Presentation Overview

- Update on recent statistics from Uniform Crime Reports
- 2009 Senate Judiciary Committee recommendation for victimization survey
- FY10 Alaska Victimization Survey
- FY11 Alaska Victimization Surveys

CDVSA
Council on Domestic Violence & Sexual Assault
Safety * Prevention * Accountability

Forcible Rape in Uniform Crime Reports

- **Forcible rape is defined as the carnal knowledge of a female forcibly and against her will**
- **UCR statistics show the number of forcible rapes reported to police each year**
- **Important limitations:**
  - Not all police agencies participate in the UCR program
  - These statistics only include rapes reported to police
  - These statistics exclude:
    - Statutory rapes
    - Incapacitated rapes
    - Rapes with male victims
    - Other sex offenses
    - Rapes with more serious offenses (e.g., homicide)

UCR Forcible Rape Statistics

	2007 to 2008	2008 to 2009
U.S.	-2.3%	-2.1%
Alaska	-16.9%	+12.3%
Anchorage	-2.7%	+11.6%
Fairbanks	-12.5%	+27.1%

- Changes in UCR forcible rape statistics may be attributable to:
  - Changes in victimization rates,
  - Changes in reporting,
  - Changes in both victimization rates and reporting.

Source: UCR, 2007-2009

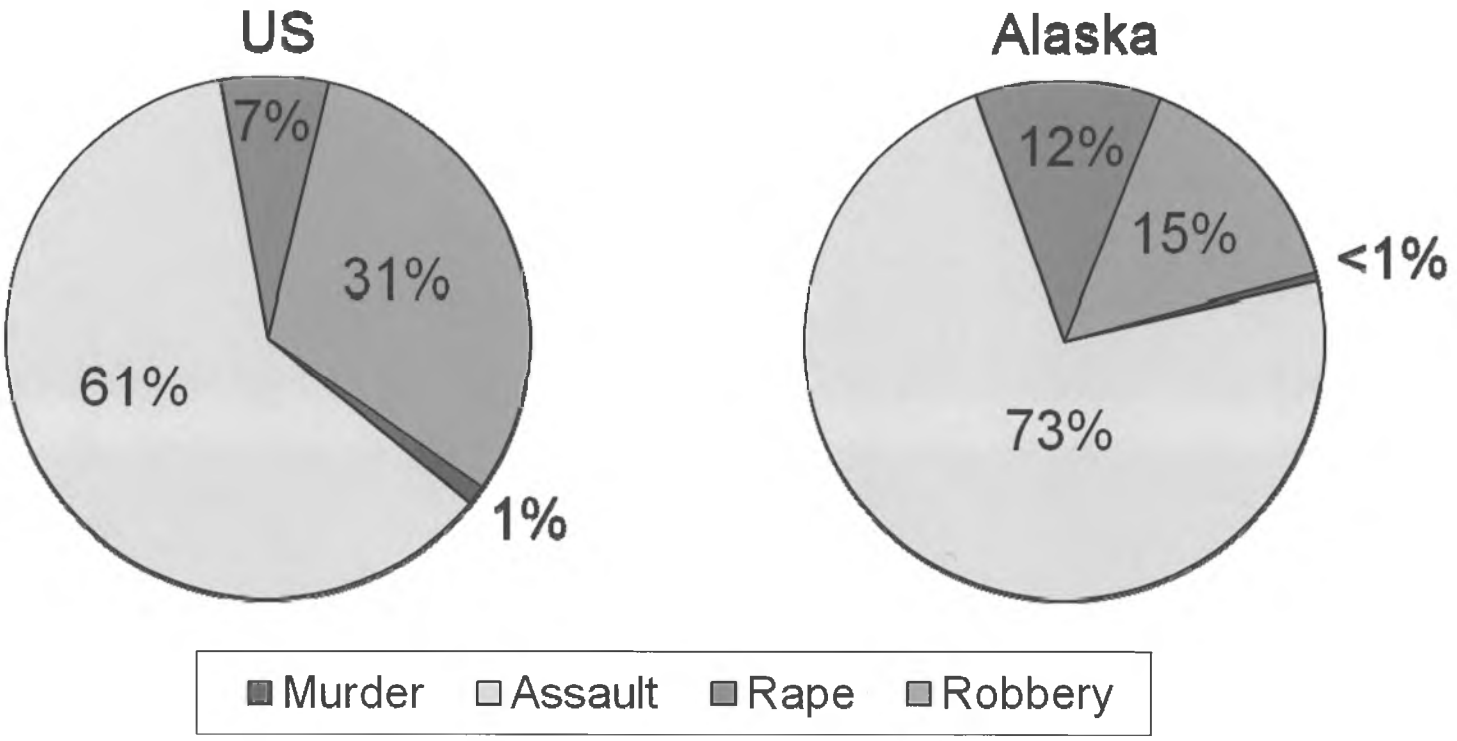
Composition of Violent Crime: 2009

Forcible rape is still a more common form of violent crime in Alaska than in the U.S.



Source: UCR, 2009; Interpretation: 7% of violent crime reported to police in the US is attributable to rape; 12% of violent crime reported to police in Alaska is attributable to rape.

Council on Domestic Violence and Sexual Assault

Council Vision:

Alaska, free from domestic and sexual violence

Council Mission:

Provide safety for Alaskans victimized or impacted by domestic Violence and sexual assault through a system of statewide crisis intervention, perpetrator accountability and prevention services.

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

FY10 Alaska Victimization Survey

- Designed to establish a baseline with statewide intimate partner and sexual violence estimates.
- Modeled after the National Intimate Partner and Sexual Violence Surveillance System (CDC, NIJ, DoD) and administered by RTI.
- Utilized a statewide random digit dial dual frame phone survey (both land and cell phone lines).
- Maximized respondent safety and confidentiality.

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

Alaska Victimization Survey Questions

- Begin with less sensitive questions
- Use behaviorally specific questions:
  - *Avoid terms which respondents must define: "victim," "rape," "sexual assault," or "domestic violence." Instead, ask about behaviors and define when necessary. Example: "by vaginal sex, we mean that a man or boy put his penis in your vagina."*
- Attribute behaviors to perpetrators rather than respondents:
  - *Avoid asking "did you have vaginal sex with others? Instead, ask "did others have vaginal sex with you?"*
- Respondents were thankful for the survey (94% completed the entire 25 min. survey).

CDVSA
Council on Domestic Violence & Sexual Assault
Safety ★ Prevention ★ Accountability

Survey Respondents

- Survey respondents were limited to English-speaking adult women residing in a household with at least one land or cell phone line.
- Includes 871 adult women throughout Alaska, surveyed in May/June 2010.
- Sample provides an excellent representation of the Alaska population of adult women.
- Sampling weights were used to control for selection, non-response, and coverage.

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

Survey Respondents

- Average age = 46 (ranges from 18 to 80+)
- 72% White, 15% Alaska Native
- 5% Hispanic
- 49% were married
- 35% had a high school degree or less
- 56% reported a household income <$50,000
- Geographically representative (68% are from Anchorage Municipality, Fairbanks North Star Borough, Matanuska-Susitna Borough)

Intimate Partner Violence Definitions

- Intimate partner violence includes two measures:
  - *A – Threats of physical violence.*
  - *B – Physical violence.*
  - *Both include intimate partners only, defined as romantic or sexual partners.*
  - *Measures are then combined into a single 'intimate partner violence' composite.*
- Threats of physical violence by intimate partners:
  - *Have your romantic or sexual partners made threats to physically harm you?*

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety ★ Prevention ★ Accountability

Intimate Partner Violence Definitions

- Physical violence by intimate partners:
  - *Have your romantic or sexual partners…*
    - *Slapped you?*
    - *Pushed or shoved you?*
    - *Hit you with a fist or something hard?*
    - *Kicked you?*
    - *Hurt you by pulling your hair?*
    - *Slammed you against something?*
    - *Tried to hurt you by choking or suffocating you?*
    - *Beaten you?*
    - *Burned you on purpose?*
    - *Used a knife or gun on you?*

Intimate Partner Violence Estimates

Lifetime Estimates	Estimated %	Estimated N (out of 247,238)
Intimate Partner Violence[1]	47.6%	117,685
A. Threats	31.0%	76,644
B. Physical Violence	44.8%	110,763

1 – Includes both threats of physical violence and physical violence by intimate partners.

- *47.6% of adult women in Alaska (or 117,685) experienced intimate partner violence in their lifetime,*
  - *31.0% (or 76,644) experienced threats of physical violence,*
  - *44.8% (or 110,763) experienced physical violence.*

Sexual Violence Definitions

- Sexual violence includes two measures:
  - *A – Alcohol or drug involved sexual assault.*
  - *B – Forcible sexual assault.*
  - *Measures are not limited to intimate partners.*
  - *Measures are then combined into a single 'sexual violence' composite.*
- Alcohol or drug involved sexual assault:
  - *When you were alcohol or drug intoxicated and unable to consent, has anyone…*
    - *Had vaginal sex with you?*
    - *Made you receive anal sex?*
    - *Made you perform oral sex?*
    - *Made you receive oral sex?*

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

Sexual Violence Definitions

- Forcible sexual assault:
  - *Has anyone used physical force or threats to physically harm you to…*
    - *Make you have vaginal sex?*
    - *Make you receive anal sex?*
    - *Make you perform oral sex?*
    - *Make you receive oral sex?*
    - *Put their fingers or an object in your vagina or anus?*
    - *Try to have vaginal, oral, or anal sex with you?*

Note: percentages do not sum because some respondents experienced multiple victimizations.

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT

Important Limitations

- Survey only provides a statewide average and masks regional differences. Regional estimates may vary significantly.
- Survey excluded non-English speaking women, women without phone access, and women not living in a residence (e.g., shelters, hospitals, homeless, prisons). Estimates may be significantly higher among women excluded from the survey.

CDVSA
Council on Domestic Violence & Sexual Assault
Safety • Prevention • Accountability

Important Limitations

- Measured *number of victims*, not *number of victimizations*. The number of victimizations is higher than the number of victims.
- Survey did not measure all forms of intimate partner violence or sexual violence. Estimates are therefore conservative.
- Estimates may also be conservative because of the continuing stigma of reporting intimate partner and sexual violence.

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

A Special Thank You!

We sincerely thank the women who invested time and effort to participate in the 2010 Alaska Victimization Survey.

They re-lived horrendous experiences – experiences no one should be subjected to – to help the rest of us understand the extent of intimate partner and sexual violence in Alaska. Thank you!

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety * Prevention * Accountability

FY10 Alaska Victimization Survey

- Survey provides the first statewide, comprehensive, and behaviorally specific measures of violence against Alaskan women
- Establishes a new baseline for Alaska that can be repeated to monitor progress and document change
- National comparisons and comparisons with other states will soon be available
- Results will be used to guide policy and practice

CDVSA
COUNCIL ON DOMESTIC VIOLENCE & SEXUAL ASSAULT
Safety • Prevention • Accountability

FY11 Alaska Victimization Surveys

- Surveys will soon begin in Anchorage and Fairbanks
- Surveys will include at least one rural location
- FY11 surveys will include two new questions:
  - Location of victimization (in/out of Alaska)
  - Child witnesses to violence
- FY11 surveys are again funded by the Council on Domestic Violence and Sexual Assault
- Continuing funding is needed and requested in the FY12 Governor's budget

http://justice.uaa.alaska.edu/vaw/

Abstract: *This study examined 989 cases with a sexual assault or sexual abuse of a minor charge reported to Alaska State Troopers in 2003 and 2004, and excluded any sexual assault cases reported to local or municipal departments.*

- *Forty-eight percent of reports came from C Detachment (Western Alaska - Kodiak to Kotzebue), and 58% were reported from communities off the road system.*
- *In 69% of cases, the identity of at least one suspect was known. While most suspects (87%) were adults, most victims (73%) were juveniles. Sixty-one percent of victims were Alaska Native and 38% were White. Intra-racial victimizations were much more prevalent than inter-racial victimizations. The most common suspect was a friend or acquaintance of the victim, followed by a relative. Forty-three percent of suspects and 27% of victims had used alcohol.*
- *Sexual penetration occurred in 60% of assaults. Weapons were very rarely used. Most assaults occurred inside private residences. Nineteen percent of victims experienced general physical pain and 10% suffered bruising or swelling. Most victimizations were reported quickly to Troopers and Troopers were quick to respond. Ninety-six percent of victims were interviewed, with 48% interviewed on the day of the report and 80% interviewed within one week of the report.*
- *Forty-six per cent of reported cases were referred for prosecution, 60% of referred cases were accepted for prosecution, and 80% of accepted cases resulted in a conviction. Overall, however, only 22% of reported cases resulted in a conviction. In some cases, the conviction may be for a non-sexual offense. The highest level of attrition occurred from report to referral.*

Most research on sexual assault and the sexual abuse of minors in the state of Alaska has been focused on Anchorage; little has been known about the characteristics of these problems in other communities. The Justice Center, working with the Alaska State Troopers and the Alaska Department of Law, has completed the first thorough review of sexual assault incidents reported to Troopers in 2003 and 2004. The results delineate a first draft of the problem in Alaska's smaller communities, for the population primarily served by the Troopers.

The final sample in this study included 989 cases with a sexual assault or sexual abuse of a minor charge, reported to Troopers in 2003 and 2004, and closed by the time of the study. It is important to note that this study did not include any sexual assault cases reported to local or municipal departments. In addition, this study did not include cases specific to child pornography or online enticement of minors.

Report Characteristics

Almost half of the reports included in the study (48%) came from C Detachment, which covers western Alaska, from Kotzebue to Kodiak (Table 1). The C Detachment headquarters is in Anchorage, with the remaining posts in Aniak, Bethel, Dillingham, Emmonak, King Salmon, Kodiak, Kotzebue, Nome, and St. Mary's. The Bethel post handled 17 percent of all sexual assault and sexual abuse of minor cases reported to Troopers in 2003 and 2004. Thirty percent of the reports came from the Alaska Bureau of Investigation (ABI), whose Major Crime Unit is responsible for investigating sexual assaults and other person offenses statewide. The Alaska Bureau of Investigation has posts in Anchorage, Palmer, Fairbanks, and Soldotna. ABI posts in Palmer and Fairbanks handled 16 percent of all sexual assault and sexual abuse of minor cases reported to Troopers in 2003 and 2004. Together, C Detachment and ABI handled 78 percent of all reports. Forty-two percent of the reported cases originated in communities connected to the State of Alaska highway system, and 58 percent were reported from communities off the road system.

Most reports (86%) were made directly to troopers. The remaining 14 percent were reported to Village Police Officers, Village Public Safety Officers, or Tribal Police Officers. Few of the initial complaints (21%) were made by the victims themselves. Most initial reports to law enforcement (79%) were made by a third party. In over two-thirds of the cases (69%), the identity of at least one suspect was known.

The 989 cases in this study included a total of 1,645 sexual assault charges and 258 non-sexual assault charges (Table 2). The most common sexual assault charges were second degree sexual abuse of a minor, first degree sexual assault, second degree sexual assault, and first degree sexual abuse of a minor—all felonious assaults (Unclassified or Class B). Together, these four offenses accounted for 81 percent of all sexual assault charges. The most common non-sexual assault charges included assaults (in the

Table 1. Total Number of Reports by Detachment

Table 2. All Sexual Assault Charges

Column percentages.

Charge	Number N	%
Sexual abuse of a minor 2nd degree	481	29.2 %
Sexual assault 1st degree	366	22.2
Sexual assault 2nd degree	292	17.8
Sexual abuse of a minor 1st degree	193	11.7
Sexual assault 3rd degree	130	7.9
Sexual abuse of a minor 3rd degree	99	6.0
Sexual abuse of a minor 4th degree	78	4.7
Sexual assault 4th degree	6	0.4
Total	**1,645**	

Source of data: *AST data (2003–2004)*

second, third, or fourth degree), burglary (in the first or second degree) and kidnapping. Together, these three offenses accounted for 50 percent of all non-sexual assault charges.

Despite the geographical distance that is often present between victims and Troopers, most victimizations were reported quickly to Troopers, and Troopers were quick to respond. Sixty-two percent of cases were reported within 72 hours, which, at the time of the study, was the benchmark for initiating a call to the Sexual Assault Response Team (SART) and collecting evidence with a sexual assault evidence kit. Seventy-seven percent of suspects were interviewed by Troopers (recall that the identity of the suspect was known in 69% of cases). Fifty-seven percent of suspect interviews occurred within one week of the report. Ninety-six percent of victims were interviewed, with 48 percent interviewed on the day of the report and 80 percent interviewed within one week of the report. Ninety-one percent of victim interviews were conducted in-person. On average, cases were closed 18 weeks after they were reported (Table 3). More specifically, 30 percent of cases were closed within three weeks, 50 percent were closed within eight weeks, and 75 percent were closed within 24 weeks.

Table 3. Case Closure Codes

Column percentages.

Closure code		Reports N	%
CA	Closed by arrest	316	32.0 %
CR	Closed, referred	255	25.7
CI	Closed by investigation	232	23.5
CU	Closed, unfounded	150	15.2
CD	Closed, declined	29	2.9
CE	Closed, exception	7	0.7
	Total	**989**	

Source of data: *AST data (2003–2004)*

A majority of cases (61%) were closed and referred for prosecution. These included cases closed by arrest (32%), closed and referred (26%), and closed but declined (3%). The remaining cases were closed after investigation (23%), closed as unfounded (15%), or closed by exception (1%). These latter groups of cases (excluding those closed by exception) were all closed without a suspect being arrested and in some cases without a suspect being identified. Cases that were closed as unfounded were more likely to be reported by third parties who were concerned that a sexual assault may have occurred.

Suspect and Victim Characteristics

From the 989 reports included in this study, we gathered information on 1,050 suspects and 1,082 victims. Most suspects (97%) were male and most (87%) were adults. Conversely, most victims (89%) were female and most (73%) were juveniles. The average age of suspects—29.2—was 13 years greater than the average age of victims—16.2 (Table 4).

Figure 1 displays the number of victim-suspect combinations on the horizontal axis, by victim age on the vertical axis, for five different suspect age groups, in horizontal bars. The top five age group combinations were (1) suspects 31 years old or older and victims 0 to 12 years old (N=137); (2) 16 to 20-year-old suspects and 13 to 15-year-old victims (N=113); (3) 21 to 30-year-old suspects and 13 to 15-year-old victims (N=89); (4) suspects 31 years old or older and victims 31 years old or older (N=76); and (5) suspects 31 years old or older and 13 to 15-year-old victims (N=75). Together, these five age group combinations accounted for 48 percent of the assaults for which both the age of the suspect and victim were known.

Table 4. Demographic Characteristics of Suspects and Victims

Column percentages.

	Suspects N	%	Victims N	%

Most suspects were Native (59%) or White (37%) and most victims were also Native (61%) or White (38%) (Table 4). Intra-racial victimizations were much more prevalent than inter-racial victimizations, with 91 percent of Native victims assaulted by Native suspects and 84 percent of White victims assaulted by White suspects. Slightly less than half (43%) of the suspects had used alcohol; few (7%) had used drugs. Substance use was most frequent among suspects age 21 to 30, followed by suspects age 31 to 40 and suspects age 16 to 20. Among victims, 27 percent had used alcohol and 5

percent had used drugs. Substance use was most frequent among victims age 13 to 15, followed by victims age 21 to 30 and victims age 31 or older.

Most victims (all but one) were not homeless, nor were most suspects (99%). Most victims (71%) were not living with the suspect at the time of the assault, but overwhelmingly, the victims reported knowing the suspect in some fashion (98%) (Table 5). Only 2 percent of all victim-suspect relationships involved complete strangers. Nearly half (46%) involved friends or acquaintances, 35 percent involved relatives, 12 percent involved current or past intimate partners (including married couples), and 4 percent involved suspects that were in a position of authority over their victims. Together, friends, relatives, and intimate partners accounted for 94 percent of the victim-suspect relationships in the study sample.

The nature of the victim-suspect relationship varied substantially by the age of the victim. In particular, minor victims were substantially more likely be assaulted by relatives than adult victims. While only 17 percent of adult victims were assaulted by relatives, 41 percent of minor victims were assaulted by relatives. Minor victims were slightly less likely to be assaulted by friends or acquaintances (43%) than adult victims (57%) and slightly less likely to be assaulted by current or former partners (10%) than adult victims (17%).

Assault Characteristics

The five most common ways that victims and suspects came into contact with each other prior to the assault were by living together (32%); the suspect inviting the victim somewhere (20%); the suspect attacking the victim indoors (15%); the victim inviting the suspect somewhere (10%); and the victim and suspect meeting up with each other at a party (9%). Together, these five pickup methods were used in 86 percent of the assaults (Table 6).

The five most common pickup and assault locations were identical, differing only in terms of rank. These locations included mutually shared residences (25% of pickups and 25% of assaults), the suspect's residence (25% of pickups and 30% of assaults), the victim's residence (20% of pickups and 17% of assaults), someone else's residence (14% of pickups and 14% of assaults), and outdoors (10% of pickups and 7% of assaults). Private residences accounted for 84 percent of pickup locations and 87 percent of assault locations (Table 7).

The reported use of weapons by suspects was very rare in this sample of sexual assault cases. The one major exception, however, was suspects' use of their hands and/or arms to restrain or strike their victims during the assaults. In slightly less than one-third of the incidents, suspects used their hand and/or arms to restrict victims' movement or to assault victims physically beyond the sexual assault. Other weapons such as knives, guns, drugs, or blunt objects were reported to have been used in less than 1 percent of the incidents.

Sexual penetration, as defined by Alaska law, was documented in 60 percent of the assaults. On average, suspects engaged in just over two sexual acts (2.16) per assault (Table 8).

As a result of the assault, 19 percent of victims experienced general physical pain. In addition, 10 percent suffered bruising or swelling. Lacerations, bite marks, and bone fractures were rarely reported or documented (less than 3% of victims). Overall, very few victims received any type of emergency medical treatment for injuries suffered as a result of the sexual assault. Only 4 percent of victims received emergency medical care for genital injuries; 2 percent received emergency medical care for non-genital injuries; and less than 1 percent received emergency medical care for alcohol or drug intoxication.

of evidence, including physical evidence, electronic data, and photographic documentation.

Physical evidence from the victim (e.g., clothing) and victim sexual assault evidence collection kits were the most commonly collected types of evidence, gathered in 22 percent and 20 percent of cases respectively (Table 9). Suspect sexual assault kits were collected in only 7 percent of cases, and physical evidence from the suspect was gathered in only 13 percent of cases. In the majority of cases, there was no physical evidence recovered from the scene (84% of cases) and in 87 percent of cases, the scene was not photographed. Search warrants were obtained in 36 percent of cases. The most common warrants were for the victims' medical records (26% of cases) and glass warrants (13% of cases). Forensic exams of evidence were requested in only 16 percent of cases, with forensic DNA exams the most commonly requested (14% of cases).

Photographs of suspect injuries and the recovery of a weapon were the least common types of evidence collected (also the least available) during investigations.

Overall, evidence collection appeared to be somewhat low, although the statistics represent only what was included in the reports (Table 10). This is an important limitation with this study because evidence was counted as collected only if it was included in the report. This is particularly problematic with photographs. In some cases, photographs were taken, but were kept separately from the report (i.e., stored electronically but not printed to include with the report). In these cases, we counted the evidence as not collected because it was not found within the report. The statistics reported here therefore underestimate how frequently evidence was collected by Troopers.

Future analyses will be necessary to determine how these types of evidence impact legal resolutions. Two main factors determine the applicability and availability of evidence: one, the nature, or severity, of the reported incident; two, the timeliness of the report. Both factors impact what evidence is applicable and what evidence is available to be collected.

Legal Resolutions

We examined data from the Alaska Department of Law (DOL) to determine the legal resolution for cases in the study which were referred to DOL. We did not examine referrals to other agencies, such as the Division of Juvenile Justice. From the sample of 989 reported cases, 46 percent (N = 452) were referred to DOL for prosecution. Sixty percent of the cases referred to DOL (N = 273) had at least one charge accepted and filed with the court for prosecution (Table 11). Of those cases with at least one charge accepted by DOL, 80 percent resulted in a conviction. The highest level of attrition occurred from report to referral. Once cases were referred, the likelihood of at least one charge being accepted and resulting in a finding of guilt was quite high.

Additional analyses showed that attrition was less likely in cases with one or more

witnesses than in cases without witnesses and was less likely among rural cases than among urban cases (rural cases were defined as those emerging from locations not connected to the State of Alaska highway system). (See "Case Attrition of Sexual Violence Offenses: Empirical Findings" in this issue.)

From the 989 reports, a total of 1,171 charges were referred to DOL. Sixty-six percent of these charges were accepted by DOL. Thirty-one percent were declined with a required dismissal and 3 percent were declined without a required dismissal. The most frequently cited reasons for not accepting charges as referred were evidentiary reasons, with the two most common evidentiary reasons being inadequate corroboration and insufficient evidence.

Because evidentiary reasons were the most common reasons for not accepting charges that were referred and because evidence collection was somewhat low, it is imperative that we improve the capacity to collect evidence, when it is available. In "Sexual Assault Nurse Examinations in Alaska," also in this issue of the *Forum*, the importance of documenting non-genital injuries is discussed. In this study, victim injury photos were taken in only 55 percent of applicable cases. Again, this estimate may be low because some victim injury photos are kept separately from the reports. Nonetheless, there is room for improving evidence collection and resources should be provided for these improvements.

The findings presented here constitute a first look at the problem of sexual assault in smaller communities across the state—those served predominately by the Troopers. Further research will undoubtedly provide a more detailed picture.

Abstract: *This report examined the legal resolutions for 1,184 contact sexual violence cases reported to Alaska State Troopers in 2003 and 2004, and excluded results from other law enforcement agencies. We determined whether cases were founded with an identifiable suspect, were referred to the Alaska Department of Law for prosecution, were accepted for prosecution, and if the case resulted in a conviction. We only examined whether any conviction on any charge was obtained. In some cases, the conviction may be for a non-sexual offense.*

- *Seventy-five percent of cases were founded with at least one identifiable suspect, 51% of founded cases were referred to the Alaska Department of Law for prosecution, 60% of referred cases were accepted for prosecution, and 80% of accepted cases resulted in a conviction on at least one charge. The greatest point of attrition was from the founding to the referral decision.*
- *For the most part, cases of Alaska Native victims were as likely, or even more likely, to be processed by the criminal justice system relative to the cases of non-Native victims.*
- *Cases of sexual violence in the most rural portions of Alaska had an equal or greater chance of being subject to legal sanction when compared with cases from Alaska's less rural areas, and were as likely or more likely to receive full enforcement and prosecution. Unfortunately, the percentage of founded cases that resulted in a conviction never exceeded 30%.*

The State of Alaska's response to violence in Alaska Native villages has faced increased scrutiny over the past decade, with criticism coming from a number of sources, including the Alaska Advisory Committee to the U.S. Commission on Civil Rights, the Alaska Inter-Tribal Council (in *AITC v. Alaska*, 110 P.3d 947, 2005), and, most recently, Amnesty International. In general, allegations have been made that the state discriminates on a geographic and racial basis in the provision of criminal justice services to Alaska Native villages that are isolated from the main road system. For example, in *AITC v. Alaska* (2005), plaintiffs argued that their equal protection rights were violated by the state's deployment of police resources in a discriminatory fashion that favored those living along the main highway system. Similarly, in a 2007 report on police and court responses to violence against American Indian and Alaska Native women (*Maze of Injustice: The Failure to Protect Indigenous Women from Sexual Violence in the USA*), Amnesty International singled out Alaska for what it considers to be a discriminatory, two-tiered deployment of police into the isolated areas of the state, said to be indicative of the state's "failing to exercise due diligence when it comes to sexual violence against . . . Alaska Native women." Amnesty International argued that with this two-tiered deployment of police resources, villages without a trooper post receive less effective police response than villages with a trooper post.

The evidence put forth in the many critical reports is based primarily upon the written and oral testimony of criminal justice agency personnel as well as Alaska Native crime victims, political leaders, and legal advocates. Although compelling, the case made against the state is largely anecdotal, failing to demonstrate a *systematic* lack of criminal justice system response to sexual violence against Alaska Natives. In this article we consider information gathered from the case files of the Alaska State Troopers (AST) and the Alaska Department of Law (DOL) to determine if there is an empirical basis for claims of unequal enforcement of sexual violence statutes. Specifically, we consider multiple decision-making points within the criminal justice process to compare the outcomes of cases involving Alaska Native victims with cases of non-Native victims.

The results presented below allow for an examination of case attrition of instances of sexual violence reported to AST and prosecuted by DOL. *Case attrition* is a term used to describe the process by which only a portion of offenses reported to the police are eventually dealt with through criminal prosecution. At each specific decision-making point the number of cases deemed worthy of official attention is reduced, with some cases carried forward for additional processing while others are no longer subject to prosecution.

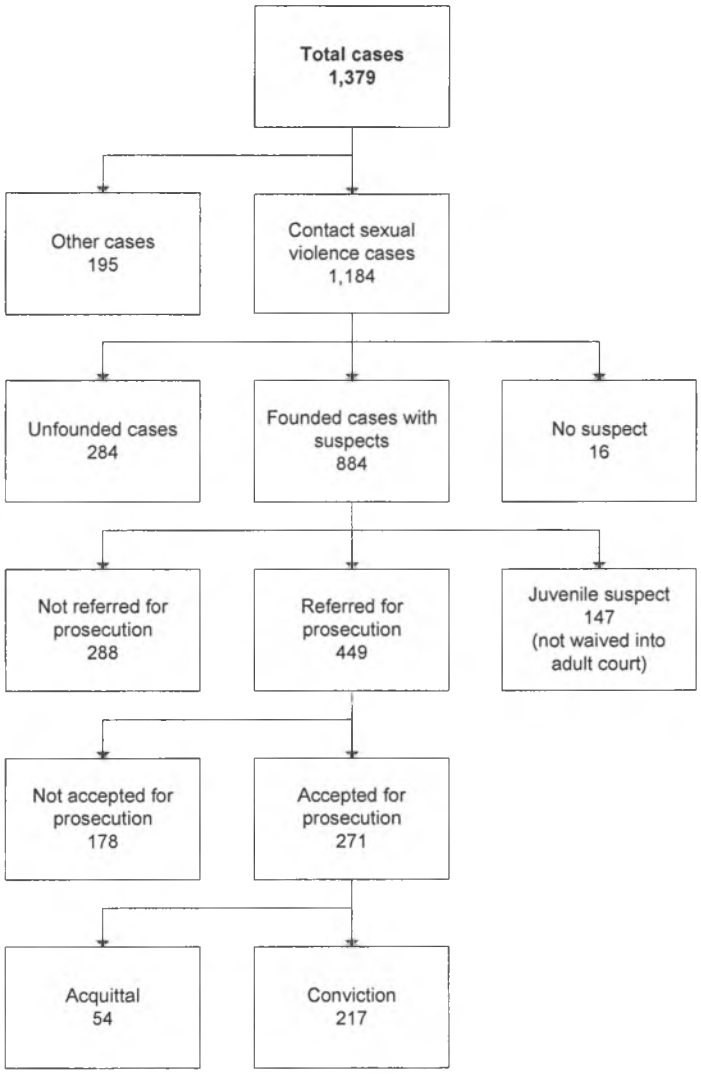
The attrition of sexual violence cases reported to AST in 2003 and 2004 is shown in Figure 1. Overall, there were 1,379 reports of sexual offenses made to AST during those two years. Of those original reports, 1,184 were contact sexual violence cases involving forcible rape, sexual assault, or sexual abuse of a minor. Among the other 195 cases were offenses that occurred outside of AST's geographic area of responsibility, offenses that occurred before 2003, offenses committed by children too young to form criminal intent, and non-contact sexual offenses such as indecent exposure or possession of child pornography.

In the next step in the process the police decide if the reported offense is *founded* (i.e., that it actually occurred) and if there is a suspect responsible for the offense to be subject to prosecution. Roughly three-fourths (74.7%) of the 1,184 reported contact sexual violence cases were deemed by AST to have occurred and to have at least one identifiable suspect.

After the police decide that an offense has indeed occurred and also identify a suspect, the next decision is whether to refer the case for prosecution in criminal court. Half (50.8%) of the 884 founded cases with identified suspects were referred to DOL for prosecution in adult criminal court. The

© 2009 Justice Center, University of Alaska Anchorage

Figure 1. Processing of Sexual Violence Cases Reported to the Alaska State Troopers, 2003–2004



cases excluded from the analysis at that point included those juvenile cases that were not waived into adult court (a sixth—16.6%—of founded cases with suspects) and those that were not referred for reasons such as a lack of evidence or uncooperative victims (a third—32.6%—of founded cases with suspects).

Once referred by the police, prosecutors decide which cases to prosecute; three-fifths (60.4%) of contact sexual violence cases referred by AST to DOL were accepted for prosecution. Cases that are prosecuted eventually result either in a conviction or an acquittal. Of the cases of sexual violence accepted for prosecution by DOL, most (80.1%) resulted in a conviction. Ultimately, only 18 percent of reported cases, 25 percent of founded cases with suspects, and 48 percent of cases referred by AST to prosecution resulted in a conviction—i.e., guilty plea or conviction at trial.

Apart from this general consideration of the winnowing of reported sexual violence offenses as they proceed through the system, it is also possible to examine relative case attrition of offenses involving Alaska Natives versus those of non-Natives. Doing so allows for a determination of the extent to which there is systematic under-enforcement of laws against contact sexual violence in cases with Alaska Native victims. Greater degrees of attrition of Alaska Native victims' cases when compared to that for non-Native victims would lend credence to the anecdotal evidence used in reports critical of the state's provision of policing and prosecution to Alaska Native communities.

Comparisons of attrition of cases of sexual violence are made on a number of levels. First, case attrition for offenses involving Alaska Native victims is compared with attrition of non-Native victims' cases. Next, case attrition in communities located in the rural regions of Alaska is compared with case attrition in communities located outside of the state's rural regions. Finally, the attrition of cases that occurred in isolated villages is compared with the attrition of cases that occurred in less-isolated locations. At each of these levels comparisons are made on the basis of the total of all contact sexual violence offenses, and for rape/sexual assault and sexual abuse of a minor (SAM) separately. Four different decisions are considered: the Troopers' decision on whether reported cases are founded; the Troopers' decision to refer founded cases for prosecution; the prosecutors' decision

to accept referred cases for prosecution; and the final court decision in cases accepted for prosecution—i.e., whether a conviction was obtained. These results are presented as a comparison between Alaska Native and non-Native victims in terms of the number and percentage of cases that were chosen to be carried forward in the criminal justice process. The results of chi-square tests of statistical significance—a test which measures the likelihood that differences in the percentage of cases carried forward are the result of chance alone and not indicative of an underlying association—are also provided.

Differences in the processing of cases involving Alaska Native and non-Native victims are shown in Table 1. For the most part, these results indicate that the cases of Alaska Native victims are as likely, or are even more likely, to be processed by the criminal justice system relative to the cases of non-Native victims. For the total of all sexual violence offenses, cases involving Alaska Native victims were just as likely as cases with non-Native victims to be founded or to result in a conviction and they were more likely to be referred by AST to prosecutors and to be accepted by DOL for prosecution. Considering only cases involving the offenses of rape and sexual assault, there were statistically significant differences between Alaska Native and non-Native victims at the founding decision and at the decisions to refer cases and accept cases for prosecution; at each of these decision-making points the cases of Alaska Native victims *were more likely* to be carried forward. In terms of SAM cases, those cases involving Alaska Native victims were less likely to be founded. Otherwise, none of the differences in the processing rates of Alaska Native and non-Native victims' SAM cases were statistically significant.

A second set of analyses was conducted to consider the processing of cases occurring in the largely Alaska Native communities of the most rural areas of the state. The dichotomy for these analyses was drawn between cases occurring either inside or outside of what the Department of Health and Social Services in its Alaska Behavioral Risk Factor Surveillance System has termed the "Bush Stratum"—comprising the boroughs and census areas north and west of the Railbelt. Comparisons of case processing from these bush communities with cases from non-bush communities are reported in Table 2. These results indicate that cases of sexual violence that occur in the most rural portions of Alaska have, depending upon the decision, an equal or greater chance of being subject to legal sanction when compared with cases from Alaska's less rural areas. Similar to what was found when comparing attrition in Alaska Native victims' cases versus non-Native victims' cases, victims from bush communities of sexual violence in general and of rape/sexual assault *were more likely* to have their cases referred to prosecutors by AST and to have DOL accept those cases for prosecution.

The final set of analyses considers attrition of cases coming from the most isolated villages compared to places that are less isolated. For these analyses a village was considered isolated if it lacked a local AST post or if Troopers were unable to reach the village by automobile. The premise of this dichotomy is that travel to villages that cannot be reached by highway is more difficult and, because of that hindrance, it could be expected that conducting investigations would be more difficult—thus increasing case attrition. From the perspective behind the allegations against the state, it is in these disconnected villages that lack a locally-posted police agency certified by the Alaska Police Standards Council where the greatest disparities in the enforcement and prosecution of cases of sexual violence would be expected to occur.

The results comparing attrition of cases occurring in villages defined as isolated with cases occurring in places more easily reached are presented in Table 3. As with the previously discussed comparisons of cases, case attrition in isolated villages is no more prevalent than in places that are better connected to AST posts. The results presented in Table 3 indicate that cases from isolated villages are instead *actually more*

Table 3. Attrition of Sexual Violence Cases Reported to Alaska State Troopers, Isolated vs. Non-Isolated Communities, 2003-2004

*Difference between isolated and non-isolated regions is statistically significant at the $p < .05$ level.

likely to receive full enforcement. Cases of rape/sexual assault in isolated villages *were more likely to be founded, more likely to be referred for prosecution by AST, and more likely to be accepted for prosecution by DOL.* Likewise, across the total of all sexual violence offenses, cases from isolated villages were referred and accepted for prosecution at a rate *greater than* cases from non-isolated locations. No differences were found in the attrition of SAM cases.

Overall, the results presented in this article provide little empirical support for allegations of discrimination in the processing of sexual violence cases by AST or DOL on a racial or geographic basis. With the exception of SAM cases against Alaska Native victims being less likely to be founded, *cases of sexual violence against Alaska Native victims were just as likely or actually more likely to receive full enforcement and prosecution when compared with cases against non-Native victims.* On the basis of geography, cases occurring in locations with predominately Alaska Native populations believed to be underserved by AST were actually more likely to be dealt with by AST or DOL when compared with cases from outside those geographic areas. Our results indicate that the anecdotal evidence found in reports critical of the state's response to sexual violence against Alaska Natives does not accurately reflect the actual processing of cases of rape, sexual assault, and SAM reported to AST and prosecuted by DOL. Ultimately, these results do not support claims of unequal enforcement by the state in response to the victimization of the Alaska Native population. However, Alaska continues to experience high rates of forcible rape, and the prosecution of sexual violence continues to be difficult: the percentage of AST-founded cases that resulted in a conviction never exceeded 30 percent.

Revisiting Alaska's Sex Offender Registration and Public Notification Statute

Deborah Periman

In Alaska and throughout the country sex offender registration requirements have become more inclusive. Almost all convicted sex offenders now must register for very extended periods; the registry is available over the Internet; and more details on the current status of the offender are available to the public. The intent of the registries is to protect the public from convicted offenders, but it can be argued that the increasingly stringent demands placed on offenders may, in fact, be counter-productive. The severity of the registration requirements may prohibit the rehabilitation of offenders and their reintegration into the community, and the increasing burden on law enforcement to monitor and maintain very broad registries may prevent police from focusing on the more serious sexual predators.

Abstract: *This article examines the background and judicial interpretation of Alaska's sex offender registration and public notification statute, the new federal requirements for state sex offender registries and public notice under the Adam Walsh Child Protection and Safety Act, and weaknesses in both Alaska's existing system and the enhanced requirements of the new federal legislation. These weaknesses include:*

- *Absence of incentives for offenders to seek therapy or treatment;*
- *Failure to provide for individualized risk assessment that would differentiate between those offenders who pose a negligible or very low risk of re-offending from those who pose a continuing public risk – a failure that causes unwarranted marginalization of low risk offenders and diminishes the overall effectiveness of the public notification system;*
- *Public notice provisions so broad as to substantially impede offenders' reintegration into their families, their community, and the workforce, and potentially chilling family reporting;*
- *Internet posting requirements associated with severe stigmatization and public harassment, and concomitant emotional destabilization and isolation of offenders – factors that may actually increase the risk of recidivism and community harm.*

Because the Walsh Act conditions state receipt of Byrne Grant funds on compliance with its enhanced registration and notice requirements, there is little Alaska can do to remedy the above weaknesses and still remain eligible for Byrne funds. However, the article concludes with a recommendation for limited changes to our statute that would minimize, to the extent possible, its adverse effect on offenders' ability to find employment; omit the lowest risk offenders from internet posting requirements; and provide those incentives for treatment permissible under the Walsh Act.

Author's Note

This is an extremely abbreviated look at a complex federal initiative and at how specified aspects of the initiative relate to weaknesses in Alaska's sex offender registry. Issues of federalism and due process are not addressed, nor does this piece attempt to identify how the statutory elements of sex and kidnapping offenses under Alaska's code fit within the Walsh Act offender tiers. Finally, the reader should draw no inferences regarding Alaska's overall level of compliance with the Walsh Act requirements. A longer version of this piece, with complete legal citations, is available on the Justice Center website at http://justice.uaa.alaska.edu/workingpapers/.

Background

The Alaska Sex Offender Registration Act, which was enacted in the wake of extensive publicity over the tragic rape and murder of Megan Kanka in New Jersey, rests on specific legislative findings that (1) "sex offenders pose a high risk of reoffending after release from custody" and (2) release of information about sex offenders to the public "will assist in protecting public safety" (1994 Alaska Sess. Laws 41, § 1).

The state legislature's findings were premised on testimony reflecting the commonly held belief that sex offenders as a class are different from other offenders—that they will inevitably reoffend and that they are not receptive to treatment. In light of this testimony, the legislature did not attempt to distinguish among types of offenders or to evaluate which offenders were most likely to recidivate. Instead, it simply divided all offenders into two groups, aggravated and nonaggravated offenders, based on the severity of the offense. These two categories cover offenders ranging from the 18-year-old who has consensual sex with a 14-year-old to the perpetrator of a violent rape and murder.

The registration statute that emerged was, at the time of its enactment, one of the most stringent in the country. In a 2003 case closely watched by state and federal lawmakers, the U.S. Supreme Court upheld its terms against an *ex post facto* challenge. Justice John Paul Stevens, dissenting, summarized the statute's effect:

> In Alaska, an offender who has served his sentence for a single, nonaggravated crime must provide local law enforcement authorities with extensive personal information—including his address, his place of employment, the address of his employer, the license plate number and make and model

© 2009 Justice Center, University of Alaska Anchorage

> of any car to which he has access, a current photo, identifying features, and medical treatment—at least once a year for 15 years. If one has been convicted of an aggravated offense or more than one offense, he must report this same information at least quarterly for life. Moreover, if he moves, he has *one* working day to provide updated information. Registrants may not shave their beards, color their hair, change their employer, or borrow a car without reporting those events to the authorities. Much of this registration information is placed on the Internet. In Alaska, the registrant's face appears on a webpage under the label "Registered Sex Offender." His physical description, street address, employer address, and conviction information are also displayed on this page. (*Smith v. Doe*, 538 U.S. 84, 111 (2003))

At the time of its passage, Alaska's statute far exceeded the minimum requirements imposed on the states by the federal Jacob Wetterling Act. This legislation, adopted in 1994, required every state to enact a sex offender registration program meeting certain minimum guidelines or face a reduction in federal grant funding for law enforcement (42 U.S.C.A. § 14071 (West 2008)).

Unlike Alaska, many states attempted to tailor the reach of their registration statutes to the actual risk posed by individual offenders. The Connecticut legislature, for example, adopted a system using individualized clinical assessment to determine which offenders would be subject to registration requirements. Offenders were required to register only if such assessment demonstrated that they were found to pose a high risk of recidivism. This type of classification system has come to be known as an *offender-based* system, reflecting the emphasis on the individual. Alaska's system, in contrast, is *offense-based*, with classification resting solely on the conviction and no individual risk assessment undertaken.

Alaska was one of the relatively few states to require Internet dissemination of registration information for all offenders. Other states attempted to strike a balance between the stigmatization and collateral consequences of public notification and the risk of recidivism. New Jersey, for example, classified its offenders by risk and required no public disclosure for those who posed the least risk of reoffending, a percentage estimated at 45 percent of the entire sex offender class. Widespread disclosure was required only for those at the highest risk of reoffending (approximately five percent) of the whole.

Some of the flexibility afforded states under the original Wetterling Act was reduced through subsequent amendment; the flexibility to utilize individualized risk assessments will disappear almost completely as the provisions of the Adam Walsh Child Protection and Safety Act, PL 109-248, become binding on the states. This act represents an extensive revision and expansion of federal sex offender legislation. One of its many purposes is to standardize and increase minimum registration requirements nationwide. It imposes on the states highly detailed requirements for sex offender registration and public notification—requirements the states must in general implement by July 27, 2009. A state's failure to meet the implementation deadline will trigger a mandatory ten percent reduction in Byrne Justice Assistance Grant funding.

Key provisions of the Walsh Act include broadening the classes of sex offenses for which registration is required and extending it to cover juvenile offenses; requiring covered offenders to consistently remain registered in any jurisdiction in which they live, work, or attend school; expanding the scope of registration information required; imposing a national requirement for periodic in-person appearances by registrants; standardizing the required duration of registration; and widening the availability of information concerning registrants available to the public through required Internet posting. The act adopts an offense-based, three-tiered classification for offenders. It does not authorize the states to implement an offender-based classification using individualized risk assessment, nor, with limited exceptions, does it authorize the states to implement ameliorative programs that would allow offenders to avoid or shorten registration based on treatment and rehabilitation. The net effect of the new federal legislation will be to bring all cooperating states closer to Alaska's registration and publication requirements.

Alaska's Statute and its Federal Counterpart Rest on Disproved Assumptions

The myth of the incorrigible sex offender, all but guaranteed to reoffend, has been largely refuted. A study by the Alaska Justice Statistical Analysis Center of sex offenders released from Alaska corrections facilities in 2001 found that non-sex offenders were more likely to be rearrested than sex offenders. (See "Recidivism of Alaska Sex Offenders Released from Corrections Facilities in 2001" in this issue of the *Forum*.) With respect to sex crimes specifically, the study found no statistically significant difference between the rates at which sex offenders were rearrested for a new sex crime and the rates at which non-sex offenders were arrested for a first sex crime. These patterns are consistent with the results of studies elsewhere finding that sex offenders as a class are somewhat less likely than other categories of offenders to re-offend.

Moreover, recent studies conclude that treatment programs are, in fact, effective in reducing the overall rate of recidivism for many offenders. A Canadian study published in late 2007, for example, found that high-risk sex offenders who participated in a community-based treatment project had lower rates of reoffending of any type than did offenders who did not participate (Wilson, et al., 2007). Although sex offender treatment remains a controversial issue, these results are consistent with the general findings of studies conducted over the last decade or so—studies that refute the earlier belief that sex offenders are impervious to treatment.

The foregoing is particularly true with respect to juvenile offenders. Although offenders as young as 14 are subject to registration and public notification requirements under the Walsh Act, research establishes that recidivism rates for juvenile sex offenders are substantially lower than the rates for other types of juvenile offenders. Juvenile offenders have, in addition, proven highly amenable to treatment.

Problems with the Existing System

The Walsh Act and its antecedents rest on the premise that state registration and notification systems advance public safety, but empirical evidence disproves this premise. Studies show that after more than ten years of national registration and public notice, sex offender registries have made no discernable difference in sex offender recidivism rates (Tewksbury & Lees, 2007). (Although the registries have not curbed the commission of sex offenses, it should be noted that law enforcement officials in Alaska do view the offender database as a useful investigatory tool after an offense occurs.)

The weaknesses of Alaska's registration and notice system are well documented. Supreme Court Justice Ruth Bader Ginsberg, in a dissenting opinion in *Smith v. Doe*, 538 U.S. 84, 116–117 (2003), put it simply—the statute is excessive in relation to its purpose:

> The Act applies to all convicted sex offenders, without regard to their future dangerousness. And the duration of the reporting requirement is keyed

not to any determination of a particular offender's risk of reoffending, but to whether the offense of conviction qualified as aggravated." Moreover, "the Act makes no provision whatever for the possibility of rehabilitation: offenders cannot shorten their registration or notification period, even on the clearest demonstration of rehabilitation or conclusive proof of physical incapacitation. However plain it may be that a former sex offender currently poses no threat of recidivism he will remain subject to long-term monitoring and inescapable humiliation.

Of course, no matter how excessive the reach of the statute in relation to its goals, many would argue that the disabilities imposed on low-risk or rehabilitated offenders are warranted if the system serves to protect even one child. The difficulty, however, is that Alaska's registration and notification system, and others like it, do not demonstrably make the public safer. To the contrary, they are likely to trigger a host of consequences antithetical to the public interest.

Unemployment, Instability and Enhanced Risk of Recidivism

After ten-plus years of national experimentation with sex offender registries, the destabilizing effects of being listed on a sex offender registry are well understood. They include profound humiliation and social isolation, loss of employment and housing, and destruction of family ties. Registrants and their families have experienced vigilantism in the form of harassment, threats of violence, physical attacks and arson.

In *Doe v. State*, 92 P.3d 398, 410 (Alaska 2004), the Alaska Supreme Court made note of the severity of these consequences. Citing examples of Alaska registrants who had lost their jobs, been forced to move their residences, and received threats of violence, the Court observed that "the potentially destructive practical consequences that flow from registration and widespread governmental distribution of disclosed information" are grave. "[O]utside Alaska, there have been incidents of suicide by, and vigilantism against, offenders on state registries, and offenders listed on registries often have unique difficulties locating places to reside and work. Offenders are sometimes subjected to protests and group actions designed to force them out of their jobs and homes." Registrants have suffered neighborhood rallies staged to protest their presence, bricks thrown through windows, and harassing calls to employers.

Of these negative consequences, employment difficulties are perhaps most significant. The Ninth Circuit Court of Appeals concluded that Alaska's system of putting offenders' employment information on the Internet is likely to make registrants "completely unemployable" (*Doe v. Otte*, 259 F.3d 979, 988 (9th Cir. 2001), *rev'd.*, *Smith v. Doe*, 538 U.S. 84 (2003)). The system "creates a substantial probability that registrants will not be able to find work, because employers will not want to risk loss of business when the public learns that they have hired sex offenders." The court cited the experience of one Alaska business owner who suffered community hostility and damage to his business after print ads from the Alaska sex offender registry web site were publicly distributed and posted on a bulletin board.

It may be tempting to dismiss these adverse consequences as the just result of the offender's own conduct, but these consequences also disserve the community in several important ways. First, study after study has identified stress as one of the antecedents to sex offender relapse. Chronic torment and hostility from the public, fractured social relationships, lack of stable housing, and unemployment are likely to cause the registered offender heightened stress, anxiety and resentment, all of which may erode an offender's self-restraint (Cohen & Jeglic, 2007). Lack of social support, in particular, and the accompanying stress on the offender has been identified as a key trigger in sex offense recidivism (Levensen & Cotter, 2005).

These problems are particularly acute for juvenile offenders. Young persons subject to registration have been harassed at school; some have dropped out. The stigma associated with the public notice system causes a loss of social networks, which in turn increases the risk of anti-social behaviors.

The extreme length of the registration period may exacerbate these problems. Under the Walsh Act, states must require a minimum of 25 years registration for mid-level offenses and lifetime registration for the most serious offenses. Studies show, however, that offenders who view punishment as too severe or inescapable may be more likely to reoffend and that many offenders subject to the lifetime registration requirement feel states have opened the door to endless harassment and stigmatization.

The majority of offenders surveyed report that they have experienced first-hand social or psychological effects resulting from the public registries. The consequent shame, isolation, fear, and hopelessness all interfere with an offender's reintegration and recovery.

Lifetime Registration as a Disincentive to Therapy or Recovery

In Alaska, a sex offender "cannot escape the [registration] Act's grasp no matter how clearly he may demonstrate that he poses no future risk to anyone, and no matter how final the judicial determination that he has been successfully rehabilitated..." (*Otte*, 259 F.3d at 994). Alaska's failure to provide any avenue for relief from or mitigation of the registration requirement is one of its statute's failings.

In a recent sampling of individual sex offender perceptions, several offenders observed that the ability to have a risk evaluation completed while on the registry would provide an incentive and motivation "to pursue treatment, to avoid problematic situations, and . . . [maintain] a crime free lifestyle" (Tewksbury & Lee, 2007, p. 400). Another study looking at the social and psychological effects of registration on sex offenders found many experiencing feelings of despair and hopelessness in the absence of individualized assessment. One respondent stated, "no one believes I can change, so why even try?" (Levensen & Cotter, 2005, p. 52).

As written, the statute fails to recognize the possibility of rehabilitation and provides offenders considering treatment no hope that their efforts might eventually reduce the stigma associated with the registry's public notification system.

Mandatory Internet Publication and Chilled Reporting

The inability to avoid publication of an offender's personal information on the internet and the ensuing social obloquy may also discourage family members of some offenders from reporting offenses. The spouse of an offender, particularly of an offender who may be the family's primary source of economic support, faces a terrible dilemma in reporting: While the report may protect the spouse herself or himself, or a child, the report may consign the entire family to a lifetime of poverty, to loss of the family home if the offender is evicted, and to shared shame and harassment once the offender's personal information is placed on the Internet. Studies suggest that reporting may be equally difficult for the parent or sibling of an offender. Thus, to the extent that mandatory Internet publication acts as a disincentive to reporting intra-family offenses, Alaska's notification statute ill-serves Alaska's abused children and spouses.

Obfuscation of More Dangerous Offenders

The extraordinarily broad reach of

Alaska's publication requirement has ramifications beyond its collateral consequences to the offender and his or her family. Indiscriminate posting of information on all offenders tends to obscure from the public pertinent information relating to very dangerous sexual predators. Including low-risk offenders also places an unnecessary administrative burden on state officials responsible for establishing and maintaining the posting, with a concomitant increase in public expense. In addition, the greater the number of postings, the more difficult and expensive it is for the state to ensure accuracy and respond to noncompliant offenders.

Possible Changes

During the 2008 session, the Alaska legislature passed and the governor signed into law CSSB 185, which extends the reach of existing sex offender registration requirements. The new law adds the requirement that offenders provide the Department of Corrections with every email or instant messaging address or other Internet communication identifier they use—information mandated by the Walsh Act. This type of legislative fine-tuning, however, will not solve the most fundamental problems with the statute—overbreadth and the absence of treatment incentives.

Recent data show that those states whose legislation is most narrowly drawn to focus on the highest-risk offenders are most likely to achieve their legislative goals. A sex offender registration system is most effective where it uses actuarial risk-assessment measures to ascertain which sex offenders are at the highest risk of reoffending, distinguishes among offenders based on risk, and imposes the disabilities of registration and publication only on those most likely to recidivate. This type of registration and publication system allows the public to readily identify the most dangerous individuals and allows law enforcement to focus its resources on the most likely threats to the community (Cohen & Jeglic, 2007).

Unfortunately, the Walsh Act, with its offense-based tier structure, has foreclosed to a significant extent the states' ability to implement a true risk assessment scheme and retain eligibility for full Byrne Grant funding. There are, however, a few windows left open for small improvements to Alaska's statute.

Minimize the impact on employment. For reasons stated above, Internet publication of an employer name and address is one of the consequences of registration most likely to de-stabilize an offender socially and psychologically. The risk of consigning an offender to a lifetime of unemployment may also be a factor in deterring some family reporting.

The public interest associated with making employment available to released offenders is implicitly recognized under the new federal guidelines. The Walsh Act authorizes the states to exclude from their websites the name (though not the address) of a sex offender's employer. To facilitate offender reintegration and to protect the economic welfare of offenders' families, Alaska could avail itself of this option. While it is argued that knowing the name of an offender's employer enhances public safety, there is no empirical evidence to support this claim.

Omit the lowest risk offenders from internet publication. Another option granted the states under the new federal guidelines pertains to offenders classified under the statute as "Tier I Sex Offenders." Tier I offenders include those whose registration offense is not punishable by imprisonment for more than one year, whose offense is receipt or possession of child pornography, or whose offense is a sexual assault against an adult that involves sexual contact only.

The Walsh Act provides the states discretion to omit offenders in this category (other than those convicted of specified offenses against a minor) from placement on the state sex offender web site. With respect to this grant of discretion, Alaska legislators should do one of two things: Either adopt an individualized risk assessment program for offenders within this category and exclude from web publication those deemed to pose a low community risk or simply exclude these offenders as a class. The first approach would strike the optimal balance between the competing goals of providing adequate public notice and promoting offender reintegration and rehabilitation. It would also be much more expensive to administer, leaving the second approach a reasonable alternative with respect to these low-level offenders.

Include the limited treatment incentives authorized under the Walsh Act. The new federal requirements also offer states some latitude to include treatment incentives in their registration statutes. The Walsh Act generally requires the states to register Tier I offenders for 15 years, Tier II offenders for 25 years, and Tier III offenders for life. However, Section 115(b) provides that Tier I offenders' registration periods may be reduced by five years if they maintain a clean record within the statutory definition of that term, which includes successful completion of an approved treatment program. No reduction is authorized for offenders classified as Tier II or Tier III (73 Fed. Reg. at 38068). (Tier III offenders whose conviction stemmed from a delinquency proceeding are eligible for a reduction in term. In Alaska, however, a conviction triggering registration is defined as a conviction of an adult or a juvenile charged as an adult (AS 12.63.100(3).)

This window of opportunity for offering reduction of the registration period as a treatment incentive is very small. Nevertheless, in light of recent data showing that treatment is often effective in deterring future offenses, Alaska should take advantage of this limited opportunity to encourage released offenders to seek treatment.

Conclusion

There are ways to refine the current sex offender registration system to ensure that it better protects the public. The revulsion and anger that most of us feel toward those convicted of sex crimes should not blind us to the safety interest served by affording released offenders treatment incentives and the opportunity to live stable and socially productive lives. Within the confines of the federal funding mandates, Alaska can strike a more effective balance between warning the public of the most dangerous sexual predators and promoting the reintegration and rehabilitation of the larger class of offenders.

Deborah Periman is an assistant professor with the Justice Center.

Abstract: *This study examined the characteristics of all sexual assaults reported to the Anchorage Police Department from 2000 through 2003. Key descriptive findings are summarized.*

- *Victims tended to be young and female, with Native women victims in over 45% of reported sexual assaults.*
- *In a majority of the assaults – over 62% - the assailant was not a stranger to the victim. The most common non-stranger relationships included friends and acquaintances.*
- *A majority of the assaults occurred indoors, with 45% taking place at the residence of one or both of those involved.*
- *Sixty-five percent of victims had used alcohol prior to the assault and 74% of suspects had also.*
- *While assaults occurred all over the Municipality of Anchorage, they happened with more frequency in Spenard, Fairview, and Downtown.*

Information from four years of police files shows that the problem of sexual assault in Anchorage has discernible contours: most assaults take place indoors, between people who are not strangers to each other, with either or both parties having consumed alcohol. The attached tables, figures and map provide an overview of reported sexual assaults in the city from 2000 through 2003. The data come from a recently-completed report by the Justice Center that updates an earlier study released in 2003. The new study was undertaken by the Center in collaboration with the Anchorage Police Department.

The Justice Center study revealed that victims have tended to be young and female, with Native women victims in over 45 percent of reported sexual assaults. In a majority of the assaults—over 62 percent—the assailant was not a stranger to the victim. A majority of the assaults occurred indoors, with 45 percent taking place at the residence of one or both of those involved. Over 65 percent of the victims had used alcohol prior to the assault and close to 74 percent of suspects had also. While assaults occurred all over the city, they happened with more frequency in certain areas of town—particularly in Spenard, Fairview, and Downtown.

The data presented here are already two years old, but figures released by the FBI's Uniform Crime Reporting (UCR) program indicate that the rate of reported forcible rape (a more tightly defined offense than that reflected in the tables presented here) in the Municipality of Anchorage was 96.1 per 100,000 people in 2004. The national rate was only 32.2. These UCR figures are not directly comparable to those presented in the Justice Center study, but they show that the

Table 1. Race of Victims in Sexual Assaults Reported to Anchorage Police, 2000-2003

Race	Percentage of Anchorage population, 2001[1]	Sexual assault victims N	%	Rate per 1,000 population[2]

sexual assault rate in Anchorage continues to be extremely high. With the problem of sexual assault, it is also important to note that national data show that many assaults are not reported to the police, so it is possible that the figures collected represent only a limited picture of the problem.

André Rosay of the Justice Center was the principal investigator for the study. Abstract: *This study examined the outcomes of sexual assault cases reported to the Anchorage Police Department between January 2000 and December 2003. The data include 1,052 cases involving one suspect and one victim (85% of all reported sexual assaults). Cases and charges were tracked through the Alaska Department of Law to determine what was referred, accepted, and convicted.*

- *Overall, 18% of cases were referred for prosecution. The most common referred charge was a sexual assault in the first degree. Seventy-nine percent of referred charges were sexual assault charges.*
- *Overall, 12% of cases were accepted for prosecution. The greatest point of attrition was from report to referral. Once referred, 68% of cases were accepted for prosecution. Sixty-eight percent of charges were accepted by the Department of Law as referred. The most common reasons for not accepting a charge as referred were evidentiary reasons. The most common accepted charge was also a sexual assault in the first degree. Seventy-five percent of accepted charges were sexual assault charges.*
- *Overall, 11% of cases resulted in a conviction. Once accepted, 87% of cases resulted in a conviction. Although convictions were common in accepted cases, accepted charges were often dismissed. While 87% of accepted cases resulted in a conviction, 59% of accepted charges were dismissed. Ninety percent of guilty findings were a result of plea bargaining. With plea bargaining, some charges were dismissed but a conviction was still secured. Fifty-six percent of convicted charges were sexual assault charges. The most common convicted charge was for assault, followed by sexual assault in the second degree.*

A recent Justice Center examination of sexual assault case processing shows that close to 60 percent of cases referred by the Anchorage Police Department to the Alaska Department of Law result in a conviction on some charge—although not necessarily the original charge. The number of cases referred, however, is less than 20 percent of those reported.

Anchorage has a very high incidence of reported rape. Between 2000 and 2003, the rate of reported forcible rape in Anchorage was 163 percent higher than in the U.S. as a whole. Over the past twenty years, Anchorage has been consistently at or near the top of U.S. metropolitan statistical areas for rates of reported forcible rape.

The Justice Center examined the outcomes of all sexual assaults involving one suspect and one victim reported to the Anchorage Police Department (APD) between January 2000 and December 2003. In this article we summarize how the Alaska Department of Law disposed of these reported assaults, detail case and charge outcomes and discuss the reasons given by prosecutors for these outcomes.

Overall, 1,235 sexual assaults were reported to APD from January 2000 through December 2003. We sampled all 1,074 sexual assaults committed by one suspect against one victim (87.0% of all sexual assaults reported from January 2000 to December 2003). Data were collected on 1,052 (98%) of these reports. Of these 1,052, 188 (17.9%) were referred for prosecution and had reached final disposition prior to data collection. Offenses in these 1,052 reports included sexual assaults, forcible rapes, attempted sexual assaults, and attempted forcible rapes. As defined by the Federal Bureau of Investigation's Uniform Crime Reports, forcible rape is "the carnal knowledge of a female forcibly and against her will." Sexual assault is a less restrictive state-defined offense that does not consider the gender of the parties involved and does not require carnal knowledge.

For this article, we consider three stages of prosecution: referral, acceptance, and conviction. These stages can be thought of as formal decision points at which prosecutors record what has transpired with the case, and why that outcome resulted. Referral is the forwarding of charges by APD to the DOL. This is the initial stage of prosecution and the first stage at which prosecutors officially become aware of a report. Once a case has been referred to the DOL, it is screened for acceptance. More specifically, prosecutors will screen each charge within each case for acceptance. The prosecutor's initial screening decision for each charge is recorded with a screening disposition code which indicates in what fashion the charge did or did not move forward. At this decision point, in addition to disposition codes, reason codes are given to charges that are not accepted as referred by law enforcement. The reason code indicates the formal reason that prosecutors gave for the disposition of the charge in that manner.

Acceptance can be considered the second stage of prosecution, or the second formal prosecutorial decision point. At this stage prosecutors formally agree to move forward with criminal prosecution. Once a final outcome has been established, a final disposition code and potentially a reason code are attached to each individual accepted charge within a case. The final disposition code indicates the final outcome of an accepted charge. The reason code associated with this final disposition reflects the prosecutor's reason for the final disposition of the charge. A conviction is an accepted charge result-

Table 1. Number of Cases By Stage

Stage	N	% of reported	% of referred	% of accepted
Reported	1052	100.0 %	—	—
Referred	188	17.9	100.0 %	—
Accepted	127	12.1	67.6	100.0 %
Convicted	111	10.6	59.0	87.4

Source of data: Alaska Department of Law

ing in a finding of guilt. A finding of guilt can occur through plea bargaining or being found guilty beyond a reasonable doubt by either judge or jury.

Table 1 describes the number of cases reported, referred, accepted, and convicted. Of the 1,052 reported cases, 188 (17.9%) were referred to DOL and 127 (67.6%) were accepted. Finally, 111 (87.4%) of these 127 cases resulted in a conviction. Obviously, the point with the greatest attrition is from report to referral.

For the purposes of this article, two separate levels of analysis are used: a case-level analysis and a charge-level analysis. For case-level analysis, a case as a whole is the unit of analysis. With this level of analysis, we are concerned only with the most serious outcome at a particular stage. The second level of analysis, at the charge level, considers individual charges within a case, using the individual charge as the unit of analysis. Using this level of analysis, we are concerned with all charges at each decision point, not simply the single charge that received the most serious outcome. This distinction is important for understanding many of the results of this project.

Table 2. Referred Charges

Charge	N	%
Sexual assault 1	180	41.5 %
Sexual assault 2	99	22.8
Sexual assault 3	11	2.5
Sexual abuse of a minor 1	20	4.6

Class B misdemeanor	4	0.9
Non-classified violation	1	0.2
Total	**434**	

Source of data: Alaska Department of Law

From referral to acceptance, there is often cross-movement of charges within a case. While it is necessary that at least one charge be referred for any case to be accepted, the number of charges within a case need not be static from referral to acceptance or from acceptance to conviction. Law enforcement may refer many charges to prosecutors, but upon review of the case, prosecutors agree to move forward with prosecution on a subset of the referred charges (i.e., the number of accepted charges is less than the number referred). Similarly, it is possible that when law enforcement refers only a single charge to prosecutors, upon review, prosecutors feel that additional charges are appropriate (i.e., they create an accepted charge that was not referred).

Referral

As mentioned earlier, of the 1,052 reported sexual assault cases, 188 (17.9%) resulted in a referral to the DOL. Fewer than half (41.5%) of the referred cases included one charge; 76.5 percent had three or fewer charges. Overall, the 188 referred cases contained 434 referred charges. Table 2 shows the distribution of these 434 referred charges by charge type. One hundred and eighty (41.5%) of the referred charges were sexual assaults in the first degree. Further, 290 (66.8%) of the 434 referred charges were sexual assaults of some degree. Fifty-two (12.0%) of the referred charges were for sexual abuse of a minor; 38 (8.8%) were assault charges; 17 (3.9%) were kidnapping charges; and 37 (8.5%) were other charges. Examples of other charges included contributing to the delinquency of a minor, driving under the influence, and possession of child pornography.

Table 4. Disposition of Referred Charges

Disposition	N	%
Accepted as referred	296	68.2 %
Accepted—same class	7	1.6
Accepted—higher level	19	4.4
Accepted—lesser felony	6	1.4
Accepted—lesser misdemeanor	2	0.5
Prosecution declined—dismissal required	9	2.1
Prosecution declined—no dismissal required	95	21.9
Total	**434**	

Source of data: Alaska Department of Law

Table 3 is a breakdown of referred charges by class. Over 90 percent (n = 394) of the referred charges were felonies. Almost half of the charges (48.6%) were referred as unclassified felonies, that is, the gravest crimes under Alaska statutes, carrying with them the harshest penalties. Under the statutes, sexual assault is taken very seriously. Further, when a report results in a referral, the charges referred for prosecution are at a high level of class severity and carry with them some of the most significant penalties exacted by the justice system.

All charges referred to the DOL receive screening disposition codes. Table 4 indicates the disposition codes that were attached to the 434 referred charges. Prosecutors agreed to prosecute 68.2 percent of charges as referred by law enforcement. "Prosecution declined" disposition codes were attached to 24.0 percent (n=104) of

referred charges. Interestingly, 92.2 percent (n=400) of charges were either accepted as referred by law enforcement or declined.

Here we make claims about charges, not cases. As stated earlier, a majority of cases (58.5%) have more than one charge. It is therefore possible that at least one charge in a case progresses forward, while others are dismissed.

Only charges that were not accepted as referred receive reason codes. Thus, in our sample, the 138 charges not accepted as referred received reason codes. Reasons for not accepting charges as referred are shown in Table 5. What is important to note is the proportion of reasons, by type, given by prosecutors for a charge not being accepted as referred. At this stage, evidentiary reasons were the most typical reasons (45.7%) for not accepting a charge as referred. Discretionary reasons were the second most common reasons for not accepting a charge as referred—32.6 percent.

Transition between Referral and Acceptance

Of the 434 charges that were referred for prosecution, 330 (76.0%) were accepted, either as referred or as a different charge, while the remaining 104 (24.0%) were dropped. Also, 83 new charges were created by prosecutors from referral to acceptance. This means that there were a total of 517 charges at some stage of prosecution within these 188 cases (see Table 6).

We now briefly focus on the 104 charges that were declined for prosecution and the 83 new charges that were added by prosecutors. Half (n=52) of the 104 charges not accepted by the DOL were sexual assaults in the first degree and an additional 21.2 percent (n=22) were sexual assaults in the second degree. Over half of the charges that were not accepted by prosecutors were unclassified felonies and an additional 27.9 percent were class B felonies. Of the 83 charges added by prosecutors, 32 (38.6%) were sexual assault charges, 20 were sexual abuse of a minor charges, 6 were assault charges, 2 were kidnapping charges, and 23 were other charges. New charges added by prosecutors were most commonly class B felonies or unclassified felonies.

Acceptance

We now turn our attention to the 413 charges that moved forward from referral to acceptance. Within the case-level analysis, 127 cases of the original 188 moved forward from referral to acceptance (see Table 1). Stated differently, prosecutors agreed to move forward on 67.6 percent of the cases referred to them. Of the 127 accepted cases, 28.3 percent contained one charge and 70.8 percent contained three or fewer charges. Overall, 413 charges moved forward between referral and acceptance. Table 7 shows the charge type of these 413

charges. As with referral, the most common accepted charge was sexual assault in the first degree—36.6 percent (n=151) of the accepted charges. Further, 58.8 percent of all accepted charges were sexual assaults in some degree.

Table 8 shows exactly how charges moved from the referral stage to the accepted stage, for the 330 charges which were both referred and accepted. What is interesting here is the remarkable consistency with which charges fall on the table's diagonal: A charge referred and accepted as the same charge type will fall on a diagonal line from the upper-left to lower-right corners. We see that the vast majority of charges (92.4%) fall on this diagonal.

Table 9 provides the charge class frequencies for the 413 charges that were accepted by the DOL. Most charges were accepted as unclassified felonies. Furthermore, 86.9 percent of the charges in our sample were accepted at the felony level. Knowing that the vast majority of charges are accepted as referred, we could reasonably expect charge class to remain relatively constant from referral to acceptance—as Table 10 shows. For charges that were both referred and accepted, there is a great degree of class congruency between referral and acceptance.

Table 11. Disposition of Accepted Charges

Disposition	N	%
Jury trial—guilty as charged	10	2.4 %
Jury trial—not guilty	17	4.1
Pled as charged	52	12.6

Dismissed by prosecutor	243	58.8
Dismissed by court	9	2.2
Probation/SIS revoked	4	1.0
No true bill	3	0.7
Final disposition outstanding	3	0.7
Total	**413**	

Source of data: *Alaska Department of Law*

Final Disposition

Once a final outcome has been determined for a charge, prosecutors attach a final disposition code. Table 11 shows the final disposition codes that were attached to the 413 accepted charges in our sample. What is immediately apparent is the large of proportion of charges that are dismissed by prosecutors. Of the 413 accepted charges, 243 (58.8%) were dismissed by prosecutors. Taken as a whole, 61.7 percent of accepted charges were later dismissed, including those for which no true bill was returned. Another point becomes clear from Table 11: For 124 of the 138 accepted charges that resulted in a finding of guilt, the conviction was a result of plea bargaining. This means that plea agreements were responsible for 89.9 percent of guilty findings in our sample. To state this differently: Only 10 percent of guilty findings were a result of court action.

Charges that were dismissed by prosecutors or charges for which prosecutors allowed a plea to an amended charge are given a final disposition reason code. These reasons are shown in Table 12. The most striking result in Table 12 is the degree to which discretionary reasons are cited by prosecutors. Of the reasons given by prosecutors for dismissing a charge or allowing a plea to an amended charge, 70.5 percent were discretionary in nature. Among discretionary reasons for charge dismissal can be the choice of another charge as more accurate, the consolidation of charges, or the suspect pleading to the essence of the offense.

Table 12. Reason for Accepted Charges Being Dismissed or Allowing Plea to an Amended Charge

Reason	N	%
Witness reason	53	16.8 %
Evidentiary reason	34	10.8
Discretionary reason	222	70.5
Procedural/other reason	6	1.9
Total	**315**	

Source of data: *Alaska Department of Law*

Conviction

Of the 127 cases that were accepted by DOL, 16 cases (12.6%) resulted in no conviction. Most cases (87.4%) resulted in a conviction on at least one charge. When examining the charge-level analysis, 138 (33.4%) of the 413 accepted charges resulted in a finding of guilt. Table 13 is a frequency table of convicted charge types. Table 14 presents the changes in the types of charges between acceptance and conviction. We see much more variation about the diagonal than we did in earlier crosstabulations.

Table 13. Convicted Charges

This is an indication that charge types are shifting between acceptance and conviction. Given that a large proportion of cases are disposed of by plea bargaining, this is not surprising.

There is a shift in charge class similar to the shift in charge type we observed between acceptance and conviction. Table 15 presents the convicted charge class, and Table 16 demonstrates the way charge class shifted between acceptance and conviction.

Sexual assaults in some degree formed 60.8 percent of charges that were accepted but failed to result in a conviction.

Conclusions

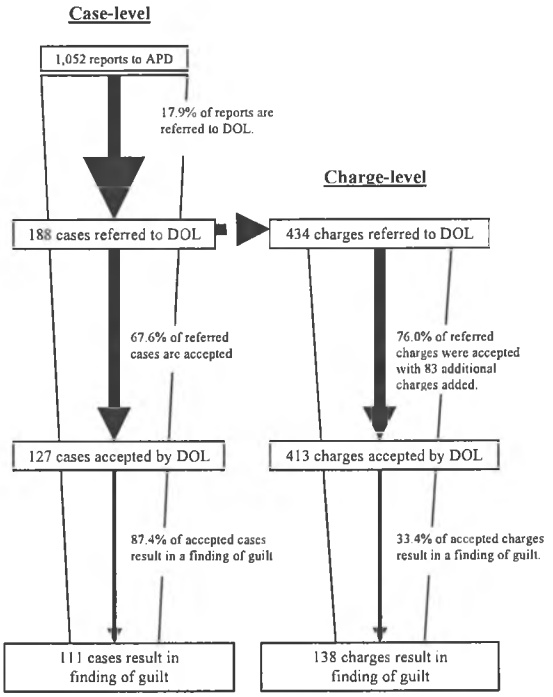
As we have seen, the picture of sexual assault case processing that emerges depends, in large part, on the level of analysis. Conclusions about the prosecution of sexual assaults by the DOL vary substantially depending on which level of analysis we consider. Figure 1 succinctly illustrates the points and rates of attrition for sexual assault cases and charges at the three formal prosecutorial decision points considered in this project. Figure 1 shows that a higher proportion of charges than offenders are being removed from the system at each decision point. Furthermore, results indicate that most offenders whose cases reach prosecutors are being held accountable in some degree; that is, they receive criminal sanctions. Another fact becomes clear when looking at Figure 1: The point of highest attrition is prior to prosecutorial involvement, with 82.5 percent of reported sexual assaults not referred for prosecution. This is by far the largest filtering that occurs at any formal decision point studied in this research. However, determining what precisely is happening between report and referral is beyond the scope of the present project.

In addition to the rates of attrition shown in Figure 1, there is a substantial change in the types of charges that flow through the three decision points examined in this research (Tables 8, 10, 14, and 16). The distribution of charges by type is relatively constant from referral to acceptance, but there is a demonstrable shift in the distribution between acceptance and conviction. The most dramatic shift is observed for the sexual assault in the first degree charges. At referral, charges for sexual assault in the first degree constitute 41.5 percent of all charges. At acceptance, this proportion is relatively unchanged at 36.6 percent. However, sexual assault in the first degree constitutes only 8.7 percent of convicted charges.

Upon first inspection, this result may be startling, but it becomes readily explainable when viewed in light of previous results. We stated earlier that the vast majority (89.9%) of convictions in our sample are a result of plea bargaining, which commonly results in convictions on less serious charges. We could therefore reasonably expect that many charges in our sample would result in convictions on charges that are less severe than those originally referred or accepted.

While the reason codes may not capture all possible reasons for charge dispositions, they offer useful insight into prosecutorial decision making. A comparison of reason codes between those given from referral to acceptance (Table 7) and those given from acceptance to conviction (Table 12) shows that there is a perceptible shift in the reasons attached to case dispositions at the respective decision points. From referral to acceptance, evidentiary reasons account for 47.5 percent of reasons given for a referred charge not being accepted as referred. From acceptance to conviction, this proportion drops substantially to 10.8

Figure 1. Case and Charge Movement Between Decision Points



Source of data: Alaska Department of Law

percent of reasons given by prosecutors. The opposite happens for the proportion of total reasons that are discretionary in nature. Between referral and acceptance, discretionary reasons account for 32.6 percent of the reasons given by prosecutors. This proportion jumps to 70.5 percent of reasons given for a dismissal or plea agreement to an amended charge.

Overall, we began with a total 1,074 sexual assaults reported to the Anchorage Police Department between January 2000 and December 2003 involving one suspect and one victim. Data were collected on 1,052 (98%) of these 1,074 reports. These 1,052 reports to APD resulted in the referral of 188 cases and 434 charges to DOL. These 188 referred cases resulted in the acceptance of 127 cases that included 413 charges. Prosecutors obtained convictions in 111 cases on 138 charges. Thus, the majority of cases resulted in a conviction on at least one charge. For referred cases, a majority of respondents were held accountable for their actions to some degree.

It remains true, however, that a heavy majority of reported sexual assaults are not referred for prosecution. More examination of this point in case processing—between reporting and referral—is urgently needed.

Since the greatest source of case and charge attrition is from report to referral, enhancing offender accountability may depend on increasing the proportion of reported sexual assaults that are referred to the Department of Law.

G. Matthew Snodgrass is a researcher in an ongoing study of sexual assaults in Anchorage. *The study is being directed by André Rosay of the Justice Center. Abstract: *This study examined the characteristics of all sexual assaults reported to the Anchorage Police Department from 2000 through 2003. Key descriptive findings are summarized.*

- *Victims tended to be young and female, with Native women victims in over 45% of reported sexual assaults.*
- *In a majority of the assaults — over 62% — the assailant was not a stranger to the victim. The most common non-stranger relationships included friends and acquaintances.*
- *A majority of the assaults occurred indoors, with 45% taking place at the residence of one or both of those involved.*
- *Sixty-five percent of victims had used alcohol prior to the assault and 74% of suspects had also.*

Alaska generally, and Anchorage specifically, have been plagued by a high incidence of forcible rapes and sexual assaults. For the first time, solid data on victim and suspect characteristics, time and location of assaults and other details have been assembled and studied. These data contradict some of the more common assumptions regarding Anchorage's rape problem.

The data are important to designing effective rape prevention efforts. The Anchorage Police Department has recently secured new funding sources directed at reducing the occurrence of forcible rapes and sexual assaults: a $2 million federal grant and a $500,000 municipal grant. The question now is how to best allocate these resources. As discussed in the criminological literature, problem-oriented policing offers a promising approach.

Problem-oriented policing is a strategy in which police (1) define the problems to be solved, (2) diagnose these problems to identify their causes, (3) develop and implement interventions that address these causes, and (4) assess the efficacy of their interventions.

As defined in the Federal Bureau of Investigation's Uniform Crime Reporting (UCR) Program, forcible rape is "the carnal knowledge of a female forcibly and against her will." Attempted forcible rapes are also included in the UCR's measure. Figure 1 displays the rates of forcible rape reported to police from 1982 to 2002 for the United States, Alaska, and Anchorage. In 2002, the state of Alaska had the highest rate of reported forcible rape among the 50 states (79.4 per 100,000) and Anchorage had the second highest rate of reported forcible rape among metropolitan statistical areas in the U.S. (95.0 per 100,000). In 2002, the rates of reported forcible rape were 141 percent higher in Alaska and 188 percent higher in Anchorage than in the U.S.

In addition to forcible rapes, Anchorage also has a high rate of reported sexual assaults (although national comparisons are not available). The definition of a sexual assault is less restrictive than that of a forcible rape: sexual contact with another person, male or female, without the consent of that other person. In 2002, there were 254 forcible rapes and 85 sexual assaults reported to the Anchorage Police Department, for a total of 339 forcible rapes and sexual assaults. Furthermore, according to analysis done by Callie Marie Rennison for the Bureau of Justice Statistics, national statistics indicate that only 36 percent of forcible rapes, 34 percent of attempted forcible rapes, and 26

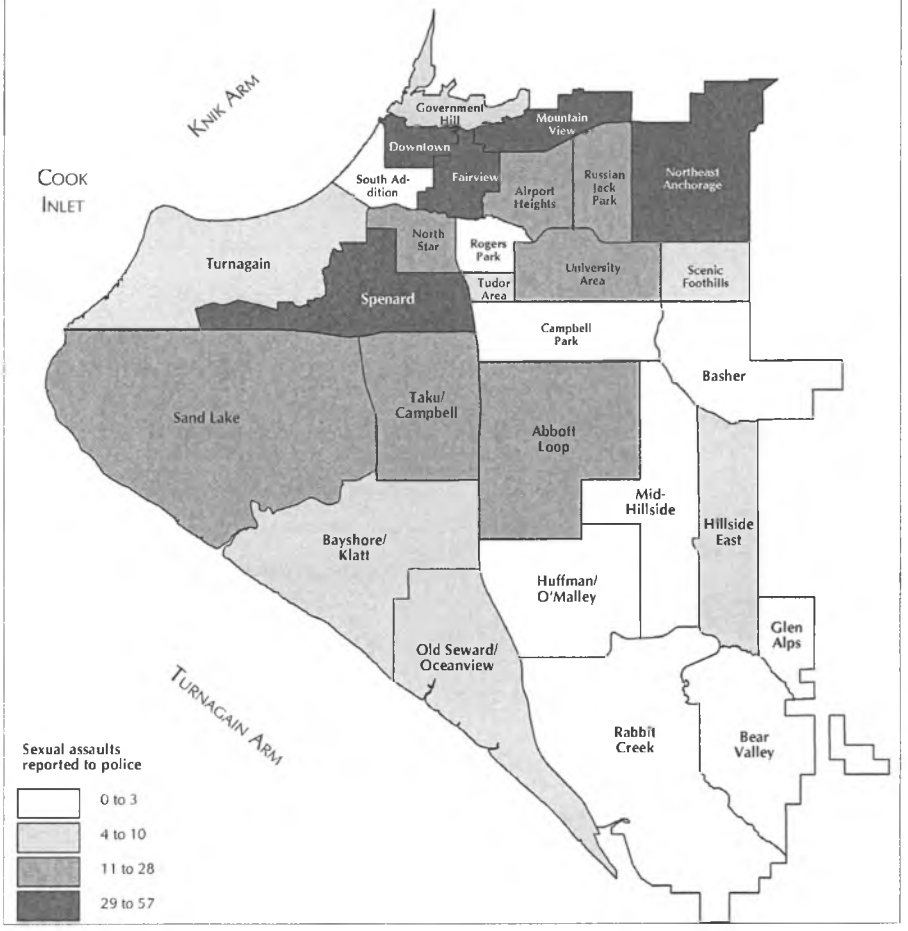
Figure 2. Sexual Assaults Reported to Anchorage Police by Community Council Area, 2000-2001



percent of sexual assaults are reported to the police. In light of this, the forcible rape and sexual assault problem in Anchorage is probably worse than that indicated by police statistics.

A joint project of the UAA Justice Center and the Anchorage Police Department has focused on gaining a better understanding of the parameters of the rape problem in Anchorage. Researchers collected data from all sexual assaults and rapes reported to the Anchorage Police Department in 2000 and 2001. These data contain detailed information on the assaults, victims, and suspects. The findings presented here reflect a quantitative perspective on those assaults that have been reported. It is important to note again that many sexual assaults go unreported.

The key findings from this study suggest that interventions will be successful in Anchorage only insofar as they take into account:

- Geographical and temporal concentration of reported sexual assaults and rapes;
- Demographic characteristics of victims and suspects;
- Types of victim-suspect relationships;
- Locations of assaults; and
- Use of alcohol.

Like all criminal activity, sexual assaults and rapes are neither geographically nor temporally random. In the data studied, reported sexual assaults and rapes were most likely to occur in five community council areas—Downtown, Fairview, Spenard, Mountain View, and, to a lesser extent, Northeast Anchorage (see Figure 2). More specifically, 10.1 percent of the sexual assaults and rapes reported in 2000 and 2001 occurred Downtown, 10.1 percent in Fairview, 13.4 percent in Spenard, 10.1 percent in Mountain View, and 9.0 percent in Northeast. Of the 424 assault locations reported in 2000 and 2001, 52.7 percent were in these five community council areas. Temporally, reported sexual assaults and rapes were most likely to occur on the weekends and from 10 PM to 6 AM. More precisely, 49 percent of sexual assaults and rapes reported in 2000 and 2001 occurred on weekends and 60 percent occurred between 10 PM and 6 AM.

Knowing where and when sexual assaults

Table 1. Race of Victims of Sexual Assaults Reported to Anchorage Police, 2000-2001

Race[1]	Victims[2] N = 539 N	%	Percentage of Anchorage population, 2001[3]	Sexual assault rate per 1,000 population[4]
Caucasian	257	47.7 %	77.6 %	1.28
Native	243	45.1	10.6	8.86
Hispanic	8	1.5	6.0	0.52
African-American	27	5.0	7.2	1.45
Asian	8	1.5	7.3	0.42
Pacific Islander	0	0.0	1.3	0.00

[1] Categories are not mutually exclusive.
[2] Detail adds to greater than total N because victims may be of more than one race.
[3] Includes both males and females (95.5% of victims were female).
[4] Base population includes both males and females.
Source of data: *2000 and 2001 data (N = 539); U.S. Census Bureau, 2001 Supplementary Survey (Anchorage, AK MSA) <www.census.gov/acs/www/Products/Profiles/Single/2001/SS01/Tabular/380/38000US03801.htm>.*

Table 2. Race of Suspects in Incidents of Sexual Assault Reported to Anchorage Police, 2000-2001

Race[1]	Suspects[2] N = 567 N	%	Percentage of Anchorage population, 2001[3]	Sexual assault suspects per 1,000 population[4]
Caucasian	231	40.7 %	77.6 %	1.15
Native	126	22.2	10.6	4.60
Hispanic	47	8.3	6.0	3.05
African-American	137	24.2	7.2	7.38
Asian	30	5.3	7.3	1.59
Pacific Islander	4	0.7	1.3	1.20

[1] Categories are not mutually exclusive.
[2] Detail adds to greater than total N because suspects may be of more than one race.
[3] Includes both males and females (99.4% of suspects were male).
[4] Base population includes both males and females.
Source of data: *2000 and 2001 data (N = 539); U.S. Census Bureau, 2001 Supplementary Survey (Anchorage, AK MSA) <www.census.gov/acs/www/Products/Profiles/Single/2001/SS01/Tabular/380/38000US03801.htm>.*

and rapes occur is an important step in defining the problem to be solved. These results provide reliable evidence of the geographical and temporal concentration of sexual assaults and rape—rather than unreliable evidence based on hunches, experience, or common sense. This evidence suggests that police efforts to combat sexual assaults and rape ought to be concentrated on the weekends from 10 PM to 6 AM in Downtown, Fairview, Spenard, Mountain View, and Northeast.

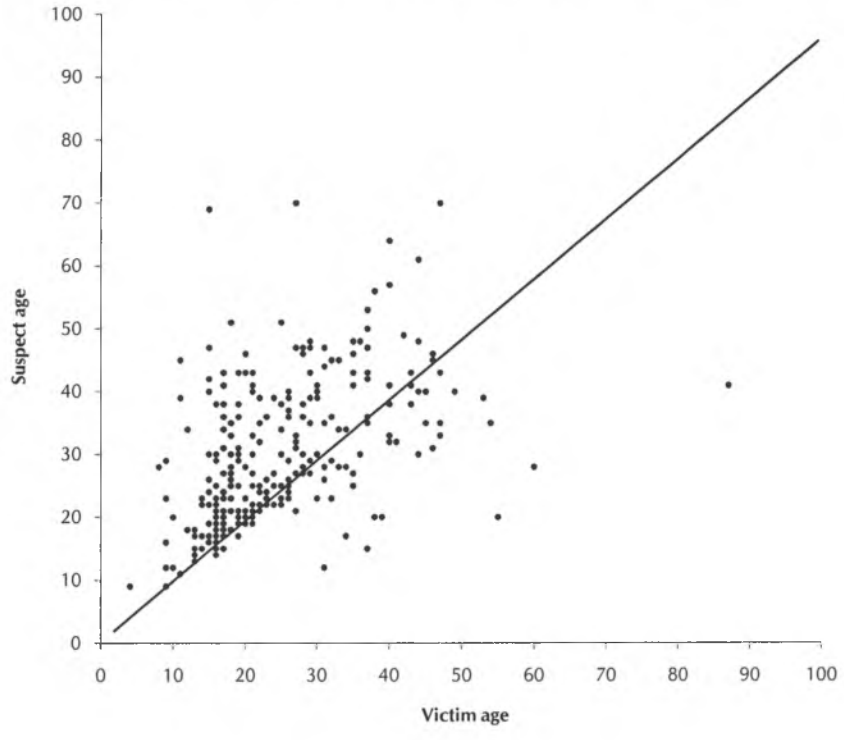
At the same time, police efforts to combat sexual assault and rape need to take into consideration the demographic characteristics of both victims and suspects. The vast majority (95.5%) of victims were female, with most (93.2%) residing in Anchorage. Almost all suspects (99.4%) were male and, again, most (94.3%) resided in Anchorage. Most victims were Caucasian or Native, with Native victims vastly overrepresented (see Table 1). For reported sexual assaults and rapes, Natives were 7.6 times more likely than others to be a victim.

Suspects were more racially diverse than victims (see Table 2). Most suspects were Caucasian, but Native and African-American suspects were overrepresented in proportion to the general population.

The age of victims and suspects is shown in Figure 3. On average, victims were 5 years younger than suspects. For victims, the highest rate of reported sexual assault and rape was for 15-to-19-year-olds (6.76 per 1,000) while for suspects, the highest rate of reported sexual assault and rape was for 20-to-24-year-olds (3.75 per 1,000).

Figure 3. Victim and Suspect Age in Sexual Assault Cases Reported to Anchorage Police, 2000-2001

Analysis includes only those cases with one victim and one suspect (N = 264).



With these demographics characterizing those involved in sexual assaults, interventions should primarily focus on Anchorage residents rather than visitors. Furthermore, it is clear that victim-focused interventions must occur at an earlier age than suspect-focused interventions. The daily routines of 15-to-19-year-olds are substantially different than those of 20-to-24-year-olds. In particular, 15-to-19-year-olds are likely to be in school during the week, making schools an attractive intervention partner for victim-focused interventions. Developing suspect-focused interventions in schools, however, makes little sense as most suspects are beyond school age.

It would also make little sense to develop interventions without considering the relationships between victims and suspects. These relationships are described in greater detail in Table 3. According to the 2002 National Crime Victimization Survey, only 32.5 percent of sexual assaults nationwide and rapes are stranger assaults. In Anchorage, however, stranger assaults are far more common. In 2000 and 2001, 44.3 percent of victims who reported a sexual assault or rape to police did not know the offender beforehand. Among non-stranger assaults, the most common were assaults between casual acquaintances (30.4%) and those between well-known friends (27.1%). Unfortunately, little is known about the differences between stranger and non-stranger assaults. Consequently, the implications of this important finding are still unclear. It is likely, however, that important differences between stranger and non-stranger assaults do exist, requiring separate approaches to reduce occurrence. For example, it is possible that non-stranger assaults are more likely to occur in private places than stranger assaults.

Though we have not yet investigated these differences, our analyses clearly reveal that most sexual assaults reported to police (over 67.7%) occurred indoors (see Table 4). The most common indoor locations included the victim's residence and the suspect's residence. Of the sexual assault locations, 45.3 percent were the victim's residence or suspect's residence (or both), and an additional 9.9 percent took place in some other residence. In comparison, fewer sexual assaults occurred outdoors (22.0%). Common outdoor locations included fields, woods, parks, roads, streets, and parking lots. Few assaults occurred in vacant lots (5.3%), city parks (1.9%), or along park trails (0.5%). Overall, our data show that

Table 3. Victim-Offender Relationship in Incidents of Sexual Assault Reported to Anchorage Police, 2001

Suspect's relationship to victim	N	% of total	% of non-stranger
Total non-stranger	**181**	**55.7 %**	**100.0 %**
Spouse	8	2.5	4.4
Parent	2	0.6	1.1
Sibling	5	1.5	2.8
Grandchild	1	0.3	0.6
Stepparent	3	0.9	1.7
Other family	9	2.8	5.0
Acquaintance	55	16.9	30.4
Friend	49	15.1	27.1
Neighbor	2	0.6	1.1
Babysitter	2	0.6	1.1
Boy/girlfriend	22	6.8	12.2
Ex-spouse	5	1.5	2.8
Employer	1	0.3	0.6
Otherwise known	17	5.2	9.4
Stranger	**144**	**44.3 %**	**–.–**
Total	**325**		

only 4.3 percent of reported sexual assaults *originated* in parks, fields, or woods and that only 7.3 percent *occurred* in these places. Most of these places were vacant lots. Moreover, while only one assault was reported as occurring in a bar, the original pick-up in 54 cases (13.6%) occurred in a bar—a finding that should be seen in relation to the figures on alcohol involvement in sexual assaults.

Consequently, strategies that target outdoor places, particularly ones that target parks or trails, will not appreciably affect the rates of sexual assault and rape in Anchorage. Although the municipality's Trail Watch Program instituted in September 2003 may reduce the fear of crime among trail users (and may reduce other forms of crime), it will probably have negligible effects, if any, on the occurrence of sexual assaults and rapes if these patterns continue. Different strategies must be used to lower the rates of sexual assault and rape in Anchorage, since most rapes occur indoors, in residences.

Finally, interventions must take into account that alcohol use was very frequent among both suspects and victims. During 2000 and 2001, 76.2 percent of suspects and 59.9 percent of victims had used alcohol. Table 5 displays victim and suspect alcohol use for 176 cases (cases with only one victim and one suspect and cases where both victim and suspect alcohol use was known). Both the suspect and the victim had used alcohol in 59.7 percent of these cases. Only the suspect had used alcohol in 13.1 percent of these cases. Only the victim had used alcohol in 1.7 percent of these cases and neither the suspect nor the victim used alcohol in 25.6 percent of these cases. Stated differently, almost 75 percent of these cases involved alcohol—either by the suspect, the victim, or both.

Overall, we have come a long way towards defining the problems to be solved, diagnosing these problems, and identifying their causes. Though the analyses are neither finished nor definitive, we nonetheless now have some reliable information that can be used to enhance the success of community and police rape prevention efforts. We ought to make sure that all interventions take into consideration that:

- Reported sexual assaults and rapes occur mostly on the weekends from 10 PM to 6 AM in Downtown, Fairview, Spenard, Mountain View, and Northeast;
- The highest victimization rates are for 15-to-19-year-olds while the highest offending rates are for 20-to-24-year-olds;
- 44.3 percent of victims are assaulted by strangers;
- 59.6 percent of known assault locations are private residences; and
- Alcohol use is very frequent among both suspects and victims.

It must be understood that police alone cannot solve the sexual assault and rape problem that has plagued Anchorage for well over 20 years. The data suggest that effective solutions to this problem need to be both suspect-focused and victim-focused (as well as event-focused). Many have dismissed the idea of victim-focused interventions for fear that it leads to victim blaming. The reality, however, is that we can educate about sexual assault and rape without blaming victims for sexual assault and rape: we educate homeowners about burglary prevention without blaming them for burglaries and we educate business owners about shoplifting without blaming them for shoplifting.

ALASKA JUSTICE FORUM
REPRINTS

March 2009 JUSTICE CENTER ♦ UNIVERSITY of ALASKA ANCHORAGE No. 9

Disposition of Sexual Assault Cases

It is not possible to correlate the figures on reported sexual assaults in Anchorage in 2000-2001 presented in the first article in this issue of the *Alaska Justice Forum* with figures on felony case processing as examined in the Judicial Council felony study, but the Judicial Council felony case study does contain figures specifically related to cases involving sexual offenses that give an idea of how these cases are handled.

According to the Judicial Council study, a sexual offense constituted the most serious charge in 12 percent of the cases studied. Table 1 shows the dispositions for these cases. The data reveal that disposition charges are often lower, sometimes at the misdemeanor level. A majority of all cases, however, resulted in a conviction on a felony charge—and on a sexual offense charge, a disposition that results in placement on the sexual offender registry.

The statistical analysis presented in the Judicial Council study shows that cases involving sexual offenses were handled even-handedly, with no effects associated with ethnicity in charge reduction, pre-disposition incarceration or sentence. Some disparities did appear in association with case location and with type of attorney.

See table on page 2.

http://justice.uaa.alaska.edu/vaw/

Abstract: *This article summarizes findings on cases involving sexual offenses from the Alaska Judicial Council study* ***Alaska Felony Process: 1999*** *(February 2004). (The full Judicial Council report is available online at http://www.ajc.state.ak.us/reports/Fel99FullReport.pdf.) The study examined the original single most serious charge and determined its final disposition. Twelve percent of felony cases included a sexual offense as the original single most serious charge. Charges for sexual abuse of a minor were more likely to be convicted as sexual offenses than sexual assault charges (and were less likely to be convicted as misdemeanors).*

- *The most frequent original single most serious charges included sexual abuse of a minor in the second degree (Class B felony), sexual assault in the second degree (Class B felony), sexual assault in the first degree (Unclassified felony), and sexual abuse of a minor in the first degree (Unclassified felony).*
- *Eighty-one percent of charges for sexual abuse of a minor in the second degree were convicted as sexual offense charges. Forty-one percent were convicted as sexual abuse of a minor in the second degree. Thirteen percent were convicted as misdemeanors.*
- *Fifty-five percent of charges for sexual assault in the second degree were convicted as sexual offense charges. Seventeen percent were convicted as sexual assault in the second degree. Thirty-four percent were convicted as misdemeanors.*
- *Fifty percent of charges for sexual assault in the first degree were convicted as sexual offense charges. Nine percent were convicted as sexual assault in the first degree. Twenty-two percent were convicted as misdemeanors.*
- *Eighty-four percent of charges for sexual abuse of a minor in the first degree were convicted as sexual offense charges. Twenty-one percent were convicted as sexual abuse of a minor in the first degree. Five percent were convicted as misdemeanors.*

A PUBLICATION OF THE JUSTICE CENTER

Fall 2009 | UNIVERSITY of ALASKA ANCHORAGE | Vol. 26, No. 3

Predicting Legal Resolutions in Domestic Violence Cases

Marny Rivera, André B. Rosay, Darryl S. Wood, and Katherine TePas

Introduction

The adoption of such policies as mandatory arrest, pro-arrest, and no-drop prosecution has changed the arrest and prosecution practices in domestic violence cases. Pro-arrest refers to arrest being preferred, but not required. No-drop prosecution allows the prosecutor, with or without the cooperation of the victim, to decide if the evidence merits going forward. Prosecution and conviction practices were the focus of a meta-analysis by Joel Garner and Christopher Maxwell in *Criminal Justice Review* 34(1) in 2009. They looked at 135 published reports emphasizing prosecution and/or conviction of intimate partner and other forms of domestic violence. These researchers found that 34 percent of reports to law enforcement of intimate partner violence (IPV) were prosecuted, and 59 percent of arrests for IPV were prosecuted. Overall, 51 percent of prosecuted cases resulted in conviction. They concluded that prosecution for IPV was not rare, but acknowledged that prosecution rates varied considerably across jurisdictions. They also acknowledged that the data in their 2009 study did not provide enough information to identify factors that predict prosecution and conviction of IPV. Identification of such predictive factors is important because these factors may explain jurisdictional variation in the prosecution of domestic violence cases, and may also suggest policies and practices for enhancing prosecution rates.

HIGHLIGHTS INSIDE THIS ISSUE

- An examination of attrition in criminal justice processing of cases of intimate partner violence against women (page 2).
- A summary of two sets of recommendations to reduce violence against women in Alaska (page 5).
- A look at the relationship between animal abuse and domestic violence (page 6).
- A comparison between leading causes of death in the U.S. and Alaska among different age groups (page 7).

Table 1. Number of Cases by Stage, for Cases with only One Suspect and One Victim

Stage	N	% of reported	% of referred	% of accepted
Reported	1,095	100.0 %	—	—
Referred	874	79.8	100.0 %	—
Accepted	753	68.8	86.2	100.0 %
Convicted	591	54.0	67.6	78.5

Source of data: *Alaska State Trooper data (2004)*

A recent analysis of prosecution for assaults in domestic violence incidents reported to Alaska State Troopers (AST or Troopers) found that prosecution rates in Alaska were even higher than the national average prosecution rates reported by Garner and Maxwell. Data from the study of assaults in domestic violence incidents reported to AST included detailed characteristics associated with these incidents, as well as prosecution data from the Alaska Department of Law. These data allowed for the computation of prosecution and conviction rates, as well as an analysis of characteristics predicting prosecution of domestic violence assaults. The results of those analyses are presented here following a summary of domestic violence statutes in Alaska and descriptive statistics for the characteristics examined as predictors of prosecution and conviction.

Summary of Alaska's Assault Statutes

The findings here come from a study of 1,281 Trooper reports (not including reports to local or municipal police) of assaults in domestic violence incidents in 2004 that resulted in at least one assault charge. Alaska's criminal code defines assault in terms of first, second, third, and fourth degrees (Alaska Statutes §§11.41.200, 11.41.210, 11.41.220, and 11.41.230). First, second, and third degree assault are class A, B, and C felonies, respectively, and fourth degree assault is a class A misdemeanor. The main distinctions between the degrees of assault relate to the level of intent and seriousness of resulting physical injury.

In this study we focus on assaults in domestic violence incidents between household members. *Household member*, as broadly defined in Alaska Statue §18.66.990, includes adults or minors who are current or former spouses, living together or who have lived together, dating or who have dated, engaging in or who have engaged in a sexual relationship, related to each other up to the fourth degree of consanguinity, related or formerly related by marriage, or who have a child together. Unrelated individuals residing together as roommates, and live-in caregivers, also fall under this definition.

The Sample

A subsample of 1,095 cases involving one victim and one suspect was used to conduct analyses to predict legal resolutions. Of the 1,095 cases, 874 (80%) were *referred* for prosecution and 753 (86% of referred cases) were *accepted* for prosecution. The conviction rate was 54 percent for reported cases, 68 percent for referred cases, and 79 percent for accepted cases. (See Table 1.)

Report Characteristics

Several report characteristics were examined as predictors of prosecution: time between the assault incident and the report

*Please see **DV cases**, page 8*

Table 2. Coding for and Frequencies of Report Characteristics Predicting Legal Resolutions

Variables	Reports N	Reports %	Variables	Reports N	Reports %
Time to report			**Time to case closure**		
One or more days = 0	175	16.1 %	Twenty or more days = 0	538	49.2 %
Zero days (day of incident) = 1	914	83.9	Zero through median of 19 days = 1	555	50.8
Person reporting the assault			**Total charges per report**		
Victim = 0	639	58.4 %	One = 0	659	60.2 %
Other = 1	456	41.6	More than one = 1	436	39.8
Detachment			**Number of witnesses per report**		
Other (A, E, or I) = 0	190	17.4 %	Zero = 0	464	42.4 %
B, C, or D = 1	905	82.6	One or more = 1	631	57.6
First agency notified					
AST = 0	870	79.5 %			
VPSO, VPO, local police or other = 1	225	20.5

DV cases

(continued from page 1)

of the incident to law enforcement, person reporting the assault, Trooper detachment area receiving the report, agency reported to, time to case closure, total charges per report, and number of witnesses per report. The majority of cases (84%) were reported on the same day as the incident and the victim reported the incident in 58 percent of cases. Most reports (83%) were made in Trooper detachments B (Southcentral Alaska), C (Western Alaska), or D (Interior Alaska). In 80 percent of cases, AST was the first agency notified of the domestic violence assault. In the remaining 21 percent of cases the report was most often received by a Village Public Safety Officer (VPSO) or Village Police Officer (VPO), and less often by a local police department. (Percentages may total to more than 100% due to rounding.) Over half (51%) of the cases were closed between zero and 19 days (the median time to closure for all cases). The majority of domestic violence assaults (60%) involved a single charge, and in 58 percent of cases there was only one witness. (See Table 2).

Table 3. Coding for and Frequencies of Victim Characteristics Predicting Legal Resolutions

Variables	Reports N	Reports %	Variables	Reports N	Reports %
Race of victim			**Present upon Trooper arrival**

No = 0	794	73.1 %			
Yes = 1	292	26.9			

Source of data: *Alaska State Trooper data (2004)*

Victim Characteristics

In over half of the cases, the victim was Caucasian (52%) and under 32 years of age (52%). The victim was female in 73 percent of the cases. Most victims (66%) did not use alcohol or drugs prior to the assault in domestic violence incident. Seventy-three percent of the victims contacted no one prior to reporting the assault to law enforcement. In the majority of cases (96%), the victim was present upon Trooper arrival. The victim was interviewed in 97 percent of cases, and most victims (86%) cooperated with the AST investigation. In 60 percent of cases victims suffered documented injuries as a result of the assault in domestic violence incident, but in 40 percent of cases victims did not suffer injuries or their injuries were not documented in the report. (See Table 3.)

Suspect Characteristics

Just over half of the suspects (52%) were Caucasian. Seventy-nine percent were male and 52 percent were in the 12 to 32 years age group. Fifty-eight percent of suspects used alcohol or drugs prior to the assault. Most suspects (77%) were present upon the Trooper's arrival at the scene and were interviewed as part of the Trooper's investigation. The suspect admitted guilt or gave a full confession in 57 percent of cases. In 7 percent of cases the suspect was known to have violated a Domestic Violence Protection Order (DVPO), conditions of release, or conditions of probation. (See Table 4.)

Victim-Suspect Characteristics

In terms of victim-suspect relationship, 67 percent of assaults in domestic violence

Interracial = 1	169	15.4
Victim suspect age combination		
Intraage group = 0	447	41.2 %
Interage group = 1	638	58.8

Source of data: *Alaska State Trooper data (2004)*

incidents involved intimate partners while 33 percent involved other family members. Victims and suspects shared common living arrangements in 75 percent of cases. Most assaults in domestic violence incidents (85%) were intraracial—that is between a victim and a suspect of the same race—and 15 percent of cases were interracial—between persons of different races. In 59 percent of cases the victim and suspect were in a different age group. (See Table 5.)

Incident Characteristics

A number of incident characteristics were examined as predictors of prosecution. In 64 percent of cases the victim and suspect came into contact by invitation (either from the victim or the suspect) while in 36 percent of cases the suspect made a forced entry. In 41 percent of cases, a child was present at the time of the assault in domestic violence incident. Suspects used a weapon in five percent of cases. Twenty-eight percent of victims responded aggressively to the domestic violence assault. Victims remained at the scene following 75 percent of assaults in domestic violence incidents. Alcohol and/or drug use was a reported precipitating factor that led to the assault in domestic violence incident in 22 percent of cases, and jealousy was a reported precipitating

DV cases
(continued from page 9)

factor in 14 percent of cases. The majority of assaults in domestic violence incidents (87%) took place in a private location and involved physical assaults (89%). Stalking behavior was reported in 7 percent of cases. (See Table 6.)

Predicting Legal Resolutions

Several characteristics of domestic violence incidents were examined as potential predictors of referral, acceptance for prosecution, and conviction: reports to law enforcement of the domestic violence incident, suspects, victims, victim-suspect relationships, and incidents. The analyses involved a three-phase procedure for each type of legal resolution (referral, acceptance, and conviction). In the first phase, individual characteristics within each category were analyzed as predictors of the three legal resolutions using bivariate logistic regression. In the second phase, significant individual predictors of legal resolutions in each category (reports, suspects, victims, etc.) were analyzed using multivariate logistic regression. In the third phase, characteristics found to be significant predictors from phase two, were analyzed across all five categories using multivariate logistic regression to produce a full model of predictors.

Referral

Characteristics that did not predict referral of cases for prosecution. The full model used to predict referral of cases for prosecution included several predictor characteristics found to be significant when analyzed with other characteristics from their respective categories (i.e., reports, suspect, victims, etc.), but not all of these were found to be significant predictors of referral when examined individually and included in the full model. Characteristics analyzed in the full model that did not significantly predict referral of cases for prosecution included: the person who reported the incident (victim or other), the first agency notified (AST, VPSO, VPO, or local police department), the total number of charges associated with the report (one or more than one), victim use of alcohol or drugs, victim injuries, the racial combination of the victim and suspect (intraracial or interracial), the victim's response characteristic (stayed or left the scene), the type of assault (physical or not physical), and precipitating factors to the assault in domestic violence incident (did or did not involve alcohol and/or drugs, did or did not involve jealousy).

Characteristics significantly predicting referral of cases for prosecution. The characteristics predicting referral of domestic violence incidents for prosecution are presented in order of greatest impact to least impact on referral. Each of these characteristics was found to significantly predict referral of domestic violence incidents for prosecution when the other predictive characteristics included in the model were held constant. Cases where the victim was interviewed by a Trooper were 5.8 times more likely to be referred for prosecution than cases where the victim was not interviewed by a Trooper. Cases involving domestic violence incidents that took place between a suspect and victim who were intimate partners were 2.9 times more likely to be referred for prosecution than cases where the victim and suspect were not intimate partners (i.e., family members such as siblings, parent/child, or extended family, etc.). When the suspect was reported to have used alcohol or drugs prior to the domestic violence incident, cases were 2.5 times more likely to be referred for prosecution than in cases with no report of a suspect's use of alcohol and/or drugs. Cases that were closed relatively quickly (less than or equal to a median of 19 days) were 2.3 times more likely to be referred for prosecution than cases that took longer to close. Cases in which the victim and suspect lived together were 2.1 times more likely to be referred for prosecution than cases where the victim and suspect were not cohabiting. Cases with relatively older suspects (older than the mean of 32 years) were two times more likely to be referred for prosecution than cases with younger suspects. (See Table 7.)

Table 7. Characteristics Significantly Predicting Referral for Prosecution

Variable	b	SE(b)	P	Exp(b)
Victim was interviewed	1.757	0.603	0.004	5.794
Intimate partner relationship	1.071	0.205	0.000	2.918
Suspect used alcohol or drugs	0.905	0.226	0.000	2.473
Time to case closure less than or equal to median	0.826	0.199	0.000	2.284
Common living arrangement	0.722	0.239	0.003	2.058
Suspect 33 years or older	0.707	0.203	0.000	2.028

Log Likelihood = 621.10; χ^2 = 117.10; $p < .05$.

Source of data: *Alaska State Trooper data (2004)*

Acceptance

Characteristics that did not predict acceptance of cases for prosecution. Characteristics analyzed in the full model that did not significantly predict acceptance of cases for prosecution included: the time between the incident and the report (one or more days or the same day on which it occurred), the first agency notified (AST, VPSO, VPO, or local police department), the suspect's use or non-use of alcohol or drugs, the victim's gender (female or male), the victim's race (minority or Caucasian), the victim and suspect relationship (intimate partners or other family), the victim and suspect's living arrangement (common or separate), and a precipitating factor to the assault in domestic violence incident (did or did not involve alcohol and/or drugs, did or did not involve jealousy).

Characteristics significantly predicting acceptance of cases for prosecution. The characteristics that significantly predicted whether cases were referred for prosecution were *not* the same characteristics that predicted whether referred cases were *accepted* for prosecution. Each of the following characteristics was found to significantly predict acceptance of domestic violence incidents for prosecution when the other predictive characteristics included in the model were held constant. One of the strongest predictors of acceptance

Table 8. Characteristics Significantly Predicting Acceptance for Prosecution

Variable	b	SE(b)	P	Exp(b)
Suspect admitted guilt or gave a full confession	0.784	0.327	0.003	3.114
Total charges greater than one	0.988	0.351	0.005	2.686
Person reporting was not the victim	0.841	0.351	0.017	2.318
Victim suffered injury	0.839	0.324	0.010	2.315
Child was present	0.825	0.354	0.020	2.282
Suspect male	1.136	0.381	0.016	2.191

Log Likelihood = 243.91; χ^2 = 64.02; $p < .05$.

Source of data: *Alaska State Trooper data (2004)*

for prosecution was whether the suspect admitted guilt or gave a full confession. Cases where suspects admitted guilt or gave a full confession were 3.1 times more likely to be accepted for prosecution, and cases with relatively more charges (cases with more than one charge) were 2.7 times more likely to be accepted for prosecution than cases with only a single charge. When the initial report of domestic violence was made by a person other than the victim, cases were 2.3 times more likely to be accepted for prosecution. Cases in which the victim suffered injury were 2.3 times more likely to be accepted for prosecution than cases in which the victim did not suffer injury. Cases in which a child was reportedly present were 2.3 times more likely to be accepted for prosecution than cases with no report of a child's presence. If the suspect was male, the case was 2.2 times more likely to be accepted for prosecution than if the suspect was female. (See Table 8.)

Table 9. Characteristics Significantly Predicting Conviction

Variable	b	SE(b)	P	Exp(b)
Reported to VPSO, VPO, or other	0.862	0.363	0.018	2.367
Suspect used alcohol or drugs	0.841	0.230	0.000	2.319
Total charges greater than one	0.584	0.237	0.014	1.794
Suspect admitted guilt or gave a full confession	0.561	0.228	0.014	1.752

Log Likelihood = 93.21; χ^2 = 33.57; $p < .05$.

Source of data: *Alaska State Trooper data (2004)*

Conviction

Characteristics that did not predict conviction. One characteristic analyzed in the full model that did not significantly predict conviction was the suspect's age (12 to 32 years *or* 33 years and older).

Characteristics significantly predicting conviction. The characteristics that predicted conviction in cases of domestic violence incidents included some characteristics that predicted referral and acceptance. It is important to note that the term "conviction" used in this article refers to *any* conviction for *any* charge (not necessarily a domestic violence charge), and includes plea bargains, guilty pleas, and convictions resulting from a bench or jury trial. Each of the following characteristics was found to significantly predict conviction of domestic violence incidents when the other predictive characteristics included in the model were held constant. Cases first reported to a VPSO, a VPO, or a local police department were 2.4 times more likely to result in a conviction than cases first reported to AST. Cases in which the suspect was reported to have used alcohol or drugs prior to the domestic violence incident were 2.3 times more likely to result in conviction than cases with no report of a suspect's alcohol or drug use. Cases were 1.8 times more likely to result in a conviction if there was more than one charge involved, or if the suspect admitted guilt or gave a full confession. (See Table 9.)

Conclusion

Based on our analyses, a number of report, victim, suspect, victim-suspect, and incident characteristics predict prosecution of assaults in domestic violence incidents reported to AST. The identification of these characteristics creates an opportunity to modify policy and/or practice in a way that enhances prosecution of these types of assaults. In the development of policy and/or practice changes, the impact of characteristics predicting prosecution at *each level* (referral, acceptance, and conviction) is equally important to consider: cases must progress through the initial stages of prosecution in order to result in conviction. Therefore, the majority of characteristics that predicted conviction also predicted acceptance or referral of cases.

The presence of certain characteristics seemed to increase the gravity of a case and heighten the likelihood of prosecution. Cases more likely to be prosecuted include those in which the victim was injured, there was more than one charge, and/or the report to law enforcement was made by someone other than the victim. Policies for investigation of assaults in domestic violence incidents should ensure extensive documentation of victim's injuries, corroboration of the victim's description of events, and discovery of all associated, justified charges. A victim's injuries and a report by someone other than the victim can corroborate the victim's description of events. Victim interviews and suspect admission of guilt also made prosecution more likely. Rates of victim interviews by Troopers were high (97%), but additional efforts could be made to interview a larger percentage of known suspects. (77% of suspects were interviewed.) It is important to train law enforcement officers to conduct thorough suspect interviews and interrogations and to employ reliable interviewing techniques that encourage suspects to admit guilt or give a full confession.

Other cases more likely to result in prosecution involved suspects who used alcohol or drugs prior to the assault in domestic violence incident. Therefore, it is essential for Troopers to document suspects' substance use every time it is indicated. Also, cases involving male suspects and assaults between intimate partners who live together were more likely to be prosecuted than other cases. As noted previously, the definition of domestic violence in Alaska statute covers a range of relationships. Troopers make arrests for assaults in domestic violence incidents where the victim-suspect relationship is one of several identified in the statute. However, it is more likely that domestic violence assaults between intimate partners who live together will be prosecuted than assaults between persons involved in other statutorily defined relationships. This may suggest a tendency on the part of prosecutors to view intimate partner domestic violence as an offense warranting more urgent prosecution

DV cases

(continued from page 11)

than other forms of domestic violence.

In terms of conviction, assaults in domestic violence incidents that took place in communities with a VPSO or a VPO had a greater likelihood of resulting in conviction than other cases. This supports similar findings identifying predictors of prosecution and conviction in sexual assault cases reported to AST, as well as findings noted by Wood, et al. (see "Attrition in Cases of Violence Against Women Reported to the Alaska State Troopers" in this issue), and findings by Wood and Rosay (see "Case Attrition of Sexual Violence Offenses: Empirical Findings" in the Spring/Summer 2008 issue of the *Alaska Justice Forum*). Increased likelihood of prosecution and conviction for cases first reported to a VPSO or a VPO highlights the importance of the VPSO and VPO programs. This finding suggests that the resources provided by these first responders (i.e., reduced response time and enhanced investigation) increases conviction of assaults in domestic violence incidents. The impact of VPSO and VPO programs on conviction, as well as factors that make intimate partner violence different from other forms of domestic violence, should be examined further. Additional studies could assist in better understanding the variation in prosecution of domestic violence assault cases and the policies and practices that enhance prosecution and conviction rates.

Attrition in Cases of Violence Against Women Reported to the Alaska State Troopers

Darryl S. Wood, André B. Rosay, Marny Rivera, and Katherine TePas

The statutory requirement that arrests be made for all crimes involving domestic violence (Alaska Statute 18.65.530) is an important dimension of the state's efforts to reduce violent victimization occurring among intimate partners. This policy is rooted in research that suggests mandatory arrest has a specific deterrent effect in cases of misdemeanor assault committed by males against their female intimate partners. Although there is reason to believe mandatory arrest may reduce re-victimization in its own right, the impact of the policy upon further criminal justice system intervention is largely unknown. On the one hand, it is possible that caseload pressures make it difficult for prosecutors to continue with zero-tolerance in intimate partner violence (IPV) cases. But it is also possible that mandatory arrest sets the tone for continual rigorous enforcement of IPV assault cases throughout the remainder of the criminal justice process. In this article we consider police, prosecutor, and court decision-making about IPV cases initially dealt with by the Alaska State Troopers (AST or Troopers) in 2004.

Information gathered from AST and Alaska Department of Law (DOL) case files was analyzed for this article to examine IPV assault case processing decisions. Two basic types of analyses were conducted. We first charted the processing of IPV assault cases as they made their way from the Troopers through the court system. We also used commonly employed categories (i.e., Alaska Native vs. Non-Native and isolated location vs. non-isolated location) to determine if there were variations in the processing of IPV cases relative to the victims' race or geographic location. Together, these analyses allow us (1) to understand how likely it is that IPV assault cases from the Troopers' area of responsibility are fully prosecuted, and (2) to begin to determine if particular aspects of the criminal justice environment have an impact upon the likelihood that IPV assault cases are dealt with fully.

The results presented in this article allow us to consider the attrition of cases of IPV assault reported to the Troopers and prosecuted by the DOL. For our purposes here, *case attrition* refers to the manner in which criminal cases are screened out of the criminal justice process as they are considered at successive decision making points. By definition, for a specific offense type, the number of cases resulting in conviction is smaller than the number of prosecutions which, in turn, is smaller than the number of arrests. Put another way, the greater the proportion of cases screened out of the process, the higher the rate of case attrition.

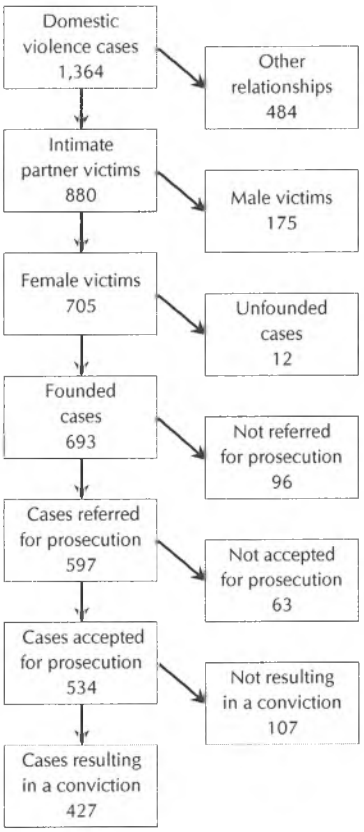
This article focuses upon IPV rather than *domestic violence* because the former is more indicative of the particularly pernicious power-based relationship violence that police and prosecutors have perpetually struggled against and that has served as the impetus for mandatory arrest policies. Under Alaska state law (§18.66.990), domestic violence is inclusive of all violent offenses committed by one household member against another household member where *household members* are broadly defined to include individuals who are related to one-another through common ancestry or marriage, unrelated individuals who are roommates or live-in caretakers, and individuals who are or were intimate partners (i.e., suspects and victims involved together in marital, dating, and/or sexual relationships). From a conceptual standpoint, it makes sense to consider IPV assault separately because it is qualitatively different compared to other types of violence that fall under the umbrella of domestic violence (e.g., child abuse, elder abuse, teenage brothers engaged in fisticuffs) in terms of its etiology and in terms of the nature and severity of official responses.

Likewise, the results presented below focus only on assault cases involving female victims because of the dissimilarities in the IPV assault committed against men compared to that committed against women. (IPV is not a purely heterosexual phenomenon. The analyses presented below include the cases of three women who reported being assaulted by their female partners.) Even though both women and men are violent toward one another when in intimate relationships, the character of women's violence against their male partners is substantially different than men's violence against their female partners in terms of its purpose and its potential for physical harm. Generally speaking, men are much more likely than women to employ physical violence in an instrumental fashion, using it as one method among many to maintain power and control over an intimate partner. Furthermore, the likelihood of physical harm is substantially higher in IPV assault against female victims relative to that of male victims because of the physiological differences between the sexes in terms of size and strength. Given these differences we would expect the victim's sex to have a differential impact on the probability that cases would be screened out during the criminal justice process.

Overall Attrition of IPV Cases

In Figure 1 we consider IPV assault cases reported to AST in 2004 as they made their way through the criminal justice process. First, we see that IPV assault cases made up a majority of the assaults classified as domestic violence. Roughly two-thirds of reported domestic violence cases (65%) involved an assault by one member of an intimate relationship against another member. The remainder of the domestic violence cases included victims and suspects that were connected by some other form of

Figure 1. Processing of Cases of Intimate Partner Violence Against Women Reported to the Alaska State Troopers, 2004



household membership. Of the IPV assault cases reported to police, the large majority (80%) involved a female victim.

Nearly all of the IPV assault cases against female victims that came to the Troopers' attention were *founded* (i.e., deemed to have actually occurred and classified as "crimes known to the police"). Less than two percent of the time was an IPV assault case against a female victim classified as unfounded after further investigation by AST. Some comparison figures are found in Alaska Department of Public Safety data, *Crime Reported in Alaska, 2004*. When compared to the founding rates for all assault cases reported to AST in 2004 regardless of victim-suspect relationship, IPV assault cases against female victims were more likely than simple assaults to be founded (87%) and just as likely as aggravated assaults to be founded (97%).

After establishing that an assault did occur, the next two steps in the process involve decisions about carrying a case forward for prosecution. An investigating Trooper first has to decide whether to refer the case to DOL and then, once referred, a DOL attorney has to choose to accept the case and proceed with prosecution. We see in Figure 1 that a large majority (86%) of IPV assault cases that were known to AST were referred to DOL for prosecution and a slightly larger proportion of those referred cases were accepted by DOL attorneys for further adjudication. Ultimately, of the cases that DOL attorneys accepted for prosecution, most (80%) resulted in a conviction.

To put these rates of prosecution and conviction into context, comparisons can be drawn with similar rates found for other U.S. jurisdictions as published in a recent meta-analysis by Joel Garner and Christopher Maxwell in *Criminal Justice Review* 34(1) in 2009. By any measure, it appears that there is substantially *less* case attrition for IPV assaults reported to AST than any other place in the U.S. where it has been studied. For example, across the studies considered by Garner and Maxwell, the proportion of IPV assault cases known to the police that were not accepted for prosecution was 72 percent. In comparison, only 23 percent of the IPV assault cases known to AST in 2004 were not accepted for prosecution. When the basis of comparison is acquittals per prosecutions, we see that DOL attorneys were much less likely to lose IPV assault cases than what has been reported elsewhere; only 20 percent of the IPV assault cases prosecuted by DOL resulted in acquittal while, on average, half of the cases prosecuted elsewhere in the U.S. did not result in conviction. Overall, of the IPV assaults known to the police, the cases dealt with by AST and DOL were much more likely to result in conviction than what has been found in other U.S. jurisdictions. In 2004, 61 percent of all IPV assault cases known to AST ultimately resulted in a conviction whereas the average conviction rate for founded cases in Garner and Maxwell's meta-analysis was 14 percent. Comparatively speaking, the AST/DOL conviction rate in 2004 was four times greater than is typical in the U.S. With such an extreme difference, it is no wonder that the prosecution and conviction rates shown in Figure 1 rank among or above the highest rates found in individual studies reviewed by Garner and Maxwell. While the DOL rate of prosecuted cases resulting in conviction was surpassed in a few jurisdictions, the AST/DOL rate of prosecutions per founded case and the AST/DOL rate of convictions per founded case were higher than what was reported in any of the American studies considered by Garner and Maxwell. Based upon these comparisons, it is fair to say that the case attrition rate of IPV assaults dealt with by AST and DOL in 2004 was among the lowest anywhere in the U.S.

Comparisons of Attrition by Victim Race and Location

To consider disparities in prosecution rates, we made comparisons of case attrition in terms of the victims' race and in terms of the geographic location where the IPV assault took place. Given the scrutiny placed on the State of Alaska's response to violence against Alaska Native women in rural villages (e.g., *AITC v. Alaska,* 110 P.3d 947, 2005 or Amnesty International's *Maze of Injustice*), these comparisons were made between the cases of Alaska Native and non-Native victims and between the cases that occurred in isolated villages versus cases that occurred in places that are less remote. These results have been used to argue that there is unequal enforcement by the State of Alaska in cases of IPV assault against Alaska Native women.

To test this assertion, we first examined the differences in case attrition of cases of Alaska Native victims compared to cases of non-Native victims. The first two rows of figures in Table 1 allow comparisons between the cases of female Alaska Native and non-Native IPV assault victims in terms of the proportion of all cases reported that were founded, that were referred for prosecution, that were accepted for prosecution, and that resulted in a conviction. With a lack of statistically significant differences between the two groups, it appears that Alaska Native victims' reports of IPV assault are just as likely as non-Native victims' reports of IPV assault to be founded and referred for prosecution by AST, to be accepted for prosecution by DOL, and to result in conviction in state court. In the third and fourth rows of Table 1 the two groups are compared in terms of the proportion of founded cases that resulted in referral for prosecution, acceptance for prosecution, and conviction. Although there was little difference between the referral and acceptance rates for founded cases reported by the two groups of victims, founded IPV assault cases against Alaska Native victims were actually more likely to result in a conviction relative to founded IPV

Please see ***Attrition****, page 4*

Table 1. Attrition of Cases of Intimate Partner Assault Against Women Reported to the Alaska State Troopers, Alaska Native vs. Non-Native Victims, 2004

Total possible cases		Number & percent founded		Number & percent referred		Number & percent accepted		Number & percent convicted	
Alaska Native	Non-Native	Alaska Native	Non-Native	Alaska Native	Non-Native	Alaska Native	Non-Native	Alaska Native	Non-Native
All cases reported									
333	372	325	368	275	322	251	283	213	214
100.0%	100.0%	97.6%	98.9%	82.6%	86.6%	75.4%	76.1%	64.0%	57.5%
Founded cases									
325	368			275	322	251	283	**213**	**214**
100.0%	100.0%			84.6%	87.5%	77.2%	76.9%	**65.5%**	**58.2%**
Referred cases									
275	322					251	283	**213**	**214**
100.0%	100.0%					91.3%	87.9%	**77.5%**	**66.5%**
Accepted cases									
251	283							**213**	**214**
100.0%	100.0%							**84.9%**	**75.6%**

Note: **Bold** type indicates difference between Alaska Native and non-Native victims is statistically significant at the $p < .05$ level.

Attrition

(continued from page 3)

assault cases against non-Native victims. The fifth and sixth rows of figures in Table 1 let us compare the rates of acceptance for prosecution and conviction for those cases that were referred by AST to DOL for prosecution. Once again, the difference in the acceptance rates of referred cases was not statistically significant whereas the conviction rates of the referred cases of Alaska Native victims was higher than the referred cases of non-Native victims. A similar result is found in the bottom two rows of Table 1 in which a greater proportion of cases of Alaska Native victims that were accepted for prosecution resulted in conviction when compared to the corresponding proportion for non-Native victims. Overall, the results of Table 1 indicate that Alaska Native and non-Native IPV assault victims' cases are processed at similar rates and that the only exception is that IPV assault cases are more likely to result in a conviction when the victim is Alaska Native.

Table 2. Attrition of Cases of Intimate Partner Assault Against Women Reported to the Alaska State Troopers, Victims from Isolated vs. Non-Isolated Communities, 2004

Total possible cases		Number & percent founded		Number & percent referred		Number & percent accepted		Number & percent convicted	
Isolated	Non-isolated	Isolated	Non-isolated	Isolated	Non-isolated	Isolated	Non-isolated	Isolated	Non-isolated
All cases reported									
221	484	215	478	179	418	170	364	**149**	**278**
100.0%	100.0%	97.3%	98.8%	81.0%	86.4%	76.9%	75.2%	**67.4%**	**57.4%**
Founded cases									
215	478			179	418	170	364	**149**	**278**
100.0%	100.0%			83.3%	87.4%	79.1%	76.2%	**69.3%**	**58.2%**
Referred cases									
179	418					**170**	**364**	**149**	**278**
100.0%	100.0%					**95.0%**	**87.1%**	**83.2%**	**66.5%**
Accepted cases									
170	364							**149**	**278**
100.0%	100.0%							**87.6%**	**76.4%**

Note: **Bold** type indicates difference between victims from isolated and non-isolated communities is statistically significant at the $p < .05$ level.

To consider the effect of geographic isolation on case attrition, we made comparisons in terms of whether the IPV assault occurred in a village that was difficult for AST to reach to conduct an investigation. Villages were considered isolated if they did not have a local AST post or if they could not be reached by the Troopers from a post via automobile. The results of these comparisons are made in Table 2. In many ways, the results for an isolated/non-isolated comparison mirror the results presented in Table 1 regarding the differences in the processing of Alaska Native and non-Native victims' cases. First, the results indicate that isolation did not have an effect on the proportion of cases that were founded or that were referred for prosecution. In other words, it appears that the difficulty of reaching a village to make an investigation did not make it less likely that an IPV assault case would be carried forward by AST to DOL for prosecution. Next, there is some indication that DOL is more likely to accept IPV assault cases that occurred in isolated villages as compared to those cases that occurred in non-isolated locales; we see in Table 2 that there was a statistically significant difference in the proportion of cases referred by AST that were accepted for prosecution and that it was the cases from the isolated villages that were least likely to be screened out at that point. Finally, the results in Table 2 indicate that the conviction rate for cases that occurred in isolated villages was higher than for cases from non-isolated villages for all possible bases of calculation (i.e., convictions per reported case, convictions per founded case, convictions per case referred for prosecution, and convictions per case accepted for prosecution). Taken as a whole, it appears that the isolation of a village where an IPV assault occurs does not increase the likelihood of case attrition. If anything, these results indicate that IPV assault cases from isolated villages are not neglected by the State of Alaska but are instead more likely to be fully prosecuted.

Conclusion

Although Alaska's mandatory arrest law is the only policy specifically requiring official response to IPV cases, it appears that the law's spirit of full-enforcement guided other decisions regarding IPV cases as they continued through the criminal justice process in 2004. And while attrition still occurred in the IPV cases handled by AST and the DOL, it happened at a rate that was substantially less than what has been found outside of Alaska. By most standards, the fact that at any given decision point there was less than a one-in-five chance that a case would be screened out of the criminal justice process is an indication that IPV is taken seriously in rural Alaska and that AST and the DOL are willing and able to deal with the cases brought to their attention. Furthermore, this appears to be as true for Alaska Native victims as it is for non-Native victims and it does not seem to be affected by the difficulties of travel to conduct investigations.

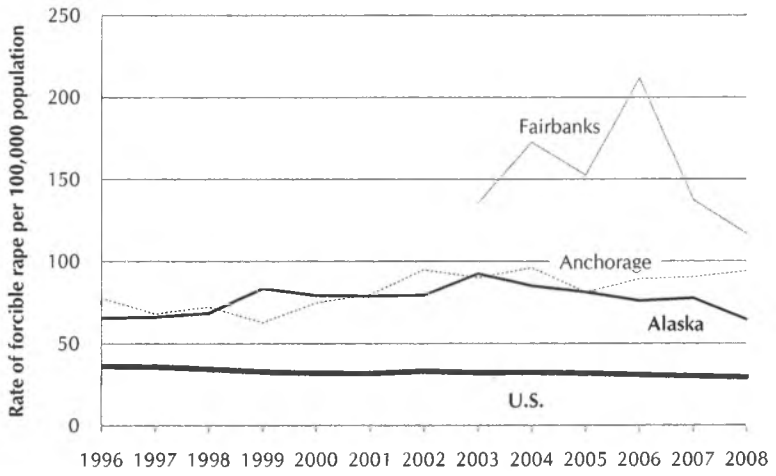
Reducing Violence Against Women in Alaska

Alaska has long been plagued by astonishingly high rates of violence against women. National statistics on forcible rapes reported to law enforcement provide one example. Relative to the average U.S. rate from 2003 to 2008, the average Alaska rate was 2.6 times higher, the average Anchorage rate was 2.9 times higher, and the average Fairbanks rate was 5.0 times higher. Alaska has the highest rate of forcible rape reported to law enforcement out of all U.S states. While changing these trends is a daunting task, several initiatives are currently being considered. In chronological order, they include recommendations from the Alaska Senate Judiciary Committee and initiatives from Governor Sean Parnell.

Figure 1. Rates of Forcible Rape Reported to Law Enforcement in the U.S., Alaska, Anchorage, and Fairbanks, 1996–2008



Source of data: *Uniform Crime Reports, 1996–2008*

Alaska Senate Judiciary Committee Recommendations to Reduce Sexual Assault in Alaska

Four major areas are outlined in the recommendations: (1) getting better data on sexual assault, (2) increasing the number of successful prosecutions, (3) addressing the alcohol and sexual assault nexus, and (4) reducing recidivism by known sex offenders.

A brief summary of the recommendations follows:

- Improve data systems to track sexual assault cases statewide from report to conviction.
- Fund a victimization study to determine the actual rates of both reported and unreported sexual assaults.
- Increase the number of villages with local law enforcement through the Village Public Safety Officer (VPSO) program.
- Consider grant funding for local hospitals to provide qualified Sexual Assault Nurse Examiners (SANEs) and continue to support the cost of existing programs.
- Review ways to increase the State Crime Lab's ability to process DNA evidence in a timely way.
- Continue to support, as a state, programs and policies to reduce alcohol consumption.
- Address alcohol use specifically, and its potential negative impact on personal safety, in education programs about sexual assault awareness and prevention.
- Continue to fund and expand Alaska sex offender management programs.
- Expand Alaska's Internet Crimes Against Children Task Force which locates offenders who are looking for victims using the internet.

Governor Sean Parnell's Initiative to Reduce Domestic Violence and Sexual Assault

Three major areas are outlined in the initiative: (1) putting abusers behind bars, (2) helping victims heal, and (3) preventing abuse.

A brief summary of the recommendations follows:

- Launch a public education campaign encouraging Alaska's men to "Choose Respect."
- Increase law enforcement presence in every community that desires it, with new Village Public Safety Officers (VPSOs) and Alaska State Troopers.
- Fund specialized domestic violence/sexual assault training across multiple disciplines.
- Toughen penalties for sexual assault crimes, and toughen guidelines for prosecutors.
- Strengthen sex offender registry requirements.
- Expand prisoner re-entry programs to reduce recidivism among offenders.
- Increase support for victims of abuse including funding for shelters and the availability of *pro bono* legal services.
- Create a position within the Alaska Department of Law to coordinate state, federal, tribal, and non-profit domestic violence and sexual assault programs.
- Work with youth, community leaders, private sector, and religious organizations to raise awareness and develop prevention strategies.

Visiting Faculty

Dr. Adrienne Freng, Associate Professor in the Department of Criminal Justice at the University of Wyoming, joins the Justice Center as Visiting Faculty for the Spring 2010 semester. Dr. Freng received her Ph.D. in sociology from the University of Nebraska-Lincoln. Her research areas include juvenile justice, gangs, Native American justice issues, and research methods. Dr. Freng's experience includes serving as a counselor in a group home for delinquent boys and as an intern probation officer.

Animal Abuse and Domestic Violence

Concern that acts of animal abuse are connected with or are predictors of domestic violence prompted a number of specific research studies in the 1990s. This early work focused on describing interviews with women in battered women's shelters and highlighted the frequency with which women reported abuse of pets by their partners. The interviews documented a high rate of pet abuse and appeared to indicate that animal abuse in the home and concern for pets affected *if* and *when* a woman sought assistance at a shelter—particularly because shelters did not normally accept pets.

As more attention was given to animal abuse and its impact in the context of domestic violence assaults, additional studies were undertaken. Frank Ascione discussed the limitations of some of these past studies in his article, "Emerging Research on Animal Abuse as a Risk Factor for Intimate Partner Violence" in the Civic Research Institute's 2007 publication, *Intimate Partner Violence*. He noted that although twelve different studies found (1) a high rate of pet ownership by domestic violence victims in shelters, (2) a substantial rate of children's exposure to pet abuse, and (3) clear indications that domestic violence victims' concern for pets affected their decision to stay in or leave a relationship with a batterer, more research is needed that includes women in domestic violence situations who have not chosen to go to a shelter, in addition to women in shelters. In response to the concern expressed by battered women for their pets, many areas developed "safe haven" programs for free fostering of pets of victims of domestic violence. Anchorage is currently the only area in Alaska with a "safe haven" program. It is administered by Friends of Pets, a local nonprofit animal welfare group, in collaboration with the Abused Women's Aid in Crisis (AWAIC) shelter. Another local nonprofit, the Eva Foundation Pet's Program, provides post-shelter transition services to domestic violence victims and their pets.

In addition, since 2006 ten states have enacted domestic violence protective orders covering pets: California, Colorado, Connecticut, Illinois, Louisiana, Maine, Nevada, New York, Tennessee, and Vermont.

Research involving a larger sample population of women was reported by Ascione, et al. in 2007 in *Violence Against Women*, "Battered Pets and Domestic Violence: Animal Abuse Reported by Women Experiencing Intimate Partner Violence and Nonabused Women." The findings of this study agreed with earlier research about the high rate of pet abuse reported by victims of intimate partner violence (IPV). Responses showed that women in domestic violence shelters were nearly 11 times more likely to report that their partner had engaged in pet abuse than women who said they had not experienced intimate partner violence. This study again stressed the need for further research on co-occurring pet abuse and IPV with larger and more diverse populations, i.e., urban, suburban, and rural victims of intimate partner violence, as well as non-victims of IPV.

Catherine Simmons and Peter Lehman addressed some of these issues in a 2007 *Journal of Interpersonal Violence* article, "Exploring the Link Between Pet Abuse and Controlling Behaviors in Violent Relationships." In their study of 1,283 women who owned pets and were sheltered at an urban domestic violence center in Texas between 1998 and 2002, they concluded that "[m]en who abuse the family pet appear to be more dangerous than men who do not." The authors did not find that pet abuse was always a form of controlling behavior in incidents of domestic violence assault. However, they did conclude:

> Despite the limitations of this study, it is clear that animal cruelty is an important factor for domestic violence workers to address in assessment and treatment of both victim and perpetrator populations. Batterers who also abuse their pets are both more controlling and use more dangerous forms of violence than batterers who do not. Therefore, addressing whether pet abuse has occurred in the home can help workers in the domestic violence field better understand the behavior of the batterer and the overall risk they present to their partner.

Animal abuse is one factor in the complex dynamic of intimate partner violence, and can be used by law enforcement and domestic violence advocates in assessing risk. In 2008, the Anchorage Police Department (APD) began a program to target animal abuse and to look at its connection to domestic violence. Detective Jackie Conn was assigned as the liaison to the Anchorage Animal Care and Control Center and received training from the Law Enforcement Training Institute National Cruelty Investigations School and from the First Strike program developed by the Humane Society of the United States to raise awareness about the connection between animal cruelty and other violent crime. Detective Conn now trains APD personnel in recognizing animal abuse, and relating it to the possible presence of other types of abuse in the home. She works closely with Alaska Department of Law Assistant District Attorney Joan Wilson who is regularly assigned the prosecution of animal abuse

cases. For the period 2002–2009, 121 misdemeanor animal cruelty cases under Alaska Statute 11.61.140 and 11.61.145 were referred and 94 prosecuted. During the same period, one felony case was referred and prosecuted. Case statistics are also being compiled to better understand the relationship between domestic violence and animal abuse.

Leading Causes of Death

A look at recent data on leading causes of death in Alaska and the U.S. shows that malignant neoplasms (cancer) and heart disease rank as the top two causes. Although intentional self-harm (suicide) and assault (homicide) do not rank in the U.S. top ten leading causes of death, they have ranked as leading causes of death in Alaska for many years. A comparison of rankings of suicide and homicide as causes of death for specific age groups in Alaska and the U.S. reveals some similarities in trends.

In 2008 in Alaska, suicide was ranked number 6 among the top ten causes of death for the entire population. Suicide has been ranked number 5 or 6 consistently for the past decade. Homicide has been reported as the number 8 cause of death in 1999, number 10 in 2001, and number 10 again in 2007. The rankings for the leading causes of death by specific age group in Alaska show that suicide and homicide are in the top five for each age group up to the age of 44. In Alaska, and the nation as a whole, people aged 15–34 are more likely to die in an accident, at the hands of another, or by suicide, than by cancer or heart disease. For the period 2005–2007, suicide and homicide were the second and third leading causes of death for both 15–24 and 25–34 year olds. Suicide was the second leading cause of death for 35–44 year olds, and homicide was fifth. Among 45–54 year olds, suicide was the fourth leading cause of death.

Nationally, suicide and homicide are not among the ten leading causes of death according to the most current final data available: 2006. However, suicide ranked number 11 in causes of death for the overall population for 2006; homicide ranked 15.

In the U.S. in 2006, homicide and suicide were the second and third leading causes of death, respectively, for 15–24 year olds, while for 25–34 year olds, suicide ranked second and homicide third. Suicide was the fourth leading cause of death for 35–44 year olds, and the fifth leading cause for 45–54 year olds. These rankings mirror those of Alaska for those aged 15–44, where both suicide and assault were in the top five leading causes of death. Suicide was one of the top five causes of death for 45–54 year olds.

This high ranking of suicide as a cause of death for 15–44 year olds is also seen globally. According to the World Health Organization, suicide is among the top three leading causes of death in 15-44 year olds. For the worldwide population, the top two leading causes of death are coronary heart disease, and stroke and other cerebrovascular diseases.

The leading causes of death for the overall population continue to be related to diseases of the body; however, the growing rate of suicide among young people and the suicide rate among other age groups, as well as the rate of homicide, are the focus of national and international study and prevention programs.

Table 1. Five Leading Causes of Death by Age Group, U.S. (2006) and Alaska (2005–2007)

	U.S. (2006)		Alaska (2005–2007)

Abstract: *This study examined 1,281 cases with an assault charge involving domestic violence reported to Alaska State Troopers in 2004, and excluded any cases reported to local or municipal departments.*

- *Eighty-two percent of reports were handled by three detachment areas: 32% in C – Western Alaska, 29% in D – Interior Alaska, and 22% in B – Southcentral Alaska. Troopers received 80% of the reports, while 20% were received by Village Police Officers, Village Public Safety Officers, or Tribal Police Officers. Eighty-one percent of the assault charges were in the fourth degree. Eighty-four percent of assaults were reported within 24 hours, and 89% of victims and 81% of suspects were interviewed on the day of the report.*
- *Seventy-six percent of suspects were male and 24% were female. On average, suspects were 33 years old and victims were 32 years old. The majority of assaults in domestic violence incidents (86%) were intra-racial. Fifty-seven percent of suspects and 32% of victims used alcohol. Overall, alcohol was involved in 59% of domestic violence incidents reported to Troopers.*
- *Most assaults in domestic violence incidents (75%) occurred between victims and suspects who were staying or living together. The most common forms of violence (disclosed by victims and documented by officers) included pushing, grabbing, or shoving the victim (in 48% of incidents), punching the victim (in 29%), and slapping or hitting the victim (in 28%). Weapons such as knives or guns were rarely used. The most common injuries included bruising (for 38% of victims), lacerations or bite marks (for 27%), bloody nose or lips (for 10%), and black or swollen eyes (for 10%). Forty-three percent of incidents occurred in the presence of children.*
- *Eighty percent of cases were referred to the Alaska Department of Law for prosecution, 68% were accepted for prosecution, and 54% resulted in a conviction. Overall conviction rates were slightly lower for female suspects, but conviction rates were generally not affected by victim gender or victim-suspect relationship.*

Researchers, criminal justice system professionals, victim advocates, and policymakers agree that domestic violence is an undeniable urban and rural problem in Alaska and the nation. Detailed data on domestic violence incidents in the state are sparse, except for ongoing data collection by the Municipality of Anchorage. Now, a recent joint study by the Justice Center, the Alaska State Troopers, and the Alaska Department of Law looks for the first time at reports of assaults in domestic violence incidents made to Troopers for populations outside of Anchorage. Focusing on reports made in 2004 from communities served primarily by the Troopers, the study reviews a final sample of 1,281 cases with an assault charge involving domestic violence. Only reports to the Troopers were included in this study; reports to local or municipal police were not reviewed.

Some preliminary findings mirror national and Anchorage statistics: the majority of domestic violence assault incidents occur between victims and suspects of the same race, and the victim's home is the most common location of the domestic violence incident. On the other hand, both Anchorage data and the data from this study show a much higher use of alcohol by suspects and victims in Alaska than is reported nationally.

Report Characteristics

The majority of reports to Troopers (82%) were handled by three detachment areas: C—Western Alaska (32%), D—Interior Alaska (29%), and B—Southcentral Alaska (22%) (Table 1). While fifty-eight units received at least one report in 2004, over 90 percent of reports came from roughly 18 units or geographic areas (Table 2). Fairbanks Alaska State Trooper (AST) Enforcement and Investigation Units received the highest number of reports (23%) with Palmer AST Enforcement and Investigation Units and Soldotna AST Enforcement and Investigation Units having the second and third highest percentage of reports (19% and 9% respectively). Units in Nome received seven percent of reports while units in Bethel, Aniak, Kotzebue, and Kodiak each received four or five percent of all reports.

Troopers received 80 percent of reports while the remaining 20 percent were received by Village Police Officers, Village Public Safety Officers, or Tribal Police Officers. Reports of assaults in domestic violence incidents were most likely to come from victims (57%), though third parties, including family members, friends, officials, strangers and others, initiated 43 percent of reports.

The 1,281 cases in this study included a total of 1,803 assault charges and 604 other

charges. The most common assault charges (81%) were for fourth degree assaults and fewer charges were leveled for third through first degree felony assaults. Thirty-one percent of cases involved other charges. The most common other charges included interfering with a report of a crime involving domestic violence, criminal mischief, reckless endangerment, misconduct involving a weapon, DUI/reckless driving, resisting arrest, misconduct involving a controlled substance, and criminal trespass.

The time interval between the incident, the report to Troopers, and the Troopers' response was short, even with transportation and distance issues. The majority of reports (84%) were made the day of the domestic violence assault incident and 97 percent of reports were made within one week.

Suspect and Victim Characteristics

From the 1,281 cases included in this study, we gathered information on 1,356 suspects and 1,523 victims, though information was not always available for every suspect or every victim. Over three-quarters of the suspects were male while only 24 percent were female. Victim ages ranged from under one year to eighty-four years old. Most victims were in the following age groups: 21–30 years (26%), 31–40 years (22%), and 41–50 years (19%). Suspect ages ranged from 10 years old to eighty-eight years old. The majority of suspects were adults (94%). Starting with the group of suspects 21 or older, the number of suspects in each age group decreased as age increased. More specifically, 21–30 year olds made up 31 percent of suspects, 31–40 year olds made up 28 percent of suspects, 41–50 year olds made up 19 percent of suspects, and suspects 51 years or older made up 7 percent of suspects. Most suspects were White (50%) or Native (47%) and most victims were also White (51%) or Native (47%) (Table 3).

The average age of suspects (33) was quite similar to the average age of victims (32). Thirty-nine percent of assaults in domestic violence incidents took place between suspects and victims in the same age group while 61 percent took place between suspects and victims in different age groups. The age groups most commonly shared by suspects and victims involved in assaults in domestic violence incidents included 21 to 30 year olds (38%), 31 to 40 year olds (27%) and 41 to 50 year olds (19%).

In contrast to the age groups of suspects and victims, the majority of assaults in domestic violence incidents (86%) were intraracial (occurring between suspects and victims of the same race). Of all intraracial assaults in domestic violence, 51 percent occurred between White suspects and White victims and 48 percent occurred between Native suspects and Native victims.

We examined alcohol and substance use among victims. Over a third of female victims (35%) and 27 percent of male victims used alcohol prior to the assault in domestic violence incident, but only two percent of female victims and less than one percent of male victims used illicit drugs (Table 4). We also examined alcohol and substance use among suspects. Fifty-eight percent of male suspects and 54 percent of female suspects used alcohol prior to the assault. Only three percent of male suspects and two percent of female suspects used an illicit drug prior to the assault. Overall, alcohol was involved in 59 percent of domestic violence incidents reported to Troopers. Nationally, for the period 2001–2005, 42 percent of victims reported the presence of alcohol or drugs during a domestic violence incident, while in Anchorage for the period 1989–2002 there was documented involvement of alcohol in 49 percent of the reported cases.

Many of the suspects (79%) remained at the location of the assault. Specifically, 76 percent of male suspects and 86 percent

Source of data: *Alaska State Troopers (2004)*

of female suspects were still at the scene of the assault when Troopers arrived. Troopers were able to interview 76 percent of male suspects and 89 percent of female suspects.

Eighty-one percent of suspects were interviewed on the day of report. Ninety-six percent of all suspect interviews occurred within one week of the report. Troopers interviewed 95 percent of the victims, with 89 percent being interviewed on the day of the report, and 98 percent of the interviews being completed within one week.

The total number of charges per suspect (including both assault and other charges), the number of assault charges, and the number of other charges are summarized in Table 5. On average, each suspect received a total of 1.78 charges, including an average of 1.33 assault charges and 0.45 other charges. Of the 1,356 suspects, 200 (15%) had multiple assault charges and 401 (29%) had at least one other charge. As a result, 580 (43%) of the suspects therefore had a total number of charges greater than one. Overall, the 1,356 suspects generated a total of 2,407 charges, including 1,803 assault charges and 604 other charges.

Violated conditions of release	1,320	97.9	28	2.1	**1,348**
Violated conditions of probation	1,280	95.6	59	4.4	**1,339**

Source of data: *Alaska State Troopers (2004)*

Despite the number and types of offenses suspects were charged with as a result of the assaults in domestic violence incidents, few suspects (just over 1%) had an existing domestic violence protection order filed against them by the victim at the time of the offense (Table 6). Likewise, few suspects were violating conditions of release or probation. Specifically, two percent of suspects were documented as violating a condition of release with their current charges. Another four percent of suspects violated documented conditions of their probation with the current charges. It is important to note that the percentage of suspects violating conditions of release may be greater than those reported here, because these conditions are not always documented in APSIN (Alaska Public Safety Information Network) and are not readily available to Troopers, or for our analysis.

Incident Characteristics

The presence of children during a domestic violence incident continues to be a serious concern. In this study, the victim's or suspect's children under the age of 18 were witnesses to 43 percent of the incidents (Table 7). In Anchorage during 1999–2002, 42 percent of domestic violence incidents occurred with children under the age of 18 present. Nationwide, in 43 percent of the incidents with female victims during 2001–2005, children under the age of 12 were residing in the household where the incident took place. Studies discussed by John L. Worrall in *Crime Control in America: An Assessment of the Evidence* highlight concern regarding children who are present during domestic violence. Exposure to such violence is associated with both child abuse and later delinquency.

Most assaults in domestic violence incidents (75%) occurred between victims and suspects who were staying or living together at the time of the incident. For the remaining quarter of incidents that occurred between suspects and victims who did not stay or live together, 34 percent occurred between victims and suspects who met in a

Table 7. Presence of Children During Assault

Victim and/or suspect's child present	N	%

Total	**1,147**	

Source of data: *Alaska State Troopers (2004)*

public place, and 32 percent resulted from invitation by the suspect or victim. In 25 percent of incidents (where suspects and victims were not living together) the suspect was uninvited or forced entry, and in nine percent of these incidents the suspect entered through an open window or unlocked door.

The use of a traditional weapon such as a knife or a gun was extremely rare; each weapon was used in fewer than four percent of assaults in domestic violence incidents. While still fairly infrequent, suspects were more likely to throw something at the victim (9% of incidents) or hit the victim with an object (10%) rather than use a traditional weapon. Nationwide in 2001–2005, 19 percent of domestic violence incidents with a female victim reported a traditional weapon present, while 31 percent of incidents with a male victim reported a weapon.

We also gathered information about the presence of nine specific violent acts and seven types of threats in the assaults in domestic violence incidents. Only forms of violence that were documented as a result of victim disclosure or officer inquiry, rather than all forms of violence that occurred, were included for analysis. The three most common forms of violence disclosed by victims or documented as a result of officer inquiry included pushing, grabbing or shoving the victim (48%), punching the victim (29%), and slapping or hitting the victim (28%). Documented sexual assault of the victim occurred in only one percent of the cases.

Documented injuries to victims and emergency medical treatment data were also collected and analyzed. The percentage of victims who sustained the most common types of documented injuries included the following: bruising (38%), lacerations or bite marks (27%), bloody nose or lips (10%) and black or swollen eyes (10%). Overall, few victims (12%) received any type of emergency medical treatment for their injuries.

Legal Resolutions

Mandatory arrest in domestic violence cases has been in effect in Alaska since 1996. This law places additional requirements on law enforcement when investigating a domestic violence report and provides criteria for assessing whom to arrest if there are cross complaints "arising from the same incident." (See "Mandatory Arrest in Domestic Violence Cases" accompanying this article.)

Most of the cases (96%) were closed and referred for prosecution including cases that were closed by arrest (79%), and those closed and referred (13%). The remaining cases were closed after investigation (2%) or closed as unfounded (2%) in cases where a suspect was not arrested. On average, it took 6.30 weeks to close a case after it was reported, and 87 percent of cases were closed within 90 days.

An important component of this study involved tracking assaults in domestic

Mandatory Arrest in Domestic Violence Cases

Alaska's mandatory arrest statute was passed as part of the Domestic Violence Prevention and Victim Protection Act of 1996 with the support of prosecutors, law enforcement, and advocates for domestic violence victims in the state. Alaska Statute 18.65.530, "Mandatory arrest for crimes involving domestic violence, violation of protective orders, and violation of conditions of release," sets out conditions for arrest and minimum sentencing requirements. A law enforcement officer is required to make an arrest with or without a warrant:

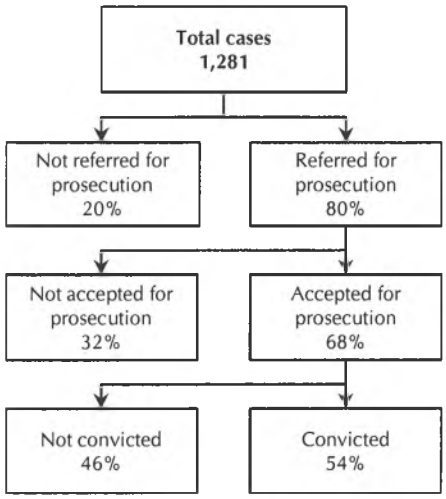
> if the officer has probable cause to believe the person has, either in or outside the presence of the officer, within the previous 12 hours, (1) committed domestic violence, except an offense under AS 11.41.100-11.41.130, whether the crime is a felony or misdemeanor; (2) committed the crime of violating a protective order in violation of AS 11.56.740; (3) violated a condition of release imposed under AS 12.30.025, 12.30.027, 12.30.029....

The statute provides criteria for an officer to use when determining who is the "principal physical aggressor." A "principal physical aggressor" evaluation must be made in domestic violence cases if there are cross complaints "arising from the same incident." In rare circumstances, an officer may determine that no arrest should be made. An "authorization not to arrest" must first be granted by a prosecutor from "the jurisidiction in which the offense under investigation arose," and the officer must later report in writing why an arrest was not made. A prosecuting attorney is on call and available by phone to law enforcement in all parts of the state to provide an officer with an authorization, if needed.

Under Alaska law, there is a 20-day minimum sentence if the defendant is in violation of a domestic violence protection order, a 30-day minimum sentence if the defendant has a prior conviction for assault or domestic violence assault, and a 60-day minimum sentence if the defendant "has been previously convicted two or more times of a crime against a person or a crime involving domestic violence, or a combination of those crimes." Aggravating factors that can increase the length of the normal minimum sentence required by the statute include the presence of a child under the age of 16 during a felony crime involving domestic violence, as well as a domestic violence offense committed at a shelter or facility providing services to domestic violence and sexual assault victims. In addition, recent legislative changes have upgraded certain misdemeanor assaults to a Class C felony and have added a new provision to the animal cruelty statute dealing with "intent to intimidate, threaten or terrorize another person." Some domestic violence convictions also carry federal legal consequences. Under federal law it is "unlawful to sell or dispose of a firearm" to a person convicted of a qualifying domestic violence misdemeanor.

The terms "domestic violence and "crime involving domestic violence" have a broad meaning under AS 18.66.990(3) & (5). "Acts of domestic violence" as defined under the statute go beyond physical assault; acts of domestic violence also include burglary, criminal trespass, arson or criminally negligent burning, criminal mischief, terrorist threatening, violating a protective order, and harassment. In addition, the statute defines domestic violence as an offense committed "by [one] household member against another household member." The definition of household member encompasses more than persons living in the same residence. It includes many people who do not live together: "adults or minors who are current or former spouses, adults or minors...who have lived together, adults or minors who are dating or have dated, adults or minors who are engaged in or who have engaged in a sexual relationship, adults or minors who are related to each other up to the fourth degree of consanguinity..., adults or minors who are related or formerly related by marriage, persons who have a child of [their] relationship, and minor children in a relationship that is described [in the statute]."

Figure 1. Processing of Domestic Violence Cases Reported to Alaska State Troopers, 2004



violence incidents from reports to Troopers through case resolution by the Department of Law. Because we only examined referrals to the Department of Law (and excluded, for example, referrals to the Division of Juvenile Justice), the following statistics are not directly comparable to the ones reported in the previous paragraph.

When examining case processing with Department of Law data, we find that after Troopers close a case, the next decision is whether to refer the case for prosecution. Results show that 80 percent of the 1,281 cases reported to Troopers were referred for prosecution, 68 percent were accepted for prosecution, and 54 percent resulted in a conviction (Figure 1). Once cases were referred for prosecution, they had a high likelihood of being accepted for prosecution. Specifically, 84 percent of referred cases (N=1,030) were accepted for prosecution, and 67 percent resulted in a conviction (Table 8). Cases accepted for prosecution (N=869) had an 80 percent conviction rate.

In addition to examining case resolution rates for all assaults in domestic violence incidents reported to Troopers, we reviewed case resolution rates separately for male and female suspects comparing cases that had at least one male suspect to cases that had at least one female suspect. In our sample of 1,281 cases, 974 cases included at least one male suspect and 259 included at least one female suspect. Cases with at least one female suspect were slightly less likely to be referred for prosecution, to be accepted for prosecution, and to result in a conviction than cases with at least one male suspect. Of the 259 reported cases with at least one female suspect, 75 percent were referred for prosecution (versus 82% with a male suspect), 56 percent were accepted for prosecution (versus 73% with a male suspect), and 44 percent resulted in a conviction (versus 58% with a male suspect) (Figure 2).

Once referred for prosecution, 89 percent of cases with at least one male suspect (N=707) and 76 percent of cases with at least one female suspect (N=146) were accepted for prosecution. Once accepted for prosecution, the likelihood of cases resulting in a conviction did not vary greatly by suspect gender. Upon acceptance for prosecution, 80 percent of cases with at least one male suspect (N=568) and 78 percent of cases with at least one female suspect (N=114) resulted in a conviction (Table 9).

In addition to examining case resolution rates separately for male and female suspects, we examined case resolution rates separately for male and female victims. In our sample of 1,281 cases, 352 cases included at least one male victim and 925 included at least one female victim. Cases with at least one female victim were as likely to be referred for prosecution, as likely to be accepted for prosecution, and as likely to result in a conviction as cases with at least one male victim. Of the 925 reported cases with at least one female victim, 80 percent were referred for prosecution (versus 81% with a male victim), 59 percent were accepted for prosecution (versus 65% with a male victim), and 54 percent resulted in a conviction for both female and male victims (Figure 3 and Table 10). Although cases involving male suspects had higher case processing and conviction rates, case processing rates were quite similar for victims of both genders. No discernable pattern was found in case processing rates for domestic violence victims based on their gender.

Another variable examined in relation to case processing of assaults in domestic violence incidents was the relationship between the victim and the suspect. We examined the relationship between the victim and suspect separately for male and female victims. Most of the assaults in domestic violence incidents occurred between intimate partners. The most likely relationship identified was current or former intimate partner as seen in 67 percent of assaults in domestic violence incidents with female victims and 38 percent with male victims. The next most likely relationship was parents or children comprising 16 percent of the assaults in domestic violence incidents with female victims and 25 percent with male victims. Another 12 percent of assaults in domestic violence incidents with female victims and 22 percent with male victims took place between other

family members (including siblings and extended family). Six percent of assaults in domestic violence incidents with female victims and 13 percent with male victims took place between roommates. Overall, most assaults occurred between intimate partners, and this was particularly true for female victims.

An examination of case processing for the different relationship types revealed some differences in the earlier stages of case processing. Regarding referral rates for assaults in domestic violence incidents, 88 percent of cases involving roommates, 86 percent of cases involving intimate partners, 72 percent of cases involving other family members, and 63 percent of cases involving parents or children were referred for prosecution (Table 11). Cases involving victims and suspects who were roommates or intimate partners were more likely to be referred for prosecution than cases involving other family members or parents and children. Of all referred cases, 87 percent of cases involving intimate partners, 82 percent of cases involving parents or children, 81 percent of cases involving other family members, and 74 percent of cases involving roommates were accepted for prosecution. Referred cases involving intimate partners were most likely to be accepted for prosecution, and cases involving roommates were least likely to be accepted for prosecution. Although some differences were found in referral and acceptance rates for different relationship types in assaults in domestic violence incidents, conviction rates for accepted cases were remarkably similar. Eighty-one percent of cases involving intimate partners, 81 percent of cases involving other family members, 80 percent of cases involving parents or children, and 77 percent of cases involving roommates resulted in a conviction, once accepted for prosecution. Despite differences in referral and acceptance rates for assaults in domestic violence incidents involving various relationships between victims and suspects, conviction rates for accepted cases were similar across the different relationship types.

In another examination of assaults in domestic violence incidents, we assessed the combined influence of gender and relationship on case processing. In this examination, cases were classified as intimate partner violence or non-intimate partner violence incidents. Incidents of intimate partner violence were defined as taking place between intimate partners and involving a male suspect and a female victim. Non-intimate partner violence incidents included all other combinations of suspect and victim gender and the various relationship types. (Few cases—1.5%—involved same-sex intimate partner violence. The characteristics of these cases will be included in a future study.) Results showed higher case processing rates for intimate partner violence incidents in the earlier stages of case processing. Specifically, 85 percent of intimate partner violence incidents and 75 percent of non-intimate partner violence incidents were referred for prosecution (Table 12). Once referred, 90 percent of intimate partner violence incidents and 79 percent of non-intimate partner violence incidents were accepted for prosecution. Again, no discernable differences were found in conviction rates for intimate partner and non-intimate partner violence incidents once they were accepted for prosecution. Eighty-one percent of accepted cases involving intimate partner violence incidents resulted in a conviction, and 79 percent of accepted non-intimate partner violence incidents resulted in a conviction. Conviction rates based on the total number of reports to Troopers of intimate partner violence incidents were

Source of data: *Alaska SANE data and Alaska Department of Law*

higher (62%) than for all reported cases to Troopers of non-intimate partner violence incidents (47%).

A more detailed examination of legal resolutions explored differences in case processing rates for male and female victims in various relationships with suspects. Just as cases with male suspects tended to have higher case processing rates at each stage of prosecution, male victims tended to experience higher case processing rates across different relationship types. One exception to this trend was higher rates of acceptance for referred cases involving intimate partners with female victims (76%) relative to male victims (67%). Similarly, cases involving intimate partners with female victims had higher conviction rates (61% of accepted cases) than cases with male victims (53% of accepted cases) (Table 13). In sum, cases of assaults in domestic violence incidents investigated by Troopers had relatively high referral, acceptance and conviction rates overall, despite variation in rates by gender of the suspects and victims and relationships between them.

The findings presented in this article provide an initial description of case processing and conviction rates for assaults in domestic violence incidents in smaller communities across the state of Alaska. The full report containing more detailed descriptive analyses is published on the Justice Center website. Future studies may focus on comparisons of the data from the Anchorage analysis, this study, and nationwide reports. An important area to examine in more depth is factors affecting legal resolutions. More complex analyses involving multiple predictor variables are required to understand the many influential factors in case processing and conviction of assaults in domestic violence incidents. A growing body of data about domestic violence incidents will enable policymakers to focus on improving ways to deal with this critical issue.

Research Overview

January 2011 No. 11

Stalking Victimization: Comparisons between Alaska and U.S. Data

This research overview presents information on stalking victimization in the United States. Alaska-specific data include Alaska State Trooper cases from 1994–2005 as published in the *Alaska Justice Forum* in 2007. Nationwide data are from the U.S. Bureau of Justice Statistics (BJS) 2009 "Special Report on National Crime Victimization Survey (NCVS), Stalking Victimization in the United States"; the survey was conducted in 2006. It is important to note that Alaska does not yet have stalking victimization estimates. This research overview looks at data that are currently available for Alaska and notes contrasts and similarities with nationwide data. Only adult cases were considered for this purpose.

It is also important to emphasize that Alaska data are only from stalking victimizations that were reported to law enforcement. By comparison, the national NCVS data are from all stalking victimizations, those reported to law enforcement and those not reported to law enforcement. Finally, it is important to emphasize that the Alaska data are only from stalking victimizations reported to Alaska State Troopers (the data do not include victimizations reported to municipal or other law enforcement agencies in Alaska).

Gender of Victim and Offender

- Alaska data show that 89% of stalking victims were female and 11% were male while 88% of offenders were male and 9% were female. In comparison, NCVS data show that nationally 74% of stalking victims were female and 26% male (Table 1).

Table 1. Gender of Victims and Offenders

Column percentages

	Victims		Offenders	
	Alaska	U.S.	Alaska	U.S.
Male	10.6 %	26.0 %	88.0 %	60.2 %
Female	89.4	74.0	9.3	28.4
Don't know	—	—	2.8	11.3

Note: Percentages exceed 100% due to rounding errors.

- In Alaska, nearly 90% of female stalking victims and 74% of male stalking victims were victimized by male offenders. According to the NCVS, nationally, 67% of female victims and 41% of male victims were victimized by male offenders (Table 2).

Table 2. Gender of Stalking Offender, by Victim Gender

Column percentages except where noted.

	Victim gender					
	Alaska			U.S.		
Offender gender	Male	Female	**All offenders**	Male	Female	**All offenders**
Male	73.9 %	89.6 %	**88.0 %**	41.3 %	66.9 %	**60.3 %**
Female	26.1	7.3	**9.3**	42.5	23.5	**28.4**
Don't know	0.0	3.1	**2.8**	16.1	9.6	**11.3**
All victims	**10.7 %** (row percentages)	**89.4 %**		**25.96 %** (row percentages)	**74.02 %**	

Note: Percentages may not total to 100% due to rounding.

Age of Victim and Offender

- In Alaska, the most common age group for both stalking victims (39%) and offenders (34%) was 30–39 years. NCVS data show that nationally, the most common age group for stalking victims (28%) was 21–29 years while the most common age of offenders (22%) was 30–39 year-olds (Table 3).

Table 3. Ages of Victims and Offenders

Column percentages.

	Victims		Offenders	
	Alaska	U.S.	Alaska	U.S.
18-20	9.4 %	9.3 %	4.4 %	7.3 %
21-29	20.4	27.7	20.4	21.7
30-39	39.2	22.2	33.7	22.3
40-49	23.8	21.2	30.4	18.7
50 and older	7.2	19.5	11.0	15.7
Unknown	0.0	0.0	0.0	14.3

- NCVS data show that stalking victims are most likely to be victimized by an offender in their own age group (Table 4).
- Victims in Alaska, similarly to victims nationwide, are most likely to be victimized by offenders in the same age group. However, in Alaska, victims aged 50 years and older are most likely to be victimized by an offender in the 30–39 year-old age group (Table 4).

Table 4. Age of Stalking Offender, by Victim Age

			(row percentages)			

Race of Victim and Offender

- Overall, nearly 86% of all Alaska victims were White and 13% were Alaska Native/American Indian. NCVS data show that nationally 84% of stalking victims were White (Table 5).
- Offenders in the Alaska cases were most likely to be White (79%) or Alaska Native (20%). Nationally, offenders were most likely to be White (73%) or Black (12%) in stalking cases (Table 5).

Table 5. Race of Victims and Offenders

Column percentages

	Victims		Offenders	
	Alaska	U.S.	Alaska	U.S.
White	86.0 %	84.1 %	78.7 %	73.3 %
Black	1.0	10.7	1.0	12.2
Alaska Native/American Indian	12.6	—	20.3	—
Some other race	0.5	5.2	—	9.2
Unknown	—	—	—	5.2

Note: Due to rounding errors, percentages may not total 100.

— Alaska data identified Alaska Native as an individual cateogory. NCVS data includes "Alaska Native/American Indian" data with "Some other race."

- Alaska stalking victims are more commonly stalked by offenders of the same race. NCVS data show that, like in Alaska, Whites are more likely to be victimized by White offenders and Blacks are more likely to be victimized by Black offenders (Table 6).
- NCVS data show that victims of other races were most commonly victimized by White (45%) offenders (Table 6).

Table 6. Race of Stalking Offender, by Victim Race

Column percentages except where noted.

	Victim race								
	Alaska					U.S.			
Offender race	White	Black	Native	Other	All offenders	White	Black	Other	All offenders

		(row percentages)					(row percentages)		

Note: Percentages may not total to 100% due to rounding.

— Alaska data identified Alaska Native as an individual cateogory. NCVS data includes "Alaska Native/American Indian" data with "Some other race."

Victim-Offender Relationship

- Alaska stalking victims most commonly were victimized by ex-boy/girlfriends (30%), acquaintances (29%), and current spouses (16%). NCVS data show that nationally most stalking victimization was committed by an acquaintance (20%), friend (16%), or ex-boy/girlfriend (13%) (Table 7).
- In Alaska, 8% of stalking victims had unknown relationships with the offender. Nationwide, 10% of victims had unknown relationships with their offenders.

Stalking Behaviors

- Alaska stalking victims were most likely to be stalked by offenders showing up at places and/or waiting for the victim (64%), receiving unwanted phone calls and text messsages (51%), and/or by being followed or spied upon (Table 8).
- NCVS data show that the most common types of stalking behaviors were unwanted phone calls and text messages (66%), spreading rumors (36%), and following or spying upon victims (34%) (Table 8).

Table 7. Relationship Between Victims and Offenders

	Alaska	U.S.
Stranger	7.5 %	9.7 %
Current spouse	15.5	5.6
Ex-spouse	6.5	8.4
Current boy/girlfriend	2.5	3.2
Ex-boy/girlfriend	29.5	13.1
Other family	3.5	9.0
Friend	6.5	16.4
Acquaintance	28.5	19.7

Note: Fifteen percent of NCVS data represent unknown relationships between the victim and offender.

Table 8. Nature of Stalking Behaviors Experienced by Victims

	Alaska	U.S.
Unwanted phone calls and text messages	50.5 %	66.2 %
Unwanted letters and email	16.7	30.6
Spreading rumors	2.7	35.7
Following or spying	39.6	34.3
Showing up at places	64.0	31.1
Waiting for victim	64.0	29.0
Leaving unwanted presents	9.9	12.2

Note: "Showing up at places" and "Waiting for victim" were combined for Alaska due to data detail limitations. Percentages may total more than 100% because multiple behaviors may have been reported.

Stalking in Alaska

André B. Rosay, Greg Postle, Katherine TePas, and Darryl Wood

Originally published in the *Alaska Justice Forum* 24(1): 1, 7–12 (Spring 2007).

For other articles and publications related to stalking and violence against women, see:
http://justice.uaa.alaska.edu/vaw/

Abstract: *This study examined 267 cases with a stalking charge reported to Alaska State Troopers from 1994 to 2005, and excluded any cases reported to local or municipal departments. We also examined the legal resolutions for cases that were reported from1999-2004.*

- *Over 50% of reports occurred in B detachment (Southcentral Alaska) and D detachment (Interior Alaska). Three units (Fairbanks AST Enforcement, Palmer AST Enforcement, and Soldotna AST Enforcement) handled 49% of reports. Thirty-five percent of the charges were for stalking in the first degree and 65% were for stalking in the second degree.*
- *Most suspects (91%) were male and most victims (89%) were female. Most suspects (78%) were White and most victims (86%) were also White. On average, suspects were 36 years old while victims were 33 years old. Twenty percent of suspects had used alcohol, but only 2% of victims had used alcohol. Fifty-four percent of suspects were, or had been, in a romantic relationship with the victim. An additional 35% of suspects were friends or acquaintances of the victim.*
- *The most common forms of stalking included standing outside or visiting the victim's home (in 54% of charges), making unsolicited phone calls to victims (in 51% of charges), following the victim (in 39% of charges), threatening to physically assault the victim (in 36% of charges), harassing the victim's family and friends (in 28% of charges), trying to communicate with the victim in other ways (in 27% of charges), standing outside or visiting the victim's work (in 20% of charges), physically assaulting the victim (in 19% of charges), sending the victim unsolicited mail (in 15% of charges), and vandalizing the victim's home (in 13% of charges). Forty-five percent of behaviors occurred primarily at the victim's home, while 27% occurred primarily in cyberspace.*
- *Seventy-five percent of the cases reported between 1999-2004 were referred for prosecution, 55% were accepted for prosecution, and 40% resulted in a conviction on at least one charge. Cases with suspects who violated protective orders were 20% more likely to be referred for prosecution, were 19% more likely to be accepted, and were 41% more likely to result in a conviction.*

Although the available data are limited, a recent Justice Center examination of Alaska State Trooper case files has revealed that the crime of stalking is probably greatly underreported by victims as well as underrecognized by law enforcement and hence not charged often enough in Alaska. A charge of stalking can be applied in a wide range of situations, and its parameters as a crime can be somewhat ambiguous for both victims and law enforcement. The available data show that a stalking charge is often made in conjunction with other charges, particularly when there has been a prior relationship—which is often the case, with stranger stalking fairly rare.

Stalking, by its nature and its legal definition, induces fear. Statistics from the National Violence Against Women Survey showed that even after the stalking ended, 68 percent of victims thought their personal safety had gotten worse, 42 percent were very concerned about their personal safety, 30 percent were very concerned about being stalked, and 45 percent carried something to defend themselves. Psychological counseling was sought by 30 percent of female victims and 20 percent of male victims.

Moreover, other studies have shown links between stalking and intimate partner homicide among female victims. For example, according to an analysis published in *Homicide Studies* in 1999, 76 percent of female intimate partner homicide victims had been stalked by their intimate partner in the past. Furthermore, 89 percent of female intimate partner homicide victims that were physically abused had also been stalked by their intimate partner in the past. Of all female intimate partner homicide victims, 54 percent had previously contacted police to report they were being stalked.

With funding from the National Institute of Justice, the Justice Center is working with the Alaska State Troopers and the Alaska Department of Law to learn more about the characteristics of stalking in Alaska.

In the first quantitative examination of the crime, data from all stalking incidents reported to Alaska State Troopers from 1994 to 2005 were collected to gather descriptive information. The research provides a first overview of a specific crime whose characteristics are not widely known beyond the justice community. The Alaska statutes defining the crime of stalking are presented on page 5.

Methodology

To conduct this study, Justice Center researchers examined the total 267 cases with a stalking charge reported to Alaska State Troopers from 1994 to 2005. (Alaska stalking statutes went into effect in 1993.) The final sample for analysis comprised 210 cases (Table 1) covering a total of 222 stalking charges, 211 suspects, and 216 victims. Case outcome data were gathered directly

Source of data: *Anchorage State Troopers data (1994–2005)*

from the Alaska Department of Law for a sub-sample of the stalking cases—only those reported from 1999 to 2004 ($N = 92$).

Results

For the first four years included in this investigation (1994 to 1997), the number of reports averaged 22 per year. After that, the average number of reports dropped significantly, to 15 per year. Figure 1 displays the trend of reporting over time, from January 1994 to December 2005, using a three-month moving average. Seasonal variations from January to December in the trend of reporting were not quite statistically significant, but 23 percent of the reports were made in the months of June and October.

Over 50 percent of reports occurred in B and D detachments. B detachment includes five Alaska State Trooper posts (Wasilla, Palmer, Glennallen, Big Lake, and Talkeetna) while C detachment includes nine Alaska State Trooper posts (Coldfoot, Galena, Fairbanks, Nenana, Healy, Cantwell, Delta Junction, Tok, and Northway; see Figure 2). The units with the highest number of stalking reports included Fairbanks AST Enforcement (with 19% of reports), Palmer AST Enforcement (with 18% of reports), and Soldotna AST Enforcement (in E Detachment, with 12% of reports). Together, these three units had 49 percent of all stalking reports. Additional details are shown in Table 2.

Most cases (67%) were closed by arrest, meaning that at least one person was criminally charged, by a physical arrest, summons, warrant, or criminal complaint (see Table 1). Other cases (10%) were closed with a referral to the district attorney for a charging decision. Sixteen percent of cases were closed after the investigation because there were no suspects or because evidence was lacking. Only four percent of cases were closed unfounded (because there appeared to be no basis for the complaint). Finally, only three percent of cases were closed because the prosecution declined to pursue the case, even though a suspect was known.

The 210 stalking incidents reported to troopers from 1994 to 2005 included a total of 222 stalking charges. Seventy-seven (35%) of the 222 stalking charges were for stalking in the first degree (AS §11.41.260) and 145 (65%) were for stalking in the second degree (AS §11.41.270). For each stalking charge, thirty different forms of behavior were examined, shown in Table 3. On average, four forms of stalking behaviors were found per charge. The most common forms of stalking behaviors included standing outside or visiting the victim's home (found in 54% of charges), making unsolicited phone calls to victims (found in 51% of charges), following the victim (found in 39% of charges), threatening to physically assault the victim (found in 36% of charges), harassing the victim's family and friends (found in 28% of charges), trying to communicate with the victim in other ways (found in 27% of charges), standing outside or visiting the victim's work (found in 20% of charges), physically assaulting the victim (found in 19% of charges), sending the victim unsolicited mail (found in 15% of charges), and vandalizing the victim's home (found in 13% of charges).

The primary location for stalking behaviors was most often the victim's residence. As shown in Table 4, 45 percent of stalking behaviors occurred primarily at the victim's home. Cyberspace was also a common location for stalking behavior, with 27 percent of charges occurring primarily in cyberspace. An additional 10 percent of charges occurred primarily on public roads and parking lots.

The 210 stalking incidents reported to troopers from 1994 to 2005 included a total of 211 suspects and 216 victims. Most suspects (91%) were male and most victims (89%) were female. As shown in Table 5, most suspects (78%) were white and most victims (86%) were also white. On average, suspects were 36 years old while victims were 33 years old; with 13 percent of suspects and 20 percent of victims under 21, 18 percent of suspects and 22 percent of victims between 21 and 30, 37 percent of suspects and 33 percent of victims between

Relationships between suspects and victims are shown in Table 7. Half (54%) of the suspects were, or had been, in a romantic relationship with the victim, as an ex-boyfriend or ex-girlfriend (29%) or current spouse (15%). In addition, 35 percent of suspects were friends or acquaintances of the victim, with acquaintances as the more prominent category. Very few suspects (4%) were currently living with the victim. Slightly over half of the relationships (55%) had ended prior to the stalking, and 58 percent had ended by the time the stalking was reported to law enforcement (these statistics were not calculated for strangers or family members).

Most suspects (55%) were not charged solely with a stalking offense. Stalking charges were often accompanied by other charges (Tables 8 and 9). On average, suspects had a total of 2.32 charges, including an average of 1.05 stalking charges and an average of 1.27 other charges. Overall, the 211 suspects were charged with 489 offenses (i.e., 222 stalking offenses and 267 non-stalking offenses). The most common additional non-stalking charges included assault, violating a protective order, and harassment. In addition to these additional charges, 38 percent of suspects had at least one aggravating factor (Table 10). The most common aggravating factors included violating protective orders and prior arrests for stalking the victim—present for 20 percent and 12 percent of suspects respectively. In addition, 22 percent of suspects had a prior arrest for stalking, assaulting, or harassing the victim. More specifically, 12 percent of suspects had a prior arrest for stalking the victim, 8 percent had a prior arrest for assaulting the victim, and 5 percent had a prior arrest for harassing the victim. Almost three quarters (74%) of the victims had previously contacted law enforcement to report harassing behavior by the suspect (e.g., to seek a protective order).

Overall, 75 percent of the 92 cases reported between 1999 and 2004 were referred; 55 percent were accepted; and 40 percent resulted in a conviction (Table 11). The likelihood of referring, accepting, and convicting varied substantially by legal factors (Table 12)—whether suspects violated protective orders, violated conditions of release, violated conditions of probation, had prior arrests for assaulting the victim, had prior arrests for harassing the victim, had multiple stalking charges, or had additional non-stalking charges. In general, these legal factors enhanced the likelihood of referral, acceptance, and conviction.

In particular, violating protective orders and having additional non-stalking charges were important legal factors. Cases with

Stalking Cases

The following individual case summaries, drawn from the sample studied in the accompanying article "Stalking in Alaska" illustrate a range of situations and circumstances in which the Alaska State Troopers issued a stalking charge. The details were taken from the AST case file. The initials of those involved have been changed.

B.W. reported receiving phone calls from S.M.; she reported being frightened for herself and for her family. S.M. had previously pled "no contest" to harassment charges and had been ordered to have no contact with her. At the time of the reported phone calls, he was on probation for the previous harassment offense. During the phone calls, S.M. stated that he was in trouble and needed B.W., that he loved her and found her perfect. In response to this report, the troopers charged him with first degree stalking.

***

T.K. reported that she was being stalked and harassed by her boyfriend's ex-wife, M.D. An order forbidding contact between M.D. and her former husband, P.D., was in place, but there was no provision forbidding contact with the girlfriend T.K. The two former spouses were involved in a child custody case.

T.K. reported that M.D. was making threatening phone calls; that she had destroyed T.K.'s personal property—including cutting up clothes—and had followed T.K. and P.D. to a mall and attempted to force her way into their vehicle. On another occasion she had followed the couple on a berry-picking trip.

M.D. was charged with second-degree stalking, criminal mischief involving personal property and misdemeanor assault.

***

N.C. called the troopers to report that P.M., her ex-boyfriend, was in her home yelling and causing a disruption. Another man, who was spending the night, and two of N.C.'s children were present in the house at the time P.M. arrived. She also reported that P.M. had been following her to her workplace and other locations. She had reported to the troopers at least once before. She said she had previously obtained protective orders against P.M. but had let them drop.

N.C.'s employer and a co-worker confirmed that P.M. would regularly appear at the workplace.

N.C. stated that she had made it clear that she no longer wanted a relationship with P.M. He maintained that they still had an active sexual relationship and that he often came to her house late at night. The two have a child together.

P.M. was charged with third degree assault, fourth degree criminal trespass, and second degree stalking.

L.K. reported that her ex-husband S.K. had telephoned her several times that day, leaving threatening messages on her voice mail. He had been served with a protective order two days previously. L.K stated that S.K. could be violent and that he had been trying to obtain a gun.

When contacted by AST, S.K. said he had only been trying to contact his daughter. He was charged with violating a protective order and stalking in the second degree.

***

E.R. called to report that her ex-boyfriend V.L. was pounding on her door and refused to leave. He ran off just before the troopers arrived and was caught shortly afterward.

He had been previously arrested for a crime involving domestic violence against E.R., stalking and criminal trespass. She had had several protective orders against him. She stated that he was violent when drinking and had assaulted her in the past.

The couple had lived together off and on for nine years but not for three years prior to this incident, although they had recently been sexually intimate and he had done work on her property. She stated she had told him she did not want a relationship with him.

For this incident, V.L. was charged with fourth degree assault and second degree stalking.

***

I.W. reported to the VPSO that she was being harassed and threatened by her ex-boyfriend J.T. He had been sending her obsessive letters for some time and was threatening to kill her. (*Copies of some of the letters are in the AST file.)* The two have two children together. They had last lived together three years previously, and she had indicated she no longer wanted a relationship with him.

It appeared that he had followed her from one community to another over a period of time. There had been previous incidents in other towns, including at least one in which the local police were called when J.T. attempted to take one of the children from I.W.

A witness confirmed that J.T. had made threats to kill others if I.W. would not be intimate with him again.

J.T. was charged with second degree stalking.

and were 139 percent more likely to result in a conviction. In other words, cases that included additional non-stalking charges were 2.4 times more likely to result in a conviction than cases that did not include additional non-stalking charges.

It is important not to over-interpret these results because some categories are represented by extremely low sample sizes (e.g., only two suspects had a prior arrest for harassing the victim). Nonetheless, it is interesting to see the variation in the likelihood of cases being referred, accepted, and convicted. For example, although only six cases had suspects who had a prior arrest for stalking the victim, all six were referred for prosecution, all six were accepted, and all six resulted in a conviction. By comparison, only 34.6 percent of other cases resulted in a conviction. When suspects had a prior arrest for stalking the victim, they were 2.9 times more likely to be convicted.

Comparisons with National Data

Few national statistics on stalking are available. The current primary source of information on the offense is the National Violence Against Women Survey (NVAWS). While the numbers are not directly comparable, in looking at the NVAWS statistics and the Alaska figures presented here, we can note several points. First, stalking seems even more underreported and, possibly, underrecognized by law enforcement in Alaska than in the country as a whole. Second, it is likely that this is particularly true among Alaska Natives. Third, it is likely that the prosecution of stalking is more effective in Alaska than nationally.

Based on NVAWS results, an estimated 2.2 percent of men and 8.1 percent of women in the United States have been stalked at some point in the past (for a total of over two million men and over eight million women). Annual stalking estimates (rather than lifetime estimates) are obviously much lower, with 1.0 percent of women and 0.4 percent of men stalked per year. Nationally, this equates to over one million women and over 370,000 men stalked in a given year. Although we must do so with great caution, we can use these statistics to estimate the prevalence of stalking in Alaska.

Using the annual NVAWS statistics that 1.0 percent of women and 0.4 percent of men are stalked (derived from a sample of 8,000 women and 8,000 men), and assuming that annual rates in Alaska would be similar to annual rates in the U.S., we can estimate that around 2,100 adult women and 900 adult men are stalked in Alaska in a given year (see Table 13). Further NVAWS estimates suggest that nationally 55 percent of female stalking victims and 48 percent of male stalking victims report to law enforcement. If similar reporting patterns emerged in Alaska, around 1,100 women and over 530 men in Alaska would report a stalking incident in a given year (see Table 14). Alaska's numbers are much lower than those for the rest of the country, something that may be a factor of underreporting by victims or underrecognition by law enforcement.

More accurate estimates of stalking prevalence and reporting patterns will be available only through additional research; nonetheless, even in the absence of this additional research, it is clear that stalking is greatly underreported in Alaska. In 2005, only 17 stalking incidents were reported to the Alaska State Troopers, and statewide from all jurisdictions only 30 stalking cases were referred to the Alaska Department of Law.

The underreporting may be particularly true among Alaska Natives. NVAWS statistics show that "American Indian/Alaska Native women reveal significantly more stalking victimization than women of other racial and ethnic backgrounds." While 8.2 percent of white women reveal being stalked at some point in their lifetime, 17.0 percent of American Indian/Alaska Native women revealed being stalked at some point in their lifetime. American Indian/Alaska Native women (and men) were the most likely persons to indicate having been stalked at some point in their lifetime—over two times more likely than for whites. This was true for both women and men. (It is important to note that the NVAWS figures do not represent actual reports to law enforcement, but rather self-disclosure of incidents that may or may not have been reported to the police.) By comparison, according to the study, the rates of stalking reported to Alaska State Troopers were 6.6 times higher for white women than for Native women and were 9.1 times higher for White men than for Native men (see Table 15)—rates contradicting national figures. Although these statistical extrapolations are fraught with untested assumptions, it is nonetheless clear that stalking is under-

reported in Alaska, particularly for Alaska Natives.

But, while stalking may be underreported in Alaska, prosecution seems to be somewhat more effective. The Alaska Department of Law secured convictions in the cases accepted more often than occurred nationally: while NVAWS results showed that 54 percent of accepted cases resulted in a conviction, 72 percent of the 51 cases accepted by the Alaska Department of Law between 1999 and 2004 resulted in a conviction.

Reporting and Early Intervention

While we do not have any data on why stalking is so underreported, law enforcement hypothesizes that stalking may be underrecognized by victims. NVAWS statistics show other factors may also come into play. Of the victims that did not report to police, 20 percent believed it was not a police matter, 17 percent believed that police could not help, and 16 percent were afraid of reprisal from the stalker. Of the victims that did report to police, 50 percent were not satisfied with police actions and 46 percent thought that police actions did not improve the situation.

Law enforcement might be trained to capitalize on opportunities for early recognition of stalking patterns. Efforts might also be undertaken to raise public awareness of stalking as a crime and report it as such and to further train law enforcement to recognize the signs of stalking. This will increase the likelihood that suspects who violate stalking statutes are reported to law enforcement and are appropriately charged.

Alaska Victimization Survey Questions

Intimate Partner Violence

Now I'm going to ask you some questions about times when any romantic or sexual partner has physically hurt you. Remember that you can skip questions you don't want to answer and you can stop at any time. How many of your romantic or sexual partners have…

1. Made threats to physically harm you?
2. Slapped you?
3. Pushed or shoved you?
4. Hit you with a fist or something hard?
5. Kicked you?
6. Hurt you by pulling your hair?
7. Slammed you against something?
8. Tried to hurt you by choking or suffocating you?
9. Beaten you?
10. Burned you on purpose?
11. Used a knife or gun on you?

Alcohol or Drug Involved Sexual Assault

Sometimes sex happens when a person is unable to consent to it or stop it from happening because they were drunk, high, drugged, or passed out from alcohol, drugs, or medications. This can include times when they voluntarily consumed alcohol or drugs or they were given drugs or alcohol without their knowledge or consent. Please remember that even if someone uses alcohol or drugs, what happens to them is not their fault. When you were drunk, high, drugged, or passed out and unable to consent, how many people have…

1. Had vaginal sex with you? By vaginal sex, we mean that a man or boy put his penis in your vagina.
2. Made you receive anal sex, meaning they put their penis into your anus?
3. Made you perform oral sex, meaning that they put their penis in your mouth or made you penetrate their vagina or anus with your mouth?
4. Made you receive oral sex, meaning that they put their mouth on your vagina or anus?

Forcible Sexual Assault

Some people are threatened with harm or physically forced to have sex when they don't want to, for example, by being pinned or held down, or by the use of violence. How many people have used physical force or threats to physically harm you to…

1. Make you have vaginal sex?
2. Make you receive anal sex?
3. Make you perform oral sex?
4. Make you receive oral sex?
5. Put their fingers or an object in your vagina or anus?
6. Try to have vaginal, oral, or anal sex with you, but sex did not happen?

Weighted Proportions of Alaskan Women Reporting Intimate Partner Violence

Measures of Intimate Partner Violence	Past 12 Months	Lifetime
Partner(s) made threats to physically harm you	5.8%	31.0%
Partner(s) slapped you	3.1%	27.2%
Partner(s) pushed or shoved you	7.9%	39.3%
Partner(s) hit you with a fist or something hard	2.9%	22.2%
Partner(s) kicked you	2.0%	13.3%
Partner(s) hurt you by pulling your hair	2.1%	17.3%
Partner(s) slammed you against something	4.2%	25.4%
Partner(s) tried to hurt you by choking or suffocating you	1.5%	13.8%
Partner(s) beat you	2.0%	17.1%
Partner(s) burned you on purpose	0.6%	2.9%
Partner(s) used knife or gun on you	0.9%	9.7%
Intimate partner violence (composite with all items)	9.4%	47.6%
Physical violence (composite without threats)	8.6%	44.8%

Note. CI = confidence interval.

Weighted Proportions of Alaskan Women Reporting Sexual Violence

Measures of Sexual Violence	Past 12 Months	Lifetime
While intoxicated[a] and unable to consent…		
Someone had vaginal sex with you	2.0%	18.3%
Someone made you receive anal sex	1.0%	6.9%
Someone made you perform oral sex	1.7%	11.5%
Someone made you receive oral sex	1.6%	8.4%
Alcohol or drug involved sexual assault (composite)	3.6%	26.8%
With physical force or threats of physical harm…		
Someone made you have vaginal sex	1.5%	17.9%
Someone made you receive anal sex	0.4%	3.3%
Someone made you perform oral sex	0.9%	7.7%
Someone made you receive oral sex	0.9%	5.3%
Someone put fingers or an object in your vagina/anus	0.9%	9.4%
Someone tried to have vaginal/oral/anal sex with you	1.2%	13.0%
Forcible sexual assault (composite)	2.5%	25.6%
Sexual violence (composite)	4.3%	37.1%

Note. CI = confidence interval.

[a] Includes being drunk, high, drugged, or passed out from alcohol, drugs, or medications.

2/01/11 OVERVIEWS: AK STATEWIDE INDEP LIVING COUNCIL; GOV'S COUNCIL ON DISABIL & SPEC EDUC; GOV'S STATE SUICIDE PREVEN COUNCIL

<TARGET><BILL></BILL><SUBJECT>2-01-11 OVERVIEWS ALASKA STATEWIDE INDEPENDENT LIVING COUNCIL; GOVERNOR'S COUNCIL ON DISABILITIES and SPECIAL EDUCATION; GOVERNOR'S STATEWIDE SUICIDE PREVENTION COUNCIL</SUBJECT><COMM>SHSS27</COMM></TARGET>

Gavel the meeting to Order on Tuesday, February 1st at 3pm. For a joint House and Senate Health and Social Service Meeting

Let the Record reflect that there is a quorum:

Present are:

- Representative Cissna
- Representative Dick
- Representative Herron
- Representative Millet
- Representative Miller
- Representative Seaton
- And myself Representative Keller

Today will be Hearing from the Department of Health and Social Services for a continuation of their overview presentation. Commissioner Streur.

After the Department is finished we will hear from the other presenters scheduled for today:

- Statewide Independent Living Council –Andi Nations
- Governor's Council on Disabilities and Special Education- Millie Ryan
- Governor's Statewide Suicide Prevention Council

Are there any questions from the members of the committee?

No more Activities:

With that we have concluded today's business. Meeting adjourned.

We will meet again Tuesday, February 8th, 3pm in this room.

An Overview of The Alaskan Independent Living Network

Presented to the Alaska Senate
Health and Social Services Committee
By the Alaska Statewide
Independent Living Council and
The Alaskan Centers for Independent Living
February 2, 2011

Independent Living Philosophy

- All Alaskans, regardless of disability
  - Should have the control over choices
  - Are in charge of their lives and know best what they need
- The independent living movement is
  - Grassroots
  - Local control
  - Giving communities and individuals the right and responsibility to make choices they deem best

Vital Components of the Independent Living Philosophy

- Consumer control and choice
- Peer support
- Self-help
- Self-determination
- Equal access
- Individual and systems advocacy
- Empowerment
- Independence
- Home and community-based services
- Integration as fully contributing, valued members of society

Alaskan Independent Living Partners

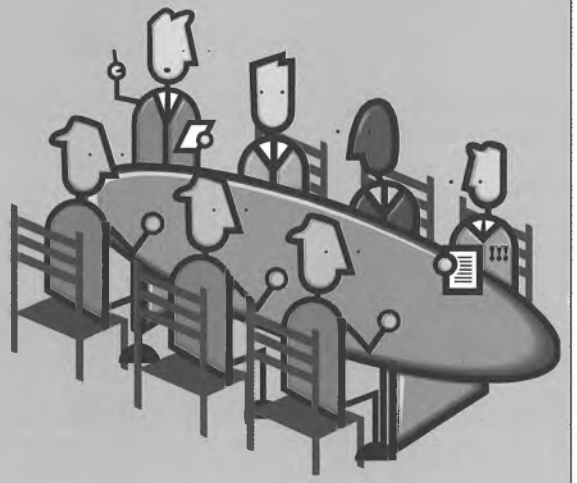
- Alaskans with disabilities, their friends and families
- Centers for Independent Living
- Alaska Statewide Independent Living Council
- Partner agencies and service providers

Alaska Statewide Independent Living Council (SILC)

- Alaska SILC is a non-profit corporation
- Established by Rehabilitation Act of 1992
- In 1995 established under Alaska Statute AS 47.80.300
- For budgetary purposes, falls under
  - **Alaska Department of Labor and Workforce Development Division of Vocational Rehabilitation**
- Mission
  - **To ensure that Alaskans with disabilities live independently and are fully integrated into the mainstream of society**

Alaska SILC Composition and Responsibilities

- Council members are appointed by the Governor
- **Main responsibilities**
  - ➢ to develop, implement and evaluate the State Plan for Independent Living
  - ➢ expand and improve the IL network



Alaskan Centers for Independent Living

- **Access Alaska**
  Southcentral and Interior regions
- **Southeast Alaska Independent Living Center(SAIL)**
  Southeast region
- **Independent Living Center(ILC)**
  Kenai Peninsula, Kodiak Island and Valdez/Cordova census area
- **Arctic Access**
  Nome census area and Northwest Arctic Borough

Regional Service Areas

- ACCESS ALASKA ANCHORAGE
- SOUTHEAST ALASKA INDEPENDENT LIVING (SAIL)
- ACCESS ALASKA FAIRBANKS
- KENAI PENINSULA INDEPENDENT LIVING CENTER
- ARCTIC ACCESS

Each Center for Independent Living

- Unique
- A private, non-profit organization
- Offers services based on community needs and choice
- Supported by a board of directors made up of a majority of people with disabilities
- Non-residential
- Consumer-controlled
- Cross-disability
- Cross-age
- Designed and operated by Alaskans with disabilities

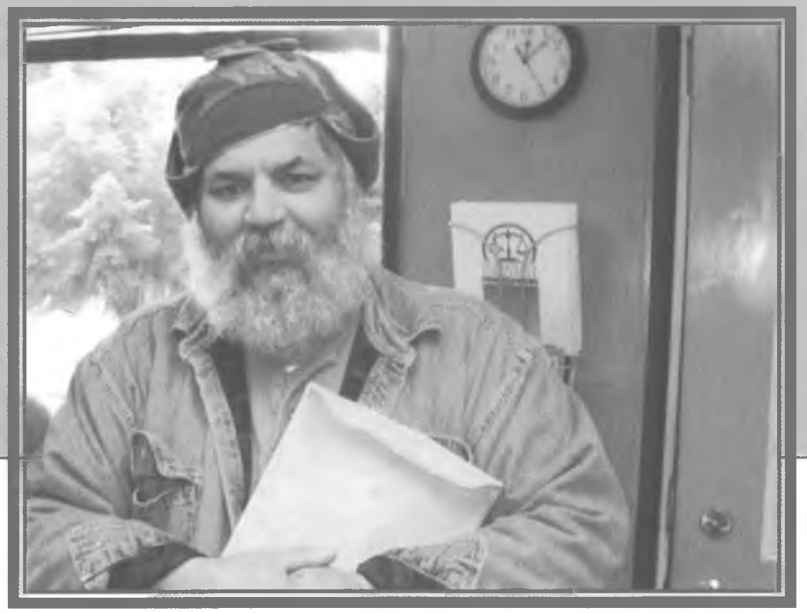
Each Center for Independent Living Offers Five Core Services

1. Information and referral
2. Peer counseling and support
3. Individual and systems advocacy
4. Independent living skills training
5. Deinstitutionalization

Assistive Technology

Centers for Independent Living

- Housing
- Transportation
- Health Care
- Financial Assistance
- Access to Home and Community Based Services
- Employment
- Recreation
- Many more!



Independent Living Partners

- Governor's Council on Disability and Special Education
- Alaska Mental Health Trust Authority
- State of Alaska Advisory Board on Drug and Alcohol Abuse
- The Alaska Commission on Aging
- Alaska Deaf Council
- The Alaska Center for the Blind
- Alaska Brain Injury Network
- State Vocational Rehabilitation Committee
- AgeNet
- The Alaska Mobility Coalition
- Consortia for Native American Rehabilitation
- Association of Programs for Rural Independent Living

Pocket Talker Made a Difference in Darrell's Life!

Overview

Governor's Council on Disabilities & Special Education

House HSS Standing Committee

February 1, 2011

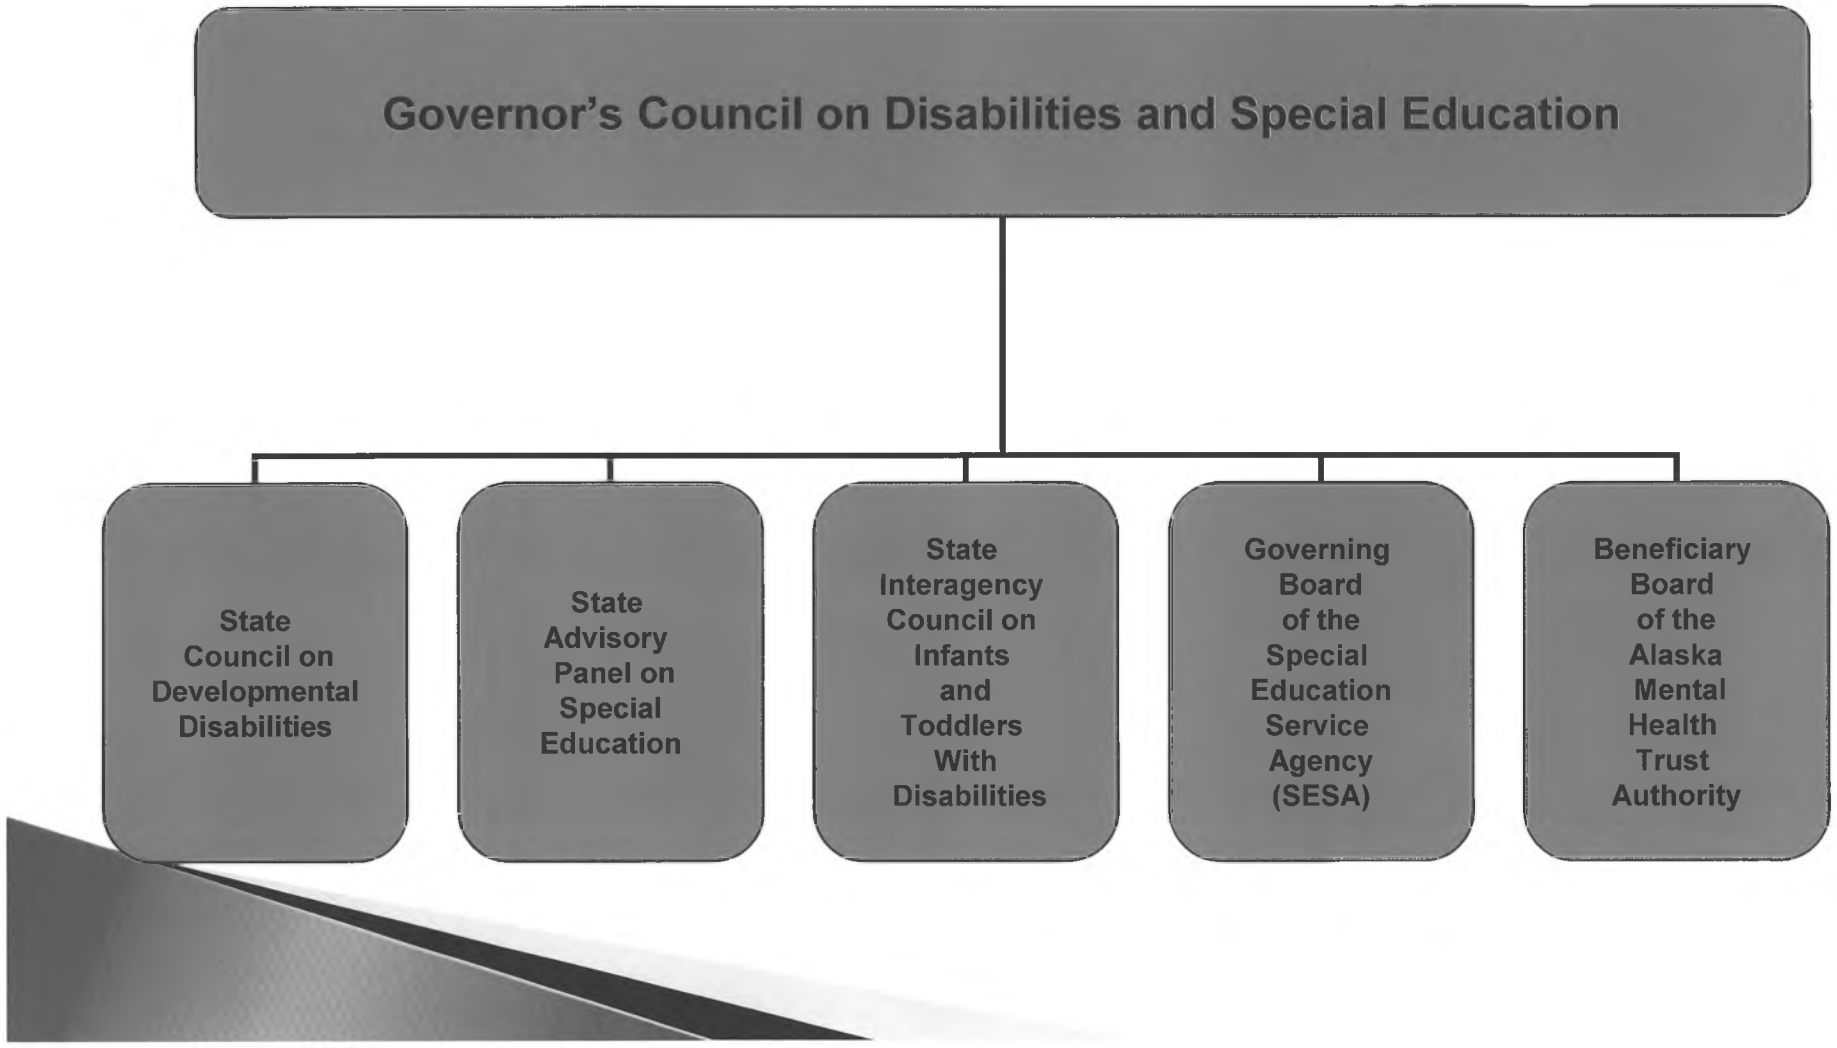
Council Mission

- Create change that improves the lives of people with disabilities
  - Capacity building
  - Systems change
  - Advocacy

Council Members

- 27 members appointed by the Governor
- Primary consumers or self-advocates
  - Individuals with disabilities
- Secondary consumers
  - Parents or family members of people with disabilities
- State agency representatives
- Other representatives designated in federal law
  - Center for Human Development
  - Disability Law Center
  - Non-profit agencies
  - Public education systems
  - Higher education

Council Responsibilities



Tools Used to Achieve Mission

- Gathering community and stakeholder input
- Conducting research and data gathering
- Preparing policy papers and reports about issues impacting people with disabilities
- Providing testimony about how legislation will impact people with disabilities
- Providing advice to the Governor, legislature and agencies on policy that impacts people with disabilities
- Helping self-advocates and families learn about and connect with the political process
- Educating and providing information to the media and general public

Example of Council in Action

- Heard considerable public testimony about the lack of services for people with autism
- Convened ad hoc committee on autism to develop recommendations for administration and legislature
- Researched work done in other states and evidence-based practices

Example of Council in Action

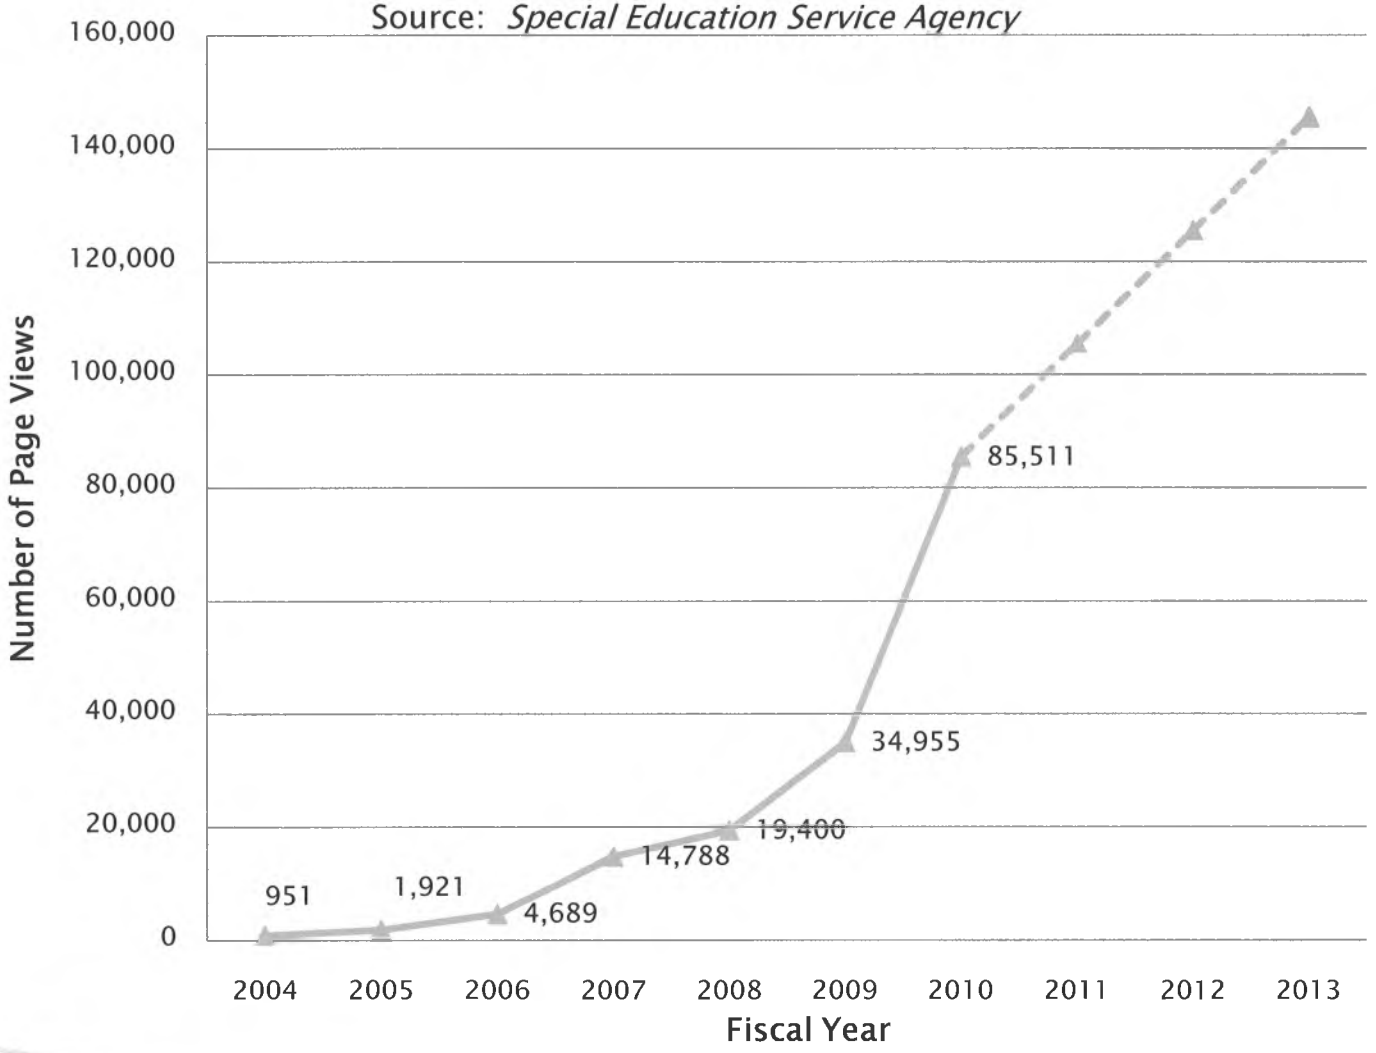
- Boiled recommendations into 5-Part Autism Initiative
  - Universal screening
  - Expanded diagnostic capacity
  - Enhanced awareness, I&R and training
  - Workforce development capacity building
  - Funding for time-limited intensive services

Outcomes

- Use of Ages & Stages Questionnaire and Modified Checklist for Autism in Toddlers (M-CHAT) in *Child Find* and well baby check-ups
- Secured federal grant to develop rapid rural response system (Division of Public Health)
- $500.0 legislative increment for diagnostic and screening clinics
- Added Advanced Nurse Practioneer to list of medical personnel that can diagnosis autism (State Board of Education & Early Development)
- Legislative increment and MHTAAR funding for Alaska Autism Resource Center
- Legislative increment and MHTAAR funding for workforce development capacity

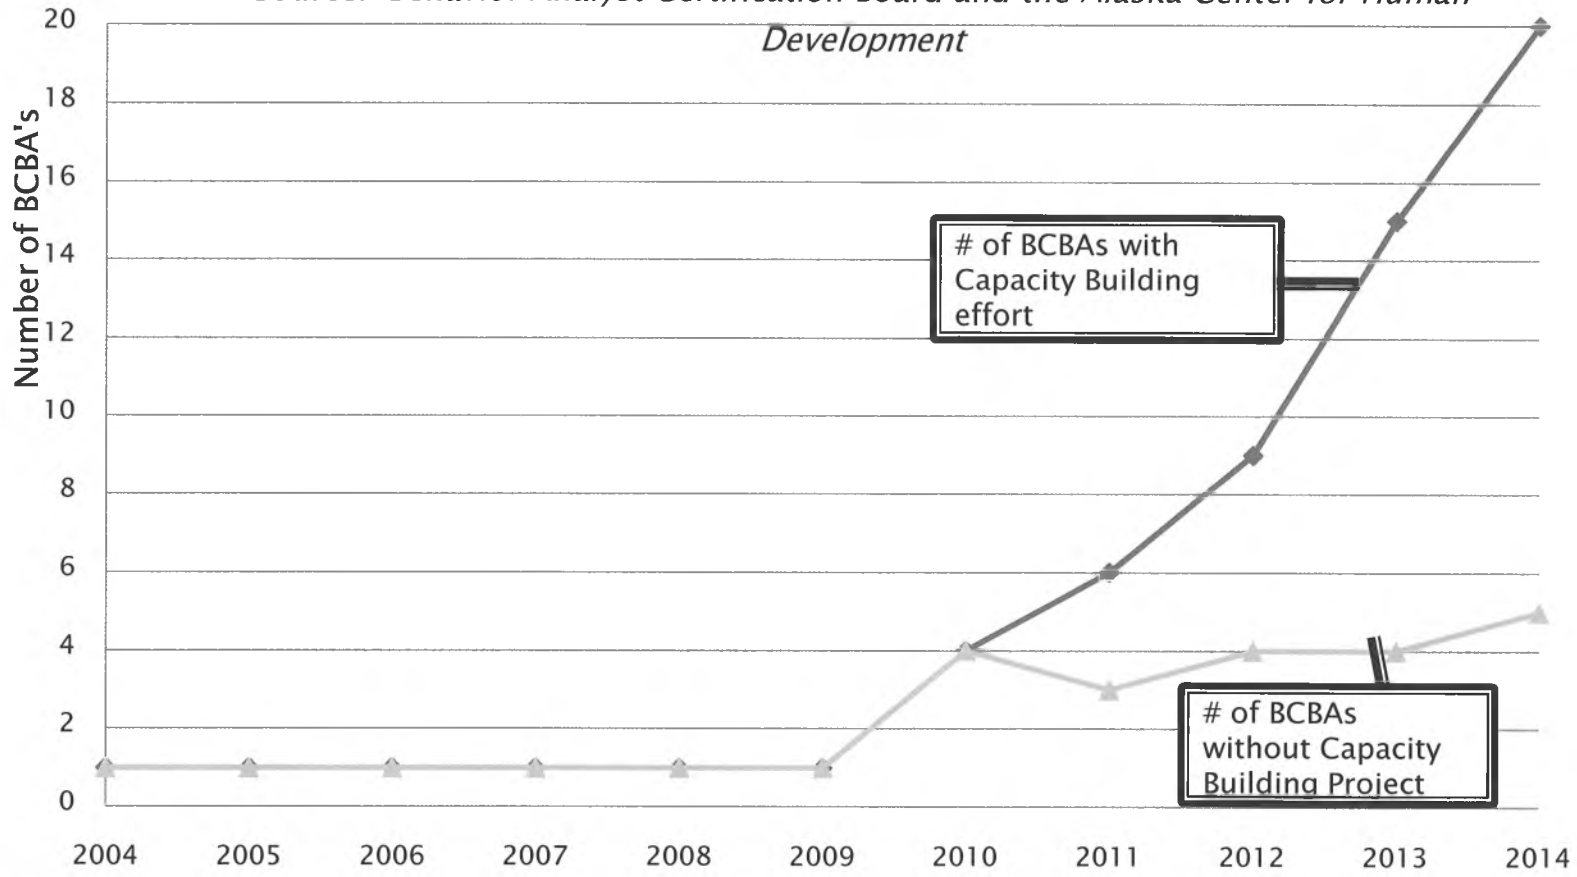
Number of AARC Web Site Page Views by Fiscal Year

Source: *Special Education Service Agency*



Number of Board Certified Behavior Analysts (BCBAs) Practicing in Alaska

Source: *Behavior Analyst Certification Board and the Alaska Center for Human Development*



Complex Behaviors Hub

- Current Situation
  - 1st in the country with no publicly or privately funded institutions for people with developmental disabilities
  - However, 11 individuals with developmental disabilities are in out-of-state institutions
    - Longest placement (3+ years)
    - 5 out-of-state placements (2+ years)
    - Shortest placement (4 months)
  - 12 individuals are in the process of being sent out of state
- Policy Recommendation: Establish Complex Behaviors Hub
  - Comprehensive diagnostic and testing capacity
  - Individualized triage services
  - Technical assistance to providers throughout Alaska
  - Case-specific consultation and training services

Special Education Service Agency

- Current Situation
  - Established under State Statute (AS 14.30.600) in 1986
    - Provide itinerant outreach services to students with low incidence disabilities
      - Students who are dead, deaf-blind, cognitively impaired, hearing impaired, blind and visually impaired or who have orthopedic disabilities, other health impairments, severe emotional disabilities, multiple disabilities
    - Provide special education instruction support and training of local school district special and general education personnel
    - Other services appropriate to special education services
  - Formed as a not-for-profit corporation
  - Operates under a sunset provision
  - Receives Low Incidence Disabilities funding from EED based on prior year's statewide total enrollment at a flat rate ($15.75) set in 1986
  - Receives federal and state grants and contracts

Special Education Service Agency

- Policy Recommendations
  - Remove the sunset provision from SESA's authorizing statute
    - Recommended by most recent audit
    - SESA performs a valuable effective and efficient service to local school districts that they cannot provide themselves and does not duplicate services
  - Change the funding formula for SESA
    - 0.39 – 0.40% of Current Year Base Student Allocation (BSA) X Total Average Daily Membership (ADM) from Previous Year
      - SESA already has trouble meeting its statutorily mandated duties; if there is a reduction in grants and contracts, this situation will get even worse and negatively impact students and school districts

2010 Harris Poll Findings

- Only 21% employed compared to 59% of general population
- Much more likely to be living in poverty
- Much less likely to socialize
- Only 54% use the Internet compared to 85% of the general population
- More likely to have gone without needed health care (19% vs. 10%)

Upcoming Challenges

- Developing actions and policies that will improve the lives of thousands of Alaskans with disabilities in the future
- Properly equipping Alaskans with disabilities with tools, skills and opportunities they need to successfully live the same everyday lives as Alaskans without disabilities

Thank You!

Questions?

Progress Made on Action Plan and Timeline for Implementing the Five-Part Autism Initiative

	FY07	FY08	FY09	FY10	FY11	FY12
Infrastructure Development						
▪ Develop strategic plan for autism services – Ad Hoc Committee on Autism	Done					
▪ Oversee strategic plan implementation – Ad Hoc Committee on Autism		In progress and ongoing				
▪ Identify and secure variety of funding resources – Governor's Council on Disabilities & Special Education (GCDSE)	Secured legislative increments and Trust funding for diagnostic evaluations, Alaska Autism Resource Center and workforce development capacity building; some examples of pooled funding; autism insurance reform bill introduced					
▪ Coordinate services/continued infrastructure development – Autism Alliance		In progress and ongoing				
Universal Screening						
▪ Conduct Child Find – Infant Learning Programs/School Districts	Ongoing – in addition, federal funds from the *Combating Autism Act* were secured to develop a rapid rural response systems to meet the needs of children living in rural and remote areas, who are typically diagnosed 1-3 years later than children living in urban areas					
▪ Develop plan to establish universal screening at well child clinics – Early Childhood Comprehensive Systems Grant	Done					
▪ Pilot universal screening at 3 pediatric clinics conducting well child clinics – Early Childhood Comprehensive Systems Grant		Pilot findings are being used for expansion to other sites and there is an enhanced Early Periodic Screening, Diagnosis and Treatment (EPSDT) fee for using Ages & Stages Questionnaire and Modified Checklist for Autism in Toddlers (M-CHAT)				
▪ Develop plan for diagnostic clinic expansion – Ad Hoc Committee on Autism	Done					
▪ Expand diagnostic clinics in Anchorage and regional hubs – Providence Hospital		The number of communities with screening and diagnostic clinics has increased from 3 in FY07 to 15 in FY 10 and 50% of referrals to the main clinic in Anchorage are coming from outside the Anchorage bowl				
Diagnostic Clinic Expansion						
▪ Provide multi-disciplinary team services – Providence Hospital		Ongoing - Recent autism diagnostic clinic data shows a 44% increase in children served over the 2007 baseline, which suggests that adding services and a provider were effective expansion tactics.				
▪ Conduct regional screening and diagnostic clinics – Providence Hospital		Ongoing				
▪ Coordinate clinic program and related		Ongoing				

activities – Division of Public Health						
▪ Increase parent navigation services – Stone Soup Group (SSG)		Ongoing - Parent navigators are meeting the very specific needs of each of the families they serve				
Resources, Referral and Training						
▪ Conduct public awareness activities – Special Education Service Agency(SESA)	Ongoing –in FY10, information was provided to 2,600 people. In addition, the Division of Public Health is using federal funds from the *Combating Autism Act* are being used to develop outreach materials specifically targeted to reach those living and working in rural and remote areas					
▪ Provide information and referral services – SESA	Ongoing – the number of website page views has increased from 14,788 in 2007 to 85,511 in FY10					
▪ Provide overview training on service delivery strategies – SESA	Ongoing – in FY10, overview training was provided to 1,500 Alaskans.					
▪ Provide consultation services to families, infant learning program providers, school districts and service providers – SESA	Ongoing					
▪ Provide expanded support to parent of children with autism spectrum disorders – SSG			Ongoing – Stone Soup Group is offering Structured play dates, helping families use generic resources (e.g., Boy Scouts), offering shadowing services and providing training in use of positive reinforcement			
Workforce Training (Specific, Hands-On, Intensive Interventions)						
▪ Contract with experts in a variety of evidence-based, intensive autism interventions to provide training – Center for Human Development at the University of Alaska Anchorage			Ongoing – primarily with Northern Arizona University and University of Kansas, two programs providing cutting edge, evidence-based training over through distance education			
▪ Coordinate face-to-face and distance delivery training to develop state expertise in evidence-based, intensive autism interventions – Center for Human Development			The number of individuals who are board certified as Applied Behavior Analysts increased from 1 in FY07 to 6 in FY 10, with a total of 20 expected by the end of FY14. In addition, approximately 100 people per year are participating in summer autism institutes.			
Time-Limited Intensive Early Intervention						
▪ Conduct policy analysis – GCDSE	Done					
▪ Develop time-limited early intervention program – GCDSE and Department of Health & Social Services (DHSS)		This is taking longer than expected; the ad hoc committee on autism will develop a funding and resources plan in early March				
▪ Implement and monitor autism program				Some examples of pooled funding exist.		

Mending the Net: Suicide Prevention in Alaska

Annual Report FY2010

Governor Sean Parnell

Statewide Suicide Prevention Council

William Martin, Chair 2010-2011

431 North Franklin Street, Suite 204

Juneau, Alaska 99801

Acknowledgements

The Statewide Suicide Prevention Council recognizes the contributions of the following people to the FY2010 Annual Report:

Brenda Moore, chair of the Council from 2008-2010, for her tireless efforts to guide and support the Council in the activities on which it is reporting;

Andrew Jessen, Research Analyst III, Bureau of Vital Statistics, Division of Public Health, Department of Health and Social Services, for assisting with the effective use of suicide data in this report;

Brian Laurent, MPA Candidate, Boise State University, for his analysis of funding patterns and the creation of the maps used in the report;

Patrick Sidmore, Research Analyst III, Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, for analyzing incidence and unemployment data used in the report, assuring accuracy in reporting, and creating charts and graphs for the report;

Thomas Chard, Planner II, Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, for his work with the Council in the activities reported;

Tim Spengler, Legislative Analyst II, Legislative Research, for his work on the November 12, 2010 report, "Suicide Rates, Prevention Funding, and Prevention Efforts in Alaska;"

Martha Moore, Public Health Specialist II, Alaska Trauma Registry, Division of Public Health, Department of Health and Social Services, for assisting with the effective use of suicide attempt data in this report;

the **Alaska Mental Health Board** and **Advisory Board on Alcoholism and Drug Abuse**, for providing support (financial, staff, and moral) in advocacy, education, outreach, and planning in the activities on which the Council is reporting; and

Eric Morrison, Council Assistant, and **Kate Burkhart**, Executive Director, for their work on the report.

A Letter from the Chair

On behalf of the Statewide Suicide Prevention Council, thank you for your interest in learning about the state of suicide prevention in Alaska. What you will learn from our report is both inspiring and disappointing. Despite substantial efforts by communities and organizations statewide, and millions of dollars of funding, over the last ten years, the number of suicides in Alaska and the rate of suicide has not decreased. What has changed is that people in Alaska are talking — and talking a lot — about how suicide affects us and how we can prevent it.

Years ago, no one talked about suicide. There was stigma and fear. Now, even though there is still stigma and there is still fear, people are showing greater courage and speaking out. I am grateful for the leaders in our tribal organizations and communities who are standing up with the Council to speak about suicide and how to prevent it. I have seen more and more openness to talking about suicide, more awareness of how important talking about suicide is to healing from its wounds.

One of our biggest achievements of FY2010 was the Statewide Suicide Prevention Summit we hosted, with the help of the Alaska Native Tribal Health Consortium and many partners. Since then, there have been listening sessions and public meetings all over Alaska. Suicide prevention providers have come together to better support each other, share ideas, and take care of each other. The message that every life has value is being spread in communities all over our state. My hope is that, in the coming year, the Council will continue to support and encourage people to speak out, to share their loss and grief, to heal, and to come together to prevent suicide.

Thank you again for your interest in the Council's work.

Gunalchéesh,

William Martin, Chair

Mending the Net: Suicide Prevention in Alaska

Annual Report FY2010

INTRODUCTION

The Statewide Suicide Prevention Council was established by the Alaska Legislature in 2001, in response to what was characterized as "an on-going epidemic" of suicide.[1] The Council, after a legislative audit in 2008, was extended by the Legislature to June 30, 2013.[2]

The Council is responsible for advising legislators and the Governor on ways to improve Alaskans' health and wellness by reducing suicide, improving public awareness of suicide and risk factors, enhancing suicide prevention efforts, working with partners and faith-based organizations to develop healthier communities, creating a statewide suicide prevention plan and putting it in action, and building and strengthening partnerships to prevent suicide.[3]

Each year, the Council provides an annual report on its activities and the impact of suicide prevention efforts over the past year. The FY2010 report takes its title from the theme of the Suicide Prevention Summit, "Mending the Net." Many individuals and organizations are working to prevent suicide all over Alaska — but often, these dedicated people feel disconnected and unsupported. Focus is often placed on practices or strategies that may or may not fit a community's needs. Creative community-based solutions often operate in isolation.

By "mending" the suicide prevention systems' "net," the Council hopes to increase the effectiveness of local suicide prevention efforts, support the spread of effective ideas to other Alaskan communities, recognize the work of every person trying to prevent suicide, and honor the losses to families and communities caused by suicide.

The Council has increased its efforts related to its statutory duties. The State of Alaska, tribal organizations, and communities all over the state have continued to work to prevent suicide. Even so, Alaska is still faced with an "on-going epidemic." Therefore, in addition to fulfilling the yearly reporting requirements, this Annual Report will include a look back at the last ten years of data and will offer the opportunity to look with fresh eyes at how Alaskans can work together to prevent suicide.

[1] SB198 Sponsor Statement, Senator Rick Halford, April 24, 2001.
[2] HB123, sponsored by Representative Anna Fairclough, passed in April 2009 and was signed into law on August 5, 2009.
[3] AS 44.29.350. The Council's statutory authority is included in Appendix A.

HISTORY OF THE COUNCIL

The Statewide Suicide Prevention Council was established in 2001 after a series of "suicide clusters" throughout Alaska led state leaders to more closely examine the issue. Former Department of Health and Social Services Commissioner Karen Perdue requested funding in March of 2001 to support communities experiencing high rates of suicide and to examine Alaska's suicide prevention strategies. The passage of SB 198, on May 7, 2001 established the Council. The Council had its first meeting on November 12, 2001 in Anchorage.

The Council has twelve voting members from the public and four non-voting members from the Legislature. The twelve voting members are appointed by the Governor to four-year terms. Members include:

- one person representing the Department of Health and Social Services;
- one person representing the Department of Education and Early Development;
- one person from the Advisory Board on Alcoholism and Drug Abuse;
- one person from the Alaska Mental Health Board;
- one person recommended by the Alaska Federation of Natives;
- one person who works for a high school;
- one person who is active in a youth organization;
- one person who has experienced the death by suicide of a member of their family;
- one person who resides in a rural Alaska community not on the road system;
- one person who is a member of the clergy;
- one person who is enrolled in grades 9-12 of a secondary school in Alaska;
- and one public member.

The President of the Alaska State Senate and the Speaker of the House appoint the four non-voting members of the council. The Senate President appoints one majority and one minority member of the Senate, and the Speaker appoints one majority and one minority member of the House of Representatives.

2010-2011 Council Chair Bill Martin with Vice-Chair Barbara Jean Franks

SUICIDE IN ALASKA

Suicide was considered an "epidemic" when the Council was created. Back then, in 2000, the age-adjusted rate of suicide for all Alaskans was 21.2/100,000 — an average of 135 lives lost each year.[4] In 2000, the suicide rate in rural Alaska was nearly three times that in urban Alaska.[5] Not much has changed since then. In 2009, the (provisional) age-adjusted rate was 20.2/100,000 with 140 lives lost.[6]

Conversations about suicide rates versus numbers can be confusing. The **number** of suicides is the actual number of people who have been confirmed to have died by committing suicide.[7] The **rate** is the number of deaths by suicide divided by the total population. That means that, if 100 people die by suicide in Alaska, the rate is 100/6.92314 or 14.4/100,000 (which should not be confused with percentage).[8] A **crude rate** is a basic division of the number of deaths by the population (the example given is a crude rate). An **age-adjusted rate** is a weighted average that accounts for the distribution of people of different ages in different regions (some communities are "younger" or "older" than others). It reflects the rate that would occur if every region had the same mix of people of different age ranges.

Why does it matter whether we talk about rates or numbers?

The impact of suicide on a community isn't always clear if you just look at one or the other. For example, in 2008 there were 33 suicides in the Interior Region and 75 in the Anchorage/Mat-Su/Kenai Peninsula region.[9] Based solely on those numbers, you might think that suicide is a bigger problem in Anchorage/Mat-Su/Kenai Peninsula area. Except, the age-adjusted suicide rate in the Interior Region in 2008 was 33.7/100,000 and for the Anchorage/Mat-Su/Kenai Peninsula area it was 17.6/100,000.[10] If you look at that alone, you would come to the opposite conclusion. This is why it's important to look at **both** numbers and rates.

[4] Data from the Alaska Bureau of Vital Statistics.
[5] FY2002 Statewide Suicide Prevention Council Annual Report at 5 (available online at www.hss.state.ak.us/suicideprevention/pdfs_sspc/2002sspcannualreport.pdf).
[6] Data from Alaska Bureau of Vital Statistics. All data for 2009 is considered provisional and subject to change until all deaths by suicide have been confirmed.
[7] This does not take into account those people who may have committed suicide but whose death was classified accidental (i.e. accidental overdose, firearm accident, etc.) or due to other causes (i.e. exposure, etc.)
[8] The Alaska Department of Labor and Workforce Development July 1, 2009 population estimate is 692,314, which is 6.92314 when divided by 100,000. For more information, go to http://almis.labor.state.ak.us/?PAGEID=67&SUBID=115 .
[9] Data from Alaska Bureau of Vital Statistics.
[10] Data from Alaska Bureau of Vital Statistics.

It's also important to consider the local impact of suicide. Between 2000 and 2009, there were 1,369 confirmed suicide deaths in Alaska; at least one suicide occurred in 176 Alaskan communities.[11]

Suicide Data

Over the last ten years, the rate of suicide has remained consistently high. The statewide age-adjusted rate has been 20/100,000 people or higher for eight of the ten years. Some regions have had age-adjusted rates much higher than that.

Suicides By Region of Residence: Age-Adjusted Rates'

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
North Slope Borough	103.3*	**	**	**	**	**	**	**	**	**
Northwest Arctic Borough	**	**	93.5*	**	**	**	102.1*	**	99.4*	**
Nome	63.5*	63.2*	118.2*	**	63.7*	106.0*	65.0*	**	59.9*	84.9*
Bethel/Wade Hampton	62.5*	**	36.7*	57.8*	96.2	60.2*	46.0*	55.0*	75.4*	55.8*

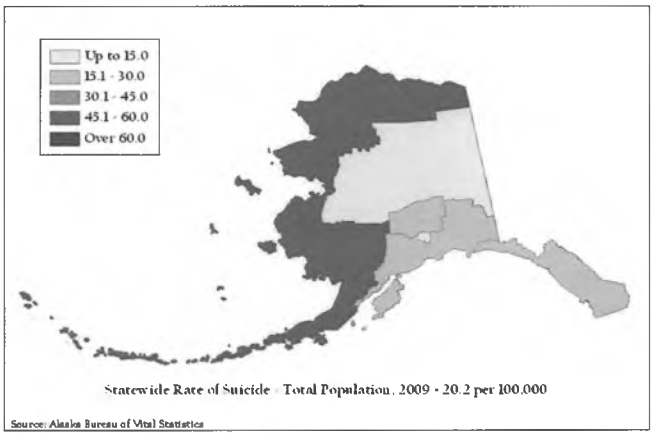
Total	21.1	16.5	20.9	20.5	23.3	19.5	20.0	23.1	24.7	20.2

Data provided by Bureau of Vital Statistics. 2009 data is provisional.
Rates based on fewer than 20 occurrences are not statistically reliable and should be used with caution.
****** *Rates based on fewer than 6 occurrences are not reported.*

The table above shows age-adjusted rates (weighted averages). The crude rates (the simple number of suicide deaths divided by the population) by economic region are a little different. This map shows the regional breakdown.[12] The Southwestern Region and the Northern Region had crude rates of 60/100,000 people or higher — three times the statewide crude rate of 20.2/100,000 people. The Interior Region and Municipality

Crude Rate of Suicide by Alaska Department of Labor Economic Region per 100,000 Population, 2009



[11] Data from Alaska Bureau of Vital Statistics.

[12] For a map of the Department of Labor and Workforce Development's economic regions, see Appendix B. The Department of Labor and Workforce Development uses six regions, but we have separated the Municipality of Anchorage and the Mat-Su Borough to better understand any differences in the communities.

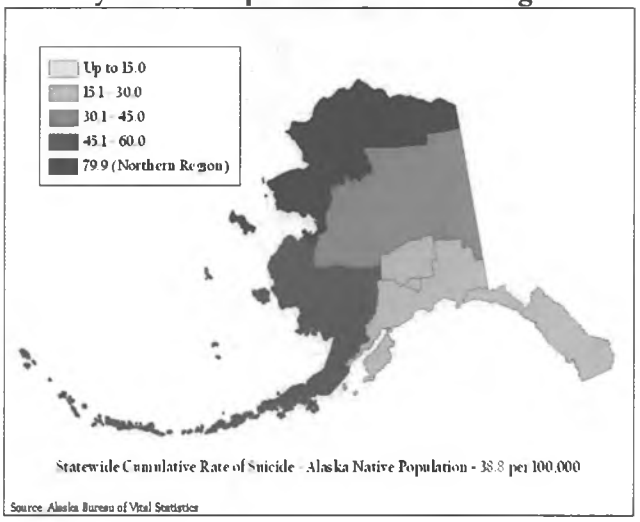
of Anchorage had crude rates below the statewide rate.

Suicide and Ethnicity

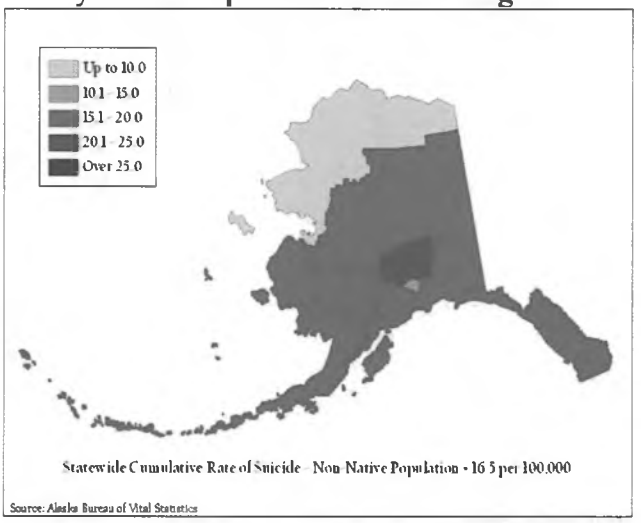
Suicide rates among Alaska Native peoples are higher than for any other ethnicity in the state, and are the highest of any ethnicity in the United States. In 2009, the age-adjusted rate for Alaska Native peoples was 32.8/100,000 people.[13] For White or Caucasian people, the age-adjusted rate was 17.7/100,000.[14] That is a difference of nearly 2:1.

Looking at Alaska suicide rates over time shows that same disparity, with a cumulative crude rate of 38.8/100,000 for Alaska Native peoples and 16.5/100,000 for non-Native peoples. Alaska Native individuals are twice as likely to commit suicide as individuals of other ethnicities.

Crude Rate of Alaska Native Suicide by Alaska Department of Labor Region



Crude Rate of Non-Native Suicide by Alaska Department of Labor Region



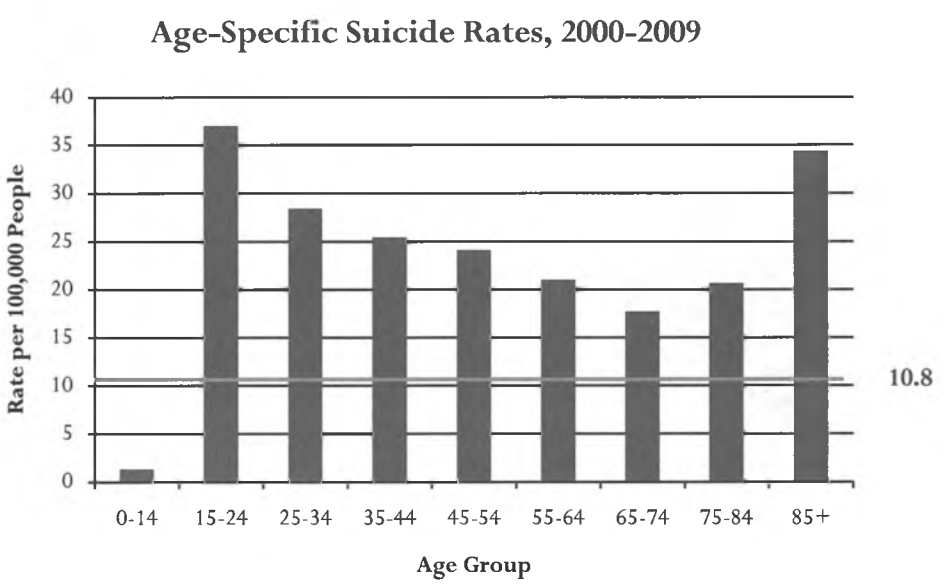
Looking at the suicide rates according to ethnicity tells one side of the story. The actual numbers of suicides tell another. In 2009, twice as many White or Caucasian Alaskans (89) committed suicide as Alaska Natives (44).[15] Since 2001, 847 White or Caucasian Alaskans have committed suicide and 411 Alaska Natives have committed suicide.[16] What this tells us is that suicide is not confined to one ethnic group. Suicide is an **Alaskan** problem.

[13] Data provided by the Bureau of Vital Statistics.
[14] Data provided by the Bureau of Vital Statistics.
[15] Data provided by the Bureau of Vital Statistics.2009 data is provisional.
[16] Data provided by the Bureau of Vital Statistics.

Suicide and Age

In Alaska, young people age 15-24 continue to have the highest rates of suicide. The age-specific suicide rate for young men age 15-24 is 56.1/100,000 and for young women is 16.6/100,000.[17] For Alaska Natives, the rate for this age group is 141.6/100,000 for young men and 50.3/100,000 for young women.[18] For White or Caucasian young men, the rate is 33.8/100,000.[19] For White or Caucasian young women, it is 6.1/100,000.[20]

The rates for other age groups[21] are less dramatic, but no less important. For all age groups above 0-14, the age-specific rate is above the 2007 national rate of 10.8.[22]



From review of the suicide rates over time, it appears that risk of suicide decreases as Alaskans age, at least until age 75. For the most senior group (age 85+), the high rate of 34.4 should be taken in the context of a small number of suicides (13) among a relatively small population. The age groups of 75-84 and 85+ bear further scrutiny over the next 10 years, as Alaska's senior population continues to grow.[23]

Suicide and Substance Abuse

Alcohol and drugs play a role in the suicide problem in Alaska, but are not a cause of suicide. We know this from three sources of Alaska-specific information. First, the Alaska medical examiner's office performs a post mortem examination (autopsy) in some — but not all — suicide deaths. From those exams, there is an indication that alcohol and/or drug use was involved in the majority of suicide decedents examined. The Alaska Suicide Follow-Back Study reported that, of the 33% of suicide decedents tested for drugs and/or alcohol, 44% tested positive for alcohol and 48% one or more other drugs.[24]

The Alaska Psychiatric Institute reports that alcohol and/or drug use is involved in an average of 48.44% of all admissions to the state psychiatric hospital. To be admitted to API under the law, a person must be a danger to himself or to another person, so not all of these admissions involved the risk of suicide. However, the data does show that substance abuse is a factor in a significant number of psychiatric emergencies requiring hospitalization.

The Alaska Trauma Registry tracks hospitalizations for poisonings – of which overdoses on alcohol and/or drugs account for the majority. In 2005, the Alaska Trauma Registry published a review of suicide hospitalizations for 2001-2002.[25] During that time, 77% of hospital visits resulting from suicide attempts (or other self-harm) involved an overdose on medications. Of those medication overdoses, 64% were prescription medications. Tylenol was the most common medication on which children age 0-19 years overdosed.

Do numbers and rates tell the whole story?

Rates and numbers are helpful in describing the problem of suicide in Alaska, but the stories of people who have survived a loss to suicide provide an important context for understanding the true impact of the problem.

- "We have an epidemic, a Hurricane Katrina and a Gulf oil spill but in a magnitude much more devastating because it is humanitarian." (Nick Tucker, Sr., Emmonak)

- "Over the past few years, a large number of people took their lives and caused a lot of pain to our friends and family. We try to move on in our lives but the pain never leaves." (Kyle M., Galena)

[24] The Alaska Suicide Follow-Back Study at 16. This study reviewed data on all 426 suicides that occurred between 2003 and 2006. It is available online at http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/aipc_suicide_followback207.pdf .
[25] Alaska Suicide Hospitalizations 2001-2002, Alaska Injury Prevention Center, July 2005 at 4. Available online at http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/hospitalsuicides01-02.pdf .

- "The war that engulfs us today is a war fought on the battlefield of substance abuse. Self-hatred. Suicide. Rape. Child molestation. This is a war within ourselves." (Elizabeth Hensley, Alaska Federation of Natives 2009 Convention)

- "It's a lot for a small town to go through. It's amazing that a lot more people's spirits haven't been broken by this." (James Hoelscher, Hooper Bay)

- "Everybody in Southeast has lost friends and loved ones to suicide, so it's pretty hard to talk about it." (Bill Martin, Juneau)

- "The process of waiting for my son's body to be sent to Anchorage from Bethel and to be sent back to here was the longest four to five days I have ever felt. The emotions we went through cannot be described in human terms. I tried to do something and I would feel lost while I was doing it. I tried working on my (fish) nets but found myself lost in my mind. We should never ever put our parents through this no matter how low we feel or how mad we may be." (Harley Sundown, Scammon Bay)

Photographs courtesy of Thomas Chard

There is empirical information that supports what Alaskans say about the tragic consequences of suicide. Suicide claims more lives in the United States than homicide. Suicide is one of the top ten causes of death in Alaska. Between 2000 and 2008, 4.26% of all deaths in Alaska were due to suicide. In the Wade Hampton Census Area (which includes Hooper Bay, Emmonak, Chevak, Scammon Bay, Mountain Village, Nunam Iqua, and nine other villages), 14% of all deaths were due to suicide. In the Northwest Arctic Borough,

which includes Kotzebue, 13.54% of all deaths were due to suicide. In Anchorage, 3.49% of all deaths in that time period were due to suicide.

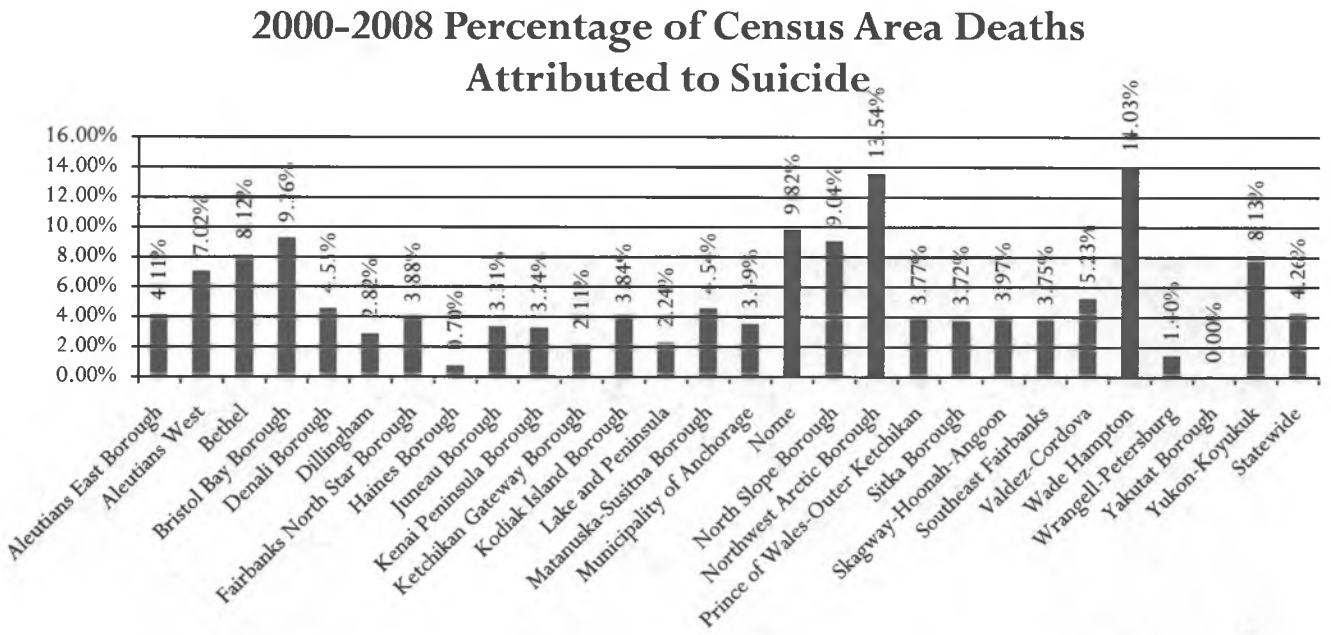

Chart created by Alaska Mental Health Board staff. **Sources:** *Alaskan Bureau of Vital Statistics, Detailed Causes of Death by Census Area & Department of Labor and Workforce Development Population Estimates.*

Does unemployment affect suicide rates?

The availability of jobs and economic opportunities has a lot to do with personal feelings of self-worth and the health of a community. Research has documented a connection between unemployment, poverty and other social determinants and low self-esteem, anxiety, and isolation.[26] Unemployment and economic distress are factors that can increase the risk of suicide.[27] Review of Alaska's unemployment data shows a weak connection between unemployment and suicide rates.

The average state unemployment rate in 2009 was 8%.[28] For the census areas in economic regions with the highest suicide incidence rate, the average annual unemployment rates in 2009 varied from very low to very high. Bristol Bay Borough had the lowest unemployment rate in 2009 at 4.3%. Wade Hampton had the

[26] *Mental Health, Resilience, and Inequalities*, Dr. Lynne Friedli, World Health Organization 2009 (available online at www.euro.who.int/__data/assets/pdf_file/0012/100821/E92227.pdf).
[27] *Getting Through Tough Economic Times*, A SAMHSA Guide (available online at www.samhsa.gov/economy/#suicide).
[28] All unemployment data for 2009 provided by the Department of Labor and Workforce Development, online at http://almis.labor.state.ak.us/?PAGEID=67&SUBID=188

highest 2009 unemployment rate at 21.2%. Unemployment rates in regions with lower suicide rates are equally variable, ranging from 6.6% in Anchorage to 15.7% in the Yukon-Koyukuk Census Area.

Looking at unemployment rates for 2000-2008, there is a weak statistical correlation between unemployment rates and suicide rates.[29] There is no clear connection between an increase in the unemployment rate and an increase in the suicide rate, as there were periods of time when suicide rates fell in regions experiencing increases unemployment. What this means is that unemployment, while **not a cause of suicide**, is apparently a factor in suicide incidence — and there is room for more research and study of the impact of the health of the economy on the suicide rate.

Photographs courtesy of the Alaska Department of Commerce, Community and Economic Development

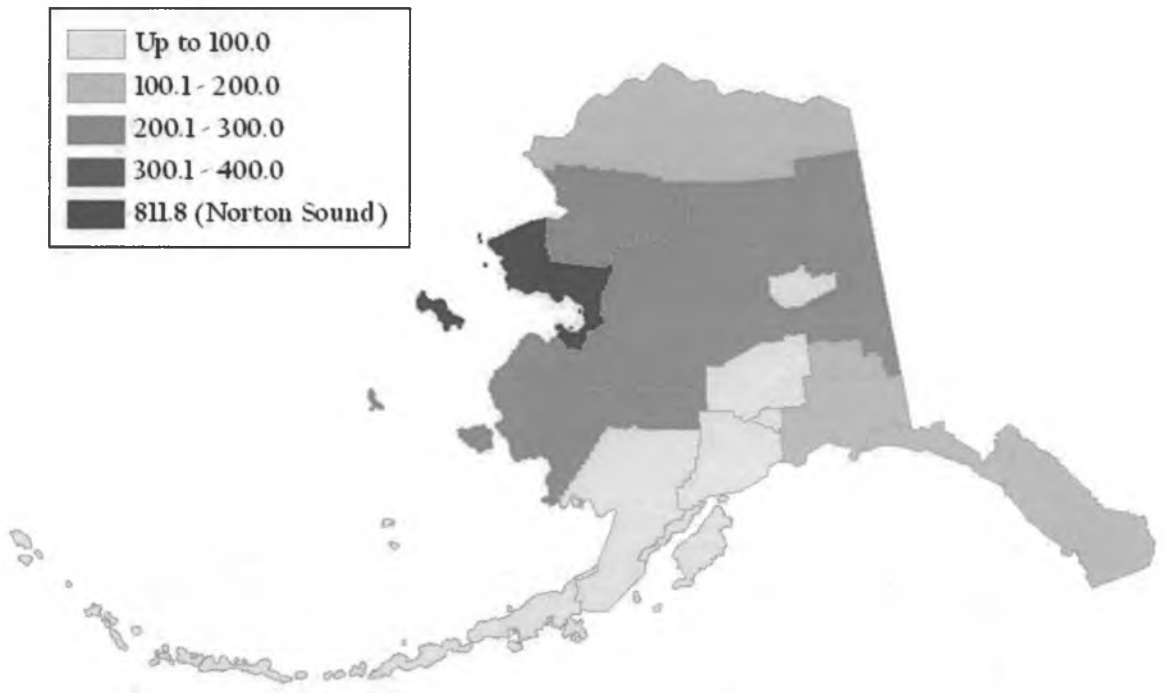
Suicide Attempts

The number of attempted suicides is just as important as completed suicides. The Alaska Department of Health and Social Services tracks this information through the Alaska Trauma Registry. In 2007 (the most

[29] Analysis of unemployment rates and suicide rates for 2000-2008 was conducted by Alaska Mental Health Board staff.

recent year's data available), the suicide attempt rate was 99.3/100,000 people.[30] That's nearly five attempted suicides to each completed suicide.

In 2007, the Norton Sound area (Nome, St. Lawrence Island, and the Seward Peninsula) had the highest rate of non-fatal suicide attempts. That same year, Fairbanks, Anchorage, Mat-Su and the Aleutians had a rate of less than 100 non-fatal attempts per 100,000 people.



Statewide Rate of Non-Fatal Suicide Attempts - Total Population, 2007 - 99.3 per 100,000

Source: Alaska Division of Public Health

Depression and suicidal ideation occurs with alarming frequency among Alaska's high school students. This information is collected every two years through the Youth Risk Behavior Survey, an anonymous survey developed by the Centers for Disease Control and Prevention. In 2009, the survey was administered in alternative high schools as well as traditional high schools. The information was alarming.

[30] Data provided by the Alaska Trauma Registry, Division of Public Health.

2009 Youth Risk Behavior Survey Data

2009	Traditional High Schools % of students surveyed	Alternative High Schools % of students surveyed	National Average % of students surveyed
Depression, hopelessness	25.2%	37.5%	26.1%
Considered attempting suicide in the past 12 months	13.9%	18.1%	13.8%
Attempted suicide at least once in the last 12 months	8.5%	11.3%	6.3%
Suicide attempt resulted in injury, poisoning, or overdose requiring medical treatment	2.6%	4.4%	1.9%

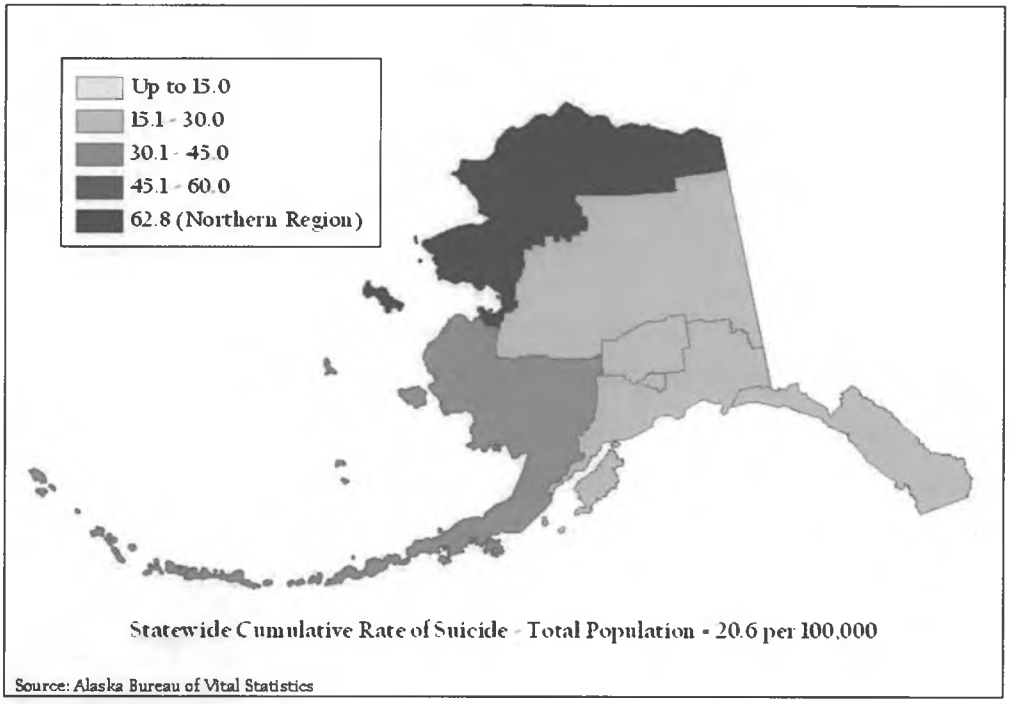
Alaska data provided by the Division of Public Health, Chronic Disease Prevention and Health Promotion (available online at http://www.hss.state.ak.us/dph/chronic/school/YRBSresults.htm).
National data reported by the Centers for Disease Control and Prevention, Morbidity and Mortality Weekly Report, June 4, 2010 (available online at http://www.cdc.gov/mmwr/pdf/ss/ss5905.pdf).

In 2009 Alaskan high school students, especially those attending alternative high schools, presented a much higher incidence of suicidal ideation, suicide attempts, and suicide attempts requiring medical treatment than students nationally.

What does the data tell us?

In 2009, more people died by suicide in the Anchorage area than any other region. However, rural Alaska had higher rates of suicide, indicating a more dramatic impact on communities. We typically look at the suicide rates by year, and measure from year to year whether it is getting better or worse. However, since some regions have a low number of suicides, we don't always have rates for every region. Also, looking year by year doesn't show the long-term effects of suicide on communities. If you look at the cumulative rate since 2001, the statewide rate remains consistent — 20.6/100,000 people. But the rate by region varies considerably.

Cumulative Crude Rate of Suicide by Alaska Department of Labor Economic Region per 100,000 Population, 2001-2009



Source: Alaska Bureau of Vital Statistics

The Alaska Trauma Registry reports data using different geographical regions than the census boroughs or economic regions used by the Alaska Bureau of Vital Statistics and Department of Labor and Workforce Development.

The 2001-2009 crude rate for the majority of the state is between 15.1 and 30 per 100,000 people. This is the case for the Anchorage area, where most of Alaska's population resides.[31] However, the rate for the Northern Region (which includes the North Slope Borough, Northwest Arctic Borough, and Seward Peninsula) is 62.8/100,000. Less than 5% of the state population lives in that region.[32] This is a good

[31] According to the Alaska Department of Labor and Workforce Development, the 2009 population for the Anchorage Mat-Su region was 374,902 (54% of the state population). Data available at http://laborstats.alaska.gov/?PAGEID=67&SUBID=247 .
[32] According to the Alaska Department of Labor and Workforce Development, the 2009 population for the Northern Region was 23,664. Data available at http://laborstats.alaska.gov/?PAGEID=67&SUBID=247 .

example of how looking solely at rates can be misleading. The number of people who died by suicide in that period of time in the Anchorage area was 626; in the Northern Region it was 152.[33] Again, we see that looking solely at rates — or solely at numbers — is not enough.

⌘⌘⌘

Suicide Prevention Efforts

In Alaska, suicide prevention efforts are supported by the State of Alaska, the tribal health system and Alaska Native Tribal Health Consortium, the federal government, and local communities. Some suicide prevention efforts are large-scale professionalized prevention programs. Others are community driven efforts staffed by volunteers.

Until 2009, very little effort was put into linking the state and tribal suicide prevention systems with other community efforts. Many prevention providers were unaware of other suicide prevention projects in other parts of Alaska. In FY2010, the Council and its partners, the Alaska Mental Health Board, the Department of Health and Social Services Division of Behavioral Health, the Advisory Board on Alcoholism and Drug Abuse, and others prioritized strengthening the connections between suicide prevention efforts. Thus, the Council can better report the scope of suicide prevention in Alaska (though is not yet able to comprehensively identify every suicide prevention program or project in the state).

Careline

Careline, located in Fairbanks, is the statewide suicide hotline. Careline's focus is the safety of the caller and helping the caller access appropriate services to preserve that safety. Careline partners with community mental health centers and clinicians statewide to ensure callers' mental health needs are appropriately addressed.

Careline offers telephone-based crisis intervention and online chat for people who would rather connect with a counselor that way. When someone calls in crisis, the trained counselor assesses the person's safety by identifying whether or not the person is at imminent risk of suicide.

In 99% of calls, the Careline counselors are able to provide effective interventions to keep the callers safe until they can access services they need. In the 1% of cases that are judged to be so acute that the caller is found to be in "imminent risk of death," Careline engages with local emergency services to provide immediate interventions to preserve the caller's safety.

[33] Data provided by the Bureau of Vital Statistics.

Careline provides prevention materials through its website, at community events, and through partners like the Council, Alaska Mental Health Board, and community coalitions. As an agency, Careline has used social media like Facebook to reach out to individuals and to link prevention providers to better serve people in crisis.

Careline reported a 55% increase in total call volume in the second half of FY2010, compared to the same period in FY2009.[34] Of calls received, 223% more involved suicidal ideation.[35] Careline staff attributes this increase in suicide-related calls to increased outreach through partnerships with the Alaska Native Tribal Health Consortium, Alaska Mental Health Trust Authority, NAMI chapters, military Family Advocacy Centers, and statewide outreach efforts. A 23% increase in calls involving addiction and a 54% increase in calls from individuals experiencing mental illness occurred in this same time period.[36]

Careline has received state funding from the Department of Health and Social Services and the Alaska Mental Health Trust since 2006.

Suicide Prevention ~ State Funded

In FY2010, the Department of Health and Social Services made 28 grants totaling $2,663,743 for suicide prevention. These grants were funded with General Funds, receipts from the Alcohol Excise Tax, and federal grant funds received by the State of Alaska. While many more comprehensive community prevention grants were made to address substance abuse, violence, etc. — all contributing factors to suicide — only 28 grants targeted suicide (in whole or in part). Grantees in FY2010 included:

- Juneau School District (Juneau, Douglas)
- Iditarod School District (McGrath)
- Central Peninsula Hospital (Kenai)
- Big Brothers Big Sisters (Fairbanks, Juneau, Sitka)
- City of Nulato (Nulato)
- Mt. Edgecumbe High School (Sitka)
- Mat-Su Health (Palmer, Wasilla)
- PeaceHealth (Prince of Wales Island)
- Stone Soup Group (Statewide)

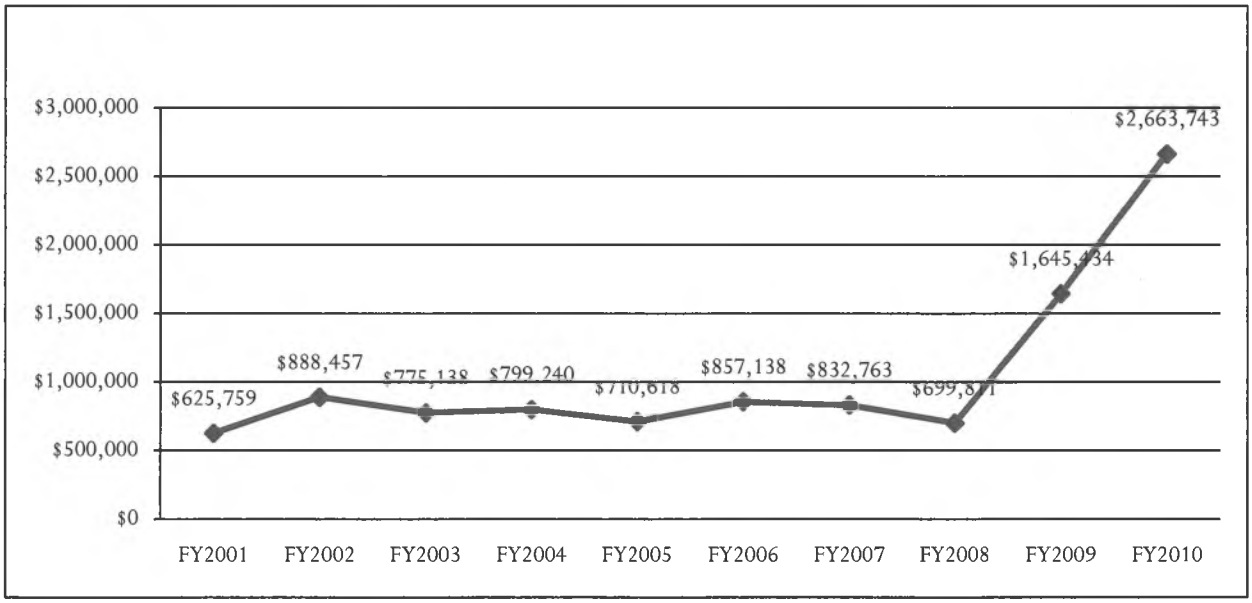
Examples of suicide prevention projects funded through these grants include community coalitions, creation of community resources, public education and outreach. The Juneau School District (which has received grant funding since FY2008) has implemented a school-based screening and intervention program using the Signs of Suicide Prevention Program. This is an evidence based prevention program that addresses depression, suicide risk, and self-harm. Of Juneau alternative high school students screened in September 2009, 40% met the diagnostic criteria for major depression.[37] In the two traditional high schools, 23% and 31% of students screened presented with characteristics of a major depressive episode and/or suicidal ideation. In Juneau, the grantee has added additional interventions and referrals to address contributing factors like poverty, domestic violence, and access to health care to provide a more comprehensive

[34] Data reported by Careline Executive Director Kimberlee Jones to the Statewide Suicide Prevention Council, August 24, 2010.
[35] Data reported by Careline Executive Director Kimberlee Jones to the Statewide Suicide Prevention Council, August 24, 2010.
[36] Data reported by Careline Executive Director Kimberlee Jones to the Statewide Suicide Prevention Council, August 24, 2010.
[37] Reported by Juneau Douglas School District for FY2010.

response to students at risk for suicide. In cooperation with the local suicide prevention task force, the grantee created a valuable internet-based community resource guide: JuneauSuicidePrevention.org.

Since 2001, the State of Alaska has invested over $10 million in suicide prevention. Funding remained consistent from year to year, until 2009 when available grant funds were substantially increased. This was made possible by the State of Alaska's receipt of a Garrett Lee Smith Grant from the federal government.[38]

Cumulative Suicide Prevention Grants Funded by State of Alaska, FY2001-FY2010



The distribution of grant funds has changed over the last ten years. Before 2006, large numbers of communities received small grants of less than $20,000 per year to engage in community driven suicide prevention efforts.[39] These small grant projects included Alaska Native culture camps, "alternative activities" that promoted healthy relationships between adults and youth, community wellness and suicide prevention coalitions, and a natural helper programs for youth in the Lower Yukon School District.

Since FY2006, the number of grantees has dropped steadily as the amount of the awards has risen. In FY2001, grants were made to 48 communities. In FY2010, only 28 grants were made, even though **four times as much money** was available for grants.

Beginning in FY2006, the Department of Health and Social Services adopted a funding mechanism that blended and braided multiple funding streams available for prevention programs and implemented the

---

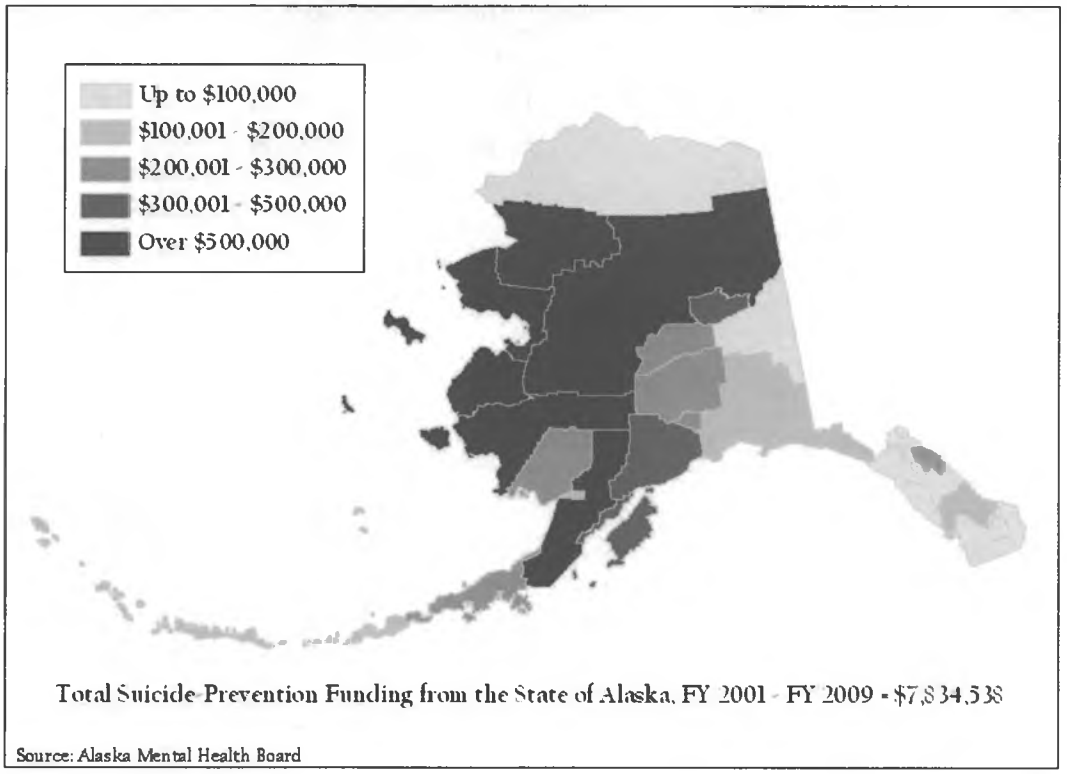
[38] $1.5 million was awarded by the Substance Abuse and Mental Health Services Administration to the State of Alaska, payable in $500,000 increments over three years (2008-2010).

[39] For a full list of grantees between 2001 and 2009, see "Suicide Rates, Prevention Funding, and Prevention Efforts in Alaska," Legislative Research Report (November 12,2010) at Attachment D (available online at http://archives2.legis.state.ak.us/PublicImageServer.cgi?lra/2011/11-015m.pdf).

Strategic Prevention Framework model established by the federal Substance Abuse and Mental Health Services Administration. This model is a public health model that emphasizes community readiness and planning, as well as outcomes, in prevention efforts. Community collaborations are a major part of prevention projects funded under the Strategic Prevention Framework model. This model is more complicated than what was previously used (before FY2006), and requires more from grant writers and managers, as well as community coalitions and partnerships, than the previous structure.

With the evolving funding mechanisms, and the move to a more competitive grant process in FY2006, the distribution of funding has depended more on communities' sophistication in grant writing and management — and their willingness to apply for funding. The map below shows how this funding has been distributed from FY2001-FY2009.

Suicide Prevention Funding from the State of Alaska, by Borough and Census Area FY2001-FY2009



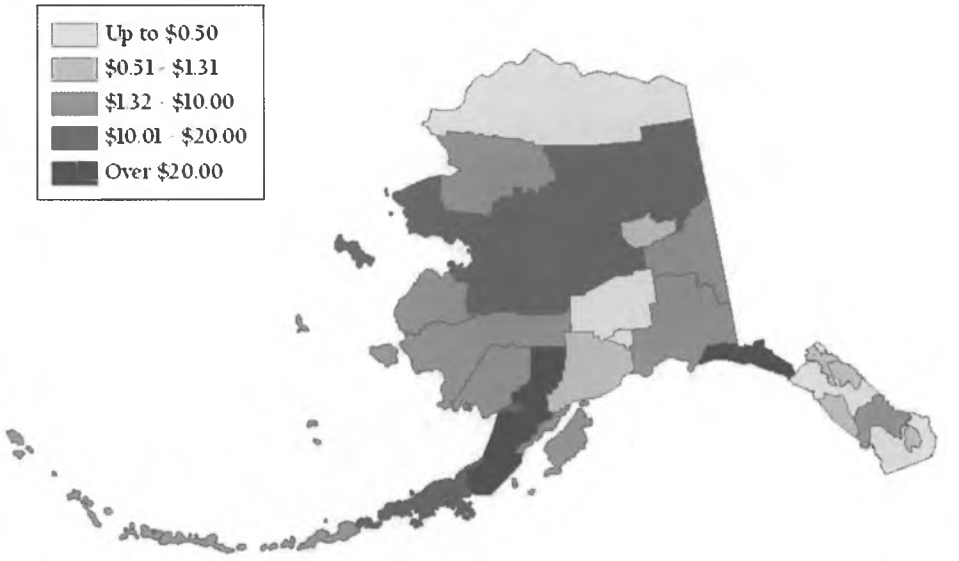
Source: Alaska Mental Health Board

Because not all communities apply for suicide prevention grants, not all regions receive suicide prevention funding from the State of Alaska. Between FY2001 and FY2009, the State of Alaska spent $1.31 per capita per year on suicide prevention.[40] Annual per capita per year spending ranged from $0.08 per capita — in

[40] Average annual per capita numbers were calculated by dividing each geographic area's nine-year funding total by the corresponding nine-year population total. The State of Alaska provided $7.8 million in suicide prevention grants between FY2001 and FY2009. The denominator in this equation is 5,964,093, the sum of the statewide population figures from each of

the North Slope Borough (which received the benefit of less than $5,000 in suicide prevention funding from statewide projects like Careline over this time period), Municipality of Anchorage, Hoonah-Angoon Census Area, and Municipality of Skagway — to $35.24 per capita in the Lake and Peninsula Borough.

Annual Per Capita Suicide Prevention Funding from the State of Alaska, by Borough and Census Area FY2001-FY2009



Annual Statewide Per Capita Suicide-Prevention Funding from the State of Alaska, FY 2001 - FY 2009 = $1.31

Sources: Alaska Mental Health Board; Department of Labor and Workforce Development

Analysis[41] of the distribution of suicide prevention funding shows that incidence is not clearly affected by the amount of funding received. Between FY 2001 and FY 2009, grantees in the Southwest Region received $2.6 million in grant funds (approximately one-third the total provided by the State of Alaska). That region had the second-highest cumulative suicide rate during the same period. However, funding peaked in FY2004 (the year when the region experienced its highest suicide rate of 67.9/100,000). Since FY2005, funding has decreased annually. This region received only $72,931 in FY 2009. Incidence of suicide has come down in the Southwest Region from its peak in FY2004 (during years of decreasing funding), though the rate is still twice the statewide average.

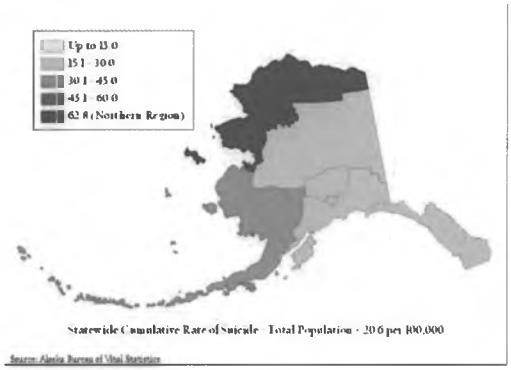
Grantees in the Interior Region received $1.6 million (20% all funding provided by the State of Alaska) in suicide-prevention funding between FY 2001 and FY 2009. Grants averaged about $100,000 per year from FY 2001 to FY 2005. The average from FY2006 to FY2008 was about $180,000 per year. In FY 2009, the

---

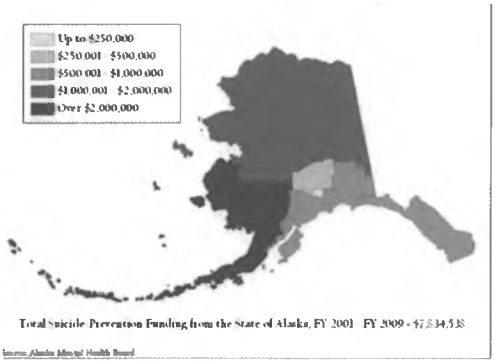
the nine years in the study period. Dividing the former number by the latter gives us $1.31. This means that the State of Alaska distributed the equivalent of $1.31 annually for every Alaska resident between FY 2001 and FY 2009.

[41] Analysis provided by Brian Laurent, former research analyst with the Alaska Department of Labor and Workforce Development and MPA candidate at Boise State University. Because FY2010 grant information was not available until December, 2010, it was not available at the time the analysis was performed.

Cumulative Crude rate of Suicide by Department of Labor Economic Region, FY2001-FY2009



Suicide Prevention Funding from State of Alaska by Department of Labor Economic Region, FY2001-FY2009



$580,989 in grant funds went to the Interior Region. The suicide rate in this region was lower than the statewide rate between 2002 and 2007. In 2008, it spiked to 30.7/100,000 people. In 2009, it fell to 13.8 /100,000 people.

In the Northern Region, which had the highest cumulative suicide rate between 2001 and 2009, grantees received 18.8% of total funding from the State of Alaska ($1.5 million). The amount of grant funding received fell by 37.2% in FY2008 and 51.6% in FY2009, when grantees in this region received $70,500 (the lowest in the state outside of Anchorage).[42]

Funding in the Southeast Region was consistent from FY 2001 to FY 2008. Average annual funding was about $41,000. In FY 2009, grants to the region totaled $406,247 (more than the previous eight years combined). The suicide rate in the Southeast Region increased from 2001 to 2009. Between 2001 and 2006, the rate was between 8.4 and 18.1/100,000 people (below the statewide average). The suicide rate since 2006 has ranged from 23.1 to 27.4 per 100,000/people.

Further detail and disparities can be discerned in an analysis of funding by the smaller regional designations used by the Department of Health and Social Services. For example, the department of Labor's "Northern Region" includes the North Slope and Northwest Arctic boroughs, and the Norton Sound Region. The Norton Sound Region had extreme rates of non-fatal suicide attempts suicide in 2008 and 2009, specifically in the Alaska Native community. This region received close to $900,000 between FY2001 and FY2009. Conversely, the North Slope Borough, with a suicide-attempt rate close to double the statewide average, received less than $5,000.[43]

Suicide Prevention ~ Federally Funded

Seventeen tribal organizations received prevention grants from the Indian Health Service as part of the Methamphetamine and Suicide Prevention Initiative. These grants, totaling over $5 million over three years) were funded as part of the 2009 Recovery Act. The intent of these grant programs is to expand

[42] The Municipality of Anchorage received no suicide prevention grant funds from the State of Alaska in FY 2009. The only grant awards that went to Anchorage between FY2001 and FY2009 were part of larger statewide grants. It received no specifically allocated funds during this period. All funds attributed to the region were apportioned, based on population, from statewide suicide prevention grants.

[43] Like the Municipality of Anchorage, none of the North Slope Borough's suicide prevention funds were to grantee organizations in the borough. All were apportioned, based on population, from statewide grants to organizations like Careline.

community prevention efforts to reduce methamphetamine use and incidence of suicide. Grantees include the Alaska Native Tribal Health Consortium, Southcentral Foundation, Maniilaq Association, Ketchikan Indian Community, Arctic Slope Native Association, Chugachmiut, Bristol Bay Area Health Corporation, and others.

Photograph courtesy of Southcentral Foundation

These grants have funded a variety of projects. Southcentral Foundation is using its grant for the Lead the Change project, a contest that provides outreach, awareness, and education and technical assistance to help youth produce short video messages focused on protective factors that reduce risk for suicide. Rather than a stark suicide prevention message, videos focused on positive aspects of life and hopefulness. The FY2010 winner was a team of youth from Wendler Middle School in Anchorage.

In addition to the current IHS Methamphetamine and Suicide Prevention Initiative grantees, several tribal organizations have received federal Garrett Lee Smith funding. As mentioned above, Maniilaq in the Kotzebue region was awarded a three year Garrett Lee Smith Grant in 2006, which supported a digital storytelling project for students in schools in twelve regional villages and efforts to improve suicide prevention practices in local agencies.

Kawerak, Inc. in the Norton Sound region also received a three year Garrett Lee Smith Grant in 2008. It is funding the Bering Strait Suicide Prevention Program, focusing on all youth age 12-18 and young Alaska Native men age 19-30 in the region's 15 villages. This prevention program includes a "Peer Helpers" project to provide peer support for youth.

Southcentral Foundation received a three year Garrett Lee Smith Grant in 2009. The grant will fund a screening, referral, and case management program targeting high risk Alaska Native youth age 10-24. Suicide prevention and intervention training and youth engagement in media outreach and awareness campaigns are also anticipated.

Suicide Prevention ~ Tribal Health

Tribal health organizations all over Alaska have worked to prevent suicide among their client/customer populations. Along with individual tribal health organizations, the Alaska Native Tribal Health Consortium (ANTHC) has been engaged in ongoing efforts to reduce suicide among Alaska Native peoples. These include a Suicide Prevention Initiative begun in 2009, ongoing suicide prevention and intervention training

(discussed below), assisting regional tribal health organizations with community readiness, and projects to reduce access to "lethal means" (guns, etc.) of suicide. Examples of these efforts are described below.[44]

Bristol Bay Area Health Corporation (BBAHC), a tribal health organization serving Dillingham and 34 regional villages, developed a gun locker program in partnership with ANTHC and the local housing authority. BBAHC targeted access to guns as a "lethal means" of suicide, because firearms are involved in 2/3 of suicides by men in Alaska.[45] In the course of this project, BBAHC has installed over 300 gun safes in homes throughout the region.[46]

In FY2010, ANTHC and its partners worked to develop a culturally relevant postvention resource for Alaska Native peoples. *Doorway to a Sacred Place* is a tool for communities after a suicide or other tragedy has occurred. It incorporates traditional ways of knowing to provide resources for healing — which in turn can prevent suicide contagion, or the domino effect of suicides that so many rural communities have experienced. *Doorway to a Sacred Place* is expected to be finalized and ready for use in FY2011.

Southcentral Foundation offers a suicide prevention program called Denaa Yeets' — "Our Breath of Life" in Athabascan. This program provides case management, information and referrals to services to Alaska Native adults who are at risk of suicide. Denaa Yeets' also provides supportive services to the family members of clients.

Suicide Prevention ~ Training

There are multiple prevention and intervention models available in Alaska. Training is provided through the State of Alaska, ANTHC, and other organizations.

ASIST, which stands for Applied Suicide Intervention Skills Training, is an evidence based suicide prevention model used all over the world. ANTHC has supported trainings throughout the tribal health system in Alaska. At the end of FY2010, there were 585 Alaskans who had been trained in the ASIST model. Communities like Barrow have emphasized training in identifying warning signs of suicide and appropriate responses and referrals.

ASIST Training in Barrow
Photograph courtesy of Audrey Suganna

CISM, Critical Incident Stress Management, is another suicide prevention model. It is most effective after a suicide or other tragic event. The Alaska Police and Fire Chaplain's Ministries, as well as other organizations offer training in this model. CISM is a comprehensive model that focuses on how individuals and communities can debrief and react to a suicide or other crisis in a healing way. By partnering together, organizations have expanded the

[44] Contact the Injury Prevention Program at the Alaska Native Tribal Health Consortium (907-729-3799) for a more comprehensive review of tribal health organizations' suicide prevention efforts.

[46] Reported to the Statewide Suicide Council by Eric Holland, deputy director of Behavioral Health, BBAHC, November 13, 2009.

reach of this model. For example, ANTHC, the Chaplain's Ministry, and the Arctic Slope Native Association partnered to train 50 individuals in CISM in FY2010. Participants included public safety officers and behavioral health providers.

Gatekeeper is another suicide prevention and intervention model. Training in this model is offered by the State of Alaska through the Division of Behavioral Health, Department of Health and Social Services. Anyone can be trained as a Gatekeeper. The model focuses on teaching people to listen and connect with someone, assess that person's risk for suicide, and act appropriately when someone is in crisis. Gatekeeper trainings include a basic overview of suicide, active listening skills, how to assess someone's risk of suicide, and how to be comfortable intervening to keep someone safe. Knowledge of local and statewide resources is also provided, to help Gatekeepers make referrals to the right services when someone is in need.

⌘⌘⌘

Council Activities

The Council held meetings in Dillingham, Anchorage and Toksook Bay in FY2010. At all of these meetings, extensive public comment was provided to council members. Council members have characterized the Toksook Bay meeting in May, 2010 as one of the most meaningful and informative meetings held so far. Not only was much of the meeting held in Yupik (with English translation), but a significant amount of time was spent listening and learning from the local elders.

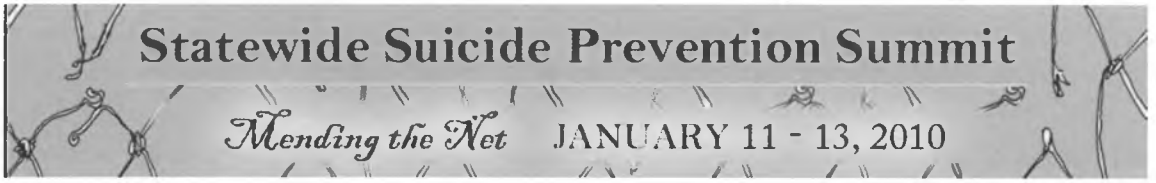
Photographs courtesy of Teri Tibbett

The Council provided anti-stigma and public education materials to communities around the state and online. In addition to conducting regular business, the Council worked with the Division of Behavioral Health, the Alaska Mental Health Board, and the Advisory Board on Alcoholism and Drug Abuse to develop a transition plan for co-locating the Council with the Boards beginning in FY2011.

The Council's major achievements, however, involved extensive efforts to identify and connect suicide prevention stakeholders to "mend" and strengthen the suicide prevention system "net." These efforts, the first ever Suicide Prevention Summit in January 2010 and the development of the web portal StopSuicideAlaska.org, were only possible because of the Council's partnerships with the Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, and the Alaska Mental Health Trust.

Alaska Suicide Prevention Summit

In January, 2010 the Statewide Suicide Prevention Council and the Alaska Native Tribal Health Consortium partnered with several state agencies to convened the first ever Alaska Suicide Prevention Summit (Summit). More than 60 individuals, representing agencies and communities statewide, gathered to review and assess the state of Alaska's suicide prevention system and to determine what immediate, short-term and long-term steps can be taken to strengthen the system.



The tribal health system and state-funded health system both support suicide prevention efforts in Alaska. Often these suicide prevention systems operate along parallel tracks rather than in concert. The Summit was the first time that the tribal health suicide prevention system and the state-funded suicide prevention system have come together to identify their unique and common strengths, and how together these systems could build upon those strengths to fill in the gaps in our suicide prevention efforts overall. The Summit started a more collaborative partnership between the tribal and state prevention systems, to begin to have a more meaningful impact on Alaska's suicide rate.

Summit participants identified the strengths and weakness of the suicide prevention systems in Alaska. **Partnerships**, where they occur, between the state and tribal suicide prevention systems were identified as strengths. After the Summit, the level of cooperation between tribal and state entities, as well as other stakeholders, has increased dramatically:

- ANTHC, Southcentral Foundation, and NAMI-Anchorage are partnering to form and host a support group for survivors of suicide in Anchorage.

- SSPC, ANTHC, the Alaska Mental Health Board, the Alaska Mental Health Trust, non-profit organizations, and many survivors of suicide partnered in advocacy to secure funding for suicide prevention, postvention, and technical assistance. Through this partnership, an increment of $200,000 general funds per year was appropriated for postvention funding.
- Alaska Children's Services and the Alaska State Troopers are partnering to deliver Gatekeeper training to state troopers statewide between 2010-2012.
- The Alaska Federation of Natives identified suicide and suicide prevention as a major focus of the 2010 convention.

Photograph courtesy Thomas Chard

Summit participants identified many different avenues of **health promotion** that is now or could more fully be part of suicide prevention efforts. These include a wide range of efforts undertaken at the individual, community, and state levels. Elders and cultural leaders model healthy lifestyles and encourage connections with youth to foster leadership and growth. Depression and substance abuse screening in clinics and other primary care settings, like Anchorage Neighborhood Health Center, help people access treatment and recovery services before they are in crisis. This is an especially effective model for rural and older populations. The tribal health system offers many health promotion programs that help Native Alaskans and people living in rural communities. These include primary and dental health programs, as well as substance abuse prevention and overall wellness programs. These services are culturally appropriate for the target populations. The Rural Human Services program provides culturally relevant education for the behavioral health aides, family service workers, and other human services providers in Alaska's villages and rural communities. This helps expand the wellness promotion services available throughout the state.

Summit participants identified the power of **young Alaskans** as a strength. The Statewide Suicide Prevention Council includes a youth member with full voting privileges. The new youth suicide prevention effort coordinated by Central Council of Tlingit and Haida Indians has a youth advisory board. These are just two examples of how suicide prevention organizations reach out to and include the perspectives of young people in their work.

Current suicide prevention efforts were also identified by Summit participants as system strengths. Some are evidence based practices implemented in clinical settings, some are community based, and some are built on other models. **School-based screenings** of students, like the model in Juneau discussed above, are an effective way of identifying children at risk of suicide before they are in crisis. In some districts, there are student clubs and support groups related to mental wellness that help de-stigmatize mental illness and the seeking of help for a crisis.

Community coalitions involve partnerships between local agencies and individuals interested in preventing suicide emphasize the importance of diverse stakeholder participation. They include multi-disciplinary collaborations between public health, primary care, and behavioral health systems. Since the Summit, a new coalition – SPEAK – has formed in Ketchikan and is an active part of the community's larger wellness coalition.

Careline, Alaska's 24/7 crisis call line, was identified as a strength. Careline and the Alaska Native Tribal Health Consortium offer dynamic and information web pages with prevention resource information. The Juneau Suicide Prevention Task Force and SPEAK in Ketchikan have equally effective webpages with local information and resources. All of these websites link back to each other, to help make sure people can access all the information they need. The Anchorage gay, lesbian, bisexual organization, Identity, Inc., provides a toll-free helpline.

Both the tribal and state systems emphasize the importance of **locally developed prevention solutions**, to ensure that each community has a relevant and respectful way of addressing the problem of suicide as it occurs in their community. The wide availability and acceptance of ASIST, CISM, Gatekeeper, and other suicide prevention and intervention models were identified as strengths. The Rural Human Services program includes a suicide prevention curriculum. The Alaska National Guard is a partner in providing ASIST trainings in communities statewide.

While many strengths were noted, weaknesses and gaps were also identified. Few Alaska communities have an active **support groups for survivors of suicide**. Survivors of suicide can find support groups in only six of the 143 communities: Anchorage, Barrow, Bethel, Fairbanks, Juneau, and Wasilla. Not all of these meet regularly. There are two active support groups and one developing support group in Anchorage, where the largest number of suicides occur each year. In the four census areas with suicide rates of 30 or more per 100,000 people, there are only two communities with support groups for survivors of suicide (Barrow has an active group and Bethel is developing a group). In the Nome census area, where the rate has been the highest, there are no active support groups for survivors of suicide. Increasing access to support for survivors, whether in person or through other means, was identified as a next step for participants and the state as a whole.

Many different models for support services are available, based on specific community needs and capacity. Cultural healing circles help individuals, families and communities deal with the feelings that come immediately after a loss to suicide. They also can provide ongoing support to survivors of suicide. Fairbanks Counseling and Adoption developed the structure for the Fairbanks group directly with participants to ensure that the group provides meaningful support and assistance to people who attend.

Summit participants spoke often of suicide as a taboo subject in families and communities. The pervasiveness of this silence on the issue of suicide was reflected in experiences individual and communal, in public and private space. Family members' deaths left unexplained for generations, ostracism of survivors, suicide deaths listed as accidental by local physicians, media outlets avoidance of even the term "suicide" – these are just a few of the ways that the long-standing culture of silence weakens the suicide prevention system. Contributing to the social norm that suicide is not a subject openly discussed is the fact that, in

many communities, the lack of confidentiality presents an obstacle to developing trust necessary to seek services. Stigma and labeling of both the person who has committed suicide, as well as those affected by the loss to suicide, further impairs access to services and their effectiveness.

Since the Summit, the number of public forums to discuss suicide and its impact on Alaska's communities and families has exploded. Media coverage in newspapers large and small, and by television news programs, has also increased. State and federal policymakers have taken greater interest in the state of the suicide prevention system in Alaska.

IF, FOR NOTHING ELSE, FY2010 IS RECOGNIZED AS THE YEAR THE COUNCIL HELPED ALASKANS END THE SILENCE ABOUT SUICIDE, IT WILL HAVE BEEN A SUCCESSFUL YEAR.

Summit participants identified a lack of cohesion among the different prevention systems (tribal, faith-based, state, federal, local) as a weakness. Efforts to bridge the gaps between these systems were begun immediately after the Summit, and continue today. Other weaknesses included:

- Lack of support services for populations made vulnerable by loss of structure (veterans, transition age youth, immigrants, individuals displaced due to economic or environmental hardships);
- Lack of effective prevention and intervention programs to address bullying;
- Lack of age appropriate services for individuals age 18-25 years;
- Lack of follow up services for individuals who have attempted suicide; and
- Lack of communication among and support for suicide prevention providers.

The Council, along with the Alaska Mental Health Board, prioritized the lack of communication among and support for suicide prevention providers as a weakness that could be addressed in FY2010. Together, they implemented initiatives to improve "net"-working among suicide prevention providers statewide.

StopSuicideAlaska.org

The Alaska Mental Health Board had in, 2009, successfully advocated for a one-time increment of $75,000 in Alaska Mental Health Trust receipts for a web-based suicide prevention resource. This funding, with the input from the Summit, led to the development of StopSuicideAlaska.org.

StopSuicideAlaska.org is not a website. It is a web portal that provides a forum for community groups and stakeholders to come together, share information and ideas, and support each other in suicide prevention efforts. Design and content development was the focus for FY2010, with StopSuicideAlaska.org going live in FY2011.

Given the time necessary to develop and launch the suicide prevention web portal, a companion page for StopSuicideAlaska.org was created on Facebook. Like Careline, the Council has begun to use social media outlets like Facebook to improve outreach efforts and strengthen communication with stakeholders.

Set up in May, 2010, the StopSuicideAlaska.org page on Facebook had nearly 100 members by the end of June (it now has 275 members from all over Alaska). Research, data, news, upcoming events, and words of strength and support are now constantly streaming to stakeholders through these online resources.

Outreach and Education

The Council receives a small grant from the Alaska Mental Health Trust for anti-stigma efforts. In FY2010, this funding supported print media based awareness ads. The Council also provided education, materials, and in-person discussion at a booth at the Alaska Federation of Natives convention (October, 2010). Council members spoke at regional and community events to help raise awareness about suicide, its warning signs, and the effect it has on the people left behind. Council member Barbara Franks coordinated the National Survivors of Suicide day event at the University of Alaska Anchorage in November 2009 (the second survivors' event at UAA).

⌘⌘⌘

Looking Ahead

After a year spent assessing the suicide prevention system, gathering stakeholders together, and identifying its own resources, the Council is ready to look forward at the next five (or even ten) years. Council members will use all the public comment received, the information from the Summit participants, as well as the data and information compiled and reported on here to develop a true state suicide prevention plan for Alaska. That plan will include strategies and recommendations for the State of Alaska, as well as communities and individuals, to prevent suicide.

With the August 2010 hire of a full-time assistant, and the co-location with the advisory boards most closely related to the issue of suicide, the Council can now maximize its resources to better serve the people of Alaska. Strengthening relationships with the tribal suicide prevention system, as well as non-traditional partners like law enforcement and members of the clergy, will ensure that the work of the Council stays fresh and relevant. With the help of the Governor's Office, the Council has begun active recruitment of diverse and energetic candidates for membership. Use of social media, the StopSuicideAlaska.org web portal, and other easily access communication channels will provide ongoing information and feedback from the public — and ensure that the Council stays connected to the people it serves.

⌘⌘⌘

Conclusion

This Annual Report is offered to inform Alaskans about the problem of suicide in our state, and to show how many people all over the state are working very hard to prevent suicide. A substantial financial investment in suicide prevention is being made by the State of Alaska, tribal health organizations, and the federal government. An even greater personal, emotional and spiritual investment is being made by each and every Alaskan dedicated to preventing suicide. And yet, Alaska still experiences suicide at a rate twice the national average.

We hope that this Annual Report starts conversations — in the Legislature, in classrooms, in assembly chambers, in doctors' offices, and in living rooms — about how we can better prevent suicide. The Council deliberately avoided coming to conclusions or providing answers in this report. Instead, we invite you to join us as we plan for the future and share the message that every life is valuable across Alaska.

APPENDIX A

STATUTORY AUTHORITY

AS 44.29.300 Council Established

(a) There is established in the Department of Health and Social Services the Statewide Suicide Prevention Council, consisting of 16 members, as follows:

(1) two members of the senate, appointed by the president of the senate, one of whom shall be a member of the majority and one of whom shall be a member of the minority;

(2) two members of the house of representatives, appointed by the speaker of the house of representatives, one of whom shall be a member of the majority and one of whom shall be a member of the minority;

(3) 12 members appointed by the governor, as follows:

(A) two persons who are employed in the executive branch of state government, one of whom shall represent the Department of Health and Social Services and one of whom shall represent the Department of Education and Early Development;

(B) one member of the Advisory Board on Alcoholism and Drug Abuse;

(C) one member of the Alaska Mental Health Board;

(D) one person recommended by the Alaska Federation of Natives, Inc.;

(E) one person who is an employee of a secondary school;

(F) one person who is active in a youth organization;

(G) one person who has experienced the death by suicide of a member of the person's family;

(H) one person who resides in a rural community in the state that is not connected by road or the Alaska marine highway to the main road system of the state;

(I) one person who is a member of the clergy;

(J) one person who is enrolled in grade nine, 10, 11, or 12 of a secondary school in the state; and

(K) one public member.

(b) Members of the council appointed under (a)(1) and (2) of this section are nonvoting members.

AS 44.29.310 Term of Office

(a) The governor shall appoint the members of the council under AS 44.29.300(3)(D) - (J) for staggered terms of four years.

(b) The governor shall fill a vacancy of a member on the council appointed under AS 44.29.300(3)(D) - (J) by appointment for the unexpired part of the vacated term.

(c) Members of the council serve at the pleasure of the governor. The governor shall replace a member who, by poor attendance or lack of contribution to the council's work, demonstrates ineffectiveness as a member. In this subsection, "poor attendance" means the failure to attend three or more consecutive meetings.

AS 44.29.330 Officers and Staff

(a) The council, by a majority of its membership, shall annually elect a presiding officer and other officers it considers necessary from among its membership.

(b) The council may employ a coordinator to assist the council. The coordinator is in the partially exempt service. The coordinator shall be directly responsible to the council in the performance of the coordinator's duties. The council shall annually review the performance of the coordinator.

(c) The council may appoint an advisory panel to provide further advice on suicide prevention. The advisory panel serves at the pleasure of the council. Members of the advisory panel are not entitled to compensation, per diem, or reimbursement of travel expenses.

AS 44.29.340 Meetings

(a) The council may meet and vote, by teleconference or otherwise, as often as considered necessary by the presiding officer of the council.

(b) Seven voting members of the council participating in a meeting in person or by teleconference constitute a quorum for the transaction of business and the exercise of the powers and duties of the council.

AS 44.29.350 Duties

The council shall serve in an advisory capacity to the legislature and the governor with respect to what actions can and should be taken to

(1) improve health and wellness throughout the state by reducing suicide and its effect on individuals, families, and communities;

(2) broaden the public's awareness of suicide and the risk factors related to suicide;

(3) enhance suicide prevention services and programs throughout the state;

(4) develop healthy communities through comprehensive, collaborative, community-based and faith-based approaches;

(5) develop and implement a statewide suicide prevention plan;

(6) strengthen existing and build new partnerships between public and private entities that will advance suicide prevention efforts in the state.

AS 44.29.360 Annual Report

The council shall annually report its findings and recommendations in a report to the governor, the president of the senate, and the speaker of the house of representatives by March 1 of each year.

2/02/11 PRESENTA-TION: DENALI FAMILY SERVICES

<TARGET><BILL></BILL><SUBJECT>2-02-11 PRESENTATION DENALI FAMILY SERVICES</SUBJECT><COMM>SHSS27</COMM></TARGET>

More about Denali Family Services
&
Little Steps Preschool

Brief History of the Organization

Denali Family Services (DFS) was incorporated in May 1995 as *Alternatives Child and Family Guidance Clinic.* At that time, the agency operated as an outpatient psychological and psychiatric provider with a child protection visitation program. In December of 1995, Denali Family Services was accepted as an Alaska Youth Initiative (AYI) provider. As an AYI provider, DFS was allowed to serve the most acute children with mental illness residing outside of psychiatric residential settings. By 1996, the agency grew from approximately 15 employees to 98 employees and provided wrap-around services for the "severely emotionally disturbed" (SED). In 1997, DFS became a child placement agency with the ability to recruit, license, train, and supervise foster homes and place children in those homes. In 2002, the agency joined in a partnership with Life Quest to provide therapeutic foster care services for that agency's AYI clients. Also, in July 2002, *Alternatives* changed its name to *Denali Family Services* to better communicate to the community the focus of its services. Denali's mission is "Supporting Children and Families through Individualized Community Based Services."

Denali Family Services (DFS) provides mental health rehabilitation services from a wrap-around model to approximately 300 clients at any one time. Approximately half of the clients we serve are under the age of twelve, with the remaining 50% in the adolescent range, particularly older teens who are aging out of the system and for many there is no natural support network. DFS provides a full range of support services, which include all of the rehabilitation services, including psychiatric care. By providing such a wide array of supports within DFS, we are able to meet the mental health needs for most of the families within our agency through a unified team, without fragmentation of services. However, the transition from adolescence to adulthood

also marks, for many of our adolescents, a transition from one system of care to another and teens aging out of the system find themselves with little or no assistance in navigating the systems designed for adults.

DFS maintains an active foster care program, licensing treatment foster homes, placing children in those homes and working in partnership with the foster parents and the DFS clinical staff to ensure the child is making progress toward his/her treatment goals. The foster care program accepts a number of placements of children in OCS custody who are returning to Alaska after receiving residential treatment in the Lower 48. Denali Family Services believes in providing as much support as possible to foster parents. DFS is one of only a few agencies that provide liability insurance coverage for foster parents. Because the behaviors of the children placed in their homes can often become destructive, foster parents need a way to have some insurance covering loss to their home or household belongings due to the omission or commission of an act by a child placed in their home. This has been viewed by foster parents as an extremely positive benefit.

Finally, DFS operates a therapeutic pre-school, "Little Steps." The goal of this program is to provide a safe structured environment where children may work on developing social competency. Little Steps, located at 545 5th Avenue in Anchorage, provides developmentally appropriate activities for children ages twelve months through five years.

Little Steps Preschool is a licensed preschool dedicated to serving young children and their families. A part of Denali Family Services (DFS), the Center operates from 7:30 am to 5:30 pm, Monday through Friday year-round. This program is the only one in Alaska that accepts children meeting the criteria for *severely emotionally disturbed (SED)* as well as typically developing children and places special emphasis on their social/emotional development. In addition to the program director and teaching staff, Little Steps has a full-time, master's level clinician located at the preschool. In order for Little Steps to best meet the needs of all of the children, the program maintains low child to staff ratios. The program is currently licensed for 60 children, is operating at capacity and presently has a one-year waiting list.

Legislative request: A one year waiting list at Little Steps in Anchorage has prompted the agency to locate a larger facility and to find suitable space in the Valley where a similar waitlist exists without a Little Steps program in operation. Finding space that can be remodeled for a preschool at a reasonable cost and that will meet child care regulations is a challenge. DFS hopes to purchase a building in at least one of the two locations. We realize capital funding is limited and we are asking for assistance from the Legislature on a down payment – not on the total purchase.

Request amount: $400,000.

LITTLE STEPS PRESCHOOL

...A GUIDED TOUR

WHAT WE ARE

- "Little Steps" is a therapeutic preschool and the only early development program in the State serving both typically developing children and children who have been diagnosed with serious emotional issues.
- Little Steps is one of only six demonstration projects in the country utilizing the Pyramid project design for enhancing the learning environment for children.
- In addition to a high staffing ratio (1 staff for every 3 children), a clinician is on site fulltime.

The early years are the "critical" years.

- Our current site has the capacity to serve 60 children.
- We have a waiting list of almost 70 children in Anchorage.
- We have a similar waitlist in the Valley and are hoping to open a "Little Steps-too" in the summer of 2011.

United Way volunteers hung Bamboo blinds to add privacy for the children.

What makes Little Steps special?

- 12 AMAZING CLASSROOM TEACHERS
- A WONDERFUL COOK
- A SPUNKY ADMINISTRATIVE ASSISTANT
- AN ALL KNOWING CLINICIAN
- …AND OF COURSE OUR WEEKLY CONSULTATIONS WITH 'DR MIKE'

Classroom Break Down

- Little Steps has four classrooms:
  - 1 for 12-24 months old
  - 1 for 2-3 year olds
  - 2 for 3-5 year olds

1'S and 2'S classroom

2'S and 3'S classroom

Individualized plans & positive behavioral support : keys to positive growth & development

3-5 year old classroom

A recipe for success:

- A positive workforce
- Providing children with structure and resources for social and emotional development

Little Steps utilizes "evidence-based practice"

- Early childhood research has shown that learning problem solving techniques early lead to positive successes in school and as adults.

To serve the children in our communities, we need:

- To open a program in the Valley
- To double our capacity in Anchorage

Program Expectations....

Healthy, creative, enthusiastic learners who communicate effectively become responsible & ethical members of our communities!

COME VISIT US SOMETIME!!

Letter Requesting ACTION on (Alaska State) Senate Bill 3

Name: Scott Heyworth

Address: PO Box 100531

Anch. AK 99510

Phone Number: (907) 277-9981

Senate Bill 3, "An Act providing for funding for school lunch and breakfast," is sponsored by Senator Bill WIELECHOWSKI and 9 other Senators (including Majority leaders Johnny ELLIS, Bettye DAVIS, and Hollis FRENCH.) This bill will directly impact the lives of 10,000 Alaskan children by increasing the reimbursement rates for school lunches by 15 cents and school breakfasts by 35 cents. This is the second time WIELECHOWSKI has sponsored such a bill and as a citizen of the Great State of Alaska I ask that it be passed because . . .

We are the richest State in the U.S.A. - $40 Billion + Cash!!
Surely we can help feed our hungry children !! ??!!
Pass SB 3 this session! Please.

Thank you for taking my thoughts into consideration. **Yes, we "ARE" – ending child hunger in America!**

Alaska Department of Health & Social Services

Vision: *All individuals and families are healthy, safe & productive.* • **Mission:** *To promote and protect the health and well-being of Alaskans.*

Substance Abuse & Mental Health

Substance abuse and mental illness affect every family and community in Alaska. They are a contributing factor in suicides, crime, unemployment, domestic violence, child abuse, school dropouts, juvenile delinquency, emergency room visits, physical health, etc. We need to prevent, intervene early, treat and help people recover from substance abuse through public/private partnerships, performance-based standards and funding, and long-term strategies.

Major strategies include:

- Prevention and Health Promotion: Implement strategies to change common influences among children, youth, adults and communities to develop healthy attitudes, beliefs and behaviors. Target areas include underage drinking, binge drinking, heavy drinking, suicide, and domestic and sexual violence.
- Early Intervention: Integrate primary care with behavioral health (mental health and substance abuse); screen all youth in the juvenile justice system for substance abuse; universal screening for behavioral health conditions; implementation of general mental health services.
- Treatment: Develop and implement family-based treatment services; increase access to substance abuse services; implement involuntary treatment and secure detoxification services; ensure adequate response to behavioral health emergencies; increase use of tele-behavioral health; promote integration of behavioral health and primary care.
- Recovery: Support array of recovery services using performance-based standards and funding. Continue to integrate mental health and substance abuse services into a behavioral health system.

Health and Wellness

Many Alaskans lead less happy and less productive lives, and many die prematurely each year, because of disability and death caused by obesity, tobacco, alcohol abuse, injuries, diabetes, cancer, heart disease, and vaccine-preventable diseases. The economic impact of chronic disease alone in Alaska is staggering: an estimated $600 million is spent annually on direct medical services and $1.9 billion in lost productivity. Most of this is attributable to personal choice involving diet, physical activity and tobacco use — and is preventable. We can do a better job of screening, diagnosing and treating these conditions.

Major strategies include:

- Prevention and Health Promotion: Implement evidence-based, population-based health promotion efforts to reduce obesity, chronic disease, and injuries. Increase primary prevention approaches, including those targeting increased self responsibility. Educate about and improve methods for screening, diagnosis, and early treatment of conditions and behaviors most detrimental to the physical and mental health of Alaskans.
- Disease Control: Detect epidemics and control the spread of infectious diseases, in particular influenza, tuberculosis, hepatitis C, HIV and sexually transmitted diseases, through screening, testing, diagnosis and treatment. Immunize children and adults against vaccine-preventable diseases.
- Access: Use Public Health nurses to ensure all possible resources are made available in Alaska communities. Expand medical examiner services statewide. Increase community partnerships to improve local capacity for primary care and preventive health services.
- Emergency Response and Preparedness: Build capacity in Alaska's statewide trauma system. Work with communities to prevent health emergencies and prepare for pandemics and natural disasters.
- Environmental Health Impacts: Provide medical, toxicological, and public health expertise to individuals and communities to enable them to reduce hazards from environmental exposures. Develop credible, science-based, Alaska-specific information about environmental exposure levels and potential impact to human health.

Health Care Access and Delivery

Through the state-run Medicaid program, health insurance coverage is provided to approximately 18 percent of Alaska's population. Similar to other states, Alaska's Medicaid program is being challenged to meet increasing demands for costs and services. However, Alaska's rate of growth of the more medically needy in the Medicaid population is out-pacing most other states. A compounding factor unique to Alaska is the fragmentation of the health care delivery system that exists related to geography, active Tribal and Veterans Affairs health care systems, and other factors. By utilizing technology tools, strengthening statewide policies and embracing state priorities for action with partners such as the Health Care Commission, and supporting health care workforce development, the health care delivery system and access to care will align with increasing demand.

Major strategies include:

- Technology for Sustainable and Effective Health Care Delivery:
  - Implement a new Medicaid Management Information System for enhanced, effective program management through timely, data-driven decisions that improve health care utilization analysis and promote decisions that support sustainability of the program.
  - Reduce erroneous payments, and monitor payment trends for more accurate projections in an environment of rapidly increasing costs.
  - Create a health information exchange that will facilitate the communication of health information sharing, improve continuity of care and potentially reduce costs related to duplicate testing and referrals.
  - Convert providers throughout the state to electronic health records to make records more accessible for health care service delivery, to more effectively and efficiently monitor health care use and quality of care.
- Workforce development:
  - Partner with the University of Alaska and others to create new training opportunities for health professionals throughout the state.
  - Create professional residency programs for "hard to attract" health care fields such as psychiatry.
  - Develop alternative approaches to health care delivery in rural Alaska.
- Enhanced Management of High Health Needs
  - Improve coordination of care for individuals with the highest needs and chronic health conditions.
  - Analyze care management options and implement the Health Care Commission's recommendations for managing care, cost containment and improving health outcomes and quality.

Sustainable Long-Term Care Delivery System

Medicaid is the primary payer for long-term care services for the elderly and disabled. In Alaska, those services are delivered in a fragmented fee-for-service environment. Alaska has been very successful in making services available in homes and communities, thereby delaying or avoiding the higher cost and more restrictive institutional care for many individuals. Challenges remain, however, in the availability of home and community-based services in rural areas; long-term institutional care for the individuals with very high needs that cannot be met in the community; standardization of the quality of care delivered; and comprehensive oversight of the health and welfare of these participants.

Major strategies include:

- Identification and Coordination of Health and Welfare Needs
  - Implement quality assurance strategies that set forth standards of performance for home and community-based care providers and remediation responses for failure to meet those standards.
  - Integrate automated solutions that provide for real-time care plan development and amendment to meet change in condition of the participant and to conduct risk assessments.
- Align cross-division efforts to manage provider enrollment, certification, compliance and performance oversight.
- Train and oversee the performance of care coordinators who have the role of continuous monitoring of health and welfare needs of waiver program participants.
- Integrate recipient feedback on analysis of the efficacy of home and community based programs.

- Develop integrated pro-active and reactive programs of safety related to complaints and reports of harm received by Adult Protective Services, Long Term Care Ombudsman, Licensing and Certification and Senior and Disabilities Services.
- Increase utilization of Aging and Disability Resource Centers as referral sources to meet the needs of those receiving services in their home and community settings.

- Promote a service array that meets the needs of underserved who require long term care services
  - Collaborate with providers to develop sustainable options for institutional care that meets the needs of those very complex individuals whose needs may not be safely met in the community setting;
  - Improved coordination of services to individuals utilizing the general relief program to promote greater self-responsibility and self-reliance where appropriate;
  - Provide continued support to individuals who do not qualify for waiver services but need supports through continued grant opportunities;
  - Create sustainable solutions through partnerships with the Pioneer Homes, Senior and Disabilities Services, Medicaid and Behavioral Health to address the needs of individuals with long-term needs related to complex behavioral issues and cognitive deficits such as Alzheimer's disease and other dementias.
- Develop Integrated and Comprehensive Model of Care
  - Evaluate opportunities provided by the federal government to manage the benefits of dually eligible individuals.
  - Design a risk-based long-term care management program to improve care coordination and incorporate disease management strategies.

Vulnerable Alaskans

We must work to ensure that Alaska families are safe and communities are equipped to help our citizens thrive. When our neighbors struggle, appropriate supports should be in place to prevent progressively worsening circumstances. By focusing on family-centered services we can better meet the needs of our most vulnerable citizens and their families. Developmentally disabled children and adults should have access to quality services and supports, and individuals and families should receive the kind of financial and vocational supports they need to be contributing members of society.

Major Strategies Include:

- Protective Services: Provide effective and timely protective services to vulnerable children and adults experiencing, or at risk for, neglect, abuse and exploitation in an environment where more timely and effective reporting by providers and community members is occurring. Forge relationships with community partners to develop proactive measures to reduce and eliminate risks to the health and welfare of vulnerable children and adults.
- Domestic Violence and Sexual Assault: Strengthen behavioral health programs to address family violence prevention and to provide treatment for alcohol and substance abuse, often an underlying cause of DVSA.
- Suicide Prevention: Target suicide prevention efforts to those individuals and communities most in need.
- Bring the Kids Home Initiative: Continue efforts to develop the infrastructure within the state to support the needs of children who have previously been sent out of state to receive services and to keep youth in state.
- Families First Initiative: Expand this project which is designed to help families leave the public assistance rolls and find employment through coordination of services between state agencies to assure that services are designed to meet family needs vs. individual program requirements.

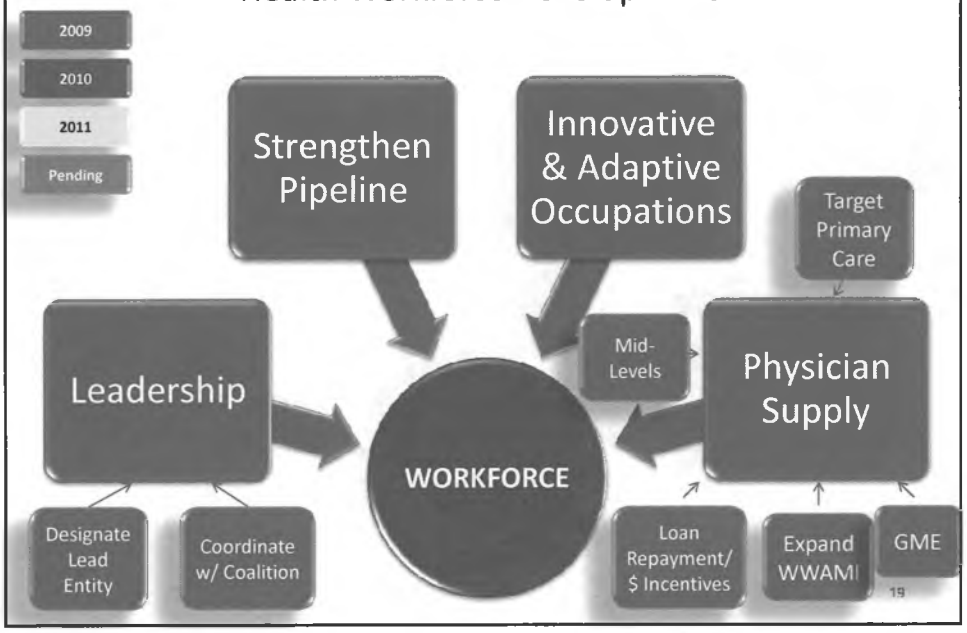
Potential Strategies for Building the Foundation: Health Workforce Development



Measure Progress

- ✓ Track Implementation of Recommendations
- ✓ Measure Improvement in Health Care System Over Time

20

Potential Health Care System Improvement Measures

I. Increase Access
- Percent of Alaskans Uninsured
- Percent of Alaskans who have a specific source of on-going care
- *Measure of insurance affordability?*
- *Indicator of workforce supply?*

II. Control Costs
- Annual growth rate in total health system expenditures in Alaska
- Annual growth rate in Alaska's Medicaid expenditures
- Impact on Alaska's state budget: Annual change in spending and revenue; net savings
- *Measure of provider revenue based on value rather than volume*

III. Safe, High-Quality Care
- Percent of population receiving key preventive services
- Percent of Alaskans with chronic conditions controlled
- Percent reduction in gap between benchmark and actual levels of quality
- Percent reduction in gap between benchmark and actual levels of safety

IV. Focus on Prevention
- Percent of Alaskan homes with safe water and wastewater systems
- Percent of Alaskans reporting health risks
  - Percent of Alaskans who smoke cigarettes
  - Percent of Alaskans who are obese or overweight
  - Percent of Alaskans who are binge drinkers
- Percent of Alaskans with moderate to severe depression
- Death rate among Alaskans due to injury (intention and unintentional)

21

2010 Report

- **Introduction** – Background, Purpose, Planning Framework, 2010 Activities
- **Description of Current Condition of Alaska's Health Care System**
  - Summarizes 2009 Information and Findings
  - New 2010 Information: Federal Reform in AK
  - Study Plans for 2011
    - Health Care Spending & Cost Drivers in Alaska
    - Health Care Pricing & Reimbursement in Alaska
    - Health Status of Alaskans
    - Services: Long Term Care; Trauma Care
- **Recommendations for Health Care Transformation**
  - Status of Implementation of 2009 Recommendations
  - New 2010 Recommendation: Evidence-Based Medicine
  - Strategies for Consideration in 2011:
    - Price & Quality Transparency
    - Value-Driven Purchasing (Payment Bundling; Leverage State Purchasing)
    - Insurance Regulations
    - On-Line Community Health Information System
    - Measure Improvement in Alaska's Health Care System
    - Consumer-Oriented Health Information Technology Innovation

22

Status of 2009 Recommendations

2010 Activities to Strengthen Consumer's Role

- Support Healthy Lifestyles and Create Culture of Wellness
  - *"Choose Respect" Initiative launched by Gov. Parnell March 2010*
  - *Alaskans taking on Childhood Obesity Collaborative MOA July*
  - *Alaska Food Policy Council Created*
  - *$375.0 GF appropriated to DHSS/DPH for Obesity Prevention/Control*
  - *StopSuicideAlaska web portal created*
- Develop Patient-Centered Primary Care Model
  - *DHSS received federal grant for PC Medical Home pilots*
  - *Southcentral Foundation PCC 1st practice in AK to achieve NCQA recognition – others following suit*
  - *AK Primary Care Association launched initiative to support member clinic transition to Patient-Center Medical Home model*

23

Status of 2009 Recommendations

2010 Activities to Foster Statewide Leadership

- Invest in Health Policy Infrastructure to Respond to National Reform
  - *SOA engaged in lawsuit regarding constitutionality*
  - *Commission tracking; high-level impact analysis*
- Establish Permanent State Health Policy Body
  - *Commission established in statute (AS 18.09.010) with passage of SB 172*
  - *Members appointed September 2010; Convened October 2010*

24

Status of 2009 Recommendations

2010 Workforce Development Activities

- Make health care workforce development a priority
- Strengthen the pipeline of future workers
- Explore strategies for innovation and adaptation
- Designate single, coordinating entity for workforce planning

  - *Alaska Health Workforce Coalition completed the "Alaska Health Workforce Plan" – adopted by the Alaska Workforce Investment Board May 2010*
  - *Alaska Department of Labor & Workforce Development received federal grant to develop strategic plan for health workforce development*

Status of 2009 Recommendations

2010 Workforce Development Activities

- Increase Supply of Primary Care Physicians by
  - Supporting educational loan repayment/financial incentive program
  - Expand WWAMI as resources allow
  - Support primary care residency program development (continue supporting family medicine residency, support development of pediatric, psychiatry, and internal medicine residencies)

  - *Legislation to develop state loan repayment/financial incentive program did not pass in 2010*
  - *Pediatric and psychiatry residency programs planned – ready for implementation in 2012*
    - *Psychiatry residency will require state financial support*

Status of 2009 Recommendations

2010 Activities to Deploy Health Information Technology

- Support Health Information Technology (HIT) Adoption & Utilization; Ensure Privacy & Security
  - *DHSS awarded $3 M contract to Alaska eHealth Network (AeHN) to develop Alaska's Health Information Exchange (HIE) – AeHN is designated entity responsible for privacy & security*
  - *AeHN awarded HIE vendor contract to Orion Health*
  - *AeHN received $3.6 M federal grant to establish HIT Regional Extension Center*
  - *Alaska EHR Alliance selected two EHR vendors for Alaska providers*
  - *2009 Provider EHR Survey Updated*
  - *Two hospitals began offering EHRs at reduced prices for affiliated providers*
  - *University of Alaska created two HIT certificate training programs*
  - *DHSS planned implementation of Medicaid EHR Incentive Program*
- Expand Broadband Telecommunication Infrastructure
  - *Connect Alaska chartered – new non-profit formed to expand broadband in Alaska*
  - *1st web-based statewide broadband availability map launched in September*
  - *$117 M in federal grants received by broadband service providers to expand and improve connectivity in rural Alaska*
  - *257 rural health clinics in Alaska received FCC subsidies for telecommunications/Internet access*
- Develop Reimbursement Mechanisms for Telemedicine

Status of 2009 Recommendations

2010 Activities to Improve Medicare Access

- Improve the supply of primary care providers
- Support Federally Qualified Health Center (FQHCs) and Rural Health Clinics (RHCs)
- Request relief from Federal Reimbursement Inequities and Administrative/Audit Burden
- Develop Programs of All-Inclusive Care for the Elderly (PACE)
  - *New Medicare Clinics started/planned*
    - *Mat-Su Community Medicine opened in Wasilla in November*
    - *Providence Senior Care Center scheduled to open in January 2011*
    - *Alaska Medicare Clinic, Inc. received $1 M state capital grant to support start-up*
  - *Clinic/Capacity Expansion supported: Anchorage Neighborhood Health center received new $6 M state capital grant (in addition to $10 M received earlier) plus new $8 M federal grant to support clinic*
  - *Health care organizations in Anchorage are studying feasibility of PACE*
  - *Sen. Begich included amendment in the Affordable Care Act*

New 2010 Recommendations

Foster the Use of Evidence-Based Medicine

- Encourage and support State health care programs to
  - engage in application of high grade evidence-based medicine (EBM) in benefit design and provider payment methods
- Require/Direct State health care programs to
  - Coordinate development and application of EBM policies
  - involve health care providers and consumers in decision-making related to application of EBM to public policy
  - Incorporate data on patient compliance in developing provider payment methods and benefit design
- Implement a web-based data system for public health information

Thank You

STATE OF ALASKA

DEPT. OF HEALTH AND SOCIAL SERVICES
ALASKA HEALTH CARE COMMISSION

SEAN PARNELL, GOVERNOR

3601 C Street, Suite 902
Anchorage, Alaska 99503
PHONE: (907) 269-7800

January 15, 2011

To: The Honorable Sean Parnell, Governor, State of Alaska
The Honorable Gary Stevens, President, Alaska State Senate
The Honorable Mike Chenault, Speaker of the Alaska House of Representatives

We are pleased to present this report of the Alaska Health Care Commission in accordance with AS 18.09.070. SB 172 was signed into law on June 21, 2010 establishing the Alaska Health Care Commission in statute (AS 18.09.010). Commission members were appointed on September 15 and the new Commission convened for the first time October 14. While the new Commission only just started their work during the last quarter of 2010 there is much to report.

The Commission was able to spend time this past quarter studying progress made during 2010 related to the Commission's 2009 recommendations and also learning about federal health reform and its implications for Alaska. The Commission will remain focused on developing Alaskan solutions to Alaska's health care challenges, but is tracking implementation of federal reform to understand how it may be affecting Alaska's health care environment. To that end, the Commission learned about provisions in the new federal law and also compiled information about action taken so far in Alaska. The Commission also contracted with the Institute for Social & Economic Research to study potential impacts of the impending changes to Alaska's health care system and Alaska's economy. This report documents what the Commission has learned.

Our greatest concern is the continuing escalation in health care costs, which is making health insurance increasingly unaffordable for Alaska's families and businesses and driving government spending for health care programs to new heights. During 2011we will continue digging deeper into understanding this problem through new studies on health care spending trends and cost drivers, and comparisons of pricing and reimbursement for health care services in Alaska compared to other states. We will also focus on studying potential solutions, such as primary care innovation and price and quality transparency. In addition we will continue studying needs and opportunities for improving health status, supporting health workforce development, and deploying health information technology. These plans are included in this report.

We are grateful for the foresight of the Alaska Legislature and Governor Parnell in establishing the Commission in statute and providing resources to support continuing work to address the challenge of transforming Alaska's health care system so that it is sustainable, provides value for Alaskans' health care dollar, meets the needs of patients and providers, and focuses on health.

Sincerely,

Ward B. Hurlburt, MD, MPH
Chair, Alaska Health Care Commission
Chief Medical Officer & Public Health Director
Department of Health & Social Services

Deborah Erickson

Executive Summary

Background

The Alaska Health Care Commission was established in Chapter 9 of Title 18 in Alaska Statute this year with the implementation of SB 172, which was signed into law by Governor Parnell in June 2010. Commission members were appointed in September and the new Commission convened for the first time in October. The new body continued the work of the original Commission which was organized and met during 2009 under Governor's Administrative Order #246. This report reflects work accomplished since the launch of the new Commission in the last quarter of 2010, describes how it builds on and continues the work begun in 2009, and lays the groundwork for 2011 activities.

The Commission's process for transforming Alaska's health care system began with identification of a vision, goals and values of the ideal system, and is now in a continuing cycle of learning about current challenges, designing policies for achieving the vision, and evaluating progress. The core of the transformation strategy rests on building a strong foundation for the system through health workforce development, deployment of health information technology, and statewide leadership. The focus of the core transformation strategy is to strengthen the consumer's role in health through innovations in patient-centered care and by fostering healthy lifestyles.

Understanding Alaska's Health Care Challenges

To better understand why Alaska's health care system is not achieving the vision, the Commission started in 2009 by describing how health care in Alaska is delivered and funded (Appendix A of the 2009 report). Particular concerns identified in the 2009 report included that:

- The high and rising cost of health care in Alaska is unsustainable;
- Health insurance coverage in Alaska is inadequate;
- Providers and patients experience logistical challenges in the delivery of and in accessing health care services;
- Fragmentation and duplication in Alaska's health care system creates inefficiencies;
- Alaska suffers from shortages and maldistribution of health care workers;
- Health status, health risk behaviors and changing demographics contribute to high utilization of health care services;
- The State of Alaska does not have an infrastructure and capacity to provide leadership for health care system improvement;
- Use of modern health information technology is taking hold in Alaska, but much remains to be done; and,
- Alaskan Medicare enrollees living in urban areas have trouble accessing primary care.

In 2010 the Commission added to learning about Alaska's health care system challenges by compiling information on the new federal health care reform law. In addition to reviewing and providing summaries of the law's provisions and noting activities related to implementation in Alaska that occurred during 2010, the Commission also contracted with the Institute for Social & Economic Research to provide an analysis of the potential economic impact of the law on Alaska.

In 2011 the Commission will continue studying current challenges in Alaska health care delivery and financing with a focus on health care spending trends and cost drivers, pricing and reimbursement for health services, and health conditions contributing to utilization of services. The Commission will also review the status of statewide planning for long term care and for trauma system improvement.

Alaska Health Care System Transformation Strategies

The Commission's 2009 recommendations for health care system transformation still stand – the Commission is building on those recommendations to develop a mosaic of strategies intended to increase value, improve access and support prevention. These strategies focus on enhancing the consumer's role in health through supporting healthy lifestyles and fostering innovations in health care delivery, building statewide leadership for health policy development, strengthening the supply and distribution of health care workers, promoting the use of health information technology, and improving access to primary care for Medicare enrollees.

2010 saw a number of developments related to the Commission's 2009 recommendations.

- **Consumers' Role/Healthy Lifestyles:** Governor Parnell launched a domestic violence and sexual assault initiative aimed at preventing harm through creating a culture of respectful relationships. The Commissioners of the Departments of Health & Social Services (DHSS) and Education & Early Development collaborated to convene a task force targeting obesity prevention and control among Alaska's school children. The legislature invested in the state's obesity and control program, and Alaska's first food policy council was created to improve the supply and distribution of Alaska-produced foods and improve the nutrition literacy of Alaskans.
- **Consumer's Role/Primary Care Innovation:** DHSS received federal grant funds that will be used to pilot test and evaluate patient-centered medical homes for children; a number of Alaska health care organizations are implementing the patient-centered medical home model in their practices and seeking NCQA recognition; and the Alaska Primary Care Association began an initiative to support Alaska's 142 community health center sites' movement towards adoption of innovative care models.
- **Statewide Leadership:** Creation of the Alaska Health Care Commission in AS 18.09.010 this year implemented the recommendation for a permanent state health planning and policy body. No new resources were allocated to support analysis and implementation of federal health care reform due to the state challenge regarding constitutionality of the new law and questions regarding severability of the challenged provisions from the whole law; however, state agencies and other organizations are tracking federal implementation, complying with legally mandated requirements, and investigating optional provisions that align with existing policies and programs.
- **Health Workforce Development:** The Alaska Health Workforce Coalition completed the "Alaska Health Workforce Plan," which was adopted by the Alaska Workforce Investment Board in May, and received a federal grant to develop a strategic plan for implementing the comprehensive plan. None of the proposed bills that would have created and funded a state health professions educational loan repayment and financial incentive program passed during the 2010 session, but a federal grant with matching funds from stakeholders enabled the creation of such a program for at least one year. Two new primary care residency programs for training pediatricians and psychiatrists in Alaska are closer to reality with progress made in planning during the year.
- **Health Information Technology:** DHSS awarded the State Health Information Exchange (HIE) Entity grant to the Alaska eHealth Network (AeHN) in April, and in November AeHN awarded a contract to Orion Health to build the system. AeHN also received a federal grant to establish a regional health IT extension center to provide technical assistance to health care providers. The Alaska EHR Alliance established preferred vendor agreements with two electronic health record (EHR) vendors to simplify the selection process and guarantee reduced pricing for Alaska providers. Broadband telecommunications service providers received $117 million in federal grants to support expansion in rural communities; and Connect Alaska, a new non-profit formed to expand broadband access, was created and launched Alaska's first statewide interactive online broadband availability map.

- **Medicare Access:** A new clinic intended to alleviate the primary care access problem for seniors in the Mat-Su was opened this year, and two new clinics devoted to providing health care for seniors in Anchorage were planned during 2010 and will open early in 2011: The Senior Care Center at Providence, which is subsidized by Providence Health & Services, and the Alaska Medicare Clinic, which is subsidized by a FY 11 state capital grant. In addition the Anchorage Neighborhood Health Center will open doors of a new clinic doubled in size with more room and staff to accommodate additional Medicare recipients and medical clinic space devoted to seniors.

New 2010 Recommendations made by the Commission relate to the significance of **Evidence-Based Medicine** for improving the quality of health care by emphasizing the need for critical assessment skills in understanding and applying findings from medical research to clinical practice and to health care policies. The importance of protecting the practitioner's and the patient's role in making clinical decisions is emphasized. The importance of shared decision-making and also patient compliance is recognized to balance reliance on the medical system to improve quality. The need for reliable data and information to guide decision-making is also noted.

The Commission has identified a number of additional strategies to study and consider for 2011 recommendations. For improving value – by increasing quality and controlling costs – the Commission will analyze additional strategies for fostering patient-centered primary care, mechanisms for providing transparency in health care pricing and quality, bundled payment systems, and the possibility of leveraging state purchasing power to drive quality improvement. For supporting community efforts to foster healthy lifestyles, the Commission will consider the need for an on-line interactive public health information system. To strengthen statewide leadership, the Commission will finalize a set of indicators for measuring improvement in Alaska's health care system over time.

Part I: Introduction

A. Purpose of this Report

The purpose of this report is to convey the 2010 findings and recommendations of the Alaska Health Care Commission to Governor Parnell and the Alaska Legislature as required under Alaska Statute 18.09.070. This report builds on the work of the original Alaska Health Care Commission (created by Governor Palin under Administrative Order #246) which in their 2009 Report presented a 5-year strategic planning framework as a "roadmap" for strengthening Alaska's health care delivery system. The 2009 report was described as a living document meant to evolve each year as problems of health care quality, cost and access are studied, potential solutions are analyzed, and implemented strategies are evaluated. This new report documents the continuation of that process.

Included in this report are:

- Part I: an introduction including background on the Commission, a summary of the Commission's 2010 activities, and a description of the Commission's strategic planning framework;
- Part II: information on the challenges of delivering and accessing health care in Alaska, and plans for additional study of current challenges in 2011;
- Part III: the Commission's recommendations for transformation of Alaska's health care system, including a status report on implementation of the Commission's 2009 recommendations, findings and recommendations on the one new strategy studied this year, and strategies that will be considered in 2011;
- Appendices: information on the new federal health care law and its implementation in Alaska, an analysis of the potential economic impact on Alaska of the new federal health care law, and additional information by and about the Commission.

B. Background on the Commission

The Alaska Health Care Commission was first established by Governor Palin on December 4, 2008 under Administrative Order #246. Original Commission members were appointed on January 27, 2009 and the Commission met throughout 2009, producing a report on their findings and recommendations in January 2010. The Commission created under A.O. #246 terminated with the production of that report.

The Alaska Health Care Commission was established in state statute (AS 18.09.010) this year with the passage of Senate Bill (SB) 172 to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility, and availability of health care for all citizens of the state. SB 172 was passed by the Alaska Legislature on April 17, 2010 and subsequently signed into law by Governor Parnell on June 21, 2010.

Duties of the Commission prescribed by AS 18.09.070:

I. Serve as the state health planning and coordinating body;
II. Provide recommendations for and foster the development of a:
    1. Comprehensive statewide health care policy;

2. Strategy for improving the health of Alaskans that
    i. Encourages personal responsibility for disease prevention, healthy living and acquisition of health insurance;
    ii. Reduces health care costs;
    iii. Eliminates known health risks, including unsafe water and wastewater systems;
    iv. Develops a sustainable health care workforce;
    v. Improves access to quality health care; and,
    vi. Increases the number of insurance options for health care services.

III. Submit a report to the Governor and the Legislature by January 15 of each year regarding the Commission's recommendations and activities.

Former Commission members were reappointed under the transition clause included in SB 172, and new members were appointed by Governor Parnell September 15, 2010. Legislative representatives were reappointed by their respective bodies. Short biographies for each of the Commission members are provided on the Commission's web site at www.hss.state.ak.us/healthcarecommission. The members of the Commission are:

Ward Hurlburt, MD, MPH: Designated Chair; Chief Medical Officer for the Alaska Department of Health & Social Services; Anchorage.
Patrick Branco: Representing the Alaska State Hospital & Nursing Home Association; Chief Executive Officer of Ketchikan General Hospital; Ketchikan.
C. Keith Campbell: Representing consumers; retired hospital administrator and former AARP Chair; Seward.
Valerie Davidson: Representing Alaska tribal health care providers; Senior Director of Legal and Inter-Governmental Affairs for the Alaska Native Tribal Health Consortium; Anchorage.
Jeffrey Davis: Representing Alaska's health insurance industry; President of Premera Blue Cross Blue Shield of Alaska; Anchorage.
Emily Ennis: Representing the Alaska Mental Health Trust Authority; Executive Director of Fairbanks Resource Agency; Fairbanks.
Col. Paul Friedrichs, MD: Representing the U.S. Department of Veterans Affairs health care system; Commander of the Air Force/Veterans' Affairs Joint Venture Hospital at Elmendorf; Anchorage.
T. Noah Laufer, MD: Representing primary care physicians; family medicine physician and president of Medical Park Family Care; Anchorage.
David Morgan: Representing community health centers; Reimbursement Director for the Southcentral Foundation; Anchorage.
Wayne Stevens: Representing the Alaska State Chamber of Commerce; President & CEO of the Alaska State Chamber of Commerce; Juneau.
Lawrence Stinson, MD: Representing Alaska health care providers; anesthesiologist and co-owner of Advanced Pain Centers of Alaska; Anchorage.
Linda Hall (Ex-Officio): Representing the Governor's Office; Director of the Alaska Division of Insurance; Anchorage.
Representative Wes Keller (Ex-Officio): Representing the Alaska House of Representatives; Wasilla.
Senator Donny Olson (Ex-Officio): Representing the Alaska Senate; Golovin.

C. Summary of 2010 Activities

The formal work of the Commission was paused for the first 9 months of 2010 following termination of the 2009 Commission until the new body was established in statute and members were appointed in September. The group was then able to hold two face-to-face meetings during 2010, one in October and one in November. At these first meetings the new members were introduced to the work of the 2009 Commission, and the group received updates on several issues studied during the previous year. Despite the short timeframe available for developing this year's annual report, the Commission:

1. Revised their Core Transformation Strategy
2. Developed recommendations for a key strategy to improve value: Evidence-based Medicine
3. Identified issues to be analyzed in 2011
4. Prioritized new policy options for study and recommendation development in 2011.

2010 Accomplishments

Meetings and public hearings: During 2010 the Commission held three face-to-face meetings, all in Anchorage: January 8 (this was the last meeting of the 2009 Commission to incorporate changes based on public comment, finalize and approve the 2009 report to the Governor and legislature); October 14-15; and November 16-17. All of these meetings were open to the public, and teleconferenced for members of the public unable to attend in person but interested in listening to the meeting or providing public testimony. Summaries of the meetings and the Commission's voting record are included in Appendix D of this report. Public hearings were held during both the October and November meetings, and a summary of comments received from the public is also included in Appendix D.

Administration: In their first months the new Commission reviewed meeting rules, updated and approved changes to the by-laws, approved a budget for SFY 2011, and received ethics training from the State's ethics attorney. A copy of the Commission's meeting rules, by-laws, SFY 2011 budget, and ethics handbook are available on the Commission's website (see website address below).

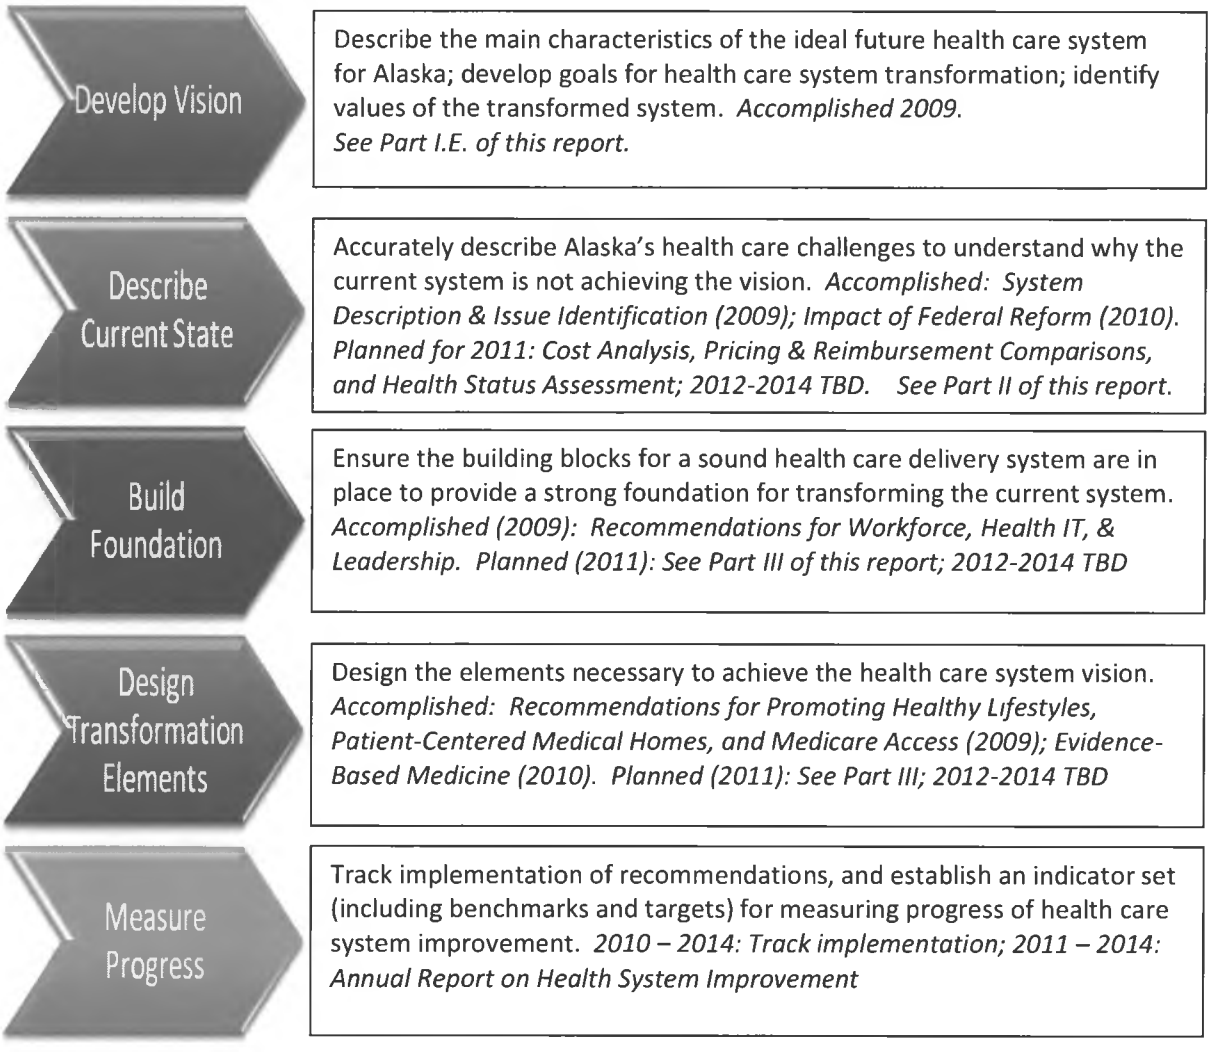
Communication and coordination: The Commission updated and maintained a website for posting information regarding their meetings as well as reference documents related to their priority focus areas (http://hss.state.ak.us/healthcommission/). A listserv established in 2009 to maintain communication with system stakeholders and members of the public interested in receiving periodic updates was also updated, expanded and utilized. The Commission also maintained an inventory of boards, committees, coalitions, and other organizations in Alaska involved in health planning in some way, as well as a list of health reports and plans (also available on the website).

Products: The main product from 2010 is this annual report, which includes analysis and recommendations related to the value-improvement strategy of evidence-based medicine, and an overview and analysis of potential impact of the new federal health care law (P.L. 111-148, the Affordable Care Act) on Alaska.

D. 2010 – 2014 Strategic Plan Framework

In 2009 the initial Commission developed a 5-year strategic planning framework to guide the process for improvement of Alaska's health care system. The new Commission is following the same process, depicted graphically below with a brief note about the status of implementing each process step. Note that except for the first step of developing a vision the process is not sequential - the steps in the process are being implemented concurrently and continually.

Strategic Planning Process & Implementation Status



E. The Commission's Vision for Transformation of Alaska's Health Care System

A healthy citizenry is vital to the economy and governance of the state of Alaska. Good health, both physical and behavioral, is essential to all Alaskans' ability to actively participate in and contribute to their families, schools, places of employment, and communities. Access to quality health care is an important contributor to the health of Alaskans.

The Alaska Health Care Commission was created to address growing concern over the state of Alaska's health care system. The delivery of care is fragmented. Costs are unaffordably high and continue to climb, seemingly out of control. Too many Alaskans lack health care coverage, or have coverage but can't find a doctor who will accept them as a patient. Levels and variations in the quality of care are not well understood. Consumers aren't happy. Providers are frustrated. The system as currently designed is not sustainable.

The health care system has come together in a piecemeal fashion over many decades. It is funded by a conglomeration of numerous public and private payers. Care is provided under layers of government rules and regulations. Some provider organizations are government, some are quasi-government, some are non-profit, some are private business. Providers trained in different regions of the country and in different fields don't have a consistent approach to diagnosis and treatment. A system this complex cannot be fixed over night. A journey of transformation that will be many years in the making is required to redesign and implement a more rational, coherent and sustainable system that will deliver the highest quality of care at the most reasonable price in a way that protects providers and their business interests, while protecting the interests of their consumers.

Vision

Alaska's Health Care System

- Produces improved health status
- Provides value for Alaskans' health care dollar
- Delivers consumer and provider satisfaction
- Is sustainable

The first step in the Commission's journey toward transformation of Alaska's health care system was to design a picture of the ideal system. The Commission envisions a health care system for Alaska that places individual Alaskans and their families at the center of their health experience and focuses on creating health, not simply treating illness and injury. In addition to producing healthy Alaskans, a transformed system will provide value for Alaskans' health care dollar – delivering high quality care as efficiently as possible at a reasonable price. In this system providers' business and professional interests and integrity will be maintained. Health care consumers will be satisfied with the level and quality of services they receive. And a final but essential element of this picture is that Alaska's health care system is one that is sustainable over time.

Health Care Goals

I. Improved Access
II. Contained Cost
III. Safe, High Quality Care
IV. Prevention-Based

The Commission also identified four goals for a transformed health care system to support a targeted approach to identification of improvement strategies and performance measurement.

I. **Access:** Access to affordable health care coverage and to a viable and vital health care delivery system is improved.
II. **Cost:** The cost of health care is controlled so that the medical inflation rate in Alaska is below the national rate.
III. **Quality:** Alaskans can be assured that health care services they receive in Alaska meet the highest quality and safety standards.
IV. **Prevention:** A focus on preventive services, both clinical preventive services for individuals and community prevention policies, will support improved health status and control costs by reducing the burden of preventable disease and injury.

Values

- Sustainability
- Efficiency
- Effectiveness
- Individual Choice
- Personal Engagement

The Commission agreed to the following set of values to guide planning and policy recommendation decisions for transformation of Alaska's health care system:

Sustainability: A redesigned health care system for Alaska must be sustainable in terms of: 1) government, private sector, and individual ability to financially support implementation over the long term; and, 2) health care provider ability to deliver quality care while maintaining a sound business operation.
Efficiency: A redesigned health care system for Alaska will minimize waste in clinical care and administrative processes.
Effectiveness: A redesigned health care system for Alaska will support practices best known to produce the best outcomes.
Individual Choice: A redesigned health care system for Alaska will provide information and options for Alaskans in terms of health care coverage and service providers.
Personal Engagement: A redesigned health care system for Alaska encourages and empowers Alaskans to exercise personal responsibility for healthy living and for obtaining and participating in their health care.

F. Core Transformation Strategy

The figure below depicts in graphic form the core strategies identified by the Commission for transforming Alaska's health care system to achieve their vision, and the relationship of those strategies to one another and to the planning process.

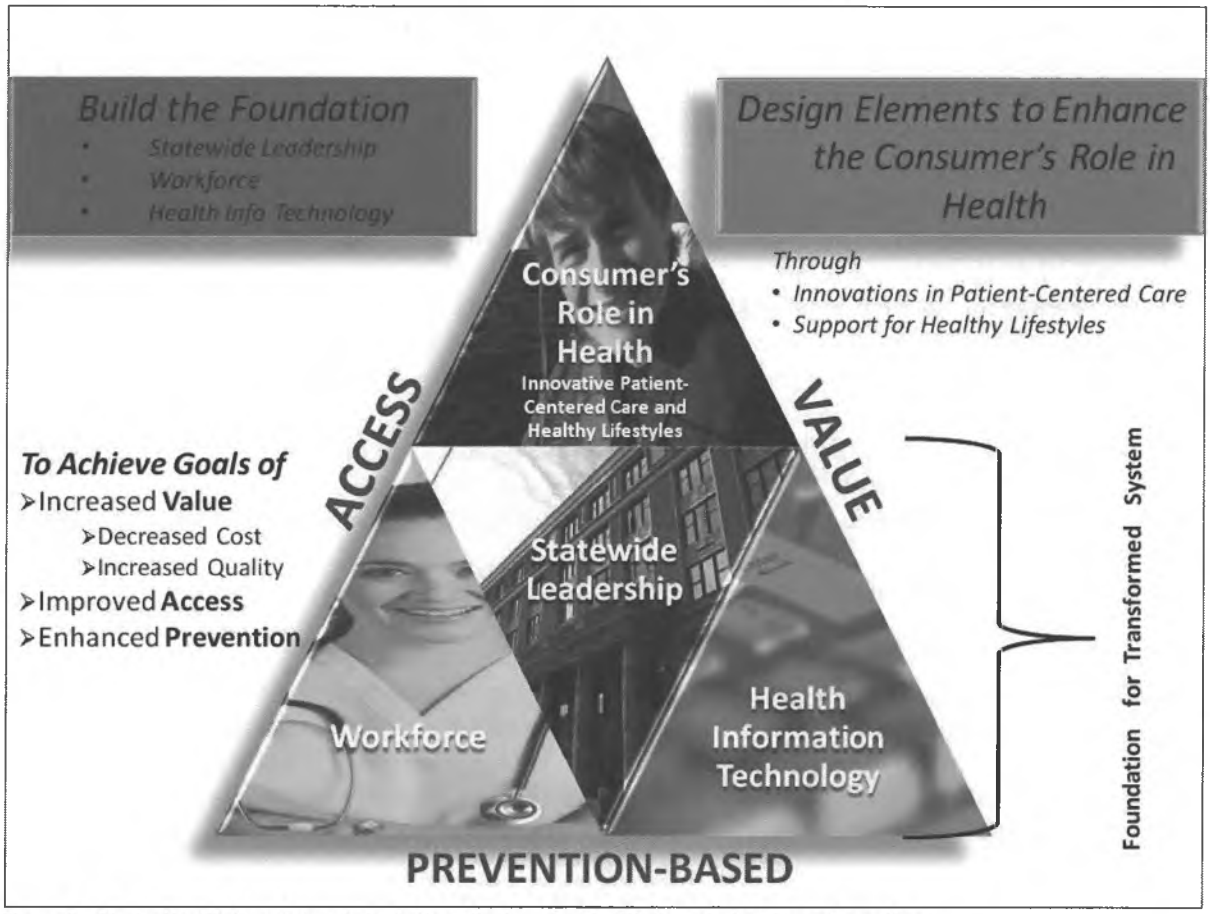


Figure 1: Alaska Health Care Commission's Core Strategy for Health Care System Transformation

Understanding and supporting the consumer's role in health care is the central focus of Commission's strategic approach to transformation of Alaska's health care system. Two aspects of the consumer's role are critical to addressing the goals of increased access, improved value (cost and quality), and a focus on prevention – 1) individual lifestyle choices and the impact those choices have on health outcomes and demand for health care services; and 2) the individual's central position in their health care experience. Support for healthy lifestyles and new innovations in patient-centered care are the pinnacle of the Commission's health care transformation strategy.

A vital health care workforce and modern information management tools are the foundation upon which support for healthy lifestyles and an innovative patient-centered system depend. And the journey to a transformed health care system cannot continue without statewide leadership to see it through. On-going study, planning, and policy development is necessary to create a regulatory and reimbursement environment that supports the health care industry while it redesigns itself.

Part II: Understanding Alaska's Health Care System Challenges

A. Summary of 2009 Findings

To better understand why Alaska's health care system is not achieving the Commission's vision, the 2009 Commission started by describing how health care in Alaska is delivered and funded (Appendix A of the 2009 report). The commission also received numerous presentations and reviewed existing reports to identify a series of challenges that contribute to the current problems in the system. Particular concerns identified in the 2009 report included that:

- The high and rising cost of health care in Alaska is unsustainable;
- Health insurance coverage in Alaska is inadequate;
- Providers and patients experience logistical challenges in the delivery of and in accessing health care services;
- Fragmentation and duplication in Alaska's health care system creates inefficiencies;
- Alaska suffers from shortages and maldistribution of health care workers;
- Health status, health risk behaviors and changing demographics contribute to high utilization of health care services;
- The State of Alaska does not have an infrastructure and capacity to provide leadership for health care system improvement;
- Use of modern health information technology is taking hold in Alaska, but much remains to be done; and,
- Alaskan Medicare enrollees living in urban areas have trouble accessing primary care

Health Care Costs: Health care spending in the U.S. has been growing faster than the economy for decades, doubling from 8% of the nation's GDP in 1970 to 16% in 2006 and projected to increase to 20% by 2016. Per capita national health care expenditures in the U.S. increased 850% over the past three decades. High costs for health care contribute to higher prices for goods and services produced in the U.S., challenging our ability to maintain a competitive edge in the global market place.

In 1993 the Alaska Health Resource & Access Task Force projected health care spending in Alaska would "sky-rocket" from slightly below $1.9 billion in 1991to nearly $5.6 billion in 2003. In 2009 spending was estimated at over $6 billion. State general fund expenditures for Medicaid grew more than five-fold between FY 91 and FY 08 from a little over $80 million to over $408 million. In 2005 government paid 64% of Alaska's health care bills, private employers paid 17%, and individual Alaskans paid 19%.

Alaska has the highest annual Medicaid expenditure level per enrollee in the U.S. Alaska has also ranked 1st in the nation for cost of workers' compensation premium rates since 2005, with medical costs making up 72% of total benefit claims in Alaska in 2008 compared to the national average of 58%. Signs that prices for health care are higher in Alaska than other states include differences in reimbursement rates between our Medicaid and Workers Comp programs and those of other states. A comparison of Alaska's Medicaid rates to Washington state's indicate our fees are two to three times higher. Alaska's Workers' Comp medical fee schedule rates were the highest in the nation in 2006 – on average 3.5 times higher than Massachusetts (the state with the lowest rates).

Health Insurance Coverage: Increased spending for health care translates into higher insurance premiums, as health insurance providers adjust to cover rising prices and growing utilization. In Alaska health insurance premiums for working families grew by 90.8% between 2000 and 2009. In comparison, the median earnings of Alaska's workers rose 17% during the same period. The average annual premium for individual health coverage rose from $2,923 to $5,626 during that same period. The percentage of income spent on health care in Alaska increased steadily from 11% in 1991 to 19% in2004.

14% of Alaskans are uninsured or do not have access to military, Veteran's Administration or Indian Health Service beneficiary health care services. 84% of uninsured Alaskans belong to households with one or more workers. Most uninsured workers are self-employed, or employed in small businesses that do not offer health benefits or offer coverage they cannot afford. Nearly all Alaskan firms with more than 100 employees provide health benefits, while less than a quarter of Alaska's smallest businesses (<10 employees) offer insurance. The seasonal nature of Alaska's workforce is an important factor in employer health coverage – data on coverage does not account for those who are insured only part of the year. There is also insufficient data on Alaskans who are underinsured – those who have coverage but with such high deductibles and co-pay that they still cannot afford care.

Logistical Challenges: The dispersion of Alaska's relatively small population over a large geographic area increases the cost and complexity of delivering care here. Approximately 75% of Alaska's communities are not connected by road to a community with a hospital, and nearly a quarter of the state's population lives in towns and villages that can only be reached by boat or aircraft.[i] Transportation costs associated both with patient travel and also with moving supplies, staff and equipment to operate clinics and hospitals in rural Alaska can be formidable.

The cost of delivering services is also made higher by a loss of economies of scale associated with operating hospitals in sparsely populated regions and clinics in nearly every small community in the state – a necessity due to the remoteness and isolation of those locations. Some of Alaska's smallest communities with a clinic have as few as 50 residents. However, the loss of economies of scale to maintain the facilities is off-set somewhat by the innovative workforce solutions used to staff them, such as the Community Health Aide/Practitioner Program, and the use of telehealth technologies.

Health System Fragmentation and Duplication: Alaska's health care "system" is not a system, but an assortment of private, for-profit and non-profit, large and small medical businesses; hospitals and clinics to serve military personnel, retirees and their dependents; and hospitals and clinics owned and operated by tribal organizations. Health care organizations within the same sector (military, tribal health system, or private sector) do not have interoperable electronic information systems, care coordination systems, or business management processes. In addition to fragmentation in the delivery of services, there are a variety of payers financing health care services, including Medicare, Medicaid, private insurers, self-insured employers, the military and VA, the Indian Health Service, and individuals.

Some communities have multiple health care systems operating side-by-side. For example, one community of 9,000 people has both a community hospital and a tribal health system hospital. Another community of just 6,000 people has a community hospital, a tribal health system clinic, and a military clinic. Alaska's largest city, with a relatively small population of 285,000, has four hospitals – one military, one tribal, one for-profit, and one non-profit (plus two psychiatric hospitals). The facilities in these communities also serve regional (and in the largest city's case statewide) populations, but there is still an overabundance of infrastructure that leads to higher costs.

Health Care Workforce Shortages: Demand for health care workers rose sharply over the past decade. Alaska's health care employment sector experienced 40% job growth between 2000 and 2007, compared to 13% for all other industries, outpacing the state's population growth during that same period by five times.[ii] The supply of new workers produced by Alaska's training and education programs plus those imported from outside Alaska cannot keep up.

Alaskan health care employers had an estimated 3,529 number of vacant positions in 2007. Primary care occupations are experiencing vacancy rates of 15% - 20%. Pharmacist, therapist and certain nurse specialist positions are also experiencing high vacancy rates. Behavioral health occupations have a somewhat lower vacancy rate overall, but made up the highest proportion of vacancies with 1,033 vacant positions in 2007.[iii]

Health Status, Health Risk Behaviors and Changing Demographics: Health conditions and demographics drive utilization of health care services and spending for health care services. Alaska experiences high rates of chronic disease, behavioral health conditions, and injuries. Three health risk behaviors (tobacco use, poor diet, and inactivity) are the primary contributors to development of chronic diseases such as heart disease, diabetes, lung disease, and cancer. Tobacco use in Alaska has been declining due to significant investment of resources in prevention and control, but increases in Alaska's rates of obesity are alarming. The total population of Alaska is steadily increasing, and the number of Alaskans aged 65 and older has more than doubled over the past two decades and is projected to nearly triple again by the year 2030.

Statewide Leadership for Health Care System Improvement: Over the two decades preceding the creation of the Commission four groups had been formally convened to address the problems of access to and cost of health care. All of those entities had been ad-hoc in nature and met over periods ranging from 6 months to 2 years. Existing resources for health care planning are fragmented, and also insufficient for analyzing the complexity of pending federal health care reforms for their impact on Alaska. Lack of sustainable capacity and a coordinated, long-term approach to health care planning and policy development hampers the ability to provide statewide leadership for health care system improvement.

Health Information Technology: There is significant governmental and private sector interest in deploying the use of health information technology to improve efficiency and effectiveness of health care. President Bush established the Office of the National Coordinator for Health Information Technology in 2004, and in 2009 Congress appropriated more than $20 billion for the development and adoption of health information technology under the HITECH Act. The Alaska Legislature passed SB 133 during the 2009 session to create a statewide health information exchange (HIE) system for Alaska. Two non-governmental organizations in the state – the Alaska eHealth Network and the Alaska EHR Alliance formed in recent years to support implementation of electronic health records (EHRs) in physician practices and foster the development of a HIE.

There is also a history of innovative uses of telecommunications technologies for delivering health care in Alaska, and now growing support for development and utilization of these technologies. The Alaska Federal Health Care Access Network provides telehealth applications to 248 sites throughout Alaska. Other telemedicine programs involved in improving access to health care in the state include the Alaska Rural Telehealth Network, Providence's REACH system and eICU, the Alaska Psychiatric Institute's Telebehavioral Health Care Services Program, and the Southeast Alaska Regional Health Consortium

Telebehavioral Health Program. Insufficient access to broadband telecommunication services hampers further development and deployment of telehealth in some rural communities.

Medicare Enrollee Access to Primary Care: A study conducted by the Institute for Social & Economic Research in 2008 confirmed anecdotal information that many Alaskan Medicare beneficiaries living in urban communities, particularly Anchorage, have trouble finding a primary care physician to take them as a patient. The researchers found that only 17% of Anchorage primary care physicians accept new Medicare patients compared to 61% nationally.

Finding Statements from 2009 Report: Following are the Finding Statements included in the 2009 report associated with each of the core strategies that were studied and for which recommendations were developed.

Strengthen the Consumer's Role – Support Healthy Lifestyles

- Chronic disease is the leading cause of death and disability in the U.S. and Alaska.
- The majority of health care spending in the U.S. is for chronic disease.
- Three risk factors – tobacco use, poor diet and inactivity – contribute to the four leading chronic diseases – heart disease, diabetes, lung disease and cancer.
- Individual behavior is now the leading determinant of the health status of the population and contributor to premature death.
- Childhood obesity is a growing concern; for example, 33% of kindergarten and 1st grade students in the Anchorage School District are overweight or obese.
- Employee health risk behaviors can be changed through financial incentives coupled with other supports (e.g., coaching).

Strengthen the Consumer's Role – Foster Innovative Primary Care Models

- Patient-centric health care delivery models based on a longitudinal relationship-based platform are effective at reducing unnecessary utilization of services by empowering patients to take more responsibility for their health and health care.

Develop Statewide Leadership – Response to National Health Care Reform

- National health care reform proposals under consideration by Congress will have a significant impact on Alaska's state and local governments, health care system, business community, citizens, and families.

Develop Statewide Leadership – State Health Policy Board

- The systems and policies for financing and delivering health care in Alaska are fragmented and complex, and the scope of the challenges involved in improving these systems is huge. Past efforts to improve health care in Alaska have been ad hoc in nature. A planning process to achieve health care system improvement must be sustained over time in order to ensure accountability for the achievement of meaningful change.

Develop the Health Care Workforce

- Health care in Alaska is big business and represents a significant employment sector.
- Access to health care requires a sufficient supply and adequate distribution of health care providers. Successful achievement of the goal of expanding access to health care in Alaska is directly tied to health care workforce capacity and capability.

- Health care worker shortages in Alaska are widespread and costly.
- A comprehensive approach to health care workforce training includes strategies at every point on the training continuum (K12, post-secondary, graduate and post-graduate, on-the-job, continuing medical education).
- Alaskans have been particularly innovative in meeting their health care workforce needs.
- Many organizations, both public and private, have a stake in health care workforce development, and there are numerous programs and groups currently involved in health care workforce planning. There is evidence of collaboration in these planning and development efforts; however, not all related activities are fully coordinated.

Workforce – Physician Supply

- The United States is facing a shortage of physicians as this provider population ages and enters retirement and the production is not expected to keep up with demand. As the physician shortage increases in the U.S. the competition for recruiting physicians to Alaska will become increasingly difficult.
- Alaska has a shortage of primary care physicians[1].
- New physicians face disincentives to entering primary care specialties.
- Providers stay to practice where they train.
- Mid-level medical practitioners (Nurse Practitioners and Physician's Assistants) and medical support staff (nurses, medical assistants, care coordinators, etc.) are essential occupations for addressing primary care physician shortages.

Deploy Health Information Technology

- Development and utilization of electronic information management tools is essential to health care system improvement for the purpose of supporting:
  - Increased health care efficiency and effectiveness; and
  - Improved clinical quality and patient safety.

Deploy Health Information Technology – Electronic Health Records

- Many providers in Alaska are at the early end of adopting electronic health records. Many still use paper records. Barriers to adoption of electronic health information technologies by Alaska's health care providers include:
  - Start-up costs for new systems, including purchase of new hardware and software as well as costs associated with implementing new office procedures, training staff, and transitioning existing records from paper to electronic;
  - The multitude of products on the market making evaluation and selection of one system time-consuming and costly for individual providers in small practices;
  - Systems that are not user-friendly from the provider's perspective, i.e., are difficult, inflexible and time-consuming to use;
  - Costs associated with on-going operation and maintenance; and,
  - Antiquated and nonstandard eligibility and claims processing systems.

[1] The Commission includes both osteopathic as well as allopathic medical doctors in their definition of physician. The Commission's definition of primary care physician is slightly different from most standard definitions – family practitioners, pediatricians, and general internists are included, but also psychiatrists, and Ob-Gyns are excluded.

- Federal policies, such as the national incentive program funded under ARRA and pending Medicare payment penalties, are forcing rapid adoption of electronic health records by providers. Some Alaskan providers feel forced to move forward quickly while being concerned that standards are not yet fully in place and systems may not be ready.

Deploy Health Information Technology – Ensure Privacy & Security

- Alaskans are concerned about the privacy of their personal health information. Progress has been made by the federal government to develop national health information security and privacy protection standards, and Alaskans have participated in these efforts, but more work remains to be done.

Deploy Health Information Technology – Telehealth/Telemedicine

- Alaskans have been particularly innovative in the use of telecommunications technologies as one way to bridge our vast geography and address health care access challenges.
- Barriers to adoption and use of telemedicine include:[2]
  - Insufficient telecommunications connectivity in some rural Alaskan communities;
  - Inadequate access to training for providers and their staff;
  - Medical licensure restrictions across state borders;
  - Misalignment of payment systems between costs and benefits.

Improve Access to Primary Care for Medicare Beneficiaries

- Alaska's Medicare-eligible population is growing.
- Medicare patients in some areas of Alaska experience trouble accessing primary care. The communities experiencing the most trouble with access are those with larger populations, notably Anchorage.
- One contributor to the Medicare access problem is an insufficient supply of primary care physicians willing to accept and retain Medicare patients in larger urban centers.
- Health care providers report Medicare's burdensome administrative requirements, onerous audits, and what they find to be insufficient reimbursement rates as the primary reasons for limiting or denying provision of Medicare services.
- Care for Medicare patients is often more complex and time-intensive than for the general patient population.
- Mid-level practitioners are increasingly being used to solve the Medicare access problem.
- Health care providers report Medicare's physician and mid-level practitioner reimbursement schemes are not rational and not reliable.
- Health care providers commonly report that Medicare's audit process designed to weed out fraud and abuse in the system focuses more on identification of billing errors than intentional fraud, incentivizes audit contractors to pursue and penalize providers for unintentional billing errors, and unnecessarily places an onerous administrative and legal burden on providers. The audit process, which appears to physicians to be based on an assumption of guilt, serves as a disincentive for Alaska providers to provide care for Medicare patients.

[2] The order of the bullets in this finding is not meant to imply priority order of significance.

B. 2010 Analysis: Overview & Impact of the Federal Health Care Law

For their 2010 report the Commission compiled summary information on the new federal health care law and Alaska's response to enacted provisions to-date. The Commission is not charged with developing recommendations on the implementation of federal reform, but plans to track implementation in order to understand how the law may affect the health care landscape in Alaska as they continue developing state-specific solutions to Alaska's health care challenges. As part of this effort the Commission contracted with the Institute for Social and Economic Research (ISER) at the University of Alaska Anchorage to provide a report on the projected economic impact of the new law on Alaska.

An overview of the law, brief information on enactment status in Alaska to-date, and a summary of preliminary estimates of the health care and economic impact to Alaska are provided in this section. Additional information and the full ISER report are included in Appendices B and C.

Overview & Status in Alaska

Federal health care reform is enacted under three new federal laws passed in March and April 2010:

- P.L. 111-148: The Patient Protection and Affordable Care Act (PPACA)
- P.L. 111-152: The Health Care and Education Reconciliation Act
- P.L. 111-159: The TRICARE Affirmation Act

PPACA is structured as follows (the names of these titles do not reflect the exact names assigned in the legislation – they are modified to be more descriptive):

Title I	Private Health Care Coverage
Title II	Public Health Care Coverage (primarily Medicaid changes)
Title III	Health Care Delivery and Payment (primarily Medicare changes)
Title IV	Prevention and Public Health
Title V	Health Care Workforce
Title VI	Fraud, Waste and Abuse
Title VII	Pharmaceuticals
Title VIII	CLASS Act (Community Living Assistance Services & Supports)
Title IX	Taxes and Fees
Title X	Amendments (changes made to the original bill (Titles I-IX) prior to passage)

This overview describes PPACA as amended by Title X and the two subsequent laws. The provisions described in this overview take effect at various points over the next eight to ten years. A number of key provisions took effect during 2010. Most of the more significant changes take effect in 2014.

Title I – Private Health Care Coverage

The private health care coverage provisions set forth in Title I impose a series of new rules on health insurance plans, create state-based Health Insurance Exchanges, create a number of new health insurance programs, require individuals and employers to participate in purchasing health coverage or pay a penalty, and provide subsidies for low-income individuals, small businesses, and employers providing health insurance for early retirees.

New health insurance rules include prohibitions against pre-existing condition exclusions, lifetime and annual limits, and coverage rescissions. They also require expansion of coverage to dependents up to 26 years of age and require benefit packages to include clinical preventive services. Health insurers are required to guarantee issuance and renewal of coverage. A minimum Medical Loss Ratio (MLR) will be imposed, requiring insurance companies to pay out 85% of their premium revenue in medical claims (80% for insurers covering the individual and small group market). New community rating rules will limit variations in rates to certain ratios based only on age, region, family composition and tobacco use. Risk adjustment will be required in individual and small group markets and in the Exchange. This title also imposes a series of new administrative simplification and standardization requirements on insurance plans. Grants are made available to States to conduct premium rate reviews, and to establish an Office of Health Insurance Consumer Assistance to assist and advocate for consumers with private coverage in the individual and small group markets.

A Health Insurance Exchange will be established for every state by 2014. The Exchanges are intended to provide an electronic web-based marketplace where individuals and small businesses of under 100 employees (and eventually large businesses) will be able to comparison shop for health plans. State governments are given the option of designing and establishing the Exchanges, and federal planning grants are provided to States choosing to develop their own Exchange. States are also given the option of partnering with other States to create regional or multi-state Exchanges. The Exchanges may be administered by a government agency or non-profit entity, and are required to be self-sustaining within one year of implementation. The federal government will establish Exchanges for the states in which the State government chooses not to participate.

Other health insurance programs and entities that are established in Title I include 1) a temporary high risk health insurance pool program, intended to offer coverage to those with pre-existing conditions until the prohibition on exclusions takes effect (for children for plan years starting after 9/23/10; for adults for plan years starting after 1/1/14); 2) a temporary (2010 – 2014) early-retiree reinsurance program that will subsidize health plans provided by employers offering insurance to retirees not yet qualified for Medicare; 3) a Health Care Cooperative program, which will create non-profit member-operated health insurance companies in each state; 4) Health Choice Compacts, which will allow insurance companies to sell plans across state lines for those States that have entered into a compact agreement; and 5) Multi-State Health Plans that the federal Office of Personnel Management will establish in every state.

Individuals will be required to have a qualified health plan or pay a tax penalty. The tax penalty will be $695/year (family penalty capped at 3-times the individual penalty, or $2,085) or 2.5% of household income (whichever is greater), and will be phased in starting in 2014 reaching the full amount noted here in 2016 (and indexed to CPI thereafter). Exemptions to the individual mandate apply for financial hardship, religious objections, American Indians/Alaskan Natives (due to the federal government's trust obligation under treaty to provide their health care), and if the lowest cost coverage option exceeds 8% of household income.

U.S. citizens and legal immigrants with incomes between 133% - 400% of federal poverty level (FPL) whose employer does not offer coverage with a value of at least 60%, or for which the employee's contribution is 9.5% of income, will be eligible for subsidies in the form of premium credits. Amounts of the credits will be tied to the cost of certain plans in the region and set on a sliding scale based on income level. The premium credits will be advanceable and available for purchase of insurance through

the Exchange. In addition to premium credits, cost sharing subsidies will be provided to individuals and households whose income is between 100% - 400% FPL.[3]

Larger employers (over 50 full-time employees (FTEs)) will be required to offer their employees a qualified health plan or pay a tax penalty. Employers offering health plans will face penalties if one or more of their employees choose to purchase coverage through an Exchange and receives a federal subsidy (under certain conditions). Employers who do not offer coverage will be required to pay $2,000/FTE (first 30 FTEs are excluded from calculation) if one or more of their employees receive a subsidy through the exchange. Employers who do offer coverage will be required to pay $2,000/FTE or $3,000/subsidized employee (whichever is less) if one or more of their employees receive a subsidy.

Small employers (for this provision defined as 25 or fewer employees with average annual wages of less than $50,000) that purchase health insurance for employees will receive a tax credit of up to 35% of the employer's contribution (25% for non-profit employers) if that contribution is at least 50% of the premium cost for 2010 through 2013. Starting in 2014 the tax credit increases to 50% (35% for non-profits), but then ends two years later. The full tax credits are available for the smallest businesses (10 FTEs or less and average annual wages less than $25,000) and phases out as business size increases.

Status in Alaska:

- *State Lawsuit Challenging the Individual Mandate: Alaska is participating in the 20-state Florida-led lawsuit against the federal government over the enactment of PPACA. One of the two main complaints asserted in the suit is regarding the federal government's constitutional authority to require individuals to purchase health insurance. The lawsuit was heard in a Florida district court in December, and is expected to proceed to the appellate courts and eventually be heard by the U.S. Supreme Court in 2012 or 2013.*
- *High Risk Pool: The State of Alaska supported and facilitated the application by the state's existing high risk pool, the Alaska Comprehensive Health Insurance Association, for the new federal high risk pool. $13 million was allocated for Alaska's federally-subsidized pool, and coverage began September 1, 2010. Television and other media have been used to advertise the availability of the subsidized insurance program. 24 Alaskans had enrolled as of December 17.*
- *Early Retiree Reinsurance Program: The following Alaskan employers and unions had been approved for participation in this program by the US DHHS as of December 20: Alaska Electrical Health and Welfare Fund, Alaska Pipe Trades UA Local 367 Health & Security, Alaska Teamster-Employer Welfare Trust, Alaska USA Federal Credit Union, Alyeska Pipeline Service Company, Municipality of Anchorage, State of Alaska Retirement and Benefits Plan, Tongass Timber Trust.*
- *Health Insurance Rate Review: The State of Alaska chose not to apply for the state Health Insurance Rate Review grant made available in July (and again in October) citing onerous grant requirements, lack of state statutory authority to pre-approve health insurance rates for most health insurance plans, and sufficient existing capacity to review health insurance rates. At this date it is unknown whether state legislation will be introduced during the 2011 legislative session to adopt new federal insurance standards in state law.*
- *Consumer Information & Assistance: The State of Alaska chose not to apply for the state Consumer Information and Assistance grant made available in September citing concerns over sustainability of capacity created with one-time funds, and insufficient need (the Alaska Division*

[3] The Hyde amendment applies to the use of federal funds in these programs, and prohibits the use of federal subsidy funds for the purchase of coverage for abortion (except in the case of rape or incest or to save the life of the mother).

of Insurance currently has sufficient capacity to respond to consumer inquiries and complaints in its existing consumer assistance program).

- *Health Insurance Exchange: The State of Alaska chose not to apply for the state Health Insurance Exchange planning grant made available in September At this date it is unknown whether state legislation will be introduced during the 2011 legislative session to establish an Alaska health insurance exchange.*

Title II – Public Health Care Coverage

PPACA changes the role of the Medicaid program in the health care system by moving the program from one that covers certain safety-net populations to one that covers all individuals under certain income limits so that it becomes the floor for all insurance coverage in the country. The law expands Medicaid eligibility to everyone under 65 years of age, including childless adults, whose incomes are under 138% of FPL (the new minimum eligibility level is 133% but PPACA also imposes a required 5% income disregard effectively increasing the level to 138%). A maintenance of effort requirement took effect on enactment of the law in March to prohibit States from reducing eligibility for adults between now and when the expansion takes effect in 2014. The maintenance of effort requirement for children is in place until September 30, 2019.

The federal government will absorb 100% of the increased cost associated with the expansion population during the first four years, then States will begin sharing in the cost at phased in levels until the State share is 10% in 2020. States have the option of expanding eligibility prior to 2014, but would do so at their regular match rate (about 50% for Alaska). Of significance is a policy change in PPACA that requires States to change to a new eligibility determination method based on modified adjusted gross income. A number of new enrollment procedure changes are included as well, along with a requirement for States to integrate Medicaid enrollment into the Health Insurance Exchange.

A number of provisions add new requirements for covered services, such as freestanding birth center and comprehensive tobacco cessation services for pregnant women; and also makes available new State options to add services, such as family planning for low income individuals. Changes are made to certain payments and reimbursements, such as a new prohibition against federal Medicaid payments to States for services related to health care acquired conditions, and a change to the prescription drug rebate. Optional programs to test new payment methodologies include hospital bundled payment and Accountable Care Organization demonstration projects. There are also incentives and options intended to increase home and community based services in lieu of facility-based services for individuals requiring long term care.

Status in Alaska:

- *Medicaid Maintenance of Effort: the Alaska Medicaid program is required to maintain eligibility standards, methods and procedures for adults until January 2014 and for children until October 2019.*
- *Medicaid Expansion:*
    - *As noted above, Alaska is participating in the 20-state Florida-led lawsuit against the federal government over the enactment of PPACA. One of the challenges under the lawsuit is regarding the unfunded federal mandate imposed by the Medicaid expansion.*
    - *Preliminary estimates released by the Alaska Department of Health & Social Services (DHSS) this summer project that the 2014 expansion will cover approximately 30,000 new enrollees[iv]. The Urban Institute, applying Alaska data to a national model, projects*

the expansion will add between 42,794 to 59,914 new Medicaid enrollees (33,106 – 49,061 of whom will have been previously uninsured)[v].
    - *DHSS is not currently planning to apply for the early expansion option.*
- *New Service Requirements: The Alaska Medicaid program previously exercised the option to cover all the services now mandated under provisions enacted in Title II, including freestanding birth centers and comprehensive tobacco cessation services for pregnant women. These changes are not expected to impact Alaska, other than by eliminating the flexibility the state once had to remove these services from the covered services list, and by requiring a new billing methodology for freestanding birth centers.*
- *Maternal, Infant, and Early Childhood Home Visiting Program: The following organizations were awarded grants under this program in 2010:*
    - *AK Department of Health & Social Services (DHSS): $584,256*
    - *Southcentral Foundation: $345,000*
    - *Fairbanks Native Association: $250,000*
    - *Kodiak Area Native Association: $236,000*
- *Personal Responsibility Education Program (PREP): DHSS was awarded two grants in 2010 totaling $849,985 under this program, which focuses on fostering healthy relationships and preventing teen pregnancy. DHSS chose not to apply for an abstinence education grant made available under this title as the relatively small amount allocated to Alaska would not fund the grant requirements, a match was required, and the same services will be provided under the PREP program.*
- *Aging & Disability Resource Centers (ADRC): DHSS applied for but did not receive the ADRC grant made available under Title II in 2010.*
- *Money Follows the Person Rebalancing Demonstration: DHSS did not apply for a planning grant made available for this program, and does not intend to apply to participate in the demonstration project (grant application due in January 2011).*
- *Medical Home for Medicaid Enrollees with Chronic Conditions: Federal planning funds for this demonstration project will be made available in January through Medicaid match at the state's pre-ARRA FMAP rate. DHSS has not yet made a decision regarding whether to plan for and participate in this demonstration.*

Title III – Health Care Delivery and Payment Changes

Title III intends to control health care costs and improve quality through a series of delivery system and payment changes driven primarily through the Medicare program. Increases in Medicare costs will be limited by restructuring payments to Medicare Advantage plans, reducing annual market basket updates for inpatient hospital, home health, skilled nursing facility, hospice and other Medicare providers. Providers organized as Accountable Care Organizations will be allowed to participate in cost savings they achieve for the Medicare program as long as they meet certain quality thresholds. The Center for Medicare and Medicaid Innovation is created to test new payment and service delivery models, and the Independent Payment Advisory Board is created to develop proposals for reducing per capita rate of growth in Medicare if spending exceeds target growth rates. The Secretary of HHS is vested with broad authority to implement payment reform models that prove to be effective at improving quality and reducing the rate of cost growth.

Medicare will reduce payments to hospitals for excess preventable hospital readmissions and for hospital-acquired conditions. Bonus payments will be made to hospitals in counties with the lowest

Medicare spending. Medicare will establish a Hospital Value-Based Purchasing Program to pay hospitals based on performance on certain quality measures. Plans to implement value-based purchasing for skilled nursing facilities, home health agencies, and ambulatory surgical centers will be developed. A Medicare pilot program to test payment bundling for acute inpatient hospital, physician, outpatient hospital, and post-acute care services for an episode of care that begins three days prior to a hospitalization and ends 30 days following discharge is created. A home health demonstration program intended to prevent hospitalization and improve cost, patient outcomes and satisfaction is also created.

The Medicare Part D "doughnut hole" is phased out starting with a $250 rebate check provided to all Medicare beneficiaries entering this drug coverage gap in 2010 and phasing down the coinsurance rate until it is eliminated altogether in 2020. A program to strengthen trauma center capacity is created, along with a demonstration program to develop models for regional emergency care systems.

Status in Alaska:

- *MIPPA (Medicare Improvements for Patients & Providers Act) Medicare Outreach: DHSS was awarded $65,454 for Medicare Outreach to low-income and rural Alaskans.*
- *The only other major provision under Title III known to have taken effect in Alaska during 2010 was the issuance of the $250 rebate checks to Medicare enrollees in the prescription drug "doughnut hole." A few of the provisions impacting Medicare reimbursement also began taking effect in 2010.*

Title IV – Prevention and Public Health

Title IV establishes or reauthorizes and funds a series of programs intended to reduce the burden of disease in the population. It establishes the National Prevention, Health Promotion & Public Health Council and a Prevention and Public Health Fund to coordinate and support prevention, wellness, and public health activities. National committees to develop and disseminate recommendations on effectiveness of clinical and community preventive services are authorized.

Medicaid and Medicare coverage of preventive services is expanded. The Fair Labor Standards Act is amended to require employers to provide reasonable break times and private locations for employees who are nursing mothers to express breast milk. Chain restaurants will be required to disclose the nutritional content of the food items they sell.

"Community Transformation" and "Healthy Aging, Living Well" grants aimed at reducing chronic disease rates and addressing health disparities through wellness activities are funded, and a worksite wellness program to provide technical assistance and funding to small businesses is also established. A grant program to support school-based health centers is created. A grant program to support oral health promotion and disease prevention is created. Programs to improve immunization coverage and continue federal support of public health epidemiology and laboratory capacity are authorized or reauthorized.

Status in Alaska:

- *Much of the new funding appropriated to the new National Prevention & Public Health Fund was diverted by the US DHHS to fund workforce programs authorized but not funded under Title V.*
- *The following grants were awarded to the Alaska Division of Public Health under provisions in Title IV during 2010:*

- *Strengthening Public Health Infrastructure ($100,000)*
- *HIV/AIDS Surveillance – Lab Reporting ($41,909)*
- *Epidemiology & Laboratory Capacity ($473,908)*
- *Behavioral Risk Factor Surveillance System Supplemental ($68,265)*

- *Strengthening Tribal Public Health Infrastructure: The Alaska Native Tribal Health Consortium and the SE Alaska Regional Health Consortium were each awarded $100,000 under this new program.*
- *School-Based Health Centers Capital Program: None of the three school-based health centers (Juneau-Douglas High School/Juneau, Mt. Edgecumbe High School/Sitka, and Clark Middle School/Anchorage) applied to participate in this 1-year equipment grant opportunity.*

Title V – Health Care Workforce

Title V establishes a National Workforce Advisory Committee and requires a national health care workforce assessment be conducted. There are a number of new scholarship and educational loan repayment programs created and existing programs are expanded, with certain emphases on primary care and preventive specialties, nursing, oral health, public health, geriatrics, and behavioral health. It increases the National Health Services Corps and eliminates the cap on the number of commissioned officers in the Public Health Service Regular Corps, and also expands the use of the Reserve Corps (renamed Ready Reserve Corps) in times of a public health emergency. It also expands Area Health Education Centers.

The number of Medicare-funded physician training positions (Graduate Medical Education (GME) for residency training) will be increased by redistributing unused positions with priority given to primary care and general surgery, and by expanding eligible training sites to allow for outpatient health center-based residency training programs. A number of provisions also support the development of training programs in different patient care models, such as medical homes, chronic disease management, and integration of primary and specialty health care into behavioral health care settings. This Title also includes a provision for a 10% bonus payment under Medicare to primary care physicians and general surgeons practicing in health professional shortage areas.

Status in Alaska:

- *State Health Care Workforce Development: The Alaska Workforce Investment Board (AWIB)/ Department of Labor & Workforce Development (DOLWD) in collaboration with the Alaska Health Workforce Planning Coalition received a $150,000 grant in September to develop a strategic plan for health workforce development in Alaska.*
- *Health Occupations Training for Low Income and TANF Recipients: DOLWD also collaborated with DHSS to apply for funding for this program but did not receive a grant. The Cook Inlet Tribal Council was awarded $1,463,627 in September under the tribal organizations provision for this program.*
- *Primary Care Service Integration in Behavioral Health Centers: Alaska Island Community Services (in Wrangell) was awarded a grant of $296,836 under this program in September.*
- *Primary Care Residency Expansion: This grant opportunity became available in July, but did not support planning and development for new residency programs and therefore was not a potential funding stream for development of the new psychiatric or pediatric residency programs in Alaska. The Alaska Family Medicine Residency Program chose not to apply due to concerns over sustainability as the grant would only support addition of new residency slots for one year.*

- *Physicians Assistant Training Program: The UAA Physicians Assistant Training Program was not eligible to apply under the grant opportunity made available by this program in July (only accredited PA schools were eligible, and the PA program at UAA is accredited under the University of Washington's MEDEX program).*
- *Family-to-Family Health Information Centers: This program, initially created in 2005, was reauthorized under PPACA. Stone Soup Group, an Anchorage-based non-profit, was previously funded under this program and received a continuation grant of $96,700 in July to provide information and training to families of special needs children.*
- *No Alaskan organizations are known to have applied for the following grant opportunities made available under provisions in Title V during July:*
    - *Personal and Home Care Aide State Training Program (competitive 6-grantee demonstration project)*
    - *Advanced Nursing Education Expansion Program*
    - *Nurse Managed Health Clinics*
    - *Nursing Assistant and Home Health Aide Program*

Title VI – Fraud, Waste and Abuse

Title VI will require transparency related to financial relationships between health care provider and supplier entities. New provider enrollment processes for Medicare and Medicaid are created, as well as a new database for sharing provider data among federal programs and between federal and State programs. Providers and suppliers will be required to establish compliance programs, and face increased penalties for false claims. State Medicaid programs are required to implement the Medicare RAC (Recovery Audit Contractor) Program.

The Elder Justice Act is created under this title, which addresses prevention and intervention in the abuse and neglect of individuals aged 60 or older, creating an Elder Justice Coordinating Council, and providing funding to State Adult Protective Services and Long Term Care Ombudsman programs. A medical malpractice demonstration program is also created, which will provide grants to States to test alternatives to tort litigation. This title also establishes a non-profit Patient-Centered Outcomes Research Institute to identify priorities for a national comparative outcomes research project agenda.

Status in Alaska:

- *Medicare RAC Program Expanded to Medicaid: AK DHSS submitted a request to US DHHS to extend the deadline for Alaska's compliance with this new requirement from April 1, 2011 to October 1, 2011. The department currently has a contract in place with Myers and Stauffer to conduct audits of Medicaid providers required under state law (AS 47.05.200). This contract is up for annual renewal 10-1-11. The department's intent is to align the state audit program as much as possible with the new RAC program. It will not be possible however to fully integrate the two Medicaid audit programs, as the state program pays the audit contractor a flat fee, while the federal RAC program requires audit contractors be paid on a contingency fee basis.*
- *Nationwide Program for Long Term Care Worker Background Checks: The DHSS/Division of Public Health's Section of Certification & Licensing received a grant of $1 million in October under this program.*
- *Other Provisions: Additional changes enacted under this Title that will potentially impact the Alaska's Medicaid program are currently under analysis by DHSS, including extension of the*

period for collection of overpayments, termination of provider participation in Medicaid if terminated under Medicare, and required participation in the National Correct Coding Initiative.

Title VII - Pharmaceuticals
Title VII authorizes the FDA to approve generic versions of biologic drugs, and expands the 340B program, which is a program limiting the cost of covered outpatient drugs to certain federal grantees.

Status in Alaska:

- *Unknown*

Title VIII – CLASS Act
The Community Living Assistance Services and Supports Act will establish a national, voluntary long term care insurance program starting in 2011. The program requires five-year vesting, and will provide a cash benefit of no less than $50 per day to help aged or disabled individuals to stay in their home. The benefit may also be used to cover nursing home costs. Premiums will be paid through payroll deductions.

Status in Alaska:

- *The federal government is required to establish this new national program in 2011.*

Title IX – Taxes and Fees
New taxes and fees imposed in order to finance the new programs established under PPACA started in 2010 with a 10% excise tax on indoor tanning. There are a series of new taxes and fees imposed on the health care industry and health care products, such as an annual fee on the pharmaceutical industry (starting at $2.8 billion in 2012 and increasing over time), an annual fee on the health insurance industry (starting at $8 billion in 2014 and increasing over time), and a 2.3% sales tax on medical devices starting in 2013. The tax deduction for employers receiving Medicare Part D retiree subsidies is eliminated.

The Medicare payroll tax is increased starting in 2013 by 0.9% (from 1.45% to 2.35%) for individuals who make over $200,000/year ($250,000/year for married couples filing jointly). The payroll tax increase applies only to the employee, not the employer share of the tax. There is also a new 3.8% tax imposed on the unearned income for high-income individuals in that same tax bracket. The revenue from that tax is intended to flow to the Medicare program. Starting in 2018 a new excise tax will be imposed on employer-sponsored high-value insurance plans. Otherwise known as the "Cadillac tax", this tax will be imposed on plans valued at more than $10,200 for individual plans and $27,500 for family coverage, and will be assessed at 40% of the amount over those thresholds.

Status in Alaska:

- *The one Title IX provision that took effect in 2010 was the new federal 10% sales tax on indoor tanning.*

Title X - Amendments

There are a few stand-alone provisions included in Title X (not amending other sections of PPACA). Of significance to Alaska's health care system is a provision that expands funding for Community Health Centers and another that permanently reauthorizes the Indian Health Care Improvement Act. There is one provision specific to Alaska that created the Federal Interagency Task Force to Improve Access to Health Care in Alaska, which was charged with assessing access to health care for beneficiaries of federal health care systems in Alaska.

Status in Alaska:

- *Federal Interagency Task Force to Improve Access to Health Care in Alaska: The Task Force was convened in July, conducted a site visit in August, and issued its report and disbanded in September. A copy of the Task Force's report is available on the Commission's website.*
- *Community Health Center Construction/Renovation: Two Alaska CHCs received grants in October In the first round of funding made available under this program – the Anchorage Neighborhood Health Center ($8 million) and the SE Alaska Regional Health Consortium ($1,299,147).*
- *The Alaska Native Health Board sponsored workshops during 2010 for its member tribal health care organizations and partners on changes made under the Indian Health Care Improvement Act reauthorization and associated amendments.*

Economic Impact of the Federal Affordable Care Act (ACA) on Alaska

Executive Summary of October 2010 Presentation to Commission (included in Appendix C), by Mark A. Foster & Associates/Institute for Social & Economic Research.

Overview – How much might it cost by 2019?

- The Medicaid Expansion *and* Individual Mandate may result in a *net* increase of roughly 60,000 insured individuals in Alaska by 2019; reducing the number of uninsured by about 50% over baseline projections
- The *net effect on overall Alaska health care spending* in 2019 may be an increase of roughly 3%, consisting of:
    - An increase of roughly 4% associated with an increase in utilization of medical care by the newly insured and those whose existing insurance coverage will be increased to comply with new requirements
    - An increase to close the Medicare prescription drug "donut hole"
    - Decreases associated with:
        - Medicare reductions in allowable growth rates – including hospitals, skilled nursing facilities, long term care hospitals, inpatient rehabilitation facilities, hospice, and home health
        - Insurance and provider discounts imposed or negotiated
        - Reductions in utilization associated with the shift of financial resources away from health insurance and toward income in response to the 40% excise tax on high cost plans

Changes in Funding Sources in Alaska, 2019 – Who Pays?

- Federal support for the Medicaid Expansion *and* subsidies for households <400% of federal poverty level (FPL) are the primary sources of funding for the insurance expansion – totaling roughly $800 million in Alaska in 2019
- The increased federal support for the insurance expansions will be offset by:
    - Reductions in the overall level of spending on Medicare including:
        - Increments for closing the Medicare prescription drug benefit "donut hole"[<$10M], and
        - Decrements associated with reductions in rate updates and changes in payments for hospitals, skilled nursing facilities, long term care hospitals, inpatient rehabilitation facilities, hospice, and home health [$60M]
        - Increased Medicare taxes on high income families [$90M]
        - New 40% excise tax on high cost health plans (approx 50% of health plans in Alaska in 2019 may be subject to the excise tax) [$280M]
        - New fees on drugs, medical devices, health insurance, changes in tax deductions and Health Savings Accounts (HSA) rules [$80M]

Impact on Households

In aggregate, Alaskan households may spend on the order of 1-2% more on health care, which is the net effect of several factors including:

- Subsidies
    - Federal support of coverage expansions – including insurance premium support, cost sharing subsidies, and Medicaid expansion
- Insurance Mandate
    - Increased costs for households who purchase insurance to comply with the mandate; even after subsidies and cost support, households can be expected to pay on the order of 8-9% of income on health insurance
    - Penalties of 2.5% of income for households who decline to purchase health insurance
- Taxes and Fees
    - 40% excise tax on high cost health plans
    - New fees on drugs, medical devices, health insurance providers, changes in tax deductions and Health Savings Accounts rules

The net effect of the ACA on households varies considerably by income level, whether previously insured, and the age of householder. Low and moderate-income level older households and high medical expense households tend to be net beneficiaries. Healthier, higher-income households with no insurance or high deductible plans tend to be net payers. Previously insured households <400% of federal poverty guidelines ($110,280 for a family of four in 2010) are slated to receive insurance subsidies that increase as household incomes decrease. With some limited exceptions, uninsured households above 138% of federal poverty level can be expected to spend roughly 8-9% of their income (after subsidies) to purchase health insurance or spend up to 2.5% of their income as a penalty for noncompliance with the individual mandate. In the individual and small group market, young singles (not covered under their parents' plans) and young families can expect to pay more under health insurance reform while those over 55 can expect to pay less due to a mandate to limit age differentials (previously market rates for insurance tended to more closely track the actuarial costs by age group).

Impact on Private Business

In aggregate, Alaskan businesses may see a reduction in spending on health care of around 3%, which is the net effect of several factors including:

- A reduction in the number of firms offering health insurance with employees migrating to the new Exchange for subsidized coverage; sign-up rates in the new Exchange are likely to be higher for low to moderate wage employees (<400% of FPL) who are in line to receive larger subsidies as a portion of their income in the Exchange
- Firms with 50 or more employees may offer insurance or be required to pay an assessment when their employees use subsidies in the new Exchange

Impact on key economic sector competitiveness

Resource development and export sectors with high wages and benefits appear likely to experience the 40% excise tax on high cost plans sooner than their competitors in other states. Large fishing and tourism enterprises may be faced with challenging "pay or play" penalties due to the high cost of medical care. Small fishing and tourism enterprises may not see the same proportion of small business tax credits due to a relatively small proportion of employees with "low wages" as compared to other states.

C. Issues Prioritized for Study in 2011

1. Health Care Costs

Health care costs are higher in Alaska compared to other states[vi], but a thorough understanding of the underlying reasons why costs vary is required prior to making specific policy recommendations to address the problem. Is it due to an insufficient supply of providers and insufficient competition between providers? Is there higher utilization of medical services in our state, and if so is it due to waste in the system or due to a higher prevalence of complex health conditions? How does fragmentation of the health care delivery system affect overall costs? Are payers unable or unwilling to negotiate the lowest possible price for services?

An important aspect of understanding variations in cost and underlying cost drivers is understanding how cost shifting occurs when one payer or set of payers underpays a health care provider (pays less than the costs the provider incurs to deliver the service). Prices charged are typically higher than the cost of care to make up for capped reimbursement by some payers, low fees negotiated with contract payers, and uncompensated care provided for uninsured and underinsured individuals who are unable to pay. Further analysis of cost drivers and cost shifting is needed to support development and implementation of successful strategies to control cost and improve value.

The high and continued escalation in health care costs in Alaska was a primary concern of the Commission in 2009, and they identified the need for additional analysis to better understand what is driving those costs as a top priority for future study. To understand the main variables influencing cost the Commission was introduced to this simple formula in 2009:

Cost (total spending) = **Price** (paid)/process unit x **Utilization**

During 2010 they were introduced to a more detailed breakdown of the utilization variable:

Utilization =
of **health conditions**
x # of **episodes of care**/condition
x # of **services (by type)**/episode of care
x # of **process units**/service

This formula is providing a framework to guide plans for studying the cost of health care in 2011.

A. Health Care Spending and Cost Driver Analysis – In order to better understand the current cost of health care in Alaska in terms of total spending in the state for health care services the Commission has contracted with the Institute for Social and Economic Research (ISER) at the University of Alaska Anchorage to conduct an analysis. ISER conducted similar analyses in the past – once in 1992 and more recently in 2005 (published in March 2006 with 2005 data).[vii] ISER will provide updated information on current spending by payer and service category, will expand past analyses of cost drivers, and will also include an analysis of opportunity costs of high health spending. The final report, expected in April 2011, will include:

- A review of historical spending trends, health insurance and health provider costs, and distribution of public and private payers;
- A ten-year spending forecast;

- An analysis of cost drivers, including:
    - Demand
        - Demographic trends
        - Technology
        - Nature and extent of insurance coverage
        - Tax treatment of benefits
        - Supply sensitive and preference sensitive demand considerations
    - Supply
        - Inefficient organization
        - Physician supply
    - Other factors (e.g., institutional factors, research)
- An analysis of opportunity costs of health spending (in Alaska and compared to the U.S.), including health spending trends as a percentage of GDP compared to other sectors, implications of health spending trends in terms of potential cuts to other public programs and/or tax increases, and description of what higher spending in Alaska buys.

B. Health Care Price and Reimbursement Study - The Commission will contract with a health care actuarial consulting firm with expertise in the analysis of system-wide health care pricing and reimbursement to conduct a study comparing health care provider third party and private-pay charges and reimbursement in Alaska to charges and reimbursement for the same services in Washington and Oregon, and to also benchmark those charges against public coverage such as Medicare, Medicaid, Workers Compensation, TriCare, and the Veteran's Administration. Specific analyses to be requested will include:

- Comparisons of billed and allowed non-facility provider charges, on a per unit basis, for the top 25 most commonly used codes;
- Comparisons of billed and allowed non-facility provider charges, on a per unit basis, for the top 25 most commonly used codes by specific major specialties, including but not limited to family practice, pediatrics, internal medicine, ob/gyn, orthopedics, urology, gastroenterology, cardiology, neurology, general surgery, cardiothoracic surgery, interventional cardiology, ENT, ophthalmology, diagnostic imaging, and chiropractic;
- Comparisons of facility-based provider charges.

The range of billed and allowed charges for each grouping of codes by specialty, as well as the mean and the 50th and 80th percentile, will be included. The consultant will also be asked to identify the major drivers of the pricing and reimbursement differences between Alaska and the other states.

In addition, to assist the Commission in better understanding the challenges Alaska physicians face in delivering Medicare services under the current reimbursement structure, the consultant will be asked to include an analysis of variations in the cost of providing primary care (including compensation, materials and overhead) to Medicare recipients in Alaska compared to other regions of the study, and a description of the major factors driving differences resulting in under-reimbursement of Alaskan physicians by the Medicare program.

The Commission intends to award this contract in January 2011 and hopes to take delivery of the final report by July 2011.

C. Health Status Assessment - The Commission is interested in learning how the "health conditions" variable in the cost equation is driving utilization of and spending for health care services, and has asked the Department of Health & Social Services to provide information on the health status of the Alaskan population, including health trends and health disparities, with comparisons to national averages. The Commission anticipates the information will include data on chronic and infectious disease, injury (both intentional and unintentional), health risk behaviors (including substance abuse), mental illness, and disabling conditions. The Commission hopes to receive the state health status report by July 2011.

3. Long Term Care

Alaska's long term care system is recognized as being one of the most balanced in the nation in terms of supporting people to live in their home and in community settings as opposed to institutions. However, the growing cost of providing long term care services is a critical issue facing Alaska's Medicaid program, and Alaska's senior population is projected to triple over the next twenty years. Current challenges in addition to escalating costs and concerns over system capacity include the need to improve quality in assisted living and other home and community based services, and inadequate services for individuals with maladaptive or severe behavior issues. During 2011 the Commission will compile recent long term care studies, plans and other information available, and will invite a presentation by state leaders grappling with the long term care challenges in our state.

4. Trauma System

Injury is the leading cause of death for Alaskans who are one to 44 years of age. A trauma system that provides rapid appropriate response and treatment is critical to reducing death and disability due to injury. The Department of Health & Social Services made trauma system development a priority two years ago and commissioned a study by the American College of Surgeons Committee on Trauma. Progress has been made since the release of the Committee's November 2008 report. For example HB 168, establishing the Uncompensated Trauma Care Fund to incentivize hospitals to meet trauma center standards, passed during the 2010 legislative session and was signed into law in June; and, DHSS created and filled a Trauma System Coordinator position to support development of a trauma system strategic plan. During 2011 the Commission will learn about the status of trauma system improvement in our state.

Part III: Alaska Health Care System Transformation Strategies

A. Status of Implementation of 2009 Commission Recommendations

The Commission intends their recommendations from prior years to continue standing as current recommendations unless and until they decide to modify or eliminate them based on further study. To that end the Commission will track, consider and report on implementation of our prior year recommendations over time. During 2010 progress was made related to all of the 2009 Commission recommendations. Following is a summary of these developments.

A. <u>Strengthen the Consumer's Role in Health and Health Care</u>

1. Support healthy lifestyles and create cultures of wellness
2. Develop patient-centered primary care models through payment reform, removal of barriers, and support for pilot projects

Healthy Lifestyles

State agencies operate a number of programs aimed at supporting healthy lifestyles, including programs to prevent and control specific diseases and conditions and also risk behaviors such as: obesity, tobacco use, alcohol & drug abuse (including Fetal Alcohol Spectrum Disorders), suicide, unintentional injuries, domestic violence & sexual assault, child abuse, infectious disease, chronic disease, autism, and metabolic and other genetic disorders. Following are significant new efforts initiated and resources invested during 2010.

- Governor Parnell launched "Choose Respect" in March 2010, a new initiative to stop the epidemic of domestic violence and sexual assault in Alaska. As an early phase of this initiative, the Governor proposed and won passage of several new laws during the 2010 legislative session targeted at sexual and domestic violence offenders. The Governor's initiative is now aiming to prevent domestic violence and sexual assault from occurring in the first place by working towards creating a culture that emphasizes respect for others and zero tolerance of violence against women and children.

- The Alaska Department of Health & Social Services (DHSS) implemented two new initiatives related to obesity and chronic disease prevention and control:

    - Alaskans Taking on Childhood Obesity: DHSS collaborated with the Alaska Department of Education & Early Development (DEED) to create "ATCO" – a Task Force convened by the Commissioners of the two state agencies and including the Anchorage School District, Alaska Association of School Boards, and the Alaska Native Tribal Health Consortium to develop recommendations regarding strategies to reverse the trend of increasing rates of overweight and obesity among Alaska's children. The two state agencies (DHSS and DEED) formalized their agreement to collaborate in school-based obesity prevention and reduction efforts in a Memorandum of Agreement signed by Commissioner Hogan and Commissioner LeDoux in July.

    - Alaska Food Policy Council (AFPC): DHSS collaborated with the Alaska Division of Agriculture, US Department of Agriculture, Farm Bureau, Alaska Center for the Environment, and Alaska Root Sellers to create the first food policy council in Alaska. The goal of the new council is to expand

Alaska's food production, improve supply and distribution of locally grown and produced products, decrease hunger, support the use of traditional and local foods, and increase nutrition literacy of consumers.

- DHSS also received an annual operating budget increase of $375,000 in state general funds in the SFY 11 budget to support the Division of Public Health's Obesity Prevention & Control Program. The new state funding will not support new efforts, but replaces federal funding received through hard earmarks and under ARRA to support obesity prevention and control over the past decade. Without the new state funds and with federal support drying up the program may have been discontinued.

- The Statewide Suicide Prevention Council launched a new web portal in November, **www.StopSuicideAlaska.org**, offering information and resources for individuals and groups in Alaska to support efforts to prevent suicide and help with recovery after a loss.

Patient-Centered Primary Care

During 2010 DHSS received a federal grant under CHIPRA (Children's Health Insurance Program Reauthorization Act) that will provide funding for piloting and evaluating patient-centered medical home care models to improve children's health care in primary care clinics in Alaska. The department released a grant Request for Proposals in November and intends to make grant awards to pilot sites in January 2011.

In June of this year the Southcentral Foundation's (SCF) Primary Care Center became the first practice in Alaska to achieve NCQA (National Committee for Quality Assurance) recognition as a patient-centered medical home (level III; effective 2010-2013). In July the University of Alaska Anchorage was awarded a 2-year federal grant to evaluate SCF's adoption of the medical home model in terms of its impact on the cost and quality of care.

This past year the Providence Family Medicine Center/Alaska Family Medicine Residency Program transitioned to a patient-centered medical home care model. The new Providence Senior Care Center, scheduled to open in January 2011, is building its practice based on the same model.

The Alaska Primary Care Association (APCA) launched an initiative in 2010 to support their members' efforts to transform their clinics and practices to a medical home model. APCA contracted with Primary Care Development Corporation to hold a learning session for member clinics and organizations on how to become a recognized medical home. APCA is currently investigating opportunities for developing a set of "Alaskanized" patient-centered medical home standards that will be based on national standards but modified to accommodate special features of health care delivery in Alaska (such as mid-level practitioner led clinics in rural communities too small to support physician practices).

B. <u>Foster Statewide Leadership to Support Health Care Transformation</u>

1. Invest in the health policy infrastructure needed to respond to national reform
2. Establish a permanent state health planning and policy body in statute

National Reform

Following passage of the federal health care reform laws in March and April Governor Parnell directed the State Attorney General to join the Florida-led multi-state lawsuit challenging the law on two primary points: 1) the constitutionality of the federal government's authority to require individuals to purchase

health insurance or pay a penalty, and 2) the imposition of an unfunded mandate on state government by expansion of the Medicaid program.

Due to the Administration's constitutional challenge to the new federal laws, state agencies are proceeding cautiously regarding implementation of new programs created by the laws. State agency staff have been working to assess requirements imposed on state government and to consider options to participate in potential funding opportunities. Decisions to participate in optional programs and regarding how to implement required provisions are being made on a case-by-case basis by program managers and agency executives based on alignment with current policies and programs.

Information that has been made public to-date by state and federal agencies on analyses and implementation of the new laws in Alaska is included in this report in Part II.B and Appendix B.

State Health Planning & Policy Body

The Alaska Legislature passed SB 172 establishing the Alaska Health Care Commission in statute on the final day of the legislative session in April. The bill was transmitted to the Governor in June and signed into law June 21. The new law is very similar to Governor Palin's order that established the original Commission (Administrative Order #246). The most substantive change is the addition of four new voting member seats. SB 172 also included a transition clause to automatically appoint former members appointed under A.O. #246 to the new Commission. New Commission members were appointed September 15 and the Commission convened for the first time in October of this year.

C. Develop the Health Care Workforce

1. Make workforce a priority on health care reform and economic development agendas
2. Strengthen the pipeline of future health care workers
3. Support workforce innovation and adaptation as patient care models evolve
4. Direct workforce planning to be more coordinated
5. Increase the supply of primary care physicians by
    - Supporting educational loan repayment and financial incentives for recruitment
    - Expanding the WWAMI Alaska medical school program as resources allow
    - Supporting primary care residency program development and operation

Health Workforce Planning

The Alaska Health Workforce Coalition completed the "Alaska Health Workforce Plan," which was adopted by the Alaska Workforce Investment Board in May 2010. In September the Department of Labor & Workforce Development (DOLWD) received a federal grant to develop a strategic plan for health workforce development in Alaska. DOLWD is using these funds to support the work of the Coalition to develop an action plan based on the new comprehensive statewide plan. The Coalition anticipates the action plan will be drafted by the spring of 2011. The Coalition also launched a new website this year (https://sites.google.com/site/alaskahealthworkforcecoalition/) and has been holding monthly planning meetings.

Educational Loan Repayment & Financial Incentives

A number of bills introduced in the 26th legislature (2009-2010) would have created and funded a state educational loan repayment and financial incentive program to support recruitment of health care professionals to serve underserved areas and populations in Alaska, but none of these bills passed.

During 2010 the Department of Health & Social Services started a loan repayment program, SHARP (Supporting Healthcare Access through loan Re-Payment), funded with a 1-year $600,000 federal grant and additional funds provided by the Alaska Mental Health Trust Authority and health care organizations. The annual loan repayment benefit provides up to $35,000 for Tier-1 professions or $20,000 for Tier-2 professions for two years, and is paid directly to the practitioner's lender. Eligible practitioners are primary care physicians, nurse practitioners, physician's assistants, dentists, dental hygienists, psychiatrists, psychologists, clinical social workers, psychiatric nurse specialists, licensed professional counselors, and marriage and family therapists serving in identified high-needs areas and facilities. The first grants issued under this program were awarded in June to 14 practitioners based in Anchorage, Bethel, Dillingham, Kenai, Homer, Petersburg, Talkeetna, Tok and Wrangell, as follows: $230,000 to five behavioral health providers, $140,000 to two dental care providers, and $361,771 to seven primary medical care providers.

Primary Care Residency Programs

Of the three new residency programs noted as a need in the Commission's 2009 recommendations, there was significant progress made related to planning and development for two during 2010:

- Alaska Pediatric Residency: The new pediatric residency program will be a three-year branch program of the UW Children's Hospital Pediatric Residency Program. Residents will complete a four-month rotation in Alaska during each of the three years in training; will train in Anchorage, Fairbanks and Juneau; and will have opportunities for placement in both urban and rural and tribal health system and private industry sites. The new pediatric residency program will support 12 residents starting in 2012. Planners do not anticipate requesting funding from the State of Alaska for support. Financial support will be provided by Southcentral Foundation, Providence Health and Services System, Banner Health System, SouthEast Alaska Regional Health Consortium, and the Seattle Children's Hospital.

- Alaska Psychiatry Residency: The new psychiatry residency program will be a four-year branch program of the University of Washington Psychiatry Residency Program. Residents will spend their first two years training in Seattle, and the last two years in Alaska. The program could begin as early as the summer of 2012, and at full capacity 11 residents will be enrolled in the program each year. Residents will train with both urban and rural providers of psychiatric care, and their training will emphasize primary care integration, telepsychiatry and rural/remote consultation. Financial support will be provided by Southcentral Foundation, Anchorage Community Mental Health Trust, Fairbanks Memorial Hospital, Providence Health and Services System, and the Alaska Psychiatric Foundation. Planners anticipate requiring State of Alaska funding in addition to industry and other support to start and maintain operation of this program.

D. Deploy Health Information Technology

1. Support health information technology adoption and utilization
2. Ensure public health connectivity
3. Ensure resulting information is used for optimization of medical care
4. Ensure privacy and security
5. Facilitate broadband telecommunications service access
6. Improve reimbursement for telemedicine

In April 2010 the Alaska Department of Health & Social Services awarded a $3 million four-year contract to the Alaska eHealth Network (AeHN) to serve as the state's official Health Information Exchange (HIE) management entity. In November AeHN awarded a contract to Orion Health to provide the technology for Alaska's statewide exchange. Initial pilots to begin connecting hospitals and clinics in certain test sites are slated to begin in April 2011. The program creates a system for securely moving electronic health records (EHRs) between participating health care providers; provides connectivity to referral providers in Alaska and the lower 48; supports telemedicine (high-resolution image transfer, videoconferencing, and Voice-over-Internet applications); and creates a system to track chronic disease across the state, coordinate care programs and improve patient health.

Also in April AeHN received a federal grant of $3,632,357 to establish a Regional Health IT Support Center (also known as the Regional Extension Center, or "REC") to provide technical assistance to health care providers in the selection and implementation of EHRs. One of AeHN's goals is to assist smaller providers with implementing EHR systems and achieving "meaningful use" (standards for qualifying for incentive payments and avoiding penalties). Services include EHR readiness assessment, vendor selection and contracting assistance, practice workflow redesign, training, and IT support ("geek team"). Alaska's REC began offering services in September.

Following a 2009 survey of Alaskan providers on EHR adoption that identified difficulty in selecting an EHR vendor as a top barrier, the Alaska EHR Alliance launched an 8-month process to select two EHR vendors to endorse for Alaska's providers. In April 2010 the Alliance selected e-MDs and Greenway Medical Technologies as the preferred vendors. Under the endorsement Alaska providers are offered reduced pricing and access to pre-negotiated contracts to simplify the EHR selection process, in addition to the assurance that the vendors were carefully vetted from an initial field of 250 potential vendors by a team of Alaska health care system stakeholders. This project was funded by AeHN through a grant from the State of Alaska.

The Alaska EHR Alliance also updated their 2009 survey of Alaskan providers in January 2010 by contacting clinics that reported not having EHRs in the 2009 survey. Of the 94 clinics that responded to the follow-up survey, 24 had acquired new EHRs in the past year and an additional 18 were planning to do so.

In addition to the contracts negotiated by the Alliance with e-MDs and Greenway, two Alaska hospitals began offering EHRs at a reduced price to affiliated physicians this year. Central Peninsula Hospital in Soldotna offers eClinical Works and Providence offers Epic as remote-hosted EHRs, providing hosting, maintenance and subsidies to independent physician practices choosing to adopt their systems.

The University of Alaska partnered with Dakota State University this year to create Alaska's first Health Information Technology Workforce Training Program. The program offers two certificates available through the UAS Sitka Campus providing noncredit continuing education courses via online delivery. The two certificates, one for Health IT Redesign, Planning, and Management, and the other for Health IT Implementation and Technical Support, fulfill the requirements for roles defined by the federal Office of the National Coordinator (ONC) for Health IT. This program is federally funded by the American Recovery and Reinvestment Act of 2009 (ARRA).

In July CMS published final regulations to implement the Medicare and Medicaid EHR Incentive Programs created by ARRA. These programs will begin providing financial incentives to health care providers making "meaningful use" of electronic health records in 2011. Federal regulations also issued

in July implement the EHR Certification Program. Authorized testing and certification bodies are now certifying EHR technologies as meeting compliance standards required for achieving meaningful use.

Significant 2010 developments related to expansion of broadband availability and support in Alaska include:

- The creation of Connect Alaska at the beginning of the year. Connect Alaska is a subsidiary non-profit of Connected Nation (a national non-profit formed to expand broadband across the U.S.), and received a $1.9 million federal NTIA (National Telecommunications and Information Administration) grant through the Denali Commission to map broadband connectivity in Alaska.
- The launch of Alaska's first statewide broadband availability map in September. Connect Alaska, in partnership with the Alaska Department of Commerce, Community and Economic Development, developed the web-based interactive map with funding from the federal NTIA grant (appropriated under ARRA). The map will be continually updated, and is available at www.connectak.org.
- Receipt of $117 million in federal grants and loans by broadband service providers to expand and improve broadband connectivity to rural SW Alaska communities (and also Tanana and Cordova).
- Receipt by 257 health clinics in rural Alaska of FCC subsidies for telecommunication and internet access costs.

E. Improve Access to Primary Care for Medicare Beneficiaries

1. Increase the supply of primary care providers
2. Support Federally Qualified Health Centers and Rural Health Clinics
3. Request relief from federal reimbursement inequities and administrative burdens
4. Develop a PACE (Program of All-Inclusive Care for the Elderly) program

Expansion of clinical capacity intended to help alleviate the primary care access problem for Medicare beneficiaries is the main area of progress during 2010 related to the Commission's recommendations. One new clinic that accepts Medicare patients opened this year, and two new clinics were planned during 2010 and will open in early 2011:

- Mat-Su Community Medicine, currently staffed by one physician who is board certified in both pediatrics and internal medicine, opened in November. The new clinic accepts Medicare patients, and is being subsidized by Mat-Su Regional Medical Center.

- Providence Senior Care Center will open in January 2011. It will initially be staffed by two internal medicine physicians and one nurse practitioner with hopes to add two additional internists by the summer. Care delivery will be based on the patient-centered medical home model. The Center will accept patients 55 years of age and older, and estimates that approximately 70% of the patients will be Medicare enrollees. Providence Health & Services is subsidizing the start-up and operation of this clinic.

- Alaska Medicare Clinic, Inc., a new non-profit, received a $1 million state grant in the FY 2011 capital budget to support start-up costs for a new clinic devoted solely to Medicare enrollees. This clinic will be directed by a physician and primarily staffed with mid-level practitioners, nurses and medical assistants. It will not use a patient-centered medical home care model, but planners have developed a streamlined care delivery process. Administrative operations will also be streamlined since the practice will be limited to a single payer and a specific patient population. Clinic organizers are hoping to open in February.

In addition to these new clinics the Anchorage Neighborhood Health Center (ANHC), a Federally Qualified Health Center, is implementing a project to relocate and expand clinic capacity from 20,000 ft^2 to 42,000 ft^2. During 2010 ANHC received a new $6 million state capital grant (in addition to $10 million in state capital funds received in prior year budgets), and also an $8 million federal grant under the Patient Protection & Affordable Care Act (PPACA), to support this $28 million project. The new facility will have 3 medical pods, one dedicated to seniors, and use a patient-centered medical home model. August 2012 is the scheduled move-in date for the new facility.

Health care organizations in Anchorage are continuing to study the feasibility of creating a PACE program, but are not yet prepared to begin active planning with the Department of Health & Social Services on a reimbursement model, which will be the next step towards development of a CMS waiver to develop a PACE program for Alaska.

Individuals commenting at recent public hearings of the Commission have noted a provision included in the federal Patient Protection & Affordable Care Act through an amendment offered by Sen. Begich that intends to provide state governments an avenue for subsidizing Medicare payments to providers with state-funded grants (P.L. 111-148, Sec. 5606 added by Sec. 10501). It is unclear whether this provision overcomes the legal restriction prohibiting providers from accepting supplemental payment for Medicare services.

Continuing Work Needed on 2009 Recommendations

While progress has been made during 2010 in every area the 2009 Commission addressed more effort is needed to implement the initial set of recommendations, including on-going work to:

- Develop policies and capacity to encourage and support healthy lifestyles;
- Foster the development of innovative patient-centered primary care models including integration of primary medical care and behavioral health services;
- Track implementation of federal health reform legislation;
- Create sustainable capacity for health workforce planning and development;
- Improve health professions recruitment and retention through a state educational loan repayment and financial incentive program;
- Develop and support graduate medical education programs for training psychiatry, pediatric, and internal medicine residents in Alaska;
- Support health information technology deployment; and,
- Achieve improvements in federal Medicare policies.

The Commission will continue tracking progress made on the 2009 recommendations and will periodically review and potentially refine and add to these recommendations over time.

B. 2010 Commission Recommendations

Note: The numbering system for Strategies, Findings, and Recommendations continues from 2009.

A.3. Consumer's Role/Value: Foster the use of Evidence-Based Medicine

Finding A.3.a: Waste in the health care system due to misused medical resources is estimated to represent as much as 30% of health care spending.

Finding A.3.b: Evidence-based medicine can increase the effectiveness of medical treatment, improve the quality of health care, and reduce health care costs.

Finding A.3.c: Public and private health care sectors have demonstrated an increasing interest in applying evidence-based medicine to policy and practice in response to high and rising costs and variations in quality of health care.

Finding A.3.d: Involvement of health care providers and patients in decision-making is essential to the successful application of evidence-based medicine to clinical practice and public and private payer policies.

Finding A.3.e: Existing mechanisms to assess patients' compliance with evidence-based medical recommendations are limited.

Finding A.3.f: Assessing the outcomes of health care interventions is challenging due to limitations on collecting and sharing data among patients, clinicians, payers, and government agencies.

> *"Evidence-based medicine is the practice of medicine in which the physician finds, assesses, and implements methods of diagnosis and treatment on the basis of the best available current research, their clinical expertise, and the needs and preferences of the patient."*
>
> Mosby's Medical Dictionary, 8th edition, 2009 Elsevier

Health care expenditures are consuming an increasing proportion of Alaska's and the United States' gross domestic product (GDP) each year, but there is no indication that higher spending is producing better health outcomes for individuals or populations. Furthermore, there is growing evidence that a significant proportion of health care delivered in the United States is ineffective, inappropriate, or unnecessary, potentially wasting hundreds of billions of dollars. An oft-cited estimate is that waste in the health care system due to misused medical resources represents as much as 30% of health care spending. There is a costly gap between the care patients need and the care they actually receive.[viii]

Highlighting the problem of inconsistent and inappropriate use of health services is the Dartmouth Atlas of Health Care[ix] and numerous other studies, which have consistently demonstrated wide variations in practice patterns across geographic regions of the United States. The tests and treatment patients receive varies based on the location in the country where the care is provided. Moreover, research has documented those regions of the country where there is overuse of health care resources and higher spending actually have lower quality of care and worse health outcomes.[x xi xii]

Coinciding with increased recognition of the gap in the quality of care is an evolution in the nature of medical practice toward shared decision-making. A generation ago patients typically relied on their physician to make decisions for them regarding their care. The physician would determine the best

course of treatment based on their training, continuing education and journal reviews, and clinical experience. Today health care decision making is becoming a shared process that includes the provider's clinical judgment but also takes account of the patient's personal values and preferences and presents them with choices based on the best available scientific evidence of what course of treatment might work best for them.

A growing trend in clinical practice that is demonstrating improvement in quality and cost of care and that also supports better patient engagement in decision-making about their care is "evidence-based medicine." Evidence-based medicine (EBM) is a model of clinical practice intended to improve the quality, safety and effectiveness of care by applying scientific evidence of effectiveness and benefit to individual medical decisions. It uses the best available, high-grade evidence to support the clinician's and patient's decision-making process.

The practice of EBM dates back to ancient times, with accounts of efforts to study and understand the health outcomes of different treatment regimens found from Ancient Greece and China and even documented in the Bible.[xiii] Archie Cochrane, a physician and epidemiologist from Scotland, is acknowledged as the father of modern EBM. His 1972 text "Effectiveness and Efficiency: Random Reflections on Health Services" is noted as having had a profound influence on the practice of medicine and on the evaluation of medical interventions. His work led to the founding of the Cochrane Collaboration which is an international, nonprofit, independent organization dedicated to making up-to-date, accurate information about the effects of health care readily available worldwide.

The term "evidence-based medicine" is relatively new. It came into use in the early 1990s and was first formally defined by David Sackett in 1996 as "the conscientious and judicious use of current best evidence from clinical care research in the management of individual patients."[xiv] More recently David Eddy integrated the definition to include application of evidence to policy development with his definition published in 2005, defining EBM as a set of principles and methods intended to ensure that, to the greatest extent possible, population-based policies and individual medical decisions are consistent with evidence of effectiveness and benefit.[xv]

Numerous public and private organizations have demonstrated increasing interest in supporting the use of evidence-based medicine to improve health care quality and contain costs, for example:

- The Blue Cross Blue Shield Association established the Technology Evaluation Center (TEC) in 1985 to provide health care decision makers with timely, rigorous and credible assessments that synthesize the available evidence on the diagnosis, treatment, management, and prevention of disease. Current TEC clients include Kaiser Permanente and the Centers for Medicare and Medicaid Services.[xvi]

- The Veterans Health Administration established the Quality Enhancement Research Initiative in 1998 to support the application of new research findings into routine clinical practice to improve the quality of health care for Veterans.[xvii]

- The Agency for Healthcare Research and Quality (AHRQ), the lead Federal agency charged with improving the quality, safety, efficiency, and effectiveness of health care in the United States, established the Effective Health Care Program in 2003 (under the Medicare Prescription Drug, Improvement, and Modernization Act of 2003) to support the production of health care effectiveness research for clinicians, consumers, and policymakers.[xviii]

- The Oregon Center for Evidence-based Policy was created at the Oregon Health & Science University in 2003. Current projects of the Center include 1) the Drug Effectiveness Review Project (DERP), which supports the application of the best available evidence on effectiveness and safety comparisons between drugs in the same class to public policy and decision making; and, 2) the Medicaid Evidence-based Decisions Project (MED), which makes high quality evidence available to participating State Medicaid Programs to support benefit design and coverage decisions.[xix]

- Washington state enacted a set of statutory provisions between 2003 and 2006 authorizing the state's public payers (Medicaid, Workers' Compensation, state government employee benefit plans, and the corrections department) to use evidence-based methods to improve the quality of care, reduce wasteful use of health care resources, and determine what benefits should be covered.[xx]

- In 2006 the Institute of Medicine convened the "Roundtable on Evidence-Based Medicine", which is working through a series of workshops and publications to explore opportunities for achieving the Roundtable's goal that "by 2020, 90% of clinical decisions will be supported by accurate, timely, and up-to-date clinical information and will reflect the best available evidence."[xxi]

- The Patient Protection & Affordable Care Act (P.L. 111-148) enacted in 2010 established a private, non-profit Patient-Centered Outcomes Research Institute to assist patients, clinicians, purchasers, and policy-makers in making informed health decisions by carrying out research projects that provide high-grade, relevant evidence on how diseases, disorders, and other health conditions can effectively and appropriately be prevented, diagnosed, treated, monitored, and managed. Members of the Board of Governors of the new Institute were recently appointed by the U.S. Government Accountability Office (GAO).[xxii]

A critical aspect of EBM is the importance of understanding the quality of evidence and the appropriate application of evidence to an individual medical decision or population policy decision. Many unfortunate decisions have been made based on inadequate information or information derived from poor quality research or by those who misinterpreted the findings. The media is filled with stories of drugs being pulled off the market due to newly identified dangerous side-effects (e.g., Vioxx, Avandia, and Meridia), and commonly used medical therapies found to be potentially harmful (e.g., hormone replacement therapy) or no more effective compared to less invasive, less costly treatments (e.g., arterial stents). This has lead to significant confusion on the part of the public and skepticism regarding whether to ever believe any medical research at all.

Skepticism on the part of the public is not misplaced – an estimated 90% of published medical information is flawed.[xxiii] It is therefore essential that health care professionals understand how to translate evidence into practice. It is relatively easy to learn basic critical appraisal skills, and training in how to critically evaluate the medical literature and apply it is increasingly available. Methods for grading the quality of evidence and the strength of recommendations have been developed and are in wide use. A growing number of organizations evaluate clinical studies and make medical information based on high grade evidence available publicly. Other challenges to applying EBM in clinical practice, such as the overwhelming volume of research and information available to guide clinical decision making, should in time be more easily managed with the assistance and growing use of health information technologies by health practitioners and patients.

It should be noted that there has been some controversy around the term "evidence-based medicine." Some borne out of concern that the intent is to turn clinicians into automatons through imposed decisions based on required instructions ("cookbook medicine"). Others who have heard the term in recent use by public entities fear it is a government initiative, intended to take individual health care decisions out of the hands of providers and their patients. It is neither, and acknowledging these potential concerns and ensuring the appropriate use of EBM can guard against these concerns becoming realized.

> *"Evidence based medicine is not "cookbook" medicine. Because it requires a bottom up approach that integrates the best external evidence with individual clinical expertise and patients' choice, it cannot result in slavish, cookbook approaches to individual patient care. External clinical evidence can inform, but can never replace, individual clinical expertise, and it is this expertise that decides whether the external evidence applies to the individual patient at all and, if so, how it should be integrated into a clinical decision. Similarly, any external guideline must be integrated with individual clinical expertise in deciding whether and how it matches the patient's clinical state, predicament, and preferences, and thus whether it should be applied."*
>
> *David Sackett, et al, 1996*[xxiv]

Resources available for health care are not infinite, and policy decisions regarding their use are made by health care payers in the public and private sector every day. Evidence-based medicine is a model of individual clinical practice and population policy decision-making that can serve to ensure limited resources are targeted to the most effective and efficient services. Application of evidence-based medicine to the public policy arena should not increase government control over health care decisions, but should ensure that government officials are being more responsible stewards of the public funds with which they are entrusted. The goal should always be to increase the quality of care and improve health care outcomes by ensuring information on which decisions are being made is valid and accurate.

The ideal health care system for Alaska should be designed to apply high-grade evidence in support of a collaborative health care choice for each patient and provider. The system should also be designed to support application of high-grade evidence by public officials who have the qualifications and training to critically appraise medical literature, and through a public process that is transparent and includes stakeholders in public policy decision-making regarding allocation of limited public medical care dollars.

In Alaska state government is a significant payer for health care services. State programs that purchase health care such as the Medicaid program, state employee and retiree health plans, corrections and Workers' Compensation could provide leadership in incentivizing improved quality and efficiency of care through the use of evidence-based medicine. Public policies based on the application of evidence-based medicine should enhance the consumers' role in health by fostering informed discussions between patients and providers with the goal of improving the health outcomes of medical decisions.

Recommendation A.3.a: The Commission recommends that the Governor and Alaska Legislature encourage and support State health care programs to engage in the application of high grade evidence-based medicine in making determinations about benefit design (covered services, prior authorization requirements, patient cost-sharing differentials) and provider payment methods.

Recommendation A.3.b: The Commission recommends that the Governor require State health care programs to coordinate development and application of evidence-based medicine policies to create a consistent approach to supporting improved quality and efficiency in Alaska's health care system.

Recommendation A.3.c: The Commission recommends that the Governor require State health care programs to involve health care providers and consumers in decision making related to the application of evidence-based medicine to public policy. The purpose of such involvement is to support a transparent process leading to policies that avoid restricting access to appropriate treatment and that foster informed discussions between patients and clinicians in which individualized, evidence-based choices improve the quality of health care.

Recommendation A.3.d: The Commission recommends that the Governor direct State health care programs to seek to incorporate data on patient compliance in developing new provider payment methods and benefit design.

Recommendation A.3.e: The Commission recommends that the Alaska Department of Health & Social Services implement a web-based data system for public health information.

C. Strategies under Consideration for Study in 2011

Note: The numbering system for Strategies continues from 2009 and 2010.

A.1. Consumers' Role/Prevention: Healthy Lifestyles - On-line Community-Based Health Data System
During 2009 the Commission learned that chronic disease is the leading cause of death and disability in the U.S. and Alaska, that the majority of health care spending is for chronic disease, and that individual behaviors such as tobacco use, poor diet and inactivity are now the leading determinants of the health status of the population and contributors to premature death. The Commission recommended that the State investigate strategies to encourage and support healthy lifestyles, including strategies to create cultures of wellness in any setting.

Communities play an important role in creating local environments that support healthy lifestyles. Design of roads, walkways and public transportation systems; school policies regarding nutrition, physical education, and extracurricular activity; development of non-profit organization programs; local ordinances such as those pertaining to clean indoor air; and, organization of local medical services and systems are all examples of where communities can act to influence the health of their residents.

A critical resource for community health improvement planning is timely and relevant data on local health factors to guide identification and prioritization of program strategies, support alignment with health goals, and enable measurement of progress and evaluation of outcomes. During their November 2010 meeting the Commission heard from a representative of an Alaskan community health foundation about the need for and opportunity to develop a public access, web-based data and information system to support local health status reporting and improvement planning. The Commission identified this strategy as a priority for study during 2011.

A.2. Consumers' Role/Value: Primary Care Innovation - *Next Steps*
Primary care is the foundation of the health care delivery system – providing the main point of entry for secondary and tertiary care, and meeting the majority of patient needs for health education and disease prevention, initial assessment of health problems, treatment of acute and chronic health conditions, and overall management of a patient's health care services. There is increasing evidence that access to high-quality primary care improves health outcomes and reduces costs. However, the rising demand for services from an aging population and increasing chronic disease, coupled with the decreasing supply of primary care physicians, is sweeping our primary care system toward a crisis.

In preliminary learning about innovative patient-centered primary care models during 2009 the Commission found that these models are effective at reducing unnecessary utilization of services by empowering patients to take more responsibility for their health and health care. Key characteristics of patient-centered primary care include a stable trusting relationship between the patient and their health care practitioners; care that is provided by a multidisciplinary team; whole-person orientation (addressing all life stages, prevention and wellness, acute and chronic conditions, and both mind and body); care that is coordinated and/or integrated (including integration of primary medical care and behavioral health services); emphasis on quality and safety; and enhanced access (through open scheduling and modern communication options). The Commission recommended the State aggressively pursue development of these care models through payment reform, removal of statutory and regulatory barriers, and implementation of pilot projects.

During 2011 the Commission will engage in additional learning to identify more specific strategies for advancing the patient-centered primary care medical home model in Alaska, including strategies for integrating primary medical care with behavioral health services.

A.4. Consumers' Role/Value: Increase Price & Quality Transparency

Consumers need to know the price and quality of their health care options in order to make informed decisions and support their ability to participate more fully in their care, but the present system of health care pricing and reimbursement has been characterized as "forcing sick and anxious people to shop around blindfolded for cost-effective care."[xxv] Empowering consumers with information not only supports improved decision-making on their part, but drives the entire system to provide better care for less money. An infrastructure to support transparency of health care prices and quality for Alaskan consumers, compiling and analyzing data on pricing and quality measures for physician services and hospital care and producing public information through an accessible and understandable reporting mechanism, does not currently exist.

Creating a system to provide transparency is not as simple as it may sound however. Pricing of individual services might be misleading without a more comprehensive picture of the total cost of care for a given condition and the expected outcomes of various care options. And transparency to support a market-based approach is not the only solution to the health care cost and quality problem. Health care is different than other goods and services, and all the conditions required for a competitive market do not exist in the health care market. Consumers do not fully control all of their health care dollars, and they cannot participate fully in all aspects of clinical decision-making about their care. In addition, many health care decisions are made for consumers in urgent or emergent situations when the consumer is severely ill, injured or under too much emotional stress to participate in their care decisions.

The potential benefits of and barriers to developing a system providing price and quality information to support consumer choice need to be fully understood as part of a strategic approach to making the system more transparent with the goal of improving value (increasing quality/controlling costs). During 2011 the Commission will study national trends in price and quality transparency and identify opportunities for applying transparency strategies to improve value in Alaska's health care system.

A.5. Consumer's Role/Value: Bundled Payment Systems

The current fee-for-service payment system rewards health care providers for volume, not value. The financial incentives in this system lie entirely in the provision of more health care services and the sale of more health care commodities regardless of the quality of care provided, and may actually serve as a disincentive to creating health. Payment bundling is one value-driven payment method with the potential for rewarding quality over volume.

Payment bundling provides a global fee for a specified set of services. Development of this type of payment system could be phased in over time, starting with bundling of a limited set of hospital services related to certain acute care episodes (related to certain illness diagnoses for a specified period of time – for example, coronary artery bypass surgery and extending 30 days beyond discharge); and expanding over time to include physician inpatient care and post-acute care.

A particular challenge to implementing this strategy in Alaska is the lack of integrated care networks in our state. Hospitals would have to contract with physicians and other service providers required to deliver the suite of services potentially needed to treat the bundled diagnoses or procedures. Other challenges involve the lack of sophisticated information and accounting systems in many of Alaska's smaller hospitals, the need to identify standards to ensure changes in reimbursement do not negatively impact quality, mechanisms for avoiding "cherry-picking" of patients with the potential for fewer complications, and ways to reduce exposure to risk for providers. Research is required to guide implementation of new payment methods, and careful evaluation is required to assess cost-effectiveness, impact on quality of care and patient outcomes, and identification of unintended

consequences. During 2011 the Commission will analyze the opportunities for testing bundled payment systems in Alaska.

A.6. Consumer's Role/Value: Leverage State Purchasing Power

State government in Alaska represents a substantial payer for health care services. The state spent over $1.5 billion in FY 2009 in Medicaid expenditures, state employee and retiree claims (not counting benefit credits paid to union health trusts), state employee Workers' Compensation medical claims, and purchase of health care services for incarcerated offenders in the state correctional system. In 2011 the Commission will study potential benefits and barriers to collaboration between these state programs to develop shared value-driven purchasing strategies --- leveraging their purchasing power to drive improved health care quality and cost in Alaska.

A.7. Consumer's Role/Access: Insurance Industry Regulation/Deregulation

One cornerstone of the new federal health care legislation (the Affordable Care Act) is reform of the private insurance market through a series of new federal regulatory requirements. The federal government envisions these reforms will be implemented through and by state insurance regulators. There are questions and concerns regarding the impact of these new requirements on the insurance industry, on future prices for insurance premiums, and on the States' role in insurance regulation.

Only 23% of Alaskans have health insurance purchased on the private market. An additional 32% have insurance through their employers' self-insured plan (exempt from state regulation under federal law (ERISA)). The remaining 45% of Alaskans have insurance through a public plan (Medicaid/Medicare), have health care provided by the military or the tribal health system, or are uninsured. [xxvi] Consideration of insurance market reform strategies will require study of the potential impact on Alaska's health care system since less than a quarter of the population is covered by the state-regulated insurance market. During 2011 the Commission will study opportunities for improving access to and value of health care through insurance market regulation (and deregulation) in the context of the changes imposed by the Affordable Care Act.

B.3. Statewide Leadership: Measuring Health System Improvement

The Commission and State leaders in government, business and the health care industry need a mechanism for tracking how Alaska's health care system is performing over time, and whether Commission recommendations are having intended results in health system improvement. During 2011 the Commission will develop a set of indicators that are measurable and that best represent the status of our health care system relative to attainment of the four goals of increased access, controlled costs, improved quality, and prevention-focused. The Commission will also set benchmarks and targets for each measure, with the intention of reporting annually in future years on the progress of health system improvement. Following are examples of potential indicators.

<u>Potential Health Care System Transformation Measures:</u>

1. Increase Access
    - Percent of Alaskans insured
    - Percent of Alaskans who have a specific source of on-going care
    - *Measure of insurance affordability*
    - *Indicator of workforce supply*

2. Control Costs
    - Annual growth rate in total health system expenditures in Alaska
    - Annual growth rate in Alaska's Medicaid expenditures

- Impact on Alaska's state budget: new spending, net savings, new revenues
- *Measure of provider revenues based on value*

3. Safe, High-Quality Care
    - Percent of population receiving key preventive services or screenings
    - Percent of Alaskans with chronic conditions controlled
    - Percent reduction in gap between benchmark and actual levels of quality
    - Percent reduction in gap between benchmark and actual levels of safety
4. Focus on Prevention
    - Percent of Alaskan homes with safe water and wastewater systems
    - Percent of Alaskans reporting health risks
        - Percent of Alaskans who smoke cigarettes
        - Percent of Alaskans who are overweight or obese
        - Percent of Alaskans who are binge drinkers
    - Percent of Alaskans with moderate to severe depression
    - Death rate among Alaskans due to injury (intentional and unintentional)

C. Workforce Development - *Next Steps*

Alaskans' access to quality health care is dependent on the availability of a well trained health care workforce with sufficient numbers of workers in the right occupations and the right locations to meet the needs of the population. The Commission focused during 2009 on the physician workforce as just a first small step and only one component in what should be a comprehensive and sustained approach to development and implementation of a health care workforce strategy for Alaska. There are numerous organizations collaborating on various aspects of health care workforce planning and development, and further study and improvement of Alaska's health care workforce cannot occur in isolation but must consider and build on these other efforts, and a comprehensive approach to addressing Alaska's health care workforce needs must include strategies to address:

- On-going assessment of Alaska's health care workforce size, composition and distribution
- Workforce innovations required for responding to transformation in patient care models
- Training needs along the continuum of K12 education through graduate medical education and including on-the-job training
- Improved recruitment and retention of health care workers
- Sustainability of health care workforce planning, development and support infrastructure

During 2011 the Commission will coordinate with the Alaska Health Care Workforce Coalition to identify opportunities for sharing and leveraging resources to develop strategies for health workforce development in our state.

One specific workforce strategy that the Commission also intends to track during 2011 is improvement of the licensure process for health care professionals in Alaska.

Pending Strategies for Future Consideration

In addition to the policy options and other strategies for which recommendations were developed in 2009 and 2010 and those described above for consideration in 2011, the following options have been identified for study by the Commission at some point in the future. Most of these options were identified during 2009 and are briefly described in the Commission's 2009 report.

A. Consumer's Role in Health

I. Value (Cost & Quality)

- Move to value-driven purchasing
  - Pay-for-Performance
  - Medical error/infection reporting and non-payment
- Control fraud and abuse
- Reform the malpractice system
- Support process and quality improvement
- Increase consumer participation in payment for services
  - Health Savings Accounts
- Identify additional innovative patient-centered health care strategies to address
  - High-cost beginning and end of life care
  - Medicaid high-cost clients

II. Access

- Increase insurance coverage
  - New insurance programs
  - Health insurance exchange
  - Individual and/or business subsidies
  - Individual and/or business mandates
  - Medicaid Expansion
- Address availability of specific services
  - Behavioral health
  - Long term care
  - Trauma care
  - Clinical preventive services
  - Pediatric specialties

III. Prevention

- Safe water and sanitation systems
- Employee health risk management programs

B. Statewide Leadership

- Strengthen the Health Data Infrastructure

2/23/11 PRESENTATIONS: ALASKA MENTAL HEALTH TRUST; LONG TERM CARE OMBUDSMAN; ALASKA COMMISSION ON AGING

<TARGET><BILL></BILL><SUBJECT>2-23-11 PRESENTATIONS ALASKA MENTAL HEALTH TRUST; LONG TERM CARE OMBUDSMAN; ALASKA COMMISSION ON AGING</SUBJECT><COMM>SHSS27</COMM></TARGET>

SENATE COMMITTEE

HEALTH & SOCIAL SERVICES

AGENDA

WEDNESDAY, FEBRUARY 23, 1:30 PM
Butrovich Room #205

PRESENTATIONS:

- *AK MENTAL HEALTH TRUST – Subject: AK Health Workforce Plan (Presentation by: Alaska Health Workforce Coalition)*
- *LONG TERM CARE OMBUDSMAN (Presentation by: Diana Weber, LTC Ombudsman)*
- *ALASKA COMMISSION ON AGING (Presentation by: Denise Daniello, Exec. Dir)*

REMINDER

TONIGHT, 6 PM, LEGISLATORS ARE INVITED TO ATTEND THE KEY CAMPAIGN KICK-OFF DINNER AT THE CENTENNIAL HALL. ALSO TOMORROW MORNING AT 8 AM IN THE SENATE FINANCE CONFERENCE ROOM #532, BOTH SENATE AND HOUSE HSS ARE HOSTING THE ANNUAL KEY CAMPAIGN MEETING. I WOULD APPRECIATE MEMBERS SUPPORTING BOTH EVENTS.

Also, it's time for the Legislative Health Fair tomorrow from 8 to noon in the Terry Miller Building gym. All legislative family members are invited to the fair. PSA, thyroid, prostate screenings and more are available. Fasting is helpful.

ADJOURNMENT:

H&SS Committee: Sen. Bettye Davis, Chair; Sen. Johnny Ellis, Sen. Fred Dyson, Sen. Kevin Meyer, Sen. Dennis Egan

ALASKA HEALTH WORKFORCE PLAN

Prepared by the Health Workforce Planning Coalition for presentation to the Alaska Workforce Investment Board

May 2010

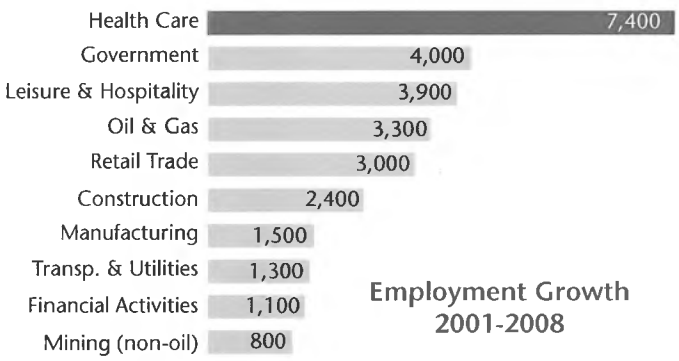
Executive Summary

Health care is one of the largest and most dynamic industries in Alaska, accounting for eight percent of total employment and around 16 percent of the value produced by the state's economy. Between 2000 and 2009, health care employment increased 46 percent, about five times as fast as the state's population and three times as fast as all other sectors of the economy.

This plan is a consensus of the strategies that must be employed to meet Alaska's most pressing health workforce needs. It is a result of a year-long, industry-led process with active involvement from education and governmental sectors. While there have been many large health workforce expansions and plans around specific occupations, this plan is the most comprehensive statewide effort to date, targeting key occupations with severe shortages.

This growth is expected to continue. Department of Labor and Workforce Development (DOLWD) data indicate a 30 percent growth rate between 2004 and 2014, twice that of the overall economy. Currently, 11 of the top 15 fastest growing jobs in Alaska are in this sector.

Additionally, federal health reform is expected to significantly increase the demand for providers.



Source: Alaska Department of Labor and Workforce Development, Research and Analysis

The Need:

While job growth is good news for the economy, it also places heavy strains on an industry already burdened by unacceptably high vacancy rates in key occupations. State rates for primary care professions, as determined by the 2009 Health Workforce Vacancy Study conducted by the Alaska Center for Rural Health, range from 12.9 percent for community health aides and practitioners to 37.4 percent for pediatric nurse practitioners. Though registered nurses had a comparatively moderate vacancy rate at 10.1 percent, this relatively large profession was calculated to have over 320 vacant positions.

The above vacancy rates are statewide averages; rates in rural Alaska are even more dramatic. These vacancy figures coupled with anticipated high increases in demand for workers indicate a significant skills gap in the health care workforce at the present time, a gap that without increased attention can only worsen.

The Promise:

Health care positions are found in all regions of the state, offering close-to-home employment for many Alaskans. Although some positions require advanced training, many jobs are entry-level, requiring limited preparation. Often, these entry-level positions are the start of a career ladder or lattice that can—with additional experience and education—lead to life-long, meaningful careers.

Through public and private postsecondary education institutions in the state, Alaskans currently have access to education and training in more than 80 health care occupations. This combination of local jobs, opportunity for advancement and access to in-state training makes the health care industry a primary mover in putting Alaskans to work.

The Strategy:

The Health Care Workforce Development Plan addresses the challenge of assuring a well-prepared and sufficient workforce to meet Alaskans' health care needs through four strategies: Engage, Train, Recruit, Retain.

Alerting Alaskans to the opportunities available in the health care field is a first step in securing the necessary workforce. Public information campaigns, K-12 career awareness and exploration and outreach to Alaskan job seekers are elements of the Engage strategy.

Preparation for a health care career often starts at the secondary level, where prerequisite math, science and communications skills are developed. Quality, standards-based postsecondary education delivered as close to home as possible is a next step

along a career path in health care. As the practice of health care changes through technology, health reform, or new care models, those employed in the industry must upgrade skill levels. Finally, experienced teachers must be available to deliver the necessary education and training at all levels. Strengthening secondary math, science and career education, expanding access to training programs in priority occupations, providing continuing education and securing the necessary faculty are elements of the Train strategy.

Although the plan speaks to significant expansion of health care career training and education in the state, the size and complexity of the industry indicate that recruitment from outside of Alaska will continue to be needed to fill some positions. Alaska can improve its competitiveness with others seeking similar skilled professionals by more widely disseminating information about employment opportunities and offering more post-graduate experiences within the state. State and federal-supported loan repayment and other financial and quality-of-life incentives can sway the decision to locate or stay in Alaska. Finally, more coordination in recruitment by health care providers could reduce costs. All of these approaches are elements of the Recruit strategy.

The final plank in the health care plan is to retain the workforce that has been educated and recruited. To do so requires successful transitioning from training into the world of work and employment that offers sufficient remuneration, adequate supervision and opportunities for professional growth. Assisting employers to provide these workplace elements make up the Retain strategy.

Plan Phases:

The Steering Committee considered several time horizons in developing the plan strategies: short term (within the next two years), medium term (within three to five years) and long term (five years or more in the future). A key focus of the plan is in training for and development of specific occupations. From data collected by the Departments of Labor and Health and Social Services, the University of Alaska and other sources, the planning group identified 15 occupational groupings encompassing 26 individual occupations and careers requiring action in the short term.

The following occupational groups are included in this plan:

Behavioral Health Aide/Village Counselor
Primary Care Physician
Advanced Nurse Practitioner
Substance Abuse Counselor
Registered Nurse
Community Health Aide/Practitioner
Social Worker
Oral Health Practitioner
Psychiatrist
Human Services Worker
Pharmacist
Therapist and Therapist Assistant
Nurse Educator
Health Informatics Staff
Direct Care Worker

Details for applying the plan to these priority occupational groups are found in Section 4. Here, the occupations are described with relevant data on vacancy rates, educational qualifications and training opportunities, followed by suggested strategies under the four broad strategies of Engage, Train, Recruit, Retain. Occupational and training data will be reviewed and updated annually, at which time—due to changes brought about by reform efforts, population shifts and/or adoption of new models of care—additional occupations may emerge as high priority.

The Role of AWIB:

Endorsement by the Alaska Workforce Investment Board (AWIB) of this health workforce plan is essential for assuring a coordinated approach to implementation. Representatives of the three key state departments involved in delivering plan elements—Health and Social Services, Labor and Workforce Development and Education and Early Development—sit on the Board as do representatives from health industry employers. The University of Alaska, the major training provider for health care careers, is also a member. This mix of government agencies, industry and training institutions provides a mechanism for collaborative efforts in addressing the workforce strategies outlined in the plan. In addition, AWIB's stewardship responsibilities for federal and state workforce development funds can direct needed resources to support the plan. Data collected from public and private training providers as part of the Board's oversight duties will allow for annual checks of progress toward meeting training goals and targets.

Purpose:

The heath care plan is anchored in collaboration and builds on earlier successful cooperative efforts, such as the expansion of the UA nursing program, the addition of slots at the University of Washington Medical School through WWAMI, participation in the National Health Service Corps and Indian Health Service loan repayment programs

and the creation of a Health Care Commission. Under the governance structure that is being developed to oversee plan implementation and monitoring, these collaborations will be made more formal through memoranda of understanding among stakeholders.

The Alaska Health Workforce Development Plan is indeed a call for action: a call that has already been heeded by industry, education and training institutions, state government and professional organizations. Successfully directing the energies and resources of these stakeholders through the steps outlined in the plan will not only increase the size and quality of the health care workforce but will be reflected in a higher standard of health for all Alaskans.

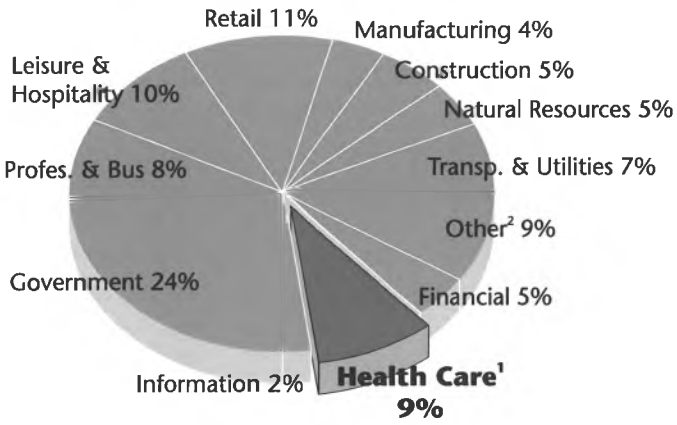
Introduction

The health care industry is important to Alaska and Alaskans

Health care is one of the largest and most dynamic industries in Alaska, accounting for eight percent of total employment and around 16 percent of the value produced by the state's economy. One out of every 12 employed Alaskans works in the industry; one out of every six dollars spent in Alaska is spent on health care. The industry also accounts for a significant portion of economic growth. Between 2000 and 2009, health care employment increased 46 percent, about five times as fast as the state's population and three times as fast as all other sectors of the economy. With a payroll of more than $1.4 billion in 2008, it employed more people than state government, oil industry or most other industries.[1]

Health Care: One of the Biggest Players in Alaska's Labor Market



[1]Includes the private and public sectors, 2008
[2]Includes other services, private education services, social assistance and wholesale trade
Source: Alaska Department of Labor and Workforce Development, Research and Analysis

This growth is estimated to continue. Department of Labor and Workforce Development (DOLWD) data indicate a 30 percent growth rate between 2004 and 2014, twice that of the overall economy. Around 15 percent of the state's new jobs in that period will come from health care; currently, 11 of the top 15 fastest growing jobs in Alaska are in this sector.

While job growth is good news for the economy, it also place heavy strains on an industry already burdened by unacceptably high vacancy rates in key occupations. For example, state rates for primary care occupations as reported by 747 surveyed employers for a 2009 University of Alaska study[2] range from 12.9 percent (community health aide/practitioner) to 37.4 percent (pediatric nurse practitioner). Other troubling rates include occupational therapist and physical therapist at 22.8 and 15.8 percent respectively. Though registered nurses had a comparatively moderate vacancy rate at 10.1 percent, this relatively large profession was calculated to have over 320 vacant positions. These rates indicate a significant skills gap in the health care workforce at the present time, a gap that without increased attention can only worsen.

Recognizing these conditions, the Alaska Workforce Investment Board (AWIB) has targeted health care as one of the industries critical to Alaska's workforce and economic needs. The Alaska Health Care Commission and many other agencies and groups, such as the Department of Health and Social Services, The Alaska Mental Health Trust and the Alaska State Hospital and Nursing Home Association (ASHNHA), have identified health care workforce development is one of the most critical priorities in assuring health care access in Alaska.

The health care industry has unique features

Health care has unique features that distinguish it from other industries—features of Impact, breadth, scope and outlook. These characteristics add to the urgency of assuring that Alaska has a well prepared and sufficient health care work force.

Impact—The health care industry touches almost every Alaskan, from the newborn infant in Ketchikan General Hospital to the elder in Barrow's assisted living facility. The overall health of the state's citizenry is intimately tied to the adequacy and competence of the health care workforce. Meeting Alaska's targets for improved health as envisioned in Healthy Alaskans 2010[3] in the areas of health promotion, health protection, preventative services and access to health care requires attention to the development, upgrading and retention of workers who can address these targets.

Breadth—Health care industry employment can be found in almost every location in the state.

[1] Alaska Department of Labor and Workforce Development, *Alaska's Health Care Industry*, Alaska Economic Trends, March 2010, p.
[2] Alaska Center for Rural Health, University of Alaska Anchorage, *2009 Alaska Health Workforce Vacancy Study (Draft)*, January 2010.
[3] Alaska Department of Health and Social Services, Division of Public Health, *Healthy Alaskans 2010, Targets and Strategies for Improved Health*, November 2005

Although about half of the jobs are in hospitals and nursing homes, the other half are with small health care provider offices, outpatient and community health centers and home health care. The State of Alaska also provides many career opportunities in the health care field. This breadth indicates that job opportunities are available close to home for many Alaskans.

Scope—Perhaps no other industry employs front-line workers with such a wide range of educational backgrounds, from high school diploma or GED through post-doctoral specialization. Although the industry utilizes many highly-skilled professionals, a large portion of health care is provided by direct service workers, who assist Alaskans dealing with mental health problems, substance abuse, medical illnesses, developmental delays and disabilities, elder care and social stressors. Career ladders and lattices exist that can move workers to higher-level positions. This wide scope of employment allows many Alaskans to access the industry through entry-level jobs and to construct meaningful, life-long careers.

Outlook—Demand for health care is not cyclical, unlike that for most Alaskan industries. This has distinct advantages. As reported by DOLWD, health care is one of a handful of industries expected to grow in 2010—adding about 500 jobs—while most other sectors will continue to experience a decline.[4] Because it is not subject to sudden downward shifts in demand, the output from training programs can more easily be matched to current and future industry needs.

While health care is relatively free from the effects of economic fluctuations, it is highly susceptible to other influences. At least four factors are currently driving higher demand for health care services and therefore increasing the need for workforce development: reform efforts, demographics, changes in care models and technology.

Health care reform will greatly expand demand for care, adding coverage for tens of thousands of Alaskans who were previously un- or underserved. The increased demand from this population is likely to be in areas such as primary care, therapies and behavioral health that currently experience high job vacancy rates throughout the state. Reforms will also spur the growth of new classes of health care positions such as continuum of care managers and health information technicians.

An aging Alaskan population also contributes to increased demand for services. In the decade between 1996 and 2006, the number of Alaskans 65 years and older increased 50 percent, from 30,440 to 45,489. In the latter year, older Alaskans accounted for 6 percent of the total population. DOLWD estimates indicate that this age segment will reach around 134,400 persons by 2030, or about 16 percent of the population. This demographic shift has tremendous implications for workforce development, not only in numbers but also in types of workers needed, such as geriatric nurses, nurse practitioners, psychiatrists, licensed practical nurses (LPNs) and certified nursing assistants (CNAs).

Changes in care models and care objectives will also change the face of the workforce. For example, the move to more outpatient services increases the demand for home health care workers. An emphasis on prevention requires increases in occupations such as health educator and wellness trainer.

Technology influences the health care workforce in many ways. First, access to higher levels of medical technology within the state has an "import substitution" effect on demand as an increasing share of Alaskans can meet their health care needs locally rather than going out of state. Generally, this effect heightens the need for highly-trained specialists. Increasing uses of technology in all areas of care also require continuing skill attainment and development on the part of the existing workforce at all levels, from direct service worker through specialist. Implementation of electronic health records will require the creation of new job classes and related training. Finally, technology—in particular simulation and the Internet—can vastly increase access to health care career education and training.

Because of the above factors, several of the strategies identified for successful workforce development in health care will differ from those in other industries. Recruitment of health care providers that cannot be trained or trained in adequate numbers in the state will remain a central activity. Retention, while a significant concern in all industries, assumes greater importance when high turnover can affect Alaskans' access to critical medical and therapeutic services.

The health care workforce planning process is collaborative

To begin to address these workforce issues and to craft a statewide plan for workforce development, a Health Care Workforce Coalition made up of health care providers, agencies, educators and associations was formed in August, 2009. A steering team from the larger coalition, comprised of

[4] Alaska Department of Labor and Workforce Development, *Employment Forecast for 2010*. Alaska Economic Trends, January 2010, p. 11

representatives from industry, state government and the University of Alaska met regularly to work on the plan. The basic plan strategies were presented to the larger provider community for discussion and further refinement at the ASHNHA Health Care Workforce Summit in November, the Alaska Public Health Association Health Summit in December, 2009, and to various smaller groups. Audio-conferences with the Coalition allowed member input throughout plan development.

The planning group early on agreed on several underlying principles. First, although health care workforce development is a statewide issue, the need is especially acute in rural Alaska. The difficulties involved in training, recruiting and retaining health care workers in the more remote parts of the state require increased attention to distance education that trains people to work in their home community, financial and other incentives for attracting needed specialists, community involvement in recruitment and retention and opportunities for professional growth.

Second, because the training needs of the health care industry are substantial and relatively costly, the planning group recognized that particular care must be taken to assure that resources—both public and private—are allocated to areas of highest need, avoid needless duplication and utilize existing institutions wherever possible. The priority occupations treated in Section 4 of the plan have been identified as needing immediate attention for one or more of the following reasons: high vacancy rate, high number of vacancies or criticality to health care delivery. The governance structure that will be developed to oversee plan implementation will be a major tool for assuring coordinated, effective and efficient resource use.

Finally, the group agreed that all training under the plan must be directed at meeting industry standards, state and national licensing requirements and the quality benchmarks established by educational program accreditation agencies. These principles of access, efficiency and quality permeate the plan document.

Because the health care industry in the state is so diverse and covers so many disparate occupations, many of the overall strategies in the following plan are broad and general in nature. Several of the strategies and many of the action steps echo those in other industry plans, particularly the call for broad public awareness and support for developing a pipeline of new workers through the revitalization of K-12 career awareness and technical education programs. To achieve these goals will require a cooperative, coordinated effort by many industries and agencies.

Health care workforce planning builds on successful partnerships

The planning group acknowledged the considerable cooperative effort that has already been made in developing the health care workforce. For example, a strong partnership between industry and the University of Alaska School of Nursing succeeded in doubling the number of nursing graduates between 2003 and 2007. Industry/university collaboration has also led to the introduction, expansion or revision of more than 80 health care-related UA certificates and degrees over the past ten years. New UA programs such as the bachelor degree in nutrition are coming on line to address emerging critical needs.

A coordinated effort by industry resulted in a doubling of medical school slots for Alaska students at the University of Washington through the WWAMI program. Combined industry, government and association advocacy has also spurred the creation of a Health Care Commission and the introduction of several pieces of legislation to provide loan repayment and other financial incentives for health care professionals practicing in Alaska. The Behavioral Health Initiative partnered the University of Alaska, the Alaska Mental Health Trust Authority and the Department of Health and Social Services to address the severe workforce shortages experienced in the behavioral health field at all levels of licensure and credentialing.

Implementing the health care-specific strategies and action steps in the plan will require the continued participation and coordination of many partners: industry/employers, education and training providers, government and professional associations. Each group contains many stakeholders.

Industry/employers include the broad range of health care providers—public, private and nonprofit—that extend health care services to Alaska's residents. Among these are hospitals, health clinics, tribal health organizations, private practice offices, state and local public health agencies and mental/behavioral health programs and treatment centers.

Education and training providers include the University of Alaska, Alaska Pacific University, the Alaska Vocational Technical Center (AVTEC), the Alaska Technical Center (ATC), Yuut Elitnaurviat and other regional training centers, private training providers and out-of-state institutions that have partnered with an Alaskan institution to offer a specific program within the state.

Government agencies involved in health care workforce development include the state departments of Health and Social Services, Labor and Workforce Development, Education and Early Development and Commerce, Community and Economic Development (Licensing), the Alaska Mental Health Trust Authority and local government public health offices. With the passage of health care reform, the federal government is also assuming a larger role in supporting health workforce planning and training.

Professional organizations encompass a variety of groups such as the Alaska Public Health Association, the Alaska Primary Care Association, the Alaska Nurses Association and other health care membership organizations such as ASHNHA.

In addition to the above groups, health care is served by the Alaska Area Health Education Center (AHEC) network—a university-industry partnership directed at strengthening Alaska's health workforce serving rural and other underserved populations. The AHEC network plays an important role in encouraging Alaskans to pursue careers in health and behavioral health care, providing clinical rotation sites and delivering continuing education to health care practitioners.

In the following plan, the first partner category listed under "Responsible Parties" in any sub-strategy is assumed to be the prime mover for that particular strategy, although the support and involvement of other listed partner groups is essential for success.

Health care workforce planning is on-going

The plan is intended to encompass rather than replace the workforce development efforts of other professional groups and health care organizations. The strategies outlined in the plan become real through application to a specific occupation, as can be seen in Section 4 that links strategies to the top priority occupations identified by vacancy data and other information.

The plan is not complete; rather it is a work-in-progress that will be revisited and revised over time as occupation-specific action plans are developed, successes are achieved and circumstances change.

The health care workforce development plan embraces AWIB principles

In preparing the plan, the steering group was cognizant of the need to address the following principles found in Alaska's Future Workforce Strategic Policies and Investment Blueprint, which was adopted by AWIB in 2000 to serve as the comprehensive guide for alignment of public policy and resource investments in vocational and technical education and training programs statewide.[5]

The plan is needs driven, based on data provided by the Research and Analysis Section of DOLWD, the Alaska Center for Rural Health, the Office of the Associate Vice Provost for Health Programs, University of Alaska Anchorage and DHSS Health Planning and Systems Development Section. Occupational supply and demand data were distributed to participants of the ASHNHA, Alaska Public Health and Behavioral Health conferences and to members of the Alaska Medical Group Management Association and the Alaska Native Tribal Health Consortium to gain consensus on the priority occupations detailed in Section 4. Strong industry leadership and involvement in the planning process assured that both current and emerging workforce needs would be addressed.

The plan extends access to health care occupations by creating awareness of career opportunities, utilizing distance delivery and simulation in health workforce education and training programs and increasing financial support for pursing health care careers. As mentioned above, the need to strengthen training, recruitment and retention of health care workers in rural Alaska was at the forefront of the planning effort.

The plan is interconnected, extending the use of career pathways to link secondary and post-secondary education and expanding post-employment training and advancement. It incorporates the state's job center system both to advertise job openings and to counsel job-seekers into training for health care positions.

The plan is accountable. All of the training and education under the plan is based on industry standards and most programs lead to state or national certification. Programs offered under the plan that utilize state or federal workforce development funds will report annually on the outcomes of the training in terms of number of participants and completers, placement of graduates and gains in income.

The plan will be collaboratively governed. The governance structure to be developed in a sustainability plan will include industry, tribal health organizations, appropriate government agencies, the University of Alaska and other training partners. The plan closely aligns with the AWIB emphasis on training Alaskans for high demand, high wage jobs.

[5] Alaska Workforce Investment Board, *Alaska's Future Workforce: Strategic Policies and Investment Blueprint, 2002, p. 1*

The plan will be sustained. The sustainability plan will detail the linkages between plan strategies and the mission and operational responsibilities of the involved partners. These linkages will be made concrete through memoranda of understanding outlining such activities as shared staffing, joint grant applications and other mechanisms to assure that parties carry through with assigned responsibilities for implementing the plan. The sustainability plan will call for an annual review of accomplishments and modifications to the plan as new opportunities and challenges arise.

Endorsement by AWIB is a critical step in moving the plan forward and securing the financial and other support necessary to assure that plan strategies are actualized.

Overall Health Workforce Development Strategies

Strategy 1

Engage Alaskans in health care workforce development

Alaskans need information about career opportunities afforded by the health care industry in the state—careers that are in demand in all regions, provide stable employment and encompass all educational levels, from on-the-job training through postgraduate programs. Alaskans also should be aware of the link between a well-trained, sufficient health care workforce and the overall health of the state's citizenry. Finally, voters and policy makers need reliable information about public policy and financing options that can impact health care work force development.

This strategy can be implemented by:

- Conducting public awareness campaigns on general workforce development issues and the full continuum of jobs available
- Expanding career awareness and counseling that highlight health career pathways in Alaskan schools
- Developing targeted marketing for high need professions
- Utilizing the existing one-stop information system to disseminate information on training opportunities and job openings in Alaska to job seekers

Funding

- Industry/employers
- Private foundations (e.g., the Robert Wood Johnson nationwide nursing career promotion)
- Alaska School Foundation funding
- State General Fund
- Youth Workforce Development funds
- Alaska Native Health Corporations
- Alaska Mental Health Trust Authority (AMHTA)

Strategy 1.1 Create public awareness

Rationale: Health occupations comprise 11 of the 15 fastest growing occupations in the state and employers report difficulty in attracting qualified workers. The most recent Alaska Health Workforce Vacancy Study[6] identified a range of vacancy rates in various occupations, with generally higher rates in rural Alaska. The demand is expected to increase as a result of health care reform, changes in care models, demographic shifts and retirement of older workers. Alaskans need accurate and timely information not only for career counseling and planning but also to develop and support the policy and funding initiatives needed to address critical health care workforce shortages.

Action Steps

- Develop a consistent, multi-faceted public awareness campaign that highlights the link between an adequate health care workforce and the overall health of Alaskans
- Implement communication strategies for the full continuum of job opportunities, with particular emphasis on reaching rural, Alaskan Native and minority residents
- Provide opportunities for public dialog on policy and funding issues around health care workforce development

Timeline

- Short term

  - Private Foundations
  - State General Fund
  - State and federal grant funds
  - University of Alaska general funds
  - Alaska Native Health Corporations
- People
  - State and industry public information staff

Evaluation: Public awareness/communications plan is in place and being implemented as planned

Strategy 1.2 Expand career awareness and counseling

Rationale: Career decision-making begins early in a child's educational career. Research indicates that students begin to rule out certain career options as early as the third grade. Often career choices are guided by what a student is familiar with rather than a careful consideration of alternatives. Many health careers require substantial preparation at the secondary level in math and science. In addition, choices made while still in school, such as teenage drinking and drug use, are not only dangerous in themselves but can be lifelong barriers to entry into careers that require extensive background checks. A sound career awareness and guidance program beginning in early elementary grades can open up many more career options to Alaskan students and can assist them in developing both their secondary and postsecondary academic plans.

Action Steps

- Reinforce job readiness skills through the use of WorkKeys™, Youth Employability Skills (YES) or other programs that develop the soft skills necessary for success in the workplace
- Expand the use of health career pathways and DOLWD Health Career Guides in local school districts and for postsecondary academic counseling
- Identify "best practices" for use in elementary and middle schools to introduce students to careers in health care
- Establish an incentive program to encourage schools to adopt these practices
- Provide training for high school counselors and postsecondary academic advisors in using health care career pathways to advise students into health care occupations
- Secure sustainable state and industry funding for the Alaska AHEC network

Timeline

- Short term

Responsible Parties

- Government (DEED, K-12 districts)
- Industry/Employers
- AHEC
- Education and training providers

Resources

- Models
  - Best practices from Alaskan school districts
  - Alaska Career Information System (AKSIS)
  - Hot Jobs in Health Care (DOLWD) publications and teacher guides
  - State and national health career pathway models
- Funding
  - Alaska School Foundation Program (for K-12 district programs)
  - State and federal grant funds
  - Industry
  - Private Foundations
- People
  - K-12 and postsecondary career and academic advisors

Evaluation: By 2012, 50 percent of all Alaskan school districts will have incorporated healthcare career pathways into a career awareness/counseling program that begins in elementary school and continues through high school with demonstrated connections/transitions to postsecondary programs.

Strategy 1.3 Market high need professions

Rationale: There are several occupations in the health care industry that are in constant and high demand and that can be prepared for in Alaska. A full-scale media campaign, modeled after such nationwide efforts as the successful Robert Wood Johnson (RWJ) Nursing campaign, could attract considerable numbers of Alaskans into these careers.

Action Steps

- Identify two top priority, high demand professions across the full continuum, from direct service workers to doctors
- Prepare and widely disseminate ads, TV spots and other materials to encourage Alaskans to prepare for these professions
- Target under-represented minorities and populations for recruitment

Timeline

- Mid-term

Responsible Parties

- Industry/Employers
- Government (DHSS, DOLWD)
- Education and training providers
- Professional organizations
- AHEC

Resources

- Models
  - RWJ Nurse Campaign
  - The Alaska Mental Health Trust You Know Me anti-stigma campaign
- Publications
  - *Securing an Adequate Number of Physicians for Alaska's Need*, Alaska Physician Supply Task Force, August 2007
- Funding
  - Industry
  - Private Foundations

Evaluation: Enrollment in preparation programs for the selected occupations will double by 2015. Recruitment and enrollment of Alaskan Natives and underserved minorities will reflect the make-up of the total population.

Strategy 1.4 Attract Alaskan job seekers into health careers

Rationale: The health care industry offers many opportunities for job-seekers such as retiring active duty military, underemployed individuals, persons undergoing job loss/transitions, out-of-school youth and women returning to the workforce to prepare for and secure entry-level employment in a relatively short period of time. Many of these jobs are the first step in a career ladder than leads to long-term, stable and well-paid employment.

Action Steps

- Utilize the existing one-stop information system to disseminate information on health care training opportunities and job openings in Alaska
- Encourage health care providers to utilize the Alaska Labor Exchange System (ALEXsys) and 3RNet (Rural Recruitment and Retention Network) to post job openings
- Establish mechanisms for networking between DOLWD job counselors and local health care provider human resources offices
- Target market to persons who are undergoing transition due to economic downturn and/or job losses
- Increase coordination among vacancy posting services to disseminate information to a broad array of potential applicants

Timeline

- Short term

Responsible Parties

- Government (DHSS, DOLWD)
- Industry/Employers

Resources

- Information Systems
  - ALEXsys
  - AKCIS
  - EarnAndLearnAK.org
  - 3RNet (national)
  - Alaska Alliance for Direct Service Careers
- Funding
  - State and Federal Employment Security funds
  - Workforce Investment Act (WIA) Youth funds
  - Industry
  - Alaska Native Tribal Health Corporations
- People
  - DOLWD employment counselors

Evaluation: Health care job openings are posted in ALEXsys and 3RNet. Employment security counselors are aware of health care training and employment opportunities.

Strategy 2

Train Alaskans for health care employment

Almost three-quarters of the fifteen fastest growing occupations in Alaska are in the health care field. Taken as a group, these occupations are estimated to account for over 6,000 job openings between now and 2016[7]. These projections are based on the current level of health care provision and do not take into account the increased demand for health care workers that will result with the aging of the Alaskan population or from expansion of health care access. Filling these positions with Alaskans requires creating a pipeline for people seeking the necessary credentials, providing appropriate training and educational opportunities and allowing for those already employed to upgrade their skills and to advance professionally. Delivering training as close to home as possible through expanded distance education is essential to assuring that rural workforce development needs are addressed.

This strategy can be implemented by

- Strengthening secondary school offerings in mathematics, sciences, communications, job readiness and entry-level training in health care occupations
- Providing postsecondary health care occupational training and education programs that are effective, cost-efficient and lead to employment in Alaska
- Delivering post-employment training opportunities that allow practitioners to gain new skills and advance in their profession
- Developing the faculty needed at the secondary, postsecondary and continuing education levels to deliver education and training programs

Funding

- Alaska Public School Foundation Program
- University of Alaska general funds
- DOLWD
- State of Alaska General Fund
- Industry
- State and federal grants
- Private foundations
- The Alaska Mental Health Trust
- Alaska Native Tribal Health Consortium

[7] DOLWD, *Alaska's 10-year Occupational Forecast*, Alaska Economic Trends, January 2009, p. 22

Strategy 2.1 Strengthen secondary school offerings and programs

Rationale: Preparation for many health care careers begins at the secondary level, where fundamental academic and job readiness skills are acquired. Ideally, students with knowledge of what is required in their fields of interest will select the appropriate math, science and other high school courses that support their career interests. Individual learning plans based on career pathways greatly assist secondary students to easily transition to postsecondary education and training. Applied academics—where the student experiences real-life applications of math, science and communications—improve student success in these subjects. Training programs that lead to national certification can provide an avenue to post-high school employment and onto a career ladder.

Action Steps

- Encourage Alaska's secondary schools to develop and deliver foundation programs that support health career pathways, include advanced math, science and communications courses and articulate to postsecondary certificates and degrees (Career and Technical Education Programs of Study)
- Develop a framework to provide Work-based Learning Experiences (WBLEs) in health care settings that clearly delineates the responsibilities of the educational and health care provider and supports the interests of all parties in the health care setting
- Develop short-term exploratory programs in health care sciences that spark student interest in pursuing careers in the industry and that can be conducted with local resources in rural as well as urban settings
- Expand the use of health career academies modeled on the construction academies conducted throughout the state
- Deliver high school programs that lead to entry-level employment such as CNA and EMT or to certificates that are widely accepted, such as First Aid, CPR and OSHA Safety
- Expand the use of dual credit/Tech Prep/School-to-Apprenticeship/Early College programs that provide secondary students the opportunity to earn university credit
- Establish four additional career/technical magnet high schools that deliver training in health occupations and other careers
- Utilize distance education to expand access to students in small, rural high schools
- Work with health care providers and organizations to secure on-going support through scholarships, internships and mentoring programs

Timeline

- Short term

Responsible Parties

- Government (DEED, K-12 districts, DHSS)
- Education and training providers
- Industry/Employers
- AHEC

Resources

- Models
  - National health career pathways
  - Alaska-specific health career pathways
  - Tech Prep, early college and dual enrollment programs
  - Existing secondary career high schools and centers: Mat-Su Career and Technical High School, King Career Center, Hutchison Career Center
  - Construction academies
- Funding
  - Alaska State Foundation Program
  - Federal Perkins IV funding
  - Industry

Evaluation: Alaska's secondary schools have programs of study based on health career pathways. Four career/technical high schools are established and operational.

Strategy 2.2 Provide health care occupational training and education programs

Rationale: Between 2001 and 2009, aggressive program development at the University of Alaska added instruction and training in a variety of health occupations resulting in more than 80 certificates/degrees in primary care, nursing, and allied, behavioral and public health. The UA system now serves around 4,200 Alaskans each year who are preparing for and enrolled in health care training and education programs. Half of the programs are accessed by students via distance education technology. APU provides undergraduate degrees in behavioral health and health administration. AVTEC, regional training centers and several private training providers serve additional students, generally with entry-level training. Meeting the anticipated workforce needs, however, will require additional effort—to expand access to existing programs particularly to rural sites, to develop new programs where demand and cost-considerations dictate and to partner with out-of-state institutions when programming by an Alaskan institution is not feasible.

Action Steps

- Develop and deliver occupation specific training at all levels (work-based, certificate, Associate, Bachelor and graduate) for occupations that are high demand and/or are critical to health care delivery, as indicated in Section 4
- Continue to refine and develop the UA academic plan for health care occupation certificates and degrees
- Provide adequate financial support for training and education programs
- Increase access through program expansion, distance delivery and simulation
- Expand the capacity of community campuses of the UA system to support local students in health care programs
- Strengthen the dialog among employers, labor and education/training institutions concerning registered apprenticeship and other work-based learning opportunities in health care, create and evaluate pilot apprenticeship projects and disseminate the results
- Explore credit-for-experience or other mechanisms that allow practitioners to challenge introductory and lower level coursework in a certificate/degree program
- Develop partnerships with institutions in other states to provide certificate and degree programs in Alaska that cannot be cost-effectively delivered by in-state institutions
- Assure that all health care training and education programs delivered by any institution in Alaska meet industry standards, are accredited by a regional or national body and lead to certification or licensure as required for employment
- Periodically assess Alaska's capacity to deliver high need/high cost programs in-state and initiate programs that are deemed viable
- Research national and international best practices in health care professional training for possible adoption in Alaska

Timeline

- Short term for high priority occupations
- Mid and long term for other occupations

Responsible Parties

- Education and training providers (Alaska and elsewhere)
- Government
- Industry

Resources

- Programs
  - Existing health care occupational training programs at UA, APU, AVTEC, ATC, regional training centers and private training providers
  - Washington, Wyoming, Alaska, Montana and Idaho (WWAMI) regional school of medicine based at University of Washington
  - Western Interstate Commission on Higher Education (WICHE) and Western Undergraduate Exchange (WUE)
  - Distance delivered programs in Alaska and in other states
- Funding
  - UA general funds
  - Tuition and fees (UA, APU, AVTEC ATC, other)
  - Technical and Vocational Education Program (TVEP) state dollars
  - Scholarships and loan repayment programs
  - State and federal grant funds (STEP/WIA)
  - Industry

- People
  - UA, APU, technical center and private provider faculty

Evaluation: Programs are available in-state that train Alaskans for high need occupations in a cost-effective manner. Training is available as close to home as possible for most Alaskans.

Strategy 2.3 Deliver post-employment training opportunities

Rationale: Changes in health care access, care models and technology mandate that the workforce engage in continuing education and acquisition of new skills. Professional development is most effective when it is based on developing or strengthening commonly-accepted competencies and promotes career advancement. Adopting core competencies for various health care occupations and utilizing these competencies to build on-the-job training and career ladders are proven methods of assuring comparable skill levels around the state. Greater economies of scale can be achieved by sharing professional development programs and resources among health care providers.

Action Steps

- Define priority occupations for competencies and career ladders and lattices
- Develop and adopt standardized core competencies in critical health care occupational clusters
- Assist in developing and supporting occupation-specific industry/education consortia that will address the professional development needs within the occupation, including competencies and career ladders
- Encourage health care providers—including state and local governments—to establish professional development programs and career ladders/lattices based on competencies
- Extend the use of registered apprenticeships and other work-based post-employment training for career development
- Provide post-employment academies and other intensive training to accelerate skills and achieve advanced certifications, including nursing specialties
- Utilize the AHEC network to provide continuing education to practitioners in underserved areas
- Establish mechanisms for sharing high-cost, effective training tools such as simulation and distance delivery among health care institutions around the state
- Increase opportunities for health care professionals to obtain continuing education and continuing medical education credits (CEUs/CMEs)

Timeline

- Short term for competencies, career ladders, apprenticeships and continuing education
- Short/mid-term for expansion of simulation

Responsible Parties

- Industry/Employers
  - Education and training providers
  - Professional associations
  - Government (licensing boards)
  - AHEC

Resources

- Models
  - Alaska Coalition of Educators-Health Care (ACE-HC) Nurse Competencies
  - Alaska Mental Health Trust Authority (AMHTA) Credentialing and Quality Standards Subcommittee (CQSS) – Alaska Core Competencies for Direct Care Workers
  - Providence Hospital Academies to accelerate skills and advanced certifications
  - Registered Apprenticeships
- Facilities
  - Community and university-based simulation facilities
- Funding
  - Industry
  - AMHTA
  - UA general funds
  - State and federal grants
- People
  - Education personnel in health care facilities
  - Training program faculty

Evaluation: Core competencies are developed and adopted for the major occupational groups in the health care workforce. Employers conduct professional development programs based on competencies. Training programs and resources are shared among Alaskan health care providers in all areas of the state.

Strategy 2.4 Develop needed faculty

Rationale: High quality education and training programs are built on strong faculty who not only know the content but who also have practical experience in the field. Increasingly, faculty members need to be conversant with technology and distance-delivery methodologies. Because the demand for persons who are skilled health care program educators is high throughout the country, Alaska will need to consider "grow your own" strategies to develop this workforce internally.

Action Steps

- Provide opportunities for secondary academic and career/technical teachers to increase their understanding of how academic skills are applied in various health care occupations using the Teacher-Industry Externship (TIE) program or other successful models
- Develop additional secondary faculty from industry and elsewhere that can deliver heath career-related instruction
- Prepare/secure the necessary postsecondary faculty through better utilization of national health care educator loan repayment programs, sabbaticals/release time for faculty pursuing the necessary credentials and/or aggressive recruitment
- Assure salaries, benefits and other incentives for faculty that are comparable to practicing health care professionals in their area of instruction
- Increase opportunities for health care professionals to serve as adjunct or part-time faculty by identifying and addressing current workplace and training institution policy or practice barriers
- Establish training and incentives for practicing professionals to assume responsibility for continuing education in their facilities, for example, as nurse educators
- Assist health care faculty and educators to effectively utilize technology, including simulation, and distance methodologies in their instruction

Timeline

- Short term for programs such as faculty externships and adjuncts
- Mid-term for master/doctoral degree-prepared faculty development

Responsible Parties

- Education and training providers
- Industry/Employers
- Professional Associations

Resources

- Models
  - Alaska Process Industry Careers Consortium Teacher Industry Externships (TIE) programs
  - ACE-HC
- Funding
  - K-12 Foundation Program
  - UA general funds
  - Industry
  - State and federal grants

Evaluation: Alaska has skilled and well-prepared faculty at all levels to deliver the training, education and continuing skill development necessary to support the health care workforce. The health care industry supports a teacher in industry program modeled after APICC's TIE program.

Strategy 3

Recruit qualified candidates to fill health care positions

Even with expansion of programs through in-state training facilities and distance delivery, Alaska's population and resources alone will not be able to fill all of the health care workforce needs. In some cases—such as medical education—preparation program are prohibitively expensive; in others—such as pharmacy—positions are critical but needed in relatively small numbers. For the foreseeable future, therefore, Alaska will need to attract health care providers to the state.

This strategy can be implemented by

- Promoting health care employment opportunities in the state
- Expanding post-graduate programs, residencies and fellowships
- Establishing financial and other incentives to attract needed professionals
- Coordinating recruitment among health care providers
- Creating a positive community, policy and economic environment for health care providers

Funding

- Industry
- State and federal loan repayment/incentive dollars
- State marketing dollars
- Federal grants and programs that address recruitment

Strategy 3.1 Promote health care employment opportunities in Alaska

Rationale: A widespread campaign to advertise health care opportunities in Alaska can assist in developing a pool of qualified applicants for open positions. An untapped resource is Alaskan students who have gone out-of-state for education in health care fields and who may return if provided information about career opportunities. Identifying institutions that have a high number of graduates practicing in Alaska for targeted recruitment can also increase the applicant pool. Greater use of existing resources such as the ALEXsys system and state marketing efforts can be a cost-effective means of attracting needed expertise to the state.

Action Steps

- Refine the ALEXsys system to more accurately identify the occupations and specialties that are being recruited
- Partner with state marketing groups to advertise health care provider opportunities in Alaska
- Reach out to Alaskan students who are pursing health care education outside of Alaska to inform them of opportunities in Alaska and encourage them to return after graduation
- Develop partnerships with institutions in other states with strong health care preparation programs and/or which have a large number of graduates already practicing in Alaska to directly recruit program completers

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Government (DOLWD, DHSS, DEED, Alaska Commission on Postsecondary Education)
- Professional Associations
- Education and training providers (Alaska and other states)

Resources

- Models
  - *Status of Recruitment Resources and Strategies 2005-06 (DHSS)*
  - Seafood Marketing Institute
  - Office of Tourism marketing materials
- Funding
  - State employment security dollars
  - State marketing dollars
  - Industry
  - National Health Service Corps (NHSC) and Indian Health Service (IHS) Loan Repayment programs

Evaluation: ALEXsys information accurately reflects the nature and qualifications of open positions. Alaska's health care system and workforce needs are highlighted in the state's promotional materials. Recruiting networks are established with select institutions in other states.

Strategy 3.2 Expand post-graduate opportunities

Rational: Research indicates that health care professionals frequently choose to practice in an area where they have completed a rotation, residency, internship, fellowship or other postgraduate experience. In Alaska, the rate of return on its one residency program—the Alaska Family Medicine Residency—is extremely high: 70 percent of the 55 graduates have remained in Alaska.[8] There is widespread agreement that Alaska has additional capacity for residencies and rotations; however, at the current time, there are policy and fiscal barriers to such expansion.

Action Steps

- Change Medicaid and Medicare policy to allow increased support for in-state teaching hospitals and the use of residents
- Increase funding for Alaskan and rural rotations through AHEC and other agencies that support rotations
- Develop an American Psychology Association (APA) approved residency in conjunction with the UA PhD in psychology
- Establish residencies in psychiatry, pediatrics and internal medicine
- Support the development of a plan to expand graduate medical education (GME) to additional specialties and regions
- Implement strategies to identify medical interns and residents working with Alaskan physicians and to encourage them to practice in the state upon graduation

Timeline

- Short term for APA, pediatric, internal medicine and psychiatry residencies
- Mid term for other specialties
- Short term for changes in Medicaid/Medicare reimbursement policies

Responsible Parties

- Industry/Employers
- Education and training providers
- Government (DHSS, state legislature for Medicaid/Medicare policy changes)
- AHEC

Resources

- Programs
  - NHSC Student/Resident Experiences and Rotations in Community Health
  - AHEC network
  - Alaska Family Practice Medical Residency
  - Alaska Center for Rural Health Rural/Underserved Opportunities Program
- Funding
  - Medicaid and Medicare Graduate Medical Education (GME) funds
  - NHSC and IHS federal funding
  - Federal Health Resources and Services Administration (HRSA) for AHEC, NHSC and IHS funding
  - Industry
  - State funds

Evaluation: Medicaid/Medicare policies support the use of residents in Alaskan hospitals. Residency opportunities are available in all regions of the state. Rural rotations are available at all rural hospitals, in most community health centers and tribal clinics and in a number of private practices.

[8] DHSS, *Securing an Adequate Number of Physicians for Alaska's Need*, Report of the Alaska Physician Supply Task Force, August 2006, p. 42

Strategy 3.3 Improve coordination in recruitment among health care providers

Rationale: Recruitment in the health care industry is an expensive business. According to a 2005 study, state health care facilities—hospitals, community health centers and rural mental health centers—spent over $24 million on recruitment in the prior year. Many times, more than one institution is recruiting for a similar skill set. Often searches at one institution yield multiple qualified candidates, some of whom at least could be good fits for other open positions in the state. A more coordinated recruitment system would allow hiring agencies to spread the costs of recruitment, share promising recruitment practices and develop a pool of applicants that are interested in relocating to Alaska in general and rural Alaska in particular.[9]

Action Steps

- Inventory existing recruiting practices among health care providers and facilities to identify "best practices"
- Create and maintain a single website that links health care organizations and is a repository for open positions
- Actively market Alaska health care employment opportunities in selected regions and with selected institutions in other states
- Explore a coordinated recruitment consortium that can serve multiple agencies and can share applicant information/applicant pools
- Pilot the use of non-traditional recruitment strategies such as posting on Craig's List and other web sites

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Government (DHSS)
- Professional associations and membership organizations

Resources

- Programs
  - 3RNET technical assistance and web page
  - DHSS Alaska Primary Care Office and State Office of Rural Health
  - ASHNHA
- Funding
  - Industry

Evaluation: A coordinated recruitment effort exists that shares information and recruiting resources.

Strategy 3.4 Establish incentives to attract needed professionals

Rationale: Financial incentives of various types—loan repayment, moving costs, housing assistance and tax breaks—can influence a provider's decision to practice in Alaska. Research on support-for-service programs indicates that these programs bring health care providers to needy communities where they remain in practice for many years. Of all types of programs, loan repayment and direct financial incentives that target the practitioner after training show the broadest success.[10] Currently, a small number of health care providers—primarily physicians—who locate to Alaska are eligible for a variety of federal loan repayment programs, but these programs have limited slots and are generally targeted at underserved areas of the state. Incentives are needed for additional categories of high-need health care professionals, for all areas of the state and for those for whom loan repayment is not appropriate.

Action Steps

- Maximize use of federal loan repayment programs through dissemination of information and application assistance to health care providers and potential applicants
- Continue to submit the Health Professional Shortage Area (HPSA) designation application to HRSA to assure that sites are eligible to have loan repayors through HRSA-funded National Health Service Corps and State Loan Repayment programs
- Create and fund a state-supported loan repayment program
- Provide funds for non-loan incentives
- Explore federal tax breaks and other economic incentives to practice in underserved areas

[9] Alaska DHSS, *Status of Recruitment Resources and Strategies 2005-06*, p. iii and Recommendations, pp. 40-41

[10] Donald E. Pathman, M.D., et al, *Outcomes of States' Scholarship, Loan Repayment, and Related Programs for Physicians*, Medical Care, Vo. 42, No. 6, p. 567

Timeline
- Short term for state loan repayment and incentive program
- Mid-term for tax incentives

Responsible Parties
- Government (DHSS, State Legislature, Alaska Congressional delegation)
- Industry/Employers

Resources
- Programs
  - HRSA NHSC Loan Repayment
  - National Institutes of Health loan repayment programs
  - Military LR
  - HRSA State Loan Repayment Program
  - HRSA Nursing Faculty Loan Repayment
  - IHS Loan Repayment Program
  - Alaska Mental Health Trust Authority
- Funding
  - Federal loan repayment, including stimulus funds
  - State dollars
  - Industry
- People
  - DHSS health Planning and Systems Development Section staff, including the Alaska Primary Care Office and the State Office of Rural Health
  - Alaska Native Tribal Health Consortium staff for IHS loan repayment

Evaluation: State loan repayment and incentive program is in place and funded. Federal loan repayment programs are utilized to maximum effect. Support system for non-loan incentives is in place.

Strategy 3.5 Create a positive environment for health care providers

Rationale: While financial considerations can greatly influence the success of recruiting efforts, other factors can also come into play. The ease with which a relocating professional can become licensed or certified in Alaska can significantly affect a successful placement. Hurdles such as multiple background checks for the same position and with the same state agency can sour an applicant. Community amenities such as quality schools, housing and opportunities for spousal employment are important, particularly when a family is relocating.

Action Steps
- Align state regulations and licensure requirements with clinical workforce needs
- Develop and support the utilization of tools that promote community-based approaches to recruitment and retention
- Create Alaskan-specific practice environment assessments and comparison tools for selected profession

Timeline
- Short term for alignment of licensure and regulatory requirements
- Mid-term for community-based approaches and practice environment assessments

Responsible Parties
- Government (DCCED, Division of Corporate, Business and Professional Licensing, DHSS Criminal Background Check Unit)
- Industry/Employers
- Professional organizations

Resources
- Models
  - National Health Service Corps Site Development Manual
  - Examples from other states, such as the Massachusetts Medical Society index for physicians
- Funding
  - State GF and professional fees for licensing
  - Industry/state funds for community grants
  - Professional organizations
  - Federal/state grant funds
  - Private foundations

Evaluation: State licensure requirements are in line with national standards and reflect the needs of the health care workplace. Communities are involved in and take appropriate responsibility for the recruitment of needed health care professionals.

Strategy 4

Retain a skilled health care workforce

While recruiting skilled health care workers is a major task, keeping this workforce is even more critical. Some health care occupations and some locations report annual double-digit turnover rates. A 2006 study by DHSS found that the average cost for a physician hire was $126,782. Urban costs for recruiting registered nurses were $10,527 per hire; rural costs for the same position topped $42,500.[11] Clearly, replacement of lost workers represents huge costs in terms of both recruitment and retraining—costs that can be avoided by better retention.

This strategy can be implemented by

- Supporting and disseminating effective orientation and on-boarding programs for new employees
- Providing opportunities for professional development and advancement
- Promoting positive work environments

Funding

- Industry
- Private Foundations
- State/federal grants

Strategy 4.1 Support and disseminate effective orientation programs for new employees

Rationale: Much of the turnover in the health care workforce occurs during the first year of employment, particularly among new graduates who are entering the profession. As health care worker shortages in Alaska and the nation continue to grow, the state's health care employers are hiring and are willing to hire newly-trained workers in ever higher numbers.[12] Even seasoned professionals who are new to Alaska or to more rural conditions require assistance to be successful in their positions. Both health care organizations and the wider community have a responsibility for assuring that entering employees receive the support they require to succeed.

Action Steps

- Assist employers to implement preceptorship/mentorship programs based on standardized core competencies
- Encourage employers to provide cultural awareness/competencies training
- Establish industry/education consortia to share competencies, models and best practices in inducting new employees
- Identify community support initiatives

Timeline

- Short term for competency-based preceptorship programs
- Mid-term for community-based initiatives

Responsible Parties

- Industry/Employers
- Professional Organizations

Resources

- Models
  - ACE-HC competency-based nurse preceptorship programs
  - AMHTA – Alaska Core Competencies for Direct Service Workers
  - AHEC network
- Funding
  - Industry
  - AMHTA
  - Professional organizations

Evaluation: Competency-based preceptorship/mentorship/apprenticeship programs are established in all health care facilities and available to new employees.

[11] DHSS, *Status of Recruitment Resources and Strategies 2005-2006*, June 2006, pp. 31-32

[12] Alaska Center for Rural Health, *2007 Alaska Health Workforce Vacancy Study Research Summary*, August 2007, p. 4

Strategy 4.2 Provide opportunities for professional development and advancement

Rationale: The health care industry provides many career pathways both for those who come to the industry with entry-level skills and for those with more advanced training who wish to specialize. Work-based training directed at competencies and tied to career ladders is an effective method for retaining employees and for developing an increasingly-skilled workforce. Sharing training and continuing education opportunities among health care facilities through state/regional workshops or distance delivery can increase the reach of limited resources. Professional networking opportunities can assist with on-going skill development, encourage collaboration and lessen the sense of isolation that frequently occurs in Alaska among health care professionals, particularly those serving in rural areas.

Action Steps

- Share existing competency-based career ladders among employers
- Identify emerging roles and competencies resulting from health care reform and changes in care models
- Encourage apprenticeships and work-based experiences tied to career ladders and lattices
- Sponsor in-state professional development events
- Expand access to continuing education coursework through the UA system
- Assist with networking among health care occupational groups

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Education and training providers
- Professional organizations

Resources

- Models
  - ACE-HC nursing group
  - Alaska Primary Care Association
- Funding
  - Industry
  - State/federal grants
  - Private foundations

Evaluation: Competency-based career ladders are established for high demand occupational groupings. Appropriate work-based and credit-bearing training opportunities support the career ladders. Professional workshops and networking opportunities are available to practitioners throughout the state.

Strategy 4.3 Promote positive work environments

Rationale: Health care positions place a high degree of responsibility on individual workers and often demand long hours and non-standard shifts. A major cause of turnover among direct care workers is the lack of appropriate supervision that supports and develops the employee. For all health care providers, changes in care models, technology and record-keeping systems can increase stress levels if adequate information and training is not provided. Finally, although compensation is usually not at the top of the list of reasons for leaving the industry, salary and benefits for the entry-level workforce need to recognize the importance of these positions and their contributions to the quality of health care in Alaska.

Action Steps

- Strengthen supervisory and leadership skills in health care occupations and facilities
- Assure competitive salary rates and employee benefits for health care workers, particularly those in entry-level and direct care positions
- Provide training in supervision and leadership to front-line supervisory personnel
- Inventory and disseminate best practices such as flexible schedules
- Establish organizational models that reflect changes in care management and that utilize technology to improve patient care and employee effectiveness
- Explore cross-industry leadership training programs that can be delivered collaboratively to both urban and rural site

Timeline

- Short term for supervisory and leadership training
- Mid-term for new organizational models

Responsible Parties

- Industry/Employers
- Professional organizations
- Education and training providers

Resources

- Programs
  - ACE-HC Nurse leadership competencies
  - UA/APU management/supervisory training programs
  - State of Alaska supervisory training
  - Private sector consultants/training
- Funding
  - Industry
  - UA general funds
  - Fees and tuition for management/supervisory training courses and programs

Evaluation: Turn-over in Alaskan health care facilities is reduced to at least the national average. Employees receive appropriate supervision and competitive wages and benefits.

Occupation-Specific Strategies for Priority Occupations

The health workforce is exceedingly complex to describe, evaluate and project. While overarching strategies to engage, train, recruit and retain health care workers are useful—even essential—to address the overall workforce picture, individual occupations and professions require their own detailed action plans comprised of strategies tailored to their unique needs.

In order to begin to develop these action plans, the health workforce planning process included an initial assessment of occupational priorities for Alaska, utilizing data and information from a variety of sources including the following:

- DOLWD
- Ten-Year Projections
- Industry-Specific Studies
- Occupational Information, Ranking and Demographics
- DHSS
- Health Professional Shortage Area (HPSA) Analysis
- Physician Task Force Report
- Special Topics (e.g. dental, pharmacy, licenseholders, loan repayment/
- employee incentives options)
- University of Alaska (Alaska Center for Rural Health/Alaska's AHEC and Office of Health Programs Development)
- Vacancy Studies
- Recruitment Studies
- Special Topics (e.g. rural allied health, CHA/P, nursing, health information technology, pharmacy, geriatric education)

On the basis of the above information, which is compiled in the Occupational Forecast (Section 5), the planning group initially identified 35 occupations that appeared to be in most critical need of attention because of high vacancy rates, high number of vacancies and/or criticality to health care delivery. This initial listing was then distributed to various health-related groups either in a conference setting—Behavioral Health, Alaska State Hospital and Nursing Home Association (ASHNHA) and Alaska Public Health Association (ALPHA)—or through surveys to the participants/members of those groups as well as to the Alaska Medical Group Management Association (which represents many doctor's offices and clinics) and the Alaska Native Tribal Health Consortium. In all, 151 Alaskans participated in the survey prioritization process.

Conference and survey respondents were asked to select their top five from the list of priority occupations and to add occupations that they felt should be on the list. Results were reviewed by the coalition's Assessment and Priorities Committee. From these processes, occupations/occupational groupings were identified as those most in need of immediate attention. The 15 top priority groupings listed below include a total of 26 occupations and professions:

- Behavioral Health Aide/Village Counselor
- Primary Care Physician
- Advanced Nurse Practitioner
- Substance Abuse Counselor
- Registered Nurse
- Community Health Aide/Practitioner
- Social Worker
- Oral Health Practitioner
- Psychiatrist
- Human Services Worker
- Pharmacist
- Therapist and Therapist Assistant (Physical, Occupational, Speech-Language)
- Nurse Educator
- Health Informatics Staff
- Direct Care Worker

Once priorities were identified, an initial set of strategies for each occupation on the list was developed. These strategies were then circulated to educators and practitioners in the occupation for review, verification and revision.

The revised strategies for each of the 15 priorities, together with descriptions of the occupations and pertinent data, make up the remainder of this section. The format used is similar to that found in the Physician Supply Task Force report cited elsewhere in this plan. An estimated time frame for the strategies is provided: Short Term (within the next two years), Medium Term (within three to

five years) and Long Term (five years or more in the future).

Priority strategies will be identified in the next step of the planning process and action plans utilizing these strategies will be drafted in the coming months for each of the identified priority occupations. These plans will include the following sections: Strategy, Problem Statement, Action Steps, Target Outcomes, Timeframe, Benefits, Costs, Responsibility, Area of Impact, and Rationale. During action planning, budget projections will be made for each strategy.

It is anticipated that those responsible for working on strategies for a particular health occupation will maintain regular communication, collaborate, and share ideas, information and results. Also, it is expected that work will continue on occupations beyond those included in the plan until a full set of health occupations strategies is completed.

Industry Occupations by Priority

Priority 1 *Most critical; requires immediate attention*

Behavioral Health Aide/Village Counselor
Certified Nurse Assistant
Community Health Aide/Practitioner
Dental Health Aide/Therapist
Dental Hygienist
Dietitian/Nutritionist
Disabilities Specialist/Worker
Family Nurse Practitioner/Advanced FNP
Family Physician (M.D., D.O.)
General Internal Medicine Physician/Internist
Health Educator
Health Informatics Staff
Healthcare Managers/Supervisors
Home Health Aide
Human Services Worker
Medical Assistant
Nurse Educator
Nurse Manager/Executive
Nurse Specialist (e.g. Critical Care, ER, OB)
Occupational Therapist
Personal Care Assistant
Pharmacist
Pharmacy Technician
Physical Therapist
Physical Therapy Assistant
Physician Assistant
Psychiatric Nurse
Psychiatric Nurse Practitioner
Psychiatrist
Public Health Nurse
Registered Nurse
Social Worker (BSW, MSW, LCSW)
Sonographer
Speech-Language Pathologist
Substance Abuse Counselor

Priority 2

Accountant (Health Care)
Behavioral Health Case Manager
Behavioral Health Clinician
Billing/Coding Clerk/Technician/Specialist
Clinical Psychologist/Psychologist
Community Health Representative
Community Wellness Advocate
Compliance Officer/Auditor
Dental Assistant
Dentist
Geriatrician
Gerontologist
Health Information Administrator/Manager
Healthcare Quality Professional
Hospital Administrator
Licensed Practical Nurse
Limited Radiographer
Mammographer
Marital/Family Therapist
Medical Director
Medical Laboratory Technician
Medical Technologist
Nuclear Medicine Technologist
Nurse Case Manager
Nurse Midwife/Women's Health Nurse Practitioner
Nursing Home Manager
Occupational Therapy Assistant
Optician
Pediatric Nurse Practitioner
Pediatrician
Physician Specialist
Radiation Therapist
Radiographer/Radiologic Technician
Rehabilitation Counselor
Residential Aide
Safety Officer
Sanitarian
Speech Therapist
Surgical Technologist
Veterinary Technologist/Technician
Village Health Educator

Priority 3

Anesthesia Technologist/Technician
Anesthesiologist Assistant
Art Therapist
Athletic Trainer
Audiologist
Billing Supervisor
Biomedical/Health Researcher
Blood Bank Technology Specialist
Cardiovascular Technologist
Chaplain
Clinical Assistant (Lab)
Cytogenic Technologist
Cytotechnologist
Dance/Movement Therapist
Dental Laboratory Technician
Diagnostic Molecular Scientist
Echocardiography Technician
Electrocardiography Technician (EKG)
Electroencenphalography Technician (EEG)
Electroneurodiagnostic Technologist
Emergency Medical Services Technician (EMT/ETT)
Epidemiologist
Exercise Physiologist
Exercise Science Professional
Genetic Counselor
Health Advocate
Health Care Manager/Supervisor
Health Information Clerk/Technician
Histotechnologist
Horticultural Therapist
Kinesiotherapist
Low Vision Therapist
Magnetic Resonance Technologist (MRI/CT)
Massage Therapist
Medical Biller/Billing Clerk
Medical Coding Clerk/Specialist/Certified Coder
Medical/Dental Receptionist
Medical Dosimetrist
Medical Illustrator
Medical Librarian
Medical Transcriptionist
Music Therapist
Nurse Anesthetist
Orientation and Mobility Specialist
Ophthalmic Assistant
Ophthalmic Dispensing Optician
Ophthalmic Medical Technician/Technologist
Optometric Technician
Optometrist
Orthoptist
Orthotist and Prosthetist
Paramedic
Pathologist's Assistant
Perfusionist
Personal Fitness Trainer
Phlebotomist
Podiatrist
Polysomnographic Technologist
Privacy Officer/Specialist
Professional Counselor
Psychiatric Aide/Technician
Public Health Administrator
Respiratory Therapist
Surgical Assistant
Sterile Processing Technician
Therapeutic Recreation Specialist
Teacher of the Visually Impaired
Veterinarian
Veterinary Assistant/Lab Animal Caretaker
Vision Rehabilitation Therapist

Behavioral Health Aide/Village Counselor

Description:

Behavioral Health Aides/Practitioners are employed by Alaska tribal health organizations to address local mental health and substance abuse issues and to promote healthy individuals, families and communities in rural and remote Alaska Native Villages. Behavioral health aides work under the supervision of licensed professionals.

Overview:

Programs are in place to train behavioral health workers for rural and urban Alaska, and there is an articulated behavioral health pathway available through distance delivery. Attracting individuals to these demanding positions and retaining them is challenging.

Workforce Data:

There were an estimated 39 vacancies in 2009 (15% vacancy rate).[13]

Education and Training:

UAF Rural Human Services; Regional Alcohol and Drug Abuse Counselor Training (RADACT), Alaska Native Tribal Health Consortium (ANTHC) Behavioral Health Aide Training; certification by Community Health Aide Program Certification Board; behavioral health career ladder (BHA I, II, III and BHA Practitioner) with participation by many UA campuses and tribal health organizations; courses are a combination of distance delivered and in person.

Strategies	Timescale
Engage	
Develop awareness of behavioral health occupations, especially in rural Alaska, using public service announcements on radio and television and other methods.	Short
Conduct culturally appropriate anti-stigma campaigns.	Medium
Engage local elders and leaders in introducing children and adults to the role of a village counselor.	Short
Provide information about, access to and funding for training and career opportunities in behavioral health.	Medium
Support continued ANTHC/University of Alaska/Alaska Mental Health Trust Authority cooperative efforts on the further development of BHA training opportunities and outreach.	Short
Train	
Enlist the help of local Alaska Native elders and leaders to assist with teaching healthy lifestyles and coping skills development in elementary schools.	Short
Continue to provide competency-based, culturally sensitive education for behavioral health workers at the village level; expand as needed. Ensure local Alaska Native elders and leaders co-teach and story-tell.	Medium
Expand access to continuing education for the village behavioral health workforce by promoting UA cross-campus coordination.	Medium
Consider strengthening work-based learning approaches to BHA education.	Medium
Present training materials and information at the Annual BHA Forum.	Short
Recruit	
Identify youth with peer helping skills and abilities in consultation with Native elders and community leaders, and support and nurture their growth.	Medium
Educate the legislature and advocate for increases in funding for sustaining these positions across the state.	Medium
Ensure that BHA certifications and endorsements are reciprocal and can be used at all levels of the career ladder in all rural areas.	Medium

[13] Unless otherwise noted, vacancy data are taken from the *2009 Alaska Health Workforce Vacancy Study*, conducted by the Alaska Center for Rural Health at the University of Alaska Anchorage. Licensing data have been provided by the Division of Occupational Licensing at the Department of Commerce, Community and Economic Development and by Department of Health and Social Services. Non-resident and age data for the current workforce are from Department of Labor and Workforce Development studies and projections.

Provide support to the Tribal BHA Training Academy to recruit and support training staff.	Short
Provide recruitment materials through tribal health organization communication channels and at tribal events around the state	Short

Retain

Ensure Native elder and community leader support for behavioral health workers through mentoring, guidance and leadership.	Short
Make general and targeted skills enhancement available for village behavioral health workforce.	Medium
Improve supervision of village workers.	Medium
Develop community understanding of and support for behavioral health workers in local areas, including personal expressions of appreciation.	Short

Primary Care Physician

Description:

Primary Care Physicians diagnose, treat, and help prevent diseases and injuries that commonly occur in the genera population and may be trained as either Doctors of Medicine (MD) or Doctors of Osteopathy (DO). Areas of practice include Family Practice, General Internal Medicine, and Pediatrics. Obstetricians/Gynecologists are sometimes include in this group, as are General Surgeons.

Overview:

In 2005 a task force was convened to analyze and provide recommendations regarding Alaska's physician workforc These recommendations included expanding the size of the WWAMI medical school class, considering establishment o a medical school in Alaska, and various recruitment and retention measure. Several of these strategies, and some others represented in this section, have already commenced. Further planning is needed to develop strategies specific to each type of primary care physician.

Workforce Data:

In 2009, there were an estimated 67 family practice vacancies (11% vacancy rate) and 1,583 licensees, up 2% from 2007; 24% of the workforce is non-resident, 41% over age 50.

Education and Training:

Alaska WWAMI program (20 graduates per year); Alaska Family Medicine Residency (10 completers per year).

Strategies	Timescale
Engage	
Strengthen pipeline programs to medical and other health professions, particularly for minority and disadvantaged/under-represented populations.	Short
Support school districts in offering health occupations awareness and exploration activities.	Short
Incentivize consideration of family rather than specialty practice.	Medium
Engage hospitals/physicians in the community to help develop student awareness and interest.	Short
Train	
Expand the WWAMI program to include the second year in Alaska and additional students as resources allow.	Medium
Remove requirement to repay the public fund portion of medical education.	Short
Increase the use of distance delivery, simulation and other technologies to strengthen medical education in Alaska.	Medium
Implement a post-baccalaureate program to prepare college graduates and mid-career individuals for successful application to medical school.	Short

Provide excellent continuing medical education opportunities for family physicians throughout the state.	Medium
Develop a plan for Graduate Medical Education (GME) across the state that includes reducing barriers to financing GME.	Short
Explore community partnerships for GME programs, DO rotations, etc.	Medium
In conjunction with nurse practitioner and physician assistant programs, work to expand clinical practice opportunities for medical students and residents.	Short-Medium
Consider development of a medical school in Alaska.	Long
Infuse interdisciplinary teamwork, quality improvement and evidence-based practice concepts and applications in all health programs including medical.	Medium
Recruit	
Work collaboratively to recruit primary care physicians to Alaska.	Short
Offer information and incentives to attract physicians to Alaska, particularly to areas of shortage.	Medium
Establish a robust loan repayment and employment incentives program that rewards physicians in family practice.	Long
Retain	
Sustain and improve the practice environment in Alaskan communities.	Long
Assess and meet market wages and benefits for employed staff physicians.	Medium
Offer incentives for physicians and their families to remain in Alaskan communities.	Long

Advanced Nurse Practitioner (Family, Psychiatric/Mental Health)

Description:

Advanced nurse practitioners (ANPs) are Registered Nurses who have specialized formal, post-basic education and who function in highly autonomous and specialized roles working with all ages of patients.

Overview:

Nurse practitioner programs in the state have been in existence for many years. There is growing interest in these programs and class size in the UAA Family NP program has increased. Maintaining current enrollment and evolving the programs will require additional faculty. Recruitment, especially for other specialties, will continue to be required.

Workforce Data:

In 2009, there were an estimated 58 vacancies for Family Nurse Practitioners (17% vacancy rate) and 490 licensees, 9% increase from 2007. In that same survey, there were 2 vacancies (18% vacancy rate) reported for Psychiatric/Mental Health Nurse Practitioners.

Education and Training:

UAA Master of Science in Nursing Science, Family Nurse Practitioner track (15 graduates per year); Psychiatric/ Mental Health Nurse Practitioner Track (6 graduates every other year); these programs are offered primarily through distance delivery with some clnical intensives.

Strategies	Timescale
Engage	
Inform the public and prospective students about advanced practice nursing and the need for primary care providers in Alaska through media, role modeling, job shadows, and other means.	Short
Target nurses from minority and disadvantaged/underrepresented groups for encouragement and assistance in becoming advanced practice nurses.	Medium

Train

Hire more faculty for the UAA SON Advanced Nurse Practitioner programs.	Short
Identify additional practice sites for the education of advanced nurse practitioners in Alaska; consider innovative solutions such as offering a business tax credit to practices that agree to serve as a training site.	Short
Allow for evolution of advanced nursing practice education in Alaska toward national norms to ensure continued graduation and certification of Alaska ANPs, including the development of a Doctorate in Nursing Practice (DNP) program.	Medium
Provide continuing education in essential and advanced skills and knowledge for nurse practitioners across the state.	Medium
Update audio/video equipment to improve program delivery; add capacity for clinical simulation throughout the state.	Short

Recruit

Include advanced nurse practitioners in the professions eligible for loan repayment and other employment incentives.	Short
Examine the feasibility of subsidies for establishing advanced nursing practices in communities experiencing a primary care shortage; consider housing support.	Medium
Identify other strategies for external recruitment of ANPs through consortia of providers.	Medium

Retain

Sustain and improve the practice environment in Alaskan communities.	Medium
Ensure continuation of a robust scope of practice for advanced nurse practitioners in Alaska.	Short
Subsidize continuing education offerings by providing financial support for continuing education conferences to keep attendee costs affordable.	Medium

Substance Abuse/Behavioral Health Counselor

Description:

These positions counsel and advise individuals, families or groups with alcohol, tobacco, drug, or other co-occurring mental health and associated problems, such as domestic violence, criminal justice involvement, gambling, eating disorders, etc. Counselors may also provide life skills development and engage in education, harm reduction and prevention programs.

Overview:

There is an established process in Alaska for training and certifying these workers . As with other behavioral health fields, attracting and retaining individuals as substance abuse counselors is challenging.

Workforce Data:

There were an estimated 48 vacancies (15% vacancy rate) in 2009. An additional 110 positions are expected to be created in the ten-year period ending 2016. Currently, 8% of the workforce is non-resident; 39% is over 50 years of age.

Education and Training:

Alaska certifications and continuing education in the chemical dependency field; pertinent content included in behavioral health degree programs such as social work, psychology and human services. (Behavioral Health Technicians - 151 contact hours; Behavioral Health Counselor I - 304 contact hours; BH Counselor II - 6 years of work in chemical dependency or a bachelor's in human services or a minimum of 436 contact hours. An advanced BH Counselor II must have 6 years of full time work and experience supervised by a chemical dependency supervisor.)

Strategies	Timescale
Engage	
Develop awareness and educate the public about occupations and professions dedicated to decreasing the effects of alcohol, tobacco, substance use, eating disorders, and gambling in Alaska.	Short
Engage in a dialog with elders, local community leaders, businesses and civic organizations, as well as prospective students, about these roles.	Short
Train	
Inform practitioners at all levels about certification requirements and training opportunities such as Regional Alcohol and Drug Abuse Counselor Training (RADACT) and university programs.	Short
Encourage and assist substance abuse staff to receive required levels of training in the field.	Short
Ensure that Behavioral Health Technicians through Advanced Behavioral Health Counselors have access to the hours needed for training to keep their certification; provide financial assistance as necessary.	Short
Recruit	
Identify with community elders and leaders youth that show helping skills and abilities; ensure they have access to further their interest through formal education; support them as necessary to complete their training.	Medium
Work with all post secondary and vocational training programs to disseminate information to students who may be interested in an addiction treatment professional career.	Short
Partner with regional Native corporations to provide scholarships targeted to the addiction treatment field.	Medium
Create a Tech Prep pathway for high school students interested in this career area, allowing them to take one or more courses from the university as a way to build toward a career and future training.	Medium
Retain	
Create opportunities for certified Behavioral Health Technicians through Advanced Behavioral Health counselors to have daily access to not only a clinical supervisor but also to community leaders and advisors.	Short
Support the development and delivery of evidence-based continuing education critical to the professional development of counselors in the areas of substance abuse and related disorders, such as specific assessment tools, interventions and treatment modalities.	Short
Institute a loan repayment program for paraprofessionals in the addiction treatment field to enable them to seek postsecondary education that will allow them to assume leadership positions in their agencies.	Medium
Facilitate the development of a rural substance abuse and behavioral health counselor network to connect these individuals through video or live web-conferencing on a regular basis.	Medium
Ensure individuals just entering the behavioral health field have regular and consistent access to a clinical supervisor for support, using distance delivery as a prime method for education and/or transitioning into private practice.	Medium

Registered Nurse (RN)

Description:

RNs assess patient health problems and needs, develop and implement nursing care plans, and maintain medical records. They administer nursing care to ill, injured, convalescent, or disabled patients in many venues and may advise patients on health maintenance and disease prevention or provide case management. Licensing or registration is required in order to practice. DOLWD data include advance practice nurses in this category.

Overview:

Progress has been made on increasing the number of new graduate registered nurses in Alaska. Over time, the exte sion of the associate's degree program to many locations across the state, and improvement of the distance delivered RN to-bachelor's degree, will allow for significant headway in most regions. Distribution remains a challenge—though less than in the past—and should improve further as new training sites are added. A continuing challenge is the process of orienting new graduates into their workplace roles and augmenting their skills in specialty areas. Considering the size o this workforce, it is anticipated that recruitment from outside the state will continue to be a factor, especially for nurse specialists.

Workforce Data:

There were 307 estimated vacancies (10% vacancy rate) in 2009 with only 63 vacancies for new graduates. By 2016 DOLWD estimates that the state will have 6,328 nursing positions, up from 4,817 in 2006. There were 6,334 licensees in 2009, a 9% increase from 2007; 16% of the current workforce is non-resident, 40% over age 50.

Education and Training:

AAS and BS nursing degrees at UAA SON (180-200 graduates per year); currently 12 locations in Alaska, 2 more to be added in 2011.

Strategies	Timescale
Engage	
Inform the public about nursing as a career, including K-12 awareness activities and working with AHEC Centers.	Short
Expand awareness of nursing opportunities to include specialty, rural and long-term care areas, as well as advanced practice.	Short
Educate the public about career lattice opportunities, including the ability to grow into the profession from a direct services background. Include information to those with other bachelor's degrees.	Short-Mediu
Broaden the field of nursing applicants, reaching out to students with degrees in other fields.	Short
Train	
Encourage relevant knowledge and skills development during K-12 education.	Short
Sustain and improve UA School of Nursing basic programs; solidify AAS program at the community level; strengthen and market advanced and specialty education, including the nurse educator distance-delivered master's program.	Short-Mediu
Identify specialty priories; achieve statewide process for specialty training.	Medium
Continue development and support for accelerated specialty and rural generalist preceptorships and other post-employment continuing education opportunities; fund coordinating/development consortium; find funding for coordination/development consortium.	Medium
Engage all levels of nursing students in interdisciplinary teamwork and quality improvement/evidence-based practice education and clinical opportunities.	Short

Recruit	
Identify nursing specialists and nurse educators as beneficiaries of loan repayment and employment incentives programs.	Short
Use a coordinated approach to developing a strong pool of nursing candidates in the state.	Medium
Develop a comprehensive plan including financial incentives to attract nursing faculty to Alaska and engage local nurses in educational roles as preceptors and faculty members.	Medium
Retain	
Structure the workplace environment to maximize retention of incumbent nurses; consider factors such as shared governance, fair salary/benefits, highest attention to patient care quality and safety, reasonable and flexible workloads and schedules, etc.	Medium
Incentivize nursing staff to welcome and mentor new graduates and employees.	Short
Identify methods of attracting and retaining nurses later in their careers as productive members of the workforce.	Short
Encourage the delivery of continuing education that is financially feasible and readily available to nurses residing in rural settings.	Short

Community Health Aide/Practitioner (CHA/Ps)

Description:

A profession unique to Alaska, Community Health Aides and Practitioners provide preventive, primary and emergency care to rural Alaskans. CHA/Ps work under the supervision of licensed physicians employed by one of the tribally-managed hospitals or clinics and communicate regularly with these providers by telemedicine, telephone, email and other means.

Overview:

CHA/Ps are employed by the tribal system in Alaska. Certification is provided by the Community Health Aide Program Certification Board. Village councils typically participate in selection of individuals for CHA/P training.

Workforce Data:

In 2009, there were an estimated 43 vacancies (12.9% vacancy rate). Quarterly program surveys most recently revealed 103 vacancies out of 583 positions, for a 17.6% vacancy rate.

Education and Training:

Tribal Training Centers provide required session training, with field experience between sessions. UAF assists with advanced courses and provision of credits and degree progression for those interested in academic credentials.

Strategies	Timescale
Engage	
Include CHA/Ps in career awareness activities for K-12 and the public, especially in rural Alaska.	Short
Engage local elders and leaders in introducing children and adults to the role of health aides.	Short
Provide job shadowing and basic skills strengthening for those interested in these occupations; work with AHECs on this strategy.	Short
Train	
Continue to assess and seek support for provision of sufficient sessions to meet needs in the state.	Medium
Provide continuing education opportunities on a variety of pertinent topics.	Short
Provide smooth and subsidized access to university credits and relevant degrees, including a career ladder to the physician assistant program and other health professions.	Medium

Recruit	
Seek and encourage likely candidates for CHA/P positions to apply and proceed through levels of session training.	Short
Retain	
Provide respite for those working with little assistance in small villages.	Short
Ensure reasonable wages, benefits, and schedules.	Medium
Work to provide adequate supervision and support.	Medium
Consider housing stipends for community health aides and practitioners.	Short

Social Worker

Description:

Social workers provide services to improve client well-being and functioning. Particular focus is placed on assisting bulnerable populations and providing psycho-social supports to help clients cope with health/public health, behavioral health, abuse and neglect, education and basic need-related issues. Interventions may include individual, family and group therapy, crisis intervention, case management, advocacy, prevention and education.

Overview:

While the overall vacancy rate for social workers in the 2009 study was very low, there are critical pockets of vacancies, particularly in rural areas, that seriously affect critical functions. In some organizations, the inability to find social workers has resulted in positions being discontinued and filled by other types of workers. There may also be a need to provide additional resources to increase numbers of positions.

Workforce Data:

The 2009 vacancy rate was 3%, with 5 estimated vacancies. DOLWD data indicate a need for an additional 70 positions by 2016. Of the current workforce, 3% is non-resident, 33% is over age 50.

Education and Training:

Social work bachelor's degrees are delivered by UAA and UAF (distance), master's in social work at UAA (distance). Graduate about 58 per year (35 bachelors and 23 masters). Career pathway from rural human services certificate through associates in human services, bachelor's in social work, human services or psychology, master's in social work, now PhD in psychology.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and educate the public on the role of the clinical social worker.	Short
Train	
Continue to develop and maintain a smoothly articulated career pathway in social work.	Short
Recruit	
Include clinical social workers in loan repayment and employment incentives programs, especially for Alaskan students.	Medium
Retain	
Increase numbers of positions in social work to lessen workload burden and associated burn out, decision errors and other problems.	Medium
Provide continuing education for social workers.	Short-Medium
Provide respite to decrease burn out.	Medium
Improve salary/benefits for social workers, as well as supervision and support.	Medium

Oral Health Practitioner

Description:

Dental Hygienists – The role of the dental hygienist is to assist members of the dental profession in providing oral health to the public. A person licensed in this profession may clean and remove stains from teeth, apply topical preventive agents (i.e. fluoride and sealants), and examine oral areas, head and neck for signs of oral disease. They may educate patients on oral hygiene and take and develop x-rays.

Dental Health Aides and Therapists (DHA/Ts) are only employed by Alaska's tribal organizations. They provide oral health care to individuals in remote communities without regular access to dentists. DHAs provide dental disease prevention and education services. Depending on level of training, DHAs may also provide additional basic level dental services. DHA Therapists are advanced practitioners who provide prevention services and a limited scope of basic restorative dental procedures such as cavity removal, fillings and simple extractions. DHATs practice under the direct, indirect or general supervision of a dentist.

Overview:

Dental Hygienists - Program expansions have recently been implemented in the UA system. The University will assess the effect in next few years and consider if additional changes are necessary. Recruitment to rural areas needs considerable attention.

DHA/T – The several levels of DHAs function similarly to dental assistants and dental health educators in non-tribal organizations. In many other developed nations, there is a tradition of a DHAT mid-level role, similar to physician assistants and nurse practitioners.

Workforce Data:

Dental Hygienists: In 2009, there were an estimated 41 vacancies statewide (8% vacancy rate); 16 (4.6%) urban and 24 (15.8%) rural. According to DOLWD estimates, an additional 210 will be needed over the 10-year period ending 2016. There were 444 licensees in 2009, up 4% from 2007. The current workforce is 7.5% non-resident, 26% over age 50.

DHA/T s: The DHA/T roles have only recently been developed in Alaska and their potential employment opportunities are evolving. The 2009 vacancy study, which included all tribal organizations except one small one, found an estimated 48 positions statewide, with 2 vacancies, a 4.2% rate.

Education and Training:

Dental Hygienists - Dental hygiene programs exist in Anchorage and Fairbanks; combined 17-20 graduates per year.

DHA/T - Training sessions for DHAs are organized by tribal health organizations. DHATs are educated in Anchorage and Bethel, in a partnership between ANTHC and the University of Washington MEDEX program. Formerly DHATs were educated in New Zealand. DHA/Ts receive certification from the Community Health Aide Program Certification Board.

Strategies	Timescale
Engage	
Include oral health practitioner occupations (Dental Hygienists and Dental Health Aides/Therapists, as well as Dentists) in career awareness activities with K-12 students and the public.	Short
Work with high schools, especially in rural areas, to provide adequate science education supportive of careers in oral health.	Medium-
Inform public about new expanded functions role for dental hygienists.	Short
Train	
Evolve educational programs for DHA/Ts.	Medium
Develop crosswalk of training in hygiene and dental assisting with that for dental health aides; collaborate where feasible.	Medium
Ensure continued funding for the cost intensive DHA/T program.	Short
Provide training in expanded dental hygiene functions.	Medium
Explore ways to give college credit for DHA/T program work.	Medium

Continue dental hygiene programs in Anchorage and Fairbanks; expand when resources and space permit; offer a Bachelor of Science in Dental Hygiene (BSDH) degree to prepare dental hygienists for entry into ADHP programs.	Medium
Recruit	
Identify and encourage likely candidates for DHA/T positions.	Short
Educate tribal dental directors about employment of DHAs and encourage appropriate support of training.	Short
Include dental hygiene in loan repayment and employment incentives programs, especially for Alaskan students.	Short
Include dental hygiene in efforts to recruit collaboratively, especially to rural Alaska.	Short
Retain	
Provide adequate compensation for oral health practitioners.	Medium
Improve supervision of village-based DHAs, including training for the dental team.	Medium
Provide meaningful, appropriate continuing education for Dental Hygienists and DHA/Ts.	Short
Improve workplace conditions and compensation and exercise other retention strategies for oral health practitioners.	Medium

Psychiatrist

Description:

A psychiatrist is a physician who specializes in the prevention, diagnosis, and treatment of mental, emotional and addictive disorders.

Overview:

While the total number of vacancies was fairly low in the 2009 study, the population of psychiatrists in Alaska ove age 50 is quite high. Considering the extent of behavioral health issues in the state, it is important to address this medical specialty.

Workforce Data:

The 2009 vacancy study estimated 11 vacancies (13% vacancy rate); 16% of current practitioners are non-resident, 57% over age 50.

Education and Training:

A psychiatry residency being worked on at this time with the University of Washington.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and the public.	Short
Train	
Develop psychiatric residency in Alaska.	Medium
Expand the third year WWAMI psychiatry clerkship for medical students.	Medium
Create and maintain a robust psychiatry resident elective until a psychiatry residency is operational; add matriculating psychiatrists to the workforce.	Medium
Recruit	
Cover psychiatrists in loan repayment and employment incentives programs.	Medium
Include psychiatrists in efforts to recruit collaboratively for physicians.	Short

Retain	
Develop and deliver continuing education opportunities for psychiatrists, particularly those in more rural areas of the state.	Shortt
Create supportive practice environments; assist in establishing practices and transitioning into the workforce.	Short

Human Service Worker

Description:

The primary purpose of the human service worker is to assist individuals and communities to function as effectively as possible in the major domains of living.

Overview:

Human service workers hold jobs with many titles. Examples include: Case Worker, Family Support Worker, Life Skills Instructor, Probation Officer, Group Home Worker, Mental Health Worker, Community Outreach Worker, Residential Manager, and Care Coordinator. Human service workers are found in diverse settings such as group homes, correctional facilities, community mental health centers, and a wide variety of other social service programs. In rural Alaska, employment opportunities include regional health corporations and federal, state and local governmental agencies.

Workforce Data:

In a large workforce of about 1,000, the number of vacancies among human service workers was 176 in 2009 (12% vacancy rate). Non-residents made up 11% of the workforce in 2006; 26% of workers were over age 50. DOLWD projects a need for about 250 additional workers in the period from 2006-2016.

Education and Training:

Some human service workers require only a high school education. The University of Alaska provides various levels of human service education, from certificate to graduate coursework. Several campuses provide education in human services, and it is possible to access programs in this field via in distance education.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and the public.	Short
Target under-represented and other non-traditional students for human services occupations.	Short
Train	
Develop and maintain a smoothly articulated career pathways in human services across UA campuses.	Short
Seek improvements in educational programs, including complying with national standards and trends, meeting accreditation requirements, and providing access via distance education.	Short
Recruit	
Provide incentives for students to enroll in human services programs, including financial aid and scholarships for part-time, working students, workplace learning and distance education.	Medium
Retain	
Deliver continuing education for human service workers.	Short
Provide respite and sufficient staffing to decrease burn out.	Medium
Strengthen supervision through education and incentives.	Medium
Improve salary/benefits for human service workers.	Medium

Pharmacist

Description:

Pharmacists dispense drugs prescribed by physicians and other health practitioners and provide information to patients about medications and their use. Pharmacists may advise physicians and other health practitioners on the selec tion, dosage, interactions, and side effects of medications.

Overview:

The demand for pharmacists in Alaska has diminished somewhat in the past two years, probably helped by the recession and the recent increase in the number of pharmacy schools in the rest of the country. With anticipated retire- ments and potential expanded functions for pharmacists, it is expected that attention will need to be paid to ensuring that the number and distribution of this profession are adequate to meet state needs. Recruitment and retention will be important, as well as expanding viable options for educating pharmacists in state.

Workforce Data:

There were an estimated 37 vacancies (8.6% vacancy rate) in 2009 and 471 licensees, up 12% from 2007. Of the current workforce, 26% is non-resident and 34% over age 50.

Education and Training:

Currently there is no program in Alaska. Several options for pharmacy education recommended by a consultant ar being discussed. An average of fewer than 10 Alaskans enroll in pharmacy schools in other states each year. The Creigh- ton University distance delivered pharmacy program is available for those who want to stay in state for school.

Strategies	Timescale
Engage	
Inform the public about pharmacy as a career; include in K-12 career awareness activities.	Short
Target college majors in chemistry, biology and biochemistry for information about opportunities in pharmacy.	Short
Consider pharmacy technology program at the high school level.	Medium
Train	
Develop a strategy for pharmacy education for Alaska.	Short
Explore partnership options through an RFP process.	Medium
Develop a clear pre-pharmacy track at all three UA Major Administrative Units (MAUs).	Short
Work with Creighton University to set aside slots and provide tuition discount for Alaska students.	Short
Recruit	
Continue successful recruitment efforts; target new schools for information about Alaska.	Medium
Include pharmacists in loan repayment and employment incentives programs.	Short
Retain	
Creative attractive workplaces and exercise other retention strategies.	Long
Assure continuing education opportunities for pharmacists, especially in rural areas.	Medium

Therapists

Description:

A Physical Therapist assesses, treats, plans, organizes, and participates in developmental, restorative, and rehabilitative programs that improve mobility, relieve pain, increase strength, and decrease or prevent deformity of patients suffering from disease or injury.

An Occupational Therapist assesses, treats, plans, organizes, and participates in developmental, restorative and rehabilitative programs that help restore vocational, homemaking, and daily living skills, as well as general independence, to disabled persons.

A Speech-Language Pathologist assesses and treats persons with speech, language, cognition, voice, and fluency disorders to develop or regain the ability to communicate. The therapist may select alternative communication systems and teach their use and work with those with swallowing disorders to optimize nutritional intake and decrease risk of aspiration.

A Physical Therapist Assistant assists physical therapists in providing physical therapy treatments and procedures. The PT Assistant may, in accordance with State laws, assist in the development of treatment plans, carry out routine functions, document the progress of treatment, and modify specific treatments in accordance with patient status and within the scope of treatment plans established by a physical therapist.

An Occupational Therapist Assistant assists occupational therapists in providing occupational therapy treatments and procedures. The OT Assistant may, in accordance with State laws, assist in development of treatment plans, carry out routine functions, direct activity programs, and document the progress of treatments.

A Speech Therapy Assistant assists speech-language pathologists in carrying out services for individuals requiring these services.

Overview

Therapist professions in Alaska are in short supply, and pressures will continue to grow on this workforce as the population continues to rapidly age. Training for these professions tends to be expensive and complex to deliver. At present, programs in two critical therapy professions (OT and Speech-Language) are offered in Alaska through partnership arrangements and partners are being sought for physical therapy. There is some need to expand the use of occupational therapists across the state, as well as assistants in both PT and OT. That has not been the typical practice pattern to date but could serve the state well. Local development of the assistant occupations is being considered, but will require resources. There will be a continued need for recruitment into the state and for attention to distribution within Alaska.

Workforce Data:

The 2009 vacancy study estimates the following for the various therapies: PT: 45 (rate 16%), OT: 29 (rate 23%), Speech-Language Pathologists: 16 (rate 10%), PTA: 17 (rate 28%). The current workforce has considerable non-resident and older workers: OT: 17% out-of-state workers; 32% age 50+; PT: 22% out-of-state, 22% age 50+; Speech-Language: 18% out-of-state, 44% age 50+; PTA: 11% out-of-state, 19% age 50+.

Education and Training:

There is an OTD program at UAA with Creighton University, currently admitting up to ten per year in Anchorage. UA is exploring partnerships for an Alaska-offered DPT. The University is also looking into requirements for development of PTA and OTA programs. There is a speech-language master's program available in Alaska, a partnership with East Carolina University's distance program, with post-baccalaureate bridge courses offered by UAA. There is a speech pathology assistant distance option available through the UAA Center for Human Development.

Strategies	Timescale
Engage	
Elevate public awareness of therapies occupations and professions.	Medium
Provide information to K-12 students, including job shadows, role models, and mentors.	Short
Advise students on educational opportunities within and outside Alaska.	Medium
Raise awareness and acceptance of the use of mid-level PTAs and OTAs in the Alaska healthcare community.	Long

Train

Maintain OT partnership with Creighton University and Speech-Language partnership with East Carolina University; develop PT partnership with an external institution.	Medium
Seek expanded/alternate approaches to therapies education in Alaska over time, where feasible and needed.	Long
Assist UA to move aggressively to develop programs for both PTA and OTA, with a goal of admitting a cohort of PTA students in the fall of 2011.	Short-Mediu
Consider potential for the speech therapy assistant program to be developed as an apprenticeship (may be registered or non-registered).	Short
Assist non-traditional students to enter professional programs; give credit for relevant past experience; provide mentors.	Medium

Recruit

Address wage disparity for mid-levels (PTAs and OTAs).	Medium
Identify schools in the Lower 48 that would like to offer clinical rotations in Alaska facilities and develop relationships, after giving first preference to students in programs in Alaska.	Medium
Include PTs, OTs and Speech Pathologists in loan repayment/employment incentive programs and recruitment collaborations.	Medium
Consider industry provision of financial assistance in exchange for service.	Medium
Develop additional appropriate clinical rotations for therapy students.	Medium

Retain

Assess retention factors for therapy professionals in Alaska; plan retention strategies.	Medium
Work on a re-entry strategy for those who have left the profession to raise children, etc.	Long
Provide affordable, high quality and pertinent continuing education in a format easily accessed by therapists, especially those in rural Alaska.	Medium

Nurse Educator

Description:

Nurse educators teach nursing students in basic and advanced nursing programs. They may also provide education to patients, families, communities and health care workers, in a variety of settings.

Overview

There is a national shortage of nurse educators and current faculty is older on average than the overall nursing work force. Recruitment and retention require attention to salary/benefits issues. Accreditation standards are high for school of nursing. Regular faculty are required to have earned master's or doctoral degrees. This is a challenging role, combinin expertise in clinical skills and instruction. UAA established a master's track several years ago and interest is increasing. Sustaining and marketing this program is important to allow Alaska to grow its own nurse faculty and to also prepare nurse educators to work with patients and communities.

Workforce Data:

Currently there are 4 faculty vacancies in the UA SON AAS program (vacancy rate 16%) . The overall nursing faculty vacancy rate is 7.8%. One to two additional FTEs are needed for the MS program. The average age of current faculty is 54.9 years: 4% at 30-39, 17% at 40-49, 49% at 50-59, and 30% at 60-69 years.

Education and Training:

UAA has an online master's degree track for nursing education.

Strategies	Timescale
Engage	
Expand awareness of nursing opportunities in the education of students, patients, families, others.	Short
Engage local nurses in educational roles as preceptors and faculty members.	Short
Encourage health care providers to identify members of the workforce to serve as educators.	Short
Train	
Market nurse educator distance-delivered master's program at UAA.	Short
Provide scholarships and other incentives for nurses to achieve advanced education and to participate as educators of the next generation of nurses.	Medium
Encourage continued involvement of current nursing faculty as preceptors of graduate nurse educator students.	Short
Recruit	
Identify nursing specialists and nurse educators as beneficiaries of loan repayment and employment incentives programs.	Short
Develop a comprehensive plan and provide incentives to attract nursing faculty to Alaska.	Medium
Encourage and incentivize aspirations for advanced degrees in nursing, including master's and doctoral degrees.	Short
Assess salaries for nursing faculty and find ways to enhance salary/benefits to improve recruitment and retention.	Short
Retain	
Provide incentives to nursing staff to welcome and mentor student nurses, new graduates and employees.	Short
Ensure School of Nursing workplace is collegial and congenial place to work; provide resources, mentoring and support needed to become/be an effective faculty member.	Short
Identify methods of attracting and retaining nurses later in their careers as productive members of the nurse educator workforce.	Medium
Establish faculty compensation at levels found in the industry.	Medium

Health Informatics Staff

Description:

Modern definitions of Health Informatics encompass the two broad interrelated fields of Health Information Management (HIMS) and Clinical Informatics. Personnel operate at many levels to design, develop, implement, use and manage information technology in health care organizations. Related HIMS occupational titles include medical records technicians, medical coders, and medical and health services managers. In the evolving field of Clinical Informatics, occupational titles are not yet standardized but encompass the spectrum of information technology (IT) titles in a clinical setting: clinical informatics specialist, programmer, and analyst.

Overview

Health Informatics is a swiftly growing and evolving field in Alaska. A combination of education and on-the-job training is usually required for these occupations. IT professionals need an augmented health background, and health professionals require IT knowledge. Alaska is presently working to develop a Health Information Exchange to enable the electronic sharing of patient records between medical providers and all medical providers are working to implement or enhance electronic health record systems and interface them with point-of-care medical devices such as glucometers, ventilators, EKGs, etc.

Workforce Data:

There are many types of workers involved in health informatics, from administrative assistants and billing/coding staff to health care and IT professionals. The common denominator is that they function in support of health IT, inclu ing electronic medical records. The future growth in jobs in this broad and complex field is not yet accurately measurec but it is expected to be dramatic due to the proliferation of hi-tech devices in direct patient care, and federal mandates expand the meaningful use of electronic health records.

Education and Training:

The University of Alaska has several programs in billing, coding, health records and related topics. A work group is planning to add HIT components to these existing programs and to expand coursework in this area, especially at certificate and associate degree levels. Collaborations with other universities and colleges are being developed in this area, particularly to make graduate level education available to Alaskans. Charter College also offers health informatio technology programming.

Strategies	Timescale
Engage	
Include health informatics careers when providing career awareness to K-12 students.	Medium
Inform existing health care workers and administrative staff about health informatics.	Short
Advise current students in health programs and computer science/IT programs to study HIT.	Medium
Train	
Assess HIT training needs with industry.	Short
Develop a comprehensive plan for HIT education needed by the Alaska health care industry.	Short
Participate in consortia to develop curricula and share HIT courses at all levels.	Short
Provide HIT-related coursework in-state for health and IT staff pertinent to individual knowledge gaps.	Medium
Recruit	
Encourage interested employees to gain additional education and skills in the area of HIT.	Medium
Retain	
Provide sufficient support and continuing education to health care staff to allow them to be comfortable as health informatics evolves and becomes more prevalent in the workplace.	Medium

Direct Care Worker

Description:

Direct care workers are the backbone of the health care delivery system, providing routine, personal healthcare and assistance with daily living in a variety of settings. Common titles for these workers are Personal Care Assistant or Atter dant, Home Health Aide, Nurse Aide or Certified Nurse Assistant (CNA), Disabilities Services Worker, Direct Suppor Professional, Direct Service Worker.

Overview

CNAs fall under the Board of Nursing in Alaska which ensures that educational standards are met by programs and that the CNA scope of practice is defined and enforced. In January 2010 a proposal was put forth by a collaborative Credentialing and Quality Standards group outlining core competencies for direct care workers in health and human services. These competencies are intended to be used to further educate and strengthen the direct care workforce in the state.

Workforce Data:

The direct care workforce in Alaska is quite large. In 2006, DOLWD identified 2,337 Personal and Home Care Aides, 1,859 Home Health Aides and 1,940 Nurses Aides, Orderlies and Attendants, for a total in these three occupations of 6,136 workers. 2009 vacancy data for Personal Care Attendants showed 33 positions (6%, vacancy rate) with 8% non-residents and 31% over 50 years of age. DOLWD projects a need for an additional 1,210 PCAs in the 2006-2016 timeframe. There were 12 vacancies for home health aides identified in 2009, a 16% vacancy rate. DOLWD projects needing an additional 830 HHAs by 2016. Certified Nurse Aides showed 116 vacancies, an 8% rate. DOLWD projects a need for 850 more nurse aides, orderlies and attendants by 2116. While only 6% of the current nurse aide workforce is non-residents, 21% is over 50 years of age. There is a high turnover in these entry-level occupations.

Education and Training:

There are a number of training providers for CNAs across the state, including university campuses, AVTEC and several hospitals (some in partnership with campuses and/or high schools). PCAs are required to have minimal training and, if hired directly by a consumer rather than an agency , there is very little required training or oversight. In part because home health aides do not have special certification in Alaska at this time, there is no specific training program for HHAs in the state.

Strategies	Timescale
Engage	
Encourage awareness of these entry-level careers, including providing programs at the high school level.	Short
Ensure potential and current workers understand this can be an entry point into a career ladder.	Short
Train	
Work with the Board of Nursing to remove barriers that impede the provision of CNA training programs in a large number of communities and in various training sites.	Short
Continue to work on common core curricula for PCA and CNA education, as well as advanced practice specialties with the Board of Nursing and others.	Short
Strengthen, support and expand the long-term care and direct/disabilities support apprenticeship programs, working with federal and state DOLWD staff.	Short
Continue work on standardization of occupational core competencies and strategies for implementation.	Medium
Recruit	
Increase efforts to attract underrepresented individuals to participate in the direct care workforce.	Short
Develop and support recruitment strategies that focus on the non-traditional and under-represented worker, i.e. retirees, family & friends, Alaskan Natives, etc.	Short
Retain	
Work on improving wages and benefits for direct care workers through a focus on credentialing.	Long
Provide continuing education to allow direct care workers to add to their competencies and advance in their field.	Medium
Increase skills of supervisors and ensure delivery of supervision of Direct Care Workers; integrate instruction on the supervision and support of direct care workers into the educational preparation for registered nurses or related occupations.	Medium
Seek opportunities to facilitate participation of direct care workers in educational programs and the annual conference to advance their credentials; augment career ladders.	Short

Alaska Commission on Aging
2010 SURVEY OF OLDER ALASKANS

(Do you have access to a computer? If so, you may complete this survey online by going to our website, www.alaskaaging.org, and clicking on the SURVEY button. Otherwise, mail your completed survey to us in the enclosed postpaid envelope, or send to Alaska Commission on Aging, P.O. Box 110693, Juneau, AK 99811-0693.)

1. Your Age: _____
2. Your Gender: ____ Female ____ Male
3. Your Race: (Check all that apply.)
   ____ African-American / Black ____ Asian / Pacific Islander
   ____ Alaska Native / American Indian ____ Caucasian / White
   ____ Other, please specify: _____
4. Your Zip Code: _____

5. How long have you lived in Alaska?
   ____ All my life (born here) ____ 11 to 20 years
   ____ More than 40 years ____ 5 to 10 years
   ____ 31 to 40 years ____ Less than 5 years
   ____ 21 to 30 years

6. Would you recommend your community as a good place to live for seniors?
   ____ Yes, unconditionally ____ Yes, with a few reservations ____ No

7. *Please rate the following senior concerns from 1 to 10 based on how much they affect Alaskan seniors in your opinion. A rating of 10 indicates the issue is of great importance. A rating of 1 indicates the issue is of minor importance. For example, if you feel that fuel costs are a very minor concern, you would circle "1"; if you feel it's a very important issue for seniors, you would circle "10". (You may use the same number more than once.*

	Minor Importance									*Great Importance*
Health care	1	2	3	4	5	6	7	8	9	10
Financial security	1	2	3	4	5	6	7	8	9	10
Fuel costs	1	2	3	4	5	6	7	8	9	10
Transportation	1	2	3	4	5	6	7	8	9	10
Having enough food to eat	1	2	3	4	5	6	7	8	9	10
Affordable, accessible housing options	1	2	3	4	5	6	7	8	9	10
Assisted living facilities providing 24-hour care	1	2	3	4	5	6	7	8	9	10
Availability of in-home services for seniors	1	2	3	4	5	6	7	8	9	10
Information about programs and services	1	2	3	4	5	6	7	8	9	10
Mental health and substance abuse problems	1	2	3	4	5	6	7	8	9	10
Help for isolated or depressed seniors	1	2	3	4	5	6	7	8	9	10
Senior center with a variety of programs and activities	1	2	3	4	5	6	7	8	9	10
Other, please specify: _____	1	2	3	4	5	6	7	8	9	10

8. Do you provide home care for a family member or friend? (Check all that apply.)
   ___ No ___ Yes, a friend age 60 or older
   ___ Yes, a spouse or partner age 60 or older ___ No, but I am a long-distance caregiver for an elder who lives elsewhere
   ___ Yes, a parent age 60 or older
   ___ Yes, a disabled family member under age 60 ___ Other, please specify: _____
   ___ Yes, one or more children or grandchildren under age 18

9. Do you visit your senior center?
   ___ Yes, regularly – at least twice a month
   ___ Yes, occasionally – once a month or less
   ___ No, I would like to but have difficulty getting to the senior center
   ___ No, I am not interested in what the senior center offers
   ___ There is no senior center in my community

10. Your estimated net MONTHLY household income from all sources: $ _____
11. Total number of people living in your household (including yourself): _____
12. Besides yourself, who lives in your household? (Check all that apply.)
   ___ Just myself
   ___ My spouse or partner
   ___ One or more adult children
   ___ One or more adult grandchildren
   ___ One or more grandchildren under age 18
   ___ Roommate(s) or renter(s)
   ___ Other, please specify: _____
13. Is your monthly income enough to meet all your monthly expenses?
   ___ Yes, with some left over for extras like vacations
   ___ Yes, but there is very little money left for extras in the budget
   ___ No, my income is not enough to pay for food, housing, fuel, clothing, medicine, and other necessities
14. At any time in the past 30 days, have you had difficulty paying for any of the following? (Check all that apply.)
   ___ Food to prepare meals
   ___ Medications or medical bills
   ___ Rent or mortgage payment
   ___ Energy costs – utilities, fuel oil, gas
   ___ Credit card bill
   ___ None of the above
   ___ Other, please specify: _____
15. What are the sources of your household's income? (Check all that apply.)
   ___ Social Security
   ___ Disability payments
   ___ Pension from employer or union
   ___ Wages from employment
   ___ Income from self-employment
   ___ Personal savings or investments
   ___ Senior Benefits program
   ___ Rental income
   ___ Permanent Fund Dividend
   ___ Native corporation dividends
   ___ Food Stamps
   ___ Adult Public Assistance
   ___ Cash from relatives
   ___ Rent subsidy (voucher, etc.)
   ___ Other, please specify: _____
16. What type of housing do you live in?
   ___ House/condo that I or a family member own (or have a mortgage on)
   ___ House/condo that I rent
   ___ Apartment in senior housing complex
   ___ Apartment that I rent, not in senior complex
   ___ Assisted living facility
   ___ Nursing home
   ___ Rooming house or hotel
   ___ Homeless shelter
   ___ Other, please specify: _____
17. Is your home in need of modification in order for you to be safe and comfortable (example: insulation, ramp installation, grab bars, elevator, etc.)?
   ____ Yes ____ No

18. Where do you expect to be living five years from now?
   ___ Same home as I live in now
   ___ Same community, but smaller living space
   ___ Living independently in a larger community in Alaska
   ___ Living independently in a smaller community in Alaska
   ___ Other, please specify: _____
   ___ Living independently in a different state
   ___ Move to an assisted living or nursing facility in Alaska
   ___Move to an assisted living or nursing facility outside Alaska

19. Are you currently employed or self-employed?
    ___Yes, full-time ___ No, but I am seeking work
    ___ Yes, part-time ___ No, I am retired
20. If you are currently still working, when do you expect to retire? (Skip this question if you are already retired.)
    ___ Within the next year or two
    ___ Within the next two to five years
    ___ More than five years from now
    ___ I can't afford to retire
    ___ I don't plan to retire even if I can afford to
21. Do you participate in subsistence activities (hunting, fishing, gathering) during subsistence season?
    ___ Yes, for an average of less than two hours a week
    ___ Yes, for an average of two to five hours a week
    ___ Yes, for an average of more than five hours a week
    ___ No
22. Do you do volunteer work in your community? (Check all that apply.)
    ___ Yes, with my church or house of worship
    ___ Yes, with a civic organization (example: Rotary)
    ___ Yes, with a charitable organization (example: Red Cross)
    ___ Yes, with a non-profit organization (example: senior center)
    ___ Yes, with a library, school, or educational institution
    ___ No, I do not volunteer because I don't have time right now
    ___ No, I do not volunteer at this time due to disability or ill health
    ___ No, I do not volunteer at this time due to difficulties with transportation
    ___ No, I do not volunteer at this time because I don't know how to find the right opening
    ___ Other, please specify: _____
23. Total hours per week you spend in volunteer work (estimate an average): _____
24. Where do you go when you have questions about the services available for seniors? (Check all that apply.)
    ___ Local senior center
    ___ Other local non-profit agency
    ___ Aging & Disability Resource Center
    ___ Independent Living Center
    ___ Pamphlets or handouts
    ___ Printed directory showing services by community
    ___ Dial 2-1-1
    ___ Internet search or specific website with service information
    ___ Senior housing staff
    ___ Hospital social services department
    ___ Check the phone book for possible information sources
    ___ Ask a friend or relative for help finding the information
    ___ Other, please specify: _____
25. What would be the BEST way for you to get the information you need about programs and services?
    ___ Toll-free number to call, with live answer
    ___ Toll-free number to call, with push-button options
    ___ Website with search features
    ___ Pamphlets, handouts, or printed directory
    ___ Speak to someone in person at senior center or other agency
    ___ Speak to someone in person in my housing complex or neighborhood
    ___ Other, please specify: _____

26. In the last TWO WEEKS, on how many occasions have you gotten together with family, friends, or a group you belong to for an event or activity, either outside your home or at your home? (For example: parties, movies, concerts, games, classes, dinners, senior center meals....)

___ None
___ Once
___ Two or three times
___ Four or five times
___ More than five times

27. In the past year, have you had trouble finding a primary care doctor to see you when you needed to see a doctor?

___ Yes, because of Medicare payment issues
___ Yes, because there are not enough doctors in my community
___ Yes, for another reason (tell us below)
___ No
___ Haven't needed to see a doctor in the last year
___ Other reason for trouble finding doctor: _____

28. Do you experience an illness or disability that limits the range of activities you can enjoy? (Check all that apply.)

___ No
___ Yes, a chronic disease such as heart disease, diabetes, etc.
___ Yes, a physical disability such as low vision, knee or hip problems, etc.
___ Yes, other physical health problems
___ Yes, Alzheimer's or other type of dementia
___ Yes, a mental or emotional problem such as depression, anxiety, etc.

29. *If you have used any of the following services in the past year, please tell us how satisfied you were. For example, if you were "very satisfied" with home-delivered meals you received, check "4." If you were "very unsatisfied," check "1". A "5" indicates that you didn't use the service in the past year, and a "6" means that the service isn't available in your community. Use the "additional comments" space to tell us how the service made a difference to you, or how it* could *be improved.*

1=very unsatisfied	*2=mostly unsatisfied*	*3=mostly satisfied*	*4=very satisfied*	*5=did not use*	*6= not available in my community*
Meals at a senior meal site	1	2	3	4	5	6
Home-delivered meals	1	2	3	4	5	6
Senior transportation	1	2	3	4	5	6
Information & referral	1	2	3	4	5	6
Care coordination	1	2	3	4	5	6
Chore service	1	2	3	4	5	6
Respite care	1	2	3	4	5	6
Personal care attendant	1	2	3	4	5	6
Adult day program	1	2	3	4	5	6
Caregiver support program	1	2	3	4	5	6

30. ***Additional Comments: Please add any specific comments you have on the services you have used, OR ANY OTHER TOPIC THAT IS IMPORTANT TO YOU. What is working well? What needs improvement?***

Alaska Health Programs

Workforce Crisis

Alaska is experiencing a workforce crisis that affects home and community-based health and behavioral health services. Issues pertaining to wages and benefits, recruitment and retention, and training and education impact the accessibility and effectiveness of these services to all Alaskans, especially beneficiaries of the Alaska Mental Health Trust. These beneficiaries include people with:

- Mental illness
- Developmental disabilities
- Chronic alcoholism
- Alzheimer's disease and related dementia.

Growing Alaska's Workforce

To address these problems, The Trust has developed and funds the Workforce Development Focus Area, which aims to develop a capable, culturally competent workforce that can support the communities and families of Trust beneficiaries. The Trust has partnered with the University of Alaska, Alaska Department of Health & Social Services, Alaska Department of Labor & Workforce Development and service providers from across the state to address workforce issues.

For more information, contact Kathy Craft:
907-450-8048
kathryn.craft@alaska.gov

The TRUST
The Alaska Mental Health Trust Authority
www.mhtrust.org

Training Collaborative

The following organizations provide support, training and education for the workforce and provider agencies serving Trust beneficiaries.

Trust Training Cooperative (TTC)

The TTC promotes career development opportunities for direct service workers and their supervisors by ensuring that technical assistance and training is accessible and coordinated. To learn more, visit **www.trusttrainingcoop.org**. The TTC also provides a Learning Management System, a web-based, one-stop shop for professional training opportunities with an on-line training catalog, registration and tracking of a user's training, conferences and educational participation in an E-Portfolio. See **www.ttclms.org** for details.

Alaska Rural Behavioral Health Training Academy

Alaska Rural Behavioral Health Academy (ARBHA)
ARBHA's mission is to develop and provide training for the behavioral health workforce primarily working in or serving rural Alaska. This University of Alaska Fairbanks based program offers training activities statewide via face-to-face, telebehavioral health, and hybrid delivery models and modalities. While the ARBHTA serves an array of service providers, its target group includes mid and upper-level clinicians, supervisors, and program directors. For more information, visit **www.uaf.edu/arbhta**

Alaska Alliance for Direct Service Careers

Alaska Alliance for Direct Service Careers (AADSC)
AADSC works to improve the flow of information to direct service professionals and the organizations that employ them. AADSC is focused on increasing the awareness of the industry statewide; working to help agencies recruit via a statewide job bank; and helping agencies reduce turnover via technical assistance on recruitment and retention issues. For more information, visit **www.aadsc.org**

Summary: HB 78 Incentives for Certain Medical Providers

Sponsored by Representative Bob Herron

Health Care Professions Loan Repayment & Incentive Program

The following organizations support the loan repayment and incentive solution as outlined in HB 78 Incentives for Certain Medical Providers:

Alaska State Medical Association • Alaska Dental Society • Alaska Primary Care Association • Alaska Osteopathic Medical Association • Alaska State Hospital and Nursing Home Association • Alaska Mental Health Trust Authority • Alaska Native Health Board • Alaska Pharmacists Association • Alaska Physical Therapy Association • AARP-Alaska • Advisory Board on Alcoholism and Drug Abuse • Alaska Behavioral Health Association • Alaska Mental Health Board • Alaska Mental Health Trust Authority • Alaska Public Health Association • Alaska Hygienists Association • Commonwealth North • Iliuliuk Family and Health Services, Inc. • Maniilaq Association • Municipality of Anchorage Senior Citizens Advisory Board • Mary Willard, DDS, Clinical Site Director, Alaska Native Tribal Health Consortium • Alaska Chapter National Association of Social Workers • Nome Eskimo Community • SEARHC • School of Social Work-UA • Dental Hygiene Program-UA • Sunshine Community Health Center

Problem:

Having a sustainable and competent practitioner workforce is vital to the health of Alaskans. However, Alaska is at a serious disadvantage as it competes in the national health care labor market. In other states, "support-for-service programs" (SFSPs) have shown substantial and long-standing success as a cost-effective strategy to address shortages (e.g., loan repayment and direct incentive). A key problem is that Alaska does not have a robust SFSP while 47 other states have one or more SFSPs.

Solution:

The Health Care Professions Loan Repayment and Incentive Program, as outlined in Representative Herron's HB 78 will make Alaskan health care employment competitive and attractive enough for practitioners to want to work in Alaska, particularly in hard-to-fill localities. State funds will be used to ensure that Alaskans with the greatest difficulty in obtaining care due to limited financial resources, cultural barriers, and geography will have access to professional health care services.

Program Description:

1) **Practitioner Eligibility**
   - DHSS Commissioner will annually prioritize the 10 eligible practitioner types:
     - Tier-1: Dentists, Pharmacists, Physicians (MD and DO)
     - Tier-2: Dental Hygienists, Nurse Practitioners, Nurses (RN), Physical Therapists, Physician Assistants, Psychologists, Social Workers (LCSW)
   - A practitioner's clinical duties must constitute at least 50% of duties to be eligible.
   - A part-time practitioner may participate and be eligible for pro-rated payments.
   - Preference may be given to current Alaskan residents.

2) **Payment Detail**

Placement Type		Regular		Hard-to-Fill
Tier 1:	up to	$35,000/year	up to	$47,000/year
Tier 2:	up to	$20,000/year	up to	$27,000/year

   - Duration of award is for a 3-year period of service.
   - Payments will be made every quarter following a completed full quarter of service.

3) **Site Eligibility**
   - DHSS Commissioner will rank eligibility of sites annually and determine any area and/or population in Alaska as a "shortage priority." These may include, but are not limited to, federally defined Health Professional Shortage Areas.
   - Preference will be given to sites that provide care to individuals regardless of insurance status, including persons who are uninsured or have Medicare and/or Medicaid.

4) **Oversight Entity**
   - Department of Health & Social Services will serve as the Oversight Entity.
   - DHSS Commissioner will appoint an advisory body to make recommendations regarding program administration including the identification of shortages, eligible sites, payment priorities and program evaluation.

5) **Program Evaluation**
   - By January 1, 2019, DHSS will submit a report to the Legislature on the program: the participation rates, costs, and the effect on the health care profession shortage areas.

6) **Fiscal Agent**
   - DHSS will serve as Fiscal Agent. DHSS will make loan repayments to the lending institution or eligible practitioners and will make incentive payments to eligible practitioners.

7) **Funding**
   - An in-cash "employer match" is required and is paid on a quarterly basis by eligible sites to DHSS. The level of required match will be adjusted according to the ability of the eligible site to contribute and may be set between 0% and 50%.
   - Program funds will not be used to offset current or expected provider supports.
   - The DHSS Commissioner will reserve funding for not fewer than three very-hard-to fill positions in each of the tier 1 and tier 2 categories.
   - The fiscal note has not yet been released but the expected funding for FY12 is $2.7 million to fund 90 participants for year 1 of their 3 years of service; that is, approximately 9 practitioners in each of 10 occupational categories.

For more information re: HB 78, please contact Shelley Hughes / Alaska Primary Care Association at Shelley@alaskapca.org or 907-841-1634.

Alaska Psychiatry Residency

- Alaska currently has a critical shortage of at least 25-30 psychiatrists, a deficit of 30%-40%. 40% of Alaska psychiatrists are 50 years of age or older and 29% may retire within five years.

- Four Anchorage health care organizations spent $2.9 million in 2009 for temporary psychiatrists.

- This critical shortage adversely impacts health care access, quality, cost, and outcomes across the continuum of care.

- A coalition of federal and state agencies, hospitals and providers, and the University of Alaska recommend partnering with the University of Washington to create the Alaska Psychiatry Residency.

- The Alaska Psychiatry Residency will emphasize primary care integration, telebehavioral health, and rural consultation.

- There will be 11 residents in training with three graduating annually. The final two years will be in Alaska increasing the likelihood graduates remain in Alaska.

- Stakeholders have promised $2.88 million for the first five years (FY12 – FY16) and more than $500,000 annually beginning year six (FY17). The Governor has included $202,000 in FY12.

- The balance remaining is $3.62 million across the first five years (FY12 – FY16) and $1.62 million annually beginning year six (FY17).

- Alaska is ineligible for new Medicare graduate medical education funding because a cap was imposed in 1997. Medicare is the largest funder of graduate medical education ($8.8 billion in 2007).

- Partners include:
  - Alaska Family Medicine Residency
  - Alaska Federal Health Care Partnership
  - Alaska Mental Health Trust Authority
  - Alaska Psychiatric Foundation
  - Alaska Psychiatric Institute
  - Alaska Veterans Affairs Healthcare System
  - Anchorage Community Mental Health Services
  - Fairbanks Memorial Hospital
  - Joint Base Elmendorf Richardson
  - North Star Behavioral Health Systems
  - Providence Health & Services Alaska
  - Southcentral Foundation
  - Southeast Alaska Regional Health Corporation
  - Tanana Chiefs Conference

2/19/2011

RRANN

Recruitment and Retention of Alaska Natives into Nursing

MEETING A NEED

In rural Alaska, the ongoing, well documented shortage of qualified nursing professionals is compounded by a need for nurses who speak indigenous Native languages and are attuned to the cultural traditions and sensibilities of their patients. Honoring the past while working toward the future, RRANN plays an integral part in meeting Alaska's burgeoning need for qualified nurses, and is the key to helping many individual Alaskans to achieve their dreams.

UAA recognizes that Alaska Native students, while deeply motivated to succeed, face unique challenges on their way to meeting their goals. The RRANN program was initiated to increase the number of Alaska Native and American Indian nurses in the state by providing assistance and support, beginning with advice on preparing for college, and following through to include creating a sense of community on campus.

In just its first two years, the program had already successfully doubled the percentage of Alaska Native nurses in the state. But there's still a long way to go.

"I can honestly say that if it had not been for the support of the RRANN program, I would have given up ... "

Michelle Cooper ('08, B.S. Nursing), RRANN graduate

"Recruitment and Retention of Alaska Natives into Nursing opened a door for me to be involved with the community at UAA. It made me feel like a part of a community, like I did in the Kotzebue community. I was able to form lasting relationships and share my culture with other nursing students. I also spent time talking to pre-major nursing students about the program, mentoring them and encouraging them not to give up. The only way to get through the program is to have a sense of community and support."

Marjorie Bolton-Baldwin ('10, B.S. Nursing), RRANN graduate

ACHIEVING A BALANCE

Alaska Natives and American Indians account for about 16 percent of Alaska's population, yet less than 3 percent of nursing professionals fall into that group. To address this disparity, RRANN offers help to prospective students in planning for admission to UAA, as well as information about nursing degree programs and course requirements. Through RRANN, students have access to tutoring, financial aid and on-campus housing options tailored to their needs.

"I now find myself encouraging others to enter the nursing field. I tell them, 'Your hard work will pay off in the end.'"

Andrea Moses ('08, B.S. Nursing) RRANN graduate, currently working at Alaska Native Medical Center

SHOWING THE WAY

In the RRANN program, individual success breeds success for the entire community, with program graduates not only serving as role models for new recruits, but also going on to actively mentor new students in the program.

"My incentive to become a nurse derived from my relationship with my grandmother ... I firmly believe there is more happiness in giving than receiving and I'm ready to spend the rest of my life giving to people as a nurse."

Debra Snider ('05, A.A.S. Nursing), RRANN graduate

"A lack of educational resources in rural Alaska puts many intelligent students at a disadvantage for pursuing their dreams of college and careers. RRANN's pre-nursing support services are designed to help level that playing field, and expand opportunities for success."

Jackie Pflaum, RNC, DNSC, RRANN Project Director/Associate Vice Provost for Health Professions Development

SUCCESS BY THE NUMBERS

Over 120 Alaska Native and American Indian students have graduated from UAA's nursing programs since the inception of RRANN. Looking toward the future, 35 RRANN students are currently in the clinical portion of their nursing studies and are on track to obtain their degrees in the next three years. At least 70 additional students are immersed in their pre-clinical studies.

"My goal is to return to rural Alaska and promote healthier lifestyles, as well as spread awareness about the various diseases that are devastating our villages."

Chelsea Royal, Upper Kuskokwim Athabaskan Pre-nursing Student, RRANN program

UAA

Health Programs

Health Sciences Building

Health Sciences Building Operating & Maintenance

$591.0 - Regents Budget

Health Sciences Building Staffing

$392.6 - Regents Budget

Above: UAA's HSB will open in August 2011. FY12 request ensures building is fully operational with funding to ensure there is adequate funding for utilities, cleaning and all-season ground maintenance. This is included in the govenor's budget.

Right: Also needed are four positions in support of interdisciplinery clinical simulation laboratories onsite and the distance delivery of simulation statewide. This is not included in the govenor's budget.

Demand for health care workers in Alaska is expected to grow faster than any other employment sector over the next decade. According to the Anchorage Economic Development Corporation's annual report regarding employment, 45 percent of Anchorage's net job growth occurred in health care since 2002 (that's 4,600 new jobs). The same report states that health care jobs increased by 500 in 2010 alone, and forecasts that growth of 300 more in 2011.

In response to the state's growing need for well educated and trained health care professionals, UAA will open its new Health Sciences Building (HSB) in August 2011.

About the HSB

This 66,000-square-foot facility will provide much-needed laboratory space as well as education and instructional space for the health sciences programs.

The building is situated across Providence Drive from the Anchorage campus and will house the following programs:

- medical
- nursing
- clinical laboratory
- physician assistant

Co-location of these programs will provide for efficiency of scale, as well as provide opportunities for interdisciplinary education.

The building will feature:

- Distance classrooms to connect students from rural communities
- Clinical and instructional laboratories and classrooms
- Faculty and staff offices
- Instructional spaces designed for interactive learning, simulation of real-life clinical situations and collaborative hands-on experiences

The facility will allow students an opportunity to integrate theory and practice, think critically and ensure patient safety.

This request covers maintenance and repair needs and the operations component, which are undeniably critical to the building's opening.

Also needed are several positions included in the FY12 High-Priority Program requests.

Alaska's AHEC Program

2011 Legislative Session Talking Points

Engage

Train

Recruit

Retain

Summary of request

Alaska's Area Health Education Centers, known as AHEC, with our supporting partners request $500,000 to continue healthcare workforce development activities. As part of the Federal AHEC funding awarded to Alaska in 2005, there is an expectation that states will pick up the funding as federal monies diminish – beginning in September 2011. ($125,000 x 4 Centers; excluding Northwest AHEC)

Background

AHEC is a statewide university-healthcare industry partnership focused on strengthening Alaska's health workforce across the spectrum from "pipeline to placement."

- Since 2005, host organizations have invested a 1:1 match with federal HRSA funds in the Alaska AHEC. **In FY2011, this investment totals more than $1.6 million dollars.** Partners are:
  - Yukon Kuskokwim Health Corporation (YK AHEC)
  - Providence Health & Services Alaska (South Central AHEC)
  - Fairbanks Memorial Hospital (Interior AHEC)
  - Southeast Alaska Regional Health Consortium (Southeast AHEC)
  - Ilisagvik College (Northwest AHEC)

Program highlights

- **Engaging Alaskans into health careers & guiding them into the workforce.**
  - In 2010, *Alaska's AHEC Program touched 4,907 K-12 students, adults, educators and parents in part through partnerships with*:
    - Secondary Career & Technical Education Programs i.e. Alaska Health Careers Academy
    - UAA & UAF programs i.e. U/DOC Della Keats, Pre-Med Summit, Alaska Summer Research Academy
    - Teacher-Industry Externships with UAA & Department of Labor
    - Health Occupations Students of America (HOSA)
    - Maintaining the http://www.healthcareersinalaska.info website
- **Training health professions students through on-site clinical rotations and exposing them to Alaska's hardest-to-fill vacancies**
  - Since 2005, *AHEC supported clinical rotations for 2,419 non-duplicated health programs students*
  - Multi-disciplinary support: allied health, behavioral health, physicians, pharmacy, nursing, therapies, and social work
- **Retaining Alaska's rural health workforce by assessing their needs and increasing access to Continuing Education opportunities**
  - In 2010, *AHEC supported over 6,000 contact hours of CE/CME*
  - Developing preceptor/mentor certification in coordination with UAS & the Alaska Coalition of Educators (ACE)

Alaska's Health Workforce

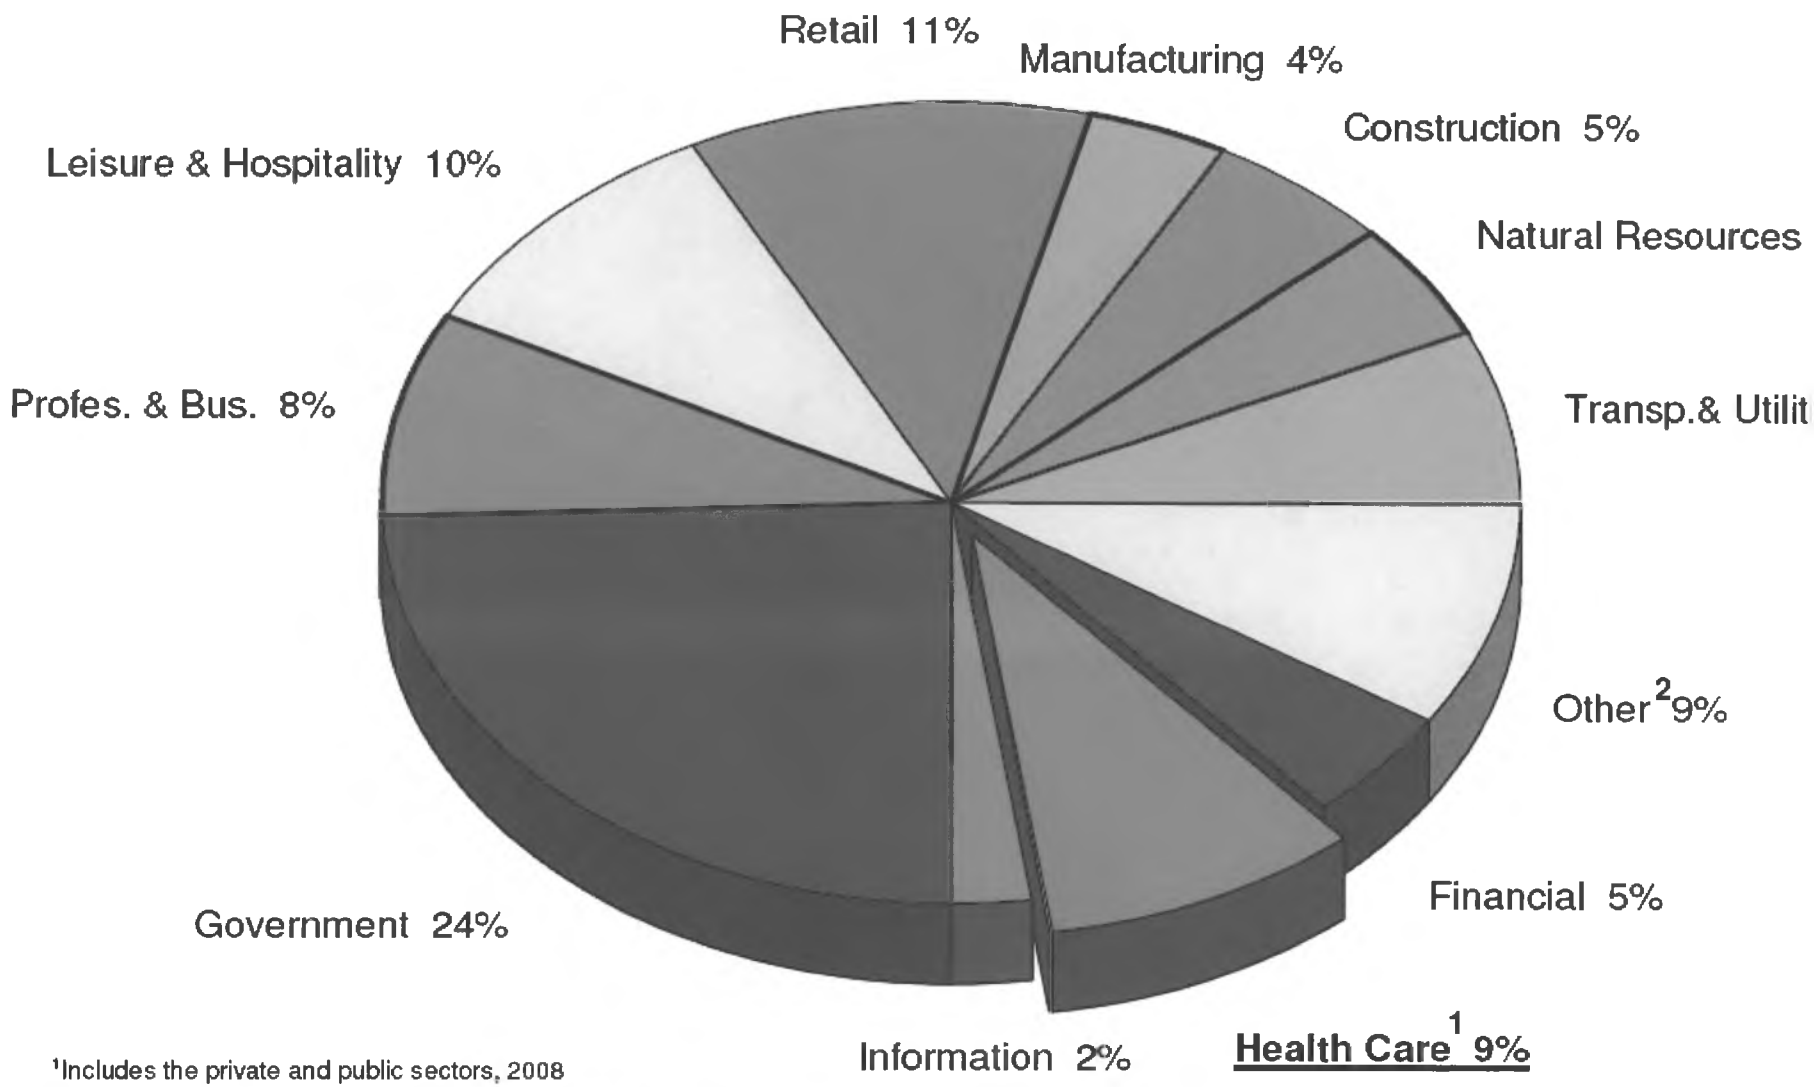
Alaska Health Workforce Coalition

January 2011

Health Care is a Vibrant Industry

- 11 of the 15 fastest growing Alaska jobs are in health care
  - Large employer ~ 10% of workforce in 2009
  - Payroll is more than $1.4 billion a year
  - Has wide geographic distribution; many healthcare organizations are the largest employers in their region
  - Is a labor-intensive industry; has a broad range of occupations and professions requiring from on-the-job training to post-doctoral education

Health Care-One Of The Biggest Players Alaska's Labor Market

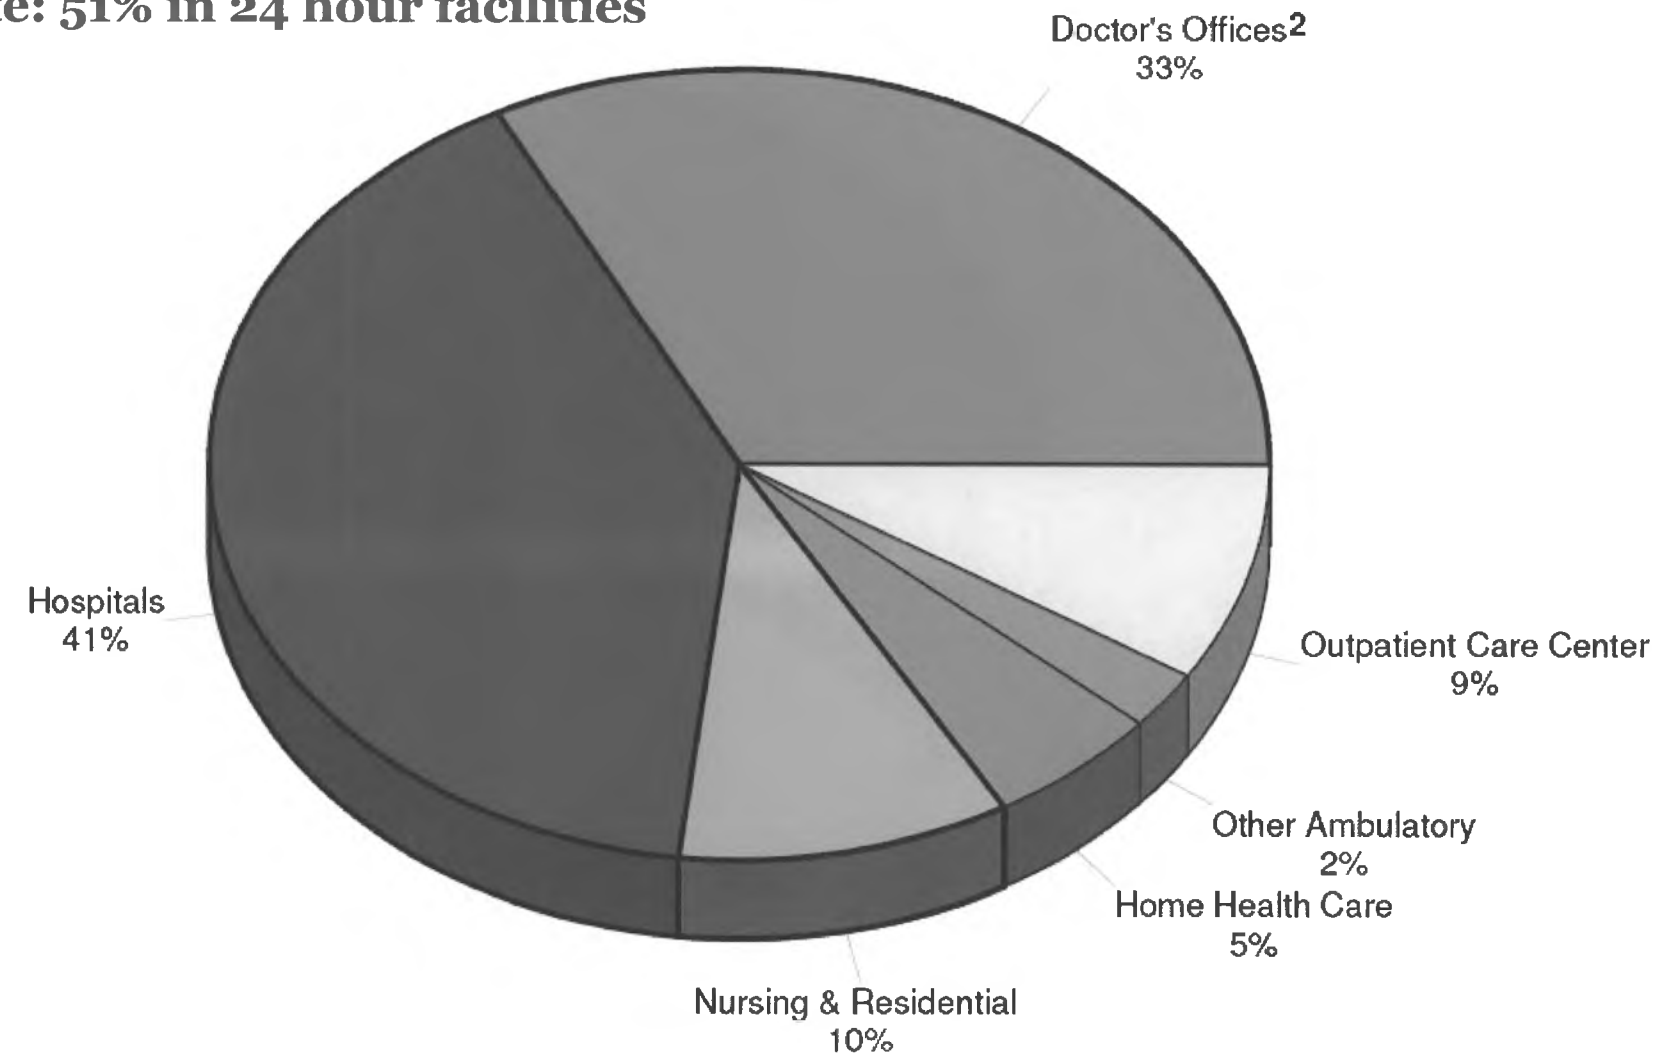


[1]Includes the private and public sectors, 2008

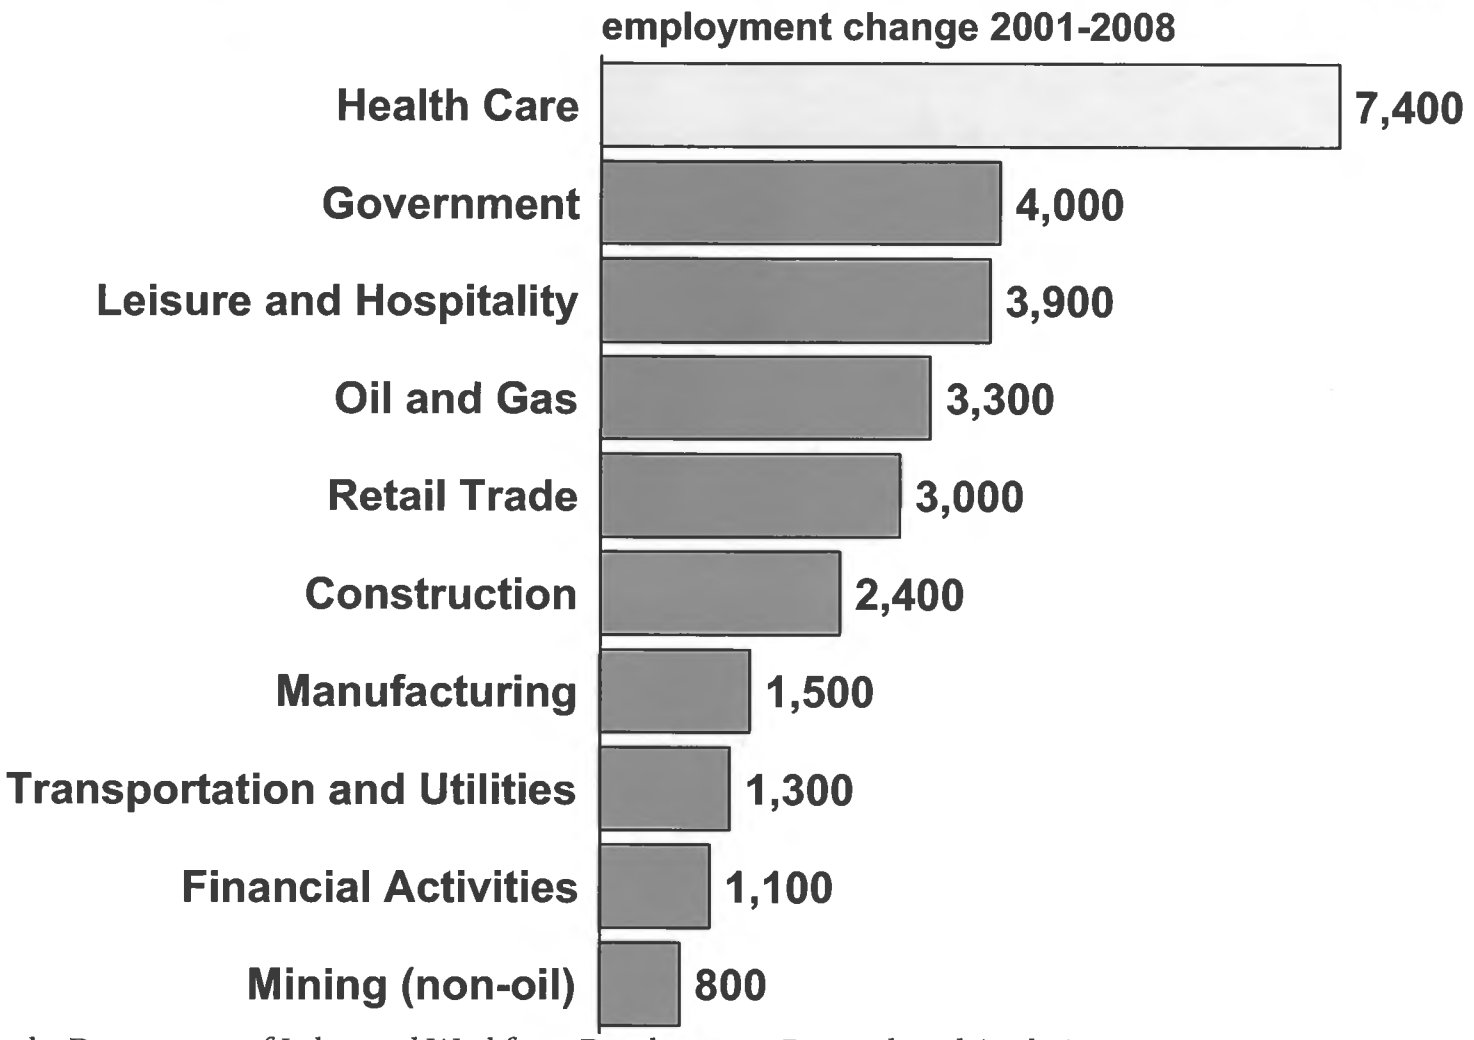
[2]Include other services, private education services, soical assistance and wholesale trade

Where Alaska's Health Care Services Job Are-2009[1]

Note: 51% in 24 hour facilities



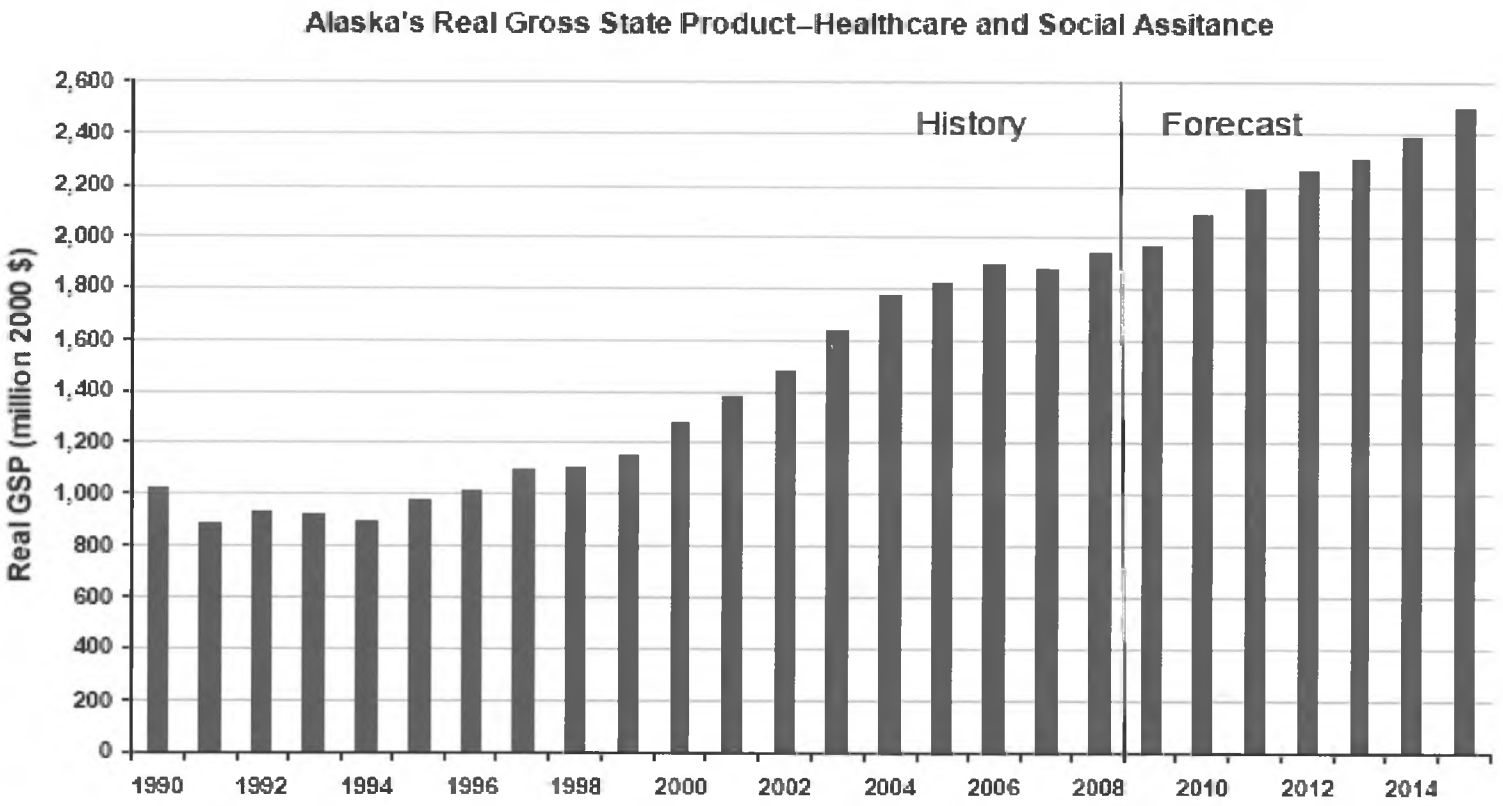
Health Care-The Number One Job Generator In The 2001-08 period



Source: Alaska Department of Labor and Workforce Development, Research and Analysis

Continued Growth is Expected

Healthcare Sector Expansion

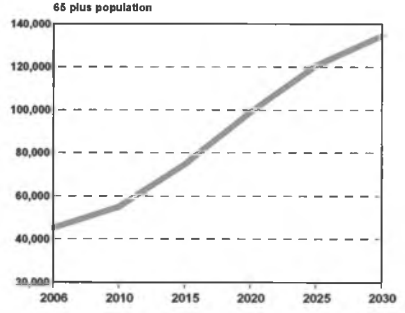


Source: Alaska Department of Labor and Workforce Development, Research and Analysis

Demographic Pressures

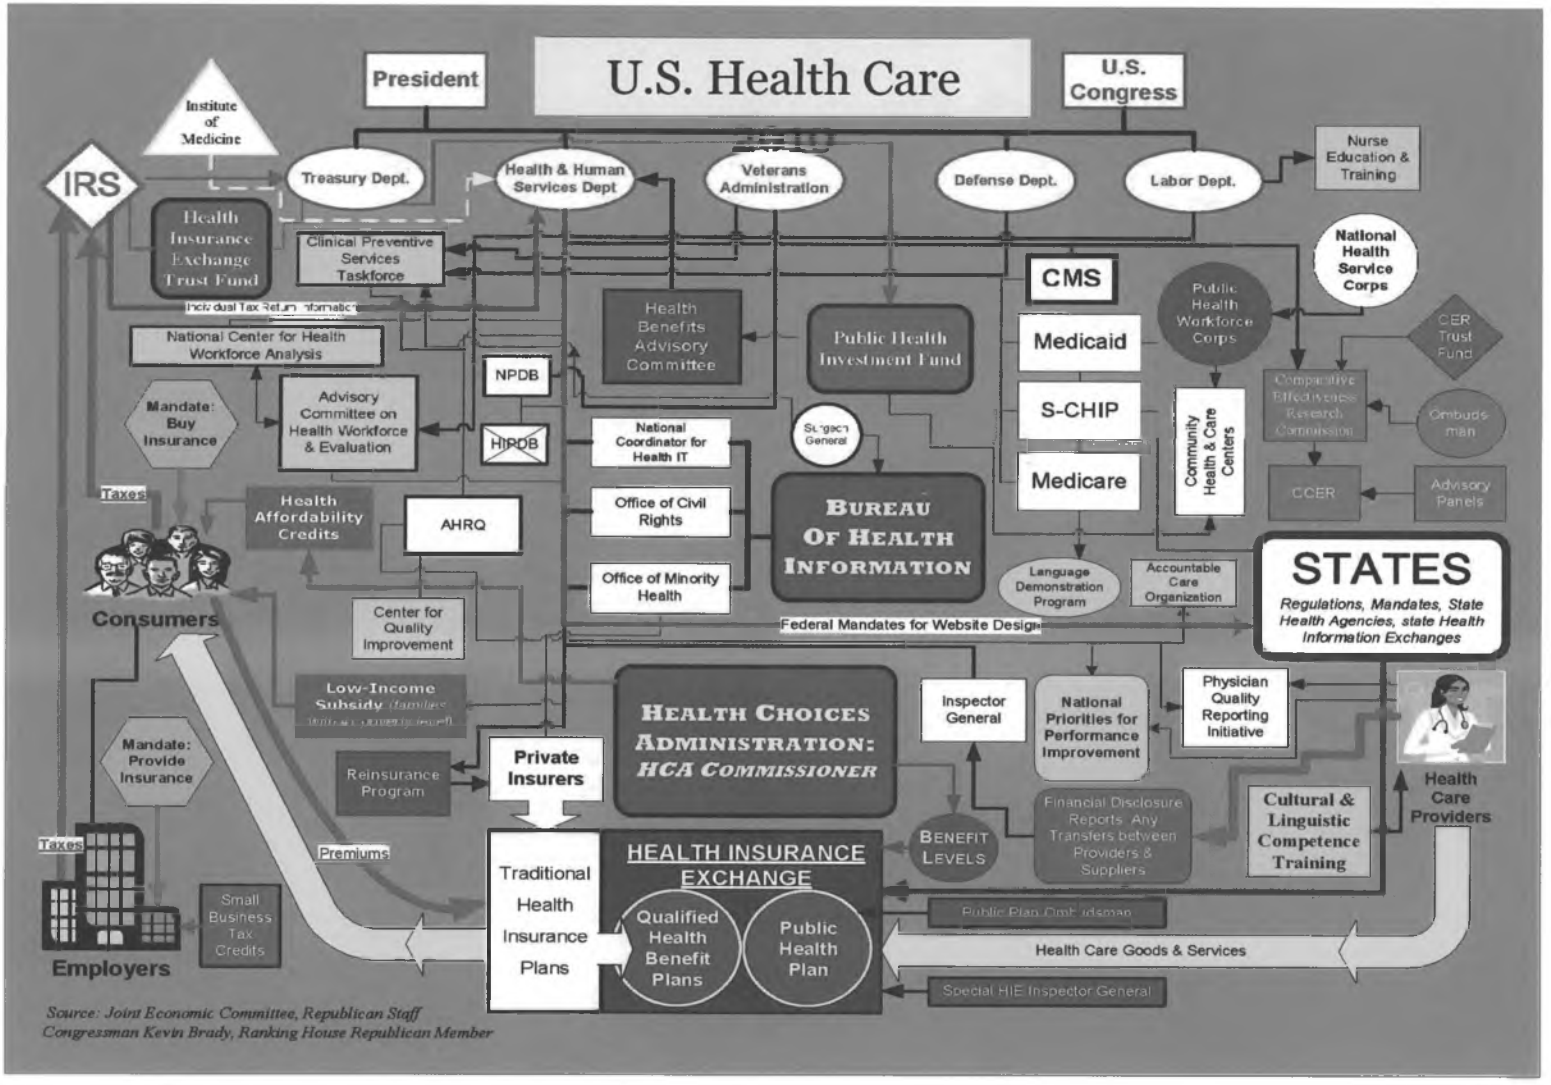
The Silver Tsunami

- **Fastest growing senior population in the nation** - will increase utilization of health services
  - Age 65+ will grow to ~20% of Alaska's population by 2025



- **Retirements** will accelerate health care staffing vacancies
- **Federal Health Reform** –potentially 64,000 Alaskans added to insurance rolls (50% Medicaid, 50% Exchange/Employer plans)
- **Result – growing critical workforce shortages in many occupations and professions**

Health Care is a Complex Industry



An Investment in Health Workforce Development is an Investment in Alaska

- Workforce shortages
  - Higher costs for health care
  - Limited access to care
  - Enormous recruitment/retention costs
    - ~$25 million in 2005 for 12 professions (> half for "travelers")
- Economic impact of industry/on other industries
- Educating Alaskans for Alaska legacy jobs

Critical Shortages/Distribution Issues

PRIMARY CARE
- Physicians
- Nurse Practitioners
- Physician Assistants
- Community Health Aides
- Pharmacists

2009 Vacancy Study, Alaska Center for Rural Health/Institute for Social and Economic Research

Activity Across the Workforce Continuum

- Engage – filling the pipeline; ensuring adequate preparation
- Train – supporting basic training and education, as well as continuing education; distributing across the state
- Recruit – improving Alaska's draw
- Retain – reducing turnover and its attendant costs

Alaska Health Workforce Plan

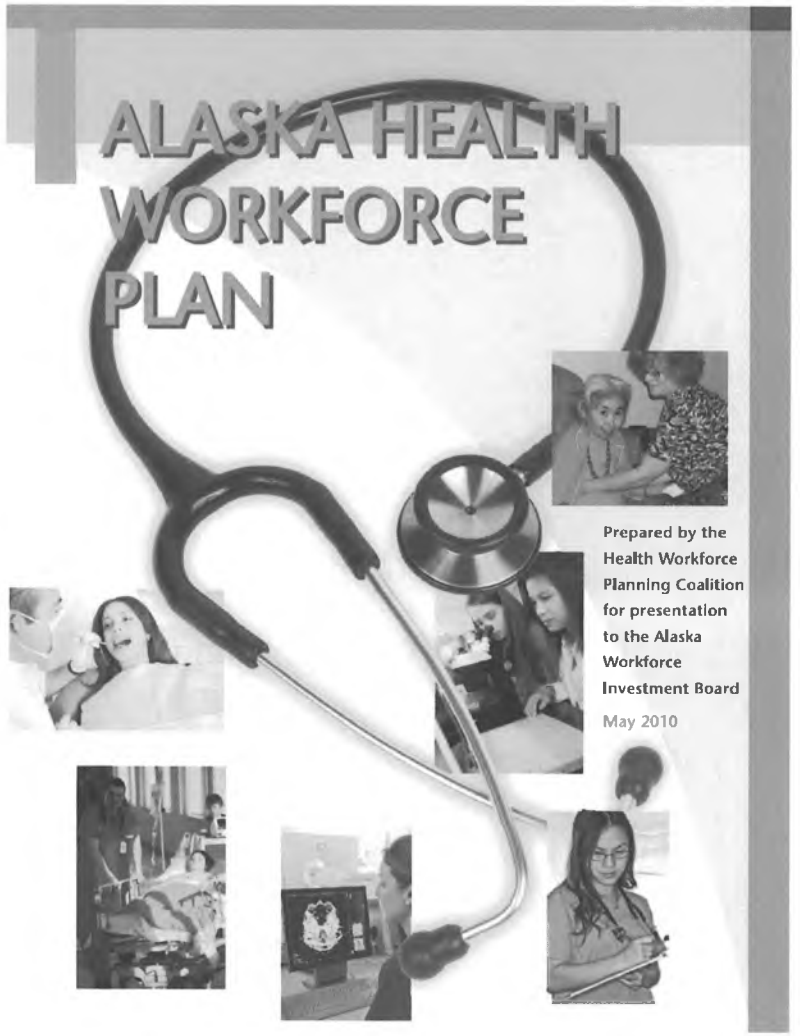
Alaska Healthcare Workforce Opportunities in 2011----and Beyond

Prepared by: Alaska Health Workforce Coalition

Who are we: An informal network of healthcare providers, educators and state agencies

Why is the plan needed:

Alaska continues to have a shortage of trained healthcare workers; state-wide strategies for workforce are critical to Alaska's success in providing services to its citizens



Plan Development

- Ad hoc group gathered in Summer 2009 to discuss health workforce development – became known as the Alaska Health Workforce Coalition
- Stakeholders were asked to provide input into a statewide health workforce plan – through forums, surveys and work groups - in Fall and Winter 2009-10
- AHW Plan was approved by the Alaska Workforce Investment Board in May 2010
- The AWIB received a small HRSA planning grant in September 2010 to continue refining Plan this year; Coalition members have also contributed funds to the effort

Health Care Workforce Plan Overview

ENGAGE	TRAIN	RECRUIT	RETAIN	SUSTAIN
▸ Engage Alaskans in health care workforce development · Create public awareness · Expand career awareness and counseling · Market high need professions · Attract Alaska job seekers into health careers	▸ Train Alaskans for health care employment · Strengthen secondary school offerings and programs · Provide health care occupational training and education programs · Deliver post-employment training opportunities · Develop needed faculty	▸ Recruit qualified candidates to fill health care positions · Promote health care employment opportunities in Alaska · Expand post-graduate opportunities · Improve coordination in recruitment among health care providers · Establish incentives to attract needed professionals · Create a positive environment for health care providers	▸ Retain a skilled health care workforce · Support and disseminate effective orientation programs for new employees · Provide opportunities for professional development and advancement · Promote positive work environments	▸ Develop formalized structure for ongoing activity and accountability · Ensure regular collection and assessment of workforce data · Align health status and workforce data · Develop effective funding sources to support strategies · Align granting agencies · Leverage existing resources · Monitor plan results · Ensure plan is reviewed and revised to changing health care environment · Develop policy environment that supports healthcare workforce

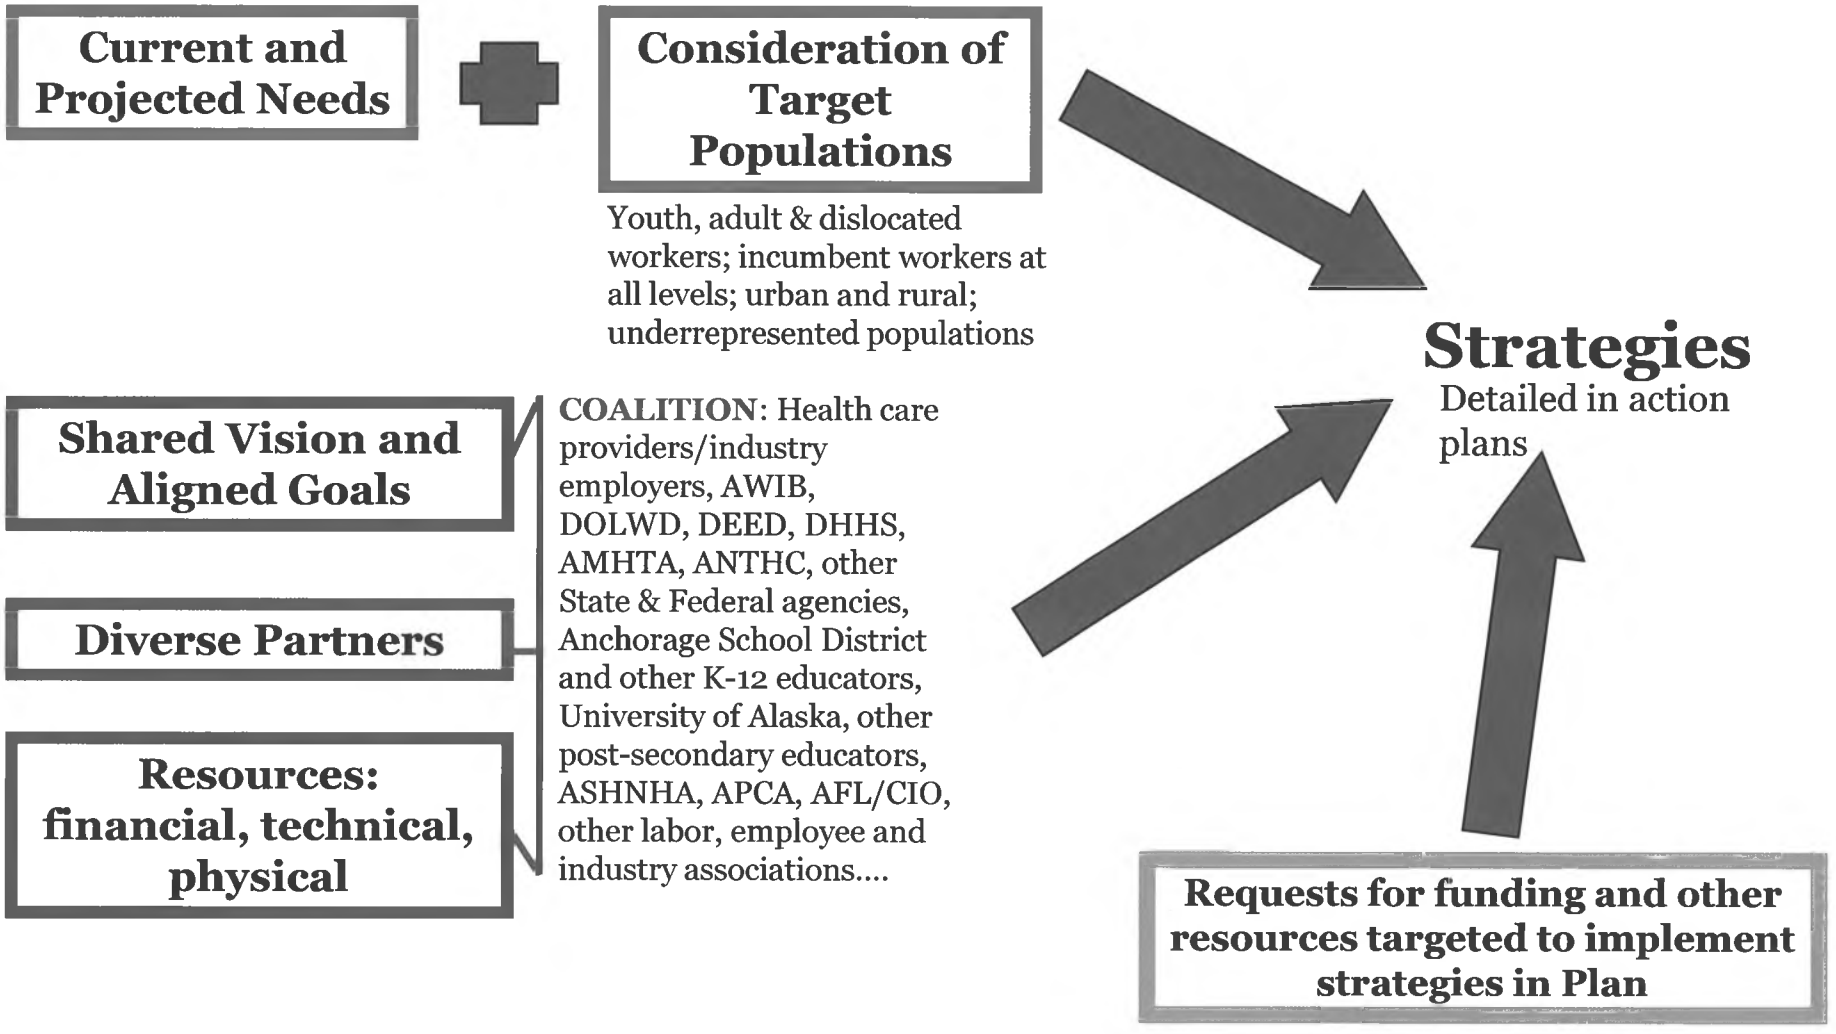
Initial Priority Occupations

- The 15 selected occupational groups include about 30 occupations and professions
  - Advanced Nurse Practitioner
  - Behavioral Health Aide/Village Counselor
  - Behavioral Health Clinician
  - Community Health Aide/Practitioner
  - Direct Care Worker
  - Health Informatics Staff
  - Human Services Worker
  - Nurse Educator
  - Oral Health Practitioner
  - Pharmacist
  - Primary Care Physician
  - Psychiatrist
  - Registered Nurse
  - Substance Abuse Counselor
  - Therapist and Therapist Assistant (Physical, Occupational, Speech-Language)

2011 Legislative Priorities

- Psychiatric Residency
- Loan Incentives and Repayment
- Alaska Health Education Centers (AHECs)

Alaska's Health Care Workforce Plan

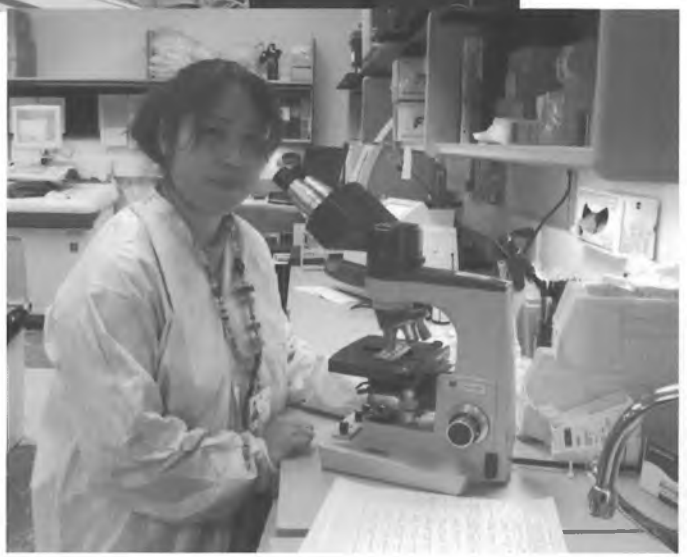


Investments Needed

What Will It Take to Resolve These Issues?

- Continued commitment of all stakeholders, including State government
- Support needed
  - **Strategic direction**
  - **Attention and advocacy**
    - **Loan Repayment/employment incentives** legislation
    - Support for **medical residency development – psychiatry**, pediatrics, others
    - **Implementation of plan** elements as they are ready – Alaska Health Workforce Plan and Career and Technical Education Plan
    - Funding of the **University of Alaska** budget
    - Funding for the **Area Health Education Center (AHEC)** workforce development system
  - **Participation**
  - **Other resources**

QUESTIONS?



OFFICE OF THE LONG TERM CARE OMBUDSMAN

Alaska State 27th Legislature,

February 2011

Authority

Federal Older Americans Act of 1965 (42 U.S.C. 3058g(j). Title VII).

AS 47.62.015. "The ombudsman shall investigate and resolve a complaint made by or on behalf of an older Alaskan who resides in a long term care facility… if the complaint relates to a decision, action or failure to act by a provider…or by a public agency or social services agency that may adversely affect the health, safety, welfare, or rights of the older Alaskan."

OLTCO Enforcement Authority

None, but can pursue legal or administrative remedies.

OLTCO does not take away licenses.

OLTCO does not remove vulnerable adults from homes.

OAA Mandate to OLTCO

- Investigate and resolve complaints.
- Monitor conditions in facilities.
- Advocate for vulnerable seniors.
- Raise public awareness.

Administration

Administratively housed in Alaska Mental Health Trust Authority.

Advised and represented by State Attorney General.

Funding: Federal OAA grant ($418,100), matching State GF ($265,400).

S Alaska 312 Locations

Staff and Volunteers

- 5 Staff cover approximately 312 facilities statewide. Responsible for investigations, "friendly visits," consultation with public, training for providers, managing volunteers.

- 12 volunteer ombudsmen in 23 facilities.

Complaints and Cases

	Average # of complaints/month	Average # of cases opened / month
FY 2009	32	14
FY 2010	38	18
FY 2011	66	30

Complaints
FY 2011

90% of complaints are about assisted living homes. 394 (out of total 465) verified.

Top 3 complaints:

- Poor medication management practices.
- Falls / improper handling of residents.
- Shortage of staff.

Resolution of Complaints
July 1, 2010 – January 31, 2011

465 complaints, 211 cases opened.

67% of complaints were resolved wholly or partially to satisfaction of resident or complainant.

23% were referred to another agency for resolution.

9% did not need action.

1% were not resolved to satisfaction of resident or complainant.

Improving the System of Care

Volunteer ombudsmen

- 20 hours of training, practicum, supervision.
- Assigned to 2-5 homes.
- Visit residents 1-2 times/month.
- Identify problems and resolve them BEFORE someone is hurt (or license is lost).

Problems solved by volunteers

Home too cold, medications not managed responsibly, meals not adequate, bedrooms locked from the outside, dirty bathrooms, cords/rugs creating hazard, staff treating seniors harshly.

Collaboration

- OLTCO reaching out to Filipino American ALH Provider Association for mutual communication and problem-solving.
- OLTCO provider education on dementia.
- OLTCO presents at DHSS Licensing orientation for new ALH administrators.
- DHSS interagency investigative protocol, mortality review team.

FY 2012 Budget

- Operating budget
  - Department of Revenue, OLTCO, $418.1 (IAA)
- Mental Health bill
  - Department of Revenue, OLTCO, $252.1 (GF)

Request to continue funding 1.0 FTE investigator (funded in FY 2010 with OTI, using an existing .5 FTE position).

check on this in Revenue

Findings from the Older Alaskans Survey and Elder/Senior Community Forums

Senate Health and Social Services Committee
February 23, 2011

Alaska Commission on Aging

Presentation Overview

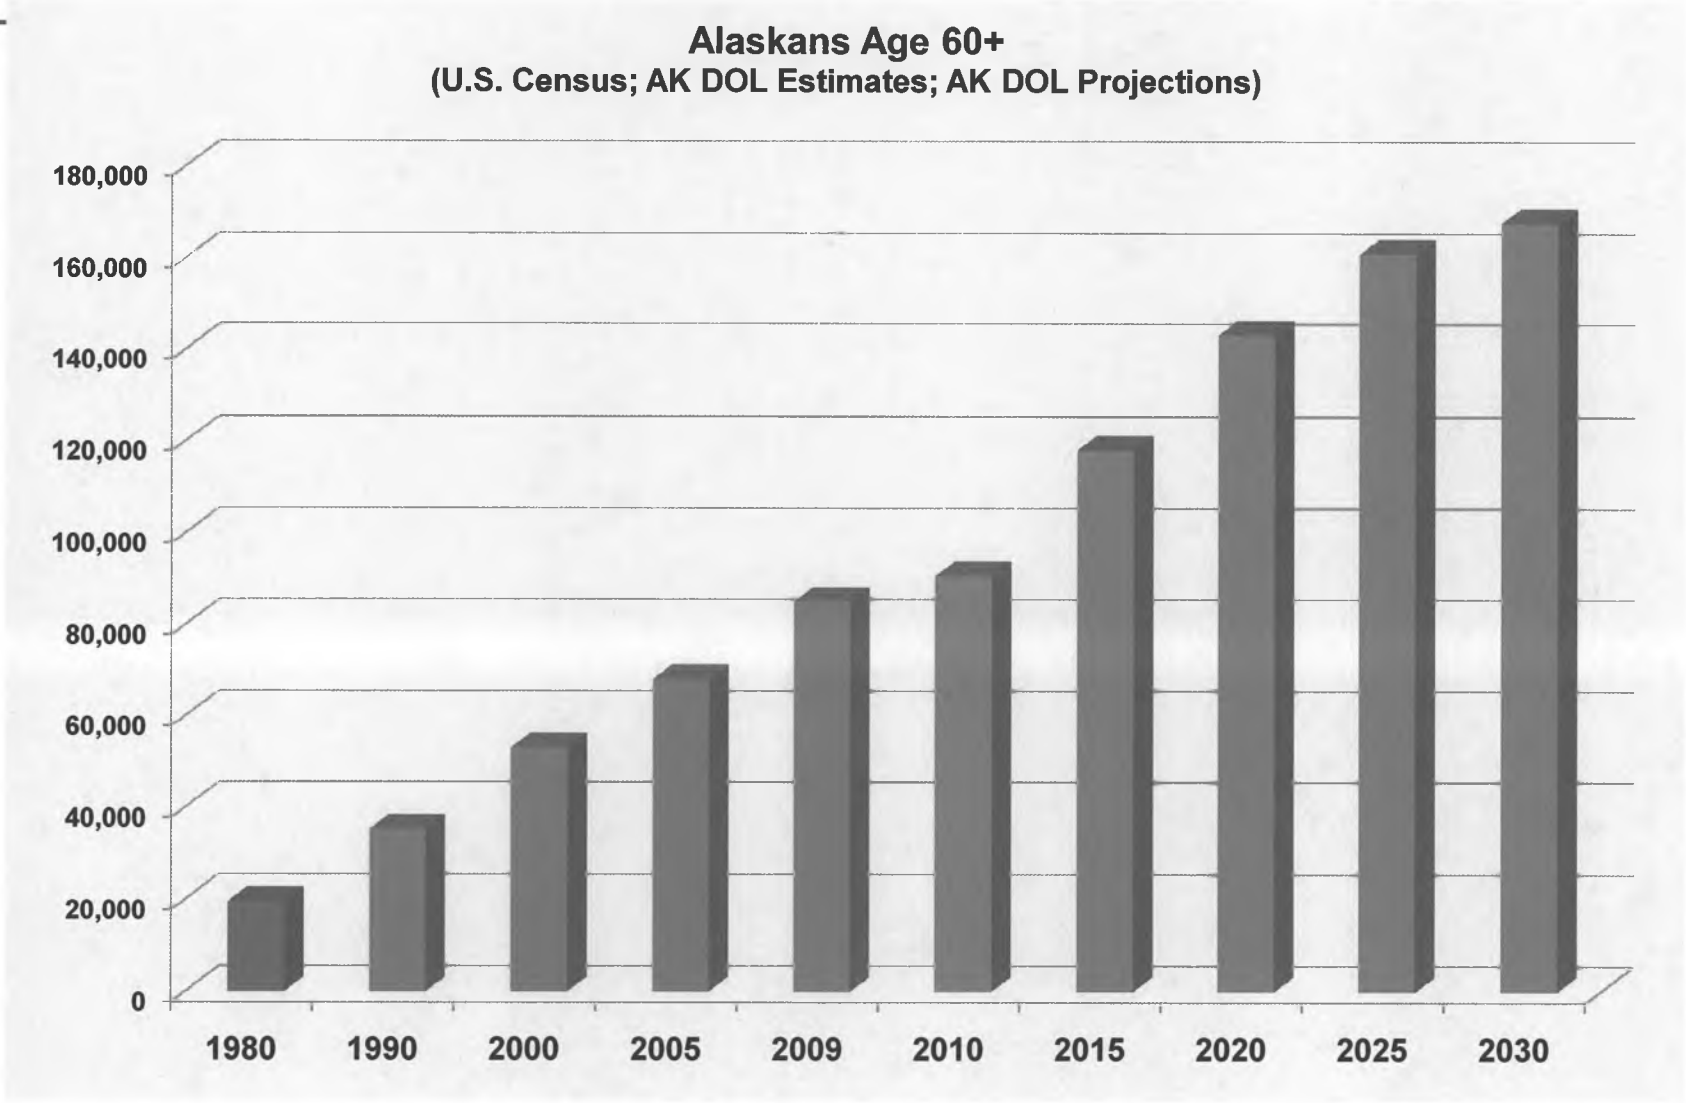
- Alaska senior demographics
- Purpose of needs assessment and methodology used
- Characteristics of survey respondents
- Findings of senior survey
- Elder/senior community forum results
- Priorities for seniors' future

Our Purpose

The mission of the Alaska Commission on Aging is to ensure the dignity and independence of all older Alaskans, and to assist them through planning, advocacy, education and inter-agency cooperation to lead useful and meaningful lives.

DEMOGRAPHICS

Growth of Alaska's Senior Population 1980-2030



Comparison of Age Distribution 1977 and 2009

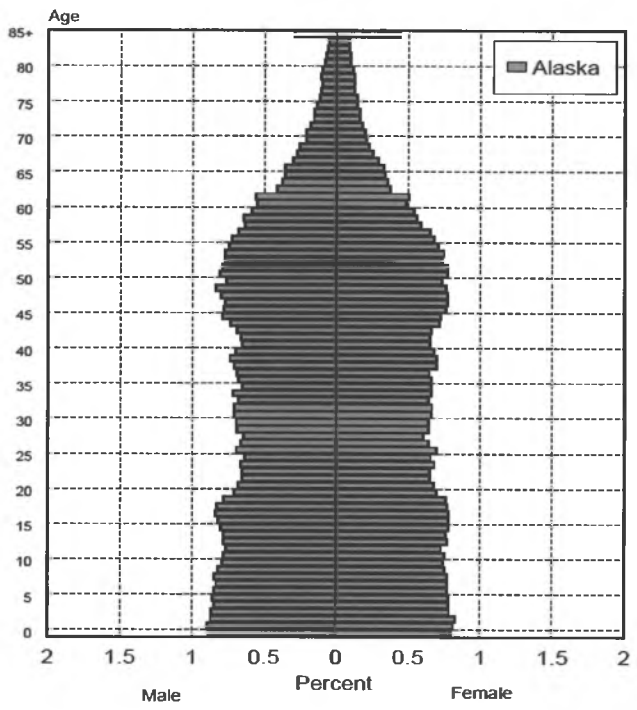
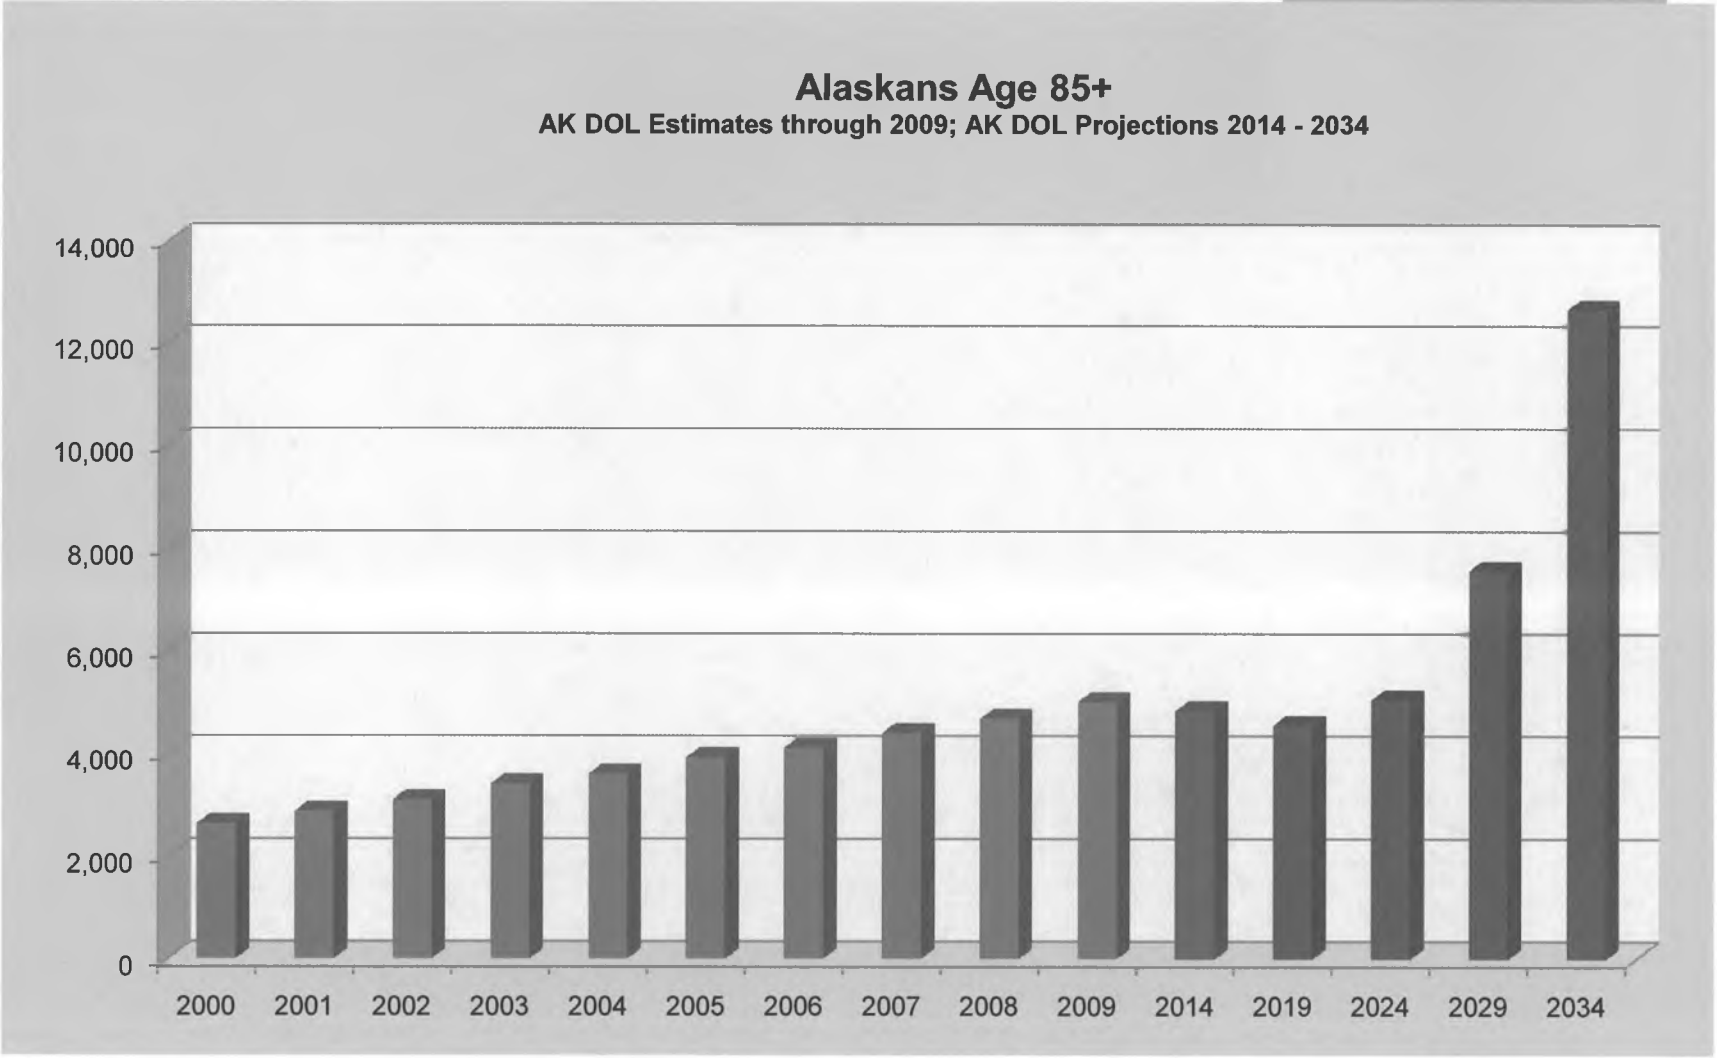
Alaska Population by Age and Sex, July 1, 2009

Percent Distribution

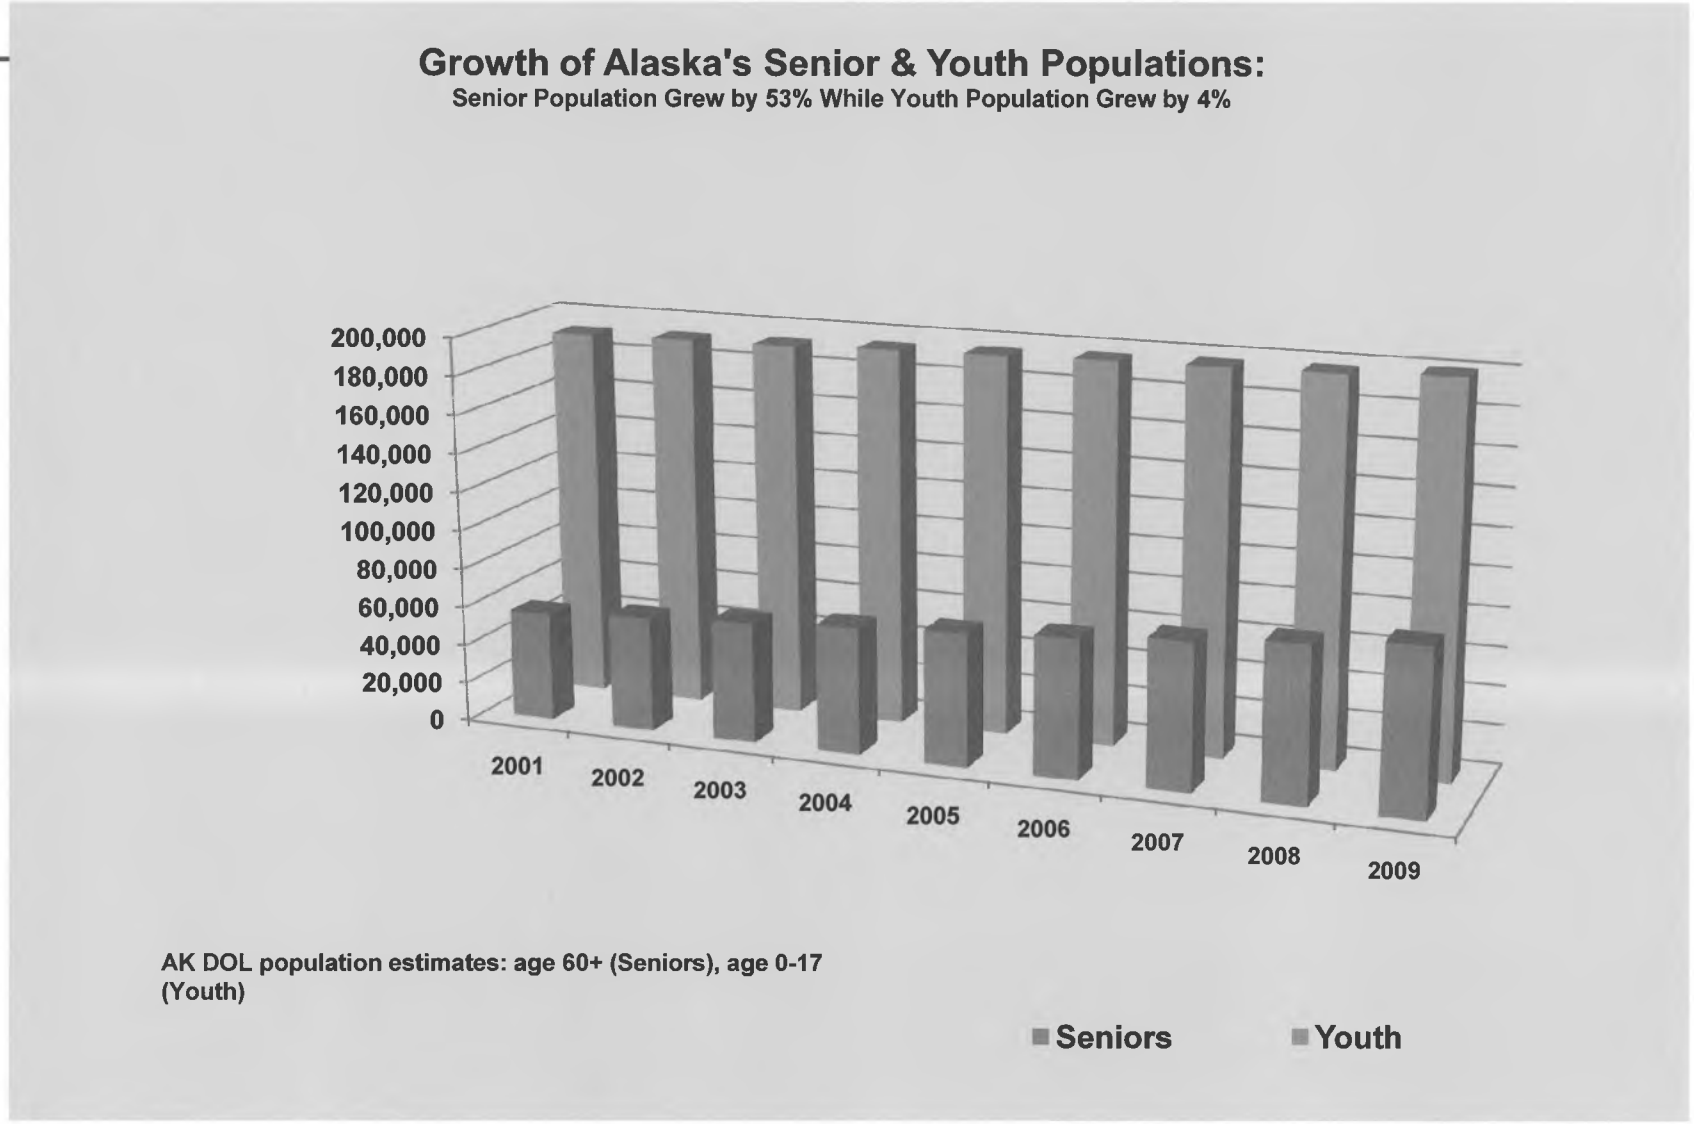


Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

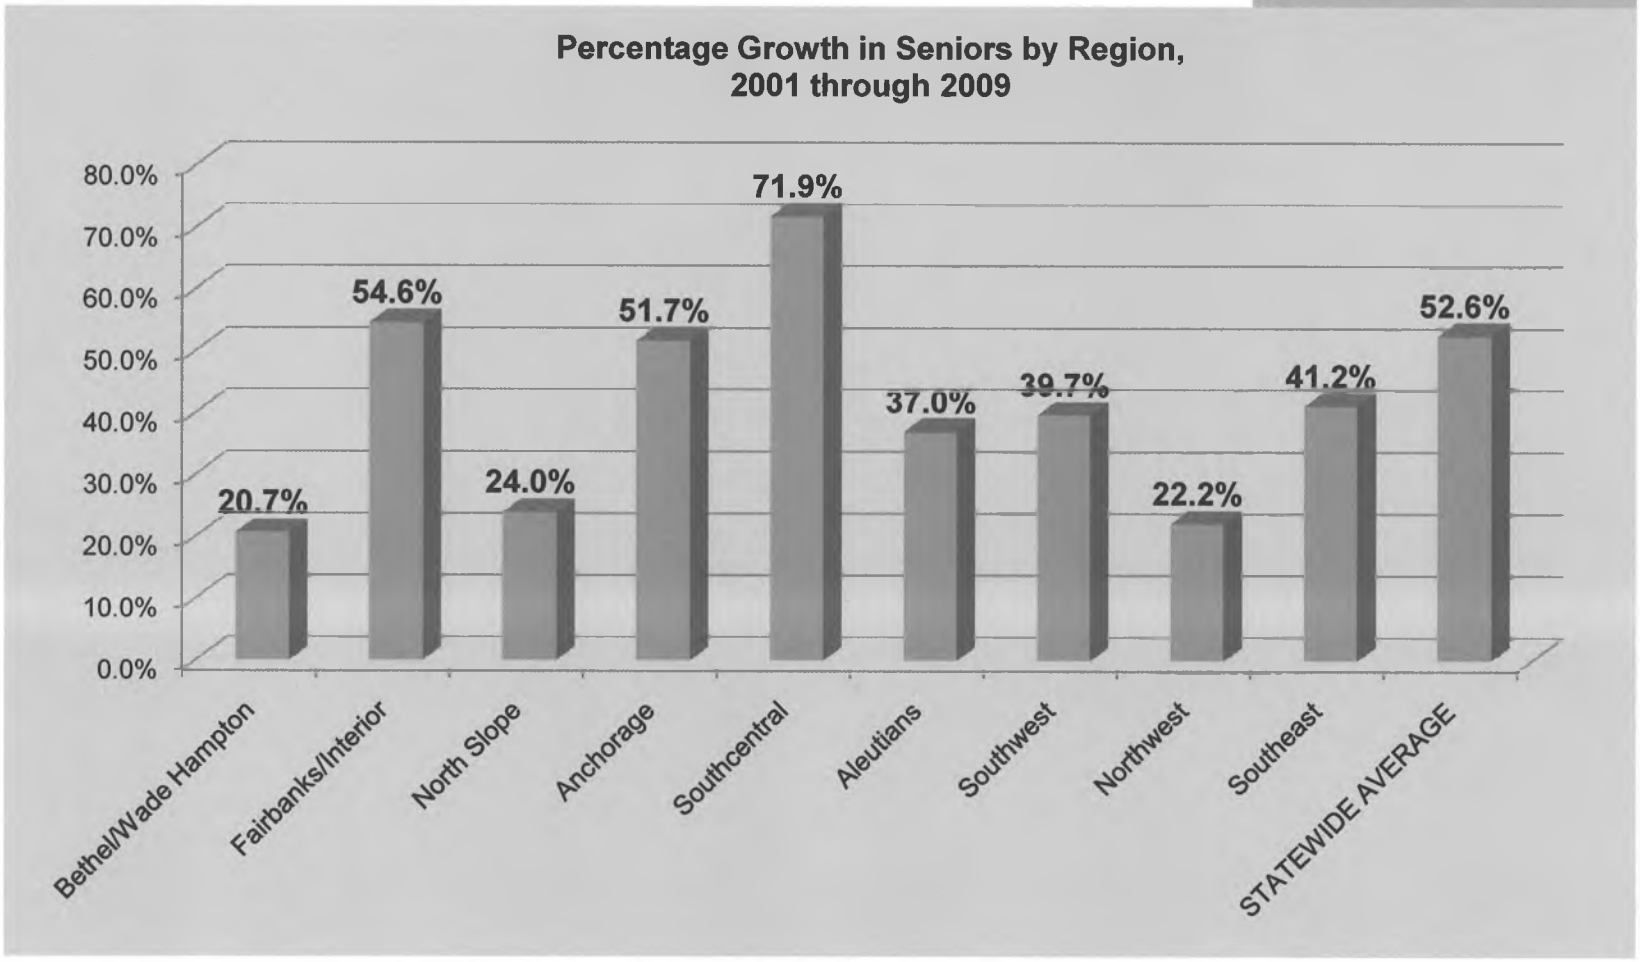
The population of Alaskans age 85+ will grow by nearly 500% from 2000 to 2034.



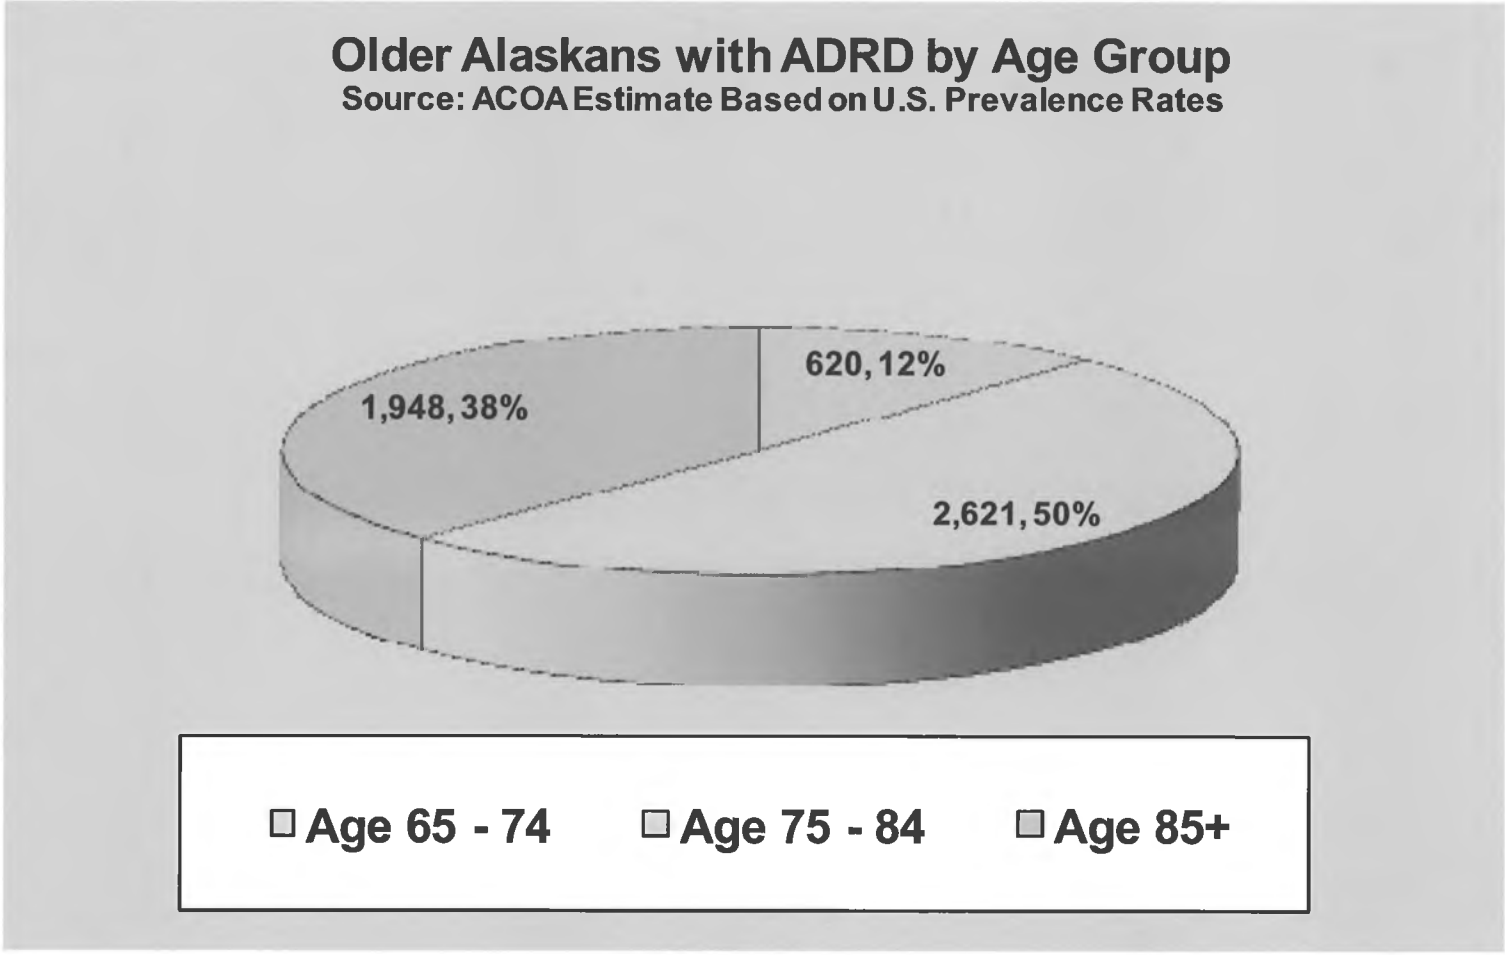
Growth of Alaska's Senior and Youth Populations



Senior Growth Rates Vary by Region



There are over 6,000 Alaskans with Alzheimer's disease and related dementias, based on national prevalence rates.



2010

NEEDS ASSESSMENT & METHODOLOGY

Needs Assessment Efforts for State Plan Development Process

- Six Elder/Senior Community Forums: Anchorage, Fairbanks, Juneau, Kotzebue, Bethel, Alaska Native Tribal Health Consortium
- Provider Survey: online questionnaire about current and projected senior needs and service usage; received 50 responses
- Senior Survey: 4-page survey for Alaskans age 50 and older; distributed through the Senior Voice, senior meal programs, and other methods; received 3,222 responses

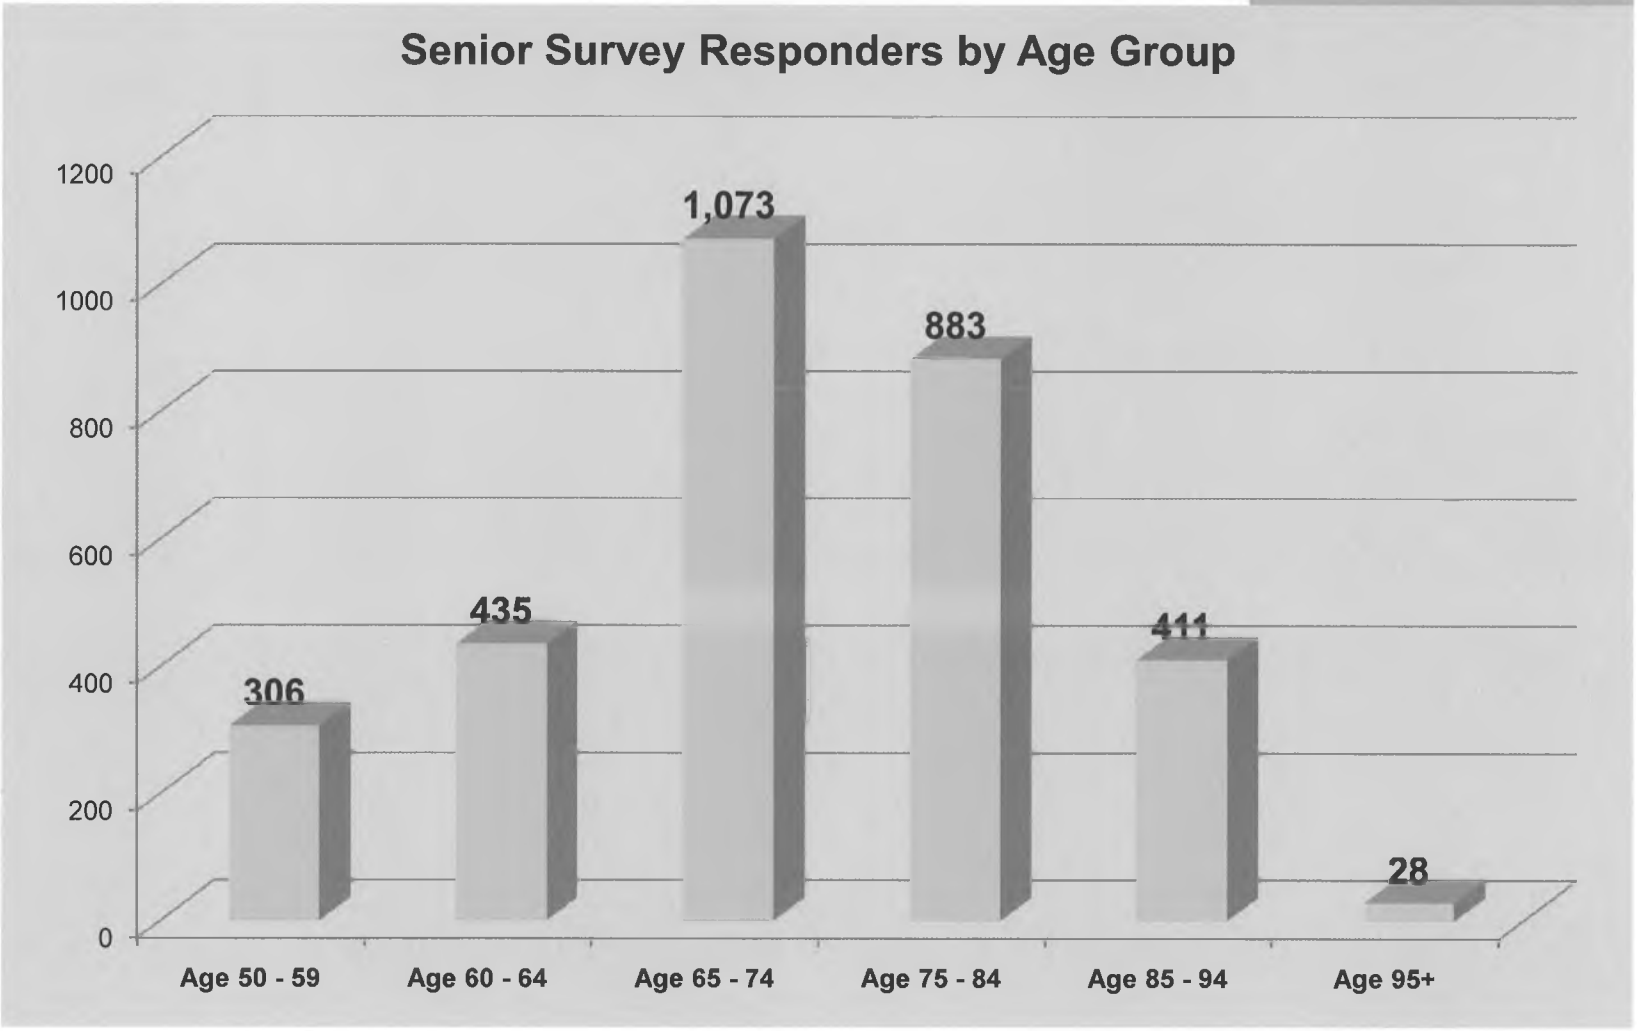
Intw356

Senior Survey Methodology

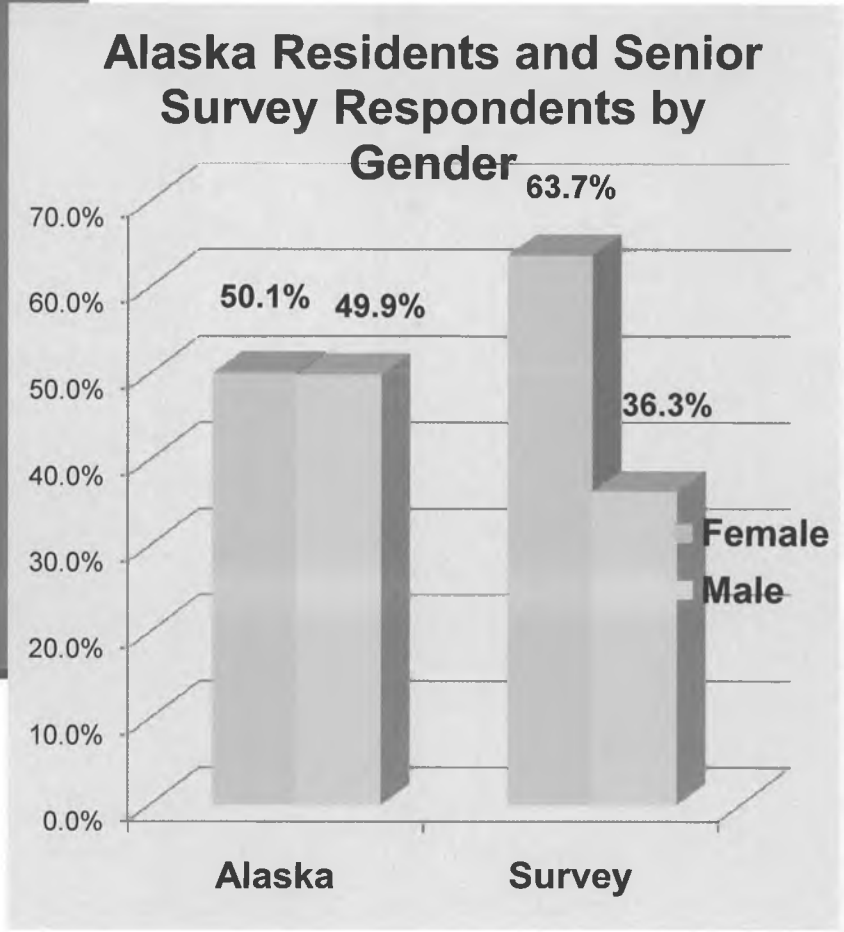
- Both paper copies (about 20,000) and links to an electronic version were widely distributed; postpaid reply envelopes were made available; Alaskans age 50 and older were invited to respond
- 3,222 responses were received (2,836 from seniors age 60 and older); roughly 600 were submitted online; the remainder were mailed back to us
- Paper responses were also entered into a Zoomerang online survey data base by ACOA staff
- ***This was NOT a random, statistically-valid sample of Alaska seniors; therefore, precise conclusions about the status of all older Alaskans cannot be drawn from it***
- However, the large number of responses and their representation of all regions, races, and age groups does offer us plenty of valuable information about the lifestyles and concerns of Alaska's seniors

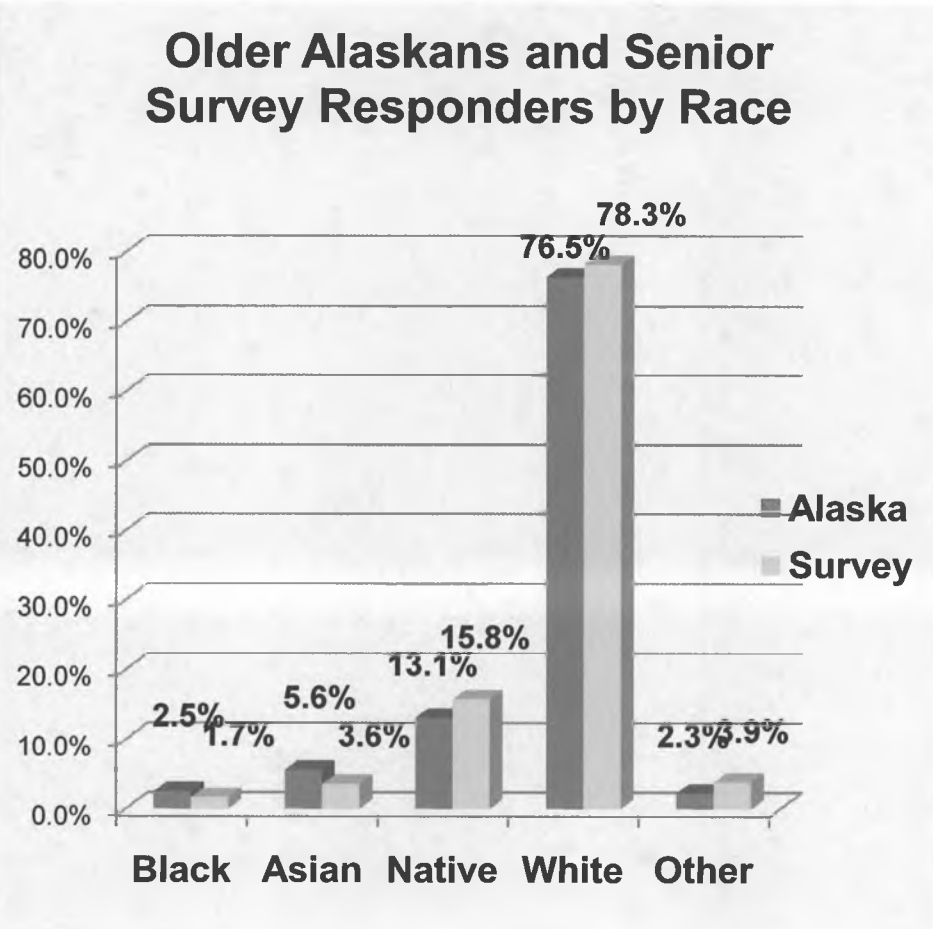
CHARACTERISTICS OF SURVEY RESPONDENTS

The great majority of survey responders were seniors (age 60+). We received responses from every senior age group. The oldest respondent was 107.

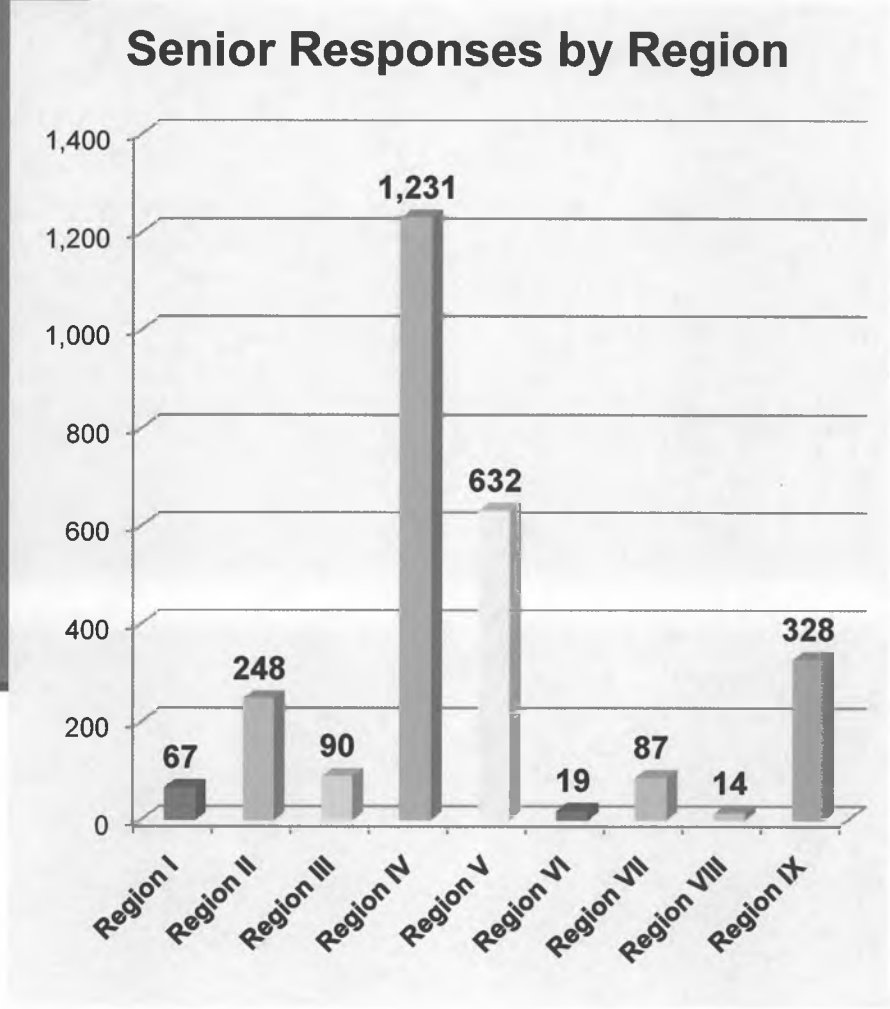


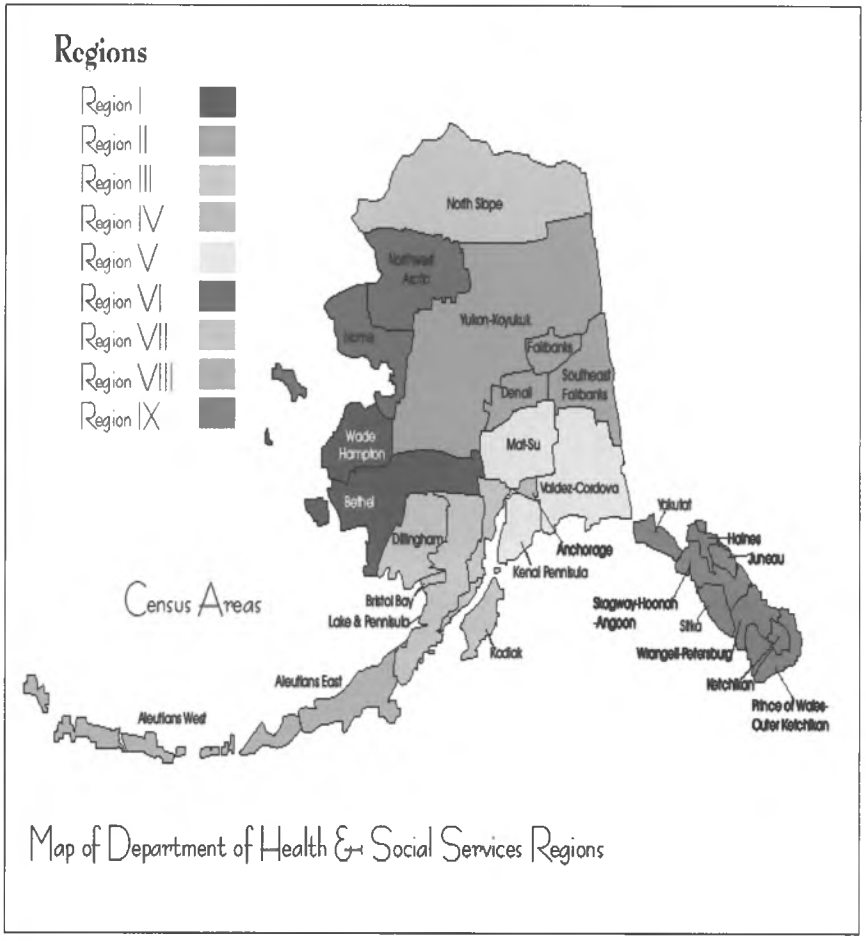
Survey responders were much more likely to be female and slightly more likely to be Native or White than the general population of Alaska seniors.



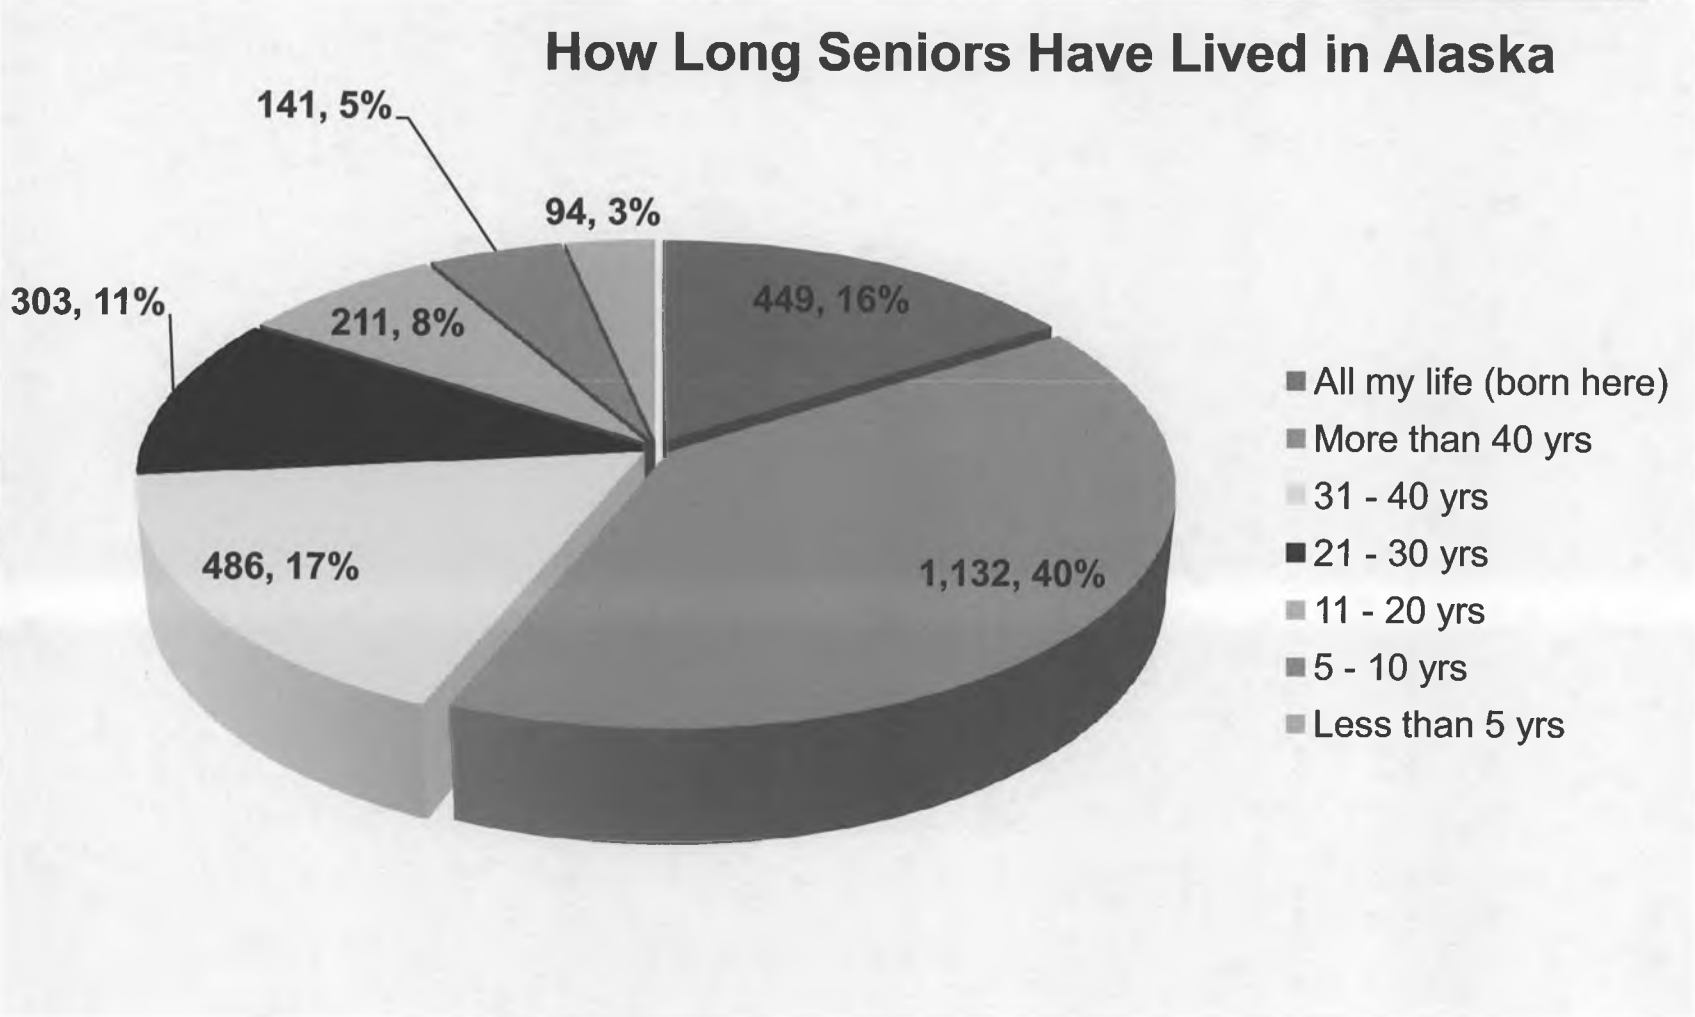


We received survey responses from every region of the state.



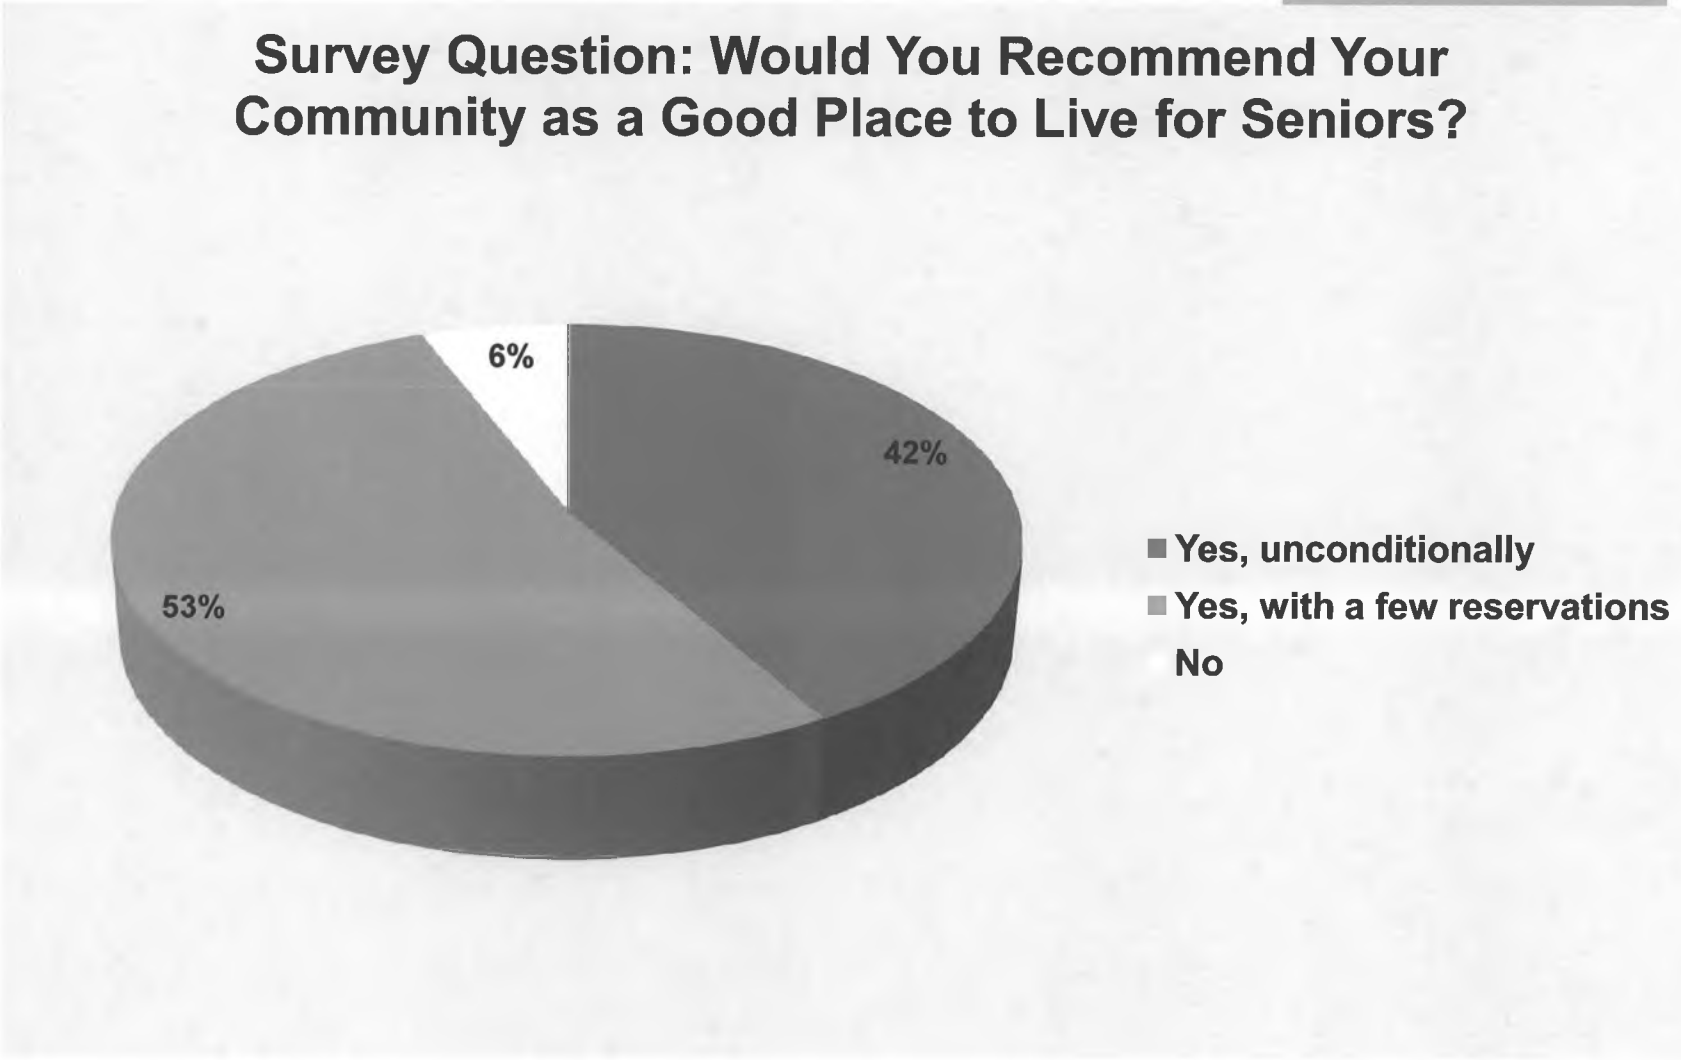


The majority of seniors who responded have lived in Alaska for 40 years or more.

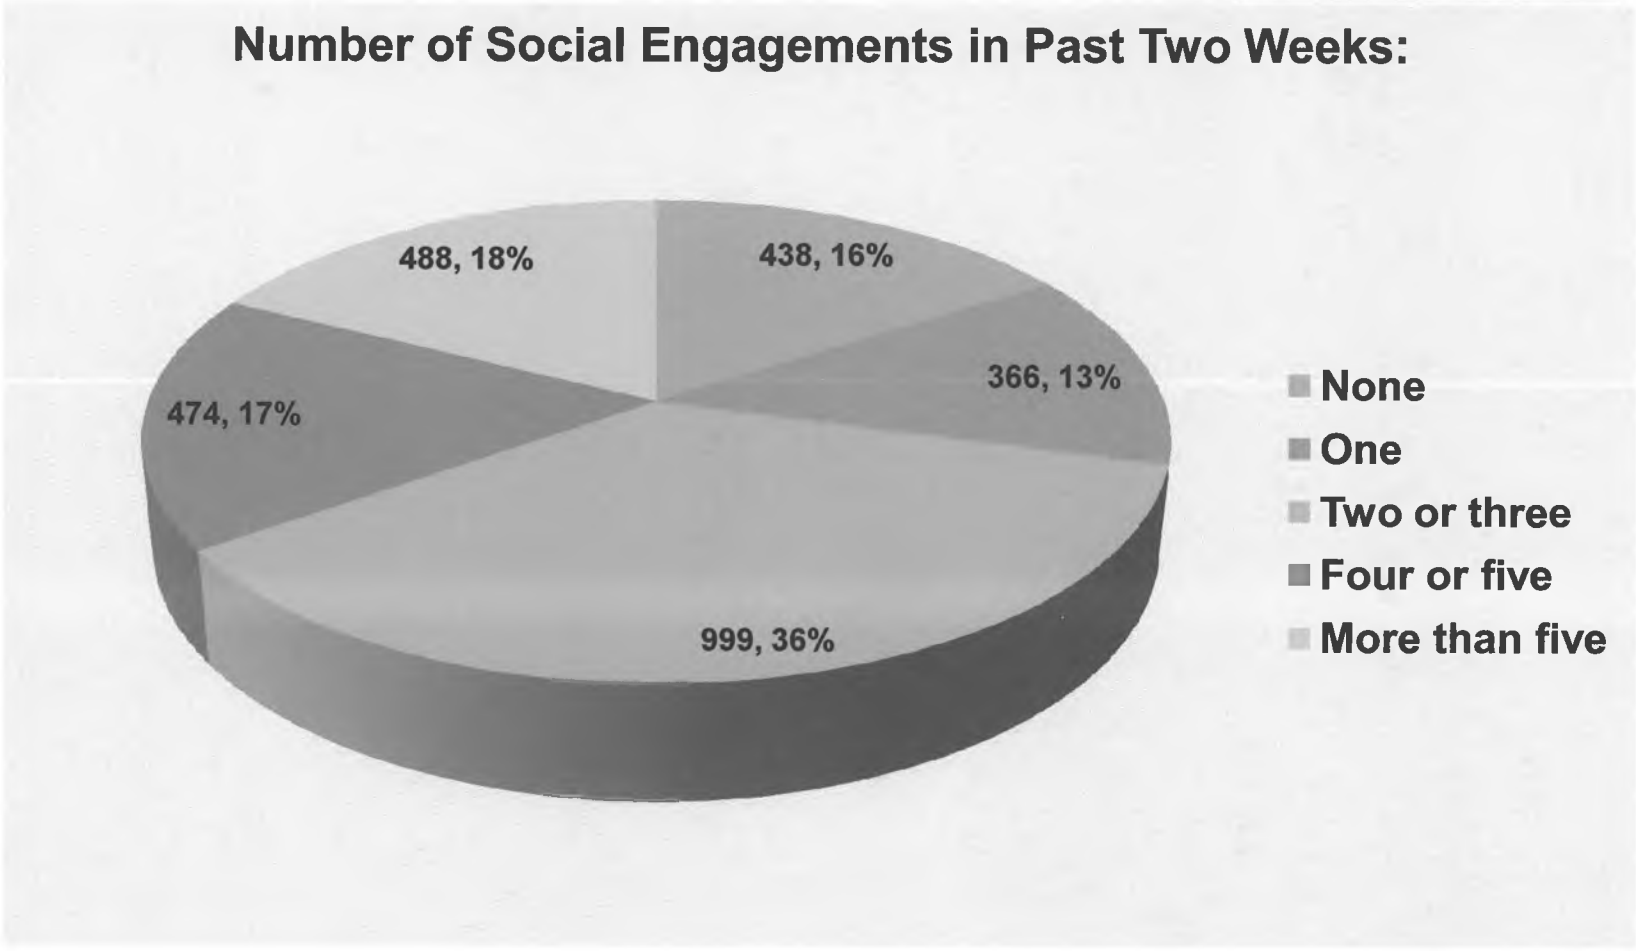


FINDINGS OF THE SENIOR SURVEY

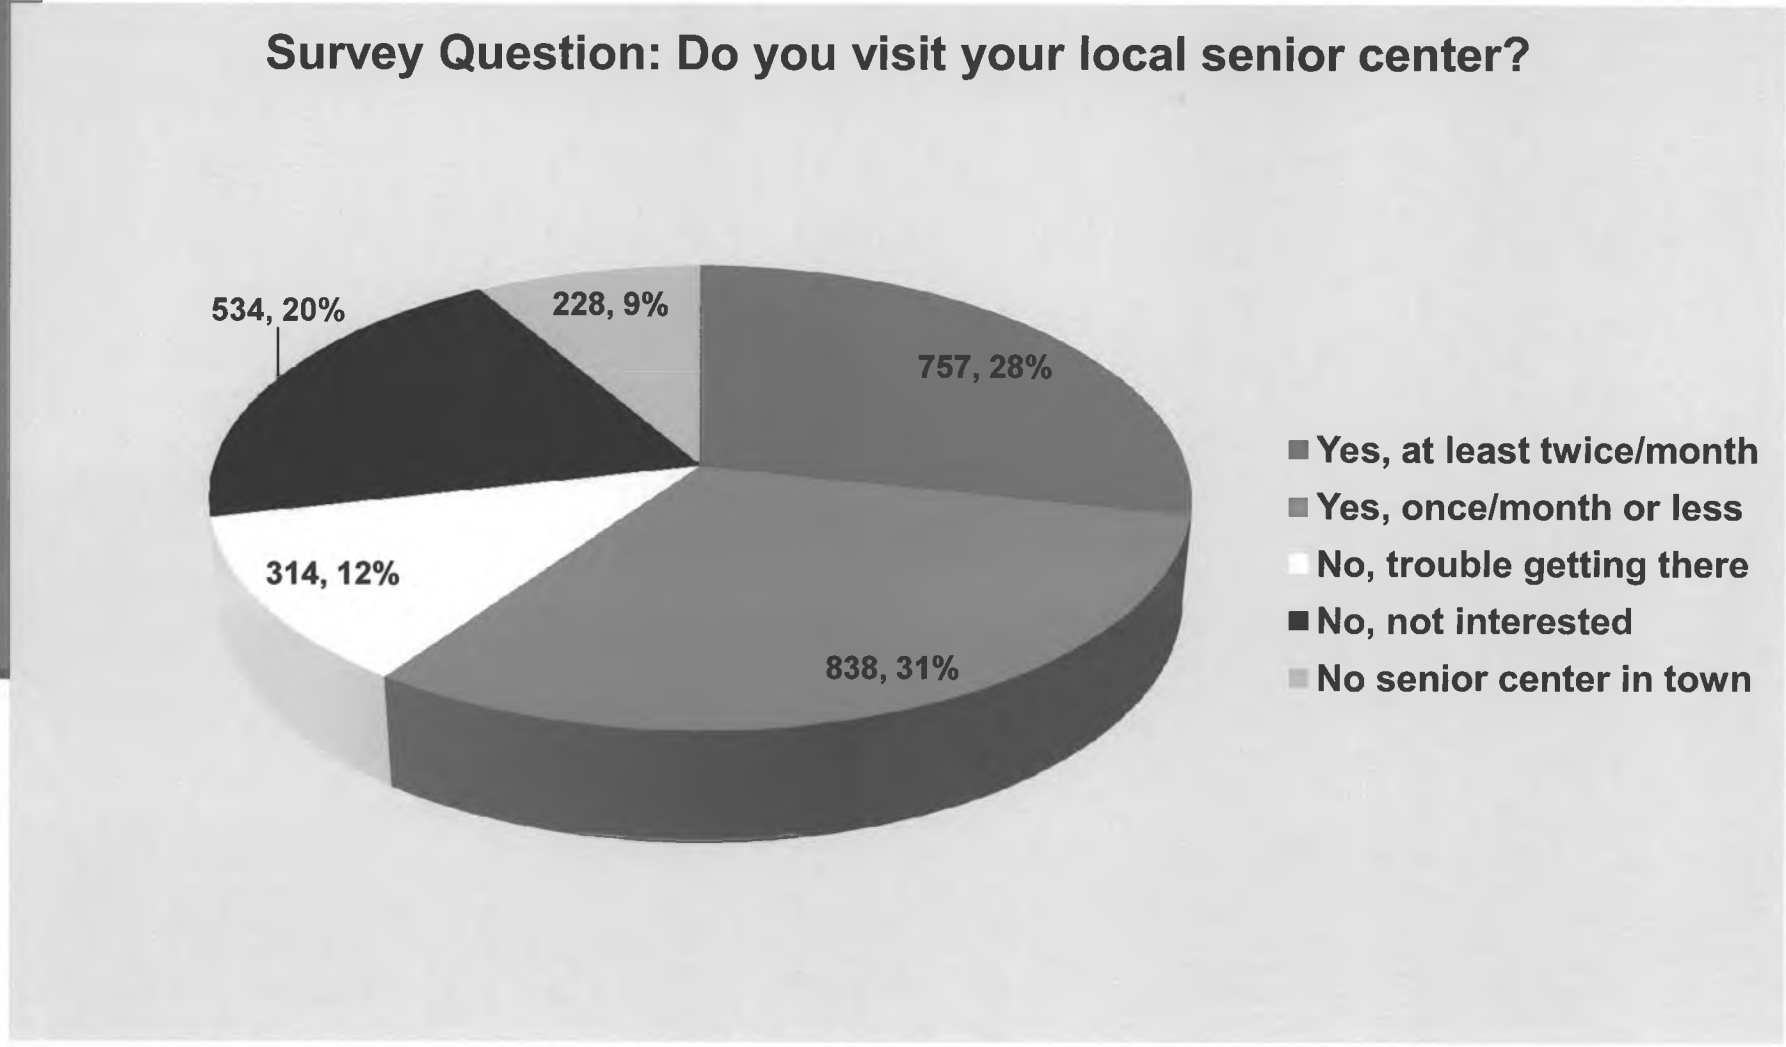
Alaskan seniors are very happy here. More than 9 out of 10 older Alaskans (94%) would recommend their community as a good place to live for seniors.



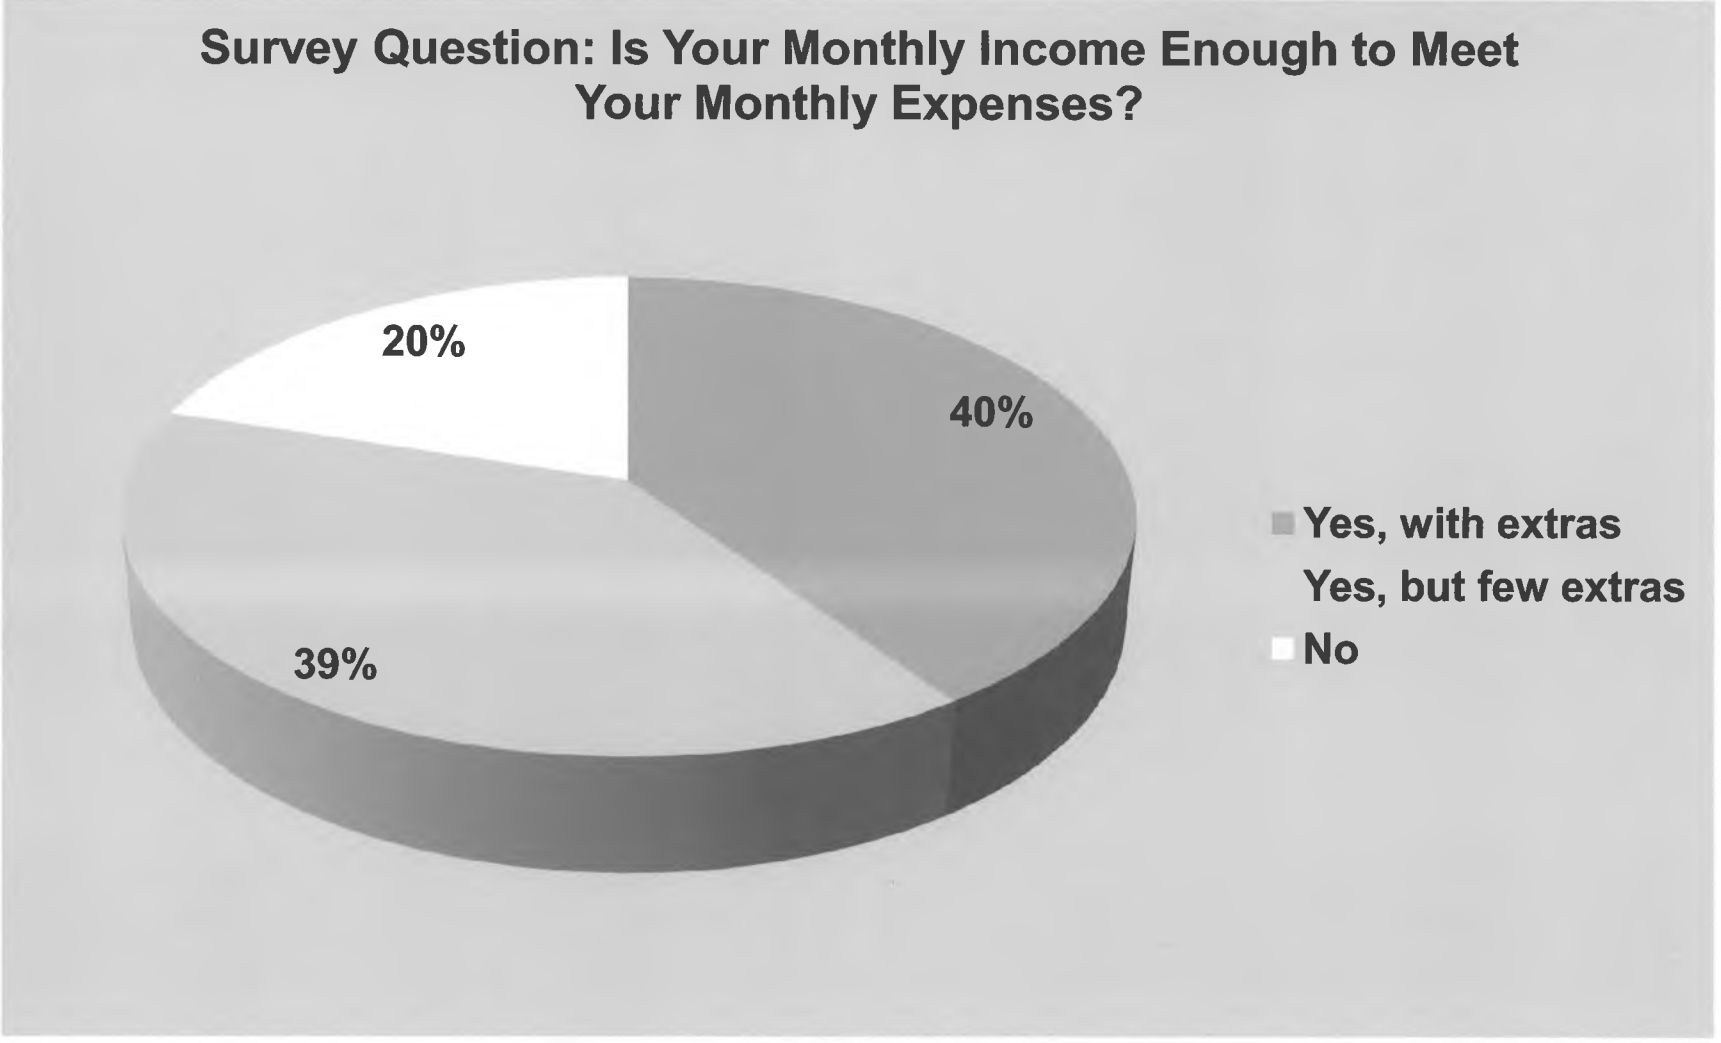
Research shows that social engagement is an important correlate of both mental and physical health for seniors.



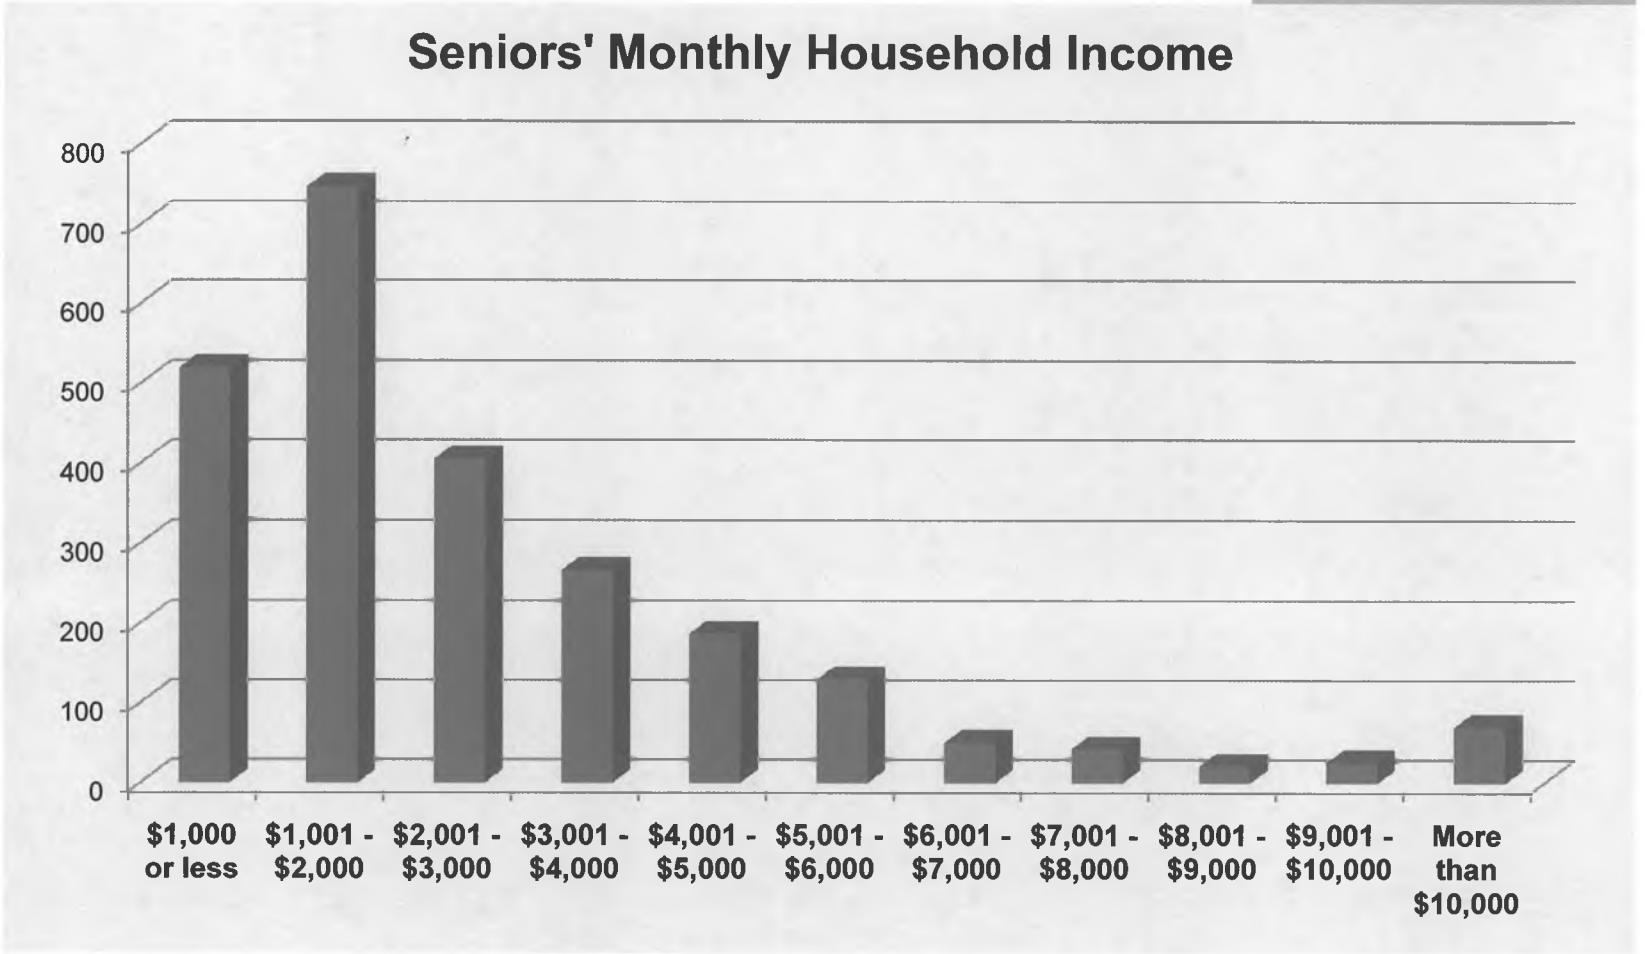
Senior centers are an important key to senior community involvement. Nearly six in ten seniors visit a local senior center at least occasionally.



Many older Alaskans are struggling financially. One in five cannot make ends meet, and another two in five are just getting by.



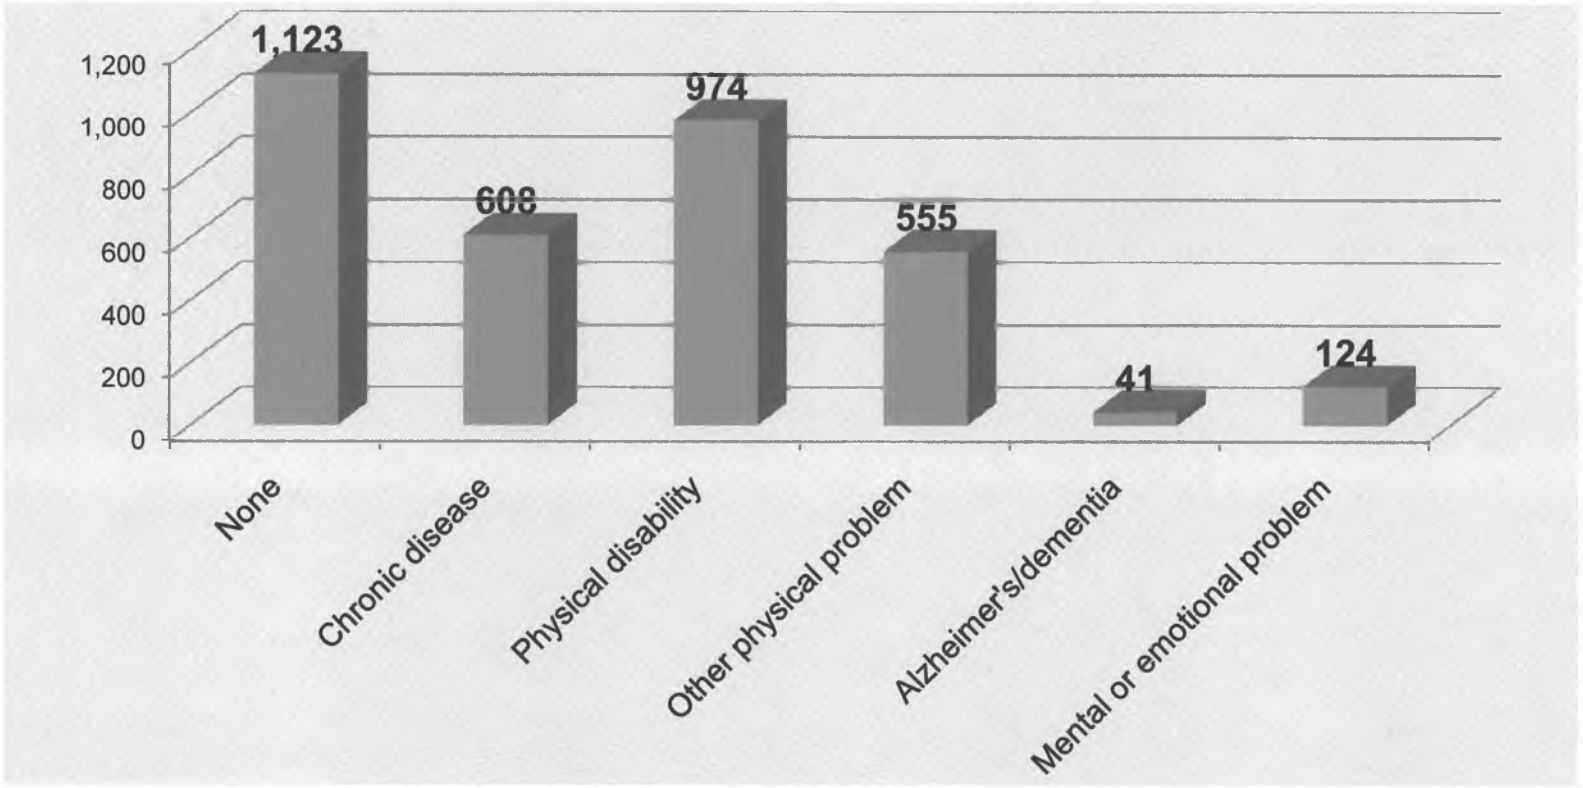
More than half of the older Alaskans who responded to the survey indicated that they live in a household with $2,000 or less of monthly income.



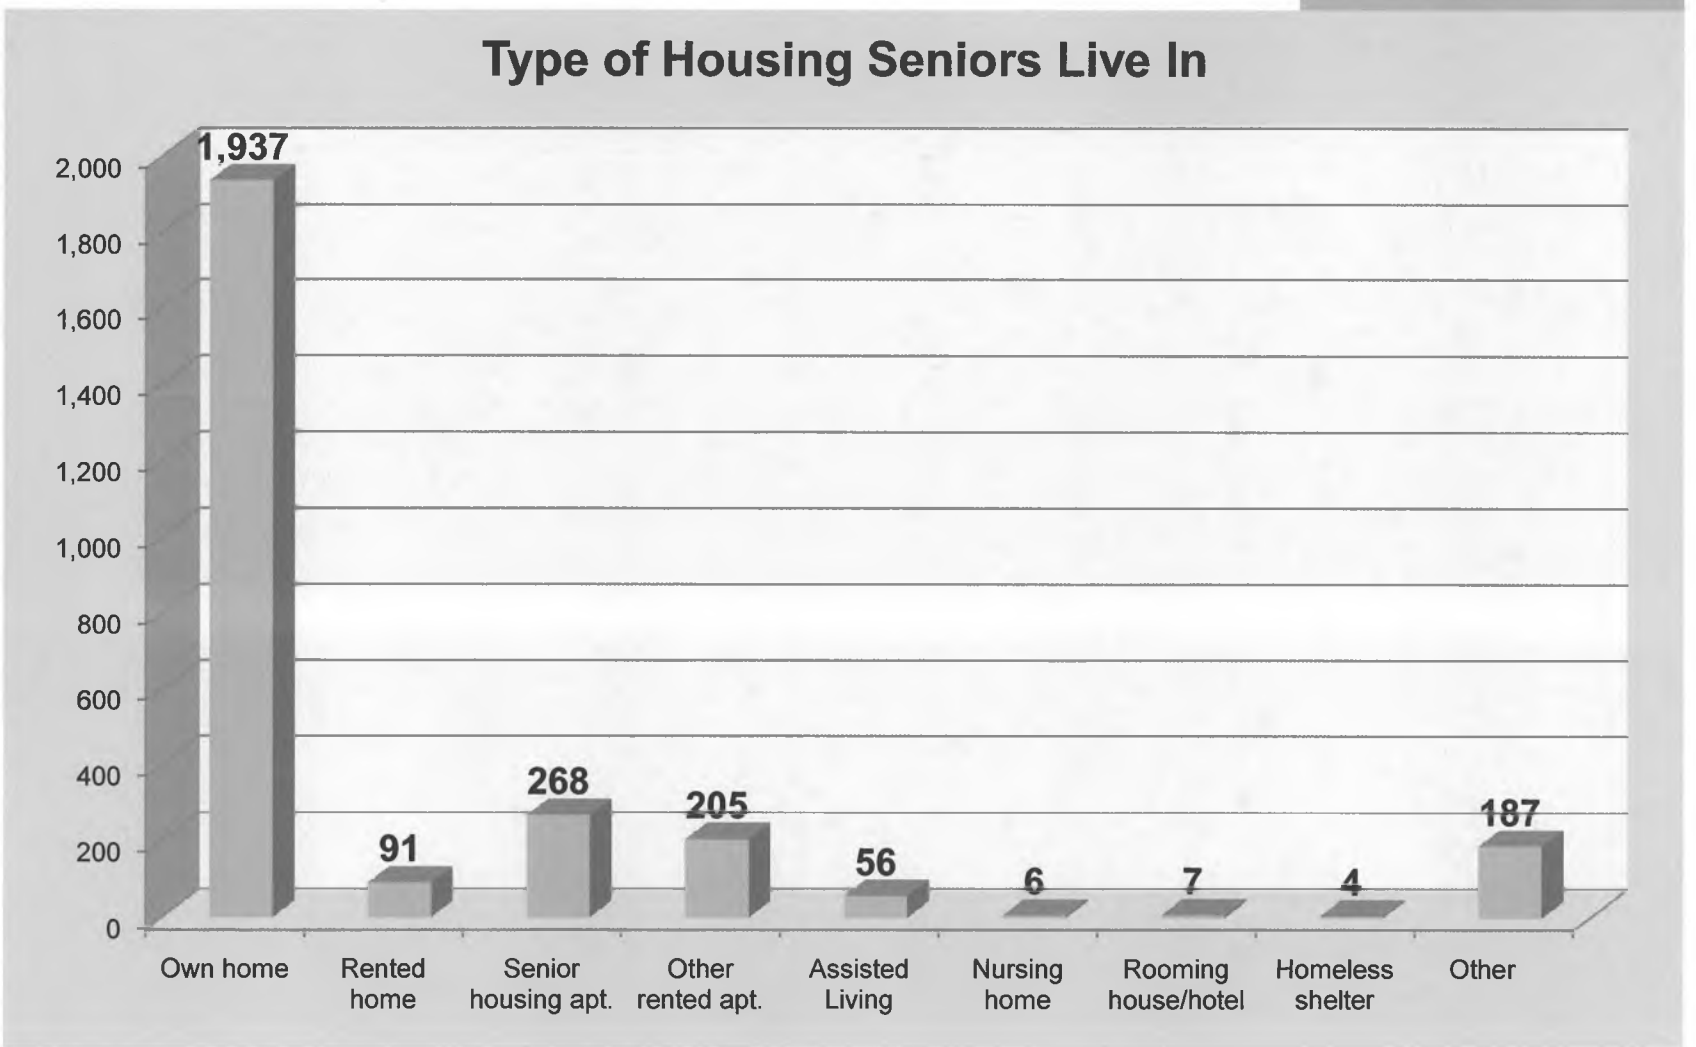
Three out of five older Alaskans surveyed have an illness or disability that limits the range of activities they can enjoy.

3 out of 5

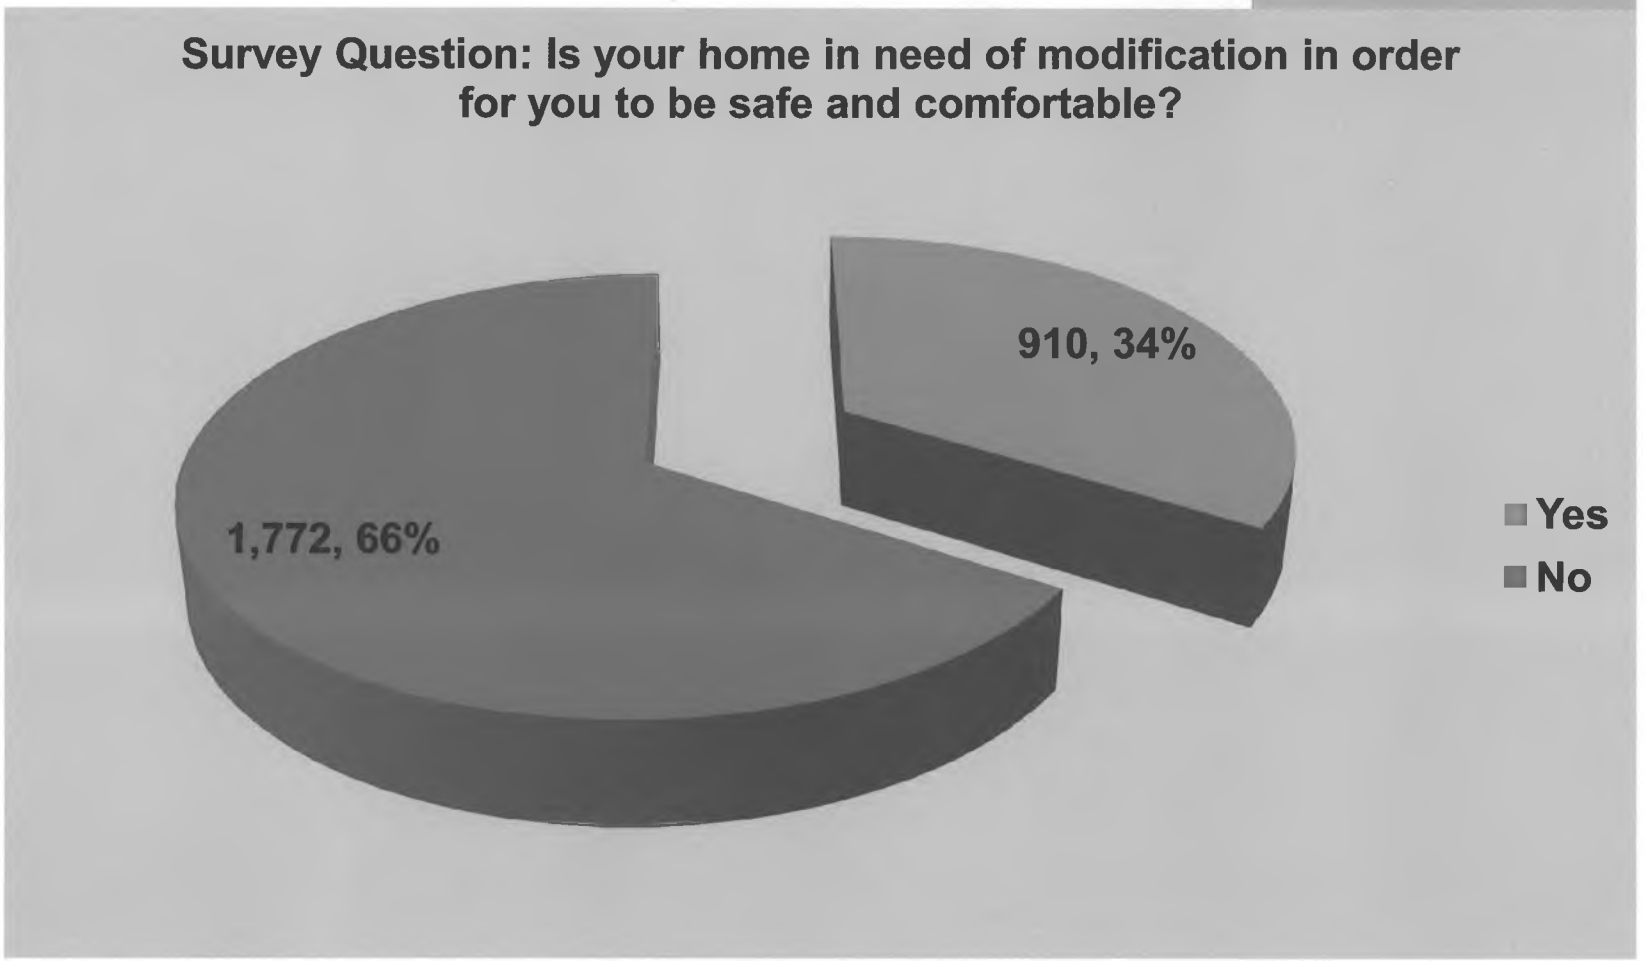
Survey Question: Do You Have an Illness or Disability?



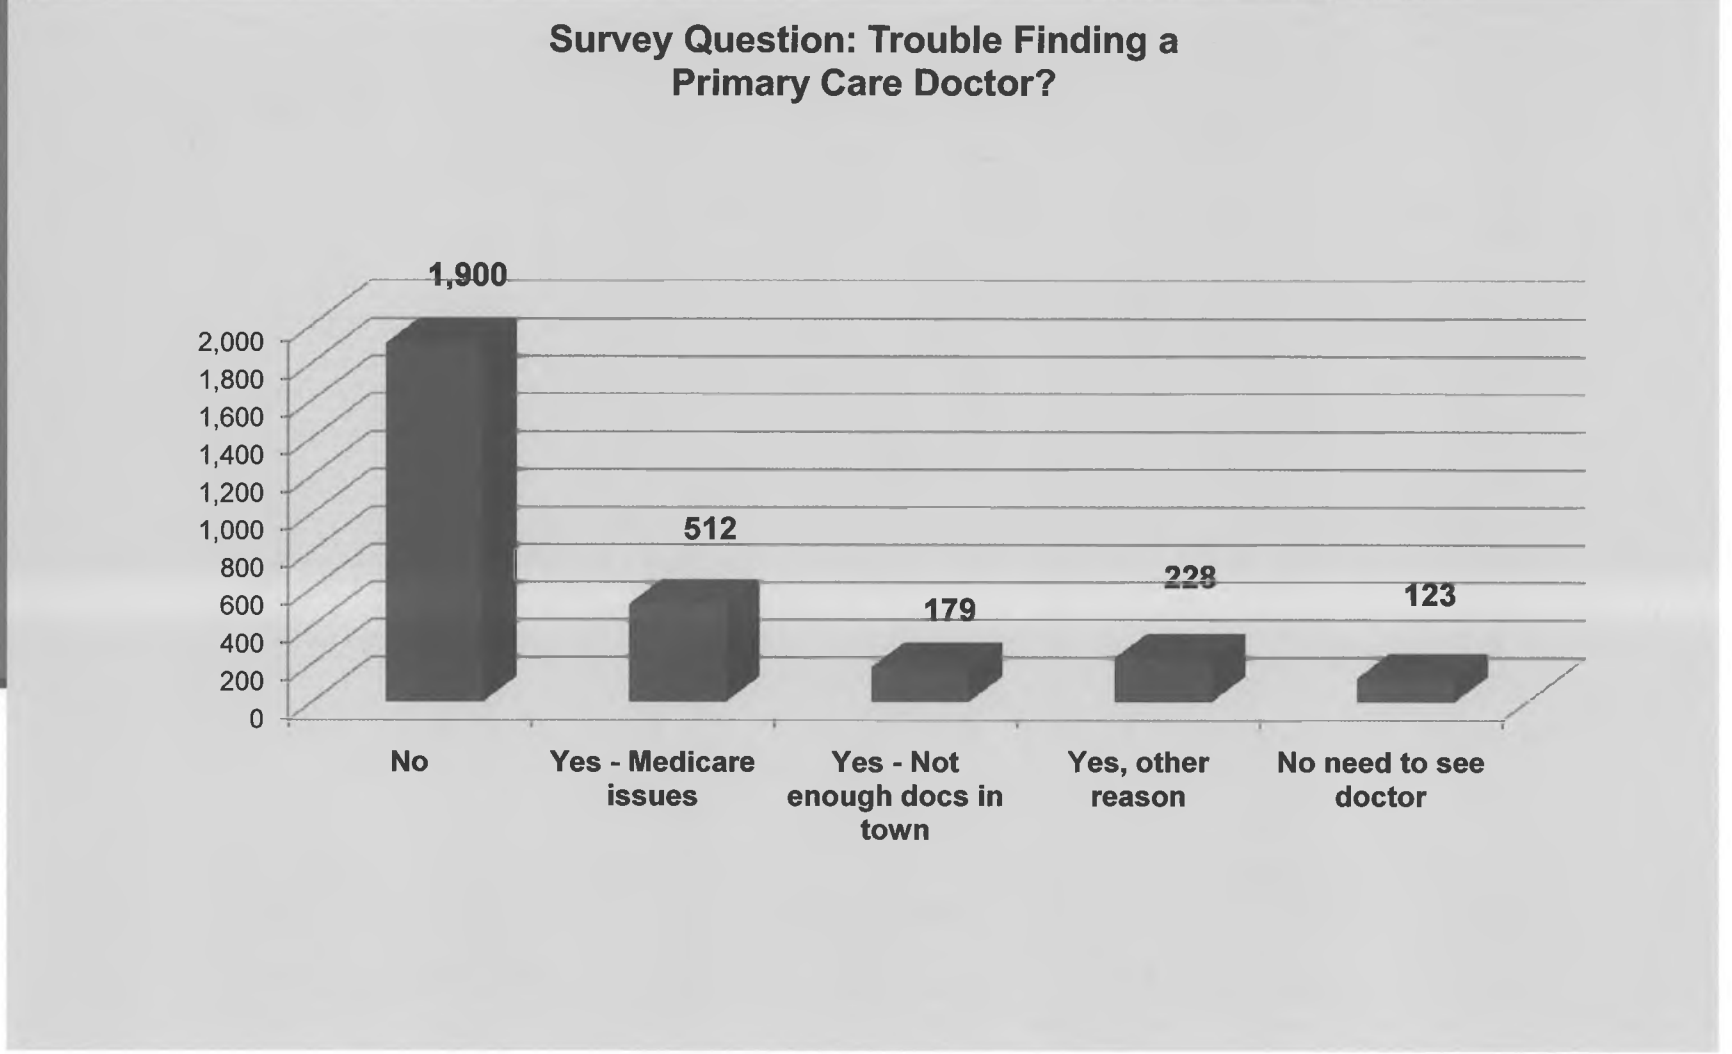
Seven out of ten responders live in a home they or a family member own. Two in ten live in a rented home or apartment.



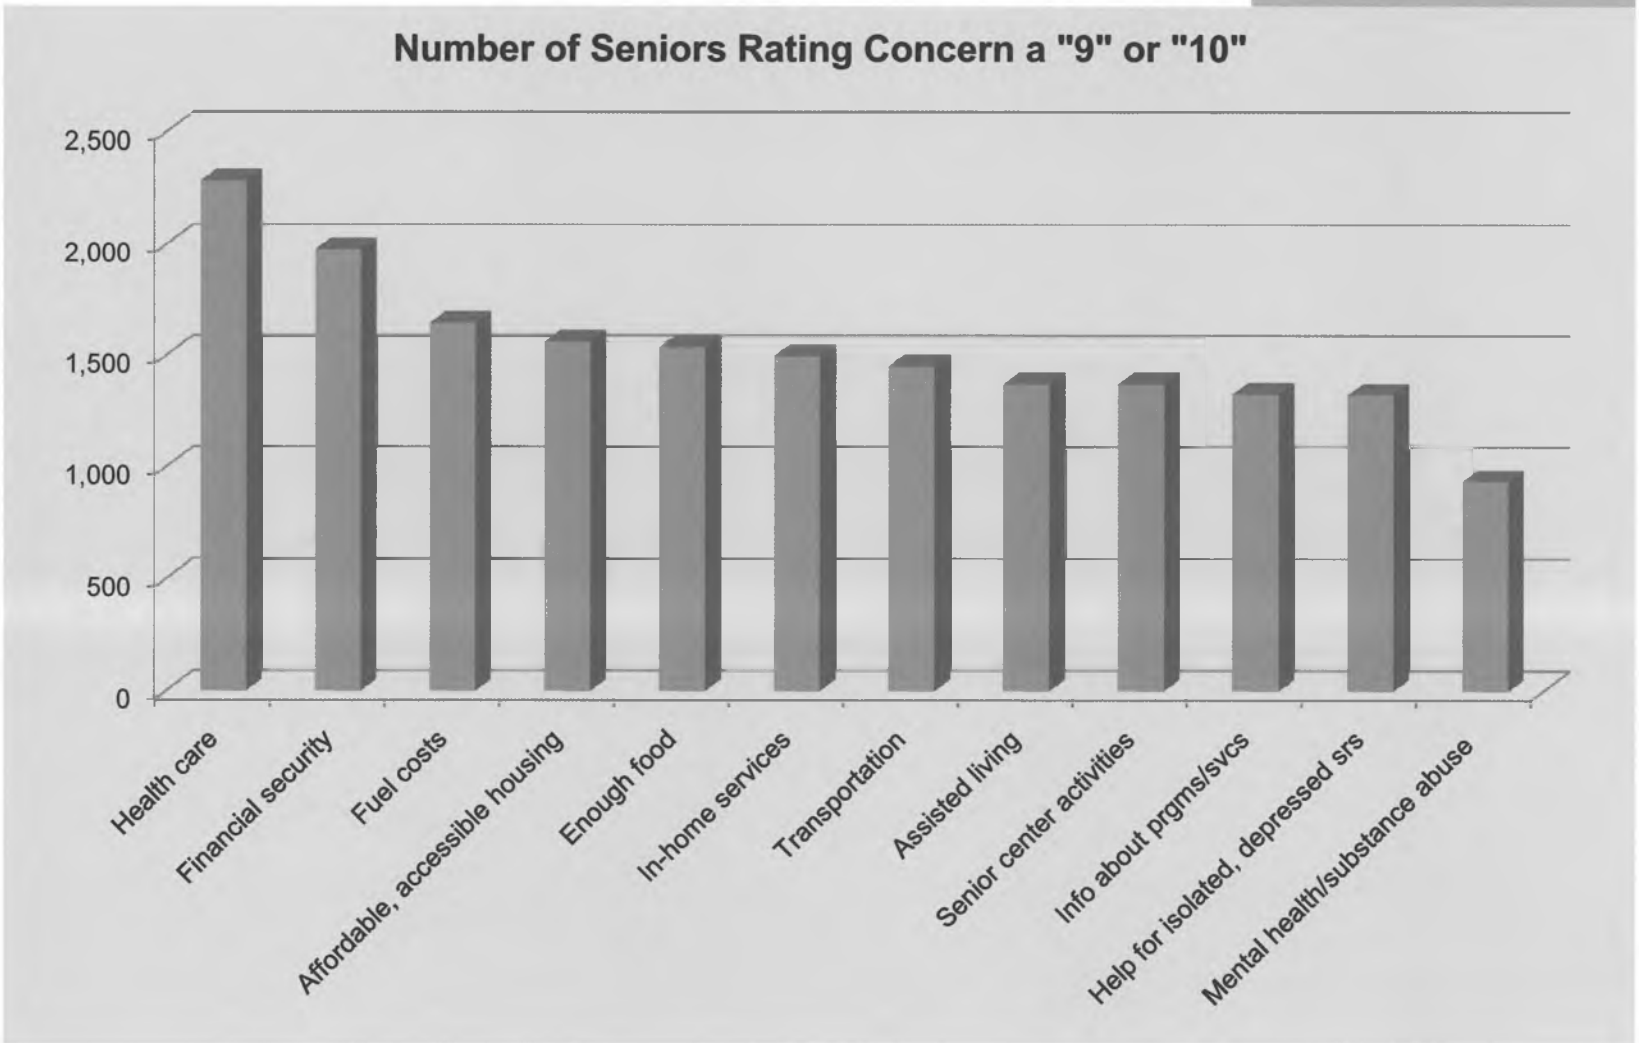
One in three seniors say their home needs some sort of modification – such as ramp installation, grab bars, or insulation – in order for them to be safe and comfortable.



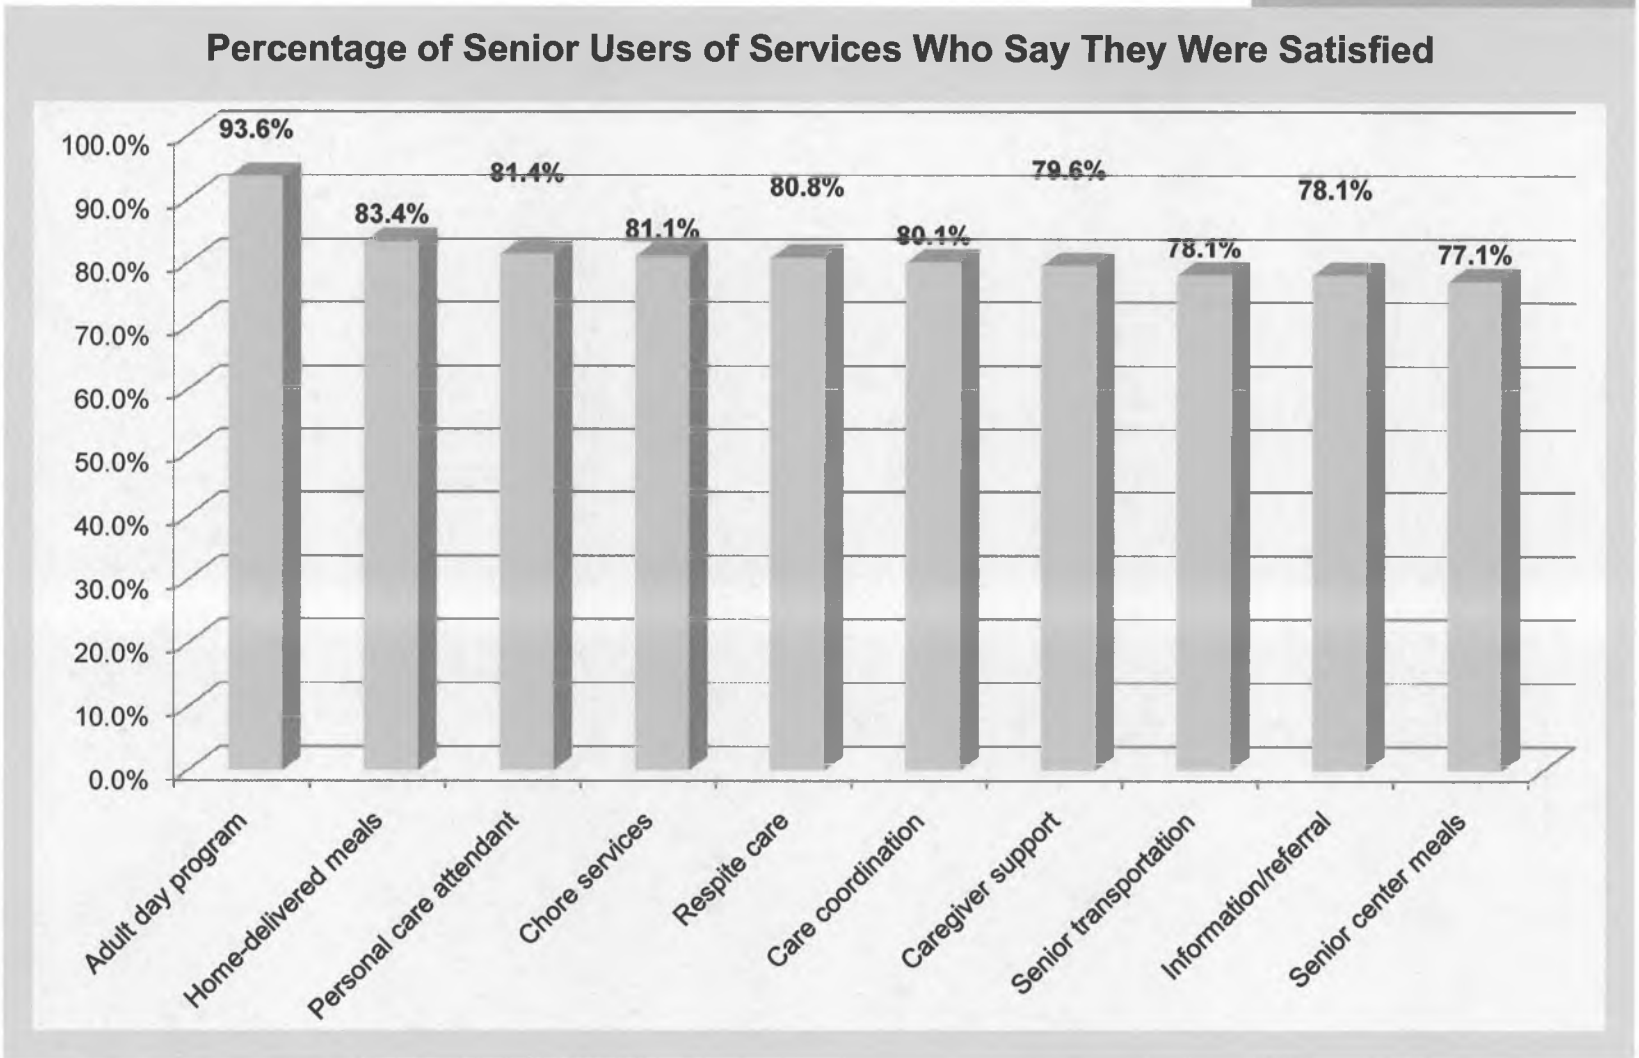
Most older Alaskans (69%) are not having trouble finding a primary care doctor. Of those who are, Medicare payment issues are the most often-cited reason.



More seniors rated "health care" and "financial security" as important issues than any other topic. These two issues were also the top concerns listed in our 2005 senior survey.



Most seniors have not used any of the available senior services. Of those who have, most are satisfied with the service they received.



Many seniors included open-ended comments on a wide range of topics.

- "Rental and fuel costs have been rising to the degree that people on fixed incomes are seriously impacted and could easily find themselves on the street. Affordable, safe housing central to businesses…is seriously needed."
- "Need assisted living in smaller communities and/or 24-hour personal care attendant services, to alleviate options of moving or nursing home."
- "They cut bus service in Chugiak. No senior transportation. If you don't drive, you stay home. Or find someone to drive you."
- "As a senior, one of the things I am most concerned about is snow and ice removal downtown and in midtown. I sometimes decide not to shop or attend an event because of treacherous conditions brought about by poor snow removal, lack of access to sidewalks, and dark conditions. Falling is terrifying; at my age, I don't bounce so good."
- "We desperately need to take care of our people. It is important that no one is left suffering, hungry, without good medical benefits. [Seniors should] have dignity without huge worries."

ELDER/SENIOR COMMUNITY FORUM RESULTS

Findings from the ACoA's elder/senior community forums held in Anchorage, Fairbanks, Juneau, Kotzebue, Bethel, and with the Alaska Native Tribal Health Consortium Elders Committee highlighted similar concerns:

- Access to primary care is limited due to Medicare and provider availability issues
- Long-term support services across the continuum of care need increased capacity, especially in rural areas that are culturally appropriate
- Expansion of the capacity, range and hours of senior transportation services
- Many communities need assisted living facilities to enable elders to remain close to home
- A centralized, one-stop-shop source of information and referral services which can direct seniors and family members to long-term care services, benefit programs, and other supports is desired

PRIORITIES FOR SENIORS' FUTURE

Future priorities for addressing senior needs and concerns include:

- Resolution of the primary care access for Medicare recipients
- Creation and implementation of a statewide long-term care plan
- Workforce development efforts to ensure that sufficient well-trained caregivers are available as the senior population expands
- Development of quality senior housing
- Expansion of community coordinated transportation
- Community prioritization of a senior-friendly environment
- Support for appropriate-scale assisted living facilities
- Adequate funding for information resources to guide seniors and their families to the services and programs available to help them
- Programs to address seniors with complex mental and behavioral health needs
- Financial assistance for seniors facing escalating costs for food, fuel, housing, and other basic life necessities.

SENIOR VOICE

Serving Older Alaskans and Their Families Since 1978

A publication of ***Older Persons Action Group, Inc.*** 325 E. Third Ave., Suite 300, Anchorage, Alaska 99501 Vol. 34 No. 2 February, 2011

Senior Benefits is a priority, legislators say

But extension of the program is not a given, advocates warn

By DAVID WASHBURN
Senior Voice

With the Alaska state legislature back in session, one issue is standing out as an immediate priority for senior advocacy groups: the state's Senior Benefits program, which provides monthly cash assistance to low-income Alaska seniors will end this summer unless legislators and the governor *agree to extend it. Bills have been introduced in* the state House and Senate to do just that.

The Senior Benefits program is the successor to the Longevity Bonus, which was halted by former Gov. Frank Murkowski and replaced with SeniorCare. That program was allowed to "sunset" in 2006 and was replaced when former Gov. Sarah Palin called a special legislative session to establish the Senior Benefits program as we know it now.

The program provides monthly cash assistance to Alaska seniors age 65 or older whose household income does not exceed 175 percent of the federal poverty guidelines. Payment amounts vary, depending on income:

- $250 per month for income of 75 percent of less of federal poverty level
- $175 per month for income between 75 and 100 percent of federal poverty level
- $125 per month for income between 100 and 175 percent of federal poverty level

More than 10,000 Alaskans currently receive payments, according to a sponsor statement by Rep. Mike Hawker, R-Anchorage, who introduced HB 16 to extend the program another four years. The bill has a host of co-sponsors, from both parties, and Hawker has said he would like it to be the first bill passed out of the House this session. Hawker authored the bill that created the Senior Benefits

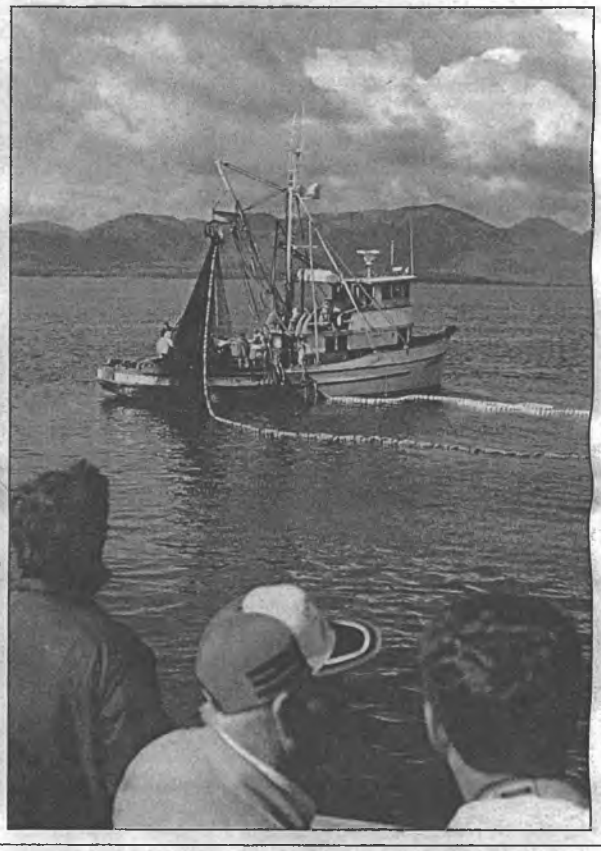
A good catch for nets and cameras

Fish on! In fact lots of fish on! If you would like to see and photograph the dynamic workings of Alaska salmon seiners (and other Alaska commercial fishing craft) you or visiting guests might consider booking this one-of-a-kind cruise offered by Dale Pihlman of Ketchikan. The cruise is called "Misty Fjords/ Commercial Fishing." You can do it next summer aboard his new expedition-class cruise vessel Misty Fjord. To learn about this and other innovative Pihlman cruises see Mike Miller's monthly travel column, "When Seniors Travel," on page 28.

Mike Miller photo



Survey produces wealth of information on older Alaskans

Note: The first in a series of three articles summarizing the results of a survey of older Alaskans conducted last summer and fall, this article will focus on the demographics, finances, and housing characteristics of the seniors who responded. Next month's article will explore health and service issues as reflected in the survey, and in March we'll look specifically at issues of concern for older Alaskans.

ALASKA COMMISSION ON AGING

More affordable, accessible housing and some help with living expenses would boost their quality of life, say many Alaskan seniors. In general, though, most are happy with the community in which they're living and productively engaged in volunteer work, family caregiving, and social get-togethers with family and friends.

Older Alaskans recently took the opportunity to share their candid opinions on issues ranging from health care and financial security to senior services and housing. Over 3,000 Alaskans age 50 and older completed the Alaska Commission on Aging's 2010 Survey of Older Alaskans, which was distributed in the August 2010 issue of the Senior Voice. Copies of the survey were also mailed in bulk to senior meal programs and other programs that receive federal or state grant funds. Of the total 3,222 survey responses received, 2,836 came from those aged 60 and over. That's more than twice as many responses as the Commission received to its 2005 survey, also distributed through the Senior Voice.

Why a survey?

The 2010 survey is part of an effort to gather information on senior needs as the commission

Senator Bettye Davis
Press Release

For Immediate Release: February 28, 2011

Senator Davis Calls Meeting to Address Homelessness In Alaska

Lawmakers will take up current concerns as well as future solutions and possibilities

JUNEAU-Senator Bettye Davis, D-Anchorage, is calling on leaders and experts from around the state to come to Juneau so that Legislators can start tackling the problem of homelessness.

According to the 2009 Annual Homeless Assessment Report to Congress, Alaska has one of the top ten highest concentrations of homeless people in the nation, based on percentage of the state's total population.

From Alaska's largest urban communities to the state's smallest villages, the growing homelessness problem is something state leaders can't afford to ignore. The purpose of this meeting will be to hear concerns and statistics around homelessness and current solutions and possibilities for the future.

Some of the meeting's presenters will include representatives from the Alaska Coalition on Housing and Homelessness, the Alaska Council on the Homeless, the Alaska Housing Finance Corporation, NeighborWorks Anchorage, the Mental Health Trust, and the Rural Alaska Community Action Program (RurAL CAP).

Who: Senate Health and Social Services Committee
What: Meeting to address homelessness in Alaska
Where: Alaska State Capitol, Butrovich Room 205
When: 1:30 p.m. on Wednesday, March 9th

Anyone who can't attend the meeting in Juneau can join in by teleconference at any Legislative Information Office in their district.

For more information, please contact Celeste Hodge in Senator Davis' office at 907-465-3822.

Subject: Hearing on Homelessness

Senate Health and Social Services Committee Members,
Here's a rundown for Wednesday's Senate HSS committee meeting (March 9) – Homelessness presentations. Six agencies were invited to participate – see list below. The meeting will begin promptly at 1:30 PM. Thanks.

Presenters (In order of Presentation):

1. **Suzi Pearson, Alaska Coalition on Housing and Homelessness (on-line)**
2. **Dan Fauske – Chair of the Alaska Council on the Homeless (state appointed council) & CEO of AHFC and Jim Gurke of AHFC (both on-line)**
3. **Mark Romick, AHFC, and Stacy Schubert, AHFC (Voucher Program) (Juneau)**
4. **Deb Mahoney and Michael Courtney, Neighbor Works Anchorage - Affordable Housing (Juneau)**
5. **Kate Burkhart, Alaska Mental Health Board and the Advisory Board on Alcohol and Drug Abuse – (Juneau)**
6. **Kenny Scollan, Rural Cap – (Juneau)**

Focus areas for hearing on homelessness

- **Each agency will have no-more-than 15 minutes to present regardless to the number of presenters for that agency**
- **Each agency will describe what they do related to housing and homelessness**
- **Each agency will provide a description of the recipients utilizing their services (eligibility requirements, demographics, etc.)**
- **Each agency will describe the gaps or barriers to meeting the need for housing from their perspective**
- **Each agency will fully describe to the legislators specific types of support needed from the State to bridge these gaps and barriers and solve homelessness in Alaska**

HEALTH & SOCIAL SERVICES

AGENDA

WEDNESDAY, MARCH 9, 1:30 PM, Butrovich Room #205

1:30 PM – Call to Order

Today, we are calling on leaders and experts from around the state to provide critical information to us so we as legislators can help tackle the problem of homelessness. According to the 2009 Annual Homeless Assessment Report to Congress, Alaska has one of the top ten highest concentrations of homeless people in the nation, based on percentage of the state's total population. From Alaska's largest urban communities to the state's smallest villages, the growing homelessness problem is something we, as state leaders can't afford to ignore. The purpose of this meeting will be to hear concerns and statistics around homelessness and current solutions and possibilities for the future.

Presenters will include representatives from the Alaska Coalition on Housing and Homelessness, the Alaska Council on the Homeless, the Alaska Housing Finance Corporation, NeighborWorks Anchorage, the Mental Health Trust, and Rural Alaska Community Action Program (RurAL CAP). I'm asking members to hold all questions till the end to allow adequate time for all presenters.

H&SS Committee: Sen. Bettye Davis, Chair; Sen. Johnny Ellis, Sen. Fred Dyson, Sen. Kevin Meyer, Sen. Dennis Egan

Housing First Services for People Who Are Homeless With Co-Occurring Serious Mental Illness and Substance Abuse

Leyla Gulcur
Sam Tsemberis
Pathways to Housing

The literature on homeless adults with severe mental illness is generally silent on a critical issue surrounding service delivery—the contrast between housing first and treatment first program philosophies. This study draws on data from a longitudinal experiment contrasting a housing first program (which offers immediate permanent housing without requiring treatment compliance or abstinence) and treatment first (standard care) programs for 225 adults who were homeless with mental illness in New York City. After 48 months, results showed no significant group differences in alcohol and drug use. Treatment first participants were significantly more likely to use treatment services. These findings, in combination with previous reports of much higher rates of housing stability in the housing first group, show that "dual diagnosed" adults can remain stably housed without increasing their substance use. Thus, housing first programs favoring immediate housing and consumer choice deserve consideration as a viable alternative to standard care.

Keywords: *homelessness; serious mental illness; dual diagnosis; psychiatric rehabilitation*

Homelessness in the United States, traceable to a famine in housing markets beginning in the early 1980s, afflicts thousands of persons who are psychiatrically disabled who lack adequate community-based care (Baumohl, 1996; Lovell & Cohn, 1998). Many are visible as they lead troubled lives on the streets; however, a growing number are likely to be incarcerated—the largest de facto psychiatric facility in the country is the Los Angeles County Jail (Butterfield, 2003). Regardless of whether the problem is viewed as one of individual pathology or systemic failure, the plight of people with mental illness and homeless remains one of the least understood and most contested service delivery problems in mental health today (Gonzalez & Rosenheck, 2002; McGray, 2004; Substance Abuse and Mental Health Services Administration [SAMHSA], 2003).

Social workers join other providers and advocates in lamenting the lack of service integration and the scarcity of resources available to meet the needs of adults who are homeless with mental illness who also abuse substances. However, the literature of social work and other professions is generally silent on a policy-relevant and practice-relevant debate surrounding service delivery for this population. The point of contention stems from fundamental differences in how people with mental illness who are homeless are viewed and in how consumer choice is defined and incorporated into a program's service delivery philosophy. Put another way, there are two contrasting paradigms in services for persons who are homeless with serious mental illness, one the traditional continuum of care approach favoring treatment first and the other a consumer-driven movement (housing first) that has gained momentum in recent years (Carling, 1990; Culhane, Metraux, & Hadley, 2001; Tsemberis, 1999).

Among a number of differences between them, a contrast of interest in this report lies in how they deal with substance abuse and whether abstinence is a precondition to independent housing and other services. Approximately 50% to 70% of persons who are homeless with mental illness abuse substances (Drake, Osher, & Wallach, 1991; SAMHSA, 2003), and these estimates are widely considered underreports because of denial, distrust, and fear of the consequences of divulging illegal behaviors (Drake, Yovetich, Bebout, Harris, & McHugo, 1997).

Housing first programs rank stable housing as the first and highest priority vis-à-vis abstinence from substance use and/or abuse, thus practicing a harm reduction approach (Inciardi & Harrison, 2000). Treatment first programs reverse this sequence and require detoxification and sobriety before giving access to services such as independent housing. For these programs, consumers'

Research on Social Work Practice, Vol. 16 No. 1, January 2006 74-83
DOI: 10.1177/1049731505282593
© 2006 Sage Publications

choice in adherence to mental health treatment and abstinence requirements must be relinquished for their own sake until they are deemed ready for independent living.

Our primary goals in this article are twofold: (a) to describe the historic development and core components of these two distinct service alternatives (treatment first and housing first) and (b) to provide findings related to substance and services use from the only randomized experiment designed to compare their effectiveness—the New York Housing Study.

BACKGROUND

The Treatment First Approach for People Who Are Homeless With Mental Illness

The era of deinstitutionalization opened the door to independent living for persons with diagnoses such as schizophrenia and bipolar disorder; however, these individuals still needed an array of support services as they made the transition from psychiatric hospital to community (Dixon, Krauss, Kernan, Lehman, & DeForge, 1995). Among these were medication management, psychological counseling, education, and job training. For a large subgroup, abuse of drugs and/or alcohol complicated matters considerably (Drake et al., 1997). Persons with mental illness who became homeless were disproportionately individuals who were "dual diagnosed" whose lives became a continual struggle to find shelter and avoid being victimized (Drake et al., 1991; Padgett & Struening, 1992).

The well-intentioned but underfunded system of public sector mental health services that evolved after the 1960s rarely interacted with drug and alcohol (D/A) treatment programs designed with clients without mental illness in mind. However, both service systems had one thing in common: They were predicated on assumptions of the need for structure and control. Different funding streams, staff expertise, and service philosophies, notwithstanding, the mental health, D/A, and homeless services systems share a "hurdle" approach in which gaining access to services requires relinquishing control and choice. In exchange for a bed and supportive services, consumers and/or clients submitted to rules requiring treatment compliance, abstinence, curfews, limited visitation, and a loss of privacy (Miller & Flaherty, 2000). From the perspective of a person who was dually diagnosed living on the street, this threshold for entry can seem daunting at best. It is also a high-stakes gamble because rule breaking usually leads to expulsion and a return to the streets.

Evaluations of treatment first programs have produced modest results in achieving housing stability (Lipton, Siegel, Hannigan, & Samuels, 2000); however, program attrition and a return to the "institutional circuit" (Hopper, Jost, Hay, Welber, & Haugland, 1997) remain a problem when trying to ascertain change over time. Recent innovations in programs designed specifically for persons with dual diagnoses have shown promising results for integrated treatment models (Drake et al., 1997; Bebout, Drake, Xie, McHugo, & Harris, 1997; Minkoff, 2001) and Double Trouble in Recovery 12-step groups (Magura, Laudet, Mahmood, Rosenblum, & Knight, 2002). Indeed, the cumulative findings have made integrated treatment for persons who are dual diagnosed the "state of the art" in terms of effectiveness (Tsuang, Fong, & Ho, 2003).

When integrated treatment was linked to housing options in a randomized trial, positive outcomes were associated with supervised living and on-site clinical services (McHugo et al., 2004). However, no study of integrated treatment to date has tested its comparative effectiveness as part of the consumer choice model as is the focus of the current study.

Reversing the Continuum: The Pathways Model of Housing First for Adults Who Are Psychiatrically Disabled and Homeless

By the early 1990s, a consumer-centered approach surfaced that reversed the treatment first continuum. Its proponents argued for "supported housing," with tenets of consumer choice, ongoing support services, and community integration (normal housing, not "treatment" residences; Carling, 1990; Ridgeway & Zipple, 1990; Srebnik, Livingston, Gordon, & King, 1995). They described treatment first approaches as "supportive housing" with on-site (or proximal) staff and rules governing behavior ranging from curfews to visitation to abstinence. Most involve congregate living with other consumers who are homeless and function as transitional housing, that is, therapeutic environments designed to foster independent living skills enabling clients to graduate to living on their own. In contrast, housing first is a type of "supported housing" that separates treatment from housing, considering the former voluntary and the latter a fundamental need and human right. As such, it provides scatter-site housing without on-site staff supervision and generally promotes harm reduction rather than requiring abstinence.

Although confusion can arise regarding what are considered essential and defining program components in supported versus supportive housing (Fakhoury, Murray,

Shepherd, & Priebe, 2002), housing first shares a bottom-line commitment to consumer choice and to immediate and continuing access to scatter-site independent housing. To our knowledge, the agency model that is the subject of the current study—Pathways to Housing, Inc.—stands alone in embodying the following elements: (a) immediate independent permanent housing that is not contingent on treatment compliance and is retained regardless of the client's temporary departure because of inpatient treatment or incarceration; (b) choice and harm reduction with respect to mental health treatment and substance use; (c) integrated Assertive Community Treatment (ACT) services (Drake et al., 1998) that work in conjunction with housing staff and a nurse practitioner to address ongoing housing and health needs.

The New York Housing Study

With its funding of a national multisite study of housing alternatives for persons who are homeless with mental illness, the federal agency SAMHSA chose the Pathways to Housing (PTH) program as the experimental condition for the New York City site (Shern et al., 2000). The New York Housing Study (NYHS), which began in 1996, was a 4-year randomized trial comparing the PTH version of housing first with treatment first continuum of care programs in the New York City area.

Published findings from the NYHS have shown higher rates of housing stability (Tsemberis & Eisenberg, 2000; Tsemberis, Gulcur, & Nakae, 2004) and cost savings (Gulcur, Stefancic, Shinn, Tsemberis, & Fischer, 2003) for the PTH model. In addition to housing stability, the NYHS also assessed outcomes related to mental health symptoms, quality of life, drug and alcohol use, and utilization of substance abuse treatment. Analyses of the 24-month data showed no significant group differences in these outcomes with the exception of higher use of substance abuse treatment services by the control group (Tsemberis et al., 2004). The NYHS maintained a remarkable 87% retention rate of participation for 4 years (Stefancic, Shaefer-McDaniel, Davis, & Tsemberis, 2004).

In summary, the NYHS found that "a person's mental health diagnosis is not related to his or her ability to obtain or to maintain independent housing" (Tsemberis et al., 2004, p. 654). Moreover, housing such persons without requiring abstinence and sobriety did not increase their use of substances during a 2-year period despite comparatively lower levels of use of substance abuse treatment services. The control group's higher use of substance abuse services did not produce comparatively lower rates of drug or alcohol use, thus indicating that residence in "sober housing" did not produce the desired results in terms of abstinence.

In this report, we assessed substance-related and treatment-related outcomes from the full 48 months of data to determine if the previous findings are sustained or change during a much longer period of observation (4 years vs. 2 years). Thus, we address the following research questions:

Research Question 1: Are there group differences in alcohol and drug use at 48 months?

Research Question 2: Are there group differences in participation in substance abuse and mental health treatment at 48 months?

METHOD

Sampling and Recruitment

Individuals were eligible to participate in the NYHS if they signed an informed consent form (approved by federal and university Human Subjects Committees) and met three inclusion criteria. These were that the person (a) spent 15 of the last 30 days on the street or in other public places, (b) exhibited a history of homelessness during the past 6 months, and (c) had an Axis I diagnosis of severe mental illness. Although substance abuse was not a criterion for eligibility, 90% of the study participants had a diagnosis or history of alcohol or drug disorders according to clinical records. Psychiatric diagnoses were obtained from clinical records and interviews with referring providers.

Respondents were recruited from outreach teams, drop-in centers, state psychiatric facilities, psychiatric wards, and the streets. When it was determined that individuals met the inclusion criteria, they were asked if they would be interested in participating in a research study with compensation of U.S. $25 for each interview. It was further explained that based on a randomized lottery system, individuals would be referred to different housing programs in the city. Recruitment lasted from November 1997 to January 1999. The recruited sample was 225 people (99 in the experimental group and 126 in the control group) between ages 18 and 70 years.

Study Design and Description of Experimental and Control Conditions

The housing first model was developed by Pathways to Housing, Inc. (PTH) in 1992 as a consumer-driven approach to providing housing and support services to

adults who were homeless with mental illness. PTH gives immediate access to housing in independent scatter-site apartments and offers tenants an array of services through interdisciplinary Assertive Community Treatment (ACT) teams that include social workers, psychiatrists, vocational trainers, and substance abuse counselors. Two modifications of the ACT model initiated by PTH were the addition of a nurse practitioner to address health problems and a housing specialist to coordinate housing needs. As part of its vision of consumer choice, PTH does not make housing contingent on sobriety or treatment compliance. The single contingency in this model is a money management program for PTH clients who are unable to meet landlord requirements for leases (e.g., credit histories) or who are not ready to conserve resources necessary to make monthly rent payments. Because it does not refuse clients with histories of violence or incarceration, PTH has accepted and housed the most problematic among persons who are homeless with mental illness, that is, those other programs would not take or had ejected (Tsemberis, 1999).

PTH tenants who abuse drugs or alcohol are counseled by clinical services staff based on their readiness for change. Those with serious substance abuse problems are urged to accept referrals to residential treatment (and their apartments held for them or another one found when they are discharged). PTH also offers harm reduction support groups at its various branch offices. PTH clients whose substance use causes disruption face the usual consequences of a tenant in a similar situation with the exception that PTH staff will assist them in moving to another apartment if evicted.

Individuals randomly assigned to the control group were referred to usual care programs that offer abstinent-contingent housing and services based on a treatment first model. A typical program would be exemplified by a group home or a single-room occupancy residence in which clients are expected to attend day treatment, 12-step, and other therapeutic groups and follow medication regimens enforced by on-site staff. Sleeping, cooking, and bathing facilities are shared, and house rules strictly prohibit consumption of any substances and overnight guests.

During the research design phase, volunteer tenants at PTH reviewed the proposal and provided feedback. Tenants also served on the PTH Institutional Review Board (IRB) and had a voting role as to whether the project and the randomization process was fair and not harmful. Fidelity to the ACT model in the experimental condition was assessed using the Dartmouth fidelity model (Teague, Bond, & Drake, 1998) and was found to be satisfactory (Shinn, Tsemberis, & Moran, 2005).

Data Collection and Measures

A structured interview was administered at 6-month intervals for 48 months. To reduce attrition and maintain contacts, monthly 5-minute call-in interviews were conducted. Participants were paid $25 for in-person interviews (9 in all) and $5 for the monthly calls. These repeated contacts are one of the reasons for the study's high retention rate (Stefancic et al., 2004).

Because the NYHS was one of eight sites participating in a federally funded demonstration project, standardized cross-site measures were used to assess key variables.

Use of alcohol and illegal drugs. Use of alcohol and illegal drugs was assessed with the Six-Month Follow-Back Calendar (Sobell, Sobell, Leo, & Cancella, 1988). Participants reported the number of days drinks were consumed, and the number of days that certain illicit drugs were used during the 6-month period. Four summary variables were defined by the cross-site team: any use of alcohol, any use of illegal substances, heavy use of alcohol (more than 28 days in 6 months), and heavy use of drugs (more than 4 days in 6 months). Of these four variables, two (heavy use of alcohol and heavy use of drugs) were utilized in analyses for the current study.

It is possible that individuals in the treatment first programs underreport substance use differentially because these programs typically require abstinence or at least the promise of sobriety. Although such a bias would work against finding effects favoring the experimental condition, we considered this possibility of differential self-report in interpreting the findings.

Participation in substance abuse treatment. Participation in substance abuse treatment was collected through the use of a modified Treatment Services Review (McLellan, Alterman, Woody, & Metzer, 1992). Service use was computed as the average of a seven-item measure consisting of questions such as whether the participant had received treatment in a detox program or consulted with a counselor to talk about substance problems, and attended AA, NA, or any other substance abuse self-help group.

Participation in mental health treatment. Mental health service use was also collected through the modified Treatment Services Review (McLellan et al., 1992). Service use was computed as the average of a five-item measure consisting of questions such as whether the participant had received overnight treatment in a psychiatric hospital, attended a day hospital program or day

treatment center, and visited with a doctor or nurse to discuss medication or emotional problems.

For both utilization variables, the average proportion of services used is reported as the outcome of interest. A proportion of .20, for example, means that group members averaged one of a possible five "yes" answers to the mental health services measure.

Data Analyses

Checks on random assignment. A preliminary data analysis question checked on random assignment of the sample retained at each data collection point. One of the best guarantees of random assignment is a strong retention rate, which we successfully attained. We compared respondents who were and were not retained in the sample at several data collection points to see if they differed from baseline and found no differences in key demographic or other baseline variables. Because random assignment produced satisfactory equivalence of the groups, no demographic variables were used as covariates because they were not correlated with the outcomes. For this reason, we reported the demographic characteristics for the total sample rather than by group (see Table 1).

Analyses of research questions. Research Question 1 was analyzed graphically and with a growth curve model with group-by-time interactions to formally assess whether differences are changing over time, also known as hierarchical linear modeling (Bryk & Raudenbush, 1992). We created a Level-1 (repeated measures) model for the trajectory of each participant, and a Level-2 (person level) model to examine differences in experimental versus control trajectories for participants. At Level 1 (repeated measures), we estimated a regression equation for alcohol and drug use outcomes as a function of time. At Level 2 (person level), we estimated whether the intercept and growth parameters of the Level-1 models differed by group. Note that with nine points of data collection, we were able to include participants in this analysis even if they missed as many as one half of the assessments; this was an advantage of utilizing SAS Proc Mixed over repeated measures MANOVA.

Research Question 2 was tested using a sub-sample of participants who were in some type of service-related program, namely, experimental participants who were currently housed by the PTH/housing first program and control participants who reported living in one of the following places at time of the interview: supportive single-room-occupancy (SRO) hotels, drop-in centers, safe havens, detox facilities, crisis housing, intermediate care, boarding houses, transitional housing, group homes, alcohol and/or drug-free facilities, or treatment and/or recovery programs. The rationale for using this subsample for Research Question 2 was to "level the playing field" in terms of including only housed study participants—those in shelters, incarcerated, or on the streets were considered less able to avail themselves of such services. Because participants' residential status changed from one time point to the next, the subsamples also changed; we, therefore, had to conduct separate *t* tests for each time point instead of SAS Proc Mixed.

Perhaps it is not surprising to note, sample sizes varied considerably in this analysis across the nine points of data collection (every 6 months for 48 months). Thus, control group sample sizes ranged from a high of 126 at baseline to a low of 53 at 24 months. Similarly, experimental group sizes ranged from a high of 99 at baseline to a low of 35 at 12 months. In addition to the analysis decision to include only individuals who were housed at each specific time of

TABLE 1: ***Participant Characteristics***

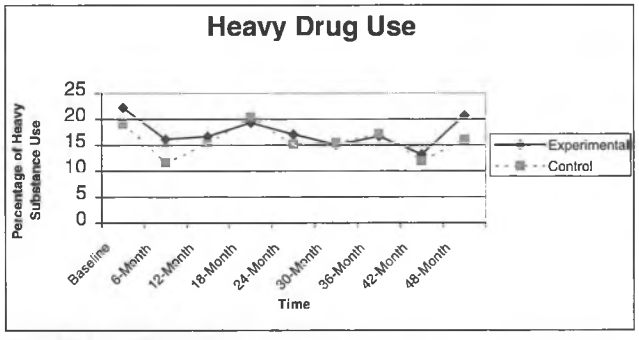

Figure 1: Heavy Drug Use, Baseline to 48 Months

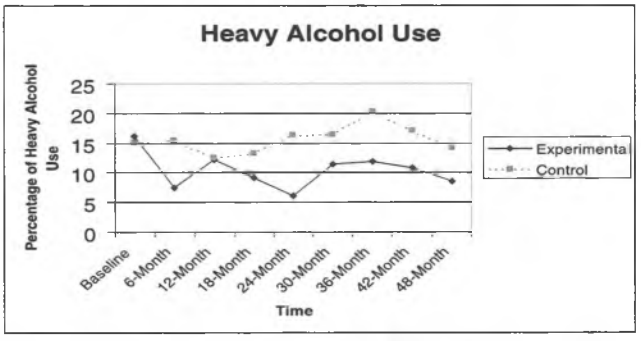

Figure 2: Heavy Alcohol Use, Baseline to 48 Months

data collection, samples were reduced because of study dropout, no-shows, incarceration, or other forms of institutionalization. PTH (experimental) participants were not considered "housed" if they were institutionalized even though they had access to housing on discharge. Because of these multiple group comparisons, a more conservative significance level was applied using a Bonferroni-corrected alpha of .006.

RESULTS

Description of the Study Sample

As can be seen in Table 1, the sample consisted of 173 men (76.9%) and 52 women (23.1%) with an average age of 41.5 years. Most of the participants (69.2%) had never been married. Sixty-three (28%) participants identified their race as White, and 90 (40%) identified their race as African American. Twenty-three (10.3%) participants did not go beyond eighth grade in their education. Among Axis I diagnoses, psychotic disorders were dominant (53.8%).

Thirty nine (17.6%) of the participants reported becoming homeless before age 18 yrs. The average age at which participants reported experiencing homelessness for the first time was 29.5 yrs (age range was 5 to 64 yrs). The longest period of time homeless was an average of 4.4 years with a median of 3 years. The majority (50.1%) of the participants lived on the streets or public place or in a drop-in shelter at time of the baseline interview, and 36% (n = 81) were living in a psychiatric hospital. According to their psychosocial histories, 90% had substance use disorders either in the past or currently. At the study's end at 48 months, housing first clients were stably housed 75% of the time during the previous 6 months compared to 50% of the time for treatment first clients (L. Gulcur, personal communication, July 25, 2005).

Group Differences in Alcohol and Drug Use

To answer Research Question 1, SAS Proc Mixed was utilized to test whether there were changes in reported drug and alcohol use over time. Because of low reported levels of drug and alcohol use, the "heavy use" variables were analyzed and predicted by time, group assignment, and the Time × Group Assignment interaction. As can be seen in Figures 1 and 2, none of the parameters were significant: Reports of drug use remained constant during the 48 months of the evaluation project, the groups did not differ from each other, nor were there differences in their rates of change over time. The same predictors were used to examine change in alcohol use over time, and again, none of the parameters were significant. However, there was a visual trend indicating that the PTH group used less alcohol than the control group.

Group Differences in Substance Treatment and Psychiatric Services Utilization

Substance treatment utilization showed notable differences at 6 months (p = .012), 18 months (p = .021), 24 months (p = .025), 36 months (p = .006) and 48 months (p = .014) with the control group members showing higher utilization (see Figure 3). With the Bonferroni correction, these differences were significant only at 36 months. Control groups members were somewhat higher utilizers of mental health treatment though the differences were statistically significant only at 48 months (p = .003; see Figure 4).

Discussion

The above results extend those cited earlier (Tsemberis et al., 2004) to an additional 2 years of data collection. We

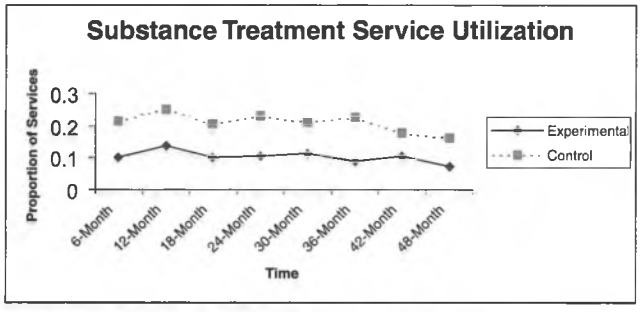

Figure 3: Substance Treatment Service Utilization, Baseline to 48 Months

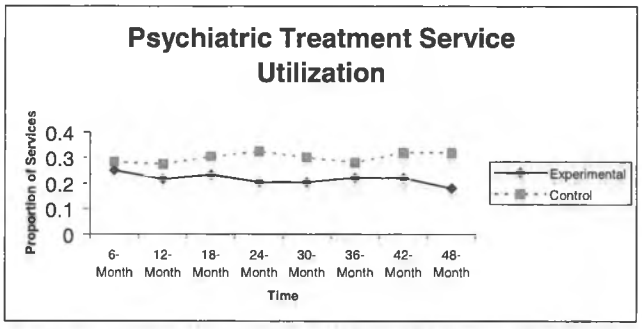

Figure 4: Psychiatric Treatment Service Utilization, Baseline to 48 Months

note the continued absence of group differences in alcohol and drug use, though with a nonsignificant trend toward lower alcohol use by the housing first group. The lack of compliance with sobriety requirements by a significant proportion of the treatment first group—now extending to 4 years' duration—is an indication that such strictures fall short in bringing about abstinence among consumers whose primary need is for housing (Watkins, Shaner, & Sullivan, 1999). Although substance use was almost certainly underreported by members of both groups, it is likely to be greater among those in treatment first because the adverse consequences of any admission of substance use are greater for them.

The treatment first group's higher use of substance abuse treatment services during the 48 months of the study must be considered in this context in which service use is linked to housing. It is not unusual to see clients continue to use drugs or drink surreptitiously even while attending treatment groups (Wolford et al., 1999). Our findings that treatment first clients did not reduce substance use and had comparably greater use of substance abuse and mental health services underscore this possibility.

Access to and availability of such services might influence these findings aside from program philosophies and requirements. However, it is useful to distinguish between services that are available versus those that are required. Housing first participants had an array of services available to them but were not required to use them. Control participants were required to use certain services (e.g., detox, 12-step groups, day treatment) to maintain their housing and presumably had access to them. Given the systemic factors influencing an individual's ability and willingness to seek help for mental health and substance abuse problems, our findings of "no significant difference" in substance use despite lower treatment service utilization and no program-specific restraints on substance use connotes clinical and programmatic significance favoring the housing first approach.

Limitations of the Study and Implications for Future Research

Despite a rigorous experimental design, low attrition rate and the use of standardized measures known for their reliability among persons who are homeless with mental illness, the current study is subject to concerns about accuracy in recall and social desirability bias. Such concerns are common to studies using self-report measures (Calsyn, Morse, & Klinkenberg, 1997) but are especially pertinent given the complex interplay of mental symptoms, drug effects (illicit and prescribed), and the severe deprivations of homelessness. If a man who is homeless is taken to a hospital emergency room disheveled, incoherent, and violent, he could be psychotic, high, or both. When it comes to substance abuse and psychiatric medication adherence, study participants may have a number of reasons for memory loss, misunderstanding Likert-type questions, or deliberately misleading researchers (Wolford et al., 1999).

In the current study, the thresholds selected as indices of a substance abuse problem do not necessarily square with providers' perceptions (Drake et al., 1991) nor should they be construed as clinically significant. In addition, the lower overall rates of substance use reported in this sample do not conform to estimates from previous sources. It is possible that this discrepancy is because of measurement bias or deliberate underreporting. As well, previous estimates may have been higher because of their reliance on persons who were dually diagnosed and homeless rather than those enrolled in services as in the current study. The absence of verification measures (e.g., urine toxicology tests) makes it impossible to draw definite conclusions about these reported rates.

Concerns about inaccuracies in detecting substance use are widespread in research dealing with problems of persons with severe mental illness. Yet Wolford et al. (1999) were surprised to find that self-report was superior to laboratory tests and clinical exams in a controlled evaluation of detection methods with this population. Although beyond the scope of this article, methodological problems related to accuracy in detecting and diagnosing substance abuse continue to challenge clinicians and researchers alike (Calsyn et al., 1997; Wolford et al., 1999). The current study's reliance on psychosocial histories and clinic records, rather than formal *DSM* diagnoses (Axis I or II) limits our capacity to analyze or compare findings based on *DSM* criteria. However, we are reasonably certain that the Axis I eligibility criteria were met.

Given the unquestionable negative effects of drug and alcohol abuse on rehabilitation of persons with mental illness, it is imperative that researchers pursue a number of avenues for understanding the beginning and ending of substance abuse among individuals in this population (Hohmann & Shear, 2002; Ridgway, 2001). To this end, the NYHS investigators and the first author have embarked on a longitudinal qualitative study designed to address this gap in knowledge by asking consumers about their histories of substance use and experiences in the service delivery system.

Beyond methodological improvements, future research is needed on supported housing in general (and housing first programs in particular) to compare outcomes across different settings and geographic areas (Mares, Kasprow, & Rosenheck, 2004). Currently, the PTH program is being replicated in a number of cities (Anderson, 2005), and plans for formal evaluations of the replicated model are under way.

Implications for Practice and Policy

The results of the current study show that individuals with severe mental illness and substance use problems do not have to undergo mandatory treatment to be able to live independently in the community. Moreover, consumer-driven programs that practice housing first and harm reduction are not linked to increased substance use despite the absence of restrictions. The current study has also revealed consistent (and probably underreported) use of illicit substances by individuals enrolled in treatment first programs despite abstinence requirements.

Our findings have distinct relevance for practitioners charged with engaging and retaining clients who are homeless with mental illness in care. Thus, the one-size-fits-all assumption that mental disorders and homelessness cannot be addressed until a client is clean and sober is no longer valid. Indeed, engagement and retention may be far more effective when clients who are dually diagnosed are able to actively participate in their own treatment decisions.

Yet long-held beliefs are difficult to change. Research has shown that consumers who are dually diagnosed and homeless prefer independent living while clinicians recommend supervised congregate housing (Schutt, Weinstein, & Penk, 2005; Watkins et al., 1999). Although the landscape of mental health and homeless policies is continually changing (McGray, 2004), there is a marked lag in implementation of empirical findings in policy and practice (Tsuang et al., 2003). Even individual components taken separately from housing first "packaging" (e.g., harm reduction and integrated treatment) remain far less common than treatment first and abstinence-oriented approaches. Organizational cultures, funding streams, and a conservative sociopolitical climate present obstacles to change and have the ultimate impact of restricting consumer choice (Tsuang et al., 2003).

As part of a federally funded national demonstration project, the NYHS was intended to inform housing and treatment policies for this deeply vulnerable population. Millions of public and private dollars are spent each year on treatment for persons with mental illness, and services for persons who are homeless have expanded exponentially (McGray, 2004). For example, the New York State Office of Mental Health has an annual budget of $5.6 billion, yet a small fraction (about $6.5 million) is dedicated to supported housing initiatives.

Further support for housing first approaches comes from comparative cost analyses. A groundbreaking study released in 2001 documented substantial cost savings from community-based care compared to shelters, jails, and hospital beds (Culhane et al., 2001). Because "community-based care" encompasses many noninstitutional approaches, future policy decisions to redirect public funds toward more effective alternatives will invariably also consider costs. Annual per capita costs of the PTH program are $22,500 compared with $40,000 to $50,000 for treatment first congregate housing programs, $85,000 for a jail bed, and $175,000 for a state psychiatric hospital bed (Anderson, 2005).

Social work practitioners, policy makers, and educators can benefit from these findings as some of the strongest support for "evidence-based practice" in housing and services for persons who homeless with mental illness. As the largest single group of mental health practitioners

and a significant part of the substance abuse treatment workforce, social workers play a critical role in implementing best practices for this vulnerable population.

Heartened by results showing that housing first leads to residential stability even for those considered least capable of benefiting, we end on a note of optimism that future research will shed additional light on the complex dynamic surrounding decisions of individuals who are homeless about substance use and the many other dimensions of successful recovery from mental illness. In this context, program philosophies favoring choice over restrictions and empowerment over compliance deserve consideration as not only effective but humane.

HOUSING FOR HOMELESS ALCOHOLICS CAN REDUCE COSTS TO TAXPAYERS

JAMA study finds drinking goes down even if residents are allowed to drink

Seattle, WA, March 31- Providing housing and support services for homeless alcoholics costs taxpayers less than leaving them on the street, where taxpayer money goes towards police and emergency health care. Stable housing also results in reduced drinking among homeless alcoholics, according to a Seattle-based study published today in the *Journal of the American Medical Association (JAMA)*.

The study found that the program saved taxpayers more than $4 million dollars over the first year of operation. During the first six months, even after considering the cost of administering housing for the 95 residents in a Housing First program in downtown Seattle, the study reported an average cost-savings of 53 percent -- nearly $2,500 per month per person in health and social services, compared to the costs of a wait-list control group of 39 homeless people.

"Our study suggests that homeless alcoholics who qualify to take part in Housing First can stay out of jails and emergency rooms, and cost the taxpayer a lot less money as a result," said Mary E. Larimer, PhD, professor of psychiatry and behavioral sciences and adjunct professor of psychology at the University of Washington and lead author of the study. "We also found that these benefits increase over time and that they are possible without requiring that participants stop drinking. And yet, the longer the participants stay in the housing program, the less they drink."

"The Housing First model was developed in response to the problem of long-term homelessness among those living with severe mental illnesses and substance abuse problems," said William G. Hobson, a co-author on the JAMA paper and executive director of Downtown Emergency Service Center in Seattle. "In most US cities, people with behavioral health disabilities die on the streets far more frequently than any other subset of the homeless population. Before they die, they use large amounts of taxpayer-funded services in our healthcare and criminal justice systems. The housing program, known in Seattle as the 1811 Eastlake project, was created to stabilize people and stop them from endlessly cycling through emergency rooms, prisons and other crisis institutions, reducing the amount of taxpayer money spent on them."

The Housing First approach offers stable housing to chronically homeless, alcohol-dependent individuals without requirements of abstinence or treatment. It is being implemented in major cities throughout the United States. Initiatives that have adopted the comprehensive model have been criticized for allowing enrollees -- virtually all with severe substance abuse problems -- to continue to consume alcohol in their new quarters. The 1811 Eastlake study, funded by the Substance Abuse Policy Research Program (SAPRP) of the Robert Wood Johnson Foundation,

[redacted]

represents the first US controlled assessment of the effectiveness of Housing First specifically targeting chronically homeless alcoholics.

Researchers began enrolling people for the study and the control group in November 2005 and finished in March 2007. A list of the most expensive homeless users of health and social services in the community provided the target population from which participants were drawn.

"These findings suggest that stable housing provided to people who are still drinking and addicted to alcohol can reduce their use of crisis services and ultimately their consumption of alcohol," Larimer said, noting that virtually every person invited to participate had agreed to enroll. The study also notes that restrictions on the consumption of alcohol in a housing environment may well prevent those most in need from accepting help.

The wait-list comparison study lasted six months, comparing usage of health and social services of participants in the program to those in the control group. But researchers also followed the enrollees for another six months, looking at the trend in alcohol consumption among residents and comparing their use of services to levels in the year before they enrolled in Housing First. After one year in the program, the 95 participants had reduced total costs relating to their care by more than $4 million compared to the year before.

"Each of them had cost state and local governments an average of $86,062 per year before being housed, compared to an average of $13,440 it costs per person per year to administer the housing program," Larimer said.

In assessing utilization and cost of services, the researchers collected data from jail bookings, days incarcerated, shelter and sobering center use, hospital-based medical services, publicly-funded alcohol and drug detoxification and treatment, emergency medical services, and Medicaid-funded services.

Because healthcare and criminal justice system costs for the participants continued to decrease over time, as did their alcohol use, Larimer says, she and her co-authors concluded that permanent housing may be necessary in order to take full advantage of the cost-savings identified in the study. The authors concluded that several factors were key to the success of the program, including the decision to limit rules and regulations on residents, and to provide them with supportive case managers, as well as easy access to providers of mental health and health care services within the housing program.

The authors started with a list of 388 of the most expensive users of hospitals, jails and sobering centers. The study enrolled every willing candidate until the downtown apartment building was filled up. Hobson said "we only had to offer housing to 79 people to get 75." The waiting list was comprised of others who also wanted the housing.

The Substance Abuse Policy Research Program (www.saprp.org) of the Robert Wood Johnson Foundation funds research into policies related to alcohol, tobacco and illegal drugs.

The Robert Wood Johnson Foundation focuses on the pressing health and health care issues facing our country. As the nation's largest philanthropy devoted exclusively to improving the health and health care of all Americans, the Foundation works with a diverse group of organizations and individuals to identify solutions and achieve comprehensive, meaningful and timely change. For

more than 30 years the Foundation has brought experience, commitment, and a rigorous, balanced approach to the problems that affect the health and health care of those it serves, helping Americans lead healthier lives and get the care they need. The Foundation expects to make a difference in our lifetime. For more information, visit www.rwjf.org .

Rural Alaska Community Action Program, Inc

Anchorage Services Division

MARCH, 2011

Homeward Bound

RurAL CAP's Anchorage Services Division provides services to chronic homeless alcoholics, many of whom have severe mental health and substance abuse problems. Homeward Bound is one of only a few programs in the United States with such comprehensive services as outreach, transitional housing in a 25-bed facility, intensive case management, employment assistance, and public education. In addition, the Anchorage Services Division provides Affordable Housing to low-income people in Anchorage and graduates of transitional housing programs, such as Homeward Bound. It does this by collaborating with a network of housing and alcohol treatment service providers and building and maintaining strong partnerships and linkages. The Anchorage Services Division also serves individuals and families experiencing income limitations by providing affordable housing.

AVERAGE HOMEWARD BOUND RESIDENT

- **78% Alaska Native Male**
- **10 or more years homeless**
- **29 years as an alcoholic**
- **15 or more pickups by Community Patrol in the last year**

Affordable Housing

The philosophy behind the Affordable Housing program is to provide high-quality, affordable housing to formerly homeless, special needs and low income people who "fall through the cracks" after leaving transitional housing and are at risk of becoming homeless again if they cannot obtain permanent housing. Our approach to property management emphasizes personal responsibility, assisting tenants in obtaining supportive services from third-party providers when needed and not judging tenants on past behaviors. We involve tenants in improving and maintaining the property and in reinforcing security and a sense of community.

Housing First

A Housing First approach rests on the belief that helping people access and sustain permanent, affordable housing should be the central goal of our work with people experiencing homelessness. By providing housing assistance, case management and supportive services responsive to individual needs after that individual is housed, communities can significantly reduce the time people experience homelessness and prevent further episodes of homelessness. A central tenet of the Housing First approach is that social services to enhance individual well-being can be more effective when people are in their own home.

Success Stories

Elsie had been living on the streets, since she was 12 years old. Abusing drugs and alcohol, she found her way to Homeward Bound. After graduating from the program, Elsie moved into an affordable housing apartment in Mt. View where she continues to maintain her housing.

Paul, Homeward Bound's first graduate, has been sober for over 9 years. Due to his alcohol use, Paul began to have difficulty holding down jobs and maintaining a stable home. Today Paul has a steady income, a home, a vehicle and the pride of many accomplishments. Homeward Bound is proud to feature Paul in the statewide educational campaign entitled, "You Know Me."

Drucker Foundation, Best Practices

Recognized as an Alaskan promising practice in 2006

Funded By:

Residential Services Specialists: The Heart of Special Needs Housing

The Anchorage Services Division receives funding through the Alaska Housing Finance Corporation for the Special Needs Housing Grant (SNHG). In conjunction with the Alaska Mental Health Trust Authority, this grant provides funding to develop housing for people who otherwise would be homeless.

2010 saw the increase of Anchorage Services Division Special Needs properties (3726 Peterkin St. and 100 Davis St.). This included the addition of two more onsite Residential Services Specialists (RSS). With the upcoming Karluk Manor project, this will increase the RSS staff to five.

Officially, the main task of the RSS is to: "*Promote a supportive and accepting environment for the residents, regularly monitor each resident to assure the residents' needs are met, and provide interventions as necessary, act as the focal point of communication between the residents and other social service agencies. Provide reports to program managers as needed.*"

As a key point of daily contact for most tenants, it takes a lot more than what can be outlined in a job description to accurately portray the role of the RSS's. In addition to training and experience, it requires compassion, patience, empathy, respect and creativity. The Anchorage Services Division is fortunate to have exemplary staff who go beyond the job description and really put their hearts into the care of each tenant.

Gloria Gomez-Villanueva, RSS at Peterkin, tells a story of a tenant, "John," who wanted to learn how to cook a meal. One evening, several months ago, Gloria helped "John" to prepare a full chicken dinner, with all the trimmings, in the kitchen that is in her office. Gloria described how proud and happy "John" was to share his first "home-cooked" meal with her. Today, they have cooking classes twice a week. Gloria also encourages her tenants to attend outings with her such as the movies or Karaoke.

Linda Forrester, RSS at North Lane has several tenants who now join her on regular grocery shopping trips. When in the office, it is common to find tenants seated on the couch watching a movie with the smell of popcorn wafting in the air. More recently, Linda hosted an Autumn barbeque. Many tenants enjoyed the fresh air, sunshine and good food.

Henry Ferguson, RSS at Davis Street, is also well-known for his "world famous" barbeque talents. He also leads physical fitness classes. Equipped with fitness balls, mats and exercise machines, he helps to encourage and strengthen the choice for healthier lifestyles.

To teach people how to navigate day-to-day living takes a special kind of person—with every need being different. Gloria, Linda and Henry are on the front lines every day making the difference.

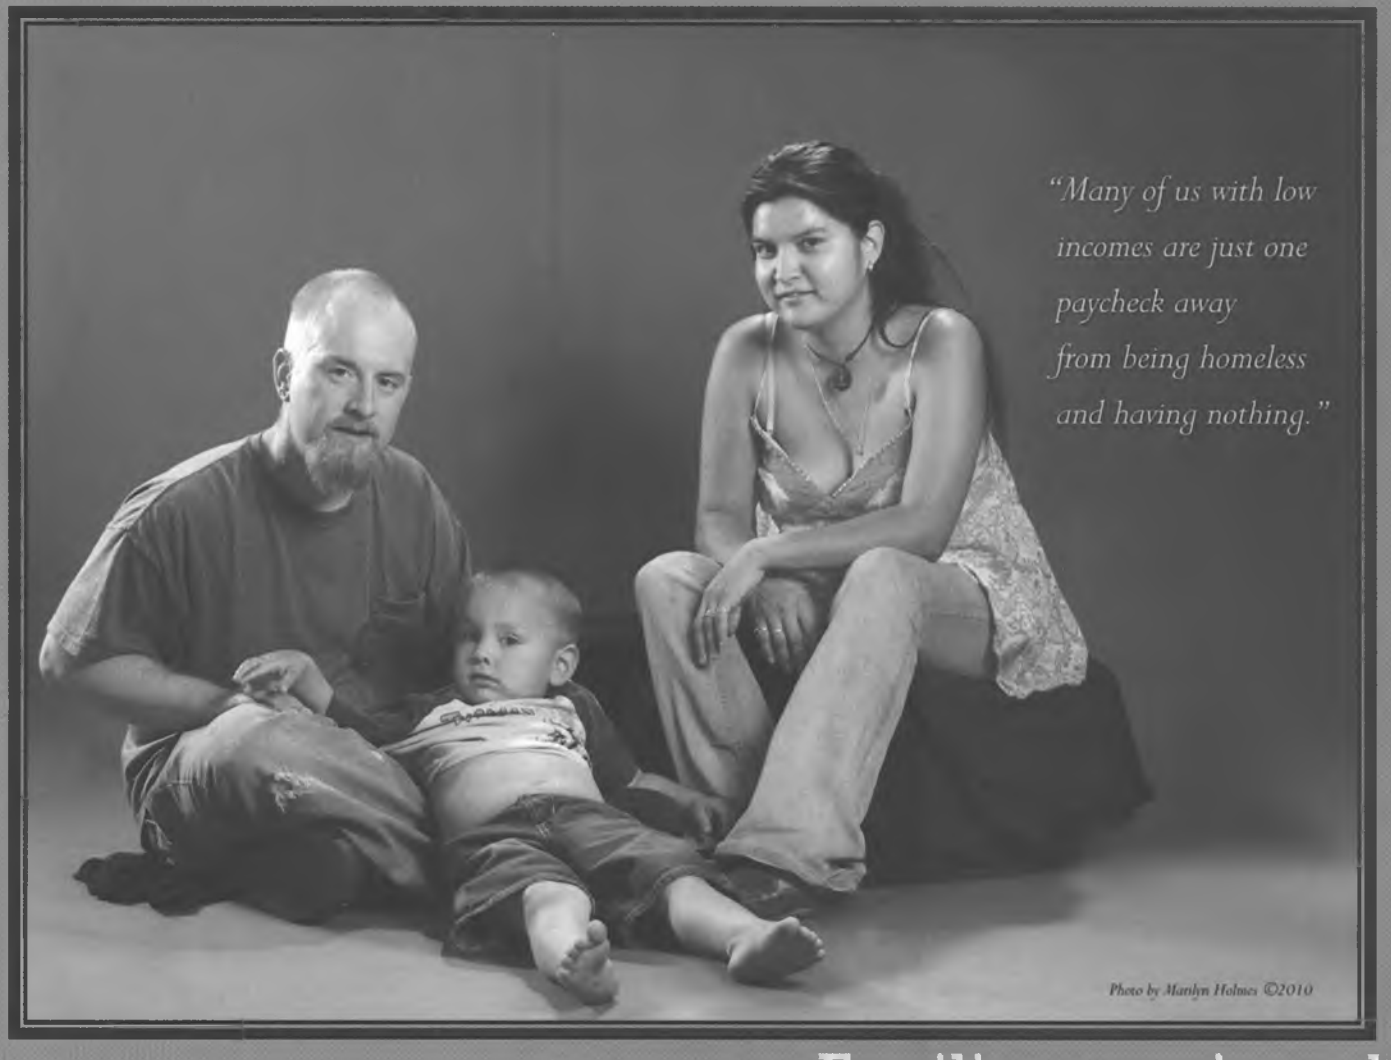
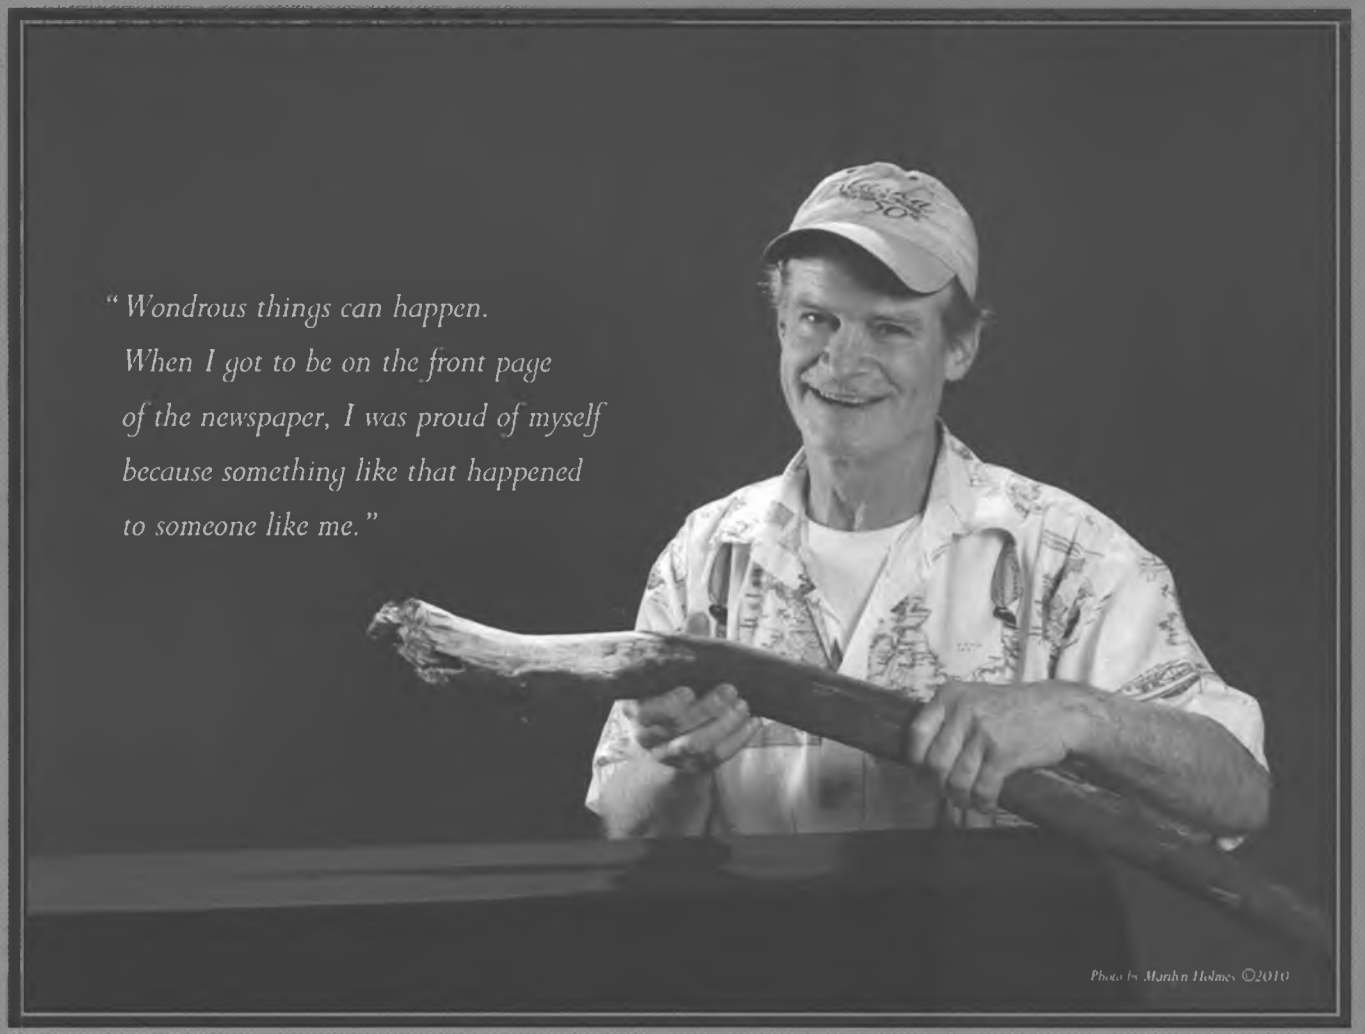
A Snapshot of Who In Alaska Experiences Homelessness



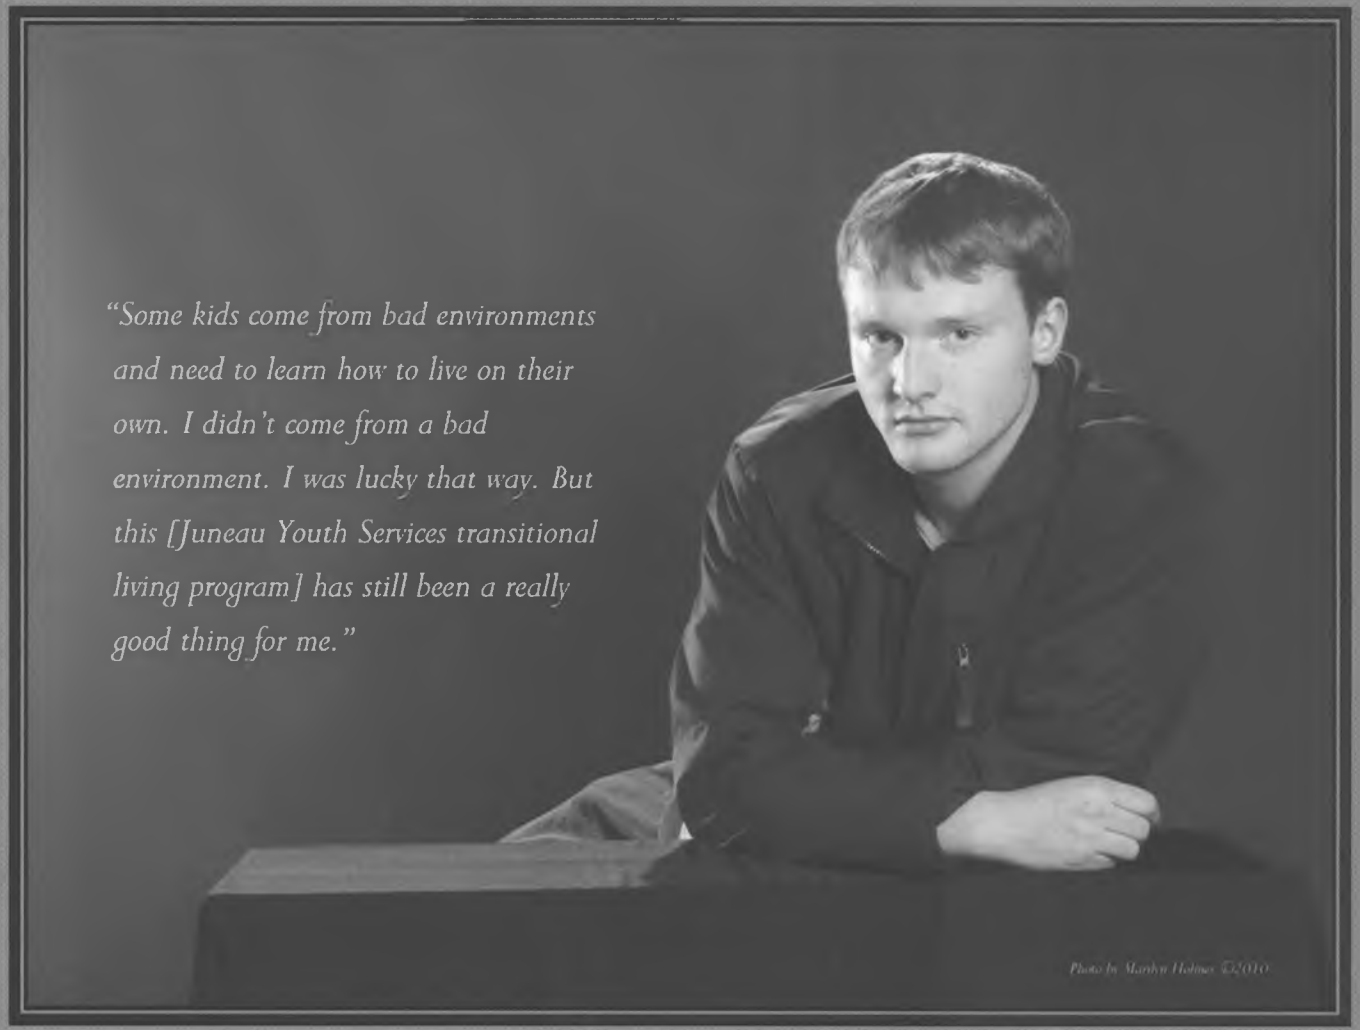
Families experience homelessness

29% of homeless households were families with children (January 2010)
National rate was 23-31% of all homeless households (2008)
4,218 children were identified as homeless during 2009-10 school year



Veterans experience homelessness

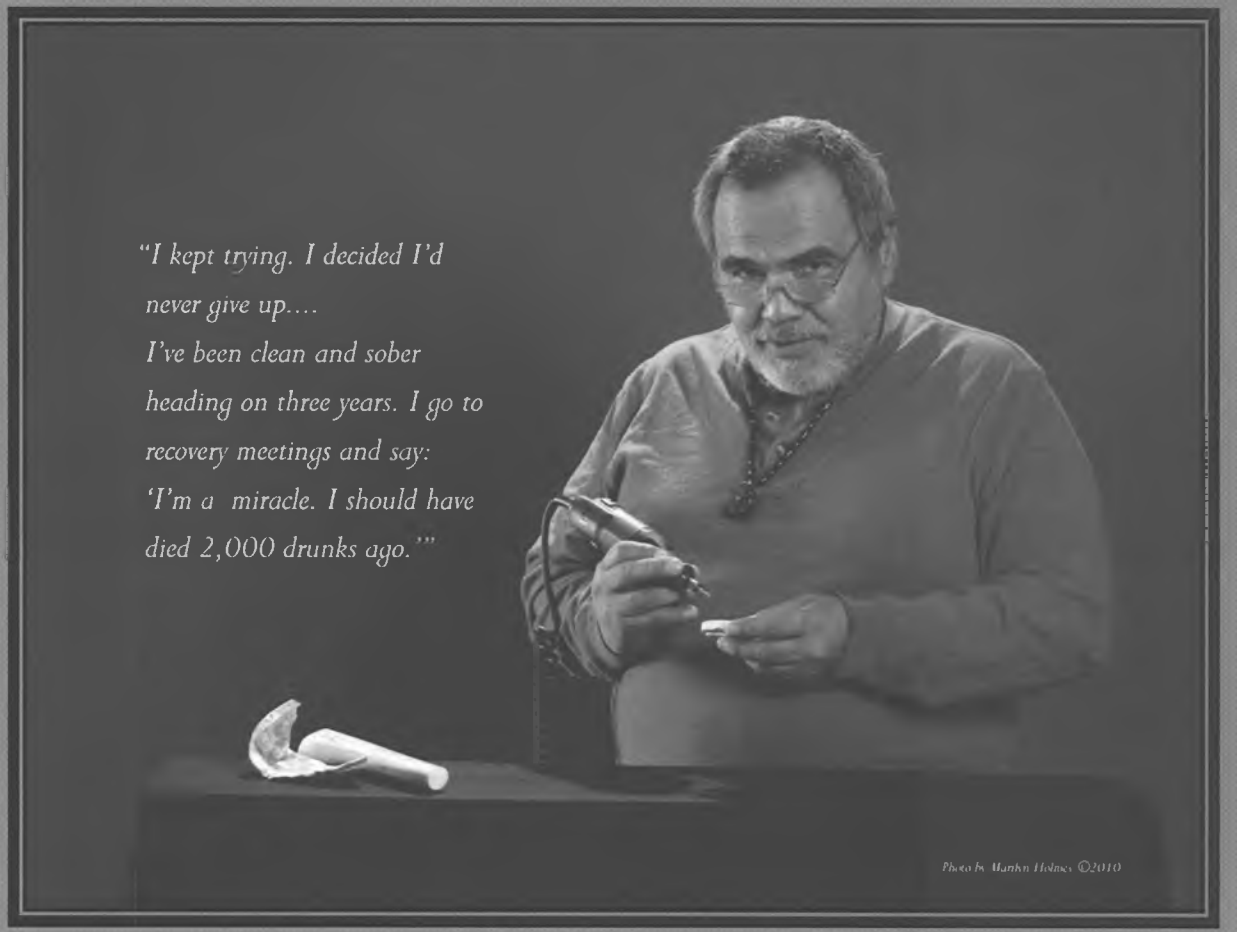
Veterans were 6% of all homeless Alaskans (January 2010)
National rate of homelessness for veterans was 13% (2009)
Nationally, homeless veterans are more likely to be single adult men



Youth experience homelessness

1,306 10th-12th graders were homeless during 2009-2010 school year

Homeless youth are more at risk for suicide, exploitation, mental health disorders, PTSD, and substance use disorders



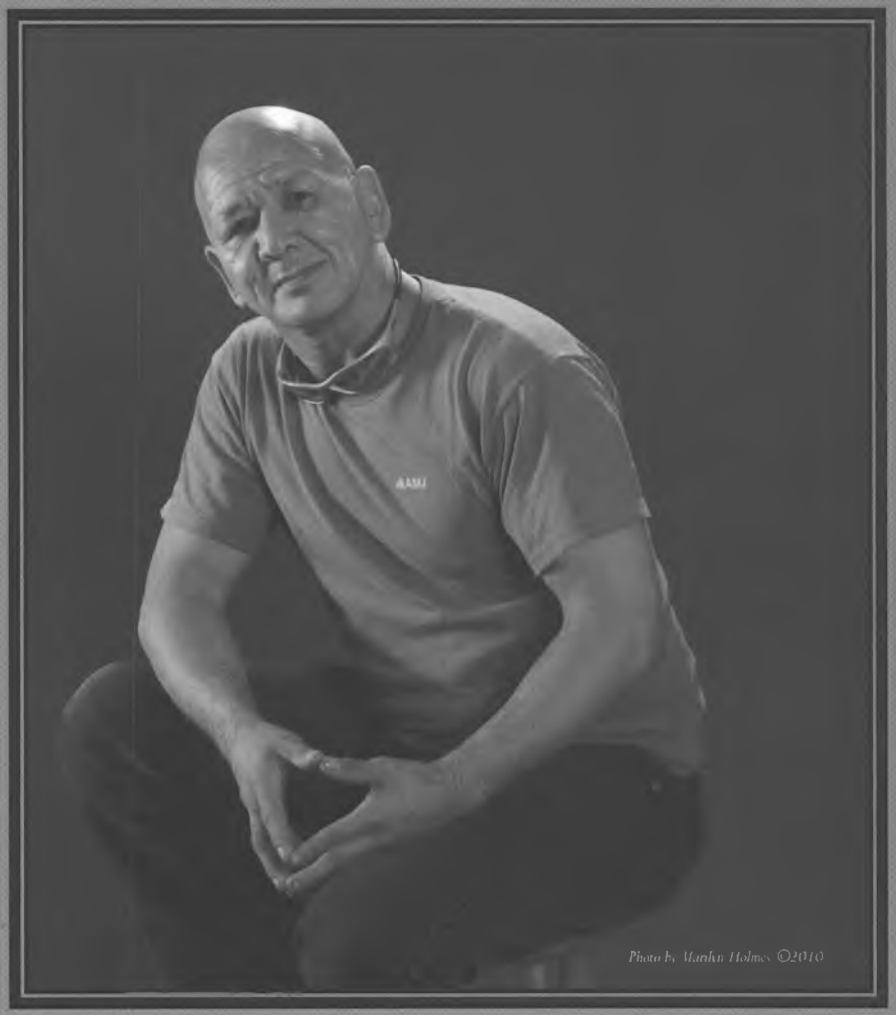
People with substance use disorders experience homelessness

16% of homeless individuals report chronic substance abuse (January 2010)
2.1% higher than reported chronic substance abuse in January 2009

N.B. Many Homeless Connect participants decline to answer, affecting data

Victims of domestic violence experience homelessness

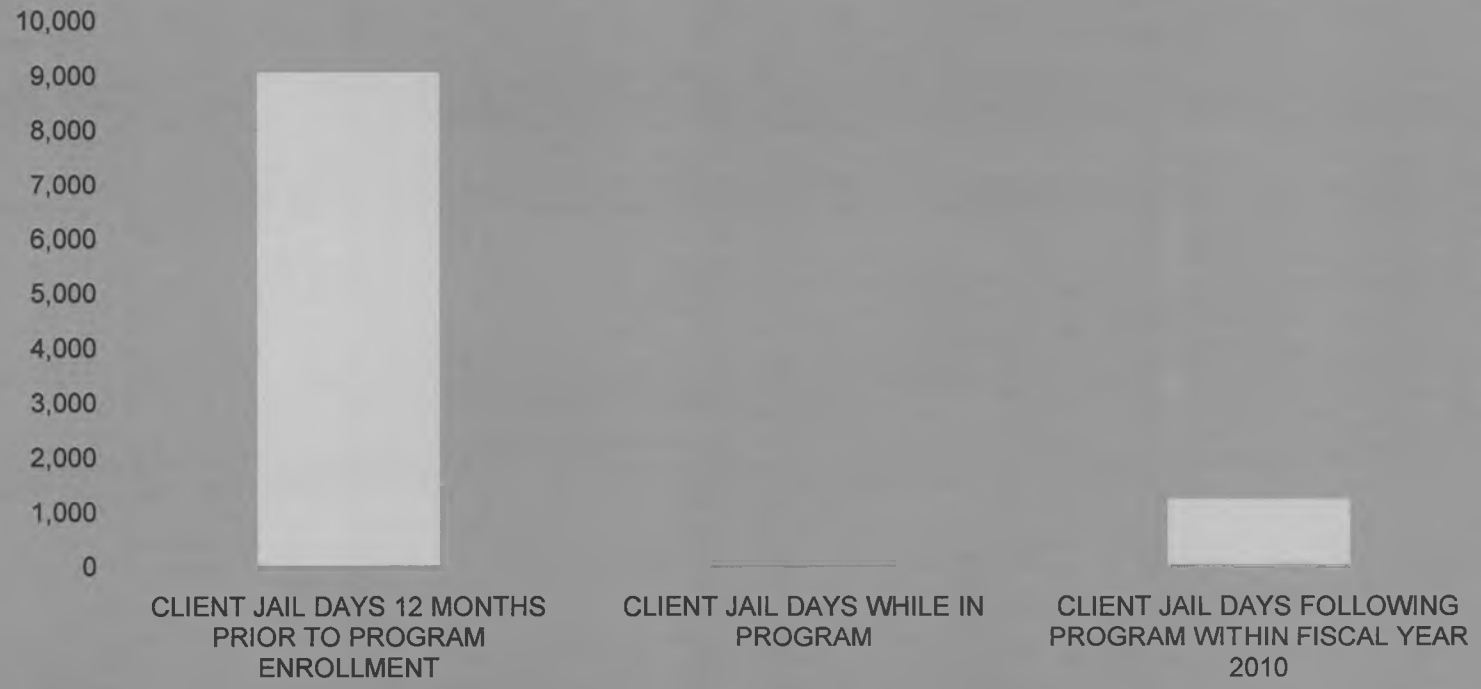
10.7% of homeless people reported past domestic violence (January 2010)
3.6% increase since January 2009
Nationally, 22-25% of homeless women report past domestic violence



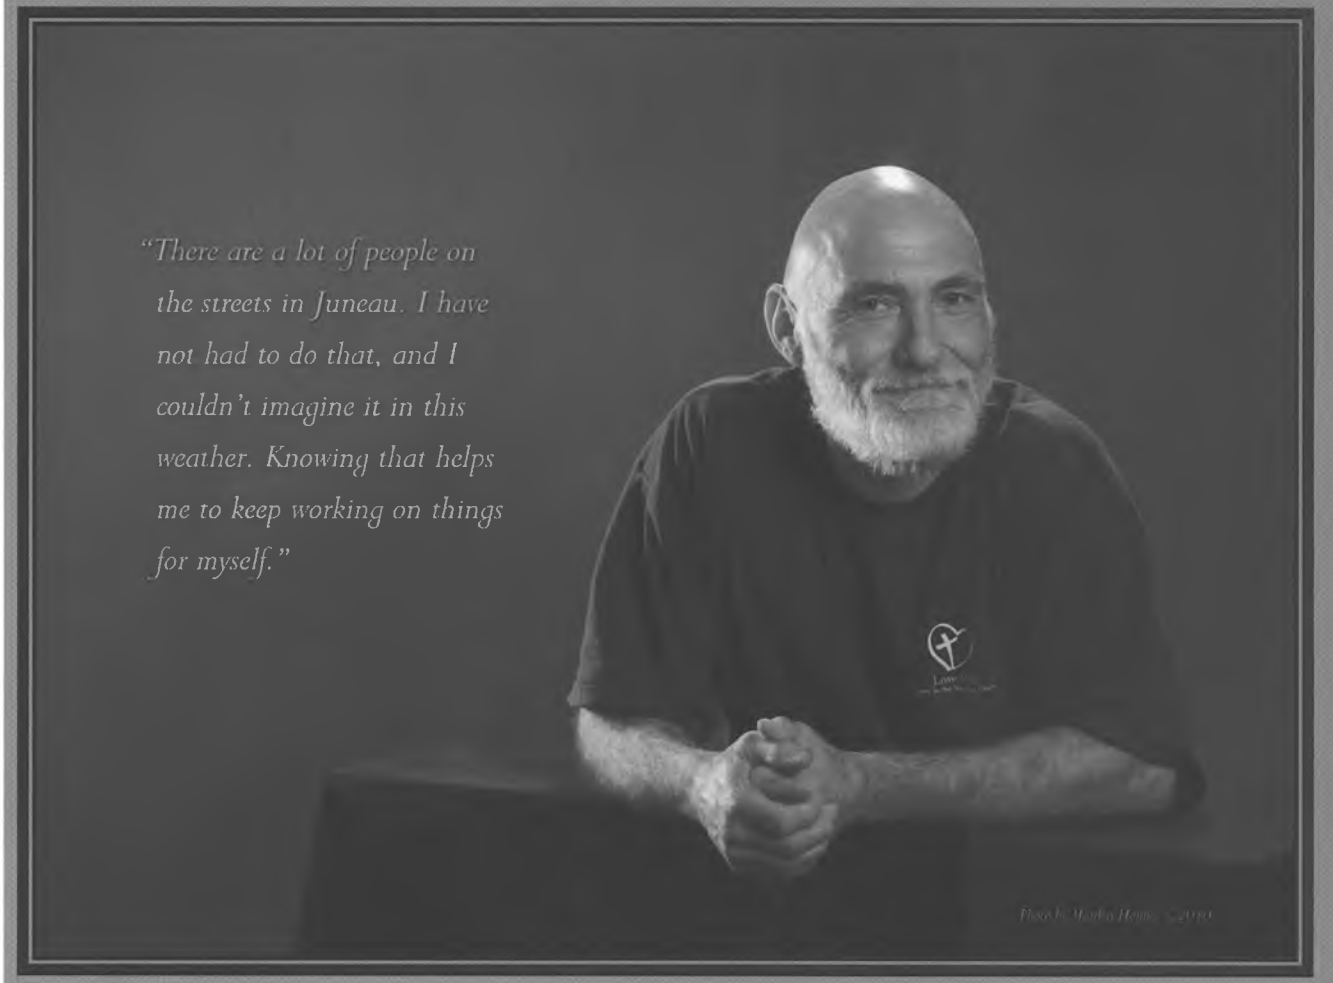
Prisoners experience homelessness before and after incarceration

Nationally, over 50% of homeless people report previous incarceration
20% of prisoners reporting mental illness were homeless before prison

DOC Discharge Incentive Grant Program



N = 43 clients served in Assisted Living Homes with augmented services and reimbursement because their needs were too high for standard assisted living

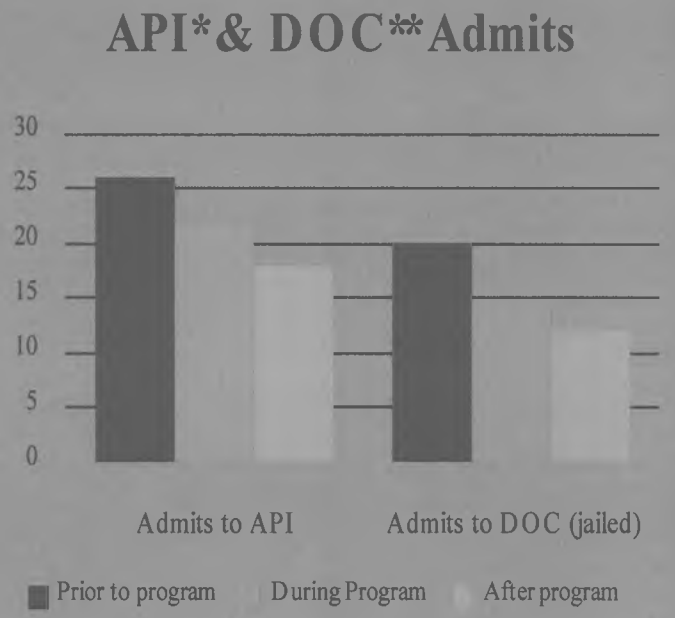


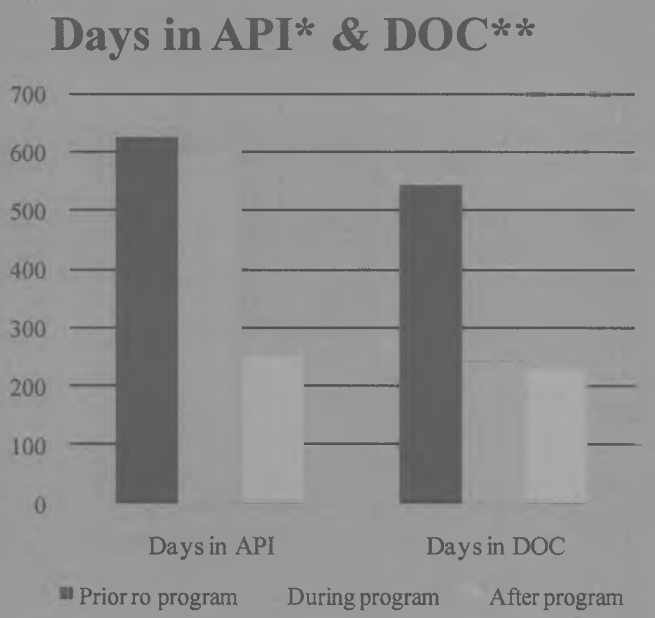
People with serious mental illness experience homelessness

18%of homeless people reported serious mental illness (January 2010)

(N.B. Many Homeless Connect participants decline to answer, affecting data)
Nationally, 26% of homeless people experience serious mental illness

Bridge Home Programs





Outcomes 1 year prior, 1 year during and 1 year after participation in Bridge Home program at Anchorage Community Mental Health Services

Effective Housing Models

- Transitional Housing
  - Covenant House, Anchorage –Juneau Youth Services, Juneau
- Prioritizing by Vulnerability
  - Common Ground, New York City
- Supportive Housing for People Experiencing Serious Mental Illness
  - Downtown Assisted Living, Fairbanks – Polaris House & JAMHI, Inc., Juneau - Evans House, Seattle
- Supportive Housing for Chronic Alcoholics
  - Jacob's Place, Sitka – Karluk Manor, Anchorage - 1811 East Lake, Seattle

A Mile From Home

5,281 Alaskans were homeless in 2010.

Agenda

Suzi Pearson, Alaska Coalition on Housing and Homelessness (on-line)

Dan Fauske – Chair of the Alaska Council on the Homeless (state appointed council) and CEO of AHFC and Jim Gurke of AHFC (both on-line)

Mark Romick, AHFC, and Stacy Schubert, AHFC (Voucher Program)

Debe Mahoney and Michael Courtney, Neighbor Works Anchorage (Affordable Housing)

Jeff Jesse or representative of the Mental Health Trust

Representative of Rural Cap

Subject: Focus areas for hearing on Solving Homelessness

Importance: High

Dear Celeste,
Here are my ideas for shaping the 1 ½ hour hearing on Solving Homelessness.

I hope this is helpful. I can be available at any time today through Wednesday as I fly out of state Wednesday night. After Wednesday, if you need further brainstorming, I would suggest contacting our Division Manager, Ken Scollan. He will be presenting in Juneau and has a great deal of experience in the areas of housing and homelessness and knows all of the presenters.
I have copied him on this email and his direct line is 865-7507.

Focus areas for hearing on homelessness

- **Each agency has a total of 18 minutes to present regardless of the number of presenters for that agency**
- **Each agency describes what they do related to housing and homelessness**
- **Provide a description of the recipients utilizing their services (eligibility requirements, demographics, etc.)**
- **Each agency needs to describe the gaps or barriers to meeting the need for housing from their perspective**
- **Fully describe to the legislators specific types of support needed from the State to bridge these gaps and barriers and solve homelessness in Alaska**

Let me know if this is what you had in mind. I can revise this if you need more information. I am here for several more hours, so just let me know how I can help.

Dear Celeste,

You've done a fabulous job putting this together!

Thank you for the hard work and dedication that you put into your job.

As I mentioned when Sarah Scanlan and I visited you last week, I will be in DC on March 9th, week, but will look forward to hearing from Kenny how it all went.

It looks like this hearing is in good hands!

Cheers,

- David

Subject: Focus areas for hearing on Solving Homelessness

First, thank you for participating in the hearing next **Wednesday, March 9, 1:30 PM** in the Butrovich Room of the Capitol to discuss homelessness – a couple of you will be presenting on-line outside of Juneau. Unfortunately, because of limited time, each agency regardless to the number of presenters for that agency has no-more-than 15 minutes to present information. Please be mindful of the time allotted in order to ensure every presenting agency gets equal time.

Presenters (In order of Presentation):

1. Suzi Pearson, Alaska Coalition on Housing and Homelessness (on-line)
2. Dan Fauske – Chair of the Alaska Council on the Homeless (state appointed council) and CEO of AHFC and Jim Gurke of AHFC (both on-line)
3. Mark Romick, AHFC, and Stacy Schubert, AHFC (Voucher Program) – Juneau

4. Deb Mahoney and Michael Courtney, Neighbor Works Anchorage - Affordable Housing (Juneau)
5. Kate Burkhart, Alaska Mental Health Board and the Advisory Board on Alcohol and Drug Abuse – (Juneau)
6. Kenny Scollan, Rural Cap – (Juneau)

Focus areas for hearing on homelessness

- **Each agency has no-more-than 15 minutes to present regardless of the number of presenters for that agency**
- **Each agency describes what they do related to housing and homelessness**
- **Provide a description of the recipients utilizing their services (eligibility requirements, demographics, etc.)**
- **Each agency needs to describe the gaps or barriers to meeting the need for housing from their perspective**
- **Fully describe to the legislators specific types of support needed from the State to bridge these gaps and barriers and solve homelessness in Alaska**

We will have a computer and projector in case you need one. However, you will need to let me know if you plan on using it – and remember, please be mindful of your time. If you have handouts, please bring seven copies for the members. If you email your presentation to me by Wednesday of this week, I can make the copies for you. If you have questions, please let me know by 5 PM tomorrow. I will be out of the office tomorrow evening, returning on Monday, March 7. Thank you.

Subject: RE: HOMELESSNESS PRESENTATION BEFORE THE SENATE HEALTH & SOCIAL SERVICES COMMITTEE

Hi Celeste,

I wanted to touch base with you on the presentation on homelessness. We are compiling some information on homelessness and Trust beneficiaries for the committee hearing to provide to you. I'm wondering if you have a final list of people who will be presenting? This will help us tailor our information on topics that are not covered by other partners.

One other update: Jeff was unable to cancel his trip out of state over this time, so we have asked our partner, Kate Burkhart at the Alaska Mental Health Board and the Advisory Board on Alcohol and Drug Abuse to present on this day. Kate and her staff have been very involved with our housing initiative and she will be knowledgeable of the area for the committee report.

I look forward to talking with you more about the hearing. However, I wanted to let you know that I am leaving town tomorrow evening, but I have copied our partners on the presentation here so you have someone to connect with in my absence.

Thank you again for your work in this area, Nancy

Celeste,
Thanks to you for organizing this session and to the Senator for the opportunity to present the work that the Trust is doing in this critical area.

I am out of town for the date identified, however, our team will be happy to meet and provide materials. I am copying our CEO who will also be a contact for the hearing and who may be able to present in my absence.
I will contact you on Tuesday to confirm and to seek additional information on the focus of the session.
Nancy

Nancy,
Hello. I'm Celeste Hodge, Committee Aide to the Senate Health & Social Services Committee (SHSS) chaired by Senator Davis. As most in this state, Senator Davis is very concerned about the homeless situation in Alaska and asked me to organize a SHSS meeting to hear concerns and statistics around homelessness and current solutions and possibilities for the future. The meeting is set for Wednesday, March 9, 1:30 PM in the Butrovich Room of the Capitol. Suzi Pearson, chair of Alaska Coalition on Homelessness suggested I contact you to see if you could provide a brief presentation on the impact of homelessness in our communities. Please let me know of your availability. Once presenters are confirmed, details for the meeting will be emailed to participants. Please let me know if you have questions. Thanks.

Sent: Wednesday, February 16, 2011 4:12 PM
To: Celeste Hodge
Subject: RE: Alaska Coalition on Housing and Homelessness

Celeste,

I would certainly be available to participate but I would have to do it telephonically. I can't come to Juneau that week.

Regarding other agencies to involve, Alaska Housing Finance Corporation has many resources for homeless programs and their voucher program is a critical resource for housing. There are over 4,400 people on the waitlist for these vouchers in Anchorage alone and I think involving them in the conversation of homelessness and affordable housing is critical. Two contacts there are Mark Romick (mromick@ahfc.state.ak.us) and Jim Gurke (jgurke@ahfc.state.ak.us). The CEO of AHFC is Dan Fauske and he is also the Chair of the Alaska Council on the Homeless, a state appointed council.

I would also recommend contacting the CEO of Rural Cap, David Hardenbergh (dhardenbergh@ruralcap.com). They are a statewide organization and provide homeless services in Anchorage.

Another aspect that deeply affects the homeless population is substance abuse and mental health issues. I would recommend either John Sperbeck (jsperbeck@acmhs.org) from Anchorage Community Mental Health Services or Nancy Burke (nancy.burke@alaska.gov) from the Alaska Mental Health Trust to discuss the impact of these issues in our communities.

What specific issues around homelessness do you want to address? I would highly recommend a discussion of affordable housing in our communities and how the lack of it leads to homelessness. I would suggest that I go first with some of the concerns and statistics around homelessness and then the others can talk about current solutions and possibilities for the future.

I hope I'm not overstepping boundaries with my suggestions. It is such an important topic and I appreciate the Senator's interest in discussing it.

Please let me know how I can help. Thank you so much for the opportunity.

Best regards,

suzi

Suzi,
Hi. I am Celeste Hodge, committee aide to the Senate Health and Social Services (SHSS) Committee that Senator Davis chairs. I understand you are the chair of the Alaska Coalition on Housing and Homelessness. I'm wondering if the coalition is available to provide an update at the March 9 (Wed.), 1:30 PM, Senate HSS meeting in the Butrovich Room. We have one other organization scheduled to present thus far (NeighborWorks Anchoarge). I would like the agenda for this particular meeting to surround Homelessness and will probably invite one or two other groups to present. If you could suggest a couple of other groups to present, that would be great. Please let me know if you have questions. Thank you.

Subject: RE: Follow-up on March 9th Senate Committee Meeting on Homelessness

Hi Celeste,

It was a pleasure meeting with you yesterday!

By way of follow up, I would suggest that you speak with Melinda Freemon, RurAL CAP's Anchorage Services Division Director (wk: 865-7507 cell 529-7911) regarding contact information and areas of expertise for some of the leaders on homeless issues as well as for her input on key areas to discuss during this presentation. Melinda is very knowledgeable and very well-connected on homeless issues, but as I mentioned, she will be out-of-state on March 9th.

The person who Sarah and I suggested for the March 9th presentation is Kenny Scollan, RurAL CAP's Anchorage Services Division Manager (cell 529-2798). Kenny has been managing RurAL CAP's Affordable Housing (72 units) and Homeward Bound (25-bed facility in Mountain View for chronic homeless alcoholics) programs for more than a decade. He is planning to move his office into the Karluk Manor housing first facility when that 46-bed project opens later this year. Kenny is a strong public presenter and he also knows many of the leaders and issues around homelessness in Alaska. I will encourage Kenny to attend the committee meeting in person in Juneau on March 9th if he is able.

Please feel free to call or email both Melinda and Kenny if you don't hear from them first.

Thank you Celeste!

FEB 22 2011

Hi Celeste!

I'm sure Debe will be responding, but I know she doesn't get cell service where she's at in Arizona. We will be putting a power point together this week and will be sure to get it sent to you within the timeframe you need it. I will be working with Brian on the presentation and will be sure to address our efforts to reduce homelessness!

Have a wonderful morning!

Mike

Subject: HOMELESSNESS PRESENTATION BEFORE THE SENATE HEALTH & SOCIAL SERVICES COMMITTEE

Debe,
Hello. As most in this state, Senator Davis is very concerned about the homeless situation in Alaska and asked me to organize a SHSS meeting to hear concerns and statistics around homelessness and current solutions and possibilities for the future. The meeting is set for Wednesday, March 9, 1:30 PM in the Butrovich Room of the Capitol. As Executive Director of NeighborWorks Anchorage, I am inviting you to participate by presenting a ten minute overview of NeighborWorks Anchorage, to include information on NWA's affordable housing efforts. Also, at the appropriate time, you'll be invited to discuss possible solutions to the homeless situation. I also need to know if you will need to utilize a computer/projector. If you have a PowerPoint presentation, please email the presentation to me at least one week prior to the meeting. Once presenters are confirmed, details for the meeting will be emailed to participants. Please let me know if you have questions. Thanks.

Subject: PRESENTATION TO SENATE HSS ON MARCH 9, 2011

Stacy,
Thanks for contacting me to follow-up on the request for a representative to speak at the upcoming Senate Health and Social Services Committee on March 9, 1:30 PM in the Butrovich Room. Please let me know if you were able to locate someone to represent AHFC during the meeting either in person or via teleconference. Specifically, we would like to hear what AHFC is doing as it relates to homelessness and the voucher program. As it relates to the Alaska Council on the Homeless, the state appointed council chaired by Dan Fauske, the committee would like to hear an update of the council by a representative of the council. Please let me know if you have questions. Again, thanks.

Subject: RE: I was thinking about NeigborWorks last night while sleeping and wondered if the organizatin ever presented before the legislators?

I was hoping it could be sooner since we will have limited time for presentations in March as Bills will generate much of our agenda as we move closer to the end of the session. With that being said, March is still doable. Let me know what you decide and if March 10th would work for you. Remember, our committee meets on Monday's, Wednesday's and Friday's at 1:30 PM. Currently, we are not scheduling meetings on Friday's. Also, I could set the entire agenda around Homelessness and Affordable Housing and have various agencies present information. Just thinking out loud and trying to get NeighborWorks some face time with legislators so that important information about the organization can be shared. Thanks.

That is a great idea! I won't be back in town until March 7th. Would that be too late? I leave tomorrow morning. Mike and I could come down though in March. Perhaps Owen might want to go too.

I think it would be good to present information about the organization to the legislators. What are your thoughts? I could get you scheduled to present in front of the Senate Health and Social Services Committee (HSS) (Chair, Sen. Davis) and connect you to the House HSS committee to possibly schedule during that same time-frame. It's a good way to get the information out about the organization and become known to those that appropriate funds. Let me know. Thanks.

Subject: Re: HOMELESSNESS PRESENTATION BEFORE THE SENATE HEALTH & SOCIAL SERVICES COMMITTEE

Celeste,
Thanks to you for organizing this session and to the Senator for the opportunity to present the work that the Trust is doing in this critical area.

I am out of town for the date identified, however, our team will be happy to meet and provide materials. I am copying our CEO who will also be a contact for the hearing and who may be able to present in my absence.
I will contact you on Tuesday to confirm and to seek additional information on the focus of the session.
Nancy

Nancy,
Hello. I'm Celeste Hodge, Committee Aide to the Senate Health & Social Services Committee (SHSS) chaired by Senator Davis. As most in this state, Senator Davis is very concerned about the homeless situation in Alaska and asked me to organize a SHSS meeting to hear concerns and statistics around homelessness and current solutions and possibilities for the future. The meeting is set for Wednesday, March 9, 1:30 PM in the Butrovich Room of the Capitol. Suzi Pearson, chair of Alaska Coalition on Homelessness suggested I contact you to see if you could provide a brief presentation on the impact of homelessness in our communities. Please let me know of your availability. Once presenters are confirmed, details for the meeting will be emailed to participants. Please let me know if you have questions. Thanks.

Alaska Council on the Homeless

History

The Alaska Council on the Homeless (The Council) is a state-wide council appointed by the Governor of Alaska. It was first established on April 30, 2004 by Governor Frank H. Murkowski through Administrative Order 214. Governor Murkowski appointed a dozen members from state and federal agencies to the Council and charged them with preparing recommendations on how state resources may be directed towards ending homelessness. In his Administrative Order establishing the Council, Governor Murkowski identified the need to develop a statewide plan that would include short-term and long-term strategies to effectively address the problem of Alaska's homeless population. He said the development of the plan should serve to educate all Alaskans about the tragedy of homelessness and engage both governmental agencies and the private sector in finding solutions to this problem. The Council completed its mission in October 2005 by releasing the report "Keeping Alaskans Out of the Cold."

On May 1, 2007 Governor Palin re-authorized the Governor's Council through Administrative Order 236. She made it a more permanent council under the auspices of Alaska Housing Finance Corporation (AHFC). The Alaska Council on the Homeless membership includes representation from AHFC, the Alaska Mental Health Trust Authority, the Alaska State Departments of Education, Public Safety, Corrections and Health and Social Services and six public members from the homeless provider community, rural housing authorities, local government and the real estate industry. The Council's role continues as a public policy forum for recommendations on the use of state and federal resources to address homelessness within Alaska.

Current Activities

During 2008 and 2009, the Council is focusing on the development of a Ten Year Plan on Homelessness. For more information on this plan and its development, check AHFC's Alaska Council on the Homeless:

Keeping Alaskans Out of the Cold

STATE OF ALASKA
REPORT TO GOVERNOR FRANK MURKOWSKI
RECOMMENDED STRATEGIES TO ADDRESS HOMELESSNESS

OCTOBER 2005

Clare House provides temporary, emergency 24-hour shelter and case management for women and women with children.

The Office of
Governor Frank H. Murkowski

Homelessness is a wrenching problem that confronts an estimated 14,000 Alaskans a year, according to this report.

My goals in establishing the Interagency Council on Homeless were to find ways to address the problem, encourage public discussion, and increase Alaskans' understanding of the complexities surrounding homelessness.

The Interagency Council looked at the many causes of homelessness in Alaska. It is no surprise that the primary reason is a change in economic status and the inability to pay increased housing cost.

The council recognized that many government and nongovernment organizations, including community and faith-based groups, are involved in helping. Yet, with all this effort, the problem persists. As a result of their efforts, the council made a number of recommendations for action that can help move toward the elimination of homelessness in Alaska.

My belief is that the best way to help someone meet the basic necessities of life is to have opportunities for job training and hence permanent employment. That is why my priority is creating employment opportunities for Alaskans by stimulating private sector investment through development of Alaska's natural resources.

I am grateful to the Lieutenant Governor, the commissioners, and other executives who served on the panel and produced this report. I thank in particular all of the citizens who participated, presented testimony, and made recommendations to the council.

I encourage Alaskans to read this report to gain insight into the complex problems surrounding homelessness in Alaska and look forward to further work on the recommendations.

Sincerely yours,

Frank H. Murkowski
Governor

Governor Frank Murkowski
Office of the Governor
PO Box 110001
Juneau, Alaska 99811-0001

Dear Governor Murkowski

On behalf of the interagency Alaska Council on Homelessness, I am pleased to transmit to you this report and recommended strategies for addressing homelessness in Alaska. As you know, the members of the council include eight department commissioners, the executive director of the Alaska Mental Health Trust, and two ex-officio members, the Lieutenant Governor and the director of the Alaska HUD office. It was my honor to serve as the chair.

Over the past 17 months, we held a number of public meetings, discussions and hearings to develop this information. Council members were well qualified for the assignment. Each is knowledgeable about the complexities of the state's homeless problem, and each addressed it from a different perspective, based on his or her professional background.

We all agreed that homelessness is a costly and serious problem. It has the potential to become critical in times of a major economic downturn or, conversely, in times of another boom like the state experienced during the 1970s. Council members also agreed that the most cost effective strategy for the state is to prevent homelessness and thereby avoid dealing with its many consequences.

Although dozens of recommendations for a state strategy were discussed, council members agreed to pare the list to a realistic handful considered affordable and ones that could be acted upon relatively quickly. You will find in this report the following recommendations:

1. Support programs that assist low income families to preserve, maintain and weatherize homes and multi-family housing, so the families can continue living in their homes and not become homeless.

2. Expand renter education programs statewide so that new renters, including young people first leaving home and rural residents relocating to urban communities, have an understanding of their obligations as a renter and of the consequences of not paying rent on time or neglecting maintenance needs.

3. Create a working group of representatives from the departments of Health and Social Services, Public Safety and Corrections, the Alaska Mental Health Trust, and local community partners and stakeholders to identify policies and procedures that would provide individuals a well coordinated transition from institutionalization to independent living. Currently, about 5,000 Alaskans are released each year from a state hospital, a correctional facility or a foster care setting into homelessness status.

4. Increase the inventory of affordable housing and thereby ease the burden on community-funded shelter services by reducing homelessness. Accomplish this objective by bringing together a working group comprised of policy makers, local partners, and representatives of housing builders, financiers and providers, land use planners, Native corporations, and community and faith-based organizations to identify housing priorities and regions of the state most in need. The working group would be available to provide counsel and recommendations to the state executive and legislative branches of government.

5. Appoint a steering committee to assist the Governor and Legislature to establish an affordable housing trust that would help the state fund programs that increase the inventory of affordable housing and accomplish the recommendations to end homelessness, identified in this report.

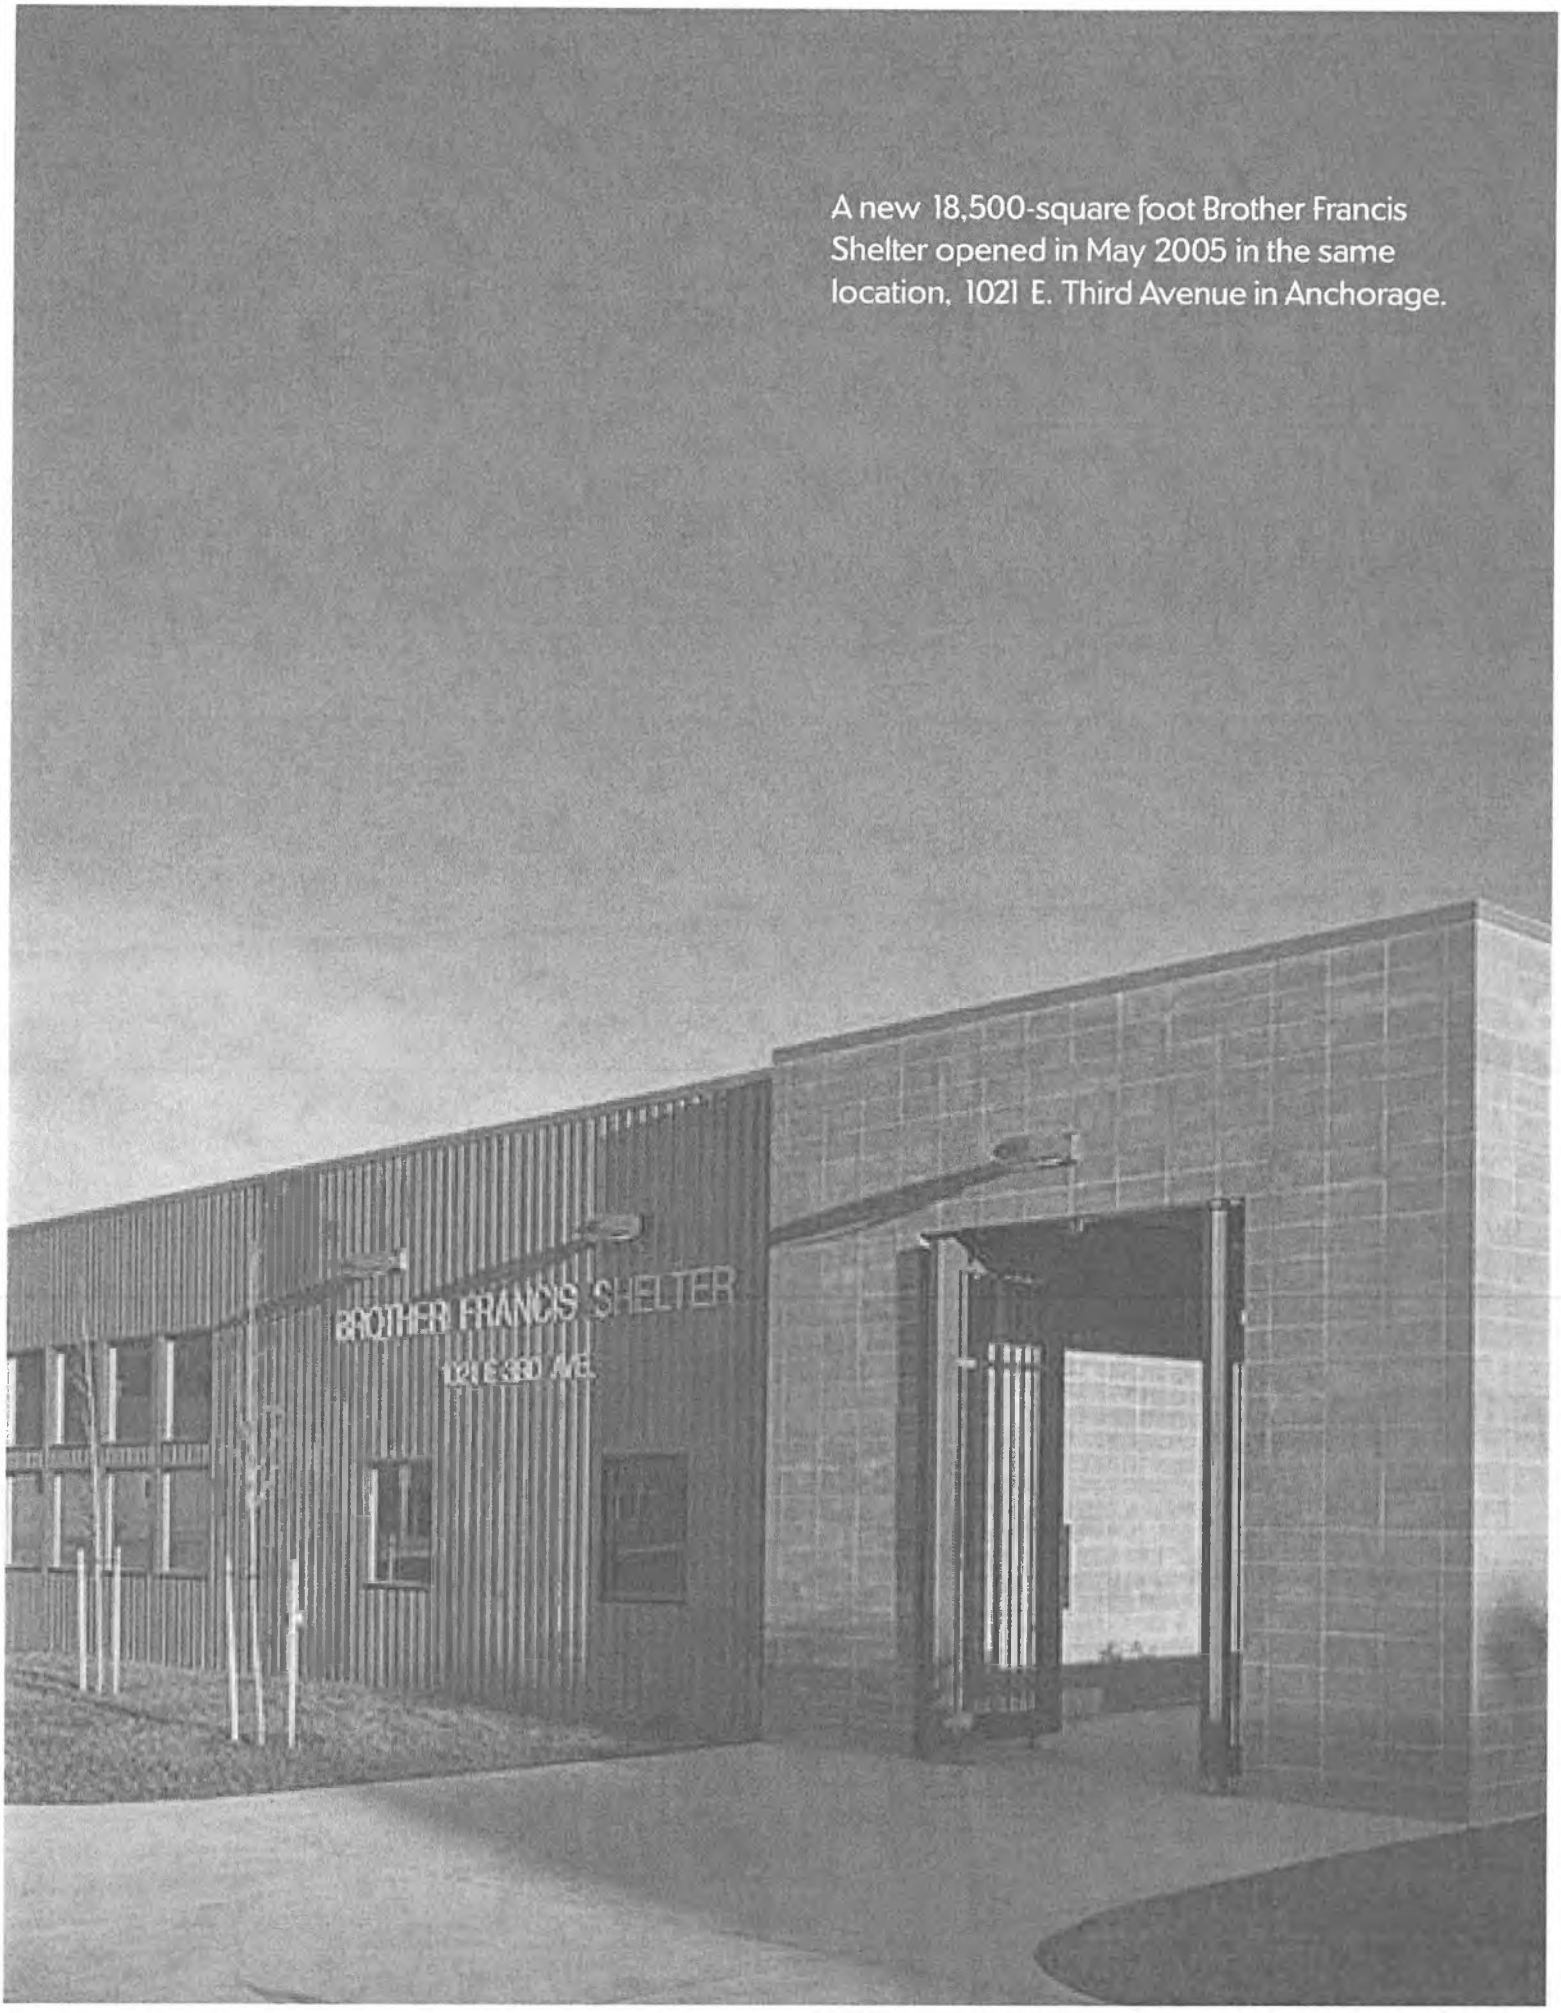
With delivery of this report, the Interagency Council on Homelessness considers its assignment completed, and unless otherwise directed, dissolves. As the administration evaluates these recommendations and contemplates implementation, those of us who served stand ready to provide counsel and assistance, and to serve on working groups that may be formed.

Thank you for the opportunity to serve on the council. It has been a rewarding and enlightening experience for all of us. We hope that the recommendations in the report are of help to you as your administration continues to address the complex problem of Alaska's homeless population.

Sincerely,

Daniel R. Fauske

Dan Fauske
Chair



A new 18,500-square foot Brother Francis Shelter opened in May 2005 in the same location, 1021 E. Third Avenue in Anchorage.

Introduction

It is estimated that 14,000 people experience homelessness in Alaska at some time each year. That's the equivalent of all the people in communities such as Ketchikan or Kodiak or the Bethel region living without housing. Homelessness is a complex problem surrounded by many issues in addition to housing. It is one of the most challenging domestic matters facing Alaska and the nation.

The costs of homelessness in Alaska are enormous – both in terms of human suffering and economic impact. Annually, more than $14 million are spent on homeless services in Alaska, and include assistance with housing, health, education, social services and public safety. A 2003 study of chronic homelessness in Fairbanks, conducted by the University of Alaska Center for Alcohol and Addiction Studies, revealed that more than $40,000 per person was spent in public intervention over a 20-month period.

Statewide strategies to address homelessness were first developed through the Alaska Coalition on Housing & Homelessness. Established in 1989, the Coalition is a partnership of faith-based and community organizations, public agencies and concerned citizens. Urban communities also have established similar networks of local partnerships, and mayoral task forces in several Alaskan communities have studied homelessness over the past 15 years. Despite these efforts, homelessness has continued to grow throughout Alaska.

Faith-based and community organizations over the years have fulfilled a critical role in providing assistance to Alaskans in need. In recognition of this, Gov. Murkowski in 2002 called upon Lt. Gov. Loren Leman to lead a task force that examined issues and ways in which the various organizations might be able to improve delivery of services and how the government might reduce hurdles that hinder this delivery. "This task force surveyed current needs in Alaska and determined that the concern voiced most often was the lack of adequate safe and affordable housing." (Alaska Faith Based and Community Initiatives Task Force Report, February 2004.)

In April 2004, Governor Murkowski furthered his commitment to address the needs of Alaskans by joining 44 other states in appointing an interagency council on homelessness. The Alaska Council on the Homeless is comprised of eight state commissioners (from the departments of Health and Social Services; Corrections; Public Safety; Transportation and Public Facilities; Education and Early Development; Labor and Workforce Development; Military and Veterans Affairs and Commerce, Community and Economic Development) and representatives from the Governor's office, Lt. Governor's office, the Alaska Mental Health Trust Authority (AMHTA) and the U.S. Dept. of Housing & Urban Development (HUD). The governor designated the CEO of the Alaska Housing Finance Corporation, Dan Fauske, to chair the Council and to provide the resources and staff time necessary for the Council to assess the problem and develop strategies.

A two-tiered strategy was adopted by the Council. First, the Council looked internally at the role state government should take. Following that, the Council explored ways to bring together other partners and stakeholders to identify actions that the state, federal, and local governments, along with non-profits, faith-based and private organizations, could take to end homelessness in Alaska.

The Council held a series of six meetings and formal public hearings to gather information and to formulate strategies. All meetings included the opportunity for public comment. Active participation

was also sought from a number of identified partners, including the U.S. Dept. of Veterans Affairs, the Social Security Administration, Alaska Coalition on Housing & Homelessness, Alaska Policy Academy team on Homeless Families and Youth, the Anchorage Mayor's Task Force on Homelessness and representatives of the faith and community-based providers. Meaningful insights were also shared by people who had personally experienced homelessness.

This report examines homelessness in Alaska and offers potential strategies for further consideration. The report, along with other state and local planning documents, will assist stakeholders and policy makers to create a comprehensive statewide action plan to end homelessness.

Overview of Homelessness in Alaska

How does homelessness impact the state?

Homelessness is a costly problem that threads its way throughout state systems. While only a few discrete programs are specifically related to homelessness, the needs of homeless people, families and children intersect among numerous state services. For example, homeless children will often require financial, nutritional and medical support from the Department of Health and Social Services or from state-sponsored social service partners. Additionally, these children will intersect with the Department of Education and Early Development (DEED). Not only does homelessness affect school performance, but it may also cause a reduction or channeling of federal funds for purposes outside the classroom. For example, schools are penalized for poor academic performance, and additional costs are borne by school districts to provide specialized tutoring and to transport homeless children to their home schools, no matter where they currently live in the district. During the 2004/2005 school year, the DEED reported 3,023 children were homeless or residing in inadequate housing at some time during the school term.

More than 3,000 Alaska children were homeless or in inadequate housing during the school term.

State and state-supported agencies address other needs of homeless families, as well. Without adequate housing, family stability becomes precarious. Work, child care and transportation may become tenuous, due to the uncertainty of where the family will be living from one day to the next. State job reemployment services assist these families in rebuilding economic stability, while government supported shelters and case managers are often called upon for transitional support purposes. Homeless families are a priority for public and subsidized housing, and often seek help with securing permanent housing from AHFC or regional housing authorities.

A stay at Alaska Psychiatric Institute costs $732 per day; a trip to a detox center costs $270 per day; incarceration costs $111 per day. By contrast, a supportive housing program costs $70 per day.

The impact of chronic homelessness upon state services is also significant. The underlying issues that result in chronic homelessness lead to crisis and public safety interventions that are especially costly to the State. The cost for a stay at Alaska Psychiatric Institute (API) is $732 per day. A trip to detox is $270 per day and incarceration is $111 per day. Prevention of homelessness is cost-effective. By contrast, placement in a supportive housing program is estimated to be only $70 per day, and can provide early intervention to avoid these additional human and financial costs. Placements in supportive housing may also lead to reductions in the secondary costs of homelessness to the many state, federal and community-based resources.

An estimated 14,000 Alaskans experience homelessness at some point each year.

How is homelessness defined?

The definition of homelessness varies among different federal funding sources. The definition from the McKinney-Vento Act is the most inclusive, and is used in determining eligibility for various health and education programs. The U.S. Department of Housing & Urban Development (HUD) provides a different and more restrictive definition. HUD defines homeless as: "an individual or family who lacks a fixed, regular, and adequate nighttime residence and an individual who has a primary nighttime residence that is

(a) a supervised publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill);

(b) an institution where the person is within one week of discharge with no identified residence or resources to obtain a residence; or

(c) a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings."

The HUD definition is not a perfect fit because it does not address several specific issues surrounding homelessness, such as homeless students or overcrowding caused by shared housing. However, the best available data on homelessness according to HUD's definition of those who are homeless is gathered annually for HUD's Continuum of Care process. Consequently, unless otherwise noted, the data presented in this report utilizes HUD's definition and should be treated as a conservative estimate of number and characteristics of the population.

How many homeless are there?

At least 3,500 Alaskans are identified as homeless, based upon point-in-time surveys regularly conducted by AHFC twice each year. This total represents only those who happened to interact with a homeless enumerator on that particular survey day. In communities where shelters or other related services are unavailable, homeless persons are not likely to be counted. According to a study by the Urban Institute, (Martha R. Burt, Oct. 1, 2001) "during a year's time, four or five times as many people experience homelessness as are homeless on any particular day." Annual service reports from Alaska providers support this estimate, thus indicating that in the course of a year, approximately 14,000 Alaskans experience a period of homelessness.

What are their characteristics?

28 percent of Alaska's homeless are families with children.

32 percent of Alaska's homeless are "chronically homeless."

Homeless Alaska Natives and African-Americans are over-represented compared to their proportion of the population.

There are many subpopulations among those who experience homelessness. These subpopulations include single men and women of all ages, single mothers with children, single fathers with children, two-parent or "blended" families with children, disabled persons, runaway or abandoned youth, victims of domestic violence and veterans. Over the last two years, the AHFC Homeless Survey reveals that approximately 28 percent of the reported households were families with children. Homelessness for many of these families may be the result of a sudden economic downturn from causes such as illness, injury, divorce or job loss. According to the Summer 2004 AHFC Homeless Survey, 32 percent of the homeless were "Chronically Homeless." HUD defines the chronically homeless as "single individuals with a disabling condition who have been homeless for a year or more, or who have experienced at least four episodes of homelessness within three years." In at least 50 percent of the chronic homeless cases, the "disabling" condition was mental illness and/or substance abuse.

Homeward Bound's Mission is to provide the homeless chronic alcoholic with the tools needed to travel the journey home.

Alaska Natives are over-represented among Alaska's homeless. They represent 36 percent of the homeless counted over the last 10 years of the survey, but are only 19 percent of the state's population. African-Americans are also over-represented, accounting for 8 percent of the homeless reported compared to 3 percent for the overall population in Alaska.

According to shelter providers around the state, some of the most difficult people to house are those recently released from institutions with no resources or family support and essentially nowhere to go. In a survey of inmates conducted in January 2005 by the Alaska Department of Corrections, 373 (35 percent) of the 1,067 respondents stated they either had no place identified to reside upon release, or they were certain they would enter a homeless shelter and/or live on the streets. Reports from Alaska Psychiatric Institute also indicate a 5-10 percent discharge rate each month to homelessness.

What services are currently in place?

Alaska has 1,229 emergency shelter beds, 817 transitional housing beds, 450 targeted permanent supportive housing beds.

The fundamental components of a "continuum of care" for homelessness include prevention, outreach/assessment/intake, supportive services, emergency shelter, transitional housing and permanent housing. Alaska's current HUD-defined "Continuum of Care" inventory consists of 1,229 emergency shelter beds (including 376 secure beds for domestic violence victims), 817 transitional housing beds, and 450 permanent supportive housing beds that specifically target homeless persons.

A critical component for housing retention is the provision of supportive services that reinforce housing stability and break the cycle of homelessness for people with complex problems. Testimony from formerly homeless people overwhelmingly confirmed the value of case management, particularly during the early stages of a housing crisis when someone to help "navigate the system" is vital. Existing "housing first" programs report that private landlords are more willing to accept persons with clouded housing histories when a case manager is available to call should problems arise. The Council also recognized employment assistance, transportation, and child care as other essential elements for housing retention.

How are homeless services currently funded?

$14 million is spent on homeless services in Alaska annually.

A combination of private and public funds is used to assist Alaska's homeless. Annually, Alaska spends more than $14 million for services ranging from housing, health, education, social services and public safety, as tabulated from the 2004 Continuum of Care applications for Anchorage and the remainder of the state. Many of the emergency shelters and food pantries serving the general public were developed by faith-based organizations such as the Salvation Army, Catholic Social Services, Lutheran Social Services and St. Vincent de Paul. These agencies generally rely on private donations and government support to keep their doors open. Pitted against a community's need for public safety, education and transportation, these shelters struggle every year to keep a line in their local government budget.

Numerous federal programs also contribute funding for services to the homeless. HUD's Emergency Shelter Grant provided $83,573 for Anchorage and $119,198 for the remainder of the state for the federal fiscal year (FFY) 2004. Federal funding for domestic violence shelters, under the Victims of Crime Act, totaled $867,100 in FFY03.

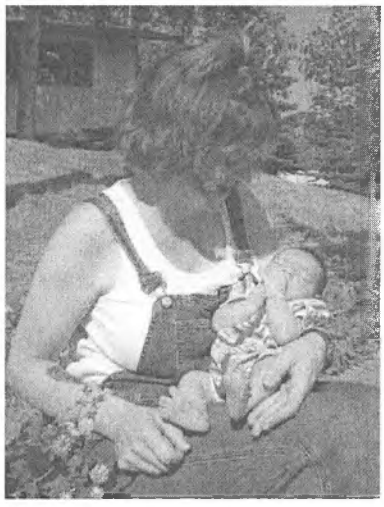
Federal funding plays a greater role in longer-term homeless assistance, most notably through the Stewart B. McKinney Act. Under this act, a combination of formula and competitive awards is made each year by the federal government to assist the homeless in Alaska. Formula awards include funds to the Alaska Department of Education and Early Development to provide continuity in the education of homeless children. In July 2004, 12 agencies throughout the state competed under HUD's Continuum of Care process to renew 17 projects that were

Clare House serves as a temporary haven through which homeless women and children are assisted on their paths toward independence and self-respect.

originally funded in the mid- to late 1990s. These projects ranged from transitional housing for victims of domestic violence to scattered-site housing for homeless persons with mental disabilities. The most recent FFY04 award totaled $3,574,089. To meet HUD's matching requirements, AHFC has annually awarded about $1 million to Continuum of Care grantees.

As the recipient of a number of federal formula funds, the State of Alaska is in a position to make a concerted effort to address homelessness. Federal funds awarded through block grants all come with provisions that allow states wide discretion to determine priority programs and beneficiaries, including homeless persons. The State can also play a key role in ensuring that federal grant funding which specifically targets homeless persons such as PATH (Projects for Assistance in Transition from Homelessness), Healthcare for the Homeless and Homeless Education are used in association with other State and local homeless programs to maximize benefits.

A growing concern among agencies in the homeless service sector is securing funding for operating and program expenses. Most of the private foundations operating in Alaska and many of the federal programs limit their awards to capital (building) projects or one-time program start-ups. The harsh reality of homelessness is that people in this situation are not in a position to pay for the services they need. Without a united effort from all sectors, Alaska cannot expect to break the cycle of homelessness.



Clare House served 452 clients in FFY04; 60 percent were children.

Strategies to End Homelessness

Major strategies emerged, including education, early crisis intervention, housing preservation and increase of affordable housing stock.

The Council conducted two fact-finding meetings and held a public hearing to examine the causes of homelessness. A list of 21 needs and issues was extracted from reports and plans generated by such groups as the Alaska Coalition on Housing & Homelessness, the Faith-Based & Community Initiatives Task Force, Continuum of Care applications and the Mental Health Trust Authority.

Throughout the planning process, Council discussions centered on the role the State of Alaska should or could play in ending homelessness. Council members were provided with strategies and recommendations contained in plans from other states and in local plans to assess best practices. In addition, the Council reviewed the draft plan created by the Alaska Policy Academy Team on Homeless Families and Youth, as well as the recently completed "Ten-Year Plan on Homelessness" for the Municipality of Anchorage. The Council also heard a presentation from the Chair of the Mayor's Task Force on Homelessness and the executive director of the Faith-Based and Community Initiatives, Alaska Department of Health and Social Services. Also, a public hearing was conducted on April 26, 2005, so people could respond to a draft report that proposed recommendations to address homelessness, and, in some cases, to offer additional recommendations.

After assessing all the information, the Council narrowed its focus to a few central themes. Three major areas emerged as change points to ending homelessness:

1. Sufficient affordable housing;
2. Well-coordinated transition from institutionalization to independent living and
3. Homeless prevention and housing retention.

Affordable Housing

16,000 new affordable housing units are needed.

National research has shown that the supply of affordable housing is directly related to the incidence of homelessness.

According to AHFC's 2005 Consolidated Housing and Community Development Plan and the 2005 Alaska Housing Needs Assessment, about 300 to 350 units of affordable housing are added annually in Alaska. But an estimated 16,000 new housing units are currently needed to meet population growth, relieve overcrowding and replace substandard housing. An annual average of 1,000 housing units are weatherized, repaired or modified for accessibility, but more than 20,000 units currently are in need of major repair. An estimated additional 25,000 units require weatherization improvements and/or accessibility modifications.

20,000 units are in need of major repair, and 25,000 units require weatherization improvements and/or accessibility modifications.

Alaska also faces challenges on the other side of the housing affordability equation – affordable rents. Alaska has relied upon a variety of federal and state programs to lower rental costs to make housing more affordable. Unfortunately, "affordable" rents are often more than the amount very low-income Alaskans can manage and various federal rental subsidy programs, as well as funds for public and Indian housing, are being significantly reduced.

Thirty-four states already have created housing trusts to supplement current funding for affordable housing development and rental subsidy programs. These states fund their trusts through unclaimed property funds, general fund appropriations and other methods. Nationwide, state housing trust funds commit $400 million annually to provide 50,000 units of affordable housing. On average, each housing trust fund dollar leverages eight additional dollars of housing funding.

Many state housing trust funds target specific purposes. Three states have homeless trust funds specifically addressing the needs of the homeless. These include the Georgia Trust Fund for the Homeless, Nebraska Homeless Assistance Trust Fund and Wisconsin's Interest Bearing Trust Account.

One successful multi-faceted housing trust fund is the Burlington (Vermont) Housing Trust Fund. During its ten-year history, this fund has supported the construction or rehabilitation of 750 units of low-income housing; the continuous operation, building maintenance and improvement of Way Station, a 36-bed shelter for the homeless; and the operation of Project HOME – a program that links people who have extra living space with those who are seeking affordable housing.

One important component of the Burlington Housing Trust Fund activities has been its funding support of the Burlington Community Land Trust projects providing low-income housing alternatives. Between 1984 and 2002, the Burlington Community Land Trust developed 259 affordable single-family homes and condominiums. All of these homes were sold to first-time homebuyers subject to durable controls over their occupancy and resale. These controls are designed to maintain availability and affordability for low-income households far into the future.

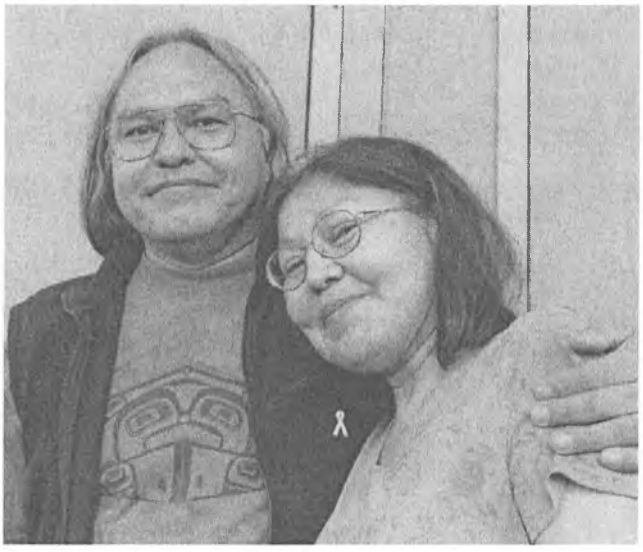
Over the past five years, AHFC has funded affordable rental housing development totaling more than 950 units at a total development cost of $170 million. During this same period, state funding of $15 million has leveraged $155 million in federal funds – a ten-fold leveraging. That leveraging came from low-income housing tax credits and mortgage financing and it made affordable housing projects feasible. Projects included 500 units set aside for households at or below 50 percent of median family income, with an additional 250 units set aside for households at or below 60 percent of median family income. The Council recognizes the importance of leveraging federal and other funds through commitment of state funds, and knows that such leveraging is critical to increasing affordable housing stock across the state.

AHFC has funded more than 950 units of affordable rental housing over the past five years.

AHFC has also proposed a federal legislative agenda involving modifications to the federal tax code that would increase funds for affordable housing. A number of housing authorities from other states support this initiative. The federal agenda can be accessed through the Reference Guide, which can be found at the end of the report.

Council Recommendation: Develop a State Affordable Housing Trust

The Council recommends the Governor and Legislature establish an affordable housing trust. A steering committee should be formed, representing public and private interests, to research options and develop a housing trust framework to present for the Governor's approval, which will maintain the affordability of housing. The steering committee should examine the various resources – statewide and nationwide – currently available to develop and operate affordable rental housing and ownership programs; develop a mission statement and performance measures for the housing trust; establish policies and procedures; determine the financing mechanism of the trust; and develop enabling legislation to be considered during the next legislative session.



Elsie entered the Homeward Bound program after spending most of her adult life on the streets of Anchorage. She graduated from the program this year and now enjoys her own apartment. She was recently reunited with her brother Ben, a counselor from Sitka, for the first time in 30 years.

Institutional Services Discharge

A growing body of research is showing significant cost savings when public funds are invested in a well-coordinated transition from institutionalization to independent living. Those leaving a state hospital, a correctional facility or a foster care setting are likely to have little or no income and lack significant social skills to make a positive transition into society. Without support from family or friends, these individuals may be vulnerable to homelessness. Often this risk is increased by lack of adequate support, or expectations to secure housing, employment, medical and mental health services and legal assistance. Some of these individuals require substantial and long-term support to achieve a successful and lasting transition. It is estimated that more than 4,700 Alaskans are released from institutional care into homelessness every year.

It is estimated that more than 4,700 Alaskans are released from institutional care into homelessness every year.

Council Recommendation: Institutional Services Discharge

The Council recommends the State of Alaska adopt policies to reduce the likelihood of homelessness upon discharge from institutions by creating a working group comprised of representatives from the departments of Health and Social Services, Public Safety and Corrections, the Alaska Mental Health Trust, and local community partners and stakeholders. This group would evaluate the barriers to effective discharge planning and make recommendations for modifications to policies that would reduce the risk of homelessness.

Homeless Prevention/ Housing Retention

Emergency shelters are expensive and problematic for local communities. The Council unanimously agreed that one of the best ways to reduce the need for shelters is to keep homelessness from happening. From the presentations and discussions on this topic, three major strategies emerged: education, early crisis intervention, housing preservation and increase of affordable housing stock. The Council also recognized the need for adequate supports in transportation, job opportunities and, in some cases, supportive services to assure housing stability.

Renter Education

According to testimony, young people first leaving home and rural residents relocating to urban centers often have a difficult time retaining housing. They are not fully prepared for, nor do they understand the consequences of not paying rent on time or neglecting the maintenance needs of their units. To mitigate this problem, several providers around the state, such as Catholic Social Services in Anchorage and St.Vincent de Paul in Juneau, have developed successful renter education programs that cover such topics as budgeting, housing search techniques, understanding and negotiating a lease, maintenance dos-and-don'ts and skills

Homeward Bound has served 212 program participants since April 1997. Participants have repaid $330,670 in debt previously considered unrecoverable.

for dealing with guests and roommates. AHFC currently provides free day-long seminars throughout the state to educate prospective home buyers about various aspects of buying and caring for a new home. This program could be modified easily to provide information pertinent to renters. Several other states such as Minnesota, Wisconsin, Virginia and Michigan provide renter education courses through their Cooperative Extension Service.

Council Recommendation: Expand Renter Education

The Council recommends the expansion of renter education opportunities in Alaska through existing delivery systems and educational programs, such as the Department of Education and Early Development, the University of Alaska Cooperative Extension Service, AHFC and community and faith-based groups.

Housing Preservation and Increasing Inventory of Affordable Housing

Other critical elements of homeless prevention are the preservation of existing housing stock and increasing the inventory of affordable housing. Programs that assist low-income homeowners make needed repairs or modifications, improve energy efficiency, or create additional affordable housing can ease the burden on community-funded shelter services by reducing homelessness. Additionally, support for maintenance and weatherization programs aids in reducing the rising costs of utilities and extend the life of existing homes.

Council Recommendation Long-Term: Appoint a Working Group to Continue the Discussion on Homelessness and its Solutions

The Council recommends the Governor bring together policy makers, partners from within our communities, and other stakeholders as a working group to address ongoing housing issues mentioned in this report, including the goal of expanding the affordable housing inventory and preserving existing housing stock. This working group should include housing builders, housing financiers, current housing providers, land use planners, Alaska Native corporations, and faith-based and community organizations.

The working group's primary charge should be to address community and statewide barriers and solutions to ending homelessness. It should work closely with the housing trust to encourage investments in affordable housing in areas most in need. Documents created from state and local planning efforts to address homelessness, community "best practices" and resources can be shared and used to craft an ongoing action plan that produces measurable results, and achieves the goal of ending homelessness in Alaska.

10 YEAR PLAN TO END LONG TERM HOMELESSNESS IN ALASKA

"Opportunity begins with a Home"

Alaska Council on the Homeless

Adopted May 28, 2009

Executive Summary:

This Ten Year Plan to Address Long-term Homelessness in Alaska (Plan) is based on four years of work by state and local governments and the input of hundreds of people and homeless service providers. It is realistic and achievable. It will reduce the number of homeless individuals and families in total and decrease the duration of time spent in homelessness.

The Plan recommends:

1. 1,000 new units over the next 10 years
2. 500 new rental assistance vouchers
3. 160 new supportive service slots
4. $3 million annually to establish a coordinated pool of funds for prevention activities.

The plan establishes realistic goals and details specific actions steps to achieve them. It will take $10 million in additional resources to achieve a reduction of greater than 50% in the homeless population.

The state Homeless Assistance Program (HAP), the Housing for Persons with AIDS/HIV(HOPWA), and McKinney-Vento homeless programs, along with activities of the private sector through non-profits and faith based organizations are the reason for our current successes. They form the base line that is responsible for the current successes in addressing homelessness. This plan assumes that current efforts will be maintained and additional resources will help create future successes.

The amount of funding needed to take Alaska beyond its current status of "maintaining" rather than "reducing" homelessness is not astronomical. While some additional investment is necessary, much can be accomplished through redirection of existing resources and greater interagency cooperation. This plan focuses on three approaches that have been proven successful throughout the US in addressing homelessness. These three approaches are:

- the creation of supportive housing. It brings support services together with appropriate housing to allow the homeless with co-occurring disorders (mental health, substance abuse) to live independently or under supervision. This approach is far more cost effective than reliance on emergency room visits, or periodic stays in the Alaska Psychiatric Institute or prison to address homelessness;

- New rental assistance for families and individuals that need short term assistance to get back into the work force; and

- Prevention activities. The most expensive way to address homelessness is to wait until a family's situation becomes a crisis requiring reliance on emergency assistance. A small

amount of money (less than $2,000), made available at the right time can prevent a family or individual from becoming homeless.

With incremental additions to the housing inventory and the adequate living supports identified in this plan, Alaska can handily reduce its homeless numbers from thousands to hundreds by 2019.

Introduction

The face of homelessness in Alaska is a child playing in a shelter. It is a veteran struggling with post-traumatic stress, estranged from family and distrustful of "the system." It is a camp concealed in the trees until discovered, dismantled and all of the inhabitants' possessions are taken. It is a foster child who must now fend for themselves because a birthday suddenly turned them into a legal "adult." The face of homelessness is people of every age and ethnic group more often caught up in circumstances beyond their control who are looking for the path that will lead them home. Homelessness is not a character flaw.

This document is the product of a continuing effort in the state of Alaska to strategically reduce the tragedy of long-term homelessness in our state. For many years the Alaska Coalition on Housing & Homelessness, a grass-roots statewide organization had been collecting data and promoting policies that would more aggressively address this growing problem. In 2005, then Governor Frank Murkowski signed an executive order creating the Alaska Council on the Homeless, a cabinet-level interagency task force comprised of state commissioners and the Executive Directors of Alaska Housing Finance Corporation (AHFC) and the Alaska Mental Health Trust Authority. The Council was charged with developing a plan to combat homelessness in our state.

In October 2005, the Council released its report, "Keeping Alaskans Out of the Cold." The plan contained three key recommendations: 1) establishment of a state affordable housing trust; 2) formation of a task force to help reduce the incidence of discharges from state-funded institutions to homelessness; and 3) expansion of renter education opportunities. During the next two years progress was made on a number of the recommendations. A structure was developed for a housing trust and a plan produced and submitted to Governor Murkowski, a more coordinated effort was developed by state agencies to try and reduce discharges to homelessness, and existing renter education program models were identified and one was selected for implementation.

In May 2007, Governor Sarah Palin reactivated the Alaska Council on the Homeless, and expanded its membership to include representatives from local government, Native housing authorities, homeless advocates and members of the public-at-large. The Council was tasked with further developing the recommendation of a housing trust, establishing a statewide homeless action plan, monitoring progress during the implementation of the plan and issuing an annual report to the governor on the use of state resources to end homelessness.

In January 2008, legislation was introduced to create a coordinated fund source within the Alaska Housing Finance Corporation (AHFC). During the deliberation process, questions were raised about the long-term financial commitment attached to the legislation when there was not yet an action plan to review and react to. The end result was an increase in funding for an existing homeless program administered by AHFC and a directive to produce a 10-year action to address homelessness in Alaska.

After several meetings and a full-day work session, the Council, in consultation with the Alaska Coalition on Housing & Homelessness, produced this action plan which will serve as the guide for directing state resources toward reducing long-term homelessness in the coming years. The plan includes current baseline data and measurable goals to track progress, determine funding levels, and implement programmatic adjustments along the way. Recognizing that a "one-size-fits-all" approach to combating long-term homelessness is unrealistic, this plan contains a number of action steps that are grouped within specific focus areas.

How Alaska Measures Up

Although the absolute number of homeless in Alaska is less than 5,000 people at any given time:

- Alaska had double the national average of per capita homelessness in 2008.
- Alaska is in the top ten states in per capita homelessness.

To measure the extent of homelessness, communities throughout the country have embraced the "point-in-time" (PIT) approach for gathering statistical information. Since 1995, AHFC has coordinated statewide PIT counts. In conformance with guidelines issued by the U.S. Department of Housing & Urban Development (HUD), PIT counts are conducted during the last week in January each year. Recent (2008) PIT data tells us the following:

- The total count of homeless Alaskans was 3,305
- The number of homeless households with children was 494 (1,507 persons)
- 627 persons met the HUD definition of a "chronic" homeless person
- 161 beds existed in the homeless housing inventory to target chronic homeless persons.

In addition to PIT information, the Department of Corrections reports that approximately 8,000 persons are discharged from prison each year with no identified housing arrangement.

Nationally, overall chronic homelessness decreased between 2005 and 2007. This is the result of a re-targeting of HUD resources and the narrow definition HUD uses that includes a person sleeping in an 1) emergency homeless shelter; 2) a transitional housing facility that targets homeless persons or; 3) a place not suitable for human habitation like a sidewalk or their car.

Those who have been turned away because a shelter is full or those in a community that lacks a shelter and must turn to family or friends to avoid the streets are not included in HUD reports.

Alaska's PIT count distinguishes homeless populations that fit in HUD-prescribed charts from those that are homeless by displacement, by their lack of permanent housing, by those who are temporarily staying in a motel or with friends or relatives. The 3,305 homeless persons counted in 2008 represent the sum of all groups. AHFC has a statutory definition of "homelessness" that aligns with the McKinney-Vento definition as it applies to the Department of Education and Department of Health and Human Services and is inclusive of all groups.

Success is Achievable

In January 2009, in conjunction with the annual PIT count, the Anchorage Homeless Coalition organized a one-day, one-stop service fair called Project Homeless Connect (PHC). A comparison of PHC data shows that nearly the same number of homeless persons attended the January 2008 (519) and January 2009 (524) events. Of these participants, 77% were attending for the first time, and less than 15% had attended each of the last 3 PHC events. Nearly 34% stated they had been homeless for less than six months. These figures indicate there are a significant number of people who are newly experiencing homelessness. They also show that for many, prevention reduces the duration of a homeless episode.

The ever-increasing momentum of government, corporate and philanthropic investment in supportive housing has been bolstered by research documenting its effectiveness. Supportive housing is a term used to describe housing that combines a residential environment with support services that address each family or individual's particular service needs. Research shows that supportive housing costs far less than a stay in a correctional facility, a hospital or psychiatric institution, and decreases the cost of emergency services. The Corporation for Supportive Housing has spearheaded a national effort to document the costs and benefits of supportive housing. They report studies to indicate[1]:

Positive impacts on health. Decreases of more than 50% in tenants' emergency room visits and hospital inpatient days; decreases in tenants' use of emergency detoxification services by more than 80%; and increases in the use of preventive health care services.

Positive impacts on employment. Increases of 50% in earned income and 40% in the rate of participant employment when employment services are provided in supportive housing, and a significant decrease in dependence on entitlements - a $1,448 decrease per tenant each year.

Positive impacts on treating mental illness. At least a third of those people living in streets and shelters have a severe and persistent mental illness (20% in Alaska). Supportive housing

[1] Corporation for Supportive Housing, *Research Summaries*, www.csh.org . 2009

has proven to be a popular and effective approach for many mentally ill people, as it affords both independence and as-needed support.

A study of nearly 900 homeless people with mental illness provided with supportive housing found 83.5% of participants remained housed a year later, and that participants experienced a decrease in symptoms of schizophrenia and depression[2]. A study of almost 5,000 homeless individuals with mental illness placed in supportive housing through the NY/NY program confirmed that nearly 80% remained housed a year later, with 10% moving on to independent settings.

Positive impacts on reducing or ending substance use. Once people with histories of substance use achieve sobriety, their living situation is often a factor in their ability to stay clean and sober. A one-year follow-up study of 201 graduates of the Eden Programs chemical dependency treatment programs in Minneapolis found that 56.6% of those living independently remained sober; 56.5% of those living in a halfway house remained sober; 57.1% of those living in an unsupported SRO remained sober; while 90% of those living in supportive housing remained sober.

The University of Alaska's Institute of Social and Economic Research (ISER)[3] just completed a study of the cost benefit of treatment and re-entry programs on the Alaskan prison population and the long term cost savings to the Corrections system from an investment in these programs. The results are conclusive: Investing in treatment and rehabilitation programs reduces the recidivism rate. The ISER report found that for an additional $4 million annual investment, through existing programs, the state could save $321 million over the next 20 years. That's equivalent to an average return of approximately $16 million or 400%.

The Alaska Mental Health Trust Authority (AMHTA) and its partners operate the Bridge Home program which helps beneficiaries obtain stable living environments through the provision of rental assistance and support services. A recent AMHTA report showed that Bridge Home participants had 38% less admissions to API and 48% less to Corrections. The number of days spent in both these systems dropped 32% for API and 68% for Corrections.

For many years, the Kodiak Brother Francis Shelter (KBFS) has used the prevention component of the Homeless Assistance Program (HAP) to nearly eliminate family homelessness and keep their shelter census at nearly 50% of capacity. As a "one-stop-shop," works closely with the local housing authorities and private landlords to either avert displacement or work to rapidly

---

[3] ISER Research Summary January 2009, RS NO. 71

re-house the few that become homeless. As of January 2008, AHFC's public housing waitlist only showed one homeless family and one household fleeing domestic violence in Kodiak.

Plan Description

Based on the work of the Governor's Council and the public input over the last several years, this Plan encompasses several guiding principles:

1. **Preservation and Full Utilization of Existing Resources**

   The recent decreases in chronic homelessness are the result of the existing housing and service resources that are available in Alaska. Some of these resources can be re-directed in a manner to increase the impact on homeless populations. All of the resources in our current housing continuum (including shelters and transitional housing) are necessary to maintain the level of success we have today. A net loss of zero existing housing and supportive services is a main principle of this plan.

2. **Prevention and Intervention is Integral to addressing long-term homelessness**

   Experience shows that preventing a family or individual from becoming homeless is far easier and less costly than providing any type of housing or service assistance after the fact. Assistance must be directed further "upstream" to prevent people from falling into homelessness.

3. **Expansion of Supportive Services outside Medicaid Eligible Costs is Critical**

   As the nation has moved closer to a "Medicaid eligible only" model for providing supportive services to the disabled and low income families, necessary services for life skill training and periodic interventions to insure independent living have been reduced. Not all families and individuals need intensive medical services to remain independent.

4. **The provision of housing is an immediate fix to homelessness, but the long term solution is greater employment opportunities.**

   The majority of families and individuals who find themselves homeless at any given time are there as a result of economic circumstances. Job creation and economic development are important solutions to homelessness. The rise and fall of economic activity is a function of many different variables. Many of these variables are beyond the scope of any effort to reduce homelessness. This plan suggests program activities specifically in area of employment for people being discharged from institutions but focuses mainly on the immediate stabilization of housing for families and individuals.

This plan focuses on four major areas:

□ production of supportive housing;

□ additional rental assistance for homeless families;

□ supportive services to help homeless individuals and families transition to a permanent housing situation; and

□prevention activities.

These four categories were developed as a result of the many years of public input from social service providers, state agencies, the work of the Governor's Council, the Alaska Coalition on Housing and Homelessness and the local homeless planning efforts that are ongoing in communities like Anchorage, Barrow, Fairbanks, Juneau, the Mat-Su Borough and Kenai Peninsula. This plan provides the "three legs of the stool" to address the range of needs that affect the homeless population in Alaska; housing, operating and supportive housing. Not all homeless people need intensive support services to move out of homelessness, some just need a helping hand on a temporary basis.

The Plan calls for a central funding mechanism to minimize the number of "places to go" for resources to meet the outcomes of the plan. Better coordination in allocating state funding resources means greater efficiency in the distribution of funds and more direct impact on the problem.

Plan Format

The Alaska Ten Year Plan for Addressing Homelessness is based on a format by the State of Minnesota. It is organized into three components; 1) Goals, 2) Action Steps and 3) Outcomes on a one year, five year and ten year basis. The goals, action steps and outcomes anticipated are broad in scope, so that the local action plans of communities in Alaska can fit within them. The success of this ten year plan will be based on the participation of local governments, for-profits housing developers, non-profits and faith based organizations. An estimate of the sources and uses of the funds proposed for the effort and a financing plan make up the other parts of the plan.

The financing plan estimate forms the basis of the ten year plan. It identifies the different uses of the funds, how the costs were calculated and where the potential additional funding could come from. This plan attempts to be realistic in the type and sources of funds that may be available over time, with an understanding that the State of Alaska can't bear the burden alone. A significant proportion of the funding will come from re-directing existing resources to focus on this effort. A similar effort by HUD over the last five years has lead to substantial reductions in chronic homelessness in the US.

Measuring Our Success

Throughout the planning process, Council members and staff have acknowledged the need to attach measurable outcomes to every action taken or dollar invested. Each focus area has a baseline upon which progress will be evaluated. Not only will homeless counts and units added be measured, but also the degree of housing stability after a housing crisis is resolved. As more agencies link into the central Homeless Management Information System (HMIS), more will become known about migration patterns and characteristics of homeless subpopulations. The system can also be used as a tool to determine which programs and services are the most effective. All of these resources will be used to generate an annual progress report to the Council and Coalition.

Next Steps

This plan is under the purview of the Governor's Council on Homelessness. The Council will serve as the guiding force for the accomplishments of the Ten Year plan. It will monitor the success of the plan on an annual basis and advise on the allocation of state resources that are made available for the effort. As AHFC is the designated coordinator for addressing homelessness in Alaska, AHFC will provide the staff support necessary to collect information to measure the outcomes of the Ten Year Plan. This Plan is a living document and will be revised as appropriate when housing market and employment conditions change in Alaska.

The immediate first steps are to secure increased funding to finance this plan and re-align, where practical, existing programs to place greater emphasis on reducing homelessness.

GLOSSARY OF TERMS

AHFC – Alaska Housing Finance Corporation

AMHTA – Alaska Mental Health Trust Authority

Chronic Homeless – HUD term that refers to a subset of the homeless populations that experience repetitive instances of homelessness and suffer from disabilities or co-occurring disorders like substance abuse.

Continuum of Care - HUD planning process that coordinates the application of projects to HUDs McKinney-Vento Homeless programs, the Shelter Plus Care and Supportive Housing programs.

DHSS – Department of Health and Social Services – State of Alaska

ESG – Emergency Shelter Grant - HUD program for the support of emergency shelters.

FUP – Family Unification Program – HUD rental assistance program that encourages the reunification of families that have been separated from their children through incarceration or other similar life events.

HAP – Homeless Assistance Program – AHFC/AMHTA/DHSS funded program that reduces homelessness in Alaska through temporary housing, and prevention programs.

HERA Act of 2008 – enabling federal legislation creating the NSP and NHT programs.

HOPWA – Housing For Persons with HIV/AIDS – HUD program that provides housing assistance to individuals suffering from HIV or AIDS.

HOME – Home Investment Partnership Program – a HUD program that funds affordable housing options for families at 80% of the median and below.

"Homeless" as defined in AHFC Statutes – much broader definition of "homelessness" than federal definition, includes people in shelters and doubled up family or friends.

Housing Choice Voucher (Section 8) – HUD program operated by AHFC that provides rental assistance to low income families throughout Alaska. Families rent units from private landlords and pay a fixed 30% of their income towards the rent.

LIHTC – Low Income Housing Tax Credit Program – a federal tax incentive for private sector development of low-income rental housing for families below 60% of the median income.

McKinney-Vento – federal enabling legislation that authorizes the distribution of funds for homeless programs through the US, by HUD, the department of Education and other federal agencies.

NHT – National Housing Trust – program created under HERA Act of 2008 to create more affordable housing in the US. Funds come from a percentage of value from Fannie Mae and Freddie Mac. Funds won't become available until Federal Fiscal Year 2010. Seventy-five percent of funds will be targeted towards families below 30% of median income.

NSP – Neighborhood Stabilization Program – program created under HERA Act of 2008 to return foreclosed/abandoned and blighted property to residential occupancy. Alaska recieve an allocation of $19.6 million, 25% of which is targeted to families below 50% of median income.

Public Housing – rental units owned by AHFC and occupied by low-moderate income families and individuals. Rent is fixed at 30% of the families income. Rental assistance is provided through a contract from HUD.

SCHDF – Senior Citizens Housing Grant Program – AHFC funded program that develops housing for families meeting the federal definition of "senior".

Section 202 – HUD program that provides capital funds and rental assistance to low-income senior households.

Section 811 – HUD program that provides capital funds and rental assistance to low-income disabled households.

SNHG – Special Needs Grant Program – AHFC funded program that develops housing for special needs populations with special emphasis on the "hard to house" and mental helath trust beneficiaries.

Shelter Plus Care – a HUD program that is part of the Continuum of Care which provides rental assistance for chronic homeless disabled individuals. The program requires that a matching amount of services "care" is provided to each client.

Supportive Housing – term that refers to housing where the families and individuals participate in one or more service programs. These programs can support the participants in transitioning back into the mainstream after a period of homelessness or institutionalization.

Financing Estimates for Ten Year Plan

Activity	Average $/U	#need	$$ over 10 Years
1. New Construction*	$200,000	1000	$194,300,000
2. Operating Support/Rental Assistance**	$550	500	$33,000,000
3. Supportive Services***	$30,000	160	$48,000,000
4. Prevention Resources****	$600	500	$3,000,000
Ten year Total			**$278,300,000**
Annual Total			**$27,830,000**
Existing Long Term Resources to be used Annually:			
LIHTC/HOME/SCHDF Development programs			(8,000,000)
Special Needs Housing Grant Program (SNHG)			(1,750,000)
Partial Utilization of HUD 811/202 programs			(1,000,000)
National Housing Trust (not till 2010)			(2,700,000)
Other Federal/State/Private Sources			(4,380,000)
ADDITIONAL ANNUAL RESOURCES TO ADDRESS NEED			**$10,000,000**

*Average of new construction, acquisition and rehab costs per 2009 GOAL program apps. Assumes $5.7 million of Neighborhood Stabilization Program and other Economic Stimulus $ in 1st Year (30%).

**Based on average cost of rental assistance per family under Section 8 Housing Choice Vouchers

***Based on average per person supportive service cost per the 2009 SNHG program apps.

****Based on average cost of prevention costs per 2008 HAP Prevention Report

Alaska Council on the Homeless

Ten-Year Plan to Reduce Long Term Homelessness

F-1. Housing for Chronic & Special Needs Homeless		**Baseline:** 627 chronic homeless out of 3,311 total homeless (PIT) 161 Chronic Housing units out of 428 Permanent Supportive Housing inventory		
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1.Expand housing options (construction/rehab/rental assistance) *Section 811 and 202 are HUD programs that provide capital funding and rental assistance for the elderly and disabled. Funds are distributed competitively annually. HOME refers to the HOME Investment Act Partnership Program	1.a Build capacity to maximize flexible use of resources (811/202; HOME*) 1b Develop prototype model for supportive housing 1.c Develop a coordinated homeless fund to house more high need homeless persons 1.d Develop intensive service-enriched housing for persons w/high needs exiting API & DOC	1.a List of 202/811 applicants developed for next 10 yrs 1.b Prototypes/ models identified 1.c Fund established 1.d Four agencies identified through RFQ process to develop prototype	1.a 25 new 202 units and 25 new 811 units 1.b, 10 new programs developed from model 1.c&d 300 additional households assisted	1.b 50 new 202 units 50 new 811 units 1.b,c,d 800 additional households assisted

F-1. Housing for Chronic & Special Needs Homeless Continued:				
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
2. Increase supplemental support for services not covered by Medicaid	2. a Identify unmet service needs and costs	2.a Funding sources identified for unmet service needs	2.a 30% of service needs addressed	2.a 70% of service needs addressed
	2.b Utilize housing finance resources to cover cost of room & board for persons served by Adult Protective Services (APS)	2.b Housing & service costs delineated	2.b 50% of APS clients receiving housing assistance	2.b 100% of APS clients receiving housing assistance
3. Increase pool of operating support to preserve existing housing stock	3.a Inventory existing projects for operating assistance needs 3.b Issue NOFA to award project-based assistance	3. 20 project-based rent assistance	3. 100 project-based rent assistance	3. 200 project-based rent assistance

F-2. Housing for Persons Discharged from State Custody		Baseline: 8,000/yr discharged from DOC w/no identified housing 33 existing beds for transitioning youth (ANC & JNU)		
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1. Revise discharge policies to explicitly discourage discharge to homeless shelters.	1.a Review policies and identify text revisions 1.b Establish baseline on discharges to homelessness	1a. Policy revisions completed	1.b 50% reduction of discharge to shelter or streets	1.b 75% reduction of discharge to shelter or streets
2. Increase # of units available to transitioning youth	2.a Identify exact # of transitional beds needed (300 est.) 2b. Apply for Family Unification Program (FUP)vouchers from HUD	2.a Needs baseline established 2.b Vouchers awarded by HUD	2.a 50% of needed beds added to inventory 2.b 100% FUP voucher utilization	2.a 50% of need added to inventory 2.b 100% FUP voucher utilization

F-2. Housing for Persons Discharged from State Custody Continued				
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
3. Identify landlords and develop landlord incentives to rent to "hard to house" persons.	3.a. Identify incentives and outreach (e.g. damage fund, rent-up bonus, etc) 3.b Develop a coordinated homeless fund to house more high need homeless persons	3.a Incentive program developed 3.b Fund established	3.a&b 50% placement success	3.a&b 75% placement success
4. Increase employment/vocational opportunities for persons in transition.	4.a Identify models	4. a Model selected for implementation	Programs in every DOC & DJJ facility	100% job referral upon discharge

F-3. Permanent Housing for Households w/Children Transitioning from Homelessness		Baseline: 1,507 People (494 Families) out of 3,311 total homeless in PIT		
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1.Expand housing options (construction/rehab/rental assistance) *HOME/TBRA is a tenant based rental assistance program funded from HUD's HOME Investment Partnership Act program	1.a Build capacity to maximize use of resources (HOME/TBRA*) 1.b Create incentives to utilize existing housing programs to address needs of low-income families 1.c Develop s coordinated homeless fund to assist more homeless families	1.a Agencies identified for intensive technical assistance 1.b GOAL policies/ priorities revised to target homeless families 1.c Fund established	1.b&c 150 Units w/20% f/large families	1.b&c 300 Units w/20% f/large families
2. Increase pool of operating support to preserve existing housing stock	2. Inventory existing projects for operating assistance needs	2. Inventory completed and needs identified	100 assisted units	200 assisted units

F-3. Permanent Housing for Households w/Children Transitioning from Homelessness Continued				
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
3. Provide rapid re-housing services for households w/children	3.a Create incentives for central intake & assessment of family homeless needs 3.b Develop coordinated homeless fund for move-in costs.	3.a Central clearinghouse identified in each AK community 3.b Fund established	3.a &b. 50% Households re-housed within 90 days	3.a&b. 85% Households re-housed within 90 days
4. Improve outreach & linkages to housing resources & services	4.a Build capacity among homeless school liaisons & rural school districts 4.b Expand outreach on use of AK Housing Locator 4.c Improve 211 to accurately reflect all local homeless services	4.a 25% increase in homeless school liaison participation in state housing coalition 4.b 50% increase in Locater listings 4.c 65% coverage	4.a 50% increase in homeless school liaison participation in state housing coalition 4.b 100% increase in Locator listings 4.c 80% coverage	4.a 100% increase in homeless school liaison participation in state housing coalition 4.b 200% increase in Locator listings 4.c 95% coverage

F-4. Short-Term Homeless Prevention / Crisis Intervention		2008 Baseline: 324 households served by HAP-funded prevention component in SFY08/ 67% housing retention rate		
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1. Create local centralized pool of prevention resources to provide assistance with rent, mortgage & utility arrearages OR to cover housing costs for persons temporarily absent due to hospitalization, substance abuse treatment or short-term incarceration (less than 60 days).	1.a Coordinate existing resources (ESG, LIHEAP, EFSP, ATAP Diversion) 1.b Develop framework for central prevention pools 1.b Set aside min. 30% of funding authorization for prevention activities 1.c Develop a coordinated homeless fund to assist more households at-risk of homelessnes	1.b Framework developed 1.b Award funds w/priority to central pools 1.c Fund established	100% increase in # of households served 75% retention rate	200% increase in # of households served 85% retention rate
2. Apply a uniform assessment tool to identify barriers to housing stability	2.a Integrate assessment tool into existing Homeless Management Information System (HMIS)	2.a Updated version installed	60% assessments completed on prevention cases	100% assessments completed on prevention cases
3. Maintain and/or expand emergency lodging options as needed	3.a Identify shelter gaps in the homeless housing inventory by community and target population	3.a. Points added to HAP application for projects targeting unserved or underserved populations	No net loss to shelter inventory & 3 unserved communities add new beds	No unmet shelter needs

F-5. Data Collection				
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1. Expand HMIS coverage to all federal and state-funded homeless programs.	1.a Continue ongoing training and access project to connect all providers of shelter & transitional housing in AK (except DV)	1.a 50% bed coverage in HMIS	75% bed coverage in HMIS	85% bed coverage in HMIS
2. Coordinate prevention report from all potential funding sources	2. Develop MOU w/fund sources to coordinate report	2. Fund administrators meet & forge agreement	2. Report reflects 50% coverage	2. Report reflects 90% coverage

F-6. Community Infrastructure – Local Planning Efforts to Coordinate Activities				
Strategy	**Action Steps**	**12-Month Outcome**	**By the Year 2014**	**By the Year 2019**
1. Ensure housing policy is addressed at the local level 2. Provide operational support to local housing planning organizations to coordinate services and reporting	1.a Educate Alaska Municipal League & local Continuum of Cares re: housing component in comprehensive plans 2.a Develop long-range organizational plan	1.a Comprehensive plan enabling legislation introduced 2.a. Statewide organization fully staffed	1.a Comprehensive plan enabling legislation enacted & 30% comp plans inc. housing element 2.a Local organizations established in 5 communities	1.a Comprehensive plan enabling legislation enacted & 70% comp plans inc. housing element 2.a Local organizations established. in 9 communities

Administrative Orders
FROM THE OFFICE OF THE GOVERNOR OF ALASKA

Sarah Palin
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

May 1st, 2007

ADMINISTRATIVE ORDER NO. 236

I, Sarah Palin, Governor of the State of Alaska, under the authority of art. III, secs. 1 and 24, of the Alaska Constitution, and in accordance with AS 44.19.145(c), establish the Alaska Council on the Homeless in the Alaska Housing Finance Corporation.

BACKGROUND AND PURPOSE

Homelessness is one of the most challenging domestic issues facing the United States. Alaska is no exception. Alaska's Faith-Based and Community Initiatives Task Force found housing to be the most commonly identified challenge facing those in need. The Alaska Council on the Homeless (council) was initially established by Administrative Order No. 214 in April 2004 to develop a statewide action plan addressing homelessness in Alaska.

The plan, *Keeping Alaskans Out of the Cold,* was completed and submitted in October 2005. Included in its recommendations was the appointment of a steering committee to assist the governor and the legislature to develop an affordable housing trust. The steering committee completed its work in 2006 and the current council has recommended that the Alaska Housing Trust Fund (fund) be created within the Alaska Housing Finance Corporation (AHFC) under AS 18.56. The purpose of this Administrative Order is to add additional members to the council and to expand the council's duties.

MEMBERSHIP

The council consists of members appointed by the governor to serve at the pleasure of the governor. Continuing members of the original council are: one representative each from the Alaska Housing Finance Corporation, Alaska Mental Health Trust Authority, Department of Health and Social Services, Department of Education and Early Development, Department of Public Safety, and Department of Corrections serving on the effective date of this Order. New members are: one representative of regional Native housing authorities, one representative of municipal government, and four additional members with experience and expertise in housing development or as consumers of affordable housing.

The council may invite to its meetings non-voting representatives from federal and local government agencies, the business community, providers of services to the homeless, philanthropic agencies, faith-based organizations, homeless advocacy organizations, homeless persons, and community leaders. The council may elect a chair and other officers as determined necessary.

DUTIES OF THE COUNCIL

The council's duties set out in Administrative Order No. 214 are amended by adding new duties as follows:

1. Assist with the development of the fund.

2. Upon establishment of the fund, annually evaluate housing needs and priorities to establish a statewide homeless action plan and recommend to the AHFC Board of Directors the allocation of money in the fund to implement the plan; other duties specific to the fund include monitoring implementation of the fund budget, recommending methods for evaluating and monitoring fund activities, recommending methodology for reporting to public and elected officials, coordinating the fund with other available financing sources, seeking additional money to support fund activities, and ensuring that projects supported by the fund are sustainable.

3. Monitor and review implementation of the statewide homeless action plan and annually report to the governor the council's findings and recommendations regarding implementation of the plan.

4. Annually report to the governor on how state resources, in addition to the fund, may be used to end homelessness.

ADMINISTRATIVE SUPPORT

The AHFC shall provide administrative support for the council. In accordance with law, the AHFC may enter into intergovernmental agreements necessary to accomplish the purposes of this Order.

GENERAL PROVISIONS

The following general provisions apply to the activities of the council:

1. Council members do not receive compensation as a member of the council. Per diem and travel expenses for state and federal members of the council are the responsibility of the state or federal agency the member represents.

2. To reduce costs, the council may use teleconferencing or other electronic means to the extent practicable in order to gain the widest public participation at minimum cost.

3. The council shall establish procedures for voting and meetings of the council.

4. Meetings of the council shall be conducted, and notice of the meetings provided, in accordance with AS 44.62.310 and 44.62.320 (Open Meetings of Governmental Bodies).

This Order takes effect immediately. This Order supplements Administrative Order No.

214 on this matter.

DATED at Juneau, Alaska, this 1st day of May, 2007.

Frank H. Murkowski
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

April 30, 2004

ADMINISTRATIVE ORDER NO. 214

I, Frank H. Murkowski, Governor of the State of Alaska, under the authority of art. III, secs. 1 and 24, of the Alaska Constitution, and in accordance with AS 44.19.145(c), establish the Alaska Council on the Homeless in the Office of the Governor.

BACKGROUND AND PURPOSE

Homelessness is one of the most challenging domestic issues facing the United States as a nation. Alaska is no exception. Alaska's Faith-Based and Community Initiatives Task Force found housing to be the most commonly identified challenge facing those in need. The purpose of this Administrative Order is to establish the Alaska Council on the Homeless (council) and recognize the need to develop a statewide plan that would include short-term and long-term strategies to effectively address the problem of Alaska's homeless population. The development of the statewide plan by the council should serve to educate all Alaskans about the tragedy of homelessness and engage both governmental agencies and the private sector in finding solutions to this problem.

MEMBERSHIP

The council consists of members appointed by the governor to serve at the pleasure of the governor. Council members will be representatives of appropriate state agencies, with ex-officio representation by the lieutenant governor or the lieutenant governor's designee and by the director for the United States Department of Housing and Urban Development for Alaska or the director's designee. The council may invite to its meetings other non-voting representatives from federal and local government agencies, the business community, providers of services to the homeless, philanthropic agencies, faith-based organizations, homeless persons advocacy organizations, homeless persons, and community leaders. The executive director of the Alaska Housing Finance Corporation, or the executive director's designee, shall chair the council. The council may elect other officers as determined necessary.

DUTIES OF THE COUNCIL

The council shall prepare and submit to the governor a statewide homeless Alaskans

action plan by June 30, 2005. The action plan must include at least the following:

1. accurate fiscal and demographic information on the homeless in this state, to support policy development;

2. an inventory and analysis of all existing activities and programs in this state that assist homeless persons;

3. an inventory and assessment of existing statutory and regulatory provisions relating to the homeless and suggested changes to those provisions needed to implement the plan;

4. short-term and long-term statewide strategies designed to substantially lessen homelessness in this state within the next 10 years; these strategies should:

a. identify funding opportunities to assist homeless persons in this state;

b. involve non-traditional stakeholders, including business, philanthropic, faith-based, and other community organizations; and

c. promote systems integration, including interagency agreements, to reduce duplication among homeless assistance programs;

5. performance measures and accountability mechanisms to provide policymakers with tools to assess the success of the plan over time.

In addition, the council shall conduct a public hearing on the issue of homelessness.

The council shall monitor and review implementation of the action plan, and shall annually provide to the governor a report containing the council's findings and recommendations regarding implementation of the plan.

ADMINISTRATIVE SUPPORT

The Alaska Housing Finance Corporation shall provide administrative support for the council. In accordance with law, the Alaska Housing Finance Corporation may enter into intergovernmental agreements necessary to accomplish the purposes of this Order.

GENERAL PROVISIONS

The following general provisions apply to the activities of the council:

1. Council members do not receive compensation as a member of the council. Per diem and travel expenses for members of the council are the responsibility of the state or federal agency the member represents.

2. To reduce costs, the council may use teleconferencing or other electronic means to the extent practicable in order to gain the widest public participation at minimum

cost.

3. The council shall establish procedures for voting and meetings of the council.

4. Meetings of the council shall be conducted, and notice of the meetings provided, in accordance with AS 44.62.310 and 44.62.320 (Open Meetings of Governmental Bodies).

This Order takes effect immediately.

DATED at Juneau, Alaska, this 30th day of April, 2004.

1:00 pm – 2:15 pm	**Section 3 Training/Listening Session** (Joint with Housing Conference) **Location: Dupont Ballroom** Part three in a series COSCDA has sponsored on Section 3 Implementation for Community Development programs, this session will offer practical ways for States to comply with Section 3 requirements as well as providing an opportunity for HUD staff to hear your comments on what changes you would like to see as HUD develops the Final Rule. **Moderator:** Gail Hammond, Director, Office of Community Renewal, NYS Housing Trust Fund Corporation **Panelist:** Staci Gilliam Hampton, Director, Economic Opportunity Section 3 Division, U.S. Department of Housing and Urban Development
2:15 pm – 2:30 pm	**Networking Break (No refreshments)**
2:30 pm – 3:45 pm	**IDIS Training (PER)** **Location: Dupont Ballroom**

DRAFT

HUD's IDIS System need not have you looking like a "deer in the headlights." This panel will address the use of the system, helping to remove the mystery and the fear of using it. Specifics to be covered include:

IDIS Online and the State PER – entering funding by source year.

Timely distribution of State CDBG funds including reporting and findings for non-compliance.
Timely Expenditure reports.

Moderator:
Basil Julian, Grants Division Director, Arkansas Economic Development Commission

Speaker:
James McCann, CPD Specialist, Office of State and Small Cities, U.S. Department of Housing and Urban Development

3:45 pm – 5:00 pm

COSCDA Community Development Committee Meeting
Location: Dupont Ballroom

Participate in developing COSCDA policy and positions related to the Community Development Block Grant (CDBG) program, All are welcome!

5:30 pm – 7:00 pm

Networking Reception
Location: Glover Park Ballroom

Meet and greet your colleagues attending the housing, community development, and homeless conferences.

Tuesday, March 15

8:00 am – 10:00 am

HUD Compliance Monitoring Training (Joint with Housing)
Location: Dupont Ballroom

Get an overview of the laws, regulations, and HUD guidance that will help you understand your obligations before HUD comes to monitor your project(s) for compliance. Panelists will address:

DRAFT

NSP
Environment (NEPA)
Davis Bacon
Uniform Relocation Act (URA)

Moderator: TBD

Panelists:
John Laswick, NSP Team Leader, U.S. Department of Housing and Urban Development

Joan Morgan, Director of Relocation and Real Estate Division, Office of Affordable Housing Programs, U.S. Department of Housing and Urban Development

10:00 am – 10:15 am **Networking Break**

10:15 am – 12:00 noon **HUD Compliance Monitoring Training (continued)**

Panelists:
Jade Banks, Senior policy Advisor, Office of Labor Relations U.S. Department of Housing and Urban Development

Charles Bien, Acting Director for the Office of Environment and Energy, Environmental Review Division Director, U.S. Department of Housing and Urban Development

12:00 noon – 1:30 pm **Lunch on your own**

1:30 pm – 3:00 pm **Job Creation Through Community Development and CDBG**
Location: Dupont Ballroom

CDBG has a powerful economic development impact, creating jobs, something sorely needed as the country strives to overcome lingering low employment. This panel offers several speakers who will share their State's approach and their practices. We know States often combine their own resources with CDBG funding, as well as with private investment creating a layered process for maximizing use of CDBG

Moderator:
Brian Williamson, Assistant Commissioner, Georgia Department of Community Affairs

Panelists:
Jean Noble, Grants Manager, Arkansas Economic Development Commission

Patrick Howard, Small Cities Staff, Florida Department of Community Affairs

Joanie Perry, Director, Office of Economic Development, Georgia Department of Community Affairs

3:00 pm – 3:15 pm **Networking Break (No refreshments)**

3:15 pm – 5:00 pm **HUD Officials**
Location: Dupont Ballroom

Program staff from the Office of Community Planning and Development State and Small Cities Office will provide a program update on program guidance, regulations, and the funding outlook affecting the CDBG program.

Moderator: TBD

Speaker:
Stan Gimont, Director, Office of Block Grant Assistance, U.S. Department of Housing and Urban Development

Diane Lobasso, Director, Special Assistant to the Director, Office of Block Grant Assistance, U.S. Department of Housing and Urban Development

Steve Rhodeside, Acting Director, State and Small Cities Division, U.S. Department of Housing and Urban Development

5:00 pm **Conference Adjourns**

DRAFT

AHFC's Role in Addressing Homelessness

Senate HSS Hearing
March 9, 2010

4300 Boniface Parkway • Anchorage, Alaska 99504 P.O. Box 101020 • Anchorage, Alaska 99510

AHFC Homeless Impact Programs

- **Homeless Assistance Program Fund–** These funds are granted to local communities/agencies to help develop programs to prevent homelessness by providing assistance to families in imminent danger of becoming homeless or those who are currently homeless. Organizations qualified to apply include municipalities and public or private nonprofit corporations. Activities funded are consistent with the State of Alaska's strategic plan to address homelessness and focused on homeless prevention, intervention, temporary assistance and support services.

- **Beneficiary & Special Needs Housing –** Special Needs Housing Grant Program (referred to as "SNUG"). The program provides funds to Alaskan nonprofit service providers to increase housing opportunities for Mental Health Trust beneficiaries and other special needs populations throughout the state, including the homeless. The funds may be used for housing development and/or other housing related purposes. Organizations qualified to apply include municipalities and public or private nonprofit corporations.

- **Emergency Solutions Grant Program** – HUD program for emergency shelters for homeless in balance of state ($121,000) and Anchorage ($85,000).

AHFC Homeless Impact Programs

- **Housing for Persons with AIDS/HIV** – HUD program provides rental assistance and supports services to persons with HIV/AIDS to prevent homelessness. Grants go to non-profit organizations who administer services in Fairbanks, South Central and Southeast.

- **Shelter Plus Care** – provides rental assistance to disabled homeless persons. Grants go to non-profit organizations working in Anchorage, Mat-Su Borough, Bethel and Juneau.

- **Tenant Based Rental Assistance for Prisoner Re-Entry**

  As part of the Department of Corrections efforts to address prisoner re-entry issues and recidivism, AHFC is using federal funds to provide tenant based rental assistance to exiting prisoners allowing them to find housing upon release. A special set-aside is available for persons with disabilities and at-risk populations. TBRA is essential to meeting the unmet needs of special needs and at-risk populations by providing opportunities for those seeking individual living options in normal residential settings or in need of subsidized rental housing; TBRA will help narrow the gap in benefits and services received and help reduce recidivism.

AHFC Homeless Impact Programs

- **Continuum of Care Matching Grant Program** Nationwide, grants are made available annually by the federal government or private institutions or foundations that target the housing needs of low-income families, special needs groups, senior citizens, those with mental illness, physical disability or the homeless, and others. These program funds are used to match the grant funds received by local nonprofit organizations, municipalities and other organizations that deliver housing-related services. The average match ratio is 2:1 federal/state.

- **Housing Choice Voucher Program**

  The Housing Choice Voucher Program provides eligible low-income Alaskans (below 50 percent of median) with a method of obtaining affordable housing. It helps families lease privately-owned rental units from participating landlords. The household pays 30 percent of their income toward rent, the remainder is paid by AHFC. AHFC administers the voucher program in *11 communities throughout Alaska.* There are approximately 4,200 vouchers in Alaska.

- **Public Housing Properties**

  AHFC owns more than 1,600 safe, decent and affordable rental housing across Alaska where low-income families (below 80 percent of median) can access supportive services; however, AHFC is required to target 40 percent of all new admissions from families earning below 30 percent of median income. The household pays 30 percent of their income toward rent, the remainder is paid by AHFC. Public housing and Section 8 new housing developments are located in 14 communities across Alaska.

Public Housing Statistical Overview

If The Budget Cuts Proposed by Congress for the FY2012 Budget pass:

- AHFC will lose about $1.23 million for the repair and renovation of public housing stock.
- AHFC will lose about $782,000 from the statewide Housing Choice Voucher administrative fund.
- No new vouchers will be received.
- Veteran Affairs Supportive Housing (VASH) voucher program will be zeroed out. AHFC currently administer 95 VASH vouchers within Anchorage and Fairbanks and hoped to expand the program to Juneau.
- A $10 million cut to tenant protection vouchers. This program was the source of the 59 vouchers AHFC received in 2010 with the demolition of the Loussac Manor project.
- A $149 million cut to the Public Housing Operating Fund, a 3 percent reduction from current $4.775 billion funding level. Significantly, Congress may try to have public housing authorities pay a substantial portion of their operating expenses by drawing on reserves otherwise available for unanticipated capital repairs.

Public Housing Statistical Overview

- Of the 5,176 voucher holders ages 19 and older, 1,112 (21.5 percent) have full or part-time work

- Average duration on the program today = 8.9 years
- Average duration about 10 years ago = 3.6 years
- Percentage of families on program more than 10 years = 7.5 percent
- Percentage of families on program more than 5-10 years = 71.5 percent
- Percentage of families on program fewer than 5 years = 21 percent

THE "*REAL WORLD*" OF HOUSING NEEDS IN ALASKA

Alaska Housing FINANCE CORPORATION

Dave & Emily have two children ages 4 and 7. Dave works variable hours at a large home improvement store and Emily works at a small engine repair shop. They lost their apartment after their youngest child developed complications from the flu and Emily had to stay with the child at the hospital and later at home. Though Denali Kid Care covered the medical expenses, Emily's employer did not provide paid leave. Without her paycheck, the family got behind on their rent and utilities. They applied to the local Salvation Army and several churches for help with the arrearages but were repeatedly told that their timing was bad as funds were exhausted for the year. The family is #1348 on the Public Housing Voucher waitlist and is currently bouncing between motels and several friends' homes, never staying in one place for more than two weeks.

Solution: Provide adequate funding for short-term rent and utility arrearages
Increase federal & state funding for tenant based rental vouchers

Jeremy is a 24-year old former foster child. He was removed from the home where he was abused, neglected and sexually molested when he was nine. Considered "difficult to manage," he was placed in multiple foster homes. The longest period of stability Jeremy has known is the two years he spent at McLaughlin Youth Facility between 16-18 years. He has no stable adult mentors or relatives. Jeremy has worked at various fast-food restaurants but his volatile relationships with co-workers and managers often results in his losing or walking off the job. He tried shared apartment living but could not maintain relationships with his roommates. When the memories of his childhood or recent failures get overwhelming, Jeremy self-medicates with alcohol and/or drugs. He is too old for services from Covenant House but says he doesn't relate to the people who sleep at a Brother Francis-type shelter. Instead, he either camps or finds friends to take him in temporarily. Jeremy tried to apply for public housing but was turned down due to a history of disorderly conduct. He would like to enter a trade school but he can't afford the cost and is fearful of any entrance exam.

Solution: Link long-term care coordination and counseling for persons formerly in foster care with job service centers
Provide tax credits for businesses that develop workforce housing in industrial and commercial zones.

4300 Boniface Parkway • Anchorage, Alaska 99504 PO Box 101020 • Anchorage, Alaska 99510

THE "*REAL WORLD*" OF HOUSING NEEDS IN ALASKA

Grace is a 55-year old single mother with **Phillip,** a 30-year old developmentally disabled son. For many years, Grace ran a children's day care center out of her home. Last year, she had to close the business due to a deteriorating back condition. Currently the family is living off of Phillip's SSI check of $675 a month and food stamps. Grace has completed a course in tax preparation and hopes she can work through the tax season but her earnings will not be enough to stop foreclosure on her home. She has tried to sell her house but no one is interested in all the modifications that were made for her business.

Grace has no idea where they will go next. Grace is #2113 on the Public Housing wait list but hopes Phillip's Medicaid waiver will qualify them for a special set-aside voucher for this population. She knows there are no suitable shelters that can accommodate her son's disability without her. Due to her son's disability, most of her friends and family keep their distance.

Solution: Increase federal & state funding for tenant based rental vouchers

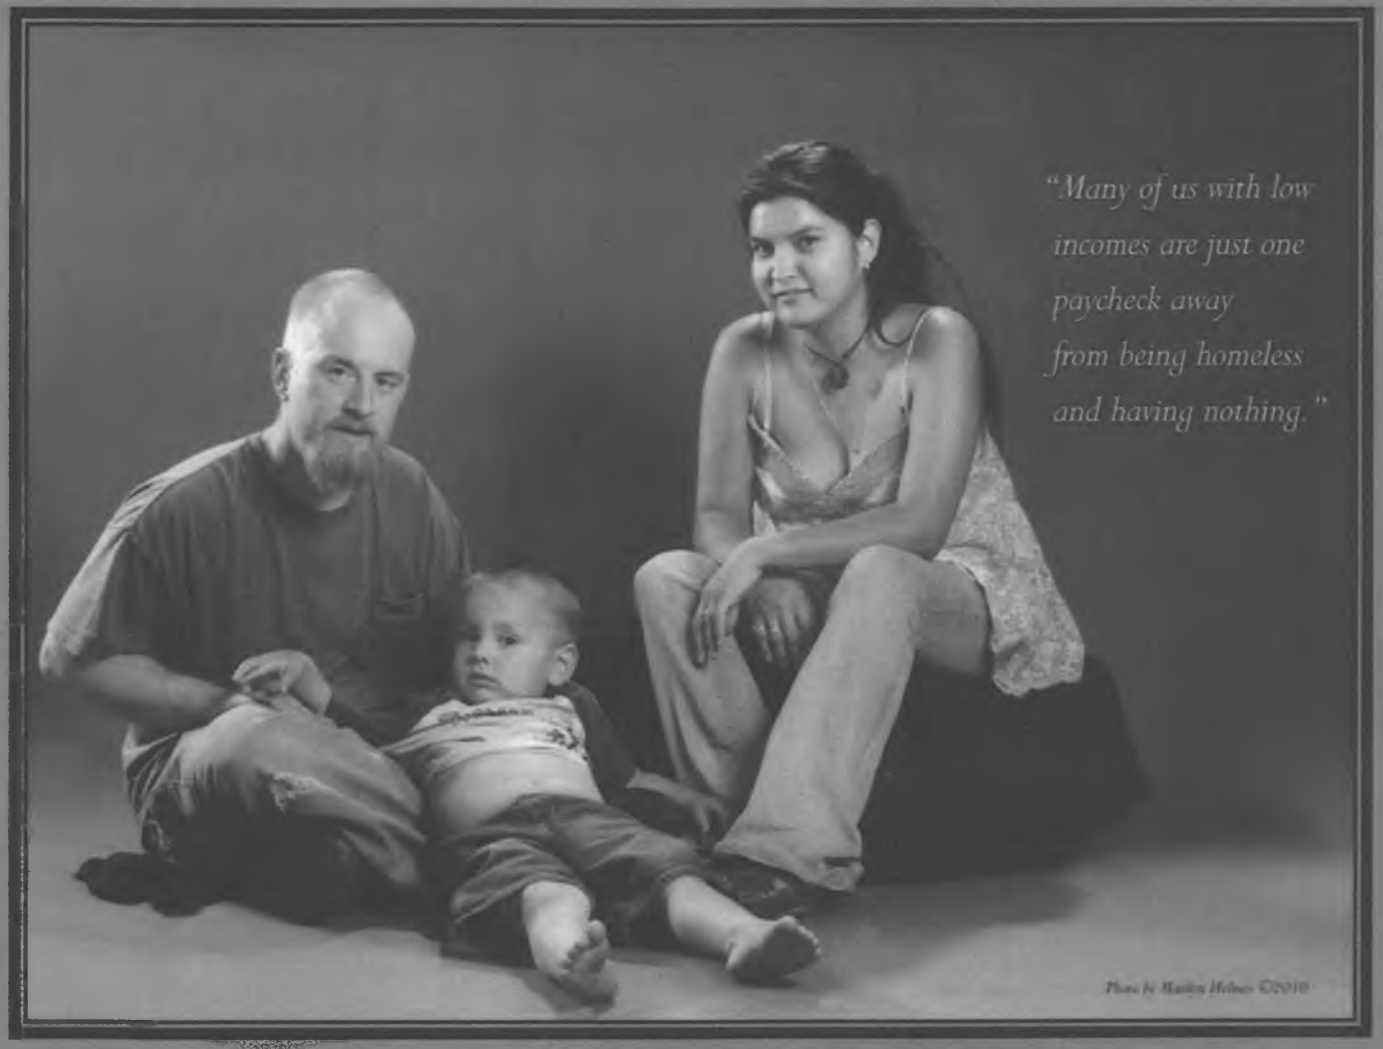
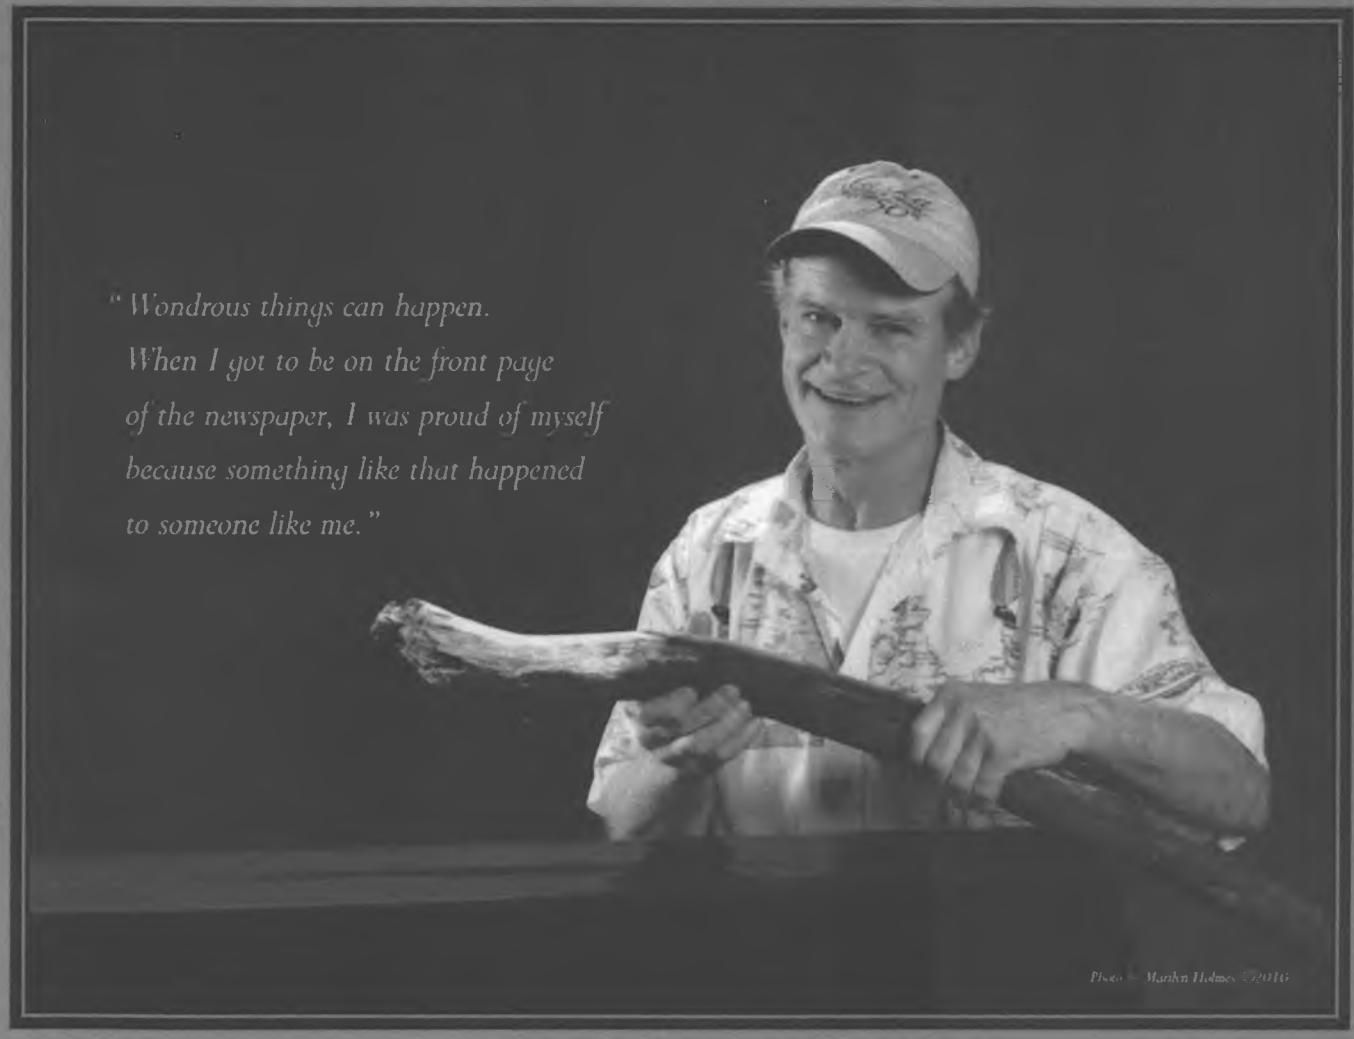
Alaska's Homeless

A Snapshot of Who In Alaska Experiences Homelessness



Families experience homelessness

29% of homeless households were families with children (January 2010)
National rate was 23-31% of all homeless households (2008)
4,218 children were identified as homeless during 2009-10 school year



Veterans experience homelessness

Veterans were 6% of all homeless Alaskans (January 2010)

National rate of homelessness for veterans was 13% (2009)

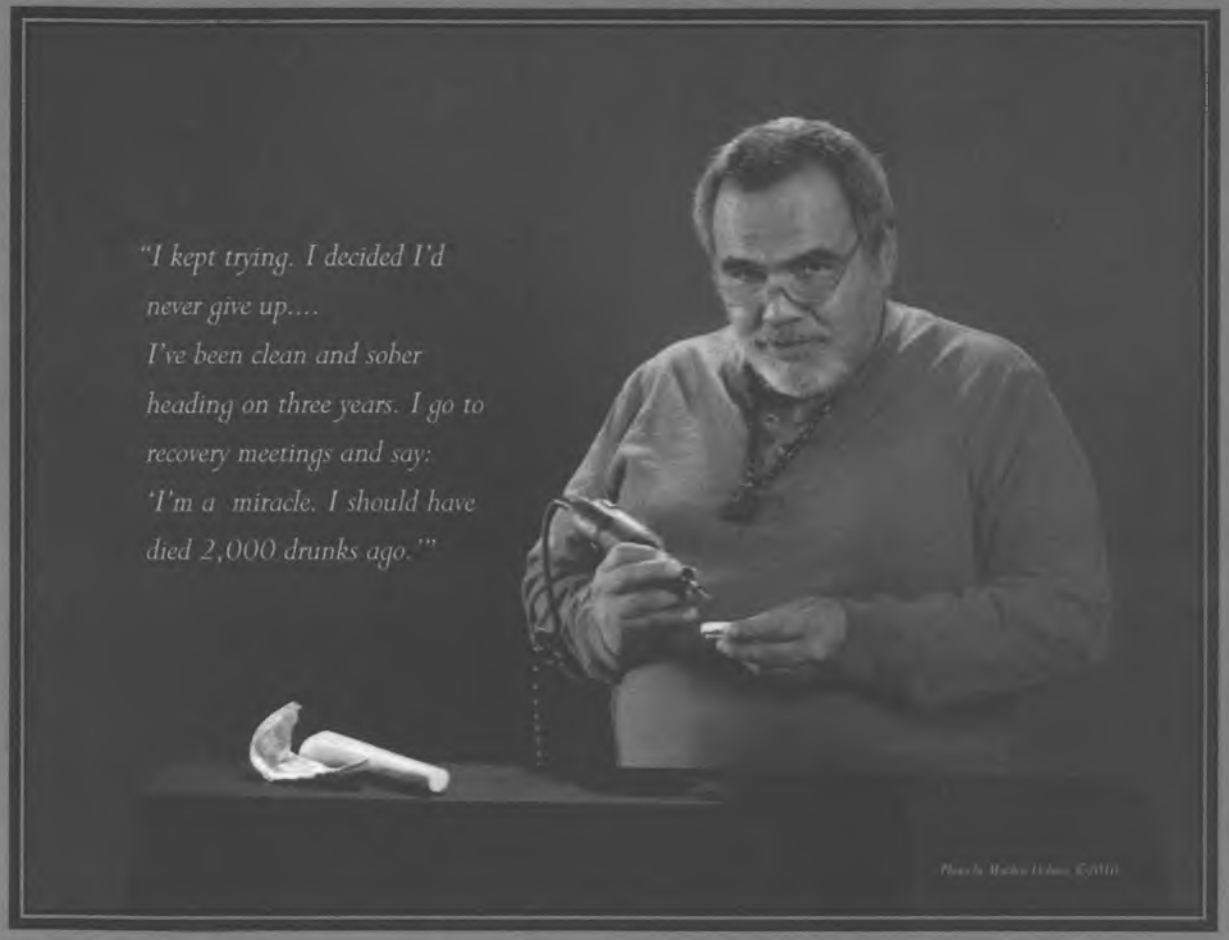
Nationally, homeless veterans are more likely to be single adult men

"Some kids come from bad environments and need to learn how to live on their own. I didn't come from a bad environment. I was lucky that way. But this [Juneau Youth Services transitional living program] has still been a really good thing for me."

Youth experience homelessness

1,306 10th-12th graders were homeless during 2009-2010 school year

Homeless youth are more at risk for suicide, exploitation, mental health disorders, PTSD, and substance use disorders



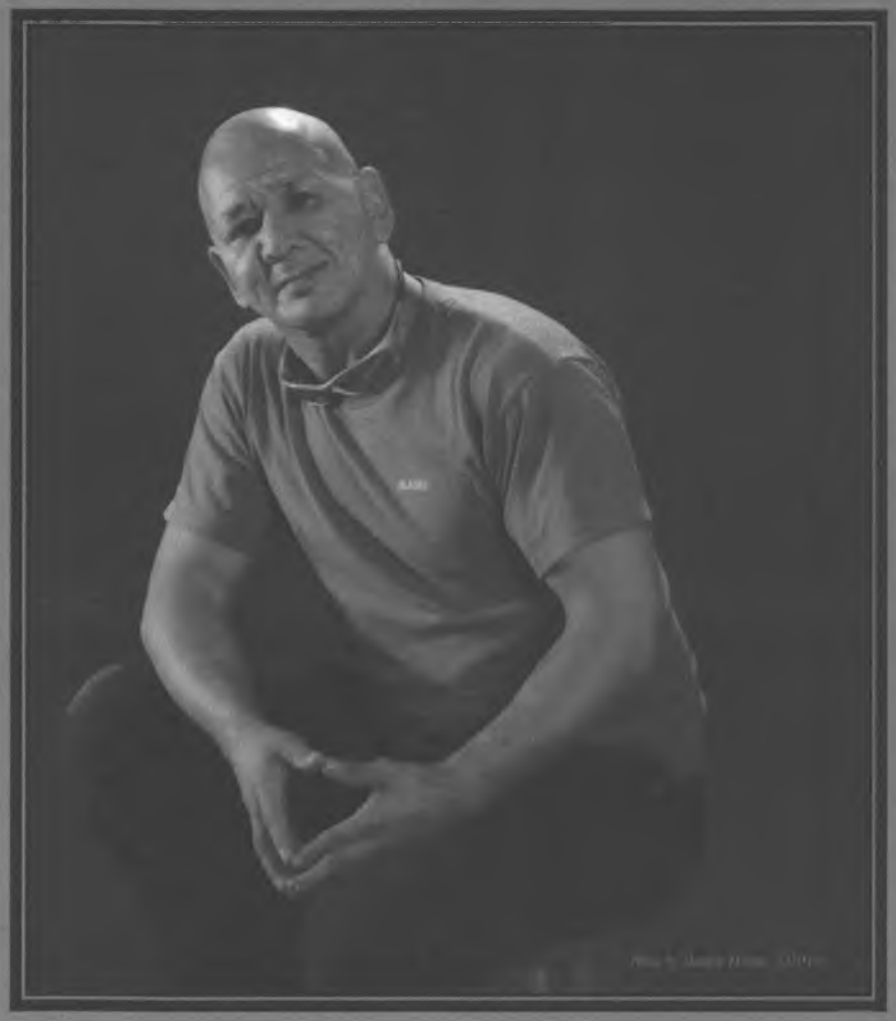
People with substance use disorders experience homelessness

16% of homeless individuals report chronic substance abuse (January 2010)
2.1% higher than reported chronic substance abuse in January 2009

N.B. Many Homeless Connect participants decline to answer, affecting data

Victims of domestic violence experience homelessness

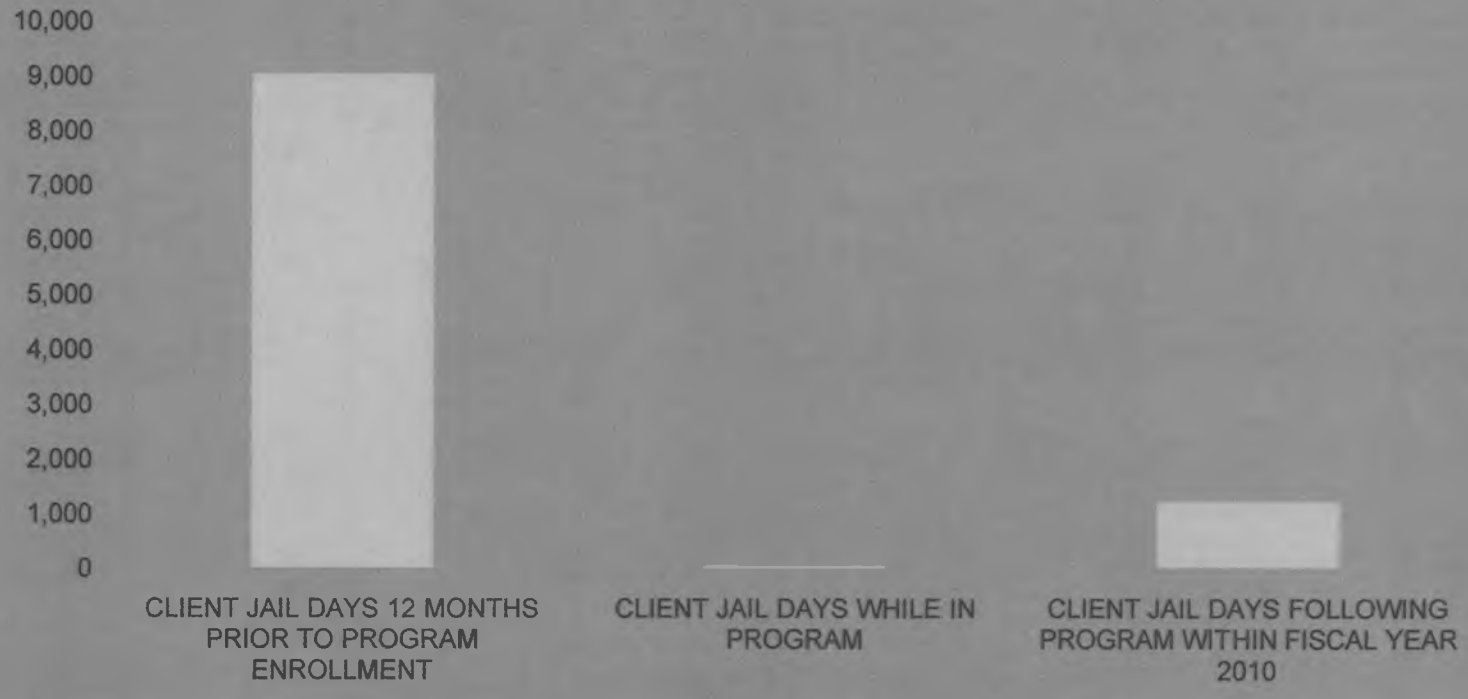
10.7% of homeless people reported past domestic violence (January 2010)
3.6% increase since January 2009
Nationally, 22-25% of homeless women report past domestic violence



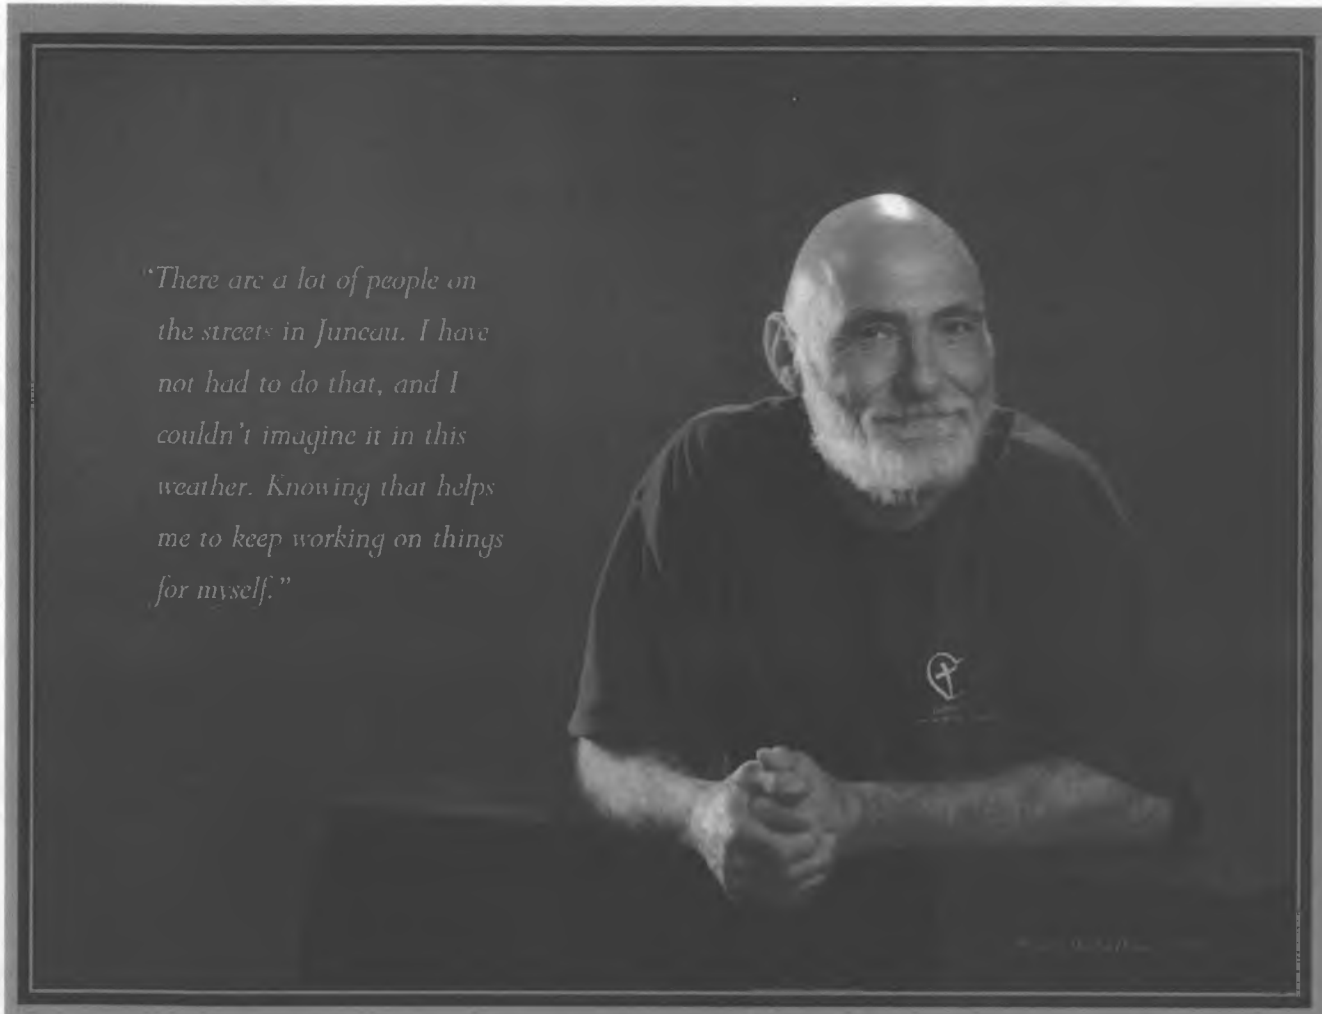
Prisoners experience homelessness before and after incarceration

Nationally, over 50% of homeless people report previous incarceration
20% of prisoners reporting mental illness were homeless before prison

DOC Discharge Incentive Grant Program



N = 43 clients served in Assisted Living Homes with augmented services and reimbursement because their needs were too high for standard assisted living

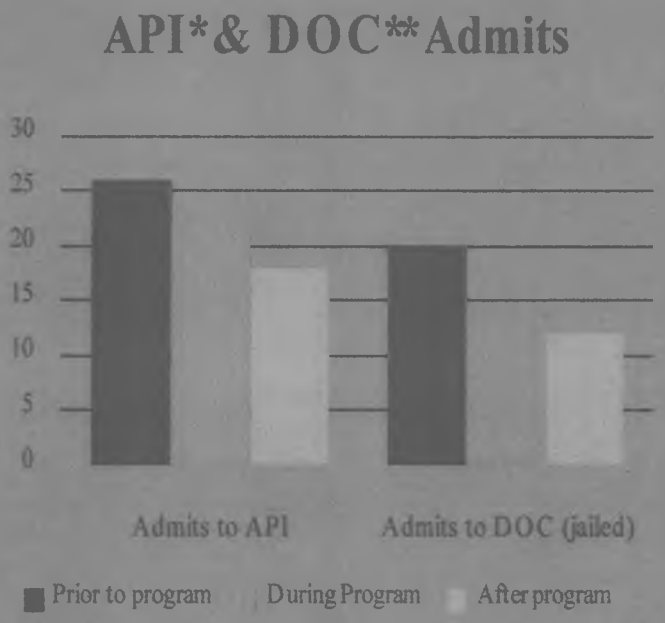


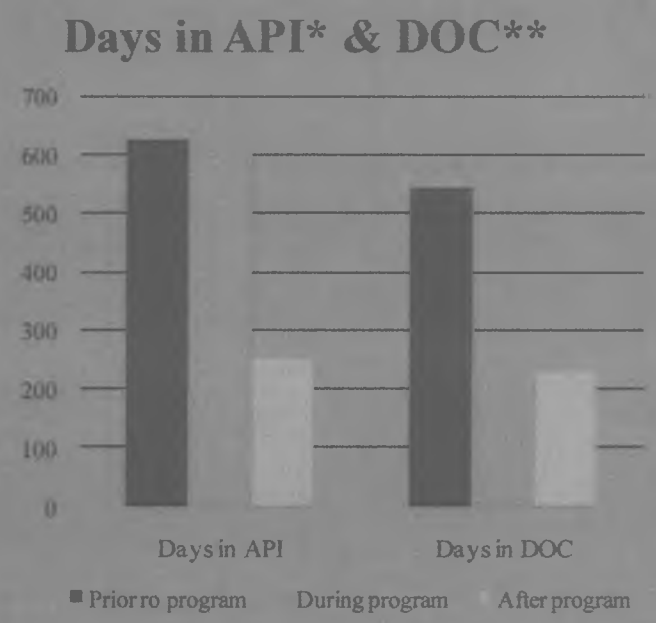
People with serious mental illness experience homelessness

18%of homeless people reported serious mental illness (January 2010)

(N.B. Many Homeless Connect participants decline to answer, affecting data)
Nationally, 26% of homeless people experience serious mental illness

Bridge Home Programs





Outcomes 1 year prior, 1 year during and 1 year after participation in Bridge Home program at Anchorage Community Mental Health Services

Effective Housing Models

Transitional Housing

- Covenant House, Anchorage –Juneau Youth Services, Juneau

Prioritizing by Vulnerability

- Common Ground, New York City

Housing First Services for People Who Are Homeless With Co-Occurring Serious Mental Illness and Substance Abuse

Deborah K. Padgett
New York University School of Social Work

Leyla Gulcur
Sam Tsemberis
Pathways to Housing

The literature on homeless adults with severe mental illness is generally silent on a critical issue surrounding service delivery—the contrast between housing first and treatment first program philosophies. This study draws on data from a longitudinal experiment contrasting a housing first program (which offers immediate permanent housing without requiring treatment compliance or abstinence) and treatment first (standard care) programs for 225 adults who were homeless with mental illness in New York City. After 48 months, results showed no significant group differences in alcohol and drug use. Treatment first participants were significantly more likely to use treatment services. These findings, in combination with previous reports of much higher rates of housing stability in the housing first group, show that "dual diagnosed" adults can remain stably housed without increasing their substance use. Thus, housing first programs favoring immediate housing and consumer choice deserve consideration as a viable alternative to standard care.

Keywords: *homelessness; serious mental illness; dual diagnosis; psychiatric rehabilitation*

Homelessness in the United States, traceable to a famine in housing markets beginning in the early 1980s, afflicts thousands of persons who are psychiatrically disabled who lack adequate community-based care (Baumohl, 1996; Lovell & Cohn, 1998). Many are visible as they lead troubled lives on the streets; however, a growing number are likely to be incarcerated—the largest de facto psychiatric facility in the country is the Los Angeles County Jail (Butterfield, 2003). Regardless of whether the problem is viewed as one of individual pathology or systemic failure, the plight of people with mental illness and homeless remains one of the least understood and most contested service delivery problems in mental health today (Gonzalez & Rosenheck, 2002; McGray, 2004; Substance Abuse and Mental Health Services Administration [SAMHSA], 2003).

Social workers join other providers and advocates in lamenting the lack of service integration and the scarcity of resources available to meet the needs of adults who are homeless with mental illness who also abuse substances. However, the literature of social work and other professions is generally silent on a policy-relevant and practice-relevant debate surrounding service delivery for this population. The point of contention stems from fundamental differences in how people with mental illness who are homeless are viewed and in how consumer choice is defined and incorporated into a program's service delivery philosophy. Put another way, there are two contrasting paradigms in services for persons who are homeless with serious mental illness, one the traditional continuum of care approach favoring treatment first and the other a consumer-driven movement (housing first) that has gained momentum in recent years (Carling, 1990; Culhane, Metraux, & Hadley, 2001; Tsemberis, 1999).

Among a number of differences between them, a contrast of interest in this report lies in how they deal with substance abuse and whether abstinence is a precondition to independent housing and other services. Approximately 50% to 70% of persons who are homeless with mental illness abuse substances (Drake, Osher, & Wallach, 1991; SAMHSA, 2003), and these estimates are widely considered underreports because of denial, distrust, and fear of the consequences of divulging illegal behaviors (Drake, Yovetich, Bebout, Harris, & McHugo, 1997).

Housing first programs rank stable housing as the first and highest priority vis-à-vis abstinence from substance use and/or abuse, thus practicing a harm reduction approach (Inciardi & Harrison, 2000). Treatment first programs reverse this sequence and require detoxification and sobriety before giving access to services such as independent housing. For these programs, consumers'

Research on Social Work Practice, Vol. 16 No. 1, January 2006 74-83
DOI: 10.1177/1049731505282593
© 2006 Sage Publications

choice in adherence to mental health treatment and abstinence requirements must be relinquished for their own sake until they are deemed ready for independent living.

Our primary goals in this article are twofold: (a) to describe the historic development and core components of these two distinct service alternatives (treatment first and housing first) and (b) to provide findings related to substance and services use from the only randomized experiment designed to compare their effectiveness—the New York Housing Study.

BACKGROUND

The Treatment First Approach for People Who Are Homeless With Mental Illness

The era of deinstitutionalization opened the door to independent living for persons with diagnoses such as schizophrenia and bipolar disorder; however, these individuals still needed an array of support services as they made the transition from psychiatric hospital to community (Dixon, Krauss, Kernan, Lehman, & DeForge, 1995). Among these were medication management, psychological counseling, education, and job training. For a large subgroup, abuse of drugs and/or alcohol complicated matters considerably (Drake et al., 1997). Persons with mental illness who became homeless were disproportionately individuals who were "dual diagnosed" whose lives became a continual struggle to find shelter and avoid being victimized (Drake et al., 1991; Padgett & Struening, 1992).

The well-intentioned but underfunded system of public sector mental health services that evolved after the 1960s rarely interacted with drug and alcohol (D/A) treatment programs designed with clients without mental illness in mind. However, both service systems had one thing in common: They were predicated on assumptions of the need for structure and control. Different funding streams, staff expertise, and service philosophies, notwithstanding, the mental health, D/A, and homeless services systems share a "hurdle" approach in which gaining access to services requires relinquishing control and choice. In exchange for a bed and supportive services, consumers and/or clients submitted to rules requiring treatment compliance, abstinence, curfews, limited visitation, and a loss of privacy (Miller & Flaherty, 2000). From the perspective of a person who was dually diagnosed living on the street, this threshold for entry can seem daunting at best. It is also a high-stakes gamble because rule breaking usually leads to expulsion and a return to the streets.

Evaluations of treatment first programs have produced modest results in achieving housing stability (Lipton, Siegel, Hannigan, & Samuels, 2000); however, program attrition and a return to the "institutional circuit" (Hopper, Jost, Hay, Welber, & Haugland, 1997) remain a problem when trying to ascertain change over time. Recent innovations in programs designed specifically for persons with dual diagnoses have shown promising results for integrated treatment models (Drake et al., 1997; Bebout, Drake, Xie, McHugo, & Harris, 1997; Minkoff, 2001) and Double Trouble in Recovery 12-step groups (Magura, Laudet, Mahmood, Rosenblum, & Knight, 2002). Indeed, the cumulative findings have made integrated treatment for persons who are dual diagnosed the "state of the art" in terms of effectiveness (Tsuang, Fong, & Ho, 2003).

When integrated treatment was linked to housing options in a randomized trial, positive outcomes were associated with supervised living and on-site clinical services (McHugo et al., 2004). However, no study of integrated treatment to date has tested its comparative effectiveness as part of the consumer choice model as is the focus of the current study.

Reversing the Continuum: The Pathways Model of Housing First for Adults Who Are Psychiatrically Disabled and Homeless

By the early 1990s, a consumer-centered approach surfaced that reversed the treatment first continuum. Its proponents argued for "supported housing," with tenets of consumer choice, ongoing support services, and community integration (normal housing, not "treatment" residences; Carling, 1990; Ridgeway & Zipple, 1990; Srebnik, Livingston, Gordon, & King, 1995). They described treatment first approaches as "supportive housing" with on-site (or proximal) staff and rules governing behavior ranging from curfews to visitation to abstinence. Most involve congregate living with other consumers who are homeless and function as transitional housing, that is, therapeutic environments designed to foster independent living skills enabling clients to graduate to living on their own. In contrast, housing first is a type of "supported housing" that separates treatment from housing, considering the former voluntary and the latter a fundamental need and human right. As such, it provides scatter-site housing without on-site staff supervision and generally promotes harm reduction rather than requiring abstinence.

Although confusion can arise regarding what are considered essential and defining program components in supported versus supportive housing (Fakhoury, Murray,

Shepherd, & Priebe, 2002), housing first shares a bottom-line commitment to consumer choice and to immediate and continuing access to scatter-site independent housing. To our knowledge, the agency model that is the subject of the current study—Pathways to Housing, Inc.—stands alone in embodying the following elements: (a) immediate independent permanent housing that is not contingent on treatment compliance and is retained regardless of the client's temporary departure because of inpatient treatment or incarceration; (b) choice and harm reduction with respect to mental health treatment and substance use; (c) integrated Assertive Community Treatment (ACT) services (Drake et al., 1998) that work in conjunction with housing staff and a nurse practitioner to address ongoing housing and health needs.

The New York Housing Study

With its funding of a national multisite study of housing alternatives for persons who are homeless with mental illness, the federal agency SAMHSA chose the Pathways to Housing (PTH) program as the experimental condition for the New York City site (Shern et al., 2000). The New York Housing Study (NYHS), which began in 1996, was a 4-year randomized trial comparing the PTH version of housing first with treatment first continuum of care programs in the New York City area.

Published findings from the NYHS have shown higher rates of housing stability (Tsemberis & Eisenberg, 2000; Tsemberis, Gulcur, & Nakae, 2004) and cost savings (Gulcur, Stefancic, Shinn, Tsemberis, & Fischer, 2003) for the PTH model. In addition to housing stability, the NYHS also assessed outcomes related to mental health symptoms, quality of life, drug and alcohol use, and utilization of substance abuse treatment. Analyses of the 24-month data showed no significant group differences in these outcomes with the exception of higher use of substance abuse treatment services by the control group (Tsemberis et al., 2004). The NYHS maintained a remarkable 87% retention rate of participation for 4 years (Stefancic, Shaefer-McDaniel, Davis, & Tsemberis, 2004).

In summary, the NYHS found that "a person's mental health diagnosis is not related to his or her ability to obtain or to maintain independent housing" (Tsemberis et al., 2004, p. 654). Moreover, housing such persons without requiring abstinence and sobriety did not increase their use of substances during a 2-year period despite comparatively lower levels of use of substance abuse treatment services. The control group's higher use of substance abuse services did not produce comparatively lower rates of drug or alcohol use, thus indicating that residence in "sober housing" did not produce the desired results in terms of abstinence.

In this report, we assessed substance-related and treatment-related outcomes from the full 48 months of data to determine if the previous findings are sustained or change during a much longer period of observation (4 years vs. 2 years). Thus, we address the following research questions:

Research Question 1: Are there group differences in alcohol and drug use at 48 months?

Research Question 2: Are there group differences in participation in substance abuse and mental health treatment at 48 months?

METHOD

Sampling and Recruitment

Individuals were eligible to participate in the NYHS if they signed an informed consent form (approved by federal and university Human Subjects Committees) and met three inclusion criteria. These were that the person (a) spent 15 of the last 30 days on the street or in other public places, (b) exhibited a history of homelessness during the past 6 months, and (c) had an Axis I diagnosis of severe mental illness. Although substance abuse was not a criterion for eligibility, 90% of the study participants had a diagnosis or history of alcohol or drug disorders according to clinical records. Psychiatric diagnoses were obtained from clinical records and interviews with referring providers.

Respondents were recruited from outreach teams, drop-in centers, state psychiatric facilities, psychiatric wards, and the streets. When it was determined that individuals met the inclusion criteria, they were asked if they would be interested in participating in a research study with compensation of U.S. $25 for each interview. It was further explained that based on a randomized lottery system, individuals would be referred to different housing programs in the city. Recruitment lasted from November 1997 to January 1999. The recruited sample was 225 people (99 in the experimental group and 126 in the control group) between ages 18 and 70 years.

Study Design and Description of Experimental and Control Conditions

The housing first model was developed by Pathways to Housing, Inc. (PTH) in 1992 as a consumer-driven approach to providing housing and support services to

adults who were homeless with mental illness. PTH gives immediate access to housing in independent scatter-site apartments and offers tenants an array of services through interdisciplinary Assertive Community Treatment (ACT) teams that include social workers, psychiatrists, vocational trainers, and substance abuse counselors. Two modifications of the ACT model initiated by PTH were the addition of a nurse practitioner to address health problems and a housing specialist to coordinate housing needs. As part of its vision of consumer choice, PTH does not make housing contingent on sobriety or treatment compliance. The single contingency in this model is a money management program for PTH clients who are unable to meet landlord requirements for leases (e.g., credit histories) or who are not ready to conserve resources necessary to make monthly rent payments. Because it does not refuse clients with histories of violence or incarceration, PTH has accepted and housed the most problematic among persons who are homeless with mental illness, that is, those other programs would not take or had ejected (Tsemberis, 1999).

PTH tenants who abuse drugs or alcohol are counseled by clinical services staff based on their readiness for change. Those with serious substance abuse problems are urged to accept referrals to residential treatment (and their apartments held for them or another one found when they are discharged). PTH also offers harm reduction support groups at its various branch offices. PTH clients whose substance use causes disruption face the usual consequences of a tenant in a similar situation with the exception that PTH staff will assist them in moving to another apartment if evicted.

Individuals randomly assigned to the control group were referred to usual care programs that offer abstinent-contingent housing and services based on a treatment first model. A typical program would be exemplified by a group home or a single-room occupancy residence in which clients are expected to attend day treatment, 12-step, and other therapeutic groups and follow medication regimens enforced by on-site staff. Sleeping, cooking, and bathing facilities are shared, and house rules strictly prohibit consumption of any substances and overnight guests.

During the research design phase, volunteer tenants at PTH reviewed the proposal and provided feedback. Tenants also served on the PTH Institutional Review Board (IRB) and had a voting role as to whether the project and the randomization process was fair and not harmful. Fidelity to the ACT model in the experimental condition was assessed using the Dartmouth fidelity model (Teague, Bond, & Drake, 1998) and was found to be satisfactory (Shinn, Tsemberis, & Moran, 2005).

Data Collection and Measures

A structured interview was administered at 6-month intervals for 48 months. To reduce attrition and maintain contacts, monthly 5-minute call-in interviews were conducted. Participants were paid $25 for in-person interviews (9 in all) and $5 for the monthly calls. These repeated contacts are one of the reasons for the study's high retention rate (Stefancic et al., 2004).

Because the NYHS was one of eight sites participating in a federally funded demonstration project, standardized cross-site measures were used to assess key variables.

Use of alcohol and illegal drugs. Use of alcohol and illegal drugs was assessed with the Six-Month Follow-Back Calendar (Sobell, Sobell, Leo, & Cancella, 1988). Participants reported the number of days drinks were consumed, and the number of days that certain illicit drugs were used during the 6-month period. Four summary variables were defined by the cross-site team: any use of alcohol, any use of illegal substances, heavy use of alcohol (more than 28 days in 6 months), and heavy use of drugs (more than 4 days in 6 months). Of these four variables, two (heavy use of alcohol and heavy use of drugs) were utilized in analyses for the current study.

It is possible that individuals in the treatment first programs underreport substance use differentially because these programs typically require abstinence or at least the promise of sobriety. Although such a bias would work against finding effects favoring the experimental condition, we considered this possibility of differential self-report in interpreting the findings.

Participation in substance abuse treatment. Participation in substance abuse treatment was collected through the use of a modified Treatment Services Review (McLellan, Alterman, Woody, & Metzer, 1992). Service use was computed as the average of a seven-item measure consisting of questions such as whether the participant had received treatment in a detox program or consulted with a counselor to talk about substance problems, and attended AA, NA, or any other substance abuse self-help group.

Participation in mental health treatment. Mental health service use was also collected through the modified Treatment Services Review (McLellan et al., 1992). Service use was computed as the average of a five-item measure consisting of questions such as whether the participant had received overnight treatment in a psychiatric hospital, attended a day hospital program or day

treatment center, and visited with a doctor or nurse to discuss medication or emotional problems.

For both utilization variables, the average proportion of services used is reported as the outcome of interest. A proportion of .20, for example, means that group members averaged one of a possible five "yes" answers to the mental health services measure.

Data Analyses

Checks on random assignment. A preliminary data analysis question checked on random assignment of the sample retained at each data collection point. One of the best guarantees of random assignment is a strong retention rate, which we successfully attained. We compared respondents who were and were not retained in the sample at several data collection points to see if they differed from baseline and found no differences in key demographic or other baseline variables. Because random assignment produced satisfactory equivalence of the groups, no demographic variables were used as covariates because they were not correlated with the outcomes. For this reason, we reported the demographic characteristics for the total sample rather than by group (see Table 1).

Analyses of research questions. Research Question 1 was analyzed graphically and with a growth curve model with group-by-time interactions to formally assess whether differences are changing over time, also known as hierarchical linear modeling (Bryk & Raudenbush, 1992). We created a Level-1 (repeated measures) model for the trajectory of each participant, and a Level-2 (person level) model to examine differences in experimental versus control trajectories for participants. At Level 1 (repeated measures), we estimated a regression equation for alcohol and drug use outcomes as a function of time. At Level 2 (person level), we estimated whether the intercept and growth parameters of the Level-1 models differed by group. Note that with nine points of data collection, we were able to include participants in this analysis even if they missed as many as one half of the assessments; this was an advantage of utilizing SAS Proc Mixed over repeated measures MANOVA.

Research Question 2 was tested using a sub-sample of participants who were in some type of service-related program, namely, experimental participants who were currently housed by the PTH/housing first program and control participants who reported living in one of the following places at time of the interview: supportive single-room-occupancy (SRO) hotels, drop-in centers, safe havens, detox facilities, crisis housing, intermediate care, boarding houses, transitional housing, group homes, alcohol and/or drug-free facilities, or treatment and/or recovery programs. The rationale for using this subsample for Research Question 2 was to "level the playing field" in terms of including only housed study participants—those in shelters, incarcerated, or on the streets were considered less able to avail themselves of such services. Because participants' residential status changed from one time point to the next, the subsamples also changed; we, therefore, had to conduct separate *t* tests for each time point instead of SAS Proc Mixed.

Perhaps it is not surprising to note, sample sizes varied considerably in this analysis across the nine points of data collection (every 6 months for 48 months). Thus, control group sample sizes ranged from a high of 126 at baseline to a low of 53 at 24 months. Similarly, experimental group sizes ranged from a high of 99 at baseline to a low of 35 at 12 months. In addition to the analysis decision to include only individuals who were housed at each specific time of

TABLE 1: ***Participant Characteristics***

Variable	*Number*	*Percentage*

NOTE: Some percentages do not add up to 100% due to rounding error. Categories with the same superscripts were combined for analysis of group differences.

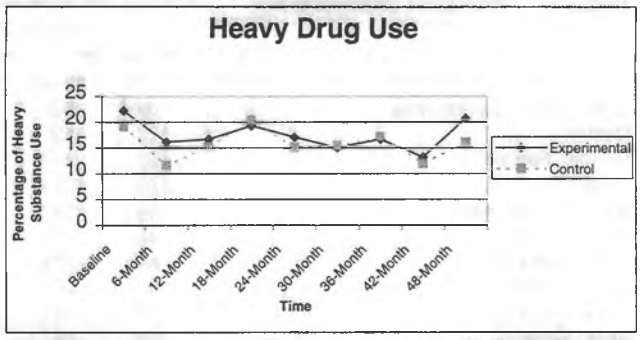

Figure 1: Heavy Drug Use, Baseline to 48 Months

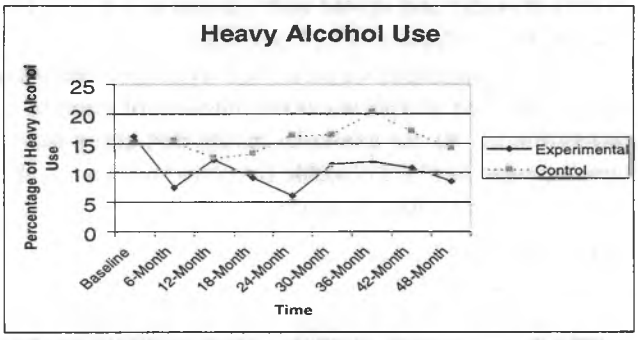

Figure 2: Heavy Alcohol Use, Baseline to 48 Months

data collection, samples were reduced because of study dropout, no-shows, incarceration, or other forms of institutionalization. PTH (experimental) participants were not considered "housed" if they were institutionalized even though they had access to housing on discharge. Because of these multiple group comparisons, a more conservative significance level was applied using a Bonferroni-corrected alpha of .006.

RESULTS

Description of the Study Sample

As can be seen in Table 1, the sample consisted of 173 men (76.9%) and 52 women (23.1%) with an average age of 41.5 years. Most of the participants (69.2%) had never been married. Sixty-three (28%) participants identified their race as White, and 90 (40%) identified their race as African American. Twenty-three (10.3%) participants did not go beyond eighth grade in their education. Among Axis I diagnoses, psychotic disorders were dominant (53.8%).

Thirty nine (17.6%) of the participants reported becoming homeless before age 18 yrs. The average age at which participants reported experiencing homelessness for the first time was 29.5 yrs (age range was 5 to 64 yrs). The longest period of time homeless was an average of 4.4 years with a median of 3 years. The majority (50.1%) of the participants lived on the streets or public place or in a drop-in shelter at time of the baseline interview, and 36% (n = 81) were living in a psychiatric hospital. According to their psychosocial histories, 90% had substance use disorders either in the past or currently. At the study's end at 48 months, housing first clients were stably housed 75% of the time during the previous 6 months compared to 50% of the time for treatment first clients (L. Gulcur, personal communication, July 25, 2005).

Group Differences in Alcohol and Drug Use

To answer Research Question 1, SAS Proc Mixed was utilized to test whether there were changes in reported drug and alcohol use over time. Because of low reported levels of drug and alcohol use, the "heavy use" variables were analyzed and predicted by time, group assignment, and the Time × Group Assignment interaction. As can be seen in Figures 1 and 2, none of the parameters were significant: Reports of drug use remained constant during the 48 months of the evaluation project, the groups did not differ from each other, nor were there differences in their rates of change over time. The same predictors were used to examine change in alcohol use over time, and again, none of the parameters were significant. However, there was a visual trend indicating that the PTH group used less alcohol than the control group.

Group Differences in Substance Treatment and Psychiatric Services Utilization

Substance treatment utilization showed notable differences at 6 months (p = .012), 18 months (p = .021), 24 months (p = .025), 36 months (p = .006) and 48 months (p = .014) with the control group members showing higher utilization (see Figure 3). With the Bonferroni correction, these differences were significant only at 36 months. Control groups members were somewhat higher utilizers of mental health treatment though the differences were statistically significant only at 48 months (p = .003; see Figure 4).

Discussion

The above results extend those cited earlier (Tsemberis et al., 2004) to an additional 2 years of data collection. We

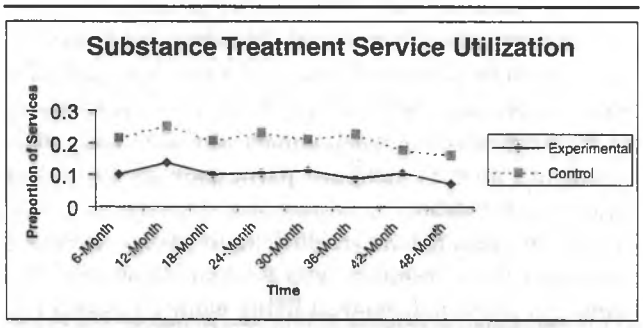

Figure 3: Substance Treatment Service Utilization, Baseline to 48 Months

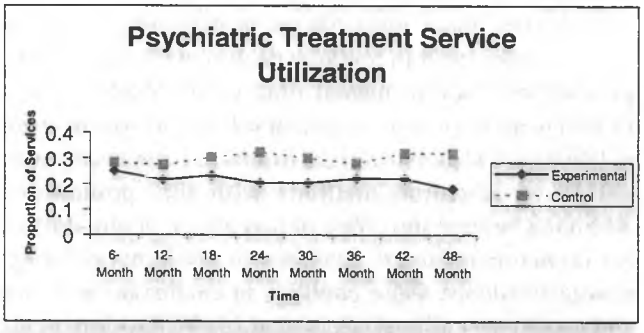

Figure 4: Psychiatric Treatment Service Utilization, Baseline to 48 Months

note the continued absence of group differences in alcohol and drug use, though with a nonsignificant trend toward lower alcohol use by the housing first group. The lack of compliance with sobriety requirements by a significant proportion of the treatment first group—now extending to 4 years' duration—is an indication that such strictures fall short in bringing about abstinence among consumers whose primary need is for housing (Watkins, Shaner, & Sullivan, 1999). Although substance use was almost certainly underreported by members of both groups, it is likely to be greater among those in treatment first because the adverse consequences of any admission of substance use are greater for them.

The treatment first group's higher use of substance abuse treatment services during the 48 months of the study must be considered in this context in which service use is linked to housing. It is not unusual to see clients continue to use drugs or drink surreptitiously even while attending treatment groups (Wolford et al., 1999). Our findings that treatment first clients did not reduce substance use and had comparably greater use of substance abuse and mental health services underscore this possibility.

Access to and availability of such services might influence these findings aside from program philosophies and requirements. However, it is useful to distinguish between services that are available versus those that are required. Housing first participants had an array of services available to them but were not required to use them. Control participants were required to use certain services (e.g., detox, 12-step groups, day treatment) to maintain their housing and presumably had access to them. Given the systemic factors influencing an individual's ability and willingness to seek help for mental health and substance abuse problems, our findings of "no significant difference" in substance use despite lower treatment service utilization and no program-specific restraints on substance use connotes clinical and programmatic significance favoring the housing first approach.

Limitations of the Study and Implications for Future Research

Despite a rigorous experimental design, low attrition rate and the use of standardized measures known for their reliability among persons who are homeless with mental illness, the current study is subject to concerns about accuracy in recall and social desirability bias. Such concerns are common to studies using self-report measures (Calsyn, Morse, & Klinkenberg, 1997) but are especially pertinent given the complex interplay of mental symptoms, drug effects (illicit and prescribed), and the severe deprivations of homelessness. If a man who is homeless is taken to a hospital emergency room disheveled, incoherent, and violent, he could be psychotic, high, or both. When it comes to substance abuse and psychiatric medication adherence, study participants may have a number of reasons for memory loss, misunderstanding Likert-type questions, or deliberately misleading researchers (Wolford et al., 1999).

In the current study, the thresholds selected as indices of a substance abuse problem do not necessarily square with providers' perceptions (Drake et al., 1991) nor should they be construed as clinically significant. In addition, the lower overall rates of substance use reported in this sample do not conform to estimates from previous sources. It is possible that this discrepancy is because of measurement bias or deliberate underreporting. As well, previous estimates may have been higher because of their reliance on persons who were dually diagnosed and homeless rather than those enrolled in services as in the current study. The absence of verification measures (e.g., urine toxicology tests) makes it impossible to draw definite conclusions about these reported rates.

Concerns about inaccuracies in detecting substance use are widespread in research dealing with problems of persons with severe mental illness. Yet Wolford et al. (1999) were surprised to find that self-report was superior to laboratory tests and clinical exams in a controlled evaluation of detection methods with this population. Although beyond the scope of this article, methodological problems related to accuracy in detecting and diagnosing substance abuse continue to challenge clinicians and researchers alike (Calsyn et al., 1997; Wolford et al., 1999). The current study's reliance on psychosocial histories and clinic records, rather than formal *DSM* diagnoses (Axis I or II) limits our capacity to analyze or compare findings based on *DSM* criteria. However, we are reasonably certain that the Axis I eligibility criteria were met.

Given the unquestionable negative effects of drug and alcohol abuse on rehabilitation of persons with mental illness, it is imperative that researchers pursue a number of avenues for understanding the beginning and ending of substance abuse among individuals in this population (Hohmann & Shear, 2002; Ridgway, 2001). To this end, the NYHS investigators and the first author have embarked on a longitudinal qualitative study designed to address this gap in knowledge by asking consumers about their histories of substance use and experiences in the service delivery system.

Beyond methodological improvements, future research is needed on supported housing in general (and housing first programs in particular) to compare outcomes across different settings and geographic areas (Mares, Kasprow, & Rosenheck, 2004). Currently, the PTH program is being replicated in a number of cities (Anderson, 2005), and plans for formal evaluations of the replicated model are under way.

Implications for Practice and Policy

The results of the current study show that individuals with severe mental illness and substance use problems do not have to undergo mandatory treatment to be able to live independently in the community. Moreover, consumer-driven programs that practice housing first and harm reduction are not linked to increased substance use despite the absence of restrictions. The current study has also revealed consistent (and probably underreported) use of illicit substances by individuals enrolled in treatment first programs despite abstinence requirements.

Our findings have distinct relevance for practitioners charged with engaging and retaining clients who are homeless with mental illness in care. Thus, the one-size-fits-all assumption that mental disorders and homelessness cannot be addressed until a client is clean and sober is no longer valid. Indeed, engagement and retention may be far more effective when clients who are dually diagnosed are able to actively participate in their own treatment decisions.

Yet long-held beliefs are difficult to change. Research has shown that consumers who are dually diagnosed and homeless prefer independent living while clinicians recommend supervised congregate housing (Schutt, Weinstein, & Penk, 2005; Watkins et al., 1999). Although the landscape of mental health and homeless policies is continually changing (McGray, 2004), there is a marked lag in implementation of empirical findings in policy and practice (Tsuang et al., 2003). Even individual components taken separately from housing first "packaging" (e.g., harm reduction and integrated treatment) remain far less common than treatment first and abstinence-oriented approaches. Organizational cultures, funding streams, and a conservative sociopolitical climate present obstacles to change and have the ultimate impact of restricting consumer choice (Tsuang et al., 2003).

As part of a federally funded national demonstration project, the NYHS was intended to inform housing and treatment policies for this deeply vulnerable population. Millions of public and private dollars are spent each year on treatment for persons with mental illness, and services for persons who are homeless have expanded exponentially (McGray, 2004). For example, the New York State Office of Mental Health has an annual budget of $5.6 billion, yet a small fraction (about $6.5 million) is dedicated to supported housing initiatives.

Further support for housing first approaches comes from comparative cost analyses. A groundbreaking study released in 2001 documented substantial cost savings from community-based care compared to shelters, jails, and hospital beds (Culhane et al., 2001). Because "community-based care" encompasses many noninstitutional approaches, future policy decisions to redirect public funds toward more effective alternatives will invariably also consider costs. Annual per capita costs of the PTH program are $22,500 compared with $40,000 to $50,000 for treatment first congregate housing programs, $85,000 for a jail bed, and $175,000 for a state psychiatric hospital bed (Anderson, 2005).

Social work practitioners, policy makers, and educators can benefit from these findings as some of the strongest support for "evidence-based practice" in housing and services for persons who homeless with mental illness. As the largest single group of mental health practitioners

and a significant part of the substance abuse treatment workforce, social workers play a critical role in implementing best practices for this vulnerable population.

Heartened by results showing that housing first leads to residential stability even for those considered least capable of benefiting, we end on a note of optimism that future research will shed additional light on the complex dynamic surrounding decisions of individuals who are homeless about substance use and the many other dimensions of successful recovery from mental illness. In this context, program philosophies favoring choice over restrictions and empowerment over compliance deserve consideration as not only effective but humane.

Alaska 10-Year Plan to End Homelessness

Progress Briefs (3/1/2011)

▲ = Good News

▼ = Bad News

PROGRAM PLANNING & COORDINATION

▲Homeless Coordinator grants awarded to Anchorage, Fairbanks & Mat-Su
▲Five -Year Prisoner Reentry Strategic Plan Released by DOC
▲ Number of communities working on a homeless strategy increased to 9
▲ *Number of Project Homeless Connect events increased from 3 to 5* in 2011

1. Housing for Chronic & Special Needs Homeless

▲33 new units developed under HUD 811 or 202 opened their doors in 2010
▲Count of chronic homeless continued to drop in AK to 240 from 453 in 2009
▲Number of VASH housing vouchers for homeless veterans rose from 35 to 95
▼10 TH units & 8 PSH units for homeless disabled persons eliminated in Mat-Su
▼Deaths among unsheltered homeless in ANC continued to rise

2. Housing for Persons Discharged from State Custody

▲Re-entry rental assistance program fully operational outside of ANC
▼AHFC application for Family Unification Program vouchers unsuccessful

3. Housing for Families w/Children

▼Number of homeless households with dependent children rose by nearly 10%
▼Average subsidy per household reduced est. # of vouchers from 4,275 to 3,982

4. Homelessness Prevention /Crisis Intervention

▲ Family Hope Center in Kenai increased # of transitional beds
▲# of HH receiving HAP-funded Prevention rose to 844 compared to 556 in '09
▼Housing retention rate dropped from 95% in '09 to 83% in '10

5. Data & Reporting

▲ Participation in HMIS increased

State of Alaska Homeless Count – January 2010

A Look at Homelessness in Alaska

Homelessness, and its impact on individuals, families, and society, is an issue of growing concern both nationally and in Alaska. In the U.S., about 1,594,000 individuals used an emergency shelter or transitional housing, or both, between October 1, 2007 and September 30, 2008. On a single night in January 2008, the U.S. homeless population was estimated at 664,000 according to this annual Point-In-Time (PIT) count. These figures are part of the Department of Housing and Urban Development's (HUD) "2008 Annual Homeless Assessment Report to Congress" released in July 2009. HUD also reports that although the overall homeless rate was down one percent in 2008 from the prior year, the number of people in families using homeless shelters increased by 9 percent, a possible reflection of the effects of the current recession.

"Homelessness" is defined in the United States Code, Chapter 119, Subchapter I, §11302, "General definition of homeless individual":

> ... the term "homeless" or "homeless individual or homeless person" includes—
>
> 1. an individual who lacks a fixed, regular, and adequate nighttime residence; and
> 2. an individual who has a primary nighttime residence that is —
>
> A. a supervised publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill);
>
> B. an institution that provides a temporary residence for individuals intended to be institutionalized; or
>
> C. a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings.

In 2008, Alaska ranked tenth among the 50 states in concentration of homeless people, with 0.24 percent of the total state estimated to be homeles (Table 1). Oregon was number one with 0.54 percent, Nevada number two at 0.48 percent, Hawaii was number three at 0.47 percent, and California was fourth ranked with 0.43 percent. Homelessness in the U.S. is concentrated in urban areas. But from September 2007 to September 2008, the number of homeless nationally in suburban and rural areas rose from 23 percent of the homeless population to 32 percent.

It is important to note that most homeless counts rely on homeless agency participation—which varies year to year. Any counts of homelessness are estimates. Each count is a snapshot of a given moment and reflects data collected for individuals at a particular time.

Table 1. States with Highest Concentrations of Homeless People, 2008

Estimates of homeless persons as a percentage of state's total population.

Rank*	State	Homeless population N	Homeless population % of total population
1	Oregon	20,653	0.54 %
2	Nevada	12,610	0.48
3	Hawaii	6,061	0.47
4	California	157,277	0.43
5	Washington	21,954	0.34
6	New York	61,125	0.31
7	Colorado	14,747	0.30
8	Michigan	28,248	0.28
9	Florida	50,158	0.27
10	Alaska	1,646	0.24

* Rank is based on the number of homeless persons as a percentage of the state's total population.

Source of data: *2009 Annual Homeless Assessment Report to Congress, U.S. Department of Housing and Urban Development, Office of Community Planning and Development*

Who are the homeless in the U.S.?

Of the 1,594,000 homeless who used emergency shelter or transitional housing between October 1, 2007 and September 30, 2008:

- 32% were homeless persons in families.
- 68% were homeless individuals.
- 64% of homeless adults were male.
- 62% of the homeless were a minority.
- 43% had a disability.
- 40% of all these individuals were between 31 and 50 years old.

Table 2. Subpopulations of Homeless Persons, by Type, Anchorage and Alaska, January 2009

	Anchorage						Alaska (includes Anchorage)					
	Sheltered[1]		Unsheltered[2]		Total		Sheltered[1]		Unsheltered[2]		Total	
	N	%	N	%	N	%	N	%	N	%	N	%

Victims of domestic violence	140	5.0	7	4.5	**147**	**5.0**	312	7.3	15	4.6	**327**	**7.1**
Veterans	190	6.8	25	15.9	**215**	**7.3**	257	6.0	37	11.3	**294**	**6.4**
Severely mentally ill	243	8.7	22	14.0	**265**	**8.9**	453	10.6	51	15.6	**504**	**11.0**
Unaccompanied youth (under 18 years)	45	1.6	0	0.0	**45**	**1.5**	115	2.7	6	1.8	**121**	**2.6**
Persons with HIV/AIDS	17	0.6	4	2.5	**21**	**0.7**	26	0.6	4	1.2	**30**	**0.7**
Total number of homeless	**2,805**		**157**		**2,962**		**4,256**		**327**		**4,583**	

Note: Percentages are calculated by averaging all available data points. This approach, a moving average, provides a clearer picture of the long-term trends in the homeless population. Veteran's Affairs homeless count was not included in this count, but generally adds 10 to 20 individuals to the count. Some homeless individuals are members of more than one subpopulation. Not all individuals were members of a subpopulation.

1. *Sheltered homeless* includes individuals living in emergency shelters, transitional shelters, living with extended family and/or friends, or temporarily living in motels.
2. *Unsheltered homeless* includes individuals living in a place not meant for human habitation, such as cars, parks, sidewalks, abandoned buildings, or on the street.
3. *Chronic homeless* is defined by the federal government as either (1) an unaccompanied homeless individual with a disabling condition who has been continuously homeless for a year or more, or (2) an unaccompanied individual with a disabling condition who has had at least four episodes of homelessness in the past three years. A *disabling condition* is a diagnosable substance abuse disorder, a serious mental illness, developmental disability, or chronic physical illness or disability, including the co-occurrence of two or more of these conditions. An *episode of homelessness* is a separate, distinct, and sustained stay on the streets and/or in a homeless emergency shelter.

Source of data: *"Anchorage Homeless Count—January 2009: Preliminary Count w/o Data from VA" and "Alaska Total Homeless Count—January 2009," Alaska Housing Finance Corporation*

Estimates of subpopulations of the homeless based on the nationwide single-night January 2008 PIT count show:

- About 15% were veterans.
- Almost 13% were recent victims of domestic violence.
- Nearly 26% were persons with severe mental illness.
- 37% were persons with chronic substance abuse issues.
- 2% were unaccompanied youth under age 18.
- 4% were persons with HIV/AIDS.

The chronically homeless are another subpopulation. The federal definition of chronically homeless used by HUD states that a chronically homeless person is:

> ...either (1) an unaccompanied homeless individual with a disabling condition who has been continuously homeless for a year or more, OR (2) an unaccompanied inividual with a disabling condition who has had at least four episodes of homelessness in the past three years.

To be considered chronically homeless, a person must have been on the streets or in emergency shelter (i.e., not in transitional or permanent housing) during these stays.

The nationwide 2008 PIT count estimated that:

- About 19% of the *total homeless population* (individuals and families) are chronically homeless.
- About 30% of homeless *individuals* are chronically homeless.

The number of chronically homeless remained about the same from 2007 to 2008 nationally.

Who are the homeless in Alaska?

Based on the January 2009 single-night count, Alaska's homeless number 4,583 persons. (The total state population in July 2008 was estimated at 679,200.) This figure includes individuals who meet HUD's definition of homeless, as well persons temporarily housed in a motel or with family/friends:

- 93% (4,256 persons) were "sheltered," which includes living in emergency shelters, transitional shelters, with extended family and/or friends, or temporarily in motels.
- 7% (327 persons) were "unsheltered," which includes living in a place not meant for human habitation such as cars, parks, sidewalks, abandoned buildings, or on the street.
- Among the sheltered, 57.5% were households with children.
- Among the unsheltered, 23.5% were households with children.

This 2009 count (including sheltered and unsheltered persons) showed the following figures for homeless subpopulations (Table 2):

- Almost 9% are chronically homeless.
- Nearly 14% have chronic substance abuse issues.
- Over 7% are victims of domestic violence.
- About 6% are veterans.
- Approximately 11% are severely mentally ill.
- Nearly 3% are unaccompanied youth under the age of 18.
- Less than 1% have HIV/AIDS.

Where are the homeless in Alaska?

In 2009, the January single-night homeless count across the state showed the highest number of homeless was in Anchorage, with 2,962 homeless persons—nearly 65 percent of the state's total homeless population. The next highest number was in the Matanuska-Susitna Borough with 472 persons, followed by Fairbanks North Star Borough with 428 homeless, the City of Juneau with 403 homeless individuals, and the Kenai Peninsula Borough with 166 homeless. The number of homeless persons increased from 2007 to 2009 in all the above areas, with the exception of the Kenai Peninsula Borough. (See Table 3.)

Who are the homeless in Anchorage?

According to the January 2009 count, Anchorage, the state's most populous city, had 2,805 persons who were sheltered

Please see ***Homelessness****, page 4*

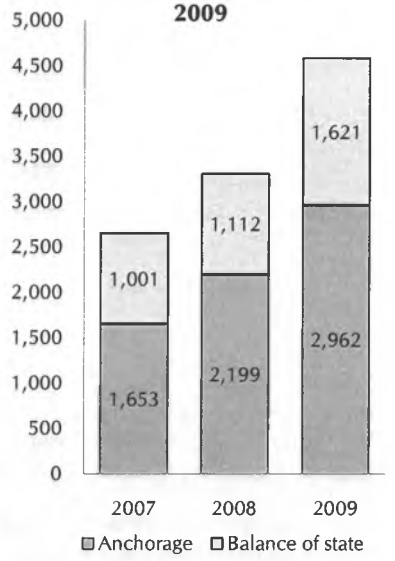
Total number of homeless	**2,805**		**157**		**2,962**		**4,256**		**327**		**4,583**	

Note: Percentages are calculated by averaging all available data points. This approach, a moving average, provides a clearer picture of the long-term trends in the homeless population. Veteran's Affairs homeless count was not included in this count, but generally adds 10 to 20 individuals to the count. Some homeless individuals are members of more than one subpopulation. Not all individuals were members of a subpopulation.

1. *Sheltered homeless* includes individuals living in emergency shelters, transitional shelters, living with extended family and/or friends, or temporarily living in motels.
2. *Unsheltered homeless* includes individuals living in a place not meant for human habitation, such as cars, parks, sidewalks, abandoned buildings, or on the street.

Source of data: *"Anchorage Homeless Count—January 2009: Preliminary Count w/o Data from VA" and "Alaska Total Homeless Count—January 2009," Alaska Housing Finance Corporation*

Figure 1. Homeless Persons in Alaska by Year, 2007–2009



Homelessness

(continued from page 3)

homeless, and 157 who were unsheltered. (Anchorage's total population in July 2008 was estimated to be 284,994.) The count included households with and without dependent children:

- Over 25% of all homeless households in Anchorage had dependent children.
- There was a 49% increase in households with dependent children from 2008 to 2009.

A survey for HUD of Anchorage homeless persons over the period October 1, 2007 to September 30, 2008 showed that of *sheltered persons in families*:

- 73% were female.
- 55% were under the age of 12.
- 29 % were American Indian or Alaska Native.
- 20% were White.
- 18% were Black or African American.
- 21% were between the ages of 18 and 30 years.
- 16% were between the ages of 31 and 50 years.
- 34% stayed in shelters or transitional housing for 1 to 3 months.

Data for *individuals in shelters* show:

- 80% were male.
- 42% were American Indian or Alaska Native.
- 39% were White.
- 13% were Black.
- Over half (55%) were between the ages of 31 and 50 years.
- 27% were between the ages of 51 and 61 years.
- 68% stayed in shelters or transitional housing for a week or less.

Anchorage's homeless subpopulations include sheltered and unsheltered persons. (See Table 4.) According to the January 2009 count of Anchorage's homeless population:

- Nearly 9% are chronically homeless.
- Over 13% have chronic substance abuse issues.
- Approximately 5% are victims of domestic violence.
- Close to 7% are veterans.
- About 9% are severely mentally ill.
- Close to 2% are unaccompanied youth under the age of 18.
- Less than 1% have HIV/AIDS.

Table 5. Homeless Students Enrolled in Anchorage School District, 2004–2009

Year	Total student population	Homeless students N	Homeless students % of total student population
2004–05	49,454	1,052	2.1 %
2005–06	49,589	1,767	3.6
2006–07	49,068	1,637	3.3
2007–08	48,457	1,752	3.6
2008–09	48,440	2,010	4.1

Note: Anchorage School District defines *homeless* according to the McKinney-Vento Homeless Education Assistance Improvements Assistance Act of 2001. ASD has improved its identification process since the 2004–2005 school year, resulting in a significant percentage increase in 2005–2006.

Source of data: *Anchorage School District, 2009*

Single-night homeless counts from 2007, 2008, and 2009, both statewide and in Anchorage, show a definite rise in the overall number of homeless. (See Figure 1.) In 2008, more than 20 percent of sheltered and unsheltered individuals in Anchorage, and nearly 19 percent of persons statewide met the definition of chronically homeless. However, the 2009 January count showed a drop in chronic homelessness to about 9 percent both in Anchorage and statewide.

Members of the Alaska Coalition on Housing and Homelessness have looked at this decrease in the percentage of the chronically homeless. Coalition members have suggested that factors for the difference in the rates for 2008 and 2009 may include: 1) temporary closure of some supportive housing resources in 2008 which contributed to a rise in numbers for that year, and 2) in 2009, the increasing number of chronically homeless mentally ill persons who are in the judicial and correctional systems, rather than in the community at large. Homeless service providers also suggest that earlier intervention with the homeless may be having an effect and that because episodes of homelessness may be fewer or farther apart in time, fewer number of homeless meet the definition of "chronically homeless" (see page 2 for the federal definition).

The Anchorage School District (ASD) tracks the number of homeless students in grades Kindergarten through 12, and uses the definition of homeless children and youth found in the 1987 McKinney-Vento Homeless Assistance Act which was reauthorized in January 2002 through the No Child Left Behind Act. The term "homeless children and youths" is defined in Title VII, Subtitle B of the McKinney-Vento Act:

> [Homeless children and youths include] ...individuals who lack a fixed, regular, and adequate nighttime residence...and includes (i) children and youth who are sharing the housing of other persons due to loss of housing, economic hardship, or a similar reason; are living in motels, hotels, trailer parks, or camping grounds due to the lack of alternative adequate accommodations; are living in emergency or transitional shelters; are abandoned in hospitals; or are awaiting foster care placement....(iii) children and youths who are living in cars, parks, public spaces, abandoned buildings, substandard housing, bus or train stations, or similar settings; and (iv) migratory children....

The percentage of homeless students in Anchorage has risen steadily from 3.3 percent in the school year 2006-2007 to 3.6 percent in 2007-2008, to 4.1 percent for 2008-2009. This translates to a total of 2,010 homeless students in 2008-2009. (See Table 5.)

Most recently, statistics on the homeless in Anchorage were collected at the July 31, 2009 Project Homeless Connect coordinated by the Anchorage Coalition on Homelessness. Project Homeless Connect is a "one-day, one-stop event to provide housing, services, and hospitality in a convenient one-stop model directly to people experiencing homelessness in Anchorage"(www.anchoragehomeless.org/project-homeless-connect). The day-long event provided services to 646 individuals:

- 62% were male.
- 53% were Alaska Native as identified by Alaska Native Regional Corporation.
- 25% were White.
- 7% were Black or African American.

Table 6. Homeless Persons by Year, Anchorage and Alaska, 2007–2009

	2007			2008			2009		
	Sheltered[1]	Unsheltered[2]	Total	Sheltered[1]	Unsheltered[2]	Total	Sheltered[1]	Unsheltered[2]	Total
Anchorage	1,521	132	**1,653**	2,097	102	**2,199**	2,805	157	**2,962**
Balance of state (excluding Anchorage)	942	59	**1,001**	1,020	92	**1,112**	1,451	170	**1,621**
Alaska total	**2,463**	**191**	**2,654**	**3,117**	**194**	**3,311**	**4,256**	**327**	**4,583**

Note: Percentages are calculated by averaging all available data points. This approach, a moving average, provides a clearer picture of the long-term trends in the homeless population. Veteran's Affairs homeless count was not included in this count, but generally adds 10 to 20 individuals to the count.

1. *Sheltered homeless* includes individuals living in emergency shelters, transitional shelters, living with extended family and/or friends, or temporarily living in motels.
2. *Unsheltered homeless* includes individuals living in a place not meant for human habitation, such as cars, parks, sidewalks, abandoned buildings, or on the street.

Source of data: *"Anchorage Homeless Count—January 2009: Preliminary Count w/o Data from VA" and "Alaska Total Homeless Count—January 2009," Alaska Housing Finance Corporation*

- 22% reported being homeless more than one month and up to six months.
- 24% reported having slept the previous night in "a place not meant for human habitation."
- 21% reported a chronic substance abuse issue.
- 17% reported a mental illness.
- 26% had a physical disability.
- 23% of the females stated they had been victims of domestic violence.

The Alaska Council on the Homeless, the Alaska Coalition on Housing and Homelessness (there are regional coalitions across the state), the Municipality of Anchorage, Alaska Housing Finance Corporation, HUD, and the Anchorage Coalition on Homelessness are among the agencies looking at ways to prevent homelessness and provide assistance to homeless individuals and families. The Alaska Council on the Homeless, a state entity established in 2004, adopted a "10 Year Plan to End Long Term Homelessness in Alaska" in May of this year. To assist regional areas of the state, Alaska Housing Finance Corporation is working with local coalitions to develop their own "10 Year Plans" that will interface with the State Council's "Plan."

As part of the State Council's "10 Year Plan," a program is in development through Alaska Housing Finance Corporation to provide rental assistance to another group that has been identified as being at risk for homelessness: persons with disabilities who are being discharged from correctional facilities. In addition, the Alaska Council on Homelessness reports data from the Department of Corrections indicating that overall about 8,000 persons are released from state correctional facilities each year with "no identified housing arrangement."

The Municipality of Anchorage Department of Health and Human Services published an "Overview of Homelessness in Anchorage, Alaska" in July 2009 which includes statistics from specific shelters in Anchorage. In examining shelter numbers from January through June 2009, the report found that AWAIC (Abused Women's Aid in Crisis) and Clare House were operating over capacity, but other Anchorage shelters were not. The Municipality has also issued a 2008 redraft of Anchorage's "Ten-Year Plan on Homelessness," and Anchorage Mayor Dan Sullivan recently released a "Mayor's Strategic Action Plan" on chronic public inebriates and related issues of homelessness.

National, state, and local agencies continue to collect data on the homeless, the causes and prevention of homelessness, and explore ways to assist those individuals and families experiencing homelessness.

Faculty News

Dr. Sharon Chamard has been promoted to the rank of Associate Professor and awarded tenure in the Justice Center in the UAA College of Health and Social Welfare. Dr. Chamard holds a Ph.D. in Criminal Justice from Rutgers-Newark and has been a Justice Center faculty member since 2003.

Justice Center Research Overview

The Justice Center has launched a new monthly publication, *Justice Center Research Overview*. These brief papers cover a specific justice-related topic and provide a snapshot of the most recent information. Recent *Overviews* include:

- Batterer Intervention Programs (BIPs)
- Violent and Property Offenses in Anchorage, 2003–2007
- Victim-Suspect Relationship in Sexual Assault Cases Reported to Law Enforcement: Alaska and National Data
- Sex Offender Registries and Notification Programs
- Violent and Property Offenses in Anchorage, 2003–2008

The *Research Overviews* are available online at http://justice.uaa.alaska.edu/overview/index.html. If you would like to receive an electronic copy monthly by e-mail, please send an e-mail to justiceresearch@uaa.alaska.edu.

Keeping Kids Off the Street: Snapshot of Covenant House Alaska

By Stephanie Martin and Alejandra Villalobos Meléndez

March 2010
Institute of Social and Economic Research • University of Alaska Anchorage

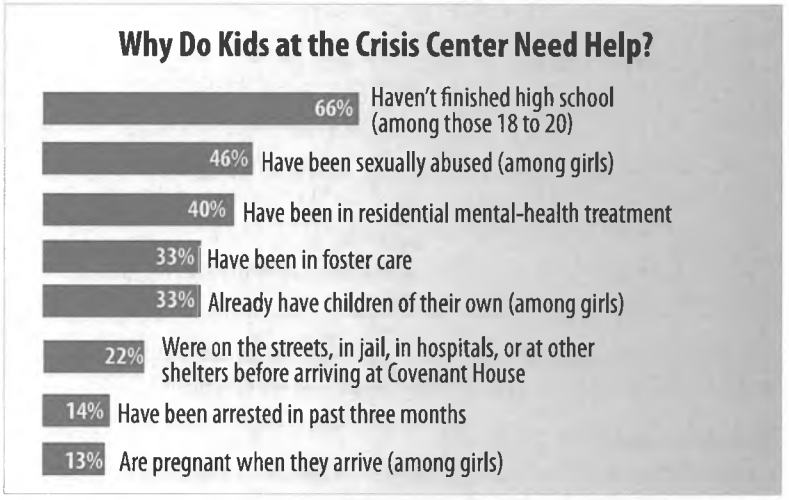
In 1988, Covenant House Alaska became the first shelter for homeless teenagers in Anchorage—and it is still the only such shelter in the city and in the entire state of Alaska .

More than 18,000 young people (ages 13 to 20) have walked into Covenant House's Crisis Center so far. Some come just for a bed for the night, but many also receive medical care, help getting back into school, counseling with their families, or other services.

About 1,300 young people stayed at Covenant House for at least one night in 2008, and 600 stayed longer and received more help getting back on their feet or reuniting with their families.

But many Alaskans know little about Covenant House, which today operates not only the crisis center but three other facilities for young people (see box on back page). This is a broad profile of what Covenant House's Crisis Center does, who it helps, and why so many need help.

Stephanie Martin and Alejandra Villalobos Meldendez of the Institute of Social and Economic Research (ISER) prepared this profile for Covenant House Alaska. Nationwide, Covenant House is trying to form collaborative relationships with academic partners in all the cities where it has sites, to help Americans better understand the characteristics and needs of homeless young people and provide better information for its program development.



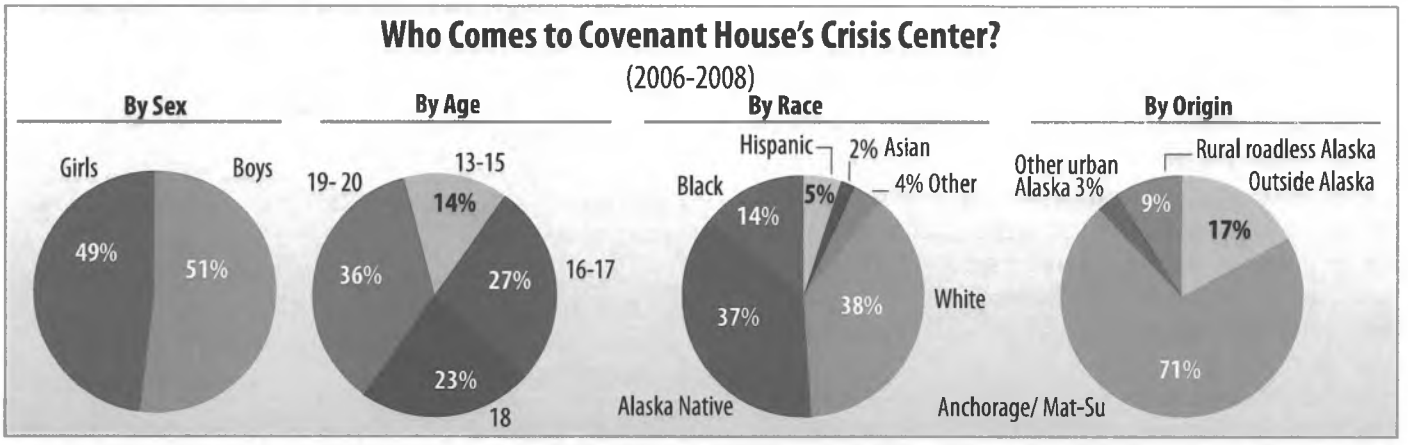
Who Comes to the Crisis Center?

The figure below shows characteristics of young people who came to the Crisis Center in recent years. They were:

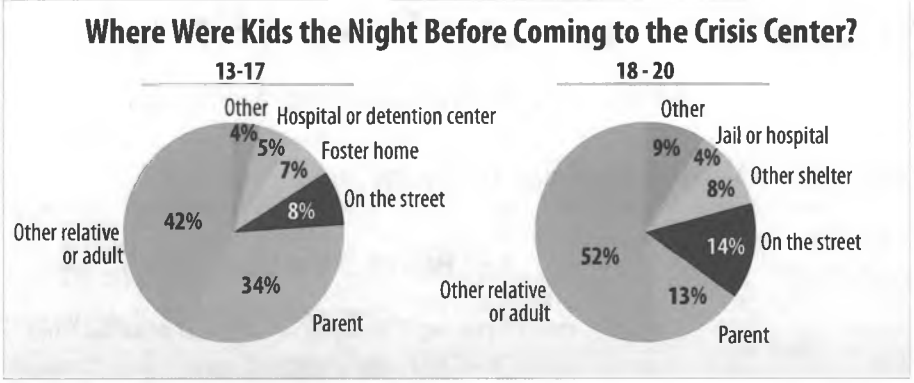
- Almost evenly divided between boys and girls
- Mostly older teenagers
- Primarily White and Alaska Native
- Mostly from Anchorage, but with significant numbers from remote rural areas of Alaska and from outside the state.

Why Do They Need Help?

Teenagers who come to Covenant House typically have very serious problems, as the figure above shows. Those include living on the streets before arriving at Covenant House; having been treated for mental health problems; having been sexually assaulted; failing to graduate from high school; and being pregnant or already having children.



ISER is part of the University of Alaska Anchorage and is Alaska's oldest public policy research institution. To learn more about ISER, visit:
www.iser.uaa.alaska.edu



Where Were Kids Before?

Kids who turn to Covenant House's Crisis Center come from various living situations, as the figure above shows. There are also differences in living situations of the younger and the older teenagers.

- *Only about a third of the younger teenagers and 13% of the older ones live with their parents* before coming to Covenant House.
- *Close to half of the younger and the older teenagers live with some other relative* or an unrelated adult before arriving at Covenant House.
- *Nearly one in ten of the younger teenagers and about one in seven of the older ones come from the streets.* Some also come directly from juvenile detention centers, jails, or hospitals.
- *Some of the younger teenagers leave foster homes for Covenant House*, and some of the older ones come from shelters that are for adults.

What's Changed Over the Years?

Covenant House Alaska began as essentially a place where homeless teenagers could find shelter. Today it offers a range of services to help them reunite with their families or become self-sufficient.

The profile of teenagers coming to Covenant House's Crisis Center has also changed in recent years, as the adjacent figure shows.

- The average time teenagers spend at the Crisis Center increased from ***10 days in 2001 to 13 days in 2008***. Those longer average stays put more stress on the center's capacity.
- Substantially more boys than girls came to the Crisis Center as recently as 2003, ***but in 2008 girls actually outnumbered boys***. That change also has implications for Covenant House's capacity, because girls require a different mix of services than boys.
- Ten years ago, almost all those coming to the Crisis Center were from Anchorage and the adjacent Mat-Su Borough. ***But in 2008 nearly a third came from other areas***, with 17% from outside Alaska and 8% from remote rural places.

Covenant House reports that about 25% of the teenagers from outside the state had originally been from Alaska and are returning after receiving mental-health treatment in other states—and then finding themselves homeless. Most of those from places off the road system are Alaska Native, which reflects a broader trend that's been documented in Alaska recently: thousands of Alaska Natives are moving from rural to urban Alaska. We also know, from recent ISER research, that some of the Alaska Native teenagers moving to Anchorage are coming without their parents and plan to live with other relatives.*

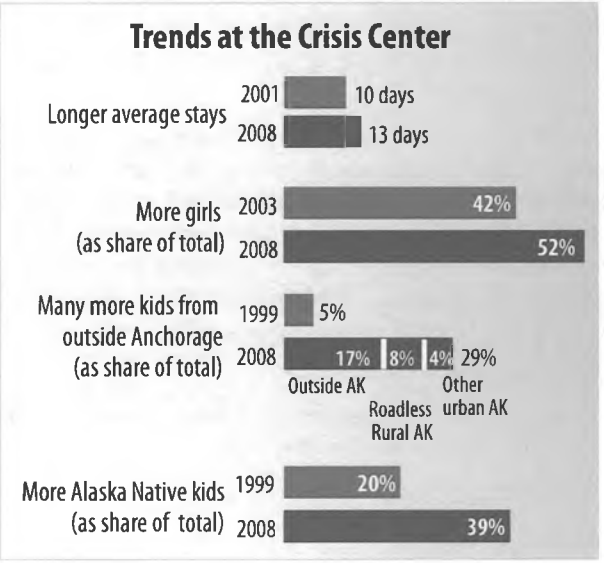
**New Students in the Anchorage School District: Where Are they Coming From?* By Marie Lowe. Available at: www.iser.uaa.alaska.edu/Publications/LoweMigrationReportFinal.pdf

- Alaska Native teenagers make up a growing share of those coming to Covenant House, ***up from about 20% in 1999 to 39% in 2008.*** That probably reflects the growing number of Alaska Native residents of Anchorage, as well as the increasing numbers arriving from rural Alaska.

Where Is Covenant House Headed?

Covenant House foresees growing needs at its Crisis Center, as Anchorage grows and as the center increasingly helps teenagers from many places besides Anchorage. It also provides different services and accommodations not only for boys and a growing number of girls, but also for young people of different ages—from those who are barely into their teens to those on the verge of being adults.

Because the young people turning to the Crisis Center need such a broad range of help, Covenant House reports that it has reached its functional capacity—and in early 2010 it is trying to raise money to pay for construction of a new, larger facility.



Covenant House Alaska
Opening Doors for Homeless Youth

www.covenanthouseak.org

Covenant House Alaska is one of 21 sites of Covenant House International in North America and Central America. This summary describes just Covenant House Alaska's Crisis Center, which provides short-term shelter and other services for homeless teenagers. Covenant House also operates several other facilities in Anchorage:

- *Community Services Center* provides young people (13 to 20) with tutoring, health care, referrals for treatment of substance abuse, help getting jobs, and other services.
- *Rights of Passage* is a residential care program to help homeless young people (18 to 20) become self-sufficient and get ready to live on their own.
- *Passage House* is a residential program for girls 17 to 20 who are pregnant or have children.

The authors thank Deirdre Cronin, Daniel Lemaire, Alison Kear, and Carlette Mack of Covenant House Alaska and Miranda Yates of the Covenant House Institute for providing data and other help.

Homeless?

Couch Surfing?

Worrying about where you might sleep tonight?

Is there a service you need?

Attend Project Homeless Connect
When: Monday, January 24, 2011
10 a.m. – 3 p.m.
Centennial Hall

Participate in the annual homeless count and receive services

Each year hundreds of people of all ages face homelessness in Juneau.
Why is a count important? In order to know the amount of services needed, the community needs to know how many people need them.
All Information collected is kept confidential.
Help us bring awareness to the fact that homelessness happens in Juneau and help us have better information to bring more resources to assist you.

Food * Haircuts * Housing Services * Medical Care * Rental Assistance * Employment Services * Transportation to the DMV * Legal services * Foot Care * Public Assistance * Clothing * Toiletries * Entertainment * And Much More……

HOUSING FOR HOMELESS ALCOHOLICS CAN REDUCE COSTS TO TAXPAYERS

JAMA study finds drinking goes down even if residents are allowed to drink

Seattle, WA, March 31- Providing housing and support services for homeless alcoholics costs taxpayers less than leaving them on the street, where taxpayer money goes towards police and emergency health care. Stable housing also results in reduced drinking among homeless alcoholics, according to a Seattle-based study published today in the *Journal of the American Medical Association (JAMA).*

The study found that the program saved taxpayers more than $4 million dollars over the first year of operation. During the first six months, even after considering the cost of administering housing for the 95 residents in a Housing First program in downtown Seattle, the study reported an average cost-savings of 53 percent -- nearly $2,500 per month per person in health and social services, compared to the costs of a wait-list control group of 39 homeless people.

"Our study suggests that homeless alcoholics who qualify to take part in Housing First can stay out of jails and emergency rooms, and cost the taxpayer a lot less money as a result," said Mary E. Larimer, PhD, professor of psychiatry and behavioral sciences and adjunct professor of psychology at the University of Washington and lead author of the study. "We also found that these benefits increase over time and that they are possible without requiring that participants stop drinking. And yet, the longer the participants stay in the housing program, the less they drink."

"The Housing First model was developed in response to the problem of long-term homelessness among those living with severe mental illnesses and substance abuse problems," said William G. Hobson, a co-author on the JAMA paper and executive director of Downtown Emergency Service Center in Seattle. "In most US cities, people with behavioral health disabilities die on the streets far more frequently than any other subset of the homeless population. Before they die, they use large amounts of taxpayer-funded services in our healthcare and criminal justice systems. The housing program, known in Seattle as the 1811 Eastlake project, was created to stabilize people and stop them from endlessly cycling through emergency rooms, prisons and other crisis institutions, reducing the amount of taxpayer money spent on them."

The Housing First approach offers stable housing to chronically homeless, alcohol-dependent individuals without requirements of abstinence or treatment. It is being implemented in major cities throughout the United States. Initiatives that have adopted the comprehensive model have been criticized for allowing enrollees -- virtually all with severe substance abuse problems -- to continue to consume alcohol in their new quarters. The 1811 Eastlake study, funded by the Substance Abuse Policy Research Program (SAPRP) of the Robert Wood Johnson Foundation,

[redacted]

represents the first US controlled assessment of the effectiveness of Housing First specifically targeting chronically homeless alcoholics.

Researchers began enrolling people for the study and the control group in November 2005 and finished in March 2007. A list of the most expensive homeless users of health and social services in the community provided the target population from which participants were drawn.

"These findings suggest that stable housing provided to people who are still drinking and addicted to alcohol can reduce their use of crisis services and ultimately their consumption of alcohol," Larimer said, noting that virtually every person invited to participate had agreed to enroll. The study also notes that restrictions on the consumption of alcohol in a housing environment may well prevent those most in need from accepting help.

The wait-list comparison study lasted six months, comparing usage of health and social services of participants in the program to those in the control group. But researchers also followed the enrollees for another six months, looking at the trend in alcohol consumption among residents and comparing their use of services to levels in the year before they enrolled in Housing First. After one year in the program, the 95 participants had reduced total costs relating to their care by more than $4 million compared to the year before.

"Each of them had cost state and local governments an average of $86,062 per year before being housed, compared to an average of $13,440 it costs per person per year to administer the housing program," Larimer said.

In assessing utilization and cost of services, the researchers collected data from jail bookings, days incarcerated, shelter and sobering center use, hospital-based medical services, publicly-funded alcohol and drug detoxification and treatment, emergency medical services, and Medicaid-funded services.

Because healthcare and criminal justice system costs for the participants continued to decrease over time, as did their alcohol use, Larimer says, she and her co-authors concluded that permanent housing may be necessary in order to take full advantage of the cost-savings identified in the study. The authors concluded that several factors were key to the success of the program, including the decision to limit rules and regulations on residents, and to provide them with supportive case managers, as well as easy access to providers of mental health and health care services within the housing program.

The authors started with a list of 388 of the most expensive users of hospitals, jails and sobering centers. The study enrolled every willing candidate until the downtown apartment building was filled up. Hobson said "we only had to offer housing to 79 people to get 75." The waiting list was comprised of others who also wanted the housing.

The Substance Abuse Policy Research Program (www.saprp.org) of the Robert Wood Johnson Foundation funds research into policies related to alcohol, tobacco and illegal drugs.

The Robert Wood Johnson Foundation focuses on the pressing health and health care issues facing our country. As the nation's largest philanthropy devoted exclusively to improving the health and health care of all Americans, the Foundation works with a diverse group of organizations and individuals to identify solutions and achieve comprehensive, meaningful and timely change. For

more than 30 years the Foundation has brought experience, commitment, and a rigorous, balanced approach to the problems that affect the health and health care of those it serves, helping Americans lead healthier lives and get the care they need. The Foundation expects to make a difference in our lifetime. For more information, visit www.rwjf.org .

NeighborWorks®

ANCHORAGE

Building Community Through Neighborhoods

COMMUNITY COLLABORATION

NeighborWorks®
ANCHORAGE

Community Collaboration

NeighborWorks® Anchorage ardently believes that collaboration is the most powerful way to achieve our goal to build community through neighborhoods. By working together, sharing skills and knowledge, and pooling our resources, we can meet the needs of our community. We share a common vision with many partners of a strong, vibrant and sustainable community where everyone has a place to call home.

We are dedicated to a philosophy of teamwork, sharing ideas, and are focused on the people we serve. Our teamwork is part and parcel of everything we do, and our staff work collaboratively with one another and with our partners. Working together as a team, we can accomplish great things.

NeighborWorks® Anchorage works to develop, sustain, and further our community partnerships and collaborations. We cultivate strong bonds with the public, private and non-profit sectors to make a positive and lasting impact on the communities we serve.

Our community partners and supporters are wide and varied, ranging from service providers such as the ARC of Anchorage, Anchorage Community Mental Health Services, Catholic Social Services, other housing providers like Cook Inlet Housing Authority, Habitat for Humanity and Anchorage Housing Initiatives, to public agencies including Alaska Housing Finance Corporation, HUD, and Department of Neighborhoods at the Municipality of Anchorage.

Our work is made possible through the support of the private sector where we count many lenders, businesses and suppliers as our friends and colleagues.

NeighborWorks® Anchorage is COMPASSIONATE.

Please contact our office if you would like further information. We can be reached at 907-677-8490.

COMMUNITY BUILDING

NeighborWorks® ANCHORAGE

Community Building

NeighborWorks® Anchorage believes that all residents should have opportunities for civic engagement, leadership development and connections to the wider community. We empower people to make a positive difference in our neighborhoods and our city. We bring people together and focus on what makes a community a positive place to live. We teach people how to work with a diversity of opinions and backgrounds, and build strong, vibrant, and sustainable neighborhoods.

We offer unique opportunities for community building and engagement:

LEADERSHIP DEVELOPMENT

We are a member of NeighborWorks® America's Community Leadership Institute program, and our training workshops teach skills needed for successful community based leaders and advocates. Skills learned are then applied to a neighborhood project. Members are empowered to address issues by finding positive solutions that build and strengthen their neighborhoods.

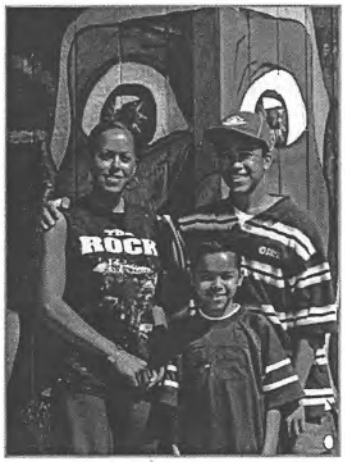
RESIDENT SERVICES AND CONNECTIONS

We work to develop relationships through resident councils, social activities and community events. These services are available to all residents at any NeighborWorks® Anchorage apartment community.

We can also facilitate access to vital services that enhance quality of life.

COMMUNITY OUTREACH

We collaborate with businesses, schools, community groups, and partner agencies to provide volunteer opportunities, workshops, and seminars to all members of the community. We support activities that encourage and foster a brighter future for everyone.



NeighborWorks® Anchorage is EMPOWERING.

We invite you and/or you organization to get involved in our community building activities. Please contact our office if you would like further information about our programs. We can be reached at 907-677-8490.

HOME REHAB

NeighborWorks® ANCHORAGE

Home Rehab and Accessibility

Even the best built home will, at some point, need to undergo repairs or major replacements. Often the cost of replacing a roof or heating system will be a major expense. NeighborWorks® Anchorage can support current homeowners by maintaining the health, safety, and value of their homes through our repair and rehabilitation programs.

NeighborWorks® Anchorage manages grant programs on behalf of the U.S. Department of Housing and Urban Development, the Municipality of Anchorage, and the Alaska Housing Finance Corporation. Our knowledgeable and caring staff are experienced in guiding our customers through this often complicated process of outlining the work, hiring the contractor, and managing the project.

GRANTS

• **Minor Repair Program:** This program assists income eligible families who own and occupy a single family residence or mobile home in need of minor repair. Typical repairs may include roof repair/replacement, replacement of heating systems, or other health and safety improvements. Accessibility repairs can also be performed with Minor Repair Program funds.

• **Senior Access Program:** This program provides home accessibility modifications for qualified seniors, which allow them to continue to live independently in their own homes. Available to persons over 55 years of age, this grant can provide for accessibility improvements such as bathroom modifications, ramps, handrails, or stair lifts. Small assisted living homes of five bedrooms or less may be eligible for smaller grants to make improvements for eligible senior residents.

HOME IMPROVEMENT LOANS

NeighborWorks® Anchorage may be able to finance home improvement projects. These loans are made on a case-by-case basis. We welcome your questions, so please feel free to call our staff if you are interested in a home improvement loan.

NeighborWorks® Anchorage provides a SANCTUARY.

PAINT THE TOWN

Originally introduced in 1988, NeighborWorks® Anchorage re-launched Paint the Town in 2007 as part of the NeighborWorks® America nationwide NeighborWorks® Week. In the last two years we have assisted nearly 30 families with their exterior painting. Each year we hope to grow the program in order to help more families maintain the curb appeal of their homes. We invite you and/or your organization to get involved in this great community project.

Please contact our office if you would like further information about any of our home improvement programs. We can be reached at 907-677-8490.

NeighborWorks® CHARTERED MEMBER

HOMEOWNERSHIP

NeighborWorks®
ANCHORAGE

Counseling * Education * Lending

Home ownership remains at the heart of most Americans and that dream is alive and well in Anchorage. NeighborWorks® Anchorage offers homebuyer education and an array of affordable loan programs designed to assist home buyers with purchasing a home. Experienced staff assist potential new homeowners with the lending process and help determine how our loan products may best fit their needs. We offer down payment and closing cost assistance loans, first mortgages, and partner with a number of local lenders. All loan programs are subject to income limits and other borrower eligibility requirements.

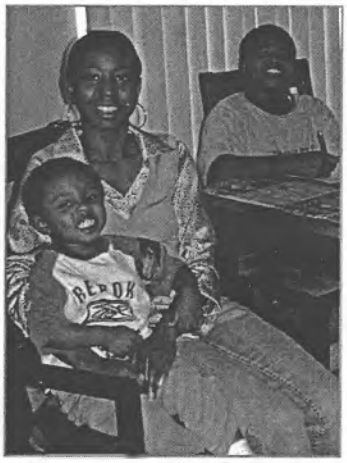
COUNSELING AND EDUCATION

- **Pre-and Post-Purchase Counseling and Education:** Staff are HUD certified counselors and well versed in working with individuals and families in preparing them for homeownership. Pre-purchase counseling helps prospective homebuyers determine affordability based on their individual financial situation. Post-purchase classes help integrate new homeowners into their community and make them stronger, more self-reliant and more comfortable in their roles as new homeowners.
- **Foreclosure Prevention:** NeighborWorks® Anchorage has joined the Homeownership Preservation Foundation in a national campaign to help homeowners who are facing foreclosure. Borrowers can call: 1-888-995-HOPE or visit www.995hope.org/.
- **Financial Literacy:** The ABCs of Money program, designed for both adults and children, offers an opportunity to learn the basics of saving and money management, credit building, and lending practices.
- **Predatory Lending Prevention:** NeighborWorks® Anchorage is a key member of the statewide Don't Borrow Trouble® Alaska campaign.

Victims of predatory lending or loan scams can call the hotline at 1-800-478-6501 or visit www.muni.org/dontborrowtroublealaska.

LENDING PROGRAMS

- **AnCHOR (Anchorage Communities Home Ownership Resource) Loan:** Through our partnership with the Municipality of Anchorage, the program provides a second or third mortgage to low- to moderate-income homebuyers to help pay for down payment and/or closing costs.
- **Revolving Loan Fund:** The "gap" loan fund provides the difference between a homebuyer's first mortgage and the sales price. This results in a lower monthly payment and increases the homebuyer's purchasing power.
- **NeighborHomes Loan:** In concert with Alaska Housing Finance Corporation, we provide down payment assistance loans to make homeownership available to households that may otherwise not be able to afford a conventional loan.
- **First Mortgage Loans:** First mortgage loans are offered on a case by case basis. These loans provide funding for borrowers who might not meet traditional lending requirements.



NeighborWorks® Anchorage is a STEPPING STONE.

Please contact our office if you would like further information about any of our home ownership programs. We can be reached at 907-677-8490.

NeighborWorks® ANCHORAGE

Affordable Rental Housing

HOME SWEET HOME

NeighborWorks® Anchorage is dedicated to providing quality, safe, and clean affordable apartment homes in convenient locations all over Anchorage. From well appointed three-bedroom units to practical efficiencies, we have an apartment that is ideal for any lifestyle. All our apartment communities are professionally managed and are located near schools, bus lines, and shopping. Many of our properties are also located close to major employment centers, including the downtown, midtown, and southeast business districts. Our Single Room Occupancy communities offer a less expensive alternative to the traditional studio apartment, allowing residents more freedom to pursue other interests without devoting most of their income to housing. We offer housing opportunities to people of all income levels, and some of our units feature rental assistance to qualified applicants.

Each of our employees embodies our values of integrity, professionalism, and customer first service. Our hard-working staff is focused on delivering the highest level of service and treating each resident first and foremost as a valued customer. Maintenance is available 24 hours a day to ensure the utmost comfort for our residents. We believe that everyone deserves a place to call home.

YOUR HOME IS OUR PASSION

At NeighborWorks® Anchorage, we value our partnership with those who serve in the armed forces. We participate in the Military Rental Partnership Program with both Elmendorf Air Force Base and Fort Richardson Army Post. Garden Villa, Boniface Plaza, and Stephens Park Apartments are properties approved for this program, and we encourage our military personnel to apply.

We believe a home is more than just a roof over your head. Residents can join programs and activities at many of our properties and become part of their greater community. Community building is a resident driven process in which people from all walks of life work effectively and collaboratively to create more livable and inclusive communities. Resident councils and leadership development activities are just two examples of volunteer opportunities available to our residents. Our goal is to create an environment that enhances every resident's quality of life in a safe, positive, family setting.

NeighborWorks® Anchorage is QUALITY.

LIVE ✶ WORK ✶ PLAY

Our mission is to provide clean, affordable and inclusive rental communities where our residents can enjoy a great quality of life, children can play safely, and families can enjoy their homes in peaceful settings. We are building community through neighborhoods!

Please contact our office if you would like further information on our apartment communities or our affordable rental housing programs. We can be reached at 907-677-8490. Our knowledgeable staff will be happy to answer your questions.

NeighborWorks® Anchorage

Building Community Through Neighborhoods

NeighborWorks® Anchorage
Who We Are:

- Non-Profit community development organization founded in 1981 by Faye Connolly for neighborhood advocacy
- Originally called Anchorage Neighborhood Housing Services, Inc.
- Have operated as NeighborWorks® Anchorage since 2008
- Charter member of the national NeighborWorks® America family of community development and affordable housing organizations

NeighborWorks® Anchorage What We Do:

- Community Engagement and Resident Services
- Affordable Rental Housing & Real Estate Development – 9 rental communities with 950 units
- Homeownership and Home Rehabilitation Services

Beyond Bricks and Mortar:
Community Engagement and Resident Services

- Our experience teaches us that creating opportunities for residents provides more than just a place to call home. When people face overwhelming challenges, our programs and partnerships assists them in becoming self – sufficient, independent, and empowered.

- Our ultimate goal is to increase the likelihood of individuals and families retaining stable, permanent housing. We believe this is a foundation to a better quality of life.

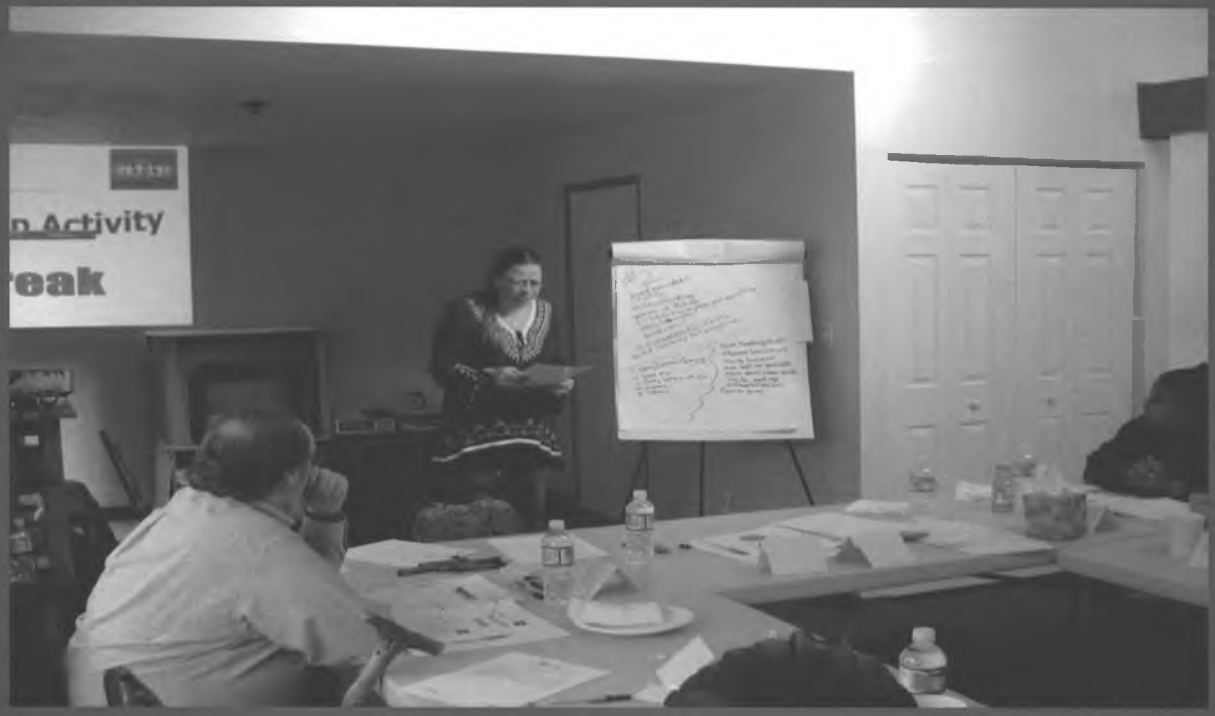
Community Partnerships

- We partner with over 30 community organizations to provide safe, affordable housing to homeless and hard to house families and individuals
- Member of the Alaska Coalition on Housing and Homelessness, the Anchorage Coalition on Homelessness and the Beyond Shelter group, all working together to reduce homelessness

Community Engagement

Residents and staff volunteer with over 55 community agencies and 300 volunteers at Project Homeless Connect. Not only do we provide housing opportunities at the event, but our residents, who were formerly homeless, are empowered to give back to the greater community, by volunteering at the event.

Leadership Training



Community and resident leadership workshops are presented quarterly by NeighborWorks® staff. The workshops facilitate individual leadership and advocacy skill development. In 2010, 27 individuals participated in these classes, and many continue as community leaders.

Community Engagement

Since 2007, resident volunteers helped to distribute nearly 200,000 lbs. of food to over 9,000 families and individuals in the Anchorage community. These resident volunteers were honored as Heart of Anchorage Award nominees in 2010, recognizing their contribution to the community.

Stepping Stones:
(One-on-One Mentoring)

Our work with at risk adults facing overwhelming challenges teaches us that one-on-one mentoring can transform lives long term. NeighborWorks® Anchorage's Stepping Stones program will provide the training and tools to support individuals as they work toward achieving their goals.

The Adelaide

Breaking the Cycle of Homelessness

- A 73 unit property exclusively for homeless individuals
- In 2010, 27 people were transitioned from homeless-ness into a place of their own
- Includes project rental assistance for each resident
- Active Resident Council

Loussac Sogn

Transition to Independent Living

- Historic building in the heart of downtown Anchorage with 52 units
- Affordable rents serving very low income individuals
- Active Resident Council
- Housed 6 new previously homeless individuals in 2010

Under Development

Serving Anchorage's Vulnerable Citizens

- The Roosevelt (HUD 811 funding) – 10 units of rental housing for low income people experiencing disabilities (includes rental assistance for residents)

Under Development

Serving Anchorage's Vulnerable Citizens

- Connolly Square (HUD 202 funding) – 20 units of rental housing for low income seniors over the age of 62 (includes rental assistance for residents)

2010 Community Impact

- 33 homeless individuals were transitioned to affordable apartments
- Working with partners we provided 10 hard to house families with a place to call home
- 30 additional units of affordable rental housing are being developed for those at high risk of homelessness

NeighborWorks® Anchorage
Takeaways

- We reduce homelessness through community engagement and affordable housing opportunities.
- Addressing housing and homelessness issues is a community wide problem, requiring the collaboration of the entire community. Partnerships are crucial in making greater impact possible.

NeighborWorks® Anchorage

Building Community Through Neighborhoods

NeighborWorks® Anchorage
HomeOwnership Center
Services

- Lending Programs
- Counseling and Education
- Home rehabilitation grants for people of modest means
- Accessibility grants for elderly / disabled individuals and families
- We assist the underserved to fulfill their dream of homeownership

Housing Continuum

- We offer opportunities at all stages of the housing continuum. Homeless, affordable rental, home ownership and preservation.
- The NeighborWorks® approach to home ownership is built upon the triad of preparing, investing, and retention.
- Stable families, stable neighborhoods and stable communities are built on home ownership.
- The American dream of home ownership is still possible!

Barriers to Home Ownership

- High cost of housing in Anchorage
- Aging and limited affordable housing stock
- Complicated buying process/steps to buying a home
- Underserved are vulnerable to mortgage scams and predatory lending
- Limited loan products

Preparing and Investing
Education and Lending

- Buying a home starts with financial capability and an understanding of the responsibilities of home ownership.
- One-on-one counseling and education programs build home buyer capacity.
- Our lending programs are tailored primarily to the first time and underserved home buyers.

Home Ownership
Retention and Preservation

- Retaining and preserving home ownership requires smart money management and continual upkeep of a home.

- Our post purchase education and home maintenance programs support successful long term home ownership.

2010 Community Impact

- We loaned $908,000, which leveraged $5,223,168 in first mortgages
- We provided pre-purchase and post-purchase counseling to 134 individuals
- 114 homes were rehabilitated through the Minor Repair, Senior Access and Home Modification programs

NeighborWorks® HomeOwnership Center

HomeOwnership Center Overview

A NeighborWorks® HomeOwnership Center provides services and education that customers need to successfully:

- shop for a home
- buy a home
- rehabilitate a home
- insure a home
- maintain a home

All in one physical location

Benefits of a NeighborWorks® HomeOwnership Center

- "One Stop Shop" in a convenient location
- Highly trained and licensed staff
- Advisory council of community partners
- Quality customer service and tracking systems
- Certified Full-Cycle Lending Services®
- One of 100 NeighborWorks® HomeOwnership Centers nationwide

NeighborWorks® Full-Cycle Lending Approach

The NeighborWorks® HomeOwnership Center Approach

- Works with potential home buyers that traditional mortgage companies ignore (the underserved).
- Reduces predatory lending, mortgage scams, and "trendy" mortgage products.
- Pre- and Post- Purchase counseling and education supporting stronger home buyers.

Home buyers attending pre and post purchase classes are better prepared for the responsibilities of owning a home.

NeighborWorks® HomeOwnership Center Outcomes

- A simplified home buying process for 1st time and /or underserved buyers.
- Sustainable homeownership through responsible underwriting and lending practices.
- Hands on home repair and skill building classes.
- Financially capable home buyers.

1/31/12 PRESENTATION: ALZHEIMER'S RESOURCE OF ALASKA

<TARGET><BILL></BILL><SUBJECT>1-31-12 PRESENTATION ALZHEIMER'S RESOURCE OF ALASKA</SUBJECT><COMM>SHSS27</COMM></TARGET>

Contact Information: Patrick M Cunningham, DSW
Associate Professor, School of Social Work
College of Health, University of Alaska Anchorage
3211 Providence Drive, Anchorage, Alaska 99508
907-786-6902 afpmc@uaa.alaska.edu

TESTIMONY
Joint Session House and Senate HSS Committees
January 31, 2012

My name is Patrick Cunningham and I am a member of the Board of Directors of Alzheimer's Resource of Alaska. I am also an Associate Professor of Social Work in the College of Health, University of Alaska Anchorage.

Thank you for the opportunity of meeting with you to present information regarding Alzheimer's Disease and Related Dementia. Related to this, I wish to thank Senator Bettye Davis for introducing Senate Bill 179 creating missing vulnerable adult prompt response and notification plans. This is similar to the Amber Alert for missing children, but targets adults. Victims of Alzheimer 's disease and related dementia have a tendency to wander as one of the manifestations of the condition and are at risk. Just last month in Fairbanks, a 63 year old woman suffering from Alzheimer's Disease froze to death after she became disoriented while driving, ran out of gas, and tried walking several miles to seek help.

A number of University of Alaska Anchorage Bachelor and Master of Social Work graduates are employed by Alzheimer's Resource of Alaska and provide education and support services as well as care coordination. Last July, I attended the Alzheimer's Association International Conference on Alzheimer's disease, in Paris , France.

Attending this Conference were over 5,000 scientists from all over the world who are engaged in a variety of research ventures seeking the causes of the disease and developing treatment interventions. I had the opportunity of reporting on challenges of care coordination in Alaska listing 20 challenges and proposing 20 solutions. Among the solutions was an emphasis on proactive early detection and engagement in services. I learned at the Conference that it is possible to identify individuals who are at risk for the Disease ten years prior to onset with 80% accuracy. The identification of biomarkers that may be measured with brain scans, spinal fluid analysis, blood, and cognitive markers consisting of tests for mild cognitive impairment are methods that are being used. At the Conference, the results of The World Alzheimer Report 2011 provided evidence that early dementia diagnosis, coupled with early intervention, is cost-effective, as the costs of an earlier diagnosis are more than offset by savings from the use of antidementia drugs and delayed institutionalization. Other key findings were

- when people with dementia are well prepared and supported, their initial feelings of shock, anger, and grief often give way to a sense of reassurance and empowerment;
- earlier diagnosis allows patients to plan ahead while they can still make important decisions about their future care and allows them and their families to access timely practical advice and support, as well as to access available therapies that may improve their cognition and enhance their quality of life; and
- most people with early-stage dementia would want to be told of their diagnosis.

The Alaska Division of Public Health conducts the Behavioral Risk Factor Surveillance System (BRFSS). Data are collected on risk and preventive behaviors and chronic disease prevalence that are especially useful for planning, initiating, supporting, and evaluating health promotion and disease prevention programs. Although Alzheimer 's disease is listed as the 8th leading cause of death in Alaska and predicted to increase, it is not referenced in the section dealing with chronic disease. The Center for Disease Control Healthy Aging Program has developed an Impact of Cognitive Impairment Module to assess and monitor the public's beliefs about the impact of cognitive impairment. So far, 20 states have added it to the Behavioral Risk Factor Surveillance System. It consists of 10 questions. The CDC has also developed a Caregiver Module to examine various aspects of caregiving. It also contains 10 questions. If the Division of Public Health were to include these modules in the survey, this would provide service providers like Alzheimer's Resource of Alaska with essential information to assist them in health promotion and disease prevention programs.

To date, treatment interventions for Alzheimer 's disease and Related Dementia consists of pharmacological and non-pharmacological approaches. Some medication has been found to delay the progression of the disease, if identified early, but not cure it. Among the non-pharmacological approaches are prevention of risk factors, psychological, diet, exercise, and cognitively stimulating activities. Some experts are advocating for a paradigm shift away from the current approach of treating symptoms as they emerge to targeting the disease in its very earliest, preclinical stage. These are individuals with mild cognitive impairment who have not progressed to Alzheimer 's

disease. This offers the best opportunity, to date, to prevent or substantially delay the Disease.

A study reported at the Conference that I attended stated that up to 50% of Alzheimer's Disease cases are potentially attributable to 7 preventable risk factors. These include smoking, physical inactivity, midlife obesity, midlife hypertension, depression, diabetes, and cognitive inactivity. This is where interventions to increase education and physical activity and reduce smoking rates and depression could potentially have a dramatic impact on Alzheimer's prevalence over time. At the national level, government action on AD does not reflect the expanding human, social, and economic burden of the disease for American families. Today there are 5.4 million Americans with Alzheimer 's disease and by 2050, as many as 16 million Americans will have Alzheimer's and the cost of care will surpass $1 trillion annually. There is currently no cure for AD and no disease-modifying treatment, so the current best hope lies in identifying prevention strategies.

Psychological interventions target behavioral and psychological symptoms of dementia. The most obvious are agitation, aggression, mood disorders and psychosis. Some examples of interventions are art, music, activity, and validation therapy.

In terms of diet, a study of relatively healthy elderly adults found that those with diets rich in several vitamins B,C,D,E, or omega-3 fatty acids had better cognitive function and less brain atrophy associated with Alzheimer's disease than their peers with diets less abundant in these nutrients. Those who ate a diet rich in red meat and full-fat dairy foods were more likely to get Alzheimer's disease compared to those who ate a diet

consisting mostly of nuts, poultry, fish, fruits, and vegetables. A chemistry professor at UAA has been recently rewarded a grant to study the effect of bog blueberries on dementia. Circumin derived from the spice turmeric reduces amyloidal accumulation and synaptic marker loss associated with Alzheimer 's disease. There is currently a clinical trial underway to determine the effect of the herb sage as a potential treatment for the disease. Sage has been demonstrated to enhance memory and mental function.

Mounting evidence suggests that physical activity may have benefits beyond a healthy heart and body weight. Through the past several years, population studies have suggested that exercise which raises your heart rate for at least 30 minutes several times a week can lower your risk of Alzheimer's. A number of clinical trials are examining the effect of aerobic fitness training on human cognition, brain structure, and brain functioning in older adults. The use of a Nintendo gaming console called WII Fit is being tested for aerobics, strength training and balance improvement with individuals with a diagnosis of mild dementia. A nurse at the University Of Washington School Of Nursing is evaluating an exercise and health promotion program for older adults with mild memory loss. And lastly, an even more promising program included exercise and mental activity. The participants rode recumbent bikes for an average of 3 rides per week, plus they had a virtual reality display that allowed them to ride in a 3-dimensional landscape and race against a ghost rider based on their own last best performance.

In a group of healthy elderly individuals, researchers found that greater participation throughout life in cognitively stimulating activities such as reading, writing, and playing

challenging games ~~was~~ were associated with less beta-amyloid deposition in the brain, a hallmark of AD. Other cognitive activities for AD patients is to engage them in activities of recollection which are not only general in nature, but also can focus on memory skills that can be directly helpful to them in activities of daily living, such as where they left a purse or wallet, or what is their living address. These memory exercises are also beneficial to their caregivers, who often get frustrated with the memory deficits of their family member.

One of the functions of the agency's Education and Support Program is to provide education to the health care provider. Since it is the primary health care provider who bears the responsibility for managing most of the AD patients, there clearly is a need to assist these clinicians with best practices guidelines. When best prepared, the provider will be able to make the appropriate diagnosis and, in a timely manner, inform the patient so that crises can be avoided, therapeutic and rehabilitative support can be initiated, and the patient can be adequately informed so that choices can be made for the future while decision-making capability remains. The patient and family face many short-term and long-term decisions that are best made based on knowledge of the disease process, the range of symptom progression, and the ultimate prognosis. This would include making decisions about advance directives to physicians, appointing a durable medical power of attorney, discussing end of life decisions with whoever will be designated as the surrogate decision maker, and future living arrangements. This is where a referral to the agency education and support services is warranted.

In terms of an economy of scale, when you consider the services provided by this program it becomes very cost effective when it may prevent the development of Alzheimer's Disease or delay it resulting in the individual remaining in their home and community for as long as possible, extending their quality of life and remaining out of an assisted living facility or nursing home. If the services the program provides delays for one year a nursing home admission for two clients, it results in a savings of well over $200,000. When you consider this, the request for $223,000 additional funding for the grant is a very modest one. Even more funding would enable an even greater outreach program.

Alzheimer's Disease & Related Disorders (ADRD) - Education and Support Program
Request for Funding Increment – FY 13

Budget Component: Senior Community Based Grants (2787)
RDU: Senior and Disabilities Services (487)

The ***ADRD Education and Support Program*** of the Alzheimer's Disease Resource Agency of Alaska provides support and education services ***statewide*** for people with Alzheimer's disease and related dementias as well as healthcare professionals, service provider agencies and the general public. The program provides outreach, information & referrals, consultations, memory screenings, support groups, and education for professionals and the general public. Through this program's activities the Alzheimer's Resource of Alaska raises public awareness of ADRD (signs and symptoms, diagnosis, healthy behaviors, etc.) which helps reduce the stigma associated with the disease. This program is a portal into the continuum of care and has a tremendous reach considering its very few resources. The Alzheimer's Resource of Alaska has provided these services on-going for 27 years. Overtime, we designed new programs and expanded service offerings to keep up with the population growth and the demand for services.

The senior population in Alaska is growing at a staggering rate and the number of people affected by Alzheimer's disease is growing proportionately. In 1990 an estimated 2,200 people had Alzheimer's disease while today that number is over 6,000 (172% increase).

SDS currently provides a $127,118 grant for this program. The original grant in 1984 was $28,838. From FY 92 through FY 08 the grant remained flat at $115,443. In FY09 the grant was increased approximately 10% to the current $127,118. In 20 years (FY92-FY2012), the grant was increased once by 10%.

The expectations for the organization for the use of these funds are significant:

- ⇨ Statewide Services
- ⇨ Demonstrated knowledge and expertise in providing education, training and support to caregivers, individuals, service providers and the community about ADRD
- ⇨ Statewide outreach with particular attention to rural and underserved communities
- ⇨ Information, referral and assistance via a statewide toll-free line
- ⇨ Individual and family consultations
- ⇨ Group education and training
- ⇨ Education of professionals and provision of technical assistance to those who are serving ADRD clients
- ⇨ Support groups
- ⇨ Conduct public awareness activities
- ⇨ Maintain staffed offices in Anchorage, Fairbanks, Juneau and the Mat-Su
- ⇨ Maintain a lending library

The Alzheimer's Resource of Alaska supplements this grant with private funds from foundations, corporations and individuals. This amount varies but on an annual basis it can range $20,000-$40,000.

In FY 11, the ADRD Education & Support Program served an **unduplicated** 430 individuals and 253 service providers. In addition, the program provided education services to 5,147 individuals statewide (may include some, but minimal, duplication). The following is a sample of the growth in the program in the last 10 years:

Service Levels	FY 2001	FY 2011	Increase in Service Levels
Information & Referral Contacts	6218	28,409	357%
Individual/Family Consultations	270	367	36%
Support Groups	72	153	113%
Consultations for Providers	121	268	121%
Education Activities	62	124	100%
Public Awareness Activities	84	353	320%
Communities Served	61	102	67%

Looking at a longer time span, the increase is even more dramatic. For example, from FY97 to FY11 the number of Information & Referral contacts increased almost 1600%. Given the demographics that we are familiar with, this is not much of a surprise. The demand for services is great now and increasing. The disparity is that in 20 years the State's investment has been minimal with only one increase of 10% in 2009.

The services provided through the *ADRD Education & Support Program* are preventive in nature and give individuals with ADRD and their families tools to preserve independence and maintain persons living at home for as long as it is feasible. Research shows that providing education, counseling and support to caregivers can keep people with ADRD out of nursing homes for an extra 1 ½ years. If this program can keep just ten people out of nursing homes each year, it will save the state more than $2 million each year. Given the high number of individuals this program serves, it is an extremely cost-effective approach. This program also supports professionals and thus raises the overall quality of care. How many individuals are admitted to API or the ER due to dementia related issues? Are all the staff at these facilities familiar with ADRD behaviors and knowledgeable of how to respond? How many care coordinators are writing care plans for those with ADRD with no understanding of the special needs of these individuals? How many clients with dementia are refused admission back to their assisted living home after a hospitalization or evicted due to behaviors? Training in this very specialized area is an investment in much needed workforce development.

The Alzheimer's Resource of Alaska has done well with the limited resources, however a great deal more work is needed to adequately respond to the demand in services: increased outreach/travel to rural areas, translation of materials to disseminate information to various communities, increased technical assistance and staff training for assisted living facilities and other service providers statewide, increased availability of qualified, professional staff to provide consultations and support to individuals concerned with memory loss and their families, just to name a few of the areas that require attention. With the expected continued growth in this population, additional resources for these basic services need to be allocated to this program. To meet the current program expectations and address the population growth with a reasonable level of effectiveness the **Alzheimer's Resource of Alaska respectfully requests an increase of $223,000 for the statewide *ADRD Education & Support Program* for a total grant amount of $350,000.**

To: Celeste Hodge
Subject: RE: Suicide Presentation

Hi Celeste,
Okay, first for your question on funding. I don't track funding of this issue very closely, but the Suicide Prevention Resource Center seems to have relatively updated info on funding opportunities within states. I have pasted their information about legislation that involves funding and recent federal funding streams. I hope this helps.

As for the press release, I will be speaking on suicide rates (both Alaskan and US) and I will provide some detail about rates among specific demographic groups. I will also discuss state laws and 2012 legislation that aim to prevent suicide.

A short bio from me:
Hollie Hendrikson, MSc. Ms. Hendrikson has been a policy analyst at the National Conference of State Legislatures since April 2010 and is responsible for tracking state legislation related to injury and violence prevention including trauma systems. She contributes to multiple publications for state legislators related to policies that aim to reduce injury and violence rates, and address health care access.
I bio will probably not be needed for Laura since she will be accompanying me as my supervisor and trainer and will not be presenting.

And, I do plan on having a power point presentation and I will bring copies of my presentation to disseminate. Please let me know how many I should bring.

I hope this answers all your questions. Please let me know if I have forgotten anything. Thanks!

-Hollie

From the Suicide Prevention Resource Center

Legislation/Resolutions:

- **2009** – House Bill 123: Extends the statewide Suicide Prevention Council another four years, through June 30, 2013. It also expands the membership of the Council to include a public member as well as representatives from the Department of Health and Human Services and the Department of Education and Early Development.
- **2009** – House Bill 83: Makes appropriations for the operating and capital expenses of the state's integrated comprehensive mental health program. Specifically, the act appropriates $2,135,700 for rural services and suicide prevention for FY2010.
- **2007** – $2,241,243 is appropriated for suicide prevention and the rural human services system.

PAGE 16

Dear Readers,

Today, in Alaska more than 6,000 people have Alzheimer's.

Alaska has the fastest growth rate of aging population in the nation. From 1990 to 2010, the number of people over age 65 grew 146%. Since the incidence of Alzheimer's disease and related dementias (ADRD) increases with age, the number of people affected is increasing proportionately. When the Alzheimer's Resource of Alaska started in the early 80's as a grassroots effort less than 2,000 Alaskans were affected; since then the number as more than tripled.

To address these demographics, the Alzheimer's Resource of Alaska has expanded the depth of its services to educate, support and care for the individuals affected, their families and communities. The organization serves the entire state of Alaska with offices in Anchorage, Fairbanks, Juneau and Palmer, and we hire workers in local communities to provide home care in rural areas. With the number of people with ADRD expected to double in the next 10 years, we are preparing to address the challenges in the years ahead.

Alzheimer's is a disease that affects the entire family. More than three-quarters of people with ADRD live at home where they are cared for by family and friends. Although most families who care for their aging relatives in the home view care giving as a positive experience, providing 24-hour care is a demanding and draining task. The person with Alzheimer's disease can experience confusion or disorientation, loss of communication skills, agitation or hostility and in the later stages, a need for total care. The caregiver is responsible for all aspects of care and safety for their loved one. Over the course of the disease, watching a loved one's abilities decline from Alzheimer's disease is comparable to a sustained grieving process - a continual loss of the person they once knew.

At the Alzheimer's Resource of Alaska we provide the information that individuals concerned with memory loss are seeking. We help them navigate the health care system and provide the reassuring support and comfort that lets them know they are not alone. We provide hands-on care in the home to help individuals preserve their independence for as long as it is possible. And, we give family members the knowledge and tools necessary to become skilled caregivers and preserve their own emotional, physical and mental well-being.

Alzheimer's Resource of Alaska

While caring for those affected by ADRD, the Alzheimer's Resource of Alaska does not underestimate the importance of research as perhaps the most important factor in solving the Alzheimer's puzzle. Although there are some medications available that may temporarily improve symptoms, there is still no cure for Alzheimer's. A great deal of promising research is underway worldwide as many countries are concerned with the financial and social impact this devastating disease will have on society. Right here in Alaska, at the UAF Alaska Basic Neuroscience Program, research is in progress exploring causes and potential therapies for Alzheimer's. Our organization is fully committed to investing in research efforts and this year we established the "Alzheimer's Resource of Alaska Research Fund" with the University of Alaska Foundation to support the excellent work of our research partners here in Alaska.

At the Alzheimer's Resource of Alaska we will continue working hard to ensure respect, dignity and comfort in the lives of those we serve until a cure is found. We hope the next few pages will provide you with some answers about Alzheimer's disease and other dementias and insight into the experiences of those affected. We all know someone who has been touched by this disease and we must begin talking about it not as a myth but as a reality.

What is the difference between dementia and Alzheimer's disease?

ONE OF THE MOST FREQUENTLY asked questions is: "What is the difference between dementia and Alzheimer's disease?" Dementia is not a disease itself. It is a term used to describe a number of symptoms that can be caused by various conditions and diseases that affect the brain. Dementia symptoms include a decline and loss of cognitive functions and memory, confusion, behavioral and personality changes in the affected person. Alzheimer's is just one disease that causes dementia.

There are a number of conditions that have similar cognitive effects as Alzheimer's disease. Vascular dementia, Parkinson's disease and Lewy Body dementia are just a few that exhibit many of the same symptoms and are often referred to as "related dementias".

The confusion between dementia and Alzheimer's is because the terms are often used interchangeably even though dementia can have a number of other causes. It is even possible for a person to have more than one form of dementia at the same time. One of the most common combinations of dementias is referred to as Mixed dementia, which is the combination of Alzheimer's disease and Vascular dementia.

Alzheimer's disease (AD) is the most common cause of dementia. It affects approximately 6,000 Alaskans and 5.4 million people nationwide. It attacks the brain and over time causes serious mental *and physical decline, eventually leading to death.* The disease is typically associated with memory loss but symptoms also include a loss of language and thinking abilities as well as changes in personality and behavior. These changes happen over time and symptoms come on gradually.

In Alzheimer's a buildup of Amyloid plaques and tau-containing neurofibrillary tangles keep the brain from making connections. With AD these buildups typically start in the region of the brain that concerns memory. As the disease progresses, more blockages are formed and connections are continuously inhibited. Simultaneously, there is a decline of Acetylcholine, a chemical responsible for transmitting messages from one brain cell to the next. Eventually nerve and brain cells begin to die causing the brain itself to shrink.

Causes of Alzheimer's are still unknown for the majority of cases. It is thought that a combination of genetic, environmental and life-style factors may lead to the disease but there is no definite answer. There is one exception, families who have a history of early-onset AD (AD before the age of 65), can pass a genetically transferrable gene mutation to their children. Mutations found in the APP, PSEN 1 or PSEN 2 genes, if inherited will cause Early-Onset Familial Alzheimer's (EOFA). However this genetic link is extremely rare and only found in a small portion of all Alzheimer's cases.

There is still much to learn about Alzheimer's disease and other forms of dementia. Medications have been developed to temporarily slow symptoms in those with progressive mental impairments, but eventually these disorders catch up. Until a cure is found, Alzheimer's Resource of Alaska is dedicated to providing education, support and services to all individuals affected by Alzheimer's disease or a related dementia.

RELATED FORMS OF DEMENTIA include:

- Vascular dementia
- Parkinson's disease
- Lewy Body dementia
- Frontotemporal dementia
- Creutzfeldt-Jakob disease
- Normal pressure hydrocephalus

HEALTHY HABITS

Recent research suggests that leading an overall healthy lifestyle may lower the risk of developing Alzheimer's disease and related dementias. Healthy habits include:

- Exercise
- Engaging in mentally stimulating activities
- Eating well
- Staying socially active

Ten Warning Signs

Alzheimer's disease is not normal aging. Alzheimer's disease is an illness which leads to a loss of cognitive abilities (i.e. memory, judgment, reasoning, language, perception, etc.). Symptoms usually occur in adults 65 years and older, although people in their 30s, 40s, and 50s may also be affected. Alzheimer's disease is the most common form of dementia. However, it is not the only cause of dementia.

Check for these 10 warning signs. If you find yourself answering yes to a number of these questions contact a doctor or the Alzheimer's Resource of Alaska.

Do You Or A Loved One Have...

1. Recent memory loss that affects daily living skills?
2. Difficulty performing familiar tasks?
3. Problems with language?
4. Disorientation of time, place?
5. Poor or decreased judgment?
6. Problems with abstract thinking?
7. A problem frequently misplacing things?
8. Sudden changes in mood or behavior?
9. Dramatic changes in personality?
10. Significant loss of initiative?

Mind Matters

A program for those with early memory loss

"I LIKE TO BE AROUND PEOPLE who believe in me," John announced. The focus of the morning's discussion among group members of Mind Matters, an early memory loss support program, was whether or not to tell others about a medical condition affecting their brain. Many confessed to remaining silent on such disclosure, fearing that friends and neighbors might begin treating them differently. Others like Tim say they have had to because it is now obvious that something is wrong.

This group meets once a week. The men and women sitting around the room are living with various degrees of memory loss. Some have been diagnosed with Mild Cognitive Impairment (MCI), others with Alzheimer's, Tim has Parkinson's. They come together week after week to connect with others experiencing similar challenges and engage in activities that connect them to the community.

Mind Matters is an education and support program for individuals with early memory loss facilitated by the Alzheimer's Resource of Alaska. The program offers a forum for people like Tim and John with early memory loss to share information, understanding, camaraderie, humor and hope with each other through discussions and activities.

Today is a discussion day and the group continues to talk about how there are friends and neighbors who find it difficult to remain in touch with a person living with memory loss and other cognitive changes. Probably because they don't know how to react or have fears that they won't be able to communicate. Discussions for the group typically revolve around topics like these as well as understanding diagnosis and the impact of the disease, managing lifestyle and relationship changes and preparing for the future.

According to Marilyn McKay, program facilitator and education specialist at the Alzheimer's Resource of Alaska, "This is definitely a time of challenge in the lives of group members and those closest to them. It's a time to sort through feelings of fear, anger and frustration. By group members sharing with family, friends and the community they feel less alone. The program is a process of learning and sharing among accepting and understanding peers. It's also a reminder that life continues with all of its ups and downs."

For Tim, "[The program] is about learning what other people are doing and how they deal with it. People are airing their inner most feelings and pieces of information here and there to help."

Program participants engage in a variety of activities including writing poetry, volunteering to bag food for the Children's Lunchbox Program, listening to guest speakers and on one chilly spring morning even bird watching at Westchester Lagoon.

"Having a variety of activities provides opportunities to continue to be creative, help others, learn something new and relax in the company of friends" says McKay.

These kinds of early memory loss programs were pioneered by Robyn Yale, LCSW, of San Francisco in 1986, and are now being replicated throughout the world. Her model combined education and support to better serve individuals living with early memory loss and their families.

Research has shown that groups like Mind Matters play an important role in reducing the isolation experienced by those living with early memory loss. Sharing personal experiences, helping others living through similar experiences, learning about memory loss, ways of coping and caring for self, along with the encouragement received from others eases individual distress and loneliness.

But research doesn't capture the reason these participants come back week after week. Jim comes for a shared feeling of learning and hopefulness. "I've heard there is no way out of this. I can't accept that. There has to be something. I come to learn from others." And he will as he shows up weekly to the new discussions and activities of Mind Matters.

I AM

I am Long Island, Seattle, Los Angeles and Boston,
North Dakota, Alabama, Kansas and Missouri,
I am Rocky River, Ohio.

I am father and son, husband and grandpa.
I am mother, daughter and wife.

What Is It Like to Have Alzheimer's Disease?

ABOUT THE AUTHOR:
Dr. Richard Taylor, a retired professor and psychologist, was diagnosed with dementia of the Alzheimer's type a decade ago. Since his diagnosis, he has been thinking, speaking and writing about his condition as well as advocating for those with early-stage and early-onset Alzheimer's disease.

FEBRUARY 24TH DR. TAYLOR WILL BE SPEAKING at Alzheimer's *Resource of Alaska's Winter* Workshop. The workshop will be held at the BP energy center and those that attend will have an opportunity to talk to Dr. Taylor and Eden Mentor, Dr. Allen Power.

This is an excerpt from Dr. Richard Taylor's book: Alzheimer's From the Inside Out a collection of essays he has written since his Alzheimer's diagnosis in 2001.

WHAT IS IT LIKE to drive your car from Houston to Anchorage? The answer depends on many things: the type of car you will drive, the age of the car, how well you maintained it, where you are in your trip, if others are helping you with the drive, if you have enough gas or access to a gas credit card, if you have accepted the fact you must drive to Anchorage, whether or not you are afraid of arriving in Anchorage.

What is it like to have Alzheimer's? This, too, depends on many things: Do you have an existing group of individuals who are committed to your well-being? Are you a proactive or a reactive person when it comes to dealing with doctors, our health insurance company, and yourself? Where do you live: Houston, Texas, or Houston, Nigeria? Do you have insurance? Especially long- term care insurance? Does your culture and economic class encourage and promote younger generations taking responsibility and care of their family's older generations? There are dozens of important factors outside of yourself that will directly and significantly influence you and your inner experiences with the disease.

After meeting, speaking, and corresponding with hundreds of people who have Alzheimer's, I am convinced there is no universal answer to the question, "What is it like to have Alzheimer's?"

Since the disease process unpredictably and seemingly randomly destroys various cognitive processes and undermines the basis of most all understanding and memory, each person has a unique and personal way of dealing with the rate, the degree, and the various components of the syndromes we attribute to Alzheimer's disease. Neurologists who tell us they understand the disease because they see 4 or 40, or 400, individuals with Alzheimer's does not mean they understand me or you. Just as there really is no single "average" person, there is no meaningful "average" Alzheimer's disease experience.

I was diagnosed with dementia of the Alzheimer's type two years before I wrote this piece. I imagined, maybe hoped, that some day I would wake up and a heavy velvet curtain would have fallen during the night. I would wake up to a world where I could see shapes but not enough details to know what or who they were, sort of like Plato's flickering shadows on the wall produced by the fire on the cave floor.

Instead, right now, I feel as if I am sitting in my grandmother's living room, looking at the world through her lace curtains. From time to time, a gentle wind blows the curtains and changes the patterns through which I see the world. There are large knots in the curtains and I cannot see through them. There is a web of lace connecting the knots to each other, around which I can sometimes see. However, this entire filter keeps shifting unpredictably in the wind. Sometimes I am clear in my vision and my memory, sometimes I am disconnected but aware of memories, and other times I am completely unaware of what lies on the other side of the knots. As the wind blows, it is increasingly frustrating to understand all that is going on around me, because access to the pieces and remembering what they mean keeps flickering on and off, on and off.

Thanks in large part to my family caregivers, I am still functioning in the non-Alzheimer's world. I drive, I learn (although I seem to forget much of what I learn), I teach, I love, I mostly understand—but not all the time, and not always the way others do. It is a constant effort to look around the lacy webs and to have to put effort into understanding and doing things that came naturally but a few months ago (cooking, reading, driving to a new store, remembering the recent past). Some activities hide beyond the knots and rarely have clarity (arithmetic, reading a watch, remembering what I just read). It is not a lot of fun, but I can still do it!

Does the disease increasingly dominate my life, or has the disease insidiously and largely unconsciously become a part of my life?

Does the chicken come first, who I am?

Does the egg come first, Alzheimer's disease?

Today, but not yesterday, I firmly believe: Individuals have a cold, have cancer, have the measles. Alzheimer's has the individual. Ask me again tomorrow! I am trying to be rational and realistic, using tools that are rusting and increasingly out of sync with each other. In my writings you will feel me leaning one way in one paragraph (I am in a war with this disease and I will go down fighting. This is an opportunity for me to grow in ways few people have an opportunity to experience), or another way (I'm mad, I'm sad, and I feel sorry for myself. Why won't others join my self-pity party?).

My writings don't offer answers, just my own observations from my own increasingly unsure perspective.

Tips on being a friend

Talk to me
Please don't direct all your conversation only to the person who is with me.

Listen to me
I may have difficulty finding the words I need, but I have things to say. Please be patient with me as I share my thoughts with you.

Treat me as you always have
I'm not invisible. I'm not contagious.

Let me help
I have advice, strength, time and a desire to give to others. Please invite me to help you.

Include me
Help me to feel comfortable in small groups by including me in the conversation or activities.

Respect my feelings
At times I can be very emotional. Please stay with me if I want you to, or offer me a quiet space.

Encourage me
Recognize that I'm doing the best I can. Celebrate accomplishment with me.

Do things with me
Please don't assume you have to do everything for me.

Tell me what you would like me to do
Choices can be hard for me. It is much easier for me to say "yes" or "no."

Be positive
I'm going to make mistakes and I'm going to feel bad about that. Accept me for who I am right now and with your positive comments let me know that that is enough.

Tips are adapted from the words of Robert Simpson in Through the Wilderness of Alzheimer's *(1999)*

Living with Alzheimer's in Nunapitchuk

One family's story

CARING FOR SOMEONE with Alzheimer's is not an easy task but doing so in rural Alaska presents a unique set of challenges. Elsie and Ivan Jacobs live in Nunapitchuk a small Yup'ik village in western Alaska set on the Johnson River about 30 miles west of Bethel.

Elsie and Ivan are life long companions, and Elsie cares for her husband who has been diagnosed with Alzheimer's disease. She is responsible for feeding, clothing and bathing both Ivan and herself with the limited resources available. If it is raining, Elsie will make sure to collect the rain so she can use that water to give her husband a bath later in the evening. Running water is not piped into the homes in Nunapitchuk due to freezing problems. They have a small supply of potable water delivered to the house when needed, so she tries to be conservative.

Preserving water, she only washes clothes on the weekends and starts by soaking them the day before. This loosens dirt so she can finish scrubbing them by hand the following day. Winters can make this chore particularly difficult.

These tasks are a part of daily life for many rural Alaskans without being thought of as an added inconvenience. But when compounded with caring for someone with Alzheimer's disease or related dementia (ADRD) managing what were once routine activities can become nearly impossible.

Elsie was referred to Alzheimer's Resource of Alaska for respite services in August 2010 to help her care for her husband with suspected dementia. Soon after, Alzheimer's Resource of Alaska hired workers to provide Elsie and Ivan with services in the home and started sending the couple incontinent supplies from its loan closet to help with their growing needs.

In December of 2010 Ivan had a stroke and needed more help than was available in the village. Just hearing Elsie talk about it best describes how difficult it can be to get advanced medical care in a village with no roads.

"The nearest doctor is two hours by boat and I don't know how many hours by snow machine" she says.

That is how long it takes her to get to Bethel where the nearest hospital is located. She can take the Kuskokwim River or drive by four-wheeler or snow machine. But in an emergency such as when Ivan suffered a stroke, rural Alaskans need to be medevac'd to a hospital where they have access to more care.

It was during this time Elsie made the decision to keep Ivan at home in the village rather than send him to an Anchorage facility. Aside from the added expenses it would take to relocate Ivan, people with Alzheimer's always do much better surrounded by family, friends and the things they are used to. And as Elsie said, with a few extra hands around the house it has become possible to care for him at home.

Today, two Alzheimer's Resource of Alaska workers provide approximately 17 hours of services per week. These workers help Elsie care for her husband's personal needs and do chores such as heavy lifting, washing and housekeeping. Elsie uses some of this time for her own respite to go to appointments and get some time to herself.

"I need help mostly in the mornings. That is when it is hardest" she says. "They really really help me... I thank god for them."

Elsie will repeat this over and over again. She has no lack of appreciation for the in-home workers that come to her house weekly.

After a diagnosis of Alzheimer's was received in January, Alzheimer's Resource of Alaska awarded Elsie a mini-grant funded by the Mental Health Trust Authority to periodically send care packages to their home. The packages typically include items she can't get or are astronomically expensive in the village. For example, a package of Depends costs almost $40 in Nunapitchuk as compared to the $19.99 it costs in Anchorage. As a retired teacher's aid those are prices Elsie can't afford. Other items include food supplements (ensure, food thickeners, etc.) and rubber gloves. Elsie loves the rubber gloves and will mention them often if asked about what helps her the most (other than her in-home workers).

"I'm doing my best to help my husband" she says.

And she is. Elsie had the courage to reach out for help when she needed it most and, as a result, she and Ivan can continue their life together in the unique yet familiar surroundings of Nunapitchuk.

Jim Clark

One caregiver's story

EVERY FRIDAY, LIKE CLOCKWORK Jim and Ginny Clark show up at the Alzheimer's Resource of Alaska for Art Links. Jim parks Ginny at the table in front of a white piece of paper on a blue sheet next to a set of water colors and brushes. Ginny is usually the first one in the room as others trickle in to join her for the painting session. She can't really paint anymore but Jim still brings her so she can get out of the house and be around people.

Once Ginny is settled Jim takes a moment to "make the rounds". He pops his head into each office at Alzheimer's Resource of Alaska with opening lines like, "I got a joke for ya..." and "did I tell you the one about..." He knows just about everyone in the building and is sure to collect as many hugs as possible. "I'm a bull-shitter," He says with a big grin, "nowadays they call it a people person."

It has been a long road for Jim and Ginny. In early 2006 the couple found out that Ginny had Alzheimer's. The first time Jim noticed something was wrong was in 2005. He was returning his son's truck they borrowed and Ginny was following him. Her driving was erratic, but at the time Jim didn't know why.

The progression of the disease was slow at first. Ginny continued working for another six months after the diagnosis. But eventually she needed to stop.

"To me it was a real shock about how our life was going to change" said Jim.

They had known a bit about the disease because Ginny's mother, sister and one aunt all were diagnosed. In fact, her mother developed signs in the early 60's and was committed to a mental institution at the time. Jim thinks that this history of the disease in her family is why, after being diagnosed, Ginny was always compliant when he was caring for her. "She knew I was trying to help her" he explains "she was always very receptive".

For Jim, after finding out Ginny had Alzheimer's the hardest part was figuring out what to do and how to go about it. Through this process was how he first made contact with Alzheimer's Resource of Alaska.

"I went to the library at the organization, and talked to a young man who worked there at the time, Tony. Smartest move I've ever done in my life" says Jim.

He went on to take classes and join support groups at the Alzheimer's Resource of Alaska. He even had the organization help him talk to his entire family about Ginny's condition and the care she was receiving.

He did this all for his wife. "I owed it to Ginny, I wanted to. I love that woman, I really do... I just need to take care of her."

For Jim, there was never any question who would be taking care of Ginny through this difficult time. Years ago when Jim got back from the Korean War she stood by him and helped him through some difficult times. Now it was his turn to do the same for her.

And he has in spite of all the challenges. Jim has learned to take blood pressure, comb her hair and coordinate with doctors and pharmacists. He made sure she ate well, regulated her meds (including the ones she hid in her cheek) and learned to work a roaming monitor. For years he slept with "one ear open".

Later in the progression of the disease, when Ginny got mad at the old lady in the mirror Jim put butcher paper up so she wouldn't be bothered anymore. "You've got to conquer what comes at the time" Jim explains "I don't think people really know what goes on, because it is a 24 hour, 7 day a week job".

But doing these things was not what made the disease difficult for him. Instead it was his constant guilt and concern for doing the right thing. If Ginny got sick his first thought was that it was because he didn't clean her well enough or he had exposed her to it somehow. "Sometimes you feel like you're going under" he says. "The most stressful part is wondering whether or not you are doing the right thing... if there's something else you should be doing. People can tell you that you are, but it doesn't always alleviate the questions you have."

For five years Jim didn't do anything major for himself. His life revolved around caring for Ginny and he had to learn a few coping techniques. While Ginny was still living at home he read a lot. He read for escape. He would get Ginny to bed, then go turn on a light, close the curtain to "read and nibble". According to Jim, finding a way to relax and get your mind clear for 15-20 minutes a day is essential. "You can't do it while they are there."

At times the stress got so bad that Jim says he just blocked it out. Most of the time, he didn't even realize how much stress he was under. At least not until he got in situations that would remind him, one time he recalls spending 15 minutes tearing the house apart looking for his cell phone. His son-in-law called to get a phone number Jim had stored on the phone. Eventually he realized it was in his hand, against his ear, his son-in-law was waiting on the other end.

Now Jim finds humor in these stories and others. "Ginny was always a very affectionate lady" he recalls. And this showed even as her disease progressed. At times they would be in the supermarket and Ginny would walk up to a complete stranger, arms open and say "Hello, I haven't seen you in a long time." She would hug them tight. All the while, Jim was dancing in the background pointing to Ginny and noiselessly mouthing the word "Alzheimer's". "And usually" Jim says "people would hug her back".

Jim encountered a lot of this kindness from strangers over the years. He is still amazed by how generous some people were no matter her condition. Staff at the Golden Coral and the Village Inn would go out of their way to take care of them and make them feel comfortable.

"Those are the little things that make it all worthwhile" says Jim.

Jim cared for Ginny in the home for five years. Now she is living at an assisted living facility where she can get round the clock care. Jim can visit and take her out whenever he likes as he does every Friday when he takes her to get her hair done and to Art Links just as she liked to do regularly before the Alzheimer's progressed.

"We've had a good life" he says. And before he leaves he asks "Did I tell you the joke about..."

Caregiver Facts

In Alaska, last year over 30,000 family caregivers provided over $420 worth of unpaid care to a loved with Alzheimer's or dementia.

34 million adults (16% of population) provide care to adults 50+ years.

8.9 million caregivers (20% of adult caregivers) care for someone 50+ years who have dementia.

5.8 million people (family, friends and neighbors) provide care to persons 65+ who need assistance with everyday activities.

Unpaid family caregivers will likely continue to be the largest source of long-term care services in the U.S. and are estimated to reach 37 million caregivers by 2050, an increase of 85% from 2000.

Trust Training Cooperative
Building Our Workforce Together

The Trust Training Cooperative (TTC) is a resource that promotes career development opportunities for direct service workers* and their supervisors engaged with Alaska Mental Health Trust Authority beneficiaries, by ensuring that technical assistance and training is accessible.

**Direct service worker is a position that requires a bachelor's degree or less and works at least 75% directly with consumers.*

Visit the TTC website at www.trusttrainingcoop.org

The TTC Learning Management System (LMS) provides training opportunities for Alaskan providers who serve Alaska Mental Health Trust Authority beneficiaries.

Grant funded by the Alaska Mental Health Trust Authority ID# 1384 and University of Alaska Anchorage Center for Human Development. UAA is an AA/EO employer and educational institution.

Caregiving

Do self-care in order to be a healthy caregiver

WHEN TALKING ABOUT ALZHEIMER'S the conversation often focuses on the individual who has been diagnosed. However, it is just as important to recognize the impact this disease has on family caregivers.

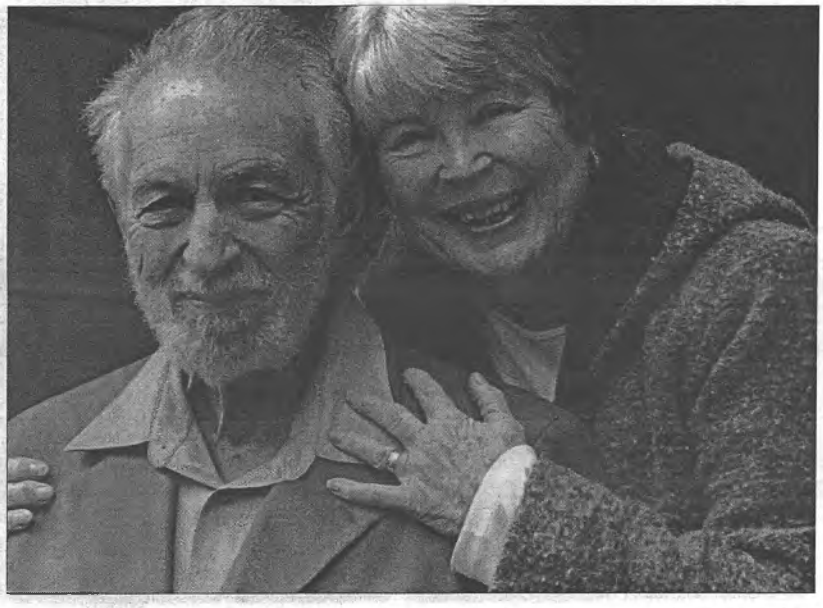
Caregiving is a physically, emotionally and mentally draining job and often, the last person to notice the toll it takes is the caregiver himself. The stresses of caregiving build up over time and for many, the job ends up consuming a person to the point where it becomes their sole role in life. They no longer have time to do things for themselves and they are constantly caring for someone else.

Caregivers, more often than not, are family members of a loved one who has been diagnosed. One of the most difficult aspects of caring for a loved one is that it forces people to change roles in ways they never imagined, especially in cases of Alzheimer's. A daughter helps her mother get out of bed, dress, eat and go to the bathroom as her mother once did for her. A husband does the same for his wife, as they once did together for their children.

This role reversal, on top of the financial, physical and logistical responsibilities of caring for someone contributes to caregiver stress and compassion fatigue. Compassion fatigue is a term used to describe someone who cares so deeply for another person that it becomes how they identify themselves. Everything in their lives revolves around the act of caregiving.

According to Lisa Wawrzonek, statewide Education Director at the Alzheimer's Resource of Alaska, this is dangerous because eventually the caregiver starts losing sight of some of their individual qualities. "You are committed to the point that eventually you become blinded to everything else, you are just in the mode of caregiver."

Becoming consumed by the role of caregiving is especially common in people who are considered part of the "sandwich generation". This is a term used to describe people who are caring for their children as well as their parents. They are caught in the middle and their role as a caregiver is pronounced by caring for two other generations simultaneously.



"It's important to be able to personally identify yourself away from these roles," says Wawrzonek. "You need to pay yourself first. And sometimes to do that, you need to find ways in which you can do self-care in order to be a healthy caregiver."

Doctors agree that to do something solely for oneself can provide an individual with a certain amount of self-care. They recommend taking time away from caregiving each day, even if it only adds up to 30 minutes a week. This allows a person to cope with the stress they are under and recharge for a moment.

"What it all comes down to," says Wawrzonek, "if you are not a happy, healthy caregiver you are not an effective caregiver."

Self-Care Tips *for the caregiver provided by Alzheimer's Resource of Alaska*

Support Groups: It always helps to know that you are not alone. It helps to hear that feelings of guilt, anxiety, anger, frustration and depression are normal. And you can discuss issues you are having with your loved one and get tips from others on how they have dealt with difficult situations.

"You" time: Find something separate from the role of caregiver, something that is just yours. And try to do this activity for at least 15 minutes a day. Read a book after everyone's in bed, take a bath, close the door and tell everyone not to disturb you.

Find yourself again: Ask yourself the question "Who am I?" and find something you can do to reinforce that. This is often a question that can be answered through identifying activities that you once enjoyed doing. For example, gardening, take a moment if you can and garden; at one time, you were not a caregiver, you were a gardener. Go back to that even if it is only for a short time.

Modify: Though you may not be able to take the time to garden anymore, you may be able to take 15 minutes and walk through the park, or visit a nursery. You will still be doing an activity that connects you to things you love, but it will be a modified, more obtainable version of that activity.

Set goals: Give yourself something to look forward to. Maybe it is taking an hour to get your hair done, getting easily through a meal with your loved one, or getting to a class once a month. Whatever you choose, make sure your goals are obtainable and have realistic expectations. Don't set yourself up for failure. Give yourself little successes in life and if you don't make it, it's alright.

Find a happy moment: Find a moment that made you really happy in life. A moment, day or event, that when you think about it, it makes you smile. And hold on to it for a few minutes during the day.

Shut off: Spend some time during the day to clear your mind. Try not to think about all the things you should be doing or will need to do. When something creeps in try pushing it out. Play some music and try it for the duration of the song.

Breathe: Breathe with purpose. Take deep breaths in through the nose and out through the mouth, expanding your stomach. Allow yourself to make noises as you exhale. Flush your system. Release some of those stresses.

Exercise: Research has proven that doing some exercise each day promotes better sleep, reduces tension, increases energy and decreases depression. This can be as simple as going for a walk or doing household chores. The key is to stay physically active.

A glass of wine: If it is something you enjoy, give yourself permission to have that glass of wine at night. Just one glass, any more can disrupt sleep, which is desperately needed for caregivers. But allow yourself to unwind at the end of the day.

Alzheimer's Resource of Alaska Programs and Services

MEMORY SCREENINGS
Free confidential memory screenings are available by appointment and administered at any of our office locations. Memory screenings must be done in person. Call to schedule an appointment at your local office.

CONSULTATIONS
Free confidential consultations are available for individuals, families and professionals to offer guidance in planning for the course of progressive dementia and other medical conditions. Consultations can be held in-person or by phone.

CARE COORDINATION
A service for individuals with physical or cognitive impairments who need assistance locating and accessing community resources for themselves or a loved one. Care Coordination enhances a person's independence, safety and comfort by coordinating the services he or she needs. Available only in the Municipality of Anchorage.

IN-HOME SERVICES
When physical or cognitive limitations make it difficult to remain safely at home, in home services offers a number of resources for clients and their families. Each service is uniquely designed to work with the health and financial considerations of the individual. Services include personal care assistance, chores and respite for family caregivers.

SUPPORT GROUPS
An opportunity for family members and friends to meet regularly for mutual support. Support groups are offered throughout the state of Alaska and we can help connect you with the group nearest you.

ADRD MINI GRANTS
Specifically for those diagnosed with Alzheimer's disease or related dementias, this grant program can assist in obtaining items or services when other funding sources are not available. Confirmation of diagnosis and estimates are required. Applications can be found on the web at www.AlzAlaska.org or www.mhtrust.org.

LENDING LIBRARY
As part of the University of Alaska's Consortium Library, we offer an extensive listing of materials on the topics of dementia, dementia care and diagnosis. Current titles on topics of interest to family and professional caregivers are available at all our locations and a number of resources can be found online at www.AlzAlaska.org.

MIND MATTERS
An educational and support program for those with early memory loss. Participants learn strategies to adapt with confidence and are encouraged to continue an active lifestyle. *(See page 4 for a closer look at the program)*

ART LINKS
Art Links is a weekly art program that provides a vehicle for self-expression for the memory impaired person. Family and friends are invited to participate. Classes are held in Anchorage and Palmer every Friday.

Education for Family and Friends:
ABC'S OF CAREGIVING
Two-hour workshops are offered every month for people caring for a frail elder or a person with Alzheimer's disease or a related dementia. The "ABC's of Caregiving" classes are free and held regularly in Anchorage, Palmer, Fairbanks, Juneau and the Copper River Basin. Topics include communication techniques, caregiving fundamentals, legal issues and Medicaid/Medicare concerns.

SAVVY CAREGIVER
A family caregiver education program that takes place over the course of 6 weeks, two hours each week. The program focuses on improving the practice of caregiving for both the individual living with dementia as well as the caregiver. Classes offered in Anchorage, Palmer, Fairbanks and Juneau.

Education for Professionals
SAVVY PROFESSIONAL
A one-day workshop that shares essential knowledge, practical skills and visionary outlook in dementia care. For those whose roles require dementia capable leadership, advocacy and mentoring.

DEMENTIA CARE ESSENTIALS
A training program for direct service workers wanting to improve their skills when caring for individuals with dementia. It offers an overview of Alzheimer's disease, understanding the dementia experience, communication skill development and enhancing activities of daily living. Past participants have included: respite workers, personal care attendants, care coordinators, home health workers, adult day, assisted living home, and long-term care staff. Currently offered in Anchorage, Fairbanks, Juneau and Palmer. Classes are also available via video conferencing.

DEMENTIA CARE WORKSHOP
A four hour workshop designed for long term care facilities and large organizations that need the fundamentals of dementia care. Facilities across the state can organize a workshop by calling the education department in Anchorage.

Education for Anyone:
RESEARCH FORUMS
Latest research and discussions on Alzheimer's disease and related disorders are offered with experts from around the nation. The forums are free events open to the public. This November Dr. Joshua Gatson will be speaking about Traumatic Brain Injury and its link to Alzheimer's disease. And in February Dr.'s Allen Power and Richard Taylor will be advocating on behalf of those with ADRD.

MENTAL FITNESS
A social and mentally stimulating program to help improve or maintain mental activity. Classes are held throughout the state at Alzheimer's Resource of Alaska offices and local senior centers.

AWARENESS PRESENTATIONS
For anyone interested in learning more about Alzheimer's disease and related dementias. Alzheimer's Resource of Alaska presents at civic groups, churches, and organizations. Call to schedule a presentation.

FOR MORE INFORMATION
on any of our programs or services contact Alzheimer's Resource of Alaska at one of our statewide offices or call toll free 1-800-478-1080.

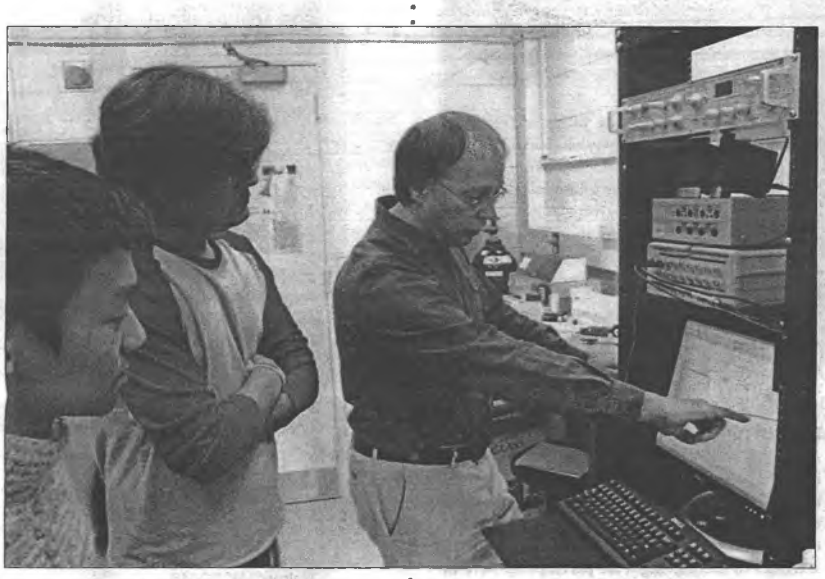
Many of these programs are made possible with funding by these major grantors: State of Alaska Senior & Disability Services, Alaska Mental Health Trust Authority, Mat-Su Health Foundation, Mat-Su Borough, Fairbanks North Star Borough.

Supporting Alzheimer's Research in Alaska

ALZHEIMER'S RESOURCE OF ALASKA established a fund this year with the University of Alaska Foundation to support promising Alzheimer's research being conducted here in Alaska. This year, the Alzheimer's Resource of Alaska's contribution was designated to Dr. Marvin Schulte's laboratory within the Alaska Basic Neuroscience Program at the University of Alaska Fairbanks (UAF). The lab has made significant progress developing a drug to treat the cognitive effects of Alzheimer's disease.



The Schulte lab has also received funding from the National Institute of Health (NIH) and American Recovery and Reinvestment Act (stimulus funding in 2009) to continue research and development on their lead compound desformylflustrabromine (dFBr). dFBr is a natural product that has been found to increase the activity of an important neurotransmitter that declines in Alzheimer's brains. This compound has the potential to improve cognitive abilities responsible for recalling, retaining and forming memories. Further research may lead to the development of new therapies for Alzheimer's disease.

In 2005 the lab started collaborating with Dr. Richard Glennon, Chair of Medicinal Chemistry at Virginia Commonwealth University to make synthetic variations of the compound. These synthetic variations change the structure of the compound allowing researchers in Schulte's laboratory to determine which properties of the base molecule are important for its therapeutic effects. These variations may enhance the drugs positive characteristics and reduce potential side effects.

According to Dr. Schulte the excitement surrounding this new drug has been undeniable. "The NIH funded the project on the first submission, which seldom happens." Dr. Glennon started working on changing the compound structure the day after speaking with Dr. Schulte. "We have received a lot of attention at scientific meetings from drug companies and other laboratories interested in this compound," says Schulte.

In order for cells to communicate with one another, a neuron will send a chemical messenger which will result in an electrical signal being discharged on the receiving cell. A person with Alzheimer's begins losing brain function because, for reasons that are not entirely clear, cells in the brain known as neurons start to lose the ability to send and receive signals to one another and ultimately die. Current medications for Alzheimer's act to increase the amount of the neurotransmitter chemicals available but they do not modulate the signal in the unique way the dFBr does.

"This is a very unique drug," says Schulte. "It doesn't activate or inhibit the receptors involved in Alzheimer's disease but instead modulates the signal that is produced".

In laymen's terms, what this means is that the drug dFBr, does nothing unless it is present along with the natural chemical signaling compound in the brain. When put together, the two produce a larger response then then would have been produced without the drug. In other words, dFBr enhances the signal or "turns up the volume" without significantly altering the brains normal control. This is a substantially different way of working then the current Alzheimer's drugs available to patients.

"There is great potential for this drug to help patients in the future" says Schulte. Dulce Nobre, Executive Director of Alzheimer's Resource of Alaska agrees. "Research is the essential piece that will help us solve the Alzheimer's puzzle and someday lead

FULLER DIAGNOSTICS, LLC

A NEW SUPPORT GROUP FOR OLDER ADULTS

Krista Pemberton, LCSW and Maureen Young, LCSW introduce a new support group for older adults struggling with life cycle transitions. Our goal is to provide exceptional behavioral health care across the lifespan with special consideration of the challenges facing older Alaskans.

ft to right: Shane Rideout, Yeganeh Ataian (PhD student), Yanzhou Huang (PhD student), Marvin K. Schulte (primary investigator), ailesh Khatri (PhD student), Jordan Ross (undergraduate researcher)

to a cure. The research being done in our very own state is providing valuable knowledge to the entire Alzheimer's research community. And while caring for those affected today, the Alzheimer's Resource of Alaska believes in, and is committed to supporting and investing in promising research efforts."

THE FUND

The Alzheimer's Resource of Alaska Research Fund was set up with the University of Alaska Foundation to support the excellent work of our research partners' right here in Alaska. This fund will provide financial support to the Alaska Basic Neuroscience Program to further explore causes and potential therapies for Alzheimer's disease and related dementia (ADRD). The fund is open to anyone interested in contributing to ADRD research.

This year, the fund will allow one graduate student to work fulltime in the Marvin Schulte Laboratory. According to Dr. Schulte, "The ability to have one student concentrate 100 percent of their time in the lab, without distraction, is the most productive way to stimulate research".

Shane Rideout, a third year graduate student at the University of Alaska Fairbanks (UAF) was granted this funding. Rideout received his undergraduate degree in Biochemistry from UAF and went on to pursue a doctorate. He has been working in the lab since 2010 but until recently, has been splitting his time teaching, writing papers, giving presentations and mentoring.

According to Rideout the opportunity to work fulltime in the lab, doesn't just benefit him, "I am incredibly grateful on a personal level for this, but it affects so much more... When we can devote [all] of our time to research, it is a huge benefit to our productivity."

Over the next year Rideout will be characterizing the interactions of this promising compound, dFBr, as well as developing a new platform to permit more rapid testing of drugs produced by Dr. Glennon. This "high-throughput" type of testing will accelerate the pace of discovery and will potentially benefit other laboratories as well.

THE PROGRAM

The Alaska Basic Neuroscience Program (ABNP) began in 2000 when the University of Alaska Fairbanks (UAF) received one of 12 Specialized Neuroscience Research Program (SNRP) awards. This award from the National Institutes of Health initiated the development and coordination of neuroscience research and education in Alaska. Their goal is to facilitate high-quality neuroscience research and education opportunities addressing identified state and national needs in partnership with local communities, state and federal governments. The ABNP program has received over $10M in research funding that directly supports neuroscience research in Alaska. In addition to money received from the SNRP program, Neuroscience faculty members are highly productive and receive significant additional support from both NIH and NSF to conduct neuroscience research of relevance to AK. In addition to Alzheimer's research, this includes research into new models of disease and the treatment of stroke, SIDS, Autism, depression and neuroinflammation.

Facts and Figures

Alzheimer's is the **SIXTH-LEADING** cause of death in the country.

Alzheimer's disease is the **MOST COMMON** form of dementia, although there are a number of others with similar symptoms that is why we often refer to Alzheimer's disease and related disorders (ADRD).

Alzheimer's disease is the only cause of death among the top 10 in the United States that **CANNOT BE PREVENTED OR CURED.**

Geneva Tryck Mortimer, age 93, and daughter Sabra Tryck (right) with Helene Wood who helps care for Geneva. Helene is a Certified Nursing Assistant and volunteer for the Office of the Long Term Care Ombudsman.

We All Have The Power To Protect
you know me

At this stage of my life, I'm lucky to have people who look after me. We all need a support system, especially older Alaskans and people with severe disabilities. Harm comes in many forms: abandonment, abuse, financial exploitation, neglect and self-neglect.

If you know someone who needs help, call Adult Protective Services at (907) 269-3666 or (800) 478-9996 or visit www.hss.state.ak.us/dsds/aps.htm

Dementia Care Training for Professionals and Paraprofessionals

ALZHEIMER'S RESOURCE OF ALASKA has launched three new specialized programs this year to train professionals and paraprofessionals in the field of dementia care.

The rapidly growing number of people with Alzheimer's disease or related dementia (ADRD) in Alaska has created great demand for a dementia-capable workforce in all areas from home-based services to institutional care. The number of people with ADRD is expected to almost double in the next 10 years, and the shortage of trained personnel will be at a breaking point.

Specialized dementia training is needed because caring for an individual with ADRD requires a unique set of skills for which not all medical professionals or direct care workers are trained. Alzheimer's Resource of Alaska is providing trainings to meet the growing need, accommodating individual workers and organizations by offering three new programs in different locations and venues throughout Alaska.

According to Lisa Wawrzonek, statewide education director of Alzheimer's Resource of Alaska, "These programs are incredibly important because the more professionals trained, the more we promote effective dementia care all-around. People that work with someone who has ADRD need to provide a special type of care, and when they use best care practices in dementia care it makes the experience better for themselves and the individual they're caring for."

The first program launched this year was Dementia Care Essentials (DCE). It was created specifically for direct care workers such as certified nursing assistants, workers in assisted living homes, personal care attendants, in-home workers and care coordinators. The course teaches the fundamentals of dementia, as well as practical skills such as communication techniques, activities planning and best practices in de-escalating difficult behaviors. DCE is a 10 hour class that takes place over the course of 5 weeks, two hours each week. This format allows participants to study and practice the skills learned each week and bring insights to the following class for further discussion.

The Dementia Care Workshop offers many of the same fundamentals as DCE but in a condensed four hour time frame. This format is typically used by larger facilities wanting to train a number of employees at once about the fundamentals of dementia and basic tools for working with individuals with ADRD. Nursing homes, assisted living facilities, adult day centers and hospitals have been scheduling this workshop in various locations throughout the state.

The third program, Savvy Professional, is an interactive workshop designed for those in leadership roles. The training equips administrators, supervisors, nurses, social workers and attorneys to provide leadership, advocacy and mentoring to others who work with individuals and families affected by ADRD.

So far this year over 200 people have participated in these programs and the response has been extremely positive. The training programs offer continuing education (C.E.) hours to nurses, C.N.A.'s, social workers and attorneys. They are available in Anchorage, Palmer, Fairbanks and Juneau and as of this fall, Education Specialists have began scheduling Dementia Care Essentials and Savvy Professional in other areas of the state.

In October, DCE will be offered via video conference for the first time. The new video conferencing is a result of collaboration between Alzheimer's Resource of Alaska and the Trust Training Cooperative. The first session will be open to professionals in Bethel and Nome.

Dear Lisa

Questions and answers

Dear Lisa,

I recently turned 50 and Alzheimer's has been on my mind more and more lately. Both my mom and my dad developed Alzheimer's later in life and now I am afraid that I might get it. I have heard a lot about Alzheimer's and genetics lately. Is there some sort of blood test I should get done to find out if I am going to end up with Alzheimer's too?

—Genetic Worrier

Good question GW, the short answer is no. What causes Alzheimer's in 99 percent of all cases is still unknown, but age and family history are the two main risk factors. You have probably been hearing about gene mutations in three genes which have been linked to an increased risk of developing Alzheimer's later in life. But it is not a definitive indicator that you will develop the disease. So even if you are tested for these mutations it doesn't mean much. Current research suggests that a combination of genetic and environmental factors cause Alzheimer's and in this case, scientists believe that an overall healthy lifestyle is the best way to prevent the disease.

That being said, Early-Onset Alzheimer's (EOA), which is developed before the age of 65, does not always fall into this category. Only 5 percent of all cases of Alzheimer's are classified as EOA and in only 1 percent of those cases there is a clear genetic link running in families with a long history of EOA. But again, this is very rare and if your parents developed the disease later in life there is no reason for you to be tested.

Dear Lisa,

My mother has been living with us for about seven years and we've been able to take care of her. We feel it is time to ask for help but have really no idea where even to start. Can you point us in the right direction? We'd like to keep her at home if we can.

—Helpless at Home

Dear Helpless,

First, congratulations on caring for your mother successfully at home for so many years. There is a place to start and I would recommend a consultation with a care coordinator at Alzheimer's Resource of Alaska. A care coordinator is an expert at community resources, services and funding sources. They can help with both short and long term plans and providing options for care for you and your family to choose from. You may feel after getting the information, you can arrange the necessary services but it is also nice to have a care coordinator ongoing to provide an extra set of eyes as well as someone who gets to know you and your loved one. This is helpful in the event of a significant change or decline. Knowing the situation can allow the care coordinator to jump right in with assistance rather than trying to learn from the ground up when you really need action.

Care coordinators know of the resources such as in-home services, adult day centers and companionship services that can provide your family a break, interaction with your loved one and peace of mind all around.

Dear Lisa,

My husband was recently diagnosed with Alzheimer's and lately, he's been asking me about things we did years ago or talking about places where we lived as though we are still there. I try to tell him that we're in Alaska, not Oregon anymore or remind him when these things happened but he gets really angry. How do I keep him calm? And why is he getting so angry at me?

—Unsure what to do

Dear Unsure,

This is a very common scenario so I'm glad you asked this question. Alzheimer's disease is affecting two areas of cognition that cause him to think of past experiences as if they are happening in the present. One is memory and the other is reasoning. Memory and reasoning are two of our cognitive thinking abilities that can be affected or impaired by Alzheimer's disease or related dementia. First, short term memory is affected so new learning will be impaired but individuals hold on to long term memories for a while. The individual begins to regress through his long term memory and those memories come back to him as if they are present reality. This becomes his reality. It then becomes difficult to reorient the person to our reality or truth because he loses the ability to reason.

Telling a person with Alzheimer's the truth becomes like telling him that he is wrong. Many will react confused, frustrated or even angry because they don't understand. The best thing to do when he starts telling you stories of things that happened years ago is to go with the flow. Validate his stories and maybe try to re-direct him to the task at hand. Use those stories as tools if he becomes agitated. You can say, "tell me about" and bring up one of the stories he can still remember. One positive spin is that these are experiences this disease has not taken away from him yet. And if you need to, don't hesitate to call for a consultation at the Alzheimer's Resource of Alaska. Someone there can help you find other ways of coping to meet your needs as well as your husband's.

Dear Lisa,

I have been taking care of my mother who was diagnosed with Alzheimer's for about a year now and things have been going fine, but recently her wondering has gotten worse. I find her in the kitchen trying to cook, creating dangerous situations like putting tinfoil in the microwave. And sometimes at night she gets up and tries to leave the house for "work". It has been getting more difficult to keep track of her. When I told my friend about this she mentioned something about a monitoring system with video cameras. This sounds strange to me. Does anybody use video cameras to monitor their loved one with Alzheimer's?

—Hall Monitor

Thank you for your question HM. Some family members do put up security cameras or motion detectors to monitor loved ones when they are still living alone or when wandering becomes an issue. It seems to work best when family is living very close by or is trying to get additional information about their loved one's activity. And it often helps the family better care for that individual. However, it certainly poses a question of privacy and I would recommend that there be a legal representative (like a Power of Attorney or guardian) involved in this type of decision. I would also recommend a consultation with someone at the Alzheimer's Resource of Alaska to provide more in-depth information.

Facts and Figures

In 2010 Alaskans provided **$213 MILLION** in unpaid care for by caring for a family member or friend with dementia.

Last year, Alzheimer's Resource of Alaska facilitated **153 SUPPORT GROUPS** across the state.

In 2010 almost 31,000 Alaskans provided over **25 MILLION HOURS** of unpaid care to an individual living with Alzheimer's disease or related dementia.

Mental Fitness

Facts and Figures

Alzheimer's Resource of Alaska served **102 COMMUNITIES** last year.

Alzheimer's disease usually begins after age 60 and **RISK INCREASES WITH AGE.** Younger people in their 30s, 40s and 50s may get Alzheimer's disease, but it is rare.

While there is no cure for Alzheimer's disease, there is **QUALITY CARE AVAILABLE.**

KEEPING OUR BRAINS HEALTHY and active is good advice at any age. Like any other part of our body the mind needs to be exercised. However, rarely do we do an activity with the deliberate intention of "working out" our minds. Some may think it is unnecessary since cognitively stimulating activities can be as simple as reading, doing crossword puzzles or learning a new word. But as we age, it becomes more and more important to seek out these activities.

When we are young, we go to school every day. We are constantly learning, reading and problem solving in various areas of study. But later in life we tend to lose some of these activities. This can be simply because we don't have the time to dedicate towards them, or maybe our job makes us utilize one area of the brain more than others. But like any other muscle, if an area of the brain is neglected it becomes weak.

Participating in structured mental fitness programs, no matter what age, can help challenge and exercise different areas of the brain in ways we may not do on our own. In these programs, various activities are created to stimulate creative, logical and problem solving functions in an entertaining way.

Though it is still unknown what causes one person to develop Alzheimer's and not another, studies have shown lower rates of Alzheimer's disease in people who maintain an overall healthy lifestyle. That includes physical exercise, maintaining a healthy diet, reducing stress, not smoking and engaging in social and cognitively stimulating activities. So let's get started by doing a few fun "workouts."

STIMULATING CREATIVITY:

Figure out what these re-written proverbs are:

The previously arriving feathered, winged biped captures the invertebrate crawler.

It's vastly preferable to remain unscathed than to be forced into repentance.

If you refrain from interrogating me, I'll articulate to you no prevarications.

When the terrain becomes arduous, the resolute becomes vigorous.

Heedful prudence is the preferred component of intrepidly.

Now re-write your own variations.

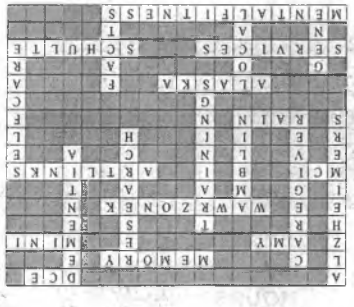
Puzzle Answers



The early bird catches the worm.
Better safe than sorry.
Ask me no questions, I'll tell you no lies.
When the going gets tough, the tough get going
Discretion is the better part of valor.

It's more than a helping hand...

LOIS REPNOW AND HER HUSBAND KELLY have six children, ages 7 and under. It has been over a year since Kelly's father TeRoy Repnow, who was diagnosed with Alzheimer's disease, came to live with them. The Repnow's fit the "sandwich generation" description where they are caring for an elderly parent while still raising their own children. Due to several circumstances in the family, the choice became that either TeRoy came to live with the family or he went to an Alzheimer's care facility. At the time, Lois was pregnant with their sixth child. So the family was growing by two. In February, TeRoy's granddaughter was born and this was a time which Lois remembers vividly, "I will never forget the tenderness with which TeRoy held his newest granddaughter."

The Repnow's have been happy to have this time with TeRoy. "I have been very blessed to watch my children get to interact with their grandpa and love on him. Children are without guile and lavish love freely no matter one's physical or mental condition." Says Lois.

But caring for grandpa TeRoy has not always been easy on the family. His Alzheimer's is fairly advanced and he has become almost like another "chicky in the nest" according to Lois. However, he is an adult, and that carries its own challenges. TeRoy's needs have grown even in the short time he has been staying with the Repnows. The family's laundry load increased when TeRoy moved in. There were a few more spills around the house and his bedding needed to be washed frequently. This put a strain on the family's septic system and their basement in danger of flooding.

When the family contacted the Palmer Senior Center to find out what resources were available they learned of the Mini-Grant program administered by the Alzheimer's Resource of Alaska and funded by the Alaska Mental Health Trust Authority. They applied for the grant and were awarded a small amount to purchase resources that would help the family care for TeRoy.

With these funds the family purchased vitamins, a monitoring system, towels and a large capacity, resource efficient washer and dryer. The monitoring system allows Lois to go up and down the stairs to do all her daily tasks without having to worry about taking TeRoy with her to each room of the house. And the washer and dryer may have helped the most, "I can easily load 15-20 towels in one load, wash Dad's sheets and bedding in one load... I can do all of my laundry without having to worry about overtaxing the septic system and flooding our home!"

Lois and her family are extremely grateful for the mini-grant. They can now spend less time doing chores and spend more time enjoying grandpa TeRoy while he is in their home.

TeRoy has since moved to North Dakota to be closer to his wife in an assisted living facility where he can see her every day. It has been a joyful reunion for a couple that has been married 59 years. And should the need arise; he is welcome back in the Repnow home at any time.

Mini-Grants are awarded by the Alzheimer's Resource of Alaska and funded by the Alaska Mental Health Trust Authority. Applicants can apply for up to $2500 for items or services that improve the quality of life for a loved one diagnosed with Alzheimer's or related dementia.

Upcoming events

November is Alzheimer's Awareness Month www.AlzAlaska.org

Research Forum: Dr. Joshua Gatson regarding research in traumatic brain injuries and the link to Alzheimer's Disease.
October 31st from 6-8 pm at Providence Hospital East/West Auditorium, Anchorage
November 1st from 6-8 pm at Public Library, Fairbanks
November 2nd from 6-8 pm at the University Campus, Soldotna
November 3rd from 6-8pm at Centennial Hall, Juneau

When does Forgetting Become a Disease?
November 3rd from 10-12 noon at the Anchorage Senior Activity Center

WineStyles wine tasting & silent auction
November 5th from 7-10 pm at the Alaska Native Heritage Center

ABC's of Caregiving: What about the Kids? Alzheimer's through the eyes of a child
November 7th from 10-12 noon or 5:30-7 at Alzheimer's Resource of Alaska, Anchorage office

ABC's of Caregiving: When does Forgetting Become a Disease?
November 8th from 6-7:30 Alzheimer's Resource of Alaska, Palmer office

Momentum in Science: A film exploring scientific efforts to uncover the causes of Alzheimer's
November 10th from 10-12 noon at the Anchorage Senior Activity Center

National Memory Screening Day
November 15th Call your local office for events and appointments

ABC's of Caregiving: Holidays and traveling with those who have dementia
November 16th from 10-12 noon or 5:30-7 at Alzheimer's Resource of Alaska, Anchorage office

Being a Friend: Staying Connected with Individuals with Alzheimer's Disease or Related Dementia
November 17th 10- 12 noon at the Anchorage Senior Activity Center

Open House: Join classes, listen to presentations, meet staff and learn about the support and services of Alzheimer's Resource of ' Alaska.
November 18th from 1-5 at Alzheimer's Resource of Alaska's offices in Anchorage and Palmer

Alzheimer's Disease: Unraveling the Mystery
November 28th from 10-12 noon or 5:30-7 at Alzheimer's Resource of Alaska Anchorage office

Art Links:
Every Friday in Anchorage from 11-12 noon
Every Friday in Palmer from 1-2 p.m.

One Woman Making a Difference

OVER THE PAST FOUR YEARS Amy DeWitt has dedicated an extraordinary amount of time and effort to Alzheimer's Resource of Alaska. She has volunteered for numerous events as well as raised over $16,000 fundraising for Amblin' for Alzheimer's. Unbelievably, she has done all of this while raising six children and holding a full time job.

Amy got involved with Alzheimer's Resource of Alaska when she started serving Jackie Brunton and her mother Dorothy at the Bradley House seven years ago. The two would come in to eat about three to four times a week and Amy would go out of her way to make sure Dorothy was comfortable. Dorothy had Alzheimer's disease, and Jackie was caring for her at the time.

"It was about the only place I could take her. It is small, quaint and not overwhelming" Jackie explains. "And Amy took such good care of my mom."

Amy always had hugs and kisses for Dorothy when they came in. And when Dorothy stopped eating most foods, the kitchen started making her favorite dish, chicken fingers (which can now be found on the Bradley House menu). Amy even had the chicken fingers cut up so that Jackie wouldn't have to do it at the table and could enjoy a meal with her mother.

In 2008 Dorothy passed away, and around the same time Amy found out her grandfather Fredolin was diagnosed with Alzheimer's as well. The following year Amy decided to participate in Alzheimer's Resource of Alaska's fundraising walk, Amblin' for Alzheimer's. That first year, she and her youngest son Haden raised $1,621 for the organization.

This amount won her the top fundraising prize for all of Alaska in 2009. Amy was in shock when she learned she won. She wasn't even trying to compete with anyone. She found out when Jackie, who was then Board President of Alzheimer's Resource of Alaska, surprised Amy at work and presented her with two round-trip tickets courtesy of Alaska Airlines to anywhere she wanted to go. Amy knew right away it was Hawaii.

To top it off, when another set of her regulars at Bradley House found out she won the tickets they gave her their timeshare in Hawaii to use. Amy still can't believe they did that for her, but Jackie doesn't seem surprised.

"You know it really says a lot about Amy. She's so genuine, I don't know how else to describe her."

In 2010 and 2011 Amy kept up the momentum by raising more money for Amblin' than any individual in the state. However, since that first trip she took to Hawaii, all of the prizes she has won over the years she has given away.

When she won both of the following years she gave the airline tickets to her parents, and sent them off to Hawaii.

"They absolutely deserved it." she said. "They have never taken a vacation."

Over the years, ensuring that individuals with Alzheimer's have the services they need has become a cause that is deeply important to Amy. When she visited her grandfather on his birthday for the last time in 2010 Amy gained a clearer understanding of what takes place with the disease how it affects everyone who comes in contact with it.

She watched as family members expectations were let down as they visited and interacted with Fredolin. They wanted him to remember who they were and would say things like, "Hey grandpa, it's me! Don't you remember me?" And though their intentions were good, this would leave both people feeling disappointed. Her grandfather was frustrated because he had no idea who was talking to him but felt like he should, and the other person left the exchange sad and feeling forgotten.

It wasn't until seeing her Aunt Carol talk to Fredolin that Amy understood how simple changes of speech can alter an interaction completely. She watched as her grandfather lit-up when her aunt went to him and said "Hey, it's your birthday! Happy birthday!" she smiled, gave him a kiss and nothing more.

"Aunt Carol didn't need anything from him" Amy says. "She was just there to celebrate the day with him."

It was at that moment that Amy says it became apparent, "it is not about what we need from them, it is about what we can give to them."

Everyday she continues to give in a number of ways whether it is at the Bradley House or the Alzheimer's Resource of Alaska. For 2012 Amy has a slightly different plan from what she has done in the past. When Amblin' comes around next year, Amy may do some fundraising but will not be trying to break any more records.

"It's time for someone else" she says.

Not to say that she will be slowing down. Amy will just be committing her time to the organization in other ways. This year she is organizing donations and coming up with ideas for the silent auction benefit in November hosted by WineStyles. And she is already planning to donate her time as a server for Date Night in February.

"She just gives back" Jackie says, "and she does so much for so many... I couldn't love her anymore if she were [my] blood."

But Amy doesn't do it for the praise. Her dedication to Alzheimer's Resource of Alaska and the work they do, can be seen in her teary eyes as she says, "I just hope somebody was able to treat my grandfather like we do here."

Facts and Figures

ONE IN EIGHT people over the age of 65 will develop Alzheimer's disease, and nearly one in two over the age of 85.

Alaska has the **FASTEST GROWING** aging populations in the nation.

Approximately **6,000 ALASKANS** are currently living with Alzheimer's disease and related dementia and as many as 5.4 million Americans nationwide.

2/01/12 PRESENTATIONS: ALASKA HEALTH CARE COMMISSION REPORT AND DEPARTMENT OF HEALTH & SOCIAL SERVICES OVERVIEW 2012

<TARGET><BILL></BILL><SUBJECT>2-01-12 PRESENTATIONS ALASKA HEALTH CARE COMMISSION REPORT AND DEPARTMENT OF HEALTH and SOCIAL SERVICES OVERVIEW 2012</SUBJECT><COMM>SHSS27</COMM></TARGET>

Alaska's Approach to Increasing Value in Health Care:

Improve Quality, Lower Costs, Focus on Health

Presentation at the Joint Senate and House Health & Social Services Committee Hearing

Dr. Ward Hurlburt and Deborah Erickson
Alaska Health Care Commission

February 1, 2012

1

Presentation Overview

- Background on Commission
- Process & Strategy
- Findings to Date
- Recommendations to Date
- Next Steps
- A Note about Federal Reform

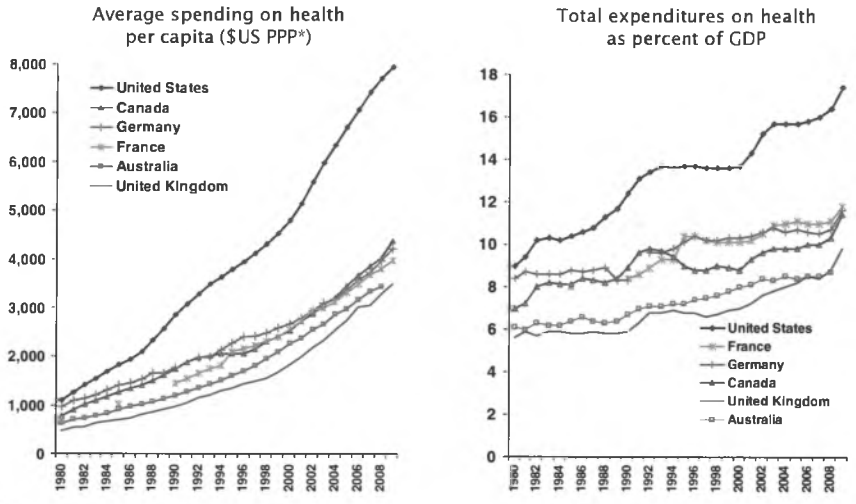
2

Commission Background

- " The purpose of the commission is to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility and availability of health care for all citizens of the state." AS 18.09.010
  - Temporary body 2009; Statute enacted 2010
  - Advisory in nature
  - 14 members, appointed by Governor except for 2 leg.s
  - Policy recommendations due annually to Governor and Legislature

3

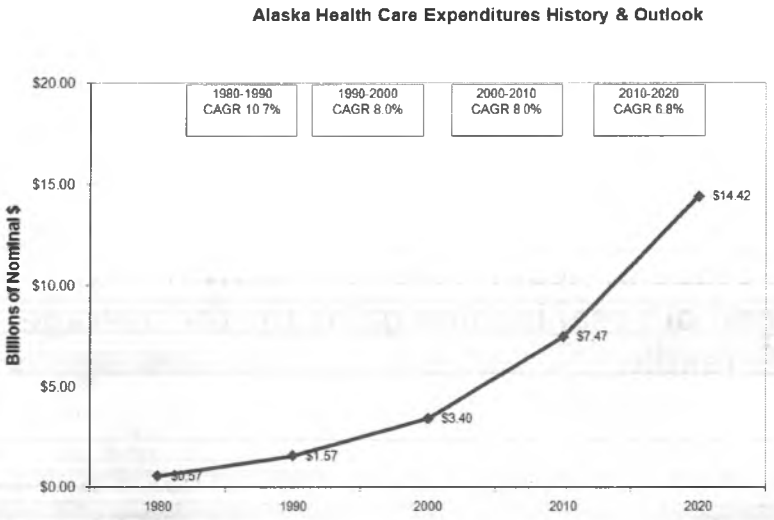
International Comparison of Spending on Health, 1980–2009



* PPP=Purchasing Power Parity.
Data: OECD Health Data 2011 (database), version 6/2011.

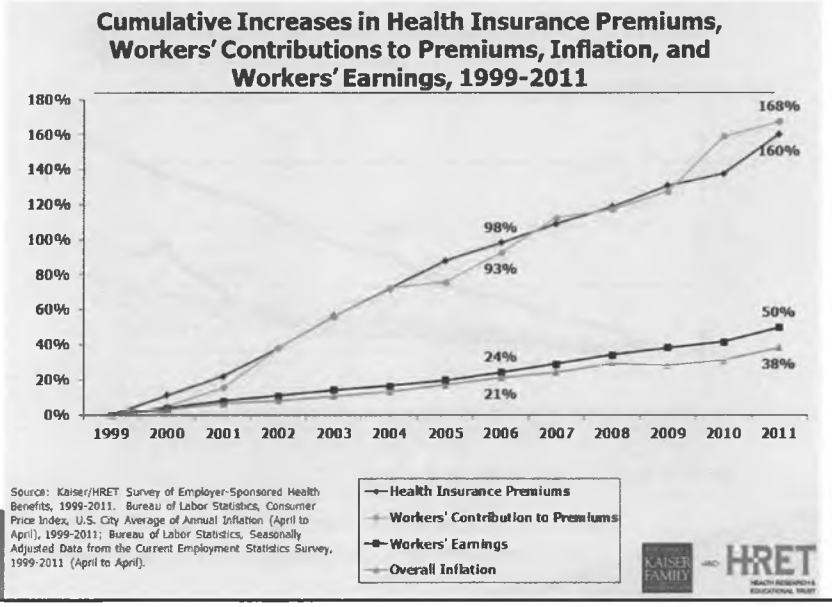
Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.

Cost of Health Care in Alaska (MAFA/ISER)
Next Ten Years – Baseline Projection



5

Affordability – Cost vs. Inflation, Earnings



6

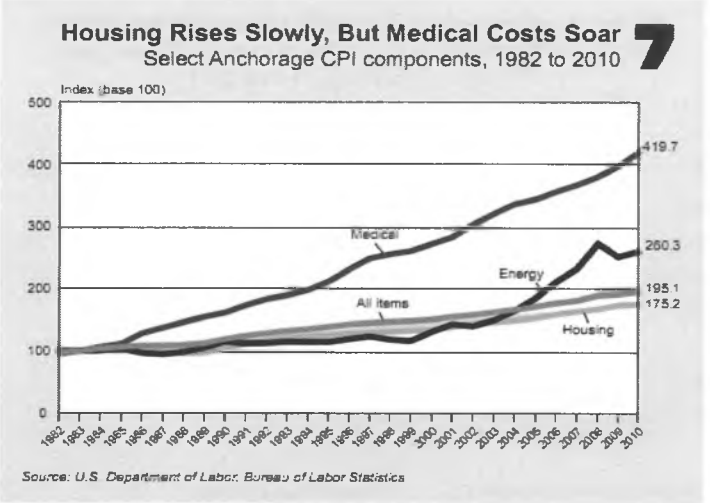
Affordability – U.S. Families

- Median income increased by $23,000 between 1999 and 2009
- Out of pocket costs for health care increased by nearly the same amount
- A decade of health care cost growth has wiped out real income gains for the average U.S. family

Source - Health Affairs, September 2011 30:9

7

Affordability – Alaskan Families



Over the past decade, medical costs in Anchorage increased by 46% compared to 27% nationwide

8

Affordability – Alaskan Employers

- Fewer Alaskan employers offer employee health benefits in 2010 than in 2003
  - Large employers dropped from 95% to 93% (96% US)
  - Small employers dropped from 35% to 30% (39% US)
- Commercial premiums in Alaska are roughly 30% higher relative to comparison states
  - $11,926/employee health benefits cost highest in the nation
  - Share employee pays increased from 17% to 22% for family coverage between 2003 and 2010

9

Value in Alaska's Health System

- **Coverage**: 14% – 19% uninsured[1]
- **Costs**: 2nd highest per capita expenditures[2]
- **Quality**: Ranked 38th for health care quality[3]
- **Outcomes**: 35th healthiest state in the nation[4]

1. Varies dependent on whether IHS beneficiaries without 3rd party coverage are included in the uninsured count or not
2. CMS Personal Health Expenditure Data
3. 2010 US DHHS Agency for Healthcare Research & Quality State Dashboard on Health Care Quality
4. 2011 United Health Foundation America's Health Rankings

10

What System?

Our health care system is perfectly designed to deliver the results we get.

So…

How can we redesign (transform) the system to deliver the best possible health and health care at the lowest possible cost?

11

The Conundrum (at least one of them)

- "If we don't cut costs, we'll have to cut care."
  Don Berwick
- "Cutting costs does not cut costs."
  Joe Flower

12

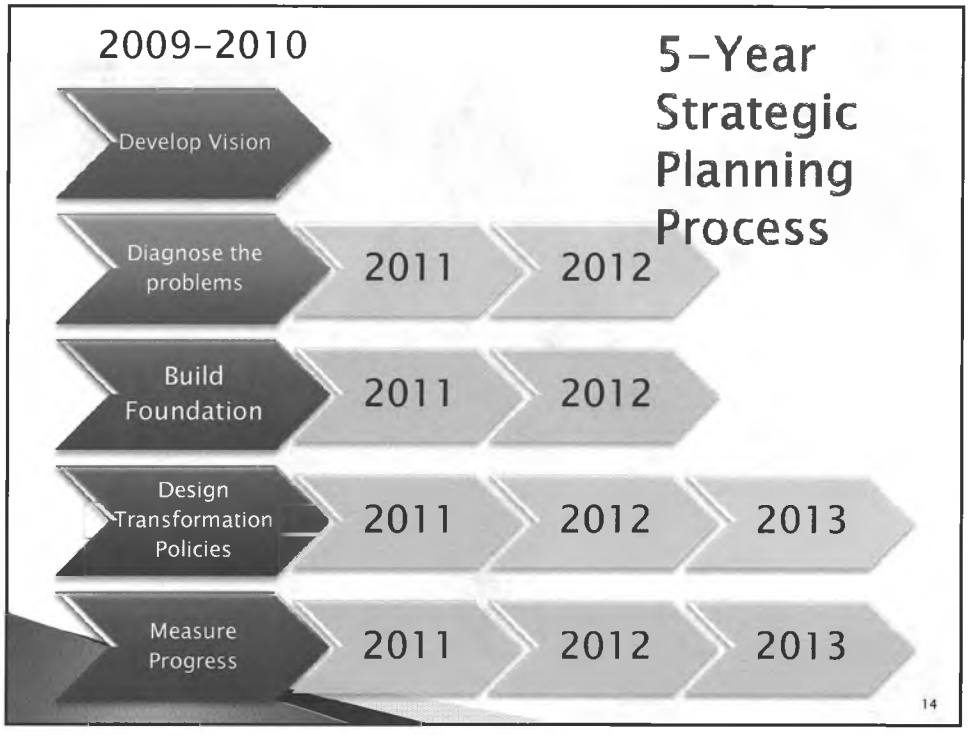
The Answer

- "The way to make health care less expensive is to make it better."

Don Berwick

So now how do we do that?

13



14

The Future

VISION

Goals

I. Improved Access

II. Affordable Costs

III. High Quality Care

IV. Increased Prevention

Values

- Sustainability
- Efficiency
- Effectiveness
- Individual Choice
- Personal Engagement

15

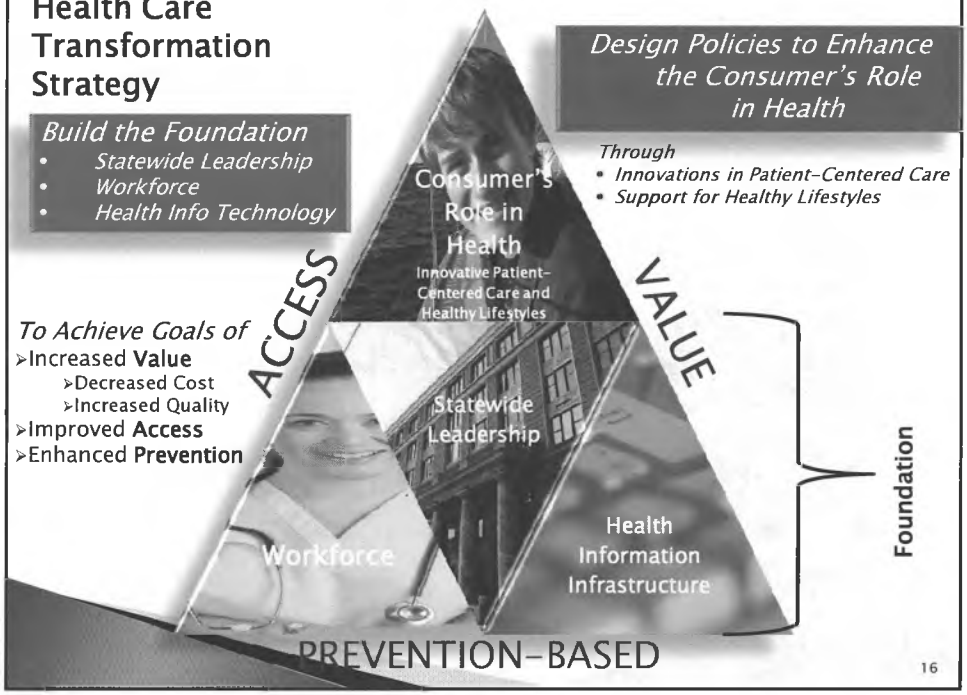
Health Care Transformation Strategy

Build the Foundation
- *Statewide Leadership*
- *Workforce*
- *Health Info Technology*

Design Policies to Enhance the Consumer's Role in Health

Through
- *Innovations in Patient-Centered Care*
- *Support for Healthy Lifestyles*

To Achieve Goals of
- Increased **Value**
  - Decreased Cost
  - Increased Quality
- Improved **Access**
- Enhanced **Prevention**



16

Diagnosing the Problem

- Description of Alaska's health care system (2009)
- Discussion of current challenges (2009)
  - Unsustainable costs
  - Inadequate insurance coverage
  - Logistical challenges
  - Fragmentation and duplication
  - Shortages and maldistribution in workforce
  - Health status, health risk behaviors and changing demographics
  - Use of health information technology
  - Urban Medicare access problem
- Overview of Affordable Care Act & Impact on Alaska (2010)

17

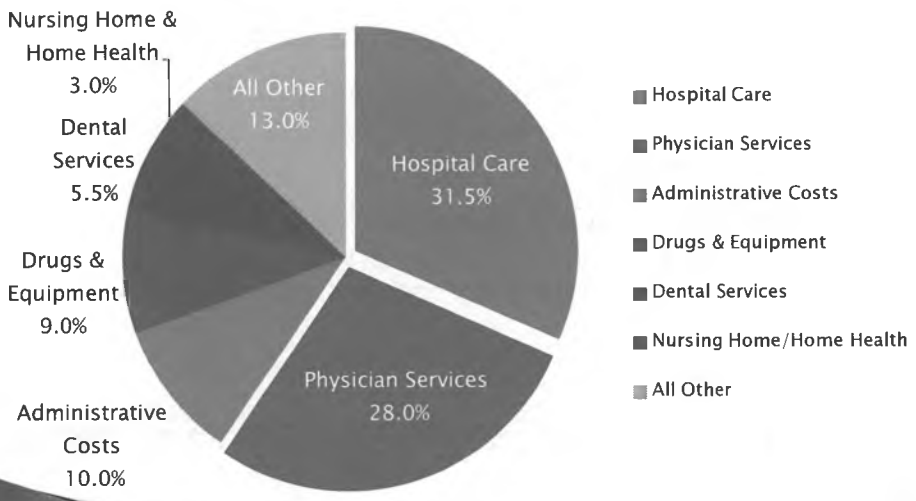
Diagnosing the Problem

- Understand health care cost drivers: Two complimentary analyses conducted in 2011

1. Economic Analysis: Health Care Spending and Cost Drivers in Alaska
   - ISER/MAFA
   - Update of 2005 and 1992 analyses
   - Big picture: Total spending – by who, for what
2. Actuarial Analysis: Health Care Prices and Cost Drivers in Alaska
   - Milliman, Inc.
   - Billed and allowed charges

18

What do Alaska's Health Care Dollars Buy?



19

Premiums

State	Health insurance PPO premiums					
	Single employee coverage		Family coverage		Per member	
	Monthly amount	Relative to comparison state average	Monthly amount	Relative to comparison state average	Monthly amount	Relative to comparison state average
Idaho	$486	91%	$1,358	98%	$451	95%
Washington	552	103%	1,413	102%	482	102%
Oregon	571	106%	1,406	101%	486	103%
Alaska	**684**	**128%**	**1,817**	**130%**	**613**	**130%**
Comparison State Average	$536	100%	$1,392	100%	$473	100%
Nationwide Average	$508		$1,390		$465	

- Premiums in Alaska are 30% higher per member than comparison state average

20

Cost Drivers: Utilization (Kaiser FF)

Relative to National Average, Alaska had (in 2009)

- 29% fewer hospital admissions
  - Alaska: 82/1,000 pop
  - U.S.: 116/1,000 pop
- 23% fewer inpatient bed days
  - Alaska: 485/1,000 pop
  - U.S.: 628/1,000 pop
- 2% more emergency room visits
  - Alaska: 425/1,000 pop
  - U.S.: 415/1,000 pop
- 21% more hospital outpatient visits
  - Alaska: 2,530/1,000 pop
  - U.S.: 2,091/1,000 pop

21

Utilization – Milliman's Conclusion

- "Alaska's utilization rates do not appear to be a major driver behind high premium rates."
- "Alaska's utilization is roughly in line with the comparison states, and significantly lower than the nationwide average."
- *Caveat from the Commission: This is the answer to one specific question (why are premiums higher in Alaska than other states), but is not meant to imply that reducing utilization and making it more effective and efficient is not an important strategy – it is actually an essential strategy.*

22

Alaska prices* are significantly higher than comparison states'

- Physician Services
  - 69% higher for commercial payers
  - 60% higher for all payers combined
  - Price differences between Alaska and the comparisons states vary significantly by specialty, e.g.,
    - Pediatrics: 43% higher for all payers; 39% higher for commercial
    - Cardiology: 83% higher for all payers; 101% higher for commercial
- Facility Services
  - 37% higher for commercial payers
  - 36% higher for Medicare
  - Price differences within Alaska vary significantly by payer, e.g., commercial reimbursement is 113% higher than Medicare

* "Price" means paid claims (i.e., allowed, not billed, charges), including patient co-pay

23

Sample comparisons: Mean commercial allowed charges non-facility-based professional svcs

Description/ Code	AK	ID	ND	OR	WA	WY
Office/outpatient visit (99214)	194.83	133.62	140.11	164.90	140.23	117.70

Left heart cath (93510)	2203.48	n/a	471.79	603.85	n/a	5657.83

27

Cost (Price) Drivers – Operating Costs

- Medical salaries in Alaska are 2% to 10% higher than comparison states (does not include benefit costs, and excludes non-salaried physician income)
- Cost of living in Alaska is 15% to 20% higher
- Hospital operating costs are 38% higher in Alaska than the comparison states on average
  - But rural hospital operating costs in Alaska are 86% higher on average than the average of all hospitals in the comparison states

28

Cost (Price) Drivers – Provider Discounts

State	Provider Discounts			
	Inpatient Hospital	Outpatient Hospital	Professional	Overall
Alaska	**32%**	**35%**	**20%**	**28%**
Idaho	27%	20%	29%	25%
Oregon	36%	35%	32%	34%
Washington	46%	49%	35%	42%
Wyoming	19%	16%	26%	21%

29

Private Hospital Sector Average Operating Margins

Region/State	2008	2009	2010
Hawaii	-1.3%	-2.7%	3.4%
Idaho	5.8%	6.8%	6.1%
North Dakota	-0.6%	2.1%	4.0%
Oregon	2.9%	3.7%	6.1%
Washington	4.2%	4.9%	5.8%
Wyoming	6.5%	2.6%	9.4%
COMP STATE AVG.	**3.3%**	**3.9%**	**5.7%**
NATIONWIDE AVG.	**1.5%**	**3.8%**	**5.3%**
Urban Alaska (Anch/Fbx/Mat-Su)	11.5%	13.4%	16.2%
Rural Alaska (non-MSA)	5.4%	5.2%	6.1%
ALASKA	**9.8%**	**11.2%**	**13.4%**
AK relative to comp states	297.4%	289.0%	232.8%

30

Milliman's Cost (Price) Driver Conclusions

- Private Hospital Sector
  - Prices in Alaska are high relative to comparison states
    - Operating costs are driving higher prices in rural Alaska
      - Average of rural Alaskan hospitals' operating costs is 86% higher than average of all private comparison state hospitals
    - Operating margins are driving higher prices in urban Alaska
      - Average of private urban Alaskan hospitals' operating margins is 186% higher than the average of all private comparison state hospitals
- Physician Services (non-facility-based)
  - Prices for commercial payers are very high relative to comparison states
    - Low discounts indicative of high physician pricing power, likely due to relative scarcity particularly of specialists.
- Low Medicare rates create upward pressure on prices for other payers.

31

Solutions focused on Value and Health

32

5% of the U.S. population required 50% of health care spending in 2009*

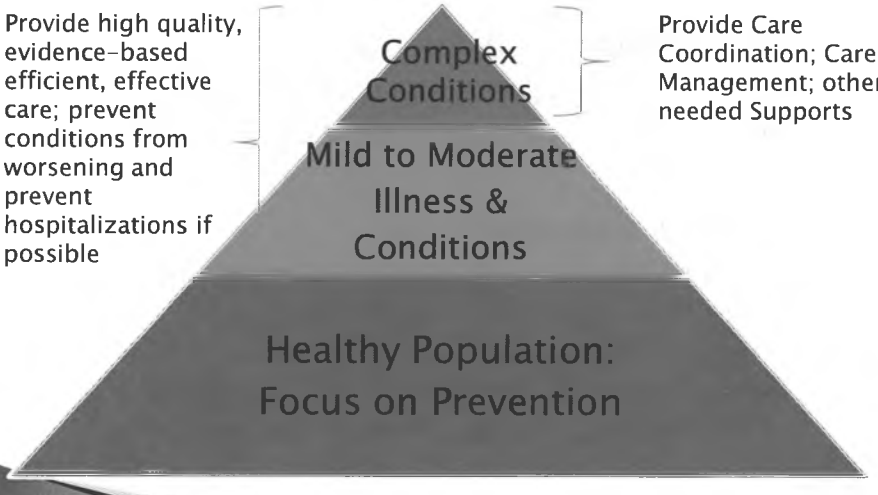
50% of the population required 3% of health care spending in that same year

* U.S. Agency for Healthcare Research & Quality/DHHS, January 2012

33

Focus on Health & Value

Provide high quality, evidence-based efficient, effective care; prevent conditions from worsening and prevent hospitalizations if possible



Provide Care Coordination; Care Management; other needed Supports

34

Ensure the best available evidence is used for making decisions

Solution #1

35

The need for application of high grade evidence

- Waste in the health care system due to misused medical resources is estimated to represent 30% of health care spending
- Just a few examples
  - Drugs pulled from the market due to dangerous side-effects: Vioxx, Avandia, Meridia
  - Therapies found to be harmful: Hormone therapy
  - Expensive invasive treatments no more effective than those less costly/invasive: arterial stents

36

Quality/Appropriateness of Care

- Evidence-based medicine aims to apply the best available evidence gained from the scientific method to medical decision making. It seeks to assess the quality of evidence of the risks and benefits of treatments (including lack of treatment).
- Isn't that what we've always done?
  - Not exactly
  - Requires understanding and interpretation of grades of evidence

Commission Recommendations

Foster the Use of Evidence-Based Medicine

- Encourage and support State health care programs to
  - engage in application of high grade evidence-based medicine (EBM) in benefit design and provider payment methods
- Require/Direct State health care programs to
  - Coordinate development and application of EBM policies
  - involve health care providers and consumers in decision-making related to application of EBM to public policy
  - Incorporate data on patient compliance in developing provider payment methods and benefit design
- Implement a web-based data system for public health information

Enhance quality and efficiency of care on the front end

Solution #2

39

Commission Recommendations

- Patient-Centered Primary Care
  - Recognize value through appropriate reimbursement
  - Promote patient-clinician relationship
  - Incorporate strategies proven to be successful
    - Vision focused on improving patient care
    - Phased approach to implementation
    - Tiered approach to managing patient populations
    - Local (practice-level) flexibility
    - Strong medical leadership and management
  - Include attributes of successful initiatives
    - Resources
    - Tools
    - Shared learning environment
    - Timely data
    - Infrastructure support
    - System of review
  - Support a State government led Patient-Centered Medical Home Initiative

40

Commission Recommendations

- Trauma System
  - Support all the components of a strong trauma system
  - Support continued implementation of 2008 ACS recommendations

41

Increase price and quality transparency

Solution #3

42

Commission Recommendations

- Preliminary Steps Toward Transparency
  - Encourage full participation in Hospital Discharge Database
  - Study feasibility of an All-Payers Claims Database

43

Statewide Hospital Discharge Database - Inpatient

Legislative mandate

*ND has a mandate-no collection since 2009

No collection

Voluntary collection

Alaska's Hospital Discharge Database

- Started in 2001
- Voluntary participation
- Utilization inconsistent due to:
  - Incomplete data
    - 11 of 27 hospital facilities (representing approximately 75% of discharges) participated in 2010
  - Unstable financial support
  - Lack of knowledge about potential uses and benefits

45

All-Payer Claims Databases (APCDs)

- Databases created by state mandate that include data derived from medical, pharmacy, and dental claims with eligibility and provider files from private and public payers:
  - Insurance carriers (medical, dental, 3rd-party administrators, pharmacy benefit managers)
  - Public payers (Medicaid, Medicare)
- Augment (do not replace) hospital discharge, Medicaid, Medicare, registries, and other datasets

46

APCDs support transparency and answer questions to help improve health and health care

For Example:

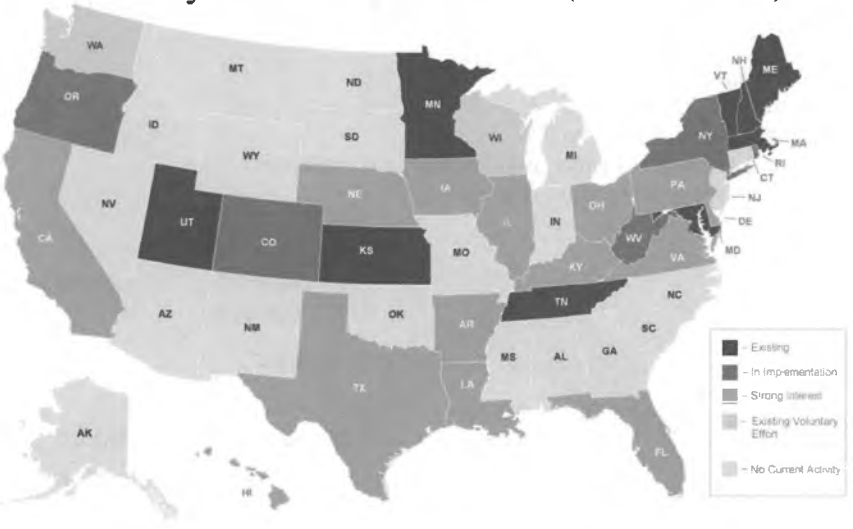
- What does a MRI cost by provider and by payer?
- In what communities is public health improving?
- If emergency room usage in Medicaid is higher than the commercial population, what are the drivers?
- How far do people travel for services? Which services?

All-Payer Claims Data Sources

Users of All-Payer Claims Data

- Consumers
- Employers
- Health Plans/Payers
- Health Care Providers
- Government (policy makers, Medicaid, public health, insurance department, etc.)
- Researchers (public policy, academic, etc.)

All-Payer Claims Databases (as of June 2011)



50

Pay for Value

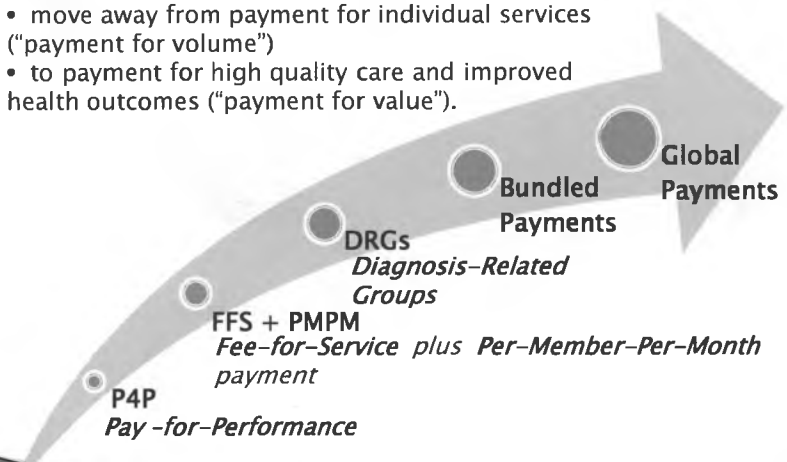
Solution #4

51

"Continuum" of Payment Reform

Restructuring how we pay for health care to:

- move away from payment for individual services ("payment for volume")
- to payment for high quality care and improved health outcomes ("payment for value").



52

Payment Reform System Requirements

Risk Management

Population Health Management

Organizational Alignment

Payment Policy Alignment

53

System Requirements for Supporting Payment Reform

- Capability to manage financial risk (both payers and providers)
  - Data and analytics for monitoring utilization and quality
  - Actuarial expertise for financial risk analyses
- Capability to manage health (patients, providers, payers)
  - Methods for targeting high risk patients
  - Capability to track, coordinate and follow-up on patient care
  - Patient education and self-management support
- Alignment of organizational structures (providers, facilitator?)
  - Trust relationships between physicians and hospitals
- Alignment of payment policies (payers)
  - Multi-payer approaches to avoid further fragmentation of payment systems

54

Alaska at the back of the pack?

- Alaska is one of only three states that reimburses Medicaid strictly on a FFS basis (along with NH & WY)
- Lowest HMO Penetration in the U.S. at 0.1% (July 2010)
- FFS + PMPM --- Preliminary plans :
  - Alaskan FQHC applicant(s) for Medicare Demo (but unsuccessful...)
  - Medicaid Task Force: Patient-Centered Medical Homes
    - AK DHSS Pilot Program expected to begin Jan 2013
- Payment Bundling for Diagnoses or Episodes of Care
  - Alaska VA RFP for in-state cancer care includes option for service and payment bundling

55

Commission Recommendations

- Utilize payment policies for improving value
- Take a phased approach - start with primary care
- Develop data collection and analysis capacity as a tool for quality improvement and payment reform
- Support efforts by State government officials collaborating on health care purchasing strategies
- Take a multi-payer approach to minimize burden on providers

56

Build the foundation of a strong health care system

Solution #5

57

Health Workforce

- 2009 Commission Recommendations
  - Make workforce development a priority and support coordinated planning
  - Strengthen the pipeline
  - Support workforce innovation and adaption as care models evolve
  - Increase the supply of primary care providers
    - Support educational loan repayment and financial incentives
    - Expand WWAMI
    - Support primary care residency development
- Currently tracking the impressive work of the Alaska Health Workforce Coalition

58

Health Information Infrastructure

- 2009 Commission Recommendations
  - Support HIT (electronic health records, health information exchange, and telemedicine) adoption and utilization
  - Ensure HIT is utilized for public health purposes
  - Ensure data available through the health information exchange is used to improve health care
  - Ensure privacy and security of health information
  - Facilitate broadband telecommunication service access
  - Improve reimbursement for telemedicine-delivered services

59

Focus on Prevention

Solution #6

60

Support healthy lifestyles: Obesity Prevention

- Findings
  - The most significant public health challenge facing Alaskans today
  - Related medical spending in Alaska estimated at $477 million
  - As many as 40% of Alaska's children are overweight or obese.
  - A child born today has a 34%–38% chance of developing diabetes in his or her lifetime
- **Recommendation**
  - Implement evidence-based programs.

61

Support healthy lifestyles: Immunizations

- Alaska ranked 49th in 2009 for rate of immunization completion for children aged 19–35 months
- **Recommendation**
  - Ensure adequate funding and support for program.

62

Support healthy lifestyles: Behavioral Health

- Almost one-quarter of all adult stays in U.S. community hospitals involve mental health or substance use disorders.
- Alaskans experience high rates of violence, with 47.6% of adult women reporting having experienced intimate partner violence in their families.
- Binge alcohol use in Alaska is among the highest in the nation.
- The 2009 age-adjusted suicide rate for all Alaskans was 20.2/100,000 - 140 lives lost.
- **Recommendations**
  - Integrate behavioral health and primary care services; support with new payment methodologies
  - Screen using evidence-based tools:
    - History of adverse childhood events
    - Substance abuse
    - Depression

63

Next Steps

64

Commission's 2012 Agenda

- Continue learning about current health care system challenges
  - Pharmaceutical Costs
  - Behavioral Health System
  - Impact of 2005 Malpractice Reform
  - Track Federal Health Care Reform
- Consider additional strategies for future recommendation
  - Reduce government regulations that hamper innovation and increase costs
  - Enhance the employer's role in health and health care
  - Improve patient choice in end-of-life care decisions
  - Use technology to facilitate access to care.

65

Update on Affordable Care Act

Included as Appendix C in the Commission's 2011 Annual Report

Transforming Health Care in Alaska
2011 Annual Report Highlights

Alaska Faces Unique Health Care Challenges

The Commission's 2011 study of current health care challenges focused on understanding health care spending and cost drivers. Other challenges are described in prior year reports.

Health care cost increases in Alaska continue to outpace inflation.

- Health care spending in Alaska reached $7.5 billion in 2010, a 40% increase over 2005. State government's portion of this bill was close to $2 billion.
- At current trends health care spending is expected to double to more than $14 billion by 2020. By comparison the wellhead value of oil produced in Alaska in 2010 was $16.4 billion and is projected to be $18.6 billion in 2020.
- Since 1982 the Anchorage Consumer Price Index increased 95%, while prices for medical care in Anchorage over that time period increased 320%.

Health care is increasingly unaffordable for our employers, families.

- At $11,926 per employee, Alaska has the highest average annual cost for employee health benefits in the nation - twice what employers in the lowest cost state pay.
- Fewer Alaskan employers are offering employee health benefits, dropping from 35% to 30% of small employers between 2003 and 2010.
- The average cost of health care premiums in Alaska increased 51% for single coverage and 35% for family coverage between 2003 and 2010. The average annual commercial health insurance premium for family coverage in 2010 was $14,230.
- Despite the fact that Alaskans utilize roughly the same amount of care, health insurance premiums are about 30% higher here than in comparison states.

Health care prices paid in Alaska are much higher than in comparison states*.

- Different payers (Medicare, Medicaid, Workers' Compensation, commercial health insurers, TRICARE, and the Veterans Health Administration) pay different prices for the same service.
- The average reimbursement for physician services in Alaska is 60% higher than in comparison states for all payers combined – 69% higher for commercial health insurers.
- The difference in reimbursement for physician services varies depending on specialty. For example, Alaskan pediatricians are paid 43% more, while cardiologists are paid 83% more.
- Commercial health insurance reimbursement for private sector hospital services is 37% higher than in comparison states; Medicare pays our private sector hospitals 36% more.
- Alaska's higher medical prices are due in part to higher operating costs for providers resulting from a higher cost of living, more costly employee benefits, transportation and shipping costs, fuel prices, and workforce shortages.
- Higher prices are also due to high physician pricing power compared to other states, and a high average operating profit margin for the private hospital sector.
- Low Medicare payment rates create upward pressure on prices for other payers.

Recommended Solutions – *built on the above and prior year findings*

Focus on value – increase the quality, effectiveness and efficiency of care for each dollar spent, from the patient's and consumer's perspective.

Ensure the best available evidence is used for making decisions. Support clinicians and patients to make clinical decisions based on high grade medical evidence regarding effectiveness and efficiency of testing and treatment options. Apply evidence-based principles in the design of health insurance plans and benefits.

Alaskan Solutions for Better Health and Health Care

The Alaska Health Care Commission was established by the Legislature in 2010 to advise the State on policies for improving health and health care for all Alaskans. Commission members are appointed by the Governor.

The Commission is implementing the following strategy for building a plan to transform Alaska's health care system.

TRANSFORMATION STRATEGY

I. Develop a vision of the ideal health care system

II. Study current health care challenges to inform policy recommendations

III. Build the foundation of a strong health care system
- Statewide leadership
- Health workforce
- Health information

IV. Design policies that enhance the consumer's role in health and health care through:
a) Innovations in patient-centered health care, and
b) Support for healthy lifestyles

V. Measure progress

* Washington, Oregon, Idaho, Wyoming, North Dakota, (and also Hawaii for hospital comparisons only).

Recommended Solutions *(continued)*

Enhance quality and efficiency of care on the front-end. Strengthen the role of primary care providers, and give patients and their clinicians better tools for making health care decisions. Improve coordination of care for patients with multiple providers, and care management for patients with chronic health conditions. Improve Alaska's trauma system.

Increase price and quality transparency. Provide Alaskans with information on how much their health care costs and how outcomes compare so they can become informed consumers and make informed choices. Provide clinicians, payers and policy makers with information needed to make informed health care decisions.

Pay for value. Design new payment structures that incentivize quality, efficiency and effectiveness. Support multi-payer payment reform initiatives to improve purchasing power for the consumer and minimize the burden on health care providers.

Build the foundation of a strong health care system. Ensure there is an appropriate supply and distribution of health care workers. Create the information infrastructure required for maintaining and sharing electronic health information and for conducting health care analytics to support improved clinical decisions, personal health choices, and public health.

Focus on prevention. Create the conditions that support Alaskans to exercise personal responsibility for living healthy lifestyles. High priorities include reducing obesity rates, increasing immunization rates, and improving behavioral health status.

The Commission's Vision for the Future, Goals and Guiding Values

VISION

Healthy Alaskans
*
High Value Health Care
*
Sustainable Health Care System
*
Satisfied Health Care Consumers and Providers
*

GOALS

I. Improved Access
II. Affordable Costs
III. Safe, High Quality Care
IV. Increased Prevention

GUIDING VALUES

- Sustainability
- Efficiency
- Effectiveness
- Individual Choice
- Personal Engagement

Next Steps *– during 2012 the Commission will...*

Continue learning about current health care system challenges.

- **Pharmaceutical costs:** Compare prices for pharmaceuticals in Alaska across payer types to the comparison states and identify drivers of cost differentials.
- **Behavioral health:** Learn about the behavioral health care system in Alaska.
- **Malpractice reform:** Investigate the impact of the Alaska Medical Injury Compensation Reform Act of 2005 on medical professional liability insurance rates.
- **Federal health care reform:** Track implementation of the Affordable Care Act.

Consider additional strategies for future recommendations.

- **Reduce government regulations that hamper innovation and increase costs.** Identify state laws and regulations that create legal barriers to delivery and finance of the highest quality most affordable health care. Study alternative approaches to facilitate provider innovation while ensuring appropriate consumer and patient protections.
- **Enhance the employer's role in health and health care.** Identify the roles Alaska's employers can play in supporting the health of their employees and in their employees' access to health care. Study innovative approaches employers across the country are using to promote employee safety and health and to design health plans that improve care and contain costs.
- **Improve patient choice in end-of-life health care decisions.** Learn how improving quality of services and patient choice in health care decisions at the end of life can improve the patient's experience and contain costs.
- **Use technology to facilitate access to care.** Identify impediments to the use of telecommunications technology for improving access to health care, including barriers created by reimbursement, liability, licensure, and availability of tools. Design strategies to overcome barriers.

Please see the Commission's 2011 Annual Report for detailed findings and recommendations. For a copy of the 2011 and prior year reports and accompanying studies and reference materials, visit the web site at http://hss.state.ak.us/healthcommission.

PHONE: (907) 269-7800

January 15, 2012

To: The Honorable Sean Parnell, Governor, State of Alaska
The Honorable Gary Stevens, President, Alaska State Senate
The Honorable Mike Chenault, Speaker of the Alaska House of Representatives

We are pleased to present the 2011 Annual Report of the Alaska Health Care Commission in accordance with AS 18.09.070. During this past year the Commission continued to identify solutions for improving health and health care while working to better understand current challenges. This report includes findings from new studies regarding the cost of health care in Alaska, and policy recommendations intended to guide state government down a path that supports transformation of our health care system so that it better meets the needs of patients, providers, and employers.

Alaska's health care delivery system is headed towards a financial cliff. If medical costs continue to grow at current trends the results will be catastrophic. At risk is financial access to care for individual Alaskans, affordability of health benefits for employers, sustainability of public programs that pay for health care and support vulnerable Alaskans, and the long term economic viability of our health care providers. The Commission's recommended approach to containing cost growth is to improve care, not cut it, by focusing on value – increasing the quality of care for each dollar spent – and also by increasing efforts to prevent avoidable health problems.

The Commission's 2011 recommendations include strategies for enhancing care at the front end by strengthening the role of primary care and arming clinicians with tools for coordinating care and managing chronic disease. They call for increased price and quality transparency to better inform consumers and clinicians. Also suggested is an approach to design of new payment structures that incentivize quality and positive health outcomes. A continued focus on prevention emphasizes the need to control obesity, increase immunization rates, and improve behavioral health status. These recommendations build on those presented in 2010 regarding the importance of evidence-based medicine in improving quality and controlling costs.

Thank you for this opportunity to present solutions for transforming Alaska's health care system so that it is sustainable and provides value, meets the needs of patients and providers, and focuses on health.

Sincerely,

Ward B. Hurlburt, MD, MPH

- Jean Malouin, MD, MPH, Associate Chair, Clinical Programs in Family Medicine, University of Michigan
- David Ford, President & CEO, CareOregon
- David Labby, MD, PhD, Medical Director, CareOregon

Payment Reform

- Harold Miller, Executive Director, Center for Healthcare Quality & Payment Reform; President & CEO, Network for Regional Healthcare Improvement; National Quality Forum; Carnegie Mellon University.
- Bruce Lamoureux, Senior Vice President/CEO, Providence Health & Services Alaska; Board Chair, Alaska State Hospital & Nursing Home Association
- Ryan Smith, CEO, Central Peninsula General Hospital
- Michael Banks, Acting CFO, Alaska Native Tribal Health Consortium
- Jeff Davis, President, Premera Blue Cross Blue Shield of Alaska
- T. Noah Laufer, MD, Medical Park Family Care

Alaska's Top Population Health Challenges

- Ward Hurlburt, MD, MPH, DHSS Chief Medical Officer and Public Health Director
- Melissa Stone, Director, DHSS Division of Behavioral Health

Trauma System

- Frank Sacco, MD, Alaska Trauma System Review Committee
- Dan Johnson, Director, Interior Region EMS Council
- Julie Rabeau, Alaska Trauma Program Manager, Division of Public Health, Alaska DHSS

Long Term Care

- Duane Mayes, DHSS Senior & Disabilities Services Director
- Millie Duncan, Administrator, Wildflower Court
- Dave Cote, Director, Division of Pioneer Homes, DHSS
- Denise Daniello, Executive Director, Alaska Commission on Aging
- Kay Branch, Elder/Rural Health Program Coordinator, Alaska Native Tribal Health Consortium
- Nancy Burke, Program Officer, Alaska Mental Health Trust Authority
- Sandra Heffern, Chair, Community Care Coalition
- Thea Agnew Bemben, Principal & Founding Partner, Agnew::Beck Consulting

Health Information Infrastructure

- Paul Cartland, State Health Information Technology Coordinator, DHSS
- Andrea Fenaughty, PhD, Deputy Chief, Section of Chronic Disease Prevention & Health Promotion, Division of Public Health, DHSS
- Joe McLaughlin, MD, State Epidemiologist & Chief of the Section of Epidemiology, Division of Public Health, DHSS.
- Jeannie Monk, Small & Rural Hospital Program Officer, Alaska State Hospital & Nursing Home Association.
- Denise Love, Executive Director, National Association of Health Data Organizations

Health Workforce Development

- Jan Harris, Vice Provost for Health Programs, University of Alaska
- Karen Perdue, President/CEO, Alaska State Hospital & Nursing Home Association
- Delisa Culpepper, Chief Operating Officer, Alaska Mental Health Trust Authority

Affordable Care Act

- William Streur, Commissioner, DHSS
- Linda Hall, Director, Division of Insurance, Alaska Department of Commerce, Community & Economic Development

Also, to the many Alaskans who took the time to testify before the Commission during public hearings, comment on the Commission's draft findings and recommendations, and attend Commission meetings, the Commission is grateful for your interest in improving the health of Alaskans and Alaska's health care system.

Executive Summary

Introduction

The Alaska Health Care Commission was established by the Legislature in 2010 to advise the state on policies for improving health and health care for all Alaskans. Members are appointed by the Governor, and represent stakeholder groups specified in statute. The Commission originally convened during 2009 under Governor's Administrative Order #246.

The Commission's approach to improving Alaska's health care system began with identification of a vision of the ideal health care system for Alaska, plus goals and guiding values for the planning process. We are now in an ongoing cycle of learning about current challenges to better understand why the system is not attaining the vision, designing policies that will transform the system into one that embodies the vision, and evaluating progress. Information, findings and recommendations presented in each annual report build on prior year reports, which should be referenced together for a full picture of the Commission's learning and recommendations to date.

The ideal health care system envisioned for Alaska places individuals and their family at the center of their care experience and focuses on creating health, not simply treating illness and injury. The best system will also provide value for Alaskans' health care dollar – delivering safe high quality care as efficiently as possible at an affordable price. In this system providers' business and professional interests and integrity will be maintained. Health care consumers will be satisfied with the level and quality of services they receive. And the final but essential element of this picture is that Alaska's health care system will be sustainable over time.

The Commission's core strategy for attaining the goals of improved access, affordable costs, high quality care, and increased prevention, is to strengthen the consumer's role in health and health care through innovations in patient-centered care and through support for healthy lifestyles. This core strategy rests on the foundation of a sound health care system - a sustainable workforce, a complete health information infrastructure, and statewide leadership. Values the Commission adopted to guide recommendations emphasize the importance of sustainability, the need to increase efficiency and effectiveness of care, and the significance of individual choice and personal engagement.

Understanding Alaska's Health Care Challenges

To better understand why Alaska's health care system is not achieving the vision, the Commission began in 2009 by describing how health care in Alaska is delivered and funded today (see Appendix A of the 2009 report). Challenges described in the 2009 report identified the extent to which:

- The high and rising cost of health care in Alaska is unsustainable;
- Health insurance coverage in Alaska is inadequate;
- Providers experience logistical challenges in the delivery of care, and patients face similar challenges in accessing services;
- Fragmentation and duplication in Alaska's health care system create inefficiencies;
- Alaska suffers from shortages and maldistribution of certain health care workers;
- Health status, health risk behaviors and changing demographics influence utilization of health care services;
- Use of modern health information technology is taking hold in Alaska; and,
- Alaskan Medicare enrollees living in urban areas have trouble accessing primary care.

In 2010 the Commission added to learning about Alaska's health care system challenges by compiling information on the newly passed federal health care reform law - reviewing and providing summaries of the law's provisions, and contracting with the Institute for Social & Economic Research for an analysis of the potential impact of the law in Alaska.

In 2011 the Commission focused on studying health care spending trends, pricing and cost drivers. The Commission also learned about Alaska's long term care system and the status of statewide planning to meet long term care needs, Alaska's trauma system and implementation of a plan to improve it, and the status of the Affordable Care Act. Highlights from this year's cost and pricing studies include:

- **Health care cost increases in Alaska continue to outpace inflation.**
  - Health care spending in Alaska reached $7.5 billion in 2010, a 40% increase over 2005. State government's portion of this bill was close to $2 billion.
  - At current trends health care spending is expected to double to more than $14 billion by 2020. By comparison the wellhead value of oil produced in Alaska in 2010 was $16.4 billion and is projected to be $18.6 billion in 2020.
  - Since 1982 the Anchorage Consumer Price Index increased 95%, while prices for medical care in Anchorage over that time period increased 320%.

- **Health care is increasingly unaffordable for our employers, families.**
  - At $11,926 per employee, Alaska has the highest average annual cost for employee health benefits in the nation - twice what employers in the lowest cost state pay.
  - Fewer Alaskan employers are offering employee health benefits, dropping from 35% to 30% of small employers between 2003 and 2010.
  - The average cost of health care premiums in Alaska increased 51% for single coverage and 35% for family coverage between 2003 and 2010. The average annual commercial health insurance premium for family coverage in 2010 was $14,230.
  - Despite the fact that Alaskans utilize roughly the same amount of care, health insurance premiums are about 30% higher here than in comparison states.

- **Health care prices paid in Alaska are much higher than in comparison states** (Washington, Oregon, Idaho, Wyoming, North Dakota, (and also Hawaii for hospital comparisons only)).
  - Different payers (Medicare, Medicaid, Workers' Compensation, commercial health insurers, TRICARE, and the Veterans Health Administration) pay different prices for the same service.
  - The average reimbursement for physician services in Alaska is 60% higher than in comparison states for all payers – 69% higher for commercial health insurers.
  - The difference in reimbursement for physician services varies depending on specialty, for example Alaskan pediatricians are paid 43% more, while cardiologists are paid 83% more.
  - Commercial health insurance reimbursement for private sector hospital services is 37% higher than in comparison states; Medicare pays our private sector hospitals 36% more.
  - Alaska's higher medical prices are due in part to higher operating costs for providers resulting from a higher cost of living, more costly employee benefits, transportation and shipping costs, fuel prices, and workforce shortages.
  - Higher prices are also due to high physician pricing power compared to other states, and a high average operating profit margin for the private hospital sector.
  - Low Medicare payment rates create upward pressure on prices for other payers.

During 2012 the Commission plans to learn about pricing for pharmaceuticals, the behavioral health care system, and the impact of Alaska's malpractice reform law passed in 2005.

Alaska Health Care System Transformation Strategies

During 2009 the Commission developed general recommendations regarding the importance of patient-centric primary care and support for healthy lifestyles, and more detailed recommendations for promoting the use of health information technology, providing statewide health leadership, strengthening the health workforce, and improving access to primary care for Medicare enrollees. During 2010 the Commission added to these strategies with recommendations for employing evidence-based medicine to improve the quality of health care and contain cost growth.

This year the Commission identified findings and developed recommendations regarding:

- Patient-Centric Primary Care: Compiling lessons learned from a variety of patient-centered medical home programs from other states that are demonstrating success at improving patient care and outcomes and controlling costs, the Commission recommends the State of Alaska support a patient-centered medical home program and include the attributes they identified as common to successful programs.
- Price & Quality Transparency: Identifying the importance of price and quality transparency for empowering consumers and providers with information required for improving value in the health care system, the Commission provides recommended first steps toward improving and developing needed data systems to support this strategy.
- Payment Reform: Finding that changes in the way we pay for health care can improve quality and decrease costs without imposing price controls or rationing care, the Commission recommends the State of Alaska align state programs that purchase health care and utilize payment policies for improving value.
- Alaska's Trauma System: The Commission recommends the State of Alaska support a strong trauma system, defining the necessary elements for the system and emphasizing the need to continue implementation of a 2008 improvement plan.
- Population-based Prevention Priorities: The Commission identifies obesity, low immunization rates, and significant behavioral health challenges as the top health concerns in Alaska's population, and recommends the State of Alaska support efforts to address these problems.

Following is a general summary of the Commission's recommended solutions for improving health and health care in Alaska to-date:

Ensure the best available evidence is used for decision-making. Support clinicians and patients to make clinical decisions based on high grade medical evidence regarding effectiveness and efficiency of testing and treatment options. Apply evidence-based principles in the design of health insurance plans.

Enhance the quality and efficiency of care on the front-end. Strengthen the role of primary care providers, and give patients and their clinicians better tools for making health care decisions. Improve coordination of care for patients with multiple providers, and care management for patients with chronic health conditions. Improve Alaska's trauma system.

Increase price and quality transparency. Provide Alaskans with information on how much their health care costs and how outcomes compare so they can become informed consumers and make informed choices. Provide clinicians, payers and policy makers with information needed to make informed health care decisions.

Pay for value. Design new payment structures that incentivize quality, efficiency and effectiveness. Support multi-payer payment reform initiatives to improve purchasing power for the consumer and minimize the burden on health care providers.

Build the foundation of a strong health care system. Ensure there is an appropriate and sustainable supply and distribution of health care workers. Create the information infrastructure required for maintaining and sharing electronic health information and for conducting health care analytics to support improved clinical decisions, personal health choices, and public health.

Focus on prevention. Create the conditions that support Alaskans to exercise personal responsibility for living healthy lifestyles. High priorities include reducing obesity rates, increasing immunization rates, and improving behavioral health status.

Additional strategies the Commission will study and consider for future recommendations during 2012 include:

- Reduction in government regulations that hamper innovation and increase costs.
- Enhancement of the employer's role in improving quality and controlling cost of health care through the design of employee health benefits, and in improving the health of their employees through worksite wellness programs.
- Improvement of patient choice in end-of-life health care decision making.
- The use of technology and telecommunications to facilitate access to health care services.

Part I: Introduction

A. Purpose of this Report

The purpose of this report is to convey the 2011 findings and recommendations of the Alaska Health Care Commission to Governor Parnell and the Alaska Legislature as required under Alaska Statute 18.09.070. This report builds on the work of the original Alaska Health Care Commission (created by Governor Palin under Administrative Order #246) which in their 2009 Report presented a 5-year strategic planning framework as a "roadmap" for strengthening Alaska's health care delivery system. The 2009 report was described as a "living" plan meant to evolve each year as problems regarding health care quality, cost and access are studied, potential solutions are analyzed, and implemented strategies are evaluated. This latest report documents the continuation of that process.

Findings and recommendations by the Commission included in past reports are still current, but are not repeated in this report. Please see the Commission's 2009 Annual Report for the:

- Overview of current challenges in Alaska's health care system
- Findings & Recommendations on:
    - Patient-Centric Primary Care
    - Healthy Lifestyles
    - Statewide Leadership
    - Workforce
    - Health Information Technology
    - Medicare Access
- Detailed description of Alaska's health care system (separate report included as Appendix A)

Please see the Commission's 2010 Annual Report for the:

- Findings & Recommendations on Evidence-based Medicine
- Affordable Care Act Overview and Projected Impact in Alaska

Included in this Annual Report for 2011, are:

- Part I: An introduction including background on the Commission; a summary of the Commission's 2011 activities; a description of the Commission's strategic planning framework; the Commission's vision, goals, guiding values, and core strategy; and key definitions.
- Part II: Information on certain aspects of the current health care system, particularly challenges related to the rising cost of health care, and an overview of the long term care system in Alaska. 2012 plans for continued study of health care system challenges are also included.
- Part III: The Commission's 2011 recommendations for transformation of Alaska's health care system, and strategies that will be considered in 2012;
- Appendices: Copies of studies conducted for the Commission this year on health care spending and cost trends (by the Institute for Social & Economic Research), and on payment levels and cost drivers for hospital and physician services (by Milliman, Inc.); an overview and update on the implementation of the Affordable Care Act in Alaska (in chart pack format); and additional information by and about the Commission.

B. Background on the Commission

The Alaska Health Care Commission was first established by Governor Palin on December 4, 2008 under Administrative Order #246. Original Commission members were appointed on January 27, 2009 and the Commission met throughout 2009, producing a report on their findings and recommendations in January 2010. The Commission created under A.O. #246 terminated with the production of that report.

The current Alaska Health Care Commission was established in state statute (AS 18.09.010) during 2010 with the passage of Senate Bill (SB) 172 to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility, and availability of health care for all citizens of the state. SB 172 was passed by the Alaska Legislature on April 17, 2010 and signed into law by Governor Parnell on June 21, 2010. Members were appointed in September and the new body convened for the first time in October, 2010.

Duties of the Commission prescribed by AS 18.09.070:

I. Serve as the state health planning and coordinating body;
II. Provide recommendations for and foster the development of a:
    1. Comprehensive statewide health care policy;
    2. Strategy for improving the health of Alaskans that
        i. Encourages personal responsibility for disease prevention, healthy living and acquisition of health insurance;
        ii. Reduces health care costs;
        iii. Eliminates known health risks, including unsafe water and wastewater systems;
        iv. Develops a sustainable health care workforce;
        v. Improves access to quality health care; and,
        vi. Increases the number of insurance options for health care services.
III. Submit a report to the Governor and the Legislature by January 15 of each year regarding the Commission's recommendations and activities.

Commission members are appointed by the Governor, with the exception of the two legislative representatives who are appointed by their respective bodies. Short biographies for each of the Commission members are provided on the Commission's web site. The members of the Commission are:

- **Ward Hurlburt, MD, MPH:** Designated Chair; Chief Medical Officer for the Alaska Department of Health & Social Services; Anchorage.
- **Patrick Branco:** Representing the Alaska State Hospital & Nursing Home Association; Chief Executive Officer of Ketchikan General Hospital; Ketchikan.
- **Keith Campbell:** Representing consumers; retired hospital administrator and former AARP Chair; Seward.
- **Valerie Davidson:** Representing Alaska tribal health care providers; Senior Director of Legal and Inter-Governmental Affairs for the Alaska Native Tribal Health Consortium; Anchorage.
- **Jeffrey Davis:** Representing Alaska's health insurance industry; President of Premera Blue Cross Blue Shield of Alaska; Anchorage.
- **Emily Ennis:** Representing the Alaska Mental Health Trust Authority; Executive Director of Fairbanks Resource Agency; Fairbanks.
- **Col. Paul Friedrichs, MD:** Representing the U.S. Department of Veterans Affairs health care system; Commander of the Air Force/Veterans' Affairs Joint Venture Hospital at Elmendorf; Anchorage.

- **T. Noah Laufer, MD:** Representing primary care physicians; family medicine physician and president of Medical Park Family Care; Anchorage.
- **David Morgan:** Representing community health centers; Reimbursement Director for the Southcentral Foundation; Anchorage.
- **Allen Hippier:** Representing the Alaska State Chamber of Commerce; Chief Financial Officer for Faulkner Walsh Constructors; Anchorage.
- **Lawrence Stinson, MD:** Representing Alaska health care providers; anesthesiologist and co-owner of Advanced Pain Centers of Alaska; Anchorage.

Ex-Officio (non-voting members)

- **Linda Hall:** Representing the Governor's Office; Director, Division of Insurance; Anchorage.
- **Representative Wes Keller:** Representing the Alaska House of Representatives; Wasilla.
- **Senator Donny Olson:** Representing the Alaska Senate; Golovin.

C. Summary of 2011 Activities

Meetings and public hearings: During 2011 the Commission held six face-to-face meetings, all but one in Anchorage: January 7 (the last meeting of the 2010 Commission to incorporate changes based on public comment, finalize and approve the 2010 report); March 31-April 1 (Juneau); June 23-24; August 25-26; October 11-12; and December 9. All of these meetings were open to the public, and teleconferenced for members of the public unable to attend but interested in listening or providing testimony. The general format of each of the four quarterly two-day meetings included presentations by experts on the various topics studied, followed by a panel of Alaskan providers offering their perspective. Public hearings were also held during each of the four quarterly meetings. The Commission's voting record from these meetings and a summary of public comments received are included in Appendix D.

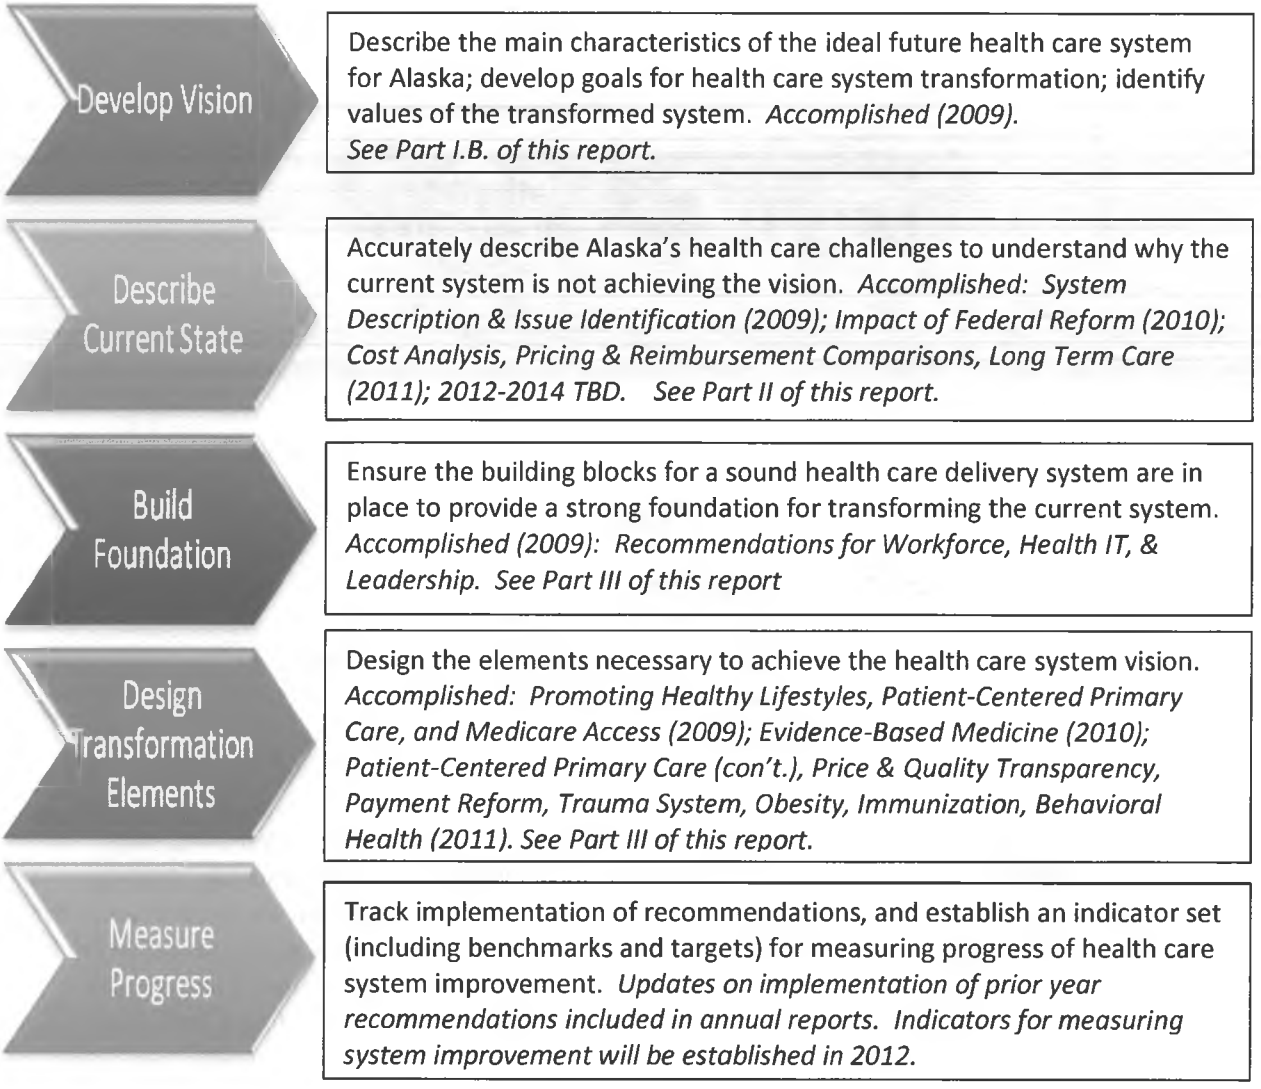
Administration: The Commission developed with guidance from the State's ethics attorney a Financial Disclosure form as required under AS 18.09.060. A copy of the Commission's meeting rules, by-laws, SFY 2012 budget, and ethics handbook are available on the Commission's website (see website address below). Copies of Commission members' 2011 Financial Disclosure forms are available from the Commission office on request.

Communication and coordination: The Commission updated and maintained a website for posting information regarding their meetings as well as reference documents related to their priority focus areas (http://hss.state.ak.us/healthcommission/). The listserv established to maintain communication with system stakeholders and members of the public interested in receiving periodic updates was also enhanced, and by the end of 2011 there were over 600 subscribers. The Commission also maintained an inventory of boards, committees, coalitions, and other organizations in Alaska involved in health planning in some way, as well as a list of health reports and plans (also available on the website).

2011 Products: The Commission's primary product for this year is this annual report. In addition, the Commission contracted with consultants to conduct two studies during 2011. The Institute for Social & Economic Research and Mark Foster and Associates conducted an economic analysis of health care spending in Alaska for the Commission; and Milliman, Inc, an international health care actuarial firm, compared payment levels for hospital and physician services in Alaska to a number of other states. The Commission also held a three-part webinar series on successful patient-centered medical home programs in other states, and also a webinar on payment reform. The four reports resulting from the two consultant studies and recordings of the webinars are available on the Commission's website.

D. 2010–2014 Strategic Plan Framework

The following graphic depicts the framework the commission is using to guide the process for improvement of Alaska's health care system, and includes updates on the status of each step in the process.



E. Vision for Transformation of Alaska's Health Care System

Vision

Alaska's Health Care System:

- Produces improved health status
- Provides value for Alaskans' health care dollar
- Delivers consumer and provider satisfaction
- Is sustainable

The Commission envisions a health care system for Alaska that places individual Alaskans and their families at the center of their health experience and focuses on creating health, not simply treating illness and injury. In addition to producing healthy Alaskans, a transformed system will provide value for Alaskans' health care dollar – delivering high quality care as efficiently as possible at an affordable price. In this system providers' business and professional interests and integrity will be maintained. Health care consumers will be satisfied with the level and quality of services they receive. And a final but essential element of this picture is that Alaska's health care system is one that is sustainable over time.

Health Care Goals

I. Improved Access
II. Contained Cost
III. Safe, High Quality Care
IV. Prevention-Based

The Commission is crafting strategies focused on attainment of the following four goals for a transformed health care system:

I. **Access:** Improve access to affordable health care coverage and to a viable and vital health care delivery system.

II. **Cost:** Control the cost of health care so that the medical inflation rate in Alaska is below the national rate.

III. **Quality:** Health care services provided in Alaska meet the highest quality and safety standards.

IV. **Prevention:** Focus on preventive services, both clinical preventive services for individuals and community-based prevention policies, to support improved health status and control costs by reducing the burden of preventable disease and injury.

Values

- Sustainability
- Efficiency
- Effectiveness
- Individual Choice
- Personal Engagement

The Commission applies the following values to guide planning and policy recommendation decisions for transformation of Alaska's health care system:

Sustainability: A redesigned health care system for Alaska must be sustainable in terms of: 1) government, private sector, and individual ability to financially support implementation over the long term; and, 2) health care provider ability to deliver quality care while maintaining a sound business operation.

Efficiency: A redesigned health care system for Alaska will minimize waste in clinical care and administrative processes.

Effectiveness: A redesigned health care system for Alaska will support practices best known to produce the best outcomes.

Individual Choice: A redesigned health care system for Alaska will provide information and options for Alaskans in terms of health care coverage and service providers.

Personal Engagement: A redesigned health care system for Alaska encourages and empowers Alaskans to exercise personal responsibility for healthy living and for obtaining and participating in their health care. Individual investment is a vital part of a robust health care system.

F. Core Transformation Strategy

The figure below depicts in graphic form the core strategies identified by the Commission for transforming Alaska's health care system to achieve their vision, and the relationship of those strategies to one another and to the planning process.

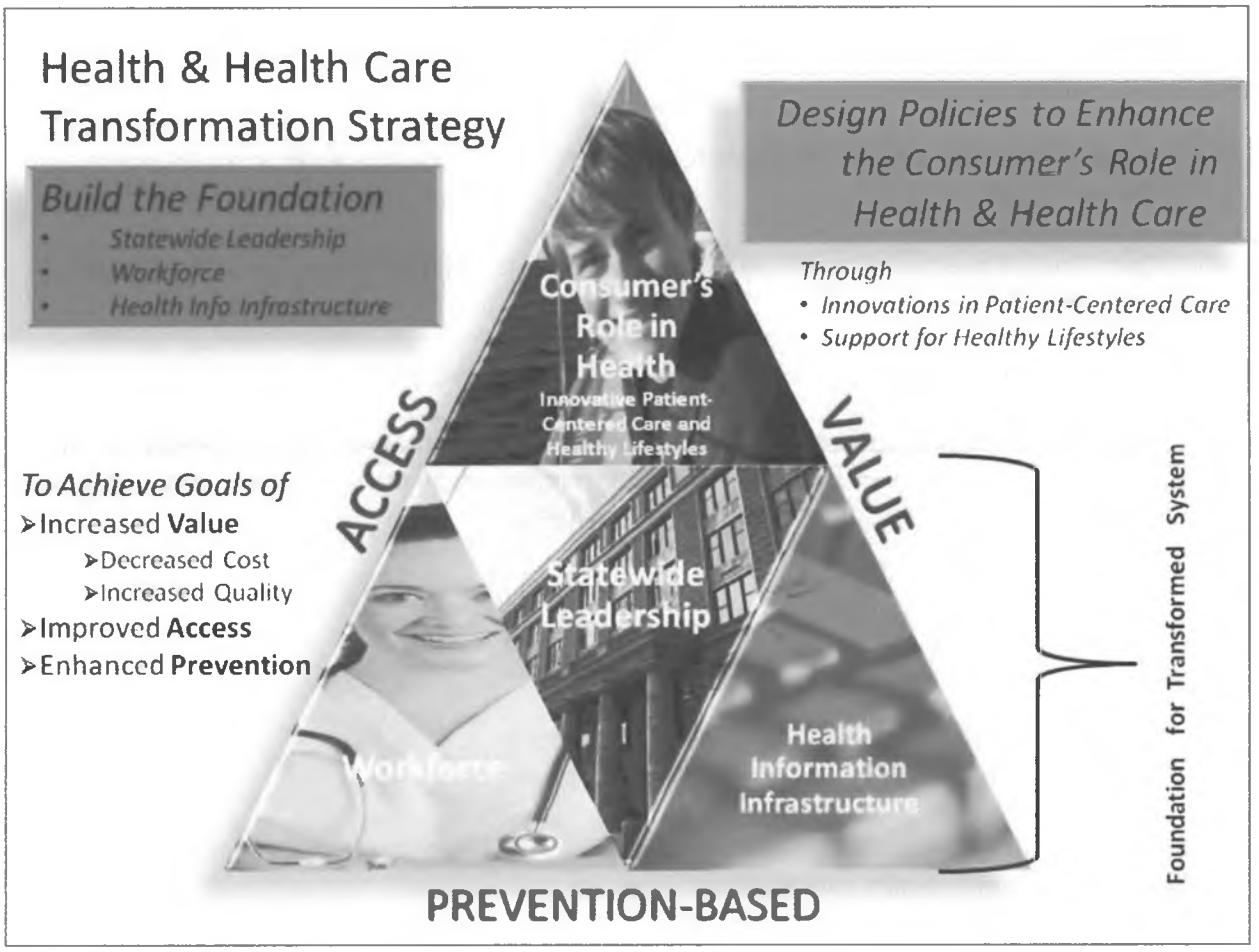


Figure 1: Alaska Health Care Commission's Core Strategy for Health Care System Transformation

Understanding and supporting the consumer's role in health care is the central focus of Commission's strategic approach to transformation of Alaska's health care system. Two aspects of the consumer's role are critical to addressing the goals of increased access, improved value (cost and quality), and a focus on prevention – 1) individual lifestyle choices and the impact those choices have on health outcomes and demand for health care services; and 2) the individual's central position in their health care experience. Support for healthy lifestyles and new innovations in patient-centered care are the pinnacle of the Commission's health care transformation strategy.

A vital health care workforce and modern information management tools are the foundation upon which support for healthy lifestyles and an innovative patient-centered system depend. And the journey to a transformed health care system cannot continue without statewide leadership to see it through. Ongoing study, planning, and policy development is necessary to create a regulatory and reimbursement environment that supports the health care industry while it redesigns itself.

G. Definitions of Health & Health Care

The commission adopted the following definitions as a tool for providing a common understanding for group discussion and for guiding planning efforts. These definitions are not meant to imply certain roles for government or health care providers.

Health & Healing

- Optimal health is a dynamic balance of physical, emotional, social, spiritual, and intellectual health.

Physical	Fitness. Nutrition. Medical self-care. Control of substance abuse.
Emotional	Care for emotional crisis. Stress Management
Social	Communities. Families. Friends
Intellectual	Educational. Achievement. Career development
Spiritual	Love. Hope. Charity.

- An individual's health status is largely self-defined, encompassing a broader state of well-being beyond physical health and lack of disease or infirmity.

- Healing is restoration of wholeness and unity of body, mind and spirit. It involves curing when possible, but embraces more than cure. When illness is limited to disease and health care is limited to cure, the deeper dimensions of healing are missed.

Health Care

- Health Care means any care, treatment, service, or procedure to prevent disease, injury and other physical and mental impairment; and to maintain, diagnose, or otherwise affect an individual's physical or mental condition.

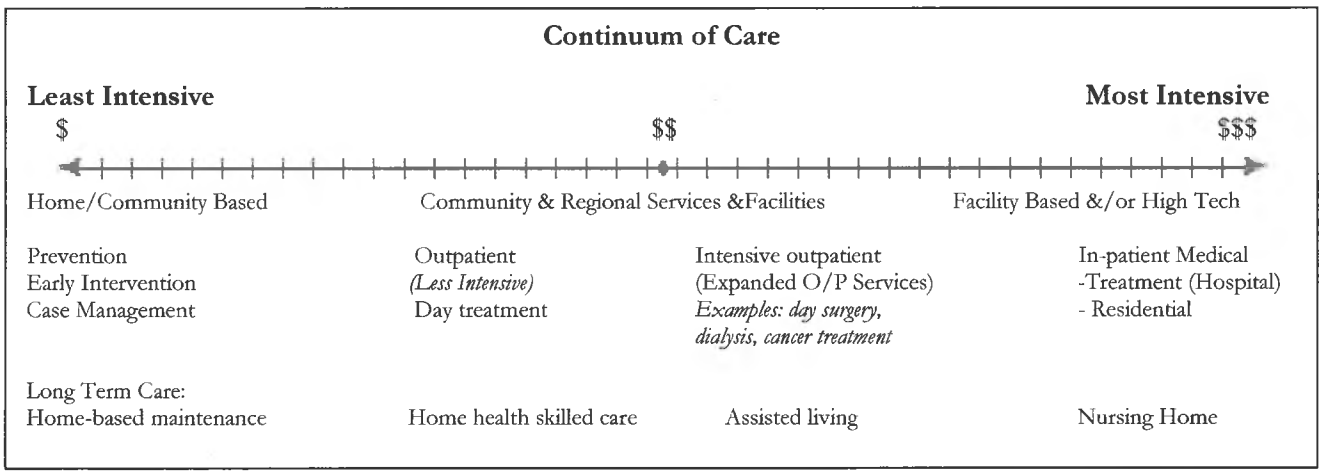
Health Care System

- A health care system is a collection of organizations, practitioners and allied workers, facilities and technologies, financing mechanisms, policies, and information that provide and support the provision of health care for a population.

- People in Alaska obtain health care through three different systems: the private sector, the military/VA, and the Alaska Tribal Health System.

Health Care Continuum

- The health care continuum is the full array of physical and behavioral health services, from prevention to treatment to rehabilitation and maintenance, required to support optimum health of a population.



Public Health

- Public health is what society does collectively to assure the conditions for people to be healthy. The two main characteristics of public health are 1) it is concerned with prevention rather than cure, and 2) it is concerned with population-level rather than individual-level health concerns.

- Public health protects and improves communities by preventing epidemics and the spread of disease; promoting healthy lifestyles for children and families; protecting against hazards in homes, worksites, communities and the environment; and preparing for and responding to emergencies.

Part II: Understanding Alaska's Health Care System Challenges

A. Summary of Prior Year Findings

Concerns regarding the current condition of Alaska's health care system described in detail in past years' reports include the following. Please see the Commission's 2009 and 2010 reports for more detailed findings and discussion.

- The high and rising cost of health care in Alaska is unsustainable.
- Health insurance coverage in Alaska is inadequate.
- Providers and patients experience logistical challenges in the delivery of and in accessing health care services.
- Fragmentation and duplication in Alaska's health care system creates inefficiencies.
- Alaska suffers from shortages and maldistribution of certain health care workers.
- Health status, health risk behaviors and changing demographics influence utilization of health care services.
- Use of modern health information technology is taking hold in Alaska, but much remains to be done.
- Alaskan Medicare enrollees living in urban areas have trouble accessing primary care.

B. 2011 Study: Cost of Health Care in Alaska

The Commission contracted for two studies this year to learn more about the cost of health care in Alaska. One was an economic analysis conducted by the Institute for Social & Economic Research (ISER)/MAFA on spending for health care services in Alaska, including estimates of total spending levels by payer and types of services. The other was a financial analysis conducted by Milliman, Inc., an international health care actuarial consulting firm, on health care pricing for hospital and physician services.

The purpose of these studies was to provide information regarding health care cost drivers in Alaska to inform future policy recommendations aimed at improving affordability and access to care. Hospital and physician services were the first two areas selected for study because they represent the highest proportion of spending for health care in Alaska at 31.5% and 28% (respectively), compared to 9% for prescriptions and equipment, 3% for nursing home and home health care services, 5.5% for dental services, 10% for administrative costs, and 13% for all other services. The Commission plans to study pricing for prescription medication during the coming year.

The economic analysis conducted by ISER/MAFA identified trends in levels of spending, who is paying the bills and how cost shifting occurs between payers, the services Alaskans are buying, the numbers of Alaskans with health insurance, and the proportion of employers offering health care coverage to their employees. This study, published in August, is included as Appendix A of this report and is available on the Commission's website at:
http://www.hss.state.ak.us/healthcommission/2011commissionreport.htm.

The financial analysis of physician payment rates conducted by Milliman, Inc. compares health care prices for the top 25 utilized procedure codes for each of 17 physician specialties in Alaska with five other states: Washington, Oregon, Idaho, Wyoming, and North Dakota. This analysis includes a comparison of billed and allowed charges for commercial payers, and fees for Medicare, Medicaid,

Workers' Compensation, the Veteran's Health Administration, and TRICARE. The report on physician payment rates also includes a comparison of the average reimbursement level for durable medical equipment (DME) overall and by payer.

The hospital payment rate analysis compares payment levels in Alaska's non-federal facilities with non-federal facilities in the same five comparison states plus Hawaii. Hawaii was added at the request of the state hospital association because it has logistical challenges somewhat similar to Alaska's, such as those associated with transportation costs, and because of the similarly high cost-of-living. This analysis was restricted to non-federal hospital facilities due to data limitations, and because federal facilities serve a defined beneficiary population, have unique federal funding streams, and operate under differing rules than non-federal facilities. Additionally, the commission's recommendations are primarily targeted at state government policy leaders and will have more limited influence on federal and tribal policies.

The hospital analysis includes 100% of the non-federal acute care facilities and 74% of licensed acute care beds in Alaska (federal tribal and military hospitals support 19% and 7% respectively of total licensed beds). The commission may choose to conduct a separate analysis of reimbursement levels and cost drivers for federal tribal and military hospital services at some point in the future if analysis of potential strategies related to affordability, cost of care and sustainability of the health care system require this additional information.

The analyses of hospital and physician payment rates and cost drivers are presented in three reports from Milliman, Inc. and are included in Appendix B of this report (available on the commission's website at: http://www.hss.state.ak.us/healthcommission/2011commissionreport.htm). Note that these reports are systems-level analyses and are not intended to be utilized as an evaluation of individual facilities or physician practices. Statistics for individual facilities vary widely within the systems-level averages presented, and conclusions should not be drawn about specific facilities from these data without review of each individual facility's financial and cost reports.

Findings

- **Health care spending in Alaska continues to increase faster than the rate of inflation.**
  - Total spending for health care in Alaska reached $7.5 billion in 2010, a 40% increase from 2005. At current trends it is projected to double to more than $14 billion by 2020.
  - By comparison, the wellhead value of oil produced in Alaska was $16.4 billion in 2010, and is projected to be $18.6 billion in 2020.
  - Also by comparison, total wages earned by Alaskan employees was $15.4 billion in 2010.

- **Health care is becoming increasingly unaffordable for U.S. and Alaskan employers and families.**
  - The cost of health insurance premiums in the U.S. increased by 160% between 1999 and 2011, compared to an overall rate of inflation of 38% during that same period.
  - American workers' contributions to health insurance premiums increased 168% between 1999 and 2011, compared to a 50% increase in workers' earnings during that same period.
  - Since 1982 the Anchorage Consumer Price Index increased 95%, while the CPI for medical care in Anchorage over that time period increased 320%.
  - Alaska is number one in the nation for the cost of employee health benefits based on a newly released survey by United Benefits Advisors, which found that Alaska employers are paying an average of $11,926 per employee each year for health insurance – nearly twice as much as the least expensive state.

- Fewer Alaskan employers are offering employee health benefits in 2010 than in 2003.
  - The percentage of large employers in Alaska (those with more than 50 employees) offering coverage dropped from 95% in 2003 to 93% in 2010.
  - The percentage of small employers offering coverage dropped from 35% to 30% during that same period.
- Alaskan employees' share in the cost of their insurance premiums increased from 11% to 14% for single coverage and from 17% to 22% for family coverage between 2003 and 2010.
- The average cost of a health care premium increased 51% for single coverage and 35% for family coverage between 2003 and 2010.
- The average annual premium cost for family coverage in Alaska was $14,230 in 2010.

- **Cost shifting occurs between commercial and public payers.** Cost per unit of service is significantly higher for commercial payers relative to provider operating costs and compared to the two largest public payers, Medicaid and Medicare. For example, commercial reimbursement rates are 110% higher than Medicare reimbursement for hospital services in Alaska. Also, as spending has increased over time for all payers in Alaska, it increased at a higher rate for individuals and private employers compared to government employers and public programs.
  - Because of the cost shifting that occurs through rate disparities, rate reductions by public payers may result in higher rates charged to commercial insurers and translate into higher premiums for individuals who purchase private insurance and for employers who provide employee health benefits.
  - While the major public payers appear to under-reimburse providers compared to private payers, they provide additional financial support for health care through other mechanisms. For example, Medicare subsidizes physician residency training, Medicare and Medicaid provide Disproportionate Share Hospital (DSH) payments to hospitals that see a high proportion of Medicare and Medicaid patients, and the federal government through the Indian Health Service and Alaska Tribal Health System has funded much of the development of the rural health infrastructure in Alaska.
  - The existence of public insurance programs helps spread health care system fixed costs among more payers and beneficiaries.

- **Commercial insurance premiums in Alaska are roughly 30% higher relative to five comparison states, which are higher than the national average. Commercial insurance premiums are primarily a factor of utilization and price for health care services.**

- **Alaska's health care utilization rates do not appear to be a major driver behind higher premium rates relative to comparison states based on financial analysis of the private health care system. Utilization of health care services in Alaska is roughly in line with comparison states, and is lower than the nationwide average.**
  - Alaska uses 13% fewer services than the nationwide average to treat a similar Medicare patient.
  - Alaskan Medicare enrollees have fewer hip replacement surgeries and roughly the same number knee and shoulder replacement surgeries (rate per 1,000 enrollees).
  - For the commercially covered population, inpatient bed days are higher overall in Alaska, but lower in urban Alaska than the comparison states. Emergency room visits are higher, outpatient visits are about the same, and medication prescriptions are lower.

- **Health care prices paid in Alaska are significantly higher than in comparison states.**
  - Reimbursement for physician services in Alaska is 60% higher than in comparison states for all payers based on a weighted average; and 69% higher for commercial (private insurance) payers.
  - The difference in reimbursement for physician services varies significantly depending on the specialty. For example, pediatricians in Alaska are reimbursed at rates 43% higher on average than pediatricians in the comparison states, and cardiologists in Alaska are reimbursed at rates 83% higher than cardiologists in the comparison states.
  - Commercial reimbursement for private sector hospital services is 37% higher in Alaska than in the comparison states. Medicare fees paid for private sector hospital services are 36% higher in Alaska than in the comparison states.

- **Medical prices are driven by two components: 1) operating costs associated with delivering medical services, and 2) operating margins. Following are attributes of medical prices in Alaska's private health care sector:**
  - Operating costs for health care providers are higher in Alaska relative to the comparison states. There is insufficient data available to fully analyze and compare physician practice operating costs, but analysis of publicly available hospital cost reports found Alaska private sector hospital operating costs are 38% higher overall and 86% higher for Alaska's private sector rural hospitals. Higher operating costs in Alaska for hospitals and physician practices are driven by:
    - The cost of living, which is 20-30% higher in Alaska than in comparison states (overall, not accounting for rural/urban differences).
    - Medical salaries for health care workers, which are 0% - 10% higher in Alaska (excluding self-employed physicians).
    - Health benefit costs for hospital and physician practice employees, which in Alaska are higher than any other state in the nation.
    - 11% - 15% utilization of "travelling" temporary staff, who typically are paid at a higher rate and whose employment results in other inefficiencies in delivery of health care services;
    - Administrative burdens associated with government regulation and compliance with payer requirements, including documentation requirements, fraud and abuse audits, licensing and certification requirements, and employee background checks.
    - Drivers of higher operating costs in Alaska specific to the private sector hospital system include:
      - RN staffing ratios, which average 29% higher than comparison states.
      - Occupancy rates, which on average are lower at 49.9% in Alaska relative to 58.1% in comparison states.
  - In 2010 the average all-payer operating margin for Alaska's private sector hospital system was 13.4% compared with the average of comparison states' hospital systems of 5.7%. Operating margins for individual Alaska facilities vary widely within these averages, ranging from -9.2% to 29.4%. For Medicare patients, the operating margin is 2.6 percentage points less than the comparison state average, at -11.5% in Alaska compared to -8.9% in the comparison states, causing upward pressure on commercial premiums in order to offset hospital losses.
  - Physician discounts are low in Alaska relative to the comparison states, an indication that physicians in Alaska have more market power relative to pricing.

- **Utilization for health care services in Alaska, while similar to the comparison states and low relative to the U.S. and other industrialized nations, is still a critically important factor to consider in containing cost growth and improving quality of care and health outcomes.** Utilization of health care resources is highly inefficient. The estimated level of wasted health care spending in the U.S. is between 30% and 50%, leaving significant room for improvement in the effectiveness and efficiency of health care delivery.

- **Market forces affecting pricing for health care services are impacted by state laws and regulations in Alaska.** There are state laws and regulations in place that influence the market in such a way as to drive prices higher for the consumer.
    - Lower physician discounts in Alaska can be at least partly explained by the relative lack of competition among providers, particularly for specialty care. In many areas, including Anchorage, there are a limited number of providers in any given specialty (sometimes only one provider group). As a result, physicians can largely dictate the fees they are paid by commercial payers.
    - Relative provider leverage may be further exacerbated by Alaska's regulation requiring usual and customary charge payment to be at least equal to the 80th percentile of charges by geographic area. Since many providers have over 20% of their market share, this implies that those providers can ensure that their charges are below the 80th percentile and therefore, receive payment for their full billed charges.
    - A separate state law requires payers to reimburse non-contracted providers directly instead of through the patient, removing incentives typically used by payers to encourage providers to join their networks.

- **The average payment for durable medical equipment (DME) in Alaska is 21% higher for all payers relative to the average comparison state payment level.** DME consists of non-pharmaceutical items ordered by a provider for a patient. By payer, the average reimbursement for DME is:
    - 23% higher for commercial payers in Alaska relative to the average across commercial payers in the comparison states
    - The same in Alaska for Medicare and TRICARE as the comparison states' Medicare and TRICARE average
    - 180% higher for the VA in Alaska relative to the average VA payment across the comparison states
    - 55% higher for the Alaska Medicaid program relative to the average Medicaid program payment across the comparison states (excluding N. Dakota)
    - 98% higher for the Alaska Workers' Compensation program relative to the average of N. Dakota and Washington states' Workers' Comp payment level (Idaho, Oregon and Wyoming not available)

C. 2011 Study: Long Term Care in Alaska

Long term care encompasses a broad range of medical and support services for individuals requiring assistance over time with meeting skilled acute care needs and custodial support with activities of daily life. These services can be provided in the home, community settings such as senior centers, assisted living facilities, and nursing homes. Alaskans with long term care needs span all ages and include children with intellectual and developmental disabilities, people with spinal cord and traumatic brain injury, people with persistent and severe behavioral health conditions, and seniors suffering decreased mobility or cognitive functioning due to aging or those with severely disabling chronic disease.

Medicaid is the primary payer for long term care services and supports in the U.S. and in Alaska. To become eligible for Medicaid coverage long term care recipients must spend down most of their personal resources. Medicare pays for time limited nursing home stays that are transitional and rehabilitative in nature, and will also pay for limited home health services if there is registered nurse oversight and the services are therapeutic. Other sources of funding include out-of-pocket spending (which accounts for 18% of long term care spending nationally), and long term care insurance (though only 7.2% of Americans have or use private insurance to pay for long term care). Unpaid family members and friends provide the majority of long term care services.

Nearly 50,000 Alaskans benefit from state-administered long term care services in Alaska, with a total expenditure of $422 million annually. 78% of state-supported long term care spending provides for home and community-based care. 97% of state-supported recipients receive long term care services and supports in a non-institutional setting. Currently in Alaska only 38% of senior and disability service recipients in Medicaid programs are seniors over 65 years of age.

Alaska policy makers have worked for years to move away from institutional care to a more balanced system emphasizing home and community-based care. Alaska is one of very few states that do not maintain a state facility for the developmentally disabled, and the only state to have no intermediate care facility for individuals with mental retardation. There are currently 15 nursing facilities with 662 licensed nursing home beds. While the senior population has tripled over the last 20 years, the number of nursing home beds has decreased as programs have moved away from institution-based care.

The move away from institutional care led to a substantial increase in Medicaid spending for home and community-based services, which more than quadrupled over the past decade from approximately $58 million in 2000 to nearly $280 million in 2010. Alaska Department of Health & Social Services officials cite the growing cost of providing long term care services as one of the most critical issues facing the state's Medicaid program. The department projects Medicaid spending for all long term care services will increase by 240% over the next decade to $922 million in 2020.

The State of Alaska conducted numerous studies over the past decade to develop recommendations for the future of long term care in Alaska, but a strategic plan focused on finding the most appropriate, cost effective, affordable, sustainable approach to meeting the long term care needs of Alaskans does not exist. A new coalition of long term care stakeholders was formed during 2011 to help facilitate that planning. In the short time since this coalition convened they have reviewed and compiled recommendations from the most recent studies, gathered existing data on the current system, and also gathered future cost and demographic projections. The commission benefited from presentations by the coalition this year, commends them on their rapid progress, and looks forward to additional information and future recommendations from the coalition.

D. Issues Prioritized for Study in 2012

The commission intends to focus on the following areas to continue learning about the current condition of Alaska's health care system during 2012:

- **State legal and regulatory barriers:** Identify barriers to innovation in health care delivery, financing and reimbursement in Alaska that are specifically created by Alaska laws and regulations. Consult with Alaska health care providers, payers, purchasers and patients to gather their ideas.
- **Cost of Pharmaceuticals in Alaska:** Compare pricing and reimbursement levels across payer types for pharmaceuticals to the comparison states, and identify drivers of cost differentials.
- **Behavioral Health Care:** Learn about the behavioral health care system in Alaska.
- **Malpractice Reform:** Tort reform legislation was passed in Alaska in 2005. Identify whether the new law had an impact on malpractice insurance rates for providers.
- **Federal Reform:** Continue to track Affordable Care Act implementation activities in Alaska.

Tabled for Study in Future Years

- **Genetic advancements in medicine**: This is sure to have an effect and result in issues related to cost, access and quality, but there is not much the commission can do to address it right now.
- **Malpractice Reform**: Tort reform legislation was passed in Alaska in 2005. Future work could address how standards of care are defined in case law, and study models for alternatives to litigation.
- **Fraud & Abuse**: Numerous new programs to prevent and control fraud and abuse are being implemented under federal reform and the state is trying to align state fraud and abuse efforts with the new federal programs and requirements as much as possible to minimize disruption for providers. The commission will wait and see how these programs develop.
- **Alaska's Public Health System:** The Alaska State Constitution vests the legislature with the duty to "provide for the promotion and protection of public health" (Article 7, Section 4). The commission may devote future study to learn about the system in place to fulfill this duty, and identification of strengths and weaknesses of the current system.
- **"Hyperconsumerism":** System incentives caused by third-party payment systems lead patients to seek more care and not seek value: This issue has been addressed in part in the 2011 payment reform and transparency discussions, and will be addressed further during 2012 discussions on employee health benefit and plan design.
- **Alaska's Worker's Compensation Program:** It is not the commission's role to develop operational recommendations for specific state programs such as Workers' Comp and Medicaid; however, issues related to state programs and general policy recommendations affecting them emerge in the course of the commission's work. Issues related to this program were identified in part in the 2011 cost studies, and will be further identified and addressed during 2012 through the work on the Employer's role in health and health care.
- **Demographic changes:** Specifically, the effects of the Baby Boom generation population bubble on the health care system following its "pop" – how will our kids and grandkids support (or dismantle) the huge infrastructure that will be created to care for us?

Part III: Alaska Health Care System Transformation Strategies

A. Health Care System Foundation

Health Workforce

The workers who provide patient care and support all other aspects of health and health care delivery are a foundational resource for the health system. Shortages of workers in certain health occupations can increase health care costs and limit access to care. The commission initially made a series of recommendations related to the health workforce during 2009. Since that time the commission has tracked the work of the Alaska Health Workforce Coalition, a public-private partnership of leading health industry, government, academic and training organizations formed in 2010 to address Alaska's health workforce needs.

In the short time since their formation the Alaska Health Workforce Coalition has made significant progress, leveraged through an impressive partnering effort and pooling of resources rarely seen between public and private sectors. The coalition identified a series of goals and strategies for strengthening the workforce and published the Alaska Health Workforce Plan in 2010, and during 2011 developed an "Action Agenda" to focus efforts on specific high-priority occupational and system improvement issues. The commission applauds the efforts of the coalition, and will continue tracking their work over the coming year. Of particular importance to the commission are the coalition's systemic change initiatives focused on improving workforce data to support needs-based planning and resource allocation, and on government policy barriers to and supports for workforce development.

Summary of current health workforce recommendations made by the commission in prior years:

- Make health workforce development a priority, and support coordinated planning
- Strengthen the pipeline of future health care workers
- Support workforce innovation and adaptation as care models evolve
- Increase the supply of primary care physicians
    - Support educational loan repayment and financial incentives for recruitment
    - Expand WWAMI Alaska medical school seats as resources allow
    - Support primary care residency program development & operation
        - Continue support for family medicine residency
        - Support development of pediatric and psychiatric residencies
        - Support planning for primary care internal medicine residency

Health Information Infrastructure

The health information infrastructure is the combination of all the people, data, policies and procedures, financial resources, facilities and technology which supports the creation, use, storage, protection and transmission of health information. Health information is required to support:

- Public health surveillance and epidemiologic studies
- Coordination and management of patient care by clinicians
- Performance management and quality improvement efforts of providers
- Decision-making by commercial payers, government policy makers, and community leaders
- Fraud and abuse prevention and control
- Consumer/patient decision-making regarding
    - Lifestyle choices
    - Purchase of health care services
    - Medical testing and treatment
    - Self-management of health conditions

Summary of current health information infrastructure recommendations made by the commission in prior years:

- Support health information technology (electronic health records, health information exchange, and telemedicine) adoption and utilization
- Ensure health information technology is utilized to protect the public's health
- Ensure data available through the health information exchange is used to improve health care
- Ensure privacy and security of health information
- Facilitate broadband telecommunications service access
- Improve reimbursement for telemedicine-delivered services

B. 2011 Commission Recommendations

1. Patient-Centric Primary Care

Findings

- Strong primary care systems are foundational to a high performing health care system. Improving access to primary care that is patient-centric and enhancing the role of primary care providers in the coordination and management of care improves health and lowers the per capita cost of health care.

- Improved evidenced-based care management, especially of patients with complex health conditions experiencing high needs and high costs, can reduce health care costs while improving patient care and outcomes.

- A renewed emphasis on the value of primary care and new models of primary care practice are borne out of a convergence in the progression of medicine and changes in patient needs.
  - The vast increase in medical knowledge over the past several decades has led to more complexity in the management of medical information and also increased specialization of medical practitioners.
  - Improvements in the prevention and control of infectious disease and injury have been accompanied by a higher prevalence of chronic disease in the population, which has led to a shift in patient care needs from acute episodic care to chronic care management.

- Changes in medicine and patient needs necessitate a stronger role for primary care providers in supporting patients with the navigation of medical information, coordination of care between specialists, and management of chronic health conditions. Primary care practitioners who have fully assumed these expanded responsibilities have demonstrated cost savings for the overall health care system and improved health status of their patients; however, traditional fee-for-service payment models do not adequately recognize the new functions and do not adequately compensate primary care providers for the additional work involved.

- Patient-centered primary care requires:
  - a continuous healing relationship between the clinical team and the patient; ensuring patients and their families have the information, skills and tools necessary to maintain and manage their health, and that they are treated in a way that is respectful, engaging and empowering.

  - a holistic approach to patient care that views the patient as a whole person, acknowledging and understanding behavioral as well as physical health needs, and integrating primary care for behavioral and physical conditions in a common clinical setting.

  - an active partnership between the primary care provider, community health and social service providers, and governmental public health agencies to effectively coordinate and manage the care of patients with complex health conditions and to support primary prevention for healthy patients.

- Innovative approaches to strengthening primary care and making it more patient-centric have been implemented and are being tested in many other states, by the Veteran's Administration and the Department of Defense, and here at home within the Alaska Tribal Health System. A number of these innovative programs are demonstrating that it is possible to improve care for patients, improve health outcomes for the patient population, and reduce health care costs for the payers. Some are beginning to move forward with multi-payer initiatives to drive further transformation of their health care systems. The design of pilot programs under development in Alaska can be informed by lessons learned from the experience of these early innovators, such as:
    - Community Care of North Carolina (CCNC), whose demonstrated cost savings and improvement in patient outcomes include:
        - Annual growth in Medicaid expenditures fell from a high of 11.5% in 2002 to 2.5% in 2010;
        - Total Medicaid savings of $1.5 billion between 2006 and 2010;
        - Scores in the top 10% in the nation on key quality measures related to care for diabetes, asthma, and heart disease.
        - Comparison of Medicaid Aged, Blind and Disabled members enrolled in CCNC to members not enrolled in the program demonstrated between 2007 and 2010:
            - Better access to care - 95.9% of enrollees use health care system compared to 86.5% of unenrolled population.
            - Average spending for inpatient hospital services decreased 6%, compared to a 25% increase for the unenrolled population.
            - Potentially preventable inpatient admissions declined by 12.5%, while increasing by 25.9% for the unenrolled.
    - Blue Cross Blue Shield of Michigan, which administers the largest patient-centered medical home (PCMH) program in the country with 2,500 physicians in 700 PCMH-designated practices, demonstrated in 2010 that PCMH practices had a
        - 7% lower rate of pediatric emergency room visits;
        - 25.5% lower rate of adult inpatient admissions among patients with manageable chronic conditions; and
        - 7.4% lower rate of adult high-tech radiology usage.
    - CareOregon, a non-profit Medicaid managed care plan in Oregon which piloted their Primary Care Renewal (PCR) program in 2007 and has been expanding it since. Results from the pilot test include a:
        - 7.6% increase in proportion of diabetic patients with blood sugar under control, and of hypertensive patients with blood pressure under control
        - Threefold increase in proportion of patients screened for depression
        - 9% decrease in average cost for dual eligible members (plan members enrolled in both Medicaid and Medicare) treated at a PCR site, compared to a 1.2% increase for those treated in non-PCR sites.
    - The Veterans Health Administration launched a three year plan in April 2010 to transition more than 900 primary care clinics across the country to patient-centered medical homes, investing more than $227 million to hire additional clinical staff, institute a nationwide training program, and develop regional learning collaboratives. In one year a sample clinic increased access to same-day appointments for veterans who previously had to wait as long as 3 months, reduced inappropriate emergency department visits from 52% to 12%, and improved blood sugar scores in 33% of patients with poorly controlled diabetes.

- Within the Department of Defense all three service branches are moving towards a medical home model of care in their military treatment facilities and is collaborating with TRICARE Management and the VA. The DOD and VA are working together on development of guidelines for evidence-based practices critical to the functioning of a medical home, and also on design of quality metrics and process evaluations.

- There is currently active interest and engagement in the development of patient-centered primary care models in Alaska on the part of health care payers and primary care providers.
  - The Alaska Medicaid Task Force, convened Sept 2010 – April 2011 to identify cost containment strategies, recommended that the state's Medicaid program pilot test patient-centered medical home. DHSS plans to contract with a consultant during SFY 2012 to assist with the design of the pilot program.
  - The Alaska Primary Care Association received a $400,000 capital grant from the state legislature this year to assist community health centers with transition to a medical home model.
  - The Alaska Native Tribal Health Consortium is supporting a collaborative of clinicians throughout the tribal health system in an Improving Patient Care initiative that includes testing and learning from patient-centered medical home projects.
  - Two primary care clinics in Alaska currently hold NCQA (National Committee for Quality Assurance) recognition as Patient Centered Medical Homes – the Southcentral Foundation (SCF) Primary Care Center (Level 3), and the Providence Family Medicine Center/Alaska Family Medicine Residency Program (Level 1).
  - Numerous private sector primary care clinics are actively working on implementing various aspects of the PCMH model, such as opening up schedules for same-day appointments, establishing or upgrading electronic medical records systems, and creating web-based patient information portals. The commission specifically learned about the efforts of the Tanana Valley Clinic in Fairbanks and Medical Park Family Care in Anchorage.
  - The state Department of Health & Social Services is participating in a multi-state collaborative ("TCHIC") funded by CMS to test quality measurement and health information technology applications to improve care for children in Medicaid. DHSS created a medical home pilot program under this initiative this year and awarded pilot-site grants to Central Peninsula Community Health Center (Kenai/Soldotna), Iliuliuk Family & Health Services (Unalaska), and SCF (Anchorage).
  - A number of clinics are working to integrate primary care and behavioral health services. Two organizations, Alaska Island Community Services (Wrangell) and SCF (Anchorage) received federal demonstration grants this year to introduce primary care services within behavioral health clinic settings.

Recommendations

1. The Alaska Health Care Commission recommends the State of Alaska recognize the value of a strong patient-centered primary care system by supporting appropriate reimbursement for primary care services.

2. The Alaska Health Care Commission recommends the State of Alaska support state policies that promote the central tenet of patient-centered primary care – that it is a model of care based on a continuous healing relationship between the clinical team and the patient.

3. The Alaska Health Care Commission recommends the State of Alaska and other entities planning a patient-centered primary care transformation initiative incorporate the following strategies the Commission found to be common to start-up of successful programs studied as models. These successful models started with:
   a) Financial investment by the initiating payer organization (whether public or private).
   b) Strong medical leadership and management involved in planning and development.
   c) A collaborative partnership between the payers and clinical providers.
   d) A vision concerned with improving patient care, followed by identification of principles, definitions, criteria for participation, and tools and measures.
   e) A focus on local (i.e., practice-level) flexibility and empowerment.
   f) A phased approach to implementation.
   g) A tiered approach to managing patient populations.

4. The Alaska Health Care Commission recommends the State of Alaska and other entities implementing a patient-centered primary care transformation initiative include the following attributes the Commission found to be common to successful programs studied as models:
   a) **Resources** provided to primary care practices to support improved access and care coordination capabilities.
   b) **New tools and skill development opportunities** provided to primary care practices to support culture and practice transformation.
   c) **Shared learning environments** for clinical teams to support development of emergent knowledge through practice and dissemination of new knowledge.
   d) **Timely data** provided to primary care practices to support patient population management and clinical quality improvement, including centralized analytical and reporting capability and capacity.
   e) **Infrastructure support** for medical guidance, including a medical director for clinical management and improvement, case managers, pharmacists, and behavioral health clinicians.
   f) **A system of review** that includes both implementation monitoring by initiative partners and evaluation of initiative outcomes by an independent third-party.

5. The Alaska Health Care Commission recommends the State of Alaska support a patient-centered medical home (PCMH) initiative, recognizing:
   a) Front-end investment will be required for implementation, and it may take two to three years before a return on investment will be realized;
   b) Collaboration between State programs that pay for health care, other health care payers and the primary care clinicians who will be responsible for implementing this model is essential to success; and,
   c) Patient-centered primary care development is not the magic bullet for health care reform, but is an essential element in transforming Alaska's health care system so that it better serves patients, better supports providers, and delivers better value.

2. Price & Quality Transparency

Findings

- There currently is insufficient data and information to support consumerism in Alaska's health care market. Empowering consumers and health care providers with access to information on the cost and quality of care is an important strategy for improving value in Alaska's health care system.

- Some patients lack incentives to seek value in their health care decisions. Normal supply-and-demand price mechanisms do not always work when consumers are insulated from the cost of a good or service, which is one effect of the third-party payer health insurance system. Consumers who share directly in the out-of-pocket cost of their health care purchases are more likely to make decisions based on value (price and quality).

- State government and other payers require high quality health data sources and health analytics capacity to provide the information needed to guide payment reform and health care delivery improvement policies.

- Alaska's Hospital Discharge Database is an important source of health care data, and is a good example of collaboration between a health care provider group and the State to make health care data more transparent. However, this data set is currently incomplete due to lack of full participation by all of Alaska's hospitals. It is also insufficient for supporting full cost and quality transparency in that it represents care provided only by acute care hospitals.

- A number of states have implemented or are in the process of planning for All-Payers Claims Databases (APCDs) to complement data from their Hospital Discharge Data and Medicaid Management Information Systems. APCDs are large-scale databases that systematically collect and aggregate medical, dental and pharmacy claims data from public and private payers, and are valuable sources of information about outpatient services and health care payments for those states that have implemented them. They also minimize the burden on health care providers as the aggregated data from payers is an efficient alternative to collecting data directly from individual providers.

Recommendations

1. The Alaska Health Care Commission recommends the State of Alaska encourage full participation in the Hospital Discharge Database by Alaska's hospitals.

2. The Alaska Health Care Commission recommends the State of Alaska study the need for and feasibility of an All-Payers Claims Database.

3. Payment Reform – Paying for Value, Rather than Volume

Findings

- Current fee-for-service and third-party payment structures reward delivery of high numbers of costly services; compel health care to be technology driven, volume-driven, fragmented, and expensive; and are a disincentive to innovations that improve health outcomes and the efficiency and effectiveness of health care services.

- There are options to health care cost containment strategies that do not rely on across-the-board rate reductions, price controls and rationing. These alternative approaches attempt to maximize value by moving away from payment for individual services to payment structures that reimburse providers for high quality care and improved health outcomes.

- Improving value in health care requires the following four mutually supportive components:
  1. **Consumer Empowerment**
     a. Educational materials and tools
     b. Engagement strategies that recognize the consumer as a partner/owner in their care
  2. **Price and Quality Reporting & Measurement**
     a. Measurement and analytics system design
     b. Reporting on quality, cost and experience of care
  3. **Value-Driven Health Care Delivery**, which empowers the patient and focuses first on keeping the patient healthy, minimizing the need for hospital care when health is compromised, and ensuring efficient successful outcomes when care is required.
     a. Design and delivery of care grounded in evidence-based medicine principles
     b. Technical assistance to providers
     c. Provider organization coordination
  4. **Value-Driven Payment Systems and Benefit Designs**.
     a. Payment system design
     b. Benefit design grounded in evidenced-based medicine principles
     c. Engagement of Purchasers
     d. Alignment of multiple payers

- Successful payment reform initiatives require systems that can support:
  - Capabilities to **manage financial risk** for payers and providers
    - Data and analytics for monitoring utilization and quality
    - Actuarial expertise for financial risk analyses
  - Capabilities to **manage health** for patients, providers, payers
    - Methods for targeting high risk patients
    - Capability to track, coordinate and follow-up on patient care
    - Patient education and self-management support
  - **Alignment of organizational structures** among providers
    - Trust relationships between physicians and hospitals
    - Significant regulatory barriers exist
    - Neutral, trusted facilitator may be required
  - **Alignment of payment policies** among payers
    - Multi-payer approaches to avoid further fragmentation of payment systems

- 26 cents of every health care dollar spent in Alaska are public funds administered either directly or indirectly by the State of Alaska, including state and federal Medicaid funds and spending for state employee and retiree health benefit s, correctional system inmates' care, workers' compensation, and other state health care programs. State government holds significant purchasing power that could be utilized to leverage improvement in Alaska's health care system.

Recommendations

1. The Alaska Health Care Commission recommends the State of Alaska utilize payment policies for improving the value of health care spending – for driving improved quality, efficiency and outcomes for each health care dollar spent in Alaska – recognizing that:
    a. Local payment reform solutions are required for Alaska's health care markets
    b. Payment reform may not result in immediate cost savings, but efforts must begin immediately
    c. Payment reform is not the magic bullet for health care reform, but is one essential element in transforming Alaska's health care system so that it better serves patients, and delivers better value for payers and purchasers.

2. The Alaska Health Care Commission recommends the State of Alaska take a phased approach to payment reform, revising payment structures to support primary care transformation as a first step in utilizing payment policies for improving value in Alaska's health care system.

3. The Alaska Health Care Commission recommends the State of Alaska develop health data collection and analysis capacity as a tool for quality improvement and payment reform. Data collection, analysis and use decisions should involve clinicians, payers, and patients.

4. The Alaska Health Care Commission recommends the State of Alaska support efforts by state officials responsible for purchasing health care services with public funds to collaborate on the development of common purchasing policies. These collaborative efforts should include key stakeholders, and should be used as leverage to drive improved quality, effectiveness, efficiency and cost of care in Alaska's health care system. These efforts should endeavor to engage commercial payers and federal health care programs in alignment of payment policies in a multi-payer approach to minimize the burden on health care providers.

4. Alaska's Trauma System

Findings

- Injury is the leading cause of death for Alaskans who are one to 44 years of age. Roughly 400 to 500 Alaskans die each year as the result of an injury. Approximately 5,000 Alaskans are admitted to a hospital each year due to an injury, over 1,000 of who are left with a permanent disability.

- A trauma system that provides rapid, effective, and efficient response and treatment is critical to reducing death and disability due to injury. An improved trauma system improves overall care for any health condition that is time critical, such as heart attack and stroke, not just trauma.

- The Alaska Department of Health & Social Services made trauma system improvement a priority three years ago with the commission of a study by the American College of Surgeons Committee on Trauma. Subsequently the Division of Public Health began implementing the ACS recommendations for strengthening Alaska's trauma system by establishing a Trauma System Coordinator position to support development of a trauma system strategic plan, and reorganizing to consolidate the Emergency Medical Services Program with the Emergency and Disaster Preparedness Program. More recently the Division has invested in improving the Alaska Trauma Registry to ensure sound data is available for informing prevention and system improvement efforts.

- The Alaska Legislature made a commitment to strengthening Alaska's trauma system, passing a bill during the 2010 legislative session establishing the Uncompensated Trauma Care Fund to incentivize hospitals to meet trauma center standards.

- Alaska's health care community has made commitments to strengthening Alaska's trauma system. The Alaska Native Medical Center has demonstrated leadership in trauma care in Alaska for many years and is currently the only Level II designated trauma center in the state, the highest level any hospital in Alaska can attain. Four of Alaska's rural hospitals are designated Level IV trauma centers. An additional nine hospitals are actively working towards attainment of trauma center designation. However, Alaska remains the only state in the nation without a Level II or higher designated trauma center serving the general population.

Recommendations

- The Alaska Health Care Commission recommends the State of Alaska support a strong trauma system for Alaska that:
    - Is comprehensive and coordinated, including:
        - Public health system capacity for
            - studying the burden of injury in the local population
            - designing and implementing injury prevention programs
            - supporting the development and exercise of local and statewide emergency preparedness and response plans

        - Emergency medical service capacity for effective pre-hospital care for triage, stabilization and coordination of safe transportation of critically injured patients
        - Trauma center care for treatment of critically injured patients
        - Rehabilitation services for optimizing recovery from injuries
        - Disability services to support life management for individuals left with a permanent disability due to an injury
    - Is integrated, aligning existing resources to efficiently and effectively achieve improved patient outcomes.
    - Is designed to meet the unique requirements of the population served.
    - Provides evidence-based medical care to achieve the best possible outcomes for the patient.
    - Provides seamless transition for the patient between the different phases of care.

- The Alaska Health Care Commission recommends the State of Alaska support continued implementation of the recommendations contained in the 2008 consultation report by the American College of Surgeons Committee on Trauma, including achievement and maintenance of certification of trauma center status of Alaskan hospitals.

5. Obesity in Alaska

Findings

- The growing prevalence of overweight and obese Alaskans is the most significant public health challenge facing Alaska today. This largely avoidable condition affects Alaskans of all ages, from all regions, across all levels of education and income, and of all racial and ethnic backgrounds. The dramatic increase in overweight and obesity prevalence that occurred over the past 18 years will have lasting financial and health impacts on Alaskan families, communities, businesses, and the health care system for decades to come.

- Overweight and obesity cause 365,000 premature deaths a year in the U.S.

- Medical spending in the U.S. directly related to overweight and obesity was estimated at $147 billion annually in 2008, and $477 million in Alaska.

- As many as 40% of Alaska's children are overweight or obese.

- The generation of Americans born in the last decade may be the first generation of Americans who do not live as long as their parents, since our country began, due to the medical complications of overweight and obesity. A child born today has a 34-38% chance of developing diabetes in his or her lifetime.

Recommendations

- The Alaska Health Care Commission recommends the State of Alaska implement evidence-based programs to address the growing rate of Alaskans who are overweight or obese. First efforts should focus on nutrition and physical activity for children and young people and raise public awareness of the health risks associated with being overweight and obese.

6. Immunization against Vaccine-Preventable Disease

Findings

- Until the mid-20th century infectious diseases were a leading cause of illness, disability and death in Alaska. Few effective treatment and preventive measures existed. Since that time there has been a dramatic decline in the burden of infectious disease in the population due to significant achievements in control measures, especially for those diseases for which vaccines have been developed.

- During the 20th century the success of biomedical science in development of vaccines combined with the success of the public health system in immunizing the population led to the eradication of smallpox from the worldwide population and the elimination of polio from the U.S. population. Furthermore, immunizations have resulted in substantial declines in other diseases that had previously been a common cause of serious illness and death among children, such as measles, mumps, rubella, diphtheria, tetanus, pertussis, and bacterial meningitis.

- Despite remarkable progress in vaccine development and use, there are a number of challenges in maintaining sufficient immunization levels to protect the population.
    - Vaccination schedules have become increasingly complex. U.S. children require 19 doses of vaccine by age 35 months to be protected against 11 childhood diseases.
    - The success of immunization policies in controlling once-dreaded diseases has led to complacency among some subsets of the population toward vaccines.
    - Insufficient and erroneous information about vaccine safety and effectiveness creates confusion among parents, who must recognize immunizations as an important tool in protecting their children's health and actively seek them.
    - Health care providers must be kept informed of the latest developments and recommendations.
    - Vaccine supplies and financing must be made more secure.
    - Researchers must address increasingly more complex questions about safety, efficacy, indications, contraindications, and delivery.
    - Information technology must be used to support timely vaccination.
    - Adolescents and adults must be targeted for vaccine-preventable diseases that affect their age groups, such as influenza and pneumonia.

- Alaska's childhood immunization rate has declined in recent years to nearly the lowest in the nation. Alaska's rate of immunization completion for children ages 19 months to 35 months was just 56.6% in 2009, compared to the national average of 70.5%, ranking Alaska 49th among the 50 states and leaving Alaska's children vulnerable to preventable diseases that can result in serious complications, preventable hospitalizations, and in some cases death.

- The Alaska Division of Public Health, Department of Health & Social Services, maintained a "universal vaccine program" (providing all recommended childhood and adult vaccines to public and private health care providers in the state) for over three decades. The vaccine program was supported almost entirely with federal funding from two different sources, one of which is reducing its annual allocation to Alaska by $3.6 million in a phased 3-year reduction starting in FFY 11.

- As a result of the loss of funding the state discontinued provision of all adult vaccine and of human papillomavirus and meningococcal vaccines for children in FFY 11, and will no longer provide the following childhood vaccines for children who are not eligible for the Vaccines for Children Program ("VFC"; a program for children who are American Indian/Alaska Native, on Medicaid, or uninsured) beginning in FFY 12: influenza, pneumococcal conjugate, and rotavirus.
- Elimination of the universal vaccine program is expected to have the following consequences:
    - Reduction in the number of small private medical practices that provide vaccine to their patients due to the complexities of maintaining separate vaccine supplies (per VFC administrative requirements), and the cost of up-front purchase of expensive vaccine;
    - Reduced immunization coverage leading to increased risk of vaccine-preventable diseases such as measles, mumps, pertussis, chicken pox and hepatitis A; and,
    - Inability to maintain a stockpile of vaccine to support timely response to outbreaks of vaccine-preventable disease.

Recommendations

- The Alaska Health Care Commission recommends the State of Alaska ensure the state's immunization program is adequately funded and supported, and that health care providers give priority to improving immunization rates in order to protect Alaskans from serious preventable diseases and their complications.

7. Population-Based Prevention & Behavioral Health

Findings

- Behavioral health is essential to whole health. Almost one-quarter of all adult stays in U.S. community hospitals involve mental or substance use disorders. 83% of people diagnosed with serious mental illness are overweight or obese. The life span of a person with SMI is 27 years shorter than the average life span.

- Alaskans experience high rates of violence. According to the 2010 Alaska Victimization Study, 47.6% of adult women in Alaska experienced intimate partner violence in their lifetime. 37% experienced sexual violence, and 27% experienced alcohol or drug involved sexual assault.

- Adverse childhood experiences, such as recurrent and severe physical or emotional abuse, sexual abuse, or growing up in a household with an alcoholic or drug user, a member in prison, a mentally ill member, a mother treated violently, or both biological parents absent, are a significant determinant of health and well-being well into adulthood, correlating to poor health indicators such as obesity and depression.

- Binge alcohol use in Alaska is among the highest in the nation. 8% of all adults in Alaska, 20% of adults ages 18-25, and 25% of students in grades 10, 11, and 12 use marijuana.

- Alcohol use is suspected or proven in nearly 25% of all hospitalizations for injury.

- In 2009 the age-adjusted suicide rate for all Alaskans was 20.2/100,000 (140 lives lost). The suicide rate among Alaska Native people is two times that of non-Native.

- Routine screening for substance abuse, depression, and a history of adverse childhood events using evidence-based tools is an important strategy for reducing the prevalence of health conditions related to these problems.

- Integration of primary care for both behavioral and physical conditions in a common clinical setting is an essential feature of patient-centered primary care.

Recommendations

- The Alaska Health Care Commission recommends the State of Alaska support efforts to foster development of patient centered primary care models in Alaska that:
  - Integrate behavioral health services with primary physical health care services in common settings appropriate to the patient population.
  - Assure coordination between primary care and higher level behavioral health services.
  - Include screening for the patient population using evidence-based tools to screen for
    - A history of adverse childhood events
    - Substance abuse
    - Depression

- The Alaska Health Care Commission recommends the State of Alaska develop with input from health care providers new payment methodologies for state-supported behavioral health services to facilitate integration of primary physical health care services with behavioral health care services.

C. Strategies under Consideration for Study in 2012

- **Design policies to enhance the consumer's role in health and health care - A) Innovate to improve quality, affordability and access to care:**
  - **Legal barriers and cost drivers:** Identify policies to address cost drivers and state legal barriers identified through 2011 cost and pricing studies and 2012 legal barriers analysis.
  - **Employer's Role in Health & Health Care – Employee Health Benefit and Plan Design:** Identify the roles Alaska's employers play in their employees' health and access to health care, and study innovative approaches employers in Alaska and across the country are utilizing to improve the quality, affordability and access to health care for their employees.
  - **End-of-Life Care:** Learn how improving quality of services and patient choice in health care decisions at the end of life can improve the patient's and patient's family's experience and contain costs.
  - **Use of Technology to Facilitate Access to Care:** Determine the characteristics of a legitimate electronic patient visit, and identify impediments to use of telecommunications technology to improve access, including reimbursement, liability, licensure (including cross-state licensure), technological, etc. Study the Veteran's Health Administration experience with telemedicine.
  - **Transparency - All-Payers Claims Database:** Conduct a needs assessment and feasibility study for establishment of an All-Payers Claims Database for Alaska
  - **Track Developments in Alaska Related to Previous Recommendations:**
    - Value-Based Purchasing (Payment Reform and Price & Quality Transparency)
    - Patient-Centered Primary Care
    - Evidence-Based Medicine

- **Design policies to enhance the consumer's role in health and health care - B) Support Healthy Lifestyles**
  - **Employer's Role in Health & Health Care – Worksite Wellness:**
    Identify the roles Alaska's employers play in their employees' health and access to health care, and study innovative approaches employers in Alaska and across the country are utilizing to create cultures of wellness and promote the health and safety of their employees.
  - **Track Developments in Alaska Related to Previous Recommendations:**
    - Obesity
    - Immunizations
    - Behavioral Health

- **Build the foundation of a strong, stable health system**
  - **Statewide Leadership:**
    - Identify indicators for measuring statewide health care delivery system improvement
  - **Health Workforce Development**
    - Track developments in Alaska related to previous recommendations
  - **Health Information Infrastructure**
    - Track developments in Alaska related to previous recommendations

<u>Strategies Tabled for Future Years' Agendas</u>

- **Strategies to support innovations in patient-centric care**
  - **Health Benefit & Plan Designs that support patient engagement in seeking value:** This strategy will be addressed in large part during 2012 work on the employer's role in health and health care.
  - **Care coordination and management for patients with multiple chronic conditions:** Will track new Medicaid program initiatives in this area for now.
  - **Patient-Provider shared decision-making support tools:** Work during 2012 on employer efforts to craft innovative health plans focused in part on improving and supporting employee health and engagement in health care will inform future direction for this strategy.
  - **Process/Quality Improvement:** The commission may elect to study provider efforts to improve quality and design more efficient processes sometime in the future.

- **Strategies to support healthy lifestyles**
  - **Rural sanitation:** A very important community health issue, but the commission might not be able to add value to the current efforts underway in Alaska.
  - **Fluoridation:** Local decisions regarding this important public health issue should be based on high quality research and evidence. The commission may chose to investigate the status of this strategy and changes in community policies at some point in the future.

- **Health Workforce Development**
  - **Workforce issues related to supporting the Patient-Centered Medical Home::**
    - Sufficient supply of the appropriate workers needed to support the care team
    - Appropriate training and other workforce issues to support the roles of the care team members

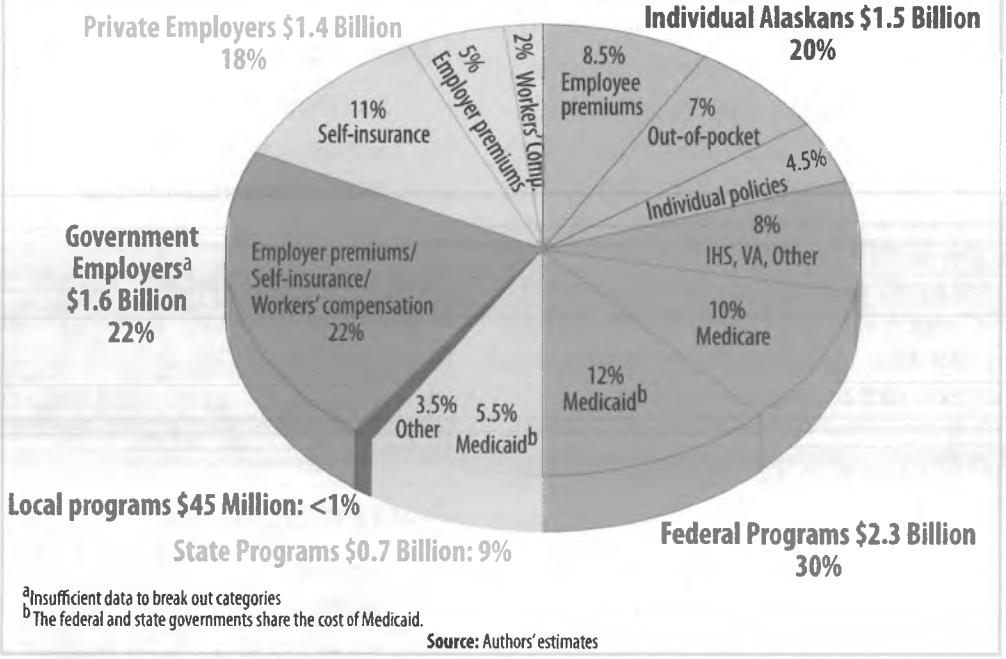
Alaska's Health-Care Bill: $7.5 Billion and Climbing

By Mark A. Foster and Scott Goldsmith

UA Research Summary No. 18 • August 2011
Institute of Social and Economic Research • University of Alaska Anchorage

Figure 1. Who Pays for Health Care in Alaska?
(2010 Spending: $7.5 Billion)



[a] Insufficient data to break out categories
[b] The federal and state governments share the cost of Medicaid.

Source: Authors' estimates

Health-care spending for Alaskans reached about $7.5 billion in 2010. For comparison, that's close to half the wellhead value of all the oil produced in Alaska that year. It's also roughly equal to half the wages Alaskans collected in 2010.

The state's health-care spending has been rising fast, tripling since 1990 and jumping 40% just between 2005 and 2010—and at current trends it could double by 2020, reaching more than $14 billion.

Here we report on who's paying the bills, what we're buying, what's contributing to the growth, and other aspects of health-care spending. We conclude with a discussion of how Alaska could get better value for its health-care dollars.

- ***Who pays the bills?*** Individual Alaskans directly pay about 20%, state and federal programs around 40%, and private and government employers another 40% (Figure 1 and page 2).
- ***What's the biggest cost?*** Medicaid is the largest single expense, making up nearly 18% of all Alaska health-care spending. But that's down from 20% of total spending in 2005. Why? Because spending for Medicaid didn't grow as fast as other kinds of spending (page 3).
- ***Are costs shifting?*** Every category of spending increased since 2005—but because spending by individuals and private employers increased faster, their shares of total spending increased (page 4).
- ***What are we buying?*** Hospitals and doctors account for nearly 60% of total spending—but the next largest cost is the 10% that goes for administering private and government health insurance (page 4).
- ***What's driving spending*** Over the past 50 years, technology, income growth, medical-price inflation, changing insurance coverage, and a growing, aging population have driven health-care spending (page 5).
- ***How many Alaskans are uninsured?*** The answer varies depending on how "uninsured" is measured and when. But recent estimates say about 18% of adults and 9% of children are uninsured. Based on 2010 census figures, that would be about 17,000 children and 94,000 adults (page 6).
- ***How many Alaska businesses offer health insurance?*** More than 90% of large firms offer insurance, compared with just 30% of small businesses—and that's down from 35% in 2003 (page 7).
- ***Are prices higher in Alaska?*** Yes. But Alaska's isolation, small markets, and other factors contribute to those higher prices—a day in the hospital costs on average 50% more than in the U.S. as a whole, and costs for common procedures are roughly 35% higher (page 8).
- ***How is spending distributed?*** Just 10% of Americans are responsible for two-thirds of all health-care spending in an average year (page 9).
- ***What about the future?*** Expanded insurance coverage; an aging population; and continued growth in technology, incomes, and medical prices will keep driving growth in health-care spending in the coming years. Controlling that growth will be an ongoing challenge (page 11).

Who Pays the Bills?

Individuals, private employers, and governments share the direct costs of health care in Alaska (Figure 1 and Table 1).

Individual Alaskans spent about $1.5 billion for health care in 2010—20% of total spending.

- *Alaskans with employer-based insurance—both private and government—paid about $640 million* for premiums, and those with individual policies spent $350 million.
- *Out-of-pocket costs for Alaskans totaled about $545 million* in 2010. That includes deductibles and co-pays—the part of medical bills insurance doesn't pay. It also includes costs for services not covered by insurance, and money that uninsured Alaskans spent for medical bills.

Private employers spent about $1.4 billion—18% of total spending.

- *Alaska businesses spent around $835 million to self-insure* in 2010. They set aside money to pay medical bills themselves, rather than pay insurance premiums. They're betting that the medical bills will be less than the premiums they would have paid—and that their reserves will be enough to cover annual variation in claims. Many self-insured firms carry "stop loss" insurance, to protect them against very large claims. At first only large firms self-insured, but as insurance costs climbed, smaller businesses have also begun self-insuring.
- *Businesses spent about $400 million for insurance premiums* in 2010. That's only about half what businesses spent to self-insure, showing how widespread the practice of self-insuring is.
- *Medical bills of employees injured at work cost businesses about $150 million* in 2010. State law requires employers to pay for such injuries.

Government employers spent $1.6 billion for health benefits in 2010.

- *Local government employers—including school districts—spent about $630 million*, the federal government nearly $590 million, and the state $410 million.
- *Like businesses, many public employers self-insure, rather than pay insurance premiums*—but we don't have enough data to separate out those costs. The federal government also pays medical costs for active-duty and retired military personnel and veterans.

Governments spent nearly $3 billion for health programs in 2010.

- *Medicaid spending was nearly $1.3 billion in 2010*—$871 million in federal money and $409 million in state money. Medicaid is a federal program, but the state administers it and shares the costs (see page 3).
- *Medicare spending was $733 million in 2010*, accounting for nearly 10% of all health-care spending. Medicare is a federal program for people 65 and older and those with certain disabilities. Medicare spending is expected to grow rapidly in the next decade, as older Alaskans make up an ever-growing share of the population (see page 5).
- *The federal government spent close to $650 million for other health programs* in 2010, including the Indian Health Service, which provides medical care for Alaska Natives, and the Veterans Administration, which provides care for military veterans. Spending for these programs depends somewhat on enrollment, but it's also constrained by Congressional appropriations.
- *Besides its share of Medicaid, the state government spent about $260 million* for a variety of other programs in 2010, including grants to local governments, the state-operated Pioneer Homes for older Alaskans, and the Alaska Psychiatric Institute.

Table 1. Health-Care Spending in Alaska, 2010
(Total Spending: $7.5 Billion)

Individuals	**$1,529 million**
Employee premiums	$637
Out-of-pocket costs	$544
Individual policies	$348
Private Employers*	**$1,384 million**
Insurance premiums	$395
Self-insurance costs	$836
Workers' compensation medical	$153
Government Employers*	**$1,625 million**
Federal	$586
State	$408
Local	$631
Federal Health Programs	**$2,250 million**
Medicare	$733
Medicaid	$871
IHS, VA, Community Health Centers, public health, K-12 health	$646
State Health Programs	**$670 million**
Medicaid	$409
Local grants, API, Pioneer Homes, K-12 health, WAMI, Department of Corrections	$261
Local Health Programs	**$45 million**
Hospital and health program support	$40
Other local	$5

*Includes coverage for current and retired employees.
Source: Authors' estimates. See page 12 for a description of what's included in health-care costs.

- *Local health programs are much smaller*, at around $45 million in 2010, largely support for hospitals and health programs.

And finally, keep in mind that even though governments and businesses pays most of the *direct* costs of health care, individual Alaskans and other Americans *indirectly* pay all the costs of health care—because they buy goods and services, own businesses, and pay taxes.

Is There Also Spending Outside Alaska?

Our estimates are for health-care spending *in* Alaska. The health-care industry has been one of the state's fastest-growing sectors for decades, and it provides a broad range of care. But long-time Alaskans can remember when getting anything other than basic care required leaving Alaska. So some people wonder how much Alaskans spend for health care outside Alaska these days.

We know Alaskans still travel for some care—like very advanced cancer treatments available only in a few locations in the Lower 48. Also, some Alaskans go to other states—or even other countries—where medical prices are lower.

We don't have enough data to estimate overall health-care spending outside Alaska. In 2004, the federal Centers for Medicare and Medicaid Services estimated that the difference between spending *in Alaska* and spending *for Alaska residents* was roughly 2%.[1]

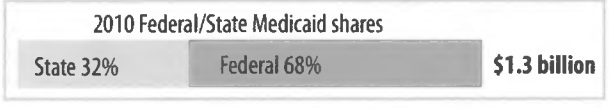
And Premera-Alaska, which has about 57% of the Alaska health-insurance market,[2] recently analyzed claims paid under one of its large group plans. Premera estimates that in a recent two-year period, a third of payments under that group plan went to providers outside Alaska. And of that third, one-third was paid to providers in Washington state and two-thirds to providers in other states (Figure 2).

Figure 2. Estimated Shares of Premera-Alaska's Payments For Care, Inside and Outside Alaska

Source: Jeff Davis, Premera-Alaska, based on analysis of recent claims of one of its large groups.

We can't generalize to other payers—like the Veterans Administration or the Indian Health Service or even other private insurers—that might have quite different spending patterns. Still, the Premera estimate offers interesting evidence that for at least some segments of the market, significant spending outside Alaska continues.

Largest Single Cost: Medicaid



The federal and state governments spent nearly $1.3 billion for Medicaid in 2010, making it by far the largest single health-care expense in 2010. So just what is Medicaid, and how many Alaskans benefit from it?

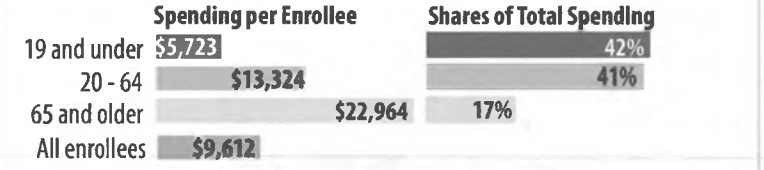
Medicaid is a joint federal-state health insurance program, administered by the state. The cost split has varied somewhat over the years, but it's typically closer to 50-50 than it was in 2010, when the American Recovery and Reinvestment Act (now expired) boosted the federal share.

Medicaid is for low-income families; adults with certain disabilities; and increasingly, long-term care in nursing homes for people who have spent down all their own assets and home-based services for those who meet specific disability criteria.[3]

Figure 3. Share of Alaskans in Medicaid, 2010

Sources: Alaska Department of Health and Social Services; 2010 U.S. census

Figure 4. Alaska Medicaid Spending by Age of Enrollee, 2010



Source: Alaska Department of Health and Social Services, Medicaid Budget Group, January 2011

There's also an expansion of Medicaid, called Denali KidCare, which covers children and pregnant women from families with incomes somewhat too high to qualify them for traditional Medicaid. Spending for both standard Medicaid and Denali KidCare are included in the $1.3 billion.

More than 135,000 of Alaska's 710,000 residents were enrolled in Medicaid and Denali KidCare in 2010—close to 20% of all Alaskans. Most of those—about 88,000—are children and teenagers. That means more than four in ten of all Alaskans 19 or younger are enrolled (Figure 3). About 38,500, or 9%, of working-age Alaskans are enrolled, as are nearly 9,000—or 16%—of Alaskans 65 or older.[4]

As Figure 4 shows, Medicaid spending is much different for younger and older enrollees. The average spending per child was under $6,000 in 2010—but because they make up so much of the enrollment, 42% of total spending was for them.

By contrast, average spending per enrollee 65 or older was close to $23,000. But because there aren't nearly as many older enrollees, they accounted for only 17% of total Medicaid spending. Some of those older Alaskans are in nursing homes, where care is expensive.

Enrollment in Alaska's Medicaid program increased about 23% over the past decade—but, as Figure 5 shows, Medicaid spending did not grow as fast as total health-care spending from 2005 to 2010. Medicaid spending was up about 32%, compared with 42% for total spending. The state held down cost increases in various ways in recent years—for example, by directing providers to prescribe generic rather than brand-name drugs whenever possible.

Still, spending for Medicaid and all other health-care expenses grew fast in recent years, and health-care spending is projected to continue growing fast in the coming years. In a later section we look at the factors contributing to that growth.

Figure 5. Increases in Medicaid and Total Health-Care Spending, 2005-2010

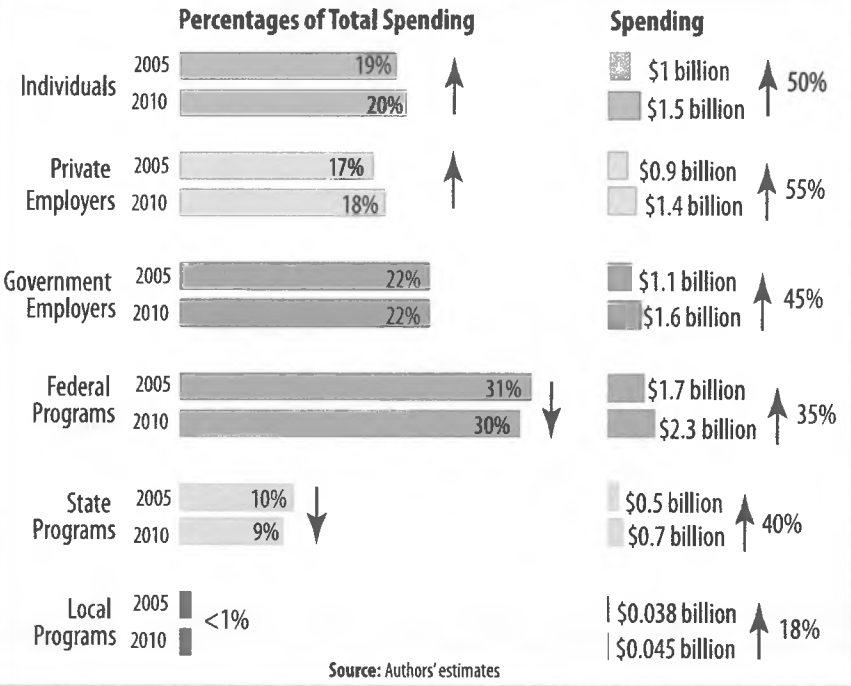
Sources: Alaska Department of Health and Social Services and authors' estimates

How Have Patterns of Spending Changed?

Every category of health-care spending increased between 2005 and 2010, but the shares of spending shifted slightly among the various payers. We don't have enough information to say exactly what caused this shift—but several things likely contributed, as we describe below.

- *Individuals paid 20% of Alaska's health-care bills in 2010, up from 19% in 2005.* As costs of health-care benefits increased rapidly, employers shifted more of those costs to employees (see page 7). Also, prices for policies individuals buy directly increased significantly.
- *Private employers' share of spending increased from 17% to 18%.* That increase was in part because private industry added nearly four times more jobs than governments did since 2005—and at least some of that bigger base of employees had health-care coverage.
- *Government employers' share of spending was about the same, at 22%.*
- *Government health programs accounted for a somewhat smaller share of spending, down from about 41% to 39%.* The federal and state governments have attempted to hold down growth in costs of health programs—but federal programs alone continue to make up nearly a third of all Alaska's health-care spending. Local government spending for health programs remains small, relative to that of the state and federal governments, and the increase in local spending was smaller as well.

Figure 6. Changes in Who Pays for Alaska Health-Care, 2005-2010



Source: Authors' estimates

How About Health-Care Jobs?

This summary looks at health care from the perspective of spending for care—but it's important to remember that the spending also supports jobs for Alaskans. As the Alaska Department of Labor and Workforce Development reports in its August 2011 *Alaska Economic Trends*:

- Health-care spending directly supports 31,800 jobs in Alaska. That's one in ten of all wage and salary jobs—in hospitals, offices of doctors and other providers, nursing homes, and many other places.
- Many additional jobs related to health care—in government agencies, and among the self-employed—aren't included in that total.
- Alaska employment in health care has been increasing at an annual rate of 4.3% for the past decade.

What Do Health-Care Dollars Buy?

Alaska's $7.5 billion health-care bill includes everything from visits to doctors and dentists to prescriptions and nursing-home care.[5] Figure 7 summarizes what Alaska's health-care dollars bought in 2010.

- *Hospital care was the largest expense,* followed closely by payments for doctors and related clinical services—together they accounted for about 60% of Alaska health-care spending in 2010.
- *Administering private and public insurance plans cost one of every ten dollars* spent for Alaska health care in 2010. That's more than spending for prescriptions and medical equipment, and nearly twice the spending for dentists.
- *Spending for nursing homes and home-health care made up only about 3%* of total spending, even though spending for home health care has increased rapidly in the past decade. Much of this care is paid for under Medicaid.

What's Been Driving Growth in Health-Care Spending?

Health-care costs in Alaska are higher than U.S. averages partly because of small markets and other conditions specific to Alaska (see page 8). But the factors that have been driving *growth* in spending are common to Alaska and the rest of the country. Some of these are general factors—that is, factors that add to spending not only for health care but for everything. Others are specific to health-care spending.

General Growth Factors

Some factors have contributed to growth in spending for all sorts of things, including health care:

• *More people and more older people.* Alaska's population was up 13% in the past decade, and it's projected to increase nearly 10% in the next (Figure 8). And the percentage of Alaskans 65 and older is rising—up from 6% to 8% since 2000 and projected to reach 12% by 2020 (Figure 9). Older people have more health problems and so higher medical costs.

• *General inflation.* The Anchorage consumer price index recorded an increase of nearly 14% from 2005 to 2010 (Figure 10).

• *Growing incomes.* As the economy grew, Alaskans and other Americans spent more not only for health care but for most goods and services.

Factors Specific to Health-Care

Other factors that have been driving up spending are specific to health care:

• *Faster inflation in health-care costs.* The health-care industry has been growing fast, in Alaska and nationwide, putting upward pressure on prices of many things that make up overall health-care costs. That partly explains why costs of medical care as reported in the Consumer Price Index (CPI) have been rising faster than general inflation (Figure 10). But the CPI also reflects some of the costs of new health-care technologies. It's impossible to sort out how much each factor contributes to growth in the CPI for medical-care—but it's important to recognize that the CPI is measuring not only changes in prices but changes in what is being priced.

• *New technologies and drugs.* Health care is not a fixed commodity but rather is continually changing as new technologies and drugs are developed. Some of these certainly make care more effective, while others may not—but adopting them adds to the price of health care.[6]

• *More use of medical services.* Alaskans and other Americans are making more visits and having more procedures, partly because they have new options but also because more are older. The changing prevalence of disease—some illnesses are more common and some less so—may also be increasing use of services. And a broad increase in insurance coverage in the past several decades may also have added to use.

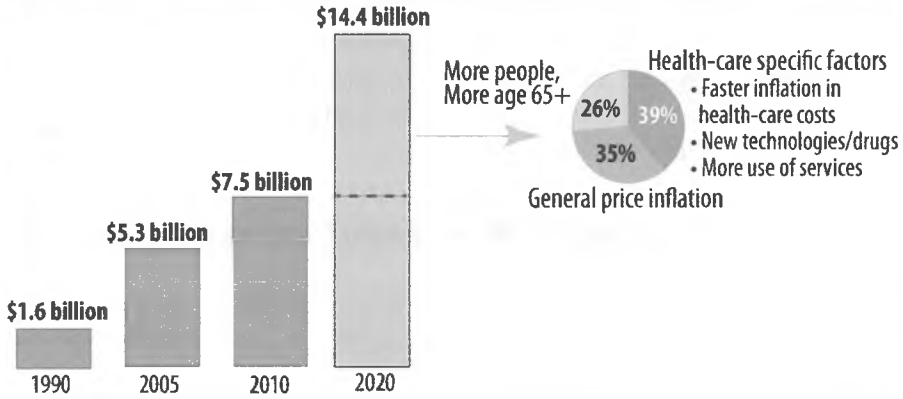
Figure 11. Alaska Health-Care Spending Could Double by 2020, At Current Trends: What's Driving Growth?



Source: Mark A. Foster and Associates estimates, based on Centers for Medicare and Medicaid Services, National Health Expenditure accounts

What's Ahead?

Looking forward, Alaska's health-care spending could double in the next decade. Why? As Figure 11 shows:

• *General factors will likely account for about 61%* of growth between 2010 and 2020—with general price inflation accounting for 35% and a growing and aging population 26%.

• *The remaining 39% of projected growth can be traced to health-care specific factors.* But sorting out how much of that 39% can be traced to any specific factor—like more use of services—is impossible.

What Health-Coverage Do Alaskans Have?

Here we look at how individual Alaskans cover health-care costs. Many Alaskans have more than one type of coverage. The figures here are from two sources, which ask slightly different questions and use different definitions.

Figure 12 shows coverage for children for the period 2006 to 2008. It's from the American Academy of Pediatrics, based on the Current Population Survey (CPS), but with an important adjustment for Alaska.

Alaska Native children are eligible for care through the Indian Health Service, at IHS-supported clinics and hospitals; many also have coverage through Medicaid or private insurance. For some reason we don't understand, the CPS classifies children with *only* IHS coverage as "uninsured."

But the Academy of Pediatrics takes these IHS-only children out of the uninsured category, because they in fact have medical coverage. Classifying them as "uninsured" substantially increases the share of Alaska children shown as having no coverage. So keep in mind that the unadjusted CPS figures—which are often cited and used for comparisons across states—show a larger share of Alaska children as uninsured.[7]

Figure 12 shows 9% of Alaska children were uninsured in recent years. Based on 2010 census figures, that would be roughly 17,000 children. Children are less likely than adults to be uninsured. Denali KidCare—the Medicaid expansion for children and pregnant women—provides coverage for many children. The estimated share of uninsured children is smaller in Alaska than nationwide—9% versus 11%—in part because of IHS coverage.

Figures 13 and 14 show coverage for adult Alaskans, reported in a joint federal-state survey. That survey asks respondents to name only the coverage that pays *most* of their bills—but again, many Alaskans have more than one type of coverage.

- *Nearly one in five adults reported being uninsured in 2008*— based on 2010 census figures, that would be about 85,000 adults. Lack of insurance is most common among young adults, especially men.
- *Alaska's large number of military personnel and veterans is reflected in the 11%* of adults—mostly men—who report having coverage through either the military or the Veterans Administration.
- *About 9% of adults rely on Medicare.* But in Anchorage and other large Alaska communities, most primary-care doctors don't accept new Medicare patients.[8] So older Alaskans who have other options are using them—as the figure below shows.
- *Only 3% of adults in Alaska report relying on Medicaid,* while state figures show a substantially larger percentage (page 3). That discrepancy could be due to several things. Many Medicaid enrollees self-report themselves as uninsured. Also, some of those eligible for care through the Indian Health Service but also enrolled in Medicaid may have cited IHS as their principal source of coverage.

Figure 12. Health-Care Coverage for Children (18 and Under), Alaska and U.S.
(Average 2006-2008)

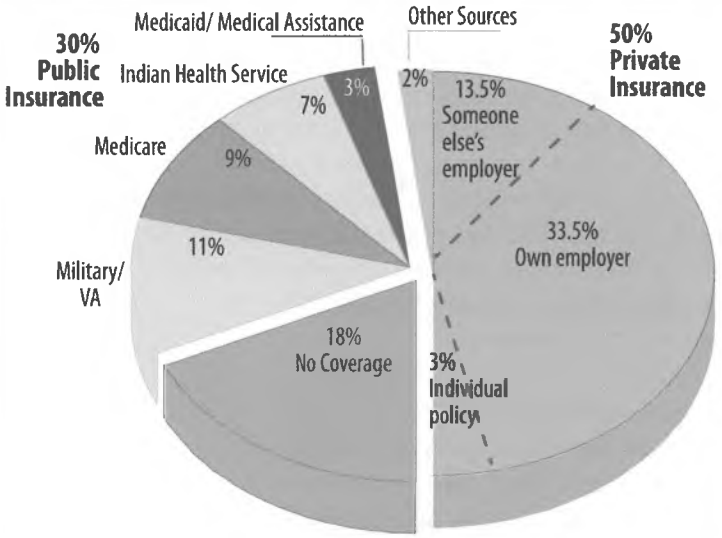
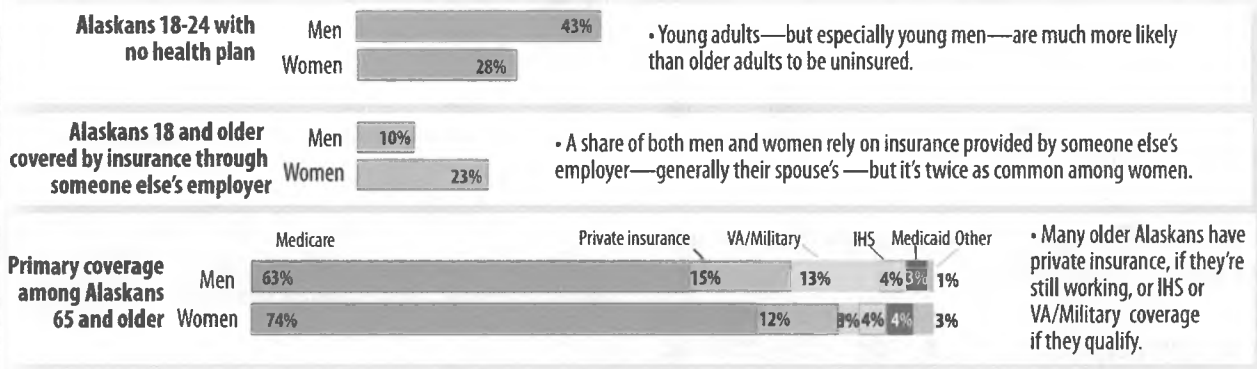
Figure 13. Health-Care Coverage by Type Among Alaskans 18 and Older, 2008*



*Type of coverage that pays most medical bills. Some Alaskans have more than one type of coverage; the survey asks respondents to list only the coverage that pays most of the bills.

Source: Behavioral Risk Factor Surveillance System survey, 2008

Figure 14. Differences in Coverage among Adult Alaskans, by Age and Sex



Source: Behavioral Risk Factor Surveillance System survey, 2008

Finally, uninsured Alaskans do have access to some care. Government-funded community health centers provide care and charge according to income, and federal law requires hospital emergency rooms to see all patients who come in. Also, annual insurance status is measured at a specific time; some people gain or lose coverage during the year.

How Many Alaska Businesses Offer Health-Insurance?

About 50% of adults in Alaska report using private insurance as their primary coverage (Figure 13). Here we report how many Alaska businesses offer insurance and how much it costs, based on a federal survey.

Figures 15 and 16 show that in the face of fast-rising premiums in recent years, businesses in Alaska and nationwide have been shifting more of the costs of insurance to their employees—and many small businesses have been dropping coverage altogether.

Premiums remain higher in Alaska, especially for single-person coverage. On the other hand, Alaska employees still pay a smaller share of premiums than the average U.S. employee.

But keep in mind that premiums are only part of employee health-care costs. Employees pay not only their share of premiums, but also deductibles and co-pays. It's likely that many employers have also raised deductibles—the amount employees have to pay before insurance kicks in—as costs increased. Deductibles can be thousands of dollars.

Patterns of increase in premiums were not consistent between Alaska and the U.S. as a whole in recent years—and in Alaska, premiums for single-person coverage increased much faster than premiums for family coverage. We don't have enough data to explain what caused those differences.

Also, comparisons over time are complicated by changes in who's paying and what's being covered. So while the figures here are useful for showing patterns, remember that many things can affect premiums.

- *Almost all large businesses in Alaska offer employee health insurance*—but that share dropped from 95% in 2003 to 93% by 2010. Nationwide, the share of large businesses offering insurance actually blipped up, from 95% to 96%.
- *Relatively few small Alaska businesses offered employee insurance in 2003*, and that share got even smaller by 2010, dropping from 35% to 30%. The share of small businesses nationwide offering insurance also dropped, but at 39% it's still higher than in Alaska.
- *Premiums for single-person coverage in Alaska went up more than 50%* from 2003 to 2010, compared with a 40% increase around the country. Premiums were already higher in Alaska in 2003, and the gap widened in recent years. Single-person premiums in Alaska were 15% higher than the U.S. average in 2003, but 23% higher by 2010.
- *Family coverage in Alaska cost 35% more in 2010 than in 2003.* But around the U.S., premiums for family coverage jumped 50%. And because of that faster growth nationwide, by 2010 premiums for family coverage in Alaska were only about 3% higher than the U.S. average.
- *Private employees in Alaska paid about 14% of premium costs* for single coverage in 2010, up from 11% in 2003. In the U.S. as a whole, the employee share for single coverage went from 17% to 21%.
- *The employee share for family coverage in Alaska was 22% in 2010*, up from 17% in 2003. Around the country, the employee share for family coverage was 27% in 2010, up from 25%. Still, even though Alaskans saw a bigger percentage increase, their payments for family coverage in 2010 remained below the U.S. average—$3,130, compared with $3,745.

How is Alaska Different?

Health-care spending of $7.5 billion is a lot for a population of around 710,000. We can't entirely explain why that health-care bill is so high, but we know that special characteristics of Alaska contribute.

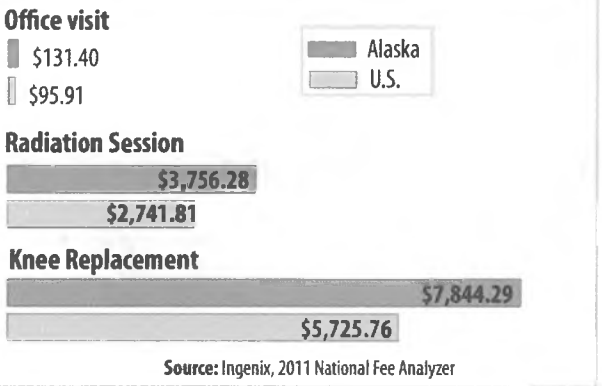
- Costs of most things remain higher than the U.S. average, because of Alaska's distance from the Lower 48, its many small, remote communities, and other factors. Improved transportation and growing urban markets have sharply reduced but not eliminated that historical difference in living costs.
- Alaskans have higher incomes than the U.S. average, and more work for government. People with more income tend to spend more for health care. Also, about one-quarter of Alaska jobs are in federal, state, or local government. Government jobs usually have good health insurance.
- Alaska's health-care system also faces conditions that tend to keep prices for care higher, relative to other U.S. places. Those include:

Alaska has to compete for doctors and other health-care professionals —and Alaska continues to be at a competitive disadvantage with other states. It's isolated; it has long, harsh winters; and many of its communities aren't even on the road system. To attract health-care workers, Alaska often has to offer them the opportunity to earn more or have other benefits.

Small, isolated Alaska hospitals tend to have higher staffing levels per patient than facilities in other states. Alaska hospitals outside urban areas are small and more isolated than small hospitals in other states. The number of patients in small Alaska hospitals can move up and down quickly—but they need to maintain enough capacity to meet times of high demand.

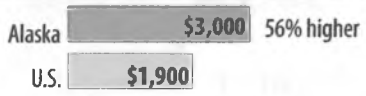
Small markets. Roughly half of all Alaskans live in Anchorage and nearby areas, but Alaska has hundreds of small communities—and the small markets in those places mean providers can't take advantage of economies of scale and have limited competition.

Figure 17. Private Insurance Payments to Doctors, Alaska and U.S., 2011



Source: Ingenix, 2011 National Fee Analyzer

Figure 18. Hospital Costs per Inpatient Day, 2009



Sources: Ingenix Almanac of Hospital Financial Operating Indicators; Medicare Cost Reports, Median Values

Those factors don't entirely explain Alaska's high health-care spending, but they help put it in context. Figures 17-19 show examples of price differences for medical care in Alaska and the U.S. as a whole.

- *Doctor's fees are in the range of 35% higher* for common procedures in Alaska, as Figure 17 shows. For example, private insurance might pay on average $3,700 for a radiation session in Alaska, compared with about $2,700 nationwide.
- *Average hospital costs per day are 56% higher in Alaska* (Figure 18).
- *Prescriptions on average cost 50% more in Alaska* in 2009, up from 26% in 2003 (Figure 19). At least part of that growing difference in price may be that generic drugs—which cost considerably less than brand-names—are not used as much in Alaska. There is also some evidence that Alaska's medical practitioners tend to quickly adopt new drugs, which are typically expensive.

Figure 19. Average Price of Prescriptions, Alaska and U.S., 2003 and 2009

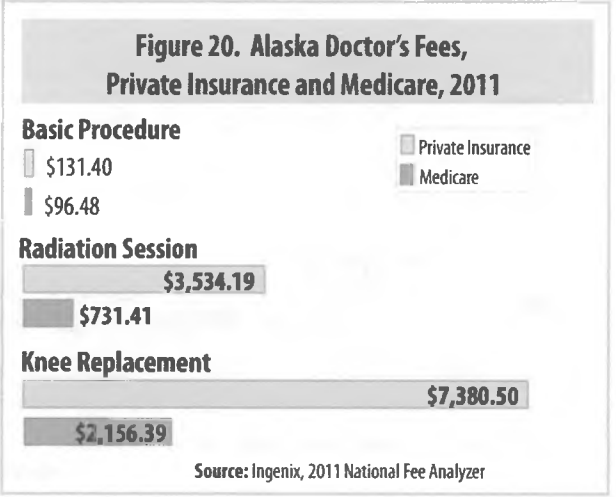
Gap in Medicare and Private Insurance Payments

Another health-care issue that's gotten a lot of attention in the past few years—especially in Alaska but also in the country as a whole—is the shortfall between what Medicare pays doctors and what private insurance pays them. Figure 20 provides examples of procedures, with Medicare paying only 30% to 77% of what private insurance pays.

And Medicare payments to doctors are scheduled to be reduced, as the federal government tries to hold down spending for the huge Medicare program.[9]

It's far outside the scope of this paper to discuss the possible future path for Medicare. Here we just want to note that if Medicare pays providers less than their actual costs, providers will attempt to recoup some of those costs by charging higher prices for those with private insurance. But we don't have data on providers' actual costs.

Figure 20. Alaska Doctor's Fees, Private Insurance and Medicare, 2011



Source: Ingenix, 2011 National Fee Analyzer

How is Spending Distributed?

Health-care needs differ across Alaskans and other Americans: some of us are born with genetic predispositions to certain illnesses; some of us take better care of ourselves; some of us are older and have costly, chronic ailments; some of us are just lucky.

We don't have figures specifically for Alaskans, but patterns of spending for Alaskans are not likely to be much different from those for all Americans. Here we look at average spending in the U.S. by type of ailment; by shares of the population; and by age.

Keep in mind that we're looking at how much the health-care system as a whole spends for certain groups—not how much individual Americans spend directly.

• *Patients with major acute ailments—like heart attacks or strokes—make up only about 8% of all patients treated across the U.S. but account for more than 22% of the cost.* Similarly, patients with major chronic ailments—like heart disease or diabetes—make up only about 5% of patients in the U.S. but account for 34% of costs (Figure 21).

• *By contrast, those with minor acute ailments make up 28% of all patients but are responsible for only 8%* of the costs. Those with minor chronic ailments—which don't require as intense care—make up 41% of patients but account for just 35% of costs.

• *Just 10% of Americans are responsible for 65% of all health-care spending in a typical year*—and the 1% of most expensive patients alone account for 20% of all spending (Figure 22).

• *At the other extreme, half the population is responsible for only 3%* of health-care expenses—and 15% of Americans have no expenditures at all.

• *Americans with the highest expenses are disproportionately older, women, and White.* The uninsured make up only a tiny share (2%) of the patients with the highest medical bills—but those costs are covered either by government support or through higher prices for those with insurance.

• *Americans with very small health-care costs are mostly young* and one-quarter are uninsured—and many are Black or Hispanic men.

• *Health-care spending routinely increases with age—although among infants it's driven up* by the high costs of care for premature babies. Spending is at its lowest among children, increases somewhat through the 20s and 30s, and then begins a steep climb so that spending among those 85 years old averages nearly 10 times as much as among children (Figure 23).

Are Alaskans Healthier?

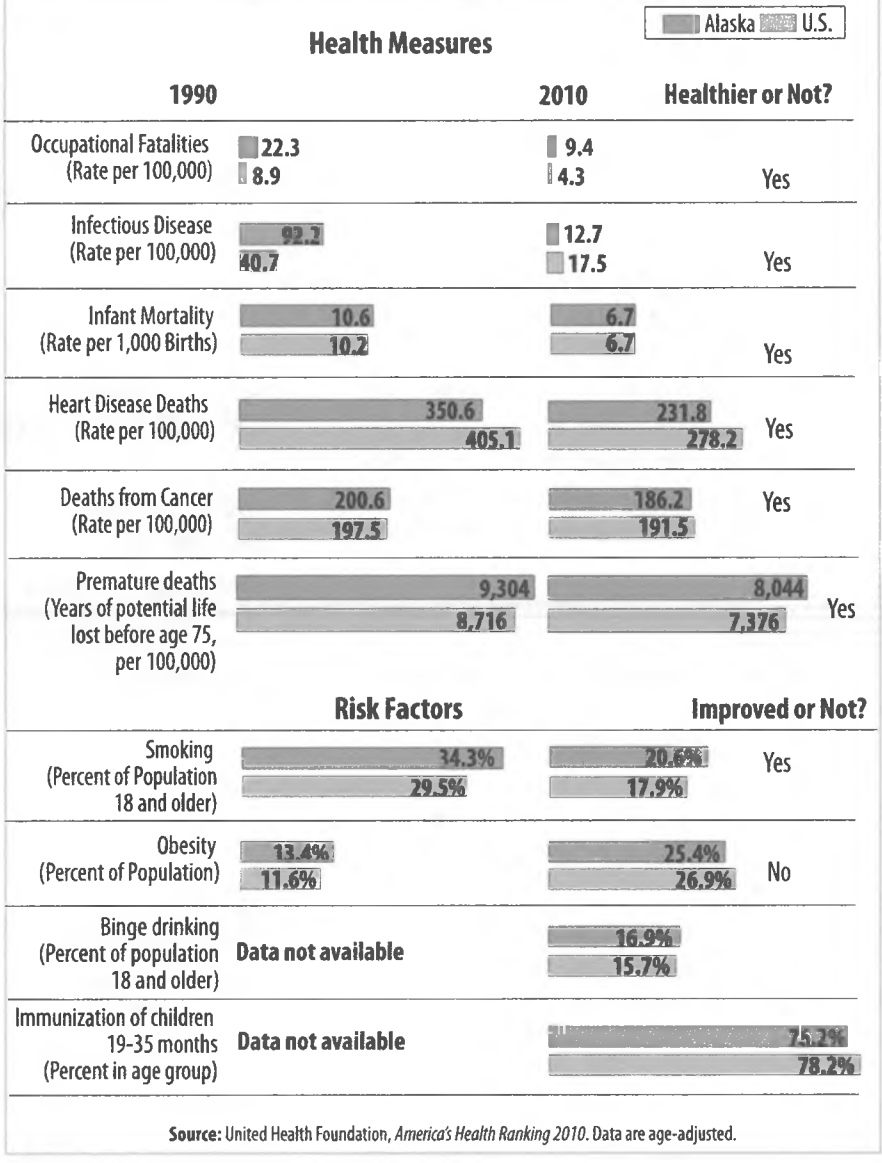
On a number of broad measures, Alaskans are healthier now than they were 20 years ago—and in some cases healthier than other Americans, as Figure 24 shows.

- *Deaths on the job are less than half as common* in Alaska now as in 1990, dropping from 22 per 100,000 to about 9 per 100,000—reflecting improved safety measures in many occupations, as well as the fact that a bigger share of Alaskans now work in generally safer jobs, like in retail stores. But many Alaskans still work in dangerous jobs—commercial fishing, for instance—so Alaska's rate of occupational fatalities remains twice that of the U.S. as a whole.
- *The rate of infectious disease in Alaska is now a small fraction* of what it was in 1990—down from 92 per 100,000 to under 13. Several things probably account for that, including higher rates of immunization. But a lot of credit also goes to federal and state programs that are building safe water and sewer systems in remote rural communities. The Alaska Department of Environmental Conservation reports that as recently as 1994, less than 40% of rural Alaska households had adequate sanitation systems. By 2005, nearly 80% had running water and flush toilets.[10]

And it's worth noting that the hundreds of millions of dollars the federal and state governments have spent for these sanitation systems is *not* defined as health-care spending—and so it's not included in our estimates.

- *Infant mortality has dropped sharply in both Alaska and the U.S. since 1990*, down from more than 10 infant deaths per 1,000 births to under 7. Experts say that infant survival is tied not only to the health of the mother but also to social and economic conditions in the communities where they're born, public health practices, and the availability of health care.[11]
- *Rates of death from heart disease and cancer—but especially heart disease—are down from 1990s levels* in both Alaska and the country as a whole. Treatments for those conditions have improved, and fewer Americans are smoking—which is a big risk factor for heart disease and cancer. Death rates for both heart disease and cancer are lower in Alaska than nationwide, even when adjusted for Alaska's younger population.
- *Alaskans are less likely to die prematurely now than they were in 1990,* but still more likely than other Americans to lose years off their lives—partly due to higher rates of occupational and other injury deaths.
- *The percentage of adult Alaskans who smoke has dropped from 34% in 1990 to about 21%*—but that remains above the national average, and means that one in five of all adult Alaskans still smokes.
- *Obesity is almost twice as common in Alaska now as in 1990.* Analysts link obesity to higher rates of diabetes, heart disease, and other illnesses.
- *Nearly 17% of adults in Alaska report binge drinking*—somewhat higher than the 16% among all Americans.

Figure 24. Changes in Health Measures and Risk Factors, 1990 -2010



Source: United Health Foundation, *America's Health Ranking 2010.* Data are age-adjusted.

- *About one-quarter of Alaska children don't have all the recommended immunizations* before age three. The U.S. rate is only slightly better.

It's beyond the scope of this study to provide a detailed comparison of the quality of health care in Alaska with that in the rest of the U.S. or other countries. Measuring the quality of health care has many dimensions, and comparisons are influenced by many factors.

Still, even though comparisons across countries are fraught with complexity, it's worth pointing out that data collected by the World Health Organization currently rank the U.S. number 31 in "healthy life expectancy"—the number of years that a person can expect to live in "good" health. With an expectancy of 70 years, the U.S. is 6 years behind the perennial leader, Japan, where healthy life expectancy is 76 years.

Some of the difference is due to a higher U.S. infant mortality rate, compared with that of other developed countries—but the higher mortality rate among Americans persists throughout the adult years. Some of the difference can also be traced to the high homicide rate in the U.S.—double that of most European countries.

What Contributes to Longevity?

Analysts are continuing to explore how important various factors are in making Americans live longer, healthier lives. They have looked at the issue in different ways, with different emphases. Figure 25 shows results from two assessments of what subtracts years from our lives. One assigns weight to specific factors—like smoking or lack of education—and the second generalizes to broader categories, like behavior and social circumstances.

The two ways of looking at the question aren't parallel, but they also aren't mutually exclusive. For instance, obesity—cited in the left-hand pie as one of the big contributors to early death—can be influenced by several factors in the right-hand pie: behavior (what people eat, as well as how much they eat); genetic predisposition; and social circumstances—for example, people without much money may eat more starchy, high-sugar foods that are cheaper but unhealthier.

What both sets of analysts do agree on is that lack of health insurance, or lack of access to good medical care, play relatively small roles in the overall longevity of Americans. That's not to say medical care isn't important: it saves thousands of lives daily.

But in the big picture, there are also many other individual, community, and social factors that affect health.

What About Health-Care Reform?

An obvious question, as we close this discussion of Alaska's current health-care spending and likely future growth, is how the 2010 federal health-care reform law might affect spending and coverage in Alaska.

We're not going to discuss that very complex question in this paper. The health-care reform law—formally, the Patient Protection and Affordable Care Act—runs to hundreds of pages and calls for substantial changes in health insurance and health-care sectors over the next decade. There is still uncertainty about how all the provisions will play out, or how they might be affected by any future changes in the law.

One of the authors of this paper has taken a preliminary look, in a separate paper, at the broad possible economic effects of the law in Alaska over the next decade. That paper finds that by 2019 overall health-care spending in Alaska is likely to be somewhat higher than it would otherwise have been—perhaps in the range of 3% to 4% higher—mostly because the new law will expand health-care coverage.[12]

Getting Good Value for Health-Care Spending

Analysts generally agree that the hundreds of billions of dollars Americans spend for health care are not giving us as much value as we should expect. Among the problems commonly cited are unnecessary care, fraud, system inefficiencies, failure to coordinate care, and care that could have been avoided, through preventive measures.[13] Spending per capita on health care is higher in the U.S. than in other developed countries, and yet by some measures the quality of care is lower.

Some researchers even believe we may be at a point where increased health-care spending is not translating into significant reductions in rates of illness and death. And clearly, fast growth in the nation's health-care bill limits our ability to pay for other important needs.

A growing, aging population and general inflation will continue to drive up the health-care bill in Alaska and across the country, as they have in the past. Rising incomes among Americans, and adoption of new technologies, will also add to future spending.

No one is suggesting that the U.S. try to curb health-care spending by reducing the development and implementation of new technologies that might provide real advances in health care. But we do need to think about how to rein in the growth in spending and get the best value from our health-care dollars.

What can we do? Many people inside and outside the health-care system agree on some general guidelines for change.

- *Consumer activism and improved transparency.* Patients should become more careful consumers of health care, and doctors and other providers should provide better information on alternate treatments and their comparative effectiveness.
- *System improvements and care coordination.* Hospitals, doctors, and other health-care providers should promote integrated delivery systems that put the patient at the center of the process. Building shared electronic medical record systems will be an important part of that.
- *Medical homes and culture of health.* Providers and patients should think of themselves as in a partnership, with the patients and the caregivers each taking an active part. Patients should take more responsibility for managing their own health—by paying attention to their own behavior, taking steps to try to prevent disease, and getting appropriate care for chronic diseases.

• *Patient safety and quality improvement.* The health-care industry should support initiatives to improve the quality of care and encourage a culture that continually strives to improve care.

• *Simplify reimbursement and reduce opportunities for fraud.* Providers, administrators, and patients should join together to help find ways of making the billing process easier and eliminating fraud, as well as recognizing those who demonstrate integrity in both billing and paying.

With those general guidelines in mind, many analysts suggest there are two areas of systemic reform that could help make the health-care system more efficient and cost-effective, and also moderate the rate of growth in future health-care spending. Those reforms are: changing how we pay for care, and changing how care is provided.

The current payment system is dominated by "fee-for service," which means payments to health-care providers are directly related to the volume of services they provide. So there's little incentive to reduce unnecessary care. By contrast, under a "bundled payment" approach, multiple providers are paid a single sum for all the services related to one episode of care—for example, a hospitalization plus a period of post-acute care. Some providers are adopting that payment system.

The current system for providing health care doesn't have mechanisms to screen treatments for either their medical effectiveness or their cost effectiveness. Many people agree that a reasonable step would be closer analysis of what treatments and technologies are worth the cost.

The challenge, of course, is that while many people believe the health-care system needs to be reformed, they disagree about how to make the changes. Also, the hurdles in reforming a system with very powerful vested interests will be formidable. But the savings from making the kinds of changes we just discussed could be in the range of 3% to 10% over 10 years.[14]

Given this national context, what about Alaska? Alaska's health-care system will always face challenges created by its special circumstances—remoteness and small, widely disbursed population—that will add to the cost of health care here, compared with other states.

Reducing that cost differential will require special programs—for example, investing in a "home-grown" supply of health-care workers. But Alaska has also already put into effect a number of initiatives to improve the value we get for our health-care spending.

One example is the Southcentral Foundation (serving Alaska Natives) which operates a patient-centered primary care system—NUKA—that the foundation reports has reduced per patient costs.[15] Another example is the recent training of dental technologist to do certain kinds of dental work in rural areas, to reduce the need to either fly dentists into remote villages of fly dental patients out. The state government also reduced the rate of growth in Medicaid spending in recent years, and the legislature recently expanded the state's authority to review increases in health-insurance rates.

Alaska's total health-care bill will continue to go up in the coming years, given that much of the bill is driven by population and general inflation. But potential systemic reforms—along with more initiatives like those we've just discussed—can make inroads in that growth, and give Alaskans more confidence that we're getting better value for our health-care dollars.

Endnotes

1. Centers for Medicare and Medicaid Services, *Health-Care Expenditures by State of Provider; Health Expenditures by State of Residence*, 2004.

2. Reported by Alaska Division of Insurance, FY 2010 Annual Report, Statistical and Financial Data, Accident and Health Market Share, Total Market, Direct Percent of Market, page 78.

3. See Family Medicaid Eligibility Manual, Alaska Department of Health and Social Services, Division of Public Assistance: http://dpaweb.hss.state.ak.us/manuals/fam-med/fmem.htm.

4. Here we use enrollment estimates of the Alaska Department of Health and Social Services, Medicaid Budget Group. Those estimates are not directly comparable to figures commonly found on the Kaiser State Health Facts website, which are from the Centers for Medicare and Medicaid Services and are based on enrollment counts for federal fiscal years. Reconciling the differences, typically less than 10%, was beyond the scope of this analysis.

5. We define health-care costs based on what's included in the National Health Expenditure accounts of the Centers for Medicare and Medicaid Services. These accounts include: hospital care; physician and clinical services; other professional services; dental services; other personal health care; home health care; nursing care facilities and continuing care retirement facilities; prescription drugs; durable medical equipment; non-durable medical products; government administration and net cost of private health insurance; government public health activity; and research structures and equipment.

6. Analysts often disagree about the effectiveness of new treatments. See, for example A. Rosen, et al., "The Value of Heart-Disease Care for the Elderly," *Health Affairs*, Vol. 26, No. 1, 2007; and M. Rothberg et. al., "Little Evidence of Correlation Between Growth in Health-Care Spending and Reduced Mortality," *Health Affairs* , Vol. 29, No. 8, August 2010.

7. The CPS also shows a smaller share of Alaska children—around 30%—relying on Medicaid in the 2006-2008 period than 2010 state figures show—about 40%. This may be because the figures are from different periods, or because the CPS is an underestimate.

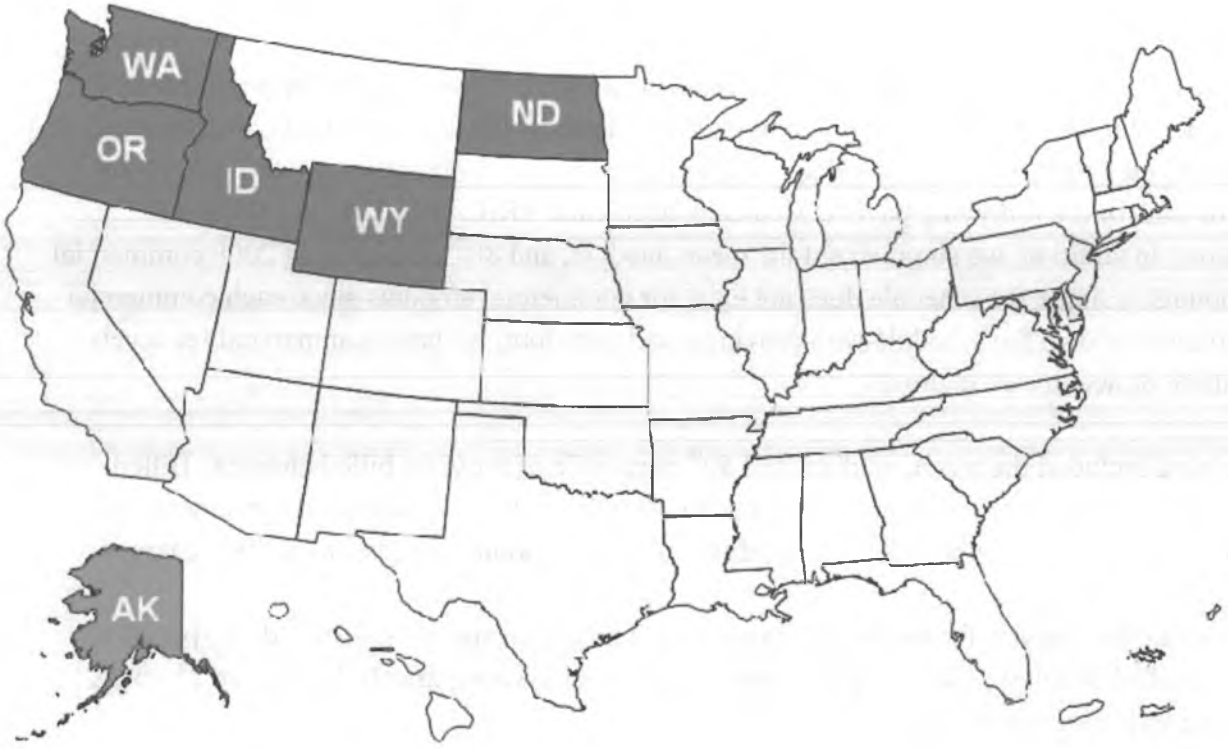
1. Executive Summary

The Alaska Health Care Commission ("AHCC") engaged Milliman to compare Alaska's health care payment rates and underlying drivers to those in certain other states. The comparison states are Washington, Oregon, Idaho, Wyoming, and North Dakota.



This report is the first of three reports. This report is focused on how Alaska's physician payment rates compare to other states. The second report will analyze facility payment rates. The final report will identify the key drivers of the cost differences across states.

Our results show that Alaska's physician reimbursement is approximately 59% higher than the average of the comparison states. Physician reimbursement in Alaska exceeds each of the comparison states for each type of payer and each provider specialty, though the differential varies. The results here should be interpreted with caution, since they only identify the relative reimbursement among states and do not consider reasons for the differences such as staff wages, cost of living, cost of business operation, or provider availability, which may account for some or all of the relative differences in reimbursement. Analysis of the drivers behind the differences will be presented in the third report in this series.

2. RESULTS

For this report, we define physician reimbursement to be the full amounts that providers may collect for a given service, commonly called "allowed amounts". These allowed amounts include member-paid amounts such as co-pays, co-insurance, and deductibles, as well as payments from the insurer (or government entity).

We compared relative allowed amounts for physicians in Alaska to those in the comparison states for procedure codes that were either in the top 25 by utilization rate or the top 25 in total cost (reflecting both utilization rates and the cost per service). The comparison was done separately using 2011 fee schedules for each of the following payers: Medicare, Medicaid, TRICARE, VA, and Workers' Compensation. In addition, we summarized the mean, median, and 80th percentile of 2009 commercial allowed amounts; a single fee schedule does not exist for commercial amounts since each commercial insurer negotiates its own fee schedule with providers and therefore, we have summarized fee levels from a database of health care claims.

Finally, we have included the mean, median, and 80th percentile of provider billed charges. Billed charges are the amounts that providers bill. In many cases, due either to contractual agreements with commercial insurers or government-set fee schedules, allowed amounts are less than billed charges.

We are providing the analysis for the top 25 codes overall across all specialties (including specialties not included in the list below). We have also performed the analysis separately for the top 25 codes for each of the following specialties:

- cardiology
- cardiothoracic surgery
- chiropractic
- DME
- ENT
- Family practice
- gastroenterology
- general surgery
- internal medicine
- interventional cardiology
- lab
- neurology

- ophthalmology
- orthopedics
- pediatrics
- radiology
- urology

For some specialties, such as chiropractic, there were fewer than 25 codes with significant volume and therefore, some of the analyses by specialty include fewer than 25 codes.

Detailed fee information for each state, payer, specialty and procedure code is included in Appendix A to this report.

Relative Reimbursement by Payer across States

Table 2.1 below shows physician relative allowed charges by state and payer. This table is based upon aggregate data across all of the specialties listed above except for DME. The table is calibrated so that the average across the five comparison states for each payer is equal to 100%. As an example, the 127% shown for Alaska Medicare indicates that Medicare reimbursement in Alaska is equal to 127% of the average Medicare reimbursement in the five comparison states. Across all payers, Alaska relative reimbursement is 160% of the comparison states across specialties that were analyzed.

Table 2.1
Physician Reimbursement Levels by State and Payer

	AK	ID	ND	OR [1]	WA [1]	WY
Medicare [1]	127%	96%	98%	100%	105%	101%
Tricare [1]	182%	97%	97%	101%	104%	101%
VA	215%	96%	98%	100%	105%	101%
Medicaid	174%	99%	134%	87%	68%	113%
Workers' Compensation	190%	108%	98%	107%	86%	N/A
Comm Allowed - Mean	169%	96%	96%	112%	92%	105%
Comm Allowed - Median	181%	94%	97%	113%	88%	107%
Comm Allowed - 80th Percentile	176%	98%	89%	110%	92%	111%
Billed - Mean	142%	90%	96%	113%	107%	95%
Billed - Median	147%	89%	98%	114%	105%	93%
Billed - 80th Percentile	135%	93%	93%	112%	104%	98%
All Payers [2]	160%	97%	105%	102%	91%	103%

All values are relative to the average for the five comparison states (excluding AK) for each payer category

[1] For this summary, the Portland, OR and Seattle, WA Medicare and Tricare fee schedules were used.

[2] The All Payers values are weighted by payer, using national health expenditure data from CMS. The weights are: Medicare - 28%, Tricare - 2%, VA - 2.4%, Medicaid - 20.8%, Workers' Compensation - 2.2%, and Commercial - 44.6%.

For Tables 2.1 through 2.3, summary values are not shown if fee schedule amounts were unavailable for more than half of the expected volume of procedures for combinations of state and payer or state and specialty. However, fee schedule amounts for procedure codes in cells marked as "N/A" are still used to determine the relative payment in other states/specialties where available.

Relative Reimbursement by Specialty across States

Table 2.2 below shows physician relative allowed charges by state and specialty, sorted based on the relative charge for Alaska. This is similar to Table 2.1 except that charges have been blended across payers to estimate the average relative reimbursement for each specialty within each state across all analyzed payer types. Alaska relative charges are once again about 50% higher than the comparison states, across all payers.

Table 2.2
Physician Reimbursement Levels by State and Specialty

	AK	ID	ND	OR [1]	WA [1]	WY
Pediatrics	143%	95%	110%	109%	91%	90%
Family Practice	148%	96%	109%	104%	93%	92%
Internal Medicine	150%	96%	109%	104%	93%	93%
Lab	151%	93%	114%	88%	84%	108%
Ophthalmology	152%	98%	98%	109%	97%	94%
OBGYN	157%	94%	100%	102%	94%	106%
Chiropractic	166%	93%	109%	103%	86%	105%
Urology	167%	96%	103%	105%	90%	101%
Gastroenterology	168%	100%	99%	100%	89%	106%
Radiology	170%	102%	95%	90%	84%	122%
Neurology	173%	101%	104%	102%	92%	97%
Orthopedics	177%	96%	101%	101%	90%	107%
ENT	179%	95%	101%	106%	91%	101%
General Surgery	179%	94%	98%	106%	90%	109%
Cardiology	183%	103%	96%	99%	88%	114%
Cardiothoracic Surgery	N/A	N/A	N/A	99%	92%	N/A
Interventional Cardiology	N/A	N/A	N/A	N/A	N/A	N/A
DME	121%	93%	105%	95%	100%	94%

All values are relative to the average for the five comparison states (excluding AK) for each payer category

[1] For this summary, the Portland, OR and Seattle, WA Medicare and Tricare fee schedules were used.

[2] The totals by specialty are weighted by payer using national health expenditure data from CMS. The weights are: Medicare - 28%, Tricare - 2%, VA - 2.4%, Medicaid - 20.8%, Workers' Compensation - 2.2%, and Commercial - 44.6%.

Values are only reported in Table 2.2 if both commercial and Medicare results were available. Appendix A presents summaries similar to Table 2.2, but presented separately for each type of payer. Appendix A also contains detailed information for all categories, including those with N/A in Table 2.2. The procedure codes used for interventional cardiology have changed in 2011 and as a result, fee schedule amounts for many payers no longer exist for the most commonly used procedure codes historically.

Relative Reimbursement by Payer within States

Table 2.3 below shows the relative allowed amounts within each state, sorted by the relative payment within Alaska. This table is based upon aggregate data across all the same specialties included in Table 2.1. Instead of reading this table across rows, it should be read down each column. This table shows, for each state, the relative reimbursement for each payer as compared to other payers in that state. For example, Medicare fees are 69% of the overall average fees across all payers in Alaska. By comparison, Medicare fees are 82% of the average statewide reimbursement in Idaho. However, the 69% and 82% values cannot be compared to conclude that Medicare reimbursement in Idaho is higher than in Alaska, since the overall average across all payers varies by state (and, as shown earlier in this report, is higher in Alaska than in Idaho).

Table 2.3
Relative physician reimbursement within each state (2009)

	AK	ID	ND	OR [1]	WA [1]	WY
Medicare [1]	69%	82%	80%	79%	95%	82%
Medicaid	83%	78%	100%	63%	55%	85%
Tricare [1]	93%	79%	76%	76%	91%	78%
VA	108%	82%	80%	79%	95%	82%
Comm Allowed - Mean	123%	119%	113%	127%	123%	119%
Workers' Compensation	169%	169%	148%	156%	146%	N/A
All Payers [2]	100%	100%	100%	100%	100%	100%

All values are relative to the All Payers value for each state

[1] For this summary, the Portland, OR and Seattle, WA Medicare and Tricare fee schedules were used.

[2] The All Payers values are weighted by payer, using national health expenditure data from CMS. The weights are: Medicare - 28%, Tricare - 2%, VA - 2.4%, Medicaid - 20.8%, Workers' Compensation - 2.2%, and Commercial - 44.6%.

Changes in Relative Reimbursement over Time

It is important to note that reimbursement rates change over time. While allowed charges typically increase each year due to medical inflation, these changes are not uniform across states, payers or specialties (and often vary across procedure codes) so that relative reimbursement will also change among these categories.

As an example, consider Medicare's geographic reimbursement adjustment for physicians, which is composed of three components: work, practice and malpractice. In very broad terms, the work and practice components have roughly the same weight, with the malpractice component forming a much smaller portion of the total payment. Each of the three components has a base nationwide payment amount for each procedure code which is then adjusted using Geographic Practice Cost Index (GPCI) factors to reach the allowed charge for specific geographic areas. The GPCI factors vary for each of the three components by geographic location, with an average of approximately 1.00 nationwide (prior to the adjustments described below). There are approximately 100 areas nationwide, though many states, including Alaska, have only a single set of GPCI factors for the entire state.

CMS updates the GPCI factors annually, leading to changes in relative reimbursement across geographic areas over time. Changes resulting from CMS's annual updates tend to be fairly small from year to year. Larger changes occur as a result of legislative action that overrides the GPCI factors calculated by CMS. Some recent examples are listed below:

- The Patient Protection and Affordable Care Act (PPACA) of 2010 introduced a minimum value of 1.00 for the practice component of the GPCI in "Frontier States", which include North Dakota and Wyoming. This increased the Medicare reimbursement for those states relative to other states. The practice GPCI was also increased halfway toward 1.00 in all other areas where the value was below 1.00.
- A minimum value of 1.00 was introduced for the work component of the GPCI in 2004. This minimum was introduced as a temporary provision, but has been extended in recent years through legislative action. This provision increases reimbursement in lower cost areas, relative to other areas.
- Beginning in 2009, the work GPCI factor in Alaska was set to a minimum value of 1.50. By comparison, the Alaska work GPCI factor in 2008 was 1.017.

Table 2.4 shows a summary of the GPCI factors in the comparison states before and after the 1.00 work GPCI floor and the practice GPCI changes.

Table 2.4
Comparison of GPCI Factors Before and After PPACA Changes

	2010 GPCI Factors Pre PPACA			2011 GPCI Factors Post PPACA			Change from 2010 to 2011		
Locality	Work GPCI	PE GPCI	MP GPCI	Work GPCI	PE GPCI	MP GPCI	Work GPCI	PE GPCI	MP GPCI
Alaska [(1)]	1.50	1.09	0.65	1.50	1.09	0.65	0%	0%	0%
Idaho	0.97	0.88	0.55	1.00	0.94	0.57	3%	7%	5%
North Dakota	0.95	0.84	0.39	1.00	1.00	0.45	6%	18%	17%
Portland, OR	1.00	1.02	0.47	1.00	1.02	0.54	0%	0%	15%
Rest of Oregon	0.97	0.93	0.47	1.00	0.97	0.54	3%	4%	15%
Seattle, WA	1.01	1.09	0.71	1.02	1.10	0.79	1%	1%	11%
Rest of Washington	0.99	0.97	0.69	1.00	0.99	0.77	1%	2%	11%
Wyoming	0.96	0.84	0.89	1.00	1.00	1.05	5%	19%	18%

1) Alaska work GPCI reflects the 1.50 floor established in 2009. In 2008, Alaska had a work GPCI of 1.017.

The changes in GPCI factors have significantly altered the relative Medicare reimbursement rates among the states in this analysis. Very roughly, these provisions increased Medicare reimbursement by approximately 20 – 25% in Alaska, and by approximately 10% – 15% in North Dakota and Wyoming, while having no impact on reimbursement in Portland, Oregon. Therefore, if the analysis had been performed three years ago, we would have found that Medicare reimbursement in Alaska was closer to that in the comparison states.

Similar changes in relative reimbursement have also been seen in other payers. Medicaid, in particular, is prone to significant changes in relative reimbursement across states, since each state sets its own reimbursement rates. Table 2.5 shows the relative changes in aggregate Medicaid reimbursement for physicians from 2003 to 2008.[1] Increases in reimbursement have varied considerably across states, with essentially no changes in New York and Minnesota, but increases of roughly 60% in Oklahoma and Pennsylvania. Alaska, with an increase of only 3% over the 5 year period, had one of the lowest increases. Looking forward, with changes to Medicaid eligibility under PPACA and with many states seeking to cut budgetary expenditures, we expect there to be more changes in relative Medicaid reimbursement.

3. Methodology and Detailed Results

This section describes the methodology used to develop the results in Section 2 and provides more detailed results where appropriate.

General Methodology

The list of the top 25 procedure codes is based upon data from the 2009 Milliman Specialty Database, which estimates the relative frequency of utilization for physician services by specialty and procedure code for a commercially insured population. The actual top 25 codes by volume varies by payer type (for example, Medicare would have significantly fewer maternity and childhood procedures). However, we wanted to use the same distribution for each payer, and the commercial distribution is a reasonable basis to select the top 25 codes for other payers.

Since the comparison is being performed across multiple states, we used the nationwide aggregate frequency for each code. For each specialty, we created lists of the 25 procedure codes with the most utilization in that specialty and lists of the top 25 procedure codes with the highest expected expenditures in that specialty (using relative value units as a proxy, reflecting a combination of utilization and anticipated cost per service); note that many codes appear on both lists in each specialty and therefore, this leads to fewer than 50 unique procedure codes when the lists are combined. We limit these lists to only include codes that made up 1% or more of the total utilization for that specialty. Therefore, some specialties have fewer than 25 codes listed.

Table 3.1 summarizes the percentage of the total utilization and relative value units captured by the "top 25" codes in each specialty.

Table 3.1
Percentage of Total Utilization and RVUs Captured

	% of Total Utils	% of Total RVUs
Cardiology	72.3%	64.1%
Cardiothoracic Surgery	48.5%	47.3%
Chiropractic	95.6%	93.7%
DME	52.4%	56.0%
ENT	80.0%	69.9%
Family Practice	62.0%	68.7%
Gastroenterology	80.9%	87.1%
General Surgery	52.0%	38.5%
Internal Medicine	60.6%	61.4%
Interventional Cardiology	95.6%	93.9%
Lab	48.2%	51.8%
Neurology	73.3%	72.6%
OBGYN	63.5%	65.9%
Ophthalmology	88.8%	82.1%
Orthopedics	64.7%	49.4%
Pediatrics	69.3%	73.9%
Radiology	59.3%	59.4%
Urology	75.4%	67.1%

For each code, we summarized the following:

- The mean, median and 80th percentile of commercial allowed amounts in each state based upon data from the 2009 Thomson Reuters MarketScan™ database. The following is a summary of total allowed dollars for professional services included in the MarketScan™ data by state (in millions).

AK	$95.1
ID	103.9
ND	42.4
OR	524.8
WA	727.2
WY	65.1

  We have not adjusted these charges to estimate changes in reimbursement levels since 2009. To ensure sufficient credibility in the data, we did not use results for any code with fewer than 10 claims in the database.

  Estimated commercial allowed charges by specialty use data from all specialties for each procedure code since the specialty data coding in the database could not support a separate analysis by specialty. For example, CPT 98941 (chiropractic manipulation) is the top code for chiropractors. However, in developing the allowed and billed charge metrics for this

procedure code, we used data for this code from all specialties (though we expect the vast majority of the volume to be from chiropractors). Often, payers do not vary their reimbursement by specialty and therefore, the inclusion of all specialties in the analysis is a reasonable approach.

The MarketScan database contains detailed claims data for commercially insured individuals. The data is submitted by large employer groups and health plans. As a compilation of many payers' data, our results reflect the average payment level for payers in the data, weighted by the volume of data. The payers included vary from market to market.

- Medicare allowed charges. In states where Medicare allowed charges vary by geographic area within the state, we included the Medicare allowed charges for each area.
- TRICARE allowed charges. In states where TRICARE allowed charges vary by geographic area within the state, we included the TRICARE allowed charges for each area. The analysis is based on the published TRICARE fee schedules. TRICARE increases payments in Alaska using Locality Based Waivers for some specialties and geographic areas.
- Medicaid allowed charges. We used publicly available Medicaid fee-for-service fee schedules. Many states have managed Medicaid programs. However, the managed care organizations typically pay providers at roughly similar levels to the FFS levels, although not always. In some cases, payment levels from managed Medicaid organizations may be higher than FFS levels.
- Workers' Compensation allowed charges, based upon publicly available fee schedules, though in the case of Alaska, there is a fee to obtain the fee schedule.
- VA allowed charges paid to external (non-VA) providers. For Alaska, we use the 2010 fee schedule. For all states other than Alaska, these charges are equal to Medicare and use the 2011 Medicare schedule. Note that the majority of VA's health care costs are incurred through salaries paid to staff and therefore, there is no explicit cost for those services. The fee schedule used here is applied to the smaller portion of VA services that are not provided by VA staff or through contracted care.
- The mean, median and 80th percentile of billed charges. Billed charge analyses were conducted using the 2009 Medicare 5% Sample, with no adjustment to reflect increases in billed charge levels since 2009. Like the commercial allowed charge database, we used data across all specialties for each procedure code and did not use results for any code with fewer than 10 claims in the Medicare 5% Sample. Although the billed charges are based on Medicare data, billed charges do not vary by payer and therefore this is also representative of charges billed to other payers including commercial and Medicaid.

The Wyoming Workers' Compensation fee schedule consists of conversion factors that are intended to be used with Ingenix Physician RVP RVUs. These RVUs, which are different than the Medicare RBRVS RVUs, are not publicly available and are calibrated to different conversion factors by service category. Since these values are not publicly available, we are unable to calculate fees for Wyoming Workers' Compensation.

Reimbursement for some procedure codes is impacted by modifiers. For each code, we used the most common associated modifier from the Medicare 5% Sample and MarketScan data. For the majority of codes this led to a blank, or global, modifier, which did not impact the fee schedule amount. However, for radiology services, the most common modifier was frequently the "26" modifier, indicating that only the professional component of the service was performed by the billing physician. Similarly, reimbursement for many DME codes is affected by a modifier indicating whether the equipment is new, used or rental. When comparing against reimbursement from the fee schedules, we have used the same modifier across all states and payers.

Many physician fee schedules vary fees according to the place of service, typically paying lower fees for services that occur in hospitals (referred to as "facility fees") and higher fees for services that occur in the doctor's own office ("non-facility fees"). The following fee schedules do not vary physician fees based on the place of service:

- Alaska Workers' Compensation
- All Medicaid schedules except for Washington
- Alaska VA

The fees reported in this analysis are based upon non-facility fees for all other schedules. As a result, reimbursement from the above schedules may be slightly understated since they effectively represent a blend of the lower facility fees with the non-facility fees.

Many fee schedules include at least some codes that are paid as a percentage of billed charges, paid at "reasonable charges", not covered by the payer, or bundled services (meaning that payment is included with payment for other services, such as surgical supplies). We have excluded any combinations of payer and procedure codes that fall under these categories from this analysis since they do not have an explicit fee schedule amount. There are relatively few such codes and therefore, their inclusion would not materially impact the results.

Development of Summary Results

In order to create a meaningful comparison among the states, results are shown as a percentage of the average across the comparison states; the average across states is calculated as an arithmetic mean, weighting each state equally. If information is not available for a specific combination of payer and state, the average is calculated using only the remaining payers or states. A simplified example for one specialty and payer is shown below.

Table 3.2
Relativity Calculation Example

	AK	ID	ND	OR	WA	WY	ID - WY Average
Medicare Fee	$110	$90	$90	$95	$90	$95	$92
Relative Percentage	120%	98%	98%	103%	98%	103%	

Using the methodology in Table 3.2, we develop a relative payment for each combination of HCPCS code, state and payer. Subtotals by state and payer are then developed by taking a weighted average of the ratios, where the relative weight for each code is based upon the relative utilization rate and relative value units from the Milliman Specialty database.

The All Payers total is based on a weighted average of the relative ratios for each payer in each state. Weighted averages across payers are based on the relative expenditures in the CMS 2009 National Health Expenditures.[2]

A similar process is used to develop relative payment levels across states for each specialty.

We have included the detailed summaries by specialty, state, and payer in Appendix A.

[2] For information about the CMS National Health Expenditures, see http://www.cms.gov/NationalHealthExpendData/25_NHE_Fact_Sheet.asp

4. LIMITATIONS AND CONSIDERATIONS

Any opinions expressed in this report are solely those of the authors.

Any reader of this report must possess a certain level of expertise in areas relevant to this analysis to appreciate the significance of the approaches and assumptions and the impact of these approaches and assumptions on the results. The reader should be advised by their own actuaries or other qualified professionals competent in the subject matter of this report, so as to properly interpret the material.

This report is not intended to benefit third parties. Regarding the contents of this report, Milliman makes no representations or warranties to third parties. Third parties are to place no reliance upon this report that would result in the creation of any duty or liability for Milliman or its employees to third parties, under any theory of law. Third parties receiving this report must rely on their own experts to draw conclusions about the report's contents.

As documented in the report, this analysis has relied extensively on historical data. The data were reviewed for reasonableness, but no independent audits were performed. Should errors or omissions be discovered in the source data, the results of our analysis would need to be modified. Future results will differ from the historic estimates in this report.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. We are members of the American Academy of Actuaries and meet the qualification standards for performing the analyses in this report.

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

The procedure codes used for interventional cardiology have changed in 2011 and as a result, fee schedule amounts for many payers no longer exist for the most commonly used procedure codes historically.
For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

Appendix A-20
Summary of Professional Provider Allowed Amounts by Payer
Alaska and Comparison States
Urology

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility claim

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

Appendix A-20

(1) Medicare fees are from CY2011 schedule.
(2) TRICARE fees are from the current schedules effective 8/1/2010.
(3) Alaska VA fees are from the 2010 schedule. All other states' VA fees are equal to Medicare (2011).
(4) Medicaid and workers' compensation fees are current as of 8/3/2011.
(5) Commercial allowed and billed are based off of CY2009 data.

For fee schedules that adjust payment based on place of service, payment is based on a non-facility clain

APPENDIX 1 RBRVS FOR HOSPITALS™

APPENDIX 2 ALASKA HOSPITAL LIST

1. Executive Summary

The Alaska Health Care Commission ("AHCC") engaged Milliman to compare Alaska's health care payment rates and underlying drivers to those in certain other states. The comparison states are Washington, Oregon, Idaho, Wyoming, and North Dakota. For this facility payment report, Hawaii is included as another comparison state.

This report is the second of three reports. This report is focused on how Alaska's facility payment rates compare to other states. The first report analyzed physician payment rates in Alaska. The final report will identify the key drivers of the cost differences across states.

This report focuses on commercial and Medicare hospital payment rates. The results presented in this report are based on analyses of large medical claims databases for claims incurred in 2009. Payments to specific providers, both by commercial payers and by Medicare, can vary significantly from the averages presented here.

Table 1 presents commercial allowed payment levels in Alaska relative to the six comparison states. Table 2 presents similar values for Medicare. The payment levels measure the total payment received by the facility, either paid by the insurer/Medicare or by the patient as copay, coinsurance, or deductible.

Tables 1 and 2 report payment levels relative to the straight (equal-weighted) average in the six comparison states. For example, Table 1 shows that the Alaska total commercial hospital payment level is 37% higher than the average in the six comparison states. Table 2 shows that the Alaska total Medicare hospital payment level is 36% higher than the average in the six comparison states.

Table 1
Commercial Hospital Allowed Unit Cost
Relative to the Comparison State Average

Region	Inpatient Average	Outpatient Average	Total Average
Anchorage/Frbnks/Mat-Su	138%	132%	135%
Non-MSA Area	134%	149%	141%
AK	138%	135%	137%
HI	117%	99%	108%
ID	79%	102%	91%
ND	72%	70%	71%
OR	103%	111%	107%
WA	113%	88%	100%
WY	116%	130%	123%
Comparison States	100%	100%	100%

Table 2
Medicare Hospital Allowed Unit Cost
Relative to the Comparison State Average

Region	Inpatient Average	Outpatient Average	Total Average
Anchorage/Frbnks/Mat-Su	128%	116%	126%
Non-MSA Area	151%	215%	175%
AK	132%	145%	136%
HI	104%	97%	102%
ID	95%	97%	95%
ND	83%	93%	86%
OR	107%	104%	106%
WA	110%	98%	106%
WY	102%	111%	105%
Comparison States	100%	100%	100%

Table 3 presents the ratio of commercial payment levels to Medicare payment levels by state.

Table 3
Hospital Allowed Unit Cost
Commercial / Medicare

Region	Inpatient Average	Outpatient Average	Total Average
Anchorage/Frbnks/Mat-Su	225%	253%	226%
Non-MSA Area	185%	154%	171%
AK	219%	208%	213%
HI	235%	229%	223%
ID	175%	233%	202%
ND	182%	169%	175%
OR	202%	238%	215%
WA	214%	200%	199%
WY	237%	260%	249%
Comparison States	209%	223%	212%

Table 3 shows that commercial payment levels are approximately 213% of Medicare payment levels in Alaska. The relationship in other states varies from 175% in North Dakota to 249% in Wyoming but is similar on average between Alaska and the comparison group.

For a list of Alaska hospitals included in the Medicare portion of this analysis, see Appendix 2. The commercial data did not specifically identify facilities; Alaska facilities were identified and mapped to MSAs using the zip code of the service.

The results in this report should be interpreted with caution since they only identify the relative unit cost reimbursement among states and do not analyze reasons for the differences such as staff wages, cost of living, cost of business operation, or provider availability, which may account for some or all of the relative differences in reimbursement. Analysis of the drivers behind the differences will be presented in the third report in this series.

2. Detailed Results

This report evaluates hospital allowed payment levels. These are the total payment amounts that are either contractually agreed upon by the hospital and a commercial insurer, or administratively set by Medicare. These "allowed amounts" include member-paid amounts such as co-pays, co-insurance, and deductibles, as well as amounts paid by the insurer/Medicare.

This report also includes a summary of the billed charge levels among the states.

To measure relative hospital allowed payment levels among the states, we employ a metric called the "Hospital Allowed per Relative Value Unit (RVU)". Relative value units are assigned to detailed claims data. The RVUs assigned reflect the amount of resources required to perform the given hospital service. Higher intensity services are assigned more RVUs; lower intensity services are assigned fewer RVUs. Both inpatient and outpatient services are assigned RVUs. The RVUs we use are the Milliman *RBRVS for Hospitals*™ RVUs. These provide the best case-mix and severity adjustment available. Appendix 1 presents more in depth information about the Milliman *RBRVS for Hospitals*™ approach.

The commercial results are based on analysis of the 2009 Thomson Reuters MarketScan® Database. The Medicare results are based on analysis of the 2009 Medicare Provider Analysis and Review (MedPAR) file for inpatient services, and the 2009 Medicare Outpatient Prospective Payment System (OPPS) and the Medicare Standard Analytic File 5% Sample (5% Sample) files for outpatient services. The billed charge analysis is also based on the MedPAR, OPPS, and 5% Sample files.

RVUs are assigned to the detailed claims data, and then allowed amounts from the same claims are summed. The total allowed amount divided by the total RVUs results in a conversion factor. The application of the RVUs provides the case-mix and severity adjustment, such that the conversion factors can be compared directly at whatever level of aggregation is desired.

Exhibit 1, at the end of this report, presents the detailed conversion factor results for the commercial allowed level. This presents results by detailed service category within the larger inpatient and outpatient categories. These results are consistent with the summary presented in Table 1 earlier in this report.

Exhibit 2 presents analogous information for Medicare payment levels. Table 2, earlier in this report, is based on the results from Exhibit 2.

Exhibit 3 presents the same for billed charge levels. This exhibit shows that Alaska has approximately 39% higher billed charges than the comparison states. The difference in billed charges is roughly similar to both the difference in commercial (35%) and Medicare (36%) payment levels between Alaska and the comparison states.

Exhibit 4 presents the commercial allowed charge results on a basis that is adjusted for expected geographic cost differences. The geographic adjustment factors are based on the geographic adjustment factors that Medicare uses for IPPS and OPPS hospital payments, including the Wage Index and Capital Geographic Adjustment Factor. These exhibits show that the difference between Alaska and the comparison states shrinks when geographic adjustments are taken into account, indicating that part of Alaska's higher reimbursement is due to area.

Medicare pays many hospitals on a prospective payment basis for both inpatient (IPPS) and outpatient (OPPS) services. However, certain hospitals such as Critical Access Hospitals, Cancer Hospitals and Children's Hospitals are paid on an alternate, cost-based basis. This is one reason why the Medicare geographically adjusted payment levels are still higher in Alaska than in other states. The Medicare geographic adjustment factors are applied to IPPS and OPPS payment, but not to cost-based payments.

Exhibit 5 presents results by state and type of hospital – either paid by OPPS or not. We divided hospitals into two categories based on whether Medicare pays outpatient services based on the Outpatient Prospective Payment System. This was a convenient attribute for us to use to split the data since our data source for Medicare outpatient services was split between OPPS and non-OPPS facilities. It also nicely defines a split between hospitals that are generally paid on a type of cost basis (non-OPPS) versus a prospective payment, fee schedule basis (OPPS).

Exhibit 5 show that, Medicare's inpatient payments tend to be very similar for hospitals that are paid under OPPS compared to those reimbursed on a cost-basis. However payments for outpatient services are considerably higher for those facilities not paid under OPPS, particularly in Alaska.

Other Payers

The above discussion dealt with commercial and Medicare payment levels. No comparable claims databases are available to perform similar analyses for other payers, such as Medicaid, Workers' Compensation, TRICARE, or the Veterans Administration.

However, we have reviewed the fee schedules for other payers in Alaska and the comparison states, where available. We include here more qualitative observations on these fee schedules.

- TRICARE is transitioning payment for hospital outpatient services to use Medicare's payment methodology. For hospital inpatient services, TRICARE pays using a DRG approach that is similar to Medicare, but with some differences. The amount paid for Indirect Medical Education (IME) is similar for both Medicare and TRICARE in each state. However, Medicare makes additional Disproportionate Share (DSH) payments in all states and and cost-of-living adjustment (COLA) payments in Alaska and Hawaii. The combined impact of these payments varies greatly across states. For example, the DSH and COLA payments in Alaska are approximately 17% of the total, while in Wyoming they are only 3%. Overall, TRICARE inpatient reimbursement in Alaska is approximately 125% – 130% of the comparison states average (about 10% lower than the 138% under Medicare).
- Medicaid payments for hospitals in Alaska are based on per diem rates for inpatient services (varying by facility) and on discounts from billed charges for outpatient services. Medicaid in Washington State applies a DRG approach for inpatient services for most payers and a fee schedule approach for outpatient services, so the two states cannot be easily compared.
- For Workers' Compensation, Alaska pays inpatient services on a per diem basis. Washington, Idaho and North Dakota use a DRG based approach, while Wyoming pays on a usual and customary basis, which is likely to produce higher fees than the other methods.

Utilization Efficiency

We note that this report considers only the relative cost per unit of service provided, but does not consider the relative efficiency of resource utilization. More efficient health care systems may discharge equivalent patients with shorter lengths of stay, or may direct more patients to outpatient settings instead of incurring more expensive inpatient care. Better preventive care and community health may avoid medical claims altogether. More efficient use of resources will reduce overall health care costs in an area and could offset higher unit costs. The third report in this series will review some aspects of resource utilization efficiency, among other things.

3. METHODOLOGY

The commercial results are based on analysis of the 2009 Thomson Reuters MarketScan® Database. This database contains detailed claims data for commercially insured individuals. The data is submitted by large employer groups and health plans.

The RVU assignment process is dependent on the quality of diagnosis and procedure coding in the data. As a compilation of claims data from several different sources, the coding quality found in the data varies significantly. We limited our analysis to contributors that we determined to have well-coded diagnosis and procedure code data.

The coding quality can vary between inpatient and outpatient services, even from the same data contributor. After poorly coded data is excluded, the remaining data likely will have an inpatient/outpatient mix that varies from that of the full data. Therefore, to estimate the overall hospital results, inpatient and outpatient combined, we applied a standardized weighting to the inpatient and outpatient categories. We applied a 49% weight to inpatient services and a 51% weight to outpatient services, based on a typical distribution of services for a commercial population.

We assigned Milliman *RBRVS for Hospitals*™ RVUs into both the inpatient and outpatient claims data. The commercial contractual allowed amounts were summed and divided by RVUs from the same claims to create the conversion factors.

As the MarketScan® data is a compilation of many payers, our results reflect the average payment level for payers in the data, weighted by the volume of data. The payers included vary from market to market.

The Medicare inpatient results are based on analysis of the publicly available 2009 Medicare Provider Analysis and Review (MedPAR) file. The Medicare outpatient results are based on analysis of the publicly available 2009 Medicare Outpatient Prospective Payment System (OPPS) data and the publicly available 2009 Medicare Standard Analytic File 5% Sample (5% Sample). The OPPS data only includes data on services paid under the OPPS payment system. We used the 5% Sample data to supplement the OPPS data set, in order to include results for Critical Access hospitals and other hospitals not paid on OPPS. We defined the split of OPPS/non-OPPS on whether a hospital's provider ID appeared in the OPPS data set.

The 5% Sample, not surprisingly, includes data for 5% of Medicare fee-for-service beneficiaries. In order to combine the Medicare outpatient results obtained from the 5% sample with those from the OPPS data (which is a 100% sample), we multiplied the 5% Sample results by a weighing factor of 20 (5% x 20 = 100%).

4. Limitations and Considerations

Any opinions expressed in this report are solely those of the authors.

Any reader of this report must possess a certain level of expertise in areas relevant to this analysis to appreciate the significance of the approaches and assumptions and the impact of these approaches and assumptions on the results. The reader should be advised by their own actuaries or other qualified professionals competent in the subject matter of this report, so as to properly interpret the material.

This report is not intended to benefit third parties. Regarding the contents of this report, Milliman makes no representations or warranties to third parties. Third parties are to place no reliance upon this report that would result in the creation of any duty or liability for Milliman or its employees to third parties, under any theory of law. Third parties receiving this report must rely on their own experts to draw conclusions about the report's contents.

As documented in the report, this analysis has relied extensively on historical data. The data were reviewed for reasonableness, but no independent audits were performed. Should errors or omissions be discovered in the source data, the results of our analysis would need to be modified. Future results will differ from the historic estimates in this report.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. We are members of the American Academy of Actuaries and meet the qualification standards for performing the analyses in this report.

RBRVS FOR HOSPITALS™

Milliman RBRVS for Hospitals

Will Fox, FSA, MAAA
Ed Jhu, FSA, MAAA
Charlie Mills, ASA, MAAA

WHAT IS RBRVS FOR HOSPITALS?

The Milliman RBRVS for Hospitals™ Fee Schedule provides a simple solution for comparing hospital contractual allowed amounts, billed charge master levels, efficiency, and patient mix differences. The fee schedule is based on Relative Value Units (RVUs). The RVUs are the same for procedures that require the same relative resources.

ADVANTAGES OF RBRVS FOR HOSPITALS

- RVUs have been developed for all hospital services (inpatient and outpatient), so they reflect the relative resources required to perform the care.
- The concept is similar to Medicare's RBRVS physician fee schedule, in that a conversion factor provides a valid comparison even for widely different provider types and patient populations.
- A single conversion factor can be used to benchmark a hospital contract. Lengthy summaries of hospital contracts with medical/surgical per diems, maternity case rates, ICU per diems, outlier arrangements, and miscellaneous outpatient reimbursement structures are no longer necessary.
- Allows insurers and hospitals to benchmark and compare contractual reimbursement levels, efficiency, billed charge master levels, and benchmark patient mix differences.

DEVELOPING RBRVS FOR HOSPITALS RVUS

All inpatient and outpatient procedures are assigned RVUs. Procedures requiring the same level of resources have the same RVUs. Both the inpatient and outpatient RVUs are developed using Medicare payment rates, which are then converted to RVUs using Medicare's RBRVS conversion factor. Therefore, inpatient and outpatient RVUs are directly comparable.

INPATIENT RVU DEVELOPMENT AND ADJUDICATION

Inpatient RVUs are developed at the most detailed level possible using data commonly available in administrative claims, resulting in a very refined patient severity adjustment

- RVUs are assigned per day, rather than per case. The RBRVS for Hospitals RVUs are comprised of Diagnosis Related Group (DRG) specific First Day and Additional Day RVUs. The First Day RVUs are an estimate of the resources required for the first day of each admission. DRG-specific Additional Day RVUs are assigned for each additional day of acute care. The Additional Day RVUs are an estimate of the resources required for each subsequent day of acute care.
- The Additional Day RVUs are lower than the First Day RVUs, reflecting lower resource use on the additional days. Thus, the RVU fee schedule adjusts for differences in length of stay and patient mix among hospitals. As a result, hospital specific average inpatient conversion factors developed using the RVUs provide a direct comparison of historic or projected fee levels for different hospitals, even if the fee schedules for each hospital are structured differently.
- Using Medicare's average length of stay, the Milliman RVUs and the Medicare RBRVS conversion factor will produce payments that are similar to Medicare's case rates, as demonstrated in Table A.
- For more refined risk adjustment, Milliman has developed RVUs for inpatient services based on APR-DRGs at each severity level within the APR-DRG system (1,266 DRGs/severity levels versus

TABLE A

INPATIENT EXAMPLE #1

ADDITIONAL DAY RVU	24.490
MEDICARE ALOS	2.933
TOTAL RVUS FOR ALOS	114.187
RBRVS CONVERSION FACTOR	$36.0846
AVERAGE CASE PAYMENT	$4,120.40

746 MS DRGs). In Table B, we provide a comparison of the MS-DRG RVUs to the APR-DRG RVUs.

The RVUs for any inpatient admission are calculated as:

(First Day RVUs + (Additional Day RVUs))

Note that "Additional Days" includes all days after day 1.

RVUs can be assigned to claims on either a per case or a per day basis. The formula above illustrates the calculation of RVUs using a "per day" approach and incorporates the LOS in estimating the resources used to treat a patient. Alternatively, Case RVUs represent the average resources used for the given service independent of LOS.

Case RVUs are created to be consistent with the characteristics of the population to be measured. For example, resource consumption for a given APR-DRG may differ between commercial and Medicare populations, or potentially between populations in different geographic areas based on LOS management. Milliman develops population-specific case-based RVUs by setting average LOS assumptions using client and/or benchmark data combined with actuarial judgment.

With RVUs assigned on both a per day and per case basis, a LOS efficiency measure can be calculated as:

$$\frac{\text{RVUs on a per day basis}}{\text{RVUs on a per case basis}}$$

Using this method of comparison, a ratio of 1.0 indicates average efficiency. Values lower than 1.0 indicates better than average efficiency, as the hospital required fewer RVUs than average to deliver its mix of services.

Table C shows an example of the implied efficiency for a sample discharge using APR-DRG 047 and Severity Level 1. By summing the RVUs and Case RVUs for each discharge, we estimate the overall efficiency factor for each facility.

OUTPATIENT RVU DEVELOPMENT AND ADJUDICATION

The outpatient case mix and severity adjustment methodology assigns an RVU for each procedure performed by the hospital using HCPCS.

The Milliman RBRVS for Hospitals outpatient RVUs can be viewed as an extension of the Medicare RBRVS schedule. We use the

DRG	SEVERITY	DESCRIPTION	FIRST DAY RVUS	ADDITIONAL DAY RVUS
MEDICARE-DRG				
069		TRANSIENT ISCHEMIA	66.848	24.490
APR-DRG				
047	1	TRANSIENT ISCHEMIA	65.682	23.666
047	2	TRANSIENT ISCHEMIA	66.145	23.949
047	3	TRANSIENT ISCHEMIA	70.933	25.383
047	4	TRANSIENT ISCHEMIA	88.064	31.381

* THE FOUR SEVERITY LEVELS AVAILABLE USING APR-DRGS ALLOW FOR A MORE REFINED QUANTIFICATION OF THE RESOURCES REQUIRED FOR SPECIFIC PATIENTS.
* MEDICARE SETS DRG RELATIVE WEIGHTS AT THE CASE RATE LEVEL, NOT ACCOUNTING FOR LOS VARIATIONS.

TABLE C

EXAMPLE OF IMPLIED LOS EFFICIENCY

APR-DRG 047, SEVERITY LEVEL 1 (TRANSIENT ISCHEMIA)

BASE RVUS	BASE LOS	ADDITIONAL DAY RVUS	AVERAGE LOS	CASE RVUS
65.682	1.000	23.666	1.711	82.509

EXAMPLE OF EFFICIENCY CALCULATION

ASSUMED LENGTH OF STAY (LOS)	(1) ACTUAL LOS	(2) LOS-ADJ. RVUS	(3) CASE RVUS	(4) = (2) / (3) EFFICIENCY FACTOR
AVERAGE LOS PATIENT	1.711	82.509	82.509	1.000
SHORT LOS PATIENT	1.000	65.682	82.509	0.796
LONG LOS PATIENT	3.000	113.014	82.509	1.370

RBRVS technical component RVUs as a basis for many procedures, such as X-rays and cardiovascular testing. We utilize many other data sources to create our outpatient RVUs including Medicare fee schedules, proprietary data sources and public data sources. Clinical and actuarial reviews are used to finalize the relative relationships.

Our 2010 outpatient hospital RVU schedule consists of 14,129 procedure codes. The breakdown of codes by source is as follows:

3,537	Medicare Fee Schedules
10,592	Milliman Defined
14,129	Total

There are many areas where publicly available fee schedules are not adequate for creating RVUs. We used other databases and our internal resources to estimate the relative resources to perform each of these services. For example, Medicare APCs include procedures of which the true cost may be as low as half of the APC average or as high as twice the average. Therefore, the actual resources required for a procedure within an APC can vary significantly. Since Medicare APCs do not define homogeneous patient services, Milliman Outpatient RVUs are assigned at the HCPCS level, rather than APC. By assigning RVUs at the HCPCS level for outpatient services, we are able to more precisely reflect the resources required for each specific service.

Table D illustrates the resource differences by HCPCS for a sample Medicare APC.

Most outpatient services have Milliman RVUs; however, the treatment of services with no RVUs is important in calculating conversion factors. The outpatient RVU fee schedule includes an identification field for all services that have no RVUs. Some procedures are not valued (NVS) because a more specific HCPCS should be coded. Some HCPCS are not valued because they are typically not paid to a facility, but to a professional provider type (NVO). Bundled procedures are labeled as NVB. Finally some low volume procedures have not yet been valued (NYV) by Milliman and should be excluded from analysis.

Conditionally packaged codes (status indicator Q) have both an RVU value and a not valued reason (either Q-T or Q-STVX, depending upon the bundling rules applicable to each HCPCS).

Following is a summary of entries for codes with no RVUs:

NYV	=	Not Yet Valued
NVS	=	Not Valued–non-specific procedure code
NVO	=	Not Valued–Other provider type should bill
NVB	=	Not Valued–Bundled procedure
Q-T	=	Bundled if another code with status indicator T is included in the same claim. Otherwise, RVUs are separately assigned.
Q-STVX	=	Bundled if another code with status indicator S, T, V, or X is included in the same claim. Otherwise, RVUs are separately assigned.

Reimbursement analyses can usually be performed with less than perfect data, since we can assume that the calculated conversion factor for the partial data is representative of the complete outpatient data set.

The RVU schedule includes a field labeled "maximum procs," which puts a limit on the number of times a procedure should be performed during a single encounter. This field can be helpful in evaluating reimbursement levels (attaching RVUs) and adjudicating claims. Our adjudication process limits units to the maximum procs for a HCPCS.

RBRVS for Hospitals includes a listing of revenue codes that represent bundled services. No RVUs should be calculated for line items with these revenue codes (unless there is a valid non-bundled CPT/HCPCS code), as the workload is implicitly covered in other lines within the encounter. CPT/HCPCS codes with N status indicators have no RVUs since they are bundled items.

2004999	3	270	A4649	N	3	-	-	BUNDLED CPT/HCPCS CODE. NO RVUS.
2004999	4	300	88302	X	1	0.354	0.354	PAID IN FULL.
2004999	5	360	49580	T	1	56.505	56.505	1ST "T" PROCEDURE. PAID IN FULL.
2004999	6	360	11100	T	1	2.458	1.229	2ND "T" PROCEDURE. REDUCED TO 50%.
2004999	7	370			4	-	-	BUNDLED REVENUE CODE AND NO HCPCS.
2004999	8	636	J2180	N	1	-	-	BUNDLED CPT/HCPCS CODE. NO RVUS.
2004999	9	636	J2270	N	1	-	-	BUNDLED CPT/HCPCS CODE. NO RVUS.
2004999	10	762			1	-	-	BUNDLED REVENUE CODE AND NO HCPCS.
	TOTAL						58.088	

Multiple procedure discounting follows the CMS rules. The code with the greatest RVUs and with status T is paid at 100%. Other codes with a T status are paid at 50% and, therefore, assigned half of the standard RVUs.

Table E shows the adjudication of a sample claim.

Note that, as a result of the bundling rules implicit in RBRVS for Hospitals, payment amounts should be compared on a claim-by-claim basis and should not use individual service lines. Payment systems that separately pay bundled services will have higher values for those amounts, but lower values for the main procedure(s) within each encounter.

Outpatient claims do not fall into homogeneous case categories as easily as inpatient claims. However, RBRVS for Hospitals supports hospital efficiency evaluations for emergency room and surgeries. In addition to the procedure RVUs, the user can assign a separate single RVU for the entire case, allowing the user to evaluate efficiency by comparing the case RVUs to the service RVUs. The efficiency-adjusted RVUs can be used to create efficiency-adjusted outpatient conversion factors.

Emergency Room case RVUs assume an average level of ancillary diagnostic and minor surgical procedures that varies by emergency room encounter level. The surgery case RVUs include an average level of ancillaries and additional surgeries for each primary surgical procedure. On average, the total RVUs should be approximately the same for procedure RVUs or case RVUs.

Case RVUs are not a standard part of the HECS license and need to be customized for the provider practice patterns in each service area. Customizing case RVUs for each line of business is a highly technical undertaking. Contact Milliman for help creating case RVUs.

CALCULATING CONVERSION FACTORS

Benchmarking contracts is as straightforward as adding up the allowed charges and RVUs for all procedures performed under that contract.

Table F shows an example of calculating an average conversion factor for a data set including one inpatient claim and one outpatient claim.

The procedural basis can be a CPT/HCPCS procedure code (i.e., outpatient hospital services) or a DRG (i.e., inpatient hospital stays). For DRGs, the RVUs vary with the LOS to further reflect the severity within a DRG.

A conversion factor may be calculated for any number and/or mix of services performed under the contract. If a procedure can be performed multiple times in one encounter (i.e., 15-minute physical therapy), then the procedure can either be listed multiple times or with multiple units of service on a single line. In either case, the units will be multiplied by the RVUs per unit of service to show RVUs consistent with the charges on the claim.

The HECS case mix and severity adjusted conversion factors provide a means to compare average per-unit costs among contracts, lines of business, health plans, service categories, hospitals or health

TABLE F

CALCULATING A CONVERSION FACTOR

	ALLOWED CHARGES	LOS	RVUS
APR 047-1	$6,000	3	113.014
82441	$20		0.237
99284	$275		6.185
A4642*	$95		-
74150	$425		5.709
TOTAL	$6,815		125.145
CONVERSION FACTOR [ALLOWED CHARGES/RVUS]			$54.46

* BUNDLED SERVICE. RVUS ARE IMPLICITLY INCLUDED IN RVUS FOR OTHER CPT/HCPCS CODES.

systems. Since the RBRVS for Hospitals RVUs adjust for the relative resources required to perform the services, the calculated conversion factors are comparable regardless of the underlying population, hospital type, or location. See Table G for an example of conversion factors for six contracts and their relative cost differences.

Users interested in developing a better understanding of the components affecting the average conversion factor may drill down to review the results by type of service. Table H expands the six-contract conversion factor summary from Table G to include each major type of inpatient and outpatient service.

A summary like Table H can be useful in identifying where a contract is high or low and allows the user to develop an action plan to change the contract details in order to improve the desired results. For example, assume that Table H represents six contracts for a payer and the payer wants to re-negotiate Contract #3 rates to be more in line with the other contracts. Rather than just ask for an overall rate decrease, the payer may want to focus on a particular area, such as outpatient radiology. The payer may either propose that the contract move to use the RBRVS for Hospitals RVUs and a lower conversion factor, or they may simply negotiate a lower payment using the current payment methodology (e.g., percent of billed charges).

TABLE G

CONTRACT SUMMARY TABLE

	TOTAL CONVERSION FACTOR	CONVERSION FACTOR RELATIVE TO TOTAL
CONTRACT #1	$55.48	1.000
CONTRACT #2	$46.29	0.834
CONTRACT #3	$80.43	1.450
CONTRACT #4	$60.64	1.093
CONTRACT #5	$63.70	1.148
CONTRACT #6	$48.46	0.874
TOTAL	$55.47	1.000

Alternatively, assume that Table H represents six contracts for a hospital and the hospital identifies that Contract #2 is a low outlier. The hospital can use the information in Table G to quantify the amount of increase needed. They may decide that they need a 25% increase in inpatient rates, but the outpatient rates are satisfactory.

RBRVS FOR HOSPITALS USERS AND REVIEWS

There are a large number of companies that have or currently use the RBRVS for Hospitals. They include:

- twenty Blue Cross Blue Shield plans
- many other insurers
- three state Medicaid plans
- hospitals (academic, tertiary, community)
- CalPERS (used to create a high performance network)

The RVUs were first developed in 1994 and are updated and reviewed at least once a year, in accordance with Milliman's strict internal peer-review standards. In addition, the RVUs are receiving continuous outside review as they are used by a wide variety of clients.

At the request of a client, an independent actuarial consulting firm performed a review. This review encompassed not only the RVUs themselves, but also the worksheets used to calculate relative provider costs, and ultimately, determine relative facility rankings.

A complete audit of the RVUs and hospital rankings was performed by the California Bureau of State Audits. The audit was comprehensive, covering all aspects of the hospital ranking process. The audit included an on-site review of the RVU development and documentation by an independent actuary hired by the state.

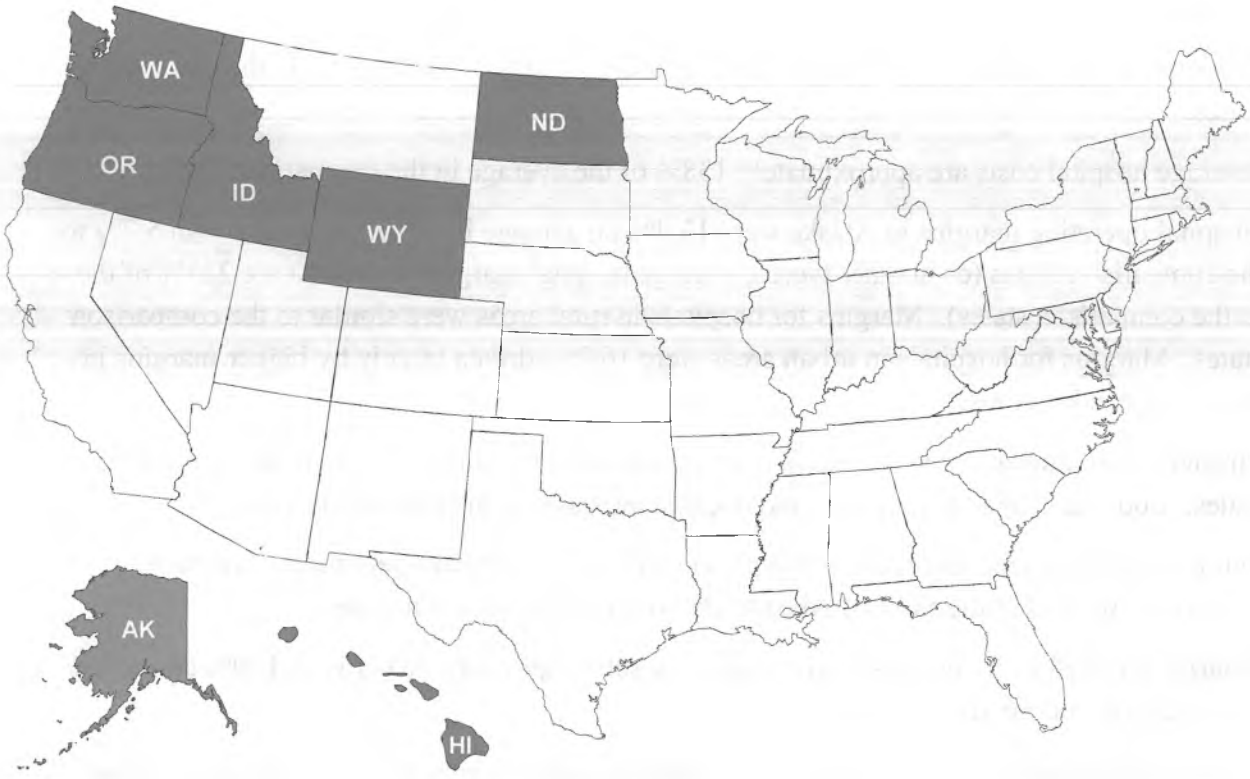
1. Executive Summary

Background

The Alaska Health Care Commission ("AHCC") engaged Milliman to compare Alaska's health care payment rates and underlying drivers to those in certain other states. The comparison states are Washington, Oregon, Idaho, Wyoming, and North Dakota. Hawaii was also included in the comparison states where practical. The comparison states were selected by the AHCC.



This report is the third of three reports. This report is focused on how Alaska's health care costs and underlying drivers compare to other states. The first report analyzed physician payment rates in Alaska. The second report analyzed facility payment rates in Alaska.

The previous two reports indicated that Alaska's reimbursement exceeds that in the comparison states for both physician and hospital services. Our analysis of the drivers behind those higher reimbursements suggests that some portion results from higher costs incurred by the providers. However, some component of the higher reimbursement is resulting in higher profit for private sector facilities in Alaska, particularly in the urban areas, and higher compensation for physician services relative to the overall cost of living. A brief summary of conclusions is presented below.

Our initial reports showed that the mean physician reimbursement from commercial payers in Alaska is approximately 169% of the average in the comparison states, and that across all payers, physician reimbursement is approximately 160% of the comparison state average. Similarly, commercial reimbursement for facilities in Alaska is approximately 137% of the average in the comparison states.

KEY CONCLUSIONS

- Commercial health care premiums in Alaska are approximately 130% of the average in the comparison states.
- Commercial hospital reimbursement is approximately 137% of the average in the comparison states.
- Average hospital costs are approximately 138% of the average in the comparison states.
- Hospital operating margins in Alaska were 13.4% on average in 2010, compared with 5.7% for the comparison states (or in other words, average hospital margins in Alaska are 233% of those in the comparison states). Margins for hospitals in rural areas were similar to the comparison states. Margins for hospitals in urban areas were 16.2%, driven largely by higher margins in two for-profit hospitals.
- Physician reimbursement in Alaska is approximately 160% of the average in the comparison states. Looking only at commercial payers, this increases to approximately 169%.
- Our analysis of discounts revealed that physicians have significant negotiating leverage relative to insurers in the State of Alaska relative to the comparison states.
- Salaries for health care professionals (excluding self-employed) are between 100% and 110% of those in the comparison states.
- Overall health care utilization rates for Medicare patients are similar to the comparison states. Utilization rates for commercial patients are similar to the comparison states for urban areas, but significantly higher in rural areas.

SUMMARY OF ANALYSES

Section 2 of this report shows that commercial premiums in Alaska are approximately 130% of the average in the comparison states. This is directionally consistent with the higher physician and facility costs, but is likely dampened somewhat by other elements of health care such as prescription drugs, which may have costs that are more similar to the comparison states.

The remaining report can be subdivided into two categories, utilization and unit cost. Sections 3 and 4 compare the utilization of health care services in Alaska against the comparison states. More efficient use of health care resources can offset higher unit costs. Our analyses found that urban areas in Alaska are similar to the comparison states in its resource utilization which makes it more efficient

than the nationwide average. Utilization in rural Alaska areas appears to be higher than in the comparison states. Utilization efficiency in rural areas is likely constrained by the delivery system and the relative lack of population density.

The remaining sections of the report focus on the cost per unit of service. On the hospital side, this can be further subdivided into the operating costs incurred by the facility (Section 5) and the profit margin (Section 6). Operating costs for hospitals in Alaska are approximately 138% of the average operating costs in the comparison states. This ratio increases to 186% when restricting to only the rural Alaska facilities. As a result, Alaska facilities have suffered higher losses from Medicare patients than in the comparison states. However, across all payers, average margins for Alaska facilities exceed those in the comparison states in each year of our analysis. The higher margins are driven primarily by two of the urban facilities, which have margins that are considerably higher than averages elsewhere in Alaska or the comparison states.

Sections 7 and 8 look at hospital occupancy rates and staffing ratios to explore contributors to the higher costs for Alaska facilities. Occupancy rates in Alaska are lower than the comparison states, particularly in the rural areas, consistent with the relationship between rurality and occupancy across the comparison states. As a result, there are fewer admissions over which to spread the fixed costs of operation, raising unit costs. Staffing ratios (measured as nurses per occupied bed) in Alaska are also higher than in the comparison states, further increasing costs.

Section 9 compares compensation for nurses and other employed health care professionals in Alaska against those in the comparison states. The analysis shows that salaries for nurses in Alaska are approximately 100% to 110% of those in the comparison states, as compared to the 160% ratio in commercial professional unit cost reimbursement. Similarly, Section 12 shows that the composite cost of living in Alaska is approximately 120% – 130% of the average in the comparison states excluding Hawaii.

Section 10 compares the relative availability of primary care by state. Approximately 12% of Alaska residents live in medically underserved areas. While this issue is a concern, it is not limited to Alaska, as the nationwide average is similar (and the percentage of medically underserved is higher in three of the six comparison states).

Section 11 compares negotiated discounts for commercial payers by state. Hospital discounts are similar to the comparison states (though the comparison states have a considerable range), but physician discounts are lower than each of the comparison states, which contributes to the higher reimbursement. We believe that the low discounts are indicative of physician negotiating leverage relative to the health plans, which is likely driven in turn by the relative scarcity of physicians (particularly specialists).

Overall, the higher commercial premiums in Alaska are being driven by higher unit costs, rather than by higher utilization of health care resources. The higher physician reimbursement is caused, at least in part, by the relative scarcity of providers. On the hospital side, higher reimbursement can be explained by higher facility costs in the rural areas, but is leading to higher profit margins in urban areas where the reimbursement in Alaska (relative to the comparison states) is greater than the relative cost.

This report did not review the relative quality of care provided to Alaskans, nor the relative health outcomes from treatment. Those issues were beyond the scope of our report but should be considered when evaluating the relative value of health care in Alaska.

2. Commercial Health Insurance Premiums

The level of a state's commercial health insurance premiums is a key indicator of the level of its health insurance costs. In this section we compare the level of Alaska's commercial health insurance premiums to the level in other states, and to the national average.

A. Detailed Results

Health insurance premiums are the amounts that health insurance companies charge individuals and businesses to pay for healthcare expenses. This section compares premiums that insurance companies in various states would have charged in 2010 to cover a typical company with 100 employees, for a Preferred Provider Organization (PPO) healthcare plan with specified benefits, including prescription drug coverage.

2010 Group Health Insurance Survey

Milliman conducts surveys of the premiums charged by the nation's health insurers that serve the commercial large- or small-group markets. Over sixty health insurers participated in the Milliman *2010 Group Health Insurance Survey*, the 17th edition, representing a total enrollment of about one hundred million members.

For the 2010 survey, respondents were asked to provide single employee, family, and per covered member premium rates for a specified group of 100 employees covered by a specified PPO plan, including prescription drug coverage as well as administrative costs and profit, but excluding broker commissions, with a July 1, 2010 renewal date.[1]

Data for the comparison of premiums in this section is from the Milliman 2010 Group Health Insurance Survey (see the sidebar). To learn more about how we compiled the premium data, see Section 2.B: Methodology.

Table 2A.1 below shows 2010 average commercial PPO premium levels for Alaska and the comparison states where there were 3 or more survey responses (states with fewer than 3 respondents are not included to preserve the confidentiality of respondents). The nationwide average premium shown in the table is the weighted average of premiums for all states with 3 or more survey responses, using census bureau data for persons under age 65 as the relative weight for each state.

For each state, the table shows monthly premiums for single employee coverage, family coverage and per member per month (PMPM). Results are shown relative to the average of the comparison states. Alaska's PMPM premiums are approximately 130% of the comparison states' average.

[1] For more information about the survey, see www.milliman.com/news-events/press/pdfs/milliman-group-health-survey.pdf

Table 2A.1
Health Insurance PPO Premium Levels as a Percentage of the Comparison States' Average (2010)

State	Health insurance PPO premiums					
	Single employee coverage		Family coverage		Per member	
	Monthly amount	Relative to comparison state average	Monthly amount	Relative to comparison state average	Monthly amount	Relative to comparison state average
Idaho	$486	91%	$1,358	98%	$451	95%
Washington	552	103%	1,413	102%	482	102%
Oregon	571	106%	1,406	101%	486	103%
Alaska	**684**	**128%**	**1,817**	**130%**	**613**	**130%**
Comparison State Average	$536	100%	$1,392	100%	$473	100%
Nationwide Average	$508		$1,390		$465	

In order to validate the results of the Milliman survey, we compared them to results obtained by the Agency for Healthcare Research and Quality (AHRQ) in their annual Medicare Expenditure Panel Survey (MEPS) for 2010. Results from MEPS are shown in Table 2A.2 and are similar to the Milliman survey results. MEPS showed that Alaska single-employee premiums were 126% of the comparison states' average, and family premiums were 110% of the average. These results include all six comparison states.[2] We suspect that the 110% value for families is driven by a different average family demographic in Alaska relative to the other states (e.g. fewer members per family), and we consider the 126% single-employee value to be the more meaningful value.

[2] For more information on the AHRP MEPS study, see http://meps.ahrq.gov/mepsweb/

Table 2A.2
Premium Levels from AHRQ as a Percentage of the Comparison States' Average (2010)

State	Health Insurance Premiums			
	Single employee coverage		Family coverage	
	Monthly amount	Relative to comparison state average	Monthly amount	Relative to comparison state average
Idaho	$375	94%	$948	88%
Hawaii	358	89%	1,005	93%
North Dakota	393	98%	1,045	97%
Oregon	432	108%	1,146	106%
Wyoming	434	108%	1,158	107%
Washington	415	103%	1,182	109%
Alaska	**507**	**126%**	**1,186**	**110%**
Comparison State Avera	$401	100%	$1,081	100%
Nationwide Average	$412		$1,156	

B. METHODOLOGY

The 2010 Milliman *Group Health Insurance Survey* presents state-specific health insurance premiums for a specified PPO plan for 32 states.[3]

The Milliman *Group Health Insurance Survey* requires three responses before including states. For the state of Washington, PPO premium data was not directly available from the survey, because Milliman received only two relevant responses from Washington healthcare insurers. To supplement the two responses, we used the publicly-available small group PPO rate filing for July 1, 2010 from a large Washington health insurer that was not included in the survey. From this insurer, we used the rate filing for the plan that most closely matches the specified plan for the survey. To put this additional plan on a comparable basis with survey responses, we used Milliman's *Health Cost Guidelines*™ to calculate the actuarial differential between the additional plan and the specified survey plan. We then adjusted the additional plan's premium rates to reflect this differential. Lastly, we averaged three premium rates (two from the survey, and one from the additional plan) to obtain the Washington premiums to compare to other states. We calculated average PMPMs using the specified demographics and the single employee and family rates.

[3] For more information about the survey, see www.milliman.com/news-events/press/pdfs/milliman-group-health-survey.pdf.

3. HEALTHCARE RESOURCE USE

A. DETAILED RESULTS

In this section, we compare the level of Alaska's healthcare resource use and healthcare utilization to the levels in other states and to national averages.

Wide variation in healthcare resource use

As an illustration, consider the rate of hip replacements per 1,000 people. In 2005 – 2006, Bryan, Texas had the nation's lowest rate—1.8 replacements per 1,000 Medicare beneficiaries—while Ogden, Utah had the nation's highest rate—7.2, four times higher than in Bryan, Texas. During the same period, Anchorage had a rate of 3.6.

These results are from the Dartmouth Atlas Project.[4]

In the US, there is wide variation from state to state in healthcare resource use and healthcare utilization. To compare healthcare resource use among the states, we employ a metric called "Adjusted Resource Use". It is the amount of healthcare resources used by Medicare beneficiaries in a particular state, adjusted for demographics (including health status) and the relative cost of health care services so that states are directly comparable. To learn more about the metric, see Section 3B: Methodology.

Table 3A.1 below shows the Adjusted Resource Use for Alaska and each comparison state during the period 2006 – 2008, both as a percent of the national average and relative to the comparison states' average. Alaska's Adjusted Resource Use is 87% of the national average, meaning that Alaska uses 13% fewer services than the nationwide average to treat a similar patient. The comparison states all have below average Adjusted Resource Use as well. Alaska's Adjusted Resource Use is equal to the average of the comparison states.

Table 3A.1
Healthcare Resource Use Among Medicare Beneficiaries (2006-2008)[5]

State	Adjusted Resource Use (% of national average)	Adjusted Resource Use (relative to comparison states)
Hawaii	76%	87%
Oregon	86%	98%
Alaska	**87%**	**100%**
North Dakota	88%	101%
Washington	89%	102%
Idaho	92%	105%
Wyoming	94%	107%
Comparison States	87%	100%
Nationwide	100%

[5] Medicare Payment Advisory Commission (2011), www.medpac.gov/document_TOC.cfm?id=631

Tables 3A.2 and 3A.3 show how Alaska compares to other areas on key healthcare utilization metrics. The utilization results in Table 3A.2 are based on data from Milliman's 2011 Commercial (i.e. Under Age 65) *Health Cost Guidelines*™.

Table 3A.2
Healthcare Utilization Results – Utilization per 1,000 (2011)

	Utilization per 1,000 people (2011)							
	Inpatient bed days		ER Visits		Office/home physician		Prescription drug scripts	
State	Days	Relative to Comparison States	Visits	Relative to Comparison States	Visits	Relative to Comparison States	Scripts	Relative to Comparison States
Washington	202	87%	190	99%	2,828	104%	8,558	100%
Idaho	206	88%	205	106%	2,548	94%	9,034	105%
Oregon	206	88%	205	106%	2,800	103%	8,083	94%
Wyoming	237	102%	214	111%	2,744	101%	8,748	102%
Hawaii	266	114%	135	70%	2,884	106%	7,797	91%
North Dakota	283	121%	206	107%	2,492	92%	9,224	108%
Alaska - Anch/Frbnk/Mat-Su	**193**	**82%**	**221**	**115%**	**2,772**	**102%**	**8,273**	**96%**
Alaska - Non-MSA	**467**	**200%**	**224**	**116%**	**2,884**	**106%**	**8,843**	**103%**
Alaska	**283**	**121%**	**221**	**115%**	**2,800**	**103%**	**8,463**	**99%**
Comparison State Average	233	100%	193	100%	2,716	100%	8,574	100%
National Average	283		178		2,800		9,509	

Table 3A.2 shows that Alaska ranks high in inpatient bed days, and ER visits, which are major components of healthcare resource use. However, a closer look reveals the broad disparity between the urban and rural areas within Alaska. Claims are assigned to geographic areas in Table 3A.2 based on the member's residence. Members in Alaska's urban areas have significantly lower utilization rates than those in rural areas, particularly for inpatient days. This result is not surprising, since the rural areas may not have the health care delivery systems in place to discharge patients quickly. This problem is exacerbated since many rural members receive treatment far from home, particularly for more complex cases, making discharge more difficult.

Table 3A.3
Healthcare Utilization Results – Surgical Replacements per 1,000 Medicare Enrollees (2005-2006)

State	Region	Surgical replacements per 1,000 Medicare enrollees (2005-2006)		
		Hip	Knee	Shoulder
Alaska	**Anchorage**	**3.6**	**9.3**	**0.9**
Hawaii	Honolulu	1.9	4.1	0.4
Idaho	Boise	5.9	11.9	1.7
	Idaho Falls	5.4	12.5	N/A
North Dakota	Bismarck	5.8	13.6	1.4
	Fargo/Moorhead	5.6	12.5	1.0
	Grand Forks	6.3	11.3	N/A
	Minot	4.9	10.1	N/A

	Olympia	4.5	10.5	0.8
	Seattle	5.3	8.5	1.0
	Spokane	5.7	11.2	0.9
	Tacoma	4.8	9.0	0.8
	Yakima	3.6	9.9	1.1
Wyoming	Casper	4.4	12.9	1.5
Nationwide Average		4.0	8.8	0.8

Dartmouth Atlas of Health Care

The Dartmouth Atlas of Health Care is a well-known and respected series of reports about unwarranted variation in US healthcare service use (as well as in healthcare expenditures and quality) founded by Dr. Jack Wennberg. Over his forty-year career, Dr. Wennberg has thoroughly demonstrated that the amount of health care one receives in the US varies widely from state to state, city to city, hospital to hospital, and even doctor to doctor, for reasons often unrelated to demographics, health status, or good medical practice.

Dartmouth Atlas reports and articles have included studies of unwarranted variation in:

- Elective surgery
- End-of-life cancer care
- Chronic illness care
- Endoscopic sinus surgery
- Hip, knee, and shoulder replacement
- Prostate-specific antigen screening
- Carotid artery stenting
- Inpatient use of services during the last six months of life[6]

Table 3A.3 shows the frequency of surgical replacements for a number of procedures. Results shown in Table 3A.3 are taken from the Dartmouth Atlas project (see the sidebar).[7]

The number of hip replacements in Anchorage is lower than or equal to every region in the comparison states except Honolulu. The number of knee and shoulder replacements appear about equal to the comparison regions.

[6] See www.dartmouthatlas.org/publications/reports.aspx and www.dartmouthatlas.org/publications/articles.aspx

[7] Fisher, E. S., Bell, J.-E., Tomek, I. M., Esty, A. R., & Goodman, D. C. (2010). Trends and regional variation in hip, knee, and shoulder replacement A Dartmouth Atlas Surgery Report (pp. 22): The Dartmouth Institute for Health Policy & Clinical Practice.

B. METHODOLOGY

To compare healthcare resource use among states, we employed a metric called "Adjusted Resource Use". This metric was developed by the Medicare Payment Advisory Commission (MedPAC), in order to identify geographic variation in the volume and intensity of services that comparable Medicare beneficiaries use.[8] MedPAC starts with fee-for-service Medicare expenditures for beneficiaries. It then adjusts the result to remove geographic variation in provider reimbursement levels, beneficiary health status, and beneficiary demographic characteristics.

The MedPAC report presents results for most states by Metropolitan Statistical Areas (MSAs). To obtain the Adjusted Resource Use for each comparison state, we weighted the MedPAC results for each of the MSAs in each state using the Census Bureau's count of people age 65 and over. For example, as shown in the following table, we calculated Washington's Adjusted Resource Use, expressed as a percentage of the national average, to be 89 percent. Note that some states, such as Alaska, were reported at the state level in the MedPAC report, and therefore no summarization was needed.

Table 3B.1
Calculation of the Washington Adjusted Resource Use as a Percent of the National Average

Metropolitan statistical area (MSA)	Adjusted Resource Use (percent of national average)	Population age 65 and over
Bellingham, WA	85	23,117
Bremerton-Silverdale, WA	85	28,979
Kennewick-Pasco-Richland, WA	88	22,651
Lewiston, ID-WA	83	3,797
Longview, WA	87	13,933
Mount Vernon-Anacortes, WA	94	16,942
Olympia, WA	84	28,059
Portland-Vancouver, OR-WA	85	43,027
Seattle-Bellevue-Everett, WA	90	265,880
Spokane, WA	91	55,894
Tacoma, WA	90	82,264
Wenatchee, WA	85	14,936
Yakima, WA	83	26,321
Non-MSA areas	89	128,549
Weighted average/total	89	754,349

[8] MedPAC calls the metric "Medicare Service Use". For details about this metric, see Medicare Payment Advisory Commission (2011). The report is found at www.medpac.gov/document_TOC.cfm?id=631. Its Appendix B contains the Adjusted Resource Use for Medicare beneficiaries in each US Metropolitan Statistical Area (MSA) and in non-metropolitan areas, expressed as a percentage of the national average.

4. INPATIENT LENGTH-OF-STAY

A. DETAILED RESULTS

When trying to explain variations in health care costs for inpatient services, analyses typically focus on inpatient days (as we did in Section 3), rather than admissions, since facilities continue to incur costs for each day of a patient's stay. However, it is also informative to disaggregate the utilization of inpatient days into the portions driven by admissions and by the average length of stay (LOS) per admission.

In order to create a valid comparison of LOS across states, we compared the actual average LOS in each state to a benchmark based on the nationwide average LOS by APR-DRG. The benchmark is adjusted for each state to reflect the mix of admissions. This methodology ensures that states are not penalized for having a greater percentage of higher severity cases, such as cardiology, while also ensuring that each state is evaluated based on a mix of cases appropriate to that state. For more information on how this metric is calculated, see Section 4B: Methodology.

Table 4A.1 shows the relative length of stay for urban (i.e. Anchorage, Fairbanks and Mat-Su) and rural areas within Alaska and for each of the comparison states.

Table 4A.1
Inpatient Average LOS Relative to Benchmark for Medicare Beneficiaries (2009)[9]

Region	Admits	Days	ALOS	Benchmark Days	Benchmark ALOS	Actual to Benchmark	Relative to Comparison State Average
Anchorage/Frbnks/Mat-Su, AK	9,617	50,189	5.2	50,558	5.3	0.99	112%
Non-MSA, AK	3,269	14,974	4.6	14,507	4.4	1.03	116%
Alaska	**12,886**	**65,163**	**5.1**	**65,066**	**5.0**	1.00	**113%**
Hawaii	21,793	142,018	6.5	118,056	5.4	1.20	135%
Idaho	34,011	145,842	4.3	176,881	5.2	0.82	93%
North Dakota	34,516	158,818	4.6	185,123	5.4	0.86	96%
Oregon	79,163	368,803	4.7	422,281	5.3	0.87	98%
Washington	178,270	833,226	4.7	952,459	5.3	0.87	98%
Wyoming	16,837	73,213	4.3	80,987	4.8	0.90	102%
Comparison State Average	364,590	1,721,920	4.7	1,935,787	5.3	0.89	100%
Nationwide Average	11,357,376	61,135,387	5.4	61,135,387	5.4	1.00	112%

[9] Medicare Provider Analysis and Review (MedPAR) file (2010), https://www.cms.gov/IdentifiableDataFiles/05_MedicareProviderAnalysisandReviewFile.asp

This table shows that Alaska's LOS is 113% of the comparison state average after adjusting for case mix. It is higher than all of the comparison states except Hawaii. However, it is also interesting to note that the length of stay in Alaska relative to the benchmark is close to the nationwide average, which is 112% of the average in the comparison states.

We note that Table 4A.1 shows similar results for both urban and rural areas within Alaska, in contrast to the large difference in total bed days shown in Table 3A.2. This can be partly explained by a difference in methodology. Whereas Table 3A.2 allocated admissions to areas based on the member's location, Table 4A.1 is based on the location of the facility where the admission occurs. Therefore, admissions for members in rural areas who are being transported to facilities in Fairbanks and Anchorage are counted within the urban areas. To the extent that the lengths of stay for those admissions are higher than average (even for those facilities) due to either the lengthy travel required for those members to return home or the need to find adequate care upon returning, those additional days of stay are being attributed to those urban facilities.

B. Methodology

We used publicly available data from the 2010 Medicare Provider Analysis and Review (MedPAR) file. Data was restricted to include only short term acute care hospitals, including critical access hospitals and sole community hospitals and to include only Medicare FFS admissions (removing those that occurred in Medicare Advantage plans). We retained admissions for all hospitals in the data, including tribal health facilities.

Each admit was grouped to APR-DRG and severity level using 3M's All Payer Refined DRG grouper. For each APR-DRG and severity level, we calculated the nationwide average LOS. The nationwide average LOS for each APR-DRG and severity level was used as the benchmark. For each region, we then summed up the actual days of stay and the benchmark days. The relative LOS statistic was then calculated as the ratio of the actual days of stay to the benchmark days based on the region-specific case mix.

5. HOSPITAL OPERATING COSTS

Hospital operating costs have a significant impact on commercial reimbursement levels. Higher operating costs have a direct impact on commercial reimbursement, and lead to greater losses for Medicare and Medicaid patients, thus leading to even higher commercial reimbursement. In this section, we compare the level of Alaska's non-federal hospital operating costs to the level in comparison states.

A. DETAILED RESULTS

Hospital operating costs are the expenses a hospital must pay to stay in business. They include staff wages and benefits; buildings, equipment, supplies, utilities and other items.

To measure relative hospital operating costs among the states, we employ a metric called the "Adjusted Hospital Costs per Relative Value Unit". For a state, the Adjusted Hospital Costs per RVU is the average amount of total operating costs per RVU for all hospitals located within the state. The cost per RVU is shown with or without a geographic adjustment to level out differences among states in wages and capital costs. Because the metric reflects costs per resource unit, it levels out differences in patient and service mix.

For this metric, operating costs are the expenses hospitals report to the Centers for Medicare and Medicaid Services (CMS) as part of the annual Medicare Cost Reports (see the sidebar), and "relative value units" for healthcare services are determined with the Milliman *RBRVS for Hospitals*™. For a complete description of the way we calculated this metric, see Section 5B: Methodology.

Medicare Cost Reports

Every year, each non-federal hospital that treats Medicare patients provides an extensive financial report, called the Medicare Cost Report, to the Centers for Medicare and Medicaid Services (CMS). In the report, the hospital provides data about its billed charges, operating expenses, net income, patient visits, and patient mix. A report is typically several hundred pages long.

The Medicare Cost Reports are publicly available through CMS.

To develop the Adjusted Hospital Costs per RVU for each hospital, we extracted the ratio of operating costs to billed charges by department.

Because tribal hospitals and government hospitals (i.e. military and VA) do not file cost reports in the same manner as other facilities, they are excluded from this analysis. The tribal health system is unique to Alaska and therefore, comparing costs at those facilities against acute care facilities in the other states would not necessarily be an appropriate comparison even if cost information were available.

Table 5A.1 reports payment levels relative to the cost per RVU weighted average in the six comparison states. For example, it shows that the Alaska total non-federal hospital operating cost is 138% of the average in the six comparison states. As with other analyses, there is a considerable difference in the costs for facilities in urban areas compared with rural areas. At least some of this difference can be attributed to the higher costs of living in more rural areas of Alaska, as well as necessary inefficiencies resulting from the operation of smaller facilities.

Table 5A.1
Cost per RVU Relative to the Comparison State Average

Region	Inpatient Average	Outpatient Average	Total Average
Anchrg/Frbanks/Mat-Su, AK	132%	114%	129%
Non-MSA Area, AK	182%	202%	186%
AK	137%	139%	138%
HI	95%	99%	97%
ID	92%	89%	90%
ND	73%	79%	74%
OR	109%	104%	107%
WA	103%	106%	104%
WY	109%	110%	110%
Comparison States	100%	100%	100%

Table 5A.2 is similar to table 5A.1, but adjusts costs to reflect anticipated differences in input costs based on the geographic adjustment factors that Medicare uses for Inpatient Prospective Payment System (IPPS) and Outpatient Prospective Payment System (OPPS) hospital payments, including the Wage Index and Capital Geographic Adjustment Factor. Table 5A.2 is included for informational purposes only; our analysis focuses primarily on Table 5A.1 since it is consistent with other analyses in this report which do not reflect geographic differences in Medicare payment. Relative to Table 5A.1, the costs for Alaska are lower in Table 5A.2.

Table 5A.2
Geographically Adjusted Cost per RVU Relative to the Comparison State Average

Region	Inpatient Average	Outpatient Average	Total Average
Anchrg/Frbanks/Mat-Su, AK	122%	108%	120%
Non-MSA Area, AK	168%	161%	160%
AK	127%	124%	126%
HI	89%	95%	91%
ID	102%	93%	98%
ND	88%	86%	87%
OR	105%	101%	104%
WA	100%	104%	101%
WY	119%	114%	118%
Comparison States	100%	100%	100%

Table 5A.3 presents results by state and type of hospital – either paid by OPPS or not. We divided hospitals into two categories based on whether Medicare pays outpatient services based on OPPS. This was a convenient attribute for us to use to split the data since our data source for Medicare outpatient services was split between OPPS and non-OPPS facilities. It also nicely defines a split between hospitals that are generally paid on a cost-related basis (non-OPPS) versus a prospective payment, fee schedule basis (OPPS).

Table 5A.3
Geographically Adjusted Cost per RVU

Region	OPPS Facilities # of Facilities	OPPS Facilities Total	Non-OPPS Facilities # of Facilities	Non-OPPS Facilities Total	Ratio: Non-OPPS / OPPS
Anchrg/Frbanks/Mat-Su, AK	4	$55	2	$44	0.81
Non-MSA Area, AK	2	$50	11	$86	1.72
AK	6	$55	13	$65	1.20
HI	14	$41	10	$53	1.30
ID	16	$44	25	$50	1.13
ND	8	$38	33	$49	1.26
OR	33	$47	18	$53	1.13
WA	49	$46	27	$39	0.83
WY	13	$53	15	$58	1.10
Comparison States	133	$45	128	$48	1.05

Table 5A.3 shows that operating costs tend to be higher for hospitals that are paid on a cost-basis compared to those reimbursed under OPPS. Part of the differential is likely driven by the higher cost of living in rural Alaska areas and also by efficiencies lost by needing to maintain access to services for a much more variable patient load. The cost level may also be influenced by the Medicare payment system; facilities that are reimbursed on a cost basis have less incentive to reduce costs than those paid on a fixed fee schedule. While the higher costs for Medicare patients are reimbursed by Medicare, the higher costs incurred in the treatment of Medicaid and commercial patients will be passed along to payers in Alaska.

B. Methodology

The following table illustrates how we calculated Adjusted Hospital Costs per RVU for each hospital (including the geographic adjustment). The total within each state (and across the comparison states) was calculated by dividing the total adjusted costs across all facilities in each state by the total RVUs in that state.

Table 5B.1
Illustration of Adjusted Hospital Costs per RVU calculation

Medicare claim codes for state A	Billed amount	Ratio of costs to billed amounts	Geographic adjustment factor	Adjusted costs	Relative value unit	Adjusted hospital costs per RVU
Service 1	B_1	R_A	G_A	$AC_1 = (B_1 * R_A)/G_A$	RVU_1	
Service 2	B_2	R_A	G_A	$AC_2 = (B_2 * R_A)/G_A$	RVU_2	
...	...	...	...	...	...	
Service n	B_n	R_A	G_A	$AC_n = (B_n * R_A)/G_A$	RVU_3	
Total				$\sum_n AC_i$	$\sum_n RVU_i$	$\frac{\sum_n AC_i}{\sum_n RVU_i}$

The inpatient results are based on analysis of the publicly available 2009 Medicare Provider Analysis and Review (MedPAR) file. The outpatient results are based on analysis of the publicly available 2009 Medicare OPPS data and the publicly available 2009 Medicare Standard Analytic File 5% Sample (5% Sample) [10]. The OPPS data only includes data on services paid under OPPS. We used the 5% Sample data to supplement the OPPS data set, in order to include results for Critical Access hospitals and other hospitals not paid on OPPS. We defined the split of OPPS/non-OPPS on whether a hospital's provider ID appeared in the OPPS data set.

The 5% Sample, not surprisingly, includes data for 5% of Medicare fee-for-service beneficiaries. In order to combine the Medicare outpatient results obtained from the 5% sample with those from the OPPS data (which is a 100% sample), we multiplied the 5% Sample results by a weighing factor of 20 (5% x 20 = 100%).

For each hospital, we used the cost-to-charge ratio from the CMS 2009 Medicare Inpatient Provider Specific (IPPSF) file[11] when available, and otherwise directly from 2009 Medicare Cost Reports.[12] Next, for each hospital we adjusted its operating cost amounts for geographic differences in staff wages and capital costs using the CMS 2009 Medicare Wage Index and Capital Geographic Adjustment factors.[13] We then calculated an adjusted cost amount for each service, as the billed amount times the cost-to-charge ratio, divided by the geographic adjustment factor.

[10] All data sources are publicly-available through CMS. For information about OPPS data, see www.cms.gov/LimitedDataSets/06_HospitalOPPS.asp.
For MedPAR, see www.cms.gov/IdentifiableDataFiles/05_MedicareProviderAnalysisandReviewFile.asp.
For the 5% Sample, see https://www.cms.gov/LimitedDataSets/12_StandardAnalyticalFiles.asp

[11] IPPSF data is publicly available through CMS. For information about this data source, see www.cms.gov/AcuteInpatientPPS/FFD.

[12] Medicare Cost Reports are publicly available through CMS. For information about them, see www.cms.gov/CostReports.

[13] For information about the Medicare Wage Index and Capital Geographic Adjustment factors, see www.cms.gov/AcuteInpatientPPS/03_wageindex.asp#TopOfPage.

The following table shows the relative geographic adjustments by service type.

Table 5C.1
Geographic Adjustment Factors

State	Geographic Adjustment Factor IP	OP
North Dakota	0.832	0.888
Idaho	0.901	0.942
Wyoming	0.932	0.958
Oregon	1.049	1.033
Washington	1.056	1.040
Hawaii	1.076	1.051
Alaska	**1.102**	**1.065**
Nationwide	1.000	1.000
