of wages deducted!

No communication, no explanation for changes and or reviews, and no call backs.

Under AS 25.24.160 (a)(1) **it requires that child support be set in an amount which is just and proper.** When someone can't go to work because he/she doesn't have a drivers license and his/her savings is wiped out and he/she can't support him or her self, little alone the family he/she has right now, that is not just and proper. Most people find they are helpless with no place to go.

I would like to suggest;

- No more than 33% percent of wages be taken, period. People are finding they cannot live on anything less, especially in rural Alaska, where the cost of living is 3 times higher than urban Alaska.
- Only two thirds of savings and other income be garnished.
- Consideration is given to ALL of the children in calculating the support payments. The 'subsequent' children have the same rights and needs as those under court order.

- The automated system is scary, the employer should have some control, like deducting only one third of ones pay.
- **Involve the parent(s) in any changes and reviews. If you involve the parent(s) in decisions, that's gives them ownership and a since of control and therefore are more cooperative**.
- A handbook in layman's terms.

Your consideration to making this Department more user friendly would benefit everyone, especially the children you are serving.

Thank you for your time.

Sincerely,

Dorothy J. Shockley
Legislative Aide to Senator Albert Kookesh

Celeste Hodge

Subject: SB 134, 1-27-2011 John D. Younce

Dorothy,

I am relieved to hear there is a bill aiming to change the child support calculations in Alaska. I have paid child support for a number of years and recently began thinking about fairness in regards to the income differences of the parents. I am in favor of a calculation table such as the one SB 134 describes. I imagine most obligors feel the same as I do. The current system is obviously unfair, unjust, and begs for opposition in the form of class action lawsuits by groups of obligors who feel they have been cheated (and also possible retroactive payments from St. of AK). The talk of a class action lawsuit has been out there for a while now, but I was never willing to stand against this system. Thanks to you and Sen Kookesh for giving obligors such as myself the chance to "comfortably" stand against an unjust system. 35 or more other states employ the same system for good reason.

In closing, I appreciate the ease of contacting and discussing this issue with you. It's uncommon to navigate directly to a human voice these days. Although it looks as though this bill may take a few sessions to make the table, my attitude is that the sooner the state changes the language, the less they may be liable to repay later.

Sincerely,

John D. Younce

FAIRBANKS NORTH STAR BOROUGH

RESOLUTION NO. 2005 - 71

A RESOLUTION SUPPORTING EXTERNAL REVIEW OF THE CASE FILES OF CHILDREN WHO HAVE BEEN PLACED IN OUT-OF-HOME CARE BY STATE AGENCIES

WHEREAS, the Citizen's Review Panel for Permanency Planning Act was enacted in 1990 and required the appointment of local review panels in each judicial district; and

WHEREAS, the local panels were to have reviewed the case plans of each child placed in out-of-home state custody; and

WHEREAS, the Assembly has adopted five other resolutions on this issue asking for compliance with the Act; and

WHEREAS, public citizens are concerned about children who have been placed in out-of-home care by state agencies particularly when there is no external review of the agency's actions for the purpose of quality assurance; and

WHEREAS, efforts to develop a different and new system under the title of "Citizen Review Panel" under the Child Abuse Prevention and Treatment Act (CAPTA), which was most recently reauthorized on June 25, 2003, by the Keeping Children and Families Safe Act of 2003 (P.L. 108-36), have not met the needs and expectations for government accountability regarding cases of children placed outside their family homes; and

WHEREAS, possible failure of state and federal governments to provide appropriate external review of case plans of children in state custody as provided in the original Citizen's Review Panel for Permanency Planning Act of 1990 needs to be reviewed; and

NOW, THEREFORE, BE IT RESOLVED that the Assembly of the Fairbanks North Star Borough urges the Honorable Governor Frank Murkowski and the Alaska State Legislature to restore and reenact the Citizen's Review Panel under Ch. 117 SLA 1990.

BE IT FURTHER RESOLVED that the Assembly encourages and supports creations of public processes to resolve grievances regarding the care of children.

BE IT FURTHER RESOLVED, that the Assembly encourages and supports legislation that would safeguard children and families.

BE IT FURTHER RESOLVED, that copies of this resolution shall be sent to the Honorable Governor Frank Murkowski, the Alaska Interior Delegation and Alaska's Congressional Delegation.

PASSED AND APPROVED THIS 27th DAY OF OCTOBER 2005.

FAIRBANKS NORTH STAR BOROUGH

RESOLUTION NO. 2004 - 50

A RESOLUTION ASKING FOR COMPLIANCE WITH THE CITIZENS REVIEW PANEL FOR PERMANENCY PLANNING ACT OF 1990

WHEREAS, in 1990 the Legislature enacted Ch.117, SLA 1990, which created the Citizens' Review Panels for Permanency Planning in the Department of Administration, and required the appointment of local out-of-home care citizen review panels in each judicial district; and

WHEREAS, these local panels by law should have reviewed the case plans of each child in out of home placement under state custody, beginning fourteen years ago, to shorten the duration of state custody and encourage custody in a permanent home; and

WHEREAS, goals of the Act included the best interest of the child, either in restoration to their own family and home, or in the expeditious placement in other secure and permanent homes; and

WHEREAS, one local panel was appointed 12 years ago experimentally in Anchorage, and was not in compliance with state statute current at the time; and

WHEREAS, in some cases, the best interest of the children are not being met and in fact, harm, danger and even death have occurred involving children in state custody; and

WHEREAS, the Fairbanks North Star Borough Assembly adopted Resolution No. 96-047, requesting the Governor to appoint a local oversight panel needed in Fairbanks; adopted Resolution 97-027 requesting the same, and adopted Resolution No. 2002-94, requesting compliance with the Act; and

WHEREAS, no panel has been appointed in the Fourth Judicial District serving Fairbanks, and legislation is needed to correct the causes of this problem,; and

WHEREAS, it is in the best interests of the State of Alaska to care for its youngest and most vulnerable citizens; and

WHEREAS, quality assurance and quality care of children in state custody will benefit Alaskans and the State of Alaska in the later years of those same children and others.

NOW THEREFORE BE IT RESOLVED that the Fairbanks North Star Borough Assembly respectfully requests that Governor Frank Murkowski implement a local review panel program in compliance with Ch. 117, SLA 1990.

BE IT FURTHER RESOLVED that the Assembly urges each member of the Interior Delegation to sponsor and vote for legislation to create an external, local, citizen review panel program in Fairbanks as part of a statewide program as earlier provided in Ch. 117, SLA 1990.

BE IT FURTHER RESOLVED that copies of this resolution be sent to Governor Frank Murkowski and all members of the Interior Delegation.

PASSED AND APPROVED THIS 24th DAY OF JUNE 2004.

RESOLUTION 2002-94

A RESOLUTION RELATING TO THE CITIZENS REVIEW PANEL FOR PERMANENCY PLANNING ACT OF 1990 ASKING FOR COMPLIANCE

WHEREAS, in 1990 the Legislature enacted Ch.117, SLA 1990, which created the Citizens' Review Panels for Permanency Planning in the Department of Administration, and required the appointment of local out-of-home care citizen review panels in each judicial district; and

WHEREAS, these local panels by law shall review the case plan of each child in an out-of-home placement with a view to shortening state custody and encouraging custody in a permanent home; and

WHEREAS, goals of the Act included the best interests of the child, for the good of the child, either in restoration to their own family, or expeditiously into a secure, permanent home; and

WHEREAS, no local panel have ever been appointed in this judicial district; and

WHEREAS, only one local panel has ever been appointed in the past 12 years, that being experimentally in Anchorage; and

WHEREAS, the best interests of the child cannot be seen to be met; and

WHEREAS, events receiving news coverage in the past several years indicate that the best interests of the child are in fact not being met in some cases; and

WHEREAS, harm, danger and even death have occurred involving children in state custody; and

WHEREAS, a federal audit completed this year revealed serious flaws and concerns in the State's operations; and

WHEREAS, the Fairbanks North Star Borough Assembly unanimously adopted Resolution No. 96-047, requesting the Governor to appoint a local oversight panel needed in Fairbanks; and adopted Resolution 97-027 requested the same; and

WHEREAS, no panel has yet been appointed in the Fourth Judicial District serving Fairbanks; and

WHEREAS, it is in the best interests of the State of Alaska to care for its youngest and most vulnerable citizens; and

WHEREAS, quality assurance and sound care of children in custody of the State will result in far greater savings of the State in the later years of those same children.

NOW THEREFORE BE IT RESOLVED that the Fairbanks North Star Borough Assembly respectfully requests that Governor-Elect Frank Murkowski consider and appoint a local review panel in Fairbanks in compliance with a state statute passed in 1990.

BE IT FURTHER RESOLVED that copies of this resolution be sent to all members of the Interior Delegation, the Speaker of the House of the Alaska Legislature, and the respective Chairs of HESS and Judiciary in both the State House and the State Senate.

PASSED AND APPROVED THIS 21st DAY OF NOVEMBER 2002.

Amended: 04/10/97
Adopted: 04/10/97

RESOLUTION NO. 97-027

A RESOLUTION RELATING TO THE CITIZENS' REVIEW PANEL FOR PERMANENCY PLANNING ACT OF 1990

WHEREAS, in 1990, the Legislature enacted Ch. 117, SLA 1990, which created the Citizens' Review Panels for Permanency Planning in the Department of Administration, and required the appointment of local out-of-home external citizen review panels in each judicial district; and

WHEREAS, the local panels, by law, must review the caseplan of each child in out-of home placement to ensure that children do not linger unnecessarily in state custody, but rather, receive the support and benefit of a permanent home; and

WHEREAS, among the goals of the Act is the goal to reunite children with their own families by ensuring that services are available and appropriate for reunification, or otherwise, to expeditiously place the child in a secure, permanent home; and

WHEREAS, although this legislative Act was effective on July 1, 1990, to date, only a "pilot project" review panel in Anchorage has been established using statewide appropriations, leaving the rest of the State unserved; and

WHEREAS, on June 13, 1996, the Fairbanks North Star Borough Assembly unanimously adopted Resolution No. 96-047, requesting the Governor to appoint a local oversight panel needed in Fairbanks however, no panel has been appointed; and

WHEREAS, the Legislature has introduced Senate Bill 73 and House Bill 100, by the request of the Governor and House Bill 127, sponsored by the Health, Education and Social Services Committee, all three would change significantly the original Act.

WHEREAS, these changes would limit local citizen oversight, reduce citizen participation, and disrupt the continuity of service of the citizen volunteers by encouraging political interference and administrative pressures upon the panel members reviewing agencies involved in state custody of children and would severely diminish the effectiveness of the Act.

NOW THEREFORE BE IT RESOLVED that the Borough Assembly respectfully urges the Governor of the State of Alaska to:

1. Without additional delays, appoint the local out-of-home care external review panels, and the state panel as required by existing state laws in effect since July 1, 1990.

BE IT FURTHER RESOLVED that the Fairbanks North Star Borough Assembly respectfully requests the Alaska State Legislature to:

1. Extend the sunset termination date for the Citizens' Review Panel For Permanency Planning Act an additional four years as provided by existing statute, with no other changes;

2. Appropriate the funds for foster care review requested by the Governor in his FY '98 Operating Budget Proposal, provided that the Governor agrees to implement the statewide program as originally enacted.

BE IT FURTHER RESOLVED that copies of this resolution shall be sent to the Honorable Tony Knowles, Governor, State of Alaska; the Honorable Karen Perdue, Commissioner, Department of Health and Social Services; the Honorable Con Bunde, Chair, House Committee on Health, Education, & Social Services; the Honorable Gary Wilken, Chair, Senate Committee on Health, Education, & Social Services; and all members of the Interior Delegation.

PASSED AND APPROVED THIS 10TH DAY OF APRIL, 1997.

Adopted: 06/13/96

RESOLUTION NO. 96-047

A RESOLUTION REQUESTING THE GOVERNOR TO APPOINT A LOCAL OVERSIGHT PANEL FOR PERMANENCY PLANNING

WHEREAS, in 1990, the Legislature enacted ch. 117 SLA 1990 relating to the establishment of a Citizen's Review Panel for Permanency Planning both on the state and the local level; and

WHEREAS, provisions in ch. 117 SLA 1990 require the governor to appoint, for each judicial district, a local citizen out-of-the-home care review panel composed of five members and two alternates who are residents of the judicial district; and

WHEREAS, the local panel is required to review the case plan of each child in the custody of the department who is in a placement other than the child's own home; and

WHEREAS, members of the state panel are to be appointed by the governor from among present members of local citizen review panels established under AS 47.10.420; and

WHEREAS, to date only one local panel, operating in Anchorage, has been appointed and the department claims that this panel is a "pilot" panel to be developed as the "Model Panel"; and

WHEREAS, until all of the local panels are appointed, the state panel cannot be selected; and

WHEREAS, because of the ever-increasing juvenile problems in the state which have multiplied dramatically since 1990 and although this legislation was passed by the legislature in 1990 to address the problems that existed then, little has been accomplished to implement the program; and

WHEREAS, concerned citizens throughout the state are urging the establishment of both the state and local panels.

NOW, THEREFORE, BE IT RESOLVED that the Fairbanks North Star Borough Assembly respectfully requests and urges the governor of the State of Alaska to select the panels in each of the judicial districts in the state, not only to implement the statutes adopted by the legislature, but also to provide for the safety and protection of the juveniles of Alaska and their care providers.

BE IT FURTHER RESOLVED that the Legislature is requested to provide for full funding of the State and Local Panels.

BE IT FURTHER RESOLVED that copies of this resolution shall be sent to the Honorable Tony Knowles, Governor, State of Alaska; the Honorable Mark Boyer, Commissioner, Department of Administration, the Honorable Karen Perdue, Commissioner, Department of Health and Social Services; and all members of the Interior Delegation.

BILL NO. SB 151

Analysis

This bill would add fetal alcohol spectrum disorder to the list of mitigating factors at sentencing in a criminal trial. The burden of assessment would be on the courts and therefore would have zero fiscal impact on the Department of Corrections.

2012 LEGISLATIVE SESSION

BILL NO. SB151

Analysis

AS 12.55.155(d) allows a sentencing court to impose a sentence less than the presumptive range where mitigating factors have been proven. This bill amends AS 12.55.155(d) by adding section 20, which allows the court to find a factor of mitigation where the defendant committed the offense while affected by fetal alcohol spectrum disorder.

The Public Defender Agency does not anticipate a fiscal impact from this change. Accordingly, the Agency submits a zero fiscal note.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB151-ACS-TRC-3-02-12

Analysis

Senate Bill 151 adds a new factor to the list of mitigating factors in AS 12.55.155(d) that the court shall consider at sentencing; if proven, the court may then impose a sentence below the presumptive range for certain crimes. Specifically, except for defendants convicted of offenses against persons , arson, and criminal mischief, and except if the defendant has any prior felony conviction, the court may consider whether the defendant committed the offense "while affected by a fetal alcohol spectrum disorder that was insufficient to constitute a complete defense . . . but that significantly affected the defendant's conduct."

The court cannot predict the number of cases in which parties will attempt to prove this factor as a mitigator at sentencing, but believes the sentencing hearings will be held and handled in the normal course without a fiscal impact. The Alaska Court System therefore submits a zero fiscal note.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

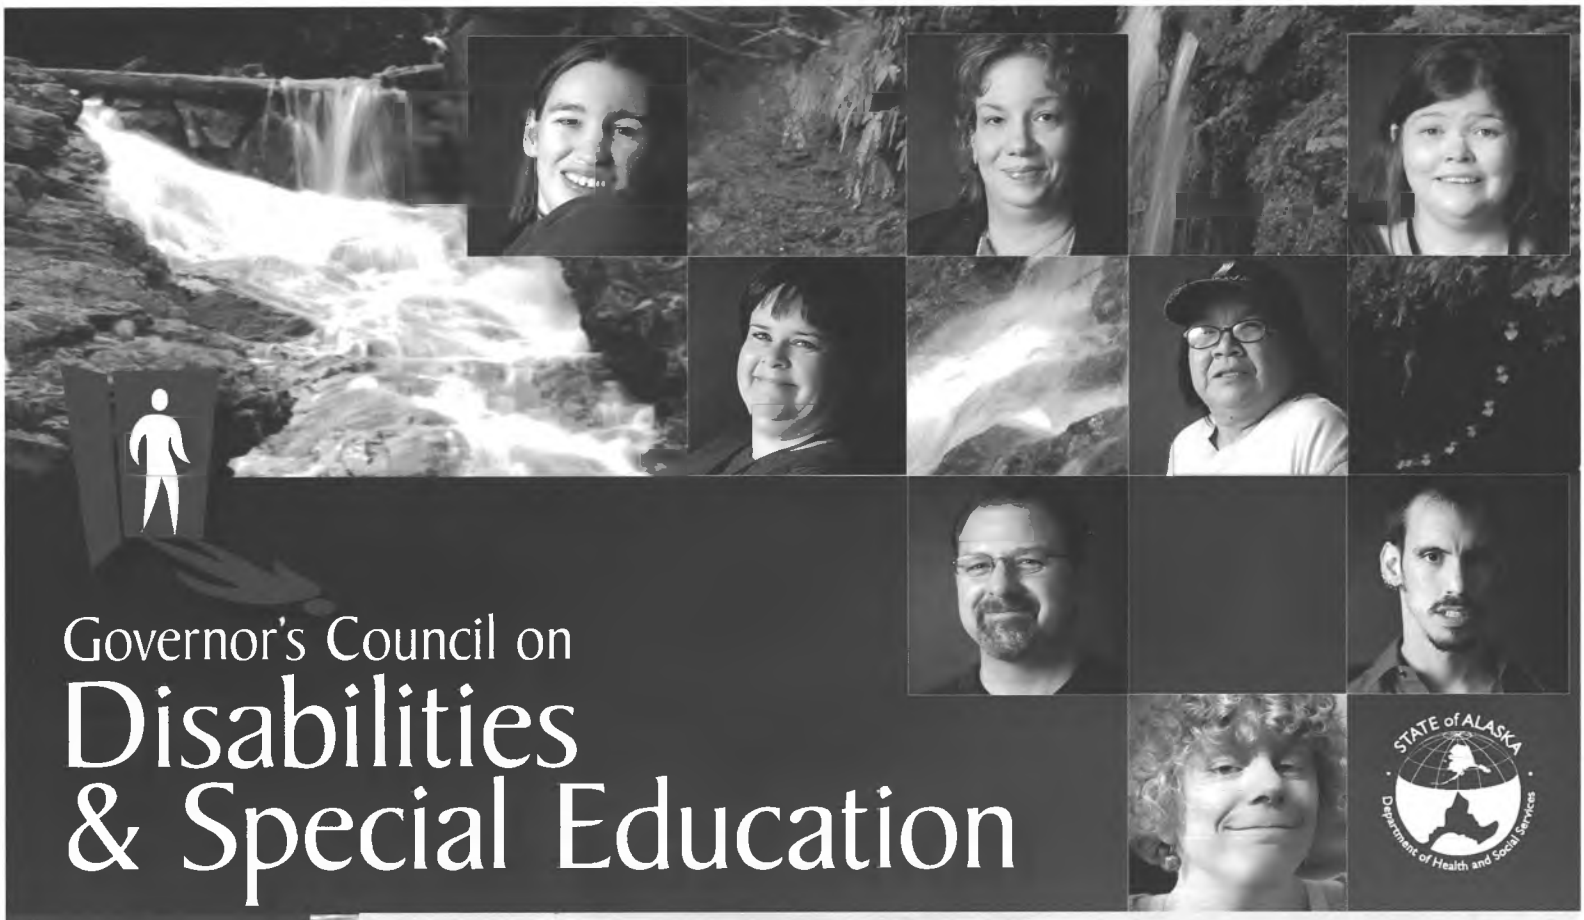
BILL NO. SB 151

Analysis

SB 151 would add as a mitigating factor at sentencing. It would allow a new mitigator if the defendant was affected by a fetal alcohol spectrum disorder that significantly affected the defendant's behavior. If proven, the court would have discretion to reduce the term of imprisonment to below the presumptive range.

The proposed new factor would not apply to persons convicted of crimes against a person (AS 11.41), arson in the first degree (AS 11.46.400), or if the person being sentenced had previously been convicted of a felony.

The fiscal impact for the Departmetn of Law is indeterminate because it will require expert testimony on the issue of whether the person suffers from such a disorder and if so, did it significantly affect his or her behavior.



Governor's Council on Disabilities & Special Education

1 Role

2 Mission

3 The Council in Action

4 Moving Towards Employment

5 Outcomes

6 Priorities

1. Role of the Council

- State Council on Developmental Disabilities
- Special Education Advisory Panel
- Interagency Coordinating Council for Infants and Toddlers with Disabilities
- Governing Board of the Special Education Service Agency
- Beneficiary Board for the Alaska Mental Health Trust Authority

2. Mission

Creating change that improves the lives of Alaskans with disabilities

3. Making Sustainable Change — An Example of the Council in Action

The Council manages the Alaska Works Initiative, a strategic effort funded by the Centers for Medicare & Medicaid Services to improve Medicaid programs and employment infrastructures. The Council works with state agencies, business & industry, service providers and the university to improve employment outcomes for Alaskans with severe disabilities. The Council also receives funding from the Alaska Mental Health Trust Authority to manage the microenterprise grant program, which helps Trust beneficiaries start their own businesses. In addition, the Council received funding from the Department of Education & Early Development to start a Project SEARCH program, which provides internship opportunities to youth with intellectual or developmental disabilities in their last year of school at a host business.

- From 2009 to 2010, there was a **5.6% *increase*** in the number of Alaskans on social security who worked (Note: nationally, there was an average ***4.8% decrease*** in the number of people on Social Security who worked).

State of Alaska • Department of Health & Social Services • Governor's Council on Disabilities & Special Education
3601 C Street, Suite 740, P.O. Box 240249, Anchorage, Alaska 99524-0249 • 907-269-8990

3. Continued … Sustainable Change

- In fiscal year 11, the number of people with developmental disabilities who were employed increased by 10.6% (358 to 396).
- In fiscal year 11, 13 Trust beneficiaries started their own businesses.
- Three Project SEARCH sites were established at Mat-Su Regional Medical Center, Providence Hospital and Fairbanks Memorial Hospital; other partners include the Division of Vocational Rehabilitation, local school districts and disability service providers.

4. Moving toward Employment: Stories of people who have benefited from the work of the Council

- Katie, age 21, was the first student to be hired by one of the host hospitals participating in Project SEARCH. Katie was in the program at Mat-su Regional Medical Center (MRMC) only five months before she was hired to work as a technician in Environmental Services. She works 20-25 hours per week, is a union member and makes over $13 an hour. One of the goals of Project SEARCH is to change the culture of a workplace into one that accepts disability in the workplace. At MRMC, Katie and the other Project SEARCH students have certainly accomplished this.
- Becca is starting Becca's Alpacas in the Mat-Su valley, thanks to start-up funding from the microenterprise grant program. Her business will primarily raise, breed, and sell alpacas. She may also collect and sell alpaca waste as fertilizer for local gardeners, and shear alpaca fleece and have it made into yarn to sell locally and/or online.

5. Other Outcomes for Alaskans with Intellectual or Developmental Disabilities in Fiscal Year 2011

As a result of the Council's work with 119 entities participating in partnerships or coalitions, the following number of people benefited:

- 627 people have needed health services.
- 3,019 people received formal or informal supports.
- 3,297 people have transportation for work, medical and personal needs.
- 81 individuals got and kept employment consistent with their interests and abilities.
- 2,301 students have the education and support they need to reach their educational goals.
- 1,821 infants and young children have services and supports needed to reach developmental goals.
- 384 individuals have homes of their choice.
- 928 people have information, skills, opportunities and supports to live independently, productively and included in all aspects of community life.

6. Fiscal Year 2012-13 Priorities

- Ensuring the continuation of complex behavior collaborative consultation and training services to meet the needs of individuals with cognitive disabilities and challenging behaviors
- Implementing autism insurance reform
- Changing the funding formula for the Special Education Service Agency (SESA) and removing its sunset clause in state statute
- Increasing the employment and self-employment rate of people with disabilities
- Improving services and supports to women with disabilities who are victims of sexual or physical assault
- Increasing access to services for people residing in rural and remote areas of the state

Bill would let judges consider fetal alcohol spectrum disorders

FETAL ALCOHOL: First, its direct role in a crime must be proved.

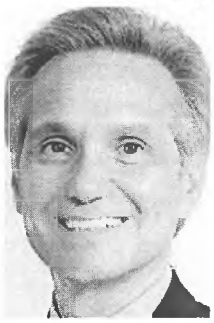
JUNEAU -- A proposal before the Alaska Legislature would give judges flexibility when handing down criminal sentences to people who were born with effects caused by their mother drinking during pregnancy.

Click to enlarge



Click to enlarge

Kevin Meyer

Judges are not allowed to consider fetal alcohol spectrum disorders -- a catch-all phrase for conditions caused by prenatal exposure to alcohol -- during criminal sentencing. SB151 would change that by adding FASD to the list of mental conditions that judges can consider as a mitigating factor.

Senate Majority Leader Kevin Meyer, R-Anchorage, worked with a statewide coalition from various professions called the Alaska FASD Partnership to craft the bill in response to the large number of people affected by the fetal alcohol disorders in the criminal justice system. Meyer said a mitigating factor is not a "get out of jail free card" and only reduces punishment if it's proved that a condition played a direct role in a crime. The bill calls for proof of documentation of prenatal alcohol use as well as a convincing clinical diagnosis.

The proposal is welcomed by advocates but not touted as a cure-all.

Public understanding of the issue is lacking, according to Teri Tibbett, the partnership's coordinator, and problems are multifaceted and complex.

"Alcohol has been around for a long time and so have women," Tibbett said. "Those two have gone together about that long but we understand the impacts better now than ever."

Modern research has determined that cell death caused by exposure to alcohol in the womb is the root of damage, according to Susan Astley, an epidemiology professor at the University of Washington. The best-known result is a series of distinct facial features -- smaller eye openings, a thin upper lip and the ridges below the nose are smooth -- but other problems are also common, she said.

Morgan Fawcett is a 19-year-old getting ready to study journalism but for now he travels around the U.S. and Canada sharing the story of his struggles with prenatal alcohol exposure with clinicians, lawmakers and others interested groups.

Fawcett recently told a group in Juneau that he made it to his early teens with an array of unexplained problems. He said he couldn't focus or remember things he was just told; that he was often at a loss during class; that his jaw would lock, sometimes tightly enough that he couldn't eat or drink, and that he suffered debilitating migraines.

He was 14 when he realized those problems and others resulted from his mother's drinking during pregnancy.

"I was angry at (my mother) in the beginning but I love her and I know she didn't do this on purpose," Fawcett said. "No mother would do this intentionally. If more people understood this, mothers wouldn't be the focus."

Alaska has been somewhat of a national leader by creating a network of diagnostic clinics and treatment programs, Astley said.

Midtown: Our property features lush landscaping in a quiet, peaceful environment.

"Damage can take place throughout pregnancy, from very early to the very end," she said. "It's impossible to predict exactly what damage will take place if you drink at a certain time and you can't tell for sure when certain effects were caused."

Seven-term Rep. Beth Kerttula, D-Juneau, remembers when discussion in the Capitol started and ended with how severely mothers should be punished. Kerttula recalls a fellow legislator saying during a committee hearing a few years ago that drinking pregnant women should be taken to the wharf in downtown Juneau, latched into stockades and have tomatoes thrown at them.

Meyer said another bill would have held bartenders in Alaska criminally liable if they served alcohol to pregnant women.

"People have the right heart, even when they put up ideas like this," Meyer said. "You want an easy target and, sure, the mothers are easy targets. But if it was that simple, someone else would have fixed this already."

Judge Michael Jeffery of the Barrow District Court, which serves the North Slope, said a 1990 case that involved an 18-year-old affected by fetal alcohol syndrome brought the problem to his attention. Jeffery sympathized with a request by the young man's lawyer who wanted the condition to count as a mitigating factor but a panel of judges determined he could not add conditions at his discretion.

"Extra jail time didn't help him or anyone else and it's true for many people," Jeffery said.

Jeffery learned the problem is endemic in his community and around the state, especially so in the justice system: An estimated 27 percent of Alaska's inmate population has fetal alcohol syndrome, according to a 2006 state report.

Long before Jeffery's experience in the United States' northernmost court became the basis of SB151, he implemented a few changes of his own.

He uses plain English and large type to account for poor reading comprehension commonly associated with FASD during his court cases. Listening comprehension is another common problem, with only the last few words of sentences heard and remembered, so Jeffery repeats important points often and carefully structures sentences. Another procedure has caused tense moments, he said: He explains common effects of FASD, how it is caused and where to find treatment, often with parents and relatives in attendance.

"If someone doesn't speak the language, you give them a translator in court," Jeffery said. "What I'm doing for people with this disorder is no different. They don't understand things the same way, interpret information the same."

He said he wants to see similar changes elsewhere, and to that end the American Bar Association is working on a resolution that addresses some of the concerns about justice and FASD. Howard Davidson, who runs the ABA's Center on Children and the Law, said the resolution is modeled after a similar step taken by the Canadian Bar Association in 2010; he said the wording is still being refined but could be ready for a vote of approval in time for the group's national convention this August.

SB151 has attracted eight co-sponsors and the Senate Health and Social Services Committee will start discussion Monday.

Re: Letter of Support for CSSB 151 – Mitigation at Sentencing for a Defendant Affected by FASD

Dear Senator Meyer,

The Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse support the committee substitute for SB 151 (CSSB 151). This bill recognizes the special needs presented by Alaskans experiencing fetal alcohol spectrum disorders (FASD) in the justice system.

It is an objective of Alaska's comprehensive mental health program that people with mental and cognitive disabilities are treated with dignity in all aspects of life. Our judges, prosecutors, defenders, and court staff work to ensure that everyone who appears in court is treated fairly and with respect. However, Alaskans experiencing FASD often present with special needs and situations that impede the course of justice. Low cognitive functioning, inability to understand and stay within accepted social norms, limited short term memory, impulsivity, and impaired judgment can all result in a person experiencing FASD not being able to explain his or her actions, understand why they resulted in a criminal charge, or understand the criminal justice process. Usually, these impairments do not rise to the level of legal incompetence – but they often make it hard for judges and juries to make decisions that serve our notions of fairness and justice.

Based on research in other jurisdictions, an estimated 60% of inmates experience an FASD, brain injury, or similar organic cognitive impairment. The cost of incarceration is very high and usually does not result in restoration or rehabilitation. In fact, according to a 2009 ISER Study,[1] the cost of prison far exceeds the cost of services. CSSD 151 allows judges – **at their discretion** – to modify presumptive sentences to take into account the defendant's disabilities and to provide the sort of sentence needed to prevent recidivism and ensure a just outcome for victims, defendants, and our communities.

We thank you for your work on behalf of all Alaskans.

Sincerely,

J. Kate Burkhart
Executive Director

March 2, 2012

Senator Kevin Meyer
Alaska State Legislature
Juneau, Alaska 99801

Dear Senator Meyer,

It is with great pleasure that the Alaska FASD Partnership supports the proposed committee substitute for SB 151 to include FASD, Traumatic and Acquired Brain Injury, and Intellectual Disability as "impaired brain function" in the definition of "mental disease or defect."

The Partnership also supports the bill's intent to include FASD and traumatic and acquired brain injury as mitigating factors related to sentencing.

Individuals diagnosed with a fetal alcohol spectrum disorder (FASD) or a traumatic or acquired brain injury (T/ABI) are disproportionately represented within Alaska's criminal justice system. However, the intent underlying Alaska's sentencing structure – that people will modify their behaviors based on the criminal justice system's response to their crimes – is not met when applied to individuals with FASD or T/ABI. These disabilities manifest as deficits in executive function resulting in impaired adaptive behavior, memory difficulties, an inability to plan, and a failure to recognize the consequences of actions. In the interest of justice, it is important to take these deficits into account during sentencing. Neither the offender nor society benefits from holding individuals with FASD or T/ABI to community standards that they cannot possibly attain given their impairments.

The cost of incarceration in Alaska's prison is about $136 per day. Over the course of five to ten years in an Alaskan prison, an inmate is expected to cost the state close to $250,000-$500,000 (not including medical, mental health or other specialized treatment while incarcerated).

According to the 2009 ISER Study, *The Cost of Crime: Could the State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?*" the cost of providing services is less than the cost of incarceration. With appropriate supports, clients with FASD, T/ABI and other brain-based disabilities can live successfully in the community as contributing citizens, ***and*** provide jobs for Alaskan case workers, clinicians, assisted living providers, mental health and substance abuse

Alaska Fetal Alcohol Spectrum Disorders (FASD) Partnership
431 N. Franklin St. Suite 203, Juneau, Alaska 99801 ▪ (907) 465-8920

counselors, psychologists and psychiatrists. Not only does CSSB 151 further the cause of justice for a vulnerable population, it represents a better investment of our state's resources.

Additionally, the state's movement toward "Smart Justice" will promote less crime, reduced public costs, and greater rehabilitative effect on offenders. The research behind "Smart Justice" suggests that spending money on rehabilitating offenders is more cost effective than paying the high costs associated incarceration and recidivism, including public safety, courts, prisons, alcoholism and drug abuse programs.

Thank you for the time and effort you have put into supporting this important effort.

Sincerely,

Monica Charles Leinberger

The TRUST

The Alaska Mental Health
Trust Authority

March 2, 2012

Senator Kevin Meyer
State Capitol Building
Juneau, Alaska 99801

Dear Senator Meyer,

The Alaska Mental Health Trust Authority is pleased to support SB 151, adding fetal alcohol spectrum disorders and traumatic and acquired brain injury as mitigating factors under "mental disease or defect" in state statute. The Trust also supports the bill's intention to use the word "intellectual disability" to describe Alaskans with developmental disabilities, rather than the archaic term "mental retardation."

This legislation is an important step in the state's recognition that people with disabilities are better served with supports and services, rather than incarceration without supports.

SB 151 fulfills a recommendation adopted by the Alaska Criminal Justice Assessment Commission that "the legislature should create a statutory mitigating factor for use at criminal sentencing, recognizing when the wrongful conduct was substantially affected by an organic brain disorder." [1]

SB 151 also supports a recommendation currently before the American Bar Association stating that the ABA "... urges lawyers and judges, as well as bar associations and law school clinical programs, to support training that includes law school law enforcement, and legal/judicial education curricula on enhanced awareness of the child and adult disability of Fetal Alcohol Spectrum Disorders (FASD) and its impact on individuals in the child welfare, juvenile justice, and adult criminal justice systems, and that they work with medical, mental health, and FASD disability experts to promote: ... (d) applying FASD as a mitigating factor in the mitigation of juvenile justice and criminal sentencing ... and consideration of alternatives to incarceration that reduce recidivism."

The Trust thanks Senator Meyer's efforts to address issues related to people with disabilities, so that the most appropriate (and cost effective) outcomes are realized.

Sincerely,

Jeff Jessee
Chief Executive Officer
Alaska Mental Health Trust Authority

Re: Support for SB 151

Dear Senator Meyer:

The Disability Law Center of Alaska supports the objective of SB 151, which is to allow the courts to take into consideration during sentencing whether the defendant was diagnosed with a fetal alcohol spectrum disorder, a traumatic brain injury or an acquired brain injury. If these conditions cannot be considered as mitigating factors, then as one jurist observed, these individuals are paying for their disability with their freedom.

Thank you for your efforts in correcting this manifest injustice.

Sincerely,

DISABILITY LAW CENTER OF ALASKA

CS FOR SENATE BILL NO. 151(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS MEYER, Hoffman, Dyson, Menard, Paskvan, Egan, Davis, Ellis, McGuire

A BILL

FOR AN ACT ENTITLED

"An Act relating to inclusion of fetal alcohol spectrum disorders, traumatic and acquired brain injury, and intellectual disability in the definition of 'mental disease or defect'; and relating to mitigation at sentencing in a criminal case for a defendant suffering from a mental disease or defect."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 12.47.130(5) is amended to read:

(5) "mental disease or defect" means a disorder of thought or mood **or a condition of impaired brain function** that substantially impairs judgment, behavior, capacity to recognize reality, or ability to cope with the ordinary demands of life; "mental disease or defect" also includes **"intellectual disability"** [MENTAL RETARDATION], which means a significantly below average general intellectual functioning that impairs a person's ability to adapt to or cope with the ordinary demands of life; **in this paragraph, "condition of impaired brain function" means fetal alcohol spectrum disorders or traumatic and acquired brain injury;**

*** Sec. 2.** AS 12.55.155(d) is amended to read:

(d) The following factors shall be considered by the sentencing court if proven in accordance with this section, and may allow imposition of a sentence below the presumptive range set out in AS 12.55.125:

(1) the offense was principally accomplished by another person, and the defendant manifested extreme caution or sincere concern for the safety or well-being of the victim;

(2) the defendant, although an accomplice, played only a minor role in the commission of the offense;

(3) the defendant committed the offense under some degree of duress, coercion, threat, or compulsion insufficient to constitute a complete defense, but that significantly affected the defendant's conduct;

(4) the conduct of a youthful defendant was substantially influenced by another person more mature than the defendant;

(5) the conduct of an aged defendant was substantially a product of physical or mental infirmities resulting from the defendant's age;

(6) in a conviction for assault under AS 11.41.200 - 11.41.220, the defendant acted with serious provocation from the victim;

(7) except in the case of a crime defined by AS 11.41.410 - 11.41.470, the victim provoked the crime to a significant degree;

(8) before the defendant knew that the criminal conduct had been discovered, the defendant fully compensated or made a good faith effort to fully compensate the victim of the defendant's criminal conduct for any damage or injury sustained;

(9) the conduct constituting the offense was among the least serious conduct included in the definition of the offense;

(10) the defendant was motivated to commit the offense solely by an overwhelming compulsion to provide for emergency necessities for the defendant's immediate family;

(11) after commission of the offense for which the defendant is being sentenced, the defendant assisted authorities to detect, apprehend, or prosecute other

persons who committed an offense;

(12) the facts surrounding the commission of the offense and any previous offenses by the defendant establish that the harm caused by the defendant's conduct is consistently minor and inconsistent with the imposition of a substantial period of imprisonment;

(13) the defendant is convicted of an offense specified in AS 11.71 and the offense involved small quantities of a controlled substance;

(14) the defendant is convicted of an offense specified in AS 11.71 and the offense involved the distribution of a controlled substance, other than a schedule IA controlled substance, to a personal acquaintance who is 19 years of age or older for no profit;

(15) the defendant is convicted of an offense specified in AS 11.71 and the offense involved the possession of a small amount of a controlled substance for personal use in the defendant's home;

(16) in a conviction for assault or attempted assault or for homicide or attempted homicide, the defendant acted in response to domestic violence perpetrated by the victim against the defendant and the domestic violence consisted of aggravated or repeated instances of assaultive behavior;

(17) except in the case of an offense defined by AS 11.41 or AS 11.46.400, the defendant has been convicted of a class B or C felony, and, at the time of sentencing, has successfully completed a court-ordered treatment program as defined in AS 28.35.028 that was begun after the offense was committed;

(18) [EXCEPT IN THE CASE OF AN OFFENSE DEFINED UNDER AS 11.41 OR AS 11.46.400 OR A DEFENDANT WHO HAS PREVIOUSLY BEEN CONVICTED OF A FELONY,] the defendant committed the offense while suffering from a mental disease or defect as defined in AS 12.47.130 that was insufficient to constitute a complete defense but that significantly affected the defendant's conduct;

(19) the defendant is convicted of an offense under AS 11.71, and the defendant sought medical assistance for another person who was experiencing a drug overdose contemporaneously with the commission of the offense.

SPONSOR STATEMENT

SB 172 – An Act Relating to Health Care Decisions, Including Do Not Resuscitate Orders

The purpose of this bill is to provide for the protection of a patient's right to prevent a physician from issuing a Do Not Resuscitate (DNR) order on the patient without the expressed consent of that patient, or if the patient lacks capacity, without the expressed consent of the authorized agent of the patient, or, if no one is available or known to be authorized to speak for the patient and the patient lacks capacity, without the concurrence of a second physician.

In 2004 and 2005 the Alaska Legislature drafted the current AS 13.52 *Health Care Decisions Act.* The Legislature included language in AS 13.52.120(a) establishing a *presumption in favor of life.* Legislative Legal states the language of the Health Care Decision Act, when read in its entirety, supports interpreting the chapter to allow a patient (or the patient's authorized representative) to prevent a physician from issuing a DNR order, but that ambiguities in the chapter could result in other interpretations.

This ambiguity in statute allows unnecessary emotional and mental anguish to Alaskan residents faced with critical end of life decisions. SB 172 clarifies the authority of DNR decisions with respect to patients and physicians, and amends the Alaska Health Care Directive form to allow patients to accept or refuse life-sustaining procedures.

SENATE BILL NO. 172

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY SENATORS DYSON, Davis, Coghill, McGuire, Olson

Introduced: 1/20/12
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to health care decisions, including do not resuscitate orders."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 13.52.045 is amended by adding a new subsection to read:

(b) A health care institution or health care facility may not interpret the issuance of a do not resuscitate order for a patient as preventing the health care institution or health care facility from providing life-sustaining procedures to the patient.

*** Sec. 2.** AS 13.52.060(e) is amended to read:

(e) A health care provider may decline to comply with an individual instruction or a health care decision for reasons of conscience, except **that a health care provider may not decline to comply with** [FOR] a do not resuscitate order **that is consistent with this chapter for reasons of conscience**. A health care institution or health care facility may decline to comply with an individual instruction or health care decision if the instruction or decision is contrary to a policy of the institution or facility that is expressly based on reasons of conscience and if the policy was timely

communicated to the patient or to a person then authorized to make health care decisions for the patient. **Notwithstanding the other provisions of this subsection, this subsection does not allow a health care provider, health care institution, or health care facility to decline to comply with an individual instruction or a health care decision that requests that cardiopulmonary resuscitation or other resuscitative measures be provided.**

* **Sec. 3.** AS 13.52.060(f) is amended to read:

(f) A health care provider, health care institution, or health care facility may decline to comply with an individual instruction or a health care decision that requires medically ineffective health care or health care contrary to generally accepted health care standards applicable to the provider, institution, or facility**, except that this subsection does not allow a health care provider, health care institution, or health care facility to decline to comply with an advance health care directive or a health care decision that requests that cardiopulmonary resuscitation or other resuscitative measures be provided**. In this subsection, "medically ineffective health care" means health care that according to reasonable medical judgment cannot cure the patient's illness, cannot diminish its progressive course, and cannot effectively alleviate severe discomfort and distress.

* **Sec. 4.** AS 13.52.065(a) is amended to read:

(a) A physician may issue a do not resuscitate order for a patient of the physician **only as provided in this section**. The physician shall document the grounds for the order in the patient's medical file.

* **Sec. 5.** AS 13.52.065(b) is amended to read:

(b) The department shall by regulation adopt a protocol, subject to the approval of the State Medical Board, for do not resuscitate orders that sets out a standardized method of procedure for the withholding of cardiopulmonary resuscitation by health care providers and health care institutions. **The protocol adopted by the department must comply with this section.**

* **Sec. 6.** AS 13.52.065 is amended by adding new subsections to read:

(g) Except as provided in (h) of this section, a physician may not issue a do not resuscitate order for a patient of the physician without the express consent of

(1) the patient, if the patient has capacity and is 18 years of age or older; under this paragraph, the consent may be provided by an advance health care directive; or

(2) a person authorized to make health care decisions for the patient.

(h) A physician may issue a do not resuscitate order for a patient of the physician without the express consent required by (g) of this section if the patient does not have capacity, no person is authorized to make health care decisions for the patient, and,

(1) if the patient has an advance health care directive, the directive indicates that the patient wants a do not resuscitate order; or

(2) if the patient has an advance health care directive, the directive is silent about the issuance of a do not resuscitate order and another physician concurs in the decision to issue a do not resuscitate order.

(i) A physician shall revoke a do not resuscitate order issued for a patient if

(1) the issuance of the do not resuscitate order violates (g) of this section;

(2) except as provided in (5) of this subsection, the patient has capacity and requests that the do not resuscitate order be revoked;

(3) the patient has an advance health care directive that indicates that the patient does not want a do not resuscitate order;

(4) the patient does not have capacity, the patient does not have an advance health care directive that indicates that the patient wants a do not resuscitate order, and a person authorized to make health care decisions for the patient requests or does not oppose the revocation of the do not resuscitate order; or

(5) the patient is under 18 years of age and the parent or guardian of the patient requests that the do not resuscitate order be revoked.

(j) A physician may revoke a do not resuscitate order issued by another physician for a patient, if the physician has a

(1) physician-patient relationship with the patient; or

(2) health care obligation to the patient arising out of the physician's

(A) individual relationship with the patient; or

(B) employment by the health care institution or health care facility where the patient is being treated.

* **Sec. 7.** AS 13.52.080(a) is amended to read:

(a) A health care provider or health care institution that acts in good faith and in accordance with generally accepted health care standards applicable to the health care provider or institution is not subject to civil or criminal liability or to discipline for unprofessional conduct for

(1) providing health care information in good faith under AS 13.52.070;

(2) complying with a health care decision of a person based on a good faith belief that the person has authority to make a health care decision for a patient, including a decision to withhold or withdraw health care;

(3) declining to comply with a health care decision of a person based on a good faith belief that the person then lacked authority;

(4) complying with an advance health care directive and assuming in good faith that the directive was valid when made and has not been revoked or terminated;

(5) participating in the withholding or withdrawal of cardiopulmonary resuscitation under the direction or with the authorization of a physician or upon discovery of do not resuscitate identification upon an individual;

(6) causing or participating in providing cardiopulmonary resuscitation or other life-sustaining procedures

(A) under AS 13.52.065(e) when an individual has made an anatomical gift;

(B) because an individual has made a do not resuscitate order ineffective under **AS 13.52.065** [AS 13.52.065(f)] or another provision of this chapter; or

(C) because the patient is a woman of childbearing age and AS 13.52.055 applies; or

(7) acting in good faith under the terms of this chapter or the law of another state relating to anatomical gifts.

*** Sec. 8.** AS 13.52.080(c) is amended to read:

(c) A health care provider, health care institution, or health care facility is not subject to civil or criminal liability, or to discipline for unprofessional conduct, if a do not resuscitate order prevents the health care provider, health care institution, or health care facility from attempting to resuscitate a patient who requires cardiopulmonary resuscitation or other resuscitative measures because of complications arising out of health care being administered to the patient by the health care provider, health care institution, or health care facility. This subsection does not apply if

(1) the complications suffered by the patient are caused by gross negligence or reckless or intentional actions on the part of the health care provider, health care institution, or health care facility**; or**

(2) the do not resuscitate order relied on by the health care provider, health care institution, or health care facility was issued in violation of AS 13.52.065.

*** Sec. 9.** AS 13.52.120(b) is amended to read:

(b) Notwithstanding any other provision of law **except (h) of this section**, death resulting from the withholding or withdrawal of cardiopulmonary resuscitation or other life-sustaining procedures does not, for any purpose, constitute a suicide or homicide if the withholding or withdrawal is

(1) consistent with this chapter**, except that a violation of AS 13.52.065(g) - (i), does not, for any purpose, constitute a homicide**; and

(2) from an individual

(A) for whom a do not resuscitate order has not been issued;

(B) for whom a do not resuscitate order has been issued under

(i) the protocol for do not resuscitate orders established under AS 13.52.065; or

(ii) a do not resuscitate identification found on the individual.

*** Sec. 10.** AS 13.52.120 is amended by adding a new subsection to read:

(h) The provisions of (b) of this section do not apply to a person who orders or causes the withholding or withdrawal of cardiopulmonary resuscitation or other life-

sustaining procedures if the person acts intentionally, recklessly, with criminal negligence, or with gross negligence. In this subsection, "intentionally," "recklessly," and "criminal negligence" have the meanings given in AS 11.81.900.

* **Sec. 11.** AS 13.52.300 is amended to read:

Sec. 13.52.300. Optional form. The following sample form may be used to create an advance health care directive. The other sections of this chapter govern the effect of this or any other writing used to create an advance health care directive. This form may be duplicated. This form may be modified to suit the needs of the person, or a different form that complies with this chapter may be used, including the mandatory witnessing requirements:

ADVANCE HEALTH CARE DIRECTIVE

Explanation

You have the right to give instructions about your own health care to the extent allowed by law. You also have the right to name someone else to make health care decisions for you to the extent allowed by law. This form lets you do either or both of these things. It also lets you express your wishes regarding the designation of your health care provider. If you use this form, you may complete or modify all or any part of it. You are free to use a different form if the form complies with the requirements of AS 13.52.

Part 1 of this form is a durable power of attorney for health care. A "durable power of attorney for health care" means the designation of an agent to make health care decisions for you. Part 1 lets you name another individual as an agent to make health care decisions for you if you do not have the capacity to make your own decisions or if you want someone else to make those decisions for you now even though you still have the capacity to make those decisions. You may name an alternate agent to act for you if your first choice is not willing, able, or reasonably available to make decisions for you. Unless related to you, your agent may not be an owner, operator, or employee of a health care institution where you are receiving care.

Unless the form you sign limits the authority of your agent, your agent may make all health care decisions for you that you could legally make for yourself. This form has a place for you to limit the authority of your agent. You do not have to limit the authority of your agent if you wish to rely on your agent for all health care decisions that may have to be made. If you choose not to limit the authority of your agent, your agent will have the right, to the extent allowed by law, to

(a) consent or refuse consent to any care, treatment, service, or procedure to maintain, diagnose, or otherwise affect a physical or mental condition, including the administration or discontinuation of psychotropic medication;

(b) select or discharge health care providers and institutions;

(c) approve or disapprove proposed diagnostic tests, surgical procedures, and programs of medication;

(d) direct the provision, withholding, or withdrawal of artificial nutrition and hydration and all other forms of health care; and

(e) make an anatomical gift following your death.

Part 2 of this form lets you give specific instructions for any aspect of your health care to the extent allowed by law, except you may not authorize mercy killing, assisted suicide, or euthanasia. Choices are provided for you to express your wishes regarding the provision, withholding, or withdrawal of treatment to keep you alive, including the provision of artificial nutrition and hydration, as well as the provision of pain relief medication. Space is provided for you to add to the choices you have made or for you to write out any additional wishes.

Part 3 of this form lets you express an intention to make an anatomical gift following your death.

Part 4 of this form lets you make decisions in advance about certain types of mental health treatment.

Part 5 of this form lets you designate a physician to have primary

responsibility for your health care.

After completing this form, sign and date the form at the end and have the form witnessed by one of the two alternative methods listed below. Give a copy of the signed and completed form to your physician, to any other health care providers you may have, to any health care institution at which you are receiving care, and to any health care agents you have named. You should talk to the person you have named as your agent to make sure that the person understands your wishes and is willing to take the responsibility.

You have the right to revoke this advance health care directive or replace this form at any time, except that you may not revoke this declaration when you are determined not to be competent by a court, by two physicians, at least one of whom shall be a psychiatrist, or by both a physician and a professional mental health clinician. In this advance health care directive, "competent" means that you have the capacity

(1) to assimilate relevant facts and to appreciate and understand your situation with regard to those facts; and

(2) to participate in treatment decisions by means of a rational thought process.

PART 1

DURABLE POWER OF ATTORNEY FOR
HEALTH CARE DECISIONS

(1) DESIGNATION OF AGENT. I designate the following individual as my agent to make health care decisions for me:

_____

(name of individual you choose as agent)

_____

(address) (city) (state) (zip code)

_____

(home telephone) (work telephone)

OPTIONAL: If I revoke my agent's authority or if my agent is not

willing, able, or reasonably available to make a health care decision for me, I designate as my first alternate agent

_____

(name of individual you choose as first alternate agent)

_____

(address) (city) (state) (zip code)

_____

(home telephone) (work telephone)

OPTIONAL: If I revoke the authority of my agent and first alternate agent or if neither is willing, able, or reasonably available to make a health care decision for me, I designate as my second alternate agent

_____

(name of individual you choose as second alternate agent)

_____

(address) (city) (state) (zip code)

_____

(home telephone) (work telephone)

(2) AGENT'S AUTHORITY. My agent is authorized and directed to follow my individual instructions and my other wishes to the extent known to the agent in making all health care decisions for me. If these are not known, my agent is authorized to make these decisions in accordance with my best interest, including decisions to provide, withhold, or withdraw artificial hydration and nutrition and other forms of health care to keep me alive, except as I state here:

_____

_____

_____

(Add additional sheets if needed.)

Under this authority, "best interest" means that the benefits to you resulting from a treatment outweigh the burdens to you resulting from that treatment after assessing

(A) the effect of the treatment on your physical, emotional, and cognitive functions;

(B) the degree of physical pain or discomfort caused to you by the treatment or the withholding or withdrawal of the treatment;

(C) the degree to which your medical condition, the treatment, or the withholding or withdrawal of treatment, results in a severe and continuing impairment;

(D) the effect of the treatment on your life expectancy;

(E) your prognosis for recovery, with and without the treatment;

(F) the risks, side effects, and benefits of the treatment or the withholding of treatment; and

(G) your religious beliefs and basic values, to the extent that these may assist in determining benefits and burdens.

(3) WHEN AGENT'S AUTHORITY BECOMES EFFECTIVE. Except in the case of mental illness, my agent's authority becomes effective when my primary physician determines that I am unable to make my own health care decisions unless I mark the following box. In the case of mental illness, unless I mark the following box, my agent's authority becomes effective when a court determines I am unable to make my own decisions, or, in an emergency, if my primary physician or another health care provider determines I am unable to make my own decisions. If I mark this box, my agent's authority to make health care decisions for me takes effect immediately.

(4) AGENT'S OBLIGATION. My agent shall make health care decisions for me in accordance with this durable power of attorney for health care, any instructions I give in Part 2 of this form, and my other wishes to the extent known to my agent. To the extent my wishes are unknown, my agent shall make health care decisions for me in accordance with what my agent determines to be in my best interest. In determining my best interest, my agent shall consider my personal values to the extent known to my agent.

(5) NOMINATION OF GUARDIAN. If a guardian of my person needs to be appointed for me by a court, I nominate the agent designated in this form. If that agent is not willing, able, or reasonably available to act as guardian, I nominate the alternate agents whom I have named under (1) above, in the order designated.

PART 2

INSTRUCTIONS FOR HEALTH CARE

If you are satisfied to allow your agent to determine what is best for you in making health care decisions, you do not need to fill out this part of the form. If you do fill out this part of the form, you may strike any wording you do not want. There is a state protocol that governs the use of do not resuscitate orders by physicians and other health care providers. You may obtain a copy of the protocol from the Alaska Department of Health and Social Services. A "do not resuscitate order" means a directive from a licensed physician that emergency cardiopulmonary resuscitation should not be administered to you.

(6) END-OF-LIFE DECISIONS. Except to the extent prohibited by law, I direct that my health care providers and others involved in my care provide, withhold, or withdraw treatment in accordance with the choice I have marked below: (Check only one box.)

(A) [ ] Choice To Prolong Life

I want my life to be prolonged as long as possible within the limits of generally accepted health care standards; OR

(B) [ ] Choice Not To Prolong Life

I want comfort care only and I do not want my life to be prolonged with medical treatment if, in the judgment of my physician,

I have (check all choices that represent your wishes)

[ ] (i) a condition of permanent unconsciousness: a condition that, to a high degree of medical certainty, will last permanently without improvement; in which, to a high degree of medical certainty, thought, sensation, purposeful action, social interaction, and awareness of

myself and the environment are absent; and for which, to a high degree of medical certainty, initiating or continuing life-sustaining procedures for me, in light of my medical outcome, will provide only minimal medical benefit for me; or

[ ] (ii) a terminal condition: an incurable or irreversible illness or injury that without the administration of life-sustaining procedures will result in my death in a short period of time, for which there is no reasonable prospect of cure or recovery, that imposes severe pain or otherwise imposes an inhumane burden on me, and for which, in light of my medical condition, initiating or continuing life-sustaining procedures will provide only minimal medical benefit;

[ ] Additional instructions:_____

_____

(C) Artificial Nutrition and Hydration. If I am unable to safely take nutrition, fluids, or nutrition and fluids (check your choices or write your instructions),

[ ] I wish to receive artificial nutrition and hydration indefinitely;

[ ] I wish to receive artificial nutrition and hydration indefinitely, unless it clearly increases my suffering and is no longer in my best interest;

[ ] I wish to receive artificial nutrition and hydration on a limited trial basis to see if I can improve;

[ ] In accordance with my choices in (6)(B) above, I do not wish to receive artificial nutrition and hydration.

[ ] Other instructions: _____

_____

(D) Relief from Pain.

[ ] I direct that adequate treatment be provided at all times for the sole purpose of the alleviation of pain or discomfort; or

[ ] I give these instructions:

_____

_____

(E) **Life-Sustaining Procedures. "Life-sustaining procedures" means any medical treatment, procedure, or intervention that may keep you alive but will not remove your terminal condition or remove permanent unconsciousness; "life-sustaining procedures" includes assisted ventilation, renal dialysis, surgical procedures, blood transfusions, and the administration of drugs, including antibiotics, or artificial nutrition and hydration.**

[ ] I wish to receive life-sustaining procedures.

[ ] I do not wish to receive life-sustaining procedures.

(F) Should I become unconscious and I am pregnant, I direct that

_____

_____

(7) OTHER WISHES. (If you do not agree with any of the optional choices above and wish to write your own, or if you wish to add to the instructions you have given above, you may do so here.) I direct that

_____

_____

Conditions or limitations: _____

_____.

(Add additional sheets if needed.)

PART 3

ANATOMICAL GIFT AT DEATH

(OPTIONAL)

If you are satisfied to allow your agent to determine whether to make an anatomical gift at your death, you do not need to fill out this part of the form.

(8) Upon my death: (mark applicable box)

(A) [ ] I give any needed organs, tissues, or other body parts, OR

(B) [ ] I give the following organs, tissues, or other body parts only

_____

_____

(C) [ ] My gift is for the following purposes (mark any of the following you want):

[ ] (i) transplant;

[ ] (ii) therapy;

[ ] (iii) research;

[ ] (iv) education.

(D) [ ] I refuse to make an anatomical gift.

PART 4

MENTAL HEALTH TREATMENT

This part of the declaration allows you to make decisions in advance about mental health treatment. The instructions that you include in this declaration will be followed only if a court, two physicians that include a psychiatrist, or a physician and a professional mental health clinician believe that you are not competent and cannot make treatment decisions. Otherwise, you will be considered to be competent and to have the capacity to give or withhold consent for the treatments.

If you are satisfied to allow your agent to determine what is best for you in making these mental health decisions, you do not need to fill out this part of the form. If you do fill out this part of the form, you may strike any wording you do not want.

(9) PSYCHOTROPIC MEDICATIONS. If I do not have the capacity to give or withhold informed consent for mental health treatment, my wishes regarding psychotropic medications are as follows:

_____ I consent to the administration of the following medications:

_____ I do not consent to the administration of the following medications:

Conditions or limitations: _____

_____.

(10) ELECTROCONVULSIVE TREATMENT. If I do not have the capacity to give or withhold informed consent for mental health treatment, my wishes regarding electroconvulsive treatment are as follows:

_____ I consent to the administration of electroconvulsive treatment.

_____ I do not consent to the administration of electroconvulsive treatment.

Conditions or limitations: _____

_____.

(11) ADMISSION TO AND RETENTION IN FACILITY. If I do not have the capacity to give or withhold informed consent for mental health treatment, my wishes regarding admission to and retention in a mental health facility for mental health treatment are as follows:

_____ I consent to being admitted to a mental health facility for mental health treatment for up to _____ days. (The number of days not to exceed 17.)

_____ I do not consent to being admitted to a mental health facility for mental health treatment.

Conditions or limitations: _____

_____.

OTHER WISHES OR INSTRUCTIONS

_____

_____

_____

Conditions or limitations: _____

_____.

PART 5

PRIMARY PHYSICIAN

(OPTIONAL)

(12) I designate the following physician as my primary physician:

_____

(name of physician)

_____

(address) (city) (state) (zip code)

_____

(telephone)

OPTIONAL: If the physician I have designated above is not willing, able, or reasonably available to act as my primary physician, I designate the following physician as my primary physician:

_____

(name of physician)

_____

(address) (city) (state) (zip code)

_____

(telephone)

(13) EFFECT OF COPY. A copy of this form has the same effect as the original.

(14) SIGNATURES. Sign and date the form here:

_____

(date) (sign your name)

_____

(print your name)

_____

(address) (city) (state) (zip code)

(15) WITNESSES. This advance care health directive will not be valid for making health care decisions unless it is

(A) signed by two qualified adult witnesses who are personally known to you and who are present when you sign or acknowledge your signature; the witnesses may not be a health care provider employed at the health care institution or health care facility where you are receiving

health care, an employee of the health care provider who is providing health care to you, an employee of the health care institution or health care facility where you are receiving health care, or the person appointed as your agent by this document; at least one of the two witnesses may not be related to you by blood, marriage, or adoption or entitled to a portion of your estate upon your death under your will or codicil; or

(B) acknowledged before a notary public in the state.

ALTERNATIVE NO. 1

Witness Who is Not Related to or a Devisee of the Principal

I swear under penalty of perjury under AS 11.56.200 that the principal is personally known to me, that the principal signed or acknowledged this durable power of attorney for health care in my presence, that the principal appears to be of sound mind and under no duress, fraud, or undue influence, and that I am not

(1) a health care provider employed at the health care institution or health care facility where the principal is receiving health care;

(2) an employee of the health care provider providing health care to the principal;

(3) an employee of the health care institution or health care facility where the principal is receiving health care;

(4) the person appointed as agent by this document;

(5) related to the principal by blood, marriage, or adoption; or

(6) entitled to a portion of the principal's estate upon the principal's death under a will or codicil.

_____

(date) (signature of witness)

_____

(printed name of witness)

_____

(address) (city) (state) (zip code)

Witness Who May be Related to or a Devisee of the Principal

I swear under penalty of perjury under AS 11.56.200 that the principal is personally known to me, that the principal signed or acknowledged this durable power of attorney for health care in my presence, that the principal appears to be of sound mind and under no duress, fraud, or undue influence, and that I am not

(1) a health care provider employed at the health care institution or health care facility where the principal is receiving health care;

(2) an employee of the health care provider who is providing health care to the principal;

(3) an employee of the health care institution or health care facility where the principal is receiving health care; or

(4) the person appointed as agent by this document.

(signature of notary public)

* **Sec. 12.** AS 13.52.390(17) is amended to read:

(17) "health care decision" means a decision made by an individual or the individual's agent, guardian, or surrogate regarding the individual's health care, including

(A) selection and discharge of health care providers and institutions;

(B) approval or disapproval of proposed diagnostic tests, surgical procedures, and programs of medication;

(C) direction to provide, withhold, or withdraw artificial nutrition and hydration if providing, withholding, or withdrawing artificial nutrition, artificial hydration, or artificial nutrition and hydration is in accord with generally accepted health care standards applicable to health care providers or institutions;

(D) the administration or withdrawal of psychotropic medications, the use of electroconvulsive treatment, and the admission to a mental health facility; [AND]

(E) making an anatomical gift at death; **and**

(F) a direction relating to the provision of cardiopulmonary resuscitation or other resuscitative measures;

* **Sec. 13.** AS 13.52.065(f) is repealed.

* **Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINUING EFFECT OF DO NOT RESUSCITATE ORDERS. A do not resuscitate order made under AS 13.52 before the effective date of this Act continues in effect under AS 13.52, unless the do not resuscitate order is revoked under AS 13.52.065(i) or (j), added by sec. 6 of this Act, or made ineffective under another provision of AS 13.52, as amended by this Act.

MEMORANDUM January 23, 2012

SUBJECT: Sectional summary of SB 172 relating to health care decisions, including do not resuscitate orders
(Work Order No. 27-LS0991\B)

TO: Senator Fred Dyson
Attn: Chuck Kopp

FROM: Terry Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Amends AS 13.52.045 to prohibit a health care institution or health care facility from interpreting the issuance of a do not resuscitate order as preventing the providing of life-sustaining procedures to the patient.

Section 2. Amends 13.52.060(e) to prohibit a health care provider from declining, for reasons of conscience, to comply with a do not resuscitate order that is consistent with this chapter. Also states that the subsection does not allow a health care provider, health care institution, or health care facility to decline to comply with an individual instruction or a health care decision that requests that cardiopulmonary resuscitation or other resuscitative measures be provided.

Section 3. Amends AS 13.52.060(f) to state that the subsection does not allow a health care provider, health care institution, or health care facility to decline to comply with an advance health care directive or a health care decision that is consistent with the chapter and that requests that cardiopulmonary resuscitation or other resuscitative measures be provided. The subsection addresses declining to comply with an individual instruction or a health care decision that requires medically ineffective health care or health care contrary to generally accepted health care standards.

Section 4. Amends AS 13.52.065(a) limits a physician's right to issue a DNR order. The order may be issued only as provided in AS 13.52.065.

Section 5. Amends AS 13.52.065(b) to require that the protocol (adopted by the department) for withholding cardiopulmonary resuscitation comply with AS 13.52.065.

Section 6. Adds new subsections to AS 13.52.065.

Sec. 13.52.065(g) prohibits a physician from issuing a do not resuscitate order for a patient of the physician without the express consent described in the subsection (except as provided by (h)).

Sec. 13.52.065(h) states when a physician may issue a do not resuscitate order for a patient of the physician without the express consent required by (g) of this section.

Sec. 13.52.065(i) requires a physician to revoke a do not resuscitate order issued for a patient under certain listed circumstances.

Sec. 13.52.065(j) allows a physician to revoke a do not resuscitate order issued by another physician under certain described circumstances.

Section 7. Amends AS 13.52.080(a) to replace a citation to a subsection that is repealed by this bill.

Section 8. Amends AS 13.52.080(c) to provide that its immunity provisions do not apply if a do not resuscitate order relied on by the health care provider, health care institution, or health care facility was issued in violation of AS 13.52.065.

Section 9. Amends AS 13.52.120(b) to clarify that a violation of the new provisions (added by bill sec. 6) does not, in the context of the provision's required consistency with the chapter, constitute a homicide. Adds a cross reference to the new (h) as an exception for applying the subsection's approach to suicide or homicide.

Section 10. Adds AS 13.52.120(h) to state that the provisions in (b) about homicide and suicide do not apply to a person who orders or causes the withholding or withdrawal of life-sustaining procedures and acts intentionally, recklessly, with criminal negligence, or with gross negligence.

Section 11. Amends the optional form in AS 13.52.300 to add a wish regarding life-sustaining procedures.

Section 12. Amends AS 13.52.390 (the definition section) to change the definition of "health care decision" to state that the term includes a direction about receiving cardiopulmonary resuscitation or other resuscitative measures.

Section 13. Repeals AS 13.52.065(f), which currently addresses how DNR orders are made ineffective.

Section 14. Adds a provision to indicate how DNR orders made before the bill's effective date are to be treated in light of the bill.

If I may be of further assistance, please advise.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB172

Analysis

This bill specifies that a health care provider may not decline to comply with a do not resuscitate order that is consistent with the chapter for reasons of conscience. The bill amends the statutes specifically as it relates to requests that cardiopulmonary resuscitation or other resuscitative measures be provided. It provides that the protocol adopted by the department must comply with the amended language provided section.

Implementation of the bill as written would require the Division of Public Health's Section of Emergency Programs, Emergency Medical Services (EMS) Unit to upgrade the statewide DNR protocol in the Comfort One program.

Implementation of the bill as written would require the Division of Public Health's Section of Emergency Programs, Emergency Medical Services (EMS) Unit to upgrade the statewide Do Not Resuscitate protocol materials. While the program already budgets on-going printing costs as part of the base budget, revising these materials will have one-time costs associated that are not considered part of the base. This involves modifying already printed administrative forms and procedures that support the Comfort One program. Also, the current inventory of forms already printed and distributed will need to be replaced with the updated forms. The cost to update the forms and replace the inventory can be absorbed without reducing services elsewhere.

The Division of Public Health provides about 4500 enrollment forms and a lesser number of each of two pamphlets each year. The Comfort One enrollment forms are distributed to the three main EMS Regions (Southern, Southeast, and Interior). Southern Region is the largest user of the forms and has had an increasing number of requests for the forms. The three regions send forms out to the other four regions upon request.

MEMORANDUM October 28, 2011

SUBJECT: Question regarding AS 13.52 (Work Order No. 27-LS0991)

TO: Senator Fred Dyson
Attn: Chuck Kopp

FROM: Terry Bannister
Legislative Counsel

You have asked whether AS 13.52 adequately protects the right of a patient, or the patient's designee, to overrule a physician's decision to issue a do not resuscitate (DNR) order. This question was prompted by a recent situation in which a physician at a hospital issued a DNR order against the express wishes and directions of both the patient and the patient's wife who held his durable power of attorney.[1] You have referred me to AS 13.52.065, which addresses DNR protocol and identification requirements, AS 13.52.100, which addresses the patient's right to make health care decisions while the patient has capacity, and AS 13.52.120, which addresses a presumption in favor of life.

AS 13.52.065(a) does allow a physician to issue a do not resuscitate order. However, that provision cannot be read in isolation from the rest of AS 13.52 (the "chapter"). AS 13.52 is fairly clear that a patient with capacity has the right to make a DNR order ineffective. However, the chapter is not as clear that an individual can prevent a doctor from placing the order or that an authorized agent of the patient may make a DNR order ineffective or prevent the doctor from placing the DNR order.

With certain exemptions for conscience or where medically ineffective standards are involved,[2] AS 13.52.060(d) requires a health care provider,[3] to comply with an individual instruction[4] of the patient, and with a health care decision made by an authorized person. The term, "individual instruction," appears to cover a DNR order, because it covers a

[1] I am presuming this was a durable power of attorney for health care.

[2] AS 13.52.060(e) - (f).

[3] The term includes a physician.

[4] Defined in AS 13.52.390 as an individual's direction concerning a health care decision for the individual.

health care decision,[5] which in turn includes any care, treatment, service, or procedure that affects an individual's physical or mental condition.[6]

The chapter's specific provisions regarding DNR orders, AS 13.52.065(f) and AS 13.52.100(c), clearly allow DNR orders to be made ineffective if a patient who is able to make the decision requests this, but these sections do not expressly address authorized agents. However, with regard to patients without capacity, AS 13.52.100(c) states that if the individual is not able to make the decision, the DNR protocol authorized by AS 13.52.065(b) be used. The sample form in AS 13.52.300 for an advance care directive states that the protocol governs the use of DNR orders by health care providers; the exact meaning of "use" is not defined in the chapter or the protocol, so it is left up to interpretation. The DNR protocol established by the Department of Health and Social Services[7] states that a DNR patient may revoke the patient's DNR status at any time and in any manner in accordance with AS 13.52,[8] but does not go into more detail or expressly address revocation by agents of the individual.

It can also be argued that in this chapter a reference to a "patient" also includes an authorized agent of an adult individual. This interpretation is supported by AS 13.52.060(d) mentioned above. It is also supported by AS 13.52.080(a)(6)(B), because that provision appears to indicate that AS 13.52.065(f) is not the only provision under which a DNR order can be made ineffective. This position is also supported by AS 13.52.010's allowing a patient to make advance health care directives and appoint agents regarding health care decisions. And, under AS 13.52.010(b), an agent may be given the authority under a durable power of attorney for health to make any health care decision the principal could have made while having capacity.[9]

---

[5] See AS 13.52.390(17).

[6] See AS 13.52.390(16).

[7] The current protocol was adopted in 1996 under AS 18.12, a chapter that was repealed when AS 13.52 was enacted in 2004 (with an effective date of January 1, 2005). Under sec. 18, ch. 83, SLA 2004, the Department of Health and Social Services was given authority to adopt regulations to implement AS 13.52, and under sec. 19, ch. 83, SLA 2004, the Department of Law's regulations attorney was directed to make certain citation changes in 7 AAC 16 to reflect the new chapter (these do not appear in the regulations) until the new regulations were adopted. Under sec. 19, ch. 83, SLA 2004, the regulations in 7 AAC 16 were to continue in effect until the Department of Health and Social services adopted regulations for the 2004 act.

[8] See 7 AAC 16.010(g).

[9] See AS 13.52.010(b).

The fact that the chapter at AS 13.52.300 contains an advance care directive form to state health care decisions and to appoint agents also supports an interpretation that individuals may indicate their wishes, and appoint agents, regarding DNR orders. The form itself contains language that the individual has the right to give instructions about the individual's own health care, although this language is qualified by making the right "to the extent allowed by law." But the form states that the DNR protocol governs the use of DNR orders. Finally, AS 13.52.120(a) states that the chapter establishes a presumption in favor of life, which would seem to support interpreting the chapter to allow a patient (or the patient's authorized representative) to prevent a physician from issuing a DNR order.

In AS 13.52 it seems clear that a patient with capacity has the right to make a DNR order ineffective. And while I would tend to conclude that the better interpretation of AS 13.52 is that a doctor's right to issue a DNR order is limited by the decision of the patient or the patient's authorized representative, and that an agent with that authority can revoke a DNR order, there are some ambiguities in the chapter that could result in other interpretations.

It would be helpful to know the exact basis for the positions taken by the physician and the hospital.

If I may be of further assistance, please advise.

MEMORANDUM December 30, 2011

SUBJECT: Bill relating to health care decisions, including do not resuscitate orders (Work Order No. 27-LS0991\M)

TO: Senator Fred Dyson
Attn: Chuck Kopp

FROM: Terry Bannister
Legislative Counsel

This memo accompanies the bill described above.

1. "Intervening care." After reviewing what you were requesting and the terms used in the chapter, it appears that you are referring to "life-sustaining procedures" (see the definition in AS 13.52.300). Please read the complete definition and make sure that this is what you had in mind. The new section uses that term instead of "intervening care." The provision has been moved to AS 13.52.045, which addresses the provision of life-sustaining procedures.

Contrary to what I indicated on the phone, it appears that the selection of life-sustaining procedures is not sufficiently addressed in the form provided under AS 13.52.300, so it is necessary to change the form. Unfortunately, this requires that the entire form be laid out in your bill even though the actual changes are small.

2. Use of "advance health care directive." After reviewing your question about the substitution of "advance health care directive" for "individual instruction" in AS 13.52.060(e), I decided to return to "individual instruction" because it is narrower than "advance health care directive," and a narrower term is consistent with the goal of the changes to AS 13.52.060(e) (to limit the health care provider's right to decline to comply for reasons of conscience).

3. Authorization by another physician to revoke a DNR order. Language has been added to proposed sec. 13.52.065(j) to identify which physicians may revoke another physician's DNR. Please examine sec. 13.52.065(j)(2)(B): is employment of the physician by the health care facility or institution the relationship that you had in mind?

If I may be of further assistance, please advise.

Memorandum

TO: Senator Fred Dyson
FROM: Chuck Burnham, Legislative Analyst
DATE: January 19, 2012
RE: State Laws: Assuring Healthcare Provider Compliance with Advance Health Directives
LRS Report 12.142

You asked about states' laws on "do not resuscitate orders" (DNRs). Specifically, you asked how other states prevent healthcare providers from using their patient care management authority to issue DNRs against the will of patients who have terminal conditions.

Background

As you likely know, all states have laws codifying patients' control, to varying degrees, over the medical care they receive in their final days of life.[1] Such legal mechanisms are commonly known as "advanced health directives," and may include "do not resuscitate orders" (DNRs). Typically, DNRs are used by elderly individuals or those with terminal illnesses to direct healthcare providers to suspend treatment should the patient experience a medical event that, in the absence of intervention, is likely to bring about death. In the absence of a DNR, medical ethics and standards of practice generally compel physicians to attempt life-saving measures; however, this requirement is limited when, in the judgment of the attending physician, such care would not ultimately prove beneficial to the patient. This concept is embodied in the Code of Ethics of the American Medical Association (AMA), which includes the following language in AMA Opinion 2.035:

> Physicians are not ethically obligated to deliver care that, in their best professional judgment, will not have a reasonable chance of benefiting their patients. Patients should not be given treatments simply because they demand them. Denial of treatment should be justified by reliance on openly stated ethical principles and acceptable standards of care, as defined in Opinion 2.03, "Allocation of Limited Medical Resources," and Opinion 2.095, "The Provision of Adequate Health Care," not on the concept of "futility," which cannot be meaningfully defined.

Recognizing the emotional and trying atmosphere that surrounds end-of-life care, the AMA provides in Opinion 2.037 a framework of considerations and actions to be taken by healthcare providers in circumstances where their prescribed treatment differs from the wishes of terminal patients. That Opinion frames the issue as follows:

> When further intervention to prolong the life of a patient becomes futile, physicians have an obligation to shift the intent of care toward comfort and closure. However, there are necessary value judgments involved in coming to the assessment of futility. These judgments must give consideration to patient or proxy assessments of worthwhile outcome. They should also take into account the physician or other provider's perception of intent in treatment, which should not be to prolong the dying process without benefit to the patient or to others with legitimate interests. They may also take into account community and institutional standards, which in turn may have used physiological or functional outcome measures. Nevertheless, conflicts between the parties may persist in determining what is futility in the particular instance.[2]

---

[1] Alaska's laws on advanced healthcare directives are codified at AS 13.52. For the purposes of this report, the term "patient" generally includes individuals receiving care, their families, and other proxies that may be involved in end-of-life decisions should the patient become incapacitated.

[2] The AMA Code of Medical Ethics is available online at *http://www.ama-assn.org/ama/pub/physician-resources/medical-ethics/code-medical-ethics.page?*.

The AMA recommends that healthcare institutions adopt policies that use a due process approach in determining medical futility. Opinion 2.037 outlines a seven-step approach that emphasizes fostering understanding and cooperation between patient and physician, involvement of institutional bodies such as ethics committees where disagreements remain, and the swift and orderly transfer of patients to other institutions when agreement cannot be reached.

Patient Protections in State Laws

Although the policies of the AMA generally appear to strike a reasonable balance between the wishes of patients and the medical judgment of physicians, those policies do not carry the weight of law. The concern that you contemplate—that physicians may order a DNR over the wishes of the patient at a point too early in the end-of-life process—is clearly shared by policymakers in a number of other jurisdictions.

For example, the Uniform Law Commission (ULC) includes protection against physicians superseding the wishes of patients in its Uniform Healthcare Decisions Act.[3] Section 7 of the Act, "Obligations of Healthcare Provider," includes the following:

> (d) Except as provided in subsections (e) and (f), a health-care provider or institution providing care to a patient shall:
>
> > (1) comply with an individual instruction of the patient and with a reasonable interpretation of that instruction made by a person then authorized to make health-care decisions for the patient; and
> >
> > (2) comply with a health-care decision for the patient made by a person then authorized to make health-care decisions for the patient to the same extent as if the decision had been made by the patient while having capacity.

The Act then allows that should a healthcare provider decline to comply with the instructions of a patient for reasons of conscience, policy, or conflict with generally accepted healthcare standards, the patient should be promptly informed and treatment should continue until transfer to another facility can be arranged.[4] The Act, in part or in total, has been adopted by a number of states including Alaska and, for example, Mississippi and New Mexico.

Although the policies of the AMA and the Uniform Act have clearly influenced policymakers' approaches to protecting patients' wishes in end-of-life circumstances, states nonetheless vary considerably in their laws on the topic. For instance, in California and Hawaii, physicians may issue orders specifying withholding end-of-life treatment, but only with the signature of a patient or legally recognized proxy. Similar orders may be issued by physicians in Tennessee and Virginia only with the "consent" of the affected patient. Medical doctors in Ohio may issue a "DNR Identification" order, but state law makes clear that the legal "declaration" of a patient regarding treatment preferences supersedes the physician's DNR.[5]

It is important to note that although the states we have mentioned, and others, have taken steps to protect patients from becoming subject to a DNR order against their will, determinations on when to discontinue efforts at life-saving interventions such as cardio pulmonary resuscitation (CPR) fall to the purview of physicians, the policies of the institutions in which they practice, and the accepted standards of medical practice. Therefore, patients' authority under the laws we've discussed necessarily extend only to whether they desire or refuse medical intervention through an advanced directive at the end of life rather than to the duration or timing of the cessation of those measures.

We hope this is helpful. If you have questions or need additional information, please let us know.

---

[3] Established in 1892, the ULC, also known as the National Conference of Commissioners on Uniform State Laws, seeks to provide states with "non-partisan, well-conceived and well-drafted legislation that brings clarity and stability to critical areas of state statutory law." The ULC is comprised of lawyers, judges, legislators, and academics who have been appointed by state governments. More information is available on the Commission's website at *http://www.nccusl.org/Default.aspx*.

[4] Full text of the Act is available online at *http://www.nccusl.org/Default.aspx*.

[5] We include, as attachments, examples of relevant statutes of California, Delaware, Florida, Georgia, Hawaii, Mississippi, New Mexico, Ohio, Tennessee, and Virginia.

SENATOR FRED DYSON

January 18, 2012

Senator Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

Re: AS 13.52 Alaska Health Care Decisions Act – Do Not Resuscitate (DNR) Orders & End of Life Decisions

Dear Senator Davis,

Thank you for your valuable support as a co-sponsor of the attached bill amending AS 13.52 *Alaska Health Care Decisions Act.* Ambiguities in the current law concerning the rights of patients and their surrogates to refuse or invalidate a DNR order have resulted in unnecessary distress of Alaskan residents facing critical end of life decisions.

In August 2011 my office was contacted by a recently discharged Anchorage area hospital patient and his wife, Mervin and Margery Mullins. The couple stated that a physician at the hospital put a Do-Not-Resuscitate order on Mervin, who has brain cancer, but doing much better than the prognosis. The DNR order was issued against the expressed wishes of both Mervin and Margery. When they protested, the physician told them that a DNR order is issued at the sole direction of a physician for his/her patient. Margery met with the hospital Chief Ethicist who confirmed their attending physician was correct. According to the Mullins, they were also told that the Durable Power of Attorney held by Margery "did not matter" because the decision was the physician's to make.

I had several conversations with the hospital Chief Operating Officer and Chief Medical Officer. They stated there is ambiguity in the law as to what a hospital (health care facility) can do with respect to overruling a DNR order placed on a patient by a physician. I explained my view - that the presumption of the law is in favor of life and of the patient's rights on end of life decisions, stated as such in AS.13.52.120(a) *In the absence of evidence to the contrary of the patient's intent, this chapter establishes a presumption in favor of life, consistent with the best interest of the patient.* The Chief Medical Officer agreed and directed that the DNR order be removed from Mr. Mervin Mullins.

I asked Legislative Legal to advise me on what the law actually says in AS 13.52 with respect to DNR orders and end of life decisions, and their opinion on whether the law adequately protects the patient (or his/her agent) right to overrule a physician's decision to issue a DNR order. I have attached to this correspondence the memos from Legal, dated October 28, 2011, and December 30, 2011.

During Session (January - May): Alaska State Capitol • Juneau, Alaska 99801 • (800) 342-2199 • (907) 465-2199 • (907) 465-4587 (fax)

senator.fred.dyson@legis.state.ak.us • www.akrepublicans.org

In part, Legal states -

> *AS 13.52 is fairly clear that a patient with capacity has the right to make a DNR order ineffective. However, the chapter is not as clear that an individual can prevent a doctor from placing the order or that an authorized agent of the patient may make a DNR order ineffective or prevent the doctor from placing the DNR order. (emphasis added)*
>
> *Finally, AS 13.52.120(a) states that the chapter establishes a presumption in favor of life, which would seem to support interpreting the chapter to allow a patient (or the patient's authorized representative) to prevent a physician from a issuing a DNR order. In AS 13.52 it seems clear that a patient with capacity has the right to make a DNR order ineffective. And while I would tend to conclude that the better interpretation of AS 13.52 is that a doctor's right to issue a DNR order is limited by the decision of the patient or the patient's authorized representative, and that an agent with that authority can revoke a DNR order, there are some ambiguities in the chapter that could result in other interpretations. (emphasis added)*

Based on this review by Legal, the stated confusion in the law by an Anchorage area hospital facility, and the experience of the Mullins couple, I asked Legal to draft an amendment to AS 13.52 clarifying the ambiguities. Specifically, that a physician may not issue a DNR order without the expressed consent of the patient, or if the patient lacks capacity, without the expressed consent of the authorized agent of the patient, or, if no one is available or known to be authorized to speak for the patient, without the concurrence of a second physician.

The Advance Health Care Directive sample form provided in AS 13.52.300 is also amended to allow the patient the option of accepting or decline life-sustaining procedures (treatments that will keep you alive, but not remove your terminal condition).

If you agree with me that this is an important matter and find the amendments to AS 13.52 to be acceptable, I would very much welcome your support as a co-sponsor.

Best regards,

Fred Dyson

SB 202

<TARGET><BILL>SB 202</BILL><SUBJECT>SB 202</SUBJECT><COMM>SHSS27</COMM></TARGET>

SENATOR DENNIS EGAN

Sponsor Statement

SB 202: Resuscitation Protocol Documents

Cardiopulmonary Resuscitation (CPR) standards are updated regularly based on new research. Unfortunately, due to the slow process of changing agency regulations, current state regulations reference outdated and incorrect CPR standards.

For example, when the current resuscitation regulations were adopted in 2002, the gold standard for adult CPR was 15 chest compressions for every two breaths administered. Today, the American Heart Association recommends 30 compressions for every two breaths. Pediatric standards have also changed significantly since the time current CPR regulations were established.

The International Liaison Committee on Resuscitation (ILCOR) is an international group of scientists that reviews studies, makes treatment recommendations, and publishes its findings. The addition of the ILCOR findings to AS 47.05.012 would allow Emergency Medical Services offices and instructors to teach the most current and appropriate resuscitation standards without having to go through the lengthy process of revising agency regulations.

This bill is necessary to maintain a high standard of emergency medical care in Alaska.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB202

Analysis

The bill amends AS 47.05.012 by adding resuscitation protocols to the list of materials that may be incorporated by reference in regulations. This will allow Emergency Medical Services (EMS) instructors to teach the most appropriate cardiopulmonary resuscitation techniques without the delay in adopting new statutory changes when new standards are published. The state EMS office has to choose between teaching and testing EMTs on current best practices or according to current state regulations which reference outdated and incorrect medical standards.

There is no fiscal impact to the department. The cost to update training materials to the current ILCOR standards is expected to be minimal and can be absorbed with existing resources.

The International Liaison Committee on Resuscitation (ILCOR) is an international consensus group of scientists that reviews studies, makes treatment recommendations for resuscitation, and publishes its findings when appropriate, usually every five years.

ALASKA COUNCIL ON EMERGENCY MEDICAL SERVICES

ACEMS
P.O. Box 110616
Juneau, AK 99811-0616

March 2, 2012

Senator Dennis Egan
State Capitol Room 510
Juneau AK, 99801

Dear Senator Egan,

We are deeply appreciative and excited that this bill is going forward. The Governor's Alaska Council on Emergency Medical Services (ACEMS) feels the responsibility of ensuring the most up to date information is utilized in the instruction of the state's first responders throughout Alaska. The ability to do that with cardiopulmonary resuscitation training (CPR) has been hindered by a seemingly minor road block in the state regulatory process.

We feel that SB 202 will remedy this situation.

The members of ACEMS feel there would be a significant benefit in adding the ILCOR scientific findings to the list in AS 47.05.012. This would allow the EMS Unit of the Section of Emergency Programs (the lead agency for EMS training in Alaska) and EMS instructors in the State to teach the most current, appropriate resuscitation standards as they are published, without having to go through a succession of regulatory changes to adopt new curricula for their training programs. This bill is vital to help maintain the high standards of emergency care in Alaska.

Thank you for your time and efforts of this very important matter. If you have any questions, please feel free to contact me.

Sincerely,

David Hull

David Hull, MICP
Chair, Alaska Council on Emergency Medical Services

SPONSOR STATEMENT – SENATE BILL 221

SB 221 – An Act relating to the disposition of proceeds from the alcoholic beverage tax and to the alcohol and other drug abuse treatment and prevention fund.

The state of Alaska is projected to collect nearly $40 million dollars from the existing alcohol excise tax in FY2013. SB 221 allocates 100 percent of existing alcohol tax revenue to the Alcohol and Other Drug Abuse Treatment and Prevention Fund (ADTP). In 2002, State Representative Lisa Murkowski championed HB225 to raise the alcoholic beverage tax and establish the ADTP to "help provide revenue needed for the expanded treatment, therapeutic courts, diversion programs and other initiatives now under consideration in the Legislature." Since 2003, only 50 percent of funds collected from the existing alcohol tax have been appropriated to the ADTP. While the political reasoning for the fund was to expand treatment, decreases in general fund spending have left overall funding for substance abuse treatment and prevention reduced or stagnant.

Despite passage of HB 225, demand for residential treatment, intensive outpatient, aftercare and community treatment and prevention programs continue to dramatically exceed the substance abuse treatment system's capacity. Providers throughout the state report treatment beds are full to capacity, long waiting lists exist for services they offer, and there are numerous requests for services they can't provide.

According to the Division of Behavioral Health, when the 141,000 uninsured Alaskans living at or below 250 percent of the federal poverty index become eligible for publicly funded health insurance after 2014 under federal law, (based on 2006 prevalence estimates) at least 2,800 of these adults can be expected to experience a substance abuse disorder requiring treatment. Federal match funds (FMAP) will provide 100 percent funding for expanded populations from 2014-2016, then phase down to a 90 percent match by 2020. Failing to build adequate alcohol and drug treatment capacity for the Medicaid expansion will have a profound impact on State General Fund expenditures for the Medicaid program long into the future. Passage of SB 221 will provide supplemental funding to expand treatment capacity statewide by addressing the backlog of capital budget requests for evidence-based detox and treatment facilities, as well as reinforce and expand current substance abuse treatment programs.

Alcoholism and drug abuse are inextricably linked to Alaska's epidemic levels of domestic violence and sexual assault, suicide, child neglect cases and rising corrections costs. According to a 2005 McDowell report, costs incurred as a result of substance abuse neared $738 million annually. With a small statutory change, all monies collected from alcohol taxes can be put toward proven substance abuse treatment and prevention programs. I strongly urge you to join in support of SB 221 to allocate 100 percent of existing alcohol tax revenue for substance abuse treatment and prevention.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB221
2012 LEGISLATIVE SESSION

Analysis

This bill relates to the disposition of proceeds from the alcoholic beverage tax and to the alcohol and other drug abuse treatment and prevention fund.

This fund was established several years ago, and there are processes in place for the Department of Revenue to make the deposits of taxes, and the Department of Health and Social Services to expend the funds upon receiving an appropriation.

This bill will have no fiscal impact on the Department of Administration, Division of Finance.

BILL NO. SB 221

Analysis

Bill Language:
Under current statute, 50% of the Alcoholic Beverage Excise Tax is deposited into the alcohol and other drug abuse treatment and prevention fund , a subaccount within the general fund, and the remaining 50% is deposited directly into the general fund. This bill would require the entire proceeds of the Alcoholic Beverage Excise Tax to be deposited in the alcohol and other drug abuse treatment and prevention fund established in the general fund. In FY 2011, the Tax Division collected approximately $38.7 million in total alcoholic beverage excise tax. Approximately $19.3 million was deposited in the alcohol and other drug abuse treatment and prevention fund. Under this bill, the entire amount would be deposited in the drug abuse treatment and prevention fund.

Revenues:
The bill has no effect on total revenues.

Expenditures:
The department can implement the provisions of the bill with existing resources.

Behavioral Health Response
LegLog 870
Breakdown of Funding for SA Treatment & Prevention by Component and Fund Source
11/3/2011

Behavioral Health offers response to the following request:

- Can we provide a breakdown of our alcohol and drug treatment and prevention programs by component showing funding by fund source for FY11? FED, UGF, DGF, Other.

Based on the associated core services, Behavioral Health recognizes the expenditures and revenue in the following components as Substance Abuse related.

- AK Fetal Alcohol Syndrome Program – SA Prevention and Intervention
- Alcohol Safety Action Program (ASAP) – SA Prevention and Intervention
- Community Action Prevention & Intervention - SA Prevention and Intervention
- Rural Services & Suicide Prevention - SA Prevention and Intervention
- Behavioral Health Grants – SA Treatment

The attached spreadsheet reports actual expenditures and revenue in the above components for FY11. The expenditures and revenue reported for Substance Abuse Administration are based on an allocation proportionate to the expenditures in the substance abuse components vs. the expenditures in the mental health related components. The expenditures reported for Substance Abuse Medicaid are available at the collocation code level.

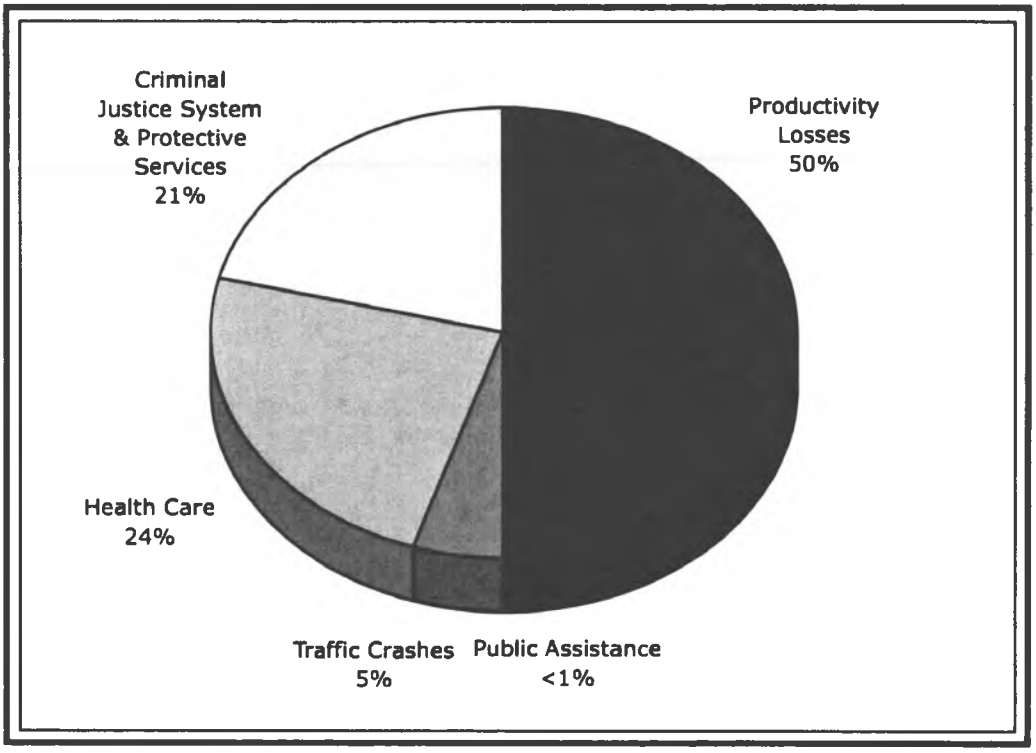
EXECUTIVE SUMMARY

The Advisory Board on Alcoholism and Drug Abuse, through the Alaska Department of Health and Social Services, contracted with McDowell Group in April 2005 to update a prior study on the economic costs of alcohol and other drug abuse in Alaska.

Alcohol and other drug abuse impacts the economy in many ways. Public safety, health care, and public assistance are among the areas impacted by alcohol and other drug abuse. The extent of these impacts is evident in the level of alcohol and other drug dependency and its associated cost on the Alaska economy. According to a 1998 study, 9.7 percent of Alaska's population is dependent upon or abuses alcohol (39,596 residents), while 1.5 percent is other drug dependent (14,238 residents). The total cost of this dependence to the Alaska economy is estimated to be $738 million during 2003. Alcohol abuse costs accounted for $525.5 million (71 percent). Other drug abuse costs were estimated at $212.5 million (29 percent). Costs by category include:

- $367 million from productivity losses.
- $154 million from criminal justice and protective services.
- $178 million from health care.
- $35 million from traffic crashes.
- $4 million from public assistance.

Percentage of Costs by Category Related to Alcohol and Other Drug Abuse in Alaska, 2003



More detailed study results for each cost category are presented below. Some of the economic benefits related to the manufacturing and sale of alcohol are also included.

Productivity Losses

Lost productivity occurs when alcohol and other drug abuse results in premature death, reduced efficiency of workers through physical or mental impairment, incarceration for criminal offense, and inpatient treatment or hospitalization. The reduced efficiency of employees, or premature death of Alaska residents, results in less production of goods and services, and is thus a cost to society.

Alcohol and other drug abuse in Alaska cost an estimated $367 million in lost productivity during 2003. Components of productivity losses and associated costs include:

- Premature death from alcohol and other drug abuse in Alaska resulted in an estimated $183 million in lost productivity in 2003. The annual average number of deaths from alcohol and other drug abuse between 1999 and 2003 was 236.
- Workers impaired by alcohol and other drug abuse had an estimated reduced productivity in Alaska of $136 million during 2003. This includes $106 million in alcohol-related impairment and $20 million in other drug-related impairment.
- Costs from alcohol and other drug-related incarcerations totaled an estimated $39 million in lost productivity during 2003. During that period, 1,193 inmate incarcerations were directly related to alcohol and other drug abuse.
- Lost productivity from Alaska residents receiving inpatient treatment for alcohol and other drug abuse cost an estimated $8.8 million in 2003.

Traffic Crashes

Alcohol and other drug abuse are a major cause of traffic crashes in Alaska. There were 1,109 traffic crashes in Alaska attributed to alcohol and other drug abuse during 2002. Of these crashes, 25 were fatal, 107 were major injury crashes, 370 were minor injury crashes, and 607 had property damage only. The estimated costs from these crashes were more than $35 million. Costs included:

- $16 million for legal costs.
- $12 million for insurance administration costs.
- $5 million for property damage costs.
- $2 million for workplace costs.

Costs by traffic accident category included:

- $26 million from major injuries.
- $5 million from fatalities.
- $2.5 million from minor injuries.
- $1 million from property damage only.

Criminal Justice

Alcohol and other drug abuse contribute to crime and child abuse. In 2003, an estimated 17,400 arrests were attributed to alcohol and other drug abuse. During this same period, 15,800 Alaska residents were victims of alcohol and other drug abuse-related crimes. Costs attributed to crime-related alcohol and other drug abuse in the state were nearly $154 million during this period. Crime costs in 2003 included:

- $43 million for law enforcement.
- $38 million for corrections.
- $12 million for legal costs and court adjudication.
- $636,000 for property damage.
- $1.9 million in economic costs to victims.
- Adult and child protective services attributed to alcohol and other drug abuse cost an estimated $59 million. These costs include foster care services, adoption care services, residential care services, and social worker services.

Health Care

Health care costs attributed to alcohol and other drug abuse result from illnesses or injuries. Examples of the kinds of health problems that can result from alcohol and drug abuse are cirrhosis of the liver, hypertension, diabetes, or stomach cancer. Health care costs related to alcohol and other drug abuse totaled an estimated $178 million in 2003. Health care costs included:

- Hospital costs from illnesses and injuries were estimated at $9.3 million. Alcohol abuse-related health care costs accounted for $84.8 million, while other drug abuse-related costs were $8.2 million.
- Alcohol and other drug residential and outpatient treatment costs were approximately $26.8 million.
- Total medical outpatient costs from illnesses and injuries totaled an estimated $25.7 million.
- Pharmaceutical costs were estimated at $23.0 million, while nursing home costs were $719,400.
- Medical care totaled $3.9 million for patients with other drug-related HIV and HIV with AIDS. Approximately 78 HIV and HIV with AIDS cases were attributed to intravenous drug abuse.
- Costs for medical treatment of hepatitis B and C caused by intravenous drug abuse was $5.1 million. Intravenous drug abuse contributed to 344 hepatitis B and C cases in Alaska in 2003.

Public Assistance and Social Services

A portion of public assistance expenditures can be attributed to alcohol and other drug abuse. Alcohol and other drug-dependent persons may qualify for public assistance because of reduced income, inability to hold a job, or disability caused by substance abuse. Costs attributed to abuse (program administration costs only) were an estimated $4.1 million in 2003.

Employment Impacts of Alcohol Sales

Although the focus of this study is centered on the cost of alcohol and other drug abuse, there are some economic benefits associated with the sale of alcoholic beverages. These economic benefits include employment, income and tax revenues. In 2003, there were approximately 3,000 jobs in alcohol-related industries in Alaska, with earnings of approximately $62 million. State excise tax revenue on alcoholic beverages, collected at the wholesale level, was approximately $33 million in FY 2004.

Actual Costs

It is critical the reader recognize that the alcohol and other drug-related costs presented in this study are estimates only. Actual costs could be 25 percent higher or lower than the total presented in this report. Very little underlying data exists regarding the monetary impact of alcohol and other drug abuse in Alaska. There is a clear need for more comprehensive research.

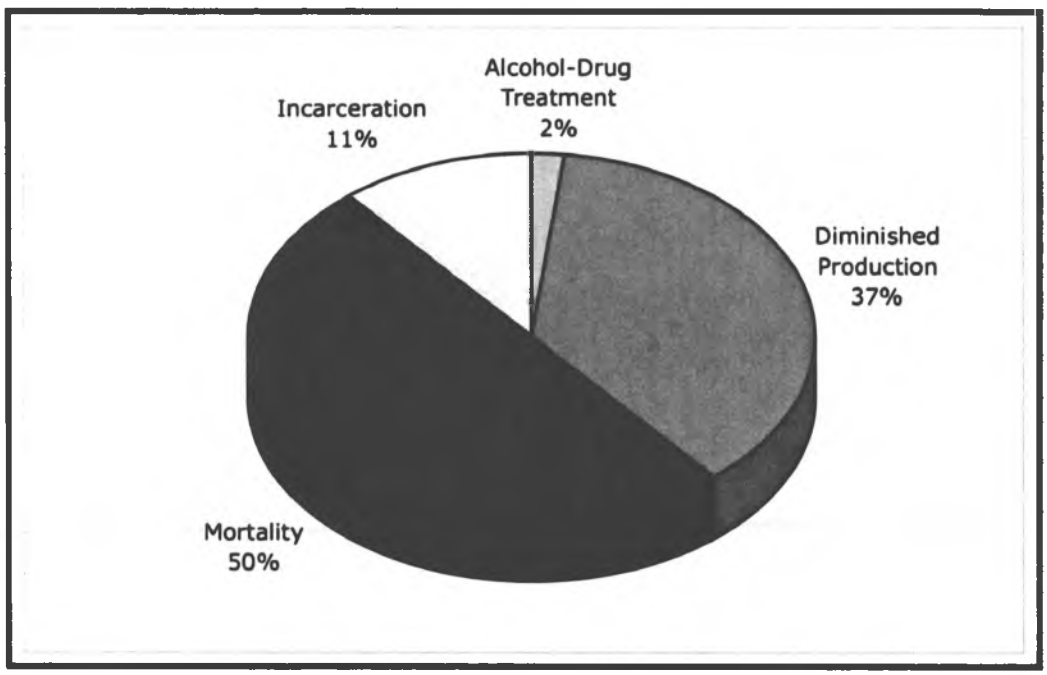
For this report, the McDowell Group study team used national data to estimate Alaska's alcohol and other drug abuse costs and then adjusted these costs for Alaska's higher cost of living. The study team relied heavily on a 1998 publication from the National Institute on Drug Abuse and National Institute on Alcohol Abuse and Alcoholism (NIDA/NIAAA, 1998), and a 1999 study for the Washington State Department of Social and Health Services, Division of Alcohol and Substance Abuse. As exhaustive and thorough as these studies are, they do not address Alaska's higher alcohol rates or its higher cost of providing services. Alaska's alcohol-dependent population is double the national average, according to results of the Alaska Adult Household Telephone Survey conducted by the Gallup Organization. In addition, cost-of-living indicators published by American Chamber of Commerce Researchers Association (ACCRA) show Anchorage health care costs were 65 percent higher than the national average during 2003.

In nearly all cases, Alaska-specific data were not available on the amount of crime, health and medical costs, lost production, and public assistance that can be attributed to alcohol and other drug abuse. Estimates rely on national norms based on tested methodologies. National norms are based on a lower prevalence of alcohol abuse and dependence than is the case in Alaska. Comprehensive development of Alaska-specific data is recommended.

Summary

Alcohol and other drug abuse cost Alaska an estimated $367 million in lost productivity during 2003. Lost productivity occurs when alcohol and other drug abuse results in premature death, reduced efficiency of workers through physical or mental impairment, incarceration for criminal offense, and residents requiring inpatient treatment or hospitalization. Overall, the reduced efficiency of employees or premature death of Alaska residents results in less production of goods and services, and thus is a cost to society. Figure 1 illustrates the sources of lost productivity in the Alaska economy.

Figure 1
Percent of Lost Productivity for Alaska from Alcohol and Other Drug Abuse in 2003



- Premature death from alcohol and other drug abuse in Alaska resulted in an estimated $183 million in lost productivity in 2003. Males accounted for $145 million in estimated losses and females, $37.7 million. An average of 236 deaths annually can be attributed to alcohol and other drug abuse between 1999 and 2003. Alcohol and drug abuse accounted for approximately 8 percent of deaths in that period; the average annual number of deaths from all causes in Alaska was 2,964 between 1999 and 2003.
- Alcohol and other drug abuse can impair worker performance resulting in lost productivity. An estimated 39,596 Alaska residents are alcohol dependent, resulting in reduced productivity of $106 million in 2003. Another 14,238 residents were drug dependent, resulting in $30 million in diminished productivity. The male population accounted for the largest portion of lost

productivity at $111 million, while productivity losses for females were estimated at $26 million.

- Of the 3,743 Alaska residents incarcerated in 2003, an estimated 1,193 incarcerations can be attributed to alcohol and other drug abuse. Lost productivity from alcohol and drug related incarcerations was estimated at $39 million.

- Time spent by Alaska residents while receiving inpatient treatment for alcohol and other drug abuse resulted in approximately $9 million in lost productivity in 2003. These figures do not include the actual cost of treatment.

Lost Production Due to Mortality

The largest cost to Alaska residents from alcohol and other drug abuse stems from productivity losses due to premature death. Death from alcohol and other drug abuse can result from suicide, motor vehicle crashes, homicide, cirrhosis, diabetes, or other medical causes. From an economic point of view, an Alaska resident provides two types of production benefits. The first is in the form of employment. By being employed, the resident is contributing to the overall benefit of Alaska society by producing goods and services. The second production benefit is from household services. An individual spends time caring for children, cleaning and maintaining a household like any wage and salary job, though that service is generally not compensated. Combined, these production losses contribute to the largest cost from alcohol and other drug abuse in Alaska.

Methodology

To estimate productivity losses from premature death, McDowell Group relied on the same methodology used in the "The Economic Costs of Alcohol and Drug Abuse in the United States – 1992" for the National Institute on Drug Abuse and National Institute on Alcohol Abuse and Alcoholism (NIDA/NIAAA) published in 1998. The research team first applied attribution factors by diagnosis supplied in the NIDA/NIAAA study to annual deaths by diagnosis reported by Alaska Vital Statistics from 1999 to 2003. Second, 2000 estimates of the present value of life earnings by age and gender were obtained from a published report by University of California Professor Dorothy Rice. These values are a combination of earnings data and estimated value of household services, which originate from U.S. Bureau of Census data. Earnings were adjusted by 5.5 percent to reflect the change in annual per capita personal income from 2000 to 2003 reported by the Bureau of Economic Analysis. Finally, the number of deaths by age and gender attributed to alcohol and other drug abuse were multiplied by the appropriate present value of life earnings in 2003 dollars.

In summary, the value of an average person's lifetime productivity is estimated and, depending on their age at the time of premature death, lost productivity is measured. It is important to note that this measure is not an estimate of "out-of-pocket" losses. Rather, it is a theoretical construct intended to reflect the fact that humans have the potential to be productive, and if life is cut short, society has suffered a loss of production potential.

Results

On average, there were 236 deaths in Alaska due to alcohol and other drug abuse between 1999 and 2003. Based on data from this period, alcohol and other drug abuse accounted for approximately 8 percent of all the deaths in the state (there was an annual average of 2,964 deaths from all causes between 1999 and 2003).

A breakdown of average annual deaths by age and gender is presented in Table 1. Of these deaths, 72 were females and 163 were males. From 1999 to 2003 the largest number of deaths was between ages 40 to 44 for females (seven alcohol and other drug-related deaths) and ages 45 to 54 for males (36 alcohol and other drug-related deaths). Table 2 shows the number of alcohol and other drug-related deaths by cause during this period. Motor vehicle crashes (41 deaths) and suicide (33 deaths) were the major causes of premature death from alcohol and other drug abuse between 1999 and 2003.

Table 1
Average Annual Number of Deaths Attributed to Alcohol and Other Drug Abuse by Age and Gender, 1999-2003

Age	Males	Females
00-04	2.9	2.0
05-09	1.4	0.2
10-14	2.9	1.4

Total economic loss from premature death of Alaska residents was $183 million during 2003. Table 3 presents estimated loss of productivity by age and gender. Males accounted for almost $145 million in lost productivity. Females accounted for approximately $38 million. The most significant costs were associated with males in two age groups, those between the ages of 20 to 24 years and 40 to 44 years, which each accounted for $18 million in lost productivity. Females age 35 to 39 years accounted for $5 million, as did those age 40 to 44.

Table 3
Mortality Costs Attributed to Alcohol and Other Drug Abuse
By Age and Gender, 2003

Age	Males	Females
1-4	$3,363,000	$1,693,000
5-9	$1,751,000	$226,000
10-14	$4,038,000	$1,382,000
15-19	$16,320,000	$4,450,000
20-24	$18,240,000	$4,602,000
25-29	$15,410,000	$3,892,000
30-34	$14,810,000	$3,348,000
35-39	$17,870,000	$5,216,000
40-44	$18,040,000	$5,054,000
45-49	$15,590,000	$3,765,000
50-54	$9,872,000	$1,951,000
55-59	$5,456,000	$1,076,000
60-64	$2,188,000	$625,000
65-69	$1,189,000	$236,000
70-79	$539,800	$115,200

Lost Production Due to Diminished Productivity

Alcohol and other drug abuse by Alaska residents results in reduced productivity. This loss can come in the form of high absenteeism, reduced efficiency from diminished physical and mental abilities, or limited work history because of the individual's inability to hold a job. Abuses of alcohol and other drugs may also impact a person's ability to be productive in non-employment related activities like household or parenting services. In extremely severe cases, abusers of alcohol and other drugs can be hospitalized or even institutionalized, in essence removing the individual from productive society entirely. These productivity losses from alcohol and other drug abuse have a significant cost burden to the residents of Alaska.

Methodology

The primary method for estimating economic costs from diminished productivity was to measure lost earnings. The research team relied on estimates presented in the NIDA/NIAAA (1998) study that determined the percent of lost earnings from alcohol and other drug dependence. In the study, the authors estimated the loss of earnings from alcohol-dependent males at 9.4 percent of average earnings and lost earnings from other drug dependent males at 7.7 percent of average earnings. Estimates on lost earnings for the female alcohol and other drug-dependent population came from the 1990 Rice study on the economic impacts of alcohol and other drug abuse. These estimates were used because the authors of the NIDA/NIAAA (1998) study found no impacts to female earnings from alcohol or other drug dependence. The 1990 study reports a reduction in earnings from alcohol dependence of 6.9 percent and 5.4 percent from other drug dependence.

Estimates on the number of Alaskans who are alcohol and other drug dependent came from the 2003 National Survey on Drug Use and Health by the Substance Abuse and Mental Health Services Administration (SAMHSA). In the report, SAMHSA estimated that 10.4 percent of Alaska's population is classified with alcohol or drug dependence or abuse: 8.6 percent for alcohol and 3.1 percent for other drugs. Approximately 1.3 percent of the population is dependent or abusing both alcohol and drugs. SAMHSA reports that males are almost twice as likely to be classified with substance dependence or abuse as females.

Total costs from diminished productivity for male and females were calculated by multiplying diminished productivity by the number of Alaskans who were alcohol and other drug dependent in 2003. The research team collected data from the Alaska Department of Labor and Workforce Development (ADOL) on earnings for males and females during 2003. Alaska males earned an average of $33,762 in 2003, while females earned $23,056. The research team then estimated the annual loss in earnings by multiplying the percent decline in earnings for alcohol or other drug dependence for each gender by the appropriate annual Alaska earnings for 2003.

Results

In 2003, Alaska had approximately 39,596 adult residents classified with alcohol dependence or abuse and 14,238 residents classified with drug dependence or abuse. Of those alcohol-dependent residents, 27,355 were males and 12,240 were females. The drug-dependent population consists of 9,283 adult males and 4,956 adult females. Table 4 presents computation figures for estimating diminished productivity from alcohol and other drug dependence or abuse.

Table 4
Productivity Losses from Alcohol and Other Drug Dependence or Abuse by Gender, 2003

	Alcohol		Other Drugs	
	Males	**Females**	**Males**	**Females**
Alaska population 18 years and over that is alcohol and other drug dependent	27,355	12,240	9,283	4,956
Annual average earnings for Alaska in 2003	$33,762	$23,056	$33,762	$23,056
Loss in productivity from alcohol and other drug dependence	9.4%	6.9%	7.7%	5.4%
Annual lost earnings from alcohol and other drug abuse	$3,174	$1,591	$2,600	$1,245
Estimated productivity loss from alcohol and other drug abuse	$87 million	$19 million	$24 million	$6 million

Sources: Alaska Department of Labor, Employment and Earnings report, 2003; SAMHSA *2003 National Survey on Drug Use and Health*, and *The Economic Costs of Alcohol and Drug Abuse in the United States-1992* (NIDA/NIAAA, 1998).

The typical Alaska male alcohol abuser cost society $3,174 annually in diminished productivity in 2003. The typical male drug abuser cost society $2,600 in 2003. During that same period, the average female alcohol abuser cost society $1,591 in lost production, while the typical female drug abuser cost society $1,245. Total diminished productivity for Alaska from alcohol and other drug-dependent residents was an estimated $137 million. Of those adults who abuse alcohol or are dependent, the largest portion was from the state's male population. An estimated $87 million in diminished productivity was from males who abuse or are dependent on alcohol, and another $19 million was from females. Diminished productivity from other drug dependence was estimated to cost the state economy $30 million, $24 million from males and $6 million from females.

Lost Production Due to Incarceration

Another source of lost productivity for Alaska is from residents incarcerated because of alcohol and other drugs. Residents can be incarcerated for committing an alcohol or other drug related crime or from committing a crime while under the influence of alcohol or other drugs. An example of an alcohol or other drug-related crime would be distributing alcohol without a license or selling illegal drugs. Sexual assault is an example of a crime committed under the influence, where alcohol or other drug use was a contributing factor. Without alcohol or other drugs, incarcerated Alaskans could be productive members of society producing goods and services. While incarcerated, these individuals are generally not employed and thus are not productive members of society. This loss in productivity can be measured by estimating lost earnings.

Methodology

Estimates for lost productivity from incarcerations involved two steps. The first was to determine the number of Alaska residents incarcerated due to alcohol or other drug-related crimes. The research team relied on national attribution rates published in the NIDA/NIAAA (1998) study. These rates are presented in Table 5. These national attribution rates are thought to be lower than incarceration rates for Alaska from alcohol and other drug abuse. However, no Alaska-specific research has been completed to verify this premise. Currently, only anecdotal information is available. It is speculated that alcohol and other drug abuse plays a role in 85 percent to 95 percent of all incarcerations in Alaska.[1]

Table 5
Attribution Rates for Alcohol and Other Drug-Related Incarcerations

	Alcohol	Other Drug
Homicide	30.0%	15.8%
Assault	30.0%	5.1%
Sexual assault	22.5%	5.1%
Robbery	3.4%	27.2%
Burglary	3.6%	30.0%
Larceny/theft	2.8%	29.6%
Auto theft	3.5%	6.8%
Drug laws	0.0%	100.0%
Driving under the influence	100.0%	0.0%
Liquor laws	100.0%	0.0%
Prostitution	0.0%	12.8%

Source: *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).

The second step was to estimate potential loss of earnings from incarceration. The research team assumed that persons incarcerated because of alcohol and other drug abuse could be as productive as the general population. As shown above, ADOL indicates Alaska males earned $33,762 in 2003 and females earned $23,056. The earnings estimates were then applied to the alcohol and other drug-related incarcerated population for Alaska in 2003.

[1] Based on discussions with Sarah Williams, Coordinator of Substance Abuse Program, and Teri Carns, Staff Director for the Alaska Criminal Justice Assessment Commission.

Results

In 2003, there were 3,743 people incarcerated for crimes of all types (this is a count of the inmate population regardless of what year they were placed in a correctional facility, not the number of annual offenses). Of these, 1,193 incarcerations were attributed to abuse of alcohol and other drugs. Males accounted for most of the incarcerations attributed to abuse of alcohol and other drugs at 1,065 in 2003, while females accounted for 128 incarcerations.

Table 6 presents the number of people incarcerated for alcohol or drug related offenses in 2003 by offense and gender. These are not the number of incidences in a single year, but the cumulative total of those in prison as of December 31, 2003. Sexual assault, assault, and homicide were the primary offenses committed. Based on attribution rates shown in Table 5, an estimated 122 people were incarcerated for sexual assaults, 163 for assaults, and 122 for homicides attributed to alcohol abuse. Drug law violations were the primary offense associated with other drug abuse at 175 incarcerations.

Table 6
Alcohol and Other Drug-related Incarcerations in Alaska by Offense and Gender, 2003

	Alcohol		Other Drug	
Offense	**Females**	**Males**	**Females**	**Males**
Homicide	7	115	4	61
Assault	11	152	2	26
Sexual Assault	1	121	0	27
Robbery	0	4	2	32
Burglary	0	2	0	21
Larceny-Theft	1	5	11	51
Auto Theft	0	1	0	3
Drug Laws	0	0	34	141
Driving under the influence	41	259	0	0
Liquor Laws	8	49	0	0
Prostitution	0	0	0	0
Total	**70**	**708**	**54**	**360**

Source: McDowell Group based on Alaska Department of Corrections 2003 Offender Profile data and attribution rates by offense from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).

Total lost productivity from incarcerations from alcohol and other drug abuse in Alaska was $39 million in 2003. Incarcerated males accounted for $36 million, while females accounted for $3 million in lost productivity.

Lost Production Due to Alcohol/Other Drug Treatment

The final source of lost productivity included in this study is from Alaska residents receiving inpatient alcohol and other drug treatment. Treatment includes long-term residential treatment, short-term hospitalization, and detoxification. While receiving treatment for alcohol and other drug abuse, patients are not productive residents in the Alaska economy, so society loses the benefit of their production of goods and services. This loss in productivity can be measured by estimating lost earnings.

Methodology

Total bed days for residential and detoxification treatment centers were used to estimate lost productivity in 2005 from time spent while undergoing alcohol and other drug treatment. Data for 2003 was not available, therefore 2005 is considered a reasonable proxy for 2003 bed days. Total bed days were then converted to work years. Work years were multiplied by average annual 2003 earnings of $37,356 for all Alaskans, as reported by ADOL.

Results

There were 85,926 total bed days for alcohol and other drug abuse in 2005.[2] These total bed days was equivalent to 235 work years. Overall, total lost production from inpatient treatment for alcohol and other drug abuse was estimated at $8.8 million. This figure does not include lost productivity from residents receiving substance abuse treatment outside the state. Although the exact number of these individuals is unknown, it is estimated that much of the private residential treatment received by Alaskans occurs outside of the state.[3]

[3] Source: Finding the Answers to Tough Questions About Substance Abuse in Alaska, 1999 Annual Report, State of Alaska Advisory Board on Alcoholism and Drug Abuse.

Alcohol use is a major cause of traffic crashes in Alaska. In 2002, 1,109 traffic crashes were attributed to alcohol, costing an estimated $35 million. Of these crashes, 25 were fatal injury crashes, 107 were major injury crashes, 370 were minor injury crashes, and 607 crashes had property damage only. According to the Alaska Department of Transportation and Public Facilities (ADOTPF), a traffic crash is alcohol-related under the following conditions:

- If the blood alcohol test given to the driver, pedestrian, pedal cyclists, or recreational vehicle operator was positive.
- If a police investigation indicated that alcohol consumption was a contributing factor.
- If a citation was issued for driving while under the influence of alcohol, driving with an open container of alcohol, or public drunkenness.

Methodology

To measure the cost of traffic crashes, the research team used two sources: State of Alaska 2002 alcohol-related traffic crash statistics from ADOTPF, and cost-per-accident data from the National Highway Traffic Safety Administration (NHSTA), adjusted for inflation to 2003 dollars.[4] Crash data was divided into four categories: property damage only, minor injury, major injury, and deaths. These categories were matched to the national data, which shows unit costs from motor vehicle crashes in eight categories. McDowell Group matched minor injuries reported by ADOTPF with Maximum Abbreviated Injury Scale (MAIS) Level 1, classified as minimum injuries in the NHTSA report. Major injuries were matched to MAIS Level 5, classified as critical injuries by NHTSA. No extrapolation is needed for the remaining categories, property damage only and fatalities, which are in each study. Unit costs related to traffic crashes from the NHTSA report are presented in Table 7.

Table 7
Unit Costs of Traffic Crashes in the U.S., 2003

Type of Cost	Fatal	Major Injury (MAIS 5)	Minor Injury (MAIS 1)	Property Damage Only
Insurance administration	$37,120	$75,118	$715	$116
Workplace cost	$8,702	$8,191	$252	$51
Legal cost	$102,138	$88,753	$172	$0
Property damage	$10,273	$9,446	$3,844	$1,484

Source: *The Economic Cost of Motor Vehicle Crashes, 2000*, NHSTA.

Other than knowing that other drugs are a contributing factor in traffic crashes, little is known about their significance, because only alcohol-related data is collected. In the NHTSA study, costs from traffic crashes are divided into separate expense categories. This includes medical costs, loss in productivity from mortality and morbidity, insurance administration costs, workplace costs, legal costs, and property damage costs. To avoid double counting, the research team estimated insurance

[4] *The Economic Cost of Motor Vehicle Crashes, 2000*, published by the National Highway Traffic Safety Administration (NHTSA).

administration costs, workplace, legal and property costs. Losses in productivity and medical costs are accounted for in other sections of the report.

Cost estimates for alcohol-related traffic crashes were adjusted to reflect changes in the Alaska cost-of-living and in U.S. prices from 2000 to 2003. Inflation was estimated using the Anchorage consumer price index from the Bureau of Labor Statistics (BLS). Inflation over this period was approximately 8 percent. The source for the cost-of-living data was the American Chamber of Commerce Researchers Association (ACCRA). During 2003, Anchorage's cost-of-living was approximately 25 percent higher than the average participating city in the American Chamber of Commerce.

Traffic accident statistics include ATV and snowmobile crashes on roadways, but DOTPF does not collect ATV and snowmobile crashes off roadways, such as rivers, lakes, and in the backcountry. Lost productivity and health care costs associated with alcohol-related ATV and snowmobile deaths or injuries are included in the cost estimates. Property damage is not included.

Results

In 2002, 1,109 traffic crashes in Alaska were alcohol-related, about 8 percent of traffic crashes from all causes (13,325). However, the percentage of traffic fatalities caused by alcohol is much greater. About half of all U.S. fatal traffic crashes are caused by alcohol use (NHTSA, 1994). In Alaska, 32 percent of the 78 deaths from traffic crashes were attributed to alcohol in 2002. Figure 2 shows the number of alcohol-related crashes by category.

Adjusted to reflect 2003 dollars, alcohol-related traffic crashes in Alaska cost approximately $35 million in 2003. Table 7 shows the cost of alcohol-related traffic crashes by severity and expense. Legal costs of $16 million were the largest expense, followed by insurance administration costs at $12 million. By crash category, major injuries accounted for the largest costs at $26 million. Lost productivity associated with fatal crashes are not included in this estimate. (See chapter on Lost Productivity.) If these costs were included, the costs of alcohol-related traffic deaths would be far higher than other traffic crash categories.

Table 8
Number of Traffic Crashes and
Total Cost of Alcohol-Related Crashes in Alaska, 2003

Number of Traffic Crashes and Cost Type	Fatal	Major Injury	Minor Injury	Property Damage Only	Total Costs
Number of traffic crashes	25	107	370	607	1,109
Insurance administration cost (thousands of dollars)	$1,245	$10,787	$355	$94	$12,482
Workplace cost (thousands of dollars)	$292	$1,176	$125	$42	$1,635
Legal cost (thousands of dollars)	$3,427	$12,745	$85	$0	$16,257
Property damage cost (thousands of dollars)	$345	$1,356	$1,909	$1,209	$4,819
Total Costs (thousands of dollars)	**$5,309**	**$26,064**	**$2,474**	**$1,345**	**$35,192**

Source: McDowell Group, Note: Number of accidents is based on 2002 data from Alaska Department of Transportation and Public Facilities report, *2002 Alaska Traffic Collisions*; and *The Economic Cost of Motor Vehicle Crashes, 2000*, NHTSA, adjusted for inflation and cost-of-living in Alaska.

Alcohol and other drug abuse contribute to a majority of the criminal justice and protective services costs in Alaska. Combined, these costs totaled nearly $154 million during 2003. Costs for police protection, legal and court services, and incarceration services totaled $93.8 million in 2003. Child and adult protective services totaled nearly $60 million in Alaska during 2003. Child protective services, the largest share of protective services, includes foster care, adoption care, residential care, and social worker services.

Criminal Justice

Like all states in the U.S., Alaska suffers from alcohol and other drug abuse-related crime. Nationwide, 49 percent of 14,000 inmates surveyed reported they were under the influence of alcohol and other drugs at the time of the offense (NIDA/NIAAA, 1998). In another study, it was reported that 2.5 million arrests were made in the U.S. for alcohol offenses, while another 1.5 million arrests were for other drug offenses (Schneider Institute for Health Policy, 2001).

In Alaska there were an estimated 17,000 arrests or offenses known to law enforcement in 2003 that were attributed to alcohol and other drug abuse. During the same period, approximately 57,000 Alaska residents were victims of alcohol and other drug abuse-related crimes. All combined, costs attributed to crime-related alcohol and other drug abuse in Alaska were $93.8 million during this period.

The focus of this section is to provide estimates on the economic costs of crime-related alcohol and other drug abuse for Alaska during 2003.

Methodology

To estimate the economic costs of alcohol and other drug abuse-related crime, the research team relied on a methodology similar to that used in the NIDA/NIAAA (1998) report. Five cost measurements were used: law enforcement, legal and adjudication, corrections, victims' property damage, and victims' medical expenses. Within each category, crime-related attribution rates for alcohol and other drug abuse (NIDA/NIAAA, 1998) were applied to Alaska crime data.

To estimate enforcement and legal costs, estimates were based on data from the Alaska Department of Public Safety (DPS), and blended with attribution rates from the NIDA/NIAAA (1998) report. DPS prepares an annual report, "Crime Reported in Alaska," as part of the nationwide Unified Crime Reporting system. In 2003, law enforcement agencies reporting to DPS for the purposes of the UCR had jurisdiction over 97.5 percent of Alaska's population. The report presents data on offenses known to law enforcement for a proscribed group of offenses: murder, rape, aggravated assault, burglary, larceny-theft, and motor vehicle theft. This includes all offenses of which law enforcement is aware, whether or not an arrest was made. In addition, the report provides arrest data on a number of additional categories of offense. For the purpose of this report, data on offenses known to law enforcement were used when available. When unavailable, straight arrest data was used. Variations between the two data types are noted when appropriate.

Though not used in this study, data from the Arrestee Drug Abuse Monitoring Program (ADAM) project provides an indication of the linkage between drug abuse and crime in Alaska. For example, a survey (including drug testing) of 718 male and female arrestees in Anchorage in 1999 found that 54 percent of males and 56 percent of females tested positive for one or more drugs (including cocaine, marijuana, opiates, Methamphetamine, and PCP).[5] The ADAM project also collected arrestee data on alcohol use. The survey collected data on long-term and near-term drinking behavior prior to arrest for 1,178 males booked into Anchorage jails in 2000 and 2001. The authors of the summary report concluded that "among those that enter the criminal justice system through jails, problematic alcohol abuse is rampant."[6]

Inmate population by offense was used for correction cost estimates. Inmate counts were based on the Alaska Department of Corrections 2003 Offender Profile. The Offender Profile provides inmate counts by offense category as of December 31 of each year. Alcohol and drug abuse attribution rates from NIDA/NIAAA (1998) were applied to this data. Total expenditures by the Department of Corrections in 2003 were $179 million.

Alaska population data from ADOL and victimization rates from the Bureau of Justice Statistics were used to estimate victim property damage and medical costs. In each case, Alaska-specific data by offense was multiplied by its associated attribute rate for alcohol and other drug abuse.

Attribution rates, arrests, and incarcerations related to alcohol and other drug abuse are presented in Tables 9 and 10.[7] Victimization rates, victim numbers, and attribution rates related to alcohol and other drug abuse are shown in Table 11.

[5] "Drug Abuse Among Arrestees in Anchorage", Alaska Justice Forum 17(1), Spring 2000.
[6] "Alcohol Use Among Anchorage Arrestees", Alaska Justice Forum 19(4), Winter 2003.
[7] Specific data on drug and alcohol arrests is available from the Alaska State Troopers Alaska Bureau of Alcohol and Drug Enforcement (ABADE). For example, ABADE alcohol-related arrest/charges included 43 for distribution/sales and 237 for transport in 2003. Cocaine related arrests/charges includes 53 for distribution/sales, 28 for transport and 24 for possession in 2003. Crack related arrests/charges includes 13 for distribution/sales and 11 for possession. Source: 2003 Annual Drug Report.

Table 9
Arrests Attributed to Alcohol and Other Drug Abuse in Alaska, 2003

Type of Offense	Total Number of Arrests	Alcohol Abuse	Drug Abuse	Arrests Attributed to Alcohol Abuse	Arrests Attributed to Drug Abuse	Total Substance Related Arrests
Murder	39	30%	16%	12	6	**18**

Murder	-	39	30.0	16.0	12	6	**18**
Total		**49,232**			**4,299**	**11,514**	**15,813**

Source: McDowell Group, based on attribution rates from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998); population data from Alaska Department of Labor, and victimization rates from Bureau of Justice Statistics.

As reported under Productivity Losses, crime rates attributed to alcohol and other drug abuse are thought to be higher in Alaska than the rest of the nation. Attribution rates from the NIDA/NIAAA (1998) study were used to estimate Alaska crime rates related to substance abuse, because no Alaska-specific data is currently available to support this premise.

To measure criminal costs attributed to alcohol and other drug abuse, the research team used NIDA/NIAAA (1998) data to estimate the economic implications of criminal activity. After adjusting for inflation and the Alaska cost-of-living differential, law enforcement costs per arrest ranged from $60 to $4,100, depending on the offense, while the average legal costs for most offenses were $1,100 per arrest. Legal costs for driving while intoxicated, liquor laws, and public drunkenness were approximately $60 per arrest. Average incarceration costs per inmate were approximately $33,500. Property damage and medical costs per victim by crime type are presented in Table 12. These unit costs were used to estimate the costs of arrests, incarcerations, and victimizations related to alcohol and other drug abuse.

Table 12
Property Damage and Medical Expenses per Victim, 2003

Type of Crime	Property Damage Expenses per Victim	Medical Expenses per Victim
Robbery	$27	$10
Assault	46	540
Rape	-	72
Murder**	-	23,816
Larceny	31	-
Burglary	58	-
Motor vehicle theft	207	-

Source: McDowell Group estimates based on NIDA, NIAAA 1992 and the Bureau of Justice Statistics.
** Medical costs for homicides include long-term costs. See NIDA/NIAAA (1998), Appendix C, Table C.6.

As noted above, costs were adjusted to reflect changes in U.S. prices from 1992 to 2003, as well as the cost-of-living in Alaska. Bureau of Labor Statistics inflation rates specific to health care were used to inflate health care and medical expenses (a 56 percent inflation rate). To adjust for Alaska's higher medical costs relative to the rest of the country, medical expenses for victims were increased by a 65 percent health care-specific cost-of-living differential. This differential was drawn from American Chamber of Commerce Research Association data for fourth quarter 2003.

Additional costs from lost productivity due to incarceration are presented in the Productivity Losses chapter to avoid double counting. Inmates are generally not employed while incarcerated, so society loses the benefit of their production of goods and services.

Drug traffic control costs were not included in this report. The U.S. budget in fiscal year 2003 for drug traffic control was $11 billion.[8] Some portion of this money was spent in Alaska for drug interdiction, international intelligence, research, and a number of other drug-related activities. However, specific information on Alaska's portion of this budget is not available.

Results

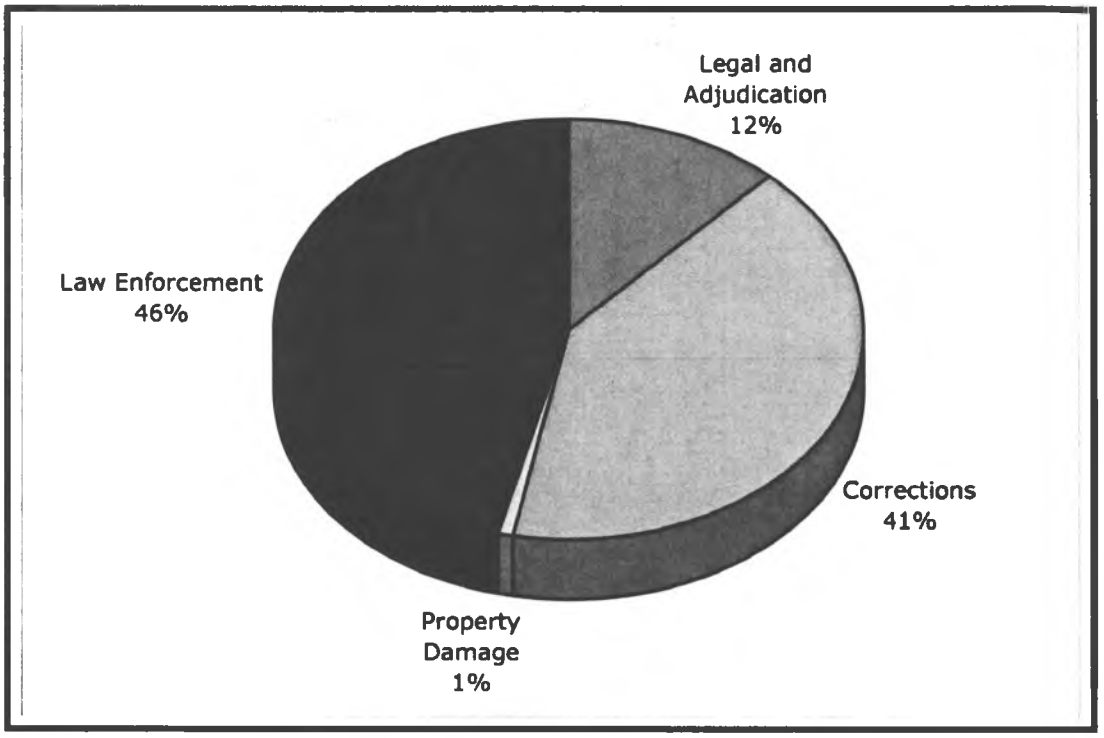
In Alaska in 2003, approximately 17,400 offenses known to law enforcement and 1,190 incarcerations were attributed to alcohol and other drug abuse. Of the 17,400 arrests, 8,400 crimes were related to alcohol abuse, while other drug abuse accounted for 9,000 crimes. Among incarcerations, 780 were alcohol-related and 410 were other drug-related.

Alaska also had an estimated 15,800 residents who were victims of alcohol or other drug abuse-related crimes. The number of victims who had property damage was 11,700, while 4,100 of the victimizations were against a person.

Figure 3 shows the distribution of alcohol and other drug-related crime by cost. Total costs for Alaska substance abuse-related crime were $93.8 million in 2003. The largest expense was law enforcement at $43.4 million, followed by correction costs at $38.2 million and legal and adjudication costs at $11.6 million. Property damage costs totaled more than $636,000 and medical costs to victims totaled $1.9 million. Medical costs are reported in this chapter for reference, but were not added to total crime-related costs to avoid double counting. Medical costs are included in the Health Care chapter.

[8] Bureau of Justice Statistics, http://www.ojp.usdoj.gov/bjs/dcf/dcb.htm, retrieved 8/17/05.

Figure 3
Distribution of Criminal Justice Costs Attributed to Alcohol and Other Drug Abuse in Alaska, 2003



Note: Figures may not add to 100% due to rounding.

Table 13 presents law enforcement costs from alcohol and other drug-related crime for Alaska during 2003. Larceny and theft accounted for the largest expense at $23 million. Burglary accounted for $5.2 million and assault for $3.7 million.

Legal costs from alcohol and other drug-related crimes for Alaska during 2003 are presented in Table 14. Larceny and theft were the largest expense at $6 million. Costs for burglary were $1.3 million, and for assault were $972,000.

Among Alaska incarceration costs in 2003, costs for inmates imprisoned for driving while intoxicated were greatest, at $10 million. This is a substantial increase from 1999, due largely to a more than doubling of the inmate population for DWI crimes. This was followed by costs for aggravated assault, at $6.4 million and homicide at $6.2 million. Drug laws were fourth, at $5.9 million, and sexual assault followed, at $4.5 million. Table 15 presents incarceration costs for Alaska during 2003 by offense.

Table 13
Law Enforcement Costs Attributed to Alcohol and Other Drug Abuse by Offense in Alaska, 2003

Type of Offense	Alcohol	Drug	Total
Homicide*	$47,000	$25,000	$71,000

Liquor laws	-	-	-
Prostitution	-	-	-
Drug laws	-	6,097,000	6,097,000
Total	**$24,384,000**	**$13,800,000**	**$38,184,000**

Source: McDowell Group, based on attribution rates from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998); and incarceration data from Alaska Department of Corrections.

Note: Columns and rows may not total due to rounding.

This incarceration data does not include Alaska Statute Title 47 Protective Holds in Department of Corrections Facilities. Department of Corrections data does not specify the reason for each protective hold, but DOC staff indicate that the "vast majority [of protective holds] are the result of incapacitation due to alcohol use." For the years 2000-2002, there were a total of 7,920 protective holds for 3,243 individuals.[9] Estimates of the annual cost of these protective holds are not available.

Protective Services

Alcohol and other drug abuse is a primary contributor to child abuse and neglect cases in Alaska. In a study completed by the National Center on Addiction and Substance Abuse at Columbia University in 1999, it was found that parents were three times more likely to abuse their children and four times more likely to neglect their children if the parents were substance abusers. In that same study, approximately seven out of ten abused or neglected children nationwide are linked to parents who abuse alcohol and other drugs. In a study completed by the Alaska, Department of Health and Social Services, Division of Alcohol and Drug Abuse (DADA) (now part of the Department of Behavioral Health), approximately 81 percent of all Division of Family and Youth Services (DFYS) (now the Office of Children's Services) reports of child abuse involved alcohol and drug abuse.[10,11]

[9] "Analysis of Title 47 Protective Holds in Department of Corrections Facilities, CY 00-02." Undated document.
[10] *Final Report of the Alaska Criminal Justice Assessment Commission*, May 2000, published by the Alaska Judicial Council.

Methodology

Currently, there is no accurate measure of the cost to Alaska from child abuse and neglect caused by alcohol and other drug abuse. To overcome this shortfall, the research team relied on the 1999 DADA child abuse estimate and assumed that 81 percent of child protective services were attributable to alcohol and other drug abuse. These services include foster care, adoption care, residential care, and social work care through the Office of Children's Services (OCS). In addition, the Office of Public Advocacy (OPA) provides child protective services. Their services include advocacy within the legal system for children under state custody. Their total FY2003 expenditure was $13.8 million. Unfortunately, OPA was not able to provide the portion of their budget that is attributed to child protective services.

Adult protective service costs during 2003 were provided by Division of Senior and Disability Services, in the Department of Health and Social Services. The division provides assistance to adults who are unable to care for themselves, either because of physical, emotional, or mental impairment. Total expenditures on adult protective services in 2003 were $733,000. Department personnel estimate that 20 percent of all protective services cases are related to substance abuse or dependence by the care recipient. Another 20 percent of the cases the department handles are linked to substance abuse or dependence by primary caregivers or other family members.

Results

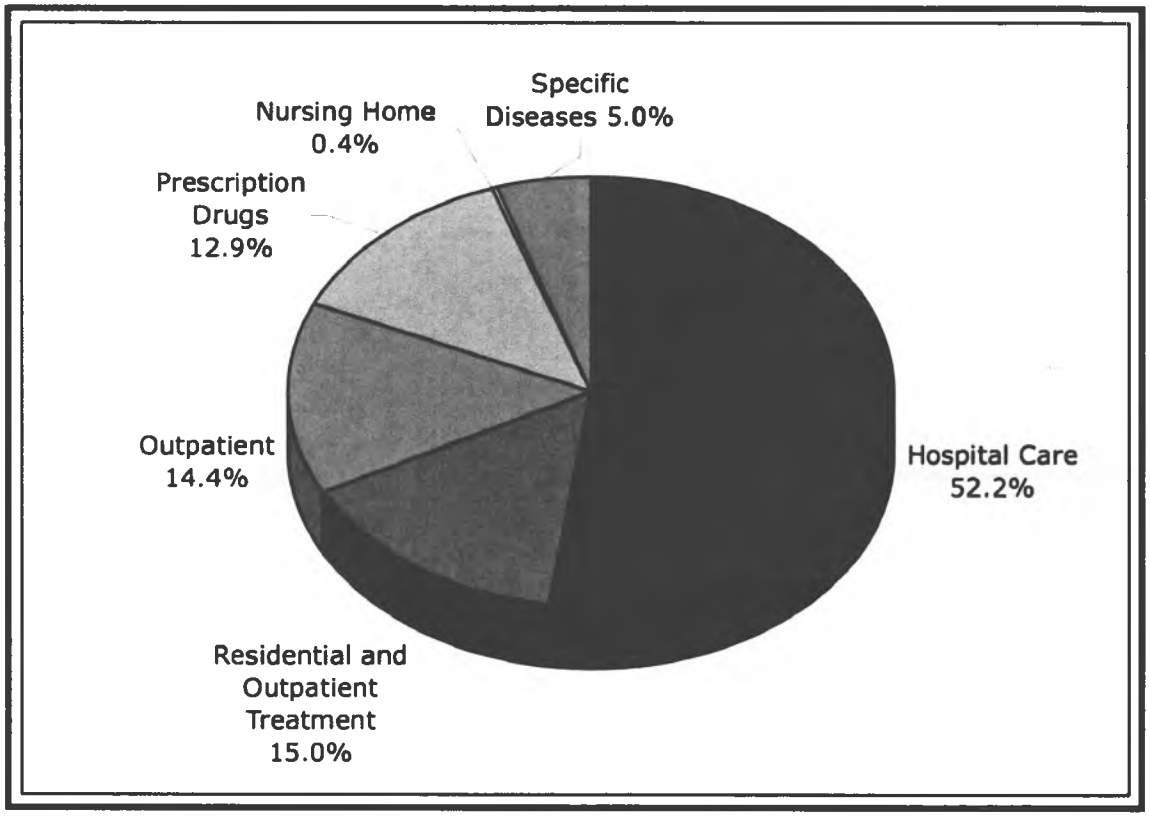
Total costs for child protective services provided by the Office of Children's Services in Alaska during fiscal year 2003 were nearly $60 million. Social work accounted for the largest expense at $18.4 million. Other expenses include $13 million for foster care services, $14 million for residential services, and $13.7 million for adoption and guardianship services. Additional program funding for child abuse prevention programs was $1.6 million.

Adult protective care services were estimated at $293,000 during 2003.

Illness and injuries stemming from alcohol and other drug abuse have significant health costs. In Alaska, health care costs related to alcohol and other drug abuse are estimated at $178 million. Alcohol and other drug-related illnesses or injuries range from acute to chronic. Acute illness includes alcohol poisoning, while chronic illness could be cirrhosis of the liver. In addition, prolonged alcohol and other drug abuse could increase the chance of other illnesses such as hypertension, diabetes, or stomach cancer.

This chapter estimates health care costs related to alcohol and other drug abuse in Alaska during 2003. Health care costs are presented for the following categories: hospital, outpatient, prescription drugs, nursing home and long term care facilities, fetal alcohol syndrome (FAS), HIV, and hepatitis B and C.

Figure 4
Distribution of Health Care Costs Related to Alcohol and Other Drug Abuse in Alaska, 2003



- Hospital costs from alcohol and other drug abuse-related injuries and illnesses in Alaska are estimated at $93 million in 2003. Alcohol abuse-related hospital care for medical illnesses and injuries costs accounted for $84.8 million, while other drug abuse-related costs were $8.2 million.

- Alcohol and other drug in-resident and outpatient drug and alcohol treatment costs from state sources were approximately $26.8 million.

- Total medical outpatient visits from alcohol and other drug abuse-related illness or injuries are estimated at 60,100 for a total cost of $25.7 million in 2003.

- Pharmaceutical and long term care costs from alcohol abuse are estimated at $23.0 million and $719,400, respectively.

- Approximately 78 HIV and HIV with AIDS cases were attributed to intravenous drug use during 2003. Total medical costs for treating these patients were $3.9 million.

- Intravenous drug abuse contributed to 344 hepatitis B and C cases in Alaska during 2003, with medical care costs of $5.1 million.

Excluded from the total values are the costs of care for individuals with Fetal Alcohol Syndrome and other Fetal Alcohol Spectrum Disorders. Data on the number of individuals living with FASD in Alaska is unavailable. However, information on the number of children born with FAS in a given year is available, as are estimates for lifetime costs of care. Estimated lifetime health care costs for the 15 FAS births in 2003 are $47.0 million.

Hospital Costs

Hospital costs from illness and injuries are a significant portion of alcohol and other drug-related health care costs. In 2003, hospital costs from illness and injuries accounted for 52 percent of total health care costs related to alcohol and other drug abuse (which totaled $178 million). Hospital costs are composed of three sources:

- Illness or injuries directly related to alcohol and other drug abuse, which might include alcohol cirrhosis or gastritis.

- Illness indirectly related to alcohol and other drug abuse, which could include cancer of the esophagus, burns, or poisoning.

- Treatment or injuries complicated by alcohol and other drug abuse resulting in lengthy hospital stays.

Methodology

To estimate injury and illness-related hospital costs from alcohol and other drug abuse, the research team relied on results of two studies: the *National Survey on Drug Use and Health,* conducted annually by the Substance Abuse and Mental Health Services Administration in the U.S. Department of Health and Social Services; and *The Economic Costs of Alcohol and Drug Abuse in the United States - 1992,* NIDA/NIAAA (1998).

The NSDUH showed that 10.4 percent of Alaska's population age 12 and older was dependent upon or had abused illicit drugs or alcohol in 2003, while the U.S. national average was 4.5 percent. Alaska's portion of the U.S. substance dependent or abusing population was 0.5 percent.

No Alaska-specific data exists on the number of hospital inpatient days related to drug and alcohol abuse; to estimate this number, the research team adjusted NIDA/NIAAA (1998) estimates to reflect growth in the U.S. population, and used

the factor for Alaska's alcohol and drug-dependent population (0.5 percent) to determine the number of hospital care days in the state. The NIDA/NIAAA study reported costs for non-federal and federal/veteran inpatient care, as well as costs for alcohol and other drug-related hospital and outside physician services. Cost estimates were adjusted to reflect U.S. price inflation for health care from 1992 to 2003 and Alaska health care costs. Inflation in nationwide health care costs over the time period was approximately 56 percent according to the Bureau of Labor Statistics. During 2003, health care costs in Fairbanks (the largest Alaska city included in 2003 American Chamber of Commerce Research Associates – ACCRA cost-of-living data) were approximately 65 percent higher than a national average. After adjusting for inflation and Alaska health care costs, estimated average cost per day for hospital care in 2003 was $2,099. The daily cost for physician care averaged $504.

Total Alaska non-federal hospital costs from illness and injury-related substance abuse were estimated by applying daily hospital costs to the estimated number of hospital care days related to alcohol and other drug abuse. Hospital costs were divided into three categories for alcohol: alcohol-specific illness, alcohol-related illness, and additional costs from co-occurring alcohol disorders. Other drug categories include other drug-specific illness, other drug-related illness, and additional days from other drug disorders.

Substance abuse-related hospital stay costs for illnesses and injuries in a veterans' or federal facility were estimated using the methodology from the NIDA/NIAAA (1998) study. In that study, veterans' and federal hospital revenues accounted for 9.5 percent of total U.S. hospital revenues. By applying this proportion to non-federal hospital costs for substance abuse, the research team estimated hospital costs for the federal facilities for Alaska during 2003.

Results

The estimated total number of hospital care days related to alcohol and other drug abuse illnesses and injuries were 32,900 in Alaska during 2003. Alcohol abuse accounted for an estimated 30,000 care days, while 2,900 were from other drug abuse. Among alcohol abusers, total hospital care days were estimated as follows: specific illnesses at 2,300, related illnesses at 22,700, and co-occurring alcohol disorders at 5,000. Estimated number of hospital care days for other drug abuse-specific illnesses was fewer than 10, while hospital care days for other drug abuse-related illnesses are not included in hospital costs to avoid double counting. These costs are presented later in this chapter. Additional days from other drug disorders were estimated at 2,900 hospital care days. Table 16 presents results on the number of care days by category for Alaska in 2003.

Table 16
Hospital Costs for Illness and Injuries
Related to Substance Abuse in Alaska, 2003

	Total Care Days	Non-Federal Hospital Costs	Veteran and Federal Hospital Costs	Total Hospital Costs
Alcohol-specific illness	2,300	$6,072,400	$514,000	**$6,586,300**
Alcohol-related illness	22,700	59,164,600	5,007,800	**64,172,400**
Additional days from co-occurring alcohol disorders	5,000	12,931,600	1,094,600	**14,026,100**
Subtotal, alcohol abuse	*30,000*	*78,168,600*	*6,616,300*	***84,784,900***
Other Drug abuse-specific illness	<10	14,800	1,300	**16,100**
Other Drug abuse-related illness	*	*	*	*
Additional days from other drug disorders	2,900	7,586,700	642,200	**8,228,900**
Subtotal, other drug abuse	*2,900*	*7,601,600*	*643,400*	***8,245,000***
Total alcohol and other drug abuse	**32,900**	**$85,770,100**	**$7,259,700**	**$93,029,900**

Source: McDowell Group, based on alcohol and drug dependent population estimates from the 2003 National Survey on Drug Use and Health, from the Substance Abuse and Mental Health Services Administration, U.S. Department of Health and Human Services; and U.S. hospital care days and costs per day related to alcohol and other drug abuse from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).

**These costs include HIV, and Hepatitis A and B, which are presented later in the chapter.*

Alaska hospital costs from alcohol and other drug abuse-related medical injuries and illness in 2003 were estimated at $93 million (Table 16). Non-federal hospitals accounted for $85.8 million, while veterans and federal hospitals were $7.3 million. Estimated hospital costs injuries and illness related to alcohol and other drug abuse were $84.8 million and $8.2 million, respectively. Alcohol-related illnesses resulted in the highest hospital costs at $64 million.

Data maintained in the Alaska Department of Health and Social Services Alaska Trauma Registry, for the years 1997 through 2001, provides an indication of the number of accidents where alcohol and/or illegal drug use, at the time of the accident, was suspected or proven. Of approximately 22,700 trauma incidents recorded in the registry, alcohol use was suspected or proven in 24 percent of the cases and illegal drug use was suspected or proven in 10 percent of the cases.

Residential and Outpatient Alcohol and Other Drug Treatment Costs

In 2003, there were 4,006 substance abuse treatment admissions in Alaska. Just over 80 percent of these admissions were for alcohol or alcohol with secondary drug issues.

There are several categories of costs related to the treatment of alcohol and drug abuse and dependence in resident and outpatient facilities. The Alaska Department

of Health and Social Services, Division of Behavioral Health, provides grant funds to organizations and agencies throughout the state in support of drug and alcohol treatment services. Specific services include rehabilitation, counseling, case management, and other types of treatment services for individuals and families. In addition, Medicaid pays for treatment in facilities within and outside of Alaska for qualifying Alaskans. Treatment can also be paid through private insurers or private parties.

Data pertaining to the state-funded treatment, both through DBH and through Medicaid, is readily available. Data on costs borne by private insurers or private parties is not available. As a result, cost estimates presented underestimate the total cost of drug and alcohol treatment.

Funding appropriated by the DBH to support alcohol and drug abuse treatment in 2003 totaled approximately $23.3 million. Payments from Medicaid for substance abuse services in 2003 totaled $3.5 million. These payments account for treatment received in substance abuse-specific treatment facilities. Not included in these treatment costs are any services for co-occurring disorders that may have been billed by mental health or other providers. Costs for lab tests for drug and alcohol screening are also excluded from this number. Because Health and Social Services provided the data on both DBH and Medicaid directly, no estimate procedures were needed.

Data from the National Survey of Substance Abuse Treatment Services (N-SSATS) provides data on the number of treatment facilities and clients in substance abuse treatment. As of March 2004, there were 2,503 clients in substance abuse treatment in 69 facilities in Alaska. Just over half of those clients (53 percent) were in private non-profit treatment facilities, 8 percent were in private for-profit facilities, 9 percent were in local government facilities, 14 percent were in federal government facilities, and 16 percent were in tribal government facilities.[12]

Medical Outpatient Costs

Another health expense related to alcohol and other drug abuse is outpatient medical treatment for a specific disorder or illness related to alcohol and other drug abuse. Examples of specific disorders could include alcohol gastritis or cirrhosis, while a related illness could be chronic pancreatitis or cancer of the esophagus.

Methodology

Like hospital costs, specific data on alcohol and other drug abuse-related medical outpatient visits was not available for Alaska. To estimate these costs, the research team applied Alaska prevalence figures to U.S. estimates for alcohol abuse-related medical outpatient visits reported in the NIDA/NIAAA (1998) study. The NIDA/NIAAA study did not report any medical outpatient visits for other drug abuse-specific disorders because of the lack of data and causal relationships needed to estimate the medical outpatient visits. Other drug abuse medical outpatient visits related to HIV and Hepatitis B and C are presented later in the chapter.

Estimated medical outpatient visits were multiplied by the average medical outpatient cost for alcohol and other drug abuse-related illnesses and injuries. Cost estimates were adjusted to reflect changes in U.S. prices from 1992 to 2003, and

[12] N-SSATS State Profile – Alaska 2004.

Alaska health care costs. Inflation was estimated at 56 percent using U.S. consumer price index for health care expenditures from the U.S. Bureau of Labor Statistics. Alaska health care cost data came from ACCRA. During 2003, health care costs in Fairbanks (the largest Alaska city for which data were available) were approximately 64 percent higher than the average participating city. After adjusting for inflation and cost-of-health care in Alaska, the estimated average cost for an alcohol and other drug abuse-related medical outpatient visit was $504.

Results

Alcohol abuse-related medical outpatient visits in Alaska during 2003 were estimated at $25.7 million. Alcohol-related disorders accounted for 52,200 estimated visits, while alcohol-specific illnesses had an estimated 7,900 visits. Table 17 presents estimated medical outpatient visits and costs for alcohol abuse-related disorders.

Of the total $25.7 million in alcohol abuse-related outpatient medical costs in 2003, alcohol abuse-related illness and injury contributed an estimated at $22.3 million, while alcohol abuse-specific illness and injury contributed $3.4 million.

Table 17
Medical Outpatient Visits and Costs Related to Alcohol Abuse in Alaska, 2003

	Outpatient Visits	Outpatient Costs (thousands of dollars)
Alcohol-specific	7,900	$3,373,000
Alcohol-related	52,200	22,286,000
Total, Alcohol Abuse	**60,100**	**$25,659,000**

Source: McDowell Group, based on alcohol and other drug-dependent population estimates from *National Survey on Drug Abuse and Health, 2003*, Substance Abuse and Mental Health Services Administration, U.S. Department of Health and Human Services; and U.S. medical outpatient and costs related to alcohol abuse from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).

Prescription Drugs and Nursing Home/Long-Term Care Costs

Although not as high as hospital and medical outpatient costs, alcohol and other drug abuse also have prescription drug and nursing home costs. Prescription drugs are prescribed for alcohol abuse-specific illnesses such as cirrhosis or alcohol-related cancer. Long-term care and nursing home costs estimates are for residents who have a primary alcohol abuse-specific diagnosis.

Methodology

Alcohol-related prescription drug costs were estimated using Alaska prevalence data on substance abuse. Prevalence estimates were applied to the total U.S. prescription drug costs related to alcohol abuse, as published in the NIDA/NIAAA (1998) study. These totals were adjusted to reflect population growth, inflation, and the cost of health care in Alaska. In the study, 2.2 percent of U.S. prescription drug costs for all illnesses were attributed to alcohol abuse. Prescription drug costs related to other drug abuse were not estimated due to the lack of national data.

Nursing home costs related to alcohol abuse were estimated using data from the Alaska Department of Health and Social Services and the NIDA/NIAAA (1998) study. HSS collects data on the number of long-term care days per care facility in

Alaska, as well as the daily rate information for each facility. There were an estimated 219,400 total nursing home and long-term treatment care bed days in Alaska for all during 2003, while cost per day of care averaged $328 per day, with a range of $213 to $625 per day. The cost of Alaska nursing home care for all illnesses and injuries during 2003 was approximately $71.9 million. Based on estimates published in the NIDA/NIAAA (1998) study, approximately 1 percent of the nation's nursing home care costs can be attributed to alcohol abuse-specific illnesses. The research team applied 1 percent to total nursing home and long term care costs in Alaska during 2003.

Results

Estimated pharmaceutical costs related to alcohol abuse in Alaska during 2003 were approximately $23.0 million. Alcohol abuse-related nursing home care days totaled 2,194 in Alaska during 2003. Costs from these visits amounted to approximately $719,000.

Fetal Alcohol Spectrum Disorders

Prenatal exposure to alcohol can cause specific birth defects which may include physical, mental, behavioral, and learning disabilities. Many children with fetal alcohol disorders are not identified until they reach school age or later. Individuals with alcohol-related effects may have difficulties with attention, memory, and problem solving. Heart, liver, and kidney defects are also common, as well as vision and hearing problems.[13] Alcohol-related effects that fall within the broad category of fetal alcohol spectrum disorders (FASD) include:

- fetal alcohol syndrome (FAS),
- partial FAS (PFAS),
- fetal alcohol effects (FAE),
- alcohol-related neurodevelopmental disorder (ARND),
- and other alcohol-related birth defects (ARBD).[14]

During the past ten years, a number of FAS prevalence rates have been established. Studies by the Centers for Disease Control and Prevention indicate a national rate from 0.2 to 1.5 cases per 1,000 births across various populations.[15] Other studies, including those focusing on specific high-risk populations such as Native Americans, other minorities and families living in poverty have indicated rates from 0.5 to 5.0 per 1,000 live births. Clearly, the data is varied and limited.

In establishing a clear number of infants born each year in the United States with Fetal Alcohol Syndrome, the CDC estimates between 1,000 and 6,000 children will be born with FAS each year – a preventable birth defect and disability.

Beginning in 1997, Alaska was one of five states comprising the CDC's Fetal Alcohol Syndrome Surveillance Network (FASSNet), a program established to provide consistent and comparable FAS prevalence rates. Participating states included Arizona, Colorado, New York, Wisconsin and Alaska (however, FAS rates for Wisconsin are not available). At 1.5 per 1,000 live births, Alaska has a significantly higher rate of children born with FAS than other states in the FASSNet program. In

[13] National Organization on Fetal Alcohol Syndrome, *What is FAS/FASD?*, www.nofas.org/faqs.aspx?id=9
[14] US Department of Health and Human Services, SAMHSA Fetal Alcohol Spectrum Disorders Center for Excellence. *The Language of Fetal Alcohol Spectrum Disorders.*
[15] *FAS: Guidelines for Referral and Diagnosis*, CDC, 2004.

addition, Alaska data showed an estimated FAS prevalence rate of 4.8 per 1,000 live births among Alaska Natives. CDC data indicates FAS prevalence rates ranging from 0.3 per 1,000 in Arizona and Colorado to 0.4 in New York.

CDC estimates that other prenatal alcohol-related conditions, such as ARND and ARBD, occur approximately three times as often as FAS.[16] Within the wider category of FASD (which would include individuals with FAS), the US is estimated to have about 10 cases per 1,000 live births. [17]

Alaska's estimated rate of all births impacted by prenatal alcohol exposure is 16.3 cases per 1,000 births, based on the 1995 to 1999 birth years. While these alcohol-related effects are closely associated with FASD, these rates are not directly comparable to national FASD rates of 10 per 1,000 live births due to differences in diagnoses and reporting at the state and national levels. Based on 16.3 cases per 1,000 and the number of live births from 1995 to 1999, approximately 160 infants are born each year in Alaska with FAS and other effects from maternal alcohol use during pregnancy. Of those, approximately 15 are born with Fetal Alcohol Syndrome (FAS).

FAS vs. FASD

It is important to remember that the information being used to determine the economic costs of care and service delivery to individuals with Fetal Alcohol Syndrome is only a small portion of the overall impact of prenatal exposure to alcohol and the resulting birth defects and disabilities. Beginning in 2000, the State of Alaska began extensive efforts to improve and expand the ability to appropriately diagnose individuals prenatally exposed to alcohol. In 2005, Alaska has a broad and regionally diverse network of diagnostic teams across the state.[18] Data collected from these teams indicate that from July 2000 through March 2005 teams have conducted 755 FASD diagnostic assessments. Of this number, 76 (10.0 percent) were diagnosed with FAS or atypical FAS; 378 (49.9 percent) were diagnosed with Static Encephalopathy; 251 (32.2 percent) were diagnosed with Neurobehavioral Disorder; and 50 (6.6 percent) were found to have no evidence of organic brain damage.

What this data indicates is that the costs associated with all alcohol-related births are much higher than those estimated just for individuals with FAS. And, as noted in the break-through research of Dr. Ann Streissguth in 1996 (Understanding the Occurrence of Secondary Disabilities in Clients with Fetal Alcohol Syndrome [FAS] and Fetal Alcohol Effects [FAE]), individuals with FAE (what is now referred to as FASD) are more likely to develop secondary disabilities and need more services than those with Fetal Alcohol Syndrome and the associated facial dysmorphology. For Alaska and the economic costs associated with all fetal alcohol spectrum disorders, the costs could be as much as 80 percent higher than indicated for FAS alone.

Economic Cost of Fetal Alcohol Syndrome

The cost of caring for and providing appropriate services to a person with FAS can be significant. These costs may include neonatal care for low birth weight to special speech therapy, behavioral management, or residential care for adults with FAS. Lifetime costs for care for children born in 2003 with FAS are estimated below. However, these costs are excluded from the total health care costs for 2003, as the component of that expenditure in 2003 alone cannot be determined.

[18] For information on available services go to http://health.hss.state.ak.us/fas/teams/default.htm).

Methodology

To estimate the economic costs from FAS, the research team first determined the number of live births with FAS in Alaska. The Alaska Department of Health and Social Services has closely monitored incidence of FAS in the state since 1998, as part of a U.S. Centers for Disease Control (CDC) monitoring program called the Fetal Alcohol Syndrome Surveillance Network (FASSNet), the ongoing Alaska FAS Surveillance Project and the Alaska Birth Defects Registry. The development of 13 community-based FASD diagnostic teams across Alaska has also assisted in the collection of data related to both FAS and other alcohol-related disabilities included in the FASD umbrella definition.

The Alaska FAS Surveillance Project data collection system is based on reports to the Alaska Birth Defects Registry, and uses medical chart data points to identify children with FAS or other prenatal alcohol-related conditions. DHSS staff consider the surveillance program to be highly rigorous. Alaska clinicians and case workers use a diagnostic process developed by researchers at the University of Washington Fetal Alcohol Syndrome Diagnostic and Prevention Network. Reporting of birth defects to the state registry is mandated by Alaska law. While Alaska's FAS surveillance system is believed to capture the majority of prenatal alcohol-related cases, it is possible that underreporting could make the incidence rate even higher.

For birth years 1995 to 1999, the incidence rate of FAS in Alaska is 1.5 per 1,000 live births.[19] This was the highest rate of the five states that were involved in developing the CDC FASSNet system. (The lowest rate was 0.3 FAS cases per 1,000 births.) However, the incidence of all prenatal alcohol-related conditions, including such conditions as alcohol-related birth defects (ARBD) and alcohol-related neurodevelopmental disorder (ARND), as well as FAS, is 16.3 per 1,000 live births. This incidence rate is assumed to be consistent in birth year 2003.

To estimate FAS costs in Alaska, the research team relied on data published in Health Professions Education Partnership Act of 1998 (Senate Bill 1754). The cost of treating an individual with FAS over his or her lifetime was estimated to be at least $1.4 million in 1995. These costs could include neonatal intensive care, medical and surgical services (not related to neonatal care), special speech therapy, behavioral management, and residential care. Medical and surgical service might include rectifying or monitoring hearing loss or cleft palate surgery. Residential services include special education, home care, speech therapy or institutional care. The 1995 data was adjusted for inflation using the Bureau of Labor Statistics Consumer Price Index for medical care. Additionally, costs of providing care were adjusted by the Alaska differential for cost of living (65 percent in 2003). The resulting total lifetime costs (in 2003 dollars) for providing services to an individual with FAS are estimated at $3.1 million.

The total cost for providing services to an individual with FAS born in Alaska during 2003 was estimated by multiplying the lifetime costs by the number of FAS births during that period.

Results

Table 18 presents estimated costs for FAS births in Alaska during 2003. During that period, Alaska had about 15 FAS births. Total economic costs resulting from services to all individuals with FAS in Alaska totaled approximately $47.0 million.

Table 18
Lifetime Costs of Medical and Residential Services for Children Born with FAS in 2003

	Incidence and Costs
Alaska births in 2003	10,084
FAS incidence per 1,000 live births	1.5
FAS births	15
Lifetime FAS cost	**$47,037,000**

Source: Birth data from the Alaska Bureau of Vital Statistics. McDowell Group, based on FAS data from Alaska Department of Health and Social Services; and Health Professions Education Partnership Act of 1998, S. 1754, 108d Congress (1998).

AIDS and HIV Costs

Intravenous drug abuse among individuals who share unhygienic needles is a significant cause of AIDS and HIV. Although AIDS and HIV no longer require extensive inpatient medical care, both result in high medical expenses worth measuring separately from the hospital and outpatient costs presented above (NIDA/NIAAA, 1998).

Methodology

The State of Alaska Department of Health and Social Services Epidemiology Section compiles data on HIV and AIDS diagnoses in the state. While the section does not track individuals with HIV and/or AIDS diagnoses, it does compile cumulative counts of the number of diagnoses in the state since the first known HIV diagnosis. Of the known cases of HIV and/or AIDS, 13 percent are associated with intravenous drug use. In addition, the Epidemiology Section tracks known deaths. The section does not track the whereabouts of diagnosed individuals, and as a result no data exists regarding the number of HIV/AIDS patients who may have moved away from Alaska. For the purposes of these estimates the research team assumes that 100 percent of diagnosed individuals remain in the state, though it is recognized that this may not be the case. Additionally, we assume that 100 percent of the known deaths occurred among individuals who had been diagnosed with AIDS, although data is not available on specific cause of death.

Two steps were used to calculate other drug-related AIDS and HIV medical costs. First, AIDS and HIV costs were estimated by applying annual medical expenses from the NIDA/NIAAA (1998) study to the number of known Alaska AIDS and HIV patients in 2003. Cost data was adjusted for inflation and the cost of health care in Alaska using the same sources and methods previously reported. Annual medical expenses for each Alaska HIV patient were estimated at $30,600, while medical expenses for each AIDS patient were $68,200.

The second step was to determine the percent of AIDS and HIV medical expenses that can be attributed to other drug abuse. The Epidemiology Section reported that approximately 13 percent of AIDS and HIV cases were attributed to intravenous drug abuse. This attribution rate was then applied to medical costs for AIDS and HIV patients.

Based on the data from the Alaska Division of Public Health, a total of 597 individuals with HIV or HIV/AIDS lived in Alaska in 2003. Of those, an estimated

295 had HIV without AIDS and 302 had HIV with AIDS. An estimated 13 percent of these individuals contracted HIV through intravenous drug use.

Although the following cost estimates are limited only to those caused by intravenous drug abuse, alcohol abuse is a risk factor in contracting AIDS and HIV from unprotected sex.

Results

An estimated 78 HIV and HIV with AIDS cases in Alaska are attributable to intravenous drug use. Medical costs for treating these patients in 2003 were approximately $3.8 million. Table 19 presents the number of HIV and HIV with AIDS cases and annual medical expenses for these cases.

Table 19
Annual Medical Expenses per AIDS and HIV Case
Due to Other Drug Abuse in Alaska, 2003

	Annual Medical Expenses per Patient	Number of AIDS and HIV Patients	Total Costs due to Drug Abuse
HIV Positive	$30,600	38	$1,172,000
AIDS	$68,200	39	$2,678,000
Total	**n/a**	**78**	**$3,850,000**

Source: McDowell Group, based on AIDS and HIV case numbers from Alaska Department of Health and Social Services, Division of Public Health; and annual medical expense data from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).

Hepatitis B and C Costs

Intravenous drug abuse and sharing unhygienic needles are leading contributors to hepatitis B and C in Alaska. In fact, intravenous drug use is the largest contributor to hepatitis C. Hepatitis B and C have been linked to cirrhosis and primary hepatic cancer.

Methodology

Approximately 12 percent of hepatitis B cases and 36 percent of hepatitis C cases can be attributed to intravenous drug abuse (NIDA/NIAAA, 1998). According to the Alaska Department of Health and Social Services, there were 8 cases of hepatitis B and 952 cases of hepatitis C reported in the state in 2003. Hepatitis B infection is accompanied by acute illness, and reported cases in 2003 likely accurately represent the number of people seeking care for hepatitis B in that year. However, hepatitis C is not necessarily accompanied by acute symptoms, though long-term costs of care are generally far more significant. Due to limited data on the disease stage[20] and how many patients were cured, the report estimates the cost of treating only those hepatitis C cases reported by the Alaska Division of Public Health in 2003.

Medical expenses for hepatitis B and C were presented in the NIDA/NIAAA (1998) study by stage. Since data is limited for hepatitis B and C in Alaska, medical expenses from the NIDA/NIAAA study were averaged. Adjusting for inflation and Alaska health costs, the annual average medical expense is $3,400 for treating hepatitis B and $14,900 for hepatitis C. These costs were applied to all other drug

[20] Incubation, acute, and persistent are the three stages of hepatitis.

abuse-related hepatitis B and C cases reported in 2003 by the Division of Public Health. However, it should be pointed out that most hepatitis B and C cases required only monitoring of the disease, which is relatively inexpensive. Hepatitis B cases generally require intensive treatment but limited long-term care, while hepatitis C cases may require low levels of treatment over an extended time, leading toward intensive treatment in later stages of the disease. The study provides an approximate cost of treating hepatitis B and C cases that were newly reported during 2003.

Results

In Alaska, intravenous drug abuse attributed to one hepatitis B case and 343 hepatitis C cases during 2003. Total annual medical costs for intravenous drug abuse-related hepatitis B were $3,000. Costs associated with the treatment of hepatitis C attributed to intravenous drug abuse were an estimated $5.1 million. Table 20 presents total medical costs and number of cases for hepatitis C in Alaska during 2003.

Table 20
Annual Medical Expenses per Hepatitis C Case
Due to Drug Abuse in Alaska, 2003

	Annual Medical Expenses per Patient	Number of Patients	Total Costs due to Drug Abuse
Hepatitis C	$14,900	343	$5,114,000

Source: McDowell Group, based on hepatitis B and C case numbers from the Alaska Department of Health and Social Services; and annual medical expense data from *The Economic Costs of Alcohol and Drug Abuse in the United States – 1992* (NIDA/NIAAA, 1998).
Hepatitis B costs were not included in the table because costs were insignificant compared to Hepatitis C ($3,000).

A significant percentage of individuals with serious mental illness also are users of or dependent upon drugs and/or alcohol. Similarly, rates of serious mental illness among individuals who experience drug and/or alcohol dependence or abuse are significantly higher than among the general population. Research also indicates that adults with co-occurring serious mental illness (SMI) and substance abuse disorders are more likely to receive treatment for their mental illness than for their substance dependence.

The State of Alaska is currently undergoing a process to integrate substance abuse treatment and mental health services in the state so that individuals in need of care can receive coordinated treatment for any co-occurring disorders. In addition, the state introduced an initiative in 2004 called Bring the Kids Home. The purpose of BTKH is to support the development of in-state residential psychiatric treatment capacity for Alaskan children and youths. Though still in its nascent stage, there are already measurable impacts from the initiative.

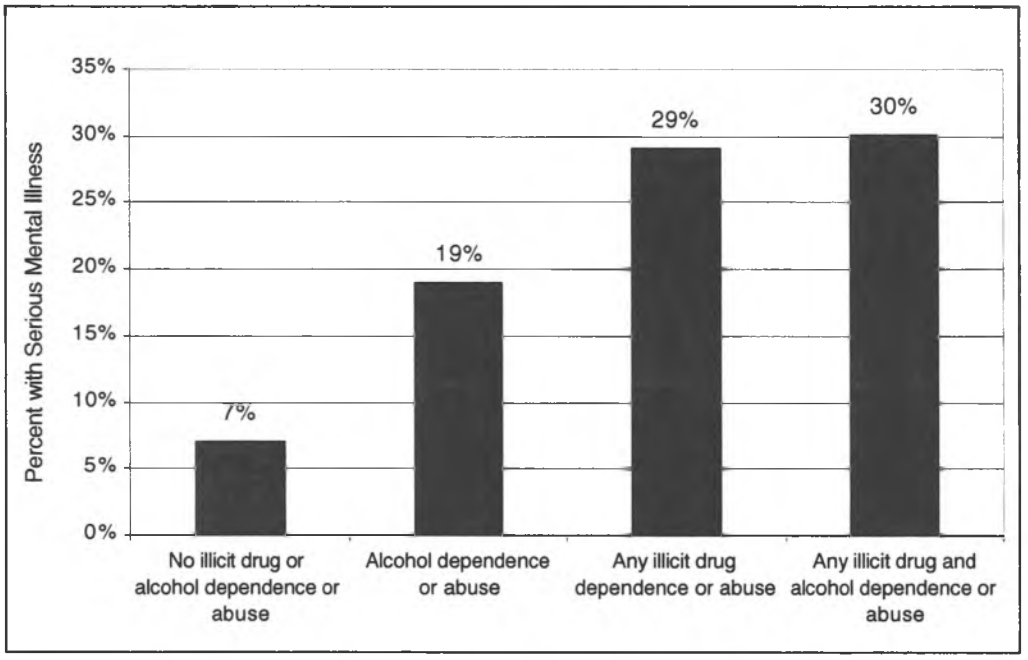
The U.S. Substance Abuse and Mental Health Services Administration (SAMHSA), Office of Applied Studies published a report in 2004 on *Serious Mental Illness and Its Co-Occurrence with Substance Use Disorders* for the year 2002. The report provides data on co-occurrence of mental illness and substance dependence or abuse, as well as comparative data on the rates of treatment for individuals with these conditions, alone or in combination.

Co-Occurrence of Serious Mental Illness and Substance Dependence or Abuse

The prevalence of serious mental illness (SMI) among adults who have a substance use disorder is significantly higher than among adults who do not. Nineteen percent of adults who are dependent upon or who abuse alcohol had SMI in 2002, as did 29 percent of those with illicit drug dependence or abuse, and 30 percent of those with both drug and alcohol abuse or dependence. By contrast, only 7 percent of adults who have no substance use disorder experienced SMI (see Figure 5).

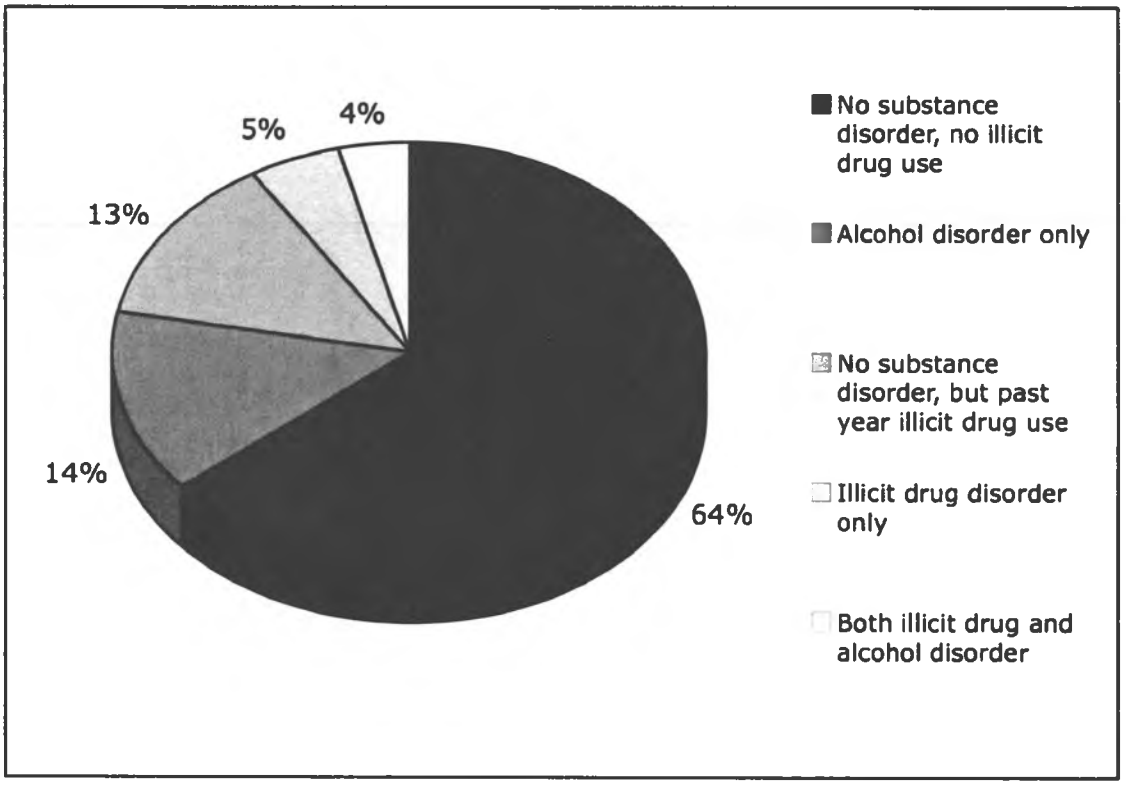
This data clearly shows that serious mental illness is much more likely to occur among the drug and/or alcohol dependent population. Likewise, among the population of adult Americans who experience serious mental illness, significant percentages of individuals are likely to have a drug and/or alcohol dependency or abuse. Of 17.5 million adults aged 18 or older who experienced SMI in 2002, 14 percent had an alcohol disorder only, 13 percent had no substance abuse disorder but had nevertheless used illicit drugs in the past year, 5 percent had an illicit drug disorder only, and another 5 percent had both illicit drug and alcohol disorders. In total, 46 percent of the population with SMI had drug or alcohol disorders or abuse, alone or in combination (see Figure 6.)

Figure 5
Serious Mental Illness among Adults Aged 18 or Older, by Substance Dependence or Abuse, 2002



Source: SAMHSA, Office of Applied Studies, National Survey on Drug Use and Health, 2002.

Figure 6
Substance Use Disorder Among Adults With Serious Mental Illness, 2002



Source: SAMHSA, Office of Applied Studies, National Survey on Drug Use and Health, 2002.

These data clearly show that there is a strong correlation between alcohol and or substance dependence and serious mental illness.

The analysis of the use of treatment services for either SMI or for substance dependence in the SAMHSA report revealed interesting trends in the treatment services accessed by affected individuals. Individuals with SMI only, and no substance abuse disorder, were most likely (48 percent) to receive mental health treatment. Among those individuals with SMI and substance dependence, 46 percent received only mental health treatment, while 14 percent received only specialty substance use treatment. Only 12 percent received treatment for both SMI and a substance abuse disorder. In addition, adults with SMI co-occurring with illicit drug dependence or abuse were more likely to receive mental health treatment (54 percent) than those adults who had SMI co-occurring with alcohol dependence or abuse (43 percent).

Adults who had co-occurring SMI and substance dependence or abuse were more likely to receive specialty substance use treatment than adults with substance disorders but no SMI (14 versus 5 percent).

In 1999, the Gallup Organization conducted a household telephone survey in Alaska and determined that 9.7 percent of the population aged 18 and over abused or was dependent on alcohol. Applying this percentage to the 2002 adult population in Alaska of 448,000 would result in an estimated 43,500 alcohol dependent adults in that year. Based on the co-occurrence rates presented in the SAMHSA (2002) study, this means an estimated 8,300 Alaskans had co-occurring alcohol dependence or abuse and serious mental illness in 2002. However, the Gallup survey did not assess the percentage of Alaskans whose alcohol dependence was accompanied by illicit drug dependence or abuse. It is reasonable to assume that some of the 8,300 alcohol dependent Alaskans also had illicit drug dependence or abuse. The prevalence of SMI among adults with both alcohol dependence and illicit drug use is significantly higher (30 percent versus 19 percent for alcohol only), so it is likely that the number of Alaskan adults with co-occurring SMI and alcohol and/or illicit drug dependence or abuse is even higher.

Bring the Kids Home Initiative

Like adults, children and youth experience co-occurring mental and substance abuse disorders. According to the SAMHSA Report to Congress, 2002, researches have found a link between substance abuse disorders and behavioral and mental/emotional disorders in youth. The 2001 National Household Survey on Drug Abuse found that 26 percent of 12 to 17-year-olds who had used illicit drugs in the past year had also received treatment or counseling for behavioral or mental health issues. This compared to only 16 percent of youths who had not used illicit drugs (SAMHSA, 2002).

In Alaska, there are a limited number of residential mental health treatment facilities for children and youth. When children and youth need intensive mental health treatment they often must travel to facilities outside of the state. However, according to the Alaska Division of Behavioral Health and the Mental Health Trust Authority, out-of-state treatment may not be as beneficial as services delivered close to home. Possible disadvantages of out-of-state services may include less therapeutic benefit for children and their families, longer lengths of stay and higher risk of readmission, and transitional difficulties.

To address the high rates of out-of-state institutionalization, the State of Alaska launched the "Bring the Kids Home Initiative" to support the development of in-state infrastructure and treatment opportunities for youth and children. Since the program inception in late 2004, several steps have been taken to position the state to achieve these goals. Three workgroups have been established, including one that is working to identify means to support the establishment of services and service providers in Alaska and one that is identifying ways to support the development of a treatment professional workforce. A third work group, made up of three mental health clinicians, reviews the cases of children who are under consideration for out-of-state treatment, and tries to redirect cases within the state whenever clinically possible and appropriate.

Prior to the launch of the BTKH initiative, Alaska had seen a stark increase in the number of children in out-of-state residential psychiatric treatment centers (RPTCs). There was a 200 percent increase in the number of children covered by Medicaid who received treatment in an out-of-state RPTC from 2000 to 2004. This was accompanied by a 280 percent increase in the cost of those services, from $9.9 million in 2000 to $37.8 million in 2004.

Preliminary fiscal year 2005 data, however, shows that more children were able to receive treatment in Alaska facilities. The number of children receiving services in out-of-state treatment facilities through Medicaid decreased from the previous year, and the percentage of Alaskan children receiving treatment services in-state rose to 29 percent from 22 percent the previous year. In addition, 71 children who were in out-of-state facilities have been transferred to treatment facilities within Alaska since the program inception. Additionally, there was a drop in out-of-state spending on RPTC care.

Table 21
Medicaid Residential Treatment Care Expenditures,
State Fiscal Years 2001 to 2005

	SFY01	SFY02	SFY03	SFY04	SFY05 preliminary
In-State	8,243,000	9,230,000	10,093,000	11,532,000	12,659,000
Out-of-State	17,609,000	21,752,000	30,915,000	37,794,000	34,044,000
Total	**$25,852,000**	**$30,982,000**	**$41,008,000**	**$49,326,000**	**$46,703,000**

Source: Division of Behavioral Health, "Bring the Kids Home Indicators: Baseline Data State Fiscal Years 1998-2004," May 2005; and "Bring the Kids Home Indicators: SFY05 Supplemental Data—Preliminary," August 2005.
Note: Claims for state fiscal year 2005 are still being processed; final numbers will likely be higher.

While the state continues to process insurance claims for FY05 treatment services, HSS staff indicated that the trends reflected in the preliminary data are likely representative of overall change. While expenditures for the program were modest in FY05 ($100,000), HSS staff said awareness of the BTKH initiative in the treatment community likely drove some of the shift toward Alaska-based treatment. The BTKH initiative has a budget of $2.4 million for FY06.

Needy Alaskans who qualify for public assistance receive cash and food stamps and other social services from the state. A portion of the public assistance expenditures can be attributed to alcohol and other drug abuse. As noted earlier in the report, alcohol and other drug dependence can result in reduced income, trouble finding and holding a job, or even a disability, all of which may qualify the individual for public assistance. This chapter looks briefly at the economic costs of alcohol and other drug abuse-related public assistance.

Methodology

Different methods were used to estimate the costs of alcohol and drug abuse-related public assistance at the state and federal levels. At both levels, only administrative costs of programs were considered as public assistance payments are a redistribution of income and not an actual cost to society.

At the federal level, there are two sources of public assistance costs. The first is former Supplemental Security Income (SSI) and Old Age, Survivors, and Disability Insurance (OASDI) recipients. National administrative cost figures were used to estimate the Alaska-specific portion of the federal programs, using the assumption that costs were proportional to the number of recipients. NIDA/NIAAA (1998) attribution rates were used to estimate the proportion of total costs that are attributable to drug and alcohol abuse. For SSI and OASDI recipients, 1.7 percent of the cases were related to alcohol and other drug abuse.

At the state level, public assistance programs include the Alaska Temporary Assistance Program (ATAP) and food stamp programs, and other programs such as energy assistance and child care assistance. Again, NIDA/NIAAA (1998) attribution rates were used to estimate the cost attributable to substance abuse.

For ATAP and other state programs, 4.1 percent of the cases were related. Because Alaska's dependency rates are more than twice national rates, attribution rates published in the NIDA/NIAAA (1998) study likely provide a conservative estimate of Alaska's true administration costs from public assistance. However, the lack of Alaska attribution rates for alcohol and other drug abuse-related public assistance necessitates the use of these national attribution rates published in the NIDA/NIAAA study.

Results

Administration costs from alcohol and other drug abuse-related public assistance was approximately $4.1 million in Alaska during 2003. The largest contributor was administration of payments for Alaska Temporary Assistance Program, food stamps and other state-administered assistance programs at $4.0 million, while administrative costs from former OASDI and SSI recipients totaled $170,000.

The cost of underage drinking in Alaska is a component of many of the alcohol and drug abuse-related costs already identified in this study. However, it is informative to examine specifically underage drinking costs, to place such costs in perspective relative to overall costs associated with alcohol and other drug abuse in Alaska.

This study did not include research focused on underage drinking costs. However, data from other sources is available. The Pacific Institute for Research and Evaluation (PIRE) has produced national and state-level estimates of the cost of underage drinking. PIRE data indicates that medical care costs and loss of work costs in Alaska totaled $128 million in 2001. PIRE also placed "pain and suffering" costs at $353 million. The following table provides more detail on specific sources of underage drinking costs in Alaska.

Table 22
Costs of Underage Drinking in Alaska, by Problem, 2001

	Total Costs (in millions)
Youth Violence	$329.7
Youth Traffic Crashes	77.7
High-Risk Sex, Ages 14-20	13.9
Youth Property Crime	7.6
Youth Injury	26.9
Poisonings and Psychoses	2.6
FAS Among Mothers Age 15-20	3.3
Youth Alcohol Treatment	18.9
TOTAL	$480.7

Source: Pacific Institute for Research and Evaluation (PIRE), March 2004. Posted at http://www.udetc.org/UnderageDrinkingCosts.asp

As indicated above, many of these costs have been captured in other sections of this report. The largest component of underage drinking costs, as measured by PIRE, are pain and suffering-related costs, which are not addressed at all (for adults or youth) in this report. While it is likely that some of the direct medical and work loss costs identified in the PIRE study are not reflected in this report, the potential for double-counting is high, therefore none of the costs reported in Table 22 are added to the grand total costs related to alcohol and drug abuse in Alaska, as measured in this study. Research beyond the scope of this study would be required to identify specific components of costs reported in the PIRE report that are not captured in the McDowell Group report.

EMPLOYMENT AND TAX IMPACTS OF ALCOHOL SALES

Although this report concentrates on quantifying the costs of alcohol and other drug abuse, there are some measurable economic benefits associated with the sale of alcohol. The most obvious benefit is employment. Jobs related to alcohol sales include manufacturing, wholesale trade and retail trade. Alcohol excise tax revenues go into Alaska's unrestricted general-fund budget. Other benefits, including indirect employment impacts from alcohol manufacturing and sales, are more difficult to measure and beyond the scope of this study. Earnings from these jobs help employ other residents who are not directly linked to the alcohol industry.

This chapter looks briefly at the direct employment benefits from the alcohol industry and discusses the excise tax collected from the sale of alcohol beverages.

Methodology

To measure the employment and earnings related to manufacturing and sales of alcohol, the research team relied on data published in the 2003 Employment and Earnings Report by Alaska Department of Labor and Workforce Development, Research and Analysis Division. Employment and earnings data was collected for the following industries:

- Breweries & Wineries (NAICS 31212, 31213)
- Wholesale trade for beer, wine, and distilled beverages (NAICS 4248)
- Beer, Wine, Liquor stores (NAICS 4453)
- Drinking places, Alcoholic (NAICS 7224)

Total tax revenue collected in FY2004 from the sale of alcohol beverages was published in the Tax Division Annual Report of Division Operations, by the Alaska Department of Revenue. Per gallon tax rates on alcoholic beverages were increased, on October 1, 2002, from $0.35 to $1.07 for beer, $0.85 to $2.50 for wine and $5.60 to $12.80 for liquor. As of that same date, 50 percent of the revenue is deposited in the Alcohol and Other Drug Abuse Treatment and Prevention Fund.

Results

Table 22 presents employment and earnings for alcohol-related commerce and manufacturing industries in Alaska during 2003. Total employment related to the sale of alcoholic beverages in Alaska was approximately 3,000 jobs with earnings of $62 million. Drinking establishments accounted for the most employment at approximately 1,800 jobs with $26 million in payroll.

Table 23
Employment and Earnings for Alcohol-Related Industries in Alaska, 2003

Industry	Employment	Earnings (millions)
Breweries and Wineries	90	$3.0
Wholesale trade	413	17.1
Retail trade: Liquor stores	672	15.9
Retail trade: Drinking places	1,815	25.8
Total	**2,990**	**$61.8**

Source: *2003 Employment and Earnings Report*, Alaska Department of Labor and Workforce Development, Research and Analysis Division.

Total tax revenue collected from the sale of alcohol beverages in Alaska was $32.7 million during FY 2004. This includes $14.1 million collected on sales of 1.1 million gallons of liquor, $4.3 million collected on sales of 1.7 million gallons of wine, and $14.3 million collected on sales of 14.7 million gallons of beer. Contributions of unrestricted revenue to the General Fund totaled $16.4 million, with an equal amount contributed to the fund for alcohol and drug abuse treatment programs.

Cost Offset of Treatment Services

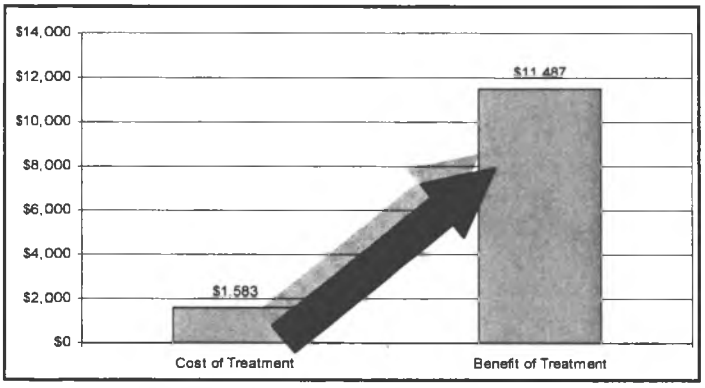
There is a great paucity on nationwide data related to the cost benefit of substance use treatment. However, the limited research in some States suggests that there is a major benefit to substance use treatment. According to recent estimates[1], the total financial cost of drug use disorders to the United States is estimated to be $180 billion annually. The economic costs of alcohol abuse were 184.6 billion in 1998[2]. Accessible and effective community-based alcohol and drug treatment is imperative to reduce society's financial burden from problems associated with drug use. As the U.S. economy faces unsustainable escalations in health care costs, we need to ensure needed substance use disorder treatment and recovery programs help reduce health and societal costs.

The benefits of treatment far outweigh the costs. Even beyond the enormous physical and psychological costs, treatment can save money by diminishing the huge financial consequences imposed on employers and taxpayers.

Cost Savings of Treatment: California, New York, and Washington

Treatment has been shown to have a benefit-cost ratio of 7:1[3]. The largest savings were due to reduced cost of crime and increased employer earnings (see Figure 1).

Figure 1. Cost Offset of Substance Abuse Treatment in California



For every **$100,000 spent on treatment,**

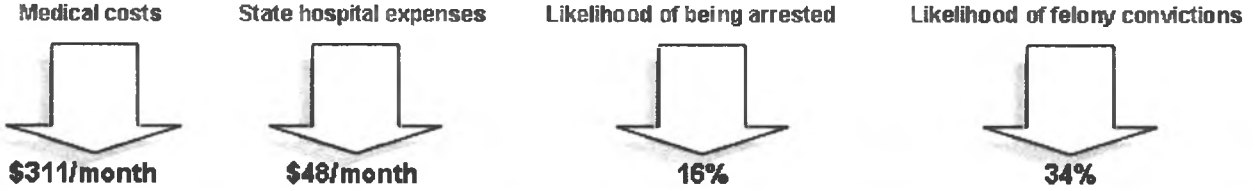
$487,000 of health care costs[4] and $700,000 of crime costs were shown to be avoided[5].

Public Assistance in Washington

A comparison of medical expenses of Medicaid clients[6] who received treatment noted these savings:

Modality	Savings per Medicaid member per month
Inpatient	$170
Outpatient	$215
Methadone	$230

Spending money on treatment has led to important health and public safety cost reductions in Washington[7]:



Health Care Utilization Savings: California

Treated patients have been shown to **reduce**[8]:

- **ER visits by 39%**
- **Hospital stays by 35%**
- **Total medical costs by 26%**

when compared to a control group.

Employers

Employees treated for substance use[9] have:

- **reduced absenteeism,**
- **reduced tardiness,**
- **lowered on-the-job injuries,**
- **fewer mistakes, and**
- **disagreements with supervisors by 75%**

Benefit-Cost Comparisons

- A study[10] comparing the direct cost of treatment to monetary benefits to society determined that on average, costs were $1,583 compared to a benefit of $11,487 (a benefit-cost ratio of 7:1).
- In an analysis[11] of methadone detoxification patients (n=102), authors observed that for every dollar spent on treatment, $4.87 of health care costs were offset.
- In comparing cost offsets in Washington State of people in treatment to non-treated, authors noted:[12] lower medical costs ($311/month); lower state hospital expenses ($48/month); lower community psychiatric hospital costs ($16/month); reduced likelihood of arrest by 16%; and reduced likelihood of felony convictions by 34%.

Health Care Utilization

- In a study[13] examining nearly 150,000 Medicaid claims for beneficiaries in six states, authors determined that people with substance abuse disorders had significantly higher expenditures for health problems compared to others.
- In comparison of medical expenses for welfare clients in Washington State[14] (n=3,235 treatment group and n=4,863 control) it was determined that substance abuse treatment was associated with a reduction in expenses of $2,500 per year.
- In reviewing selected beneficiaries in Oregon's Medicaid program,[15] researchers concluded that eliminating the substance abuse benefit led to increased medical expenditures.
- A review[16] of over 1,000 patients in a Sacramento chemical dependency program noted a substantial decline in hospital (35%), emergency room (39%), and total medical costs (26%) when compared to a control group.
- A recent article[17] on medical costs concluded that health care costs are higher for families with a person who has a dependency problem than for other similar families.

Employer Savings

An intake-to-follow-up assessment[18] study of nearly 500 people treated at Kaiser Permanente's Addiction Medicine program demonstrated significant reduction in missed work, conflict with coworkers, and tardiness. It also noted that employers break even on investing in chemical dependency treatment.

Every $1 spent on addiction treatment saves $7 in crime and criminal justice costs. When researchers added savings related to health care, the savings-to-cost ratio was 12:1.[19]

Introduction

The Alaska State Troopers, Alaska Bureau of Investigation Statewide Drug Enforcement Unit (SDEU) in authoring this publication, has endeavored to represent the drug situation in Alaska in a manner that provides the broadest possible picture of the true situation.

There are numerous agencies that conduct drug investigations in Alaska. While some agencies have a less formal relationship, most work closely with the Alaska State Troopers. In order to properly represent the true drug situation in Alaska, statistics from as many agencies in Alaska as possible are included in this report. Information provided by all sources should be considered when attempting to measure how drugs are impacting the citizens of this state.

We believe including as much information from all agencies involved in drug enforcement in Alaska is vital when analyzing the needs of the state in the arena of drug enforcement. However, it is important to note that the numbers alone should not be the sole source from which to make a complete assessment of the true drug situation in Alaska. To get the truest picture of the drug situation within Alaska we have attempted to take into account the anecdotal information gathered from conversations with those investigators on the frontlines of Alaska's war on drugs.

Our Mission

SDEU provides a leadership role in coordinating law enforcement's efforts to reduce the availability of illegal alcohol and controlled substances throughout Alaska. SDEU recognizes that a successful alcohol and drug program depends upon a unified effort blending traditional law enforcement techniques with demand reduction programs that address educational, social, and community concerns.

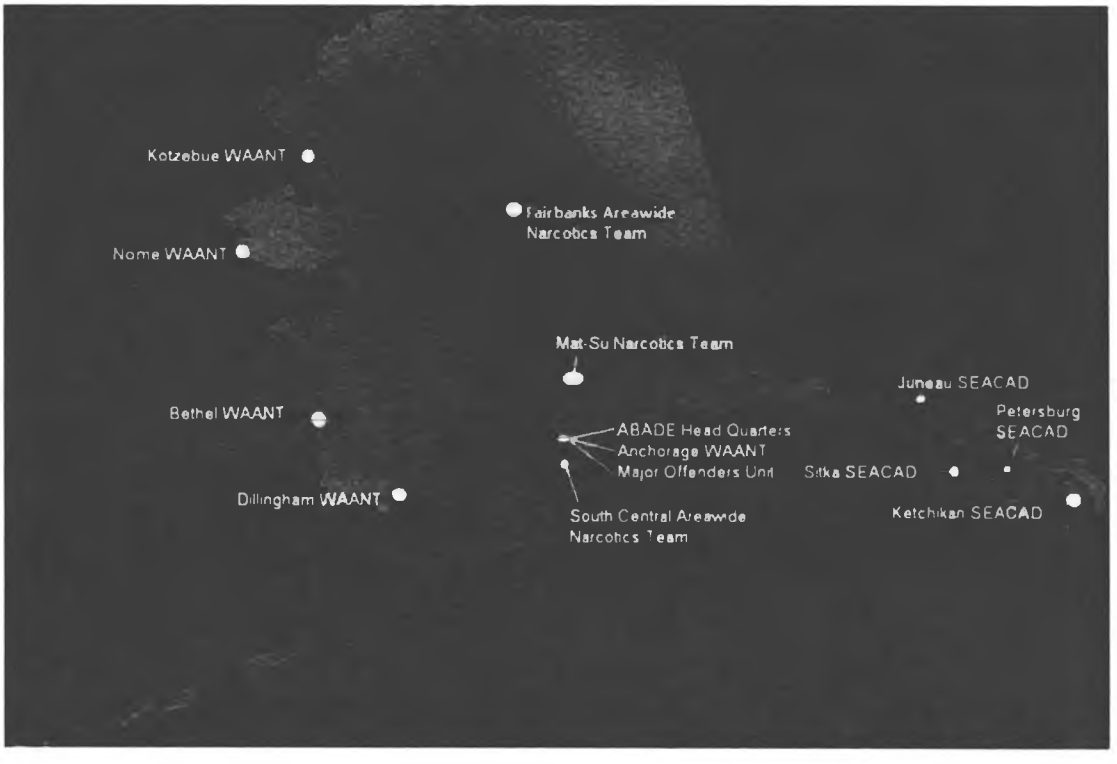
SDEU's mission is to:

- Interdict and seize alcohol and controlled substances that are illegally distributed throughout Alaska.
- Identify and arrest distributors of controlled substances and illegal alcohol.
- Provide training and investigative support to criminal justice agencies.
- Support and participate in public education programs.

Staffing and Support

SDEU recognizes that because of Alaska's geographical vastness no single law enforcement agency is capable of handling the drug and alcohol issues alone. Using a combination of federal and state funding, the Department of Public Safety helps to fund a number of multi-jurisdictional task forces around the state. SDEU encourages cooperative efforts between federal, state and local law enforcement agencies and has taken a leadership role in fostering and developing many of these cooperative arrangements through multi-jurisdictional and/or multi-agency efforts. The ABI-SDEU Headquarters office in Anchorage primarily supports seven (7) investigative task forces throughout the state. These teams are broken down by region as follows:

Alaska Interdiction Task Force / Anchorage Enforcement Group (DEA sponsored)
Fairbanks Area-wide Narcotics Team
Major Offender Unit
Mat-Su Narcotics Enforcement Team
South Central Area-wide Narcotics Team
Southeast Alaska Cities Against Drugs Task Force
Western Alaska Alcohol and Narcotics Team



Additional specific information on the individual units can be found at –

http://dps.alaska.gov/AST/ABI/SDEU.aspx

The Alaska National Guard Counter Drug Support Program (CDSP) provides additional personnel support within several SDEU units, as well as other narcotic enforcement groups. They provide operational resources, which include, but are not limited to manpower, equipment, a scent detection canine and logistical support to federal, state, and local law enforcement throughout Alaska. Financed under a special congressional appropriation, there is no cost to the state of Alaska for CDSP personnel support. This program contributes numerous resources not normally available to law enforcement agencies for assistance specific to drug investigations.

SDEU participates with and receives assistance from several investigative agencies involved in drug enforcement. These agencies include the Drug Enforcement Administration (DEA), Federal Bureau of Investigation (FBI), the US Postal Inspection Service, the Internal Revenue Service (IRS), Bureau of Alcohol, Tobacco, Firearms and Explosives (BATF) and US Immigration and Customs Enforcement (ICE). SDEU also works closely with other local law enforcement agencies.

Nature of Alaska's Drug and Alcohol Problem

Members of Alaska's law enforcement community and others who are part of Alaska's criminal justice system have long known that the greatest contributing factor to violent crimes, including domestic violence and sexual assault, is drug and alcohol abuse. It is also widely recognized that many of the accidental deaths that occur in Alaska are related to alcohol use. This is especially true in the western regions of the state and is clearly shown through statistics drawn from the Alaska State Trooper case management system. Of all cases initiated by the Alaska State Troopers in 2011, 33.6% involved drugs and/or alcohol. Of all violent crime cases, 59.5% involved drugs and/or alcohol.

While there is no question that many aspects of the drug and alcohol problem are unique to Alaska, SDEU strives to provide a continuing and coordinated effort that not only meets the needs of Alaska, but is also dovetailed with the National Drug Control Strategy. The strategy underscores the social and economic costs to society and was developed to provide general guidance and a framework for federal, state, and local agencies in developing a counter drug effort. The strategy's established objectives are:

- Strengthen efforts to prevent drug use in communities
- Seek early intervention opportunities in health care
- Integrate treatment for substance use disorders into health care and expand support for recovery
- Break the cycle of drug use, crime, delinquency, and incarceration
- Disrupt domestic drug trafficking and production
- Strengthen international partnerships
- improve information systems for analysis, assessment, and local management

Drugs of Choice

Alcohol, cocaine, heroin, marijuana, methamphetamine, and prescription drugs have been identified as the primary substances of abuse and are the focus of most law enforcement efforts.

During 2011 the number of methamphetamine labs investigated by the Alaska State Troopers has declined slightly from 11 labs in 2010 to 8 in 2011. Despite the smaller number of labs seized, methamphetamine, mainly from sources outside the state, continues to be readily available throughout the state, but is more prominent in the larger populated areas.

Perhaps just as significant are the abuse and sales of prescription drugs and the continued resurgence of the abuse of heroin in the urban areas. Alcohol and marijuana continue to be the overwhelming drugs of choice for Western Alaska.

Alcohol

Alaska's criminal justice professionals recognize that alcohol is the primary substance of abuse in Alaska and contributes to many violent, suicidal, and accidental deaths, especially in rural areas. Currently, 108 communities[1] have voted in favor of local option statutes prohibiting the sale, importation, and/or possession of all alcohol. Because alcohol remains legal in many areas of Alaska, illegal bootlegging activities continue to be a problem in the local option communities. Alcohol is frequently transported to the villages via the US Postal Service, local air carriers, private aircraft, boat, snow machines and express mailing services. Bootlegging alcohol of all types has become a very lucrative business in rural Alaska.

The United States Postal Inspector continues to support the cross deputation of investigators in SDEU's Western Alaska Alcohol and Narcotics Team. This program is the only one of its kind currently in the United States.

The economics of the illegal sales of alcohol is staggering. For example, a bootlegger can purchase a 750-milliliter bottle of alcohol legally for $10 or less in an urban liquor store. The same bottle of alcohol in Bethel, Kotzebue or Barrow may sell for $50. In the more remote communities, alcohol can easily sell for $150 to over $300 per bottle depending on the supply and demand. The initial purchase for the bootlegger involves a minimal cash investment, a maximum cash return. A dollar-for-dollar comparison of alcohol and drugs purchased in Anchorage and then resold in many Alaskan villages breaks down as follows:

Cocaine	$1.00	$1.50
Marijuana	$1.00	$4.00
Alcohol	$1.00	$15.00

* Calculated at $150 per bottle

Alcohol seized (gallons)

2009	2010	2011
582.29	774.02	682.87

Alcohol related charges/arrests

2009	2010	2011
317	363	392

[1] http://www.dps.state.ak.us/abc/docs/localopt.pdf

Cocaine

Cocaine continues to be a widely used and lucrative drug for sale in Alaska. Cocaine is readily available in most areas of the state and is seen with great frequency in powder form and crack cocaine in the major urban areas such as Anchorage and Fairbanks.

Cocaine is brought into Alaska concealed on passengers or in luggage through ports of entry such as the Ted Stevens Anchorage International Airport, and it is also shipped via the US Post Office or commercial parcel companies such as FedEx, DHL or UPS.

The cocaine brought into Alaska is typically packaged in kilogram quantities and later broken down by dealers into smaller quantities for retail sale. In powder form, it is normally sold in gram quantities for $100-150 and its primary method of ingestion is by snorting.

Crack dealers use a process involving powder cocaine, water, baking soda and heat to produce crack cocaine, which is then sold in small rocks for $20. The primary method of use for crack is by smoking.

The statistics below show powder and crack cocaine seized in 2011 by all task forces where SDEU investigators are assigned.

Cocaine seized (pounds)

28.81	22.16	37.12

Cocaine related charges/arrests

2009	2010	2011
96	145	108

Heroin

Heroin is a highly addictive drug derived from morphine which is obtained from the opium poppy. It is a "downer" or depressant that affects the brain's pleasure systems and interferes with the brain's ability to perceive pain. It is a white to dark brown powder or tar like substance. Heroin can be used in a variety of ways, depending on the user's preference and the purity of the drug. Heroin can be injected into a vein, injected into a muscle, smoked in a water pipe or standard pipe, mixed in a marijuana joint or regular cigarette, inhaled as smoke through a straw, or snorted as a powder via the nose.

The short term effects of heroin abuse appear soon after a single dose and disappear after a few hours. After an injection of heroin, the user reports feeling a surge of euphoria accompanied by a warm flushing of the skin, a dry mouth, and heavy extremities.

Heroin use is not isolated to the metropolitan areas of Alaska. Undercover buys and interdictions of heroin have been reported in several smaller communities. Heroin is primarily imported into Alaska via parcels and body carries. Investigations have shown that heroin use crosses socio-economic boundaries.

Heroin seized (pounds)

64	82	118

Marijuana

Marijuana is available throughout the state and is viewed as a gateway drug to other drugs for young adults and teenagers. The 2011 Alaska Youth Risk Behavior Survey conducted by State of Alaska Department of Health and Social Services indicates that 21.2% of high school students used marijuana within the last 30 days. Demand for Alaskan-grown marijuana continues to be high as a result of its exceptional tetrahydrocannabinol (THC) content. Because Alaskan produced marijuana is extremely high quality; Alaska is considered a marijuana exporting state. However, there is also a significant market for "BC Bud" brought into Alaska from British Columbia, Canada.

SDEU teams continue to find extremely sophisticated indoor growing operations. Most commercial marijuana growing operations are found in communities along Alaska's road system. It is not unusual for sites to be located in homes with hidden or underground rooms specifically designed for the cultivation of marijuana. These rooms are often equipped with surveillance cameras and state-of-the-art timers controlling temperature, lighting, water, humidity and air purifiers. Many grows are found during and/or after fires. Also, many lease/rental and abandoned housed are damaged by the remodeling and humidity of a grow operation.

In some parts of the state, the local economy is directly affected by the influx of money from illegally produced marijuana. Proceeds from marijuana production are used for a multitude of purchases including fuel, grow equipment/supplies, utilities, vehicles, ATV's and building materials.

Processed Marijuana seized (pounds)

Methamphetamine

Methamphetamine use continues to be an issue throughout the United States including Alaska. Methamphetamine, also known as meth, speed, crank, crystal, and ice, produces an increase in energy and alertness and a decrease in appetite. The effects, which include an intense rush, have been reported to last up to 36 hours. It can be smoked, snorted, injected, or taken orally.

The collection of hazardous materials associated with the take down of a methamphetamine lab requires a certified clean-up company to respond to the location, collect and containerize larger items as well as various chemicals found at the site. These containers are then transported to a location for safe long-term storage and/or destruction.

In previous years, the DEA has paid for this collection of materials at these lab sites. DEA suspended that funding and cleanup costs are now borne by state and local agencies.

Methamphetamine labs continue to be discovered in single and multi-family residences in many neighborhoods. In addition to meth labs producing illegal, often deadly drugs, the clandestine nature of the manufacturing process and the presence of ignitable, corrosive, reactive, and toxic chemicals at the sites, have resulted in explosions, fires, toxic fumes, and irreparable damage to human health and to the environment. Children are found residing in meth lab sites and many continue to live in dangerous environments. Loaded firearms are also frequently found at these meth labs, which increases the danger to children living in these residences.

Prescription Drugs

Throughout the state, the abuse of prescription drugs continues to be a significant problem. Not only does the abuse of prescription drugs create a health hazard for the users, it creates a financial impact upon the communities. The drugs vary in price and can cost anywhere from one dollar per milligram to two dollars per milligram depending on availability. With the increased demand for the drugs and a shortening of supply, many abusers may not have the money or insurance to pay for their addiction; thus increasing property and violent crimes in these communities. It has been reported that tens of thousands of dollars are being spent to feed this growing abuse and addiction.

The sale and abuse of Oxycontin/Oxycodone and Hydrocodone continued to be a significant issue in 2011. These drugs are sought for their pharmaceutical purity and ability to alter the central nervous system.

Prescription drugs have been linked to the following crimes - homicide, assault, prescription fraud, home invasion thefts and pharmacy robberies. People who are addicted to prescription drugs facilitate their addiction by doctor shopping, pharmacy shopping, forgery, and purchasing the drugs via the Internet. Law enforcement is especially concerned for the welfare of particularly vulnerable populations such as the elderly and those with severe long-term illnesses such as cancer.

It is the intent of SDEU to increase pressure on those involved in the non-medical use, abuse, and sales of these addictive drugs, by applying tried and true narcotics investigation techniques, and when ever prudent partnering with the DEA to charge these crimes in the federal system.

Hydrocodone seized (dosage units)

National Prescription Drug Take Back Program

This initiative addresses a vital public safety and public health issue. More than seven million Americans currently abuse prescription drugs, according to the 2009 Substance Abuse and Mental Health Administration's National Survey on Drug Use and Health. Each day approximately 2,500 teens use prescription drugs to get high for the first time according to the Partnership for a Drug Free America. Studies show that a majority of abused prescription drugs are obtained from family and friends, including the home medicine cabinet.

In an effort to address this problem, the US Department of Justice, Drug Enforcement Administration, Office of Diversion Control, in conjunction with state and local law enforcement agencies throughout the United States, conducted the first ever National Prescription Drug Take Back Day on Saturday, September 25, 2010. The purpose of this National Take Back Day was to provide a venue for persons who wanted to dispose of unwanted and unused prescription drugs. This effort was a huge success in removing potentially dangerous prescription drugs, particularly controlled substances, from our nation's medicine cabinets. There were approximately 3,000 state and local law enforcement agencies throughout the nation that participated in the event. All told, the American public turned in more than 121 tons of pills on this first National Take Back Day.

Members from the Alaska State Troopers along with the Drug Enforcement Administration, other Alaskan law enforcement agencies and other professional and community organizations worked together in April and again in October of 2011 to facilitate "Prescription Drug Take Back Days." The program resulted in the collection and proper disposal of approximately 3,500 pounds of prescription medications from around the state.

Drug Enforcement Administration

The Drug Enforcement Administration (DEA) in Alaska is deeply involved in working with all state and local drug units to enhance and facilitate investigations of major offenders throughout Alaska.

DEA in Alaska is broken down into the Anchorage District Office (ADO) along with a post of duty in Fairbanks, Alaska. The ADO is broken down into the Enforcement Group (EG) and the Alaska Interdiction Task Force (AITF). These groups operate as task forces, in that they are comprised of DEA agents as well as officers from other agencies. The EG has federally deputized task force officers from the Anchorage Police Department (APD) and the Alaska State Troopers (AST), while AITF consists of federally deputized task force officers from the AST, APD, and Airport Police, as well as several other federal agencies as needed. The Alaska National Guard Counter Drug Support Program supports DEA throughout the entire state.

DEA furnishes training to state and local agencies and in the past, has provided funding for law enforcement personnel to be trained and re-certified in a variety of drug law enforcement related topics.

DEA continues to facilitate forfeiture proceedings related to assets and funds seized as a result of criminal investigations and drug trafficking. This effort allows state and local law enforcement agencies to receive a portion of the assets seized, which in turn funds additional criminal investigations.

Drug seizures by DEA

	Cocaine (kilos)	**Heroin** (kilos)	**Marijuana** (lbs)	**Meth** (lbs)
2009	4.57	1.10	53.20	4

2011	5.77	.63	3.54	2.58

Anchorage Police Department

The Anchorage Police Department drug enforcement effort includes the Vice Unit, Special Assignment Unit, FBI Safe Streets Task Force, and a DEA Task Force. In addition to these units that specialize in drug investigations, we also have our Patrol Division that responds to immediate calls for service involving narcotics.

The Vice Unit focuses on longer term investigations targeting mid to high level dealers in the Anchorage area. Most of these investigations are three to six months in length but can last up to a year. The Vice Unit consists of one sergeant, six full-time detectives and two TDY officers from the patrol division. The Vice Unit also provides detectives for narcotics training and education in the Anchorage community.

The Special Assignment Unit focuses on short-term street level drug investigations often resulting in an immediate buy/bust. This unit has one sergeant, and 13 full-time officers including a canine officer. The Safe Streets Task Force mission consists of targeting violent offenders with an emphasis on gang members. These are often associated with the narcotics trade.

There are three full-time officers from APD assigned to the Safe Streets Task Force. Our DEA Task Force is comprised of DEA agents as well as officers from other departments; we have two Detectives currently assigned to the airport interdiction group. Their primary mission is interception of narcotics entering the state.

Drug Seizures by APD

Ted Stevens Anchorage International Airport

The Ted Stevens Anchorage International Airport Police conducts investigative efforts within the hub involving the statewide, domestic and international transportation of illegal drugs and alcohol. The mission to seize and interdict these illegal substances to prevent distribution throughout Alaska starts with a commitment to narcotics enforcement activities by assigning an officer to the DEA operated Alaska Interdiction Task Force. Additionally, uniformed officers and the department investigator conduct numerous narcotics investigations as a result of anonymous tips and complaints from airlines and cargo facilities. The department also coordinates investigative efforts with other state, federal and lower 48 law enforcement agencies. Dedication to community/customer service in this arena is paramount and officers are involved in drug education activities with our local airport businesses, schools and other private and public entities.

Emerging Trends in 2011

It is the intent of this section to familiarize the reader with some current and anticipated trends within Alaska. To do so it is important to look at the current Pacific Region picture as Alaska tends to follow suit in the following years. The National Drug Intelligence Center (NDIC) breaks the nation down into nine regions. The Pacific Region is made up of Alaska, Washington, Oregon, Idaho, Nevada, Hawaii, Guam and Northern and Central California.

PACIFIC REGION TRENDS

Methamphetamine
According to the NDIC's 2011 Drug Threat Assessment, methamphetamine continues to be the greatest threat to the Pacific Region. They report that although the domestic production of methamphetamine has declined over the region in large part due to the regulation of precursor chemicals use in its production; it is widely available throughout the region. It is further reported that the majority of methamphetamine within the region is supplied by Mexican drug trafficking organizations (DTOs) entering the country through the ports of entry and along the United States - Mexico border.

Powder Cocaine
The NDIC identifies powder cocaine as a significant issue in the Pacific Region as well. Also supplied to the United States by Mexican DTOs, the DTOs supply independent dealers and street gangs with the powder cocaine that they often times process into crack cocaine prior to distribution.

Marijuana
Marijuana is the most widely available and commonly abused drug throughout the Pacific Region. The Pacific Region leads the country in marijuana cultivation.

During 2011, utilizing funds acquired from federally forfeited illegal drug proceeds, the Alaska State Troopers (AST) commissioned the University of Alaska Anchorage (UAA) Justice Center to analyze three years of marijuana grows which were discovered by AST. The UAA study analyzed 200 marijuana grow searches conducted by AST during calendar years 2006, 2007 and 2008.

The primary purpose of the study was to provide an empirical estimate of the extent to which AST investigators' detection of marijuana odors served as a reliable indicator of the presence of illegal quantities of marijuana in structures.

Detection of marijuana odors was found to be significantly associated with the discovery of

25 or more plants.

The study titled, "The Predictive Validity of Marijuana Odor Detection" analyzed a total of 115 variables, a link to the entire 53 page report can be found in the resources section of this report.

ALASKA TRENDS

Methamphetamine

In July of 2006, pseudoephedrine regulations were adopted by the State of Alaska. This armed law enforcement professionals with a valuable tool to combat meth labs in the state. The table below shows the number of reported meth labs seized by SDEU.

Reported Meth Labs Seized in Alaska *

2007	2008	2009	2010	2011
11	12	9	11	8

* Statistic represents labs seized by SDEU only.

Although we have witnessed a decrease in the number of methamphetamine labs since 2006, SDEU has some concern due to the recent popularity of a new method in producing methamphetamine known as the "One Pot" or "Shake and Bake" method.

Methamphetamine cooks using the one pot method combine ammonium nitrate or sulfate, pseudoephedrine tablets, ether, water and the reactive metal into one container from the beginning of the process. The intent is to reduce the amount of time needed for the overall process. The dangers to the cooks and to first responders are due to the mixing of all of the ingredients in one container. The concentration of products builds pressure within the sealed container to levels beyond which the containers were built to withstand. The building pressure along with the violent reaction of the reactive metal with water can create a rupture or bursting of the container exposing the ingredients within to the outside air. Beyond the damage that is created by the bursting container, these ruptures are often accompanied by flames resulting from the flammable liquid within the container. As this method begins to gain in popularity within Alaska it will increase the danger to all citizens of Alaska from explosions, fires, and exposure to dangerous chemicals.

The number of methamphetamine lab seizures in nearly every other region of the country has shown a steady increase over the last three years due primarily to one pot labs.

As previously mentioned in this publication, methamphetamine abuse remains a significant issue within Alaska. Although the number of labs has remained relatively low, it appears that the use and abuse of the drug lingers.

Prescription Medication

More and more, prescription medications are being abused and sold. SDEU continued to see significant seizures of prescription medications in 2011. It is believed that the largest portion of these medications is being obtained through illegal means.

The latest data provided by the National Drug Intelligence Center shows that overdose deaths associated with the use of prescription medications exceeds those associated with

the use of cocaine, heroin and methamphetamine combined. This number includes both legal and illegal uses of prescription medications.

Heroin
The number of heroin seizures in our urban areas continues to grow. SDEU recognizes that there has been an increase in the availability of heroin throughout the state and it is no longer isolated to the urban areas.

Synthetic Cannabinoids
Synthetic cannabis is a term used to describe a variety of a psychoactive herbal and chemical substances which, when consumed mimic the effects of smoking marijuana. Marketed as incense and herbs, these products are sold on the internet and in smoke shops.

Although complete studies have not been conducted, some of the side effects of synthetic cannabis consumption are heart palpitations, extreme agitation, vomiting, delusions, hallucinations, and panic attacks.

In July of 2011, Alaska legislation prohibiting the sale and possession of a number of the common chemical compounds found in these synthetic cannabinoids was enacted. Following this enactment, the SDEU purchased a number of suspect products from a variety of vendors around the state. The items were submitted to the Scientific Crime Detection Laboratory (SCDL) for analysis. Additionally SDEU monitored submissions to the SCDL of these items from other law enforcement agencies.

Of the items submitted for analysis, none were found to contain any of the banned substances. This denotes compliance with the law by retailers but, changes to the chemical composition of these substances has allowed manufacturers to continue to legally market similar types of products in Alaska.

Bath Salts
Products containing MDPV (3,4 methylenedioxypyrovalerone)—marketed as "legal alternatives to cocaine or Ecstasy (MDMA)" emerged in the U.S. designer drug market during 2009. Such products have caused users throughout the country to experience severe adverse effects, and the number of calls to U.S. poison control centers related to them has trended upward. Retailers often sell these products labeled as "bath salts."

Currently legislation is under consideration by the Alaska Legislature to ban the chemicals commonly found in these products.

Summary

The Statewide Drug Enforcement Unit, with its unique ability to interdict and investigate cases across the state, recognizing that drug abuse is not confined to any one geographical location or any economic strata in our state. Drug and alcohol abuse affects all Alaskans, despite social, ethnic, racial and economic barriers.

We also recognize that the ill-gotten gains of drug traffickers and alcohol smugglers promote an increase in lawlessness of all types. This lawlessness is not isolated to the use of controlled substances. It includes, but is not limited to, burglary, theft, domestic violence assaults and murder. By the eradication of such activity and the arrest of those who would profit off the misery of others, we will make Alaska and the communities therein a much better and safer place to live and raise a family. The Alaska Bureau of Investigation, along with our partner agencies throughout the state, diligently dedicate our resources and energy toward that goal.

The Statewide Drug Enforcement Unit is committed to working with interested agencies in the fight against substance abuse throughout the state by using innovative concepts to deal with the illegal sale and distribution of alcohol and drugs. We are also committed to focusing on increased awareness and knowledge of drug abuse through educational presentations to the Public Safety Academy and in public forums, such as schools, service organizations and other community groups.

The 2011 Annual Drug Report is authored by the Alaska State Troopers, Alaska Bureau of Investigation Statewide Drug Enforcement Unit. It can be accessed via the Department of Public Safety internet site therefore there is no publication cost. It is intended to inform Alaskans about the type and frequency of drug related crime reported in Alaska during 2011.

The Alaska State Troopers, Alaska Bureau of Investigation supplied the majority of information presented in this report. Statistical data was provided by the Alaska State Troopers, Alaska Bureau of Investigation, the Anchorage Police Department, Ted Stevens Anchorage Airport Police and the Drug Enforcement Administration.

Addiction Treatment Advocates Call for More Alcohol Tax Money for Programs

Originally printed at http://www.ktva.com/home/outbound-xml-feeds/Addiction-Treatment-Advocates-Call-for-More-Alcohol-Tax-Money-for-Programs-140742513.html

By Corey Allen-Young
February 28, 2012

ALASKA - Calling substance abuse an epidemic in Alaska, advocates of treatment and prevention say the key to getting more people help is by increasing the amount of dollars used from the alcohol beverage tax – money they say could save lives.

The numbers are quite frankly embarrassing and heartbreaking, with substance abuse playing a role in nine of Alaska's top ten causes of death.

A list of groups from restaurants to bars to even the Anchorage Assembly say only using 50 percent of the alcohol sin tax is not enough if we want stop the tragic cycle of addiction.

"This is the best I've done being addicted to drugs," said Holly, who's getting treated for her addiction to prescription meds. "This is the cleanest I've ever been." It's a long road to recovery that Holly, who is pregnant, first started when she used drugs with a boyfriend as a teenager. "He was using them partying and I dabbled a little bit in OxyContin." It became a cycle of abuse that not even her family could get her out of.

"That was very, very scary for me. I looked for all kinds of different ways to get help," Holly said. But the problem is the help takes a lot longer than you would think because there isn't enough funding to support the demand.

"Some cases it could be six months or a year," said Anna Sappah, the executive director of Alaska Addiction Professionals Association. "[We've] got programs that aren't running at full capacity because they don't have the staff and manpower." This year, the state made $40 million on alcohol taxes. Half of it goes toward treating and preventing substance abuse. Drug counselors say the other half should be used for

treatment, as well, if we want fewer addicts.

"While people were waiting on their waiting list they actually died of the disease of addiction, either overdosed, or you'll hear of folks freezing to death," said Sappah.

"If people want help, help should be available for them," said APD spokesman Lieutenant Dave Parker. "If you have people on a waiting list, those people are motivated at least at the time that they write their name on the list."

"Really, you're not going to do it unless you're ready, nobody can force you," said Holly, who adds she and her baby are alive because she got help. The state says this year they have spent $42 million on treatment for about 7,000 people, with 450 waiting to be served.

But when you hear that 690 people were arrested for drug related offenses in Anchorage this year and that 484 sit in prisons statewide, its a push from both private and government organizations for 100 percent of the alcohol taxes to get that extra $19 million they say will lower numbers and cut down costs.

CLERK'S OFFICE
APPROVED
Date: 12-13-11

Submitted by: ASSEMBLY MEMBER FLYNN
Prepared by: Assembly Counsel
For reading: December 13, 2011

ANCHORAGE, ALASKA
AR NO. 2011–347

A RESOLUTION OF THE ANCHORAGE MUNICIPAL ASSEMBLY IN SUPPORT OF ALLOCATING 100 PERCENT OF THE EXISTING ALCOHOLIC BEVERAGE TAX RECEIPTS TO FUND ADDITIONAL TREATMENT SERVICES IN RECOGNITION OF THE OVERWHELMING UNMET DEMAND FOR SUBSTANCE ABUSE TREATMENT IN ALASKA.

WHEREAS alcohol and drug abuse are an epidemic in Alaska; and

WHEREAS Alaska consistently ranks among the top five states for alcohol and drug dependence; and

WHEREAS Alaska ranks eighth nationally for the percentage of people ages 18 years and older who need but do not receive treatment for illicit drug use; and

WHEREAS alcohol is a factor in an estimated 85 percent of reported cases of domestic violence and 80 percent of sexual assaults; and

WHEREAS the 2005 Advisory Board on Alcohol and Drug Abuse through the Alaska Department of Health and Social Services found that the economic costs of alcoholism and other drugs in Alaska annually include $367 million due to productivity loss in the workplace, $154 million on criminal justice and productive services, $178 million on health care, $35 million on traffic crashes, and $4 million for public assistance; and

WHEREAS Treatment has been shown to have a benefit-cost ratio of 7:1, and the largest savings are due to reduced cost of crime and increased employer earnings; and

WHEREAS according to the latest federal Substance Abuse and Mental Health Services Administration (SAMHSA) reports, between 43,000 and 57,000 Alaskans age 12 or over abused or were dependent on alcohol or an illicit drug; and

WHEREAS under AS 43.60.050 (a), 50% of the taxes collected under the Alcoholic Beverage Tax (43.60.010) are deposited in the Alcohol and Other Drug Abuse Treatment and Prevention Fund; and

WHEREAS Alaska is projected to collect nearly $40 million in total existing alcohol tax receipts for Fiscal Year 2012; and

WHEREAS, there is an overwhelming unmet demand for substance abuse treatment in Alaska; and

WHEREAS tax monies collected from the sale of alcohol should be used to prevent and treat substance abuse; and

WHEREAS the Cabaret, Hotel, Restaurant & Retailers Association, Alaska Wine and Spirit Wholesalers, social service organizations, treatment providers, and faith-based organizations support increasing funds for substance abuse treatment in Alaska;

NOW THEREFORE BE IT RESOLVED that the Anchorage Assembly, in recognition of the overwhelming unmet demand for substance abuse treatment in Alaska, supports allocating 100 percent of the receipts from the existing Alcoholic Beverage Tax to fund additional substance abuse treatment services in Alaska, rather than supplanting current funding for the limited services presently available.

PASSED AND APPROVED by the Anchorage Assembly this 13th day of December, 2011.

Debbie Ossiander
Chair

ATTEST:

Barbara E. Jones
Municipal Clerk

Alaska Cabaret, Hotel,
Restaurant & Retailers Association

Alaska State Legislature
Senator Johnny Ellis
716 W. 4th Ave, Ste 500
Anchorage, AK 99501

December 5, 2011

Dear Senator Johnny Ellis:

The Alaska Cabaret, Hotel, Restaurant & Retailers Association (CHARR) supports depositing 100 percent of the receipts from the existing Alcoholic Beverage Tax into the Alcohol and Other Drug Abuse Treatment and Prevention Fund, and requests that these funds be allocated into the budget to provide additional treatment services rather than supplanting current services.

Currently, only half of the revenue from the existing alcohol tax is used for substance abuse treatment and prevention. Alaska consistently ranks among the top five states for alcohol and drug dependence. Alaskans who seek treatment must be able to find and enter into treatment programs. There are far too few options available, and when someone needs help they often face long wait times. Substance abuse treatment services continue to be underfunded statewide, leaving individuals to continue the costly and tragic cycle of addiction.

According to the Federation of Tax Administrators, Alaska's alcohol tax is 3.5 to 4 times the national average which means Alaska has one of the highest excise tax rates on alcohol in the nation. These taxes produce over 38 million dollars annually, but sadly the majority of this tax revenue is not used to combat the problems related to the abuse and misuse of alcohol.

Alaska's hospitality industry pays the state government its fair share in taxes, and we support the use of this revenue to provide cost-effective, evidence based and readily available treatment. Alaska CHARR respectfully requests that you support this effort, and take action to ensure 100 percent of the existing alcohol tax revenue goes towards substance abuse treatment.

Sincerely,

Dale Fox

March 12, 2012

Dear Members of the Senate Finance Committee,

Thank you for introducing Senate Bill 221 to allocate 100 percent of existing alcohol tax revenue to the Alcohol and Other Drug Abuse Treatment and Prevention Fund (ADTP). In 2002, State Representative Lisa Murkowski championed HB225 to raise the alcoholic beverage tax and establish the ADTP to help provide much-needed revenue for expanded substance abuse treatment and diversion programs. Since 2003, only half of the funds collected from the existing alcohol tax have been appropriated to the ADTP. While the political reasoning for the fund was to expand treatment, decreases in general fund spending have left overall funding for substance abuse treatment and prevention reduced or stagnant.

Despite the increasing need for more substance abuse treatment and prevention, these programs are historically underfunded. Providers throughout the state report treatment beds are full to capacity, long waiting lists exist for services they offer, and there are numerous requests for services they can't provide. According to the Federation of Tax Administrators, Alaska's alcohol tax is 3.5 to 4 times the national average which means Alaska has one of the highest excise tax rates on alcohol in the nation. These taxes produce over 38 million dollars annually, but sadly the majority of this tax revenue is not used to combat the problems related to the abuse and misuse of alcohol.

Alaska consistently ranks among the top 5 states for alcohol and drug dependence. Not only does substance abuse have an extreme economic impact on the state, estimated at $738 million annually in health care costs, traffic crashes, criminal justice and public assistance, substance abuse is a reportedly a factor in 85% of sexual assault and domestic violence cases, and a contributing factor in 70% of child abuse and neglect cases. We cannot continue to ignore the substance abuse epidemic in Alaska.

The Governor should be commended for his Choose Respect initiative. Senate Bill 221 is the logical next step. We can't stop the scourge of sexual assault and domestic violence without addressing the underlying issue of alcoholism and drug abuse. With a small statutory change, all

monies collected from alcohol taxes can be put toward proven substance abuse treatment and prevention programs. The time to act is now.

Thank you for your leadership on this crucial issue.
Sincerely,

Perry R. Ahsogeak
Behavioral Health Director

Re: Letter of Support for SB 221

Dear Senator Ellis,

The Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse support SB 221, a bill to ensure that the revenue from our state's alcohol taxes is used to prevent and treat substance abuse. We appreciate your work, and that of the Senate Finance Committee, to address this issue.

Our Boards have long held the position that funds available from the alcohol tax were intended to supplement and not supplant existing general fund (GF) monies for behavioral health. The legislative intent of the alcohol tax was clearly to supplement existing funding for behavioral health services. This is clear from then state Representative Lisa Murkowski's sponsor statement: the alcohol tax fund "would help provide revenue needed for the expanded treatment, therapeutic courts, diversion programs and other initiatives" then being considered by the Legislature.

Alaska consistently ranks among the states with the highest rates of binge drinking.[1] Indigenous Americans report higher rates of alcohol dependence than other ethnicities in America.[2] Alaska's alcohol taxes produce over $38 million annually. Only half of the revenue from the existing alcohol tax is expressly allocated for substance abuse treatment and prevention.

Our concern is that funds from the alcohol tax fund have been used instead of GF dollars rather than in addition to GF dollars. The result is that substance abuse treatment services continue to be underfunded statewide, leaving individuals to continue the costly and tragic cycle of addiction.

---

[1] "Prevalence of Binge Drinking Among Adults, 2010," Centers for Disease Prevention and Control *citing* Behavior Risk Factor Surveillance System data (geographic representation of state rates available online at http://www.cdc.gov/alcohol/data-stats.htm).

[2] *The NSDUH Report*, "Alcohol Dependence or Abuse: 2002, 2003, 2004" (Issue 16, 2006) (online at http://www.samhsa.gov/data/2k6/alcDepend/alcDepend.htm).

In 2005, the Advisory Board on Alcoholism and Drug Abuse published findings on the economic costs of alcoholism and other drug abuse in Alaska:

- $367 million due to productivity loss in the workplace;
- $154 million on criminal justice and protective services;
- $178 million on health care;
- $35 million on traffic crashes; and
- $4 million for public assistance.[3]

Accessible and effective community-based alcohol and drug treatment is essential to reducing society's financial burden from problems associated with alcohol and drug abuse. Even beyond helping to alleviate the enormous physical and psychological costs, access to treatment and recovery supports diminishes the huge financial consequences imposed on employers and taxpayers.

Our board members expressly support the effort to ensure that 100 percent of Alaska's alcohol tax revenue goes to substance abuse treatment and prevention programs. We appreciate your work to improve access to these important services – for the health of all our neighbors and our communities.

Sincerely,

J. Kate Burkhart

Subject: Senate Bill 221

March 15, 2012

Dear Members of the Senate Finance Committee:

At our March 15, 2012 meeting, the Board of Directors of Partners for Progress discussed Senate Bill 221. We voted unanimously to support this bill.

Since 1999 Partners for Progress has been closely involved in the work of Alaska's Legislature, Administration, and the Court System to identify "Smart Justice" measures that better protect the public while reducing the human and monetary costs of incarceration. This year's Legislative Crime Summit highlighted a number of tested and proven measures that achieve this goal. Most involve substance abuse prevention and treatment.

Prevention and treatment of substance abuse is at the core of "Smart Justice". Providing additional funding to address the scourge of alcohol and drug abuse that underlies much of the crime in Alaska is an essential step towards curbing Alaska's ever-growing costs of incarceration while improving public protection. We urge your support for Senate Bill 221.

Respectfully,

Janet McCabe

RE: **SB 221** – Allocation of 100 percent of existing alcohol tax revenue to the Alcohol and Other Drug Abuse Treatment and Prevention Fund (ADTP)

Dear Senators Hoffman, Stedman and members of the Finance Committee,

The Alaska Mental Health Trust Authority (The Trust) is writing in strong support of **Senate Bill 221**. This bill would allocate 100 percent of existing alcohol tax revenue to the Alcohol and Other Drug Abuse Treatment and Prevention (ADTP) fund.

Sadly, Alaska consistently ranks among the top five states for alcohol and drug dependence. In addition, many of Alaska's social ills can be linked back to substance abuse. For example, substance abuse is a reportedly a factor in 85% of sexual assault and domestic violence cases, and in 70% of child abuse and neglect cases. Furthermore, the economic impact on Alaska from substance abuse is estimated at $738 million annually in health care costs, traffic crashes, criminal justice, public assistance and lost productivity.

In an effort to ensure Alaska had revenue for substance abuse prevention strategies and treatment programs, then State Representative Lisa Murkowski, championed HB225 to raise the alcoholic beverage tax and establish the ADTP fund to generate needed revenue for these programs and services. Unfortunately, since 2003, only 50 percent of the funds collected from the existing alcohol tax have been appropriated to the ADTP fund.

The Trust and its partners have been and continue to be steadfast advocates for ensuring Alaska's continuum of health care is sufficient to help those with addictions find a path to recovery. Unfortunately, Alaskans' access to evidence based substance abuse treatment is severely limited. If these additional ADTP funds were used to supplement rather than supplant the General Funds currently used for these services, they would go a long way to helping individual Alaskans and improving the health and wellness of our state.

The Trust strongly supports SB221 and thanks the Senate Finance Committee for their leadership in helping Alaskans suffering from addiction find their path to recovery.

Sincerely,

Jeff Jessee, CEO

ALASKA FEDERATION
OF NATIVES

March 16th, 2012

The Honorable Senate Finance Committee
State Capitol Building, Room 532
Juneau, Alaska 99801

Dear Senate Finance Committee Members,

On behalf of the Alaska Federation of Natives we would like to state our support for Senate Bill 221 to allocate 100 percent of the money collected by the existing alcohol tax to the Alcohol and Other Drug Abuse Treatment and Prevention Fund. It is clear that you recognize the negative effect of alcohol and drug addiction on the health and safety of Alaska Natives and you are actively seeking solutions that will reduce that impact.

We advocate for this bill on behalf of our membership wishes for a healthy future for all of Alaska. AFN represents 230 villages, through themselves or the 11 Regional Non-profits, and 12 Regional ANSCA corporations that are also members.

Senate Bill 221 is in alignment with AFN's commitment to ensuring healthier Alaska Natives. Many of the health challenges facing Alaska Natives are tied to behavioral health conditions; chief among these is substance abuse.

- 1 in 11 Alaska Native deaths is alcohol-induced
- Alcohol was the fourth leading cause of death from 1993 to 2002 (Alaska Bureau of Vital Statistics)
- Alcohol contributed to 85% of reported domestic violence cases and 80% of reported sexual assault cases between 2000-2003 (ISER, Status of Alaska Native Report, 2004)

Senate Bill 221 will help us fulfill our mission by allocating nearly 40 million dollars for substance abuse treatment and prevention services statewide. These programs continue to be underfunded leaving desperate individuals to continue the costly and tragic cycle of addiction.

Should you have any questions about our position, please feel free to contact me at (907) 274-3611.

SCR1 *"Designating May as Lupus Awareness Month"*

SPONSOR STATEMENT

SCR1 designates May as Lupus Awareness Month and encourages Alaskans to observe Lupus Awareness Month with appropriate activities that provide both lupus education and support for people diagnosed with the disease.

According to the Lupus Foundation of America, lupus is an acute, chronic and often lifelong disease affecting the immune system by causing inflammation and tissue damage. Major gaps exist in the understanding of the causes and consequences of lupus. Lupus can affect any body part, including the skin, lungs, heart, kidney, and brain. Lupus can cause seizures, strokes, heart attacks, miscarriages and organ failure. Lupus strikes mostly women of childbearing age and women of color develop lupus at a rate two-to-three times the rate that Caucasians develop lupus. Lupus is difficult to diagnose because its symptoms are similar to the symptoms of other illnesses. New drugs have not been approved by the United States Food and Drug Administration specifically for lupus during the last 50 years. Current treatment for lupus can have damaging side effects.

Each year, May is designated as Lupus Awareness Month to show support for the estimated 1.5 million Americans with lupus. More than 3,000 cases of lupus have been diagnosed in Alaska in patients 20 to 87 years of age. Ten members of the Lupus Foundation of America, Alaska Chapter recently passed away from lupus. Designating May as Lupus Awareness Month will help increase awareness of lupus and show support for those diagnosed with the disease.

Lupus Foundation of America, Inc.

What I Need to Know About Lupus

If you have been diagnosed with lupus, you will want to know as much as you can about the disease. Lupus is a chronic, autoimmune disease that can damage any part of the body (skin, joints, and/or organs inside the body). Normally the immune system produces proteins called antibodies that protect the body from foreign invaders, such as bacteria and viruses. With lupus, the immune system cannot tell the difference between these foreign invaders and the body's healthy tissues and creates autoantibodies ("auto" means "self") that attack and destroy healthy tissue. These autoantibodies cause inflammation, pain, and damage in various parts of the body.

Lupus is a disease of flares (the symptoms worsen and you feel ill) and remissions (the symptoms improve and you feel better). Lupus can range from mild to life-threatening and should always be treated by a doctor. With good medical care, most people with lupus can lead a full life.

What Causes Lupus?

No one knows what causes lupus. However, scientists believe that hormones, genetics (heredity), and environment are all involved. Hormones regulate many of the body's functions. In particular, the sex hormone estrogen is believed to play a role in lupus. Men and women both produce estrogen, but estrogen production is much greater in females.

Scientists have noted some common triggers among people who have lupus, including exposure to the sun, an infection, a medication taken to treat an illness, pregnancy, and giving birth.

However, that does not mean that estrogen, or any other hormone for that matter, causes lupus.

While no gene or group of genes has been proven to cause lupus, the disease does appear in certain families. And, although lupus can develop in people with no lupus in their family history, other autoimmune diseases may be present in some family members. Certain ethnic groups (people of African, Asian, Hispanic/Latino, Native American, or Pacific Island descent) have a greater risk of developing lupus, which may be related to genes they have in common.

Your genes may increase the chance that you will develop lupus, but scientists believe some kind of environmental trigger can set off the illness or bring on a flare, such as:

- *ultraviolet rays from the sun or from fluorescent light*
- *sulfa drugs and some tetracycline drugs, which make a person more sensitive to the sun*
- *penicillin or certain other antibiotic drugs*
- *infection*
- *a cold or a viral illness*
- *exhaustion*
- *injury*
- *emotional stress*
- *anything that causes stress to the body such as surgery, an accident, pregnancy, or giving birth*

Facts About Lupus

- Lupus is not contagious.
- Lupus is not like or related to cancer.
- Lupus is not like or related to HIV or AIDS.
- It is believed that at least 1.5 million people in the U.S. have lupus.
- More than 16,000 new cases of lupus in the U.S. are reported each year.
- Lupus strikes mostly women of childbearing age.
- Women of color are 2-3 times more likely to develop lupus.
- People of all races and ethnic groups can develop lupus.

Forms of Lupus

Systemic lupus erythematosus is the most common form of lupus, and is what most people mean when they refer to "lupus." Systemic lupus can be mild or severe. Some of the more serious complications involving major organ systems are:

- *inflammation of the kidneys (lupus nephritis)*
- *an increase in blood pressure in the lungs (pulmonary hypertension)*
- *inflammation of the heart muscle (myocarditis)*
- *hardening of the arteries (coronary artery disease)*
- *inflammation of the nervous system and brain*
- *inflammation of the brain's blood vessels*

Cutaneous lupus erythematosus is limited to the skin. Although cutaneous lupus can cause many types of rashes and lesions (sores), the most common rash is raised, scaly and red, but not itchy; it is called a *discoid rash* because the areas of rash are shaped like disks, or circles. Another common example of cutaneous lupus is a rash over the cheeks and across the bridge of the nose, known as the *butterfly rash*. Hair loss and changes in the pigment, or color, of the skin are also symptoms of cutaneous lupus.

Drug-induced lupus is a lupus-like disease caused by certain prescription drugs. The drugs most commonly connected with drug-induced lupus are hydralazine (used to treat high blood pressure or hypertension), procainamide (used to treat irregular heart rhythms), and isoniazid (used to treat tuberculosis). The lupus-like symptoms usually disappear within six months after these drugs are stopped.

Neonatal lupus is a rare condition that can affect infants of women who have lupus. At birth, the infant may have a skin rash, liver problems, or low blood cell counts, but all of these symptoms disappear completely after several months with no lasting effects. A very small percentage of infants with neonatal lupus may also have a serious heart defect; however, most infants of mothers with lupus are entirely healthy.

Another common example of cutaneous lupus is a rash over the cheeks and across the bridge of the nose, known as the butterfly rash.

What Are the Symptoms of Lupus?

Because lupus can affect so many different organs, a wide range of symptoms can occur. The most common symptoms of lupus, which are the same for females and males, are:

- *extreme fatigue (tiredness)*
- *headaches*
- *painful or swollen joints*
- *anemia (low numbers of red blood cells)*
- *fever*
- *swelling (edema) in feet, legs, hands, and/or around the eyes*
- *pain in chest on deep breathing (pleurisy)*
- *butterfly-shaped rash across cheeks and nose*
- *sun- or light-sensitivity (photosensitivity)*
- *hair loss*
- *blood-clotting problems*
- *fingers turning white and/or blue when cold (Raynaud's phenomenon)*
- *ulcers in mouth or nose*

Most people with lupus will be treated by a rheumatologist, who is a specialist in the diseases of joints and muscles.

What Kinds of Doctors Treat Lupus?

Most people with lupus will be treated by a *rheumatologist*, who is a specialist in the diseases of joints and muscles. The rashes or lesions from cutaneous lupus require treatment from a *dermatologist*, a specialist in diseases that affect the skin (including the scalp and the mouth).

Because lupus can cause damage to any part of the body, other specialists may be necessary, such as a *nephrologist*, who specializes in kidney problems; a *cardiologist*, who specializes in heart problems; a *neurologist*, who specializes in problems that affect the brain and nervous system; or a *perinatologist*, who specializes in high-risk pregnancies.

LUPUS Foundation of America, Inc

The Lupus Foundation of America (LFA) is the nation's leading nonprofit voluntary health organization dedicated to finding the causes of and cure for lupus and providing support and services to all people affected by the disease. The LFA and its network of chapters pursue this mission through programs of research, education and advocacy. Contact the LFA or a chapter that serves your area to find out how you can become involved in our mission and how we can help you. For more information call 1-800-558-0121 or visit us online at www.lupus.org.

2000 L Street, NW, Suite 710 | Washington, DC 20036 | www.lupus.org | ©2007 Lupus Foundation of America Inc.

BAND TOGETHER FOR LUPUS

Are you in the band? Join the Lupus Foundation of America (LFA) and Band Together for Lupus™ to raise awareness and educate others about the needs of people affected by lupus. We are asking that you show your support and commitment to the millions of people worldwide impacted by lupus and "band together" by wearing a purple lupus awareness wristband.

Together, we can show our support for those who are working to develop a full arsenal of new treatments, and highlight the need for safe, more tolerable, and effective medications. Most importantly, we can offer hope to the millions of people affected by the disease.

Here's how you can get involved and "band together."

- **Wear a wristband!** You can buy them at the LFA store, or from your local LFA chapter. Don't forget to share them with your friends and family.
- **Spread the word.** Ask your friends and family to join us and "band together" by sending an e-card.
- **Pledge your commitment** to "band together" and show your support for the millions of people affected by the disease.
- **Sign up to be an e-advocate and make your voice heard**. Become an e-advocate and tell Congress there is a critical need for increased funding for sound lupus research and education programs.
- **Join the band by following us Facebook, Twitter, or MySpace**. Check out our regular announcemnts on Facebook or MySpace or follow us on Twitter. Put an LFA wristband Twibbon on your Twitter account,
- **Make a donation**. Please consider making a tax-deductible contribution to help the LFA support research, education, and support services that benefit the 1.5 million Americans living with lupus and their families.
- **"Band Together" with an LFA chapter**. Find out what your local LFA chapter is doing as part of the "Band Together for Lupus" campaign.

LUPUS FOUNDATION OF AMERICA

ALASKA CHAPTER

2009 ANNUAL REPORT

The **Lupus Foundation of America (LFA) Alaska Chapter** was founded in July of 1986 as a nonprofit, nonsectarian, primarily volunteer organization. Our chapter is affiliated with and receives organizational support from the Lupus Foundation of America (LFA), the nation's leading non-profit voluntary health organization dedicated to research, education and advocacy in finding the causes of and cure for lupus.

The **Alaska Chapter** of LFA, serving over 40 cities and communities in Alaska, strives to improve early diagnosis and treatment of lupus, support individuals, families and friends affected by the disease, and increase awareness of lupus among health professionals and the public. We do this through our strong and involved Board of Directors and our dedicated and committed volunteers.

About Lupus

It is estimated that lupus affects 1.5 million Americans nationally and over ***3,000 Alaskans.*** Lupus is a widespread life diminishing and potentially life threatening disease that causes the immune system to attack the body's own healthy tissues and organs, including the kidneys, heart, lungs, brain, blood, and skin. Common symptoms of lupus include joint pain and swelling, fevers, extreme fatigue, skin rashes, anemia, chest pains due to inflammation of the heart or lungs, and sun sensitivity, among others.

Without intervention, the number of people nationally with lupus is expected to rise to more than 2 million in the next decade. The disease is two to three more common among African Americans, Hispanics, Asians and Native Americans. While eight of the ten new cases of lupus develop among women of childbearing age, men and women of all ages, as well as children also develop the disease. At the present time, there is not a cure for lupus.

Lupus is NOT infectious, rare, or cancerous. Researchers do not know exactly what causes lupus. While scientists believe there is a genetic predisposition to the disease, it is known that environmental factors such as sun exposure, stress, toxins, and infections can play a role in triggering the disease.

Shelly's Story

In every family there is some trait passed along the generations that is recognized as a 'common thread" among members. Some families get Grandpa's eyes; some get Great Aunt Millie's dry sense of humor. For my family, our common trait is lupus.

When my mother was first diagnosed at 35, we knew very little about the disease other than the muscle pain she suffered on a regular basis. We learned more throughout the years as not one but every female member of my family was diagnosed. After my mom came my aunt, her daughter and, finally, my diagnosis at the age of 20. We have varying degrees of the disease, from my general fatigue and muscle aches to the full-blown multi-organ involvement that eventually claimed my 31 year old cousin's life. At any level it is a disease that touches and changes us all.

While no one wishes for a chronic and life threatening illness, I am grateful that the disease I have is one that, so far, has been treatable and tolerable. I take my medication each day as my only major treatment. Experience has taught me that controlling my weight and getting regular exercise and sleep can alleviate the need for the two prescription pain killers and muscle relaxers I took each day in my early twenties. Yet I am, like all lupus patients, always cautious about the road ahead and the challenges I may face. Any fever is one to question. Vacations and trips must always allow for rest and sleep, otherwise I can count on a forced "time out" from a flare. How will this affect my family life when my husband and I decide to have kids? Will my boss understand when I can't "push through" a simple cold at work like the rest of my co-workers? Issues which, for me, are mere complications become full battles for those with more severe cases.

WHAT WE DO

SUPPORT

- Organize and facilitate support groups for individuals with lupus and their families
- Provide phone support through local and toll free numbers: (907) 338-6332 and (800) 307-5878
- Provide a website with information regarding our local chapter, lupus, support options, and links to the national LFA web site
- Supply brochures, books and resource articles about lupus to individuals with lupus and their families
- Maintain a lending library of books, videos and over 600 articles
- Distribute newsletter ***LUPUS LINK*** and national LFA magazine ***LUPUS NOW*** to our Alaska Chapter members
- Provide assistance and information to requesting individuals on current lupus treatment, diagnosis and physician referrals (both within Alaska and nationally)

EDUCATION & AWARENESS

- Provide Lupus related brochures, newsletters, books and current literature to individuals as well as the Alaska medical community statewide; including doctors, clinics, nurse practitioners, dentists and chiropractors
- Present lupus information at health fairs, businesses, and conferences
- Organize continuing education opportunities on the topic of lupus for physicians, nurses, health aides, dentists, dental hygienists, and chiropractors

Cities and communities where LFA Alaska has members and provides services

Highlights and Accomplishment for 2009

Walk for Lupus Now – On September 19, 2009, the Alaska Chapter hosted the State's first Walk for Lupus Now™, a nation-wide fundraising event aimed at raising both money and awareness of this chronic and debilitating disease. The National LFA provided a grant to assist in planning and implementation of the event. Over 125 walkers and 240 donors supported the Walk for Lupus Now™ held at the Alaska Dome. The event raised $25,000 in cash and in-kind donations.

Team Alaska

Individuals and teams on the start line

2nd Wine Tasting and Silent Auction – This successful fundraising event was held in partnership with Wine Styles on April 24th at O'Malleys on the Green and raised $7,000.

Jammin Salmon" Cook Off - The Eagle River Chugiak Chamber of Commerce's IBEW Salmon Cook-Off at the Bear Paw Festival in July 2009 chose the LFA Alaska Chapter as the recipient charity for this annual fundraiser.

Health Fairs - Alaska Chapter volunteers participated in **23** Health Fairs in the communities of Anchorage, Wasilla, Palmer, Fairbanks, Seward, Girdwood and Nome.

Day of Caring –
ConocoPhillips IT Department volunteered their time and office for the 7th year in a row by preparing a mass mailing of informative letters to Alaska medical providers and post cards promoting our chapter's the *Walk for Lupus Now™*, as well as putting together the gift bags for the Walk.

Volunteers – Over **10,000** hours were provided Statewide by wonderful dedicated community volunteers supporting the Alaska Chapter of LFA.

Lupus Link – The quarterly multipage Alaska Chapter newsletter-was produced and distributed to nearly 500 LFA Alaska Chapter members as well as medical professionals and clinics Statewide.

Additional Awards, Grants & Donations

Alaska Kidney Association - award grant for $1,200 to assist the chapter in buying educational materials

Rasmuson Foundation – award grant for $14,864 to purchase office technical equipment and furnishings

Alaska Permanent Dividend –*"Pick, Click and Give"* – individual donations of $800

Payroll Deduction Program including Alaska Community Share / United Way / Combined Federal Campaign – donations of $2,198

KeyBank Leadership Grant – award grant of $500

Leadership Anchorage – selected LFA Alaska Chapter as one of four community projects for the 2009-2010 class. This project will assist in the development of a new business plan to reach and support the younger lupus population of Alaska as well as the broader lupus community in the State.

Jackie G. Page Charitable Trust – donation of $17,000 to be applied towards an Alaskan Statewide Lupus Conference

Lupus Foundation of America – award grant of $11,000 for the implementation of the first *Walk for Lupus Now* in Alaska

L to R -granddaughter Keely, Debora and daughter Michelle

Debora's Story

I have been living with lupus for 40 years. Lupus and other auto-immune diseases run in families, so my daughter and granddaughter are at increased risk of developing lupus. On average, it takes 1 - 4 years and visits to 3 doctors before patients are correctly diagnosed with lupus. For me, it took over 26 years and a multitude of doctors before I received a diagnosis of lupus.

This is my story:
At seventeen, I had a horrible rash everywhere on my body. The doctor said it was an allergic reaction. At twenty, I started having transient strokes that caused temporary loss in my visual field. The doctor said to quit taking birth control pills. In my twenties, I also had several miscarriages. In my thirties, I often felt fatigued and was hospitalized for 4 days for high fevers of unknown origin. The doctors couldn't find anything wrong with me. Finally, at age 43, I went to my doctor and complained of severe fatigue. He asked me if I was depressed (which I wasn't) and said to come back in a month if I was still feeling fatigued. A month later, I finally got a diagnosis. It was a relief to finally know what had been causing all of my medical problems.

Living with any chronic and potentially life-threatening illness is a challenge. People with lupus often have to quit working because of the overwhelming fatigue combined with the unpredictable nature of the illness. After 25 years as a dental hygienist, I had to give up my work and my wonderful patients. Lupus also makes it difficult to pursue my love of gardening since being in the sun causes flare-ups of the disease. Although lupus has taken several things from me, it has also inspired me to be a better person and to live each day to the best of my ability. I volunteer my time with the Lupus Foundation of America Alaska Chapter and Big Brothers Big Sisters. My life is full of wonderful experiences and I am blessed to have amazing friends and family to support me.

Re: SCR 7 — FASD Awareness Day

Dear Senator Meyer,

The Advisory Board on Alcoholism and Drug Abuse and the Alaska Mental Health Board express their appreciation and support for SCR 7 declaring September 9, 2011 Fetal Alcohol Spectrum Disorders Awareness Day.

As you know, fetal alcohol spectrum disorders are 100% preventable. Raising awareness and recognition of this fact will help prevent more Alaskan children from being born affected by prenatal alcohol exposure.

Even more importantly, SCR 7 will raise awareness of the special and often very individual needs of individuals diagnosed with fetal alcohol spectrum disorders. Too often the services and supports they need to thrive – at home, at school, and in their communities – are not available. By highlighting a day that focuses on the unique issues of fetal alcohol spectrum disorders and their impact on Alaskans, we can not only support Alaskans with FASD, but also prevent future Alaskans from experiencing FASD.

Thank you for your continued work on this important issue.

Sincerely,

J. Kate Burkhart
Executive Director

Alaska State Legislature

Senator Kevin Meyer
Senate District O

SPONSOR STATEMENT FOR SCR 7

"Proclaiming September 9, 2011, as Fetal Alcohol Spectrum Disorders Awareness Day."

SCR 7 would proclaim September 9, 2011 as Fetal Alcohol Spectrum Disorders Awareness Day (FASD).

Alaska has the highest known incidence of FASD in the United States. This is a condition caused by prenatal exposure to alcohol, which can result in permanent brain damage, birth defects, learning disabilities, behavioral problems and most tragically, the loss of individual potential.

While FASD affects all racial and socioeconomic groups, it is a 100% preventable condition. FASD Awareness Day is observed internationally on September 9th. This serves as a reminder on the ninth day of the ninth month of the year that during the nine months of pregnancy a woman should abstain from alcohol.

SCR 7 would observe FASD Awareness Day by promoting the awareness of the effects of prenatal exposure to alcohol.

TEN THINGS YOU SHOULD KNOW ABOUT FAS

1. Drinking during pregnancy can cause permanent damage to a developing fetus.

2. FAS is one of the most common causes of mental retardation, and is the only cause that is entirely preventable.

3. According to recent State of Alaska DHSS surveillance data, more than 126 children are born at risk for FASD each year in Alaska.

4. Prenatal exposure to alcohol can cause brain damage and other permanent birth defects.

5. Obtaining an FAS diagnosis can improve an individual's ability to function in the world, and may reduce secondary disabilities like depression and school failure.

6. FASD is found in all races and all socio-economic groups – wherever women drink alcohol FASD exists.

7. There is no safe level of alcohol consumption during pregnancy.

8. Women should stop drinking prior to trying to conceive – alcohol can cause damage to a developing fetus even before a woman knows she is pregnant.

9. FASD is 100 percent preventable.

10. With the right diagnosis, support and understanding, many individuals with FASD are living happy and full lives.

Fetal Alcohol Spectrum Disorders

Prenatal exposure to alcohol can cause specific birth defects which may include physical, mental, behavioral, and learning disabilities. Many children with fetal alcohol disorders are not identified until they reach school age or later. Individuals with alcohol-related effects may have difficulties with attention, memory, and problem solving. Heart, liver, and kidney defects are also common, as well as vision and hearing problems.[13] Alcohol-related effects that fall within the broad category of fetal alcohol spectrum disorders (FASD) include:

- fetal alcohol syndrome (FAS),
- partial FAS (PFAS),
- fetal alcohol effects (FAE),
- alcohol-related neurodevelopmental disorder (ARND),
- and other alcohol-related birth defects (ARBD).[14]

During the past ten years, a number of FAS prevalence rates have been established. Studies by the Centers for Disease Control and Prevention indicate a national rate from 0.2 to 1.5 cases per 1,000 births across various populations.[15] Other studies, including those focusing on specific high-risk populations such as Native Americans, other minorities and families living in poverty have indicated rates from 0.5 to 5.0 per 1,000 live births. Clearly, the data is varied and limited.

In establishing a clear number of infants born each year in the United States with Fetal Alcohol Syndrome, the CDC estimates between 1,000 and 6,000 children will be born with FAS each year - a preventable birth defect and disability.

Beginning in 1997, Alaska was one of five states comprising the CDC's Fetal Alcohol Syndrome Surveillance Network (FASSNet), a program established to provide consistent and comparable FAS prevalence rates. Participating states included Arizona, Colorado, New York, Wisconsin and Alaska (however, FAS rates for Wisconsin are not available). At 1.5 per 1,000 live births, Alaska has a significantly higher rate of children born with FAS than other states in the FASSNet program. In addition, Alaska data showed an estimated FAS prevalence rate of 4.8 per 1,000 live births among Alaska Natives. CDC data indicates FAS prevalence rates ranging from 0.3 per 1,000 in Arizona and Colorado to 0.4 in New York.

CDC estimates that other prenatal alcohol-related conditions, such as ARND and ARBD, occur approximately three times as often as FAS.[16] Within the wider category of FASD (which would include individuals with FAS), the US is estimated to have about 10 cases per 1,000 live births.[17]

Alaska's estimated rate of all births impacted by prenatal alcohol exposure is 16.3 cases per 1,000 births, based on the 1995 to 1999 birth years. While these alcohol-related effects are closely associated with FASD, these rates are not directly comparable to national FASD rates of 10 per 1,000 live births due to differences in diagnoses and reporting at the state and national levels. Based on 16.3 cases per 1,000 and the number of live births from 1995 to 1999, approximately 160 infants are born each year in Alaska with FAS and other effects from maternal alcohol use during pregnancy. Of those, approximately 15 are born with Fetal Alcohol Syndrome (FAS).

FAS vs. FASD

It is important to remember that the information being used to determine the economic costs of care and service delivery to individuals with Fetal Alcohol Syndrome is only a small portion of the overall impact of prenatal exposure to alcohol and the resulting birth defects and disabilities. Beginning in 2000, the State of Alaska began extensive efforts to improve and expand the ability to appropriately diagnose individuals prenatally exposed to alcohol. In 2005, Alaska has a broad and regionally diverse network of diagnostic teams across the state.[18] Data collected from these teams indicate that from July 2000 through March 2005 teams have conducted

[15] *FAS: Guidelines for Referral and Diagnosis*, CDC, 2004.
[16] CDC, *Tracking Fetal Alcohol Syndrome*, www.cdc.gov/ncbddd/fas/fassurv.htm

[18] For information on available services go to http://health.hss.state.ak.us/fas/teams/default.htm).

Full report is available online:
http://www.hss.state.ak.us/abada/pdf/mcdowell_rept2005_091307.pdf

755 FASD diagnostic assessments. Of this number, 76 (10.0 percent) were diagnosed with FAS or atypical FAS; 378 (49.9 percent) were diagnosed with Static Encephalopathy; 251 (32.2 percent) were diagnosed with Neurobehavioral Disorder; and 50 (6.6 percent) were found to have no evidence of organic brain damage.

What this data indicates is that the costs associated with all alcohol-related births are much higher than those estimated just for individuals with FAS. And, as noted in the break-through research of Dr. Ann Streissguth in 1996 (Understanding the Occurrence of Secondary Disabilities in Clients with Fetal Alcohol Syndrome [FAS] and Fetal Alcohol Effects [FAE]), individuals with FAE (what is now referred to as FASD) are more likely to develop secondary disabilities and need more services than those with Fetal Alcohol Syndrome and the associated facial dysmorphology. For Alaska and the economic costs associated with all fetal alcohol spectrum disorders, the costs could be as much as 80 percent higher than indicated for FAS alone.

Economic Cost of Fetal Alcohol Syndrome

The cost of caring for and providing appropriate services to a person with FAS can be significant. These costs may include neonatal care for low birth weight to special speech therapy, behavioral management, or residential care for adults with FAS. Lifetime costs for care for children born in 2003 with FAS are estimated below. However, these costs are excluded from the total health care costs for 2003, as the component of that expenditure in 2003 alone cannot be determined.

Methodology

To estimate the economic costs from FAS, the research team first determined the number of live births with FAS in Alaska. The Alaska Department of Health and Social Services has closely monitored incidence of FAS in the state since 1998, as part of a U.S. Centers for Disease Control (CDC) monitoring program called the Fetal Alcohol Syndrome Surveillance Network (FASSNet), the ongoing Alaska FAS Surveillance Project and the Alaska Birth Defects Registry. The development of 13 community-based FASD diagnostic teams across Alaska has also assisted in the collection of data related to both FAS and other alcohol-related disabilities included in the FASD umbrella definition.

The Alaska FAS Surveillance Project data collection system is based on reports to the Alaska Birth Defects Registry, and uses medical chart data points to identify children with FAS or other prenatal alcohol-related conditions. DHSS staff consider the surveillance program to be highly rigorous. Alaska clinicians and case workers use a diagnostic process developed by researchers at the University of Washington Fetal Alcohol Syndrome Diagnostic and Prevention Network. Reporting of birth defects to the state registry is mandated by Alaska law. While Alaska's FAS surveillance system is believed to capture the majority of prenatal alcohol-related cases, it is possible that underreporting could make the incidence rate even higher.

For birth years 1995 to 1999, the incidence rate of FAS in Alaska is 1.5 per 1,000 live births.[19] This was the highest rate of the five states that were involved in developing

[19] *Susan Merrick, FAS Surveillance Project Manager, Alaska Department of Health and Social Services, personal communication, July 2005.*

Full report is available online:
http://www.hss.state.ak.us/abada/pdf/mcdowell_rept2005_091307.pdf

the CDC FASSNet system. (The lowest rate was 0.3 FAS cases per 1,000 births.) However, the incidence of all prenatal alcohol-related conditions, including such conditions as alcohol-related birth defects (ARBD) and alcohol-related neurodevelopmental disorder (ARND), as well as FAS, is 16.3 per 1,000 live births. This incidence rate is assumed to be consistent in birth year 2003.

To estimate FAS costs in Alaska, the research team relied on data published in Health Professions Education Partnership Act of 1998 (Senate Bill 1754). The cost of treating an individual with FAS over his or her lifetime was estimated to be at least $1.4 million in 1995. These costs could include neonatal intensive care, medical and surgical services (not related to neonatal care), special speech therapy, behavioral management, and residential care. Medical and surgical service might include rectifying or monitoring hearing loss or cleft palate surgery. Residential services include special education, home care, speech therapy or institutional care. The 1995 data was adjusted for inflation using the Bureau of Labor Statistics Consumer Price Index for medical care. Additionally, costs of providing care were adjusted by the Alaska differential for cost of living (65 percent in 2003). The resulting total lifetime costs (in 2003 dollars) for providing services to an individual with FAS are estimated at $3.1 million.

The total cost for providing services to an individual with FAS born in Alaska during 2003 was estimated by multiplying the lifetime costs by the number of FAS births during that period.

Results

Table 18 presents estimated costs for FAS births in Alaska during 2003. During that period, Alaska had about 15 FAS births. Total economic costs resulting from services to all individuals with FAS in Alaska totaled approximately $47.0 million.

Table 18
Lifetime Costs of Medical and Residential Services for Children Born with FAS in 2003

	Incidence and Costs
Alaska births in 2003	10,084
FAS incidence per 1,000 live births	1.5
FAS births	15
Lifetime FAS cost	**$47,037,000**

Representative
District 25, Anchorage

SPONSOR STATEMENT

HB 15

An Act relating to prevention and evaluation of and liability for traumatic brain injuries in student athletes

More than 60,000 high school student athletes sustain concussions each year. The number is much greater when you include middle school and younger children. The National Football League has recently begun focusing on concussions and brain trauma, raising public awareness of this serious problem, and many states are now moving to add protections for students who participate in sports or other potentially dangerous activities. While concussions and brain trauma are more prevalent in football, many other sports and activities are also dangerous, with girls' soccer resulting in the second-most concussions.

A concussion results from the brain striking the inside of the skull, and can be caused by a blow to the head, or by violent motion of the head. Though the risk can be somewhat reduced with a helmet, it cannot be prevented with external equipment. While it is nearly impossible to completely prevent an initial concussion or brain trauma, this legislation seeks to minimize complications and more permanent conditions that can be caused when athletes continue to practice or play after receiving a concussion.

HB 15 is modeled after legislation that recently passed in Washington State, known as the Zackery Lystedt Law. Zackery was a middle-school football player who was returned to a game after suffering a concussion. He sat out for about 15 minutes, and then returned to the game, forcing a game-saving fumble, but suffering a further head injury on the play. The second injury caused a brain hemorrhage that ultimately lead to the removal of both sides of Zackery's cranium, leaving him drifting in and out of a coma for three months. He has battled his way back to some sense of normalcy, but will never fully recover from this avoidable injury.

HB 15 simply requires school districts, in consultation with the Alaska School Activities Association, to develop and publish guidelines and information to educate coaches, student athletes and parents about the nature and risks of concussions and traumatic brain injuries. The bill will require that a student athlete suspected of suffering a concussion or brain trauma be removed from practice or play, and not be allowed to return until cleared by a licensed health care professional.

While there is no way to completely prevent concussions or traumatic brain injuries, we can strive to prevent the serious complications and potentially life-altering or life-threatening ramifications that can occur from continuing to practice or compete once a brain injury has occurred. This is a critical public health issue, and a responsibility to our children we should take seriously.

Fax 907-269-0218

Rep.Mike.Doogan@legis.state.ak.us

The bill as drafted applies these principles to school-based youth sports. While this is vital, we encourage you to consider amending the legislation to include other youth sports leagues as well. All young athletes deserve the protections offered in this bill.

The youth concussion bill provides better protection for Alaska's youth athletes by mandating a more formal, aggressive and uniform approach to the treatment of concussions. We applaud you and offer our assistance in aiding the passage of this bill.

Parents, coaches, teachers and school personnel will benefit from this measure. And, most importantly, our youth athletes will as well.

Sincerely,

Jeff Miller
Senior Vice President

SECTIONAL ANALYSIS

HB 15

An Act relating to prevention and evaluation of and liability for traumatic brain injuries in student athletes.

Section 1: Adds a new section to the uncodified law of the State of Alaska that will explain statistics, risks and challenges related to youth-related concussions, including:

(1) Concussions rank high in reported brain trauma injuries to children participating in sports and recreational activities.
(2) The CDC estimates nearly 4 million sports- and rec-related concussions in the US every year.
(3) Provides the definition of a concussion and some of the consequences of concussions – the effects may or may not include loss of consciousness; disruption of normal brain function.
(4) Explains how concussions may occur during organized or unorganized sports and rec. activities – such as through a fall or from a collision with another player.
(5) Explains that the risks of catastrophic injury or death from head injuries increase without proper evaluation and management, and if the athlete is allowed to continue participating following the concussion.
(6) Explains that, in spite of nationwide guidelines recommending individual assessment and gradual return to play following concussions, athletes continue to be returned to play prematurely – increasing risk of greater injury.

Section 2: Amends AS 14.30 by adding new sections to article 3 that would establish requirements for school district governing bodies relating to prevention and reporting. It also clarifies points of liability and damages (more details below, if needed):

Sec. 14.30.142. Concussions in student athletes: prevention and reporting.

(a) Requires school district governing body to consult with Alaska School Activities Association to develop and publish guidelines, etc. to educate coaches, student athletes and parents about the nature and risks of concussions.
(b) A student suspected of having a concussion or traumatic brain injury is immediately removed from the practice or game.
(c) Before returning to play or practice, the student must be cleared by a licensed health care provider who has received training in evaluating and managing traumatic brain injuries, including concussions.
(d) This provision explains that an evaluator may not be held liable for civil damages, except where he/she acted recklessly or with intentional misconduct or gross negligence.

Sec. 14.30.143. Concussions: school district immunity.

(a) Explains that a school district may not be held liable for injury or death resulting from the action or inaction of an employee or contractor with a non-profit youth organization if –

(1) the action/inaction occurred on school property during the delivery of services by the district or organization;

(2) the organization is under contract with the district to provide the services, and

(3) before the provision of services, the organization provided to the district written verification of –

(A) a valid insurance policy covering the injury or death in an amount not less than $50,000 per person and $100,000 per incident;

(B) compliance with the protocol for prevention and reporting of traumatic brain injury required in AS 14.30.142.

(b) This section may not be construed to impair or modify a person's ability to recover damages for harm due to negligent or reckless actions of a school or district employee or contractor or by the existence of a condition, equipment, program or structure known by the school district or organization to be unsafe.

(c) "Youth organization" means a public or private entity, qualified to do business in the state, that provides a program or service to persons under 19 years old.

CERTIFICATE

I, Barbara Baker, Chief Clerk of the House of Representatives of the State of Washington, do hereby certify that the attached is **ENGROSSED HOUSE BILL 1824** as passed by the House of Representatives and the Senate on the dates hereon set forth.

BARBARA BAKER

Chief Clerk

FILED

May 18, 2009

Secretary of State
State of Washington

ENGROSSED HOUSE BILL 1824

AS AMENDED BY THE SENATE

Passed Legislature - 2009 Regular Session

State of Washington 61st Legislature 2009 Regular Session

By Representatives Rodne, Quall, Anderson, Liias, Walsh, Pettigrew, Priest, Simpson, Kessler, Rolfes, Johnson, Sullivan, and Morrell

Read first time 01/30/09. Referred to Committee on Education.

AN ACT Relating to requiring the adoption of policies for the management of concussion and head injury in youth sports; amending RCW 4.24.660; and adding a new section to chapter 28A.600 RCW.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

Sec. 1. RCW 4.24.660 and 1999 c 316 s 3 are each amended to read as follows:

(1) A school district shall not be liable for an injury to or the death of a person due to action or inaction of persons employed by, or under contract with, a youth program if:

(a) The action or inaction takes place on school property and during the delivery of services of the youth program;

(b) The private nonprofit group provides proof of being insured, under an accident and liability policy issued by an insurance company authorized to do business in this state, that covers any injury or damage arising from delivery of its services. Coverage for a policy meeting the requirements of this section must be at least fifty thousand dollars due to bodily injury or death of one person, or at least one hundred thousand dollars due to bodily injury or death of two or more persons in any incident. The private nonprofit shall also

provide a statement of compliance with the policies for the management of concussion and head injury in youth sports as set forth in section 2 of this act; and

(c) The group provides proof of such insurance before the first use of the school facilities. The immunity granted shall last only as long as the insurance remains in effect.

(2) Immunity under this section does not apply to any school district before January 1, 2000.

(3) As used in this section, "youth programs" means any program or service, offered by a private nonprofit group, that is operated primarily to provide persons under the age of eighteen with opportunities to participate in services or programs.

(4) This section does not impair or change the ability of any person to recover damages for harm done by: (a) Any contractor or employee of a school district acting in his or her capacity as a contractor or employee; or (b) the existence of unsafe facilities or structures or programs of any school district.

NEW SECTION. **Sec. 2.** A new section is added to chapter 28A.600 RCW to read as follows:

(1)(a) Concussions are one of the most commonly reported injuries in children and adolescents who participate in sports and recreational activities. The centers for disease control and prevention estimates that as many as three million nine hundred thousand sports-related and recreation-related concussions occur in the United States each year. A concussion is caused by a blow or motion to the head or body that causes the brain to move rapidly inside the skull. The risk of catastrophic injuries or death are significant when a concussion or head injury is not properly evaluated and managed.

(b) Concussions are a type of brain injury that can range from mild to severe and can disrupt the way the brain normally works. Concussions can occur in any organized or unorganized sport or recreational activity and can result from a fall or from players colliding with each other, the ground, or with obstacles. Concussions occur with or without loss of consciousness, but the vast majority occurs without loss of consciousness.

(c) Continuing to play with a concussion or symptoms of head injury leaves the young athlete especially vulnerable to greater injury and

even death. The legislature recognizes that, despite having generally recognized return to play standards for concussion and head injury, some affected youth athletes are prematurely returned to play resulting in actual or potential physical injury or death to youth athletes in the state of Washington.

(2) Each school district's board of directors shall work in concert with the Washington interscholastic activities association to develop the guidelines and other pertinent information and forms to inform and educate coaches, youth athletes, and their parents and/or guardians of the nature and risk of concussion and head injury including continuing to play after concussion or head injury. On a yearly basis, a concussion and head injury information sheet shall be signed and returned by the youth athlete and the athlete's parent and/or guardian prior to the youth athlete's initiating practice or competition.

(3) A youth athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time.

(4) A youth athlete who has been removed from play may not return to play until the athlete is evaluated by a licensed health care provider trained in the evaluation and management of concussion and receives written clearance to return to play from that health care provider. The health care provider may be a volunteer. A volunteer who authorizes a youth athlete to return to play is not liable for civil damages resulting from any act or omission in the rendering of such care, other than acts or omissions constituting gross negligence or willful or wanton misconduct.

(5) This section may be known and cited as the Zackery Lystedt law.

Passed by the House April 20, 2009.
Passed by the Senate April 2, 2009.
Approved by the Governor May 14, 2009.
Filed in Office of Secretary of State May 18, 2009.

(INSERT SCHOOL/ORGANIZATION NAME HERE)
Concussion Information Sheet

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.** In other words, even a "ding" or a bump on the head can be serious. You can't see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:	
• Headaches • "Pressure in head" • Nausea or vomiting • Neck pain • Balance problems or dizziness • Blurred, double, or fuzzy vision • Sensitivity to light or noise • Feeling sluggish or slowed down • Feeling foggy or groggy • Drowsiness • Change in sleep patterns	• Amnesia • "Don't feel right" • Fatigue or low energy • Sadness • Nervousness or anxiety • Irritability • More emotional • Confusion • Concentration or memory problems (forgetting game plays) • Repeating the same question/comment

Signs observed by teammates, parents and coaches include:
• Appears dazed • Vacant facial expression • Confused about assignment • Forgets plays • Is unsure of game, score, or opponent • Moves clumsily or displays incoordination • Answers questions slowly • Slurred speech • Shows behavior or personality changes • Can't recall events prior to hit • Can't recall events after hit • Seizures or convulsions • Any change in typical behavior or personality • Loses consciousness

What can happen if my child keeps on playing with a concussion or returns too soon?

Adapted from the CDC and the 3rd International Conference on Concussion in Sport
Document created 6/15/2009

(INSERT SCHOOL/ORGANIZATION NAME HERE)

Concussion Information Sheet

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athletes will often fail to report symptoms of injuries. Concussions are no different. As a result, education of administrators, coaches, parents and students is the key to student-athlete's safety.

If you think your child has suffered a concussion

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours. The new "Zackery Lystedt Law" in Washington now requires the consistent and uniform implementation of long and well-established return-to-play concussion guidelines that have been recommended for several years:

> "a youth athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time"
>
> and
>
> "...may not return to play until the athlete is evaluated by a licensed heath care provider trained in the evaluation and management of concussion and received written clearance to return to play from that health care provider".

You should also inform your child's coach if you think that your child may have a concussion. Remember it's better to miss one game than miss the whole season. And when in doubt, the athlete sits out.

STATE OF WASHINGTON
OFFICE OF THE GOVERNOR
P.O. Box 40002 • Olympia, Washington 98504-0002 • (360) 753-6780 • www.governor.wa.gov

December 8, 2010

Roger Goodell, Commissioner
National Football League
280 Park Avenue, Floor 12W
New York, NY 10017-1206

Dear Commissioner Goodell:

From the time I was first approached to support a law to protect youth athletes from the risks of concussions, I have focused on, and learned much about, this important issue. We all share the desire to protect our children from serious, yet preventable, health risks. This is why I am pleased to share Washington State's experience with the Zackery Lystedt Law.

I feel it is my responsibility to protect the health and safety of our young athletes while carefully limiting the cost to Washington State taxpayers. Our state, like many others in our country, is facing significant budget challenges, so any new expenditures have to be carefully scrutinized.

I am thrilled to report that the Zackery Lystedt Law is working. We are seeing a decrease in concussions and other head injuries in our student athlete population. I believe the adoption of this important legislation has saved our state money in emergency medical care, rehabilitation, and other services children need when they suffer the consequences of untreated brain injuries. In addition, school districts have not been required to hire medical professionals or trainers, and no additional significant investments were needed to comply with this law.

Thank you for your leadership in working to have a version of the Zackery Lystedt Law adopted around the country. Please feel free to share this with other states as you work to keep our country's children active and safe.

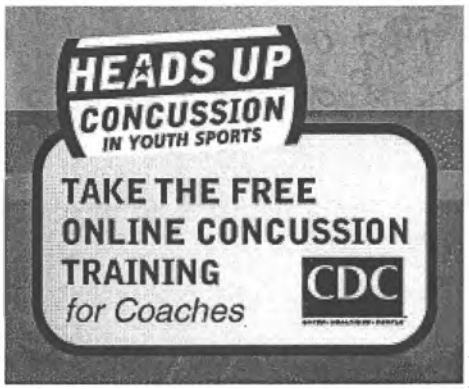
Sincerely,

Chris

Christine O. Gregoire
Governor

Happy holidays!

Centers for Disease Control and Prevention
Your Online Source for Credible Health Information



Heads Up Online Training Course

Heads Up: Concussion in Youth Sports is a free, online course available to coaches, parents, and others helping to keep athletes safe from concussion. It features interviews with leading experts, dynamic graphics and interactive exercises, and compelling storytelling to help you recognize a concussion and know how to respond if you think that your athlete might have a concussion.

What You Will Learn

This course will help you:

- Understand a concussion and the potential consequences of this injury,
- Recognize concussion signs and symptoms and how to respond,
- Learn about steps for returning to activity (play and school) after a concussion, and
- Focus on prevention and preparedness to help keep athletes safe season-to-season.

You can help make your league and school sports safer and healthier for all athletes. Learn when to make the call to pull an athlete off the field, ice, court, or track, and work with athletes, parents, and league and school officials to implement a concussion action plan and prevention strategies.

Course Highlights

Concussion Basics

- Understand concussion and what happens to the brain,
- Discover what causes a concussion, and
- Learn the potential consequences of concussion.

Recognize and Respond to a Suspected Concussion

- Focus on what to look for and when to pull athletes out of play,
- Watch for danger signs and seeking immediate medical attention, and
- Learn the four-step, "Heads Up" action plan when a concussion is suspected.

Helping Athletes Get Back to Play and to School

- Characterize the gradual steps for returning to activity (play and school), and
- Review a concussion preparedness checklist to guide you through pre-, mid-, and post-seasons.

Resource Center

- Access additional concussion information, videos, presentations by leading experts, fact sheets, communication strategies for talking with parents and athletes, and other tools.

Click here to take the training

Follow us on Facebook and learn more about concussion: www.cdc.gov/Concussion.

HEADS·UP CONCUSSION IN HIGH SCHOOL SPORTS

A FACT SHEET FOR PARENTS

What is a concussion?

A concussion is a brain injury. Concussions are caused by a bump, blow, or jolt to the head or body. Even a "ding," "getting your bell rung," or what seems to be a mild bump or blow to the head can be serious.

What are the signs and symptoms?

You can't see a concussion. Signs and symptoms of concussion can show up right after the injury or may not appear or be noticed until days after the injury. If your teen reports ***one or more*** symptoms of concussion listed below, or if you notice the symptoms yourself, keep your teen out of play and seek medical attention right away.

Signs Observed by Parents or Guardians	Symptoms Reported by Athlete
• Appears dazed or stunned • Is confused about assignment or position • Forgets an instruction • Is unsure of game, score, or opponent • Moves clumsily • Answers questions slowly • Loses consciousness *(even briefly)* • Shows mood, behavior, or personality changes • Can't recall events *prior* to hit or fall • Can't recall events *after* hit or fall	• Headache or "pressure" in head • Nausea or vomiting • Balance problems or dizziness • Double or blurry vision • Sensitivity to light or noise • Feeling sluggish, hazy, foggy, or groggy • Concentration or memory problems • Confusion • Just not "feeling right" or is "feeling down"

How can you help your teen prevent a concussion?

Every sport is different, but there are steps your teens can take to protect themselves from concussion and other injuries.

- Make sure they wear the right protective equipment for their activity. It should fit properly, be well maintained, and be worn consistently and correctly.
- Ensure that they follow their coaches' rules for safety and the rules of the sport.
- Encourage them to practice good sportsmanship at all times.

What should you do if you think your teen has a concussion?

1. **Keep your teen out of play.** If your teen has a concussion, her/his brain needs time to heal. Don't let your teen return to play the day of the injury and until a health care professional, experienced in evaluating for concussion, says your teen is symptom-free and it's OK to return to play. A repeat concussion that occurs before the brain recovers from the first—usually within a short period of time (hours, days, or weeks)—can slow recovery or increase the likelihood of having long-term problems. In rare cases, repeat concussions can result in edema (brain swelling), permanent brain damage, and even death.
2. **Seek medical attention right away.** A health care professional experienced in evaluating for concussion will be able to decide how serious the concussion is and when it is safe for your teen to return to sports.
3. **Teach your teen that it's not smart to play with a concussion.** Rest is key after a concussion. Sometimes athletes wrongly believe that it shows strength and courage to play injured. Discourage others from pressuring injured athletes to play. Don't let your teen convince you that s/he's "just fine."
4. **Tell all of your teen's coaches and the student's school nurse about ANY concussion.** Coaches, school nurses, and other school staff should know if your teen has ever had a concussion. Your teen may need to limit activities while s/he is recovering from a concussion. Things such as studying, driving, working on a computer, playing video games, or exercising may cause concussion symptoms to reappear or get worse. Talk to your health care professional, as well as your teen's coaches, school nurse, and teachers. If needed, they can help adjust your teen's school activities during her/his recovery.

If you think your teen has a concussion:
Don't assess it yourself. Take him/her out of play. Seek the advice of a health care professional.

It's better to miss one game than the whole season.

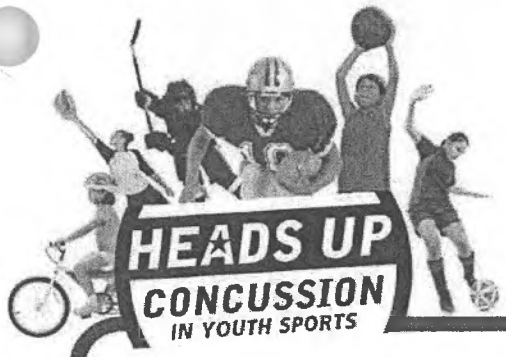
U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES
CENTERS FOR DISEASE CONTROL AND PREVENTION

June 2010

U.S. Department of Health and Human Services
Centers for Disease Control and Prevention



A Fact Sheet for **ATHLETES**

WHAT IS A CONCUSSION?

A concussion is a brain injury that:

- Is caused by a bump or blow to the head
- Can change the way your brain normally works
- Can occur during practices or games in any sport
- Can happen even if you haven't been knocked out
- Can be serious even if you've just been "dinged"

WHAT ARE THE SYMPTOMS OF A CONCUSSION?

- Headache or "pressure" in head
- Nausea or vomiting
- Balance problems or dizziness
- Double or blurry vision
- Bothered by light
- Bothered by noise
- Feeling sluggish, hazy, foggy, or groggy
- Difficulty paying attention
- Memory problems
- Confusion
- Does not "feel right"

WHAT SHOULD I DO IF I THINK I HAVE A CONCUSSION?

- **Tell your coaches and your parents.** Never ignore a bump or blow to the head even if you feel fine. Also, tell your coach if one of your teammates might have a concussion.
- **Get a medical check up.** A doctor or health care professional can tell you if you have a concussion and when you are OK to return to play.
- **Give yourself time to get better.** If you have had a concussion, your brain needs time to heal. While your brain is still healing, you are much more likely to have a second concussion. Second or later concussions can cause damage to your brain. It is important to rest until you get approval from a doctor or health care professional to return to play.

HOW CAN I PREVENT A CONCUSSION?

Every sport is different, but there are steps you can take to protect yourself.

- Follow your coach's rules for safety and the rules of the sport.
- Practice good sportsmanship at all times.
- Use the proper sports equipment, including personal protective equipment (such as helmets, padding, shin guards, and eye and mouth guards). In order for equipment to protect you, it must be:
  - > The right equipment for the game, position, or activity
  - > Worn correctly and fit well
  - > Used every time you play

July 2007

It's better to miss one game than the whole season.

www.cdc.gov/ConcussionInYouthSports

For more detailed information on concussion and traumatic brain injury, visit:
www.cdc.gov/injury

CONCUSSION

A Must Read for Young Athletes | Let's Take Brain Injuries Out of Play

CONCUSSION FACTS

- A concussion is a brain injury that affects how your brain works.
- A concussion is caused by a blow to the head or body:
  - from contact with another player, hitting a hard surface such as the ground, ice, or court, or
  - being hit by a piece of equipment such as a lacrosse stick, hockey puck, or field hockey ball.
- A concussion can happen even if you haven't been knocked unconscious.
- If you think you have a concussion, you should not return to play on the day of the injury and until a health care professional says you are OK to return to play.

CONCUSSION SYMPTOMS

- Concussion symptoms differ with each person and with each injury, and may not be noticeable for hours or days. Common symptoms include:
  - Headache
  - Confusion
  - Difficulty remembering or paying attention
  - Balance problems or dizziness
  - Feeling sluggish, hazy, foggy, or groggy
  - Feeling irritable, more emotional, or "down"
  - Nausea or vomiting
  - Bothered by light or noise
  - Double or blurry vision
  - Slowed reaction time
  - Sleep problems
  - Loss of consciousness

During recovery, exercising or activities that involve a lot of concentration (such as studying, working on the computer, or playing video games) may cause concussion symptoms to reappear or get worse.

WHY SHOULD I REPORT MY SYMPTOMS?

- Unlike with some other injuries, playing or practicing with concussion symptoms is dangerous and can lead to a longer recovery and a delay in your return to play.
- While your brain is still healing, you are much more likely to have another concussion. Repeat concussions can increase the time it takes for you to recover and the likelihood of long term problems.
- In rare cases, repeat concussions in young athletes can result in brain swelling or permanent damage to your brain. They can even be fatal.

*For more information about concussion and other types of traumatic brain injuries, go to

www.cdc.gov/Concussion

A part of CDC's Heads Up series

What Should I Do if I Think I Have a Concussion?

DON'T HIDE IT, REPORT IT. Ignoring your symptoms and trying to "tough it out" often makes symptoms worse. Tell your coach, parent, and athletic trainer if you think you or one of your teammates may have a concussion. Don't let anyone pressure you into continuing to practice or play with a concussion.

GET CHECKED OUT. Only a health care professional can tell if you have a concussion and when it's OK to return to play. Sports have injury timeouts and player substitutions so that you can get checked out and the team can perform at its best. The sooner you get checked out, the sooner you may be able to safely return to play.

TAKE CARE OF YOUR BRAIN. A concussion can affect your ability to do schoolwork and other activities. Most athletes with a concussion get better and return to sports, but it is important to rest and give your brain time to heal. A repeat concussion that occurs while your brain is still healing can cause long-term problems that may change your life forever.

All concussions are serious. *Don't hide it, report it. Take time to recover.*

It's better to miss one game than the whole season.

USA Football serves as the sport's national governing body on youth and amateur levels. An independent non-profit based in downtown Indianapolis, USA Football leads the game's development, inspires participation and ensures a positive experience for all youth and amateur players. USA Football was endowed by the NFL Youth Football Fund in 2002.

Working in partnership with the Centers for Disease Control and Prevention since 2007 as well as other credentialed medical organizations and doctors regarding player health and safety, USA Football stands among leaders in youth sports concussion education, particularly in youth football. The organization has built the first football-specific online youth football coaching course that includes chapters and comprehension quizzes encompassing concussion education and management, heat and hydration preparedness and equipment fitting guidelines. USA Football's members – youth football coaches, players, league commissioners and game officials – reside in all 50 states.

USA Football partners with collegiate athletic conferences, the NFL and its teams to promote concussion education through its 80-plus annual football training events and national campaigns. Dozens of articles, downloadable online resources and video promoting concussion education and management reside at usafootball.com and are available at no cost. Approximately 1 million visitors reach usafootball.com annually.

What Youth Football Coaches Should Know About Concussions

By Michael D. Goodlett, M.D., Lawrence J. Lemak, M.D.
March 11, 2009, revised December 28, 2009

Recognize the signs and symptoms of a concussion to ensure your players' safety. An easy rule of thumb to follow is when in doubt, sit them out.

WHAT COACHES SHOULD KNOW

Knowing the signs and symptoms of a concussion will help a youth football coach feel more comfortable and be more prepared in case of an emergency.

*A concussion is any change in an athlete's behavior, awareness, and/or physical feelings caused by a direct or indirect blow to the head.

*Any concussion has the potential to be a serious injury.

*Before letting an athlete go back to play, a concussion should be evaluated by a doctor.

*An athlete should never return to play while exhibiting any signs or symptoms of a concussion either at rest or with exertion. When in doubt, sit them out!

*There is an increased risk of suffering subsequent concussions after a first concussion.

*Any head injury associated with loss of consciousness must be treated as a suspected head, neck, or back injury.

*The only instances in which an athlete's helmet and shoulder pads should be removed is when a medical authority believes that it is necessary for the care of the athlete, or if the equipment interferes with the rescuers' ability to provide required CPR.

*If necessary to provide care for life-threatening conditions, it is recommended that the facemask be removed rather than the whole helmet. A tool to remove the facemask should be in the first aid kit.

*For any head injury, activate the Emergency Action Plan and follow the emergency action steps, Check-Call-Care.

When a player is hit, he may receive a blow to the head and become unconscious or demonstrate changes in behavior. If the player regains consciousness, seems to be alert and oriented, and is eager to play, a coach may feel the player is fully recovered and allow him back into the game or practice. However, the player has suffered a concussion. Failure to recognize a concussion can potentially lead to coma and death particularly if a second impact occurs. Coaches need to be aware of the signs of concussions and treat the situation properly.

Concussions are caused by a force being transmitted to the head. The force may be caused by any direct or indirect hit to the head or body and can cause changes in behavior, awareness, or physical feeling in the injured person. Concussions often go unrecognized by coaches because they are underreported by athletes who want to continue competing. Athletes often will minimize or deny symptoms. Maintaining a high level of suspicion and having some knowledge of the individual athlete's personality helps coaches in early detection of the signals of concussion. This awareness can prevent additional concussive injury, potential long-term brain damage, or other possible catastrophic outcomes.

On-The-Field Evaluations
If there is a forceful blow to the head, with or without loss of consciousness, the coach should suspect a head injury and also be concerned that the neck or back has been injured. When caring for the player on the field, tell him not to nod or shake his head during the assessment, but to say yes or no. The player's helmet should also be left in place. The goal is to minimize movement. If the head impact has caused the player to become unconscious or show the signs of concussion listed below, activate the Emergency Action Plan and follow the emergency action steps, **Check-Call-Care**. **Check** the scene for safety and check the ill or injured athlete, **Call** 9-1-1 or the local emergency number when needed, and

Care for the injured player until EMS personnel arrive.

To Care For Serious Injuries To The Head, Neck, And Back
Follow basic precautions to prevent disease transmission.

Minimize movement of the player's head, neck, and back by putting your hands on both sides of the player's helmet or head. Maintain an open airway using a jaw-thrust maneuver. Have the player remain in the position that you found him until EMS personnel arrive and take over.

Monitor the player's airway, breathing, and circulation.

If life-threatening symptoms are present, it is recommended that the facemask of the athlete's helmet be removed, rather than removing the entire helmet. This will allow access to an airway should the athlete stop breathing.

A tool for removing the facemask should be in the team's first aid kit.

The coach should evaluate the symptoms listed below if he suspects a player may have a concussion requiring immediate care.

The only instance in which an athlete's helmet and shoulder pads should be removed is when a medical authority believes that it is necessary for the care of the athlete, or if the equipment interferes with the rescuers' ability to provide CPR.

Symptoms that require immediate activation of the Emergency Action Plan and immediate removal to a medical facility are:

- *Period of unconsciousness;
- *Confusion, disorientation to time and place;
- *Severe headache or vomiting;
- *Appears sleepy, pale, and is sweating;
- *Blurred vision, slurred speech, and muscle weakness;
- *Neck pain.

Checking For Concussion
If the player is removed from the field after receiving a head impact, it is important to continue evaluating the player every five minutes for at least 30 minutes.

Look at the facial expression of the athlete.

- *Does the athlete have a vacant stare or a confused facial expression?

Check the athlete's behavior.

- *Is the athlete easily distracted or slow to answer questions or follow directions?
- *Does the athlete display unusual emotional reactions, such as *crying or laughing?
- *Does the athlete have a headache or complain of nausea?
- *Is the athlete irritable and easily frustrated?
- *Does the athlete appear unusually anxious or depressed?
- *Does the athlete appear sleepy?
- *Does the athlete have significantly decreased playing ability from earlier in the contest?

Check the athlete's orientation and memory.

- *Is the athlete aware of the time of day and date?
- *Is the athlete generally confused? Questions to ask
- *Which quarter or period is it?
- *Where are we? Which field or arena?
- *Which team are we playing?
- *Which side scored the last points?
- *Which team did the athlete play in the last game?
- *Did the athlete's team win or lose in the last game?

Check for posttraumatic amnesia (the athlete's ability to remember events after the injury).

- *Ask the athlete how he got injured?
- *Ask the athlete the first thing he remembers after the injury?
- *Ask the last thing the athlete remembers before the injury?

Medical attention is required if the athlete's expression, behavior, or memory is affected. Attention should be immediate if symptoms show a deteriorating situation. When an athlete has had a concussion, he should not be allowed to return to the current game or practice, and should not be left alone. Medical evaluation following the concussion is required before a return to participation is permitted.

Postconcussion syndrome
After a player is removed from the field, he may develop symptoms of postconcussion syndrome. This can occur immediately after the injury or many hours or days later. Symptoms of postconcussion syndrome include:

- *Blurred vision
- *Fatigue
- *Ringing in the ears
- *Trouble falling asleep
- *Dizziness

- *Sleeping more or less than usual
- *Headache
- *Increased sensitivity to light and noise
- *Nausea and vomiting
- *Feeling more emotional than normal
- *Poor coordination or balance
- *Difficulty concentrating
- *Increased irritability
- *Difficulty remembering
- *Slurred speech
- *Feeling dazed or stunned
- *Seeing stars or flashing lights
- *Having double vision.

A physician may conduct neuropsychological testing or neuroimaging to assess exactly when the athlete has recovered from a concussion. No athlete should go back to play before being free of all symptoms and signs, both at rest and during exertion, and a physician has indicated the player is ready to return to competition.

Concussion Awareness

CDC, NFL unite national governing bodies of sport to teach young athletes about concussions

By Joe Frollo
October 11, 2010, revised October 28, 2010

Free poster available for download and distribution to all youth leagues

The Centers for Disease Control and Prevention (CDC), the NFL and 14 national governing bodies of sport, including USA Football, are promoting a free poster designed to increase concussion awareness among young athletes, parents and coaches.

Players, coaches and parents can better recognize concussion symptoms thanks to a poster being distributed by the Centers for Disease Control and Prevention, NFL, USA Football and other national governing bodies of sport.

The poster, created by the NFL's Head, Neck and Spine Medical Committee, the CDC and the NFL Players Association, is similar to the one displayed in NFL locker rooms but geared toward a younger audience. It stresses the importance of recognizing a concussion, taking time to recover and not returning to play too soon. By walking through the steps to recognize if the athlete - or a teammate - has suffered a concussion, the goal is increased concussion awareness in all sports.

"The NFL understands its obligation to educate and inform parents, teachers, coaches and especially young athletes about the risks of concussions," NFL Commissioner Roger Goodell said. "This poster is one element of the NFL's program to assist in the development and broad dissemination of reliable medical information on concussions, which will give players, parents, coaches and others the information they need."

The poster is available online for download and order at no cost at CDC's website or by calling (800) CDC-INFO. Information on recognizing and reacting to concussions also can be found at usafootball.com and through USA Football's Put Pride Aside For Player Safety program as well as through the following national governing bodies:

USA Football's Certified Coaching Education Program, employed by youth football coaches in all 50 states, includes chapters on concussion awareness and management as well as hydration and proper equipment fitting. Health and safety videos also are available at USA Football's Health and Safety page.

"Having more than one dozen different sports be part of this initiative underscores the point that coaches, athletes and parents across all youth athletics need to be informed about this issue," USA Football Executive Director ScottHallenbeck said.

"USA Football has worked with the CDC on concussion education since 2007, and we will continue to emphasize it while teaching coaches and players proper football fundamentals for fun and safe play."

Concussion Awareness

Redskins and USA Football Welcome High School Coaches for Concussion Education

By Steve Alic
April 23, 2010, revised April 29, 2010

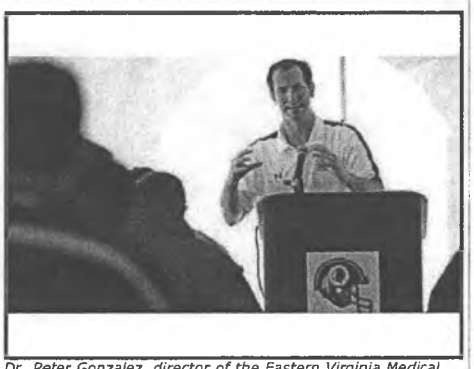
The Washington Redskins and USA Football partnered for the Redskins' inaugural Concussion Awareness and Education Forum on April 17 at Redskins Park.

Redskins Park has a history of preparing football teams for success.

Successful preparation at the football training facility earned a new and vital definition on April 17 when the Washington Redskins and USA Football partnered for the Redskins' inaugural Concussion Awareness and Education Forum for Maryland, Virginia and Washington, D.C. high school head football coaches.

Nearly 200 high school coaches traveled to Redskins Park as guests of the team to watch minicamp practice and participate in a 90-minute concussion education seminar led by USA Football's Peter Gonzalez, M.D.

Dr. Gonzalez is the director of the Eastern Virginia Medical School Sports Concussion Program in Norfolk, Va.



Dr. Peter Gonzalez, director of the Eastern Virginia Medical School Sports Concussion Program, spoke on behalf of USA Football regarding concussion awareness and management to 170 high school head football coaches at Redskins Park. The session was part of a full-day minicamp invitation that the Washington Redskins extended to high school coaches throughout Maryland, Virginia and Washington, D.C. (Photo courtesy of Ned Dishman/Washington Redskins)

Redskins General Manager Bruce Allen opened the day by welcoming the coaches and introduced Dr. Gonzalez. Each coach received a USA Football/CDC concussion awareness clipboard sticker listing concussion signs, symptoms and an action plan. This same material is given to thousands of coaches who attend USA Football's full-day coaching schools across the country. Concussion-related information is available at no cost throughout usafootball.com.

"The coaches asked good questions," Dr. Gonzalez said after the presentation. "The Redskins are to be commended - this was a great discussion and also was the largest group of high school coaches I've spoken to at any one time."

"I came to learn all I can," said Jason Meade, head football coach of Lee-Davis High School in Mechanicsville, Va., a two-hour drive from Redskins Park. Coach Meade enters his eighth season as head coach this fall. "Learning more when it comes to putting our players in a better, safer situation is important to us."

"We can't allow high school athletes who suffer concussions to return to play too soon," Dr. Gonzalez added. "If there's one thing a coach takes away from our session today, it's not allowing an athlete to return to play while still possessing the symptoms of a concussion.

"And if we even suspect someone to have suffered a concussion, there is no same-day return to play."

Concussion awareness and management is an important part of USA Football's online coaching education courses and its 80-plus training events held across the country for players, coaches and youth league commissioners.

USA Football is the official youth football development partner of the NFL, its 32 teams and the NFL Players Association. More than 60 of USA Football's events in 2010 are conducted in partnership with NFL clubs.

NATIONAL FOOTBALL LEAGUE AND THE NATIONAL ATHLETIC TRAINERS' ASSOCIATION TEAM TO PASS STATE LAWS TO PROTECT YOUTH ATHLETES FROM THE RISKS OF CONCUSSIONS

Washington, D.C., December 7, 2010 – The National Football League and the National Athletic Trainers' Association today announced a joint effort to promote legislation to raise awareness and protect youth athletes from the risks of concussions. The new partnership was announced during the Youth Sports Safety Summit in the nation's capital.

"We are pleased to team with the National Athletic Trainers' Association on a state-based legislative effort to protect youth athletes," said Jeff Miller, the NFL's vice president of government relations. "We will advance a simple, but significant shared goal -- to help prevent concussions and make sports and recreational activities safer for young athletes around the country."

The NFL and NATA have agreed to work together to pass concussion awareness and prevention laws in every state throughout the country. The league and the association will promote laws modeled on the Zackery Lystedt law in Washington State, which contains three key elements: (1) concussion education for young athletes, parents and coaches on an annual basis; (2) immediate removal of a student athlete who appears to have suffered a concussion from play or practice; and (3) mandatory clearance of that student by a health care professional who is trained in the evaluation and management of concussions before returning to play or practice.

Marjorie J. Albohm, MS, ATC, president of the National Athletic Trainers' Association added, "We know from recent cases and studies that far too many youth athletes are either playing with undiagnosed symptoms of concussions or returning to play before fully recovering from them. That's why our organization of trained health care professionals supports legislation in every state that will help coaches, youth athletes, their parents and school officials to recognize and respond appropriately to concussions. Doing so will help prevent injury, chronic impairment and even death."

-more-

The NFL and NATA also have pledged to encourage and enlist the participation of other stakeholders and advocates. Organizations already supporting the adoption of such laws include USA Football, the American College of Sports Medicine and the Brain Injury Association of Washington. To date, nine states have enacted adequate concussion awareness and prevention laws including Washington, Oregon, New Mexico, Virginia, Rhode Island, Massachusetts, Oklahoma, Connecticut and New Jersey.

National Athletic Trainers' Association (NATA) – Health Care for Life & Sport

Athletic trainers are health care professionals who specialize in the prevention, diagnosis, treatment and rehabilitation of injuries and sport-related illnesses. They prevent and treat chronic musculoskeletal injuries from sports, physical and occupational activity, and provide immediate care for acute injuries. Athletic trainers offer a continuum of care that is unparalleled in health care. The National Athletic Trainers' Association represents and supports 32,000 members of the athletic training profession. Visit www.nata.org

Headbanger Nation

By Jeffrey Kluger

I didn't get a good look at the little boy who injured my daughter in the science museum in Mexico City. He seemed to be about 7, my daughter Elisa was not yet 3, and the two of them were part of a scrum of kids playing on an indoor patio. At precisely the wrong moment, she turned left, he turned right, and they collided. Physics being physics, the smaller mass yielded to the larger one, and my daughter fell down. She landed first on her bottom, then tipped backward and hit her head on the floor.

The sound was one that parents dread: the singular clunk of skull striking cement. I winced, Elisa wailed, and I gathered her up. Soon she stopped crying and went off to play, but even as she did, a dangerous process had begun to unfold inside her skull. (Read Dr. Mehmet Oz's column about concussions.)

When Elisa's head hit the floor, the deceleration was sudden, but — physics again — her brain stayed in motion for an instant, moving through the small intracranial space until it collided with the back of the inside of her skull. Concussive energy radiated through the tissue. As it did, channels in the neurons opened wide, allowing calcium ions to flow into the cells, depressing their ability to metabolize energy. Brain tissue began swelling, but with nowhere to go, it squeezed up against the skull wall. Shearing forces tore axons connecting the cells, damaging their myelin sheathing, which can disrupt nerve signals. All of that was the best-case scenario. The worst case was a brain bleed, which could be fatal without immediate surgery.

Within 20 minutes, Elisa grew withdrawn. An hour later, back in our hotel, she vomited and then began thrashing convulsively. We rushed her to a hospital, where doctors struggled to get a line into one of the tiny veins in her arm, shouting at her to stay awake.

"Open your eyes!" I shouted at her in English. "*Abre tus ojitos!*" my wife echoed. Elisa understood both languages; she answered in neither.

Finally, the doctors got her into a CT scanner, then administered an EEG. There was no bleeding, but there was swelling. Elisa spent three days in the hospital taking antiseizure and antiswelling medication and finally was released. On the flight home, she was a terror — but only in the way a toddler is supposed to be. (See a graphic on the physics behind concussions.)

For us, that was a first-time — and, we dearly hoped, last-time — experience, but we're hardly alone in having gone through it. In the U.S., concussions are an alarmingly commonplace injury, particularly among kids and most particularly among active, athletic ones. Up to 3.8 million Americans are getting concussed per year, according to the Centers for Disease Control and Prevention, and even that big a figure is a moving target. In 2005, the number of children who visited emergency rooms for treatment of concussions was more than twice what it had been in 1997, according to a new study in the journal *Pediatrics*. High school football players alone sustain 100,000 full-blown, diagnosed concussions per year. Flying under the radar are injuries mild enough to get passed off by coaches as a mere ding or ignored by players anxious to get back on the field.

According to a study by neuroscientist Kevin Guskiewicz of the University of North Carolina, the average college football player sustains a breathtaking 950 to 1,100 subconcussive blows per season — hits that are enough to do cumulative damage to young brain tissue but not enough to cause immediate symptoms. "There's what we call a dose response," Guskiewicz says. "After a certain number of hits, the damage starts to show."

But while football is responsible for more than half the concussions kids suffer playing team sports, there's a lot more blame to go around. The success of Title IX, which forbids gender discrimination in scholastic athletics, has led to a 900% increase in girls' sports teams since the law's passage in 1972. But guaranteeing girls equal access to sports also guarantees them equal access to injuries. Girls' soccer accounts for nearly 12% of total team-sports concussions, compared with just 6.6% for boys' soccer. Girls' basketball causes 7%. Even volleyball weighs in at 1.1%. (See a special report on women and health.)

What's more, a third of all concussions among kids are caused by nonteam activities such as ice skating, bicycling and playground recreation. Gaining fast too are newer head-cracking activities like snowboarding and extreme skateboarding. Kids may be the first group to fall in love with such sports, but they're the last group — neurologically speaking — that should engage in them.

"The immature brain is still developing," says Julian Bailes, a neurologist at West Virginia University and the medical director for the Pop Warner Youth Football program. "That makes it more susceptible to damage and more likely to suffer repetitive injury." How this shapes overall development is unknown. A child's brain is like a ship en route to somewhere: a concussion can blow it off course.

The severity of the damage — both acute and chronic — is what researchers are now trying to understand and what legislators and the sports-equipment industry are trying to control. Even as scientists look deeper into the physics, neurochemistry and genetics of brain injury, lawmakers are imposing new rules governing how kids should be assessed for concussions and when they should and should not be eligible to play. Equipment manufacturers, particularly those who make football helmets, are being pushed to redesign their product lines and reform the testing standards that essentially allow the industry to police itself. Pro teams too are feeling the heat for selling an elbow-throwing, stick-swinging, head-butting ethos that may be

fine for millionaire athletes who know what they're getting into but is hurting, and in some cases killing, the kids who emulate them.

"I keep telling kids, Your brain is not your knee. It's not your shoulder. It's your future," says neuropsychologist Gerard Gioia, chief of pediatric neuropsychology at Children's National Medical Center in Washington. "We have to protect it better than we are." (See TIME's special report "How to Live 100 Years.")

The Science of a Hit

If it's football that receives most of the attention in conversations about concussions, it's partly because the hits inflicted in the game can be so shocking. In soccer, basketball or even hockey, violence is typically a by-product of aggressive play. In football, it is the play. Guskiewicz conducts his studies by placing accelerometers in players' helmets and recording not just how often they get hit but also how hard. The unit of measure he uses is g-force. Liftoff of a Saturn V moon rocket exposed its crew to a maximum of four g's. A roller coaster may exceed six g's. College football players, by contrast, collide with each other with an impact of nearly 23 g's — and that's the average. Higher-end blows range from 85 to 100 g's. "The highest we ever recorded was 180 g's," says Guskiewicz.

Worse, it's not necessary to be hit in the head for that kind of impact to do concussive damage. A player struck in the chest can suffer whiplash just like a passenger in a car accident, and when the head snaps back and forth, the brain sloshes around with it. "One sign," says Gioia, "is when a player complains of neck pain. That's often an indicator that the head has moved around hard."

Many of those blows don't necessarily lead to a concussion, and in a way, that's unfortunate. Only about 10% of concussions lead to loss of consciousness, but the other signs are hard to miss, including headache, vomiting, dizziness, balance problems, sensitivity to light or noise, confusion, irritability and amnesia. A player with any of those symptoms is likely to be sent to the bench — at least for a while. A player whose brain has been jolted at a subconcussive level is much likelier to stay on the field and return there week after week with no recuperation time. The damage that does can be deadly. (Read Dr. Mehmet Oz's column about concussions.)

In April 2010, University of Pennsylvania football star Owen Thomas committed suicide in his off-campus apartment, having never before exhibited any sign of mental illness. When researchers at Boston University examined his brain, they found it flecked with what are called tau proteins, telltale signs of a condition known as chronic traumatic encephalopathy (CTE), which is often seen among dementia patients and NFL players with a lifetime of concussions behind them. Thomas had never sustained a concussion, but that might not have mattered.

"He'd been playing since he was 9," says neuropsychologist Robert Stern, part of the team that conducted the analysis. "That suggests he had a great deal of exposure to repeated subconcussive blows."

The link between tau and brain damage is straightforward. The protein is one of the major structural materials of nerve tissues. When the brain is shaken too hard, nerve fibers are torn and the tau is released. The brain tries to clean up the mess, and given enough time, it could. If the hits keep coming, however, the proteins just accumulate. "I describe [the tau deposits] as a form of sludge," says Bailes.

It's not unusual for players like Thomas suffering from CTE to die in violent or otherwise dramatic ways. Bailes was part of a team that found tau protein in the brain of Chris Henry, a player for the Cincinnati Bengals who was killed in 2009 when he got into an argument with his fiancée and jumped on the back of her pickup truck as she drove away — taking a fatal tumble onto the road. In 2007 wrestler Chris Benoit murdered his wife and son and then hanged himself. In 2004 former Pittsburgh Steeler Justin Strzelczyk, who suffered from hallucinations, died when he drove his car into a tractor trailer while fleeing police. Both Benoit and Strzelczyk had CTE. "This disease starts young and progresses through life," says Stern.

Until recently, doctors didn't know just how young, but they're getting an idea. Michael (not his real name) is a ninth-grade football player visiting an outpatient concussion clinic Gioia runs in Rockville, Md. Michael got clobbered in a game in mid-September, suffered many of the immediate concussion symptoms and four months later is still not well. Recovery time varies for all patients, though three months is a good benchmark; four months suggests trouble. Michael's sleep remains disturbed, his temper remains erratic, and his school performance has cratered. An honor-roll student in eighth grade, he has gotten mostly D's and F's this year. "The change," says his mother, "it's shocking."

It's not possible to diagnose anything like CTE from just those symptoms, particularly because Michael's recent academic problems began before his concussion. But he already had a history of what he calls stingers, or head blows — none of which kept him off the field. What's more, his coach allowed him to return to play only a month or so after his recent concussion, a game in which he took another blow to the head, then lost his temper and got ejected.

Michael is hardly the only student athlete playing roulette with his brain, and his coach is hardly alone in abetting such recklessness. One study has shown that up to 40% of players who experience a concussion are back on the field before their brains have fully healed. That, Gioia says, is especially worrisome since sometimes two mild injuries can do more damage than one severe one. In some cases — mercifully rare — players who return to the field before they're fully recovered may even suffer what is known as malignant brain edema, or second-impact syndrome, in which another blow to the head leads to a fatal brain bleed. About half a dozen kids per year die from second impact. (Read Dr. Mehmet Oz's column about concussions.)

It's easy enough to make the case that any person who has suffered a brain injury needs a long period of recuperation before returning to vigorous physical activity. But what about vigorous intellectual activity? The brain is a cognitive machine, and it requires an enormous amount of energy to keep its gears moving. That's a fact concussed kids often confront when they resume their classwork after an injury and find that their symptoms return the moment they crack a book. "Cognitive exertion requires a high degree of

metabolic activity," says Gioia. "If you have a brain that's already impaired, that ability is going to be reduced."

Mary, a high school junior and another patient at Gioia's clinic, has suffered three concussions over the past three years as a goalie for her soccer team. Surprisingly, it is not heading the ball that leads to most concussions in soccer — though the limited studies that have been done have looked only at young adults, and none have explored subconcussive injury. Rather, the damage is done mostly by collisions with other players or, as in Mary's case, with equipment. Her third concussion came last November, when she hit her head against the frame of the goal. She remains an honors student in the International Baccalaureate program in her high school, but the struggle to keep up that level of academic excellence has been grueling.

"I didn't have any exams until two months after the injury," she says. "But when I did, the headaches and fatigue came back immediately. I lost focus during one test and had no idea what I'd just written." She got through all the same and has gone back to school full time, but every day is a battle with pain, exhaustion and sensitivity to noise and light. She has also accepted that soccer — which was a passion — is just not an option anymore. "I can't afford another concussion," she says. (See a graphic on the physics behind concussions.)

Digging Deep

The fact that no two concussions follow the same recovery arc is one of the things that makes them so challenging to diagnose and treat. But that same particularity of injury also provides scientists insights into which people are at the greatest concussive risk.

Gender, for one thing, seems to play a role. Mary may be recovering faster from her injury than Michael is, but on the whole, females are both more susceptible to concussions than males are and suffer more-severe symptoms. So far, the reason for that gap is unclear. There is some thought that a girl's comparatively weaker neck muscles may leave her head more susceptible to violent shock. Hormones too may play a role. Among epileptic girls and women, rising and falling estrogen levels are known to make the brain more or less vulnerable to seizures. The thinking is that this may apply to concussion symptoms as well — though it's unclear whether a girl's hormonal makeup leaves her more concussion-prone throughout the month or just during menstruation. (See a special report on women and health.)

Genes may also be involved. The fact is, plenty of athletes make it through their careers battered and scarred but cerebrally intact, while others who may not get hit with any greater frequency suffer all manner of brain damage. Researchers at the Children's National Medical Center are studying the genomes of both concussed and nonconcussed kids, looking for markers that may explain the difference.

"There could be a genetic predisposition that affects metabolic activity," says geneticist Susan Knoblach. "People always assume that there's a genetic component in degenerative conditions but not acute ones, but of course there can be."

Maryland's Fairfax County has instituted a program in which student athletes spit into cups so their genetic profiles can be taken. The genomes of the ones who come down with concussions can then be compared for key similarities. Early attention is focusing on a gene that codes for a protein called ApoE, which has been implicated in Alzheimer's disease. In the long run, teasing out concussion genes could lead to better drugs or gene therapy to treat or prevent the injury. In the short run, it could help parents and coaches determine in advance which sports kids are best suited to play. Says Gioia: "We may actually find out, 'You know what? You're not set up to be a football player. You might be a better tennis player.'"

Newer brain-scanning technology is also making a difference, helping doctors diagnose concussions and track recovery. The microscopic size of tau proteins and nerve fibers makes them impossible to see without a postmortem exam, but three noninvasive techniques can help sidestep that problem. Magnetic resonance spectroscopy measures not direct damage to the brain but its metabolic activity — a good way to evaluate the very system that breaks down first when a brain is concussed. Diffusion tensor imaging can observe transmission along nerve-fiber tracks, providing a sense of the integrity of the neural wiring. And resting fMRI allows physicians to watch the brain when it's not performing a task, providing a look at basic function. (See TIME's special report "How to Live 100 Years.")

Changing the Rules

Smart medicine, of course, can do only so much to reverse the number of concussions. Smart policy must do the rest. To keep kids from hurting themselves — and to prevent coaches from enabling them — 10 states, including New Jersey, Oregon, Virginia and football-mad Oklahoma, have passed return-to-play laws requiring kids who have sustained even a suspected concussion in any sport to be pulled from play and not returned until a doctor or certified athletic trainer declares them fit. A handful of other states are considering similar legislation, and last year two separate bills along the same lines were introduced in the House of Representatives. Both will have to be resubmitted under the new GOP majority. Still, the national trend is clear: "When in doubt, sit them out" is how the advocates put it.

Most major professional sports leagues in the U.S., as well as most large universities and 4,000 high schools, now also use a computer program known as ImPACT (for Immediate Post-Concussion Assessment and Cognitive Testing) that measures such basic skills as memory, word recognition and pattern recognition. Players are required to take a baseline test at the beginning of the season and are periodically retested, especially postconcussion, to determine if there's been any erosion of skills. "I used to sit across from athletes doing paper-and-pencil memory tests," says ImPACT developer Mark Lovell, a neuropsychologist at the University of Pittsburgh Medical Center. "That would never work with large groups of kids. There aren't that many neuropsychologists alive."

Reform is also coming — slowly — to the major manufacturers of football helmets, driven mostly by the NFL, which has imposed much stricter concussion and tackling rules in the past season. The NFL is anxious both to protect its players and to shake its image as a weekly tutorial for student athletes learning all the wrong safety lessons from pros who should know better. Currently, the group that certifies helmets is the National Operating Committee on Standards for Athletic Equipment (NOCSAE), which sounds

reassuringly official except for the fact that it's essentially funded by the manufacturers themselves. NOCSAE has come under fire not only for this seeming conflict of interest but also for what critics consider unreliable testing. The larger problem, though, is that the standard football helmet was designed to prevent only lacerations and fractures — a job it does very well — and to do little or nothing to prevent concussions. "The science just isn't there today," says Dr. Robert Cantu, a neurosurgeon at Boston University and a member of NOCSAE's board. (See a graphic on the physics behind concussions.)

That's not NOCSAE's or the NFL's fault, but they're trying to do something about it. In December the league and the helmet manufacturers convened a sort of head-injury summit in New York — a gathering that also included officials from NASCAR and the military — to consider helmet modifications that could reduce the concussive carnage. For football, those modifications could include better padding, stronger chin straps and redesigned face masks that distribute shock differently. Kids' helmets must also be more than simply smaller versions of those used by adults. The padding inside all helmets is designed to compress at the forces generated by colliding adult bodies. With the smaller forces kids produce, the padding stays rigid, essentially becoming one more hard surface for the head to strike. Innovations introduced in football could ripple out to other sports' playing fields, to say nothing of battlefields.

Athletics will never be stripped of all danger, and terrible as the blown knee or wrecked elbow may be, there is always an assumption of those risks when you elect to play the game. But the brain is more than a joint or a limb. It's the seat of the self. We overlook that fact at our peril and — much worse — at our children's.

BOSTON UNIVERSITY AND DEPARTMENT OF VETERANS AFFAIRS RESEARCHERS DISCOVER BRAIN TRAUMA IN SPORTS MAY CAUSE A NEW DISEASE THAT MIMICS ALS

Two former NFL players died after being diagnosed with Lou Gehrig's Disease; New findings suggest they had a new disease associated with repetitive brain trauma

(BOSTON) – The Center for the Study of Traumatic Encephalopathy (CSTE) at Boston University School of Medicine (BUSM) and Department of Veterans Affairs (VA) announced today that they have provided the first pathological evidence that repetitive head trauma experienced in collision sports is associated with motor neuron disease, a neurological condition that affects voluntary muscle movements. The most common form of motor neuron disease is amyotrophic lateral sclerosis (ALS) or Lou Gehrig's disease. The findings will be published in the September issue of the *Journal of Neuropathology and Experimental Neurology* (**http://journals.lww.com/jneuropath**).

The finding was discovered by Ann McKee, MD, and colleagues at the CSTE. McKee, a CSTE Co-Director, is an associate professor of neurology and pathology at BUSM, as well as Director of Neuropathology for the Department of Veterans Affairs at the Bedford VA Medical Center, where this research was conducted.

McKee and the CSTE researchers made this groundbreaking pathological discovery while examining the brains and spinal cords of 12 athletes donated by family members to the CSTE Brain Bank at the Bedford VA Medical Center. Three of these 12 athletes, including former professional football players Wally Hilgenberg and Eric Scoggins, as well as an unidentified former military veteran and professional boxer, developed motor neuron disease late in their lives. The former football players were diagnosed clinically with ALS, which is a progressive neurodegenerative disease that attacks motor nerve cells in the brain and spinal cord, resulting in muscle weakness and atrophy. ALS affects fewer than two in 100,000 patients annually, and 30,000 Americans currently live with the disease. The majority of ALS cases (90-95 percent) are considered "sporadic," meaning of unknown cause, although it has long been suspected to involve a complex interaction between multiple genetic and environmental risk factors.

In this study, funded in part by an unrestricted gift from the National Football League (NFL) to the CSTE, McKee found that when they died, all 12 athletes showed neuropathological evidence of chronic traumatic encephalopathy (CTE), a progressive degenerative brain disease characterized by deposits of an abnormal form of *tau* protein and believed to be caused by repetitive head trauma. In the three athletes with motor neuron disease, abnormal *tau* protein deposits were not only found throughout the brain, but also in the spinal cord.

CSTE researchers also discovered that 10 of 12 CTE victims had a second abnormal protein, TDP-43, in their brains. Of those 10, only three had TDP-43 in the brain *and* the spinal cord, and those were the three athletes diagnosed with motor neuron disease. TDP-43 is also found in individuals with sporadic ALS although in the athletes with repetitive brain trauma, the TDP-43 pathology was more severe than found in sporadic ALS and was accompanied by extensive *tau* pathology. The brains and spinal cords of normal individuals show no TDP-43 or *tau* deposition.

These new findings suggest that the motor neuron disease that affected the three athletes is similar to, but distinct from sporadic ALS and represents a disease never described previously in the medical literature. This new disease, referred to as chronic traumatic encephalomyopathy (CTEM) by McKee and colleagues is likely caused by the repetitive head trauma experienced by athletes in contact sports.

The association between head trauma and ALS is supported by the medical literature, in which the risk of ALS has been reported to be higher among contact sport athletes and veterans. A study of professional soccer players in Italy found that the incidence rate of ALS was 6.5 times higher than in the general population. An increased incidence of ALS has also been reported in American football players, including three players from the 1964 San Francisco 49ers who died from ALS. Based on the number of retired NFL players with ALS, it is estimated that the risk is at least 8 times higher than in the adult male population. Among Veterans with a history of head injuries, their risk of ALS was 2.3 times higher than normal, and Gulf War Veterans have a twofold increased risk. In fact, since 2008, the US Department of Veterans Affairs has considered ALS as a presumptively compensable illness for all veterans. The discovery of this new ALS-like disease by the BU CSTE investigators suggests that one possible reason for the increased risk of clinically diagnosed ALS in veterans and in contact sport athletes may be the exposure to repetitive head trauma, including concussions, subconcussive blows and blast injuries.

These findings raise the question of whether head injuries may have contributed to Lou Gehrig's motor neuron disease, and whether he also suffered from CTEM. Gehrig, nicknamed the "Iron Horse," played football at Columbia University before becoming a legendary member of the New York Yankees and playing in 2,036 consecutive games, a record that stood for more than 60 years. Gehrig suffered at least five documented concussions and was reported to have been knocked unconscious for five minutes after taking a pitch to the head while not wearing a helmet. He played the next day.

"When we read reports about cases of the disease being linked to specific activities or experiences, such as the increased risk associated with military service, or this one regarding professional athletes, we are reminded of just how complex of a disorder ALS is. We're hopeful that this new work may shed light on potentially exciting new possibilities for biomarker and therapy development," said Steve Perrin, PhD, CEO and Chief Scientific Officer of the ALS Therapy Development Institute.

Responding to these new findings, Hunt Batjer, MD and Richard Ellenbogen, MD, the co-chairmen of the NFL's new Head, Neck and Spine Committee, stated, "We are pleased that the NFL has provided the support necessary for this research and look forward to continued discussion of the findings within our medical committee and with other researchers to better understand their clinical implications."

McKee now has analyzed the brains of more than 35 athletes and found evidence of CTE in 12 of 13 former NFL players. These brains were acquired primarily through the efforts of CSTE co-director Chris Nowinski who is also president of the non-profit Sports Legacy Institute. The CSTE maintains a registry of more than 350 living athletes who have agreed to donate their brain and spinal cord following death and to undergo telephone-based interviews and assessments during life. Robert Stern, PhD, CSTE co-director and an associate professor of neurology at BUSM, oversees the CSTE registry as well as a study about to begin of retired NFL players who undergo extensive neurological, cognitive, psychiatric, cerebrospinal fluid and neuroimaging studies. Robert Cantu, MD, a clinical professor of neurosurgery at BUSM and co-director of the CSTE, was recently appointed senior advisor to the NFL Head, Neck and Spine Committee.

COORDINATES WOULD BE PLACED HERE

****

Wally Hilgenberg died in 2008 at the age of 66 after a three-year battle with ALS. After graduating from the University of Iowa, Mr. Hilgenberg played 12 seasons with the Minnesota Vikings and three with the Detroit Lions as a linebacker.

Eric Scoggins died in 2009 at the age of 49 after a two-year battle with ALS. After graduating from the University of Southern California, he played one season for the San Francisco 49ers before playing two seasons in the United States Football League, for the Los Angeles Express and the Houston Gamblers.

Early symptoms of ALS often include increasing muscle weakness, especially involving the arms and legs, and progressive problems with speech, swallowing and breathing. Because voluntary muscle action is progressively affected, patients in the later stages of the disease may become totally paralyzed. In nearly all cases, ALS is fatal.

The CSTE (**www.bu.edu/cste/**) was founded in 2008 and is the leading center in the world studying the long-term effects of repetitive brain trauma in sports and the military. The CSTE was created as a collaboration between Boston University (BU), Sports Legacy Institute (SLI) and the Department of Veterans Affairs. Co-directors of the BU CSTE include Robert Cantu, MD, a clinical professor of neurosurgery at BUSM, Ann McKee, MD, an associate professor of neurology and pathology at BUSM, Chris Nowinski, and Robert Stern, PhD, an associate professor of neurology at BUSM. The mission of the CSTE is to conduct state-of-the-art research of CTE, including its neuropathology and pathogenesis, the clinical presentation, biomarkers, and course, the genetics and other risk factors for CTE, and ways of preventing and treating this cause of dementia. Brain trauma is increasingly seen as a public health crisis due to the discovery of CTE in a number of recently deceased athletes, most of whom have been studied at the CSTE. McKee also identified CTE in the only former NHL player examined, Reggie Fleming. The CSTE's groundbreaking research created a dramatic change in the understanding of and response to brain trauma and concussions in all sports, especially football. The BU CSTE has received grants from the National Institute on Aging and the National Operating Committee on Standards in Athletic Equipment (NOCSAE), and has received an unrestricted gift from the NFL.

CTE, originally referred to as "dementia pugilistica" because it was believed to only affect boxers, is a progressive brain disease believed to be caused by repetitive trauma to the brain, including concussions and subconcussive blows. It is characterized by deposits of an abnormal protein called *tau* in the form of neurofibrillary tangles, glial tangles, and neuropil threads throughout the brain, and, in some cases, the presence of another abnormal protein – associated with motor neuron disease – known as TDP-43. These abnormal proteins are associated with the impaired functioning and eventual death of brain cells. Early on, CTE sufferers may display symptoms such as memory impairment, emotional instability, erratic behavior, depression and problems with impulse control. CTE may eventually progress to full-blown dementia. Although similar to Alzheimer's disease, CTE is pathologically distinct, and it is the only known preventable cause of dementia.

CSTE co-directors Cantu, McKee and Nowinski serve on the NFL Players Association Mackey/White Traumatic Brain Injury Committee, which includes, and is chaired by, CSTE registry member Sean Morey. In addition, Cantu serves as a senior advisor to the newly created NFL Head, Neck and Spine Committee.

Sports Legacy Institute is a 501(c)(3) nonprofit corporation founded in 2007 to solve the sports concussion crisis. SLI is dedicated to education, prevention, treatment and research on the effects of concussions and other brain injuries in athletes and the military. SLI partnered with Boston University School of Medicine to form the Center for the Study of Traumatic Encephalopathy in 2008.

BRAIN INJURY ASSOCIATION OF WASHINGTON

Journey Toward Understanding: Concussion & Mild Brain Injury

Introduction

Three little monkeys jumping on the bed.
One fell off and bumped his head.
Took him to the doctor and the doctor said,
"That's what you get for jumping on the bed!"

This nursery rhyme tells a story about concussion--the bumps, bangs and shakings to the brain that many adults and children experience. Unfortunately, just like the monkeys jumping on the bed, professionals may not understand concussion well enough to offer support and to help individuals who sustain concussions. People with concussions may just try and "shake it off" and, thus, not be evaluated and treated properly by professionals. It is not uncommon for individuals to be sent home from emergency rooms (ERs) with no follow-up care or to end up with long-term problems that no one understands. This paper will define concussion, present the common symptoms of concussions and discuss ways to help people who sustain concussions.

Each year, it is estimated that approximately 1.5 million people experience concussions. Vehicular crashes (cars, motorcycles, bicycles), sports/recreational activities (football, hockey, playgrounds), abuse/assault (shaken baby syndrome, beatings), falls (young children and the elderly) and other events all have been implicated. It is easy to see that almost any activity can put a person at risk for a concussion. It is a little surprising that people do so well avoiding concussions and equally not surprising that many of us have had concussions.

It is important to note that concussions clearly are associated with lifestyle and parallel other similar lifestyle injuries. If you are involved actively in sports that put your body at risk for muscle pulls, strains, sprains and broken bones, then your chances of a concussion also are great. The Centers for Disease Control and Prevention (CDC) estimates 300,000 sports-related concussions in the United States each year. The more risk to your body, the more risk of serious harm and permanent damage, and the greater the chances that a concussion or more permanent brain injury can occur.

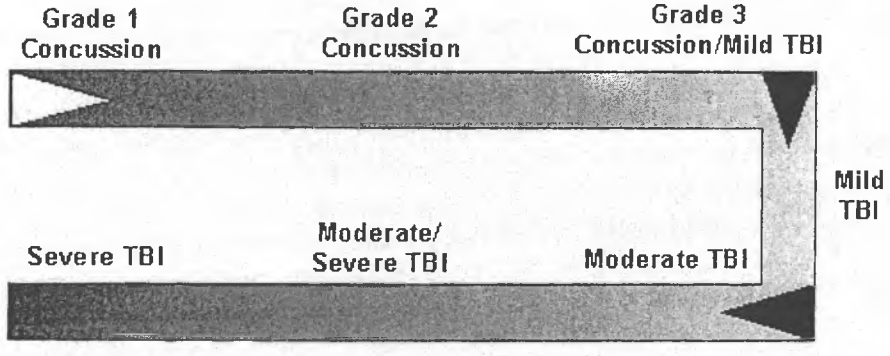
If your job involves heavy labor in farm or construction settings, your chances of physical injury increase and the chances of a concussion increases as well. The use of substances, such as alcohol, that alter your judgment and coordination about everyday activities, like driving or even walking, put you at risk for physical injury and, therefore, at similar risk for a concussion or more serious brain injury. Children--especially younger children--are susceptible to sustaining concussions from falls, play activities and abuse. Lastly, older individuals with balance problems may be prone to falls that can result in not only broken hips, but concussions as well.

What is Concussion?

It is important to understand that a concussion is a physical injury to the brain that causes a disruption of normal functioning just like any other physical injury disrupts your normal functioning. For example, some ankle injuries (i.e., sprains and fractures) are more disruptive

than others, just as some brain injuries are more disruptive than others. The better we understand any injury, the better our chances are for a speedier and healthier recovery.

There is some confusion as to the definition of a concussion and the definition of a mild traumatic brain injury (MTBI). Brain injury can be viewed along a continuum that incorporates concussion, mild brain injury, moderate brain injury and severe brain injury. Each type of brain injury varies depending upon: 1) whether the person was unconscious, 2) how long he/she was unconscious, 3) the length of their amnesia, 4) the resulting cognitive, behavioral and physical problems and 5) the recovery. Viewed as a continuum, the severity of brain injuries can be represented as follows:



As one can see, the definition for a Grade 3 concussion and a MTBI tend to overlap on this continuum.

To further clarify, a concussion is defined as a trauma (i.e., a blow to the head or a serious whiplash) that induces an alteration in mental status (physical or cognitive abilities) that may or may not involve a loss of consciousness.
Concussion as detailed by guidelines developed by the American Academy of Neurology (AAN) and the Brain Injury Association (BIA), commonly is divided into three different types.

Grade 1 Concussion

- Person is confused but remains conscious.
- SIGNS: Temporarily confused, dazed, unable to think clearly, has trouble following directions
- TIME: Symptoms clear within 15 minutes

Grade 2 Concussion

- Person remains conscious, but develops amnesia .
- SIGNS: Similar to Grade 1
- TIME: Symptoms last more than 15 minutes

Grade 3 Concussion

- Person loses consciousness
- SIGNS: Noticeable disruption of brain function exhibited in physical, cognitive and behavioral ways.
- TIME: Unconsciousness for seconds or minutes

It is important to note that a person can sustain a concussion (Grades 1 & 2) without losing consciousness. A Grade 3 concussion involves the loss of consciousness, even if only briefly. As defined by the American Congress of Rehabilitation Medicine, MTBI is a traumatically induced physiological disruption of brain function as manifested by some or all of the following:

- Any period of loss of consciousness
- Any loss of memory for events immediately before or after the incident
- Any alteration in mental state at the time of incident
- Focal neurological deficits that may or may not be transient but does not exceed:
  1. Loss of consciousness of approximately 30 minutes or less
  2. An initial Glasgow Coma Scale score of 13-15 after 30 minutes
  3. Post-traumatic amnesia (PTA) of no more than 24 hours

If concussion and MTBI are seen as part of the brain injury continuum, with Grade 3 concussion and MTBI overlapping, one can get a better understanding of how these definitions compliment each other and enhance our understanding. BIA estimates that approximately 75% of all brain injuries fall in the "concussion-MTBI continuum."

The Functional Mechanics of Concussion

Two mechanisms currently are believed to underlie the changes following concussion. In the first, a sudden movement or direct force applied to the head can set the neural matter of the brain in motion even though the brain is well protected in the skull and very resilient. This motion squeezes, stretches and sometimes tears the neural cells, changing the precise balance and distance the cell's axons and dendrites maintain to transmit or process information.

The second mechanism involves changes that occur in the neuron's ability to produce energy for the cell's vital functions in structures called mitochondria. An initial increase in energy production occurs followed by a dramatic decrease that affects the ability of the cell to produce structural proteins to preserve the diameter of the axon. This change occurs gradually after the time of impact and may be responsible for the delay in symptoms sometimes observed.

The changes that occur affect the electrical or chemical aspects of neural cell functioning and result in unusual processing of normal information. (For this reason, radiologic studies that look at the structure of the brain, such as CT scans and MRI, are most frequently read as normal after concussion/MTBI.) This actually is quite adaptive because the brain cells automatically keep working to reconnect or establish normal impulse transmission. Even the loss of consciousness is adaptive, because the brain shuts down all unnecessary functions until the most important life sustaining neural adjustments are made. Unfortunately, sometimes these neural adjustments cannot be made quickly enough and death can occur.

As a person recovers, the cells re-establish the precise balance needed to ensure effective information processing, but this may mean some compensation or adjustments to the neural cell's original alignments. The more often neural cells must compensate or adjust to injury, the more likely the task takes longer and may not be as complete. For example, when a person sprains or fractures an ankle, professionals recommend cold/heat treatments, rest and supports (i.e., cast, brace) and specific exercises to help the ankle adjust to the injury and recover maximal function. Depending on the severity of the ankle injury (i.e., sprain, fracture) and what is required after recovery (i.e., long distance running, ballet), the severity of the injury to the ankle can disrupt a person's life. Obviously, a human brain is much more complicated than an ankle. Yet similarly, rest, supports (i.e., compensations, modifications) and "exercises" (i.e., therapies, education) for the brain may be recommended to rehabilitate and restore useful

function. Depending on the severity of the concussion and what the person needs to do (i.e., care for a family, return to work or school, manage a large company), a concussion can disrupt a person's life for a short period of time or even longer.

To review, a concussion causes a disruption of normal brain function that may be a temporary inconvenience or result in permanent changes in brain function. Where there are complicating factors, the disturbance in brain function can be fatal. Because of the potential life-threatening danger associated with brain injury, the severity of any brain injury--including concussion--is determined at the time of the injury, based on measures of physical, cognitive and behavioral responsiveness. Again, the three categories commonly used to describe brain injury--mild, moderate and severe--indicate only how seriously impaired the person was at the time of the injury. Thus, on the brain injury scale of severity, a concussion usually is classified as a MTBI because the alterations in brain function are not severe enough or do not last long enough to be classified as moderate or severe brain injury. In the moderate and severe classifications, there appears to be direct damage to the brains neural network with long-term difficulties related to the sites of the damage. The long-term effects of MTBI on brain cell recovery and functioning and behavior vary across individuals. However, for most individuals, no long-term neuronal changes are noted after three to four months and the cognitive and behavioral adjustments return to normal.

Exceptions to this rule exist. Studies indicate that age (i.e., 40 years or older), the presence of a systemic disease (i.e., diabetes mellitus), and possibly female gender affect the recovery process. Other risk factors for delayed recovery include a history of previous brain injury or when situational and personality factors play a role in recovery. For example, individuals who sustain a second concussion while still symptomatic from the first one may sustain what is termed "second impact syndrome." This condition is very serious and can result in lifelong impairments, coma and even death. Individuals who sustain a series of multiple concussions over time (i.e., boxers, abused children) may be left with permanent impairments and disabilities. People who have mental health issues or other disabilities (i.e., attention deficits, learning disabilities) may find that a concussion further complicates their behavioral and learning challenges. Also, even litigation issues may complicate a person's recovery.

The symptoms of concussions cover a wide range of perceptual, sensory, cognitive, emotional and behavioral features. The TABLE below lists the common early and late symptoms of concussion:

Early Symptoms:

- Headache
- Dizziness or vertigo
- Lack of awareness of surroundings
- Nausea with or without memory dysfunction
- Vomiting

Later Symptoms:

- Persistent low grade headache
- Lightheadedness
- Poor attention and concentration
- Excessiveness or easy fatigue
- Intolerance of bright light or difficulty focusing vision
- Intolerance of loud noises
- Ringing in the ears

- Anxiety and depressed mood
- Irritability and low frustration tolerance

As you can see, many of the symptoms listed above are common to a variety of other natural human experiences. Feeling scared or anxious can make our vision change and cause dizzy feelings and numerous "fight or flight" reactions. Muscle cramps in the neck can give headaches, just as not having our usual dose of caffeine causes headaches. A virus can make us feel "spaced-out" and affect our balance. Depression can affect our cognitive abilities and memory. Being angry over changes due to an injury such as a broken arm can make us irritable and affect our motivation. And, as with concussion, if everyone else feels you "should be over it by now," being treated unfairly may cause hopelessness that makes it difficult to concentrate and sleep.

Recovery Variations after Concussion

Concussions vary, depending upon the type and the individual, hence, recovery varies as well. Some commonly asked questions by individuals who sustained concussions include:

Why is there so much variation in symptom presentations? This variation can best be explained because people differ and their perceptual experience of sensations such as pain and distress remains subjective. Without a technology (i.e., more sophisticated CT/MRI scanning technology) to measure these individual experiences, it remains difficult to determine when the brain's coping or healing has taken place and when the individual's reaction to the process has left perceptual and learned phenomena. Thus, we need to monitor the symptoms of concussion in order to monitor recovery. The following checklist can help individuals and their families monitor their recovery one to three months after a concussion so they can report this information to their physician or therapist. Symptoms that persist beyond the usual recovery time for concussion need to be evaluated and treated more carefully.

Physical Symptoms

- Headache, dizziness, lightheadedness
- Vomiting or nausea
- Numbness or tingling
- Balance problems, clumsiness, drops things, trips often
- Fatigue, tires easily, needs extra sleep, drowsiness, trouble falling asleep or staying asleep
- Sensitivity to light and noise
- Blurry vision
- Ringing in ears

Cognitive Symptoms

- Confusion, in a "fog," has befuddled expression, gets mixed up about time and place
- Attention or concentration problems, inability to do more than one thing at a time, unable to return to a task if interrupted
- Memory problems, forgets things
- Takes longer to get things done or complete assignments
- Has problems organizing thoughts or words, misunderstands things

Behavioral Symptoms

- Restless, irritable, fussy
- Acts without thinking

- Becomes upset easily, loses temper
- Sadness, depressed mood
- Anxiety, nervousness

Why some people adjust better after a concussion than others? Research in cognitive-behavioral therapy supports the notion that: 1) looking at the positive aspects of recovery, 2) taking steps to gain control of your rehabilitation and 3) knowing that fundamental healthy behavior requires a focused rehearsed plan all can contribute to dealing better with the many sensations and feelings that often follow concussion. Concussion needs to be taken seriously and modifications to a person's life (i.e., home, work, school) need to be made during the recovery period. Just because a person "looks great" does not mean that they are recovered fully. Having a good plan for recovery and knowledge about concussion helps individuals feel more in control and lessens their anxiety.

Why do concussive symptoms change over time? It now appears that during the first months after concussion the brain begins to heal and evidence suggests that there is little trace of brain damage after three to four months. During this period of time, sleep patterns return to normal, sensations mirror the brains recovery and efforts to return to normal and develop a sense of self are influenced by the rehabilitation process. For example, many strange sensations accompany recovery from a sprained or fractured ankle, including pain from the efforts a person makes to accommodate the recovery time (such as muscle atrophy), as well as sleeping and exercise changes due to limitations. Brain function is much more complex to understand and monitor. Yet, just as an ankle can "return to normal" over time, so can the brain after concussion.

Why can't professionals tell if there is permanent brain injury over time? Without doing an autopsy, brain function can only be estimated. For example, neurological testing can provide information about what a person might be able to do at this point in time, but without the same information from before the concussion, it is only possible to estimate how a concussion affected performance. Many professionals use various tools to help them understand the degree of brain damage (i.e., CAT scans, MRI, neuropsychological batteries, neurolinguistic assessment, functional behavioral analysis), but these tools are only approximations and it is difficult to predict the total impact a brain injury may have on a person's life. The best "predictor" is the person with the injury working with a dedicated team of professionals to identify and compensate for permanent damage.

Is permanent brain damage always bad? This is a trick question because the easy answer is that damage always means a loss of brain cells. Yet, many people can attest that the loss of brain cells does not mean that they themselves are "lost". Rather, many individuals have found the strategies and techniques they have used to cope with brain injury have been helpful in assisting them to become the person they felt they wanted to be all along--happy, loved, productive and important. The experience of coping with a rehabilitation or treatment program has helped them: 1) appreciate their talents, 2) give up bad habits and 3) become more mindful of what they truly wanted out of life. This is not to minimize the tremendous changes brain injury causes for people and their families, but rather to emphasize the importance of good treatment programs and community support to help people re-define their lives.

Treatment Recommendations

The only cure for brain injury is prevention. Obviously, the treatment of concussion starts with prevention. Thoughtful preparation before activities--knowing your limits; minimizing risk to one's head by wearing protective gear such as seat belts, helmets, hard hats; and being

substance free when activities require concentration such as driving, bicycling, swimming, boating and skiing--all will reduce the likelihood of injury. Unfortunately, concussions often are difficult to prevent even with careful preparation and protective gear.

Immediately after a concussion, emergency care may be required. Since life-threatening complications--usually due to brain swelling and bleeding--can occur from any brain injury regardless of the type, all brain injuries must be taken seriously. The proper assessment of concussion by emergency medical professionals and physicians is critical.

AAN and the BIA have developed a clear, scientifically based set of guidelines for the medical management of concussion in sports that is used by team physicians, coaches and athletic trainers and can easily be adapted for all concussions. Thus, after the type of concussion has been determined, management guidelines are implemented. If an adult sustains a Grade 1 or 2 concussion, it may be wise for that person to rest for two or three days before returning to regular activities and not operate a motor vehicle for at least a week. If a child crashes a bicycle and the physician has examined and given them a clean bill of health, it is wise to keep the child off the bicycle for a week. As always with children, the rule should be that if it has wheels, you need a helmet.

The potential danger with concussion is sustaining a second one before allowing the brain time to rest and recovery from the first one (as we would for a broken ankle). The chart below summarizes AAN's management recommendations for athletes returning to play after concussion, but reworded for the general audience. Please remember that all concussions are potentially serious and an individual should be examined by a physician if there is any doubt about their safety.

Grade 1 Concussion Management Guidelines

If the person has no symptoms or mental status abnormalities 15 minutes after the injury, he/she can resume normal activities. All symptoms from the concussion must have disappeared, first at rest and then with exertional testing, before the individual can return to regular activities.

Grade 2 Concussion Management Guidelines

The individual should refrain from activities for at least one week, again only after the person is asymptomatic at rest and during exertion. Additionally, a physician should perform a neurological exam before the individual is allowed to go back to regular activities. If the individual experiences a worsening in headaches and other concussion symptoms and/or these symptoms last longer than a week, a CT scan or MRI is recommended.

Grade 3 Concussion Management Guidelines

One month should be the minimum period for an individual to return to rigorous activity. For an individual with a brief loss of consciousness (i.e., seconds), he/she can return to regular activities only after being asymptomatic for at least one week. For a person who had a prolonged loss of consciousness (i.e., minutes), he/she can resume normal activities no sooner than after two weeks of rest. A thorough neurological examination and a neuro-imaging study (i.e., CT scan, MRI) should be performed on all individuals who have been rendered unconscious for brief periods of time. The individual should be admitted to the hospital if any signs of pathology are detected and/or the mental status of the person remains abnormal.

Recovery after concussion--just like a sprained or fractured ankle--takes time. An individual with a broken ankle would not go out the next day and run a marathon. That individual likely would take time out from work, rest and put the leg up, use crutches, attend therapy, if necessary, and allow the ankle time to recover. Too often after concussion, many individuals immediately return to work or school, push themselves to think as well and as quickly as they did before and expect that in a day or two they are recovered fully. One of the problems with concussion is that people try and "get back on the horse" too quickly. The danger in doing this is that the person could sustain a second concussion (i.e., the athlete returns to the game; the child gets back on his/her bicycle; the person resumes driving a car) that could cause more serious injury to the brain. Or, if individuals push themselves to perform and/or are expected to perform by their colleagues and family too soon after the concussion, the symptoms may become exacerbated.
After a concussion, it is wise for people to modify their lives by: 1) reducing workloads, 2) building in rest periods, 3) giving more time to finishing projects, 4) developing a written plan to refer to when confused or uncertain, 5) using a notebook/calendar to write things down and check-off when completed, 6) writing down schedules with time, place and person and 7) avoiding the use of alcohol or other substances that may slow recovery.

It is also important to monitor symptoms over the next one to three months and report this data to one's physician and other treating professionals. Family members can become more knowledgeable about concussion and help the person make accommodations, monitor symptoms and ensure that--just like with a broken ankle--the person is given ample healing time. The use of other professionals, such as a Neuropsychologist, can help through testing to determine a person's strengths, needs and preferences. Psychologists and counselors may be extremely beneficial in helping people with more serious injuries to understand and adjust to any changes caused by the concussion. BIA, its chartered state affiliates and support groups may provide the person with education about concussion and where to go for additional help.

Conclusion

Concussion is the most common of all brain injuries. It needs to be better understood, evaluated and treated. Individuals who sustain concussions may experience an array of symptoms, both short, and long term. The important thing is to take any concussion seriously and recognize that recovery is dependent on many things.

About the Authors...

William Frey, PhD, maintains a private clinical psychology practice in Rutland, VT, specializing in behavioral medicine with a focus on traumatic brain in jury rehabilitation. He received his BA from Villanova University (1967) and his MS (1969) and PhD (1976) from the University of Vermont. In addition to his clinical practice, he has held faculty positions at the University of Vermont, St. Michael's College and Middlebury College and, most recently, had been interim Dean of Student Development at Green Mountain College in Poultney, VT. He has been a President of the Vermont Psychological Association (1985-1987) and a founding board member or the Vermont Head Injury/Stroke Independence Project (1983-1986). He has published articles on mild traumatic brain injury and the impact of brain injury on sense of self and has developed an ecologically-based rehabilitation model for traumatic brain injury.

Ronald C. Savage, EdD, has worked with children, adolescents and young adults with neurological injuries and disabilities for over 25 years. Presently, Dr. Savage is Executive Vice President for Professional Development at Bancroft NeuroHealth in New Jersey. He is the former Senior Vice President of Behavioral Health and Rehabilitative Services at The May

Institute in Massachusetts and the former Director of Clinical Services for Rehabilitative Services of New York and the company's for rehabilitation facilities. In addition, Dr. Savage has taught at the elementary and secondary school level as a classroom teacher and as a special educator, as well as teaching at several colleges and universities. Dr. Savage presently holds academic appointments at Tufts University, Department of Rehabilitation Medicine; Northeastern University, Department of Psychology; The George Washington University School of Education; and the Laboratorio de Neuropsicologia, Universidad de Sevilla, Spain. Dr. Savage has presented at over 200 conferences, training seminars and grand rounds presentations in the past four years. He has published numerous articles, chapters, manuals and books on children, adolescents and adults with traumatic brain injuries and other neurological disabilities.

NATIONAL FOOTBALL LEAGUE

March 15, 2011

The Honorable Mike Doogan
House of Representatives
Alaska State Capitol
Room 112
Juneau, Alaska 99801

RE: HB 15 – Student Athlete Traumatic Brain Injuries

Dear Representative Doogan:

The National Football League is pleased to support HB 15 – the Student Athlete Traumatic Brain Injuries bill. The bill will help raise awareness and protect youth athletes from the dangers of preventable brain injuries.

The NFL is playing a leading role on this important issue for the safety of our own players as well as athletes at all levels of sports. Our primary rule is this: the medical decisions of health care professionals take precedence over the playing decisions of coaches and players. Given our experience at the professional level, we believe a similar approach is appropriate and necessary when dealing with concussions in youth sports.

Concussions can occur in male and female athletes of any age and in any sport or recreational activity. In fact, the Centers for Disease Control and Prevention estimates that there may be as many as 3.8 million sports and recreational-related concussions each year in the United States.

In addition, medical researchers have determined that children and teenagers whose brains still are developing are more susceptible to concussions than adults, and they recover more slowly. Recognizing and responding to concussions when they first occur aids recovery and helps to prevent prolonged concussion symptoms, chronic impairment and even death.

That is the reason the NFL supports the passage of this bill and similar legislation in states throughout the country. HB 15 contains three core principles: (1) concussion education for youth athletes, parents and coaches on an annual basis; (2) immediate removal of a youth athlete who is suspected of sustaining a concussion from play or practice; and (3) mandatory clearance of that youth athlete by an appropriate licensed health care professional before returning to play or practice.

1201 Pennsylvania Avenue NW, Suite 645, Washington, DC 20004 Tel 202.662.6650 Fax 202.662.6860

The future of our state depends on the brains of the individuals that reside here. HB 15 is one tool to giving Alaska's youth the best opportunity to become community and business leaders as adults.

The Alaska Brain Injury Network appreciates your leadership in sponsoring this important legislation. You have our support.

Sincerely,

Jill Hodges
Executive Director

The Honorable Mike Doogan
Alaska House of Representatives
Alaska State Capitol, Rm 400
Juneau, Alaska 99801

Dear Representative Doogan,

Thank you for introducing HB 15, an act relating to prevention and evaluation of and liability for concussions in student athletes.

The Alaska Brain Injury Network, Inc (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury. ABIN's eighteen member board represents all regions of Alaska and at least 50 percent are TBI survivors or family members. We fully support HB 15.

ABIN has become the leader in understanding the needs of Alaskans with brain injury. ABIN has heard from 800 Alaskans requesting brain injury services since 2007. In addition, ABIN has heard public testimony from hundreds of Alaskans from Anchorage, Juneau, Fairbanks, Kenai, Barrow, Nome, Kodiak, Dillingham, Bethel, Copper River Basin, Tok, Ketchikan, Sitka, Homer, and more.

There are an estimated 10,000 Alaskans who have experienced long-term difficulties from a moderate to severe brain injury. The number of Alaskans experiencing a concussion or Mild TBI (mTBI) who visit the emergency department is estimated at 3,000 per year. Concussion and brain injury need to be taken seriously. With proper diagnoses, management, and treatment, research shows 80-90 percent of people experiencing a concussion or mTBI will recover fully. HB 15 is vital to ensuring our youth athletes have the best chance of recovery after an injury. When a concussion is not properly managed, prolonged recovery or even death from a second impact may result.

The National Football League, National Hockey League, the United States Olympic teams, majority of collegiate teams, and most recently in many states, even high school and youth sports teams have protocols and guidelines for concussion identification and return to play. Many of the leagues also require a cognitive baseline which is the first step to providing the best data to assess for a concussion when symptoms appear. If an athlete is suspected of a concussion, the assessment guidelines and return to play protocol are in place for the safety of the athlete, as well as ensuring the team has the strongest players in the game. A player who is normally elite, but then suffers a concussion, may temporarily have difficulty making quick decisions, their speed and reaction time may be compromised, and they may clumsily handle the ball. This compromised state caused by the concussion may hinder the team, and more importantly may put the athlete at risk for serious, life-long disability. No one wants to see an athletic child or young adult become disabled due to a decision to keep a kid in the game for a win or because of lack of education of what concussion symptoms may look like.

HB 15 will ensure that coaches have a basic understanding of concussion, student athletes will begin to understand the seriousness of concussion on and off the field, and parents may begin to understand brain injury better as well. This legislation is an opportunity to improve the public's awareness of the seriousness of concussion and brain injury, and keep our student athletes safe.

ALASKA ATHLETIC TRAINERS ASSOCIATION

Alaska Athletic Trainers Association
PO Box 872710
Wasilla, AK 99687

March 15, 2011

Representative Doogan,

The Alaska Athletic Trainers Association fully supports the language of House Bill 15 and Senate Bill 22, *Student Athlete Traumatic Brain Injuries*. This legislation serves to raise awareness and protect youth athletes from the risks of concussions. The Alaska Athletic Trainers Association pledges to support the following key elements: (1) concussion education for young athletes, parents and coaches; (2) immediate removal of a student athlete who appears to have suffered a concussion from play or practice; and (3) mandatory clearance of that student by a health care professional who is trained in the evaluation and management of concussions before returning to play or practice.

Athletic trainers are health care professionals who specialize in the prevention, diagnosis, treatment and rehabilitation of injuries and sport-related illnesses. We prevent and treat chronic musculoskeletal injuries from sports, physical and occupational activity, and provide immediate care for acute injuries. Athletic trainers offer a continuum of care that is unparalleled in health care.

The Alaska Athletic Trainers Association is also working toward licensing athletic trainers in the state of Alaska. A licensed athletic trainer is one who has established qualifications and works within a scope of practice. Alaska is one of only three states that do not regulate athletic trainers and we feel it is time to change that. We hope you will support our professional endeavor for licensing athletic trainers in Alaska.

Sincerely,

B. Shelden

The National Football League, USA Football, the Brain Injury Association of Washington, and the American College of Sports Medicine, among many other organizations, strongly support the adoption of laws to prevent traumatic brain injury in youth athletes in all fifty states. The Zackery Lystedt law, passed in Washington state, through the efforts and hard work of advocates in the medical, educational and athletic fields represents model legislation. The bill includes three elements essential to protecting youth athletes in all sports:

(1) Inform and educate youth athletes, their parents and guardians and require them to sign a concussion information form;
(2) Removal of a youth athlete who appears to have suffered a concussion from play or practice at the time of the suspected concussion; and
(3) Requiring a youth athlete to be cleared by a licensed health care professional trained in the evaluation and management of concussions before returning to play or practice.

This packet of materials includes information about the Zackery Lystedt law and frequently asked questions regarding it. In addition, educational materials on the topic of youth concussions are included. These documents published by the Centers for Disease Control and Prevention and USA Football and endorsed by the American College of Sports Medicine, the National Football League, USA Football, and the Brain Injury Association of Washington will provide significant information about youth concussions.

As of November 2010, nine states have adopted laws containing the three key provisions of the Zackery Lystedt law. We encourage you to adopt a similar law in your state and encourage you to reach out to our organizations if we can be of assistance.

FREQUENTLY ASKED QUESTIONS ABOUT CONCUSSION-PREVENTION LAWS

How widespread are concussions among youth athletes?

An estimated 400,000 high school athletes sustained concussions while participating in five major male sports and four major female sports during the 2005-2008 school years[i]. In addition, experts believe that the prevalence of sports-related concussions among young people in all sports is significantly higher than reported.

Moreover, the number of youth athletes taken to emergency rooms with sports-related concussions doubled during the 10-year-period from 1997 to 2007[ii]. Meanwhile, among youth aged 14 to 19, emergency room visits for concussions sustained during team sports more than tripled over the same period[iii].

What dangers do these head injuries pose to young athletes?

A concussion is a type of traumatic brain injury, or TBI, which changes the way the brain normally works. Recognizing and responding to concussions when they first occur help to aid recovery and to prevent prolonging concussion symptoms, chronic brain damage or even death. Yet, a recent study estimated that more than 40 percent of high school athletes return to participate in school athletics before they have fully recovered from these serious head injuries[iv].

Do concussions involve youth athletes in all sports and at any age or is it just an injury sustained by boys who play football?

Concussions can occur in athletes of any age and in any sport or recreational activity. In fact, each year, U.S. emergency departments treat an estimated 135,000 sports-related and recreation-related TBIs, including concussions, among children ages 5 to 18[v]. In addition, children and teens are more likely to get a concussion and take longer to recover than adults. While youth sports concussions often are associated with football, the rate of concussions in girl's high school soccer is almost as high. Research also indicates that there may be gender differences in how boys and girls recover from concussions.[vi]

How many states have enacted laws related to concussion-awareness, prevention and management?

As of October 2010, eight states have adopted similar concussion-awareness and prevention laws initially adopted in Washington, known as the Zackery Lystedt law, including Oregon, New Mexico, Connecticut, Oklahoma, Virginia, Massachusetts and Rhode Island. In many other states, active coalitions are pushing to enact similar legislation.

What are the key elements of a concussion-prevention and management bill?

An effective concussion-prevention bill follows the example of the State of Washington's Zackery Lystedt law. It includes three essential elements: (1) inform and educate student athletes, their parents and guardians and require them to sign a concussion information form; (2) removal of a student-athlete who appears to have suffered a concussion from play or practice at the time of the suspected

concussion; and (3) requiring an athlete to be cleared by a licensed medical professional trained in the evaluation and management of concussions before returning to play or practice.

There is an international consensus on return to play guidelines for youth, adopted at the 3rd International Conference on Concussion in Sport in Zurich, in November 2008, which states that "It is not appropriate for a child or adolescent athlete with concussion to RTP on the same day as the injury regardless of the level of athletic performance."[vii]

What is the cost of implementing a concussion prevention and awareness bill?

Zero. The bill is revenue neutral. There are no mandates in the bill and no requirements that resources be spent to hire or train medical professionals or to purchase equipment. Free information on concussions for high school and youth coaches, parents, athletes, as well as school professionals is publicly available on the Centers for Disease Control and Prevention's (CDC) website at www.cdc.gov/Concussion, including a youth concussions poster found at www.cdc.gov/concussion/pdf/poster_Eng.pdf designed to hang in every locker room across the country.

What are the penalties for violating the concussion prevention and awareness law? Who is liable if the law is not followed?

There is no liability attached to Washington's Zackery Lystedt law. It does not mandate any civil or criminal penalties, nor does it create greater liability for individuals and/or organizations. Indeed, the education and awareness efforts and requirement of medical clearance before return to play has decreased the variability of care and decreased liability. Wherever the law is passed, the community can determine if and how to monitor and enforce the law.

What about implementing the law in rural areas where it may be more challenging to find medical professionals?

The law does not require a specific medical specialist to participate in every evaluation. Rather, the language of the Washington statute requiring an athlete "to be cleared by a licensed medical professional trained in the evaluation and management of concussions before returning to play or practice" permits a wide range of qualified individuals to determine a youth athlete's suitability for returning to play. For example, in Washington State, the Washington Interscholastic Activities Association decided that qualifying medical professionals included: medical doctors, osteopaths, nurse practitioners, athletic trainers, and physician assistants.

What is the impact of concussion-prevention laws on private sports organizations?

These laws may be written in such a way as to apply not only to public sports organizations but also to private sports organizations, many of which maintain public-sector connections/affiliations (such as the use of public facilities). For example, in Washington private sports groups are required by law to carry insurance to play on publicly-owned playing fields. The Zackery Lystedt law amended that insurance-based law to require private nonprofits to comply with the policies on the management of concussions and head injuries in youth sports.

What impact have concussion-prevention laws had in states that have passed them?

The Zackery Lystedt law was the first concussion-prevention state law to pass in 2009. While no comprehensive and detailed assessment can yet be made, early and anecdotal data suggests that the law is having an immediate and positive impact. It is helping meet a critical goal -- preventing preventable brain injuries and making sports and recreational activities safer for youth.

What organizations have supported such measures?

A broad coalition of groups representing teachers and parents, sports medicine, medical professionals, school administrators, the disability community and athletic organizations have supported concussion-prevention legislation at the state and federal level. These organizations include the National Football League, American College of Sports Medicine, USA Football, National School Boards Association, Parent Teacher Association, National Association of School Nurses, National Council of Youth Sports, The Sarah Jane Brain Foundation, National Disability Rights Network, National Athletic Trainers' Association, National Association of Health and Fitness, the Brain Injury Association of America, the Brain Injury Association of Washington, and many others.

What law, if any, has Congress proposed or passed regarding concussion prevention and awareness?

The "Protecting Student Athletes from Concussions Act of 2010" incorporates the same core principles of the Lystedt law and was introduced in Congress in September of 2010. If passed, the bill would require school districts to develop and implement a minimum standard, community-based plan for concussion safety and management. Of course, states would be able to implement standards far exceeding these basic, minimum standards.

Where may I find/read a copy of the Zackery Lystedt law?

The Zackery Lystedt law may be found in this packet. It may also be found online by visiting: http://www.leg.wa.gov/CodeReviser/documents/sessionlaw/2009pam3.pdf

Where may I find more information about the dangers of concussions and passing a law in my state?

More information about concussions may be found on the website of the CDC. You also may watch an NFL-produced video about enacting a concussions-prevention law in your state, which is available at NFL.com/youthconcussions and on the CDC's website as well.

House Bill 16
Sponsor Statement

Short Title: Extend Senior Benefits Payment Program

House Bill 16 would extend the Alaska Senior Benefits Program to June 30, 2015.

The Senior Benefits Program provides monthly cash assistance to state residents age 65 years or older whose household income does not exceed 175% of the federal poverty guidelines for Alaska. Specifically, the program pays:

- $250 per month to individuals with income of 75% or less of FPG
- $175 per month to individuals with income between 75% and 100% of FPG
- $125 per month to individuals with income between 100% and 175% of FPG

The program assists approximately 10,000 Alaskan seniors, with a total cost of $21 million projected for this fiscal year. If it is not extended, the program will sunset on June 30, 2011.

House Bill 16 Background Information
Alaska Senior Benefits Program Statutes

Title 09. CODE OF CIVIL PROCEDURE

Chapter 09.38. ALASKA EXEMPTIONS ACT

(a) An individual is entitled to exemption of the following property:

(11) [See delayed amendment note]. benefits paid or payable under AS 47.45.301 - 47.45.309.

Sec. 47.45.301. Alaska senior benefits payment program. [See delayed repeal note]..

(a) The Alaska senior benefits payment program is established in the Department of Health and Social Services to provide cash benefits as far as practicable under appropriations provided by law.

(b) The department shall administer the program and adopt regulations under AS 44.62 to carry out the purposes of the program.

(c) If the department estimates that appropriations for the program are insufficient to meet the demands of the program in a fiscal year, the department may reduce or eliminate the cash benefit available to recipients.

Sec. 47.45.302. Cash assistance benefit. [See delayed repeal note]..

(a) An individual is eligible for a cash assistance benefit under the program if the individual

(1) is 65 years of age or older;

(2) is a resident of the state;

(3) has a household income that does not exceed 175 percent of the annual federal poverty line for Alaska, as determined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(4) has not received a longevity bonus payment under AS 47.45.010 - 47.45.160 for the same period; and

(5) applies on a form provided by the department; the department may use an abbreviated form for an individual who received a payment under an assistance program for seniors that paid $120 a month and was administered by the department on or before the effective date of this section.

(b) An eligible individual shall receive a monthly cash assistance payment beginning on August 1, 2007, as follows:

(1) $250 if the individual's household income does not exceed 75 percent of the federal poverty line for Alaska;

(2) $175 if the individual's household income does not exceed 100 percent but is above 75 percent of the federal poverty line for Alaska;

(3) $125 if the individual's household income does not exceed 175 percent but is above 100 percent of the federal poverty line for Alaska.

(c) Cash assistance provided under this section is subject to appropriation.

Sec. 47.45.304. Continuation of benefits. [See delayed repeal note]..

An eligible individual who leaves the state may not receive a cash benefit under AS 47.45.302 during the absence unless the individual's absence is temporary and is for one of the following reasons:

(1) to receive medical treatment for the individual;

(2) to accompany the individual's family member who is receiving medical treatment outside the state; or

(3) for a vacation, business trip, or other absence of less than 30 consecutive days, unless the individual has applied for and received a time extension from the department for special circumstances.

Sec. 47.45.306. Appeal rights. [See delayed repeal note]..
An individual who receives a determination from the department that denies, limits, or modifies a cash benefit under AS 47.45.301 - 47.45.309, other than a determination under AS 47.45.301 (c) to reduce or eliminate benefits, may request a hearing before the department under regulations adopted by the department.

Sec. 47.45.308. Ability to recover or recoup improper assistance or benefits. [See delayed repeal note]..
An individual is liable to the department for the value of assistance or benefits improperly paid to the individual under AS 47.45.302 or former AS 47.45.310 or 47.45.320 if the improper payment was based on inaccurate or incomplete information provided by the individual. In a civil action brought by the state to recover from the individual the value of assistance or benefits improperly paid under AS 47.45.302 or former AS 47.45.310 or 47.45.320, the state may recover from the individual the costs of investigation and prosecution of the civil action, including attorney fees as determined under court rules.

Sec. 47.45.309. Definitions. [See delayed repeal note]..
In AS 47.45.301 - 47.45.309,

(1) "department" means the Department of Health and Social Services;

(2) "eligible individual" means an individual who meets the requirements of AS 47.45.301 - 47.45.309 and regulations adopted under those statutes for eligibility for the program;

(3) "family member" means a person who is

(A) legally related to an eligible individual through marriage or guardianship; or

(B) an eligible individual's sibling, parent, grandparent, son, daughter, grandson, granddaughter, uncle, aunt, niece, nephew, or first cousin;

(4) "program" means the senior benefits payment program established in AS 47.45.301 - 47.45.309;

(5) "resident" has the meaning given in AS 47.25.430 (a).

Senior BENEFITS PROGRAM

Fact Sheet
January 24, 2011

The Alaska Senior Benefits Payment Program was established on August 1, 2007 and, unless reauthorized, is set to end on June 30, 2011. It pays cash benefits to Alaskans who are age 65 or older and have low to moderate income. Cash payments are $125, $175, or $250 each month depending on income.

Recipients

- There were 10,093 Senior Benefits recipients as of December 2010. Of these, 5,534 were also Adult Public Assistance recipients.

- Number and percent of seniors at each payment level in December 2010.
  - ✓ $250 - 1,071 (10.6%)
  - ✓ $175 - 3,872 (38.4%)
  - ✓ $125 - 5,150 (51.0%)

- Average age of recipients is 75. The maximum age is 105.

Program Expenditures

- Currently, projected program benefit expenditures for FY 2011 are $21.0 million. Projected benefit expenditures for FY 2012 are $21.7 million.

Eligibility and Payment

- Eligibility and payment amount is based on gross annual income (before any deductions are taken for taxes, Medicare premiums, etc.).

Senior Household Size	Senior Benefits Program Gross Annual Income Limit Effective 3/1/2011		
	$250 monthly payment	**$175 monthly payment**	**$125 monthly payment**
Individual	$10,200 ($850 per month)	$13,600 ($1,134 per month)	$23,800 ($1,984 per month)
Married Couple	$13,785 ($1,149 per month)	$18,380 ($1,532 per month)	$32,165 ($2,680 per month)

- Income limits may change yearly along with Alaska's federal poverty level. The $250, $175, and $125 monthly payments correspond to 75 percent, 100 percent, and 175 percent of the federal poverty level for Alaska, respectively.

- Assets, such as savings, are not counted for eligibility.

- Payments are not available to seniors living in the following institutions:
  - ✓ Prison or jail,
  - ✓ nursing home,
  - ✓ Alaska Pioneers' Home or Alaska Veterans' Home, or
  - ✓ Public or private institution for mental disease

Analysis:

Analysis:

The Senior Benefits Payment Program helps low income seniors who are age 65 or older remain independent in the community by providing a monthly income supplement to help meet their basic needs, such as food and housing. Currently the program is set to expire on June 30, 2011. This legislation continues the program through June 30, 2015. As of December 2010, the current program enrollment was 10,093. The number and percent of seniors at each payment level was:

* $250 - 1,071 (10.6%)
* $175 - 3,872 (38.4%)
* $125 - 5,150 (51.0%)

Assumptions:

* Current staffing levels for the program will be maintained and will consist of one Eligibility Technician III, four Eligibility Technician I's, and one Office Assistant I.
* Annual expenditures for Personal Services, Travel, Contractual, and Supplies will remain constant for FY 2012 through FY 2015.
* Projected grant expenditures in FY 2011 are expected to be about $21.0 million. A supplemental for $1.3 million has been requested in FY 2011.
* Annual grant expenditures are expected to increase in response to a projected caseload growth of 3% annually in the out years.
* Grant expenditures for FY 2012 through FY 2015 are expected to increase as follows:
-- 3.55 percent in FY 2012
-- 2.78 percent in FY 2013
-- 2.78 percent in FY 2014
-- 2.77 percent in FY 2015

With the exception of the amount shown in the FY12 appropriation needed column, all of the represented costs are contained in the governor's proposed FY12 budget.

See attached projected caseload and grant expenditures.

Alaska State Capitol, Room 502
Juneau, AK 99801-1182

Subject: Support for HB 16

Dear Representative Hawker:

The Alaska Commission on Aging (ACoA) is pleased to offer our enthusiastic support of HB 16, a bill sponsored by you to reauthorize the Senior Benefits program which is scheduled to sunset on June 30, 2011. Because this program provides a critical financial safety net for Alaska seniors, the Alaska Commission on Aging supports the extension of the sunset date to 2015 or beyond.

The Senior Benefits program, originally initiated by you and enacted by the Legislature in 2007, has been an invaluable program for modest-income seniors who are on small fixed incomes to assist them to live with dignity and independence in their home communities. Alaskans age 65 and over with incomes up to 175% of poverty are eligible for a calibrated monthly cash benefit based on income through the Senior Benefits program. Although the monthly payments are not large amounts, they can make a significant difference in whether or not an older Alaskan is able to afford food, rent, fuel, medication, and other necessities. Many low-income seniors do not have cash reserves that allow for emergencies or the increasing cost of living.

In fiscal year 2010, the average monthly enrollment in the Senior Benefits Program was 10,009. Among the Department of Health and Social Services' nine regions, there is wide variation in the percentage of seniors age 65 and over who receive Senior Benefits. Statewide, less than one in five seniors (19.1%) participates in the Senior Benefits program. Region 1 (the Bethel/Wade Hampton area), long recognized as a very low income region of the state, has over 50 percent of seniors participate in the program. The Aleutian Islands, Region VIII, also has a high rate of participation – more than twice as high as the state's average rate.

The Alaska Commission on Aging strongly recommends that the 2011 Legislature vote to extend the sunset date for the Senior Benefits Program, enabling the program to continue to support those seniors most vulnerable to economic stresses. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879 or denise.daniello@alaska.gov) should you require additional information. Thank you so much for your support of this important program for older Alaskans.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello
ACoA Executive Director

RE: HB 16 (Hawker) – Support

Dear Representative Hawker:

The Alaska Food Coalition is pleased to express our support for HB 16 which will extend the Senior Benefits Program for another four years. At least 1/3 of the Alaska Food Coalition membership serves the senior population. Our members identify hunger, or food insecurity, as a growing problem among the senior population in Alaska.

The Hunger in America 2010 study found 42% of adult pantry and soup kitchen clients in Alaska were 50 and older. Of those pantry visitors 65 and older, 57.8% told us they experienced low or very low food security; they worry about or don't know if they will have enough food. The study also found, of all pantry clients in Alaska:

- 43% had to choose between buying food and paying for utilities
- 45% had to choose between buying food and paying for rent or mortgage
- 35% had to choose between buying food and medicine

Among households with 1 senior member age 65 or older, 21.8% participate in a home delivered meal program. Agencies who deliver home meals have reported a 20% increase in requests for services. The Salvation Army Older Alaskans Program in Anchorage estimates there are twice as many seniors in Anchorage in need of their services. The Yakutat Senior Center serves an average of 42 meals a day; double what they served the previous year. According to data from the Alaska Department of Public Assistance, food stamp recipients age 60 and over increased by 22% in 2009. The need is clear; our low-income seniors need help paying for basic needs.

We want all Alaskans to be hunger free, food secure. There is no question the Senior Benefits Program has helped Alaskan seniors put food on their tables, and will continue to do so with continued funding. We appreciate your leadership on this issue and wish to express our sincere thanks to you for helping Alaska Seniors live full and productive lives.

We ware also thankful to Representatives Millet, Lynn, Gara and Tuck for signing up to co-sponsor HB16.

Please do not hesitate to contact Vanessa Salinas, Alaska Food Coalition Manager if you have any questions, 907-222-3103 afc@foodbankofalaska.org

Thank you for all that you do for Alaska.

Sincerely,

Heather Harris

RE: HB 16 (Hawker)—Support

Dear Representative Hawker:

On behalf of the members of AARP in Alaska, we are pleased to indicate our very strong support for HB 16 which will extend the Senior Benefits program for another four years.

There is no doubt that the Senior Benefits program has proven to be an invaluable help to many older Alaskans who might not be able to afford to stay here without it.

We all recognize that Alaska's seniors face high health care costs as well as high energy costs.

The Senior Benefits program has allowed over 10,000 older Alaskans to deal with these costs and to remain citizens of our state.

We want Alaskans to be able to stay here after retirement. The Senior Benefits program is essential to achieve that goal.

On behalf of all those older Alaskans who may not be aware of your continued leadership on this issue, please accept our thanks for all that you have done, continue to do, and will do in the future.

We are pleased to thank Representatives Millet, Lynn, Gara and Tuck for signing up to co-sponsor HB 16.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Barbara A. Schumacher
P.O. Box 873505
Wasilla, AK. 99687

To Whom it may concern,
Please think very carefully about the Senior Benefits Program, here in Alaska. It has been a great source of comfort & financial stability to me for the last 3 years. I shudder to think what it would mean to your Senior Constituents, who benefit so greatly from this program if it were to be discontinued
Thank you for your consideration.

Sincerely,
Barbara A. Schumacher - age 75
BARBARA A. SCHUMACHER
Wasilla, AK.

Date: January 12, 2011

To: MatSu Legislative Office

To whom it may concern;

I am the daughter of a Wasilla area resident senior citizen. It has come to my attention that the State needs to seek renewal for the Alaska Senior Citizen Benefits Program. I strongly support this program and urge the State to petition for renewal of this very important service to our Seniors. The Senior Care benefits that my mother receives allow her that tiny bit of extra wiggle room on her fixed retirement income, without which, her standard of living will become negatively affected.

Many Alaskan Seniors are in similar, or worse, situations. Without these benefits the State would surely see a rise in emergency medical care resulting from senior's not getting the medications, doctor visits, appropriate food, etc. they need because of less income.

Please support the continued funding for the Alaska Senior Citizen Benefits Program.

Sincerely,

Mrs. Katherine McLaughlin
PO Box 8043
Chenega Bay, Alaska 99574

SENATE BILL NO. 21

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR WIELECHOWSKI

Introduced: 1/7/11
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

"An Act extending senior benefits."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** Section 4, ch. 1, FSSLA 2007, is amended to read:

Sec. 4. AS 09.38.015(a)(11); AS 47.45.301, 47.45.302, 47.45.304, 47.45.306, 47.45.308, and 47.45.309 are repealed June 30, **2015** [2011].

SENATOR BILL WIELECHOWSKI

Sponsor Statement

Senate Bill 21 – Extending The Senior Benefit Program

"An Act extending senior benefits."

Senate Bill 21 would extend the Alaska Senior Benefits Program for another four years to June 30, 2015.

The Senior Benefits Program provides a monthly cash assistance to Alaskan seniors who are age 65 or older and have an income less than 175% of the federal poverty guidelines for the state of Alaska.

The program pays a monthly assistance of:

- $250 to seniors with a monthly income limit of $846 (75% FPG)
- $175 to seniors with a monthly income limit of $13,530 (100% FPG)
- $125 to seniors with a monthly income limit of $1,972 (175% FPG)

The program assists approximately 10,000 Alaskan seniors and costs an estimated $20 million a year. Without action, this benefit will sunset on June 30, 2011.

This bill is supported by many senior groups, including the Alaska Commission on Aging, the Older Persons Action Group and the AARP.

Analysis:

Analysis:

The Senior Benefits Payment Program helps low income seniors who are age 65 or older remain independent in the community by providing a monthly income supplement to help meet their basic needs, such as food and housing. Currently the program is set to expire on June 30, 2011. This legislation continues the program through June 30, 2015. As of December 2010, the current program enrollment was 10,093. The number and percent of seniors at each payment level was:

* $250 - 1,071 (10.6%)
* $175 - 3,872 (38.4%)
* $125 - 5,150 (51.0%)

Assumptions:

* Current staffing levels for the program will be maintained and will consist of one Eligibility Technician III, four Eligibility Technician I's, and one Office Assistant I.
* Annual expenditures for Personal Services, Travel, Contractual, and Supplies will remain constant for FY 2012 through FY 2015.
* Projected grant expenditures in FY 2011 are expected to be about $21.0 million. A supplemental for $1.3 million has been requested in FY 2011.
* Annual grant expenditures are expected to increase in response to a projected caseload growth of 3% annually in the out years.
* Grant expenditures for FY 2012 through FY 2015 are expected to increase as follows:
-- 3.55 percent in FY 2012
-- 2.78 percent in FY 2013
-- 2.78 percent in FY 2014
-- 2.77 percent in FY 2015

With the exception of the amount shown in the FY 2012 appropriation needed column, all of the represented costs are contained in the governor's proposed FY 2012 budget.

See attached projected caseload and grant expenditures.

SENIOR BENEFIT FACT SHEET 1

How It Works

Low-income seniors are eligible for monthly benefit amounts of $125, $175 or $250 a month **based on gross annual income**.

	$250 monthly payment (75% Federal Poverty Guideline)	$175 monthly payment (100% FPG)	$125 monthly payment (175% FPG)
Individual [1]	$10,148 ($846 a month)	$13,530 ($1,128 a month)	$23,678 ($1,972 a month)
Married Couple [2]	$13,658 ($1,139 a month)	$18,210 ($1,518 a month)	$31,868 ($2,646 a month)

Eligibility is based on **gross annual income**, before deductions are taken for taxes, Medicare premiums, etc. Assets such as savings accounts are not considered.

Income limits are tied to the **Federal Poverty Guideline for Alaska** and are updated annually.

Percentage of Seniors **at each payment level**:
$250 - 10.6%
$175 - 38.5%
$125 - 50.9%

The program cost **$19.6 million last year**, with $460,600 (2.3%) going to administrative costs. It's projected cost for the **upcoming year is $2.1 million**. [LINK]

SENIOR BENEFIT FACT SHEET 2: Who Benefits

The average age of a recipient is **75 years**.

There were **10,109 senior Alaskans** who received a monthly Senior Benefit in 2010. [HHS]

Alaskans are not eligible for the senior benefits if they are in **prison/jail, live in an institution for mental disease, live in a nursing home or currently reside in an Alaska Veterans' Home or Alaska Pioneers Home.**

Senior Benefit recipients by region
Alaska Committee On Aging

# of Senior Benefits Recipients	Nov. 2010:	% of Seniors Age 65+:
Statewide	*10,109*	*19.3%*
I. Bethel Area	812	57.4%
II. Interior	1,214	17.0%
III. North Slope	38	10.7%
IV. Anchorage	3,642	17.7%
V. Southcentral	2,353	18.0%

VII. Southwest	421	28.8%
VIII. Northwest	401	39.4%
IX. Southeast	1,188	17.0%

SENIOR BENEFIT FACT SHEET 3: The Need

In 2010, the financial advisory organization "MoneyRates" ranked Alaska as **the third-worst state in the nation in which to retire**, citing in part the high cost of living. [MoneyRates]

In Alaska, **14% of seniors** live below the poverty level. An estimated **4,000 Alaska seniors** rely on food stamps. [Kaiser Family]

Health care costs have skyrocketed in Alaska over the past decade, **growing by 53.9% versus the 29.1% rise in the overall price index. [Alaska Economic Trends 2010]**

The average cost of food in Alaska is at least 20% higher than the national average. Based on the "Thrifty Plan," the cheapest USDA food plan with all meals cooked at home, the average Alaska senior spends **$2,171.99 - $2,085.36** on food a year. [USDA]

How much more expensive things are in Alaska than in the Lower 48 [AK Econ Trends]

	Groceries	Housing	Utilities	Transportation	Health Care
Anchorage	29.3%	37.0%	1.9%	18.2%	27.6%
Fairbanks	23.9	50.2	59.4	26.5	44.3
Juneau	30.4	34.8	30.8	25.7	42.2
Kodiak	45.0	21.9	27.5	40.5	28.7

Energy Costs In Alaskan Cities, Rural Towns [AK Econ Trends]

	One Gallon Heating Oil	One Gallon Gasoline	One Gallon Propane
Anchorage	$3.26	$3.33	$4.60
Bethel	$4.62	$5.37	$7.84
Fairbanks	$3.07	$3.29	$3.75
Juneau	$3.08	$3.11	$3.68
Kenai-Soldotna	$2.75	$3.65	$4.35
King Salmon	$3.87	$4.45	$6.23
Nome	$4.38	$4.49	$5.70
Sitka	$2.69	$3.15	$3.50

10 worst states for retirement

by Richard Barrington | Money-Rates Columnist

What makes a place the ideal spot for retirement -- and what makes other places a potential disaster for retirees?

There are several personal choices that make some places more attractive than others -- where your children and grandchildren live is probably at the top. But there are some more objective and measurable factors that determine whether a state is a good or a bad place for retirees. The following are the factors MoneyRates.com used to determine the 10 best and worst states for retirement:

- **Economic factors.** Using a combination of cost of living in major metropolitan areas, unemployment and tax burden, MoneyRates.com rated the 50 states from best to worst according to economic conditions.
- **Climate.** Americans tend to set the thermostat at around 68 degrees. So, MoneyRates.com used this as the standard, and rated states according to how far their monthly temperatures varied from 68 degrees.
- **Crime rate.** Security is a particular concern for senior citizens, so violent and property crime rates were used to rank the safety of the state.
- **Life expectancy.** States conducive to long lives are naturally well-suited for retirees.

For frequently updated data, such as unemployment, the most recently available monthly figures were used, whereas for other criteria that reflect longer-term trends, such as climate, more historical information was used.

Data sources: ACCRA Cost of Living Index, the Bureau of Labor Statistics, the Tax Foundation, the National Oceanic and Atmospheric Administration, MSNBC, the U.S. Census Bureau, Bloomberg Business Week.

No. 5: Maryland

- *Economic factors*: Cost of living is 126 percent of the national average, unemployment is at 7.1 percent, and the average state and local tax burden is 10.8 percent.
- *Climate*: Average monthly temperatures range from 32.24 degrees in January to 75.44 degrees in July.
- *Crime rate*: 9th in the nation in violent crime, and 21st in property crime.
- *Life expectancy:* 76.3 years.
- *Reason for low rank:* Between the cost of living and the tax burden, Maryland is

expensive, and the high rate of violent crime is also troubling.

No. 4: South Carolina

- *Economic factors*: Cost of living is 97 percent of the national average, unemployment is at 10.8 percent, and the average state and local tax burden is 8.8 percent.
- *Climate*: Average monthly temperatures range from 44.12 degrees in January to 80.08 degrees in July.
- *Crime rate*: 1st in the nation in violent crime, and 2nd in property crime.
- *Life expectancy:* 74.8 years.
- *Reason for low rank:* You can find things to like in South Carolina -- the pleasant climate, for example -- but the high crime rates would be enough to scare off many retirees, and the life expectancy (one of the lowest in the nation) is a downside.

No. 3: Alaska

- *Economic factors*: Cost of living is 128 percent of the national average, unemployment is at 7.7 percent, and the average state and local tax burden is 6.4 percent.
- *Climate*: Average monthly temperatures range from 16.5 degrees in January to 59.0 degrees in July.
- *Crime rate*: 8th in the nation in violent crime, and 23rd in property crime.
- *Life expectancy:* 77.1 years.
- *Reason for low rank:* The nation's lowest tax burden is more than offset by the high cost of living, and the harsh climate and high rate of violent crime are not friendly to retirees.

No. 2: Michigan

- *Economic factors*: Cost of living is 97 percent of the national average, unemployment is at 13.1 percent, and the average state and local tax burden is 9.4 percent.
- *Climate*: Average monthly temperatures range from 18.87 degrees in January to 68.32 degrees in July.
- *Crime rate*: 10th in the nation in violent crime, and 27th in property crime.
- *Life expectancy:* 76.3 years.
- *Reason for low rank:* The high unemployment rate is indicative of a severely damaged economy, the climate is a little rough, and the violent crime rate is a concern.

No. 1: Nevada

- *Economic factors*: Cost of living is 105 percent of the national average, unemployment is at 14.3 percent, and the average state and local tax burden is 6.6 percent.
- *Climate*: Average monthly temperatures range from 30.43 degrees in January to 71.94 degrees in July.
- *Crime rate*: 3rd in the nation in violent crime, and 13th in property crime.
- *Life expectancy:* 75.8 years.

- *Reason for low rank:* Nevada has the second lowest tax rate in the country, but scored poorly on just about every other criterion. Gambling enthusiasts may disagree, but high crime rates and a dismal economy make Nevada a bad bet for retirees.

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
Alaska Capitol, Room 30
Juneau, AK 99801-1182

RE: HB 16 (Hawker) and SB 21 (Wielechowski)—Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we are pleased to indicate our very strong support for HB 16, authored by Representative Mike Hawker which will extend the Senior Benefits program for another four years as well as SB 21, authored by Senator Bill Wielechowski. SB 21 has a Primary co-sponsorship by your Committee colleague Senator Kevin Meyer as well as co-sponsorship by your Committee colleague Senator Johnny Ellis. Senators Kookesh, McGuire and Paskvan are also primary co-sponsors and Senators French and Menard are co-sponsors. Representative Hawker's HB 16 has twenty-one co-sponsors and passed the House 37-0.

There is no doubt that the Senior Benefits program has proven to be an invaluable help to many older Alaskans who might not be able to afford to stay here without it.

We all recognize that Alaska's seniors face high health care costs as well as high energy costs.

The Senior Benefits program has allowed over 10,000 older Alaskans to deal with these costs and to remain citizens of our state.

We want Alaskans to be able to stay here after retirement. The Senior Benefits program is essential to achieve that goal.

AARP recommends an "AYE" vote for HB 16 as well as for SB 21.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Alaska State Legislature

Please enter into the record my testimony to the Senate Health & Social Services
committee name

Committee on SB 21, dated 2-2-11
bill # / subject public hearing date

TO: Honorable Senators of the State of Alaska

Regarding SB 21.

FROM: Mary Wallis

I am very concerned about the potential loss of Senior Benefits.
I am a 70 year old woman whose annual social security benefit is $11,976.
I also have a part-time job for my past employer which grosses $1940 annually
(which I have to pay SE taxes on).

Since I retired at age 64, my benefits can never increase, and without the help of my family,
I could not survive financially.
But my mother, Dorothy Westphal, is 89 years old and will need our help.

Please consider situations such as mine, and others who have worse situations.
Frankly I will have a very tough time getting by without the help from Senior Benefits.
Thank you for your attention.

Signed: Mary Wallis

To Whom it may concern,
Please think very carefully about the Senior Benefits Program, here in Alaska. It has been a great source of comfort & financial stability to me for the last 3 years. I shudder to think what it would mean to your Senior Constituents, who benefit so greatly from this program if it were to be discontinued
Thank you for your consideration.

Sincerely,
Barbara A. Schumacher - age 75
BARBARA A. SCHUMACHER
Wasilla, AK.

Date: January 12, 2011

To: MatSu Legislative Office

To whom it may concern;

I am the daughter of a Wasilla area resident senior citizen. It has come to my attention that the State needs to seek renewal for the Alaska Senior Citizen Benefits Program. I strongly support this program and urge the State to petition for renewal of this very important service to our Seniors. The Senior Care benefits that my mother receives allow her that tiny bit of extra wiggle room on her fixed retirement income, without which, her standard of living will become negatively affected.

Many Alaskan Seniors are in similar, or worse, situations. Without these benefits the State would surely see a rise in emergency medical care resulting from senior's not getting the medications, doctor visits, appropriate food, etc. they need because of less income.

Please support the continued funding for the Alaska Senior Citizen Benefits Program.

Sincerely,

Mrs. Katherine McLaughlin

RE: SB 21 (Wielechowski, Kookesh, Meyer, Paskvan, McGuire)—Support

Dear Senator Wielechowski:

On behalf of the members of AARP in Alaska, we are pleased to indicate our very strong support for SB 21 which will extend the Senior Benefits program for another four years.

There is no doubt that the Senior Benefits program has proven to be an invaluable help to many older Alaskans who might not be able to afford to stay here without it.

We all recognize that Alaska's seniors face high health care costs as well as high energy costs.

The Senior Benefits program has allowed over 10,000 older Alaskans to deal with these costs and to remain citizens of our state.

We want Alaskans to be able to stay here after retirement. The Senior Benefits program is essential to achieve that goal.

On behalf of all those older Alaskans who may not be aware of your leadership on this issue, please accept our thanks for all that you have done, continue to do, and will do in the future.

We are pleased to thank Senators Kookesh, Meyer, Paskvan, and McGuire as prime co-sponsors and Senators French and Menard as co-sponsors for SB 21.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Senior Snapshot: Older Alaskans in 2009

Older Alaskans are a highly diverse group of individuals, living a great variety of lifestyles in communities large and small. Statistics about our senior population do not capture the unique personalities and circumstances of all the seniors we know. Nevertheless, information about some aspects of the collective lives of Alaska's seniors illustrates many of the issues of concern to older Alaskans and their advocates.

The Alaska Commission on Aging has gathered a selection of data on older Alaskans in order to provide a sketch of the older residents of our state and their well-being. In our ***Senior Snapshot: Older Alaskans in 2009***, we offer a number of data points, which corroborate the following observations:

- For the second year in a row, Alaska has the fastest-growing senior population of the 50 states, with an increase of almost 50% among individuals age 65 and older during the past ten years.

- While senior populations in several regions have grown especially rapidly in the past seven years (for example, the Southcentral region's seniors have increased by over 60%), all nine regions have witnessed an increase in their senior populations of at least 18% during this time period.

- Older baby boomers are swelling the ranks of the youngest group of seniors, now the fastest-growing age group, second to the 85-and-older group, whose members are the most frail, the most likely to struggle with Alzheimer's disease and related dementias (ADRD), and the most likely to depend on home- and community-based care as well as institutional long-term support services.

- While Alaska seniors appear less likely to be living in poverty than the national average among seniors, many of them are struggling to get by financially. Over 20 percent of Alaskans age 65 and older are receiving a modest monthly cash supplement from the Senior Benefits Program, a percentage which varies greatly by location, from 13 percent in the North Slope region to 59 percent in the Bethel/Wade Hampton region. To qualify for this program, seniors must have incomes below 175% of the federal poverty level for Alaska. In 2009, that meant no more than $23,678 for a single senior, and no more than $31,868 for a couple.

- Retired seniors as a whole contribute approximately $1.7 billion annually to Alaska's economy, including their retirement income and health care spending. While Alaska's "retirement industry" may not yet be competing with those of Florida or Arizona, this source of cash flow is in fact one of the state's top industries. And its value is enhanced by the fact that it produces local spending and is environmentally benign, stable, year-round, compatible with other industries, spread throughout the state, and helps create economies of scale (particularly in health care) which benefit the entire population.

- Alaskan seniors are more likely than U.S. seniors as a whole to die of causes linked to behavioral health issues. Older Alaskans have high suicide rates as well as high rates of accidental deaths and alcohol-induced deaths. These figures suggest that behavioral health programs targeted to seniors with depression, other mental illness, and substance abuse problems could have a dramatic impact on our seniors' quality of life.

- In spite of these areas of unfavorable comparison, Alaska's seniors are actually healthier than the national average – less likely to die from any of the leading causes of death and less likely to die in a given year from *any* cause of death. Alaskan seniors' age-adjusted death rates are substantially lower than those of U.S. seniors as a whole. For every 100,000 Alaskans age 65 and older, only 3,818 die in a given one-year period, while for every 100,000 U.S. seniors, 4,722 die during that period. In other words, an Alaskan senior is 19 percent less likely to die (from any cause) during a given year than his or her U.S. counterpart.

- Alaskan seniors report higher levels of self-described disability than do U.S. seniors as a whole. The BRFSS (Behavioral Risk Factor Surveillance System, a Public Health phone survey) asks whether they are "limited in their activities because of physical, mental, or emotional problems." Alaskan seniors are about 20 percent more likely to answer, "Yes."

- Today's Pioneer Home residents are more likely than not to require care at Level III, the most advanced level of care, which includes 24-hour nursing care. This presents the Pioneer Homes with a challenge because it is a very different mix of residents from that which the homes were originally designed to serve. However, one reason for this more intensive level of need is that older Alaskans are able to remain in their own homes longer today thanks to more comprehensive home- and community-based services. The average Pioneer Home resident today is more than six years older than the average resident of a decade ago.

- A substantial number of complaints about abuse and neglect involving seniors are being received by agencies such as Adult Protective Services and the Long-Term Care Ombudsman's Office. Cases of abuse, neglect and exploitation of seniors may involve friends and family members, paid caregivers, telemarketers, and others. Reports to Adult Protective Services have increased by 169% in the last four years alone.

NOTES:

1. Data from Alaska Department of Labor and Workforce Development's 2008 population estimates. Regions are those used by the Alaska Department of Health & Social Services. "The Alaska State Plan for Senior Services, FY 2008 – FY 2011" prescribes funding by region for those grant programs which include federal Older Americans Act money.

2. Data from Alaska Department of Labor and Workforce Development's 2008 population estimates. Percent of area population column shows percent of statewide population in each age group.

3. Data from "A Profile of Older Americans: 2009," Administration on Aging, U.S. Department of Health and Human Services. The five states with the fastest-growing senior populations during the decade from 1998 through 2008 were Alaska (49.8%), Nevada (48.1%), Arizona (39.7%), Utah (33.7%), and New Mexico (31.3%). Rhode Island and Washington, DC saw a decline in senior population during this decade. Alaska's gains reflect the choices of more and more seniors to remain in the state after retirement.

4. The University of Alaska Anchorage's Institute for Social and Economic Research (ISER) estimated the 2004 cash contribution of Alaska retirees age 60 and older at $1.461 billion. The estimate is contained in the 2007 ACOA-commissioned "Report on the Economic Well-Being of Alaska Seniors," available on the Commission's website at: http://www.hss.state.ak.us/acoa/documents/seniorWellbeingReport.pdf . The Commission estimated seniors' 2009 contributions by applying the increases in the Anchorage Consumer Price Index for 2005 (3.1%), 2006 (3.2%), 2007 (2.2%), and 2008 (4.6%) to the 2004 base figure.

5. Data obtained from Social Security Administration's website. Alaska average includes all Alaska residents age 65 and older who receive Social Security retirement benefits, a total of 45,710 people. U.S. average includes all U.S. residents age 65 and older who receive Social Security retirement benefits. The Alaska average monthly payment may be lower because of the high percentage of Alaska retirees who are subject to the "Windfall Elimination Provision," which limits Social Security retirement benefits to many individuals receiving public employee pensions.

6. Figures on PERS (Public Employee Retirement System) benefits include PERS retirees age 60 and older who currently reside in Alaska.

7. Figures on TRS (Teachers Retirement System) benefits include TRS retirees age 60 and older who currently reside in Alaska.

8. Alaskans age 65 and older with incomes up to 175% of the Federal Poverty Level (FPL) for Alaska are eligible for the Senior Benefits Program. For 2009, 175% of the Alaska FPL was $23,678 for a single senior and $31,868 for a couple.

9. Seniors age 65 and older often have higher incomes than those in the 60 – 64 age group because they are receiving Social Security retirement benefits or other benefits that begin at age 65. Hence the lower average monthly Food Stamps value for the 65+ population.

10. Adult Public Assistance is a supplement to SSI, so recipients must be either certified as disabled by the Social Security Administration (with severe long-term disabilities that impose mental or physical limitations on their day-to-day functioning) or be age 65 and older. There are income limits for the program, which is intended to assist aged or disabled individuals in attaining self-support or self-care.

11. ADRD: Alzheimer's disease and related dementias. Alaska ADRD population was estimated by the Alaska Commission on Aging based on national (per Dr. Denis Evans, 1990) prevalence rates of three percent for those age 65 to 74, 18.7 percent for those age 75 to 84, and 47.2 percent for those age 85 and older. National estimate is for 2009, from the Alzheimer's Association's "2009 Alzheimer's Facts and Figures." "The dramatic rise in Alzheimer's underscores that the disease has the ability to undermine the entire U.S. health care system," according to Stephen McConnell, Ph.D., the vice president of advocacy and public policy for the Alzheimer's Association.

12. The age-adjusted death rate shows how many people out of every 100,000 in a particular age group died during a given time period. For states like Alaska with fewer than 100,000 people in the 65-and-older age group, adjustments are made to produce a comparable figure. This statistic tells us that Alaskans age 65 and older were substantially less likely to die from any cause than U.S. seniors as a whole.

13. Alaska's senior suicide rate is 40% higher than that of U.S. seniors as a whole.

14. Alaska's "Other Accidental Deaths" (excluding fatal falls) are 45% higher for seniors here compared with the U.S. as a whole.

15. Alaska seniors are nearly three times more likely than U.S. seniors as a whole to experience an alcohol-induced death.

16. Note that Alaska seniors are less likely to die from any of the six leading causes of death. Death rates from cancer, diabetes mellitus, or chronic lower respiratory disease are slightly lower. Death rates from stroke and Alzheimer's disease are moderately lower. And death rates from heart disease are substantially lower in Alaska.

17. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. Binge drinking is defined as males having five or more drinks on one occasion or females having four or more drinks on one occasion.

18. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. Heavy drinking is defined as adult men having more than two drinks per day or adult women having more than one drink per day.

19. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. Smokers are defined as current smokers.

20. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. Seniors with disabilities include those age 65 and over who say that they are limited in their activities because of physical, mental, or emotional problems.

21. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. "Obese" individuals are defined as those with a body mass index (BMI) of 30.0 or greater.

22. The Behavioral Risk Factor Surveillance System (BRFSS) is an ongoing multi-state phone survey conducted in Alaska by the Division of Public Health. "Frequent Mental Distress" was defined as having 14 or more days of "not good" mental health during the last 30 days. "Frequent Mental Distress" was last assessed in the national BRFSS survey in 2006. However, the Alaska BRFSS survey includes this measure each year.

23. To qualify for services under the Older Alaskans Medicaid Waiver program, individuals must be age 65 or older, income-eligible for Medicaid, and must meet nursing home level-of-care requirements. Waiver services are home- and community-based services (such as meal programs, chore assistance, and care coordination) that allow the individual to continue living in his or her own home.

24. The figure shown represents an unduplicated count of seniors served in "registered services," those services for which data on individual participants is collected. Senior grant programs include Nutrition, Transportation and Support Services (NTS), Senior In-Home Services, Adult Day Services, Family Caregiver, and ADRD Education and Support. The senior grant programs are available to individuals age 60 and older.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Bill 21

"An Act relating to the membership of the Statewide Suicide Prevention Council."

House Bill 21 would simply increase the number of members appointed to the Statewide Suicide Prevention Council from 16 members to 17 members and create an age requirement for the youth member.

The additional member would be appointed by the Governor and would give representation on the council for members of our military. Suicide among our military is on the rise and having an individual familiar with the lives and challenges our military members face on a daily basis is crucial to their overall well-being.

The new member must be one of the following; discharged from, retired from, or engaged in active duty military service or someone who is a mental health provider, social worker, or other person actively providing a health care service to discharged, retired, or active military personnel.

House Bill 21 also changes the requirement for the youth member who is appointed to the council. Currently this appointee has to be enrolled in the 9^{th}, 10^{th}, 11^{th}, or 12^{th} grade of a secondary school. This member would be changed allowing the youth to be 16 years of age when appointed, but not older than 20 years of age. This will allow our youth members to continue to serve beyond completion of their secondary school education and allow for continuity on the council.

Thank you for your consideration of this legislation. I appreciate your support of House Bill 21.

COMMITTEE COPY

FISCAL NOTE #1

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHB 21(STA)

Analysis:

This bill will increase the size of the Statewide Suicide Prevention Council by one member, from a total membership of 16 to 17. The additional member being requested is someone specifically representing the military. In addition, the definition of the youth member has been revised to include an age demarcation, and eliminates the need to be currently enrolled in a secondary school in Alaska.

The proposed changes will result in increased travel costs for the Council. Four meetings are held each year at varying locations. Based on historical costs, it is estimated that the additional travel costs for an additional council member will be $3,950.00 per year.

HB 218

<TARGET><BILL>HB 218</BILL><SUBJECT>HB 218</SUBJECT><COMM>SHSS27</COMM></TARGET>

ALASKA STATE LEGISLATURE

State Capitol Building
Juneau, Alaska 99801-1182

Sponsor Statement House Bill 218

"An Act prohibiting an insurer from using a drug formulary system of specialty tiers under certain circumstances."

Specialty medications used to treat complex chronic diseases continue to be the fastest growing segments of overall drug spend. While traditional drug spend slowed to an increase of only 1.5% in 2008, specialty drug spend continued its steady climb, increasing 15.4%*

House Bill 218 protects patients with critical illnesses from sudden changes in their drug treatment and therapy protocols which may un-expectantly deprive the patient from critical therapies due to the inability to pay for the drug or sufficient time to plan alternative financial or therapeutic strategies.

Currently, insurance companies can change their reimbursement policies with only a 30 day notice, often forcing the patient to absorb thousands of dollars of unexpected costs for expensive specialty drug therapy. By extending the notification period the savings for the patient will be absorbed by rest of the policy holders on the plan.* This may give the patient additional time to explore other options which may allow for a transition to a more affordable plan with similar therapeutic results.

Without these specialty drugs quality of life deteriorates and long term health care costs may increase. Additionally, cost savings may be achieved by exploring options like management through specialty pharmacies that use drug-utilization monitoring specifically designed for hard to manage conditions.

MEMORANDUM February 21, 2012

SUBJECT: Drug formulary tiers (HB 218, Work Order No. 27-LS0728\B)

TO: Representative Wes Keller
Attn: Janet Ogan

FROM: Dennis C. Bailey
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. States legislative findings relating to the need for prescription drugs, the categories and specialty tiers for certain drugs, the cost of drugs, excessively high payments for drugs, the need to inform patients about the cost of drugs that exceed insurance coverage; and the disparity in insurance payments for unique categories or tiers for patients whose life and health depend on certain drugs.

Section 2. States the legislative intent is to provide information to patients about the cost of drugs for certain diseases and conditions.

Section 3. Allows a health care insurer that provides coverage for drugs in unique categories or specialty tiers to impose cost sharing, deductibles, or copayment terms that exceed the cost sharing, deductibles, or copayments of nonpreferred brand drugs or the drug's equivalent if the insurer notifies the insured of the cost sharing, deductibles, or copayment terms at least 90 days before the terms apply.

Section 4. Provides that the notice requirements in sec. 3 apply to health insurance plans offered, issued for delivery, delivered or renewed on or after the effective date.

If I may be of further assistance, please advise.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB 218

Analysis

Section 1 lists legislative findings including the cost sharing obligations for certain drugs are becoming prohibitively expensive, that some health plans have established specialty tiers for drugs and are requiring patients to pay a higher percentage of the costs of these drugs, seeking to ensure patients are well informed about cost sharing requirements and recognizing the disparities caused by these cost burdens.

Section 2 lists legislative intent of providing patients with timely information relating to the cost of prescription drugs essential for treatment of certain diseases.

Section 3 amends AS 21.42 to only allow cost sharing for specialty tiers of drugs that exceed the cost sharing for a non-preferred brand drug, only if the insurer notifies the insured of the cost sharing at least 90 days before the terms apply.

These provisions have no anticipated fiscal impact on the Division of Insurance.

Memorandum

TO: Representative Beth Kerttula
FROM: Chuck Burnham, Legislative Analyst
DATE: March 9, 2012
RE: Prescription Drug Formulary "Tiers" in Health Insurance Plans and the Impacts of HB 218
LRS Report 12.228

You asked a number of questions about prescription drug formulary tiers in health insurance plans and the impacts of HB 218. Specifically, you wanted to know the following:

- ***The definition of "drug formulary" and "value-based drug formulary;"***
- ***Whether insurers in Alaska use tiered formularies and a list of drugs included in tiers 4 or higher;***
- ***The states that have prohibited coinsurance on "specialty tiers" in prescription drug formularies for high cost pharmaceuticals and the costs and benefits to those states of doing so;***
- ***The impacts on health insurance premiums for Alaskans should HB 218 be enacted, thereby requiring insurers to provide policyholders with notice at least 90 days prior to increasing premiums, co-pays, or coinsurance for prescription drugs.***

Brief Summary

Alaska's major private health insurers employ 4-tier prescription drug formularies in a number of their various plans. New York is the only state thus far to prohibit such plans; however, Vermont has placed a one-year moratorium on the practice, and numerous other states are variously studying the issue and considering measures to curb or eliminate specialty drug tiers.

Because HB 218 primarily seeks to increase notification timeframes for a relatively small percentage of the state's population, it is unlikely that its passage will have a significant impact on health premiums in Alaska.

Formulary Basics

Health insurance plans that offer prescription drug coverage for pharmaceuticals and other patient-administered treatments often categorize those medications under a formulary, which lists drugs approved for coverage by the insurer for specific medical conditions. For many years, insurers often divided these drugs into three tiers according to their costs, and required differing levels of co-pay—typically a flat rate paid by the policyholder—for each tier. So, for example, an insurer may charge a $10 co-pay for less expensive, "tier 1" substances, and respective co-pays of $20 and $50 for higher cost drugs in tiers 2 and 3. This flat-rate co-pay model serves both to reduce costs to the insurer, thereby allowing for lower premium rates system wide, and to provide predictable and relatively low-cost medications to the insured.

Enter Tier 4

Two events in recent years combined to challenge the traditional 3-tiered system. First, in recent decades pharmaceutical companies have increasingly developed highly effective "specialty drugs" to treat complex chronic diseases like rheumatoid arthritis, multiple sclerosis, and certain cancers. These drugs are very expensive to develop and produce and extremely costly to purchase. Further, because these substances are used to treat chronic diseases, the costs are not only very high per dose but potentially recurring monthly throughout a lifetime of disease. Second, the 2006 enactment of the Medicare "Part D" prescription drug plan allowed insurers participating in the program to place specialty drugs in a separate tier and charge more for them. Private insurers rapidly adopted the model, creating tiers 4 and higher, and switched their policyholders' portion of costs from *co-pay* to *coinsurance*, which charges a *percentage* of the price of the prescription rather than a flat rate.

As a result, policyholders who had been paying $10, $20, or $50 per month for their medications were met with pharmacy bills many times those amount—upwards of $2,000 per month in some cases.[1]

To be fair, the advent of specialty drugs has placed insurers in a difficult situation. Annual inflation rates on such medications have increased much faster than for other healthcare services, which, in turn, have been climbing at a rate multiple times that of overall inflation in the U.S. economy. The Kaiser Family Foundation reports 17 percent inflation for specialty drugs in 2010, and that spending on these medications often accounted for 15 percent to 25 percent of an employer's total pharmacy benefit costs.[2] Insurers, employers and benefit plan designers have stemmed, somewhat, the rate of growth of specialty tier plans over the past two years through various methods, including steering clients to "value-based formularies," which offer access to generic drugs and pharmacies through which discount prices have been negotiated. Nonetheless, the proportion of plans that use specialty tiers doubled from 2008 to 2011, comprising 14 percent of all prescription drug benefit plans by the end of that period.[3]

Specialty Tiers in Alaska

In fiscal year 2011, the private health insurance market in Alaska—that which would be impacted by HB 218 (we provide information on plans not covered under the bill below)—was dominated by two insurers: Premera Blue Cross Blue Shield and Aetna. The companies respectively hold 56.69 percent and 10.19 percent of the total market, and their collective market share of over two-thirds dwarfs the next largest private health insurer, United Healthcare Insurance, and its 3.97 percent of the customer base.[4]

According to plan documents, Premera's standard tier 4 coinsurance rate is 30 percent, although this rate may differ under the variables of specific plans.[5] Aetna publishes multiple rates for its various small group prescription drug plans, ranging from 30 percent to 50 percent.[6] These rates compare to typical co-pays for tiers 1-3 of $10-$100.[7]

States Respond

We found just one state—New York—that has prohibited insurance companies from creating specialty tiers with coinsurance models. (Vermont put in place a one-year moratorium on specialty tiers effective May 6, 2011.) California Assembly Bill (AB) 310, which is currently under consideration, proposes to ban specialty tiers and limit co-pays to $150 per monthly prescription. Other states, such as Louisiana and Texas, have set mandatory 60-day notification schedules that must be met before changes to prescription drug costs can be made. At least seven other states have undertaken studies of the impacts of specialty tiers on costs, access to drugs, and outcomes, among other measures, as a first step toward regulating the issue. Various measures prohibiting, limiting, or otherwise regulating the use of specialty tiers are currently under consideration across the country.[8]

[8] "Specialty Tiers/Coinsurance," The Alliance for Biotherapeutics, June 2011, *http://www.bioalliance.org/Downloads/Policy-CoinsuranceAndSpecialtyTiers.pdf*.

Impacts on Premium Costs

You were particularly interested to know if prohibiting specialty tiers increased health insurance premium rates in New York, which enacted its prohibition October 31, 2010. Our research located no study of the law's impact on premiums, and we expect that insufficient time has elapsed to allow a complete understanding of the law's impact on costs.

California's Health Benefits Review Program—comprised of a research team from several of the state's prestigious universities—conducted a study of the medical, financial, and public health impacts of AB 310, the bill currently under consideration. The group projected that the prohibition on specialty drug tiers would increase per month, per member premiums by an average of between zero and $3.69, depending on the market in question (group, individual, Health Management Organizations [HMO], etc.). Total net premium expenditures were projected to increase by roughly $31.7 million (0.0332 percent) as aggregate premium increases caused by the bill would be largely offset by reduced overall co-pays across the pool of 20.9 million policyholders impacted by the bill.[9]

Projected Impact of HB 218 on Premiums

As you know, HB 218 does not contemplate an outright prohibition on specialty tiers per se. Rather, the bill prohibits the use of the 4-tier model for the purpose of establishing deductibles, co-pays, or coinsurance unless the insurer provides policyholders notice of at least 90 days prior to changing the cost terms of their prescription drug coverage. Nonetheless, in a letter to House Health, Education, and Social Service Committee Chair Representative Wes Keller, Premera Blue Cross Blue Shield of Alaska Senior Vice President Jack C. McRae states that the notification timeframe in HB 218 will "inflate costs for specialty drugs and will increase overall healthcare premiums for Alaskans."[10]

Although not required by Alaska law, Premera's current policy, as stated by Mr. McRae, is to provide its policyholders notice 30 days prior to changes on costs associated with prescription drugs. Therefore, assuming that the insurer would comply with the increased notification timeline in HB 218 rather than discontinue its tier for specialty drugs, the impact of the legislation would be to increase by 60 days the amount of notice required prior to changing costs associated with medications. Further limiting the impact of the bill is the proportion of Alaskans to which it would apply if enacted. According to Insurance Division Director Linda Hall, the bill does not apply to public plans (state and federal employees, Medicare, Medicaid, Indian Health Service) or self-insured plans that are merely administered by insurers, which are most commonly funded by large organization like the State of Alaska and companies with a large pool of employees.[11, 12] Individuals covered by public and self-insured health plans, combined with the approximately 16 percent of uninsured Alaskans, total 85 percent of the state's population. The provisions of HB 218 would, therefore, apply to the remaining 15 percent of residents covered by state-regulated, "fully-insured" health plans in the private market.

The change to which Mr. McRae refers in his letter of opposition to HB 218 is, then, an additional 60 days of notice provided to 15 percent of the Alaska population. Presumably, the cost associated with the bill would be two months of the difference in cost between the proposed increase in price to drugs for which Premera is, by definition, already funding at a lower rate (that is, if the drug in question were not already being funded, notification of price change would not be in question). Although we are aware of no study on the impact of the changes described above, assuming the cost projections in the study of California AB 310—which, again, would *completely prohibit* specialty tiers—are remotely accurate, the cost of a 60-day delay in implementing increased costs for specialty drugs would, presumably, be a small fraction of the maximum per month premium increases projected by that study. We asked Director Hall for her views on the likely impact of HB 218 on premiums. She stated that the bill was unlikely to bring significant increases.

We hope this is helpful. If you have questions or need additional information, please let us know.

Fact Sheet
AB 310 – Assemblywoman Fiona Ma
Fair Specialty Drug Payments

Summary: AB 310 would prohibit health plans and insurers from using "co-insurance" and cap out-of-pocket co-pay costs for patients.

Background & Problem:
When patients pay for drug medications, many health care plans include a pricing structure. The tiers are often labeled 'generic,' 'preferred,' and 'non-preferred' and each have a set cost-sharing amount. For example, $10 for generic, $30 for preferred and $60 for non-preferred.

In 2006, Medicare Part D plans (PDPs) started introducing a fourth level known as a "specialty tier," which provides the plan with the ability to use a co-insurance to share the costs of the most expensive medications with the patient

Many private healthcare and drug plans have copied this model for the most expensive medications, but instead of a fixed amount like in Medicare, plans may now require enrollees to pay co-insurance, which is a percentage of the cost of medications. These plans have been charging patients, on average, 25 to 33 percent, which can end up costing the patient thousands of dollars a month out of pocket. These extortionate co-insurance charges can be as high as over $8,000 per month.

The Kaiser Family Foundation Employer Health Benefits 2010 survey reports a dramatic increase in specialty tiers, using the co-insurance method of payment. Nationwide, in 2004, only 3% of workers were in a plan with four or more tiers of coverage. However, in 2010 that number increased to 13%, covering more than 20 million Americans. Data also indicates that in 2006, 50% of Medicare drug plans used specialty tiers. In 2008, specialty tiers were represented in 81% of Medicare plans.

In addition, Prime Therapeutics released a study in 2009 that measured multiple sclerosis medication OOP expense association with decline to fill rate. It showed that when MS medication OOP expenses were greater than $200 the decline to fill rate compared was six times greater than if the co-payment was less than $100.

Many of the drugs on specialty tiers are used to treat conditions such as: cancer, autoimmune conditions like Crohn's disease, lupus, multiple sclerosis, myasthenia gravis, myositis, psoriasis, scleroderma, rheumatoid arthritis, hemophilia and other bleeding disorders, hepatitis, primary and secondary immune deficiencies, neuropathy, and transplant patients.

Drugs found on specialty tiers have been in the marketplace for over twenty years and have been covered by insurance plans without charging co-insurance. Many of these therapies have remained at the same price, with the exception of new generations of these drugs. These drugs have no generic alternatives, are used to treat rare diseases, genetic disorders, and chronic conditions that without treatment will lead to disability and death.

Solution:
Beginning January 1, 2012 AB 310 prevents health plans and insurers from using the co-insurance method of payment. The bill also places $150 dollar out-of-pocket cap for a one month supply of medication, or its equivalent for prescriptions for longer periods, as adjusted for inflation.

In addition, AB 310 makes sure that if a health care service plan provides for a limit on patients' annual out-of-pocket expenses, the patients' out-of-pocket costs of covered prescription drugs shall be included in that limit.

The Honorable Wes Keller
Alaska House of Representatives
State Capitol
Juneau, AK 99801-1182

Dear Representative Keller:

The new specialty drug tiers have caused us to have to consider stopping my husband's MS medication. Our Co-Pay went from $30/mo to nearly $1200/mo. No financial assistance applies to us although it is a major financial burden. Other states have laws banning tier 4 drug pricing (New York, etc). Does it make sense to have people stopping their meds & making more hospital trips? Please direct me how to get this on someone's radar so this can be dealt with. I am sure there are many others suffering as well. ALL MS medications are now tier 4. I would appreciate anything you can do. It looks like the HB 218 only requires 90 days notice. The problem is the same, in 90 days people will just have to stop their medication. We have always paid our own way, not on welfare, don't take govt assistance...but $1200 a month? Plus our massive insurance premiums we pay each month?? We need help - please let me know if there is anything you can do.

Sincerely,

Brenda Robertson

Alaska State Legislature

Please enter into the record my testimony to the (H) HSS
committee name

committee on HB No. 218 dated 2/28/12
bill/subject

- I strongly support HB 218 and encourage this committee to pass this Bill for my daughter + other Alaskans who take "specialty" drugs.
- My daughter was diagnosed with "juvenile idiopathic arthritis" when she was about 11. For about 5 years, she was only able to attend school part-time; she was hospitalized about 2, and up to 4 times per year for "joint injections"; she could not participate in sports because of the inflamation + instabilities in her joints.
- Then, she started taking a "biologic" - a specialty drug! She began improving in 3 months and went back to school full-time.
- She is now in her 1st year at UAA - attending full-time. She was accepted into the UAA Honors College, has declared a chemistry major, + wants to study medicine!
- This specialty drug has been amazing for my daughter + our family. The cost is pretty amazing too - $400/week or $1600/month
- Because of the cost, I strongly support HB 218 because it gives us notice to make the right decisions.
- Please support this Bill to make sure my daughter, and other Alaskans like her, are able to continue on the path to be productive citizens of our communities + our State.

Advocates for Responsible Care

We will be their voice until their voices are heard.

Specialty Tier Story Submission

Today health insurance companies are creating a fourth and fifth tier of drugs, called *Specialty Tier* drugs. *Specialty Tier* medications include drugs that are injected, infused, taken orally, inhaled, or that require special dosing and handling, close supervision, or monitoring. Specifically these include medications for Rheumatoid Arthritis, Systemic Lupus, Cancer, MS, plasma therapies and other life-threatening and chronic diseases. Unlike the co-payments for the other tiers, health insurance companies are charging an extraordinarily high co-insurance (higher cost for the drug) for *Specialty Tier* medicines. This co-payment/co-insurance is 20-35% of the cost of the drug. Many individuals cannot afford this out-of-pocket expense for their *Specialty Tier* medications. This practice is restricting access to much-needed medications for patients with serious chronic diseases.

Advocates for Responsible Care (ARxC) are leading an initiative to stop the high co-insurance/co-payments for *Specialty Tier* medications in Georgia. We are asking persons who are dependent upon these medications to share with us their stories. We want to know how an increase in the cost of these specialty drugs will affect their illness and their access to these vital medications. We will use these stories to help mobilize a Georgia-wide effort to end the rise in out-of-pocket costs for *Specialty Tier* medications.

If you are dependent upon a *specialty tier* medication please share your story at http://advocatesforresponsiblecare.org/Story_Submission.html.

If you would like to learn more the issue, how you may be affected, and how you can get involved in the movement to stop health insurance providers from increasing the costs for *Specialty Tier* medications please visit our website at http://advocatesforresponsiblecare.org/Specialty_Tiers.html. You can also follow ARxC on Facebook at Advocates for Responsible Care or on twitter @ARxCAdvocates.

The Advocates for Responsible Care empower individuals to achieve their maximum wellness with a strong voice as health care advocates, effectively reducing cultural incompetency and health care delivery disparity.

National Multiple Sclerosis Society

Eliminate Tier IV or Specialty Tiering in Prescription Drug Coverage

Position

Multiple sclerosis (MS) is an often disabling, autoimmune disease affecting the central nervous system. Although there is no cure for MS, appropriate medication can slow the disease progression, reduce the frequency and intensity of flare-ups, and allow people with MS to live active and productive lives.

People with MS depend on access to affordable disease modifying therapies for improving and maintain quality of life. The annual cost of these drugs ranges from $16,500 to more than $30,000. Many are forced to stop their prescribed therapy because they cannot afford the cost-sharing associated with these high prices.

As drug prices climb, health insurance companies, including those administering Medicare Part D plans, address these increasing costs by creating a new cost sharing mechanism within their drug plans. This mechanism, called "specialty tiers," introduces a fourth tier to the traditional three tiered drug formulary structure. The fourth tier is reserved for the most expensive medications such as MS therapies. Instead of companies charging a fixed co-pay for tier IV drugs, patients are responsible for a co-insurance or a percentage (20 to 35 percent or more) of the cost of the tier IV drug. Co-insurance can amount to thousands of dollars in out-of-pocket costs to patients for drugs critical to the treatment of their disease.

Request

The National Multiple Sclerosis Society supports efforts to prohibit the practice of specialty tiering or implementing a tier IV by health insurance companies, including Medicare Part D plans. Such a practice creates a barrier to access of medically necessary medication to improve the quality of life of people with MS and will raise overall health care costs.

Supporting Rationale

National Multiple Sclerosis Society

- Health insurance companies, including those administering Medicare Part D plans, are adopting a new pricing system for expensive drugs. This new system adds a tier IV or a "specialty tier" to the company's traditional three tiered drug plan.

- Rather than charging a fixed co-pay ($10 for generic, $25 for preferred, $50 for non-preferred), companies charge patients a co-insurance or a percentage (20 to 35 percent or more) of the cost of the high-priced drug. Co-insurance can amount to thousands of dollars in out-of-pocket costs to patients for drugs critical to the treatment of their disease.

- The extraordinary disparity in cost-sharing and co-insurance resulting from specialty tiering imposes a significant burden on patients whose health depends on expensive drugs and constitutes an undue and unjust discrimination based on their disease, disability, or condition.

- People with MS depend on disease modifying therapies that range in cost from $16,500 to more than $30,000 annually. With no generic alternative available, a patient's choice is limited to paying significant out-of-pocket costs or not taking their prescribed medication.

- The below chart estimates the monthly cost of four common MS therapies and shows the estimated monthly cost for those who are subject to a tier IV co-insurance.

MS Therapy	Monthly Cost	25% Co-Pay	33% Co-Pay
Avonex	$2,270	$567	$749
Betaseron	2,198	549	725
Copaxone	2,110	527	696
Rebif	2,347	586	775

- If subject to a 25 to 33 percent co-insurance, the medication to treat MS would cost between $525 and $775 out-of-pocket each month. People with MS rely on access to these vital drugs in order to live active and productive lives. These co-insurance rates place a significant barrier to access of these medically necessary drugs.

Senior Vice President

Re: HB 218, Specialty Pharmacy Tiers

Dear Chair Olson, Vice-Chair Johnson, and Members of the Committee,

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you to express our opposition to HB 218, pertaining to specialty pharmacy tiers, in its current form.

HB 218 requires member notification related to cost sharing, deductibles or copayments of pharmaceuticals in certain tiers at least 90 days before the terms apply. This bill imposes a new notification requirement that is duplicative of existing notifications already provided to our members about their coverage and changes to benefits. In addition, this notification requirement is duplicative of a new federal healthcare reform requirement. This additional notification requirement will increase costs and premiums for consumers. It can also create confusion for our members who will receive several notices already provided by Premera, as well as notices required by the healthcare reform requirement.

Regarding notice to members, Premera provides timely information to members and groups about our benefit plans, including pharmacy benefits and cost sharing. Currently, we notify members with this information upon initial plan enrollment and renewal. We also notify members if and when a pharmaceutical tier is added to their current pharmacy benefit plan. If there is a change to the prescription drug formulary that would impact member cost sharing, Premera notifies impacted members by mail 30 days before such changes occur. We also provide a notice 45 days in advance of a premium change.

As part of federal healthcare reform, beginning September 23, 2012, insurers will be required to provide a ***Summary of Benefits and Coverage*** document, inclusive of a specific section on prescription drugs and related cost sharing. This document must be provided during application for individuals and groups, upon renewal, and upon request by the member. A change at mid-year, or more specifically, a change that impacts the information provided in the summary document, triggers a notification requirement to members at least 60-days prior to the effective date of the change. This requirement and mid-year notice will impact all plans: grandfathered and non-grandfathered individual and group coverage as well as self-funded plans.

Because of existing notification requirements and processes and the imminent federal healthcare reform requirement to provide ***Summary of Benefits and Coverage*** information to members and group health plans, we oppose HB 218.

Thank you for your consideration. I would be happy to answer any questions that you may have.

Sincerely,

Jack C. McRae

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

Jack C. McRae
Senior Vice President

February 14, 2012

Representative Wes Keller
State Capitol Room 432
Juneau, Alaska 99801

Re: HB 218, Specialty Pharmacy Tiers

Dear Representative Keller,

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you to express our concerns with HB 218, pertaining to specialty pharmacy tiers.

Premera currently provides notification regarding our policy on cost sharing, deductibles or copayment terms applicable to specialty pharmacy to our members 30 days before the terms apply. To date, we've received no complaints about this approach from members: the 30-day advance notice allows members time to meet with their providers to discuss specialty drug prescription options. Members may face cost sharing changes during the year for different reasons, including a formulary change when a generic drug becomes available. Premera notifies impacted members by mail 30 days before such changes that would impact cost sharing. HB 218 includes a shift to a 90-day notification timeframe. This change will inflate costs for specialty drugs and will increase overall healthcare premiums for Alaskans. If implemented, this change could also impact and raise state employee insurance rates.

Premera Blue Cross Blue Shield of Alaska covers over 70,000 members and provides comprehensive coverage to our members, with the majority of our plans including prescription drug coverage. We currently offer a four-tier pharmacy benefit for our members. Drugs are classified into tiers by an independent committee of experts, including doctors, pharmacists, health economists, a bioethicist and a member representative. This committee continuously reviews new and existing drugs, evaluates how well drugs work, and how their cost and effectiveness compare to similar drugs used for the same condition, then compares how much additional benefit a drug provides to the extra cost in comparison to a standard treatment for the same medical condition.

It is important to note the following for specialty pharmacy:

- The Centers for Medicare and Medicaid Services (CMS) classifies specialty pharmacy as pharmaceuticals often used to treat complex, chronic medical conditions. The drugs have fewer generic alternatives and may require increased physician involvement and special storage and handling.

- The average price of specialty drugs can cost $2,000 - $2,500 for 30-day supply.

- Expenses for drugs are the fastest growing segment of healthcare, with **expenses for specialty drugs growing at the fastest rate in the drug category (15%-20% per year).**

P.O. Box 327
Seattle, WA 98111

tel 425.918.5757
fax 425.918.5635
jack.mcrae@premera.com

www.premera.com

An Independent Licensee of the
Blue Cross Blue Shield Association

- Specialty drugs comprise **more than 16% of total pharmaceutical spending** in the U.S. today. If current trends continue, by 2030, specialty pharmacy costs will exceed $1 trillion/ year and account for as much as 44% of a health plan's total drug expenditures.[1]

- Less than 3% of private health plan members use specialty pharmaceuticals; however, these members account for **25-30% of total private payer medical costs.**

- Medicare first created a specialty drug tier or 4th tier to help manage rising drug costs.

- An insurer's use of drug formulary tiering is an effective cost management tool, for the insurer and for its members and allows insurers to continue to provide access to these critical drugs.

We would oppose any prohibition on specialty drug tiering, including a prohibition on imposing higher cost sharing for specialty drugs.

Thank you for your consideration. I would be happy to answer any questions that you may have.

Sincerely,

Jack C. McRae

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

Jack C. McRae
Senior Vice President

March 13, 2012

Representative Wes Keller
State Capitol Room 432
Juneau, Alaska 99801

Re: HB 218, Specialty Pharmacy Tiers

Dear Representative Keller,

We at Premera Blue Cross Blue Shield of Alaska continue to have concerns with HB 218, pertaining to pharmacy tiers and wanted to make you aware of a requirement in the Affordable Care Act (ACA) that will require specific information about coverage and benefits, including pharmacy benefits, to be provided to members at certain times.

The language of this bill imposes mandatory notification processes on insurers that are duplicative to current processes and new federal reform requirements and further, would add costs and confusion for our members. Specifically, HB 218 requires member notification related to cost sharing, deductibles or copayments of pharmaceuticals in certain tiers at least 90 days in advance of term applicability.

Premera provides timely information to members and groups about our benefit plans, including pharmacy benefits and cost sharing for tiers. Currently, we notify members about this information on an annual basis, upon initial plan enrollment or upon plan renewal. We also notify members if and when a pharmaceutical tier has been added to their current pharmacy benefit plan. Premera notifies impacted members by mail 30 days before such changes that would impact cost sharing.

In addition, as part of healthcare reform under the Affordable Care Act beginning September 23, 2012, insurers will be required to provide a summary of benefits and coverage document, inclusive of a specific section on drugs and cost sharing. This document must be provided during open enrollment periods for individuals and groups. A change at mid-year, or more specifically, a change that impacts the information provided in the summary document, triggers a 60-day notification requirement to members. This requirement will impact all plans: grandfathered and non-grandfathered individual and group coverage as well as self-funded plans.

We wanted you to be aware of this imminent ACA requirement as part of the discussion on HB 218.

Thank you for your consideration. I would be happy to answer any questions that you may have.

Sincerely,

Jack C. McRae

March 15, 2012

Representative Wes Keller, Chair
House Health & Social Services Committee
Alaska State Capitol
Juneau, AK, 99801

Re: House Bill 218: Oppose

Dear Representative Keller:

Medco Health Solutions regrets that it must respectfully oppose House Bill 218 requiring plans to provide 90-day notice of changes in copays/coinsurance for specialty prescription drugs. Medco is the parent company of Accredo Health Group, one of the nation's leading specialty pharmacies. Our clients including public and private payers, union trusts and health plans, rely on us to help manage their specialty drug costs.

According to the Utilization Review Accreditation Committee (URAC), "Specialty drugs or pharmaceuticals usually require special handling, administration, unique inventory management, a high level of patient monitoring and more intense support than conventional therapies. They could include all routes of administration."

Specialty drugs are very expensive, sometimes as much as $10,000/month or more. If a plan changes from a fixed copay for a specialty drug to a percent copay, it is possible that patients will see an increase in their monthly cost. It would be highly unusual for a plan to make this change in the middle of a benefit year. However, as our clients attempt to manage their costs, they may make a change at the start of the benefit year. Plan members are notified in advance of changes in the benefit cost structure. In our experience, usually a plan that goes from a fixed copay to a percentage copay will place a cap on the copay - say $250 per prescription. So, circumstances wherein the cost, for example increases from $100 to $1,000 is extraordinarily rare.

The average cost for a generic Rx at retail is $25.00 and the average copay is about $8.00 or a 34% member cost share. The average cost for a brand at retail is about $150 and the average brand copay is $30.00 or about a 20% member cost share. The average cost for a specialty Rx at retail is between $1,500 & $2,000. Plans generally seek to maintain a 20-25% member cost share in order to help them control costs. If we look into the future we find that by 2013, 80% of prescriptions will be generics and this will represent about 25% of plan costs, 19% of

prescriptions will be for non-specialty brands which will represent about 55% of plan costs, and specialty brands will be about 1% of prescriptions and 20% of plan costs.

Plan sponsors typically provide members with a 30 day notice prior to implementing a benefit change. HB 218 requires plans to provide 90-day notice of changes in the cost sharing requirements for drugs in a specialty tier. In late September, the federal Affordable Care Act will require plans to provide 60 day notice. HB 218 creates a conflicting standard that will create unnecessary duplication and confusion in the marketplace as plans are required to send 90-day and then 60 day notices to patients regarding the same benefit change.

For these reasons, we respectfully must oppose HB 259. Please feel free to contact me with questions.

Sincerely,

CYNTHIA M. LAUBACHER

MEMORANDUM April 9, 2012

SUBJECT: Single subject (Amendment to CSHB 218(L&C), Work Order No. 27-LS0728\D.2)

TO: Representative Wes Keller
Attn: Janet Ogan

FROM: Dennis C. Bailey
Legislative Counsel

You have asked whether amendment 27-LS0728\D.2, which relates to establishing a reinsurance program for residents who are high risk, could be added to CSHB 218(L&C), which relates to insurance for certain specialty drugs, without violating the single subject requirements of art. II, sec. 13 of the Alaska Constitution.

The single subject requirement

Under art. II, sec. 13, Constitution of the State of Alaska, "[e]very bill shall be confined to one subject unless it is an appropriation bill or one codifying, revising, or rearranging existing laws." This provision of the Alaska Constitution is frequently referred to as the "single subject requirement." Each bill may only contain provisions related to the bill's single subject.

The standard adopted by the Alaska Supreme Court in regard to the single subject requirement states that an "act should embrace some one general subject; and by this is meant, merely, that all matters treated of should fall under some one general idea, be so connected with or related to each other, either logically or in popular understanding, as to be part of, or germane to, one general subject." *Gellert v. State*, 522 P.2d 1120, 1123 (Alaska 1974). The Alaska Supreme Court has held that the purpose of this constitutional provision is to guard against legislative log-rolling, "the practice of 'deliberately inserting in one bill several dissimilar or incongruous subjects in order to secure the necessary support for passage of the measure.'" *Evans v. State*, 56 P.3d 1046, 1069 (Alaska 2002), quoting from *Gellert*, *supra* at 1122.

Alaska's single subject rule has been interpreted by the Alaska Supreme Court to permit very broad subject matter in a bill without violating the single subject requirement. In construing the single subject rule, the Court will "resolve doubts in favor of validity" and "in order to warrant the setting aside of enactments for failure to comply, the violation must be substantial and plain." *Suber v. Alaska State Bond Committee*, 414 P.2d 546, 557 (Alaska 1966); see also *Evans* and *Gellert*, *supra*, and *Short v. State*, 600 P.2d 20

(Alaska 1970). Specifically, the Court has held that bills relating to such broad themes as "civil actions," "taxation," "transportation," and "land" are acceptable. *Evans*, 56 P.3d at 1070; *North Slope Borough v. Sohio Petroleum*, 585 P.2d 534, 545 (Alaska 1978); *Yute Air Alaska, Inc. v. McAlpine*, 698 P.2d 1173, 1181 (Alaska 1985); *State v. First National Bank of Anchorage*, 660 P.2d 406 (Alaska 1982).

The single subject rule has been so broadly construed by the Court that the Court itself has expressed misgivings about the construction possibly rendering the rule meaningless. *See Yute Air Alaska, Inc.*, *supra* at 1180 - 1183, and *First National Bank of Anchorage*, *supra* at 414 - 415. However, without this broad construction, "statutes might be restricted unduly in scope and permissible subject matter, thereby multiplying and complicating the number of necessary enactments and their interrelationships." *Gellert*, *supra* at 1122, and quoted by *Galbraith v. State*, 693 P.2d 880, 886 (Alaska App. 1985). The Court appears reluctant to impose a stricter standard. *See Yute Air Alaska, Inc.*, *supra* at 1180 - 1181. But, the single subject rule is still of concern at least in obvious cases. *See Croft v. Parnell*, 236 P.3d 369 (Alaska 2010) (initiative proposing new oil production tax and new "clean elections" program violated the single-subject rule).

Conclusion

Under the Alaska Supreme Court's liberal interpretation of the rule, in my opinion, a court would find that the subject of the amendment, which relates to reinsurance for high risk residents, and CSHB 218(L&C), which relates to insurance for specialty tiers of prescription drugs, both address the single subject of "insurance."

Please be aware that because the house bill is now in the senate and the amendment requires a title change, a concurrent resolution suspending the rules must be approved in order to amend the bill.

If I may be of further assistance, please advise.

Senator Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

RE: Support for Children's Reinsurance Program

Dear Senator Davis,

On behalf of the Alaska Comprehensive Health Insurance Association (ACHIA), we are asking for your support for the establishment of children's reinsurance program which would provide access to health insurance coverage for children under the age of 19.

The ACHIA Board and the Division of Insurance have been wrestling with the fact that there are no child-only health insurance policies available in Alaska's insurance market today. Other states are facing the same issue. This problem has arisen, in part, as a result of the federal healthcare reform law. We have developed a solution to this problem and would like the opportunity to present it to the Senate Health and Social Services Committee. The solution would take the form of an amendment that we hope the Committee would consider with favorable action. We have identified a "vehicle" which is currently in the Committee that could serve as a "carrier" of this amendment. We have obtained the permission of the sponsor of the "vehicle" to attach our amendment to the bill, and all we need is an opportunity to present this amendment to the Committee. Finally, the Division of Insurance supports the amendment.

Given that there are no child-only health insurance policies available for purchase in the state, the ACHIA Board believes this situation needs to be changed. Allowing ACHIA to take on the reinsurance function is a simple, proven solution.

A children's reinsurance program would allow insurers to offer individual policies to children throughout the year by spreading the risk of enrolling high cost children across the entire commercial market. The proposed approach also provides premium stability for individuals and families in Alaska. If this amendment is passed, insurance companies in Alaska will be able to immediately start selling child-only policies.

The ACHIA Board sees an unmet need with respect to children being able to obtain coverage in the individual marketplace, but current Alaska statutes which govern ACHIA do not allow ACHIA to help remedy the problem. The proposal before you would allow ACHIA to fulfill this role, under the direction of the Division of Insurance. On behalf of the ACHIA Board, we are committed to working with the Legislature, state agencies, and insurers in Alaska to establish this program to benefit the youngest residents.

Thank you for your consideration of this proposal which will provide immediate and year-round access to health coverage for children in Alaska.

Sincerely,

Cecil D. Bykerk, FSA, MAAA
Executive Director
Alaska Comprehensive Health Insurance Association (ACHIA)

HB 310

<TARGET><BILL>HB 310</BILL><SUBJECT>HB 310</SUBJECT><COMM>SHSS27</COMM></TARGET>

ALASKA STATE LEGISLATURE
Representative Bob Herron

Official Business

State Capitol
Juneau, Alaska
99801-1182

CS HB 310 (FIN) – State Immunization Program

"An Act temporarily reinstating the child and adult immunization program in the Department of Health and Social Services; and providing for an effective date."

Version 27-LS1273\I
Staff Contact: Liz Clement 465-6576

SPONSOR STATEMENT

HB 310 is a temporary measure to reinstate the Alaska Immunization Program (AIP), which supplies vaccinations to uninsured and underinsured Alaskans to effectively limit the occurrence of vaccine-preventable diseases in Alaska, to its former level of coverage. Without the protection these vaccines provide, Alaska communities are vulnerable.

For decades, Federal funding ensured the AIP could make preventative vaccines accessible to all Alaskans desiring them. But that funding has seen a sharp downturn – from $4.3 Million in FY2010, to a mere $700 thousand in FY2013. These reductions have cut the number of vaccines available to children, and completely discontinued offerings for adults.

Preventative vaccines control diseases such as whooping cough, lockjaw, pneumonia, meningitis, polio, and others – silently saving lives every day. Prevention, generally, is key – and by far the most cost-effective way to address health issues. If we do not prevent, we will have to treat, at far greater human and financial cost.

HB 310 makes no changes to the historically Federally funded program, and existing exemption policies for medical and religious reasons will continue.

HB 310 temporarily substitutes state funding for the decrease in federal funding to AIP, through FY2015, while we seek a more permanent solution. It preserves Alaskans' ability to choose for themselves, while providing a humane and business-smart solution to the growing problem of unnecessary disease wracking our communities.

Please join me in support of HB 310.

CS HB 310 (FIN) – State Immunization Program

Version 27-LS0147\I
Staff Contact: Liz Clement 465-6576

SECTIONAL SUMMARY

Section 1. Gives legislative intent that the Alaska Immunization Program be reinstated as it existed in the state in 2009, before the loss of significant federal funds. States that the program exists to make preventive vaccines available to underinsured children, as well as uninsured and underinsured adults.

Sections 2. Establishes a child and adult immunization program in the Department of Health and Social services, and requires the department to determine eligibility, adopt regulations, and apply for available funds. Also establishes standards for provider and recipient participation in the program and types of vaccinations covered.

Section 3. Authorizes the Department of Health and Social Services to adopt regulations governing administration of the program.

Section 4. Sets a repeal date for the program: June 30, 2015.

Section 5. Sets an immediate effective date.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

Bill Version: **CSHB 310(FIN)**
Fiscal Note Number: **2**

(discuss reasons and fund source(s) in analysis section)

Why this fiscal note differs from previous version (if initial version, please note as such)

The CS (FIN) version I amends Section 2, subsections (f), (g) & (h). Sec. (f)(1) adds meningococcal and rotavirus vaccines for children. Sec. (f)(2) adds zoster vaccine for adults. Sec. (g)(2) allows vaccines to be subtracted if the disease is eradicated or high-grade scientific evidence indicates it will result in optimal efficacy and efficiency. Sec. (h) adds a new section stating procurement is subject to available funding. The changes in this CS will reduce the risk of additional disease outbreaks for more preventable diseases. The changes increase the fiscal note by $1,596.0 but otherwise have no significant operational impact.

(Revised 1/17/2012 OMB)

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSHB 310(FIN)

Analysis

This CS (FIN) requires the Department of Health and Social Services to establish an immunization program that would purchase and distribute recommended vaccines to children and adults who do not have coverage elsewhere. The intent is to restore funding to the 2009 level before federal cuts were implemented. Limited vaccine funding for this population is available through Section 317 of the U.S. Public Health Service Act ("317") and administered by the Centers for Disease Control and Prevention. Funding has been cut 84% from $4.3 million in 2010 to $700 thousand in 2013. As a result, by January 2012, the Immunization Program has stopped supplying all adult vaccines and select childhood vaccines: influenza, pneumoccocal, rotavirus, human papillomavirus, and meningococcal.

This CS (FIN) has an immediate effective date. It is assumed that the program is implemented on July 1, 2012. Currently the department has regulations in place to implement this program immediately. These are all vaccines the department has provided in the past and the infrastructure is still in place. The fiscal note does not involve any administrative costs because they are already in the base budget. This bill has a sunset date of June 30, 2015.

This CS (FIN) would provide vaccine to enrolled providers for an estimated 47,000 underinsured children under the age of 19 years and about 110,000 doses of vaccines to underinsured and uninsured adults that reside in Alaska. Underinsured children under the age of 19 years would receive vaccines required for school attendance, plus meningococcal, influenza, pneumococcal, and rotavirus vaccines. Underinsured or uninsured adults age 19 years and older would receive influenza, pneumococcal, tetanus/diptheria/pertussis (Tdap), and zoster (shingles) vaccines. The Commissioner may add vaccines based on federal Advisory Committee on Immunization Practices' recommendations and available funding. Vaccines may be dropped if the disease has been declared eradicated by the Centers for Disease Control and Prevention or the commissioner finds that available high-grade scientific evidence indicates that subtracting the vaccine results in optimal efficacy and efficiency. The procurement of vaccines is subject to available funding.

Projected costs of selected vaccines for the total eligible population are based on the CDC's forecasting model and state and national immunization data. An 80% immunization rate is assumed for most vaccines (the recommended level to maintain immunity at the community level). The estimated annual cost of the vaccines (2013 prices) are below.

Vaccines required for school attendance: $1,400.0;
Pneumococcal vaccine for infants: $1,250.0;
Influenza vaccine annually for ages 6 months to 18 years: $300.0;
Rotavirus vaccine for infants: $ 409.0;
Meningococcal vaccine for adolescents: $207.0;
Pnuemococcal vaccine for adults ages 50 years and older: $250.0;
Influenza vaccine annually for adults ages 19 years and older: $400.0;
Tdap vaccine for adults ages 19 years and older: $700.0;
Zoster vaccine for adults ages 50 years and older (4% immunization rate): $980.0

The fiscal note takes into account funds the department assumes it will have to apply toward this vaccine program. The total cost to operate the program is estimated at $5,896.0. The Division of Public Health's base budget for immunizations includes $700.0 of the Federal "317" funds. The FY2013 Governor's Budget request also includes an increment for $700.0 ($630.0 GF, $70.0 Fed). The remaining $4,496.0 GF is requested in this fiscal note.

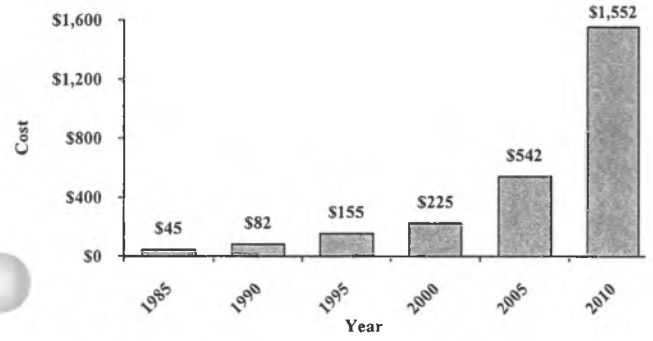
Bulletin No. 31 October 6, 2010

Only Pediatric/Adolescent Vaccines to be Supplied by State Beginning in 2011

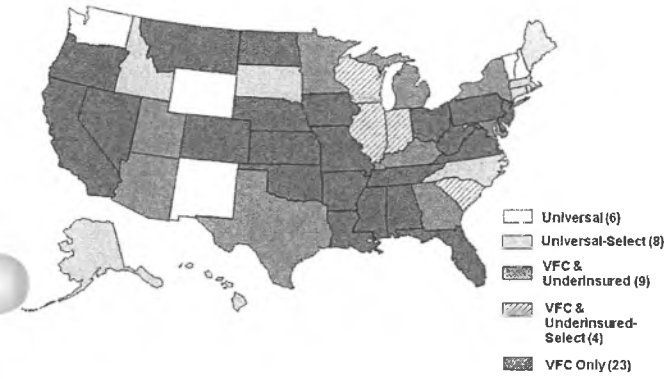
For over 30 years the Alaska Immunization Program maintained a "universal" vaccine program, distributing at no cost all Advisory Committee on Immunization Practices (ACIP)-recommended pediatric and selected adult vaccines to public and private providers in Alaska. This vaccine distribution has been supported almost entirely with two sources of federal funding. The *Vaccines for Children (VFC) Program* pays for vaccines for children who meet certain federal criteria. *Section 317 of the U.S. Public Health Service Act (317)* covers the cost of vaccines for the approximately one-third of Alaska children who are not VFC-eligible, as well as adult vaccines. As a federal entitlement program, VFC funding increases to support newly recommended vaccines for children; however, 317 funding has not kept pace with rapidly rising vaccine costs, which have risen almost seven-fold in the last 10 years (Figure 1).

Figure 1: Alaska Immunization Program Estimated Cost to Purchase Recommended Vaccines for One Child from their Year of Birth through Age 18 Years, for Selected Years from 1985 through 2010



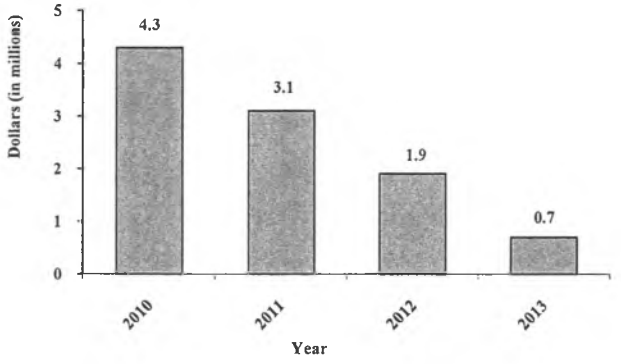
The rising cost and growing number of recommended vaccines has made it increasingly challenging for Alaska to maintain its vaccine distribution policy; however, these challenges are not unique to Alaska. Almost one-half (23/50) of U.S. states supply vaccines only for VFC-eligible children, i.e., vaccines are not supplied for children who do not meet program eligibility criteria or for adults. Other state vaccine supply policies include *universal purchase* (all vaccines for all children), *universal purchase select* (vaccines for all children except selected expensive vaccines available for VFC-eligibles only), and *VFC and underinsured* and *VFC and underinsured select* (varying levels of coverage for underinsured children) (Figure 2).

Figure 2: Public Purchase Pediatric Vaccine Supply Policy — United States, July 2010[1]



Alaska's vaccine purchases are supported almost entirely with funding from the U.S. Centers for Disease Control and Prevention (CDC). In 2008, CDC informed Alaska that the state had been of pediatric vaccines. In 2007, the Immunization Program discontinued shipments of adult influenza vaccine to private providers. In January 2009, the state limited the provision of human papillomavirus (HPV) and meningococcal conjugate vaccines to children who met the federal eligibility requirements of the Vaccines for Children (VFC) Program.[2] These program modifications helped trim vaccine costs by more than $2 million per year. However, CDC has notified Alaska that, beginning in 2011, the state's 317 vaccine dollars will be reduced by ~$1.2 million for each of the next 3 years, at which time Alaska's funding will be proportionate to that received by other immunization programs in the United States (Figure 3). Therefore, a change in Alaska's vaccine supply policy is necessary (Box).

Figure 3: Projected 317 Vaccine Funding for Alaska, 2010–2013



Box. The Alaska Immunization Program's 2011 Vaccine Supply Policy

Due to the increased cost of vaccines and federal 317 funding cuts, the following Alaska Immunization Program vaccine supply policy will become effective on **January 1, 2011**:

- All ACIP-recommended pediatric vaccines except HPV and MCV4 will continue to be supplied for all children through age 18 years. HPV and MCV4 will continue to be available for VFC-eligible children only.
- **Adult vaccines that historically have been provided by the Alaska Immunization Program (i.e., influenza, pneumococcal, tetanus/diphtheria) will no longer be supplied to public or private sector providers.**

Alternate Resources Available for Adult Vaccines

Private insurance policies and Medicare frequently support the cost of adult vaccines. Resource information related to Medicare billing and other potential funding sources is posted on the Section of Epidemiology website.[3] Manufacturer contact information for vaccine ordering also is included.

Conclusion

Although the Alaska Immunization Program regrets this policy change for adult vaccines, we are pleased that we can continue to provide pediatric vaccines at the current level throughout 2011. As the state's 317 funding levels continue to decrease over the next 3 years, this pediatric policy may need to be reconsidered. We will also continue to monitor the implementation of the Patient Protection and Affordable Care Act to determine its potential impact on vaccine funding in the future. To the greatest extent possible, we will continue our commitment to eliminate vaccine-preventable diseases in Alaska's children.

Bulletin No. 28 October 19, 2011

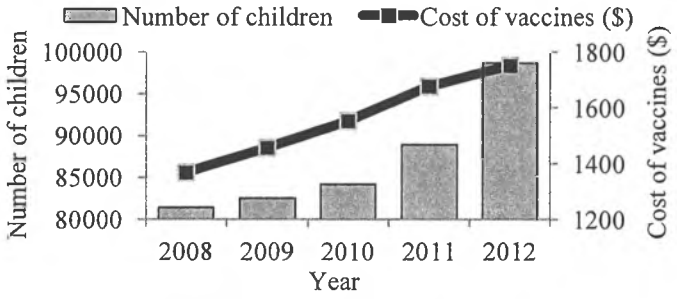
Further Cuts in State-Provided Vaccines for VFC-Ineligible Children in 2012

Background

In Alaska, state-supplied childhood vaccines are funded almost entirely through two federal funding sources. The primary source is the *Vaccines for Children (VFC) Program*, which pays for all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines for children who are Medicaid eligible, American Indian/Alaska Native, and uninsured. Underinsured children (i.e., children with private health insurance that covers no or only selected vaccines, or caps vaccine coverage at a certain amount) are also eligible to receive VFC vaccine, but only if they are seen at a specified Rural Health Clinic (RHC) or at a Federally Qualified Health Center (FQHC). FQHCs are health centers designated by the federal Health Resources and Services Administration to provide health care to medically underserved populations.

The second funding source is *Section 317 of the U.S. Public Health Service Act (317),* which provides limited vaccine funding for VFC-ineligible persons (i.e., adults, fully insured children, and underinsured children who are not seen at a FQHC or a RHC). The number of VFC-ineligible children in Alaska is increasing steadily, as is the cost to fully vaccinate a child through age 18 years (Figure).[1,2] Of the estimated 98,689 Alaska children who will be VFC-ineligible in 2012, 46,884 (48%) will be underinsured.[1]

Figure. Number of VFC-Ineligible Children and Estimated Cost of Recommended Vaccines for One Child from Birth through Age 18 Years — Alaska, 2008–2012



On October 6, 2010, the Section of Epidemiology (SOE) published a *Bulletin* describing a $1.2 million annual decrease in Alaska's 317 federal funding for 3 years starting in 2011 (from $4.3 million in 2010 to $700,000 in 2013).[3] The rationale for the cuts was that Alaska had been "significantly overfunded" relative to other state immunization programs for many years and, due to budgetary constraints, the U.S. Centers for Disease Control and Prevention (CDC) was no longer able to support Alaska's universal immunization program.[3]

In order to absorb this enormous reduction in 317 funding, the Alaska Immunization Program has implemented mitigation measures over the past 2 years, including the following:

- Discontinuation of 317-funded adult vaccines;[3]
- Discontinuation of 317-funded meningococcal (MCV4) and human papillomavirus (HPV) vaccine for VFC-ineligible children;[3]
- Requiring dose-level accountability for state-supplied vaccine;[4] and
- Educating providers on ways to reduce vaccine wastage.[5]

In addition to HPV and MCV4, the following three vaccines will no longer be supplied by the state for VFC-ineligible children: as of January 2012, *pneumococcal conjugate (PCV 13) and rotavirus*; as of July 2012, *influenza* (Table).

Table. State-Supplied Vaccines that will be Available to VFC-Ineligible Children in Alaska in 2012

ACIP Recommended Childhood Vaccines	Estimated Cost of Vaccines for VFC-Ineligible Children in 2012	State-Supplied Vaccines Available in 2012 to VFC-Ineligible Children
DTaP	$234,038	Available
Hepatitis A	$177,755	Available
Hepatitis B	$106,463	Available
Hib	$137,498	Available
HPV	$350,307	Not available *(as of 1/09)*
Influenza	$371,881	Not available *(as of 7/12)*
MCV4	$256,695	Not available *(as of 1/09)*
MMR	$143,497	Available
PCV 13	$1,655,175	Not available *(as of 1/12)*
Polio	$152,783	Available
Rotavirus	$530,870	Not available *(as of 1/12)*
Td/Tdap	$132,449	Available
Varicella	$779,434	Available
Total Cost	**$5,028,845**	**$1,863,917** (for available vaccines)

Some Good News

In the near future, public health centers statewide will be able to provide VFC-funded vaccines to underinsured children.

Here's how: FQHCs are allowed to vaccinate underinsured children using VFC vaccine. Additionally, FQHCs are allowed to delegate their authority to (i.e., deputize) public health VFC providers (e.g., public health centers and local health departments) to vaccinate underinsured children on their behalf. On September 23, 2011, the Anchorage Neighborhood Health Center (an FQHC) signed a memorandum of agreement with SOE that authorizes the Alaska Immunization Program to administer delegation of authority to SOA public health centers statewide to vaccinate underinsured children using VFC vaccine. PHCs will implement this authority as soon as possible.

Recommendations

1. Health care providers *must screen all children for VFC-eligibility at each visit* prior to administering state-supplied vaccine;[6] VFC-ineligible children may only receive select state-supplied vaccines (Table).
2. Underinsured children may be referred to an FQHC, RHC, or public health center where they are eligible to receive all ACIP-recommended vaccines for free under the VFC Program.
3. Manufacturer contact information for vaccine ordering is posted on the SOE website to assist providers in purchasing vaccines for VFC-ineligible children.[7]

6. Immunization against Vaccine-Preventable Disease

Findings

- Until the mid-20th century infectious diseases were a leading cause of illness, disability and death in Alaska. Few effective treatment and preventive measures existed. Since that time there has been a dramatic decline in the burden of infectious disease in the population due to significant achievements in control measures, especially for those diseases for which vaccines have been developed.

- During the 20th century the success of biomedical science in development of vaccines combined with the success of the public health system in immunizing the population led to the eradication of smallpox from the worldwide population and the elimination of polio from the U.S. population. Furthermore, immunizations have resulted in substantial declines in other diseases that had previously been a common cause of serious illness and death among children, such as measles, mumps, rubella, diphtheria, tetanus, pertussis, and bacterial meningitis.

- Despite remarkable progress in vaccine development and use, there are a number of challenges in maintaining sufficient immunization levels to protect the population.
    - Vaccination schedules have become increasingly complex. U.S. children require 19 doses of vaccine by age 35 months to be protected against 11 childhood diseases.
    - The success of immunization policies in controlling once-dreaded diseases has led to complacency among some subsets of the population toward vaccines.
    - Insufficient and erroneous information about vaccine safety and effectiveness creates confusion among parents, who must recognize immunizations as an important tool in protecting their children's health and actively seek them.
    - Health care providers must be kept informed of the latest developments and recommendations.
    - Vaccine supplies and financing must be made more secure.
    - Researchers must address increasingly more complex questions about safety, efficacy, indications, contraindications, and delivery.
    - Information technology must be used to support timely vaccination.
    - Adolescents and adults must be targeted for vaccine-preventable diseases that affect their age groups, such as influenza and pneumonia.

- Alaska's childhood immunization rate has declined in recent years to nearly the lowest in the nation. Alaska's rate of immunization completion for children ages 19 months to 35 months was just 56.6% in 2009, compared to the national average of 70.5%, ranking Alaska 49th among the 50 states and leaving Alaska's children vulnerable to preventable diseases that can result in serious complications, preventable hospitalizations, and in some cases death.

- The Alaska Division of Public Health, Department of Health & Social Services, maintained a "universal vaccine program" (providing all recommended childhood and adult vaccines to public and private health care providers in the state) for over three decades. The vaccine program was supported almost entirely with federal funding from two different sources, one of which is reducing its annual allocation to Alaska by $3.6 million in a phased 3-year reduction starting in FFY 11.

- As a result of the loss of funding the state discontinued provision of all adult vaccine and of human papillomavirus and meningococcal vaccines for children in FFY 11, and will no longer provide the following childhood vaccines for children who are not eligible for the Vaccines for Children Program ("VFC"; a program for children who are American Indian/Alaska Native, on Medicaid, or uninsured) beginning in FFY 12: influenza, pneumococcal conjugate, and rotavirus.
- Elimination of the universal vaccine program is expected to have the following consequences:
    - Reduction in the number of small private medical practices that provide vaccine to their patients due to the complexities of maintaining separate vaccine supplies (per VFC administrative requirements), and the cost of up-front purchase of expensive vaccine;
    - Reduced immunization coverage leading to increased risk of vaccine-preventable diseases such as measles, mumps, pertussis, chicken pox and hepatitis A; and,
    - Inability to maintain a stockpile of vaccine to support timely response to outbreaks of vaccine-preventable disease.

Recommendations

- The Alaska Health Care Commission recommends the State of Alaska ensure the state's immunization program is adequately funded and supported, and that health care providers give priority to improving immunization rates in order to protect Alaskans from serious preventable diseases and their complications.

February 10, 2012

RE: Letter of Support, House Bill 310

As a long-time Alaska pediatrician I am writing in support of House Bill 310 to temporarily reinstate the child and adult immunization program.

For over 30 years, the Alaska Department of Health and Social Services Immunization Program had a "universal" vaccine program – distributing all recommended childhood and adult vaccines to public and private providers in Alaska. These vaccines were supported almost entirely with 2 sources of federal funding. Vaccines for Children (VFC) Program (an entitlement program) pays for children who meet federal criteria; and Section 317 of the U.S. Public Health Service Act covered the cost for children not VFC-eligible and adult vaccines. In 2008, the federal government notified the State that the State had been "overfunded" with 317 funding compared with other states and that Centers for Disease Control would be decreasing the Section 317 funding to the State during 2010 to 2013 from $4.3 million to $0.7 million. Therefore, Alaska is losing $3.5 million dollars in federal funding for critical vaccines between 2010 and 2013.

This staged funding decrease started in 2011 –

- In 2011 the State stopped providing any adult vaccine.
- In 2012, the State Immunization Program will no longer provide the following childhood vaccines to non-VFC eligible children: *influenza, pneumococcal conjugate, rotavirus, and varicella.*
- In 2013, the State Immunization Program will no longer provide any vaccines except for VFC eligible children.

Why should we be concerned?

1. When faced with the complexities of maintaining two separate vaccine supplies for VFC and non-VFC eligible children, as well as fronting the cost for expensive vaccines, many small medical practices will stop providing vaccines to their patients.
2. This decrease in provision of vaccines will result in a critical decrease in immunization coverage (proportion of vaccinated children) in children, leading to increased risk of outbreaks from diseases like measles, mumps, pertussis, chicken pox and hepatitis A. Vaccines are cost saving. Alaska cannot afford further downward trend in coverage – in 2009 our 2 year old vaccination rate was 49th in the nation.
3. The State could be left without an adequate vaccine supply and infrastructure to allow for timely response to outbreaks of measles, mumps, hepatitis A, pertussis, if such outbreaks were to occur in Alaska.

House Bill 310 is a stop-gap measure to fill the gap left by the reduction in federal funding and reinstate the Alaska Immunization Program's ability to provide vaccine for under-insured and uninsured Alaskans currently not covered by other programs. I urge Alaskans to support this bill.

Sincerely,

Rosalyn Singleton

December 1, 2011

Dear Ms. Erickson,

As a pediatrician in a small, solo practice, I am writing to voice my support for the Alaska Health Care Commission's recommendation that the Alaska legislature fully fund the immunization and vaccine program.

Changes in funding will lead to small practices like my own being unable to provide vaccine for our patients. I have estimated the costs for the first year to be equivalent to hiring another full-time employee. But, even more importantly, ethically, I feel medical practices should try to provide vaccines to their pediatric patients. This is part of the "medical home" model which we are being encouraged to follow, which is associated with better outcomes for children. If patients have to go to another clinic for their vaccines, some of them will forget or "be too busy". The end result will be a less immune set of children, more susceptible to infectious diseases that should be things of the past. The recent pertussis outbreak in California (10,000 case, 10 deaths) stands as a warning for what Alaska could be facing. The treatment of these diseases is much more expensive than their prevention by vaccination. At a time when Alaska is ranked 49th in vaccination rates among the United States, we really cannot afford this short-sighted approach.

Sincerely yours,

Mary Ann Jacob, M.D., F.A.A.P.

February 27, 2012

The Honorable Wes Keller, Chair
The Honorable Alan Dick, Chair
House Health & Social Services Committee
Alaska State Capitol, Rooms 432 & 104
Juneau, AK 99801-1182

Subject: Support for HB 310, Temporary Reinstatement of the Child and Adult Immunization Program

Dear Chair Keller and Chair Dick:
The Alaska Commission on Aging (ACoA) supports passage of HB 310, a bill to re-establish and fund the child and adult immunization program as it existed in 2009 targeting children and adults who are uninsured and underinsured. This legislation is authored by Representative Herron and co-sponsored by Representatives Wilson, Costello, Gruenberg, Edgmon, and Holmes.

Preventive services, such as immunizations, are important tools for maintaining the health of all Alaskans at every stage of life. Immune systems weaken with age, which place older people at greater risk for severe illness from influenza and pneumonia. The U.S. Preventive Services Task Force (2011) recommends influenza and pneumococcal vaccinations for persons age 65 and older. The Alaska Behavior Risk Factor Surveillance System (BRFSS 2011) reports underutilization of these vaccines by seniors with more than 36 percent reporting not receiving a flu shot within the past year and 33.5 percent having never received a pneumonia vaccination. Older adults who receive immunizations from providers who do not accept Medicare reimbursement and seniors who have not contributed to Medicare would not be eligible for free immunizations, which may explain some of the underutilization by the senior population of these vaccines. In addition, seniors ages 60 to 64 who are not eligible for Medicare and are low-income, uninsured or unemployed may find the cost of obtaining flu and pneumonia vaccines prohibitive. For these reasons, HB 310 will help increase senior access to immunizations.

A growing number of Alaska seniors are grandparents raising their grandchildren on a fixed income with limited insurance coverage. They desire healthy grandchildren who have access to the recommended immunizations recognized by public health standards. Medicare does not cover the cost of childhood immunizations. Rather than seeing their grandchildren go without immunizations, which are required for admission to public schools, many grandparents will make personal and financial sacrifices to insure their grandchildren receive the recommended immunizations.

Although not on the list of select immunizations, the ACoA recommends consideration of the shingles vaccine as a qualified immunization targeting low-income uninsured/underinsured older adults. Shingles most often strikes older people, particularly those with weakened immune systems. Shingles, caused by the varicella zoster (or the "chicken pox" virus on first infection), is a debilitating and painful rash that can be accompanied by irritation and nerve inflammation. The Centers for Disease Control and Prevention recommends the vaccine for all people over the age of 60. The shingles vaccine has been shown effective in reducing the number of outbreaks by 55 percent in a recent study of 300,000 elderly patients however it is used by only 11 percent of the older adult population. While Medicare and most insurance plans cover the cost of the vaccination, some seniors may need to pay deductibles, co-pay expenses, or the full cost of the vaccine if their provider does not accept Medicare

reimbursement. These additional costs are believed to be contributing to the underutilization of the shingles vaccine by seniors.

The ACoA supports HB 310 as a temporary measure to ensure that select vaccines are made available to underinsured and uninsured Alaskans of all ages. We appreciate your consideration and support of this legislation. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello

The Honorable Wes Keller, Co-Chair
House Health and Social Services Committee
Alaska Capitol, Room 432
Juneau, AK 99801-1182

RE: HB 310 (Herron)—Support
State Immunization Program

Dear Chair Keller:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support HB 310, authored by your Committee colleague Representative Bob Herron and co-sponsored by Representatives Peggy Wilson, Mia Costello, Max Gruenberg, Bryce Edgmon, and Lindsey Holmes.

In the past, Alaska and Alaskans of all ages have benefited from a comprehensive vaccination program primarily funded by the federal government. HB 310 would provide state funding to make up the shortfall on a temporary basis.

From the standpoint of older citizens, AARP recognizes that providing free vaccines for influenza, pneumonia, and TDaP to adults is a good effective public health measure.

From the standpoint of grandparents, AARP members recognize that restoring the thirteen previously covered vaccines for children is an excellent decision for our state leadership to make.

According to the Vaccine Research Group at the Mayo Clinic, 50,000 to 70,000 Americans die each year from diseases that could be prevented by vaccines.

Vaccine-preventable diseases have many costs, both economical and social. Parents who need to stay home to take care of sick children lose time from work. Preventable diseases also result in more physician visits, hospitalizations and even death. Vaccinations work. Think of the savings for Medicaid and PERS and TRS if we can restore the vaccination program and prevent costly illnesses.

Vaccines are like seat belts. We wear them to prevent injury or death if someone decides to run a red light. We still need to have vaccines available to prevent injury or death from bacteria and viruses that exist and can still be passed on to us.

AARP requests an "AYE" vote on HB 310.

Jennie Chin Hansen, President
Addison Barry Rand, Chief Executive Officer

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

PROVIDENCE
Alaska
Medical Center

February 28, 2012

The Honorable Bob Herron
Alaska State House of Representatives
State Capitol, Room 411
Juneau, AK 99801

Dear Representative Herron:

As physician leaders of Providence Health and Services, Alaska's largest health system, we write today to thank you for introducing HB 310, and offer our strong support for this legislation.

We recognize the individual and public health consequences of unchecked infectious disease and believe that HB 310, with the goal of temporarily reinstating funding through the Department of Health and Social Services for adult and child immunizations is a positive step. Providence believes it is our heritage and responsibility to advocate specifically for our state's most vulnerable population; our children.

Thank you again for introducing this legislation and thank you too for your work on behalf our public's health.

Sincerely,

Richard Mandsager, MD
CEO, Providence Alaska Medical Center

RE: Support for House Bill 310 pending in the Senate Finance Committee

Dear Representative Herron:

We are writing to you to express the support of March of Dimes for **House Bill 310.** Historically, the March of Dimes has been centrally involved in immunization issues as the organization was founded in 1938 with the mission to prevent polio.

The March of Dimes supports ongoing efforts to increase immunization rates so that children are protected from vaccine-preventable diseases to assure that such diseases of the past do not return. In our view, the nation should pursue the goals that all eligible children complete the recommended series of immunizations, and that no family face financial barriers to obtaining full immunization for their children.

House Bill 310 intends to reinstate the immunization program as it existed and was administered by the Department of Health and Social Services in 2009 by providing additional state funding and authorization to fill the gap left by a reduction in federal funding for immunization.

Childhood immunizations are among the most cost-effective preventive health measures known:

- Every dollar invested in immunizing a child fully saves $16.50 in medical and societal costs.
- Every dollar invested in varicella (chicken pox) vaccine saves $4.37 in direct medical costs and other societal costs.

March of Dimes is a leading nonprofit organization for maternal, infant and child health. With chapters nationwide and its premier event, March for Babies, March of Dimes works to improve the health of women, infants and children. **We urge you bring House Bill 310 before the Senate Finance Committee for a vote and to ensure passage of this important piece of legislation.**

Sincerely,

Janie Odgers
State Director

Cherie Curry
Public Affairs Chair

PREMERA | BLUE CROSS BLUE SHIELD OF ALASKA

February 10, 2012

Jack C. McRae
Senior Vice President

Representative Bob Herron
State Capitol Room 411
Juneau, Alaska 99801

Re: HB 310, Temporary Child and Adult Immunization Program

Dear Representative Herron,

I am writing in support of House Bill 310, which seeks to *temporarily reinstate* the child and adult immunization program in the Department of Health and Social Services.

As one of the largest healthcare insurers in Alaska, Premera Blue Cross Blue Shield of Alaska provides comprehensive, tailored services to our members, including innovative programs focused on wellness and prevention. We agree with you that prevention is important in ensuring a healthier future for Alaskans. Our plans echo that sentiment: Premera currently covers all CDC recommended vaccinations for members under age 19 and certain vaccines for adults. This is provided without cost sharing.

We believe HB 310 and its temporary establishment of a state-funded immunization program is a good approach to the process of determining a permanent solution to the gap in federal funding for vaccinations that Alaska is experiencing. Other states have also realized a decrease in federal Vaccines for Children (VFC) and Section 317 funding and have created innovative, durable solutions to this funding gap to sustain full vaccination program financing. We look forward to working with you, the Department of Health and Social Services, in conjunction with the Alaska Health Care Commission, on developing a sustainable solution for the State that takes into account Alaska's needs and financial constraints.

In the meantime, we believe that the approach outlined in HB 310, to put in place a temporary, state-funded solution to vaccination access for children and adults in Alaska, is financially sensible and offers the state ample time to develop a carefully planned, fairly funded and permanent program.

Thank you for your time and consideration and please give either myself or Jerry Reinwand (907/586-8966), our lobbyist in Juneau, a call if you have any questions pertaining to this letter.

Sincerely,

Jack C. McRae

ALASKA
PRIMARY CARE ASSOCIATION
supporting Alaskans' health care homes

4/2/12

Marilyn Kasmar, CEO
Alaska Primary Care Association
903 W. Northern Lights Blvd., Suite 200
Anchorage, Alaska 99503
907-929-2722
Marilyn@alaskapca.org

Dear Members of the House and Senate Committees:

I am writing in support of HB 310. The Alaska Primary Care Association represents the 143 (and growing) clinics operated by our 25 Community Health Center organizations. As such, we understand the vital importance of vaccination to Alaska's public health. There are immunizations available for many potentially deadly diseases, and it is disheartening to see that some Alaskans will not have access to the vaccines they need to stay healthy because the Alaska Immunization Program is no longer adequately funded.

While only temporary, this bill helps ensure that Alaskans of all ages will have access to the vaccinations they need to remain healthy. It also provides ample time for all parties to come together and work towards a more permanent solution.

The health of Alaskans and their families is an important issue, and HB 310 helps address a growing problem. I urge your support.

Sincerely,

Marilyn Kasmar, CEO
Alaska Primary Care Association

Sponsor Statement

HCR: Pancreatic Cancer Awareness Month

Over 43,000 people were diagnosed with pancreatic cancer in the United States (US) in 2010. Almost 37,000 will die from the disease. Pancreatic cancer is the fourth leading cause of cancer death in the US and ranks as one of the deadliest cancers with no real improvement in survival rates in the last 40 years. Three-fourths of pancreatic cancer patients die within one year of diagnosis; this is because by the time symptoms of pancreatic cancer first appear, it is usually too late for an optimistic prognosis. All of this while only receiving 2% of the National Cancer Institute's federal research funding.

The Pancreatic Cancer Action Network (PANCAN) is the first and only national patient advocacy organization to serve the pancreatic cancer community in Alaska. PANCAN focuses their efforts on public policy, research funding, patient services, and public awareness and education related to developing effective treatments and finding a cure for pancreatic cancer. The Alaska Bureau of Vital Statistics reported 158 Alaskan deaths from pancreatic cancer during 2006-2008.

Increasing awareness will lead to expanded research into locating the disease's causes, enhancing early detection, and developing effective treatments. Raised awareness will also lead to more knowledge about pancreatic cancer among Alaskans and directly enhance the good health and well-being of our state's residents.

FISCAL NOTE #1

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHCR 1(HSS)

Analysis

This fiscal note has zero impact on the Legislative Affairs Agency.

- An estimated 43,140 Americans will be diagnosed with pancreatic cancer in the U.S., and over 36,800 will die from the disease.
- Pancreatic cancer is one of the few cancers for which survival has not improved substantially over nearly 40 years.
- Pancreatic cancer is the 4th leading cause of cancer-related death in the United States.
- Pancreatic cancer has the highest mortality rate of all major cancers. 94% of pancreatic cancer patients will die within five years of diagnosis – only 6% will survive more than five years. 75% of patients die within the first year of diagnosis.
- The average life expectancy after diagnosis with metastatic disease is just three to six months.
- Few risk factors for developing pancreatic cancer are defined. Family history of the disease, smoking, age, and diabetes are risk factors.
- Pancreatic cancer may cause only vague symptoms that could indicate many different conditions within the abdomen or gastrointestinal tract.
- Symptoms include pain (usually abdominal or back pain), weight loss, jaundice (yellowing of the skin and eyes), loss of appetite, nausea, changes in stool, and diabetes.
- Treatment options for pancreatic cancer are limited. Surgical removal of the tumor is possible in only approximately 15% of patients diagnosed with pancreatic cancer. Chemotherapy or chemotherapy together with radiation is typically offered to patients whose tumors cannot be removed surgically. Only three drugs are FDA-approved for the treatment of pancreatic cancer: fluorouracil (5-FU), gemcitabine (Gemzar®), and erlotinib (Tarceva®).
- Pancreatic cancer is a leading cause of cancer death largely because there are no detection tools to diagnose the disease in its early stages when surgical removal of the tumor is still possible.
- The National Cancer Institute (NCI) spent an estimated $89.4 million on pancreatic cancer research in 2009. This represented a mere 2% of the NCI's approximate $5 billion cancer research budget for that year.

Source for statistics: American Cancer Society: Cancer Facts & Figures 2010 and NCI Funded Research Portfolio.

Representative Petersen:

In February 2010 my 65 year old father, David Shew, Sr., began experiencing severe abdominal pains. This was a symptom my family assumed would turn out to be a gallbladder problem or something simple like acid reflux. Unfortunately, a simple diagnosis was not in the cards. On March 14th, 2010 my father was diagnosed with metastatic pancreatic cancer. We knew that this diagnosis was a death sentence. Once a person has been diagnosed with the condition, the general life expectancy is only 5 to 8 months. We were lucky...my father lived 11 months after his diagnosis. He passed away on February 12, 2011, a week shy of his 66th birthday. My father, who was an Alaskan, a veteran, and a friend to everybody he met, experienced a long, painful journey to his final days.

Upon receiving the devastating news of my father's illness and finding out that this is also the type of cancer that killed my paternal grandmother, the feelings of hopelessness and helplessness set in. Once the shock wore off, I knew I had to do something. I had to make sure that my father's legacy would live on and that I would—from here on out—be his voice. I educated myself about the disease and I found support online through an organization called the Pancreatic Cancer Action Network. To my disappointment there were no organizations or support groups in Anchorage (or Alaska for that matter), and nowhere to turn locally. I vowed that in the future, Alaskans suffering from pancreatic cancer and their family members would have local access to information, education, and support resources. They will have a way to get involved and a way to have their stories heard locally, at home. This is a disease that few understand and those who have not been touched by it cannot fathom the impact, pain, and devastation. It is vital to have a support network and a place to turn.

Thank you, thank you, thank you for doing what you're doing and for helping me to fulfill one of the last promises I made to my father. That promise is that I will do whatever possible to create awareness about this disease so that there is hope in the future and those diagnosed will have a fighting chance to survive.

Sincerely,

--

Kim McFadden, Volunteer
Community Representative
Anchorage, Alaska
Pancreatic Cancer Action Network
www.pancan.org

Phone: (907) 444-4874

David Shew Sr.

Anchorage resident David Odell "Dave" Shew Sr., 65, died Feb. 12, 2011, in Anchorage after a yearlong battle with pancreatic cancer.

A memorial service will be at 1 p.m. Friday at the Fort Richardson Chapel. After the service, Dav be interred with military honors at 2:30 p.m. at Fort Richardson National Cemetery.

A celebration of life after both services will be at the Down Under on Fort Richardson.

Born Feb. 18, 1945, in Johnson City, Tenn., Dave was one of nine children born to Ernest and Kathleen Shew. He honorably served in the U.S. Air Force for 21 years. He continued working C Service for the Army after his retirement, and at the time of his cancer diagnosis was working on Richardson for the Shaw Group.

Dave had a passion for fishing, 4-wheeling, the outdoors, photography and collecting things. He loved treasure-hunting at g sales. He also loved his dogs, Taffy and Miah. He had an amazing sense of humor and never met a stranger.

Dave is survived by his wife, Cindy Shew of Anchorage; three children: daughter and son-in-law, Tracy and Mike Johnson o Wasilla, daughter, Kim McFadden of Anchorage, and son, David O. Shew Jr. of Emerald Isle, N.C.; seven grandchildren, As Bilak of Jacksonville, N.C., Aimee Waldrep, Joshua Brown and Samantha McFadden of Anchorage, Alexis Shew, David O. III and Jackson Shew of Emerald Isle, N.C.; four brothers, Bobby, Lloyd, Donald and Richard Shew; two sisters, Peggy Kepl and Doris Gabert, all in Tennessee; and many nieces and nephews.

Dave was a beloved husband, father and friend. He loved his family, friends, and his country above all.

In lieu of flowers, the family suggests donations in the name of David O. Shew Sr. to the Pancreatic Cancer Action Network, www.pancan.org; or to donate by phone, please call: Pancreatic Cancer Action Network at 877-272-6226.

Arrangements are with Cremation Society of Alaska; www.alaskacremation.com.

PANCREATIC CANCER ACTION NETWORK®
ADVANCE RESEARCH. SUPPORT PATIENTS. CREATE HOPE.

March 9, 2011

The Honorable Pete Petersen
State Capitol, Room 422
Juneau, AK 99801-1182

Dear Representative Petersen:

I am writing to you today on behalf of the Pancreatic Cancer Action Network to thank you for your leadership in raising awareness about pancreatic cancer by introducing HCR 1, which recognizes November 2011 as "Pancreatic Cancer Awareness Month". As the national patient advocacy organization that works with volunteers across the country to find answers for this devastating disease, we greatly appreciate your support for this bill.

Approximately 43,140 Americans will hear that they have pancreatic cancer this year and 75% of those will die within the first year of their diagnosis. Only 6% will make it to the 5-year survival mark. In fact, pancreatic cancer is the only major cancer with a five-year survival rate still in the single digits and remains the 4th leading cause of cancer death in the United States, but currently receives only 2% of the federal government's cancer research budget at the National Cancer Institute. Through awareness efforts like your resolution and the *Pancreatic Cancer Research & Education Act* (S. 362/H.R. 733), legislation which has been introduced in the U.S. Congress to require the National Cancer Institute to develop a long-term and comprehensive strategic plan for this disease, we hope to find early detection tools and treatments that will begin to lower these statistics.

Your work on the HCR 1 signifies an important step towards helping us raise awareness about this deadly disease. We thank you again for your continuing support of increasing awareness about pancreatic cancer.

Sincerely,

Megan Gordon Don

Megan Gordon Don

It's Time for a Death Defying Strategy:
Support the Pancreatic Cancer Research & Education Act (S. 3320/H.R. 745)

We're Not Making Progress on pancreatic cancer and the consequences are deadly

- Pancreatic cancer is one of the deadliest cancers and is one of the few cancers for which survival has not improved substantially in nearly 40 years. In fact, pancreatic cancer is the only one of the top 10 cancer killers that still has a five-year survival rate in the single digits.[1]
- The number of new pancreatic cancer cases and the number of deaths caused by pancreatic cancer are increasing – not decreasing. Most alarmingly, the expected number of new pancreatic cancer cases is projected to increase by 55% between the years 2010 and 2030.[2]
- 94% of those diagnosed with pancreatic cancer die within the first five years because there are no early detection tools or effective treatments for this disease. Given the research discovery timeline, it is unlikely we will have the tools required to manage the significant, projected increase in expected cases unless we take dramatic action now.
- The National Cancer Institute (NCI) does not currently have a strategic plan to make progress on this deadly killer.

We Need to Step Up the investment in pancreatic cancer research

- Currently, the NCI allocates just 2% of its $5 billion annual budget for pancreatic cancer research.
- There is no question that when researchers are properly funded, research advances follow:
    - While in 2009 NCI funded approximately 8,700 research grants, contracts and intramural research projects across all forms of cancer, only 471 (approximately 5%) were relevant to pancreatic cancer.[3]
    - Further, NCI currently funds significantly fewer pancreatic cancer researchers at any funding level compared to the other top five cancer killers. In 2009, only 334 pancreatic cancer researchers were funded, compared to 1,558 breast cancer researchers, 838 prostate cancer researchers, 835 lung cancer researchers and 820 colorectal cancer researchers.[3]
- Less than 2% of the NCI's 2009 awards for early-career and established investigators (K, F and T awards) had relevance to pancreatic cancer. Even more troubling, NCI reduced the total funding allocated for these important awards from their 2008 level.[3]
- Given the lack of funding for pancreatic cancer research, senior scientists from other areas of biomedical and cancer research do not have the incentive to apply their knowledge to this disease.
    - Out of the researchers who received NCI funding specifically for pancreatic cancer research, only 32 received funding totaling $500,000 or more, a level appropriate for senior scientists. By comparison, this level of funding was awarded to 240 researchers in breast cancer, 108 in prostate cancer, and 110 in colorectal cancer. The positive survival trends in these other cancers strongly suggest that these larger grants are necessary to further progress and attract investigators.[3]

We Need a Unique and Targeted approach to studying this disease

- Pancreatic cancer tumors are different than many other tumors. The cellular make-up of the tumors is different and therefore, specialized research techniques must be applied.
- Numbers are also an issue. An estimated 43,140 Americans will be diagnosed with pancreatic cancer in 2010 compared to 209,060 with breast cancer.[1]
- Due to the wide geographic dispersion of relatively few pancreatic cancer patients, few individual medical centers treat a sufficient numbers of patients to conduct statistically significant research.
- Furthermore, because few patients qualify for surgery and most patients die quickly after diagnosis, scant pancreatic cancer tissue is available for research.
- Additionally, many patients who might consider participating in clinical trials are too sick to do so or die before they can enroll.
- These are challenges that can be overcome, but they require a concerted effort by NCI to develop a specific strategic plan to address these and other challenges in pancreatic cancer research in addition to an infusion of targeted research funding.

The Pancreatic Cancer Action Network is a nationwide network of people dedicated to working together to advance research, support patients and create hope for those affected by pancreatic cancer.

3</SUBJECT><COMM>SHSS27</COMM></TARGET>

REPRESENTATIVE CATHY MUÑOZ

HCR 3 – Promoting the Safety and Protection of Older Alaskans

A devastating problem of elder abuse has been on the rise in Alaska. Over the past four years Adult Protection Services in the Department of Health and Social Services has received an alarming 169% increase in the reports of harm. The Ombudsman Office for Long-term Care has seen a corresponding increase in the reports of harm at 200% in the past three years. The most common allegations are self-neglect, abuse, neglect, and financial exploitation.

Older Alaskans enrich the lives of our communities and provide knowledge of culture and history. As the population of older Alaskans continues to increase it is essential we recognize the complex health needs and services which need to be offered to provide independence and dignity to every individual.

I encourage all Alaskans to take a step forward in recognizing this growing problem. Your support of HCR 3 will help to raise awareness of elder abuse and will promote the safety and protection of older Alaskans.

REPRESENTATIVE CATHY MUÑOZ

MEMORANDUM

TO: Senator Bettye Davis
Health & Social Services Committee Chair

FROM: Representative Cathy Muñoz

DATE: March 29, 2011

RE: Changes to CS HCR 3 (HSS)

The House Health and Social Services Committee adopted two amendments that recognize family and community involvement. "Be it Resolved" language was added to reflect the Department of Health & Social Services support to provide family services and enable independent living, in addition to recognizing family and community who provide an essential source of security and well-being for vulnerable Alaskans.

An amendment passed on the House floor to include language identifying "centers for independent living" under the support for efficient and early intervention services (page 3, line 13). Centers for Independent Living have served seniors for many years and provide a variety of abuse prevention and response services.

March 1, 2011

Representative Cathy Muñoz
Alaska State Capitol, Room 403
Juneau, AK 99801-1182

Subject: Support for HCR 3

Dear Representative Muñoz:

The Alaska Commission on Aging (ACoA) is pleased to offer our support of HCR 3, a resolution sponsored by you to help raise awareness about the growing problem of elder abuse and to promote safety and protection of older Alaskans.

Elder abuse is a devastating and unrecognized problem that oftentimes goes unreported and can have life-threatening consequences. According to a report from the National Institute of Justice (March 2009), approximately 11% of people age 60 years and older suffer some form of abuse every year. Other studies have shown that elderly victims of abuse, exploitation and neglect have twice the risk of dying within a year. The National Center on Elder Abuse estimates that only one out of six elder abuse incidents (excluding the cases of self-neglect) are reported to authorities. The majority of cases go unreported as elders/seniors are often reluctant to report the abuse, particularly if the abusers are family members, for fear of shaming the family or losing that person's care. Sometimes well-meaning family and other unpaid caregivers suffer from "caregiver burnout" that can lead to mistreatment. According to Dr. Lisa Gibbs, University of California, "Elder abuse is where child abuse was 30 years ago," referring to society's lack of awareness of the mistreatment of vulnerable adults.

Alaska continues to lead all states in the rate of growth of people age 60 and older; they number 85,100, according to 2009 estimates from the Alaska Department of Labor and are projected to triple in size over the next 25 years due to the aging of the baby boomer population. Moreover, Alaska has the fastest growing population of the "oldest old" (those 85 years and older) many of whom are frail, have high health care needs, and are most at risk for Alzheimer's disease and related dementias in addition to other complex behavioral needs. Older adults with dementia are particularly vulnerable to abuse as well as persons who live in isolation. As the number of assisted living homes has increased significantly over the last three years for seniors and people with developmental disabilities, so have complaints from elderly residents and their family caregivers to the Office of the Long-Term Care Ombudsman concerning quality of care in assisted living settings. Adult Protective Services, an agency under the Division of Senior and Disabilities Services, reports a 169% increase in their reports of harm. While the increase in reporting may be partly attributed to growing social awareness, the increase in the senior population, particularly among the "oldest old" (persons age 85 years and older), and the current times of economic insecurity may also contribute to mounting threats of neglect, fraud, and abuse directed toward the most vulnerable.

Please accept our sincere appreciation for your efforts to improve protection and safety for Alaska's most vulnerable citizens. We look forward to working with you to raise public awareness about the prevalence of elder abuse in Alaska and to develop strategies to protect Alaska's vulnerable elderly citizens from harm. Please feel free to contact Denise Daniello, ACoA's Executive Director, by phone (465-4879) or email (denise.daniello@alaska.gov) for questions or help in promoting this effort. Thank you.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Representative Cathy Munoz
Alaska State 27th Legislature
Capitol Building
Juneau, AK

Re: HCR 3 "Relating to promoting the safety and protection of older Alaskans"

Dear Rep. Munoz:

The Office of the Long Term Care Ombudsman investigates and resolves complaints made by, or on behalf of, older Alaskans in long term care facilities. Our five staff visit skilled nursing facilities and assisted living homes across the state to advise seniors of their rights and to resolve problems the seniors identify. Like other state and local agencies, our staff work hard to protect older Alaskans who may not be able to advocate for themselves.

I am grateful for your sponsorship of HCR 3, promoting public awareness of elder maltreatment. I also pledge my program's commitment to improving coordination with DHSS and other state agencies in whatever way will serve the cause of elder justice.

With our state's growing senior population, and with the rising number of public complaints coming into our office, I believe that this is the right time to bring public attention to the needs of vulnerable older Alaskans.

Sincerely,

Diana Weber

Adult Protective Services – Quick Fact Sheet

Issue: Reports of Harm for Alaskan Elders

The following analysis focuses on reports of harm received by Adult Protective Services (APS) that involved Alaskan elders, identified as **individuals who were 60 years or older** at the time of report. The following analysis represents data for fiscal years 2009 and 2010.

The **average age of elders** who have been the subject of a substantiated APS report of harm for both FY09 and FY10 was **75 years old.**

There were a total of 701 reports of harm for Alaskan elders in FY09. Of these, 308 were substantiated and the remaining 393 were unsubstantiated. In FY10 there were 813 total reports of harm for Alaskan elders. Of those, 343 were substantiated, and the remaining 470 were unsubstantiated.

Regional Analysis of APS Substantiated Reports of Harm:

Region	FY09	% of total	FY10	% of total
Anchorage Region	156	50.7%	176	51.3%
Interior Region	29	9.4%	32	9.3%
Northwest Region	5	1.6%	8	2.3%
Southcentral Region	72	23.4%	98	28.6%
Southeast Region	26	8.4%	17	5.0%
Southwest Region	20	6.5%	12	3.5%
Total number of substantiated cases	**308**	**100.0%**	**343**	**100.0%**

Abuse, Exploitation, and/or Neglect by a Family Member:

Family member involvement	FY09	% of total	FY10	% of total
Cases involving family members	78	25.3%	90	26.2%
Total number of substantiated cases	**308**	**100.0%**	**343**	**100.0%**

Substantiated Allegation Analysis:

Type of allegation	FY09	% of total	FY10	% of total
Abandonment	3	1.0%	4	1.2%
Abuse-Mental	19	6.2%	30	8.7%
Abuse-Physical	19	6.2%	30	8.7%
Abuse-Sexual	1	0.3%	0	0.0%
Exploitation-Financial	66	21.4%	64	18.7%
Exploitation-Person	3	1.0%	12	3.5%
Neglect	47	15.3%	32	9.3%
Self-Neglect	150	48.6%	171	49.9%
Total number of substantiated allegations	**308**	**100.0%**	**343**	**100.0%**

Gender Analysis:

Gender	FY09	% of total	FY10	% of total
Male	115	37.3%	144	42.0%
Female	193	62.7%	199	58.0%
Total number of substantiated cases	**308**	**100.0%**	**343**	**100.0%**

PRESS RELEASE
Alaska Commission on Aging
February 17, 2009

We're #1: Alaska Tops in Senior Population Growth

The number of people age 65 and older grew faster in Alaska than in any other state during the decade between 1997 and 2007. Seniors still make up just eleven percent of Alaska's population, a far lower proportion than in states like Florida or Arizona. But with a growth rate of 49.6 percent in the last ten years, the number of older Alaskans is increasing at a rate more than four times the national average.

For years, Nevada laid claim to the fastest-growing senior population in the U.S. As of this year, it has fallen to second place.

The surprising statistics conjure up images of seniors packing up their households and migrating to the frozen 49th state en masse. Are wagon trains of older Americans in Winnebagos motoring up the Alaska Highway, bearing signs that read, "Last Frontier or Bust"?

Not exactly. In fact, the number of seniors leaving Alaska is roughly equal to the number who move here. Out-migration patterns have not changed substantially in decades. Many Alaskans still retire to warmer, sunnier locations. So what explains the senior population surge?

What we're witnessing is not a change in *current* retiree preferences but rather the maturing of *past* trends in Alaskan population movements.

Thousands of working-age people migrated to Alaska during the 1970s oil pipeline construction and the era of post-pipeline spending growth in the early 1980s. With the continental U.S. experiencing a steep recession during that period, young people, many of them born in the 1940s and 1950s, moved north to fill jobs in the state's rapidly-expanding economy.

The new arrivals put down roots in Alaska; they bought homes, raised families, and enjoyed the state's natural beauty and rugged outdoor lifestyle. Now heading into their retirement years, a large number of them are choosing to stay.

The selective migration of thousands of people in a limited age range during the 1970s and early 1980s created a population spike which has

steadily moved into higher and higher age groups. Like the "pig inside the python," this concentrated population may even decrease slightly over time, but it remains a large, visible anomaly in the state's demographic portrait. (To view the population distribution by age group, go to http://laborstats.alaska.gov/?PAGEID=67&SUBID=115 and click on the graph of "Alaska's Changing Population" to see the changes unfold over time.)

It's true that other states' populations have prominent baby boomer segments as well. But because so many of Alaska's boomer and slightly-older residents arrived during a narrow band of time, leaving their parents' generation behind in their states of origin, our state has long had proportionately more residents in the boomer and slightly-older age groups than other states.

In addition to those who moved to Alaska from elsewhere, Alaska Natives – whose numbers had also expanded rapidly during the "baby boom" era – are highly likely to remain in the state during their senior years.

Increases in life expectancy also play a role in the increasing number of seniors. In fact, the fastest-growing age group in Alaska is the 85-and-older group. Individuals in this group are the most likely to be in frail health, disabled, and in need of supportive services.

Finally, the aging parents of some of our 1970s and 1980s migrants do come to Alaska to be cared for by their offspring in their later years. However, there is no indication that this group represents a large proportion of our state's seniors.

Our fast-growing senior population primarily consists not of newcomers from other states but of our long-time friends and neighbors, those who built up many of modern Alaska's institutions and our communities' infrastructures.

While the growing number of seniors means Alaska must increase its capacity to supply the services and supports they will need, the state can expect a net gain in its quality of life thanks to the presence of more older Alaskans. As volunteers in civic enterprises, caregivers within their families, and mentors of cultural and professional achievement, not to mention the estimated $1.6 billion they contribute annually to the state's economy, seniors represent an incomparable asset for Alaska.

Other states, and even some cities, invest in advertising campaigns to attract senior residents to their communities. They recognize the tremendous economic and community leadership benefits seniors bring with them. The "retirement industry" is well-known as one of the most positive contributors to any economy. According to the Report on the Economic Well-Being of Alaska Seniors (2007), the retirement pension and health care funds this industry draws in are spent locally (triggering an economic multiplier effect), and senior spending is stable, year-round, environmentally benign, compatible with other industries, and helps produce economies of scale (particularly in health care) which benefit all segments of the population.

Alaska has the immense good fortune to be rapidly gaining seniors with no public investment in advertising at all. Our seniors are part of the latest greatest American retirement boom – without having to pack their bags or abandon their favorite people and places. And Alaska will benefit from their wisdom, perspective, and community contributions.

WHO MUST REPORT?

Physicians or other licensed health care providers

Mental health professionals including licensed marital and family therapists

Pharmacists

Nursing home, residential care, and health care facility administrators

Guardians and Conservators

Police Officers

Village Public Safety Officers

Village Health Aids

Social Workers

Members of the Clergy

Personal Care Attendant

Home Health Aide

Emergency Medical Technician or Paramedic

Caregiver of Vulnerable Adults

Certified Nurses Aide

Employees of service grant agencies funded by the Department of Administration for the provision of services to older Alaskans, the Department of Health and Social Services, and the Council on Domestic Violence and Sexual Assault

ANY PERSON MAY REPORT.

DESIGNATIONS OF OTHERS TO PROVIDE PROTECTIVE SERVICES

Alaska law authorizes the Division of Senior Services to designate and train other state agencies, community service providers, or individuals to provide protective services.

Guiding Principles of Adult Protection

- When interests compete, the adult client is the person we are charged to serve; not the community concerned about safety, the landlords concerned about property, citizens concerned about crime or morality, families concerned about their own health or finances.
- When interests compete, the adult client is in charge of decision-making until she or he voluntarily delegates responsibility to another or the court grants responsibility to another.
- Freedom is more important than safety. The person can choose to live in harm or even self-destructively provided she or he has the capacity to choose, does not harm others, and commits no crime.
- In the ideal case, protection of adults seeks to achieve simultaneously, and in order of importance: freedom, safety, least disruption of life-style and least restrictive care alternative.

RIGHTS OF VULNERABLE ADULTS

- Right to expect that information about one will be shared only on a need to know basis and only as necessary to insure that one can receive coordinated services and protection.
- Right to give informed consent in accepting services.
- Right to have services delivered in the least restrictive manner that meets one's needs.
- Right to voluntarily accept or reject services except where the vulnerable adult lacks decision making capacity, is unable to consent, or is incapacitated.
- Right to receive assistance through utilizing family and other informal support systems.
- Right to all possible alternatives to formal legal action in the form of guardianship or conservatorship except where decision making capacity is lacking or protection of the adult requires it.

WHAT IS ADULT PROTECTION?

SERVICES THAT PREVENT OR STOP HARM FROM OCCURRING TO VULNERABLE ADULTS

Alaska law requires that protective services not interfere with the elderly or disabled adults who are capable of caring for themselves.

Vulnerable adults have a physical or mental impairment or condition that prevents them from protecting themselves or from seeking help from someone else.

Alaska law defines vulnerable adults to include adults 18 years of age or older, not just the elderly.

The harm they suffer may result from abandonment, abuse, exploitation, neglect or self-neglect.

ABANDONMENT is the desertion of a vulnerable adult by a caregiver.

ABUSE is the intentional or reckless non-accidental non-therapeutic infliction of pain, injury, or mental distress, or sexual assault.

EXPLOITATION is the unjust or improper use of another person or their resources for one's own benefit.

NEGLECT is the intentional failure of caregiver to provide essential services.

SELF-NEGLECT is the act or omission by a vulnerable adult that results, or could result in the deprivation of essential services necessary to maintain minimal mental, emotional, or physical health and safety.

See Alaska Statute 47.24.010.900 (Amended 1994)

EXAMPLES OF SERVICES

Information and Referral
Investigation of Reports
Protective Placement
Guardianship/Conservatorship Counseling
Care Coordination
Training and designation of local community resources to provide services.

WHAT MUST BE REPORTED?

Any incident in which a vulnerable adult suffers harm from abandonment, exploitation, abuse, neglect, or self neglect. If in doubt, make the report.

MAKE REPORTS TO WHOM?

Reports can be made to the central reporting number for the Division of Senior Services within 24 hours at 1-800-478-9996. Reports can be made to local law enforcement agencies in the event that a report cannot be made to the Division. Local law enforcement agencies are mandated to investigate and take appropriate action to protect vulnerable adults.

IMMUNITY FROM LIABILITY

Persons who make reports in good faith are immune from liability and protected by law from retaliation.

CONFIDENTIALITY OF REPORT

Investigation reports and reports of the abandonment, abuse, exploitation, neglect, or self-neglect of a vulnerable adult are confidential and are not subject to public inspection and copying.

Investigation reports may be used by appropriate agencies or individuals inside and outside the state in connection with investigations or judicial proceedings involving the abandonment, abuse, exploitation, neglect, or self-neglect of a vulnerable adult.

Individuals who report abandonment, abuse, exploitation, neglect, or self-neglect of a vulnerable adult may remain anonymous.

HCR 5
Sponsor Statement

Short Title: A resolution relating to prevention of disease and to vitamin D.

HCR 5 urges the State of Alaska to adopt a disease prevention model of health and to increase the awareness of the preventative benefits of vitamin D supplementation, and increase vitamin D availability to reduce health impacts and costs.

Mounting scientific evidence suggests a correlation between vitamin D sufficiency and significant decrease in incidence of cancer, diabetes, heart disease, rheumatoid arthritis, chronic pain, Seasonal Affective Disorder, oral disease, influenza, upper respiratory illness, tuberculosis, multiple sclerosis, osteoporosis, fractures in the elderly, autism, rickets, pregnancy complications, and hepatitis C.

For seven months out of the year, the sun angle is too low for Alaskans to be able to produce vitamin D from sunlight. Partly due to this long "vitamin D winter," Alaska has some of the lowest blood serum levels of vitamin D in the country. Correspondingly, Alaska also has relatively high rates of chronic disease. For example, according to the Alaska Division of Public Health, chronic diseases (cancer, heart disease, respiratory disease, and stroke, respectively) make up four of the top five causes of death in the state. These diseases come at a great cost both socially and financially to our state.

Deficiency in vitamin D may contribute heavily to this steep social and financial cost. Two studies mentioned in HCR 5 demonstrate this. The first one, examining the economic burden of vitamin D deficiency, estimated that Canada could lower the death rate by 37,000 deaths and save $14.4 billion dollars per year by increasing the national average of vitamin D blood serum levels. The second, similar study showed that the United States could have 50,000—63,000 fewer deaths and save $40-56 billion per year with sufficient population levels of vitamin D.

Phone: 235-2921
Fax: 235-4008

REPRESENTATIVE Paul Seaton
District 35

With higher rates of chronic disease in northern latitudes, and fewer and fewer federal dollars coming in to cover the escalating healthcare and Medicaid costs in Alaska, it is imperative to prevent—rather than just treat—chronic disease. Prevention of chronic disease is a matter of lifestyle: healthy diet, frequent exercise, and adequate levels of vitamins and nutrients. Most people understand this, but are unaware that vitamin D deficiency needs to be addressed in every community of this state.

HCR 5 asks Governor Sean Parnell to establish "prevention of disease" as a primary model of health care in Alaska, and for the Department of Health and Social Services and health care providers to increase attention to vitamin D deficiency and promote supplementation. It also asks the Department to provide vitamin D supplements to the elderly, children, and pregnant women. Vitamin D supplementation is a low-cost measure that could help save lives, and significantly improve the health of many Alaskans, while saving millions of dollars in health treatment costs.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HCR005

Analysis

This House Concurrent Resolution relates to the prevention of disease and the benefits of Vitamin (Vit.)D.

The division is submitting a zero fiscal note because no new authorization is necessarily invoked by passage of this resolution. Should the Legislature decide to require the department to undertake activities through additional legislation, an additional appropriation will be necessary.

This analysis estimates the cost of implementing the four activities in the resolution if the division were to implement them, although the division has no plans to do so at this time. The assumptions used to calculate the fiscal note are detailed on page 3.

The resolution includes language that encourages or urges the Department of Health and Social Services to implement four activities in regards to Vitamin D supplements. The activities are

(1) to increase attention to Vit. D deficiency, Vit. D testing, and to promote awareness of the long-term health benefits of and increased chances of cancer survival with sufficient levels of Vit. D;
(2) investigate substituting Vit. D supplementation for influenza vaccination as a less costly method for preventing influenza;
(3) provide Vit. D supplements to the elderly to prevent bone loss, falls, fractures, and other age-related health problems; and
(4) provide Vit. D supplements to pregnant women and infants to prevent pregnancy complications, preterm births, type 1 diabetes, and rickets.

For the first activity, the department would contract for professional services to create an awareness campaign on the benefits of Vit. D. at an estimated cost of $50.0. This would be an ongoing cost.

For the second activity, the department would require $100.0 for a PhD-level epidemiologist (1 FTE, existing PCN, Range 20/A) plus $35.0 for overhead (rent, utilities, etc.). The epidemiologist would conduct a study investigating subsitution of Vit. D supplemention for influenza vaccination as a less costly method of preventing influenza. This study would take at least three years. This is a conservative estimate and could be double or triple the amount depending on the final study design.

For the third and fourth activities, the department would provide Vit. D supplements through Public Health Nursing Clinics at a cost of $211.2 annually. Elderly, pregnant women, and infants who go to the clinics would receive a limited office visit to determine if Vitamin D supplements were indicated. Of the approximately 17,200 public health clinic clients seen in 2011, it is assumed 3,225 (18.75%) could have received one or more 90-day supplies of Vit. D supplements. The client would receive a limited office visit each time the client came to the clinic for more supplements to determine if Vit. D was still medically necessary and evaluate their health condition. Public Health Nursing would report their results to the epidemiologist conducting the Vit. D study.

The total cost for Years 1 to 3 would be $396.2. Years 4 and 5 would be $261.2 since the second activity for a study would be completed by then.

(Continued on page 3.)

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HCR005

Analysis Continued

Assumptions:

Clients
17,200 total clients served by Public Health Nursing, 2011
75% percent PHN clients who are elderly/pregnant women/infants
12,900 clients eligible for Vit. D supplements
25% percent clients eligible who receive Vit. D
3,225 clients eligible who receive Vit. D
806 clients (25%) visit 1/year
806 clients (25%) visit 2/year
806 clients (25%) visit 3/year
807 clients (25%) visit 4/year

Medical Supply Unit Cost
$ 1.20 Cost is $0.10 per Vit. D pill (over-the-counter, wholesale)
At 1 dose per week, with 12 doses dispensed per clinic visit (90-day supply)
$ 25.00 Cost of 15 min. limited office visit for each clinic visit (max. 4 /year)
$ 26.20 total cost per clinic visit for Vit. D

Total Annual Cost
$ 211,238 medical supplies for dispensing Vit. D
$ 100,000 personal services for 1 FTE epidemiologist (Range 20/A) to investigate Vit. D as substitute for influenza vaccine (Years 1-3)
$ 85.000 contractual costs for awareness campaign of benefits of Vit. D ($50.0); overhead for 1 FTE ($35.0)
$ 396,238 total annual cost Year 1

This analysis includes only the direct medical supply and administrative costs of implementing the resolution. The cost savings if patients opted for Vit. D supplements in lieu of influenza vaccine are not included in this analysis. Nor does it include the additional cost of treating patients who did not get vaccinated for influenza and later became ill.

The annual cost per person for Vit. D supplements (assuming 52 doses, 4 visits) is $104.80. In comparison, the medical supply unit cost of influenza vaccine is approximately $33-$66 annual cost per person (assuming $8/dose plus $25 limited office visit for 1-2 doses/year).

The resolution notes that part of the budget of the Department of Health and Social Services is used to treat illnesses that could be prevented with adequate blood serum levels of Vit. D. Those potential costs savings are not included in this analysis as the amount of avoided costs are indeterminate and would likely not be realized in the time frame covered by the fiscal note.

SEASONAL VARIATION IN SERUM 25-HYDROXYVITAMIN D IN HEALTHY FAIRBANKS, ALASKA RESIDENTS: RELATION TO DIET AND SUNLIGHT EXPOSURE

A

THESIS

Presented to the Faculty of the University of Alaska

In Partial Fulfillment of the Requirements

for the Degree of

MASTER OF SCIENCE

By

Meredith Grant Tallas, B.S.

Fairbanks, Alaska

December 1986

ABSTRACT

This study tested the hypothesis that lower UV radiation during the Fairbanks winter may cause seasonal vitamin D deficiencies. Forty-seven adult Caucasians (mean age, 34 years) donated monthly blood samples and gave 4-day food and sunlight exposure records during one year. There was a highly significant seasonal variation in serum 25-(OH)vitamin D (25-OHD), with the lowest mean mid-winter value above deficiency levels, and a yearly mean of 27 ng/ml for the full group. Analyses of variance indicated significant effects of vitamin D intake, sunlight exposure and sex on serum 25-OHD. Vitamin D intake appeared to be a more important factor determining year-round 25-OHD levels than sunlight exposure. Males had yearly mean 25-OHD levels 16% higher than females and 25% of the females, but none of the males, had yearly means less than 20 ng/ml indicating that females were at greater risk for the development of vitamin D deficiency.

Vitamin D Deficiency in a Nonrandom Sample of Southeast Alaska Natives

JOSEPH T. FROST, MPH, RD; LANI HILL, FNP

ABSTRACT

Serum vitamin D has recently been inversely associated with risk for type 2 diabetes. Recent literature suggests that many more individuals than generally thought suffer from vitamin D deficiency. Southeast Alaskan Natives are at an increased risk due to limited sunlight exposure and possible inadequate vitamin D intake. Therefore, the relationship between vitamin D and glucose should be investigated specifically in the southeast Alaska Native population. A review of lab records yielded 83 charts of patients found to have a serum 25-hydroxyvitamin D during a 2-year period. Upon review of these charts, only nine of 83 vitamin D levels were found to exceed the 32 ng/mL (80 nmol/L) threshold. Age and vitamin D levels were associated in a positive linear relationship ($r=0.354$, $P=0.028$). The patients in the lowest vitamin D quartile were younger in age compared to the highest quartile (14.6 years, 95% confidence interval: 4.9, 24.29; $P=0.004$). The high rate of deficiency noted in this sample suggests this population should be further assessed for vitamin D deficiency. Future studies are needed to confirm the association between a vitamin D deficiency and diabetes incidence in this population.
J Am Diet Assoc. 2008;108:1508-1511.

Although traditionally associated with calcium absorption and bone health, expanded roles for vitamin D, including a relationship to diabetes, have recently been reported in the literature. Low serum 25-hydroxyvitamin D levels have been found in individuals with diabetes compared to controls (1,2). The Third Nutrition and Health Examination Survey revealed an inverse association between risk of diabetes and 25-hydroxyvitamin D levels (3). A similar association was seen in the Nurses' Health Study (4). Serum 25-hydroxyvitamin D levels were found to be inversely associated with pancreatic beta cell function, thus suggesting a cause and effect relationship with diabetes (5). Recent research suggests that many more individuals than generally thought, especially those in northern latitudes or with other sunlight restrictions, are deficient in vitamin D (6-9). Both the recommended levels of serum vitamin D and the Adequate Intake from food sources have recently been suggested to be inadequate. At these levels it is thought the beneficial effect of vitamin D cannot be achieved. (6,8,10-12). Despite being at an increased risk for vitamin D deficiency due to limited sunlight exposure (13,14) and lactose intolerance (up to 80%) (15), southeast Alaskan Natives have not been included in vitamin D deficiency studies. The objectives of this study were to investigate vitamin D deficiency in the southeast Alaskan Native population and its possible role in the incidence of diabetes.

METHODS

A manual review of lab records for the 2-year time period of April 1, 2005, to March 30, 2007, was used to identify patients who had 25-hydroxyvitamin D tests completed as part of their care received at the Ketchikan Indian Community Tribal Health Clinic, a native health clinic on an Alaskan island that receives an annual rainfall of 12.5 feet per year. (Natives with varying degrees of native ancestry and who belong to one of 557 federally recognized tribes qualify for health care through Indian Health Service policies. In general, the term *American Indian* or *Alaskan Native* refers to those with native, although not necessarily exclusive, ancestry. Therefore, degree of Native blood varies in this population.)

This review yielded a nonrandom sample of 83 charts of Alaskan Natives. We conducted a retrospective electronic and manual review of these charts to investigate the possible relationship between serum vitamin D levels and abnormal glucose levels.

Electronic and paper charts of individuals known to have the test performed were reviewed, and test results for serum vitamin D and glucose, sex, age, and body mass index (BMI) were recorded. In the event of multiple vitamin D tests, only the initial test was used in data analysis. In all cases, the fasting glucose measured closest to the date of the initial vitamin D test was recorded. Glucose values obtained more than 1 year apart from the vitamin D test were excluded from the analysis. Of the 83 patients, fasting blood glucoses were recorded for 51.

J. T. Frost is a Lieutenant Commander in the US Public Health Service; at the time of the study, he was the diabetes coordinator at the Ketchikan Indian Community Tribal Health Clinic, Ketchikan, AK, and a graduate student in the School of Public Health and Health Sciences, University of Massachusetts, Amherst. L. L. Hill is a family nurse practitioner, Ketchikan Indian Community Tribal Health Clinic, Ketchikan, AK.

Table. Demographic data, 25-hydroxyvitamin D levels, and fasting glucose levels of patients with and without diabetes (n=83 except where otherwise noted)

	Patients with diabetes (n)	Patients without diabetes (n)	*P* value
Sex			
Male	12	16	
Female	16	39	
	mean±SD[a]		
Age[b] (y)	56±14	45±16	0.004
BMI[bc]	38.9±9.2	31.9±7.2	0.001
25-hydroxyvitamin D (ng/mL)	15.7±8.6	17.8±12.1	0.348
Fasting glucose[ab] (mg/dL)	139.8±49.9 (n=16)	96.2±11.1 (n=35)	<0.001

[a]SD=standard deviation.
[b]Denotes category of statistical significance at the $\alpha=.05$ level.
[c]BMI=body mass index; calculated as kg/m^2.

Data from 2-hour oral glucose tolerance tests are not reported because only five were recorded. Random glucose levels were not analyzed due to multiple variables affecting their results. Vitamin D samples were drawn in-house and sent to a commercial laboratory for analysis using immunochemiluminometric assay. The threshold for the laboratory's vitamin D assay is 7.0 ng/mL (17.5 nmol/L); for data analysis all "undetectable" values were assigned 7.0 ng/mL (17.5 nmol/L).

Minitab version 15 (2007, Minitab Inc, State College, PA) was used for statistical analysis. Univariate regression calculations were done. Subjects were divided into quartiles based on vitamin D levels and comparisons were made using two-sample *t* tests with regard to glucose values, sex, age, and BMI. Results were considered significant at the $\alpha=.05$ level.

The protocol for this study was granted expedited status under 45 CFR 46.110 by the Alaska Area Institutional Review Board in Anchorage. It was also approved by Ketchikan Indian Community Tribal Health Clinic Administration staff, the Ketchikan Indian Community Health Board, and the Ketchikan Indian Community Tribal Council.

RESULTS AND DISCUSSION

Of the 83 Native patients found to have received a 25-hydroxyvitamin D test during the 2-year period, 55 were female and 28 were male, with a mean age of 49 years (range=19 to 94 years) (Table). Twenty-eight of these patients were diagnosed with diabetes, of which all but two were vitamin D–deficient. Of the 55 without diabetes, only seven were vitamin D–sufficient (Figure). Subjects without diabetes were younger (−10.39, 95% confidence interval [CI]: −17.31, −3.47; $P=0.004$), had a lower BMI (−7.05, 95% CI: −11.06, −3.05; $P=0.001$), and had lower fasting blood glucose values (−43.63, 95% CI: −61.29, −25.97; $P=<0.001$). The mean (±standard deviation) 25-hydroxyvitamin D level was 17.1±11.0 ng/mL (42.8±27.5 nmol/L). Using two-sample *t* tests, no significant differences were found between sexes. Results indicated a significant positive linear relationship of age with respect to vitamin D levels ($r=0.354$, $P=0.028$).

Subjects were divided into quartiles based on 25-hydroxyvitamin D levels. These quartiles were compared in terms of sex, age, BMI, and fasting blood glucose values. With the exception of age, no statistically significant differences were observed between quartiles. The lowest quartile was on average 14.6 years younger compared with the highest quartile (95% CI: −24.29, −4.91; $P=0.004$). Patients known to have diabetes were then removed from the analysis (to control for confounding from the diabetes disease process or treatment, which may affect vitamin D), yielding similar results.

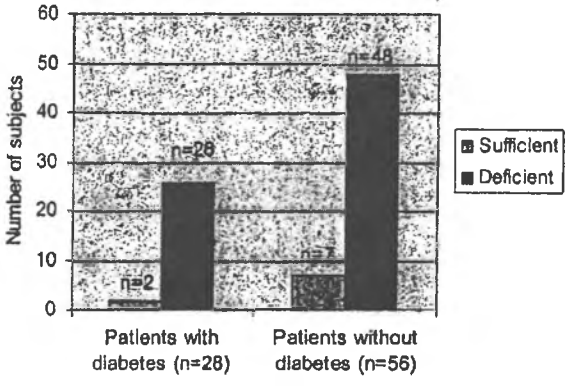

Figure. Vitamin D sufficiency of patients with and without diabetes using 32 ng/mL (80 nmol/L) as the minimum value for sufficiency.

No statistically significant relationships between vitamin D levels and blood glucose levels were observed. However, only nine of 83 vitamin D values were more than the recommended threshold of 32 ng/mL (80 nmol/L), and 18 of the vitamin D levels were so low that their actual value was undetectable. Although we cannot extrapolate these results to say that 89% of the population is vitamin D–deficient, the data suggest a basis for further investigation. It would seem unlikely to observe such a high rate of deficiency in this study, if there were not a high prevalence of vitamin D deficiency, even with perceptive clinicians ordering vitamin D tests for patients they thought to be at high risk for deficiency. The intent

of the study to compare serum glucose values between individuals of high and low serum vitamin D levels was somewhat undermined by the fact that so few normal values were observed. In fact, even the highest quartile of vitamin D values included values much less than the threshold of vitamin D deficiency.

The high prevalence of vitamin D deficiency found in this study is supported by studies reporting vitamin D deficiency in populations at higher latitudes or with otherwise limited sunlight exposure (although not at the magnitude found in this convenience sample) (7,8,12,13). The positive linear correlation between age and vitamin D levels found in this study differs from the common belief that vitamin D levels decrease with age. However, this positive correlation has been reported previously (7).

The finding related to subjects with known diabetes is also intriguing; only two of the 28 patients had 25-hydroxyvitamin D levels more than the 32 ng/mL (80 nmol/L) threshold. This is consistent with previous reports of vitamin D deficiency in patients with diabetes (1,2). Again, this is not a random sample but it does represent 20% of the known patients with diabetes per the Ketchikan Indian Community Diabetes Management System database. From a chart review we cannot determine that low vitamin D levels were a risk factor for diabetes in these individuals; however, this possibility deserves further investigation.

There are clear limitations to the design of this study. First, the study is retrospective in nature and therefore cannot determine causality. Second, this study did not assess known contributors to serum 25-hydroxyvitamin D levels, such as diet, supplementation, sunlight exposure, and medications that may interfere with vitamin D absorption and/or utilization. The results include 59 vitamin D levels measured during autumn and winter months, when vitamin D levels are thought to be lowest. Furthermore, the study consisted of a convenience sample of patients who were likely tested by providers on their suspicion that the patients had low vitamin D status. The study was not powered to detect differences; however, these data support the need for a larger study to investigate this association.

Despite these limitations, this study design offered a cost-effective opportunity to explore the possibility of vitamin D deficiency in this population and its relationship with diabetes. Given southeast Alaskan Natives' high risk for vitamin D deficiency, the increasing incidence of diabetes (100% to 125% in 14 years) (16), and recent research associating diabetes and vitamin D status, these results should not be dismissed. Although it is tempting to disregard vitamin D deficiency in this population as a genetic difference in normal values, it must be noted that African Americans also have lower vitamin D levels and have a 33% higher risk for cancer (17). Nor should Chiu and colleagues' conclusion that increasing a person's blood concentration of 25-hydroxyvitamin D from 10 ng/mL (25 nmol/L) to approximately 30 ng/mL (75 nmol/L) would improve insulin sensitivity by 60% be easily dismissed as not applicable to the native population (5).

Future efforts to explain the increase in incidence of diabetes should consider decreasing vitamin D–rich fish and fish oil consumption in the native population and the potential resultant decrease in serum vitamin D levels. It has been reported that in at least one group of Alaskan Natives that the consumption of traditional foods is much less common in younger natives compared with elders: 50% less in some categories of native food (18). Decreased traditional food consumption combined with additional lifestyle changes (eg, increased automobile use, more indoor activities, sedentary lifestyle) may be promote vitamin D deficiency.

CONCLUSIONS

This study suggests southeast Alaskan Natives may be at risk for vitamin D deficiency. To the extent that vitamin D plays a role in the etiology of diabetes and other chronic disorders, Alaskan Natives with vitamin D deficiency may be at increased risk for these diseases. This study's finding of decreased vitamin D levels in younger individuals is of concern from a public health standpoint and should be further evaluated. Specifically, the possibility that elder natives consume more fish and fish oils and therefore have higher vitamin D levels should be considered. Registered dietitians should be aware of the emerging expanded role of vitamin D in chronic diseases such as diabetes, and should consider vitamin D status in their nutrition assessments, especially for patients with limited sun exposure.

VITAMIN D VS BROAD SPECTRUM PHOTOTHERAPY IN THE TREATMENT OF SEASONAL AFFECTIVE DISORDER

F. MICHAEL GLOTH, III*, WASIF ALAM**, BRUCE HOLLIS***

Abstract: Seasonal Affective Disorder (SAD) is prevalent when vitamin D stores are typically low. Broad-spectrum light therapy includes wavelengths between 280-320 nm which allow the skin to produce vitamin D. This study was designed to test the hypothesis that vitamin D deficiency might play a role in SAD. A prospective, randomized controlled trial was conducted in a group of 15 subjects with SAD. Eight subjects received 100,000 I.U. of vitamin D and seven subjects received phototherapy. At the onset of treatment and after 1 month of therapy subjects were administered the Hamilton Depression scale, the SIGH-SAD, and the SAD-8 depression scale. All subjects also had serum levels of 25-hydroxyvitamin D (25-OH D) measured before and 1 week after intervention therapy. All subjects receiving vitamin D improved in all outcome measures. The phototherapy group showed no significant change in depression scale measures. Vitamin D status improved in both groups (74% vitamin D group, $p < 0.005$ and 36% phototherapy group, $p < 0.01$). Improvement in 25-OH D was significantly associated with improvement in depression scale scores (r^2=0.26; p=0.05). Vitamin D may be an important treatment for SAD. Further studies will be necessary to confirm these findings.

Introduction

Because some evidence exists demonstrating a therapeutic effect of full spectrum light on people with a diagnosis of seasonal affective disorder (1,2), we hypothesize that depletion of vitamin D ("the sunshine vitamin") may have a role in the development of this syndrome. Similarly, it has been demonstrated that vitamin D status declines during winter (3,4), a time when Seasonal Affective Disorder is prevalent.

Poor nutritional habits, particularly in relation to dairy products and other foods supplemented with vitamin D, that many older adults may have, could obviate some of the obvious benefits of food supplementation (5,6). Liver disease, renal disease, and malabsorption, as well as some medications, also may affect vitamin D metabolism. These factors play a role in some form or another in many people.

Vitamin D deficiency has been associated with muscle weakness, abnormalities of bone metabolism, bone pain, fatigue, and various other metabolic abnormalities (7,8,9). There are many reasons to consider vitamin D deficiency as a source of Seasonal Affective Disorder (SAD) as well. First there is an intriguing temporal relationship between a nadir for vitamin D status and what, as the name of the disorder implies, is felt to be a peak occurrence of Seasonal Affective Disorder in the general population. Second, vitamin D receptors exist on many organs including the skin and brain (10, 11, 12, 13, 14, 15, 16). The vitamin D receptors in the brain and in many other sites thusfar have no clearly identified function. Third, phototherapy has been described as being useful in Seasonal Affective Disorder when full spectrum light is used. Coincidentally, the skin requires ultraviolet wavelengths in the range of 280 to 320 nm to convert 7-dehydrocholesterol to cholecalciferol (vitamin D_3). Full spectrum light includes ultraviolet wavelengths in the range of 280 to 320 nm.

This study was designed to identify a population diagnosed with SAD and to determine their vitamin D status and their clinical and serologic response to either dietary vitamin D supplementation or exposure to full-spectrum light.

Methods

Fifteen subjects diagnosed with Seasonal Affective Disorder (Seasonal Pattern Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition)(17) and belonging to a support group for patients with SAD were enrolled into the study after providing informed consent. The protocol, which was approved by the Institutional Review Boards at the Sheppard and Enoch Pratt Hospital and the Union Memorial Hospital, involved obtaining psychological testing for SAD and Depression and serum samples for the measurement of levels of 25 hydroxyvitamin D (25 OHD) in a fasting state at entry into the study. Serum 25-hydroxyvitamin D was measured using a modification of a previously reported technique involving a direct radioimmuno-assay employing an antibody to the 23,24,25,26,27-petanor-C(22)-carboxylic acid of vitamin D (18). Subjects were screened for liver disease, renal disease, and malabsorption, as well as certain medications, that may

100,000 IU single dose ≈ 3,300 IU/d
Full spectrum light at 2 hr./d

fect vitamin D metabolism. Subjects could have had no treatment changes for the prior 3 months and did not have any other treatment changes during the month of study. Subjects were then randomized using computer generated randomization to receive one of two interventions. Either 100,000 I.U. of vitamin D (ergocalciferol) once as a single dose or scheduled exposure to full spectrum light on a daily basis. After 1 week, a repeat serum measure of vitamin D metabolites was obtained. Vitamin D is fat soluble and a single large dose of vitamin D typically raises the vitamin D status into the normal range for months (19).

≈3300 IU/d

Phototherapy was provided by a Sol-Lux-I phototherapy Unit (Triple "H" Associates, Owings Mills, Maryland). This is a 58.125 cm x 33.125 cm x 10.625 cm portable unit that produces 2,500 Lux of full spectrum light at 120 cm. Subjects had 2 hours of exposure per day verified by entries into a logbook.

At the end of one month (all subjects were evaluated between February and March) repeat psychological testing (Hamilton Depression Scale, the Combined Hamilton/SAD-8 or SIGH-SAD, and the SAD-8)(20,21,22), was obtained by an investigator blinded to the intervention. One month was selected for follow up because it was a period of time in which vitamin D status would improve regardless of the intervention chosen, and it was felt that this would allow sufficient time for an end-organ response. Mean baseline scores were compared between the vitamin D and phototherapy groups using a t-test. A comparison of mean change in test scores between the two groups was also made using analysis of variance (ANOVA testing). Vitamin D status was also compared in a similar fashion. Vitamin D status was measured after 1 week of treatment to determine whether overall vitamin D status improved into the normal range with intervention.

Regression analyses were also done between the change in vitamin D status and the change in each of the pschological tests for the combined population to ascertain a potential relationship between improvement in vitamin D status and resolution of depression in SAD.

Results

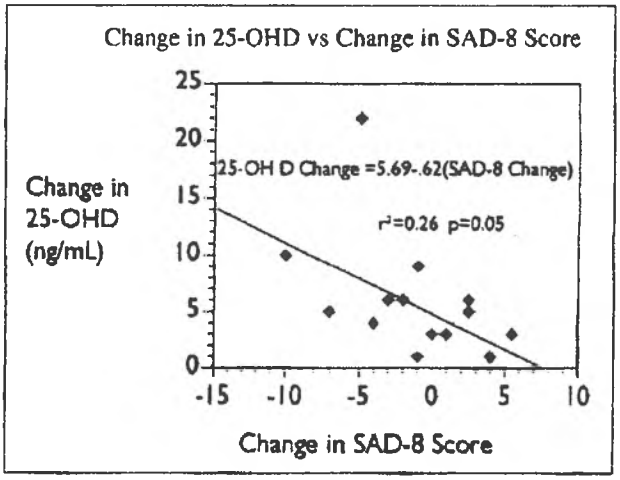
Baseline characteristics of the two groups were similar with regards to age (range 15-61 years), sex (14 females, 1 male), race (Caucasian), psychological test scores (Table 1 following page), and vitamin D status. The mean test scores for all psychological tests significantly improved in the group treated with vitamin D (Table I). None of the tests improved significantly in the group receiving phototherapy. The scores in the vitamin D supplementation group were also significantly better post-treatment when compared to the phototherapy post-treatment group (See Figure 1).

Vitamin D status in the groups was similar (11.0 ± 3.6 ng/mL vitamin D supplementation group vs 13.7 ± 3.1 ng/mL phototherapy group) at baseline. Following 1 week of treatment vitamin D status in the vitamin D supplementation group increased by 74% (19.1 ± 8.2 ng/ml; paired t-test p=0.003) compared to a 36% change (18.6 ± 2.5 ng/mL paired t-test p=0.007) in the phototherapy group.

A significant linear relationship was seen between improvement in vitamin D status and changes in SAD-8 scores before and 1 month after treatment in both groups combined (see Figure 1).

Figure 1

Improvement in vitamin D status was significantly associated with improvement in SAD-8 scores when both cohorts were examined together



Discussion

Subjects identified with SAD all responded favorably to vitamin D supplementation while phototherapy did not consistently result in improvement. A combined analysis of the phototherapy group and the vitamin D supplementation group demonstrated a significant association between improvement in vitamin D status and SAD-8 scores. While the association was significant, one subject demonstrated an inordinately large increase in vitamin D (>20ng/mL). Removal of this potential outlier (analysis and regression not shown) only strengthened the relationship statistically.

Outside of abstracts, one other report has been published which pursues the role of vitamin D with SAD (23). This study selected women with only mild SAD-type symptoms and used 400 I.U. supplementation. Thus, the study cohort and the treatment regimen were substantially different. Serum levels of 25-hydroxyvitamin D were measured but not specifically reported in that study. That study did not show a benefit to the relatively small doses of vitamin D. Possible explanations for different outcomes in our study include: 1) The 400 I.U. supplement in the Harris study may have been inadequate to

substantially improve vitamin D status (24); 2) the outcome measures were different and, with milder symptoms, may not have had adequate sensitivity to detect changes; 3) baseline vitamin D status may not have been low, in which case supplementation would not be likely to have an effect.

It is of interest to note that, on average, our subjects had a vitamin D status below 15 ng/mL (38 nmol/L). Such levels have been associated with other physiologic aberrations, e.g. secondary hyperparathyroidism (5). Vitamin D supplementation also led to significant improvements in vitamin D status.

Vitamin D status seems to play a role in SAD and may play a role in the overall effect of phototherapy. By chance, the phototherapy group had higher baseline vitamin D status. Perhaps phototherapy responses in this study would have also been statistically evident if baseline and post-treatment differences in vitamin D status were of a greater magnitude. In this relatively modest study, the change in vitamin D status in the phototherapy group was less than the difference in the oral supplementation group which may explain the lack of response seen with phototherapy. This would support the hypothesis that inconsistent results of phototherapy may be associated with inadequate exposure to effectively alter vitamin D status or an incorrect diagnosis at the onset.

The present study design did not incorporate a placebo which may be a legitimate criticism in this limited study. Under the circumstances, however, the phototherapy control group may actually parallel the function of a placebo arm.

While these results are by no means conclusive, the findings are provocative enough to stimulate interest in additional studies with larger sample sizes. Such studies with similar results are necessary before the suggestion of a causal relationship can be confidently presented. Nevertheless, it is intriguing to consider that some of the depression seen in seniors who are confined indoors and likely to be vitamin D deficient may be attributable to SAD which may be amenable to simply replenishment with vitamin D.

Acknowledgments: The authors would like to acknowledge Dr. Henry Hyman, for assistance with the phototherapy boxes and all of the participants for their interest and dedication.

Table I

Depression scale differences before and after interventions and between cohorts (vertical)

Abstract: Vitamin D sufficiency is required for optimal health, and solar ultraviolet B (UVB) irradiance is an important source of vitamin D. UVB and/or vitamin D have been found in observational studies to be associated with reduced risk for over a dozen forms of cancer, multiple sclerosis, osteoporotic fractures, and several other diseases. On the other hand, excess UV irradiance is associated with adverse health outcomes such as cataracts, melanoma, and nonmelanoma skin cancer. Ecologic analyses are used to estimate the fraction of cancer mortality, multiple sclerosis prevalence, and cataract formation that can be prevented or delayed. Estimates from the literature are used for other diseases attributed to excess UV irradiation, additional cancer estimates, and osteoporotic fractures. These results are used to estimate the economic burdens of insufficient UVB irradiation and vitamin D insufficiency as well as excess UV irradiation in the United States for these diseases and conditions. We estimate that 50,000-63,000 individuals in the United States and 19,000-25,000 in the UK die prematurely from cancer annually due to insufficient vitamin D. The U.S. economic burden due to vitamin D insufficiency from inadequate exposure to solar UVB irradiance, diet, and supplements was estimated at $40-56 billion in 2004, whereas the economic burden for excess UV irradiance was estimated at $6-7 billion. These results suggest that increased vitamin D through UVB irradiance, fortification of food, and supplementation could reduce the health care burden in the United States, UK, and elsewhere. Further research is required to confirm these estimates.

Abstract: The objective of this work is to estimate the economic burden and premature death rate in Canada attributable to low serum 25-hydroxyvitamin D (25(OH)D) levels. Vitamin D deficiency has been linked to many diseases and conditions in addition to bone diseases, including many types of cancer, several bacterial and viral infections, autoimmune diseases, cardiovascular diseases, and adverse pregnancy outcomes. Canadians have mean serum 25(OH)D levels averaging 67 nmol/L. The journal literature was searched for papers reporting dose-response relationships for vitamin D indices and disease outcomes. The types of studies useful in this regard include randomized controlled trials, observational, cross-sectional, and ecological studies, and meta-analyses. The mortality rates for 2005 were obtained from Statistics Canada. The economic burden data were obtained from Health Canada. The estimated benefits in disease reduction were based on increasing the mean serum 25(OH)D level to 105 nmol/L. It is estimated that the death rate could fall by 37,000 deaths (22,300-52,300 deaths), representing 16.1% (9.7-22.7%) of annuals deaths and the economic burden by 6.9% (3.8-10.0%) or $14.4 billion ($8.0 billion-$20.1 billion) less the cost of the program. It is recommended that Canadian health policy leaders consider measures to increase serum 25(OH)D levels for all Canadians.

Dr Emily A. Kane ND, LAc
Natural Healthcare
Juneau AK 99801

3-8-11

I strongly support any legislation or resolutions that would promote awareness of, and apply remedies to, Vitamin D deficiency which is rampant in Alaska.

We have become an indoor society. I have been checking Vit D levels routinely in my primary care practice for five years. Not one Alaskan who does not supplement with 3-6,000 IU's daily is replete. The fix is cheap: a year's worth of Vit D3 drops costs about $20.

Sincerely,
Dr Emily A. Kane

The FNB Has Failed Millions

After 13 year of silence, on Nov. 30, 2010, the quasi-governmental agency the Institute of Medicine's (IOM) Food and Nutrition Board (FNB) recommended that a 3-pound premature infant take virtually the same amount of vitamin D as a 300-pound pregnant woman. While that 400 IU/day dose is close to adequate for infants, 600 IU/day in pregnant women will do nothing to help the three childhood epidemics most closely associated with gestational and early childhood vitamin D deficiencies: asthma, autoimmune disorders, and – as recently reported in the largest pediatric journal in the world – autism. Professor Bruce Hollis of the Medical University of South Carolina has shown that pregnant and lactating women need at least 5000 IU/day, not 600.

The FNB also reported that vitamin D toxicity might occur at an intake of 10,000 IU/day (250 micrograms/day), although it could produce no reproducible evidence that 10,000 IU/day has ever caused toxicity in humans and only one poorly conducted study indicating that 20,000 IU/day may cause mild elevations in serum calcium, but not clinical toxicity.

Viewed with a different measure, this FNB report recommends that an infant should take 10 micrograms/day (400 IU) and a pregnant woman 15 micrograms/day (600 IU). As a single, 30-minute dose of summer sunshine gives adults more than 10,000 IU (250 micrograms), the FNB is apparently also warning that natural vitamin D input – as occurred from the sun before the widespread use of sunscreen – is dangerous. That is, the FNB is implying that God does not know what she is doing.

Disturbingly, this FNB committee focused on bone health, just as it did 14 years ago. It ignored the thousands of studies from the last 10 years that showed higher doses of vitamin D help: heart health, brain health, breast health, prostate health, pancreatic health, muscle health, nerve health, eye health, immune health, colon health, liver health, mood health, skin health, and especially fetal health. Tens of millions of pregnant women and their breast-feeding infants are severely vitamin–D deficient, resulting in a great increase in the medieval disease rickets. The FNB report seems to reason that if so many pregnant women have low vitamin D blood levels then it must be OK because such low levels are so common. However, such circular logic simply represents the caveman existence (never exposed to the light of the sun) of most modern-day pregnant women.

Hence, if you want to optimize your vitamin D levels – not just optimize the bone effect – supplementing is crucial. But it is almost impossible to significantly raise your vitamin D levels when supplementing at only 600 IU/day (15 micrograms). Pregnant women taking 400 IU/day have the same blood levels as pregnant women not taking vitamin D; that is, 400 IU is a meaninglessly small dose for pregnant women. Even taking 2000 IU/day of vitamin D will only increase the vitamin D levels of most pregnant women by about 10 points, depending mainly on their weight. Professor Bruce Hollis has shown that 2000 IU/day does not raise vitamin D to healthy or natural levels in either pregnant or lactating women. Therefore supplementing with higher amounts – like 5000 IU/day – is crucial for the woman who wants her fetus to enjoy optimal vitamin D levels, and the future health benefits that go along with it.

For example, taking only two of the hundreds of recently published studies: Professor Urashima and colleagues in Japan gave 1200 IU/day of vitamin D3 for six months to Japanese 10-year-olds in a randomized controlled trial. They found that vitamin D dramatically reduced the incidence of influenza A as well as the episodes of asthma attacks in the treated kids, while the placebo group was not so fortunate. If Dr. Urashima had followed the newest FNB recommendations, it is unlikely that 400 IU/day treatment arm would have done much of anything and some of the treated young teenagers may have come to serious harm without the vitamin D. Likewise, a randomized controlled prevention trial of adults by Professor Joan Lappe and colleagues at Creighton University, which showed dramatic improvements in the health of internal organs, used more than twice the FNB's new adult recommendations.

Finally, the FNB committee consulted with 14 vitamin D experts and – after reading these 14 different reports – decided to suppress them. Many of these 14 consultants are either famous vitamin D researchers, like Professor Robert Heaney at Creighton or, as in the case of Professor Walter Willett at Harvard, the single best-known nutritionist in the world. So, the FNB will not tell us what Professors Heaney and Willett thought of its new report? Why not?

Today, the Vitamin D Council directed our attorney to file a federal Freedom of Information (FOI) request to the IOM's FNB for the release of these 14 reports.

Most of my friends, hundreds of patients, and thousands of readers of the Vitamin D Council newsletter (not to mention myself) have been taking 5000 IU/day for up to eight years. Not only have they reported no significant side effects, indeed, they have reported greatly improved health in multiple organ systems. My advice, especially for pregnant women: continue taking 5000 IU/day until your 25(OH)D is between 50 and 80 ng/mL (the vitamin D blood levels obtained by humans who live and work in the sun and the midpoint of the current reference ranges at all American laboratories). Gestational vitamin D deficiency is associated not only with rickets, but a significantly increased risk of neonatal pneumonia, a doubled risk for preeclampsia, a tripled risk for gestational diabetes, and a quadrupled risk for primary cesarean section.

The FNB has failed millions of pregnant women whose as-yet unborn babies will pay the price. Let us hope that the FNB will comply with the spirit of "transparency" by quickly responding to our Freedom of Information requests.

RE: Preventative Health - Vitamin D Resolution

I appreciate your efforts and agree that research links Vitamin D deficiency and insufficiency to depression, bone disorders, cancer, immune disease, diabetes, and coronary disease, at the very least. Therefore, I support your resolution.

Perhaps, an addendum to your resolution might address a list of micronutrients including Vitamins and Minerals be drawn annually by all primary healthcare providers and with all initial mental health assessments. I would suggest expanding, at the very least, to include Niacin, B12, folate (folic acid), thiamine, Vitamin D and trace minerals including iron, magnesium, and selenium. Scientific evidence links a variety of psychiatric symptoms with deficiency and insufficiency as components to psychiatric syndromes.

I receive healthcare through Indian Health Services and have had few of these labs drawn to my knowledge as late as age 60. My Father is 83, a diabetic, with hypertension, hyperlipidemia, skin cancer, and situational depression who receives services through the VA. The labs listed below were not drawn, any time recently that I am aware of, *until* I made a request of a local practitioner October of 2010. Which found the labs to be: Vitamin D 25 OH Total level of 21, optimum levels range from 30-100 with <20 deficient and 20-30 insufficient, B12 was 127, low was indicated at 180 and high 914, and his Iron was 23, low indicated at 45 and high 182. I plan to request a recheck at his next VA visit this month. His diet has improved and he has been taking supplements I would like to evaluate any improvement or lack thereof. Additionally, I am awaiting my own lab results as we speak.

A large majority of Alaska's citizens would not know to request these labs. It is, therefore, up to the State of Alaska to protect the physical & mental

health and wellbeing of Alaska's people, of all ages. We seek as healthcare professionals and legislative representative's to address the prevention of medical and mental illness; not only personal and family short and long term impact, but as our obligation to address and curb the economic impact on Alaska as a whole.

Additionally, I would support, as an indication of need, an Alaskan research study to evaluate levels of vitamins and minerals, using a very large sample group of both rural and urban Alaskans (not less than 20,000), with a variety of ages, listing medical and psychiatric diagnoses, and comparing regions, those consuming the traditional Native diet compared to Western diet, and those taking supplements with those not. *Including,* those individuals of all ages having threatened and attempted suicide. In order to discover whether levels may or may not suggest a relationship to depression and other psychiatric symptoms potentially contributing to suicide. With a follow-up study evaluating diet changes and vitamin and mineral supplements provided over time.

I appreciate your addressing the preventative health of Alaskans.

With Kindest Regards,

Sharon Norton

Mayoclinic http://www.mayoclinic.com/health/vitamin-d/NS_patient-vitamind/DSECTION=evidence suggests among many other diagnoses that:
Seasonal affective disorder (SAD) is a form of depression that occurs during the winter months, possibly due to reduced exposure to sunlight. In one study, vitamin D was found to be better than light therapy in the treatment of SAD. Further studies are necessary to confirm these findings.

NYU Medical Center http://www.med.nyu.edu/content?ChunkIID=21566 Other micronutrients are also commonly deficient in elderly populations. A small study among nursing home residents found that low levels of the mineral selenium was associated with depression. Moreover, 8 weeks of mineral supplementation tended to improve the mood of the most seriously depressed patients with low selenium levels.

Dear Representative Seaton,

I just read the resolution on promotion of Vitamin D in Alaska, and I would like to personally thank you for your leadership in this area.
I told a group of pediatricians at a meeting today, and we are all so pleased that this important health issue is getting attention thanks to your resolution.
This is an example of a low or no-cost health care solution.

Thanks again, and if testimony on this is needed please let me know and I will be happy to help get the word out.

To Paul Seaton,

Hello,
My name is Kirstie Shirey. I'm twenty years old and am in college to become a early childhood teacher. I'm writing this e-mail for both myself, and class. I was given a list of things to choose from, this was one that was easy and something I believe in. I am low in Vitamin D, and my father is also is low.

Vitamin D, something that everyone needs. I think that a lot of people don't know how little they are getting. Even those who go outside everyday and are active don't get a lot of sun. It's to cold, with clouds, snow, and bundled up with little skin showing for the little sun Alaska gets in the winter.

support bill HCR 5.

Thank you for taking the time to read my little e-mail.

Sinisterly
Kirstie Shirey

March 9, 2011

The Honorable Wes Keller
Chair, House Health & Social Services Committee
Alaska Capitol, Room 427
Juneau, Alaska 99801

Dear Representative Keller,

On behalf of the more than 12,000 U.S. members of the American Academy of Dermatology Association (AADA), I am writing to point out several inaccuracies contained in HCR 5 regarding vitamin D. HCR 5 misrepresents several findings of the cited scientific literature, and as such endangers the health of Alaska's citizens by overemphasizing the role of vitamin D in disease prevention.

The AADA would not want HCR 5 to be used as grounds to legitimize use of indoor tanning beds as a means for increasing vitamin D levels. In 2010, the Institute of Medicine (IOM) released an exhaustive review of scientific literature and revised its previous recommendations on vitamin D intake. Of particular note, the IOM stated that individuals should not increase their exposure to UV radiation in order to increase their vitamin D levels, because of the risk of developing skin cancer and melanoma.

The AADA would like to point out specific omissions (**noted in bold**) in the cited data in HCR 5, which erroneously make the case for substantial vitamin D supplementation:

- A 2007 article published in the American Journal of Clinical Nutrition reported that a study that compared cancer rates of a group ***of post menopausal women*** taking 1100 IU of vitamin D supplements in combination with calcium to cancer rates of a group taking a placebo found the risk of developing any cancer after four years was 60 percent lower in the group taking vitamin D supplements *(page 1, line 16 – page 2, lines 1-4);*
- A 2007 article published in the American Journal of Preventative Medicine reported that a study found blood serum levels of vitamin D of at least 33 ng/ml ***to be associated with a 50 percent lower risk of colorectal cancer incidence*** compared with blood serum levels of vitamin D of less than 12 ng/ml *(page 2, lines 9-12)*;
- A 2001 study published in the Lancet found that children in Finland who received 2,000 IU a day of vitamin D for the first year of life 78 percent reduced risk of type 1 diabetes ***over the ensuing 31 years*** compared to children receiving 400 IU a day of vitamin D *(page 2, lines 23-26)*;
- The Centers for Disease Control and Prevention report that influenza vaccine effectiveness varies greatly ***based on the age and immunocompetence of the vaccine recipient and the degree of similarity between the viruses in the vaccine and those in circulation*** *(page 3, line 22-23)*;

- A 2010 article published in the American Journal of Clinical Nutrition reported that a study of a group of Japanese school children who received ***1200 IU*** of vitamin D ***had a decreased incidence of influenza compared to children receiving placebo. The reduction was more prominent in specific subgroups of children who had not been taking other vitamin D supplements and who started nursery school after age 3*** *(page 3, lines 27-30)**; and***
- A 2010 article in The Lancet reported that the risk of multiple sclerosis increases with latitude ***~~and with low blood serum levels of vitamin D~~*** *(page 4, lines 3-4).*

The key information missing from the above whereas clauses misrepresent the scientific data regarding vitamin D health benefits by neglecting to include critical information on the populations involved in the studies and the intent of the research.

While there are epidemiologic studies that show a statistical relationship between lower vitamin D levels and a higher incidence of some of these diseases, there are also multiple studies that have suggested an inverse association between vitamin D intake and cancer. There is some evidence that too much vitamin D may be harmful. Further, well-designed prospective studies of vitamin D intake and its association to diseases are needed to better assess this ambiguous association.

The AADA recommends vitamin D should be obtained through a healthy diet which includes drinking milk, eating foods which are good sources of vitamin D, and taking vitamin supplements. Intentional exposure to ultraviolet light from indoor tanning beds or the outdoor sun to produce optimum levels of vitamin D is not recommended, as ultraviolet (UV) radiation exposure is associated with increased risk of skin cancer and melanoma.

> **FURTHER RESOLVED** that the Alaska State Legislature urges the Department of Health and Social Services to provide vitamin D supplements to the elderly to prevent bone loss, falls, fractures, and other age-related health problems;

Studies have demonstrated that calcium and vitamin D are two essential nutrients, long known for their joint role in bone health. The AADA supports use of vitamin D supplements taken orally (according to the Institute of Medicine recommended dosage) along with calcium for the elderly to prevent bone loss, falls, and fractures. It is critical for overall health, that individuals follow the recommendations of their physician and abide by the guidelines of the Institute of Medicine as there is emerging evidence that too much of these nutrients may be harmful.

> **FURTHER RESOLVED** that the Alaska State Legislature urges the Department of Health and Social Services to investigate substituting vitamin D supplementation for influenza vaccination as a less costly method for preventing influenza;

Studies have not conclusively demonstrated than vitamin D supplements will prevent infectious diseases; yet, numerous studies have conclusively demonstrated that vaccines are very effective in preventing infectious diseases. Vigorous vaccination practices and healthy living conditions will lower the rates of preventable infectious diseases and also reduce morbidity and mortality from these preventable diseases.

HCR 5 would endanger patients by replacing a proven method of disease prevention with a vitamin supplementation program which has not been tested to protect the general population from infectious disease, such as influenza.

> **FURTHER RESOLVED** that the Alaska State Legislature urges the Department of Health and Social Services to provide vitamin D supplements to pregnant women and infants to prevent pregnancy complications, preterm births, type 1 diabetes, and rickets.

The AADA strongly cautions the Alaska Legislature to further review the scientific literature regarding vitamin D, and disease prevention before moving forward with a supplementation program aimed at specific, vulnerable segments of the population. Moreover, it is critical that the public be appropriately educated about vitamin D and be encouraged to consult their physician before taking any vitamin supplements. Lastly, Alaskans should be educated about the dangers of ultraviolet radiation (UV). As stated previously, UV radiation from the sun and indoor tanning beds is associated with a significant increased risk in the development of skin cancer and melanoma. The public should be educated about proper sun protection and urged to avoid UV exposure from indoor tanning devices.

Thank you for the opportunity to provide written comments on HCR 5. For further information, please contact Kathryn Chandra, Assistant Director of State Policy for the AADA, at kchandra@aad.org or (202) 712-2615.

PERSPECTIVE

JBMR

Why the IOM Recommendations for Vitamin D Are Deficient

Robert P Heaney[1] and Michael F Holick[2]

[1]Creighton University , Omaha, NE, USA
[2]Department of Medicine, Division of Endocrinology, Boston University Medical Center, Boston, MA, USA

ABSTRACT

The IOM recommendations for vitamin D fail in a major way on logic, on science, and on effective public health guidance. Moreover, by failing to use a physiological referent, the IOM approach constitutes precisely the wrong model for development of nutritional policy.
© 2011 American Society for Bone and Mineral Research.

KEY WORDS: VITAMIN D; NUTRITIONAL POLICY; EVOLUTIONARY PHYSIOLOGY

Introduction

In the past two years, vitamin D supplement sales to consumers have increased by more than 100% per year.[1] Now, following publication of the report[2] on Dietary Reference Intakes (DRIs) for calcium and vitamin D by the Institute of Medicine (IOM), many physicians report that they are decreasing their vitamin D recommendations to patients. This change was explicitly proposed by members of the IOM panel in their various media statements. While a small fraction of consumers may well have all the vitamin D they need, on balance, we consider a general downward trend to be harmful to the health of the public.

Both the authors of this Perspective served as members of the panel that drafted the 1997 report of the IOM on the DRIs for calcium and vitamin D. That report was the first issued by the IOM under the then-new evidence-based guidelines for evaluating studies and making recommendations. We are thus familiar with the process and, most important, with vitamin D itself. On the basis of this experience, we respectfully dissent from many of the findings and recommendations in the current report, and we set forth here a small fraction of the reasons for that dissent.

The IOM report (and its presentation to the media) stressed that its recommendations for vitamin D were based primarily on the intake (and serum 25-hydroxyvitamin D concentration) needed to ensure skeletal health and that, in the panel's judgment, there was insufficient evidence to make any recommendations with respect to nonskeletal benefits, if any. Second, the report concluded that a serum level for 25-hydroxyvitamin D [25(OH)D] of 20 ng/mL was sufficient to ensure bone health. And third, the panel concluded that since the bulk of the American public had 25(OH)D values that were above 20 ng/mL, most individuals were getting all the vitamin D they needed and had no reason for further supplementation. These conclusions fail on three grounds: logic, science, and guidance.

First, logic. Since the panel, in its judgment, concluded that it did not know whether there might be nonskeletal benefits (or at what blood level they could be ensured), then it is patently incorrect to say that they know that people are getting enough. The most the panel could have said logically was, "Here's what you need for bone; most people get that much; we do not know whether more would confer possible nonskeletal benefits." That, at least, would have been an honest communication of the state of the issue as the panel apparently understands it. However, to state publicly that the general public does not need more goes well beyond what the panel admits it knows.

Second, science. The statement that skeletal health can be ensured at serum 25(OH)D levels of 20 ng/mL is simply incorrect. Without going into an exhaustive recital of all the evidence pointing to a skeletal need for higher levels, we cite here three illustrative observations that, in our collective judgment, indicate that instead of 20 ng/mL, a serum level of 30 ng/mL is closer to the bottom end of the acceptable range for skeletal health. First, there is the large randomized, controlled trial in the United Kingdom that raised serum 25(OH)D level from 21 to 29 ng/mL and produced a 33% reduction in all major osteoporotic fractures combined.[3] The fact that other trials, with less good compliance, failed to reproduce that effect does not negate the evidence of a well-conducted trial. Second, there are the many meta-analyses of Bischoff-Ferrari and colleagues[4,5] demonstrating that, taken overall, fracture reduction with vitamin D does not occur reproducibly below serum 25(OH)D

levels of 30 ng/mL and for some fractures even 40 ng/mL. Finally, there is the demonstration, in a large German autopsy series (strangely misinterpreted by the panel), that osteoid seam width—the histologic hallmark of vitamin D deficiency—does not reach fully normal values until serum 25(OH)D levels are above 30 ng/mL.[6] [N.B.: Of 33 patients with 25(OH)D values between 20 and 30 ng/mL, more than half (18) had elevated osteoid volume. A Recommended Daily Allowance (RDA), by definition, meets the need of 97.5% of the population.] In a closely related finding, investigators from South Australia[7] showed seasonal variation in osteoid seam width and mineral appositional rate, reflecting variations in serum 25(OH)D precisely within the 20 to 30 ng/mL range, that is, above the IOM panel's "adequate" level.

Additionally, there is an apparent inconsistency between the recommended intake (600 IU/day for all individuals up through age 70) and the bottom end of the acceptable 25(OH)D serum concentration range (let alone higher values). As virtually universal experience with vitamin D supplementation demonstrates, 600 IU/day, if the body's sole input of vitamin D, would not be enough to produce a value of even 10 ng/mL, let alone 20 ng/mL or above. There is a generally recognized "rule of thumb" to the effect that each additional 100 IU of vitamin D per day raises serum 25(OH)D concentration by approximately 1 ng/mL. That is, in fact, a "rounding up" for convenience of calculation. Several studies indicate that the response increment is closer to 0.7 ng/mL/100 IU.[8,9] Either way, 600 IU/day will not suffice without appreciable solar and dietary input. Furthermore, as is also widely recognized, 600 IU/day produces barely perceptible changes in individuals who are overweight or obese (now better than 50% of the US adult population). Hence the increase from the 1997 DRIs, while welcome, and certainly in the right direction, is simply inconsistent with current professional experience. It not only is inadequate, by itself, to meet even the panel's recommended serum levels, but this internal inconsistency detracts from the credibility of the whole report inasmuch as it flies in the face of the everyday experience of clinicians who recommend supplements to their patients and measure the resulting responses.

Finally, guidance. At already noted, the panel indicated that it was uncertain about extraskeletal benefits—benefits that might accrue at intakes above the new intake recommendations. At the same time, the panel raised the upper-level intake "TUIL" to 4000 IU/day. (The report acknowledges that intakes up to 10,000 IU/day are probably safe for everyone and applied an uncertainty factor[10] to that 10,000-IU figure to generate the 4000-IU TUIL. It is important to stress that the TUIL is not a limit but instead constitutes an assurance of safety for such an intake.) One should have thought that even a very simplistic game-theory approach would have led to a guidance statement such as the following: "We do not know whether taking more vitamin D than we are currently recommending will help you, but it could, and we can assure you that supplemental intakes up to at least 4000 IU/day are safe." Such a statement, couched, perhaps, in less straightforward language, nevertheless would provide guidance that both the public and governmental agencies could find useful. Instead, we now have only a confused public.

Beyond these errors and inconsistencies, though, serious as they are, lies a much deeper flaw in the approach taken by the panel, exemplified by a quote from one of the panel members to the *New York Times* at the time of release of the report.[11] The statement was simply that the "onus" (ie, burden of proof) fell on anyone who claimed benefits for intakes higher than the panel's current recommendations. This is an approach that is correct for drugs, which are foreign chemicals and which do carry an appropriately heavy requirement for proof. For drugs, the position of privilege is given to the placebo. And in the current IOM report, the privilege is given to a serum 25(OH)D level that is effectively the status quo. We judge that this is exactly backward for nutrients. The privilege instead must be given to the intake that prevailed during the evolution of human physiology, the intake to which, presumably, that physiology is fine-tuned. So far as can be judged from numerous studies documenting the magnitude of the effect of sun exposure,[12,13] the primitive intake would have been at least 4000 IU/day and probably two to three times that level, with corresponding serum 25(OH)D levels ranging from 40 to 80 ng/mL. The fact that primitive levels would have been higher than current IOM recommendations does not, of course, prove their necessity today. But such intakes should be given the presumption of correctness, and the burden of proof must be placed on those who propose that lower intakes (and lower serum levels) are without risk of preventable dysfunction or disease. The IOM, in its report, has utterly failed to recognize or meet that standard.

Finally, we commend the IOM panel for their concern about safety, certainly an appropriate posture for a body crafting public policy. However, the standards adopted by the panel for taking into evidence papers indicating possible risk were, we note, far lower than those the panel required to indicate benefit. Additionally, many of the purported risks were, on their face, implausible and inconsistent with the experience of population subgroups that routinely have serum levels in the range mentioned by the panel as possibly risky (eg, approximately 50 ng/mL). We note that one of the widely accepted Hill[14] criteria for acceptance of observational data is precisely biologic plausibility. Furthermore, we consider it highly implausible that serum levels such as prevailed during hominid evolution could carry more risk than benefit for the populations concerned. Had that been the case, one should have expected that natural selection would have eliminated those prone to such risks.

In this Perspective, we have deliberately avoided a mind-numbing laundry list of the vast number of factual inaccuracies and misinterpretations in the report. We are informed that there is a request, through the Freedom of Information Act, to obtain the external review comments submitted to the IOM in response to a prepublication draft. When those materials become available, those interested can review the many problems with the IOM report in detail. For now, our recommendation to the American public is that the IOM report should be taken with a grain of salt (another nutrient the IOM finds risky).

HOUSE DISTRICT 2

SPONSOR STATEMENT
House Concurrent Resolution 20
"A Resolution designating February 2012 as American Heart Month."

HCR 20 raises awareness of the nation's leading cause of death: cardiovascular disease.

This unfortunate disease causes an average of one American death every 39 seconds or nearly 2,200 deaths each **day**. It is the costliest disease in the nation, with direct and indirect costs estimated to be $297,700,000 a year.

The American Heart Association's 2020 impact goal seeks to improve cardiovascular health of all Americans by 20 percent while reducing deaths from cardiovascular disease and stroke by 20 percent through research, population-level and community-level interventions, and public health and policy measures

The passage of this resolution would join Alaska and the American Heart Association in raising awareness of this disease by celebrating February 2012 as "American Heart Month" and promoting education and awareness by encouraging citizens to learn the warning signs of heart attack and stroke.

Abstract—This document details the procedures and recommendations of the Goals and Metrics Committee of the Strategic Planning Task Force of the American Heart Association, which developed the 2020 Impact Goals for the organization. The committee was charged with defining a new concept, *cardiovascular health*, and determining the metrics needed to monitor it over time. Ideal cardiovascular health, a concept well supported in the literature, is defined by the presence of both ideal health behaviors (nonsmoking, body mass index <25 kg/m^2, physical activity at goal levels, and pursuit of a diet consistent with current guideline recommendations) and ideal health factors (untreated total cholesterol <200 mg/dL, untreated blood pressure $<120/<80$ mm Hg, and fasting blood glucose <100 mg/dL). Appropriate levels for children are also provided. With the use of levels that span the entire range of the same metrics, cardiovascular health status for the whole population is defined as poor, intermediate, or ideal. These metrics will be monitored to determine the changing prevalence of cardiovascular health status and define achievement of the Impact Goal. In addition, the committee recommends goals for further reductions in cardiovascular disease and stroke mortality. Thus, the committee recommends the following Impact Goals: "By 2020, to improve the cardiovascular health of all Americans by 20% while reducing deaths from cardiovascular diseases and stroke by 20%." These goals will require new strategic directions for the American Heart Association in its research, clinical, public health, and advocacy programs for cardiovascular health promotion and disease prevention in the next decade and beyond. (***Circulation.*** **2010;121:586-613.)**

This committee, which was composed of members of the Statistics Committee, the Strategic Planning Task Force, and other ad hoc members, was formed in February 2008 and met regularly through June 2009. Its recommendations were formally approved by the AHA National Board of Directors in February 2009. The final recommendation of the committee, as approved by the Board of Directors, was that the AHA 2020 Impact Goals should be as follows:

"By 2020, to improve the cardiovascular health of all Americans by 20% while reducing deaths from cardiovascular diseases and stroke by 20%."

Although important refinements in monitoring and improving rates of cardiovascular diseases (CVDs) and stroke were also to be considered and are reviewed here, the major challenge confronted by the committee was to address cardiovascular health as an Impact Goal: How to define it and how to measure it. This document details the commission, underlying rationale, processes, and recommendations of the committee, which outline bold new strategic directions for the AHA in cardiovascular health promotion and disease prevention for the next decade and beyond.

Public Health Burden of CVD and Stroke

Despite 4 decades of declines in age-standardized CVD and stroke death rates, the numbers of heart disease, stroke, and related vascular deaths continue to make these by far the leading causes of morbidity and mortality in the United States.[1,2] The burden of CVD and stroke in terms of life-years lost, diminished quality of life, and direct and indirect medical costs also remains enormous.[2] Downward shifts in population levels of cholesterol, blood pressure, and smoking account for nearly half (after adjustment for the impact of increasing prevalence of obesity and diabetes) of the decline in coronary heart disease (CHD) deaths that would have been expected in 2000 on the basis of rates in 1980; wider use of effective treatments among persons with existing CVD accounts for an equal share in this decline. Offsetting trends in prevalence of obesity and diabetes, as well as growth in the older population at highest risk for CVDs, have contributed to the persistent national CVD and stroke burden.[3] Very recent data also suggest a slowing of reductions in coronary death rates[4] and growing numbers of hospitalizations for acute and chronic manifestations of CVD, such as heart failure and atrial fibrillation.[1,2] It has also become clear that many CVDs with ultimate outcomes in adulthood actually have their origins during childhood. Unfortunately, there are disturbing trends of increasing obesity, increasing severe obesity, and increasing prevalence of hypertension and type 2 diabetes mellitus in the pediatric population.[2] These trends will very likely result in future increases in the burden of CVD and stroke among adults, including a trend for events to occur at younger ages.

As the leading voluntary health organization in the field of heart diseases and stroke, the AHA has taken a major leadership role in promoting the implementation of interventions that have contributed to the improvements in CVD and stroke morbidity and mortality rates seen to date. The AHA policies and programs designed to achieve the AHA 2010 Impact Goal appear to have contributed substantially to improvements in morbidity and mortality, as reviewed below.

However, it appears clear that the AHA and the nation must add a substantial new effort in the coming decade, building on the gains to date, if we are to arrest or reverse a rising tide of CVD events due to aging of the population and ongoing adverse levels of unhealthy behaviors (dietary imbalance, physical inactivity, smoking) and unhealthy risk factors (adverse blood lipids, high blood pressure, diabetes, obesity). To design and implement this next phase of CVD and stroke prevention, the AHA has decided not only to continue efforts at reducing CVD but also to adopt a major new focus: To improve cardiovascular health in the population as a whole. This fundamental expansion of prevention efforts will require an array of new tools and competencies for implementing public health policy and population- and community-level interventions to complement the traditional, predominantly medically oriented interventions that the AHA has promoted successfully in the past. To understand the new role being charted for the AHA, a review of past and current AHA efforts is warranted, because they laid the foundation for the new 2020 Impact Goals.

Development of the AHA 2010 Impact Goal

Process

The AHA 2010 Impact Goal was developed by a task force appointed by the Board of Directors in 1999. The task force began with a process to rank order risk factors, risk behaviors, and disease states in the order that they should be addressed to have a significant effect on CVD and stroke. Approximately 170 scientists were selected from the various executive committees of scientific councils within the AHA and were surveyed for their responses. The rank-ordering results showed CHD and stroke in the positions of highest importance. Risk factors followed in order of importance, with smoking, high blood pressure, high cholesterol, and physical inactivity deemed the most important, in that order. Obesity and diabetes were later added to the list as major risk factor metrics; nutrition ultimately was not included because of challenges present at that time for measurement of population nutritional habits in the United States.

Groups of scientists within the 2010 Task Force were assigned to each of the priority disease states and risk factors to estimate potential reductions for each by 2010. The group referenced trends for the previous decades and projected forward to 2010, considering various scenarios for treatment and control of risk factors and implementation of acute and chronic therapies. One portion of this group recommended that the 2010 Impact Goal aim for 30% relative reductions in CHD and stroke mortality, as well as in the prevalence of each of the risk factors. Another portion of this group recommended 20% reductions be targeted. Consensus was reached around a compromise goal of 25% reductions as the target for the 2010 Impact Goal.

Product

The final version of the goal approved in February 2004 by the AHA Board of Directors was, "By 2010, to reduce coronary

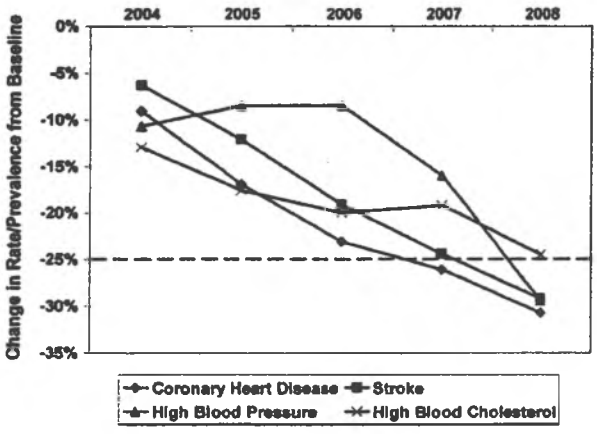

Figure 1. Trajectory of mortality rates from CHD and stroke, rate of uncontrolled high blood pressure, and prevalence of high blood cholesterol from 2004 to 2008.

heart disease, stroke, and risk by 25%," with the following indicators:

- Reduce death rate due to CHD and stroke by 25%;
- Reduce prevalence of smoking, high blood cholesterol, uncontrolled high blood pressure, and physical inactivity by 25%; and
- Eliminate the growth of obesity and diabetes (0% increase).

Levels of mortality rates and risk factor prevalences in 1999 were used as the baseline. The goal also aligned well with the objective and goals of the US Healthy People 2010 focus area 12 on heart disease and stroke, although indicators and target goals were not identical.

From 2000 on, AHA staff and volunteers worked from this Impact Goal to develop multiple supporting goals in the areas of prevention, treatment, acute care, and resources. At the time, the 2010 Impact Goal and its supporting strategic programs represented a bold step for a voluntary health organization in the arena of national and public health policy focused on treatment and acute care. The concept of quantifying the impact on death rates and risk factors was a critical step in the evolution of the AHA's prevention strategies. The 2010 goal focused the AHA's agenda, efforts, and resources on a national scale and in a concerted way that had not been present previously.

Progress

Despite the ambitious nature of the 2010 Impact Goal, the targets for most components of the first 3 indicators were achieved well in advance of 2010 (Figure 1). The goals for indicators of smoking, physical inactivity, obesity, and diabetes have proven to be more difficult to achieve and will represent major challenges to the even more ambitious 2020 Impact Goal. The achievement of lower mortality goals was accomplished in part as the result of the work of practitioners and scientists engaged in the medical prevention and treatment of acute and chronic atherosclerotic CVD by accelerating existing trends toward lower heart disease and stroke death rates. Similarly, public health and policy measures instituted before the development of the 2010 goals had emphasized the importance of elimination of smoking, the importance of physical activity, and the control of risk factors for CHD and stroke such as high blood pressure and dyslipidemia. The work of the AHA also contributed to these declines through the development of guidelines and their implementation in the "Get With the Guidelines" programs and numerous other initiatives.

Monitoring of the 2010 Impact Goal revealed by 2008 a 30.7% reduction in the death rate due to CHD, a 29.2% reduction in the death rate due to stroke (data from the National Vital Statistics Sample), a 29.4% reduction in uncontrolled high blood pressure (data from the National Health and Nutrition Examination Survey [NHANES] 2005–2006), a 24.5% reduction in prevalence of high cholesterol (NHANES 2005–2006), and a 15.8% reduction in prevalence of smoking (data from the National Health Interview Survey 2006) compared with baseline levels (http://www.cdc.gov/nchs/deaths.htm, http://www.cdc.gov/nchs/nhanes.htm, http://www.cdc.gov/nchs/nhis.htm, and the AHA Heart Disease and Stroke Statistics—2009 Update[2]). There was only limited impact on other risk factors, including increases in prevalence of obesity and diabetes, and a small 2.5% reduction in those not engaged in moderate or vigorous physical activity (National Health Interview Survey 2006).

Proposal for 2020

The strategic approach and progress toward the 2010 Impact Goal pointed to innovations that are required to define and implement new strategies for improving cardiovascular health and preventing disease events and deaths. Accordingly, in June 2007, the AHA Board of Directors commissioned a Strategic Planning Task Force of the AHA to oversee drafting and implementation of the 2020 Impact Goal, with a directive to incorporate the novel aim of improving the cardiovascular health of all Americans while reducing death due to CVD and stroke.

In addition to refining the longstanding focus on reducing the burden of CHD and stroke mortality, the charge for the Goals and Metrics Committee suggested that the design of the new metric for cardiovascular health would require that attention be paid to a number of critical issues. Success in this task would enable the AHA to undertake a new and more proactive organizational mission, not only continuing the tremendous success in improved treatment but also addressing the need for a new and expanded emphasis on prevention, control of risk, improving quality of life, and promoting health rather than solely treating disease. It was acknowledged that at that time, no comprehensive metric for cardiovascular health existed, and the committee was charged with developing such a metric.

In addition, it was recommended that the committee broaden its scope to encompass all of CVD and stroke mortality, not just CHD and stroke, in support of existing and future programs and initiatives of the AHA in all areas of CVD. This is important because it recognizes areas such as congenital heart disease, which is the leading cause of mortality of any congenital defect and is an area in which progress is being made in prevention and treatment. As with the 2010 goal, an implicit aspect of the 2020 Impact Goal is

Downloaded from http://circ.ahajournals.org/ by guest on January 25, 2012

the ability to measure the current status and progress of each component with nationally representative samples. Thus, although further focus on reducing the incidence of nonfatal CVD events was also suggested, it was acknowledged that this would entail establishing means for national surveillance of nonfatal events. Other areas for consideration were to include quality of life, quality of care, and health disparities, although each of these areas also presents significant challenges with regard to measurement over time in nationally representative samples. With this charge, the committee began its work to develop recommendations to complete the following draft 2020 Impact Goals statement: **"By 2020, to improve the cardiovascular health of all Americans by __% while reducing deaths from cardiovascular diseases and stroke by __%."**

Defining and Measuring Cardiovascular Health

Concepts of Prevention

In considering the concept of cardiovascular health, the committee took into account 3 key concepts in health promotion and disease prevention: (1) The power of primordial prevention; (2) the evidence that CVD and risk factors for it often develop early in life; and (3) the appropriate balance between population-level approaches for health promotion and disease prevention and individualized high-risk approaches. These concepts informed the definition of cardiovascular health, as well as the metrics that would be needed to monitor it and the strategies that would be needed to improve it across the lifespan.

Primordial Prevention

Most clinicians are familiar with the concepts of secondary and primary prevention. In secondary prevention, efforts are aimed at preventing the recurrence of clinical events in patients who have manifest clinical disease. For example, therapeutic lifestyle change and aspirin and statin medications are used to prevent recurrent myocardial infarction (MI) in patients who have already experienced an MI. In primary prevention, efforts focus on preventing the first occurrence of a clinical event among individuals who are at risk. Examples are the use of blood pressure–lowering medications and dietary intervention in patients with hypertension to prevent the first occurrence of stroke. As such, primary prevention efforts are aimed at individuals who already have adverse levels of known risk factors. However, as reviewed below, once adverse levels of risk factors are present, even in young adulthood and middle age, substantial elevations in long-term and lifetime risks for CVD and stroke are largely unavoidable. Furthermore, whereas clinical guidelines impose thresholds on risk factor levels to guide decision making, the association of risk factor levels with CVD risk is continuous and graded across all levels. Therefore, it is of paramount importance to focus on prevention at all levels of risk. Risk factors may result in the development of subclinical atherosclerosis and other myocardial and vascular changes over the course of years to decades. In turn, subclinical CVD typically precedes the occurrence of clinical events by years to decades. Thus, it makes sense that avoidance of adverse levels of risk factors in the first place may be the most effective means for avoiding clinical events during the remaining lifespan.

This is the meaning of *primordial prevention*, a concept introduced by Strasser in 1978.[5] On a population-wide basis, primordial prevention was conceived as a strategy to prevent whole societies from experiencing epidemics of the risk factors. The corresponding strategy at the individual level is to prevent the development of risk factors in the first place. Although this terminology may be unfamiliar to some, the strategy of promoting healthy behaviors for this purpose is well recognized and common to many guidelines and recommendations in CVD prevention, especially those that focus on childhood and adolescence.[6] Thus, primordial prevention has relevance and urgency in the high-income nations of today, given the substantial burden of obesity and the adverse health behaviors and environment that often begin in childhood and are present in most high-income nations, especially the United States. Primordial prevention was also a guiding feature of the Healthy People 2010 goals for heart disease and stroke prevention, which include prevention of risk factors.[7] The concept of primordial prevention therefore formed a cornerstone for the committee's deliberations in defining ideal cardiovascular health.

High-Risk and Population-Wide Approaches to Prevention

Rose[8,9] articulated the important complementary relation between interventions that focus on individuals at highest risk (the high-risk strategy) and those that address the risk distribution in the entire population (the population-wide strategy). Primary prevention requires a focus on individuals known to be at risk for disease. Hence, screenings for elevated cholesterol or blood pressure in at-risk groups are key facets of CVD prevention guidelines, even in children and adolescents.[6] By identifying and treating those at the highest risk for events because of markedly elevated risk factor levels, a number of clinical events may be avoided. Indeed, a large proportion of the reductions in CHD mortality experienced in the United States and other high-income nations since the 1960s has been ascribed to the development and institution of efficacious primary and secondary prevention interventions in people at elevated risk[3]; however, individuals with markedly elevated levels of risk factors are relatively uncommon in the population.[2,10] It is widely recognized that the majority of CVD and stroke events occur in individuals with average or only mildly adverse levels of risk factors, simply because this is where the majority of the population lies.[9,10] Therefore, for effective disease prevention, population-level strategies are essential to shift the entire distribution of risk. As explained by Rose, health thus becomes an issue for populations and not just for individuals, and health promotion and disease prevention strategies must embrace both high-risk and population strategies. Of the 2, however, greater power resides with the population strategy when risk is widely diffused throughout the whole population, as is the case for CVD.[9]

For example, Stamler[11] has demonstrated that modest and achievable reductions in salt intake in populations can likely
