We assigned Milliman *RBRVS for Hospitals*™ RVUs to both the inpatient and outpatient claims data. Lastly, we divided the sum of adjusted cost amounts by the sum of RVUs. We did this for the total of all hospital services, as well as separately for inpatient and outpatient services. The total cost amount divided by the total RVUs results in a conversion factor. The application of the RVUs provides the case-mix and severity adjustment, such that the conversion factors can be compared directly at whatever level of aggregation is desired.

6. HOSPITAL MARGINS

This section compares the level of Alaska's non-federal hospital margins to the level in other states, and to the national average. Higher margins contribute to higher commercial reimbursement levels and higher commercial premiums.

A. DETAILED RESULTS

A hospital margin is its gain or loss divided by revenue, for a particular time period. We developed hospital margins from data in the Medicare Cost Reports (see the sidebar about Medicare Cost Reports in the previous section). For details about the methodology we used to determine this metric, see Section 6B: Methodology.

The table below shows the average non-federal hospital margins for Alaska and each comparison state for the period 2008 – 2010. The All Payer margins are calculated for all patients, including Medicare. Medicare operating margins are also shown separately. In order to compare to the Medicare operating margin, the All Payer Operating Margin is approximated by removing investment income and contributions from the All Payer Total Margin.

Medicare cost shifting

In many states, Medicare hospital reimbursements do not fully cover the costs of treating Medicare patients, and thus lead to hospital operating losses. Hospitals often cover these losses by negotiating higher reimbursements from other payers, such as from health insurers covering employer populations. This phenomenon is called Medicare "cost shifting".

A similar phenomenon occurs with Medicaid reimbursements, and is called Medicaid cost shifting.

The average All Payer margin for non-federal hospitals in Alaska is approximately 13.8%, compared to 6.9% in the comparison states in 2010. This means that the Alaska margin for non-federal hospitals is 6.9 percentage points higher than the comparison state average, or stated differently, that the average margin in Alaska is 200% of that in the comparison states. When restricting to operating margins for all payers, the average margin in Alaska is approximately 7.7 percentage points higher than the average in the comparison states (13.4% in Alaska vs 5.7% in the comparison states, meaning that All Payer operating margins in Alaska are 233% of those in the comparison states). For Medicare patients, the operating margin is more negative (by 2.6 percentage points) than the comparison state average (-11.5% vs. -8.9%). As demonstrated in the attached exhibits, the margins vary considerably across facilities.

Such markedly negative Medicare margins in Alaska cause upward pressure on commercial premiums, in order to offset hospital losses from Medicare business. This phenomenon is called "Medicare cost shifting".

Table 6A.1

Notes:
1) Based on Medicare Cost Reports.
2) All Payer Approximate Operating Margin removes investment income and contributions from the All Payer Total Margin.
3) Medicare values based on cost report allocation process and Medicare allowed costs. This typically leads to better margins than if all costs are included and allocated by LOB.

Separating results in Alaska into the urban and rural areas reveals that the higher margins in Alaska are caused mostly by the urban areas. Margins in the rural areas are similar to those in the comparison states and nationwide. However, margins in the urban areas are significantly higher than elsewhere. Even within the urban areas, there is considerable variance in the margins by hospital. The higher average margin for urban Alaska facilities can be largely explained by high margins at two for-profit facilities (Alaska Regional Hospital and Mat-Su Regional Medical Center).

It is important to remember that hospital margins have a leveraged effect on commercial reimbursement. Since payment from Medicare is on a fixed fee schedule (or fixed percent of cost), a 1% increase or decrease in commercial reimbursement will lead to a smaller change in a hospital's total operating margin.

The negative Medicare margins in the non-MSA areas were a somewhat surprising result. Many of these facilities are critical access facilities and therefore are reimbursed at a rate 1% above cost for inpatient and outpatient services. A closer examination of these cost reports revealed that the losses were being incurred on swing-bed skilled nursing services.

B. METHODOLOGY

For this report, we define hospital margin as a hospital's revenue minus expenses divided by revenue, for a particular period of time. To calculate the hospital total margin (for revenue and expenses related to all patients) and the Medicare operating margin (for Medicare patients only) for each state, we used data from the Medicare Cost Reports.

The following table shows how we calculated the 2010 margins for Alaska and the comparison states. The dollar amounts in the table are aggregate amounts for all hospitals in the state. As the table shows, margins are equal to income divided by net revenue.

Table 6B.1
Calculation of the Hospital Total Margin and Medicare Margin for Alaska and Comparison States (2010)
(dollar amounts in millions)

		All Payer							Medicare

Notes:
1) Based on Medicare Cost Reports.
2) All Payer Approximate Operating Margin removes investment income and contributions from the All Payer Total Margin.
3) Medicare values based on cost report allocation process and Medicare allowed costs. This typically leads to better margins than if all costs are included and allocated by LOB.

For total margins, we extracted total revenue and total expenses from the G series of the Medicare Cost Reports. These results include both operating and non-operating revenue and expense amounts. An approximate All Payer Operating Margin is calculated by removing investment income and contributions from the All Payer Total Margin.

For the Medicare margins, to obtain Medicare revenue amounts we extracted Medicare allowed amounts reported in the E series of the Medicare Cost Reports, and we obtained Medicare expenses from the D series. These are operating revenue and expenses, and do not include non-operating income and expenses. The Medicare expenses are limited to Medicare allowable expenses (e.g. excluding physician practice expenses and other items not allowed by Medicare). Thus, the financial basis of the two margins is different.

Since the margin analysis is based on Medicare Cost Reports, federal government facilities are excluded from the analysis as are all but one tribal health facility.

7. Occupancy Rates

A. Detailed Results

The number of occupied bed days divided by total bed days for a hospital is called the occupancy rate. These rates show the percent of staffed beds that are occupied, as reported by the Medicare cost reports. For more information on the Medicare cost reports, see the sidebar in Section 5A.

Higher occupancy rates will lead to lower costs per admission and higher margins. The expenses of the building and equipment will not vary as the occupancy rate fluctuates, but the revenue earned from occupied beds will help to offset those expenses. Table 7A.1 below shows the occupancy rates for Alaska and the comparison states from 2008 to 2010. The table includes only acute care hospitals (including critical access facilities) but includes sub-providers (i.e. psych and rehab units) within those facilities.

Table 7A.1
Occupancy Rates for Alaska and Comparison States (2008-2010)

Region	FY10 Number of Hospitals	Total		
		2008	2009	2010
Anchrg / Frbnks / Mat-Su, AK	4	55.5%	53.7%	53.6%
Non-MSA Area, AK	12	39.4%	38.4%	38.8%
AK	16	51.3%	49.5%	49.9%
HI	24	67.8%	64.2%	62.4%
ID	40	48.8%	46.6%	45.9%
ND	41	49.9%	48.8%	49.5%
OR	58	62.3%	61.4%	60.2%
WA	87	65.7%	64.3%	62.9%
WY	27	43.0%	41.3%	39.1%
Comparison State Average	277	60.6%	59.1%	58.1%
Nationwide Average	4,318	62.2%	61.2%	60.2%

Alaska's average occupancy rate for all providers was 49.9% in 2010, lower than the 58.1% average for the comparison states (which was in turn slightly below the nationwide average). The 58.1% average was calculated by summing total occupied bed days in comparison states and dividing by total available bed days in those states, so states with more bed days, like Washington, have more weight. Comparison state total rates range from 39.1% to 62.9%, with higher occupancy rates in the more densely populated states. In general, we expect to see higher occupancy rates in larger facilities (which typically coincide with urban settings) since those facilities should have more stable inpatient demand and therefore, would require less of a buffer in order to accommodate periods of high demand.

The Anchorage and Fairbanks areas have a significantly higher occupancy rate than the non-MSA areas, consistent with the higher occupancy rates in more densely populated states.

B. METHODOLOGY

For this report, we define occupancy rate as a hospital's occupied bed days divided by their available bed days, for a particular period of time. To calculate the rates for each state, we used data from the Medicare Cost Reports.

The following table shows how we calculated the 2010 occupancy rates for Alaska and the comparison states. The amounts in the table are aggregate amounts for all hospitals in the state that completed Medicare cost reports. Of note, as with other analyses based on the cost reports, federal government and tribal health hospitals are excluded.

Table 7B.1
Calculation of Occupancy Rates for Alaska and Comparison States (2010)

Region	FY10 Number of Hospitals	Total		
		A Available Bed Days	B Occupied Bed Days	C=B/A Occupancy Rate

Nationwide Average	4,318	244,628,574	147,354,738	**60.2%**

8. Staffing Ratios

A. Detailed Results

A significant component of facility operating costs is the number of nurses per hospital bed. In this section we compare Alaska's staffing ratios to the level in the comparison states.

Staffing ratios are a measure of the number of full time equivalent (FTE) professional staff in a hospital relative to the size of the facility. The number of staff for a given hospital is divided by the number of occupied beds for the hospital, resulting in a ratio that is comparable across hospitals and across states. For example, a nurse ratio of 2.0 indicates that on average, each bed is staffed by two nurses. This does not imply that there are two nurses on duty per bed at any given time. The nurse count is based on FTEs (where "full time" represents a typical work week) but hospitals are open at all times and therefore, require multiple FTEs per occupied bed.

Data for the staffing ratios in this section are from the CMS Provider of Services file from the second quarter of 2011[14] (the most recently available data period at the time to the analysis). To learn more about how we calculated the staffing ratios, see Section 8B: Methodology.

Table 8A.1 below shows 2011 FTE registered nurse staffing ratios for Alaska and the comparison states. Overall, Alaska' ratio of registered nurses per occupied bed is 129% of the ratio in the comparison states, though the ratio is similar to that in four of the six comparison states. Staffing ratios for the comparison states range widely from 1.67 (Washington) to 2.90 (Wyoming). Within Alaska, staffing ratios are fairly similar between urban and rural areas. We note however, that when comparing staffing ratios per bed (regardless of occupancy) the lower occupancy rates in the rural areas lead to a lower staffing ratio per bed.

We are not aware of a broadly accepted consensus on the ideal staffing ratio. Higher staffing ratios may lead to higher quality care (up to a certain point), but also lead to higher costs. Therefore, our analysis should not be used to conclude that Alaska's staffing ratio should be reduced to that of the comparison states. However, we can state that the higher staffing ratio adds to the higher facility costs in Alaska.

[14] For more information on this file, see https://www.cms.gov/nonidentifiabledatafiles/04_providerofservicesfile.asp

Table 8A.1
FTE Registered Nurses per Occupied Bed (2nd Quarter of 2011Q2)

State	FTE Registered Nurses Per Occupied Bed	
	Ratio	Relative to comparison state average
Anchrg/Frbnks/Mat-Su, AK	2.74	136%
Non-MSA, AK	2.34	116%
Alaska	2.59	129%
Hawaii	2.47	122%
Idaho	2.70	134%
North Dakota	1.69	84%
Oregon	2.26	112%
Washington	1.67	83%
Wyoming	2.90	144%
Comparison State Average	2.01	100%

B. METHODOLOGY

The Provider of Services (POS) file is a publicly available file from CMS that contains data on providers. The file is updated quarterly and contains information such as type of hospital, staffing, beds, and services offered by each Medicare-approved provider. For this analysis, we used the latest version of the file, updated through the second quarter of 2011. This file includes all types of facilities (including tribal health and federal government facilities). We estimated occupancy rates for facilities that did not report that information using the statewide average occupancy rate (or the averages by MSA within Alaska).

After calculating the ratio of nurses to total beds for each area, we divided this ratio by the occupancy rate discussed in Section 7 of this report. Since the occupancy rate is the number of occupied beds divided by total beds, this results in the number of nurses per occupied bed.

9. Professional Salaries

A. Detailed Results

Professional salaries are a significant driver of health care costs for both professional and facility services. We have summarized statistics on annual base salary from both a Milliman salary survey and data from the Bureau of Labor and Statistics (BLS) for several health care jobs.

Milliman data are compiled from salary survey responses in Alaska, Idaho, Oregon, and Washington. Comparable information is not available for Wyoming, North Dakota or Hawaii and therefore, those states are excluded from this analysis.

In Table 9A.1, the "Number of Firms" statistic represents how many responding companies surveyed employed that occupation. The "Number of Employees" is the total number of people with that occupation across all respondents. The "Average" is a straight average across companies. "Weighted Average" is weighted by number of employees in the position, so larger companies have a larger weight. We have also reported various percentile estimates based on the survey responses.

Over half of the employees represented by the surveys are Registered Nurses (RNs). The results show that Alaska's RNs are paid approximately the same amount as RNs in the Pacific Northwest states. The other occupations range from 98% of the comparison states (Radiology Technician) to 112% (LPN and Nurse Practitioner) with an average of approximately 105%.

The results reported on Table 9A.1 reflect base salaries only. The Alaska survey also summarizes total cash compensation, though those results were very similar to the base salary information.

Table 9A.1
Health Care Salaries for Alaska and Select Comparison States (2010)

State	Job Title	Number of Firms	Number of Employees	Base Salary

	Average			104%	102%	102%	100%	104%	105%	97%

(1) "Average" is a straight average across firms. "Weighted average" is weighted by number of employees, so larger firms have a larger weight.
(2) Includes Washington, Oregon, and Idaho. Hourly figures are multiplied by 2,080 to approximate yearly salary.
(3) Physician Assistants and Nursing Managers were both separated into multiple "sub-occupations" in the Northwest survey. Total statistics for these lines were weighted together by the number of employees in each sub-occupation. The number of firms for these jobs is not able to be calculated, since there is overlap between the sub-occupations.

The second source of compensation data is from BLS's May 2010 Occupational Employment and Wages estimates. Although the data include over 40 healthcare occupations, we have simplified the results by combining all physician and surgeon categories and excluding occupations with fewer than 200 estimated full time equivalents in Alaska.

Table 9A.2 shows the salaries in Alaska and the comparison states for each occupation. BLS wage information includes incentive pay and production bonuses, but does not include overtime, shift differentials or the employer cost of benefits.

Table 9A.2
Health Care Salaries (excluding Self Employed) for Alaska and Comparison States (2010 – from BLS)

	Mean Annual Income								
Job Title	AK	HI	ID	ND	OR	WA	WY	Comparison St Avg	AK vs Avg
Physicians and Surgeons	195,864	177,817	179,810	170,131	178,393	173,006	190,044	178,348	110%
Physician Assistants	91,810	78,870	89,720	79,310	93,580	98,620	97,890	93,870	98%

Medical and Clinical Laboratory Technologists	63,920	61,550	53,510	48,280	63,270	62,250	56,900	60,472	106%
Medical and Clinical Laboratory Technicians	44,520	42,500	36,650	33,600	43,220	39,840	28,630	39,360	113%
Radiologic Technologists and Technicians*	64,870	65,220	50,000	44,550	61,550	62,670	51,090	59,712	109%
Emergency Medical Technicians and Paramedics	48,050	47,920	39,670	29,720	44,570	43,530	32,190	41,810	115%
Pharmacy Technicians	39,210	34,920	29,500	31,820	34,080	37,290	31,960	34,927	112%
Psychiatric Technicians	32,120	0	28,410	27,330	39,030	36,790	29,510	34,865	92%
Licensed Practical and Licensed Vocational Nurses	47,100	44,640	38,120	35,320	45,370	45,400	39,810	42,479	111%
Medical Records and Health Information Technicians	39,300	42,430	30,910	30,730	35,970	37,630	34,450	36,329	108%

Consistent with Table 9A.1, salaries in Alaska are higher than in the comparison states. The BLS data indicates a slightly higher relative reimbursement in Alaska. However, in both cases, the relative salaries in Alaska are lower than the relative facility and professional unit cost reimbursement identified in our initial reports.

B. Methodology

Salary statistics were taken from the 2011 Alaska Cross-Industry Survey and the 2011 Northwest Health Care Industry Salary Survey, both administered by Milliman, Inc.

The data for the Alaska survey were compiled from 50 major employers with operations located throughout the state. The survey includes data on many occupations not related to health care, but we have included only the health care occupations in our analysis. Specific health care respondents include Alaska Native Tribal Health Consortium, Alaska VA Healthcare System, Fairbanks Memorial Hospital, PeaceHealth Ketchikan General Hospital and Providence Health & Services Alaska. The data is effective June 2011.

The data for the Northwest survey was compiled from 161 major hospital, clinic, home care, and long-term care organizations across Washington, Oregon, and Idaho. The data is effective January 2011. Since the Northwest salaries were reported on an hourly basis, and the Alaska survey was reported on an annual basis, we multiplied the hourly pay rates by 2,080 (52 weeks times 40 hours per week) to approximate annual salaries for the Northwest.

Physician Assistants and Nursing Managers were both separated into multiple "sub-occupations" in the Northwest survey. Total statistics for these lines were weighted together by the number of employees in each sub-occupation. The number of firms for these jobs cannot be calculated, since there is overlap between the sub-occupations.

The average salary across all listed positions is an average of the salary ratios by position, weighted based on the number of jobs in Alaska for each position.

BLS data contain mean salaries for each position. These numbers are reported directly in our results with the exception of the "physician and surgeon" category, which aggregates results from seven separate jobs included in the BLS data. The average salary for physicians and surgeons in each state is based on the relative number of employees for each position in Alaska.

The comparison states average salary for each job position is weighted across states in proportion to the number of employees in each state for that job. For the physician and surgeon subtotal, the comparison states average is calculated for each of the seven jobs, then weighted together using the distribution of those jobs within Alaska, so that differences in the mix of physician and surgeon jobs would not skew the comparison.

Note that the BLS data excludes self-employed individuals (which may therefore exclude any independently practicing physicians[15]).

[15] See http://www.bls.gov/oes/

10. Health Care Professional Shortage Areas

Health care prices are subject to the laws of supply and demand, like most other goods and services. While those market forces are somewhat hampered for hospitals due to the high cost of opening a new facility, they can be applied to professional health care services. Anecdotally, it is broadly accepted that the relative scarcity of health care professionals in Alaska is part of the reason for the high cost of services.

In order to compare supply and demand, we used data on Health Professional Shortage Areas (HPSAs), which are developed by the Office of Shortage Designation, Bureau of Health Professions, Health Resources and Services Administration (HRSA).[16] HPSAs are identified for primary care, mental health and dental services, but we have focused on the primary care physician shortages for this study.

Table 10A.1 below shows the percentage of the population in each state living in primary care HPSAs, indicating that they have a shortage of primary care providers.

Table 10A.1
Underserved Population in Primary Care HPSAs (2008)

	Estimated Underserved Population (2008)
United States	11.8%
Alaska	12.1%
Hawaii	2.6%
Idaho	17.4%
North Dakota	22.0%
Oregon	7.1%
Washington	9.5%
Wyoming	20.3%

The percentage of the population in primary care shortage areas in Alaska, at 12.1%, is close to the nationwide average of 11.8%, while the comparison states range from 2.6% (Hawaii) to 22.0% (North Dakota). Looking only at this information would suggest that reimbursement for primary care physicians in Alaska is at a level that attracts enough primary care providers to generate a reasonable HPSA population percentage. Of note, Alaska's underserved population percentage is lower than that of the two comparison states without medical schools (Idaho and Wyoming), suggesting that Alaska is attracting more physicians from out of state, possibly because of the relative difference in reimbursement.

In the bigger picture, this result does point out the nationwide shortage of primary care doctors.

[16] For more information, see http://statehealthfacts.org/comparemaptable.jsp?ind=682&cat=8

11. COMMERCIAL DISCOUNTS

A. DETAILED RESULTS

Commercial discounts represent the difference between provider charges (the "billed" amount) and provider reimbursement (the "allowed" amount). While discounts without billed charge level information cannot be used to compare absolute reimbursement levels, discount levels may be indicative of the degree to which commercial payers have negotiating leverage relative to providers.

The Milliman Discount Benchmark Model shows discount information for carriers in each state, excluding Blue Cross and Blue Shield (BCBS) plans. Although much of the commercial care in Alaska is through Premera Blue Cross Blue Shield, there is a sufficient volume of Alaska commercial data in our database (over $30 million in billed charges) to produce credible discounts estimates.

Using the model, we calculated average provider commercial discounts for Alaska and each of the comparison states (where data was sufficiently credible). For more information on this model, please see Section 11B: Methodology. Results are shown in Table 11A.1 below.

Table 11A.1
Commercial discounts by major category of service (2008-2009)

State	Provider Discounts			
	Inpatient Hospital	Outpatient Hospital	Professional	Overall
Alaska	**32%**	**35%**	**20%**	**28%**
Idaho	27%	20%	29%	25%
Oregon	36%	35%	32%	34%
Washington	46%	49%	35%	42%
Wyoming	19%	16%	26%	21%

Overall, hospital discounts in Alaska are higher than Idaho and Wyoming, similar to Oregon and below Washington. Professional discounts are lower than the comparison states.

The lower physician discounts in Alaska can be at least partly explained by the relative lack of competition among providers, particularly for specialty care. In many areas, including Anchorage, there are a limited number of providers in any given specialty (sometimes only one provider group). As a result, physicians can largely dictate the fees they are paid by commercial payers.

The relative provider leverage may be further exacerbated by Alaska's regulation requiring usual and customary charge payments to be at least equal to the 80th percentile of charges by geographic area. We are not aware of similar provisions in other states. Since many providers have over 20% of their

market share, this implies that those providers can ensure that their charges are below the 80th percentile and therefore, receive payment for their full billed charges.

A separate state law in Alaska requires payers to reimburse even non-contracted providers directly (instead of reimbursing them through the patient). This provision removes another incentive typically used by payers to encourage providers to join their networks.

Indeed, at least one major commercial payer sets its contractual fee schedule using a percentile of charge approach, and a high percentile, presumably in order to ensure sufficient physician participation. This approach and fee level is unique to Alaska; we have not seen a similar approach used for a PPO product in the rest of the United States.

B. Methodology

Beginning in 2001, Milliman started collecting employer group historical medical claims data to determine the lowest cost solution from a network reimbursement perspective. We typically collect more than a billion dollars of health care data each year. This data becomes the basis for our annual market reimbursement benchmarking.

The data we have compiled for the 2010 benchmark analysis includes employer group data collected during 2009 and 2008 and represents primarily 2008 – 2009 incurred dates. By combining two years worth of data, we were able to benchmark 158 Metropolitan Statistical Areas ("MSAs") amounting to approximately $3.41 billion in billed charges. Discounts reflect claim reimbursement for major national carriers/networks and several self-administered networks and TPAs; however, BCBS data is not included in the benchmark data.

Claims are mapped to MSAs (and states) based on the residential zip code of the patient when provided in the claims data; otherwise, the provider zip code is used. The benchmarks are measured using discounts off of billed charges.

12. Cost of Living

A. Detailed Results

The overall cost of living in a given region affects the cost of health care. Hospitals and physicians in more expensive areas will need to pay higher salaries. In addition, non-staff costs such as property, construction/leasing, utilities and transportation will affect the relative cost to provide health care in each area (and therefore, provider reimbursement).

The Council for Community and Economic Research calculates the ACCRA Cost of Living Index (COLI) for select urban areas, which is referenced in the US Census Bureau's Statistical Abstract of the US.[17] The COLI is a measure of prices for consumer goods and services in a certain area. Taxes are excluded from the calculation. The composite COLI is calculated from smaller components, such as health care, that are weighted together based on each component's share of consumer spending. Weights are based on nationwide results from the Bureau of Labor Statistics' 2004 Consumer Expenditure Survey.

The COLI for urban areas in Alaska and the comparison states is shown below. The COLI is restricted to urban centers and therefore, no equivalent values are available for rural areas. Note that each number is to be read as a percentage over or under the nationwide average.

[17] http://www.census.gov/compendia/statab/cats/prices/consumer_price_indexes_cost_of_living_index.html

Table 12A.1
Cost of Living Index (2010)[18]

Urban Area	Cost of Living Index (2010)						
	Composite Index (100%)	Grocery Items (13%)	Housing (29%)	Utilities (10%)	Transportation (12%)	Health Care (4%)	Miscellaneous Goods and Services (32%)
Anchorage, AK	**128.4**	**134.5**	**142.9**	**94.1**	**122.0**	**135.7**	**124.8**
Fairbanks, AK	**137.4**	**127.9**	**148.5**	**193.1**	**118.7**	**144.9**	**118.8**
Juneau, AK	**136.5**	**133.1**	**165.7**	**135.1**	**121.2**	**144.4**	**116.1**
Kodiak, AK	**128.7**	**149.4**	**127.8**	**131.9**	**143.4**	**130.7**	**115.4**
Honolulu, HI	165.7	160.1	249.0	146.6	126.2	120.0	117.9
Boise, ID	97.2	98.5	84.0	99.6	108.0	106.6	103.3
Idaho, Falls, ID	90.6	99.5	78.0	84.9	102.1	93.2	96.3
Twin, Falls, ID	91.5	95.5	81.4	97.0	99.2	93.3	94.6
Bismarck-Mandan, ND	95.3	105.9	91.5	70.1	102.6	100.5	99.4
Fargo-Moorhead, ND-MN	92.7	99.8	87.4	78.7	95.8	102.4	96.6
Minot, ND	99.9	99.3	95.9	73.5	98.2	91.0	113.6
Eugene, OR	109.8	93.8	132.3	85.3	110.0	118.2	102.9
Portland, OR	111.3	105.8	130.8	87.1	105.8	113.6	105.1
Bellingham, WA	113.0	114.9	135.9	83.8	113.2	115.3	100.8
Everett, WA	111.3	112.0	128.1	85.4	110.4	129.1	102.1
Kennewick-Richland-Pasco, WA	92.6	90.9	85.9	85.1	106.1	109.9	95.2
Olympia, WA	104.1	107.4	102.2	82.1	114.9	120.5	106.0
Seattle, WA	121.4	115.1	140.3	85.7	118.8	119.9	119.1
Spokane, WA	93.9	92.4	85.7	89.5	109.1	110.0	96.5
Tacoma, WA	109.5	111.3	116.6	83.1	109.0	115.1	110.2
Vancouver, WA	94.8	96.9	82.2	91.8	106.1	114.3	100.1
Yakima, WA	95.8	99.8	86.9	86.8	105.5	117.1	99.2
Cheyenne, WY	100.5	101.7	107.9	96.3	95.0	98.3	96.5
Laramie, WY	97.0	105.1	102.3	90.5	91.6	97.5	92.7
Nationwide	100.0	100.0	100.0	100.0	100.0	100.0	100.0

The composite COLI for the four Alaska areas range from 128% to 137% of the nationwide average. The health care component is 130% to 145% of the nationwide average. These high costs are roughly consistent with the hospital operating cost results seen in Table 5A.1.

[18] http://www.census.gov/compendia/statab/cats/prices/consumer_price_indexes_cost_of_living_index.html

13. Limitations and Considerations

Any opinions expressed in this report are solely those of the authors.

Any reader of this report must possess a certain level of expertise in areas relevant to this analysis to appreciate the significance of the approaches and assumptions and the impact of these approaches and assumptions on the results. The reader should be advised by their own actuaries or other qualified professionals competent in the subject matter of this report, so as to properly interpret the material.

This report is subject to the terms of the contract between the Alaska Health Care Commission and Milliman. This report is not intended to benefit third parties. Regarding the contents of this report, Milliman makes no representations or warranties to third parties. Third parties are to place no reliance upon this report that would result in the creation of any duty or liability for Milliman or its employees to third parties, under any theory of law. Third parties receiving this report must rely on their own experts to draw conclusions about the report's contents.

As documented in the report, this analysis has relied extensively on historical data. The data were reviewed for reasonableness, but no independent audits were performed. Should errors or omissions be discovered in the source data, the results of our analysis would need to be modified. Future results will differ from the historic estimates in this report.

This report did not review the relative quality of care provided to Alaskans, nor the relative health outcomes from treatment. Those issues were beyond the scope of our report but should be considered when evaluating the relative value of health care in Alaska.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. We are members of the American Academy of Actuaries and meet the qualification standards for performing the analyses in this report.

APPENDIX 1. LIST OF HOSPITALS

Following is the list of hospitals included in each of the analyses in this report. The list differs across analyses due to the availability of data. For each analysis, we have included all hospitals with sufficient data.

Alaska Hospitals Included in Analysis						
	Reimbursement (From Previous Report)	ALOS	Cost	Margin	Occupancy Rates	Staffing Ratios
Anchorage / Fairbanks / Mat-Su						
Alaska Native Medical Center	✓	✓				✓

Overview & Update
Federal Health Care Reform

Alaska Health Care Commission Meeting

Deborah Erickson
Alaska Health Care Commission
October 11, 2011
UPDATED 12-14-11

Presentation Overview

- Legal Challenges & Political Realities
- Status of Federal Implementation
- Structure of the Affordable Care Act
- Key Provisions in the Act (with Alaska Updates)
- Alaska Impact
- Timeline for Implementation

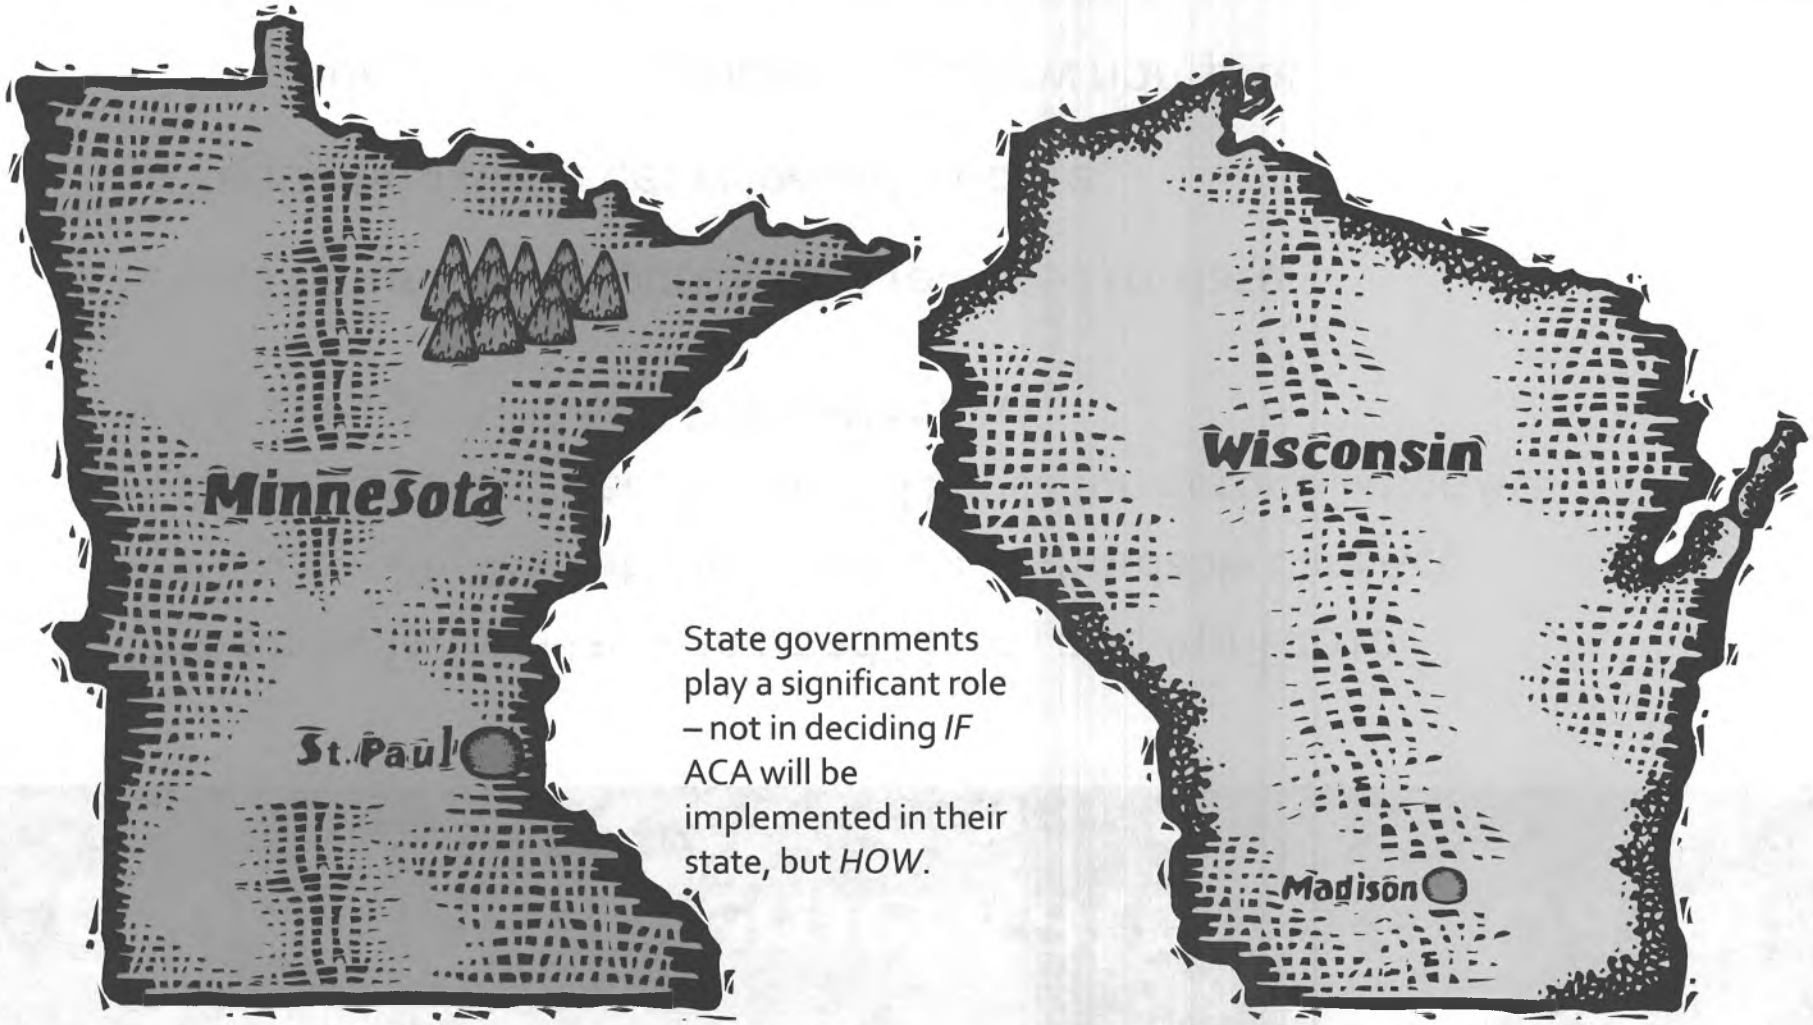
Legal Challenges & Political Realities

- Alaska is participating as a plaintiff in the 26-state lawsuit led by Florida. (11th Circuit)
- Challenging the Constitutionality of:
  - The individual mandate requiring individuals to purchase health insurance
  - Unfunded mandates imposed on state governments (Medicaid Expansion)
  - Question regarding severability
- Appellate Court Ruling Scorecard:
  - 2 rulings upheld ACA (6th and D.C. Circuits)
  - 1 ruling against individual mandate, but upheld Medicaid expansion (11th Circuit)
  - 1 ruling avoided merits of the case; ruled against plaintiffs on jurisdictional grounds (4th Circuit)
  - Supreme Court will Review this year – ruling expected June 2012

Legal Challenges & Political Realities

- **What has the 2010 election meant for the ACA?**
  - There's a big difference between campaigning and legislating….
  - Wholesale repeal unlikely
  - Increased congressional oversight of implementation
  - Provisions with no appropriation in original bill may not be funded
  - Some provisions are supported by GOP (e.g., fraud and abuse)
  - Repeal of some provisions would increase deficit

Legal Challenges & Political Realities



State governments play a significant role – not in deciding *IF* ACA will be implemented in their state, but *HOW*.

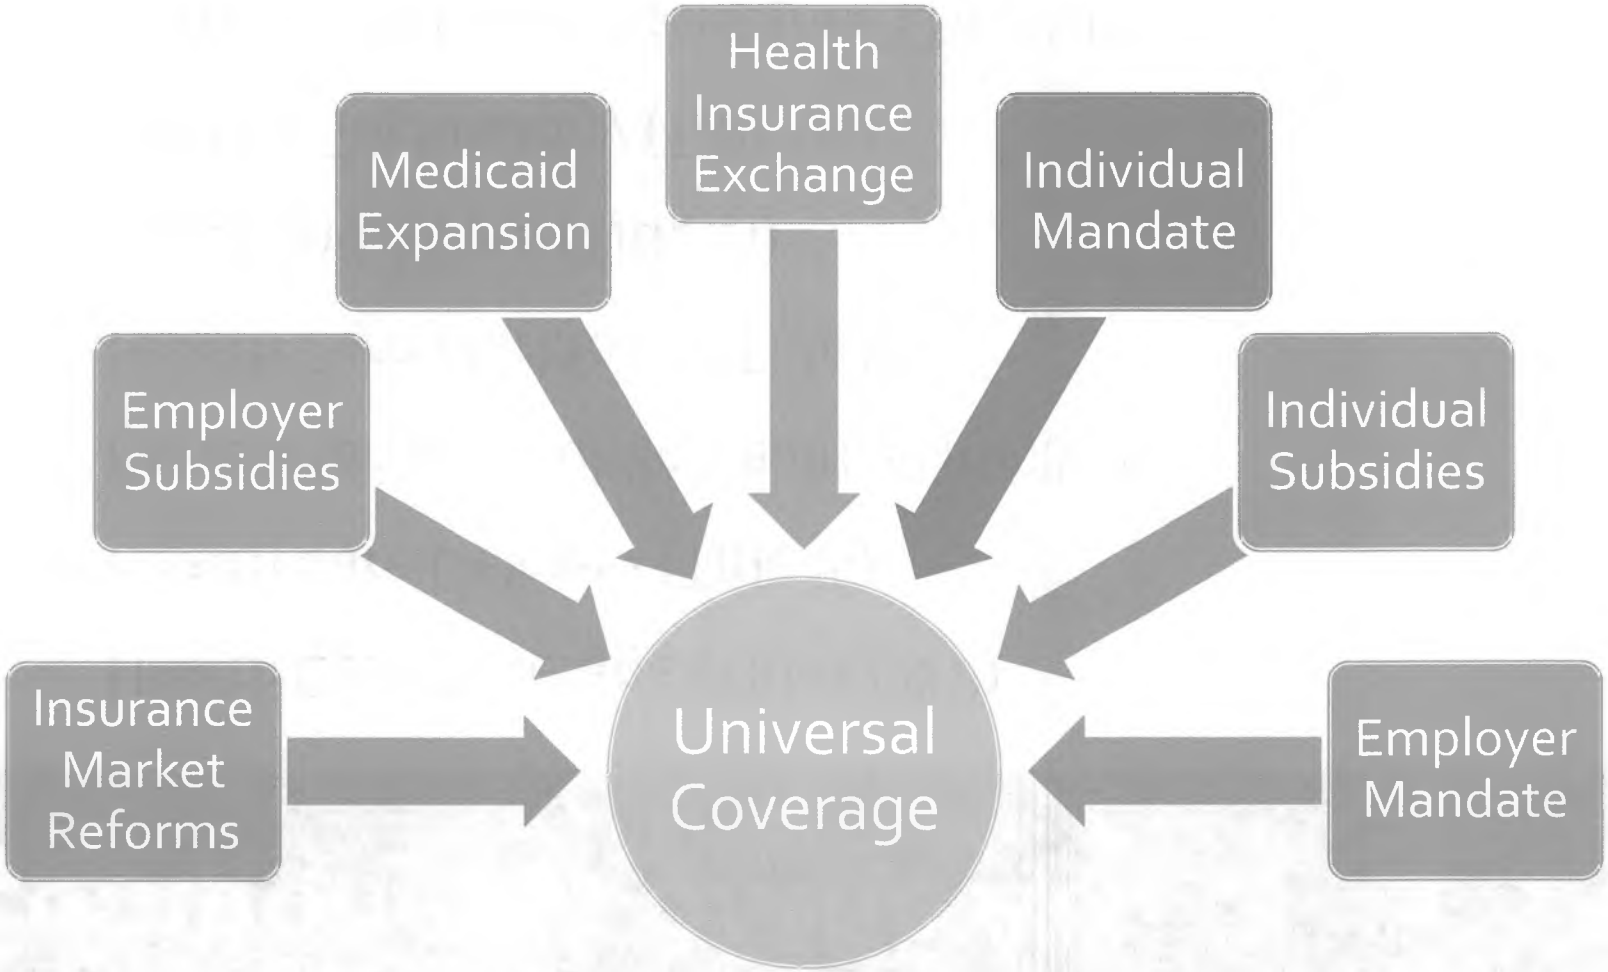
Federal Implementation To-Date

- Three new federal laws enacted March and April 2010
  - P.L. 111-148: The Patient Protection & Affordable Care Act
  - P.L. 111-152: The Health Care and Education Reconciliation Act
  - P.L. 111-159: TRICARE Affirmation Act
- Scores of funding opportunities released to-date
- 34 Regulation packages released to-date
- 4 New federal offices established; 1 new non-profit
- 4 New councils/boards/committees formed
- New website live – www.healthcare.gov

Components of the Act

- Health Care Coverage (Titles I & II)
- Health Care Delivery (Title III)
- Prevention and Public Health (Title IV)
- Health Care Workforce (Title V)
- Fraud and Abuse (Title VI)
- Medical Technology (Title VII)
- Community Living Assistance (Title VIII)
- Taxes and Fees (Title IX)
- Amendments (Title X)

Move Towards Universal Coverage



Insurance Market Reforms

- New Private Insurance Market Rules
  - Exclusions for pre-existing conditions prohibited
    - For children in 2010
    - For adults in 2014
  - Dependent coverage extended to 26 years of age (2010)
  - Lifetime limits prohibited (2010)
  - Annual limits restricted (2010), then prohibited (2014)
  - Prohibition on rescissions (2010)
  - Medical Loss Ratio: Reporting (2010); Restricted (2011)
  - Guaranteed issue and renewal rules (2014)
  - Adjusted community rating rules limit variations in premiums to region, tobacco use, age, and family composition (2014)
  - Gender discrimination prohibited

Insurance Market Reforms

- New Insurance Plan Options
  - Temporary high-risk health insurance pool (2010 - 2014)
    - *Alaska Update: Alaska's ACHIA Fed Pre-Existing Conditions Plan started 8/1/10; there were 46 Alaskans enrolled on 12/02/11*
  - Health Care Cooperatives ("Co-Ops") (2013)
    - Non-profit member-operated health insurance companies created through loans and grants
  - Multi-state health plans (2014)
  - Health Choice Compacts (2016)

Insurance Market Reforms

- State Insurance Oversight and Consumer Assistance
  - Review of Health Plan Premiums (2010)
    - *Alaska Update: SOA declined fed funds as unnecessary and potentially burdensome; HB 164 passed during 2011 legislative session expanded authority of AK Division of Insurance to pre-approve rate increases for all private health insurers operating in Alaska; Alaska was deemed by US DHHS as having an effective review program in July 2011.*
  - State Consumer Assistance Programs (2010)
    - *Alaska Update: SOA declined fed funds as unnecessary and potentially burdensome; AK Division of Insurance maintains an adequately staffed consumer assistance program.*

Employer Subsidies

- Tax Credit (2010)
  - For businesses with <= 25 employees and average annual wages < $50,000
  - *Unable to determine participation by Alaskan employers at this time*
- Temporary Early Retiree Reinsurance Program (2010 - 2014)
  - Employers reimbursed 80% of retiree claims between $15,000 and $90,000 until 2014
  - *Alaska Update: 8 employers enrolled; $1.1 million in reimbursement received as of Sept 2011*

Medicaid Expansion

- Eligibility expanded to all individuals/families under 65 years of age up to 133% FPL (2014)
- State share phased in 2017-2020 (max 10%)
- Alaska preliminary mid-range estimate
  - 30,000 new enrollees
  - Cost to State = $20 M/year
- State option to implement immediately (2010)

Health Insurance Exchange (HIX)

- Electronic Market Place for Purchasing Insurance
  - State-based; Multi-state option
  - May be administered by gov't agency or non-profit
  - State gov't opt-out provision (fed gov't will then establish state's exchange) (2013)
  - For individuals and small business (<100 employees) (2014)
    - Federal subsidies for individuals will be applied through the exchange
    - Interface with State's Medicaid eligibility and enrollment system required
    - Large businesses allowed to participate starting 2017
  - Required to be self-sustaining (2015)
- Grants to states for planning and implementation (2010)
  - *Alaska Update: SOA declined fed funds as unnecessary and potentially burdensome, but is utilizing available funds to solicit contract with consultant to advise on design – RFP released Sept 2011, contract to be awarded Dec 2011, report due Apr 2012; Alaska Medicaid's Children's Health Insurance Program (CHIP) has won a number of financial awards from US DHHS for high performance in CHIP enrollment, and is being used as a model at the national level in the design of streamlined eligibility process and outreach templates for HIXs.*
- State innovation waiver (2017)

Individual Mandate

- Individuals must have a qualified health plan or pay a tax penalty (2014)
  - Tax penalty $695/year (Family capped at 3x individual penalty ($2,085)) or 2.5% of household income, whichever is greater (phased in)
  - Exemptions include
    - Financial hardship
    - Religion
    - American Indians/Alaskan Natives
    - Lowest cost option exceeds 8% of income

Individual Subsidies

- Premium Credits (2014)
  - Refundable/Advanceable credits for purchase of insurance through the Exchange
  - Individuals/families with incomes between 133%-400% FPL
  - Amounts tied to cost of plan and set on sliding scale based on income level
- Cost Sharing Subsidies (2014)
  - Individuals/families between 100% - 400% FPL

Employer Mandate

- < 50 employees: Exempt
- > 50 employees - if 1 or more employee receives subsidy:
  - And employer does not offer coverage, employer required to pay fee of $2,000/FTE (1st 30 FTEs excluded)
  - And employer provides coverage, employer required to pay fee of $2,000/FTE or $3,000 per subsidized employee (whichever is less)
- > 200 employees: Required to auto-enroll new employees
- Provide voucher to employees with incomes less than 400% FPL who chose to participate in Exchange
- Report value of health care benefits on employees' W-2 (2011)
  - IRS issued notice making this requirement optional for large employers (>250 employees) until 2012 and for small employers until 2013.

Health Care Delivery

- Evidence-Based Practice (Comparative Effectiveness Research)
  - New non-profit Patient-Centered Outcomes Research Institute was established Sept 2010
- Quality Improvement (National Strategy)
  - National Health Care Quality Strategy report was issued March 2011
- Care Coordination and Service Integration
  - Community-Based Care Transitions Program *at least 1 AK HC provider intends to apply*
  - Primary Care & Behavioral Health Service Integration *grants to AICS (Wrangell) & SCF*
- Trauma System Enhancement *(funds not appropriated)*
- Enhanced funding for Community Health Centers
  - *Alaska Update: $9.5 million in new and increased community health center funds awarded in Alaska as of Aug 2011; plus 13 Akn CHCs awarded $35k each Sept 2011 for PCMH transition*
- Primary Care Enhancement
  - Medicare 10% bonus to primary care physicians (2011–2015)
  - Medicaid Medical Home State Plan Option (90% FMAP for 2 years) (2011) *AK Medicaid program will wait until medical home program fully operational to exercise option, as there is no expiration date on the option, and the 2-year clock on the enhanced FMAP starts ticking as soon as the State's application is approved by feds*
  - Increase Medicaid payment to Medicare rate *(n/a in AK)*

Payment Reform

- Center for Medicare & Medicaid Innovation (2011)
- Multi-Payer Advanced Primary Care Practice Demo (2011)
- Medicare Payment Reform ACA Provisions
  - Independent Payment Advisory Board (2011; 1st rpt due 2014)
  - FQHC Advanced PCP Demo (2011)
  - Hospital readmission reduction program (2012)
  - Shared savings program (Accountable Care Organizations) (2012)
  - Hospital value-based purchasing program (2012)
  - Bundled payment (episodes of care) pilot (2013)
  - Physician fee schedule value-based payment modifier (2015)
  - Payment adjustments for hospital-acquired conditions (2015)
- Medicaid Payment Reform ACA Provisions
  - Non-payment for healthcare-acquired conditions (2011)
  - Pediatric ACO demonstration (2012)
  - Hospital bundled payment (episodes of care) demonstration (2013)

Prevention & Public Health

- National Prevention Council and Fund
- Coverage of clinical preventive services
- Nutrition labeling on menus
- Community wellness grants
- Healthy lifestyles incentives (Medicare and Medicaid)
- Immunization program
- Epidemiology & PH laboratory capacity
- Childhood obesity demonstration project
- Maternal and child health programs

Alaska Update: Approximately $7 M in grants for public health, prevention, workforce development, and programs for aged/disabled have been awarded to-date in AK; it's important to note that a number of these grants were previously authorized and funded but were reauthorized under and now appear as ACA programs

Health Care Workforce

- National HC Workforce Commission
- National health care workforce assessment
- National Health Service Corps increased
- State health care workforce plans
  - *Alaska Update: AK Dept of Labor and WF Development awarded grant last year, which was used to support AK Health Workforce Coalition and development of their recently released Action Plan*
- Recruitment and retention programs
- Training and education programs
  - Rural physician training grants
  - Area Health Education Center (AHEC) expansion
  - GME (graduate medical education) improvements
    - Resident training in community-based settings
    - Redistribution of GME slots

Fraud & Abuse

"2011 will be a turning point for compliance programs…."

Report on Medicare Compliance
January 17, 2011

"The stress level for compliance professionals will go off the charts this year."

Roy Snell, President
Health Care Compliance Association
January 17, 2011

ACA includes 32 sections on health care fraud and abuse and program integrity

Fraud & Abuse

- New Provider Enrollment Processes
- Data Sharing Across Federal Programs
- Overpayment Recovery Expanded
- Increased Penalties
- Disclosure of Financial Relationships Required
- Compliance Plans Required

Fraud & Abuse

- New Medicaid RAC Program
  - Federal regulations released September 2011
  - State Medicaid Program required to implement RAC Program by January 2012
  - *Alaska Update: AK DHSS is evaluating how to align new Medicaid RAC program with Medicaid audit program mandated under State law to minimize impact on providers.*

Community Living Assistance

- New long-term care insurance program (2011)
  - Voluntary
  - 5-year vesting
  - Cash benefit
    - to help aged/disabled stay in home or
    - cover nursing home costs

How the Act Pays for Itself

New Fees & Taxes

- 10% sales tax on indoor tanning (2010)
- $2.8 billion annual fee on pharmaceutical industry (2012; increasing over time)
- 2.3% sales tax on medical devices (2013)
  - Glasses, contacts, hearing aids exempt
- Medicare payroll tax increased from 1.45% to 2.35% for individuals >$200K and couples >$250K; no increase to employer share (2013)
- New 3.8% Medicare tax on unearned income for individuals >$200K and couples >$250K (2013)
- Tax deduction for employers receiving Medicare Part D retiree subsidy eliminated (2013)
- $8 billion annual fee on health insurance industry (2014; increasing over time)
- Excise tax on employer-sponsored high-value insurance plans (2018)
  - "Cadillac Plans" tax imposed on plans valued at more than $10,200 for an individual plan and $27,500 for family coverage

Other Provisions

- Amends FLSA to require break times/locations for nursing mothers
- Alaska Federal Health Care Access Task Force
  - *Alaska Update: Convened Jul-Aug 2010, produced report Sept 2010, dissolved with production of report.*
- Medicare "Donut Hole" Closure
  - *2,329 Alaskans received $250 rebate in 2010; in 2011 those in the donut hole are receiving a 50% discount on covered brand name prescription drugs*
- Elder Justice Act
- Indian Health Care Improvement Act Reauthorized

Alaska Impact 2019 (MAFA Projections)

- Increase in health care spending: +$289 M
  - State of Alaska: +41 M
  - Alaska Households: $124 M
  - Federal Gov: $124 M

- Increase in insurance coverage: +53,000 Alaskans
  - Medicare: 0
  - Medicaid: +38,000
  - Employer sponsored: - 45,000
  - Exchanges: +78,000 (60% supported by fed subsidies)
  - Other Private: - 18,000
  - Other Public: 0

Timeline

- **2010**
  - Smallest employers (<=25 FTEs) eligible for tax credits
  - Medicaid Maintenance of Effort imposed (March)
  - Temporary high-risk insurance pool program established (June)
  - Temporary reinsurance program for early retirees established (June)
  - Feds establish website to facilitate insurance information (July)
  - Grants to states for
    - Exchange planning and implementation
    - Assistance with insurance premium review requirements
    - Establishing an office of health insurance consumer assistance
    - Numerous public health and workforce programs
  - Insurance Market Reforms Implemented (new plans for plan years beginning after 9/23/10)
    - Pre-existing condition exclusion prohibited for children
    - Lifetime limits prohibited; annual limits restricted
    - Prohibition on rescission of coverage
    - Dependent coverage to 26 years of age
    - Medical loss ratio reporting required
    - Coverage of clinical preventive services required

Timeline

- **2011**
  - Medicaid Options & Requirements
    - States eligible for 1% FMAP increase if certain preventive services covered with no cost-sharing
    - Required to cover tobacco cessation for pregnant women
    - New state option for home and community-based services for disabled
  - Insurance Market Reforms
    - Medical Loss Ratio requirement imposed: Large group plans required to spend 85% of premium revenue on medical claims (80% for insurers covering individuals and small business)
  - New Fraud & Abuse Rules Implemented

- **2013**
  - U.S. DHHS determines State readiness to establish Exchange
  - Fed regulations for health care choice compacts issued

Timeline

- **2014**
  - Insurance Exchanges implemented
  - Medicaid changes implemented
    - Expansion to 133% FPL takes effect
    - Required to implement enrollment simplification and coordination with Exchanges
    - Required to offer premium assistance for employer-sponsored insurance.
    - DSH funding reduced
    - Prohibition on exclusion of coverage for barbiturates, benzodiazepines, and tobacco cessation products
  - States required to establish at least one reinsurance entity
  - Insurance Market Reforms Implemented
    - Pre-existing condition exclusion prohibited for adults
    - Guaranteed issue and renewal required
    - Adjusted community rating rules take effect
  - Individual and employer mandates and subsidies implemented

Timeline

- **2015**
  - Insurance Exchanges must be self-sustaining
  - Medicaid programs required to begin annual enrollment reporting
  - States eligible for 23% FMAP increase on regular CHIP match (FFY 16 – FFY 19)
- **2016**
  - Health Care Choice Compacts may take effect
- **2017**
  - States will begin funding share of Medicaid expansion
  - States may operate an alternative program in lieu of federal coverage reforms if waiver obtained in previous year
  - States may allow large companies (>100 employees) to participate in Exchange
- **2018**
  - Excise tax on high-value health insurance plans imposed

Department of Health & Social Services

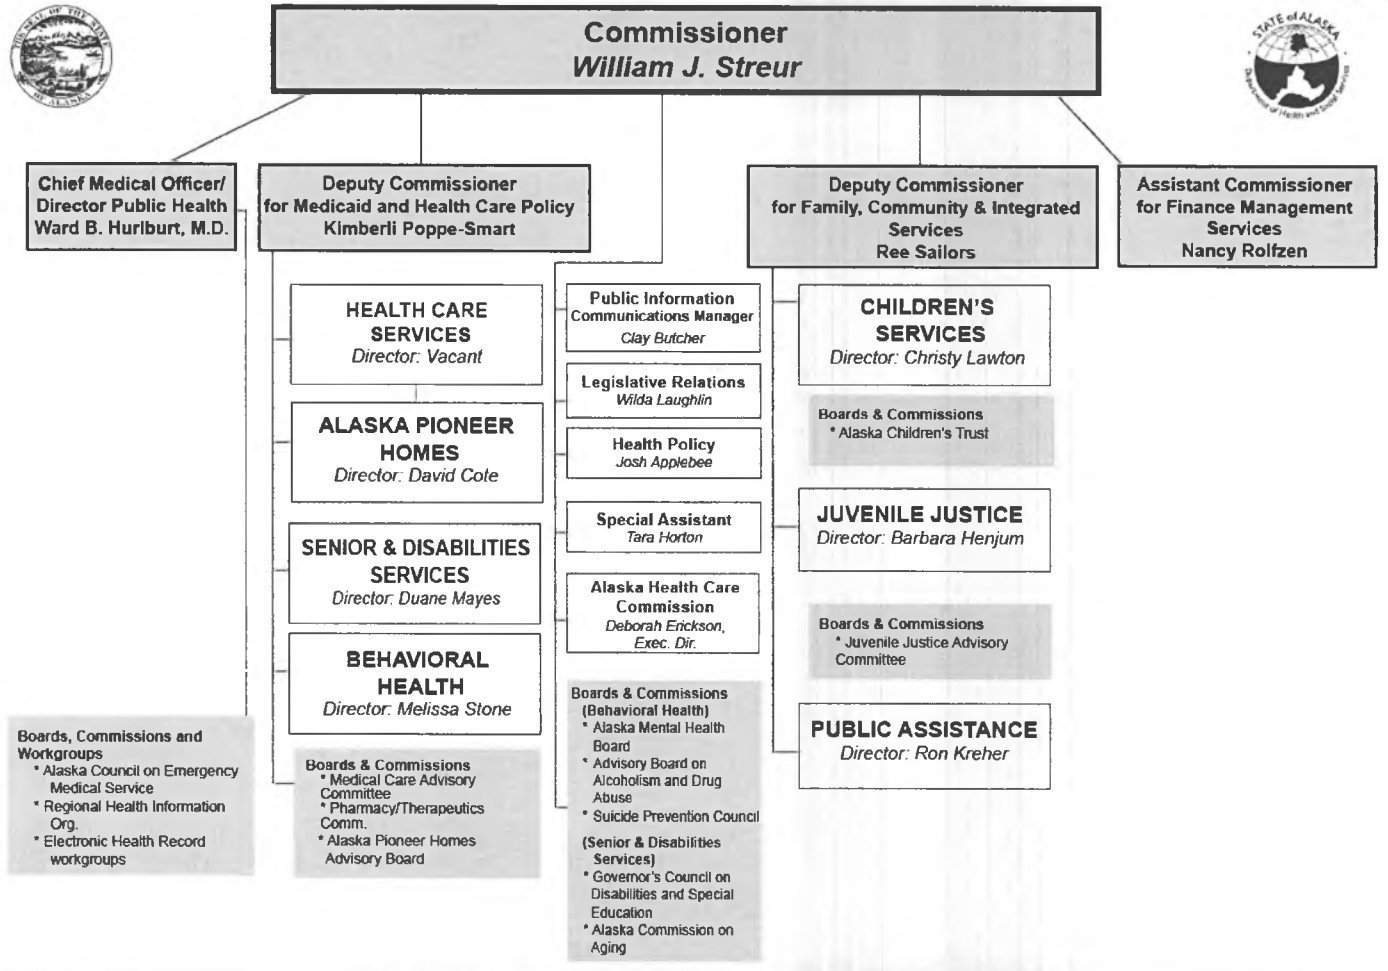
Department Overview

Partnerships

Commissioner William Streur

2012 Department Overview

Department of Health & Social Services
Organization



Mission: to promote and protect the health and well-being of all Alaskans

Core Services

- Provide the highest quality of life in a safe home environment for older Alaskans and veterans.
- Manage an integrated and comprehensive behavioral health system based on sound policy, effective practices, and open partnerships.
- Promote safe children and strong families.
- Manage health care coverage for Alaskans in need.
- Hold juvenile offenders accountable for their behavior, promote the safety and restoration of victims and communities, and assist offenders and their families in developing skills to prevent crime.
- Provide self-sufficiency and basic living expenses to Alaskans in need.
- Protect and promote the health of Alaskans.
- Promote the independence of Alaskan seniors and persons with physical and developmental disabilities.
- Provide quality administrative services in support of the department's mission.

Priorities

- Integrated Health and Wellness
- Health Care Access and Delivery
- Sustainable Long-Term Care Delivery System
- Safe and Responsible Families and Communities

Priorities

- **Integrated Health and Wellness**
- Adult Preventative Dental Care: 14,821 Individual recipients over the age of 21
- H1N1 Pandemic Influenza vaccinations and distribution to providers
- Alaskans Taking on Childhood Obesity (ATCO)

Priorities

Health Care Access and Delivery

Medicaid Task Force

- Patient-centered medical homes
- Pharmacy – effective use of generic and formula drugs
- Community First Choice

Priorities

Sustainable Long-Term Care Delivery System

- Alaska Seniors and Veterans in the Pioneer Homes
- Served ~ 30,000 recipients through Senior and Disabilities service programs
- Partnering with Native Organizations for Nursing Home Care

Priorities

Safe and Responsible Families and Communities

- Support Child Advocacy Centers
- Child Welfare system Family-to-Family (F2F)
- Families First
- Bring the Kids Home

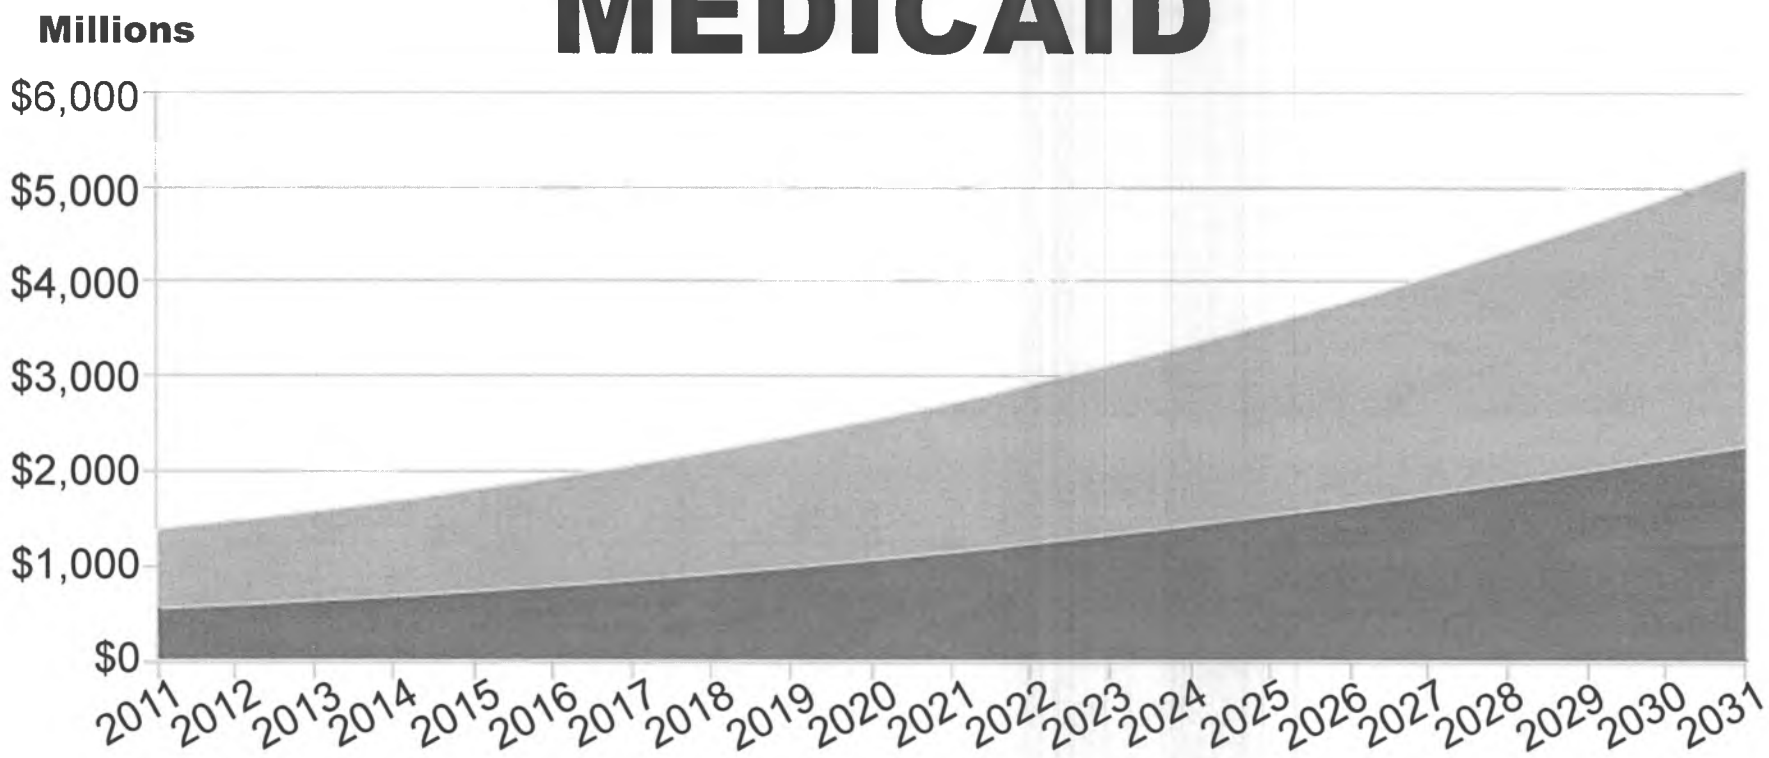
Priorities

Safe and Responsible Families and Communities Cont.

- Juvenile Justice
  - Alaska Native Recidivism Committee
  - Behavioral Health Services for Juveniles within detention and treatment facilities
- Heating Assistance Grants – Over 14,500 during 2010-2011 heating season
- Home and Community-based senior and disabilities services

Challenge:

MEDICAID

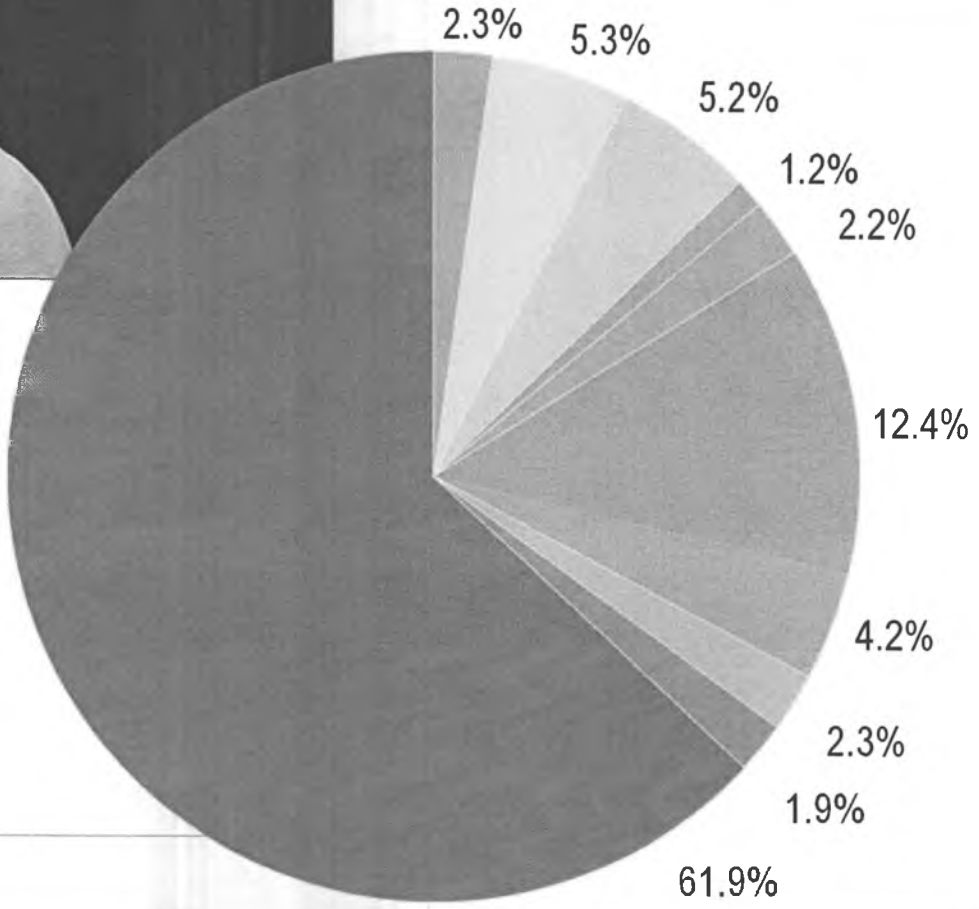


Mission: to promote and protect the health and well-being of all Alaskans

Partnerships

Department of Health & Social Services
Budget Overview

Alaska Pioneers Homes	61,061.4
Behavioral Health	138,935.6
Office of Children's Services	135,470.0
Health Care Services	32,254.4
Juvenile Justice	58,175.2
Public Assistance	323,996.0
Public Health	109,935.7
Senior & Disabilities Services	61,173.8
Finance & Management Services	51,218.2
Medicaid Services	1,645,471.9
	2,617,692.2



Mission: to promote and protect the health and well-being of all Alaskans

Partnerships

Goals

- **Vulnerable Populations**
  - Increase the percentage of at-risk individuals who are able to live safely in their homes in Alaska.
- **Substance Abuse**
  - Decrease the negative impacts of alcohol and substance abuse in Alaska.
- **Long Term Care**
  - Increase the percentage of adults 65 and older living independently in Alaska.
- **Health and Wellness**
  - Improve the health status of Alaskans.
- **Health Care Reform**
  - Improve access to quality health care in Alaska.

Strategies

- **INTEGRATED SERVICES**
- Maximize resources for effective service delivery.
- Promote rural infrastructure development and standardization of regional structure.
- Promote accountability at all levels of the organization.
- Leverage technology in strategic ways to accomplish the department's goals.

Strategies

- Promoting and responding to overall health and wellness of Alaskans
- System Development/Improvements
- Partnerships
- Recruitment and retention of qualified employees

NEWS

December 2011-Anchorage

Master Gardeners honored for their service

December 9th, the Anchorage Pioneer Home honored Judy Christinson and Mary Shier for their 20 years of volunteer service at our home through the Master Gardener Program. They were responsible for all the beautiful flowers in the front of our home each summer for the past two decades. They have grown the flowers from seeds, planted and cared for them each summer and prep everything for winter. Both Judy and Mary have volunteered thousands of hours of their time over the years taking care of the Anchorage Pioneer Home's gardens. We can't thank them enough.

From left to right, Judy Christinson and Mary Shier are presented their awards.

2/08/12 PRESENTATION ALASKA CHILDREN'S JUSTICE ACT TASK FORCE

<TARGET><BILL></BILL><SUBJECT>2-08-12 PRESENTATION ALASKA CHILDREN'S JUSTICE ACT TASK FORCE</SUBJECT><COMM>SHSS27</COMM></TARGET>

Alaska Children's Justice Act Task Force

Presentation to Joint Senate Judiciary and HSS Committees, Alaska Legislature

February 8, 2012

hss.state.ak.us/ocs/ChildrensJustice/default.htm

OVERVIEW OF 2012 PRESENTATION

- Background on CJA: Who we are and what we do
- Child maltreatment in Alaska
- Proposed legislative changes

OVERVIEW OF CJA TASK FORCE

- Background: Founded 2002
  - Federal mandate: Child Abuse Prevention and Treatment Act (CAPTA) 42 U.S.C. 5101 and Victims of Crime Act 42 U.S.C. 10601
  - Multidisciplinary/statewide representation
  - Federally funded based on population

Mission

- Identify areas where improvement is needed in the statewide response to child maltreatment, particularly child sexual abuse, make recommendations and take actions to improve the system

Task Force Projects

- Develop and distribute better data
  - Collaboration with DHSS, Maternal Child Health Epidemiology Unit - Surveillance of Child Abuse and Neglect (SCAN) program
- Improve system response
  - Support the development of Child Advocacy Centers (CACs) and Multidisciplinary Teams (MDTs)
  - Support innovative programs
  - Support education and training
- Make recommendations for law changes

IMPROVE THE SYSTEM RESPONSE

Support the development of CACs and MDTs

- Alaska now has 10 regional CACs and 2 satellite centers
- Publications:
  - Guidelines for the Multidisciplinary Response to Child Abuse in Alaska
  - Standardized medical documentation forms

Support Innovative Programs

- Pathway to Hope
  - Tribal facilitator curriculum to assist community healing from intergenerational trauma due to sexual abuse
- Sexual exploitation of children protection
  - Internet Crimes Against Children
  - NetSmartz
  - In-school education programs

Education and training

- Educate mandatory reporters
  - Developed Mandatory Reporter Training CD
- Encourage professional development
  - Scholarships for trainings
  - Sponsor biennial Alaska Child Maltreatment Conference (collaboration with the Alaska Children's Alliance)
- Yearly legislative presentations

Yearly legislative presentations

- Children's Caucus
- Legislative committee presentations
- 2012 presentation to Senate Judiciary & HSS
  - Child maltreatment in Alaska
  - Proposed legislation

Child maltreatment in Alaska

- Data
- Fiscal impact

Maltreatment-Related Child Deaths

Deaths occurring between 2000-2008,
children ages 0 – 9 years

- Approximately **1 out of every 5** (20%) Alaskan child deaths is maltreatment-related
  - ~ **1 out of every 4** (25%) for Alaska Native children
- Nearly **3 out of every 4** (~75%) maltreatment-related deaths occur in infants

Maltreatment - All Types

- In 2008 ~ **12,400 Alaskan children** were likely victims of at least one incident of maltreatment
  - **24%** had at least one incident confirmed
    - Substantiated or conviction
    - "Tip of the iceberg"
  - As many as **34 children a day** are likely maltreated, or **3,000** during this 90 day legislative session

Maltreatment - Neglect

- In 2008 ~ **8,900 Alaskan children** were the likely victims of at least one incident of neglect
  - **25%** had at least one incident confirmed
  - As many as **25 children a day** ,or **2,200** during this 90 day legislative session

Maltreatment – Physical Abuse

- In 2008 ~ **2,700 Alaskan children** were likely victims of at least one incident of physical abuse
  - **22%** had at least one incident confirmed
  - As many as **7 children a day**, or **630** during this 90 day legislative session

Maltreatment – Sexual Abuse

- In 2008 ~ **1,900 Alaskan children** were likely victims of at least one incident of sexual abuse
  - Among the children experiencing sexual abuse, **16%** had at least one incident confirmed
  - ~ **As many as 5 children a day**, or **450** during this 90 day legislative session

What does this cost?

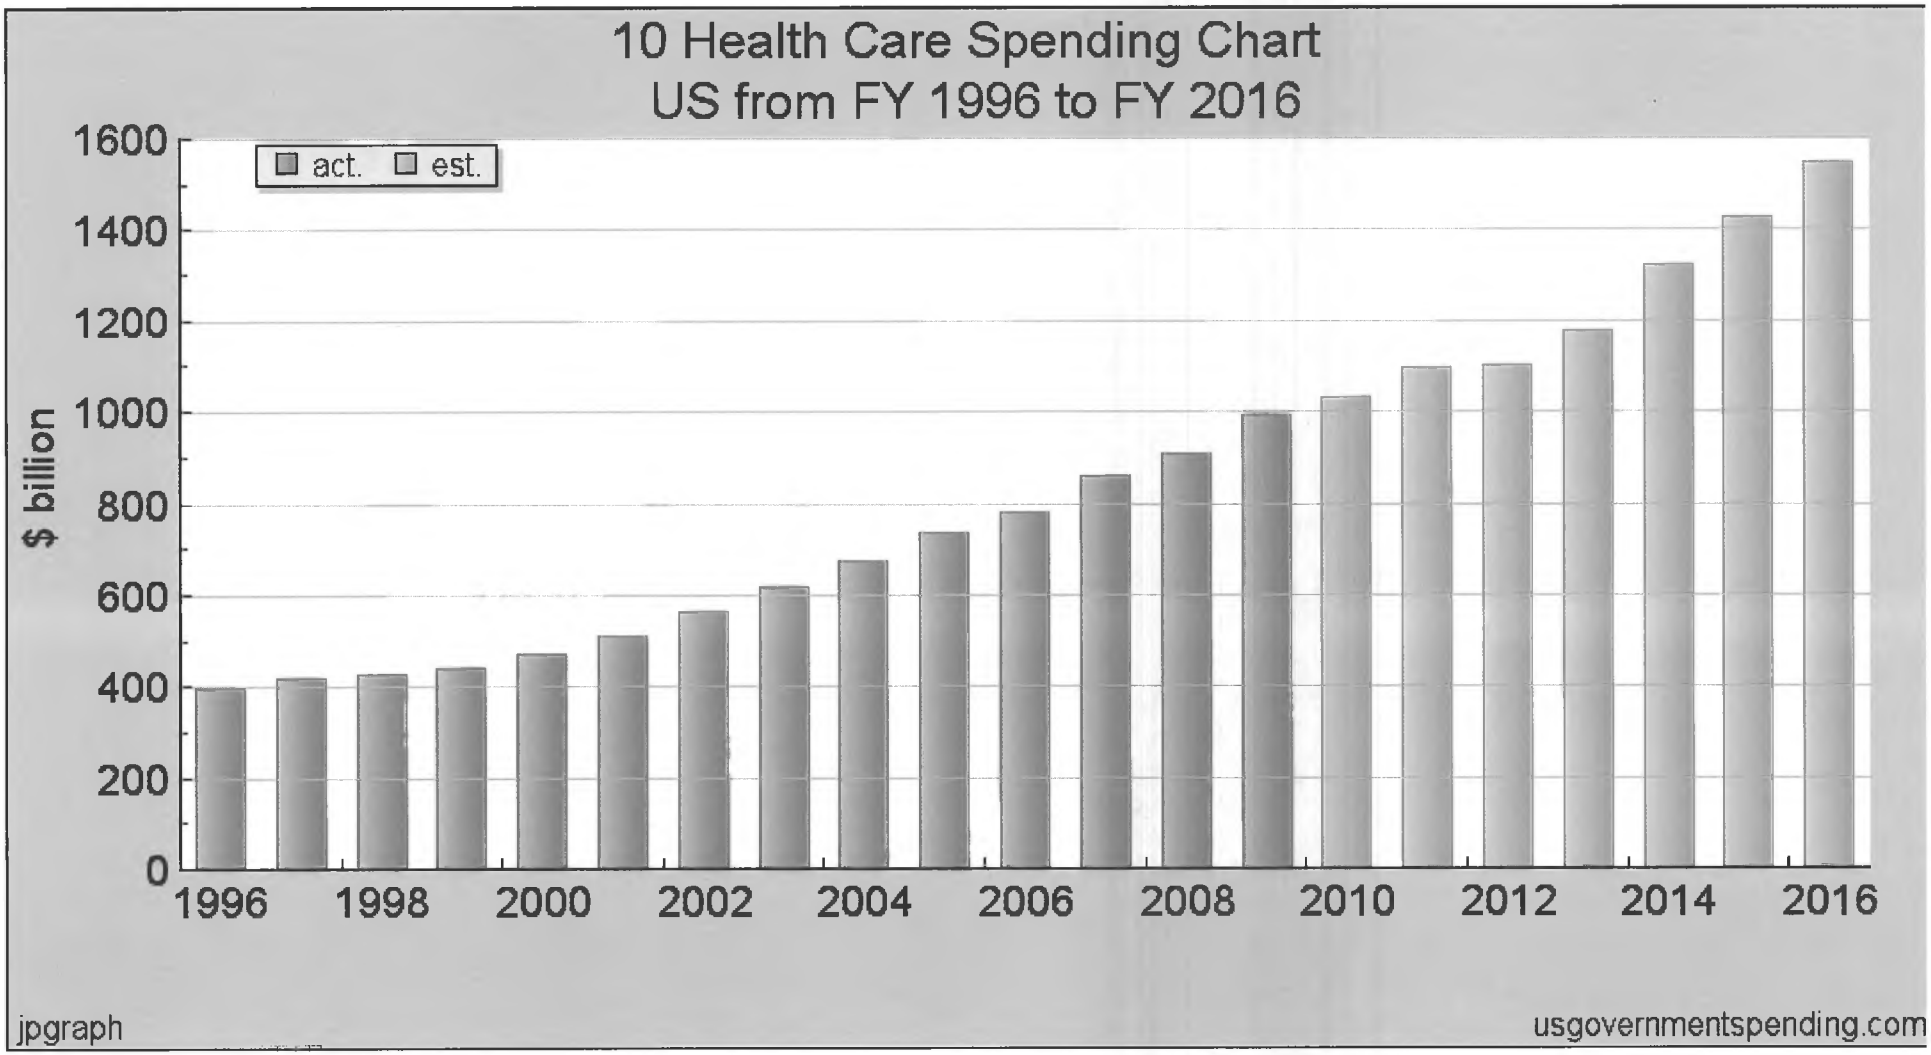
- Medical & mental health care
  - Short and long term
- Child protection system
- Criminal justice system
- Future earnings
- Quality of life

Health Care Costs

- Adverse Childhood Experiences Studies: "Turning Gold Into Lead"
- "…much of what is recognized as common in adult medicine is the result of what is not recognized in childhood."
- Link to ALL most common causes of adult disease and death in US today

www.cdc.gov

Health Care Costs



Average lifetime cost per case of fatal child maltreatment

• Medical costs	• $ 14,000
• Productivity losses	• $1,258,800
• Total	• $1,272,900

2012 The economic burden of child maltreatment in the United States Child Abuse and Neglect

Annual economic burden to Alaskans: fatal child maltreatment (infants only)

• Medical costs	• $ 140,000
• Productivity losses	• $12,588,000
• Total	• $12,729,000

Average lifetime cost per case of nonfatal child maltreatment

• Short-term health care costs	• $ 32,648
• Long-term health care costs	• $ 10,530
• Productivity losses	• $144,360
• Child welfare costs	• $ 7,728
• Criminal justice costs	• $ 6,747
• Special education costs	• $ 7,999
• Total	• $210,012

Estimated annual economic burden for Alaskans

• Short-term health care costs	• $97 – 405 million
• Long-term health care costs	• $31 - 130 million
• Productivity losses	• $430 million -1.8 billion
• Child welfare costs	• $23 – 96 million
• Criminal justice costs	• $20 -84 million
• Special education costs	• $24 – 99 million
• Total	• $625 million - 2.6 billion

based on ~3000 - 12,400 children annually

SYSTEM IMPROVEMENT THROUGH CHANGES TO OUR CRIMINAL STATUTES

RECOMMENDATION #1

Modify assault statutes to create broader criminal liability for assaults to children

Problem: Required for felony prosecution

- Serious physical injury OR
- Multiple events OR
- Reasonable caregiver would seek medical diagnosis and treatment

Problem: Definition of "serious physical injury"

- "**(A)** physical injury caused by an act performed under circumstances that create a substantial risk of death; or
- **(B)** physical injury that causes serious and protracted disfigurement, protracted impairment of health, protracted loss or impairment of the function of a body member or organ, or that unlawfully terminates a pregnancy."

Solutions: New definition "serious bodily injury to a child"

- "Serious bodily injury to the child" includes, but is not limited to, second- or third-degree burns, a fracture of any bone, a concussion, subdural or subarachnoid bleeding, retinal hemorrhage, cerebral edema, brain contusion, strangulation, injuries to the skin that involve severe bruising or the likelihood of permanent or protracted disfigurement, including those sustained by striking children with objects, or other physical injury that results in significant physical injury to the child

Solutions

- Apply the proposed "serious bodily injury" definition to
  - children under 12
  - children under age 16 who are mentally or physically impaired
- Add new theories to all three felony assault statutes that incorporate the definition of serious bodily injury to a child

Post-conviction recommendation:

- To recognize mental harm resulting from physical injury:
- Create a sentencing aggravator if the serious bodily injury caused to a child resulted in significant mental injury to the child

RECOMMENDATION #2

STRENGTHEN STATUTES REGARDING EXPOSURE OF CHILDREN TO DRUGS

Problem:

- Difficult to prosecute person who has exposed a child to drugs to extent that child tests positive for drug
- Examples: meth lab, leaving drugs laying around, using drugs around child

Solution:

- Amend endangering the welfare of a minor statute by creating 2 new subsections to:
  - Penalize reckless exposure of child to controlled substance and, because of exposure, the child tests positive for the controlled substance
  - Penalties vary depending on dangerousness of drug

Section 5, subsections (b)(2) and (g)

Problem:

- Inability to prosecute for indirect exposure to dangerous chemicals used in drug labs

Solution

- Penalize reckless exposure of child to chemicals used in meth labs

RECOMMENDATION #3

INCREASE PENALITES WHEN A PARENT INTENTIONALLY WITHHOLDS ADEQUATE FOOD OR LIQUIDS

Problem:

- Current punishment for criminal nonsupport is a misdemeanor
- Intentional failure to provide adequate food or liquids to a child should be a felony

Solutions:

- Modify criminal nonsupport to create a class C felony for parent or guardian who intentionally fails to provide adequate food and liquids to the child
- Standard for determination: "a reasonable person would conclude the child was not receiving adequate food or liquids"

RECOMMENDATION #4

CREATE A CRIMINAL LAW THAT PROHIBITS AN INCARCERATED PERSON FROM CONTACTING A VICTIM OR WITNESS

Problem:

- Current statutes do not fully protect a child victim from influences and pressure prior to trial and sentencing
  - Only after sentencing
- Examples:
  - Incarcerated accused sex offender can contact under age victim
  - 3rd party can forward phone calls, letters from defendant to victim

Solutions:

- Add two new theories to unlawful contact statute to:
  - Penalize a person incarcerated before trial or sentencing for contacting a victim or witness of the offense in violation of no-contact order
  - Penalize person who assists the defendant in engaging in such contact

Alaska Children's Justice Act Task Force

- Problem: need legislative changes to enhance safety of Alaskan children
- Solution: introduce and pass proposed legislation

We need champions for children!

Suicide Attempts: Alaska Suicide Hospitalization Study 2001-2002

- The Alaska Injury Prevention Center conducted a thorough analysis of the 1,223 hospitalized suicide attempts in Alaska for 2001 and 2002.
- This analysis looks at the epidemiology and costs associated with hospitalizations for self inflicted injuries
  - http://www.alaska-ipc.org/documents/Hospital_Suicide_report.pdf

NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

A few facts revealed by this study:

- The average age for the patients was 30 years.
- The average length of hospital stays was 4 days.
- The average hospital costs per year were $5,508,363.
- The average cost per case was $8,986.
- Over 75% of the hospital costs were paid through public funding sources.
  - More than $4 million in "public funds" is spent each year to pay for hospitalizations for suicide attempts.
- The hospital cases were over-represented by people from rural communities.

Learning from Others: Policy Options to Prevent Suicide

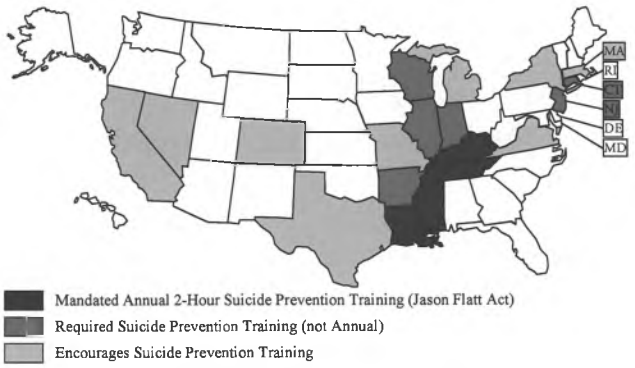
NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

State Laws: Gatekeeper Training for Key School Personnel

- At least 19 states have laws that either mandate or encourage some type of gatekeeper training.
  - Laws in KY, LA, MS, and TN require a 2-hour annual in-service training for certain school personnel on suicide prevention (*Jason Flatt Act)*.
  - Laws in AR, CT, IL, IN, NJ, and WI require similar training, but not on an annual basis.
  - CA, CO, MA, MI, MO, NV, NY, TX, and VA encourage suicide prevention training, sometimes as an option for professional development.

NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

State Laws: Gatekeeper Training



NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

State Laws: Suicide Prevention Education Required in School Curriculum

- At least seven states have laws that require school curriculum to include suicide prevention education or awareness.
  - IA, ME, MD, NH, RI, VT, and WA
- Controversy?
  - "Many experts share the view that it is unwise to teach young people about suicide explicitly."

-World Health Organization, 2000

- Implementing EHR to hard-wire Quality and Patient Satisfaction processes throughout care continuum
- Exploring contracting possibilities beyond hospital only services managed care

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Affordable Care Act
Value Based Purchasing
(AKA Pay for Performance)

- In January 2011, the Centers for Medicare & Medicaid Services officials established value-based purchasing incentives for hospitals by identifying which metrics will generate payment after Oct. 1, 2012.
- These CMS guidelines incorporate 17 clinical process-of-care measures used in five health categories, acute myocardial infarction, heart failure, pneumonia, healthcare associated infections and surgical care improvement. They also will use eight measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey that reflects how patients view their care experiences.
- These 25 measures will be used to generate FY 2013 DRG payments.
- The regulations will apply to discharges at 3,000 acute care hospitals. All these hospitals will have their funding reduced starting with 1% in fiscal year 2013, rising to 2% by FY 2017, but will have a chance to earn that money back, and perhaps more, under the incentives algorithm.

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Two Specific Categories of Value Based Purchasing

- Quality of care
  - Core Measures
- Patient Satisfaction
  - HCAPS Surveys

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Core Measures

The Centers for Medicare and Medicaid (CMS) developed several measurements to reflect the Quality and Safety of care in hospitals.

- Pneumonia
- Surgical care improvement project (SCIP)
- Heart failure
- Heart attack (AMI)
- Obstetrical care
- Children's Asthma
- Stroke
- Vaccination rates

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Core Measures
Current Pay for Performance Pieces

- Elements of the PN, AMI, HF, and SCIP core measures
- Perfect Care Score is a composite score of these elements
- Applicable to Medicare patients
- Pay for performance is calculated based on compliance with these elements.

CMS will [illegible] back 1% of pay

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

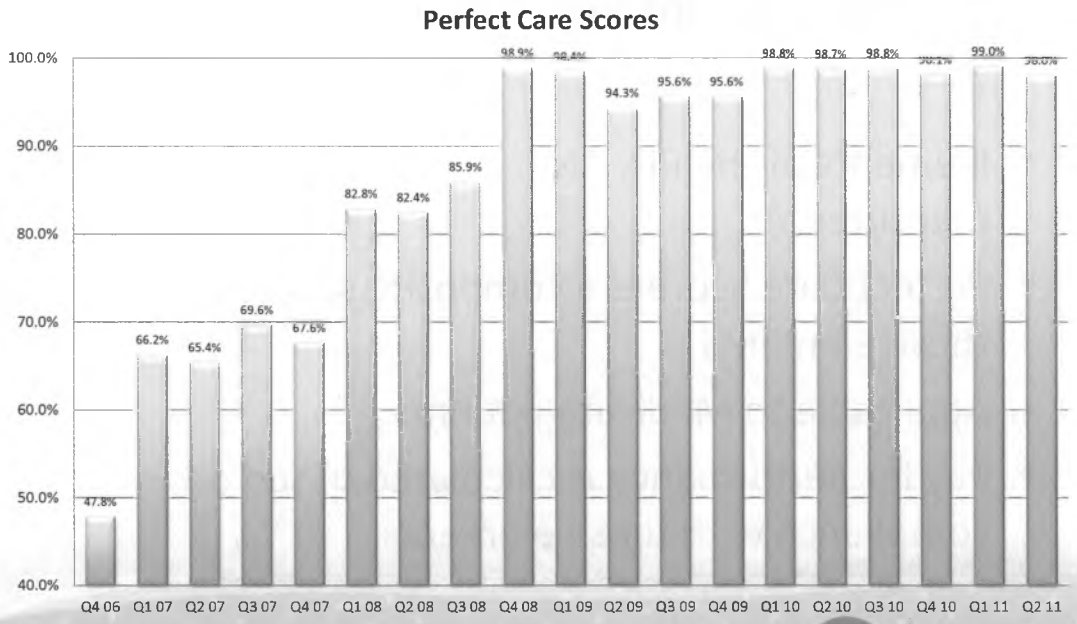
Why are they Important?

- Reflect evidence based-standardized care
- Associated with better outcomes
- Publicly reported
- Allow systematic comparison of hospitals by consumers. This information is available publicly on http://www.hospitalcompare.hhs.gov
- Associated with Value Based Purchasing payments

[illegible]

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Central Peninsula Hospital



ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Patient Experience

- Based on HCAHPS scores (Hospital Consumer Assessment of Healthcare Providers and Systems)
  - How well nurses communicated with patients
  - How well doctors communicated with patients
  - How responsive hospital staff were to patients' needs
  - How well caregivers managed patients' pain
  - How well caregivers explained patients' medications to them
  - How clean and quiet the hospital was
  - How well caregivers explained the steps patients and families need to take to care for themselves outside of the hospital (i.e., discharge instructions)
  - Overall rating of the hospital
- Publicly reported

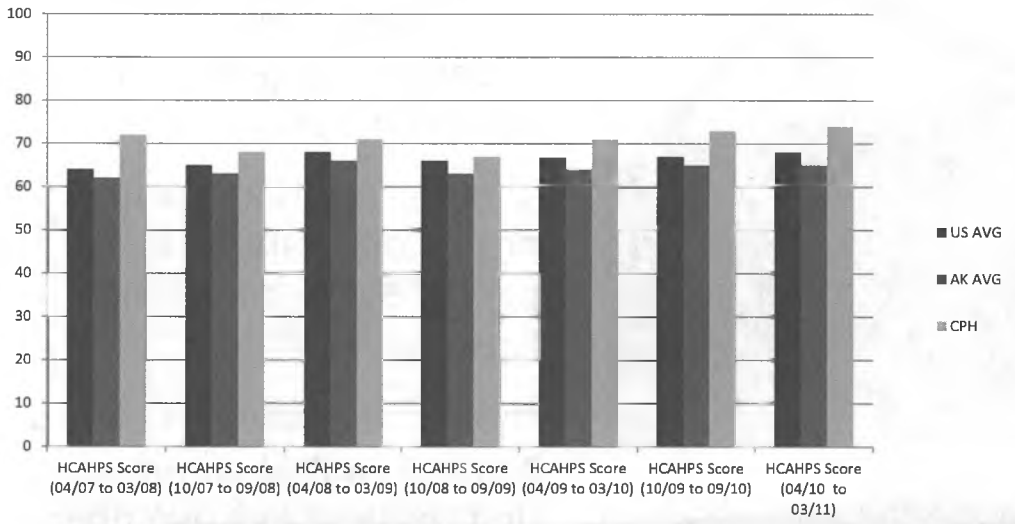
ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Strategies to Improve the Patient Experience

- Review all patient satisfaction data at an administrative level each week.
- Follow up phone call to address all patient concerns
- Hourly nursing rounds
- Management rounds
- Address specific problem areas
  - Quiet environment Night

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Percentage of patients rating the hospital 9 or 10



ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Awards and Recognition

- Received Mountain Pacific Commitment to Quality award in 2008
- Received Mountain Pacific Quality achievement awards in 2009, 2010, and 2011.
- Named as the top hospital for CMS core measures compliance in the State of Alaska in 2011.
- Recognized as a Joint Commission Top Performer in 2010 for excellence in key indicators which is the top 14% of hospitals in quality in the nation and the only hospital in Alaska to be recognized.

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

Wildflower Court

Wildflower Court is a nursing home providing a high level of care for long-term or acute illnesses.

The organization is a non-profit corporation. It is not a part of Bartlett Regional Hospital.

Wildflower Court (St. Ann's Nursing Home) admitted it's first resident in November 1977.

ASHNHA ALASKA STATE HOSPITAL & NURSING HOME ASSOCIATION

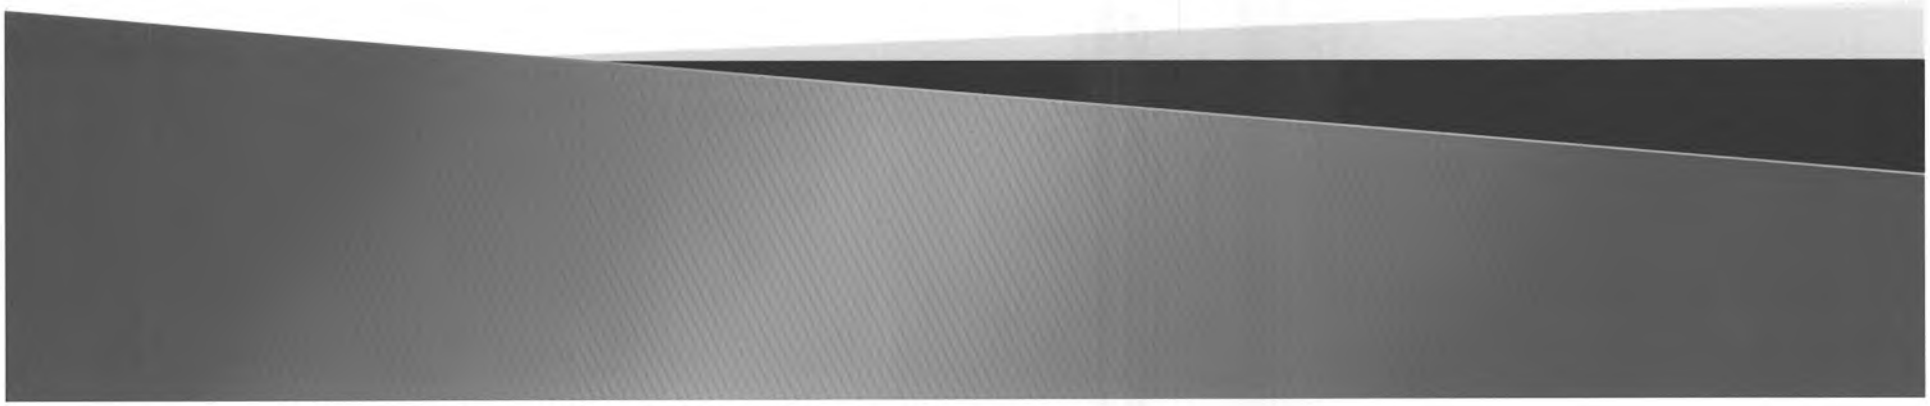
3/05/12 OVERVIEW: GOVERNOR'S COUNCIL ON DISABILITIES & SPECIAL EDUCATION

<TARGET><BILL></BILL><SUBJECT>3-05-12 OVERVIEW GOVERNOR'S COUNCIL ON DISABILITIES and SPECIAL EDUCATION</SUBJECT><COMM>SHSS27</COMM></TARGET>

Overview

Governor's Council on Disabilities & Special Education

Senate HSS Standing Committee
March 5, 2012



Council Mission

- Create change that improves the lives of people with disabilities
  - Capacity building
  - Systems change
  - Advocacy

Council Members

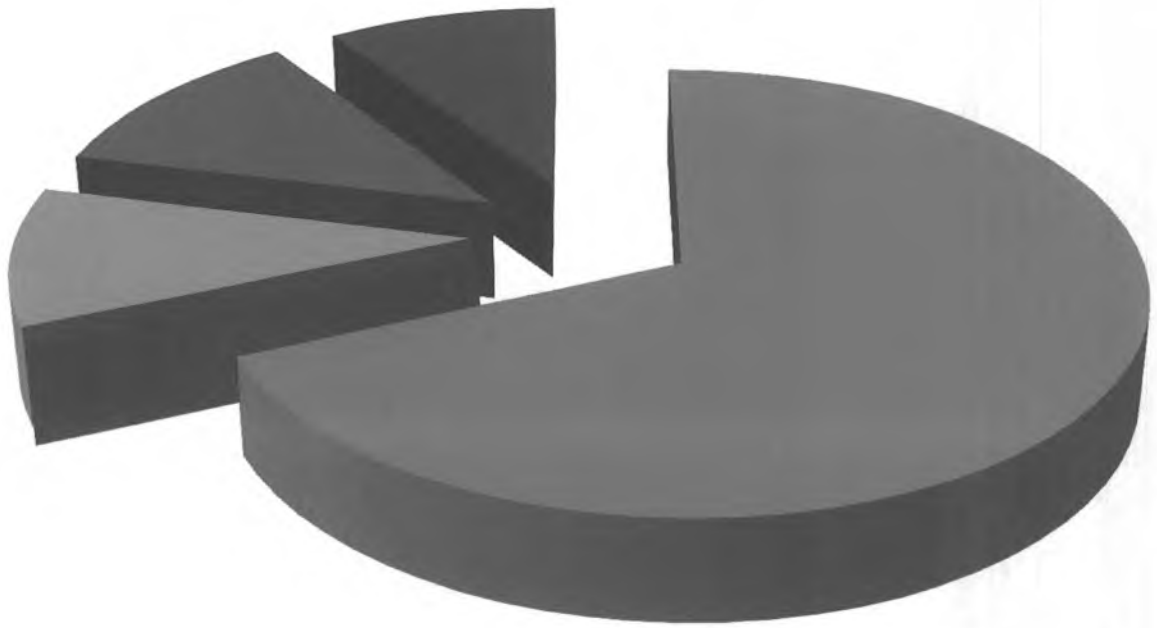
- 27 members appointed by the Governor
- Primary consumers or self-advocates
  - Individuals with disabilities
- Secondary consumers
  - Parents or family members of people with disabilities
- State agency representatives
- Other representatives designated in federal law
  - Center for Human Development
  - Disability Law Center
  - Non-profit agencies
  - Public education systems
  - Higher education

The Council – A Unique "Beast"

- Located within State of Alaska government
  - Boards and Commissions
  - Designated State Agency: DHSS
- Different from most boards and commissions
  - "Freedom to Act"
- Different from other states
  - Roles and responsibilities
  - No granting authority
  - "Working" board

FY12 Funding Sources

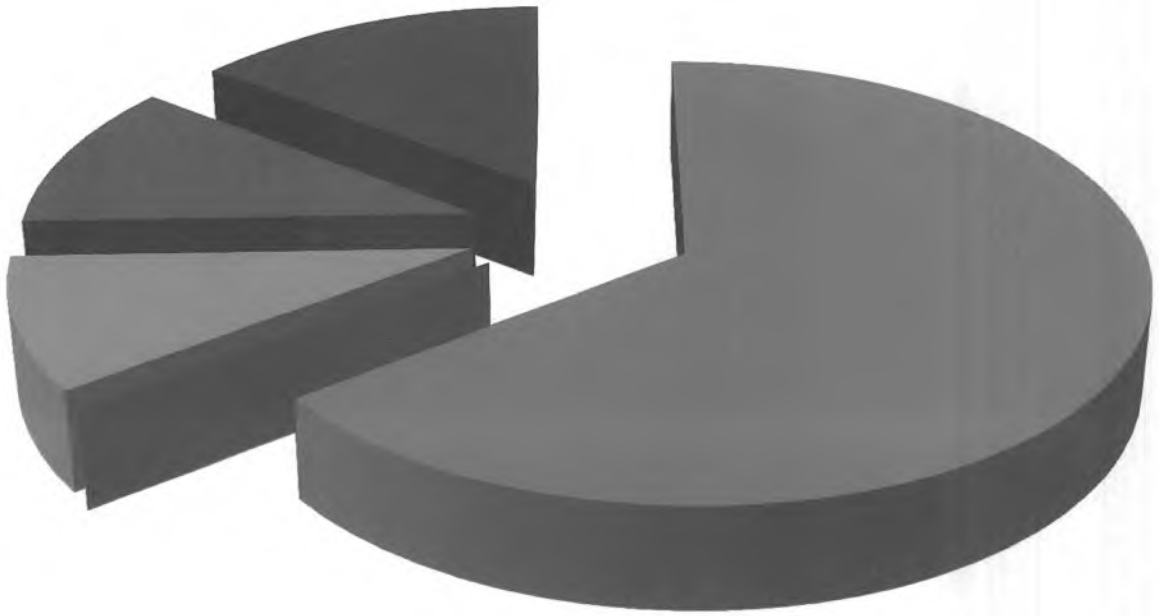
$2,536.8 Total



- Federal Receipts $1,739.2
- General Fund Receipts $0
- Inter-Agency Receipts $261.9
- GF/MH $297.0
- MHTAAR $238.7

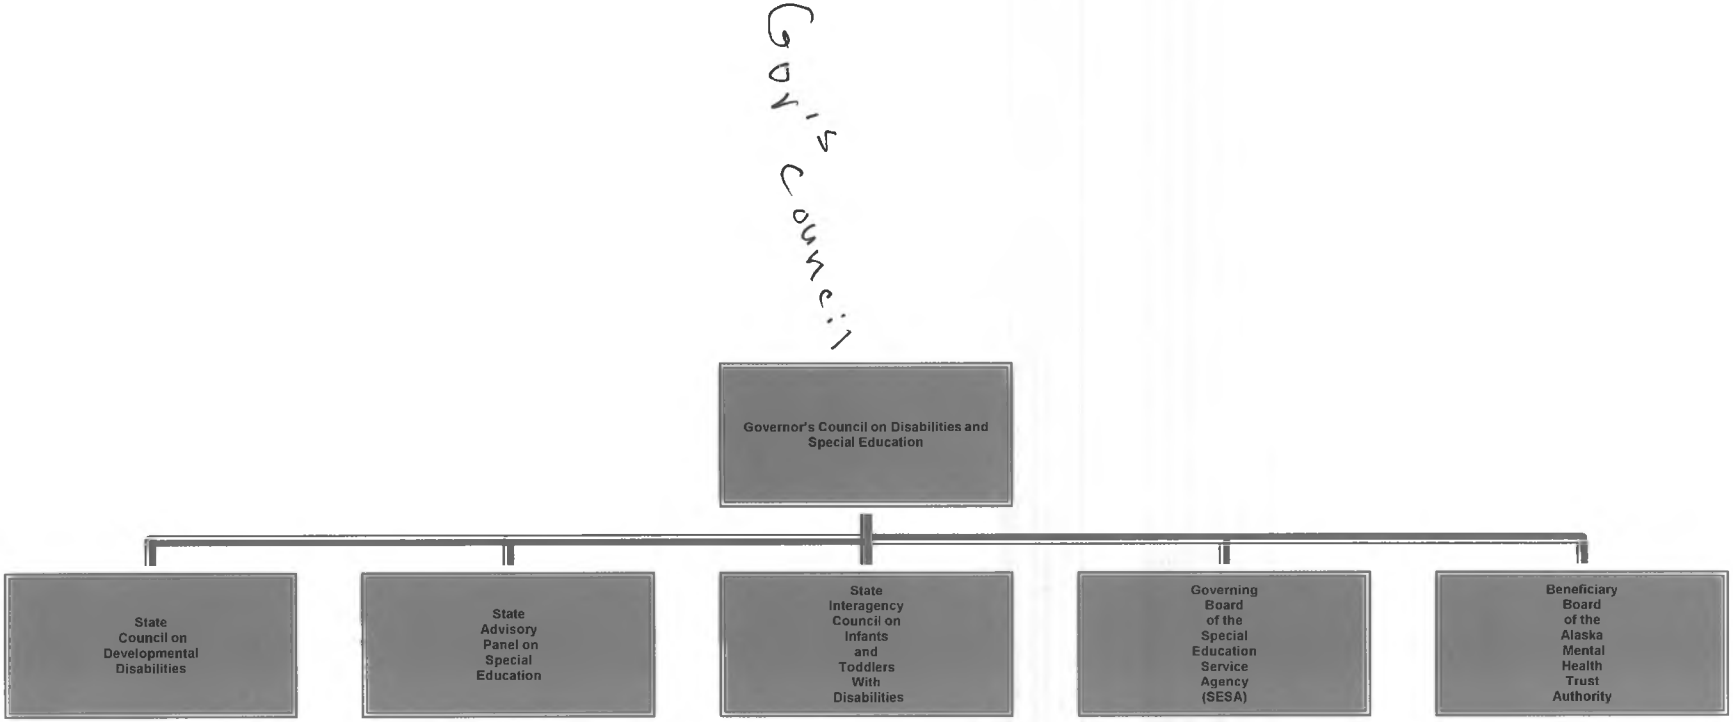
FY13 Funding Sources

$2,709.9 Total



- Federal Receipts $1,753.8
- General Fund Receipts $0
- Inter-Agency Receipts $266.3
- GF/MH $297.0
- MHTAAR $392.8

Council Responsibilities



KEY FACTS ABOUT DEVELOPMENTAL DISABILITIES

- Severe, chronic disabilities that occur at birth or before age 22 and are likely to continue indefinitely
- Result in substantial function limitations in 3 or more areas of major life activity
  - Self-care
  - Receptive and expressive language
  - Learning
  - Mobility
  - Self-direction
  - Capacity for independent living
  - Economic self-sufficiency

KEY FACTS ABOUT DEVELOPMENTAL DISABILITIES

- Reflect individual's need for a combination and sequence of special, interdisciplinary or generic assistance, supports or other services that are of lifelong or extended duration and are individually planned and coordinated
- Examples of developmental disabilities
  - Intellectual disabilities
  - Cerebral palsy
  - Seizure disorders
  - Autism
  - **Note:** mental illness and FAS or FASD may be developmental disabilities ***IF*** all criteria in the definition are met
- Approximately 12,784 Alaskans have a developmental disability

Ongoing Challenges

- Developing actions and policies that will improve the lives of thousands of Alaskans with disabilities in the future
- Properly equipping Alaskans with disabilities with tools, skills and opportunities they need to successfully live the same everyday lives as Alaskans without disabilities

5-Year State Plan Goal Areas

- Advocacy and Leadership
  - Foundation of all Council work
- Community Inclusion and Supports
  - Home and community-based services
  - Housing
  - Transportation
- Employment
- Early Intervention
- Education
- Healthy Living

Tools Used to Achieve Mission

- Gathering community and stakeholder input
- Conducting research and data gathering
- Preparing policy papers and issue reports
- Providing legislative testimony
- Providing policy recommendations and advice
- Helping people connect with the political process
- Educating and providing information to the public

Example of Council in Action

- Heard considerable public testimony about barriers to employment
  - Lack of policy that promotes work as an expectation
    - Fear of losing health benefits
    - Financial disincentives
    - Lack of knowledge of existing work incentives
  - Lack of access to needed resources/fragmented services
    - Lack of holistic vocational services
    - Work incentives counseling, 1-stop job center resources, assistive technology, asset building, transportation and housing
  - Limited employment opportunities
    - Limited access to employment and training programs
    - Self-employment often viewed as "option of last resort"

Overall Strategies

- Secured Trust and federal funding
- Worked within existing systems, initiatives and partnerships
- Gathered variety of information to prioritize activities
- Identified and leveraged resources to strategically address areas of need
- Took comprehensive approach
  - Strategic planning ("Summits R Us")
  - Capacity building (training, technical assistance and outreach)
  - Policy assessment
- Built on what's learned

Some Outcomes to Date

- Division of Vocational Rehabilitation policy changes
  - Work Incentives Counseling reimbursement
  - *Discovery* as a reimbursable service
  - Self-employment policy more friendly to would-be entrepreneurs
- Establishment of microenterprise and virtual business coaching program
- Slow but steady increase in number of participants in Working Disabled Medicaid Buy-in Program

Some Outcomes to Date

- Annual *Full Lives Conference* includes employment track
- Establishment of 3 Project SEARCH sites
  - Providence Hospital – Anchorage
  - Mat-Su Regional Medical Center
  - Fairbanks Memorial Hospital
- One-stop job center policy changes
  - Disability Resource Coordinators located within job centers
- Development of curriculum on customized self-employment

Some Outcomes to Date

- Division of Vocational Rehabilitation policy changes
  - Work Incentives Counseling reimbursement
  - *Discovery* as a reimbursable service
  - Self-employment policy more friendly to would-be entrepreneurs
- Establishment of microenterprise and virtual business coaching program
- Annual *Full Lives Conference* includes employment track
- Establishment of 3 Project SEARCH sites
- One-stop job center policy changes
  - Disability Resource Coordinators located within job centers

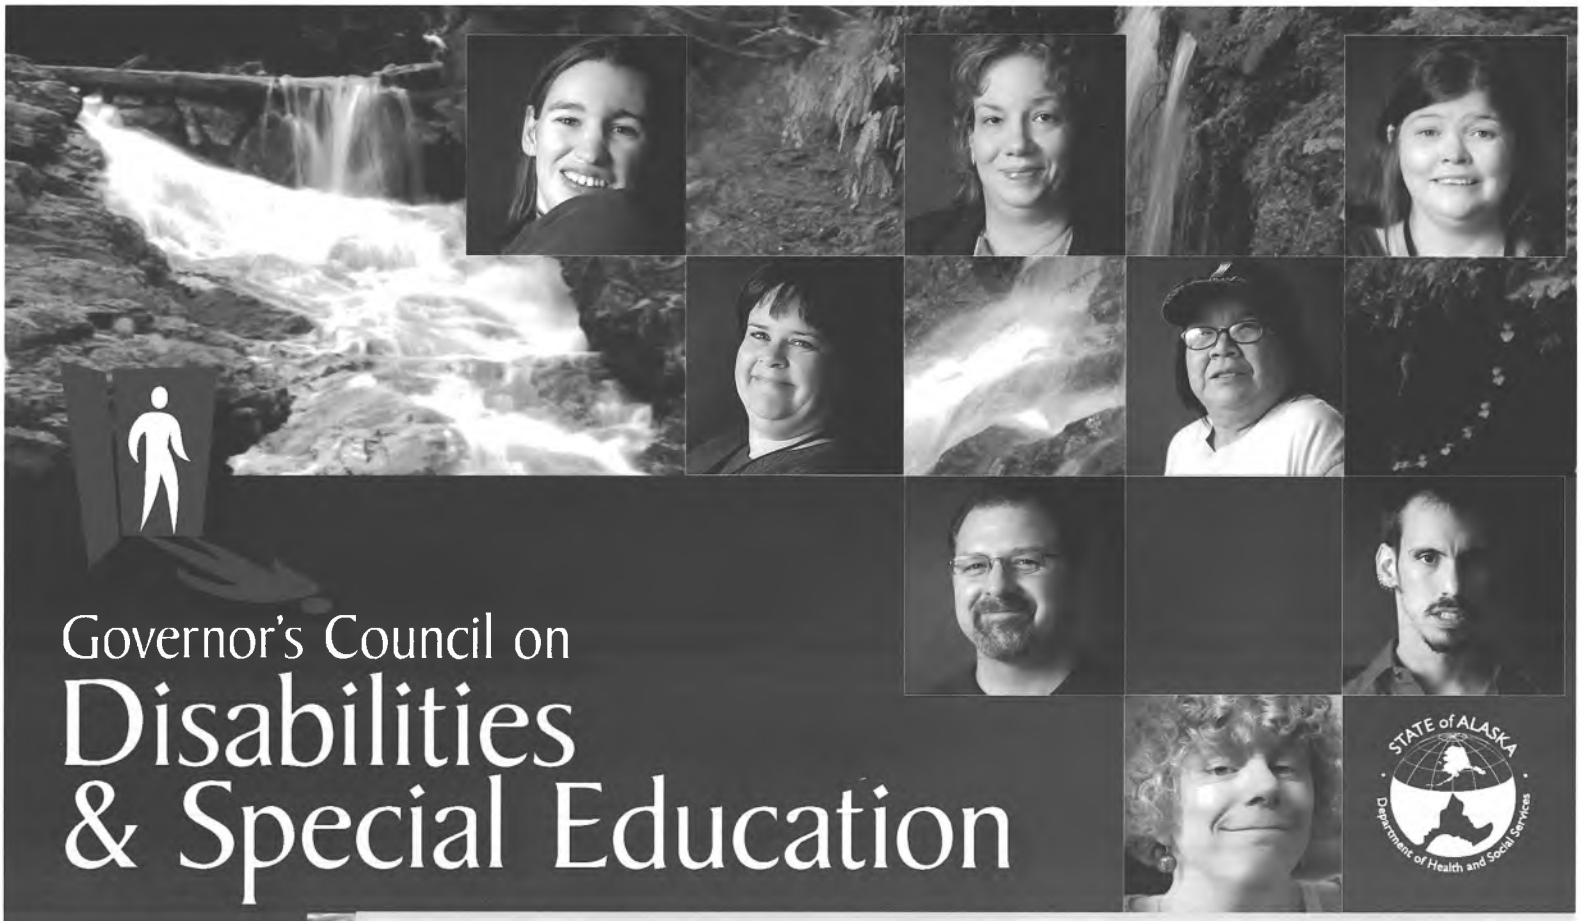
Questions?



Governor's Council on Disabilities & Special Education

1 ROLE

2 MISSION

3 THE COUNCIL IN ACTION

4 MOVING TOWARDS EMPLOYMENT

5 OUTCOMES

6 PRIORITIES

1. Role of the Council

- State Council on Developmental Disabilities
- Special Education Advisory Panel
- Interagency Coordinating Council for Infants and Toddlers with Disabilities
- Governing Board of the Special Education Service Agency
- Beneficiary Board for the Alaska Mental Health Trust Authority

2. Mission

Creating change that improves the lives of Alaskans with disabilities

3. Making Sustainable Change — An Example of the Council in Action

The Council manages the Alaska Works Initiative, a strategic effort funded by the Centers for Medicare & Medicaid Services to improve Medicaid programs and employment infrastructures. The Council works with state agencies, business & industry, service providers and the university to improve employment outcomes for Alaskans with severe disabilities. The Council also receives funding from the Alaska Mental Health Trust Authority to manage the microenterprise grant program, which helps Trust beneficiaries start their own businesses. In addition, the Council received funding from the Department of Education & Early Development to start a Project SEARCH program, which provides internship opportunities to youth with intellectual or developmental disabilities in their last year of school at a host business.

- From 2009 to 2010, there was a ***5.6% increase*** in the number of Alaskans on social security who worked (Note: nationally, there was an average ***4.8% decrease*** in the number of people on Social Security who worked).

State of Alaska • Department of Health & Social Services • Governor's Council on Disabilities & Special Education
3601 C Street, Suite 740, P.O. Box 240249, Anchorage, Alaska 99524-0249 • 907-269-8990

3. Continued … Sustainable Change

- In fiscal year 11, the number of people with developmental disabilities who were employed increased by 10.6% (358 to 396).
- In fiscal year 11, 13 Trust beneficiaries started their own businesses.
- Three Project SEARCH sites were established at Mat-Su Regional Medical Center, Providence Hospital and Fairbanks Memorial Hospital; other partners include the Division of Vocational Rehabilitation, local school districts and disability service providers.

4. Moving toward Employment: Stories of people who have benefited from the work of the Council

- Katie, age 21, was the first student to be hired by one of the host hospitals participating in Project SEARCH. Katie was in the program at Mat-su Regional Medical Center (MRMC) only five months before she was hired to work as a technician in Environmental Services. She works 20-25 hours per week, is a union member and makes over $13 an hour. One of the goals of Project SEARCH is to change the culture of a workplace into one that accepts disability in the workplace. At MRMC, Katie and the other Project SEARCH students have certainly accomplished this.
- Becca is starting Becca's Alpacas in the Mat-Su valley, thanks to start-up funding from the microenterprise grant program. Her business will primarily raise, breed, and sell alpacas. She may also collect and sell alpaca waste as fertilizer for local gardeners, and shear alpaca fleece and have it made into yarn to sell locally and/or online.

5. Other Outcomes for Alaskans with Intellectual or Developmental Disabilities in Fiscal Year 2011

As a result of the Council's work with 119 entities participating in partnerships or coalitions, the following number of people benefited:

- 627 people have needed health services.
- 3,019 people received formal or informal supports.
- 3,297 people have transportation for work, medical and personal needs.
- 81 individuals got and kept employment consistent with their interests and abilities.
- 2,301 students have the education and support they need to reach their educational goals.
- 1,821 infants and young children have services and supports needed to reach developmental goals.
- 384 individuals have homes of their choice.
- 928 people have information, skills, opportunities and supports to live independently, productively and included in all aspects of community life.

6. Fiscal Year 2012-13 Priorities

- Ensuring the continuation of complex behavior collaborative consultation and training services to meet the needs of individuals with cognitive disabilities and challenging behaviors
- Implementing autism insurance reform
- Changing the funding formula for the Special Education Service Agency (SESA) and removing its sunset clause in state statute
- Increasing the employment and self-employment rate of people with disabilities
- Improving services and supports to women with disabilities who are victims of sexual or physical assault
- Increasing access to services for people residing in rural and remote areas of the state

ImPACT
Sports Concussion Management

Heather Macomber, PhD

Alaska Neuro
ASSOCIATES

Learning Objectives

- Define sports concussion and describe symptoms
- Describe ImPACT Post-Concussion system and research
- Describe ImPACT assessment protocol for ASD
- Describe sideline assessment for coaching and/or medical staff
- Review standard concussion management guidelines

Sports Concussion Definition

At the 2004 International Symposium on Concussion in Sport, the following definition and criteria for concussion was adopted:

"*Sports concussion is defined as a complex pathophysiological process affecting the brain, induced by traumatic biomechanical forces*"

Sports Concussion Characteristics

- Approximately 90% of sport-related concussions occur without loss of consciousness (LOC)
- An athlete who sustains concussion is 4-6 times more likely to sustain a second concussion
- 10% of all contact-sport athletes sustain concussions yearly
- 63% of all concussions occur in football
- Estimated that up to 20% of football players will sustain a concussion per season

Sports Concussion Data

- An estimated 1.6 - 3.8 million sports-related concussions occur each year in the US, leading the CDC to conclude that sports concussions have reached an "epidemic level"
- For those 15-24 years old, sports are the 2nd leading cause of traumatic brain injury (motor vehicle crashes are 1st)
- According to research by *The New York Times*, at least 50 youth football players (high school or younger) from 20 different states have died or sustained serious head injuries on the field since 1997
- According to the CDC, during 2001-2009 athletes ages 5-18 years increased 62% to a total of 2.6 million sports-related emergency department (ED) visits annually, of which 6.5% (173,285) involved a traumatic brain injury, including concussion. The rate of TBI visits increased 57%, likely due to increased awareness of the importance of early diagnosis of TBI

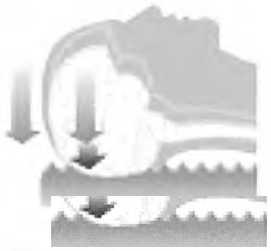
Mechanisms of Concussion

Concussions: Causes and Recovery

A concussion is a change in mental status caused by a blow to the head, neck or upper body. Symptoms may include confusion, amnesia, nausea, dizziness, blurred vision or loss of consciousness.

How it Happens

There are two types of injuries that can lead to concussions.



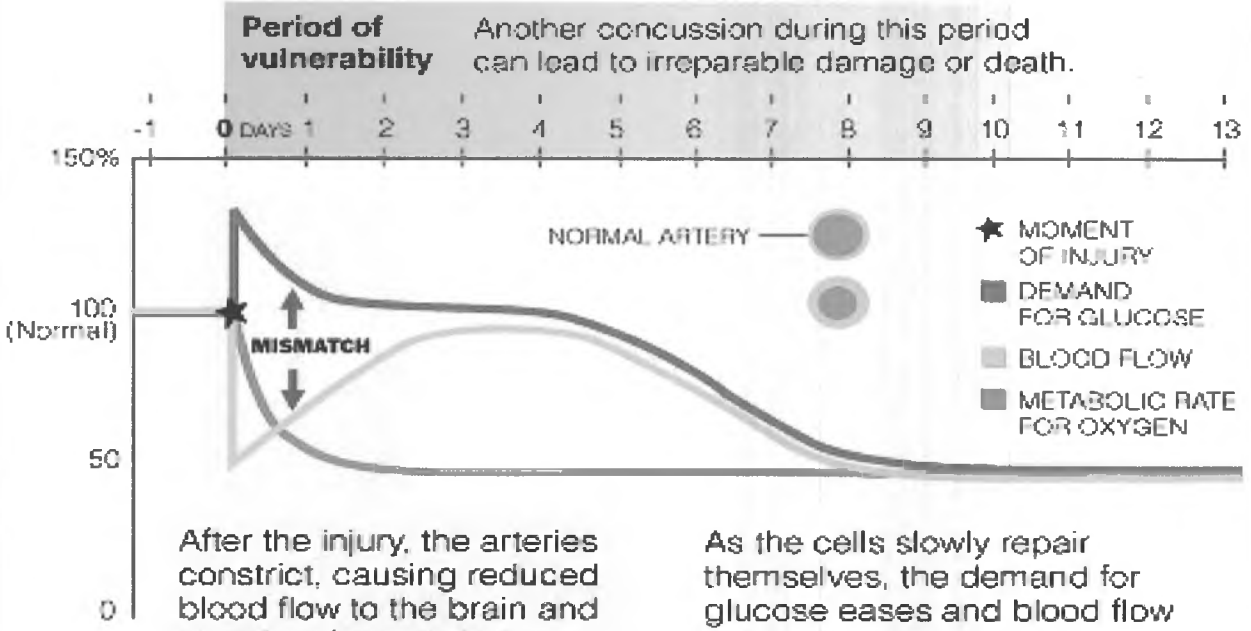
IMPACT
When the head slams into a hard surface, the skull stops abruptly while the brain, floating in cerebral fluid, continues to move and is shaken and sometimes bruised when it finally hits the skull.

SPIN
A blow to the head can cause the head to snap rapidly. When the head stops abruptly, the brain continues to rotate, potentially causing cell damage.

Neurometabolic Changes of Concussion

The Crisis and the Healing

At the moment of injury, the brain goes through an initial period of crisis followed by an undetermined period of healing. The rate of recovery varies according to the severity of the injury.



After the injury, the arteries constrict, causing reduced blood flow to the brain and lowering the rate that oxygen is metabolized. The demand for glucose also rises to provide cell energy for healing. But the high demand for glucose cannot be met by the constricted arteries. This mismatch creates a metabolic crisis.

As the cells slowly repair themselves, the demand for glucose eases and blood flow returns to normal as vessels become less constricted. But the brain remains in a state of metabolic depression, a quiet state akin to rest, for a long period before returning to normal.

Source: David A. Hovda, Ph.D., U.C.L.A. Brain Injury Research Center

Why Concussion Management is Important…

- Prevent against cumulative effects of injury
  - Cumulative neurobehavioral deficits
  - Lowered threshold to injury
- Concussion management allows players to return quickly and safely to play
- Sideline assessment helps identify when to seek immediate medical attention (ER visit)

Why Concussion Management is Important…

- Second Impact Syndrome
  - Additional concussion while still in recovery
- NOTE: Second hit does not need to be severe
  - Second impact has been shown to occur up to 14 days post-injury or when athlete returns to play before resolution of symptoms
- Catastrophic increase in intracranial pressure
  - Vasomotor paralysis, edema, massive swelling, herniation, death
- Most often occurs in athletes <21 years old
  - Neurochemical processes appear to differ in developing brain

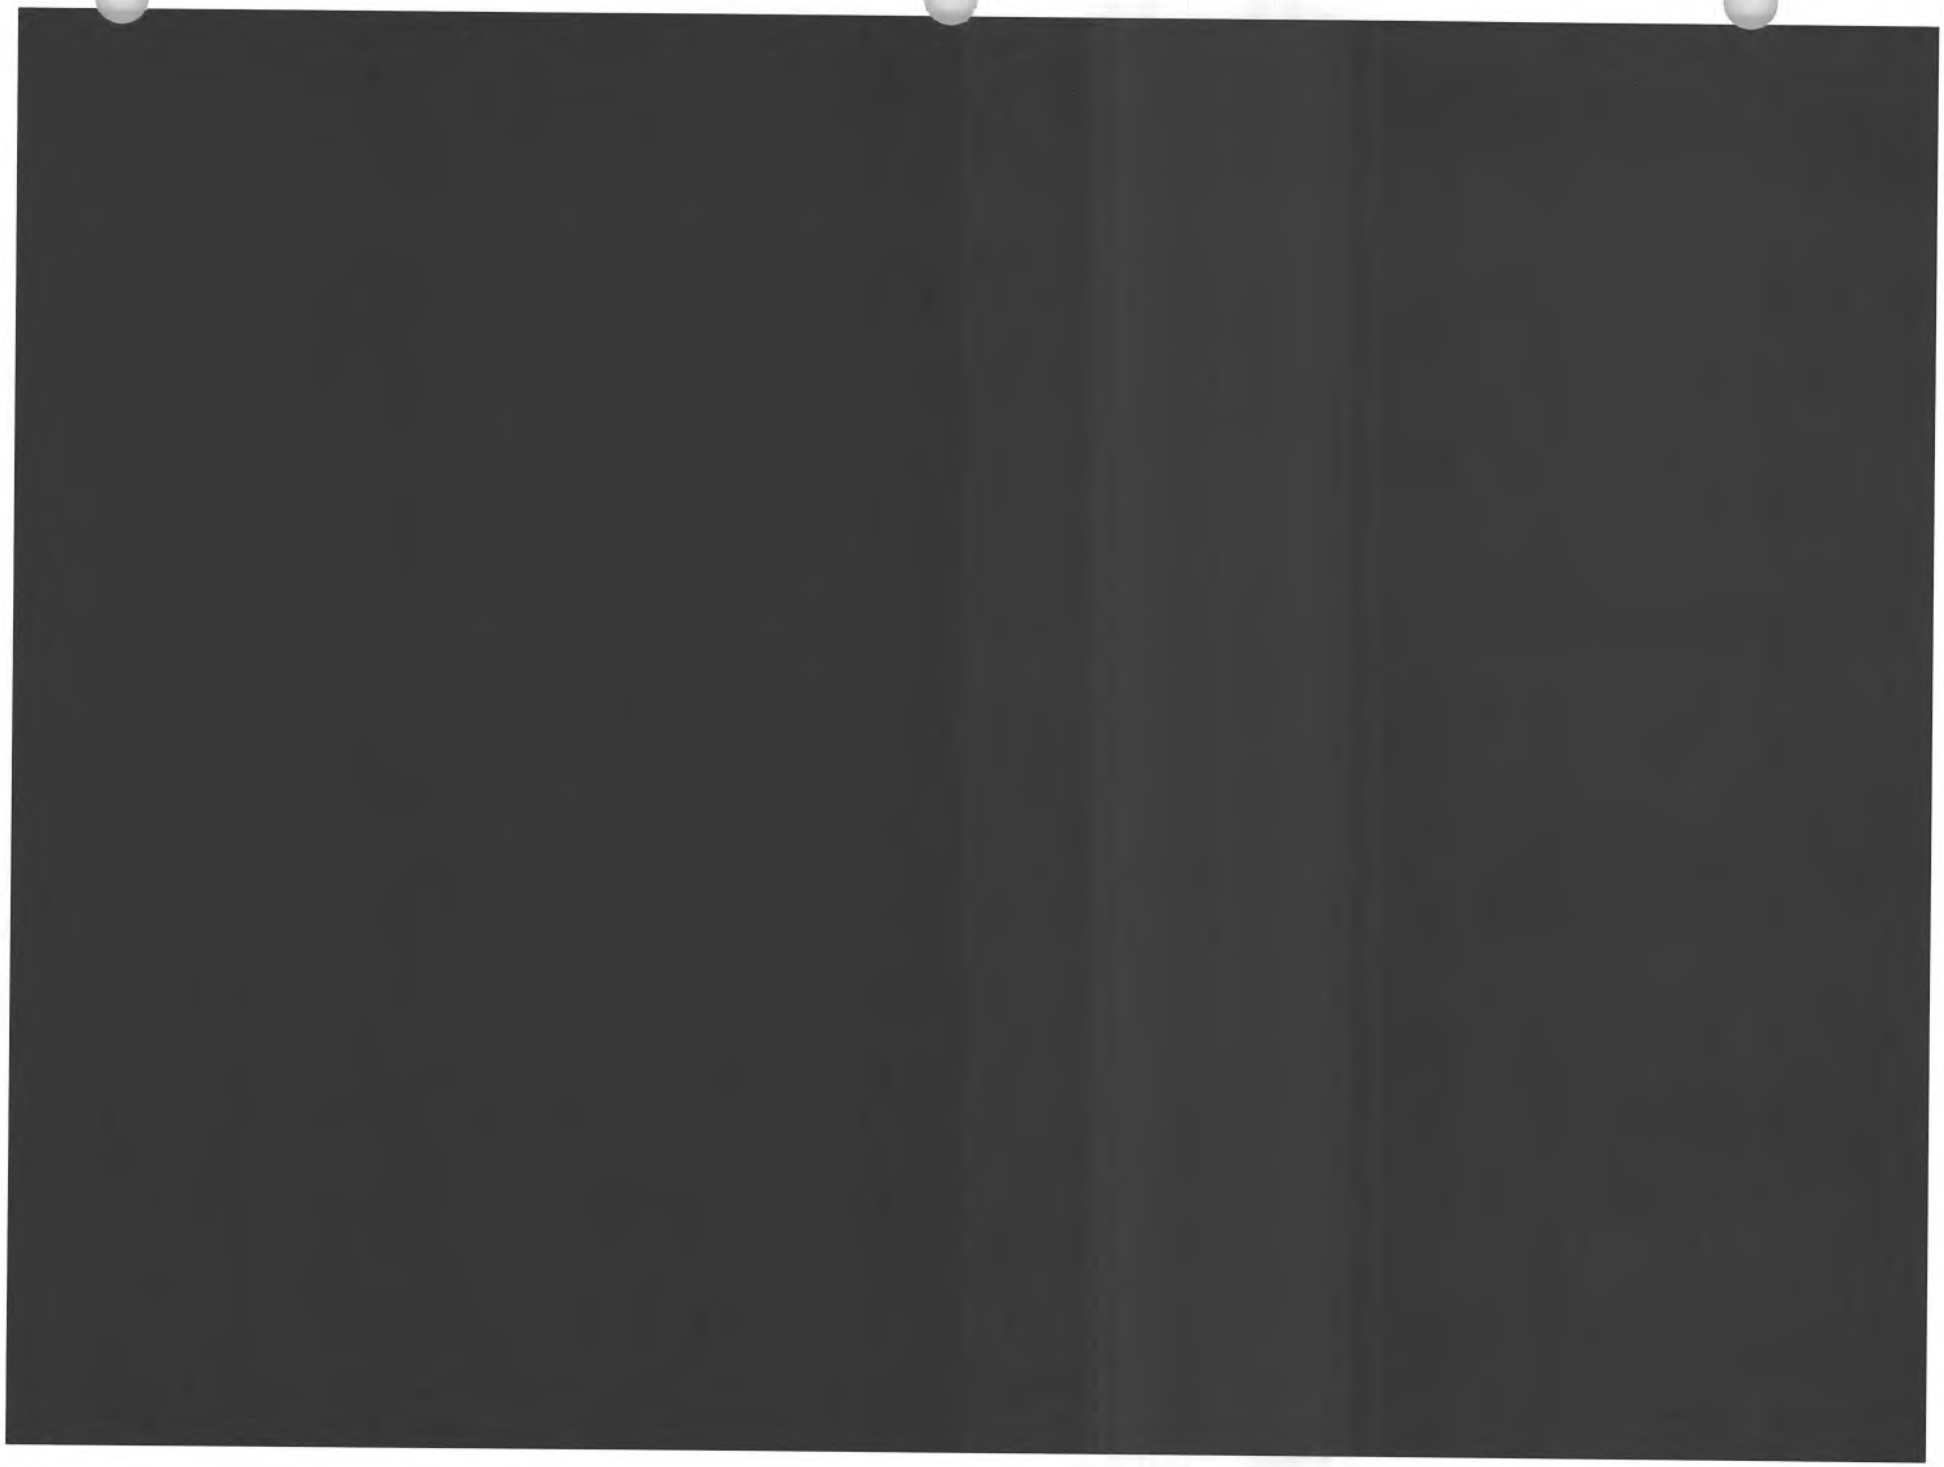
Why Concussion Management is Important…

Increased risk of concussion:

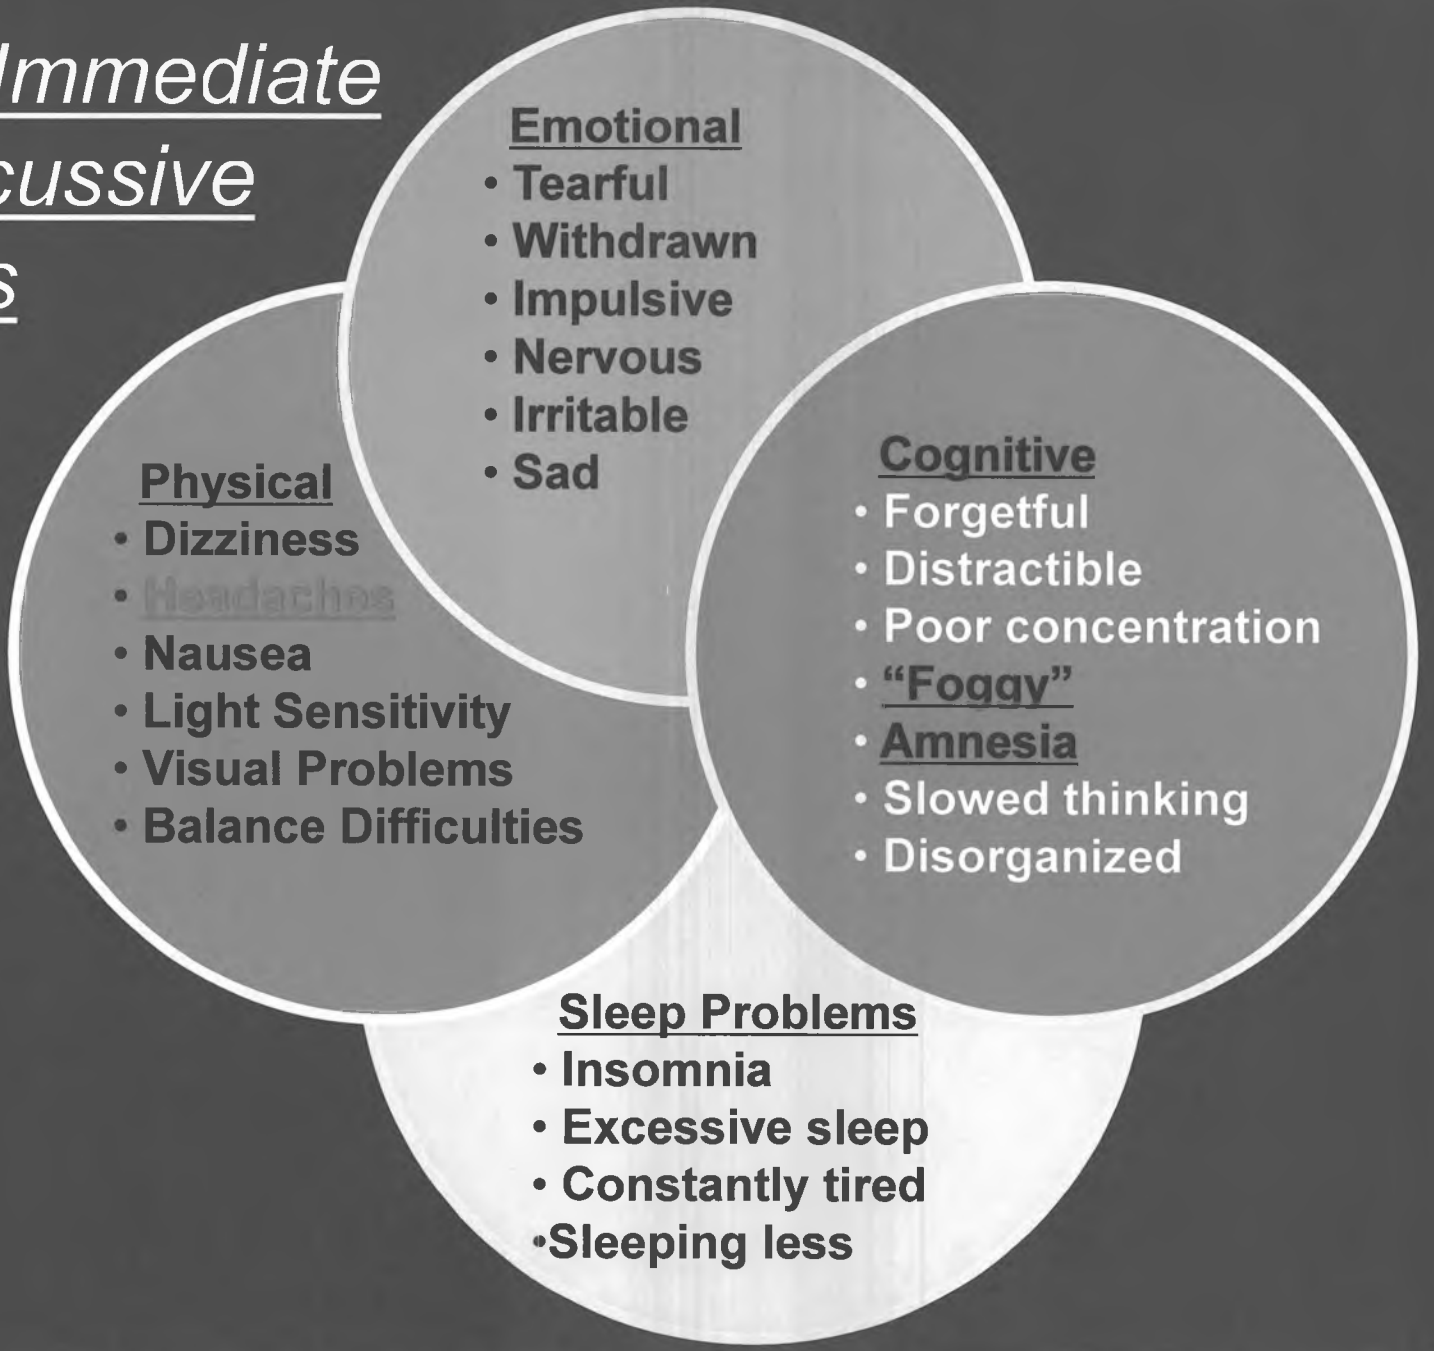
- players with 1 previous: 1.5x risk
- players with 2 previous: 2.8x risk
- players with 3+ previous concussions, are 3.5x more susceptible to concussion than a player with no concussion history

High school athletes with ≥3 concussions are at increased risk for the following with subsequent concussion:

- LOC (8-fold greater risk)
- anterograde/post-traumatic amnesia/PTA (5.5-fold greater risk)
- confusion (5.1-fold greater risk)



Common Immediate Post-Concussive Symptoms

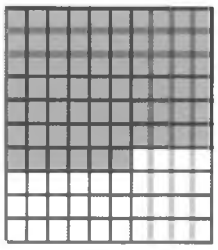


Can an athlete's self-report be trusted?

Keeping the Injuries to Themselves

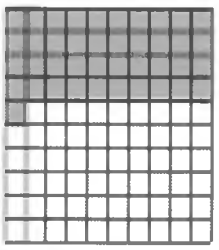
High school football players often do not report concussions, according to a 2004 study presented in the Clinical Journal of Sports Medicine. The survey of 1,532 varsity players in Wisconsin revealed that 47 percent of players who sustained concussions continued to play without reporting the injuries to anyone. They listed their principal reasons:

Did not think a concussion was serious enough to report.



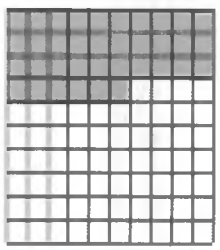
66%

Did not want to leave the game.



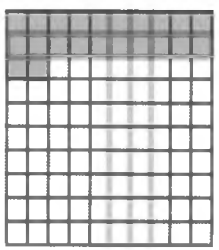
41%

Did not realize a concussion was sustained.



36%

Did not want to let down their teammates.



22%

Can an athlete's self-report be trusted?

"Anonymous questionnaires that ask specifically about concussions have reported rates among high school football players at about 15% each season; when the word concussion is omitted and a description of symptoms is provided instead, close to ***50%*** of players say they had one, with ***35%*** reporting two or more." *New York Times, Nov 14, 2007*

Former AAN Concussion Guidelines

- Tremendous variability
- Up to 14 different scales
- Assumes same standard for all age groups
- Poor job distinguishing “mild” concussion
- Assigns too much importance to LOC
- Management guidelines not based on cognitive test data are arbitrary

NEW CONCUSSION MANAGEMENT GUIDELINES
CIS Group, Vienna (2001), Prague (2004)

"Cornerstones of Management"

- Removal of symptomatic athletes from play
- Restriction from play while symptomatic
- Graduated return to play (following exertion)
- *Neurocognitive testing*
- Recognition of differences in children

Aubry, Cantu, Dvorak, Graf-Baumann, Johnston, Kelly, Lovell, McCrory, Meeuwisse, Schasmasch, 2001. *Clinical J. Sports Med.*

The Unique Role of Neuropsychology

- Specific training in cognitive assessment in general and brain injury in particular
- Identify pre-existing cognitive/learning disorders that could result in misdiagnosis
- Identify co-existing psychiatric issues that affect recovery
- Identify poor effort/invalid test performances
- Capable of successfully managing atypical recovery
- Familiarity with a wide array of providers when additional care is needed
- Of the two recognized professions that are trained to evaluate for brain injury, neurologists typically refer patients to neuropsychology to assess concussion/mTBI

ImPACT

Immediate Post-Concussion Assessment and Cognitive Testing

Computerized Neurocognitive Testing

Mark Lovell, Ph.D.-UPMC Dept. of Orthopedic Surgery

Micky Collins, Ph.D.-UPMC Dept. of Orthopedic Surgery

Joseph Maroon, M.D.-UPMC Dept. of Neurological Surgery

What is ImPACT?

Post-Concussion Evaluation & Management

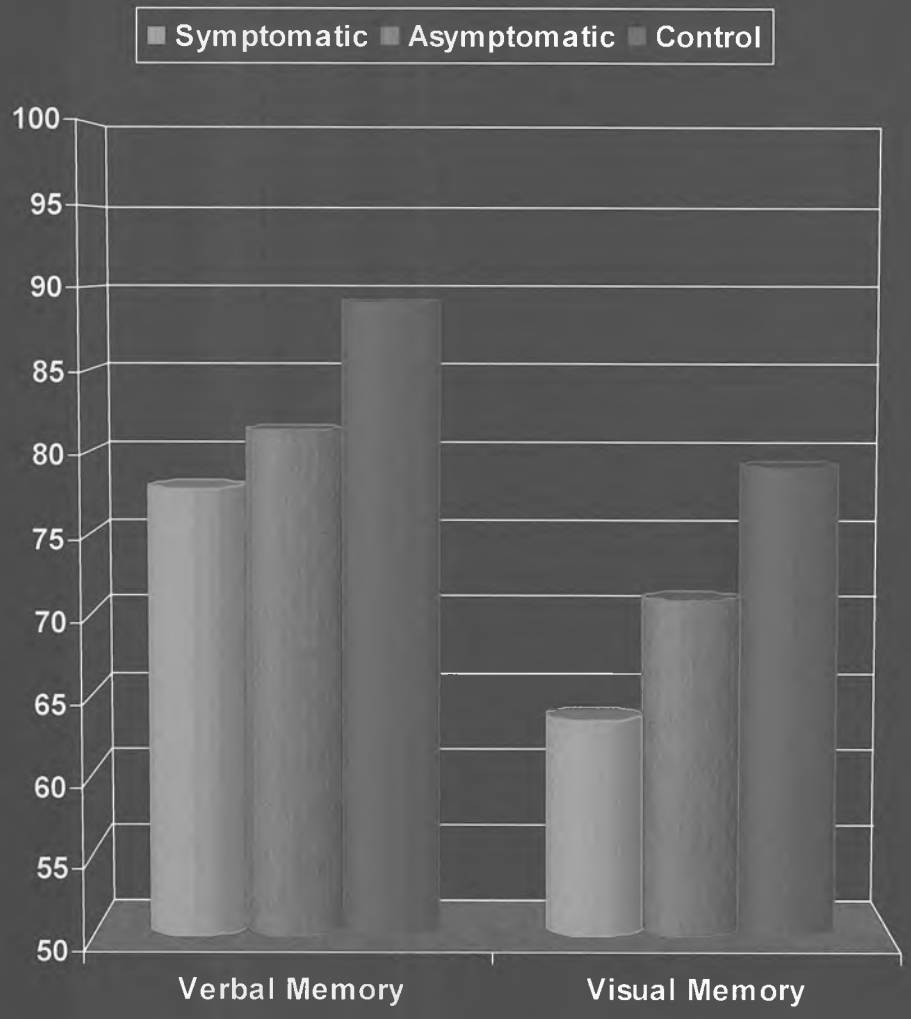
- Demographic/Concussion history questionnaire
- Concussion Symptom Scale
  - 21 Item 5-point scale (e.g. headache, dizziness, nausea, etc.)
- Multiple neurocognitive measures
  - Measures domains of memory, working memory, attention, reaction time, mental speed
- Detailed clinical report
  - Outlines demographic, symptom, neurocognitive data
  - Computer scored

Who's using ImPACT?

- Army, Navy
- NFL, MLB, NBA, NHL
- All MLB umpires
- USA Olympic Training Center
- Cirque du Soleil
- U.S. Soccer Federation
- U.S. Ski Team
- NFL Europa, South African Rugby
- More than 300 colleges and universities
- More than 1,000 school districts

UNIQUE CONTRIBUTION OF NEUROCOGNITIVE TESTING TO CONCUSSION MANAGEMENT

Testing reveals cognitive deficits in asymptomatic athletes within 4 days post-concussion



N=215, MANOVA p<.000000 (Lovell et al., AJSM, In Press 2006)

ImPACT "Bell-Ringer" Study

- 64 high school athletes with "mild" concussion and no loss of consciousness
- Two groups compared in terms of outcome
  - Athletes with <5 min of signs/symptoms recovered completely within 7 days
  - Athletes with 5-15 min of signs/symptoms had cognitive deficits at 7 days

Lovell, Collins, Iverson, Field, Podell, Cantu, Fu; J Neurosurgery; 98:296-301,2003
Lovell, Collins, Iverson, Johnston, Bradley; Amer J Sports Med; 32;47-54,2004

Post-Traumatic Migraine

PTM symptoms following sports concussion are related to a greater decline in cognitive performance and increased symptoms

- Post-traumatic headache is most common symptom
- Headaches occurs more often with mild brain injury than with more severe TBI (Yamaguchi et al, 1992)
- Headache with photosensitivity, phonosensitivity, and/or nausea likely leads to prolonged recovery

Cumulative Effect of Concussion

- 867 Male High School and College Athletes
  - Mean age 17.7 years
  - 86.7% football,10% hockey, 2.3% soccer
- No long-term effects of one or two prior concussions
- Evidence exists that ≥3 concussions is associated with ongoing adverse effects in some athletes (Collins et al, Guskiewicz et al, Iverson et al)

Additional ImPACT Research

- Concussed high school athletes have slower recovery from neurocognitive & other symptoms than college athletes (Field, Collins, Lovell et al. J. Pediatrics, April 2003).
- Amnesia is up to 10X better than loss of consciousness in predicting deficits on ImPACT following concussion (Collins et al., Clinical Journal of Sport Medicine, July 2003)
- Symptom of "fogginess" highly predictive of neurocognitive deficits and prolonged recovery as measured by ImPACT (Iverson, Lovell, Collins et al, JINS, 2004)
- "General" mouthguard use demonstrated no effect in reducing neurocognitive/symptom deficits related to sports concussion (Mihalik, Pardini, Guskiewicz, Collins, Lovell et al. Dental Traumatology, In Press)

Clinical Protocol

Neurocognitive Testing

1st assessment
w/n 24-72
Hours

Repeat
assessment
Day 5-10

Concussion

Baseline
Testing

Repeated assessment
Beyond if necessary

Baseline (Pre) Testing

- The best point of comparison is the student's own baseline scores
- Typically, the first step is a sports physical and ImPACT baseline at the beginning of the season
- Establishes a "starting point" for students with a prior history of concussions
- Helps accelerate return to play for students with learning disability
- Allows neuropsychologists to track the student's path back to their "normal" level

Sideline Assessment

- For signs of severe head trauma--Send directly to ER if you observe:
  - Any loss of consciousness, fixed pupil, vomiting, can't stand, can't respond, can't move limbs, immediate severe head pain
- For students without signs of severe head trauma, use the ImPACT sideline assessment tool:
  - Look for listed concussion signs
  - Ask athlete about listed concussion symptoms

Principles of Sideline Assessment

- Take athlete away from distracting activity and people
- Try to maintain their full attention
- Speak in loud and clear voice
- Have athlete perform all tasks listed on card
- If they fail any questions, the protocol says that they cannot return to play--refer to nurse
- No “do-overs” or hints--if they cannot do these simple tasks, then they are not safe to be on the field

The Best Approach To Concussion Management

Concussion Signs and Symptoms Evaluation

Signs observed by staff

- appears to be dazed or stunned
- is confused about assignment
- forgets plays
- is unsure of game, score, or opponent
- moves clumsily
- answers questions slowly
- loses consciousness ***(even temporarily)***
- shows behavior or personality change
- forgets events prior to hit ***(retrograde)***
- forgets events after hit ***(anterograde)***

Symptoms reported by athlete

- headache
- nausea
- balance problems or dizziness
- double or fuzzy vision
- sensitivity to light or noise
- feeling sluggish
- feeling "foggy"
- change in sleep pattern
- concentration or memory problems

Symptoms may worsen with exertion.
Athlete should not return to play until symptom-free.

On-field Cognitive Testing

Orientation

Ask the athlete the following questions.

What stadium is this?
What city is this?
Who is the opposing team?
What month is it?
What day is it?

Anterograde amnesia

Ask the athlete to repeat the following words.

Girl, dog, green

Retrograde amnesia

Ask the athlete the following questions.

What happened in the prior quarter/period?
What do you remember just prior to the hit?
What was the score of the game prior to the hit?
Do you remember the hit?

Concentration

Ask the athlete to do the following.

Repeat the days of the week backward (starting with today).
Repeat these numbers backward:
63 ***(36 is correct)*** 419 ***(914 is correct)***

Word list memory

Ask the athlete to repeat the three words from earlier. (Girl, dog, green)

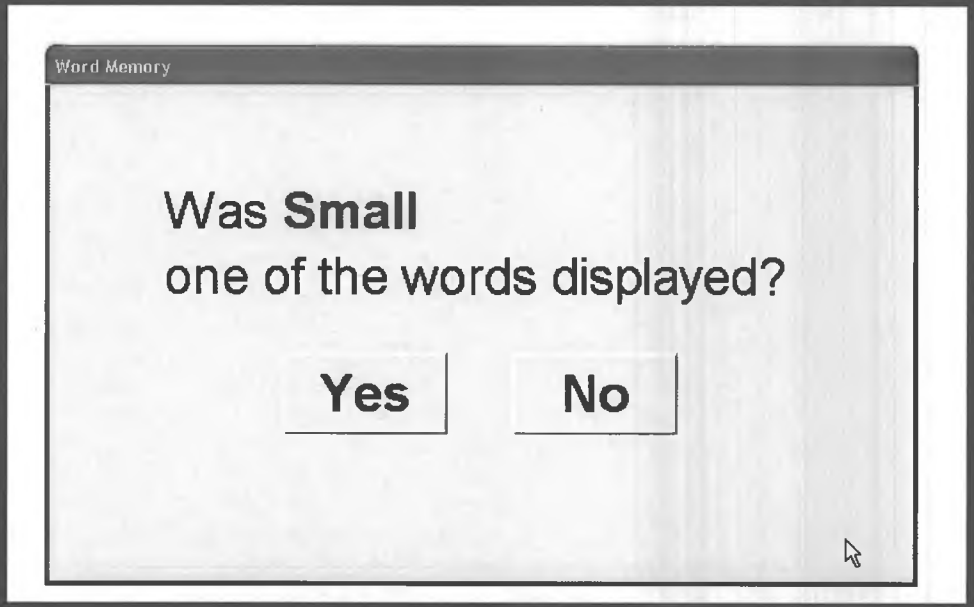
Any failure should be considered abnormal.
Consult a physician following a suspected concussion.

Module 1 *(Word Memory)*

ImPACT
The Best Approach To Concussion Management

There are five different forms of the word list.

Recall Condition: Following the administration of all other test modules (approximately 20 minutes), the subject is again tested for recall

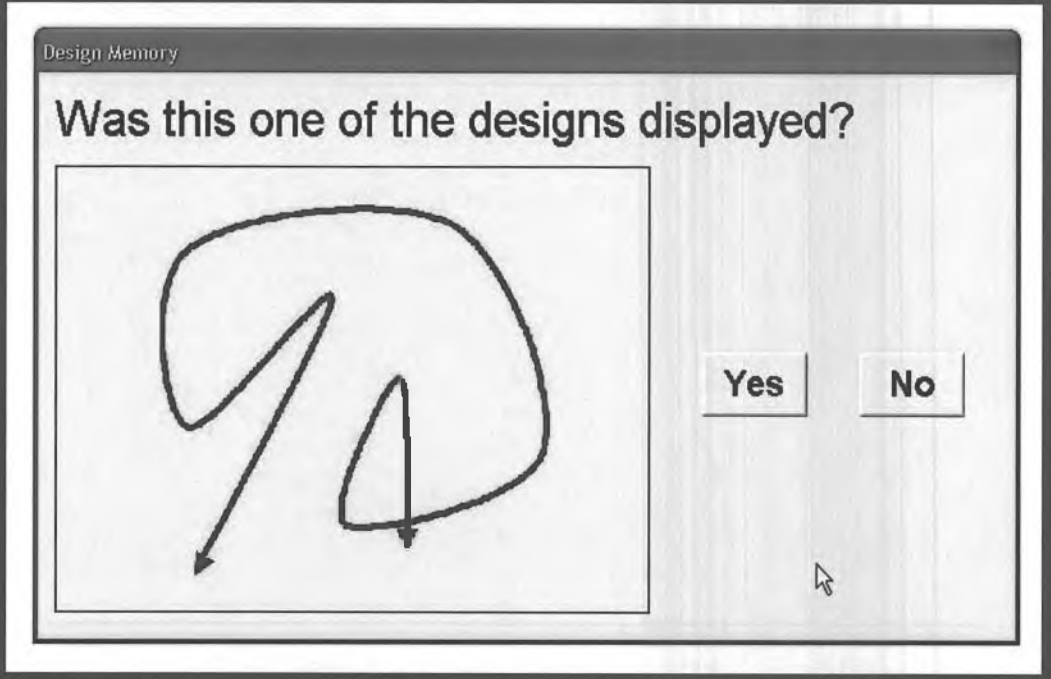


Module 2 (Design Memory)

ImPACT©
The Best Approach To Concussion Management

There are five different forms of this task

Recall Condition: Following the administration of all other test modules (approximately 20 minutes), the subject is again tested for recall



ASD Post-Injury Protocol

- Student is injured and has signs/symptoms
- Coach pulls student from activity and completes sideline assessment
- If protocol is positive:
  - Coach alerts Nurse
  - Nurse meets with student, refers for ImPACT assessment
  - Neuropsychologist evaluates student and manages post-concussion recovery and return to play decision
  - Student's post-concussive "team" works together for fastest and safest possible return to play

Return to Play Protocol

- Students are not returned to play on the day of injury if they have any signs or symptoms of concussion.
- The following guidelines are for symptomatic students:
  - Rest until symptom free
  - No *physical or mental* activity if symptoms are present, including headaches
  - Light physical/mental activity at first
  - If symptom free with light physical/mental activity, increase intensity of activity and re-test
  - Repeat until athlete is symptom-free with physical/mental exertion
- A concussed player is a POOR player

When Used by Properly Trained Professionals, ImPACT will…

- Determine severity of concussion
- Provide valuable information to the athlete, parents, athletic trainers, physicians
- Provide information on academic deficits associated with concussion
- Determine safe return to play
- Reduce liability for school districts

“Team” Collaboration

- Coordination between parents, coaches, nurses, teachers, counselors, and the student is critical
- Team approach keeps everyone informed about the student’s recovery process, so adjustments can be made for academic work, physical activity, and level of rest/general activity at home
- Allows for multiple parties to monitor and supervise the student’s recovery process. Good concussion management is the result of a good team effort.

Why Schools Choose ImPACT

- Concussions are one of the most serious medical problems at the high school level
- Proper management of concussion is the best form of prevention of serious injury
- To avoid litigation for improper concussion management
- Alerts teachers, nurses, and counselors to student's injury and helps create team approach to concussion management

Current ASD Data

ASD Middle and High School students completed (July 2011 – present):

- 8,354 Baselines
- 30 Post-injury Tests

< 1% concussion rate is highly implausible

Challenges to Program

- Under-reporting of concussions
  - Expected rate for football alone is 20%
  - Current reported rate is <1% (est. 0.008)
  - Hockey is slightly better at 2%
- Poor roll-out of program by schools
  - Limited or no information provided to parents
  - Some parents felt schools were overstepping bounds
  - Some coaching staff disagreed with program and have undermined effectiveness

Challenges to Program

- Mixed messages from coaches/school personnel regarding need for removal or follow up
- Students underreporting injuries due to fear of prolonged/excessive restriction
- Teachers/support staff unwilling to meet students' needs or grant accommodations
- A few coaches directed students to re-take baselines to assess concussion themselves, despite having no training in this regard
- Students deliberately performing poorly on baseline, with the goal of being returned to play faster after concussion
- Baselines conducted in suboptimal conditions, resulting in low scores that do not reflect students' true ability

Challenges to Program

- Financial and insurance constraints
  - Under-insured or uninsured students
  - High co-pays
  - Codes denied or insurance unwilling to pay for assessment
  - No additional financial source available to alleviate patients' financial burden (e.g., grants, waiver program)
  - In particular, Tricare has regular intervals in which they consistently deny pre-authorization for all evaluations, which prevents families from receiving needed services
  - No assistance available in rural areas due to inability to use/bill for telemedicine codes

Key Points

- Sports concussion is a hidden epidemic for student athletes
- A "bell-ringer" *is* a concussion
- Amnesia, headaches, and "fogginess" are better predictors for concussion related problems than loss of consciousness
- Concussed athletes should avoid physical/mental exertion while in the early stages of recovery
- Failure of sideline testing means that athletes do not return to play-following the protocol keeps them safe

Key Points

- Always have someone with the concussed athlete after injury
- Send the athlete to the ER if you observe signs of severe head trauma (LOC, vomit, fixed pupils)
- Keep the injured athlete's "team" members well informed to make accommodations - this approach leads to a faster, safer recovery and return to play

REMEMBER…

A CONCUSSION IS A BRAIN INJURY…TAKE IT SERIOUSLY!!!

Health Information Technology
Policy Guidance for State-level Decision-makers

May 23, 2011

I. Purpose

This State Health Information Technology (health IT) Policy Guidance document serves as a reference for state legislators and executives for how health IT might be used in the development of state health IT policy, executive orders and legislation. Whether newly elected or experienced, as legislators, you all grapple with how to best enact policies that promote quality healthcare delivery for your constituents. The goal of delivering highly effective and quality healthcare is supported by streamlining the care delivery process and leveraging health IT. With the current healthcare landscape in transition and as healthcare delivery varies in each state, this State health IT Policy Guidance document is a valuable resource focused on key topics, issues and concepts on the adoption, deployment and utilization of health IT.

While this document does not prescribe exact methods to implement and support health IT, it does provide key information for state officials on widely accepted concepts in the current health IT arena. Whether through the development and/or operation of health information exchanges (HIEs), Regional Extension Centers (RECs), reimbursement structures for health IT, electronic health record (EHR) adoption and implementation, or telehealth, health IT activities underway within states are affecting healthcare delivery and patient safety and care quality outcomes throughout the United States. When developing health IT policy, state legislators and executives should appropriately address support of currently available funding, consumer engagement, privacy and security, and the role of the publicly-funded health programs and other policy issues affecting the deployment and use of health IT. State health IT policy should be aligned with federal health IT initiatives, policy, regulations and compliance efforts to share the common goal of transforming healthcare in our nation by harnessing the potential of information technology and applying it in a uniform manner.

Note that the State health IT Policy Guidance document reflects the HIMSS 2011-2012 Public Policy Principles. Please refer to these principles for direction and definition from the federal government on health IT.

II. State Health IT Policy Guidance for Protecting and Supporting Funding and Incentives

The 2011-2012 HIMSS Public Policy Principles provide the basis for many of the policy and funding issues going forward in the states. Furthermore, the basis for developing many of these funding principles arose from The American Recovery and Reinvestment Act of 2009 (ARRA). ARRA included billions of dollars in Medicare and Medicaid incentive payments for the "meaningful use" of certified EHR technology and will help to close the health IT adoption gap in the United States. In addition, ARRA provides funding to states for the development of statewide health information exchanges which are a key component encouraging EHR adoption by providing information sharing to support effective healthcare delivery and increased patient care quality outcomes. HIMSS agrees with Dr. David Blumenthal, former National Coordinator for Health IT that "these are historic times".

ARRA is bringing the power of EHRs into the hands of healthcare providers at the point of patient care delivery. However, these new initiatives should not create a new form of "digital divide." Our goal is to ensure that all constituencies benefit from these efforts and that healthcare is provided in an effective and efficient manner across all patient care settings.

Each state has the capability to protect funding and prioritize their dollars to ensure that money is put to best use, which includes supporting the betterment of healthcare. ARRA committed unprecedented public funding with the intention of stimulating the economy through methodical purchase, implementation and use of EHRs. Focus is now directed on the administration of these funds in an efficient and effective and transparent manner, and development of initiatives to assure the durability of these investments over time. In addition, clinician reimbursement methodologies must appropriately reflect the evolving use of health IT over time.

III. State Health IT Policy Guidance for Supporting Consumer Engagement

State health IT policy can encourage, facilitate, and drive consumer engagement so that consumers have access to information and become active participants in their healthcare decisions. Consumer engagement can increase effective patient/provider communications, lead to reduction of medical errors, increase patient safety, and facilitate improvements in public and population healthcare. In today's electronic environment, various health IT applications, such as personal health records (PHRs) and EHRs, serve as tools for consumers to manage their personal health information and lifestyles, bolstered by the widespread use of mobile technology and social media. These new technologies facilitate increased consumer awareness and engagement with their providers that facilitates and aids privacy decisions and management of advance directives. The overall effect of consumer engagement is anticipated to result in transparency of price, cost and quality; foster trust and collaboration among stakeholders; and positively impact the health and quality of life for all individuals residing in the U.S.

IV. State Health IT Policy Guidance for Privacy and Security

The privacy and security of protected health information is best achieved when state health IT policy aligns with related federal and state privacy laws and regulations as designated by HIPPA. Consumers and their authorized providers should have access to PHI in a timely, private and secure manner, as protected by law.

HIMSS continues its 10 year history of producing privacy and security tools that have helped shape the discussion and prepare the healthcare community for regulatory compliance and today's most pressing security implementation challenges. Featured tools include the HIMSS Privacy and Security Toolkit and the recently released HIMSS Privacy and Security Toolkit for Small Provider Organizations, published in partnership with the Medical Group Management Association (MGMA).

For additional information on HIMSS' privacy and security activities, please contact Lisa A. Gallagher, HIMSS Senior Director of Privacy and Security at lgallagher@himss.org.

V. State Health IT Policy Guidance for the Role of Publicly Funded Health Programs

States have the ability to directly affect and participate in health IT initiatives through select publicly funded health programs such as Medicaid, public health initiatives, and State Employee Health Benefits programs. As payers, providers and regulators of these programs, states can leverage their role to not only provide grants, loans and tax incentives to support health IT initiatives, but also require the use of select health IT strategies and applications, and adherence to nationally recognized health IT standards and interoperability frameworks.

Additionally, states can support federal, state and private programs that assist providers with health IT implementation and support programs such as Regional Extension Centers (REC). The RECs focus on training the workforce to support the selection, implementation and management of EHRs to improve quality, safety and health outcomes and encourage scholarships matching grant funding and loan repayment programs to support this effort.

States can also expand or establish new workforce development and training programs that not only provide resources to support health IT curricula, but require the programs to engage in "pipeline" channels (e.g., technically focused middle/high schools, community colleges, AmeriCorps, veterans' employment and training programs). These programs support informatics competencies, particularly in underserved communities, through which potential skilled workers can be identified, engage in internships, be recruited and prepare for health IT related careers.

VI. HIMSS Government Relations and Regional Affairs

Developed by HIMSS, the State health IT Policy Guidance is an excellent resource for state executives and legislators when developing health IT policy. HIMSS is a cause-based, not-for-profit organization exclusively focused on providing global leadership for the optimal use of health IT and management systems for the betterment of healthcare. Founded 50 years ago, HIMSS and its related organizations have offices in Chicago, Washington, DC, Brussels, Singapore, Leipzig, and other locations across the United States. HIMSS represents more than 35,000 individual members, of which more than two thirds work in healthcare provider, governmental and not-for-profit organizations. HIMSS also includes over 520 corporate members and more than 120 not-for-profit organizations that share our mission of transforming healthcare through the effective use of information technology and management systems. HIMSS frames and leads healthcare practices and public policy through health ITs content expertise, professional development, and research initiatives designed to promote information and management systems' contributions to improving the quality, safety, access and cost-effectiveness of patient care.

In developing and supporting state health IT policy, HIMSS is a resource for analytical and public policy expertise. HIMSS Analytics, a subsidiary of HIMSS, is a valuable resource for health IT data and analytic needs. HIMSS Analytics supports HEALTH IT decision making by collecting and analyzing healthcare organization data relating to IT processes, environments, products, information systems department management, healthcare delivery trends and purchasing- related decisions.

HIMSS serves as an instrumental component in developing and supporting state health IT policy on the local level. Our members and staff help educate federal and state officials with the health IT knowledge and resources needed to develop and implement appropriate health IT- related policy. State officials can request legislative analyses, forecasting and health IT-specific information through HIMSS. Such activities are conducted in conjunction with the appropriate HIMSS committees and roundtables. On the local level, state officials have the opportunity to collaborate with 50 U.S.-based HIMSS Chapters on health IT initiatives. If a state official is not already a HIMSS State Government Member, he or she can reach out to a local HIMSS Chapter to connect with health IT experts. Facilitated by HIMSS Chapters, and supported by HIMSS, State Advocacy Days are the most prominent advocacy activities at the local level. During State Advocacy Days, HIMSS members and other health IT stakeholders have an opportunity to participate in health IT education, as well as visit and educate state legislators on health IT policy. Additional advocacy and public policy activities among HIMSS Chapters include monitoring state health IT legislative activities and fostering relationships with industry experts and state officials.

For additional information on HIMSS and our State Health IT Policy Guidance, please call Thomas S. Keefe, Senior Director of HIMSS State Government Affairs at (703) 562 – 8813 or tkeefe@himss.org.

AKEELA, INC.
PROGRAM DESCRIPTIONS

TREATMENT PROGRAMS

ANCHORAGE

Akeela House Recovery Center – Akeela House is a 48-bed adult, co-ed, long-term, residential therapeutic community treatment program serving clients with an ASAM III.5 assessment. The majority are also dually diagnosed so we also provide services for co-occurring disorders. The State funds 20 beds and we have contracts that support an additional five to seven beds. **Funding:** State grant, Federal grant, contract with Federal Parole and Probation, third-party payment and cash including donations supports the program. Address: 2805 Bering St., Anchorage, AK 99503. 907-561-5266.

Stepping Stones Residential Program – Stepping Stones is a long-term treatment program serving women assessed at an ASAM III.3 level and the children who live with their mothers in 15 individual apartments. It serves individuals with co-occurring disorders and it provides day care for the children while mothers are attending treatment. Most of the women are involved with OCS and are working to regain and retain custody of their children. **Funding:** State grant, augmented by Medicaid. Address: 611 W. 47th Avenue, Anchorage, AK, Mailing address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Akeela Women and Families Program – This program provides outpatient services to women who are assessed at the ASAM I or II.1 level. It offers group and individual counseling for 12 to 18 weeks with an emphasis of relapse prevention. Included is intensive case management for families under the supervision of the Office of Children's Services. **Funding:** State grant augmented by Medicaid and third-party payors. Address: 505 W. Northern Lights Blvd., Anchorage, AK 99503. 907-565-1200.

Akeela Outpatient Program – This is a fee for service program serving men and women who assess at the ASAM I or II.1 level. Available are outpatient and intensive outpatient services that offers group and individual counseling for 12 to 18 weeks with an emphasis on relapse prevention. **Funding:** Third-party payors, contracts with the Federal Bureau of Prisons and Federal Probation and Parole, and self payors augmented by an occasional Medicaid payment. There is no grant support for this program. Address: 3935 Reka Dr., Anchorage, AK 99508. 907-564-7483.

Family Care Court – A division of the Therapeutic Court System, Family Care Court serves women in need of substance use disorder services whose children are wards of the State's Office of Children's Services. They are admitted for treatment at either our women's outpatient or our women's residential program. Family services are provided through this program. **Funding:** Grants support the primary program with treatment

grants and occasional Medicaid augmentation. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Mental Health Outpatient Services – We provide mental health assessments, individual and group counseling and rehabilitation services for all ages. Included are psychiatric services and play and drama therapy with an emphasis on providing a family trauma program serving women and children suffering from trauma. This small program – two staff members – also provides services to treatment clients in our Anchorage based substance abuse programs that need mental health services. **Funding:** Small State grant, Medicaid, and some third-party and cash payments. Address: 3935 Reka Drive, Anchorage, AK 99508. 907-562-7438.

Transitional Housing – Fourteen apartments providing 29 bedrooms are available providing affordable, safe, and drug and alcohol free living for clients coming out of our treatment programs. We support these units with a case manager who works to make sure they are staying clean and sober, coordinates other services for them and assists them to find employment. **Funding:** Rental fee the clients pay augmented by some donations. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

KETCHIKAN

Outpatient Substance Use Treatment – The Gateway Center for Human Services provides outpatient services for men, women and juveniles. Service for clients assessed at the ASAM I to II.1 level are provided along with continuing care following treatment. **Funding:** A combination of grant, third-party payors, fees, and Medicaid. Address: 3052 5th Avenue, Ketchikan, AK 99901. 907-225-4135.

KAR House Residential Program – This program serves clients who are assessed at an ASAM III.1 to III.5 level. It is long-term treatment based on the individual progress of each client. KAR House is a small, 12 beds, co-ed program that provides a modified Therapeutic Community modality of therapy, and services for co-occurring disorders. **Funding:** Primarily grant with some donations. Address: 3134 Tongass Avenue, Ketchikan, AK 99901. 907-225-4135.

Gateway Mental Health Services – Gateway serves as a full-service community mental health service for the rural, southeastern section of the State of Alaska. Services include: children, youth and family services with in-school and wrap around services, adult and couples services, individual and group therapy, rehabilitation services, and community support programs for seriously mentally ill with a drop-in day treatment program. **Funding:** A combination of State grant, third-party payors, cash, and Medicaid. Address: 3052 5th Avenue, Ketchikan, AK 99901. 907-225-4135.

Gateway Psychiatric Emergency Services – On-call mental health clinicians are available 24/7 to respond for all ages suffering behavioral health emergencies. The hospital, police and private providers call on them. **Funding:** Primarily the grant.

Address: 3052 5th Avenue, Ketchikan, AK 99901. 907-225-4135.

Horizon House – Mental health services transitional housing is provided in two duplex style apartments providing a total of six bedrooms. The goal is to provide stable housing for mentally fragile adults pending acceptance into permanent housing. **Funding:** Grant, donations, and Medicaid. 1356 Peyton Place, Ketchikan, AK 99901. 907-225-4135.

SPECIALIZED DEPARTMENT of CORRECTIONS TREATMENT PROGRAMS

Intensive Outpatient Programs – Akeela provides intensive outpatient programs to inmates with a substance use disorder who assess at an ASAM II.1 level, at least. The programs is approximately 90 days in length with continuing care coordinated by the primary counselors either at their discharge location or in the prison if they have more time to serve. This service is provided in the following institutions and communities: Anvil Mountain Correctional Center, Nome; Yukon-Kuskokwim Correctional Center, Bethel; Fairbanks Correctional Center, Fairbanks; Palmer Correctional Center, Sutton; Spring Creek Correctional Center, Seward; and Lemon Creek Correctional Center, Juneau. In addition, an intensive outpatient program is provided by our Anchorage outpatient program to inmates living in halfway houses in Anchorage. **Funding:** State contract. Address: 4111 Minnesota Ave., Funding for all are contracts with DOC. Anchorage, AK 99503. 907-565-1200.

Assessment and Referral – We provide assessment and referral services to inmates located in the correctional facilities in Anchorage and in Palmer. Inmates can receive an assessment followed by referral either to institutional located programs if they are facing long term sentences, or they may be referred to substance use programs in the communities to which they will be released. **Funding:** A DOC contract. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Mental Health Emergency Services – Akeela's Gateway Center provides mental health services to inmates of the Ketchikan Correctional Center. The emergency nature of the services makes it an on-call service, so we respond to calls from the institution for support. **Funding:** A DOC contract. Address: 3052 5th Avenue, Ketchikan, AK 99901. 907-565-1200.

INTERVENTION AND PREVENTION PROGRAMS

Alcohol Safety Action Programs (ASAP) – Provided as an intervention program, ASAP addresses driving offenses involving a mind altering substance. Individuals found guilty of a driving offense are screened and referred to a treatment program for an assessment with treatment to follow if the assessment indicates it is needed, or to an alcohol/driving training program. Staff provides case management for the program participants. The program is available to both adults and juveniles. It is provided by us in

Kenai, Homer, and Ketchikan. **Funding:** A small grant augmented by client fees. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Alcohol and Drug Information School – A certified school program is provide to educate individuals found to be driving while impaired or to juveniles involved in underage drinking. The goal is to provide individuals with information that will prevent them from re-offending. The program is provided in Ketchikan and Anchorage. **Funding**: client fees. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Senior Behavioral Health – Started in Anchorage, this program has developed a broad coalition aimed at addressing the use and abuse of drugs and alcohol by senior citizens. Community development is the primary focus of this program with the goal of helping communities all over the State to develop programs to assist seniors in their communities. A major voluntary drug collection effort was a significant project this year. **Funding:** A State grant and donations. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Harmful Legal Product – This program is a NIDA funded project that operates in 16 rural communities in Alaska from Stebbin in the Northwest to Petersburg in the Southeast. The goal is to work with communities and schools to identify the numerous aerosol products that can be harmful if misused and to develop methods of discouraging and decreasing usage. **Funding** is a Federal grant that comes to us as a contract under the primary grant operated by the Pacific Institute of Research and Evaluation. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

Tobacco Prevention – Akeela operates a program in Anchorage aimed at providing cessation activities for programs such as substance abuse treatment programs in which tobacco use is prevalent. Educational efforts and aids such as patches and supportive medical assistance are made available. **Funding:** A State grant augmented by donations. Address: 4111 Minnesota Dr., Anchorage, AK 99503. 907-565-1200.

State treatment grants all require the grant recipient to provide a 33% match that cannot be provided by another State or Federal grant. The prevention grants require a minimum of a 10% match depending on the specific grant. This means that minimally all treatment grants are leveraged up to a third; $100 becomes $133 in service. State grants also provide the base from which we can contract to provide services thereby increasing the amount of services available throughout the State.

COST REDUCTION THROUGH CONSOLIDATION

The Governor, Commissioner of Health and Social Services, and the Legislature have all expressed concerns about budget containment. Let me offer, to quote a famous author, "A Modest Proposal." Let's look at creative and targeted consolidation of services. By that I do not mean move services out of small communities, but instead move to a system of distance management by which administrative costs can be significantly reduced.

Consolidation has been a key factor in the growth of Akeela over the last 12 years. We believe we have something to add to a conversation on this issue through our experience. In 1999 our Board of Directors' and that of the Alaska Council on the Prevention of Alcoholism and Drug Abuse agreed to merge. That brought two organizations that each had a budget of a little over $1,000,000 under one umbrella. Akeela was the remainder corporation. One executive director and one whole finance office went away leaving us more funds to spend on program. We spent about five years solidifying our services, learning to manage related but different programs, and upgrading systems to make it easier to manage the very diverse programs.

In 2005, we were approached by the Alaska Women's Resource Center (AWRC) about assuming management of its programs. We did so under a contract in early FY-2006 and in the spring of that year after significant analysis, their Board agreed that the best way to preserve their programs was to dissolve the corporation and asked the State to move those grants to us because we had been operating them for most of the year. That was done on April 1, 2006. In the meantime, we had purchased a small, for-profit outpatient substance abuse program in Anchorage in the fall 2005. That meant two executive directors and two financial operations disappeared allowing more funds to be spent on services.

Last fiscal year – May 1, 2010 – we assumed the operation of the Gateway Center for Human Services in Ketchikan. Again, like with AWRC, we worked closely with the Division of Behavioral Health and the City of Ketchikan, the manager of the Gateway programs. We moved all fiscal management under our corporate finance office and retained one administrator and a clinical director thereby eliminating several high cost positions.

We believe we have developed a process that can allow the same funds to serve more clients by using fewer on-site administrators. One Executive Director and one finance director now run the business and financial operation of what were five different corporate entities. Too often small, rural providers have too little money to provide the necessary administration and program services. They attempt to do so by having their administrators double as direct service staff. Most cannot do both jobs, and the agencies suffer as do the clients they serve. In addition, as we look at reductions in funding, small organizations will be forced out of business because they have no place to cut. Add to this dilemma the issue of increasing demands for positive outcomes. With the demand for administration and direct service, small organizations are pressed to demonstrate that they do produce positive outcomes. Thoughtful consolidation could preserve services.

Adding to the pressures all Behavioral Health corporations, especially small ones, feel is the State's demand, as written into the proposed Behavioral Health Regulations that every agency achieves accreditation from a National accrediting agency. This is a $20,000 plus unfunded mandate. While I understand the importance of National Accreditation – Akeela has been nationally accredited since 1997 – for organizations that have seen their funding either flat or reduced for years, funding the effort is a major fiscal hit. We face the same expense, but because our programs are the result of significant consolidation, we pay much less than if all five organizations had a separate accreditation review. We also are better staffed to successfully negotiate the demands of accrediting organizations.

Another factor in adding to the costs, especially for substance abuse providers, is adoption of the new Behavioral Health Regulations. Ten years ago we were mental health services or substance abuse services, not behavioral health services. The staff qualifications for each were very different as were the salary scales. Substance abuse programs with flat or reduced budgets have struggled to employ clinical staff that can serve the more complex clients we are all beginning to see. Akeela has been working to employ staff that meet the higher qualifications required to provide services to dually diagnosed clients, but the Division has never moved to provide specific substance abuse increases to allow agencies to upgrade the staff. That makes us one of the few organizations with a large substance abuse programs that has aggressively move to add increasingly better prepared staff. We believe our move to consolidation has made upgrading staff possible.

COST EFFECTIVENESS STUDY

"A study in Washington State found that drug treatment in the community produces $18.52 in public safety benefits in terms of reduced crime for every dollar spent, whereas treatment in prison produced only $5.88 in benefits, and drug courts less than $2.10 in benefits for every dollar spent."
Tracy Velazquez, Executive Director, Justice Policy Institute [December 27, 2010]

Treatment or Incarceration? National and State Findings on the Efficacy and Cost Savings of Drug Treatment Versus Imprisonment by Doug McVay, Vincent Schiraldi, and Jason Ziedenberg January 2004, pages 6-7:

"The Washington State Institute for Public Policy (WSIPP), which does an annual analysis of Washington state and other jurisdictions' criminal justice programs, frames the question of cost-benefits for the state policy makers as, what is the benefit of each dollar of criminal justice programming spending as measured for taxpayers by program costs, and for crime victims by lower crime rates, and less recidivism.

"Drug treatment in prison-such as in-prison therapeutic community programming, or that same program with community aftercare after the person leaves prison-yields a benefit of between $1.91 and $2.69 for every dollar spent on them. By contrast, therapeutic community programs outside of prison-typically work release facilities-yielded $8.87 of benefit for every program dollar spent. The reason for the difference versus in prison treatment programs was mainly due to higher program completion rates and lower recidivism. In writing of the non-prison therapeutic community option, WSIPP writes "the economics of this approach appear quite attractive." Other kinds of non-prison programs also yielded significant benefits. Community-based substance abuse treatment generated $3.30 of benefit for every dollar spent, while drug courts yielded $2.83 for every dollar spent. Treatment oriented intensive supervision programs yielded $2.45 worth of benefit for every dollar spent, and was far more cost effective than simple supervision without treatment."

Training Collaborative

The following organizations provide support, training and education for the workforce and provider agencies serving Trust beneficiaries.

Trust Training Cooperative (TTC)

The TTC promotes career development opportunities for direct service workers and their supervisors by ensuring that technical assistance and training is accessible and coordinated. To learn more, visit **www.trusttrainingcoop.org**. The TTC also provides a Learning Management System, a web-based, one-stop shop for professional training opportunities with an on-line training catalog, registration and tracking of a user's training, conferences and educational participation in an E-Portfolio. See **www.ttclms.org** for details.

Alaska Rural Behavioral Health Training Academy

Alaska Rural Behavioral Health Academy (ARBHA)
ARBHA's mission is to develop and provide training for the behavioral health workforce primarily working in or serving rural Alaska. This University of Alaska Fairbanks based program offers training activities statewide via face-to-face, telebehavioral health, and hybrid delivery models and modalities. While the ARBHTA serves an array of service providers, its target group includes mid and upper-level clinicians, supervisors, and program directors. For more information, visit **www.uaf.edu/arbhta**

Alaska Alliance for Direct Service Careers

Alaska Alliance for Direct Service Careers (AADSC)
AADSC works to improve the flow of information to direct service professionals and the organizations that employ them. AADSC is focused on increasing the awareness of the industry statewide; working to help agencies recruit via a statewide job bank; and helping agencies reduce turnover via technical assistance on recruitment and retention issues. For more information, visit **www.aadsc.org**

Workforce Crisis

Alaska is experiencing a workforce crisis that affects home and community-based health and behavioral health services. Issues pertaining to wages and benefits, recruitment and retention, and training and education impact the accessibility and effectiveness of these services to all Alaskans, especially beneficiaries of the Alaska Mental Health Trust. These beneficiaries include people with:

- Mental illness
- Developmental disabilities
- Chronic alcoholism
- Alzheimer's disease and related dementia.

Growing Alaska's Workforce

To address these problems, The Trust has developed and funds the Workforce Development Focus Area, which aims to develop a capable, culturally competent workforce that can support the communities and families of Trust beneficiaries. The Trust has partnered with the University of Alaska, Alaska Department of Health & Social Services, Alaska Department of Labor & Workforce Development and service providers from across the state to address workforce issues.

For more information, contact Kathy Craft:

Alaska Psychiatry Residency

- Alaska currently has a critical shortage of at least 25-30 psychiatrists, a deficit of 30%-40%. 40% of Alaska psychiatrists are 50 years of age or older and 29% may retire within five years.

- Four Anchorage health care organizations spent $2.9 million in 2009 for temporary psychiatrists.

- This critical shortage adversely impacts health care access, quality, cost, and outcomes across the continuum of care.

- A coalition of federal and state agencies, hospitals and providers, and the University of Alaska recommend partnering with the University of Washington to create the Alaska Psychiatry Residency.

- The Alaska Psychiatry Residency will emphasize primary care integration, telebehavioral health, and rural consultation.

- There will be 11 residents in training with three graduating annually. The final two years will be in Alaska increasing the likelihood graduates remain in Alaska.

- Stakeholders have promised $2.88 million for the first five years (FY12 – FY16) and more than $500,000 annually beginning year six (FY17). The Governor has included $202,000 in FY12.

- The balance remaining is $3.62 million across the first five years (FY12 – FY16) and $1.62 million annually beginning year six (FY17).

- Alaska is ineligible for new Medicare graduate medical education funding because a cap was imposed in 1997. Medicare is the largest funder of graduate medical education ($8.8 billion in 2007).

- Partners include:
  - Alaska Family Medicine Residency
  - Alaska Federal Health Care Partnership
  - Alaska Mental Health Trust Authority
  - Alaska Psychiatric Foundation
  - Alaska Psychiatric Institute
  - Alaska Veterans Affairs Healthcare System
  - Anchorage Community Mental Health Services
  - Fairbanks Memorial Hospital
  - Joint Base Elmendorf Richardson
  - North Star Behavioral Health Systems
  - Providence Health & Services Alaska
  - Southcentral Foundation
  - Southeast Alaska Regional Health Corporation
  - Tanana Chiefs Conference

Summary: HB 78 Incentives for Certain Medical Providers

Sponsored by Representative Bob Herron

Health Care Professions Loan Repayment & Incentive Program

The following organizations support the loan repayment and incentive solution as outlined in HB 78 Incentives for Certain Medical Providers:

Alaska State Medical Association • Alaska Dental Society • Alaska Primary Care Association • Alaska Osteopathic Medical Association • Alaska State Hospital and Nursing Home Association • Alaska Mental Health Trust Authority • Alaska Native Health Board • Alaska Pharmacists Association • Alaska Physical Therapy Association • AARP-Alaska • Advisory Board on Alcoholism and Drug Abuse • Alaska Behavioral Health Association • Alaska Mental Health Board • Alaska Mental Health Trust Authority • Alaska Public Health Association • Alaska Hygienists Association • Commonwealth North • Iliuliuk Family and Health Services, Inc. • Maniilaq Association • Municipality of Anchorage Senior Citizens Advisory Board • Mary Willard, DDS, Clinical Site Director, Alaska Native Tribal Health Consortium • Alaska Chapter National Association of Social Workers • Nome Eskimo Community • SEARHC • School of Social Work-UA • Dental Hygiene Program-UA • Sunshine Community Health Center

Problem:

Having a sustainable and competent practitioner workforce is vital to the health of Alaskans. However, Alaska is at a serious disadvantage as it competes in the national health care labor market. In other states, "support-for-service programs" (SFSPs) have shown substantial and long-standing success as a cost-effective strategy to address shortages (e.g., loan repayment and direct incentive). A key problem is that Alaska does not have a robust SFSP while 47 other states have one or more SFSPs.

Solution:

The Health Care Professions Loan Repayment and Incentive Program, as outlined in Representative Herron's HB 78 will make Alaskan health care employment competitive and attractive enough for practitioners to want to work in Alaska, particularly in hard-to-fill localities. State funds will be used to ensure that Alaskans with the greatest difficulty in obtaining care due to limited financial resources, cultural barriers, and geography will have access to professional health care services.

Program Description:

1) **Practitioner Eligibility**
   - DHSS Commissioner will annually prioritize the 10 eligible practitioner types:
     - Tier-1: Dentists, Pharmacists, Physicians (MD and DO)
     - Tier-2: Dental Hygienists, Nurse Practitioners, Nurses (RN), Physical Therapists, Physician Assistants, Psychologists, Social Workers (LCSW)
   - A practitioner's clinical duties must constitute at least 50% of duties to be eligible.
   - A part-time practitioner may participate and be eligible for pro-rated payments.
   - Preference may be given to current Alaskan residents.

2) **Payment Detail**
   - Placement Type

		Regular		Hard-to-Fill
Tier 1:	up to	$35,000/year	up to	$47,000/year
Tier 2:	up to	$20,000/year	up to	$27,000/year

   - Duration of award is for a 3-year period of service.
   - Payments will be made every quarter following a completed full quarter of service.

3) **Site Eligibility**
   - DHSS Commissioner will rank eligibility of sites annually and determine any area and/or population in Alaska as a "shortage priority." These may include, but are not limited to, federally defined Health Professional Shortage Areas.
   - Preference will be given to sites that provide care to individuals regardless of insurance status, including persons who are uninsured or have Medicare and/or Medicaid.

4) **Oversight Entity**
   - Department of Health & Social Services will serve as the Oversight Entity.
   - DHSS Commissioner will appoint an advisory body to make recommendations regarding program administration including the identification of shortages, eligible sites, payment priorities and program evaluation.

5) **Program Evaluation**
   - By January 1, 2019, DHSS will submit a report to the Legislature on the program: the participation rates, costs, and the effect on the health care profession shortage areas.

6) **Fiscal Agent**
   - DHSS will serve as Fiscal Agent. DHSS will make loan repayments to the lending institution or eligible practitioners and will make incentive payments to eligible practitioners.

7) **Funding**
   - An in-cash "employer match" is required and is paid on a quarterly basis by eligible sites to DHSS. The level of required match will be adjusted according to the ability of the eligible site to contribute and may be set between 0% and 50%.
   - Program funds will not be used to offset current or expected provider supports.
   - The DHSS Commissioner will reserve funding for not fewer than three very-hard-to fill positions in each of the tier 1 and tier 2 categories.
   - The fiscal note has not yet been released but the expected funding for FY12 is $2.7 million to fund 90 participants for year 1 of their 3 years of service; that is, approximately 9 practitioners in each of 10 occupational categories.

For more information re: HB 78, please contact Shelley Hughes / Alaska Primary Care Association at Shelley@alaskapca.org or 907-841-1634.

RRANN

Recruitment and Retention of Alaska Natives into Nursing

MEETING A NEED

In rural Alaska, the ongoing, well documented shortage of qualified nursing professionals is compounded by a need for nurses who speak indigenous Native languages and are attuned to the cultural traditions and sensibilities of their patients. Honoring the past while working toward the future, RRANN plays an integral part in meeting Alaska's burgeoning need for qualified nurses, and is the key to helping many individual Alaskans to achieve their dreams.

UAA recognizes that Alaska Native students, while deeply motivated to succeed, face unique challenges on their way to meeting their goals. The RRANN program was initiated to increase the number of Alaska Native and American Indian nurses in the state by providing assistance and support, beginning with advice on preparing for college, and following through to include creating a sense of community on campus.

In just its first two years, the program had already successfully doubled the percentage of Alaska Native nurses in the state. But there's still a long way to go.

"I can honestly say that if it had not been for the support of the RRANN program, I would have given up ... "

Michelle Cooper ('08, B.S. Nursing), RRANN graduate

"Recruitment and Retention of Alaska Natives into Nursing opened a door for me to be involved with the community at UAA. It made me feel like a part of a community, like I did in the Kotzebue community. I was able to form lasting relationships and share my culture with other nursing students. I also spent time talking to pre-major nursing students about the program, mentoring them and encouraging them not to give up. The only way to get through the program is to have a sense of community and support."

Marjorie Bolton-Baldwin ('10, B.S. Nursing), RRANN graduate

ACHIEVING A BALANCE

Alaska Natives and American Indians account for about 16 percent of Alaska's population, yet less than 3 percent of nursing professionals fall into that group. To address this disparity, RRANN offers help to prospective students in planning for admission to UAA, as well as information about nursing degree programs and course requirements. Through RRANN, students have access to tutoring, financial aid and on-campus housing options tailored to their needs.

"I now find myself encouraging others to enter the nursing field. I tell them, 'Your hard work will pay off in the end.'"

Andrea Moses ('08, B.S. Nursing) RRANN graduate, currently working at Alaska Native Medical Center

SHOWING THE WAY

In the RRANN program, individual success breeds success for the entire community, with program graduates not only serving as role models for new recruits, but also going on to actively mentor new students in the program.

"My incentive to become a nurse derived from my relationship with my grandmother ... I firmly believe there is more happiness in giving than receiving and I'm ready to spend the rest of my life giving to people as a nurse."

Debra Snider ('05, A.A.S. Nursing), RRANN graduate

"A lack of educational resources in rural Alaska puts many intelligent students at a disadvantage for pursuing their dreams of college and careers. RRANN's pre-nursing support services are designed to help level that playing field, and expand opportunities for success."

Jackie Pflaum, RNC, DNSC, RRANN Project Director/Associate Vice Provost for Health Professions Development

SUCCESS BY THE NUMBERS

Over 120 Alaska Native and American Indian students have graduated from UAA's nursing programs since the inception of RRANN. Looking toward the future, 35 RRANN students are currently in the clinical portion of their nursing studies and are on track to obtain their degrees in the next three years. At least 70 additional students are immersed in their pre-clinical studies.

"My goal is to return to rural Alaska and promote healthier lifestyles, as well as spread awareness about the various diseases that are devastating our villages."

Chelsea Royal, Upper Kuskokwim Athabaskan Pre-nursing Student, RRANN program

UAA

Health Programs

Health Sciences Building

Health Sciences Building Operating & Maintenance

$591.0 - Regents Budget

Health Sciences Building Staffing

$392.6 - Regents Budget

Above: UAA's HSB will open in August 2011. FY12 request ensures building is fully operational with funding to ensure there is adequate funding for utilities, cleaning and all-season ground maintenance. This is included in the govenor's budget.

Right: Also needed are four positions in support of interdisciplinery clinical simulation laboratories onsite and the distance delivery of simulation statewide. This is not included in the govenor's budget.

Demand for health care workers in Alaska is expected to grow faster than any other employment sector over the next decade. According to the Anchorage Economic Development Corporation's annual report regarding employment, 45 percent of Anchorage's net job growth occurred in health care since 2002 (that's 4,600 new jobs). The same report states that health care jobs increased by 500 in 2010 alone, and forecasts that growth of 300 more in 2011.

In response to the state's growing need for well educated and trained health care professionals, UAA will open its new Health Sciences Building (HSB) in August 2011.

About the HSB

This 66,000-square-foot facility will provide much-needed laboratory space as well as education and instructional space for the health sciences programs.

The building is situated across Providence Drive from the Anchorage campus and will house the following programs:

- medical
- nursing
- clinical laboratory
- physician assistant

Co-location of these programs will provide for efficiency of scale, as well as provide opportunities for interdisciplinary education.

The building will feature:

- Distance classrooms to connect students from rural communities
- Clinical and instructional laboratories and classrooms
- Faculty and staff offices
- Instructional spaces designed for interactive learning, simulation of real-life clinical situations and collaborative hands-on experiences

The facility will allow students an opportunity to integrate theory and practice, think critically and ensure patient safety.

This request covers maintenance and repair needs and the operations component, which are undeniably critical to the building's opening.

Also needed are several positions included in the FY12 High-Priority Program requests.

Alaska's AHEC Program

2011 Legislative Session Talking Points

Engage

Train

Recruit

Retain

Summary of request

Alaska's Area Health Education Centers, known as AHEC, with our supporting partners request $500,000 to continue healthcare workforce development activities. As part of the Federal AHEC funding awarded to Alaska in 2005, there is an expectation that states will pick up the funding as federal monies diminish – beginning in September 2011. ($125,000 x 4 Centers; excluding Northwest AHEC)

Background

AHEC is a statewide university-healthcare industry partnership focused on strengthening Alaska's health workforce across the spectrum from "pipeline to placement."

- Since 2005, host organizations have invested a 1:1 match with federal HRSA funds in the Alaska AHEC. **In FY2011, this investment totals more than $1.6 million dollars.** Partners are:
  - Yukon Kuskokwim Health Corporation (YK AHEC)
  - Providence Health & Services Alaska (South Central AHEC)
  - Fairbanks Memorial Hospital (Interior AHEC)
  - Southeast Alaska Regional Health Consortium (Southeast AHEC)
  - Ilisagvik College (Northwest AHEC)

Program highlights

- **Engaging Alaskans into health careers & guiding them into the workforce.**
  - In 2010, *Alaska's AHEC Program touched 4,907 K-12 students, adults, educators and parents in part through partnerships with*:
    - Secondary Career & Technical Education Programs i.e. Alaska Health Careers Academy
    - UAA & UAF programs i.e. U/DOC Della Keats, Pre-Med Summit, Alaska Summer Research Academy
    - Teacher-Industry Externships with UAA & Department of Labor
    - Health Occupations Students of America (HOSA)
    - Maintaining the http://www.healthcareersinalaska.info website
- **Training health professions students through on-site clinical rotations and exposing them to Alaska's hardest-to-fill vacancies**
  - Since 2005, *AHEC supported clinical rotations for 2,419 non-duplicated health programs students*
  - Multi-disciplinary support: allied health, behavioral health, physicians, pharmacy, nursing, therapies, and social work
- **Retaining Alaska's rural health workforce by assessing their needs and increasing access to Continuing Education opportunities**
  - In 2010, *AHEC supported over 6,000 contact hours of CE/CME*
  - Developing preceptor/mentor certification in coordination with UAS & the Alaska Coalition of Educators (ACE)

Alaska Commission on Aging
2010 SURVEY OF OLDER ALASKANS

(Do you have access to a computer? If so, you may complete this survey online by going to our website, www.alaskaaging.org, and clicking on the SURVEY button. Otherwise, mail your completed survey to us in the enclosed postpaid envelope, or send to Alaska Commission on Aging, P.O. Box 110693, Juneau, AK 99811-0693.)

1. Your Age: 72
2. Your Gender: ____ Female ✓ Male
3. Your Race: (Check all that apply.)
   ____ African-American / Black ____ Asian / Pacific Islander
   ____ Alaska Native / American Indian ✓ Caucasian / White
   ____ Other, please specify: _____
4. Your Zip Code: 99577
5. How long have you lived in Alaska?
   ____ All my life (born here) ____ 11 to 20 years
   ✓ More than 40 years ____ 5 to 10 years
   ____ 31 to 40 years ____ Less than 5 years
   ____ 21 to 30 years
6. Would you recommend your community as a good place to live for seniors?
   ✓ Yes, unconditionally ____ Yes, with a few reservations ____ No
7. *Please rate the following senior concerns from 1 to 10 based on how much they affect Alaskan seniors in your opinion. A rating of 10 indicates the issue is of great importance. A rating of 1 indicates the issue is of minor importance. For example, if you feel that fuel costs are a very minor concern, you would circle "1"; if you feel it's a very important issue for seniors, you would circle "10". (You may use the same number more than once.*

	Minor Importance									*Great Importance*
Health care	1	2	(3)	4	5	6	7	8	9	10
Financial security	1	2	(3)	4	5	6	7	8	9	10
Fuel costs	(1)	2	3	4	5	6	7	8	9	10
Transportation	(1)	2	3	4	5	6	7	8	9	10
Having enough food to eat	(1)	2	3	4	5	6	7	8	9	10
Affordable, accessible housing options	(1)	2	3	4	5	6	7	8	9	10
Assisted living facilities providing 24-hour care	(1)	2	3	4	5	6	7	8	9	10
Availability of in-home services for seniors	(1)	2	3	4	5	6	7	8	9	10
Information about programs and services	(1)	2	3	4	5	6	7	8	9	10
Mental health and substance abuse problems	(1)	2	3	4	5	6	7	8	9	10
Help for isolated or depressed seniors	(1)	2	3	4	5	6	7	8	9	10
Senior center with a variety of programs and activities	(1)	2	3	4	5	6	7	8	9	10
Other, please specify: _____	1	2	3	4	5	6	7	8	9	10

8. Do you provide home care for a family member or friend? (Check all that apply.)
   ✓ No
   ___ Yes, a spouse or partner age 60 or older
   ___ Yes, a parent age 60 or older
   ___ Yes, a disabled family member under age 60
   ___ Yes, one or more children or grandchildren under age 18
   ___ Yes, a friend age 60 or older
   ___ No, but I am a long-distance caregiver for an elder who lives elsewhere
   ___ Other, please specify: _____

9. Do you visit your senior center?
   - ___ Yes, regularly – at least twice a month
   - ✓ Yes, occasionally – once a month or less
   - ___ No, I would like to but have difficulty getting to the senior center
   - ___ No, I am not interested in what the senior center offers
   - ___ There is no senior center in my community
10. Your estimated net MONTHLY household income from all sources: $ 4500
11. Total number of people living in your household (including yourself): 2
12. Besides yourself, who lives in your household? (Check all that apply.)
   - ___ Just myself
   - ✓ My spouse or partner
   - ___ One or more adult children
   - ___ Other, please specify: _____
   - ___ One or more adult grandchildren
   - ___ One or more grandchildren under age 18
   - ___ Roommate(s) or renter(s)
13. Is your monthly income enough to meet all your monthly expenses?
   - ✓ Yes, with some left over for extras like vacations
   - ___ Yes, but there is very little money left for extras in the budget
   - ___ No, my income is not enough to pay for food, housing, fuel, clothing, medicine, and other necessities
14. At any time in the past 30 days, have you had difficulty paying for any of the following? (Check all that apply.)
   - ___ Food to prepare meals
   - ___ Medications or medical bills
   - ___ Rent or mortgage payment
   - ___ Other, please specify: _____
   - ___ Energy costs – utilities, fuel oil, gas
   - ___ Credit card bill
   - ___ None of the above
15. What are the sources of your household's income? (Check all that apply.)
   - ✓ Social Security
   - ___ Disability payments
   - ___ Pension from employer or union
   - ✓ Wages from employment
   - ___ Income from self-employment
   - ___ Personal savings or investments
   - ___ Senior Benefits program
   - ✓ Rental income
   - ___ Permanent Fund Dividend
   - ___ Native corporation dividends
   - ___ Food Stamps
   - ___ Adult Public Assistance
   - ___ Cash from relatives
   - ___ Rent subsidy (voucher, etc.)
   - ___ Other, please specify: _____
16. What type of housing do you live in?
   - ✓ House/condo that I or a family member own (or have a mortgage on)
   - ___ House/condo that I rent
   - ___ Apartment in senior housing complex
   - ___ Apartment that I rent, not in senior complex
   - ___ Assisted living facility
   - ___ Nursing home
   - ___ Rooming house or hotel
   - ___ Homeless shelter
   - ___ Other, please specify: _____
17. Is your home in need of modification in order for you to be safe and comfortable (example: insulation, ramp installation, grab bars, elevator, etc.)?
   - ___ Yes
   - ✓ No
18. Where do you expect to be living five years from now?
   - ✓ Same home as I live in now
   - ___ Same community, but smaller living space
   - ___ Living independently in a larger community in Alaska
   - ___ Living independently in a smaller community in Alaska
   - ___ Other, please specify: _____
   - ___ Living independently in a different state
   - ___ Move to an assisted living or nursing facility in Alaska
   - ___ Move to an assisted living or nursing facility outside Alaska

19. Are you currently employed or self-employed?
___ Yes, full-time ___ No, but I am seeking work
___ Yes, part-time ___ No, I am retired

20. If you are currently still working, when do you expect to retire? (Skip this question if you are already retired.)
___ Within the next year or two
___ Within the next two to five years
___ More than five years from now
___ I can't afford to retire
___ I don't plan to retire even if I can afford to

21. Do you participate in subsistence activities (hunting, fishing, gathering) during subsistence season?
___ Yes, for an average of less than two hours a week
___ Yes, for an average of two to five hours a week
___ Yes, for an average of more than five hours a week
___ No

22. Do you do volunteer work in your community? (Check all that apply.)
___ Yes, with my church or house of worship
___ Yes, with a civic organization (example: Rotary)
___ Yes, with a charitable organization (example: Red Cross)
___ Yes, with a non-profit organization (example: senior center)
___ Yes, with a library, school, or educational institution
___ No, I do not volunteer because I don't have time right now
___ No, I do not volunteer at this time due to disability or ill health
___ No, I do not volunteer at this time due to difficulties with transportation
___ No, I do not volunteer at this time because I don't know how to find the right opening
___ Other, please specify: _____

23. Total hours per week you spend in volunteer work (estimate an average): 2

24. Where do you go when you have questions about the services available for seniors? (Check all that apply.)
___ Local senior center
___ Other local non-profit agency
___ Aging & Disability Resource Center
___ Independent Living Center
___ Pamphlets or handouts
___ Printed directory showing services by community
___ Dial 2-1-1
___ Internet search or specific website with service information
___ Senior housing staff
___ Hospital social services department
___ Check the phone book for possible information sources
___ Ask a friend or relative for help finding the information
___ Other, please specify: _____

25. What would be the BEST way for you to get the information you need about programs and services?
___ Toll-free number to call, with live answer
___ Toll-free number to call, with push-button options
___ Website with search features
___ Pamphlets, handouts, or printed directory
___ Speak to someone in person at senior center or other agency
___ Speak to someone in person in my housing complex or neighborhood
___ Other, please specify: _____

26. In the last TWO WEEKS, on how many occasions have you gotten together with family, friends, or a group you belong to for an event or activity, either outside your home or at your home? (For example: parties, movies, concerts, games, classes, dinners, senior center meals....)

___ None
___ Once
✓ Two or three times
___ Four or five times
___ More than five times

27. In the past year, have you had trouble finding a primary care doctor to see you when you needed to see a doctor?

___ Yes, because of Medicare payment issues
___ Yes, because there are not enough doctors in my community
___ Yes, for another reason (tell us below)
✓ No
___ Haven't needed to see a doctor in the last year
___ Other reason for trouble finding doctor: _____

28. Do you experience an illness or disability that limits the range of activities you can enjoy? (Check all that apply.)

✓ No
___ Yes, a chronic disease such as heart disease, diabetes, etc.
___ Yes, a physical disability such as low vision, knee or hip problems, etc.
___ Yes, other physical health problems
___ Yes, Alzheimer's or other type of dementia
___ Yes, a mental or emotional problem such as depression, anxiety, etc.

29. *If you have used any of the following services in the past year, please tell us how satisfied you were. For example, if you were "very satisfied" with home-delivered meals you received, check "4." If you were "very unsatisfied," check "1". A "5" indicates that you didn't use the service in the past year, and a "6" means that the service isn't available in your community. Use the "additional comments" space to tell us how the service made a difference to you, or how it* could *be improved.*

	1=very unsatisfied	2=mostly unsatisfied	3=mostly satisfied	4=very satisfied	5=did not use	6= not available in my community
Meals at a senior meal site	1	2	3	4	5	6
Home-delivered meals	1	2	3	4	5	6
Senior transportation	1	2	3	4	5	6
Information & referral	1	2	3	4	5	6
Care coordination	1	2	3	4	5	6
Chore service	1	2	3	4	5	6
Respite care	1	2	3	4	5	6
Personal care attendant	1	2	3	4	5	6
Adult day program	1	2	3	4	5	6
Caregiver support program	1	2	3	4	5	6

30. ***Additional Comments: Please add any specific comments you have on the services you have used, OR ANY OTHER TOPIC THAT IS IMPORTANT TO YOU. What is working well? What needs improvement?***

I BELIEVE THAT PEOPLE ARE DESIGNED TO WORK AT MEANING-FULL TASKS - WE WILL NOT BE FULFILLED LAYING AROUND
I BELIEVE THAT GOOD HEALTH NEED LOTS OF VERY ACTIVE EXCERCISE AND MENTAL STIMULATION
I BELIEVE THAT "SENIOR CARE" SHOULD COME FROM WELL RAISED KIDS

ALASKA HEALTH WORKFORCE PLAN

Prepared by the Health Workforce Planning Coalition for presentation to the Alaska Workforce Investment Board

May 2010

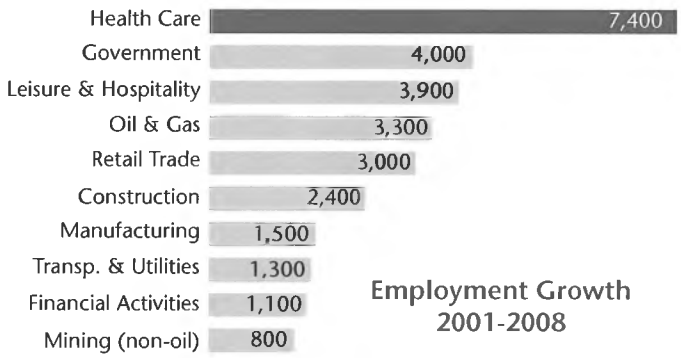
Executive Summary

Health care is one of the largest and most dynamic industries in Alaska, accounting for eight percent of total employment and around 16 percent of the value produced by the state's economy. Between 2000 and 2009, health care employment increased 46 percent, about five times as fast as the state's population and three times as fast as all other sectors of the economy.

This plan is a consensus of the strategies that must be employed to meet Alaska's most pressing health workforce needs. It is a result of a year-long, industry-led process with active involvement from education and governmental sectors. While there have been many large health workforce expansions and plans around specific occupations, this plan is the most comprehensive statewide effort to date, targeting key occupations with severe shortages.

This growth is expected to continue. Department of Labor and Workforce Development (DOLWD) data indicate a 30 percent growth rate between 2004 and 2014, twice that of the overall economy. Currently, 11 of the top 15 fastest growing jobs in Alaska are in this sector.

Additionally, federal health reform is expected to significantly increase the demand for providers.



Source: Alaska Department of Labor and Workforce Development, Research and Analysis

The Need:

While job growth is good news for the economy, it also places heavy strains on an industry already burdened by unacceptably high vacancy rates in key occupations. State rates for primary care professions, as determined by the 2009 Health Workforce Vacancy Study conducted by the Alaska Center for Rural Health, range from 12.9 percent for community health aides and practitioners to 37.4 percent for pediatric nurse practitioners. Though registered nurses had a comparatively moderate vacancy rate at 10.1 percent, this relatively large profession was calculated to have over 320 vacant positions.

The above vacancy rates are statewide averages; rates in rural Alaska are even more dramatic. These vacancy figures coupled with anticipated high increases in demand for workers indicate a significant skills gap in the health care workforce at the present time, a gap that without increased attention can only worsen.

The Promise:

Health care positions are found in all regions of the state, offering close-to-home employment for many Alaskans. Although some positions require advanced training, many jobs are entry-level, requiring limited preparation. Often, these entry-level positions are the start of a career ladder or lattice that can—with additional experience and education—lead to life-long, meaningful careers.

Through public and private postsecondary education institutions in the state, Alaskans currently have access to education and training in more than 80 health care occupations. This combination of local jobs, opportunity for advancement and access to in-state training makes the health care industry a primary mover in putting Alaskans to work.

The Strategy:

The Health Care Workforce Development Plan addresses the challenge of assuring a well-prepared and sufficient workforce to meet Alaskans' health care needs through four strategies: Engage, Train, Recruit, Retain.

Alerting Alaskans to the opportunities available in the health care field is a first step in securing the necessary workforce. Public information campaigns, K-12 career awareness and exploration and outreach to Alaskan job seekers are elements of the Engage strategy.

Preparation for a health care career often starts at the secondary level, where prerequisite math, science and communications skills are developed. Quality, standards-based postsecondary education delivered as close to home as possible is a next step

along a career path in health care. As the practice of health care changes through technology, health reform, or new care models, those employed in the industry must upgrade skill levels. Finally, experienced teachers must be available to deliver the necessary education and training at all levels. Strengthening secondary math, science and career education, expanding access to training programs in priority occupations, providing continuing education and securing the necessary faculty are elements of the Train strategy.

Although the plan speaks to significant expansion of health care career training and education in the state, the size and complexity of the industry indicate that recruitment from outside of Alaska will continue to be needed to fill some positions. Alaska can improve its competitiveness with others seeking similar skilled professionals by more widely disseminating information about employment opportunities and offering more post-graduate experiences within the state. State and federal-supported loan repayment and other financial and quality-of-life incentives can sway the decision to locate or stay in Alaska. Finally, more coordination in recruitment by health care providers could reduce costs. All of these approaches are elements of the Recruit strategy.

The final plank in the health care plan is to retain the workforce that has been educated and recruited. To do so requires successful transitioning from training into the world of work and employment that offers sufficient remuneration, adequate supervision and opportunities for professional growth. Assisting employers to provide these workplace elements make up the Retain strategy.

Plan Phases:

The Steering Committee considered several time horizons in developing the plan strategies: short term (within the next two years), medium term (within three to five years) and long term (five years or more in the future). A key focus of the plan is in training for and development of specific occupations. From data collected by the Departments of Labor and Health and Social Services, the University of Alaska and other sources, the planning group identified 15 occupational groupings encompassing 26 individual occupations and careers requiring action in the short term.

The following occupational groups are included in this plan:

Behavioral Health Aide/Village Counselor
Primary Care Physician
Advanced Nurse Practitioner
Substance Abuse Counselor
Registered Nurse
Community Health Aide/Practitioner
Social Worker
Oral Health Practitioner
Psychiatrist
Human Services Worker
Pharmacist
Therapist and Therapist Assistant
Nurse Educator
Health Informatics Staff
Direct Care Worker

Details for applying the plan to these priority occupational groups are found in Section 4. Here, the occupations are described with relevant data on vacancy rates, educational qualifications and training opportunities, followed by suggested strategies under the four broad strategies of Engage, Train, Recruit, Retain. Occupational and training data will be reviewed and updated annually, at which time—due to changes brought about by reform efforts, population shifts and/or adoption of new models of care—additional occupations may emerge as high priority.

The Role of AWIB:

Endorsement by the Alaska Workforce Investment Board (AWIB) of this health workforce plan is essential for assuring a coordinated approach to implementation. Representatives of the three key state departments involved in delivering plan elements—Health and Social Services, Labor and Workforce Development and Education and Early Development—sit on the Board as do representatives from health industry employers. The University of Alaska, the major training provider for health care careers, is also a member. This mix of government agencies, industry and training institutions provides a mechanism for collaborative efforts in addressing the workforce strategies outlined in the plan. In addition, AWIB's stewardship responsibilities for federal and state workforce development funds can direct needed resources to support the plan. Data collected from public and private training providers as part of the Board's oversight duties will allow for annual checks of progress toward meeting training goals and targets.

Purpose:

The heath care plan is anchored in collaboration and builds on earlier successful cooperative efforts, such as the expansion of the UA nursing program, the addition of slots at the University of Washington Medical School through WWAMI, participation in the National Health Service Corps and Indian Health Service loan repayment programs

and the creation of a Health Care Commission. Under the governance structure that is being developed to oversee plan implementation and monitoring, these collaborations will be made more formal through memoranda of understanding among stakeholders.

The Alaska Health Workforce Development Plan is indeed a call for action: a call that has already been heeded by industry, education and training institutions, state government and professional organizations. Successfully directing the energies and resources of these stakeholders through the steps outlined in the plan will not only increase the size and quality of the health care workforce but will be reflected in a higher standard of health for all Alaskans.

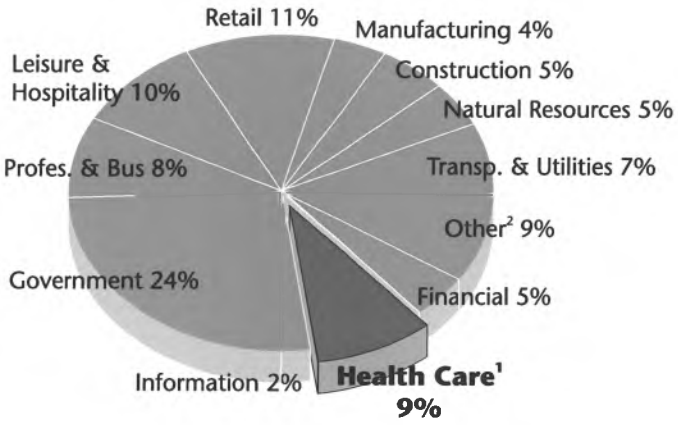
Introduction

The health care industry is important to Alaska and Alaskans

Health care is one of the largest and most dynamic industries in Alaska, accounting for eight percent of total employment and around 16 percent of the value produced by the state's economy. One out of every 12 employed Alaskans works in the industry; one out of every six dollars spent in Alaska is spent on health care. The industry also accounts for a significant portion of economic growth. Between 2000 and 2009, health care employment increased 46 percent, about five times as fast as the state's population and three times as fast as all other sectors of the economy. With a payroll of more than $1.4 billion in 2008, it employed more people than state government, oil industry or most other industries.[1]

Health Care: One of the Biggest Players in Alaska's Labor Market



[1]Includes the private and public sectors, 2008
[2]Includes other services, private education services, social assistance and wholesale trade
Source: Alaska Department of Labor and Workforce Development, Research and Analysis

This growth is estimated to continue. Department of Labor and Workforce Development (DOLWD) data indicate a 30 percent growth rate between 2004 and 2014, twice that of the overall economy. Around 15 percent of the state's new jobs in that period will come from health care; currently, 11 of the top 15 fastest growing jobs in Alaska are in this sector.

While job growth is good news for the economy, it also place heavy strains on an industry already burdened by unacceptably high vacancy rates in key occupations. For example, state rates for primary care occupations as reported by 747 surveyed employers for a 2009 University of Alaska study[2] range from 12.9 percent (community health aide/practitioner) to 37.4 percent (pediatric nurse practitioner). Other troubling rates include occupational therapist and physical therapist at 22.8 and 15.8 percent respectively. Though registered nurses had a comparatively moderate vacancy rate at 10.1 percent, this relatively large profession was calculated to have over 320 vacant positions. These rates indicate a significant skills gap in the health care workforce at the present time, a gap that without increased attention can only worsen.

Recognizing these conditions, the Alaska Workforce Investment Board (AWIB) has targeted health care as one of the industries critical to Alaska's workforce and economic needs. The Alaska Health Care Commission and many other agencies and groups, such as the Department of Health and Social Services, The Alaska Mental Health Trust and the Alaska State Hospital and Nursing Home Association (ASHNHA), have identified health care workforce development is one of the most critical priorities in assuring health care access in Alaska.

The health care industry has unique features

Health care has unique features that distinguish it from other industries—features of Impact, breadth, scope and outlook. These characteristics add to the urgency of assuring that Alaska has a well prepared and sufficient health care work force.

Impact—The health care industry touches almost every Alaskan, from the newborn infant in Ketchikan General Hospital to the elder in Barrow's assisted living facility. The overall health of the state's citizenry is intimately tied to the adequacy and competence of the health care workforce. Meeting Alaska's targets for improved health as envisioned in Healthy Alaskans 2010[3] in the areas of health promotion, health protection, preventative services and access to health care requires attention to the development, upgrading and retention of workers who can address these targets.

Breadth—Health care industry employment can be found in almost every location in the state.

[1] Alaska Department of Labor and Workforce Development, *Alaska's Health Care Industry*, Alaska Economic Trends, March 2010, p.
[2] Alaska Center for Rural Health, University of Alaska Anchorage, *2009 Alaska Health Workforce Vacancy Study (Draft)*, January 2010.
[3] Alaska Department of Health and Social Services, Division of Public Health, *Healthy Alaskans 2010, Targets and Strategies for Improved Health*, November 2005

Although about half of the jobs are in hospitals and nursing homes, the other half are with small health care provider offices, outpatient and community health centers and home health care. The State of Alaska also provides many career opportunities in the health care field. This breadth indicates that job opportunities are available close to home for many Alaskans.

Scope—Perhaps no other industry employs front-line workers with such a wide range of educational backgrounds, from high school diploma or GED through post-doctoral specialization. Although the industry utilizes many highly-skilled professionals, a large portion of health care is provided by direct service workers, who assist Alaskans dealing with mental health problems, substance abuse, medical illnesses, developmental delays and disabilities, elder care and social stressors. Career ladders and lattices exist that can move workers to higher-level positions. This wide scope of employment allows many Alaskans to access the industry through entry-level jobs and to construct meaningful, life-long careers.

Outlook—Demand for health care is not cyclical, unlike that for most Alaskan industries. This has distinct advantages. As reported by DOLWD, health care is one of a handful of industries expected to grow in 2010—adding about 500 jobs—while most other sectors will continue to experience a decline.[4] Because it is not subject to sudden downward shifts in demand, the output from training programs can more easily be matched to current and future industry needs.

While health care is relatively free from the effects of economic fluctuations, it is highly susceptible to other influences. At least four factors are currently driving higher demand for health care services and therefore increasing the need for workforce development: reform efforts, demographics, changes in care models and technology.

Health care reform will greatly expand demand for care, adding coverage for tens of thousands of Alaskans who were previously un- or underserved. The increased demand from this population is likely to be in areas such as primary care, therapies and behavioral health that currently experience high job vacancy rates throughout the state. Reforms will also spur the growth of new classes of health care positions such as continuum of care managers and health information technicians.

An aging Alaskan population also contributes to increased demand for services. In the decade between 1996 and 2006, the number of Alaskans 65 years and older increased 50 percent, from 30,440 to 45,489. In the latter year, older Alaskans accounted for 6 percent of the total population. DOLWD estimates indicate that this age segment will reach around 134,400 persons by 2030, or about 16 percent of the population. This demographic shift has tremendous implications for workforce development, not only in numbers but also in types of workers needed, such as geriatric nurses, nurse practitioners, psychiatrists, licensed practical nurses (LPNs) and certified nursing assistants (CNAs).

Changes in care models and care objectives will also change the face of the workforce. For example, the move to more outpatient services increases the demand for home health care workers. An emphasis on prevention requires increases in occupations such as health educator and wellness trainer.

Technology influences the health care workforce in many ways. First, access to higher levels of medical technology within the state has an "import substitution" effect on demand as an increasing share of Alaskans can meet their health care needs locally rather than going out of state. Generally, this effect heightens the need for highly-trained specialists. Increasing uses of technology in all areas of care also require continuing skill attainment and development on the part of the existing workforce at all levels, from direct service worker through specialist. Implementation of electronic health records will require the creation of new job classes and related training. Finally, technology—in particular simulation and the Internet—can vastly increase access to health care career education and training.

Because of the above factors, several of the strategies identified for successful workforce development in health care will differ from those in other industries. Recruitment of health care providers that cannot be trained or trained in adequate numbers in the state will remain a central activity. Retention, while a significant concern in all industries, assumes greater importance when high turnover can affect Alaskans' access to critical medical and therapeutic services.

The health care workforce planning process is collaborative

To begin to address these workforce issues and to craft a statewide plan for workforce development, a Health Care Workforce Coalition made up of health care providers, agencies, educators and associations was formed in August, 2009. A steering team from the larger coalition, comprised of

[4] Alaska Department of Labor and Workforce Development, *Employment Forecast for 2010*, Alaska Economic Trends, January 2010, p. 11

representatives from industry, state government and the University of Alaska met regularly to work on the plan. The basic plan strategies were presented to the larger provider community for discussion and further refinement at the ASHNHA Health Care Workforce Summit in November, the Alaska Public Health Association Health Summit in December, 2009, and to various smaller groups. Audio-conferences with the Coalition allowed member input throughout plan development.

The planning group early on agreed on several underlying principles. First, although health care workforce development is a statewide issue, the need is especially acute in rural Alaska. The difficulties involved in training, recruiting and retaining health care workers in the more remote parts of the state require increased attention to distance education that trains people to work in their home community, financial and other incentives for attracting needed specialists, community involvement in recruitment and retention and opportunities for professional growth.

Second, because the training needs of the health care industry are substantial and relatively costly, the planning group recognized that particular care must be taken to assure that resources—both public and private—are allocated to areas of highest need, avoid needless duplication and utilize existing institutions wherever possible. The priority occupations treated in Section 4 of the plan have been identified as needing immediate attention for one or more of the following reasons: high vacancy rate, high number of vacancies or criticality to health care delivery. The governance structure that will be developed to oversee plan implementation will be a major tool for assuring coordinated, effective and efficient resource use.

Finally, the group agreed that all training under the plan must be directed at meeting industry standards, state and national licensing requirements and the quality benchmarks established by educational program accreditation agencies. These principles of access, efficiency and quality permeate the plan document.

Because the health care industry in the state is so diverse and covers so many disparate occupations, many of the overall strategies in the following plan are broad and general in nature. Several of the strategies and many of the action steps echo those in other industry plans, particularly the call for broad public awareness and support for developing a pipeline of new workers through the revitalization of K-12 career awareness and technical education programs. To achieve these goals will require a cooperative, coordinated effort by many industries and agencies.

Health care workforce planning builds on successful partnerships

The planning group acknowledged the considerable cooperative effort that has already been made in developing the health care workforce. For example, a strong partnership between industry and the University of Alaska School of Nursing succeeded in doubling the number of nursing graduates between 2003 and 2007. Industry/university collaboration has also led to the introduction, expansion or revision of more than 80 health care-related UA certificates and degrees over the past ten years. New UA programs such as the bachelor degree in nutrition are coming on line to address emerging critical needs.

A coordinated effort by industry resulted in a doubling of medical school slots for Alaska students at the University of Washington through the WWAMI program. Combined industry, government and association advocacy has also spurred the creation of a Health Care Commission and the introduction of several pieces of legislation to provide loan repayment and other financial incentives for health care professionals practicing in Alaska. The Behavioral Health Initiative partnered the University of Alaska, the Alaska Mental Health Trust Authority and the Department of Health and Social Services to address the severe workforce shortages experienced in the behavioral health field at all levels of licensure and credentialing.

Implementing the health care-specific strategies and action steps in the plan will require the continued participation and coordination of many partners: industry/employers, education and training providers, government and professional associations. Each group contains many stakeholders.

Industry/employers include the broad range of health care providers—public, private and nonprofit—that extend health care services to Alaska's residents. Among these are hospitals, health clinics, tribal health organizations, private practice offices, state and local public health agencies and mental/behavioral health programs and treatment centers.

Education and training providers include the University of Alaska, Alaska Pacific University, the Alaska Vocational Technical Center (AVTEC), the Alaska Technical Center (ATC), Yuut Elitnaurviat and other regional training centers, private training providers and out-of-state institutions that have partnered with an Alaskan institution to offer a specific program within the state.

Government agencies involved in health care workforce development include the state departments of Health and Social Services, Labor and Workforce Development, Education and Early Development and Commerce, Community and Economic Development (Licensing), the Alaska Mental Health Trust Authority and local government public health offices. With the passage of health care reform, the federal government is also assuming a larger role in supporting health workforce planning and training.

Professional organizations encompass a variety of groups such as the Alaska Public Health Association, the Alaska Primary Care Association, the Alaska Nurses Association and other health care membership organizations such as ASHNHA.

In addition to the above groups, health care is served by the Alaska Area Health Education Center (AHEC) network—a university-industry partnership directed at strengthening Alaska's health workforce serving rural and other underserved populations. The AHEC network plays an important role in encouraging Alaskans to pursue careers in health and behavioral health care, providing clinical rotation sites and delivering continuing education to health care practitioners.

In the following plan, the first partner category listed under "Responsible Parties" in any sub-strategy is assumed to be the prime mover for that particular strategy, although the support and involvement of other listed partner groups is essential for success.

Health care workforce planning is on-going

The plan is intended to encompass rather than replace the workforce development efforts of other professional groups and health care organizations. The strategies outlined in the plan become real through application to a specific occupation, as can be seen in Section 4 that links strategies to the top priority occupations identified by vacancy data and other information.

The plan is not complete; rather it is a work-in-progress that will be revisited and revised over time as occupation-specific action plans are developed, successes are achieved and circumstances change.

The health care workforce development plan embraces AWIB principles

In preparing the plan, the steering group was cognizant of the need to address the following principles found in Alaska's Future Workforce Strategic Policies and Investment Blueprint, which was adopted by AWIB in 2000 to serve as the comprehensive guide for alignment of public policy and resource investments in vocational and technical education and training programs statewide.[5]

The plan is needs driven, based on data provided by the Research and Analysis Section of DOLWD, the Alaska Center for Rural Health, the Office of the Associate Vice Provost for Health Programs, University of Alaska Anchorage and DHSS Health Planning and Systems Development Section. Occupational supply and demand data were distributed to participants of the ASHNHA, Alaska Public Health and Behavioral Health conferences and to members of the Alaska Medical Group Management Association and the Alaska Native Tribal Health Consortium to gain consensus on the priority occupations detailed in Section 4. Strong industry leadership and involvement in the planning process assured that both current and emerging workforce needs would be addressed.

The plan extends access to health care occupations by creating awareness of career opportunities, utilizing distance delivery and simulation in health workforce education and training programs and increasing financial support for pursing health care careers. As mentioned above, the need to strengthen training, recruitment and retention of health care workers in rural Alaska was at the forefront of the planning effort.

The plan is interconnected, extending the use of career pathways to link secondary and post-secondary education and expanding post-employment training and advancement. It incorporates the state's job center system both to advertise job openings and to counsel job-seekers into training for health care positions.

The plan is accountable. All of the training and education under the plan is based on industry standards and most programs lead to state or national certification. Programs offered under the plan that utilize state or federal workforce development funds will report annually on the outcomes of the training in terms of number of participants and completers, placement of graduates and gains in income.

The plan will be collaboratively governed. The governance structure to be developed in a sustainability plan will include industry, tribal health organizations, appropriate government agencies, the University of Alaska and other training partners. The plan closely aligns with the AWIB emphasis on training Alaskans for high demand, high wage jobs.

[5] Alaska Workforce Investment Board, *Alaska's Future Workforce: Strategic Policies and Investment Blueprint, 2002, p. 1*

The plan will be sustained. The sustainability plan will detail the linkages between plan strategies and the mission and operational responsibilities of the involved partners. These linkages will be made concrete through memoranda of understanding outlining such activities as shared staffing, joint grant applications and other mechanisms to assure that parties carry through with assigned responsibilities for implementing the plan. The sustainability plan will call for an annual review of accomplishments and modifications to the plan as new opportunities and challenges arise.

Endorsement by AWIB is a critical step in moving the plan forward and securing the financial and other support necessary to assure that plan strategies are actualized.

Overall Health Workforce Development Strategies

Strategy 1

Engage Alaskans in health care workforce development

Alaskans need information about career opportunities afforded by the health care industry in the state—careers that are in demand in all regions, provide stable employment and encompass all educational levels, from on-the-job training through postgraduate programs. Alaskans also should be aware of the link between a well-trained, sufficient health care workforce and the overall health of the state's citizenry. Finally, voters and policy makers need reliable information about public policy and financing options that can impact health care work force development.

This strategy can be implemented by:

- Conducting public awareness campaigns on general workforce development issues and the full continuum of jobs available
- Expanding career awareness and counseling that highlight health career pathways in Alaskan schools
- Developing targeted marketing for high need professions
- Utilizing the existing one-stop information system to disseminate information on training opportunities and job openings in Alaska to job seekers

Funding

- Industry/employers
- Private foundations (e.g., the Robert Wood Johnson nationwide nursing career promotion)
- Alaska School Foundation funding
- State General Fund
- Youth Workforce Development funds
- Alaska Native Health Corporations
- Alaska Mental Health Trust Authority (AMHTA)

Strategy 1.1 Create public awareness

Rationale: Health occupations comprise 11 of the 15 fastest growing occupations in the state and employers report difficulty in attracting qualified workers. The most recent Alaska Health Workforce Vacancy Study[6] identified a range of vacancy rates in various occupations, with generally higher rates in rural Alaska. The demand is expected to increase as a result of health care reform, changes in care models, demographic shifts and retirement of older workers. Alaskans need accurate and timely information not only for career counseling and planning but also to develop and support the policy and funding initiatives needed to address critical health care workforce shortages.

Action Steps

- Develop a consistent, multi-faceted public awareness campaign that highlights the link between an adequate health care workforce and the overall health of Alaskans
- Implement communication strategies for the full continuum of job opportunities, with particular emphasis on reaching rural, Alaskan Native and minority residents
- Provide opportunities for public dialog on policy and funding issues around health care workforce development

Timeline

- Short term

- Securing an Adequate Number of Physicians for Alaska's Need, Physicians Task Force Report

- Funding
  - Industry
  - Private Foundations
  - State General Fund
  - State and federal grant funds
  - University of Alaska general funds
  - Alaska Native Health Corporations
- People
  - State and industry public information staff

Evaluation: Public awareness/communications plan is in place and being implemented as planned

Strategy 1.2 Expand career awareness and counseling

Rationale: Career decision-making begins early in a child's educational career. Research indicates that students begin to rule out certain career options as early as the third grade. Often career choices are guided by what a student is familiar with rather than a careful consideration of alternatives. Many health careers require substantial preparation at the secondary level in math and science. In addition, choices made while still in school, such as teenage drinking and drug use, are not only dangerous in themselves but can be lifelong barriers to entry into careers that require extensive background checks. A sound career awareness and guidance program beginning in early elementary grades can open up many more career options to Alaskan students and can assist them in developing both their secondary and postsecondary academic plans.

Action Steps

- Reinforce job readiness skills through the use of WorkKeys™, Youth Employability Skills (YES) or other programs that develop the soft skills necessary for success in the workplace
- Expand the use of health career pathways and DOLWD Health Career Guides in local school districts and for postsecondary academic counseling
- Identify "best practices" for use in elementary and middle schools to introduce students to careers in health care
- Establish an incentive program to encourage schools to adopt these practices
- Provide training for high school counselors and postsecondary academic advisors in using health care career pathways to advise students into health care occupations
- Secure sustainable state and industry funding for the Alaska AHEC network

Timeline

- Short term

Responsible Parties

- Government (DEED, K-12 districts)
- Industry/Employers
- AHEC
- Education and training providers

Resources

- Models
  - Best practices from Alaskan school districts
  - Alaska Career Information System (AKSIS)
  - Hot Jobs in Health Care (DOLWD) publications and teacher guides
  - State and national health career pathway models
- Funding
  - Alaska School Foundation Program (for K-12 district programs)
  - State and federal grant funds
  - Industry
  - Private Foundations
- People
  - K-12 and postsecondary career and academic advisors

Evaluation: By 2012, 50 percent of all Alaskan school districts will have incorporated healthcare career pathways into a career awareness/counseling program that begins in elementary school and continues through high school with demonstrated connections/transitions to postsecondary programs.

Strategy 1.3 Market high need professions

Rationale: There are several occupations in the health care industry that are in constant and high demand and that can be prepared for in Alaska. A full-scale media campaign, modeled after such nationwide efforts as the successful Robert Wood Johnson (RWJ) Nursing campaign, could attract considerable numbers of Alaskans into these careers.

Action Steps

- Identify two top priority, high demand professions across the full continuum, from direct service workers to doctors
- Prepare and widely disseminate ads, TV spots and other materials to encourage Alaskans to prepare for these professions
- Target under-represented minorities and populations for recruitment

Timeline

- Mid-term

Responsible Parties

- Industry/Employers
- Government (DHSS, DOLWD)
- Education and training providers
- Professional organizations
- AHEC

Resources

- Models
  - RWJ Nurse Campaign
  - The Alaska Mental Health Trust You Know Me anti-stigma campaign
- Publications
  - *Securing an Adequate Number of Physicians for Alaska's Need*, Alaska Physician Supply Task Force, August 2007
- Funding
  - Industry
  - Private Foundations

Evaluation: Enrollment in preparation programs for the selected occupations will double by 2015. Recruitment and enrollment of Alaskan Natives and underserved minorities will reflect the make-up of the total population.

Strategy 1.4 Attract Alaskan job seekers into health careers

Rationale: The health care industry offers many opportunities for job-seekers such as retiring active duty military, underemployed individuals, persons undergoing job loss/transitions, out-of-school youth and women returning to the workforce to prepare for and secure entry-level employment in a relatively short period of time. Many of these jobs are the first step in a career ladder than leads to long-term, stable and well-paid employment.

Action Steps

- Utilize the existing one-stop information system to disseminate information on health care training opportunities and job openings in Alaska
- Encourage health care providers to utilize the Alaska Labor Exchange System (ALEXsys) and 3RNet (Rural Recruitment and Retention Network) to post job openings
- Establish mechanisms for networking between DOLWD job counselors and local health care provider human resources offices
- Target market to persons who are undergoing transition due to economic downturn and/or job losses
- Increase coordination among vacancy posting services to disseminate information to a broad array of potential applicants

Timeline

- Short term

Responsible Parties

- Government (DHSS, DOLWD)
- Industry/Employers

Resources

- Information Systems
  - ALEXsys
  - AKCIS
  - EarnAndLearnAK.org
  - 3RNet (national)
  - Alaska Alliance for Direct Service Careers
- Funding
  - State and Federal Employment Security funds
  - Workforce Investment Act (WIA) Youth funds
  - Industry
  - Alaska Native Tribal Health Corporations
- People
  - DOLWD employment counselors

Evaluation: Health care job openings are posted in ALEXsys and 3RNet. Employment security counselors are aware of health care training and employment opportunities.

Strategy 2

Train Alaskans for health care employment

Almost three-quarters of the fifteen fastest growing occupations in Alaska are in the health care field. Taken as a group, these occupations are estimated to account for over 6,000 job openings between now and 2016[7]. These projections are based on the current level of health care provision and do not take into account the increased demand for health care workers that will result with the aging of the Alaskan population or from expansion of health care access. Filling these positions with Alaskans requires creating a pipeline for people seeking the necessary credentials, providing appropriate training and educational opportunities and allowing for those already employed to upgrade their skills and to advance professionally. Delivering training as close to home as possible through expanded distance education is essential to assuring that rural workforce development needs are addressed.

This strategy can be implemented by

- Strengthening secondary school offerings in mathematics, sciences, communications, job readiness and entry-level training in health care occupations
- Providing postsecondary health care occupational training and education programs that are effective, cost-efficient and lead to employment in Alaska
- Delivering post-employment training opportunities that allow practitioners to gain new skills and advance in their profession
- Developing the faculty needed at the secondary, postsecondary and continuing education levels to deliver education and training programs

Funding

- Alaska Public School Foundation Program
- University of Alaska general funds
- DOLWD
- State of Alaska General Fund
- Industry
- State and federal grants
- Private foundations
- The Alaska Mental Health Trust
- Alaska Native Tribal Health Consortium

[7] DOLWD, *Alaska's 10-year Occupational Forecast*, Alaska Economic Trends, January 2009, p. 22

Strategy 2.1 Strengthen secondary school offerings and programs

Rationale: Preparation for many health care careers begins at the secondary level, where fundamental academic and job readiness skills are acquired. Ideally, students with knowledge of what is required in their fields of interest will select the appropriate math, science and other high school courses that support their career interests. Individual learning plans based on career pathways greatly assist secondary students to easily transition to postsecondary education and training. Applied academics—where the student experiences real-life applications of math, science and communications—improve student success in these subjects. Training programs that lead to national certification can provide an avenue to post-high school employment and onto a career ladder.

Action Steps

- Encourage Alaska's secondary schools to develop and deliver foundation programs that support health career pathways, include advanced math, science and communications courses and articulate to postsecondary certificates and degrees (Career and Technical Education Programs of Study)
- Develop a framework to provide Work-based Learning Experiences (WBLEs) in health care settings that clearly delineates the responsibilities of the educational and health care provider and supports the interests of all parties in the health care setting
- Develop short-term exploratory programs in health care sciences that spark student interest in pursuing careers in the industry and that can be conducted with local resources in rural as well as urban settings
- Expand the use of health career academies modeled on the construction academies conducted throughout the state
- Deliver high school programs that lead to entry-level employment such as CNA and EMT or to certificates that are widely accepted, such as First Aid, CPR and OSHA Safety
- Expand the use of dual credit/Tech Prep/School-to-Apprenticeship/Early College programs that provide secondary students the opportunity to earn university credit
- Establish four additional career/technical magnet high schools that deliver training in health occupations and other careers
- Utilize distance education to expand access to students in small, rural high schools
- Work with health care providers and organizations to secure on-going support through scholarships, internships and mentoring programs

Timeline

- Short term

Responsible Parties

- Government (DEED, K-12 districts, DHSS)
- Education and training providers
- Industry/Employers
- AHEC

Resources

- Models
  - National health career pathways
  - Alaska-specific health career pathways
  - Tech Prep, early college and dual enrollment programs
  - Existing secondary career high schools and centers: Mat-Su Career and Technical High School, King Career Center, Hutchison Career Center
  - Construction academies
- Funding
  - Alaska State Foundation Program
  - Federal Perkins IV funding
  - Industry

Evaluation: Alaska's secondary schools have programs of study based on health career pathways. Four career/technical high schools are established and operational.

Strategy 2.2 Provide health care occupational training and education programs

Rationale: Between 2001 and 2009, aggressive program development at the University of Alaska added instruction and training in a variety of health occupations resulting in more than 80 certificates/degrees in primary care, nursing, and allied, behavioral and public health. The UA system now serves around 4,200 Alaskans each year who are preparing for and enrolled in health care training and education programs. Half of the programs are accessed by students via distance education technology. APU provides undergraduate degrees in behavioral health and health administration. AVTEC, regional training centers and several private training providers serve additional students, generally with entry-level training. Meeting the anticipated workforce needs, however, will require additional effort—to expand access to existing programs particularly to rural sites, to develop new programs where demand and cost-considerations dictate and to partner with out-of-state institutions when programming by an Alaskan institution is not feasible.

Action Steps

- Develop and deliver occupation specific training at all levels (work-based, certificate, Associate, Bachelor and graduate) for occupations that are high demand and/or are critical to health care delivery, as indicated in Section 4
- Continue to refine and develop the UA academic plan for health care occupation certificates and degrees
- Provide adequate financial support for training and education programs
- Increase access through program expansion, distance delivery and simulation
- Expand the capacity of community campuses of the UA system to support local students in health care programs
- Strengthen the dialog among employers, labor and education/training institutions concerning registered apprenticeship and other work-based learning opportunities in health care, create and evaluate pilot apprenticeship projects and disseminate the results
- Explore credit-for-experience or other mechanisms that allow practitioners to challenge introductory and lower level coursework in a certificate/degree program
- Develop partnerships with institutions in other states to provide certificate and degree programs in Alaska that cannot be cost-effectively delivered by in-state institutions
- Assure that all health care training and education programs delivered by any institution in Alaska meet industry standards, are accredited by a regional or national body and lead to certification or licensure as required for employment
- Periodically assess Alaska's capacity to deliver high need/high cost programs in-state and initiate programs that are deemed viable
- Research national and international best practices in health care professional training for possible adoption in Alaska

Timeline

- Short term for high priority occupations
- Mid and long term for other occupations

Responsible Parties

- Education and training providers (Alaska and elsewhere)
- Government
- Industry

Resources

- Programs
  - Existing health care occupational training programs at UA, APU, AVTEC, ATC, regional training centers and private training providers
  - Washington, Wyoming, Alaska, Montana and Idaho (WWAMI) regional school of medicine based at University of Washington
  - Western Interstate Commission on Higher Education (WICHE) and Western Undergraduate Exchange (WUE)
  - Distance delivered programs in Alaska and in other states
- Funding
  - UA general funds
  - Tuition and fees (UA, APU, AVTEC ATC, other)
  - Technical and Vocational Education Program (TVEP) state dollars
  - Scholarships and loan repayment programs
  - State and federal grant funds (STEP/WIA)
  - Industry

- People
  - UA, APU, technical center and private provider faculty

Evaluation: Programs are available in-state that train Alaskans for high need occupations in a cost-effective manner. Training is available as close to home as possible for most Alaskans.

Strategy 2.3 Deliver post-employment training opportunities

Rationale: Changes in health care access, care models and technology mandate that the workforce engage in continuing education and acquisition of new skills. Professional development is most effective when it is based on developing or strengthening commonly-accepted competencies and promotes career advancement. Adopting core competencies for various health care occupations and utilizing these competencies to build on-the-job training and career ladders are proven methods of assuring comparable skill levels around the state. Greater economies of scale can be achieved by sharing professional development programs and resources among health care providers.

Action Steps

- Define priority occupations for competencies and career ladders and lattices
- Develop and adopt standardized core competencies in critical health care occupational clusters
- Assist in developing and supporting occupation-specific industry/education consortia that will address the professional development needs within the occupation, including competencies and career ladders
- Encourage health care providers—including state and local governments—to establish professional development programs and career ladders/lattices based on competencies
- Extend the use of registered apprenticeships and other work-based post-employment training for career development
- Provide post-employment academies and other intensive training to accelerate skills and achieve advanced certifications, including nursing specialties
- Utilize the AHEC network to provide continuing education to practitioners in underserved areas
- Establish mechanisms for sharing high-cost, effective training tools such as simulation and distance delivery among health care institutions around the state
- Increase opportunities for health care professionals to obtain continuing education and continuing medical education credits (CEUs/CMEs)

Timeline

- Short term for competencies, career ladders, apprenticeships and continuing education
- Short/mid-term for expansion of simulation

Responsible Parties

- Industry/Employers
  - Education and training providers
  - Professional associations
  - Government (licensing boards)
  - AHEC

Resources

- Models
  - Alaska Coalition of Educators-Health Care (ACE-HC) Nurse Competencies
  - Alaska Mental Health Trust Authority (AMHTA) Credentialing and Quality Standards Subcommittee (CQSS) – Alaska Core Competencies for Direct Care Workers
  - Providence Hospital Academies to accelerate skills and advanced certifications
  - Registered Apprenticeships
- Facilities
  - Community and university-based simulation facilities
- Funding
  - Industry
  - AMHTA
  - UA general funds
  - State and federal grants
- People
  - Education personnel in health care facilities
  - Training program faculty

Evaluation: Core competencies are developed and adopted for the major occupational groups in the health care workforce. Employers conduct professional development programs based on competencies. Training programs and resources are shared among Alaskan health care providers in all areas of the state.

Strategy 2.4 Develop needed faculty

Rationale: High quality education and training programs are built on strong faculty who not only know the content but who also have practical experience in the field. Increasingly, faculty members need to be conversant with technology and distance-delivery methodologies. Because the demand for persons who are skilled health care program educators is high throughout the country, Alaska will need to consider "grow your own" strategies to develop this workforce internally.

Action Steps

- Provide opportunities for secondary academic and career/technical teachers to increase their understanding of how academic skills are applied in various health care occupations using the Teacher-Industry Externship (TIE) program or other successful models
- Develop additional secondary faculty from industry and elsewhere that can deliver heath career-related instruction
- Prepare/secure the necessary postsecondary faculty through better utilization of national health care educator loan repayment programs, sabbaticals/release time for faculty pursuing the necessary credentials and/or aggressive recruitment
- Assure salaries, benefits and other incentives for faculty that are comparable to practicing health care professionals in their area of instruction
- Increase opportunities for health care professionals to serve as adjunct or part-time faculty by identifying and addressing current workplace and training institution policy or practice barriers
- Establish training and incentives for practicing professionals to assume responsibility for continuing education in their facilities, for example, as nurse educators
- Assist health care faculty and educators to effectively utilize technology, including simulation, and distance methodologies in their instruction

Timeline

- Short term for programs such as faculty externships and adjuncts
- Mid-term for master/doctoral degree-prepared faculty development

Responsible Parties

- Education and training providers
- Industry/Employers
- Professional Associations

Resources

- Models
  - Alaska Process Industry Careers Consortium Teacher Industry Externships (TIE) programs
  - ACE-HC
- Funding
  - K-12 Foundation Program
  - UA general funds
  - Industry
  - State and federal grants

Evaluation: Alaska has skilled and well-prepared faculty at all levels to deliver the training, education and continuing skill development necessary to support the health care workforce. The health care industry supports a teacher in industry program modeled after APICC's TIE program.

Strategy 3

Recruit qualified candidates to fill health care positions

Even with expansion of programs through in-state training facilities and distance delivery, Alaska's population and resources alone will not be able to fill all of the health care workforce needs. In some cases—such as medical education—preparation program are prohibitively expensive; in others—such as pharmacy—positions are critical but needed in relatively small numbers. For the foreseeable future, therefore, Alaska will need to attract health care providers to the state.

This strategy can be implemented by

- Promoting health care employment opportunities in the state
- Expanding post-graduate programs, residencies and fellowships
- Establishing financial and other incentives to attract needed professionals
- Coordinating recruitment among health care providers
- Creating a positive community, policy and economic environment for health care providers

Funding

- Industry
- State and federal loan repayment/incentive dollars
- State marketing dollars
- Federal grants and programs that address recruitment

Strategy 3.1 Promote health care employment opportunities in Alaska

Rationale: A widespread campaign to advertise health care opportunities in Alaska can assist in developing a pool of qualified applicants for open positions. An untapped resource is Alaskan students who have gone out-of-state for education in health care fields and who may return if provided information about career opportunities. Identifying institutions that have a high number of graduates practicing in Alaska for targeted recruitment can also increase the applicant pool. Greater use of existing resources such as the ALEXsys system and state marketing efforts can be a cost-effective means of attracting needed expertise to the state.

Action Steps

- Refine the ALEXsys system to more accurately identify the occupations and specialties that are being recruited
- Partner with state marketing groups to advertise health care provider opportunities in Alaska
- Reach out to Alaskan students who are pursing health care education outside of Alaska to inform them of opportunities in Alaska and encourage them to return after graduation
- Develop partnerships with institutions in other states with strong health care preparation programs and/or which have a large number of graduates already practicing in Alaska to directly recruit program completers

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Government (DOLWD, DHSS, DEED, Alaska Commission on Postsecondary Education)
- Professional Associations
- Education and training providers (Alaska and other states)

Resources

- Models
  - *Status of Recruitment Resources and Strategies 2005-06 (DHSS)*
  - Seafood Marketing Institute
  - Office of Tourism marketing materials
- Funding
  - State employment security dollars
  - State marketing dollars
  - Industry
  - National Health Service Corps (NHSC) and Indian Health Service (IHS) Loan Repayment programs

Evaluation: ALEXsys information accurately reflects the nature and qualifications of open positions. Alaska's health care system and workforce needs are highlighted in the state's promotional materials. Recruiting networks are established with select institutions in other states.

Strategy 3.2 Expand post-graduate opportunities

Rational: Research indicates that health care professionals frequently choose to practice in an area where they have completed a rotation, residency, internship, fellowship or other postgraduate experience. In Alaska, the rate of return on its one residency program—the Alaska Family Medicine Residency—is extremely high: 70 percent of the 55 graduates have remained in Alaska.[8] There is widespread agreement that Alaska has additional capacity for residencies and rotations; however, at the current time, there are policy and fiscal barriers to such expansion.

Action Steps

- Change Medicaid and Medicare policy to allow increased support for in-state teaching hospitals and the use of residents
- Increase funding for Alaskan and rural rotations through AHEC and other agencies that support rotations
- Develop an American Psychology Association (APA) approved residency in conjunction with the UA PhD in psychology
- Establish residencies in psychiatry, pediatrics and internal medicine
- Support the development of a plan to expand graduate medical education (GME) to additional specialties and regions
- Implement strategies to identify medical interns and residents working with Alaskan physicians and to encourage them to practice in the state upon graduation

Timeline

- Short term for APA, pediatric, internal medicine and psychiatry residencies
- Mid term for other specialties
- Short term for changes in Medicaid/Medicare reimbursement policies

Responsible Parties

- Industry/Employers
- Education and training providers
- Government (DHSS, state legislature for Medicaid/Medicare policy changes)
- AHEC

Resources

- Programs
  - NHSC Student/Resident Experiences and Rotations in Community Health
  - AHEC network
  - Alaska Family Practice Medical Residency
  - Alaska Center for Rural Health Rural/Underserved Opportunities Program
- Funding
  - Medicaid and Medicare Graduate Medical Education (GME) funds
  - NHSC and IHS federal funding
  - Federal Health Resources and Services Administration (HRSA) for AHEC, NHSC and IHS funding
  - Industry
  - State funds

Evaluation: Medicaid/Medicare policies support the use of residents in Alaskan hospitals. Residency opportunities are available in all regions of the state. Rural rotations are available at all rural hospitals, in most community health centers and tribal clinics and in a number of private practices.

[8] DHSS, *Securing an Adequate Number of Physicians for Alaska's Need*, Report of the Alaska Physician Supply Task Force, August 2006, p. 42

Strategy 3.3 Improve coordination in recruitment among health care providers

Rationale: Recruitment in the health care industry is an expensive business. According to a 2005 study, state health care facilities—hospitals, community health centers and rural mental health centers—spent over $24 million on recruitment in the prior year. Many times, more than one institution is recruiting for a similar skill set. Often searches at one institution yield multiple qualified candidates, some of whom at least could be good fits for other open positions in the state. A more coordinated recruitment system would allow hiring agencies to spread the costs of recruitment, share promising recruitment practices and develop a pool of applicants that are interested in relocating to Alaska in general and rural Alaska in particular.[9]

Action Steps

- Inventory existing recruiting practices among health care providers and facilities to identify "best practices"
- Create and maintain a single website that links health care organizations and is a repository for open positions
- Actively market Alaska health care employment opportunities in selected regions and with selected institutions in other states
- Explore a coordinated recruitment consortium that can serve multiple agencies and can share applicant information/applicant pools
- Pilot the use of non-traditional recruitment strategies such as posting on Craig's List and other web sites

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Government (DHSS)
- Professional associations and membership organizations

Resources

- Programs
  - 3RNET technical assistance and web page
  - DHSS Alaska Primary Care Office and State Office of Rural Health
  - ASHNHA
- Funding
  - Industry

Evaluation: A coordinated recruitment effort exists that shares information and recruiting resources.

Strategy 3.4 Establish incentives to attract needed professionals

Rationale: Financial incentives of various types—loan repayment, moving costs, housing assistance and tax breaks—can influence a provider's decision to practice in Alaska. Research on support-for-service programs indicates that these programs bring health care providers to needy communities where they remain in practice for many years. Of all types of programs, loan repayment and direct financial incentives that target the practitioner after training show the broadest success.[10] Currently, a small number of health care providers—primarily physicians—who locate to Alaska are eligible for a variety of federal loan repayment programs, but these programs have limited slots and are generally targeted at underserved areas of the state. Incentives are needed for additional categories of high-need health care professionals, for all areas of the state and for those for whom loan repayment is not appropriate.

Action Steps

- Maximize use of federal loan repayment programs through dissemination of information and application assistance to health care providers and potential applicants
- Continue to submit the Health Professional Shortage Area (HPSA) designation application to HRSA to assure that sites are eligible to have loan repayors through HRSA-funded National Health Service Corps and State Loan Repayment programs
- Create and fund a state-supported loan repayment program
- Provide funds for non-loan incentives
- Explore federal tax breaks and other economic incentives to practice in underserved areas

[9] Alaska DHSS, *Status of Recruitment Resources and Strategies 2005-06*, p. iii and Recommendations, pp. 40-41

[10] Donald E. Pathman, M.D., et al. *Outcomes of States' Scholarship, Loan Repayment, and Related Programs for Physicians*. Medical Care. Vo. 42, No. 6, p. 567

Timeline
- Short term for state loan repayment and incentive program
- Mid-term for tax incentives

Responsible Parties
- Government (DHSS, State Legislature, Alaska Congressional delegation)
- Industry/Employers

Resources
- Programs
  - HRSA NHSC Loan Repayment
  - National Institutes of Health loan repayment programs
  - Military LR
  - HRSA State Loan Repayment Program
  - HRSA Nursing Faculty Loan Repayment
  - IHS Loan Repayment Program
  - Alaska Mental Health Trust Authority
- Funding
  - Federal loan repayment, including stimulus funds
  - State dollars
  - Industry
- People
  - DHSS health Planning and Systems Development Section staff, including the Alaska Primary Care Office and the State Office of Rural Health
  - Alaska Native Tribal Health Consortium staff for IHS loan repayment

Evaluation: State loan repayment and incentive program is in place and funded. Federal loan repayment programs are utilized to maximum effect. Support system for non-loan incentives is in place.

Strategy 3.5 Create a positive environment for health care providers

Rationale: While financial considerations can greatly influence the success of recruiting efforts, other factors can also come into play. The ease with which a relocating professional can become licensed or certified in Alaska can significantly affect a successful placement. Hurdles such as multiple background checks for the same position and with the same state agency can sour an applicant. Community amenities such as quality schools, housing and opportunities for spousal employment are important, particularly when a family is relocating.

Action Steps
- Align state regulations and licensure requirements with clinical workforce needs
- Develop and support the utilization of tools that promote community-based approaches to recruitment and retention
- Create Alaskan-specific practice environment assessments and comparison tools for selected profession

Timeline
- Short term for alignment of licensure and regulatory requirements
- Mid-term for community-based approaches and practice environment assessments

Responsible Parties
- Government (DCCED, Division of Corporate, Business and Professional Licensing, DHSS Criminal Background Check Unit)
- Industry/Employers
- Professional organizations

Resources
- Models
  - National Health Service Corps Site Development Manual
  - Examples from other states, such as the Massachusetts Medical Society index for physicians
- Funding
  - State GF and professional fees for licensing
  - Industry/state funds for community grants
  - Professional organizations
  - Federal/state grant funds
  - Private foundations

Evaluation: State licensure requirements are in line with national standards and reflect the needs of the health care workplace. Communities are involved in and take appropriate responsibility for the recruitment of needed health care professionals.

Strategy 4

Retain a skilled health care workforce

While recruiting skilled health care workers is a major task, keeping this workforce is even more critical. Some health care occupations and some locations report annual double-digit turnover rates. A 2006 study by DHSS found that the average cost for a physician hire was $126,782. Urban costs for recruiting registered nurses were $10,527 per hire; rural costs for the same position topped $42,500.[11] Clearly, replacement of lost workers represents huge costs in terms of both recruitment and retraining—costs that can be avoided by better retention.

This strategy can be implemented by

- Supporting and disseminating effective orientation and on-boarding programs for new employees
- Providing opportunities for professional development and advancement
- Promoting positive work environments

Funding

- Industry
- Private Foundations
- State/federal grants

Strategy 4.1 Support and disseminate effective orientation programs for new employees

Rationale: Much of the turnover in the health care workforce occurs during the first year of employment, particularly among new graduates who are entering the profession. As health care worker shortages in Alaska and the nation continue to grow, the state's health care employers are hiring and are willing to hire newly-trained workers in ever higher numbers.[12] Even seasoned professionals who are new to Alaska or to more rural conditions require assistance to be successful in their positions. Both health care organizations and the wider community have a responsibility for assuring that entering employees receive the support they require to succeed.

Action Steps

- Assist employers to implement preceptorship/mentorship programs based on standardized core competencies
- Encourage employers to provide cultural awareness/competencies training
- Establish industry/education consortia to share competencies, models and best practices in inducting new employees
- Identify community support initiatives

Timeline

- Short term for competency-based preceptorship programs
- Mid-term for community-based initiatives

Responsible Parties

- Industry/Employers
- Professional Organizations

Resources

- Models
  - ACE-HC competency-based nurse preceptorship programs
  - AMHTA – Alaska Core Competencies for Direct Service Workers
  - AHEC network
- Funding
  - Industry
  - AMHTA
  - Professional organizations

Evaluation: Competency-based preceptorship/mentorship/apprenticeship programs are established in all health care facilities and available to new employees.

[11] DHSS, *Status of Recruitment Resources and Strategies 2005-2006*, June 2006, pp. 31-32

[12] Alaska Center for Rural Health, *2007 Alaska Health Workforce Vacancy Study Research Summary*, August 2007, p. 4

Strategy 4.2 Provide opportunities for professional development and advancement

Rationale: The health care industry provides many career pathways both for those who come to the industry with entry-level skills and for those with more advanced training who wish to specialize. Work-based training directed at competencies and tied to career ladders is an effective method for retaining employees and for developing an increasingly-skilled workforce. Sharing training and continuing education opportunities among health care facilities through state/regional workshops or distance delivery can increase the reach of limited resources. Professional networking opportunities can assist with on-going skill development, encourage collaboration and lessen the sense of isolation that frequently occurs in Alaska among health care professionals, particularly those serving in rural areas.

Action Steps

- Share existing competency-based career ladders among employers
- Identify emerging roles and competencies resulting from health care reform and changes in care models
- Encourage apprenticeships and work-based experiences tied to career ladders and lattices
- Sponsor in-state professional development events
- Expand access to continuing education coursework through the UA system
- Assist with networking among health care occupational groups

Timeline

- Short term

Responsible Parties

- Industry/Employers
- Education and training providers
- Professional organizations

Resources

- Models
  - ACE-HC nursing group
  - Alaska Primary Care Association
- Funding
  - Industry
  - State/federal grants
  - Private foundations

Evaluation: Competency-based career ladders are established for high demand occupational groupings. Appropriate work-based and credit-bearing training opportunities support the career ladders. Professional workshops and networking opportunities are available to practitioners throughout the state.

Strategy 4.3 Promote positive work environments

Rationale: Health care positions place a high degree of responsibility on individual workers and often demand long hours and non-standard shifts. A major cause of turnover among direct care workers is the lack of appropriate supervision that supports and develops the employee. For all health care providers, changes in care models, technology and record-keeping systems can increase stress levels if adequate information and training is not provided. Finally, although compensation is usually not at the top of the list of reasons for leaving the industry, salary and benefits for the entry-level workforce need to recognize the importance of these positions and their contributions to the quality of health care in Alaska.

Action Steps

- Strengthen supervisory and leadership skills in health care occupations and facilities
- Assure competitive salary rates and employee benefits for health care workers, particularly those in entry-level and direct care positions
- Provide training in supervision and leadership to front-line supervisory personnel
- Inventory and disseminate best practices such as flexible schedules
- Establish organizational models that reflect changes in care management and that utilize technology to improve patient care and employee effectiveness
- Explore cross-industry leadership training programs that can be delivered collaboratively to both urban and rural site

Timeline

- Short term for supervisory and leadership training
- Mid-term for new organizational models

Responsible Parties

- Industry/Employers
- Professional organizations
- Education and training providers

Resources

- Programs
  - ACE-HC Nurse leadership competencies
  - UA/APU management/supervisory training programs
  - State of Alaska supervisory training
  - Private sector consultants/training
- Funding
  - Industry
  - UA general funds
  - Fees and tuition for management/supervisory training courses and programs

Evaluation: Turn-over in Alaskan health care facilities is reduced to at least the national average. Employees receive appropriate supervision and competitive wages and benefits.

Occupation-Specific Strategies for Priority Occupations

The health workforce is exceedingly complex to describe, evaluate and project. While overarching strategies to engage, train, recruit and retain health care workers are useful—even essential—to address the overall workforce picture, individual occupations and professions require their own detailed action plans comprised of strategies tailored to their unique needs.

In order to begin to develop these action plans, the health workforce planning process included an initial assessment of occupational priorities for Alaska, utilizing data and information from a variety of sources including the following:

DOLWD

Ten-Year Projections

Industry-Specific Studies

Occupational Information, Ranking and Demographics

DHSS

Health Professional Shortage Area (HPSA) Analysis

Physician Task Force Report

Special Topics (e.g. dental, pharmacy, licenseholders, loan repayment/

employee incentives options)

University of Alaska (Alaska Center for Rural Health/Alaska's AHEC and Office of Health Programs Development)

Vacancy Studies

Recruitment Studies

Special Topics (e.g. rural allied health, CHA/P, nursing, health information technology, pharmacy, geriatric education)

On the basis of the above information, which is compiled in the Occupational Forecast (Section 5), the planning group initially identified 35 occupations that appeared to be in most critical need of attention because of high vacancy rates, high number of vacancies and/or criticality to health care delivery. This initial listing was then distributed to various health-related groups either in a conference setting—Behavioral Health, Alaska State Hospital and Nursing Home Association (ASHNHA) and Alaska Public Health Association (ALPHA)—or through surveys to the participants/members of those groups as well as to the Alaska Medical Group Management Association (which represents many doctor's offices and clinics) and the Alaska Native Tribal Health Consortium. In all, 151 Alaskans participated in the survey prioritization process.

Conference and survey respondents were asked to select their top five from the list of priority occupations and to add occupations that they felt should be on the list. Results were reviewed by the coalition's Assessment and Priorities Committee. From these processes, occupations/occupational groupings were identified as those most in need of immediate attention. The 15 top priority groupings listed below include a total of 26 occupations and professions:

Behavioral Health Aide/Village Counselor

Primary Care Physician

Advanced Nurse Practitioner

Substance Abuse Counselor

Registered Nurse

Community Health Aide/Practitioner

Social Worker

Oral Health Practitioner

Psychiatrist

Human Services Worker

Pharmacist

Therapist and Therapist Assistant (Physical, Occupational, Speech-Language)

Nurse Educator

Health Informatics Staff

Direct Care Worker

Once priorities were identified, an initial set of strategies for each occupation on the list was developed. These strategies were then circulated to educators and practitioners in the occupation for review, verification and revision.

The revised strategies for each of the 15 priorities, together with descriptions of the occupations and pertinent data, make up the remainder of this section. The format used is similar to that found in the Physician Supply Task Force report cited elsewhere in this plan. An estimated time frame for the strategies is provided: Short Term (within the next two years), Medium Term (within three to

five years) and Long Term (five years or more in the future).

Priority strategies will be identified in the next step of the planning process and action plans utilizing these strategies will be drafted in the coming months for each of the identified priority occupations. These plans will include the following sections: Strategy, Problem Statement, Action Steps, Target Outcomes, Timeframe, Benefits, Costs, Responsibility, Area of Impact, and Rationale. During action planning, budget projections will be made for each strategy.

It is anticipated that those responsible for working on strategies for a particular health occupation will maintain regular communication, collaborate, and share ideas, information and results. Also, it is expected that work will continue on occupations beyond those included in the plan until a full set of health occupations strategies is completed.

Industry Occupations by Priority

Priority 1 *Most critical; requires immediate attention*

Behavioral Health Aide/Village Counselor
Certified Nurse Assistant
Community Health Aide/Practitioner
Dental Health Aide/Therapist
Dental Hygienist
Dietitian/Nutritionist
Disabilities Specialist/Worker
Family Nurse Practitioner/Advanced FNP
Family Physician (M.D., D.O.)
General Internal Medicine Physician/Internist
Health Educator
Health Informatics Staff
Healthcare Managers/Supervisors
Home Health Aide
Human Services Worker
Medical Assistant
Nurse Educator
Nurse Manager/Executive
Nurse Specialist (e.g. Critical Care, ER, OB)
Occupational Therapist
Personal Care Assistant
Pharmacist
Pharmacy Technician
Physical Therapist
Physical Therapy Assistant
Physician Assistant
Psychiatric Nurse
Psychiatric Nurse Practitioner
Psychiatrist
Public Health Nurse
Registered Nurse
Social Worker (BSW, MSW, LCSW)
Sonographer
Speech-Language Pathologist
Substance Abuse Counselor

Priority 2

Accountant (Health Care)
Behavioral Health Case Manager
Behavioral Health Clinician
Billing/Coding Clerk/Technician/Specialist
Clinical Psychologist/Psychologist
Community Health Representative
Community Wellness Advocate
Compliance Officer/Auditor
Dental Assistant
Dentist
Geriatrician
Gerontologist
Health Information Administrator/Manager
Healthcare Quality Professional
Hospital Administrator
Licensed Practical Nurse
Limited Radiographer
Mammographer
Marital/Family Therapist
Medical Director
Medical Laboratory Technician
Medical Technologist
Nuclear Medicine Technologist
Nurse Case Manager
Nurse Midwife/Women's Health Nurse Practitioner
Nursing Home Manager
Occupational Therapy Assistant
Optician
Pediatric Nurse Practitioner
Pediatrician
Physician Specialist
Radiation Therapist
Radiographer/Radiologic Technician
Rehabilitation Counselor
Residential Aide
Safety Officer
Sanitarian
Speech Therapist
Surgical Technologist
Veterinary Technologist/Technician
Village Health Educator

Priority 3

Anesthesia Technologist/Technician
Anesthesiologist Assistant
Art Therapist
Athletic Trainer
Audiologist
Billing Supervisor
Biomedical/Health Researcher
Blood Bank Technology Specialist
Cardiovascular Technologist
Chaplain
Clinical Assistant (Lab)
Cytogenic Technologist
Cytotechnologist
Dance/Movement Therapist
Dental Laboratory Technician
Diagnostic Molecular Scientist
Echocardiography Technician
Electrocardiography Technician (EKG)
Electroencenphalography Technician (EEG)
Electroneurodiagnostic Technologist
Emergency Medical Services Technician (EMT/ETT)
Epidemiologist
Exercise Physiologist
Exercise Science Professional
Genetic Counselor
Health Advocate
Health Care Manager/Supervisor
Health Information Clerk/Technician
Histotechnologist
Horticultural Therapist
Kinesiotherapist
Low Vision Therapist
Magnetic Resonance Technologist (MRI/CT)
Massage Therapist
Medical Biller/Billing Clerk
Medical Coding Clerk/Specialist/Certified Coder
Medical/Dental Receptionist
Medical Dosimetrist
Medical Illustrator
Medical Librarian
Medical Transcriptionist
Music Therapist
Nurse Anesthetist
Orientation and Mobility Specialist
Ophthalmic Assistant
Ophthalmic Dispensing Optician
Ophthalmic Medical Technician/Technologist
Optometric Technician
Optometrist
Orthoptist
Orthotist and Prosthetist
Paramedic
Pathologist's Assistant
Perfusionist
Personal Fitness Trainer
Phlebotomist
Podiatrist
Polysomnographic Technologist
Privacy Officer/Specialist
Professional Counselor
Psychiatric Aide/Technician
Public Health Administrator
Respiratory Therapist
Surgical Assistant
Sterile Processing Technician
Therapeutic Recreation Specialist
Teacher of the Visually Impaired
Veterinarian
Veterinary Assistant/Lab Animal Caretaker
Vision Rehabilitation Therapist

Behavioral Health Aide/Village Counselor

Description:

Behavioral Health Aides/Practitioners are employed by Alaska tribal health organizations to address local mental health and substance abuse issues and to promote healthy individuals, families and communities in rural and remote Alaska Native Villages. Behavioral health aides work under the supervision of licensed professionals.

Overview:

Programs are in place to train behavioral health workers for rural and urban Alaska, and there is an articulated behavioral health pathway available through distance delivery. Attracting individuals to these demanding positions and retaining them is challenging.

Workforce Data:

There were an estimated 39 vacancies in 2009 (15% vacancy rate).[13]

Education and Training:

UAF Rural Human Services; Regional Alcohol and Drug Abuse Counselor Training (RADACT), Alaska Native Tribal Health Consortium (ANTHC) Behavioral Health Aide Training; certification by Community Health Aide Program Certification Board; behavioral health career ladder (BHA I, II, III and BHA Practitioner) with participation by many UA campuses and tribal health organizations; courses are a combination of distance delivered and in person.

Strategies	Timescale
Engage	
Develop awareness of behavioral health occupations, especially in rural Alaska, using public service announcements on radio and television and other methods.	Short
Conduct culturally appropriate anti-stigma campaigns.	Medium
Engage local elders and leaders in introducing children and adults to the role of a village counselor.	Short
Provide information about, access to and funding for training and career opportunities in behavioral health.	Medium
Support continued ANTHC/University of Alaska/Alaska Mental Health Trust Authority cooperative efforts on the further development of BHA training opportunities and outreach.	Short
Train	
Enlist the help of local Alaska Native elders and leaders to assist with teaching healthy lifestyles and coping skills development in elementary schools.	Short
Continue to provide competency-based, culturally sensitive education for behavioral health workers at the village level; expand as needed. Ensure local Alaska Native elders and leaders co-teach and story-tell.	Medium
Expand access to continuing education for the village behavioral health workforce by promoting UA cross-campus coordination.	Medium
Consider strengthening work-based learning approaches to BHA education.	Medium
Present training materials and information at the Annual BHA Forum.	Short
Recruit	
Identify youth with peer helping skills and abilities in consultation with Native elders and community leaders, and support and nurture their growth.	Medium
Educate the legislature and advocate for increases in funding for sustaining these positions across the state.	Medium
Ensure that BHA certifications and endorsements are reciprocal and can be used at all levels of the career ladder in all rural areas.	Medium

[13] Unless otherwise noted, vacancy data are taken from the *2009 Alaska Health Workforce Vacancy Study*, conducted by the Alaska Center for Rural Health at the University of Alaska Anchorage. Licensing data have been provided by the Division of Occupational Licensing at the Department of Commerce, Community and Economic Development and by Department of Health and Social Services. Non-resident and age data for the current workforce are from Department of Labor and Workforce Development studies and projections.

Provide support to the Tribal BHA Training Academy to recruit and support training staff.	Short
Provide recruitment materials through tribal health organization communication channels and at tribal events around the state	Short

Retain

Ensure Native elder and community leader support for behavioral health workers through mentoring, guidance and leadership.	Short
Make general and targeted skills enhancement available for village behavioral health workforce.	Medium
Improve supervision of village workers.	Medium
Develop community understanding of and support for behavioral health workers in local areas, including personal expressions of appreciation.	Short

Primary Care Physician

Description:

Primary Care Physicians diagnose, treat, and help prevent diseases and injuries that commonly occur in the general population and may be trained as either Doctors of Medicine (MD) or Doctors of Osteopathy (DO). Areas of practice include Family Practice, General Internal Medicine, and Pediatrics. Obstetricians/Gynecologists are sometimes includec in this group, as are General Surgeons.

Overview:

In 2005 a task force was convened to analyze and provide recommendations regarding Alaska's physician workforce. These recommendations included expanding the size of the WWAMI medical school class, considering establishment of a medical school in Alaska, and various recruitment and retention measure. Several of these strategies, and some others represented in this section, have already commenced. Further planning is needed to develop strategies specific to each type of primary care physician.

Workforce Data:

In 2009, there were an estimated 67 family practice vacancies (11% vacancy rate) and 1,583 licensees, up 2% from 2007; 24% of the workforce is non-resident, 41% over age 50.

Education and Training:

Alaska WWAMI program (20 graduates per year); Alaska Family Medicine Residency (10 completers per year).

Strategies	Timescale
Engage	
Strengthen pipeline programs to medical and other health professions, particularly for minority and disadvantaged/under-represented populations.	Short
Support school districts in offering health occupations awareness and exploration activities.	Short
Incentivize consideration of family rather than specialty practice.	Medium
Engage hospitals/physicians in the community to help develop student awareness and interest.	Short
Train	
Expand the WWAMI program to include the second year in Alaska and additional students as resources allow.	Medium
Remove requirement to repay the public fund portion of medical education.	Short
Increase the use of distance delivery, simulation and other technologies to strengthen medical education in Alaska.	Medium
Implement a post-baccalaureate program to prepare college graduates and mid-career individuals for successful application to medical school.	Short

Provide excellent continuing medical education opportunities for family physicians throughout the state.	Medium
Develop a plan for Graduate Medical Education (GME) across the state that includes reducing barriers to financing GME.	Short
Explore community partnerships for GME programs, DO rotations, etc.	Medium
In conjunction with nurse practitioner and physician assistant programs, work to expand clinical practice opportunities for medical students and residents.	Short-Medium
Consider development of a medical school in Alaska.	Long
Infuse interdisciplinary teamwork, quality improvement and evidence-based practice concepts and applications in all health programs including medical.	Medium

Recruit

Work collaboratively to recruit primary care physicians to Alaska.	Short
Offer information and incentives to attract physicians to Alaska, particularly to areas of shortage.	Medium
Establish a robust loan repayment and employment incentives program that rewards physicians in family practice.	Long

Retain

Sustain and improve the practice environment in Alaskan communities.	Long
Assess and meet market wages and benefits for employed staff physicians.	Medium
Offer incentives for physicians and their families to remain in Alaskan communities.	Long

Advanced Nurse Practitioner (Family, Psychiatric/Mental Health)

Description:

Advanced nurse practitioners (ANPs) are Registered Nurses who have specialized formal, post-basic education and who function in highly autonomous and specialized roles working with all ages of patients.

Overview:

Nurse practitioner programs in the state have been in existence for many years. There is growing interest in these programs and class size in the UAA Family NP program has increased. Maintaining current enrollment and evolving the programs will require additional faculty. Recruitment, especially for other specialties, will continue to be required.

Workforce Data:

In 2009, there were an estimated 58 vacancies for Family Nurse Practitioners (17% vacancy rate) and 490 licensees, 9% increase from 2007. In that same survey, there were 2 vacancies (18% vacancy rate) reported for Psychiatric/Mental Health Nurse Practitioners.

Education and Training:

UAA Master of Science in Nursing Science, Family Nurse Practitioner track (15 graduates per year); Psychiatric/ Mental Health Nurse Practitioner Track (6 graduates every other year); these programs are offered primarily through distance delivery with some clnical intensives.

Strategies	Timescale
Engage	
Inform the public and prospective students about advanced practice nursing and the need for primary care providers in Alaska through media, role modeling, job shadows, and other means.	Short
Target nurses from minority and disadvantaged/underrepresented groups for encouragement and assistance in becoming advanced practice nurses.	Medium

Train

Hire more faculty for the UAA SON Advanced Nurse Practitioner programs.	Short
Identify additional practice sites for the education of advanced nurse practitioners in Alaska; consider innovative solutions such as offering a business tax credit to practices that agree to serve as a training site.	Short
Allow for evolution of advanced nursing practice education in Alaska toward national norms to ensure continued graduation and certification of Alaska ANPs, including the development of a Doctorate in Nursing Practice (DNP) program.	Medium
Provide continuing education in essential and advanced skills and knowledge for nurse practitioners across the state.	Medium
Update audio/video equipment to improve program delivery; add capacity for clinical simulation throughout the state.	Short

Recruit

Include advanced nurse practitioners in the professions eligible for loan repayment and other employment incentives.	Short
Examine the feasibility of subsidies for establishing advanced nursing practices in communities experiencing a primary care shortage; consider housing support.	Medium
Identify other strategies for external recruitment of ANPs through consortia of providers.	Medium

Retain

Sustain and improve the practice environment in Alaskan communities.	Medium
Ensure continuation of a robust scope of practice for advanced nurse practitioners in Alaska.	Short
Subsidize continuing education offerings by providing financial support for continuing education conferences to keep attendee costs affordable.	Medium

Substance Abuse/Behavioral Health Counselor

Description:

These positions counsel and advise individuals, families or groups with alcohol, tobacco, drug, or other co-occurring mental health and associated problems, such as domestic violence, criminal justice involvement, gambling, eating disorders, etc. Counselors may also provide life skills development and engage in education, harm reduction and prevention programs.

Overview:

There is an established process in Alaska for training and certifying these workers . As with other behavioral health fields, attracting and retaining individuals as substance abuse counselors is challenging.

Workforce Data:

There were an estimated 48 vacancies (15% vacancy rate) in 2009. An additional 110 positions are expected to be created in the ten-year period ending 2016. Currently, 8% of the workforce is non-resident; 39% is over 50 years of age.

Education and Training:

Alaska certifications and continuing education in the chemical dependency field; pertinent content included in behavioral health degree programs such as social work, psychology and human services. (Behavioral Health Technicians - 151 contact hours; Behavioral Health Counselor I - 304 contact hours; BH Counselor II - 6 years of work in chemical dependency or a bachelor's in human services or a minimum of 436 contact hours. An advanced BH Counselor II must have 6 years of full time work and experience supervised by a chemical dependency supervisor.)

Strategies	Timescale
Engage	
Develop awareness and educate the public about occupations and professions dedicated to decreasing the effects of alcohol, tobacco, substance use, eating disorders, and gambling in Alaska.	Short
Engage in a dialog with elders, local community leaders, businesses and civic organizations, as well as prospective students, about these roles.	Short
Train	
Inform practitioners at all levels about certification requirements and training opportunities such as Regional Alcohol and Drug Abuse Counselor Training (RADACT) and university programs.	Short
Encourage and assist substance abuse staff to receive required levels of training in the field.	Short
Ensure that Behavioral Health Technicians through Advanced Behavioral Health Counselors have access to the hours needed for training to keep their certification; provide financial assistance as necessary.	Short
Recruit	
Identify with community elders and leaders youth that show helping skills and abilities; ensure they have access to further their interest through formal education; support them as necessary to complete their training.	Medium
Work with all post secondary and vocational training programs to disseminate information to students who may be interested in an addiction treatment professional career.	Short
Partner with regional Native corporations to provide scholarships targeted to the addiction treatment field.	Medium
Create a Tech Prep pathway for high school students interested in this career area, allowing them to take one or more courses from the university as a way to build toward a career and future training.	Medium
Retain	
Create opportunities for certified Behavioral Health Technicians through Advanced Behavioral Health counselors to have daily access to not only a clinical supervisor but also to community leaders and advisors.	Short
Support the development and delivery of evidence-based continuing education critical to the professional development of counselors in the areas of substance abuse and related disorders, such as specific assessment tools, interventions and treatment modalities.	Short
Institute a loan repayment program for paraprofessionals in the addiction treatment field to enable them to seek postsecondary education that will allow them to assume leadership positions in their agencies.	Medium
Facilitate the development of a rural substance abuse and behavioral health counselor network to connect these individuals through video or live web-conferencing on a regular basis.	Medium
Ensure individuals just entering the behavioral health field have regular and consistent access to a clinical supervisor for support, using distance delivery as a prime method for education and/or transitioning into private practice.	Medium

Registered Nurse (RN)

Description:

RNs assess patient health problems and needs, develop and implement nursing care plans, and maintain medical records. They administer nursing care to ill, injured, convalescent, or disabled patients in many venues and may advise patients on health maintenance and disease prevention or provide case management. Licensing or registration is required in order to practice. DOLWD data include advance practice nurses in this category.

Overview:

Progress has been made on increasing the number of new graduate registered nurses in Alaska. Over time, the extension of the associate's degree program to many locations across the state, and improvement of the distance delivered RN-to-bachelor's degree, will allow for significant headway in most regions. Distribution remains a challenge—though less than in the past—and should improve further as new training sites are added. A continuing challenge is the process of orienting new graduates into their workplace roles and augmenting their skills in specialty areas. Considering the size of this workforce, it is anticipated that recruitment from outside the state will continue to be a factor, especially for nurse specialists.

Workforce Data:

There were 307 estimated vacancies (10% vacancy rate) in 2009 with only 63 vacancies for new graduates. By 2016 DOLWD estimates that the state will have 6,328 nursing positions, up from 4,817 in 2006. There were 6,334 licensees in 2009, a 9% increase from 2007; 16% of the current workforce is non-resident, 40% over age 50.

Education and Training:

AAS and BS nursing degrees at UAA SON (180-200 graduates per year); currently 12 locations in Alaska, 2 more to be added in 2011.

Strategies	Timescale
Engage	
Inform the public about nursing as a career, including K-12 awareness activities and working with AHEC Centers.	Short
Expand awareness of nursing opportunities to include specialty, rural and long-term care areas, as well as advanced practice.	Short
Educate the public about career lattice opportunities, including the ability to grow into the profession from a direct services background. Include information to those with other bachelor's degrees.	Short-Mediun
Broaden the field of nursing applicants, reaching out to students with degrees in other fields.	Short
Train	
Encourage relevant knowledge and skills development during K-12 education.	Short
Sustain and improve UA School of Nursing basic programs; solidify AAS program at the community level; strengthen and market advanced and specialty education, including the nurse educator distance-delivered master's program.	Short-Medium
Identify specialty priories; achieve statewide process for specialty training.	Medium
Continue development and support for accelerated specialty and rural generalist preceptorships and other post-employment continuing education opportunities; fund coordinating/development consortium; find funding for coordination/development consortium.	Medium
Engage all levels of nursing students in interdisciplinary teamwork and quality improvement/evidence-based practice education and clinical opportunities.	Short

Recruit	
Identify nursing specialists and nurse educators as beneficiaries of loan repayment and employment incentives programs.	Short
Use a coordinated approach to developing a strong pool of nursing candidates in the state.	Medium
Develop a comprehensive plan including financial incentives to attract nursing faculty to Alaska and engage local nurses in educational roles as preceptors and faculty members.	Medium
Retain	
Structure the workplace environment to maximize retention of incumbent nurses; consider factors such as shared governance, fair salary/benefits, highest attention to patient care quality and safety, reasonable and flexible workloads and schedules, etc.	Medium
Incentivize nursing staff to welcome and mentor new graduates and employees.	Short
Identify methods of attracting and retaining nurses later in their careers as productive members of the workforce.	Short
Encourage the delivery of continuing education that is financially feasible and readily available to nurses residing in rural settings.	Short

Community Health Aide/Practitioner (CHA/Ps)

Description:

A profession unique to Alaska, Community Health Aides and Practitioners provide preventive, primary and emergency care to rural Alaskans. CHA/Ps work under the supervision of licensed physicians employed by one of the tribally-managed hospitals or clinics and communicate regularly with these providers by telemedicine, telephone, email and other means.

Overview:

CHA/Ps are employed by the tribal system in Alaska. Certification is provided by the Community Health Aide Program Certification Board. Village councils typically participate in selection of individuals for CHA/P training.

Workforce Data:

In 2009, there were an estimated 43 vacancies (12.9% vacancy rate). Quarterly program surveys most recently revealed 103 vacancies out of 583 positions, for a 17.6% vacancy rate.

Education and Training:

Tribal Training Centers provide required session training, with field experience between sessions. UAF assists with advanced courses and provision of credits and degree progression for those interested in academic credentials.

Strategies	Timescale
Engage	
Include CHA/Ps in career awareness activities for K-12 and the public, especially in rural Alaska.	Short
Engage local elders and leaders in introducing children and adults to the role of health aides.	Short
Provide job shadowing and basic skills strengthening for those interested in these occupations; work with AHECs on this strategy.	Short
Train	
Continue to assess and seek support for provision of sufficient sessions to meet needs in the state.	Medium
Provide continuing education opportunities on a variety of pertinent topics.	Short
Provide smooth and subsidized access to university credits and relevant degrees, including a career ladder to the physician assistant program and other health professions.	Medium

Recruit	
Seek and encourage likely candidates for CHA/P positions to apply and proceed through levels of session training.	Short
Retain	
Provide respite for those working with little assistance in small villages.	Short
Ensure reasonable wages, benefits, and schedules.	Medium
Work to provide adequate supervision and support.	Medium
Consider housing stipends for community health aides and practitioners.	Short

Social Worker

Description:

Social workers provide services to improve client well-being and functioning. Particular focus is placed on assisting bulnerable populations and providing psycho-social supports to help clients cope with health/public health, behavioral health, abuse and neglect, education and basic need-related issues. Interventions may include individual, family and group therapy, crisis intervention, case management, advocacy, prevention and education.

Overview:

While the overall vacancy rate for social workers in the 2009 study was very low, there are critical pockets of vacancies, particularly in rural areas, that seriously affect critical functions. In some organizations, the inability to find social workers has resulted in positions being discontinued and filled by other types of workers. There may also be a need to provide additional resources to increase numbers of positions.

Workforce Data:

The 2009 vacancy rate was 3%, with 5 estimated vacancies. DOLWD data indicate a need for an additional 70 positions by 2016. Of the current workforce, 3% is non-resident, 33% is over age 50.

Education and Training:

Social work bachelor's degrees are delivered by UAA and UAF (distance), master's in social work at UAA (distance). Graduate about 58 per year (35 bachelors and 23 masters). Career pathway from rural human services certificate through associates in human services, bachelor's in social work, human services or psychology, master's in social work, now PhD in psychology.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and educate the public on the role of the clinical social worker.	Short
Train	
Continue to develop and maintain a smoothly articulated career pathway in social work.	Short
Recruit	
Include clinical social workers in loan repayment and employment incentives programs, especially for Alaskan students.	Medium
Retain	
Increase numbers of positions in social work to lessen workload burden and associated burn out, decision errors and other problems.	Medium
Provide continuing education for social workers.	Short-Medium
Provide respite to decrease burn out.	Medium
Improve salary/benefits for social workers, as well as supervision and support.	Medium

Oral Health Practitioner

Description:

Dental Hygienists – The role of the dental hygienist is to assist members of the dental profession in providing oral health to the public. A person licensed in this profession may clean and remove stains from teeth, apply topical preventive agents (i.e. fluoride and sealants), and examine oral areas, head and neck for signs of oral disease. They may educate patients on oral hygiene and take and develop x-rays.

Dental Health Aides and Therapists (DHA/Ts) are only employed by Alaska's tribal organizations. They provide oral health care to individuals in remote communities without regular access to dentists. DHAs provide dental disease prevention and education services. Depending on level of training, DHAs may also provide additional basic level dental services. DHA Therapists are advanced practitioners who provide prevention services and a limited scope of basic restorative dental procedures such as cavity removal, fillings and simple extractions. DHATs practice under the direct, indirect or general supervision of a dentist.

Overview:

Dental Hygienists - Program expansions have recently been implemented in the UA system. The University will assess the effect in next few years and consider if additional changes are necessary. Recruitment to rural areas needs considerable attention.

DHA/T – The several levels of DHAs function similarly to dental assistants and dental health educators in non-tribal organizations. In many other developed nations, there is a tradition of a DHAT mid-level role, similar to physician assistants and nurse practitioners.

Workforce Data:

Dental Hygienists: In 2009, there were an estimated 41 vacancies statewide (8% vacancy rate); 16 (4.6%) urban and 24 (15.8%) rural. According to DOLWD estimates, an additional 210 will be needed over the 10-year period ending 2016. There were 444 licensees in 2009, up 4% from 2007. The current workforce is 7.5% non-resident, 26% over age 50.

DHA/T s: The DHA/T roles have only recently been developed in Alaska and their potential employment opportunities are evolving. The 2009 vacancy study, which included all tribal organizations except one small one, found an estimated 48 positions statewide, with 2 vacancies, a 4.2% rate.

Education and Training:

Dental Hygienists - Dental hygiene programs exist in Anchorage and Fairbanks; combined 17-20 graduates per year.

DHA/T - Training sessions for DHAs are organized by tribal health organizations. DHATs are educated in Anchorage and Bethel, in a partnership between ANTHC and the University of Washington MEDEX program. Formerly DHATs were educated in New Zealand. DHA/Ts receive certification from the Community Health Aide Program Certification Board.

Strategies	Timescale
Engage	
Include oral health practitioner occupations (Dental Hygienists and Dental Health Aides/Therapists, as well as Dentists) in career awareness activities with K-12 students and the public.	Short
Work with high schools, especially in rural areas, to provide adequate science education supportive of careers in oral health.	Medium-
Inform public about new expanded functions role for dental hygienists.	Short
Train	
Evolve educational programs for DHA/Ts.	Medium
Develop crosswalk of training in hygiene and dental assisting with that for dental health aides; collaborate where feasible.	Medium
Ensure continued funding for the cost intensive DHA/T program.	Short
Provide training in expanded dental hygiene functions.	Medium
Explore ways to give college credit for DHA/T program work.	Medium

Continue dental hygiene programs in Anchorage and Fairbanks; expand when resources and space permit; offer a Bachelor of Science in Dental Hygiene (BSDH) degree to prepare dental hygienists for entry into ADHP programs.	Medium
Recruit	
Identify and encourage likely candidates for DHA/T positions.	Short
Educate tribal dental directors about employment of DHAs and encourage appropriate support of training.	Short
Include dental hygiene in loan repayment and employment incentives programs, especially for Alaskan students.	Short
Include dental hygiene in efforts to recruit collaboratively, especially to rural Alaska.	Short
Retain	
Provide adequate compensation for oral health practitioners.	Medium
Improve supervision of village-based DHAs, including training for the dental team.	Medium
Provide meaningful, appropriate continuing education for Dental Hygienists and DHA/Ts.	Short
Improve workplace conditions and compensation and exercise other retention strategies for oral health practitioners.	Medium

Psychiatrist

Description:

A psychiatrist is a physician who specializes in the prevention, diagnosis, and treatment of mental, emotional and addictive disorders.

Overview:

While the total number of vacancies was fairly low in the 2009 study, the population of psychiatrists in Alaska over age 50 is quite high. Considering the extent of behavioral health issues in the state, it is important to address this medical specialty.

Workforce Data:

The 2009 vacancy study estimated 11 vacancies (13% vacancy rate); 16% of current practitioners are non-resident, 57% over age 50.

Education and Training:

A psychiatry residency being worked on at this time with the University of Washington.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and the public.	Short
Train	
Develop psychiatric residency in Alaska.	Medium
Expand the third year WWAMI psychiatry clerkship for medical students.	Medium
Create and maintain a robust psychiatry resident elective until a psychiatry residency is operational; add matriculating psychiatrists to the workforce.	Medium
Recruit	
Cover psychiatrists in loan repayment and employment incentives programs.	Medium
Include psychiatrists in efforts to recruit collaboratively for physicians.	Short

Retain	
Develop and deliver continuing education opportunities for psychiatrists, particularly those in more rural areas of the state.	Shortt
Create supportive practice environments; assist in establishing practices and transitioning into the workforce.	Short

Human Service Worker

Description:

The primary purpose of the human service worker is to assist individuals and communities to function as effectively as possible in the major domains of living.

Overview:

Human service workers hold jobs with many titles. Examples include: Case Worker, Family Support Worker, Life Skills Instructor, Probation Officer, Group Home Worker, Mental Health Worker, Community Outreach Worker, Residential Manager, and Care Coordinator. Human service workers are found in diverse settings such as group homes, correctional facilities, community mental health centers, and a wide variety of other social service programs. In rural Alaska, employment opportunities include regional health corporations and federal, state and local governmental agencies.

Workforce Data:

In a large workforce of about 1,000, the number of vacancies among human service workers was 176 in 2009 (12% vacancy rate). Non-residents made up 11% of the workforce in 2006; 26% of workers were over age 50. DOLWD projects a need for about 250 additional workers in the period from 2006-2016.

Education and Training:

Some human service workers require only a high school education. The University of Alaska provides various levels of human service education, from certificate to graduate coursework. Several campuses provide education in human services, and it is possible to access programs in this field via in distance education.

Strategies	Timescale
Engage	
Include behavioral/mental health occupations in career awareness activities for K-12 students and the public.	Short
Target under-represented and other non-traditional students for human services occupations.	Short
Train	
Develop and maintain a smoothly articulated career pathways in human services across UA campuses.	Short
Seek improvements in educational programs, including complying with national standards and trends, meeting accreditation requirements, and providing access via distance education.	Short
Recruit	
Provide incentives for students to enroll in human services programs, including financial aid and scholarships for part-time, working students, workplace learning and distance education.	Medium
Retain	
Deliver continuing education for human service workers.	Short
Provide respite and sufficient staffing to decrease burn out.	Medium
Strengthen supervision through education and incentives.	Medium
Improve salary/benefits for human service workers.	Medium

Pharmacist

Description:

Pharmacists dispense drugs prescribed by physicians and other health practitioners and provide information to patients about medications and their use. Pharmacists may advise physicians and other health practitioners on the selection, dosage, interactions, and side effects of medications.

Overview:

The demand for pharmacists in Alaska has diminished somewhat in the past two years, probably helped by the recession and the recent increase in the number of pharmacy schools in the rest of the country. With anticipated retirements and potential expanded functions for pharmacists, it is expected that attention will need to be paid to ensuring that the number and distribution of this profession are adequate to meet state needs. Recruitment and retention will be important, as well as expanding viable options for educating pharmacists in state.

Workforce Data:

There were an estimated 37 vacancies (8.6% vacancy rate) in 2009 and 471 licensees, up 12% from 2007. Of the current workforce, 26% is non-resident and 34% over age 50.

Education and Training:

Currently there is no program in Alaska. Several options for pharmacy education recommended by a consultant are being discussed. An average of fewer than 10 Alaskans enroll in pharmacy schools in other states each year. The Creighton University distance delivered pharmacy program is available for those who want to stay in state for school.

Strategies	Timescale
Engage	
Inform the public about pharmacy as a career; include in K-12 career awareness activities.	Short
Target college majors in chemistry, biology and biochemistry for information about opportunities in pharmacy.	Short
Consider pharmacy technology program at the high school level.	Medium
Train	
Develop a strategy for pharmacy education for Alaska.	Short
Explore partnership options through an RFP process.	Medium
Develop a clear pre-pharmacy track at all three UA Major Administrative Units (MAUs).	Short
Work with Creighton University to set aside slots and provide tuition discount for Alaska students.	Short
Recruit	
Continue successful recruitment efforts; target new schools for information about Alaska.	Medium
Include pharmacists in loan repayment and employment incentives programs.	Short
Retain	
Creative attractive workplaces and exercise other retention strategies.	Long
Assure continuing education opportunities for pharmacists, especially in rural areas.	Medium

Therapists

Description:

A Physical Therapist assesses, treats, plans, organizes, and participates in developmental, restorative, and rehabilitative programs that improve mobility, relieve pain, increase strength, and decrease or prevent deformity of patients suffering from disease or injury.

An Occupational Therapist assesses, treats, plans, organizes, and participates in developmental, restorative and rehabilitative programs that help restore vocational, homemaking, and daily living skills, as well as general independence, to disabled persons.

A Speech-Language Pathologist assesses and treats persons with speech, language, cognition, voice, and fluency disorders to develop or regain the ability to communicate. The therapist may select alternative communication systems and teach their use and work with those with swallowing disorders to optimize nutritional intake and decrease risk of aspiration.

A Physical Therapist Assistant assists physical therapists in providing physical therapy treatments and procedures. The PT Assistant may, in accordance with State laws, assist in the development of treatment plans, carry out routine functions, document the progress of treatment, and modify specific treatments in accordance with patient status and within the scope of treatment plans established by a physical therapist.

An Occupational Therapist Assistant assists occupational therapists in providing occupational therapy treatments and procedures. The OT Assistant may, in accordance with State laws, assist in development of treatment plans, carry out routine functions, direct activity programs, and document the progress of treatments.

A Speech Therapy Assistant assists speech-language pathologists in carrying out services for individuals requiring these services.

Overview

Therapist professions in Alaska are in short supply, and pressures will continue to grow on this workforce as the population continues to rapidly age. Training for these professions tends to be expensive and complex to deliver. At present, programs in two critical therapy professions (OT and Speech-Language) are offered in Alaska through partnership arrangements and partners are being sought for physical therapy. There is some need to expand the use of occupational therapists across the state, as well as assistants in both PT and OT. That has not been the typical practice pattern to date but could serve the state well. Local development of the assistant occupations is being considered, but will require resources. There will be a continued need for recruitment into the state and for attention to distribution within Alaska.

Workforce Data:

The 2009 vacancy study estimates the following for the various therapies: PT: 45 (rate 16%), OT: 29 (rate 23%), Speech-Language Pathologists: 16 (rate 10%), PTA: 17 (rate 28%). The current workforce has considerable non-resident and older workers: OT: 17% out-of-state workers; 32% age 50+; PT: 22% out-of-state, 22% age 50+; Speech-Language: 18% out-of-state, 44% age 50+; PTA: 11% out-of-state, 19% age 50+.

Education and Training:

There is an OTD program at UAA with Creighton University, currently admitting up to ten per year in Anchorage. UA is exploring partnerships for an Alaska-offered DPT. The University is also looking into requirements for development of PTA and OTA programs. There is a speech-language master's program available in Alaska, a partnership with East Carolina University's distance program, with post-baccalaureate bridge courses offered by UAA. There is a speech pathology assistant distance option available through the UAA Center for Human Development.

Strategies	Timescale
Engage	
Elevate public awareness of therapies occupations and professions.	Medium
Provide information to K-12 students, including job shadows, role models, and mentors.	Short
Advise students on educational opportunities within and outside Alaska.	Medium
Raise awareness and acceptance of the use of mid-level PTAs and OTAs in the Alaska healthcare community.	Long

Train	
Maintain OT partnership with Creighton University and Speech-Language partnership with East Carolina University; develop PT partnership with an external institution.	Medium
Seek expanded/alternate approaches to therapies education in Alaska over time, where feasible and needed.	Long
Assist UA to move aggressively to develop programs for both PTA and OTA, with a goal of admitting a cohort of PTA students in the fall of 2011.	Short-Mediu
Consider potential for the speech therapy assistant program to be developed as an apprenticeship (may be registered or non-registered).	Short
Assist non-traditional students to enter professional programs; give credit for relevant past experience; provide mentors.	Medium
Recruit	
Address wage disparity for mid-levels (PTAs and OTAs).	Medium
Identify schools in the Lower 48 that would like to offer clinical rotations in Alaska facilities and develop relationships, after giving first preference to students in programs in Alaska.	Medium
Include PTs, OTs and Speech Pathologists in loan repayment/employment incentive programs and recruitment collaborations.	Medium
Consider industry provision of financial assistance in exchange for service.	Medium
Develop additional appropriate clinical rotations for therapy students.	Medium
Retain	
Assess retention factors for therapy professionals in Alaska; plan retention strategies.	Medium
Work on a re-entry strategy for those who have left the profession to raise children, etc.	Long
Provide affordable, high quality and pertinent continuing education in a format easily accessed by therapists, especially those in rural Alaska.	Medium

Nurse Educator

Description:

Nurse educators teach nursing students in basic and advanced nursing programs. They may also provide education to patients, families, communities and health care workers, in a variety of settings.

Overview

There is a national shortage of nurse educators and current faculty is older on average than the overall nursing workforce. Recruitment and retention require attention to salary/benefits issues. Accreditation standards are high for schools of nursing. Regular faculty are required to have earned master's or doctoral degrees. This is a challenging role, combining expertise in clinical skills and instruction. UAA established a master's track several years ago and interest is increasing. Sustaining and marketing this program is important to allow Alaska to grow its own nurse faculty and to also prepare nurse educators to work with patients and communities.

Workforce Data:

Currently there are 4 faculty vacancies in the UA SON AAS program (vacancy rate 16%) . The overall nursing faculty vacancy rate is 7.8%. One to two additional FTEs are needed for the MS program. The average age of current faculty is 54.9 years: 4% at 30-39, 17% at 40-49, 49% at 50-59, and 30% at 60-69 years.

Education and Training:

UAA has an online master's degree track for nursing education.

Strategies	Timescale
Engage	
Expand awareness of nursing opportunities in the education of students, patients, families, others.	Short
Engage local nurses in educational roles as preceptors and faculty members.	Short
Encourage health care providers to identify members of the workforce to serve as educators.	Short
Train	
Market nurse educator distance-delivered master's program at UAA.	Short
Provide scholarships and other incentives for nurses to achieve advanced education and to participate as educators of the next generation of nurses.	Medium
Encourage continued involvement of current nursing faculty as preceptors of graduate nurse educator students.	Short
Recruit	
Identify nursing specialists and nurse educators as beneficiaries of loan repayment and employment incentives programs.	Short
Develop a comprehensive plan and provide incentives to attract nursing faculty to Alaska.	Medium
Encourage and incentivize aspirations for advanced degrees in nursing, including master's and doctoral degrees.	Short
Assess salaries for nursing faculty and find ways to enhance salary/benefits to improve recruitment and retention.	Short
Retain	
Provide incentives to nursing staff to welcome and mentor student nurses, new graduates and employees.	Short
Ensure School of Nursing workplace is collegial and congenial place to work; provide resources, mentoring and support needed to become/be an effective faculty member.	Short
Identify methods of attracting and retaining nurses later in their careers as productive members of the nurse educator workforce.	Medium
Establish faculty compensation at levels found in the industry.	Medium

Health Informatics Staff

Description:

Modern definitions of Health Informatics encompass the two broad interrelated fields of Health Information Management (HIMS) and Clinical Informatics. Personnel operate at many levels to design, develop, implement, use and manage information technology in health care organizations. Related HIMS occupational titles include medical records technicians, medical coders, and medical and health services managers. In the evolving field of Clinical Informatics, occupational titles are not yet standardized but encompass the spectrum of information technology (IT) titles in a clinical setting: clinical informatics specialist, programmer, and analyst.

Overview

Health Informatics is a swiftly growing and evolving field in Alaska. A combination of education and on-the-job training is usually required for these occupations. IT professionals need an augmented health background, and health professionals require IT knowledge. Alaska is presently working to develop a Health Information Exchange to enable the electronic sharing of patient records between medical providers and all medical providers are working to implement or enhance electronic health record systems and interface them with point-of-care medical devices such as glucometers, ventilators, EKGs, etc.

Workforce Data:

There are many types of workers involved in health informatics, from administrative assistants and billing/coding staff to health care and IT professionals. The common denominator is that they function in support of health IT, inclu ing electronic medical records. The future growth in jobs in this broad and complex field is not yet accurately measured but it is expected to be dramatic due to the proliferation of hi-tech devices in direct patient care, and federal mandates t expand the meaningful use of electronic health records.

Education and Training:

The University of Alaska has several programs in billing, coding, health records and related topics. A work group is planning to add HIT components to these existing programs and to expand coursework in this area, especially at certificate and associate degree levels. Collaborations with other universities and colleges are being developed in this area, particularly to make graduate level education available to Alaskans. Charter College also offers health information technology programming.

Strategies	Timescale
Engage	
Include health informatics careers when providing career awareness to K-12 students.	Medium
Inform existing health care workers and administrative staff about health informatics.	Short
Advise current students in health programs and computer science/IT programs to study HIT.	Medium
Train	
Assess HIT training needs with industry.	Short
Develop a comprehensive plan for HIT education needed by the Alaska health care industry.	Short
Participate in consortia to develop curricula and share HIT courses at all levels.	Short
Provide HIT-related coursework in-state for health and IT staff pertinent to individual knowledge gaps.	Medium
Recruit	
Encourage interested employees to gain additional education and skills in the area of HIT.	Medium
Retain	
Provide sufficient support and continuing education to health care staff to allow them to be comfortable as health informatics evolves and becomes more prevalent in the workplace.	Medium

Direct Care Worker

Description:

Direct care workers are the backbone of the health care delivery system, providing routine, personal healthcare and assistance with daily living in a variety of settings. Common titles for these workers are Personal Care Assistant or Attendant, Home Health Aide, Nurse Aide or Certified Nurse Assistant (CNA), Disabilities Services Worker, Direct Support Professional, Direct Service Worker.

Overview

CNAs fall under the Board of Nursing in Alaska which ensures that educational standards are met by programs and that the CNA scope of practice is defined and enforced. In January 2010 a proposal was put forth by a collaborative Credentialing and Quality Standards group outlining core competencies for direct care workers in health and human services. These competencies are intended to be used to further educate and strengthen the direct care workforce in the state.

Workforce Data:

The direct care workforce in Alaska is quite large. In 2006, DOLWD identified 2,337 Personal and Home Care Aides, 1,859 Home Health Aides and 1,940 Nurses Aides, Orderlies and Attendants, for a total in these three occupations of 6,136 workers. 2009 vacancy data for Personal Care Attendants showed 33 positions (6%, vacancy rate) with 8% non-residents and 31% over 50 years of age. DOLWD projects a need for an additional 1,210 PCAs in the 2006-2016 timeframe. There were 12 vacancies for home health aides identified in 2009, a 16% vacancy rate. DOLWD projects needing an additional 830 HHAs by 2016. Certified Nurse Aides showed 116 vacancies, an 8% rate. DOLWD projects a need for 850 more nurse aides, orderlies and attendants by 2116. While only 6% of the current nurse aide workforce is non-residents, 21% is over 50 years of age. There is a high turnover in these entry-level occupations.

Education and Training:

There are a number of training providers for CNAs across the state, including university campuses, AVTEC and several hospitals (some in partnership with campuses and/or high schools). PCAs are required to have minimal training and, if hired directly by a consumer rather than an agency , there is very little required training or oversight. In part because home health aides do not have special certification in Alaska at this time, there is no specific training program for HHAs in the state.

Strategies	Timescale
Engage	
Encourage awareness of these entry-level careers, including providing programs at the high school level.	Short
Ensure potential and current workers understand this can be an entry point into a career ladder.	Short
Train	
Work with the Board of Nursing to remove barriers that impede the provision of CNA training programs in a large number of communities and in various training sites.	Short
Continue to work on common core curricula for PCA and CNA education, as well as advanced practice specialties with the Board of Nursing and others.	Short
Strengthen, support and expand the long-term care and direct/disabilities support apprenticeship programs, working with federal and state DOLWD staff.	Short
Continue work on standardization of occupational core competencies and strategies for implementation.	Medium
Recruit	
Increase efforts to attract underrepresented individuals to participate in the direct care workforce.	Short
Develop and support recruitment strategies that focus on the non-traditional and under-represented worker, i.e. retirees, family & friends, Alaskan Natives, etc.	Short
Retain	
Work on improving wages and benefits for direct care workers through a focus on credentialing.	Long
Provide continuing education to allow direct care workers to add to their competencies and advance in their field.	Medium
Increase skills of supervisors and ensure delivery of supervision of Direct Care Workers; integrate instruction on the supervision and support of direct care workers into the educational preparation for registered nurses or related occupations.	Medium
Seek opportunities to facilitate participation of direct care workers in educational programs and the annual conference to advance their credentials; augment career ladders.	Short

Alaska Children's Alliance Update on CACs 2011

- **Pam Karalunas**

Chapter Coordinator, Alaska Children's Alliance

- **Cory Bryant**

Program Manager, CARES, Anchorage

- **Elena Aluskak**

Program Manager, TWC The Children's Center, Bethel

Alaska Children's Alliance

The mission of the Alaska Children's Alliance is to promote a culturally appropriate multidisciplinary response to child maltreatment throughout Alaska

ACA - State Chapter of National Children's Alliance which:

- Sets minimum standards for CACs
- Sets minimum standards for State Chapters
- Provides
  - Limited funding for Chapters
  - Support, Training and Technical Assistance
  - National recognition
  - Accreditation

Alaska Children's Alliance provides:

- **Technical assistance & support to existing and developing:**
  - **Children's Advocacy Centers**
  - **Multidisciplinary Teams**
  - **Child Protection Teams**
- **State representation at the regional and national levels**
- **Limited funding through national grants**

Alaska Children's Alliance provides:

- **Statewide Projects to enhance services**
  - **TeleCam Medical Peer Review & Consultation – based at CARES**
  - **Biennial Alaska Child Maltreatment Conference**
  - **Forensic Photography Equipment & Medical Training for each CAC**
- **Coordination of statewide efforts**
  - **Data Collection in collaboration w/CJA & SCAN (Suspected Child Abuse & Neglect)**
  - **Statewide protocols to ensure high & consistent level of service**

Alaska Children's Alliance provides:

- **Development of Alaska specific projects**
  - Pilot Project: *Honoring, Protecting & Nurturing Our Children* Community Outreach Project
  - Specialized training for natural support people in villages served by CACs (in development in collaboration with Western Region CAC)
  - Training for Tribal entities on use of Child Advocacy Centers in their Regions (in development)
  - Training on development of satellite CACs (in development in collaboration with Western Region CAC)

Alaskan Child Advocacy Centers

- Anchorage – Alaska C.A.R.E.S.
- Bethel – TWC The Children's Center
- Copper River Basin – Copper River Basin CAC
- Dillingham – Nitaput Child Advocacy Center
- Fairbanks – RCPC Stevie's Place
- Kenai Peninsula – Kenai Peninsula CAC
- Juneau – S.A.F.E. CAC
- Kodiak–Kodiak Area Native Assoc. CAC – *Developing*
- Mat-Su – The Children's Place
- Nome – Kawerak CAC

Anchorage:

Est. 1996
served 8,854 children through FY10

- A program of the Children's Hospital at Providence
- Co-located with state & local law enforcement, OCS
- Part time mental health services on-site
- Alaska Native Unit on-site
- Serves children 0-18
- Re-accredited by National Children's Alliance
- Serves 27 communities

Bethel:

Est. 2001
served 1,063 children through FY10

- A program of the Tundra Women's Coalition
- Yupik name: "Irniamta Ikayurviat"
- Recently moved to a new building funded by the State of Alaska, the Rasmuson Foundation & the Paul G. Allen Family Foundation
- Serves children 0-18
- Serves 35 communities

Copper River Basin

Est. 2009
served children 29 through FY10

- Independent non-profit
- Housed in a recently closed rural school
- Co-located with OCS
- Serves children 0-18
- Serves 17 communities
- Have Polycom capabilities for mental health services

Dillingham:

- A program of Bristol Bay Area Health Corporation
- "Nitaput" – *We hear them*
- *Serves children 0-18*
- *Serves 32 communities*

Est. 2003
served 222 children through FY10

Fairbanks:

Est. 2003
served 1,105 children through FY10

- A program of Resource Center for Parents & Children
- Co-located with the ABI Crimes Against Children Unit
- Serves children 0-18
- Serves 83 communities
- Community Care contract with Fairbanks Memorial Hospital to provide services on-site at Stevie's Place
- Community presentations done by MDT

Juneau:

Est. 2001
served 1,047 children through FY10

- A program of Catholic Community Services
- S.A.F.E. – Southeast Alaska Family Evaluation
- Accredited by National Children's Alliance
- Serves children 0-18
- Serves 19 communities

Kenai Peninsula:

Est. 2008
served 210 children through FY10

- A program of South Peninsula Haven House, Homer
- Satellite CAC in Kenai is co-located with the Sexual Assault Response Team in the Health Center
- Satellite CAC developing in Seward
- Serves 30 communities with 3 locations

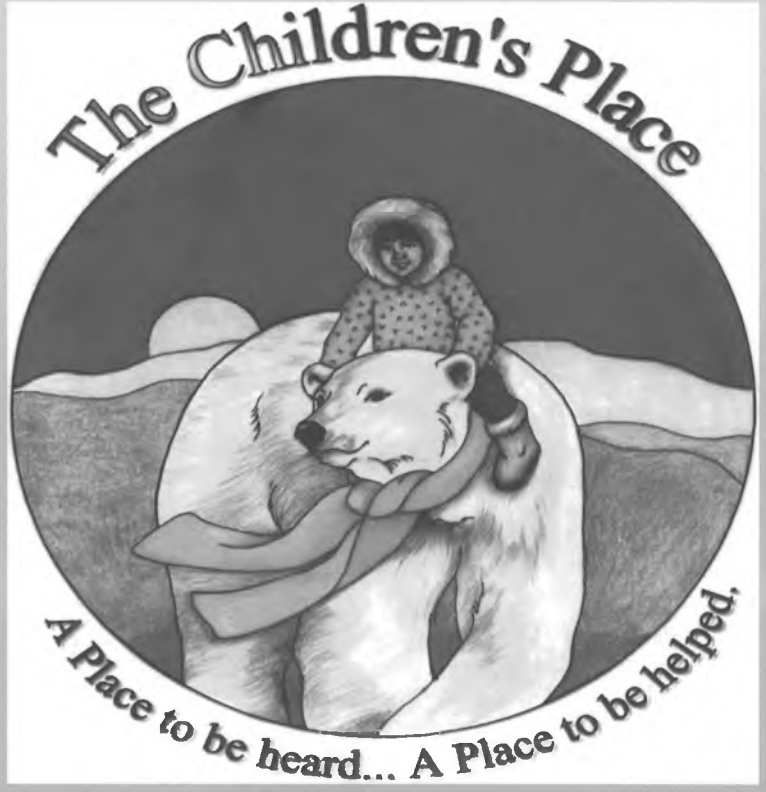
Kodiak:

Developing – to open early summer 2011

$250 000
Start up money

- A program of Kodiak Area Native Association
- Working closely with ACA, OCS, community partners
- Governor's budget includes funding for development
- Currently drafting MDT policy and protocol to begin services

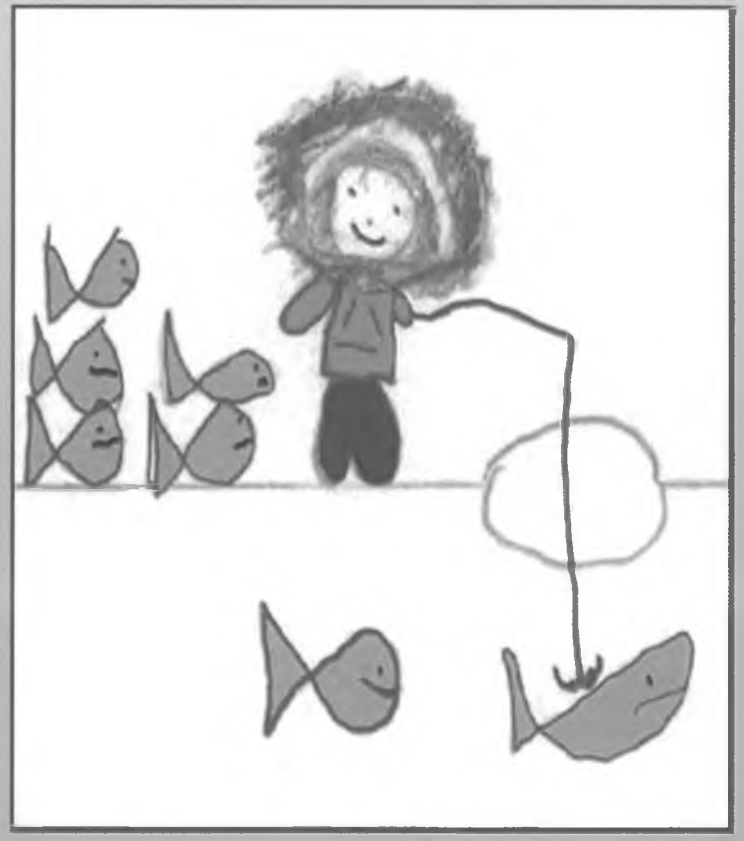
Mat-Su:



Est. 1999
served 1,678 children through FY10

- Independent non-profit
- Recently expanded building to co-locate Alaska State Troopers ABI Child Abuse Investigation Unit
- Serves children 0-18
- Re-accredited by National Children's Alliance
- Serves 11 communities

Nome:



Est. 2002
served 219 children through FY10

- A program of Kawerak Native Association
- "annaktuq" – *is sheltered, is safe*
- Serves children 0-18
- 3 CAC Educators fly to villages in the Region to provide education on child sexual abuse and support services to victims
- Serves 17 communities

Child Advocacy Centers provide:

- **A child and family friendly environment for coordination of investigative process in child abuse cases, specifically child sexual abuse**

"nice people, cozy, homey, - I felt safe here"

Child Advocacy Centers provide:

- **Specialized Forensic Interview**

"They said I'm not in trouble and I did do the right thing on telling someone what my uncle was doing."

Child Advocacy Centers provide:

Multidisciplinary response/investigation reduces duplicative interviews

MDT "Watching Room"

The best part was:

~"Telling what my dad did to us."

~"Talking to people I trust and that care for me."

Child Advocacy Centers provide:

- **Specialized, Non-traumatic Medical Exam**

"My favorite part (of being at the CAC) was finding out my body is OK"

Child Advocacy Centers provide:

- **On-going support and follow up for family throughout the system process and beyond**

"Everything was well explained-you guys are doing a great job. Thank you."

"I am happy there is such a place as the CAC, for me as a child I did not have anyone or anywhere to go for my experience."

Child Advocacy Centers provide:

- **Culturally competent services**

"I am so thankful for this place, where my grandchild is safe to talk to familiar people in a familiar language."

"Thank you so much for your help in the start of our long battle."

Child Advocacy Centers provide:

"(The CAC) added to our healing. They didn't add to our hurt."

- **Collaboration with mental health services for earlier response to referrals**
- **Identification of risks and assessment of needs of child and family and referrals to address those issues**

Child Advocacy Centers provide:

- **Case review:**
  - **to ensure the well-being of the children and family**
  - **to monitor and assess the effectiveness of the MDT**

once a month

Child Advocacy Centers provide:

- **Case Tracking**
  - **CACs in Alaska use a uniform data collection system, NCATrak**
  - **Provides essential demographics, case information & investigation outcomes**
  - **Useful for program evaluation**

"All the caring personalities was very comforting. Everyone kept us apprised of what was happening and were giving us very helpful information. It was nice to be treated so respectfully and I think everyone here helped my daughter find a little peace in this terrible situation."

Child Advocacy Centers provide:

Community Awareness, Education, Outreach:

- ♥presentations
- ♥Classes
- ♥Radio shows, interviews, etc

Did you know?

- **History of child sexual abuse is linked with increased risk for:**
  - alcoholism and alcohol abuse
  - suicide attempts
  - intimate partner violence
  - chronic obstructive pulmonary disease
  - depression
  - fetal death
  - illicit drug use
  - ischemic heart disease
  - liver disease
  - multiple sexual partners
  - sexually transmitted diseases
  - smoking
  - unintended pregnancies

Cost of Child Abuse & Neglect In Alaska:

- estimates the annual cost of child abuse in Alaska to be **$500,503,200** (06 incidents, 07 costs)
  - Medical Care $ 2,540,500
  - Mental Health 55,724,600
  - Property Damage 50,000
  - Public Programs 27,131,900
  - Future Earnings 23,666,000
  - Quality of Life 391,390,200

Children's Safety Network, National Injury & Violence Prevention Center, 2007

Why the CAC Model? Cost

- NCAC Cost-Benefit Analysis
  - Per Case – traditional investigations were 36% more expensive than CAC investigation. Average cost: $2,902 compared to $ 3,949, more than $1,000 savings per case.

Why the CAC Model? Prosecution Timelines

How long to prosecute child sexual abuse for a community using a CAC and two comparison communities? Walsh, W.A., Lippert, T., Cross, T.E., Maurice, D.M., & Davison, K.S. (2008) *Child Maltreatment*, 13(1), 3-13

- Charging decision in child sexual abuse cases:

  Cases seen at the CAC had a significantly faster charging decision

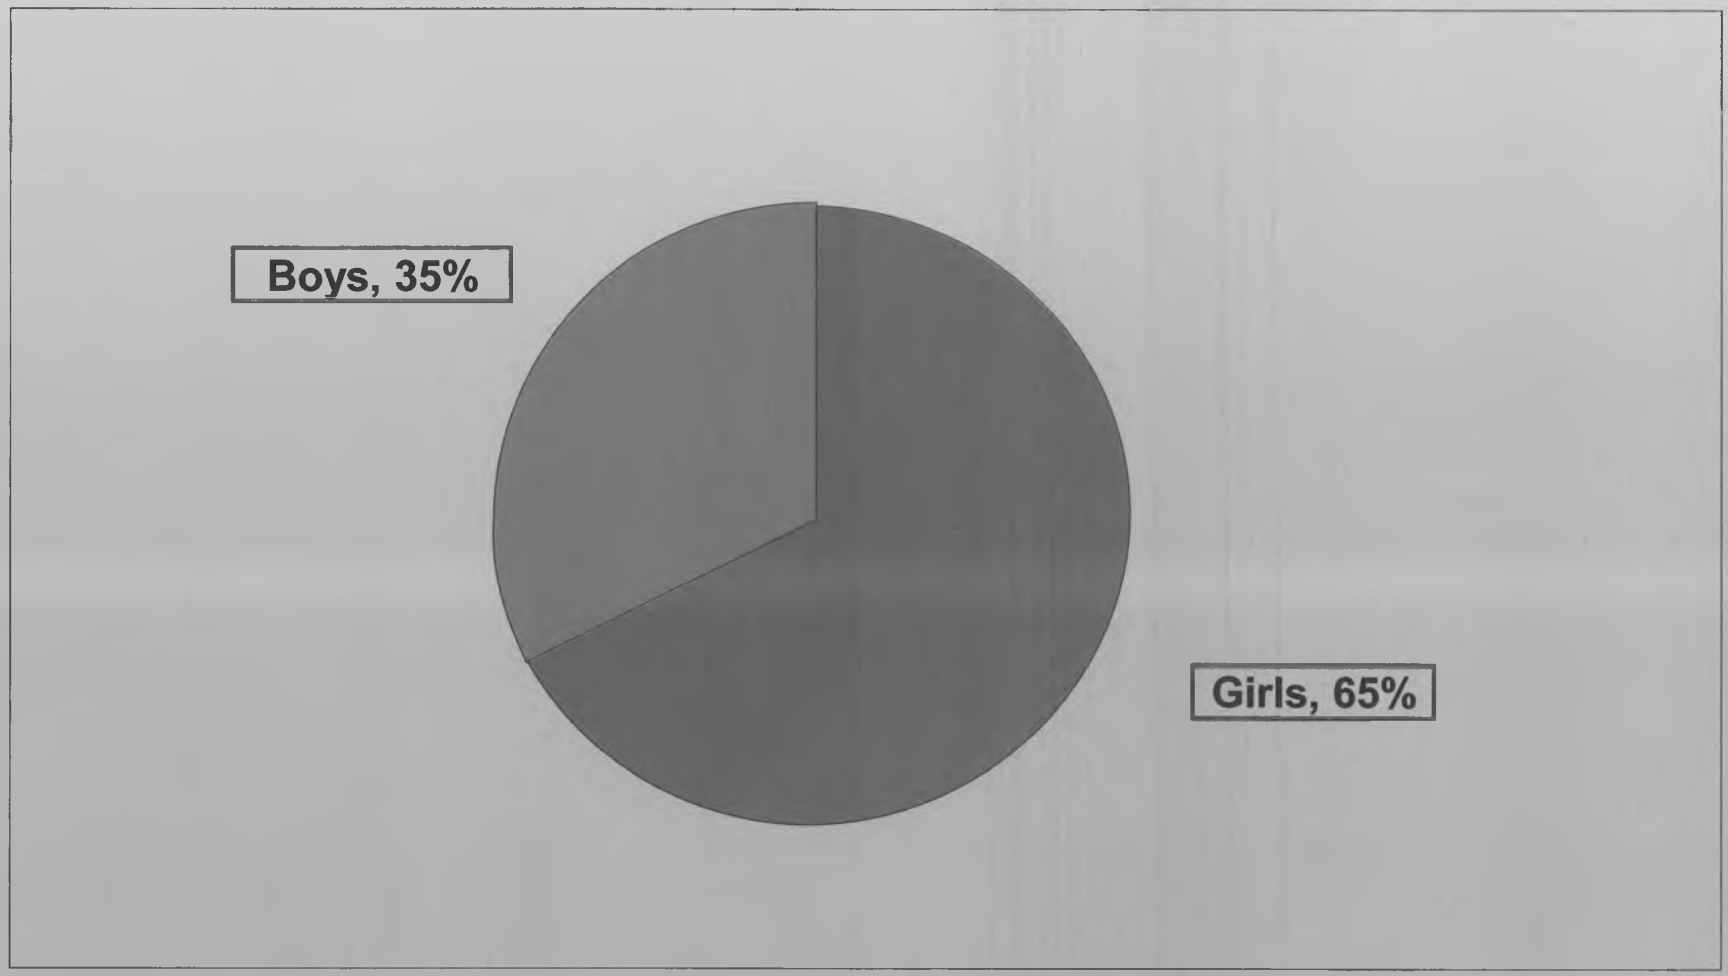
- Case Resolution Time
  - CAC 20% were resolved within 180 days
  - Comparison 30% took more than two years after indictment or were still pending

Why the CAC Model?

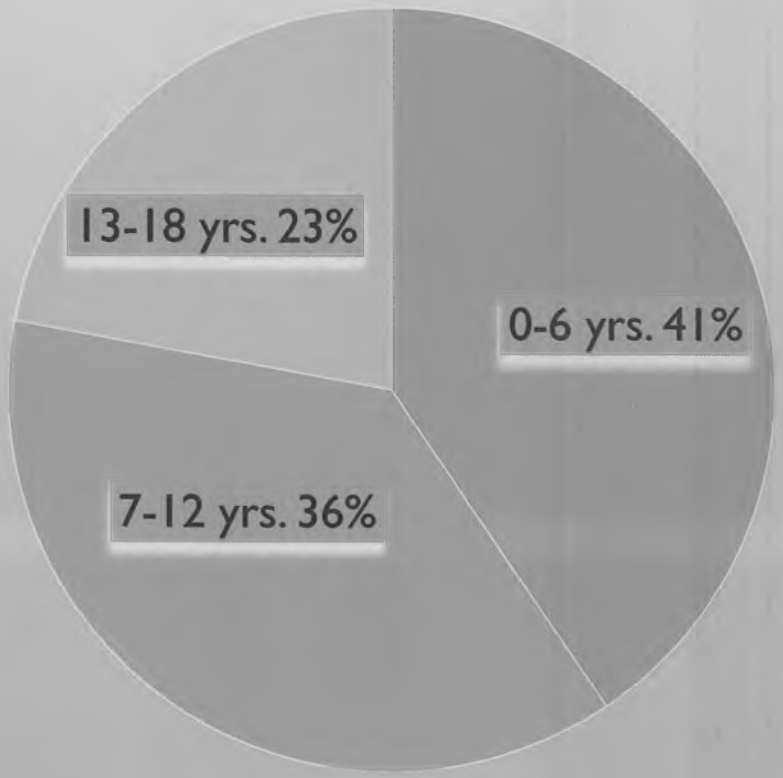
OUR CHILDREN DESERVE NOTHING LESS!

Research suggests that one in four girls and one in seven boys will be the victim of some type of sexual abuse/assault before age 18

Gender of children seen at Alaska CACs in FY10



Ages of children seen at Alaska CACs in FY10



Numbers of children served

Location of CAC & year opened	# of comm-unities	FY 05	FY06	FY 07	FY08	FY 09	FY10	Total seen since open
Anchorage 96	27	601	756	740	921	823	837	8,854
Bethel 01	35	131	161	137	184	121	128	1,063
Copper River Basin 09	17					12	17	29
Dillingham 03	32	15	28	40	45	28	40	222
Fairbanks 03	83	126	163	140	142	213	225	1,105
Juneau 01	19	102	89	100	90	87	99	1,047
Kenai Peninsula 08	30				37	47	126	210
Mat-Su 99	11	142	98	152	145	167	199	1,678
Nome 02	17	16	37	24	23	29	23	219
TOTALS	271	1,133	1,332	1,333	1,587	1,527	1,694	14,427

THANK YOU!

- While none of our CACs rely 100% on state funding for their existence (16% to 85%), that funding is essential for sustainability and to leverage other funding.
- Need is increasing, as the number of CACs and children and families served increases.

Current needs:

- Nome – Nurse examiner - there has not been a SART coordinator for almost a year now, so the child exams at the CAC are hit and miss. A nurse on staff would allow for consistent service delivery.
- Copper River Basin – an additional FTE position would expand the capacity of the Center to provide full community outreach, a continuum of community based therapeutic support services to child victims and their non-offending family members, structured community education, and full mobility/access of Center services

Current needs:

- Anchorage – partial funding for a part time medical director who also provides services across the state and funding for a FTE mental health provider for children and families with no insurance or who have Medicaid and are on a 3 month wait list for these services.
- Fairbanks - .5FTE, increase in contract medical services and supplies to meet increased need
- Kenai Peninsula CACs – support for the satellite CAC in Seward

THANK YOU FOR HELPING US MAKE ALASKA A SAFER PLACE FOR CHILDREN!

Children's Safety Network

Definitions:

Medical Care includes payments for hospital and physician care, as well as emergency medical transport, rehabilitation, prescriptions, allied health services, medical devices, and insurance claims processing. For fatalities, also include coroner and premature burial costs.

Mental Health Care includes payments for services by psychiatrists, psychologists, social workers, and pastoral counselors. Also includes insurance claims processing.

Future Earnings includes wages, fringe benefits, schoolwork, and housework lost by the injured. This estimate excludes earnings lost by family and friends caring for the injured.

Public Programs include police, fire, paramedic, ambulance, and helicopter transport costs. Social services and victim assistance costs are also included in this category. It excludes mental health services costs.

Property Damage and Loss is the value of property damage and of property taken and not recovered.

Quality of Life places a dollar value on pain, suffering and lost quality of life to the victim and their family. The value is computed from jury awards for pain, suffering, and lost quality of life due to physical injuries and fear. For murders, this value is computed from the amount people routinely spend (in dollars or time) to reduce their risk of death.

Source:

Children's Safety Network-Economics and Data Analysis Resource Center, at the Pacific Institute for Research and Evaluation, Calverton, MD, 2009. The costs were adapted to Alaska using a state-specific price adjusters. All costs were calculated using incidents reported in the Child Maltreatment 2006, National Center on Child Abuse and Neglect Data Set. Date: Friday, March 11, 2011, 10:15 AM

To All Concerned,

I would like to thank-you for the honor and opportunity to serve on the Board of Nursing. However, due to family and financial hardships that serving on the Board will create for me, I feel that it is best for me to resign my appointment effective immediately, Friday March 11, 2011.

I hope that you will appreciate that this has been a difficult decision. I do feel that I would bring a value to the Board and hope that perhaps the future will bring this opportunity around again. My first responsibility is to my family. I feel that it would be a dis-service to all involved for me to try to continue to serve and that its best to resign now, rather than later.

I will return all the materials given to me at orientation last week.

Respectfully,
J Robin Allen LPN.

She Resigned

Warren, Robert
Board of Dental Examiners

Curriculum Vitae

Robert E. Warren, DDS

Private Business: 1976-Present

Robert E. Warren, DDS, a professional corporation
Dba Denali Dental Care

1. Education/Training

University of the Pacific, School of Dentistry	DDS	1969-1973
Womack Army Hospital, Fort Bragg (General Dental Residency)		1973-1974
Fort Richardson Dental Clinic (Post endodontist)		1974-1975
Fort Richardson Dental Clinic (Prosthodontic Mentorship)		1975-1976

2. Relevant Dental Board Experience/Appointments

Alaska Board of Dental Examiners 1984
Appointed: Governor Sheffield

The Board restructured the clinical examination, insuring candidate anonymity and testing on procedures more relevant to current private clinical practice. The Board developed new regulations and procedures to process applications for licensure by credential. Warren appointed liaison between the State of Alaska and the American Association of Dental Examiners. In 1986-1988, Warren elected President by the Board. In 1987, Alaska invited to attend a Western Regional Examining Board exam and Board of Directors meeting at Loma Linda University. Warren attended the meeting and returned to convince the Alaska Board that joining a regional board would be in our best interest of the State. It would remove the burden of administering a clinical exam and put that function the hands of a professional third party that does nothing else but examine licensing candidates. With support from the State Legislature, Alaska became WREB's sixth member state in the spring of 1987. Warren was appointed to serve on the WREB Board of Directors.

Alaska Board of Dental Examiners (reappointment) 1988
Appointed: Governor Cowper

From 1988-1992, Warren served a second term on the Board of Dental Examiners. Our Board members participated in giving multiple clinical examinations each year to dental and dental hygiene candidates for initial licensure. The exams were given at dental schools in Los Angeles, San Francisco, Portland, Seattle, and Omaha,

giving a much larger candidate pool an opportunity to take and pass the exam and become eligible for licensure in Alaska. With WREB now handling the clinical examination process, the Board was more able to focus its meeting time on its regulatory and disciplinary functions. The Board also continued its work to clarify its policies and regulations on licensure by credentials.

President of Western Regional Examining Board (WREB) 1989-1990

WREB expanded its membership to ten states: Oregon, Washington, Texas and Oklahoma became new members. These states joined Utah, Idaho, Montana, Arizona, New Mexico, and Alaska.

American Dental Association-Council on Dental Education and Commission on Dental Accreditation 1990-1994

Appointed: Am Association of Dental Examiners

The Commission accredits all U.S. dental schools, all dental hygiene programs, all dental graduate programs, and all dental assistant and dental laboratory technician training programs. The Commission writes the education curriculum standards for each discipline and conducts periodic institution site visits to award initial and continued accreditation. Recognized by the U.S. Department of Education as the official and only accrediting body. Warren chaired Committee C (dental hygiene). In second year, Warren chaired Committee D (dental laboratory technology). During his third and forth year on the Commission, Warren served and chaired Committee A (dental school accreditation). Education and curriculum standards for each discipline were revised and rewritten. The commission also processed four applications of recognition for new specialty areas in dentistry.

Vice-Chairman-ADA Commission on Dental Accreditation 1991-1992

Third Vice-President-Am. Association of Dental Examiners 1993-1994

Alaska is required by statute to be a member of the AADE. All fifty States and U.S. possessions are members. Acts as a forum for regional and individual state boards to exchange ideas and procedures. Have two national meetings per year where formal programs are presented on a variety of current issues and topics.

Second Vice-President-Am. Association of Dental Examiners 1994-1995
First Vice-President-Am. Association of Dental Examiners 1995-1996
President-Elect-Am. Association of Dental Examiners 1996-1997
President of American Association of Dental Examiners 1997-1998

ADA national conferences on Dental Licensure 1998-1999

Appointed: by AADE

Met three times and developed the "Agenda For Change" in Chicago. The "Agenda" concentrated on standardizing the entry-level examination process for dentists on a national level. Developing calibration and examination guidelines for all regional and state testing agencies. Laying the ground work for recognition of multiple regional board examinations by licensing agencies.

Grading Examiner for WREB at various dental schools 1999-2010

3. Presentations/Papers

Lecturer and presenter at Western Conference of Dental Examiners
And Dental School Deans-Denali National Park 1993

Barton, Mike
Alaska Mental Health Trust Authority Board of Trustees

Mike Barton

Relevant Experience

Executive- The Rise Group (08/07- present)
Responsible for developing and maintaining relationships with public and private entities that utilize construction management services. Primary focus is the Alaska Natural Gas Pipeline as well as Federal construction activities. Position became half-time in 2009 because of the national economic situation.

Commissioner of Transportation and Public Facilities - State of Alaska (7/94-12/94; 12/02-12/06)
Provide executive leadership and direction for 3500 employees located throughout Alaska with a $450 million annual operating budget and a capital construction program of a billion dollars per year. Responsible for determining and accomplishing objectives including budgeting and allocation of resources. Activities included construction and/or maintenance of over 6000 miles of state roads; operation of the eleven ships of the Alaska Marine Highway serving 33 ports of call and 3300 miles of routes; operation of Anchorage and Fairbanks International Airports; operation of 259 other airports throughout Alaska; maintenance of over 600 public buildings throughout Alaska. Served on the Boards of the Alaska Railroad, the Alaska Industrial Development and Export Authority, and the Alaska Energy Authority. Extensive dealings with members of the state legislature and staff, members of Congress and staff, federal agency officials, local officials, other state agencies, the public, special interest groups, and the media. Experience in legal matters including litigation and labor relations.

Chairman of the Board- Juneau International Airport (8/95-12/02)
Served as the first Board chairman. Worked with the City Assembly, other Board members, staff, tenants and airport users to coordinate the development of policies for the operation of the airport. Provided direction for the airport manager to ensure policies of the City Assembly and the Board were implemented and that the airport was operated in a safe, secure and cost-effective manner. Extensive dealings with airport tenants including airline representatives, local officials, FAA and the Transportation Security Administration. Non-paid position.

Regional Forester - US Forest Service (8/84-4/94)
Served as one of the nine Regional Foresters in the Forest Service. Provided executive leadership for 1000 employee organization with annual budgets ranging from $70-120 million. Established and accomplished objectives that contributed to hundreds of private sector jobs. Included was the production of commodity outputs from the national forests in Alaska such as timber, fish, subsistence wildlife, and minerals as well as non-commodity outputs such as wilderness, recreation use, and aesthetics. Responsible for all support activities to accomplish objectives including budgeting and allocation of resources, procurement, road construction, wildfire prevention and suppression, aircraft and boat operations, computer operations, labor relations, equal employment opportunity and affirmative action programs, employee safety programs, law enforcement, and other administrative activities. Represented Secretary of Agriculture on the five member federal Subsistence Board. Served as Dept. of Agriculture trustee on the six member Exxon Valdez Oil Spill Trustee Council which oversees the expenditure of the billion dollar Exxon settlement for the restoration of the spill impacted area. Extensive dealings, including Congressional testimony, with national and state legislators and staff, other federal, state, and local officials, the public, special interest groups, the media, users and permittees of the National Forests, and private landowners. Experience in legal matters including litigation. Served as lead negotiator with agency sign-off authority in the negotiation of national union contract for the Forest Service with 20,000 member employee union.

SUMMARY OF QUALIFICATIONS

Health Information Technology Specialist trained in health information functions such as content and format of records, retention and storage requirements, indexes and registries, and forms design. Special interest in quality systems as they apply to information technologies for data search and access. Familiar with laws and regulations addressing release of information and retention of records, as well as the legal and regulatory issues surrounding confidentiality of information. Detail-oriented with technical expertise yielding streamline operations to benefit patient care and regulatory compliance.

HIT SKILL AREAS

Policy & Regulations	• HIPPA	• CPT	• ICD9
Medical Office	• Patient Accounts	• LYTEC	• EHRs

EDUCATION

A.A.S.	**Health Information Technology**	DeVry University	June, 2008
A.A.S.	**Logistics**	Community College of the Air Force	August, 2001
A.A.S.	**Electronic Systems**	Community College of the Air Force	June, 1997

EXPERIENCE

HEALTH INFORMATION TECH (TRAINING AND EXPERIENCE)

- June 2008-February 2010 Medical Records Manager, Valley Neuroscience Center, Jeffrey Sponsler, MD.
- Primary duties: Proofreading reports, coordinating diagnostic testing, referrals to other specialties, and ensuring patient records were received from third parties as requested. Ensuring patients complete pre-diagnostic requirements for new patient visits. Tracking referrals and reports.
- Managed electronic records for over 2,800 patients, maintained continuity & consistency
- Streamlined referring physician program resulted in 25% reduction of pending referrals & overdue reports.
- Chosen by practicum director to compare EHRs to data in LYTEC for monitoring patients on seizure medications. Captured data on 132 patients' last appointments, diagnoses, and lab results.
- Developed an Excel sheet to capture a list of 375 potential Video Electroencephalogram candidates out of 2089 patients using epilepsy diagnostic codes.
- Coordinated contact with 900 doctors statewide in the clinic's first major marketing campaign.

UNITED STATES AIRFORCE — APRIL 1998 – APRIL 2006

• **Superintendent, Contingency Plans**	Minot AFB, ND	2004-2006
• **Chief, Logistics Plans**	Elmendorf AFB, AK	2002-2004
• **Superintendent, 3rd Wing Support Agreements**	Elmendorf AFB, AK	2000-2002
• **Unit Deployment Manager**	Elmendorf AFB, AK	1998-2000

LEADERSHIP/MANAGEMENT

- Innovative support agreement manager, developed a template that slashed reviews by 30 days and converted program from paper to electronic.
- Analyzed monthly deployment taskings and developed a program matching personnel exactly to positions reducing the error rate 80% in 120 days.
- Led, directed, and supervised one Non-Commissioned Officer and two airmen supporting Minot AFB installation logistics planning efforts. Orchestrated installation support and deployment of 3,712 personnel and 2,269 tons of cargo.
- Supervised the development and completion of the Base Support Plans for the Pacific Air Command and NORAD contingency taskings for two main bases, one air station, two forward operating locations, and 18 remote radar sites.

4301 South Well Site Road ♦Wasilla, Alaska 99654
(907) 376-5455♦ loggiemonster@hotmail.com

Julie A. Gillette

- Led two individuals in the management of a $5 million support agreements program consisting of 87 interservice and intraservice support agreements, memorandums of agreement, and memorandums of understanding. Won Logistic Planner of the Year.
- Trained 117 unit deployment managers to meet demands of two major regional conflicts and rotations of ten Air Expeditionary Teams.

COMMUNICATION

- Created user friendly data sheets for operational war plans reducing deployment planning time by 20%.
- Benchmarked as an Air Force instruction and training materials author; wrote local supplements and base training programs adopted command-wide.
- Wrote detailed performance evaluations for five Air Force personnel; leadership earned major command level awards for subordinates.

TEAM BUILDING

- Motivated high-performance teams while cultivating productive relationships

Sem/Year:	Course #:	Course Title:
Fall 04,05,06,07,08,09	NURS 220	Perinatal Nursing Course Coordinator
Fall 04,05,06,07,08,09	NURS 221	Adv. Parenteral Lab Course Coordinator
Fall 04,05,06,07,08,09	NURS 220L	OB Clinicals
Sp 05,06,07,08,09,10	NURS 220	Perinatal Nursing Course Coordinator (web-based course)
Sp 05,06,07,08,09,10	NURS 220L	OB Clinicals
Sp 07,08,09	NURS 295	Advanced Practicum in Nursing

Outreach Coordinator (UAA School of Nursing) 2008-present

Work with the Chair, AAS Nursing Program, to coordinate the twelve site Outreach (distant) delivery of an NLNAC-accredited associate degree nursing program in Alaska. Responsible for mentoring/guiding outreach faculty in teaching & planning for local community student experiences. Duties include traveling to Outreach sites for the purpose of site evaluation, ensuring distant sites are assessed for essential resources used in course delivery, coordinating video/audio conference schedules, intensive clinical rotation schedules & instructional technology and instructional design initiatives for Outreach delivery.

Clinical Nurse, Obstetric/Gynecologic (Inpatient)

Seven Years of full-time inpatient floor nursing in Labor & Delivery, Postpartum, Newborn Nursery, and High-risk Perinatal units. Facilities included small rural hospitals and high risk tertiary maternity centers. Functioned as charge nurse of 8-12 staff members per shift and in-house nursing night supervisor of 50-bed hospital. Have also functioned as a nurse preceptor orienting new nurses to inpatient OB nursing.

Traveling Nurse

Worked three travel nurse assignments at busy Labor and Delivery units with 200+ deliveries per month. Able to function independently with very little orientation.

Obstetric/Gynecologic (Outpatient)

One year full-time in busy OB/GYN clinic, seeing 300 patients per day. Duties included telephone triage for a variety of women's health situations, patient education, and assistance with minor procedures.

Childbirth Educator

Director of Childbirth Education at Offutt Air Force Base Hospital. Duties included coordinating classes for 250 couples per year, education and scheduling childbirth instructors, teaching class, advertising, and ordering of supplies and materials.

Military

Twelve years military service: 5 years active duty, 7 years reserve. Member of Air Force Reserve Nurse Corps, rank of Major, having completed extensive training in combat medicine and readiness, trauma, leadership, and deployment capability. Served as assistant Chief Nurse Executive of 50-member nursing flight. Duties included coordination of training for military medics and yearly performance evaluations for every nurse in the flight. Performed tour of duty at Prince Sultan Air Base, Saudi Arabia, in December of 2000, and Misawa Air Base, Japan in 2002. These were peacetime deployments in forward locations with varied duties including night shift supervisor of the inpatient medical facility.

College of Nursing Committees

2004-current: AAS (Associate of Applied Science) Program Committee
2004-current: AAS Curriculum Committee

William J. Streur

Streur, William
Commissioner - Department of Health and Social Services

PERSONAL

A highly motivated and confident manager, a strong communicator, a quick thinker, and excellent strategist, with strengths in startup, acquisitions, fundraising, contract negotiation and turnaround and change. Perceived as charismatic, an articulate speaker with a thorough knowledge of managed care strategies, the health insurance market, claims systems, the Medicaid market, indigent and uninsured needs issues and all health delivery operations.

WORK HISTORY

State of Alaska
Anchorage/Juneau, Alaska
Deputy Commissioner, Medicaid and Health Care Policy. **2007-Present**

Responsible for all aspects of the $1.2B Medicaid, SCHIP and CAMA programs for the State including all policy development and implementation, claims benefit packages and payment for services and oversight of the fiscal agent contract. Responsible to coordinate the five year plan for the Legislature, interface with the legislature on budget, policy and regulation development, benefit coverage and provider/enrollee satisfaction. Implements all federally mandated changes to programs, promulgate regulations and develops state plan amendments to satisfy requirements. The position coordinates all activities of the Deputy position including interfaces with other divisions, departments of stat e government and the legislature. Oversee the development of the new MMIS development (DDI) and all other IT improvements for the Medicaid and SCHIP programs. Directly manage the Department health planning and systems development, rate review and facility survey sections. Analyze and review all financial performance to coordinate budget, spending and project needs throughout the fiscal year. Serve as primary liaison for the department with Center for Medicare and Medicaid Services (CMS).

First Health Services Corporation
Anchorage Alaska
Senior Director, Alaska Operations **2003-2007**

Lead position administering over 90 employees in the fulfillment of the State of Alaska MMIS Medicaid contract for all operations including MMIS, SURS, claims/correspondence scanning and OCR, claims adjudication, Pharmacy (POS, PDL, Profiling and Reporting, etc.), and mental health inpatient/residential utilization review and care coordination. Directed and oversaw the operations and beginning of the transition to a new MMIS system for the State, the State's first since 1987.

- Maintained an open communicative relationship regarding the fiscal agent services with the State while facing significant legal and contractual challenges regarding the new MMIS development.
- Redesigned the contract with the State for Claims review and SURS functions and preserved its continuation into 2010.

Upper Peninsula Health Plan **1998-2003**
Marquette, Michigan
President and Chief Executive Officer

Founding officer for the Plan and its first employee. Plan's ownership consists of 13 of the Upper Peninsula's 14 hospitals and nearly 200 physician investors with over 800 total providers serving Medicaid and CHIP populations. Plan is recognized as a leader in innovative involvement with the provider community. State Medicaid leadership points to the Plan as a model of quality and customer satisfaction for others to follow. Led the plan to successful NCQA accreditation in 2003.

- Guided the concept development, raised funds from investors, employed staff and prepared the Plan for its initial service population and brought the Plan to profitability in 26 months with an enrollment of approximately 20,000 Medicaid members.

- Led the Plan to a rating as one of the top five health plans in Michigan (Benchmark Plan) for quality and customer satisfaction (member and provider) in its second full year of operation. This achievement was repeated in the third and fourth years of operation. Awarded quality bonus each year.

Consultant-Self Employed **1997-1998**
Marquette, Michigan
Medicaid and Managed Care Strategy
Consultant and trainer to a variety of organizations and corporations on managed care issues including strategic planning, business process management, alliances, acquisitions and mergers, implementation strategies, benefit design systems development, network development and contracting, administrative structures, gate keeping approaches, and training. Trained over 1000 persons on managed healthcare strategies, transition issues, structure acceptance and courtesies. Contracts include state government, universities, mental health organizations, hospital systems, county government and private health plans. Consistently rated as outstanding instructor and presenter.

PeaceHealth **1987 - 1997**
Eugene, Oregon
Corporate Director (Vice President) of Behavioral Health
Responsible for overseeing the development of a nonprofit coordinated and comprehensive behavioral health system supporting the corporation's overall strategic plan. The position objectives were to develop and ensure consistent standards throughout the PeaceHealth system and to ensure the long-term viability of a behavioral health service line fully integrated with other health care services corporately and in each region. One member of a four person team addressing the strategy of the corporation.

- Acquired a large, privately owned, and freestanding behavioral health case management and delivery system. Recovered acquisition costs in first five months of operation. Realized over a 17% net corporate gain per annum for first three years of operation. Emerged as the largest behavioral health provider in the state of Washington, Oregon and Alaska.

Recovery Northwest (PeaceHealth) **1984 - 1987**
Vancouver, Washington
CEO
Hired as a turnaround CEO. Brought the company to profitability and sold to PeaceHealth, which expanded and grew the business line with me as the product line manager.

Northern Michigan Substance Abuse Services **1978 – 1984**
Gaylord, Michigan
Executive Director, building the agency from one representing 12 counties in Northern Michigan to one representing 23 counties. Seen as one of the premier agencies in the state system and operating continuously through 2009.

United States Air Force **1970 - 1976**
United States Air Force Reserve **1980 - 1995**
Served in a variety of officer duties including aircrew, maintenance officer, race relations, equal opportunity and drug and alcohol control and rehabilitation. Opened first formal chemical dependency treatment unit for Armed Forces in Europe. Vietnam and Desert Storm (Kuwait liberation) veteran. Numerous deployments representing the United States. Bronze Star and Meritorious Service Medal recipient. Highest decorated officer in the unit upon retirement in November 1995.

PROFESSIONAL AFFILIATIONS AND APPOINTMENTS

- Managed Care Consultant to design team of Oregon Health Plan, the state's Medicaid Managed Care effort.

- Board member and volunteer to numerous human services organizations, active in my church.

- Seventeen year Rotarian, Paul Harris Fellow (x3), Club President 2000-2001.

EDUCATION

Graduate study toward concurrent Master's degrees in Business and Sociology
Ball State University and Troy State University

Bachelor of Arts, (Pre Medicine/Liberal Arts)
Northern Michigan University, Marquette, Michigan

Subject: Confirmation of Governor's Appointments
Importance: High

Senate HSS Members,
The governor's appointment packets were delivered to members months ago. Since that time, I've asked several times if senator's had any concerns with any of the names the governor recommended for legislative confirmation. So far, no one has mentioned any concerns to me. If there are no concerns with any of the individuals recommended, we will simply process the report at the Senate HSS meeting on Monday. If there are concerns, please let me know no-later-than 5:00 PM today so I can invite that individual or those individuals to this Monday's meeting. I'm attaching a copy of the report for your review. Please let me know if you have questions. Thanks.

Sent: Friday, March 11, 2011 10:16 AM
To: Maitlen, Brandon R (GOV); Sanders, Nancy L (CED)
Subject: Resignation

To All Concerned,

I would like to thank-you for the honor and opportunity to serve on the Board of Nursing. However, due to family and financial hardships that serving on the Board will create for me, I feel that it is best for me to resign my appointment effective immediately, Friday March 11, 2011.

I hope that you will appreciate that this has been a difficult decision. I do feel that I would bring a value to the Board and hope that perhaps the future will bring this opportunity around again. My first responsibility is to my family. I feel that it would be a dis-service to all involved for me to try to continue to serve and that its best to resign now, rather than later.

I will return all the materials given to me at orientation last week.

Respectfully,
J Robin Allen LPN.

Subject: Confirmation Hearing for Board of Nursing

Dear Celeste,

Thank you for the information about the confirmation hearings scheduled for the Board of Nursing on Monday, March 21st. I am in the East Coast time zone for the week and am scheduled for an event that co insides with the hearing time. I sincerely apologize for not being available.

I am truly interested to be reappointed for my second 4 year term. I have served this past term as secretary, vice chair and as chair. I continue to work as an RN in a Post Anesthesia Care Unit and am able to balance my work schedule with the commitment to the Board of Nursing.

Thank you for conveying my willingness to serve. I look forward to hearing from you.

Sincerely,
Beth Farnstrom, RN

To: Celeste Hodge
Cc: Julianna Singh
Subject: Governor's Appointments - Legislative Confirmation Reports & Resumes Attached
Attachments: hss commissioner 2.2.11 #2.doc; hss.2.2.11.#2.doc; hss #2.doc; Commissioner, HSS - Streur#2.pdf; Dental Examiners - Fellenberg#2.pdf; Dental Examiners - Kovaleski#2.docx; Dental Examiners - Silveira#2.doc; Dental Examiners - Warren#2.pdf; Marital and Family Therapy - Webber#2.doc; Marital and Family Therapy - Young#2.rtf; Mental Health Trust - Barton#2.pdf; Mental Health Trust - Webb#2.pdf; Midwives - Downing#2.pdf; Nursing - Allen# 2.doc; Nursing - Farnstrom#2.pdf; Nursing - Gillette#2.doc; Nursing - Pringle#2.docx

Pursuant to AS 39.05.080, Governor's Appointment(s) were referred to your committee for a committee hearing, recommendation and report. You should have received a memo listing the appointees referred to your committee. For your convenience, a copy of the memo is attached.

Also, attached are:

1) Senate Confirmation Committee Report - If you have more than one appointee, use this Report document as a template. Cut and paste appointees into the Report to correlate with your hearings.

2) Appointee Resume(s) - If your committee received an abundance of referrals, you may receive more than one email containing resumes (the file size may be too large to send all resumes in one email attachment).

Contact Julianna or Ben in the Senate Secretary's Office at 465-3701 if you have questions about the attachments.

Good luck with your hearings.
-Ben

SENATE

Powers, David
State Medical Board

JUN 0 6 2008

Office of the Governor
Anchorage

OFFICE OF THE GOVERNOR
ANCHORAGE
JUN 16 2008

Honorable Sarah Palin
Governor, State of Alaska
550 W. 7th Ave Ste. 1700
Anchorage, Alaska 99501

Governor Palin,

Recently Frank Bailey contacted me regarding the possibility of serving on the Alaska State Medical Board, and I am writing to let you know that if appointed, I will gladly accept the position.

I came to Alaska in 1984 as a Commissioned Officer in the United States Indian Health Service. Since then, I have practiced in various sites throughout the State, including Anchorage, Juneau, Nome, Barrow, St Paul Island, and for the past 15 years in Dillingham.

Long distance medicine is part of our daily routine, as we work with Community Health Aides and Mid-Level practitioners in approximately 30 outlying villages.

If appointed, I will endeavor to contribute from this rural prospective while working with other members of the Board on pertinent issues.

Thank you for your consideration,
Sincerely,

D Powers MD

David J. Powers, M.D.

January 8, 2008

State of Alaska
Office of Governor Sarah Palin
Attention: Frank Bailey, Director of Boards & Commissions
P.O. Box 110001
Juneau, AK 99811-0001

January 8, 2008

Dear Governor Palin,

I am a Certified Direct-entry Midwife (CDM) in the State of Alaska. I am also a Certified Professional Midwife (CPM), which is a national certification. I have resided in Fairbanks for the past 35 years. I received my midwifery certification in April 1996 and have been privileged to attend the births of over 600 Alaskan babies. I have served on the Midwives Association of Alaska's peer review committee for the past 8 years. I understand that I have been recommended for a position on the State of Alaska's Board of Certified Direct-entry Midwives. If I am offered this appointment I will gladly accept this position and serve with integrity and reliability. Thank you for your consideration.

Sincerely,

Cheryl Corrick, CDM, CPM

"I certify"

Resume Addendum
James E. Montgomery Jr.
Safety and Operations Auditor
BP International

OBJECTIVE

Throughout my career, I have received extensive knowledge and training in production and safety, first as a Control Room Operator and Supervisor at US Oil & Refining Company, Control Room/Facility Operator(Operations Dept) BP Alaska and then in the HSE dept, as a HSE Advisor. I'm presently in an International Safety and Operations Audit Group working for the BP Board of Directors, which has expanded my ability, knowledge for personal growth and contribute to the success and performance of the B P as a company.

PROFESSIONAL SKILLS

April 2010-Present Site Safety Lead MC 252 Response Jefferson Branch.
Assigned to Venice originally then Grand Isle on 5/5, responsibilities initially included oversight of Cocodrie and Pt. Fourchon. When Grand Isle work team went to 3000 plus employees, Cocodrie and Pt. Fourchon were assigned to the new developed Regional Safety Manager. HSE team consisted of Safety, Medical, Coast Guard, National Guard and the Jefferson Parish Sheriffs Dept. 200 plus employees at its peak.
• Site safety plans.
• Emergency response plans

• Hazcom (developed a GI site plan)
• Developed a Safe Practice manual for New Orleans to review.
• Developed training for site, RTV, Supervisor training on Hazard recognition.
• Managed staffing at GI to meet the operation needs and was consistently lower ratio of Safety staff to workers than other sites.

2006-April 2010 S&O Auditor
Assigned tasks included auditing of gHSEr, OMS and PSM standards. Individual areas of auditing were HSE, Operations, Leadership, Emergency Response, Incident Investigation, Assurance, Maintenance and Security.

• International Program auditing
• Detailed deficiency reports
• Mitigating actions to address deficiencies
• International travel with different teams, Singapore, China, Trinidad, Egypt, Great Britain
• US based sites, Gulf of Mexico, Durango Colorado, Whiting Refinery (Indiana), East Coast Pipelines, NAG, Mid-Con Greater Prudhoe Bay and Alaska Consolidated Team (Endicott, Milne Point and North Star)
HSE Safety Advisor, Greater Prudhoe Bay Business Unit

Previous Duties GPB Facilities group included:
• Assist all facility and field personnel to ensure adequate safety, health and loss prevention measures are being followed.
• Assist all facility and field personnel in identifying and mitigating hazards and risks. Assist in the development and application of standards, policies and procedures.
• Conduct formal and informal audits, investigations and inspections of facilities and work in progress.
• Core job specific activities include permitting, confine space entry, training, pre-job and weekly safety meetings, operating procedures, hazards analysis, emergency response and providing information on injury and illness trends.

1995 -1997 Safety Specialist, Prudhoe Bay Western Operating

1986 - 1995 Production Operator, Gathering Center II Prudhoe Bay Western Operating
DCS control room (Lead Console Operator), alarm management, plant operations, permitting, safe outs, commissioning PWH project, Water flood and gas management.

1984 – 1986 Operations Shift Relief (TRX) Supervisor, US Oil and Refining Co.
Covered for vacation and vacancies in operations responsible for the following units: Light Crude, Heavy Crude, Catalytic Reformer, Fuel Oil Hydro Treating, Sulfur Recovery, Gasoline blending and Marine shipping and receiving.

1984-1986 Supervisor Asphalt Plant, US Oil and Refining Co
Responsible for blending, quality control, inventory, scheduling of product loading and personnel.

1977-1984 Production Operator, US Oil and Refining Co
B-Operator for Light Crude, Heavy Crude, Catalytic Reformer, Fuel Oil Hydro Treating and Sulfur Recovery Units. Blender responsible for blending operations and QC of asphalt products. Worked on research/development and commissioning of the emulsion asphalt blending systems.

Mala, Theodore Jr.
Board of Pharmacy

TED MALA, JR.

Professional Account Management Experience:

- Identifying and closing the highest revenue new business deal.
- Multicultural awareness resulting in higher sales volume.
- Exceptional rapport building skills resulting in longer partnerships.

Business Development Manager, NANA Management Services Nov. 2010- Present

Work with some of the most visible and prominent businesses in Alaska to develop and maintain relationships statewide.

Senior Media Consultant, The Alaska Journal of Commerce June 2010-Sept. 2010

Establish relationships with key accounts such as Southcentral Foundation, CH2M Hill, Alaska Native Heritage Center, and Bristol Bay Native Corporation.

- Develop targeted sales strategies, proposals, and contracts.
- Independently maintain quota of 25 cold calls and five new business appointments per week
- Sold $80,000 in new business revenue in the 10 weeks I consulted for AJOC.

Major Account Manager, Los Angeles Times 2007-2009

Develop and maintain key accounts such as Twentieth Century Fox, Charles Drew University, Los Angeles Country Club, and Century City Doctor's Hospital.

- Closed first quarter 258% to goal.
- Develop targeted sales strategies to close record-breaking business deals.
- Independently maintain quota of 100 cold calls and five new business appointments per week.
- Develop targeted sales strategies, proposals, and contracts.
- Selected as member of the inaugural Los Angeles Times sales strategy council.

Luxury Real Estate Agent, Surterre Properties 2007-2011

Represent Newport Beach's premier luxury real estate office in prestigious Crystal Cove, Newport Coast.

- Strong rapport building, extensive product knowledge, and tactful negotiating yielded sale of home just under five million dollars in Newport Coast.
- Design targeted marketing materials distinguishing team brand.
- Develop rapport and maintain relationships with clients resulting in repeat business and referrals.

Advertising Consultant, Yellow Book USA 2003-2007

Designed comprehensive advertising programs representing multicultural clients from varying industries.

- Secured business through cold calling, appointment setting, studying industry trends, in-depth needs analysis, calculating ROI, and negotiating contracts.
- Personally designed effective ad copy.
- Supervised territory growth and development.
- Created Spanish/English advertising programs.
- Independently maintained quota of 200 cold calls and eight new business appointments per week.
- Grew all territory assignments on average 20%.

Corporate Account Representative, The Alaska Club 2002-2003

Managed the development and maintenance of corporate accounts for Alaska's premier health club network.

- Prospected major corporate clients.
- Designed and pitched corporate presentations and proposals.
- Secured corporate partnerships.
- Current record holder for most new members signed up in one day (29).
- Ranked as number one salesperson in the history of The Alaska Club.

Project Coordinator, Southcentral Foundation 2001-2002

Instrumental in developing the Family Wellness Warrior Initiative (FWWI) at Southcentral Foundation/Alaska Native Medical Center.

- Represented the President/CEO and Board of Directors in public speaking engagements aimed at spreading awareness of the initiative's purpose which is to combat domestic violence, abuse, and neglect in Alaska.
- Gave a speech to 500 people which was broadcast live statewide.
- Built relationships with leaders in the community to garner support including Alaska Native Leaders, Judges, the head of the DOC, the head of DHSS, CEO's, legislators, and many others.
- Presented to the boards of directors of all the major Native Health Corporations in Alaska seeking the passing of a resolution supporting the initiative.
- Every board of directors passed a unanimous resolution of support.

EDUCATION/RECENT PROFESSIONAL DEVELOPMENT

- Current State of California Real Estate License
- Power Messaging - Corporate Visions, Inc.

- Spin Selling – Strategic Sales Solutions

COMPUTER SKILLS

- Microsoft Office Suite (Outlook, Excel, Word, PowerPoint)

Employment History

Employment work history including paid, unpaid or voluntary.
EMPLOYMENT HISTORY

Physical Therapist - Mat-Su Regional Medical Center Palmer, Alaska 11/10 - present
I am a pool physical therapist who covers weekends and holidays for the inpatient hospital population. Duties include performing initial evaluations, providing care/treatment, attending rounds as required/needed, communicating with various other medical staff and family members, evaluating and requesting equipment for patient needs upon discharge and performing hospital/corporate based continuing education as required.

Physical Therapist - Eagle Center Physical Therapy
Eagle River, Alaska 06/10 - present
I am a staff physical therapist involved in all aspects of patient care including initial evaluations,

progress notes and discharge summaries. I also assist with marketing of the facility to local referral sources and attending events where I promote health topics and our services to potential clients/patients.

Clinic Director/Physical Therapist - Denali Physical Therapy Anchorage Alaska 06/08 – 03/10
I helped open and was a limited partner of an outpatient orthopaedic clinic. Duties included doing due diligence with referral sources, researching a location for the practice, assisting with buildout design, marketing the facility and services to referral sources, identifying new revenue sources, ordering supplies/equipment and being responsible for the facility income statement. I also provided all aspects of patient care including evaluations, re-evaluations/progress notes, daily treatment and discharge summaries.

Business Development/Physical Therapist
HealthSouth Rehabilitation Corp., Anchorage Alaska 10/06 – 5/08
The first part of my job duties included marketing the facility and staff to referral sources, identifying new revenue sources, diversifying and expanding facility operations, communicating to local staff the needs/preferences of referral sources and being a communication channel between staff and referral sources. I assisted in coordinating in services, surgery observations and educational opportunities for local staff. I also addressed patient questions/concerns and acted as a liaison between the patient, the referral source and the clinic.
As a therapist I was responsible for patient care, including performing initial evaluations, treatment, re-evaluations/progress notes and discharge summaries.

Site Coordinator/Physical Therapist
HealthSouth Rehabilitation Corp., Anchorage Alaska 08/05 – 10/06
I was hired to turn the integrated medical facility clinic around. Duties included supervision of clinical and non-clinical staff, compliance with Medicare regulations, marketing facility and staff to referral sources, obtaining new revenue streams, diversifying and expanding facility operations, delegating various job tasks to staff (pool maintenance, supplies/equipment ordering, Medicare review, staff education), maintaining compliance with HealthSouth policies, reporting to my chain of command, being responsible for the facility income statement, review of the facility general ledger, performing monthly staff meetings, conducting employee performance appraisals and hiring/firing of staff. I also provided all aspects of patient care including evaluations, re-evaluations/progress notes and discharge summaries.

Owner/Operator Personal Touch Physical Therapy
Hilton Head Island, South Carolina 1998 – 2005
I incorporated and opened an orthopaedic private practice. Duties included marketing the facility and services to physicians, designing and building out the practice, negotiating and contracting billing services as well as lease arrangements. I provided all aspects of patient care including initial evaluations, progress notes/re-evaluations and discharge summaries. I performed all equipment acquisition, obtained insurance and Medicare provider numbers and performed all other aspects of operating a private practice.

Physical Therapist Jasper County School System
Ridgeland, South Carolina 1996 – 2005
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist Beaufort County School System 1997 – 2004
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist Beaufort-Jasper Home Health Services 1995 – 1998
Evaluate and provide services to Medicaid home bound individuals, maintain open

communication with staff/family and provide progress notes to physicians and ancillary services

Physical Therapist Care One 1994 – 1995
Provide services in an outpatient orthopaedic clinic including evaluations, treatment plans, progress notes and communication with other medical personnel.

Owner/Operator Health Quest One Fitness Center 1993 – 2003
Perform daily business functions including interaction with members, facility maintenance, equipment repair, marketing, billing and supervision of employees. Duties also included designing the fitness center, equipment acquisition, lease negotiations, subcontractor negotiations, contract development in compliance with state law as well as all other duties associated with owning/operating a business.

Physical Therapist ABC Home Health Agency 1993 – 1993
Evaluate and provide services to home bound individuals, maintain open communication with staff and provide progress notes to physicians and ancillary services.

Physical Therapist
HealthSouth Rehabilitation Corp., Merritt Island, FL 1992 – 1993
Provide physical therapy services in an outpatient orthopaedic clinic. Duties included performing evaluations, developing treatment plans, writing progress notes, discharge summaries and communicating with physicians, peers, patients and family members.

Physical Therapist South Miami Hospital 1991 - 1992
Evaluate and provide services to post-op orthopaedic, neurological, wound and general de-conditioned patients in an acute rehabilitation setting. Communicate with physicians, other staff, peers, patients and family members. I also filled in for other therapists in the rehab center and worked in the insensitive limb clinic with patients with chronic circulatory problems.

Education, Training, Experience & Qualifications

List both formal and informal education and training experiences:
FORMAL EDUCATION

1990 Master of Science in Physical Therapy (M.S.P.T.)
University of Miami, Coral Gables Florida

1989 Licensed Massage Therapist

HealthSouth Rehabilitation Corp., Anchorage Alaska 08/05 – 10/06
I was hired to turn the integrated medical facility clinic around. Duties included supervision of clinical and non-clinical staff, compliance with Medicare regulations, marketing facility and staff to referral sources, obtaining new revenue streams, diversifying and expanding facility operations, delegating various job tasks to staff (pool maintenance, supplies/equipment ordering, Medicare review, staff education), maintaining compliance with HealthSouth policies, reporting to my chain of command, being responsible for the facility income statement, review of the facility general ledger, performing monthly staff meetings, conducting employee performance appraisals and hiring/firing of staff. I also provided all aspects of
EMPLOYMENT HISTORY (Cont.)

patient care including evaluations, re-evaluations/progress notes and discharge summaries.

Owner/Operator
Personal Touch Physical Therapy, Hilton Head Island SC 1998 – 2005
I incorporated and opened an orthopaedic private practice. Duties included marketing the facility and services to physicians, designing and building out the practice, negotiating and contracting billing services as well as lease arrangements. I provided all aspects of patient care including initial evaluations, progress notes/re-evaluations and discharge summaries. I performed all equipment acquisition, obtained insurance and Medicare provider numbers and performed all other aspects of operating a private practice.

Physical Therapist Jasper County School System 1996 – 2005
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist Beaufort County School System 1997 – 2004
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist
Beaufort-Jasper Home Health Services, Ridgeland SC 1995 – 1998
Evaluate and provide services to Medicaid home bound individuals, maintain open communication with staff/family and provide progress notes to physicians and ancillary services

Physical Therapist
Care One, Hilton Head Island South Carolina 1994 – 1995
Provide services in an outpatient orthopaedic clinic including evaluations, treatment plans, progress notes and communication with other medical personnel.

Owner/Operator
Health Quest One Fitness Center, Hilton Head Island SC 1993 – 2003
Perform daily business functions including interaction with members, facility maintenance, equipment repair, marketing, billing and supervision of employees. Duties also included designing the fitness center, equipment acquisition, lease negotiations, subcontractor negotiations, contract development in compliance with state law as well as all other duties associated with owning/operating a business.

Physical Therapist
ABC Home Health Agency, Merritt Island, FL 1993 – 1993
Evaluate and provide services to home bound individuals, maintain open communication with staff and provide progress notes to physicians and ancillary services.

Physical Therapist
HealthSouth Rehabilitation Corp., Merritt Island, FL 1992 – 1993
Provide physical therapy services in an outpatient orthopaedic clinic. Duties included performing evaluations, developing treatment plans, writing progress

EMPLOYMENT HISTORY (Cont.)

notes, discharge summaries and communicating with physicians, peers, patients and family members.

Physical Therapist
South Miami Hospital, Miami Florida 1991 - 1992
Evaluate and provide services to post-op orthopaedic, neurological, wound and general de-

conditioned patients in an acute rehabilitation setting. Communicate with physicians, other staff, peers, patients and family members. I also filled in for other therapists in the rehab center and worked in the insensitive limb clinic with patients with chronic circulatory problems.

Subject: Committee Bill Files

This is a reminder that at the end of the Twenty-Seventh Legislature (April 2012) your committee bill files must be sent to the Legislative Reference Library.

Please ... make sure these files contain the original, or best copy, of all important information on each bill or subject considered by your committee during the two-year legislature, and include all committee documents you have put online. (Please read the section in the *House* or *Senate Guide for Committee Aides* concerning transfer of these files to the library.)

If you have any questions, please contact us.

Thank you,

February, 2012

"WOMAN OF THE YEAR"

Guidelines

The recipient:

- **Must be a paid North to the Future (NTTF) member.**
- **Provide a brief overview of club involvement, community service, education level, youth involvement, and career advancement.**
- **Summarize, in 100 words or less, why you think you or your nominee should be chosen as NTTF's Woman of the Year.**

The Selection committee:

- **Must be comprised of 3 paid members of NTTF**
- **The Selection Committee is appointed by the Women's History Committee.**

Some helpful hints:

For community service and career advancement, consider attaching copies of any certificates, letters and anything else you can think of that may help the selection committee.

Answer all areas on the application in full detail even if in list format. Show your education in your responses.

Indicate volunteer work for five years. The nominee still could be recognized for long-term services. Community service is still important whether done today or yesterday.

Consider nominating yourself! Remember the saying: "If it's to be, it's up to me!"

Board or Commission and seat for which I am applying: Board of Marriage & Family, Public Seat
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:
none

Name: The Very Rev. John W. Downing

Mailing Address: _____

Residence Address _____

City, State and Zip Code: Eagle River, AK 99577

Home or Message Telephone: _____ ss Telephone: _____

Fax Number: _____ Cell Phone: _____

Email address: _____

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES ✓ NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel reimbursement etc) _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO ✓ if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES ✓ NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES _____ NO ✓

If "YES", explain:

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

See resume

B. List both formal and informal education and training experiences: (Use additional paper if necessary).

See resume

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.

See Resume

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).

See Resume.

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: SEX: FEMALE _____ MALE ___ __

ETHNICITY:
Alaska Native ___ American Indian ___ Asian or Pacific Islander ___ Black ___ Hispanic ___ White __ .

MILITARY SERVICE (if applicable, give dates): _____ _____ __

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Powers, David
State Medical Board

JUN 0 6 2008

Office of the Governor
Anchorage

OFFICE OF THE GOVERNOR
FAIRBANKS
JUN 16 2008

Honorable Sarah Palin
Governor, State of Alaska
550 W. 7th Ave Ste. 1700
Anchorage, Alaska 99501

Governor Palin,

Recently Frank Bailey contacted me regarding the possibility of serving on the Alaska State Medical Board, and I am writing to let you know that if appointed, I will gladly accept the position.

I came to Alaska in 1984 as a Commissioned Officer in the United States Indian Health Service. Since then, I have practiced in various sites throughout the State, including Anchorage, Juneau, Nome, Barrow, St Paul Island, and for the past 15 years in Dillingham.

Long distance medicine is part of our daily routine, as we work with Community Health Aides and Mid-Level practitioners in approximately 30 outlying villages.

If appointed, I will endeavor to contribute from this rural prospective while working with other members of the Board on pertinent issues.

Thank you for your consideration,
Sincerely,

D Powers MD

David J. Powers, M.D.

State of Alaska
Office of Governor Sarah Palin
Attention: Frank Bailey, Director of Boards & Commissions
P.O. Box 110001
Juneau, AK 99811-0001

January 8, 2008

Dear Governor Palin,

I am a Certified Direct-entry Midwife (CDM) in the State of Alaska. I am also a Certified Professional Midwife (CPM), which is a national certification. I have resided in Fairbanks for the past 35 years. I received my midwifery certification in April 1996 and have been privileged to attend the births of over 600 Alaskan babies. I have served on the Midwives Association of Alaska's peer review committee for the past 8 years. I understand that I have been recommended for a position on the State of Alaska's Board of Certified Direct-entry Midwives. If I am offered this appointment I will gladly accept this position and serve with integrity and reliability. Thank you for your consideration.

Sincerely,

Cheryl Corrick, CDM, CPM

Yes

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you are applying?
No

Please explain the potential financial benefit

Employment History

Employment work history including paid, unpaid or voluntary.
EMPLOYMENT HISTORY

Physical Therapist - Mat-Su Regional Medical Center Palmer, Alaska 11/10 - present
I am a pool physical therapist who covers weekends and holidays for the inpatient hospital population. Duties include performing initial evaluations, providing care/treatment, attending rounds as required/needed, communicating with various other medical staff and family members, evaluating and requesting equipment for patient needs upon discharge and performing hospital/corporate based continuing education as required.

Physical Therapist - Eagle Center Physical Therapy
Eagle River, Alaska 06/10 - present
I am a staff physical therapist involved in all aspects of patient care including initial evaluations,

progress notes and discharge summaries. I also assist with marketing of the facility to local referral sources and attending events where I promote health topics and our services to potential clients/patients.

Clinic Director/Physical Therapist - Denali Physical Therapy Anchorage Alaska 06/08 – 03/10
I helped open and was a limited partner of an outpatient orthopaedic clinic. Duties included doing due diligence with referral sources, researching a location for the practice, assisting with buildout design, marketing the facility and services to referral sources, identifying new revenue sources, ordering supplies/equipment and being responsible for the facility income statement. I also provided all aspects of patient care including evaluations, re-evaluations/progress notes, daily treatment and discharge summaries.

Business Development/Physical Therapist
HealthSouth Rehabilitation Corp., Anchorage Alaska 10/06 – 6/08
The first part of my job duties included marketing the facility and staff to referral sources, identifying new revenue sources, diversifying and expanding facility operations, communicating to local staff the needs/preferences of referral sources and being a communication channel between staff and referral sources. I assisted in coordinating in services, surgery observations and educational opportunities for local staff. I also addressed patient questions/concerns and acted as a liaison between the patient, the referral source and the clinic.
As a therapist I was responsible for patient care, including performing initial evaluations, treatment, re-evaluations/progress notes and discharge summaries.

Site Coordinator/Physical Therapist
HealthSouth Rehabilitation Corp., Anchorage Alaska 08/05 – 10/06
I was hired to turn the integrated medical facility clinic around. Duties included supervision of clinical and non-clinical staff, compliance with Medicare regulations, marketing facility and staff to referral sources, obtaining new revenue streams, diversifying and expanding facility operations, delegating various job tasks to staff (pool maintenance, supplies/equipment ordering, Medicare review, staff education), maintaining compliance with HealthSouth policies, reporting to my chain of command, being responsible for the facility income statement, review of the facility general ledger, performing monthly staff meetings, conducting employee performance appraisals and hiring/firing of staff. I also provided all aspects of patient care including evaluations, re-evaluations/progress notes and discharge summaries.

Owner/Operator Personal Touch Physical Therapy
Hilton Head Island, South Carolina 1998 – 2005
I incorporated and opened an orthopaedic private practice. Duties included marketing the facility and services to physicians, designing and building out the practice, negotiating and contracting billing services as well as lease arrangements. I provided all aspects of patient care including initial evaluations, progress notes/re-evaluations and discharge summaries. I performed all equipment acquisition, obtained insurance and Medicare provider numbers and performed all other aspects of operating a private practice.

Physical Therapist Jasper County School System
Ridgeland, South Carolina 1996 – 2005
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist Beaufort County School System 1997 – 2004
Evaluate and provide services to physically (and usually mentally) challenged children, participate in IEP/staff meetings, communicate with facility and parents, provide progress notes of student progress and order equipment.

Physical Therapist Beaufort-Jasper Home Health Services 1995 – 1998
Evaluate and provide services to Medicaid home bound individuals, maintain open

communication with staff/family and provide progress notes to physicians and ancillary services

Physical Therapist Care One 1994 – 1995
Provide services in an outpatient orthopaedic clinic including evaluations, treatment plans, progress notes and communication with other medical personnel.

Owner/Operator Health Quest One Fitness Center 1993 – 2003
Perform daily business functions including interaction with members, facility maintenance, equipment repair, marketing, billing and supervision of employees. Duties also included designing the fitness center, equipment acquisition, lease negotiations, subcontractor negotiations, contract development in compliance with state law as well as all other duties associated with owning/operating a business.

Physical Therapist ABC Home Health Agency 1993 – 1993
Evaluate and provide services to home bound individuals, maintain open communication with staff and provide progress notes to physicians and ancillary services.

Physical Therapist
HealthSouth Rehabilitation Corp., Merritt Island, FL 1992 – 1993
Provide physical therapy services in an outpatient orthopaedic clinic. Duties included performing evaluations, developing treatment plans, writing progress notes, discharge summaries and communicating with physicians, peers, patients and family members.

Physical Therapist South Miami Hospital 1991 - 1992
Evaluate and provide services to post-op orthopaedic, neurological, wound and general de-conditioned patients in an acute rehabilitation setting. Communicate with physicians, other staff, peers, patients and family members. I also filled in for other therapists in the rehab center and worked in the insensitive limb clinic with patients with chronic circulatory problems.

Mitchell, Lillian
Board of Professional Counselors

Hi Ivy. My name is Lillian Mitchell, a RN that retired from Providence Alaska Medical Center in 2005 after working there over 27 years. I had worked for Providence several years before in the late 60's and early 70's. I have a BA degree in human resources and a MAT. I am currently involved in volunteer work with the Alaska state fair and I am involved in the Parish nurse ministry with my church. I served on the board of directors for the Blood Bank of Alaska for several years. I have lived in Anchorage over 34 years, arriving in Alaska the first time in 1968 when my husband was assigned here with the Air Force. If you need additional information, please e-mail me. I would like information regarding the medical emergency Board, the duties, purpose, location and expectations etc. Thanks, Lillian Mitchell.

Conflict of Interest

Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
Yes

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you are applying?
No

Please explain the potential financial benefit

Employment History

Employment work history including paid, unpaid or voluntary.
Self employed in Private Practice from 1985 to the present.

Prior to that I worked with the South Central Counseling Center from 1979 to 1985.

Education, Training, Experience & Qualifications

List both formal and informal education and training experiences:
I received my BA in Psychology from UAA in 1973, my MS in 1977 from the California School of Professional Psychology, and my Ph.D. from the same institution in 1979. I have done hundreds of hours of continuing education since that time, a minimum of 20 hours per year.

List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:
I am licensed as a Psychologist in Alaska. License number AA-227, 1983

List any community service, municipal government, and state positions held, and any awards received.
I served for six years on the Councel of Representatives of the American Psychological Association; Have been the Secretary of the Alaska Psychological Association and the President of the Alsaka Psychological Association.
I have most recently served on the Minicipal Health and Social Services Comission, stepping down this fall after six years. I was also CO-President of the Alaska Biathlon Association.

Conviction Record

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?
No

Conviction Circumstances

Certification of Accuracy & Completeness

By submitting this online application, I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Board of Social Work Examiners
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: Marilyn B. Kerr L.C.S.W.

Mailing Address: ____

Residence Address: ____

City, State and Zip Code: Anchorage AK 99507

Home or Message Telephone: ____ Business Telephone: ____

Fax Number: ____ Cell Phone: ____

Email address: ____

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES X NO ____ Voter Registration Number (Optional): ____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.): ____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES ____ NO X if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES X NO ____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES ____ NO X

If "YES", explain:

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria: L.C.S.W - State of Alaska 1989 through present
#AA00143

B. List both formal and informal education and training experiences: (Use additional paper if necessary).
Resume attached

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.
Served as chair of National Girls/Womens Hockey Tournament (2000-2002); 1st in the state
Serve as liturgy committee member at Holy Cross Parish, Anchorage Ak.

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).
See attached chronological resume

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: SEX: FEMALE _____ MALE _____

ETHNICITY:
Alaska Native ___ American Indian ___ Asian or Pacific Islander ___ Black ___ Hispanic ___ White

MILITARY SERVICE (if applicable, give dates): _____

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. CONGEN-
ITAL
CMV
INFORMA
TION

<TARGET><BILL></BILL><SUBJECT>CONGENITAL CMV
INFORMATION</SUBJECT><COMM>SHSS27</COMM></TARGET>

Every year, 1 in 150 children is born with congenital CMV.

Congenital CMV (cytomegalovirus) causes deafness, blindness, cerebral palsy, mental and physical disabilities, seizures, and death.

WHY IS CMV AWARENESS IMPORTANT?

In the United States, about 50 to 60% of women are at risk for contracting CMV infection during pregnancy.
In a recent survey of women in the United States, only 14% had heard of CMV, compared with 97% who had heard of Down Syndrome and 98% who had heard of HIV/AIDS. With CMV prevention measures rarely communicated to women, Stop CMV wants to increase the public profile of congenital CMV to save tens of thousands of babies each year from death and disability.

ABOUT STOP CMV & THE CMV ACTION NETWORK

The mission of Stop CMV and The CMV Action Network is to prevent and eliminate congenital CMV and to improve the lives of all people affected by congenital CMV.
Since 2003, Stop CMV has been working to foster awareness of congenital CMV through internet and public awareness campaigns. The CMV Action Network is comprised of families, friends, and medical professionals personally affected by CMV and committed to public education efforts to prevent future cases of the virus.

HOW YOU CAN HELP

There are many ways to make a difference, whether it be online or volunteering locally--there is always a way to participate in CMV awareness, outreach, and advocacy. Your service, caring and contribution can help change lives and prevent congenital CMV.
Visit Stop CMV at www.StopCMV.org for more information about CMV and how you can get involved.

If you are pregnant or planning a pregnancy, learn how you can prevent congenital CMV:

- DO wash your hands after handling babies or small children.
- DON'T share food or drinks with babies or small children.
- DON'T kiss babies or small children on the mouth.

Learn the facts about CMV

- Most common virus transmitted from mother to unborn baby
- More common than Down Syndrome, Spina Bifida and Fetal Alcohol Syndrome
- Spread through saliva, urine, tears, blood, mucus, and other bodily fluids
- Found mostly in healthy babies, toddlers, and young children
- Poses a major risk to pregnant women, especially mothers, daycare workers, preschool teachers, therapists, and nurses

Prevent birth defects. Stop CMV.

For more information, visit Stop CMV at www.StopCMV.org or the Centers for Disease Control and Prevention (CDC) at www.cdc.gov/cmv.

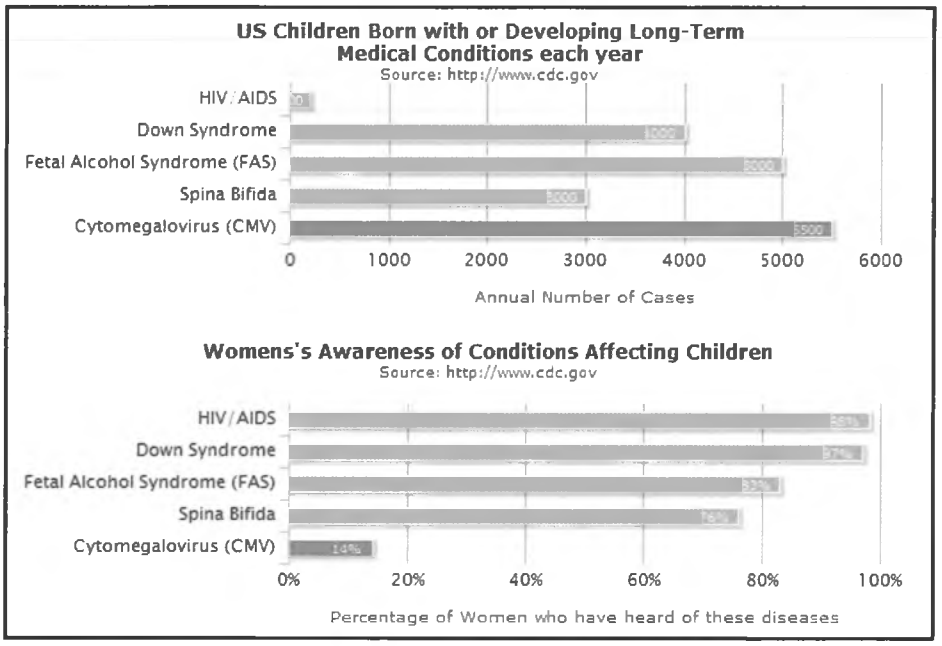
AWARENESS . OUTREACH . ADVOCACY
STOP CMV AND THE CMV ACTION NETWORK INC.

CMV
STOP CMV
The CMV Action Network

CMV Awareness

More children have disabilities due to congenital CMV (cytomegalovirus) than other well-known infections and syndromes, including Down Syndrome, Fetal Alcohol Syndrome, Spina Bifida, and Pediatric HIV/AIDS.

- A 2008 study, funded by the Center for Disease Control (CDC) found that **only 14% of women in the United Stated had heard of Cytomegalovirus (CMV).** *Ross DS, Victor M, Sumartojo E, Cannon MJ: Women's Knowledge of Congenital Cytomegalovirus: Results from the 2005 HealthStyles survey, J Women's Health, Vol. 17, 849-858 (2008).*
- The American College of Obstetricians and Gynecologists (ACOG) and the CDC recommend that OB/GYNs counsel women on basic prevention measures to guard against CMV infection.
- Only 44% of OB/GYNs reported counseling their patients about preventing CMV, according to a 2007 survey. *Knowledge and practices of obstetricians and gynecologists regarding cytomegalovirus infection during pregnancy-United States, 2007, MMWR, Vol. 57, 65-68 (January 25, 2008).*



Preventing CMV among pregnant women

- Women are not routinely screened for CMV during pregnancy.
- Infants are not routinely tested for CMV after birth.
- Behavioral intervention programs need to be developed, implemented, and evaluated
  - A study in France showed that women who were educated about preventing CMV transmission were able to significantly reduce their rates of infection during pregnancy; a similar intervention needs to be tested in the U.S.

CMV has never received dedicated funding

- It is time to fund public education and awareness campaigns to help prevent this common virus.

About Stop CMV and The CMV Action Network

Since 2003, Stop CMV has been working to foster awareness of congenital CMV through internet and public awareness campaigns. The CMV Action Network is comprised of families, friends, and medical professionals personally affected by CMV and committed to public education efforts to prevent future cases of the virus.

CMV Facts

Incidence

- Congenital CMV is the most common congenital (meaning present at birth) infection in the U.S.
  - 1 in 150 children is born with congenital CMV (approx. 35,000 each year)
- Congenital CMV is the most common cause of birth defects and childhood disabilities in the U.S.
  - 1 in 750 children develops permanent disabilities due to congenital CMV (approx. 5,500-8,000 each year)
- Congenital CMV causes more disabilities than Down Syndrome, Fetal Alcohol Syndrome, and Neural Tube Defects (Spina Bifida, Anacepahly, etc.).
- Congenital CMV is a leading cause of Cerebral Palsy, hearing loss, mental disability, and ADHD/Autism.
- Congenital CMV also causes vision loss, feeding issues/Failure to Thrive (FTT), sleeping issues, sensory issues, small head/small brain (Microcephaly), intercranial calcifications, seizures, and death

- There are approximately 400 fatal cases of congenital CMV each year; this number doesn't include miscarriages.
- CMV can cause symptoms when the baby is born or later in the baby's life; in some infants, symptoms and problems can arise months or years after birth.

Congenital CMV can be diagnosed if the virus is found in an infant's urine, saliva, blood, or other body tissues during the first week after birth.

Congenital CMV cannot be diagnosed if the infant is tested more than one week after birth.

- Anyone can become infected with CMV, which is common and usually harmless.
- Most people don't realize that they have been infected with CMV.
- One of the highest risk groups are pregnant women who have not yet contracted CMV prior to pregnancy, as they will possibly pass the virus to their developing child, causing potential birth defects.

Transmission

- CMV is found in body fluids, including urine, saliva, blood, mucus, and tears.
- CMV is very common in home and daycare settings, especially among healthy children 1 to 3 years of age who are at high risk for contracting CMV from their peers.

- Mothers and women who work with infants and young children should be educated about the risks of CMV and the precautions they can take to prevent infection.

Prevention

- Simple steps to avoid exposure to saliva and urine that might contain CMV:
  - Wash your hands often with soap and water for 15-20 seconds, especially after changing diapers, feeding a young child, wiping a young child's nose or drool, and handling children's toys.
  - Do not share food, drinks, or eating utensils used by young children.
  - Do not put a child's pacifier in your mouth.
  - Do not share a toothbrush with a young child.
  - Avoid contact with saliva when kissing a child.
  - Clean toys, countertops, and other surfaces that come into contact with children's urine or saliva.

All statistics and information cited from the Center for Disease Control and Prevention (CDC) - www.cdc.gov/cmv

The State of CMV

Background

Promising strategies for preventing and treating congenital CMV are available. They include raising awareness, developing behavioral interventions to prevent infection in pregnant women, and improving outcomes in congenitally infected children through early detection and intervention. To be successful, these approaches require adequate surveillance and laboratory capacity. However, prevention and treatment strategies have never been implemented on a wide scale.

Current efforts

Congenital CMV does not receive dedicated federal funding. Fortunately, people have realized a need to address this issue. By using CDC general funds and external grants, small research activities have been funded, including:

- Study of the natural history of CMV infection among women
- Surveys of women's knowledge, attitudes, and behaviors related to congenital CMV
- Laboratory assessments of CMV persistence in the environment and the efficacy of hand washing for removing CMV from hands
- Study of long-term outcomes in a cohort of children born with congenital CMV

Issues needing immediate attention

Awareness – Awareness campaigns are needed to explain the dangers posed by CMV and how they can be prevented

- Only 14-22% of women have ever heard of CMV.
- Most obstetricians do not discuss CMV or CMV prevention with their patients.

Preventing CMV infection among pregnant women – Behavioral intervention programs need to be developed, implemented, and evaluated

- A licensed CMV vaccine is unlikely to be available for many years.
- A large intervention study in France showed that women who were educated about preventing CMV transmission were able to significantly reduce their rates of infection during pregnancy; a similar intervention needs to be tested in the U.S.

Evaluating newborn CMV screening – Research and pilot screening programs are needed to determine whether benefits of screening outweigh costs and potential harms

- Congenital CMV infections are more common than the combined metabolic or endocrine disorders currently in the U.S. core newborn screening panel.

About Stop CMV and The CMV Action Network

Since 2003, Stop CMV has been working to foster awareness of congenital CMV through internet and public awareness campaigns. The CMV Action Network is comprised of families, friends, and medical professionals personally affected by CMV and committed to public education efforts to prevent future cases of the virus.

- Newborn CMV screening has significant potential for improving children's functional outcomes (e.g., language and educational development) through early detection and intervention.

Surveillance – Ongoing surveillance is needed to assess the burden of congenital CMV and to make it possible to monitor the effectiveness of future prevention programs.

- There is no ongoing assessment of the occurrence of CMV infection among pregnant women, rates of congenital infection among newborns, or rates of disability among infected newborns.

Laboratory capacity – Diagnostic methods are not yet sufficient for universal CMV screening programs.

- Standards and controls need to be developed for quality control of newborn CMV screening.
- Improved diagnostic tools are needed for prenatal maternal screening and diagnosis.

Stop CMV and The CMV Action Network

Who we are

Since 2003, Stop CMV has been working to foster congenital CMV awareness via internet and public awareness campaigns. The CMV Action Network is comprised of families, friends and medical professionals personally affected by CMV and committed to public education efforts to prevent future cases of the virus. We realize that the incidence of children born with congenital CMV can be greatly reduced with grassroots public education and awareness. Additionally, we hope that women, families and friends will become familiar with CMV and will take vigilant steps to prevent infection. We believe that it is better for women and their families to learn about CMV prior to pregnancy in order to be well informed and take preventative actions.

Mission

The mission of Stop CMV and The CMV Action Network is to prevent and eliminate congenital CMV and to improve the lives of all people affected by congenital CMV.

Strategic Goals

Organization – Develop and maintain an efficient organization to cost-effectively fulfill the mission and increase the quality, consistency and scope of The CMV Action Network

Funding – Develop and maintain annual revenue sources sufficient to fulfill the mission and support an appropriate capital reserve

Awareness – Support media and education programs to improve awareness and help decrease the incidence of congenital CMV affected pregnancies

Outreach – Facilitate open communication and gatherings among active Stop CMV members and provide support and resources to all CMV families in need

Advocacy – Serve as a key congenital CMV advocacy group, the unified voice of CMV familes, and increase funding for congenital CMV related research and awareness projects

June is National CMV Awareness Month

Through the efforts of Stop CMV, June was listed as National Congenital Cytomegalovirus Awareness Month, a National Health Observance (NHO) with the U.S. Department of Health and Human Services.

Your support is urgently needed to stop the spread of congenital Cytomegalovirus (CMV) and specifically to assist Stop CMV and The CMV Action Network with legislation to raise awareness of congenital CMV.

CMV Vaccine

Vaccines for preventing CMV infection are still in the research and development stage.

Vaccine Progress

- CMV vaccines are still in the research and development stage
- Phase I trials can be done (with a small number of subjects) and can cost under $1 million.
- Phase II trial costs can vary. A recent trial took 10 years and cost $7.5 million.
- Phase III trials can cost anywhere from $10 million-$100 million depending on FDA subject requirements.

Economic Burden/Cost Impact

- The annual cost for caring for CMV children is estimated at $1billion-$2 billion for the U.S. alone. *Institute of Medicine Committee to Study Priorities for Vaccine Development. Vaccines for the 21st Century: A Tool for Decision Making. Washington, D.C.: National Academy Press; 2000*
- The cost of vaccine development is dwarfed by the economic burden of caring for CMV children.

Timing

- In 2000, the Institute of Medicine (IOM) ranked the development of a CMV vaccine as a highest priority because of the lives it would save and the disabilities it would prevent.
- It may be a number of years before there is a Food and Drug Administration-approved CMV vaccine.

CMV Stories

Every year in the United States alone, thousands more children are born with congenital CMV. Their parents experience an unspeakable fear and pain as they learn more about CMV and its effects as they piece together what life will look like for their children and their families.

"The first time I see my daughter, we are baptizing her because she may not live. She is dying. There is no moment where they hand her to me. The moment when I take her face in and I know that she is mine. There is, instead, a moment when I look at her and I don't understand what went wrong. Why it is that I expected a healthy baby girl and instead I am looking at a dying neonate. Her skin is covered in red blotches, she has a wealth of black hair. She seems to have my nose. I cannot see her mouth because a tube is down her throat and tape covers the better portion of her chin, mouth and upper lip. I make myself take pictures of that moment, of us as a family. Because I still hope that someday this moment will just be ancient history." – Lauren Grace's Story, Iowa

"He was a very bright boy early on, teaching himself how to read at age two, but not learning how to walk until age 2-1/2. At age 5, he was diagnosed with ADHD and takes medication to help him at school. At age 7, Jeb was diagnosed with an autism spectrum disorder, pervasive developmental disorder (PDD-NOS)." – Jeb's Story, Wisconsin

"I remember sitting in the doctor's office at 22 weeks. They told me if I wanted to terminate, they would set me up with a doctor in another state, since it was no longer legal in my state. I was a single 19-year old sitting in a doctor's office in tears. It was the most important decision of my life. I had no one to talk to. I wish I had known about Stop CMV." – Logan's Story, Connecticut

"When I looked at him I noticed he was covered in red dots...I asked the nurse why he was covered in dots and she said some babies are born like that…When she came back she had the pediatrician with her. He told us that Dalen would have to stay in the NICU because he had an enlarged spleen and liver also that he didn't know what was wrong with him. My heart sank. I felt like I was in a show on Discovery Health Channel." – Dalen's Story, Mississippi

"I am only 16 and it's hard to process things in my mind when the doctors were telling me that she might come out like this or like that, so I just shut them all out and hoped for the best… She is 1 year old now. I don't think she can see because she doesn't follow or look at me. She laughs a lot, can't sit up yet or walk but I'm working on it." – Angelina's Story, Rhode Island

"I received two IV infusions of CMV immunoglobulin and went for another ultrasound at the end of the week. Two perinatologists came in to complete the ultrasound. As they looked at the monitors in silence, I began to cry. The ascites in our baby boy's belly had gotten so much worse. It had also spread to his chest, arms and legs. His liver was enlarged and damaged. I had barely any amniotic fluid left. I was 23 weeks pregnant. I was induced that night. We sat outside of the hospital and cried for most of the day before finally going to labor and delivery. We understood that our baby would die during the labor and delivery process." – Milan's Story, Illinois

"I was depressed and confused. I didn't know what to think anymore. I was shaking the entire morning and thinking where did I get this virus, what I did wrong. I couldn't believe what was happening. All the care I had, I never drink or smoke. I was very careful with my food, with my environment, taking all the precautions and I got CMV." – Zachary's Story, Texas

"While in the NICU he stopped eating and a NG tube was placed through his nose. It was a rough month for all of us. Kaden was such a strong baby. He hardly ever cried and just seemed to take everything that was thrown his way. It was very clear he was going to be a fighter." – Kaden's Story, Washington

NEIGHBOR WORKS ANCHORAGE, FUNDING REQUEST 2012

<TARGET><BILL></BILL><SUBJECT>NEIGHBOR WORKS ANCHORAGE, FUNDING REQUEST
2012</SUBJECT><COMM>SHSS27</COMM></TARGET>

NeighborWorks®
ANCHORAGE

February 3, 2012

The Honorable Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

Dear Senator Davis:

NeighborWorks® Anchorage respectfully submits for your consideration a request for funding to support our work in the critical areas of affordable housing, strengthening neighborhoods, and community engagement. Formerly known as Anchorage Neighborhood Housing Services, Inc. we have been improving the quality of life for Anchorage families and individuals for 30 years.

We are requesting funding from the State of Alaska to help us repair the historic Loussac-Sogn Single Resident Occupancy building, located in downtown Anchorage. This property provides safe, stable housing for many of our community's most vulnerable individuals. A number of repairs are needed to maintain the property on behalf of our residents. Last year we initiated the first of the repairs by replacing the elevator and adding chair lifts. For your convenience, our revitalization request has been categorized by building specialty.

We greatly appreciate the opportunity to be considered for this important funding, and thank you for taking the time to review our request.

Sincerely,

Debe Mahoney
Executive Director

480 West Tudor Road, Anchorage, AK 99503 p 907.677.8490 f 907.677.8450 www.nwanchorage.org

NeighborWorks®
CHARTERED MEMBER

NeighborWorks® Anchorage Legislative Request 2012

NeighborWorks® Anchorage Loussac-Sogn Revitalization Project

Anchorage Neighborhood Housing Services, Inc. dba NeighborWorks® Anchorage (NWA) was founded in 1981 and is dedicated to improving the quality of life for families and individuals by strengthening neighborhoods and creating and preserving housing opportunities. As a member of the NeighborWorks® America network of excellence, NWA provides affordable rental opportunities to nearly 3,000 individuals through its 950 units, housed in nine properties throughout Anchorage. Two of our properties are located in the downtown area. One of which, the Loussac-Sogn is in the heart of downtown and provides affordable rental housing for Anchorage's very low income seniors, individuals with disabilities, and other individuals earning less than 50% of the area median income (currently less than $29,850). The ground floor provides retail rental space for three minority-owned businesses, two not-for-profit organizations, The International Gallery of Contemporary Art, which has been located in our building for a number of years, and Urban Prints, a new social enterprise targeting disadvantaged young adults that opened for business this winter. As a business under the Anchorage Urban League, the goal is to provide job training for young adults facing individual challenges including homelessness and disabilities.

In addition to rental housing, NWA offers products and services through its homeownership line of business, supporting new homeowners through education and lending products and providing supportive services to existing homeowners. Services include minor repair grants and loans and accessibility modifications for seniors and the disabled. Through our community-wide Paint the Town program, we assist homeowners with minor exterior repair and painting. This program brings together local vendors, volunteer paint teams, and homeowners.

NeighborWorks® Anchorage is committed to housing our community's hard to house families and individuals, thereby reducing homelessness and contributing to long-term, stable housing. We are members of many local coalitions and working groups on affordable housing and other community issues. We are a member of the Anchorage Continuum of Care and a founding partner of the Anchorage Project Homeless Connect. We work closely with many providers of supportive services to permanently house their clients and consumers, including providing housing for individuals and families coming out of emergency shelter. We work with local, non-profit recipients of federal homeless assistance programs to provide permanent housing solutions for our community's most vulnerable populations. Using the "Beyond Shelter" model, we provide the housing while our partners provide services such as mobile case management, self-sufficiency training, and other life skills development.

NeighborWorks® Anchorage goes beyond providing safe, clean and affordable housing; we offer opportunities for residents to have more than just a place to call home. NWA's community engagement programs and resident services offer continuous, self-renewing efforts aimed at relationship building, problem solving and building a stronger community. They are based on the belief that people have the ability to name their problems and identify the additional information and resources they need to solve them. This is a people-focused process that improves the quality of life for individuals and the greater community.

We provide information and referrals for a vast array of community services through our partner agencies. Over the past two years we also held six Community Resource Fairs at our properties. Participants were able to receive free credit reports and flu vaccines, sign their

children up for Denali Kid Care, apply for library cards and access more than 17 additional services and resources.

In support of long-term, systemic change, we provide activities such as participation in NeighborWorks® America's Community Leadership Institute, Leadership Training and Coaching, and Resident Council support. We also encourage resident involvement through volunteer opportunities such as Project Homeless Connect.

Four of our properties currently have resident councils and our two downtown properties have floor leader programs. Resident councils serve as a means for residents to successfully integrate into their surroundings and become involved in leadership development. Resident council members learn how to conduct effective meetings and how to develop community organizing skills and techniques. Councils usually meet monthly to discuss property issues as well as resident programs and services. These councils plan social activities and events to encourage resident involvement and to promote relationship and community building efforts.

Throughout the year, we offer Community Leadership Training free of charge to residents and community members. Based on national practices, the workshops include topics such as team building, advocacy, civic engagement and diversity. Workshops include active participation, detailed workbooks and often guest speakers. Focused on the issues that the participants identify as the most critical challenges they face, we develop a curriculum based on national leadership training models. These workshops have led participants to attend assembly meetings, volunteer in the community and become award winning leaders in their neighborhoods.

Through our programs and projects, we have also discovered that by mentoring someone who faces overwhelming challenges, their life can be transformed long term. Therefore, we initiated a pilot mentoring project called Stepping Stones to work with at-risk adults. The team includes over ten community leaders who are fully committed to the project. At the announcement of this new pilot program, we received applications from 14 potential mentees. We have no doubt that lives will change for all of us based on our past successes and the commitment of so many community leaders who have worked on the project for the last year. Our intent is to build on those successes, resulting in a model that can be duplicated in other communities.

NeighborWorks® Anchorage recognizes that we must do more than provide "bricks and mortar" in order to create stable permanent housing, especially for those in our community that are the most vulnerable. As our community focuses on finding solutions to increase permanent, stable housing, NWA is taking a leading role by focusing expanded efforts on resident services and community engagement.

Our ultimate goal is to increase the likelihood of individuals and families retaining stable, permanent housing. We believe this is a foundation to a better quality of life. Families and individuals who can successfully retain housing can focus on other areas of life like health and well being, education, financial stability, and planning for the future. Stable families benefit all our neighborhoods, communities and our future. Educational attainment and success is higher when children are not moving from school to school. Access to stable permanent housing can reduce the number of people in emergency shelter or those living in substandard conditions.

Need Statement/Project Description

NeighborWorks® Anchorage provides housing for some of our community's most vulnerable residents in two properties located in the downtown area. One property, The Loussac-Sogn is a historic building we purchased, remodeled and placed in service in 1994. Built in 1947, the Loussac-Sogn originally provided office and medical clinic space. Since 1994, this three-story historic building has provided single room occupancy residential apartments in the center of downtown Anchorage. The structure has 50 efficiency units and 2 one-bedroom units on the top two floors, and 6 commercial units on the first floor. The residential portion of the building features congregate kitchens, bathrooms, and laundry facilities on each floor. There are lounges with cable television so the residents can choose to gather in a "family-like" setting. The Loussac-Sogn program targets rental applicants at or below 50% of the area median income, or slightly less than $30,000 annually. The standard single room rent is $500 per month at this time.

As previously stated, residents of the Loussac-Sogn represent some of our community's most vulnerable individuals. The following provides a snap-shot of our current residents:

Youngest:	Age 20	Lowest Income:	$ 4,901
Oldest:	Age 79	Highest Income:	$18,214
Average:	Age 49	Average Income:	$16,558*

*Currently 71% of our residents are below 30% of the area median income.

Female:	20	Disabled:	15
Male:	26	Seniors:	26

A sampling of employed residents work in the following industries: AmeriCorp Volunteer, retail sales, music and entertainment, hotel and tourism, food service/restaurant, plumbing apprentice, grocery.

- We currently house 14 senior women with disabilities living on fixed incomes; three are over 70 years old.
- Three young women found housing here after gaining mental stability from an institution; one is currently going to college part-time.
- Two middle-aged women gained stable housing after being homeless; one woman was nearly beaten to death while she was homeless and was in a coma for months, she is now stable and enjoys working during the summer at a nearby fish camp.
- Eight previously homeless men are currently housed at the Loussac-Sogn having been referred by local shelters; six have held down jobs in the neighborhood. One has gained a management position at JC Penney and hopes to buy a home in Anchorage this summer.
- We have fourteen male residents that are disabled and living on fixed incomes.
- Eleven of our residents are gainfully employed.
- One young woman moved here from Hawaii, participated in the Nine Star Program and has joined the Air Force.

Successfully retaining housing can be a challenge, especially for those families and individuals that have special needs, have past histories that make accessing mainstream housing difficult, or who have experienced homelessness, trauma, or other life altering events and are attempting to reintegrate into their community. Success means one must be able to pay the rent on time

and abide by the lease terms, tend to housekeeping and hygiene, and be a respectful neighbor, amongst others. Without extra help, many people with special needs and difficult histories can find these requirements impossible to meet, and therefore continue cycling through substandard housing nonstop. Many landlords will deny housing if past histories and references are poor, often limiting housing options. Lacking permanent housing, or being frequently transient is not just a negative social problem, it also has negative consequences for the individual. We all need to feel that we contribute to something, that we are part of something, and that we are accepted and valued by others. Lacking a stable community, those in a condition of transiency will often not be able to meet this need to belong.

Providing a place to call home plus supporting vulnerable residents takes time and money. The Loussac-Sogn was originally constructed in 1947 and while the building was rehabbed in 1994 and continually receives improvement, some of the important mechanisms and the cosmetic factors need additional attention.

The Loussac-Sogn operates without government subsidy, and contributes to the tax base of Anchorage. Operating on highly affordable, below market rents limits the ability of the property to be refinanced or be otherwise recapitalized using debt. In the past year NeighborWorks® Anchorage has invested over $150,000 into the property, including replacing the elevator and adding a stair lift to increase accessibility. We leveraged a $50,000 capital grant from NeighborWorks® America, and used a large portion of the buildings reserves to fund these critical improvements.

We have identified three categories of physical improvements needed to preserve the building and retain our ability to house vulnerable residents. The first priority is to rehab the roof and preserve the exterior of the building. The roof is the original roof from 1947 and while it has been repaired and re-layered over the years, a comprehensive re-roofing is now needed to extend the life of the property. The exterior of the building needs to be repainted and the awnings over the commercial storefronts need to be replaced. This will help protect the structure from the elements and restore the building's historic look. The exterior wainscot at street level is deteriorated and needs to be rehabilitated; restoring this element will preserve key historic façade in downtown Anchorage. As the Loussac is a Registered Historic Property, all exterior rehabilitation work will be done in conformance with the applicable standards for historic preservation. The look of the building will not be changed, but rather renewed and the historical features preserved and highlighted. Request: $1,328,050

The second priority is to replace and upgrade the boilers and water heaters that provide heat and hot water, as well as the rooftop air handling unit (RTU) that provides for ventilation and indoor air quality. While functional, the boilers are old and inefficient and we seek to replace them with new energy efficient systems (at least 95% AFUE/ASHRAE rating). The water heaters will be upgraded as well. The RTU has reached the end of its economic and useful life, and is deteriorated; replacement is necessary. Improving the air circulation and ventilation will improve indoor air quality, which results in a healthier home for the residents. Increasing the efficiency will help reduce the operating cost of the building, resulting in a more sustainable building and ensuring long term and stable housing that remains affordable. Request $178,250

The third priority area is to modernize the building interiors, included new flooring, paint, and upgrades to the plumbing and lighting systems. We believe that our residents should have a "home-like" environment in which to live, as this instills a pride of place and improves the quality of life. We seek to increase the quality and amount of lighting in each of the units to help address issues such as Seasonal Affective Disorder (SAD) and combat the long, dark, and cold months we experience in the north. Replacing the flooring in the common areas will reduce trip

hazards and help preserve the entire building by reducing water infiltration and damage to the subfloor and other building systems. The new flooring and carpet products available are durable, resilient and easy to clean and maintain, which will help reduce ongoing maintenance and replacement costs. Request $192,010

Recent improvements for fire and life safety requirements have depleted the reserves for this building. Offering affordable rents without government subsidy means that the Loussac-Sogn operates on a break even basis without additional capacity of debt financing for capital improvements. The aging facility demands greater effort and expense for annual repairs and maintenance, which more often are short term fixes for the serious building needs. Also, increased costs of utilities and property taxes paid to the Municipality of Anchorage add to the strain on the annual operating budget.

This investment of state capital funds into the Loussac-Sogn will preserve a historic building and piece of Alaska history, continue to support our small business tenants with an attractive and visible building, and enhance our ability to achieve the ultimate goal of ensuring stable long-term, affordable housing for the vulnerable people that we serve.

Fund Request/Budget

NeighborWorks® Anchorage respectfully requests funding from the State of Alaska for the repair of the historic Loussac-Sogn Single Resident Occupancy building.

State support for the repair of the building will not only benefit the residents but it will also benefit the downtown business district and the community at large. We will continue to serve our community's most vulnerable citizens with safe and desirable housing, ensuring the continuance of our part in answering the need to provide affordable housing to those individuals with very low incomes and special needs.

As indicated above, the capital needs of the building exceed what can be leverage from debt sources and revenue from operations. Capital funds for the preservation and revitalization of the building are vital to maintaining the near and long term capacity to house vulnerable individuals.

Our requested budget is presented below. A detailed budget is attached.

CATEGORY 1 – Building Envelope Preservation	$1,328,050
CATEGORY 2 – HVAC Energy Efficiency Upgrades	$ 178,250
CATEGORY 3 – Interior Preservation	$ 192,010
TOTAL REQUEST	$1,698,310

NeighborWorks® Anchorage is committed to changing lives, changing community and changing futures. Suffering trauma, dealing with physical or mental illness, and having no place to call home are burdens many of us will never face. The Loussac-Sogn provides vulnerable members of our community with a place they can call home, a connection to the wider community and foundation for a better future.

Loussac-Sogn Building Capital Renovation Budget

Category/Item		Cost Estimate
Category 1 - Building Envelope Preservation		
Re-Roof Building	$	1,250,625
Exterior Repaint	$	35,565
Replacement of Awnings	$	41,860
Category Subtotal	***$***	***1,328,050***
Category 2 - HVAC Energy Efficiency Upgrades		
Energy Efficiency Upgrade of Boilers and Water Heaters	$	132,250
Replacement of Roof Top Air Handlers	$	46,000
Category Subtotal	***$***	***178,250***
Category 3 - Interior Preservation		
Replacement of Flooring in Common Areas	$	92,860
Repainting of Common Areas	$	22,000
Unit Lighting	$	26,000
Structural and Water Damage Repairs	$	51,150
Category Subtotal	$	192,010

This project was funded by the Energy Efficiency and Conservation Block Grant, a program of the American Recovery and Reinvestment Act.

Executive Summary

The Municipality of Anchorage (MOA) contracted with McDowell Group and ECONorthwest to conduct a technical analysis of housing demand and preferences in the Anchorage Bowl and Chugiak-Eagle River. The purpose of the study was to evaluate overall housing demand over the 2010 to 2030 period and evaluate the financial feasibility of compact housing types. The study was designed to answer questions such as:

- *What is future housing demand and which mix of housing options is preferred?*
- *Is there enough available land to construct new housing to meet this future demand?*
- *What role does compact housing development play in meeting this expected growth?*
- *Are there policy, financial, market, or physical barriers that need to be addressed to accommodate expected demand for housing and make development of new compact housing financially feasible, given the cost of building new compact housing and achievable rents in Anchorage?*
- *If no action is taken to accommodate housing demand, what may happen to Anchorage's housing market and rate of population growth?*

The study's key finding is that there is not enough buildable land to accommodate future housing demand under historical development patterns, current land-use policies and development options. Building mid-rise residential and mid-rise mixed-use rental developments is not financially feasible in current market conditions. Without changes in the existing construction environment, Anchorage will not be able to accommodate the forecast for population growth, which could have adverse effects on the area's growth and economic health.

The mismatch between future housing demand and land supply is serious and needs attention. If not properly addressed, the housing gap could affect population growth in Anchorage as well as decrease affordability for both renters and homeowners. Both impacts would affect the health of the local economy. Policies that can help Anchorage accommodate expected growth are those that will increase land use efficiency; increase residential densities; increase the buildable land supply, especially through redevelopment; and ensure housing affordability.

Demand Analysis Results

- Demand for approximately 18,200 new dwellings in the Anchorage Bowl and 3,300 new dwellings in Chugiak-Eagle River over the next 20 years is expected.[1]

[1] Based on the Institute of Social and Economic Research at the University of Alaska Anchorage forecast for population growth (December 2009) for the entire Municipality of Anchorage and Municipal staff's analysis for how this breaks out by Municipal sub-areas.

- The demand for attached and compact housing types will increase over time; attached housing is projected to make up 65 percent of housing demand preference in the Anchorage Bowl by 2030 (up from 58 percent currently). An aging population, decreases in housing affordability, and changes in lifestyle will drive this shift in housing preference toward attached housing, particularly in the Anchorage Bowl.

- A survey of over 800 households in the Anchorage Bowl and Chugiak-Eagle River found that 18 percent of respondents were "highly likely" candidates to choose compact housing based on their stated housing preference.

Land Supply and Housing Capacity

- As of 2010, there were 5,800 acres of buildable residential land in the Anchorage Bowl, including 5,200 acres of vacant (undeveloped) land and 600 acres of partially vacant land that has space to be further subdivided or developed.

- The inventory shows a 30 to 40 percent decline in the amount of buildable residential land in the Anchorage Bowl since 1998.

- Without increasing the current level of housing density and increasing the rate of redevelopment, the Anchorage Bowl will lack land for about 8,900 of the projected new housing units, or about half of expected demand.

Projected Residential Land Sufficiency, Anchorage Bowl, 2010 to 2030

Structure Type	Land Capacity	Projected Housing Demand	Sufficiency (capacity minus demand)
Large Lot Single Family	2,030	362	1,668
Single Family	3,614	6,003	(2,389)
Two Family / Duplex	1,272	3,455	(2,183)
Townhouse	768	1,455	(687)
Multifamily / Other	3,315	6,909	(3,594)
Total	**11,000**	**18,184**	
Total "surplus units"	--	--	**1,668**
Total "deficit units"	--	--	(8,852)

Source: ECONorthwest

- Chugiak-Eagle River has enough land to meet its own projected demand for all housing types. The surplus land capacity in Chugiak-Eagle River could accommodate some of the Bowl's single-family detached housing demand; however, it is not the ideal location to address the Bowl's need for dense urban multifamily development and cannot accommodate all of the projected demand.

Projected Residential Land Sufficiency, Chugiak-Eagle River, 2010 to 2030

Structure Type	Land Capacity	Projected Housing Demand	Sufficiency (capacity minus demand)
Large Lot Single Family	1,700	665	1,035
Single Family	2,587	1,663	924
Two Family / Duplex	914	499	415
Townhouse	707	132	575
Multifamily / Other	629	365	264
Total "surplus units"	**6,537**	**3,324**	**3,213**

Source: ECONorthwest.

Financial Feasibility of Compact Housing

- Pro forma financial feasibility analysis for four housing prototypes, including 1) small-lot single-family detached units, 2) infill townhomes, 3) mid-rise residential development, and 4), mid-rise mixed-use development, concludes:
    - Of the four prototypes, small-lot single-family detached units (on a 3,000 square foot lot) are the most financially feasible compact housing and can be built profitably. However, the current minimum lots size (6,000 sq. ft.) and width (50 feet) would need to be amended.
    - The townhome prototype is close to feasible but sensitive to changes in the assumptions including increasing costs or decreases in sale price. This sensitivity explains the tendency for developers to choose a condominium approach which allows the developer to lower development costs slightly and reduce the amount of land needed.
    - Pro forma analyses of mid-rise (four-story) residential and mid-rise mixed-use rental prototypes demonstrate that these types of developments are not financially feasible. The financial gap can range from 20 to 55 percent of total development costs. Rents 25 to 60 percent higher than current norms would be required to make most of these projects financially feasible without a subsidy.
- Key factors that affect the financial feasibility of compact housing development in the Anchorage Bowl and Chugiak-Eagle River are:
    - Local costs for compact and other forms of housing are high. Anchorage construction costs are 37 percent higher than the nation's average. Contributing cost factors include: a short construction season, lack of contiguous utility, street and sidewalk grids, presence of unexpected contamination on sites, presence of peat that must be removed for structural integrity, higher transport costs for materials, smaller and less flexible labor pool resulting in higher labor costs, and less than ideal building sites, among other factors.

- Parking is expensive (but necessary) to provide. Reducing parking requirements or other creative approaches to addressing parking needs could bring housing projects closer to feasibility.

- The limited access to equity and the conservative lending environment is a barrier to developing mid-rise residential and mixed-use structures. Many banks require 30 percent of the project costs to be in the form of equity. Some equity lenders charge up to 20 percent interest. For condominium projects, lenders have high pre-sale requirements. The current conservative lending environment is not unique to Anchorage

- The Anchorage Bowl and Chugiak-Eagle River lack neighborhoods with a traditional "main street" architectural form where higher density development typically locates. Compact housing is easier to finance and sell when it is located near retail and other types of amenities (such as grocery stores, coffee shops, transit access, etc.).

- Public investment and other creative solutions will be necessary to make mid-rise multifamily and mixed-use development feasible in Anchorage in the near future.

Implications for Housing Policy in Anchorage

The key conclusions of the analysis are:

- Given the historic density of development and rate of redevelopment, the Anchorage Bowl does not have sufficient vacant buildable residential land to accommodate the demand for housing units forecasted over the next 20 years.
- Building mid-rise residential and mid-rise mixed-use rental developments is not financially feasible in the current market.

Those conclusions lead to an obvious, broad policy question: *What can the Municipality do to accommodate the expected demand for housing?* This question is not new to the Municipality—the preferred growth alternative in *Anchorage 2020* was the Urban Transition Scenario, whose policies included developing more intensive urban centers in Downtown and Midtown and encouraging infill and redevelopment where appropriate.

Housing Policy Options for Further Consideration

Assuming that *Anchorage 2020*, still represents the vision for the community, the following are the study team's suggestions for housing policies that merit further consideration by policy makers, city planners, housing advocacy groups, neighborhood community councils, developers, and financial institutions. The Municipality is already considering some of these options through the Title 21 rewrite process, the *Anchorage 2020 Comprehensive Plan*, and other initiatives.

Increase Efficient Land Use

- Update the Land-Use Map to increase land use efficiency and implement *Anchorage 2020* and the Title 21 Rewrite.
- Reduce parking requirements for multifamily housing to reduce development costs.

Increase Residential Densities

- Allow small-lot single-family housing on smaller lots (less than 6,000 square feet) and narrower lots (less than 50 feet) where appropriate and with design standards.
- Provide opportunity areas for building denser housing, such as the centers identified in *Anchorage 2020.*
- Develop funding solutions to provide infrastructure to support residential densities and more efficient use of land.
- Implement design standards to ensure development of desirable communities and protection of land values.

Increase the Supply of Buildable Land

- Phase infrastructure expansion into large land holdings in Chugiak-Eagle River.
- Conserve the residential land supply by limiting rezoning of residential land for other uses.
- Identify publicly owned lands that are suitable and make them available for residential development.

Facilitate Redevelopment

- Create and implement a redevelopment strategy to encourage infill and more compact residential development.
- Identify key redevelopment stakeholders, tools, and opportunity areas or sites to implement a redevelopment strategy.
- Target and clarify the existing tax-abatement and fee-waiver ordinance to increase effectiveness as a redevelopment tool.

Ensure Affordable Housing

- Expand affordable and workforce housing opportunities by identifying appropriate tools or financial incentives to create or rehabilitate affordable housing.

Improve the Regulatory Process

- Seek ways to further streamline development regulations and the permit process.

Next Steps

This technical report offers a detailed analysis of the housing demand challenges facing the Anchorage Bowl and Chugiak-Eagle River, and provides a basis for continued work on housing issues. The Municipality's next steps are to complete work on the Title 21 Revisions and develop a strategic plan to implement the preferred recommendations from this report. Some policy options will create more community or developer resistance, and policy makers and Municipal staff will need to prioritize housing policies to be adopted based on the outcomes they are most concerned about, as part of a strategic planning process.

AFFORDABLE RENTAL HOUSING A.C.T.I.O.N.
A Call To Invest in Our Neighborhoods

Alaska Fact Sheet

History of the LIHTC Program's Success in **Alaska**

2,734 affordable rental homes
4,156 jobs created
$200 million in local income
$23 million in state and local revenue
$100 million in federal revenue

The Low Income Housing Tax Credit (LIHTC) program is the most successful affordable housing production and preservation program in the nation's history. The program is designed to support the development and rehabilitation of affordable rental housing through private capital investment, and has received broad bipartisan support throughout its 25-year history.

As a provision of the Tax Reform Act of 1986, the LIHTC program has provided critical financing for the development of **2,734 affordable rental homes** in **Alaska**. Since 1987, over $75 billion of capital has been invested in the LIHTC program, financing the development of over **2.4 million affordable rental homes** throughout the nation. Widely considered the nation's most successful housing production program, the LIHTC finances approximately 90 percent of all affordable rental housing development. In 2010, 50 percent of all multifamily housing starts were financed by the LIHTC program.

The LIHTC program has a direct impact on job creation through both the construction and development of an affordable housing community and the residual benefits of that investment. Prior to the 2007-2009 recession, approximately **140,000 jobs** were created annually. It is estimated that 122 direct jobs and 30 permanent jobs are created per 100 affordable rental homes built; most of which are in the small business sector. Direct jobs are generated during the development and construction of an affordable housing community, while permanent jobs are created in the retail and business service industries due to the ongoing operation and occupancy of those affordable rental homes. Since 1987, over **2.8 million direct jobs** and almost **700,000 permanent jobs** have been created due to the economic impact of the LIHTC program; including over **3,000 direct jobs** and **800 permanent jobs** in **Alaska**.

As the fundamental housing resource used to transform communities, the LIHTC program creates affordable housing for working families and people with special needs (such as the elderly, the disabled, and the homeless) in urban, suburban, and rural communities throughout the country. In addition to successfully achieving a public policy goal, the LIHTC program has generated over **$57 billion** in tax revenue for the Federal government through increased investment.

The LIHTC program has a direct economic impact within the community through both the development of infrastructure and job creation. The impact of construction and the expansion of the tax base from the ongoing operations of the affordable apartment communities attracts investment and generates tax revenue for states and municipalities. Over the past 25 years, this increased investment has led to a return of **$200 million** in local income for **Alaska** communties, and over **$23 million** in state and local tax revenue for **Alaska**

In 2008, **149 affordable rental homes** received LIHTC financing in **Alaska**, creating approximately **182 direct jobs** and **45 permanent jobs** for the state. Through this investment, **Alaska** benefited from over **$1 million** in additional state and local tax revenue. During that year, increased investment also led to an additional **$13 million** in income for **Alaska** localities.

The LIHTC program is a premier example of a public-private partnership as it is designed to attract private investment by large corporations for a public good. The public-private nature of the LIHTC program has brought a private-sector discipline to the industry, as the ability for investors to claim tax credits and maintain a strong rate of return on their investment is determined by the project's success. Such a "pay-for-performance" model has led to the very effective management of LIHTC properties. Average vacancy rates for the overall rental market are double that of LIHTC-financed properties, and LIHTC properties have an extraordinarily low foreclosure rate of only 0.1 percent annually.

Currently there is an unmet national demand for over 2 million affordable rental homes. Although substantial vacancy rates are present in many markets, rental units that remain empty are typically high-end and are not affordable for the majority of Americans. The unmet demand for affordable housing will continue to grow over the next decade, presenting a shortfall of up to 5 million rental units by the year 2020.

ANCHORAGE

Building Community Through Neighborhoods

NeighborWorks®
ANCHORAGE

Presents:

A Community Leadership Workshop Series

Participate in an opportunity to shape Anchorage's future in this exciting project

Attend all 4 workshops and receive a ***Community Leadership Award***

You can sign up today for one or all of these workshops:

- March 24, 2012 - Community Issues
- April 21, 2012 - Community Engagement
- August 18, 2012 - Community Vision
- October 20, 2012 - Community Action

- **Location: NeighborWorks® Anchorage, 480 West Tudor Road, Anchorage, 99503**
- All workshops are free of charge, materials and meals provided
- Open to all residents and community members
- All workshops are scheduled for a Saturday from 9:30 – 3:30
- Sign up today as space is limited to the first **25** participants

To register or for additional information:

Call Vickie Dodge-Pamplin at 677-8409 or Hazel Blackmore at 677-8412

Or go to our website at: www.nwanchorage.org for more information

4. Community Action – *October 20*
    a. Service and Impact

NeighborWorks® Anchorage is dedicated to improving the quality of life for families and individuals by preserving homes, creating new housing opportunities and strengthening neighborhoods. We continue to work to address the needs of low and moderate income families and neighborhoods, and look forward to the day when everyone is successfully housed in a thriving community. **Our 2011 highlights include:**

Providing Quality Affordable Apartments:

- Over 1,800 Anchorage residents have a safe and stable home at one of our 9 rental communities. We are the largest non-profit provider of affordable housing in Anchorage. Our portfolio continues to see very high demand for our rental units and had an average occupancy rate of 97% in 2011.
- Through a partnership with RurAL CAP, we completed weatherizing the Spruce View Apartments and the Hampstead Heath Apartments, and began weatherizing the Stephen's Park Apartments. As a result, these properties will be more energy efficient, with lower utility costs for both NeighborWorks® Anchorage and the residents.
- In collaboration with community partners such as Catholic Social Services and Beyond Shelter, we housed 32 "hard-to-house" families and individuals, with 78% of those families staying successfully housed.
- We purchased the Hampstead Heath Apartments from the Low-Income Housing Tax Credit development partnership, securing the affordability of these 88 units for the long term.
- $498,000 was invested in our affordable housing portfolio in 2011 to update building systems and extend the economic life of our properties, increasing comfort and safety for over 1,800 residents.

Developing and Preserving Affordable Housing:

- We constructed an additional three 'for sale' condominium units at our Hollybrook Terrace project in Independence Park (South Anchorage). In 2010, the project won the "Golden Hammer" award at the annual Anchorage Homebuilders Association "Parade of Homes" for their price range.
- We commenced construction of a HUD funded rental housing project for low-income persons who experience a disability. The project, named The Roosevelt, will feature 10 accessible one-bedroom units, and is being built in Spenard. As a Section 811 project, all rents will be income-based allowing residents to pay no more than 30% of their income towards rent. The complex will be ready for occupancy in the summer of 2012. This project represents a $2.3 million dollar investment into the affordable housing needs of Anchorage.
- Construction of a HUD funded rental housing project for low-income seniors is also underway. The project, called Connolly Square in honor of the founder of NeighborWorks® Anchorage, will feature 20 accessible one-bedroom units, and is being built in the Airport Heights neighborhood. As a Section 202 project, all rents will be income based allowing residents to pay no more than 30% of their income towards rent. The complex will be ready for occupancy in the summer of 2012. This project represents a $5.3 million dollar investment into the affordable housing needs of Anchorage.
- We completed a $1.8 million dollar sprinkler system replacement and unit modernization project at the Spruce View Apartments, preserving 82 units of affordable housing in Anchorage.

Creating, Educating, and Supporting Homeowners:

- We assisted 31 households in becoming homeowners through our innovative lending programs for low-to-moderate income borrowers.
- 97 individuals received our one-on-one pre-purchase counseling providing them with the tools to become successful homeowners.
- We provided home maintenance education for 148 homeowners, helping them maintain their homes.
- 27 of our new homeowners in Anchorage participated in our post-purchase education workshops where they learned common home maintenance and ways to protect their investment.
- We have held our mortgage loan delinquency rate to less than 4% through the diligent work of our lending staff, both in pre- and post-purchase education and through working one-on-one with "at-risk" borrowers.

Repairing, Rehabbing and Restoring Pride of Homeownership:

- We acquired, rehabbed, and resold 4 homes into affordable homeownership, creating 4 new homeowners. Two of these units were foreclosures. Three of these units were completed under the HARP program.
- We assisted 54 homeowners by preserving their asset and retaining their ability to live independently through the completion of 71 accessibility and minor repair projects.
- We created 12 new homeowners by originating second mortgage or down payment assistance loans.
- We organized over 200 volunteers and raised $30,000 in community contributions to repaint 18 homes for our annual Paint the Town community beatification project held in June 2011. Since 2006, our community teams have painted 92 homes for deserving neighbors in neighborhoods across the city.

Community Engagement, Creative Partnerships, and Empowering Residents:

- We helped train and empower over 50 new community leaders through our quarterly leadership training workshops and the NeighborWorks® America Community Leadership Institute trainings.
- Over 900 residents participated in resident councils and resident-driven activities like community volunteer service projects and social events.
- We are a key partner in the Project Homeless Connect program. Two events were held, serving more than 1,400 households with 150 agencies providing services to the homeless.
- We hosted and provided volunteers for the Adelaide Mobile Food Pantry distributing more than 30,000 pounds of food to over 3,000 residents. Over 300 people volunteered to help at this bi-monthly event.
- Grant funding and donations totaled over $50,000 which is 28% of the total expenditures for three Community Engagement Program projects including environmental justice, mentorship, and community building through our holiday meals program.
- We have three mentor/mentee matches for our Stepping Stones Mentorship Program for adults who have experienced homelessness. Community volunteers and leaders serve as mentors and work side by side with mentees to assist them in developing their individual success plan. We plan to expand the Stepping Stones Mentorship Program with a goal of 10 mentor/mentee matches.

EQUAL HOUSING OPPORTUNITY

Loussac Sogn

Single Room Occupancy Apartments

429 D Street
Anchorage, Alaska 99501
(907) 272-4446

Project Information

Historic building built in 1947 in the heart of downtown Anchorage

50 single room occupancy units and 2 one-bedroom units on top 2 floors

6 commercial units on ground floor

Amenities include lounges with cable television and congregate kitchens, bathrooms and laundry facilities

Resident eligibility

50% Area Median Income or less ($29,850)

Renovated in 1994, the Loussac-Sogn provides affordable housing to some of our community's most vulnerable residents—seniors, the disabled, and those on fixed incomes. It also provides space for small locally owned businesses and non-profits, giving them a place in the core of downtown Anchorage.

We are forging new partnerships with our commercial space users, and have recently welcomed UrbanPrints to the building. A screen printing social enterprise, UrbanPrints offers job training and employment skills to disadvantaged young adults.

NeighborWorks® Anchorage is working to ensure that the Loussac-Sogn can remain a part of Anchorage history, continue to provide affordable housing to those who need it most, and be a vital part of a thriving downtown neighborhood.

Housing our community's most vulnerable residents

Resident demographics

Male	26	Female	20
Disabled	15	Seniors	26

Youngest	Age 20
Oldest	Age 79
Average	Age 49

Lowest income	$ 4,901 annually
Highest income	$18,214 annually
Average income	$16,558 annually

Currently 71% of our residents are below 30% of the Area Median Income ($17,900)

Supportive Housing for the Elderly

HUD Section 202 Project

1540 Charter Circle
Anchorage, Alaska 99508

Project Information

20 accessible 1-bedroom units

Amenities include lounges, community space, on-site laundry, business center, and storage

Rental assistance provided by the United States Department of Housing and Urban Development (HUD)

Resident eligibility

62+ years old

50% Area Median Income or less ($29,850)

Named in honor of the founder of NeighborWorks® Anchorage, Faye Connolly, Connolly Square will provide permanent, independent living rental units and help meet the shortage of affordable housing designed for seniors. The building will receive rental assistance from HUD, ensuring that the residents will pay no more than 30% of their income to rent.

Designed to accommodate the needs of seniors, the building features accessible units and fixtures, as well as spaces for community and social activities.

Located in the Airport Heights neighborhood of Anchorage, close to Alaska Regional Hospital, Connolly Square is made possible by funding from the Alaska Housing Finance Corporation's Neighborhood Stabilization Program, and the HUD Section 202 Supportive Housing for the Elderly Program.

Source of Funds

HUD Section 202 Program	$ 4,362,900
Neighborhood Stabilization Program	$ 493,640
HUD Section 202 Demonstration Project Grant	$ 400,000
NeighborWorks® Anchorage	$ 25,000
Total development cost	**$ 5,281,540**

COMMUNITY COLLABORATION

NeighborWorks®
ANCHORAGE

Community Collaboration

NeighborWorks® Anchorage ardently believes that collaboration is the most powerful way to achieve our goal to build community through neighborhoods. By working together, sharing skills and knowledge, and pooling our resources, we can meet the needs of our community. We share a common vision with many partners of a strong, vibrant and sustainable community where everyone has a place to call home.

We are dedicated to a philosophy of teamwork, sharing ideas, and are focused on the people we serve. Our teamwork is part and parcel of everything we do, and our staff work collaboratively with one another and with our partners. Working together as a team, we can accomplish great things.

NeighborWorks® Anchorage works to develop, sustain, and further our community partnerships and collaborations. We cultivate strong bonds with the public, private and non-profit sectors to make a positive and lasting impact on the communities we serve.

Our community partners and supporters are wide and varied, ranging from service providers such as the ARC of Anchorage, Anchorage Community Mental Health Services, Catholic Social Services, other housing providers like Cook Inlet Housing Authority, Habitat for Humanity and Anchorage Housing Initiatives, to public agencies including Alaska Housing Finance Corporation, HUD, and Department of Neighborhoods at the Municipality of Anchorage.

Our work is made possible through the support of the private sector where we count many lenders, businesses and suppliers as our friends and colleagues.

NeighborWorks® Anchorage is COMPASSIONATE.

Please contact our office if you would like further information. We can be reached at 907-677-8490.

COMMUNITY BUILDING

NeighborWorks®
ANCHORAGE

Community Building

NeighborWorks® Anchorage believes that all residents should have opportunities for civic engagement, leadership development and connections to the wider community. We empower people to make a positive difference in our neighborhoods and our city. We bring people together and focus on what makes a community a positive place to live. We teach people how to work with a diversity of opinions and backgrounds, and build strong, vibrant, and sustainable neighborhoods.

We offer unique opportunities for community building and engagement:

LEADERSHIP DEVELOPMENT

We are a member of NeighborWorks® America's Community Leadership Institute program, and our training workshops teach skills needed for successful community based leaders and advocates. Skills learned are then applied to a neighborhood project. Members are empowered to address issues by finding positive solutions that build and strengthen their neighborhoods.

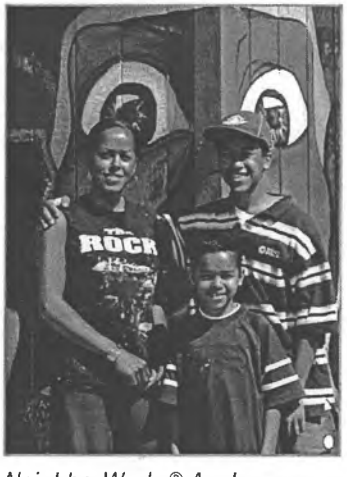
RESIDENT SERVICES AND CONNECTIONS

We work to develop relationships through resident councils, social activities and community events. These services are available to all residents at any NeighborWorks® Anchorage apartment community.

We can also facilitate access to vital services that enhance quality of life.

COMMUNITY OUTREACH

We collaborate with businesses, schools, community groups, and partner agencies to provide volunteer opportunities, workshops, and seminars to all members of the community. We support activities that encourage and foster a brighter future for everyone.



NeighborWorks® Anchorage is EMPOWERING.

We invite you and/or you organization to get involved in our community building activities. Please contact our office if you would like further information about our programs. We can be reached at 907-677-8490.

HOME REHAB

NeighborWorks®
ANCHORAGE

Home Rehab and Accessibility

Even the best built home will, at some point, need to undergo repairs or major replacements. Often the cost of replacing a roof or heating system will be a major expense. NeighborWorks® Anchorage can support current homeowners by maintaining the health, safety, and value of their homes through our repair and rehabilitation programs.

NeighborWorks® Anchorage manages grant programs on behalf of the U.S. Department of Housing and Urban Development, the Municipality of Anchorage, and the Alaska Housing Finance Corporation. Our knowledgeable and caring staff are experienced in guiding our customers through this often complicated process of outlining the work, hiring the contractor, and managing the project.

GRANTS

- **Minor Repair Program:** This program assists income eligible families who own and occupy a single family residence or mobile home in need of minor repair. Typical repairs may include roof repair/replacement, replacement of heating systems, or other health and safety improvements. Accessibility repairs can also be performed with Minor Repair Program funds.
- **Senior Access Program:** This program provides home accessibility modifications for qualified seniors, which allow them to continue to live independently in their own homes. Available to persons over 55 years of age, this grant can provide for accessibility improvements such as bathroom modifications, ramps, handrails, or stair lifts. Small assisted living homes of five bedrooms or less may be eligible for smaller grants to make improvements for eligible senior residents.

HOME IMPROVEMENT LOANS

NeighborWorks® Anchorage may be able to finance home improvement projects. These loans are made on a case-by-case basis. We welcome your questions, so please feel free to call our staff if you are interested in a home improvement loan.

NeighborWorks® Anchorage provides a SANCTUARY.

PAINT THE TOWN

Originally introduced in 1988, NeighborWorks® Anchorage re-launched Paint the Town in 2007 as part of the NeighborWorks® America nationwide NeighborWorks® Week. In the last two years we have assisted nearly 30 families with their exterior painting. Each year we hope to grow the program in order to help more families maintain the curb appeal of their homes. We invite you and/or your organization to get involved in this great community project.

Please contact our office if you would like further information about any of our home improvement programs. We can be reached at 907-677-8490.

HOMEOWNERSHIP

NeighborWorks®
ANCHORAGE

Counseling ✶ Education ✶ Lending

Home ownership remains at the heart of most Americans and that dream is alive and well in Anchorage. NeighborWorks® Anchorage offers homebuyer education and an array of affordable loan programs designed to assist home buyers with purchasing a home. Experienced staff assist potential new homeowners with the lending process and help determine how our loan products may best fit their needs. We offer down payment and closing cost assistance loans, first mortgages, and partner with a number of local lenders. All loan programs are subject to income limits and other borrower eligibility requirements.

COUNSELING AND EDUCATION

- **Pre-and Post-Purchase Counseling and Education:** Staff are HUD certified counselors and well versed in working with individuals and families in preparing them for homeownership. Pre-purchase counseling helps prospective homebuyers determine affordability based on their individual financial situation. Post-purchase classes help integrate new homeowners into their community and make them stronger, more self-reliant and more comfortable in their roles as new homeowners.
- **Foreclosure Prevention:** NeighborWorks® Anchorage has joined the Homeownership Preservation Foundation in a national campaign to help homeowners who are facing foreclosure. Borrowers can call: 1-888-995-HOPE or visit www.995hope.org/.
- **Financial Literacy:** The ABCs of Money program, designed for both adults and children, offers an opportunity to learn the basics of saving and money management, credit building, and lending practices.
- **Predatory Lending Prevention:** NeighborWorks® Anchorage is a key member of the statewide Don't Borrow Trouble® Alaska campaign. Victims of predatory lending or loan scams can call the hotline at 1-800-478-6501 or visit www.muni.org/dontborrowtroublealaska.

LENDING PROGRAMS

- **AnCHOR (Anchorage Communities Home Ownership Resource) Loan:** Through our partnership with the Municipality of Anchorage, the program provides a second or third mortgage to low- to moderate-income homebuyers to help pay for down payment and/or closing costs.
- **Revolving Loan Fund:** The "gap" loan fund provides the difference between a homebuyer's first mortgage and the sales price. This results in a lower monthly payment and increases the homebuyer's purchasing power.
- **NeighborHomes Loan:** In concert with Alaska Housing Finance Corporation, we provide down payment assistance loans to make homeownership available to households that may otherwise not be able to afford a conventional loan.
- **First Mortgage Loans:** First mortgage loans are offered on a case by case basis. These loans provide funding for borrowers who might not meet traditional lending requirements.

NeighborWorks® Anchorage is a STEPPING STONE.

Please contact our office if you would like further information about any of our home ownership programs. We can be reached at 907-677-8490.

NeighborWorks® ANCHORAGE

Affordable Rental Housing

HOME SWEET HOME

NeighborWorks® Anchorage is dedicated to providing quality, safe, and clean affordable apartment homes in convenient locations all over Anchorage. From well appointed three-bedroom units to practical efficiencies, we have an apartment that is ideal for any lifestyle. All our apartment communities are professionally managed and are located near schools, bus lines, and shopping. Many of our properties are also located close to major employment centers, including the downtown, midtown, and southeast business districts. Our Single Room Occupancy communities offer a less expensive alternative to the traditional studio apartment, allowing residents more freedom to pursue other interests without devoting most of their income to housing. We offer housing opportunities to people of all income levels, and some of our units feature rental assistance to qualified applicants.

Each of our employees embodies our values of integrity, professionalism, and customer first service. Our hard-working staff is focused on delivering the highest level of service and treating each resident first and foremost as a valued customer. Maintenance is available 24 hours a day to ensure the utmost comfort for our residents. We believe that everyone deserves a place to call home.

YOUR HOME IS OUR PASSION

At NeighborWorks® Anchorage, we value our partnership with those who serve in the armed forces. We participate in the Military Rental Partnership Program with both Elmendorf Air Force Base and Fort Richardson Army Post. Garden Villa, Boniface Plaza, and Stephens Park Apartments are properties approved for this program, and we encourage our military personnel to apply.

We believe a home is more than just a roof over your head. Residents can join programs and activities at many of our properties and become part of their greater community. Community building is a resident driven process in which people from all walks of life work effectively and collaboratively to create more livable and inclusive communities. Resident councils and leadership development activities are just two examples of volunteer opportunities available to our residents. Our goal is to create an environment that enhances every resident's quality of life in a safe, positive, family setting.

NeighborWorks® Anchorage is QUALITY.

LIVE ✶ WORK ✶ PLAY

Our mission is to provide clean, affordable and inclusive rental communities where our residents can enjoy a great quality of life, children can play safely, and families can enjoy their homes in peaceful settings. We are building community through neighborhoods!

Please contact our office if you would like further information on our apartment communities or our affordable rental housing programs. We can be reached at 907-677-8490. Our knowledgeable staff will be happy to answer your questions.

OVERVIEW ALASKA'S CITIZEN REVIEW PANEL

<TARGET><BILL></BILL><SUBJECT>OVERVIEW ALASKA'S CITIZEN REVIEW PANEL</SUBJECT><COMM>SHSS27</COMM></TARGET>

Alaska's Citizen Review Panel

Citizen Review Panel

Citizen Review Panel: Who

- The CRP is composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect.
- Susan Heuer, Anchorage (Chair)
- Bonnie Edmondson, North Pole
- Jeanne Evans, Bethel
- Dana Hallett, Haines
- Pat Hefley, Juneau
- Kristin Hull, Wasilla
- Steve McComb, Palmer
- Stella Schuchardt, Fairbanks

Citizen Review Panel

Citizen Review Panel: What

To provide oversight to the Office of Children's Services and gather public input on how well child protection is being delivered statewide. The Panel does this primarily by visiting different regions of the state and talking to OCS staff and partner agencies about how well the system is working. The Panel produces an annual report for OCS which is also distributed to all members of Legislature.

Citizen Review Panel: Where

Statewide! Since 2008 we've been to the following communities.

- Anchorage
- Aniak
- Barrow
- Bethel
- Cantwell
- Chitina
- Copper Center
- Delta Junction
- Dillingham
- Fairbanks
- Gakona
- Glennallen
- Healy
- Hooper Bay
- Juneau
- Kenai
- Kenny Lake
- Ketchikan
- King Salmon
- Kodiak
- Kwigillingok
- Naknek
- Northway
- Nuquisut
- Palmer
- Petersburg
- Point Hope
- Saint Mary's
- Sitka
- Soldotna
- Tok
- Unalaska
- Valdez
- Wainwright
- Wasilla
- Wrangell

Citizen Review Panel: When

The Panel has been active in Alaska since 2002.

Citizen Review Panel: Why

The Citizen Review Panel is mandated by state and federal law. The Panel was created through the federal Child Abuse Prevention & Treatment Act (CAPTA); Keeping Children & Families Safe Act of 2003 and through Alaska statute Sec. 47.14.205.

Benefits of CRP

- Eight volunteer members all contributing a minimum of 250 active hours annually
- We're the eyes and ears of the public for the Legislature and OCS
- Unique function of identifying and advocating for ancillary services that OCS cannot request
- Jointly we can achieve a vastly improved child protection system for the children of Alaska

Issues CRP is monitoring

- Wasilla: Director Lawton is closely monitoring, Judges see improvement
- Bethel: Nearly fully staffed, we are returning next month
- In-home safety: struggling to acquire data to determine safety of children in-home

2012 CRP Recommendations to OCS

1. That OCS use the data they are collecting as a management tool.

2012 CRP Recommendations to OCS

2. When a report of harm is screened in for safety issues and a decision is made to work with the family and keep the child at home, OCS should evaluate the timeliness and effectiveness of referrals and services to ensure the safety of children receiving "in-home" services.

2012 CRP Recommendations to OCS

3. That OCS address licensing issues.

CRP Recommendations to the Legislature

- That options be explored to obtain housing for OCS rural workers.
- That there be support for more licensing workers and support staff, pending the upcoming workload study.
- That there be support for an additional OPA CINA attorney in the Palmer office to continue recent court improvements.

The Alaska Children's Alliance

"Let us pray and work diligently,
and not take our ease,
until every Alaskan child
is safe, loved, and nurtured
every day of his or her life."

~ Senator Fred Dyson

A Chapter of the National Children's Alliance

What is the Alaska Children's Alliance?

The Alaska Children's Alliance (ACA) is a non-profit coalition of established and developing children's advocacy centers (CAC's), multi-disciplinary teams (MDT's), and child protection teams (CPT's) dedicated to improving community responses to child maltreatment.

ACA is a state chapter of the National Children's Alliance (NCA). NCA is a non-profit accrediting organization that was developed to support and sustain the continued evolution of the CAC model. NCA provided Chapter Grant funding for the development of ACA and its publications, such as this brochure.

The Mission of the Alaska Children's Alliance

The mission of the Alaska Children's Alliance is to promote a culturally appropriate multidisciplinary response to child maltreatment throughout Alaska.

What is a Children's Advocacy Center?

A Children's Advocacy Center (CAC) provides a child-friendly environment that allows law enforcement, child protection workers, prosecutors, medical providers, victim/family advocacy, tribal representatives, and mental health providers to work together when there are allegations of child abuse. Referrals are accepted from the Office of Children's Services, law enforcement agencies (Alaska State Troopers, local police departments) and medical providers.

Why does Alaska need Children's Advocacy Centers?

- Alaska continues to have very high rates of child abuse and neglect, particularly child sexual abuse
- Child maltreatment is strongly linked to juvenile and adult crime, teen pregnancy, alcohol & drug abuse, suicide, and future family violence
- Child maltreatment has also been shown to be major contributors to poor adult medical and mental health
- Studies show that the annual economic impact of child abuse is $182,000 per maltreated child.
- Children are less fearful when investigations are conducted using CACs
- Parents & caregivers are more satisfied with the investigations when CACs are used

What happens at a Children's Advocacy Center?

- Comprehensive, multidisciplinary evaluation for child abuse concerns
- Specialized forensic interview in a child-oriented interview room which is video-taped and monitored by other members of the team
- Thorough, non-invasive medical exam by specially trained medical professionals
- Support, referrals, and follow up for children and families

Goals of CAC's, MDT's, & CPT's

- Assure that children are not further victimized by the systems designed to protect them
- Assure the child is safe
- Reduce the long term affects associated with trauma for the child and family
- Enhance and coordinate the investigation so that the accuracy of the concern is quickly and reliably determined
- Promote successful prosecution of criminal child abuse
- Encourage support and treatment for abused children and their families

TRIBAL BEHAVIORAL HEALTH DIRECTORS COMMITTEE

A SUBCOMMITTEE OF THE ALASKA TRIBAL HEALTH DIRECTORS, ALASKA TRIBAL HEALTH SYSTEM

WHO WE ARE

The Tribal Behavioral Health Directors (TBHD) Committee was created in 2005 as a subcommittee of the Alaska Tribal Health Directors. The Alaska Tribal Health Directors formalized and the Alaska Native Health Board approved the committee in 2008. The TBHD Committee reports directly to the Alaska Tribal Health Directors.

The TBHD Committee performs several functions:

- Statewide behavioral health planning and advocacy
- Consulting with the State of Alaska on funding, and service delivery for tribal behavioral health, including Medicaid and grant programs;
- Providing mutual support in addressing funding, workforce, and service delivery issues that all are addressing in their organizations and communities.

CHALLENGES IN OUR COMMUNITIES

The second leading cause of outpatient visits for the Alaska Tribal Health System during FY2007 was for mental health disorders (7.0%).

During 2003-2005, second and third leading causes of injury hospitalization were suicide attempts (18.9%) and assaults (12.0%), respectively.

DISPROPORTIONALITY

Statistics about behavioral health generally point to harm to self, harm to others, and death. Alaska Native and American Indian (AI/AN) people are disproportionately affected by behavioral health issues. The reasons vary, but most point to a huge cultural shift over the last few generations.

The TBHD Committee relies on the Alaska Native Epidemiology Center for comprehensive data on the disproportionate effects of behavioral health issues for AI/AN peoples.

SUICIDE

AI/AN people in Alaska complete suicide at twice the rate as other Americans. In Western Alaska rates are seven times higher than the national average. Suicide is linked to historical trauma, substance abuse, sexual abuse and family violence. Friends, families and communities are the first line of defense.

Behavioral Health Aides (BHA) work in tribal behavioral health and wellness programs to support individuals in their healing processes and prevent suicide. When suicides occur, BHAs work with the survivors listening, and supporting them.

SUBSTANCE USE

Alaska's alcohol issues are well documented, yet our statewide substance abuse treatment capacity is very low. The Alaska State Trauma Registry shows that 73% of all assaults on AI/AN people in Alaska are alcohol related, as are 67% of hypothermia and 60% of suicide attempts. Tribal behavioral health programs offer a range of services, some funded by the State. Tribes are beginning to use sobering centers (Fairbanks, Bethel) to deal with immediate effects and Screening, Brief Intervention, and Referral to Treatment (SBIRT) to address alcohol-related emergencies.

Contact the Tribal Behavioral Health Directors Committee via
Alaska Native Tribal Health Consortium, Division of Community Health Services, Behavioral Health & Rural Services
Department: Phone: 907-729-2431.

DOMESTIC VIOLENCE & SEXUAL ASSAULT

With limited domestic violence/sexual assault response capacity at the public safety and victim advocate levels, communities have difficulty conveying baseline information about interpersonal violence. Behavioral health providers are developing community teams through an Indian Health Service (IHS) initiative, in coordination with the Network on Domestic Violence & Sexual Assault and Alaska Tribal Health Consortium (ANTHC).

HOW WE PARTNER WITH THE STATE OF ALASKA AND MENTAL HEALTH TRUST

TRIBAL CONSULTATION

The federal government recognizes that it is vital and essential for the State of Alaska to consult with tribes about a number of issues. The TBHD Committee is the entity with which state agencies consults regarding programs affecting tribal behavioral health services.

MEDICAID FUNDING

The Committee works with DHSS and DBH staff to optimize Medicaid income for tribal behavioral health, reducing costs to the state. Medicaid is the second largest state budget item in Alaska, after public school funding. Nearly 40% of Medicaid clients are AI/AN people, and an equal amount of program expenditures are made on their behalf. AI/AN people are more likely to use services provided by the Alaska Tribal Health System (ATHS) if available. However, two-thirds of the funds spent on the health care of AI/AN clients in Alaska are paid to private sector providers.

BRING THE KIDS HOME

AI/AN children from Alaska are over-represented in the population of children in custody and represent 49% of the children sent to out of state placements and 22% of the non custody children sent to out of state placements.

A subcommittee has been working with state DBH staff to bolster services and streamline the business practices of tribal organizations to bring kids home from out-of-state behavioral health placements and to serve them in their home communities.

WORKFORCE DEVELOPMENT: THE BEHAVIORAL HEALTH AIDE

The ATHS has invested in the development of the BHA model so that local people can be trained to provide a full range of behavioral health services. The ATHS has developed standards and procedures for BHAs, a certification process, and assessment processes for ongoing training needs of BHAs. The BHA program has gained national interest since the Community Health Aide Program Certification Board approved the certification process.

BHAs receive training through the University of Alaska, tribal health organizations, conferences, and field experience.

BENEFITS OF WORKING WITH US

CULTURALLY RELEVANT SERVICES

Tribal behavioral health programs are located within tribal health organizations. Tribal

Contact the Tribal Behavioral Health Directors Committee via
Alaska Native Tribal Health Consortium, Division of Community Health Services, Behavioral Health & Rural Services
Department: Phone: 907-729-2431.

behavioral health services are delivered in coordination with other health services.

INDIAN HEALTH SERVICE FUNDS

IHS provides approximately 40% of the funding to tribal health organizations in Alaska to deliver services to IHS beneficiaries.

MEDICAID REIMBURSEMENT AT 100%

Medicaid services delivered to AI/AN people by tribal programs are reimbursed by the federal government at 100 percent.

WE NEED TO COLLABORATE TO BE EFFECTIVE AND EFFICIENT

BILLING

Since cost of health care exceeds the IHS funding, tribal health organizations have gradually been developing billing processes for health services.

Through the tribal consultation process, the State and the tribes identified program improvements that will lead to better Medicaid billing processes.

DATA

The IHS RPMS data system and the State of Alaska's AKAIMS do not interface. AKAIMS has 276 data elements in its minimum data set. Of these, only 74 items overlap with the RPMS medical module.

Tribal behavioral health programs that are DBH grantees must report through AKAIMS. Tribal health organizations must use RPMS or another data system to report to IHS. Since half the State's behavioral health programs are tribal, the Committee would like the State DBH to assist in the development of a work plan that resolves the inefficiencies of data collection and allow agencies to interface directly with the AKAIMS database.

Contact the Tribal Behavioral Health Directors Committee via
Alaska Native Tribal Health Consortium, Division of Community Health Services, Behavioral Health & Rural Services Department: Phone: 907-729-2431.

Tribal Behavioral Health Directors Committee

February 17, 2011
Presented on behalf of the TBHDC by
Michael Horton, LPC &
Melody Price-Yonts, MS, CDC I

Level 3
Level 4
State Plan Amend

Tribal Behavioral Health Directors Committee

A Subcommittee of the Alaska Tribal Health Directors

- Created in 2005
- Alaska Native Health Board approved in 2008
- 24 members from 26 tribal health entities
- Meet and report quarterly
- Over 800 employees in the tribal BH system
- 6.5 million in tribal grant funding for BHAs

HHS -
Mental Health Services

Tribal Behavioral Health Directors Committee

Current Priorities Include:

- Suicide Prevention
- Domestic Violence & Sexual Assault
- Substance Abuse Prevention & Treatment
- Training & Credentialing for Behavioral Health Aides
- Development of the Behavioral Health Aide Manual (BHAM)

Growing Our Own

The Behavioral Health Aide Model

- Model is federally recognized through the Community Health Aide Program & Certification.
- 125 BHA providers working within tribal behavioral health
- Trained and certified to provide a broad range of behavioral health services.
- Focus on prevention, intervention, treatment, case management and aftercare for those who are affected by substance use and mental health disorders.
- The BHA Certification is equivalent to that of the State of Alaska BH Commission.

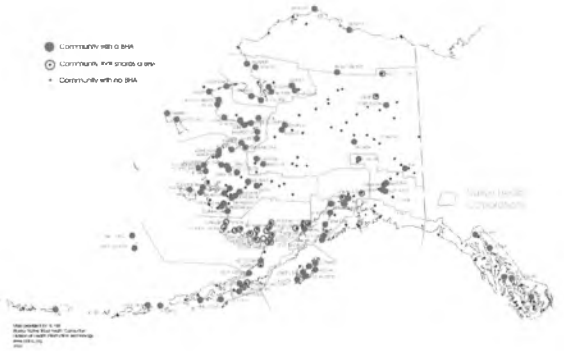
What do standards and certification mean to BHAs?

~Emma Mathias, Former BHA I, YKHC

"I think the BHA standards are what we need as a BHA to better serve our clients. It's important for me because out there our clients are struggling and with us BHAs in the village the clients will get the help they need to sobriety and support. I feel that I know with this standard I'm helping our people and others to overcome their addictions and struggle."

THE ALASKA TRIBAL HEALTH SYSTEM

Behavioral Health Aide Locations



Behavioral Health Aide Digital Story

Title: *Opening Wounds of Silence*

By Karen Mitchell, BHA III, Maniilaq Association

Karen is from and works in Noatak, Alaska –

- Population about 500,
- Located 55 air miles north of Kotzebue and 70
- Miles north of the Arctic Circle

Behavioral Health Aide- The Story Beyond the Digital Story

"Thank you for listening at my story." ~ Karen

What do standards and certification mean to BHAs?

"To me it means to show that I am capable of doing the work that is required of my level. Any agency within the state can recognize my capabilities of accomplishing the tasks that required of me in the work field."

~ Simeon John, BHA I, YKHC

BHA Training Opportunities

Experience

Conferences

University of Alaska System

Tribal Health Organizations

How does the State benefit from working with Tribal Behavioral Health?

- Eligibility for 100% FMAP
- Delivery of effective culturally relevant services
- Sole provider of health services in most rural areas – serves all community members (native and non-native)

State Plan Amendment (SPA)

Partnership between the Alaska Tribal Health System & the State of Alaska

After years of negotiation and building communication and understanding among the tribal providers and the State, a state plan amendment was drafted and submitted to the Alaska Native Health Board (ANHB) for endorsement.

The SPA was endorsed by ANHB and has been submitted to the State for action!

State Plan Amendment (SPA)

Partnership between Tribal Health & State of Alaska

This recommendation was ratified by ANHB on 12/2/2011.

"... *BHA Certification requires that BHAs of all levels have a high level of training and experience. An extensive amount of work was completed to match training with skills and competencies on all levels. The Tribal Behavioral Health Directors support the resubmission of the State Plan Amendment and request the inclusion of levels III and Practitioner in the reimbursement plan with consideration for BHA I and II in the future.*"

Opportunities to Improve within the Tribal Behavioral Health System

Reporting mandates that currently reduce efficiency due to lack of interface:

- Federal government reporting requirements
- State of Alaska – AKAIMS
- Other Electronic Health Records (EHR)

Inefficiencies

* Staff resources
* Training
* Labor expenses
* Limited web connectivity
* Data entry in multiple systems
* Data errors

Removing Reggie Jones

Alphabet Soup

merger

Goal:

Develop a work plan with the SOA that resolves the inefficiencies of data collection. ✓

Allow agencies to interface directly with the AKAIMS database. ✓

Thank You

Senator Bettye Davis

SB 5 - "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

Senate Bill 5 increases and restores to original levels established 14 years ago the qualifying income eligibility standard to 200% of the Federal Poverty Level (FPL) for the State Children's Health Insurance Program (SCHIP) called Denali KidCare (DKC) in Alaska. Alaska as one of the nation's wealthiest states is only one of four states which funds its SCHIP program below 200% FPL. This bill makes health insurance accessible to an estimated 1277 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an enhanced Medicaid reimbursement program receiving up to 70% federal matching funds.

Denali KidCare serves an estimated 7900 Alaska children and remains one of the least costly medical assistance programs in the state at about $1,700 per child with full coverage, including dental care, which is about 20% of the cost of adult senior coverage. Early intervention and preventative care will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated per the Kaiser Foundation that the 24,000 uninsured children in Alaska with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

A similar bill was overwhelmingly passed with bipartisan support by the Legislature in 2010. Governor Parnell subsequently vetoed the bill over concern that increased eligibility to Denali KidCare would require an increase in state-funded induced terminations of pregnancies. Medicaid funds 51% of all births in Alaska. In order to continue to receive federal funding for the state Medicaid program of which Denali KidCare is part, and in order to comply with state law, constitutional provisions, and Alaska Supreme Court rulings, the state must provide medical services for pregnant women including medically necessary terminations, as well as prenatal and postpartum care.

The Alaska Department of Health and Social Services (DHSS) estimated that no more than 10% or 22 more induced terminations would result with minimal expense from the increase in eligibility for Denali KidCare to 200% FPL. Induced terminations under Denali KidCare cost about $384,000 annually or less than 0.18% or 1/5 of 1% of the $217 million of the DKC budget.

While the Governor understandably is concerned about the mushrooming cost of the state Medicaid program, Denali KidCare which is about 18% of the $1.2 billion total state Medicaid budget should not be among his first cuts at the expense of Alaska's most vulnerable children and pregnant women. Increasing eligibility for DKC to 200% FPL under Senate Bill 5 is uncomplicated, manageable, and could take effect immediately with prompt implementation by DHSS.

MEMORANDUM January 24, 2011

SUBJECT: Sectional Summary (SB 5; Work Order No. 27-LS0057\B)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the medical assistance eligibility provisions for persons under 19 years of age and for pregnant women by increasing the household income limit from 175 to 200 percent of the federal poverty line.

Section 2. Increases the household income limit from 175 to 200 percent of the federal poverty line for requiring premiums and cost-sharing contributions from medical assistance recipients who are under 19 years of age.

Section 3. Provides for an immediate effective date.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB005
2011 LEGISLATIVE SESSION SB005

Analysis:

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare(DKC) program was originally created.

This fiscal note represents the additional administrative costs needed to support the increased eligibility determination workload resulting from more pregnant women and children applying for medical assistance, using the assumptions from the companion fiscal notes for the Division of Health Care Services and the Division of Behavioral Health.

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2011. We estimate two additional Eligibility Technician II (Range 14) positions will be needed to manage this additional work in FY2012.

Total Administrative Costs for Two ET II Positions:

Personal Services: Two Eligibility Technician II Range 14 at a cost of $187.0, including benefits, for 12 months.
Contractual: Annual cost for office space, phones, etc. will be $19.4.
Commodities: Annual cost for the office supplies will be $1.0.

Additional Cost of FY2012:
Equipment/Supply: A one-time cost of $14.4 for desktop computer, software, printer, and work stations will be needed for the new positions.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB005
SB005

Analysis:

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2012, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match).

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated at 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2012 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2012 and 2017. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2012 and 2017.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2010. Behavioral Health paid about 15% of the costs for affected DKC children in 2010. No charges for services for DKC pregnant women were paid by this component in 2010.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB005
2011 LEGISLATIVE SESSION

Analysis:

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2012, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match).

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY2012 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Cost projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XXI rates , Title XIX, or State General Fund only (for abortions) during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2012 and 2017. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2012 and 2017.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2010. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about 85% of the costs for affected DKC children in 2010.

STATE OF ALASKA
DEPT. OF HEALTH AND SOCIAL SERVICES
OFFICE OF THE COMMISSIONER

SEAN PARNELL, GOVERNOR

P.O. BOX 110601

FAX: (907) 465-3068

Fact Sheet on Denali KidCare as it Relates to Abortion Funding

Thank you for your questions regarding the Denali KidCare program and how it relates to abortion funding in Alaska. Because the department has received numerous questions that are similar, but worded slightly differently, we have paraphrased the questions and compiled the responses in a Fact Sheet for consistency.

We hope this addresses the intent of the questions you posed. If not, please contact Wilda Laughlin at 465-1613.

- **How many more abortions do you project would be covered if income eligibility for Denali KidCare were increased from 175% to 200%?**

  - Past history in Medicaid services shows that approximately 10% of pregnant enrollees have sought abortion related services. Applying that number to the anticipated growth in enrollment of pregnant enrollees as a result of the expansion (218), we expect approximately 22 will seek these services.

- **How much federal money will the state lose over the next 10 years as a result of the Governor's intended veto of SB 13, assuming that funding levels remain stable?**

  - The fiscal note for SB13 estimates that the state would have spent $1,592,700 in federal funds in FY 2011. The fiscal note also assumes 8.6% growth in total costs per year. If we assume the federal percentage of spending remains the same (69.7%) and grows at 8.6% per year, then over 10 years (through 2020) this totals $23,740,650 in federal funds.

- **Is the program affected by an Alaska Supreme Court decision that says certain abortions must be paid for?**

  - Yes. The Alaska Supreme Court ruled in *DHSS v. Planned Parenthood*, 28 P.3d 904 (Alaska 2001) that the State must fund medically necessary abortions for pregnant women if it funds other medically necessary services for other financially needy persons.

- **How is "medically necessary" defined?**

  - "Medically necessary" as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court decision.

- **Is there anything unique to abortions that are paid for under DKC as opposed to regular Medicaid?**

  - No.

- **How much is Denali KidCare's annual budget?**

  - Spending in Calendar Year 2009:
    - Title XXI kids: $30,246,349
    - DKC Pregnant Women: $60,578,841
    - DKC Title XIX kids: $125,761,129
    - **Total DKC: $216,586,319**

- **How much money is spent on abortions?**
  - In Calendar Year 2009:
    - Of total DKC spending: $384,000 was spent on abortion-related services
    - Of total Medicaid Spending: $616,000 was spent on abortion-related services

- **How many additional women and children would have been eligible for Denali KidCare if the eligibility had been expanded from 175 percent to 200 percent of the federal poverty level?**

  - The fiscal note for SB13 estimates 218 pregnant women and 1,277 children would have been covered by the expansion of Denali KidCare.

- **What other services do children have access to under DKC?**

  - See Department website: http://www.hss.state.ak.us/dhcs/DenaliKidCare/gen_info_dkc.htm

Re: Alaskan Options for Expanding Coverage for Pregnant Women
Date: November 4, 2010

During a recent trip to Alaska to participate in the Kids First Alaska meeting on October 19, 2010 at the invitation of the All Alaska Pediatric Partnership and the Mat Su Health Care Foundation, I was asked to provide clarifying information on opportunities to expand federally supported medical coverage to pregnant women in Alaska. This memo outlines current coverage in Alaska and provides an overview of federal options and requirements for expanding coverage.

Current Coverage for Pregnant Women and Children in Alaska

Currently, Alaska provides traditional Medicaid coverage to pregnant women with income up to 175% of the Federal Poverty Level (FPL) who are citizens or immigrants lawfully residing in the U.S. for at least five years. Additionally, the state provides, as federally required, emergency medical coverage for labor and delivery services to any uninsured pregnant woman who meets the Medicaid guidelines, regardless of citizenship or immigration status.

While the purpose of this memo is to identify options for expanding coverage to pregnant women, certain options are related to coverage for children. Alaska uses its Medicaid program for covering both children and pregnant women. Currently, the State provides Medicaid coverage for children up to 150% FPL and coverage between 150% and 175% FPL for children through a Medicaid expansion funded through the Children's Health Insurance Program (CHIP) called Denali Kid Care. The CHIP-funded Medicaid expansion for children qualifies for a higher financial participation rate. In Alaska the federal participation rate for Medicaid is 50%[1] and for CHIP is 65%.

Options for Expanding Coverage for Pregnant Women with Federal Financial Participation

- *Expand Medicaid Coverage*

  Federal Requirements and Options - States with Medicaid programs are required to cover pregnant women who are citizens with income up to 133% of the federal poverty level (FPL). States may expand income eligibility through Medicaid to pregnant women who are citizens and, at the state option, lawfully-residing immigrants up to an income level approved by the federal government. States are

also required to cover labor and delivery cost of all uninsured women under emergency Medicaid services if they otherwise meet Medicaid income and asset requirements.

Alaska Options – Alaska may expand Medicaid coverage for pregnant women with incomes higher than the current limit of 175% FPL. Under this option, the state may also elect to provide coverage for lawfully residing immigrant pregnant women. An expansion of eligibility requires a Medicaid State Plan Amendment (SPA). Federal financial participation under this option is 50%.

- *Expand CHIP Coverage to Pregnant Women*

Federal Requirements and Options – The 2009 federal reauthorization of the CHIP program (CHIPRA) expanded options for states to cover pregnant women. Under CHIPRA, states may provide coverage to pregnant women who are citizens and, at the state option, lawfully residing immigrant pregnant women, through CHIP up to 300% FPL, if certain conditions are met. Among those conditions, the state must cover children under Medicaid/CHIP up to at least 200% FPL and cover pregnant women through Medicaid up to 185% FPL. Pregnant women cannot be covered at a higher income level than children.

Alaska Options – To expand coverage to pregnant women under CHIPRA, the state would first have to expand Denali Kid Care coverage to children from the current income level of 175% FPL up to at least 200% FPL or higher, depending on the proposed income limit for pregnant women. Additionally, the state would have to expand Medicaid coverage to pregnant women between 175% and 185% FPL. With those coverage levels, the state may expand coverage for pregnant women above 185% FPL drawing down the higher 65% CHIP federal match.

This option would require a Medicaid SPA to raise the income eligibility level for pregnant women to 185% FPL. Additionally, Alaska must submit a CHIP SPA to expand income eligibility for children up to 200% FPL (or higher depending on the proposed income limit for pregnant women) and to provide CHIP coverage to pregnant women above 185% FPL.

The SPA establishes what is technically a separate CHIP program for low-income pregnant women rather than a CHIP-funded Medicaid expansion program as is Denali Kid Care. However, it can be operated as a "Medicaid look-alike" program using the existing Medicaid administrative structure and health care delivery system. The expansion to pregnant women between 175% and 185% FPL would qualify for the 50% federal Medicaid match, while expanded coverage for children above 175% FPL and for pregnant women above 185% would qualify for the higher federal CHIP match of 65%.

- *Expand Coverage Under the CHIP Unborn Child Option*

  Federal Requirements and Options - States may provide prenatal care, labor, and delivery services to pregnant women through the unborn child option in CHIP. Sixty days of postpartum care can also be funded if services are provided under a global capitation arrangement, which bundles payment for all prenatal, labor, delivery, and postpartum care. Through this option, coverage is provided without regard to the pregnant woman's immigration status. While it is the unborn child who is eligible, services are directed to the pregnant woman to ensure the delivery of a healthy newborn, including medical and dental services for the mother deemed necessary to promote the health of the unborn child.

  Alaska Options - The state may expand coverage under the CHIP unborn child option for the unborn child of pregnant women who do not otherwise qualify for Medicaid, as well as pregnant women above the current income limit of 175% FPL. Like the previous option, this would require a CHIP State Plan Amendment to create a separate CHIP program to establish coverage for the unborn child.

  Currently eligible children, ages 0 - 18 would continue to be covered under Denali Kid Care while the pregnant women receiving services based on the eligibility of their unborn child would be covered under the separate CHIP program. In this case, Alaska may also wish to design its CHIP unborn child coverage as a "Medicaid look-alike" program as described above. Services provided to pregnant women under the unborn child option qualify for a 65% federal financial participation in Alaska.

Summary

Several options exist for Alaska to expand coverage to pregnant women directly through Medicaid and/or CHIP. Financial participation depends on the option(s) chosen. This overview of provisions in CHIPRA to cover pregnant women may be helpful. Stakeholders may wish to review additional information provided to states by the Centers for Medicaid and Medicare (CMS) in these relevant State Health Official (SHO) letters of guidance and Q & A memos:

State Health Official Letter on the Unborn Child Option

State Health Official Letter on Lawfully Residing Children and Pregnant Women

State Health Official Letter on Covering Pregnant Women through CHIP

State Health Official Letter on Frequently Asked Questions about Covering Pregnant Women

[1] The 50% federal participation is the traditional matching rate for Alaska. During the period July 2008 through June 2011, the American Recovery and Reinvestment Act (ARRA) provides a higher match to help states deal with the increased need for services during the economic downturn.

MEMORANDUM November 18, 2010

SUBJECT: Medicaid funding of "medically necessary" abortions
(Work Order No. 27-LS0175)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the meaning of "medical necessity" as it relates to medical assistance (Medicaid) funding of abortions. State and federal statutes fail to define the phrase, although the concept forms the basis for coverage of all services under the jointly funded Medicaid program and is defined for purposes other than abortion services in regulation.

Despite a federal exclusion for most abortion services known as the "Hyde Amendment," upheld by the United States Supreme Court, the Alaska Supreme Court in 2001 specifically held that the equal protection guarantee under our state constitution requires the state to cover medically necessary abortion services, as it does for all other medical services covered under state Medicaid funding. The standard for "medical necessity" in Alaska appears to be similar for all Medicaid services and includes services that are broader than life saving services but less than elective services, as discussed below.

FEDERAL LAW DRAWS A DISTINCTION BETWEEN ABORTION SERVICES FUNDING AND OTHER TYPES OF COVERED SERVICES

The federal purpose of the Medicaid program established the medical necessity standard under 42 U.S.C.S. § 1396-1 as follows:

> For the purpose of enabling each State, as far as practicable under the conditions in such State, to furnish (1) medical assistance on behalf of families with dependent children and of aged, blind, or disabled individuals, whose income and resources are insufficient to meet the costs of *necessary medical services*, and (2) rehabilitation and other services to help such families and individuals attain or retain capability for independence or self-care, there is hereby authorized to be appropriated for each fiscal year a sum sufficient to carry out the purposes of this title. The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Secretary, State plans for medical assistance.

(Emphasis added.) Since 1976, Congress has prohibited, either by an amendment to the annual appropriations bill for the United States Department of Health and Human Services, or by joint resolution, the use of any federal funds to reimburse the cost of abortions under the Medicaid program except under certain specified circumstances. The "Hyde Amendment" provides that:

> [N]one of the funds provided by this joint resolution shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest when such rape or incest has been reported promptly to a law enforcement agency or public health service.

Pub. L. 96-123.

After the passage of the Hyde Amendment, federal courts wrestled with questions about whether state and federal governments are required to pay for an indigent woman's exercise of a fundamental constitutional right when a "medically necessary" abortion is involved. In several close decisions, the U.S. Supreme Court determined that the federal constitution does not require public financial support of the right to choose an abortion in cases that do not involve rape or incest or a threat to the mother's life. Beal v. Doe, 432 U.S. 438 (1977); Maher v. Roe, 432 U.S. 464 (1977); Harris v. McRae, 448 U.S. 297 (1980); Webster v. Reproductive Health Services, 492 U.S. 490 (1989). It is instructive to note the trial court definition in the McRae case of the phrase "medically necessary" for purposes of abortion funding was "a professional judgment for the physician that may be exercised in the light of all factors--physical, emotional, psychological, familial and the woman's age--relevant to the well-being of the patient."

The federal courts ruled in these cases that governments are not required to provide money to assist in the exercise of constitutional rights; governments are only prohibited from placing obstacles in the way of exercising those rights. Withholding funding, said the federal courts, is not an obstacle to the indigent woman who seeks an abortion. Her poverty may be an obstacle, but the government did not create the poverty. She is still free to have an abortion, but not with public money. The federal courts suggested other private money might be available. In light of these federal decisions, it is clear that public funding for abortions, even when "medically necessary," is not required under the federal constitution.

ALASKA LAW REQUIRES A MORE UNIFORM BUT INEXACT STANDARD FOR STATE MEDICAID FUNDING OF ALL TYPES OF SERVICES COVERED, INCLUDING ABORTION SERVICES

In the early 1990's, the state attempted to adopt the federal distinction for funding of abortion services and disregarded the general medical necessity definition adopted in regulation for other types of services. In a direct challenge to the state regulation that provided only for public funding of abortion services to preserve the life of the mother or

in cases of rape or incest, the Alaska Supreme Court held that the state must pay for medically necessary abortions for participants in the Medicaid program as it does for other types of services. State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001). The Alaska Supreme Court determined then that the "rape, incest, and to prevent the death of the mother" restrictions of the Hyde Amendment are too narrow to satisfy the requirements of the Alaska state constitution.

The Alaska constitution has been consistently interpreted to provide broader protections than the federal constitution. For instance, in Valley Hospital Ass'n v. Mat-Su Coalition for Choice, 948 P.2d 963, 969 (Alaska 1997), the Alaska Supreme Court held that "reproductive rights are fundamental . . . [and] include the right to an abortion." Later, in State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001), the Alaska Supreme Court, although basing its decision on due process considerations rather than the privacy clause used by the lower court, came to the same conclusion the lower court had. The conclusion was that if the state Department of Health and Social Services (DHSS) restricted abortion coverage for Medicaid-eligible women to only those covered by the exceptions in the Hyde Amendment, it would result in unconstitutional implementation of Medicaid in Alaska.

There is language in the Planned Parenthood of Alaska, Inc. case (cited above; see 28 P.3d at 913) strongly suggesting that the Alaska Supreme Court considers women who carry their pregnancy to term to be similarly situated with women who have an abortion (in that they are both exercising their constitutional freedom of reproductive choice). If the court continues to hold that position when faced with a renewed public abortion funding challenge, there is a possibility that the court will find that the state may not be able to burden the right to abortion services under the state Medicaid program unless a similar burden is placed on medical services to continue a pregnancy, and in the absence of comparable burdens on continuation of a pregnancy the state cannot burden the right to abortion services.

The consequence of having a more broadly interpreted right to public funding of abortions for Medicaid recipients in Alaska than what is allowed under federal law is that DHSS must cover some Medicaid abortions with 100% state money (no federal match).[1] The federal government does not prohibit states from using their own funds.

Over the years, language has appeared in Alaska budget acts that purport to prohibit DHSS from using any of its appropriated money for abortions outside the scope of the

---

[1] Alaska is reportedly not alone in using purely state funds for some Medicaid abortions that the federal government will not fund. I do not have an up-to-date list and I have not double-checked the cases cited, but the ACLU says that 17 states fund abortions outside the Hyde Amendment restrictions, 4 voluntarily and 13 under court order. I have attached the relevant information, as reported by the ACLU, excerpted from http://www.aclu.org. I cannot vouch for the accuracy of the ACLU website, but if you require further information about public funding of abortions in other states, please let the office know.

Hyde Amendment. However, DHSS has been under court order to continue to pay for medically necessary abortions and has complied with the state attorney general's advice to do so.[2]

---

[2] For instance, with regard to the 2007 fiscal year operating budget, the attorney general wrote the following:

> This year's budget, as did the prior four years' budgets, contains the following language regarding abortion funding:
>
> > No money appropriated in this appropriation may be expended for an abortion that is not a mandatory service required under AS 47.07.030(a). The money appropriated for Health and Social Services may be expended only for mandatory services required under Title XIX of the Social Security Act and for optional services offered by the state under the state plan for medical assistance that has been approved by the United States Department of Health and Human Services . . . .
>
> [citation omitted]. As we opined before, this language is intended to prevent expenditures from these appropriations for therapeutic or medically necessary abortions. DHSS, however, is under a superior court order to operate its Medicaid program in a constitutional manner by providing payment for them. That superior court order has been upheld by the Alaska Supreme Court, which specifically rejected an argument that the separation-of-powers doctrine precluded the superior court from ordering the state to pay. State, Dept. of Health & Social Services v. Planned Parenthood of Alaska, 28 P.3d 904 (Alaska 2001). Thus, the DHSS is faced with a ruling from the state's highest court that the limit on payment for abortion services results in the operation of the Medicaid program in an unconstitutional manner, while DHSS is ostensibly without the money available to pay for services to operate the program legally. . . . Five years ago, the plaintiffs in the Planned Parenthood case asked the superior court to clarify how similar budget restrictions impacted its judgment. The superior court, three days after the supreme court affirmed the judgment, issued an opinion ordering the DHSS not to comply with the restrictions. To date, therefore, DHSS has obeyed the superior court's order and we must advise DHSS to continue to obey it; i.e., to continue to pay for these medically necessary abortions, until such time as a court reverses the order that is now in effect.

2007 Alas. AG LEXIS 21, 7 - 8.

According to DHSS, the money used for Medicaid abortions not covered by the Hyde Amendment (i.e., abortions for which the federal government will not contribute federal money), comes from the appropriation made by the legislature to DHSS for Medicaid.[3]

Other attempts to narrow the definition of "medical necessity" for purposes of abortion services funding have similarly failed. In 2002, for example, the Alaska Legislature passed and the governor vetoed a bill (SB 364, 22nd Legislature) that added a new section to AS 47.07 to provide that the state Medicaid program may only pay for medically necessary abortions and for abortions to terminate pregnancies resulting from rape or incest. The bill prescribed what is a medically necessary abortion and established requirements for submitting claims for payment for abortions. (See SB 364, attached). That bill provided as follows:

> (b) A claim for payment for a medically necessary abortion that is submitted to the department must be accompanied by a written certification by the treating physician that the abortion is medically necessary to treat a serious
>
> (1) adverse physical condition of a pregnant woman that
>
> (A) either is caused by the pregnancy or would be significantly aggravated by continuation of the pregnancy; and
>
> (B) would seriously endanger the physical health of the woman if the pregnancy were not terminated by an abortion; or
>
> (2) psychological illness of a pregnant woman who requires medication for treatment of the illness if
>
> (A) the medication required to treat the illness would be highly dangerous to the fetus; and
>
> (B) the health of the woman would be endangered if the mediation was not taken during pregnancy.

Since the bill was vetoed and the definition of "medical necessity" for purposes of abortion services funding contained in former 7 AAC 43.140(a) was held to be unconstitutional in 2001 and has recently been repealed but not reenacted, the state currently lacks a clear definition of the phrase as it applies to abortion services. The repealed regulatory definition provided that:

> (a) Payment for an abortion will, in the department's discretion, be covered under Medicaid if the physician services invoice is accompanied by certification that the (1) life of the mother would be endangered if the pregnancy were carried to term; or (2) pregnancy is the result of an act of rape or incest.

---

[3] If the physician submitting the Medicaid claim for costs associated with an abortion does not provide the information that would allow DHSS to document to the federal government that a particular abortion falls within the Hyde Amendment exceptions, then DHSS does not seek a federal match for the costs associated with that abortion.

What remains in the regulations for abortion services funding are the terms "elective" and "therapeutic" (a term that appears to be used as a substitute in the regulations for "medical necessity"), defined in 7 AAC 47.290, along with the general concept of "medically necessary" for all covered services under 7 AAC 105.100.

For general relief funding,[4] 7 AAC 47.290 provides as follows:

> . . .
>
> (7) "elective abortion" means a procedure, other than a therapeutic abortion, to terminate a pregnancy;
>
> (8) "therapeutic abortion" means the termination of a pregnancy;
>
> (A) certified by a physician as medically necessary to prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health; or
>
> (B) that resulted from actions that would constitute a crime of sexual assault under AS 11.41.410 - 11.41.425, a crime of sexual abuse of a minor under AS 11.41.434 - 11.41.440, or the crime of incest under AS 11.41.450.

For state funding under Medicaid, 7 AAC 105.100 describes "covered services" to include the general concept of "medically necessary" with cross-references to specified types of services as follows:

> The department will pay for a service only if that service
>
> (1) is identified as a covered service in accordance with AS 47.07, 7 AAC 43, and 7 AAC 105 - 7 AAC 160;
>
> (2) is provided to an individual who is eligible for Medicaid under 7 AAC 100 on the date of service;
>
> (3) is ordered or prescribed by a provider authorized to order or prescribe that service under applicable law;
>
> (4) is provided by a person who is enrolled as a Medicaid provider or rendering provider under 7 AAC 105.210, or otherwise eligible to receive payment for services under 7 AAC 43 and 7 AAC 105 - 7 AAC 160;
>
> *(5) is medically necessary as determined by criteria established under 7 AAC 43 and 7 AAC 105 - 7 AAC 160 or by the standards of practice applicable to the provider;*
>
> (6) has received prior authorization from the department, if prior authorization is required under 7 AAC 43 or 7 AAC 105 - 7 AAC 160; and

---

[4] Like the Medicaid program, the general relief program is designed to meet "medical needs." While some abortions are termed "elective" by some observers, they still meet a medical need, as determined by the physician who performs the abortion procedure. Distinguishing among types of abortions in the general relief program would infringe the same privacy and equal protection interests as courts have determined are infringed when abortion funding restrictions are imposed under the Medicaid program.

(7) is not specifically excluded as a noncovered service under 7 AAC 43 or 7 AAC 105 - 7 AAC 160.

(Emphasis added.) The phrase "medically necessary" is defined for purposes of mental health services and other purposes such as vision, hearing, and dental screening funding under Medicaid as follows:

7 AAC 43.486. Medical necessity determinations for mental health rehabilitation services
(a) The division will, in its discretion, periodically review the recipient's clinical record to determine whether the services requested are medically necessary. A medically necessary mental health rehabilitation service is a service designed to

(1) screen recipients for the presence of a mental or emotional disorder;

(2) assess the nature and extent of the mental or emotional disorder and its impact upon the recipient's ability to meet the demands of daily living, social, occupational, or educational functioning;

(3) diagnose the mental or emotional disorder;

(4) treat the mental or emotional disorder;

(5) provide rehabilitation for the mental or emotional disorder;

(6) prevent the relapse or deterioration of the recipient's condition due to the mental or emotional disorder.

(b) In making its determination as to whether the proposed services are medically necessary, the division will consider the following:

(1) the recommendations of the referring physician, mental health professional clinician, or interdisciplinary team organized under 7 AAC 43.470 that prescribed, ordered, recommended, or approved the service;

(2) the recipient's diagnosis and level of functioning;

(3) the risk of danger from the recipient to self or other individuals;

(4) the appropriateness of the level of care and the need for inpatient or residential care;

(5) whether the intervention targets specific symptoms and behavioral and social dysfunction, and logically derives from the assessments and diagnosis;

(6) whether the proposed services in the individualized treatment plan are consistent with generally accepted community-based treatments and practices for the treatment of the specific symptoms and behavioral and social dysfunction;

(7) whether the recipient agrees with the referring physician, mental health professional clinician, or interdisciplinary team under (1) of this subsection that the focus of the treatment will be the symptoms and behavioral and social dysfunction targeted for intervention;

(8) the extent to which past and current treatment has been successful in treating the symptoms and behavioral and social dysfunction;

(9) if the recipient is under 21 years of age, whether the recipient has, as indicated by the American Psychiatric Association's Diagnostic

and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, an Axis V Global Assessment of Functioning (GAF) rating at admission of 50 or less, or the recipient has an Axis V Global Assessment of Functioning (GAF) rating at admission of more than 50, but exhibits specific mental, behavioral, or emotional disorders that place the recipient at imminent risk for out-of-home supervision or protective custody of state or local authorities; the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, is adopted by reference;

(10) the extent to which a less restrictive or intrusive alternative treatment is not available;

(11) the extent to which a less expensive alternative is not available;

(12) the extent to which the units of service requested are no more than are necessary to meet the treatment or rehabilitation needs of the recipient;

(13) the extent to which the duration of services requested are no more than are necessary to reach the recipient-approved goals outlined in the individualized treatment plan;

(14) if the requested services are intended to prevent the relapse or deterioration of a mental disorder, the extent to which social functioning is improved through interventions provided as active treatment, targeted in specific therapeutic goals, and included in the individualized treatment plan;

(15) the likelihood that the recipient will benefit from any therapy provided on the same day as the recipient has received crisis intervention services.

(c) Payment for services determined not to be medically necessary under this section is subject to recovery under 7 AAC 105.260.

The limitation on abortion services funding is, as for other Medicaid covered services "medical necessity," a phrase that is not clearly defined in Alaska. The regulations that pertain to other types of covered services provide some guidance. Because the right to state funding for medically necessary abortions under the current state Medicaid program is protected by the Alaska constitution, the term "medically necessary abortion" has acquired a constitutional component of unknown scope. The relatively few Alaska cases involving abortion rights do not provide guidance as to how broadly the term "medically necessary abortion" is to be construed. There is a possibility that the Alaska courts may find that there are additional situations other than those described in the vetoed bill that fall within the scope of a medically necessary abortion and thus must be covered under the state Medicaid program.

What follows is a brief overview of how other states have handled the issue after the federal exception was rejected under those state's constitutional protections.

CASE LAW FROM STATES OTHER THAN ALASKA

Other states have dealt with the issue of state funding of abortion services in various ways. After the federal decisions of the 1970's that upheld restrictions on public abortion funding, courts in a number of states were required to analyze the issue under their own laws and constitutions to see if they supported the same conclusion. In contrast with the federal decisions, several state decisions determined that funding for abortions could not be singled out under public assistance programs. See Moe v. Sec'y of Admin. and Fin., 417 N.E.2d 387 (Mass. 1981); Comm. to Defend Reproductive Rights v. Myers, 625 P.2d 779 (Cal. 1981); Right to Choose v. Byrne, 450 A.2d 925 (N.J. 1982); Planned Parenthood Ass'n v. Dep't of Human Res., 663 P.2d 1247 (Or. App. 1983), affirmed at 687 P.2d 785 (Or. 1984); and Doe v. Maher, 515 A.2d 134 (Conn. Super. 1986); contra, Fischer v. Dep't of Pub. Welfare, 502 A.2d 114 (Pa. 1985).

Except for the Pennsylvania case, these state courts weighed the private and state interests involved with abortions and struck a different balance than the federal courts. They considered the state's desire to save money, state policies to promote childbirth, state claims that poor women can still choose to find private money to fund their abortions, state interests in protecting unborn life, and state arguments that they are not required to provide money for the exercise of constitutional rights. Most of these arguments had been successful in federal courts. Not so in the state courts of Massachusetts, California, New Jersey, Oregon, and Connecticut.

In Moe v. Secretary of Administration and Finance, supra, the highest state court in Massachusetts determined that the Massachusetts constitution afforded a greater degree of protection for the right to choose an abortion than the federal constitution.[5] In upholding the right of Medicaid recipients to have their abortions paid for, the court observed:

> [T]he Legislature need not subsidize any of the costs associated with child bearing, or with health care generally. However, once it chooses to enter the constitutionally protected area of choice, it must do so with genuine indifference. It may not weigh the options open to the pregnant woman by its allocation of public funds; in this area, government is not free to "achieve with carrots what [it] is forbidden to achieve with sticks." (citation omitted). We are therefore in agreement with the views expressed by Justice Brennan, writing in dissent to Harris v. McRae, [when he wrote] "In every pregnancy, [either medical procedures for its termination, or medical procedures to bring the pregnancy to term are] medically necessary, and the poverty-stricken woman depends on the Medicaid Act to pay for the expenses associated with [those] procedure[s]. But under [this restriction], the Government will fund only those procedures incidental to childbirth. By thus injecting coercive financial incentives favoring childbirth into a decision that is constitutionally

[5] Moe, 417 N.E.2d at 400.

> guaranteed to be free from governmental intrusion, [this restriction] deprives the indigent woman of her freedom to choose abortion over maternity, thereby impinging on the due process liberty right recognized in Roe v. Wade."[6]

In Committee to Defend Reproductive Rights v. Myers, supra, the highest court in California made a determination similar to Massachusetts'. The court noted that the state had no constitutional obligation to provide medical care to the poor or to fund the exercise of all constitutional rights, but held:

> Once the state furnishes medical care to poor women in general, it cannot withdraw part of that care solely because a woman exercises her constitutional right to choose to have an abortion.[7]

In Right to Choose v. Byrne, supra, the highest court in New Jersey also came to a similar conclusion, using an equal protection analysis. The court struck down a restrictive abortion funding statute, stating:

> [T]he Legislature need not fund any of the costs of medically necessary procedures pertaining to pregnancy. . . . Once it undertakes to fund medically necessary care attendant upon pregnancy, however, government must proceed in a neutral manner. Given the high priority accorded in this State to the rights of privacy and health, it is not neutral to fund services medically necessary for childbirth while refusing to fund medically necessary abortions. . . . The statute affects the right of poor pregnant women to choose between alternative necessary medical services. No compelling state interest justifies that discrimination, and the statute denies equal protection to those exercising their constitutional right to choose a medically necessary abortion.[8]

In Planned Parenthood Ass'n v. Department of Human Resources, supra, the court struck down an Oregon Medicaid regulation that would have restricted funding of abortions, saying:

> [I]t is difficult to understand the rational basis for denying one medically necessary surgical procedure to a pregnant woman solely because it involves an abortion while, at the same time, funding all other medically necessary services relating to pregnancy.[9]

---

[6] Id. at 402.

[7] Myers, 625 P.2d at 798 and footnote 31 accompanying the text.

[8] Byrne, 450 A.2d at 935 - 936.

[9] Planned Parenthood, 663 P.2d at 1255.

In Doe v. Maher, supra, a Connecticut court struck down a state Medicaid regulation that prohibited funding for medically necessary abortions, saying:

> This court is unable to reconcile the mandate and logic of the United States Supreme Court in Roe v. Wade . . . with the McRae . . . decision. Medicaid reimbursement funds are made available for all the health care costs of women, including the medical costs necessary to carry the fetus to term, but not for the medically necessary abortion. Surely, this constitutes infringement on the right to an abortion. . . . In adopting the regulation, . . . the state has ceased to preserve its neutrality at least under our state constitution. . . . And since that one exception also is a subject of a woman's constitutional rights, the regulation impinges upon those constitutional rights to the same practical extent as if the state were to affirmatively rule that poor women were prohibited from obtaining an abortion.[10]

In each of the state cases quoted in this section, the state court struck down an abortion funding restriction that would have been upheld by a federal court. These cases clearly demonstrate that state courts can find independent state grounds to strike down an abortion restriction that might be upheld in federal court. Unfortunately, the cases do not provide a standard definition of "medical necessity" for purposes of all covered services.

CONCLUSION

The concept of "medical necessity" provides the baseline for Medicaid and other types of public funding of covered health care services. Under the federal law, the United States Supreme Court upheld an exemption for coverage of abortions services that was narrower than the standard for all other types of covered services. Many states, including Alaska, found an equal protection and liberty interest violation in drawing a distinction among various types of service coverage.

Current Alaska legislation and regulations defer to the treating physician to determine whether a service is medically necessary for the physician's patient under the applicable standard of practice for most covered services, including abortion services.

If I may be of further assistance, please advise.

Senator Bettye Davis

SB 5 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Background of SCHIP/Denali Kid Care

- State Children's Health Insurance Program (SCHIP), which is administered in Alaska through the Denali KidCare Program was created in 1997 to reduce the number of uninsured children by providing subsidized insurance to children of those parents who are too poor to afford insurance but make too much to receive Medicaid coverage. About 1/3 of all children in America get health services through Medicaid or the SCHIP program.
- The Denali KidCare Program is 70% funded by the federal government up to the state's allocated funding level. After that, the reimbursement rate declines to slightly over 50%.
- Denali KidCare provides health insurance for children up to age 18 and pregnant women who meet income guidelines. There is no cost to eligible children, teens and pregnant women. However, youth who are 18 may be required to contribute a limited amount for some services.
- Roughly 7,900 children were covered by Denali KidCare in 2009.
- The cost per child of Denali KidCare is about $1,700 annually, compared to over $12,000 for an elderly person who qualifies for federal aid.
- By comparison, private health insurance for a family of three, *e.g.,* a pregnant woman with two children, is estimated at $8,000-$17,000 annually. Unlike Denali KidCare, this insurance may require a substantial deductible, 20% co-pay, and no vision, dental or hearing benefits.

Why Coverage for Pregnant Women is Important In Alaska

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are at increased risk of pregnancy-related death.

- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.
- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk fro pregnancy-related mortality and complications of childbirth (DHSS).
- The average cost of hospital care for a premature baby was $75,000 in 2001, compared with $1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about $13.1 billion annually.

SB 5 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Repercussions of the Unmet Health Care Needs of Alaska's Uninsured Children

- The number of uninsured children in Alaska is estimated to be about 24,100 or 19% of the uninsured population (Kaiser Family Foundation, 2008-2009).
- Over the last 10 years Alaska has seen a 31% decline in the number of children covered by private health insurance (Robert Wood Johnson Foundation).
- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).
- Uninsured children have much higher health risks than do covered children. They receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser, *supra*).
- Uninsured children are more likely to develop throat, eye, and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than five times as likely as insured children to have an unmet need for medical care and nine times more likely not to be examined by a regular doctor. They are also four times more likely to use emergency rooms which are much more costly than care in physicians' offices (*Pediatrics* 105, 113; "Care for Children," *New England Journal of Medicine*, 330).
- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (*Health Affairs* 23, no. 5, September-October 2004).
- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund, Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of $65-$130 billion annually.

CHIPRA #2

May 11, 2009

Dear State Health Official:

The Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA), Public Law 111-3, ensures that States are able to provide necessary health coverage for low-income uninsured children eligible under the Children's Health Insurance Program (CHIP). Section 111 of CHIPRA adds a new section 2112 to the Social Security Act (the Act) which gives States the option to provide necessary prenatal, delivery, and postpartum care to low-income uninsured pregnant women through an amendment to its State child health plan (CHIP plan) (as described in section 2112). This letter provides general information concerning the new option and guidance on amending your CHIP plan to reflect the coverage of pregnant women, should your State wish to take advantage of this option.

Background

Prior to CHIPRA, States could provide services to pregnant women either through a Section 1115 demonstration program or under the CHIP State plan by covering unborn children. CHIPRA allows States to continue providing coverage through these two options or through a new option of covering pregnant women under the CHIP plan. This letter outlines the differences between options to assist States in adopting coverage for pregnant women.

Continuation of Existing Section 1115 Pregnant Women Demonstrations

The CHIPRA allows States to continue existing section 1115 demonstrations that provide coverage for pregnant women with title XXI funds. These States may continue demonstrations or modify their CHIP plans to include pregnant women as described below.

Continuation of Coverage for Unborn Children Under the CHIP Plan

States will continue to have the option of considering an unborn child to be a targeted low-income child and therefore eligible for coverage under CHIP, if other applicable eligibility criteria are met. This permits States to provide health care services to promote healthy pregnancies, regardless of the mother's eligibility status. States may continue to pay for pregnancy and delivery services through a bundled payment or global fee method, under which a single payment is made for prenatal care, labor, delivery, and postpartum care.

New Option to Cover Targeted Low-Income Pregnant Women Under the CHIP Plan

The CHIPRA also allows States the option of providing health care coverage for uninsured, low-income pregnant women under the CHIP plan. Under this option, the pregnant woman is eligible for coverage, rather than the unborn child.

States that choose to cover pregnant women under the CHIP plan are eligible to receive enhanced Federal Medical Assistance Payments (FMAP) for such expenditures and have the option of providing presumptive eligibility to pregnant women.

As established in CHIPRA (Section 111), in order to cover pregnant women through the State plan option under CHIP, States must meet the following criteria:

- States may only provide coverage under the CHIP plan for pregnant women who were not eligible under the Medicaid State plan as of July 1, 2008;
- States must cover pregnant women under Medicaid up to the minimum income level of 185 percent of the Federal poverty level (FPL). Any State that currently does not provide Medicaid coverage for pregnant women up to this income level, can only claim regular FMAP for pregnant women covered under a Medicaid expansion whose family income is at or below 185 percent of the FPL;
- States may not establish a higher income eligibility level for pregnant women than the State's eligibility level for targeted low-income children;
- States must cover children under 19 years of age under Medicaid or CHIP, up to a minimum income level of 200 percent of the FPL;
- States must not apply an effective income level for pregnant women under CHIP that is lower than the Medicaid effective income level and cannot cover higher income pregnant women without covering lower income pregnant women;
- States must not apply any preexisting condition exclusion or waiting period for CHIP coverage of pregnant women;
- States must not impose any cap or limitation on the enrollment of targeted low-income children, and must not have any waiting list or any procedures designed to delay applications for enrollment; and
- States may not require enrollee cost sharing for preventive or pregnancy-related services.

Benefits

States have the flexibility to offer coverage that meets the requirements of section 2103 of the CHIP statute under the new CHIP option for pregnant women, including in most cases, benefits during a 60-day postpartum period.

Coverage of Both the Unborn Child and Pregnant Women

States may opt to cover both the unborn child and pregnant women under the CHIP plan. If States elect both options, we want to emphasize that States will need to uniquely identify

enrollees so that there is no duplication of payment for services. Eligibility under either category is subject to screening for Medicaid eligibility, and payment is not available under CHIP for services that would be covered under Medicaid.

Submitting a CHIP Plan Amendment

States wishing to adopt any of the options described above and be eligible for funds under title XXI, must submit a CHIP plan amendment, which must be approved by the Secretary. States adopting such an expansion will be able to amend their CHIP plan by submitting the enclosed addendum to the CHIP plan and budget form. The addendum sections correspond to the relevant sections in your current State Child Health Plan Template.

States that have implemented CHIP through a Medicaid expansion program, but wish to extend coverage to unborn children and/or pregnant women under a separate child health program, may do so by submitting the same CHIP plan amendment above. Such States would then continue to cover children from birth through age 18 under Medicaid expansion programs, and would operate separate CHIP programs only for pregnant women and/or unborn children.

To incorporate either of these provisions into the CHIP plan, the State, through the appropriate State official, should submit these pages electronically to both the Centers for Medicare & Medicaid Services (CMS) Central and Regional Offices. Once approved, these pages will be added to the current State Child Health Plan as an addendum describing coverage for pregnant women. Before submitting such an amendment, please review the current approved CHIP plan to determine if it is necessary to amend additional sections simultaneously (e.g., if a new benefit package is being adopted, if cost sharing is being modified just for this eligibility group, if different service delivery type is being used, if different enrollee protections apply, or if the State has not previously implemented a separate child health program). Note that if a State does not choose to use the same benefit type and package of services for pregnant women or unborn children, the State needs to submit a revised section 6 of the State plan with its amendment. Questions or assistance may be provided by your Central Office or Regional Office project officer.

In addition to offering the option of covering targeted low-income pregnant women under the CHIP plan, CHIPRA requires that children born to a woman receiving pregnancy-related assistance shall be deemed on the date of the child's birth to have applied for coverage under CHIP or Medicaid, and shall be found eligible for the appropriate program, and until the child reaches age one (as described in section 2112(e) of the Act). During this deemed eligibility period, the new law stipulates that the child health or medical assistance eligibility identification number of the mother shall also serve as the identification of the child. Additionally, during this period, all claims shall be submitted and paid for the child under the mother's identification number (unless the State issues a separate identification number for the child before the child reaches age one).

Draft State plan template pages to implement these options are enclosed. CMS is in the process of obtaining the required Office of Management and Budget (OMB) clearance under the Paperwork Reduction Act for the State plan amendment (SPA) templates. Given that States may need considerable time to complete these templates, CMS is sharing in draft the SPA template at

this time. Until such time when this SPA template is assigned an OMB clearance number, States are not obligated to respond.

It is well established that access to prenatal services and care throughout a mother's pregnancy improves health outcomes for both the mother and child. Therefore, we encourage States to consider these options to establish eligibility for this vulnerable population.

Sincerely,

/s/

Jackie Garner

Addendum to State Child Health Plan Describing Coverage of Pregnant Women

Section 1. General Description and Purpose of the State Child Health Plans and State Child Health Plan Requirements. (Section 2101)

1.1 The State will use funds provided under Title XXI primarily for (Check appropriate box) **(42 CFR 457.70)**:

1.1.1 ☐ Obtaining coverage that meets the requirements for a separate child health program (Section 2103); or

1.1.2. ☐ Providing expanded benefits under the State's Medicaid plan (Title XIX); or

1.1.3. ☐ A combination of both of the above.

1.2 ☐ Please provide an assurance that expenditures for child health assistance will not be claimed prior to the time that the State has legislative authority to operate the State plan or plan amendment as approved by CMS. (42 CFR 457.40(d))

1.3 ☐ Please provide an assurance that the State complies with all applicable civil rights requirements, including title VI of the Civil Rights Act of 1964, title II of the Americans with Disabilities Act of 1990, section 504 of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975, 45 CFR Part 80, Part 84, and Part 91, and 28 CFR Part 35. (42 CFR 457.130)

1.4 ☐ Please provide the effective (date costs begin to be incurred) and implementation (date services begin to be provided) dates for this plan or plan amendment (42 CFR 457.65):

Effective date:

Implementation date:

Section 2. General Background and Description of State Approach to Child Health Coverage and Coordination. (Section 2102 (a)(1)-(3) and Section 2105)(c)(7)(A)-(B))

2.2. Describe the current State efforts to provide or obtain creditable health coverage for uncovered children by addressing: (Section 2102(a)(2) and 42 CFR 457.80(b))

2.2.1. The steps the State is currently taking to identify and enroll all uncovered children who are eligible to participate in public health insurance programs (i.e., Medicaid and State-only child health insurance):

Section 4. Eligibility Standards and Methodology. (Section 2102(b))

4.1. The following standards may be used to determine eligibility of targeted low-income children for child health assistance under the plan. Please note whether any of the following standards are used and check all that apply. If applicable, describe the criteria that will be used to apply the standard. (Section 2102(b)(1)(A), 42 CFR 457.305(a), and 457.320(a))

4.1.1. ☐ Geographic area served by the Plan:

4.1.2. ☐ Age:

4.1.3. ☐ Income:

4.1.4. ☐ Resources (including any standards relating to spend downs and disposition of resources):

4.1.5. ☐ Residency (as long as residency requirement is not based on length of time in State) :

4.1.6. ☐ Disability Status (so long as any standard relating to disability status does not restrict eligibility):

4.1.7. ☐ Access to or coverage under other health coverage:

4.1.8. ☐ Duration of eligibility:

4.1.9. ☐ Other standards (identify and describe):

4.1-P. ☐ The State includes eligibility for one or more populations of targeted low-income pregnant women under the plan. ***Please describe the population of pregnant women that the State proposes to cover in this section. Please include any criteria, such as the above categories (e.g., income and resources) that will be applied to this population. Please use the same reference number system for those criteria (for example, 4.1.1-P for a geographic restriction).***

4.2. The State assures that it has made the following findings with respect to the eligibility standards in its plan: (Section 2102(b)(1)(B) and 42 CFR 457.320(b))

4.2.1. ☐ These standards do not discriminate on the basis of diagnosis.

4.2.2. ☐ Within a defined group of covered targeted low-income children, these standards do not cover children of higher income families without covering children with a lower family income. ***Please confirm that this applies to pregnant women as well as targeted low-income children.***

4.2.3. ☐ These standards do not deny eligibility based on a child having a pre-existing medical condition. ***Please confirm that this applies to pregnant women as well as targeted low-income children.***

4.3. Describe the methods of establishing eligibility and continuing enrollment. (Section 2102(b)(2) and 42 CFR 457.350)

4.3.1 Describe the State's policies governing enrollment caps and waiting lists (if any). (Section 2106(b)(7) and 42 CFR 457.305(b))

☐ Check here if this section does not apply to your State.

Please note that this box should be checked as related to children because States may not have an enrollment cap or waiting list for children and cover pregnant women.

4.4. Describe the procedures that assure that:

4.4.1. Through the screening procedures used at intake and follow-up eligibility determination, including any periodic redetermination, that only targeted low-income children who are ineligible for Medicaid or not covered under a group health plan or health insurance coverage (including access to a State health benefits plan) are furnished child health assistance under the State child health plan. (Sections 2102(b)(3)(A), 2110(b)(2)(B), 42 CFR 457.310(b), 42 CFR 457.350(a)(1), and 457.80(c)(3))

Please confirm that the State does not apply a waiting period for pregnant women.

Section 8. Cost Sharing and Payment. (Section 2103(e))

8.1. Is cost-sharing imposed on any of the children covered under the plan? (42 CFR 457.505) ***Please indicate if this applies for pregnant women also.***

8.1.1. ☐ YES

8.1.2. ☐ NO, skip to question 8.8.

8.2. Describe the amount of cost-sharing, any sliding scale based on income, the group or groups of enrollees that may be subject to the charge, and the service for which the charge is imposed or time period for the charge, as appropriate. (Section 2103(e)(1)(A), 42 CFR 457.505(a), 457.510(b) and (c), and 457.515(a) and (c))

8.2.1. Premiums:
8.2.2. Deductibles:
8.2.3. Coinsurance or copayments:
8.2.4. Other:

Please include a statement that no cost sharing will be charged for pregnancy-related services.

9.9. Describe the process used by the State to accomplish involvement of the public in the design and implementation of the plan and the method for ensuring ongoing public involvement. (Section 2107(c) and 42 CFR 457.120(a) and (b))

9.9.1 Describe the process used by the State to ensure interaction with Indian Tribes and organizations in the State on the development and implementation of the procedures required at 42 CFR section 457.125. (Section 2107(c) and 42 CFR 457.120(c))

States should provide notice and consultation with Tribes on proposed pregnant women expansions.

9.10. Provide a 1-year projected budget. (Section 2107(d) and 42 CFR 457.140)

The budget must describe:

- Planned use of funds, including:
  - Projected amount to be spent on health services;
  - Projected amount to be spent on administrative costs, such as outreach, child health initiatives, and evaluation; and
  - Assumptions on which the budget is based, including cost per child and expected enrollment.
- Projected sources of non-Federal plan expenditures, including any requirements for cost-sharing by enrollees.

Please include a separate budget line to indicate the cost of providing coverage to pregnant women.

January 2011

THE HENRY J. KAISER FAMILY FOUNDATION

Executive Summary

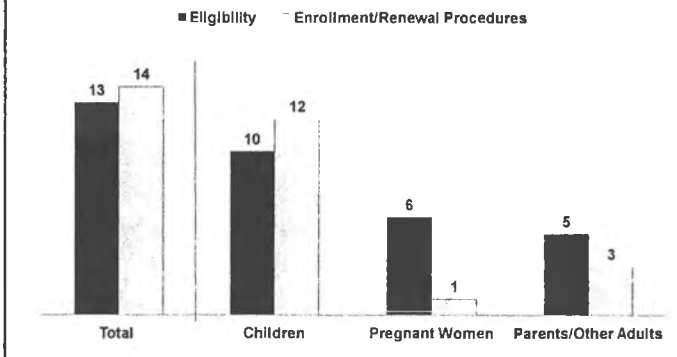
Introduction

Over the past year, as the nation's attention was focused on the country's continuing economic problems and the debate over the passage of broader health care reform, Medicaid and the Children's Health Insurance Program (CHIP) continued to play their central role of providing coverage to millions of people who otherwise lack affordable coverage options. In 2010, this role was more pronounced than ever as families losing their jobs and access to employer-based coverage turned to public programs in growing numbers. Without Medicaid and CHIP, many more individuals would have become uninsured, adding to the 50 million currently without coverage. Based on a survey of state officials in all 50 states and the District of Columbia conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, this tenth annual report provides an overview of state actions on eligibility rules, enrollment and renewal procedures, and cost sharing practices in Medicaid and CHIP during 2010, as well as the status of coverage as of January 1, 2011, for children, parents, pregnant women, and other non-disabled adults.

As the survey findings illustrate, families could turn to Medicaid and CHIP because nearly all states "held steady" or made targeted improvements in their eligibility and enrollment rules in 2010, with a total of 13 states expanding eligibility and 14 states making improvements in enrollment and renewal procedures (Figure 1). This striking stability in public programs can be directly attributed to the federal government's decision both to provide temporary Medicaid fiscal relief to states through June 2011, and to require states to maintain their Medicaid and CHIP eligibility rules and enrollment procedures until broader health reform goes into effect.

Figure 1

Number of States Improving Access to Health Care Coverage, January 2010 – January 2011



SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

During 2010, states also were starting to look ahead to implementation of the Affordable Care Act (ACA) and, in some instances, to take advantage of early options to improve Medicaid coverage. Health reform provides a broad expansion in coverage that will take effect in 2014, including extending Medicaid to a new national eligibility floor of 133 percent of the federal poverty level ($24,352 for a family of three and $14,404 for an individual in 2010). However, it is important for states to begin taking steps now to address the technological changes necessary to develop the online, consumer-friendly enrollment process envisioned under the ACA. Although there has been some progress in 2010, the survey highlights that states still have a significant amount of work to be prepared in 2014. Looking ahead, it will be important for state policymakers to continue moving forward on implementation while sustaining the gains and progress made in coverage to date.

Key Findings on Eligibility and Enrollment Procedures

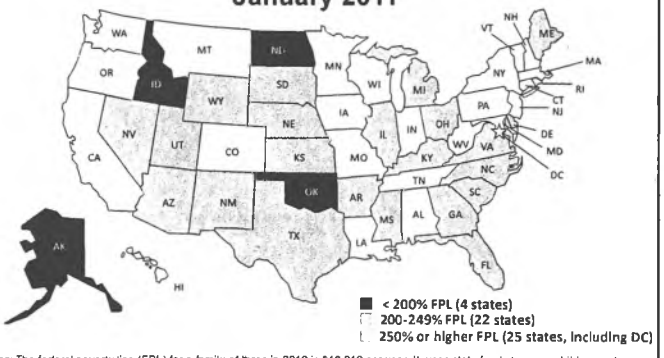
Nearly all states (49, including DC) held steady or made targeted improvements in their Medicaid and CHIP eligibility rules and enrollment procedures in 2010. By doing so, they maintained the central role of Medicaid and CHIP in providing affordable coverage to children and, to a lesser extent, their parents and other adults, many of whom lost jobs and their access to employer-based coverage in the ongoing economic downturn. This stability can be directly attributed to provisions in the American Recovery and Reinvestment Act (ARRA) adopted in February 2009, that required states to maintain their Medicaid eligibility rules and enrollment procedures as a condition of receiving a significant, temporary increase in the federal Medicaid matching rate. The ACA also included a maintenance-of-effort (MOE) requirement designed to keep Medicaid coverage steady for adults until broader reform goes into effect in 2014 and for children until 2019, as well as to extend these protections to children covered by CHIP. Without the MOE requirements and enhanced federal funding, many states almost certainly would have needed to turn to cutbacks in coverage in 2010 as a result of continuing budget pressures. Two states (AZ and NJ) did make coverage reductions that were not subject to the MOE. States also made other changes such as cuts to provider reimbursement rates and benefits to reduce Medicaid spending growth in 2010.

Despite significant budget challenges, 13 states went beyond maintaining coverage to implement targeted eligibility expansions for children, pregnant women, and adults in 2010. These expansions varied in size and scope. Most of the expansions focused on providing increased coverage to uninsured children, and in a many cases, also produced some state savings by allowing the state to draw down federal matching funds for previously fully state-funded coverage.

Building on progress made over the past decade, 3 states (CO, KS, and OR) increased income eligibility in Medicaid/CHIP for children in 2010. As such, as of January 1, 2011, 25 states, including DC, cover children in families with income at least up to 250 percent of the federal poverty level ($45,775 for a family of three in 2010), although enrollment remains heavily concentrated among the lowest-income children (Figure 2). Oregon also added a buy-in program in 2010 that enables families with incomes above Medicaid and CHIP thresholds to buy into coverage.

Figure 2

Children's Eligibility for Medicaid/CHIP by Income, January 2011



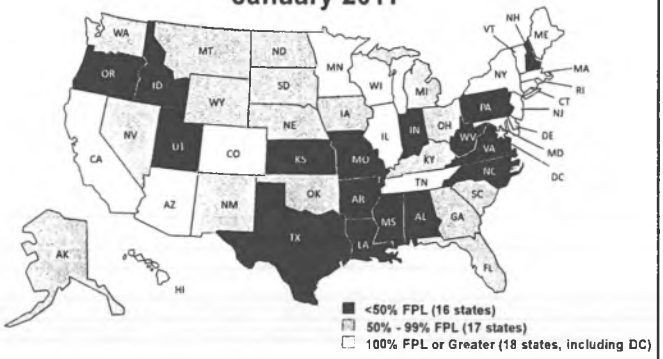
Notes: The federal poverty line (FPL) for a family of three in 2010 is $18,310 per year. IL uses state funds to cover children up to 300% of the FPL; OK has a premium assistance program for select children up to 200% of the FPL. AZ's CHIP program is currently closed to new enrollment.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

In 2010, states continued to take advantage of the option to cover lawfully-residing immigrant children and pregnant women during their first five years residing in the country. The Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) allowed states to draw down federal funding to cover these populations without imposing a 5-year waiting period. Six (6) states (DE, MN, MT, NE, NC, and WI) adopted the option for lawfully-residing immigrant children in 2010, resulting in a total of 21 states having eliminated this barrier for children as of January 1, 2011. In 15 of these states, coverage had previously been provided to these children with state-only dollars. In addition, in 2010, 5 states (DE, MN, NE, NC, and WI) adopted this option for lawfully-residing pregnant women, bringing the total number eliminating the "five-year bar" for pregnant women to 17. In 9 of these states, coverage had previously been provided with state-only dollars.

While states have made significant progress in expanding coverage for children, eligibility for their parents continues to lag far behind. In 2010, only one state (CO) expanded Medicaid coverage for parents. As of January 1, 2011, 33 states do not cover parents up to 100 percent of the federal poverty level ($18,310 for a family of three in 2010). The median eligibility threshold for parents remains at 64 percent of the federal poverty level and 16 states limit eligibility to below 50 percent of the federal poverty level ($9,155 for a family of three in 2010). In the absence of further expansions, these restrictive eligibility levels will leave most uninsured, low-income parents without an affordable coverage option until the health reform expansion goes into effect in 2014 (Figure 3).

Figure 3

Medicaid Eligibility for Working Parents by Income, January 2011



Notes: The federal poverty line (FPL) for a family of three in 2010 is $18,310 per year. Several states also offer coverage with a benefit package that is more limited than Medicaid at higher income levels.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

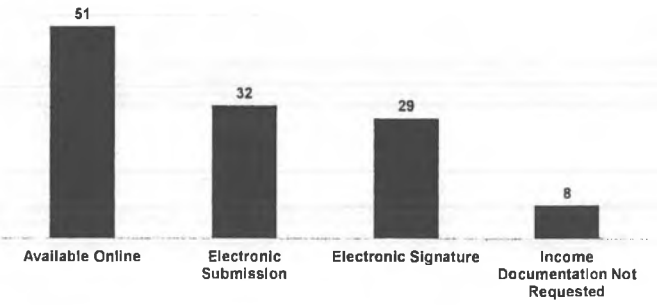
Low-income adults without dependent children remain ineligible for Medicaid in the vast majority of states. Under the ACA, Medicaid eligibility will be expanded to a minimum of 133 percent of the federal poverty level, ending the historic exclusion of non-disabled, non-pregnant adults without dependent children from the program. While this change is not required to be in effect until January 1, 2014, states have the option of moving early to cover these adults. In 2010, Connecticut and the District of Columbia took advantage of this option and moved low-income adults they had previously served through state-funded programs to Medicaid. Further, California received approval in 2010 for a waiver to continue and expand county coverage initiatives serving low-income adults. However, even with these expansions, as of January 1, 2011, only seven states (AZ, CT, DE, DC, HI, NY, and VT) provide Medicaid or Medicaid-equivalent benefits to adults without dependent children. Additional states offer more limited coverage to these adults, but in most states, low-income adults without children do not have access to public coverage regardless of their income.

States adopted improvements in their enrollment and renewal procedures in 2010 that helped to reduce burdens on families, streamline administrative processes, and achieve program efficiencies. In making these improvements, states often turned to options provided by CHIPRA. Specifically, 29 states took advantage of the CHIPRA option to more efficiently and accurately verify citizenship status by relying on an electronic data match with the Social Security Administration (SSA). A smaller, but still notable number of states, moved ahead with other simplification measures including the CHIPRA "Express Lane Eligibility" option, as well as long-standing strategies such as presumptive eligibility and continuous eligibility for children. Many appear to have done so at least in part to qualify for the Medicaid performance bonuses included in CHIPRA. These bonuses provide a financial reward and recognition to states that have implemented at least 5 of 8 simplification policies and that have reached specific enrollment targets for children in Medicaid. The Administration encouraged states in their efforts by launching the *Connecting Kids to Coverage Challenge*, a partnership of national and state organizations committed to enrolling all five million uninsured but eligible children in public programs.

States continued work to modernize their programs and begin preparing for health reform implementation by focusing on technological improvements. A number of states made program improvements such as offering applications that can be submitted online. Despite this early work, the survey findings highlight that states have a long way to go to develop the integrated, technology-driven, web-based eligibility systems for Medicaid, CHIP, and subsidized Exchange coverage that are envisioned and required under reform. For example, all states, including DC, post their Medicaid applications online, but only 32 accept the electronic submission of those applications. Among the 32 that accept electronic submission, 29 allow for the use of an electronic signature, but only 8 do not routinely ask families to submit paper documentation of information via mail or fax before checking other data sources to verify eligibility (Figure 4). In light of a rule proposed by the Administration at the end of 2010 to provide states with a 90 percent matching rate to prepare their Medicaid eligibility systems for health reform and the likelihood of additional guidance and funding opportunities in the months ahead, it can be expected that next year's survey will show more developments in this area.

Figure 4

Status of Online Applications for State Medicaid Programs, January 2011



Notes: In some states the online application is only available for children applying for coverage.
SOURCE: Based on the results of a national survey conducted by the Kaiser Commission on Medicaid and the Uninsured and the Georgetown University Center for Children and Families, 2011.

Conclusion

As implementation of broader health reform moves forward, the findings of this survey describe the foundation for coverage of low-income families and individuals through Medicaid and CHIP. These programs will play an even more substantial role in the years to come, particularly with the expansion in coverage for low-income adults. Valuable lessons can be learned from how states have streamlined and simplified their enrollment and renewal procedures in these programs, and while additional improvements will be necessary to further transform Medicaid and CHIP in order to fulfill the promise of reform, they provide a sound platform on which to begin.

Looking ahead, states face the challenge of implementing reform while at the same time dealing with significant budget pressures due to the nation's continuing economic problems and the corresponding increased need for Medicaid and CHIP. To continue forward progress on reform and keep the foundation solid, it will be important to focus on sustaining the coverage gains and progress made to date even in the face of these challenges. Health reform has the potential to markedly reduce the number of uninsured and provides states new opportunities to modernize, streamline, and continue to improve their Medicaid programs. While some of the most significant changes in health reform do not go into effect until 2014, it is important for states to lay the groundwork now. In 2010, there were initial signs of state Medicaid agencies preparing for health reform implementation, but more activity can be expected in 2011.

FOCUS on Health Reform

THE HENRY J. KAISER FAMILY FOUNDATION

NOVEMBER 2010

Access to Abortion Coverage and Health Reform

The Patient Protection and Affordable Care Act (ACA) will make significant changes to health coverage for women, expanding their access to coverage and broadening the health benefits that many will receive. Coverage for abortion services, however, was addressed separately under health reform. As result, the extent of abortion coverage that women will receive once ACA is fully implemented in 2014 will depend largely on policies enacted at the state level as well as choices that plans and consumers will make in terms of coverage of abortion services. This brief summarizes the major insurance coverage provisions of the ACA that are relevant for women of reproductive age, reviews current federal and state policies on abortion coverage and how they may be modified under health reform, and discusses the potential impact of the federal legislation on women's access to abortion coverage.

How does the Patient Protection and Affordable Care Act affect overall coverage for women of reproductive age?

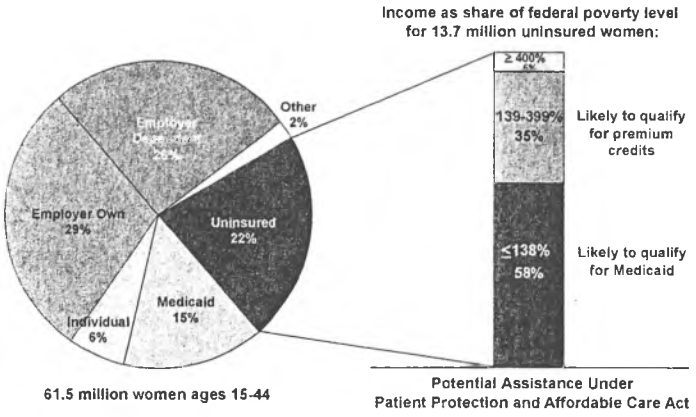
Signed into law on March 23, 2010, the ACA is a federal law aimed at ensuring that almost all U.S. citizens and legal residents have health insurance by requiring that most individuals obtain a minimum level of insurance coverage by 2014. This is to be achieved through a combination of public and private insurance expansions. By 2014, Medicaid will be available to cover many more of the nation's poorest uninsured, employers will be more likely to offer affordable coverage to their employees, and small businesses and other uninsured individuals will have access to state-based exchanges that will offer a variety of plans from which they can purchase insurance. The scope of benefits, including abortion, covered under these different avenues will vary.

The ACA will expand health care coverage to many of the nation's uninsured by extending Medicaid eligibility to all qualifying individuals with incomes up to 138% of the federal poverty level (FPL).[1] Uninsured individuals with incomes above 138% FPL will be able to purchase coverage in new state-based insurance exchanges that will act as marketplaces, open to all qualifying, uninsured individuals and small businesses with up to 100 employees. These state-based exchanges are to offer multiple insurance plans that uninsured individuals can choose from to purchase coverage. To help with the costs of insurance, the federal government will provide subsidies (in the form of premium credits) to eligible individuals and families with incomes from 139% to 399% FPL or if their share of premiums exceeds 9.5% of their income.[2]

It is estimated that 13.7 million women ages 15 to 44 are uninsured currently, 93% of whom would qualify for federal assistance under the health reform law, based on their income. The act would potentially extend Medicaid to 58% or 8 million women, and an estimated 4.8 million women (35%) would qualify for federal premium credits[3] to purchase coverage as shown in Figure 1.

Figure 1

Health Insurance Coverage and Poverty Levels of Uninsured Women Ages 15 to 44, 2009



Other includes programs such as Medicare and military-related coverage.
The federal poverty level for a family of four in 2009 was $22,050.

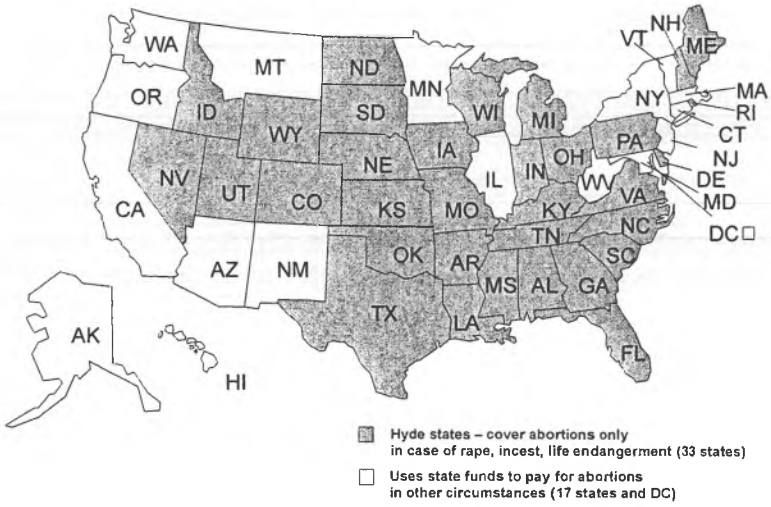
What are current federal and state laws regarding abortion coverage and financing?

Federal law bans the use of any federal funds for abortion, except when the pregnancy is a result of rape, incest, or if it is determined to endanger the woman's life. In effect since 1977, this rule known as the Hyde Amendment is not a permanent law; rather it has been attached annually to Congressional appropriations bills, and has been approved every year by the Congress. The Hyde Amendment initially affected only funding for abortions under Medicaid, but over the years, its reach broadened to limit federal funds for abortion for federal employees, women in the Indian Health Service, and in the military.

State level policies also have a large impact on abortion coverage, particularly since states are responsible for operation of Medicaid programs. The Medicaid program serves millions of low-income women and is a major payor of reproductive health services. It is estimated that two-thirds of adult women on Medicaid are in their reproductive years.[4] As discussed earlier, the federal Hyde Amendment restricts state Medicaid programs from using federal funds to cover abortions beyond the cases of life endangerment, rape, or incest. However, if a state chooses to, it can use its own funds to cover abortions in certain other circumstances, and states will continue to have this option under health reform. Currently, 17 states and the District of Columbia use state-only funds to cover abortions beyond the federal limitations for women on Medicaid.[5] In the other 33 states, Medicaid programs do not pay for any abortions beyond the Hyde restrictions (Figure 2). Currently, in these 33 states, an estimated 4.6 million women ages 15 to 44 are uninsured and have incomes less than 138% FPL, and would meet the income eligibility criteria to qualify for Medicaid under health reform (Table 2).[6]

Figure 2

Abortion Financing Under Medicaid, 2010



Source: Guttmacher Institute, State Policies in Brief, "State Funding of Abortion Under Medicaid," November 2010.

States also have authority over the scope of benefits for public employees. Currently, 13 states restrict abortion coverage in insurance plans for public employees. These restrictions range from states that provide coverage only under the Hyde limits to states that prohibit coverage for all abortions, regardless of circumstances.[7] States also regulate benefits covered by private insurance plans. Currently, at least four states (Idaho, Kentucky, Missouri, and North Dakota) prohibit private insurance coverage for abortions except in the case of rape, incest, or to save the woman's life. These states allow insurers to sell riders for abortion coverage, but there is little evidence about their availability and no documentation of their cost or impact on access.

How will abortion coverage be handled by Medicaid and plans in the exchanges under health reform?

Medicaid: The ACA reinforces current federal restrictions, limiting federal funds to be spent on abortions only to cases when the pregnancy endangers the life of the woman or results from rape or incest. This will not change for Medicaid under health reform; state Medicaid programs will continue to have the option to cover other medically necessary abortions using only state funds and no federal funds. President Obama issued an executive order as part of health reform that restated the federal limits specifically for Medicaid and community health centers.[8]

Plans in the Exchange: Plans participating in state-based exchanges will be required to cover a minimum set of services, defined as "essential health benefits, and the ACA explicitly prohibits states from including abortion in any essential benefits package. Therefore, no state or insurer offering a plan in an exchange will be required to offer abortion coverage, and each exchange must include at least one plan that does not cover abortions beyond those permitted by current federal law. Furthermore, states can bar all plans participating in the state exchanges from covering abortions, which at least five states (Arizona, Louisiana, Mississippi, Missouri, and Tennessee) have already elected to do since the health reform law's passage.[9]

If the state does not bar coverage of abortions, private insurers can offer a plan that covers abortions beyond the federal limitations within an exchange. The ACA outlines a methodology for states to follow to ensure that no federal funds are used towards coverage for abortions beyond Hyde. Any plan that covers abortions beyond Hyde limitations must estimate the actuarial value of such coverage by taking into account the cost of the abortion benefit (valued at least $1 per enrollee per month). This estimate cannot take into account any savings that might be achieved as a result of the abortions. Furthermore, plans that receive federal subsidies (it is believed that all plans in the exchanges will receive at least some federal subsidies) would have to collect two premium payments from all enrollees, including men and women of all ages. One payment would be for the value of the abortion benefit and the other payment would be for all other services. The funds would be deposited in separate allocation accounts, overseen and managed by state health insurance commissioners. Both the federal Office of Management and Budget and the Department of Health and Human Services are expected to publish guidelines in 2010 that states must follow to ensure that exchanges are adhering to these requirements.[10] The health reform law prohibits plans in the exchanges from discriminating against any provider because of "unwillingness" to provide abortions. It does not preempt other current state policies regarding abortion, such as parental notification and waiting period laws.

Currently, most (55%) women of reproductive age are covered through employer-sponsored plans from their own job or their husbands. Many of these plans do cover abortion currently and will be allowed to continue once health reform is fully implemented. Table 1 summarizes the ACA's major provisions on abortion coverage.

Table 1: Summary of Abortion Provisions in the Patient Protection and Affordable Care Act (P.L. 111-148)

Benefit Design	Prohibits abortion coverage from being required as part of the federally established essential benefits package; States can prohibit coverage for any abortions by all plans in their state-based exchange; At least one plan within a state exchange must not cover abortions beyond those permitted by federal law (to save the life of the woman and in cases of rape and incest); Private Plans: Can provide a plan in the exchanges that covers abortions beyond those permitted by federal law as long as they comply with requirement to segregate federal funds; All states' Pre-existing Condition Insurance Plans cannot cover abortions beyond those permitted by federal law.
Financing	Prohibit federal subsidies (for premiums or cost sharing) from being used to purchase a health plan in the exchanges that includes coverage for abortions beyond those permitted by federal law; In order to segregate funds, plans that choose to offer coverage for abortions beyond Hyde limitations must estimate the actuarial value of covering abortions by taking into account the cost of the abortion benefit (valued at least $1 per enrollee per month) and cannot take into account any savings that might be reaped as a result of the abortions. Any exchange plan that covers abortions and includes enrollees that receive federal subsidies must collect two separate premium payments from all enrollees — one payment for value of abortion benefit and one payment for all other covered services.
State Role	Law will have no effect on state laws regarding coverage, funding or procedural requirements on abortions, such as parental notification/consent laws; States can use state-only funds to pay for "medically necessary" abortions beyond federal requirements under Medicaid or to pay for abortion coverage in plans offered in an exchange; States can prohibit plans in new exchanges from covering any abortions; State-level health insurance commissioners will monitor and oversee payment segregation requirements for the purchase of plans within their respective exchanges.
Discrimination/ Protection	Prohibit plans participating in the exchanges from discriminating against any provider because of an unwillingness to provide, pay for, provide coverage of, or refer for abortions.

How much does an abortion cost?

The ACA's complex combination of restrictions means that under health reform, many currently uninsured women will obtain coverage either through Medicaid or an exchange; however, many of these women will not be covered for abortions and will have to pay out-of-pocket if they seek one. The cost of an abortion varies depending on factors such as location, facility, timing, and type of procedure. A clinic-based abortion at 10 weeks' gestation is estimated to cost between $400 and $550, whereas an abortion at 20-21 weeks' gestation is estimated to cost $1,250-$1,800 or more.[11] Though the vast majority (~90%) of abortions are performed early in pregnancy, the costs could still be economically challenging for many low-income women.[12]

What is the impact of the federal abortion provisions on women in high-risk pools?

The new health insurance exchanges will become operational in 2014. Prior to that time, some uninsured individuals will be able to buy coverage in new state-based, federally subsidized high-risk pools. Separate from states' currently operating high-risk pools, these new federally funded, Pre-existing Condition Insurance Plans (PCIP) will be open to individuals who have been uninsured for at least six months with existing health conditions, and will provide temporary coverage until exchanges become fully operational in 2014. States can operate the PCIPs or request the federal government to operate them, but all are financed with federal funds.

In July 2010, the Department of Health and Human Services issued a federal directive prohibiting all of these new PCIPs from covering abortions, effectively extending the Hyde Amendment to these plans as well.[13] Women who enroll in these temporary high-risk pools will not be able to use their own private dollars to purchase abortion coverage. Since many women eligible for PCIPs have more health problems than average, they could be more likely to encounter medical complications should they become pregnant. It is estimated that an additional 200,000 to 400,000 individuals are expected to enroll in the temporary PCIPs.[14] This order does not preempt states' policies on abortion coverage in their existing high-risk pools, nor does it prohibit women from paying a provider directly should they seek an abortion.

* * * * *

As a result of health reform, many more women will gain health insurance coverage. The decisions that the federal government, states, insurance companies, and policymakers will make over the next few years will determine the extent of abortion coverage that will be available to women across the nation once health reform is fully implemented in 2014.

Table 2: State Level Estimates of Percent of Uninsured Women Ages 15-44 Likely to Qualify for Federal Assistance under the Patient Protection and Affordable Care Act

		Uninsured Women, 2008-2009		Percent of Currently Uninsured Women Ages 15-44 Potentially Eligible for Federal Assistance in 2014

Parnell cites abortion in KidCare funds veto

CUTS: Governor axes over $300 million in state spending.

By SEAN COCKERHAM
scockerham@adn.com

(06/04/10 14:34:15)

Gov. Sean Parnell vetoed more than $300 million in state spending Thursday, including money for renewable energy and to expand Denali KidCare for low-income children and pregnant women.

Parnell vetoed nearly $3 million aimed at letting more Alaskans have health care costs covered under Denali KidCare. It's an increase he supported when it overwhelmingly passed the Legislature. But the governor said he reversed his position after recently finding out some Denali Kid Care money goes to fund abortions.

"My intention here today is to make sure we don't expand state government funding of abortions here in Alaska," Parnell said in announcing the veto.

His administration could not say how much Denali KidCare money is going to fund abortions, and critics of the decision say he's denying help to more than 1,000 children.

The Denali KidCare veto was the only significant cut Parnell made to the $8 billion budget that funds state agencies and services. But the governor axed $300 million from the separate $3.1 billion state budget for construction and maintenance projects, which is among the largest capital budgets the state has seen. The Legislature approved the budgets before adjourning for the year in April.

Parnell vetoed money for about 150 projects throughout the state, from roads to sewers to a new house for polar bears Ahpun and Louie at the Alaska Zoo. In many cases the governor reduced funding for projects instead of zeroing them out. He halved the $50 million intended for renewable energy grants, saying most of the money appropriated in the past for such projects still hasn't been spent. He cut $250,000 of the $1 million for deferred maintenance at the governor's mansion.

His veto of Denali KidCare money drew by far the strongest reaction, with Democrats saying it was outrageous. Anchorage Democratic Sen. Bettye Davis, who sponsored the Denali Kid Care money, said it would have allowed 1,300 children and 225 pregnant women to receive care.

Ethan Berkowitz, one of Parnell's Democratic opponents for governor, called the decision cold-hearted. "If you want to be tough, you don't be tough by slapping kids around," he said.

Hollis French, a Democratic state senator who is also running against Parnell, said the decision was depriving hundreds of children of coverage "because you're afraid a few women might make a choice you don't agree with." The courts made it clear the state has to pay for "medically necessary" abortions for poor women and the program doesn't fund elective abortions, he said.

Officials with AARP Alaska and the Central Council of Tlingit and Haida Head Start program said the governor's veto will hurt people struggling to raise children.

Parnell said he wanted to offer the health care to more women and children. But he said he couldn't bring himself to do it after recently discovering Denali Kid Care also funded abortions. Parnell said he couldn't believe it when he found out.

"I want to be able to provide those services. But if your governor doesn't stand for life and liberty, as he understands it in his conscience, then you don't have a governor," Parnell said.

Parnell said there are "hundreds of abortions being paid for by these funds." But state Sen. Davis said that's not true and only a "very small number" of abortions are funded. She said that's what the Alaska Department of Health and Social Services, which administers the program, told her when she inquired last year.

The Department of Health and Social Services was not answering any questions about it Thursday, even after Parnell referred reporters to the agency when he was asked how much Denali KidCare money is going for abortions. The agency said it could not answer that question, nor could it say how many abortions were funded or how it made the decisions on which abortions it should pay for.

Agency spokeswoman Cathy Stadem said the answers had to be run past the governor's office and she hoped to give them the next day. "Everything is having to be vetted through (the Alaska Department of Law) and through the governor's office," she said.

The $2.9 million Parnell vetoed would have expanded eligibility of the Denali KidCare program to cover households with income up to 200 percent of the federal poverty level, a threshold that's about $55,150 for a family of four. Proponents said most states fund at that level while Alaska is currently at about 175 percent.

BUILDING PROJECTS AXED

Sitka Republican Sen. Bert Stedman said he didn't realize Denali Kid Care money went to abortions and understands Parnell's reasoning on the veto. But Stedman said there was no financial reason for Parnell to chop hundreds of millions of dollars from the state budget for construction and maintenance projects.

"It's a political decision, not a financial one," said Stedman, who helped craft the budget.

The state has $12 billion in cash reserves on top of the Alaska Permanent Fund, Stedman said, and if the projects aren't funded now, they might never happen.

Parnell said the state has a surplus from high oil prices but it's not going to last forever. He said the amount of spending he approved will create jobs but not break the bank.

"These vetoes for the most part don't represent projects I do not like. They represent projects I think should be deferred to another time because of the fiscal situation," the governor said.

Ralph Samuels, a Republican running for governor, criticized Parnell for not cutting more. He said Parnell didn't do nearly enough at a time when oil production is declining.

There were about $70 million in road and drainage money vetoes in Anchorage. The mayor's office said nearly $10 million more was axed from the budget in planned upgrades for the Loussac Library, Sullivan Arena, the Ben Boeke and Dempsey Anderson ice arenas, and recreation centers in Spenard and Fairview.

But Anchorage Mayor Dan Sullivan said "a healthy list of road, public safety and other priority

projects remains, and will lead to a robust level of economic activity for Anchorage."

Parnell cut the biggest project in the budget for the Mat-Su Borough. He vetoed $22 million of the $57 million that the Legislature appropriated for work toward an extension of the Alaska Railroad from north of Willow to Port MacKenzie. Mat-Su Economic Development Director David Hanson said the remaining money will go to design and engineer the route, buy right of way and begin construction.

Mat-Su borough officials said they were mostly happy with the $137 million in projects they kept.

KidCare funded 664 'medically necessary' abortions in '09

DENALI KIDCARE: Physicians determine what is "medically necessary."

By SEAN COCKERHAM
scockerham@adn.com

(06/18/10 11:47:08)

The Alaska Department of Health and Social Services says 664 abortions were funded last year through Denali KidCare, the state health care program for low-income children and pregnant women.

Gov. Sean Parnell this month vetoed money to expand Denali KidCare to serve more Alaskans, saying he did it because some of the money pays for abortions.

Parnell said at the time that Denali KidCare funded "hundreds" of abortions. Anchorage Democratic Sen. Bettye Davis had disputed that, saying she'd previously spoken to the state health department and that a "very small number" of abortions are funded through Denali KidCare.

The health department couldn't answer for nearly two weeks exactly how many abortions were actually funded through the program. But a department spokeswoman sent out the figures Thursday showing Denali KidCare had paid for between 636 and 689 abortions every year for the past five years.

Last year's 664 is a substantial portion of the total abortions received by Alaskans. The Bureau of Vital Statistics reports 1,875 abortions in Alaska as a whole last year, although that doesn't count Alaskans who had the procedure performed out of state.

Davis didn't return a phone call Thursday seeking comment. But others were not ready to accept the state's numbers at face value.

"I am waiting for clarification about those numbers, but the bottom line is this -- Denali KidCare only pays for medically necessary abortions," said Hollis French, a Democratic state senator who is running against Parnell for governor. "Standing between a woman and her doctor is irresponsible, particularly when the stance also includes denying 1,200 children access to affordable medical care."

Denali KidCare is required to fund "medically necessary" abortions because of a 2001 Alaska Supreme Court ruling. The court ruled that "if the state undertakes to fund medically necessary services for poor Alaskans, it may not exclude from that program women who medically require abortions."

The state does not define what is "medically necessary," leaving that to the treating physician.

"I've been doing this for thirty-some years, not just abortions but health care. And early on I learned that only a physician can determine medical necessity," Bill Streur, deputy commissioner of the state health department, said earlier this month.

Jim Minnery, president of the anti-abortion group Alaska Family Council, said on Thursday that the

definition of "medically necessary" needs to be tightened.

He questioned how many abortions funded by Denali KidCare are related to the health of the mother, saying doctors are free to determine it's "medically necessary" to have an abortion if the birth would interfere with the mother's work or education.

Clover Simon, vice president of Planned Parenthood of Alaska, which provides abortions, said there was a court order during the 2001 case over state-funded abortions that set out what "medically necessary" is about. She said the term refers to "abortions certified by a physician to prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health, as determined by the treating physician performing the abortion services, in his or her professional judgment."

The state health department said $384,000 out of Denali KidCare's $217 million budget went to pay for "abortion related services." That's 0.18 percent of the total.

It adds up to about $580 for each abortion. The state and Planned Parenthood said that figure sounds about right, noting that the reimbursement to physicians through Denali KidCare is less than it would be with private insurance.

There were 55,754 Alaskans enrolled in Denali KidCare last year to receive help from the state with their health care costs, including 7,947 pregnant women.

The $3 million that Parnell vetoed would have allowed 1,300 more children and 218 more pregnant women on Denali KidCare, according to state estimates.

The money would have expanded eligibility of the program to cover households with income up to 200 percent of the federal poverty level, a threshold that's about $55,150 for a family of four. Proponents of the expansion said most states fund at that level while Alaska is currently at about 175 percent.

Ethan Berkowitz, another Democrat running against Parnell for governor, has said the issue is about health care and not abortion. If the issue for Parnell was really abortion he would have opposed all the Denali KidCare money, Berkowitz said, instead of just saying people can get health services if they are up to 175 percent of the poverty line but not between 175 and 200 percent.

Parnell spokeswoman Sharon Leighow said the governor had nothing to add Thursday to what he said when he vetoed the money. Parnell said he was acting to "make sure we don't expand state government funding of abortions here in Alaska."

Scenarios show emergency room visit is no cure-all for many children

COMPASS: ***Other points of view***

By SEN. BETTYE DAVIS

(07/23/10 21:23:29)

While stories of the governor's veto of Senate Bill 13 and the funding for the expansion of the state's Denali KidCare program fade from the media, just under 1,300 children and over 200 pregnant women will be faced with the daily reality of not having basic insurance coverage. That is why I sponsored this legislation, and that is where my interest in this remains.

Some may argue that they still have the ability to seek treatment at an emergency room. While that is true, let's look at some scenarios that Denali KidCare would cover with a less costly visit to a doctor's office.

Try taking your 6-month-old to an emergency room for checkups that include hearing or vision tests, immunizations and other various well-baby screenings instead of a pediatrician's office. They can't help you with that at the emergency room.

Perhaps while talking to your 2-year-old child, you notice he can only imitate speech or actions but doesn't produce words or phrases spontaneously. Without speech language therapy, his speech could fall further behind his peers' as he grows older. You can't get speech therapy in an emergency room.

We all know smart children who seem to lose interest or can't follow things in class, who we later learn couldn't see the visuals the teacher used because they didn't know they needed glasses. You can't get glasses in an emergency room.

How about not being able to eat or concentrate during school or at home because of a toothache? The emergency room doesn't offer dental checkups, cleanings and fillings.

Your 14-year-old breaks her leg while engaged in sports and goes to the emergency room for treatment. In this instance she will no doubt receive outstanding care, but what about follow-up physical therapy? You can't get that in an emergency room.

There are many other great services offered through Denali KidCare, such as mental health therapy, substance abuse treatment, chiropractic services, foot doctor's services and the fundamentally important but many times forgotten medical transportation services. I haven't even touched upon the prenatal services available to pregnant women that are critical to the wellbeing of the mother and birth of a healthy child.

Let me make it clear that I believe that we have some of the most highly trained, caring and compassionate professionals staffing our emergency rooms statewide and I am highly supportive of them. But an emergency room is designed for just what it pronounces itself to be: a place to treat people during emergencies. While either a doctor or an emergency room visit for your child can provide you with laboratory tests, prescription drugs or, in a worst-case scenario, hospitalization for a major traumatic event, the costs for these services could easily be a financial nightmare for any family. If the family cannot pay most or any of the bills, those costs are spread throughout the health care system to

those with insurance, whose premiums go up accordingly. And if those services are done exclusively at an emergency room, the costs are even higher.

while some individuals want to take this valuable program and use it as a touchstone for their opinions on government spending or philosophical battles, I remain focused on helping to bring health care to those who have no real interest in politics but just need assistance to see a doctor. For those women and children, the fact that the veto of SB 13 is no longer headline news doesn't change their needs.

Sen. Bettye Davis, an Anchorage Democrat, has represented District K in the state Senate since 2001.

Re: Alaskan Options for Expanding Coverage for Pregnant Women
Date: November 4, 2010

During a recent trip to Alaska to participate in the Kids First Alaska meeting on October 19, 2010 at the invitation of the All Alaska Pediatric Partnership and the Mat Su Health Care Foundation, I was asked to provide clarifying information on opportunities to expand federally supported medical coverage to pregnant women in Alaska. This memo outlines current coverage in Alaska and provides an overview of federal options and requirements for expanding coverage.

Current Coverage for Pregnant Women and Children in Alaska

Currently, Alaska provides traditional Medicaid coverage to pregnant women with income up to 175% of the Federal Poverty Level (FPL) who are citizens or immigrants lawfully residing in the U.S. for at least five years. Additionally, the state provides, as federally required, emergency medical coverage for labor and delivery services to any uninsured pregnant woman who meets the Medicaid guidelines, regardless of citizenship or immigration status.

While the purpose of this memo is to identify options for expanding coverage to pregnant women, certain options are related to coverage for children. Alaska uses its Medicaid program for covering both children and pregnant women. Currently, the State provides Medicaid coverage for children up to 150% FPL and coverage between 150% and 175% FPL for children through a Medicaid expansion funded through the Children's Health Insurance Program (CHIP) called Denali Kid Care. The CHIP-funded Medicaid expansion for children qualifies for a higher financial participation rate. In Alaska the federal participation rate for Medicaid is 50%[1] and for CHIP is 65%.

Options for Expanding Coverage for Pregnant Women with Federal Financial Participation

- *Expand Medicaid Coverage*

  Federal Requirements and Options - States with Medicaid programs are required to cover pregnant women who are citizens with income up to 133% of the federal poverty level (FPL). States may expand income eligibility through Medicaid to pregnant women who are citizens and, at the state option, lawfully-residing immigrants up to an income level approved by the federal government. States are

also required to cover labor and delivery cost of all uninsured women under emergency Medicaid services if they otherwise meet Medicaid income and asset requirements.

Alaska Options – Alaska may expand Medicaid coverage for pregnant women with incomes higher than the current limit of 175% FPL. Under this option, the state may also elect to provide coverage for lawfully residing immigrant pregnant women. An expansion of eligibility requires a Medicaid State Plan Amendment (SPA). Federal financial participation under this option is 50%.

- *Expand CHIP Coverage to Pregnant Women*

Federal Requirements and Options – The 2009 federal reauthorization of the CHIP program (CHIPRA) expanded options for states to cover pregnant women. Under CHIPRA, states may provide coverage to pregnant women who are citizens and, at the state option, lawfully residing immigrant pregnant women, through CHIP up to 300% FPL, if certain conditions are met. Among those conditions, the state must cover children under Medicaid/CHIP up to at least 200% FPL and cover pregnant women through Medicaid up to 185% FPL. Pregnant women cannot be covered at a higher income level than children.

Alaska Options – To expand coverage to pregnant women under CHIPRA, the state would first have to expand Denali Kid Care coverage to children from the current income level of 175% FPL up to at least 200% FPL or higher, depending on the proposed income limit for pregnant women. Additionally, the state would have to expand Medicaid coverage to pregnant women between 175% and 185% FPL. With those coverage levels, the state may expand coverage for pregnant women above 185% FPL drawing down the higher 65% CHIP federal match.

This option would require a Medicaid SPA to raise the income eligibility level for pregnant women to 185% FPL. Additionally, Alaska must submit a CHIP SPA to expand income eligibility for children up to 200% FPL (or higher depending on the proposed income limit for pregnant women) and to provide CHIP coverage to pregnant women above 185% FPL.

The SPA establishes what is technically a separate CHIP program for low-income pregnant women rather than a CHIP-funded Medicaid expansion program as is Denali Kid Care. However, it can be operated as a "Medicaid look-alike" program using the existing Medicaid administrative structure and health care delivery system. The expansion to pregnant women between 175% and 185% FPL would qualify for the 50% federal Medicaid match, while expanded coverage for children above 175% FPL and for pregnant women above 185% would qualify for the higher federal CHIP match of 65%.

- *Expand Coverage Under the CHIP Unborn Child Option*

  Federal Requirements and Options - States may provide prenatal care, labor, and delivery services to pregnant women through the unborn child option in CHIP. Sixty days of postpartum care can also be funded if services are provided under a global capitation arrangement, which bundles payment for all prenatal, labor, delivery, and postpartum care. Through this option, coverage is provided without regard to the pregnant woman's immigration status. While it is the unborn child who is eligible, services are directed to the pregnant woman to ensure the delivery of a healthy newborn, including medical and dental services for the mother deemed necessary to promote the health of the unborn child.

  Alaska Options - The state may expand coverage under the CHIP unborn child option for the unborn child of pregnant women who do not otherwise qualify for Medicaid, as well as pregnant women above the current income limit of 175% FPL. Like the previous option, this would require a CHIP State Plan Amendment to create a separate CHIP program to establish coverage for the unborn child.

  Currently eligible children, ages 0 - 18 would continue to be covered under Denali Kid Care while the pregnant women receiving services based on the eligibility of their unborn child would be covered under the separate CHIP program. In this case, Alaska may also wish to design its CHIP unborn child coverage as a "Medicaid look-alike" program as described above. Services provided to pregnant women under the unborn child option qualify for a 65% federal financial participation in Alaska.

Summary

Several options exist for Alaska to expand coverage to pregnant women directly through Medicaid and/or CHIP. Financial participation depends on the option(s) chosen. This overview of provisions in CHIPRA to cover pregnant women may be helpful. Stakeholders may wish to review additional information provided to states by the Centers for Medicaid and Medicare (CMS) in these relevant State Health Official (SHO) letters of guidance and Q & A memos:

State Health Official Letter on the Unborn Child Option

State Health Official Letter on Lawfully Residing Children and Pregnant Women

State Health Official Letter on Covering Pregnant Women through CHIP

State Health Official Letter on Frequently Asked Questions about Covering Pregnant Women

[1] The 50% federal participation is the traditional matching rate for Alaska. During the period July 2008 through June 2011, the American Recovery and Reinvestment Act (ARRA) provides a higher match to help states deal with the increased need for services during the economic downturn.

STATE OF ALASKA
DEPARTMENT OF
HEALTH AND SOCIAL SERVICES

Fact Sheet

COMMISSIONER'S OFFICE

Denali KidCare Fact Sheet (as relates to the topic of abortion)

1. **How big is Denali KidCare's annual budget?**
   - Spending in CY 2009:
     - Title XXI kids: $30,246,349
     - DKC Pregnant Women: $60,578,841
     - DKC Title XIX kids: $125,761,129
     - **Total DKC: $216,586,319**

2. **What fraction, estimated, is spent on abortions or on programs that include public money for abortions?**

   In CY 2009 in comparison to the above:
   - Of total DKC spending: $384,000 was spent on abortion-related services.

3. **How many abortions are performed each year (on average) with funding from Denali Kid Care?**
   - The department has data on abortion-'related' services. This does not necessarily equal the number of abortions. It indicates services provided that are related to abortion. From Jan 1, 2009 through Dec. 31, 2009, 664 individuals on Denali KidCare received abortion-related services. In Alaska as a whole, the Bureau of Vital Statistics reports that in calendar year 2009 there were 1,875 total abortions

4. **How many additional women and children would have been eligible for Denali KidCare if the eligibility had been expanded from 175 percent to 200 percent of the federal poverty level?**
   - The fiscal note for SB13 estimates 218 pregnant women and 1,277 children would have been covered by the expansion of Denali KidCare.

5. **How many abortions are conducted in Alaska each year and how many of those do you estimate receive state subsidies?**

    - The Bureau of Vital Statistics reports that in calendar year 2009 there were 1,875 abortions in Alaska as a whole. See #9 for additional information.

6. **How much is the state giving up in Federal matching funds with this veto? Is it a 50/50 match?**
    - The fiscal note for SB13 estimates that the state would have spent $1,592,700 in federal funds in FY 2011. For 2011, the estimated funding was estimated to be 69.7% federal when the regular Medicaid, CHIP, and tribal health federal match rates are factored together.

7. **Under what conditions may a woman have an abortion paid for? What is medically necessary?**
    - "Medically necessary" as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court decision.

8. **Is the program affected by an Alaska Supreme Court decision that says certain abortions must be paid for?**
    - Yes. The Alaska Supreme Court ruled in *DHSS v. Planned Parenthood*, 28 P.3d 904 (Alaska 2001) that the State must fund medically necessary abortions for pregnant women if it funds other medically necessary services for other financially needy persons.

9. **What is the average number of abortions per year paid for by Denali KidCare?**
    - From CY 2005 – CY 2009, an average of 664 individuals per year on Denali KidCare received abortion-related services. The number of abortion-related services provided each year remained relatively steady during this period.
    - The following is the number of abortions funded through the Denali Kid Care program in the last five years.(We are aware that the number of abortions listed for 2009 (664) is the same number we listed for individuals on Denali KidCare who received "abortion-related services" in the Fact Sheet sent out June 7, 2010 (question #3).)

        - 2005: 680
        - 2006: 689
        - 2007: 636
        - 2008: 653
        - 2009: 664
        - **Five year average: 664**

10. Does the state have any choice in funding abortions through Denali Kid Care?

- No. The Alaska Supreme Court held in 2001 that if "the State undertakes to fund medically necessary services for poor Alaskans, it may not selectively exclude from that program women who medically require abortions." The 2001 decision is State v. Planned Parenthood, 28 P.3d 904 (Alaska 2001). In other words, any benefits program for financially eligible Alaskans enacted by the State must include funding for medically necessary abortions if it includes funding for other medically necessary services.

11. Is that because the courts have ruled that the state cannot restrict funding for "medically necessary" abortions?

- Yes

12. What is the definition being used for "medically necessary" abortions? Is it still to "prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health."?

- "Medically necessary" as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court decision.

13. Is there a specific amount of money allocated for abortion procedures and how is that amount decided upon?

- No specific amount of funding is allocated for abortion-related services in the Department budget.

14. Does Planned Parenthood accept Denali KidCare aid?

- Planned Parenthood is an enrolled Medicaid provider and therefore can bill the Department for services provided to people on Denali KidCare.

15. Has the state awarded any grants to Planned Parenthood?

- No grant awards have been issued to Planned Parenthood of Alaska or Planned Parenthood of the Great Northwest in FY2010.

16. How many women and children were enrolled in Denali KidCare in CY2009

- Title XIX DKC kids (< 19 yrs) 39,138
- Title XXI CHIP kids (< 19 yrs) 14,914
- DKC Pregnant women any age 7,947

Total <u>unduplicated</u> enrollment: 55,754*

*: NOTE: The 3 bulleted numbers do not add up to the total shown above because some clients change categories throughout the year and are counted more than once.

MEMORANDUM

DATE: March 28, 2011

TO: Senator Bettye Davis, Chair, Senate HSS Committee

FROM: Jon Sherwood, DHSS Medical Assistance Administrator

SUBJECT: Denali KidCare

Senator Davis, below is the Department's response to two issues that came up in the hearing on SB 5 on March 23, 2011.

First, we believe there may have been some confusion regarding regulations defining medical necessity as it related to abortion and the definition of therapeutic abortion. There are regulations defining therapeutic abortion at 7 AAC 47.290; however, these regulations only apply to the General Relief Medical program. This program was defunded by the Alaska Legislature in 1998. Prior to that time, abortions for Medicaid eligible women were covered under the General Relief Medical program. This defunding of the program that covered abortions for Medicaid eligible women is what triggered the court cases that currently govern state-funded abortions. Nothing in those court decisions applies the definition at 7 AAC 47.290 to the current requirement to pay for abortions nor provides a separate definition of medical necessity.

There is no specific definition of medical necessity for abortions in 7 AAC 105.100 or elsewhere in 7 AAC 105, the regulations that govern Medicaid services. Under 7 AAC 105.100(5), the general criteria for medical necessity if there is no specific definition for a service is "by the standards of practice applicable to the provider".

Given these facts, the Department believes its previous statement that there is no statute, regulation, or court decision that defines medical necessity as it applies to abortions paid for under Denali KidCare is accurate.

Second, questions arose about how the Department uses coding to determine that services are abortion-related, and if services for miscarriages or stillbirths might be included.

The Division of Health Care Services determines whether a claim is for an abortion related service based on a combination of procedure codes and diagnosis codes as follows:

If a claim comes in with one of several ICD-9 diagnosis codes related to pregnancy, the claim is pended for review. The reviewer then identifies the procedure code and determines if the procedure code - diagnosis code combination is an abortion-related service. If so, the claim is assigned a collocation code that will be charged against state funds only. In some cases, the reviewer may request medical case notes to make the final determination of whether or not the claim is for an abortion-related service.

While a multitude of procedure codes may be included in abortion-related services, use of diagnosis codes directs the reviewer to correctly exclude services related to miscarriage, stillbirths, or other circumstances not related to abortions when we identify abortion-related services.

Subject: SB 5 - Coding of Abortions - Separating the facts

March 24, 2011

Jon,

SB 5 will be continued Monday, March 28, 2011 in Senate HSS at 1:30 p.m. Could you be there?

Senator Davis asks if you could provide the information requested yesterday before the hearing on SB 5 is continued Monday, March 28 in (S)HSS at 1:30. Her question, as I recall, concerned the coding of abortions.

This question is two-pronged as I see it:

1. It goes to funding "abortion-related services" including counseling, ultrasounds and other services that don't necessarily end in an abortion. Does the coding have bearing on the finances as well as the medical procedure? And are they distinguishable by costs or procedure alone?

2. It brings up the question whether the estimated increase of 22 abortions resulting from increasing DKC eligibility to 200% are coded differently if they are induced surgically or chemically, or other methods; whether some coded abortions ultimately result only in counseling and ultrasounds but not termination; whether abortions which are spontaneous or still born or other are distinguished from voluntary/elective but "medically necessary" abortions for the health of the mother under current law and regulations - the AAC definition per Memo provided by email to Wilda yesterday. Whether coding might distinguish the type of abortion posited by Senator Meyer: Could a woman get an abortion merely because she was depressed (recognizing "medically necessary" prerequisite) and is it coded differently so that we have a better breakdown of the 22 anticipated terminations.

Jon, feel free to rephrase my questions, as you are the expert, but I think you know what I am driving at. Is the number 22 of increased abortions a realistic figure, or is it unavoidably inflated due to a variety of procedures, costs and services which typically are not considered abortions but abortion-related services?

March 23, 2011
Celeste Hodge, Committee Aide
Senate Health & Social Services Committee

Celeste,

Per request by members of the Senate Health & Social Services Committee today regarding SB 5, attached is the 11-page Legislative Legal Services Memorandum and work-product of Legislative Counsel Jean Mischel dated November 18, 2010 to which I cited in quoting the definition of "medically necessary" abortions in federal US Supreme Court case law and a similar definition in the Alaska Administrative Code regarding "medically necessary" abortions and other covered services. Please distribute this memorandum to (S)HSS Committee members as soon as possible.

The Memorandum indicates that the issue in federal courts revolved around interpretation of the Hyde Amendment of 1973, with subsequent instructional interpretation of the definition of "medically necessary" in U.S. Supreme Court case *Harris v. McRae*, 448 U.S. 297 (1980) (see page 2 of the memorandum). Page 6 of the Memorandum provides definitions of "medically necessary" from the Alaska Administrative Code 7 AAC 47.290 along with the general concept of "medically necessary" for all covered services under 7 AAC 105.100. The memorandum provides other references to Alaska Statutes and Alaska Administrative Code concerning the same subject. I assume this memorandum will help Assistant Attorney General Stacie Kraly who promised, as I recall, a nationwide review of the same and a response within three months in Senator Davis's August 3, 2010 Senate HSS meeting, *i.e.*, almost 8 months ago. Jean Mischel produced this lengthy and substantive legal Memorandum within a week after request on November 9, 2010.

I note for the record, that the attached document from DHSS, Office of the Commissioner, to which Senator Dyson referred from the hearing package and titled "Fact Sheet on Denali KidCare as it Relates to Abortion Funding" was both undated and unsigned. He indicated it contradicted the legal memorandum attached, *i.e.,* that, in quoting, "'medically necessary' as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court Decision." In asking for clarification of the date from Wilda Laughlin after the hearing on SB 5 today, I understood it was subsequently dated upon request and republished although we never received a copy. I believe Senator Davis's office received the attached sometime last fall between September and November.

MEMORANDUM November 18, 2010

SUBJECT: Medicaid funding of "medically necessary" abortions
(Work Order No. 27-LS0175)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the meaning of "medical necessity" as it relates to medical assistance (Medicaid) funding of abortions. State and federal statutes fail to define the phrase, although the concept forms the basis for coverage of all services under the jointly funded Medicaid program and is defined for purposes other than abortion services in regulation.

Despite a federal exclusion for most abortion services known as the "Hyde Amendment," upheld by the United States Supreme Court, the Alaska Supreme Court in 2001 specifically held that the equal protection guarantee under our state constitution requires the state to cover medically necessary abortion services, as it does for all other medical services covered under state Medicaid funding. The standard for "medical necessity" in Alaska appears to be similar for all Medicaid services and includes services that are broader than life saving services but less than elective services, as discussed below.

FEDERAL LAW DRAWS A DISTINCTION BETWEEN ABORTION SERVICES FUNDING AND OTHER TYPES OF COVERED SERVICES

The federal purpose of the Medicaid program established the medical necessity standard under 42 U.S.C.S. § 1396-1 as follows:

> For the purpose of enabling each State, as far as practicable under the conditions in such State, to furnish (1) medical assistance on behalf of families with dependent children and of aged, blind, or disabled individuals, whose income and resources are insufficient to meet the costs of *necessary medical services*, and (2) rehabilitation and other services to help such families and individuals attain or retain capability for independence or self-care, there is hereby authorized to be appropriated for each fiscal year a sum sufficient to carry out the purposes of this title. The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Secretary, State plans for medical assistance.

(Emphasis added.) Since 1976, Congress has prohibited, either by an amendment to the annual appropriations bill for the United States Department of Health and Human Services, or by joint resolution, the use of any federal funds to reimburse the cost of abortions under the Medicaid program except under certain specified circumstances. The "Hyde Amendment" provides that:

> [N]one of the funds provided by this joint resolution shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest when such rape or incest has been reported promptly to a law enforcement agency or public health service.

Pub. L. 96-123.

After the passage of the Hyde Amendment, federal courts wrestled with questions about whether state and federal governments are required to pay for an indigent woman's exercise of a fundamental constitutional right when a "medically necessary" abortion is involved. In several close decisions, the U.S. Supreme Court determined that the federal constitution does not require public financial support of the right to choose an abortion in cases that do not involve rape or incest or a threat to the mother's life. Beal v. Doe, 432 U.S. 438 (1977); Maher v. Roe, 432 U.S. 464 (1977); Harris v. McRae, 448 U.S. 297 (1980); Webster v. Reproductive Health Services, 492 U.S. 490 (1989). It is instructive to note the trial court definition in the McRae case of the phrase "medically necessary" for purposes of abortion funding was "a professional judgment for the physician that may be exercised in the light of all factors--physical, emotional, psychological, familial and the woman's age--relevant to the well-being of the patient."

The federal courts ruled in these cases that governments are not required to provide money to assist in the exercise of constitutional rights; governments are only prohibited from placing obstacles in the way of exercising those rights. Withholding funding, said the federal courts, is not an obstacle to the indigent woman who seeks an abortion. Her poverty may be an obstacle, but the government did not create the poverty. She is still free to have an abortion, but not with public money. The federal courts suggested other private money might be available. In light of these federal decisions, it is clear that public funding for abortions, even when "medically necessary," is not required under the federal constitution.

ALASKA LAW REQUIRES A MORE UNIFORM BUT INEXACT STANDARD FOR STATE MEDICAID FUNDING OF ALL TYPES OF SERVICES COVERED, INCLUDING ABORTION SERVICES

In the early 1990's, the state attempted to adopt the federal distinction for funding of abortion services and disregarded the general medical necessity definition adopted in regulation for other types of services. In a direct challenge to the state regulation that provided only for public funding of abortion services to preserve the life of the mother or

in cases of rape or incest, the Alaska Supreme Court held that the state must pay for medically necessary abortions for participants in the Medicaid program as it does for other types of services. State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001). The Alaska Supreme Court determined then that the "rape, incest, and to prevent the death of the mother" restrictions of the Hyde Amendment are too narrow to satisfy the requirements of the Alaska state constitution.

The Alaska constitution has been consistently interpreted to provide broader protections than the federal constitution. For instance, in Valley Hospital Ass'n v. Mat-Su Coalition for Choice, 948 P.2d 963, 969 (Alaska 1997), the Alaska Supreme Court held that "reproductive rights are fundamental . . . [and] include the right to an abortion." Later, in State v. Planned Parenthood of Alaska, Inc., 28 P.3d 904 (Alaska 2001), the Alaska Supreme Court, although basing its decision on due process considerations rather than the privacy clause used by the lower court, came to the same conclusion the lower court had. The conclusion was that if the state Department of Health and Social Services (DHSS) restricted abortion coverage for Medicaid-eligible women to only those covered by the exceptions in the Hyde Amendment, it would result in unconstitutional implementation of Medicaid in Alaska.

There is language in the Planned Parenthood of Alaska, Inc. case (cited above; see 28 P.3d at 913) strongly suggesting that the Alaska Supreme Court considers women who carry their pregnancy to term to be similarly situated with women who have an abortion (in that they are both exercising their constitutional freedom of reproductive choice). If the court continues to hold that position when faced with a renewed public abortion funding challenge, there is a possibility that the court will find that the state may not be able to burden the right to abortion services under the state Medicaid program unless a similar burden is placed on medical services to continue a pregnancy, and in the absence of comparable burdens on continuation of a pregnancy the state cannot burden the right to abortion services.

The consequence of having a more broadly interpreted right to public funding of abortions for Medicaid recipients in Alaska than what is allowed under federal law is that DHSS must cover some Medicaid abortions with 100% state money (no federal match).[1] The federal government does not prohibit states from using their own funds.

Over the years, language has appeared in Alaska budget acts that purport to prohibit DHSS from using any of its appropriated money for abortions outside the scope of the

---

[1] Alaska is reportedly not alone in using purely state funds for some Medicaid abortions that the federal government will not fund. I do not have an up-to-date list and I have not double-checked the cases cited, but the ACLU says that 17 states fund abortions outside the Hyde Amendment restrictions, 4 voluntarily and 13 under court order. I have attached the relevant information, as reported by the ACLU, excerpted from http://www.aclu.org. I cannot vouch for the accuracy of the ACLU website, but if you require further information about public funding of abortions in other states, please let the office know.

Hyde Amendment. However, DHSS has been under court order to continue to pay for medically necessary abortions and has complied with the state attorney general's advice to do so.[2]

---

[2] For instance, with regard to the 2007 fiscal year operating budget, the attorney general wrote the following:

> This year's budget, as did the prior four years' budgets, contains the following language regarding abortion funding:
>
> > No money appropriated in this appropriation may be expended for an abortion that is not a mandatory service required under AS 47.07.030(a). The money appropriated for Health and Social Services may be expended only for mandatory services required under Title XIX of the Social Security Act and for optional services offered by the state under the state plan for medical assistance that has been approved by the United States Department of Health and Human Services . . . .
>
> [citation omitted]. As we opined before, this language is intended to prevent expenditures from these appropriations for therapeutic or medically necessary abortions. DHSS, however, is under a superior court order to operate its Medicaid program in a constitutional manner by providing payment for them. That superior court order has been upheld by the Alaska Supreme Court, which specifically rejected an argument that the separation-of-powers doctrine precluded the superior court from ordering the state to pay. State, Dept. of Health & Social Services v. Planned Parenthood of Alaska, 28 P.3d 904 (Alaska 2001). Thus, the DHSS is faced with a ruling from the state's highest court that the limit on payment for abortion services results in the operation of the Medicaid program in an unconstitutional manner, while DHSS is ostensibly without the money available to pay for services to operate the program legally. . . . Five years ago, the plaintiffs in the Planned Parenthood case asked the superior court to clarify how similar budget restrictions impacted its judgment. The superior court, three days after the supreme court affirmed the judgment, issued an opinion ordering the DHSS not to comply with the restrictions. To date, therefore, DHSS has obeyed the superior court's order and we must advise DHSS to continue to obey it; i.e., to continue to pay for these medically necessary abortions, until such time as a court reverses the order that is now in effect.

2007 Alas. AG LEXIS 21, 7 - 8.

According to DHSS, the money used for Medicaid abortions not covered by the Hyde Amendment (i.e., abortions for which the federal government will not contribute federal money), comes from the appropriation made by the legislature to DHSS for Medicaid.[3]

Other attempts to narrow the definition of "medical necessity" for purposes of abortion services funding have similarly failed. In 2002, for example, the Alaska Legislature passed and the governor vetoed a bill (SB 364, 22nd Legislature) that added a new section to AS 47.07 to provide that the state Medicaid program may only pay for medically necessary abortions and for abortions to terminate pregnancies resulting from rape or incest. The bill prescribed what is a medically necessary abortion and established requirements for submitting claims for payment for abortions. (See SB 364, attached). That bill provided as follows:

> (b) A claim for payment for a medically necessary abortion that is submitted to the department must be accompanied by a written certification by the treating physician that the abortion is medically necessary to treat a serious
>
> (1) adverse physical condition of a pregnant woman that
>
> (A) either is caused by the pregnancy or would be significantly aggravated by continuation of the pregnancy; and
>
> (B) would seriously endanger the physical health of the woman if the pregnancy were not terminated by an abortion; or
>
> (2) psychological illness of a pregnant woman who requires medication for treatment of the illness if
>
> (A) the medication required to treat the illness would be highly dangerous to the fetus; and
>
> (B) the health of the woman would be endangered if the mediation was not taken during pregnancy.

Since the bill was vetoed and the definition of "medical necessity" for purposes of abortion services funding contained in former 7 AAC 43.140(a) was held to be unconstitutional in 2001 and has recently been repealed but not reenacted, the state currently lacks a clear definition of the phrase as it applies to abortion services. The repealed regulatory definition provided that:

> (a) Payment for an abortion will, in the department's discretion, be covered under Medicaid if the physician services invoice is accompanied by certification that the (1) life of the mother would be endangered if the pregnancy were carried to term; or (2) pregnancy is the result of an act of rape or incest.

---

[3] If the physician submitting the Medicaid claim for costs associated with an abortion does not provide the information that would allow DHSS to document to the federal government that a particular abortion falls within the Hyde Amendment exceptions, then DHSS does not seek a federal match for the costs associated with that abortion.

What remains in the regulations for abortion services funding are the terms "elective" and "therapeutic" (a term that appears to be used as a substitute in the regulations for "medical necessity"), defined in 7 AAC 47.290, along with the general concept of "medically necessary" for all covered services under 7 AAC 105.100.

For general relief funding,[4] 7 AAC 47.290 provides as follows:

> . . .
> (7) "elective abortion" means a procedure, other than a therapeutic abortion, to terminate a pregnancy;
> (8) "therapeutic abortion" means the termination of a pregnancy;
> (A) certified by a physician as medically necessary to prevent the death or disability of the woman, or to ameliorate a condition harmful to the woman's physical or psychological health; or
> (B) that resulted from actions that would constitute a crime of sexual assault under AS 11.41.410 - 11.41.425, a crime of sexual abuse of a minor under AS 11.41.434 - 11.41.440, or the crime of incest under AS 11.41.450.

For state funding under Medicaid, 7 AAC 105.100 describes "covered services" to include the general concept of "medically necessary" with cross-references to specified types of services as follows:

> The department will pay for a service only if that service
> (1) is identified as a covered service in accordance with AS 47.07, 7 AAC 43, and 7 AAC 105 - 7 AAC 160;
> (2) is provided to an individual who is eligible for Medicaid under 7 AAC 100 on the date of service;
> (3) is ordered or prescribed by a provider authorized to order or prescribe that service under applicable law;
> (4) is provided by a person who is enrolled as a Medicaid provider or rendering provider under 7 AAC 105.210, or otherwise eligible to receive payment for services under 7 AAC 43 and 7 AAC 105 - 7 AAC 160;
> *(5) is medically necessary as determined by criteria established under 7 AAC 43 and 7 AAC 105 - 7 AAC 160 or by the standards of practice applicable to the provider;*
> (6) has received prior authorization from the department, if prior authorization is required under 7 AAC 43 or 7 AAC 105 - 7 AAC 160; and

---

[4] Like the Medicaid program, the general relief program is designed to meet "medical needs." While some abortions are termed "elective" by some observers, they still meet a medical need, as determined by the physician who performs the abortion procedure. Distinguishing among types of abortions in the general relief program would infringe the same privacy and equal protection interests as courts have determined are infringed when abortion funding restrictions are imposed under the Medicaid program.

(7) is not specifically excluded as a noncovered service under 7 AAC 43 or 7 AAC 105 - 7 AAC 160.

(Emphasis added.) The phrase "medically necessary" is defined for purposes of mental health services and other purposes such as vision, hearing, and dental screening funding under Medicaid as follows:

7 AAC 43.486. Medical necessity determinations for mental health rehabilitation services

(a) The division will, in its discretion, periodically review the recipient's clinical record to determine whether the services requested are medically necessary. A medically necessary mental health rehabilitation service is a service designed to

(1) screen recipients for the presence of a mental or emotional disorder;

(2) assess the nature and extent of the mental or emotional disorder and its impact upon the recipient's ability to meet the demands of daily living, social, occupational, or educational functioning;

(3) diagnose the mental or emotional disorder;

(4) treat the mental or emotional disorder;

(5) provide rehabilitation for the mental or emotional disorder;

(6) prevent the relapse or deterioration of the recipient's condition due to the mental or emotional disorder.

(b) In making its determination as to whether the proposed services are medically necessary, the division will consider the following:

(1) the recommendations of the referring physician, mental health professional clinician, or interdisciplinary team organized under 7 AAC 43.470 that prescribed, ordered, recommended, or approved the service;

(2) the recipient's diagnosis and level of functioning;

(3) the risk of danger from the recipient to self or other individuals;

(4) the appropriateness of the level of care and the need for inpatient or residential care;

(5) whether the intervention targets specific symptoms and behavioral and social dysfunction, and logically derives from the assessments and diagnosis;

(6) whether the proposed services in the individualized treatment plan are consistent with generally accepted community-based treatments and practices for the treatment of the specific symptoms and behavioral and social dysfunction;

(7) whether the recipient agrees with the referring physician, mental health professional clinician, or interdisciplinary team under (1) of this subsection that the focus of the treatment will be the symptoms and behavioral and social dysfunction targeted for intervention;

(8) the extent to which past and current treatment has been successful in treating the symptoms and behavioral and social dysfunction;

(9) if the recipient is under 21 years of age, whether the recipient has, as indicated by the American Psychiatric Association's Diagnostic

and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, an Axis V Global Assessment of Functioning (GAF) rating at admission of 50 or less, or the recipient has an Axis V Global Assessment of Functioning (GAF) rating at admission of more than 50, but exhibits specific mental, behavioral, or emotional disorders that place the recipient at imminent risk for out-of-home supervision or protective custody of state or local authorities; the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition, Text Revision, dated 2000, is adopted by reference;

(10) the extent to which a less restrictive or intrusive alternative treatment is not available;

(11) the extent to which a less expensive alternative is not available;

(12) the extent to which the units of service requested are no more than are necessary to meet the treatment or rehabilitation needs of the recipient;

(13) the extent to which the duration of services requested are no more than are necessary to reach the recipient-approved goals outlined in the individualized treatment plan;

(14) if the requested services are intended to prevent the relapse or deterioration of a mental disorder, the extent to which social functioning is improved through interventions provided as active treatment, targeted in specific therapeutic goals, and included in the individualized treatment plan;

(15) the likelihood that the recipient will benefit from any therapy provided on the same day as the recipient has received crisis intervention services.

(c) Payment for services determined not to be medically necessary under this section is subject to recovery under 7 AAC 105.260.

The limitation on abortion services funding is, as for other Medicaid covered services "medical necessity," a phrase that is not clearly defined in Alaska. The regulations that pertain to other types of covered services provide some guidance. Because the right to state funding for medically necessary abortions under the current state Medicaid program is protected by the Alaska constitution, the term "medically necessary abortion" has acquired a constitutional component of unknown scope. The relatively few Alaska cases involving abortion rights do not provide guidance as to how broadly the term "medically necessary abortion" is to be construed. There is a possibility that the Alaska courts may find that there are additional situations other than those described in the vetoed bill that fall within the scope of a medically necessary abortion and thus must be covered under the state Medicaid program.

What follows is a brief overview of how other states have handled the issue after the federal exception was rejected under those state's constitutional protections.

CASE LAW FROM STATES OTHER THAN ALASKA

Other states have dealt with the issue of state funding of abortion services in various ways. After the federal decisions of the 1970's that upheld restrictions on public abortion funding, courts in a number of states were required to analyze the issue under their own laws and constitutions to see if they supported the same conclusion. In contrast with the federal decisions, several state decisions determined that funding for abortions could not be singled out under public assistance programs. See Moe v. Sec'y of Admin. and Fin., 417 N.E.2d 387 (Mass. 1981); Comm. to Defend Reproductive Rights v. Myers, 625 P.2d 779 (Cal. 1981); Right to Choose v. Byrne, 450 A.2d 925 (N.J. 1982); Planned Parenthood Ass'n v. Dep't of Human Res., 663 P.2d 1247 (Or. App. 1983), affirmed at 687 P.2d 785 (Or. 1984); and Doe v. Maher, 515 A.2d 134 (Conn. Super. 1986); contra, Fischer v. Dep't of Pub. Welfare, 502 A.2d 114 (Pa. 1985).

Except for the Pennsylvania case, these state courts weighed the private and state interests involved with abortions and struck a different balance than the federal courts. They considered the state's desire to save money, state policies to promote childbirth, state claims that poor women can still choose to find private money to fund their abortions, state interests in protecting unborn life, and state arguments that they are not required to provide money for the exercise of constitutional rights. Most of these arguments had been successful in federal courts. Not so in the state courts of Massachusetts, California, New Jersey, Oregon, and Connecticut.

In Moe v. Secretary of Administration and Finance, supra, the highest state court in Massachusetts determined that the Massachusetts constitution afforded a greater degree of protection for the right to choose an abortion than the federal constitution.[5] In upholding the right of Medicaid recipients to have their abortions paid for, the court observed:

> [T]he Legislature need not subsidize any of the costs associated with child bearing, or with health care generally. However, once it chooses to enter the constitutionally protected area of choice, it must do so with genuine indifference. It may not weigh the options open to the pregnant woman by its allocation of public funds; in this area, government is not free to "achieve with carrots what [it] is forbidden to achieve with sticks." (citation omitted). We are therefore in agreement with the views expressed by Justice Brennan, writing in dissent to Harris v. McRae, [when he wrote] "In every pregnancy, [either medical procedures for its termination, or medical procedures to bring the pregnancy to term are] medically necessary, and the poverty-stricken woman depends on the Medicaid Act to pay for the expenses associated with [those] procedure[s]. But under [this restriction], the Government will fund only those procedures incidental to childbirth. By thus injecting coercive financial incentives favoring childbirth into a decision that is constitutionally

[5] Moe, 417 N.E.2d at 400.

> guaranteed to be free from governmental intrusion, [this restriction] deprives the indigent woman of her freedom to choose abortion over maternity, thereby impinging on the due process liberty right recognized in Roe v. Wade."[6]

In Committee to Defend Reproductive Rights v. Myers, supra, the highest court in California made a determination similar to Massachusetts'. The court noted that the state had no constitutional obligation to provide medical care to the poor or to fund the exercise of all constitutional rights, but held:

> Once the state furnishes medical care to poor women in general, it cannot withdraw part of that care solely because a woman exercises her constitutional right to choose to have an abortion.[7]

In Right to Choose v. Byrne, supra, the highest court in New Jersey also came to a similar conclusion, using an equal protection analysis. The court struck down a restrictive abortion funding statute, stating:

> [T]he Legislature need not fund any of the costs of medically necessary procedures pertaining to pregnancy. . . . Once it undertakes to fund medically necessary care attendant upon pregnancy, however, government must proceed in a neutral manner. Given the high priority accorded in this State to the rights of privacy and health, it is not neutral to fund services medically necessary for childbirth while refusing to fund medically necessary abortions. . . . The statute affects the right of poor pregnant women to choose between alternative necessary medical services. No compelling state interest justifies that discrimination, and the statute denies equal protection to those exercising their constitutional right to choose a medically necessary abortion.[8]

In Planned Parenthood Ass'n v. Department of Human Resources, supra, the court struck down an Oregon Medicaid regulation that would have restricted funding of abortions, saying:

> [I]t is difficult to understand the rational basis for denying one medically necessary surgical procedure to a pregnant woman solely because it involves an abortion while, at the same time, funding all other medically necessary services relating to pregnancy.[9]

---

[6] Id. at 402.

[7] Myers, 625 P.2d at 798 and footnote 31 accompanying the text.

[8] Byrne, 450 A.2d at 935 - 936.

[9] Planned Parenthood, 663 P.2d at 1255.

In Doe v. Maher, supra, a Connecticut court struck down a state Medicaid regulation that prohibited funding for medically necessary abortions, saying:

> This court is unable to reconcile the mandate and logic of the United States Supreme Court in Roe v. Wade . . . with the McRae . . . decision. Medicaid reimbursement funds are made available for all the health care costs of women, including the medical costs necessary to carry the fetus to term, but not for the medically necessary abortion. Surely, this constitutes infringement on the right to an abortion. . . . In adopting the regulation, . . . the state has ceased to preserve its neutrality at least under our state constitution. . . . And since that one exception also is a subject of a woman's constitutional rights, the regulation impinges upon those constitutional rights to the same practical extent as if the state were to affirmatively rule that poor women were prohibited from obtaining an abortion.[10]

In each of the state cases quoted in this section, the state court struck down an abortion funding restriction that would have been upheld by a federal court. These cases clearly demonstrate that state courts can find independent state grounds to strike down an abortion restriction that might be upheld in federal court. Unfortunately, the cases do not provide a standard definition of "medical necessity" for purposes of all covered services.

CONCLUSION

The concept of "medical necessity" provides the baseline for Medicaid and other types of public funding of covered health care services. Under the federal law, the United States Supreme Court upheld an exemption for coverage of abortions services that was narrower than the standard for all other types of covered services. Many states, including Alaska, found an equal protection and liberty interest violation in drawing a distinction among various types of service coverage.

Current Alaska legislation and regulations defer to the treating physician to determine whether a service is medically necessary for the physician's patient under the applicable standard of practice for most covered services, including abortion services.

If I may be of further assistance, please advise.

FAX: (907) 465-3068

Fact Sheet on Denali KidCare as it Relates to Abortion Funding

Thank you for your questions regarding the Denali KidCare program and how it relates to abortion funding in Alaska. Because the department has received numerous questions that are similar, but worded slightly differently, we have paraphrased the questions and compiled the responses in a Fact Sheet for consistency.

We hope this addresses the intent of the questions you posed. If not, please contact Wilda Laughlin at 465-1613.

- **How many more abortions do you project would be covered if income eligibility for Denali KidCare were increased from 175% to 200%?**

  - Past history in Medicaid services shows that approximately 10% of pregnant enrollees have sought abortion related services. Applying that number to the anticipated growth in enrollment of pregnant enrollees as a result of the expansion (218), we expect approximately 22 will seek these services.

- **How much federal money will the state lose over the next 10 years as a result of the Governor's intended veto of SB 13, assuming that funding levels remain stable?**

  - The fiscal note for SB13 estimates that the state would have spent $1,592,700 in federal funds in FY 2011. The fiscal note also assumes 8.6% growth in total costs per year. If we assume the federal percentage of spending remains the same (69.7%) and grows at 8.6% per year, then over 10 years (through 2020) this totals $23,740,650 in federal funds.

- **Is the program affected by an Alaska Supreme Court decision that says certain abortions must be paid for?**

  - Yes. The Alaska Supreme Court ruled in *DHSS v. Planned Parenthood*, 28 P.3d 904 (Alaska 2001) that the State must fund medically necessary abortions for pregnant women if it funds other medically necessary services for other financially needy persons.

- **How is "medically necessary" defined?**

  - "Medically necessary" as it applies to abortions paid for under Denali KidCare is not defined in statute or regulation, or by Court decision.

- **Is there anything unique to abortions that are paid for under DKC as opposed to regular Medicaid?**

  - No.

- **How much is Denali KidCare's annual budget?**

  - Spending in Calendar Year 2009:
    - Title XXI kids: $30,246,349
    - DKC Pregnant Women: $60,578,841
    - DKC Title XIX kids: $125,761,129
    - **Total DKC: $216,586,319**

- **How much money is spent on abortions?**
  - In Calendar Year 2009:
    - Of total DKC spending: $384,000 was spent on abortion-related services
    - Of total Medicaid Spending: $616,000 was spent on abortion-related services

- **How many additional women and children would have been eligible for Denali KidCare if the eligibility had been expanded from 175 percent to 200 percent of the federal poverty level?**

  - The fiscal note for SB13 estimates 218 pregnant women and 1,277 children would have been covered by the expansion of Denali KidCare.

- **What other services do children have access to under DKC?**

  - See Department website: http://www.hss.state.ak.us/dhcs/DenaliKidCare/gen_info_dkc.htm

Senator Bettye Davis

Press Release

For Immediate Release: March 22nd, 2011

Denali KidCare Bill Would Provide Health Care to Nearly 1300 Alaskan Kids

Senate Bill 5 sets income eligibility requirements at 200% of the Federal Poverty Level

JUNEAU-The Senate Health and Social Services committee is meeting this week to consider Senate Bill 5, which would increase and restore income eligibility levels for the Denali KidCare program to 200-percent of the Federal Poverty Level which was the level originally set 14-years ago.

Denali KidCare serves almost 8,000 Alaska children and remains one of the least costly medical assistance programs in the state. Senate Bill 5 would help place an additional 1300 kids and 225 pregnant women in the program.

The Kaiser Foundation estimates the 24,000 uninsured children with medical needs in Alaska are five times less likely to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

SUGGESTED QUOTE: "The numbers are heartbreaking," said Sen. Bettye Davis, the primary sponsor of Senate Bill 5. "Alaska is one of the wealthiest states in the nation. Yet, Alaska is one of only four states that fund children's insurance programs with eligibility levels set below 200-percent of the Federal Poverty Level."

The Legislature overwhelmingly passed a similar bill last year, but Governor Parnell vetoed it over concerns that increased eligibility for the program would require the state to pay for more medically necessary induced terminations of pregnancies. However, the Alaska Department of Health and Social Services estimated the additional funding for Denali KidCare would result in no more than 22 more induced terminations.

Who: Senate Health and Social Services Committee
What: Hearing to set Denali KidCare income eligibility levels at 200% of Federal Poverty Level
Where: Alaska State Capitol, Butrovich Room
When: Wednesday, March 23rd, 1:30p.m.

March 4, 2011

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 5 (Davis)--Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we strongly encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 5, which you authored with your Committee colleagues Senators Egan and Ellis, Senators French, and Wielechowski and co-sponsored by Senator Thomas.

AARP is the world's largest organization of grandparents. Our 91,000 AARP members in Alaska are concerned about the health of their grandchildren as well as everyone else's grandkids.

Many of our members enjoy the security of health insurance from Medicare and understand how important good coverage is to their wellness and pocketbooks.

AARP stands in strong support of this effort to take Denali KidCare to a higher eligibility level and allow more children and pregnant women to secure health coverage.

Ensuring that children have affordable health care coverage is a priority for all of us who care about our children, grandchildren, and our country's future.

Denali KidCare is an essential building block in efforts to reform our health care system. AARP believes that every American should have access to high quality, affordable health coverage no matter where they live. We need to strengthen Denali KidCare now.

Thousands of children who would otherwise be uninsured are receiving needed health care because of this program. In fact, since Congress first authorized the states to begin the program, the percentage of uninsured children has fallen by a third over the past decade, while at the same time the number of uninsured adult Americans continued to grow.

Together, Denali KidCare and Medicaid have been an essential buffer as fewer

employers offer coverage that families can afford.

Covering children's health care needs is a cost-effective use of taxpayer dollars, given the substantial long-term benefits that relatively low-cost children's health care coverage can provide. After all, productive working years and healthy aging both require an early start.

The success of Denali KidCare is far from complete, however. Many children remain uninsured – many lost coverage because of changes to Denali KidCare when the income eligibility level was lowered and, because of the flat eligibility level, more children are dropped from the program every year.

We can no longer allow so many children and pregnant women to go without access to proper health care. Alaska has a duty to give all children the best possible start in life. Failure to address children's health needs unwisely raises the risk of increasing health care costs and developing future generations who will be less healthy as they age.

By working together to improve Denali KidCare through adequate funding, effective enrollment, and appropriate pediatric preventive care, we can strengthen the bonds between generations and build a healthier future for all of us of every age.

AARP recommends an "AYE" vote on SB 5.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

RE: Support for Senate Bill 5 from AAHC.

Dear Senator Davis:

Alaska Association of Homes for Children (AAHC) thanks you again for introducing legislation to raise the Medical Assistance Eligibility this session. Moving the guidelines for Denali KidCare eligibility from 175 to 200% of the Federal Poverty Level (FPL) is essential.

Our association supports the restoration of Denali KidCare eligibility to a minimum level of 200% of the FPL. We believe this is a sound fiscal policy as the federal government covers a large portion of the cost. In addition, children without health care get less preventative care, have much higher health risks and are four times more likely to use expensive emergency room care.

You've seen the statistics - Alaska is one of the last states with income eligibility standards less that 200% FPL. Alaska should be one of the leaders in ensuring our children's well-being, not one of the last states!

Raising the threshold for Denali KidCare is a wise investment in the health and wellbeing of Alaska's children. Thank you for your continued support of on this critical issue.

Thank you,

Brad Ohs
AAHC President

cc: Senator Dennis Egan
Senator Johnny Ellis
Senator Kevin Meyer
Senator Fred Dyson

Senate Bill 5 and Denali Kid Care Expansion

March 21, 2011

The Alaska Chapter of the American Academy of Pediatrics is in support of SB 5 and expansion of Denali Kid Care to 200% FPL.

Every child has medical needs that cannot be ignored. Denying coverage to a family in poverty does not change this fact. Alaska's huge size and minimally developed wilderness present a challenge in medically caring for its children. Denali KidCare (DKC) is the only means for many of these children to have access to local primary care, and when needed, the ability to reach specialty care in Anchorage. The federal government pays 64% of the cost of the State Children's Health Insurance Program (SCHIP/DKC) for non-Alaska Native children and 100% for Alaska Native children. Alaska has some of the most stringent eligibility requirements in the United States, 175% Federal Poverty Limit, placing us at 48th out of the 50 states in covering our poorest children. Senate Bill 13 was overwhelmingly passed with bipartisan support during the last legislative session. It expands DKC back to 200% of the Federal Poverty Line, its original level when instituted in 1998, and more in line with the rest of the United States. The cost of this expansion is estimated to add less than $1M to the annual State budget. Many legislators from both parties, including Governor Parnell, publically pledged support for this bill and claimed to recognize the importance of taking care of the basic health needs of our children. Suddenly, the Governor, who is a former finance committee chairman, reversed his support claiming he did not understand DKC funding and the potential for covering selective abortion services. The Alaska Department of Health and Social Services reports that 0.18% of DKC funding went to abortion related services last year. The service is permissible if deemed a medical necessity.

Prior to last year, expansion of children's healthcare was never once an abortion issue until Governor Parnell faced re-election and the republican primary. The Governor vetoed DKC expansion arguing that it was morally wrong to spend state funds on a medical plan with an abortion benefit. The Governor and his family are covered under the state workers plan called AlaskaCare (Wells Fargo Insurance Services). A call to the AlaskaCare benefits line reveals "abortion services are a covered benefit for employees and their dependents when deemed medically indicated." It appears the Governor is unconcerned with state funds paying for a healthcare plan with an abortion benefit, if the plan is for himself, his family, administration and staff. For Governor Parnell to claim that DKC expansion is an abortion bill simply does not ring true. Nearly every healthcare plan in the state has an allowance for some sort of abortion service, including the Governor's own. If the Governor truly believes that state funding should not be used towards a plan with abortion services, then he has the opportunity to take a stand with himself, his own family, his staff and administration. Not with the poor and vulnerable.

Alaska ranks at the bottom of the country in regards to domestic violence, rape and once again, children's healthcare coverage. This is not an abortion issue. It is an issue of social justice, of doing what is right. As a State, we cab do better.

ALASKA PRIMARY CARE ASSOCIATION

RESOLUTION 2011-01
Denali KidCare Expansion

WHEREAS the Alaska Primary Care Association (APCA) strives toward the goal of a statewide healthy population with its mission to promote primary care access for all Alaskans, and because health insurance coverage is a key component related to health care access; and

WHEREAS Community Health Centers (CHCs) and the Children's Health Insurance Program (CHIP), which is the Denali KidCare Program in Alaska, together provide access to health care for medically vulnerable populations;[1] and

WHEREAS 25,600 children 18 years and younger in 2009 were uninsured in Alaska,[2] and many children from low income families do not have appropriate health care access due to lack of coverage and the cost of premiums in relation to family budgets; and

WHEREAS the provision of health coverage to low income children in Alaska would help ensure access for these children and provider choice by the parents, as well as provide reimbursements to help cover the cost of care to private sector providers, including individual physicians, group practices, and CHCs; and

WHEREAS approximately 17,800 Alaskan children 18 years or younger living below 300% of the Federal Poverty Level (FPL) were uninsured in 2008,[3] and

WHEREAS even though the Denali KidCare upper income eligibility guideline was increased in 2007 to 175% of the FPL, the fact that 46% of Alaska's children live at or below 200% FPL as compared to 40.6% nationwide and 39% in HRSA Region X indicates that Alaska has more children in the 175% to 200% FPL range per capita than most other states; [4] and

WHEREAS Alaska has seen a 31% decline in the number of children covered by private health insurance in the past decade[5] and the cost of caring for uninsured children is passed on to other Alaskans and to businesses, raising premiums and out-of-pocket expenses for everyone;[6] and

WHEREAS uninsured children are 9 times less likely to have a regular doctor, 4 times more likely to be taken to emergency rooms, and 25% more likely to miss school than insured children;[7] and

WHEREAS increasing Denali KidCare income eligibility levels to a minimum of 200% above the FPL will increase health care access for children in families that meet this criteria and result in improved public health and overall health outcomes throughout the state for Alaskan children; and

WHEREAS increasing the income eligibility guidelines for Denali KidCare to 200% of Alaska's federal poverty level would make 1,300 more children and 225 more pregnant women eligible for health coverage under Denali KidCare; [8] and

903 W. Northern Lights Blvd., Suite 200, Anchorage, AK 99503-2400
main: 907.929.2722 fax: 907.929.2734 www.alaskapca.org

ALASKA
PRIMARY CARE ASSOCIATION

WHEREAS the Federal Medical Assistance Percentage (FMAP) in Alaska in FY 2010 is 66% for non-Natives,[9] and 100% for Alaskan Natives and American Indians treated in tribal facilities,[10] the cost to the state for insuring children through Denali KidCare is relatively low, with an estimated annual total premium in 2009 per child at $1700,[11] which includes the state's 34% portion, or an estimated $600, for full coverage, including dental;

THEREFORE BE IT RESOLVED that the Alaska Primary Care Association supports the increase of the Denali KidCare income eligibility levels to a minimum of 200% above the FPL.

Letter of Support-March 2011

SB 5: Medical Assistance Eligibility

The Alaska Women's Lobby, a statewide group with steering committees in Fairbanks, Anchorage and Juneau, whose mission is to defend and advance the rights and needs of women, children and families in Alaska, supports the expansion of eligibility for Denali Kid Care. When the State Child Health Insurance Program started in Alaska eligibility was set at 200% of the federal poverty line. The legislature reduced eligibility requirements in 2003, dropping children and pregnant women from the program and keeping others from being able to participate. It is past time to take the state back to where we were seven years ago and in fact we should join the 24 states that have set income eligibility above the 200% poverty level.

According to the 2010 Children's Health Insurance Program Reauthorization Act (CHIPRA) Annual Report **13 states implemented eligibility expansions in 2010 and many others simplified their enrollment and renewal procedures.** Forty-six states and the District of Columbia now cover children with incomes up to 200% of the Federal Poverty Level (FPL) in Medicaid and CHIP, with 24 of those states and the District of Columbia covering children with incomes up to 250 percent of the FPL. Twenty-two states now offer coverage to lawfully residing immigrant children and/or pregnant women, enabling states to receive federal funding for this coverage. (Fifteen states previously provided this coverage with state-only funds, so this option has resulted in new coverage for children and/or pregnant women in 7 states.)

Denali Kid Care extends a vital safety net for hard-working parents who either aren't offered insurance for their children through their jobs, or can't afford the coverage that is offered. It is a critical step in our state's journey to ensure that all Alaskans have access to stable, high quality health insurance coverage.

We extend our thanks to Senator Davis for her constant effort to provide health care for Alaskan children; reintroducing this critical piece of legislation in the 27th Legislature. Thanks also to early co-sponsors Senators Egan, Ellis, French, Wielechowski and Thomas. Everyone should feel good about signing on to this bill. Increasing the number of children eligible for Denali Kid Care is a wise investment in their lives and our future as a State.

I fully support a return to the original income eligibility levels for the Denali KidCare program. Please return to the 200-percent of the Federal Poverty Level which was the level originally set 14-years ago.

The savings in prevention is worth twice the money paid for this! This assistance is needed more than ever these days with other options fading.

Please pass this legislation.

Testimony in Support of Senate Bill 5 to Senate Health and Social Services Committee

March 7, 2011

Dear Chairwoman Davis and Senators Egan, Ellis, Meyer and Dyson,

My name is Dr. Monica Gross. I am a board certified pediatrician who has practiced in Alaska since 1993. I support Senate Bill 5. This bill will strengthen Alaskan families and save healthcare dollars by increasing Denali Kid Care coverage.

When children have medical insurance the entire health care emphasis changes to one that strengthens the family and saves overall health care costs. Medical care is shifted from crisis-oriented care to well child and preventative care. This shift has ramifications not only for children's health, but also for family and community health.

When families don't have medical insurance kids are brought to the doctor or emergency room when they are very sick and parents are really scared. Doctors respond in crisis mode- expensive tests are ordered, drugs are prescribed and parents admonished for "waiting too long". The role of parents as the primary caregiver for their child is undermined.

When kids have medical insurance they are brought in for well child checkups and preventative care. The whole medical model shifts. Parents and doctors are a team working together to keep children healthy and prevent disease. Parents are empowered, and the important job they are doing is validated. Time is available to

answer questions and counsel about age appropriate health promotion and illness prevention. This exchange sets the stage for families where children can develop and grow and become productive and healthy members of their community. Expensive emergency room health care costs are avoided.

Please support Senate Bill 5.

Monica Gross, M.D.

Re: Support for SB 5

Dear Senator Davis,

I am writing on behalf of both Juneau Youth Services and the Alaska Association of Homes for Children. Thank you for once again introducing legislation (SB 5) to raise the eligibility threshold for Denali KidCare from 175% to 200% of the Federal Poverty Level (FPL).

As you know, Alaska is one of the strictest states in the country when it comes to eligibility for Children's Medicaid (Denali KidCare). The estimate last year was that raising the eligibility criteria to 200% of the FPL would result in an additional 1,200 children and 200 pregnant women being covered under Denali KidCare. With a high rate of federal matching funds, this increase could take place with a minimal increment in state operating funds.

It is important to recognize that Denali KidCare is a major funding source for children's behavioral health and residential services in Alaska. Approximately 75% of the children and youth served by Juneau Youth Services access these services through Medicaid/Denali KidCare. Denali KidCare is also a major factor in ensuring that Alaska's children and youth receive services as close to their home communities as possible.

Raising the threshold for Denali KidCare is a wise investment in the health and wellbeing of Alaska's children. Thank you for your leadership on this critical issue.

Sincerely,

Walter Majoros

The Honorable Bettye Davis
State Capitol, Room 30
Juneau, AK 99801

RE: Support for Senate Bill 5 pending in the House Health and Social Services Committee

Dear Senator Davis:

I am writing to you to express the support of March of Dimes for **Senate Bill 5.** The mission of March of Dimes to improve maternal and child health by preventing birth defects, premature birth and infant mortality can best be achieved if all women of childbearing age, infants and children have access to comprehensive health coverage.

Senate Bill 5 reinstates Medicaid and Denali KidCare (DKC) for children and pregnant women in Alaska up to 200% of Federal Poverty Level (FPL). This was the original eligibility level when DKC was established in 1997. The eligibility threshold was reduced and frozen at 175% FPL by the Legislature in 2003. This bill will help reinstate eligibility to many of Alaska's 24,000 uninsured children as well as provide maternity coverage for several of Alaska's 34,000 women of childbearing age who have no health insurance.

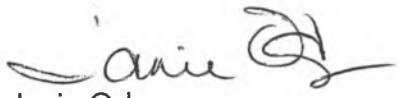
The Institute of Medicine has found that health coverage is the single most important factor in determining whether or not a child receives needed health services. Coverage also plays a key role in access to maternity care services for pregnant women.

Women who receive maternity care are more likely to have access to screening and diagnostic tests that can help to identify problems early; services to manage developing and existing problems; and education, counseling, and referral to reduce risky behaviors like substance use and poor nutrition. Such care may thus help improve the health of both mothers and infants. For example, singleton infants born to mothers who received late or no prenatal care in 2004 were nearly twice as likely to be low birth weight (less than 5 1/2 pounds) as infants born to mothers who received early prenatal care —9.9 percent compared with 5.9 percent.

In addition to pregnant women, health insurance status is the single most important influence in determining whether health care is accessible to children when they need it, according to another Institute of Medicine study. Though uninsured newborns are more likely than insured babies to be sick, they receive fewer hospital services.

Uninsured children are the most likely to have no usual source of medical care - 28.8 percent, compared with only 2.3 percent of privately insured youngsters and 4.6 percent of children in public insurance programs.
March of Dimes is a leading nonprofit organization for maternal, infant and child health. With chapters nationwide and its premier event, March for Babies, March of Dimes works to improve the health of women, infants and children. **I urge you bring Senate Bill 5 before the House Health and Social Services Committee for a vote and ensure passage of this important piece of legislation.**

Sincerely,



Janie Odgers
State Director

Subject: SB5 Denali Kid Care

Dear Senator Davis,

I am writing in strong support of SB5 expanding eligibility for Denali Kid Care. I am a preschool teacher. I like my job and I'm good at it but it doesn't provide health care benefits. I raised my two children here in Juneau. They have aged out of Denali Kid Care but it provided their health care as they were growing up. My oldest daughter has cystic fibrosis and there is no way I could have afforded to buy health care for her given her condition, even if I'd been able to afford it for my younger daughter which I could not. Denali Kid Care was essential for our family. Because the income guidelines to qualify are so low, I had to reject offers of more hours and other jobs that may have paid a little more but not enough to purchase health insurance.

Alexander Sadighi ,writing in the Alaska Law Review, Vol.27:1, cogently argues that it would be in the best financial interest of the state to pass this bill. More importantly, it is also in the best interest of children and families.

Sincerely,
Mary Sweeney

Subject: Denali KidCare

Dear Senator Davis,
Thank you for your actions to improve the health and development of Alaska's young children.

Denali KidCare is vital for many families to access health care for their children. I have been in education for 39 years; 16 years have been with Parents as Teachers. In Hoonah, we do screenings with young children. Since we don't have a doctor or hospital, many parents need to fly to Juneau for prenatal visits or to follow up with doctors' appointments.

The expense of flying, ground transportation, lodging, and meals are a huge obstacle which prevents many families from following up with needed care. Since children's brains develop faster in the first 3 years of life than at any other time of their lives, detecting and treating any condition which may interfere with learning is most crucial.

Denali KidCare is the vital link for families to access health care. 200% of the poverty level is not extravagant for families with young children. It can frequently make the difference between receiving medical care and children entering school with conditions which could have been resolved much earlier.

Thank you for your sponsorship of SB5, the Denali KidCare bill.

Sincerely,

Nicki Shelton, National and Alaska Trainer

Planned Parenthood VOTES! ALASKA

March 7, 2011

Dear Senate Health and Social Services Committee Chair and Members:

Planned Parenthood Votes! Alaska, a member organization representing over 1800 Alaskans, supports the increase in Denali Kid Care eligibility to 200% of the Federal Poverty Level as outlined in SB 5.

1. Even in these hard economic times, a Denali Kid Care income eligibility increase is good policy for the health and economics of our state –

   An increase in Denali Kid Care eligibility to 200% of the federal poverty level reflects sound fiscal policy as research shows that preventive care, such as that received through Denali Kid Care, has a positive return on investment. For example, children and pregnant women without access to health care are four times more likely to use expensive emergency room care for medical treatment. Since the federal government covers almost 65% of the entire cost of Denali Kid Care the additional financial exposure associated with a return to 200% of federal poverty level is nominal compared to the long term expenses the State of Alaska will most likely incur if these vulnerable children and pregnant women continue to be denied access to health care.

2. Increasing Denali Kid Care to 200% of Alaska's federal poverty level simply brings it back up to its original level approved by the legislature in 1999
3. Alaska continues to be one of the few states that does not prioritize health care for low income children and pregnant women.

Denali Kid Care and Abortion Coverage

Abortion coverage through Denali Kid Care is less than .18% of the total budget for DKC.

Unintended pregnancy ending in abortion disproportionately affects low income women, because Alaska does not offer subsidized family planning services these rates continue to be high.

80% of private insurance plans cover abortion services as part of their regular coverage, providing coverage to low income women who qualify for Denali Kid Care is not an extreme position, and it is required under the 2001 Supreme Court Ruling.

CS FOR SENATE BILL NO. 5(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, EGAN, ELLIS, FRENCH, AND WIELECHOWSKI, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act relating to eligibility requirements for medical assistance for certain children; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 percent of the supplemental security income benefit rate under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical

assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is

not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)**;**

(16) persons under 13 years of age who are not covered under (a) of this section and whose household income does not exceed 200 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2).

*** Sec. 2.** AS 47.07.042(d) is amended to read:

(d) In addition to the requirements established under (a) and (b) of this section, the department may require premiums or cost-sharing contributions from recipients who are eligible for benefits under AS 47.07.020(b)(13) **or (16)** and whose household income is between 150 and **200** [175] percent of the federal poverty line. If the department requires premiums or cost-sharing contributions under this subsection, the department

(1) shall adopt in regulation a sliding scale for those premiums or contributions based on household income;

(2) may not exceed the maximums allowed under federal law; and

(3) shall implement a system by which the department or its designee collects those premiums or contributions.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

CS FOR SENATE BILL NO. 5( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, EGAN, ELLIS, FRENCH, AND WIELECHOWSKI, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act relating to eligibility requirements for medical assistance for certain children; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 percent of the supplemental security income benefit rate under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical

assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is

not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)**;**

(16) persons under 13 years of age who are not covered under (a) of this section and whose household income does not exceed 200 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2).

*** Sec. 2.** AS 47.07.042(d) is amended to read:

(d) In addition to the requirements established under (a) and (b) of this section, the department may require premiums or cost-sharing contributions from recipients who are eligible for benefits under AS 47.07.020(b)(13) **or (16)** and whose household income is between 150 and **200** [175] percent of the federal poverty line. If the department requires premiums or cost-sharing contributions under this subsection, the department

(1) shall adopt in regulation a sliding scale for those premiums or contributions based on household income;

(2) may not exceed the maximums allowed under federal law; and

(3) shall implement a system by which the department or its designee collects those premiums or contributions.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

MEMORANDUM March 20, 2012

SUBJECT: Equal Protection Considerations (CSSB 5( ))
(Work Order No. 27-LS0057\I)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested an analysis of the equal protection considerations presented by the above referenced bill draft that accomplishes the purpose of SB 5, to expand medical assistance eligibility for children without a commensurate increase in services for teens and pregnant women funded under the medical assistance program. You understand that the equal protection clause of the Alaska Constitution has been interpreted to prohibit a preference in coverage for women who choose not to terminate a pregnancy over those who do. As you know, the federal and state Medicaid programs currently provide for mandatory minimum coverage based on age and income limits. For example, under 42 U.S.C. § 1396, a state must provide mandatory coverage for children under 6 years of age and pregnant women with incomes up to 133 percent of the federal poverty guideline. You now ask whether the expanded income eligibility in the bill that excludes persons 13 years of age and older is constitutional.

Equal Protection Considerations.

Article I, sec. 1 of the Alaska Constitution declares "that all persons are equal and entitled to equal rights, opportunities, and protection under the law." The law mandates equal treatment for those who are "similarly situated" and evaluates equal protection claims using a three-step sliding scale test that "places a progressively greater or lesser burden on the state, depending on the importance of the individual right affected by the disputed classification and the nature of the governmental interests at stake." *Malabed v. North Slope Borough*, 70 P.3d 416, 421 (Alaska 2003). The court determines the weight of the individual interest impaired by the classification, examines the importance of the purposes underlying the government's action, and evaluates the means employed to further those goals to determine the closeness of the means-to-end fit. *Id.* The greater the weight of the individual interest, the greater showing that must be made demonstrating that the classification achieves a legitimate governmental objective.

A more recent Alaska Supreme Court decision described the test for analyzing whether a law violates the constitutional right to equal protection as follows:

> Under the Alaska Constitution, the "legitimate reason test" is "the standard level of scrutiny . . . in equal protection cases," and we apply it to laws that do not employ classifications based on suspect factors or infringe on fundamental rights. Under this test, a law "will survive as long as a 'legitimate reason for the disparate treatment exists' and the law creating the classification 'bears a fair and substantial relationship to that reason.'"

Griswold v. City of Homer, 252 P.2d 1020 (Alaska 2011), 2011 Alas. LEXIS 43, 25-26 (Alaska June 10, 2011) (internal cites omitted).

A challenge of CSSB 5( ), draft version "I," based on the exclusion of teenage boys and girls for the expanded medical assistance coverage under equal protection principles would likely be analyzed using the least restrictive rational basis test, which requires the state to show a legitimate reason for the law, and that the law is sufficiently related to the reason. With respect to the proposed bill, the legislature must articulate a legitimate state objective in excluding teenagers from the expanded coverage. It is my understanding that the objective is to provide expanded coverage for the youngest, and arguably most vulnerable population, without providing for expanded abortion or other family planning services for fertile teenagers. By drawing a distinction based upon age and not gender or type of medical care, a challenger on equal protection grounds must first convince the court that all persons under age 19 are similarly situated and therefore all deserve expanded medical assistance coverage.

In *Valley Hosp. Ass'n v. Mat-Su Coalition for Choice*, 948 P.2d 963, 969 (Alaska 1997), the Alaska Supreme Court held that "reproductive rights are fundamental . . . [and] include the right to an abortion." In *Alaska Department of Health and Social Services v. Planned Parenthood*, 28 P.3d 904 (Alaska 2001), the Alaska Supreme Court, basing its decision on equal protection considerations rather than the privacy clause, concluded that if the state restricted abortion coverage for Medicaid-eligible women to only those covered by the exceptions in the Hyde Amendment (for life saving measures and for rape and incest), it would result in the unconstitutional implementation of Medicaid in Alaska.

Under a higher level of scrutiny for effect on a fundamental right, a court may view the age limitations as narrowly tailored to serve a compelling governmental interest in providing children's health coverage while discouraging teen pregnancy and abortion for the higher income limit recipient. By maintaining the status quo for all other income limit categories and by excluding all types of medical services, the type of discriminatory and burdensome past attempts to discourage abortions is avoided. However, the Alaska Supreme Court may find that the failure to cover medical services for people over the age of 13 whose household income is between 175 and 200 percent of the federal poverty guideline and the availability of those same services for children under 13 years of age results in unconstitutionally discriminatory treatment of teens who may be considered to

be similarly situated to younger children. Obviously, the lower the age limit the less likely reproductive rights would be affected.

A court may be less concerned about differential treatment in the context of expanded coverage than for existing minimum income eligible categories because of the choices states must make with limited resources. In providing the rationale for the differential coverage, the legislature could describe the economic and policy reasons behind its decision and that the amendment is narrowly or at least reasonably tailored to satisfy those concerns.

In this instance you have made clear that you wish to provide expanded eligibility for children but not to expand abortion or any other reproductive service for pregnant teens. I do not know how a court would come out on that issue but similar distinctions made for other types of services may be persuasive. For example, Alaska has elected to fund persons up to age 21 for specified services such as rehabilitative and psychiatric services, and others to age 19, under its Denali KidCare program for all covered services. Indeed, most of the mandatory categories under federal Medicaid law rely on age distinctions.

In *Beal v. Doe*, 432 U.S. 438 (1977), the United States Supreme Court held that while the Social Security Act (which includes Medicaid) does not require a participating state to fund every medical procedure falling within delineated categories of medical need and that it is not inconsistent with the Act's goals to refuse to fund unnecessary, though perhaps desirable, medical services, "serious questions" might be presented if state Medicaid plans did not cover necessary medical treatment. Prenatal care at any reproductive age may be found to be a necessary medical treatment.

The Alaska Supreme Court in the 2001 Planned Parenthood decision cited above was not persuaded by the state's economic interest argument for prohibiting Medicaid coverage of abortions. Noting that the savings on abortions were speculative, the court held that a government agency is constitutionally bound to apply neutral criteria in allocating health care benefits to poor Alaskans, even if considerations of expense, medical feasibility, or the necessity of particular services otherwise limit the health care it provides.

While age categories on its face appear to be neutral and common, some courts have found otherwise. For example, in *Samantha A v. Department of Social and Health Services*, 256 P.3d 1138 (Wash. 2011), the Washington State Supreme Court held that denial of Medicaid benefits solely based on the age of a child and whether the child was living with her parents was arbitrary and unenforceable. That case is not of precedential value here but provides some insight into how a court may analyze the issue of age for prenatal care or other types of services.

At the same time, Congress has excluded pregnant adults under 65 year of age from its own expansion of Medicaid under the Patient Protection and Affordable Care Act, effective in 2014, under 42 U.S.C. § 1396a(10)(i)(VIII), as follows:

> . . . beginning January 1, 2014, who are **under 65 years of age, not pregnant**, not entitled to, or enrolled for, benefits under part A of title XVIII [42 U.S.C.S. §§ 1395c et seq.], or enrolled for benefits under part B of title XVIII [42 U.S.C.S. §§ 1395j et seq.], and are not described in a previous subclause of this clause, and whose income (as determined under subsection (e)(14)) does not exceed 133 percent of the poverty line (as defined in section 2110(c)(5) [42 U.S.C.S. § 1397jj(c)(5)]) applicable to a family of the size involved, subject to subsection (k);

Summary.
I have been unable to find a case or advisory opinion of precedential value that is related to the issue of establishing a higher than minimum income limit for medical assistance services that excludes teens. The nature of the medical assistance program provides for the "categorically needy" in a way that often discriminates on the basis of the age of the recipient. A court may find that a teenager is not similarly situated to a younger child for medical assistance purposes. If a court finds them to be similarly situated, an equal protection challenge may be overcome by a legitimate state objective that is fairly and substantially related to the age distinction drawn in CSSB 5( ), version "I." If, however, a court found CSSB 5( ) affects the fundamental right of reproduction, the legislature must articulate a compelling governmental interest for the age limits and a court must find the law to be narrowly tailored to serve that purpose.

If I may be of further assistance, please advise.

A BILL

FOR AN ACT ENTITLED

"An Act relating to eligibility requirements for medical assistance for certain children ~~and pregnant women~~; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance

under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 percent of the supplemental security income benefit rate under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section[,], who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program[,] except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section

who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under

42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed ~~200~~ [175] percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed ~~200~~ [175] percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)~~.~~**;**

(16) persons under 13 years of age who are not covered under (a) of this section and whose household income does not exceed 200 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2).

*** Sec. 2.** AS 47.07.042(d) is amended to read:

(d) In addition to the requirements established under (a) and (b) of this section, the department may require premiums or cost-sharing contributions from recipients who are eligible for benefits under AS 47.07.020(b)(13) **or (16)** and whose household income is between 150 and **200** [175] percent of the federal poverty line. If the department requires premiums or cost-sharing contributions under this subsection, the department

(1) shall adopt in regulation a sliding scale for those premiums or contributions based on household income;

(2) may not exceed the maximums allowed under federal law; and

(3) shall implement a system by which the department or its designee collects those premiums or contributions.

*** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB005
2012 LEGISLATIVE SESSION

Analysis

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

This fiscal note represents the additional administrative costs needed to support the increased eligibility determination workload resulting from more pregnant women and children applying for medical assistance, using the assumptions from the companion fiscal notes for the Division of Health Care Services and the Division of Behavioral Health.

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2012. We esitmate two additional Eligibility Technician II (Range 14) positions will be needed to manage this additional work in FY2013.

Total Administrative Costs for Two ET II Positions:

Personal Services: Two Eligibility Technician II (Range 14) at a cost of $207.9, including benefits, for 12 months.
Contractual: Annual cost for office space, phones, etc will be $21.3
Commodities: Annual cost for the office supplies will be $1.1

Additional Cost of FY2013:
Equipment/Supply: A one time cost of $19.8 for a desktop computer, software, printer, and work stations will be needed for the new positions.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB005

Analysis

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2013, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match). Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY2013 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Cost projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS or Title XXI during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2013 and 2018. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2013 and 2018.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2010. Behavioral Health paid 15% of the costs for affected DKC children in 2010. No charges for services for DKC pregnant women were paid by this component in 2010.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB005

Analysis

Denali KidCare is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually. In 2003, DKC eligibility limits were reduced from 200% of poverty to 175% and frozen at 2003 levels. In 2007, the income limits were unfrozen, but remained at 175% of poverty. This bill would restore Denali KidCare to its original level.

Children age 18 and under at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2013, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid. Pregnant women under this income level are eligible only for regular Medicaid (50% match).

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY2013 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2010. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Cost projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XXI rates , Title XIX, or State General Fund only (for abortions) during 2010 and our best estimates for federal medical assistance percentages (FMAPs) between 2013 and 2018. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2013 and 2018.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2010. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about 85% of the costs for affected DKC children in 2010.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB005(HSS)

Analysis

This legislation increases the income level for Denali KidCare to 200% of federal poverty guidelines and limits the expanded coverage to children 12 years of age and younger. This fiscal note represents the additional adminstrative costs needed to support the increased eligibility determination workload resulting from more children qualifying for medical assistance. The eligiblity determination includes verifying information and determining whether a child qualifies for DKC when they apply, acting on changes, and periodically re-examining the child's eligibilty.

It is assumed that an additional 968 children will be enrolled in Medicaid if the qualifying income limit is revised to 200% and restricted to children 12 years of age and younger, and that implementation will begin July 1, 2012. It is estimated that 1 Eligibiity Technician II (R14) position is needed to manage this additional work in FY13.

Total Administrative Costs of One ET II Position
Personal Services: One Eligibility Technician II, Range 14 at a cost of $93.5, including benefits for 12 months.
Contractual: Annual costs for office space, phones, etc. will be $9.7
Commodities: Annual cost for office supplies will be $0.5

Additional costs for FY13
Equipment: A onetime cost of $7.2 for desktop computer, software, printer, and work stations is needed for the new position. An additional onetime cost of $50.0 is associated with the programming and testing of the Eligibility Information System for implementation of this bill.

(Revised 1/17/2012 OMB)

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB005(HSS)
2012 LEGISLATIVE SESSION

Analysis

Denali KidCare (DKC) is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children ages 0-12 under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually.

Children at ages 12 years and younger at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2013, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid.

First-year costs are based on an estimate for the number of new enrollees (968) times the average cost per enrollee ages 0-12 for the most close related eligibility category in 2011.

Out-year cost projections incorporate an 8.6% annual growth factor (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XXI rates, Title XIX during 2011, and our best estimates for federal medical assistance percentages (FMAPs) between 2013 and 2018. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP), so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2013 and 2018.

Expenditures for the Behavioral Health Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2010. Behavioral Health Medicaid paid approximately 10.2% of the costs for the most closely related category of DKC children age 0-12 in 2011.

Denali KidCare (DKC) is part of Alaska's Medicaid program, covering low income children and pregnant women. This legislation increases the income level for covering children ages 0-12 under Denali KidCare to 200% of the federal poverty guidelines, up from the current level of 175% of the federal poverty guidelines, which are adjusted annually.

Children at the age of 12 years and younger at this income level are part of Alaska's Medicaid CHIP expansion and are eligible for enhanced federal matching funds. For FY2013, the federal CHIP match is projected at 65%, compared to an estimated 50% for regular Medicaid.

First-year costs are based on an estimate for the number of new enrollees (968) times the average cost per enrollee ages 0-12 for the most closely related eligibility category in 2011.

Out-year cost projections incorporate an 8.6% annual growth factor (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XXI rates,Title XIX rates during 2011, and our best estimates for federal medical assistance percentages (FMAPs) between 2013 and 2018. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2013 and 2018.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2010. Health Care Services Medicaid paid approximately 89.8% of the costs for the most closely related category of DKC children age 0-12 in 2011.

Senator Bettye Davis

SB 8 - "An Act relating to questionnaires and surveys administered in the public schools."

Sponsor Statement

The purpose of this bill is to increase participation in the national biennial Youth Risk Behavior Survey (YRBS) in order to meet the minimum 60% participation required by the Centers for Disease Control (CDC) for the survey to be validated for assessment, recording and reporting of reliable results. Alaska has periodically failed to meet minimum participation levels. This anonymous survey will next be administered in Alaska School Districts in Spring 2011 and 2013. This survey is enormously valuable to all aspects of society dealing with our youth. Failure to obtain usable information adversely affects education and funding of many services.

To help achieve this objective this bill will change the parental consent requirement for the YRBS from active to passive, that is, from written to implied consent if the parent does not object or deny permission in writing for the student to participate in the survey. To alleviate increased concerns about protecting the right to privacy the bill provides lengthy and detailed new notice requirements which will be sent to parents at least two weeks in advance of the survey. There will be ample time and opportunity for parents to review the survey with instructions on how to opt out. Students may also independently decline to participate or to answer specific questions in this completely voluntary and anonymous survey. Absolute privacy and anonymity are maintained by strict administrative procedures and return of surveys to CDC. Written permission is still required to be obtained from the student's parent or legal guardian for all other surveys, anonymous or not that inquire into personal or private family affairs of the student and not a matter of public record or subject to public observation.

Although research and experience suggest that the vast majority of parents would consent to their students participating in this survey, failure of parents to return written consent forms has been found more often to be the result of lack of interest or attention, rather than refusal. Consequently, results from whole schools periodically must be disregarded when not enough parental consent forms are returned.

Without facts and population-based information on youth risk behavior parents, students, educators, planners, and policy makers cannot understand and address the important health and social issues that affect students' happiness and success in the future. The Youth Risk Behavior Survey helps guide and evaluate important health and prevention programs in both the public and private sectors. Local, state and federal officials, schools, state and federal agencies, public and private grant programs and nonprofit health organizations rely on these surveys to educate, allocate resources, and compare trends concerning safety behaviors, injury prevention, tobacco prevention and control, obesity prevention, diabetes, heart disease and stroke, safe and drug free schools, substance abuse prevention, violence and suicide prevention, HIV, STD prevention, and connectedness to teachers, parents and other adults. SB 8 simply makes it easier to obtain information on youth risk behaviors, while increasing procedures to assure privacy, parental notice, and supervision.

MEMORANDUM January 27, 2011

SUBJECT: Sectional Summary (SB 8; Work Order No. 27-LS0084\A)

TO: Senator Bettye Davis
Chair of the Senate Education Committee
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds an exception for the Youth Risk Behavior Survey (YRBS) to the written permission requirement for student surveys.

Section 2. Provides detailed written notice requirements for all student surveys, including YRBS.

Section 3. Adds specific questions and process for a student and parent to refuse to participate in a student survey by submitting a written denial of permission.

Section 4. Provides an exception to written permission for YRBS and a minimum two week notice provision that is consistent with the requirements in sec. 2.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB008
2011 LEGISLATIVE SESSION

Analysis:

This legislation removes the requirement that a student's parent or legal guardian must provide written permission before a student can participate in the Youth Risk Behavior Survey. It requires the school district to provide notice of the survey and give the parent or legal guardian the opportunity to deny permission.

There is no fiscal impact on the Department of Health and Social Services.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB8

Analysis

This legislation has no fiscal impact on the Department of Education and Early Development.

(c) Nothing in this section limits the ability of a peace officer, chief administrative officer, or other appropriate person, acting in compliance with local, state, or federal laws, to search a locker or other container provided in a public or private school by the school district. (§ 5 ch 33 SLA 1995)

Sec. 14.03.110. Questionnaires and surveys administered in public schools. (a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

(1) how the questionnaire or survey will be administered to the student;

(2) how the results of the survey or questionnaire will be used; and

(3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students. (§ 1 ch 23 SLA 1979; am §§ 1, 2 ch 63 SLA 1999)

Opinions of attorney general. — AS 14.03.110 — As long as survey questions are limited to the student's own activities and the survey does not ask the student questions about parents or other activities occurring within a student's home, the 1997 Youth Behavior Risk Survey does not impermissibly invade the domain of the student's private *'family'* affairs. September 28, 1998 Op. Att'y Gen. (Issued before 1999 amendment to this section.)

Sec. 14.03.115. Access to school records by parent, foster parent, or guardian. Upon request of a parent, foster parent, or guardian of a child under 18 years of age who is currently or was previously enrolled in a municipal school district or a school district that is a regional educational attendance area, the school district shall provide a copy of the child's record. This section does not apply to

(1) a record of a child who is an emancipated minor; or

(2) record information that consists of the child's address if the school district determines that the release of the child's address poses a threat to the health or safety of the child. (§ 1 ch 36 SLA 1999)

Sec. 14.03.120. Education planning; reports. (a) A district shall annually file with the department, and make available to the public, a report that

(1) establishes district goals and priorities for improving education in the district;

(2) includes a plan for achieving district goals and priorities; and

2009 Alaska Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is part of a national surveillance system developed by the Centers for Disease Control (CDC). Administered every other year by the Department of Education & Early Development and the Department of Health and Social Services in conjunction with Alaska's public high schools, the YRBS is used to evaluate and address the prevalence of health risk behaviors among Alaska's youth that contribute to the leading causes of death and disease.

Due to the hard work of teachers and the high participation level of high school students, enough surveys were collected for the state to be able to draw conclusions about the level of youth risk behavior in Alaska.

Alaska 2009 results compared to 2007: In general the 2009 results were very similar to those of 2007, which is not surprising since changes are usually gradual.

Alaska trends over time: In general the prevalence of many risk behaviors have decreased over the last 14 years. The prevalence of smoking cigarettes, drinking alcohol, using marijuana, physical fightng , and contemplating suicide seem to be going down. The percent of students who have ever had sexual intercourse or reported having sexual intercourse in the past three months has stayed about the same. The percent of students reporting they did not go to school one or more days in the past month because they felt unsafe at school seems to be increasing.

Alaska compared to the US: The 2009 Alaska YRBS results are very similar to the national YRBS data from 2007 (which is the last available data — 2009 national survey results will be released this summer). Fewer students in Alaska reported being in a physical fight in the past 12 months compared to the national results (27.8 percent vs. 35.5 percent), but more students in Alaska reported being hit, slapped, or physically on purpose by their boyfriend or girlfriend in the past 12 months (13.3 percent vs. 9.9 percent). The percent of high school students attending daily PE is less than the national. Only 17.7 percent of high school students attend daily PE in Alaska compared to 30.3 percent of those in the national YRBS survey (2007).

Other Points:

Suicide is the leading cause of death of Alaska youth age 15-19

- 11.7% have made a plan about how they would attempt suicide and 8.5% actually attempted suicide one or more times in the past 12 months.

Motor vehicle crashes are the second leading cause of death among Alaska youth

- 21.3% report having driven in a car driven by someone who had been drinking and 8.9% reported driving a car when they had been drinking.

The obesity epidemic in Alaska and the nation contributes to the risk of heart disease, stroke, diabetes, and other chronic diseases. Health habits such as good nutrition and being physically active are the key to maintaining a health weight.

- 81.8% of high school students do not eat the recommended daily servings of fruits and vegetables.
- 57.6% did not get the recommended 60 minutes of physical activity per day for most days of the week.
- 82.3% did not attend daily PE classes.

Traditional High School YRBS Key Findings

The following key findings compare the 2009 traditional high school survey results to the 2007 results.

Weight Issues:

- 14.4% of students are overweight, compared to 16.2% in 2007.
- 11.8% of students are obese, compared to 11.1% in 2007.

Traditional High School Key Findings Continued...

Alcohol, Tobacco and Drug Usage:

- 15.7% of students smoked cigarettes one or more of the past 30 days, compared to 17.8% in 2007.
- 21.7% of students had five or more drinks of alcohol in a row on one or more of the past 30 days, compared to 25.8% in 2007.
- 22.7% of students used marijuana one or more times during the past 30 days, compared to 20.5% in 2007.
- 24.8% of students were offered, sold, or given an illegal drug by someone on school property during the past 12 months, compared to 25.1% in 2007.

Safety Behaviors:

- 12.1% of students never or rarely wear a seat belt when riding as a passenger, compared to 7% in 2007.
- 21.3% of students have rode one or more times within the past 30 days with a driver who had been drinking, compared to 23.5% in 2007.
- 8.9% of students drove drunk within the past 30 days, compared to 9.7% in 2007.

Violence and Suicide:

- 27.8% of students were involved in a physical fight one or more times during the past 12 months, compared to 29.2% in 2007.
- 13.3% of students reported being hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months, compared to 12.4% in 2007.
- 13.9% of students seriously considered attempting suicide in the past 12 months, compared to 16.5% in 2007.

Sexual Behaviors:

- 43.5% of students have ever had sexual intercourse, compared to 45.1% in 2007.
- 30.4% of students had sexual intercourse with one or more people during the past three months, compared with 30.9% in 2007.
- 17.1% of students who had sexual intercourse during the past three months drank alcohol or used drugs before last sexual intercourse, compared to 22.1% in 2007.

Connectedness:

- 59.4% of students agree or strongly agree that their teachers really care about them and give them a lot of encouragement, compared to 56.1% in 2007.
- 83.3% of students feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life, compared 87% in 2007.

Alternative High School YRBS Key Findings

Alternative High Schools were selected to participate in a statewide YRBS for the first time in 2009. EED determined that capturing risk-behavior data on Alternative Schools was essential for 2 reasons: 1) Alternative Schools are intentionally excluded from the Traditional Schools YRBS and therefore no data on their levels of risk behavior was being captured 2) several of the programs the Department manages require it to dedicate resources to Alaska's greatest at-risk youth so data confirming Alternative Schools serve this population was needed.

The data to follow is quite compelling, and indicates significantly higher levels of reported risk behavior in Alternative Schools students than is reported by their Traditional Schools peers for almost every measure. The following data represent key findings from the Alternative High School YRBS only. To view a side-by-side comparison of the Traditional high school responses and the Alternative high school responses, visit: http://www.hss.state.ak.us/dph/chronic/school/pubs/COMPARISON_TRAD_ALT_2009.pdf

Weight Issues:

- 18.3% of students are overweight.
- 18.9% of students are obese.

Alternative High School YRBS Key Findings Continued...

Alcohol, Tobacco and Drug Usage:

- 58% of students smoked cigarettes one or more of the past 30 days.
- 42.7% of students had five or more drinks of alcohol in a row on one or more of the past 30 days.
- 50.5% of students used marijuana one or more times during the past 30 days.
- 32.4% of students were offered, sold, or given an illegal drug by someone on school property during the past 12 months.

Safety Behaviors:

- 13.6% of students never or rarely wear a seat belt when riding as a passenger.
- 29.9% of students have rode one or more times within the past 30 days with a driver who had been drinking.
- 12.3% of students drove drunk within the past 30 days.

Violence and Suicide:

- 9.1% of students were involved in a physical fight one or more times during the past 12 months.
- 21.3% of students reported being hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months.
- 18.1% of students seriously considered attempting suicide in the past 12 months.

Sexual Behaviors:

- 82.2% of students have ever had sexual intercourse.
- 65.5% of students had sexual intercourse with one or more people during the past three months.
- 27.7% of students who had sexual intercourse during the past three months drank alcohol or used drugs before last sexual intercourse.

Connectedness:

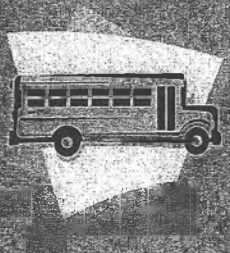
- 72.4% of students agree or strongly agree that their teachers really care about them and give them a lot of encouragement.
- 84.2% of students feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life.

Healthy Reading Kits Available

Healthy Reading is an initiative that seeks to promote K-12 health education sponsored by the Department of Education & Early Development (EED). Healthy Reading offers teachers the ability to teach about important health issues while simultaneously supporting reading practices.

Healthy Reading is comprised of a collection of age appropriate books that are selected and field tested by Alaskan teachers. Each kit contains 9 pieces of children's literature. These books cover an array of health issues that emerge naturally as children grow and develop and allow students to connect reading and writing skills to relevant life thinking skills. Ultimately, Healthy Reading is meant to empower and inform students about health issues, leaving them better able to obtain information, set goals, and develop skills that will promote their individual health.

Currently, the Department of Education & Early Development has three Healthy Reading kits available, Grades 2-4, Grades 4-8, and Grades 9-12. These kits are available to teachers, **FREE** of charge. For more information or to request a kit, please contact Kiara Alexander (907) 465-2304 or kiara.alexander@alaska.gov



Readiness and Emergency Management For Schools Grant (USDOE)

The US Department of Education recently announced the opening of the FY 2010 Readiness and Emergency Management for Schools Grant (REMS). Grants are available to local education agencies. For information regarding the REMS grant, view the USDOE REMS website at http://www.ed.gov/

Did You Know?

According to research by the NHTSA, teens are involved in 5 times as many fatal accidents as adults.

National Drunk and Drugged Driving Prevention (3D) Month

Alcohol-related car crashes rise in frequency during the holiday season, making this season the deadliest season of the year. Due to the increase in events involving alcohol, more people are more likely to find themselves driving while impaired. Unlike other types of accidents, drunk and drugged driving is one of the most preventable tragedies on the road.

Because of this, December has been designated, by presidential proclamation, as the National Drunk and Drugged Driving Prevention Month (or 3D Month). 3D month strives to bring public awareness to and prevention of alcohol and drug related crashes by campaigning for tighter laws and for alcohol checkpoints and by educating youth and adults about the perils of driving under the influence.

In 2008, 45% of all vehicular fatalities in Alaska resulted from alcohol-related incidents. Of all the fatalities and major injuries that occur on Alaska's roads and highways, teen drivers account for approximately 20% of incidents, most caused either by not wearing a seatbelt or by driving under the influence.

Traffic accidents are the leading cause of death among the United States teenage population and, according to the National Highway Traffic Safety Administration (NHTSA), more than one-third are alcohol related. Furthermore, drunk driving often results in the injury or loss of life among passengers and individuals outside the vehicle.

A recent study by the Alaska Department of Transportation & Public Facilities found a link between minor consuming and future DUIs (Driving Under the Influence). This study compared 1995-1999 minor consuming cases in Alaska to 1995-2006 DUI cases and found that 24% of youth charged with minor consuming will go onto have a DUI charge before their 31st birthday (Evaluation of Risk Factors for Repeat DUI Offenses, Preliminary Draft Report, November 2008).

The State of Alaska has developed a plan to reduce and prevent underage drinking, based on the national strategy put forth by the National Research Council, the Institute of Medicine of the National Academics of Science, and Congress. This plan highlights the national strategies as well as strategies that state and local agencies can employ.

To view state's plan, visit: http://www.dot.state.ak.us/stwdplng/hwysafety/assets/pdf/2009_underagedrinkplan.pdf

Youth Alliance for a Healthier Alaska Art Contest

The Youth Alliance for a Healthier Alaska presents: *Make Art. Not Babies. An art contest to promote healthy teen relationships and sexual responsibility.*

Rules and Regulations:

Winning entries for each category will receive: $150 VISA gift card for first place, $50 VISA gift card for second place, $25 VISA gift card for third place

Categories: 1. Video/radio 2. photography/graphic art

There will be a total of 6 winning entries.

Guidelines:

-The competition will be open to teenagers 14 through 19 years of age.

-Participants may enter one entry per category. Participants can only win in one category.

-Entry deadline is **February 19, 2010**. Entries received after this date will not be evaluated.

-Email submission to Sophie Wenzel: Sophie.wenzel@alaska.gov OR Mail to: YAHA, 4701 Business Park Blvd, Suite 20, Bldg J, Anchorage, AK 99503

-By entering the contest the entrant is giving YAHA and the State of Alaska the right to: (1.) publicly display his or her artwork. (2.) The right to photograph or otherwise reproduce the artwork for the use in connection with promotional or advertising activities by YAHA.

-All artwork must be original. All photographs must have been taken by the contestant. All videos and radio announcements must have been produced by contestant

-All entries must be "PG-13"- entries that are not appropriate will not be considered.

Regulations:

Video: Must be 2 minutes or less, Must be on a decrypted disc

Audio: Must be 30 seconds or less, Must be in MP3, WIM, or MPEG4 format

Photograph/Graphic art: Must be no less than 4" x 6" and no bigger than 11"x 17" in JPEG or Adobe format, Must have caption/name on entry

Criteria to Judge: Must have reality, originality and creative pizzazz, and relevancy to the issue.

For questions, please write Sophie.wenzel@alaska.gov

Alaska 2009 Youth Risk Behavior Survey (YRBS) Results

These risk behaviors among high school students[1] ...

Unintentional Injuries and Violence

12% Rarely or never wore a seat belt
21% Rode with a driver who had been drinking alcohol, during the past month
20% Carried a weapon during the past month
28% Were in a physical fight during the past year
9% Attempted suicide during the past year

Alcohol and Other Drug Use

33% Drank alcohol during the past month
22% Reported episodic heavy drinking during the past month[2]
23% Used marijuana during the past month
7% Ever used cocaine
10% Ever used inhalants
21% Ever used prescription drugs without prescription

Sexual Behaviors

44% Ever had sexual intercourse
11% Had sexual intercourse with ≥ 4 people
30% Had sexual intercourse during the past three months
% Did not use a condom during last sexual intercourse[3]

Tobacco Use

48% Ever tried cigarette smoking
16% Smoked cigarettes during the past month
5% Smoked cigarettes on ≥ 20 days during the past month
14% Used smokeless tobacco during the past month
10% Smoked cigars during the past month

Dietary Behaviors

83% Ate fruits and vegetables < 5 times/day during the past 7 days
20% Drank soda or pop one or more times a day during the past 7 days (not including diet soda or pop)

Physical Activity

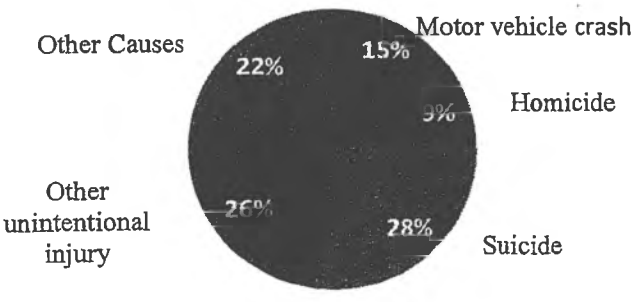
58% Did not meet currently recommended levels of physical activity[4]
54% Did not attend physical education class
82% Did not attend physical education class daily

Overweight

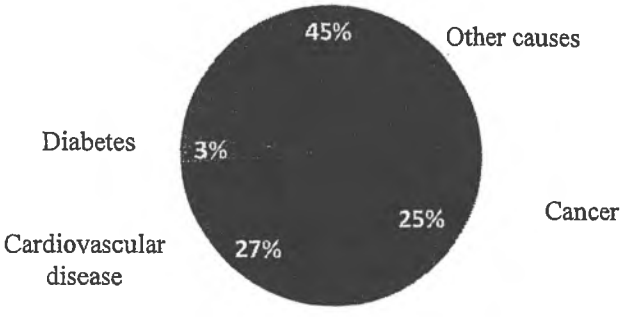
14% Were overweight[5]
12% Were obese[6]

... contribute to these leading causes of death[7]

Youth Aged 10-24 Years



Adults Aged 25 Years and Older



[1] High school students grades 9-12 in Alaska excluding alternative schools and boarding schools, weighted data.

[2] Students who had five or more drinks of alcohol in a row within a couple of hours on at least 1 day during the past 30 days

[3] Among students who had sexual intercourse during the past 3 months.

[4] Students who were not physically active for a total of at least 60 minutes per day on 5 or more days of the past 7 days.

[5] Students who were at or above the 85th percentile but below the 95th percentile for body mass index by age and sex.

[6] Students who were at or above the 95th percentile for body mass index by age and sex.

[7] 2004-2006 Alaska mortality data, Centers for Disease Control and Prevention.

State Capitol, Room 30
Juneau, AK 99801

Re: Letter of Support for SB 8

Dear Senator Davis:

Thank you for introducing SB 8: *An Act Relating to Questionnaires and Surveys Administered in the Public Schools*. The Alaska Network on Domestic Violence & Sexual Assault is committed to prevention efforts and serving victims of violence. This bill can help. SB 8 will provide a valuable tool in our efforts to understand the prevalence and shared risks of youth experiencing violence, while retaining a family's rights to remove their child from participating in the survey and allow a key segment of the student population, often the most vulnerable students, to participate in the survey.

The Centers for Disease Control and Prevention (CDC) Youth Risk Behavioral Survey (YRBS) is used nationally, and within Alaska, to determine risk behaviors among the Alaska high school student population. CDC developed YRBS data is a credible data source that can be compared to national data. This survey covers a broad range of risk behaviors and streamlines information gathering and administering surveys in the schools. However, currently with our opt-in YRBS policies, many communities, and sometimes our state, have struggled to have enough responses to consider the data valid.

This information and data is essential to help educators, health workers, social service agencies, victim service programs, and other allied professionals to better serve our communities. This data helps teachers working on prevention education to determine the best age to teach various skills and health topics in their classrooms. This data also helps organizations seeking resources to advocate for real needs in their communities as well as assisting health practitioners and others to determine how to best approach students with co-occurring risk behaviors.

Within the field of domestic and sexual violence prevention, current YRBS data indicates that in traditional high schools, more than 17% of 12th grade students have experience physical violence in a dating relationship and more than 11.5% have been forced to have sexual intercourse. We also know that in alternative schools, these numbers are 22.6% and 21.9%. While these numbers are staggering, they are incomplete, due to the current opt-out YRBS policies, with many of the most vulnerable students failing to return permission forms.

This bill is also very timely and in line with Governor Parnell's initiative to end domestic and sexual violence in our state in the next 10 years. One of the key strategies to ending the violence is by focusing on primary prevention efforts that employs various strategies to stop perpetration of violence, *before it ever occurs*. To achieve this, the Governor has brought together a multi-disciplinary group of allied professionals from communities throughout Alaska to look at the current gaps in the data needed to reach our primary prevention goals. SB 8 will help to fill ones of those gaps.

Thank you for bringing forth a bill that will provide a low cost way to better understand the scope of teen dating and sexual violence in Alaska and will assist in strengthening our violence prevention efforts.

Sincerely,

Peggy Brown
Executive Director

Senator Bettye Davis
Alaska Senate Education Committee
Alaska State Senate
State Capitol Room 30
Juneau, Alaska 99801

Dear Senator Davis and Members of the Senate Education Committee:

The Leadership Team of Anchorage United for Youth requests your support for Senate Bill 8, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Anchorage United for Youth has been making real headway at addressing the issues that impact Anchorage youth through a coordinated community effort with over 40 non-profit, public and private partners committed to increasing graduation rates, decreasing youth substance use and reducing juvenile crime rates. Current success with the Anchorage United for Youth plan and its implementation has led to interest from around the state in replicating this effort. Reliable and valid data like that obtained through the Youth Risk Behavior Survey (YRBS) is integral to the success and sustainability of this effort.

Reliable and statistically valid community data is critical to our mission of supporting Anchorage youth. Routine standardized surveys such as the YRBS allow us to track trends over time and help guide and evaluate the important youth programs we implement to keep our youth on track to graduate from high school, avoid delinquency and reject substance use. The YRBS must have a response rate of 60% to make it statistically valid, yet current legislation requires active parental consent which presents significant obstacles and costs to achieving this response rate. Approximately $90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.

Senate Bill 8 protects previously legislated parental rights to consent, parental rights to notification, and children's rights to refuse participation. We support Senate Bill 8 because it continues to provide these protections and respects the privacy of families, while removing the obstacles to obtaining this vital data that allows us to track and improve conditions for our youth.

We thank you for your commitment to youth in the state of Alaska and ask for your support of Senate Bill 8.

Sincerely,

Greg Razo, Cook Inlet Region, Inc.
Chair, Anchorage United for Youth Leadership Team

Prior Bill - Same Issues

Here are the responses to the questions at the hearing.

Statistics on parental consent for YRBS:

Data from the statewide survey from the last time the YRBS was administered (2007) showed that (after intense efforts to collect forms), in general 69-70% of parents provided written permission, 10-11% of parents declined permission, the remaining 20% of parents did not respond. (It is the non-responders that affect the survey the most). These rates vary by school and district – contact individual school districts for more information on their local YRBS survey experience.

How is the student identity protected?

The YRBS survey is an anonymous and voluntary survey. The survey has been designed to protect each student's privacy. Students do not put their name or any other identifier, or the name of their class or school on the survey. The teacher or proctor is given special instructions and a script to follow and are also required to sign an *Assurance of Confidentiality Form* which is returned to the Department of Health and Social Services. When students finish the survey, they place their answer sheet in a privacy envelope and seal it shut. The envelopes are then placed in a big box or envelope for returning to the state.

Just another FYI:

The Protection of Pupil Rights Amendment only applies to "required" surveys. (See CDC Parental Permission and the YRBS, 2006)

Let me know if you need any more information.

Patty Owen
School Health/YRBS Coordinator

Response to questions during HHSS hearing 2/11/10 on SB 101 – Questionnaires and Surveys in Public Schools.

1. **Copy of 1995 YRBS Survey** (See attached)

2. **Cost to School Districts to reach the minimum of 60% validity threshold for representative data.**

There is no direct cost to school districts to reach the validity threshold, other than contribution of staff time and often copying and postage. School districts receive incentive funding, depending on their size, between $800 and $30,000 per district. The total state expenditure in 2009 was approximately $90,000 (which included the special Alternative School Survey). In addition, some districts receive supplemental money from their community coalitions. The $90,000 was made up of a combination of federal funding from the YRBS grant and a special contribution of $20,000 from the Division of Behavioral Health and $50,000 as a one-time contribution from the Alaska Mental Health Trust.

3. **Impact on grants of failure to meet the minimum of 60% statistical validity.**

We do not have evidence of loss of federal funding for inadequate response rate to YRBS. What we can provide is examples of the program and grant dollar amounts used at the state level that rely on YRBS data.

- DHSS/Division of Public Health/CDC Tobacco Program funding : approximately $1.6 million per year
- Dept. of Education& Early Development (DEED)/CDC HIV Prevention funding: $275,000 per year
- DEED/Federal funding: Up until recently, the Title IV Safe and Drug-Free Schools and Community Program funds (formerly $1.7 million) relied on YRBS – however, this program has been eliminated. It is anticipated that it will be replaced with a new program (focusing on Positive School Climate) which will likely be competitive and it would be difficult to compete with other states without YRBS data with the majority of states that do have YRBS data.
- DHSS/Division of Behavioral Health Programs/Federal Funding:
    - Federal Substance Abuse Prevention and Treatment Block Grant ($4.8 million approx. per year) has required national outcome measures using YRBS
    - Alaska Youth Suicide Prevention Project, US Dept. of Health and Human Services, Substance Abuse and Mental Health Services Administration (SAMHSA). $500,000 per year x 3 years (1.5 million)
    - SAMHSA's Strategic Prevention Framework State Incentive Grant, five-year, $11.5 million grant
- Comprehensive Mental Health Plan: $106,000 from the Alaska Mental Health Trust

Other programs/efforts that rely on the YRBS data:

- Overall tracking progress on State Health Plan (Healthy Alaskans 2010) – approximately 16 measures.
- DEED/No Child Left Behind (NCLB) requirements to collect data captured in the YRBS remain in place and DEED has no other established mechanism to gather this data. Building a new instrument would be costly and labor intensive, and DEED presently lacks the infrastructure to accomplish this and would no doubt run in to the same challenges as YRBS faces.
- Alaska's Plan to Reduce and Prevent Underage Drinking - without the YRBS data we will lose our baseline data to show we are making change.
- DHSS State Epidemiological Outcomes Workgroup contract deliverables relies heavily on YRBS data.
- Alaska Obesity Prevention Plan

Other large community grants:

- 7 SAMSHA grants directly to community coalitions

District level grants:

- One of the eligibility requirements for school districts to apply for state Tobacco Prevention Grants ($800,000) is to collect local YRBS data.

- A query is in process to determine how else school districts have used the data to leverage additional funding. Responses so far have mentioned being able to get grant funding for school counselors to address the needs identified by YRBS.

Prior Bill-Same Issues

Representative Bob Herron, Co-Chair
Representative Wes Keller, Co-Chair
House Health, Education and Social Services Committee
Alaska State Capitol
Juneau, AK 99801-1182
Fax: 907-465-4589 (Rep. Herron)
Fax: 907-465-3818 (Rep. Keller)

RE: SB 101 (Davis)--Support

Dear Co-Chairs Herron and Keller:

On behalf of the American Heart Association, we strongly encourage you and your colleagues on the House Health, Education and Social Services Committee to support SB 101, a bill that would change the requirements of parental consent for students to participate in anonymous questionnaires and surveys. Currently, parents must actively consent in order for their child to participate in anonymous surveys about student health and behavior. If SB 101 were to become law, parents and students could still opt out of participation, but if they declined to opt out, their consent to participate would be implied.

The American Heart Association is a national voluntary health agency whose mission is "Building healthier lives, free of cardiovascular diseases and stroke." The American Heart Association supports SB 101 because it would make it feasible to reliably collect weighted, statistically significant data to accomplish important public health tasks like tracking childhood physical activity levels, and ensuring that tobacco prevention programs directed at our youth are on-target and actually effective in reducing tobacco use.

By allowing the state to more reliably track the health of our children, SB 101 will result in better, more effective programs directed at Alaska's children, and ultimately reduce preventable threats to cardiovascular health like tobacco use and chronic obesity.

Should you have any questions about our position, please feel free to contact me at 720-280-3097. Thank you for your consideration.

Sincerely,

Chris Sherwin
Vice-President, Advocacy
American Heart Association/ Pacific Mountain Affiliate

Sen. Bettye Davis
Subject: SB 101/HB 130: Student Questionnaires and Surveys

Prior Bill
Same Issues

Dear Senator Davis,

Thank you for supporting SB101/HB 130 "Student Questionnaires and Surveys." The data gathered from the Youth Risk Behavior Survey is of critical importance to Alaska's school districts and other youth-serving organizations. The bill will remove barriers to administering the Youth Risk Behavior Survey (YRBS), an anonymous survey that parents already overwhelmingly grant permission to administer. By eliminating the requirement to gather parental permission forms, the bill will save precious dollars and instructional time in our schools.

As a professional grant writer, I can attest that it is impossible to develop competitive grant applications without YRBS data that is complete, accurate, and timely. The higher the survey participation rate, the better the quality of the data.

I understand that some of the bills' opponents think that students will be encouraged to engage in risky behavior simply by taking the survey. I believe that the opposite is true. If anything, the act of responding to the YRBS may discourage these behaviors by reminding kids that adults are interested in finding out what they are doing. My nine nieces and nephews, most of whom are current or recent high school students, assure me that they did not learn of risky behaviors when taking the YRBS. They were well aware of everything the survey addresses!

By supporting this important bill, you are helping Alaska's youth-serving organizations to get accurate data in order to better address the needs of our young people.

Thank you for considering this matter that is so critical for the welfare of Alaska's youth.

Sincerely,

Corinne McVee

1998 Alaska Statute

Sec. 14.03.110. Questionnaires and surveys administered in public schools.

A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or guardian.

1999 Alaska Statute

Sec. 14.03.110. Questionnaires and surveys administered in public schools.

(a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

(1) how the questionnaire or survey will be administered to the student;

(2) how the results of the survey or questionnaire will be used; and

(3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students.

Youth Risk Behavior Survey
SB 8

Youth Risk Behavior Survey

Senate Bill 8, Student Questionnaires and Surveys, strengthens parental notification and allows for passive parental consent for students taking the Youth Risk Behavior Survey (YRBS.)

Background Information

What the bill does:

SB 8 maintains and strengthens current parent notification provisions. It ensures that parents are informed that the survey will be given, provides for the opportunity to review survey content, and allows parents to choose not to allow their children to participate.

What the YRBS is:

The YRBS is a voluntary, anonymous school-based survey of high school students (grades 9-12). There is also a shorter version for middle school students (grades 7 - 8). It is a nationally recognized and administered survey instrument developed by the Centers for Disease Control and Prevention (CDC) in 1991. The high school survey is conducted every two years on both the national and state level. It is completely anonymous. No identifying information is given and students immediately put their answer sheet into a sealed envelope to be turned in to the state. The survey is administered through cooperation between Alaska's Department of Education & Early Development, Department of Health and Social Services, local school districts and the CDC.

Why we need the law changed:

The current law, requiring signed permission slips for any student to participate, unnecessarily hinders data collection needed to design and evaluate risk prevention programs and services to protect our youth. The state spent about $90,000 in 2009 on incentives to support getting permission slips returned (whether positive or negative). This is in addition to extra staff time and costs incurred by local school districts.

Over the last decade, the survey has had years of not meeting the necessary response rate to have valid data or has barely made the minimum response rate cut off for valid data, resulting in an adequate but less than desirable degree of confidence in the results compared to achieving a higher response rate.

Parental Engagement & Support for Alaska's Youth

SB8 recognizes the need to keep parents informed and given opportunities for engagement. It balances this with the need to keep administrative burden to a minimum, resulting in a bill that supports both parental involvement and the ability to better serve our youth.

SB 12, 26-LS0089 – "An Act extending the termination date of the Board of Nursing; and providing for an effective date."

SPONSOR STATEMENT

This bill extends the termination date of the Board of Nursing eight years to June 30, 2019. The board was recommended to be extended by the Legislative Budget and Audit Committee in December, 2010.

THE MISSION OF THE ALASKA BOARD OF NURSING IS TO ACTIVELY PROMOTE AND PROTECT THE HEALTH OF THE CITIZENS OF ALASKA THROUGH THE SAFE AND EFFECTIVE PRACTICE OF NURSING AS DEFINED BY LAW.

The board adopts regulations to carry out the laws governing the practice of nursing and the work of nurse aides in Alaska. It makes final licensing decisions and takes disciplinary action against people who violate the licensing laws.

The board meets at least four times a year (AS 08.68.080) and consists of seven members appointed by the governor. One member shall be a licensed practical nurse currently involved in institutional nursing service, one member shall be a registered nurse engages in baccalaureate nursing education, three members shall be registered nurses at large, and two members shall be persons who have no direct financial interest in the health care industry (AS 08.68.010).

The five members of the board who are nurses shall be licensed in the state, and shall have been actively engaged in nursing for not less than four years before appointment, three years of which were within the five years immediately preceding appointment (AS 08.68.060). The board shall annually elect a chairman and secretary from among its members.(AS 08.68.070).

Duties and power of the board are found under AS 08.68.100(a): The board shall

(1) adopt regulations necessary to implement this chapter, including regulations pertaining to practice as an advanced nurse practitioner and a nurse anesthetist and regulations necessary to implement AS 08.68.331–08.68.336 relating to certified nurse aides in order to protect the health, safety, and welfare of clients served by nurse aides;

(2) approve curricula and adopt standards for basic education programs that prepare persons for licensing under AS 08.68.190;

(3) provide for surveys of the basic nursing education programs in the state at the times it considers necessary;

(4) approve education programs that meet the requirements of this chapter and of the board, and deny, revoke, or suspend approval of education programs for failure to meet the requirements;

(5) examine, license, and renew the licenses of qualified applicants;

(6) prescribe requirements for competence before a former nurse may resume the practice of nursing under this chapter;

(7) define by regulation the qualifications and duties of the executive secretary and delegate authority to the executive secretary that is necessary to conduct board business;

(8) develop reasonable and uniform standards for nursing practice;

(9) publish advisory opinions regarding whether nursing practice procedures or policies comply with acceptable standards of nursing practice as defined under this chapter;

(10) require applicants under this chapter to submit fingerprints and the fees required by the Department of Public Safety under AS 12.62.160 for criminal justice information and a national criminal history record check; the department shall submit the fingerprints and fees to the Department of Public Safety for a report of criminal justice information under AS 12.62 and a national criminal history record check under AS 12.62.400.

(b) The board may

(1) conduct hearings upon charges of alleged violations of this chapter or regulations adopted under it;

(2) invoke, or request the department to invoke, disciplinary action against a licensee;

(3) prescribe requirements for competence to continue practice.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. _____

Analysis

SB 12 extends the Board of Nursing to June 30, 2019. In accordance with AS 08.03.020 funding extends one year following the termination date allowing the Board to conclude its affairs. The FY2012 funding is included in the Operating Budget request and costs shown are an average of direct costs for a biennial license period.

Travel expenses represent transportation and per diem for the 7 member board and 1 staff to meet at least 4 times each year in accordance with AS 08.68.080.

The program is required to cover costs with licensing fees under AS 08.01.065, and revenue generated by board fees are anticipated to cover its full operating costs. New funds are not required to implement this bill.

SUMMARY OF: A Sunset Review of the Department of Commerce, Community and Economic Development, Board of Nursing (BON), September 30, 2010

PURPOSE AND SCOPE OF THE REPORT

In accordance with Title 24 and Title 44 of the Alaska Statutes (sunset legislation), we have reviewed the activities of BON to determine if there is a demonstrated public need for its continued existence and if it has been operating in an effective manner. As required by AS 44.66.050(a), this report shall be considered by the committee of reference during the legislative oversight process in determining whether BON should be reestablished. Currently, under AS 08.03.010 (c)(13), BON will terminate on June 30, 2011, and will have one year from that date to conclude its administrative operations.

REPORT CONCLUSIONS

BON is operating in an efficient and effective manner and should continue to regulate the professions it governs. We believe the board is safeguarding the public interest by ensuring the competence and integrity of those who present themselves to the public for the professions regulated by BON: licensed registered nurses, licensed practical nurses (LPN), advanced nurse practitioners (ANP), certified registered nurse anesthetists, certified nurse aides, and nurse and nurse aide training programs.

BON has conducted its business in a satisfactory manner. It continues to propose changes to regulations to improve the board's effectiveness and to ensure that professionals are properly licensed.

Under AS 08.03.010(c)(13), BON will terminate on June 30, 2011. If not extended by the legislature, under AS 08.03.020, BON will have a one-year period to administratively conclude its affairs. We recommend that the legislature extend the board's termination date to June 30, 2019.

FINDINGS AND RECOMMENDATIONS

1. BON should take steps to ensure all appropriate entities are notified when an ANP's authority to write prescriptions has been revoked or suspended.
2. The BON chairman should take steps to ensure that the required training program reviews are being conducted.
3. The Division of Corporations, Business, and Professional Licensing's chief investigator should take steps to ensure that complaints and cases are investigated timely.
4. The director of Boards and Commissions, Office of the Governor, should fill the LPN position with an LPN currently involved in institutional nursing services.

October 26, 2010

Members of the Legislative Budget
and Audit Committee:

In accordance with the provisions of Title 24 and Title 44 of the Alaska Statutes (sunset legislation), we have reviewed the activities of the Board of Nursing (BON), and the attached report is submitted for your review.

DEPARTMENT OF COMMERCE, COMMUNITY,
AND ECONOMIC DEVELOPMENT
BOARD OF NURSING

September 30, 2010

Audit Control Number
08-20070-10

This audit was conducted as required by AS 44.66.050 and under the authority of AS 24.20.271(1). Under AS 08.03.010(c)(13), BON will terminate on June 30, 2011. If the legislature does not extend the termination date, BON will have one year to conclude its administrative operations. In our opinion, BON's termination date should be extended until June 30, 2019. The board has generally displayed an ability to conduct its business in a professional, competent, and efficient manner – with the exception of the areas noted in the recommendations. BON is serving the public interest by promoting the competence and integrity of those who provide services to the public as licensed nurses and nurse aides.

The audit was conducted in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient and appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. Fieldwork procedures utilized in the course of developing the findings and recommendations presented in this report are discussed in the Objectives, Scope, and Methodology.

Pat Davidson, CPA
Legislative Auditor

OBJECTIVES, SCOPE, AND METHODOLOGY

In accordance with Title 24 and 44 of the Alaska Statutes, we have reviewed the activities of the Board of Nursing (BON) to determine if there is a demonstrated public need for its continued existence and if it has been operating in an efficient and effective manner.

As required by AS 44.66.050(a), this report shall be considered by the committee of reference during the legislative oversight process in determining whether BON should be reestablished. Currently, under AS 08.03.010(c)(13), BON will terminate on June 30, 2011, and will have one year from that date to conclude its administrative operations.

Objectives

The three central, interrelated objectives of our report are:

1. To determine if the termination date of the board should be extended.

2. To determine if the board is operating in the public interest.

3. To determine if the board has exercised appropriate regulatory oversight of licensed registered nurses, licensed practical nurses, advanced nurse practitioners, certified registered nurse anesthetists, certified nurse aides, and nurse and nurse aide training programs.

The assessment of the operations and performance of BON was based on criteria set out in AS 44.66.050(c). Criteria set out in this statute relates to the determination of a demonstrated public need for BON.

Scope and Methodology

The major areas of our review were board proceedings, licensing, complaint investigation, and resolution functions for fiscal years ending June 30, 2006, through June 30, 2010. During the course of our examination, we reviewed and evaluated the following:

- Applicable statutes and regulations related to the licensing and certification of registered nurses, licensed practical nurses, advanced nurse anesthetists, certified nurse aides, and nurse and nurse aide training programs.

- Minutes of meetings of BON.

- Annual Reports issued by BON and the investigative unit of the Division of Corporations, Business and Professional Licensing (DCBPL).
- Complaints filed with DCBPL, Office of the Ombudsman, and the Alaska Human Rights Commission.

- Financial records related to the revenues generated and the operating costs incurred by BON.

- Complaints and related investigative case files maintained by the investigative unit of DCBPL.

- Files related to applicants for, and holders of, licenses issued by BON.

- Files related to applicants for board member seats maintained by the Division of Boards and Commissions with the Office of the Governor.

Additionally we interviewed employees of DCBPL and members of BON.

ORGANIZATION AND FUNCTION

The Board of Nursing (BON) was established for the purpose of controlling and regulating the practice of nursing in the State. Alaska Statute 08.68.100 identifies BON's responsibilities and authority to provide effective control and regulation of the practice of nursing as well as the standards for training necessary to promote, preserve, and protect the public's health, safety and welfare.

Board Membership

BON is composed of seven members. State law requires that one member be a licensed practical nurse (LPN) currently involved in institutional nursing services, one member be a registered nurse (RN) engaged in baccalaureate nursing education, three members be RNs at large, and two members be persons who have no direct financial interest in the health care industry. For current board members, see Exhibit 1.

Thomas Hendrix, PhD, RN
Baccalaureate Nursing Education

Kevin Dougherty, Public Member

Erin Pringle, RN Position

Board Duties

In general BON regulates admission into the practice of nursing; establishes and enforces competency by ensuring compliance with professional standards and adopting regulations; and ensures that training programs are performing up to both statewide and national standards.

Most licensing requirements are established by statute. Nurses are either licensed by examination or endorsement.

Examinations for RNs and LPNs are nationally administered exams; the National Council Licensure Examination is administered through a contract with the private sector. Certified nurse aides are tested using the National Nurse Aide Assessment Program (NNAAP) exam. The NNAAP was formulated by the National Council of State Nursing Boards and is administered locally in conjunction with the training centers that have been approved by BON.

Licenses by endorsement, including certifications of nurse aides by endorsement, are issued to nurses licensed in other states that have licensing requirements acceptable to BON.

BON regulates nursing practices in part by:

1. Establishing and amending policy and regulations necessary and desirable to enforce state statutes.

2. Approving curricula for nursing and nurse aide programs; along with adopting standards for basic and continuing competency programs designed to prepare persons for licensure and ensure the maintenance of competency.

3. Issuing licenses on the basis of examination or endorsement to qualified applicants.

4. Holding hearings to resolve investigations that may lead to revocation, suspension, or other disciplinary action against an individual holding a license issued by the board.

5. Periodically reviewing and approving the facility training programs for individuals employed and certified as nursing aides.

6. Keeping the public informed of pertinent information through the use of BON's website which includes disciplinary databases, advisory opinion databases, board meetings and agenda's, meeting minutes, licensure information, regulations and other public notices.

Division of Corporations, Business and Professional Licensing (DCBPL)

DCBPL staff provide administrative support, including budgetary services and functions such as: collecting fees, maintaining files, receiving and issuing application forms, and posting public notices.

The DCBPL investigative unit is empowered with the authority to act on its own initiative or in response to a complaint. They may:

1. Conduct an investigation if it appears a person is engaged in, or is about to engage in a practice over which the Department of Commerce, Community and Economic Development has authority.

2. Issue an order for a licensed individual to stop the practice.

3. Bring an action in superior court to enjoin the act.

4. Examine the books and records of an individual.

5. Issue subpoenas for the attendance of witnesses and records.

REPORT CONCLUSIONS

The Board of Nursing (BON) is operating in an efficient and effective manner and should continue to regulate the professions it governs. We believe the board is safeguarding the public's interest by ensuring the competence and integrity of those who present themselves to the public as licensed registered nurses, licensed practical nurses, advanced nurse practitioners, certified registered nurse anesthetists, certified nurse aides, and nurse and nurse aide training programs.

BON has conducted its business in a satisfactory manner. It continues to propose changes to regulations to improve the board's effectiveness and to ensure that professionals are properly licensed.

Under AS 08.03.010(c)(13), BON is scheduled to be terminated on June 30, 2011. If not extended by the legislature, under AS 08.03.020, the board will have a one-year period to administratively conclude its affairs. We recommend that the legislature extend the board's termination date to June 30, 2019.

(Intentionally left blank)

FINDINGS AND RECOMMENDATIONS

Recommendation No. 1

The Board of Nursing (BON) should take steps to ensure all appropriate entities are notified when an advanced nurse practitioner's (ANP) authority to write prescriptions has been revoked or suspended.

During the prior sunset review, we recommended that BON develop procedures to notify the Board of Pharmacy when there is a termination or change to a nurse's prescriptive authority as required by regulation. After our review in FY 02, BON repealed these regulations and developed a disciplinary database accessible on their website.

During the period from July 1, 2002, to March 31, 2010, there were two incidents where a nurse's authorization to write prescriptions was revoked by BON. One involved an ANP whose license to practice was revoked along with prescriptive authority. In January 2010, another ANP lost prescriptive authority for a period of one year.

The ANP, whose nursing license and authority to write prescriptions was revoked, continued to write prescriptions after the revocation, putting the public at risk. The other ANP whose authority to write prescriptions was revoked for a time frame of one year, has the opportunity to continue writing prescriptions. The disciplinary database accessible on the BON website is not an effective control for stopping illegal prescriptions from being filled.

Nurses must apply with BON in order to receive authorization to write prescriptions. Once the state grants authorization, the nurse must receive a registration number from the federal Drug Enforcement Agency (DEA) before they can start writing prescriptions. The DEA keeps a database listing the current status of registration numbers. Currently, there is no statute or regulation in place requiring the board to notify the DEA if a nurse's ability to write prescriptions has been revoked. Not notifying the DEA that a prescriber's authorization has been revoked or suspended can result in illegal prescriptions being filled.

BON is established under AS 08.68 for the purpose of controlling and regulating the practice of nursing, including: ANPs, nurse anesthetists, registered nurses (RN), licensed practical nurses (LPN), and certified nurse aides (CNA). BON's mission statement is: "*to* actively *promote and protect the health of the citizens of Alaska through the safe and effective practice of nursing as defined by law.*" We recommend BON establish procedures to ensure that the DEA is notified whenever authorization to write prescriptions is revoked or suspended. We also recommend that BON ensure in-state pharmacies, hospitals, and clinics are aware of the disciplinary proceedings database on BON's website.

Recommendation No. 2

The BON chairman should take steps to ensure that the required training program reviews are being conducted.

BON is not consistently providing the required oversight of CNA training programs.

The required site reviews are not being conducted for all the CNA training programs. As of June 30, 2010, only 11 of the 21 required reviews for the year had been performed. As a result, training programs are being given approval to operate for another two years without the reviews being conducted or processed.

Additionally, in years the on-site reviews are not done, the self-evaluation forms completed by the training program staff are not being processed. As a result, BON is not aware of any issues that are highlighted in the self-evaluations.

According to regulation 12 AAC 44.857, Training Program Review:

> *(a) The board will approve a certified nurse aide training program for a two-year period. Within two years after the date of the initial approval of a certified nurse aide training program, the board will conduct an on-site review of the training program to determine continued compliance with regulations 12 AAC 44.835 - 12 AAC 44.847 and 12 AAC 44.852 - 12 AAC 44.860. If the board determines that the training program complies with those requirements, the board will extend its approval of that program for another two years.... (c) During a year in which on-site review is not scheduled, the program provider shall complete a self-evaluation form provided by the board.*

When the Nurse Consultant I position was vacated in 2002, the vacancy was not filled. As a result, the site reviews were only done sporadically. In June 2009, the board contracted for a part-time person to complete the site reviews. However, this has not fully addressed the problem.

We recommend that BON take steps to ensure that the onsite reviews and self evaluations are being completed in a timely manner to ensure that the training programs are presenting qualified applicants.

Recommendation No. 3

The Division of Corporations, Businesses, and Professional Licensing's (DCBPL) chief investigator should take steps to ensure that complaints and cases are investigated timely.

DCBPL's investigative section often does not complete investigations in a timely manner. The section's effectiveness is further diminished by the outdated and unreliable Enforcer database system currently in use.

It is DCBPL's responsibility to provide investigative support for BON. Investigators examine and research each complaint to determine jurisdiction and whether a violation exists. If the complaint meets these conditions, a case is opened and a priority is assigned. The priority reflects the level of imminent danger to the public.

During the period of July 1, 2006, through March 31, 2010, there were a total of 136 complaints and 412 cases active. Of these, 6 complaints and 20 cases were inspected for a more in-depth analysis.

Nine cases and two complaints experienced lengthy periods of inactivity (six months or more). One of those cases was assigned a priority level of "2".[1]

Investigative staff attributed the delays to higher priority cases and tasks taking precedence. Staff also believed that the investigative database contributed to the problem. The database does not have a user-friendly mechanism for flagging inactive cases. Consequently, supervisors and investigators are not effectively monitoring caseloads. Ineffective monitoring leads to unnecessary delays.

Complaints and cases that are not investigated timely may allow an individual who is practicing inappropriately, or outside of his or her scope, to continue these violations.

Cases with life threatening repercussions should take priority. However, it is still reasonable for the public to expect that all complaints against licensees will be addressed as efficiently as possible. We recommend that the DCBPL chief investigator establish procedures to ensure that priorities within each assigned level are outlined and that cases and complaints with periods of inactivity are identified and addressed.

---

[1]A priority level of "1" signifies incidents which represent an immediate danger to the public health and safety.
A priority level of "2" signifies incidents which, by the severity of their nature, dictate a high priority.
A priority level of "3" signifies incidents that are less serious in nature and do not appear to constitute immediate or severe public danger or serious damages.
A priority level of "4" signifies incidents involving failure to comply with statutes or regulations which are discovered through the course of proactive enforcement, but do not meet the criteria of priority 1 through 3.

Recommendation No. 4

The director of Boards and Commissions, Office of the Governor should fill the LPN board position with an LPN currently involved in institutional nursing services.[2]

The LPN board member appointed on June 12, 2007, for the institutional nursing services position is not currently involved in that field. She is currently an emergency medical technician and works for an emergency medical services company conducting training. There is no evidence on file that she has ever been involved in institutional nursing services.

The prior board member appointed to this position did not meet statutory requirements either. That board member was a clinical nurse, not an institutional nurse.

Under AS 08.68.010, BON is made up of seven members: one LPN currently involved in institutional nursing services, one RN engaged in baccalaureate nursing education, three RNs at large, and two public members.

It is the responsibility of the LPN currently involved in the institutional nursing services board member position to give technical advice related to the special needs of those in long-term care facilities and nursing homes. Without representation by an LPN involved in institutional nursing services, the long term care facilities and nursing homes are being underrepresented on the board. Accordingly, we recommend that the current LPN member be removed from the LPN board position and replaced with an individual meeting the statutory requirement.

[2]Institutional nursing services include facilities such as long-term care, Pioneer's Homes, and nursing homes.

ANALYSIS OF PUBLIC NEED

The following analyses of board activities relate to the public need factors defined in AS 44.66.050(c). These analyses are not intended to be comprehensive, but address those areas we were able to cover within the scope of our review.

Determine the extent to which the board, commission, or program has operated in the public interest.

The Board of Nursing (BON) has served the public by ensuring that qualified applicants are licensed as nurses or certified as nurse aides. Regulations related to licensure and certification provide reasonable assurance of competence, without being overly restrictive to entry into the nursing profession.

BON has generally displayed an ability to conduct its business in a professional, competent, and efficient manner - with the exception of the areas noted in the recommendations. BON has consistently proposed changes to statutes and regulations to improve its effectiveness in regulating the nursing profession in Alaska.

Determine the extent to which the operation of the board, commission, or agency program has been impeded or enhanced by existing statutes, procedures, and practices that it has adopted, and any other matter, including budgetary, resource, and personnel matters.

BON has changed many regulations as well as added several new ones, to bring the nursing profession in Alaska into line with the Model Nurse Practice Act that was commissioned by the National Council of State Boards of Nursing (NCSBN). The idea is to standardize as many of the regulations as possible across the United States and Canada so that nurses can be licensed in multiple states. BON has also worked on implementing the commitment to ongoing regulatory excellence (CORE) best practices. These best practices are based on data collected by the NCSBN from boards of nursing and stakeholder groups to measure outcomes, outputs, and efficiencies of nursing regulations during 2000 and 2002. This data was analyzed to discover those boards with consistently high ratings in outputs and effectiveness in each of five functional groups: discipline, licensure, education program approval, practice and governance. BON has adopted the CORE format and has formed a strategic plan around the five functional groups.

Under AS 08.01.065(c), the Department of Commerce, Community, and Economic Development (DCCED) must *"establish fee levels... so that the total amount of fees collected for an occupation approximately equals the actual regulatory costs of the occupation."* BON reviews and provides feedback on changes to fees proposed by the division.

BON revenues come from licensing and renewal fees. Renewals are conducted on a biennial basis. This creates a two-year cycle in board revenues, with BON receiving most of its revenues during the odd-numbered fiscal years. We reviewed the Division of Corporations, Business, and Professional Licensing's (DCBPL) internal records to identify BON revenues and expenditures. Exhibit 2 (shown below) presents BON's revenues and expenditures for FY 07 through FY 10.

Exhibit 2

Board of Nursing
Schedule of Revenues and Expenditures
FY 07 – FY 10
(Unaudited)

	FY 07	FY 08	FY 09	FY 10
Revenue	$ 2,436,683	1,055,587	2,688,408	1,055,141
Direct Expenditures				
Personal Services	555,647	580,516	646,370	627,158
Travel	23,289	14,867	12,615	23,081
Contractual	316,439	205,323	318,455	253,686
Supplies	4,459	4,083	7,534	5,169
Total Direct Expenditures	899,834	804,789	984,974	909,094
Indirect Expenditures	761,660	721,682	751,754	876,908
Total Expenditures	1,661,494	1,526,471	1,736,728	1,786,002
Annual Surplus (Deficit)	775,189	(470,884)	951,680	(730,861)
Beginning Cumulative Surplus (Deficit)	883,330	1,658,519	1,187,635	2,139,315
Ending Cumulative Surplus (Deficit)	$ 1,658,519	1,187,635	2,139,315	1,408,454

Due to errors in the reporting of information to BON and DCBPL, there was a large cumulative surplus at the end of FY 10. The errors were the result of a past DCBPL employee who did not have the accounting experience necessary to schedule expenditures and revenues properly or to forecast future revenues and expenditures - experience which is necessary to set fees for future periods. To address this, DCCED is recommending to BON that licensing fees for the occupations regulated by the board be dropped approximately 20% for the FY 11 and FY 12 renewal cycles.

that licensing fees for the occupations regulated by the board be dropped approximately 20% for the FY 11 and FY 12 renewal cycles.

Determine the extent to which the board, commission, or agency has recommended statutory changes that are generally of benefit to the public interest.

New regulations were enacted to address the passing rate for registered nurse (RN) and certified nurse aide (CNA) training program students. Programs are monitored for their pass rates and if one falls below a cumulative pass rate of 80% annually, then the program must submit a plan for improvement to the board and come into compliance prior to being approved for continuing the program (12 AAC 44.055).

BON instituted new regulations regarding criminal background checks for licensees and required photographs with applications (12 AAC 44.319 and 12 AAC 44.290(a)(1)(A) respectively).

BON passed regulations allowing RN's to administer Food and Drug Administration regulated vitamins and minerals as provided by their health care provider (12 AAC 44.945(d)). BON also passed standards for the delegation of nursing duties to other persons (12 AAC Article 9).

BON made several suggestions for statutory changes. These changes included rescinding obsolete statutes, as well as changing the wording for other existing statutes, and were ordered by priority. To date, none of these changes have been made.

Determine the extent to which the board, commission, or agency has encouraged interested persons to report to it concerning the effect of its regulations and decisions on the effectiveness of service, economy of service, and availability of service that it has provided.

BON's website has information on licensing, agendas, board meetings, minutes, regulations and complaints. The board's website contains several helpful links for obtaining additional information regarding the profession of nursing. Interested persons are encouraged to call the BON office to schedule testimony time and get information for up-coming board meetings. The location, date and time for board meetings are also posted on the State of Alaska Online Public Notice website and are published in the Anchorage Daily News.

Determine the extent to which the board, commission, or agency has encouraged public participation in the making of its regulations and decisions.

Public notices of proposed regulations are published in major newspapers. Meetings are adequately advertised, and time is set aside for public testimony.

There is evidence of extensive participation from the public in the continued development of BON regulations. Meeting minutes evidenced public comment on existing regulations and on proposed regulations. Public comments were heard by teleconference during times when interested persons were unable to attend the meetings in person.

Determine the efficiency with which public inquiries or complaints regarding the activities of the board, commission, or agency filed with it, with the department to which a board or commission is administratively assigned, or with the office of victims' rights or the office of the ombudsman have been processed and resolved.

There have been 136 complaints and 412 cases active during the time period from July 1, 2006, to March 31, 2010. Listed in Exhibit 3 (shown below) is a summary of the actions taken for those complaints and cases.

Exhibit 3

Complaints	**Number of Actions**
Case Opened	68
No Action (no violation, insufficient evidence, etc.)	41
Corrective Action Taken	4
Other	4
Advisement Letter	2
Still Under Investigation	17
Total Complaints	**136**
Cases	
Advisement Letter	14
No action (no violation, insufficient evidence, etc.)	52
License Action	231
Corrective Action Taken	21
Other	43
Still Under Investigation	51
Total Cases	**412**

Of these, 6 complaints and 20 cases were inspected for a more in-depth analysis. Of the 26 files reviewed, 11 were not investigated in a timely manner (see Recommendation No. 3).

No complaints or investigations specifically involving the actions and activities of BON were received, or undertaken by, either the Office of the Ombudsman or the Office of Victim's Rights within the past six fiscal years.

Determine the extent to which a board or commission that regulates entry into an occupation or profession has presented qualified applicants to serve the public.

BON is adequately regulating entry into the profession of nursing. Controls are in place and consistently performed to ensure it has presented only qualified applicants to serve the public. When received, the applications are subjected to a checklist to verify that all required documentation, such as test scores and proof of education or experience, are present, ensuring that the applicant meets all statutory and regulatory requirements.

Exhibit 4 (shown below) is a summary of new licenses and permits issued by BON for the time period from July 1, 2005, to June 30, 2009. This information was compiled from annual reports issued by the board.

Exhibit 4

New LIcenses Issued (Exclusive of Renewals)	FY 05	FY 06	FY 07	FY 08	FY 09	Total Licenses (as of June 30, 2009)
Registered Nurse	815	1084	1561	1251	1611	9304
Licensed Practical Nurse	110	114	176	129	188	958
Advanced Nurse Practitioner	51	47	60	58	60	635
Registered Nurse Anesthetist	4	17	25	22	11	135
Certified Nurse Aide	692	907	1201	1077	544	2842

Fiscal year 2009 experienced a sharp decline in the number of CNAs licensed as a result of some training programs closing and others limiting the numbers of students they would accept.

We reviewed the requirements for licensure and they appear reasonable and appropriate to ensure that qualified professionals are licensed and the public's best interest is protected. Continuing education requirements are reasonable and are audited in accordance with statute.

Determine the extent to which state personnel practices, including affirmative action requirements, have been complied with by the board, commission, or agency to its own activities and the area of activity or interest.

We found no evidence that the board has not complied with state personnel practices, including affirmative action, in the qualifying process of applicants. Each time the board has denied an applicant's licensure or certification, reasoning has been based on requirements set out by statute and regulation, not on the personal attributes of applicants. The reasons for denials are stated in writing, with the applicant always informed of their rights and of the process by which they can contest or appeal any denial of licensure or certification.

Determine the extent to which statutory, regulatory, budgeting, or other changes are necessary to enable the agency, board, or commission to better serve the interests of the public and to comply with the factors enumerated in this subsection.

See discussion in Recommendations No. 1 through No. 4 in the Findings and Recommendations section of this report. DCBPL, along with BON, should take measures to address the following:

1. Establish procedures to ensure that the Drug Enforcement Agency is notified when prescriptive authority is revoked or suspended and establish procedures to ensure in-

state pharmacies, hospitals, and clinics are aware of the disciplinary proceedings database on the board's website.

2. Ensure that onsite reviews and self evaluation forms are completed in a timely manner for all CNA training programs.

3. Ensure complaints and cases are investigated timely.

4. Fill the licensed practical nurse (LPN) board member position with an LPN meeting statutory requirements.

Determine the extent to which the board, commission, or agency has effectively attained its objectives and purposes and the efficiency with which the board, commission, or agency has operated.

In FY 09, BON adopted a balanced scorecard form of strategic planning based on the CORE best practices and set their strategic goals by the five functional groups: discipline, licensure, education program approval, practice and governance. They set their agendas to complement their strategic goals and revisit their plan annually in October. The board is continuing to implement these best practices and is improving their strategic goals.

Determine the extent to which the board, commission, or agency duplicates the activities of another governmental agency or the private sector.

There are several state and national organizations that provide newsletters, continuing education, and legislative support. The NCSBN provides national licensing exams for the nursing professions, acts as a clearing house for applicants of licensure by reciprocity, provides legislative support, and assists state boards in the standardization of regulations. We conclude that there is no evidence that any of these organizations provide the same public protection or duplicate the operations of BON. In addition, we did not find evidence of other state or private sector agencies that conduct or duplicate the efforts of BON.

Dear Ms. Davidson,

This letter is in response to your October 29, 2010 letter to Governor Parnell regarding the "CONFIDENTIAL" preliminary audit report on the Board of Nursing (BON).

Recommendation No. 4: The director of Boards and Commissions, Office of the Governor should fill the LPN board position with an LPN currently involved in institutional nursing services.

The Office of the Governor agrees that the member appointed to the LPN seat is not currently involved in institutional nursing services. We are working to appoint an LPN who meets the statutory criteria.

If you need additional information, please contact me at 907-465-3934.

Sincerely,

Jason Hooley
Director
Boards and Commissions

Juneau, AK 99811-3300

Re: Preliminary Report, Board of Nursing, Department of Commerce, Community and Economic Development (DCCED)
Dear Ms. Holmberg:

Thank you for report dated September 30, 2010 regarding audit conclusions and recommendations concerning the State Board of Nursing (BON). I appreciate your review and the opportunity to provide input into the process. In general, the department concurs with the report conclusion and recommendation and our comments are provided below.

Report Conclusions
DCCED agrees with the report conclusion that the BON "is operating in an efficient and effective manner and should continue to regulate the profession it governs. We believe the board is safeguarding the public interest by ensuring the competence and integrity of those who present themselves to the public as LPNs and CNAs." DCCED diligently strives to fulfill its duty of supporting licensed professionals and State boards to protect the public.

Recommendation No. 1
DCCED concurs that notification to the Federal Drug Enforcement Agency and other appropriate entities should occur when an advanced nurse practitioner's authority to write prescriptions is revoked or suspended. The Department will work with the BON, the Board of Pharmacy and other affected healthcare agencies and professionals to establish protocols for awareness of disciplinary proceedings and sanctions on a licensee.

Recommendation No. 2
DCCED supports the report recommendation for timely certified nurse aide training program reviews and/or training program self-evaluations. One difficulty in finding equitable solutions to this issue is past budget cuts and the resulting reduction in state personnel. A part time contract employee has not sufficiently filled the training inspection service gap. DCCED will endeavor to assist the BON chairman in finding solutions that provide adequate levels of inspection and self-evaluation review.

P.O. Box 110800, Juneau, Alaska 99811-0800
Telephone: (907) 465-2500 Fax: (907) 465-5442 Text Telephone: (907) 465-5437
Email: questions@alaska.gov Website: http://www.commerce.alaska.gov/

Recommendation No. 3
DCCED concurs that the Division of Corporations, Business and Professional Licensing (CBPL) chief investigator should take steps to ensure complaints and cases are investigated timely, and the division has already implemented positive measures toward that end. Specifically, the preliminary report recommends establishing procedures to ensure consistent treatment of complaints and cases in the priority levels assigned, that priorities are outlined and that cases and complaints with periods of inactivity are identified and addressed. The preliminary report also presents that staff believe the existing database did not have a user-friendly mechanism for flagging inactive cases and this contributed to delays.

CBPL was previously aware of the above described issues and took steps to improve timely investigations, including management changes, investments in updated technology, and staff training. A new Chief Investigator was hired in July 2010 and will be establishing procedures to outline priorities and to identify cases with inactive periods. In June 2010 CBPL implemented a new database system (GLSuite) that has significant functionality improvements over the prior outdated "Enforcer" system, including a more user-friendly mechanism for flagging inactive cases. In addition, staff training has and will continue to occur to maximize the utilization of the new system. CBPL expects that these steps will help ensure complaints and cases are investigated in a timely manner.

Recommendation No. 4
DCCED supports the management letter comments that the Licensed Practical Nurse board member should represent the institutional nursing services discipline as outlined in AS 08.68.010. We will work with the BON and the Office of the Governor Boards and Commissions to ensure that the LPN Board seat meets the statutory requirements.

Analysis of Public Need
CBPL reviewed the information presented in this section of the preliminary report and concurs with the reports comments.

We have no other comments on this section.

Again, thank you for an opportunity to provide input. We are pleased your review has, in general, found the Board of Nursing to be working in an efficient and effective manner. Should you have any questions about the content of this letter, please do not hesitate to contact me at 907-465-2500.

Regards,

Susan K. Bell
Commissioner

November 14, 2010

Dear Ms. Davidson,

As the Chair of the Board of Nursing, I have reviewed the preliminary audit report on the Department of Commerce, Community and Economic Development (DCCED), Board of Nursing Sunset Review, September 30, 2010. A few clarifications I would like to address.

Recommendation No. 1
BON should take steps to ensure all appropriate entities are notified when an advanced nurse practitioner's (ANP) authority to write prescriptions has been revoked or suspended.

The Board's plan is when an ANP's authority to write prescriptions has been revoked or suspended by the BON the Executive Administrator will:

- notify the DEA on the first day after the BON meeting concludes
- Submit the ANP's name to the Board of Pharmacy on the first day after the BON meeting concludes. The Board of Pharmacy will notify the pharmacies in the State of Alaska.
- notify the employer of an ANP on the first day after the BON meeting concludes
- update the ANP disciplinary data base found on the BON website with in two weeks after the BON meeting has concluded

Within 3 weeks after the BON meeting, the Executive Administrator will send out a message on the BON listserv stating when an ANP's authority to write prescriptions is revoked or suspended.

Recommendation No. 2
The BON chairman should take steps to ensure that the required CNA training program reviews are being conducted.

Recommendation No. 2 is for the required review of the CNA training programs. This issue has been addressed with Director Urion, Director Davis, Director Smith and Director Habeger. The Board of Nursing has had 4 Directors since I was appointed to the Board in March 2007. As found in the audit, the position of nurse consultant 1 was vacated in 2002. The Board identified that the posted position was not being filled due to the low salary compared to other nursing positions available. The best the Board has been able to do is a contract position. The contract employee has completed 3/4 of the first reviews of CNA programs as of July 2010 and others are in progress since then. The Board has recommended the position needs to be posted but with a competitive salary to ensure an experienced qualified candidate will apply. Director Habeger attended the October BON meeting and the issue of needing this position filled was addressed. I will continue to address this issue until the position is filled and in the interim the contract employee will continue the reviews.

Recommendation No. 3
The Division of Corporations, Business, and Professional Licensing's chief investigator should take steps to ensure that complaints and cases are investigated timely.

The Board of Nursing takes the responsibility that all complaints are investigated in a timely manner. I have learned that the Board of Nursing has some "older" cases due to a previous investigator who had some complaints that were never investigated. The current investigators are working to prioritize and complete the investigations. Chief, Quinten Warren has added another investigator to the BON and made Ken Weimer the senior investigator so there will now be a great deal more help to catch up the backlog plus deal with the daily intake. Also, the case situation will be monitored much more now than in the past as new procedures and computer system get up and running. The average of most cases would be that they are open from 3 months to one year if they do not involve litigation prior to the attorney general being involved, expert review and that type of process. Of course more complex cases or cases involving legal counsel and such do not fit these time frames. Cases are prioritized. The system is a 1-4 system with 1 being the highest priority, which would be cases of great potential for public harm and 4 being cases with low potential such as falsified application cases. The new GLS system is being used. However, it has many "bugs" in it which are still be rectified and causing all sort of disruptions and such. This system is actively being perfected each week. The chief and senior staff meet with other Division users in banking and security and them a meeting is held each week with the GLS people to address problems and working on correcting them. Hopefully by year's end the system will be working as expected. The Board will obtain an update with the investigative team at the January 2011 Board meeting.

Recommendation No.4
The Director of Boards and Commissions, Office of the Governor, should fill the LPN position with an LPN currently involved in institutional nursing services.

Recommendation No. 4 is the appointment of a qualified LPN. The previous Chair for the Board of Nursing recognized that the present LPN did not meet the requirements. The Chair contacted the previous Governor's office but no action was taken. The Board agrees that we need a practicing LPN for input on practice issues. The present LPN on the Board term ends March 2011. I have contacted Jason Hooley to address the issue for the future LPN appointment to the BON and have offered to evaluate potential LPN candidates prior to their appointment.

Analysis of Public Need on page 7 accounting error. I would like to highlight that the Volunteer Board of Nursing found the large accounting error that the state paid employees made. The Board will take credit for finding this error. With this error corrected, The Board was able to reduce our 2010 renewal fees.

Analysis of Public Need on Page 8 about statutory changes. The Board was asked by Director Davis in April 2008 to submit obsolete statutes. The Board promptly submitted 8 pages of changes with the rationale for the changes and the priority of these changes. The Board meets with the Director on a quarterly basis at our meeting. We have repeatedly asked our Director about where these statutory changes are in the system. The Board again asked Director Habeger at our October 2010 meeting if these statues are going to be presented as a Division or should the BON present these changes on our own. Director Habeger informed the Board that there is an omnibus with our statute requests in place. Director Habeger will follow up on this and report back to the Board at the January 2011 meeting.

Thank you for the opportunity to address a few of the items that required clarification and actions to rectify the deficiencies addressed in the preliminary BON sunset audit.

Sincerely,

Beth Gartner Farnstrom, RN

SPONSOR STATEMENT

SB 14 - Health Care Provider Protection of Conscience

The purpose of this bill is to provide for the protection and reasonable accommodation of a health care provider's expression of professional conscience in the provision of health care services.

Today we are experiencing an unprecedented explosion in science and technology which in turn influences concepts in medical practice. While they have benefited mankind in many areas, these advances pose dilemmas of an ethical and professional nature. The issue of a right to conscience in health care is one of the most pressing public issues of our time.

A health care professional's view of health, sickness, patient care and purpose of medicine comprise a well-formed professional conscience. This conscience is changed with new information and technology. A broad application of a right of conscience applies to the issues of end of life care, consumer genetic testing, the practice of pain management, psychotropic drug use, sterilizations, race-specific medications, infant circumcision, physician and nurse complicity in capital punishment, physician assisted suicide, abortion, etc.

This bill recognizes the societal benefits that divergent organizational identities bring; the relational dimension of professional conscience between health care institutions and providers, between providers and patients, and between providers and communities; and helps ensure the conditions necessary for the conversations of conscience to continue concerning the health care profession.

Most states have laws protecting the conscience rights of health care providers. Alaska law currently does not provide for a general health care provider protection of conscience.

SB 14 provides a guarantee for the exercise of health care provider conscience in an increasingly pluralistic environment. All health care providers must be treated equally, and must have recourse to the exception made for conscience.

Dear Senator Dyson,

Recently I have been in discussion with other health care providers over concerns of the possibility of being forced to be involved in medical procedures that would be considered unethical to them. I would like to commend you and support you in your proposal of Senate Bill 14. I feel this is needed protection which needs to be guaranteed.

Thank you,
Pamela Howard RN

RE: Alaska Board of Pharmacy Letter of Support –
Senate Bill 14: Protect Health Care Provider Conscience, as offered by Senator Dyson in the First Session of the 27th Alaska Legislature

Dear Senator Dyson,

Thank you for your presentation regarding Senate Bill 14 during the February 18th meeting of Alaska Board of Pharmacy. The members and audience gained valuable insight into the goals and parameters of your bill.

The mission of the Board of Pharmacy is taken very seriously. It is, per Alaska Statute Sec 08.80.005, *to promote, preserve and protect the public health, safety and welfare through effective control and regulation of the practice of pharmacy*. Senate Bill 14 is consistent with that mission.

As Chairman, and without reservation, the Alaska Board of Pharmacy announces its support of Senate Bill 14 regarding Conscience Objection by Heath Care Providers and wishes you continued success in its forward movement through the house and senate.

Respectfully Submitted,

Richard "Dick" Holm, RPh, Chairman
Alaska Board of Pharmacy

Chuck Kopp

From: Thomas Wells [tomwells@gci.net]
Sent: Thursday, January 27, 2011 3:13 PM
To: Chuck Kopp
Subject: SB 14

Dear Senator Dyson:

I have reviewed Senate Bill 14 concerning health care provider protection of conscience. I feel this is a good bill that protects the actions of providers who in good conscience do not provide drugs or treatment to patients who request treatment, medications or procedures that the provider feels is unethical or detrimental to the patient's health. A prescription by one provider should not obligate another provider to perform procedures that could be harmful to the patient or unethical in the eyes of the second provider. Pharmacists should not be obligated to provide large volumes of addictive drugs to patients who are prone to drug addiction. I am sure there are a multitude of other circumstances in which the conscience provider needs protection.

Sincerely,

Thomas J. Wells DDS, MS

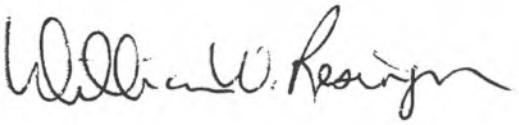
Senator Fred Dyson
Alaska State Capitol, Room 121
Juneau, Alaska 99801

Dear Senator Dyson:

I have reviewed your proposed bill, SB 14 -Health Provider Protection of Conscience, and I wish to extend my strong support for your proposal. I have been a physician since 1969 and I have indeed seen great changes in the practice of medicine over the years. There are increasing pressures coming to bear on medical workers which pose ethical and professional dilemmas. I have personally given written notice that I would not participate in certain procedures except for life threatening circumstances and, even then, I have faced considerable pressure to force my assistance. Fortunately I have been able to withstand the pressure so far, but I can see how your bill would provide much needed protection and strengthening of my position of conscience and would give further help to many other medical workers who might face even greater coercive pressure. Your bill is a well directed effort to provide legal protection of conscience for health care workers and it fills a real need in a complex, diverse, and highly technical modern society. While I would never have anticipated this need in 1969, I can now see the great necessity for your bill today. If I can be of any help in your efforts, please feel free to contact me.

Sincerely,



William W. Resinger, M.D.

SENATE BILL NO. 14

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATORS DYSON AND COGHILL

Introduced: 1/7/11
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

"An Act providing for the protection and reasonable accommodation of a health care provider's expression of conscience pertaining to a health care service; and providing for immunity, an exception, and prohibition of discrimination for an expression of conscience by a health care provider."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 18.95 is amended by adding a new section to read:

Sec. 18.95.015. Protection, reasonable accommodation, and notice of conscience objection by health care provider. (a) Except as provided in (c) of this section, an employer who receives a notice of objection described in (b) of this section shall make reasonable accommodations for the employee providing the notice and may not discriminate against an employee who provides the notice.

(b) A person who is employed as a health care provider may provide advance written notice to the person's employer of an objection to providing health care services. A health care provider is not required to provide a written explanation of the

reason for the objection, but the objection must be related to the provider's conscience. The objection may not be based on a patient's race, religion, sex, age, disability, or national origin.

(c) An employer is not required to accommodate an employee who has provided notice under (b) of this section if the employer demonstrates that the accommodation poses an undue hardship on the employer or the objecting employee is the only health care provider available to assist in the provision of health care services in a life-threatening circumstance.

(d) Notwithstanding the provision of a written notice of objection under (b) of this section, a health care provider may not refuse to provide treatment or care to a patient seeking health care services in a life-threatening circumstance until an alternate health care provider is available.

(e) A person who refuses to provide health care services in compliance with this section may not be held civilly or criminally liable for consequences resulting from the compliance.

(f) This section shall be construed in a manner consistent with 42 U.S.C. 2000e - 2000e-17 (Title VII, Civil Rights Act of 1964), as amended.

(g) In this section,

(1) "health care provider" means a person licensed, certified, or registered in the state who provides health care services; in this paragraph, "provide" means to counsel, advise, perform, dispense, assist, or refer;

(2) "health care services" means treatment, management, and research of illness and health;

(3) "life-threatening circumstance" means a situation that poses an immediate risk to a person's life or long-term health.

SENATOR FRED DYSON

SB 14 – SECTIONAL ANALYSIS

Section 1.

1. Provides within Alaska Statutes, *Title 18 - Health, Safety, and Housing,* a protection and reasonable accommodation for a health care provider's expression of conscience pertaining to provision of a health care service; and
2. Establishes written notice as the method of communicating an expression of conscience, and that the employer will reasonably accommodate and not discriminate against the employee providing notice; and
3. Provides that the notice does not have to include the reason for the objection, but must be related to the provider's conscience and not to a protected status of the patient; and
4. Provides that an employer is not required to accommodate the employee if the employer demonstrates the accommodation poses undue hardship or the objecting employee is the only health care provider available in a life-threatening circumstance, and that the health care provider may not refuse to provide treatment or care in a life-threatening circumstance until an alternate health care provider is available; and
5. Provides civil and criminal immunity to health care providers who express conscience in compliance with this section; and
6. Provides that this section will be construed in a manner consistent with Title VII of the Civil Rights Act of 1964; and
7. Defines terms.

Re: Senate Bill 14
ACLU Statement in Opposition

Chair Davis:

Thank you for the opportunity to submit written testimony with respect to Senate Bill 14.

As you know, the American Civil Liberties Union of Alaska represents thousands of members and activists throughout the state who seek to preserve and expand individual freedoms and civil liberties guaranteed under the United States and Alaska Constitutions. In that regard, we would like to advise the Committee of several issues with respect to SB 14, and register our **strong opposition to the proposed legislation**.

Importance of Religious Liberty

The ACLU has long been a defender of religious liberty. Our work in defending the free exercise rights of people of faith is robust – both at the National and State levels. For example, the ACLU of Alaska worked with the Russian Old Believer Community in the Homer area to ensure that the state would not improperly interfere with their practice of Holy Week. *See*, http://homernews.com/stories/021810/news_wto.shtml.

A quick review of the website ACLU Fights for Christians, at: http://www.aclufightsforchristians.com/, reveals the continuing work of our sister Affiliates to protect the rights of all Americans to practice and believe free of government interference.

Importance of Privacy and Right to Bodily Integrity

Pursuant to our mandate to protect the constitutional rights of Americans, the ACLU also defends the right to privacy, including medical privacy and reproductive freedom. Individuals must control decisions about their bodies and their health, and the government should not make those decisions for them.

SB 14 allows health care providers to refuse to provide health services, even if they are the only available provider, unless there are "life threatening circumstances." It gives civil and criminal immunity to those health care providers regardless of the grievous harm that could be inflicted on a patient.

SB 14 does not draw the proper balance in protecting religious liberty and individual privacy, and in ensuring Alaskans' health.

Refusals to Provide Health Care Services Threaten Public Health

An employee's refusal to provide health care threatens the health and safety of Alaskans – particularly in rural areas where medical services are limited. ***SB 14 is a dangerous step away from government's responsibility to protect public health.***

Instead of putting patients' health first, it seeks to protect individuals ***who have otherwise taken an oath to provide medical services to those in need.*** A refusal can conflict with a health care provider's ethical duty to her patient. And SB 14 does not provide the safeguards medically recommended:

> Conscientious refusals that conflict with patient well-being should be accommodated only if the primary duty to the patient can be fulfilled. . . . In resource poor areas, access to safe and legal reproductive services should be maintained. Providers with moral or religious objections should either practice in proximity to individuals who do not share their views or ensure that referral processes are in place.

http://www.acog.org/from_home/publications/ethics/co385.pdf, American College of Obstetricians and Gynecologists, Committee on Ethics, Opinion No. 385, November 2007, (Reaffirmed 2010).

The Proper Balance of Patients' Rights & Public Health with Religious Belief

The debate over religious refusals and health services need not be cast as a "winner take all contest" between "opposing" sides. The ACLU believes in a solution that balances protecting patients' rights and the public health with individual religious belief and institutional religious worship.

Institutions that operate in the public world ought to play by public rules. Health care providers serve and employ religiously diverse populations. Too, they often accept government funding. They are in the business of providing health services – not practicing religion. But SB 14 would permit a health care provider – even if that individual is the only provider on the premises – to refuse to provide care on the basis of "conscience" unless the patient was seeking care in life-threatening circumstances. It sanctions behaviors that are contrary to the interests of patients, and the standards of care required of Alaska health care providers.

This is bad public policy. Moreover, as written, SB 14 could come into conflict with the Alaska Supreme Court's decision in *Valley Hospital Association, Inc., v. Mat-Su Coalition for Choice* (1997) 948 P.2d 963, and result in needless, costly, and extended litigation. (In light of existing federal law, *see below*, passage of SB 14 would thus be doubly unwise.)

Clearly, institutions such as churches, temples, or mosques, whose main purpose is to inculcate religious values, ***ought generally to be free from having to comply with health care requirements repugnant to their beliefs***. But SB 14 dangerously goes beyond this principle.

SB 14 is Unnecessary

SB 14 is an unnecessary effort to protect an individual's right to not participate in procedures he or she finds objectionable because ***that right is already protected under the Civil Rights Act***. Title VII of that act requires an employer to attempt to accommodate current and prospective employees' refusals to provide any health care service on the basis of their religious beliefs so long as the accommodation does not pose an undue hardship on the employer's overall ability to provide health care services to its patients.

Title VII contemplates a careful balancing of interests. It gives employers leeway to take into account the effect of an employee's refusal on public health and safety, and at the same time, Title VII seeks the maximum possible accommodation of an individual's religious objection. The Civil Rights Act finds the middle ground between an employee's moral and religious objections and the needs of the patient to have access to the best healthcare possible.

Except for a "life-threatening circumstance," SB 14 makes no mention of the **patient's needs**. It implies that the patient's health is a low priority and that the patient's own moral grounding on what is and is not acceptable is unimportant. In addition – other than "life-threatening circumstances" – SB 14 includes no provision requiring the healthcare provider to find the means

for the patient to have access to the procedure in question. If the employee refuses to give the patient the necessary treatment, the patient is harmed with no recourse.

As Bad Public Policy, SB 14 Should Die in Committee

For the reasons set forth above, the ACLU believes SB 14 is bad for Alaska and particularly threatens the health of those in rural areas who are most vulnerable and in need of improved medical care.

We trust that the Health and Social Services Committee will take the necessary steps to ensure this bill does not proceed any further through the legislative process.

Thank you again permitting us to share our concerns. Please feel free to contact the undersigned should you require any additional information.

Sincerely,

Jeffrey Mittman
Executive Director
ACLU of Alaska

MEMORANDUM February 18, 2011

SUBJECT: Effect of bill (SB 14 (Work Order No. 27-LS0105\B))

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Celeste Hodge

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the effect of SB 14, if passed by the legislature. SB 14 requires an employer to make reasonable accommodation and prohibits discrimination against an employee who has provided a notice of an objection, without explanation, to providing health care services. Health care services in the bill is defined broadly to include the treatment, management, and research of illness and health. Employer is not defined. An exception to the accommodation by the employer applies when the employer can demonstrate undue hardship or the lack of availability of another employee. The bill also precludes refusal of services in a life-threatening circumstance until an alternate employee is available. The bill provides for the objecting employee with immunity from civil and criminal liability. If you would like information about the societal benefits and need for the bill, please contact the sponsor directly.

If I may be of further assistance, please advise.

LEGISLATIVE RESEARCH REPORT

FEBRUARY 25, 2011

REPORT NUMBER 11.188

GENERAL PROTECTION OF CONSCIENCE LAWS FOR HEALTHCARE PROVIDERS

PREPARED FOR SENATOR FRED DYSON

BY TIM SPENGLER, LEGISLATIVE ANALYST

You asked about states with generally-worded protection of conscience laws. Specifically, you wanted to know which states have enacted provisions allowing a healthcare provider to abstain from participating in medical procedures (not specific to abortion) that go against her or his conscience.[1]

We identified four states (Idaho, Illinois, Louisiana, and Mississippi) that have enacted general protection of conscience laws for healthcare providers.[2] According to Sean Murphy, administrator of the Protection of Conscience Project, conscience provisions that are broadly worded (as in these states) are preferable to more narrowly articulated statutes. He asserts that as new medical procedures can arise at any time, attempting to enumerate all potential issues of conscience for healthcare professionals in statute is impractical.[3]

Below we provide excerpts from Idaho, Illinois, Louisiana, and Mississippi statutes regarding protection of conscience for healthcare providers. We include the complete relevant statutes from these states as Attachment A.

Idaho (IC 18-611):

> IC 18-611(2) No health care professional shall be required to provide any health care service that violates his or her conscience.
>
> IC 18-611(4) No health care professional or employer of the health care professional shall be civilly, criminally or administratively liable for the health care professional

[1] Alaska and 46 other states (all but Alabama, New Hampshire, and Vermont) have laws that allow healthcare providers to refuse to participate in abortions.

[2] While we believe this list to be complete, it is possible that relevant provisions from other states may have eluded us.

[3] Sean Murphy can be reached at (604) 485-9765. The Protection of Conscience Project is a Canada-based organization that works to ensure that people are not forced to facilitate practices or procedures to which they object for reasons of conscience. These practices include abortion, capital punishment, contraception, sterilization, artificial reproduction, euthanasia, embryonic experimentation, assisted suicide, human experimentation, and torture (*http://www.consciencelaws.org/*).

declining to provide health care services that violate his or her conscience, except for life threatening situations as provided for in subsection (6) of this section.

Illinois (745 ILCS 70/1, Sec. 4):

No physician or health care personnel shall be civilly or criminally liable to any person, estate, public or private entity or public official by reason of his or her refusal to perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care service which is contrary to the conscience of such physician or health care personnel.

Louisiana (La. Rev. Stat. Ann. tit. 40, § 1299.35.9):

A. (1) Any person has the right not to participate in, and no person shall be required to participate in any health care service that violates his conscience to the extent that patient access to health care is not compromised. No person shall be held civilly or criminally liable, discriminated against, dismissed, demoted, or in any way prejudiced or damaged for declining to participate in any health care service that violates his conscience.

Mississippi (MC § 41-107-5):

(1) Rights of Conscience. A health care provider has the right not to participate, and no health care provider shall be required to participate in a health care service that violates his or her conscience. However, this subsection does not allow a health care provider to refuse to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

Attachment A

Idaho, Illinois, Louisiana, and Mississippi provisions regarding protection of conscience for healthcare providers.

West's Idaho Code Annotated Currentness
Title 18. Crimes and Punishments
Chapter 6. Abortion and Contraceptives
§ 18-611. Freedom of conscience for health care professionals

(1) As used in this section:

(a) "Abortifacient" means any drug that causes an abortion as defined in 18-604, Idaho Code, emergency contraception or any drug the primary purpose of which is to cause the destruction of an embryo or fetus.

(b) "Conscience" means the religious, moral or ethical principles sincerely held by any person.

(c) "Embryo" means the developing human life from fertilization until the end of the eighth week of gestation.

(d) "Fetus" means the developing human life from the start of the ninth week of gestation until birth.

(e) "Health care professional" means any person licensed, certified or registered by the state of Idaho to deliver health care.

(f) "Health care service" means an abortion, dispensation of an abortifacient drug, human embryonic stem cell research, treatment regimens utilizing human embryonic stem cells, human embryo cloning or end of life treatment and care.

(g) "Provide" means to counsel, advise, perform, dispense, assist in or refer for any health care service.

(h) "Religious, moral or ethical principles," "sincerely held," "reasonably accommodate" and "undue hardship" shall be construed consistently with Title VII of the federal civil rights act of 1964, as amended.

(2) No health care professional shall be required to provide any health care service that violates his or her conscience.

(3) Employers of health care professionals shall reasonably accommodate the conscience rights of their employees as provided in this section, upon advanced written notification by the employee. Such notice shall suffice without specification of the reason therefor. It shall be unlawful for any employer to discriminate against any health care professional based upon his or her declining to provide a health care service that violates his or her conscience, unless the employer can demonstrate that such accommodation poses an undue hardship.

(4) No health care professional or employer of the health care professional shall be civilly, criminally or administratively liable for the health care professional declining to provide health care services that violate his or her conscience, except for life-threatening situations as provided for in subsection (6) of this section.

(5) The provisions of this section do not allow a health care professional or employer of the health care professional to refuse to provide health care services because of a patient's race, color, religion, sex, age, disability or national origin.

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

(6) If a health care professional invokes a conscience right in a life-threatening situation where no other health care professional capable of treating the emergency is available, such health care professional shall provide treatment and care until an alternate health care professional capable of treating the emergency is found.

(7) Nothing in this section shall affect the rights of conscience provided for in section 18-612, Idaho Code, to the extent that those rights are broader in scope than those provided for in this section.

West's Smith-Hurd Illinois Compiled Statutes Annotated Currentness
Chapter 745. Civil Immunities
➡ Act 70. Health Care Right of Conscience Act (Refs & Annos)
➡ **70/1. Short title**

§ 1. Short title. This Act may be cited as the Health Care Right of Conscience Act.

70/2. Findings and policy

§ 2. Findings and policy. The General Assembly finds and declares that people and organizations hold different beliefs about whether certain health care services are morally acceptable. It is the public policy of the State of Illinois to respect and protect the right of conscience of all persons who refuse to obtain, receive or accept, or who are engaged in, the delivery of, arrangement for, or payment of health care services and medical care whether acting individually, corporately, or in association with other persons; and to prohibit all forms of discrimination, disqualification, coercion, disability or imposition of liability upon such persons or entities by reason of their refusing to act contrary to their conscience or conscientious convictions in refusing to obtain, receive, accept, deliver, pay for, or arrange for the payment of health care services and medical care.

70/3. Definitions

§ 3. Definitions. As used in this Act, unless the context clearly otherwise requires:

(a) "Health care" means any phase of patient care, including but not limited to, testing; diagnosis; prognosis; ancillary research; instructions; family planning, counselling, referrals, or any other advice in connection with the use or procurement of contraceptives and sterilization or abortion procedures; medication; or surgery or other care or treatment rendered by a physician or physicians, nurses, paraprofessionals or health care facility, intended for the physical, emotional, and mental well-being of persons;

(b) "Physician" means any person who is licensed by the State of Illinois under the Medical Practice Act of 1987; [FN1]

(c) "Health care personnel" means any nurse, nurses' aide, medical school student, professional, paraprofessional or any other person who furnishes, or assists in the furnishing of, health care services;

(d) "Health care facility" means any public or private hospital, clinic, center, medical school, medical training institution, laboratory or diagnostic facility, physician's office, infirmary, dispensary, ambulatory surgical treatment center or other institution or location wherein health care services are provided to any person, including physician organizations and associations, networks, joint ventures, and all other combinations of those organizations;

(e) "Conscience" means a sincerely held set of moral convictions arising from belief in and relation to God, or which, though not so derived, arises from a place in the life of its possessor parallel to that filled by God among adherents to religious faiths; and

(f) "Health care payer" means a health maintenance organization, insurance company, management services organization, or any other entity that pays for or arranges for the payment of any health care or medical care service,

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

procedure, or product.

The above definitions include not only the traditional combinations and forms of these persons and organizations but also all new and emerging forms and combinations of these persons and organizations.

[FN1] 225 ILCS 60/1 et seq.

70/4. Liability

§ 4. Liability. No physician or health care personnel shall be civilly or criminally liable to any person, estate, public or private entity or public official by reason of his or her refusal to perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care service which is contrary to the conscience of such physician or health care personnel.

70/5. Discrimination

§ 5. Discrimination. It shall be unlawful for any person, public or private institution, or public official to discriminate against any person in any manner, including but not limited to, licensing, hiring, promotion, transfer, staff appointment, hospital, managed care entity, or any other privileges, because of such person's conscientious refusal to receive, obtain, accept, perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care services contrary to his or her conscience.

70/6. Duty of physicians and other health care personnel

§ 6. Duty of physicians and other health care personnel. Nothing in this Act shall relieve a physician from any duty, which may exist under any laws concerning current standards, of normal medical practices and procedures, to inform his or her patient of the patient's condition, prognosis and risks, provided, however, that such physician shall be under no duty to perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of medical practice or health care service that is contrary to his or her conscience.

Nothing in this Act shall be construed so as to relieve a physician or other health care personnel from obligations under the law of providing emergency medical care.

70/7. Discrimination by employers or institutions

§ 7. Discrimination by employers or institutions. It shall be unlawful for any public or private employer, entity, agency, institution, official or person, including but not limited to, a medical, nursing or other medical training institution, to deny admission because of, to place any reference in its application form concerning, to orally question about, to impose any burdens in terms or conditions of employment on, or to otherwise discriminate against, any applicant, in terms of employment, admission to or participation in any programs for which the applicant is eligible, or to discriminate in relation thereto, in any other manner, on account of the applicant's refusal to receive, obtain, accept, perform, counsel, suggest, recommend, refer, assist or participate in any way in any forms of health care services contrary to his or her conscience.

70/8. Denial of aid or benefits

§ 8. Denial of aid or benefits. It shall be unlawful for any public official, guardian, agency, institution or entity to deny any form of aid, assistance or benefits, or to condition the reception in any way of any form of aid, assistance or benefits, or in any other manner to coerce, disqualify or discriminate against any person, otherwise entitled to such

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

aid, assistance or benefits, because that person refuses to obtain, receive, accept, perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of health care services contrary to his or her conscience.

70/9. Liability

§ 9. Liability. No person, association, or corporation, which owns, operates, supervises, or manages a health care facility shall be civilly or criminally liable to any person, estate, or public or private entity by reason of refusal of the health care facility to permit or provide any particular form of health care service which violates the facility's conscience as documented in its ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents.

Nothing in this act shall be construed so as to relieve a physician or other health care personnel from obligations under the law of providing emergency medical care.

70/10. Discrimination against facility

§ 10. Discrimination against facility. It shall be unlawful for any person, public or private institution or public official to discriminate against any person, association or corporation attempting to establish a new health care facility or operating an existing health care facility, in any manner, including but not limited to, denial, deprivation or disqualification in licensing, granting of authorizations, aids, assistance, benefits, medical staff or any other privileges, and granting authorization to expand, improve, or create any health care facility, by reason of the refusal of such person, association or corporation planning, proposing or operating a health care facility, to permit or perform any particular form of health care service which violates the health care facility's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents.

70/11. Denial of aid or benefit to a facility

§ 11. Denial of aid or benefit to a facility. It shall be unlawful for any public official, agency, institution or entity to deny any form of aid, assistance, grants or benefits; or in any other manner to coerce, disqualify or discriminate against any person, association or corporation attempting to establish a new health care facility or operating an existing health care facility which otherwise would be entitled to the aid, assistance, grant or benefit because the existing or proposed health care facility refuses to perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of health care services contrary to the health care facility's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents.

70/11.2. Liability of health care payer

§ 11.2. Liability of health care payer. No health care payer and no person, association, or corporation that owns, operates, supervises, or manages a health care payer shall be civilly or criminally liable to any person, estate, or public or private entity by reason of refusal of the health care payer to pay for or arrange for the payment of any particular form of health care services that violate the health care payer's conscience as documented in its ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents.

70/11.3. Discrimination against health care payer in licensing

§ 11.3. Discrimination against health care payer in licensing. It shall be unlawful for any person, public or private institution, or public official to discriminate against any person, association, or corporation (i) attempting to estab-

© 2011 Thomson Reuters. No Claim to Orig. US Gov. Works.

lish a new health care payer or (ii) operating an existing health care payer, in any manner, including but not limited to, denial, deprivation, or disqualification in licensing; granting of authorizations, aids, assistance, benefits, or any other privileges; and granting authorization to expand, improve, or create any health care payer, because the person, association, or corporation planning, proposing, or operating a health care payer refuses to pay for or arrange for the payment of any particular form of health care services that violates the health care payer's conscience as documented in the existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations or other governing documents.

70/11.4. Denial of aid or benefits to health care payer for refusal to participate in certain health care

§ 11.4. Denial of aid or benefits to health care payer for refusal to participate in certain health care. It shall be unlawful for any public official, agency, institution, or entity to deny any form of aid, assistance, grants, or benefits; or in any other manner to coerce, disqualify, or discriminate against any person, association, or corporation attempting to establish a new health care payer or operating an existing health care payer that otherwise would be entitled to the aid, assistance, grant, or benefit because the existing or proposed health care payer refuses to pay for, arrange for the payment of, or participate in any way in any form of health care services contrary to the health care payer's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents.

70/12. Actions; damages

§ 12. Actions; damages. Any person, association, corporation, entity or health care facility injured by any public or private person, association, agency, entity or corporation by reason of any action prohibited by this Act may commence a suit therefor, and shall recover threefold the actual damages, including pain and suffering, sustained by such person, association, corporation, entity or health care facility, the costs of the suit and reasonable attorney's fees; but in no case shall recovery be less than $2,500 for each violation in addition to costs of the suit and reasonable attorney's fees. These damage remedies shall be cumulative, and not exclusive of other remedies afforded under any other state or federal law.

70/13. Liability for refusal to provide certain health care

§ 13. Liability for refusal to provide certain health care. Nothing in this Act shall be construed as excusing any person, public or private institution, or public official from liability for refusal to permit or provide a particular form of health care service if:

(a) the person, public or private institution or public official has entered into a contract specifically to provide that particular form of health care service; or

(b) the person, public or private institution or public official has accepted federal or state funds for the sole purpose of, and specifically conditioned upon, permitting or providing that particular form of health care service.

70/14. Supersedes other Acts

§ 14. Supersedes other Acts. This Act shall supersede all other Acts or parts of Acts to the extent that any Acts or parts of Acts are inconsistent with the terms or operation of this Act.

LOUISIANA REVISED STATUTES
TITLE 40. PUBLIC HEALTH AND SAFETY
CHAPTER 5. MISCELLANEOUS HEALTH PROVISIONS
PART 18. ABORTION

GO TO LOUISIANA STATUTES ARCHIVE DIRECTORY

La. R.S. 40:1299.35.9 (2011)

§ 40:1299.35.9. Conscience in health care protection; definitions

A. (1) Any person has the right not to participate in, and no person shall be required to participate in any health care service that violates his conscience to the extent that patient access to health care is not compromised. No person shall be held civilly or criminally liable, discriminated against, dismissed, demoted, or in any way prejudiced or damaged for declining to participate in any health care service that violates his conscience.

(2) This Section shall not prevent an inquiry by an employer or patient regarding whether a person declines to participate in any health care service that violates its conscience. When a patient requests health care services, a person shall identify, in writing, as soon as practicable, his declination to provide a service in accordance with the provisions of this Section. All persons who have a sincerely held religious belief or moral conviction and who seek employment at a health care facility shall notify the prospective employer of the existence of any sincerely held religious belief or moral conviction. Any health care facility that employs a person with a sincerely held religious belief or moral conviction shall ensure that the health care facility has sufficient staff to provide patient care in the event an employee declines to participate in any health care service that violates his conscience.

(3) The provisions of this Section shall not be construed to relieve any health care provider from providing emergency care as required by state or federal law.

(4) A person shall notify his employer in writing as soon as practicable of any health care service that violates his conscience. A person shall notify any patient before such person provides any consultation or service to the patient of the existence of a health care service that he will decline to provide because the health care service violates his conscience.

B. For purposes of this Section:

(1) "Conscience" means sincerely held religious belief or moral conviction.

(2) "Health care service" is limited to abortion, dispensation of abortifacient drugs, human embryonic stem cell research, human embryo cloning, euthanasia, or physician-assisted suicide.

C. A suit alleging a violation of this Section shall be brought in a district court in accordance with *R.S. 23:303*.

Miss. Code Ann. § 41-107-5 (2010)

§ 41-107-5. Rights of Conscience of Health-Care Providers

(1) *Rights of Conscience.* A health-care provider has the right not to participate, and no health-care provider shall be required to participate in a health-care service that violates his or her conscience. However, this subsection does not allow a health-care provider to refuse to participate in a health-care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(2) *Immunity from Liability.* No health-care provider shall be civilly, criminally, or administratively liable for declining to participate in a health-care service that violates his or her conscience. However, this subsection does not exempt a health-care provider from liability for refusing to participate in a health-care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(3) *Discrimination.* It shall be unlawful for any person, health-care provider, health-care institution, public or private institution, public official, or any board which certifies competency in medical specialties to discriminate against any health-care provider in any manner based on his or her declining to participate in a health-care service that violates his or her conscience. For purposes of this chapter, discrimination includes, but is not limited to: termination, transfer, refusal of staff privileges, refusal of board certification, adverse administrative action, demotion, loss of career specialty, reassignment to a different shift, reduction of wages or benefits, refusal to award any grant, contract, or other program, refusal to provide residency training opportunities, or any other penalty, disciplinary or retaliatory action.

HISTORY: SOURCES: Laws, 2004, ch. 568, § 3, eff from and after July 1, 2004.

NOTES: JOINT LEGISLATIVE COMMITTEE NOTE. --Pursuant to Section 1-1-109, the Joint Legislative Committee on Compilation, Revision and Publication of Legislation corrected a typographical error in (3). "This chapter" was substituted for "this act" following "Purposes of" in the second sentence.

LEGISLATIVE RESEARCH REPORT

MARCH 2, 2011

REPORT NUMBER 11.190

STATE CONSCIENCE LAWS FOR HEALTHCARE PROVIDERS

PREPARED FOR SENATOR BETTYE DAVIS

BY TIM SPENGLER, LEGISLATIVE ANALYST

You asked for information on state laws pertaining to "protection of conscience" for health care providers. Additionally, you wanted copies of relevant statutes.

Briefly, 47 states—including Alaska—have enacted, to varying degrees, protection of conscience laws; these provisions allow providers of health care and certain institutions to refuse to provide, or participate in, medical services that go against an individual's conscience or the religious affiliation of the hospital.[1] The provisions often relate to issues regarding reproduction, especially abortion and contraception.

Proponents of conscience laws assert that without such measures health care providers may be forced to choose between providing medical services that go against their deeply held moral or religious beliefs and declining to do so with the possibility of losing their jobs. Opponents of such laws believe providers and hospitals have a duty to supply patients with their legal medical options, regardless of the moral standpoints of individuals or institutions. Opponents typically see conscience laws as an attempt to limit reproductive rights.

Alaska Statute

Alaska has enacted one provision in statute that pertains to protection of conscience. Alaska Statute 18.16.010(b) reads as follow:

> Nothing in this section requires a hospital or person to participate in an abortion, nor is a hospital or person liable for refusing to participate in an abortion under this section.

[1] Hospitals that invoke protection of conscience provisions are often affiliated with Catholic or other religious denominations. According to our review, nearly 20 percent of hospitals in the United States are religiously affiliated.

Laws in Other States

As we mentioned, 47 states (all except Alabama, New Hampshire and Vermont) have protection of conscience laws.[2] The statutory language and scope of such laws differ from state to state. We identified information on these laws from a number of sources including the Protection of Conscience Project (POCP) and the Guttmacher Institute.[3] Despite their differing standpoints on the issue (POCP advocates for conscience laws while Guttmacher has a more skeptical view of such laws), the information we gleaned on state laws from both of these entities was largely consistent.

Some of the highlights from state laws regarding protection of conscience are as follows:

- 47 states permit individual health care providers to abstain from providing abortions;
- 45 states allow health care institutions to refuse to provide abortions; 15 limit the exemption to private health care institutions;
- 9 states allow individual health care providers to refuse to provide services related to contraception; and
- 17 states allow individual health care providers to refuse to provide sterilization services while 16 states allow health care institutions to refuse to provide these services (four limit the exemption to private entities).

We include, as Attachment A, a February 2011 document from the Guttmacher Institute, which includes a table that disaggregates state conscience laws regarding abortion, contraception and sterilization.[4]

We also include, as Attachment B, statutes from 47 states that pertain to protection of conscience for health care workers. As we mentioned above, the great majority of these provisions relate to abortion. We made every attempt to ensure that the list of state laws in Attachment B is comprehensive, accurate, and up-to-date; however, it is possible that relevant provisions may have eluded us.

We identified four states (Idaho, Illinois, Louisiana, and Mississippi) that have enacted *general* (not specific to abortion or another particular medical procedure) protection of conscience laws for healthcare providers. According to Sean Murphy, administrator of the Protection of Conscience Project, conscience provisions that are broadly worded (as in these states) are preferable to more narrowly articulated statutes. He asserts that as new medical procedures can arise at any time, attempting to enumerate all potential issues of conscience for healthcare professionals in statute is impractical.[5]

---

[2] Even in the states without such provisions, an individual health care professional's actions may be legally protected by statutes prohibiting discrimination against employees based on religious objections. At the federal level, health care institutions and providers may refuse to participate in abortion services on the basis of their religious or moral beliefs under 42 USC § 300a-7(b).

[3] The Protection of Conscience Project is a Canadian-based organization that works to ensure that people are not forced to facilitate practices or procedures to which they object for reasons of conscience. These practices include abortion, capital punishment, contraception, sterilization, artificial reproduction, euthanasia, assisted suicide, human experimentation, and torture (*http://www.consciencelaws.org/*). The Guttmacher Institute works to advance sexual and reproductive health in the U.S. and worldwide through an interrelated program of social science research, policy analysis, and education (*http://www.guttmacher.org/*).

[4] The only inaccuracy we found in this document is the absence of a West Virginia law (§16-2F-7) that allows providers to refuse to participate in abortions.

[5] Sean Murphy can be reached at (604) 485-9765.

Below we provide excerpts of generally-worded statutes from Idaho, Illinois, Louisiana, and Mississippi regarding protection of conscience for healthcare providers.

Idaho (IC 18-611):

> IC 18-611(2) No health care professional shall be required to provide any health care service that violates his or her conscience.
>
> IC 18-611(4) No health care professional or employer of the health care professional shall be civilly, criminally or administratively liable for the health care professional declining to provide health care services that violate his or her conscience, except for life threatening situations as provided for in subsection (6) of this section.

Illinois (745 ILCS 70/1, Sec. 4):

> No physician or health care personnel shall be civilly or criminally liable to any person, estate, public or private entity or public official by reason of his or her refusal to perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care service which is contrary to the conscience of such physician or health care personnel.

Louisiana (La. Rev. Stat. Ann. tit. 40, § 1299.35.9):

> A. (1) Any person has the right not to participate in, and no person shall be required to participate in any health care service that violates his conscience to the extent that patient access to health care is not compromised. No person shall be held civilly or criminally liable, discriminated against, dismissed, demoted, or in any way prejudiced or damaged for declining to participate in any health care service that violates his conscience.

Mississippi (MC § 41-107-5):

> (1) Rights of Conscience. A health care provider has the right not to participate, and no health care provider shall be required to participate in a health care service that violates his or her conscience. However, this subsection does not allow a health care provider to refuse to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

"Refusing to Provide Health Services," Guttmacher Institute, February 1, 2011

GUTTMACHER INSTITUTE

STATE POLICIES IN BRIEF

As of FEBRUARY 1, 2011

Refusing to Provide Health Services

BACKGROUND: Almost every state has a policy explicitly allowing some health care professionals or certain institutions to refuse to provide or participate in abortion, contraceptive services or sterilization services. Even in states without explicit refusal statutes, an individual health care professional's actions may be legally protected by statutes prohibiting discrimination against employees, based on their religious objections. While some of the institutional policies are limited to private, or even religious, health care institutions, others apply to all institutions providing health care. (At the federal level, health care institutions and providers may refuse to participate in abortion services on the basis of their religious or moral beliefs.)

A few states have enacted laws that specifically allow pharmacists or pharmacies to refuse to provide health care due to religious or moral objections. Several other states have broadly worded refusal clause statutes that might protect pharmacists or pharmacies from liability for their refusal. (See Emergency Contraception.)

HIGHLIGHTS:

- 46 states allow some health care providers to refuse to provide abortion services.
  - All of these states permit individual health care providers to refuse to provide abortion services.
  - 45 states allow health care institutions to refuse to provide abortion services, 15 limit the exemption to private health care institutions and 1 state allows only religious health care entities to refuse to provide such care.

- 14 states allow some health care providers to refuse to provide services related to contraception.
  - 9 states allow individual health care providers to refuse to provide services related to contraception
  - 5 states explicitly permit pharmacists to refuse to dispense contraceptives. (5 additional states have broad refusal clauses that do not specifically include pharmacists, but may apply to them.)
  - 1 state explicitly permits pharmacies to refuse to dispense contraceptives.
  - 4 states have broad refusal clauses that do not specifically include pharmacies, but may apply to them.
  - 9 states allow health care institutions to refuse to provide services related to contraception, 6 states limit the exemption to private entities.

- 18 states allow some health care providers to refuse to provide sterilization services.
  - 17 states allow individual health care providers to refuse to provide sterilization services.
  - 16 states allow health care institutions to refuse to provide sterilization services; 4 limit the exemption to private entities.

Note: Unless indicated, the right to refuse applies to all institutions– private, religious and public.

§ Temporarily enjoined; law not in effect pending the outcome of litigation.

Ψ An expansion of the state's abortion refusal clause is temporarily enjoined pending the outcome of litigation; the prior law is in effect.

* A broadly worded refusal clause may apply.

† Pharmacists have a duty to dispense valid prescriptions and can only refuse to dispense a prescription, including contraceptives, when their employers approves the refusal and the woman can still access her prescription in a timely manner.

‡ Pharmacies are required to dispense valid prescriptions and in Illinois and Washington deliver FDA-approved drugs, such as emergency contraception.

Ω State law requires pharmacies to fill valid contraceptive prescriptions.

Attachment B

State statutes (47 states) regarding "protection of conscience" for health care providers.

Alaska

AS 18.16. Regulation of Abortions

(b) Nothing in this section requires a hospital or person to participate in an abortion, nor is a hospital or person liable for refusing to participate in an abortion under this section.

Arizona

36-2151 . Right to refuse to participate in abortion

No hospital is required to admit any patient for the purpose of performing an abortion. A physician, or any other person who is a member of or associated with the staff of a hospital, or any employee of a hospital, doctor, clinic, or other medical or surgical facility in which an abortion has been authorized, who shall state in writing an objection to such abortion on moral or religious grounds shall not be required to participate in the medical or surgical procedures which will result in the abortion.

36-3205 . Health care providers; immunity from liability; conditions

C. A health care provider is not subject to criminal or civil liability or professional discipline for any of the following:
1. Failing to comply with a decision or a direction that violates the provider's conscience if the provider promptly makes known the provider's unwillingness and promptly transfers the responsibility for the patient's care to another provider who is willing to act in accordance with the agent's direction.

Arkansas

20-16-304. Public policy – Availability of Procedures, Supplies, and Information –Exceptions.

(5) No private institution or physician, nor any agent or employee of such institution or physician, nor any employee of a public institution acting under directions of a physician, shall be prohibited from refusing to provide contraceptive procedures, supplies, and information when the refusal is based upon religious or conscientious objection. No such institution, employee, agent, or physician shall be held liable for the refusal.
History. Acts 1973, No.235, §4.

§ 20-16-601. Refusal to perform, participate, consent, or submit
(a) No person shall be required to perform or participate in medical procedures which result in the termination of pregnancy. The refusal of any person to perform or participate in these medical procedures shall not be a basis for civil liability to any person nor a basis for any disciplinary or any other recriminatory action against him.

(b) No hospital, hospital director, or governing board shall be required to permit the termination of human pregnancies within its institution, and the refusal to permit the procedures shall not be grounds for civil liability to any person nor a basis for any disciplinary or other recriminatory action against it by the state or any person.

(c) The refusal of any person to submit to an abortion or to give consent for an abortion shall not be grounds for loss of any privileges or immunities to which the person would otherwise be entitled, nor shall submission to an

abortion or the granting of consent for an abortion be a condition precedent to the receipt of any public benefits. History. Acts 1969, No. 61, § 8; A.S.A. 1947, § 41-2560.

California

California Health and Safety Code
Section 123400-123450 Therapeutic Abortion Act.

123400. This article shall be known and may be cited as the Therapeutic Abortion Act.

123420. (a) No employer or other person shall require a physician, a registered nurse, a licensed vocational nurse, or any other person employed or with staff privileges at a hospital, facility, or clinic to directly participate in the induction or performance of an abortion, if the employee or other person has filed a written statement with the employer or the hospital, facility, or clinic indicating a moral, ethical, or religious basis for refusal to participate in the abortion.

No such employee or person with staff privileges in a hospital, facility, or clinic shall be subject to any penalty or discipline by reason of his or her refusal to participate in an abortion.

No such employee of a hospital, facility, or clinic that does not permit the performance of abortions, or person with staff privileges therein, shall be subject to any penalty or discipline on account of the person's participation in the performance of an abortion in other than the hospital, facility, or clinic.

No employer shall refuse to employ any person because of the person's refusal for moral, ethical, or religious reasons to participate in an abortion, unless the person would be assigned in the normal course of business of any hospital, facility, or clinic to work in those parts of the hospital, facility, or clinic where abortion patients are cared for.

No provision of this article prohibits any hospital, facility, or clinic that permits the performance of abortions from inquiring whether an employee or prospective employee would advance a moral, ethical, or religious basis for refusal to participate in an abortion before hiring or assigning that person to that part of a hospital, facility, or clinic where abortion patients are cared for.

The refusal of a physician, nurse, or any other person to participate or aid in the induction or performance of an abortion pursuant to this subdivision shall not form the basis of any claim for damages.

(b) No medical school or other facility for the education or training of physicians, nurses, or other medical personnel shall refuse admission to a person or penalize the person in any way because of the person's unwillingness to participate in the performance of an abortion for moral, ethical, or religious reasons.

No hospital, facility, or clinic shall refuse staff privileges to a physician because of the physician's refusal to participate in the performance of abortion for moral, ethical, or religious reasons.

(c) Nothing in this article shall require a nonprofit hospital or other facility or clinic that is organized or operated by a religious corporation or other religious organization and licensed pursuant to Chapter 1 (commencing with

Section 1200) or Chapter 2 (commencing with Section 1250) of Division 2, or any administrative officer, employee, agent, or member of the governing board thereof, to perform or to permit the performance of an abortion in the facility or clinic or to provide abortion services.

No such nonprofit facility or clinic organized or operated by a religious corporation or other religious organization, nor its administrative officers, employees, agents, or members of its governing board shall be liable, individually or collectively, for failure or refusal to participate in any such act. The failure or refusal of any such corporation, unincorporated association or individual person to perform or to permit the performance of such medical procedures shall not be the basis for any disciplinary or other recriminatory action against such corporations, unincorporated associations, or individuals. Any such facility or clinic that does not permit the performance of abortions on its premises shall post notice of that proscription in an area of the facility or clinic that is open to patients and prospective admittees.

(d) This section shall not apply to medical emergency situations and spontaneous abortions. Any violation of this section is a misdemeanor.

Colorado

18-6-104 - Failure to comply.

Nothing in sections 18-6-101 to 18-6-104 requires a hospital to admit any patient under said sections for the purposes of performing an abortion, nor is any hospital required to appoint a special hospital board as defined in section 18-6-101 (4). A person who is a member of or associated with the staff of a hospital or any employee of a hospital in which a justified medical termination has been authorized and who states in writing an objection to the termination on moral or religious grounds is not required to participate in the medical procedures which result in the termination of a pregnancy, and the refusal of any such person to participate does not form the basis for any disciplinary or other recriminatory action against the person.

25-3-110

(2) Notwithstanding any other provision of law to the contrary, all health care facilities that are licensed pursuant to this Part I and provide emergency care to sexual assault survivors shall amend their evidence collection protocols for the treatment of sexual assault survivors to include informing the survivor in a timely manner of the availability of emergency contraception as a means of pregnancy prophylaxis and educating the survivor on the proper use of emergency contraception and the appropriate follow-up care.

(3) Nothing in this section shall be interpreted to require:

(a) a health care professional who is employed by a health care facility that provides emergency care to a sexual assault survivor to inform the survivor of the availability of emergency contraception if the professional refuses to provide the information on the basis of religious or moral beliefs; or

(b) a health care facility to provide emergency contraception to a sexual assault survivor who is not at risk of becoming pregnant as a result of the sexual assault or who was already pregnant at the time of the assault.

(4) If any licensed pharmacy does not have non-prescription emergency contraception in stock, the pharmacy shall place a conspicuous notice in the area where customers obtain prescription drugs that states "Plan B emergency contraception not available."

25-6-102. Policy, authority, and prohibitions against restrictions.

(9) No private institution or physician, nor any agent or employee of such institution or physician, shall be prohibited from refusing to provide contraceptive procedures, supplies, and information when such refusal is based upon religious or conscientious objection, and no such institution, employee, agent, or physician shall be held liable for such refusal.

Connecticut

Sec. 19-13-D54. Abortions (f) No person shall be required to participate in any phase of an abortion that violates his or her judgment, philosophical, moral or religious beliefs . .

Delaware

§ 1791. Refusal to perform or submit to medical procedures.

(a) No person shall be required to perform or participate in medical procedures which result in the termination of pregnancy; and the refusal of any person to perform or participate in these medical procedures shall not be a basis for civil liability to any person, nor a basis for any disciplinary or other recriminatory action against the person.

(b) No hospital, hospital director or governing board shall be required to permit the termination of human pregnancies within its institution, and the refusal to permit such procedures shall not be grounds for civil liability to any person, nor a basis for any disciplinary or other recriminatory action against it by the State or any person.

(c) The refusal of any person to submit to an abortion or to give consent shall not be grounds for loss of any privileges or immunities to which such person would otherwise be entitled, nor shall submission to an abortion or the granting of consent be a condition precedent to the receipt of any public benefits.
(24 Del. C. 1953, § 1791; 57 Del. Laws, c. 145, § 2; 70 Del. Laws, c. 186, § 1.)

Florida

381.0051 Family planning
(6) Refusal for Religious or Medical Reasons.

--The provisions of this section shall not be interpreted so as to prevent a physician or other person from refusing to furnish any contraceptive or family planning service, supplies, or information for medical or religious reasons; and the physician or other person shall not be held liable for such refusal.

Chapter 390 Termination of Pregnancies
390.0111 Termination of pregnancies.--
(8) Refusal to participate in termination procedure

Nothing in this section shall require any hospital or any person to participate in the termination of a pregnancy, nor shall any hospital or any person be liable for such refusal. No person who is a member of, or associated with, the staff of a hospital, nor any employee of a hospital or physician in which or by whom the termination of a pregnancy has been authorized or performed, who shall state an objection to such procedure on moral or religious grounds shall be required to participate in the procedure which will result in the termination of pregnancy. The refusal of any such person or employee to participate shall not form the basis for any disciplinary or other recriminatory action against such person. \

Georgia

Official Code 16-12-142G

Nothing in this article shall require a hospital or other medical facility or physician to admit any patient under the provisions of this article for the purpose of performing an abortion. In addition, any person who states in writing an objection to any abortion or all abortions on moral or religious grounds shall not be required to participate in procedures which will result in such abortion; and the refusal of the person to participate therein shall not form the basis of any claim for damages on account of such refusal or for any disciplinary or recriminatory action against the person. The written objection shall remain in effect until the person revokes it or terminates his association with the facility with which it is filed.

Official Code 49-7-5.

The refusal of any person to accept family-planning services shall in no way affect the right of such person to receive public assistance or public health services or to avail himself of any other public benefit. The employees of the agencies engaged in the administration of this chapter shall recognize that the right to make decisions concerning family planning and birth control is a fundamental personal right of the individual; and nothing in this chapter shall in any way abridge such individual right, nor shall any individual be required to state his reason for refusing the offer of family-planning services.

Official Code 49-7-6.

Any employee of the agencies engaged in the administration of this chapter may refuse to accept the duty of offering family-planning services to the extent that such duty is contrary to such employee's personal religious beliefs; and such refusal shall not be grounds for any disciplinary action, for dismissal, for any interdepartmental transfer, for any other discrimination in his employment, for suspension from employment, or for any loss in pay or other benefits. The directors or supervisors of such agencies shall be authorized, however, to reassign the duties of any such employees in order to carry out this chapter effectively.

Hawaii

[§453-16]

(d) Nothing in this section shall require any hospital or any person to participate in such abortion nor shall any hospital or any person be liable for such refusal. [L 1970, c 1, §2]

Idaho

5-334. Act or Omission Preventing Abortion Not Actionable

(1) A cause of action shall not arise, and damages shall not be awarded, on behalf of any person, based on the claim that but for the act or omission of another, a person would not have been permitted to have been born alive but would have been aborted.

(2) The provisions of this section shall not preclude causes of action based on claims that, but for a wrongful act or omission, fertilization would not have occurred, maternal death would not have occurred or handicap, disease, defect or deficiency of an individual prior to birth would have been prevented, cured or ameliorated in a manner that preserved the health and life of the affected individual.

18-611. Freedom of Conscience for Health Care Professionals

(1) As used in this section:

(a) "Abortifacient" means any drug that causes an abortion as defined in 18-604, Idaho Code, emergency contraception or any drug the primary purpose of which is to cause the destruction of an embryo or fetus.

(b) "Conscience" means the religious, moral or ethical principles sincerely held by any person.

(c) "Embryo" means the developing human life from fertilization until the end of the eighth week of gestation.

(d) "Fetus" means the developing human life from the start of the ninth week of gestation until birth.

(e) "Health care professional" means any person licensed, certified or registered by the state of Idaho to deliver health care.

(f) "Health care service" means an abortion, dispensation of an abortifacient drug, human embryonic stem cell research, treatment regimens utilizing human embryonic stem cells, human embryo cloning or end of life treatment and care.

(g) "Provide" means to counsel, advise, perform, dispense, assist in or refer for any health care service.

(h) "Religious, moral or ethical principles," "sincerely held," "reasonably accommodate" and "undue hardship" shall be construed consistently with Title VII of the federal civil rights act of 1964, as amended.

(2) No health care professional shall be required to provide any health care service that violates his or her conscience.

(3) Employers of health care professionals shall reasonably accommodate the conscience rights of their employees as provided in this section, upon advanced written notification by the employee. Such notice shall suffice without specification of the reason therefor. It shall be unlawful for any employer to discriminate against any health care professional based upon his or her declining to provide a health care service that violates his or her conscience, unless the employer can demonstrate that such accommodation poses an undue hardship.

(4) No health care professional or employer of the health care professional shall be civilly, criminally or administratively liable for the health care professional declining to provide health care services that violate his or her conscience, except for lifethreatening situations as provided for in subsection (6) of this section.

(5) The provisions of this section do not allow a health care professional or employer of the health care professional to refuse to provide health care services because of a patient's race, color, religion, sex, age, disability or national origin.

(6) If a health care professional invokes a conscience right in a lifethreatening situation where no other health care professional capable of treating the emergency is available, such health care professional shall provide treatment and care until an alternate health care professional capable of treating the emergency is found.

(7) Nothing in this section shall affect the rights of conscience provided for in section 18-612, Idaho Code, to the extent that those rights are broader in scope than those provided for in this section.

18-612. Refusal to Perform Abortions- - Physicians and Hospitals Not Liable [Effective contingent on Governor's Proclamation]

Nothing in this act shall be deemed to require any hospital to furnish facilities or admit any patient for any abortion if, upon determination by its governing board, it elects not to do so. Neither shall any physician be required to perform or assist in any abortion, nor shall any nurse, technician or other employee of any physician or hospital be required by law or otherwise to assist or participate in the performance or provision of any abortion if he or she, for personal, moral or religious reasons, objects thereto. Any such person in the employ or under the control of a hospital shall be deemed to have sufficiently objected to participation in such procedures only if he or she has advised such hospital in writing that he or she generally or specifically objects to assisting or otherwise participating in such procedures. Such notice will suffice without specification of the reason therefor. No refusal to accept a patient for abortion or to perform, assist or participate in any such abortion as herein provided shall form the basis of any claim for damages or recriminatory action against the declining person, agency or institution.

Illinois

745 ILCS 30/0.01 Abortion Performance Refusal Act

Sec. 0.01. Short title.
This Act may be cited as the Abortion Performance Refusal Act. (Source: P.A. 86-1324.) (745 ILCS 30/1)

Sec. 1.
(a) No physician, nurse or other person who refuses to recommend, perform or assist in the performance of an abortion, whether such abortion be a crime or not, shall be liable to any person for damages allegedly arising from such refusal.

(b) No hospital that refuses to permit the performance of an abortion upon its premises, whether such

abortion be a crime or not, shall be liable to any person for damages allegedly arising from such refusal.

(c) Any person, association, partnership or corporation that discriminates against another person in any way, including, but not limited to, hiring, promotion, advancement, transfer, licensing, granting of hospital privileges, or staff appointments, because of that person's refusal to recommend, perform or assist in the performance of an abortion, whether such abortion be a crime or not, shall be answerable in civil damages equal to 3 times the amount of proved damages, but in no case less than $2,000.

(d) The license of any hospital, doctor, nurse or any other medical personnel shall not be revoked or suspended because of a refusal to permit, recommend, perform or assist in the performance of an abortion. (Source: P. A. 78-228.)

745 ILCS 70/1 Health Care Right of Conscience Act.

Sec. 1. Short title.
This Act may be cited as the Health Care Right of Conscience Act. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/2)

Sec. 2. Findings and policy.

The General Assembly finds and declares that people and organizations hold different beliefs about whether certain health care services are morally acceptable. It is the public policy of the State of Illinois to respect and protect the right of conscience of all persons who refuse to obtain, receive or accept, or who are engaged in, the delivery of, arrangement for, or payment of health care services and medical care whether acting individually, corporately, or in association with other persons; and to prohibit all forms of discrimination, disqualification, coercion, disability or imposition of liability upon such persons or entities by reason of their refusing to act contrary to their conscience or conscientious convictions in refusing to obtain, receive, accept, deliver, pay for, or arrange for the payment of health care services and medical care. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/3)

Sec. 3. Definitions.

As used in this Act, unless the context clearly otherwise requires:

(a) **"Health care"** means any phase of patient care, including but not limited to, testing; diagnosis; prognosis; ancillary research; instructions; family planning, counselling, referrals, or any other advice in connection with the use or procurement of contraceptives and sterilization or abortion procedures; medication; or surgery or other care or treatment rendered by a physician or physicians, nurses, paraprofessionals or health care facility, intended for the physical, emotional, and mental well-being of persons;

(b) **"Physician"** means any person who is licensed by the State of Illinois under the Medical Practice Act of 1987;

(c) **"Health care personnel"** means any nurse, nurses' aide, medical school student, professional, paraprofessional or any other person who furnishes, or assists in the furnishing of, health care services;

(d) **"Health care facility"** means any public or private hospital, clinic, center, medical school, medical training institution, laboratory or diagnostic facility, physician's office, infirmary, dispensary, ambulatory surgical treatment center or other institution or location wherein health care services are provided to any person, including physician organizations and associations, networks, joint ventures, and all other combinations of those organizations;

(e) **"Conscience"** means a sincerely held set of moral convictions arising from belief in and relation to God, or which, though not so derived, arises from a place in the life of its possessor parallel to that filled by God among adherents to religious faiths; and

(f) **"Health care payer"** means a health maintenance organization, insurance company, management services organization, or any other entity that pays for or arranges for the payment of any health care or medical care service, procedure, or product. The above definitions include not only the traditional combinations and forms of these persons and organizations but also all new and emerging forms and combinations of these persons and organizations. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/4)

Sec. 4. Liability.

No physician or health care personnel shall be civilly or criminally liable to any person, estate, public or private entity or public official by reason of his or her refusal to perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care service which is contrary to the conscience of such physician or health care personnel. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/5)

Sec. 5. Discrimination.

It shall be unlawful for any person, public or private institution, or public official to discriminate against any person in any manner, including but not limited to, licensing, hiring, promotion, transfer, staff appointment, hospital, managed care entity, or any other privileges, because of such person's conscientious refusal to receive, obtain, accept, perform, assist, counsel, suggest, recommend, refer or participate in any way in any particular form of health care services contrary to his or her conscience. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/6)

Sec. 6. Duty of physicians and other health care personnel. Nothing in this Act shall relieve a physician from any duty, which may exist under any laws concerning current standards, of normal medical practices and procedures, to inform his or her patient of the patient's condition, prognosis and risks, provided, however, that such physician shall be under no duty to perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of medical practice or health care service that is contrary to his or her conscience. Nothing in this Act shall be construed so as to relieve a physician or other health care personnel from obligations under the law of providing emergency medical care. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/7)

Sec. 7. Discrimination by employers or institutions.

It shall be unlawful for any public or private employer, entity, agency, institution, official or person, including but not limited to, a medical, nursing or other medical training institution, to deny admission because of, to place any reference in its application form concerning, to orally question about, to impose any burdens in terms or conditions of employment on, or to otherwise discriminate against, any applicant, in terms of employment, admission to or participation in any programs for which the applicant is eligible, or to discriminate in relation thereto, in any other manner, on account of the applicant's refusal to receive, obtain, accept, perform, counsel, suggest, recommend, refer, assist or participate in any way in any forms of health care services contrary to his or her conscience. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/8)

Sec. 8. Denial of aid or benefits.

It shall be unlawful for any public official, guardian, agency, institution or entity to deny any form of aid, assistance or benefits, or to condition the reception in any way of any form of aid, assistance or benefits, or in any other manner to coerce, disqualify or discriminate against any person, otherwise entitled to such aid, assistance or benefits, because that person refuses to obtain, receive, accept, perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of health care services contrary to his or her conscience. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/9)

Sec. 9. Liability.

No person, association, or corporation, which owns, operates, supervises, or manages a health care facility shall be civilly or criminally liable to any person, estate, or public or private entity by reason of refusal of the health care facility to permit or provide any particular form of health care service which violates the facility's conscience as documented in its ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents. Nothing in this act shall be construed so as to relieve a physician or other health care personnel from obligations under the law of providing emergency medical care. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/10)

Sec. 10. Discrimination against facility.

It shall be unlawful for any person, public or private institution or public official to discriminate against any person, association or corporation attempting to establish a new health care facility or operating an existing health care facility, in any manner, including but not limited to, denial, deprivation or disqualification in licensing, granting of authorizations, aids, assistance, benefits, medical staff or any other privileges, and granting authorization to expand, improve, or create any health care facility, by reason of the refusal of such person, association or corporation planning, proposing or operating a health care facility, to permit or perform any particular form of health care service which violates the health care facility's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/11)

Sec. 11. Denial of aid or benefit to a facility.

It shall be unlawful for any public official, agency, institution or entity to deny any form of aid, assistance, grants or benefits; or in any other manner to coerce, disqualify or discriminate against any person, association or corporation attempting to establish a new health care facility or operating an existing health care facility which otherwise would be entitled to the aid, assistance, grant or benefit because the existing or proposed health care facility refuses to perform, assist, counsel, suggest, recommend, refer or participate in any way in any form of health care services contrary to the health care facility's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/11.2)

Sec. 11.2. Liability of health care payer.

No health care payer and no person, association, or corporation that owns, operates, supervises, or manages a health care payer shall be civilly or criminally liable to any person, estate, or public or private entity by reason of

refusal of the health care payer to pay for or arrange for the payment of any particular form of health care services that violate the health care payer's conscience as documented in its ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/11.3)

Sec. 11.3. Discrimination against health care payer in licensing.

It shall be unlawful for any person, public or private institution, or public official to discriminate against any person, association, or corporation

(i) attempting to establish a new health care payer or

(ii) operating an existing health care payer, in any manner, including but not limited to, denial, deprivation, or disqualification in licensing; granting of authorizations, aids, assistance, benefits, or any other privileges; and granting authorization to expand, improve, or create any health care payer, because the person, association, or corporation planning, proposing, or operating a health care payer refuses to pay for or arrange for the payment of any particular form of health care services that violates the health care payer's conscience as documented in the existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations or other governing documents. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/11.4)

Sec. 11.4. Denial of aid or benefits to health care payer for refusal to participate in certain health care.

It shall be unlawful for any public official, agency, institution, or entity to deny any form of aid, assistance, grants, or benefits; or in any other manner to coerce, disqualify, or discriminate against any person, association, or corporation attempting to establish a new health care payer or operating an existing health care payer that otherwise would be entitled to the aid, assistance, grant, or benefit because the existing or proposed health care payer refuses to pay for, arrange for the payment of, or participate in any way in any form of health care services contrary to the health care payer's conscience as documented in its existing or proposed ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations, or other governing documents. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/12)

Sec. 12. Actions; damages.

Any person, association, corporation, entity or health care facility injured by any public or private person, association, agency, entity or corporation by reason of any action prohibited by this Act may commence a suit therefor, and shall recover threefold the actual damages, including pain and suffering, sustained by such person, association, corporation, entity or health care facility, the costs of the suit and reasonable attorney's fees; but in no case shall recovery be less than $2,500 for each violation in addition to costs of the suit and reasonable attorney's fees. These damage remedies shall be cumulative, and not exclusive of other remedies afforded under any other state or federal law. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/13)

Sec. 13. Liability for refusal to provide certain health care.

Nothing in this Act shall be construed as excusing any person, public or private institution, or public official from liability for refusal to permit or provide a particular form of health care service if:

(a) the person, public or private institution or public official has entered into a contract specifically to provide that particular form of health care service; or

(b) the person, public or private institution or public official has accepted federal or state funds for the sole purpose of, and specifically conditioned upon, permitting or providing that particular form of health care service. (Source: P.A. 90-246, eff. 1-1-98.) (745 ILCS 70/14)

Sec. 14. Supersedes other Acts.

This Act shall supersede all other Acts or parts of Acts to the extent that any Acts or parts of Acts are inconsistent with the terms or operation of this Act. (Source: P.A. 90-246, eff. 1-1-98.)

Indiana

Indiana Code 16-34-1-3

Sec. 3. No private or denominational hospital shall be required to permit its facilities to be utilized for the performance of abortions. As added by P.L.2-1993, SEC.17.

IC16-34-1-4

Sec. 4. No: (1) physician; or (2) employee or member of the staff of a hospital or other facility in which an abortion may be performed; shall be required to perform an abortion or to assist or participate in the medical procedures resulting in or intended to result in an abortion, if that individual objects to such procedures on ethical, moral, or religious grounds. As added by P.L.2-1993, SEC.17.

IC16-34-1-5

Sec. 5. No person shall be required, as a condition of training, employment, pay, promotion, or privileges, to agree to perform or participate in the performing of abortions. As added by P.L.2-1993, SEC.17.

IC16-34-1-6

Sec. 6. No hospital or other person shall discriminate against or discipline a person because of the person's moral beliefs concerning abortion. As added by P.L.2-1993, SEC.17.

IC16-34-1-7

Sec. 7. A civil action for damages or reinstatement of employment, or both, may be brought for any violation of sections 4 through 6 of this chapter.

Iowa

Iowa Code 146.1 Liability of persons relating to performance of abortions.

An individual who may lawfully perform, assist, or participate in medical procedures which will result in an abortion shall not be required against that individual's religious beliefs or moral convictions to perform, assist, or participate in such procedures. A person shall not discriminate against any individual in any way, including but not limited to employment, promotion, advancement, transfer, licensing, education, training or the granting of hospital privileges or staff appointments, because of the individual's participation in or refusal to participate in recommending, performing or assisting in an abortion procedure. For the purposes of this chapter, "abortion" means the termination of a human pregnancy with the intent other than to produce a live birth or to remove a dead fetus. Abortion does not include medical care which has as its primary purpose the treatment of a serious physical condition requiring emergency medical treatment necessary to save the life of a mother.

146.2 Liability of hospitals refusing to perform abortions.

A hospital, which is not controlled, maintained and supported by a public authority, shall not be required to permit the performance of an abortion. The refusal to permit such procedures shall not be grounds for civil liability to any person nor a basis for any disciplinary or other recriminatory action against the hospital.

Kansas

65-443. Termination of human pregnancy; performance or participation in medical procedures not required.

No person shall be required to perform or participate in medical procedures which result in the termination of a pregnancy, and the refusal of any person to perform or participate in those medical procedures shall not be a basis for civil liability to any person. No hospital, hospital administrator or governing board of any hospital shall terminate the employment of, prevent or impair the practice or occupation of or impose any other sanction on any person because of such person's refusal to perform or participate in the termination of any human pregnancy. History: L. 1969, ch. 182, § 1; L. 1975, ch. 313, § 1; July 1.

Kentucky

Kentucky Revised Statutes 311.800

(3) No private hospital or private health care facility shall be required to, or held liable for refusal to, perform or permit the performance of abortion contrary to its stated ethical policy.

(4) No physician, nurse staff member or employee of a public or private hospital or employee of a public or private health care facility, who shall state in writing to such hospital or health care facility his objection to performing, participating in, or cooperating in, abortion on moral, religious or professional grounds, be required to, or held liable for refusal to, perform, participate in, or cooperate in such abortion.

(5) It shall be an unlawful discriminatory practice for the following:

(a) Any person to impose penalties or take disciplinary action against, or to deny or limit public funds, licenses, certifications, degrees, or other approvals or documents of qualification to, any hospital or other health care facility due to the refusal of such hospital or health care facility to perform or permit to be performed, participate in, or cooperate in, abortion by reason of objection thereto on moral, religious or professional grounds, or because of any statement or other manifestation of attitude by such hospital or health care facility with respect to abortion; or,

(b) Any person to impose penalties or take disciplinary action against, or to deny or limit public funds, licenses, certifications, degrees, or other approvals or documents of qualification to any physician, nurse or staff member or employee of any hospital or health care facility, due to the willingness or refusal of such physician, nurse or staff member or employee to perform or participate in abortion by reason of objection thereto on moral, religious or professional grounds, or because of any statement or other manifestation of attitude by such physician, nurse or staff member or employee with respect to abortion; or,

(c) Any public or private agency, institution or person, including a medical, nursing or other school, to deny admission to, impose any burdens in terms of conditions of employment upon, or otherwise discriminate against any applicant for admission thereto or any physician, nurse, staff member, student or employee thereof, on account of the willingness or refusal of such applicant, physician, nurse, staff member, student or employee to perform or participate in abortion or sterilization by reason of objection thereto on moral, religious or professional grounds, or because of any statement or other manifestation of attitude by such person with respect to abortion or sterilization if that health care facility is not operated exclusively for the purposes of performing abortions or sterilizations.

Effective: July 15, 1980
History: Amended 1980 Ky. Acts ch. 225, sec. 1, effective July 15, 1980. -- Created 1974 Ky. Acts ch. 255, sec. 11.

311.810 Discrimination for refusal to submit to abortion prohibited.

No woman may be denied governmental assistance or be otherwise discriminated against or otherwise subjected to coercion in any way for accepting or refusing to accept or submit to an abortion, which she may do or not do for any reason without explanation. History: Created 1974 Ky. Acts ch. 255, sec. 12.

Louisiana

La. Rev. Stat. Ann. tit. 40, § 1299.31.

No . . . person or corporation shall be held civilly . . . liable, discriminated against, . . . or in any way prejudiced or damaged because of his refusal for any reason to recommend, counsel, perform, assist with or accommodate an abortion.

La. Rev. Stat. Ann. tit. 40, § 1299.32.

No hospital, clinic or other facility or institution of any kind shall be held civilly. . . liable, discriminated against, or in any way prejudiced or damaged because of any refusal to permit or accommodate the performance of any abortion in said facility or under its auspices.

La. Rev. Stat. Ann. tit. 40, § 1299.33.

No hospital, clinic, or other medical or health facility, whether public or private, shall ever be denied governmental assistance or be otherwise discriminated against or otherwise be pressured in any way for refusing to permit its facilities, staff or employees to be used in any way for the purpose of performing any abortion.

La. Rev. Stat. Ann. tit. 40, § 1299.35.9

Conscience in health care protection; definitions

A.(1) Any person has the right not to participate in, and no person shall be required to participate in any health care service that violates his conscience to the extent that patient access to health care is not compromised. No person shall be held civilly or criminally liable, discriminated against, dismissed, demoted, or in any way prejudiced or damaged for declining to participate in any health care service that violates his conscience.

(2) This Section shall not prevent an inquiry by an employer or patient regarding whether a person declines to participate in any health care service that violates its conscience. When a patient requests health care services, a person shall identify, in writing, as soon as practicable, his declination to provide a service in accordance with the provisions of this Section. All persons who have a sincerely held religious belief or moral conviction and who seek employment at a health care facility shall notify the prospective employer of the existence of any sincerely held religious belief or moral conviction. Any health care facility that employs a person with a sincerely held religious belief or moral conviction shall ensure that the health care facility has sufficient staff to provide patient care in the event an employee declines to participate in any health care service that violates his conscience.

(3) The provisions of this Section shall not be construed to relieve any health care provider from providing emergency care as required by state or federal law.

(4) A person shall notify his employer in writing as soon as practicable of any health care service that violates his conscience. A person shall notify any patient before such person provides any consultation or service to the patient of the existence of a health care service that he will decline to provide because the health care service violates his conscience.

B. For purposes of this Section:

(1) "Conscience" means sincerely held religious belief or moral conviction.

(2) "Health care service" is limited to abortion, dispensation of abortifacient drugs, human embryonic stem cell research, human embryo cloning, euthanasia, or physician-assisted suicide.

C. A suit alleging a violation of this Section shall be brought in a district court in accordance with R.S. 23:303.

Maine

Maine Revised Statutes
Title 22
Subtitle 2: Health

Part 3: Public Health (Heading: PL 1989, c. 487, @11 (rpr))
Chapter 263-B: Abortions
§ 1591. Immunity and employment protection

No physician, nurse or other person who refuses to perform or assist in the performance of an abortion, and no hospital or health care facility that refuses to permit the performance of an abortion upon its premises, shall be liable to any person, firm, association or corporation for damages allegedly arising from the refusal, nor shall such refusal constitute a basis for any civil liability to any physician, nurse or other person, hospital or health care facility nor a basis for any disciplinary or other recriminatory action against them or any of them by the State or any person. [1977, c. 696, § 186 (new).]

No physician, nurse or other person, who refuses to perform or assist in the performance of an abortion, shall, because of that refusal, be dismissed, suspended, demoted or otherwise prejudiced or damaged by a hospital, health care facility, firm, association, professional association, corporation or educational institution with which he or she is affiliated or requests to be affiliated or by which he or she is employed, nor shall such refusal constitute grounds for loss of any privileges or immunities to which such physician, nurse or other person would otherwise be entitled nor shall submission to an abortion or the granting of consent therefor be a condition precedent to the receipt of any public benefits. [1977, c. 696, § 186 (new).]

§ 1592. Discrimination for refusal

No person, hospital, health care facility, firm, association, corporation or educational institution, directly or indirectly, by himself or another, shall discriminate against any physician, nurse or other person by refusing or withholding employment from or denying admittance, when such physician, nurse or other person refuses to perform, or assist in the performance of an abortion, nor shall such refusal constitute grounds for loss of any privileges or immunities to which such physician, nurse or other person would otherwise be entitled. [1977, c. 696, § 186 (new).]

§1903. Authority and policy

4. Objections. No private institution or physician or no agent or employee of such institution or physician shall be prohibited from refusing to provide family planning services when such refusal is based upon religious or conscientious objection. [1973, c. 624, §1 (NEW)]

Maryland

Maryland Statutes § 20-214. Health - General

(a) (1) A person may not be required to perform or participate in, or refer to any source for, any medical procedure that results in artificial insemination, sterilization, or termination of pregnancy.

(2) The refusal of a person to perform or participate in, or refer to a source for, these medical procedures may not be a basis for:

(i) Civil liability to another person; or
(ii) Disciplinary or other recriminatory action against the person.

(b)(1) A licensed hospital, hospital director, or hospital governing board may not be required:

(i) To permit, within the hospital, the performance of any medical procedure that results in artificial insemination, sterilization, or termination of pregnancy; or
(ii) To refer to any source for these medical procedures.

(2) The refusal to permit or to refer to a source for these procedures may not be grounds for:

(i) Civil liability to another person; or
(ii) Disciplinary or other recriminatory action against the person by this State or any person.

(d) Notwithstanding any other provision of this section, a health care provider, a licensed hospital, a hospital director, or a hospital governing board is not immune from civil damages, if available at law, or from disciplinary or other recriminatory action, if the failure to refer a patient to a source for any medical procedure that results in sterilization or termination of pregnancy would reasonably be determined as:

(1) The cause of death or serious physical injury or serious long-lasting injury to the patient; and
(2) Otherwise contrary to the standards of medical care.

Massachusetts

General Laws of Massachusetts Chapter 112: Section 12I. Abortion or sterilization procedures; refusal of hospital or health facility staff members or employees to participate.

Section 12I. A physician or any other person who is a member of or associated with the medical staff of a hospital or other health facility or any employee of a hospital or other health facility in which an abortion or any sterilization procedure is scheduled and who shall state in writing an objection to such abortion or sterilization procedure on moral or religious grounds, shall not be required to participate in the medical procedures which result in such abortion or sterilization, and the refusal of any such person to participate therein shall not form the basis for any claim of damages on account of such refusal or for any disciplinary or recriminatory action against such person. The refusal of any person who has made application to a medical, premedical, nursing, social work, or psychology program in the commonwealth to agree to counsel, suggest, recommend, assist, or in any way participate in the performance of an abortion or sterilization contrary to his religious beliefs or moral convictions shall not form the basis for any discriminatory action against such person. Conscientious objection to abortion shall not be grounds for dismissal, suspension, demotion, failure to promote, discrimination in hiring, withholding of pay or refusal to grant financial assistance under any state aided project, or used in any way to the detriment of the individual in any hospital, clinic, medical, premedical, nursing, social work, or psychology school or state aided program or institution which is supported in whole or in part by the commonwealth.

Chapter 272: Section 21B. Privately controlled hospital or health facility not required to perform abortion or sterilization procedures, or to furnish contraceptive devices or information or family planning services.

Section 21B. No privately controlled hospital or other health facility shall be required to admit any patient for the purpose of performing an abortion, performing any sterilization procedure, or receiving contraceptive devices or information.

No privately controlled hospital or other privately controlled health facility shall be required to permit any patient to have an abortion, or any sterilization procedure performed in said hospital or other health facility, or to furnish contraceptive devices or information to such patient, nor shall such a hospital or other health facility be required to furnish any family planning services within or through said hospital or other health facility or to make referrals to any other hospital or health facility for such services when said services or referrals are contrary to the religious or moral principles of said hospital or said health facility as expressed in its charter, by-laws or code of ethics, or vote of its governing body.

Any such hospital or other health facility exercising the rights granted in this section shall not on account of the exercise thereof, be disciplined or discriminated against in any manner or suffer any adverse determination by any

person, firm, corporation, or other entity, including but in no way limited to any political subdivision, board, commission, department, authority, or agency of the commonwealth.

Michigan

333.20181 Abortion ; admitting patient not required; refusal to perform, participate in, or allow; immunity. [M.S.A. 14.15(20181)]

Sec. 20181. A hospital, clinic, institution, teaching institution, or other health facility is not required to admit a patient for the purpose of performing an abortion . A hospital, clinic, institution, teaching institution, or other health facility or a physician, member, or associate of the staff, or other person connected therewith, may refuse to perform, participate in, or allow to be performed on its premises an abortion . The refusal shall be with immunity from any civil or criminal liability or penalty.

333.20182 Abortion ; objection; participation in medical procedures not required; immunity. [M.S.A. 14.15(20182)]

Sec. 20182. A physician, or other individual who is a member of or associated with a hospital, clinic, institution, teaching institution, or other health facility, or a nurse, medical student, student nurse, or other employee of a hospital, clinic, institution, teaching institution, or other health facility in which an abortion is performed, who states an objection to abortion on professional, ethical, moral, or religious grounds, is not required to participate in the medical procedures which will result in abortion . The refusal by the individual to participate does not create a liability for damages on account of the refusal or for any disciplinary or discriminatory action by the patient, hospital, clinic, institution, teaching institution, or other health facility against the individual. History: 1978, Act 368, Eff. Sept. 30, 1978

333.20183 Abortion ; refusal to give advice; refusal to participate in; immunity. [M.S.A. 14.15(20183)]

Sec. 20183. (1) A physician who informs a patient that he or she refuses to give advice concerning, or participate in, an abortion is not liable to the hospital, clinic, institution, teaching institution, health facility, or patient for the refusal.

(2) A civil action for negligence or malpractice or a disciplinary or discriminatory action may not be maintained against a person refusing to give advice as to, or participating in, an abortion based on the refusal. History: 1978, Act 368, Eff. Sept. 30, 1978

Minnesota

145.42 Abortions; nonliability for refusal to perform.

Subdivision 1. Damages. No physician, nurse, or other person who refuses to perform or assist in the performance of an abortion, and no hospital that refuses to permit the performance of an abortion upon its premises, shall be liable to any person for damages allegedly arising from the refusal.

Subd. 2. Related actions. No physician, nurse, or other person who refuses to perform or assist in the

performance of an abortion shall, because of that refusal, be dismissed, suspended, demoted, or otherwise prejudiced or damaged by a hospital with which the person is affiliated or by which the person is employed.
HIST: 1971 c 693 s 1,2; 1986 c 444

Section: 145.414
145.414 Abortion not mandatory.

(a) No person and no hospital or institution shall be coerced, held liable or discriminated against in any manner because of a refusal to perform, accommodate, assist or submit to an abortion for any reason.

(b) It is the policy of the state of Minnesota that no health plan company as defined under section 62Q.01, subdivision 4, or health care cooperative as defined under section 62R.04, subdivision 2, shall be required to provide or provide coverage for an abortion. No provision of this chapter; of chapter 62A, 62C, 62D, 62H, 62L, 62M, 62N, 62R, 64B, or of any other chapter; of Minnesota Rules; or of Laws 1995, chapter 234, shall be construed as requiring a health plan company as defined under section 62Q.01, subdivision 4, or a health care cooperative as defined under section 62R.04, subdivision 2, to provide or provide coverage for an abortion.

(c) This section supersedes any provision of Laws 1995, chapter 234, or any act enacted prior to enactment of Laws 1995, chapter 234, that in any way limits or is inconsistent with this section. No provision of any act enacted subsequent to Laws 1995, chapter 234 shall be construed as in any way limiting or being inconsistent with this section, unless the act amends this section or expressly provides that it is intended to limit or be inconsistent with this section.
HIST: 1974 c 177 s 4; 1995 c 234 art 2 s 30

Section: 145.424
145.424 Prohibition of tort actions.

Subdivision 1. Wrongful life action prohibited.

No person shall maintain a cause of action or receive an award of damages on behalf of that person based on the claim that but for the negligent conduct of another, the person would have been aborted.

Subd. 2. Wrongful birth action prohibited.

No person shall maintain a cause of action or receive an award of damages on the claim that but for the negligent conduct of another, a child would have been aborted.

Subd. 3. Failure or refusal to prevent a live birth.

Nothing in this section shall be construed to preclude a cause of action for intentional or negligent malpractice or any other action arising in tort based on the failure of a contraceptive method or sterilization procedure or on a claim that, but for the negligent conduct of another, tests or treatment would have been provided or would have been provided properly which would have made possible the prevention, cure, or amelioration of any disease, defect, deficiency, or handicap; provided, however, that abortion shall not have been deemed to prevent, cure, or ameliorate any disease, defect, deficiency, or handicap. The failure or refusal of any person to perform or have an abortion shall not be a defense in any action, nor shall that failure or refusal be considered in awarding damages

or in imposing a penalty in any action.
HIST: 1982 c 521 s 1; 1986 c 444

Mississippi

Mississippi Code Ann. § 41-107-1. Title
This chapter may be known and cited as the "Mississippi Health Care Rights of Conscience Act."

§ 41-107-3. Definitions.

As used in this chapter:

(a) **"Health care service"** means any phase of patient medical care, treatment or procedure, including, but not limited to, the following: patient referral, counseling, therapy, testing, diagnosis or prognosis, research, instruction, prescribing, dispensing or administering any device, drug, or medication, surgery, or any other care or treatment rendered by health care providers or health care institutions.

(b) **"Health care provider"** means any individual who may be asked to participate in any way in a health care service, including, but not limited to: a physician, physician's assistant, nurse, nurses' aide, medical assistant, hospital employee, clinic employee, nursing home employee, pharmacist, pharmacy employee, researcher, medical or nursing school faculty, student or employee, counselor, social worker or any professional, paraprofessional, or any other person who furnishes, or assists in the furnishing of, a health care procedure.

(c) **"Health care institution"** means any public or private organization, corporation, partnership, sole proprietorship, association, agency, network, joint venture, or other entity that is involved in providing health care services, including, but not limited to: hospitals, clinics, medical centers, ambulatory surgical centers, private physician's offices, pharmacies, nursing homes, university medical schools and nursing schools, medical training facilities, or other institutions or locations where health care procedures are provided to any person.

(d) **"Health care payer"** means any entity or employer that contracts for, pays for, or arranges for the payment of, in whole or in part, a health care service, including, but not limited to, health maintenance organizations, health plans, insurance companies or management services organizations.

(e) **"Employer"** means any individual or entity that pays for or provides health benefits or health insurance coverage as a benefit to its employees, whether through a third party, a health maintenance organization, a program of self-insurance, or some other means.

(f) **"Participate"** in a health care service means to counsel, advise, provide, perform, assist in, refer for, admit for purposes of providing, or participate in providing, any health care service or any form of such service.

(g) **"Pay" or "payment"** means pay, contract for, or otherwise arrange for the payment of, in whole or in part.

(h) **"Conscience"** means the religious, moral or ethical principles held by a health care provider, the health care institution or health care payer. For purposes of this chapter, a health care institution or health care payer's conscience shall be determined by reference to its existing or proposed religious, moral or ethical guidelines, mission statement, constitution, bylaws, articles of incorporation, regulations or other relevant documents.

§ 41-107-5. Rights of Conscience of Health Care Providers.

(1) ***Rights of Conscience.*** A health care provider has the right not to participate, and no health care provider shall be required to participate in a health care service that violates his or her conscience. However, this subsection does not allow a health care provider to refuse to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(2) ***Immunity from Liability.*** No health care provider shall be civilly, criminally, or administratively liable for declining to participate in a health care service that violates his or her conscience. However, this subsection does not exempt a health care provider from liability for refusing to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(3) ***Discrimination.*** It shall be unlawful for any person, health care provider, health care institution, public or private institution, public official, or any board which certifies competency in medical specialties to discriminate against any health care provider in any manner based on his or her declining to participate in a health care service that violates his or her conscience. For purposes of this chapter, discrimination includes, but is not limited to: termination, transfer, refusal of staff privileges, refusal of board certification, adverse administrative action, demotion, loss of career specialty, reassignment to a different shift, reduction of wages or benefits, refusal to award any grant, contract, or other program, refusal to provide residency training opportunities, or any other penalty, disciplinary or retaliatory action.

§ 41-107-7. Rights of Conscience of Health Care Institutions

(1) ***Rights of Conscience.*** A health care institution has the right not to participate, and no health care institution shall be required to participate in a health care service that violates its conscience. However, this subsection does not allow a health care institution to refuse to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(2) ***Immunity from Liability.*** A health care institution that declines to provide or participate in a health care service that violates its conscience shall not be civilly, criminally or administratively liable if the institution provides a consent form to be signed by a patient before admission to the institution stating that it reserves the right to decline to provide or participate in a health care service that violates its conscience. However, this subsection does not exempt a health care institution from liability for refusing to participate in a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(3) ***Discrimination.*** It shall be unlawful for any person, public or private institution, or public official to discriminate against any health care institution, or any person, association, corporation, or other entity attempting to establish a new health care institution or operating an existing health care institution, in any manner, including, but not limited to, any denial, deprivation or disqualification with respect to licensure, any aid assistance, benefit or privilege, including staff privileges, or any authorization, including authorization to create, expand, improve, acquire, or affiliate or merge with any health care institution, because such health care institution, or person, association, or corporation planning, proposing, or operating a health care institution, declines to participate in a health care service which violates the health care institution's conscience.

(4) ***Denial of Aid or Benefit.*** It shall be unlawful for any public official, agency, institution, or entity to deny any form of aid, assistance, grants or benefits, or in any other manner to coerce, disqualify or discriminate against any person, association, corporation or other entity attempting to establish a new health care institution or operating

an existing health care institution because the existing or proposed health care institution declines to participate in a health care service contrary to the health care institution's conscience.

§ 41-107-9. Rights of conscience of health care payers.

(1) ***Rights of Conscience.*** A health care payer has the right to decline to pay, and no health care payer shall be required to pay for or arrange for the payment of a health care service that violates its conscience. However, this subsection does not allow a health care payer to decline to pay or arrange for the payment of a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(2) ***Immunity from Liability.*** No health care payer and no person, association, corporation or other entity that owns, operates, supervises or manages a health care payer shall be civilly or criminally liable by reason of the health care payer's declining to pay for or arrange for the payment of a health care service that violates its conscience. However, this subsection does not exempt from liability a health care payer, or the owner, operator, supervisor or manager of a health care payer, for declining to pay or arranging for the payment of a health care service regarding a patient because of the patient's race, color, national origin, ethnicity, sex, religion, creed or sexual orientation.

(3) ***Discrimination.*** It shall be unlawful for any person, public or private institution, or public official to discriminate against any health care payer, or any person, association, corporation, or other entity (a) attempting to establish a new health care payer, or (b) operating an existing health care payer, in any manner, including, but not limited to, any denial, deprivation, or disqualification with respect to licensure, aid, assistance, benefit, privilege or authorization, including, but not limited to, any authorization to create, expand, improve, acquire, affiliate or merge with any health care payer, because a health care payer, or a person, association, corporation or other entity planning, proposing or operating a health care payer declines to pay for or arrange for the payment of any health care service that violates its conscience.

(4) ***Denial of Aid or Benefits.*** It shall be unlawful for any public official, agency, institution or entity to deny any form of aid, assistance, grants, or benefits or in any other manner coerce, disqualify or discriminate against any health care payer, or any person, association, corporation or other entity attempting to establish a new health care payer or operating an existing health care payer because the existing or proposed health care payer declines to pay for, or arrange for the payment of, any health care service that is contrary to its conscience.

§ 41-107-11. Civil remedies

(1) A civil action for damages or injunctive relief, or both, may be brought for the violation of any provision of this chapter. It shall not be a defense to any claim arising out of the violation of this chapter that such violation was necessary to prevent additional burden or expense on any other health care provider, health care institution, individual or patient.

(2) ***Damage Remedies.*** Any individual, association, corporation, entity or health care institution injured by any public or private individual, association, agency, entity or corporation by reason of any conduct prohibited by this chapter may commence a civil action. Upon finding a violation of this chapter, the aggrieved party shall be entitled to recover threefold the actual damages, including pain and suffering, sustained by such individual, association, corporation, entity or health care institution, the costs of the action, and reasonable attorney's fees; but in no case shall recovery be less than Five Thousand Dollars ($5,000.00) for each violation in addition to costs of the action

and reasonable attorney's fees. These damage remedies shall be cumulative, and not exclusive of other remedies afforded under any other state or federal law.

(3) ***Injunctive Remedies.*** The court in such civil action may award injunctive relief, including, but not limited to, ordering reinstatement of a health care provider to his or her prior job position.

§ 41-107-13. Severability.

The provisions of this chapter are declared to be severable, and if any provision, word, phrase or clause of this chapter or the application thereof to any person shall be held invalid, such invalidity shall not affect the validity of the remaining portions of this chapter.

Missouri

Section 188.105
Discrimination by employer prohibited because of failure of employee to participate in abortion--exceptions.

188.105. 1. It shall be unlawful:

(1) For an employer:

(a) To fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his or her compensation, terms, conditions, or privileges of employment, because of such individual's refusal to participate in abortion;

(b) To limit, segregate, or classify his, her, or its employees or applicants for employment in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his or her status as an employee, because of such individual's refusal to participate in abortion;

(c) To discharge, expel, or otherwise discriminate against any person because he or she has opposed any practices forbidden under sections 188.100 to 188.120 or because he or she has filed a complaint, testified, or assisted in any legal proceeding under sections 188.100 to 188.120;

(2) For any person, whether an employer or employee, or not, to aid, abet, incite, compel, or coerce the doing of any of the acts forbidden under sections 188.100 to 188.120, or to attempt to do so.

2. Notwithstanding any other provision of sections 188.100 to 188.120, the acts proscribed in subsection 1 of this section shall not be unlawful if there can be demonstrated an inability to reasonably accommodate an individual's refusal to participate in abortion without undue hardship on the conduct of that particular business or enterprise, or in those certain instances where participation in abortion is a bona fide occupational qualification reasonably necessary to the normal operation of that particular business or enterprise.

3. Nothing contained in sections 188.100 to 188.120 shall be interpreted to require any employer to grant preferential treatment to any individual because of such individual's refusal to participate in abortion.
(L. 1986 H.B. 1596)

Section 188.110
Discrimination by colleges, universities and hospitals prohibited-- no requirement to pay fees, when.

188.110. 1. No public or private college, university or hospital shall discriminate against any person for refusal to participate in abortion.

2. No applicant, student, teacher, or employee of any school shall be required to pay any fees that would in whole or in part fund an abortion for any other applicant, student, teacher, or employee of that school, if the individual required to pay the fee gives written notice to the proper school authorities that it would be in violation of his or her conscience or beliefs to pay for or fund abortions. The school may require the individual to pay that part of the fees not funding abortions, if the school makes reasonable precautions and gives reasonable assurance that the fees that are paid are segregated from any fund for the payment of abortions.
(L. 1986 H.B. 1596)

Chapter 197 Medical Treatment Facility Licenses
Section 197.032
Hospitals and medical personnel may refuse abortions--no denial of public benefits for such refusal--civil action, when.

197.032. 1. No physician or surgeon, registered nurse, practical nurse, midwife or hospital, public or private, shall be required to treat or admit for treatment any woman for the purpose of abortion if such treatment or admission for treatment is contrary to the established policy of, or the moral, ethical or religious beliefs of, such physician, surgeon, registered nurse, midwife, practical nurse or hospital. No cause of action shall accrue against any such physician, surgeon, registered nurse, midwife, practical nurse or hospital on account of such refusal to treat or admit for treatment any woman for abortion purposes.

2. No person or institution shall be denied or discriminated against in the reception of any public benefit, assistance or privilege whatsoever or in any employment, public or private, on the grounds that they refuse to undergo an abortion, to advise, consent to, assist in or perform an abortion.

3. Any person who shall deny or discriminate against another for refusal to perform or participate in an abortion shall be liable to the party injured in an action at law, suit in equity or other redress.
(L. 1973 H.B. 731 & 793 §§ 1, 2, 3)

Coverage for certain obstetrical/gynecological services--exclusion of contraceptive coverage permitted, when--rulemaking authority.

376.1199. 1. Each health carrier or health benefit plan that offers or issues health benefit plans providing obstetrical/gynecological benefits and pharmaceutical coverage, which are delivered, issued for delivery, continued or renewed in this state on or after January 1, 2002, shall:

(1) . . . Nothing in this subsection shall be construed to require a health carrier to perform, induce, pay for, reimburse, guarantee, arrange, provide any resources for or refer a patient for an abortion, as defined in section 188.015, RSMo, other than a spontaneous abortion or to prevent the death of the female upon whom the abortion is performed, or to supersede or conflict with section 376.805 . . .

4. Notwithstanding the provisions of subdivision (4) of subsection 1 of this section to the contrary:

(1) Any health carrier may issue to any person or entity purchasing a health benefit plan, a health benefit plan that excludes coverage for contraceptives if the use or provision of such contraceptives is contrary to the moral, ethical or religious beliefs or tenets of such person or entity;

(2) Upon request of an enrollee who is a member of a group health benefit plan and who states that the use or provision of contraceptives is contrary to his or her moral, ethical or religious beliefs, any health carrier shall issue to or on behalf of such enrollee a policy form that excludes coverage for contraceptives. Any administrative costs to a group health benefit plan associated with such exclusion of coverage not offset by the decreased costs of providing coverage shall be borne by the group policyholder or group plan holder;

(3) Any health carrier which is owned, operated or controlled in substantial part by an entity that is operated pursuant to moral, ethical or religious tenets that are contrary to the use or provision of contraceptives shall be exempt from the provisions of subdivision (4) of subsection 1 of this section.

For purposes of this subsection, if new premiums are charged for a contract, plan or policy, it shall be determined to be a new contract, plan or policy.

5. Except for a health carrier that is exempted from providing coverage for contraceptives pursuant to this section, a health carrier shall allow enrollees in a health benefit plan that excludes coverage for contraceptives pursuant to subsection 4 of this section to purchase a health benefit plan that includes coverage for contraceptives.

6. Any health benefit plan issued pursuant to subsection 1 of this section shall provide clear and conspicuous written notice on the enrollment form or any accompanying materials to the enrollment form and the group health benefit plan contract:

(1) Whether coverage for contraceptives is or is not included;

(2) That an enrollee who is a member of a group health benefit plan with coverage for contraceptives has the right to exclude coverage for contraceptives if such coverage is contrary to his or her moral, ethical or religious beliefs; and

(3) That an enrollee who is a member of a group health benefit plan without coverage for contraceptives has the right to purchase coverage for contraceptives.

7. Health carriers shall not disclose to the person or entity who purchased the health benefit plan the names of enrollees who exclude coverage for contraceptives in the health benefit plan or who purchase a health benefit plan that includes coverage for contraceptives. Health carriers and the person or entity who purchased the health benefit plan shall not discriminate against an enrollee because the enrollee excluded coverage for contraceptives in the health benefit plan or purchased a health benefit plan that includes coverage for contraceptives.

Chapter 404- Durable Powers of Attorney for Health Care

Physician, health care facility, may refuse decision of attorney in fact, when--transfer from facility allowed.

404.830. 1. No physician, nurse, or other individual who is a health care provider or an employee of a health care facility shall be required to honor a health care decision of an attorney in fact if that decision is contrary to the individual's religious beliefs, or sincerely held moral convictions.

2. No hospital, nursing facility, residential care facility, or other health care facility shall be required to honor a health care decision of an attorney in fact if that decision is contrary to the hospital's or facility's institutional policy based on religious beliefs or sincerely held moral convictions unless the hospital or facility received a copy of the durable power of attorney for health care prior to commencing the current series of treatments or current confinement.

3. Any health care provider or facility which, pursuant to subsection 1 or 2 of this section, refuses to honor a health care decision of an attorney in fact shall not impede the attorney in fact from transferring the patient to another health care provider or facility.

Refusal to honor health care decision, discrimination prohibited, when.

404.872. No physician, nurse, or other individual who is a health care provider or an employee of a health care facility shall be discharged or otherwise discriminated against in his employment or employment application for refusing to honor a health care decision withholding or withdrawing life-sustaining treatment if such refusal is based upon the individual's religious beliefs, or sincerely held moral convictions.

Montana

50-20-111. Right to refuse participation in abortion.

(1) No private hospital or health care facility shall be required contrary to the religious or moral tenets or the stated religious beliefs or moral convictions of its staff or governing board to admit any person for the purpose of abortion or to permit the use of its facilities for such purpose. Such refusal shall not give rise to liability of such hospital or health care facility or any personnel or agent or governing board thereof to any person for damages allegedly arising from such refusal or be the basis for any discriminatory, disciplinary, or other recriminatory action against such hospital or health care facility or any personnel, agent, or governing board thereof.

(2) All persons shall have the right to refuse to advise concerning, perform, assist, or participate in abortion because of religious beliefs or moral convictions. If requested by any hospital or health care facility or person desiring an abortion, such refusal shall be in writing signed by the person refusing, but may refer generally to the grounds of "religious beliefs and moral convictions". The refusal of any person to advise concerning, perform, assist, or participate in abortion shall not be a consideration in respect of staff privileges of any hospital or health care facility or a basis for any discriminatory, disciplinary, or other recriminatory action against such person, nor shall such person be liable to any person for damages allegedly arising from refusal.

(3) It shall be unlawful to interfere or attempt to interfere with the right of refusal authorized by this section. The person injured thereby shall be entitled to injunctive relief, when appropriate, and shall further be entitled to monetary damages for injuries suffered.

(4) Such refusal by any hospital or health care facility or person shall not be grounds for loss of any privileges or immunities to which the granting of consent may otherwise be a condition precedent or for the loss of any public

benefits.

(5) As used in this section, the term "person" includes one or more individuals, partnerships, associations, and corporations.

Nebraska

LAW 28-337. Hospital, clinic, institution; not required to admit patient for abortion

No hospital, clinic, institution, or other facility in this state shall be required to admit any patient for the purpose of performing an abortion nor required to allow the performance of an abortion therein, but the hospital, clinic, institution, or other facility shall inform the patient of its policy not to participate in abortion procedures. No cause of action shall arise against any hospital, clinic, institution, or other facility for refusing to perform or allow an abortion.

LAW 28-338. No person required to perform an abortion; no liability for refusal.

No person shall be required to perform or participate in any abortion, and the refusal of any person to participate in an abortion shall not be a basis for civil liability to any person. No hospital, governing board, or any other person, firm, association, or group shall terminate the employment or alter the position of, prevent or impair the practice or occupation of, or impose any other sanction or otherwise discriminate against any person who refuses to participate in an abortion.

LAW 28-339 Discrimination against person refusing to participate in an abortion; violation; penalty.

Any violation of section 28-338 is a Class II misdemeanor.

LAW 28-340 Discrimination against person refusing to participate in an abortion; damages.

Any person whose employment or position has been in any way altered, impaired, or terminated in violation of sections 28-325 to 28-345 may sue in the district court for all consequential damages, lost wages, reasonable attorney's fees incurred, and the cost of litigation.

LAW 28-341 Discrimination against person refusing to participate in an abortion; injunctive relief.

Any person whose employment or position has in any way been altered, impaired, or terminated because of his refusal to participate in an abortion shall have the right to injunctive relief, including temporary relief, pending trial upon showing of an emergency, in the district court, in accordance with the statutes, rules, and practices applicable in other similar cases.

Nevada

Nevada revised Statutes 632.475 Unlawful to require participation in abortion.

1. An employer shall not require a registered nurse, a licensed practical nurse, a nursing assistant or any other person employed to furnish direct personal health service to a patient to participate directly in the induction or performance of an abortion if the employee has filed a written statement with the employer indicating a moral, ethical or religious basis for refusal to participate in the abortion.

2. If the statement provided for in subsection 1 is filed with the employer, the employer shall not penalize or discipline the employee for declining to participate directly in the induction or performance of an abortion.

3. The provisions of subsections 1 and 2 do not apply to medical emergency situations.

4. Any person violating the provisions of this section is guilty of a misdemeanor.
(Added to NRS by 1973, 898, 1639; A 1989, 2017)

New Jersey

2A:65A-1. Requirement of person to perform; prohibition

No person shall be required to perform or assist in the performance of an abortion or sterilization.
L.1974, c. 111, s. 1, eff. Oct. 2, 1974.

2A:65A-2. Requirement of hospital or other health care facility to provide services or procedures; prohibition

No hospital or other health care facility shall be required to provide abortion or sterilization services or procedures.

L.1974, c. 111, s. 2, eff. Oct. 2, 1974.

2A:65A-3. Refusal to perform or provide services or procedures; nonliability

The refusal to perform, assist in the performance of, or provide abortion services or sterilization procedures shall not constitute grounds for civil or criminal liability, disciplinary action or discriminatory treatment.
L.1974, c. 111, s. 3, eff. Oct. 2, 1974.

New Mexico

New Mexico Statutes Unannotated 30-5-2 Persons and institutions exempt (1994 Repl.)

This article does not require a hospital to admit any patient for the purposes of performing an abortion, nor is any hospital required to create a special hospital board. A person who is a member of, or associated with, the staff of a hospital, or any employee of a hospital, in which a justified medical termination has been authorized and who objects to the justified medical termination on moral or religious grounds shall not be required to participate in medical procedures which will result in the termination of pregnancy, and the refusal of any such person to

participate shall not form the basis of any disciplinary or other recriminatory action against such person.
History: 1953 Comp., § 40A-5-2, enacted by Laws 1969, ch. 67, § 2.

New York

New York Civil Rights Law s.79-i (Consol.1989) Discrimination against person who refuses to perform certain act prohibited.

1. When the performing of an abortion on a human being or assisting thereat is contrary to the conscience or religious beliefs of any person, he may refuse to perform or assist in such abortion by filing a prior written refusal setting forth the reasons therefor with the appropriate and responsible hospital, person, firm, corporation or association, and no such hospital, person, firm, corporation or association shall discriminate against the person so refusing to act. A violation of the provisions of this section shall constitute a misdemeanor.

2. No civil action for negligence or malpractice shall be maintained against a person so refusing to act based on such refusal.

North Carolina

§ 14-45.1. When abortion not unlawful

(e) Nothing in this section shall require a physician licensed to practice medicine in North Carolina or any nurse who shall state an objection to abortion on moral, ethical, or religious grounds, to perform or participate in medical procedures which result in an abortion. The refusal of such physician to perform or participate in these medical procedures shall not be a basis for damages for such refusal, or for any disciplinary or any other recriminatory action against such physician.

(f) Nothing in this section shall require a hospital or other health care institution to perform an abortion or to provide abortion services. (1967, c. 367, s. 2; 1971, c. 383, ss. 1, 11/2; 1973, c. 139; c. 476, s. 128; c. 711; 1997-443, s. 11A.118(a).)

North Dakota

23-16-14. Participation in abortion - Not mandatory.

No hospital, physician, nurse, hospital employee, nor any other person is under any duty, by law or contract, nor may such
hospital or person in any circumstances be required to participate in the performance of an abortion, if such hospital or person objects to such abortion. No such person or institution may be discriminated against because he or they so object.

Ohio

Ohio Revised Code Section 4731.91

(A) No private hospital, private hospital director, or governing board of a private hospital is required to permit an abortion.

(B) No public hospital, public hospital director, or governing board of a public hospital is required to permit an abortion.

(C) Refusal to permit an abortion is not grounds for civil liability nor a basis for disciplinary or other recriminatory action.

(D) No person is required to perform or participate in medical procedures which result in abortion, and refusal to perform or participate in the medical procedures is not grounds for civil liability nor a basis for disciplinary or other recriminatory action.

(E) Whoever violates division (D) of this section is liable in civil damages.

Oklahoma

1998 Oklahoma State Statutes §63-1-741.

A. No private hospital, hospital director or governing board of a private hospital in Oklahoma, is required to permit abortions to be performed or induced in such hospital. Refusal to permit an abortion, in accordance with a standard policy, is not grounds for civil liability nor a basis for disciplinary or other recriminatory action.

B. No person may be required to perform, induce or participate in medical procedures which result in an abortion which are in preparation for an abortion or which involve aftercare of an abortion patient, except when the aftercare involves emergency medical procedures which are necessary to protect the life of the patient, and refusal to perform or participate in such medical procedures is not grounds for civil liability nor a basis for disciplinary or other recriminatory action.

C. The rights and immunities granted by this section shall not include medical procedures in which a woman is in the process of the spontaneous, inevitable abortion of an unborn child, the death of thechild is imminent, and the procedures are necessary to prevent the death of the mother.

§63-1-728 *Freedom of Conscience Act*

§63-1-728. Short title.

This act shall be known and may be cited as the "*Freedom of Conscience Act*".

§63-1-728.1. Definitions.

As used in the *Freedom of Conscience Act*:

1. "Health care facility" means any public or private organization, corporation, authority, partnership, sole proprietorship, association, agency, network, joint venture, or other entity that is involved in providing health care services, including a hospital, clinic, medical center, ambulatory surgical center, private physician's office, pharmacy, nursing home, university hospital, medical school, nursing school, medical training facility, inpatient health care facility, or other place where health care services are provided;

2. "Human embryo" means a human organism that is derived by fertilization, parthenogenesis, cloning, or any other means from one or more human gametes or human diploid cells;

3. "In vitro human embryo" means a human embryo, whether cryopreserved or not, living outside of a woman's body;

4. "Participate in" means to perform, practice, engage in, assist in, recommend, counsel in favor of, make referrals for, prescribe, dispense, or administer drugs or devices or otherwise promote or encourage; and

5. "Person" means any individual, corporation, industry, firm, partnership, association, venture, trust, institution, federal, state or local governmental instrumentality, agency or body or any other legal entity however organized.

§63-1-728.2. Reasonable accommodation of religious observances or practices.

An employer shall not discriminate against an employee or prospective employee by refusing to reasonably accommodate the religious observance or practice of the employee or prospective employee, unless the employer can demonstrate that the accommodation would pose an undue hardship on the program, enterprise, or business of the employer, in the following circumstances:

1. An abortion as defined in Section 1-730 of Title 63 of the Oklahoma Statutes. The provisions of this section shall not apply if the pregnant woman suffers from a physical disorder, physical injury, or physical illness which, as certified by a physician, causes the woman to be in imminent danger of death unless an abortion is immediately performed or induced and there are no other competent personnel available to attend to the woman. As used in this act, the term "abortion" shall not include the prescription of contraceptives;

2. An experiment or medical procedure that destroys an in vitro human embryo or uses cells or tissue derived from the destruction of an in vitro human embryo;

3. An experiment or medical procedure on an in vitro human embryo that is not related to the beneficial treatment of the in vitro human embryo;

4. An experiment or medical procedure on a developing child in an artificial womb, at any stage of development, that is not related to the beneficial treatment of the developing child;

5. A procedure, including a transplant procedure, that uses fetal tissue or organs that come from a source other than a stillbirth or miscarriage; or

6. An act that intentionally causes or assists in causing the death of an individual by assisted suicide, euthanasia, or mercy killing.

§63-1-728.3. Health care facilities, professionals or employees - Refusal to participate in specified acts - Discipline prohibited - Immunity.

A. No health care facility is required to admit any patient or to allow the use of the health care facility for the purpose of performing any of the acts specified in Section 3 of this act.

B. A physician, physician's assistant, registered nurse, practical nurse, pharmacist, or any employee thereof, or any other person who is an employee of, member of, or associated with the staff of a health care facility in which the performance of an activity specified in Section 3 of this act has been authorized, who in writing, refuses or states an intention to refuse to participate in the activity on moral or religious grounds shall not be required to participate in the activity and shall not be disciplined by the respective licensing board or authorized regulatory department for refusing or stating an intention to refuse to participate in the practice with respect to the activity.

C. A physician, physician's assistant, registered nurse, practical nurse, pharmacist, or any employee thereof, or any other person who is an employee of, member of, or associated with the staff of a health care facility is immune from liability for any damage caused by the refusal of the person to participate in an activity specified in Section 3 of this act on moral or religious grounds.

§63-1-728.4. Refusal to participate in specified acts - Discrimination, mandatory participation prohibited.

A. No health care facility, school, or employer shall discriminate against any person with regard to admission, hiring or firing, tenure, term, condition, or privilege of employment, student status, or staff status on the ground that the person refuses or states an intention to refuse, whether or not in writing, to participate in an activity specified in Section 3 of this act, if the refusal is based on religious or moral precepts.

B. No person shall be required to:

1. Participate in an activity specified in Section 3 of this act if the individual's participation in the activity is contrary to the person's religious beliefs or moral convictions;

2. Make facilities available for an individual to participate in an activity specified in Section 3 of this act if the person prohibits the activity from taking place in the facilities on the basis of religious beliefs or moral convictions; or

3. Provide any personnel to participate in an activity specified in Section 3 of this act if the activity is contrary to the religious beliefs or moral convictions of the personnel.

§63-1-728.5. Action for equitable relief - Attorney fees - Limitation.

A. For the purposes of this section, "damages" do not include noneconomic damages, as defined in Section 1-1708.1C of Title 63 of the Oklahoma Statutes.

B. A person who is adversely affected by conduct that is in violation of the Freedom of Conscience Act may bring a civil action for equitable relief, including reinstatement or damages, or both reinstatement and damages. An action under this subsection may be commenced against the state and any office, department, independent agency, authority, institution, association, or other body in state government created or authorized to be created by the state constitution or any law. In an action under this subsection, the court shall award reasonable attorney fees to a person who obtains equitable relief, damages, or both. An action under this subsection shall be commenced within one (1) year after the cause of action accrues or be barred.

Oregon

Oregon Revised Statutes (Death With Dignity Act) 127.885 s.4.01.

Except as provided in ORS 127.890:

(1) No person shall be subject to civil or criminal liability or professional disciplinary action for participating in good faith compliance with ORS 127.800 to 127.897. This includes being present when a qualified patient takes the prescribed medication to end his or her life in a humane and dignified manner.

(2) No professional organization or association, or health care provider, may subject a person to censure, discipline, suspension, loss of license, loss of privileges, loss of membership or other penalty for participating or refusing to participate in good faith compliance with ORS 127.800 to 127.897.

(3) No request by a patient for or provision by an attending physician of medication in good faith compliance with the provisions of ORS 127.800 to 127.897 shall constitute neglect for any purpose of law or provide the sole basis for the appointment of a guardian or conservator.

(4) No health care provider shall be under any duty, whether by contract, by statute or by any other legal requirement to participate in the provision to a qualified patient of medication to end his or her life in a humane and dignified manner. If a health care provider is unable or unwilling to carry out a patient's request under ORS 127.800 to 127.897, and the patient transfers his or her care to a new health care provider, the prior health care provider shall transfer, upon request, a copy of the patient's relevant medical records to the new health care provider.

(5)(a) Notwithstanding any other provision of law, a health care provider may prohibit another health care provider from participating in ORS 127.800 to 127.897 on the premises of the prohibiting provider if the prohibiting provider has notified the health care provider of the prohibiting provider's policy regarding participating in ORS 127.800 to 127.897. Nothing in this paragraph prevents a health care provider from providing health care services to a patient that do not constitute participation in ORS 127.800 to 127.897.

(b) Notwithstanding the provisions of subsections (1) to (4) of this section, a health care provider may subject another health care provider to the sanctions stated in this paragraph if the sanctioning health care provider has notified the sanctioned provider prior to participation in ORS 127.800 to 127.897 that it prohibits participation in ORS 127.800 to 127.897:

(A) Loss of privileges, loss of membership or other sanction provided pursuant to the medical staff bylaws, policies and procedures of the sanctioning health care provider if the sanctioned provider is a member of the sanctioning provider's medical staff and participates in ORS 127.800 to 127.897 while on the health care facility premises, as defined in ORS 442.015, of the sanctioning health care provider, but not including the private medical office of a physician or other provider;

(B) Termination of lease or other property contract or other nonmonetary remedies provided by lease contract, not including loss or restriction of medical staff privileges or exclusion from a provider panel, if the sanctioned provider participates in ORS 127.800 to 127.897 while on the premises of the sanctioning health care provider or

on property that is owned by or under the direct control of the sanctioning health care provider; or

(C) Termination of contract or other nonmonetary remedies provided by contract if the sanctioned provider participates in ORS 127.800 to 127.897 while acting in the course and scope of the sanctioned provider's capacity as an employee or independent contractor of the sanctioning health care provider. Nothing in this subparagraph shall be construed to prevent:

(i) A health care provider from participating in ORS 127.800 to 127.897 while acting outside the course and scope of the provider's capacity as an employee or independent contractor; or

(ii) A patient from contracting with his or her attending physician and consulting physician to act outside the course and scope of the provider's capacity as an employee or independent contractor of the sanctioning health care provider.

(c) A health care provider that imposes sanctions pursuant to paragraph (b) of this subsection must follow all due process and other procedures the sanctioning health care provider may have that are related to the imposition of sanctions on another health care provider.

(d) For purposes of this subsection:

(A) "Notify" means a separate statement in writing to the health care provider specifically informing the health care provider prior to the provider's participation in ORS 127.800 to 127.897 of the sanctioning health care provider's policy about participation in activities covered by ORS 127.800 to 127.897.

(B) "Participate in ORS 127.800 to 127.897" means to perform the duties of an attending physician pursuant to ORS 127.815, the consulting physician function pursuant to ORS 127.820 or the counseling function pursuant to ORS 127.825. "Participate in ORS 127.800 to 127.897" does not include:

(i) Making an initial determination that a patient has a terminal disease and informing the patient of the medical prognosis;

(ii) Providing information about the Oregon Death with Dignity Act to a patient upon the request of the patient;

(iii) Providing a patient, upon the request of the patient, with a referral to another physician; or

(iv) A patient contracting with his or her attending physician and consulting physician to act outside of the course and scope of the provider's capacity as an employee or independent contractor of the sanctioning health care provider.

(6) Suspension or termination of staff membership or privileges under subsection (5) of this section is not reportable under ORS 441.820. Action taken pursuant to ORS 127.810, 127.815, 127.820 or 127.825 shall not be the sole basis for a report of unprofessional or dishonorable conduct under ORS 677.415 (2) or (3).

(7) No provision of ORS 127.800 to 127.897 shall be construed to allow a lower standard of care for patients in the community where the patient is treated or a similar community. [1995 c.3 s.4.01; 1999 c.423 s.10]

Note: As originally enacted by the people, the leadline to section 4.01 read "Immunities." The remainder of the leadline was added by editorial action.

Oregon Revised Statutes (Family planning & abortion)

435.215 Right to refuse services protected.

The refusal of any person to accept family planning and birth control services shall in no way affect the right of such person to receive public assistance or any other public benefit and every person to whom such services are offered shall be so advised initially both orally and in writing. Employees engaged in the administration of ORS 435.205 to 435.235 shall recognize that the right to make decisions concerning family planning and birth control is a fundamental personal right of the individual and nothing in ORS 435.205 to 435.235 shall in any way abridge such individual right, nor shall any individual be required to state the reason for refusing the offer of family planning and birth control services. [1967 c.491 s.3; 1971 c.779 s.66; 1987 c.158 s.81]

435.225 Refusal by employee to offer services.

Any employee of the Adult and Family Services Division may refuse to accept the duty of offering family planning and birth control services to the extent that such duty is contrary to the personal or religious beliefs of the employee. However, such employee shall notify the immediate supervisor in writing of such refusal in order that arrangements may be made for eligible persons to obtain such information and services from another employee. Such refusal shall not be grounds for any disciplinary action, for dismissal, for any interdepartmental transfer, for any other discrimination in employment, or for suspension from employment, or for any loss in pay or other benefits. [1967 c.491 s.4; 1971 c.779 s.67]

435.235 Construction of ORS 435.205 to 435.235.

ORS 435.205 to 435.235 shall be liberally construed to protect the rights of all individuals to pursue their religious beliefs, to follow the dictates of their own consciences, to prevent the imposition upon any individual of practices offensive to the individual's moral standards, to respect the right of every individual to self-determination in the procreation of children, and to insure a complete freedom of choice in pursuance of constitutional rights. [1967 c.491 s.5]

435.435 Effect of refusal to consent to termination.

The refusal of any person to consent to a termination of pregnancy or to submit thereto shall not be grounds for loss of any privilege or immunity to which the person is otherwise entitled nor shall consent to or submission to a termination of pregnancy be imposed as a condition to the receipt of any public benefits. [1969 c.684 ss.7,12; 1983 c.470 s.5]

435.475 Refusal to admit patient for termination.

(1) Except as provided in subsection (3) of this section, no hospital is required to admit any patient for the purpose of terminating a pregnancy. No hospital is liable for its failure or refusal to participate in such termination if the hospital has adopted a policy not to admit patients for the purposes of terminating pregnancies. However, the hospital must notify the person seeking admission to the hospital of its policy.

(2) All hospitals that have not adopted a policy not to admit patients seeking termination of a pregnancy shall admit patients seeking such termination in the same manner and subject to the same conditions as imposed on any other patient seeking admission to the hospital.

(3) No hospital operated by this state or by a political subdivision in this state is authorized to adopt a policy of

excluding or denying admission to any person seeking termination of a pregnancy. [1969 c.684 s.9; 1983 c.470 s.2]

435.485 Medical personnel not required to participate in termination.
(1) No physician is required to give advice with respect to or participate in any termination of a pregnancy if the refusal to do so is based on an election not to give such advice or to participate in such terminations and the physician so advises the patient.

(2) No hospital employee or member of the hospital medical staff is required to participate in any termination of a pregnancy if the employee or staff member notifies the hospital of the election not to participate in such terminations. [1969 c.684 ss.10,11; 1983 c.470 s.3]

Insurance Code

(*The following provisions from HB 2700, 9 March, 2007, have been incorporated into the Oregon Revised Statutes, 750.055 and 750.333. The bill was signed by the Governor on 31 May, 2007*)

(1) A prescription drug benefit program, or a prescription drug benefit offered under a health benefit plan as defined in ORS 743.730 or under a student health insurance policy, must provide payment, coverage or reimbursement for:

(a) Prescription contraceptives; and
(b) If covered for other drug benefits under the program, plan or policy, outpatient consultations, examinations, procedures and medical services that are necessary to prescribe, dispense, deliver, distribute, administer or remove a prescription contraceptive.

(2) The coverage required by subsection (1) of this section may be subject to provisions of the program, plan or policy that apply equally to other prescription drugs covered by the program, plan or policy, including but not limited to required copayments, deductibles and coinsurance.

(3) As used in this section, 'contraceptive' means a drug or device approved by the United States Food and Drug Administration to prevent pregnancy.

(4) A religious employer is exempt from the requirements of this section with respect to a prescription drug benefit program or a health benefit plan it provides to its employees. A 'religious employer' is an employer:

(a) Whose purpose is the inculcation of religious values;
(b) That primarily employs persons who share the religious tenets of the employer;
(c) That primarily serves persons who share the religious tenets of the employer; and
(d) That is a nonprofit organization under section 6033(a)(2)(A)(i) or (iii) of the Internal Revenue Code

Pennsylvania

§ 3213. Prohibited acts.

(d) Participation in abortion.--Except for a facility devoted exclusively to the performance of abortions, no medical personnel or medical facility, nor any employee, agent or student thereof, shall be required against his or its conscience to aid, abet or facilitate performance of an abortion or dispensing of an abortifacient and failure or refusal to do so shall not be a basis for any civil, criminal, administrative or disciplinary action, penalty or

proceeding, nor may it be the basis for refusing to hire or admit anyone. Nothing herein shall be construed to limit the provisions of the act of October 27, 1955 (P.L.744, No.222), known as the "Pennsylvania Human Relations Act." Any person who knowingly violates the provisions of this subsection shall be civilly liable to the person thereby injured and, in addition, shall be liable to that person for punitive damages in the amount of $5,000.

Rhode Island

Section 23-17-11 § 23-17-11
Abortion and sterilization -- Protection for nonparticipation -- Procedure. --

A physician or any other person who is a member of or associated with the medical staff of a health care facility or any employee of a health care facility in which an abortion or any sterilization procedure is scheduled, and who shall state in writing an objection to the abortion or sterilization procedure on moral or religious grounds, shall not be required to participate in the medical procedures which result in the abortion or sterilization, and the refusal of the person to participate therein shall not form the basis for any claim of damages on account of the refusal or for any disciplinary or recriminatory action against the person.

South Carolina

Section 44-41-40. Certain hospitals or clinics may refuse to perform abortions

No private or nongovernmental hospital or clinic shall be required to admit any patient for the purpose of terminating a pregnancy, nor shall such institutions be required to permit their facilities to be utilized for the performance of abortions. No cause of action shall arise against any such hospital or clinic for refusal to perform or to allow the performance of an abortion if the institution has adopted a policy not to admit patients for the purpose of terminating pregnancies; provided, that no hospital or clinic shall refuse an emergency admittance.

SECTION 44-41-50. Medical employees shall not be required to aid in abortions; providing necessary aftercare following abortion.
(a) No physician, nurse, technician or other employee of a hospital, clinic or physician shall be required to recommend, perform or assist in the performance of an abortion if he advises the hospital, clinic or employing physician in writing that he objects to performing, assisting or otherwise participating in such procedures. Such notice will suffice without specification of the reason therefor.

(b) No physician, nurse, technician or other person who refuses to perform or assist in the performance of an abortion shall be liable to any person for damages allegedly arising from such refusal.

(c) No physician, nurse, technician or other person who refuses to perform or assist in the performance of an abortion shall because of that refusal be dismissed, suspended, demoted, or otherwise disciplined or discriminated against by the hospital or clinic with which he is affiliated or by which he is employed. A civil action for damages or reinstatement of employment, or both, may be prosecuted by any person whose employment or affiliation with a hospital or clinic has been altered or terminated in violation of this chapter.

South Dakota

South Dakota Codified Law 34-23A-11. Counselor or social worker not liable for arranging abortion -- Retaliation from employer prohibited.

No counselor, social worker or anyone else who may be in such a position where the abortion question may appear as a part of their workday routine, shall be liable to any person for damages allegedly arising from advising or helping to arrange for or for refusal to arrange or encourage abortion, and there shall be no retaliation from any agency or institution with which such person may be affiliated or by which he may be employed.

34-23A-12. No liability for refusal to perform abortion.

No physician, nurse or other person who refuses to perform or assist in the performance of an abortion shall be liable to any person for damages arising from that refusal.

34-23A-13. Medical facility not to discriminate for performance or refusal to perform abortion.

No physician, nurse or other person who performs or refuses to perform or assist in the performance of an abortion shall, because of that performance or refusal, be dismissed, suspended, demoted, or otherwise prejudiced or damaged by a hospital or other medical facility with which he is affiliated or by which he is employed.

34-23A-14. Hospital not required to perform abortions -- No liability for refusal of abortion as policy.

No hospital licensed pursuant to the provisions of chapter 34-12 is required to admit any patient for the purpose of terminating a pregnancy pursuant to the provisions of this chapter. No hospital is liable for its failure or refusal to participate in such termination if the hospital has adopted a policy not to admit patients for the purpose of terminating pregnancies as provided in this chapter.

36-11-70. Refusal to dispense medication.

No pharmacist may be required to dispense medication if there is reason to believe that the medication would be used to:

(1) Cause an abortion; or

(2) Destroy an unborn child as defined in subdivision 22-1-2(50A); or

(3) Cause the death of any person by means of an assisted suicide, euthanasia, or mercy killing.

No such refusal to dispense medication pursuant to this section may be the basis for any claim for damages against the pharmacist or the pharmacy of the pharmacist or the basis for any disciplinary, recriminatory, or discriminatory action against the pharmacist.

Tennessee

Tennessee Code 39-15-204. Right to refuse to perform abortions.

No physician shall be required to perform an abortion and no person shall be required to participate in the performance of an abortion. No hospital shall be required to permit abortions to be performed therein. [Acts 1989, ch. 591, § 1.]

39-15-205. Right of hospitals to refuse to accept abortion patients.

No section of this part shall be construed to force a hospital to accept a patient for an abortion.
[Acts 1989, ch. 591, § 1.]

68-34-104. Contraceptives — Availability — Information — Religious belief. —

(5) No private institution or physician, nor any agent or employee of such institution or physician, shall be prohibited from refusing to provide contraceptive procedures, supplies, and information when such refusal is based upon religious or conscientious objection, and no such institution, employee, agent, or physician shall be held liable for such refusal;

Texas

Vernon's Civil Statutes Art. 4512.7. Right not to perform abortions.

Sec. 1. Personnel Not Required to Participate in Abortion Procedures.

A physician, nurse, staff member, or employee of a hospital or other health care facility who objects to performing or participating, directly or indirectly, in an abortion procedure may not be required to perform or participate, directly or indirectly, in an abortion procedure.

Sec. 2. Private Hospitals Not Required to Make Facilities Available.

A private hospital or private health care facility may not be required to make its facilities available for the performance of an abortion unless a physician determines that the life of the mother is immediately endangered.

Sec. 3. Discrimination Prohibited.

A hospital or health care facility may not discriminate in any manner against a physician, nurse, staff member, or employee or against an applicant for such positions, who refuses to perform or participate in an abortion procedure. No physician, nurse, staff person, or employee shall be discriminated against for their willingness to participate in abortion procedures at other facilities. An educational institution may not discriminate against applicants for admission or employment as students, interns, or residents because of their attitudes concerning

abortion.

Sec. 4. Remedies.

A person whose rights under this Act are violated may sue a hospital, health care facility, or educational institution in district court in the county where the hospital, facility, or institution is located to enjoin further violations of this Act and for such affirmative relief as may be appropriate, including, but not limited to, admission or reinstatement of employment with back pay plus 10 percent interest, and any other relief necessary to ensure compliance with the provisions of this Act.
Acts 1977, 65th Leg., p. 1870, ch. 745, eff. Aug. 29, 1977.

Utah

Utah Code 76-7-306. Physician, hospital employee, or hospital not required to participate in abortion.

(1) A physician, or any other person who is a member of or associated with the staff of a hospital, or any employee of a hospital in which an abortion has been authorized, who states an objection to an abortion or the practice of abortion in general on moral or religious grounds shall not be required to participate in the medical procedures which will result in the abortion, and the refusal of any person to participate shall not form the basis of any claim for damages on account of the refusal or for any disciplinary or recriminatory action against such person, nor shall any moral or religious scruples or objections to abortions be the grounds for any discrimination in hiring in this state.

(2) Nothing in this part shall require any private and/or denominational hospital to admit any patient for the purpose of performing an abortion.
Amended by Chapter 20, 1995 General Session

78-11-24. Act or omission preventing abortion not actionable.
A cause of action shall not arise, and damages shall not be awarded, on behalf of any person, based on the claim that but for the act or omission of another, a person would not have been permitted to have been born alive but would have been aborted.
Enacted by Chapter 167, 1983 General Session

Virginia

Code of Virginia § 18.2-75 Conscience clause

Nothing in §§18.2-72, 18.2-73 or §18.2-74 shall require a hospital or other medical facility or physician to admit any patient under the provisions hereof for the purpose of performing an abortion. In addition, any person who shall state in writing an objection to any abortion or all abortions on personal, ethical, moral or religious grounds shall not be required to participate in procedures which will result in such abortion, and the refusal of such person, hospital or other medical facility to participate therein shall not form the basis of any claim for damages on account of such refusal or for any disciplinary or recriminatory action against such person, nor shall any such person be denied employment because of such objection or refusal. The written objection shall remain in effect until such person shall revoke it in writing or terminate his association with the facility with which it is filed.

Washington

Revised Code of Washington RCW 9.02.150 Refusing to perform

No person or private medical facility may be required by law or contract in any circumstances to participate in the performance of an abortion if such person or private medical facility objects to so doing. No person may be discriminated against in employment or professional privileges because of the person's participation or refusal to participate in the termination of a pregnancy.

Washington Death With Dignity Act RCW 70.245.190

Note: This law legalizes assisted suicide. It includes the following protection of conscience provisions. Note that, under Section 2(a), objecting hospitals can prohibit assisted suicide on their premises, but under 2(d)ii are forced to permit health care workers on their premises to refer patients for assisted suicide.

Immunities — Basis for prohibiting health care provider from participation — Notification — Permissible sanctions. (Effective March 5, 2009.)

(1) Except as provided in RCW 70.245.200 and subsection (2) of this section:

(a) A person shall not be subject to civil or criminal liability or professional disciplinary action for participating in good faith compliance with this chapter. This includes being present when a qualified patient takes the prescribed medication to end his or her life in a humane and dignified manner;

(b) A professional organization or association, or health care provider, may not subject a person to censure, discipline, suspension, loss of license, loss of privileges, loss of membership, or other penalty for participating or refusing to participate in good faith compliance with this chapter;

(c) A patient's request for or provision by an attending physician of medication in good faith compliance with this chapter does not constitute neglect for any purpose of law or provide the sole basis for the appointment of a guardian or conservator; and

(d) Only willing health care providers shall participate in the provision to a qualified patient of medication to end his or her life in a humane and dignified manner. If a health care provider is unable or unwilling to carry out a patient's request under this chapter, and the patient transfers his or her care to a new health care provider, the prior health care provider shall transfer, upon request, a copy of the patient's relevant medical records to the new health care provider.

(2)(a) A health care provider may prohibit another health care provider from participating under chapter 1, Laws of 2009 on the premises of the prohibiting provider if the prohibiting provider has given notice to all health care providers with privileges to practice on the premises and to the general public of the prohibiting provider's policy regarding participating under chapter 1, Laws of 2009. This subsection does not prevent a health care provider from providing health care services to a patient that do not constitute participation under chapter 1, Laws of 2009.

(b) A health care provider may subject another health care provider to the sanctions stated in this subsection if

the sanctioning health care provider has notified the sanctioned provider before participation in chapter 1, Laws of 2009 that it prohibits participation in chapter 1, Laws of 2009:

(i) Loss of privileges, loss of membership, or other sanctions provided under the medical staff bylaws, policies, and procedures of the sanctioning health care provider if the sanctioned provider is a member of the sanctioning provider's medical staff and participates in chapter 1, Laws of 2009 while on the health care facility premises of the sanctioning health care provider, but not including the private medical office of a physician or other provider;

(ii) Termination of a lease or other property contract or other nonmonetary remedies provided by a lease contract, not including loss or restriction of medical staff privileges or exclusion from a provider panel, if the sanctioned provider participates in chapter 1, Laws of 2009 while on the premises of the sanctioning health care provider or on property that is owned by or under the direct control of the sanctioning health care provider; or

(iii) Termination of a contract or other nonmonetary remedies provided by contract if the sanctioned provider participates in chapter 1, Laws of 2009 while acting in the course and scope of the sanctioned provider's capacity as an employee or independent contractor of the sanctioning health care provider. Nothing in this subsection (2)(b)(iii) prevents:

(A) A health care provider from participating in chapter 1, Laws of 2009 while acting outside the course and scope of the provider's capacity as an employee or independent contractor; or

(B) A patient from contracting with his or her attending physician and consulting physician to act outside the course and scope of the provider's capacity as an employee or independent contractor of the sanctioning health care provider.

(c) A health care provider that imposes sanctions under (b) of this subsection shall follow all due process and other procedures the sanctioning health care provider may have that are related to the imposition of sanctions on another health care provider.

(d) For the purposes of this subsection:

(i) "Notify" means a separate statement in writing to the health care provider specifically informing the health care provider before the provider's participation in chapter 1, Laws of 2009 of the sanctioning health care provider's policy about participation in activities covered by this chapter.

(ii) "Participate in chapter 1, Laws of 2009" means to perform the duties of an attending physician under RCW 70.245.040, the consulting physician function under RCW 70.245.050, or the counseling function under RCW 70.245.060. "Participate in chapter 1, Laws of 2009" does not include:

(A) Making an initial determination that a patient has a terminal disease and informing the patient of the medical prognosis;

(B) Providing information about the Washington death with dignity act to a patient upon the request of the patient;

(C) Providing a patient, upon the request of the patient, with a referral to another physician; or

(D) A patient contracting with his or her attending physician and consulting physician to act outside of the course

and scope of the provider's capacity as an employee or independent contractor of the sanctioning health care provider.

(3) Suspension or termination of staff membership or privileges under subsection (2) of this section is not reportable under RCW 18.130.070. Action taken under RCW 70.245.030, 70.245.040, 70.245.050, or 70.245.060 may not be the sole basis for a report of unprofessional conduct under RCW 18.130.180.

(4) References to "good faith" in subsection (1)(a), (b), and (c) of this section do not allow a lower standard of care for health care providers in the state of Washington.

[2009 c 1 § 19 (Initiative Measure No. 1000, approved November 4, 2008).]

West Virginia

West Virginia Code §16-2F-7. Article not to be construed to require abortion.

Nothing in this article, nor in any order issued pursuant thereto, shall require that a physician perform an abortion or that any person be required to assist in the performance of an abortion if such physician or person, for any reason, medical or otherwise, does not wish to perform or assist in such abortion.

Wisconsin

Wisconsin Statutes 253.09 Abortion refused; no liability; no discrimination.

253.09(1) No hospital shall be required to admit any patient or to allow the use of the hospital facilities for the purpose of performing a sterilization procedure or removing a human embryo or fetus. A physician or any other person who is a member of or associated with the staff of a hospital, or any employee of a hospital in which such a procedure has been authorized, who shall state in writing his or her objection to the performance of or providing assistance to such a procedure on moral or religious grounds shall not be required to participate in such medical procedure, and the refusal of any such person to participate therein shall not form the basis of any claim for damages on account of such refusal or for any disciplinary or recriminatory action against such person.

253.09(2) No hospital or employee of any hospital shall be liable for any civil damages resulting from a refusal to perform sterilization procedures or remove a human embryo or fetus from a person, if such refusal is based on religious or moral precepts.

253.09(3) No hospital, school or employer may discriminate against any person with regard to admission, hiring or firing, tenure, term, condition or privilege of employment, student status or staff status on the ground that the person refuses to recommend, aid or perform procedures for sterilization or the removal of a human embryo or fetus, if the refusal is based on religious or moral precepts.

253.09(4) The receipt of any grant, contract, loan or loan guarantee under any state or federal law does not authorize any court or any public official or other public authority to require: 253.09(4)(a) (a) Such individual to perform or assist in the performance of any sterilization procedure or removal of a human embryo or fetus if the individual's performance or assistance in the performance of such a procedure would be contrary to the individual's religious beliefs or moral convictions; or 253.09(4)(b) (b) Such entity to:

(b)1. Make its facilities available for the performance of any sterilization procedure or removal of a human embryo or fetus if the performance of such a procedure in such facilities is prohibited by the entity on the basis of religious beliefs or moral convictions; or

(b)2. Provide any personnel for the performance or assistance in the performance of any sterilization procedure or assistance if the performance or assistance in the performance of such procedure or the removal of a human embryo or fetus by such personnel would be contrary to the religious beliefs or moral convictions of such personnel.

253.09 - ANNOT.History: *1973 c. 159; Stats. 1973 s. 140.275; 1973 c. 336 s. 54; Stats. 1973 s. 140.42; 1979 c. 34; 1993 a. 27 s. 222; Stats. 1993 s. 253.09; 1993 a. 482.*

441.06(6)
(6) No person licensed as a registered nurse under this section is liable for any civil damages resulting from his or her refusal to perform sterilization procedures or to remove or aid in the removal of a human embryo or fetus from a person, if the refusal is based on religious or moral precepts.
441.06 - ANNOT. History: 1971 c. 125, 215; 1973 c. 159; 1975 c. 39, 199; 1977 c. 29, 164; 1979 c. 34, 162; 1987 a. 27, 264; 1991 a. 39.

448.03(5)
(5) Civil liability; certain medical procedures and reports.
448.03(5)(a)
(a) No person licensed or certified under this subchapter shall be liable for any civil damages resulting from such person's refusal to perform sterilization procedures or to remove or aid in the removal of a human embryo or fetus from a person if such refusal is based on religious or moral precepts.

Wyoming

35-6-105. Private institutions not required to perform abortions; no liability for refusal to perform abortion.

No private hospital, clinic, institution or other private facility in this state is required to admit any patient for the purpose of performing an abortion nor to allow the performance of an abortion therein. The private hospital, clinic, institution or any other private facility shall inform any prospective patient seeking an abortion of its policy not to participate in abortion procedures. No cause of action shall arise against any private hospital, clinic, institution or any other private facility for refusing to perform or allow an abortion.

35-6-106. Persons not required to perform abortion; no civil liability for refusal; sanctions or discrimination for refusal forbidden.
No person shall, in any way, be required to perform or participate in any abortion or in any act or thing which accomplishes or performs or assists in accomplishing or performing a human miscarriage, euthanasia or any other death of a human fetus or human embryo. The refusal of any person to do so is not a basis for civil liability to any person. No hospital, governing board or any other person, firm, association or group shall terminate the employment of, alter the position of, prevent or impair the practice or occupation of, or impose any other sanction or otherwise discriminate against any person who refuses to perform or participate in any abortion or in any act or thing which accomplishes, performs or assists in accomplishing or performing a human miscarriage, euthanasia or any other death of a human fetus or embryo.

GUTTMACHER INSTITUTE

STATE POLICIES IN BRIEF

As of FEBRUARY 1, 2011

Refusing to Provide Health Services

BACKGROUND: Almost every state has a policy explicitly allowing some health care professionals or certain institutions to refuse to provide or participate in abortion, contraceptive services or sterilization services. Even in states without explicit refusal statutes, an individual health care professional's actions may be legally protected by statutes prohibiting discrimination against employees, based on their religious objections. While some of the institutional policies are limited to private, or even religious, health care institutions, others apply to all institutions providing health care. (At the federal level, health care institutions and providers may refuse to participate in abortion services on the basis of their religious or moral beliefs.)

A few states have enacted laws that specifically allow pharmacists or pharmacies to refuse to provide health care due to religious or moral objections. Several other states have broadly worded refusal clause statutes that might protect pharmacists or pharmacies from liability for their refusal. (See Emergency Contraception.)

HIGHLIGHTS:

- 46 states allow some health care providers to refuse to provide abortion services.
  - All of these states permit individual health care providers to refuse to provide abortion services.
  - 45 states allow health care institutions to refuse to provide abortion services, 15 limit the exemption to private health care institutions and 1 state allows only religious health care entities to refuse to provide such care.

- 14 states allow some health care providers to refuse to provide services related to contraception.
  - 9 states allow individual health care providers to refuse to provide services related to contraception
  - 5 states explicitly permit pharmacists to refuse to dispense contraceptives. (5 additional states have broad refusal clauses that do not specifically include pharmacists, but may apply to them.)
  - 1 state explicitly permits pharmacies to refuse to dispense contraceptives.
  - 4 states have broad refusal clauses that do not specifically include pharmacies, but may apply to them.
  - 9 states allow health care institutions to refuse to provide services related to contraception, 6 states limit the exemption to private entities.

- 18 states allow some health care providers to refuse to provide sterilization services.
  - 17 states allow individual health care providers to refuse to provide sterilization services.
  - 16 states allow health care institutions to refuse to provide sterilization services; 4 limit the exemption to private entities.

Pharmacist Conscience Clauses: Laws and Legislation

Updated October 2010

Health provider "refusal clauses" (also known as "conscience clauses") were first enacted in response to the United States Supreme Court's decision in the Roe v. Wade case, 410 U.S. 113 (1973). Roe v. Wade was the landmark decision establishing that most laws against abortion violate a constitutional righy to privacy, overturning all state laws outlawing or restricting abortion. Some states have subsequently proposed legislation and passed laws designed to allow doctors and other direct providers of health care to refuse to perform or assist in an abortion, and hospitals to refuse to allow abortion on their premises. Now, the issue is expanding as pharmacists are refusing to fill emergency contraception and contraception prescriptions. This movement resulted in the term "conscience clause," which gives pharmacists the right to refuse to perform certain services based on a violation of personal beliefs or values. Most of the debate revolves around a pharmacist dispensing emergency contraception. Emergency contraception is used to prevent a pregnancy, not terminate a pregnancy, and is a general term used to describe several different types of birth control pills that are used in increased doses within 72 hours of unprotected intercourse. Emergency contraception is not the same thing as Mifeprex, which is the brand name of mifepristone in the United States and is sometimes referred to as non-surgical abortion, medical abortion, or RU-486. Pharmacists do not play a role in administering these medications.

In some states, legislators are introducing bills that would explicitly grant pharmacists the right to refuse to dispense drugs related to contraception on moral grounds. Other state legislators are introducing legislation that would require pharmacies to fill any legal prescription for birth control, much like Governor Blagojevich's emergency rule in Illinois, which requires pharmacies to provide the morning after pill. Four States (**Arkansas, Georgia, Mississippi,** and **South Dakota**) have passed laws allowing a pharmacist to refuse to dispense emergency contraception drugs. **Illinois** passed an emergency rule that requires a pharmacist to dispense FDA approved contraception. **Colorado, Florida**, **Maine** and **Tennesee** have broad refusal clauses that do not specifically mention pharmacists.

California pharmacists have a duty to dispense prescriptions and can only refuse to dispense a prescription, including contraceptives, when their employer approves the refusal and the woman can still access her prescription in a timely manner.

New Jersey's law (effective November 2007), prohibits pharmacists for refusing to fill prescriptions solely on moral, religious or ethical grounds.

Conscience Clause Laws (allowing the refusal to fill)

Arkansas § 20-9-1001 allows certain individuals or entities to refuse to perform abortion services and provide or dispense contraceptives in all or most circumstances.

California SB 644 Chapter No. 417 prohibits a health care licentiate from obstructing a patient in obtaining a prescription drug or device and would require the licentiate to dispense drugs and devices pursuant to a lawful prescription or order except in specified circumstances, including on ethical, moral, or religious grounds asserted by the licentiate.

Colorado Rev. Stat. 25-6-102 states that no private institution, it employees, or physicians may be held liable for refusing to dispense contraceptive supplies, procedures or information if their refusal is based on a moral or religious objection to such activities.

Florida 2003 Stat. XXIX 381.0051 states that physicians or other people may not be held liable for refusing to dispense contraceptive or family planning devices, services or information.

Georgia Admin. Code § 480-5-.03 provides that a pharmacist shall not be required to fill a prescription for an emergency contraceptive drug; provides that such refusal shall not be the basis for any claim for damages; provides for the duration of the effectiveness of the written objection; provides for related matters; repeals conflicting laws.

Idaho Code § 18-611 provides that no health care professional shall be required to provide any health care service that violates his or her conscience.

Illinois requires pharmacies to dispense contraception. Gov. Rod Blagojevich (D) issued emergency rules that require pharmacies in the state to dispense FDA-approved contraceptives. If the pharmacy does not have the drug or a suitable substitute in stock, then the pharmacy must order the medication through standard procedures, transfer the prescription to another local pharmacy or return the prescription to the patient. The emergency rules will be in effect only for 150 days, after which the state is expected to begin the normal rulemaking process in order to make the requirement rule permanent.

Maine Rev. Stat. tit. 22, 1903 (1973) gives physicians and agents of medical and related facilities the right to refuse to provide family planning services when such actions would interfere with moral or religious beliefs.

Mississippi Code Ann. § 41-41-215 permits health care providers, including pharmacists or other pharmacy employees, counselors, social workers, health insures and health care facilities to refuse to provide [any] medical services, including counseling and referral, on religious or ethical grounds (SB 2619).

South Dakota Codified Laws § 36-11-70 allows pharmacists the right to refuse to provide services.

Tennessee Code Ann. 68-34-104 allows physicians or any agent of such an entity to refuse to offer contraceptive services, supplies, or information if it interferes with a moral or religious belief. States that physicians or other agents may not be held liable for this refusal.

Washington RCW 48.43.065 allows for no individual health care provider, religiously sponsored carrier, or health care facility be required by law or contract in any circumstances to participate in the provision of or payment for a specific service if they object to so doing for reason of conscience or religion.
Also: On June 1, 2006 the Washington Board of Pharmacy approved proposed rule language regarding a pharmacist's responsibilities in dispensing a lawful prescription. This language would amend **Washington Admin. Code 246-863-095** to prohibit a pharmacist from delegating the decision not to dispense prescriptions for any reason.

Obama administration replaces controversial 'conscience' regulation for health-care workers

By Rob Stein
Washington Post Staff Writer
Friday, February 18, 2011; 1:27 PM

The Obama administration rescinded most of a federal regulation Friday designed to protect health workers who refuse to provide care they find objectionable on personal or religious grounds.

Feb. 28, 2009: Health Workers' 'Conscience' Rule Set to Be Voided
View All Items In This Story

The Health and Human Services Department eliminated nearly the entire rule put into effect by the administration of President George W. Bush during his final days in office that was widely interpreted as allowing such workers to opt out of a broad range of medical services, such as providing the emergency contraceptive Plan B, treating gay men and lesbians and prescribing birth control to single women.

Calling the Bush-era rule "unclear and potentially overbroad in scope," the new, much narrower version essentially leaves in place only long-standing federal protections for workers who object to performing abortions or sterilizations. It also retains the Bush rule's formal process for workers to file complaints.

"The department supports clear and strong conscience protections for health-care providers who are opposed to performing abortions," the rule states.

The new regulation, which goes into effect in 30 days, also ensures that no federal money can be used to "support coercive or discriminatory policies or practices in violation of federal law."

Advertisement

The Bush regulation, if enforced, would have cut off federal funding for thousands of entities, including state and local governments, hospitals, health plans and clinics, if they did not accommodate doctors, nurses, pharmacists or other employees who refused to participate in care they felt violated their personal, moral or religious beliefs.

The rule was sought by conservative groups, which argued that workers were increasingly being fired, disciplined or penalized in other ways for trying to exercise their "right of conscience."

Health Workers' 'Conscience' Rule Set to Be Voided

By Rob Stein
Washington Post Staff Writer
Saturday, February 28, 2009

The Obama administration's move to rescind broad new job protections for health workers who refuse to provide care they find objectionable triggered an immediate political storm yesterday, underscoring the difficulties the president faces in his effort to find common ground on anything related to the explosive issue of abortion.

The administration's plans, revealed quietly with a terse posting on a federal Web site, unleashed a flood of heated reaction, with supporters praising the proposal as a crucial victory for women's health and reproductive rights, and opponents condemning it as a devastating setback for freedom of religion.

Perhaps most tellingly, the move drew deep disappointment from some conservatives who have been hopeful about working with the administration to try to defuse the debate on abortion, long one of the most divisive political issues.

"This is going to be a political hit for the administration," said Joel Hunter, senior pastor of the Northland Church in Longwood, Fla., whom Obama recently named to his Advisory Council on Faith-Based and Neighborhood Partnerships. "This will be one of those things that kind of says, 'I knew it. They talk about common ground, but really what they want is their own way.' "

Administration officials stressed that the proposal will be subject to 30 days of public comment, which could result in a compromise. They said they remain committed to seeking a middle ground but acknowledged that will not always be possible.

"We recognize we are not going to be able to agree on every issue," said an administration official, who spoke on the condition of anonymity because the process has just begun. "But there remains a substantive area of common ground, and we continue to believe we can make progress and will make progress."

The Rev. Joel Hunter said the move raises skepticism about the White House's talk of common ground. (John Raoux - AP)

"Conscience Rules" Ignore Patient

By Sally Steenland
senior policy adviser, Center for American Progress

What happens when consciences collide? In the field of health care, the provider's conscience is given great consideration. For over 30 years, we've had federal and state laws that allow health care providers to refuse to provide certain treatments that they object to on religious or moral grounds. In fact, the public debate is usually framed as one of provider conscience vs. patient access. The problem is that this frame ignores the conscience of the patient.

Let's say a patient needs a prescription for contraception. She is a mother of two and takes birth control pills in order to be a spiritually and emotionally responsible parent. Her decision is one of conscience. When a pharmacist refuses to fill her prescription for religious reasons, he or she is defying the patient's conscience in favor of his or her own. That is wrong.

In a pluralistic democracy where people hold different beliefs and values, one conscience should never trump all others. Instead, we must find ways to negotiate conflicting consciences so that religious liberty is respected and health care is safeguarded.

The conflict over conscience refusals has been in the news lately because the Obama administration is rescinding a harmful Bush rule that took effect his last day in office. The Bush rule, which is currently in effect, goes too far in expanding provider refusals.

The rule jeopardizes patient health and well-being, and allows the religious beliefs of the provider to be imposed on the conscience of the patient. And not just that. The rule is also unnecessary because there are existing laws on the books to protect the religious beliefs of health care providers. The good news is that the new rule, soon to be issued by the Obama administration, should set a fairer balance between the rights, needs and responsibilities of providers and patients.

In some areas, this is not overly difficult to do. In large pharmacies, medical practices, and hospitals, for instance, provisions can be made to meet the needs of the patient and of the health care provider. However, in areas where there are fewer providers, those who refuse to provide treatment place a great burden on patients. One could also argue that they place a burden on their own professional conscience and ethical responsibility because of their chosen profession.

It must be said that most of the "conscience" issues being debated involve women's reproductive health, such as abortion, sterilization and contraception. It must also be said that one rarely hears in public debates a clear argument supporting women's moral agency, or conscience, as they make a difficult decision. For some women, the moral decision is to continue their pregnancy. For others, the moral decision is to have an abortion.

It is important to acknowledge this reality if we want to move forward and find real solutions and common ground. It is also important to look beyond reproductive health issues regarding conscience clauses, since other issues, such as end-of-life care and genetic technologies, increasingly present difficult moral choices.

As we debate and decide these issues, it is important not to demonize opposing views or claim a monopoly on morality. It is also important to put systems in place so that cases are not decided on an ad-hoc basis which can jeopardize patient care. Finally, it is important to be persistent in our search for solutions and common ground, no matter how difficult it may

Protections Set for Antiabortion Health Workers

Opponents Denounce Proposed Regulation Allowing Federal Officials to Pull Funding

The Bush administration yesterday announced plans to implement a controversial regulation designed to protect doctors, nurses and other health-care workers who object to abortion from being forced to deliver services that violate their personal beliefs.

THIS STORY

The rule empowers federal health officials to pull funding from more than 584,000 hospitals, clinics, health plans, doctors' offices and other entities if they do not accommodate employees who refuse to participate in care they find objectionable on personal, moral or religious grounds.

Advertisement

"People should not be forced to say or do things they believe are morally wrong," Health and Human Services Secretary Mike Leavitt said. "Health-care workers should not be forced to provide services that violate their own conscience."

The proposed regulation, which could go into effect after a 30-day comment period, was welcomed by conservative groups, abortion opponents and others as necessary to safeguard workers from being fired, disciplined or penalized in other ways. Women's health advocates, family planning advocates, abortion rights activists and others, however, condemned the regulation, saying it could create sweeping obstacles to a variety of health services, including abortion, family planning, end-of-life care and possibly a wide range of scientific research.

"It's breathtaking," said Robyn S. Shapiro, a bioethicist and lawyer at the Medical College of Wisconsin. "The impact could be enormous."

The regulation drops the most controversial language in a draft version that would have explicitly defined abortion for the first time in a federal law or regulation as anything that interfered with a fertilized egg after conception. But both supporters and critics said the regulation remains broad enough to protect pharmacists, doctors, nurses and others from providing birth control pills, Plan B emergency contraception and other forms of

Birth Control Fears Addressed

HHS Chief Says Draft Rule Is Not Redefining Abortion

By Rob Stein
Washington Post Staff Writer
Saturday, August 9, 2008

Health and Human Services Secretary Mike Leavitt has denied that a controversial draft regulation would redefine common birth control methods as abortion and protect the rights of doctors and other health-care workers who refuse to provide them.

In a statement posted on his blog on Thursday, Leavitt appeared to try to allay fears that the proposed regulation would create sweeping new obstacles to women seeking a variety of commonly used contraceptives, such as birth control pills and the Plan B emergency contraceptive.

"An early draft of the regulation found its way into public circulation before it had reached my review," Leavitt said. "It contained words that lead some to conclude my intent is to deal with the subject of contraceptives, somehow defining them as abortion. Not true."

Leavitt's statement, however, failed to alleviate concerns among members of Congress, family planning advocates, women's health activists and others.

"It does not alleviate my concerns at all," said Jill Morrison of the National Women's Law Center, noting that a major section of the draft regulation titled "The Problem" cites state laws designed to make sure that women have access to birth control pills and Plan B. "I will wait to see if a 'clean' version of the rule is released for publication in the Federal Register, and then I will believe it."

Advertisement

The draft regulation would deny federal funding to any hospital, clinic, health plan or other entity that does not accommodate employees who want to opt out of participating in care that runs counter to their personal convictions.

A Bush administration proposal aimed at protecting health-care workers who object to abortion, and to birth-control methods they consider tantamount to abortion, has escalated a bitter debate over the balance between religious freedom and patients' rights.

The Department of Health and Human Services is reviewing a draft regulation that would deny federal funding to any hospital, clinic, health plan or other entity that does not accommodate employees who want to opt out of participating in care that runs counter to their personal convictions, including providing birth-control pills, IUDs and the Plan B emergency contraceptive.

Advertisement

Conservative groups, abortion opponents and some members of Congress are welcoming the initiative as necessary to safeguard doctors, nurses and other health workers who, they say, are increasingly facing discrimination because of their beliefs or are being coerced into delivering services they find repugnant.

But the draft proposal has sparked intense criticism by family planning advocates, women's health activists, and members of Congress who say the regulation would create overwhelming obstacles for women seeking abortions and birth control.

There is also deep concern that the rule could have far-reaching, but less obvious, implications. Because of its wide scope and because it would -- apparently for the first time -- define abortion in a federal regulation as anything that affects a fertilized egg, the regulation could raise questions about a broad spectrum of scientific research and care, critics say.

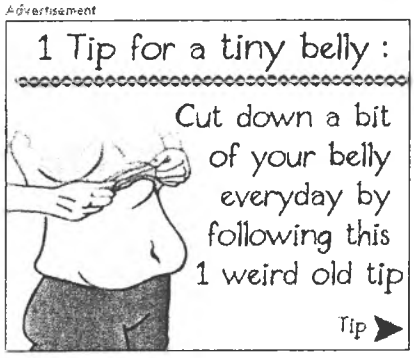
The Bush administration yesterday granted sweeping new protections to health workers who refuse to provide care that violates their personal beliefs, setting off an intense battle over opponents' plans to try to repeal the measure.

Critics began consulting with the incoming Obama administration on strategies to reverse the regulation as quickly as possible while supporters started mobilizing to fight such efforts.

The far-reaching regulation cuts off federal funding for any state or local government, hospital, health plan, clinic or other entity that does not accommodate doctors, nurses, pharmacists and other employees who refuse to participate in care they find ethically, morally or religiously objectionable. It was sought by conservative groups, abortion opponents and others to safeguard workers from being fired, disciplined or penalized in other ways.

But women's health advocates, family planning proponents, abortion rights activists and some members of Congress condemned the regulation, saying it will be a major obstacle to providing many health services, including abortion, family planning, infertility treatment, and end-of-life care, as well as possibly a wide range of scientific research.

Advertisement



The 127-page rule, which was issued just in time to take effect in the 30 days before the change in administrations, is the latest that the administration is implementing before President Bush's term ends.

The "right of conscience" rule could become one of the first contentious tests for the Obama administration, which could seek to reverse the rule either by initiating a lengthy new rulemaking process or by supporting legislation already pending in Congress.

President-elect Barack Obama's transition team did not specifically address the rule yesterday, but spokesman Nick Shapiro issued a statement that said Obama "will review all eleventh-hour regulations and will address them once he is president." Obama criticized the regulation when it was proposed last summer.

Sen. Patty Murray (D-Wash.), who with Sen. Hillary Rodham Clinton (D-N.Y.) introduced a bill last month to repeal the rule, said: "We will not allow this rule to stand. It threatens the health and well-being of women and the rights of patients across the country." Similar legislation is pending in the House.

Donna Crane, policy director for NARAL Pro-Choice America, noted that Congress has a

Many doctors believe they have the right not to tell patients about treatments that they object to on moral or religious grounds and to refuse to refer patients elsewhere for the care, according to the first study to examine physicians' views on such situations.

In the survey of 1,144 doctors nationwide, 8 percent said they had no obligation to present all possible options to patients, and 18 percent said they did not have to tell patients about other doctors who provide care they found objectionable.

Based on the findings, the researchers estimate that more than 40 million Americans may be seeing physicians who do not believe that they are obligated to disclose information about legal treatments the doctor objects to, and 100 million have doctors who do not feel the need to refer patients to another provider.

"They are a minority of doctors, but it's fairly substantial minority," said Farr A. Curlin, a bioethicist at the University of Chicago who led the study, published in today's issue of the New England Journal of Medicine.

Advertisement

The survey was prompted by an intense debate over medical workers who refuse to deliver care that runs contrary to their moral or religious beliefs, asserting a "right of conscience" or "right of refusal." Some pharmacists, for example, refuse to fill prescriptions for birth control and emergency contraceptive "morning-after" pills. Some doctors and nurses refuse to participate in abortions, prescribe birth control pills or withdraw or withhold care from dying patients.

The refusals have led to bitter clashes between medical workers and patients around the country. Dozens of states have considered legislation that would either require medical workers to deliver all legal forms of care or protect those who refuse. The issue is expected to intensify as medicine continues to move into controversial areas, such as therapies based on embryonic stem cells.

Curlin and his colleagues mailed 12-page questionnaires to 2,000 physicians from all specialties in 2003 asking them if they had objections to three controversial practices -- sedating dying patients to the point of unconsciousness; prescribing birth control to teenagers without parental consent; and performing abortions after failed contraception.

Of the 1,144 who responded, 17 percent objected to "terminal sedation," 42 percent objected to providing birth control to teens without parents' consent and 52 percent objected to abortion after failed contraception.

A Medical Crisis of Conscience

Faith Drives Some To Refuse Patients Medication or Care

By Rob Stein
Washington Post Staff Writer
Sunday, July 16, 2006; Page A01

In Chicago, an ambulance driver refused to transport a patient for an a
fertility specialists rebuffed a gay woman seeking artificial inseminatio
pharmacist turned away a rape victim seeking the morning-after pill.

Around the United States, health workers and patients are clashing wh
giving care that they feel violates their beliefs, sparking an intense, cor
debate over religious freedom vs. patients' rights.

Legal and political battles have followed. Patients are suing and filing complaints after being spurned. Workers are charging religious discrimination after being disciplined or fired. Congress and more than a dozen states are considering laws to compel workers to provide care -- or, conversely, to shield them from punishment.

Proponents of a "right of conscience" for health workers argue that there is nothing more American than protecting citizens from being forced to violate their moral and religious values. Patient advocates and others point to a deep tradition in medicine of healers having an ethical and professional responsibility to put patients first.

The issue is driven by the rise in religious expression and its political prominence in the United States, and by medicine's push into controversial new areas. And it is likely to intensify as doctors start using embryonic stem cells to treat disease, as more states legalize physician-assisted suicide and as other wrenching issues emerge.

"What constitutes an ethical right of conscience in medicine, and what are the limits?" asked Nancy Berlinger of the Hastings Center, a bioethics think tank. "This keeps getting harder and harder for us."

For Debra Shipley, her duties as a nurse began to conflict with her Christian faith when the county health clinic where she worked near Memphis required she dispense the morning-after pill.

"I felt like my religious liberties were being violated," said Shipley, 49, of Atoka, Tenn. "I could not live with myself if it did it. I answer to God first and foremost."

But Paige Gerson, 37, of Leawood, Kan., believes doctors and nurses should never let their personal values interfere with patient care. Her doctor refused to give her the morning-after pill, citing religious objections.

"I was incredibly angry and just scared to death," Gerson said. "I think it's absolutely wrong

TRANSCRIPT

Right of Conscience
Washington Post staff writer Rob Stein was online to discuss the debate over religious freedom of healthcare workers vs. patients' rights.

Seeking Care, and Refused
Desperate to have a baby, Guadalupe Benitez was hoping her next try would finally work. So Benitez was stunned when a crucial moment arrived in her cycle and her fertility clinic refused to do the insemination procedure.

For Some, There Is No Choice
When the dispatcher called, Stephanie Adamson knew this might be the run she had feared. But it wasn't until her ambulance arrived at the hospital and she saw the words "elective abortion" on the patient's chart that she knew she had to make a choice.

Health Workers' Choice Debated

Proposals Back Right Not to Treat

By Rob Stein
Washington Post Staff Writer

More than a dozen states are considering new laws to protect health workers who do not want to provide care that conflicts with their personal beliefs, a surge of legislation that reflects the intensifying tension between asserting individual religious values and defending patients' rights.

About half of the proposals would shield pharmacists who refuse to fill prescriptions for birth control and "morning-after" pills because they believe the drugs cause abortions. But many are far broader measures that would shelter a doctor, nurse, aide, technician or other employee who objects to any therapy. That might include in-vitro fertilization, physician-assisted suicide, embryonic stem cells and perhaps even providing treatment to gays and lesbians.

Because many legislatures have just convened, advocates on both sides are predicting that the number debating such proposals will increase. At least 18 states are already considering 36 bills.

"It's already a very hot issue," said Edward R. Martin Jr. of the Americans United for Life, who is advising legislators around the country pushing such bills. "I think it's going to get even hotter, for lots of reasons and in lots of places."

Advertisement

The flurry of political activity is being welcomed by conservative groups that consider it crucial to prevent health workers from being coerced into participating in care they find morally repugnant -- protecting their "right of conscience" or "right of refusal."

"This goes to the core of what it means to be an American," said David Stevens, executive director of the Christian Medical & Dental Associations. "Conscience is the most sacred of all property. Doctors, dentists, nurses and other health care workers should not be forced to violate their consciences."

The swell of propositions is raising alarm among advocates for abortion rights, family planning, AIDS prevention, the right to die, gays and lesbians, and others who see the push as the latest manifestation of the growing political power of social conservatives.

"This is a very significant threat to patients' rights in the United States," said Lois Uttley of the MergerWatch project, who is helping organize a conference in New York to plot a counterstrategy. "We need to protect the patient's right to use their own religious or ethical values to make medical decisions."

Both sides agree that the struggle between personal beliefs and professional medical responsibilities is likely to escalate as more states consider approving physician-assisted

BILL NO. SB015

Analysis

This bill would elevate the offenses of furnishing alcohol to persons under the age of 21 (under AS 04.16.051 - AS 04.16.057) if the offense is committed by a sex offender or child kidnapper. For example, if the offense committed under AS 04.16.051 - AS 04.16.057 is a class C felony, the offense would be elevated to a class B felony.

Should this legislation pass, the Department of Corrections has data to support an average of 3.5 convictions per year under the following sections:

Section 1(2): if the underlying offense is a class A misemeanor, a sex offender or child kidnapper committing the offense is guilty of a class C felony and shall be punished as provided in AS 12.55;

3.5 convictions per year represents an increase of 860 mandays per year @ $136.44/da = $117.3/yr

Section 1(3) : if the underlying offense is a class C felony, a sex offender or child kidnapper committing the offense is guilty of a class B felony and shall be punished as provided in AS 12.55.

3.5 convictions per year represents an increase of 2,579 mandays per year @ $136.44/day = $351.9/yr

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 015 \M

Analysis

SB 15 raises one level the severity of offenses for providing alcohol to persons under 21 years of age if the offender is a sex offender or child kidnapper. For example, a nonlicensee who furnishes alcohol to a person under 21 years of age commits a class A misdemeanor for a first offense. SB 15 would make this offense a class C felony if the offender was a sex offender or child kidnapper.

This would have an indeterminate fiscal impact on the Department of Law. Any time an offense is raised from a misdemeanor to a felony there is an impact. Felony prosecutions require more time – for example, a felony requires a grand jury indictment and a jury of 12 persons.

SPONSOR STATEMENT FOR SB 15

"an Act relating to penalties for certain alcohol offenses involving persons under 21 years of age committed by a sex offender or a child kidnapper."

Senate Bill 15 makes providing alcohol for those who are under 21 years of age by people with a history or background as a sex offender an aggravating offense.

If SB 15 is enacted, penalties could increase a violation to a Class B misdemeanor, a class A misdemeanor would be punishable as a class C felony and a class C felony goes to a class B felony.

Currently there are laws against those who would commit each crime separately. However, what is being discovered that those who are providing alcohol to people under 21 have the intent to commit a sexual offense. There have been instances where sex trafficking and sex offenses are preceded by providing alcohol to those under 21 years of age.

SPONSOR STATEMENT FOR SB 17

"An Act classifying certain synthetic cannabinoids as schedule IIA controlled substances; and providing for an effective date."

SB 17 would classify certain synthetic cannabinoids, commonly known as K2 or Spice as a schedule IIA controlled substance.

This new drug is dangerous, cheap and legally available. Sold in smoke shops and gas stations as incense, it is marketed to people who are interested in herbal alternatives to cannabis. Synthetic cannabinoids are inexpensive, accessible and undetectable in drug tests. Here in Alaska, the drug enjoys some popularity amongst North Slope workers, U.S. Military members and students. The U.S. Drug Enforcement Administration, Municipality of Anchorage and the U.S. Military have all taken action to control and prohibit use of this drug.

Synthetic cannabinoid is abused mainly by smoking or prepared as drink. Users experience severe adverse reactions including hallucinations, nausea, vomiting, agitation, and panic attacks. The chemical composition of synthetic cannabinoids is considerably more potent to tetrahydrocannabinol or THC, the active ingredient in marijuana).

11 states have passed legislation classifying synthetic marijuana as a controlled substance. 21 states, including Alaska, have introduced similar legislation. Should SB 17 pass, it will be unlawful to sell, use, purchase, possess, manufacture, transport or deliver synthetic cannabinoids.

MEMORANDUM January 27, 2011

SUBJECT: Sectional Summary - SB 17 (Work Order No. 27-LS0121\B)

TO: Senator Kevin Meyer
Attn: Christine Marasigan

FROM: Gerald P. Luckhaupt
Assistant Revisor

You have requested a sectional summary of the above-described bill. As a preliminary matter, please note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill -- the bill itself is the best statement of its contents.

Section 1 of the bill amends AS 11.71.150(b), by adding certain compounds to the list of Schedule IIA controlled substances contained in that section. The compounds that are being included:

(21) (6aR,10aR)-9-(hydroxymethyl)-6, 6-dimethyl-3-(2-methyloctan-2-yl)-6a,7,10,10a-tetrahydrobenzo[c]chromen-1-ol, also known as HU-210;

(22) (6aS,10aS)-9-(hydroxymethyl)-6, 6-dimethyl-3-(2-methyloctan-2-yl)-6a,7,10,10a-tetrahydrobenzo[c]chromen-1-ol, also known as Dexanabinol or HU-211;

(23) 1-Pentyl-3-(1-naphthoyl)indole, also known as JWH-018;

(24) 1-Butyl-3-(1-naphthoyl)indole, also known as JWH-073;

(25) (2-methyl-1-propyl-1H-indol-3-yl)-1-naphthalenyl-methanone, also known as JWH-015;

(26) 1-pentyl-3-(4-chloro-1-naphthoyl)indole, also known as JWH-398;

(27) 1-pentyl-3-(2-methoxyphenylacetyl)indole, also known as JWH-250;

(28) 1-hexyl-3-(1-naphthoyl)indole, also known as JWH-019;

(29) 1-(2-(4-(morpholinyl)ethyl))-3-(1-naphthoyl)indole, also known as JWH-200;

(30) 2-[(1R,3S)-3-hydroxycyclohexyl]-5-(2-methyloctan-2-yl)phenol, also known as CP 47, 497, and homologues

are commonly known, or have been identified by other states or the federal government, as forms of synthetic marijuana.

Section 2 of the bill provides an effective date.

(Revised 1/27/2011 OMB)

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB017

Analysis

This proposed legislation would add certain synthetic cannabinoids to the schedule IIA list of controlled substances. This bill would become effective immediately upon passage.

The Alaska Scientific Crime Detection Laboratory (Crime Laboratory) provides analysis of suspected controlled substances, issues reports, and provides expert testimony for the state of Alaska. For calendar year 2010 the laboratory received 1,267 requests for controlled substances analysis. A full time position is capable of analyzing 480 requests per year. The Controlled Substances Section of the Crime Lab currently has 2.5 full time staff assigned to it.

Once controlled, it is anticipated that the Crime Laboratory will receive significant requests for analysis related to the newly controlled substances. With the large presence of internet sales, and the ability for manufacturers to rapidly change the substances present in the materials sold, any suspected of containing these newly controlled substances will require scientific analysis at the Crime Laboratory.

This new position would come at an initial cost of $126,800. This includes a starting salary with benefits of $96,000, a work station start up cost of $7,300 for equipment , $2,000 for supplies, and there will be $3,000 in travel funds required for the ongoing training and education necessary for an analyst to maintain their expertise and certifications. There is an expected $5,000 in contractual costs as well, and this position also requires an initial $3,500 to obtain licensing required for the laboratory's LIMS database. Subsequently, there is a yearly 18% maintenance fee for that license. In addition to the above considerations involved with this new position, the Crime Laboratory would be required to obtain the standards necessary to analyze these nine new chemicals and their various isomers. This would be a one-time cost of $10,000.

In addition to the ongoing salary, benefits, and necessary travel costs relative to this position, all positions utilize an ongoing $2,000 for supply needs, and there is an ongoing licensing and maintenance cost of $5,600 per year. Therefore, the initial cost for this position would be $126,800, with a subsequent ongoing cost of $106,600.

BILL NO. SB017

Analysis

This bill adds several chemical forms of Synthetic cannabinoids to Schedule IIA of Alaska's prohibited substance Schedules. Currently, marijuana, a natural form of cannabis, is a Schedule VIA prohibited substance. The anticipated fiscal impact is zero, however, if litigation ensues there will be addition costs in defending this litigation.

(Revised 1/27/2011 OMB)

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 17

Analysis

This legislation makes synthetic cannabinoids a schedule IIA controlled substance. Currently, possession of a schedule IIA is a Class C felony with a possible sentence of 0-2 years. Manufacturing or delivering a schedule IIA controlled substance is a Class B felony with a possible sentence of 0-4 years. The current average daily cost to house an inmate is $136.44. Therefore, housing an offender could cost the department anywhere from $0.0 (no time served) to $199.2 (for a 4-year sentence).

Department of Corrections is unable to determine the fiscal impacts of the passage of this legislation, as we cannot estimate the total number of actual violations that will occur.

Juneau AK 99801

Dear Senator Meyer:

As the Chief of Police for the Fairbanks Police Department, I would like to extend my support of Senate Bill No. 17 "An Act classifying certain synthetic cannabinoids as schedule IIA controlled substances."

According to the U.S. Department of Justice Drug Enforcement Administration, these substances have no known therapeutic use and are known to cause a variety of effects including seizures, hallucinations, psychotic episodes, and non-responsiveness. In addition the Alaska Information Analysis Center (AKIAC) has reported in studies that subjects have reported having difficulties with balance, slurred speech, and being light headed.

These cannabinoids present a significant threat to the safety of Alaska's citizens as long as they remain unclassified. Without this new legislation a person who is under the influence of synthetic cannabinoids while operating a motor vehicle is not in violation of the law. This presents a clear danger to the citizens of Alaska, as someone could potentially be under the influence of a synthetic cannabinoid while driving and experience hallucinations, seizures, or a psychotic episode. This is not a hypothetical situation and the Fairbanks Police Department has already investigated a motor vehicle accident where the driver of the vehicle was having seizures as a result of consuming synthetic cannabinoids.

By classifying synthetic cannabinoids as a schedule II controlled substance, the act of operating a motor vehicle under the influence of a synthetic cannabinoid would become an illegal act. This bill would therefore have a direct impact on the safety of the citizens of the State of Alaska.

Sincerely

Laren Zager
Chief of Police
Fairbanks Police Department

Army punishes 36 for using synthetic pot

SPICE AND K2: U.S. Army Alaska banned head shop product in August.

The Associated Press

(12/21/10 11:33:48)

The U.S. Army Alaska says it has punished 36 soldiers for the use of synthetic marijuana since it banned the substance.

Seven soldiers were tried at courts-martial, and 29 received nonjudicial punishments, the Fairbanks Daily News-Miner reported.

Synthetic marijuana is known as Spice or K2. It's a blend of spices and herbs sprayed with a compound similar to the psychoactive ingredient in marijuana. It's commonly sold in head shops.

Some users think the substance can't be detected in drugs tests. But the Army says its urine tests can now find the chemicals used in Spice.

In March, a 25-year-old Fort Richardson soldier just back from Iraq was convicted of driving under the influence of Spice. He was arrested after driving his Chevrolet Avalanche over three raised medians, into a concrete wall and down a sidewalk with flat tires and a broken axle.

The U.S. Army Alaska banned Spice in August.

It had seen an increase in users with high blood pressure and heart rates admitted to hospitals at Fort Richardson in Anchorage and Fort Wainwright in Fairbanks.

The soldiers have had life-threatening reactions in some cases, the commander of U.S. Army Alaska, Brig. Gen. Raymond Palumbo, wrote in a commentary published in the Fort Richardson and Fort Wainwright newspapers.

"We have no idea what the long-term effects are since the chemicals vary and have not been fully tested," Palumbo wrote. "But we do know that in the short term, bad things happen when people use Spice."

This month, the Anchorage Assembly voted unanimously to make the chemicals illegal in the city as of Jan. 6. It will be a misdemeanor to sell, make, have or use products containing cannabinoids, which are versions of the active ingredients in marijuana. The products are found in convenience stores and tobacco shops in parts of the country where they're not illegal.

In October, state Sen. Kevin Meyer, R-Anchorage, proposed a bill to outlaw Spice after state troopers arrested a Fairbanks man who used the substance, broke into a house, stripped naked and slept in the homeowners' bed. He told troopers God had told him to do so.

The U.S. Drug Enforcement Agency has started a process to outlaw five chemicals commonly used in synthetic marijuana.

Assembly outlaws chemical known as 'synthetic marijuana'

By ROSEMARY SHINOHARA
rshinohara@adn.com
(12/08/10 20:59:04)

A street chemical that authorities say can cause severe reactions will be illegal in Anchorage starting in early January.

The Anchorage Assembly on Tuesday voted unanimously to ban the sale, possession or use of products containing synthetic versions of cannabinoids. The products go by a variety of names such as K2, Spice and Spike, and are found in convenience stores and tobacco shops in parts of the country where they're not illegal.

Cannabinoids, natural and synthetic, are versions of the active ingredients in marijuana.

"These products pose serious and significant health risks up to and including death, and they offer nothing positive to anyone ingesting it," said Assembly member Paul Honeman, a former police officer. Assembly members Honeman, Dick Traini and Mike Gutierrez and Mayor Dan Sullivan sponsored the new city law.

State Sen. Kevin Meyer, R-Anchorage, has pre-filed a legislative bill for consideration next year that would criminalize such products on a statewide basis.

In Anchorage, it will be a misdemeanor to sell, make, have or use products containing cannabinoids starting on Jan. 6.

The Anchorage School District made public its fears about use of the synthetic chemical last April, and said some Anchorage teens have been hospitalized. In October, school district spokeswoman Heidi Embley said regular marijuana is still much more prevalent, and that the district knew of probably only a handful of synthetic cannabinoid cases.

Lawmakers seek ban on Spice, legal synthetic marijuana

SYNTHETIC: Alarming trend sweeps nation, finally gets to Alaska.

By CASEY GROVE
casey.grove@adn.com

(10/20/10 11:41:47)

A new street drug that authorities claim is capable of causing everything from hallucinations and slurred speech to death is sweeping the nation and has made its way to Alaska, according to local police and public officials.

It goes by many names -- Spice, Spike, K2 -- but the new craze among kids, the military and others looking for a high is essentially synthetic marijuana: plant material that can hold any number of various sprayed-on psychotropic compounds.

And for now, it is legal.

State Sen. Kevin Meyer and Anchorage Assembly members Mike Gutierrez and Paul Honeman hope to change that.

The drug can be 600 to 800 times stronger than pot and can cause a physical addiction similar to methamphetamine, Gutierrez said at a press conference Tuesday.

"It's a lot more dangerous than marijuana," Guttierez said. "Your 14-year-old can walk into a convenience store and, right next to the energy drinks, they can buy it."

Meyer has pre-filed a bill for the state Legislature that would criminalize the drug, and Honeman and Gutierrez plan to introduce a resolution to the Assembly Oct. 26 that would ask local retailers to voluntarily remove it from their shelves until the Legislature has a chance to make it illegal.

Until then, the various types of synthetic pot continue to be marketed as incense and sold in convenience stores and tobacco shops across the country. Everywhere, that is, except 10 states that have already criminalized it.

Driving under the influence of synthetic marijuana can lead to an impaired driving arrest with the same penalties as drunken driving, according to local law enforcement. Hallucinations from smoking it can also compel people to commit other crimes, they say.

A 28-year-old Fairbanks man who told Alaska State Troopers he'd smoked synthetic marijuana early Tuesday morning kicked in the door of an unoccupied home on Goldhill Road, took off all of his clothes and went to sleep in a bed, according to a trooper report.

He did it because "God told him to," troopers said.

In a separate case, in March, a Fort Richardson soldier just back from Iraq was convicted of operating a vehicle while under the influence of Spike. He was arrested after driving his Chevrolet Avalanche over three raised medians, into a concrete wall, and then driving down a sidewalk on flat tires and with a broken axle, according to a police report. The 25-year-old man later admitted to

smoking some Spike, according to the police report.

The arresting officer noted some strange behavior in his report.

"I asked him who was drinking and driving and he said, 'You were,'" wrote Officer Earl Ernest in his report. "He then hollered, 'You drink, you drive, you die.' I asked if he was saying he was going to kill me and he said, 'Yes.' He then threw the cell phone he'd been holding."

The man, who later pleaded guilty to driving under the influence, had no alcohol in his system, according to a breath-alcohol test noted in the police report.

"You may not always have a bad trip, so to speak, but if you do, chances are, you're going to end up in the emergency room, you're going to be seeing the EMTs, you're going to be seeing an ER doc," Gutierrez said.

Some Anchorage teens have been hospitalized, according to the Anchorage School District, which publicized its fears about synthetic marijuana use last April. Still, use of drugs like Spice by Anchorage students does not come close to the number of cases of marijuana use, school district spokeswoman Heidi Embley said.

"You could probably count the number of cases on one hand," Embley said.

Gutierrez and Honeman had not yet compiled a list of Anchorage stores selling Spice and similar smokeable products, but they planned to do so in order to notify stores of their upcoming resolution.

Fake Weed, Real Drug: K2 Causing Hallucinations in Teens

By Jeanna Bryner, LiveScience Managing Editor
posted: 03 March 2010 04:46 pm ET

Teens are getting high on an emerging drug called "fake weed," a concoction also known as K2 and "spice" that is also causing hallucinations, vomiting, agitation and other dangerous effects.

In the last month, Dr. Anthony Scalzo, a professor of toxicology at Saint Louis University, has seen nearly 30 cases of teenagers experiencing these adverse effects after smoking the fake weed, a legal substance that reportedly offers a marijuana-like high.

"K2 use is not limited to the Midwest; reports of its use are cropping up all over the country," Scalzo said. "I think K2 is likely a bigger problem than we're aware of at this time." For instance, Atlanta has seen about 12 cases recently.

K2 has been sold since 2006 as incense or potpourri for about $30 to $40 per three gram bag – comparable in cost to marijuana.

"K2 may be a mixture of herbal and spice plant products, but it is sprayed with a potent psychotropic drug and likely contaminated with an unknown toxic substance that is causing many adverse effects," said Scalzo, who also directs the Missouri Regional Poison Control Center.

Origin of K2

This K2 compound was first created in the mid-1990s in the lab of organic chemist John W. Huffman of Clemson University, who studies cannabinoid receptors. He's not sure how the recipe for what is named JWH-018 (his initials) got picked up, but he did publish details on a series of compounds including JWH-018 in a book chapter. Even before that book came out, he recalls learning that in China and Korea people were selling the compound as a plant growth stimulant.

As for where it was first smoked or used as a recreational drug, Huffman thinks perhaps somewhere in Europe.

"Apparently somebody picked it up, I think in Europe, on the idea of doping this incense mixture with the compound and smoking it," Huffman told LiveScience. "You can get very high on it. It's about 10 times more active than THC," the active ingredient in marijuana.

From a chemist's perspective, that means K2 has an affinity for the cannabinoid brain receptor (CB1) that's about 10 times greater than THC. For the less chemically inclined, it means you can smoke a lot less K2 to get just as high.

The compound works on the brain in the same way as marijuana's active ingredient THC, or tetrahydrocannabinol. Both compounds bind to the CB1 receptors, which primarily affect the central nervous system. JWH-018 also binds to the peripheral brain (CB2) receptors, which are involved in the immune system, Huffman said.

Hallucinations and delusions

Since JWH-018 or K2 acts like marijuana, you'd expect to see the same effects, including sleepiness, relaxation, reduced blood pressure, and at high doses, hallucinations and delusions.

While some patients between the ages of 14 and 21 were showing up with hallucinations, other symptoms, such as increased agitation and elevated blood pressure and heart rates, didn't match up with marijuana.

Scalza speculates either another compound is responsible for the nasty side effects, or the concentration of JWH-018 is too high.

To answer this question, Scalzo is having doctors test patients' urine for JWH-018 and other compounds, but he is having trouble getting patients to agree to the test.

"This is *not* something that people are agreeing to," Scalzo said during a telephone interview. "Here's a legal substance that we don't know really that much about that people are putting into their bodies without quality control."

And even though doctors like Scalzo say they'd like to help the teens, that's not enough. "Phenomenally, people are saying no. They're afraid someone is going to find something," though Scalzo has no idea why they'd be afraid.

Dangerous drug

Both Scalzo and Huffman agree the drug is dangerous.

Further testing is needed, but Scalzo says the symptoms, such as fast heart beat, dangerously elevated blood pressure, pale skin and vomiting suggest that K2 is affecting the cardiovascular system of users. It also is believed to affect the central nervous system, causing severe, potentially life-threatening hallucinations and, in some cases, seizures.

"It's like playing Russian roulette. You don't know what it's going to do to you," Huffman said. "You're a potential winner of a Darwin award," referring to the tongue-in-cheek awards given to people who "do a service to humanity by removing themselves from the gene pool."

In addition to the compound being made without strict quality control or any regulation, as far as anyone knows, the compound itself has never been tested on humans. And when it was tested on mice, Huffman said, the animals were euthanized at the end of the experiment, so scientists don't even know how it affects mice long-term. "And mice are not humans," Huffman said.

It's a Dog's Life

Concerned that animals were not being treated as well as they should in some shelters, several state legislatures in the past few years have passed measures to improve shelter practices.

California lawmakers passed the Hayden Shelter Reform Law in 1999 that started the trend. It lengthens the state's previously short holding time—the period before an animal can be euthanized—from 72 hours to six business days. It recommends healthy, non-suffering animals should be euthanized only if they cannot be placed in a suitable home; these would include vicious dogs or those that pose a public health hazard. It also required shelters to release any requested animal to a qualifying non-profit rescue center or adoption group as an alternative to euthanasia.

In 2010, Delaware passed a bill similar to the Hayden Law, making its shelter regulations some of the most comprehensive in the country. The Delaware law requires all shelters to immediately inspect animals for identification and to wait at least three days before putting animals up for adoption or transferring them to another facility so owners have a chance to find lost pets. The law requires shelters to stay open beyond normal business hours so the public has a greater chance to adopt animals. And it requires shelters to post quarterly statistics on their websites regarding intake, adoption, reclamation, transfer and euthanasia rates.

Although the American Veterinary Medical Association has OK'd the use of gas chambers, animal rights groups assert they are cruel and unnecessarily frightening to dogs and cats. They have advocated for more humane methods, usually intravenous injection of sodium pentobarbital.

In the past two years, Georgia, Illinois, Louisiana, New Mexico, New York and West Virginia passed legislation that changed their euthanasia standards, joining the 13 other states that ban the use of gas chambers for animals.

Synthetic Pot Peril

Synthetic cannabinoids—commonly known as "Spice," "K2," "Genie," "Yucatan Fire," "Sence," "Smoke," "Skunk" and "Zohai" —have become a popular legal alternative to marijuana. Until now, that is. At least ten states outlawed the drug this year.

The drug is sprayed onto dried herbs, marketed as "novelty herbal incense" or potpourri, and then smoked or ingested by consumers. It produces a high similar to marijuana and is sold in local convenience stores and over the Web. Although the product labels often read "not for human consumption," abuse of these substances appears to be increasing. The American Association of Poison Control Centers reports that, as of Sept. 27, more than 1,503 calls have been made to poison centers for symptoms such as racing heartbeat, elevated blood pressure and nausea. This is up from a total of only 14 calls in 2009.

There also have been reports linking use of these drugs to hallucinations, seizures and even death. After a Minnesota teenager ended up in the hospital from using K2, Minnesota Senator Kathy Sieben announced plans to introduce legislation next session. She says protecting kids by outlawing these substances will be a top priority.

Kansas was the first state to pass legislation this year banning synthetic cannabinoids. Nine other states have passed similar measures making it illegal to possess, use, manufacture or sell the substances. Bills are pending in at least four other states as of the end of September.

Other action at the state level includes administrative bans in Arkansas, Hawaii, Iowa and North Dakota. The Hawaii Narcotics Enforcement Division, for example, applied an emergency ban on "chemicals in Spice/K2." The ban is temporary, pending action by the Hawaii Legislature in the 2011 session. And in Idaho, a newly formed advisory committee is reviewing whether synthetic cannabinoids should be added to the list of controlled substances. They will make a recommendation to the Legislature before the 2011 session begins.

BANS ON SYNTHETIC CANNABINOIDS

U.S. Department of Justice

NEWS RELEASE NEWS RELEASE

November 24, 2010

DEA MOVES TO EMERGENCY CONTROL SYNTHETIC MARIJUANA

Agency Will Study Whether To Permanently Control Five Substances

WASHINGTON, D.C. – The United States Drug Enforcement Administration (DEA) is using its emergency scheduling authority to temporarily control five chemicals (JWH-018, JWH-073, JWH-200, CP-47,497, and cannabicyclohexanol) used to make "fake pot" products. Except as authorized by law, this action will make possessing and selling these chemicals or the products that contain them illegal in the U.S. for at least one year while the DEA and the United States Department of Health and Human Services (DHHS) further study whether these chemicals and products should be permanently controlled.

A Notice of Intent to Temporarily Control was published in the *Federal Register* today to alert the public to this action. After no fewer than 30 days, DEA will publish in the *Federal Register* a Final Rule to Temporarily Control these chemicals for at least 12 months with the possibility of a six-month extension. They will be designated as Schedule I substances, the most restrictive category, which is reserved for unsafe, highly abused substances with no medical usage.

Over the past year, smokable herbal blends marketed as being "legal" and providing a marijuana-like high, have become increasingly popular, particularly among teens and young adults. These products consist of plant material that has been coated with research chemicals that mimic THC, the active ingredient in marijuana, and are sold at a variety of retail outlets, in head shops and over the Internet. These chemicals, however, have not been approved by the FDA for human consumption and there is no oversight of the manufacturing process. Brands such as "Spice," "K2," "Blaze," and "Red X Dawn" are labeled as incense to mask their intended purpose.

Since 2009, DEA has received an increasing number of reports from poison centers, hospitals and law enforcement regarding these products. Fifteen states have already taken action to control one or more of these chemicals. The Comprehensive Crime Control Act of 1984 amends the Controlled Substances Act (CSA) to allow the DEA Administrator to emergency schedule an abused, harmful, non-medical substance in order to avoid an imminent public health crisis while the formal rule-making procedures described in the CSA are being conducted.

"The American public looks to the DEA to protect its children and communities from those who would exploit them for their own gain," said DEA Acting Administrator Michele M. Leonhart. "Makers of these harmful products mislead their customers into thinking that 'fake pot' is a harmless alternative to illegal drugs, but that is not the case. Today's action will call further attention to the risks of ingesting unknown compounds and will hopefully take away any incentive to try these products."

CLERK'S OFFICE
AMENDED AND APPROVED
Date: 12-7-10

Submitted by: ASSEMBLY CHAIR TRAINI, MAYOR DAN SULLIVAN, AND ASSEMBLY MEMBERS HONEMAN AND GUTIERREZ
Prepared by: Dept. of Law
For reading: December 7, 2010

ANCHORAGE, ALASKA
AO No. 2010-87(S)

AN ORDINANCE AMENDING ANCHORAGE MUNICIPAL CODE CHAPTER 8.35 TO PROHIBIT THE MANUFACTURE, ASSEMBLY, DISTRIBUTION, MARKETING, SALE, USE OR POSSESSION OF SUBSTANCES CONTAINING SYNTHETIC CANNABINOIDS, TO PROHIBIT THE SALE OR POSSESSION OF PARAPHERNALIA RELATED TO THE USE OF SYNTHETIC CANNABINOIDS, TO PROVIDE PENALTIES, AND AMENDING SECTION 14.60.030 TO PROVIDE FOR CIVIL PENALTIES.

WHEREAS, the Municipality is aware that substances containing synthetic cannabinoids were and are manufactured, or assembled for, or marketed, sold or offered for sale to, residents of the Municipality, including minors; and

WHEREAS, local law enforcement personnel and "first responders" indicate there is an increased use of synthetic cannabinoids, currently marketed and sold under a variety of names, including "K2", "Spice", "Black Mamba", "Blue Pearl", "Genie", "DaScents", "Spike", "Space" and "Zohai"; and

WHEREAS, some users of the synthetic cannabinoids endanger the public by operating vehicles while under the influence and endanger the welfare of first responders; and

WHEREAS, some users experience severe reactions, resulting in unconsciousness, seizures, and hospitalization; and

WHEREAS, users of the drug report the effects are similar to marijuana and LSD usage, including blurred vision, extremely elevated blood pressure, irregular heart rates, hallucinations, delusions, vomiting, euphoria, "highs", and disturbing side effects including feelings of excruciating pain, agitation and loss of control; and

WHEREAS, representatives of businesses selling the substance indicate it is available to minors as well as adults; and

WHEREAS, products containing synthetic cannabinoids are not tested by the Food and Drug Administration (U.S. Department of Agriculture) or other governmental regulatory agency for human consumption and may contain chemicals detrimental to the health and welfare of those ingesting them; and

WHEREAS, medical studies and treatises note deleterious health risks and adverse effects associated with the use of synthetic cannabinoids and products containing the synthetic cannabinoids; and

WHEREAS, despite packaging warning purchasers the products are not for human consumption, the warnings are not being heeded; and

WHEREAS, synthetic cannabinoids are banned in many states and municipalities throughout the United States as a danger to public health and welfare; and

WHEREAS, the smoke emanating from the burning or incineration of synthetic cannabinoids may cause adverse effects on bystanders or those in the vicinity of such activity; and

WHEREAS, it is in the best interest of the Municipality to prohibit the manufacture, assembly, possession, use, sale, marketing, or offering for sale of synthetic cannabinoids within the boundaries of the Municipality to protect the health, safety and welfare of its citizens; now, therefore,

THE ANCHORAGE ASSEMBLY ORDAINS:

Section 1. Anchorage Municipal Code chapter 8.35 is amended by adding a new section to read as follows:

8.35.100 [SALE OF] [s] **Synthetic cannabinoids.**

A. It shall be unlawful for any person or **entity** [~~organization~~] to knowingly manufacture, assemble, distribute, dispense, sell, attempt to sell, give, trade, barter, transfer, or to otherwise furnish in a single transaction any product or combination of products containing synthetic cannabinoids, such as products commonly known as "K2", "Spice", "Genie", "DaScents", "Zohai" or similar products. [,] **Synthetic cannabinoids** contain[~~ing~~] one or more of the following chemical compounds:

1. HU-210: (6aR, 1OaR)-9-(hydroxymehty1)-6,6 dimethyl-3-(2methyloctan-2-yl)-6a,7,10,1Oa-tetrahydrobenzo[c]chromen- 1-o1, or 6aR-trans-3-(1,1-Dimethylheptyl)-6a,7,10,10a-tetrahydro-1-hydroxy-6,6-dimethyl-6H-dibenzo[b,d]pran-9-methanol;

2. HU-211: (6aS, 10aS)-9- (hydroxmethy1)-6,6-dimethyl-3-(2-methyloctan-2-y1)-6a,7,10,10a-tetsahydrobenzo[c]chromen-1-ol)(also known as Dexanabinol);

3. CP47,497 and homologues: 2-[(IR,3S)-3-hydroxycyclohexyl]-5-(2-methyloctan-2-y1)phenol;

4. JWH-018: 1-Pentyl-3-(1-naphthoyl)indole;

5. JWH-019: 1-Hexyl-1-(1-naphthoyl)indole);

6. JWH-073: 1-Butyl-3-(1 -napthoyl)indole;

7. JWH-081: 1-pentyl-3-(4-methoxy-1-napthoyl)indole, (also known as 4-methoxynapthalen-1-yl-(1-pehtylindol-3-yl)methanon);

8. JWH-200: 1-[2-(4-morpholinyl)ethyl]-3-(1-naphthoyl)indole;

9. JWH-250: 1-pentyl-3-(2-methoxyphenlacetyl)indole, (also known as 2-(2-methoxypehyl)-1-(1-pentylindol-3-yl)ethonone;

10. JWH-398: 1-Pentyl-3-(4-chloro-1-napthoyl)indole)

11[12]. TEMPP: 1-(3 trifluoromethylphenyl) piperazine;
[~~Salvia Divnorum or Salvinorum A; all parts of the plant presently classified botanically as Salvia Divinorum, whether growing or not, the seeds thereof, any extract from any part of the plant, and every compound, manufacture, salts, derivative, mixture or preparation of the plant, its seeds or extracts;~~]

12 [13].BZP: N-benzylpiperazine; or

13 [14].Any other synthetic cannabinoids or derivatives, salts, isomers, or salts of isomers with similar chemical structure and pharmacological activity as the substances described above.

14. This prohibition shall also apply to any other equivalent compound, substance, or derivative, whether described as tobacco, herbs, incense, food, nutrient, spice or any blend thereof which, when smoked or ingested, mimics the effects of a controlled substance, regardless of whether the substance is marketed for the purpose of being smoked or ingested.

B. It shall be unlawful to manufacture synthetic cannabinoids described in subsection A. within the Municipality.

C. It shall be unlawful for any person or **entity** [~~organization~~] to recklessly manufacture, assemble, distribute, sell, market, display for sale, or offer for sale within the Municipality products containing synthetic cannabinoids described in subsection A.

D. Products containing synthetic cannabinoids may not be possessed, ingested, burned, incinerated or ignited in ~~any public place or on any property owned, leased or controlled by~~ the Municipality. ~~For purposes of this section, "public place" includes any public transit vehicle, any public street or other right of way, and any public school building or grounds.~~

E. A person or **entity** [~~organization~~] violating the provisions of subsections A. or B. shall be guilty of a misdemeanor and shall be punishable by:

1. A fine of not more than $5,000 or imprisonment of not more than one year, or both.

F. A person or **entity** [~~organization~~] violating the provisions of subsection C. shall be guilty of a misdemeanor and shall be punishable by:

1. A fine of not more than $5,000 or imprisonment of not more than 6 months, or both.

G. A person or **entity** [~~organization~~] violating the provisions of subsection D. shall be guilty of a misdemeanor and shall be punishable by:

1. A fine of not more than $5,000 or imprisonment of not more than 6 months, or both.

H. As an alternative to the remedies, procedures and penalties provided in this title and section 1.45.010, a violation of subsection C. **or D.** may be charged as a civil violation subject to and prosecuted in accordance with title 14, and in such case shall be punishable by a civil penalty in accordance with chapter 14.60.

I. If, after multiple violations by the same person or entity, the Municipal Attorney and the Anchorage Police Department determine the imposition of criminal penalties or civil fines will not be effective in enforcing this section, the Municipal Attorney may seek any other remedies provided by law, including injunctive relief.

J. It is not an offense under this section if the person **or entity** was acting at the direction of an authorized agent of the municipality to enforce or ensure compliance with this section.

K. Any product described in subsection A. found in the illegal possession of any person **or entity** may be confiscated and destroyed by the municipality.

L. This section does not apply to drugs or substances lawfully prescribed or drugs or substances approved by the federal Food and Drug Administration or drugs or substances specifically permitted by state law.

Section 2. Anchorage Municipal Code section 8.35.010 is hereby amended to read as follows (*the remainder of the section is not affected and therefore not set out*):

A. The following words, terms and phrases, when used in this chapter, shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

*** *** ***

Drug paraphernalia means any items whose objective characteristics or objective manufacturer's design indicate that it is intended for use in the consumption, ingestion, inhalation, injection or other method of introduction of:

1. A [A] controlled substance into the human body or to facilitate a violation of AS 11.71; or [.]
2. A product containing illegal synthetic cannabinoids under section 8.35.100.

Section 3. Anchorage Municipal Code section 14.60.030 is hereby amended to add to the fine schedule (*the remainder of the schedule is not affected and therefore not set out*):

14.60.030 Fine schedule.

Code Section	Offense	Penalty/Fine
***	***	***
8.35.100 C. or 8.35.100 D. [~~8.36.100B~~]	Possession or use of synthetic cannabinoid	$150 for the first violation; $300 for the second violation; $600 for subsequent violations
***	***	***

'Fake Marijuana' Users Showing Up in Emergency Rooms

Called 'K2' or 'Spice,' the drug is legal in many states

Thursday, November 11, 2010

HealthDay

Photo courtesy: Wikimedia/Schorle

THURSDAY, Nov. 11 --(HealthDay News) -- A form of synthetic marijuana known as "K2" is sending young people to the hospital with racing heart beats, extreme anxiety and hallucinations, toxicologists warn.

In recent months, physicians and toxicologists say more young people have been showing up in emergency rooms after smoking synthetic marijuana. Despite the side effects, K2 is legal in many states, although many state legislators are rushing to pass legislation banning it.

Since the start of 2010, the American Association of Poison Control Centers has received nearly 2,000 reports of people who became ill after smoking K2, compared to about a dozen in 2009. Poison control officials described some of the symptoms as "life-threatening."

K2 is often marketed as incense and sold in packets of herbs laced with synthetic marijuana at "head shops," gas stations, convenience stores and online for about $30 to $40 per three-gram bag. The drug also goes by other names, including Spice, Spice Gold, Spice Diamond, Yucatan Fire, Solar Flare, K2 Summit, Genie, PEP Spice, and Fire n Ice, according to the U.S. Drug Intelligence Center.

While people who smoke K2 think they're going to experience deep relaxation and euphoria, those who end up in the hospital report unpleasant experiences, said Dr. Anthony Scalzo, medical director of the Missouri Poison Center and chief of toxicology at St. Louis University.

"The classic symptoms are agitation, anxiety, racing heart beat, elevated blood pressure," Scalzo said. "And some kids are having very negative psychotropic experiences. One said, 'I felt like I went down to hell'."

In some cases, the drug also causes vomiting, tremors and seizures, according to federal drug abuse agencies.

Scalzo was the first to sound the alarm about K2 earlier this year after seeing a couple of dozen of reports of young people treated at emergency rooms who said they'd smoked K2.

The drug, also sold under the name Happy Shaman Herbs, Smoke, Skunk and Zohai, among others, was developed for study purposes in the mid-'90s in the lab of John Huffman, a Clemson University chemist, who was conducting National Institute on Drug Abuse-supported research on cannabinoids.

The chemical makeup of the drug, which he called JWH-018 and JWH-073, was similar to tetrahydrocannabinol (THC), the active ingredient in marijuana, only considerably more potent.

While THC is a cannabinoid, it's one of many, Huffman said. There are many other substances that interact with the cannabinoid receptors in the brain and other organs, Huffman said.

"These receptors don't exist so that people can smoke marijuana and get high; they play a role in regulating appetite, nausea, mood, pain and inflammation. They may be involved in the development of conditions such as osteoporosis, liver disease and some kinds of cancer," Huffman said. "Synthetic cannabinoids can help us understand these interactions and ultimately this knowledge may contribute to the development of new therapies.

Huffman and his colleagues described JWH-018 and JWH-073 in scientific literature. "Evidently some people have figured out how to make them," Huffman said.

Huffman warned that the drugs were only meant to be used in the lab and were not designed for use in people, Huffman said. "These compounds were not meant for human consumption," Huffman said. "Their effects in humans have not been studied and they could very well have toxic effects. They absolutely should not be used as recreational drugs."

And while the makers of K2 seem to have latched on to JWH-018, many other labs have developed their own synthetic cannabinoids that may also find their way into synthetic marijuana products, Scalzo said.

The K2 craze caught on several years ago Europe, prompting several countries to make synthetic cannabis products illegal.

In the United States, the Drug Enforcement Agency has listed K2 as a "drug or chemical of concern." But because it isn't officially "scheduled," it remains legal under federal law, according to published reports.

Alarmed by the rise in popularity, several states have rushed to outlaw K2. Earlier this year, Kansas became the first state to ban K2. Other states that have outlawed it include Iowa, Missouri, Arkansas, Kentucky, Alabama, Michigan and Illinois (where K2 remains legal until the end of the year). There are similar bills pending in many other states, including Nebraska, North Dakota, Ohio, New York, New Jersey and Louisiana.

Scalzo said the prohibitions don't come a moment too soon. Little is known about the health effects of the drug. But he's heard enough anecdotal reports about strange behavior -- ranging from extreme agitation to withdrawal to a suicide after smoking K2 -- to be concerned.

"This chemical was not meant to be used in any kind of pharmaceutical manner," Scalzo said.

February 3, 2011

Senator Kevin Meyer
Alaska State Legislature
Capitol Building, Room 103
Juneau, Alaska 99801

Re: SB 17 – Regulation of Synthetic Cannabinoids

Dear Senator Meyer,

On behalf of the Advisory Board on Alcoholism and Drug Abuse, I would like to express our thanks for your efforts to regulate synthetic marijuana or "cannabinoids." These products pose a grave risk to youth and adults, causing serious health consequences and impairments to users of these drugs.

The dangers posed by synthetic marijuana are serious. While the base products may be natural, the chemicals used to mimic the properties of THC are not approved for human consumption. National news reports on the effects of these products include elevated heart rate and blood pressure, extreme anxiety, poisoning, nausea and vomiting, hallucinations, overdoses, and even addiction.

The American Association of Poison Control Centers reported more than 3,000 calls related to poisoning by synthetic marijuana products in 2010 – and nearly 400 calls since January 1 of this year. The U.S. Army banned use of synthetic marijuana by service members in August 2010. The U.S. Drug Enforcement Agency (DEA) exercised its emergency scheduling authority to **temporarily** control five chemicals used in synthetic marijuana products (JWH-018, JWH-073, JWH-200, CP-47,497, and cannabicyclohexanol). This federal regulation is limited in duration (12-18 months), leaving Alaskans at risk after that time without the state taking action.

The effects of synthetic marijuana are being felt right here in Alaska. News reports of crimes involving these products have come from Fairbanks and Anchorage. The U.S. Army reported courts martial and non-judicial discipline of more than thirty soldiers in Alaska by December 2010. The Anchorage School District reports situations requiring medical care due to use by students (though not to the same extent as actual marijuana).

Given the health consequences and the role synthetic marijuana can play in criminal activity, there is a more than adequate basis for the regulation of these products to protect the health and safety of Alaskans. Thank you for your work to protect Alaskans from these harmful products.

Sincerely,

J. Kate Burkhart
Executive Director

MUNICIPALITY OF ANCHORAGE

Office of the Mayor

FAX: 907-343-7180

Mayor Dan Sullivan

January 28, 2011

The Honorable Kevin Meyer
Alaska State Legislature
State Capitol
Juneau, AK 99801

Re: Senate Bill 17

Dear Senator Meyer,

Thank you for introducing Senate Bill 17, *"An Act classifying certain synthetic cannabinoids as schedule IIA controlled substances; and providing for an effective date."*

The Municipality of Anchorage fully supports the passage of SB 17 and its companion bill, HB 7. In the last few years, the use of synthetic cannabinoids has quickly become a significant health and public safety issue.

Due to the huge range in potency between the various compounds and products, municipal first responders have encountered users of these drugs having severe reactions, including from bizarre and dangerous behavior to unconsciousness and death. Users who operate machinery, especially motor vehicles, have had significant accidents and present a danger to others that is on par with operating under the influence of alcohol.

In response, the Municipality has enacted its own local code, but does not have the jurisdiction to deal with the influx of the drug on a state-wide basis or impose the kinds of meaningful criminal sentences that are needed to stem the manufacture, distribution, and sale of these drugs.

Thank you again for introducing this important legislation.

Sincerely,

Dan Sullivan

Dan Sullivan
Mayor

NATIONAL CONFERENCE *of* STATE LEGISLATURES

The Forum for America's Ideas

State Legislation on Synthetic Cannabinoids Pending on January 18, 2011

As of January 18, 2011, 21 states had legislation pending to modify existing laws or create new laws relating synthetic cannabinoids.

2011 PENDING LEGISLATION

Alaska H 7
Classifies certain synthetic cannabinoids as schedule IIA controlled substances.

Alaska S 17
Classifies certain synthetic cannabinoids as schedule IIA controlled substances.

Arkansas S 2
Amends the schedule VI substances regarding drugs in the criminal code; declares an emergency.

Arizona H 2167
Relates to definition of dangerous drugs; relates to synthetic.

Florida H 39
Relates to controlled substances; defines term homologue for purposes of Florida Comprehensive Drug Abuse Prevention and Control Act; includes certain hallucinogenic substances on list of controlled substances in Schedule I; reenacts provisions to incorporate amendment.

Florida S 336
Revises the list of controlled substances included in Schedules I, II, III, IV, and V.

Florida S 204
Relates to controlled substances; defines the term homologue for purposes of the Florida Comprehensive Drug Abuse Prevention and Control Act; includes certain hallucinogenic substances on the list of controlled substances in Schedule I; reenacts specified provisions relating to prohibited acts and penalties regarding controlled substances and the offense severity chart of the Criminal Punishment Code.

Iowa H 33
Adds hallucinogenic substances to the list of schedule I controlled substances; adds salvia divinorum and salvinorin A to the list of schedule I controlled substances; adds certain synthetic cannabinoids to the list of schedule I controlled substances in addition to the tetrahydrocannabinols and synthetic equivalents listed in schedule I.

Iowa S 35
Adds certain synthetic cannabinoids to the list of schedule I controlled substances; adds certain synthetic cannabinoids, also known as K2, to the list of schedule I controlled substances in addition to the tetrahydrocannabinols and synthetic equivalents listed in schedule I under Code section 124.204; A schedule I

controlled substance is considered to have a high potential for abuse and no medical purpose in treatment in the United States.

Iowa SSB 1016
Revises the lists of drugs on the controlled substances schedules, and provides penalties; removes marijuana from schedule I and reclassifies it as a schedule II controlled substance; strikes references to the authority of the board of pharmacy to adopt rules for the use of marijuana or tetrahydrocannabinols for medicinal purposes.

Iowa HSB 5
Adds hallucinogenic substances to the list of schedule I controlled substances; adds salvia divinorum and salvinorin A", also known as divinorin A to the list of schedule I controlled substances; adds certain synthetic cannabinoids, also known as "K2", to the list of schedule I controlled substances in addition to the tetrahydrocannabinols and synthetic equivalents listed in schedule I under Code section 124.204(4)(u); A schedule I controlled substance is considered to have a high potential.

Indiana S 152
Relates to synthetic cannabinoids; defines synthetic cannabinoid and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments and corrections.

Indiana S 5
Relates to synthetic cannabinoids; defines synthetic cannabinoid and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments.

Indiana H 1102
Relates to possession or manufacture of synthetic cannabinoid; defines synthetic cannabinoid and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments.

Indiana H 1277
Prohibits sale of synthetic cannabinoids; defines "synthetic cannabinoid" and makes dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; enhances the penalty based on the same weights used to enhance the penalty for dealing in, manufacturing, or delivering hash oil or hashish; makes conforming amendments and a technical correction.

Indiana S 448
elates to spice; defines "synthetic cannabinoid" and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments.

Indiana S 57
Relates to synthetic cannabinoids; defines synthetic cannabinoid and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments.

Indiana H 1315

Relates to spice and salvia divinorum; defines synthetic cannabinoid and makes possessing, dealing in, manufacturing, or delivering a synthetic cannabinoid or salvia divinorum equivalent to possessing, dealing in, manufacturing, or delivering marijuana, hash oil, or hashish; makes conforming amendments and a technical correction.

Kentucky H 121
Relates to crimes and punishments and declaring an emergency; bans possession, trafficking, or manufacture of 3,4-methylenedioxypyrovalerone the primary ingredient of a drug with a street name "dove"; amend various sections of KRS Chapters 217 and 218A and KRS 530.064 relating to unlawful transaction with a minor to conform.

Minnesota H 57
Relates to public safety; establishes the crimes of sale or possession of synthetic cannabinoids; provides for a penalty.

Minnesota S 7
Relates to public safety; adds synthetic marijuana to the list of Schedule I controlled substances; prescribes criminal penalties.

Mississippi S 2163
Conforms the punishment for the illegal possession, manufacture and sale of synthetic cannabinoids to the punishment for the illegal possession, manufacture and sale of marihuana.

Mississippi S 2226
Includes cathinone derivatives in Schedule I; clarifies the punishment for offenses involving synthetic cannabinoids; clarifies the punishment for offenses involving synthetic cannabinoids.

Mississippi H 518
Includes synthetic Cannabinoids in schedule I.

Mississippi S 2369
Relates to cathinone derivatives in schedule I and to clarify the punishment for offenses involving synthetic cannabinoids; clarifies the punishment for offenses involving synthetic cannabinoids.

Mississippi H 869
Amends existing code, to include cathinone derivatives in Schedule I and to clarify the punishment for offenses involving synthetic cannabinoids; clarifies the punishment for offenses involving synthetic cannabinoids.

Montana H 185
Bans synthetic marijuana; relates to crimes; relates to alcohol and drugs.

North Dakota S 2119
Relates to the scheduling of controlled substances; modifies provisions of the controlled substance schedule relating to certain substances, including tetrahydrocannabinols and synthetic cannabinoids.

New Jersey A 2644
Adds certain cannabis-like chemical substances to list of controlled dangerous substances.

New Jersey S 2606

Adds certain cannabis-like chemical substances to list of controlled dangerous substances.

New York S 1834
Prohibits sale or distribution of any product containing a synthetic cannabinoid; defines the chemical compounds which constitute a synthetic cannabinoid; imposes a civil penalty of not more than $500 for a violation thereof; creates defenses based on over the counter drugs approved by the federal food and drug administration or lack of knowledge that the product contained a synthetic cannabinoid.

Oregon H 2462
Directs State Board of Pharmacy to classify certain synthetic cannabinoid compounds as Schedule I controlled substances; declares emergency, effective on passage.

Oregon H 2709
Directs State Board of Pharmacy to classify certain synthetic cannabinoid compounds as Schedule I controlled substances; declares emergency, effective on passage.

South Carolina H 3137
Relates to materials, compounds, mixtures, and preparations classified as schedule i drugs, add synthetic cannabis to the list of schedule I drugs.

South Carolina H 3144
Relates to materials, compounds, mixtures, and preparations classified as schedule i drugs, add synthetic cannabis to the list of schedule I drugs.

South Carolina S 78
Relates to materials, compounds, mixtures, and preparations classified as schedule I drugs; adds synthetic cannabis to the list of schedule I drugs.

Texas H 49
Relates to the addition of certain synthetic derivatives of marihuana to Penalty Group 2 of the Texas Controlled Substances Act.

Texas H 108
Relates to the addition of a synthetic derivative of marihuana to Penalty Group 2 of the Texas Controlled Substances Act.

Texas H 597
Relates to adding certain synthetic cannabinoids to Penalty Group 2 of the Texas Controlled Substances Act.

Texas S 331
Relates to adding certain synthetic cannabinoids to Penalty Group 2 of the Texas Controlled Substances Act.

Utah H 23
Modifies provisions relating to the Utah Controlled Substances Act by creating a controlled class of listed synthetic cannabinoid substances found in products often referred to as spice.

Utah H 200
Modifies the Criminal Code prohibiting the sale, distribution, and other activities relating to products containing a synthetic cannabinoid to any person under 19 years of age; provides advertising restrictions for

products containing a synthetic cannabinoid; prohibits a person from providing a product containing a synthetic cannabinoid to any person under 19 years of age.

Virginia H 1243
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1427
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1434
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1473
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act; relates that notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1481
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act; relates that the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1778
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 (Section 54.1-3446) of the Drug Control Act ([Section] 54.1-3400 et seq.); provides that the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 1878
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act; provides that the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia H 2049
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 (Section 54.1-3446) of the Drug Control Act ([Section] 54.1-3400 et seq.); notwithstands the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for

possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 745
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 746
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 748
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 749
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 of the Drug Control Act, notwithstanding the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 926
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule I (Section 54.1-3446) of the Drug Control Act ([Section] 54.1-3400 et seq.); Notwithstands the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule I, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana.

Virginia S 1082
Adds synthetic marijuana (known as K2 and Spice and various other names) to Schedule I of the Drug Control Act.

Virginia S 1186
Creates a new category for synthetic marijuana as a series of controlled substances listed in Schedule 1 (Section 54.1-3446) of the Drug Control Act ([Section] 54.1-3400 et seq.); Notwithstands the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule 1, punishment for possession and distribution of synthetic marijuana is largely in accord with the provisions for actual marijuana; provides that has an emergency clause.

Virginia S 1373
Creates a new category for synthetic cannabinoids as a series of controlled substances listed in Schedule I (Section 54.1-3446) of the Drug Control Act ([Section] 54.1-3400 et seq.); Notwithstands the provisions regarding punishment for possession and distribution of controlled substances listed in Schedule I,

punishment for possession and distribution of synthetic cannabinoids is largely in accord with the provisions for actual marijuana.

Washington S 5101
Places certain synthetic cannabinoids into schedule I of the uniform controlled substances act.

West Virginia H 2505
Adds synthetic cannabinoids and hallucinogens and stimulants to the Schedule I list of controlled substances (K2).

West Virginia S 63
Extends number of prohibited products included in definition of salvia divinorum.

Wyoming H 62
Relates to the Wyoming Controlled Substances Act; conforms punctuation and spelling in the act to terminology in federal law; adds and deleting substances in the various schedules of the act as specified; amends registration requirements as specified; amends methamphetamine precursor sales restrictions to match federal requirements; specifies penalties; authorizes a person to sign a consent for a third party to receive prescription tracking reports; specifies applicability of new registration requirements.

Wyoming S 59
Relates to the Wyoming Controlled Substances Act; adds specified controlled substances to schedule I of the act; authorizes additional positions.

Alaska's Citizen Review Panel

Citizen Review Panel

Citizen Review Panel: Who

- The CRP is composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect.
- Susan Heuer, Anchorage (Chair)
- Bonnie Edmondson, North Pole
- Dana Hallett, Haines
- Kristin Hull, Wasilla
- George Kirchner, Fairbanks
- Ralph Taylor, Eagle River
- Fred Van Wallinga, Willow

Citizen Review Panel: What

To provide oversight to the Office of Children's Services and gather public input on how well the child protection system is working. The Panel does this primarily by visiting different regions of the state and talking to OCS staff and partner agencies about how well the system is working. The Panel produces an annual report for OCS which is also distributed to all members of Legislature.

Citizen Review Panel: Where

Statewide! Since 2008 we're been to the following communities.

- Anchorage
- Aniak
- Barrow
- Bethel
- Cantwell
- Chitina
- Copper Center
- Delta Junction
- Dillingham
- Fairbanks
- Gakona
- Glennallen
- Healy
- Hooper Bay
- Juneau
- Kenny Lake
- Ketchikan
- King Salmon
- Kodiak
- Kwigillingok
- Naknek
- Northway
- Nuquisut
- Palmer
- Petersburg
- Point Hope
- Saint Mary's
- Sitka
- Tok
- Unalaska
- Valdez
- Wainwright
- Wasilla
- Wrangell

Citizen Review Panel: When

The Panel has been active in Alaska since 2002.

Citizen Review Panel: Why

The Citizen Review Panel is mandated by state and federal law. The Panel was created through the federal Child Abuse Prevention & Treatment Act (CAPTA); Keeping Children & Families Safe Act of 2003 and through Alaska statute Sec. 47.14.205.

Benefits of CRP

- Seven volunteer members all contributing a minimum of 250 active hours annually
- We're the eyes and ears of the public for the Legislature and OCS
- Unique function of identifying and advocating for ancillary services that OCS cannot request
- Jointly we can achieve a vastly improved child protection system for the children of Alaska

Overview of presentation

- Last year's recommendations
- OCS' response
- This year's site reviews
- This year's recommendations

CRP recommendations from our work last year

Recommendations to OCS

1. The discrepancy between rural, bush and urban child protection be acknowledged and addressed.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to OCS

2. OCS front line workers have adequate support staff to allow them to focus on social work, not paperwork.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to OCS

3. Training for new OCS workers be modified to better reflect the on-the-ground reality of the job.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to the Legislature

1. The discrepancy between rural, bush and urban child protection be acknowledged and addressed.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to the Legislature

2. Fiscal responsibility for transportation of children to a child advocacy center be clarified.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to the Legislature

3. That a capital budget be formed to fund housing and facility work for OCS and its workers.

Citizen Review Panel

CRP recommendations from our work last year

Recommendations to the Legislature

4. That the State standardize resources available to all state agencies (internet, housing).

Citizen Review Panel

OCS Response to CRP Recommendations

1. Discrepancy of child protective services between urban and rural areas
   - "Safety is safety" regardless of location - same expectations, resources have been allocated to accomplish this
   - Acknowledged staff retention problems as a barrier - used staff from other areas when local staff could not be hired

OCS Response to CRP Recommendations

2. Lack of adequate support staff
   - Request updated workload study to determine additional staff requirements and what could be picked up by support staff
   - Undertaking in-house data study to examine caseload and resource distribution within the state
   - Commission a study to determine the best ratio of support staff to social workers

OCS Response to CRP Recommendations

3. Training for new workers
   - Updated training curriculum
   - Created supervisory strategic plan

Citizen Review Panel

CRP: This year's report card

- Overall, OCS doing a good job addressing the most pressing agency-wide issues
- It is a huge, ponderous, bureaucratic agency with a very challenging mission
- They are working hard to comply with the requirements from the federal Program Improvement Plan
- Those changes are reflected in better child protection policies and evolving practices

Visited Bethel & Wasilla

- Our mandate is to collect input from recipients of child protection services - families, foster families, community partners - and let legislature know what the grass roots perception is.
- This year we did that through two site visits.
  - Bethel and four surrounding villages
  - Wasilla, Palmer and Glennallen
- In May, Bethel was at a critical place because of staffing and administrative issues. The Western Region was funded and it is slowly becoming a reality. Staff recruitment and retention remains the biggest barrier.
- We did two site visits to Wasilla in August and December. Wasilla continues to struggle with its own unique set of challenges.

Site Visit Feedback on the Impact of Poor Worker Retention

- Our overall impression from the visiting communities is that the worker retention problem continues to affect child protection delivery and frustrate families and affiliated community agencies that partner with OCS.
- The shortage of workers in the field has been exacerbated due to vacancies and new workers out for training.
- There is a problem retaining experienced workers.
- There are continued complaints about lack of basic social work - returning phone calls, scheduling family visits, etc.
- There are frustrations in the court system because of continuances, late reports, detrimental court rulings, and children remaining in custody for too long.

2011 CRP Recommendations

1. Staff retention and allocation
   - Support OCS's efforts to evaluate staff ratios - PCN locations, social worker workload ratios, and ratios for social worker/support staff
   - Resources are scarce; they need to be spent as effectively as possible (e.g. not paying social workers to transport children, etc.)
   - Once the studies are completed, OCS will need financial support to implement the recommendations.

2011 CRP Recommendations

2. We renew our request from last year for legislative changes to standardize resources between state agencies
   - The Internet connection speed has certainly improved in the Bethel region, but needs to be on par with the Troopers, schools, etc. in other areas.
   - Housing is critical to retain staff in rural areas. No matter now excellent the policies and practices of OCS are, they will fail without staff to implement them.

2011 CRP Recommendations

3. External audit of Wasilla office
   - We support an external audit of the Wasilla OCS office
   - Should find opportunities to be more efficient; examine why cases stay open so long
   - There are staffing dynamics that are not successful, the audit will look for ways to resolve the problems

Most importantly

There is a widespread and consistent impression that the safety of children in Alaska remains compromised and is getting worse. This impression comes first and foremost from the line workers themselves in both regions. Community partners echoed this concern.

Alaska does not want to be a state that will not make changes until a child dies.

A BILL

FOR AN ACT ENTITLED

"An Act relating to prevention and evaluation of and liability for concussions in student athletes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONCUSSIONS IN STUDENT ATHLETES; FINDINGS. The legislature finds that

(1) concussions rank among the most commonly reported traumatic brain injuries in children and adolescents who participate in sports and recreational activities;

(2) the United States Centers for Disease Control and Prevention estimates that as many as 3,900,000 concussions occur each year in the United States as a result of sports and recreational activities;

(3) a concussion is caused by a blow to or jarring of the head or body that causes the brain to move rapidly inside the skull, resulting in a mild to severe traumatic brain injury, which may occur with or without loss of consciousness, and may disrupt normal brain

function;

(4) a concussion may occur during an organized or unorganized sport or recreational activity as a result of a fall or from players colliding with each other or another obstacle;

(5) the risk of catastrophic injury or death from a concussion or other head injury increases when the injury is not properly evaluated and managed, and the athlete is allowed to continue to participate in sports or recreational activities following the concussion;

(6) although voluntary nationwide guidelines for managing concussion in sports recommend assessing concussions on an individual basis, with gradual return to play, athletes continue to be returned to play prematurely, putting them at risk for greater injury or death.

*** Sec. 2.** AS 14.30 is amended by adding new sections to article 3 to read:

Sec. 14.30.142. Concussions in student athletes: prevention and reporting. (a) The governing body of a school district shall consult with the Alaska School Activities Association to develop and publish guidelines and other information to educate coaches, student athletes, and parents of student athletes regarding the nature and risks of concussions. Guidelines developed under this section must include a description of the risks of return to play and standards for return to play, including the procedures required under (c) and (d) of this section.

(b) A school shall annually provide to a student and the parent or guardian of a student who is under 18 years of age written information on the nature and risks of concussions. A student may not participate in school athletic activities unless the student and the parent or guardian of a student who is under 18 years of age have signed a verification of receipt of the information required under this subsection.

(c) A student who is suspected of having sustained a concussion during a practice or game shall be immediately removed from the practice or game.

(d) A student who has been removed from participation in a practice or game for suspicion of concussion may not return to play until the student has been evaluated and cleared for participation in writing by a qualified person who has received training and is currently certified in the evaluation and management of concussions, as verified in writing by the qualified person. In this subsection, "qualified person" means either a

(1) licensed health care provider; or

(2) person who is acting at the direction and under the supervision of a licensed physician.

(e) A person who conducts an evaluation under (d) of this section and who is not paid for conducting the evaluation may not be held liable for civil damages resulting from an act or omission during the evaluation, except that the person may be held liable for reckless or intentional misconduct and for gross negligence.

Sec. 14.30.143. Concussions in student athletes: school district immunity. (a) A school district may not be held liable for an injury to or the death of a person resulting from the action or inaction of a person employed by or under contract with a nonprofit youth organization if

(1) the action or inaction occurred on school property during the delivery of services by the district or organization;

(2) the organization is under contract with the district to provide the services; and

(3) before the provision of services, the organization provided to the district written verification of

(A) a valid insurance policy covering the injury or death in an amount not less than $50,000 for each person and $100,000 for each incident;

(B) compliance with the protocol for prevention and reporting of concussions required in AS 14.30.142.

(b) This section may not be construed to impair or modify the ability of a person to recover damages for harm caused by the negligent or reckless actions of an employee or contractor of a school district or by the existence of a condition, equipment, program, or structure known by the school district or organization to be unsafe.

(c) In this section, "youth organization" means a public or private entity qualified to do business in the state that provides a program or service to persons under 19 years of age.

SECTIONAL ANALYSIS

Senate Bill No. 22 (27-LS0250\A)

Section 1. Adds a new section to the uncodified law of the State of Alaska that lists findings related to Traumatic Brain Injury, especially with respect to children and adolescents who participate in sports and recreational activities. The section also defines what constitutes a concussion and points out that despite national guidelines recommending individual assessment and gradual return to play following concussions, student athletes are often returned to play prematurely resulting in risks of greater injury.

Section 2. Amends AS 14.30 by adding new sections to article 3 that would establish requirements for the governing body of a school district relating to consult with the Alaska School Activities Association relating to prevention and reporting of concussions.

Section 14.30.142 is a new section that includes provisions regarding prevention of concussions and reporting. It states that students will be immediately removed from practice or a game if suspected of having a concussion or traumatic brain injury and that before returning to play or practice, the student must be cleared by a licensed health care provider who has received training in evaluating and managing traumatic brain injuries. This Section also explains that an evaluator may not be held liable for civil damages unless he/she acted recklessly, with intentional misconduct, or gross negligence.

Section AS 14.30.143 additionally states that a school district may not be held liable for injury or death resulting from the action or inaction of an employee or contractor with a non-profit youth organization under certain circumstances.

Analysis

This legislation has no fiscal impact on the Department of Education and Early Development.

alaska brain injury network

3745 Community Park Loop, Ste. 140
Anchorage, Alaska 99508
office: (907) 274-2824 fax: (907) 274-2826
www.alaskabraininjury.net

The Honorable Lesil McGuire
Alaska Senate
Alaska State Capitol, Rm 125
Juneau, Alaska 99801

Dear Senator McGuire,

Thank you for introducing HB 15, an act relating to prevention and evaluation of and liability for concussions in student athletes.

The Alaska Brain Injury Network, Inc (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury. ABIN's eighteen member board represents all regions of Alaska and at least 50 percent are TBI survivors or family members. We fully support HB 15.

ABIN has become the leader in understanding the needs of Alaskans with brain injury. ABIN has heard from 800 Alaskans requesting brain injury services since 2007. In addition, ABIN has heard public testimony from hundreds of Alaskans from Anchorage, Juneau, Fairbanks, Kenai, Barrow, Nome, Kodiak, Dillingham, Bethel, Copper River Basin, Tok, Ketchikan, Sitka, Homer, and more.

There are an estimated 10,000 Alaskans who have experienced long-term difficulties from a moderate to severe brain injury. The number of Alaskans experiencing a concussion or Mild TBI (mTBI) who visit the emergency department is estimated at 3,000 per year. Concussion and brain injury need to be taken seriously. With proper diagnoses, management, and treatment, research shows 80-90 percent of people experiencing a concussion or mTBI will recover fully. HB 15 is vital to ensuring our youth athletes have the best chance of recovery after an injury. When a concussion is not properly managed, prolonged recovery or even death from a second impact may result.

The National Football League, National Hockey League, the United States Olympic teams, majority of collegiate teams, and most recently in many states, even high school and youth sports teams have protocols and guidelines for concussion identification and return to play. Many of the leagues also require a cognitive baseline which is the first step to providing the best data to assess for a concussion when symptoms appear. If an athlete is suspected of a concussion, the assessment guidelines and return to play protocol are in place for the safety of the athlete, as well as ensuring the team has the strongest players in the game. A player who is normally elite, but then suffers a concussion, may temporarily have difficulty making quick decisions, their speed and reaction time may be compromised, and they may clumsily handle the ball. This compromised state caused by the concussion may hinder the team, and more importantly may put the athlete at risk for serious, life-long disability. No one wants to see an athletic child or young adult become disabled due to a decision to keep a kid in the game for a win or because of lack of education of what concussion symptoms may look like.

HB 15 will ensure that coaches have a basic understanding of concussion, student athletes will begin to understand the seriousness of concussion on and off the field, and parents may begin to understand brain injury better as well. This legislation is an opportunity to improve the public's awareness of the seriousness of concussion and brain injury, and keep our student athletes safe.

The future of our state depends on the brains of the individuals that reside here. HB 15 is one tool to giving Alaska's youth the best opportunity to become community and business leaders as adults.

The Alaska Brain Injury Network appreciates your leadership in sponsoring this important legislation. You have our support.

Sincerely,

Jill Hodges
Executive Director

Alaska Athletic Trainers Association
PO Box 872710
Wasilla, AK 99687

March 15, 2011

Representative Doogan,

The Alaska Athletic Trainers Association fully supports the language of House Bill 15 and Senate Bill 22, *Student Athlete Traumatic Brain Injuries*. This legislation serves to raise awareness and protect youth athletes from the risks of concussions. The Alaska Athletic Trainers Association pledges to support the following key elements: (1) concussion education for young athletes, parents and coaches; (2) immediate removal of a student athlete who appears to have suffered a concussion from play or practice; and (3) mandatory clearance of that student by a health care professional who is trained in the evaluation and management of concussions before returning to play or practice.

Athletic trainers are health care professionals who specialize in the prevention, diagnosis, treatment and rehabilitation of injuries and sport-related illnesses. We prevent and treat chronic musculoskeletal injuries from sports, physical and occupational activity, and provide immediate care for acute injuries. Athletic trainers offer a continuum of care that is unparalleled in health care.

The Alaska Athletic Trainers Association is also working toward licensing athletic trainers in the state of Alaska. A licensed athletic trainer is one who has established qualifications and works within a scope of practice. Alaska is one of only three states that do not regulate athletic trainers and we feel it is time to change that. We hope you will support our professional endeavor for licensing athletic trainers in Alaska.

Sincerely,

B. Shelden

Brenda Shelden
Certified Athletic Trainer
President of the Alaska Athletic Trainers Association
(907)841-8942

HEADS UP!

NFL Commissioner Roger Goodell talks about the importance of protecting student athletes from traumatic head injuries.

Roger Goodell, the eighth chief executive in the NFL's 90-year history, took office in 2006. He spoke with State Legislatures about the importance of laws to help prevent young athletes from suffering traumatic brain injuries.

STATE LEGISLATURES: Why is the NFL working with state legislatures on laws dealing with youth sports concussions?

Goodell: Together, we can make sports, which are essential for so many of our kids, safer. Sports teach teamwork, perseverance, dedication and commitment that will serve kids well throughout their lives. Youth sports are safe, but we can make them even safer, especially with regard to head injuries.

We are changing the culture in the NFL with regard to concussions. Doctors—not coaches—are making the decisions regarding when a player returns to a game. When we in the NFL change our approach, we are told by youth coaches and parents that others on all levels take notice and follow.

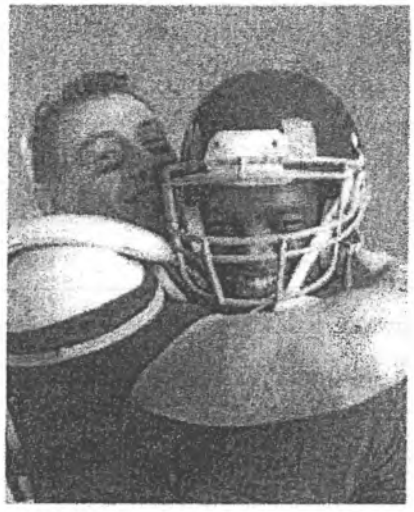
As more is learned about the ways to manage concussions, the NFL will continue to lead by example. The medical literature says risks associated with concussion are greatest when the brain is still developing, so the greatest care must be taken with young athletes.

We have made it a priority to support laws that address youth concussions across the country. We are building on the work done in the Washington Legislature with the 2009 Zackery Lystedt law, which is a model we encourage all states to follow.

SL: What are the primary elements of a substantive law?

Goodell: It is a remarkably simple idea, but one that protects our young athletes from the worst risks of concussion. The law contains three core principles:

◆ Educate athletes and their parents or guardians about concussions.



◆ Remove an athlete who may have suffered a concussion from play.

◆ Allow athletes to return to play only after being cleared by a licensed health care provider.

The law requires every child, as well as the parent or guardian, to sign an information sheet regarding concussions and their symptoms every year. Second, since children are at risk if they have suffered a concussion, they must be removed from competition immediately. Finally, only a licensed health care provider trained in the management of concussions should determine whether the child is able to return to play. These three simple steps will help prevent unnecessary head injuries to our children.

SL: Why should states pass this law?

Goodell: Concussions are brain injuries. They are an important public health concern in all sports. Girls experience concussions at significant rates in soccer; boys who play football, wrestle or play hockey suffer concussions as well. Experts also tell us that removing children immediately from play or practice and allowing them to recover completely is the best way to keep concussions from having long-term effects. We owe it to our children to adopt this law.

SL: Why aren't medical guidelines sufficient?

Goodell: In a matter as important as the health of our children's brains, we owe them the best, most comprehensive response. Laws raise awareness. Laws mandate change. Laws create uniform application of these standards. Guidelines are a second best alternative but they risk sporadic or inconsistent enforcement in different regions in a state.

SL: What does this law cost?

Goodell: There is no cost. There are no state expenditures, or costs borne by the school district. Washington Governor Christine Gregoire has told us that her state passed this law without creating any new costs to the taxpayers. There is, however, a significant cost associated with the emergency care and long-term rehabilitation in the tragic circumstances when a child suffers a traumatic brain injury. This law helps prevent burdens on the health care system and on the school district. Most important, this law spares the emotional cost to the family and the child associated with these injuries.

SL: Which states have passed these laws?

Goodell: New Jersey, in December 2010, became the ninth state to pass a substantive law. The other states are Connecticut, Massachusetts, New Mexico, Oklahoma, Oregon, Rhode Island, Virginia and Washington. We congratulate all of them and thank these legislators for their leadership.

SL: What can the NFL do?

Goodell: First of all, we can help raise awareness in a positive way on this issue. I am on record that we will help pass laws in at least 10 more states in 2011. My office and the 32 NFL clubs will contribute to legislative advocacy around youth concussions in the states that choose to address this important public health issue this year.

Doctors Throw Flags On High School Concussions

by JON HAMILTON

Matt Strasen/AP

Malcom Brown (left) is hit by Jake Smith on a kickoff return during a high school state championship game in Arlington, Texas, in December. Sports medicine professionals and the NFL are calling for tougher regulations on head injuries sustained by young athletes.

February 2, 2011

In the Super Bowl this weekend, any player who takes a shot to the head and shows signs of a concussion will be taken out of the game. But it's a different story for high school athletes, who sometimes play on despite a head injury.

So the NFL, the American College of Sports Medicine and a long list of other groups are joining together to support state laws designed to protect the brains of young athletes.

Enlarge Bill Pugliano/Getty Images

The groups say they're concerned because each year more than 60,000 high school athletes sustain a concussion. It's an injury that temporarily affects brain function, though it may or may not cause a person to lose consciousness.

It's not just football players who get concussions — it's male and female athletes involved in soccer, wrestling, basketball, baseball, field hockey — even volleyball. Many of these athletes never get an evaluation that would reveal their injury.

Steve Cohen, a member of the House Judiciary Committee, examines the helmet of Lem Barney, a former player for the Detroit Lions. A committee hearing last year evaluated steps taken at the professional, college and high school levels to deal with football brain injuries.

"Unfortunately, kids at the youth sports level don't have neurosurgeons, neurologists and some of the finest doctors on the sidelines," says Jeff Miller, a senior vice president of the National Football League. "It's just not practicable."

The coalition wants every state to have a law like the Lystedt Law, passed in Washington in 2009 and named after Zackery Lystedt, a teenager who sustained a serious brain injury during a middle school football game in 2006. Lystedt's head struck the ground in the first half, but he was allowed to keep playing. When he took another shot to the head late in the game, the result was devastating.

The Lystedt Law says an athlete suspected of having a head injury must be removed from competition. That's because even a minor injury to the brain can make it highly vulnerable to further damage.

You don't want coaches making medical decisions. That isn't their core competency.

- Jim Whitehead, executive vice president, American College of Sports Medicine

Easing Back Into The Classroom

A concussion law might have helped Sarah Rainey, a high school soccer player in Alexandria, Va., who took a violent hit during a game 10 months ago.

"I thought I just got the wind knocked out of me, and I told my coaches and the trainer that I was OK," she says. "I passed the sideline evaluation. I played the remaining five minutes and then two overtime periods."

But after the game, Rainey began experiencing headaches, nausea and fuzzy thinking. Her father took her to an emergency room where doctors told her she'd suffered a concussion and sent her home.

Damien Meyer/AFP/Getty Images

Not only football players are at risk for head injuries — soccer, basketball and volleyball players can sustain concussions, too. Michael Ciani, a defender for the French soccer team Bordeaux, heads the ball during a French Cup match on Jan. 22.

When she returned to school just a few days after the injury, she found that trying to read small print, looking at a computer screen and even her teachers' voices could trigger headaches and nausea.

It was two months before Rainey could get through a full day of school, and four months before her brain was back to normal.

She was treated by Gerry Gioia, who runs the Safe Concussion Outcome Recovery & Education (SCORE) Program at Children's National Medical Center in Washington, D.C. Gioia is also part of the coalition pushing for concussion laws.

No law could have prevented Rainey's concussion, Gioia says. But a law might have helped limit the damage.

"The problem is that she was let back into the game later on," he says. "It's hard to know exactly the contribution of that. She didn't take another hit, but certainly she was overworking that body and brain during the period of this metabolic crisis."

Rainey also returned to class too soon — something else a law could have prevented, Gioia says. He says an injured brain is like a sprained ankle. It heals faster if you don't use it too much.

"As you're learning and thinking and doing all that good performance activity in the school, that's demanding more from your brain than it can handle," Gioia says. "It's taking away the important energy toward recovery, and it basically then is affecting negatively your recovery."

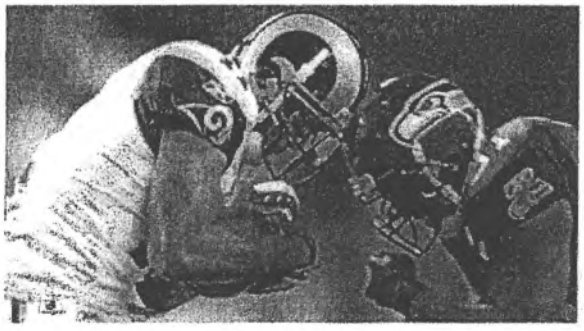
Unfortunately kids at the youth sports level don't have neurosurgeons, neurologists and some of the finest doctors on the sidelines.

- Jeff Miller, senior vice president, NFL

The coalition wants concussion laws to include provisions for easing injured students back into the classroom.

Relying On Medical Professionals

But for any of the laws to work, athletes who take a blow to the head need a proper evaluation from a trained medical professional, says Jim Whitehead, executive vice president of the American College of Sports Medicine.



Otto Greule Jr./Getty Images
Seahawks defensive end Chris Clemons (right) hits Brandon Gibbons during a game on Jan. 2 in Seattle. Clemons' head-first hit drew a personal foul.

"You don't want coaches making medical decisions," he says. "That isn't their core competency. So you want to take any of those things out of the hands of people who really aren't qualified to make those judgments, and put it in the hands of professionals who are."

That's why the coalition supports laws that call for training coaches and others on the sideline not to diagnose a concussion, but to recognize subtle signs in an athlete that could mean a concussion.

"And if there's any doubt whatsoever, you sit the athlete until he or she has been cleared by a health professional," Whitehead says.

About 10 states, including Virginia, have passed youth concussion laws. The coalition's goal is to get laws in at least 10 more states by the end of the year.

The National Football League, USA Football, the Brain Injury Association of Washington, and the American College of Sports Medicine, among many other organizations, strongly support the adoption of laws to prevent traumatic brain injury in youth athletes in all fifty states. The Zackery Lystedt law, passed in Washington state, through the efforts and hard work of advocates in the medical, educational and athletic fields represents model legislation. The bill includes three elements essential to protecting youth athletes in all sports:

(1) Inform and educate youth athletes, their parents and guardians and require them to sign a concussion information form;
(2) Removal of a youth athlete who appears to have suffered a concussion from play or practice at the time of the suspected concussion; and
(3) Requiring a youth athlete to be cleared by a licensed health care professional trained in the evaluation and management of concussions before returning to play or practice.

This packet of materials includes information about the Zackery Lystedt law and frequently asked questions regarding it. In addition, educational materials on the topic of youth concussions are included. These documents published by the Centers for Disease Control and Prevention and USA Football and endorsed by the American College of Sports Medicine, the National Football League, USA Football, and the Brain Injury Association of Washington will provide significant information about youth concussions.

As of November 2010, nine states have adopted laws containing the three key provisions of the Zackery Lystedt law. We encourage you to adopt a similar law in your state and encourage you to reach out to our organizations if we can be of assistance.

FREQUENTLY ASKED QUESTIONS ABOUT CONCUSSION-PREVENTION LAWS

How widespread are concussions among youth athletes?

An estimated 400,000 high school athletes sustained concussions while participating in five major male sports and four major female sports during the 2005-2008 school years[i]. In addition, experts believe that the prevalence of sports-related concussions among young people in all sports is significantly higher than reported.

Moreover, the number of youth athletes taken to emergency rooms with sports-related concussions doubled during the 10-year-period from 1997 to 2007[ii]. Meanwhile, among youth aged 14 to 19, emergency room visits for concussions sustained during team sports more than tripled over the same period[iii].

What dangers do these head injuries pose to young athletes?

A concussion is a type of traumatic brain injury, or TBI, which changes the way the brain normally works. Recognizing and responding to concussions when they first occur help to aid recovery and to prevent prolonging concussion symptoms, chronic brain damage or even death. Yet, a recent study estimated that more than 40 percent of high school athletes return to participate in school athletics before they have fully recovered from these serious head injuries[iv].

Do concussions involve youth athletes in all sports and at any age or is it just an injury sustained by boys who play football?

Concussions can occur in athletes of any age and in any sport or recreational activity. In fact, each year, U.S. emergency departments treat an estimated 135,000 sports-related and recreation-related TBIs, including concussions, among children ages 5 to 18[v]. In addition, children and teens are more likely to get a concussion and take longer to recover than adults. While youth sports concussions often are associated with football, the rate of concussions in girl's high school soccer is almost as high. Research also indicates that there may be gender differences in how boys and girls recover from concussions.[vi]

How many states have enacted laws related to concussion-awareness, prevention and management?

As of October 2010, eight states have adopted similar concussion-awareness and prevention laws initially adopted in Washington, known as the Zackery Lystedt law, including Oregon, New Mexico, Connecticut, Oklahoma, Virginia, Massachusetts and Rhode Island. In many other states, active coalitions are pushing to enact similar legislation.

What are the key elements of a concussion-prevention and management bill?

An effective concussion-prevention bill follows the example of the State of Washington's Zackery Lystedt law. It includes three essential elements: (1) inform and educate student athletes, their parents and guardians and require them to sign a concussion information form; (2) removal of a student-athlete who appears to have suffered a concussion from play or practice at the time of the suspected

concussion; and (3) requiring an athlete to be cleared by a licensed medical professional trained in the evaluation and management of concussions before returning to play or practice.

There is an international consensus on return to play guidelines for youth, adopted at the 3rd International Conference on Concussion in Sport in Zurich, in November 2008, which states that "It is not appropriate for a child or adolescent athlete with concussion to RTP on the same day as the injury regardless of the level of athletic performance."[vii]

What is the cost of implementing a concussion prevention and awareness bill?

Zero. The bill is revenue neutral. There are no mandates in the bill and no requirements that resources be spent to hire or train medical professionals or to purchase equipment. Free information on concussions for high school and youth coaches, parents, athletes, as well as school professionals is publicly available on the Centers for Disease Control and Prevention's (CDC) website at www.cdc.gov/Concussion, including a youth concussions poster found at www.cdc.gov/concussion/pdf/poster_Eng.pdf designed to hang in every locker room across the country.

What are the penalties for violating the concussion prevention and awareness law? Who is liable if the law is not followed?

There is no liability attached to Washington's Zackery Lystedt law. It does not mandate any civil or criminal penalties, nor does it create greater liability for individuals and/or organizations. Indeed, the education and awareness efforts and requirement of medical clearance before return to play has decreased the variability of care and decreased liability. Wherever the law is passed, the community can determine if and how to monitor and enforce the law.

What about implementing the law in rural areas where it may be more challenging to find medical professionals?

The law does not require a specific medical specialist to participate in every evaluation. Rather, the language of the Washington statute requiring an athlete "to be cleared by a licensed medical professional trained in the evaluation and management of concussions before returning to play or practice" permits a wide range of qualified individuals to determine a youth athlete's suitability for returning to play. For example, in Washington State, the Washington Interscholastic Activities Association decided that qualifying medical professionals included: medical doctors, osteopaths, nurse practitioners, athletic trainers, and physician assistants.

What is the impact of concussion-prevention laws on private sports organizations?

These laws may be written in such a way as to apply not only to public sports organizations but also to private sports organizations, many of which maintain public-sector connections/affiliations (such as the use of public facilities). For example, in Washington private sports groups are required by law to carry insurance to play on publicly-owned playing fields. The Zackery Lystedt law amended that insurance-based law to require private nonprofits to comply with the policies on the management of concussions and head injuries in youth sports.

What impact have concussion-prevention laws had in states that have passed them?

The Zackery Lystedt law was the first concussion-prevention state law to pass in 2009. While no comprehensive and detailed assessment can yet be made, early and anecdotal data suggests that the law is having an immediate and positive impact. It is helping meet a critical goal -- preventing preventable brain injuries and making sports and recreational activities safer for youth.

What organizations have supported such measures?

A broad coalition of groups representing teachers and parents, sports medicine, medical professionals, school administrators, the disability community and athletic organizations have supported concussion-prevention legislation at the state and federal level. These organizations include the National Football League, American College of Sports Medicine, USA Football, National School Boards Association, Parent Teacher Association, National Association of School Nurses, National Council of Youth Sports, The Sarah Jane Brain Foundation, National Disability Rights Network, National Athletic Trainers' Association, National Association of Health and Fitness, the Brain Injury Association of America, the Brain Injury Association of Washington, and many others.

What law, if any, has Congress proposed or passed regarding concussion prevention and awareness?

The "Protecting Student Athletes from Concussions Act of 2010" incorporates the same core principles of the Lystedt law and was introduced in Congress in September of 2010. If passed, the bill would require school districts to develop and implement a minimum standard, community-based plan for concussion safety and management. Of course, states would be able to implement standards far exceeding these basic, minimum standards.

Where may I find/read a copy of the Zackery Lystedt law?

The Zackery Lystedt law may be found in this packet. It may also be found online by visiting: http://www.leg.wa.gov/CodeReviser/documents/sessionlaw/2009pam3.pdf

Where may I find more information about the dangers of concussions and passing a law in my state?

More information about concussions may be found on the website of the CDC. You also may watch an NFL-produced video about enacting a concussions-prevention law in your state, which is available at NFL.com/youthconcussions and on the CDC's website as well.

CERTIFICATE

I, Barbara Baker, Chief Clerk of the House of Representatives of the State of Washington, do hereby certify that the attached is **ENGROSSED HOUSE BILL 1824** as passed by the House of Representatives and the Senate on the dates hereon set forth.

BARBARA BAKER

Chief Clerk

FILED

May 18, 2009

Secretary of State
State of Washington

ENGROSSED HOUSE BILL 1824

AS AMENDED BY THE SENATE

Passed Legislature - 2009 Regular Session

State of Washington 61st Legislature 2009 Regular Session

By Representatives Rodne, Quall, Anderson, Liias, Walsh, Pettigrew, Priest, Simpson, Kessler, Rolfes, Johnson, Sullivan, and Morrell

Read first time 01/30/09. Referred to Committee on Education.

AN ACT Relating to requiring the adoption of policies for the management of concussion and head injury in youth sports; amending RCW 4.24.660; and adding a new section to chapter 28A.600 RCW.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

Sec. 1. RCW 4.24.660 and 1999 c 316 s 3 are each amended to read as follows:

(1) A school district shall not be liable for an injury to or the death of a person due to action or inaction of persons employed by, or under contract with, a youth program if:

(a) The action or inaction takes place on school property and during the delivery of services of the youth program;

(b) The private nonprofit group provides proof of being insured, under an accident and liability policy issued by an insurance company authorized to do business in this state, that covers any injury or damage arising from delivery of its services. Coverage for a policy meeting the requirements of this section must be at least fifty thousand dollars due to bodily injury or death of one person, or at least one hundred thousand dollars due to bodily injury or death of two or more persons in any incident. The private nonprofit shall also

provide a statement of compliance with the policies for the management of concussion and head injury in youth sports as set forth in section 2 of this act; and

(c) The group provides proof of such insurance before the first use of the school facilities. The immunity granted shall last only as long as the insurance remains in effect.

(2) Immunity under this section does not apply to any school district before January 1, 2000.

(3) As used in this section, "youth programs" means any program or service, offered by a private nonprofit group, that is operated primarily to provide persons under the age of eighteen with opportunities to participate in services or programs.

(4) This section does not impair or change the ability of any person to recover damages for harm done by: (a) Any contractor or employee of a school district acting in his or her capacity as a contractor or employee; or (b) the existence of unsafe facilities or structures or programs of any school district.

NEW SECTION. **Sec. 2.** A new section is added to chapter 28A.600 RCW to read as follows:

(1)(a) Concussions are one of the most commonly reported injuries in children and adolescents who participate in sports and recreational activities. The centers for disease control and prevention estimates that as many as three million nine hundred thousand sports-related and recreation-related concussions occur in the United States each year. A concussion is caused by a blow or motion to the head or body that causes the brain to move rapidly inside the skull. The risk of catastrophic injuries or death are significant when a concussion or head injury is not properly evaluated and managed.

(b) Concussions are a type of brain injury that can range from mild to severe and can disrupt the way the brain normally works. Concussions can occur in any organized or unorganized sport or recreational activity and can result from a fall or from players colliding with each other, the ground, or with obstacles. Concussions occur with or without loss of consciousness, but the vast majority occurs without loss of consciousness.

(c) Continuing to play with a concussion or symptoms of head injury leaves the young athlete especially vulnerable to greater injury and

even death. The legislature recognizes that, despite having generally recognized return to play standards for concussion and head injury, some affected youth athletes are prematurely returned to play resulting in actual or potential physical injury or death to youth athletes in the state of Washington.

(2) Each school district's board of directors shall work in concert with the Washington interscholastic activities association to develop the guidelines and other pertinent information and forms to inform and educate coaches, youth athletes, and their parents and/or guardians of the nature and risk of concussion and head injury including continuing to play after concussion or head injury. On a yearly basis, a concussion and head injury information sheet shall be signed and returned by the youth athlete and the athlete's parent and/or guardian prior to the youth athlete's initiating practice or competition.

(3) A youth athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time.

(4) A youth athlete who has been removed from play may not return to play until the athlete is evaluated by a licensed health care provider trained in the evaluation and management of concussion and receives written clearance to return to play from that health care provider. The health care provider may be a volunteer. A volunteer who authorizes a youth athlete to return to play is not liable for civil damages resulting from any act or omission in the rendering of such care, other than acts or omissions constituting gross negligence or willful or wanton misconduct.

(5) This section may be known and cited as the Zackery Lystedt law.

Passed by the House April 20, 2009.
Passed by the Senate April 2, 2009.
Approved by the Governor May 14, 2009.
Filed in Office of Secretary of State May 18, 2009.

(INSERT SCHOOL/ORGANIZATION NAME HERE)
Concussion Information Sheet

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.** In other words, even a "ding" or a bump on the head can be serious. You can't see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:	
• Headaches • "Pressure in head" • Nausea or vomiting • Neck pain • Balance problems or dizziness • Blurred, double, or fuzzy vision • Sensitivity to light or noise • Feeling sluggish or slowed down • Feeling foggy or groggy • Drowsiness • Change in sleep patterns	• Amnesia • "Don't feel right" • Fatigue or low energy • Sadness • Nervousness or anxiety • Irritability • More emotional • Confusion • Concentration or memory problems (forgetting game plays) • Repeating the same question/comment

Signs observed by teammates, parents and coaches include:
• Appears dazed • Vacant facial expression • Confused about assignment • Forgets plays • Is unsure of game, score, or opponent • Moves clumsily or displays incoordination • Answers questions slowly • Slurred speech • Shows behavior or personality changes • Can't recall events prior to hit • Can't recall events after hit • Seizures or convulsions • Any change in typical behavior or personality • Loses consciousness

What can happen if my child keeps on playing with a concussion or returns too soon?

Document created 6/15/2009

(INSERT SCHOOL/ORGANIZATION NAME HERE)

Concussion Information Sheet

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athletes will often fail to report symptoms of injuries. Concussions are no different. As a result, education of administrators, coaches, parents and students is the key to student-athlete's safety.

If you think your child has suffered a concussion

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours. The new "Zackery Lystedt Law" in Washington now requires the consistent and uniform implementation of long and well-established return-to-play concussion guidelines that have been recommended for several years:

> "a youth athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time"
>
> and
>
> "...may not return to play until the athlete is evaluated by a licensed heath care provider trained in the evaluation and management of concussion and received written clearance to return to play from that health care provider".

You should also inform your child's coach if you think that your child may have a concussion. Remember it's better to miss one game than miss the whole season. And when in doubt, the athlete sits out.

For current and up-to-date information on concussions you can go to:

December 8, 2010

Roger Goodell, Commissioner
National Football League
280 Park Avenue, Floor 12W
New York, NY 10017-1206

Dear Commissioner Goodell:

From the time I was first approached to support a law to protect youth athletes from the risks of concussions, I have focused on, and learned much about, this important issue. We all share the desire to protect our children from serious, yet preventable, health risks. This is why I am pleased to share Washington State's experience with the Zackery Lystedt Law.

I feel it is my responsibility to protect the health and safety of our young athletes while carefully limiting the cost to Washington State taxpayers. Our state, like many others in our country, is facing significant budget challenges, so any new expenditures have to be carefully scrutinized.

I am thrilled to report that the Zackery Lystedt Law is working. We are seeing a decrease in concussions and other head injuries in our student athlete population. I believe the adoption of this important legislation has saved our state money in emergency medical care, rehabilitation, and other services children need when they suffer the consequences of untreated brain injuries. In addition, school districts have not been required to hire medical professionals or trainers, and no additional significant investments were needed to comply with this law.

Thank you for your leadership in working to have a version of the Zackery Lystedt Law adopted around the country. Please feel free to share this with other states as you work to keep our country's children active and safe.

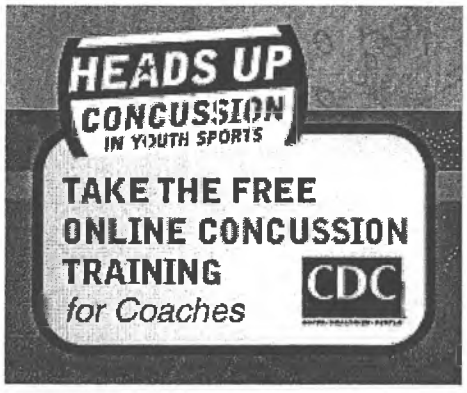
Sincerely,

Chris

Christine O. Gregoire
Governor

Happy holidays!

Centers for Disease Control and Prevention
Your Online Source for Credible Health Information



Heads Up Online Training Course

Heads Up: Concussion in Youth Sports is a free, online course available to coaches, parents, and others helping to keep athletes safe from concussion. It features interviews with leading experts, dynamic graphics and interactive exercises, and compelling storytelling to help you recognize a concussion and know how to respond if you think that your athlete might have a concussion.

What You Will Learn

This course will help you:

- Understand a concussion and the potential consequences of this injury,
- Recognize concussion signs and symptoms and how to respond,
- Learn about steps for returning to activity (play and school) after a concussion, and
- Focus on prevention and preparedness to help keep athletes safe season-to-season.

You can help make your league and school sports safer and healthier for all athletes. Learn when to make the call to pull an athlete off the field, ice, court, or track, and work with athletes, parents, and league and school officials to implement a concussion action plan and prevention strategies.

Course Highlights

Concussion Basics

- Understand concussion and what happens to the brain,
- Discover what causes a concussion, and
- Learn the potential consequences of concussion.

Recognize and Respond to a Suspected Concussion

- Focus on what to look for and when to pull athletes out of play,
- Watch for danger signs and seeking immediate medical attention, and
- Learn the four-step, "Heads Up" action plan when a concussion is suspected.

Helping Athletes Get Back to Play and to School

- Characterize the gradual steps for returning to activity (play and school), and
- Review a concussion preparedness checklist to guide you through pre-, mid-, and post-seasons.

Resource Center

- Access additional concussion information, videos, presentations by leading experts, fact sheets, communication strategies for talking with parents and athletes, and other tools.

HEADS·UP CONCUSSION IN HIGH SCHOOL SPORTS

A FACT SHEET FOR PARENTS

What is a concussion?

A concussion is a brain injury. Concussions are caused by a bump, blow, or jolt to the head or body. Even a "ding," "getting your bell rung," or what seems to be a mild bump or blow to the head can be serious.

What are the signs and symptoms?

You can't see a concussion. Signs and symptoms of concussion can show up right after the injury or may not appear or be noticed until days after the injury. If your teen reports ***one or more*** symptoms of concussion listed below, or if you notice the symptoms yourself, keep your teen out of play and seek medical attention right away.

Signs Observed by Parents or Guardians	Symptoms Reported by Athlete
• Appears dazed or stunned • Is confused about assignment or position • Forgets an instruction • Is unsure of game, score, or opponent • Moves clumsily • Answers questions slowly • Loses consciousness *(even briefly)* • Shows mood, behavior, or personality changes • Can't recall events *prior* to hit or fall • Can't recall events *after* hit or fall	• Headache or "pressure" in head • Nausea or vomiting • Balance problems or dizziness • Double or blurry vision • Sensitivity to light or noise • Feeling sluggish, hazy, foggy, or groggy • Concentration or memory problems • Confusion • Just not "feeling right" or is "feeling down"

How can you help your teen prevent a concussion?

Every sport is different, but there are steps your teens can take to protect themselves from concussion and other injuries.

- Make sure they wear the right protective equipment for their activity. It should fit properly, be well maintained, and be worn consistently and correctly.
- Ensure that they follow their coaches' rules for safety and the rules of the sport.
- Encourage them to practice good sportsmanship at all times.

What should you do if you think your teen has a concussion?

1. **Keep your teen out of play.** If your teen has a concussion, her/his brain needs time to heal. Don't let your teen return to play the day of the injury and until a health care professional, experienced in evaluating for concussion, says your teen is symptom-free and it's OK to return to play. A repeat concussion that occurs before the brain recovers from the first—usually within a short period of time (hours, days, or weeks)—can slow recovery or increase the likelihood of having long-term problems. In rare cases, repeat concussions can result in edema (brain swelling), permanent brain damage, and even death.
2. **Seek medical attention right away.** A health care professional experienced in evaluating for concussion will be able to decide how serious the concussion is and when it is safe for your teen to return to sports.
3. **Teach your teen that it's not smart to play with a concussion.** Rest is key after a concussion. Sometimes athletes wrongly believe that it shows strength and courage to play injured. Discourage others from pressuring injured athletes to play. Don't let your teen convince you that s/he's "just fine."
4. **Tell all of your teen's coaches and the student's school nurse about ANY concussion.** Coaches, school nurses, and other school staff should know if your teen has ever had a concussion. Your teen may need to limit activities while s/he is recovering from a concussion. Things such as studying, driving, working on a computer, playing video games, or exercising may cause concussion symptoms to reappear or get worse. Talk to your health care professional, as well as your teen's coaches, school nurse, and teachers. If needed, they can help adjust your teen's school activities during her/his recovery.

If you think your teen has a concussion:
Don't assess it yourself. Take him/her out of play. Seek the advice of a health care professional.

It's better to miss one game than the whole season.

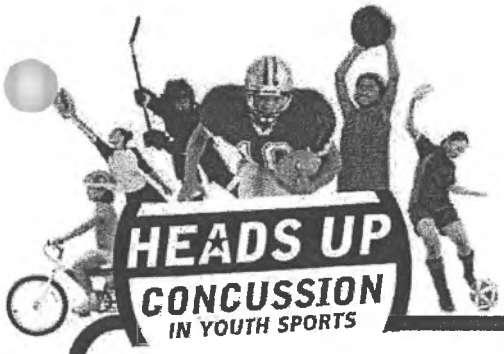
U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES
CENTERS FOR DISEASE CONTROL AND PREVENTION

June 2010

U.S. Department of Health and Human Services
Centers for Disease Control and Prevention



A Fact Sheet for **ATHLETES**

WHAT IS A CONCUSSION?

A concussion is a brain injury that:

- Is caused by a bump or blow to the head
- Can change the way your brain normally works
- Can occur during practices or games in any sport
- Can happen even if you haven't been knocked out
- Can be serious even if you've just been "dinged"

WHAT ARE THE SYMPTOMS OF A CONCUSSION?

- Headache or "pressure" in head
- Nausea or vomiting
- Balance problems or dizziness
- Double or blurry vision
- Bothered by light
- Bothered by noise
- Feeling sluggish, hazy, foggy, or groggy
- Difficulty paying attention
- Memory problems
- Confusion
- Does not "feel right"

WHAT SHOULD I DO IF I THINK I HAVE A CONCUSSION?

- **Tell your coaches and your parents.** Never ignore a bump or blow to the head even if you feel fine. Also, tell your coach if one of your teammates might have a concussion.
- **Get a medical check up.** A doctor or health care professional can tell you if you have a concussion and when you are OK to return to play.
- **Give yourself time to get better.** If you have had a concussion, your brain needs time to heal. While your brain is still healing, you are much more likely to have a second concussion. Second or later concussions can cause damage to your brain. It is important to rest until you get approval from a doctor or health care professional to return to play.

HOW CAN I PREVENT A CONCUSSION?

Every sport is different, but there are steps you can take to protect yourself.

- Follow your coach's rules for safety and the rules of the sport.
- Practice good sportsmanship at all times.
- Use the proper sports equipment, including personal protective equipment (such as helmets, padding, shin guards, and eye and mouth guards). In order for equipment to protect you, it must be:
  - > The right equipment for the game, position, or activity
  - > Worn correctly and fit well
  - > Used every time you play

It's better to miss one game than the whole season.

CONCUSSION

A Must Read for Young Athletes | Let's Take Brain Injuries Out of Play

CONCUSSION FACTS

- A concussion is a brain injury that affects how your brain works.
- A concussion is caused by a blow to the head or body:
  - from contact with another player, hitting a hard surface such as the ground, ice, or court, or
  - being hit by a piece of equipment such as a lacrosse stick, hockey puck, or field hockey ball.
- A concussion can happen even if you haven't been knocked unconscious.
- If you think you have a concussion, you should not return to play on the day of the injury and until a health care professional says you are OK to return to play.

CONCUSSION SYMPTOMS

- Concussion symptoms differ with each person and with each injury, and may not be noticeable for hours or days. Common symptoms include:
  - Headache
  - Confusion
  - Difficulty remembering or paying attention
  - Balance problems or dizziness
  - Feeling sluggish, hazy, foggy, or groggy
  - Feeling irritable, more emotional, or "down"
  - Nausea or vomiting
  - Bothered by light or noise
  - Double or blurry vision
  - Slowed reaction time
  - Sleep problems
  - Loss of consciousness

During recovery, exercising or activities that involve a lot of concentration (such as studying, working on the computer, or playing video games) may cause concussion symptoms to reappear or get worse.

WHY SHOULD I REPORT MY SYMPTOMS?

- Unlike with some other injuries, playing or practicing with concussion symptoms is dangerous and can lead to a longer recovery and a delay in your return to play.
- While your brain is still healing, you are much more likely to have another concussion. Repeat concussions can increase the time it takes for you to recover and the likelihood of long term problems.
- In rare cases, repeat concussions in young athletes can result in brain swelling or permanent damage to your brain. They can even be fatal.

For more information about concussion and other types of traumatic brain injuries, go to

www.cdc.gov/Concussion

A part of CDC's Heads Up series

What Should I Do if I Think I Have a Concussion?

DON'T HIDE IT, REPORT IT. Ignoring your symptoms and trying to "tough it out" often makes symptoms worse. Tell your coach, parent, and athletic trainer if you think you or one of your teammates may have a concussion. Don't let anyone pressure you into continuing to practice or play with a concussion.

GET CHECKED OUT. Only a health care professional can tell if you have a concussion and when it's OK to return to play. Sports have injury timeouts and player substitutions so that you can get checked out and the team can perform at its best. The sooner you get checked out, the sooner you may be able to safely return to play.

TAKE CARE OF YOUR BRAIN. A concussion can affect your ability to do schoolwork and other activities. Most athletes with a concussion get better and return to sports, but it is important to rest and give your brain time to heal. A repeat concussion that occurs while your brain is still healing can cause long-term problems that may change your life forever.

All concussions are serious. *Don't hide it, report it. Take time to recover.*

It's better to miss one game than the whole season.

Football's National Governing Body

USA Football serves as the sport's national governing body on youth and amateur levels. An independent non-profit based in downtown Indianapolis, USA Football leads the game's development, inspires participation and ensures a positive experience for all youth and amateur players. USA Football was endowed by the NFL Youth Football Fund in 2002.

Working in partnership with the Centers for Disease Control and Prevention since 2007 as well as other credentialed medical organizations and doctors regarding player health and safety, USA Football stands among leaders in youth sports concussion education, particularly in youth football. The organization has built the first football-specific online youth football coaching course that includes chapters and comprehension quizzes encompassing concussion education and management, heat and hydration preparedness and equipment fitting guidelines. USA Football's members – youth football coaches, players, league commissioners and game officials – reside in all 50 states.

USA Football partners with collegiate athletic conferences, the NFL and its teams to promote concussion education through its 80-plus annual football training events and national campaigns. Dozens of articles, downloadable online resources and video promoting concussion education and management reside at usafootball.com and are available at no cost. Approximately 1 million visitors reach usafootball.com annually.

What Youth Football Coaches Should Know About Concussions

By Michael D. Goodlett, M.D., Lawrence J. Lemak, M.D.
March 11, 2009, revised December 28, 2009

Recognize the signs and symptoms of a concussion to ensure your players' safety. An easy rule of thumb to follow is when in doubt, sit them out.

WHAT COACHES SHOULD KNOW

*A concussion is any change in an athlete's behavior, awareness, and/or physical feelings caused by a direct or indirect blow to the head.

*Any concussion has the potential to be a serious injury.

*Before letting an athlete go back to play, a concussion should be evaluated by a doctor.

*An athlete should never return to play while exhibiting any signs or symptoms of a concussion either at rest or with exertion. When in doubt, sit them out!

*There is an increased risk of suffering subsequent concussions after a first concussion.

*Any head injury associated with loss of consciousness must be treated as a suspected head, neck, or back injury.

Knowing the signs and symptoms of a concussion will help a youth football coach feel more comfortable and be more prepared in case of an emergency.

*The only instances in which an athlete's helmet and shoulder pads should be removed is when a medical authority believes that it is necessary for the care of the athlete, or if the equipment interferes with the rescuers' ability to provide required CPR.

*If necessary to provide care for life-threatening conditions, it is recommended that the facemask be removed rather than the whole helmet. A tool to remove the facemask should be in the first aid kit.

*For any head injury, activate the Emergency Action Plan and follow the emergency action steps, Check-Call-Care.

When a player is hit, he may receive a blow to the head and become unconscious or demonstrate changes in behavior. If the player regains consciousness, seems to be alert and oriented, and is eager to play, a coach may feel the player is fully recovered and allow him back into the game or practice. However, the player has suffered a concussion. Failure to recognize a concussion can potentially lead to coma and death particularly if a second impact occurs. Coaches need to be aware of the signs of concussions and treat the situation properly.

Concussions are caused by a force being transmitted to the head. The force may be caused by any direct or indirect hit to the head or body and can cause changes in behavior, awareness, or physical feeling in the injured person. Concussions often go unrecognized by coaches because they are underreported by athletes who want to continue competing. Athletes often will minimize or deny symptoms. Maintaining a high level of suspicion and having some knowledge of the individual athlete's personality helps coaches in early detection of the signals of concussion. This awareness can prevent additional concussive injury, potential long-term brain damage, or other possible catastrophic outcomes.

On-The-Field Evaluations

If there is a forceful blow to the head, with or without loss of consciousness, the coach should suspect a head injury and also be concerned that the neck or back has been injured. When caring for the player on the field, tell him not to nod or shake his head during the assessment, but to say yes or no. The player's helmet should also be left in place. The goal is to minimize movement. If the head impact has caused the player to become unconscious or show the signs of concussion listed below, activate the Emergency Action Plan and follow the emergency action steps, **Check-Call-Care**. **Check** the scene for safety and check the ill or injured athlete, **Call** 9-1-1 or the local emergency number when needed, and

Care for the injured player until EMS personnel arrive.

To Care For Serious Injuries To The Head, Neck, And Back
Follow basic precautions to prevent disease transmission.

Minimize movement of the player's head, neck, and back by putting your hands on both sides of the player's helmet or head. Maintain an open airway using a jaw-thrust maneuver. Have the player remain in the position that you found him until EMS personnel arrive and take over.

Monitor the player's airway, breathing, and circulation.

If life-threatening symptoms are present, it is recommended that the facemask of the athlete's helmet be removed, rather than removing the entire helmet. This will allow access to an airway should the athlete stop breathing.

A tool for removing the facemask should be in the team's first aid kit.

The coach should evaluate the symptoms listed below if he suspects a player may have a concussion requiring immediate care.

The only instance in which an athlete's helmet and shoulder pads should be removed is when a medical authority believes that it is necessary for the care of the athlete, or if the equipment interferes with the rescuers' ability to provide CPR.

Symptoms that require immediate activation of the Emergency Action Plan and immediate removal to a medical facility are:

- *Period of unconsciousness;
- *Confusion, disorientation to time and place;
- *Severe headache or vomiting;
- *Appears sleepy, pale, and is sweating;
- *Blurred vision, slurred speech, and muscle weakness;
- *Neck pain.

Checking For Concussion
If the player is removed from the field after receiving a head impact, it is important to continue evaluating the player every five minutes for at least 30 minutes.

Look at the facial expression of the athlete.

- *Does the athlete have a vacant stare or a confused facial expression?

Check the athlete's behavior.

- *Is the athlete easily distracted or slow to answer questions or follow directions?
- *Does the athlete display unusual emotional reactions, such as *crying or laughing?
- *Does the athlete have a headache or complain of nausea?
- *Is the athlete irritable and easily frustrated?
- *Does the athlete appear unusually anxious or depressed?
- *Does the athlete appear sleepy?
- *Does the athlete have significantly decreased playing ability from earlier in the contest?

Check the athlete's orientation and memory.

- *Is the athlete aware of the time of day and date?
- *Is the athlete generally confused? Questions to ask
- *Which quarter or period is it?
- *Where are we? Which field or arena?
- *Which team are we playing?
- *Which side scored the last points?
- *Which team did the athlete play in the last game?
- *Did the athlete's team win or lose in the last game?

Check for posttraumatic amnesia (the athlete's ability to remember events after the injury).

- *Ask the athlete how he got injured?
- *Ask the athlete the first thing he remembers after the injury?
- *Ask the last thing the athlete remembers before the injury?

Medical attention is required if the athlete's expression, behavior, or memory is affected. Attention should be immediate if symptoms show a deteriorating situation. When an athlete has had a concussion, he should not be allowed to return to the current game or practice, and should not be left alone. Medical evaluation following the concussion is required before a return to participation is permitted.

Postconcussion syndrome
After a player is removed from the field, he may develop symptoms of postconcussion syndrome. This can occur immediately after the injury or many hours or days later. Symptoms of postconcussion syndrome include:

- *Blurred vision
- *Fatigue
- *Ringing in the ears
- *Trouble falling asleep
- *Dizziness

- *Sleeping more or less than usual
- *Headache
- *Increased sensitivity to light and noise
- *Nausea and vomiting
- *Feeling more emotional than normal
- *Poor coordination or balance
- *Difficulty concentrating
- *Increased irritability
- *Difficulty remembering
- *Slurred speech
- *Feeling dazed or stunned
- *Seeing stars or flashing lights
- *Having double vision.

A physician may conduct neuropsychological testing or neuroimaging to assess exactly when the athlete has recovered from a concussion. No athlete should go back to play before being free of all symptoms and signs, both at rest and during exertion, and a physician has indicated the player is ready to return to competition.

CDC, NFL unite national governing bodies of sport to teach young athletes about concussions

By Joe Frollo
October 11, 2010, revised October 28, 2010

Free poster available for download and distribution to all youth leagues

The Centers for Disease Control and Prevention (CDC), the NFL and 14 national governing bodies of sport, including USA Football, are promoting a free poster designed to increase concussion awareness among young athletes, parents and coaches.

The poster, created by the NFL's Head, Neck and Spine Medical Committee, the CDC and the NFL Players Association, is similar to the one displayed in NFL locker rooms but geared toward a younger audience. It stresses the importance of recognizing a concussion, taking time to recover and not returning to play too soon. By walking through the steps to recognize if the athlete - or a teammate - has suffered a concussion, the goal is increased concussion awareness in all sports.

Players, coaches and parents can better recognize concussion symptoms thanks to a poster being distributed by the Centers for Disease Control and Prevention, NFL, USA Football and other national governing bodies of sport.

"The NFL understands its obligation to educate and inform parents, teachers, coaches and especially young athletes about the risks of concussions," NFL Commissioner Roger Goodell said. "This poster is one element of the NFL's program to assist in the development and broad dissemination of reliable medical information on concussions, which will give players, parents, coaches and others the information they need."

The poster is available online for download and order at no cost at CDC's website or by calling (800) CDC-INFO. Information on recognizing and reacting to concussions also can be found at usafootball.com and through USA Football's Put Pride Aside For Player Safety program as well as through the following national governing bodies:

USA Football's Certified Coaching Education Program, employed by youth football coaches in all 50 states, includes chapters on concussion awareness and management as well as hydration and proper equipment fitting. Health and safety videos also are available at USA Football's Health and Safety page.

"Having more than one dozen different sports be part of this initiative underscores the point that coaches, athletes and parents across all youth athletics need to be informed about this issue," USA Football Executive Director ScottHallenbeck said.

"USA Football has worked with the CDC on concussion education since 2007, and we will continue to emphasize it while teaching coaches and players proper football fundamentals for fun and safe play."

Concussion Awareness

Redskins and USA Football Welcome High School Coaches for Concussion Education

By Steve Alic
April 23, 2010, revised April 29, 2010

The Washington Redskins and USA Football partnered for the Redskins' inaugural Concussion Awareness and Education Forum on April 17 at Redskins Park.

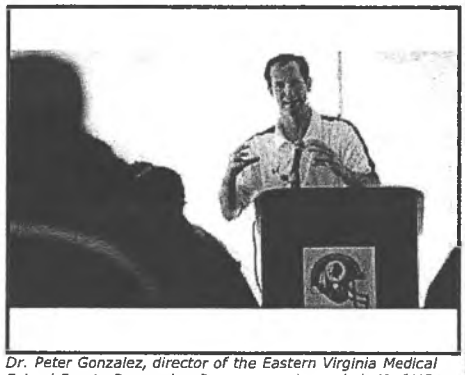
Redskins Park has a history of preparing football teams for success.

Successful preparation at the football training facility earned a new and vital definition on April 17 when the Washington Redskins and USA Football partnered for the Redskins' inaugural Concussion Awareness and Education Forum for Maryland, Virginia and Washington, D.C. high school head football coaches.

Nearly 200 high school coaches traveled to Redskins Park as guests of the team to watch minicamp practice and participate in a 90-minute concussion education seminar led by USA Football's Peter Gonzalez, M.D.

Dr. Gonzalez is the director of the Eastern Virginia Medical School Sports Concussion Program in Norfolk, Va.

Redskins General Manager Bruce Allen opened the day by welcoming the coaches and introduced Dr. Gonzalez. Each coach received a USA Football/CDC concussion awareness clipboard sticker listing concussion signs, symptoms and an action plan. This same material is given to thousands of coaches who attend USA Football's full-day coaching schools across the country. Concussion-related information is available at no cost throughout usafootball.com.



Dr. Peter Gonzalez, director of the Eastern Virginia Medical School Sports Concussion Program, spoke on behalf of USA Football regarding concussion awareness and management to 170 high school head football coaches at Redskins Park. The session was part of a full-day minicamp invitation that the Washington Redskins extended to high school coaches throughout Maryland, Virginia and Washington, D.C. (Photo courtesy of Ned Dishman/Washington Redskins)

"The coaches asked good questions," Dr. Gonzalez said after the presentation. "The Redskins are to be commended - this was a great discussion and also was the largest group of high school coaches I've spoken to at any one time."

"I came to learn all I can," said Jason Meade, head football coach of Lee-Davis High School in Mechanicsville, Va., a two-hour drive from Redskins Park. Coach Meade enters his eighth season as head coach this fall. "Learning more when it comes to putting our players in a better, safer situation is important to us."

"We can't allow high school athletes who suffer concussions to return to play too soon," Dr. Gonzalez added. "If there's one thing a coach takes away from our session today, it's not allowing an athlete to return to play while still possessing the symptoms of a concussion.

"And if we even suspect someone to have suffered a concussion, there is no same-day return to play."

Concussion awareness and management is an important part of USA Football's online coaching education courses and its 80-plus training events held across the country for players, coaches and youth league commissioners.

USA Football is the official youth football development partner of the NFL, its 32 teams and the NFL Players Association. More than 60 of USA Football's events in 2010 are conducted in partnership with NFL clubs.

NATIONAL FOOTBALL LEAGUE AND THE NATIONAL ATHLETIC TRAINERS' ASSOCIATION TEAM TO PASS STATE LAWS TO PROTECT YOUTH ATHLETES FROM THE RISKS OF CONCUSSIONS

Washington, D.C., December 7, 2010 – The National Football League and the National Athletic Trainers' Association today announced a joint effort to promote legislation to raise awareness and protect youth athletes from the risks of concussions. The new partnership was announced during the Youth Sports Safety Summit in the nation's capital.

"We are pleased to team with the National Athletic Trainers' Association on a state-based legislative effort to protect youth athletes," said Jeff Miller, the NFL's vice president of government relations. "We will advance a simple, but significant shared goal -- to help prevent concussions and make sports and recreational activities safer for young athletes around the country."

The NFL and NATA have agreed to work together to pass concussion awareness and prevention laws in every state throughout the country. The league and the association will promote laws modeled on the Zackery Lystedt law in Washington State, which contains three key elements: (1) concussion education for young athletes, parents and coaches on an annual basis; (2) immediate removal of a student athlete who appears to have suffered a concussion from play or practice; and (3) mandatory clearance of that student by a health care professional who is trained in the evaluation and management of concussions before returning to play or practice.

Marjorie J. Albohm, MS, ATC, president of the National Athletic Trainers' Association added, "We know from recent cases and studies that far too many youth athletes are either playing with undiagnosed symptoms of concussions or returning to play before fully recovering from them. That's why our organization of trained health care professionals supports legislation in every state that will help coaches, youth athletes, their parents and school officials to recognize and respond appropriately to concussions. Doing so will help prevent injury, chronic impairment and even death."

-more-

The NFL and NATA also have pledged to encourage and enlist the participation of other stakeholders and advocates. Organizations already supporting the adoption of such laws include USA Football, the American College of Sports Medicine and the Brain Injury Association of Washington. To date, nine states have enacted adequate concussion awareness and prevention laws including Washington, Oregon, New Mexico, Virginia, Rhode Island, Massachusetts, Oklahoma, Connecticut and New Jersey.

National Athletic Trainers' Association (NATA) – Health Care for Life & Sport

Athletic trainers are health care professionals who specialize in the prevention, diagnosis, treatment and rehabilitation of injuries and sport-related illnesses. They prevent and treat chronic musculoskeletal injuries from sports, physical and occupational activity, and provide immediate care for acute injuries. Athletic trainers offer a continuum of care that is unparalleled in health care. The National Athletic Trainers' Association represents and supports 32,000 members of the athletic training profession. Visit www.nata.org

BRAIN INJURY ASSOCIATION OF WASHINGTON

Journey Toward Understanding: Concussion & Mild Brain Injury

Introduction

Three little monkeys jumping on the bed.
One fell off and bumped his head.
Took him to the doctor and the doctor said,
"That's what you get for jumping on the bed!"

This nursery rhyme tells a story about concussion--the bumps, bangs and shakings to the brain that many adults and children experience. Unfortunately, just like the monkeys jumping on the bed, professionals may not understand concussion well enough to offer support and to help individuals who sustain concussions. People with concussions may just try and "shake it off" and, thus, not be evaluated and treated properly by professionals. It is not uncommon for individuals to be sent home from emergency rooms (ERs) with no follow-up care or to end up with long-term problems that no one understands. This paper will define concussion, present the common symptoms of concussions and discuss ways to help people who sustain concussions.

Each year, it is estimated that approximately 1.5 million people experience concussions. Vehicular crashes (cars, motorcycles, bicycles), sports/recreational activities (football, hockey, playgrounds), abuse/assault (shaken baby syndrome, beatings), falls (young children and the elderly) and other events all have been implicated. It is easy to see that almost any activity can put a person at risk for a concussion. It is a little surprising that people do so well avoiding concussions and equally not surprising that many of us have had concussions.

It is important to note that concussions clearly are associated with lifestyle and parallel other similar lifestyle injuries. If you are involved actively in sports that put your body at risk for muscle pulls, strains, sprains and broken bones, then your chances of a concussion also are great. The Centers for Disease Control and Prevention (CDC) estimates 300,000 sports-related concussions in the United States each year. The more risk to your body, the more risk of serious harm and permanent damage, and the greater the chances that a concussion or more permanent brain injury can occur.

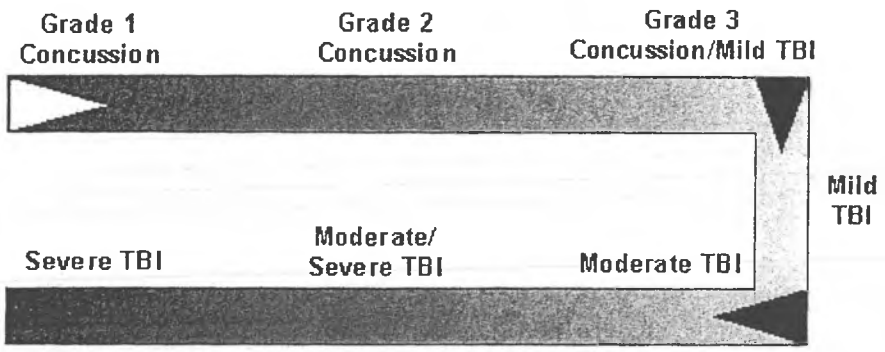
If your job involves heavy labor in farm or construction settings, your chances of physical injury increase and the chances of a concussion increases as well. The use of substances, such as alcohol, that alter your judgment and coordination about everyday activities, like driving or even walking, put you at risk for physical injury and, therefore, at similar risk for a concussion or more serious brain injury. Children--especially younger children--are susceptible to sustaining concussions from falls, play activities and abuse. Lastly, older individuals with balance problems may be prone to falls that can result in not only broken hips, but concussions as well.

What is Concussion?

It is important to understand that a concussion is a physical injury to the brain that causes a disruption of normal functioning just like any other physical injury disrupts your normal functioning. For example, some ankle injuries (i.e., sprains and fractures) are more disruptive

than others, just as some brain injuries are more disruptive than others. The better we understand any injury, the better our chances are for a speedier and healthier recovery.

There is some confusion as to the definition of a concussion and the definition of a mild traumatic brain injury (MTBI). Brain injury can be viewed along a continuum that incorporates concussion, mild brain injury, moderate brain injury and severe brain injury. Each type of brain injury varies depending upon: 1) whether the person was unconscious, 2) how long he/she was unconscious, 3) the length of their amnesia, 4) the resulting cognitive, behavioral and physical problems and 5) the recovery. Viewed as a continuum, the severity of brain injuries can be represented as follows:



As one can see, the definition for a Grade 3 concussion and a MTBI tend to overlap on this continuum.

To further clarify, a concussion is defined as a trauma (i.e., a blow to the head or a serious whiplash) that induces an alteration in mental status (physical or cognitive abilities) that may or may not involve a loss of consciousness.
Concussion as detailed by guidelines developed by the American Academy of Neurology (AAN) and the Brain Injury Association (BIA), commonly is divided into three different types.

Grade 1 Concussion

- Person is confused but remains conscious.
- SIGNS: Temporarily confused, dazed, unable to think clearly, has trouble following directions
- TIME: Symptoms clear within 15 minutes

Grade 2 Concussion

- Person remains conscious, but develops amnesia
- SIGNS: Similar to Grade 1
- TIME: Symptoms last more than 15 minutes

Grade 3 Concussion

- Person loses consciousness
- SIGNS: Noticeable disruption of brain function exhibited in physical, cognitive and behavioral ways.
- TIME: Unconsciousness for seconds or minutes

It is important to note that a person can sustain a concussion (Grades 1 & 2) without losing consciousness. A Grade 3 concussion involves the loss of consciousness, even if only briefly. As defined by the American Congress of Rehabilitation Medicine, MTBI is a traumatically induced physiological disruption of brain function as manifested by some or all of the following:

- Any period of loss of consciousness
- Any loss of memory for events immediately before or after the incident
- Any alteration in mental state at the time of incident
- Focal neurological deficits that may or may not be transient but does not exceed:
  1. Loss of consciousness of approximately 30 minutes or less
  2. An initial Glasgow Coma Scale score of 13-15 after 30 minutes
  3. Post-traumatic amnesia (PTA) of no more than 24 hours

If concussion and MTBI are seen as part of the brain injury continuum, with Grade 3 concussion and MTBI overlapping, one can get a better understanding of how these definitions compliment each other and enhance our understanding. BIA estimates that approximately 75% of all brain injuries fall in the "concussion-MTBI continuum."

The Functional Mechanics of Concussion

Two mechanisms currently are believed to underlie the changes following concussion. In the first, a sudden movement or direct force applied to the head can set the neural matter of the brain in motion even though the brain is well protected in the skull and very resilient. This motion squeezes, stretches and sometimes tears the neural cells, changing the precise balance and distance the cell's axons and dendrites maintain to transmit or process information.

The second mechanism involves changes that occur in the neuron's ability to produce energy for the cell's vital functions in structures called mitochondria. An initial increase in energy production occurs followed by a dramatic decrease that affects the ability of the cell to produce structural proteins to preserve the diameter of the axon. This change occurs gradually after the time of impact and may be responsible for the delay in symptoms sometimes observed.

The changes that occur affect the electrical or chemical aspects of neural cell functioning and result in unusual processing of normal information. (For this reason, radiologic studies that look at the structure of the brain, such as CT scans and MRI, are most frequently read as normal after concussion/MTBI.) This actually is quite adaptive because the brain cells automatically keep working to reconnect or establish normal impulse transmission. Even the loss of consciousness is adaptive, because the brain shuts down all unnecessary functions until the most important life sustaining neural adjustments are made. Unfortunately, sometimes these neural adjustments cannot be made quickly enough and death can occur.

As a person recovers, the cells re-establish the precise balance needed to ensure effective information processing, but this may mean some compensation or adjustments to the neural cell's original alignments. The more often neural cells must compensate or adjust to injury, the more likely the task takes longer and may not be as complete. For example, when a person sprains or fractures an ankle, professionals recommend cold/heat treatments, rest and supports (i.e., cast, brace) and specific exercises to help the ankle adjust to the injury and recover maximal function. Depending on the severity of the ankle injury (i.e., sprain, fracture) and what is required after recovery (i.e., long distance running, ballet), the severity of the injury to the ankle can disrupt a person's life. Obviously, a human brain is much more complicated than an ankle. Yet similarly, rest, supports (i.e., compensations, modifications) and "exercises" (i.e., therapies, education) for the brain may be recommended to rehabilitate and restore useful

function. Depending on the severity of the concussion and what the person needs to do (i.e., care for a family, return to work or school, manage a large company), a concussion can disrupt a person's life for a short period of time or even longer.

To review, a concussion causes a disruption of normal brain function that may be a temporary inconvenience or result in permanent changes in brain function. Where there are complicating factors, the disturbance in brain function can be fatal. Because of the potential life-threatening danger associated with brain injury, the severity of any brain injury--including concussion--is determined at the time of the injury, based on measures of physical, cognitive and behavioral responsiveness. Again, the three categories commonly used to describe brain injury--mild, moderate and severe--indicate only how seriously impaired the person was at the time of the injury. Thus, on the brain injury scale of severity, a concussion usually is classified as a MTBI because the alterations in brain function are not severe enough or do not last long enough to be classified as moderate or severe brain injury. In the moderate and severe classifications, there appears to be direct damage to the brains neural network with long-term difficulties related to the sites of the damage. The long-term effects of MTBI on brain cell recovery and functioning and behavior vary across individuals. However, for most individuals, no long-term neuronal changes are noted after three to four months and the cognitive and behavioral adjustments return to normal.

Exceptions to this rule exist. Studies indicate that age (i.e., 40 years or older), the presence of a systemic disease (i.e., diabetes mellitus), and possibly female gender affect the recovery process. Other risk factors for delayed recovery include a history of previous brain injury or when situational and personality factors play a role in recovery. For example, individuals who sustain a second concussion while still symptomatic from the first one may sustain what is termed "second impact syndrome." This condition is very serious and can result in lifelong impairments, coma and even death. Individuals who sustain a series of multiple concussions over time (i.e., boxers, abused children) may be left with permanent impairments and disabilities. People who have mental health issues or other disabilities (i.e., attention deficits, learning disabilities) may find that a concussion further complicates their behavioral and learning challenges. Also, even litigation issues may complicate a person's recovery.

The symptoms of concussions cover a wide range of perceptual, sensory, cognitive, emotional and behavioral features. The TABLE below lists the common early and late symptoms of concussion:

Early Symptoms:

- Headache
- Dizziness or vertigo
- Lack of awareness of surroundings
- Nausea with or without memory dysfunction
- Vomiting

Later Symptoms:

- Persistent low grade headache
- Lightheadedness
- Poor attention and concentration
- Excessiveness or easy fatigue
- Intolerance of bright light or difficulty focusing vision
- Intolerance of loud noises
- Ringing in the ears

- Anxiety and depressed mood
- Irritability and low frustration tolerance

As you can see, many of the symptoms listed above are common to a variety of other natural human experiences. Feeling scared or anxious can make our vision change and cause dizzy feelings and numerous "fight or flight" reactions. Muscle cramps in the neck can give headaches, just as not having our usual dose of caffeine causes headaches. A virus can make us feel "spaced-out" and affect our balance. Depression can affect our cognitive abilities and memory. Being angry over changes due to an injury such as a broken arm can make us irritable and affect our motivation. And, as with concussion, if everyone else feels you "should be over it by now," being treated unfairly may cause hopelessness that makes it difficult to concentrate and sleep.

Recovery Variations after Concussion

Concussions vary, depending upon the type and the individual, hence, recovery varies as well. Some commonly asked questions by individuals who sustained concussions include:

Why is there so much variation in symptom presentations? This variation can best be explained because people differ and their perceptual experience of sensations such as pain and distress remains subjective. Without a technology (i.e., more sophisticated CT/MRI scanning technology) to measure these individual experiences, it remains difficult to determine when the brain's coping or healing has taken place and when the individual's reaction to the process has left perceptual and learned phenomena. Thus, we need to monitor the symptoms of concussion in order to monitor recovery. The following checklist can help individuals and their families monitor their recovery one to three months after a concussion so they can report this information to their physician or therapist. Symptoms that persist beyond the usual recovery time for concussion need to be evaluated and treated more carefully.

Physical Symptoms

- Headache, dizziness, lightheadedness
- Vomiting or nausea
- Numbness or tingling
- Balance problems, clumsiness, drops things, trips often
- Fatigue, tires easily, needs extra sleep, drowsiness, trouble falling asleep or staying asleep
- Sensitivity to light and noise
- Blurry vision
- Ringing in ears

Cognitive Symptoms

- Confusion, in a "fog," has befuddled expression, gets mixed up about time and place
- Attention or concentration problems, inability to do more than one thing at a time, unable to return to a task if interrupted
- Memory problems, forgets things
- Takes longer to get things done or complete assignments
- Has problems organizing thoughts or words, misunderstands things

Behavioral Symptoms

- Restless, irritable, fussy
- Acts without thinking

- Becomes upset easily, loses temper
- Sadness, depressed mood
- Anxiety, nervousness

Why some people adjust better after a concussion than others? Research in cognitive-behavioral therapy supports the notion that: 1) looking at the positive aspects of recovery, 2) taking steps to gain control of your rehabilitation and 3) knowing that fundamental healthy behavior requires a focused rehearsed plan all can contribute to dealing better with the many sensations and feelings that often follow concussion. Concussion needs to be taken seriously and modifications to a person's life (i.e., home, work, school) need to be made during the recovery period. Just because a person "looks great" does not mean that they are recovered fully. Having a good plan for recovery and knowledge about concussion helps individuals feel more in control and lessens their anxiety.

Why do concussive symptoms change over time? It now appears that during the first months after concussion the brain begins to heal and evidence suggests that there is little trace of brain damage after three to four months. During this period of time, sleep patterns return to normal, sensations mirror the brains recovery and efforts to return to normal and develop a sense of self are influenced by the rehabilitation process. For example, many strange sensations accompany recovery from a sprained or fractured ankle, including pain from the efforts a person makes to accommodate the recovery time (such as muscle atrophy), as well as sleeping and exercise changes due to limitations. Brain function is much more complex to understand and monitor. Yet, just as an ankle can "return to normal" over time, so can the brain after concussion.

Why can't professionals tell if there is permanent brain injury over time? Without doing an autopsy, brain function can only be estimated. For example, neurological testing can provide information about what a person might be able to do at this point in time, but without the same information from before the concussion, it is only possible to estimate how a concussion affected performance. Many professionals use various tools to help them understand the degree of brain damage (i.e., CAT scans, MRI, neuropsychological batteries, neurolinguistic assessment, functional behavioral analysis), but these tools are only approximations and it is difficult to predict the total impact a brain injury may have on a person's life. The best "predictor" is the person with the injury working with a dedicated team of professionals to identify and compensate for permanent damage.

Is permanent brain damage always bad? This is a trick question because the easy answer is that damage always means a loss of brain cells. Yet, many people can attest that the loss of brain cells does not mean that they themselves are "lost". Rather, many individuals have found the strategies and techniques they have used to cope with brain injury have been helpful in assisting them to become the person they felt they wanted to be all along--happy, loved, productive and important. The experience of coping with a rehabilitation or treatment program has helped them: 1) appreciate their talents, 2) give up bad habits and 3) become more mindful of what they truly wanted out of life. This is not to minimize the tremendous changes brain injury causes for people and their families, but rather to emphasize the importance of good treatment programs and community support to help people re-define their lives.

Treatment Recommendations

The only cure for brain injury is prevention. Obviously, the treatment of concussion starts with prevention. Thoughtful preparation before activities--knowing your limits; minimizing risk to one's head by wearing protective gear such as seat belts, helmets, hard hats; and being

substance free when activities require concentration such as driving, bicycling, swimming, boating and skiing--all will reduce the likelihood of injury. Unfortunately, concussions often are difficult to prevent even with careful preparation and protective gear.

Immediately after a concussion, emergency care may be required. Since life-threatening complications--usually due to brain swelling and bleeding--can occur from any brain injury regardless of the type, all brain injuries must be taken seriously. The proper assessment of concussion by emergency medical professionals and physicians is critical.

AAN and the BIA have developed a clear, scientifically based set of guidelines for the medical management of concussion in sports that is used by team physicians, coaches and athletic trainers and can easily be adapted for all concussions. Thus, after the type of concussion has been determined, management guidelines are implemented. If an adult sustains a Grade 1 or 2 concussion, it may be wise for that person to rest for two or three days before returning to regular activities and not operate a motor vehicle for at least a week. If a child crashes a bicycle and the physician has examined and given them a clean bill of health, it is wise to keep the child off the bicycle for a week. As always with children, the rule should be that if it has wheels, you need a helmet.

The potential danger with concussion is sustaining a second one before allowing the brain time to rest and recovery from the first one (as we would for a broken ankle). The chart below summarizes AAN's management recommendations for athletes returning to play after concussion, but reworded for the general audience. Please remember that all concussions are potentially serious and an individual should be examined by a physician if there is any doubt about their safety.

Grade 1 Concussion Management Guidelines

If the person has no symptoms or mental status abnormalities 15 minutes after the injury, he/she can resume normal activities. All symptoms from the concussion must have disappeared, first at rest and then with exertional testing, before the individual can return to regular activities.

Grade 2 Concussion Management Guidelines

The individual should refrain from activities for at least one week, again only after the person is asymptomatic at rest and during exertion. Additionally, a physician should perform a neurological exam before the individual is allowed to go back to regular activities. If the individual experiences a worsening in headaches and other concussion symptoms and/or these symptoms last longer than a week, a CT scan or MRI is recommended.

Grade 3 Concussion Management Guidelines

One month should be the minimum period for an individual to return to rigorous activity. For an individual with a brief loss of consciousness (i.e., seconds), he/she can return to regular activities only after being asymptomatic for at least one week. For a person who had a prolonged loss of consciousness (i.e., minutes), he/she can resume normal activities no sooner than after two weeks of rest. A thorough neurological examination and a neuro-imaging study (i.e., CT scan, MRI) should be performed on all individuals who have been rendered unconscious for brief periods of time. The individual should be admitted to the hospital if any signs of pathology are detected and/or the mental status of the person remains abnormal.

Recovery after concussion--just like a sprained or fractured ankle--takes time. An individual with a broken ankle would not go out the next day and run a marathon. That individual likely would take time out from work, rest and put the leg up, use crutches, attend therapy, if necessary, and allow the ankle time to recover. Too often after concussion, many individuals immediately return to work or school, push themselves to think as well and as quickly as they did before and expect that in a day or two they are recovered fully. One of the problems with concussion is that people try and "get back on the horse" too quickly. The danger in doing this is that the person could sustain a second concussion (i.e., the athlete returns to the game; the child gets back on his/her bicycle; the person resumes driving a car) that could cause more serious injury to the brain. Or, if individuals push themselves to perform and/or are expected to perform by their colleagues and family too soon after the concussion, the symptoms may become exacerbated.
After a concussion, it is wise for people to modify their lives by: 1) reducing workloads, 2) building in rest periods, 3) giving more time to finishing projects, 4) developing a written plan to refer to when confused or uncertain, 5) using a notebook/calendar to write things down and check-off when completed, 6) writing down schedules with time, place and person and 7) avoiding the use of alcohol or other substances that may slow recovery.

It is also important to monitor symptoms over the next one to three months and report this data to one's physician and other treating professionals. Family members can become more knowledgeable about concussion and help the person make accommodations, monitor symptoms and ensure that--just like with a broken ankle--the person is given ample healing time. The use of other professionals, such as a Neuropsychologist, can help through testing to determine a person's strengths, needs and preferences. Psychologists and counselors may be extremely beneficial in helping people with more serious injuries to understand and adjust to any changes caused by the concussion. BIA, its chartered state affiliates and support groups may provide the person with education about concussion and where to go for additional help.

Conclusion

Concussion is the most common of all brain injuries. It needs to be better understood, evaluated and treated. Individuals who sustain concussions may experience an array of symptoms, both short, and long term. The important thing is to take any concussion seriously and recognize that recovery is dependent on many things.

About the Authors...

William Frey, PhD, maintains a private clinical psychology practice in Rutland, VT, specializing in behavioral medicine with a focus on traumatic brain in jury rehabilitation. He received his BA from Villanova University (1967) and his MS (1969) and PhD (1976) from the University of Vermont. In addition to his clinical practice, he has held faculty positions at the University of Vermont, St. Michael's College and Middlebury College and, most recently, had been interim Dean of Student Development at Green Mountain College in Poultney,.VT. He has been a President of the Vermont Psychological Association (1985-1987) and a founding board member or the Vermont Head Injury/Stroke Independence Project (1983-1986). He has published articles on mild traumatic brain injury and the impact of brain injury on sense of self and has developed an ecologically-based rehabilitation model for traumatic brain injury.

Ronald C. Savage, EdD, has worked with children, adolescents and young adults with neurological injuries and disabilities for over 25 years. Presently, Dr. Savage is Executive Vice President for Professional Development at Bancroft NeuroHealth in New Jersey. He is the former Senior Vice President of Behavioral Health and Rehabilitative Services at The May

Institute in Massachusetts and the former Director of Clinical Services for Rehabilitative Services of New York and the company's for rehabilitation facilities. In addition, Dr. Savage has taught at the elementary and secondary school level as a classroom teacher and as a special educator, as well as teaching at several colleges and universities. Dr. Savage presently holds academic appointments at Tufts University, Department of Rehabilitation Medicine; Northeastern University, Department of Psychology; The George Washington University School of Education; and the Laboratorio de Neuropsicologia, Universidad de Sevilla, Spain. Dr. Savage has presented at over 200 conferences, training seminars and grand rounds presentations in the past four years. He has published numerous articles, chapters, manuals and books on children, adolescents and adults with traumatic brain injuries and other neurological disabilities.

Headbanger Nation

By Jeffrey Kluger

I didn't get a good look at the little boy who injured my daughter in the science museum in Mexico City. He seemed to be about 7, my daughter Elisa was not yet 3, and the two of them were part of a scrum of kids playing on an indoor patio. At precisely the wrong moment, she turned left, he turned right, and they collided. Physics being physics, the smaller mass yielded to the larger one, and my daughter fell down. She landed first on her bottom, then tipped backward and hit her head on the floor.

The sound was one that parents dread: the singular clunk of skull striking cement. I winced, Elisa wailed, and I gathered her up. Soon she stopped crying and went off to play, but even as she did, a dangerous process had begun to unfold inside her skull. (Read Dr. Mehmet Oz's column about concussions.)

When Elisa's head hit the floor, the deceleration was sudden, but — physics again — her brain stayed in motion for an instant, moving through the small intracranial space until it collided with the back of the inside of her skull. Concussive energy radiated through the tissue. As it did, channels in the neurons opened wide, allowing calcium ions to flow into the cells, depressing their ability to metabolize energy. Brain tissue began swelling, but with nowhere to go, it squeezed up against the skull wall. Shearing forces tore axons connecting the cells, damaging their myelin sheathing, which can disrupt nerve signals. All of that was the best-case scenario. The worst case was a brain bleed, which could be fatal without immediate surgery.

Within 20 minutes, Elisa grew withdrawn. An hour later, back in our hotel, she vomited and then began thrashing convulsively. We rushed her to a hospital, where doctors struggled to get a line into one of the tiny veins in her arm, shouting at her to stay awake.

"Open your eyes!" I shouted at her in English. "*Abre tus ojitos!*" my wife echoed. Elisa understood both languages; she answered in neither.

Finally, the doctors got her into a CT scanner, then administered an EEG. There was no bleeding, but there was swelling. Elisa spent three days in the hospital taking antiseizure and antiswelling medication and finally was released. On the flight home, she was a terror — but only in the way a toddler is supposed to be. (See a graphic on the physics behind concussions.)

For us, that was a first-time — and, we dearly hoped, last-time — experience, but we're hardly alone in having gone through it. In the U.S., concussions are an alarmingly commonplace injury, particularly among kids and most particularly among active, athletic ones. Up to 3.8 million Americans are getting concussed per year, according to the Centers for Disease Control and Prevention, and even that big a figure is a moving target. In 2005, the number of children who visited emergency rooms for treatment of concussions was more than twice what it had been in 1997, according to a new study in the journal *Pediatrics*. High school football players alone sustain 100,000 full-blown, diagnosed concussions per year. Flying under the radar are injuries mild enough to get passed off by coaches as a mere ding or ignored by players anxious to get back on the field.

According to a study by neuroscientist Kevin Guskiewicz of the University of North Carolina, the average college football player sustains a breathtaking 950 to 1,100 subconcussive blows per season — hits that are enough to do cumulative damage to young brain tissue but not enough to cause immediate symptoms. "There's what we call a dose response," Guskiewicz says. "After a certain number of hits, the damage starts to show."

But while football is responsible for more than half the concussions kids suffer playing team sports, there's a lot more blame to go around. The success of Title IX, which forbids gender discrimination in scholastic athletics, has led to a 900% increase in girls' sports teams since the law's passage in 1972. But guaranteeing girls equal access to sports also guarantees them equal access to injuries. Girls' soccer accounts for nearly 12% of total team-sports concussions, compared with just 6.6% for boys' soccer. Girls' basketball causes 7%. Even volleyball weighs in at 1.1%. (See a special report on women and health.)

What's more, a third of all concussions among kids are caused by nonteam activities such as ice skating, bicycling and playground recreation. Gaining fast too are newer head-cracking activities like snowboarding and extreme skateboarding. Kids may be the first group to fall in love with such sports, but they're the last group — neurologically speaking — that should engage in them.

"The immature brain is still developing," says Julian Bailes, a neurologist at West Virginia University and the medical director for the Pop Warner Youth Football program. "That makes it more susceptible to damage and more likely to suffer repetitive injury." How this shapes overall development is unknown. A child's brain is like a ship en route to somewhere: a concussion can blow it off course.

The severity of the damage — both acute and chronic — is what researchers are now trying to understand and what legislators and the sports-equipment industry are trying to control. Even as scientists look deeper into the physics, neurochemistry and genetics of brain injury, lawmakers are imposing new rules governing how kids should be assessed for concussions and when they should and should not be eligible to play. Equipment manufacturers, particularly those who make football helmets, are being pushed to redesign their product lines and reform the testing standards that essentially allow the industry to police itself. Pro teams too are feeling the heat for selling an elbow-throwing, stick-swinging, head-butting ethos that may be

fine for millionaire athletes who know what they're getting into but is hurting, and in some cases killing, the kids who emulate them.

"I keep telling kids, Your brain is not your knee. It's not your shoulder. It's your future," says neuropsychologist Gerard Gioia, chief of pediatric neuropsychology at Children's National Medical Center in Washington. "We have to protect it better than we are." (See TIME's special report "How to Live 100 Years.")

The Science of a Hit

If it's football that receives most of the attention in conversations about concussions, it's partly because the hits inflicted in the game can be so shocking. In soccer, basketball or even hockey, violence is typically a by-product of aggressive play. In football, it is the play. Guskiewicz conducts his studies by placing accelerometers in players' helmets and recording not just how often they get hit but also how hard. The unit of measure he uses is g-force. Liftoff of a Saturn V moon rocket exposed its crew to a maximum of four g's. A roller coaster may exceed six g's. College football players, by contrast, collide with each other with an impact of nearly 23 g's — and that's the average. Higher-end blows range from 85 to 100 g's. "The highest we ever recorded was 180 g's," says Guskiewicz.

Worse, it's not necessary to be hit in the head for that kind of impact to do concussive damage. A player struck in the chest can suffer whiplash just like a passenger in a car accident, and when the head snaps back and forth, the brain sloshes around with it. "One sign," says Gioia, "is when a player complains of neck pain. That's often an indicator that the head has moved around hard."

Many of those blows don't necessarily lead to a concussion, and in a way, that's unfortunate. Only about 10% of concussions lead to loss of consciousness, but the other signs are hard to miss, including headache, vomiting, dizziness, balance problems, sensitivity to light or noise, confusion, irritability and amnesia. A player with any of those symptoms is likely to be sent to the bench — at least for a while. A player whose brain has been jolted at a subconcussive level is much likelier to stay on the field and return there week after week with no recuperation time. The damage that does can be deadly. (Read Dr. Mehmet Oz's column about concussions.)

In April 2010, University of Pennsylvania football star Owen Thomas committed suicide in his off-campus apartment, having never before exhibited any sign of mental illness. When researchers at Boston University examined his brain, they found it flecked with what are called tau proteins, telltale signs of a condition known as chronic traumatic encephalopathy (CTE), which is often seen among dementia patients and NFL players with a lifetime of concussions behind them. Thomas had never sustained a concussion, but that might not have mattered.

"He'd been playing since he was 9," says neuropsychologist Robert Stern, part of the team that conducted the analysis. "That suggests he had a great deal of exposure to repeated subconcussive blows."

The link between tau and brain damage is straightforward. The protein is one of the major structural materials of nerve tissues. When the brain is shaken too hard, nerve fibers are torn and the tau is released. The brain tries to clean up the mess, and given enough time, it could. If the hits keep coming, however, the proteins just accumulate. "I describe [the tau deposits] as a form of sludge," says Bailes.

It's not unusual for players like Thomas suffering from CTE to die in violent or otherwise dramatic ways. Bailes was part of a team that found tau protein in the brain of Chris Henry, a player for the Cincinnati Bengals who was killed in 2009 when he got into an argument with his fiancée and jumped on the back of her pickup truck as she drove away — taking a fatal tumble onto the road. In 2007 wrestler Chris Benoit murdered his wife and son and then hanged himself. In 2004 former Pittsburgh Steeler Justin Strzelczyk, who suffered from hallucinations, died when he drove his car into a tractor trailer while fleeing police. Both Benoit and Strzelczyk had CTE. "This disease starts young and progresses through life," says Stern.

Until recently, doctors didn't know just how young, but they're getting an idea. Michael (not his real name) is a ninth-grade football player visiting an outpatient concussion clinic Gioia runs in Rockville, Md. Michael got clobbered in a game in mid-September, suffered many of the immediate concussion symptoms and four months later is still not well. Recovery time varies for all patients, though three months is a good benchmark; four months suggests trouble. Michael's sleep remains disturbed, his temper remains erratic, and his school performance has cratered. An honor-roll student in eighth grade, he has gotten mostly D's and F's this year. "The change," says his mother, "it's shocking."

It's not possible to diagnose anything like CTE from just those symptoms, particularly because Michael's recent academic problems began before his concussion. But he already had a history of what he calls stingers, or head blows — none of which kept him off the field. What's more, his coach allowed him to return to play only a month or so after his recent concussion, a game in which he took another blow to the head, then lost his temper and got ejected.

Michael is hardly the only student athlete playing roulette with his brain, and his coach is hardly alone in abetting such recklessness. One study has shown that up to 40% of players who experience a concussion are back on the field before their brains have fully healed. That, Gioia says, is especially worrisome since sometimes two mild injuries can do more damage than one severe one. In some cases — mercifully rare — players who return to the field before they're fully recovered may even suffer what is known as malignant brain edema, or second-impact syndrome, in which another blow to the head leads to a fatal brain bleed. About half a dozen kids per year die from second impact. (Read Dr. Mehmet Oz's column about concussions.)

It's easy enough to make the case that any person who has suffered a brain injury needs a long period of recuperation before returning to vigorous physical activity. But what about vigorous intellectual activity? The brain is a cognitive machine, and it requires an enormous amount of energy to keep its gears moving. That's a fact concussed kids often confront when they resume their classwork after an injury and find that their symptoms return the moment they crack a book. "Cognitive exertion requires a high degree of

metabolic activity," says Gioia. "If you have a brain that's already impaired, that ability is going to be reduced."

Mary, a high school junior and another patient at Gioia's clinic, has suffered three concussions over the past three years as a goalie for her soccer team. Surprisingly, it is not heading the ball that leads to most concussions in soccer — though the limited studies that have been done have looked only at young adults, and none have explored subconcussive injury. Rather, the damage is done mostly by collisions with other players or, as in Mary's case, with equipment. Her third concussion came last November, when she hit her head against the frame of the goal. She remains an honors student in the International Baccalaureate program in her high school, but the struggle to keep up that level of academic excellence has been grueling.

"I didn't have any exams until two months after the injury," she says. "But when I did, the headaches and fatigue came back immediately. I lost focus during one test and had no idea what I'd just written." She got through all the same and has gone back to school full time, but every day is a battle with pain, exhaustion and sensitivity to noise and light. She has also accepted that soccer — which was a passion — is just not an option anymore. "I can't afford another concussion," she says. (See a graphic on the physics behind concussions.)

Digging Deep

The fact that no two concussions follow the same recovery arc is one of the things that makes them so challenging to diagnose and treat. But that same particularity of injury also provides scientists insights into which people are at the greatest concussive risk.

Gender, for one thing, seems to play a role. Mary may be recovering faster from her injury than Michael is, but on the whole, females are both more susceptible to concussions than males are and suffer more-severe symptoms. So far, the reason for that gap is unclear. There is some thought that a girl's comparatively weaker neck muscles may leave her head more susceptible to violent shock. Hormones too may play a role. Among epileptic girls and women, rising and falling estrogen levels are known to make the brain more or less vulnerable to seizures. The thinking is that this may apply to concussion symptoms as well — though it's unclear whether a girl's hormonal makeup leaves her more concussion-prone throughout the month or just during menstruation. (See a special report on women and health.)

Genes may also be involved. The fact is, plenty of athletes make it through their careers battered and scarred but cerebrally intact, while others who may not get hit with any greater frequency suffer all manner of brain damage. Researchers at the Children's National Medical Center are studying the genomes of both concussed and nonconcussed kids, looking for markers that may explain the difference.

"There could be a genetic predisposition that affects metabolic activity," says geneticist Susan Knoblach. "People always assume that there's a genetic component in degenerative conditions but not acute ones, but of course there can be."

Maryland's Fairfax County has instituted a program in which student athletes spit into cups so their genetic profiles can be taken. The genomes of the ones who come down with concussions can then be compared for key similarities. Early attention is focusing on a gene that codes for a protein called ApoE, which has been implicated in Alzheimer's disease. In the long run, teasing out concussion genes could lead to better drugs or gene therapy to treat or prevent the injury. In the short run, it could help parents and coaches determine in advance which sports kids are best suited to play. Says Gioia: "We may actually find out, 'You know what? You're not set up to be a football player. You might be a better tennis player.'"

Newer brain-scanning technology is also making a difference, helping doctors diagnose concussions and track recovery. The microscopic size of tau proteins and nerve fibers makes them impossible to see without a postmortem exam, but three noninvasive techniques can help sidestep that problem. Magnetic resonance spectroscopy measures not direct damage to the brain but its metabolic activity — a good way to evaluate the very system that breaks down first when a brain is concussed. Diffusion tensor imaging can observe transmission along nerve-fiber tracks, providing a sense of the integrity of the neural wiring. And resting fMRI allows physicians to watch the brain when it's not performing a task, providing a look at basic function. (See TIME's special report "How to Live 100 Years.")

Changing the Rules

Smart medicine, of course, can do only so much to reverse the number of concussions. Smart policy must do the rest. To keep kids from hurting themselves — and to prevent coaches from enabling them — 10 states, including New Jersey, Oregon, Virginia and football-mad Oklahoma, have passed return-to-play laws requiring kids who have sustained even a suspected concussion in any sport to be pulled from play and not returned until a doctor or certified athletic trainer declares them fit. A handful of other states are considering similar legislation, and last year two separate bills along the same lines were introduced in the House of Representatives. Both will have to be resubmitted under the new GOP majority. Still, the national trend is clear: "When in doubt, sit them out" is how the advocates put it.

Most major professional sports leagues in the U.S., as well as most large universities and 4,000 high schools, now also use a computer program known as ImPACT (for Immediate Post-Concussion Assessment and Cognitive Testing) that measures such basic skills as memory, word recognition and pattern recognition. Players are required to take a baseline test at the beginning of the season and are periodically retested, especially postconcussion, to determine if there's been any erosion of skills. "I used to sit across from athletes doing paper-and-pencil memory tests," says ImPACT developer Mark Lovell, a neuropsychologist at the University of Pittsburgh Medical Center. "That would never work with large groups of kids. There aren't that many neuropsychologists alive."

Reform is also coming — slowly — to the major manufacturers of football helmets, driven mostly by the NFL, which has imposed much stricter concussion and tackling rules in the past season. The NFL is anxious both to protect its players and to shake its image as a weekly tutorial for student athletes learning all the wrong safety lessons from pros who should know better. Currently, the group that certifies helmets is the National Operating Committee on Standards for Athletic Equipment (NOCSAE), which sounds

reassuringly official except for the fact that it's essentially funded by the manufacturers themselves. NOCSAE has come under fire not only for this seeming conflict of interest but also for what critics consider unreliable testing. The larger problem, though, is that the standard football helmet was designed to prevent only lacerations and fractures — a job it does very well — and to do little or nothing to prevent concussions. "The science just isn't there today," says Dr. Robert Cantu, a neurosurgeon at Boston University and a member of NOCSAE's board. (See a graphic on the physics behind concussions.)

That's not NOCSAE's or the NFL's fault, but they're trying to do something about it. In December the league and the helmet manufacturers convened a sort of head-injury summit in New York — a gathering that also included officials from NASCAR and the military — to consider helmet modifications that could reduce the concussive carnage. For football, those modifications could include better padding, stronger chin straps and redesigned face masks that distribute shock differently. Kids' helmets must also be more than simply smaller versions of those used by adults. The padding inside all helmets is designed to compress at the forces generated by colliding adult bodies. With the smaller forces kids produce, the padding stays rigid, essentially becoming one more hard surface for the head to strike. Innovations introduced in football could ripple out to other sports' playing fields, to say nothing of battlefields.

Athletics will never be stripped of all danger, and terrible as the blown knee or wrecked elbow may be, there is always an assumption of those risks when you elect to play the game. But the brain is more than a joint or a limb. It's the seat of the self. We overlook that fact at our peril and — much worse — at our children's.

BOSTON UNIVERSITY AND DEPARTMENT OF VETERANS AFFAIRS RESEARCHERS DISCOVER BRAIN TRAUMA IN SPORTS MAY CAUSE A NEW DISEASE THAT MIMICS ALS

Two former NFL players died after being diagnosed with Lou Gehrig's Disease; New findings suggest they had a new disease associated with repetitive brain trauma

(BOSTON) – The Center for the Study of Traumatic Encephalopathy (CSTE) at Boston University School of Medicine (BUSM) and Department of Veterans Affairs (VA) announced today that they have provided the first pathological evidence that repetitive head trauma experienced in collision sports is associated with motor neuron disease, a neurological condition that affects voluntary muscle movements. The most common form of motor neuron disease is amyotrophic lateral sclerosis (ALS) or Lou Gehrig's disease. The findings will be published in the September issue of the *Journal of Neuropathology and Experimental Neurology* (**http://journals.lww.com/jneuropath**).

The finding was discovered by Ann McKee, MD, and colleagues at the CSTE. McKee, a CSTE Co-Director, is an associate professor of neurology and pathology at BUSM, as well as Director of Neuropathology for the Department of Veterans Affairs at the Bedford VA Medical Center, where this research was conducted.

McKee and the CSTE researchers made this groundbreaking pathological discovery while examining the brains and spinal cords of 12 athletes donated by family members to the CSTE Brain Bank at the Bedford VA Medical Center. Three of these 12 athletes, including former professional football players Wally Hilgenberg and Eric Scoggins, as well as an unidentified former military veteran and professional boxer, developed motor neuron disease late in their lives. The former football players were diagnosed clinically with ALS, which is a progressive neurodegenerative disease that attacks motor nerve cells in the brain and spinal cord, resulting in muscle weakness and atrophy. ALS affects fewer than two in 100,000 patients annually, and 30,000 Americans currently live with the disease. The majority of ALS cases (90-95 percent) are considered "sporadic," meaning of unknown cause, although it has long been suspected to involve a complex interaction between multiple genetic and environmental risk factors.

In this study, funded in part by an unrestricted gift from the National Football League (NFL) to the CSTE, McKee found that when they died, all 12 athletes showed neuropathological evidence of chronic traumatic encephalopathy (CTE), a progressive degenerative brain disease characterized by deposits of an abnormal form of *tau* protein and believed to be caused by repetitive head trauma. In the three athletes with motor neuron disease, abnormal *tau* protein deposits were not only found throughout the brain, but also in the spinal cord.

CSTE researchers also discovered that 10 of 12 CTE victims had a second abnormal protein, TDP-43, in their brains. Of those 10, only three had TDP-43 in the brain *and* the spinal cord, and those were the three athletes diagnosed with motor neuron disease. TDP-43 is also found in individuals with sporadic ALS although in the athletes with repetitive brain trauma, the TDP-43 pathology was more severe than found in sporadic ALS and was accompanied by extensive *tau* pathology. The brains and spinal cords of normal individuals show no TDP-43 or *tau* deposition.

These new findings suggest that the motor neuron disease that affected the three athletes is similar to, but distinct from sporadic ALS and represents a disease never described previously in the medical literature. This new disease, referred to as chronic traumatic encephalomyopathy (CTEM) by McKee and colleagues is likely caused by the repetitive head trauma experienced by athletes in contact sports.

The association between head trauma and ALS is supported by the medical literature, in which the risk of ALS has been reported to be higher among contact sport athletes and veterans. A study of professional soccer players in Italy found that the incidence rate of ALS was 6.5 times higher than in the general population. An increased incidence of ALS has also been reported in American football players, including three players from the 1964 San Francisco 49ers who died from ALS. Based on the number of retired NFL players with ALS, it is estimated that the risk is at least 8 times higher than in the adult male population. Among Veterans with a history of head injuries, their risk of ALS was 2.3 times higher than normal, and Gulf War Veterans have a twofold increased risk. In fact, since 2008, the US Department of Veterans Affairs has considered ALS as a presumptively compensable illness for all veterans. The discovery of this new ALS-like disease by the BU CSTE investigators suggests that one possible reason for the increased risk of clinically diagnosed ALS in veterans and in contact sport athletes may be the exposure to repetitive head trauma, including concussions, subconcussive blows and blast injuries.

These findings raise the question of whether head injuries may have contributed to Lou Gehrig's motor neuron disease, and whether he also suffered from CTEM. Gehrig, nicknamed the "Iron Horse," played football at Columbia University before becoming a legendary member of the New York Yankees and playing in 2,036 consecutive games, a record that stood for more than 60 years. Gehrig suffered at least five documented concussions and was reported to have been knocked unconscious for five minutes after taking a pitch to the head while not wearing a helmet. He played the next day.

"When we read reports about cases of the disease being linked to specific activities or experiences, such as the increased risk associated with military service, or this one regarding professional athletes, we are reminded of just how complex of a disorder ALS is. We're hopeful that this new work may shed light on potentially exciting new possibilities for biomarker and therapy development," said Steve Perrin, PhD, CEO and Chief Scientific Officer of the ALS Therapy Development Institute.

Responding to these new findings, Hunt Batjer, MD and Richard Ellenbogen, MD, the co-chairmen of the NFL's new Head, Neck and Spine Committee, stated, "We are pleased that the NFL has provided the support necessary for this research and look forward to continued discussion of the findings within our medical committee and with other researchers to better understand their clinical implications."

McKee now has analyzed the brains of more than 35 athletes and found evidence of CTE in 12 of 13 former NFL players. These brains were acquired primarily through the efforts of CSTE co-director Chris Nowinski who is also president of the non-profit Sports Legacy Institute. The CSTE maintains a registry of more than 350 living athletes who have agreed to donate their brain and spinal cord following death and to undergo telephone-based interviews and assessments during life. Robert Stern, PhD, CSTE co-director and an associate professor of neurology at BUSM, oversees the CSTE registry as well as a study about to begin of retired NFL players who undergo extensive neurological, cognitive, psychiatric, cerebrospinal fluid and neuroimaging studies. Robert Cantu, MD, a clinical professor of neurosurgery at BUSM and co-director of the CSTE, was recently appointed senior advisor to the NFL Head, Neck and Spine Committee.

COORDINATES WOULD BE PLACED HERE

****

Wally Hilgenberg died in 2008 at the age of 66 after a three-year battle with ALS. After graduating from the University of Iowa, Mr. Hilgenberg played 12 seasons with the Minnesota Vikings and three with the Detroit Lions as a linebacker.

Eric Scoggins died in 2009 at the age of 49 after a two-year battle with ALS. After graduating from the University of Southern California, he played one season for the San Francisco 49ers before playing two seasons in the United States Football League, for the Los Angeles Express and the Houston Gamblers.

Early symptoms of ALS often include increasing muscle weakness, especially involving the arms and legs, and progressive problems with speech, swallowing and breathing. Because voluntary muscle action is progressively affected, patients in the later stages of the disease may become totally paralyzed. In nearly all cases, ALS is fatal.

The CSTE (**www.bu.edu/cste/**) was founded in 2008 and is the leading center in the world studying the long-term effects of repetitive brain trauma in sports and the military. The CSTE was created as a collaboration between Boston University (BU), Sports Legacy Institute (SLI) and the Department of Veterans Affairs. Co-directors of the BU CSTE include Robert Cantu, MD, a clinical professor of neurosurgery at BUSM, Ann McKee, MD, an associate professor of neurology and pathology at BUSM, Chris Nowinski, and Robert Stern, PhD, an associate professor of neurology at BUSM. The mission of the CSTE is to conduct state-of-the-art research of CTE, including its neuropathology and pathogenesis, the clinical presentation, biomarkers, and course, the genetics and other risk factors for CTE, and ways of preventing and treating this cause of dementia. Brain trauma is increasingly seen as a public health crisis due to the discovery of CTE in a number of recently deceased athletes, most of whom have been studied at the CSTE. McKee also identified CTE in the only former NHL player examined, Reggie Fleming. The CSTE's groundbreaking research created a dramatic change in the understanding of and response to brain trauma and concussions in all sports, especially football. The BU CSTE has received grants from the National Institute on Aging and the National Operating Committee on Standards in Athletic Equipment (NOCSAE), and has received an unrestricted gift from the NFL.

CTE, originally referred to as "dementia pugilistica" because it was believed to only affect boxers, is a progressive brain disease believed to be caused by repetitive trauma to the brain, including concussions and subconcussive blows. It is characterized by deposits of an abnormal protein called *tau* in the form of neurofibrillary tangles, glial tangles, and neuropil threads throughout the brain, and, in some cases, the presence of another abnormal protein – associated with motor neuron disease – known as TDP-43. These abnormal proteins are associated with the impaired functioning and eventual death of brain cells. Early on, CTE sufferers may display symptoms such as memory impairment, emotional instability, erratic behavior, depression and problems with impulse control. CTE may eventually progress to full-blown dementia. Although similar to Alzheimer's disease, CTE is pathologically distinct, and it is the only known preventable cause of dementia.

CSTE co-directors Cantu, McKee and Nowinski serve on the NFL Players Association Mackey/White Traumatic Brain Injury Committee, which includes, and is chaired by, CSTE registry member Sean Morey. In addition, Cantu serves as a senior advisor to the newly created NFL Head, Neck and Spine Committee.

Sports Legacy Institute is a 501(c)(3) nonprofit corporation founded in 2007 to solve the sports concussion crisis. SLI is dedicated to education, prevention, treatment and research on the effects of concussions and other brain injuries in athletes and the military. SLI partnered with Boston University School of Medicine to form the Center for the Study of Traumatic Encephalopathy in 2008.

CS FOR SENATE BILL NO. 22( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR MCGUIRE

A BILL

FOR AN ACT ENTITLED

"An Act relating to prevention and evaluation of and liability for concussions in student athletes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONCUSSIONS IN STUDENT ATHLETES; FINDINGS. The legislature finds that

(1) concussions rank among the most commonly reported traumatic brain injuries in children and adolescents who participate in sports and recreational activities;

(2) the United States Centers for Disease Control and Prevention estimates that as many as 3,900,000 concussions occur each year in the United States as a result of sports and recreational activities;

(3) a concussion is caused by a blow to or jarring of the head or body that causes the brain to move rapidly inside the skull, resulting in a mild to severe traumatic brain injury, which may occur with or without loss of consciousness, and may disrupt normal brain

function;

(4) a concussion may occur during an organized or unorganized sport or recreational activity as a result of a fall or from players colliding with each other or another obstacle;

(5) the risk of catastrophic injury or death from a concussion or other head injury increases when the injury is not properly evaluated and managed, and the athlete is allowed to continue to participate in sports or recreational activities following the concussion;

(6) although voluntary nationwide guidelines for managing concussion in sports recommend assessing concussions on an individual basis, with gradual return to play, athletes continue to be returned to play prematurely, putting them at risk for greater injury or death.

* **Sec. 2.** AS 14.30 is amended by adding new sections to article 3 to read:

Sec. 14.30.142. Concussions in student athletes: prevention and reporting. (a) The governing body of a school district shall consult with the Alaska School Activities Association to develop and publish guidelines and other information to educate coaches, student athletes, and parents of student athletes regarding the nature and risks of concussions. Guidelines developed under this section must include a description of the risks of return to play and standards for return to play, including the procedures required under (c) and (d) of this section.

(b) A school shall annually provide to a student and the parent or guardian of a student who is under 18 years of age written information on the nature and risks of concussions. A student may not participate in school athletic activities unless the student and the parent or guardian of a student who is under 18 years of age have signed a verification of receipt of the information required under this subsection.

(c) A student who is suspected of having sustained a concussion during a practice or game shall be immediately removed from the practice or game.

(d) A student who has been removed from participation in a practice or game for suspicion of concussion may not return to play until the student has been evaluated and cleared for participation in writing by a qualified person who has received training and is currently certified in the evaluation and management of concussions. In this subsection, "qualified person" means either a

(1) licensed health care provider; or

(2) person who is acting at the direction and under the supervision of a licensed physician.

(e) A person who conducts an evaluation under (d) of this section and who is not paid for conducting the evaluation may not be held liable for civil damages resulting from an act or omission during the evaluation, except that the person may be held liable for reckless or intentional misconduct and for gross negligence.

Sec. 14.30.143. Concussions in student athletes: school district immunity. (a) A school district may not be held liable for an injury to or the death of a person resulting from the action or inaction of a person employed by or under contract with a nonprofit youth organization if

(1) the action or inaction occurred on school property during the delivery of services by the district or organization;

(2) the organization is under contract with the district to provide the services; and

(3) before the provision of services, the organization provided to the district written verification of

(A) a valid insurance policy covering the injury or death in an amount not less than $50,000 for each person and $100,000 for each incident;

(B) compliance with the protocol for prevention and reporting of concussions required in AS 14.30.142.

(b) This section may not be construed to impair or modify the ability of a person to recover damages for harm caused by the negligent or reckless actions of an employee or contractor of a school district or by the existence of a condition, equipment, program, or structure known by the school district or organization to be unsafe.

(c) In this section, "youth organization" means a public or private entity qualified to do business in the state that provides a program or service to persons under 19 years of age.

SENATOR LESIL MCGUIRE

SPONSOR STATEMENT

SENATE BILL NO. 22

More than 60,000 high school student athletes sustain concussions each year. The number is much greater when you include middle school and younger children. The National Football League (NFL) has implemented concussion and brain trauma procedures for many years, but it has recently partnered with the Centers for Disease Control and Prevention (CDC) to raise public awareness of this serious problem. Many states are now moving to add protections for students who participate in sports or other potentially dangerous activities. While concussions and brain trauma are more prevalent in football, many other sports and activities are also dangerous, with girls' soccer resulting in the second-most concussions.

A concussion results from the brain impacting the inside of the skull, and can be caused by a blow to the head, or by violent motion of the head. Though the risk can be somewhat reduced with a helmet, it cannot be prevented with external equipment. While it is nearly impossible to completely prevent an initial concussion or brain trauma, this legislation seeks to minimize complications and more permanent conditions that can be caused when athletes continue to practice or play after receiving a concussion.

HB 15 is modeled after legislation that recently passed in Washington State, known as the Zackery Lystedt Law. Zackery was a middle-school football player who was returned to a game after receiving a concussion. He sat out for about 15 minutes, and then returned to the game, forcing a game-saving fumble, but suffered a further head injury on the play. The second injury caused a brain hemorrhage that ultimately led to the removal of both sides of Zackery's cranium, leaving him drifting in and out of a coma for three months. He has battled his way back to some sense of normalcy, but will never fully recover from this avoidable injury.

SB 22 simply requires school districts, in consultation with the Alaska School Activities Association, to develop and publish guidelines and information to educate coaches, student athletes and parents about the nature and risks of concussions and traumatic brain injuries. The bill will require that a student athlete suspected of suffering a concussion or brain trauma be removed from practice or play, and not be allowed to return until cleared by a licensed health care professional.

While there is no way to completely prevent concussions or traumatic brain injuries, we can strive to prevent the serious complications and potentially life-altering or life-threatening ramifications that can occur from continuing to practice or compete once a brain injury has occurred. This is a critical public health issue, and a responsibility to our children we should take seriously.

SENATOR LESIL MCGUIRE

Summary of Changes
Between SB 22\A and CS for SB 22\B

This document is an identification of the changes between W.O. 27-LS0250\A and W.O. 27-LS0250\B. The changes between SB 22 and the CS are based on recommendations from the Alaska School Activities Association (ASAA) and the Alaska Brain Injury Network (ABIN).

The CS for SB 22 replaces "traumatic brain injuries" with "concussions". This request was based on recommendations from ASAA who felt that traumatic brain injuries were outside their scope of expertise. However, it is recognized that concussions are a mild form of traumatic brain injury. This change is reflected in the CS on: page 1, line 6; page 2, line 13; page 3, lines 8 and 21.

Section 2 in CS SB 22 adds a new section 14.30.142(b) [page 2, lines 20-24] that requires a school to provide students and their parents with written information on the nature and risks of concussions based on recommendations by ASAA. Also required is signed verification by parents that the information is received. Page 2, line 19 in the CS amends the reference to subsections based on the addition of subsection 14.30.142(b).

14.30.142(d) [previously subsection (c)] changes the language that determines who can evaluate a student suspected of sustaining a concussion. Originally, SB 22 designated that only a licensed health care provider could return a student to play or practice. However, after discussion with ASAA and ABIN, it was determined that this requirement may be difficult to meet in rural Alaska.

Subsection 14.30.142(d) designates what constitutes a qualified person in subsections: (1) a licensed health care provider and (2) a person who is acting at the direction and under the supervision of a licensed physician.

Subsection 14.30.142(e) [previously subsection (d)] adds additional language "and who is not paid for conducting the evaluation" (page 3, lines 4-5).

CS for Senate Bill 27(HSS) – Hazardous Flame Retardants

The CS for Senate Bill 27(HSS) sponsored by Senator Wielechowski bans the manufacture, sale or import of products which contain certain toxic flame retardants.

These have been proven to be toxic not only to residents in homes but to Fire Firefighters in fighting fires.

ALASKA FIRE CHIEF'S ASSOCIATION

2358 Bradway Road, North Pole, Alaska 99705
Phone: (907) 488-3400 FAX: (907) 488-6118

March 4, 2011

Representative Lindsey Holmes
State Capitol Room 405
Juneau AK, 99801

Senator Bill Wielechowski
State Capitol Room 101
Juneau AK, 99801

Reference: HB 63 & SB 27

On behalf of the Alaska Fire Chiefs Association I am writing to give our support for HB 63 and SB 27; **TITLE:** "An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to bioaccumulative toxic chemicals; and providing for an effective date."

Polybrominated Fire Retardants (PBDEs) have been proven to be toxic chemicals and hazardous not only to residents in homes with PBDEs but to Fire Firefighters who may be called to fight fires in structures where these chemicals are present.

We support the passage of HB 63 and SB 27.

Sincerely,

Jeff Tucker, President
Alaska Fire Chiefs Association

Bill to ban PBDEs would protect Alaskans

COMPASS: *Other points of view*

By FRANK VON HIPPEL

(02/20/11 17:16:56)

The Alaska State Legislature is considering a bill backed by Sen. Bill Wielechowski and Rep. Lindsay Holmes that would ban the import of furniture and electronics containing a class of toxic flame retardants known as PBDEs (polybrominated diphenyl ethers).

PBDEs are man-made chemicals produced for the manufacture of fire-resistant products. As products break down or release PBDEs into the atmosphere, the PBDEs find their way into the environment. PBDEs are highly persistent; they may remain unchanged for many decades or break down into daughter compounds that are also toxic.

Unfortunately, they are fat soluble and bioaccumulate in the fatty tissues of exposed animals. As these animals are consumed by predators, the PBDEs biomagnify up the food web, resulting in the highest levels in the top carnivores. Many of these top carnivores, such as fish and marine mammals, are important subsistence foods in Alaska.

People are exposed to PBDEs in multiple ways, including through the ingestion of fatty foods as well as contact with household dust. PBDEs have been found in human breast milk and in the blood of mothers and their babies. A Centers for Disease Control and Prevention study found that over 93% of Americans had detectable levels of PBDEs in their bodies, some at levels that are associated with health problems in laboratory animals. PBDEs have been found to disrupt the hormone system of numerous animals and have widespread effects on neurodevelopment and reproductive development.

The laboratory animals chosen for these studies have proven to be excellent models for human medical research time and time again. The hormone system of other vertebrates is almost exactly the same as the hormone system of humans. Therefore, disruption of hormone pathways in laboratory animals indicates that PBDEs likely cause similar developmental and health effects in humans.

PBDEs interfere with thyroid hormone, which regulates many aspects of development, and male and female sex steroids, which regulate sexual development and behavior. For example, PBDE exposure may cause undescended testes in newborn boys and reduced testosterone and sperm counts in men. Some PBDEs may be carcinogens. Although we do not fully understand the mechanisms by which PBDEs disrupt multiple hormone pathways, the evidence is sufficient to take a prudent approach and ban their import to Alaska where feasible.

Washington became the first state to ban all forms of PBDEs in 2007, with key support coming from firefighter associations. Firefighters advocated against PBDEs because when products containing PBDEs burn, they release highly toxic dioxins and furans. Associations of nurses and doctors also supported the legislation.

Maine, Oregon, Vermont, Rhode Island, Illinois and Massachusetts also have banned some or all of the PBDEs, and similar legislation is under consideration in other states. Similar bans are in effect in Canada and most European nations.

The Washington law required that safer and technically feasible alternatives to PBDEs be identified before the ban would go into effect. These alternatives, which meet fire-safety standards, were identified by Washington state agencies in December 2008; the identification of alternative flame

retardants allowed restrictions on the use of PBDEs in electrical products and furniture to take effect Jan. 1, 2011.

Many companies have taken a proactive approach in phasing out PBDE use. For example, Intel, IBM and Ericsson no longer produce products with PBDEs, and Hewlett-Packard, Sony, Motorola, Panasonic, NEC, Samsung and Toshiba are all working to phase out PBDEs.

Alaskans experience unusual levels of PBDE exposure for three reasons: The Arctic is a global sink for persistent pollutants that settle out of the atmosphere in cold temperatures; Alaskans who rely on a subsistence diet eat fish and marine mammals that accumulate PBDEs because of their position at the top of the food web; and we spend most of the winter sealed in our homes, where we are exposed to household dust containing PBDEs.

Therefore, Alaska has extraordinary cause to ban the importation of products containing these chemicals. We cannot control the atmospheric deposition of PBDEs into the Arctic or their delivery by ocean currents, but we can control their importation in consumer products.

Frank von Hippel is a professor of biological sciences at the University of Alaska Anchorage.

CS FOR SENATE BILL NO. 27(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

~~**BY SENATOR WIELECHOWSKI**~~

~~Introduced~~**BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE**

Offered:
Referred:

Sponsor(s): SENATOR WIELECHOWSKI

A BILL

FOR AN ACT ENTITLED

"An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to ~~bioaccumulative toxic~~a multistate chemicals clearinghouse; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 18.31 is amended by adding new sections to read:

Article 4. ~~Toxic~~ Chemicals in Products.

Sec. 18.31.600. Prohibitions. (a) A person may not manufacture, sell, or distribute a product ~~that~~if one or more components of the product contains more than 0.1 percent by mass of pentaBDE, octaBDE, or a combination of pentaBDE and octaBDE.

(b) A person may not manufacture, sell, or distribute a mattress, a mattress pad, or upholstered furniture if one or more components of the mattress, mattress pad, or upholstered furniture ~~has a textile component containing~~contains more than 0.1

percent by mass of decaBDE.

(c) A person may not manufacture, sell, or distribute an electronic product if the electronic product has a plastic housing or other external component that contains more than 0.1 percent by mass of decaBDE.

(d) A person may not manufacture, sell, or distribute a product that is prohibited by the department under AS 18.31.610.

Sec. 18.31.610. Prohibition by department. (a) The department may prohibit by regulation the manufacture, sale, and distribution of a product that contains a flame retardant that is not ~~a brominated flame retardant~~already prohibited under AS 18.31.600(a) - (c), if the department determines that

(1) the flame retardant is harmful to public health or the environment; and

(2) an alternative to the flame retardant exists, is safer for the public health or the environment, and is available on a nationwide basis.

(b) Before establishing a prohibition under (a) of this section, the department shall consult with the Department of Health and Social Services, and the state fire marshal shall determine that the flame retardant alternative identified in (a)(2) of this section satisfies applicable fire safety standards.

(c) In this section, "product" means

(1) a mattress, a mattress pad, or upholstered furniture if the mattress, mattress pad, or upholstered furniture contains plastic fibers that contain the flame retardant; or

(2) an electronic product that has a plastic housing that contains the flame retardant.

Sec. 18.31.620. Exemptions. The prohibitions in AS 18.31.600 do not apply if the product that is prohibited is part of

(1) a transportation vehicle or a product or part used in a transportation vehicle or transportation equipment;

(2) a product or equipment used in an industrial, mining, or manufacturing process;

(3) electronic wiring or cable used for power transmission;

(4) a used item that is resold; or

(5) a new item that is brought into the state before the effective date of ~~AS 18.31.600 - 18.31.790~~this section.

Sec. 18.31.630. Notification by manufacturer. A person who manufactures products whose sale and distribution are prohibited by AS 18.31.600 shall inform its retailers in the state of the prohibitions under AS 18.31.600 and the penalty under AS 18.31.~~660~~650.

~~**Sec. 18.31.640. Retailer assistance.** The department shall develop a program to assist retailers to identify products in their inventories that violate AS 18.31.600.~~

~~**Sec. 18.31.650.**~~**Sec. 18.31.640. Enforcement.** If the department determines that there are grounds to suspect that a retailer is selling a product in violation of AS 18.31.600, the department may request that, within 10 days, the manufacturer of the product

(1) provide the department with a sworn certificate indicating that the sale of the product does not violate AS 18.31.600; or

(2) notify each retailer who sells the product in the state that the sale of the product is prohibited by AS 18.31.600 and provide the department with a list of the names and addresses of the retailers notified.

Sec. 18.31.~~660~~650. Civil penalty. A person who violates AS 18.31.600 - 18.31.~~650~~640 is liable to the state for a civil penalty of up to $1,000 for each violation.

Sec. 18.31.~~670. Review by departments.~~ ~~The department, along with and the Department of Health and Social Services, shall review~~

~~(1) the hazards and risks of brominated flame retardants and possible alternatives to brominated flame retardants; and~~

~~(2) the findings and rulings by the United States Environmental Protection Agency that are related to brominated flame retardants and possible alternatives to brominated flame retardants.~~

~~**Sec. 18.31.680. List of toxic**~~**660. Multistate chemicals.** ~~(a) The department shall, in consultation with the Department of Health and Social Services, establish by regulation and update every three years on or before February 1 a list of persistent bioaccumulative toxic chemicals that occur or are used in products used by human~~

~~beings.~~

~~(b) When establishing the list required by (a) of this section, the department shall consider~~

~~(1) the persistent bioaccumulative toxins list prepared by the State of Washington;~~

~~(2) the chemical data developed by the United States Environmental Protection Agency under the high production volume challenge program; and~~

~~(3) other sources the department determines are relevant.~~

~~**Sec. 18.31.690. Interstate** **clearinghouse.** The department may~~shall participate in ~~the establishment and implementation of a regional~~a multistate chemicals clearinghouse to

~~(1) assist the department to carry out the department's duties under AS 18.31.600 - 18.31.790; and~~

~~(2) help coordinate education and outreach activities related to brominated flame retardants, including risk assessments and possible alternatives to brominated flame retardants.~~

(1) build governmental capacity to identify and promote safer chemicals and products;

(2) avoid duplication of state initiatives on chemicals and enhance the efficiency and effectiveness of state initiatives on chemicals through collaboration and coordination;

(3) ensure that state agencies, businesses, and the public have easy access to high quality and authoritative information on chemicals.

Sec. 18.31.~~700~~670. Regulations. In addition to the regulations allowed under AS 18.31.610, the department may adopt regulations to implement AS 18.31.600 - 18.31.~~790~~690. The department shall adopt the regulations for AS 18.31.600 - 18.31.~~790~~690 under AS 44.62 (Administrative Procedure Act).

Sec. 18.31.~~790~~690. Definitions for AS 18.31.600 - 18.31.~~790~~690. In AS 18.31.600 - 18.31.~~790~~690, unless the context indicates otherwise,

~~(1) "brominated flame retardant" means a flame retardant that contains pentaBDE, octaBDE, or decaBDE;~~

~~(2~~(1) "congener" means a specific polybromodiphenyl ether molecule;

(~~3~~2) "decaBDE" means decabromodiphenyl ether or a technical mixture in which decabromodiphenyl ether is the predominant congener;

(~~4~~3) "department" means the Department of Environmental Conservation;

(~~5~~4) "distribution" means distribution for sale or for a commercial purpose;

(~~6~~5) "electronic product" means a television, a computer, or another piece of electronic equipment;

(~~7~~6) "flame retardant" means a chemical that is added to plastic, foam, or a textile to inhibit flame formation;

(~~8~~7) "manufacture" means manufacture for sale;

(~~9~~8) "manufacturer" means a person who

(A) manufactures a product or whose brand name is affixed to the product; or

(B) imports or distributes a product in the United States if the person who manufactured or assembled the product or whose brand name is affixed to the product does not do business in the United States;

(~~10~~9) "octaBDE" means octabromodiphenyl ether or a technical mixture in which octabromodiphenyl ether is the predominant congener;

(~~11~~10) "pentaBDE" means pentabromodiphenyl ether or a technical mixture in which pentabromodiphenyl ether is the predominant congener;

~~(12) "persistent bioaccumulative toxic chemicals" includes carcinogens, mutagens, reproductive toxicants, developmental toxicants, neurotoxicants, endocrine disruptors, and other toxins; in this paragraph,~~

~~(A) "bioaccumulative" means increasing in concentration in living organisms as the living organisms take in contaminated air, water, soil, sediment, or food;~~

~~(B) "persistent" means remaining in the environment without transformation or breakdown into another chemical form;~~

(~~13~~11) "sell" includes an offer to sell;

(~~14~~12) "technical mixture" means a mixture that is named for the predominant congener and that is not exclusively composed of the predominant congener;

(~~15~~13) "transportation vehicle" means a mechanized vehicle that is used to transport goods or individuals, and includes an airplane, an automobile, a motorcycle, a truck, a bus, a train, and a ship.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Environmental Conservation may ~~proceed to~~ adopt regulations necessary to implement this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

~~TRANSITION: FIRST LIST. On or before February 1, 2014, the Department of Environmental Conservation shall establish the first list required by AS 18.31.680, added by sec. 1 of this Act.~~

~~*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:~~

REVISOR'S INSTRUCTION. Wherever "chapter" appears in AS 18.31.010 - 18.31.500, the revisor of statutes shall substitute "AS 18.31.010 - 18.31.500."

*** Sec.** ~~**5. Section**~~**4.** AS 18.31.660, enacted by sec. 1 of this Act, and sec. 2 of this Act ~~takes~~take effect immediately under AS 01.10.070(c).

*** Sec.** ~~**6**~~**5.** Except as provided in sec. ~~5~~4 of this Act, this Act takes effect January 1, 2013.

MEMORANDUM February 9, 2011

SUBJECT: CSSB 27( ) relating to flame retardants and bioaccumulative toxic chemicals (Work Order No. 27-LS0300\M)

TO: Senator Bill Wielechowski
Attn: Karla Hart

FROM: Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Adds a new article on toxic chemicals in products.

Sec. 18.31.600. Prohibits a person from manufacturing, selling, or distributing certain products that contain a specified percentage of the brominated flame retardants pentaBDE, octaBDE, or decaBDE. Prohibits a person from manufacturing, selling, or distributing a product that the Department of Environmental Conservation prohibits under sec. 18.31.610.

Sec. 18.31.610. Authorizes the department to prohibit the manufacture, sale, and distribution of certain products that contain a flame retardant that is not already prohibited under sec. 18.31.600(a) - (c) if the department makes certain determinations regarding public health, the environment, and alternatives to the flame retardant. Requires the department to consult with the Department of Health and Social Services (DHSS). Requires the state fire marshal to determine whether an alternative satisfies fire safety standards.

Sec. 18.31.620. Lists five exemptions from the prohibitions in sec. 18.31.600.

Sec. 18.31.630. Requires a person who manufactures products whose sale and distribution are prohibited by sec. 18.31.600 to inform its retailers in the state of the prohibition and the penalty.

Sec. 18.31.640. Directs the department to develop a program to assist retailers to identify products that violate sec. 18.31.600.

Sec. 18.31.650. Authorizes the department to request that the manufacturer of a product it suspects of being sold in violation of sec. 18.31.600 either (1) provide the department with a sworn certificate indicating the sale does not violate sec. 18.31.600, or (2) notify its retailers in the state that the sale is prohibited and provide the department with a list of the retailers notified.

Sec. 18.31.660. Establishes a civil penalty for violating secs. 18.31.600 - 18.31.650.

Sec. 18.31.670. Directs the department and DHSS to review the hazards, risks, and certain federal findings and rulings related to brominated flame retardants and their possible alternatives.

Sec. 18.31.680. Directs the department to establish and update every three years a list of persistent bioaccumulative toxic chemicals in products. Lists some sources of information for the department to consider.

Sec. 18.31.690. Authorizes the department to participate in the establishment and implementation of a regional multistate clearinghouse to help the department carry out its duties under these sections and to help coordinate educational and outreach activities related to brominated flame retardants.

Sec. 18.31.700. Authorizes the department to adopt regulations to implement the new sections.

Sec. 18.31.790. Defines terms for the new sections.

Section 2. Authorizes the department to begin adopting regulations for these provisions.

Section 3. Directs the department to establish by February 1, 2014, the first list of persistent bioaccumulative toxic chemicals used in products.

Section 4. Directs the Revisor of Statutes to make a conforming change to the existing statutes in AS 18.31.

Section 5. Gives bill sec. 2 an immediate effective date.

Section 6. Gives the Act (except sec. 2) an effective date of January 1, 2013.

If I may be of further assistance, please advise.

SB 27

An Act Relating to Flame Retardants

Changes from 27-LS0300\M to version _____

The first changes make enforcement easier by clarifying the limit of PBDE by mass applies to each individual component. Technology exists to quickly test components of products without damage to identify if any bromines are present at the stated 0.1 percent.

Page 1, line 8 clarifies that **no component of a product** may contain more than 0.1 percent by mass

line 12 changes "a textile component" to "any component"

line 14 changes to: "a plastic housing or other external component that contains..." to account for parts of an electronic product, not just the housing, that someone may come into contact with in the routine use of the product, such as handles and knobs.

Page 3, lines 5-6. Deletes **Sec. 18.31.640. Retailer Assistance.**

Lines 17-23. Deletes **Sec. 18.31.670. Review by departments.**

Lines 24-Page 4, line 4. Deletes **Sec. 18.31.680. List of Toxic Chemicals.**

Page 4, lines 5-11. **Sec. 18.31.690. Interstate clearinghouse.** Requires the department to participate in the interstate clearinghouse and provides reasons.

The department shall participate in a multi-state chemicals clearinghouse to:

- Avoid duplication and enhance efficiency and effectiveness of agency initiatives on chemicals through collaboration and coordination
- Build governmental capacity to identify and promote safer chemicals and products
- Ensure that agencies, businesses, and the public have ready access to high quality and authoritative chemicals data, information, and assessment methods

The new bill provides for an immediate effective date for participation in the Interstate Clearinghouse.

The new bill renumbers sections to account for changes.

Preventing Human Exposure to Polybrominated diphenyl ether (PBDE) Flame Retardants to Protect Public Health

Policy Date: 11/9/2004
Policy Number: 2004-05

This policy, acknowledging that polybrominated diphenyl ether (PBDE) flame retardant compounds are widely used and chemically similar to PCBs, and noting more recent recognition that PBDEs are environmentally persistent, rapidly bioaccumulate in human tissue including breast milk and function as developmental neurotoxicants in animals, urges proactive steps to reduce human exposure citing especially APHA policy (#200011) encouraging "precautionary action to prevent potential harm to reproductive health, infants, and children, even if some cause and effect relationships have not been established with scientific certainty."1

More specifically, PBDEs are commonly used flame retardants found in foam products, textiles, electrical equipment, building materials and transportation. Penta-BDE, octa-BDE and deca-BDE are three of the most common commercial classes, with varying numbers of bromine atoms per molecule. Chemically, they look very much like PCBs, which were banned in 1976 due to their high toxicity and persistence and now conclusive evidence that they cause neurodevelopmental problems in children.2 Aside from their fire-retardant properties, PBDES are potent toxins that persist in the environment and bioaccumulate in the food chain and in human tissues.3 Like PCBs, PBDEs are lipophilic and have been found in fish, bird eggs and marine mammals as well as in human milk, fat and blood. While PCB levels in fish and breast milk have slowly declined since being banned, PBDE levels are increasing at an exponential rate. A 100-fold increase in total PBDEs was noted in Lake Ontario trout between 1978 and 1998.4 Body burdens of PBDEs in San Francisco Bay Harbor seals increased by a factor of 100 between 1989 and 1998.5 Total PBDE levels in human milk, blood and tissues have increased by a factor of 100 during the past 30 years, doubling about every five years.6 PBDE levels in U.S. women's breast milk are typically 10-100 times higher than levels in European women7,8 and are now approaching concentrations at which health effects have been observed in laboratory animals.9-17 Although human data on health effects are still lacking for PBDEs, ample data on toxicity are available from animal studies. These studies document that PBDEs are toxic to the brain, reproductive system and liver and disrupt thyroid function.18 Effects on thyroid function provide a plausible mechanism for PBDEs' possible adverse effects on child development. Human studies already document adverse effects on intelligence and psychomotor skills in children with disruptions in thyroid levels in the womb through the second year of life.19-22 One study found that workers exposed to PBDEs experienced higher prevalence of hypothyroidism.23 Concurrent exposure to both PBDEs and PCBs, as from consuming some fatty fish, may present an increased risk since some researchers have found additive or synergistic effects between the two chemicals.24

PBDEs have been detected in household dust,25 food, and in air drawn from a warm TV,26 but the major human exposure pathways have yet to be identified. PBDEs with fewer bromines, such as penta, have the highest potential for bioaccumulation and are typically the most common classes found in humans, fish and other wildlife. Scientists, however, have increasingly been finding deca-BDEs and other higher brominated congeners in biota.27-29 Moreover, it is clear that deca can debrominate and convert to the more bioavailable forms in the environment and potentially during metabolism as well, making them a greater health risk than originally thought.

Global PBDE production totaled 150 million pounds in 1999, over 50 percent of which was used in the Americas.30 Deca-BDE is the most widely used class of BDE at 80 percent of worldwide production.31 Like PCBs, PBDEs flame retardants are now ubiquitous in the environment. The European Chemicals Bureau estimates that 75 percent of penta-BDE emissions will end up in soil and 24.9 percent in surface water and sediment.32 Measured levels of PBDEs in U.S. sewage sludge are 40 times that of European sludge.33

Eliminating most uses of PBDE flame retardants is possible, and a prudent step to protect public health. Concerns about rising levels of PBDEs in the breast milk of Swedish women led to efforts by industrial users in both Sweden and Germany to phase out the use of these chemicals. These actions have led to a decline in PBDE levels in breast milk of Swedish women.34 The European Union has enacted a ban on penta and octa-BDEs and is considering a ban on deca-BDEs as well. The states of California, Hawaii, New York, and Maine have enacted phase-outs of penta and octa-BDEs. Minnesota, Massachusetts, Michigan, Washington and Maryland have proposed similar state-level phase-outs.

Alternatives to the use of PBDE flame retardants are available and cost effective. Alternatives include: product redesign to

eliminate the need for added chemicals; use of naturally flame retardant materials like wool and leather or plastics containing sulfur; and use of less toxic alternatives.35 The German Environmental Agency selected red phosphorus, ammonium polyphosphate and aluminum trihydroxide as alternatives with the least adverse environmental impact.36

Some computer and electronics manufacturers like Apple, Ericsson, IBM, Intel, Motorola, Panasonic, Phillips, and Sony are using alternatives. For example, Motorola now uses a halogen-free laminate that is cost effective, while meeting fire safety standards.37 Toshiba has replaced BFR-containing plastic casings in electronic parts with inherently flame-resistant polyphenylene sulfide. IKEA furniture, Crate and Barrel and Eddie Bauer are requesting PBDE-free polyurethane foam from their manufacturer Hickory Springs.

Although global manufacturers of these compounds continue to produce, as well as export, their products to the United States, one of the two U.S. manufacturers of PBDEs, Great Lakes Chemical, has already announced that they will phase out production of penta and octa-BDEs by 2005. The remaining U.S. manufacturer, Albemarle, continues to manufacture deca-BDE. By calling for a reasonable time frame for phase-out of deca-BDEs, impacts on businesses and workers could be minimized. Phasing out these compounds and substituting safer alternatives protects U.S. manufacturers of PBDEs and companies that use them in their products from potential liability and helps maintain a European market for products requiring flame retardant properties. Since exposure to PBDEs may include an inhalation route of exposure, phasing out the manufacture of these chemicals should better protect the health of workers in industries dealing with PBDEs.

A PBDE phase-out may result in job loss for existing production workers. APHA policy statement 9304 acknowledges potential worker impacts and calls for assistance to workers who are displaced by technological changes.38 New research further supports the need for Work Environment Impact Assessments prior to chemical phase-outs/bans in order to prevent the shifting of risks to workers within the affected industry.39 A PBDE phase-out also provides economic opportunities for workers in industries which make safer alternatives to PBDE flame retardants.40

In light of the aforementioned emerging science on the inherent toxicity and persistence of PBDEs, evidence of adverse health effects on animals and the prevalence and rising levels in fish, biota and human breast milk, immediate action is needed to prevent further environmental contamination and to protect public health.

Therefore, The American Public Health Association hereby:

1. Resolves: That APHA urge state and federal governments to require the use of PBDE flame retardants be phased out in all products manufactured and sold in the United States by a date certain; and

2. Resolves: That APHA urge state and federal governments, in enacting such phase-outs, to consider policies that alleviate short-term economic impacts on the PBDE production workforce, and to also consider economic benefits to workers in industries making safer alternatives; and

3. Resolves: That APHA urge state and federal governments to provide financial incentives for development and use of alternative flame retardants or preferably changes in product design to increase fire resistance without use of chemicals, to assure fire safety, while protecting the public from toxic exposures; that alternative flame retardants be adequately tested for toxicity; and that environmental and health safety must be assured prior to use; and

4. Resolves: That APHA urge state and federal governments to require labeling of chemical flame retardants used in products; and

5. Resolves: That APHA urge state, federal and local governments to regulate the safe disposal of products containing brominated flame retardants and to prohibit land application of sewage sludge until testing can assure that such material does not contain measurable levels of PBDEs; and

6. Resolves: That APHA urge the U.S. Centers for Disease Control and Prevention to expand the national biomonitoring program to include PBDEs and to increase the number of people studied; and

7. Resolves: That APHA urge Congress to increase funding for research on PBDE flame retardants, including monitoring levels of PBDEs in fish, sediments, human milk, blood and tissue, and additional research into exposure routes and human health effects from these exposures.

CS SB 27 (HSS)

Sectional Analysis

Section 1. Adds a new article on toxic chemicals in products.

Sec. 18.31.600. Prohibits a person from manufacturing, selling, or distributing certain products that contain a specified percentage of the brominated flame retardants pentaBDE, octaBDE, or decaBDE. Prohibits a person from manufacturing, selling, or distributing a product that the Department of Environmental Conservation prohibits under sec. 18.31.610.

Sec. 18.31.610. Authorizes the department to prohibit the manufacture, sale, and distribution of certain products that contain a flame retardant that is not already prohibited under sec. 18.31.600(a) - (c) if the department makes certain determinations regarding public health, the environment, and alternatives to the flame retardant. Requires the department to consult with the Department of Health and Social Services (DHSS). Requires the state fire marshal to determine whether an alternative satisfies fire safety standards.

Sec. 18.31.620. Lists five exemptions from the prohibitions in sec. 18.31.600.

Sec. 18.31.630. Requires a person who manufactures products whose sale and distribution are prohibited by sec. 18.31.600 to inform its retailers in the state of the prohibition and the penalty.

Sec. 18.31.640. Authorizes the department to request that the manufacturer of a product it suspects of being sold in violation of sec. 18.31.600 either (1) provide the department with a sworn certificate indicating the sale does not violate sec. 18.31.600, or (2) notify its retailers in the state that the sale is prohibited and provide the department with a list of the retailers notified.

Sec. 18.31.650. Establishes a civil penalty for violating sees. 18.31.600 - 18.31.640.

Sec. 18.31.660. Requires the department to participate in a multistate chemicals clearinghouse to build capacity to identify and promote safer chemicals and products; avoid duplication and enhance efficiency and effectiveness; and ensure access to high quality and authoritative information on chemicals.

Sec. 18.31.670. Authorizes the department to adopt regulations to implement the new sections.

Sec. 18.31.690. Defines terms for the new sections.

Section 2. Authorizes the department to begin adopting regulations for these provisions.

Section 3. Directs the Revisor of Statutes to make a conforming change to the existing statutes in AS 18.31.

Section 4. Gives participation in the chemicals clearinghouse and bill sec. 2 an immediate effective date.

Section 5. Gives the Act (except chemical clearinghouse participation and and sec. 2) an effective date of January 1,2013.

SB 27
SPONSOR STATEMENT

> "Still one thing more, fellow-citizens -- a wise and frugal Government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities."
>
> Thomas Jefferson, First Inaugural Address, March 4, 1801[1]

SB 27 will support Safer Homes and Healthier Families by banning the use of polybrominated fire retardants (PBDEs) in mattresses, upholstered furniture and the plastic housing of electronics. In addition, it will give the Department of Environmental Conservation the authority to prohibit the use of other toxic flame retardants when safer alternatives exist. It will also move Alaska a step forward in protecting people from a variety of toxins by allowing the Department to participate with other states in learning about and sharing information on toxins.

PBDEs are persistent toxins that are included in furniture and electronics found in households to enhance flame retardancy. These toxins bio-accumulate, becoming more concentrated in humans and animals high in the food chain. Fetuses and infants are at particular risk as accumulated toxins are transferred from mother to child in utero and through breast milk. Pre-natal exposure may have lifelong health impacts that are not manifested until decades later.

Alaskans are particularly vulnerable for three reasons: 1) we spend a lot of time indoors with little ventilation, increasing our exposure to and ingestion of the microscopic particles of toxins found in household dust that are released from our furniture and electronics; 2) we eat subsistence foods that may concentrate toxins; and 3) through a process known as global distillation, toxins such as PBDEs are carried in the atmosphere for great distances from points of manufacture and concentrate in cold climates.

The impact and legacy of 30 years of producing and using these chemicals is yet to be fully realized and revealed. Alaska should join the 12 other states that have stepped forward to protect their citizens without delay in the face of federal inaction.

CS FOR SENATE BILL NO. 27( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR WIELECHOWSKI

A BILL

FOR AN ACT ENTITLED

"An Act relating to flame retardants and to the manufacture, sale, and distribution of products containing flame retardants; relating to bioaccumulative toxic chemicals; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 18.31 is amended by adding new sections to read:

Article 4. Toxic Chemicals in Products.

Sec. 18.31.600. Prohibitions. (a) A person may not manufacture, sell, or distribute a product that contains more than 0.1 percent by mass of pentaBDE, octaBDE, or a combination of pentaBDE and octaBDE.

(b) A person may not manufacture, sell, or distribute a mattress, a mattress pad, or upholstered furniture if the mattress, mattress pad, or upholstered furniture has a textile component containing more than 0.1 percent by mass of decaBDE.

(c) A person may not manufacture, sell, or distribute an electronic product if the electronic product has a plastic housing that contains more than 0.1 percent by

mass of decaBDE.

(d) A person may not manufacture, sell, or distribute a product that is prohibited by the department under AS 18.31.610.

Sec. 18.31.610. Prohibition by department. (a) The department may prohibit by regulation the manufacture, sale, and distribution of a product that contains a flame retardant that is not already prohibited under AS 18.31.600(a) - (c), if the department determines that

(1) the flame retardant is harmful to public health or the environment; and

(2) an alternative to the flame retardant exists, is safer for the public health or the environment, and is available on a nationwide basis.

(b) Before establishing a prohibition under (a) of this section, the department shall consult with the Department of Health and Social Services, and the state fire marshal shall determine that the flame retardant alternative identified in (a)(2) of this section satisfies applicable fire safety standards.

(c) In this section, "product" means

(1) a mattress, a mattress pad, or upholstered furniture if the mattress, mattress pad, or upholstered furniture contains plastic fibers that contain the flame retardant; or

(2) an electronic product that has a plastic housing that contains the flame retardant.

Sec. 18.31.620. Exemptions. The prohibitions in AS 18.31.600 do not apply if the product that is prohibited is part of

(1) a transportation vehicle or a product or part used in a transportation vehicle or transportation equipment;

(2) a product or equipment used in an industrial, mining, or manufacturing process;

(3) electronic wiring or cable used for power transmission;

(4) a used item that is resold; or

(5) a new item that is brought into the state before the effective date of AS 18.31.600 - 18.31.790.

Sec. 18.31.630. Notification by manufacturer. A person who manufactures products whose sale and distribution are prohibited by AS 18.31.600 shall inform its retailers in the state of the prohibitions under AS 18.31.600 and the penalty under AS 18.31.660.

Sec. 18.31.640. Retailer assistance. The department shall develop a program to assist retailers to identify products in their inventories that violate AS 18.31.600.

Sec. 18.31.650. Enforcement. If the department determines that there are grounds to suspect that a retailer is selling a product in violation of AS 18.31.600, the department may request that, within 10 days, the manufacturer of the product

(1) provide the department with a sworn certificate indicating that the sale of the product does not violate AS 18.31.600; or

(2) notify each retailer who sells the product in the state that the sale of the product is prohibited by AS 18.31.600 and provide the department with a list of the names and addresses of the retailers notified.

Sec. 18.31.660. Civil penalty. A person who violates AS 18.31.600 - 18.31.650 is liable to the state for a civil penalty of up to $1,000 for each violation.

Sec. 18.31.670. Review by departments. The department, along with and the Department of Health and Social Services, shall review

(1) the hazards and risks of brominated flame retardants and possible alternatives to brominated flame retardants; and

(2) the findings and rulings by the United States Environmental Protection Agency that are related to brominated flame retardants and possible alternatives to brominated flame retardants.

Sec. 18.31.680. List of toxic chemicals. (a) The department shall, in consultation with the Department of Health and Social Services, establish by regulation and update every three years on or before February 1 a list of persistent bioaccumulative toxic chemicals that occur or are used in products used by human beings.

(b) When establishing the list required by (a) of this section, the department shall consider

(1) the persistent bioaccumulative toxins list prepared by the State of

Washington;

(2) the chemical data developed by the United States Environmental Protection Agency; and

(3) other sources the department determines are relevant.

Sec. 18.31.690. Interstate clearinghouse. The department may participate in the establishment and implementation of a regional multistate clearinghouse to

(1) assist the department to carry out the department's duties under AS 18.31.600 - 18.31.790; and

(2) help coordinate education and outreach activities related to brominated flame retardants, including risk assessments and possible alternatives to brominated flame retardants.

Sec. 18.31.700. Regulations. In addition to the regulations allowed under AS 18.31.610, the department may adopt regulations to implement AS 18.31.600 - 18.31.790. The department shall adopt the regulations for AS 18.31.600 - 18.31.790 under AS 44.62 (Administrative Procedure Act).

Sec. 18.31.790. Definitions for AS 18.31.600 - 18.31.790. In AS 18.31.600 - 18.31.790, unless the context indicates otherwise,

(1) "brominated flame retardant" means a flame retardant that contains pentaBDE, octaBDE, or decaBDE;

(2) "congener" means a specific polybromodiphenyl ether molecule;

(3) "decaBDE" means decabromodiphenyl ether or a technical mixture in which decabromodiphenyl ether is the predominant congener;

(4) "department" means the Department of Environmental Conservation;

(5) "distribution" means distribution for sale or for a commercial purpose;

(6) "electronic product" means a television, a computer, or another piece of electronic equipment;

(7) "flame retardant" means a chemical that is added to plastic, foam, or a textile to inhibit flame formation;

(8) "manufacture" means manufacture for sale;

(9) "manufacturer" means a person who

(A) manufactures a product or whose brand name is affixed to the product; or

(B) imports or distributes a product in the United States if the person who manufactured or assembled the product or whose brand name is affixed to the product does not do business in the United States;

(10) "octaBDE" means octabromodiphenyl ether or a technical mixture in which octabromodiphenyl ether is the predominant congener;

(11) "pentaBDE" means pentabromodiphenyl ether or a technical mixture in which pentabromodiphenyl ether is the predominant congener;

(12) "persistent bioaccumulative toxic chemicals" includes carcinogens, mutagens, reproductive toxicants, developmental toxicants, neurotoxicants, endocrine disruptors, and other toxins; in this paragraph,

(A) "bioaccumulative" means increasing in concentration in a living organism to a concentration greater than the concentration of the toxic chemical in the environment in which the organism lives;

(B) "persistent" means remaining in the environment in a toxic form;

(13) "sell" includes an offer to sell;

(14) "technical mixture" means a mixture that is named for the predominant congener and that is not exclusively composed of the predominant congener;
