151. During review of the petition, DNR found reports that recommended management practices to successfully restore fen/bogs. A 2003 study by the University of Minnesota on fen restoration, *Fen Restoration Final Project Report*,[313] recommended a number of measures to promote successful fen restoration, including direct haul of soil material to its final location, timing targets for soil removal and placement, methods for transplanting desired vegetation and controlling water levels. Another paper, *Covering Bare Ground Suppresses Unwanted Willows and Aids a Fen*

[312] Petition at 21.

[313] Johnson, K. W. and Valppu, S. H. (2003).

Meadow Restoration in Switzerland,[314] provides recommendations for controlling unwanted vegetation within a restored fen to limit competition and enhance the regrowth of desired vegetative species associated with fens. A study on the restoration of fens, *Restoration of Degraded Boreal Peatlands,*[315] cited the 1998 study by Cooper, *et al., Hydrologic Restoration of a Fen in Rocky Mountain National Park, Colorado,* USA,[316] as an example of a successful fen restoration project. The Cooper study is the same study cited by petitioners at pages 22-23 of the petition, and was also submitted with the 2007 petition. While the Cooper study addressed the difficulties the project encountered during and after competition of the project, it described mitigation measures that can be taken to minimize these difficulties and the study describes success at restoring fens.[317] The management practices suggested by these reports is already required by 11 AAC 90.313 (Topsoil Storage) and is consistent with contemporary mining practices to direct haul soils to maintain their ecologic viability. Reclamation of wetlands, including type and location, is driven by the approved postmining land use. For any new projects within the Chuitna watershed, any disturbance to or loss of wetlands would have to be approved by DNR under AS 27.21 and by the Army Corps of Engineers under the Clean Water Act section 404 provisions. Ultimately, the decision to restore fens as part of reclamation is significantly tied to the landowner's proposed postmining land use and consultation with DNR regarding that proposed use.

152. In accordance with AS 27.21.260(c)(1), the evidence in the administrative record-- particularly in light of the contrary evidence discussed in this decision -- is insufficient to require my determination that, for the petition area's hydrologic balance, reclamation in accordance with ASCMCRA is not technologically feasible. Moreover, the petitioners' evidence is insufficient to support the conclusion that surface coal mining operations would irreparably harm the area's hydrologic balance. Finally, many of the arguments and concerns raised by petitioners will also be addressed again at the permitting stage, based on project specific proposals.

[316] 18 Wetlands 3 (1998).

[317] 2010 Petition, Exhibit 6 at 344.

C. Petitioners' allegation that reclamation would not restore groundwater recharge capacity in the petition area.

153. Petitioners claim that any surface mining within the Chuitna watershed would not restore the recharge capacity, as required by the performance standard in 11 AAC 90.343 (Protection of Groundwater Recharge Capacity).[318] The petitioners assert that this allegation is reviewed under the mandatory designation standard set forth in AS 27.21.260(c)(1). This assertion is mistaken. Allegations regarding aquifer recharge are subject to the discretionary designation standard. Under AS 27.21.260(c)(2)(C), the Commissioner "*may* designate an area as unsuitable...if the commissioner determines that the operations in the area will affect aquifer recharge areas...."[319] In any event, whether the petitioners' allegation that surface coal mining operations would not restore recharge capacity is reviewed under the nondiscretionary or discretionary designation standards, the evidence is insufficient to support their allegation.

154. In making this allegation, the petitioners quote selective portions of the 1990 FEIS.[320] A full examination of the 1990 FEIS, however, contradicts petitioners' allegation:

> Reclamation of the mine area would at least partly reverse the ground-water impacts from mining. After removal of the surface-water diversion systems, surface water together with incident precipitation would recharge the underlying spoil materials and with time result in the reestablishment of a ground-water regime similar but not identical to the premining condition.[321]

155. As stated earlier, one of ASCMCA's purposes is to *minimize* adverse impacts to the hydrologic balance, including the recharge capacity within the mine area, and this is reflected in 11 AAC 90.343. As expressed in the 1990 FEIS, the EPA concluded that the proposed reclamation was essential to minimizing adverse impacts and would facilitate recharge of the "groundwater regime similar but not identical to the premining condition."[322] This finding is again supported by DNR's 1987 Permitting Decision to issue the permit for the Diamond Shamrock Chuitna Coal

---

318 Petition at 24-25.

320 Petition at 25.

321 1990 FEIS at 5-20.

322 *Id.*

Mine.[323] As required by AS 27.21.180(c)(3), the permitting decision found that there would be no material damage to the project or surrounding areas.[324]

156. The petitioners assert that because "groundwater recharge capacity cannot be achieved within a reasonable timeframe,"[325] the performance standard at 11 AAC 90.343 could not be met. Specification of a reasonable time frame is not set forth in the regulations. Moreover, the absence of a given time frame does not alone warrant an unsuitability determination, when there are a myriad of performance standards and other countervailing competent and scientifically sound data and information identified in this decision that support the conclusion that reclamation is technologically feasible.[326]

157. Petitioners also question the ability to preserve water quality during coal mining operations and cite a few studies relating to those concerns.[327] These concerns, however, can be addressed, and potential impacts prevented, by applying the performance standards and requiring adherence to Alaska Water Quality standards.

158. In sum, in accordance with AS 27.21.260(c)(1), for groundwater recharge, the evidence in the administrative record is insufficient to require my determination that reclamation is not technologically feasible. In accordance with AS 27.21.260(c)(2)(C), the evidence is insufficient to sway me to designate, in my discretion, any part of the petition area as unsuitable for surface coal mining operations due to groundwater recharge issues, because the evidence does not support a conclusion that operations anywhere in the petition area would "affect aquifer recharge areas or other renewable resource land in which the operations could

---

[323] DNR's 1987 Permitting Decision, at 386.

[324] *Id.* at 39.

[325] Petition at 25.

[326] For example, under 11 AAC 90.085(a) and (c)(3), an application for a proposed mining operation would have to describe anticipated impacts to the recharge capacity and include plans for restoring the "approximate recharge capacity in the area" after mining is complete in accordance with 11 AAC 90.343.11 AAC 90.085(c)(3). Under 11 AAC 90.083(a) and (b)(1) and 11 AAC 90.085(c)(3), DNR requires that a reclamation plan include "a detailed timetable for the completion of each major step in the reclamation plan," and that would include a timetable for restoration of the approximate recharge capacity.

[327] Petition at 25.

result in a substantial loss or reduction to the long-range productivity of water supply," in this instance, groundwater recharge.

D. Petitioners' allegation that reclamation would not restore aquatic productivity to premining levels.

159. The petitioners allege that reclamation would not restore aquatic productivity for fish habitat to premining levels. This allegation cites the importance of the petition area as highly productive fish habitat, and that invertebrates within the petition area are an important food source for fish.[328] This argument is based on an interpretation of 11 AAC 90.327(d)(3).[329] 11 AAC 90.327(d)(3) provides:

> (d)When permanent diversions are constructed or stream channels restored after temporary diversions, the operator shall ...
>
> ...
>
> (3) establish or restore the stream to a longitudinal profile and cross section, including aquatic habitats that approximate refining stream channel characteristics and *which may, using the best technology currently available,* be expected to restore aquatic productivity to premining levels.[330]

This regulation means that any coal mining operation that plans to construct permanent diversions (*i.e.*, rebuild stream channels) is directed to use the "best technology available" as part of the reclamation and mitigation plan that may be expected to restore aquatic productivity to premining level. As with other requirements of ASCMCRA, there is the understanding that mining will have adverse impacts to the environment,[331] including aquatic productivity, and that any adverse impact must be minimized or mitigated. Accordingly, there is no

---

[328] The petitioners assert that this allegation is reviewed under the mandatory designation standard set forth in AS 27.21.260(c)(1). Petitioners are again mistaken. Allegations regarding restoration of aquatic productivity -- or, in other words, to reclaim losses or reduction to productivity that may be sustained as a consequence of surface coal mining -- are subject to the discretionary designation standard. Under AS 27.21.260(c)(2)(C), the commissioner "may designate an area as unsuitable...if the commissioner determines that the operations in the area will affect aquifer recharge areas in which the operations could result in a substantial loss or reduction of long-range productivity of water supply or food or fiber products." But even if this allegation is reviewed under the nondiscretionary designation standard, the evidence is insufficient to support their allegation.

[329] Petition at 25-29.

[330] Emphasis added.

[331] *See* discussion at Allegation I, subsection B, above.

requirement, as petitioners argue, that a petition must be granted if there is a showing that mining activity will have an adverse impact on the environment.

160. Petitioners' interpretation of 11 AAC 90.327(d)(3) also ignores the emphasized portion of this performance standard -- i.e., petitioners do not consider the application of "best available technology" and how this technology can be used to restore habitat.

161. The petitioners' argument is misplaced for an additional reason: other applicable performance standards will operate to protect water quality and hydrology, and seek to minimize adverse impacts on fish and wildlife.[332]

162. Petitioners next cite examples of impacts to fish productivity that were considered in the 1990 FEIS[333] as evidence demonstrating that aquatic productivity could not be restored. The cited examples are comments set forth in Chapter 5 of the 1990 FEIS, dealing with "Environmental Consequences." A closer reading of Chapter 5 and the cited comments regarding potential impacts to aquatic productivity show the comments themselves were speculation, and not conclusions.[334]

163. Petitioners also fail to account for the mitigation required by DNR's 1987 Permitting Decision,[335] or how mitigation might be required by other state and federal permits,[336] and how that mitigation was addressed in the 1990 FEIS:

> To mitigate for the unavoidable loss of approximately two miles of anadromous fish habitat in tributaries 200305, 200304, and 20030502 (ADF&G Nos. 247-20-10010-2030 - 3018 and 3012) the applicant shall construct replacement fish habitat. Replacement fish habitat shall consist of the construction and maintenance of at least four one-half acre coho salmon rearing ponds to be located adjacent to coho salmon spawning habitat in tributary 2003.
>
> The requirement also insists upon a monitoring plan to address the effectiveness of the mitigation:

---

[332] 11 AAC 90.323 (water quality); 11 AAC 90.343, 11 AAC 90.085,11 AAC 90.321 (hydrology); and 11 AAC 90.423 (fish and wildlife).

[333] Petition at 27.

[334] 1990 FEIS at 5-139.

[335] 1987 Permitting Decision at 11.

[336] 1990 FEIS at 5-1.

> Should the monitoring show that the ponds are not providing satisfactory coho salmon rearing habitat, as determined by ADNR in consultation with ADF&G, alternative mitigation may be prescribed as necessary to compensate for the lost fish habitat.[337]

164. Moreover, information regarding anadromous fish streams has advanced since the 1990 FEIS, as has the understanding of the technology used to restore fish productivity in disturbed areas. In Alaska, several mitigation measures have been used successfully to restore productivity to impacted streams. Examples include the construction of off-channel rearing pond at the Granite Creek Material Site,[338] which is used for coho and Dolly Varden rearing, and the restoration of Resurrection Creek for pink, coho, Chinook, chum and sockeye salmon.[339] Another mitigation measure used successfully was the Alaska Resource & Economic Development Inc.[340] (ARED) system on the Moose Creek Restoration project.[341] The ARED system is designed to use existing wild salmon in an impacted stream to enhance fish population. This enhancement is accomplished by improving the survival rate of the salmon in their early life stages. In the Moose Creek project this technique has been used to help reestablish the Chinook and coho salmon populations. Other mitigation that has been used successfully in restoration projects, and discussed elsewhere in this decision, includes the addition of nutrients such as pollock bone meal, transported salmon carcasses, and salmon carcass analogs.

165. In addition, for reasons discussed above, the application of 11 AAC 90.327(d)(3) needs to be on a project-specific basis, using site specific information, including a detailed mining and reclamation plan, not area-wide information using the petition process.

166. In accordance with AS 27.21.260(c)(1), the evidence in the administrative record is insufficient to require my determination that, for aquatic productivity (specifically fish habitat), reclamation in accordance with statutory and regulatory authorities is not technologically feasible. In accordance with AS 27.21.260(c)(2)(C),

---

[337] *Id.* at 6-9 (quoting DNR's 1987 Permitting Decision at 12).

[338] PacRim Coal Intervention Letter Exhibit 2.

[339] Wildfish Habitat Initiative, http://wildfish.montana.edu/Cases/browse_details.asp?ProjectID=61 .

[340] http://www.ared.net/index.htm .

[341] Wildfish Habitat Initiative, http://wildfish.montana.edu/Cases/browse_details.asp?ProjectID=73 .

the evidence is insufficient to cause me to designate, in my discretion, any part of the petition area as unsuitable for surface coal mining operations because of aquatic productivity, because the evidence does not support a conclusion that operations anywhere in the petition area would "affect aquifer recharge areas or other renewable resource land in which the operations could result in a substantial loss or reduction to the long-range productivity of water supply or food or fiber products." Stated another way, there is insufficient evidence to support the allegation that there will be a substantial loss or reduction to the long-range productivity of aquatic productivity -- including fish habitat, fish, or other food supply -- based on the petition, even assuming that fish habitat is the confirmed postmining land use for the delineated petition area. And, as a practical matter, it must be recognized that concerns regarding a proposed project's ability to achieve the applicable performance standards with regard to water quality, minimization of damage to fish and wildlife, and design of precise reclamation measures for proposed postmining land uses is dealt with on a site-specific basis during the permitting phase. Such concerns cannot be appropriately addressed in the context of a lands unsuitable petition if petitioners fail to assume -- as they do here -- that contemporary coal mining practices will be followed.

E. Petitioners' allegation that surface coal mining in the petition area cannot be designed and operated to minimize changes in water quality and quantity and hydrology enough to ensure no adverse effects to fish and wildlife habitat.

167. Petitioners appear to assert that the Act mandates that a petition be granted if there are adverse impacts to fish and wildlife.[342] The proposition that no adverse impacts from surface coal mining operations is allowed is not consistent with the legislative expectation under either SMCRA or ASCMCRA. As noted in section B, above, adverse impacts during construction and operation are anticipated. The objective, though, is to minimize and avoid impacts, and to reclaim areas which are impacted.[343]

---

[342] Petition at 29-33.

[343] For example, regarding fish and wildlife, a coal mining operation "shall, to the extent possible using the best technology currently available, minimize disturbances and adverse impacts on fish, wildlife, and related environmental values, and achieve enhancement of such resources where practical." 11 AAC 90.423(a).

168. In making this allegation, the petitioners misconstrue 11 AAC 90.321(b) to be a performance standard requiring "avoidance of adverse effects to *pre-existing* land uses."[344] This is not a correct statement of the regulation, because, as discussed in detail above, the focus is on "postmining land use," whatever that land use may be determined to be in accordance with applicable authorities and consultation with the landowner.

169. The petitioners and a number of commenters, including the Center for Science and Public Participation (CSP2),[345] raised concerns that water discharges from coal mining operations -- specifically discharges from the proposed Chuitna Coal Project -- will not meet Alaska Water Quality Standards, even after reclamation. These comments parallel concerns that have been expressed by state and federal agencies in their initial evaluation of preliminary plans submitted by PacRim for the Chuitna Coal project, but these comments were made based on preliminary information relating to a specific project and are too speculative for determining reclamation is not technologically feasible. Moreover, if PacRim's final proposal cannot comply with performance standards (including compliance with Alaska water quality standards) it will not be permitted. Thus, petitioners -- once again -- fail to assume (as they must) that performance standards will be followed. And, the type of issue that CSP2 raised and addressed in the previous paragraph must be addressed as part of a project-specific review.[346]

---

[344] Petition at 33 (emphasis added).

[345] CSP2's January 18, 2011 letter in support of the petition.

[346] The Alaska Department of Environmental Conservation echoed this view in reviewing CSP2's comments in support of the petition:

> ....The agencies have not yet been provided all the data and plan information to determine the potential and degree of risk and suitable mitigation methods to address the multitude of issues concerning water quality and subsequent effects on habitat and fisheries. Once these issues have been identified on the basis of complete data and development plans, they will need to be reviewed and deliberated amongst the state and federal agencies for compatibility across the several permits that PacRim will need to obtain. Until such time as the agencies have been provided with complete permit applications with all the supporting data and documentation, it is pre-mature to determine if [CSP2's] concerns directly apply to the Chuitna Coal Project.

170. Petitioners also cite EPA's statements in the 1990 FEIS that streamflow reduction from the Chuitna Coal Project could be as much as 17% in the Chuitna River near Lone Creek during low flow periods, and that there might be a reduction of streamflow of 25% for Lone Creek during low flow periods.[347] However, neither citation presents EPA's complete statement regarding its analyses and conclusions on these potential reductions. For example, regarding the Chuitna River, EPA stated:

> As indicated in Table 5-7, minimum flow in the Chuitna River immediately below the mouth of Lone Creek could be reduced by up to 17% during low flow periods in later years of mining. This reduction would represent an extreme worst case situation and would be unlikely during mining because of the addition of return water to the Chuitna drainage from the various mine area drainage systems.[348]

Regarding Lone Creek, EPA stated:

> As indicated in Table 5-7, minimum flows could be reduced during low flow periods (late summer and later winter) by up to 25 percent within the portion of Lone Creek east of the mine. As flows increase downstream, impact would be proportionally less. The above calculations of flow reduction assume no transfer of pit drainage to Lone Creek. During the first 10 years of mining, Diamond Alaska plans to release much of its pit drainage into Lone Creek; therefore net flow would actually increase at least temporarily. The up to 25 percent reduction would still occur in the event of pump failure or in the event that pit water freezes and cannot be pumped.[349]

171. As stated throughout this decision, a petitioner must assume that any mine that might be permitted in the petition area will follow contemporary mining practices and that the applicable regulatory standards established by ASCMCRA, including compliance with Alaska Water Quality Standards, will be imposed and adhered to. Neither DEC, which regulates wastewater, nor DNR, which issues coal operating permits, will issue authorizations that would allow discharges to exceed Alaska's applicable statutory and regulatory requirements for water quality and quantity. The same is true for ADF&G, which will only issue Title 16 Habitat Permits if a mining proposal can show that statutory and regulatory requirements will be met.

DEC's May 26, 2011 analysis and response to CSP2's January 18, 2011 comment letter.

[347] 2010 Petition at 31.

[348] 1990 FEIS at 5-30.

[349] *Id.*

172. In accordance with AS 27.21.260(c)(1), the evidence in the record is insufficient to require my determination that -- for water quality, quantity, and hydrology that may provide fish and wildlife habitat within the petition area -- reclamation in accordance with ASCMCRA is not technologically feasible. Moreover, the evidence is insufficient to support the petitioners' allegation that surface coal mining operations would irrevocably alter the hydrology and aquatic productivity of the petition area, or the Chuitna watershed.

F. Examples of Successful Stream and Wetlands Reclamation Projects

173. In addition to the information submitted by the petitioners, I am required to review relevant, competent and scientifically sound data and information in making a determination on a petition alleging that reclamation is not technologically feasible.[350] I have reviewed stream and wetland restoration and reclamation projects in Alaska and other parts of North America. Many of the examples reviewed include areas disturbed by mining, including surface coal mining.

174. The Valdez Creek Mine, located south of the Alaska Range, is an example of mining-related successful stream reclamation. The mine operated as one of the largest gold producers in Alaska from 1984 to 1996 by the Valdez Creek Mining Company -- a consortium of Camindex Mines Ltd., Cambior Inc., and Barrick Resources Ltd.[351] The stream hosts populations of grayling and trout,[352] and during some period of the operations, fish were transported around the mine site during the spawning period. The work was done under contract from Cambior to Potterville Specialty Services and North Alaska Fisheries Services for several days each week for a period of about a month and a half in the spring.[353] While there are no anadromous fish that are supported in the river, it is an important example of stream reclamation

---

[353] EPA, 1992, Site visit report: Valdez Creek mine Cambior Alaska Incorporated, at 3-37; 46p.; website, http://www.epa.gov/osw/nonhaz/industrial/special/mining/techdocs/placer/placer3.pdf .

after substantial disturbance to the hydrologic balance by a relatively deep surface mining operation. The postmining stream on this site was constructed on reclaimed mine spoils that were replaced after mining in the same general configuration as the premining stratigraphy, including substantial thicknesses of glacialfluvial material overlying Tertiary fluvial deposits and deeply incised paleochannels.[354] This work resulted in the 1995 Governor's Award for Reclamation, presented to Cambior Alaska, Inc.[355] The selective handling of the spoil material is very similar to spoil handling plan for the Diamond Shamrock permit application.[356]

175. Nome Creek, located in the White Mountains in Interior Alaska, is another example of successful postmining stream reclamation. The creek was mined from 1900[357] up to the 1980s[358] by sluicing, and a gold dredge operated on a large scale in the 1920s and 1930s; an area is still set aside for recreational gold mining.[359] Approximately seven to eight miles of the stream and riparian areas were destroyed as part of the historic mining operations. In the late 1980s, the Department of Interior's Bureau of Land Management (BLM) initiated a water resource monitoring and inventory on Nome Creek and reclamation efforts were started in earnest by 1991. As of 2006, six miles of stream, riparian areas, and 300 acres of floodplain restoration had been completed.[360] This stream historically had a resident Arctic grayling population. Monitoring has shown grayling present in lower and upper Nome

---

Creek.[361] This restoration effort has been a national showcase for riparian reclamation projects,[362] and BLM hopes that techniques developed at Nome Creek will be useful in other placer mine reclamation efforts.[363]

176. Another pertinent example of stream reclamation related to coal mining is that of Moose Creek, in the Wishbone Hill area near Palmer and Sutton, Alaska. Prior to disturbance, the creek supported sockeye, coho, Chinook, pink, and chum salmon.[364] From 1916 through 1983, sporadic coal mining occurred along Moose Creek. Early underground mining, followed by adjoining strip mining operations, severely altered more than seven miles of Moose Creek.[365] In 1923, a railroad spur was constructed up Moose Creek, from the railroad junction at the creek's mouth to the foothills.[366] When the rail line was upgraded to a standard-gauge rail, Moose Creek was re-routed, straightened and channelized, separating it from its floodplain, creating artificial waterfalls, and impacting more than seven miles of creek.[367] Such stream alterations resulted in degraded fish rearing and spawning habitat on the creek, as well as degraded adjacent wildlife riparian habitat for species such as bears and eagles. The stream alterations resulted in three distinct waterfalls, which prevented salmon from accessing over five miles of stream and wetland complex.

The goal of the Moose Creek Fish Passage Restoration Project was to restore wild salmon spawning habitat and runs to the upper Moose Creek watershed and improve the quality and quantity of aquatic and riparian habitat available to fish and

[367] U.S. Fish and Wildlife Service, 2005, Environmental assessment, Moose Creek fish passage project: Anchorage USFWS Office, Anchorage, AK, prepared for the Chickaloon Village Traditional Tribal Council.

wildlife species.[368] The work was a cooperative effort by the Chickaloon Village Environmental Protection Program, the U.S. Fish and Wildlife Service, NOAA, the University of Alaska at Anchorage's Environment and Natural Resources Institute, the EPA, and others, receiving a Five-Star Restoration Grant in 2004.[369]

Work was done in two phases -- Phase I in 2005, and Phase II in 2006. In late July 2005, after Phase I restoration construction was complete, over 200 adult Chinook salmon were observed above the previously impassable waterfall barrier. Chinook salmon were spawning in the newly created restoration channel. In late September and early October 2005, several adult coho salmon were seen migrating through the restoration project toward upstream spawning habitats. In early September, after Phase II restoration was complete, coho salmon were observed above the previously impassable barrier.[370] It is reported that "within days of project completion, Chinook salmon were observed spawning within the new channel, and were also seen as far as four miles upstream of the old waterfall site."[371] Phase II was completed in July 2006, relocating portions of the stream to its original location and bypassing three partial-barriers to fish passage. The stream restoration work largely survived a major flood later in the late summer of 2006, and the stream allows continuous fish passage.[372]

177. Resurrection Creek, home to Alaska's first gold rush in 1896, is another relevant stream restoration project. Hydraulic and power shovel mining within the watershed reduced the quality and quantity of fish and wildlife habitat within the watershed. The most severe impacts from mining were located in the lower 6.2 miles

of river. The lower reaches within this area were identified as critical spawning and rearing habitat for coho, chum, pink and Chinook salmon. Placer tailings piles up to 25 feet high confined and straightened the stream[373] and covered 54% of the floodplain.[374]

Investigations began in 2002 by the U.S. Forest Service Wind River Restoration Team from Carson, Washington, that assisted the Chugach National Forest by surveying and analyzing stream channel conditions and developing a stream channel restoration strategy, rehabilitation alternatives, and recommendations.[375] Restoration design and implementation templates for Resurrection Creek included channel geometry equations, stream flow patterns, and relic and disturbed analog reaches for reference reaches of stream. Restoration actions included mechanically manipulating mine tailings to recover floodplain width and elevations; reconstructing meander pattern, channel profile, pools and spawning habitat; developing multiple relief channels and off-channel ponds within the floodplain; extracting beetle killed spruce trees in high risk fire hazard areas to utilize as a source of in-stream and terrestrial woody material; augmenting soils in reclaimed riparian areas to provide soil/landform and drainage conditions which can support native plant communities; thinning existing overstocked riparian sapling spruce and cottonwood stands; allowing natural revegetation where seed source and site conditions were favorable; and using native plant species in revegetation projects when natural revegetation conditions were not favorable.[376]

The U.S. Forest Service produced a draft of the EIS in April 2004, completed the FEIS in November 2004, and in 2005 had finished channel, side channel, logjam, and floodplain reconstruction for most of the lower 0.7 miles of the project. These newly created channel segments were quickly utilized by spawning salmon almost

immediately following construction.[377] With channel restoration nearly complete for about 75 percent of the length of the one-mile project reach, many of the morphologic objectives of the project have been accomplished or nearly accomplished in the reach restored in 2005. Spawning gravel at the pool tails was increased substantially from pre-project conditions. Although the majority of the fish were pink salmon, all five species of Pacific salmon have been observed in the restored reach (pink, coho, Chinook, chum and sockeye).[378] The U.S. Forest Service is now nearly complete with planning for Phase II of the project that would reclaim an additional two miles of the creek below the Phase I work.[379]

178. Outside of Alaska, there have been many examples of reclaiming fish-bearing streams, including salmon streams, after mining activity. Clear Creek near Shasta, California is an example where historic hydraulic and dredge mining, as well as recent gravel mining, significantly disturbed the flood plain and stream including the complete removal of all of the riparian and upland vegetation. Mining left a complex of large pits and ponds along the lower reaches that became isolated when water levels dropped stranding adult and juvenile salmon and steelhead.[380] Gravel mining in the 1950s through the 1980s completely disrupted channel form and confinement, interrupting fish migration.[381] Historically, Clear Creek supported populations of Chinook salmon that were adversely affected by these activities. The U.S. Fish and Wildlife Service has monitored the occurrence of juvenile salmonids

since 1998 when restoration began.[382] Recent restoration activities of the stream and riparian areas have led to a fivefold increase in Chinook spawning escapements over the disturbed configuration.[383] Restoration activities are ongoing.[384]

179. Near Butte Montana, stream restoration efforts of portions of Silver Bow Creek, as part of a Superfund cleanup of mining tailings that began in 1999, have returned trout to portions of reclaimed streams that have been barren of trout for generations.[385] By 2005, slimy sculpin and long-nosed suckers returned to the creek,[386] and by 2007, trout were found in Silver Bow Creek. In 2010, an 18.5 inch cutthroat trout was caught by a young sports fisherman and mink, which prey on fish, were observed along the creek.[387] This project included the removal of nearly a century's worth of mine tailings and the complete reconstruction of 10 miles of trout streams and their associated riparian areas. As part of the project's achievements for this restoration project, the Montana Department of Environmental Quality cites improved ground and surface water quality, and reconstructed stream channels that are functioning and providing increased habitat diversity and an increase in biological diversity especially in aquatic species susceptible to metals leaching from spoils.[388]

180. Several stream restoration projects associated with large coal mines have been completed in Illinois. Consol Energy's Burning Star 4 mine reclaimed eight miles

of stream, including associated riparian areas, that had been impacted by dragline placed mine spoil. This project has been recognized by OSM for its outstanding reclamation efforts and has received a national award for its innovative reclamation practices.[389] The Pipestone Creek Restoration Project is another project in Illinois that restored 4.6 miles of Pipestone Creek on reclaimed mine spoils. This project noted that aquatic species returned to the restored portions on the creek in a short period after work was complete. The restored creek along with the conservation easement has been added to Pyramid State Park.[390]

181. While some of the above examples involved reclamation projects that commenced long after an area was subject to some form of mining and had been abandoned, the projects nonetheless reflect that reclamation is technologically feasible. Successful reclamation for surface coal mining operations, not only within the petition area but other areas of the state, will be even more likely for present-day reclamation where statutory and regulatory authorities require detailed planning, multi-agency State and federal regulatory review, and reclamation efforts to be actively pursued before, during, and after coal mining ceases.

182. Since the 1987 Permitting Decision on the Diamond Shamrock Chuitna Coal Project, regulatory authorities nationwide have recognized that reclamation of coal mine sites could be even better. Both state and federal regulatory authorities and the mining industry have combined resources to institute geomorphic reclamation techniques such as those pioneered by Horst Schor and documented in his book "Landforming: An Environmental Approach to Hillside Development, Mine Reclamation and Watershed Restoration" (Schor and Gray, 2007), as well as the works of Dave Rosgen[391] on stream restoration. These techniques are currently being applied to large surface coal mining operations throughout the United States.

183. This use of advanced reclamation strategies recognizes the need for both pre-development baseline studies of the streams and riparian areas proposed to be disturbed, and a detailed life of project monitoring and reclamation plan that are

designed to achieve reclamation in real world conditions. The EPA, in its recognition of river corridor and wetlands restoration, stresses the importance of planning and proper management: "When properly planned, executed and managed, restoration works; its success can be attributed to the hard work and dedication of practitioners, scientists and others...."[392] This progression to more advanced reclamation techniques in Alaska can be seen in the submittal by PacRim Coal of their "Draft Chuitna Coal Project Preliminary Design Report." This report outlines the proposed designs for streams to be reclaimed at the proposed Chuitna Coal Project.

184. Unless a specific finding is made, the existing performance standard found at 11 AAC 90.353 imposes a 100-foot, "no-mining" buffer on all perennial or intermittent streams, including streams located within the Chuitna watershed. The buffer may only be waived if the Commissioner specifically finds that any surface coal mining operation, including all support facilities, will have no adverse impacts on water quality and quantity and that any adverse effect on fish and wildlife will be minimized. To make this finding, the Commissioner must have detailed baseline data and a complete operation and reclamation plan for any proposed project within the Chuitna watershed.

185. As discussed several times above, it must be recognized that concerns regarding a proposed project's ability to achieve the applicable performance standards with regard to water quality, minimization of damage to fish and wildlife, and design precise reclamation measures for proposed postmining land uses is dealt with on a site-specific basis during the permitting phase. Such concerns cannot be appropriately addressed in the context of a lands unsuitable petition if petitioners fail to assume -- as they do here – that contemporary coal mining practices will be followed.

186. While Congress intended the petition process "to be applied on an area basis, rather than a site-by-site determination, which presents issues more

---

[392] http://www.epa.gov/owow/wetlands/restore/benefits.html

appropriately addressed in the permit application process,"[393] the petition process nonetheless contemplates that sufficient evidence to establish their allegations throughout the petition area. In this regard, there is insufficient evidence to support the claim that reclamation throughout the delineated petition area is not technologically feasible.

187. Congress emphasized that the petition process "does not require the designation of areas as unsuitable for surface mining other than where it is demonstrated that reclamation of an area is not physically or economically feasible under the standards of the act."[394] Based on all of the above -- in particular the prior state and federal permitting decisions and the many examples of successful reclamation -- and pursuant to the requirements of ASCMCRA, there is insufficient evidence in the administrative record for me to determine that reclamation of streambeds and riparian areas in the petition area is not technologically feasible.[395]

Petitioners' Allegation II: Surface coal mining operations will affect fragile land and could result in significant damage to important cultural, scientific, and aesthetic values and natural systems

188. Petitioners also allege that, pursuant to AS 27.21.260(c)(2)(B), the petition area should be deemed unsuitable for surface coal mining operations on the basis that "such operations will affect fragile land and could result in significant damage to important cultural, scientific, and aesthetic values and natural systems." In connection with this allegation, petitioners assert the following:

- The watershed contains fragile land within the meaning of the ASCMCRA regulations;
- Surface coal mining within the watershed would result in significant damage to important cultural, scientific, and aesthetic values and natural systems;

---

[393] House Committee Report No. 95-218 (1977), at 630.

[394] U.S. Code Cong. & Admin. News 1977, p.630, and quoted by the Fifth Circuit in *Prager*, 793 F.2d at 732-34 (holding that the Secretary of the Interior had thoroughly considered the petitioner's allegation that reclamation would not be technologically or economically feasible, and the record supported the secretary's decision that there was insufficient evidence to support the allegation).

[395] AS 27.21.260(c)(1).

- Significant harm will result to subsistence, commercial and sport fishing, complex and poorly understood hydrologic systems, the Cook Inlet beluga whale population, and aesthetic values.[396]

189. Under AS 27.21.260(c)(2)(B), the Commissioner "may designate an area as unsuitable for all or certain" coal mining activities "if the commissioner determines that operations in the area will...affect fragile or historic land in which the operations could result in significant damage to important historic, cultural, scientific, and aesthetic values and natural systems." This provision is considered discretionary, that is, the Commissioner may designate lands unsuitable at his or her discretion, but is not required to do so.

190. At the outset, the petitioners' Allegation II is verbatim to the Allegation II that they raised in the 2007 petition.[397] As with the 2007 Petition, the current petition contains only general assertions. With the exception of one new document,[398] the petitioners do not submit any new evidence to support this allegation since it was originally made in the 2007 Petition.[399]

191. Former Commissioner Irwin rejected this same allegation in the 2007 Petition, stating the following:

> It has been recognized that many of the lands within the petitioned area may hold some of the values that petitioners list. The petition also describes how many of those listed on the petition use the area and benefit from its resources. However, petitioners have provided no evidence to support allegations that surface coal mining operations -- if carried out in accordance with applicable, contemporary standards and regulations -- would result in significant damage to these values and natural systems, rendering the assertions speculative. Petitioners also fail to describe how the allegations are specific to petitioners' interests, that is, it does not describe the specific coal mining activities that would occur and on which lands within the petitioned area that would adversely affect the petitioners' interest. This correlation must be described in the petition to support the allegations. In addition, specific existing federal statutes address many of these issues, such as laws

---

396 Petition at 33-45.

397 *See* Allegation II of 2007 Petition, at 25-36.

398 MacDonald, Glen M., *et al.*, *Rapid Early Development of Circumarctic Peatlands and Atmosphere CH4 and CO2 Variations*, 312 Science 285 (2006).

399 For this reason, petitioners' arguments are likely barred by res judicata and collateral estoppel.

> governing protection of cultural resources and protection of marine mammals, and any authorized coal development must comply with these laws.[400]

Commissioner Irwin also noted that the petitioners alleged "harms from potential coal storage and transport activities at Ladd Landing, but the petitioned area does not include Ladd Landing, and the petition likewise fails to assume that contemporary mining standards and regulations would apply to activities at the site."[401] Commissioner Irwin informed petitioners that they could submit a new petition providing evidence supporting their allegation, and that it would be considered.[402]

192. I concur with Commissioner Irwin's earlier findings, and also find, as discussed below, that the petition fails to provide any new information to support an unsuitability designation.

A. Fragile Lands

193. The petitioners' list of fragile lands for purposes of Allegation II includes streams and riparian areas, wetlands, and lands which support subsistence and commercial uses, as well as aesthetic values, and they consider these to meet the definition of "fragile lands."[403] Fragile lands are particular areas that could be damaged or destroyed by coal mining and reclamation.[404] Under 11 AAC 90.911(40), "fragile lands" means:

> ...geographic areas containing natural, ecologic, scientific, or aesthetic resources that could be damaged or destroyed by surface coal mining and reclamation operations. Examples of fragile land includes, but is not limited to, uncommon geologic features, National Natural Landmark sites, groundwater recharge areas, valuable habitats for fish and wildlife, critical habitats for endangered species of animals and plants, critical wetlands, environmental corridors containing concentrations of ecologic and aesthetic features, areas of recreational value due to high environmental quality, buffer zones around areas where surface coal mining is prohibited; and important, unique, or highly productive soils or mineral resources.

---

400 July 16, 2007 Decision on 2007 Petition at 10.

401 *Id.*

402 *Id.*

403 Petition at 34.

404 *See* 11 AAC 90.911(40) and 30 C.F.R. 762.5.

194. In reviewing this allegation, DNR has also relied on OSM's clarification in the COALEX Report of the term "fragile land." OSM stated that the definition "is meant to provide guidance on what general types of resources can be considered fragile lands, not a list of areas which can or should *automatically* be designated suitable."[405]

195. OSM has stated in the COALEX Report that "[a]n interruption of certain activities or a diminution of particular values *during* mining is not sufficient to classify the land as fragile if the activities or values can be restored."[406] Thus, even though there is a potential for surface coal mining to affect the lands and values that petitioners reference, those factors alone do not justify an automatic finding that lands are "fragile" because petitioners need to show with specificity that *after* mining and reclamation the geographic area has been destroyed or damaged by the mining operations.

196. Moreover, even if the evidence demonstrates that fragile lands would be destroyed or damaged such a finding would not dictate that lands should be designated unsuitable for surface coal mining operations because when reviewing the petition, I must consider competent and scientifically sound data and information, as well as an array of statutory and regulatory factors. For example, I must strike a balance between protection of the environment and the need for coal as an essential source of energy, recognize that responsible extraction of coal is an essential and beneficial economic activity, take into account how contemporary coal mining practices (including performance standards) will minimize or avoid damage to an area, and consider the positions expressed about coal mining in this area in area plans and by the landowners.

197. Based on the area plans cited and described earlier in this decision, coal development in the Chuitna watershed has long been recognized as an important goal for and appropriate use of the area's lands. As described earlier under Allegation I, there is substantial evidence supporting that reclamation of the petition lands is technologically feasible. With the goals of these area plans in mind, and in light of OSM's guidance above regarding fragile lands, I find that -- assuming contemporary

---

[405] COALEX State Inquiry Report – 156 (emphasis added).

[406] *Id.* (emphasis added). The OSM COALEX Report – 156 provides additional guidance for making a decision under AS 27.21.260(c)(2)(B).

coal mining practices are followed -- the petition and the administrative record do not present any evidence that lands within the petition area are fragile or that impacts in the petition area and associated values that petitioners claim for the area, would be significantly damaged.

B. Aesthetic Values

198. The petitioners raise concerns about potential impacts to aesthetic values from surface coal mining operations in the petition area. Activities that already affect the aesthetic values in the petition area and the greater Chuitna watershed include oil and gas exploration and development, exploration activities for coal, and commercial flight-seeing and guide services. Moreover, for much of the watershed, the land is privately owned, and petitioners' ability to gain access without authorization is questionable. Also, the visibility or noise associated with any specific project that might be permitted would depend on the viewshed in which the project is located (*e.g.*, the project operation may be inaccessible or the landscape situation may obstruct visibility of the activity), as well as the conditions placed on operations to minimize and avoid audio and visual impacts.

199. Because of the nature of surface coal mining operations, impacts to aesthetic values are anticipated. The 2000 Kenai Area Plan, Kenai Borough Plan, and various owners of large parcels of land in the watershed have all expressed their intent to propose coal development projects. While some impacts may be visible in localized areas where actual mining activities occur, because reclamation is conducted concurrent with mining on a rolling basis, and because reclamation must be completed before site closure is approved, impacts to aesthetic values will be substantially minimized. Impacts from noise, light pollution, or vehicle traffic associated with mining operations can also be mitigated as part of the mine plan or by stipulations during the permitting process. For instance, DNR previously dealt with noise and light issues with respect to development of the True North/Fort Knox mine near Fairbanks. Under ASCMCRA, the same or similar mitigation measures, as appropriate, can be accomplished through technical amendments pursuant to 11 AAC 90.127(2) and during the mine permitting process itself. Thus, potential impacts from surface coal mining operations in the petition area, if they occur, can likely be

minimized and avoided, or are unlikely to cause significant impacts to aesthetic values to warrant an unsuitability designation.[407]

C. Beluga Whales

200. The petitioners raise concerns that Cook Inlet beluga whales may be adversely impacted by surface coal mining in the petition area. On October 22, 2008, NMFS listed the Cook Inlet stock of beluga whales as endangered under the ESA.[408] This stock of beluga whale had also previously been listed by NMFS as depleted under the MMPA. Following the ESA listing,[409] NMFS delineated critical habitat within Cook Inlet for the beluga whale, and this habitat is adjacent to the petition area.[410]

201. There is no evidence in the administrative record that coal mining activities within the petition area, properly regulated in accordance with applicable performance standards (including those relating to protection of water quality), would have any down-stream significant, much less measureable, impact on beluga whales and their designated critical habitat. Outside the petition area and in the marine waters of Cook Inlet, impacts to belugas associated with surface coal mining operations involving shore-side bulk freighting activities would also likely be minimal, but would, in any event, be pointedly addressed on a project-specific basis in a multi-agency State and federal review, including consideration of potential impacts pursuant to NEPA, as well as federal review under the MMPA[411] and ESA[412]. For example, 11 AAC 90.423, dealing with protection of fish and wildlife, requires that any proposed project within the watershed that might pose a threat to threatened or endangered species and their critical habit would require consultation with State and federal fish and wildlife agencies to determine whether a specifically proposed project may proceed.

---

[407] AS 27.260(c)(2)(B).

[408] More information is provided at the following link:
http://www.nmfs.noaa.gov/pr/species/mammals/cetaceans/belugawhale.htm

[409] The State of Alaska has filed a court action challenging this listing. *State of Alaska v. Lubchenco*, Case No. 10-0927 (D.C. D. 2010).

[410] *Id.*

[411] 16 U.S.C. § 1361, *et seq.*

[412] 16 U.S.C. § 1531, *et seq.*

202. Regarding the significant adverse impacts that petitioners allege for both fish and beluga whales, petitioners fail to assume that contemporary coal mining practices, including performance standards, will apply. Within a project area, impacts would have to be minimized using the best available technology,[413] in addition to acquiring Title 16 Habitat Permits from ADF&G that require mitigation of lost fish productivity due to mining in streams and riparian areas.[414] These permitting requirements would also address the petitioners' concerns raised about potential impacts to subsistence, commercial and sport fisheries. If a proposed project could not comply with these performance standards and others that will be required by state and federal regulatory authorities, then the project would not be permitted.

D. Natural Systems -- Global Warming/Greenhouse Gases

203. Petitioners contend that coal extracted from the Chuitna watershed, not just from within the confines of the requested petition area, would result in adverse effects to "another natural system -- the climate."[415] Petitioners claim that extraction activities in peatland in the watershed will release trapped methane gas. The petitioners also assert that the burning of coal by customers of coal extracted from the greater Chuitna watershed would also add CO_2 into the atmosphere, furthering global warming.

204. Petitioners appear to expect that because coal extraction and burning relating to coal extracted from the petition area may contribute to greenhouse gases, this potential contribution warrants designation of the area as unsuitable for coal mining activities. Followed to its logical conclusion this argument would dictate that all coal fields in the United States would need to be designated as unsuitable. Clearly, this was not what the U.S. Congress or Alaska Legislature had in mind. Indeed, the U.S. Congress and the Alaska Legislature expressed that there needs to be a balancing between coal use and environmental protection, especially when coal is recognized by both legislative bodies as an essential source of energy.[416]

---

[413] *See* Section D of this decision on Allegation I.

[414] ADF&G's May 26, 2011 letter at 2.

[415] Petition at 44.

[416] 30 U.S.C. § 1202(f); AS 27.21.010(b)(7).

205. Consideration of these issues are subject to my discretionary review.[417] I do not find that petitioners' arguments justify a lands unsuitable designation. Methane and CO_2 that might be released during mining and the burning of coal (wherever that might occur) are just a few of many contributors to greenhouse gasses generated by human activity. Naturally occurring conditions also contribute to greenhouse gases. The contribution to greenhouse gases of coal extracted from the petition area would be minimal -- even when aggregated with greenhouse gases on a global basis -- and do not lead me to the conclusion that these would result in significant harm to natural systems.

206. For example, compared to the total production of coal in the United States, the one currently proposed project in the watershed (PacRim's proposed Chuitna Coal project) would, at maximum production, produce roughly one percent of the U.S. coal supply per year, and less than 0.2 percent of the world's annual production.[418] A rough calculation shows that this would correspond to approximately 0.04 percent of the world's greenhouse gas emissions. Moreover, the coal found in the Chuitna watershed is low sulfur, one of the cleaner burning fuels that could be burned to support basic power needs, in particular electricity.

207. While greenhouse gasses and their link to climate change is an important issue to both the State and the nation, addressing broad policy concerns regarding coal as a fuel source and global warming are outside the scope of the lands unsuitable petition process, and are handled at the national government level and through international agreements.[419]

---

[417] AS 27.21.260(c)(2)(B).

[418] Coal Statistics – World Coal Association website, http://www.worldcoal.org/resources/coal-statistics .

[419] The impact of climate change to arctic and subarctic regions is an important issue to the State of Alaska. Former Governor Sarah Palin, by Administrative order number 238, established the Alaska Climate Change Sub-Cabinet to advise the Office of the Governor on the implementation of Alaska's climate change strategy. Members of the sub-cabinet include the commissioners of the Departments of Environmental Conservation, Natural Resources, Fish and Game, Transportation, and Community and Economic Development, as well as the Vice Chancellor of Research for the University of Alaska Fairbanks. The purpose of this group is to develop strategies to mitigate the impacts of climate change while protecting Alaska's economic growth. This Sub-cabinet is developing recommendations for Alaska communities that will be impacted as a result of climate change.

208. Based on the above and the administrative record, I decline to use my discretionary authority under AS 27.21.260(c)(2)(B) to designate any of the petition area as unsuitable for surface coal mining operations.

Petitioners' Allegation III: Surface coal mining operations will affect renewable resource lands in which the operations could result in a substantial loss or reduction of long-range productivity of water supply or food or fiber products

209. Petitioners further assert that, under AS 27.21.260(c)(2)(C), the petition area should be deemed unsuitable for mining because surface coal mining operations "will affect renewable resource lands in which the operations could result in a substantial loss or reduction of long-range productivity of water supply or food or fiber products."[420] Petitioners allege that mining could impact productivity in the Chuitna watershed. Petitioners cite the potential for impacts to aquifer recharge and for increased sedimentation, which they say would harm salmon productivity, which they say in turn will harm subsistence, commercial, and sports fishing. They also claim that activities in the petition area will result in a substantial loss or reduction to moose populations in the area.[421] Finally, while citing no information to support the allegation, petitioners refer back to information they discuss in Allegations I and II of the petition.

210. Under AS 27.21.260(c)(2)(D), the Commissioner "may designate an area as unsuitable for all or certain" coal mining activities "if the commissioner determines that operations in the area will . . . affect aquifer recharge areas or other renewable resource land in which the operations could result in a substantial loss or reduction of long-range productivity of water supply or food or fiber products."[422] This provision is considered discretionary, that is, the Commissioner may designate lands unsuitable in his or her discretion, but is not required to do so.

211. The petitioners' Allegation III is verbatim to the Allegation III that they raised in the 2007 Petition.[423] As with the 2007 Petition, the current petition contains only general assertions, and petitioners fail to provide evidence to support this

---

[420] Petition at 45-46.

[422] Emphasis added.

[423] *See* Allegation III of 2007 Petition, at 36-37.

allegation. Nor do petitioners submit any new evidence to support this allegation since the 2007 Petition.

212. Former Commissioner Irwin rejected this same allegation in the 2007 petition, stating the following:

> Petitioners fail to allege how lands throughout the petitioned area, in connection with any type of surface coal mining activity would suffer substantial loss or reduction of long-range productivity of aquifers and their recharge areas, or for food or timber products, including salmon and moose that petitioners specifically name. While they mention pumping operations and potential deposition of sedimentation relating to coal operations, these statements, of themselves, do not constitute significant facts to frame the allegation. Nor do the petitioners present any evidence to suggest that current surface coal mining practices, properly regulated, will not guard against the alleged harms.[424]

213. As with the first two allegations in the petition, petitioners fail with respect to Allegation III to assume that contemporary coal mining practices will be followed, including performance standards. While it would be reasonable to expect that surface coal mining operations would have some adverse impact on the aquifer within the actual mining area, there is insufficient evidence to demonstrate a substantial loss or reduction of productivity to the water supply, or food or fiber products. To the extent there might be an effect, there are performance standards created to minimize any effect. Under 11 AAC 90.329, an operator must (among other things) use the best technology currently available to minimize and avoid, for example, additional contributions of sediment to stream flow or to runoff outside the permit area. Likewise, under 11 AAC 90.423, an operator must (among other things) use best technology currently available to minimize disturbances and adverse impacts to, for example, fish and moose. Estimation of more specific impacts to aquatic productivity would also be addressed on a project-specific basis. Within a project area, impacts would also be addressed through a Title 16 habitat permit issued by ADF&G, which likewise would contain requirements to mitigate impacts to fish productivity due to mining in streams and riparian areas.[425]

---

[424] July 16, 2007 Decision on 2007 Petition, at 10-11. Because this issue has been adjudicated and the matter was dismissed with prejudice by the Superior Court, this claim is likely barred by res judicata and collateral estoppel.

[425] ADF&G May 26, 2011 letter at 2.

214. Based on the above and the administrative record, I decline to use my discretionary authority under AS 27.21.260(c)(2)(C) to designate any of the petition area as lands unsuitable for surface coal mining operations.

Petitioners' Allegation IV: Surface coal mining operations will affect areas of unstable geology and other natural hazards in which the operations could substantially endanger life and property

215. Petitioners allege that, pursuant to AS 27.21.260(c)(2)(D), the petition area should be deemed unsuitable for surface coal mining operations on the basis that those operations will affect areas of unstable geology and other natural hazards which could substantially endanger life and property.[426]

216. Under AS 27.21.260(c)(2)(D), the Commissioner "may designate an area as unsuitable for all or certain" coal mining activities "if the commissioner determines that operations in the area will...affect areas subject to frequent flooding and areas of unstable geology, or other natural hazard land in which the operations could substantially endanger life and property." This provision is considered discretionary, that is, the Commissioner may designate lands unsuitable in his or her discretion, but is not required to do so.

217. Petitioners' Allegation IV is verbatim to the Allegation IV that they raised in the 2007 Petition.[427] As with the 2007 Petition, the current petition contains only general assertions, and petitioners fail to provide evidence to support this allegation. Nor do petitioners submit any new evidence to support this allegation since the 2007 Petition.

A. Earthquakes

218. Like Commissioner Irwin, I find that many of the conditions petitioners describe, *e.g.*, earthquakes, high winds, landslides, and severe winter ice conditions[428] occur in areas where surface coal mining activities have long been carried out under regulation without substantially endangering life and property. For example, the Usibelli Coal Mine near Healy, Alaska is located within the area impacted by the magnitude 7.9 earthquake on the Denali Fault in November 2002. Little or no damage

---

[426] 2010 Petition at 46-48.

[427] *See* Allegation IV of 2007 Petition, at 37-39.

[428] 2010 Petition at 46-48.

was sustained within active or reclaimed surface coal mining areas. Only minor slump features, occurring within both disturbed and undisturbed areas, were noted. Petitioners fail to provide supporting evidence that the situation would be any different for any of the streambeds or riparian areas they delineate in the current petition.

219. The petitioners maintain that seismic hazards in the Chuitna watershed are extreme and would cause an increased ground failure hazard if the ground were disturbed by mining activities.[429] There are two strike slip faults that occur in the petition area -- the Bruin Bay Fault and the Castle Mountain Fault. According to the Division of Geological and Geophysical Surveys, these two faults have not shown signs of movement within the Holocene period (approximately the last 11,000 years) and therefore would not be characterized as "active."[430] In addition to their lack of recent movement, and due to the geology and character of the faults, they would be unlikely to generate a seismic event on the scale of the 9.2 magnitude Good Friday earthquake in 1964. Seismic Risk Zone 4 includes virtually all of the Southcentral Alaska region, including the Chuitna watershed. The region contains roads, pipelines, railroads, oil and gas platforms, power plants, oil and gas refineries, and buildings up to 20 stories in height, all designed to withstand seismic events in this risk zone.

220. There is no evidence in the administrative record to support the allegation that surface coal mining operations, if properly regulated, would nonetheless adversely affect renewable resource lands in an earthquake event.

B. Volcanic Hazards

221. With respect to any volcanic hazards, the petitioners claim there are four volcanoes on the west side of Cook Inlet that create a volcanic risk.[431] These volcanoes include: Augustine, Iliamna, Redoubt, and Mount Spurr. Direct impacts from volcanic hazards with the Chuitna watershed would most likely be associated with Mount Spurr, the closest volcano.

---

[429] Petition at 47.

[430] DGGS, DNR Large Mine Coordinator Tom Crafford and DGGS Deputy Director Rob Cornbellick, July 12, 2007.

[431] Petition at 47.

222. A Preliminary Volcano-Hazard Assessment for Mount Spurr Volcano[432] indicates that within the Chuitna watershed there exist minimal volcanic hazards associated with an eruption. Only a small area of the southwestern edge of the watershed is within the zone of debris avalanche hazards. Volcanic ash hazards depend on the prevailing wind at the time of an eruption. They are predominantly a threat to aircraft operations and only apply to a much lesser extent to ground-based operations. Within the Chuitna watershed, a volcanic ash fall from Mount Spurr might necessitate a suspension of ground-based mining operations, but would be unlikely to constitute a significant danger to health or property, at least no more so than falling ash in the nearby communities of Tyonek or Beluga. Assuming that contemporary coal mining practices will be adhered to, the presence of mining activities in the petition area would not exacerbate an air quality situation that might result in combination with a volcanic eruption and there is no evidence in the record to support such a conclusion.

C. Winter Ice & High Wind Conditions

223. The petitioners raise concerns that winter ice conditions along with strong currents in Cook Inlet could substantially endanger life or property, either directly, or as a result of spills of fuel or coal, connected with a coal shore-side marine freight facility that may be permitted and built for transferring coal to transport ships.[433] This allegation describes potential circumstances that would occur outside the petition area.

224. This allegation does not address why surface coal mining operations within the petition area itself is a hazard. The currently proposed Chuitna Coal Project proposes a freight transport facility located outside the delineated petition area.[434] Thus, the allegation contains matters outside the scope of this decision.

225. Even if the petitioners had delineated a coal-bearing area that would encompass shore facilities, I would not find support for the allegation. Marine

[432] Preliminary Volcano-Hazard Assessment for Mount Spurr Volcano, Alaska, Open –File report 01-482, 2002.

[433] Petition at 47.

[434] Applicant's Proposed Project; April 2011, http://www.chuitnaseis.com/documents/Current-Project-Description.pdf , at 8.

shipping activities in Cook Inlet occur year-round for several ports in the Inlet, involving the transport of a variety of products (both raw resources and finished consumer products). Ice conditions/floes are issues that are commonly encountered and are successfully addressed by marine traffic in Cook Inlet during winter months. To assist with navigation and docking during ice conditions, the U.S. Coast Guard has developed operating procedures for different portions of Cook Inlet.[435] These operating procedures are designed to set minimum transit and docking requirements to lessen the chance of shipping accidents. In addition, a port operator and the U.S. Coast Guard have the option of shutting down operations if they feel conditions warrant, as noted in the February 1999 closure of the Port of Nikiski due to heavy ice conditions.[436] I find that reasonable and appropriate conditions could be imposed on any coal mining operations to minimize and avoid this particular concern, and that the allegation does not warrant designating an area that is, in the first instance, outside the petitioners' delineated petition area.

226. In the effort to support their allegation regarding high wind conditions, petitioners state that "[r]ecent events in Seward, Alaska" that involved high wind conditions, dry weather and fugitive coal dust emissions from coal stockpiled and handled at a vessel transport facility resulted in issuance of a citation by the Alaska Department of Environmental Conservation against the Alaska Railroad "for failing to control the fugitive emissions and for allowing pollution that is harmful to health and property."[437] This allegation is verbatim to that raised in the 2007 Petition. I concur with former Commissioner Irwin's 2007 finding and conclusion[438] that the referenced event simply does not support petitioners' allegation, inasmuch as the violation occurred as a consequence of the Alaska Railroad's failure to follow/comply with existing air quality standards and requirements.

---

[435] 2008 Operating Procedures for Ice Conditions in Cook Inlet, U.S. Coast Guard (December 2008).

[436] *Heavy ice in Cook Inlet halts marine traffic*, posted by the Associated Press, Tuesday, February 09, 1999.

[437] Petition at 48.

[438] July 16, 2007 Decision on 2007 Petition, at 12.

227. Based on the above and the administrative record, I decline to use my discretionary authority under AS 27.21.260(c)(2)(D) to designate any of the petition area as lands unsuitable for surface coal mining operations.

Petitioners' Allegation V: Lands Exempt from Designation under AS 27.21.260; Streambeds and Associated Riparian Areas Within Logical Mining Unit 1

228. Petitioners requested that streambeds and associated riparian areas that exist in the Chuitna watershed, including those that may traverse LMU-1, be included in my deliberations on the January 21, 2010, petition. PacRim asserts that lands delineated by the petition that may lie with LMU-1 are exempt from petition review.

229. As part of the settlement relating to a judicial proceeding involving an Alaska Civil Rule 601 administrative appeal of former Commissioner Irwin's decision on the 2007 petition, DNR agreed that lands within LMU-1 would not be held exempt -- based on the 1980s Diamond Shamrock coal permitting process -- from a future petition proceeding.[439] Thus, the petition lands contained within LMU-1, along with the greater petition area that meanders throughout the Chuitna watershed, have been considered in rendering this decision.

Statutory and Constitutional Obligations to Facilitate Responsible Development of Coal Resources

230. Other statutory and constitutional factors play a part in my determinations on this petition. As previously explained with the 2010 Petition, the petitioners have refined the area for which they seek an unsuitability designation, compared to what they sought under the 2007 Petition. Given the meandering nature and length of the petition area throughout the larger Chuitna watershed designation of the petition area, or any portion thereof, would have a significant fragmenting impact on the coal resources throughout the watershed and would affect a potential operator's ability to economically and efficiently access and extract the coal resource. In short, a designation would affect the feasibility of project-specific coal mining and deter coal resource development. Because of this, granting the requested designation would likely result in a de facto designation of the entire watershed as unsuitable for

---

[439] No other aspect of Commissioner Irwin's decision on the 2007 petition was changed or withdrawn, and the associated Rule 601 administrative appeal was dismissed with prejudice.

coal mining. Such a result would undercut my ability to carry out other important ASCMCRA objectives, including:

- assuring "that the coal supply essential to the nation's energy requirements and to its economic and social well-being is provided and to strike a balance between protection of the environment and other uses of the land and the need for coal as an essential source of energy;"[440] and
- assuring "that reclamation of land on which surface coal mining takes place is accomplished as contemporaneously as practicable with the surface coal mining, recognizing that the responsible extraction of coal by responsible mining operators is an essential and beneficial economic activity."[441]

231. As DNR Commissioner, I also have responsibilities under the Alaska Constitution and AS 44.37.025(a) to encourage and allow responsible resource development.

232. While these obligations and the manner in which they are carried out greatly depend on the context and facts in which resource development questions -- such as this petition -- are raised, these obligations are nonetheless important factors in my decision. Notably, as set out in detail at the outset of this document, I recognize that the majority of landowners in the Chuitna watershed were motivated in great part to select their lands because of the presence of significant coal resources and the financial prosperity, employment opportunities, and enhanced social well-being that development of those lands would bring, not just to private industry, but to Native corporation shareholders and Mental Health Trust beneficiaries, as well as local residents and the public at large. Thus, to the extent that any landowner or lessee in the area may propose a surface coal mining project capable of demonstrating compliance with applicable state, federal, and local requirements, and that such operations therefore can be responsibly conducted, then such operations would further these important statutory and constitutional directives.

---

[440] AS 27.21.010(b)(7).

[441] AS 27.21.010(b)(5).

DECISION

233. The information contained in the administrative record, including that provided with the petition, is insufficient to support Allegation I.

234. Regarding Allegation II there is insufficient evidence to support this allegation or that the petition area constitutes "fragile lands." I therefore decline to use my discretionary authority under AS 27.21.260(c)(2)(B) to designate any of the petition area as fragile lands or as lands unsuitable for surface coal mining operations.

235. Regarding Allegation III there is insufficient evidence to support this allegation. I therefore decline to use my discretionary authority under AS 27.21.260(c)(2)(C) to designate any of the petition area as lands unsuitable for surface coal mining operations.

236. Regarding Allegation IV, there is insufficient evidence to support this allegations. I therefore decline to use my discretionary authority under AS 27.21.260(c)(2)(D) to designate any of the petition area as lands unsuitable for surface coal mining operations.

237. Regarding Allegation V, all of the streambeds and riparian areas delineated by the petition were included in my review of the petition, including those which meander through the Chuitna Coal Project LMU-1 area.

238. Commissioner Irwin agreed that lands within LMU-1 would not be held exempt under AS 27.21.260(g) from petition review based on the Diamond Shamrock coal permitting process. Commissioner Irwin did not, however, otherwise withdraw or change any aspect of his decision on the 2007 Petition, and the petitioners' associated Rule 601 administrative appeal on the 2007 Petition decision was dismissed with prejudice by the Superior Court. A dismissal with prejudice, including a stipulation to dismiss with prejudice, "is treated as a dismissal on the merits and is, therefore, a final judgment on the merits ... operating as res judicata." *Smith v. CSK Auto, Inc.*, 132 P.3d 818, 820 (Alaska 2006). Res judicata (claim preclusion) and collateral estoppel (issue preclusion) "bind the parties and their privies to factual findings, as well as legal conclusions, that have been the subject of prior litigation," and "administrative agency decisions can have preclusive effect on later court proceedings, so that if a party participates in an administrative adjudication, ... the adjudication

may foreclose the possibility of a later lawsuit on the same factual issues." *Alaska Public Interest Group v. State*, 167 P.3d 27, 44 (Alaska 2007). The Alaska Supreme Court has also stated that (1) "'principles of finality may be applied to the decisions of administrative agencies if, after case-specific review, a court finds that the administrative decision resulted from a procedure that seems an adequate substitute for judicial procedure and that it would be fair to accord preclusive effect to the administrative decision'" and that (2) the collateral estoppel doctrine "may be applied to an administrative decision if the decision is one 'rendered pursuant to an exercise of primary jurisdiction.'" *Harrod v. State, Dep't of Revenue*, 255 P.3d 991, 1000 (Alaska 2011) (citations omitted). In rendering my decision on the 2010 petition, I expressly preserve, and in no way hold contrary to, the final findings of Commissioner Irwin on the evidence and allegations that petitioners asserted in the 2007 petition and which petitioners now reassert nearly verbatim in the 2010 Petition. I also expressly preserve the defenses of res judicata and collateral estoppel for Commissioner's Irwin's final findings for purposes of any future litigation that may be brought on the 2010 Petition.

239. Any remaining allegations raised by petitioners that have not been specifically addressed by this decision are rejected.

240. While there is insufficient evidence to support any of the allegations, some of the petitioners' allegations raise reasonable concerns regarding whether water quality, wetlands, the hydrologic balance of the larger Chuitna watershed, fish and wildlife habitat, and other resources can be adequately protected if surface coal mining occurs within the petition area. These concerns are, however, more effectively and appropriately addressed in the application of regulatory requirements, including the performance standards that are incorporated in ASCMCRA mine permits, if a proposed mine is ultimately approved anywhere within the Chuitna watershed. Moreover, the potential impacts from any proposed coal mining project will be addressed through multi-agency State and federal review, including under NEPA.

241. It is important to note that this decision to not designate the petition area as unsuitable for all or certain types of coal mining activities does not mean that surface coal mining will automatically be approved in this area. This decision simply denies petitioners' request to preemptively shutdown the Chuitna watershed from the

possibility of surface coal mining operations. The designation process is independent of the permitting and mine planning processes that are subject to multi-agency regulatory reviews by several state, federal and local agencies, and these processes may prohibit or otherwise curtail coal mining activities on a project specific basis. A permit by DNR will not, however, be issued unless a coal mining proposal demonstrated the capacity to comply with all applicable requirements, including ASCMCRA performance standards.

242. A person affected by this decision may request reconsideration, in accordance with AS 44.37.011 and 11 AAC 02. Any reconsideration request must be received in writing within 20 calendar days after the "date of issuance" of this decision as defined by 11 AAC 02.040(c) and (d) and may be mailed or delivered to Daniel S. Sullivan, Commissioner, Department of Natural Resources, 550 W. 7th Avenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-269-8918, or sent by electronic mail to dnr.appeals@alaska.gov.

243. If reconsideration is not requested within the time allowed, this decision goes into effect as a final order and decision on the 31st day after issuance. Failure of the Commissioner to act on the request for reconsideration within 30 days after issuance of this decision is an automatic denial of reconsideration (AS 44.62.540(a)) and is a final administrative order and decision for purposes of an appeal to Superior Court (AS 44.37.011; 11 AAC 02.020(c)). The decision may then be appealed to Superior Court within a further 30 days in accordance with the rules of the court, and to the extent permitted by applicable law. An eligible person must first request reconsideration of this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court (11 AAC 02.020). A copy of AS 44.37.011 and 11 AAC 02 may be obtained from any regional DNR information office.

3/14/12 CONFIRMATION HEARING: ATTORNEY GENERAL MICHAEL GERAGHTY

<TARGET><BILL></BILL><SUBJECT>3-14-12 CONFIRMATION HEARING ATTORNEY GENERAL MICHAEL GERAGHTY</SUBJECT><COMM>SJUD27</COMM></TARGET>

SENATE
CONFIRMATION COMMITTEE REPORT

Date: 3·14·12

In accordance with AS 39.05.080, the Judiciary Committee reviewed the following and recommends the appointment be forwarded to a joint session for consideration:

Attorney General – Department of Law
Michael C. Geraghty

This does not reflect an intent by any of the members to vote for or against the confirmation of the individual during any further sessions.

Signature:	**Printed Last Name**
	Wielechowski
	Coghill
	Paskvan
	McGuire
Chair:	French

Please return to the Senate Secretary's Office (Room 213).

Alaska State Legislature

Senator Hollis French, Chair
State Capitol, Room 417
Juneau, Alaska 99801
Phone: (907) 465-3892
Fax: (907) 465-6595

Committee Members:
Senator Bill Wielechowski
Senator Lesil McGuire
Senator Joe Paskvan
Senator John Coghill

Senate Judiciary Committee

1. Describe your law school experience. Where and when did you attend law school? Did you receive any honors? Did you participate in your school's law review? Moot court? Legal aid clinic? Any other details about that time in your life?

2. Describe your legal employment after law school. What subject areas have you practiced in? How many other lawyers did you practice with? How many jury trials have you completed? How many appearances have you made before the Alaska Supreme Court? Before the Ninth Circuit Court of Appeals? Have you published in any legal journals?

3. What do you see as the primary mission of the Attorney General?

4. What is the biggest challenge facing the civil division? What actions do you plan to take in reaction to that challenge?

5. What is the biggest challenge facing the criminal division? What actions do you plan to take in reaction to that challenge?

6. Are you satisfied with the turnover rates in the criminal division? If not, what actions do you plan to take to lower the turnover rates?

7. Alaska suffers from some of the highest sex assault and sex abuse rates in the nation. Are prosecutions of this crime increasing? Are trials on these charges increasing? Please provide some statistics on this subject. What actions do you plan to take in this area?

8. What will be your Department's approach to the issues of tribes and tribal sovereignty in Alaska? For instance, at the 2012 Crime Summit, Walt Monegan, CEO of the Alaska Native Justice Center suggested the creation of a pilot project creating tribal or community courts in villages that are currently not served by the state court systems. What is your view on cooperative ventures such as this?

9. The State challenged the listing of polar bears and beluga whales, as well as recent protections for stellar sea lions as threatened species under the Endangered Species Act. These challenges have failed. Do you foresee continued challenges of this sort, given the state's record?

10. Recent news articles discussed a Department of Fish and Game initiative that would give special hunting privileges to some private landowners. The story noted the involvement of an assistant Attorney General in developing this proposal. The Alaska constitution provides that all state resources, including wildlife, are "reserved to the people for common use". Tell us your thoughts regarding the constitution's provision of common use versus the provision of special hunting permits for landowners.

11. State leases for oil and gas development require the operator of the lease to drill wells when "a reasonable profit" can be made. How does law and case law define "a reasonable profit" under these leases?

Geraghty, Michael
State of Alaska Attorney General

MICHAEL C. GERAGHTY

mgeraghty@dmgz.com

PROFILE

Since he joined the firm in 1979, Mr. Geraghty's work has been devoted exclusively to litigation and trial practice before state and federal courts. He has assumed lead counsel responsibilities in all of his trials, which have included both civil and criminal law, as well as proceedings before the OSHA Review Board, the Alaska State Commission on Human Rights and the U.S. Land Commission. He has tried cases before juries in Fairbanks, Anchorage, Barrow, Kenai and Dillingham. Mr. Geraghty has been selected in The Best Lawyers in America in the specialties of Construction Law and Personal Injury Litigation since 2007 and he has also been recognized as a "Superlawyer" by Washington Law & Politics magazine since 2008. In 2005 he was appointed by the Governor to serve Alaska as a Uniform Law Commissioner to the National Conference of Commissioners on Uniform State Laws. In 2007 he was honored by his peers when he received the Board of Governors Professionalism Award "in recognition of exemplary conduct in his association with the public, his colleagues and the legal community." In 2011, he was elected to the Fellows of the American Bar Foundation "in recognition of outstanding dedication to the welfare of the community, the traditions of the profession and the advancement of the objectives of the American Bar Association."

PRACTICE DESCRIPTION

Born and raised in Alaska, Mr. Geraghty's practice has focused on industries and areas that reflect this state's growth and history, including natural resources, oil and gas and construction. He has been involved in numerous complex litigations, including class actions and anti-trust. Many, if not most, of these cases pose

unique challenges in terms of developing orderly plans for discovery, document production, depositions of witnesses and experts, and other related matters.

He has handled approximately 20 appeals to the Alaska Supreme Court in the areas of sovereign immunity, administrative law, insurance and bad faith, attorney-client privilege, OSHA regulations, personal injury, products liability and premises-landowner liability. His reported cases include:

- Harris v. Ahtna Government Services Corp., 193 P.3d 300 (Alaska 2008)
- Kirk v. Demientieff, 145 P.3d 512 (Alaska 2006)
- Halliburton Energy Services v. State of Alaska, Department of Labor Division of Labor Standards and Safety, Occupational Safety and Health Section, 2 P.3d 41 (Alaska 2000)
- McCubbins v. State of Alaska, Department of Natural Resources, Division of Parks and Recreation, 973 P.2d 588 (Alaska 1999)
- State of Alaska v. State Farm, 939 P.2d 788 (Alaska 1997)
- State of Alaska v. Sanders, 944 P.2d 453 (Alaska 1997)
- City of Dillingham v. CH2M Hill Northwest, Inc., 873 P.2d 1271 (Alaska 1994)
- Central Constr. Co. v. The Home Indem. Co., 794 P.2d 595 (Alaska 1990)
- Lake v. Constr. Mach., Inc., 787 P.2d 1027 (Alaska 1990)
- Myers v. Snow White Cleaners, 770 P.2d 750 (Alaska 1989)
- Ogle v. Craig Taylor Equip. Co., 761 P.2d 722 (Alaska 1988)
- Wade Oilfield Serv. Co. v. Providence Washington Ins. Co., 759 P.2d 1302 (Alaska 1988)
- Cheeks v. Wismer & Becker, 742 P.2d 239 (Alaska 1987)
- Exxon Corp. v. Alvey, 690 P.2d 733 (Alaska 1984)
- Miller v. Northside Danzi Constr. Co., 629 P.2d 1389 (Alaska 1981)
- Black v. Universal Services, Inc., 627 P.2d 1073 (Alaska 1981)
- Ribar v. H & S Earthmovers, 618 P.2d 582 (Alaska 1980)
- Board of Educ. v. Ewig, 609 P.2d 10 (Alaska 1980)

Michael's approach is client-focused, solution-driven and premised on providing timely and superior service.

Dubious relocation of Anchorage, Mat-Su moose makes no sense

Begich: Exempt Native hunters from duck-stamp fee, charge others more

Brace for impact: Solar flare could mean brilliant northern lights, electrical disruption

Arctic

Judge delivers 'bittersweet' polar bear ruling

Amanda Coyne | Oct 17, 2011

In a ruling that both environmentalists and Alaska Rep. Don Young can applaud, U.S. District Judge Emmet Sullivan threw out a key section of an Interior Department rule that declared global warming is threatening the survival of the polar bear, making regulations of greenhouse gases mandatory.

Sullivan said that Fish and Wildlife Service failed to conduct a proper environmental review when creating the protections for the polar bear. The agency must now go back and conduct an environmental assessment of the outcome of the rule, and consider other options.

In other words, according to **Politico,** "the Obama administration can't be forced to use endangered species law to regulate greenhouse gases . . . but it can't ignore the idea either."

Politico quotes the judge as writing the following:

> The question at the heart of this litigation — whether the ESA is an effective or appropriate tool to address the threat of climate change — is not a question that this court can decide based upon its own independent assessment, particularly in the abstract. The answer to that question will ultimately be grounded in science and policy determinations that are beyond the purview of this court.

In keeping with his optimistic disposition, Young all but declared victory:

> Today's decision by a federal judge that the Fish and Wildlife Service cannot use the Endangered Species Act to regulate greenhouse gas emissions is the right one. The lawsuits to list the polar bear as endangered were never about protecting polar bears. Instead they were nothing more than a back door approach to regulate CO2 and stop responsible development from moving forward. This is a good decision, not only for Alaska but for this nation as we look to become more energy independent.

A press release sent by the groups who brought the case to court -- Center for Biological Diversity, Natural Resources Defense Council, Greenpeace and Defenders of Wildlife -- said that today's ruling "does not limit the applicability of the ESA to greenhouse gas emissions affecting species listed as endangered under the Act or to other threatened species for which Interior has not issued a specific exemption."

It called the ruling, "bittersweet."

Sullivan is the same judge who presided over the corruption trail of the late **Sen. Ted Stevens**, and who subsequently threw out his conviction.

Steller Sea Lion Protections in Aleutian Islands Upheld

Alaska, industry groups' challenge to fishery restrictions rebuffed
January 20, 2012

January 20, 2012

Today, the United States District Court for the District of Alaska upheld protections for the Western Population of Steller sea lions. The new measures were put in place by the National Marine Fisheries Service (NMFS) to reduce competition between large-scale commercial fisheries and endangered Steller sea lions in the Aleutian Islands.

The ruling came after the State of Alaska and industry groups sued to have the sea lion protections thrown out.

Steller sea lions are powerful, playful creatures that are gracefully adept at moving through icy waters. (NOAA)

"It's a good day for our oceans," said Susan Murray, Oceana's Senior Director, Pacific. "This decision shows that responsible management requires steps to

protect healthy ocean ecosystems including sustainable fisheries and vibrant communities. We are moving away from managing single species money fish and toward ecosystem-based management that takes into account the needs of apex predators in our oceans."

The court found that the agency based its decision on good science and, with one exception, followed appropriate process. According to the court, the agency did not comply with the law in failing to prepare a full environmental impact statement.

"Today's decision validates the agency's use of the best science to protect our oceans," said Colin O'Brien, staff attorney at Earthjustice, "The next step is a full evaluation of the impacts of fisheries on ocean ecosystems, including Steller sea lions."

Oceana and Greenpeace, represented by Earthjustice, intervened in the lawsuit to defend the new measures.

The parties will submit briefing on the scope of the new environmental impact statement by February 8.

Federal judge backs listing of Inlet belugas as endangered

ENDANGERED: State failed on all points, federal judge rules.

By RICHARD MAUER

(11/22/11 16:54:57)

For the second time in less than six months, a federal judge on Monday threw out a lawsuit by the Parnell administration challenging an endangered species listing, this time involving Cook Inlet's beluga whales.

In the latest ruling, the chief judge of the Washington, D.C., District Court, Royce Lamberth, said the state failed on all its points to show that the National Marine Fisheries Service improperly designated belugas as endangered in the Cook Inlet region.

That follows a similar decision in June by another federal judge in Washington, Emmet Sullivan, who said the U.S. Fish and Wildlife Service properly designated polar bears as endangered. The state is appealing that decision.

Bob Shavelson of Cook Inletkeeper, one of the organizations that intervened in the beluga case in support of the federal fisheries service, said the ruling demonstrated that the state's lawsuit was "a waste of taxpayer money."

"The state would be better served paying scientists instead of lawyers and letting the scientists do science and not be handcuffed by politics," said Shavelson. He was referring in part to a Parnell administration order, issued in connection with beluga recovery efforts, that barred state scientists from publicly disagreeing with administration policy.

In a prepared statement, Alaska Attorney General John Burns expressed disappointment with the ruling.

State officials say they are concerned that recovery efforts for belugas,

if too strict, could threaten oil and gas development and shipping in the Inlet. Escopeta Oil Co., which recently announced a major gas discovery in Cook Inlet, had intervened in the lawsuit on the side of the state.

"We maintain that the listing process was defective because it did not sufficiently involve the state or consider the conservation measures already in place to protect Cook Inlet belugas," Burns said. "We are reviewing the decision and considering further options."

But in his ruling, Lamberth, a Reagan appointee, took note of the state's conservation measures and rejected them as inadequate.

"Ultimately, whatever conservation efforts were already being made by the state ... clearly had not demonstrated a degree of effectiveness sufficient to alleviate concern over the small population size in Cook Inlet, since the population had shown no signs of recovery and was indeed continuing to decline," Lamberth wrote in his decision.

The failure of the state to renew its coastal management program -- bills to do so died this year in the Alaska Legislature -- "certainly does not help (Alaska's) argument that the (National Marine Fisheries) Service somehow overlooked an important state-sponsored conservation effort," the judge wrote in his 25-page decision.

Lamberth also rejected the state's contention that its objections weren't adequately heard by the federal government.

"But the record reflects that the Service held four public hearings -- three in Alaska and one in Maryland -- and received approximately 180,000 public comments on the Proposed Rule," Lamberth wrote. "In any event, plaintiffs' argument that the opportunity for public comment was somehow not 'full' borders on the absurd."

Instead, he said, the National Marine Fisheries Service "considered -- and thoroughly responded to -- each of Alaska's objections to the Proposed Rule."

While beluga populations around the Northern Hemisphere are generally healthy, the subspecies in Cook Inlet begin sliding in the 1980s, then declined dramatically from 1994 to 1998 in a

"catastrophic spree of subsistence whaling," Lamberth wrote.

"Aided by modern technology, Alaska Natives decimated the beluga population in Cook Inlet, harvesting nearly half of the remaining 650 whales in only four years," Lamberth said.

New rules put a moratorium on the hunt. The federal government declined to list belugas as endangered in 2000, predicting the population would bounce back. Instead, Lamberth said, whale numbers continued to decline an average of more than 1 percent a year.

The 1973 Endangered Species Act has five criteria for determining whether a species should be listed. While any one would have been adequate, Lamberth said, Cook Inlet belugas met all five. On April 20, 2007, the fisheries service proposed listing belugas and scheduled a public comment period. It issued its final ruling Oct. 28, 2008, in the waning days of the Bush administration.

In February, the fisheries service designated more than 3,000 square miles of Cook Inlet shoreline and marine area as critical habitat for belugas, leading some state officials and development advocates to complain that the local economy could be stifled. Federal officials urged more cautious reactions, saying they had no plans to turn the Inlet into an exclusive zone for whales, which in any event had coexisted with offshore oil drilling and shipping for decades.

Among a dozen parties to the lawsuit, initially brought by Alaska on June 4, 2010, were the whales themselves, represented by four attorneys from environmental organizations. Lamberth took over the case after another judge allowed the famed white whales to join the lawsuit as an intervenor defendant. He described that status as a "noble gesture" with "no legal significance."

Alaska joins appeal of ruling on polar bear 'threatened' status

By RICHARD MAUER
rmauer@adn.com
(08/27/11 13:21:10)

The Parnell administration on Friday joined a parade of parties appealing the June decision by a federal judge in Washington, D.C., that the government correctly listed polar bears as a threatened species.

On Thursday, 35 plaintiffs and intervenors, some working together, filed three separate notices that they were appealing U.S. District Judge Emmet Sullivan's decision in favor of the U.S. Fish and Wildlife Service's listing of polar bears under the Endangered Species Act. Most of the parties support or engage in trophy hunting, though they also include an organization of California cattlemen.

The fourth notice of appeal, to the District of Columbia Circuit Court of Appeals, belongs to the State of Alaska. It was filed this morning by one of four non-state lawyers who have represented the state in the case -- Boise, Idaho-based Murray Feldman of the western states law firm Holland & Hart.

The state had been one of many plaintiffs to sue against the 2008 listing. The Parnell Administration said the listing was inappropriate because polar bear populations were healthy.

Environmental organizations also sued or intervened in District Court, saying the listing wasn't strong enough -- it should have been "endangered," they said, which would provide more protections than "threatened." None of the environmental groups have appealed yet.

The Fish and Wildlife Service agrees that the polar bear numbers are

strong today in most of their locations, but listed them because of threats to their habitat caused by global warming.

Polar bears spend much of their lives hunting seals from sea ice. Biologists say that as the sea ice melts away, bears will have to swim tremendous distances between rest stops. At the same time, their food supply will become harder to find. The stress is likely to cause deaths from drowning and reduce their ability to reproduce, the biologists say.

Over the last three decades, Arctic sea ice has melted at rates unprecedented in recorded history. A recent study by climate scientists with the National Center for Atmospheric Research concluded that half the melting was due to greenhouse gases produced by human activity, such as the burning of fossil fuel for energy production.

Parnell administration officials say that polar bears survived prehistoric periods of global warming and there's no reason to believe they wouldn't again. The state lawsuit doesn't deny the world is undergoing climate change, but it says the Endangered Species Act shouldn't be used in a "speculative" situation before an animal population actually shows signs of serious decline. State officials say they fear the listing could impede oil and gas development in the Arctic Ocean, though that is also speculative -- no development has been blocked yet by the listing.

The Fish and Wildlife Service argued successfully that the listing was well within the law, since it allows for special management of polar bears and their habitat to keep them from facing extinction.

When he ruled in June, Sullivan said the agency followed proper procedures and met the standards of "rationality" in making the listing.

Final Rule Listing the Polar Bear as a Threatened Species Under the Endangered Species Act (May 15, 2008)

On May 15, 2008, the Service published a *Final Rule* in the Federal Register listing the polar bear as a threatened species under the Endangered Species Act (ESA). This listing is based on the best available science, which shows that loss of sea ice threatens and will likely continue to threaten polar bear habitat. Any significant changes in the abundance, distribution, or existence of sea ice will have effects on the number and behavior of these animals and their prey. This loss of habitat puts polar bears at risk of becoming endangered in the foreseeable future, the standard established by the ESA for designating a threatened species. A species can be listed under the ESA under one of two categories, endangered or threatened. An endangered species is likely to go extinct within all or a significant portion of its range in the foreseeable future. The polar bear was petitioned to be listed as a threatened species, defined as a species likely to become endangered in the

foreseeable future. The Service also published on May 15, 2008, an *Interim Final Rule* for the polar bear under Section 4(d) of the ESA.

Reissuance of Interim Special Rule for the Polar Bear. 1/30/12

The U.S. Fish and Wildlife Service (Service) announces a notice that codifies the November 18, 2011, court-ordered reinstatement of an interim final special rule governing management of polar bears under the Endangered Species Act (ESA). In its ruling, the court stated that the Service was required to review potential environmental impacts of its December 16, 2008, final special rule for the polar bear under the National Environmental Policy Act (NEPA), and that the May 15, 2008 (73 FR 28306), interim final special rule will be in effect until this is done.

Hawker opposes giving special hunt rights to landowners

He calls giving rights to private landowners a terrible policy.

By LISA DEMER

(03/06/12 00:14:50)

JUNEAU -- State Rep. Mike Hawker said Monday that the idea of creating special hunting rights for private landowners is terrible policy, and he would oppose anything like that if it materialized in the Legislature.

Hawker, along with House Speaker Mike Chenault and Rules Chairman Craig Johnson, appeared before news reporters Monday morning for a weekly House Republican-led majority press conference.

They were asked about a proposal being circulated within the Parnell administration to give special hunting privileges to private landowners in exchange for improving habitat for species such as moose, killing predators, or allowing others to hunt on their land. A Sunday Daily News story detailed the project, which Wildlife Division Director Corey Rossi was quietly pursuing before he was charged with misdemeanor game violations and lost his job in January. Other picked up the project, though no legislation has been filed.

While Chenault said he wasn't familiar with the project, Hawker didn't mince words. Hawker, R-Anchorage, is an avid gun collector who enjoys target shooting but says he doesn't hunt much anymore.

"It just doesn't make any sense to be essentially exempting private landowners from any and all state fish and game regulation," Hawker said.

"I don't know where that idea came from but it's certainly not one I would have supported in the legislative process," Hawker said.

Told it came from Rossi, Hawker said he didn't know him and had

never talked to him. Had Rossi asked, "I would have told him it was pretty foolish," Hawker said.

"Alaska's wildlife ought to be managed as a public resource, not a private individual's chattel," Hawker said later.

Our View: Drop it with one shot

Kill notion to let landowners play by different hunting rules

(03/07/12 00:27:27)

Rep. Mike Hawker is right about this one.

The Anchorage Republican said this week he has no use for an idea in the works at the state Department of Fish and Game that would allow private landownwers special permits to take big game on their lands -- or sell those permits -- possibly outside the usual hunting seasons.

In return, landownwers would be expected to improve habitat for certain big game animals on their land, allow access to other hunters and/or kill predators like bears and wolves.

Hawker's response?

"Alaska's wildlife ought to be managed as a public resource, not a private individual's chattel."

The Alaska Constitution defines Alaska's resources as public, reserved for the common use of the people of Alaska. And while one senior assistant attorney general says such a program could be made constitutional, it's practical effect would be to privatize some game management in Alaska for the sake of the few. Hunting is already expensive. Given the likely cost of auctioned permits, any open-access argument would crumble in the face of the reality that state policy would be improving access only for the few who could afford such permits.

The idea also appears to be a way to incentivize private landowners to kill bears and wolves to increase populations of moose and caribou. Such a notion takes Alaska closer to the game farm ideal of some hunters. At its extreme, that ideal says ecosystems be damned -- we need to be sure there's a moose for everyone who wants to shoot one.

Not just needs, but wants.

This is wildlife management with all the knowledge, expertise and awareness of the 19th century.

The private hunting rights project was driven by Corey Rossi, the former Division of Wildlife Conservation director for the Parnell administration. Rossi has been described by dozens of Alaska professional fish and game biologists as highly unqualified. He resigned in January after being charged with a dozen misdemeanor offenses in the taking of black bears on a hunt he guided in 2008. He has pleaded not guilty. His case has not yet been tried.

Rossi's pet project should have gone out the door with him, but apparently it's still a work in progress at Fish and Game.

So it's time for a clean, one-shot kill from Gov. Sean Parnell. One phone call to the commissioner of Fish and Game and this un-Alaskan notion goes away.

What say you, governor?

BOTTOM LINE: Private hunting rights? Let them do it Outside if they like. Not in Alaska.

Hunting rights for landowners weighed
Large landowners would get special permits to big game.
By RICHARD MAUER
Anchorage Daily News
Published: March 3rd, 2012 10:50 PM
Last Modified: March 3rd, 2012 10:51 PM

Six weeks before he learned he was under criminal investigation for violating his department's hunting rules, state Wildlife Division Director Corey Rossi told his staff about a pet project -- **unprecedented in Alaska -- to give private landowners special rights to hunt big game, even out of season, and to be able to sell**

those rights to whomever they want.
Rossi lost his job in January with the filing of a criminal complaint that cited him for 12 misdemeanor violations during a 2008 bear hunt. He has pleaded not guilty and his case is moving through District Court in Anchorage.
But his project to privatize some of Alaska's game lives on in the Parnell administration. At least one deputy commissioner is still working on the landowner permit project. Rossi's replacement, Doug Vincent-Lang, says it remains under active consideration, though he needs time to review it.
"We don't waste time on ideas that have absolutely no merit," Vincent-Lang said.
The idea that wild game is a public resource and not the property of a landowner is a long-held doctrine in Alaska and most of North America. But that idea is being challenged, at least on a limited basis, by advocates of intensive game management, who argue that granting special game rights to property owners will encourage them to make life easier for big game on their land. One of the leading advocates of that position is the organization Sportsmen for Fish and Wildlife, in which Rossi was an active member before taking over the Wildlife Division.
According to Rossi's minutes of the Nov. 1-2 meeting of Wildlife Division leaders and others in Fish and Game, **the attorney general's office was already drafting a new law that would implement the project**.
A budget was under development to manage the project with new staff positions, Rossi wrote.
"There is initial draft language, and the governor's office has asked for a full legal review," Rossi wrote.
Rossi's minutes were distributed this month by Vincent-Lang. A copy was leaked to the Daily News.

Owning hunting rights
The proposal would encourage owners of large private tracts to increase "public-interest benefits" on their land. They could do that by allowing access to hunters, improving habitat for species such as moose, or killing predators, Rossi wrote.
In return, landowners would get special hunting permits "that the landowner would be allowed to use or sell, perhaps with special authorizations such as the ability to hunt outside normal hunting seasons on their lands."
The proposal is modeled on similar programs in western states like Utah and Colorado, where it has been promoted by chapters of the advocacy group Sportsmen for Fish and Wildlife and its sister organization Sportsmen for Habitat. The organization has a big expo in Salt Lake City every year where it auctions special permits.
In the West, large landowners are mainly ranchers. In Alaska, Rossi noted in his minutes, they are Alaska Native corporations.
Mark Richards, co-chairman of the grassroots organization Alaska Backcountry Hunters and Anglers, said Alaska hunters wouldn't be the beneficiaries of Rossi's proposal.
"It doesn't take a rocket scientist to figure out who would win by privatizing more hunts in Alaska," Richards said in an email from his remote Interior cabin some 60 miles north of Eagle. "It would be the orgs that get the permits to auction off, and the wealthy hunters who could afford to buy them."
Sportsmen for Fish and Wildlife and similar organizations would also get "more power and influence to further game the system," Richards asserted.
Rossi has a strong connection to Sportsmen for Fish and Wildlife. In 2007, he was one of three founders of its Alaska chapter.
He was also a big-game guide. He was working as a guide for three out-of-state bear hunters in 2008 when he lied on his post-hunt reports to the state and failed to properly seal bear hides, according to the charges.
The June bear hunt took place about six months before he was brought into the Fish and Game department by then-Gov. Sarah Palin. She created a new position for him, assistant commissioner for "abundance management" -- the idea of managing moose and caribou to provide the greatest possible number of animals for hunters.
In 2010, Gov. Sean Parnell elevated Rossi to wildlife director, the official in charge of managing hunting and big-game habitat in Alaska. It was a controversial appointment because Rossi lacked a college degree and scientific training. But he was an expert at killing predators and vermin and had the backing of hunters who wanted fewer bears and wolves and more moose.
"With Director Rossi at the wheel, we at SFW look forward to some real positive changes within the Department that are long overdue!" executive director Dane Crowley of Sportsmen for Fish and Wildlife Alaska wrote at the time.

Constitution an obstacle?
In the minutes from the meeting in November, Rossi said the private-hunting project **would require the Legislature to create a new kind of "landowner permit."** He wanted the authority to dole out such permits

at the department's discretion.
"Some discussions have occurred with various Native groups who have expressed strong interest in the concept, though at least one has firmly said it is not interested in providing hunter access," he wrote. "It is expected that **for the program to move forward, the legislature would need to provide specific funding for the program, and new staff positions would be needed. There are many details still to be worked out, but the idea is moving forward**."
One obstacle could be the Alaska Constitution. The Constitution provides that all resources, including wildlife, are "reserved to the people for common use." In the landmark 1989 McDowell decision, the Alaska Supreme Court threw out a law that violated the equal access provision by giving rural residents priority over urban dwellers to fish and game.
Given that history, would it be possible for landowners to get more rights to game than others?
"Could a constitutional law be written? Yeah, sure it could," said Kevin Saxby, a senior assistant attorney general who advises the department on hunting issues. "The goal of the law would be to open up more access for more Alaskans, I presume, so that would serve the common use and the equal access provisions in Article 8 of the Constitution."
Saxby said he has only done "a tiny bit of work" on the initiative and wouldn't say whether that included writing a draft version of a bill. "Anything more is confidential until the governor makes a decision" to take the issue to the Legislature, he said.
Byron Bateman, president of Sportsmen for Fish and Wildlife in South Weber, Utah, said in a telephone interview that landowner permits in his state have "increased the opportunity for the ordinary citizen to be able to hunt some of these private lands that they would not have been able to afford."
He described Utah's hunting and landowner programs as an example for other states to follow.
"Utah has been a model as to we how we manage all of our wildlife in the West. We've increased a lot of different populations," he said.
Sportsmen for Fish and Wildlife, along with the like-minded Mule Deer Foundation, hosts the Western Hunting and Conservation Expo in Salt Lake City, where special permits from around the West are auctioned. Among the hundreds auctioned over the weekend of Feb. 9-12 were about a dozen private landowner permits from Utah.
Bateman said those permits sold in the range of $9,000 to $18,500 each. Another indication of the value of permits appeared on Sportsmen for Fish and Wildlife's 2010 nonprofit tax returns, the most recent available. The returns show the organization raised $2.4 million from selling permits, though it didn't break down how much of those were landowner permits. It did report how much it spent buying landowner permits: $563,000. The returns show Sportsmen for Fish and Wildlife spent $1.1 million on conventions and conferences -- nearly as much as the $1.4 million it spent on big-game habitat improvements, conservation, moving wildlife and studies.

To end hunting 'socialism'
Rossi's move to give landowners special rights to the wildlife on their property coincides with the ideology of Don Peay, a Utah guide and founder of Sportsmen for Fish and Wildlife.
Peay, who stressed that the Utah chapter isn't trying to push its view in Alaska or even with the Alaska chapter, said it's time to revisit the widely accepted principle in the United States and Canada that game is a public resource. Peay described that egalitarian doctrine, found in Alaska's state constitution and laws throughout the West, as "socialism." It offers no economic incentive for landowners to kill predators, improve big game habitat and even provide food and water for target species.
"We understand the North American model where wildlife belongs to the people, but we're also seeing dramatic reductions in game populations in the western United States under that model," he said. Population pressure, habitat loss from development and the rise of environmental organizations opposed to predator control have put pressure on game herds that weren't envisioned when the laws were written a century or more ago, he said.
"When wildlife is a very highly valued asset, people want more of it and they'll invest additional funds to make sure it's abundant," Peay said.
The same is true of professional guides and outfitters, he added. "They tend to be more involved to make sure there's abundant game herds than a lot of guys who just buy their license the day before the hunt starts and then, when game disappears, the masses tend to complain -- but what did they do to allow that situation to happen and why weren't they more involved to fix it?"
Valerie Conner, conservation director for the Alaska Center for the Environment, said she doubted most Alaskans were ready to abandon or modify the concept of wildlife as a public resource. And managing wildlife to promote just moose and caribou for the benefit of guides and some sportsmen "is draconian," she said.
"It's an ecosystem out there, and the bears and wolves and other predators play a really vital role. They're just

leading us down this path to eliminate as many predators as they can and create a game farm," she said. "If you're really concerned about managing on an ecosystem-wide basis, you wouldn't be taking out all the bears and wolves and incentivizing landowners to kill all the predators on their land. It's insane."
With the Alaska Board of Game and, increasingly, the Department of Fish and Game, representing primarily trappers, guides and abundance hunters, Conner said, there's almost no one speaking out for tourism and wildlife viewing in an official capacity.
"Diversity is equally as important as abundance," she said. "There's nobody on that board who represents the thousands of Alaskans who simply appreciate wildlife for its intrinsic value or to go look at it."

Seine permit buyback meetings planned for Southeast
by **Joe Viechnicki**, KFSK
March 1, 2012 2:01 pm

The National Marine Fisheries Service will be holding informational meetings in three Southeast Alaska communities this month on a purse seine buyback program.
The agency is holding the meetings in preparation for a vote by permit holders on whether to go ahead with the fleet reduction. **Owners of the 379 Southeast seine permits will be deciding this spring on a loan to buy 64 of those permits and remove them from the fishery. The loan would be repaid by the remaining fleet members with a fee imposed on future landings**.
Supporters of the buyback say it will reduce the capacity of a fleet that's grown much more efficient at catching salmon since the limited-entry fishery started. Opponents don't see a point in reducing fleet numbers and say it will mean fewer deckhand jobs and a reduced political voice for the fleet.
NMFS has published a notice in the Federal Register with a list of all eligible permit holders and is taking public comment on that list until March 16th.
NFMS plans to hold four meetings March 5th-7th and will field comments and questions about the buyback program. The first will be at Fishermens Terminal in Seattle Monday March 5th.
A meeting is planned in Petersburg at the city council chambers Tuesday, March 6th from noon to 2 p.m. Another session will be Wednesday, March 7th from 10 to noon at the Ted Ferry Civic Center in Ketchikan and a meeting will be held later that day from 7-9 p.m. at the Northern Southeast Regional Aquaculture Association in Sitka.
Here's the notice from the Federal Register:
Eligible Voters and Meeting FR Notice 03 01 12 11

Meeting of the SE purse seiners
NMFS holds public meetings to discuss capacity reduction
Posted: March 4, 2012 - 12:07am
By By RUSSELL STIGALL
JUNEAU EMPIRE

The National Oceanographic and Atmospheric Association National Marine Fisheries Service has scheduled a series of public informational meetings in Seattle and southeast Alaska to discuss capacity reduction and other topics on the southeast Alaska purse seine salmon fishery.
The Southeast Revitalization Association submitted a capacity reduction plan to determine the industry's willingness to repay a fishing capacity reduction loan to purchase the permits identified in the reduction plan. Marine Fisheries approved that plan.
As of late Feb., 379 permits in the fishery designated as S01A. Marine Fisheries continues to update this number. These permanent permit holders are eligible to vote in the referendum, according to NMFS.

Meetings
• Seattle - Nordby Conference Center at Fishermen's Terminal, 3919 18th Avenue West on March 5, 10 am to noon.
• Petersburg - City Council Chambers, Municipal Building, No. 12 South Nordic Drive on March 6, noon to 2

Re: Arctic Marine Pilotage

Dear Mr. Sullivan:

As you know, there is tremendous national and international interest in the Arctic region. Continued reduction of the Arctic ice cover is expected to allow increased access to the region. The Arctic region is rich in natural resources, including fish, marine mammals, seabirds, oil, gas, and other minerals.

Over the last couple of years the Alaska Board of Marine Pilots (Board) has been discussing the extension of mandatory marine pilotage waters from those set out in 12 AAC 56.090 and 12 AAC 56.100 to encompass large areas of the Chukchi and Beaufort Seas. The boundaries of the proposed new mandatory marine pilotage waters include the outer continental shelf oil and gas lease areas where exploratory drilling is expected to occur this summer.

The Board is seeking advice from your office regarding the extent of the Board's authority under existing state and federal laws to adopt regulations that extend the state's mandatory marine pilotage waters to include large areas of the Chukchi and Beaufort Seas. Some background follows.

Like other U.S. maritime states,[1] Alaska requires foreign vessels and U.S. "registered vessels" heading for its ports, or transiting inland waters, to employ a state-

[1] *See generally*, A. Parks, The Law of Tug, Tow, and Pilotage 991-1003 (3rd ed. 1994).

P.O. Box 110800, Juneau, Alaska 99811-0800
Telephone: (907) 465-2500 Fax: (907) 465-5442 Text Telephone: (907) 465-5437
Email: questions@commerce.state.ak.us Website: http://www.commerce.state.ak.us/

licensed marine pilot.[2] The marine pilot boards the foreign vessel and guides it into and out of port, or through navigational hazards in inland waters.

The seven-person Board of Marine Pilots regulates marine pilotage in Alaska.[3] Under AS 08.62.040(a)(1) - (3), the Board must "provide for the maintenance of efficient and competent pilotage service", regulate the training, examination, and licensure of marine pilots, and "keep a register of licensed pilots, licensed deputy pilots, and agents". AS 08.62.040(a)(1) requires the Board to adopt regulations to "assure the protection of shipping, the safety of human life and property, and the protection of the marine environment" on the "inland and coastal water of and adjacent to the state".
AS 08.62.160 requires the Board to "define the mandatory pilotage water of the state", and requires a vessel subject to AS 08.62 to employ a state-licensed marine pilot while "navigating the inland or coastal water of or adjacent to the state".[4] Violation of this requirement is a misdemeanor crime.[5]

---

[2] AS 08.62.160. The federal government has authority over commerce and shipping, but federal statutes grant authority for marine pilotage laws to the states.
46 U.S.C.A. sec. 8501(a) states: "[e]xcept as otherwise provided in this subtitle, pilots in the bays, rivers, harbors, and ports of the United States shall be regulated only in conformity with the laws of the States." Under 46 U.S.C.A. sec. 8502(a) vessels licensed under U.S. laws engaged in domestic or coastwise trade fall under the jurisdiction of the U.S. Coast Guard, and are not subject to state pilotage laws. These are commonly referred to as "enrolled vessels". *Hochstetler v. Board of Pilot Commissioners*, 8 Cal. Rptr. 2d 403, 407 (Cal. App. 1 Dist. 1992). Foreign vessels and U.S. licensed vessels "sailing on registry" must comply with state pilotage laws. *Ray v. Atlantic Richfield Co.,* 435 U.S. 151, 159-160 (1978), T. Schoenbaum, 2 Admiralty and Maritime Law, sec. 13-1 (4th ed. 2004). These are commonly referred to as "registered vessels". *Hochstetler v. Board of Pilot Commissioners*, 8 Cal. Rptr. 2d 403, 407 (Cal. App. 1 Dist. 1992).

[3] AS 08.62.040. The Board consists of two licensed marine pilots, two registered vessel agents, two members of the public, and the commissioner of DCCED or the commissioner's designee; AS 08.62.010.

[4] State waters are not defined in AS 08.62, but under AS 44.03.010 the state asserts jurisdiction over "water offshore from the coast of the state", including (1) the "marginal sea", (2) the high seas claimed by the United States, and (3) the submerged lands under that water.

[5] AS 08.62.190.

The boundaries of those areas where use of a state-licensed marine pilot is mandatory are set out in 12 AAC 56.090 and 12 AAC 56.100. 12 AAC 56.090 is a general provision. In 2008[6] 12 AAC 56.090 provided, in part: "[p]ilotage is compulsory at all entrances from seaward to Alaska bays, sounds, rivers, straits where the passage is within three nautical miles of this state, or other estuaries for which specific boundaries are not otherwise described in this chapter."

The boundaries of mandatory pilotage waters in specific locations are set out in 12 AAC 56.100. 12 AAC 56.100(14) describes the mandatory pilotage waters along the coast of the Chukchi Sea and in Kotzebue Sound.

During a public comment period at a Board meeting held on January 22-23, 2008, a licensed marine pilot asked the Board to consider the adoption of a Board regulation to extend the compulsory (mandatory) pilotage waters from those set out in 12 AAC 56.090 and 12 AAC 56.100. The marine pilot suggested that the compulsory pilotage waters be extended out into the Chukchi and Beaufort Seas to an area roughly concurrent to outer continental shelf oil and gas lease areas.[7]

As originally proposed, pilotage would be compulsory for all vessels subject to AS 08.62 "engaged in commercial activities" within the designated waters of the Chukchi and Beaufort Seas. As proposed, the pilotage requirements would not have been restricted to vessels entering state ports, rivers, sounds, etc., but would have applied to all commercial vessels moving through the specified waters (including oil exploration and drilling vessels).

By a vote of four to three, the Board members voted to accept the marine pilot's suggestion for a proposed regulation to extend compulsory pilotage waters into the Chukchi and Beaufort Seas. A public notice of the proposed amendment to 12 AAC 56.100(14), requesting public comment on the proposed language, was issued on March 13, 2008.[8]

---

[6] As explained later in this memorandum, 12 AAC 56.090 has been amended slightly, effective November 4, 2009, Register 192.

[7] These leases are under the authority of the U.S. Department of the Interior, Minerals Management Service.

[8] This is a necessary first step in the adoption of an administrative regulation under AS 44.62.020--300 (Administrative Procedure Act); AS 44.62.190, 44.62.200.

Significant public comment on the proposed amendment was received, both in support of and in opposition to the proposal. The Board held a public hearing on the proposal at a meeting on April 18, 2008. Many of those who commented supported the proposed expansion of compulsory pilotage waters, citing the need to protect the fragile Arctic ecosystem, fish and wildlife, and indigenous peoples. Other commentators expressed concern that such a significant expansion of compulsory pilotage waters might be interpreted to apply to vessels not bound for Alaska ports, but merely passing through the lease areas, and would exceed the Board's authority. Oil companies interested in resource development in the Arctic, including ConocoPhilips, Shell Oil, and BP, were generally opposed to the proposed expansion of compulsory pilotage waters.

The Board voted to revise the proposed language in response to some of the comments received, including clarification of the right to "innocent passage".[9] The Board requested public comment on the revised version in a supplemental notice issued on June 23, 2008. The revised version also contained some technical clarifications to other existing regulations. The revised version included a new cross-reference in 12 AAC 56.090, the revised boundaries in 12 AAC 56.100(14), some technical amendments in 12 AAC 56.990(a)(5) and (8), and added a definition of the state's coastline in 12 AAC 56.990(a)(39).

A second public hearing was held at a Board meeting on October 1, 2008. The Board again considered testimony and several written comments received. The proposed amendments were further revised, and a second supplemental public notice requesting comments was issued on February 18, 2009.

A third public hearing was held at a Board meeting on April 15, 2009. At that hearing the Board decided to adopt the remaining proposed language changes dealing with the general boundaries of compulsory marine pilotage waters and definitions, but not to adopt the proposed new compulsory marine pilotage areas in the Chukchi and Beaufort Seas. These adopted regulations contain changes only to 12 AAC 56.090 and 12 AAC 56.990(a)(5) and (8), and the new definition in 12 AAC 56.990(a)(39). By the addition of the words "inlets, harbors, ports" and "adjacent to Alaska" the revised regulations are intended to make the scope of the regulations identical to the legislature's

[9] The right of innocent passage refers to the right to navigation through the territorial sea by ships of all nations, to traverse the area without entering internal waters or proceeding to or from internal waters or a port. *See* U.N. Convention on the Law of the Sea, Arts. 17 & 18 (1982).

grant of jurisdictional authority to the Board in AS 08.62.040(a)(1). These regulation changes took effect on November 4, 2009.

The Board concluded that further consideration was needed on some aspects of the Arctic pilotage proposal. A Board subcommittee was appointed to study the issue in more detail. At a Board meeting on January 28, 2010, the chair of the Board subcommittee reported his conclusion that the subcommittee likely would be unable to resolve the concerns expressed about the proposed expansion of compulsory marine pilotage into Arctic waters. Some subcommittee members questioned whether the Board possessed the legal authority to adopt the proposed regulation changes.

At a meeting held on April 28, 2010, the Board decided to ask your office for assistance in determining the scope of the Board's authority in this area.
AS 08.62.040(a)(1) requires the Board to regulate marine pilotage "on the inland and coastal water of *and adjacent to* the state" (emphasis added). By its own terms, this legislative grant of authority to the Board appears to contemplate marine pilotage requirements extending beyond state waters.[10]

But how far outside of state waters may the Board extend state marine pilotage requirements? Are special navigational factors (such as shallow waters, or extreme ice conditions) necessary to justify this extension? May the Board impose pilotage requirements on vessels subject to AS 08.62 that do not intend to enter state ports, rivers, or sounds, or even to enter state waters at all? May the Board impose pilotage requirements upon vessels subject to AS 08.62 intending to moor along stationary structures such as a drilling platform? What about drilling platforms that are located outside of state waters? Are amendments in state law needed to authorize the Board to adopt the measures it has discussed? What limits do federal laws place on the Board's authority in this area?

The Board requests advice from your office addressing the above questions, and the extent of the Board's legal authority to adopt the proposed mandatory pilotage

---

[10] Maritime zones recognized under international law include: internal waters (3 nautical miles), territorial sea (12 nautical miles), contiguous zone (24 nautical miles), exclusive economic zone (200 nautical miles), and the high seas. Courts have approved mandatory marine pilotage requirements imposed by state law on vessels located many miles outside of state waters. *See, e.g., Gillis v. Louisiana*; 294 F.3d 755 (5th Cir. 2002).

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA
FIRST JUDICIAL DISTRICT AT JUNEAU

CENTRAL COUNCIL OF TLINGIT AND HAIDA INDIAN TRIBES OF ALASKA, on its own behalf and as *parens patriae* on behalf of its members, Plaintiffs, v. STATE OF ALASKA, PATRICK S. GALVIN, in his official capacity of Commission of the Alaska Department of Revenue and JOHN MALLONEE, in his official capacity of Director of the Alaska Child Support Services Division, Defendants.	FILED IN CHAMBERS STATE OF ALASKA FIRST JUDICIAL DISTRICT AT JUNEAU BY: KJK ON: Oct 25, 2011 Case No. 1JU-10-376 CI

ORDER GRANTING PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT AND DENYING DEFENDANT'S MOTION FOR SUMMARY JUDGMENT

I. INTRODUCTION

Plaintiff, the Central Council of Tlingit and Haida Indian Tribes of Alaska ("Tribe") is a federally recognized Indian Tribe. This case presents important questions concerning the Tribe's jurisdiction to adjudicate child support in its tribal court. The Tribe seeks injunctive and declaratory relief finding that its tribal court has subject matter jurisdiction over child support cases concerning tribal member children, and requiring the State of Alaska to give recognition to tribal child support orders in such cases.

Both parties move for summary judgment. The facts are generally not in dispute; the motions present questions of law. Having considered the parties' memoranda and exhibits, and the arguments of counsel presented at oral argument, the Tribe's motion for summary

judgment is granted, and the State's motion for summary judgment is denied, for the reasons set forth below.[1]

II. DISCUSSION

A. Standard for Summary Judgment

Summary judgment is appropriate where there are no genuine issues of material fact and a party is entitled to a judgment as a matter of law.[2] The party moving for summary judgment "has the initial burden of offering admissible evidence showing both the absence of any genuine dispute of fact and the legal right to a judgment."[3] Once that burden is satisfied, the non-moving party, in order to prevent the entry of summary judgment, must produce admissible evidence reasonably tending to dispute or contradict the moving party's evidence.[4]

B. Child Support

As society changed during the nineteenth and early twentieth century, American courts created, for the first time in Anglo-American common law, a legally enforceable duty on the part of parents to financially support their children.[5] This development stemmed from a

---

[1] Plaintiff's request for the court to take judicial notice of the briefing in *State v. Native Village of Tanana*, 249 P.3d 734 (Alaska 2011) is denied. The briefing in *Tanana* does not establish any fact which would bring it within Evidence Rule 201, nor is it legal authority within the scope of Rule 202. Judicial notice is, therefore, inappropriate. However, these materials are the sort of persuasive matter which parties routinely – and quite appropriately – submit in support of legal arguments. These materials are entirely appropriate to submit for the court's consideration, and they will be made a part of the record without any need to resort to judicial notice. Defendant's motion to strike is denied for the same reasons.

recognition of the correlation between divorce, poverty, and dependency on the part of children of divorcing families (or, more generally, families involving a parent absent from the home).[6]

With the advent of modern welfare programs later in the twentieth century came a realization that the failure of noncustodial parents (often fathers) to provide financial support to their children drove those children into poverty and inflated the welfare rolls. By 1974 it could be said that:

> The problem of welfare in the United States is, to a considerable extent, a problem of the non-support of children by their absent parents. Of the 11 million recipients who are now receiving [Aid to Families with Dependent Children], 4 out of every 5 are on the rolls because they have been deprived of the support of a parent who has absented himself from the home.[7]

Until then, child support establishment, collection, and enforcement had largely been left to the States.[8]

In 1974, Congress adopted Title IV-D of the Social Security Act, which required each state, as a condition of receiving federal funds for its welfare program, to create a child support enforcement system available both to welfare recipients and non-recipients.[9] The federal government, through its IV-D reimbursement plan, pays most of the cost of this system.

As part of this federal program, participating child support enforcement agencies are overseen by the federal Office of Child Support Enforcement ("OSCE"). Federal law establishes a variety of requirements that states are required to comply with in order to receive federal IV-D funding.

[7] *Wehunt v. Ledbetter*, 875 F.2d 1558, 1565 (11th Cir. 1989), *quoting* Social Services Amendments of 1974, S. Rep. 93-1356, 93rd Congress, 2d Session 42 (1974).
[8] *See, e.g.*, 73 Mich. Bar Journal 660, *Federalization of Child Support: Twenty Years and Counting* (July 1994).
[9] P.L. 93-647; 42 USC §§661-665.

In 1996, as part of the federal welfare reform legislation known as the Personal Responsibility and Work Opportunity Reconciliation Act ("PRWORA"), states were required to adopt the Uniform Interstate Family Support Act ("UIFSA"), which sets out procedures for recognition of child support orders from other states.

UIFSA was initially promulgated by the National Conference of Commissioners on Uniform State Laws in 1992, and was adopted in Alaska in 1995.[10] The purpose of UIFSA is to unify state laws relating to the establishment, enforcement, and modification of child support orders, and to eliminate the problem of multiple child support orders from different jurisdictions.[11]

The UIFSA requires states to recognize child support orders from other "states." Although the uniform act included Indian tribes within the definition of "states," the language including Indian tribes was omitted by the Alaska legislature when it adopted UIFSA in 1997.[12]

When Congress enacted PRWORA in 1996, it required states to enact the official version of UIFSA, which includes Indian tribes within the definition of "states."[13] The State of Alaska twice requested an exemption from this requirement in 2008, but each request was rejected by the federal Department of Health & Human Services.[14] After the second denial, the State was warned that continued failure to enact a conforming statute risked loss of over $60

million in federal funds for IV-D and Temporary Assistance to Needy Families ("TANF") programs (the successor program to Aid to Families with Dependent Children).[15]

Faced with this threat, the Alaska Legislature amended UIFSA in 2009 to conform to the definition of "states" in the official text.[16] In doing so, the Legislature adopted intent language clarifying that it was not the Legislature's intention to confer additional jurisdiction on tribal courts:

> (a) It is the intent of the legislature that, in order to bring Alaska into conformity with the nationwide Uniform Interstate Family Support Act (UIFSA), as approved by the American Bar Association on February 9, 1993, and as in effect on August 22, 1996, including any amendments officially adopted as of that date by the National Conference of Commissioners on Uniform State Laws, it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States Virgin Islands" in the definition of "state."
>
> (b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are conforming amendments that will result in procedural changes in Alaska for enforcement and modification of child support orders from other jurisdictions. UIFSA does not determine the authority of an Indian tribe to enter, modify, or enforce a child support order. In adopting UIFSA conforming amendments, the legislative intent is
>
> > (1) to remain neutral on the issue of the underlying child support jurisdiction, if any, for the entities listed in the amended definition of "state";
> >
> > (2) not to expand or restrict the child support jurisdiction, if any, of the listed "state" entities in the amended definition; and
> >
> > (3) not to assume or express any opinion about whether those entities have child support jurisdiction in fact or in law.[17]

UIFSA requires a tribunal of this state to recognize the "continuing, exclusive jurisdiction" of a tribunal of another state that has issued a child support order under a law

---

[15] *Id.*
[16] AS 25.25.101(19), amended by SLA 2009, ch. 45 §3.
[17] 2009 SLA ch. 45 §1.

substantially similar to UIFSA.[18] Article 5 of UIFSA requires Alaska's Child Support Services Division ("CSSD") to take steps to administratively enforce child support orders from other states without the need to file an independent court action in an Alaska court.[19] If an order from another state is contested in Alaska, UIFSA provides that CSSD "shall" register the order in an Alaska court under the procedures set forth in article 6 of UIFSA.[20] Resort to the registration procedure avoids the need to file an independent court action in Alaska to seek recognition of a foreign judgment as a matter of comity.[21]

The State correctly points out that the ability to use these UIFSA procedures for a tribal court support order depends upon whether the tribal court has jurisdiction to issue child support orders. UIFSA does not confer jurisdiction on tribal courts; it merely requires recognition of tribal court support orders if the tribal court has jurisdiction.

Thus the outcome of this case hinges on the basic question of jurisdiction: does the Tlingit Haida tribal court have jurisdiction to enter child support orders concerning children who are tribal members?

C. Tribal Court Jurisdiction – *John v. Baker*

Indian tribes possess inherent powers of self-government which predate the arrival of European settlers and the founding of the United States.[22] Tribes "retain those fundamental

---

attributes of sovereignty . . . which have not been divested by Congress or by necessary implication of the tribe's dependent status."[23]

While tribal sovereignty is not absolute, "until Congress acts, . . . Indian tribes still possess those aspects of sovereignty not withdrawn by treaty or statute, or by implication as a necessary result of their dependent status."[24] The United States Supreme Court has articulated a "core set of sovereign powers that remain intact even though Indian nations are dependent under federal law; in particular, internal functions involving tribal membership and domestic affairs lie within a tribe's retained inherent sovereign powers."[25]

These principles are well established in the context of an Indian tribe occupying a reservation in the lower 48 states. Indian tribes possess broad sovereignty in Indian country. In Alaska, however, the Alaska Native Claims Settlement Act ("ANCSA") largely extinguished Indian country.[26]

In *John v. Baker*, the Alaska Supreme Court held that Alaska tribes retain the power to adjudicate custody disputes concerning tribal member children "by virtue of their inherent powers as sovereign nations."[27] The court in *John v. Baker* found that this power does not depend upon the existence of Indian country, but rather stems from the tribe's interest in "preserving and protecting the Indian family as the wellspring of its own future."[28] As such,

[28] *Id.* at 752.

the power to adjudicate custody disputes over Alaska Native children is necessary "to protect tribal self-government or to control internal relations."[29]

It was unclear from the Supreme Court's first *John v. Baker* opinion (*John v. Baker I*) whether the holding extended to the question of whether Alaska Native tribes have authority to decide child support as well as child custody. In its third opinion in *John v. Baker* (*John III*), the Supreme Court clarified that it did not intend to decide this question in *John v. Baker I*. The court in *John III* declined, for procedural reasons, to reach the question presented in this case – whether tribal courts have jurisdiction over child support issues.[30] This is, therefore, a question of first impression.

D. Child Custody and Child Support

It is clear under Alaska law and procedure that the issues of child custody and child support are closely intertwined. The Supreme Court emphasized this point in *McCaffery v. Green*,[31] a case dealing with interstate child support jurisdiction.

Ms. McCaffery and Mr. Green were divorced in Texas. The Texas court awarded McCaffery custody of the children and ordered Green to pay child support. Four years later, McCaffery moved to Alaska with the children. Green moved to Oregon. Neither parent retained connections to Texas.

Three years after moving to Alaska, McCaffery moved in an Alaska court to modify the visitation and child support provisions of the Texas decree. Green objected on the basis of jurisdiction.

---

[29] *Id.*
[30] *John v. Baker*, 125 P.3d 323 (Alaska 2005).
[31] 931 P.2d 407 (Alaska 1997).

The trial court found that it had jurisdiction to modify the Texas decree as to custody and visitation under the statute then in effect, the Uniform Child Custody Jurisdiction Act ("UCCJA"), but found that the court was without jurisdiction as to child support.

The Supreme Court reversed, holding that the court had jurisdiction to consider both custody or visitation, and child support. In doing so, the court noted that it "simply makes sense" for a court that has jurisdiction to consider custody and visitation to also have jurisdiction to consider child support:

> An Alaska court is already deciding issues of custody and visitation. A visitation determination inherently affects the amount of child support owed by the obligor parent. Alaska Civil Rule 90.3(a)(3) specifically links the two issues: a court may allow an obligor parent to reduce child support payments up to fifty percent for any period in which that parent has extended visitation of over twenty-seven consecutive days. This rule recognizes that a parent's own expenses are greater (and the other parent's expenses less) when that parent exercises visitation rights. To decide custody and visitation issues without being able to make the logically concomitant support modification could result in an imbalance between visitation allowed and support owed.[32]

The court went on to note that issues of support and custody are intertwined, quoting the view of one commentator on this point:

> Dissolution of marriage determines status and does not carry with it any inevitable consequences. The parties are not presumed to have any ongoing obligation to one another. Therefore, in a divorce action it is conceptually justifiable to sever the economic issues from the status issues and require personal jurisdiction to resolve the former. In contrast, divorce does not extinguish a parent's obligation to his or her children. While the amount of monthly payments is certainly a subject of frequent dispute, the fact remains that the noncustodial parent can reasonably anticipate being liable for some amount of child support. The parent's obligation to support the child is not merely related to the status determination; it is an inevitable concomitant of custody decisions.[33]

---

[32] 931 P.2d at 413-14 (emphasis added).
[33] *Id.* at 414, *quoting* Monica J. Allen, Child-State Jurisdiction: A Due Process Invitation to Reconsider Some Basic Family Law Assumptions, 26 Fam. L. Q. 293, 307 (1992).

Additionally, Alaska's court rules require the court to consider child support any time it makes a custody decision. Civil Rule 90.3(e) requires all parents seeking to litigate custody issues to file information regarding their income for child support purposes. Child support depends not upon the amount of time the child actually spends with each parent, but rather upon what is in the custody order.[34]

The court in *John v. Baker* clearly established that the tribal court has jurisdiction to decide issues of custody and visitation as to children who are members of the tribe. It would be an odd result if a state court which was called upon to decide custody were required to decide child support, but a tribal court deciding custody were barred from deciding support for lack of jurisdiction. But that would be the result of the State's position. This result would provide a substantial deterrent for parents to bring custody disputes to tribal courts, since tribal courts could not decide all of the issues in the case. It would also open the door to procedural manipulation, since a parent wanting to adjudicate custody without risking an adverse child support order could file in tribal court.

Parents have a broad range of rights and responsibilities with respect to their children. The duty to provide financial support for one's children is just one of a parent's responsibilities. Parents have a duty to keep their children safe, to provide them with food, clothing, shelter, and medical care, and to ensure that they go to school.

A court deciding child custody may make decisions that affect the full range of each parent's rights and duties. A court may enter orders in a custody case having to do with all of the parents' duties, including but not limited to child support. A court may order a parent to

---

[34] *Turinsky v. Long*, 910 P.2d 590, 595 (Alaska 1996).

take the child to school, or to the doctor, or to see a counselor, or to church. A parent may be prohibited from exercising some of the duties of a parent, or may be required in a custody order to exercise those duties.

According to the State's position, a tribal court has the jurisdiction to adjudicate each and every one of the rights and responsibilities of the parents of a tribal member child, except for the parents' duty to provide monetary support for the child. Under this argument, child support is merely a debt between the parents, which has no relation to any tribal interest. This position fails to recognize the "paramount duty" of parents to support their children.[35] This duty is not simply a debt to the other parent, but is integral to the statutory and common-law duty parents have to their children.[36]

In arguing that child support is merely a social welfare program, the State views this question only through the lens of administrative child support enforcement. This argument views child support as only a way for governments to recoup welfare payments from noncustodial parents.[37] But the duty to pay child support long predates enactment of social welfare legislation. This duty is integral to the parent child relationship. The ability to ensure that noncustodial parents support their children may be the only thing keeping those children out of grinding poverty. This duty cannot be characterized as merely a debt between parents. Nor can it be characterized only as an after-effect of the enactment of social welfare legislation in the twentieth century.

---

[35] *See, e.g., Kestner v. Clark*, 182 P.3d 1117, 1122-23 (Alaska 2008).
[36] *Matthews v. Matthews*, 739 P.2d 1298, 1299 (Alaska 1987).
[37] State's memorandum in opposition to summary judgment and in support of cross-motion for summary judgment at 6-8, 12 (". . . child support developed as a broad, national social welfare program.").

The determination and enforcement of the duty of parents to support a child who happens to be a tribal member is no less a part of the tribe's internal domestic relations than the decision as to which parent the child will live with, which school the child will attend, or any of the other important decisions that custody courts make every day. Ensuring that tribal children are supported by their noncustodial parents may be the same thing as ensuring that those children are fed, clothed, and sheltered. The future of a tribe – like that of any society – requires no less.

In my view, the determination of child support is an integral part of a custody determination. To the extent that the Supreme Court found in *John v. Baker* that tribes have jurisdiction over custody determinations, I conclude that this jurisdiction, to be meaningful, must extend to adjudication of child support.

To the extent that the State argues that the holding of *John v. Baker* is in question as a result of subsequent federal decisions, that argument was undercut by the Alaska Supreme Court's decision in *State v. Native Village of Tanana*,[38] in which the court reaffirmed *John v. Baker*'s "foundational holding" that a sovereign tribe's inherent powers of self-government include "inherent authority to regulate internal domestic relations among its members," and that this authority was not divested by ANCSA's elimination of Indian country in Alaska.[39] It is not for this court to reject the Supreme Court's holding in *John v. Baker*.[40]

---

[38] 249 P.3d 734 (Alaska 2011).
[39] *Id.* at 750.
[40] I am not persuaded that *Montana v. United States*, 450 U.S. 544 (1981), a case having to do with a tribe's authority to regulate the activities of non-members on private land, calls the Alaska Supreme Court's later holding in *John v. Baker* into question. *Montana* has to do with a tribe's authority to regulate the conduct of non-members, and does not delineate a tribe's authority to adjudicate domestic relations cases involving children who are members of the tribe. I find *Montana* to be distinguishable.

Here, of course, the tribal court seeks to decide only child support and not custody. The fact that a court has chosen not to exercise the full extent of its jurisdiction, however, does not divest the court of jurisdiction. In my view, *John v. Baker* confers jurisdiction on the tribal court to decide both custody and support. The tribal court does not forfeit its jurisdiction merely because it chooses not to decide issues of custody.

E. Personal Jurisdiction

I have concluded that the tribal court has subject matter jurisdiction over issues of child support as to children who are members of the tribe (or eligible for membership). This case does not require the court to decide the issue of personal jurisdiction, which must be decided on a case by case basis.

The United States Supreme Court held in *Kulko v. Superior Court*[41] that the Due Process clause of the Fourteenth Amendment was violated when a California court heard a custody modification and child support claim against a father who lived in New York, when that father did not have the "minimum contacts" with the State of California which are required under *International Shoe Co. v. Washington.*[42]

Statutes such as the UCCJEA or UIFSA impose geographical limitations on the jurisdiction of state courts. Reservation boundaries impose geographical limitations on the jurisdiction of tribal courts in the lower 48 states. Because of the extinguishment of Indian country in Alaska, the Tlingit Haida Tribal court has no such geographical limitation on its jurisdiction. The tribe claims jurisdiction based solely on the child's membership. Under this framework, the tribal court could claim jurisdiction to enter a support order for a tribal member

---

[41] 436 U.S. 84 (1978).
[42] 326 U.S. 310, 316 (1945).

child, against a nonmember parent, even in a case in which neither the parents nor the child have ever been to Alaska or set foot on the Tribe's traditional lands.

One could imagine a hypothetical case in which both parents live in a far away state, and all the necessary witnesses as to the issue of child support would be located in the parents' state of residence. The obligor parent would have to defend himself or herself in a far away court with which he or she has no connections. In such a hypothetical case, the exercise of jurisdiction by the tribal court may well violate due process, based on the holding in *Kulko*.

It is not necessary to decide the precise outer limits of the court's jurisdiction to decide this case. There is no suggestion that any of the particular cases at issue here involve a claim of jurisdiction that would run afoul of *Kulko*.

F. Other Practical Difficulties

The State has identified a number of practical problems with concurrent state and tribal jurisdiction. I recognize the validity of many of these concerns. These practical complications are inevitable with a system of dual sovereignty. I further recognize that many of these problems will be difficult to solve. Because I believe the conclusions reached in this decision are a necessary consequence of the Supreme Court's holding in *John v. Baker*, however, I believe the solution to these problems lies somewhere other than in this court.

G. Remedies

Based on the foregoing conclusions, I find that the Tribe is entitled to summary judgment on its first, second, and third causes of action, and I will enter a declaratory judgment declaring that the Tribe possesses inherent rights of self-governance that include subject matter jurisdiction to adjudicate child support for children who are members of the Tribe or eligible

for membership in the Tribe, and an injunction requiring the State of Alaska, Child Support Services Department to comply with UIFSA and applicable federal and state regulations.

There are several issues that require additional briefing. The first is whether these conclusions require summary judgment on the constitutional and §1983 claims set out in plaintiff's fourth and fifth causes of action. And the second is the precise language of the injunctive relief that should be granted. In particular, how broadly should the injunction be phrased as to future cases.

In addressing this second question, I would ask the parties to specifically address the question of how (or whether) to address possible questions about personal jurisdiction, under *Kulko* or other authority, in crafting an injunction.

Finally, the parties should address the question of whether, based on the conclusions set out in this order, the court should enter final judgment in this case. If so, the parties should state their positions on what that judgment should be (consistent with the conclusions reached in this order).

The plaintiff should submit a memorandum on these points, along with a proposed form of order, in thirty (30) days. The defendant should submit its memorandum thirty (30) days form the date of service of the plaintiff's memorandum. The plaintiff may submit a reply memorandum fifteen (15) days from the date of service of the defendant's memorandum.

III. CONCLUSION

As discussed above, I find that the Tlingit Haida Tribal court has subject matter jurisdiction to enter child support orders concerning tribal member children. The plaintiff's

motion for summary judgment is, therefore, GRANTED. The State's cross motion for summary judgment is DENIED.

Entered at Juneau, Alaska this 25 day of October, 2011.

New Attorney General Plans to 'Fight the Good Fight'

By Dave Donaldson, APRN - Juneau | February 16, 2012 - 3:29 pm

Content blocked by your organization

Newly appointed Attorney General Michael Geraghty made his first appearance before legislators today to talk about the budget, pending litigation – and what he calls the state's "proactive" role in state's rights litigation.

The lawmakers will determine the level of funding for the Department of Law in the budget they are now writing.

Along with Deputy Attorney General James Cantor, Geraghty gave the House Finance Subcommittee an update on thirteen major non-oil lawsuits the state has been involved in this year. He presented cases ranging from corporate income taxes to the Kasuylie and Moore education suits that were settled recently.

Geraghty also addressed what he called the states' rights cases – from Beluga Whales to Polar Bears to the roadless rule in the Tongass National Forest, to the question of jurisdiction over navigable waters within federal conservation areas.

> From my perspective, this is an insidious encroachment on states' rights. It doesn't seem like much in a particular case, a particular example – you are going to be talking about endangered species, that's another example of where we're losing control over our wildlife. And it's just an insidious process and we have to fight the good fight.

He also said the state should take care to be proactive — to pick cases it can win throughout the judicial process. He said Alaska will have "tough sledding" by being a part of the "Liberal" Ninth Circuit Court of Appeals, But he said with the right cases, Alaska can get before a "somewhat sympathetic U-S Supreme Court."

Geraghty agreed with Anchorage Democrat Lindsey Holmes –a member of the subcommittee – who said she struggles with the good intentions versus the misuse of the Endangered Species Act and the National Environmental Policy Act.

> In the Polar Bear for example, they're modeling in Global Warming – which in itself tends to be a controversial subject with many people, but that's .... The modeling is going out well into the future and they're trying to take into account Global Warming as well. It just seems like it's gotten away from good science and species that are threatened into these projections. I mean, who can tell the future a hundred years out. It just boggles the mind.

Geraghty was appointed January 12th to head the Department of Law – and he will go through the legislative confirmation process before the end of the session.

House panel advances Parnell's AG pick to vote

Geraghty still faces a hearing before Senate Judiciary Committee.

By BECKY BOHRER

(02/29/12 18:12:29)

JUNEAU -- The House Judiciary Committee on Wednesday advanced Gov. Sean Parnell's pick for attorney general to a confirmation vote.

Michael Geraghty faced friendly questioning during his confirmation hearing before the committee. He was asked, among other things, how he views his role both as a political appointee of the governor and as someone chosen to represent the public interest.

Geraghty said it's a hypothetical situation, the idea that agencies or the governor wouldn't follow his legal advice. He said he serves the office of governor, not an individual, and as long as the governor's views support the law -- and he said he has confidence they will -- then this won't be an issue.

He said attorneys general and governors come and go, but the integrity of institutions and the independence of his office are critical to the proper function of government.

He noted that he has no qualms about Parnell's ethics or commitment to Alaska.

Geraghty was a partner at an Anchorage law firm when he was appointed, and he has been practicing law for more than 30 years. His experience includes trial work in state and federal courts.

Geraghty also has served as an independent counsel to the State Personnel Board. His work as such has raised some concerns, though none was voiced at Wednesday's hearing.

Lynn Willis, of Eagle River, in a letter to the Senate and House

Judiciary chairs included in the hearing packet, said Geraghty's performance in an ethics complaint he filed against the governor raised doubts about whether Geraghty could effectively serve "all Alaskans" as attorney general.

"I am not contesting Mr. Geraghty's decision," he wrote. "What concerns me is the manner in which he executed his duties."

Willis declined to go into much more detail when contacted by The Associated Press on Wednesday, citing confidentiality surrounding ethics complaints and uncertainty about what he could discuss.

Geraghty still faces a confirmation hearing before the Senate Judiciary Committee. He must be confirmed by the full Legislature.

AG nominee urges challenges to 'federal encroachments'

Michael Geraghty talks state's rights in confirmation hearing

Posted: March 1, 2012 - 12:10am

By Pat Forgey

JUNEAU EMPIRE

Gov. Sean Parnell's nominee for the position of attorney general got a warm reception from legislators Wednesday during a confirmation hearing, suggesting the long-time Fairbanks attorney will have little difficulty winning confirmation from the full Legislature.

Michael Geraghty, 59, said he's looking forward to working on cases important to Alaska, including fighting what he called "federal encroachment" on Alaska's rights.

That's a key part of the Parnell administration's stance, including fighting Endangered Species Act listings in Alaska and other actions.

Before the House Judiciary Committee on Wednesday and in other legislative testimony, Geraghty talked of his interest in fighting those battles on behalf of the state, and hopefully getting past the "somewhat liberal" 9th Circuit Court of Appeals, and into a "somewhat sympathetic" U.S. Supreme Court.

Geraghty said the polar bear endangered species listing action is based on modeling of the future effects of global warming, and questioned the validity of the science behind it.

"I mean, who can tell 100 years out," he said. "It just boggles the mind."

He called global warming itself a controversial subject, and said the listing process had "gotten away from good science."

Geraghty on Wednesday defended a decision not to continue state involvement in the case of Jim Wild, who was arrested following a Yukon River confrontation with federal authorities.

The Fairbanks News-Miner described Wild as a "crusty 71-year old who cursed out National Park Service Rangers."

Geraghty said he was still interested in establishing the state's control of navigable waters in conservation areas under the Alaska National Interest Land Conservation Act, but that the Wild case was not a "clean" case on which to mount an appeal as Wild had some "behavior issues."

"There were some disputed issues that clouded to some extent the ANILCA issues, the issues that were of concern to the state," Geraghty said.

The state will pursue its interests in asserting control of navigable waters in conservation areas with other cases, he said.

Geraghty has described his philosophy as "looking for vehicles to attack and resist this encroachment."

Almost no gubernatorial appointments are rejected by the Legislature, and the confirmation process had become almost routine until a few years ago when then-Gov. Sarah Palin drew controversy with her choice for the AG's slot, Wayne Anthony Ross.

Ross made history in what turned out to be the closing days of the Palin administration when a Legislature dominated by Republicans rejected the Republican governor's appointment to the state's top law enforcement position. Ross was the first nominee to Alaska's attorney general post to be refused confirmation.

Geraghty has so far received mostly praise from legislators, especially those advocating for an aggressive state role in challenging federal actions.

Prior to being named attorney general in January, Geraghty's law firm worked for the state Personnel Board investigating ethics complaints.

One of those that has been made public was his recommendation to dismiss a claim of an ethics violation stemming from a state press release announcing Palin's selection as running mate for John McCain.

Confirmations are generally taken up in the last days of the legislative sessions by the full House and Senate.

Press Release ATTORNEY GENERAL'S OFFICE

FOR IMMEDIATE RELEASE **February 17, 2012**

State Requesting to Intervene in Ninth Circuit NEPA Case

February 17, 2012, Anchorage, Alaska - Attorney General Michael Geraghty today filed a motion to intervene in a case challenging the adequacy of the environmental review of the Port MacKenzie rail line extension. The rail line will improve the state's transportation system by allowing freight to be transported to and from the Interior and Port MacKenzie.

On November 11, 2011, the U.S. Department of Transportation's Surface Transportation Board authorized the construction and operation of a 35-mile railroad connecting Port MacKenzie and the Alaska Railroad Corporation's (ARRC) main line north of Willow.

The rail line will allow more efficient shipments of bulk commodities (logs, sand/gravel, coal, and cement), vehicles and heavy equipment, and mobile and modular buildings. The state previously appropriated $75 million for the project. The board concluded that the environmental analysis completed under the National Environmental Policy Act (NEPA) was sufficient and that ARRC may construct the preferred alternative outlined in the environmental document. On January 20, 2012, various project opponents, including the Sierra Club, filed suit in the Ninth Circuit on the grounds that the board violated NEPA and the federal Administrative Procedure Act.

Alaska is seeking to intervene in order to protect the state's interests. General Geraghty maintains the board followed the law, and a reversal of the board's decision would result in unnecessary delays and increased costs, which is not in the best interest of Alaska or its citizens.

"Not only does the State of Alaska have a direct financial stake in the project, but we need to protect our ability to responsibly develop Alaska's infrastructure and natural resources," Attorney General Michael Geraghty said.

For more information about the case, please contact Assistant Attorney General Sean Lynch at (907) 465-3600.

That's great! I was starting to get worried about how to fit it all in.

The 14th would be best for us, but the 16th is also available.

Thanks Cindy.

Corey,

We've always held this hearing separately. These tend to be substantive hearings and it's just too hard to do with 12 legislators.

But really, there's lots of time. How about the middle of March? We can do the 12th, the 14th, the 16th, or the 19th. Let me know what will work for the Attorney General.

Subject: AG Confirmation Hearing

Cindy,

Senator French said we should talk with you about getting the confirmation hearing scheduled. In talking with Senator French about confirmation, it sounded like he was looking at doing the confirmation hearing before things got too busy. I am currently in discussions with the House Judiciary Committee about doing the confirmation hearing on Wednesday, February 29, the week before energy week.

I was wondering if there was any possibility to hold a joint confirmation hearing? The reason being that the attorney general will be leaving for a conference at the end of that week, and we are trying to adhere to Senator French's desire to not hold off too long on the confirmation, while still allowing Mr. Geraghty time to meet the legislators and become comfortable with the Department of Law and the various issues it has to address.

If that is not a possibility, we can discuss a better time and date.

Thanks in advance for your help! Its greatly appreciated.

Subject: Re: your letter and testimony

Ms.Smith,

I am sorry that I didn't read your email until this evening when I got home. You sent it this morning and the hearing was held this afternoon. So my testimony was not included in the hearing documents.

I suppose you could have called me as my phone number was on the original letter I sent your office on February 17th. However you chose not to do so. I know my question was complicated or else I wouldn't have asked it. But what does a citizen know?

I was able to listen to the hearing today. Now I understand why Mr. Geraghty was not challenged about his performance as an independent counsel and why he never admitted that he had worked as a contract attorney for the State Personnel Board.

I truly am disgusted with the Alaska governmental process reserved for use by only the privileged few. This whole episode has been characterized by delays and abuses that have only seemed to serve the agenda of those of you who control this system. Now you can do what you want with my testimony. It was not included with the hearing documents and so it has been lost. You and your ilk win again.

Subject: your letter and testimony

I have looked into your question regarding whether you can discuss your ethics complaint publicly, and whether if you did you would be subject to sanction. I apologize for taking as long as I did but your question was more complicated than it appeared!

Here is what I have found: as you said in your letter, the law says that unless a complaint reached the reaches the public phase with an accusation, the complaint has to be kept confidential.

However, in an opinion issued by the Attorney General in August, 2009, the specific issue was addressed and he concluded " Because public dialogue about government action is speech at the core of the First Amendment, **we do not recommend imposing sanctions on a citizen for disclosing information about an ethics complaint he or she has filed. Speech by a citizen charging government officials with breach of a code of official conduct is political speech accorded First Amendment protection."**

You can read the opinion here:

http://law.alaska.gov/pdf/opinions/opinions_2009/09-008_AN2009102807.pdf

The language I am citing starts on page 8.

Given this, would you like to have your testimony distributed to the committee?

Re: Analysis and Recommendations Concerning the Alaska Executive Branch Ethics Act

Dear Mr. Nizich,

We provide this legal analysis in response to questions about how to best implement the Alaska Executive Branch Ethics Act's goals to encourage high moral and ethical conduct and to improve public service, with a particular focus on (1) effective ways in which to minimize the disruptive effects of breaches of confidentiality, and (2) whether and how the state may defend public officers charged with ethics violations.

I. Summary

These are important issues for the state. They require consideration of laws that promote ethical conduct for public officials, the balance between First Amendment rights and a fair process for those accused of ethics violations, and holding public officials accountable while also encouraging qualified citizens to serve in state government. Because these issues have broader implications for public policy, I am issuing this analysis and advice as an attorney general's opinion.

Our analysis, conclusions, and recommendations fall into two categories. First, the confidentiality of the Ethics Act investigative process can be better protected in the future. As drafted, the Act provides an unnecessary opportunity

for a complainant to publicize a confidential report at a sensitive stage of the process. In addition, it imposes no consequences for citizens who abuse the Act by filing frequent, frivolous complaints, or filing complaints in bad faith. With statutory amendments, the ethics procedures can be changed in a manner that protects both the public interest in holding public officials accountable and the integrity of the process. We do not, however, recommend amendments that would impose sanctions for a citizen's disclosure of an ethics complaint that he or she has filed.

Second, the state has a well-established general policy of either defending or reimbursing executive and judicial branch officials for their legal defense when they are accused of inappropriate conduct or wrongdoing. Underlying this general policy is the legal presumption that state officers carry out their duties ethically and responsibly and therefore should be defended by the state against allegations to the contrary. Reimbursing the reasonable expenses that exonerated public officers incur in successfully defending against ethics complaints is consistent with this policy and balances the state's interests in discouraging misconduct by public officers and encouraging public service.

Drawing on previous legal advice we have provided, we conclude that executive branch agencies have authority to pay or reimburse the legal expenses public officers incur in defending against ethics complaints, if four conditions are met: (1) the public officers are exonerated of violations of the Ethics Act or other wrongdoing; (2) the officers acted within the course and scope of their offices or employment; (3) the expenses incurred are reasonable; and (4) appropriate sources of funds are available to the agencies to pay the expenses. Where those four conditions exist, reimbursing officers for those expenses clearly serves a public purpose and the public interest.

II. Background – the Ethics Act Process

Under the Ethics Act, anyone—including the attorney general or a member of the public—may file a complaint against a public officer.[1] For most ethics complaints, the attorney general is responsible for investigating the allegations and,

---

[1] AS 39.52.310. "Public officers" include executive branch employees and officers, members of state boards and commissions, and state trustees. AS 39.52.960(20) and (21).

if appropriate, prosecuting the accused.[2] However, for ethics complaints against the governor, lieutenant governor, or attorney general, the attorney general is recused from involvement in the proceedings and the personnel board appoints independent counsel to act in place of the attorney general.[3] The attorney general is also charged with adopting regulations "necessary to interpret and implement" the Ethics Act.[4]

An Ethics Act investigation often results in the dismissal or settlement of the complaint. When it does not, the attorney general or independent counsel issues a public accusation against the subject officer, followed by an evidentiary hearing before the personnel board to determine whether a violation occurred and what remedies are appropriate.[5] In that hearing, the attorney general or independent counsel prosecutes the ethics charges against the public officer.[6]

A public officer accused of ethics violations is not required to have a lawyer represent him in ethics proceedings. But even a public officer who is confident he acted properly may decide that he does not want to handle the ethics complaint procedures on his own – especially given that the potential penalties include substantial fines, removal from office, or discharge from state employment.[7] A wrongly accused public officer might worry that, without a lawyer representing him in the process, the attorney general or independent counsel might misconstrue the officer's actions or misinterpret the Ethics Act. An accused public officer might also want a lawyer's advice on how to respond to media inquiries about an ethics complaint if the complaint prematurely becomes public knowledge.

---

2 AS 39.52.310 – 39.52.390.

3 AS 39.52.310(c).

4 AS 39.52.950.

5 AS 39.52.350 – 39.52.370.

6 AS 39.52.360(c).

7 *See* AS 39.52.410 – 39.52.460.

The Ethics Act designates as confidential an ethics complaint and all other documents and information regarding an ethics investigation unless (1) the accused waives confidentiality in writing or (2) the attorney general or independent counsel initiates formal proceedings by issuing a public accusation.[8] The Act also provides other ways in which confidential information from the proceedings can be made public.[9]

III. Preventing Breaches of Confidentiality

Despite the Ethics Act's confidentiality provisions, over the past several months complaints against public officers regularly have been provided to the news media. In addition, a confidential recommendation by the personnel board's independent counsel recently was disclosed to the press, undermining the process by which ethics complaints are resolved. The Ethics Act does not grant the state authority to punish citizens who violate the confidentiality requirement, however, nor would that be advisable in many circumstances.[10] We conclude that the appropriate manner to prevent disclosure of information that may be harmful to the process of ethics investigations and the subject of the complaint is to improve protections to the process and to implement safeguards to prevent abuse of the Ethics Act.

A. The State Can Take Steps to Protect the Integrity of the Process of Resolving an Ethics Act Complaint

Confidentiality is important to the process of investigating and resolving an ethics complaint. The investigation may involve sensitive information about personnel matters that should be protected from the public eye. Further,

---

8 AS 39.52.340(a), (c).

9 *See, e.g.*, AS 39.52.335(c), (f)-(h).

10 The confidentiality provision is enforceable against state officers who are part of the process of evaluating, investigating, and deciding Ethics Act complaints. *See, e.g., Dixon v. Kirkpatrick*, 553 F.3d 1294, 1306 (10th Cir. 2009) (holding that disclosure by a clerical employee of information about an ongoing investigation by state veterinary board was a constitutionally sufficient basis for dismissal).

publicizing information may interfere with the investigator's ability to find witnesses willing to cooperate, invite retaliation, threaten the independence of the investigation, and prejudice the right of the subject to a fair process. The public does not have a right to access information about the evidence or course of an investigation as it proceeds.[11]

The state can protect its interest in the integrity of Ethics Act investigations by creating "careful internal procedures to protect the confidentiality of [the] proceedings."[12] Thus we recommend improving Ethics Act procedures to prevent a breach of confidentiality that could prejudice the subject of a complaint and interfere with the state's ability to judiciously resolve ethics matters.

For example, the Ethics Act provides that when the attorney general finds probable cause to believe that a past action has violated, or an anticipated action would violate the Ethics Act, but determines that a hearing is unwarranted, he recommends corrective or preventive action in a confidential report. The Ethics Act currently requires the attorney general to provide copies of this confidential report to both the complainant and the accused officer. The accused officer who receives a report of recommended action from the attorney general may want to negotiate an alternative corrective action or settlement with the state. In this situation, giving the recommendations to the complainant is unnecessary. The complainant has no role in negotiations and should not be permitted to interfere

---

[11] The right of access to information is far narrower than the free speech right to publish information once it is received. *See First Amendment Coal. v. Judicial Inquiry and Review Bd.*, 784 F.2d 467, 472 (3rd Cir. 1986) ("[T]he right of publication is the broader of the two, and in most instances, publication may not be constitutionally prohibited even though access to the particular information may properly be denied.") (citing *New York Times Co. v. United States*, 403 U.S. 713 (1971)).

[12] *Providence Journal Co. v. Newton,* 723 F. Supp. 846, 857 (D.R.I. 1989) (citing *Landmark Comm'ns, Inc. v. Virginia*, 435 U.S. 829 (1978); *see also R.M. v. Supreme Court of N.J.*, 883 A.2d 369, 380 (N.J. 2005) (holding that state's interest in enabling disciplinary authorities to make a full and fair investigation can be more narrowly met by the use of subpoenas and the imposition of criminal sanctions for witness tampering, destruction of evidence, and attempts to unduly pressure officials).

with or undermine discussions by publishing the report. This would compromise the proceedings at a critical stage. The complainant can be informed of the disposition of the case when the matter is resolved, corrective action is taken under AS 39.52.330, or an accusation is filed under AS 39.52.350. Thus, we recommend the Ethics Act be amended to eliminate the requirement that the attorney general serve the complainant with his predispositional recommendations, and to delay notification to the complainant until the matter is concluded.

B. The State Can Take Steps to Prevent Abuse of the Ethics Act

The Ethics Act process also could be changed to prevent another potential harm—abuse of the process. Some Alaskans have argued that the Ethics Act has been used inappropriately in some circumstances to politically damage the subject of the complaint.[13] This opinion does not examine or decide whether or to what extent citizens may have abused the Ethics Act process in the past. We focus instead on statutory changes that could provide a disincentive to abuse the Act in the future.

Our first suggested addition to the Ethics Act is a provision that is simple and commonly used in other jurisdictions. We recommend giving the personnel board authority to order reimbursement of fees and costs from a person who has filed a complaint in bad faith. The reimbursement could extend both to the subject of the complaint, for attorney's fees and costs of defending against the accusation, and to the state, for its actual costs associated with processing and investigating the complaint. The precise standard for ordering reimbursement is a policy decision beyond the scope of this opinion, but as a general matter the standard should not discourage speech protected by the First Amendment. A brief analysis of different standards used by other states follows.

Some state codes make knowingly false complaints subject to both reimbursement orders and criminal prosecution.[14] Others have similar provisions

---

[13] *See, e.g.,* "Our View: Abuse of Ethics Complaints Turns Good Law Into Bad Politics," Anchorage Daily News, May 3, 2009.

[14] *See, e.g.*, Ala. Code § 36-25-27(a)(4) ("Any person who knowingly makes or transmits a false report or complaint pursuant to this chapter shall, upon conviction, be guilty of a Class A misdemeanor and shall be liable for the actual legal expenses incurred by the respondent against whom the false report or

but without criminal penalties, whereby reimbursement is warranted when the complainant knew that he or she was falsely alleging misconduct or providing false information.[15] In still other states, a less rigorous standard applies. Missouri law provides, for example, that "[a]ny person who submits a frivolous complaint shall be liable for actual and compensatory damages to the alleged violator for holding the alleged violator before the public in a false light."[16] The same statute defines "frivolous" to mean "a complaint clearly lacking any basis in fact or law." An even looser standard would be to assess the subject's attorney's fees against the complainant whenever a subject is found not to have violated the Ethics Act, regardless of the complainant's knowledge or intent. We have found no state that applies such a standard, however, most likely because it would discourage most ethics complaints and undermine an important element of ethics laws.

We also recommend consideration of another safeguard to discourage habitual complaint filers who use the Ethics Act process to harass executive branch employees. Statutory amendments could provide authority to the personnel board to decline to process further complaints filed by a person who has abused the Act in this way. Again, the precise parameters of this authority would be a policy

---

complaint was filed."); *see also* 5 Ill. Comp. Stat. 430/50-5(d) ("Any person who intentionally makes a false report alleging a violation of any provision of this Act to an ethics commission, an inspector general, the State Police, a State's Attorney, the Attorney General, or any other law enforcement official is guilty of a Class A misdemeanor.").

15 In West Virginia, for example, a person who files an ethics complaint in good faith "is immune from any civil liability that otherwise might result," but a person who is found, by clear and convincing evidence, to have filed a complaint knowing that material statements are untrue can be ordered to reimburse both the subject and the ethics commission for costs and fees. W. Va. Code § 6B-2-4(u)(1)-(2); *see also* Fla. Stat. § 112.317(7) (giving ethics commission authority to require reimbursement of costs and fees "[i]n any case in which the commission determines that a person has filed a complaint against a public officer or employee with a malicious intent to injure the reputation of such officer or employee … with knowledge that the complaint contains one or more false allegations or with reckless disregard for whether the complaint contains false allegations of fact material to a violation of this part.").

16 Mo. Ann. Stat. § 105.957 (4).

matter. One model is the provision for "Multiple complaints by a single complainant" in the Rules for Judicial Council and Judicial Disability, which govern the United States Court of Appeals for the Ninth Circuit. These rules provide that a complainant who has filed repetitive, harassing, or frivolous complaints, or has otherwise abused the complaint procedure, may be restricted from filing further complaints.[17] The rule allows the complainant an opportunity to demonstrate why the judicial council should not limit the complainant's right to file further complaints, and gives the council authority to prohibit, restrict, or impose conditions on the complainant's future use of the procedure.[18]

We believe that these recommendations for changes to the Ethics Act maintain an appropriate balance between protecting the integrity of the process and encouraging responsible use of the Act to expose and correct unethical conduct. As discussed further below, we do not suggest any changes that might inhibit public discussion, debate, or criticism of the government.

C. The State Should Not Discourage Public Discourse on Government Actions

Creating safeguards to keep Ethics Act investigations confidential is categorically different than restricting citizens from speaking out about government conduct. Because public dialogue about government actions is speech at the core of the First Amendment, we do not recommend imposing sanctions on a citizen for disclosing information about an ethics complaint he or she has filed. Speech by a citizen charging government officials with breach of a code of official conduct is political speech accorded First Amendment protection. The United States Supreme Court has adhered to the bedrock principle that expression on public issues rests "on the highest rung of the hierarchy of First Amendment values,"[19] and thus that "debate on public issues should be uninhibited, robust, and

---

17 U. S. Ct. of App. 9th Cir. Jud Miscon, Rule 10(a) (2008).

18 *Id.* West Virginia's ethics act contains a similar provision, *see* W. Va. Code § 6B-2-4(u)(2)(C) ("[T]he commission may decline to process any further complaints by the complainant, the initiator of the investigation, or the informant.").

19 *Carey v. Brown*, 447 U.S. 455, 467 (1979).

wide-open."[20] The Supreme Court has also made clear that protected political speech goes far beyond intellectual argument about political theory; it includes vigorous debate about the qualifications and official conduct of public officials.[21] Open discussion of official conduct is accorded the broadest protection available in our political system despite the fact "that it may well include vehement, caustic and sometimes unpleasantly sharp attacks on government and public officials."[22]

Alaska's Ethics Act does not inhibit this type of debate, because it does not impose penalties on individuals who are not engaged in the investigative or decision-making process. As we have considered ways to protect the confidentiality of the ethics investigations, we have been mindful that penalizing public discourse about the actions of government officials might threaten First Amendment rights. Courts have consistently found that confidentiality provisions applicable to ethics complaints restrict the content of speech.[23] Because they

20 *New York Times Co. v. Sullivan*, 376 U.S. 254, 270 (1964); *see also Mills v. Alabama*, 384 U.S. 214, 218 (1966) ("Whatever differences may exist about interpretations of the First Amendment, there is practically universal agreement that a major purpose of that Amendment was to protect the free discussion of governmental affairs.").

21 *See, e.g., New York Times Co. v. Sullivan,* 376 U.S. at 268 (citing with approval *Beauhamais v. Illinois*, 343 U.S. 250 (1952) ("public men, are, as it were, public property" and "discussion cannot be denied and the right, as well as the duty, of criticism must not be stifled")).

22 *Id.* at 270.

23 "As a general rule, laws that by their terms distinguish favored speech from disfavored speech on the basis of the ideas or views expressed are content based." *Turner Broad., Inc. v. FCC*, 512 U.S. 622, 643 (1994). Cases finding the confidentiality provisions of ethics laws to impose content-based restrictions include *Lind v. Grimmer,* 30 F.3d 1115, 1118 (9th Cir. 1994) (holding unconstitutional the confidentiality provision applicable to investigations conducted by Hawaii's campaign spending commission); *Baugh v. Judicial Inquiry and Review Comm'n*, 907 F.2d 440, 444 (4th Cir. 1990) (finding that confidentiality requirement of Hawaii's Judicial Inquiry and Review Commission was not content-neutral and remanding for further analysis under strict scrutiny); *Doe v. State of Florida Judicial Qualifications Comm'n*, 748 F. Supp. 1520, 1525 (S.D.

govern the content of speech, these restrictions will survive scrutiny only if narrowly drawn and necessary to serve a compelling state interest.[24] Courts generally have rejected states' interests in ethics code confidentiality provisions as insufficient to justify restrictions on citizens' speech.[25]

IV. As a General Policy, the State Either Defends or Reimburses Public Officers for Their Legal Expenses When They are Accused of Inappropriate Conduct or Wrongdoing

The state routinely defends public officers against claims of inappropriate conduct or wrongdoing. For example, unless engaged in willful misconduct or gross negligence, the state defends public officers against claims that they violated others' constitutional rights while acting within the course and scope of their official duties.[26] Similarly, the Department of Law offers in-house legal

Fla. 1988) (finding confidentiality provision of Florida State Ethics Commission unconstitutional); *In re Warner*, ___ So.3d ___, 2009 WL 1025823 at *9 (La. 2009) (invalidating confidentiality requirement in attorney disciplinary proceedings).

[24] *Boos v. Barry,* 485 U.S. 312, 321 (1988).

[25] *See Lind v. Grimmer*, 30 F.3d at 1119-20; *Stilp v. Contino*, __F. Supp.2d __, 2009 WL 1842087 at *6-11 (M.D. Pa. 2009); *Providence Journal Co. v. Newton*, 723 F. Supp. at 856-57; *S.D. v. Supreme Court of Florida*, 723 F. Supp. 690, 693-94 (S.D. Fla. 1988); *In re Warner*, 2009 WL 1025823 at *22-27; *R.M. v. Supreme Court of New Jersey*, 883 A.2d 369, 377-78 (N.J. 2005); *Doe v. Doe*, 127 S.W.3d 728, 736 (Tenn. 2004); *Petition of Brooks*, 678 A.2d 140, 144-45 (N.H. 1996).

[26] *See, e.g., Prentzel v. State, Dep't of Pub. Safety*, 169 P.3d 573, 577 (Alaska 2007). The Department of Law recently—and successfully—defended three Alaska State Troopers against claims under 42 U.S.C. § 1983, which provides, in part, that "[e]very person who, under color of any statute, ordinance, regulation, custom, or usage, of any State ... subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall

representation to its attorneys when complaints of professional misconduct are filed against them with the Alaska Bar Association.[27] The Department of Law represents its attorneys so long as the allegations of misconduct arise in the course and scope of their official duties and the attorneys did not engage in willful misconduct or gross negligence.[28]

In some cases, when the Department of Law does not defend public officers against claims of inappropriate conduct, the state will instead reimburse them for the legal expenses they incur in successfully defending themselves. For example, if a Department of Law attorney hires private counsel to defend against professional misconduct claims before the Alaska Bar Association, the department may reimburse the attorney for costs and fees incurred if the attorney successfully defends against the claims and the claims arise out of the course and scope of the attorney's work with the department.[29] The state also reimburses Alaska judges and judicial officers for legal expenses they incur in disciplinary proceedings before the Alaska Commission on Judicial Conduct.[30] This commission serves a function for the judicial branch that is analogous to the personnel board's function for the executive branch under the Ethics Act.

---

be liable to the party injured in an action at law." This statute therefore authorizes a person to bring a civil action for a public official's putative violation of the person's constitutional rights. The department also is defending former Governor Palin in a § 1983 action involving a clerical error in the Governor's Office that resulted in the failure to issue a proclamation.

27 Memorandum from Attorney General Bruce Botelho at 2 (Nov. 8, 2002) (announcing the department's policy on reimbursement and defense of employees).

28 *Id.*

29 *Id.*

30 Letter of Agreement between the State of Alaska, Dep't of Admin., Div. of Risk Mgmt. and the Alaska Ct. Sys. at 2 (undated). The state also has agreed to reimburse state employees for legal defense of allegations of wrongdoing in occupational licensing investigations before the Board of Psychologists and the State Medical Board, if the employees are exonerated.

More generally, the Department of Law was recently asked whether a state agency may reimburse a public officer for legal expenses incurred in defending against a complaint that the officer violated the professional code of conduct covering his duties and responsibilities. We concluded that the agency could reimburse such legal expenses if: (1) a decision exonerates the officer of any violations of the law or any wrongdoing; (2) the officer acted within the course and scope of his office or employment; (3) the attorney's fees are reasonable; and (4) an appropriate source of funds is available for that purpose.[31]

As these examples show, the state adheres to a general policy of either defending or reimbursing public officers for their legal expenses when they are accused of inappropriate conduct or wrongdoing, particularly when such accusations are unfounded. Underlying this general policy is the legal presumption that state officers carry out their duties ethically and responsibly,[32] and therefore should be defended by the state against allegations to the contrary.

V. May the State May Defend or Cover the Legal Expenses of Public Officers in Ethics Proceedings

Despite this widespread practice of defending or reimbursing public officials when accused of wrongdoing, the state apparently has never defended or covered the legal expenses of an accused officer in an Ethics Act proceeding. Alaska

[31] Confidential Letter from Acting Attorney General Richard Svobodny (May 4, 2009).

[32] *See, e.g., AT & T Alascom v. Orchitt*, 161 P.3d 1232, 1246 (Alaska 2007) ("[a]dministrative agency personnel are presumed to be honest"); *Earth Resources Co. v. State, Dep't of Revenue*, 665 P.2d 960, 962 n.1 (Alaska 1983) ("agency personnel and procedures are presumed to be honest and impartial").

statutes are silent on this issue with regard to ethics proceedings.[33] But existing law provides ample authority and guidance for covering these legal expenses without the need for statutory changes.

A. A Public Purpose is Critical

The state may not spend public money for public officers' defense in ethics matters unless doing so serves a public purpose and appropriations exist for the expenditures.[34] Defending officers accused of ethics violations or covering their legal expenses when they are exonerated clearly has a public purpose: citizens may be reluctant to serve in state government—or be inhibited in performing their

---

[33] We concluded in an informal 1994 opinion that defense or indemnification of public officers for expenses or penalties incurred in ethics proceedings was unavailable in part because a complaint under the Ethics Act is not a suit for money damages. 1994 Inf. Op. Att'y Gen. at 2 (June 3; 663-94-0289). To the extent that the informal 1994 opinion emphasizes that public officers are not legally entitled to defense and indemnification of fines levied against them in ethics proceedings, the reasoning of this informal opinion is sound, particularly for public officers found guilty of wrongdoing. To the extent that the opinion suggests that the state may not pay the legal expenses of exonerated public officers, it is inconsistent with the state's practice in other contexts and with the public interest. While ethics proceedings are not suits for money damages, ethics allegations usually arise out of public officers' performance of their official duties, and penalties for violating the Ethics Act may include monetary fines. *See* AS 39.52.440 – 39.52.450. Moreover, the potential damage to a public officer's reputation is a cost to the individual, and recent experience demonstrates that public officers may incur substantial legal expenses even with regard to meritless ethics complaints.

[34] *See* Alaska Const. art. IX, § 6 ("No . . . appropriation of public money [shall be] made, or public property transferred, . . . except for a public purpose."); Alaska Const. art. IX, § 13 ("No money shall be withdrawn from the treasury except in accordance with appropriations made by law. No obligation for the payment of money shall be incurred except as authorized by law."); *see also* AS 37.07.080(d) ("A state agency may not increase the salaries of its employees . . . or expend money or incur obligations except in accordance with law and [a] properly approved operations plan.").

official duties—if they must bear the cost of defending themselves against unfounded ethics charges related to their state duties.[35] Indeed, the Ethics Act itself underscores the importance of ensuring that the Act not only encourages "high moral and ethical standards among public officers in the executive branch," but also "improve[s] standards of public service."[36] Public service should not subject public officers, who are assumed by law to be acting ethically, to personal financial liabilities when ethics proceedings confirm that they acted appropriately. Therefore, in examining whether the state may defend or pay the legal expenses for public officers in ethics proceedings, the critical question is whether there is an approach that ensures that a public purpose is advanced while at the same time encouraging compliance with the Ethics Act by public officers. This question is examined in more detail below.

B. A Policy of Payment or Reimbursement After Exoneration Would Best Balance the Public Interest in Encouraging Public Service and Compliance with the Ethics Act

A policy allowing payment of legal expenses of exonerated public officers who hire private lawyers to defend them against ethics complaints would promote and "improve standards of public service"[37] while encouraging compliance with the Ethics Act. The public purpose for paying legal expenses is clearest for those

---

35 *See, e.g., Snowden v. Anne Arundel County*, 456 A.2d 380, 385 (Md. 1983) (upholding an ordinance allowing reimbursement of fees and recognizing that reimbursement serves the public interest in encouraging the recruitment and retention of high-risk officers, maintaining morale, and providing necessary protection to those whose line of work exposes them to the financial burdens of defending baseless criminal charges); *Thornber v. City of Fort Walton Beach*, 568 So. 2d 914, 916-17 (Fla. 1990) (holding that Florida common law requires publicly paid legal representation for public officials defending against litigation arising from their performance of official duties while serving a public purpose; the requirement's purpose "is to avoid the chilling effect that a denial of representation might have on public officials in performing their duties properly and diligently") (citing *Nuzum v. Valdes*, 407 So. 2d 277 (Fla. Dist. Ct. App. 1981)).

36 AS 39.52.010 (a)(1) and (a)(2)(B).

37 AS 39.52.010(a)(2)(B).

who are exonerated.[38] As noted above, the reimbursement of legal fees for those who are exonerated in ethics matters also is consistent with the state's general practice in other contexts. Those situations, all of which concern professional ethics codes, involve issues very similar to Ethics Act matters. Such an approach also appears to be the common practice among the majority of state governments in the country.[39]

The recent advice we provided to an executive branch agency on reimbursement of legal expenses in code-of-conduct proceedings offers an appropriate model for payment of legal expenses in Ethics Act matters. Based on that model, public officers may have expenses they incur in defending against ethics complaints covered if
(1) the officers are exonerated of any violation of the Ethics Act or other wrongdoing; (2) the officers acted within the course and scope of their offices or employment; (3) the expenses incurred were reasonable; and (4) there are appropriate sources of funds to pay the expenses.[40] As we stated in that opinion, "these conditions ensure that the spending will serve a public purpose."[41]

Although agencies could wait and reimburse public officers for their legal expenses once the ethics complaints against them are resolved, allowing state

---

38 *See Snowden*, 456 A.2d at 385.

39 *See* Letter from James McPherson, Executive Director of the National Association of Attorneys General 2 (July 31, 2009) ("In conclusion, the reimbursement for reasonable attorney's fees and costs incurred by state officials during the course of an investigation or adjudication of alleged ethics violations where those allegations were found unsubstantiated or unfounded appears to be a common practice among a majority of the states. Such common practice, while not specifically provided by any state statutory or regulatory scheme, is premised upon a broad interpretation of risk management programs, formal ethics programs, or sound public policy protecting state officials from frivolous lawsuits which could discourage citizens from engaging in public service or seeking elected office.").

40 Confidential Letter from Acting Attorney General Richard Svobodny, *supra* n.31.

41 *Id.*

officers the option of having their legal expenses paid as they are incurred helps serve the public interest of not discouraging public service. Logistically, reimbursement may be simpler. But if public officers must shoulder the financial burden of legal expenses while they await resolution of unfounded complaints against them, qualified individuals may be reluctant to accept positions in state service and public officers may be inhibited in carrying out their duties. Public officers must agree, however, to repay any amounts they receive if they are not exonerated. [42]

The Alaska Supreme Court has not addressed the issue of reimbursement, but other court decisions suggest that this approach strikes an appropriate balance between the public's interest in encouraging individuals to accept positions in state

---

[42] Pursuant to AS 39.52.950, the Department of Law will soon promulgate regulations addressing procedures for payment of expenses incurred in Ethics Act proceedings.

service and its interest in holding public officials accountable and discouraging misconduct under the Ethics Act.[43]

C. Conflict of Interest Issues Prevent the Department of Law from Directly Representing State Officials in Ethics Act Proceedings

Another possible approach would be to have the Department of Law defend public officers against ethics complaints. As noted above, the Department of Law regularly defends public officials when they are accused of wrongdoing under federal civil rights statutes. However, having the Department of Law directly defend public officers against ethics complaints could present conflict-of-interest

---

[43] *See, e.g., Guenzel-Handlos v. County of Lancaster*, 655 N.W.2d 384, 389-90 (Neb. 2003) (concluding that, absent specific legislative authorization, public bodies are not obligated to pay attorney's fees their officials incur in successfully defending against criminal charges arising out of performance of their official duties); *Triplett v. Town of Oxford*, 791 N.E.2d 310, 315-16 (Mass. 2003) (same); *Hart v. County of Sagadahoc*, 609 A.2d 282, 283-84 (Me. 1992) (concluding that the common law permits, but does not require, a public body to pay fees its officials incur in those circumstances); *Thornber v. City of Fort Walton Beach*, 568 So. 2d 914, 916-17 (Fla. 1990) (recognizing a common law duty of a governmental body to pay attorney's fees that its officials incur in defending against litigation arising out of performance of their official duties while serving a public purpose); *Chavez v. City of Tampa*, 560 So.2d 1214, 1214-19 (Fla. Dist. Ct. App. 1990) (holding that, where a city council member received advice from the city attorney that voting on a matter involving her personal interest would be a conflict of interest but nonetheless voted on that matter to break a tie vote, she was not entitled by statute or common law to reimbursement of the legal expenses she incurred in successfully defending against related charges before the state ethics commission); *Ellison v. Reid*, 397 So. 2d 352, 354 (Fla. Dist. Ct. App. 1981) (upholding the use of public funds to pay attorney's fees that a county appraiser incurred in successfully defending against charges of official misconduct before the state ethics commission); *Bd. of Chosen Freeholders of Burlington v. Conda*, 396 A.2d 613, 615, 620 (N.J. Super. Ct. Law Div. 1978) (holding that a county had neither the duty nor the authority to reimburse a county surrogate for legal fees incurred in defending against disciplinary proceedings before an advisory committee on judicial conduct, where the proceedings led to censure of the surrogate as a judicial officer).

challenges because of the attorney general's role in interpreting, enforcing, and prosecuting violations of the Ethics Act. If the Department of Law directly defended public officers in Ethics Act proceedings, the result would be that—for ethics complaints against most public officers—the defense counsel and the lawyer investigating and prosecuting the complaint would be in the same department and be supervised by the same attorney general and, perhaps the same deputy attorney general. In essence, the attorney general, through attorneys in the Department of Law, would be both prosecuting and defending against the ethics complaints. That could not only create an appearance of impropriety, but could also prejudice the interests of the accused officers and diminish the officers' confidence in the representation they receive. It could also create difficulties under the Alaska Rules of Professional Conduct because of the conflicting obligations of the state attorneys and their supervisors.[44]

Those conflict difficulties would not exist if the Department of Law represented only the governor, lieutenant governor, and attorney general against ethics complaints, because the attorney general is recused from investigating and prosecuting complaints against those three officers.[45] But Department of Law representation of even those three officers would still raise significant concerns.[46]

---

[44] *See* Alaska R. Prof'l Conduct 1.7, 1.10 (providing that a lawyer should generally not represent a client if the representation of that client will be directly adverse to another client of that lawyer or the lawyer's firm). *But see* Alaska R. Prof'l Conduct 1.7 cmt. ("government lawyers in some circumstances may represent government employees in proceedings in which a government agency is the opposing party.").

[45] AS 39.52.310(c).

[46] As a general rule, the Ethics Act makes clear that the attorney general has no role in the investigation and prosecution of an ethics complaint against the governor, lieutenant governor, or attorney general. In all other situations involving the Ethics Act, the role of the attorney general and Department of Law is to interpret, implement, and enforce the Act, with the goal of promoting the Act's purposes. But if the Department of Law were defending an individual officer against an ethics complaint, the goal would be different: to defend that officer zealously, regardless of the implications for the long-term implementation of the Ethics Act. For example, zealous representation of an accused officer might involve asserting that a provision of the Ethics Act is unconstitutional—an

Please contact me if we can be of further assistance with this matter.

Sincerely,

Daniel S. Sullivan
Attorney General

---

assertion that the Department of Law would likely resist in carrying out its general responsibility to implement and enforce the Ethics Act. Defending individual officers against ethics complaints would therefore create an unacceptable conflict between the Department of Law's duty to provide them zealous representation and its general duty to promote the purposes of the Ethics Act in interpreting, implementing, and enforcing the Act.

Senator Hollis French
State Capitol Building – Room 417
Juneau, Alaska 99801

Re: Testimony concerning appointment of Attorney General.

Senator French,

Approaching the Alaska Legislature is a difficult task. I asked for guidance relating to submitting testimony that relates to a confidential matter in a letter dated February 17, 2012 addressed to both you and Representative Gatto as chairs of the Judiciary Committees. I have not been provided with that information yet my letter of inquiry was included in public testimony for the House hearing. That is not what I requested.

Because I feel this is important, I will now submit detailed testimony for the Senate Judiciary hearing on the confirmation of Mr. Michael Geraghty for Attorney General with this caveat. If my statement violates the law regarding disclosure of information relating to a complaint under the Executive Ethics Act and would subject me to sanctions then I do not want my testimony submitted.

I was sent a letter from the Department of Law dated June 14, 2010 acknowledging receipt of my ethics complaint. The letter contained the following statement: "Please also be advised that ethics complaints and any related investigations are confidential under AS 39.52.340, unless the subject of the investigation fully waives confidentiality or the proceedings reach the public phase with the issuance of a public accusation." I assumed that I would be accountable for maintaining the confidential nature of my efforts and could, in fact, face punishment or my complaint would be dismissed if I violated that restriction by discussing my complaint with anyone. I am still not sure I can legally discuss this issue including this testimony.

Re: Testimony concerning appointment of Attorney General, March 2, 2012

I have pursued this question of my being able to talk about this complaint. In October 2010 I requested and received an opinion through my State Representative from the Legislative Legal Office regarding this confidentially restriction that states;" Note, however, that the remedies for violating the provisions of AS 39.52.340 **seem** (emphasis added) to apply only to a public employee. Also; "While a person who files a compliant is required to treat the existence of and information about the complaint as confidential, **there may be** (emphasis added) no statutory remedy if the person fails to abide by this requirement.

As stated, I deem my testimony important. However since the legislature has created such ambiguity in the law, while retaining the power of the State to pursue a perceived breach of this law, I am not willing to expose myself to the costs of a legal defense. Senator French if, in your opinion, my statement is not legal I demand that it not be submitted. Thank you.

Mr. Lynn Willis

March 1, 2012

To: Senate Judiciary Committee

Subject: Testimony concerning appointment of Michael Geraghty as Attorney General.

I do not support the appointment of Mr. Geraghty as the next Alaska Attorney General. My opinion is based on my experience with Mr. Geraghty when he acted as an independent counsel for the state personnel board following my submitting an ethics complaint against the Governor. This testimony is not intended to argue the merits of my complaint or contest the outcome. I am concerned about how Mr. Geraghty conducted his review of my complaint. My specific concern is if Mr. Geraghty posseses the ability to function independently from the Governor who appointed him.

My complaint concerned the ethics of violating the State Constitution to create a position for a sitting legislator. I was and am very much concerned about the actions of the Governor and the appearance of unethical behavior especially in light of the recent scandals involving Alaska Legislators.

I filed my complaint on June 12, 2010. I had never filed an ethics complaint. My complaint was then "forgotten" for over 90 days. I now assume my complaint would have remained "forgotten" had I not called the Department of Law in September asking for the status of my complaint.

I received a letter on September 29, 2010 from the Alaska State Personnel Board Chair, Debra English. In that letter Ms. English apologized for the delay. The letter included the following statement, "I received your filing on June 14th via email at my work address. I forgot about you filing and failed to assign it to independent counsel. I did not recall your case until I was contacted by Nicki Neal for a status update on September 21st." Also Ms English wrote; "When Nicki contacted me I reached out to the Board's independent counsel and Mr. Geraghty agreed to take the case and review it immediately."

Did my case not receive an adequate review because of Mr. Geraghty's agreement to have the review done immediately? Mr. Geraghty concluded his review and published his report on September 28, 2010. He never contacted me.

Subject: Testimony concerning appointment of Michael Geraghty as Attorney General.
March 1, 2012

Mr. Geraghty's review included his charge; "A complaint filed under the Executive Branch Ethics Act requires independent counsel retained by the personnel board to determine whether the conduct alleged, if true, would constitute a violation of the Act. If counsel determines that the allegations in the complaint do not warrant an investigation, counsel shall dismiss the complaint with notice to the complainant and the subject of the complaint."

I believe Mr. Geraghty didn't search for a probable violation of the act. He instead searched for justification to exonerate the Governor - which he did. Mr. Geraghty obviously didn't believe that this issue warranted further investigating despite the fact that this particular issue had generated editorials and much public discourse regarding the appearance of the Governor's actions and the fate of those he appointed. However, Mr. Geraghty chose not to mention any of those facts. Mr. Geraghty shared the opinion of the then Attorney General that the Governor's action had not been found to be irrefutably illegal and therefore was not unethical either. I personally believe that behavior can be legal yet also unethical. Mr. Geraghty apparently does not. He refused to deal with the appearance of suspect behavior which, to me, is the difference between a breach of law and a breach of ethics.

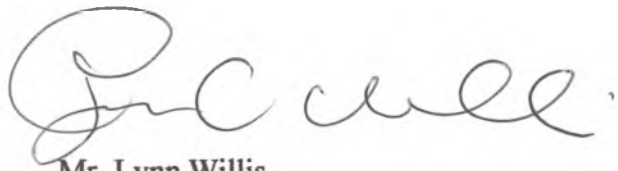
Mr. Geraghty apparently did not understand that he was to render the final and irreversible decision on this matter of pursuing a further investigation. In his September 28th report, he concludes, "It is my opinion that the allegations contained in Mr. Willis' (sic) complaint do not constitute conduct in violation of the Ethics Act and the complaint **should be** (emphasis added) dismissed." Didn't Mr. Geraghty understand that he wasn't supposed to be recommending anything? He was supposed to decide the issue. I believe his argument was written as if he would be advocating for a dismissal to another authority.

I asked the Department of Law if the statute had changed so that Mr. Geraghty was not going to make the final decision concerning a further investigation and who would be acting on Mr. Geraghty's recommendation.

Subject: Testimony concerning appointment of Michael Geraghty as Attorney General.
March 1, 2012

The Department of Law must have also asked Mr. Geraghty for clarification because I was then sent another letter on October 21, 2010 from Mr. Geraghty informing me that he had, in fact, dismissed my complaint.

Between the negligence of those who "forgot" my complaint, the self imposed necessity to complete the review quickly, and the narrow scope of the review, I feel that I was subjected to a process, including the contribution of Mr. Geraghty, more designed to quash ethics complaints from individual citizens than to determine the validity of those complaints. Therefore, based on my experience with Mr. Geraghty, I very much question his ability to maintain an independent, objective approach to situations involving conflicting issues which demand impartiality. Thank you.



Mr. Lynn Willis

February 17, 2012

Senator Hollis French, Chair, Senate Judiciary Committee
Representative Carl Gatto, Chair, House Judiciary Committee

Sirs,

I would like to submit testimony regarding the appointment of Mr. Michael G. Geraghty as Attorney General. After contacting the Anchorage LIO who referred me to the offices of the President of the Senate and the Speaker of the House of Representatives I understand that the hearings on Mr. Geraghty's appointment have not been held. I also understand that both Legislative Judiciary Committees will be involved in this process.

This concerns Mr. Geraghty's performance as an independent counsel in regard to an ethics complaint I filed against the Governor. I am not contesting Mr. Geraghty's decision. What concerns me is the manner in which he executed his duties. Based on my experience, I very much doubt if Mr. Geraghty could effectively serve all Alaskans as Attorney General.

I understand that the facts concerning my complaint might want to be treated as confidential. Therefore I am asking for guidance regarding how to submit my testimony. Thank you.

Lynn C. Willis

4/27/12 POINT THOMSON SETTLEMENT: EVALUATION, LITIGATION, DNR RESPONSE

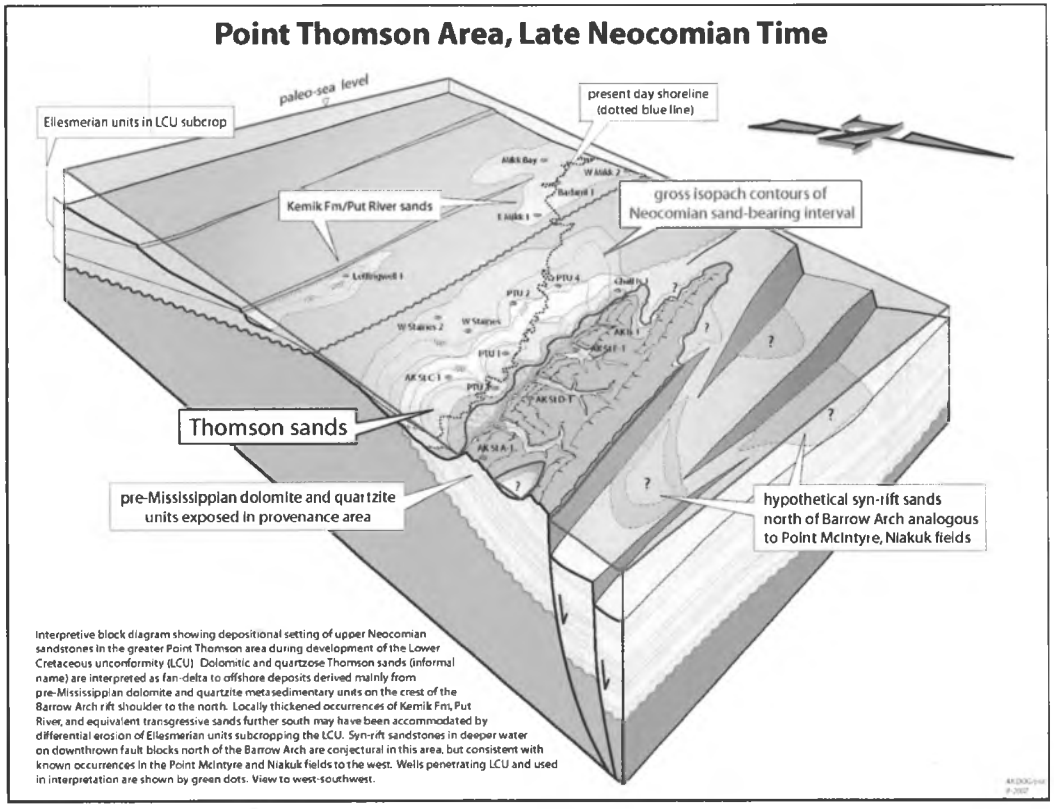
<TARGET><BILL></BILL><SUBJECT>4-27-12 POINT THOMSON SETTLEMENT EVALUATION, LITIGATION, DNR RESPONSE</SUBJECT><COMM>SJUD27</COMM></TARGET>

The Pt Thomson Settlement

Presented upon request of the Senate Judiciary Committee

Mark Myers Ph.D., CPG

April 27, 2012



Presentation of Information Useful for Understanding the Settlement

I. Technical Details of the Point Thomson field

II. Description of a few previous development commitments

III. Current Settlement

IV. Summary

I. Point Thomson Technical Details

- Largest known remaining undeveloped, onshore Alaska, conventional field (petroleum liquids - oil and condensate)

- Combined reservoirs could contain more than 1,000,000,000 barrels of technically recoverable oil and condensate and 7 TCF gas

- 2 major hydrocarbon bearing zones
  - Flaxman sands D. 1975 - conventional oil
  - Thomson sands D. 1977)-retrograde condensate, oil and natural gas

- AOGCC classifies Pt Thomson is classified by as an **oil** not a gas field – liquids production should drive development

- **Because Point Thomson is a high-pressure retrograde condensate field the method of production, well and facility design is critical to maximizing recovery**

Unless the Point Thomson Sands are Developed Using Full Field Gas Cycling the Majority of the Recoverable Condensate and Oil **Will Be Wasted**

Blow Down	Full Field Cycling (20 yrs followed by blow down)	Difference
26% of the condensate	76% of the condensate	- 50%
127-156 MMSTB	370-450 MMSTB	- 243-323 MMSTB
3-16% of the oil	43% of the oil	- 27%-40%
30-150 MMSTB	250-400 MMSTB	- 220-230 MMSTB
70% of the gas	56% of the gas	+14% of the gas
6-7 TCF	4.8-5.9 TCF	+1.1 to 1.2 TCF gas

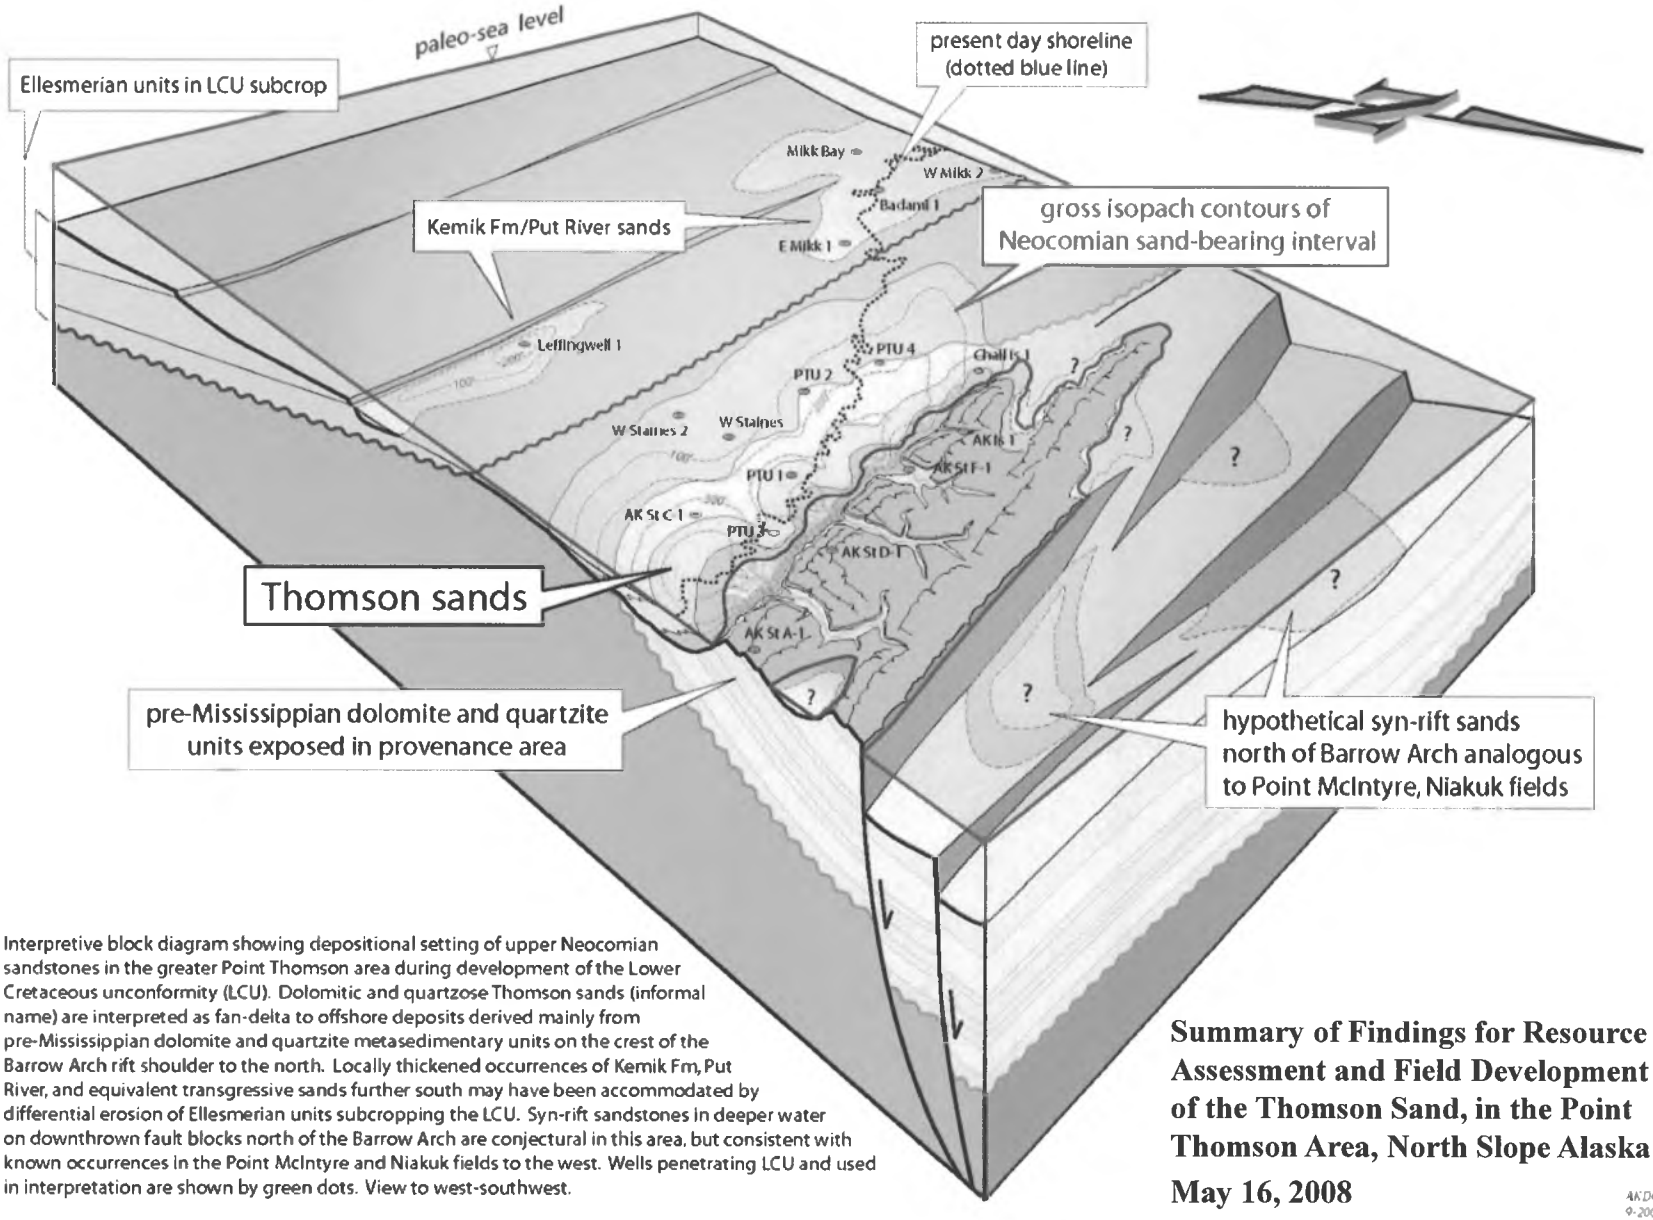
Key Findings from the only publically available study (commissioned by DNR DOG and completed by PetroTel Inc. in May 2008)

Resource owner (State DNR) and lessee/producer (WIOs) may not agree on method of production even if they agree on the geology, engineering, technology and costs

Why?

- Cycling costs more than blowdown and might have a lower – but still highly economic – rate of return
- Lessee/producer, not the state, bares the development and production costs as a requirement of the lease (somewhat offset by tax credits and potentially royalty relief)
- Lessee/producer has other options outside of Alaska where they can invest saved capitol
- State (DNR) has a mission and a legal requirement as the resource steward and regulator to protect the public interest, promote conservation and promote the prevention of physical and economic waste –done primarily through the Unitization and Plan of Development (11AAC83.303(a).

Point Thomson Area, Late Neocomian Time



Interpretive block diagram showing depositional setting of upper Neocomian sandstones in the greater Point Thomson area during development of the Lower Cretaceous unconformity (LCU). Dolomitic and quartzose Thomson sands (informal name) are interpreted as fan-delta to offshore deposits derived mainly from pre-Mississippian dolomite and quartzite metasedimentary units on the crest of the Barrow Arch rift shoulder to the north. Locally thickened occurrences of Kemik Fm, Put River, and equivalent transgressive sands further south may have been accommodated by differential erosion of Ellesmerian units subcropping the LCU. Syn-rift sandstones in deeper water on downthrown fault blocks north of the Barrow Arch are conjectural in this area, but consistent with known occurrences in the Point McIntyre and Niakuk fields to the west. Wells penetrating LCU and used in interpretation are shown by green dots. View to west-southwest.

Summary of Findings for Resource Assessment and Field Development Study of the Thomson Sand, in the Point Thomson Area, North Slope Alaska

May 16, 2008

AKDOG/pld 9-2007

II. Description of a Few Previous Development Commitments

- Pt Thomson Unit formed in 1977, 1 1 Wells Drilled 1979-1983
- 2001 Expansion agreement:
  - Exxon agreed to drill well to test western end of field by June 2003
  - Commence development drilling by June 2006 or contract unit and pay $20 Million
  - Complete 7 development wells by June 2008 or contract unit and pay $27 million and increase royalty rates
  - Target project was a 75,000 Barrels of Condensate/Day full field cycling project
  - Wells were never drilled and Unit was ultimately defaulted in 2005
- 2009 Irwin Agreement that reinstated 2 of 31 leases
  - Exxon agrees to drill the PTU 15 and PTU 16
    - "Irwin said Tuesday he decided to reverse Banks and reinstate two leases because Exxon representatives said during the hearing that the company is 'unconditionally committed' to drilling two wells by 2010 and producing from those wells by 2014 "(ADN 27 Jan 2009)
  - Exxon builds wells, drills and tests wells and began permitting the pipeline

Point Thomson Project - Clear & Committed Timeline

POINT THOMSON PROJECT

ExxonMobil

III. The Current Settlement

- This settlement is extraordinarily significant in the impact and the breadth of issues that are settled.
- These issues are normally reserved for and resolved through statute and regulations using established public processes.

Some Major Issues

- Relinquishment of DNR's authority to manage the unit
- All development options are at the sole discretion of the WIO – none optimal for state
- Requirement for the State to take its gas in-kind prior to a major gas sale
- Deferral of Taxes on PTU gas injected into Prudhoe Bay

Major Issues Continued

- Contraction of unit is not automatic and through at least one of the pathways no drilling is required to keep acreage
- Most PA and tract allocations (which affects the state royalty share) are determined by the settlement and automatic – where is the technical review?

Major Issues Continued

- Validity: The Commissioner has determined that the terms of this agreement are necessary or advisable to protect the public interest – including RIK and blowing the reservoir down in spite of the huge oil and condensate loss
- Further Assurances: - DNR will not oppose an application to AOGCC to blow the reservoir down if consistent with the agreement and applicable state law

Unusual and Problematic Definitions

"Major Gas Sale (MGS)"

- Means a large-scale pipeline project having a design throughput of more than 500 MMCFD of gas that results in delivery of gas off the North Slope of Alaska"
- This is 9X less volume than the proposed AGIA line and 6X smaller than the proposed LNG project under AGIA or the Port Authority.
- Given the gas reserves at Prudhoe Bay, a MGS for an LNG project wouldn't need Point Thomson gas until the year 2040 for a 3 BCF line and the year 2146 MMCFD for a 500 MMCFD pipeline
- Why would state use this definition?

Unusual and Problematic Definitions Continued

"Without appeal"

- Any Party may dispute in court whether a specified event has occurred that would result in termination or release of acreage "Without Appeal" (Section 5.1.4)

Available Development Options

All Alternatives are at the Discretion of the WIO

ALTERNATIVE A

- "Sanction" a Major Gas Sale: defined as any pipeline > volume than bullet line – doesn't require building it or connecting it to Point Thomson

ALTERNATIVE B

- Expanded Liquids Production into TAPS Only requires 20,000 to 30000 BOPD

ALTERNATIVE C

- Expanded Liquids Production into TAPS, Enhanced Prudhoe Bay Recovery, and Gas for In-State Use

ALTERNATIVE D

- Spend $2 Billion dollars between year end 2007 and year end 2015 on "work activities set forth in this agreement" Abandon and keep most of the acreage. Keep it all with planning No production required.

Summary

- **None of the three development scenarios maximize economic oil and gas recovery from the field. In fact they all could/will lead to very significant physical and economic waste**
- **The settlement provides several pathways which require little to no actual production**
- **Settlement removes DNR's authority to manage the field through normal development procedures**
- **Some settlement terms step back from previous commitments of WIOs**

Summary Continued

- **None of the contemplated gas pipelines will require Pt Thomson gas for decades**
  - **Linkages are made to a gas line that is so small that it could be kept full with Prudhoe Bay gas for 20-120 years. Pt Thomson gas won't be needed until 2040 and beyond: long after full field cycling for liquids would have been completed.**
- **RIK – Why? and why no finding process?**
- **Major oil and gas decision of the decade made without public process**
- **Abandonment with no damages and minimal consequences**

Unless the Point Thomson Sands are Developed Using Full Field Gas Cycling the Majority of the Recoverable Condensate and Oil **Will Be Wasted**

Blow Down	**Full Field Cycling** (20 yrs followed by blow down)	**Difference**
26% of the condensate	**76% of the condensate**	**- 50%**
127-156 MMSTB	**370-450 MMSTB**	**- 243-323 MMSTB**
3-16% of the oil	**43% of the oil**	**- 27%-40%**
30-150 MMSTB	**250-400 MMSTB**	**- 220-230 MMSTB**
70% of the gas	**56% of the gas**	**+14% of the gas**
6-7 TCF	**4.8-5.9 TCF**	**+1.1 to 1.2 TCF gas**

Key Findings from the only publically available study (commissioned by DNR DOG and completed by PetroTel Inc. in May 2008)

Excerpts from a Statement of the Alaska Oil and Gas Conservation Commission

To date, the Commission has received no application for pool rules from the PTU owners. Accordingly, the Thomson Sand Reservoir (TSR) is presumed to be an oil pool and will remain so unless and until the Commission establishes Pool Rules that provide otherwise.

As cited above, the Commission's responsibility is to prevent the physical **waste of hydrocarbon resources. Maximizing *value to the owners and the State at the*** **possible expense of additional reserves is not a valid reason for committing waste. The owners have yet to demonstrate to the satisfaction of the Commission that developing the PIU as a gas field will be the only viable alternative for a prudent operator to pursue. Until they do, the Commission will continue to regard the PTU as un oil field and steps taken towards developing it as a gas field risk being viewed as steps taken towards wasting hydrocarbon resources. Point Thomson could be part of a gas line project and still cycle condensate first; if the operator makes prudent use of the time available.**

In conclusion the Commission does not believe that the uncertainty that still exists about the potential development of the PTU can be used as justification for a decision that may promote waste of tens to hundreds of millions of barrels of oil and condensate. This is especially true in light of the fact that much of this uncertainty could have been eliminated already had the PTU owners adhered to the work commitments specified in previous POD's and agreements.

Submitted this 3rd day of November 2006.

AOGCC Explanation

- Retrograde condensate reservoirs do not behave in the same ways that conventional oil and gas reservoirs do. Dropping the pressure in the reservoir does not cause gas to form from oil, as is the case in a conventional oil reservoir. Nor does vaporized condensate remain a vapor, as is the case in a conventional gas reservoir. Rather, for a retrograde condensate reservoir, as the pressure decreases, liquids drop out of the gas in the reservoir.
- When a retrograde condensate field is produced like a conventional gas field, the gas is produced and sold at high rates. Initially a large amount of condensate is produced with the gas. However the reservoir pressure drops quickly and condensate production drops dramatically because condensate is dropping out in the reservoir instead of at the surface. To further the problem, condensate that drops out in the reservoir is much more difficult to produce than that which remains entrained as a vapor in the gas. The liquid tends to build up and clog the pore spaces in the reservoir rock. Also, since this reservoir has never been exposed to liquid before, the rock acts as a sponge and some of the condensate will be immobilized and never come out. **To make things worse, once the condensate comes out of the gas, very little of it will return to a gaseous state even if the reservoir pressure is later increased. In other words this is a problem that you can't fix after you cause it; it's like unringing a bell.**
- **In addition to lost condensate recovery, if the reservoir pressure is reduced too quickly, the gas recovery will also decrease.** The condensate that clogs up the reservoir and won't come out also blocks the gas from coming out. This is similar to an air filter on a car. When the filter is new, air will flow through it freely, but as it gets older the pores in the filter begin to clog with dirt (as the pores in the reservoir would clog with condensate) and the air will not flow through as well. Eventually no air at all will flow.
- **So to maximize condensate production from a retrograde condensate reservoir, it is necessary to keep the reservoir pressure high until the condensate has been recovered. Often this is accomplished through a process known as "gas cycling." In this process hydrocarbon gas is produced, the condensate is removed and sold, and the now-lean gas is injected back into the reservoir to maintain pressure and to sweep more condensate to the surface. As this process continues, the gas produced slowly becomes leaner and the yield of condensate decreases. Eventually the gas is stripped of most of the liquids and it is safe to sell the gas. This method delays gas sales, but it results in greater ultimate recovery of both liquid and gaseous hydrocarbons. the answer?**

POINT THOMSON

SETTLEMENT OVERVIEW

Senate Judiciary Committee

Joe Balash
Deputy Commissioner
Alaska Department of Natural Resources

April 27, 2012

Outline

PT

I. Background

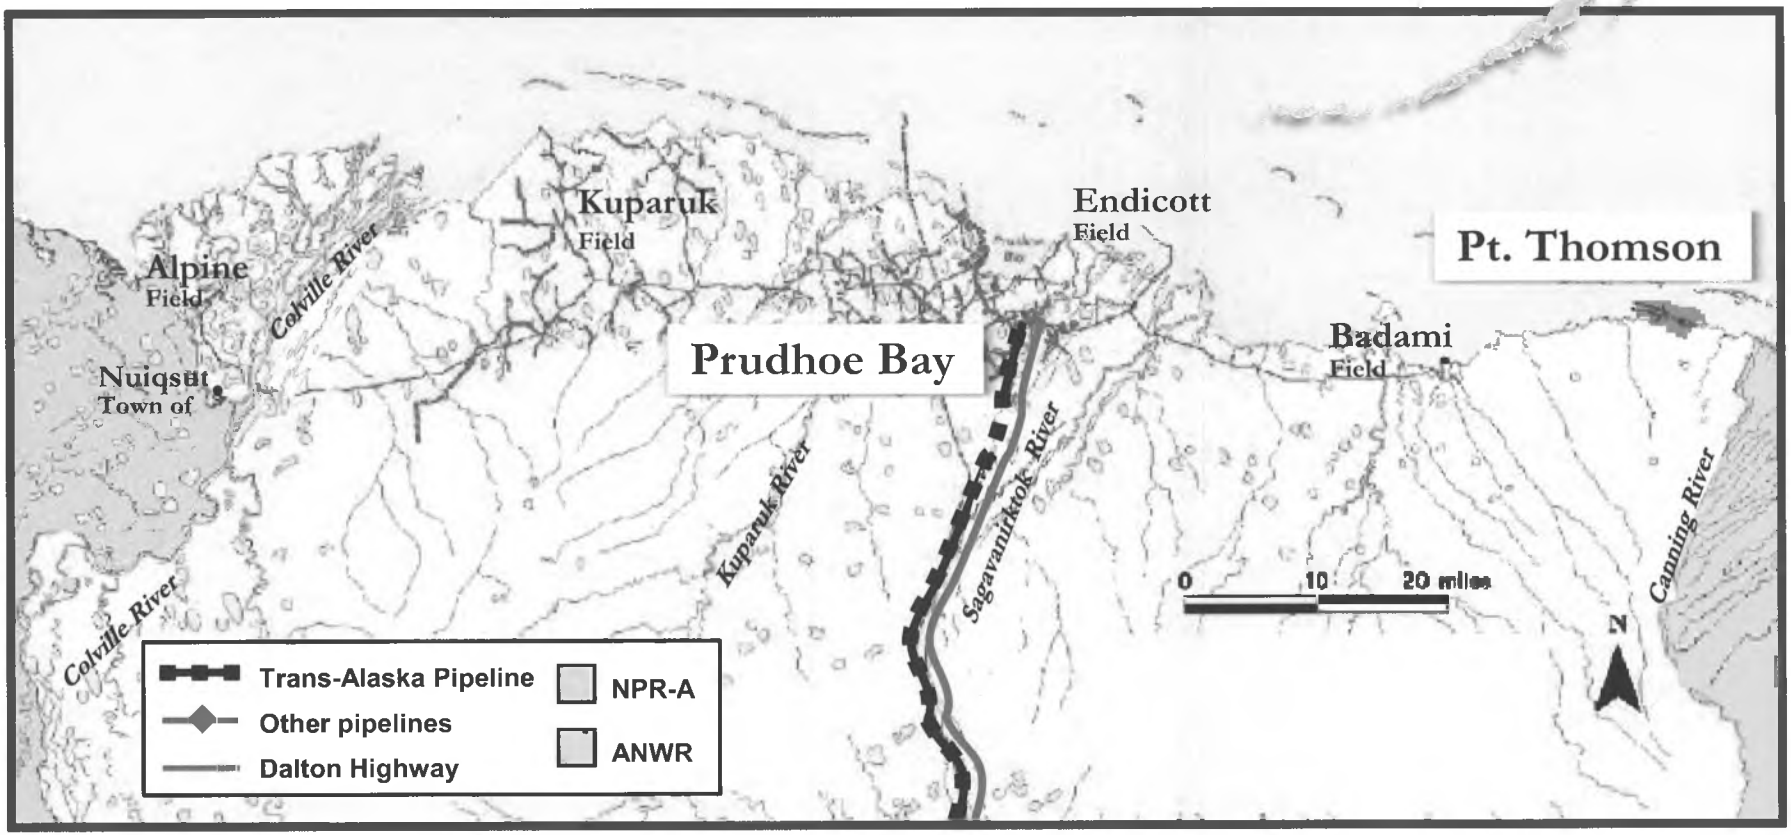
II. Long-Standing Goals Related to Point Thomson

III. How *the* Settlement Advances Alaska's Interests

IV. Components *of the* Agreement

PT

BACKGROUND



BACKGROUND

About Point Thomson

- Point Thomson (PT) is located approximately 60 miles east of Prudhoe Bay and is adjacent to the Arctic National Wildlife Refuge (ANWR)
- The first leases were acquired in 1965; oil discovered in 1975; gas discovered in 1977
- The PT unit formed in 1977
- The PT unit contains 38 state leases on approximately 93,000 acres of state land
- PT contains about 8TCF of gas and hundreds of millions of barrels of oil
- PT has ~ 25% of known North Slope gas reserves
- PT unit has a massive Thomson Sands reservoir, a thin oil rim, and smaller Brookian oil accumulations
- The PT reservoir is a high-pressure retrograde condensate and natural gas reservoir that presents development challenges

About the Litigation

- In 2005, DNR defaulted the PT unit for lack of development
- In November 2006, DNR terminated the unit when the Producers failed to cure the default
- The Producers appealed to superior court; in December 2007, the court remanded the unit termination decision to DNR
- In April 2008, DNR rejected a new plan of development and again terminated the unit
- The Producers appealed to superior court, which ruled that DNR erred in terminating the unit
- The Alaska Supreme Court granted the State's Petition for Review, which halted the current superior court litigation – final court resolution is years away

LONG-STANDING GOALS RELATED *to* POINT THOMSON

State of Alaska's Goal for Point Thomson:

Advance the State of Alaska's Strategic Interests

<u>For years the State of Alaska has focused on these common goals related to PT:</u>

- Begin producing PT hydrocarbons into TAPS—*no more warehousing*
- Keep development and production moving forward
- Incentivize and lay out clear path for full-field development
- Ensure significant consequences if the Producers fail to meet commitments
- Encourage commercialization of North Slope gas
- Create increased employment and economic opportunities for Alaskans

How *the* Settlement Advances Alaska's Interests

PT

- Creates momentum on production and development
- Creates a near-term commitment of production into TAPS and increasing TAPS throughput
- Ends the warehousing of state resources
- Provides the quickest way to move PT into production by a certain date
- Opens the Eastern North Slope to new development opportunities by adding infrastructure and a 70,000 bpd common carrier pipeline connecting to TAPS ✓
- Incentivizes and lays out a clear path and alternatives for full-field development, each of which will require billions of dollars in investment if pursued
- Generates significant investment in Alaska, which will create increased employment and economic activity for Alaskans: strong Alaska hire provision
- Establishes significant consequences if near-term or longer-term development is not pursued
- Increases competition on the North Slope
- Provides potential for significant gas volumes for in-state use no later than 2019
- Positions North Slope gas for a large-scale gas pipeline project
  - Near term work on liquids production undertaken simultaneously with gas commercialization efforts
  - Liquids production work commitments are a pre-investment for North Slope gas commercialization
  - Ends the cloud of litigation over PT
  - Catalyst for alignment among the Producers and TransCanada
- Requires a commitment to develop a separate oil reservoir within PT
- Improves technical and geologic understanding of the complicated PT reservoir to help determine the best way to maximize state resources
- Animating principle: "earn your acreage" – the more work, more commitment, more investment, and more production that occur, the more PT acreage companies will retain

PT COMPONENTS *of the* SETTLEMENT

I. Initial Production System (IPS)

II. Overview of Expanded Development Alternatives

A. ALTERNATIVE A:

Major Gas Sale

B. ALTERNATIVE B:

Expanded Liquids Production into TAPS

C. ALTERNATIVE C:

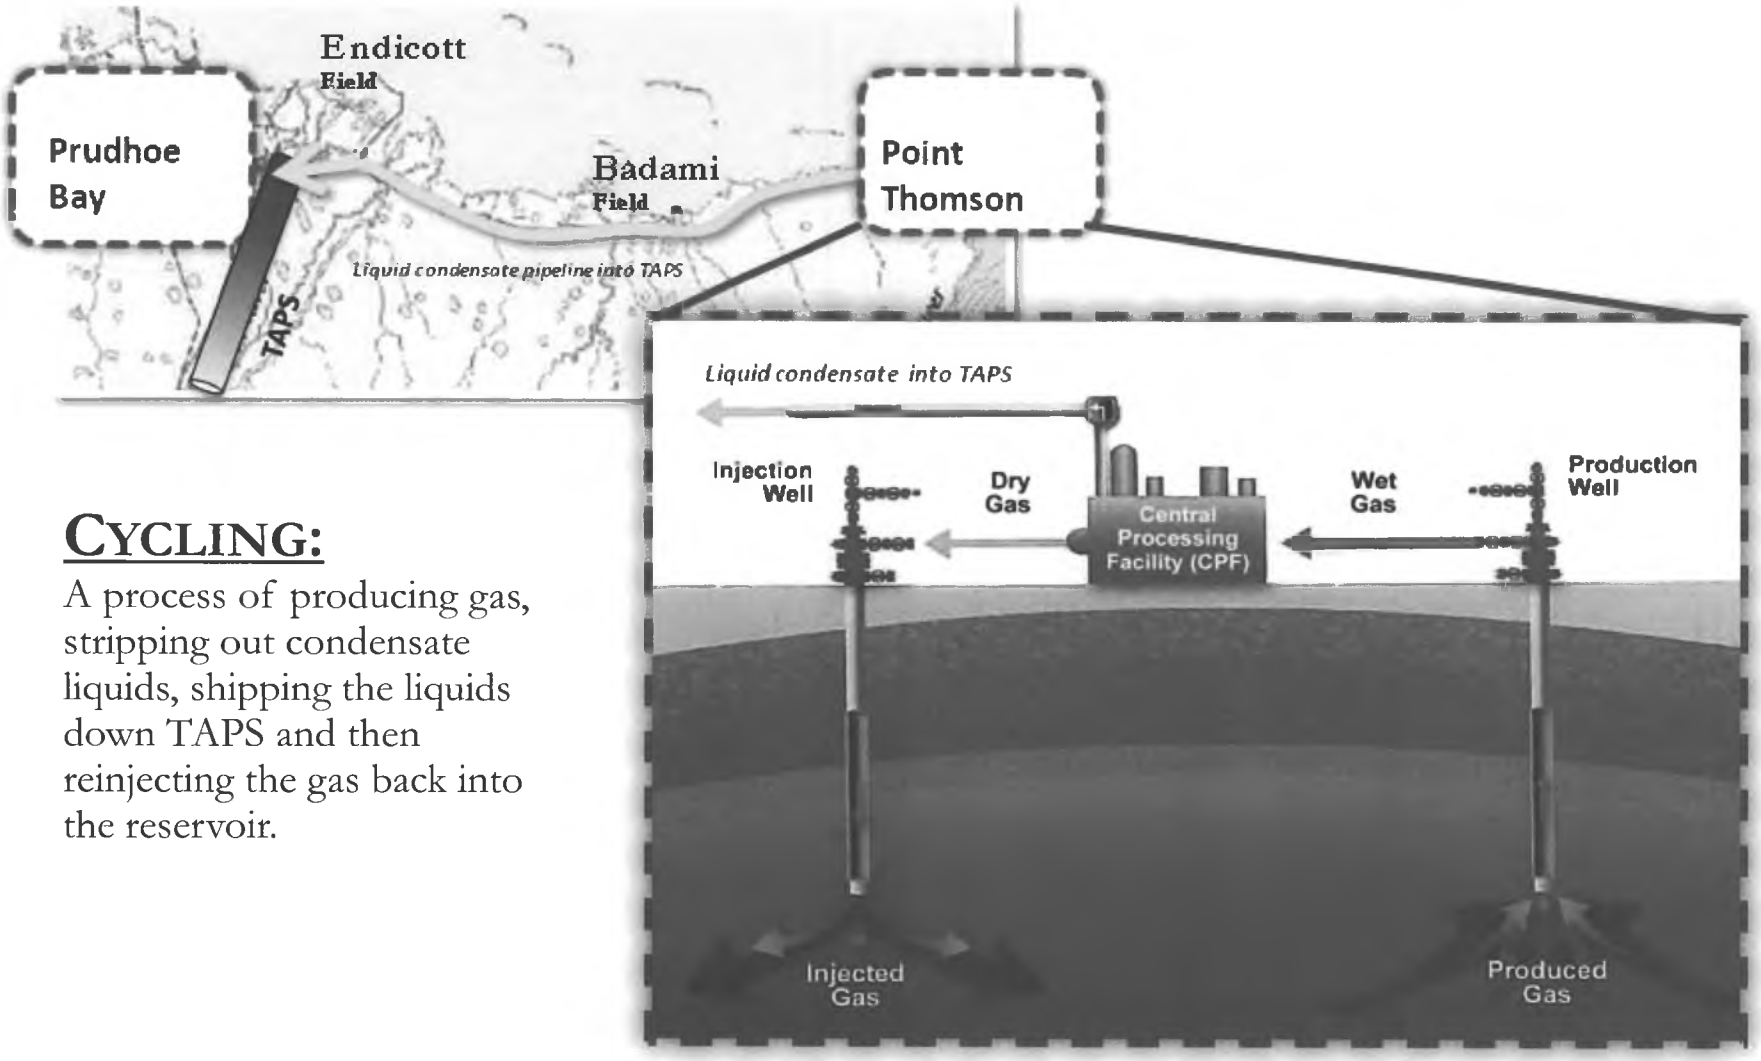
Expanded Liquids Production into TAPS, Enhanced Prudhoe Bay Recovery, and Gas for In-State Use

III. Consequences and Incentives Related to Development Path Taken

INITIAL PRODUCTION SYSTEM
- COMMITMENTS *and* TIMELINES -

- Producers will work together to complete the Initial Production System (IPS), will produce ~10kBPD of liquid gas condensates and cycle ~200 mm CFD
- To install the IPS, the Producers will complete the following work commitments:
  - Drill PT 15 & 16 wells from the central pad (completed); world-class wells in a remote location
  - Construct facilities and install 70k BPD liquids, common carrier pipeline to TAPS
  - Put PT 15 & 16 on production by end of 2015-16 winter season utilizing IPS
    - Original, agreed-upon timeline was pushed back one year because of federal permitting delays
  - Drill west pad well by end of 2016-17 winter season
  - Permit two additional wells and the east pad
- IPS installs infrastructure necessary for full-field development and will provide critical information for the next phase of development
- Detailed work schedule incorporated into the agreement (see slide 11)
- DNR technical review confirmed reservoir complexity
- If the IPS is abandoned, acreage automatically contracts from the unit and is returned to the state
- Unfavorable economics/ROI of IPS cannot serve as an excuse for non-performance
- Once production starts, limited acreage is secured consistent with state law
- IPS development proceeds in parallel with gas commercialization work

PT INITIAL PRODUCTION SYSTEM
- OVERVIEW *of* CYCLING -

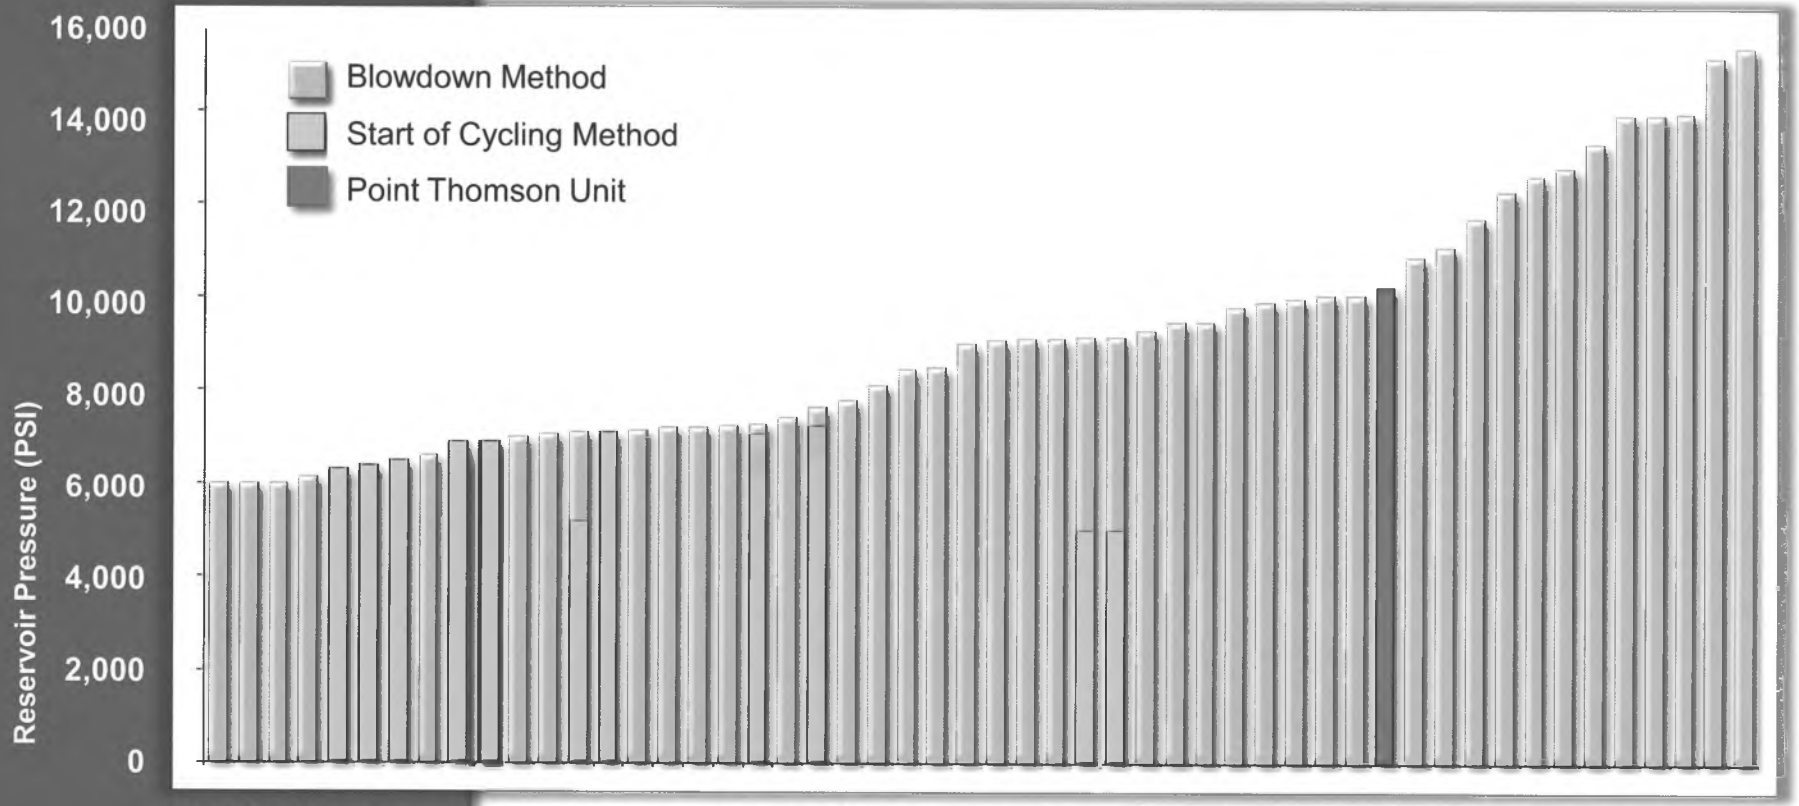


CYCLING:

A process of producing gas, stripping out condensate liquids, shipping the liquids down TAPS and then reinjecting the gas back into the reservoir.

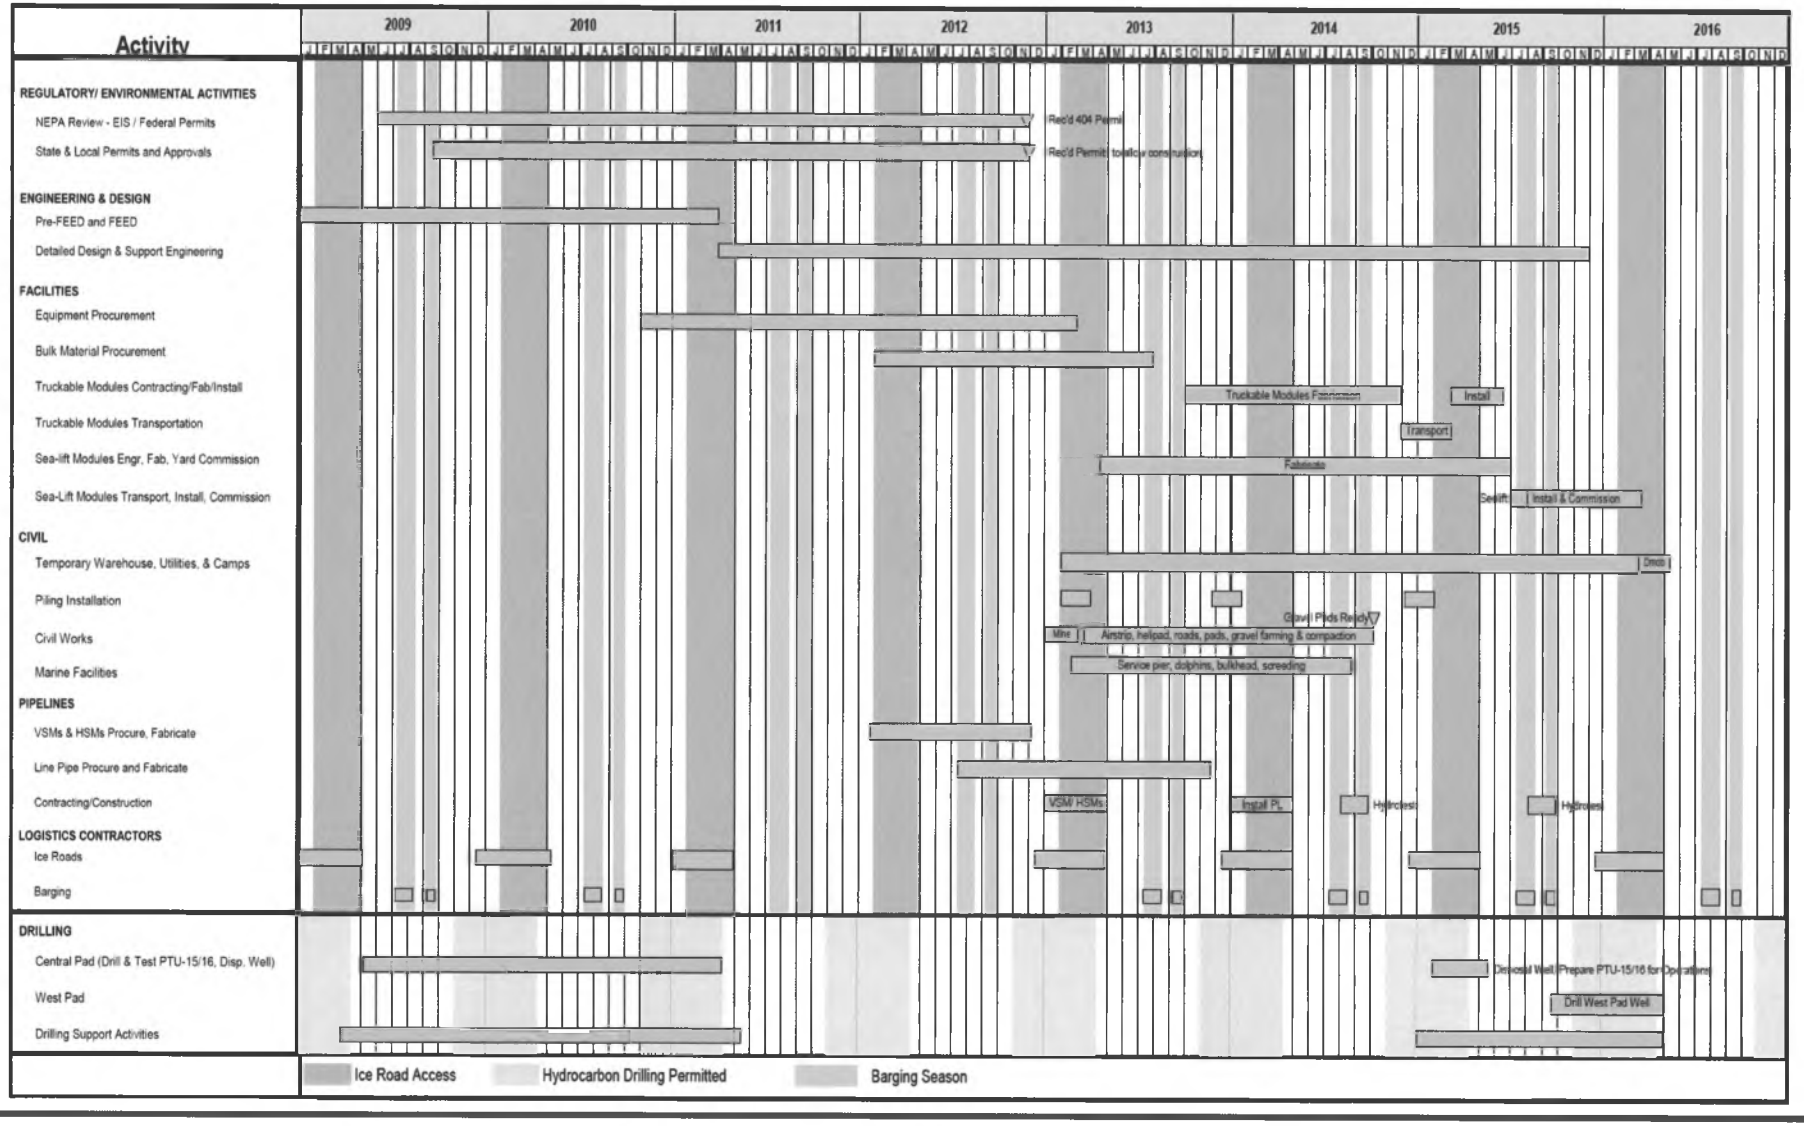
INITIAL PRODUCTION SYSTEM
- CYCLING *at* HIGH-PRESSURE -

Comparison *of* World-Wide Gas–Condensate Reservoirs



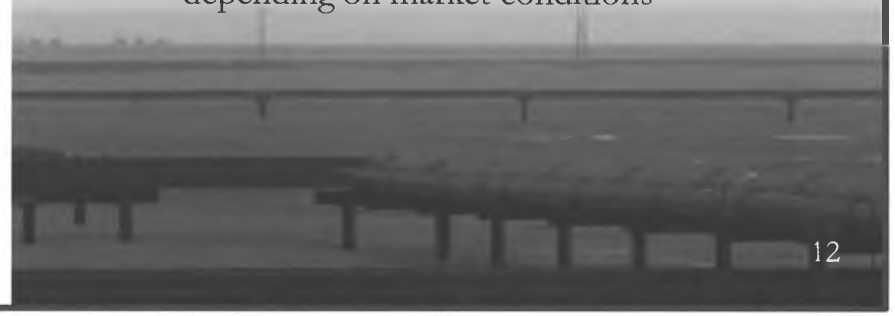
- There are no retrograde gas condensate reservoir cycling projects similar to Point Thomson (~10,200 psi), although there are a few oil and gas reservoirs in the world that are in production at a higher pressure
- For comparison, Prudhoe Bay gas is at ~3500 PSI, although this is not a condensate reservoir

IPS Work Schedule



PT Overview of Expanded Development Alternatives

- In addition to the IPS production commitments and timeline, the settlement creates pathways, incentives, and benchmarks for full-field development of the PT reservoir – *critical component of the settlement*
- Once the IPS is on production, there are three alternatives to full-field development:
  A. Major Gas Sale
  B. Expanded Liquid Production into TAPS
  C. Expanded Liquid Production into TAPS, Enhanced Prudhoe Bay Recovery, and Gas for In-State Use
- All three alternatives:
  - Can be pursued individually or simultaneously
  - Will require billions of dollars of additional investment to complete
  - Can only fully secure additional PT acreage once expanded production of hydrocarbons begins
- If none of the three expanded development alternatives are sanctioned or committed to, then the Producers automatically lose significant PT acreage
- Producers must also commit to Brookian oil formation production by 2018 or lose Brookian acreage
- A primary goal of the expanded development alternatives is commercializing North Slope gas
- But other full-field development scenarios—Alternatives B and C—are also available
  - Provides flexibility for the future: markets are hard to predict
  - State's resources can be maximized depending on market conditions



PT

ALTERNATIVE A:
- MAJOR GAS SALE -

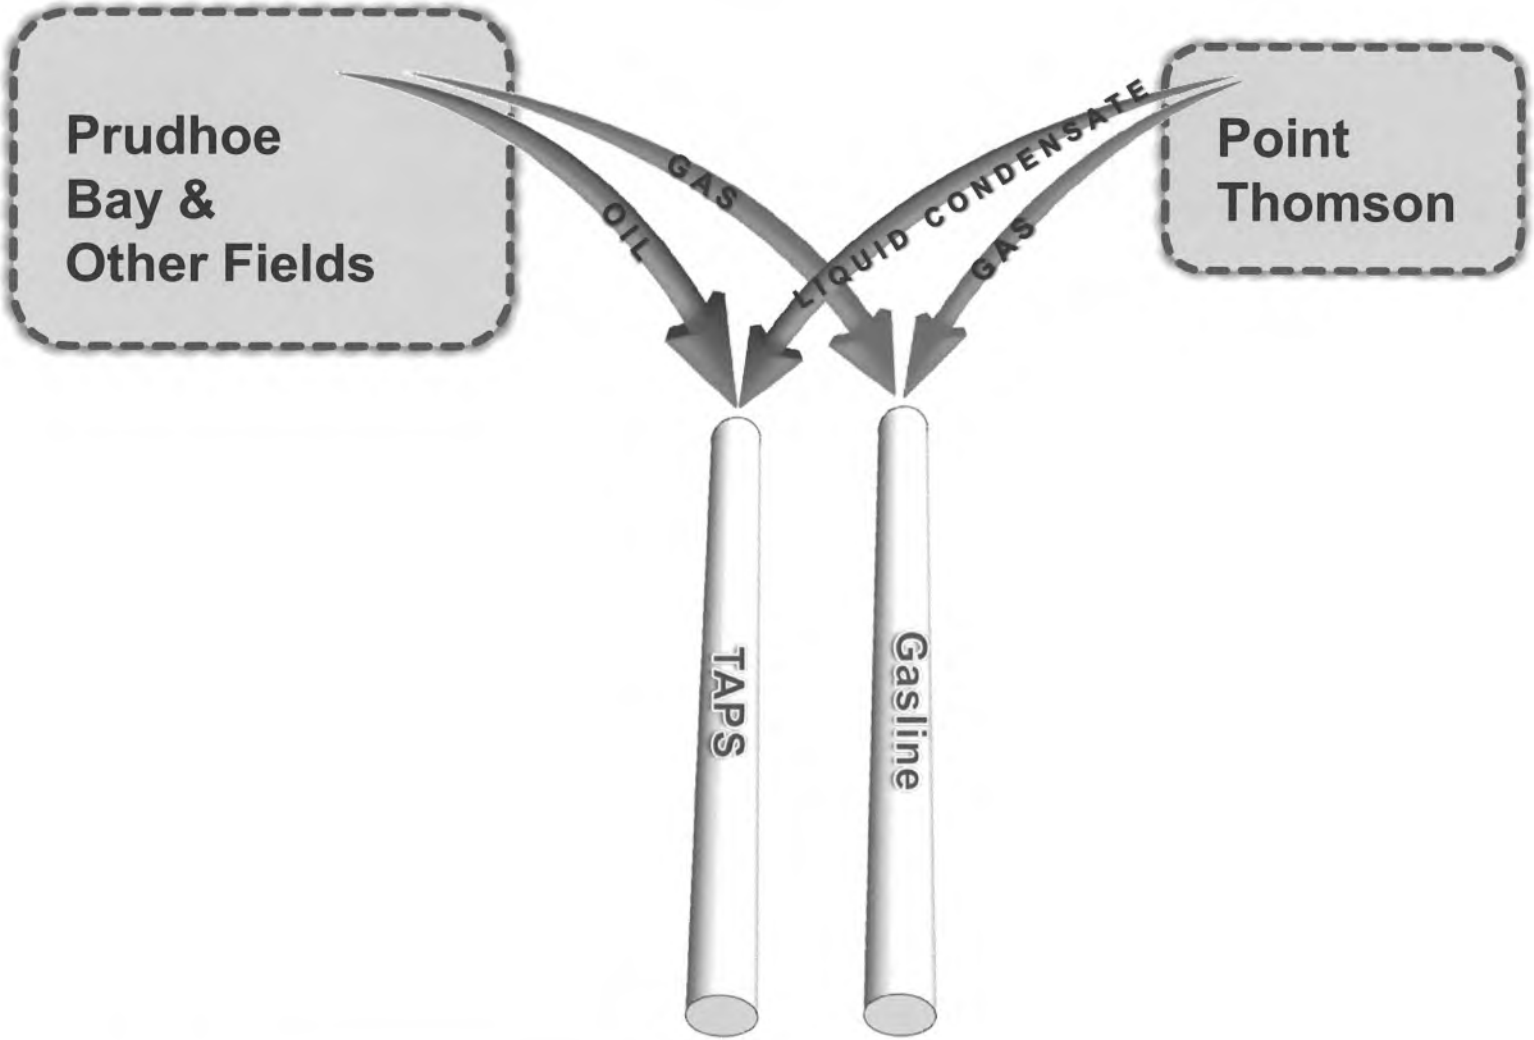
A. ALTERNATIVE A:
Major Gas Sale

B. ALTERNATIVE B:
Expanded Liquids Production into TAPS

C. ALTERNATIVE C:
Expanded Liquids Production into TAPS, Enhanced Prudhoe Bay Recovery, and Gas for In-State Use

- A primary goal of this settlement is to incentivize commercialization of North Slope gas/Major Gas Sale (MGS)
  - MGS must exceed 500 million cubic feet/d on the North Slope
  - Provides flexibility to allow different MGS scenarios
- Work begins immediately on dual spending for IPS and MGS/LNG
- There are two windows to "sanction" a MGS: (1) from present to 2016 and (2) from 2016 to 2019
  - "Sanction" means that all required state and federal gas line permits have been issued and the pipeline sponsors have secured all necessary financing and received full corporate approval to proceed with pipeline construction
  - Getting to a sanctioned decision will likely require investing hundreds of millions/billions of dollars
- MGS production makes gas available for in-state use
- If a MGS is not sanctioned by June 2016, the Producers must begin engineering & permitting to expand PT production either through Alternative B or C
- Once MGS is sanctioned, the Producers will temporarily retain most of the PT unit; but the PT unit will only be fully secured once gas is flowing into a gas pipeline
- If a MGS is not sanctioned by 2019, the Producers will have had to commit to Alternative B or Alternative C or lose significant acreage

ALTERNATIVE A:
- GENERAL DEPICTION -



ALTERNATIVE B:
- EXPANDED LIQUID PRODUCTION INTO TAPS -

A. **ALTERNATIVE A:**
Major Gas Sale

B. **ALTERNATIVE B:**
Expanded Liquids Production into TAPS

C. **ALTERNATIVE C:**
Expanded Liquids Production into TAPS, ~~Enhanced~~ Prudhoe Bay Recovery, and Gas for In-State Use

- Producers can expand the IPS cycling capacity and increase production to a minimum of approximately 30,000 bpd of liquids into TAPS
- Producers must commit to expanded cycling by 2019
- Production will likely exceed 30,000 bpd of liquids into TAPS—*lip of the funnel*
- Any expansion less than 30,000 bpd of liquids will result in certain acreage automatically contracting from the unit
- This alternative will likely result in the greatest long-term recovery of liquids from PT into TAPS, but PT gas will remain in the reservoir
- The enhanced understanding of the PT reservoir, gained from the IPS, will help determine the feasibility of this option
  - Will be influenced by factors such as condensate yield, reservoir connectivity and oil price forecasts
- Will require additional wells and larger gas processing and production facilities
- Once the Producers begin producing under this option, they will retain most of the unit acreage
- Producers can also pursue other alternatives simultaneously

PT

ALTERNATIVE C:

- EXPANDED LIQUID PRODUCTION INTO TAPS, ENHANCED PRUDHOE BAY RECOVERY, AND GAS FOR IN-STATE USE -

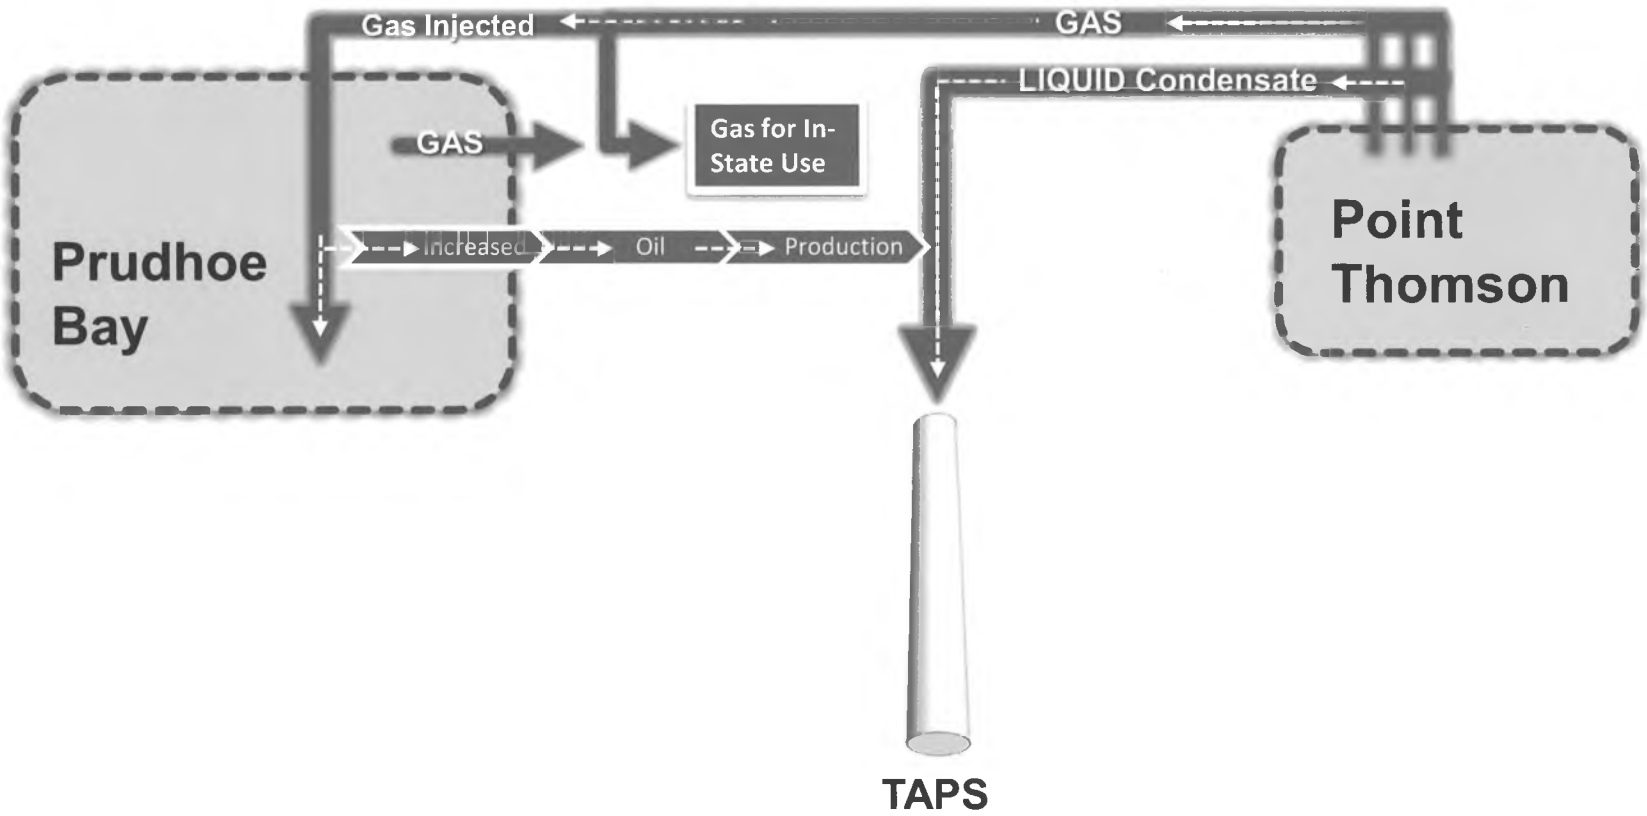
A. **ALTERNATIVE A:**
Major Gas Sale

B. **ALTERNATIVE B:**
Expanded Liquids Production into TAPS

C. **ALTERNATIVE C:**
Expanded Liquids Production into TAPS, Enhanced Prudhoe Bay Recovery, and Gas for In-State Use

- Requires complex reservoir integration between Prudhoe Bay and PT
  - PT dry gas produced, transported and injected into Prudhoe Bay
  - This will significantly increase oil production and enhanced oil recovery at Prudhoe Bay into TAPS
  - Includes significant liquids production from PT into TAPS
- Essentially a hybrid between Alternative A: MGS and Alternative B: Expanded Liquid Production
- Significantly increases TAPS throughput
- Major investment, infrastructure and hydrocarbon pre-positioning required for this alternative will facilitate North Slope gas commercialization
  - Completes installation of infrastructure, including PT gas pipeline to Prudhoe Bay and additional wells and production facilities
  - Prudhoe Bay becomes a central collection point for critical North Slope gas
- Alternative C also requires that significant volumes of gas be available for in-state use from Prudhoe Bay no later than 2019
- Once PT gas is transmitted to Prudhoe Bay, state Royalty-in-Kind (RIK) gas is made available for in-state use
- This provides the state with an opportunity to plan for large-scale, in-state gas-use projects, e.g. GTL, methanol, gas sales, etc.
- This alternative could take place prior to or in conjunction with Alternative A or B

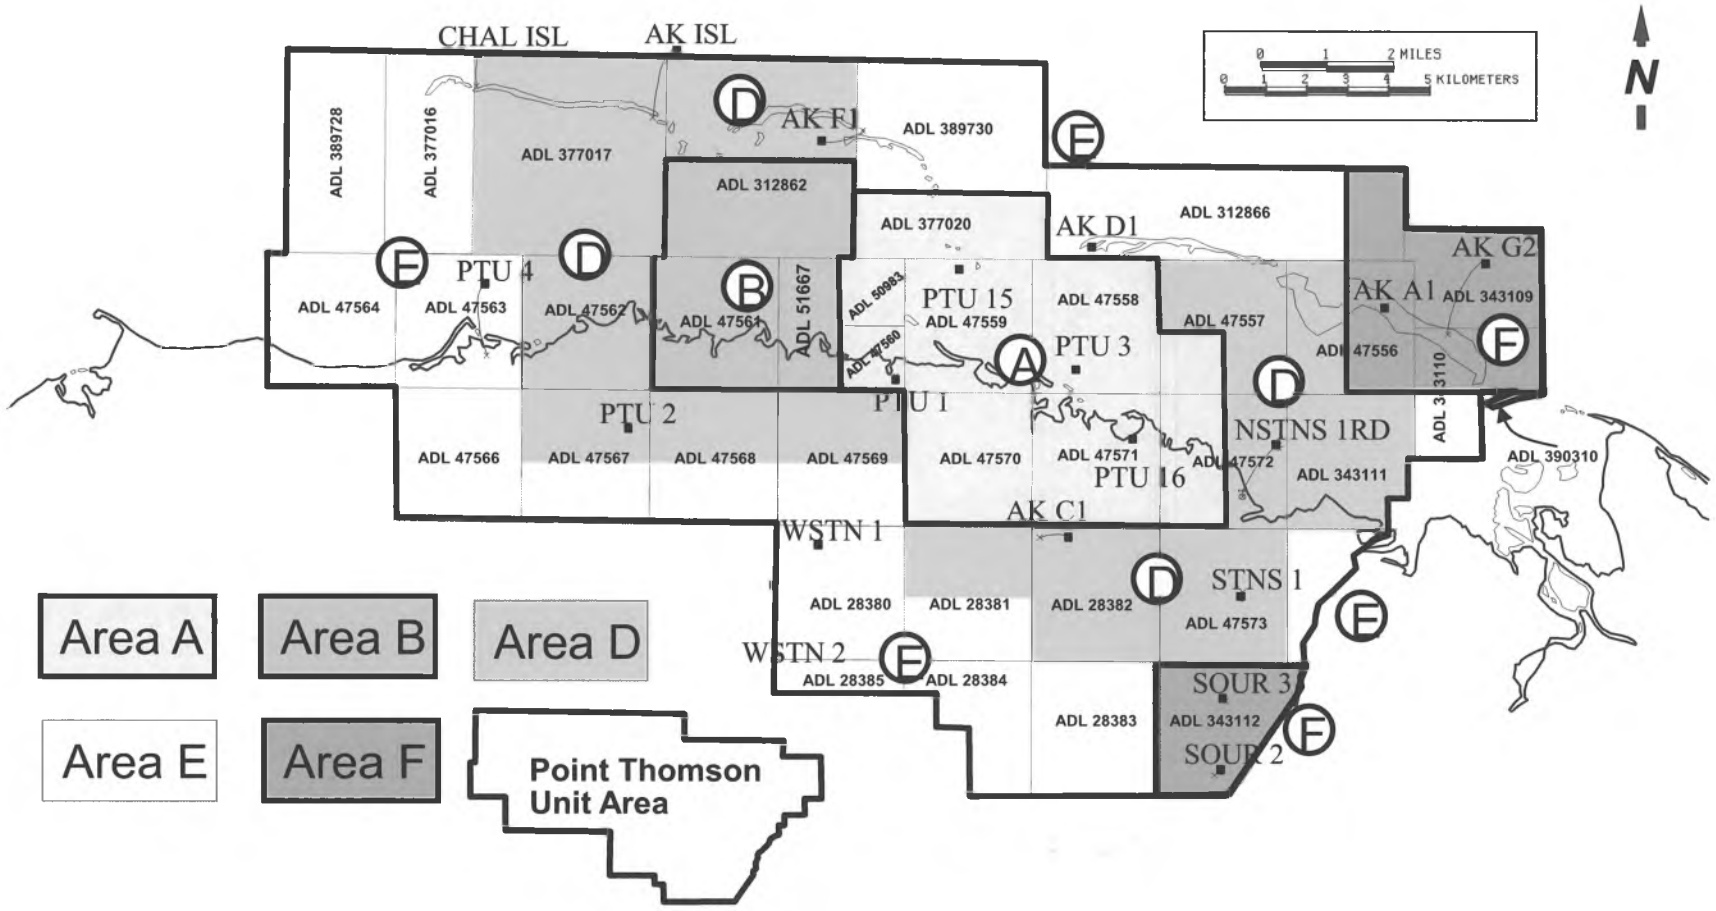
PT OVERVIEW *of* ALTERNATIVE C



PT Consequences & Incentives Related *to* Development Path

- The settlement centers on one animating principle: Producers must *earn* acreage – more work, more commitments, more production secures more state acreage
- Key Goal: Keep parties focused on near-term production (IPS) and longer-term hydrocarbon production expansion (full-field development)
  - Settlement seeks to anticipate contingencies
  - Provides incentives for work completed
  - Provides for fair and expeditious dispute resolution
- The settlement also has severe consequences if the Producers fail to develop or expand development
- If Producers abandon the IPS/fail to keep the provisional work schedule, there will be a significant contraction of PT acreage by 2015
- If there is no IPS production and a MGS is not sanctioned by 2019, then the unit terminates and all acreage automatically returns to the state *without appeal*
  - This includes leases with capable wells
- If the Producers do not commit to expand production beyond the IPS, or do not sanction a MGS, then significant acreage contracts from the unit and automatically returns to the state *without appeal*
- If the Producers commit to expanded development, or sanction a MGS by 2019, but do not follow through, the unit will contract to the area in production
- If there is no commitment to Brookian oil formation production, then Brookian acreage automatically contracts in 2018 and returns to the state *without appeal*
- *"Without appeal"* is used throughout the agreement—it means that the Producers waive their right to appeal automatic termination of their leases to any tribunal in Alaska or the United States

POINT THOMSON UNIT



STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

SEAN PARNELL, GOVERNOR

550 WEST 7TH AVENUE, SUITE 1400
ANCHORAGE, ALASKA 99501-3650

Senator Hollis French
State Capitol, Rm. 417
Juneau, AK 99801

April 27, 2012

RE: Senate Judiciary Point Thomson Settlement Hearing

Dear Senator French:

I regret that I am unable to attend today's Point Thomson hearing. I am currently in Washington, D.C. meeting with senior executives and legislative branch officials to provide updates on Alaska gas opportunities and recent positive developments regarding commercializing North Slope gas. Another key focus of my meetings in Washington has been the Point Thomson EIS process. We are here to underscore the importance of ensuring that the federal government does not continue to delay the permitting process.

My discussions in Washington complement the conversations, meetings and outreach that my office has engaged in over the past several months, including my active engagement with private sector and government officials from Asia to educate them on the benefits and comparative advantages of Alaska natural gas.

We are entering a new era in the United States, with our nation now on the path to becoming the leading hydrocarbon resource producer. A window of opportunity has also opened for significantly increasing LNG exports to Asia. Demand for gas along the Pacific Rim is strong and there is a keen interest in Alaska gas. And, for the first time, the state's three producers on the North Slope are aligned with a state backed effort to move forward to commercialize North Slope gas and one of Alaska's largest gas fields is now moving forward with development after four decades of sitting idle.

We must be part of this new era. We have a massive hydrocarbon resource basin and are poised to advance a large-scale gas line that would benefit all Alaskans. But this window of opportunity will not be open for long and Point Thomson—which holds 25% of known gas reserves on the North Slope— plays a critical role. Just as the settlement agreement places the Point Thomson Working Interest Owners on a clock to move forward with timely development, the State of Alaska is also on a clock—we cannot afford another decade of this important hydrocarbon basin sitting idle.

Since we announced the Point Thomson settlement on March 30, 2012, we have sought to explain the details of the settlement to a variety of audiences and have been transparent in answering questions and clearing up misunderstandings about its provisions. I have been all over the state

doing this with community groups, Chambers of Commerce, editorial boards, and others. The Point Thomson settlement is complex and as I have stated numerous times, it is not perfect.

Like all settlements, it entails compromise and risk. It is important to note that in this case, there was significant risk to the state in staying the course on litigation that literally had no end in sight.

My Department is eager to answer all questions about this settlement agreement.

Sincerely,

Daniel S. Sullivan
Commissioner
Alaska Department of Natural Resources

STATE OF ALASKA

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

Sean Parnell, Governor

VIA FAX TO (907) 278-7001 & 1ST CLASS MAIL

William M. Walker
Craig Richards
Walker & Levesque, LLC
731 N Street
Anchorage, AK 99501

Re: Point Thomson Unit Settlement Agreement

Dear Mr. Walker and Mr. Richards:

I am in receipt of your letter to Department of Natural Resources Commissioner Dan Sullivan dated April 17, 2012 requesting reconsideration of the State of Alaska's entry into the March 29, 2012 settlement agreement with the Point Thomson working interest owners (the "Point Thomson Settlement"). Settlements entered into by the State of Alaska are not subject to administrative challenge, by reconsideration or otherwise. As the Attorney General for the State of Alaska, I have broad authority to enter into any settlement of litigation on behalf of the State of Alaska that I believe in the exercise of my discretion is in the best interests of the State. *See, e.g., Public Defender Agency v. Superior Court*, 534 P.2d 947, 950-51 (Alaska 1975). The exercise of this authority is not subject to administrative review.

Commissioner Sullivan's signature to the Point Thomson Settlement and his findings in paragraph 5.8, recognize, among other things, that the Agreement addresses matters within the Department of Natural Resources' legislatively delegated authority and administrative expertise, and resolves disputed matters that arose as part of the agency's oversight of the Point Thomson Unit Agreement and the leases that encompass the unit. These findings do not give rise to a right to challenge or seek reconsideration of a settlement agreement entered into by the State of Alaska. The Point Thomson Settlement has been executed and all related litigation has been dismissed.

Thank you for your attention.

Sincerely,

Michael C. Geraghty
Attorney General

cc: Daniel Sullivan, Commissioner, Department of Natural Resources

CIRRICULUM VITA

QUALIFICATIONS

- Proven leadership skills and consensus building management style.
- Internationally recognized leader in energy and science policy.
- Senior executive and geologist with 23 years of Alaskan experience.
- Wide-ranging industry, state and federal government experience.
- Experienced at effectively communicating complex concepts to audiences ranging from grade school students to Governors, Congress, Cabinet Members and the President.

EDUCATION

Ph.D. Geology, University of Alaska Fairbanks, 1994.
Fields of Specialization: sedimentology, clastic depositional environments, surface and subsurface sequence analysis and sandstone petrography.
Dissertation: *Evolution of Late Cretaceous - Early Tertiary Depositional Sequences in the Beaufort-Mackenzie Basin, Canada.*
GPA 4.0

M.S. Geology, University of Wisconsin-Madison, 1981.
Fields of Specialization: stratigraphy, paleoecology, sedimentology.
Thesis: *The Stratigraphy and Sedimentology of the Upper Wonewoc Formation.*
Honors: Vilas Fellowship, Twenhofel Scholarship.

B.S. Geology and Geophysics, University of Wisconsin-Madison, 1977.
Honors: Sophomore Honors, Senior Honors Thesis, Graduation with Honors.

Military: Squadron Officers School
Air Command and Staff
Air War College
Air Force Pilot Training
Air Force Air Intelligence School

PROFESSIONAL LICENSES

Certified Professional Geologist – American Institute of Professional Geologists
Certified Petroleum Geologist – American Association of Petroleum Geologists
Licensed Geologist – State of Alaska
Commercial Pilot, land and sea, single and multiengine instrument airplane

WORK HISTORY

2011 Vice Chancellor for Research – University of Alaska Fairbanks

Oversee administration of the university's $123-million-per-year research enterprise and supervises the university's standalone research institutes.

2009-2010 Alaska Natural Gas Inducement Act (AGIA) Coordinator

Served as the first Alaska Natural Gas Inducement Act Coordinator, a new position created under state statute and appointed by the governor. Responsible for building a new organization for overseeing and coordinating state agencies engaged in efforts to build a large diameter natural gas pipeline from the North Slope of Alaska to North American markets.

2006-2009 Director of the United States Geologic Survey

Appointed by President and confirmed by the Senate as the 14th Director of the United States Geological Survey (USGS). Managed the nation's largest water, earth, and biological science and civilian mapping agency. Responsible for nearly 9000 employees in 400 locations worldwide, with a total annual budget of more than $1.4 billion. Some key accomplishments include revitalizing the USGS climate change and the national civilian mapping programs, implementing a new ten year interdisciplinary science strategy throughout the agency, advancing the development of the Landsat 8 (LDCM)) satellite and releasing the entire 35 year Landsat data library at no charge to the public, implementing a new regional structure for the USGS, building strong partnerships with state and national organizations and agencies, and significantly increasing the USGS budget in a very challenged budget environment. Testified before Congress on many issues including water quality, geothermal energy, climate change, satellite operations, and the Department of the Interior budget. Served on many national and international science and environmental committees.

2001-2005 State of Alaska Division of Oil and Gas Director/State Geologist/ Director of the State Division of Geological and Geophysical Surveys

Appointed by Governors Knowles and Murkowski as the Director of the Division of Oil and Gas. Managed the State of Alaska's oil and gas resources. The division's responsibilities include resource evaluation, leasing, unitization, permitting, royalty accounting, auditing, sale of royalty oil and gas, permitting and inspecting. Managed a professional staff of approximately 90 professionals including geoscientists, engineers, land managers, accountants, commercial analysts and auditors. For FY 2005 petroleum revenue from assets managed by the division produced $1.9 billion in royalties and lease sale bonuses and rents. Restructured the organization and nearly doubled the division's budget and staffing. This resulted in Alaska receiving significantly more income from its oil and gas resources, and a record amount of acreage under lease. Worked closely with the Alaska Legislature to develop and pass numerous oil and gas leasing, incentive and royalty modification statutes. Effectively managed relations with the public, industry, environmental organizations, native regional and village corporations, federal and local governments. Presented the concept of a North Slope natural gas hydrate evaluation program to the U.S. Senate. The proposal was strongly supported by the Alaska delegation and the Senate Energy and Natural Resources Committee and was incorporated into law with an authorization for $70 million.

In addition to being the director of the Division of Oil and Gas, in 2005 I also served as state geologist and director of the Division of Geological and Geophysical Survey (the state survey). In that role I managed the state's geological and geophysical research organization of 38 scientists and support staff. The state survey generates, analyzes and interprets data on geologic resources and natural conditions; maps and inventories mineral and energy resources on state land for use by government, private industry, scientists, educators and the public.

1998-2001 ARCO Alaska, Inc./Phillips Alaska Inc.
Sr. Staff Geologist - Exploration

Developed Alaskan oil and gas exploration prospects for ARCO/Phillips, resulting in many lease purchases, wells drilled and three oil discoveries, two of which are producing today. Led and participated in North Slope geologic field programs.

1990-1998 **State of Alaska Division of Oil and Gas**
Petroleum Geologist II

Recognized expert on state oil and gas statutes, regulations and incentive programs. Hearing officer for the division. Authored numerous DNR commissioner and director decisions for discovery royalty, economic incentive credit, extended confidentiality and royalty reduction applications. Wrote regulations for and provided significant input on many key oil and gas bills before the legislature. Led and participated in geologic field programs. Performed pre-sale evaluation for oil and gas lease sales for the State of Alaska. Evaluated the oil and gas potential of federal onshore and offshore acreage for State of Alaska and provided expert testimony to U.S. Senate on ANWR. Managed statewide oil and gas evaluation of federal lands available for final state selection. My recommendations resulted in the state selecting over 3 million acres of additional land. Completed geological evaluations for State of Alaska in support of unitization, plan of development approval, and/or tract allocation factors for most North Slope oil fields.

1987-1990 **University of Alaska Fairbanks**
Ph.D. Student and Intern with SOA Division of Oil and Gas

1985-1987 **ARCO Alaska, Inc.**
Development Geologist

Development geologist responsible for two of the three production segments of the Kuparuk River oil field during the early stages of production. Created subsurface maps, developed drilling targets and extension exploration oil prospects, evaluated well results and seismic information.

1983-1985 **ARCO Alaska, Inc.**
Exploration Geologist

Developed exploration prospects in the Beaufort Sea. Well site geologist for wells on the North Slope, Beaufort Sea, Navarin Basin and Norton Sound. Led and participated in geologic field programs.

1981-1983 **ARCO Oil and Gas, Lafayette, LA**
Extension Exploration Geologist

Developed and evaluated extension exploration prospects and infield development wells in offshore and onshore Louisiana. Evaluated oil field properties for acquisition.

1978 **Chevron USA, New Orleans, LA**
Exploration Geologist

Performed regional subsurface geologic assessment of a large portion of the Louisiana Gulf of Mexico shelf.

1977-2003 **Lt. - Lt. Colonel, USAFR**

Pilot and Senior Intelligence Officer in the Air National Guard and Air Force Reserve

BILL WALKER

2234 Kissee Court Anchorage, AK 99517

(907) 223-8530

E-mail: bill-wwa@ak.net

April 18, 2012

To Whom it May Concern:

On April 17, 2012, I moved for Commissioner Sullivan to reconsider his decision to enter into the Point Thomson settlement. The attached letter articulates the grounds for my appeal, which includes:

- No public notice or opportunity for public comment was provided in advance of the settlement being signed and announced.

- The agreement allows the working interest owners to retain development rights over the unit with no further work commitments.

    - One option allows the owners to maintain at least twenty-two of the leases indefinitely if they complete the 10,000 bbl/d gas cycling project that they had already made a firm commitment to construct in 2009 for the right to develop two leases.

    - A second option allows the owners to maintain the unit at least until the next decade, if they do no work at Point Thomson but permit without committing to construct a bullet line out of Prudhoe Bay. Since Prudhoe Bay has enough gas to fuel a bullet line for over a century, it does not make sense that such a project would excuse development at Point Thomson.

- Under the settlement, if the owners decide to develop the field, they have the discretion to blow down the reservoir without first undertaking a gas cycling project. The Department has previously concluded that depletion of the reservoir in that manner would result in the waste of approximately half a billion barrels of oil and condensates.

- The settlement purports to abrogate many of Commissioner Sullivan's statutory and regulatory obligations relating to field oversight, which the Alaska Supreme Court has held the Department may not do by contractual agreement.

- The Commissioner cannot agree to Exxon's acquisition of Chevron's interest in Point Thomson without further public process and findings.

- The agreement must be approved by the Legislature to be valid under Alaska law.

Consequently I have asked that the settlement be submitted to the Legislature for approval, with all the public process that necessarily follows, and that our Supreme Court has indicated is necessary. In the meantime, I requested that Commissioner Sullivan stay deciding

reconsideration until such time as correspondence relating to the deal is made public and the Department publishes an explanation of the agreement sufficient for the public to understand its terms. Being well acquainted with the Point Thomson Unit Agreement, it appears that the State has given up far more than it would have, had it lost the lawsuit.

I encourage all Alaskans concerned about the manner in which the settlement was entered into, its terms or its legality, to submit written comments to the Commissioner by Monday, May 7th (at which time public comment will close if the Commissioner does not extend the deadline).

DEPARTMENT OF
NATURAL RESOURCES

APR 17 2012

COMMISSIONER'S OFFICE
ANCHORAGE

April 17, 2012

VIA PERSONAL SERVICE AND E-MAIL

Commissioner Dan Sullivan
Department of Natural Resources
State of Alaska
550 W. 7th Ave., Suite 1400
Anchorage, Alaska 99501
dnr.appeals@alaska.gov

Re: Reconsideration of the Point Thomson Settlement Agreement;
Former Superior Court Case No.: 3 AN-06-13751 CI (consolidated);
Former Supreme Court Case No.: S-13730 (consolidated);
Our File No.: 449-1.

Dear Commissioner Sullivan:

On March 29, 2012, the attorney general ("Attorney General") and commissioner ("Commissioner") of the Department of Natural Resources ("Department"), on behalf of the State of Alaska ("State") and acting through the Department, and the Point Thomson Unit ("PTU") working interest owners (each an "Owner" or "WIO" and collectively "Owner Group" or "WIOs"), finalized a settlement agreement ("Settlement" or "Agreement") relating to the Point Thomson Unit ("PTU").

The Settlement was the basis to dismiss ongoing litigation related to the Department's efforts to terminate the PTU. The parties before the Alaska Supreme Court, in Case No. S-13730 (consolidated), signed the Joint Stipulation for Dismissal of Petition for Review on March 27, 28 and 29, 2012.[1] That stipulation by stamp of the Court was filed at 3:20 p.m. on March 29, 2012 and by The Order Dismissing Petition for Review was granted on the same date. Similarly, the parties before the Alaska Superior Court, in Case No. 3AN-06-13751 CI (consolidated), filed a Joint Stipulation for Dismissal of Administrative Appeal on March 29, 2012, also granted by [Proposed] Order Dismissing Administrative Appeal on the same date by the Honorable Brian

---

[1] Susan Orlansky of Feldman Orlansky & Sanders signed on behalf of BP Exploration (Alaska), Inc. ("BP"), and Stephen M. Ellis of Delaney Wiles, Inc. on behalf of Chevron U.S.A. Inc. ("Chevron") signed on March 27, 2012; Spencer C. Sneed of Dorsey & Whitney LLP on behalf of ConocoPhillips Alaska, Inc. ("ConocoPhillips"), Barat M. LaPorte of Patton Boggs LLP on behalf of Exxon Mobil Corporation ("Exxon" or "Unit Operator"), David B. Rusk of David B. Ruskin, P.C. of Leede Operating Company, LLC ("Leede"), and Mathew T. Findley of Ashburn & Mason, P.C. on behalf of the State signed on March 29, 2012.

Clark, Superior Court Judge *pro tem*. That joint stipulation was signed by counsel for the parties on the same dates as the Joint Stipulation for Dismissal of Petition for Review before the Alaska Supreme Court. Also on March 29, 2012 the parties filed and were granted, by Judge Clark, a Joint Motion to Vacate February 11, 2010 Partial Stay; Request for Expedited Consideration, which had attached a copy of the Settlement signed by the parties on March 28 and 29, 2012.[2] The rushed nature of these dismissals is particularly concerning given Settlement ¶¶ 4.10.1 and 4.10.3.2 provided for vacating the cases in an orderly manner, within 10 days or so after execution of the Agreement. Yet it occurred in secret, by expedited motion, a day before the deal became public. Those pleading are attached as Exhibit 1.

On March 30, 2012 the Settlement was announced to the public via a press conference held by State Governor Sean Parnell and the Commissioner (audio file of the press conference attached as Exhibit 2), in which a letter dated March 30, 2012, signed by the respective Presidents of BP, Exxon and ConocoPhillips (Exhibit 3), announced a plan to mutually assess, in conjunction with the State and Alaska Gasline Inducement Act, AS 43.90 *et seq*. ("AGIA") licensee, a liquefied natural gas ("LNG") export project from South Central Alaska.

The Settlement broadly encompasses terms relevant to the future development of the PTU, Prudhoe Bay Unit ("PBU"), and an Alaska North Slope ("ANS") gas commercialization project. It purports to bring definitive resolution to such subjects as *inter alia*: (i) disputes as to the termination of the PTU and underlying leases; (ii) creation of participating areas within the PTU; (iii) the expansion and contraction of acreage into and out of the PTU; (iv) the plan of development ("POD") for the PTU; (v) certain terms in the event of a major gas sale; (vii) reinjection of PTU gas into the Prudhoe Bay Unit; (viii) the use of and accounting for the State's royalty gas out of the PTU and into the PBU after reinjection; (ix) the taxation of PTU gas; (x) advanced approval of reassignment of the WIOs interests in the PTU, presumably including Exxon's acquisition of Chevron's interests in the PTU; and (xi) the procedure for handling future disputes of these subjects.

As will be discussed further, upon initial review it does not appear to William M. Walker, a citizen taxpayer of the State ("Walker"),[3] that the substantive terms of the settlement are advantageous to the future development of the PTU or ANS gas commercialization efforts. Additionally, the Department and Owner Group have attempted to settle a host of issues associated with ANS development, but have done so without any of the public process, regulatory action, and legislative approvals contemplated by Alaska law. Settlement ¶ 5.8 provides that the Agreement constitutes a finding of the Commissioner. So although the authority of the State to enter into the Settlement, and the correct procedures the State must follow to do so, are disputed, it appears the proper vehicle for Walker to challenge the Settlement is as a request for reconsideration under 11 AAC 2.010(f). Consequently Walker asks the

---

[2] Attorney General Michael C. Geraghty signed on March 28, 2012; Commissioner Daniel S. Sullivan, Randy L. Broiler of Exxon, John C. Minge of BP, Trond-Erik Johansen of ConocoPhillips, and John G. Leede of Leede signed on March 29, 2012.

[3] Walker claims standing to bring this appeal, not only as a citizen taxpayer, but as a result of interest-injury, third-party, and any other form of standing recognized by the Alaska Supreme Court.

Commissioner to reconsider his decision to enter into the PTU Settlement as: (i) not in the best interests of the State; (ii) in contravention to State law and regulation; (iii) unconstitutional; and (iv) *ultra vires* without legislative approval. The specifics of Walker's points of appeal are detailed below.

Please serve any notice, decision or other correspondence to the following address:

Anchorage, Alaska 99501

I. The Settlement is Not in the Best Interests of the State of Alaska.

A. The State Has Not Previously and Should Not Now Enter into Bargains of This Magnitude With the Three Primary ANS Producers With No Public Process.

It is irrefutable that ANS oil production is dominated and will continue to be dominated in the coming decades by affiliates of ConocoPhillips, Exxon and BP.[4] Perhaps the most telling evidence of this phenomenon is that, even though TAPS has been in operation for three decades, there is only one independent shipper. It is equally clear that the same integrated producers expect to dominate ANS natural gas production when and if they concede to commercialization of that resource.[5] This dynamic has resulted in an unflattering history where the companies have used their market dominance to negotiate, or attempt to negotiate, large scale concessions from the State outside of a traditional competitive process that should otherwise be expected in dealings with a sovereign government. Some of the more notorious of those deals are: (i) the TAPS Settlement Methodology; (ii) renegotiation of the North Star leases; (iii) BP's attempted acquisition of Atlantic Richfield Company's Alaska's assets, resulting after Federal Trade Commission intervention in the Charter for Development of the ANS;[6] and (iv) the proposed Stranded Gas Development Act Contract negotiated by the Murkowski Administration.

But even these company specific deals pale in comparison to the Settlement in one material aspect. Never before has a deal of the magnitude of the Settlement been entered into by the State and ANS producers without public notice and the opportunity for public comment. It is simply unprecedented in the annals of Alaska history for the executive branch to attempt to bind

---

[4] Amended Decision Upon Reconsideration Following Trial De Novo, 2006 Assessed Valuation of the Trans Alaska Pipeline System ("TAPS") at ¶ 104 (October 26, 2010) (Exhibit 4); Decision Following Trial De Novo, 2007, 2008, 2009 Assessed valuations of the TAPS at ¶ 70 (December 30, 2011) (Exhibit 5).

[5] *See, e.g.*, Exhibits 7.1, 7.2 and 7.3.

[6] *See* State Department of Environmental Conservation website for documents related to the Charter, which are incorporated into the record by reference herein <available at http://dec.alaska.gov/spar/ipp/nscharter.htm>.

the citizenry to such a sweeping set of concessions, with no public involvement and without legislative approval.

B. Form of the Administrative Record.

Walker has had less than twenty days to review the Settlement, and has not had the opportunity to compare his understanding of its terms against that of the parties or review any of the correspondence between the State and Owner Group. Consequently Walker bases his understanding of it and the surrounding deal relating to gas pipeline development primarily on a reading of the document and the attached exhibits. Walker acknowledges that the reading of one or more of the portions of the Settlement, and intent behind them, may be incorrect. However, a thorough public vetting of the Agreement is the proper way to ensure the public has an understanding of its terms, it is in the best interests of the State, and it is legally entered into by the current administration.

Walker also incorporates herein, and requests the Department make part of the record of this motion to reconsider, the administrative record and court pleadings in the Point Thomson Cases (as that term is defined in Settlement ¶ 1.8) and 3AN-05-12486. Additionally, Walker requests that all correspondence between any member of the Parnell Administration and any WIO relating to the Settlement or a potential settlement of the Court Cases, dated on or after January 1, 2010, be included in the administrative record. As provided by 11 AAC 02.030(d), because public notice was not provided by the Department 30 days in advance of the Settlement, Walker intends to file additional written materials within the longer of 20 days or the term of the stay requested in Part III below. Walker also undertakes this action as a public interest litigant, and consequently requests that the administrative record be prepared at the State's expense. If the Commissioner will not agree to that request, please provide Walker with advance notice before any costs chargeable to him are incurred.

C. A Summary of Certain Terms of the Settlement That Demonstrate it is Not in the Best Interests of Alaska.

In this Subpart C Walker describes his understanding of the Settlement at a high level. Capitalized terms not otherwise defined are meant to have the meaning given them in the Settlement.

1. The Owner Group Will Maintain Most if Not All of the PTU Acreage With Little or No Additional Work Commitments.

The Settlement contemplates a myriad of confusing potential options and outcomes for development of the PTU. Time and time again, however, Exxon has shown it will pursue the smallest work commitment the Department allows. In the Settlement, that appears to be one of two options. The first option is to go forward with the IPS Project, which is the 10,000 barrel per day ("bbl/d") cycling project *already committed to in 2009 to keep two leases.* If that route is taken most, if not all, of Point Thomson will be held in perpetuity by the Owner Group. Walker does not believe that the Department surrendering those additional leases for no work commitments is in the State's best interests.

But of course the Settlement no longer even requires the WIOs to undertake the previously committed to IPS Project. The second option is to Sanction a Major Gas Sale for, but not necessarily build, a bullet line project out of Prudhoe Bay. That will obviate the need for the Owner Group to do any work at Point Thomson, or even connect it by pipeline to other ANS infrastructure, yet will preserve the Owner Group's right to the acreage well into the next decade. Walker does not believe it is in the State's best interests to allow a bullet line from Prudhoe Bay, which itself has sufficient gas for such a project for approximately 125 years, to result in the Owner Group being able to continue to warehouse Point Thomson resources. And when the field is developed, Walker does not believe it is in the State's best interests, given the current available evidence, to allow the Owner Group to blowdown the reservoir without cycling, which under the Department's previous analysis will result in the physical and economic waste of condensates and oil of a value greater than the Alaska Permanent Fund.

A discussion about specific portions of the Settlement related to development options follows:

a. Under Settlement ¶ 4.1.1 the Owner Group agreed as part of the IPS Project to drill the PTU 15 and PTU 16 wells, already completed by 2010, and has the option to put those wells into production at 10,000 bbl/d no later than May 1, 2016 and to construct the liquid hydrocarbon pipeline from the PTU to Badami. This option is the same development project that was previously a firm commitment, delayed from 2014, that the Owner Group made in January 2009 to secure two leases (ADL47559 and 47571).[7] Thus the Owner Group has already been working on this project including the expected 10,000 bbl/d condensate production and 70,000 bbl/d hydrocarbons liquid line that will connect to Badami,[8] only the formerly firm commitment is now an optional one under the Settlement.

b. Also part of the IPS Project, in Settlement ¶¶ 4.1.2 and 4.1.3, the WIOs have the option to drill a Thomson Sand well from the West Pad by May 1, 2017, and to continue permitting an East Pad well.

c. Under Settlement ¶ 4.2.2 the IPS Project commitments are not mandatory. If the Owner Group Abandons these projects by 2015 the Owners still maintain core unit acreage in the 9 leases listed in Area A of Exhibit C through year-end 2019 (and if they have spuded the West Pad well by year-end 2016 they will keep the acreage in the 3 leases listed in Area B of Exhibit C). Further, if between 2007 and year-end 2015 the Owners spend more than $2.0 billion on Point Thomson Development, they will automatically keep the acreage in the 13 leases listed in Area D of Exhibit C also through year-end 2019.

---

[7] Commissioner Irwin stated in his approval of the project that the WIOs "have unconditionally committed to bring those two wells on the two leases into production by 2014." Conditional Interim Decision (January 27, 2009) (Exhibit 8). *See also* Transcript of Hearings, Before Commissioner Thomas Irwin (January 12 to 16, 2009) (Exhibit 9).

[8] *See, e.g.,* Testimony of Paul Carson, 3 AN-06-8446CI, Tr. 3149 – 50, 3190 – 93, 3212 – 14 (September 11, 2011) and Testimony of Charles Cicchetti, 3 AN-06-8446CI, Tr. 8444 – 8446 (October 13, 2011) (Exhibit 10).

d. By spending $2.0 billion on Point Thomson Development, the Owner Group, with no firm development commitments, has the right to unitize and maintain some or all of 22 of the 38 leases, that overly the core acreage, through year-end 2019. Since no accounting of the amount spent from 2007 to date was provided in the Settlement, it is unclear if the Owners had met that spending threshold as of the date of the Agreement. However, based upon the fact that the spending amount is back dated, there are no rules for how to do the accounting, the State only gets the information on spending if the IPS Project is Abandoned, and the definition of what goes towards the $2 billion is worded broadly enough to encompass work done since 2007 on various ANS projects outside the PTU or on a gas pipeline project,[9] it can only be assumed the $2 billion threshold will be met as a matter of course.[10]

e. If the WIOs keep their prior commitment made in 2009 to maintain ADL 47559 and 47571, and put the two wells drilled in 2010 into production by year-end 2019, then under Settlement ¶ 4.5.3 the Owners automatically get to keep all or part of the 23 leases now part of the PTU (9 or 12 leases if the $2 billion was not spent depending on if the West Pad well is spuded).[11] Further, because the PTU would now be under production all of this acreage will be held in perpetuity by the WIOs under the habendum clause in Section 21(c) of the PTU Agreement.

f. The WIOs also get to wrap into the PTU and maintain indefinitely additional acreage if by year-end 2019 they expand liquid production by 10,000 bbl/d (and even more acreage if 20,000 bbl/d) or Sanction a Major Gas Sale, or if by year-end 2018 they have a POD for the Brookian formation underlying Area F of Exhibit C. Since all that maintaining the Brookian requires is an approved POD by 2019 under Settlement 4.7, the agreement effectively pushes off any decision on the development of the 5 leases in Area F of Exhibit C for half a decade, at which time the POD process starts over for that acreage.

g. Pursuant to Settlement ¶ 4.5.2 if by year-end 2019 IPS Project Start-UP has not occurred, or a Major Gas Sale Sanctioned, then the Department may theoretically terminate the PTU Without Appeal.

1) However, Settlement ¶¶ 4.4.2, 4.5.1 and 4.5.7 appear to provide if a Major Gas Sale is Sanctioned by year-end 2019 then the PTU is fully reconstituted to include all the acreage except the Brookian in Area F of Exhibit C (which will be separately maintained by simply filing for a POD by year-end 2018). When the definitions of Major Gas Sale and Sanction are reviewed in Settlement ¶¶ 2.16 and 2.28, all that is required for this outcome are

---

[9] It is unclear from the Settlement what qualifies as "other work activities" under ¶ 2.19 that count toward the $2 billion threshold, such as funds spent by the Owner Group on projects relating to Prudhoe Bay gas reinjection, the Badami oil system, or in furtherance of a Major Gas Sale (e.g., on the Denali Pipeline Project, Alaska Pipeline Project under the Alaska Gasline Inducement Act, a large diameter or bullet line liquefied natural gas project to tidewater).

[10] Regardless, if the Owners spend less than $2.0 billion they similarly lock up all or part either 9 or 12 of the most productive leases (depending on whether a the West Pad well is drilled).

[11] The exception is that under Settlement ¶ 4.5.3.1 the northern half of ADL 377017 will be released from the PTU.

receipt by the State of corporate approvals and firm transportation service agreements "sufficient to proceed to construction," and necessary regulatory approvals issued, for a "pipeline project having a design through put of more than 500 million cubic feet of gas per day that results in delivery of gas off the North Slope of Alaska." No construction commitments, or even a final investment decision, are mandatory. It is also worth noting that this option does not require development of the PTU given Major Gas Sale Sanction of a project relying solely on Prudhoe Bay gas satisfies these conditions. Yet once a Major Gas Sale is Sanctioned under Settlement ¶ 4.5.1 then the reconstituted PTU is in effect, and the POD process starts over again. It would consequently appear the WIOs, at the end of 2019, having done no work on the field, have maintained the entirety of the unit by getting the paperwork in order to undertake a bullet line or large diameter pipeline project (without any actual commitment to go forward) from Prudhoe Bay. This is notwithstanding a 500 million cubic feet per day off-slope pipeline would not need gas from a source, such as the PTU, other than the PBU for approximately 125 years.

2) It also seems, although the provisions are incredibly difficult to understand and vague, that a Major Gas Sale Sanction or an IPS Project is not necessary to keep the PTU alive past year-end 2019 if before that date an Expansion Project POD is submitted. It appears nothing requires the Expansion Project POD to result in any actual work under the definition of Commit at Settlement ¶ 2.4, so long as if before the Expansion POD is submitted some internal sanctioning has occurred which document an obligation to proceed diligently (sanctioning that can presumably be revoked at a later date). Walker has not yet been able to figure out which acreage survives under an Expansion Project POD past 2019, but the consequence seems to be to start the POD process anew in the post-2020 era.

Thus for little or no consideration beyond the work commitment to produce 10,000 bbl/d of condensates made in 2009 to maintain ADL 47559 and 47571, the State has agreed to allow the PTU to remain in effect indefinitely (with the potential for some acreage contracting out). Alternatively the WIOs can avoid the 2009 production commitment of 10,000 bbl/d but get the paperwork completed to undertake, but not actually commit to, a small or large diameter off-slope pipeline, or submit an Expansion Project POD, and at the end of 2019 restart the POD process on the entire PTU. And of course if the WIOs put the unit into production and Sanction a Major Gas Sale then, as confirmed by Settlement ¶ 4.5.6, the PTU now consists of all the leases, which are held in perpetuity by the 10,000 bbl/d of condensate production committed to in 2009 pursuant to the habendum clause in Section 21(c) of the PTU Agreement.

But the terms of the Settlement go even further.

2. The Settlement Attempts to Contract Around the Department's Regulatory Authority. Settlement ¶ 5.1.3 provides:

> The Parties agree that this Agreement is a contract between the Parties. . . Application of standard administrative processes does not provide any right or basis for the State to alter the terms of this Agreement. DNR discretion and the authority to take action or make a decision regarding Point Thomson may only be exercised by DNR in a manner that . . . does not conflict with the terms of this Agreement.

It appears to be the intent of this provision to make the contractual terms of the Agreement control over the Department's regulations and other state law.

3. **The Settlement Alters the Regulatory POD Process.** Settlement ¶ 4.1.5 provides the IPS Project work plan laid out in the Settlement also acts as a substitute for plans of development otherwise mandatory under 11 AAC 83.343 and PTU Agreement Section 10. Thus rather than annual POD's, there will be no Departmental approvals of development plans until May 1, 2017 at the earliest. Then if a Major Gas Sale is Sanctioned, the process in 11 AAC 83.343 is again replaced with Settlement ¶¶ 4.6.1 and 4.6.4, such that the initial POD after Sanctioning "shall remain in effect for two years following that date and until a subsequent MGS POD is approved." Thus it appears the Department has lost the ability to terminate an otherwise non-producing unit by failing to approve a POD, and contractually altered the regulatory POD process for decades into the future. The Expansion Planning POD under Settlement ¶ 4.6.3 also substitutes an alternative process for that provided in 11 AAC 83.343 with apparently similar consequences if the WIOs go that route to maintain the PTU past year 2019. And not only has the Department forgone POD's through 2017, and contractually altered the regulatory process for later POD's, it has agreed that for most POD disputes, with several carve outs that the Department retains administrative decisional authority over, that the Department no longer has jurisdiction to hear them and instead under Settlement ¶ 5.1 disputes must be resolved by either the Superior Court or arbitration.

4. **The Settlement Results in the Abrogation of the Commissioner's Obligation to Make Findings Under 11 AAC 83.303, Including Leaving the Method of Field Development to the WIOs.** The net effect of the Settlement is that the Commissioner has used a contract to forgo his regulatory obligations to approve issues associated with the PTU. 11 AAC 83.303 provides that before the Commissioner can approve actions related to units he must evaluate and consider the proposed action in light of various factors, and then make particular findings.[12] Under .303(c) these findings must be explicitly made as to all unit approvals, including: "(1) an approval of a unit agreement; (2) an extension or amendment of a unit agreement; (3) a plan or amendment of a plan of exploration, development or operations; (4) a participating area; or (5) a proposed or revised production or cost allocation formula." Yet the sweeping Settlement contains numerous express and implied approvals without these findings, including one or more approvals as to each of items (2) to (5) in the prior sentence. Instead Settlement ¶ 5.8 contains a generic statement, "The Commissioner has determined that entry into

---

[12] The Commissioner must evaluate and consider that the proposed action will: "(1) promote conservation of all natural resources, including all or part of an oil or gas pool, field, or like area; (2) promote the prevention of economic and physical waste; and (3) provide for the protection of all parties of interest, including the state." 11 AAC 83.303(a). In evaluating those criteria the Commissioner must consider: "(1) the environmental costs and benefits of unitized exploration or development; (2) the geological and engineering characteristics of the potential hydrocarbon accumulation or reservoir proposed for unitization; (3) prior exploration activities in the proposed unit area; (4) the applicant's plans for exploration or development of the unit area; (5) the economic costs and benefits to the state; and (6) any other relevant factors, including measures to mitigate impacts identified above, the commissioner determines necessary or advisable to protect the public interest." *Id.* at 83.303(b).

this Agreement and individual terms and conditions set forth here are necessary or advisable to protect the public interest . . ."

For instance, the Commissioner's obligation to approve development so as to promote conservation, and to prevent economic and physical waste, is a fundamental mandate of the Department.[13] Yet the Settlement leaves the decision as to gas cycling (in terms of whether it occurs, in what volume, and for how long) to the discretion of the WIOs. The Department has not only abrogated it regulatory obligation to ensure the field is developed to promote conservation and prevent waste, but has agreed in Settlement ¶ 5.7 not to oppose the development approach ultimately selected by the WIOs before the Alaska Oil and Gas Conservation Commission ("AOGCC").

It is incongruous that lengthy gas cycling or a gas blowdown can both be in the public interest, particularly in light of the long standing dispute between the Unit Operator and Department as the extent gas cycling is appropriate. Consider that in 2008 the report commissioned by the Department and adopted by Commissioner Irwin into the Alaska Gasline Inducement Act findings found: "Gas cycling delays gas sales, but results in greater ultimate recovery of both liquid and gas hydrocarbons. In contrast, primary depletion as a gas reservoir results in the lowest hydrocarbon recovery of a retrograde condensate reservoir. Gas blowdown for sale can be done at any time after gas cycling and recovery of the hydrocarbon liquids."[14] As to condensates, it was concluded cycling gas for 30 years will result in 86% recovery (420-415 million stock tank barrels ("MMSTB")), 20 years of cycling 76% recovery (370-370 MMSTB), and 10 years of cycling 62% recovery (300-370 MMSTB).[15] It further found that a gas blowdown will result in recovery of only 26% (127 to 156 MMSTB) of the in-place volume of condensates.[16] The same study concluded recovery from the oil rim will also be substantially reduced by blowing down the reservoir early.[17] In fact, under the Department's analysis, a gas blowdown would result in the physical and economic waste of condensates and oil with a value that exceeds the Alaska Permanent Fund.

History, via innumerable past POD's and testimony before the Department, demonstrates that the Unit Operator's preferred method to develop the field is through a less capitally intense gas blowdown, yet the Department has previously concluded such a development approach will result in waste.[18] There is nothing in the Agreement to support a finding that a gas blowdown could now be in the public's interests, particularly if – as the Agreement allows – it does not occur for many years and no cycling project is commenced in the interim. The Settlement does not even provide for what has previously been viewed by the

Department as the only reasonable development scenario: long-term full field cycling followed by a gas blowdown. There is also no support or findings related to why PTU gas is necessary for a Major Gas Sale or why that development alternative obviates the need for cycling given, the way the term is defined in the Settlement, gas from PTU might not be necessary for a small diameter off-slope pipeline for over a century.

5. **The Settlement Contemplates Future Royalty Relief Not Available Under Alaska Law.** Settlement ¶ 4.8 allows the Owners to submit an application for royalty to relief through to the Department not "pursuant to Alaska statutory provisions . . ." It is unclear what this means.

6. **The Settlement Pre-Approves Lease Assignments Such as Exxon's Acquisition of Chevron's Interest.** In Settlement ¶ 4.9 the Department agreed to approve any lease assignment requested by ExxonMobil, BP Exploration (Alaska), Inc., Chevron U.S.A. Inc., and ConocoPhillips Alaska, Inc. submitted within 90 days of execution of this Agreement. This clause is presumably to provide advance approval of Exxon's acquisition of the Chevron interests in the PTU, notwithstanding Governor Parnell acknowledged at the press conference on March 30, 2012[19] the State had not been privy to the agreements.

7. **Terms of Taxation on Injected Gas Are Established by Contract.** In Settlement ¶ 4.16 the Department agreed "that any gas produced from a reservoir within the Point Thomson Unit and injected into a reservoir within the Prudhoe Bay Unit . . . is only subject to tax and royalty one time." This provision attempts to establish terms of future taxation by contract. The Commissioner and Attorney General have also apparently usurped the authority of the Department of Revenue, and given a legal interpretation of 15 AAC 55.151(e) that reinjection of PTU gas into Prudhoe is a non-taxable event under current Alaska law, and made such a commitment without demanding continuing compliance with the affidavit requirements of 15 AAC 55.151(e)(5).

8. **The State Waives its Right to Take Royalty In-Value and Substantially Encumbers its Rights Relating to the Taking of Royalty In-Kind.** Settlement ¶ 4.16.1 states the State will elect to only take its gas in-kind if there is a completed Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, meaning it waives its right to take the royalty in-value. In addition to committing the State to such items as taking delivery at the PBU unit and bearing the cost of transportation (if the PTU to PBU pipeline is regulated), the Agreement adopts an accounting mechanism for handling the gas once it is injected into the PBU reservoir. Agreeing to the accrual of transportation costs, without detailed treatment of the rate mechanisms, is particularly concerning in light of the history of rate manipulation by ANS producers on oil transportation.

9. **Dispute Resolution Is by Methods Different Than Those Provided by Alaska Law.** As previously discussed, the Department in Settlement ¶ 5.1 has largely abrogated its regulatory mandate, and contractual rights under the PTU Agreement, to make agency determinations about issues relevant to future disputes involving the Agreement, including for instance relating to PODs. Additionally, arbitration, rather than resolution through the

---

[19] Exhibit 2.

Department administrative process or Alaska's court system, is to be the forum under Settlement ¶ 4.2.3 to resolve whether the WIOs failure to perform was excused by circumstances outside their control. The terms of that arbitration are to "be decided following execution of this Agreement." It is also worth noting that factors outside of the WIOs control under Settlement ¶ 4.2.3, which result in their not being deemed to have Abandoned the IPS Project, includes design modifications, litigation by third parties, and permitting and regulatory delays, virtually guaranteeing an excuse to argue work has not been Abandoned and arbitration is required.

II. The Settlement Violates Alaska Law.

In addition to any reasons raised in other Subparts of this letter, Walker asserts the Settlement violates Alaska law in the following manner.

- Insufficient public notice and opportunity for public comment was provided in advance of execution of the Agreement. The Public Notice Clause of the Alaska Constitution provides, "No disposals or leases of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be prescribed by law." Alaska Const. art. VIII, § 10. "The Alaska Constitution does not express a requirement of pre-negotiation notice, and instead can be read to require notice before the State commits to an agreement requiring it to dispose of or lease state lands or interests in state lands." *Baxley*, 958 P.2d at 432. In *Baxley*, the Supreme Court held that the State could confidentially renegotiate oil and gas lease terms, in compliance with the Public Notice Clause, if "the public had ample opportunity to comment on the proposed lease amendments before the legislature authorized any binding changes. . ." *Id.* Since the Agreement purports to be binding upon execution, and without legislative approval, and the Settlement was announced without public notice and the opportunity for public input, it violates not only the Public Notice Clause but the very framework of AS 38.05 and 11.383 (among other regulatory, statutory and constitutional requirements).

- The Settlement, including Settlement ¶ 5.8, does not comply with the Commissioner's obligations to evaluate and make the findings necessary to approve this Settlement, including without limitation its terms that approve: (i) the extension and amendment of the PTU Agreement; (ii) the contained plans of development and operations; (iii) the formation, expansion and contraction of participating areas; and (iv) revised cost allocation formulas. 11 AAC 83.303. Those findings should have been sufficiently detailed in writing, orally at hearing, or in another manner that provided sufficient support to allow meaningful judicial review. *Button v. Haines Borough*, 208 P.3d 194, 2000 (Alaska 2009) (an agency's findings must be supported by substantial evidence, which is "such relevant evidence as a reasonable mind might accept as adequate to support a conclusion.").

- Compliance with the procedures provided by the legislature and by regulation to handle matters involving Alaska's public lands are mandatory and not at the discretion of the Department. The Settlement thus cannot contract around the Department's regulatory authority, either as to its current or future regulatory obligations. *Exxon Corp. v. State*, 40 P.3d 786, 796-97 (Alaska 2001) ("We disagree

with Exxon's first contention that the department can agree to contract terms that violate its regulations... To allow such activity would be arbitrary; parties contracting with the department would not be held to the same regulations that non-contracting parties were required to comply with. And the department should never need to contract in violation of its own regulations, because it has the authority to change its regulations so long as the new regulation has a reasonable basis and is within the scope of the legislature's delegation of power to the department."). Without limitation the following portions of the Settlement are improper.

- The Settlement cannot contract away the Commissioner's regulatory responsibilities to, in the future, approve unit actions that must be in the public's interests under 11 AAC 83.303. Among other items, this includes abrogating the Commissioner's obligation to ensure the ultimate method of field development promotes conservation and prevents waste (e.g., the Department cannot allow decisions as to gas cycling to be made at the discretion of the WIOs). Relying on the AOGCC to resolve conservation, waste, and reservoir management issues independent of the Department's administrate process, and without the Department's independent voice before the AOGCC, is not legally permissible and not in the State's best interests.

- The Settlement cannot contract around the POD process under 11 AAC 83.343, either by waiving the obligation to get POD's approved or by altering the POD approval process provided by statute and regulation.

- The Settlement cannot pre-commit to the continuation, expansion or term of the PTU without compliance with the public notice and other requirements of 11 AAC 83.311-.336 and .356.

- The Settlement cannot pre-commit, under 11 AAC 83.351, to the formation of participating areas, including expansion and contraction of the same, before various development commitments are final and contemporaneous data about field and reservoir characteristics are analyzed by the Department. This includes agreeing to the formation of participating areas substantially in advance of the 90 day period (before sustained production) contemplated by regulation.

- The Settlement cannot be used as a mechanism to pre-commit to any current or future amendments to the PTU operating agreement, such as any alternations associated with Chevron's withdrawal, under 11 AAC 83.366.

- The Settlement cannot by contract waive the Department's statutory and regulatory obligations to make agency determinations about issues relevant to future disputes involving the Agreement. That includes having disputes relating to the Agreement decided in the first instance by the Alaska Superior Court. Nor does the Commissioner have the power to waive the Departmental administrative process in favor of arbitration. Similarly, the Settlement cannot provide in its terms or by future agreement to allow arbitration to supplant

judicial review or otherwise alter the standard of judicial review exercised by Alaska's courts.

- The State must approve assignment of Chevron's leases after the sale. *See Baxley v. State of Alaska*, 958 P.2d at 426 n. 6 ("Oil and gas lessees often sell interests in leases without the State's involvement; the State may, however, be required to approve assignment resulting from the sale."). The Commissioner cannot issue a blanket approval, in advance of seeing the parties or terms, of any lease assignment brought to him in 90 days. Practically that means this Agreement is not sufficient to approve Exxon's acquisition and continued retention of Chevron's interest in the PTU.

- The Settlement is too vague and unclear to be enforceable against the State. *George v. Custer*, 862 P.2d 176, 179 (Alaska 1993); *Stenehjem v. Kyn Jin Cho*, 631 P.2d 482, 485 (Alaska 1981) ("A court cannot enforce a contract unless it can determine what it is. It is not enough that the parties think that they have made a contract; they must have expressed their intentions in a manner that is capable of understanding. It is not even enough that they have actually agreed, if their expressions, when interpreted in the light of accompanying factors and circumstances, are not such that the court can determine what the terms of that agreement are. Vagueness of expression, indefiniteness and uncertainty as to any of the essential terms of an agreement, have often been held to prevent the creation of an enforceable contract.") (Quoting 1 Arthur L. Corbin, Corbin on Contracts § 95, at 394 (1963 & Supp.1992) (footnote omitted)). The Settlement is also unenforceable on grounds of public policy. *State v. Public Safety Employees Ass'n*, 257 P.3d 151, 159 (Alaska 2011) ("A promise or other term of an agreement is unenforceable on grounds of public policy if legislation provides that it is unenforceable or the interest in its enforcement is clearly outweighed in the circumstances by a public policy against the enforcement of such terms.") (quoting Restatement (Second) of Contracts § 178(1) (1981)).

- The executive branch does not have the authority to consider royalty relief pursuant to a mechanism other than that provided by statute. *Baxley*, 958 P.2d at 427 (the Department cannot modify lease terms like royalty without either statutory authority or specific legislative approval).

- The executive branch cannot contract away the State's power of taxation. Alaska Const. art. IX, § 1. The Commissioner and Attorney General also cannot commit the Department of Revenue to an interpretation of State tax law or regulation, nor waive requirements contained therein.

- The Commissioner cannot, employing a non-competitive process, waive the State's right to take royalty in-value, and substantially encumber its rights relating to the taking of royalty-in kind, without the advanced findings and notices contemplated in AS 38.05.183 and 11 AAC 03.010-.070, without approval of the Royalty Board under AS 38.06.050, and without legislative approval as contemplated by AS 38.06.055. It is improper under Alaska law for the Commissioner, in a non-competitive process with no advanced findings or opportunity for public comment, to unilaterally and

potentially indefinitely waive the State's right to take royalty in-value and to so encumber the terms in which the State will take its royalty in-kind.

- This Agreement, which fundamentally alters the regulatory and contractual relationship currently existing between the State and WIOs, must be approved by the legislature under Alaska law. The Commissioner also does not have the power to affect by settlement what he does not have the authority to do by direct action. For example:

    - The Settlement violates the material amendments doctrine by creating a new contract without a new round of public bidding, and without the legislative hearing process the Supreme Court has previously held satisfies the policy considerations behind the rule when amending State oil and gas leases. *Baxley*, 958 P.2d at 434.

    - Alternatively, the State and WIOs could seek approval of the terms of the Settlement by contract through the process established by the Stranded Gas Development Act, AS 43.82 *et seq.* ("SGDA"). As recognized in prior PTU POD's, the WIOs worked with the State to enact the SGDA, which is the current statutory scheme in place to affect such a dramatic overhaul of the State's relationship with the WIOs.[20] But built into the SGDA are a series of procedural safeguards such as the requirement for preliminary findings, notice and comment regarding the contract, final findings, and legislative authorization, as well as a clear mechanism for judicial review. AS 43.82.400 – .440. However, the WIOs, having failed to achieve the goals of the Agreement through the SGDA during the Murkowski Administration,[21] now seek to achieve many of the same goals via a litigation settlement agreement, but without the multi-faceted public process.[22]

- The Settlement is not in any part or in whole in the best interests of the State or its citizens. By signing the Settlement the executive branch abused its discretion and failed to meet its fiduciary obligation to manage Alaska's natural resources for the common good of the public, thus violating the public trust doctrine. Alaska Const. art

[20] 15th PTU Plan of Development (June 5, 1998) (["T]hree of the PTU Owners (Exxon, BP and Phillips) have worked with the State of Alaska's North Slope Gas Commercialization Team which has recommended that changes be made to the State's tax and royalty structure to improve the economic feasibility of a North Slope gas project. This work culminated in the Governor's introduction of Stranded Gas legislation (HB 393) earlier this year.").

[21] SGDA Interim Fiscal Interest Findings (November 16, 2006) <available at http://www.revenue.state.ak.us/gasline/IFIF%2011-16-06.pdf>; Proposed SGDA Contract (May 24, 2006) <available at http://www.revenue.state.ak.us/gasline/ContractDocuments/ Main%20Documents/ Fiscal%20Contract/ SGDA_Contract_5%2024%2006%20final.pdf> (both documents are incorporated into the record by reference herein).

[22] *Id.* (as a reference, Exhibit 13 contains certain excerpts from the SGDA Interim Fiscal Findings and Proposed SGDA Contract related to the PTU).

VIII, § 2; *Baxley*, 958 at 422 (citing *McDowell v. State*, 785 P.2d 1, 16 n.9 (Alaska 1989)).

III. Walker Seeks the Following Remedies.

For the above stated reasons, Walker seeks the following relief.

A. A stay of this request for reconsideration until 30 days after the Department: (i) assembles, makes public, and incorporates into this record all correspondence between any member of the Parnell Administration and any WIO relating to a potential settlement of the Point Thomson Cases, dated on or after January 1, 2010; and (ii) publishes summaries of the Settlement, including flow charts or other materials, to aid Walker and the public in understanding the terms of the Agreement.[23] The additional 30 days will allow Walker and public time to review the materials and submit public comment and additional materials before the Commissioner decides this request for reconsideration.

B. That the Settlement be approved by the legislature, either under the SGDA or by special legislation similar to the process followed to amend the terms of the leases in the North Star unit (which would include among other items authorization for the Commissioner to contract around his statutory and regulatory duties).

C. That the Commissioner undertake an inquiry, with an opportunity for public comment and best interests findings, regarding whether Exxon should be allowed to acquire and retain Chevron's interest in the PTU. At a minimum the Department should review all the agreements between the WIOs relating to the Settlement and agreements between Exxon and Chevron relating to the purchase, and issue detailed best interest findings. Such a review is not only advisable and even necessary under Alaska law, but it is consistent with past actions of the Department where agreements and realignments between working interest owners impacted the State's interests.[24]

---

[23] Specifically, Walker requests an explanation of the various options the WIOs have to keep acreage past year-end 2019, including any associated work and study commitments, which are so complex and vague as to not be understandable even after detailed review.

[24] *See, e.g.*, Findings of the Decision of the Commissioner, Application for Change of Unit Operator, Prudhoe Bay Unit, As Amended, with Errata Changes (June 27, 2000) and related documents (Exhibit 14).

Sincerely,

William M. Walker
Citizen Taxpayer of the State of Alaska

March 29, 2012

SETTLEMENT AGREEMENT

This Settlement Agreement (the "Agreement") is made by and between the State of Alaska (the "State"), acting through the Department of Natural Resources ("DNR"), on the one hand, and Exxon Mobil Corporation, as Point Thomson Unit Operator and pursuant to Section 22 of the Point Thomson Unit Agreement and as working interest owner and as successor in interest to Chevron U.S.A., Inc., ExxonMobil Oil Corporation, BP Exploration (Alaska) Inc., ConocoPhillips Alaska, Inc., and Leede Operating Company, L.L.C. (collectively the "Owner Group"), on the other hand. DNR and the Owner Group are at times hereinafter referred to collectively as the "Parties" and each individually as a "Party."

1. RECITALS

1.1 The Point Thomson leases were acquired beginning in 1965. Oil was discovered in 1975, and the Point Thomson Unit was formed in 1977. Following formation of the unit, the Point Thomson owners drilled additional wells and discovered additional oil and natural gas in paying quantities. The field is located 60 miles east of Prudhoe Bay in a remote arctic area. The Point Thomson reservoir is a high-pressure retrograde condensate and natural gas reservoir with abnormally-pressured formations, and presents unique engineering challenges with respect to development and production. Since the discovery of the field, the Point Thomson owners have drilled 19 exploration / delineation wells in the Point Thomson area, and recently completed the drilling of two additional wells, the PTU 15 and PTU 16, to initiate production from the Point Thomson Unit consistent with this Agreement.

1.2 On September 30, 2005 and October 27, 2005, the Director of the Division of Oil and Gas of DNR ("Director") denied approval of the 22nd Plan of Development (a "POD") submitted by the Working Interest Owners ("WIOs") with respect to the Point Thomson Unit, and placed the Point Thomson Unit into default. The WIOs appealed this decision to the Commissioner of DNR ("Commissioner"), who affirmed the default decision, rejected the WIOs' proposed POD, and terminated the Point Thomson Unit on November 27, 2006, which was affirmed upon reconsideration by the Commissioner on December 27, 2006. These decisions were affirmed in part, reversed in part, termination of the Point Thomson Unit was vacated, and the matter was remanded to DNR by the Superior Court of the State of Alaska on December 26, 2007.

1.3 On April 22, 2008, the Commissioner issued another decision terminating the Point Thomson Unit, affirmed upon reconsideration on June 11, 2008. On August 4, 2008, DNR issued lease expiration decisions related to leases within the Point Thomson Unit.

1.4 The Owner Group filed several appeals challenging these decisions. On January 11, 2010, the Superior Court of the State of Alaska reversed DNR's April 22, 2008 decision terminating the Point Thomson Unit. On February 5, 2010, DNR filed in the Supreme Court of the State of Alaska a petition for review of the Superior Court's January 11, 2010 decision, which was granted by the Supreme Court on May 28, 2010.

1.5 The Parties wish to resolve all pending litigation and administrative proceedings between them related to the Point Thomson Unit on the terms and conditions set forth in this Agreement.

1.6 This Agreement sets forth the WIOs' commitment to produce natural gas condensate liquids ("condensate") from the Point Thomson Reservoir for delivery into the TransAlaska Pipeline System ("TAPS"). The WIOs have committed to construct an Initial Production System ("IPS") which is to be completed by the end of the 2015-2016 winter season. The IPS facility is being designed to produce and re-inject (cycle) 200 million cubic feet per day of gas and to produce approximately 10,000 barrels per day of condensate. In addition, a liquid hydrocarbon pipeline is being designed that can transport approximately 70,000 barrels per day from Point Thomson to an existing pipeline interconnection at the Badami field, which will provide for final delivery of Point Thomson liquid hydrocarbons into TAPS. Operation and production from the IPS will provide data and information to assist in evaluation of additional development plans, including potential increased gas and condensate production from Point Thomson, and plans for the delivery of Point Thomson gas into a Major Gas Sale pipeline project.

1.7 In parallel with the work on the IPS, Parties and/or their affiliates to this Agreement will, upon execution of this Agreement, undertake work for commercialization of North Slope gas. This work will build on ongoing gas commercialization efforts. If a Major Gas Sale is Sanctioned prior to year-end 2016, the WIOs will begin work on a Point Thomson project associated with that Major Gas Sale. However, if a Major Gas Sale has not been Sanctioned by June of 2016, the WIOs have committed to begin engineering of a Point Thomson Expansion Project. An expanded cycling project would result in additional condensate production, totaling approximately 20,000 to 30,000 barrels per day into TAPS, depending on the level of expansion. Alternatively,

a project to deliver Point Thomson gas to Prudhoe Bay for injection would significantly increase the rate of condensate production at Point Thomson, serve as a pre-investment for a Major Gas Sale project, and essentially complete installation of the Point Thomson wells and facilities required for a Major Gas Sale. In addition, this option would materially increase production at Prudhoe Bay, and result in enhanced recovery at Prudhoe Bay.

1.8 The Agreement further establishes terms and conditions to facilitate development and provide benefits to the State of Alaska. Certain acreage within the Point Thomson Unit is secured when specified work activities are completed (e.g., the IPS is completed and producing) and key commitments or decisions are made (e.g., a Major Gas Sale is Sanctioned or WIOs Commit to a Point Thomson gas development / Prudhoe Bay enhanced oil recovery project or an IPS gas cycling expansion project). Likewise, the Agreement provides for the automatic release of certain acreage to the State if the IPS is not completed or if certain key commitments or decisions are not made (e.g., a Major Gas Sale is not Sanctioned or WIOs do not Commit to a Point Thomson gas development / Prudhoe Bay enhanced oil recovery project or an IPS gas cycling expansion project). Depending upon the work activities that occur, the Point Thomson Unit will remain in effect or may terminate.

1.9 Since 2009, work activities at Point Thomson have resulted in contracts with over 150 companies and the employment of hundreds of Alaskans.

1.10 In implementing the terms of this Agreement, the WIOs and the State anticipate there will be significant continued investment and employment opportunities for Point Thomson Unit development.

1.11 A Major Gas Sale off the North Slope of Alaska is a primary goal of the Parties. The Parties believe settlement of the Point Thomson litigation will assist in progressing a Major Gas Sale. It also allows for other development options that may be pursued independent of or in conjunction with a Major Gas Sale, and would allow for continued progress on permitting, regulatory, and engineering activities toward a Major Gas Sale. Progress toward a potential Major Gas Sale off the North Slope of Alaska and development of Point Thomson consistent with this Agreement should aid exploration and development opportunities of North Slope resources.

2. DEFINITIONS

Whenever the following terms are used in this Agreement, they shall have the meanings set forth in this Section 2:

2.1 "Abandon," "Abandoned," or "Abandonment" has the meaning provided in Paragraph 4.2.1.

2.2 "Authorization for Expenditure" means a formal approval or authorization of expenditures for a project or a phase of a project by the authorized corporate representative.

2.3 "Brookian" means the stratigraphic interval correlating with the sands and silts penetrated by the Sourdough 3 well (API No. 50-089-200260) between the interval 10,305 feet measured depth and 12,200 feet measured depth as measured by Dual

Induction Focused Log Run No. 3, dated March 6, 1996, or the sands and silts penetrated by the Flaxman Island A-1 well (API No. 50-089-200030) between the interval 11,848 feet measured depth and 12,643 feet measured depth as measured by Dual Induction Laterolog Run No. 4, dated August 7, 1975.

2.4 "Commit," "Committed," or "Commitment" in the context of a Point Thomson Expansion Project means documentation that the WIOs have conducted project evaluation and scoping and have obligated themselves to proceed diligently with the project through completion in accordance with the terms of this Agreement. The documentation to be provided shall include corporate authorization letters by the authorized corporate representative from the WIOs and any existing project Authorizations for Expenditure.

In addition, in the context of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the documentation to be provided also includes documentation demonstrating the completion of Front End Engineering and Design (FEED) and filing of formal applications for major federal and state permits, authorizations, certificates, or rights of way associated with construction of the project, from the U.S. Army Corp of Engineers, DNR and the Alaska Oil and Gas Conservation Commission, including any related NEPA review ("Authorizations").

After the WIOs "Commit," as defined above, to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, upon receipt of Authorizations consistent with FEED design work and the applications filed by the WIOs, the WIOs will proceed

in a timely manner to enter into contracts necessary to proceed with construction of the project consistent with the POD requirements.

2.5 "Continuous Operations" in the context of the IPS Project means continuing operation of wells and facilities to produce oil or gas from the Thomson Reservoir into a pipeline or other means of transportation to market. "Continuous Operations" does not include testing, evaluation, or temporary production. "Continuous Operations" exist even when production temporarily ceases or temporarily declines due to and for the period of: (1) planned or unplanned maintenance or repairs; (2) operational upsets; or (3) circumstances beyond the control of the WIOs that impact ongoing operations.

2.6 "DNR Point Thomson Orders" means the following DNR orders: (1) the Director's September 30, 2005 Denial of Proposed Plans of Development for the Point Thomson Unit and the Director's October 27, 2005 Amended Decision - Denial of Proposed Plans of Development of the Point Thomson Unit; (2) the Commissioner's November 27, 2006 Final Decision and the Commissioner's December 27, 2006 Decision on Reconsideration; (3) the Commissioner's April 22, 2008 Findings and Decision on Remand and the Commissioner's June 11, 2008 Decision on Reconsideration; (4) the Director's February 2007 and August 4, 2008 Decisions regarding thirty-one leases entitled Lease Expiration Due To Elimination From Unit; (5) the Commissioner's August 4, 2008 Decision on Consolidated Appeals From the Director's 2007 Decisions Terminating Thirteen State Oil and Gas Leases That Were Subject to the 2001 Point Thomson Unit Expansion Agreement; and (6) the Commissioner's January 27, 2009 Conditional Interim Decision.

2.7 "East Pad" means the proposed drilling pad located east of the IPS in Area D and from which one or more wells could be drilled.

2.8 "Effective Date" has the meaning provided in Paragraph 4.10.2.

2.9 "Expansion Planning POD" has the meaning provided in Paragraph 4.6.2.

2.10 "Expansion Project POD" has the meaning provided in Paragraph 4.6.3.

2.11 "Future POD" has the meaning provided in Paragraph 4.6.

2.12 "Initial Participating Area" or "Initial PA" means the participating area ("PA") formed for the Thomson Reservoir containing all or part of the leases listed in Area A on attached Exhibit C and contained in Area A of attached Exhibit D.

2.13 "Initial Production System" or "IPS" means the gas cycling facilities designed with capacity to produce and re-inject (cycle) 200 million cubic feet of gas per day utilizing reciprocal compression and with the objective of a minimum of 10,000 barrels per day of condensate for delivery into the TransAlaska Pipeline System ("TAPS").

2.14 "IPS Project" means the project to construct and install the IPS, and includes a 12-inch liquid hydrocarbon pipeline from Point Thomson to an interconnection with the Badami Field liquid hydrocarbon pipeline.

2.15 "IPS Gas Cycling Expansion Project" means an expansion of the IPS that must be: (i) a minimum of an additional 10,000 barrels per day if reciprocal compression is used; or (ii) a minimum of an additional 20,000 barrels per day if centrifugal compression is

used for delivery into TAPS. The WIOs have the discretion to decide on (i) or (ii) above and whether they will Commit to any IPS Gas Cycling Expansion Project.

2.16 "Major Gas Sale" or "MGS" means a large-scale pipeline project having a design throughput of more than 500 million cubic feet of gas per day that results in delivery of gas off the North Slope of Alaska.

2.17 "MGS POD" has the meaning provided in Paragraph 4.6.1.

2.18 "Point Thomson Cases" means (1) the following cases consolidated with Case No. 3AN-06-13751 CI: Case Nos. 3AN-06-13760 CI, 3AN-06-13773 CI, 3AN-06-13799 CI, 3AN-07-04634 CI, 3AN-07-04620 CI, 3AN-07-04621 CI, and 3AN-08-09369 CI; (2) the expansion leases termination appeal, Case No. 3AN-08-10156 CI; (3) the appeal from the AOGCC's decision dismissing involuntary unit petition, Case No. 3AN-09-07768 CI; (4) the Supreme Court appeal from denial of breach of contract damages claim, Case No. S-12743; (5) the appeal before the Department of Administration from DNR's denial of damages claim, Case No. OAH No. 08-0409; (6) the appeal from Commissioner Irwin's August 29, 2008 letter denying certain permit applications, Case No. 3AN-08-10825 CI; and (7) Chevron's Public Records Act case, Case No. 3AN-08-11804 CI.

2.19 "Point Thomson Development" means the IPS Project, drill wells, and work plans described in Paragraph 4.1 and other work activities set forth in this Agreement.

2.20 "Point Thomson Expansion Project" means an IPS Gas Cycling Expansion Project or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The WIOs have discretion on whether to Commit to any Point Thomson Expansion Project.

2.21 "Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project" means a project to deliver Point Thomson gas to Prudhoe Bay for injection that would significantly increase the rate of condensate production at Point Thomson into TAPS, serve as a pre-investment for a Major Gas Sale, essentially complete installation of the Point Thomson wells and facilities required for a Major Gas Sale, and allow for continued efforts towards, and positions Point Thomson gas for, a Major Gas Sale. In addition, this project would materially increase oil production at Prudhoe Bay into TAPS and result in substantial enhanced recovery at Prudhoe Bay. A Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project would result in production and recovery of liquids from Point Thomson and Prudhoe Bay that would be greater than production and recovery of liquids from Point Thomson from an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day. Before Project Start-up required approvals from the Alaska Oil and Gas Conservation Commission must be obtained.

The project would consist of:

(i) a newly constructed gas pipeline from Point Thomson to Prudhoe Bay with the capacity to transport significant volumes of Point Thomson gas in an amount that would position Point Thomson gas for a Major Gas Sale, for injection for: (a) use in repressuring, stimulation of production, and increasing ultimate

recovery of Prudhoe Bay oil; and (b) for ultimate availability for a Major Gas Sale; and

(ii) additional wells and facilities at Point Thomson to produce and process significant condensate production for delivery into TAPS through existing liquid hydrocarbon pipelines and pipelines constructed as part of the IPS Project. These facilities would also be used for a Major Gas Sale.

To ensure DNR receives necessary information regarding a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, in addition to information required under an Expansion Planning POD or an Expansion Project POD, the WIOs will meet and confer with DNR technical staff and schedule periodic reviews and workshops regarding reservoir and facility modeling results related to the project, and provide data and information to DNR for it to understand and track progress and evaluation of the project consistent with Section 16 of the PTUA. If the WIOs Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then at the State's request, the State and each individual WIO with a working interest in each Point Thomson Unit lease will negotiate a separate gas sales agreement that includes the terms set forth in Exhibit G. The Parties recognize that a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project will also be subject to Prudhoe Bay Unit agreements, including the Prudhoe Bay Unit plan of development approval process, which are not part of and would not be modified by this Agreement.

2.22 "Point Thomson Superior Court Case" means the case pending in the Superior Court of the State of Alaska, Case No. 3AN-06-13751 CI (Consolidated).

2.23 "Point Thomson Supreme Court Case" means the case pending in the Supreme Court of the State of Alaska, Case No. S-13730.

2.24 "Point Thomson Unit" has the meaning set forth in Section 3.

2.25 "Point Thomson Unit Agreement" or "PTUA" means the Unit Agreement for the Development and Operation of the Point Thomson Unit effective August 1, 1977, including all amendments thereto.

2.26 "Pre-Mississippian Section" means the interval of rock correlating with the Alaska State F-1 well (API No. 50-089-200190) below the depth of 13,846 feet measured depth as measured by the Dual Induction Laterolog Run No. 4, dated March 16, 1982, consisting of low grade metamorphic rocks containing argillite, phyllite, and quartzite along with intercalated beds of dolomite and limestone.

2.27 "Project Start-up" means the date of first production through facilities constructed as a result of the project in question but does not include testing, evaluation, or temporary production.

2.28 "Sanction" in the context of a Major Gas Sale means formal and explicit approval of a Major Gas Sale. A Major Gas Sale shall be considered "Sanctioned" under this Agreement upon receipt by the State of documentary evidence of: (1) corporate approvals by parties sufficient to proceed with construction of the project to completion; (2) firm transportation service agreements that have been entered into

sufficient to proceed with construction of the project to completion; and (3) necessary United States (and, if applicable, Canadian) federal regulatory certificates that have been issued and accepted.

2.29 "Thomson Reservoir" means the accumulation of hydrocarbon substances in the Thomson Sand and the Pre-Mississippian Section within the Point Thomson Unit.

2.30 "Thomson Sand" means the interval of rock correlating with the Point Thomson Unit No. 3 well (API No. 50-089-200070) between the depths of 13,657 and 13,932 feet measured depth as measured by the Dual Induction Laterolog Run No. 3, dated May 17, 1979, consisting of conglomerates, sandstones and siltstones.

2.31 "Unit Operator" means the Point Thomson Unit Operator designated in the PTUA and Point Thomson Unit Operating Agreement.

2.32 "West Pad" means the proposed drilling pad located west of the IPS in Area B and from which one or more wells could be drilled.

2.33 "West Pad Area" means the acreage containing all or part of the leases listed in Area B on Exhibit C and contained in Area B on Exhibit D.

2.34 "Without Appeal" means that the WIOs have waived any rights under the PTUA, individual lease terms, Alaska law and/or the laws of the United States of America, to file an application, petition, administrative appeal, or any cause of action before any administrative tribunal or state or federal court of law, and that the WIOs shall not file any such application, petition, administrative appeal, or cause of action. With regard to acreage that is released to the State Without Appeal under this Agreement, upon the

occurrence of the specified event resulting in the release of acreage, that release will occur immediately and automatically.

2.35 "Working Interest Owners" or "WIOs" means the working interest owners who are entitled to vote as to the applicable operation pursuant to, or who undertake a non-consent operation under, the Point Thomson Unit Operating Agreement.

3. UNIT CONFIGURATION

The Point Thomson Unit consists of the area and leases within the boundary set forth on the map attached as Exhibit A and the schedule of leases listed and identified on Exhibit B for a total acreage of 93,291.12 acres. The WIOs confirm that any leases not set forth on Exhibits A and B that formerly may have been included in the Point Thomson Unit have expired and the acreage has been released and returned to the State.

The map of the unit area reflecting the boundary of the Point Thomson Unit as set forth on Exhibit A and the schedule listing leases within the Point Thomson Unit area as set forth on Exhibit B are approved as Exhibit A and Exhibit B to the PTUA. The Unit Operator will file revised versions of Exhibits A and B when changes occur to the configuration or boundaries of the Point Thomson Unit area as set forth in this Agreement, with the revisions effective on the date the changes occur. Exhibit C is a listing of all or part of the leases listed on Exhibit A by area as referenced in this Agreement. Exhibit D is a map depicting the leases and areas set forth in Exhibit C. A reference to Exhibit C in this Agreement includes a reference to the corresponding area depicted in Exhibit D.

4. TERMS OF AGREEMENT

The Parties agree and understand as follows:

4.1 By signing this Agreement, the WIOs shall undertake and DNR approves the following work plan:

4.1.1 IPS Project.

4.1.1.1 The WIOs shall drill the PTU 15 and PTU 16 wells by the end of 2010, which work has been completed.

4.1.1.2 The WIOs shall put the PTU 15 and PTU 16 wells on production utilizing the IPS by the end of the 2015-2016 winter season and in any event no later than May 1, 2016. The work plan and activities associated with the IPS Project are set forth in Exhibit E. The PTU 15 and PTU 16 wells shall be placed on Continuous Operations either under production or gas injection. During the first year of production following IPS Project Start-up, the WIOs shall collect data and information regarding production, well and reservoir performance, IPS facility performance, and transportation system operations to aid in further development planning and decisions.

4.1.1.3 Additional wells shall be drilled and placed on production as needed to keep the IPS fully loaded with gas as set forth in Paragraph 2.13, to sustain the objective of a minimum of 10,000 barrels of condensate per day until the Thomson Reservoir is no longer able to sustain this objective.

4.1.1.4 After IPS Project Start-up, the WIOs shall identify and pursue debottlenecking work to increase the capacity of the installed facilities.

4.1.2 West Pad Well. The WIOs shall drill a Thomson Sand well from the West Pad by the end of the 2016-2017 winter season and in any event no later than May 1, 2017.

4.1.3 East Pad, East Pad Well, and Fifth Well. In addition to the wells and pads provided for in Paragraphs 4.1.1 and 4.1.2, the WIOs shall continue permitting for the East Pad, an East Pad well, and a fifth well, with the permitted location of the fifth well determined by the WIOs based on prior well results.

4.1.4 Wells to Target Thomson Sand Gas. All wells addressed in Paragraph 4.1 shall target Thomson Sand gas.

4.1.5 IPS POD. The work plans for the development and operation for the unitized land set forth in Paragraphs 4.1.1 through 4.1.4 shall constitute the drilling and operating obligations under Section 10 of the PTUA until May 1, 2017, unless IPS Project Start-up has not occurred due to factors outside the control of the WIOs under Paragraph 4.2.3 or force majeure under Paragraph 4.14, then until one year following IPS Project Start-up. The Unit Operator shall submit an annual report by March 1 of each year describing the operations conducted during the preceding year, but otherwise shall not be required to update the plan under 11 AAC 83.343.

4.1.6 Facility Expansion.

4.1.6.1 If a Major Gas Sale is Sanctioned by year-end 2019, then the WIOs are not obligated to pursue or continue to pursue the work plans for a Point Thomson Expansion Project set forth in Paragraphs 4.1.6.2, 4.6.2, or 4.6.3.

4.1.6.2 If a Major Gas Sale is not Sanctioned by June 1, 2016, the WIOs shall begin engineering and permitting of a Point Thomson Expansion Project. The WIOs shall incorporate these work plans into the Expansion Planning POD set forth in Paragraph 4.6.2 of this Agreement.

4.2 Completion of the IPS Project; Abandonment

4.2.1 Definition of Abandonment. For purposes of Paragraph 4.2, "Abandon," "Abandoned," or "Abandonment" means the WIOs are no longer diligently pursuing the IPS Project in good faith. Diligence is understood to mean the type of effort and activity demonstrated by the WIOs in drilling the PTU 15 and PTU 16 wells. The WIOs will have diligently pursued the IPS Project if the project work plans, activities, and pace are undertaken in a manner exemplified by the Point Thomson Provisional Schedule Level 1 work sheet attached as Exhibit E. Moreover, a lack of progress on project work plans, activities, and pace commensurate with the size and scale of the IPS Project over a one-year period is indicia of the WIOs' decision to Abandon the IPS Project. The economics or costs of the IPS Project cannot be used as a rationale or justification for not completing the IPS Project and do not constitute a factor outside the WIOs' control under Paragraph 4.2.3. To demonstrate diligence, the WIOs shall continue to provide to DNR documentation (e.g., spend reports, permit

applications, etc.) of their work activities and more detailed annual work plans to supplement the information in Exhibit E.

4.2.2 Consequences of Abandonment.

4.2.2.1 If the WIOs Abandon the IPS Project and have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of less than $2.0 billion dollars, then all Point Thomson Unit area acreage except for acreage included in Area A and Area B on Exhibit C shall be released to the State Without Appeal at year-end 2015.

4.2.2.2 If the WIOs Abandon the IPS Project and: (a) have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of less than $2.0 billion dollars; and (b) a West Pad well has not been spud by year-end 2016, then the Point Thomson Unit area acreage in Area B on Exhibit C shall be released to the State Without Appeal at year-end 2016.

4.2.2.3 If the WIOs Abandon the IPS Project and have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of $2.0 billion dollars or more, then only acreage listed in Area E and Area F on Exhibit C shall be released to the State Without Appeal at year-end 2015.

4.2.2.4 If the WIOs Abandon the IPS Project, the WIOs shall provide the State with accounting information provided by the Unit Operator in joint interest

billings to the WIOs to verify the costs incurred for Point Thomson Development between year-end 2007 and year-end 2015.

4.2.3 Factors Outside the Control of the WIOs. The WIOs shall not be considered to have Abandoned the IPS Project if the WIOs are unable to continue moving forward because of factors outside the control of the WIOs due to:

(a) circumstances addressed by Section 25 of the PTUA;

(b) design modifications due to significant technological or environmental obstacles that cause substantial additional work;

(c) litigation by third parties; or

(d) permitting and regulatory delays.

At the time the WIOs assert that one or more of the factors outside of their control has prevented them from moving forward with the IPS Project, the WIOs shall provide written notice to DNR with a description of the circumstances that have occurred and information to support the basis for their position. The WIOs shall exercise due care and diligence to address a factor outside of their control and shall keep DNR updated on the steps they are taking and their progress to move forward with the IPS Project under the circumstances. The WIOs shall provide written notice when they are able to continue moving forward with the IPS Project. If DNR disagrees with the position taken in the written notice from the WIOs, or if DNR otherwise believes the WIOs have Abandoned the IPS Project, DNR shall provide the WIOs written notice of DNR's position. DNR and the WIOs shall meet and review their respective positions in an effort to resolve any

differences. If the parties are not able to resolve their different assessments, then any dispute on whether the WIOs have Abandoned the IPS Project and whether failure to spud a West Pad well by the date set forth in Paragraph 4.2.2.2 is due to circumstances addressed by Section 25 of the PTUA, shall be subject to expedited arbitration. The parties shall agree upon expedited arbitration with the principles to be decided following execution of this Agreement.

4.2.4 Term of Abandonment Provision. This Paragraph 4.2 expires upon IPS Project Start-up, but in no event extends beyond year-end 2019, which date is fixed and not subject to Paragraph 4.14.

4.2.5 Year-end 2019. The provisions in this Paragraph 4.2 do not modify the provisions regarding Point Thomson Unit contraction/termination at year-end 2019 in Paragraphs 4.5.2 and 4.5.7 of this Agreement.

4.3 Formation of Initial Participating Area (Initial PA). This Paragraph 4.3 describes how the Initial PA will be formed for the Point Thomson Unit.

4.3.1 Initial Participating Area for Thomson Reservoir. The Initial PA shall be the first participating area for the Point Thomson Unit. The Initial PA shall contain the leases listed as the Initial Participating Area on Exhibit C. At least ninety (90) days before the date of first production through the IPS Project, the Unit Operator shall submit documentation regarding the Initial PA as provided in Paragraph 4.4.5, including PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C. The Initial PA for the Thomson Reservoir shall be formed and is approved upon IPS Project Start-up effective the date of first

production through the IPS Project with delivery into TAPS. Within twenty (20) days following the month of first production through the IPS Project with delivery into TAPS, the Unit Operator shall provide notice to DNR of the date of first production through the IPS Project with delivery into TAPS.

4.4 Expansion of IPA and Formation of New PAs. This Paragraph 4.4 describes how the Point Thomson Unit Initial PA may be: (1) conditionally expanded to include acreage in Area B upon completion of certain work activities; (2) expanded to include acreage in Area B and Area D upon approval of a PA application pursuant to the PTUA including applicable State law based on technical information from drilling and IPS production; and (3) expanded to include up to the entire Point Thomson Unit area (except Area F) upon Project Start-up of a Point Thomson project resulting from Sanction of a Major Gas Sale, an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day, or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The leases in the Initial PA, and the leases included in Area B, have been identified for inclusion in the Thomson Reservoir PA by the Parties for the purposes of this Agreement. The inclusion of leases in the PA does not constitute a determination under Section 11 of the PTUA of the land that otherwise would be included in the PA. Development of Point Thomson Unit acreage in Area F (Brookian reservoirs) is subject to the provisions set forth in Paragraph 4.7.

4.4.1 Area B Expansion. If: (i) a West Pad well is drilled as provided in Paragraph 4.1.2 and casing set across the Thomson Sand; and (ii) an Authorization for Expenditure for a gathering line to the West Pad is approved, then the Initial PA formed as provided in Paragraph 4.3 shall automatically expand to include the

West Pad Area (Area B) acreage listed on Exhibit C. Within twenty (20) days following the month in which the last of the above conditions is accomplished, the Unit Operator shall submit documentation regarding the expanded PA as provided in Paragraph 4.4.5, including the PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C, and notice confirming that the conditions set forth in this Paragraph 4.4.1 have been met including a copy of the Authorization for Expenditure. Upon receipt of proper notification, expansion of the Initial PA is automatically approved effective the first day of the month in which the last of conditions (i) and (ii) was met.

4.4.2 PA Expansion to Entire Unit. If by year-end 2019, (i) a Major Gas Sale is Sanctioned or (ii) the WIOs Commit to an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day or to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then, upon Project Start-up of the project to develop the Point Thomson Reservoir for a Major Gas Sale, the IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day, or the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, as applicable, the PA for the Thomson Reservoir shall expand to include the entire Point Thomson Unit area contained on Exhibit A and the leases listed and identified on Exhibit B, except acreage listed in Area F on Exhibit C or acreage that has contracted from the Point Thomson Unit if IPS Project Start-up has not occurred as provided under Paragraph 4.5.7. At least ninety (90) days before Project Start-up, the Unit Operator shall submit documentation regarding the expanded PA as provided in Paragraph 4.4.5,

including the PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C. Within twenty (20) days following the month of Project Start-up, the Unit Operator shall submit documentation confirming Project Start-up. Prior to the effective date of expansion of the PA, any acreage subject to this Paragraph 4.4.2 and not within the PA for the Thomson Reservoir shall be subject to the provisions of Paragraph 4.5.1.

4.4.3 PA Expansion Based on Technical Information. In addition to expansion of the PA for the Thomson Reservoir provided in Paragraph 4.4.1, prior to year-end 2019 the Unit Operator may submit an application for expansion of the PA pursuant to the PTUA including applicable State law based on drilling and IPS production results (i.e., technical information). This request could include acreage in Area B and Area D on Exhibit C. Any acreage included in the PA for the Thomson Reservoir as a result of this application shall be listed as a new Area C on Exhibit C and depicted as Area C on Exhibit D. The WIOs' rights to such an expansion of the PA and DNR's decisions regarding same shall be governed by the PTUA including applicable State law. The Parties acknowledge that any DNR decision on a technical PA submitted consistent with this Paragraph 4.4.3, including any appeal of a DNR decision to the Superior Court of the State of Alaska, may extend beyond year-end 2019.

4.4.4 Acreage Not Subject to Contraction. The following acreage shall not be subject to removal from a PA or contraction from the Point Thomson Unit:

(a) acreage that has been included in the Initial PA pursuant to an IPS Project Start-up under Paragraph 4.3;

(b) except as specifically provided in Paragraph 4.5.8, acreage that has been included in a PA pursuant to a PA expansion to include Area B under Paragraph 4.4.1;

(c) acreage that has been included in a PA pursuant to a PA expansion to include the entire Point Thomson Unit (except Area F) under Paragraph 4.4.2; or

(d) subject to 11 AAC 83.351(c), as applicable, and except as specifically provided in Paragraph 4.5.3, acreage that has been included in a PA pursuant to an approved PA expansion based on technical information under Paragraph 4.4.3.

Notwithstanding the above, this Paragraph 4.4.4 does not modify Section 20(c) of the PTUA should production cease from the PA.

4.4.5 PA Documentation. Information to be submitted to DNR under Paragraphs 4.3.1, 4.4.1 and 4.4.2 is provided in Exhibit F.

4.4.6 PA Dispute. Any dispute related to a PA under this Agreement shall be subject to Paragraph 5.1. A dispute regarding PA documentation or the tract allocation factors set forth in Exhibit C shall not impact formation or expansion of a PA under this Agreement, except as provided in Paragraph 4.4.3. Submittal of PA documentation under Paragraphs 4.3 and 4.4 shall be subject to the terms of the

PTUA including applicable State law. Approval of the tract allocation factors contained in Exhibit C shall be subject the terms of the PTUA including applicable State law. If the tract allocation factors submitted by the Unit Operator under Paragraphs 4.3 and 4.4 are disputed, the factors submitted by the Unit Operator shall take effect and apply until the dispute is finally resolved. Once resolved, the tract allocation factors will be retroactively adjusted.

4.5 Unit Contraction and Participating Area Reductions / Unit Status at Year-End 2019. This Paragraph 4.5 describes various development scenarios that could be present at year-end 2019, and the implications for acreage in the Point Thomson Unit. Particularly, this paragraph sets forth the terms and conditions under which some or all of the acreage could contract out of the Point Thomson Unit and be released to the State Without Appeal, and some or all of the acreage could remain in the Point Thomson Unit and be included in a PA. Paragraph 4.5 does not address Area F; Paragraph 4.7 describes what will happen with Area F acreage.

4.5.1 Acreage Subject to Inclusion in PA. If by year-end 2019 a Major Gas Sale has been Sanctioned or the WIOs have Committed to a Point Thomson Expansion Project, acreage to be included in the PA for the Thomson Reservoir under Paragraphs 4.4.2, 4.5.4, or 4.5.7 shall be entitled to be included in the PA. Such acreage shall remain in the Point Thomson Unit following formation of the Initial PA, and thereafter shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e). If IPS Project Start-up has not occurred and the Initial PA has not been formed, but a Major Gas Sale is Sanctioned, such acreage shall remain in the

Point Thomson Unit and shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e), as if the Initial PA had been formed effective May 1, 2016.

4.5.2 No IPS or MGS.

4.5.2.1 If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, the following shall occur: (1) subject to Paragraph 4.5.2.2, the Point Thomson Unit and the PTUA shall terminate Without Appeal; (2) except for leases subject to Paragraph 4.5.2.3, each WIO will immediately surrender its leases and all such acreage shall be automatically released Without Appeal to the State; (3) each WIO agrees that it will not apply to form a compulsory unit with the Alaska Oil and Gas Conservation Commission with respect to any lease formerly within the Point Thomson Unit; and (4) this Agreement shall terminate.

4.5.2.2 If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, then the WIOs may submit an alternative POD for the Point Thomson Unit no later than sixty (60) days prior to year-end 2019. Submittal and approval of the alternative POD shall be subject to the terms of the PTUA including applicable State law. Nonetheless, DNR shall have sole discretion to accept or reject an alternative POD, and a final Commissioner decision on the alternative POD is Without Appeal. For purposes of this paragraph the WIOs agree not to assert that Section 21 of

the PTUA applies in any respect to review of or a decision on the proposed alternative POD.

4.5.2.3 If the Point Thomson Unit is terminated under Paragraph 4.5.2.1, the lessees of leases containing the PTU 15, PTU 16 and wells drilled after execution of this Agreement, and lessees of leases containing any other wells capable of producing in paying quantities, may submit a Plan of Operations ("POO") for each lease to the Director within sixty (60) days of the date of Point Thomson Unit termination. The POO shall provide for placing the well on producing status within two (2) years of the date of approval of the POO. Approval or rejection of the POO shall be within the sole discretion of the DNR. If the Director denies approval of the POO, that decision may be appealed to the Commissioner. The Commissioner's decision on the POO shall be Without Appeal. If the lessees fail to submit a POO for the leases within sixty (60) days following Point Thomson Unit termination, or the Commissioner denies approval of the POO, the leases shall terminate with acreage returning to the State Without Appeal. If the Director or the Commissioner approve the POO and the lessees fail to place the well on producing status within two years, the lease shall terminate with acreage returning to the State Without Appeal.

4.5.3 IPS Project - No Expansion and No MGS. If IPS Project Startup has occurred and the WIOs do not Commit to a Point Thomson Expansion Project and a Major Gas Sale has not been Sanctioned by year-end 2019, then:

4.5.3.1 The acreage in Area E and the northern half of ADL 377017 (ADL 377017(N) on Exhibit C), without regard to whether this acreage was included in a technical PA application or is included in the PA as the result of a technical PA expansion under Paragraph 4.4.3, shall be released to the State Without Appeal. The remaining acreage in Area D shall be subject to the PTUA including applicable State law.

4.5.3.2 If a technical PA application has been filed pursuant to Paragraph 4.4.3, then, subject to Paragraph 4.5.3.1, the acreage included in the application shall not be subject to contraction until a final decision on the technical PA application. Once a final decision has been made on the PA application, any acreage not included in a PA shall be eliminated from the Point Thomson Unit.

4.5.4 IPS Project Expansion by 10,000 Barrels per Day and No MGS. If the WIOs Commit to an IPS Gas Cycling Expansion Project of minimum of an additional 10,000 barrels per day by year-end 2019, but that expansion is less than minimum of an additional 20,000 barrels per day, then the acreage in the northern half of ADL 377017 (ADL 377017(N) on Exhibit C), without regard to whether this acreage was included in a technical PA application or is included in the PA as the result of a technical PA expansion under Paragraph 4.4.3, and the acreage listed as within ADLs 377016, 389728 and 389730 in Area E on Exhibit C, shall be released to the State Without Appeal. The remaining acreage listed within Area E on Exhibit C shall be included in the acreage listed in Area D on Exhibit C and subject to the terms of the PTUA including applicable State law.

4.5.5 IPS Project Expansion by 20,000 Barrels per Day or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project and No MGS. If IPS Project Start-up has occurred and the WIOs have Committed to either: (1) an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day; or (2) a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project by year-end 2019, then all acreage, except as set forth in Paragraph 4.7, shall remain in the Point Thomson Unit at year-end 2019 and shall be entitled to be included in a PA as set forth in Paragraphs 4.4.2 and 4.5.1.

4.5.6 IPS with MGS. If IPS Project Start-up has occurred and a Major Gas Sale has been Sanctioned by year-end 2019, then all acreage, except as set forth in Paragraph 4.7, shall remain in the Point Thomson Unit at year-end 2019 and shall be entitled to be included in a PA as set forth in Paragraphs 4.4.2 and 4.5.1.

4.5.7 MGS Sanctioned – No IPS Project. If IPS Project Start-up has not occurred and a Major Gas Sale is Sanctioned prior to year-end 2019, any acreage that contracts from the Point Thomson Unit under Paragraph 4.2 of this Agreement shall not be recommitted to the Point Thomson Unit. Acreage remaining in the Point Thomson Unit shall be subject to Paragraphs 4.4.2 and 4.5.1.

4.5.8 Area B. If (i) an expanded PA based on technical information has not been approved as provided in Paragraph 4.4.3 that includes all of Area B or (ii) if a gathering line is not constructed and the well on the West Pad is not placed on Continuous Operations into the IPS by year-end 2019, then any of the West Pad Area (Area B) acreage listed on Exhibit C that was originally included in the PA

for the Thomson Reservoir pursuant to Paragraph 4.4.1, but subsequently has not been included in the PA expansion as provided for in Paragraph 4.4.3, shall be removed from the PA and included within Area D on Exhibit C, and thereafter shall be subject to the terms of the PTUA including applicable State law.

4.5.9 Segregation of Leases Released to State or Contracted from the Unit. Any lease, a portion of which is released to the State under Paragraphs 4.2 or 4.5, shall be segregated into a separate and distinct lease as to the portion remaining within the Point Thomson Unit, which does not include the portion that contracts out of the Point Thomson Unit and is released to the State, and the provisions of the original lease shall apply to the segregated portion that remains in the Point Thomson Unit.

4.6 Plans of Development/Future Work Plans. The WIOs shall prepare plans of further development and operation for the Point Thomson Unit under Section 10 of the PTUA ("Future POD") as provided in this Paragraph 4.6 for the periods set forth. Work plans for Point Thomson Unit acreage in Area F of Exhibit C shall be subject to the terms of Paragraph 4.7, not this Paragraph 4.6.

4.6.1 Major Gas Sale Sanction. If a Major Gas Sale is Sanctioned prior to year-end 2019, then within ninety (90) days following the Sanction date, the WIOs shall submit a Future POD that includes work plans and project activities to develop the Point Thomson Reservoir for a Major Gas Sale (the initial and each Future POD under this Paragraph 4.6.1 is hereinafter referred to as an "MGS POD"). Upon Project Start-up associated with an MGS POD, the obligations set forth in

Paragraph 4.1.1 shall terminate. The initial MGS POD shall be effective as of the date a Major Gas Sale is Sanctioned and shall remain in effect for two years following that date and until a subsequent MGS POD is approved. Subsequent MGS PODs shall be submitted to DNR within ninety (90) days before expiration of the prior MGS POD. Each MGS POD shall cover a period of two years and shall address the information contained in Paragraph 4.6.4. Following submittal of each MGS POD, DNR shall have sixty (60) days to review the MGS POD. Unless DNR provides the WIOs written notice that the MGS POD is inconsistent with the terms of this Agreement, the MGS POD is approved effective the date set forth above, even if DNR approval of the MGS POD occurs after that date.

4.6.2 Expansion Project Planning. Consistent with Paragraph 4.1.6.2, if a Major Gas Sale has not been Sanctioned by June 1, 2016, the WIOs must begin engineering and permitting of a Point Thomson Expansion Project. The WIOs shall submit a Future POD that includes work plans for evaluation and selection of an option for development of the Point Thomson Reservoir through a Point Thomson Expansion Project ("Expansion Planning POD"). The Expansion Planning POD shall be effective one year following IPS Project Start-up but no later than May 1, 2017, and shall remain in effect until the earlier of: (1) the effective date of an Expansion Project POD under Paragraph 4.6.3; (2) the effective date of an MGS POD under Paragraph 4.6.1; or (3) December 31, 2019 if a Major Gas Sale has not been Sanctioned and the WIOs do not Commit to a Point Thomson Expansion Project prior to that date. The Expansion Planning POD may supplement the work plans set forth in Paragraphs 4.1.1 through 4.1.4. The Expansion Planning

POD shall be submitted no later than ninety (90) days following the Expansion Planning POD effective date provided above and shall address the information contained in Paragraph 4.6.4. Following submittal of the Expansion Planning POD, DNR shall have sixty (60) days to review the Expansion Planning POD. Unless DNR provides the WIOs written notice that the Expansion Planning POD is inconsistent with the terms of this Agreement, the Expansion Planning POD is approved effective the date set forth above, even if DNR approval of the Expansion Planning POD occurs after that date.

4.6.3 Expansion Project Commitment. If a Major Gas Sale has not been Sanctioned by year-end 2019, and the WIOs Commit to a Point Thomson Expansion Project on or before year-end 2019, then the WIOs shall submit a Future POD based on the Expansion Planning POD work product that describes work plans and project activities to develop the Point Thomson Reservoir through a Point Thomson Expansion Project (the initial and each subsequent Future POD under this Paragraph 4.6.3 is hereinafter referred to as an "Expansion Project POD"). Upon Project Start-up of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the obligations set forth in Paragraph 4.1.1 shall terminate. Upon DNR approval, the initial Expansion Project POD shall be deemed effective on January 1, 2020 unless the WIOs Commit to a Point Thomson Expansion Project and an Expansion Project POD is approved prior to year-end 2019, and shall remain in effect for two years following that approval and until a subsequent Expansion Project POD is approved. The initial Expansion Project POD shall be submitted no later than ninety (90) days following the date the WIOs Commit to a

Point Thomson Expansion Project. Subsequent Expansion Project PODs shall be submitted to DNR within ninety (90) days before expiration of the prior Expansion Project POD. Each Expansion Project POD shall cover a period of two years and shall address the information contained in Paragraph 4.6.4. Following submittal of each Expansion Project POD, DNR shall have sixty (60) days to review the Expansion Project POD. Unless DNR provides the WIOs written notice that the Expansion Project POD is inconsistent with the terms of this Agreement, the Expansion Project POD is approved effective the date set forth above, even if DNR approval of the Expansion Project POD occurs after that date.

4.6.4 POD Information. Consistent with this Paragraph 4.6, Future PODs shall include plans to address the following:

(a) data acquisition and technical evaluations and qualifications to support the development plan;

(b) well planning including identification of the number of drill wells, well locations, and completion plans;

(c) project design basis and engineering plans for infrastructure, well pads, and process facilities;

(d) acquisition of permits and other approvals to accommodate drilling, construction, production transportation, and operations;

(e) operation and maintenance considerations;

(f) construction and start-up including estimated timing to complete the work activities;

(g) logistics; and

(h) safety, security, health, and environmental considerations.

4.6.5 POD Implementation. Any dispute regarding a Future POD, including whether a Future POD is consistent with this Agreement, whether WIOs are diligently progressing a project to develop the Point Thomson Reservoir for a Major Gas Sale, or whether WIOs are diligently progressing a Point Thomson Expansion Project consistent with this Agreement shall be subject to Paragraph 5.1. Any dispute related to a Future POD shall not be used as the basis to seek Point Thomson Unit contraction or release of acreage, unless DNR asserts the WIOs are not diligently progressing a project to develop the Point Thomson Reservoir for a Major Gas Sale or a Point Thomson Expansion Project consistent with this Agreement.

4.7 Area F. If the WIOs submit a POD for the Brookian by year-end 2018 that is approved by DNR, the acreage listed in Area F on Exhibit C shall remain in the Point Thomson Unit after any Unit contraction at year-end 2019 and shall be maintained through approved PODs or formation of expanded or new PA(s) in accordance with the PTUA including applicable State law. If the WIOs do not submit a Brookian POD by year-end 2018 or if DNR does not approve the Brookian POD, the acreage listed in Area F on Exhibit C shall be released to the State Without Appeal.

4.8 Royalty. Following IPS Project Start-up, the WIOs may submit a royalty modification application requesting a royalty reduction. DNR denial of the application does not relieve the WIOs or the State of their commitments to abide by the terms of this Agreement.

4.8.1 If applicable, the application shall be submitted pursuant to Alaska statutory provisions and shall be submitted and evaluated pursuant to Alaska law.

4.8.2 If the application is not submitted pursuant to Alaska statutory provisions, the WIOs may apply for royalty modification under this Paragraph 4.8.2. The State shall evaluate this application in good faith and the WIOs shall provide DNR with sufficient information to process the application. A decision by DNR denying an application submitted under this Paragraph 4.8.2 for any reason, including a determination that DNR may not legally approve that application because it does not have the authority to do so, shall be Without Appeal.

4.9 Lease Assignments. Within ninety (90) days of the Effective Date, the State agrees to approve lease assignments for each of the leases identified on Exhibit B as PTU Tract No. 1 through Tract No. 38, in the manner requested in writing by ExxonMobil, BP Exploration (Alaska) Inc., Chevron U.S.A. Inc., and ConocoPhillips Alaska, Inc., who, as represented by those requesting parties, are the only lessees to those assignments.

4.10 Litigation.

4.10.1 Joint Motions. Within ten (10) days of the date this Agreement is executed, the Parties shall jointly and simultaneously file: (a) a motion to vacate the February 11, 2010 Order Granting Stay of Proceedings in the Point Thomson Superior Court Case; and (b) a motion to vacate the December 26, 2007 and January 11, 2010 decisions in the Point Thomson Superior Court Case ("Joint Motion"). A copy of this Agreement shall be included with the filings. The Joint Motion described in Paragraph 4.10.1(b) shall expressly affirm that the DNR Point Thomson Orders will be automatically withdrawn as set forth in Paragraph 4.10.3 if the Joint Motion described in Paragraph 4.10.1(b) is granted.

4.10.2 Effective Date of Agreement. The effective date of this Agreement ("Effective Date") shall be the later of: (i) the date the Superior Court grants the Joint Motion described in Paragraph 4.10.1(b); (ii) the date of dismissal of the Point Thomson Supreme Court Case; and (iii) the date of dismissal of the Point Thomson Superior Court Case. If the Superior Court denies the Joint Motion described in Paragraph 4.10.1(b), or the Point Thomson Supreme Court Case and the Point Thomson Superior Court Case are not dismissed, this Agreement shall not become effective.

4.10.3 Other DNR Requirements.

4.10.3.1 Immediately upon the granting of the Joint Motion described in Paragraph 4.10.1(b), the DNR Point Thomson Orders shall be automatically withdrawn. Any authorization or approval issued by DNR as a result of any

of the DNR Point Thomson Orders allowing the WIOs to conduct activity within the Point Thomson Unit area shall not be affected by such action and shall remain valid and effective by its terms.

4.10.3.2 Within ten (10) days of the date the Superior Court grants the Joint Motion described in Paragraph 4.10.1(b), the Parties shall file a joint dismissal of the Point Thomson Supreme Court Case and the Point Thomson Superior Court Case pursuant to Alaska Appellate Rule 511.

4.10.4 Other Owner Requirements. Within ten (10) days of the Effective Date, the Owner Group shall file a release of Amended Notice of Lis Pendens in the Point Thomson Superior Court Case.

4.10.5 Other Joint Motions. Within ten (10) days of the Effective Date, the Parties shall jointly move to dismiss with prejudice the remaining Point Thomson Cases. A copy of this Agreement shall be included with each filing.

4.10.6 Costs and Fees. For purposes of this Paragraph 4.10, the State and the Owner Group shall each bear their own costs and attorney's fees.

4.11 Point Thomson Unit Status. By signing this Agreement, the Parties confirm that the Point Thomson Unit, the PTUA, and the Point Thomson Unit Operating Agreement have remained in effect since originally approved, and remain in effect as of the date of this Agreement as modified by this Agreement.

4.12 Interpretation. In the event of any conflict or inconsistency between this Agreement and the PTUA, this Agreement controls. Subject to and as modified by the terms of

this Agreement, the relationship between DNR and the WIOs shall continue to be governed by the PTUA including applicable State law.

4.13 Alaska Hire. Within the constraints of law, when the Unit Operator hires, it agrees to employ Alaska residents and contract with Alaska businesses to provide goods and services to support and work on construction, fabrication, or operation at Point Thomson to the extent Alaska residents or Alaska businesses are available, ready, willing, cost competitive, in compliance with all safety and environmental standards, qualified and able to accept employment at the time required, and are located in Alaska. The Unit Operator shall use, as far as is practicable, job centers and associated services operated by the Department of Labor and Workforce Development. The Unit Operator shall advertise for available positions locally and use, as far as practicable, Alaska job service organizations to notify the Alaskan public.

4.14 Force Majeure. The terms of this Agreement are subject to the unavoidable delay provisions of Section 25 of the PTUA. For the purposes of this Agreement, failure to timely receive permit approvals or other authorizations, despite the exercise of due care and diligence of the WIOs, is considered an unavoidable delay under Section 25 of the PTUA. Notwithstanding the foregoing, failure to obtain AOGCC approval related to the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project is not force majeure and will not be considered an unavoidable delay under Section 25 of the PTUA.

4.15 Dates Subject to Adjustment. Decisions, work activities, and dates associated with Thomson Reservoir development are interrelated. Except as specifically provided in

Paragraph 4.15.1, if one or more force majeure events result in an extension of the date for IPS Project Start-up by at least one full year from the date provided in Paragraph 4.1.1.2 as may be adjusted herein, regardless of the actual term of any single force majeure event, then for each full one-year period that IPS Project Start-up is delayed, the dates for future Thomson Reservoir decisions and work activities, including dates associated with a Point Thomson Expansion Project or Thomson Reservoir development for a Major Gas Sale, shall be extended by a corresponding period of time. This provision is applicable each and every time IPS Project Start-up is delayed by at least one additional full year. This Paragraph 4.15 shall apply in addition to any extension or adjustment to a date in this Agreement resulting from a force majeure event under Paragraph 4.14.

4.15.1 Dates Not Subject to Adjustment. The following dates are not subject to adjustment under Paragraphs 4.14 and 4.15:

(a) the expiration date (year-end 2019) for the Abandonment provision under Paragraph 4.2.4;

(b) the year-end 2007 to year-end 2015 time period for determination of project costs if the WIOs Abandon the IPS Project as provided under Paragraph 4.2;

(c) the date (year-end 2018) for WIO submittal of a Brookian POD under Paragraph 4.7; and

(d) the date for application of DNR standard administrative processes under Paragraph 5.1.3.1.

The number of days for submitting information or providing notice under this Agreement (e.g., "within ninety (90) days") are not subject to adjustment under Paragraph 4.14, including the number of days for submitting and approving Future PODs under Paragraph 4.6.

4.16 Taxes and Royalty for Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The Parties agree that any gas produced from a reservoir within the Point Thomson Unit and injected into a reservoir within the Prudhoe Bay Unit pursuant to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project is only subject to tax and royalty one time.

4.16.1 Tax on Injected Gas. The Parties recognize that Alaska law regarding oil and gas production tax provides that gas produced from the Point Thomson Unit that would be used according to 15 AAC 55.151(e) in effect as of the Effective Date, and that would be injected into a reservoir within the Prudhoe Bay Unit in the course of operations of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project for purposes of repressuring, including enhanced recovery, would be exempt from taxation at the time of its production from the Point Thomson Unit and would be subject to tax only at the time the gas would be ultimately produced for sale from the Prudhoe Bay Unit.

4.16.2 Royalty on Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project Gas. If the WIOs Commit to and complete construction of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then, upon Project Start-up, the State, as authorized by the Point Thomson leases and

applicable State law, will elect, for the period prior to Project Start-up of a Major Gas Sale, to take in-kind the State's royalty share of gas produced from the Point Thomson Unit when produced into the gas pipeline from Point Thomson to Prudhoe Bay referenced in Paragraph 2.21(i). Terms implementing this royalty in kind election are as follows.

4.16.2.1 Definitions. Whenever the following terms are used in this Paragraph 4.16.2, they shall have the meanings set forth in this Paragraph 4.16.2.1. Other capitalized terms shall have the meaning set forth in Paragraph 2 of this Agreement.

(a) "Delivery Point" means: (1) the terminus of the PTU / PBU Gas Pipeline in the Prudhoe Bay Unit ("PBU Delivery Point") if the PTU / PBU Gas Pipeline has been exempted from the requirement of a right-of-way lease under AS 38.35 ("Unregulated PTU / PBU Gas Pipeline"); or (2) the point where Point Thomson gas is produced and first delivered into the PTU / PBU Gas Pipeline ("PTU Delivery Point") if the PTU / PBU Gas Pipeline has not been exempted from the requirement of a right-of-way lease under AS 38.35 ("Regulated PTU / PBU Gas Pipeline").

(b) "Field Costs" means costs incurred by lessee that may be reimbursed or deducted from royalty gas under the Point Thomson leases and other applicable agreements.

(c) "Fuel / Losses" means any fuel consumption or losses associated with transporting gas through the PTU / PBU Gas Pipeline.

(d) "PBU" means the Prudhoe Bay Unit.

(e) "PTU / PBU Gas Pipeline" means the gas pipeline to be constructed for a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project that will begin in the Point Thomson Unit and terminate in the Prudhoe Bay Unit.

(f) "State RIK Gas" means the State's royalty share of gas produced from the Point Thomson Unit into the PTU / PBU Gas Pipeline that is taken by the State in kind, as described in this Paragraph 4.16.2.

(g) "Transportation Costs" means costs for transporting gas through the PTU / PBU Gas Pipeline.

4.16.2.2 General Terms.

(a) If the WIOs Commit to and complete construction of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the State, as authorized by the Point Thomson leases and applicable State law, will elect to take in kind State royalty due when Point Thomson gas is produced into the PTU / PBU Gas Pipeline, with State RIK Gas delivered to the State at the Delivery Point.

(b) The State may take all or any portion of State RIK Gas for sale or other use at the time it is delivered to the Delivery Point.

(c) State RIK Gas not taken for sale or other use by the State at the time it is delivered to the Delivery Point will be injected into the PBU reservoir, where the gas will be used for enhanced liquids recovery.

(d) The State will retain title and risk of material loss on State RIK Gas in the PBU reservoir, but will not be responsible for any costs, payments, or fees, or charged for fuel or other operational losses, associated with use of State RIK Gas in the PBU reservoir.

(e) The State will not charge any costs, payments, or fees, nor require receipt of any other benefit for use of State RIK Gas that is delivered to the Delivery Point and injected into the PBU reservoir, beyond any royalty provided for under applicable PBU leases and other applicable agreements on liquids recovered from the PBU reservoir.

4.16.2.3 Transportation Costs, Field Costs, and Fuel / Losses. Except as interpreted or modified by the terms set forth in this Paragraph 4.16.2, any Transportation Costs, Fuel / Losses and Field Costs associated with State RIK Gas shall be addressed as set forth in the Point Thomson leases and other applicable agreements. The manner in which Transportation Costs, Fuel / Losses and Field Costs are addressed depends on whether the PTU /

PBU Gas Pipeline is a Regulated PTU / PBU Gas Pipeline or an Unregulated PTU / PBU Gas Pipeline at the time the State RIK Gas is produced and delivered into the PTU / PBU Gas Pipeline, recognizing that the status of the PTU / PBU Gas Pipeline may change. In addition, upon Project Start-Up of a Major Gas Sale, the treatment of these costs may change. No interest will be charged on any of the State's accrued Transportation Costs and Fuel / Losses prior to the due date under this Paragraph 4.16.2.

(a) Regulated PTU / PBU Gas Pipeline.

i. The State will pay Transportation Costs and be responsible for Fuel / Losses for State RIK Gas that is delivered to the State at the PTU Delivery Point pursuant to the terms of the approved transportation tariff for the PTU / PBU Gas Pipeline.

1. For State RIK Gas that is delivered to the State at the PTU Delivery Point and not injected into the PBU reservoir, the Transportation Costs will be paid by the State and deductions made for Fuel / Losses at the time of delivery to the State at the PTU Delivery Point.

2. For State RIK Gas that is delivered to the State at the PTU Delivery Point and is then injected into the PBU reservoir for enhanced liquids recovery, the Transportation Costs will accrue and deductions made for Fuel / Losses, but will not be

paid by the State until State RIK Gas is delivered from the PBU reservoir to the State for sale or other use.

ii. For State RIK Gas produced prior to Project Start-up of a Major Gas Sale, the State will not be responsible for Field Costs for State RIK Gas that is delivered to the State at the PTU Delivery Point, regardless of whether the State RIK Gas is injected into the PBU reservoir. For Point Thomson gas produced after Project Start-up of a Major Gas Sale, the State will be responsible for Field Costs to the extent provided under the Point Thomson leases and other applicable agreements.

(b) Unregulated PTU / PBU Gas Pipeline.

i. If costs for the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, including the PTU / PBU Gas Pipeline, were entitled to and received deductions and credits under AS 43.55, with substantially the same credits / benefits as exists under AS 43.55 on the Effective Date, then the State will not be responsible for Transportation Costs or Fuel / Losses associated with delivery of State RIK Gas to the State at the PBU Delivery Point prior to Project Start-up of a Major Gas Sale.

ii. If costs for the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, including the PTU / PBU Gas Pipeline, were not entitled to or did not receive deductions and

credits under AS 43.55, with substantially the same credits/benefits as exists under AS 43.55 on the Effective Date, then the State will be responsible for Transportation Costs and Fuel / Losses associated with the delivery of State RIK Gas to the State at the PBU Delivery Point.

1. If State RIK Gas is not injected into the PBU reservoir, payment of Transportation Costs and deductions for Fuel / Losses will be due at the time of delivery of State RIK Gas to the State at the PBU Delivery Point.

2. If State RIK Gas is injected into the PBU reservoir, payment of Transportation Costs and deductions for Fuel / Losses will be due from the State when State RIK Gas is delivered from the PBU reservoir to the State for sale or other use.

iii. For State RIK Gas produced prior to Project Start-up of a Major Gas Sale, the State will not be responsible for Field Costs for State RIK Gas that is delivered to the State at the PTU Delivery Point, regardless of whether the State RIK Gas is injected into the PBU reservoir. For Point Thomson gas produced after Project Start-Up of a Major Gas Sale, the State will be responsible for Field Costs to the extent provided under the Point Thomson leases and other applicable agreements.

4.16.2.4 State RIK Gas Allocation Principles.

(a) For State RIK Gas Injected into the PBU reservoir:

i. Each WIO is responsible for delivery to the State and the State will take deliveries of State RIK Gas proportionately from each WIO.

ii. State RIK Gas will be subject to gas balancing agreement procedures that will be developed between the affected parties, including the State.

iii. State RIK Gas injected into the PBU reservoir will be available for delivery to the State from the PBU reservoir at any then-existing PBU facilities, including any facilities installed for a Major Gas Sale, at a location designated by PBU owners.

iv. Delivery of State RIK Gas to the State will not be unreasonably withheld.

v. Deliveries of State RIK Gas from the PBU reservoir may not unreasonably interfere with ongoing PBU operations.

vi. If delivery from the PBU reservoir is constrained at PBU delivery point(s), gas availability will be allocated 75% to PBU gas and 25% to Point Thomson gas. The allocation to Point Thomson gas will remain fixed even if other gas is injected into the PBU reservoir from another reservoir.

(b) Specific Principles Before Project Start-up a Major Gas Sale. If the State is taking delivery of State RIK Gas for sale or other use for delivery into a facility or pipeline connected to the PTU / PBU Gas Pipeline, the State will preferentially take delivery of State RIK Gas that has not been injected into the PBU Reservoir; otherwise, subject to constraints listed above, the State may take delivery of State RIK Gas that has been injected into the PBU reservoir.

(c) Specific Principles After Project Start-up of a Major Gas Sale.

i. For gas produced from Point Thomson after Project Start-up of a Major Gas Sale, the State from time to time may elect to take its royalty share in value or in kind pursuant to the Point Thomson leases, other applicable agreements and applicable State law.

ii. For State RIK Gas that was injected into the PBU reservoir prior to Project Start-up of a Major Gas Sale, the State may take delivery of its State RIK Gas from the PBU reservoir, or may from time to time, by notice consistent with the notice requirements of the Point Thomson leases and other applicable agreements, elect to take payment in-value as follows:

1. Whether the State receives gas or a payment for its share of State RIK Gas produced from the PBU reservoir, the share will be measured in proportion to gas offtake allocated to Point Thomson gas injected into the PBU reservoir, adjusted

for any withdrawal of State RIK Gas and WIO Point Thomson gas prior to Project Start-up of a Major Gas Sale.

2. Whether the State receives gas or a payment for its share of State RIK Gas produced from the PBU reservoir, there will be no deduction for Field Costs, but the deductions for Transportation Costs and Fuel / Losses, as set forth in Paragraph 4.16.2.3, will apply.

3. If the State elects to receive a payment for its share of State RIK Gas that was injected into the PBU reservoir prior to Project Start-up of a Major Gas Sale, payment will be calculated based on the royalty in value basis for Point Thomson gas under the applicable leases, at the time the gas is withdrawn from the PBU reservoir.

5. MISCELLANEOUS PROVISIONS

5.1 Dispute Resolution. The following provisions shall apply to this Agreement:

5.1.1 Until the date set forth in Paragraph 5.1.3.1, with respect to any dispute regarding the Parties' rights and obligations under this Agreement, including any matter that otherwise would be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, a Party may file an action in the Superior Court of the State of Alaska as set forth in Paragraph 5.5, except for matters set forth in Paragraph 5.1.2 or an Abandonment dispute via arbitration under Paragraph 4.2.3.

Thereafter, DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 shall apply to any dispute regarding the Parties' rights and obligations under this Agreement as provided under the PTUA and applicable State law. Within the application of DNR's administrative processes the Parties do not waive any rights under applicable State law.

5.1.2 Decisions Subject to DNR Standard Administrative Processes.

(a) The following matters shall be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, including the right of appeal to the Commissioner, the right of appeal to the Superior Court of the State of Alaska, and the right of appeal to the Supreme Court of the State of Alaska.

i. Decisions regarding a technical PA application under Paragraph 4.4.3.

ii. Decisions regarding inclusion of acreage in Area B and Area D in a PA and retention of that acreage in the Point Thomson Unit that are specifically governed by or subject to the PTUA including applicable State law as provided in Paragraphs 4.5.3, 4.5.4, and 4.5.8.

iii. Decisions related to providing PA documentation and tract allocations as provided in Paragraph 4.4.6.

(b) The following matters shall be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, including the right of

appeal to the Commissioner, but otherwise are Without Appeal, with no right of appeal to the Superior Court of the State of Alaska or to the Supreme Court of the State of Alaska. Any DNR decision that is Without Appeal shall not have any precedential effect in any other matter, case, or dispute.

i. Decisions regarding the Brookian POD as provided in Paragraph 4.7.

ii. Decisions associated with an alternative POD as provided in Paragraph 4.5.2.2.

iii. Decisions associated with a royalty application as provided in Paragraph 4.8.2.

iv. Decisions associated with a Plan of Operations for leases as provided in Paragraph 4.5.2.3.

5.1.3 The Parties agree that this Agreement is a contract between the Parties. Subject to Paragraph 5.1.3.2, DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 shall include the right of any WIO to appeal a DNR decision or other action to the Superior Court of the State of Alaska, and the right to appeal any judgment of the Superior Court to the Supreme Court of the State of Alaska. Application of DNR standard administrative processes does not provide any right or basis for the State to alter the terms of this Agreement. DNR discretion and the authority to take action or make a decision regarding Point Thomson may only be

exercised by DNR in a manner that, consistent with Paragraph 5.7, does not conflict with the terms of this Agreement.

5.1.3.1 The date for application of DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 and as provided in Paragraph 5.1.1 shall be the later of the following:

(1) year-end 2019, if IPS Project Start-up occurs or a Major Gas Sale is Sanctioned before year-end 2019;

(2) the date of IPS Project Start-up, if the date of IPS Project Start-up occurs after year-end 2019 due to force majeure under Paragraph 4.14; however, not later than year-end 2024, which date is fixed and not subject to adjustment even if IPS Project Start-up has not occurred by year-end 2024.

5.1.3.2 Paragraph 5.1.1 does not apply to DNR decisions referenced in Paragraph 5.1.2(b).

5.1.4 Any Party may dispute whether a specified event has occurred that pursuant to the terms of this Agreement would result in termination of the Point Thomson Unit Without Appeal or release of acreage Without Appeal under Paragraphs 4.2.2, 4.5.2.1, 4.5.3, or 4.5.4, with the dispute handled in accordance with Paragraph 5.1. In the event of such dispute, termination of the Point Thomson Unit Without Appeal or the release of acreage Without Appeal shall not be required until there has been a final judicial determination as to the occurrence of the specified event, or upon an Abandonment determination via arbitration under Paragraph 4.2.3.

This Paragraph 5.1.4 does not apply to DNR decisions referenced in Paragraph 5.1.2(b).

5.1.5 Any dispute that would be subject to the terms of the PTUA shall be determined in accordance with the PTUA including applicable State law.

5.2 No Admission. This Agreement does not constitute and shall not be deemed to be an admission by any Party about the merits, validity, or accuracy of any of the allegations, claims, or defenses of any Party.

5.3 Entire Agreement. This Agreement, including all exhibits attached hereto or referenced herein (all of which are hereby incorporated herein by this reference), represents the complete agreement of the Parties. This Agreement may not be modified, amended, or changed except by written instrument signed by each Party.

5.4 Term of Agreement. Unless earlier terminated in accordance with the provisions hereof, this Agreement shall remain in full force and effect until all obligations have been performed and all rights satisfied.

5.5 Enforcement. No Party shall contest: (a) the validity of this Agreement; (b) subject to Paragraph 5.1, the jurisdiction of the Superior Court of the State of Alaska to enforce this Agreement and its terms or the right of any Party to file an action in the Superior Court of the State of Alaska for enforcement of any of the terms of this Agreement or to enforce an arbitration decision; or (c) the authority of DNR to issue decisions as provided for in Paragraphs 5.1.1, 5.1.2, and 5.1.3.

5.6 Waiver. The failure by any Party at any time to require performance by any other Party or to claim a breach of any provision of this Agreement shall not be construed as affecting any subsequent breach or the right to require performance or to claim a breach with respect thereto.

5.7 Further Assurances. In proceedings before the Alaska Oil and Gas Conservation Commission regarding approvals related to the IPS Project, a Point Thomson Expansion Project, or a Point Thomson project related to a Major Gas Sale, the DNR agrees it will not oppose any such application submitted that is consistent with the terms of this Agreement and applicable State law.

5.8 Validity. The Commissioner has determined that entry into this Agreement and the individual terms and conditions set forth herein are necessary or advisable to protect the public interest, including a determination that the taking in kind of royalty as provided in Paragraph 4.16.2 will be in the best interests of the State. If any provision of this Agreement shall be held to be invalid or unenforceable, such provisions shall not affect in any respect the validity or enforceability of the remainder of this Agreement unless the invalidity materially affects the ability of any Party to perform as contemplated hereunder.

5.9 Order of Precedence. While the exhibits are an integral part of this Agreement, in the event any exhibit conflicts with a provision in the body of this Agreement, the provision in the body of this Agreement shall control, unless that provision of the exhibit expressly states that it supersedes a specifically identified section in the body of

this Agreement, in which case the specifically identified section shall be superseded only with respect to the specific provision of the exhibit.

5.10 Effect of Headings. The headings and subheadings of the sections and paragraphs of this Agreement are inserted for convenience of reference only and shall not control or affect the meaning or construction of any of the terms, covenants, and conditions of this Agreement in any manner.

5.11 Construction. The Parties agree that this Agreement was fully negotiated by the Parties and, therefore, no provision of this Agreement shall be interpreted against any Party because that Party or its legal representative drafted the provision.

5.12 Counterparts and Facsimile Signature. This Agreement may be executed in counterparts and each shall be deemed an original. This Agreement may also be executed by facsimile signature.

5.13 Governing Law. This Agreement shall be governed in all respects by the laws of the State of Alaska without regard to its choice of law or conflict of law provisions.

5.14 Venue. The Parties agree that any action arising out of or relating to this Agreement shall be brought only in a court of competent jurisdiction in the State of Alaska, with the understanding that the State of Alaska does not waive any right to object to federal court jurisdiction, including its rights under the 11th Amendment of the United States Constitution, nor does the State of Alaska agree to waive sovereign immunity.

5.15 Authority to Sign. Each undersigned representative of a Party to this Agreement certifies that he or she is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind such Party to this Agreement.

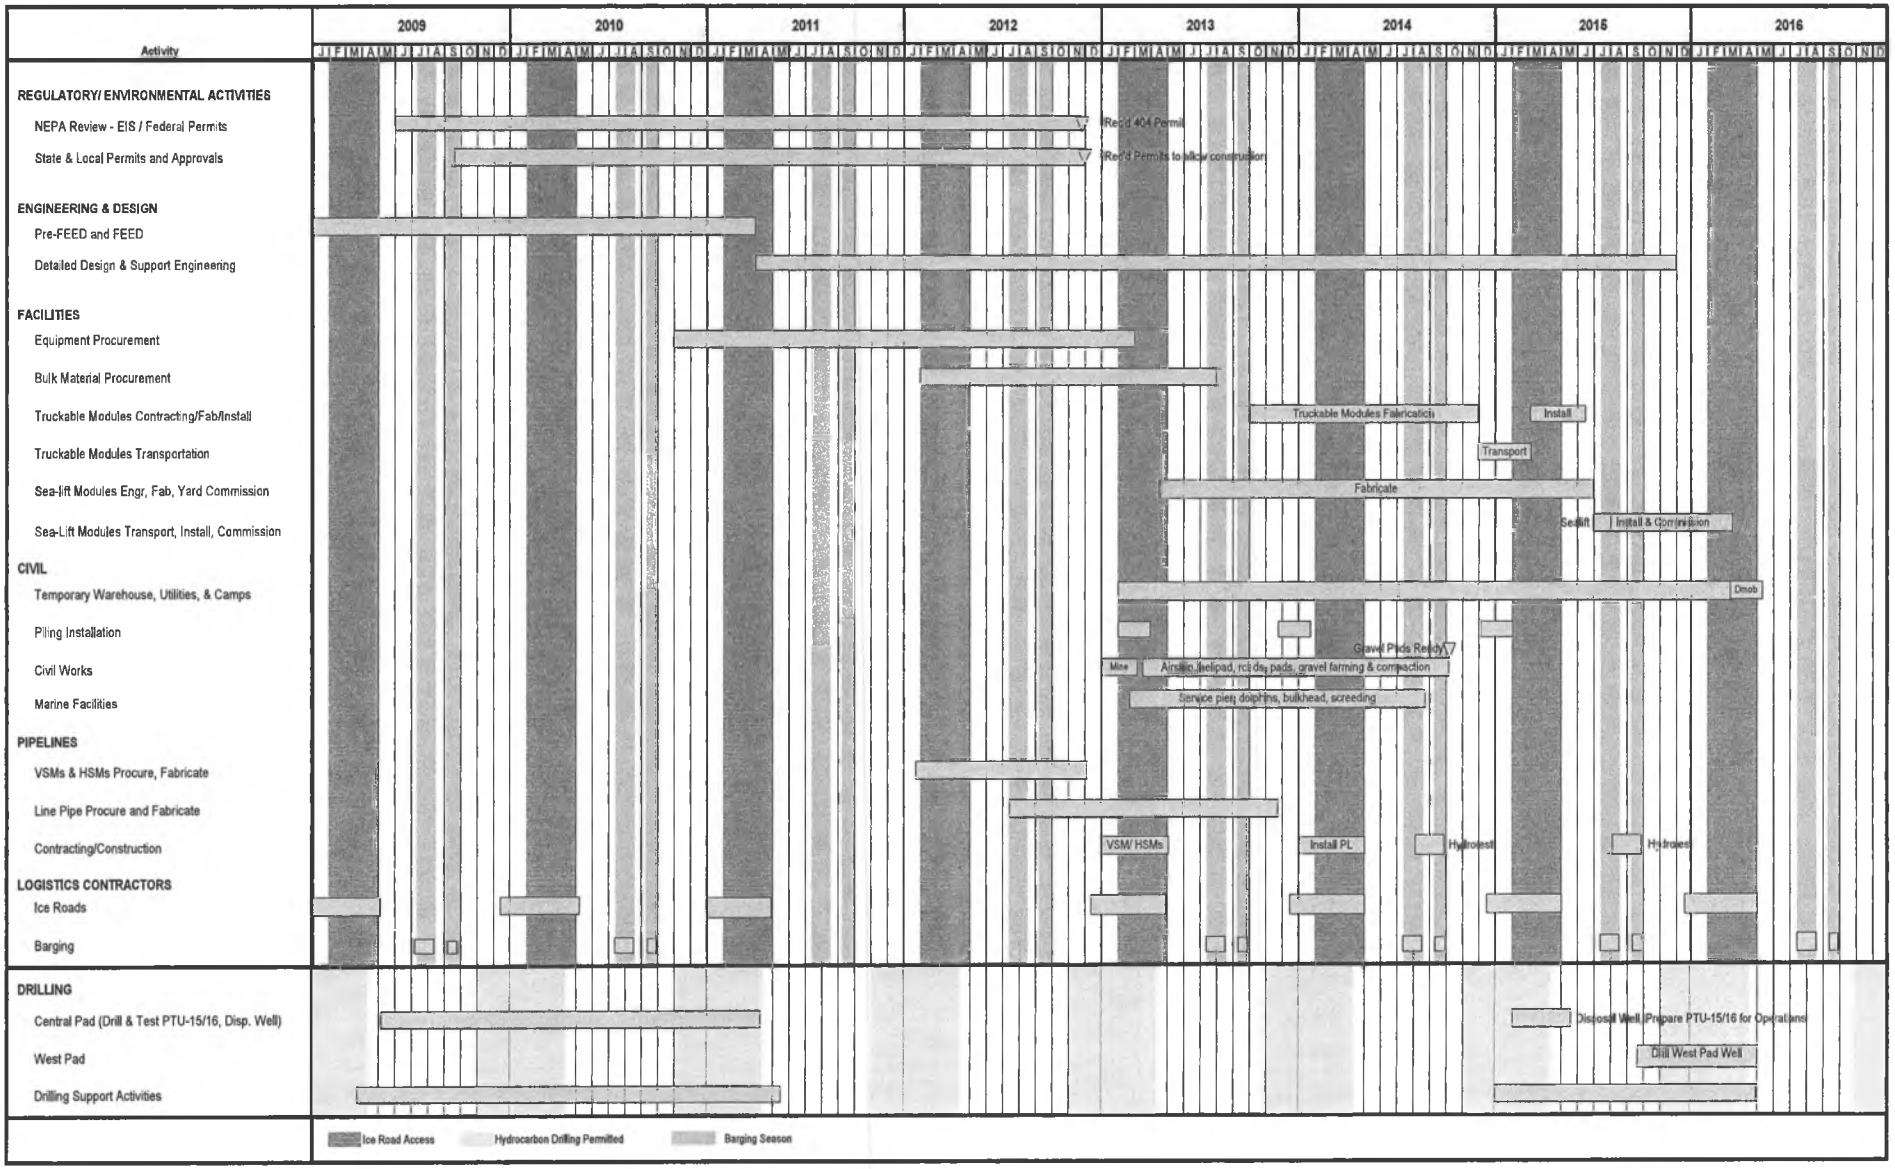
Point Thomson Provisional Schedule Level 1 Work Sheet



NOTE: This schedule is indicative and subject to change.

Exhibit F

PA DOCUMENTATION

DNR will keep information submitted in a PA application confidential as provided in AS 38.05.035(a)(8) and its applicable regulations. In accordance with AS 38.05.035(a)(8)(C), in order for geological, geophysical and engineering data to be held confidential, the Unit Operator must request confidentiality at the time the data is submitted by indicating "CONFIDENTIAL" on all confidential data items.

1. Depth Structure Maps and digital grids (including faults) for each producing horizon.

2. Gross Isochore Maps and digital grids for each producing horizon

3. Hydrocarbon Net Pay Maps and digital grids for each producing horizon. Also include any fluid contact maps and digital grids used in creation of the hydrocarbon net pay maps.

4. Average Porosity and Hydrocarbon Saturation Maps and digital grids for each producing horizon.

5. Hydrocarbon Pore Feet Maps and digital grids for each producing horizon.

6. Paper and digital copies of representative seismic lines to support the applied for action. Data submitted should include both strike and dip oriented lines, include picked horizons for all mapped surfaces, mapped faults, and wells demonstrating time-depth ties to well log formation picks. Lines should be clearly annotated with seismic survey

ID, seismic volume, line number, picked horizon and well names. Map clearly showing location of all seismic and well sections provided.

7. Paper and digital copies of representative stratigraphic and structural well-log cross-sections. Cross-sections should include, log correlations for all mapped horizons, mapped faults, identified fluid contacts and deepest "oil down to" (ODT) and shallowest "water up to" (WUT) picks. Cross-sections should be of an appropriate scale that all annotations, picks, log curves and scales are clearly legible.

8. Hydrocarbon formation volume factors (B_o, B_g) applied to each reservoir.

9. Oil Gravity and/or Viscosity Maps and digital grids for each producing horizon.

10. Digital file (ascii or Excel spreadsheet) of formation picks in measured depth (MD) and sub-sea true vertical depth (sstvd) for each well, including all plug backs and pilot holes. Picks should include top and base of each producing interval, all known fluid contacts and deepest "oil down to" (ODT) and shallowest "water up to" (WUT) picks.

11. Digital files of calculated curve data from log analysis used in determining reservoir properties and in-place hydrocarbon volumes. Curve data should include total and/or effective porosity, water saturation, permeability, clay volume, and bulk volume water.

12. Criteria /cutoffs (i.e. porosity, saturation, volume shale, permeability) used to determine net pay in each producing horizon.

13. Digital file (ascii or Excel spreadsheet) of calculated rock properties of each producing interval for every well. Data to include, top and base depth of interval in measured

depth and sstvd, gross interval thickness (tvt), net sand thickness, net hydrocarbon pay thickness, net to gross ratio, average reservoir porosity, average reservoir water saturation (Sw), average permeability, permeability height (kh), and hydrocarbon pore feet

14. Location Map clearly showing all existing production, injection and planned wells. Horizontal wells should be shown as a line highlighting the existing and planned productive interval length. In addition, a digital file (ascii or Excel spreadsheet) provided with target x y coordinates for planned wells. For horizontal wells, x y coordinates for heel and toe locations should be provided for both existing and planned wells.

15. Summary of all oil and gas (including non-hydrocarbon constituents) compositional analyses, including gravity and viscosity data.

16. Paper and digital copies of all pressure build-up PTA and fluid PVT analyses.

17. Relative permeability curves for oil/water, gas/oil, and gas/water.

18. Paper and digital copies of all capillary pressure analyses, where available.

19. Calculated original oil and/or gas in place (OOIP and/or OGIP) volumes

20. Estimated ultimate recovery (EUR).

21. Proposed reservoir depletion plan set forth in the current POD.

22. Production forecast.

Exhibit G

GAS SALES AGREEMENT PROVISION

In the event of any conflict, the language of this Exhibit G shall control and supersede the language of Paragraph 2.21 with respect to the gas sales agreement provision. If the WIOs intend to Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then at the State's request prior to the Commitment date, the State and each individual WIO with a working interest in each Point Thomson Unit lease will enter into negotiations for separate gas sales agreements, with sufficient lead time to ensure the terms below can be met, that include the following terms which the State has requested be common to all such agreements, with additional terms to be negotiated:

(a) The daily volume of gas to be sold by each WIO will be equal to that WIO's proportionate share of the State's total expected daily volume of Point Thomson royalty gas to be delivered into the PTU / PBU Gas Pipeline.

(b) The gas sales agreement would become effective if the WIOs Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project with gas to be available for delivery on the Commitment date.

(c) The term of each sales agreement will continue until the earlier of: (1) Project Start-up of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, (2) Project Start-up of a Major Gas Sale as defined under the Settlement Agreement, or (3) 10 years following the Commitment date.

(d) The delivery point for the gas will be at a mutually agreed location from Prudhoe Bay facilities.

(e) The State and each WIO will establish the price of gas in their contract based on a price mutually agreed between the State and that WIO considering most recent, relevant Alaska North Slope gas sales agreements, including consideration for volume commitments and terms. The gas sales agreement will allow for periodic price re-openers to be negotiated. The initial re-opener may not be triggered sooner than one year after the start of gas sales.

(f) Any royalty due on gas sold under this provision will be paid in value based on the contract price for that WIO.

4

ExxonMobil ConocoPhillips bp

March 30, 2012

Governor Sean Parnell
550 West 7th Avenue, Suite 1700
Anchorage, Alaska 99501

Dear Governor Parnell,

Our three corporations, collectively and individually, value our relationship with Alaska and believe that its citizens across the state, as well as our shareholders around the world, share a common interest in responsible resource development. We write today to inform you of our progress in working together on the next generation of North Slope resource development.

Alaska's vast North Slope holds over 35 trillion cubic feet of discovered natural gas. To date, this gas has been used to enhance North Slope oil production, adding several billion barrels to Prudhoe and Kuparuk recoveries. However, under the right business climate, the full commercial potential of this world-class resource can be unlocked. North Slope gas commercialization will bring new job opportunities, increased state revenues, reliable in-state energy supplies and new exploration opportunities, which will further the development of North Slope oil and gas. This will be key toward reaching your goal of one million barrels of oil per day through the Trans-Alaska Pipeline System.

Serious discussions between our companies have taken place over the past several months, along with the Alaska Pipeline Project (APP) parties who are supporting the AGIA License. We have aligned on a structured, stewardable and transparent approach with the aim to commercialize North Slope natural gas resources within an AGIA framework. As a result of the rapidly evolving global market, large-scale liquefied natural gas (LNG) exports from south-central Alaska will be assessed as an alternative to gas line exports through Alberta. In addition to broadening market access, a south-central Alaska LNG approach could more closely align with in-state energy demand and needs. We are now working together on the gas commercialization project concept selection, which would include an associated timeline and an assessment of major project components including in-state pipeline routes and capacities, global LNG trends, and LNG tidewater site locations, among others.

Commercializing Alaska natural gas resources will not be easy. There are many challenges and issues that must be resolved, and we cannot do it alone. Unprecedented commitments of capital for gas development will require competitive and stable fiscal terms with the State of Alaska first be established. Appropriately structured, stable fiscal arrangements have opened new opportunities around the world, and will play a pivotal role in making Alaska competitive in the global market and unlocking the economic potential of North Slope resources.

Point Thomson is an excellent example of a challenged, world-class resource. With approximately 25% of known North Slope natural gas, Point Thomson development is an important element in consideration of North Slope gas commercialization. However, economic models must span decades into an uncertain future to estimate economic returns. Your Administration has taken the lead in forging a Point Thomson settlement that will bring long-term resources, revenues and jobs to help Alaska's economy. With settlement now finalized, our companies are moving forward, as participating co-venturers, with the initial development phase at Point Thomson with confidence that North Slope gas development will ultimately bring the Point Thomson resource to market.

We agree the next generation of North Slope resource development is achievable, working together with the APP parties, as well as with the State of Alaska. Thank you for your leadership and your confidence in us to take on these challenges. We join you in a vision of prosperity and promise. There is much work to do and opportunities yet to discover.

Sincerely,

Rex Tillerson Jim Mulva Bob Dudley

ARTICLES

April 1, 1977

37A even if the revised fault location should diverge by a greater lateral distance than 500 feet, and in no event will the plane be shifted along that segment connecting the faults which is drawn along the Range 12 East, Range 13 East boundary.

Major Gas Pipeline is any pipeline and appurtenant equipment used to transport Separator Off-Gas off the North Slope of Alaska for purposes other than use or consumption as fuel for a Major Oil Pipeline.

Major Gas Sale. If the Forecasted Initial Gas Sales Rate, as defined in Section 40.002, equals or exceeds 2,000 MMScf/D, Major Gas Sale is 12.01 A.M. on the first day of the calendar month following the point in time when the first deliveries of Separator Off-Gas are made by any Working Interest Owner to a Major Gas Pipeline for transportation off the North Slope of Alaska for purposes other than use or consumption as fuel for a Major Oil Pipeline. If the Forecasted Initial Gas Sales Rate is less than 2,000 MMScf/D, Major Gas Sale is 12.01 A.M. on the first day of the calendar month following the first complete calendar month during which the average daily volume of Separator Off-Gas delivered to a Major Gas Pipeline for transportation off the North Slope of Alaska, for purposes other than use or consumption as fuel for a Major Oil Pipeline, has equaled or exceeded 1,750 MMScf/D.

Major Loss shall have the meaning given to it in § 32.002.

Major Oil Pipeline is any common carrier pipeline, together with suitable pump stations, tankage, terminals, docks, communication facilities and other facilities necessary and incident to the transportation of Separator Liquid Production off the North Slope of Alaska, including the pipeline from Prudhoe Bay to Valdez, Alaska.

Midperiod Allocated Solution GOR is the number calculated in accordance with Section 28.709 at each Modification Date.

Midperiod Bottomhole Pressure is the number calculated in accordance with Subsection 28.704.03 at each Modification Date.

ALASKA

ALASKA OIL AND GAS CONSERVATION COMMISSION

333 West 7th Avenue, Suite 100

Anchorage Alaska 99501

Re: **THE APPLICATION OF BP**	)	**Conservation Order 341D**
EXPLORATION (ALASKA) INC.	)	
Prudhoe Oil Pool - Modification to	)	Prudhoe Oil Pool
pool rules - Conservation Order	)	Prudhoe Bay Field
341C, for injection of water into the	)	
Prudhoe Bay Gas Cap	)	
	)	November 30, 2001

IT APPEARING THAT:

1. By letter dated September 21, 2001, BP Exploration (Alaska), Inc. ("BPXA") on behalf of the Working Interest Owners ("WIOs") of the Initial Participating Areas of the Prudhoe Bay Unit ("PBU") has applied for a modification of certain rules of Conservation Order 341C ("CO 341C") in conjunction with a proposed project named the Gas Cap Water Injection Project ("GCWI").

2. The Commission published notice of opportunity for public hearing in the Anchorage Daily News on September 29, 2001.

3. The Commission held a public hearing October 30, 2001 at 9:00 am at the Alaska Oil and Gas Conservation Commission at 333 West 7th Avenue, Suite 100, Anchorage, Alaska 99501.

4. The Commission received no protests to BPXA's application or to the public testimony.

5. Pre-filed testimony of representatives of BP Exploration (Alaska), Inc., Phillips Alaska, Inc. and ExxonMobil Production Company is included in the record (revised October 30, 2001). All additional information requested by the Commission at the hearing was received November 1, 2001 and November 6, 2001.

FINDINGS:

1. Authority 20 AAC 25.520, 20 AAC 25.540

Commission regulation 20 AAC 25.420 provides authority to issue orders prescribing rules to govern the proposed development and operation of a pool. The commission will, in its discretion, amend pool orders in accordance with procedures set forth in 20 AC 25.540.

2. Gas Cap Water Injection Project - Overview

Currently, reservoir pressure is declining at 25 to 35 psi/year. The WIOs have studied options to mitigate pressure decline and have annually reported the progress of these studies to the Commission, based upon rulings in CO 290 (2/21/92), which were incorporated into CO 341C, Rule 12(d). As a result of these studies, the WIOs sanctioned the Gas Cap Water Injection project in June 2001. This project represents a new element in the depletion strategy of the Prudhoe Bay Oil Pool with the dual goals to mitigate reservoir pressure decline and improve recovery.

3. Proposed Modifications to Conservation Order 341C

The most current rules governing Prudhoe Bay Field, Prudhoe Oil Pool are contained in CO 341C, dated June 12, 1997. CO 341C is a consolidation of all conservation orders in effect for the Prudhoe Bay Field, Prudhoe Oil Pool at that point in time. Specific to CO 341C, BPXA is requesting the following modifications:

a) Revoke paragraph (d) of Rule 12 that requires the Operator to continue to investigate options to mitigate pressure decline and to provide an annual report to the Commission. With the implementation of GCWI, BPXA claims pressure decline will be mitigated.

b) Modification of Paragraph (c) in Rule 12 which currently provides that the Operator maintain a pressure differential of at least 250 psi between the minimum miscibility pressure of the miscible injectant and the prevailing reservoir pressure. BPXA claims that as GCWI will mitigate pressure decline, a more appropriate pressure differential of 100 psi is appropriate and will allow BPXA to better optimize both the composition and volume of the miscible injectant.

c) Modification of Rule 11, which describes the Prudhoe Oil Pool surveillance report, to include the results of GCWI surveillance.

4. GCWI Project Overview

The project scope calls for ramping up to 650,000 barrels per day of seawater injection into the eastern portion of the gas cap from a new injection site located at the East Dock Staging Pad. Initial projected rates are 500,000 barrels per day. Water injection will increase over time with increased availability of seawater and decreased seawater demand in other projects, such as the Flow Station 2 and Point McIntyre waterfloods and Grind and Inject. Water injection is anticipated to continue for twenty years, with a final injected water volume of near four billion barrels. Increased hydrocarbon recovery of 150-200 million barrels is projected by BPXA.

a) Facilities Requirements

Facility construction is planned for this winter, followed by start-up of injection in mid 2002. To implement the Gas Cap Water Injection project, a new seawater pipeline from Flow Station 2 to the East Dock Staging Pad will be constructed. The new line will have a 32" diameter and a

total length of approximately 18,000 feet. It will tie-in to the existing 32"seawater line running from the Eastern Seawater Injection Plant to Flow Station 2. A heated pig receiver/manifold module and well houses will be installed at the East Dock Staging Pad to accommodate five to seven new injection wells.

b) GCWI Well Locations

Current plans for the GCWI include drilling of up to seven water injection wells into the eastern portion of the PBU, Ivishak formation gas cap. BPXA indicates the well locations were strategically chosen to allow for sufficient Ivishak pay at the bottom hole locations of the injectors, while maintaining sufficient distance from the gas injection and oil producing areas.

c) GCWI Well Completion

Each gas cap water injector will be completed with 13 3/8" surface casing cemented to surface, 9 5/8" intermediate casing with cement brought to 1000' above the shoe, and a fully cemented 7" injection liner. The tubing will be 7 5/8" and will include a 7" subsurface safety valve and two 7" profiles. The tubing is large to accommodate the high volume of water to be injected. The tubing will also be plastic coated to help minimize the friction losses. Average surface pressure for these new injection wells will be approximately 2700 psi. Maximum injection pressure is expected to be approximately 3100 psi.

5. Project Benefits

a) Reservoir Pressure

Average reservoir pressure in the Prudhoe Bay field is declining at a rate of 25-35 psi/year. The declining pressure reduces efficiency of every recovery mechanism operating in the field. The GCWI project is designed to arrest pressure decline and maintain the reservoir pressure until water injection ends in 2022. Current average reservoir pressure is approximately 3450 psi (@ 8800' ss datum).

b) Reservoir Simulation of Recovery

The GCWI incremental oil recovery was predicted using BPXA's Full Field Compositional Reservoir Model, comprised of a sixty (60) acre areal grid of the Prudhoe Bay field. It includes the oil that initially was in the gas cap and is immobile. The recovery calculated by the full field model was validated using mechanistic studies of GCWI using fully compositional 1D, 2D, strip, and pattern models. The increased pressure resulting from GCWI improves every recovery mechanism operating in the field. The benefits are characterized for three regions of the field; Gas Cap, Gravity Drainage, and Waterflood/EOR.

The incremental net additional recovery from GCWI is approximately 200 MMB in the full field model. The total reflects a reduction of 20 MMB in the Gas Cap region with increases of 200 MMB in the Gravity Drainage region, and 20 MMB in the waterflood/EOR region.

(1) Gas Cap Area

In total, there is a net reserves reduction of about 20 MMB in the Gas Cap region. In the original gas cap, not invaded by water, BPXA projects 30 MMB additional reserves from

vaporization of residual oil and retrograde condensate. In the water invaded area, some hydrocarbon liquids will be trapped and remain immobile to injected water, preventing vaporization by injected gas, which reduces liquid recovery by approximately 50 MMB.

(2) Gravity Drainage Area

BPXA projects improved vaporization and gravity drainage processes will yield about 200 MMB of incremental recovery from the Gravity Drainage region. Vaporization of residual oil and retrograde condensate by the injected gas is more efficient at higher pressure. Higher reservoir pressure reduces oil shrinkage and oil viscosity. Both of these effects increase oil mobility and result in more efficient gravity drainage.

(3) Waterflood and EOR Area

The waterflood/EOR benefits are approximately 20 MMB. The projected benefits result from: 1) higher reservoir pressure increasing well production capacity; 2) lowered oil shrinkage; and 3) the higher reservoir pressure allowing leaner miscible injectant, thus greater supply, leading to more EOR recovery.

6. Water Movement

The potential for water to interfere with the various recovery mechanisms has been extensively studied by the WIOs. In particular, the potential for water to finger through the gas cap, and interfere with the gravity drainage area was a prime concern. WIO studies showed that because gas is 100 times more mobile than the water that displaces it, a piston-like displacement is anticipated. Water saturations in simulation of water displacing oil were compared to simulation of water displacing gas in a reservoir containing a high permeability (5 Darcy) thief zone. In the case of water displacing oil, water fingered through the high perm streak to the producer. In the case of water displacing gas, a piston-like displacement occurred.

Areal water saturation maps from BPXA's full field model were presented, showing the movement of water over time. The water is projected to move in a relatively radial to oblong shaped front. At the end of GCWI injection in 2022, water is projected to reach the waterflood area in the eastern part of the field, and the northern oil producers in the gravity drainage area. However, the western portion of the gas cap, and the major portion of the gravity drainage area are not expected to be invaded with water. Shut-down of GCWI is expected in 2022. Review of model projections through 2031 indicates little lateral movement of the water, again due to the low mobility of the water to the gas in the area.

7. GCWI - Major Gas sale Relationship

The WIOs addressed the interaction of the GCWI project with potential major gas sales and how gas sales would impact the estimated benefits of the GCWI project and how gas cap water injection is expected to impact ultimate gas recovery.

a) Major Gas Sale Effect on GCWI Recovery

A gas sale will reduce the incremental oil recovery from gas cap water injection. While the rate and timing have not been determined for major gas sales, a case to demonstrate the effect

was shown. Assuming a 4 BCF/D gas sales rate beginning in 2008, the incremental production derived from GCWI is reduced from about 200 MMB to about 135 MMB. The reduction in the recovery results from three mechanisms:

* With a major gas sale the volume of gas available for injection is reduced in order to meet the gas sale demand. This reduces vaporization recovery for gas cap water injection;

* The ability of the injected gas to vaporize the oil it contacts diminishes as reservoir pressure decreases.

* Gas sale will lower reservoir pressure, making the oil more viscous, which decreases efficiency of oil production and reduces oil produced by gravity drainage.

b) Effect of GCWI on Gas Recovery of Major Gas Sales

The WIOs state that ultimate gas recovery should not be reduced by GCWI. Major Gas Sales off-take will require a large water free area from which to produce the gas. The simulation projections presented for the GCWI project suggest that the water will be localized and a significant portion of the gas cap will be free from water to allow blow-down of the gas reserves.

Without GCWI, gas recovery is expected to exceed 80% of the original gas cap gas in place when the pressure is reduced from the original 4400 psi to about 850 psi. With GCWI, gas is expected to be trapped at a saturation of 25% within the area of water injection. When reservoir pressure is subsequently reduced during "blow down", the trapped gas expands and once again becomes mobile. In the example shown by the WIOs, at a reservoir pressure of 1500 psi the gas recovery was projected at 90% with GCWI, while by pressure depletion alone the pressure has to be blown down to 500 psi to achieve the same recovery.

8. Surveillance BPXA presented plans to monitor injection well conformance, water movement and reservoir pressure. The major components of the GCWI surveillance plan are:

* Injection wells will be monitored in a manner similar to other water injection wells within the Prudhoe Bay pool.

* Pulsed Neutron Logs (PNLs) in existing wells will provide downhole and regional data on the water movement.

* 4-D gravity will provide a general view of water movement.

* Reservoir pressure monitoring will be done according to current Prudhoe Bay pool rules.

a) Injection Well Monitoring

Injection well monitoring will be conducted to ensure that the water injection is contained in the desired reservoir interval. The injection wells will be monitored with surface measured temperature, pressure and injection rate. These measurements will be similar to other injection wells within the Prudhoe Bay pool. With these measurements it is possible to monitor injection characteristics, particularly changes in the injectivity indices. The injectivity indices provide direct evidence of changes in well performance. Downhole measurements will provide

confirmation of the surface measurements and will also help describe reservoir properties and hydraulic performance. Downhole temperature logs will provide verification of injection conformance and confirm that fracture height growth is confined within the Ivishak. Downhole pressure measurements will be used to determine tubular pressure drops and hydraulic performance. Pressure falloff tests will be undertaken to determine reservoir properties and wellbore skin.

b) Water Movement Surveillance with Pulsed Neutron Logs:

The leading edge of the waterflood will be detected primarily with pulsed neutron logs. BPXA identified more than nine wells surrounding the injection areas in which pulsed neutron logs can be run to monitor the movement of water. These wells are primarily Lisburne producing wells. BPXA indicated that there are no known cement problems that would prevent confinement of injection to the Ivishak. Pulsed neutron logs, specifically the RST logs, were chosen because they can be run in Lisburne wells completed with 2 7/8 inch tubing. Also, they can be run in two modes to collect data for discerning a major change in fluids (sigma & Carbon/Oxygen). The RSTs will help locate the leading edge of the waterflood, by detecting the change in saturation as water invades the Ivishak gas cap interval at the wellbore. It will also provide data in determining the regional waterflood coverage. BPXA indicated that the statistical variations seen in the RST log measurements should not substantially affect the ability to detect movement of water into the gas zones.

c) 4D Gravity Technique

The 4D Gravity technique utilizes very sensitive surface gravity measurements taken periodically. The method measures small changes in gravity as the low-density gas is replaced with the higher density water. Baseline measurements will be taken prior to water injection. Subsequent measurements will be made at discrete time intervals and compared to the baseline measurements. An increase in the density of the fluids in the gas cap indicates the presence of water. BPXA anticipates the 4D Gravity technique will allow them to map general water movement, determine an average waterflood front, and provide a means to perform a mass balance of the injected water. The major limitations of the 4D gravity technique are that it cannot detect small horizontal or vertical flood fronts and it cannot provide any downhole zonal information. Gravity measurements coupled with material balance and PNL measurements can aid validation of simulation predictions and fine tune history match calculations.

9. Proposed change to Rule 12(c)

BPXA requested in the rules for GCWI that the requirements for minimum miscibility pressure stipulated in Rule 12(c) should be modified. Currently this rule stipulated that the Operator maintain a pressure differential of at least 250 psi between the minimum miscibility pressure of the miscible injectant and the prevailing reservoir pressure. The 250 psi differential had been initially proposed by the WIOs in testimony provided 10/9/91, and approved in CO 290 dated February 21, 1992. This differential was based upon the assumption that the reservoir pressure will decline 100-150 psi during the time in which a cycle of MI is in the reservoir. A safety factor of 100 psi in addition was added to this. With GCWI pressure will be maintained in the injection patterns. As such 100 psi differential is sufficient until such time that the reservoir pressure is stabilized. This change will allow some additional flexibility of the Operator to increase overall MI volumes, and disperse MI to other areas of the field, leading to better optimization of MI throughout the field. This will not have a negative impact upon overall

recovery.

10. Mitigation of Risks

Studies indicate that not implementing or further delaying GCWI will result in less recovery over the remaining life of the field. The studies and analysis appear thorough and technically sound. Though outweighed by the expected benefits to overall hydrocarbon recovery, there remain some risks that must be managed through ongoing surveillance. Oil reserves are potentially at risk if the injected water moves too far, too fast and enters the sensitive Gravity Drainage area of the field. Numerous reservoir simulation and studies show a likely tendency for the injected water to be concentrated in the eastern portion of the gas cap where it is more likely to improve oil recovery from up dip oil zone waterfloods already in progress or planned. In addition, model studies have consistently shown that water will move in a piston-like way through the gas cap, regardless of heterogeneities. Therefore, sweep efficiency of the process will be high and the water should move downdip slowly. GCWI is a recovery technique, which, though well studied, is untried at Prudhoe Bay. Despite the lack of precedents, risks to hydrocarbon reserves can be controlled. The WIOs have designed a process and outlined overall surveillance plans that should minimize losses and ensure greater ultimate hydrocarbon recovery.

11. Blowout Prevention Equipment and Practice

The provisions of Rule 4 of CO 341C are obsolete and inconsistent with current Commission regulations as stated in 20AAC 25 and current North Slope operator practice.

CONCLUSIONS:

1. The application requirements of 20 AAC 25.520 have been met.

2. The GCWI project is expected to significantly increase overall hydrocarbon recovery from the Prudhoe Bay Oil Pool.

3. The GCWI project will mitigate pressure decline within the Prudhoe Bay Oil Pool.

4. With the planned implementation of GCWI, further investigation of options to mitigate pressure decline and annual report of these investigations is no longer necessary.

5. Further implementation of paragraph (d) of Rule 12, is unnecessary so long as the GCWI project is in operation.

6. Decreasing the minimum pressure differential requirement of Paragraph (c) of Rule 12 from 250 psi between the minimum miscibility pressure and the average reservoir pressure in the EOR injection areas will allow the Operator flexibility to provide more MI volume, and will not negatively impact recovery. Potential for increased rate and recovery exists through optimization of the MI injectant.

7. Adequate surveillance of the GCWI project is required to determine that water movement within the reservoir is confined as intended and does not negatively impact overall hydrocarbon recovery, and to determine if the project is successful in stabilizing reservoir pressure.

8. The Commission needs to be apprised of surveillance plans and results on a yearly basis.

9. The conclusions in CO 341C and the amendments thereto are incorporated herein to the extent not inconsistent with this order.

10. Rule 4 of CO 341C is no longer current and has been superseded by 20 AAC 25.035, 25.036, 25.037, 25.285, 25.286, 25.287, and 25.288.

NOW, THEREFORE, IT IS ORDERED THAT

(1) Conservation Order 341D supersedes Conservation Order 341C dated June 12, 1997;
(2) Rule 4 of Conservation Order No. 341C is revoked, Rules 11,12, and 16 are amended, and new Rule 17 is added; and
(3) In addition to statewide requirements under 20AAC 25 (to the extent not superseding these rules), the following rules now apply to the Prudhoe Oil Pool within the following described area (referred to in this order as the affected area):

(Source: C. O. 145, page 7, expansions/contractions of initial participating area based on November 20, 1987 letter, Wade and Nelson to Eason, Re: Prudhoe Bay Unit Exhibits, Exhibit C, Part I Oil Rim Participating Area and Part II Gas Cap Participating Area.)

Rule 1 Pool Definition and Changing the Affected Area (ref. C.O. 145)

(a) The Prudhoe Oil Pool is defined as the accumulations of oil that are common to and which correlate with the accumulations found in the Atlantic Richfield - Humble Prudhoe Bay State No. 1 well between the depths of 8,110 feet and 8,680 feet. (Source: C.O. 145, Rule 1)

(b) The Commission may adjust the description of the affected area to conform to future changes in the initial participating area by administrative approval. (Source: C. O. 145, Rule 12)

Rule 2 Well Spacing (ref. C.O. 145, 174)

There shall be no restrictions as to well spacing except that no pay shall be opened in a well closer than 500 feet to the boundary of the affected area. (Source: C.O. 174, Rule 2)

Rule 3 Casing and Cementing Requirements (ref. C.O. 145, 238)

(a) Conductor casing shall be set at least 75 feet below the surface and sufficient cement shall be used to fill the annulus behind the pipe to the surface. Rigid high-density polyurethane foam may be used as an alternate to cement, upon approval by the Commission. The Commission may also administratively approve other sealing materials upon application and presentation of data which show the alternate is appropriate based on accepted engineering principles. (Source: C.O. 238, Rule 3a)

(b) Surface casing to provide proper anchorage for equipment, to prevent uncontrolled flow, to

withstand anticipated internal pressure, and to protect the well from the effects of permafrost thaw-subsidence or freeze-back loading shall be set at least 500 feet, measured depth, below the base of the permafrost but not below 5000 feet true vertical depth. Sufficient cement shall be used to fill the annulus behind the casing to the surface. The surface casing shall have minimum axial strain properties of 0.5% in tension and 0.7% in compression. (Source: C.O. 238, Rule 3b)

(c) Alternate casing programs may be administratively approved by the Commission upon application and presentation of data, which show the alternatives, are appropriate, based upon accepted engineering principles. (Source: C.O. 238, Rule 3c)

Rule 4 Blowout Prevention Equipment and Practice (revoked C.O. 341D).

Rule 5 Automatic Shut-in Equipment (ref. C.O. 145, 333, 363)

(a) Each well shall be equipped with a Commission approved fail-safe automatic surface safety valve system (SVS) capable of preventing uncontrolled flow by shutting off flow at the wellhead and shutting down any artificial lift system where an over pressure of equipment may occur.

(b) The safety valve system (SVS) shall not be deactivated except during repairs, while engaged in active well work, or if the pad is manned. If the SVS cannot be returned to service within 24 hours, the well must be shut in at the well head and at the manifold building.

1. Wells with a deactivated SVS shall be identified by a sign on the wellhead stating that the SVS has been deactivated and the date it was deactivated.

2. A list of wells with the SVS deactivated, the dates and reasons for deactivating, and the estimated re-activation dates must be maintained current and available for Commission inspection on request.

(c) A representative of the Commission will witness operation and performance tests at intervals and times as prescribed by the Commission to confirm that the SVS is in proper working condition.

(d) The SVS must be maintained in working condition at all times unless the well is shut in and secured, or the well is being operated in conformance with other sections of this rule.

(e) Upon proper application or its own motion, the Commission may administratively waive or amend the requirements of this rule as long as the change does not promote waste, jeopardize correlative rights or compromise ultimate recovery, and is based on sound engineering principles.

(f) Nothing in this rule precludes the installation of a SSSV in wells designated by the operator. If a SSSV is installed, it must be maintained in working order and is subject to performance testing as part of the SVS.

Rule 6 Pressure Surveys (ref. C.O. 145, 165, 192, 208, 213, 220, AA 220.1, 341B)

(a) Prior to regular production, a static bottom hole or transient pressure survey shall be taken on at least one in three wells drilled from a common drilling site. (Source: C.O. 220, Rule 1,

C.O. 341B)

(b) An annual pressure surveillance plan shall be submitted to the Commission in conjunction with the Annual Prudhoe Pool Reservoir Surveillance Report by April 1, each year. The plan will contain the number of pressure surveys anticipated for the next calendar year and be subject to approval by the Commission by May 1. These surveys are needed to effectively monitor reservoir pressure in the Prudhoe Oil Pool. The surveys required in (a) of this rule may be used to fulfill the minimum requirements. (Source: C.O. 220, Rule 6, C.O. 341B)

(c) Data from the surveys required in (a) and (b) of this rule shall be submitted with the Annual Prudhoe Oil Pool Reservoir Surveillance Report by April 1 each year. Data submitted shall include rate, pressure, time depths, temperature, and any well condition necessary for the complete analysis of each survey. The datum for the pressure surveys is 8800 feet subsea. Transient pressure surveys obtained by a shut in buildup test, an injection well pressure fall-off test, a multi rate test or an interference test are acceptable. Other quantitative methods may be administratively approved by the Commission. (Source: C.O. 220, Rule 7, C. O. 341C.001)

(d) Results and data from any special reservoir pressure monitoring techniques, tests, or surveys shall also be submitted as prescribed in (c) of this rule. (Source: C.O. 220, Rule 8)

(e) By administrative approval the Commission may grant time extensions and waive requirements of this rule, and by administrative order the Commission may require additional pressure surveys in (b) of this rule. (Source: C.O. 220, Rule 5)

Rule 7 Gas-Oil Contact Monitoring (ref. C.O. 145, 165, 192, 208, 213, AA 213.39)

(a) Prior to initial sustained production, a cased or open hole neutron log shall be run in each well. (Source: C.O. 165, Rule 9a) This requirement is waived for waterflood/EOR areas encompassed by the expanded Prudhoe Bay Miscible Gas Project outlined in C.O. 290, and for those areas not expected to have significant GOC movement or gas encroachment from the gravity drainage area defined by the Commission through Administrative Approval. (Source: AA 213.39, excerpts from paragraph 1)

(b) A minimum of 40 repeat cased hole neutron log surveys shall be run annually. (Source: C.O. 208, Rule 4)

(c) The neutron logs run on any well and those required in (a) and (b) of this rule shall be filed with the Commission by the last day of the month following the month in which the logs were run. (Source: C.O. 165, Rule 9d)

(d) By administrative approval, the Commission may delay, modify or waive the logging requirements of this rule or may require additional wells to be logged. (Source: C.O. 213, Rule 3)

Rule 8 Productivity Profiles (ref. C.O. 145, 165, 192, 208, 213, AA 213.40)

(a) A spinner flow meter or tracer survey shall be run in each well during the first six months the well is on production. (Source: C.O. 165, Rule 11a) This requirement is waived for wells completed with a single perforated interval, or with perforations in a single reservoir zone including highly deviated (greater than 65 degrees) and horizontal wells. (Source: AA 213.40

paragraph 3)

(b) Follow-up surveys shall be performed on a rotating basis so that a new production profile is obtained on each well periodically. Nonscheduled surveys shall be run in wells which experience an abrupt change in water cut, gas-oil ratio, or productivity. (Source: C.O. 165, Rule 11b)

(c) The complete spinner flow meter or tracer data and results shall be recorded and filed with the Commission by the last day of the month following the month in which each survey is taken. (Source: C.O. 165, Rule 11c)

(d) The Commission may administratively approve alternate methods and time periods in the enforcement of this rule provided that the data obtained is appropriate for monitoring the Prudhoe Oil Pool or may waive the requirements of (a), (b) and (c). By administrative order the Commission may specify additional surveys other than the surveys submitted under (a), (b) and (c) of this rule. (Sources: C.O. 208, Rule 8 and C.O. 213, Rule 2)

Rule 9 Pool Off-Take Rates (ref. C.O. 145, 214)

The maximum annual average oil offtake rate is 1.5 million barrels per day plus condensate production. The maximum annual average gas offtake rate is 2.7 billion standard cubic feet per day, which contemplates an annual average gas pipeline delivery sales rate of 2.0 billion standard cubic feet per day of pipeline quality gas when treating and transportation facilities are available. Daily offtake rates in excess of these amounts are permitted only as required to sustain these annual average rates. The annual average offtake rates as specified shall not be exceeded without the prior written approval of the Commission.

Annual average offtake rates mean the daily average rate calculated by dividing the total volume produced in a calendar year by the number of days in the year. However, in the first calendar year that large gas offtake rates are initiated, following the completion of a large gas sales pipeline, the annual average offtake rate for gas shall be determined by dividing the total volume of gas produced in the calendar year by the number of days remaining in the year following initial delivery to the large gas sales pipeline.

Rule 10 Facility Gas Flaring revoked (ref. C. O. 341C)

Rule 11 Annual Surveillance Reporting (ref. C.O. 165, 186, 195, 208, 223, 224, 279, AA 279.1)

(a) An annual Prudhoe Oil Pool surveillance report will be required by April 1 of each year. The report shall include but is not limited to the following:

1. Progress of enhanced recovery project(s) implementation and reservoir management summary including engineering and geotechnical parameters.

2. Voidage balance by month of produced fluids, oil, water and gas, and injected fluids, gas, water, low molecular weight hydrocarbons, and any other injected substances (which can be filed in lieu of monthly Forms 10-413 for each EOR project). (Source C.O. 279, Rule 7 and AA 279.1 excerpt from paragraph 3)

3. Analysis of reservoir pressure surveys within the field.

4. Results and where appropriate, analysis of production logging surveys, tracer surveys and observation well surveys.

5. Results of gas movement and gas-oil contact surveillance efforts including a summary of wells surveyed and analysis of gas movement within the reservoir. The analysis shall include map(s) and/or tables showing the locations of various documented gas movement mechanisms as appropriate. (Source: C.O. 279, Rule 7)

6. Progress of the Gas Cap Water Injection project with surveillance observations including;

(a) volume of water injected,
(b) reservoir pressure results, maps, and analysis (in conjunction with (a) 3 of this rule),
(c) water movement and zonal conformance maps derived from surveillance (such as Pulsed Neutron Logs and 4-D gravity surveys)
(d) results of reservoir evaluations of performance (such as material balance and reservoir simulation studies),
(e) surveillance plans for the upcoming year, and
(f) any plans for change in project operation.

(b) Upon its own motion or upon written request, the Commission may administratively amend this rule so long as the change does not promote waste nor jeopardize correlative rights and is based on sound engineering principles. (Source: C.O. 279, Rule 8)

Rule 12 Prudhoe Bay Miscible Gas Project (PBMGP) (ref. C.O. 195, 290)

(a) Expansion of the PBMGP and infill expansion of miscible gas injection in the NWFB is approved for the 59,740 acre portion of the Prudhoe Oil Pool defined in the record. (Source: C.O. 290, Rule 1, AA 290.1)

(b) An annual report must be submitted to the Commission detailing performance of the PBMGP and outlining compositional information for the current miscible injectant (MI) necessary to maintain miscibility under anticipated reservoir conditions. (Source: C.O. 290, Rule 2)

(c) The minimum miscibility pressure (MMP) of the Miscible Injectant must be maintained at least 100 psi below the average reservoir pressure in the Prudhoe Bay Miscible Project area. When the Operator demonstrates that the reservoir pressure is no longer declining within the Prudhoe Bay Miscible Project Area (as evidenced by reservoir pressure measurements), the MMP may be maintained at or below the average reservoir pressure in the Prudhoe Bay Miscible Project area. (Source: C.O. 290, Rule 4; amended C.O. 341D)

(d) Revoked (C.O. 341D).

(e) Upon its own motion or upon written request, the Commission may amend this rule by administrative action if the change does not promote waste, violate correlative rights, nor jeopardize ultimate recovery, and is based on sound engineering principles. (Source: C.O. 290, Rule 6)

Rule 13 Waiver of GOR Limitation (ref. 8/22/86 letter)

The Commission waives the requirements of 20 AAC 25.240(b) for all oil wells in the Prudhoe Oil Pool of the Prudhoe Bay Field so long as the gas from the wells is being returned to the pool, or so long as the additional recovery project is in operation. (Source: Letter 8/22/86, L. Smith to Heinze/Nelson, paragraph 3)

Rule 14 Waiver of "Application for Sundry Approval" Requirement for Workover Operations (ref. C.O. 258)

The requirements of 20 AAC 25.280(a) are waived for development wells in the Prudhoe Oil Pool of the Prudhoe Bay Field. (Source: C.O. 258)

Rule 15 Waterflooding (ref. 3/20/81 letter Hamilton to Nelson/Norgaard)

The commission approves the December 1980 additional recovery application for water-flooding in the Prudhoe Oil Pool subject to the requirements listed in Rule 11 above.

Any proposed changes must be submitted to the Commission for approval. (Source: Letter 3/20/81, Hamilton to Nelson/Norgaard)

Rule 16 Orders Revoked

The following Conservation Orders and associated Administrative Approvals and letter approvals are hereby revoked. Conservation orders 78, 83B, 85, 87, 88, 96, 97, 98B, 117, 117A, 118, 130, 137, 138, 139, 140, 141, 143, 145, 145A, 148, 155, 160, 164, 165, 166, 167, 169, 174, 178, 180, 181, 183, 184, 185, 186, 188, 189, 192, 194, 195, 195.1, 195.2, 195.4, 197, 199, 200, 204, 208, 213, 214, 219, 220, 223, 224, 238, 258, 259, 279, 290 and 333, 341, 341A, 341B, 341C, and March 20, 1981 and August 22, 1986 letter approvals.

The hearing records of these orders are made part of the record for this order.

Rule 17 Gas Cap Water Injections

The Gas Cap Water Injection Project as described in the operator's application and testimony is approved. Ongoing reservoir surveillance is required to determine that water movement within the reservoir is confined as intended and does not negatively impact overall hydrocarbon recovery, and to determine that the project has resulted in stabilization of reservoir pressure.

DONE at Anchorage, Alaska and dated November 30, 2001.

AMENDED DECISION

DENIAL OF THE PROPOSED PLANS FOR DEVELOPMENT OF THE POINT THOMSON UNIT

October 27, 2005

Findings and Decision of the Director, Division of Oil and Gas
Under Delegation of Authority from the
Commissioner, Department of Natural Resources, State Of Alaska

The Division of Oil and Gas (the Division) hereby amends the decision entitled *Denial of the Proposed Plans for Development of the Point Thomson Unit* dated September 30, 2005 (the Decision). The Decision included notice that the Division would hold a hearing under Article 21 of the Point Thomson Unit Agreement. The Decision is amended to remove certain items of work and all references to Article 21 because they do not apply to the Division's evaluation of the Unit Operator's proposed plans for development of the Point Thomson Unit.

I. SUMMARY OF DECISION

This is the final Decision of the Alaska Department of Natural Resources, Division of Oil and Gas (the Division) on the Twenty-second Plan of Development (22nd POD) for the Point Thomson Unit (PTU) submitted by the PTU Operator, Exxon Mobil Corporation (Exxon), on August 31, 2005. The Division finds that the PTU Agreement is in default for Exxon's failure to submit an acceptable unit plan of development.

The PTU is underlain by a massive undeveloped gas and gas condensate reservoir that was discovered nearly 30 years ago, but the PTU oil and gas lessees have determined that production of the unitized substances is, in their view, not commercially viable. The 22nd POD proposes additional studies to determine if the PTU lessees can design a commercially viable production project.

The 22nd POD states that PTU development is not possible without modifying the current laws regarding the State's right to taxes and royalties on oil and gas production and on construction of a North Slope gas pipeline. The PTU Operator proposed integrating the lessees' PTU development obligations into negotiations for a fiscal contract with the State and proposed a two year delay of the development commitments made by the lessees in connection with an expansion of the PTU in 2001, both of which would make PTU development uncertain. The current fiscal contract negotiations may or may not lead to construction of a North Slope gas pipeline.

The premise that the PTU can only be developed if a North Slope gas pipeline is built is inappropriate. In addition to dry gas, the unit contains 100s of millions of barrels of hydrocarbon liquids. These hydrocarbon liquids could be produced using mostly existing oil pipelines without construction of a North Slope gas pipeline. Therefore, potential PTU development is not, in fact, limited to dry gas production. In addition, the PTU Agreement, which requires timely exploration, delineation, development, and production of unitized substances, does not guarantee the lessees' commercial success or provide for indefinite extension of the leases.

1. The 22nd POD is disapproved because it does not set out a plan to bring the PTU into commercial production within a reasonable time frame.

2. Failure to obtain approval of the unit plan is grounds for default under the PTU Agreement and the State oil and gas regulations. Effective October 1, 2005, the PTU Agreement is in default. Exxon has 90 days, until December 29, 2005 to cure the default by submitting a unit plan that commits to timely development and production of unitized substances.

3. In addition, the Division denies Exxon's request for a one-year deferral of the Expansion Agreement commitments. If Exxon does not commence drilling within the PTU by June 15, 2006, the PTU boundary will contract and the contracted leases will no longer be held by unitization.

II. BACKGROUND

The details of the PTU history set out below can be summarized as follows. Some of the PTU leases were issued over 40 years ago and the unit has been in existence for 28 years. The Division certified 7 exploration wells within and around the unit area as capable of producing hydrocarbons in paying quantities, but it has been 20 years since the last well was drilled. The Thomson Sand Reservoir is known to contain at least 8 trillion cubic feet of gas and 200 million barrels of gas condensate and oil. The PTU also contains 100s of millions of barrels of oil in the shallower Brookian reservoirs. The PTU lessees have not yet determined whether they can commercially produce PTU resources, and they have not committed to timely explore, delineate, or develop PTU oil, gas, or gas condensate. The unit operator has consistently proposed that more studies or workshops are needed before putting the PTU into production and, since 1983, has periodically asserted that production cannot begin until a North Slope gas pipeline is built.

The PTU is located on the North Slope of Alaska. The western unit boundary is approximately 3 miles east of the Badami Unit and 30 miles east of the Prudhoe Bay Unit (PBU), and the eastern unit boundary lies west of the western boundary of the Arctic National Wildlife Refuge (ANWR). The southern PTU boundary is onshore, and the northern boundary is offshore in the Beaufort Sea, adjacent to or near the three-mile territorial sea boundary that separates state from federal Outer Continental Shelf (OCS) lands. The PTU consists of 45 state oil and gas leases encompassing approximately 106,200.55 acres. The state owns the entire subsurface estate within the unit area.

Twenty-five lessees hold working interest ownership in the PTU (PTU Owners), and Exxon is the designated Unit Operator. Ownership is calculated based on a lessee's percent of working interest ownership in each lease multiplied by the lease acreage, as a percentage of the total unit acreage. On a surface acreage basis, the Major PTU Owners hold 98.9056% of the PTU: Exxon 52.5779%[1], BP Exploration (Alaska) Inc. (BPXA) 29.1943%, Chevron U.S.A. Inc. (Chevron) 14.3125%, and ConocoPhillips Alaska, Inc. (CPAI) 2.821%. The Minor PTU Owners include twenty entities that hold the remaining 1.0944% interest in the PTU.

The Division approved the PTU Agreement effective August 1, 1977, with a five-year Initial Plan of Exploration. The original unit area included 18 state oil and gas leases comprising approximately 40,768 acres. The PTU Owners drilled 11 wells in and around the unit area between 1978 and 1983, and the Division certified six of those wells as capable of producing hydrocarbons in paying quantities under the regulations[2] and the PTU Agreement.[3]

---

[1] Exxon Mobil Corporation holds 43.2361% working interest ownership in the PTU and ExxonMobil Oil Corporation holds 9.3418%, jointly referred to as Exxon.

[2] 11 AAC 83.361. Certification of Well Test Results. "For the purposes of 11 AAC 83.301 – 11 AAC 83.395, a well will be considered capable of producing hydrocarbons in paying quantities, as defined in 11 AAC 83.395, when so certified by the commissioner following application by the lessee or unit operator. The commissioner will require the submission of data necessary to make the certification, including all results of the flow test or tests, supporting geological data, and cost data reasonably necessary to show that the production capability of the well

On March 26, 1984, the Division approved an application to expand the unit area on condition that the PTU Owners drill a well on one of the two southern expansion leases by March 31, 1985, and a well on one of the ten northern expansion leases by February 1, 1990. The expansion added approximately 94,152 acres within 25 leases to the PTU. The PTU Owners failed to meet both drilling commitments; therefore, the two southern expansion leases and nine northern expansion leases contracted out of the PTU.[4]

In 1998, the Division denied a unit expansion application, which was submitted by Exxon as the owner of the proposed expansion lease, rather than as the PTU Operator; because it was not supported by the other PTU Owners. The Division found that adding a lease to a unit where the owners have demonstrated a lack of cooperation may discourage, rather than encourage, unit development. The Division's denial of Exxon's 1998 PTU expansion application instigated negotiations between the Division and the PTU Owners to redefine the unit boundary. Supporting technical data indicated that the Thomson Sand Reservoir extended beyond the existing unit boundary and that other portions of the unit were not underlain by known hydrocarbons.

On February 2, 2001, Exxon applied to simultaneously expand and contract the PTU boundary. On July 31, 2001, the Division and the PTU Owners entered into an agreement in which the Division approved an expansion of the unit area in return for the PTU Owners' commitment to do certain items of work. This agreement also provided that the expansion leases would contract out of the unit and the PTU Owners would pay the State certain sums of money if the work was not done. This "*Agreement Resolving All Pending Point Thomson Unit Expansion/Contraction Matters and Proceedings*" (Expansion Agreement) identified seven Expansion Areas and one Work Commitment Area (WCA) outside of the preexisting PTU (All together referred to as "Expansion Acreage"). The Expansion Agreement included the following work commitments by the PTU Owners:

1. WCA Drilling Commitment: Drill a well through the Thomson Sand interval within the Work Commitment Area by June 15, 2003, or the WCA acreage would automatically contract out the PTU on that date. Drilling a new well or deepening the Red Dog #1 Well would have fulfilled the WCA Drilling Commitment

---

satisfies the economic requirements of the paying quantities definition." 11 AAC 83.395. Definitions. "Unless the context clearly requires a different meaning, in 11 AAC 83.301 – 11 AAC 83.395 and in the applicable unit agreements, … (4) 'paying quantities' means quantities sufficient to yield a return in excess of operating costs, even if drilling and equipment costs may never be repaid and the undertaking considered as a whole may ultimately result in a loss; quantities are insufficient to yield a return in excess of operating costs unless those quantities, not considering the costs of transportation and marketing, will produce sufficient revenue to induce a prudent operator to produce those quantities;"

[3] PTU Agreement, Article 9, Drilling to Discovery. "Within 6 months after the effective date hereof, the Unit Operator shall begin to drill an adequate test well at a location approved by the Director, … and thereafter continue such drilling diligently until the top 100 feet of the Pre-Mississippian formation has been tested or until at a lesser depth unitized substances shall be discovered which can be produced in paying quantities (to wit: quantities sufficient to repay the costs of drilling, and producing operations, with a reasonable profit) …"

[4] One of the northern expansion leases remained committed to the PTU because a well drilled on that lease in 1982 was certified as capable of producing in paying quantities.

2. 2006 Development Drilling Commitment: Commence development drilling in the PTU by June 15, 2006, or all of the Expansion Acreage would automatically contract out of the unit effective that date, and the PTU Owners would pay the State $20,000,000 by July 1, 2006, to compensate for the unrealized bonus payments during the period that the Expansion Acreage was withheld from leasing.

3. 2008 Development Drilling Commitment: Complete drilling seven development wells in the PTU by June 15, 2008, or all of the Expansion Acreage would automatically contract out of the unit effective that date, and the PTU Owners would pay the State $27,500,000 by July 1, 2008, to compensate for the unrealized bonus payments during the period that the Expansion Acreage was withheld from leasing.

4. Participating Area Commitment: Allocate production to the Expansion Acreage within a participating area approved by the Division by certain deadlines. The participating area commitment date is June 15, 2008, for Expansion Acreage primarily underlain by the Thomson Sand Reservoir; and June 15, 2010, for Expansion Acreage primarily underlain by a Brookian prospect.

In addition, the Expansion Agreement imposed contraction provisions and charges of up to $27,500,000 if the PTU Owners failed to meet the drilling commitments. The Agreement also increased royalty rates on eight of the twelve expansion leases; from 12.5% to 16.66667% on one lease, and from 16.66667% to 20% on the other seven leases.

The May 24, 2002 Findings and Decision contains the Division's evaluation of the Expansion Agreement, which resulted in the Second Expansion and Third Contraction of the PTU. The Expansion Agreement added approximately 40,353 acres within 12 leases to the PTU, and excluded all or portions of 4 leases, containing approximately 7,572 acres; an overall increase in the unit area of 39 percent. The revised unit area encompassed approximately 116,607 acres within 46 leases.

The PTU Owners based the Expansion Agreement on their assumption that they could engineer and develop a commercially viable gas cycling project. In a gas cycling project natural gas is produced, gas condensates are removed, and the dry gas is re-inject back into the reservoir for later production. The PTU Owners would need to build a pipeline from the PTU to connect with the Badami Unit pipeline to ship the gas condensates through the existing Trans-Alaska oil pipeline for sale. The Expansion Agreement provided that if PTU Owners found, in their view, the project to be uneconomic by June 15, 2003 (the Contraction Election Deadline), the PTU Owners could elect to contract all of the Expansion Acreage out of the PTU, pay the State $8,000,000 to compensate for the unrealized bonus payments during the period that the acreage was withheld from leasing, and be released from the remaining obligations in the Expansion Agreement.

The Division approved subsequent unit plans that described the PTU Owner's proposed plans for development of a gas cycling project including: facility design, preliminary engineering, updating the PTU geologic model, and initiating the permitting process. However, in the Nineteenth POD, approved effective October 1, 2002, Exxon stated that the PTU Owners could

not justify drilling an exploration well in the WCA, the first drilling commitment in the Expansion Agreement, due to their findings that the costs would be higher and the potential accumulation smaller than they had previously anticipated.

On January 29, 2003, the Division found that the geological and geophysical data supported Exxon's proposal to transfer ADL 389728 from the WCA to Expansion Area #1. This amendment of the Expansion Agreement increased the applicable royalty rate for ADL 389728 from 16.66667% to 20% and the PA Extension Charge for Expansion Area #1 from $17,031,000 to $21,289,000.

Under the terms of the Expansion Agreement, the two remaining leases in the WCA contracted out of the PTU and the PTU Owners relinquished their interest in the leases effective January 21, 2003 and the PTU Owners paid the State $940,000 because they failed to fulfill the first drilling commitment.

On April 24, 2003, Exxon requested a two–year extension of the next three deadlines in the Expansion Agreement: the Contraction Election Deadline, the 2006 Development Drilling Commitment, and the 2008 Development Drilling Commitment.

On May 15, 2003, the Division approved a one-month extension of the Contraction Election Deadline, but the Development Drilling Commitments were unchanged. On June 20, 2003, the PTU Owners requested an additional six-month extension of the Contraction Election Deadline. On July 14, 2003, the Division approved the Twentieth POD for the period October 1, 2003 through September 30, 2004, during which time, Exxon planned to acquire the necessary permits and approvals for the gas cycling project while evaluating the Thomson reservoir structure and reserve estimates to move the gas cycling project toward the next phase of funding approval. This decision also extended the Contraction Election Deadline until January 15, 2004 as follows:

a) On or before July 15, 2003, the Working Interest Owners may elect to contract all of the Expansion Acreage out of the PTU, pay the State of Alaska $8,000,000 to compensate for the unrealized bonus payments during the period that the acreage was withheld from leasing (Extension Charge), and be released from the remaining obligations imposed in the Decision. The Extension Charge will be due on August 1, 2003.

b) Notwithstanding the foregoing, the above described deadline for election is hereby extended for a period of six months, until January 15, 2004, in exchange for an increase of the Extension Charge by the sum of $2,000,000, provided that, at any time during such six-month extended period, the PTU Owners may provide notification of their election hereunder, in which event the total Extension Charge of $10,000,000 shall be reduced by an amount equal to 1/12 of $4,000,000 for each full month of such six-month period remaining.

The Division agreed to extend the Contraction Election Deadline on May 15 and again on July 14, 2003, to allow additional time for the PTU Owners to further evaluate their proposed gas cycling project. The PTU Owners presented their current interpretation of the PTU geologic model and updated in-place and recoverable hydrocarbons estimates to the Division on October

16, 2003. Unfortunately, the PTU Owners' assessment of their proposed gas cycling project indicated higher costs and lower liquid recovery than they had previously estimated.

In a letter dated December 18, 2003, Exxon stated that engineering and resource evaluation work confirmed that, in their view, development of the resource at PTU is challenged. The resource evaluation work resulted in a significant reduction in condensate recovery under the PTU Owners' conceptual design for a gas cycling project. In addition, they found that their engineering design, along with permitting and environmental requirements added significant cost to the gas cycling project. After evaluating potential cost reduction measures and alternate development plans, Exxon concluded "that a standalone project prior to gas sales is not economically viable under the current fiscal system." Exxon's letter went on to request a further extension of the Contraction Election Deadline, until June 15, 2006. The Division's denial of Exxon's requested extensions provides in part:

> "Over the past year, the Owners reviewed the geologic model, recalculated the recoverable liquid hydrocarbons, refined the engineering design to better estimate the cost of development, began evaluating the environmental impacts through the federal permitting process, and considered alternate development scenarios. Through these activities, the Owners determined that the gas cycling project is currently uneconomic and suspended the permitting process indefinitely. Representatives from ExxonMobil met with division staff on December 2, 2003, to discuss possible revisions to the State's current fiscal system that might make the gas cycling project commercially viable. However, the Owners have not made any specific proposals that would warrant a further extension of the Contraction Election Deadline.
>
> Without a commercially viable project, the Owners may surrender the expansion acreage, pay the $10 million Extension charge, and be released from the remaining obligations in the Decision. If the Owners do not exercise this option, they must begin development drilling in the PTU by June 15, 2006, or all of the Expansion Acreage will automatically contract out of the PTU and the Owners will pay $20 million to the State of Alaska. We trust that the Owners will continue to evaluate options to economically produce the known hydrocarbon resources underlying the PTU, and look forward to reviewing the proposed PTU Twenty-First Plan of Development in July 2004."

Although the PTU Owners found the gas cycling project to be uneconomic, they did not exercise their option to contract the Expansion Acreage out of the PTU prior to the January 15, 2004 Contraction Election Deadline.

The Twenty-first POD, dated August 31, 2004, stated that the PTU Owners were unable to identify a viable gas cycling project under the current fiscal terms and they planned to focus on gas sales rather than gas cycling. The Twenty-first POD included a proposal to share with the Division the results of the PTU studies including reserve estimates, distributions, and mapping for the Thomson Sand Reservoir as well as the Brookian and Pre-Mississippian reservoirs within the unit area and provide financial and technical information so the Division could conduct an independent economic evaluation of the PTU Owners' gas cycling project. But the WIOs would

only provide this information if the Division executed an extraordinary confidentiality agreement.

North Slope producers Exxon, BPXA, and CPAI (Sponsor Group), three of the Major PTU Owners, submitted an application to the State under the Stranded Gas Development Act (SGDA), which proposed a fiscal contract that may or may not lead to construction of a major North Slope gas pipeline. The Sponsor Group does not officially represent the PTU, the PBU or any other unitized area on the North Slope. During the Twenty-first POD, the PTU Owners planned to evaluate the technical and commercial issues necessary for the PTU Owners to participate in a future open season for major gas sales from the North Slope.

On September 23, 2004, the Division approved the Twenty-first POD, on condition that Exxon provide the Division with existing technical information, costs, and other fiscal assumptions necessary for the Division to conduct an economic analysis of the PTU Owners' gas cycling project. The Division reminded Exxon of the statutory and regulatory confidentiality protections accorded sensitive information, and notified Exxon that the Division would not execute the proposed confidentiality agreement. The Division requested that Exxon provide copies of all of the requested data no later than November 15, 2004. In addition, the Division's approval of the Twenty-first POD required that the 22nd POD contain specific plans to fulfill the 2006 drilling commitment set forth in the Expansion Agreement.

Exxon appealed the Division's decision on the Twenty-first POD to the Commissioner of the Department of Natural Resources (the Commissioner). But on November 15, 2004, Exxon hand delivered a set of technical data to the Division. The Commissioner affirmed the Division's Twenty-first POD decision on November 24, 2004.

On June 21, 2005, Exxon proposed amending the Expansion Agreement such that the Expansion Acreage leases would remain within the PTU while the State and Sponsor Group continue negotiations over a fiscal contract and for the duration of any resulting fiscal contract. On July 1, 2005, the Division received Exxon's proposed 22nd POD, which included an update on activities during the term of the Twenty-first POD and planned activities during the one-year term of the 22nd POD. Exxon reported that the PTU Owners had incorporated the results of the prior geologic model, updated reservoir simulation, facility design, and cost estimates into a conceptual depletion plan for the PTU gas sales project. Under that plan, the PTU Owners would produce PTU gas and send it to the PBU for further processing before shipping it via a North Slope gas pipeline for sale, but did not specify a time-frame for development.

The 22nd POD did not commit to timely development or production of unitized substances. Instead, it proposed further development of the gas sales conceptual depletion plan so the PTU Owners would be prepared to participate in some future open season for nominations to a North Slope gas pipeline. The 22nd POD provides that the exact timing of the open season will be dependent, in part, upon the successful completion of a fiscal contract under the SGDA. During the term of the 22nd POD, the PTU Owners planned to monitor the progress of the negotiations under the SGDA and adjust the PTU work schedule as necessary to participate in an open season. The 22nd POD included the items of work summarized as follows:

1. Incorporate geologic modeling of the Thomson Sand aquifer uncertainty and the Pre-Mississippian bedded facies in the reservoir simulation model to form the basis of a major gas sales depletion plan.

2. Initiate more detailed facility design or Conceptual Engineering.

3. Determine optimum drillsite and well locations and update drilling and completion plan costs to estimate total project costs and timing.

4. Share the results of the above tasks with the Division.

5. Begin planning the permitting process for the PTU gas sales project.

6. Continue working to obtain all PTU Owners' approval of a new PTU Operating Agreement.

7. Assist the Division with its independent assessment of the commercial viability of the gas cycling project.

The Division's July 27, 2005 response indicated that it would not accept Exxon's proposal to amend the Expansion Agreement by tying it to the SGDA negotiations or relieve the PTU Owners of the work commitments they made in return for including the Expansion Acreage in the PTU. However, the Division indicated that it would be willing to extend the 2006 and 2008 Development Drilling Commitments, if the PTU Owners agreed to drill an exploration/delineation well, in lieu of a development well, by June 15, 2006 that could provide pertinent information pertaining to appropriate development of the western portion of the Thomson Sand Reservoir. The Division gave Exxon ten days to submit an acceptable plan, which should include the following items:

1. ExxonMobil shall drill an exploration/delineation well within the PTU by June 15, 2006.

2. The well must be drilled to the Mississippian basement and located to
   a. delineate the Thomson Reservoir west of the PTU #1 well,
   b. evaluate connectivity and continuity within the Thomson Reservoir, and
   c. evaluate the extent of and the hydrocarbon properties within the oil rim.

3. ExxonMobil shall apply to the Alaska Oil and Gas Conservation Commission for Pool Rules and a depletion plan for the Thomson Reservoir.

4. ExxonMobil shall prepare a schedule of activities to obtain the necessary permits for construction of the PTU facilities and pipelines.

5. ExxonMobil shall compare core samples from the Badami wells with the appropriate PTU wells to evaluate the Brookian reservoirs within the PTU.

Division staff discussed the requested modifications to the 22nd POD with the PTU Owners on July 27, 2005, and on August 1, Exxon indicated that they would respond to the Division by the end of the month.

On August 31, 2005, Exxon submitted a revised 22nd POD and a letter requesting a one-year deferral of both the 2006 and 2008 Development Drilling Commitments, rather than an indefinite extension under the SGDA. The 22nd POD stated that the PTU Owners could not justify drilling an exploration well, but Exxon offered to hold a workshop with Division staff to evaluate whether drilling exploration/delineation wells could provide valuable information that would reduce the uncertainty associated with the western portion of the Thomson Sand Reservoir. Other than a commitment to drill an exploration/delineation well by June 15, 2006, the revised 22nd POD included the other modifications that the Division had requested. However, without a commitment to drill an exploration/delineation well within the PTU while requesting deferral of the Development Drilling Commitments and tying development activities in the 22nd POD to the SGDA, the PTU Owners' plans for development of the PTU are unacceptable.

III. STATE STATUTES, REGULATIONS, AND PTU AGREEMENT PROVISIONS RELEVANT TO EVALUATION OF THE PTU OWNERS' PLANS FOR DEVELOPMENT OF THE PTU

The standards and criteria for approval of unit plans are primarily set out in the State statute, regulations, and the applicable unit agreement.

A. State Statute and Regulations

The Commissioner, or his designee, may approve a unit plan if he determines it is necessary or advisable in the public interest.[5] The following statutes and regulations govern approval of unit plans:

AS 38.05.180(p) provides, in part:

> To conserve the natural resources of all or part of an oil or gas pool, field, or like area, the lessees and their representatives may unite with each other, or jointly or separately with others, in collectively adopting or operating under a cooperative or unit plan of development or operation of the pool, field, or like area, or part of it, when determined and certified by the commissioner to be necessary or advisable in the public interest. . . . The commissioner may require oil and gas leases issued under this section to contain a provision requiring the lessee to operate under a reasonable cooperative or unit plan, and may prescribe a plan under which the lessee must operate. The plan must adequately protect all parties in interest, including the state. "

Under State regulation 11 AAC 83.303(a), the Director will approve a unit plan of development upon finding that it will: 1) promote the conservation of all natural resources; 2) promote the prevention of economic and physical waste; and 3) provide for the protection of all parties of

[5] By memorandum dated September 30, 1999, the Commissioner approved a revision of Department Order 003 that delegated this authority to the Director of the Division of Oil and Gas.

interest, including the State. Subsection .303(b) sets out six factors that the Director will consider in evaluating a proposed unit plan.

11 AAC 83.343, Unit Plan of Development, provides as follows:

> (a) A unit plan of development must be filed for approval as an exhibit to the unit agreement if a participating area is proposed for the unit area under 11 AAC 83.351, or when a reservoir has become sufficiently delineated so that a prudent operator would initiate development activities in that reservoir. All development operations must be conducted under an approved plan of development. A unit plan of development must contain sufficient information for the commissioner to determine whether the plan is consistent with the provisions of 11 AAC 83.303. The plan must include a description of the proposed development activities based on data reasonably available at the time the plan is submitted for approval as well as plans for the exploration or delineation of any land in the unit not included in a participating area. The plan must include, to the extent available information exists:
>
> > (1) long-range proposed development activities for the unit, including plans to delineate all underlying oil or gas reservoirs, bring the reservoirs into production, and maintain and enhance production once established;
> >
> > (2) plans for the exploration or delineation of any land in the unit not included in a participating area;
> >
> > (3) details of the proposed operations for at least one year following submission of the plan; and
> >
> > (4) the surface location of proposed facilities, drill pads, roads, docks, causeways, material sites, base camps, waste disposal sites, water supplies, airstrips, and any other operation or facility necessary for unit operations.
>
> (b) The commissioner will approve the unit plan of development if it complies with the provision of 11 AAC 833.303. If the proposed unit plan of development is disapproved, the commissioner will, in his discretion, propose modifications which, if accepted by the unit operator, would qualify the plan for approval.
>
> (c) The unit plan of development must be updated and submitted to the commissioner for approval at least 90 days before the expiration date of the previously approved plan, as set out in that plan. The update must describe the extent to which the requirements of the previously approved pan were achieved; if actual operations deviated from or did not comply with the previously approved pan, an explanation of the deviation or noncompliance must be included in the update. … After the commissioner has determined that an updated unit plan of development is complete as submitted, or as modified by the unit operator following the commissioner's suggestions, the commissioner will have an

additional 60 days in which to approve or disapprove the plan; if no action is taken by the commissioner, the update of the unit plan of development is approved.

(d) The unit operator shall submit an annual report to the commissioner describing the operations conducted under the unit plan of development during the preceding year.

(e) The unit operator may, with the approval of the commissioner, amend an approved pan of development.

B. The PTU Agreement Provisions

The following PTU Agreement provisions are relevant to the Division's evaluation of the PTU Owners' plans for development of the PTU.

Article 10, Plan of Further Development and Operation, provides as follows:

> Within six months after completion of a well capable of producing unitized substances in paying quantities, the Unit Operator shall submit for the approval of the Director an acceptable plan of development and operation for the unitized land which, when approved by the Director, shall constitute the further drilling and operating obligations of the Unit Operator under this agreement for the period specified therein. Thereafter, from time to time before the expiration of any existing plan, the Unit Operator shall submit for the approval of the Director a plan for an additional specified period for the development and operation of the unitized land. The Unit Operator expressly covenants to develop the unit area as a reasonably prudent operator in a reasonably prudent manner.
>
> Any plan submitted pursuant to this section shall provide for the exploration of the unitized area and for the diligent drilling necessary for determination of the area or areas thereof capable of producing unitized substances in paying quantities in each and every productive formation and shall be as complete and adequate as the Director may determine to be necessary for timely development and proper conservation of oil and gas resources of the unitized area, and shall:
>
> (a) specify the number and location of any wells to be drilled and the proposed order and time for such drilling; and,
>
> (b) to the extent practicable, specify the operating practices regarded as necessary and advisable for the proper conservation of natural resources.
>
> Separate plans may be submitted for separate productive zones, subject to the approval of the Director.
>
> Said plan or plans shall be modified or supplemented when necessary to meet changed conditions, or to protect the interests of all parties to this agreement.

> Reasonable diligence shall be exercised in complying with the obligations of the approved plan of development. ...

Article 16, Conservation, states:

> Operations hereunder and production of unitized substances shall be conducted to provide for the most economical and efficient recovery of said substances without waste, as defined by or pursuant to state law or regulation.

Article 20, Effective Date and Term, provides in part:

> This agreement shall become effective upon approval by the Commissioner or his duly authorized representative as of the date of approval by the Commissioner and shall terminate five (5) years from said effective date unless:
>
> (a) such date of expiration is extended by the Commissioner, or
>
> (b) it is reasonably determined ... that the unitized land is incapable of production of unitized substances in paying quantities ... or
>
> (c) a valuable discovery of unitized substances has been made or accepted on unitized land during the said initial term or any extension thereof, in which event the agreement shall remain in effect for such term and so long as unitized substances can be produced in quantities sufficient to pay for the cost of producing same from wells on unitized land and, should production cease, so long thereafter as diligent operations are in progress for the restoration of production or discovery of new production and so long thereafter as the unitized substances so discovered can be produces as aforesaid, or
>
> (d) it is terminated as heretofore provided in this agreement. ...

IV. ANALYSIS OF THE PTU OWNERS' PLANS FOR DEVELOPMENT OF THE PTU

A discussion of the subsection 11 AAC 83.303(b) criteria, as they apply to the PTU Owners' plans for development of the PTU, is set out directly below, followed by the Director's findings relevant to the subsection .303(a) criteria, and the Director's decision.

1. Prior Exploration Activities and Geological and Engineering Characteristics of the PTU

The Thomson Sand Reservoir is the primary reservoir in the PTU, consisting of the Lower Cretaceous Thomson Sand interval trending generally west-northwest across the unit, and between approximately –12,780' and –13,128' tvdss[6] in the Point Thomson Unit #1 discovery well (PTU1) drilled by Exxon in 1977. Exxon estimates that the Thomson Sand Reservoir

[6] Total vertical depth subsurface (below sea level).

contains approximately 8 trillion cubic feet (TCF) of gas and over 200 million barrels (MMB) of recoverable gas condensate with a discontinuous heavy-oil rim. The reservoir pressure is extremely high, around 13,000 pounds per square inch (psi). Other potentially productive reservoirs present in the PTU include Brookian Lower Tertiary turbidite sands and what are informally referred to as the "Pre-Mississippian" carbonates. Although the Sourdough well data remain confidential, in 2001 BPXA disclosed that the wells encountered recoverable reserves of approximately 200 MMB in the Brookian section. All three reservoirs are, or may be, over-pressured throughout much of the PTU.

A subsurface ridge-like structural feature constrains the northern edge of the Thomson Sand accumulation. While Thomson Sand presence, hydrocarbon charge, and thickness are uncertain on the north flank of the feature, it is possible that the Thomson Sand Reservoir is present north of the feature within Expansion Area #6.

Eighteen exploration wells have been drilled within and around the PTU. At the request of the Unit Operator, the Division certified seven PTU wells as capable of producing hydrocarbons in paying quantities and granted five wells extended confidentiality[7]. The public PTU well data is summarized in Attachment 1 to this decision.

The available well data allows the Thomson Sand Reservoir to be described as very fine-grained sand along the southern margin of the unit coarsening northward to a conglomeratic facies and exhibiting an average porosity of about 16%. Permeability within the reservoir varies from 10 millidarcies (md) to more than 1,000 md.

The PTU Owners also acquired extensive seismic data over the unit. They merged and began prestack depth migration processing of four 3D seismic surveys, which cover essentially the entire unit area: the Point Thomson Unit, Flaxman Lagoon, Island Corridor West, and Challenge Island surveys. Merging the seismic data sets produced a more unified interpretation of the extent of the Thomson Sand Reservoir over the greater unit area. The well and geophysical data indicate that much of the PTU is underlain or is potentially underlain by oil, natural gas and gas condensate deposits in the Thomson Sand Reservoir, and by Brookian oil deposits. There also appears to be a thin and potentially discontinuous oil leg at the bottom of the Thomson Sand Reservoir. The PTU owners incorporated the well and seismic data into a common database, which is the basis for the PTU Owners' Thomson Sand Geologic and Reservoir Simulation Models.

The Sixteenth POD, submitted by Exxon on July 30, 1999, included a commitment to conform the unit boundary to consensus maps of the potential reservoirs. During the term of the Sixteenth POD, the PTU Owners developed consensus structure and isochore maps of the

---

7 20 AAC 25.537. Public and Confidential Well Information. "(d) Except as provided by (a) of this section, the reports and information required by this chapter to be filed by the operator will be kept confidential by the commission for 24 months following the 30-day filing period after well completion, suspension, or abandonment unless the operator gives written and unrestricted permission to release all of the reports and information at an earlier date. Upon notification that the commissioner of the Department of Natural Resources has made a finding that the required reports and information from a well contain significant information relating to the valuation of unleased land in the same vicinity, the commission will hold the reports and information confidential beyond the 24-month peiior and until notified by the commissioner of the Department of Natural Resources to release the reports and information."

Thomson Sand Reservoir and five potential Brookian accumulations; and initiated unit expansion discussions with adjacent leaseholders. On July 31, 2001, the Division and the PTU Owners executed the Expansion Agreement, which restructured the unit boundary in exchange for the PTU Owners' exploration and development commitments.

The Eighteenth POD, approved effective October 1, 2001, included activities toward fulfilling the Expansion Agreement, including selecting a location and contracting for a rig to drill an exploration/delineation well in the WCA. During the term of the Eighteenth POD, the PTU Owners completed prestack depth migration of the combined PTU 3D data set (Point Thomson Unit, Challenge Island, Island Corridor West and Flaxman Lagoon) over the redefined unit area. Exxon continued to pursue facility design, engineering and geological studies, and environmental analysis toward development of the Thomson Sand Reservoir, and initiated the federal permitting process for a gas cycling project, which moved from conceptual engineering to front-end engineering and facility design during the Eighteenth POD.

In the Nineteenth POD, dated August 8, 2002, Exxon notified the Division that the PTU Owners would not drill an exploration well prior to the WCA Drilling Commitment deadline of June 15, 2003. The State and Exxon executed a Memorandum of Understanding to facilitate the State permitting process for the gas cycling project and Exxon proceeded with engineering design of the surface facilities during the term of the Nineteenth POD. On June 24, 2003, the PTU Owners presented their updated stratigraphic and structural interpretation of the Thomson Sand Reservoir, based on the merged PTU seismic data, to Division staff.

During the term of Twentieth POD, October 1, 2003 through September 30, 2004, the PTU Owners completed a number of technical studies to evaluate Thomson Reservoir quality, fault seal, and structural framework; which, to the PTU Owners, indicated a chance of greater compartmentalization and a higher risk of sand production. The PTU Owners also studied alternative facility designs and identified cost reduction measures for their proposed gas cycling project. The PTU Owners stated that, in their view, their proposed gas cycling project is not commercially viable. Exxon suspended all permitting activities for their proposed gas cycling project and deferred evaluation of the Pre-Mississippian formation that underlies the Thomson Sand Reservoir. The PTU Owners incorporated the results of the prior geologic model, updated reservoir simulation, facility design, and cost estimates into a depletion plan for a conceptual PTU gas sales project.

Despite rigorous analyses of seismic data, the depth of the subsurface geological structure of the Thomson Sand Reservoir west of the PTU1 well remains suspect and introduces substantial uncertainty about reservoir connectivity and continuity, fluid contacts, and the character of the underlying oil rim between the eastern and western areas of the PTU. An exploration/delineation well in this area would provide geologic and reservoir data that could confirm or reduce the structural uncertainty and aid the subsequent determination of recoverable reserves and development options for the PTU.

The PTU Owners' prior exploration activities identified several hydrocarbon accumulations within the unit area that are capable of production in paying quantities. The geological and engineering data indicate that the PTU is underlain by the Thomson Sand Reservoir, which contains significant oil, gas, and gas condensate reserves, and several Brookian oil reservoirs. However, there has been no further delineation of the known accumulations or exploration

within the PTU since BPXA drilled the Sourdough #3 well in 1996. The PTU Owners have not yet begun development or production of the known hydrocarbon resources within the unit, and the 22nd POD does not contain any commitments to do so. Therefore, the criteria in 11 AAC 83.303(b)(2) and .303(b)(3), do not support approval of the 22nd POD.

2. The PTU Owners' Plans for Development of the PTU

Although the Thomson Sand Reservoir was discovered in 1977 and the PTU contains several known hydrocarbon accumulations that are capable of producing in paying quantities, the PTU Owners have not committed to put the unit into commercial production. Instead, the PTU Owners propose that more studies are needed and a fiscal contract changing the State's royalty and tax share is required before they can begin development of the PTU.

According to Exxon, the focus of the 22nd POD is on preparing for a potential open season for major gas sales from the North Slope. The 22nd POD states

> The timing of the open season process will be dependent upon successful completion of a fiscal contract between the Sponsor Group and the SoA under the Stranded Gas Development Act (SGDA). During the next year, the Owners will monitor progress of the contract negotiations under the SGDA and be prepared to adjust the work schedule to ensure the necessary work is conducted in sufficient time to allow the Owners to prepare for an open season for an Alaska gas pipeline while maximizing the efficiency of the work processes and sequence.

The Sponsor Group consists of only three of the Major PTU Owners: Exxon, BPXA, and CPAI, and does not officially represent the PTU lessees. The State is also negotiating with two other applicants that submitted proposals to build a North Slope gas pipeline. Depending on the progress of the negotiations, it is unlikely that a North Slope gas pipeline will be in operation before 2012, and the Sponsor Group has not yet made a public commitment to ever build a North Slope gas pipeline. However, regardless of the status of those negotiations, the PTU Owners have an obligation to diligently explore, delineate, and develop the hydrocarbon resources underlying the unit area.

The 22nd POD states that field activities associated with development drilling should begin three to three and one-half years before field startup, but it does not indicate when, if ever, an open season might occur or when, if ever, Exxon anticipates the commencement of development or production. At this point in time, the PTU Owners do not control if or when a North Slope gas pipeline will ever be operational. Reliance on third parties, beyond the control of the PTU Owners, is not grounds for the delay of PTU development and production.

While previous plans focused on developing unitized substances through a gas cycling project, the PTU Owners stated that project was not commercially viable and redirected their efforts to evaluate PTU development through gas sales. The 22nd POD describes several activities that the PTU Owners plan to execute during the next year to evaluate a conceptual PTU gas sales project, but those activities are all contingent on the Sponsor Group successfully negotiating a fiscal contract with the State under the SGDA.

The 22nd POD outlines the unit operator's plans for one year beginning October 1, 2005. Exxon plans to update the PTU geologic model and incorporate the results in the reservoir simulation to identify potential upside gas production from the Pre-Mississippian section. The technical studies will be the basis for a gas sales depletion plan followed by conceptual engineering for detailed facility design. The 22nd POD anticipates completing the depletion plan in April 2006 and initiating conceptual engineering, a 9 to 12 month process that must be completed in time for the PTU Owners to be prepared to nominate gas in an open season, should one occur. During the conceptual engineering process, the PTU Owners plan to determine optimum drillsites and well locations, and update drilling and completion costs to estimate total project costs and timing. PTU conceptual engineering will also include provisions for Brookian development, which Exxon anticipates will occur after it develops the Thomson Sand Reservoir. However, the 22nd POD did not identify a firm date for the start of production.

During the 22nd POD, the PTU Owners plan to assess the permitting requirements for PTU gas sales. They will review the previous permitting activities undertaken for the gas injection project, evaluate the need for additional data and studies, and assess the interrelationship between permitting for PTU development and for the Alaska gas pipeline project. The PTU Operator will also apply to the AOGCC for a conservation order that addresses gas offtake and depletion plans for the Thomson Sand Reservoir and discuss other conservation orders needed for PTU development. Based on the permitting assessment, Exxon will update the project timeline and prepare a schedule of activities to obtain the permits and conservation orders needed to drill the PTU wells and to construct and operate the facilities and pipelines.

To address the Division's concern about reservoir uncertainty in the western unit area, the 22nd POD includes Exxon's offer to hold a workshop to evaluate whether drilling delineation wells could provide valuable information that would reduce the uncertainty associated with the western Thomson Sand Reservoir. The 22nd POD also includes plans to compare core samples from PTU and Badami wells to evaluate potential development of Brookian prospects within the PTU.

While there is some benefit to the proposals in the 22nd POD, it does not contain sufficient plans or commitments to timely develop and produce unitized substances. The PTU Owners are not entitled to condition development of the PTU on the construction of a pipeline by a third party or on modification of the state's royalty and tax rights. PTU Owners' plans for delineation and development of the unit area do not justify approval of the 22nd POD or the PTU Owners' request for extension of the 2006 and 2008 Development Drilling Commitments. The 22nd POD does not meet the criteria in section 11 AAC 83.303(b)(4).

3. Economic Costs and Benefits of the PTU Owners' Plans for Development of the PTU.

The cost to the state and the public of approving the 22nd POD is that the known underlying hydrocarbons will not be timely delineated and produced and the remainder of the unit area will not be timely explored. Moreover, the 22nd POD conditions PTU development on amending the State's existing tax and royalty structure in the Sponsor Group's fiscal contract and construction of a North Slope gas pipeline, which are an inappropriate basis upon which to condition PTU development.

In the short-term, development of the PTU could create additional jobs and in the long-term, development would create additional employment and income to State residents. The State and the public are primarily interested in timely oil and gas production from State leases. Every year that production is delayed costs the State millions of dollars in unrealized interest on production revenue and delays the secondary benefits associated with PTU development. If the PTU Owners developed and began production from the PTU, the State would earn royalty and tax revenues over the long-term life of the field. Royalties, corporate income taxes, property taxes, and severance taxes would benefit the local and state economy, and provide revenue to the State's general, school, and permanent funds. The PTU Owners may reinvest revenues from PTU production in new exploration and development in the State.

Development of the PTU would also increase demand for goods and services supplied by local businesses, retailers, and service providers. An increased property tax base would benefit the residents and communities within the North Slope Borough and along the Trans-Alaska Pipeline corridor. Timely development and production from the PTU will lead to additional development and production from other reservoirs in the unit area and could provide an infrastructure base for exploration, development, and production outside of the unit area.

The Division's May 24, 2002 evaluation of the Expansion Agreement, found that the economic benefits of including the Expansion Acreage in the PTU outweighed the costs because the PTU owners made meaningful commitments to explore and develop the Thomson Sand Reservoir by drilling adequate exploration and development wells by dates certain, and agreed to increased royalty rates for some of the leases to compensate the state for lost opportunities to re-lease the acreage. If the Applicants fail to follow through with those commitments as scheduled, the Expansion Acreage will automatically contract out of the unit, and the PTU Owners must compensate the State for the lost opportunity to receive bonus payments in past lease sales. However, the PTU Owners have requested a one-year deferral of the Development Drilling Commitments. The 22nd POD, unlike the Eighteenth POD and subsequent plans, does not contain activities toward fulfilling the commitments in the Expansion Agreement.

In addition to the Development Drilling Commitments, the Expansion Agreement also contains the PTU Owners commitments to allocate production under an approved participating area by June 15, 2008, for Expansion Areas primarily underlain by the Thomson Sand Reservoir; and by June 15, 2010, for Expansion Areas underlain by Brookian prospects. If the PTU Owners ultimately fail to drill the required development wells, approval of a one-year deferral of the Development Drilling Commitments would delay receipt of any payments to compensate for withholding the Expansion Acreage from leasing, and if they do ultimately develop the PTU, deferral would delay receipt of facility and production related payments,.

There are currently 45 state oil and gas leases committed to the PTU Agreement.[8] Most of the PTU leases had a 10-year primary term, except the four most recent leases, which were issued with 7-year primary terms. All but two of the PTU leases are beyond their primary term, but under Article 18 (d) of the PTU Agreement they are all extended for the duration of the unit term.[9]

---

[8] Six of the PTU leases were effective in 1965, nineteen in 1969, three in 1970, two in 1979, four in 1982, one in 1988, eight in 1991, one in 1993, two in 1997, and one each in 2000 and 2002.

[9] PTU Agreement, Article 18 (d) states "Each lease, sublease or contract relating to the exploration, drilling, development or operation for oil or gas of lands, committed to this agreement, which, by its terms might expire prior

In addition, the primary terms of seven PTU leases are extended because the Division certified wells located on those leases as capable of production in paying quantities. The PTU leases with certified wells are: ADL 28382, ADL 47556, ADL 47560, ADL 47567, and ADL 47573, which were issued on lease form DL-1 revised October 1963; ADL 312862 issued on DMEM-1-79B (Sliding Scale Royalty) revised November 5, 1979; and ADL 343112, issued on DMEM 1-82 (Net Profit Share) revised April 7, 1982. The primary term of these leases are extended under the individual lease agreements and State regulation 11 AAC 83.135, Shut-in Production.

The lessees have had twenty to thirty years to delineate, develop, and commence production from the hydrocarbon accumulations underlying these leases, which contain wells that are certified as capable of production in paying quantities. If the Division notifies the lessees that they must commence production, and they fail to do so within the time allowed, the leases will no longer be held by shut-in production, although the primary terms may continue to be extended by unitization or other extension provisions in the lease agreements.

If the PTU Agreement terminates and the leases expire, the Division could re-offer the acreage for lease in future lease sales and impose work commitments in the new leases.[10] Re-offering the PTU acreage would also replace older lease forms with a more modern updated lease form. The Division received bonus bids totaling nearly $146 million when the State originally issued the current PTU leases, and could attract significantly higher bid bonuses today.

Another benefit the state could realize by re-offering the unit acreage is the potential for increased royalty rates. Most of the leases in the core unit area have royalty rates of 12.5%. If the Division were to re-offer the acreage, it could impose higher royalty rates. The PTU Owners agreed to increased royalty rates for some leases in the Expansion Areas, ensuring that the State would receive the benefit of higher royalties on production from those leases without releasing the acreage. The royalty rate increased from 16.66667% to 20% for seven of the leases and from 12.5% to 16.66667% for one lease.

If the PTU is terminated and the Division re-offered the PTU acreage for bid, it might attract new lessees who may bring new ideas and energy as well as new geologic interpretations, engineering, development timelines, and marketing perspectives to develop the area. At this point, the current PTU Owners have had the leases for far beyond their primary term, and their conclusion today is simply that they cannot make enough money to justify development. It is time for the PTU Owners to develop and produce or give new lessees had a chance to develop the known hydrocarbon resources within the PTU.

In summary, the economic costs outweigh the benefits that might be gained by approving the 22nd POD. Therefore, the Division's evaluation of the section .303(b)(5) economic criteria does not support approval of the 22nd POD.

---

to the termination of this agreement, is hereby extended beyond any such term so provided therein so that it shall be continued in full force and effect for and during the term o this agreement."

[10] "The Commissioner may include terms in any oil and gas lease imposing minimum work commitment on the lessee. These terms shall be made public before the sale, and may include appropriate penalty provisions to take effect in the event the lessee does not fulfill the minimum work commitment." AS 38.05.180 (h).

4. Environmental Costs and Benefits of the PTU Owners' Plans for Development of the PTU.

The PTU Owners do not propose any exploration, delineation, or development operations within the PTU. Therefore, the section 11 AAC 83.303(b)(1) environmental criteria neither supports nor condemns approval of the PTU Owners' plans for development of the PTU.

5. Other Relevant Factors to Protect the Public Interest

The PTU contains wells certified as capable of production in paying quantities. Considering the facts, it is now time to develop and produce the underlying hydrocarbons. If the PTU Owners have been unable to identify a commercial project in nearly 30 years, it is time to terminate the unit and re-offer the acreage to new lessees who will have the opportunity to develop the State's resources in a timely manner.

The Division has given the PTU Owners many opportunities over many years to develop the PTU. It is not in the public interest to grant a state lessee an indefinite extension on development merely because development in their view is not currently profitable enough or is too risky.

The intent of oil and gas leases is to give producers an opportunity to explore, develop, and produce within the primary term of the lease. That intent has been met and exceeded in this case. It is not in the public interest to change leasehold intent by allowing a lessee's parochial interests to supersede the State interest for orderly and reasonably prompt development.

The state's primary interest in oil and gas leases is development of hydrocarbons which yield oil and gas revenue. The state's interest is not met by allowing the producers to delay production until such time as the lessee determines that it is the lessee's optimum time to develop a known resource or the State agrees to compromise its tax and royalty system.

It is not fair to the public or other potential lessees to allow the current PTU Owners to continue to hold the leases, thereby precluding others from the opportunity to develop the resource.

V. FINDINGS

The PTU Owners' Plans for Development of the PTU fail to meet the criteria in 11 AAC 83.303(a) as follows.

A. Promote the Conservation of All Natural Resources.

If the Unit Operator proposed any operations under the 22nd POD, there would be environmental impacts associated with reservoir development. However, unitized development of the unit area would reduce the disruption of land and fish and wildlife habitat that would occur under individual lease development. This reduction in environmental impacts and preservation of subsistence access would, when taken in isolation, be in the public interest. While unitized operations conserve natural resources when compared to lease-by-lease development, development on a lease basis maybe preferable to no development at all. However, development of the Thomson Sand Reservoir is possible under a new unit agreement.

Additionally, before undertaking any specific operations, the unit operator must submit a unit plan of operations to the Division and other appropriate state and local agencies for review and approval, and the lessees may not commence exploration or development operations until all agencies have granted the required permits. The Division may condition its approval of a unit plan of operations and other permits on performance of mitigation measures in addition to those in the leases, if necessary or appropriate. Compliance with the mitigation measures would minimize, reduce or completely avoid adverse environmental impacts. Lease-by-lease operations would also require agency approvals, including mitigation measures.

B. Promote the Prevention of Economic and Physical Waste.

Exxon submitted geological, geophysical, and engineering data to support its interpretation of the hydrocarbon accumulations underlying the unit area. The available data indicates the PTU encompasses all or part of one or more hydrocarbon accumulations, but the PTU Owners' plans do not provide for delineation and timely development of those resources.

The PTU Owners stated that a gas cycling project was not commercially viable and the 22nd POD focuses on evaluating gas sales, but does not commit to produce and sell PTU gas. There is uncertainty regarding continuity of the reservoir in the western unit area, which could be addressed by drilling additional delineation wells. The Unit Operator has not adequately considered alternate development scenarios that incorporate both gas sales and gas cycling. Nor has Exxon evaluated the cumulative benefits of simultaneously developing the multiple hydrocarbon accumulations within the unit area. Timely development and production from the PTU does not preclude PTU gas sales at a later date. Focusing on gas sales at the exclusion of all other development options may result in waste of natural resources.

Gas cycling theoretically allows the recovery of significantly more liquids than would be recovered in a pure gas blow down project. In a gas blow down scenario, oil and gas condensates that remain in the field following gas sales may be largely unrecoverable. In addition, delaying timely production also constitutes waste. The Division and AOGCC must determine whether the proposed development will promote the conservation of oil and gas, but the Unit Operator has yet to apply to AOGCC for conservation orders and to the Division for approval of a depletion plan. The Director has the authority to modify the rate of development to achieve the conservation objectives under the PTU Agreement, and I find that increasing the rate of development in the PTU is necessary and advisable.

C. Provide for the Protection of All Parties of Interest, Including the State

A majority of the State's general fund revenue is derived from North Slope oil and gas operations in the form of royalty, net profit shares, production tax, property tax, and corporate income tax. Failure to develop and produce known hydrocarbon accumulations deprives the State of incremental revenue, economic activity and jobs. Should the PTU terminate, the area could be re-leased and unitized again under an acceptable unit plan of development that includes commitments to develop and produce the underlying hydrocarbon accumulations.

Continuing this 30-year record of non-development and delay of an oil and gas lessee's obligations to develop and produce its oil and gas leases makes a mockery of the statutory,

regulatory and contractual protections for the State as owner of the oil and gas estate. Therefore, the 22nd POD is unacceptable.

VI. DECISION

The 22nd POD fails to meet the requirements of 11 AAC 83.303 and .343 because it does not provide for the reasonable delineation and timely development of the hydrocarbon accumulations in the unit area. Nearly 30 years ago, lessees discovered the Thomson Sand Reservoir underlying the PTU, which to date has not been developed or put into commercial production. The PTU contains significant gas condensate and oil resources. Eighteen wells have been drilled within and around the PTU, but the most recent PTU well was drilled by BPXA nearly 10 years ago. Although some of the leases are more than 40 years old, and several hydrocarbon accumulations within the unit area contain wells that are certified as capable of producing in paying quantities, the Unit Operator has not stated that production from the PTU is economic and has not committed to development and commercial production. To the contrary, the Unit Operator has stated the production from the unit is not economic.

1. The 22nd POD makes no commitment to timely develop and produce PTU oil, gas, or gas condensate. The 22nd POD is hereby denied.

2. Failure to obtain approval of the unit plan is grounds for default under the PTU Agreement and the State oil and gas regulations. The PTU Owners are hereby notified that effective October 1, 2005, the PTU Agreement is in default.

3. To cure the default, the Unit Operator shall submit an acceptable POD within 90 days, by Thursday, December 29, 2005.

    a) An acceptable unit plan must contain specific commitments to timely delineate the hydrocarbon accumulations underlying the PTU and develop the unitized substances. The following commitments represent an example of an acceptable PTU plan of development:

        - Development activities for the unit, including plans and deadlines to delineate the Thomson Sand Reservoir, bring the reservoir into commercial production, maximize oil, condensate, and gas recovery, and maintain and enhance production once established; and plans for the exploration or delineation and production of other hydrocarbon accumulations and lands that lie stratigraphically above or below the Thomson Sand Reservoir;

        - The PTU Owners shall sanction a commercial PTU development project by October 1, 2006, and provide the Division with evidence of corporate approval and commitment of project funding.

        - The PTU Operator shall begin commercial production of unitized substances from the PTU by October 1, 2009.

- Details of the proposed operations to fulfill the 2006 Development Drilling Commitment, including the proposed surface location of the drill pad, bottom-hole location for the well, testing plan, and schedule of activities. The consequences of failure to fulfill the 2006 drilling commitment are specified in the Expansion Agreement.

4. Failure to submit an acceptable plan of development is grounds for termination of the PTU.

A person affected by this decision may appeal it, in accordance with 11 AAC 02. Any appeal must be received within 20 calendar days after the date of "issuance" of this amended decision, as defined in 11 AAC 02.040 (c) and (d), and may be mailed or delivered to Thomas E. Irwin, Commissioner, Department of Natural Resources, 550 W. 7th Avenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-269-8918; or sent by electronic mail to dnr_appeals@dnr.state.ak.us. This decision takes effect immediately. If no appeal is filed by the appeal deadline, this decision becomes a final administrative order and decision of the department on the 31st day after issuance. An eligible person must first appeal this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court. A copy of 11 AAC 02 may be obtained from any regional information office of the Department of Natural Resources.

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

January 27, 2009

Appeal by Exxon Mobil Corporation, BP Exploration (Alaska) Inc., Chevron USA, Inc., ConocoPhillips Alaska, Inc. and Exxon Mobil Oil Corporation, Working Interest Owners, of the Notice of the Director, Division of Oil and Gas, dated August 4, 2008, entitled Lease Expiration Due To Elimination From Unit for Oil and Gas Leases ADL 28380 et al.

CONDITIONAL INTERIM DECISION

This is a conditional interim decision in appeals from the August 4, 2008, decision of the DNR Director of Oil and Gas that 31 of the leases included in the former Point Thomson Unit had expired. BP Exploration (Alaska) Inc., Chevron USA, Inc., ConocoPhillips Alaska, Inc., and ExxonMobil Corporation appealed from that decision. The initial phase of the evidentiary hearing was held on January 12 through 16, 2009, and the hearing is continued to February 12, 2009.

I am issuing this conditional interim decision because, in part, Appellants offered testimony that their development plans to drill a well during this winter season could still go forward if DNR provided them with an ice road permit before the end of this month and authorized drilling activities on the leases. For this reason, I have decided to issue this decision.

At the initial phase of the hearing, Appellants offered testimony and evidence regarding their plans for development of certain leases in the former Point Thomson Unit, referred to by Appellants as the "Point Thomson Project." Appellants have testified that this project provided for the drilling and producing from wells by 2014. Appellants have specifically testified that they are unconditionally committed to the initiation and continuation of drilling during this 2008 and 2009 winter season, including drilling a well out of the conductors with a rig capable of drilling through the Thomson Sands on that lease, and completing the drilling of two wells, both penetrating the Thomson Sands reservoir, by 2010. Appellants testified that in furtherance of this commitment, they have: (1) mobilized equipment and materials to the North Slope to support the operations; (2) retained subcontractors to support this operation; (3) modified a drill rig to make it suitable for the high pressure Thomson Sands reservoir; and (4) applied for and pursued all necessary permits. Given this testimony, I find that it is in the public interest to authorize Appellants to drill these two wells. If Appellants provide the documents listed below, the record will be adequate to support reinstatement of the two leases and issuance of permits to authorize drilling of these two wells.

I am not, however, ruling on whether any of the remaining 29 leases are engaged in drilling operations, or are extended by another lease provision, because the record is incomplete and there are many outstanding questions that Appellants need to address.

Nonetheless, assuming Appellants can provide the documentation listed below, I find that Appellants have demonstrated that ADL 47559 and ADL 47571 have been extended by the drilling operations savings clause because they have: (1) testified that they are unconditionally committed to the initiation of drilling during this winter season, including drilling a well out of the conductors with a rig capable of drilling through the Thomson Sands on that lease, and completing the drilling of two wells on these two leases, both penetrating the Thomson Sands reservoir, by 2010; (2) mobilized equipment and materials to the North Slope to support these operations and awarded subcontracts; and (3) unconditionally committed to bring those two wells on the two leases into production by 2014.

Based on the testimony and evidence presented at the hearing, I have decided to:

(1) direct my staff to issue the ice road permit as soon as possible so that the rig can be mobilized to the drill pad this winter;

(2) direct my staff to process all permits necessary for drilling these two wells that are pending before DNR;

(3) inform local, state, and federal agencies that Appellants are authorized to drill these two wells on the two leases; and

(4) reinstate ADL 47559 and ADL 47571 on the following conditions:

a. Appellants must abide by their unconditional commitments they made on the record including: (1) initiate drilling during this winter season, including drilling a well out of the conductors with a rig capable of drilling through the Thomson Sands on that lease; (2) completing these two wells on these two leases, both penetrating the Thomson Sands reservoir, by 2010; (3) continue to diligently move towards production by constructing the necessary facilities for processing and transporting hydrocarbons from these leases to market; and (4) commence sustained commercial production and transportation of hydrocarbons from these two wells on these two leases to market by 2014;

b. Appellants must obtain AOGCC and DNR approval for the precise location and bottom hole of each well;

c. Appellants must obtain DNR's approval for its Plan of Operations for the drilling of these two wells;

d. Appellants must diligently pursue all necessary permits, including working in good faith with all permitting agencies; and

e. Appellants must provide, within two weeks, all of the answers and documentation I requested during the initial phase of the hearing regarding Appellants' drilling plans for these two wells, including the precise well locations, drilling dates and production dates for each well. Appellants must also include a drill rig contract for each well, unconditional AFEs for each well signed by all parties, an AFE for the production infrastructure, and affidavits from each Appellant stating its willingness to pay its share of the costs for each well and for the production infrastructure.[1]

Additionally, unitization of these leases will likely be appropriate in order to properly conserve natural resources. I will address unitization issues in a final decision once the record is complete.

This conditional interim decision is intended to effect more expeditious production of state oil and gas resources. However, I remind Appellants that, under the terms of these two leases, the failure to diligently pursue drilling operations in good faith for the purpose of production will result in the automatic termination of these leases.

This interim decision will be followed by a final agency decision in the lease appeals once the record is complete, setting out my findings, rationale, and decision in detail. The time for appeal to the superior court will run from the date of issuance of the final agency decision.

In summary, I am issuing this conditional interim decision because Appellants have offered testimony and evidence that they are engaged in "drilling operations" for the purpose of diligently working in good faith to bring ADL 47559 and ADL 47571 into production, and that they will proceed with the project this winter season. The decision is conditional upon Appellants abiding by the conditions set forth above. I still need to review contracts and other documents that I have requested in order to make a final agency decision.

Jan. 27, 2009

Thomas E. Irwin
Commissioner

Date

[1] Compliance with this condition does not relieve Appellants from providing all of the other answers and documentation requested during the initial phase of the hearing.

9

Summary of Findings for Resource Assessment and Field Development Study of the Thomson Sand, in the Point Thomson Area, North Slope Alaska

May 16, 2008

Commissioned by

State of Alaska, Department of Natural Resources, Division of Oil and Gas

For the purpose of evaluating the hydrocarbon resource of the Thomson sand and potential depletion scenarios to maximize oil and gas recovery.

Study completed by

PetroTel Inc.

Julie Houle
Steve Moothart

Introduction

In 2007, the Resource Evaluation section of the Alaska Department of Natural Resources (DNR) Division of Oil and Gas (DO&G) initiated an independent technical assessment of the Thomson sand reservoir. The Division o f Oil & Gas contracted with PetroTel, Inc. to perform geologic and engineering evaluation of the Pt Thomson sands reservoir. PetroTel is recognized worldwide as industry leaders in enhanced oil recovery, reservoir characterization and simulation, coalbed methane, production, and exploration technologies. PetroTel provides professional consulting and advisory services utilizing a staff of 80 professionals with combined 1100 years of industry experience along with integrated project management support to domestic and international petroleum companies. Activities span the entire spectrum of technical, project, and commercial functions along with all facets of the hydrocarbon exploitation cycle.

With state-of-the-art software and sophisticated geostatistical and object modeling techniques, PetroTel reservoir engineers and geologists have successfully tackled a broad spectrum of difficult reservoir engineering problems by the intelligent application of reservoir simulation. Through the integration of reservoir geology, rock/fluid interactions, the dynamic pressure-volume-temperature relationships of oil gas and water (PVT properties), and process mechanisms, PetroTel engineers deliver reliable predictions of reservoir performance. Company expertise includes determination of in place hydrocarbons and reserves as well as providing a plan of development for discoveries that includes integrated economics.

PetroTel also has significant expertise in the development of gas condensate reservoirs with thin oil rims. They specialize in solutions and diagnostic tools that can advance the development of potential or undeveloped reserves. PetroTel has extensive experience that deals with pressure maintenance and improving recovery from gas condensate reservoirs.

The Pt Thomson sand accumulation is recognized as a high pressure retrograde condensate reservoir, which also contains a relatively thin oil column. The Petroleum Engineering Handbook[1] states "Development and operation of these (gas condensate) reservoirs for maximum recovery require engineering and operating methods significantly different from crude-oil or dry-gas reservoirs. The single most striking factor about gas-condensate systems (fluids) is that they exist either wholly or preponderantly as vapor phase in the reservoir at the time of discovery. This key fact nearly always governs the development and operating programs for recovery of hydrocarbons from such reservoirs; the properties of the fluids in place determine the best program in each case. A thorough understanding of fluid properties together with a good understanding of the special economics involved is therefore required for optimum engineering of gas condensate reservoirs. Other important aspects include geologic conditions, rock properties, well deliverability, well costs and spacing, well-pattern geometry, and plant costs."

The Resource Evaluation Group, DO&G undertook the evaluation of the Pt Thomson reservoir to better understand the resources contained in the reservoir and get an independent analysis of the development issues associated with gas condensate. The study had two main objectives: 1) to construct three-dimensional (3D) geologic models to evaluate the proven and potential hydrocarbon

[1] Bradley, H.B., 1987, Petroleum Engineers Handbook, 1987 Society of Petroleum Engineers, Chapter 39 Gas Condensate Reservoirs.

resource and 2) to import the geologic model into a dynamic reservoir simulator to test potential development and off-take scenarios to determine the impact on ultimate recovery of both gas and hydrocarbon liquids in the form of condensate and oil from an oil-rim in the reservoir. It should be noted that this study focuses on only the resource contained in the Thomson sand and does not Include the resource tested from the underlying Pre-Mississippian strata or the overlying Brookian accumulations

Results of PetroTel's work are summarized below.

1) The geologic and engineering analysis confirmed that gas cycling recovers more hydrocarbon than simple primary depletion based on known oil properties, gas properties, and reservoir characteristics.
2) Technical issues remain to be resolved; however, economic evaluation still needs to be done to validate conceptual conclusions and refine potential development scenarios.
3) Rigorous technical evaluation will be required as delineation of the reservoirs proceeds and additional physical information is acquired; more thorough and longer well tests are done; and as high quality reservoir oil, gas and condensate samples are acquired and analyzed.
4) Maximum recovery with gas cycling may require the import of gas in the form of waste CO2, captured inert gases, methane or natural gas from reservoirs outside of the Pt Thomson reservoir to replace voidage caused by fuel usage and shrinkage. Technical literature also suggests water can be injected into gas condensate reservoirs to maintain pressure, however, that process has not been addressed with this study.[1]
5) **Gas cycling delays gas sales, but results in greater ultimate recovery of both liquid and gas hydrocarbons. In contrast, primary depletion as a gas reservoir results in the lowest hydrocarbon recovery of a retrograde condensate reservoir. Gas blowdown[2] for sale can be done at any time after gas cycling and recovery of the hydrocarbon liquids.**
6) From the eleven static geologic models created, the volume of original gas in place (OGIP) ranged from 8.5-10.4 trillion standard cubic feet (TSCF). The volume of associated condensate ranged from 490-600 million stock tank barrels (MMSTB)[3] of condensate in place.
7) The range of original oil in place in the oil-rim varied greatly depending on the depth used for the oil-water contact. Publicly available data indicate that the interval between lowest possible gas and highest known water could vary from 60 feet to 145 feet in true vertical thickness, representing a wide range of potential oil column thickness in the oil-rim. The various geologic models produced a range of volumes of original oil in place (OOIP) in the oil-rim from 580-950 MMSTB.
8) Recoverable hydrocarbon resources for the Thomson sand were determined from dynamic reservoir simulation and are primarily a function of the development method employed. Over 70 scenarios were run to model a variety of development methods and well configurations within the reservoir simulator.

---

[2] Blow-down (also Blowdown) "A term applied to the commencement of production of gas for sale after the completion o a Cycling or Recycling operation. The term refers to the reduction of pressure in the formation as a result of the production of gas. … ". Martin, Patrick H. and Kramer, Bruce M., 2000, Manual of Oil and Gas Terms, Eleventh Edition, Lexis Publishing, page 101.

[3] Million stock barrels - MMSTB, Million standard cubic feet – MMSCF or MMSCFG/D – Roman numeral designation for million. Stock tank barrel is equivalent of 42 US Gallons liquid at 60°F and 14.65 pounds per square inch absolute, psia (1 atmosphere). Standard cubic foot is measured at 14.65 psia and 60°F

9) Development of the Thomson reservoir by primary depletion (blowdown) has the potential to recover 210-305 MMSTB of liquid hydrocarbons in addition to 6-7 TSCF of gas.
10) Gas cycling for 20 years prior to gas sales has the potential to result in the ultimate recovery of 620-850 MMSTB of liquid hydrocarbons and still recover 4.8-5.9 TSCF of gas.
11) Gas cycling, has the potential to significantly increase recoverable oil and condensate as much as 500 MMSTB of condensate and oil beyond recovery from primary depletion blowdown. This incremental recovery of oil is larger than the expected ultimate recovery from the Alpine Oil Field.

The length of time required for gas cycling prior to gas sales will be determined by the resource available in the oil rim and how fast the gas volume can be cycled. The major determining factor in this decision is the number of wells that can be economically drilled and operated. More injection and production wells could accelerate cycling and recovery of the condensate liquids and oil. There are an optimal number of wells that will economically recover the maximum amount of oil and gas within a reasonable drilling budget; however, the scope of this study did not include optimization of development but rather was designed to estimate resource volumes and quantify the range of recoverable resource using conceptual development scenarios. Hydrocarbon liquids could be produced and sold using mostly existing oil pipelines prior to the construction of a North Slope gas pipeline. Once production of liquid hydrocarbons is established from the Thomson reservoir, the production facilities could be utilized to produce oil from the Brookian Flaxman and Sourdough accumulations.

Petroleum Potential and Exploration History of the Point Thomson Area

Well log and production or drill stem test data indicate that much of the Point Thomson area is underlain by the Cretaceous (Neocomian) Thomson sand that contains abundant natural gas and hydrocarbon liquids in the form of gas condensate, ranging from 35° to 45° API gravity[4],[5]. In addition to gas and condensate, the Thomson sand also contains a thin and potentially discontinuous oil-rim at the bottom of the reservoir interval that has tested oil as high as 18° API gravity. The Point Thomson area contains the potential of hundreds of millions of barrels of oil in the shallower Tertiary Brookian reservoirs. Another potential productive reservoir is composed of carbonates and bedded metasedimentary strata in the "Pre-Mississippian" basement below the Thomson sand reservoir. The DO&G reported in their 2007 annual report that the Pt Thomson Area contained estimated undeveloped recoverable resources of 295 million stock tank barrels (MMSTB) of liquid hydrocarbons and 8 trillion standard cubic feet (TSCF) of gas.

Hydrocarbons were first discovered in the Point Thomson area in 1975 in the Alaska State A-1 well. This well tested a zone of the lower Tertiary Flaxman sand of the Canning Formation from 12,565 to 12,635 feet MD(measured depth) that flowed 23° API gravity oil at a rate of 2,507 BOPD (barrels of oil per day),

[4] API Gravity – "Specific gravity measured in degrees on the American Petroleum Institute scale. The specific gravity of oil is normally specified … in terms of API degrees. On the API scale, oil with the least specific gravity has the highest API gravity. … the higher the API gravity the greater the value of the oil." ". Martin, Patrick H. and Kramer, Bruce M., 2000, Manual of Oil and Gas Terms, Eleventh Edition, Lexis Publishing, page 52.

[5] Condensate API gravity typically ranges from 40-60 degrees and are light color compared to oil. Black oils typically have API gravity that ranges from 25-35 degrees. Lake, Larry W., 2007, Petroleum Engineering Handbook, Volume V, Society of Petroleum Engineers, Chapter 10,

2.2 MMSCFG/D,GOR 864 SCF/STB (gas/oil ratio, standard cubic feet per stock tank barrel) (USGS, 1987).

In 1977, a second discovery well, the Point Thomson Unit No. 1 well was drilled and conducted two flow tests in the Lower Cretaceous (Neocomian) Thomson sand. From a zone between the depths of 12,963 to 13,050 feet MD, the well flowed 18° API gravity oil at a rate of 2,283 BOPD, 13.3 MMSCFG/D, GOR 5,830. Between the depths of 12,834 to 12,874 feet MD, the well tested at a rate of 3.86 MMSCFG/D, 170 BPD condensate, 45° API gravity (USGS, 1987).

Over the next seven years, six additional wells were drilled to delineate the two Pt Thomson discoveries. As a result of the additional delineation drilling, two other hydrocarbon reservoirs were encountered. In 1978, the Point Thomson Unit No. 2 well tested the "Staines River sand," a local sand in the Tertiary Canning formation at a depth of 11,580 to 11,678 feet MD that produced 21° API gravity oil at a rate of 248 BOPD, 124 MSCFG/D, GOR 500, after acid treatment (USGS, 1987).

In 1982, the Alaska State F-1 well tested the Thomson sand at a depth of 13,940 to 14,316 feet MD at a rate of 4.2 MMSCFG/D and 284 BOPD condensate of 35.3° API gravity. The well also tested the under lying "Pre-Mississippian" metasedimentary basement from 13,940 to 14,316 feet MD that flowed at a rate of 2.9 MMSCFG/D with 152 BPOD condensate of 34.8° API gravity. This test identified a third potentially productive zone in the Point Thomson area (USDOE, 1993).

State lands east of Prudhoe Bay saw renewed exploration activity during the 1990s after the discovery of the Badami oil field within turbidite sandstones of the Tertiary Canning Formation. First estimated to contain 100-150 MMSTB of recoverable oil, production began at Badami in August 1998. Since that time, production has been sporadic with the field periodically shut in due to connectivity issues within the reservoir. To date, over 5 MMSTB of cumulative oil production from Badami has been reported to the Alaska Oil and Gas Conservation Commission (AOGCC).

In 1994, BP Exploration Alaska (BPXA) and Chevron drilled the Sourdough #2 well targeting Brookian sands of the Canning formation in the southern portion of the former Point Thomson Unit; the Sourdough #3 well was drilled as a follow-up in 1996. Although the data from these wells are still held confidential, BP announced the discovery of hydrocarbons within turbidite sandstones of the Tertiary Canning Formation that could potentially contain 100 million barrels of recoverable oil in a 1997 press release. The Sourdough project would require up to 35 miles of pipeline to link up with the Badami field (Peninsula Clarion, 1997).

Additional discoveries have been announced in the offshore federal waters of the eastern Beaufort Sea within the Mississippian Kekiktuk Formation (Liberty) and Tertiary sandstones of the Sagavanirktok Formation (Hammerhead and Kuvlum). Once developed, production from Liberty is expected to peak at 40,000 BOPD, with a recovery target of 100 MMSTB (Petroleum News, 2007). While data from the U.S. Minerals Management Service (MMS) indicates that while neither Hammerhead nor Kuvlum have been fully delineated, the agency estimates 100-200 MMSTB of recoverable oil at Hammerhead, and 160-300 MMSTB at Kuvlum (MMS, 2006).

The timing of development of these and other Brookian oil accumulations in the area will likely follow the commercialization of the gas and liquids reserves within the Point Thomson sand.

Geologic Setting of the Thomson Sand

The Thomson sand is an informal name that describes a sequence that is stratigraphically correlated with the Kemik Sandstone of Early Cretaceous (Neocomian) age (Figure 1). Both intervals commonly consist of preserved isolated accumulations of locally derived sediment overlying the regional Lower Cretaceous unconformity (LCU), whose composition is controlled by the local provenance eroded by the unconformity.

The Thomson sands contain significant detrital dolomite and quartz sand that are interpreted as Neocomian age fan-delta complexes that were sourced from a northern provenance composed of northerly-dipping pre-Mississippian metasedimentary units. The Thomson interval includes a broad range of rock types ranging from conglomeratic dolomite breccia to fine-grained sandstone and siltstone. In general, the coarser conglomerate facies of the Thomson sand are present to the north, proximal to the interpreted source area, while the finer-grained distal facies are more prevalent to the south. A block diagram (Figure 2) depicts a highly interpretive, schematic representation of the depositional setting of the Thomson sand during an advanced stage of transgression of the Neocomian Barrow Arch rift margin uplift and development of the Lower Cretaceous Unconformity (LCU).

Other sand occurrences are irregularly distributed along the LCU surface to the south of the Point Thomson area, depending on local thickening into accommodation space attributed to paleotopography created by the differential erosion of Ellesmerian and pre-Mississippian units below the LCU. North of the rift shoulder uplift, syn-rift sands may have been deposited as sediment gravity flows down fault relay ramps to accumulate in relatively deep water. Similar sands form major reservoirs in the Point McIntyre and Niakuk fields north of Prudhoe Bay, but the concept has not yet been tested with a drill bit north of the Point Thomson area.

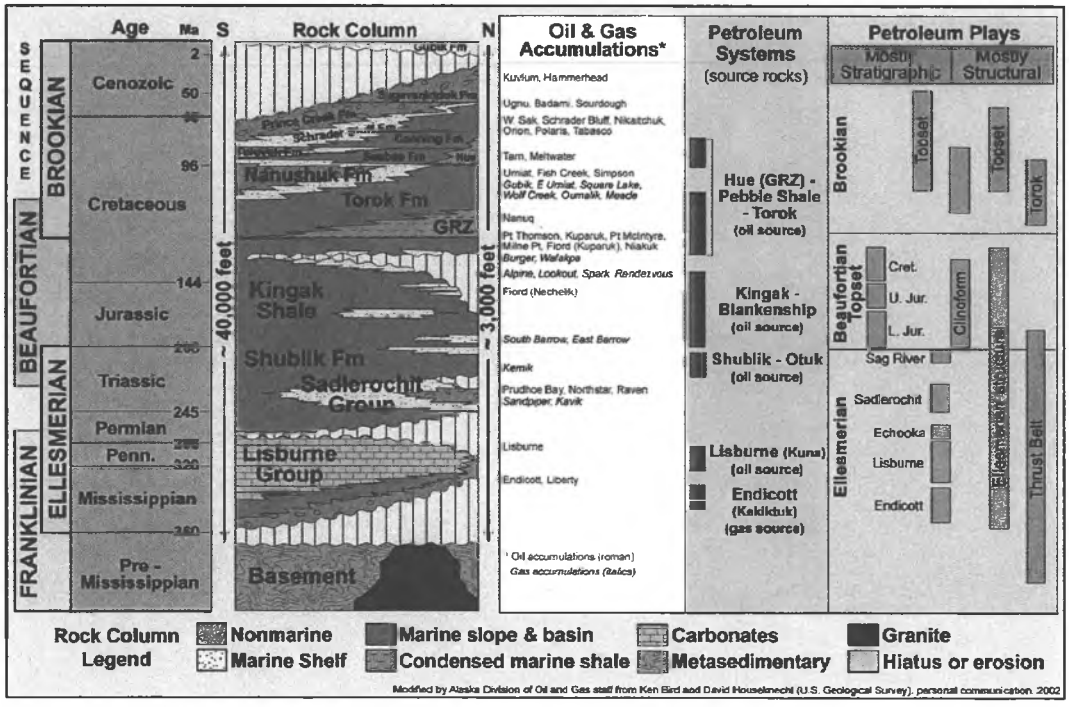

Figure 1, Alaska North Slope Stratigraphic Column

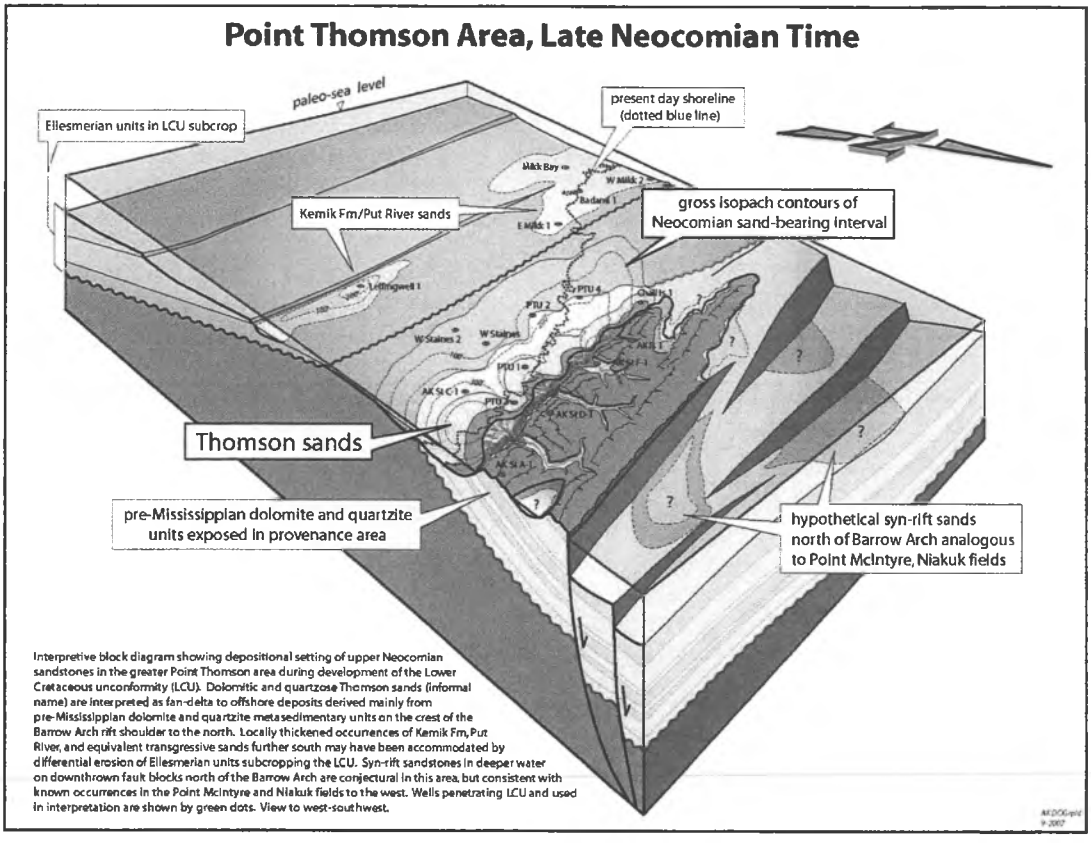

Figure 2, Block diagram of Point Thomson area in Late Neocomian time

First discovered in 1977, the oil, gas, and gas condensate contained within the Thomson sand is the largest proven, yet still undeveloped, field in Alaska. Between 1975 and 1996, a total of 17 wells have been drilled within the boundaries of the former Point Thomson unit. 1982 was the last time that a well was drilled into the Point Thomson reservoir. Although attempts were made to test most of the wells, tests were of short duration and were hampered by the high mud weights that were required to contain high reservoir pressure. Some of the tests were further complicated because they straddled both the gas and oil legs of the reservoir. No definitive, isolated test exists in the oil-rim of the Thomson reservoir. Additional wells are still needed to specifically delineate and test the productivity of Thomson oil-rim. Delineation wells in the oil-rim should include vertical pilot holes with horizontal laterals for production tests and include rigorous sampling for oil quality and PVT studies.

A number of the Point Thomson wells were drilled on the flanks of the accumulation and delineate the aerial extent of the core area of the Thomson reservoir. Along the western margin of the area though, no well has been drilled to demonstrate the western limit or trap of the reservoir or define the structural or stratigraphic continuity of the core reservoir from southeast to northwest. Additional wells are still required to adequately delineate the western limits of the hydrocarbon accumulation.

Thomson Sand Retrograde Condensate

The majority of the proven hydrocarbon resource in the Thomson sand is contained in the form of gas with entrained liquids known as a retrograde condensate. The Alaska Oil and Gas Conservation Commission (AOGCC) has released a paper entitled "Role of the Alaska Oil and Gas Commission in approving Pool Rules for the Point Thomson Field"[6] which gives an informative overview of the differences between a retrograde condensate reservoir and conventional gas and oil reservoirs. Retrograde condensate reservoirs tend to be deeper and have higher pressures and temperatures than conventional reservoirs. Due to the abnormally high pressures and temperatures, the fluid in a retrograde condensate reservoir does not behave like those in conventional oil and gas reservoirs. Pressure reduction in a conventional oil reservoir, causes the gas to expand and evolve out of solution from the oil. As gas evolves the oil becomes thicker (more viscous) and flows more slowly.

Technical literature (Society of Petroleum Engineers) has abundant examples of how condensate reservoirs perform under primary depletion and gas cycling. As pressure drops in a retrograde condensate reservoir, vaporized hydrocarbon liquids will condense when the reservoir pressure decreases below a certain point (dew point). If this happens in the reservoir, the condensate will remain trapped in place and clog the pore space, causing reduction of relative permeability; reducing well productivity and ultimate recovery. During primary depletion, the reservoir pressure will steadily decrease below dew point and hundreds of millions of barrels of condensate will become trapped in the reservoir and never be produced. Once the condensate comes out of the gas in the reservoir, very little of it will return to a gaseous state even if the reservoir pressure is later increased. Ideally, reservoir pressure should be maintained above dew point to keep vaporized liquid entrained to condense in surface facilities, thereby maximizing recovery. Results of the Pt Thomson sand reservoir modeling confirm the losses of condensate recovery during blow down. The blow down cases at best recovered about one-half the condensate that cycling cases recovered. The difference is directly attributable to trapped condensate.

Prudent development practices require keeping the reservoir pressure high (near or above dew point) until all of the economically recoverable liquid hydrocarbons have been produced in order to maximize the recovery of both oil and gas in a retrograde condensate field. "Gas cycling" is considered the best method of producing a retrograde condensate reservoir. This process involves producing hydrocarbon gas; removing the condensate for commercial sales; and then re-injecting the "lean gas" back into the reservoir to maintain pressure and sweep more condensate to the production wells. Once most of the condensate has been recovered, all the wells can be converted to gas production wells and the gas sold to market.

In addition to the dry gas and entrained condensate, the Thomson sand contains hundreds of millions of barrels of oil in the oil-rim. The gas cycling process can be applied simultaneously to the Thomson oil-rim after delineation and development. These hydrocarbon liquids could be produced and sold using mostly existing oil pipelines before a North Slope gas pipeline is operational. Once production of condensate and oil begins from the Thomson reservoir, it is anticipated that this would facilitate the delineation, development and production of some of the outlying Brookian oil discoveries in the Thomson area.

---

6 URL: http://www.state.ak.us/local/akpages/ADMIN/ogc/Gas/PtThompson_Pool_Rules.pdf, Retrieved April, 2008,

Studies of gas cycling in both the gas cap and oil rim were conducted using static geologic models and dynamic reservoir simulations to estimate recoveries under different development schemes. Results of those studies are documented later in the Reservoir Simulation section of this report.

DNR Evaluation of the Thomson Sand

Geologic Model Results

A total of eleven 3D geologic models were constructed of the Thomson sand. The distribution of facies and reservoir properties were varied in the different cases to account for the uncertainty between the well control points. A range of depths for the fluid contacts was also used to capture the uncertainty in identifying those contacts in the well logs or from available test data. The volume of original gas in place (OGIP) from the eleven static geologic models ranged from 8.5 – 10.4 trillion standard cubic feet (TSCF).

The volume of associated condensate ranged from 490 – 600 million stock tank barrels (MMSTB) condensate in place. Publically available well test data from the Thomson sand indicate condensate yields of 44-75 barrels condensate/MMSCF gas produced. The average yield was 64 STB/MMSCF.

The potential for a significant volume of oil in place below the gas cap in the oil-rim was also identified. The range of original oil in place in the oil-rim varied greatly depending on the depth used for the oil-water contact. Publicly available data indicate that the interval between lowest known gas and highest known water could range from 60 feet to 145 feet in true vertical thickness. This is the range of thickness available to be occupied by oil in the oil-rim. The range of volumes of original oil in place (OOIP) in the oil-rim varied in the models from 580 – 950 MMSTB.

All the volumes reported out of the geologic model are original hydrocarbons in place for the Thomson sand reservoir and do not include the hydrocarbons tested from the bedded carbonates of the Pre-Mississippian basement or those hydrocarbons tested from the overlying Brookian intervals. Reservoir properties within the Pre-Mississippian strata are not as well constrained by the available data as in the Thomson sand.

Because the Thomson sand directly overlies bedded carbonate strata of the Pre-Mississippian, it is likely in communication with the Pre-Mississippian. Recoverable volumes for the Thomson sand were determined from the dynamic reservoir simulation and were demonstrated to be a function of the development method employed. Neither the Pre-Mississippian nor Brookian reservoirs were included in the reservoir simulation. Both should be considered as considerable upside since they have been successfully tested in multiple wells. Further delineation drilling is required to fully access the resources in-place and production impacts of these reservoirs on future development.

Reservoir Simulation Results

Upon initialization of the reservoir simulation model, over 70 scenarios were run to model a variety of development methods and well configurations. The development methods included primary depletion (gas blowdown), gas cycling followed by gas blowdown, and development of the oil-rim. Numerous cases were run for each type of development to test different well configurations such as horizontal wells, well constraints such as rate limits and operating pressures, and the number of development wells. In this

way, we were able to judge the relative impact the different variables had on the ultimate recovery of the resource within each type of development. All model cases were run out to thirty years of production. It should be noted that no physical constraints to the development wells such as location of surface drill sites and facilities or drilling departure from surface location have been applied during the modeling. At this stage of the analysis scenarios were designed and run to discover and evaluate the key sensitivities to recovery, rather than to derive optimal production economics.

Primary Depletion (Gas Blowdown)

Gas blowdown can be done at any time after cycling and recovery of the hydrocarbon liquids. In the following cases, gas blow down is done first without pressure maintenance or gas injection. Six primary depletion cases were run in the reservoir model. Three cases contained a fixed number of wells at startup and three cases included additional wells that were added later. Gas producers were constrained to a maximum rate of 150 MMSCF/D and a minimum bottom-hole pressure (BHP) of 3000 psi. Cases were run with 8, 16 and 22 wells. Initial gas production rates for these three cases varied from 0.4 – 1.2 BSCF/D[7]. Additional cases included: 12 initial producers with 4 new producers drilled after 4 years, 16 initial producers with 3 additional wells drilled after 8 years, and 16 producers with 6 additional wells drilled after 4 years. Initial gas production rates for these three cases ranged from 0.8 to 1.2 BSCF/D. Three more primary depletion cases were run in both gas cap and oil rim. Cases were run with 22, 13 and 13 gas producers in the gas cap and 4, 30 and 20 oil producers in the oil rim. Oil producers were constrained to a maximum rate of 7000 STB/D and a minimum bottom-hole pressure (BHP) of 3000 psi. Initial gas production rates for these three cases ranged from 1.0 to 1.2 BSCF/D

With a BHP limit of 3000 psi, gas recovery can approach 60% for the 16- producer and 22-producer cases. The recovery can reach 70% at lower BHP of 2000 psi. The 8-producer case can recover 45% of the gas in 30 years. The number of wells and timing of drilling could be optimized to meet gas demand or gas sales contracts. Twenty-two wells could drain the gas in the reservoir in 12-15 years.

Condensate recovery during primary depletion of the gas cap is only about 25% of the in place volume after 30 years. The majority of the condensate is lost in the reservoir because the reservoir pressure drops below dew point. Pressure maintenance and gas recycling is needed to recover more condensate. Primary depletion is also detrimental to any future recovery from the oil-rim due to loss of energy within the oil by the reduction of reservoir pressure. Oil rim recovery ranged from 3-16% in the cases of primary depletion in both gas cap and oil rim if primary depletion is the only recovery method.

Gas Cycling Followed by Gas Blowdown

The model cases run demonstrate that full scale gas cycling should be initiated early in order to achieve maximum recovery of the condensate and any other potential hydrocarbon liquids in the gas cap. Cycling also maintains reservoir pressure for development of the oil-rim. In a gas cycling project, the ultimate recovery of condensate and timing of subsequent gas blowdown is a function of the rate at which the in place volume of gas can be produced and recycled. This can be optimized by the number of development wells in place.

---

[7] BSCF/D – Billion standard cubic feet per day.

Four base cases of cycling the produced gas for 30 years with a different numbers of wells were run to test the impact of well count on the potential ultimate recovery of condensate. Additional cases with gas blowdown commencing after 10 and 20 years of cycling were run to test how much condensate could be produced prior to blowdown for gas sales.

The four base cases consisted of: a minimum development case of 4 producers and 2 injectors; a case with 8 producers and 4 injectors; a 16-producer with 5-injector case; and a case with 22-producers and 8 injectors which resulted in the highest hydrocarbon recovery of the four cases. Producers were constrained to a maximum rate of 150 MMSCF/D and a minimum BHP of 3000 psi. The injectors were limited to a maximum rate of 300 MMSCF/D and a maximum injection pressure of 15000 psi. In all cases 90% of the produced gas was cycled back into the reservoir.

Condensate recovery after 30 years for the four cases ranged from only 24% of the in place volume for the 4-producer case, to 86% recovery for the 22-producer case. At the end of cycling the injectors can be converted to gas producers. Gas blowdown with the 30 wells producing subsequent to gas cycling can recover up to 70% of the remaining recycled gas within 12 years.

Additional cases were then run with gas cycling for both 10 years and 20 years before blowdown. For the 22-producer and 8-injector development, after 10 years of cycling 62% of the condensate is recovered and then 57% of the original gas in place (OGIP) is recovered during the ensuing blowdown. Cycling for 20 years recovers 76% of the condensate and then 56% of the gas (OGIP).

Oil-rim Development

One of the key results of the study was that it became obvious that oil rim development had to be done during a gas cycling phase. Because there is uncertainty about the quality of the oil and reservoir rock in the oil-rim, to preserve reservoir energy and sustain maximum oil producibility oil rim reservoir pressure must be maintained. The oil-rim is a relatively thin zone of the reservoir that lies between the gas cap and underlying aquifer. For this reason the use of dedicated horizontal wells will be required to avoid coning of the adjacent gas or water. Injection of the recycled gas into the oil-rim will help reduce the viscosity, improve swelling, mobilize and displace the oil.

Model cases were run that included production wells in the oil-rim as part of both a primary depletion and gas cycling developments. Individual cases in both development strategies varied the number of oil-rim producers from 4 to 20 and ultimately 30 oil wells. Sensitivities were also run on gas- oil ratio (GOR) cutoffs for the producers, minimum BHP, and the use of offsite gas for supplemental gas injection.

In a primary depletion scenario, adding four wells into the oil-rim recovered 3% of the original oil in place. Increasing the number of oil-rim wells to twenty or thirty upped the recovery to almost 16% of OOIP. In a gas cycling scenario, the addition of four wells in the oil-rim achieved 11% recovery after 30 years of cycling, going to gas blowdown after 10 or 20 years of cycling recovered 7% and 9 % of the oil-rim OOIP respectively.

Increasing the number of oil-rim wells during gas cycling development in the model increased the recovery of oil significantly. In a case with 13 gas producers, 18 gas injectors and 20 oil-rim producers, recovery of oil from the oil-rim approaches 50% of the in-place volume after 30 years of cycling. This is 3-15 times better recovery than during primary blowdown. By varying the length of time of cycling

before gas blowdown from 5 to 10 and then 20 years in the same development scenario the recoveries from the oil-rim drop to 31%, 39% and 43% respectively.

Modeling of development scenarios for the oil-rim demonstrates that to achieve maximum recovery of the oil resources located below the gas cap in the oil-rim reservoir pressure maintenance by gas cycling is crucial. The difference in recovery from the oil-rim between primary depletion and a cycling project that maintains reservoir pressure can be as much as **35% more** of the total in-place volume.

Use of Offsite Gas

Production from the oil rim increases the voidage within the reservoir. The results from model cases involving large scale development of the oil-rim (30 horizontal producers) indicated that due to the increased off-take, reinjection of 90% of the produced gas will not be sufficient to maintain reservoir pressure. A decrease in reservoir pressure below dew point results in lower condensate recoveries and the reduction also decreases oil-rim recovery.

Gas from outside sources (offsite) could be imported and injected into the Thomson reservoir to help maintain reservoir pressure. Offsite gas can be in the form of carbon dioxide (CO2), inert gas such as nitrogen, methane or natural gas.

The use of CO2 for pressure maintenance may have multiple benefits depending on the source and availability.

- CO2 is commonly removed as a byproduct from produced gas in a gas treatment plant prior to sale.
- If enough CO2 is available for pressure maintenance, it could allow sale of some Point Thomson gas before gas blowdown.
- CO2 should be fully miscible with the Thomson oil and thus reduce the viscosity and further increase recovery.

CO2 is considered a "green house gas" and re-injection into a reservoir is a method of sequestering carbon and as such government tax incentives may be available in the form of carbon credits to offset and/or mitigate CO2 re-injection costs,
Although the importation of offsite gas would require the construction of a gas line to Point Thomson, once gas cycling is completed, the line would be available for gas sales.

The large scale oil-rim development cases that needed supplemental pressure support indicated a volume of 200-500 MMSCF/D would be required in addition to the Thomson gas during the cycling process. A comparison of cases with and without offsite gas showed an increase in condensate recoveries from 33% to 60% of the original condensate in place. This is a potential increase of 130-160 MMSTB.

Conclusions from Geologic and Reservoir Modeling

1. In addition to gas, the area contains hundreds of millions of barrels of hydrocarbon liquids. These hydrocarbon liquids exist in the form of condensate liquids; a thin and potentially discontinuous oil leg at the bottom of the Thomson sand reservoir; and oil in the overlying Brookian sediments. Exploration wells drilled prior to 1982 have tested oil from each of these reservoirs. Adequate infrastructure to transport these liquids to market exists within thirty miles of this reservoir.

Therefore, the potential development of the Point Thomson area should not be limited to production of the dry gas.

2. Evaluation of the potential hydrocarbons in place in the Thomson sand reservoir by DNR and PetroTel's 3D geologic models results indicate the following volumetrics:
    - Original gas in place of 8.5-10.4 TSCF.
    - retrograde condensate - 490-600 MMSTB in place
    - Oil rim - 580 to 950 MMSTB original oil-in-places.

3. Reservoir simulation of the Thomson sand reservoir evaluated various development scenarios for the reservoir. These scenarios included primary depletion of the reservoir (gas blowdown), production and re-injection of the gas after recovering the condensate (gas cycling), and the addition of dedicated horizontal production wells into the oil-rim in both gas blowdown and cycling cases. Over 70 individual cases where run in the reservoir simulator varying the number of development wells and operating constraints in an attempt to determine the optimum recovery for each development scenario.

4. The producible liquids contained in the Thomson reservoir could technically be developed before a gas pipeline is built.

5. In order to maximize the recovery of the hydrocarbon liquids in the reservoir it is necessary to keep the reservoir pressure high until all of the economically recoverable liquid hydrocarbons are produced. This is most often accomplished through gas cycling. In the reservoir simulator cases run, gas cycling was applied in the gas cap for 30 years in conjunction with development and gas cycling of the oil-rim.

    - Gas cycling recovered 86% or 420-516 MMSTB of condensate.
    - Recovery from the oil-rim was close to 50%, 290-475 MMSTB.

6. Shorter duration Gas Cycling:
    - Cycling gas for 10 years prior to blowdown results in recoveries of:
        - Condensate - 62% or 300-370 MMSTB
        - Oil Rim - 39% or 225-370 MMSTB of the oil-rim

    - Cycling the gas for 20 years increases the recoveries:
        - Condensate - 76% or 370-450 MMSTB
        - Oil Rim - 43% or 250-400 MMSTB.

    - Subsequent blowdown of the gas cap after 10 and 20 years cycling recovers 57% and 56% or 4.8-5.9 TSCF of gas reserves.

7. Primary depletion is the fastest method to produce the gas from the reservoir but recovers the least hydrocarbons. Simulation results showed: 70% of gas recovered or 6-7 TSCF with 22 wells in 12-15 years.
    - Condensate recovery is approximately 26% of the in place volume, or 127-156 MMSTB
    - Oil-rim recovery during primary depletion is only 3-16% 30-150 MMSTB of oil.
    - The majority of the condensate is left in the reservoir by condensation below dew point.
    - Pressure maintenance and gas recycling is needed to maximize condensate recovery.

- Primary depletion reduces recovery from the oil-rim due to loss of energy by the depletion of reservoir pressure.
- Gas blowdown and sale of the gas can be done at any time after cycling and recovery of the hydrocarbon liquids.

8. A gas blowdown scenario could recover over 500 million barrels less than a gas cycling scenario. This difference is larger than the expected ultimate recovery from the Alpine Oil Field.

9. There is uncertainty in the original oil-rim volume in place and the ultimate recovery of that oil, even though it has flowed during testing of the PTU-1 exploration well.
   - Even if the oil rim was discounted entirely, the difference in condensate recovery between primary depletion (blowdown) and gas cycling for 20 years is potentially over 300 million barrels.
   - This represents three times the targeted recovery from the proposed off shore development of the Liberty Field.
   - During the period of gas cycling, further delineation of the oil-rim will determine the scale of development needed to maximize recovery from that portion of the resource.

In summary, gas cycling delays gas sales, but it is through this process that the maximum recovery of the condensate in the gas cap and any other liquid hydrocarbons can be achieved. Cycling also maintains reservoir pressure for development of the oil-rim and is a viable recovery mechanism. The length of time required for gas cycling prior to gas sales will be a combination of the resource available from the oil rim and the rate at which the in place volume of gas can be produced and recycled. A large factor in this will be the number of development wells that can be economically drilled and operated. More wells equals faster cycling and faster recovery of the condensate liquids. These liquids could be produced and sold before the construction of a North Slope gas pipeline. Production of liquid hydrocarbons from the Thomson reservoir could facilitate oil production from the other discovered reservoirs such as the Brookian Flaxman and Sourdough accumulations.

11 AAC 83.303. Criteria

(a) The commissioner will approve a proposed unit agreement for state oil and gas leases if he makes a written finding that the agreement is necessary or advisable to protect the public interest considering the provisions of AS 38.05.180 (p) and this section. The commissioner will approve a proposed unit agreement upon a written finding that it will

(1) promote conservation of all natural resources, including all or part of an oil or gas pool, field, or like area;

(2) promote the prevention of economic and physical waste; and

(3) provide for the protection of all parties of interest, including the state.

(b) In evaluating the above criteria, the commissioner will consider

(1) the environmental costs and benefits of unitized exploration or development;

(2) the geological and engineering characteristics of the potential hydrocarbon accumulation or reservoir proposed for unitization;

(3) prior exploration activities in the proposed unit area;

(4) the applicant's plans for exploration or development of the unit area;

(5) the economic costs and benefits to the state; and

(6) any other relevant factors, including measures to mitigate impacts identified above, the commissioner determines necessary or advisable to protect the public interest.

(c) The commissioner will consider the criteria in (a) and (b) of this section when evaluating each requested authorization or approval under 11 AAC 83.301 - 11 AAC 83.395, including

(1) an approval of a unit agreement;

(2) an extension or amendment of a unit agreement;

(3) a plan or amendment of a plan of exploration, development or operations;

(4) a participating area; or

(5) a proposed or revised production or cost allocation formula.

(Cite as: 958 P.2d 422)

Supreme Court of Alaska.
Clyde BAXLEY, individually, and on behalf of the citizens of the State of Alaska, and The Republican Moderate Party, a political group, on behalf of the citizens of the State of Alaska, Appellants,
v.
STATE of Alaska, and John Shively, Commissioner, Department of Natural Resources, and BP Exploration (Alaska), Inc., Appellees.

No. S-8155.
May 15, 1998.

Citizen-taxpayers brought action challenging constitutionality of statute authorizing amendment of "net profit share" (NPS) provisions of state oil and gas leases. The Superior Court, Third Judicial District, Anchorage, Michael J. Wolverton, J., entered summary judgment in favor of defendants, and plaintiffs appealed. The Supreme Court, Eastaugh, J., held that: (1) plaintiffs had standing to bring action; (2) Uniform Application Clause did not apply to statute; (3) statute was not unconstitutional special legislation; (4) Commissioner of the Alaska Department of Natural Resources (DNR) did not exceed his authority under the Alaska Land Act when he negotiated amendment; (5) statute was not enacted in violation of the Public Notice Clause; and (6) statute did not violate rule against material amendments to state contracts awarded through a public bidding process.

Affirmed.

OPINION

EASTAUGH, Justice.

I. *INTRODUCTION*

Citizen-taxpayers filed suit challenging a legislative enactment approving and giving effect to modifications of four State oil and gas leases in the Northstar Oil Field. Reasoning that the modifications were a narrowly tailored response to a unique situation, and that the legislature had not given the lessee preferential treatment, the superior court granted summary judgment for the defendants.***425** Because we agree with that analysis, we affirm.

II. *FACTS AND PROCEEDINGS*

A. *Facts*

The Northstar Unit is an oil field in the Beaufort Sea, approximately six miles from Prudhoe Bay. It contains tracts of land now subject to five State and two federal oil and gas leases. In 1979 Amerada Hess submitted the winning bid in a sale of four of the State's leases. They are the subject of this litigation.

The four leases were unusual, partially because the "net profit share" was the bid variable for the 1979 auction. When the State sells oil and gas leases, the Commissioner of the Alaska Department of Natural Resources (DNR) analyzes the tracts of state land to be leased and determines, in advance of the sale, which lease terms to establish as fixed or variable. AS 38.05.180(f)(1), (3); *Hammond v. North Slope Borough*, 645 P.2d 750, 763-64 (Alaska1982). The Commissioner determines which bidding method (the combination of fixed and variable lease terms) is in the state's best interest. AS 38.05.180(f)(1); *see also Hammond*, 645 P.2d at 763-64 (discussing some of the factors the Commissioner considers when selecting bidding methods); *Kelly v. Zamarello*, 486 P.2d 906, 912-13 (Alaska 1971). Typically, the bid variable is the bonus, the royalty share, the net profit share, or some combination of those terms. AS 38.05.180(f)(3)(A)-(G).

[1][2][3] A royalty is "a share of the product or profit reserved by the owner of land for permitting another to develop his land for oil or gas." Earl A. Brown, *The Law of Oil and Gas Leases* § 6.00 (1967). Royalties are usually expressed as fractions (such as a royalty of one-eighth of production), and they usually continue throughout the life of the lease, whether the lessee reaps a net profit or not. *Kelly*, 486 P.2d at 913 (citing *Griffith v. Taylor*, 156 Tex. 1, 291 S.W.2d 673, 676 (1956)); *see also* Richard W. Hemingway, *The Law of Oil and Gas* § 2.5, at 57-58 (3d ed.1991). A bonus is a definite sum (not a fraction of production), to be paid in cash or out of production, for the execution of the lease. *Kelly*, 486 P.2d at 913; Hemingway, *The Law of Oil and Gas* § 2.4, at 56.

[4] A net profit share (NPS), like a royalty, is a percentage of the lessee's production. 5 Eugene Kuntz, *A Treatise on the Law of Oil and Gas* § 63.5, at 254 (1991) [hereinafter Kuntz]. The lessor, however, only collects on the NPS interest when the lessee's operations yield a profit, after the lessee has recouped its expenditures for exploration and development. 11

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

Alaska Administrative Code (AAC) 83.207-219; *see also* Kuntz § 63.5, at 254. The Alaska Administrative Code allows lessees to establish special development accounts to recover all of their development costs before any NPS payments become due to the State. 11 AAC 83.207-214.

The State and BP Exploration (Alaska), Inc. argue that NPS terms allow the lessor to reap the benefits of rising oil prices in the future, especially if the lessee finds cost-effective ways of developing the field and extracting the oil. According to the State and BP (collectively, the State), leases with high NPS terms are the most risky for the lessor, because the lessor will receive little or nothing if the field is unprofitable, or if the lessee develops the field in an inefficient manner. *See, e.g.,* Kuntz § 63.5, at 258 ("[T]he owner of the [net profit] interest is dependent upon the activity of the lessee to generate net profits.").

During a brief period in the late 1970s, some lessors experimented with NPS terms, which were, and still are, controversial.[FN1] The State notes that some observers theorize that leases with high NPS terms have a fundamental problem: under these leases, the lessors' and lessees' interests are misaligned because "the oil company [has] no incentive to develop the leases promptly or to economize costs during the development." Furthermore, lessees receive very little income after the NPS payments begin; for instance, ***426** according to the State, the Northstar lessee was predicted to receive a profit of less than fifty cents per barrel once the NPS payments began. When the lessee begins paying a large percentage of its profits to the State, along with taxes and royalties, it has very little incentive to operate efficiently. The lessee also may be tempted to discontinue its operations and abandon the field prematurely, because it retains only a small portion of the profits after it has recouped its development costs.

> FN1. Philip E. Sorenson, then-visiting Professor of Economics at the University of California, Santa Barbara, addressed the Alaska House of Representatives in 1979, prior to the Beaufort Sea lease sale. He analyzed NPS interests in detail and urged the legislature not to use NPS as the bid variable in the Northstar auction.

In the late 1970s, however, oil prices had been rising, and experts predicted that they would climb to $60 to $100 per barrel. In addition, research indicated that the Northstar Unit contained massive reserves of oil-perhaps up to one billion barrels.[FN2] Thus, in 1979 the State chose to auction four of its Northstar lease tracts using NPS as the bid variable.

> FN2. In 1996 the Commissioner stated that the Northstar Unit's reserves were estimated to contain 130 million barrels. The State's Brief of Appellee, filed in 1997, asserts that oil prices had settled around $18 per barrel.

The four leases auctioned in 1979 had a fixed cash bonus and a fixed royalty of 20%.[FN3] Amerada Hess submitted the winning bids, with NPS terms ranging from 85.26% to 93.2%.[FN4] The winning NPS figure averaged about 89%, meaning that after the leaseholder recovered its expenses, the State would receive 89% of the profits.

> FN3. The State auctioned its fifth Northstar lease in 1983, using a bonus as the variable term, a fixed royalty of 12.5%, and a fixed NPS of 40%.

> FN4. Amerada Hess had the largest, but not the only, share of the four Northstar leases. The other original lessees were Shell Oil Co., Enterprise Oil Co., and Murphy Oil Co. Amerada Hess bought Enterprise's interest for $2 million in 1990.

According to the State, from 1979 to 1994 Amerada Hess invested approximately $260 million in attempting to develop the Northstar Unit. Because of the NPS terms (which allowed the lessee to recoup all of its development costs before beginning to make net profit share payments to the State), the State's chances of receiving the NPS payments seemed increasingly slim, as Amerada Hess invested in development with little prospect of producing. A 1993 study by the federal Department of Energy concluded that "Northstar was uneconomic largely due to the net profit provision." Amerada Hess estimated that its development costs would approach $1.4 billion. The combination of the development costs, the 89% NPS, and the fact that optimistic projections of Northstar's reserves and world oil prices had not materialized convinced Amerada Hess to abandon its plans to develop its Northstar holdings. Amerada Hess did not submit a

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

required development plan to the State, and DNR issued a notice of default to Amerada Hess in November 1994.

Instead of curing the default, Amerada Hess sold its interest in the leases to BP in 1995.[FN5] The State was not involved in the sale negotiations, nor were the terms or prices disclosed to the public.[FN6] BP submitted a brief plan of development to DNR, which extended the time for submitting a more detailed plan. In March 1995 BP submitted, and DNR approved, a revised and more comprehensive three-year development plan. [FN7] The revised plan increased the development time from two years to three years. Under this plan, production would probably not begin until 2002.

FN5. Shell also sold its interests to BP.

FN6. Oil and gas lessees often sell interests in leases without the State's involvement; the State may, however, be required to approve assignments resulting from the sale.

FN7. The plan called for data gathering, 3-D seismic acquisition, and construction permit acquisition. The projected three-year cost of these steps was $12 million.

Both DNR and BP asserted that BP's development of the Northstar leases would be profitable under the original lease terms. BP, however, has estimated that its rate of return later in the life of the field would be 21% without the NPS lease terms, and only 10% with the NPS terms. According to an Arthur D. Little Co. report cited in findings of fact issued by the Senate Resources Committee, oil companies tend to look for rates of return around 15%. In early 1995 BP intimated*427 to DNR that it hoped to revise the NPS terms. BP and DNR, however, decided not to pursue that issue at that time.

Later that year, BP's president testified that

> with the net profit arrangement in place, at the level that it exists, BP would not be prepared to go ahead with the development of a Northstar project, even though, if you run the economics, you can show that the return on investment for the project is a sound sort of return on investment.

BP made this announcement after DNR had approved the plan of development (which included a three-year period in which very little development would occur).[FN8]

FN8. All of the State's oil and gas leases contain an implied covenant for lessees "to diligently explore and develop their leases." BP, however, could probably fulfill that obligation by meeting the requirements of its DNR-approved three-year plan.

DNR's Petroleum Investment Manager stated that, to his knowledge, this was the first time that a lessee had ever informed the State "that it would be economical to produce a field, but that it is unwilling to do so unless the State renegotiates its competitively bid terms." [FN9]

FN9. The lease between Amerada Hess and the State allowed assignment and conveyance, but required the new lessee to be bound by all of the terms of the original lease. The lease provides, in part:

> This lease, or any undivided interest herein, may, with the approval of the State, be assigned, subleased or otherwise transferred.... No assignment, sublease or other transfer of an interest in this lease, including assignments of working or royalty interests and operating agreements and subleases, shall be binding upon the State unless approved by the State.... All covenants, conditions and agreements contained in this lease shall extend to and be binding upon the heirs, administrators, successors, and assigns of the State and/or Lessee.

In the fall of 1995, after BP's announcement, DNR and BP conducted confidential negotiations regarding possible amendments to the leases. The negotiations yielded the following proposed amendments: the State's NPS (which had averaged 89%) would be eliminated; the State's royalties would be at least 20% for all of the leases, and a variable "supplemental royalty" of 7.5% could be added to that; a "use it or lose it" provision would be added, allowing the State to terminate the leases (without litigation) if

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

BP did not begin development within a certain period; and BP committed to employing Alaskans in the construction and operation of its facilities.

The Commissioner has the statutory authority to make changes to royalty provisions of oil and gas leases without obtaining the legislature's approval. AS 38.05.180(j).[FN10] But the statute is silent on whether the Commissioner may amend NPS provisions. The Commissioner therefore negotiated proposed terms with BP and presented the negotiated proposed lease amendments to the Alaska legislature for consideration. The lease amendments were to take effect only upon approval by the legislature. After investigation by committees in the House and Senate, and testimony from DNR, BP, and the public, a bill for an act authorizing amendment of the Northstar Unit leases (the Act) passed both houses in May 1996. Governor Knowles signed the bill into law in July 1996. Since then, BP has approved development of the tracts covered by the leases.

FN10. AS 38.05.180(j) provides, in part:

> The commissioner
>
> (1) may provide for an increase or decrease or otherwise modify royalty, to allow for production that would not otherwise be economically feasible, on individual leases....
>
> (2) may not grant a royalty modification unless the lessee or lessees requesting the modification make a clear and convincing showing that a modification of royalty meets the requirements of this subsection and is in the best interests of the state....

B. *Proceedings*

This case began in January 1997 when Clyde Baxley and the Republican Moderate Party brought a declaratory judgment action against the State and John Shively, Commissioner of the Department of Natural Resources.[FN11] Baxley and the Party (collectively ***428** Baxley) asserted that they had citizen-taxpayer standing to challenge the Act. Baxley argued that the Act violates the Uniform Application Clause and the Public Notice Clause of the Alaska Constitution, and that it violates competitive bidding statutes and laws proscribing material amendments to competitively bid contracts.[FN12] Baxley also contended that the Commissioner lacked the authority to modify the leases. BP intervened as a party defendant under Alaska Rule of Civil Procedure 24.

> FN11. The Republican Moderate Party claims to be a nonprofit political group. The Republican Party of Alaska asserted below that the Republican Moderate Party admits it is not a political party, and that it has no relation to the Republican Party of Alaska. The Republican Party of Alaska has disclaimed interest in this case.
>
> FN12. Baxley also asserted, but later withdrew, a claim that the Act violated the Privileges and Immunities Clauses of the Alaska and United States Constitutions, and the Commerce Clause of the United States Constitution.

The State moved to dismiss for lack of standing. Both sides then filed motions for summary judgment. The superior court found that all plaintiffs had standing as citizen-taxpayers. It denied Baxley's motion for summary judgment and granted the State's motion for summary judgment. The court concluded that the rule against material amendments did not apply to amendments by the legislature. The court also reasoned that the legislature had conducted adequate public hearings, had not given BP privileged status, and, in passing the Act, had created a narrowly tailored response to a unique problem. Baxley appeals.

III. *DISCUSSION*

A. *Standard of Review*

We review a grant of summary judgment with our independent judgment. *Reeves v. Alyeska Pipeline Serv. Co.*, 926 P.2d 1130, 1134 (Alaska 1996). We will affirm a grant of summary judgment if the evidence in the record, viewed in the light most favorable to the non-moving party, fails to disclose a genuine issue of material fact, and the moving party is entitled to judgment as a matter of law. *Metcalfe Inv., Inc. v. Garrison*, 919 P.2d 1356, 1360 (Alaska 1996).

[5] A party raising a constitutional challenge to a statute bears the burden of demonstrating the consti-

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

tutional violation. A presumption of constitutionality applies, and doubts are resolved in favor of constitutionality. *A. Fred Miller, Attorneys at Law, P.C. v. Purvis*, 921 P.2d 610, 618 (Alaska 1996); *Bonjour v. Bonjour*, 592 P.2d 1233, 1237 (Alaska 1979).

B. *Standing*

[6] Following vigorous debate on the issue, the superior court held that Baxley had standing as a citizen-taxpayer to present the issues raised in his complaint. The State suggests on appeal that we may resolve Baxley's Uniform Application Clause claim "on standing grounds, without reaching the merits."

[7][8][9] We decline to disturb the superior court's finding that Baxley has standing as a citizen-taxpayer.[FN13] A plaintiff must meet two requirements in order to establish citizen-taxpayer standing. First, the case "must be one of public significance." *Trustees for Alaska v. State*, 736 P.2d 324, 329-30 (Alaska 1987). A plaintiff who raises constitutional issues is likely to meet this requirement. *Id.* Second, the plaintiff must be an "appropriate" party to bring the case. *Id.* Appropriateness has three main facets: the plaintiff must not be a "sham plaintiff" with no true adversity of interest; he or she must be capable of competently advocating his or her position; and he or she may still be denied standing if "there is a plaintiff more directly affected by the challenged conduct in question who has or is likely to bring suit." *Id.* The citizen-taxpayer standing requirements ensure that the plaintiff will serve as a true and strong adversary, even if the conduct in question did not directly affect the plaintiff.

> FN13. We review de novo a finding of standing. *Earth Movers of Fairbanks, Inc. v. Fairbanks N. Star Borough*, 865 P.2d 741, 742 n. 5 (Alaska 1993) (citing *Langdon v. Champion*, 745 P.2d 1371, 1372 n. 2 (Alaska 1987)).

[10] Baxley argues that the Act violates constitutional provisions, may reduce the State's income, undermines public confidence in the integrity of the bidding system, and ***429** violates the public trust. Those issues have public significance.[FN14] The State asserted below that Baxley is not an appropriate plaintiff; it suggested that a competing oil company, for instance, would have been a more appropriate challenger. The mere possibility that another party might sue, however, does not necessarily justify a denial of standing. *See Trustees*, 736 P.2d at 330. Baxley's interests are sufficiently adverse to those of the State and BP. He is adequately represented and can advocate his position competently. We conclude that the superior court did not err in determining that Baxley has citizen-taxpayer standing.

> FN14. *See, e.g., Trustees for Alaska v. State*, 736 P.2d 324, 330 (Alaska 1987) (granting citizen-taxpayer standing to a coalition of environmental, Native, and fishing groups challenging the States's mineral leasing system); *State v. Lewis*, 559 P.2d 630, 634-36 (Alaska 1977) (granting citizen-taxpayer standing for challenge of a three-way land trade involving the State, the federal government, and a Native corporation).

C. *The Uniform Application Clause*

[11] Baxley contends that the Act violates the Uniform Application Clause of the Alaska Constitution. That clause provides, "Laws and regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated with reference to the subject matter and purpose to be served by the law or regulation." Alaska Const. art. VIII, § 17.

[12] In recognition of the importance of citizens' equal access to natural resources, we interpret the Uniform Application Clause to require legislation dealing with natural resources to satisfy a heightened level of equal protection scrutiny. *Gilbert v. State*, 803 P.2d 391, 398 (Alaska 1990); *Baker v. State*, 878 P.2d 642, 644 (Alaska App.1994).

[13] The protections of the Uniform Application Clause, however, extend only to persons similarly situated with respect to the subject matter and purpose of the legislation. Alaska Const. art. VIII, § 17; *Reichmann v. State*, 917 P.2d 1197, 1200 (Alaska 1996). "Concluding that two classes are not similarly situated necessarily implies that the different legal treatment of the two classes is justified by the differences between the two classes." *Shepherd v. State*, 897 P.2d 33, 44 n. 12 (Alaska 1995).[FN15]

> FN15. The State argues that no other entity is similarly situated with respect to the Act.

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

> Baxley argues that similarly situated persons disadvantaged by the Act include: "1) all original bidders on Northstar; 2) all possible bidders at a potential rebidding of Northstar; 3) all potential bidders who might wish to bid for the rights given to BP ... and 4) all citizen-taxpayers of the State of Alaska, who have a personal and individual stake in the fair allocation of Alaska resources."

The superior court held that the Uniform Application Clause does not apply because it found that BP's status as sole lessee of the Northstar leases rendered it uniquely situated with respect to the Act.[FN16] The superior court also held that, even if the Uniform Application Clause did apply, the Act would satisfy the clause's equal protection requirements.

> FN16. We apply our independent judgment to the question whether BP is uniquely situated with respect to the Act. *See* Luedtke v. Nabors Alaska Drilling, Inc., 834 P.2d 1220, 1223 (Alaska 1992) (noting that we review a trial court's application of law to facts with our independent judgment).

We agree that the Uniform Application Clause does not apply. Land use statutes, for instance, sometimes favor existing land users over others. *See, e.g.,* AS 38.05.035(b)(5), .035(f). We also allow some changes to existing lessees' competitively bid contracts without requiring new public auctions. *See* KILA, Inc. v. State, 876 P.2d 1102, 1108-09 (Alaska 1994) (upholding State's decision to negotiate with successful bidder and accept a substitute site for government building); Kenai Lumber Co. v. LeResche, 646 P.2d 215, 218-22 (Alaska 1982) (allowing nonmaterial modifications to a long-term timber contract).

Not all persons in the state with an interest in a resource are similarly situated for purposes of the Uniform Application Clause.[FN17] BP, as sole lessee of the Northstar ***430** leases, is uniquely situated with respect to the Act. Because no other entity is similarly situated, we hold that the Act does not violate the Uniform Application Clause.

> FN17. *See, e.g.,* Reichmann v. State, 917 P.2d 1197, 1200 (Alaska 1996) (upholding differential treatment of residential and recreational users of lakeshore land); Shepherd v. State, 897 P.2d 33, 43-44 (Alaska 1995) (upholding Alaska Board of Game regulations giving hunting preference to residents over nonresidents); Tongass Sport Fishing Ass'n v. State, 866 P.2d 1314, 1318 (Alaska 1994) (upholding salmon harvesting regulation giving preference to commercial fishers because sport and commercial fishers are not similarly situated); Gilbert v. State, 803 P.2d 391, 399 (Alaska 1990) (upholding distinction in harvest quotas for two fisheries based on "biological spawning patterns").

D. *Special Legislation*

[14] Baxley next argues that the Act was special legislation prohibited by article II, section 19 of the Alaska Constitution. Although we ordinarily do not consider on appeal issues not presented to the lower court,[FN18] we choose to address Baxley's special legislation argument. It does not depend on new facts, and it could have been gleaned from the pleadings because it is closely related to Baxley's Uniform Application Clause argument that the State gave BP privileged status. The issue therefore satisfies the requirements of Zeman v. Lufthansa German Airlines, 699 P.2d 1274, 1280 (Alaska 1985) (discussing bases for reaching appellate issues not preserved in lower court). Moreover, the State has not suggested that it has been prejudiced by introduction of this argument on appeal; on the contrary, it has conceded that the court may properly consider this issue.

> FN18. *See* Brooks v. Brooks, 733 P.2d 1044, 1053 (Alaska 1987).

[15] The Alaska Constitution states: "The legislature shall pass no local or special act if a general act can be made applicable. Whether a general act can be made applicable shall be subject to judicial determination." Alaska Const. art. II, § 19. We evaluate challenges under this provision according to the test applied to nonsuspect classifications in equal protection cases.[FN19] State v. Lewis, 559 P.2d 630, 643 (Alaska 1977) (upholding a threeway exchange of land, and the minerals it contained, among the State of Alaska, the United States, and a regional Native corporation); Boucher v. Engstrom, 528 P.2d 456, 463 (Alaska 1974) ("The classification must bear a reasonable and proper relationship to the purposes of the act and the problem sought to be remedied."). Thus,

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

when the legislature has singled out an area or group, we examine the

> FN19. Baxley is correct in pointing out that this court has adopted a sliding scale analysis to determine the level of scrutiny to apply to equal protection claims. *See State v. Enserch Alaska Constr.*, 787 P.2d 624, 631 (Alaska 1989). He asserts that the court should use the sliding scale when analyzing his special legislation challenge. Baxley argues that, to determine where on the sliding scale the state and individual interests fall, the court should apply the Uniform Application Clause, which, he reasons, requires a showing of an important state interest and no less restrictive alternative to further it.
>
> Our decisions interpreting article II, section 19 of the Alaska Constitution, however, have applied the less rigorous test used for nonsuspect classifications in equal protection cases. *See Lewis*, 559 P.2d at 643; *Abrams v. State*, 534 P.2d 91, 94-95 (Alaska 1975). We will analyze this claim under the standard applied in *Abrams* and *Lewis* because they deal specifically with article II, section 19 challenges instead of equal protection challenges.

> legislative goals and the means used to advance them [to] determine whether the legislation bears a "fair and substantial relationship" to legitimate purposes. If this standard is satisfied, the bill will not be invalid because of incidental local or private advantages. Legislation need not operate evenly in all parts of the state to avoid being classified as local or special.
>
> *Lewis*, 559 P.2d at 643 (footnotes omitted). This is the "minimum level of equal protection scrutiny in Alaska"; it is more demanding than its federal counterpart. *Principal Mut. Life Ins. v. State*, 780 P.2d 1023, 1026 (Alaska 1989).

[16] The State argues that the Act is not local or special legislation because it "addresses a matter of statewide concern," and that, even though the Act focuses on one locality, it is constitutional because the high NPS terms made these leases unique and made general legislation inappropriate.

We conclude that the Act is not special legislation. Several features of the Northstar leases distinguish them from the State's other oil and gas leases. The Northstar ***431** leases were the State's only oil and gas leases auctioned with NPS as the bid variable. They are also the only State leases with NPS terms greater than 85%. (NPS terms in most State leases average about 30% to 40%.) The high NPS terms present the State with a unique problem: in the later years of the lease, the lessee would reap only a slight profit from continuing to extract oil, giving the lessee a strong incentive to abandon the field before extracting all the oil.[FN20]

> FN20. BP's president stated, "Once the net profit interest cuts in, ... some 90% or so of the revenue stream to the [Northstar lessee] would effectively dry up, and that would lead to the premature shut-down of the field." He asserted that "it would not be acceptable for BP, or I believe any other reputable oil company to continue to operate the field."

Other features of the Northstar Unit distinguish these leases. The development account the Northstar lessees amassed over seventeen years is evidence of the difficulty of developing the fields. Development of the Northstar Unit will require new technology, including the first undersea pipeline in the Arctic Ocean-a technological advance that the legislature predicts will increase the value of other North Slope leases and increase State revenues. No State lessee had previously been obliged to develop such holdings under such lease terms.

The legislature conducted numerous public hearings and debates on the propriety of the proposed Act. It concluded that, if the leases were not amended, production in the Northstar Unit would probably not begin before 2002. It found that amending the leases "will maximize the economic benefits of oil and gas production to the people of the state by encouraging timely production from the unit." It also concluded that BP's timely development of the Northstar unit "may result in technological breakthroughs and other cost savings that may make other development opportunities in Alaska economically feasible." These legislative findings express the legitimate purposes of encouraging and providing for development of state resources for the benefit of the people. *See* Alaska Const. art. VIII, §§ 1-2.[FN21]

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

> FN21. Article VIII, section 1 of the Alaska Constitution provides: "It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest."
>
> Article VIII, section 2 of the Alaska Constitution states: "The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people."

Because the Act's exclusive focus on the Northstar leases reflects their unique nature, and because the Act fairly and substantially relates to legitimate state purposes, we hold that it is not special legislation. *See Lewis,* 559 P.2d at 643.

E. *The Commissioner's Authority*

[17] Baxley asserts that the Commissioner did not "have statutory authority under AS 38.05.180(j) to unilaterally reduce the net profit share in any Alaska oil lease." [FN22] Baxley argues that, although the Commissioner has statutory authority to change royalty payments, the Commissioner has no statutory authority to change NPS payments.

> FN22. AS 38.05.180(j) is set out, in part, at note 10, *supra.*

Baxley's argument, however, depends on our acceptance of his characterization of the Commissioner's actions. The Commissioner did not unilaterally reduce the NPS terms. The Commissioner merely negotiated a proposed reduction, which the legislature then approved. The negotiations would have had no binding effect unless the legislature approved the proposed amendments.

Baxley correctly notes that the Alaska Land Act (AS 38.05) does not grant or deny the Commissioner authority to negotiate proposed changes in the NPS terms. But particular provisions of the Alaska Land Act suggest that the Commissioner at least had the authority to negotiate the amendments, whether or not the Commissioner could have approved the lease amendments absent the 1996 Act here at issue. The Commissioner has broad supervisory power over the "administration of the division of lands." AS 38.05.020(a). The Commissioner may "enter into agreements considered necessary to carry out the purposes of this chapter, including ***432** agreements with federal and state agencies." AS 38.05.020(b)(2). The Commissioner may also "exercise the powers and do the acts necessary to carry out the provisions and objectives of this chapter." AS 38.05.020(b)(4). The Commissioner's broad powers appear to us to include the authority to negotiate with a lessee wishing to change the terms of its lease; such negotiations with respect to a given lease and the pertinent circumstances may be acts necessary to further the objectives of the Alaska Land Act. We do not interpret AS 38.05.180(j) to prevent, expressly or impliedly, the Commissioner from negotiating proposed NPS amendments subject to legislative approval.[FN23]

> FN23. We do not decide here whether the Commissioner would have had the authority to modify the NPS terms without legislative approval.

The Commissioner's broad statutory powers authorized these negotiations; subsection .180(j) did not preclude them. We hold that the Commissioner did not exceed his authority.

F. *Public Notice Clause*

[18] Baxley argues that the Act violates the Public Notice Clause of the Alaska Constitution, which provides, "No disposals or leases of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be prescribed by law." Alaska Const. art. VIII, § 10. Baxley concedes that the public received notice of the legislature's approval of the proposed amendments.[FN24] He argues that the public should have received notice before the negotiations, and that, at the public hearings, other options (besides the proposed amendments negotiated by DNR and BP) should have been presented.

> FN24. Baxley argues, "The only aspect of Northstar for which the public received notice was the subsequent legislative ratification of a deal already struck, an agreement already made."

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

The Alaska Constitution does not express a requirement of pre-negotiation notice, and instead can be read to require notice before the State commits to an agreement requiring it to dispose of or lease state lands or interests in state lands. We assume for sake of discussion that amendment of the lease terms was a disposal or lease of an interest in state land. Regardless of the exact extent and timing of the notice required by the Public Notice Clause, we think that the process followed here satisfied that clause. The Commissioner presented the proposed amendments to the legislature, and nearly five weeks of spirited debate followed. We disagree with Baxley's contention that the "ink on the agreement was dry before it was submitted to the legislature": the public was still free to comment on the bill, and the legislature was still free to reject it. Because the public had ample opportunity to comment on the proposed lease amendments before the legislature authorized any binding changes, *see* Part III.D., *supra,* at 18, we conclude that the State did not violate the Public Notice Clause.

G. *Remaining Issues*

1. *Constitutional requirement of forfeiture provisions*

[19] Baxley argues that the Commissioner violated article VIII, sections 8 and 11 of the Alaska Constitution by not requiring BP to forfeit the leases after BP announced its intention not to proceed with development. [FN25] ***433** We decline to consider this issue because Baxley did not preserve it below. *See Brooks v. Brooks,* 733 P.2d 1044, 1053 (Alaska 1987). This issue presents a new constitutional theory and raises new fact questions about whether the leases' forfeiture provisions satisfied sections 8 and 11 and whether BP and the State complied with them. Because we believe that the State could not have gleaned this new constitutional argument from the pleadings, we decline to address it. *See Zeman,* 699 P.2d at 1280 (discussing bases for reaching on appeal issues not preserved below).

FN25. Article VIII, section 8 of the Alaska Constitution provides:

> The legislature may provide for the leasing of, and the issuance of permits for exploration of, any part of the public domain or interest therein, subject to reasonable concurrent uses. Leases and permits shall provide, among other conditions, for payment by the party at fault for damage or injury arising from noncompliance with terms governing concurrent use, and for forfeiture in the event of breach of conditions.

Article VIII, section 11 of the Alaska Constitution provides, in part:

> Discovery and appropriation shall be the basis for establishing a right in those minerals reserved to the State which, upon the date of ratification of this constitution by the people of Alaska, were subject to location under the federal mining laws. Prior discovery, location, and filing, as prescribed by law, shall establish a prior right to these minerals and also a prior right to permits, leases, and transferable licenses for their extraction. Continuation of these rights shall depend upon the performance of annual labor, or the payment of fees, rents, or royalties, or upon other requirements as may be prescribed by law.

2. *Anticipatory breach*

[20] Baxley contends that BP anticipatorily breached the lease agreements, and that the State should have responded by rescinding the leases. This contract law argument turns on new facts and could not have been gleaned from the pleadings. *See Zeman,* 699 P.2d at 1280. Whether BP committed an anticipatory breach would depend on the outcome of potential fact disputes and a different body of case law. For example, it would raise the question of whether BP's communication to the State was a definite and unconditional repudiation of the contract, or merely an expression of concern with certain provisions in the lease. *See, e.g., Holiday Inns of Am., Inc. v. Peck,* 520 P.2d 87 (Alaska 1974). We therefore decline to address this argument.

3. *Separation of powers*

[21] Baxley argues that the legislature unlawfully infringed on the domain of the courts and violated separation of powers principles. This argument is not closely related to Baxley's superior court argument that the Commissioner lacked the authority to negotiate lease amendments; instead, it attacks the legislature's authority to consider the proposed amendments.

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

This argument could not have been gleaned from the pleadings. We therefore decline to address it. *See Zeman*, 699 P.2d at 1280.

Moreover, Baxley seems to assume that the legislature made a legal determination that the Commissioner's negotiations with BP were constitutional. It appears, however, that the Commissioner presented the legislature with proposed legislation, and that the legislature conducted its own investigation and debates on the propriety of the proposed Act and amendments. It does not appear that the legislature impermissibly intruded on judicial domain.

4. *Rule against material amendments*

[22] Baxley asserts that the Act violates the rule against material amendments to state contracts awarded through a public bidding process. He reasons that the Act may undermine public confidence in the integrity of the bidding process because it changes the leases' terms instead of rescinding them and offering them in a new auction.

[23] In general, competitively bid contracts involving state resources cannot be materially amended. *Kenai Lumber Co. v. LeResche*, 646 P.2d 215, 221 (Alaska 1982). The rationale behind this judicially created rule is that the amendment effectively produces a new contract, which the State should award only after a new round of public bidding. *McKinnon v. Alpetco Co.*, 633 P.2d 281, 287 (Alaska 1981).[FN26]

FN26. We have explained:

> This rule has been judicially imposed in order to guard against circumvention of competitive bidding requirements. Competitive bidding itself is designed to ensure that government obtains the most favorable terms possible in its contracts, and to protect the public from the possibility of favoritism, fraud, and corruption on the part of public officials.
>
> *Kenai Lumber Co. v. LeResche*, 646 P.2d 215, 220 (Alaska 1982).

[24] We have never applied the rule to bar contract amendments approved by the legislature.[FN27] The superior court held that, "where the legislature itself amends a competitively bid contract, employing the committee and public hearing process, the need for the judiciary to protect legislative policy is essentially obviated." The superior court ***434** also reasoned that, because the legislature has the authority to create DNR and pass the leasing statutes, it would be illogical to conclude that the legislature lacks the authority to amend the leases. We agree. We believe the legislature's hearing process satisfies the policy considerations behind this rule. Therefore, we conclude that the material amendments doctrine does not apply to amendments approved by the legislature. We reject Baxley's challenge.

FN27. *See, e.g., KILA, Inc. v. State*, 876 P.2d 1102 (Alaska 1994); *Kenai Lumber*, 646 P.2d at 217-23; *McKinnon v. Alpetco Co.*, 633 P.2d 281, 285 (Alaska 1981)

5. *Public trust*

[25] Finally, Baxley argues that the amendments violate the public trust doctrine. Baxley argues that the executive branch violated the public trust by not determining whether similarly situated parties existed before allocating resources to BP, by not "telling BP to develop the field or lose it," and by not offering the Northstar leases in another sale in January 1995.[FN28] He asserts that he raised this claim in the superior court, but he fails to cite where in the record he did so. Baxley did not raise this argument in his points on appeal and made only passing references to it in the superior court in connection with his Uniform Application Clause argument. The State contends that Baxley has raised this issue for the first time on appeal.

FN28. Baxley also seems to suggest that the legislature breached the public trust. Because he does not develop this argument, we decline to address it. *See State v. O'Neill Investigations, Inc.*, 609 P.2d 520, 528 (Alaska 1980) (declining to consider an inadequately briefed argument).

The public trust doctrine provides that the State holds certain resources (such as wildlife, minerals, and water rights) in trust for public use, "and that government owes a fiduciary duty to manage such resources for the common good of the public as beneficiary." *McDowell v. State*, 785 P.2d 1, 16 n. 9 (Alaska 1989). We apply basic principles of trust law to public

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

land trusts. *State v. Weiss*, 706 P.2d 681, 683 n. 3 (Alaska 1985). One basic principle is that, when a trustee has discretion, a court will only review the trustee's acts for abuse of discretion. *See* William F. Fratcher, 3 *Scott on Trusts* § 187, at 14-19 (4th ed.1988); *see also Restatement (Second) of Trusts* § 187 (1959).

Baxley's argument consequently turns on a new body of case law, concerning fiduciary duty, and on new fact questions, concerning possible abuse of the fiduciary's discretion. Because this argument is not closely related to Baxley's trial court arguments and could not have been gleaned from the pleadings, we decline to address it. *See Zeman*, 699 P.2d at 1280.

IV. *CONCLUSION*

Because we reject Baxley's challenges to the Act, we AFFIRM the superior court's grant of summary judgment to BP and the State.

Alaska,1998.

H

Supreme Court of Alaska.
EXXON CORPORATION, Appellant,
v.
STATE of Alaska, Appellee.

No. S-9164.
Oct. 12, 2001.
Rehearing Denied Feb. 21, 2002.

Oil company appealed decision of Department of Natural Resources denying expansion of area covered by oil and gas lease unit agreement, which agreement allowed oil company to deduct field costs before paying state royalties, to include additional oil reservoir. The Superior Court, Third Judicial District, Anchorage, John E. Reese, J., affirmed Department's decision, and oil company appealed. The Supreme Court, Carpeneti, J., held that: (1) agreement provided Department with discretion to deny expansion of unit area, and (2) Department's decision did not violate settlement agreement on royalty payments due from unit area.

Affirmed.

OPINION

CARPENETI, Justice.

I. *INTRODUCTION*

In 1988 Exxon discovered the Point McIntyre oil reservoir, a bonanza with an estimated value of $4,783,800,000. Now, Exxon and the State of Alaska dispute who will absorb $24 million in field costs associated with the reservoir based on their opposing interpretations of a contract, the Prudhoe Bay Unit Agreement. We conclude that the state has the discretion under the terms of the agreement to consider the public interest according to state law and to deny the expansion of the Prudhoe Bay Unit to include the Pt. McIntyre reservoir. This conclusion is dispositive of the numerous arguments raised on appeal. We therefore affirm the commissioner's decision.

*788 II. *FACTS AND PROCEEDINGS*

In the late 1960's the predecessors of Exxon and Arco acquired several oil and gas leases on the Alaska North Slope.[FN1] Each lease had a ten-year term and provided a royalty to the state-twelve and one-half percent of all oil and gas production. These leases provided that the state could take its royalty in oil or gas products (in kind) or in equivalent dollar value (in value). If the state took its royalty in kind, the lease provided that the lessees could deduct only their cleaning and dehydration field costs.[FN2] The leases did not mention field cost deductions when the state took its royalty in value.

FN1. Appendix A contains a map that marks the various lease parcels, the Pt. McIntyre reservoir, and the Prudhoe Bay Unit. Exxon and Arco obtained the rights to Alaska Division of Lands leases 34626, 34627, 34624, 28297, 28298, and 34622. We adopt the parties' shorthand reference of "ADL" followed by the lease number. Tracts 5, 6, 7, and 8 correspond to those portions of ADLs 34626, 34627, 34624, and 28297, respectively, that were within the original PBU boundary. Tracts 115 and 116 correspond to ADLs 28298 and 34622. BP later acquired ADL 365548 (tract 117).

FN2. Field costs are all of the costs of production incurred from the wellhead to the custody transfer meters into the Trans Alaska Pipeline. Field costs generally include gathering, separation, cleaning, dehydration, compression, and other handling costs.

In 1977 Exxon, Arco, and the state, through the Department of Natural Resources, entered into the Prudhoe Bay Unit Agreement (PBUA). A unit agreement is a contract between the department and lessees that allows for the efficient development of a reservoir that underlies multiple leases owned by different lessees. The various lessees join together in exploration and drilling, and allocate costs and production. The PBUA was not based on the state's model unit agreement; the lessees drafted the PBUA. The state approved the PBUA effective April 1, 1977.

The PBUA unitized 111 leases, including portions of the five previously mentioned [FN3] Exxon and Arco leases. The Prudhoe Bay Unit (PBU) includes most of the land described by these leases. The PBUA also had expansion and contraction provisions; these provisions allowed the selective increase and decrease of the lands and natural resources controlled by the agreement.

FN3. *See supra* n. 1.

Expansion of the unit would extend the terms of the PBUA to additional lands. Expansion was generally thought to be desirable by both the state and the lessees because it allowed efficient administration under the existing agreement and efficient shared production with existing facilities. Expansion under the PBUA required that the "geologic condition" was met-that the additional lands contained a reservoir any portion of which was within the PBU.

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

40 P.3d 786, 151 Oil & Gas Rep. 317
(Cite as: 40 P.3d 786)

Contraction excluded nonproductive lands from the unit agreement. The threat of contraction was a stimulus for the lessee to discover oil and develop production into paying quantities or to lose the lease and the opportunity to discover and produce oil. The PBUA required that all lands not included in a participating area,[FN4] or entitled to be included in a participating area, would be contracted out of the PBUA after ten years.

> FN4. "Participating areas" are portions of the unit "reasonably known to be underlain by hydrocarbons and known or reasonably estimated ... to be capable of producing or contributing to production of hydrocarbons in paying quantities." 11 Alaska Administrative Code (AAC) 83.351(a) (1996).

The PBUA extended the original leases until April 1, 1987. Once production began, the terms of the PBUA would continue in force for so long as oil or gas was being produced in paying quantities.

Shortly after the PBU lessees began paying royalties based on their interpretation of the lease terms, the state sued the lessees. In *State v. Amerada Hess,*[FN5] one issue was whether the lessees could deduct field costs when the state took its royalty in value. On motions for partial summary judgment, the superior court ruled that the lessees could not. [FN6] It held further that the state could ***789** take its royalty in kind only if the market value of the oil or gas exceeded the royalty in value because only then would taking the royalty in kind be "in the best interests of the state and for the maximum benefit of its people."

> FN5. No. 77-847 Ci. (Alaska Super., 1st Dist., Juneau, complaint filed September 2, 1977).

> FN6. No. 77-847 Ci. (Alaska Super., 1st Dist., Juneau, April 6, 1979).

This ruling apparently pleased neither the lessees nor the state, because soon after the ruling, the parties settled the dispute on terms that differed significantly from the court's partial summary judgment ruling. Under the 1980 Royalty Settlement Agreement, the state agreed to pay a field cost allowance for its PBU royalty whether in value or in kind. The field cost allowance was initially set at forty-two cents per barrel but was to be adjusted annually based on the Producer Price Index. (By 1993 the cost had increased to seventy-nine cents per barrel.) The superior court approved the settlement and allowed it to supersede the court's previous ruling on the merits.

During the *Amerada Hess* litigation, the legislature amended AS 38.05.180(f) to make it clear that the lessees could not deduct field costs from the state's royalty share under the existing, standard-form state oil and gas leases. [FN7] Subsequent leases expressly disallowed all field costs deductions. In addition, all but one of all unit agreements approved after 1978 disallowed field cost deductions.

> FN7. *See* ch. 155, § 1, SLA 1978 (currently codified at AS 38.05.180(f)(2)); ch. 160, § 16, SLA 1978 (currently codified at AS 38.05.180(z)).

In early 1984 the director of the Division of Oil and Gas, acting for the commissioner of the Department of Natural Resources, allowed an expansion of the PBU. The director's decision was based on geological, royalty and rental, and public interest considerations. The director also conditioned the expansion on two changes to one of the affected leases.

In early 1985 the director approved an expansion of the Duck Island Unit and a corresponding contraction of the PBU. The director's decision again noted several factors: environmental costs and benefits of unitized development; geological characteristics of the reservoir; prior exploration activities; applicant's development plans; and the economic costs and benefits to the state.

In late 1985 BP acquired the oil and gas lease to the remaining portion of the yet-to-be-discovered Pt. McIntyre reservoir. Following the amended AS 38.05.180(f), the BP lease expressly disallowed all field costs deductions.

In late 1986 Exxon and Arco applied to defer contraction of the PBU for five years. They invoked a department regulation, 11 AAC 83.356(b),[FN8] as authority to defer contraction, because the PBUA had no provisions for deferral of contraction. The lessees argued that a delay was justified by both the public interest criteria of 11 AAC 83.303 [FN9] ***790** and geological considerations. In early 1987 the director

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

granted a conditional deferral [FN10] of the PBU contraction. The parties now dispute the terms of this deferral and whether the lessees met the conditions.

FN8. 11 AAC 83.356(b) (1996) gives the department authority to delay contraction of unit under certain circumstances:

> (b) 10 years after sustained unit production begins, the unit area must be contracted to include only those lands then included in an approved participating area and lands that facilitate production including the immediately adjacent lands necessary for secondary or tertiary recovery, pressure maintenance, reinjection, or cycling operations. The commissioner will, in the commissioner's discretion, after considering the provisions of 11 AAC 83.303, delay contraction of the unit area if the circumstances of a particular unit warrant. If any portion of a lease is included in the participating area, the portion of the lease outside the participating area will neither be severed nor will it continue to be subject to the terms and conditions of the unit. The portion of the lease outside the participating area will continue in full force and effect so long as production is allocated to the unitized portion of the lease and the lessee satisfies the remaining terms and conditions of the lease.

FN9. 11 AAC 83.303 (1996) states the criteria to consider in determining the public interest:

> (a) The commissioner will approve a proposed unit agreement for state oil and gas leases if he makes a written finding that the agreement is necessary or advisable to protect the public interest considering the provisions of AS 38.05.180(p) and this section. The commissioner will approve a proposed unit agreement upon a written finding that it will
>
> (1) promote conservation of all natural resources, including all or part of an oil or gas pool, field, or like area;
>
> (2) promote the prevention of economic and physical waste; and
>
> (3) provide for the protection of all parties of interest, including the state.
>
> (b) In evaluating the above criteria, the commissioner will consider
>
> (1) the environmental costs and benefits of unitized exploration or development;
>
> (2) the geological and engineering characteristics of the potential hydrocarbon accumulation or reservoir proposed for unitization;
>
> (3) prior exploration activities in the proposed unit area;
>
> (4) the applicant's plans for exploration or development of the unit area;
>
> (5) the economic costs and benefits to the state; and
>
> (6) any other relevant factors, including measures to mitigate impacts identified above, the commissioner determines necessary or advisable to protect the public interest.
>
> (c) The commissioner will consider the criteria in (a) and (b) of this section when evaluating each requested authorization or approval under 11 AAC 83.301-11 AAC 83.395, including
>
> (1) an approval of a unit agreement;
>
> (2) an extension or amendment of a unit agreement;
>
> (3) a plan or amendment of a plan of exploration, development or operations;
>
> (4) a participating area; or
>
> (5) a proposed or revised production or

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

cost allocation formula.

FN10. The director's decision stated in relevant part:

> This approval is conditioned on the following terms:
>
> (A) A well to delineate the hydrocarbon reserves underlying [ADL] 34626 and ADL 34627 must be drilled and completed prior to April 1, 1992; and
>
> (B) A commitment by the lessees to drill a second well to delineate the hydrocarbon reserves underlying ADL ... 28297 and ADL 34624 must be made by April 1, 1992.
>
> Should these leases not be included within an approved participating area on April 1, 1992, or should the required well not be completed or the commitment for the second well not secured by that date, ADLs 28297, 34624, 34626, and 34627 will be contracted out of the Prudhoe Bay Unit as of that date.

In January 1992 the lessees presented the department with their plans to seek deferral of contraction until September 1, 1993; they also sought expansion of the PBU to include the Pt. McIntyre reservoir. On February 28, 1992, the lessees asked the department for a second deferral pursuant to 11 AAC 83.356(b).

On March 25, 1992, the director stated that the department would "delay a decision on the contraction request" until it had the opportunity to review the additional well data. The lessees informed the department that, due to technical problems, they were unable to provide the department with the requested well data until September 1992. The department indicated that it would "further delay a decision to defer contraction of the Prudhoe Bay Unit ... until September 30, 1992." Continuing technical problems caused Arco to ask for a further postponement of its deadline to provide the well data. The department responded that it was "unwilling to delay a decision regarding the original deferral of contraction request beyond the first quarter of 1993."

On March 1, 1993, the lessees requested that the department establish the Pt. McIntyre participating area. On March 18, 1993, the lessees petitioned the department to expand the PBU to include the Pt. McIntyre reservoir. The first sentence of that letter suggested that the authority to expand the PBU was based on the PBUA and the department's regulations: "Pursuant to the provisions of Section 5.3 and Section 9.1 of the Prudhoe Bay Unit Agreement and 11 AAC 83.351 and 11 AAC 83.356, ARCO Alaska, Inc., for itself and on behalf of Exxon Corporation and BP Exploration, Inc., hereby petitions the Department of Natural Resources to expand the boundaries of the Prudhoe Bay Unit ...." (Parentheticals omitted.)

On March 31, 1993, the lessees petitioned for further deferral of contraction of the PBU. By 1993, the lessees claimed to have spent more than $287 million to develop the Pt. McIntyre and West Beach reservoirs for production.

In two separate decisions the director denied the lessees' requests to defer contraction and to expand the PBU.[FN11] On April 14, 1993, the director denied the lessees' request ***791** to defer contraction of the PBU. Because of the delays and based on the criteria of 11 AAC 83.303, the director contracted tracts 5, 6, 7, and 8 from the PBU effective April 1, 1993.

FN11. Exxon had asked that the department consider the expansion and contraction issues together. At one point, Exxon raised the issue of whether the director's refusal to consider the issues together was arbitrary and capricious. Because no further argument of this issue appears in Exxon's brief, we conclude that Exxon has waived the issue. *See Martinson v. Arco Alaska, Inc.*, 989 P.2d 733, 737 (Alaska 1999).

On August 18, 1993, the director denied the expansion of the PBU. He applied 11 AAC 83.303 and considered factors including the environmental costs and benefits, the geological characteristics and previous exploration, the lessees' plans for development, and the economic costs and benefits to the state. A large portion of the decision focused on field costs.

The lessees appealed both decisions to the com-

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

missioner.

The lessees negotiated with the director and developed an amended application to expand the PBU to include the Pt. McIntyre reservoir, which the director granted. In the amended application, BP and Arco withdrew their appeals of the director's contraction and expansion decisions and waived any right to a field cost deduction except for production attributable to the small portion of the Pt. McIntyre reservoir that underlay the original boundary of the PBU. Exxon did not agree to waive its rights to a field cost deduction on Pt. McIntyre production. However, Exxon did agree to forego the deduction pending the final resolution of the issue, subject to later recoupment from the department. The amended application expressly noted Exxon's right to appeal or commence litigation in the superior court and specifically limited Exxon's arguments on appeal. The parties dispute exactly what arguments Exxon waived by this agreement.

On November 12, 1993, the commissioner upheld the director's decision to contract the PBU. He initially focused on the lessees' substantial delays in developing tracts 5, 6, 7, and 8. The commissioner interpreted the director's actions prior to the director's decision to contract the PBU as delaying the decision to contract rather than granting a deferral of contraction. He found the authority to delay contraction under 11 AAC 83.356(b), which, he concluded, required him to consider the criteria specified in 11 AAC 83.303. The commissioner noted that unitization of the Pt. McIntyre leases was generally in the public interest, but the public interest in conservation of natural resources could be equally served by deferring contraction of the PBU or by contracting the PBU and forming a new unit that used the PBU's excess processing capacity. The commissioner then concluded that deferring contraction of the PBU was not in the public interest based on environmental costs and benefits, geological and engineering considerations, prior exploration activities, and economic costs and benefits to the state. Because the commissioner found that any deferral of the contraction was not in the public interest, he decided that the original request for deferral should have been denied and denied the deferral retroactive to April 2, 1992.

On December 2, 1994, the commissioner affirmed the director's denial of PBU expansion. He expressly did not adopt two points: that the state would never allow a field cost deduction, and that PBU expansion should be denied in part because the state has paid more under the 1980 settlement than it ever intended to pay. He noted that, while under some circumstances a field cost deduction might be allowed, it depended on the public interest analysis. The commissioner also stated that using the state's discretionary powers to recoup perceived losses under prior agreements was not good public policy and expressly disclaimed reliance on this rationale for denying expansion of the PBU.

The commissioner specifically concluded that Exxon did not have an absolute right to expansion for two reasons. First, the geologic requirements of the PBUA were not met. The PBUA requires that any additional lands to be incorporated into the PBU contain a reservoir, any portion of which is within the PBU. No part of the Pt. McIntyre reservoir was within the PBU on March 18, 1993, because the contraction decision previously removed tracts 6, 7, and 8 from the PBU effective April 1, 1992. Second, the department had discretion to deny expansion of the PBU in the public interest according to state statute and the PBUA. In considering the public interest, the commissioner first generally stated "that the public interest with respect to non-economic and even some economic matters would be served at least as *792 well if not better by the creation of a new unit as it would by expansion of the PBU to include the [Pt. McIntyre reservoir]." He then specifically noted that the field cost allowance under the 1980 settlement exceeded Exxon's likely actual field costs and concluded that allowing Exxon to make a profit at the state's expense was not in the public interest. The commissioner also noted that the public interest favored treating Exxon like the other lessees of the Pt. McIntyre area, who were not permitted a field costs deduction.

Exxon appealed both of the commissioner's decisions. The appeals were consolidated before Superior Court Judge John E. Reese. On May 19, 1999, Judge Reese affirmed the commissioner's decision. Exxon appeals the following issues: (1) whether the department retained discretion under the PBUA to deny expansion of the PBU; (2) whether the department breached the PBUA by contracting the PBU; (3) whether the decision to deny expansion violated the 1980 settlement; (4) whether the department violated Exxon's constitutional rights; and (5) whether the department was equitably estopped from denying

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

expansion or ordering contraction of the PBU.

III. *STANDARD OF REVIEW*

[1] When the superior court acts as an intermediate court, we directly review the administrative agency decision under consideration.[FN12]

FN12. *See Handley v. State, Dep't of Revenue,* 838 P.2d 1231, 1233 (Alaska 1992).

[2][3][4] We apply a substitution of judgment standard of review for agency decisions on questions of law where no expertise is involved.[FN13] Interpretation of a contract is a question of law that is not within the department's special expertise or skill. "Where ... there is no conflict in extrinsic evidence, the interpretation of contract is a question of law." [FN14]

FN13. *See id.*

FN14. *Leisnoi, Inc. v. Stratman,* 956 P.2d 452, 454 (Alaska 1998).

[5][6] But when the finder of fact must determine the meaning of a contract based on extrinsic evidence that raises conflicting inferences, "our inquiry is limited to determining whether the trier of fact's choice of inferences is supported by substantial evidence." [FN15] In this case, almost all of the extrinsic evidence raises conflicting inferences. Thus, we review the commissioner's choice of inferences for substantial evidentiary support.

FN15. *Zito v. Zito,* 969 P.2d 1144, 1147 n. 4 (Alaska 1998) (quoting *Wahl v. Wahl,* 945 P.2d 1229, 1232 n. 3 (Alaska 1997)).

IV. *DISCUSSION*

Exxon's arguments on appeal are based on one critical contention: that the PBUA abrogated the department's discretion to deny expansion and to order contraction of the PBU. Exxon's additional claims that the department breached the 1980 settlement, unconstitutionally impaired the PBUA contract, unconstitutionally worked a taking, and should be equitably estopped all derive from the department's exercise of discretion in making the contraction and expansion decisions. The state disputes Exxon's view that the PBUA destroyed its power over expansion and contraction. As discussed in greater detail below, our conclusion that the department had the discretion to deny expansion of the PBU in the public interest and in accord with state law is dispositive of this matter.

A. *Exxon Did Not Waive the Argument that the Pt. McIntyre Reservoir Was Partially within the Boundaries of the PBU.*

As a preliminary matter, we address the state's contention that Exxon waived its right to make certain arguments on appeal. The state argues that in the amended application for PBU expansion Exxon agreed to present its position as if the geologic condition-that the Pt. McIntyre reservoir was at least partially within the boundaries of the PBU-was not met. Exxon argues that the state's interpretation***793** of the amended application is incorrect because it would render Exxon's express right to appeal meaningless, because Exxon can prevail on appeal only if it can prove that the geologic condition was met. Neither side disputes that a small portion of the Pt. McIntyre reservoir actually underlies the original PBU and thus meets the geologic condition.

The amended application for PBU expansion summarizes the parties' positions and agreement as follows:

> Exxon disagrees with the State regarding their respective rights. To allow production of the Pt. McIntyre Participating Area to begin while preserving Exxon's rights and the State's rights, the Applicants propose the following procedure:
>
> ....
>
> iii. Exxon may appeal to or commence litigation in (or both) the Alaska Superior Court, and/or may appeal to the Commissioner, to contend among other things that the Commissioner's Contraction Decision (assuming he affirms the Contraction Decision) and other DNR decisions concerning the Pt. McIntyre Participating Area and the Contracted Acreage [FN16] were incorrect. Any such appeal or litigation is collectively referred to as the "Contest."
>
> FN16. "Contracted Acreage" referred to tracts 5, 6,7, and 8.
>
> In the Contest, ... Exxon shall not challenge the legality of DNR's established procedures or

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

> DNR's power and authority to act and make decisions concerning the contraction or expansion of the PBU, the Pt. McIntyre Participating Area, or the Contracted Acreage, but may claim, for example, that the established procedures were not followed or that the DNR decisions or actions are not consistent with applicable law. Also, Exxon shall not claim that the DNR is disqualified from acting because the State could realize a gain as a result of the DNR's actions.
>
> ....
>
> iv. Exxon must present its position in the Contest as if the Contracted Acreage were not in the PBU ... until Exxon obtains a final, non-appealable ruling that the Contracted Acreage should not have been contracted out of the PBU. If Exxon obtains such a ruling, it may use the ruling in presenting its position in the Contest. Exxon, however, shall not at any time ... argue or claim that it is entitled to field costs or any other costs or relief because ... the Pt. McIntyre Participating Area [is] in the PBU as a result of granting this Amended Application or the Production Application. Exxon recognizes and agrees that such an argument would be "bootstrapping."
>
> ....
>
> vi. By filing this Amended Application and pursuing any relief permitted by it, Exxon does not waive any rights which it may have to field and other costs under the terms of the Pt. McIntyre Participating Area leases....
>
> vii. All appellate rights of the State and Exxon, if any, are preserved.
>
> The commissioner interpreted the "no bootstrapping" paragraph as a waiver of Exxon's argument that the geologic condition was met, because Exxon had to present its position as if tracts 5, 6, 7, and 8 were not in the PBU. If tracts 6, 7, and 8 are not in the PBU, the geologic condition cannot be met.

[7][8] We think the commissioner read the waiver too broadly for two reasons: first, the parties intended to preserve the status quo on the field costs issue while simultaneously allowing development of the Pt. McIntyre reservoir; second, the state's interpretation eviscerates Exxon's right to appeal the field costs issue. Our goal when interpreting contracts is to "give effect to the reasonable expectations of the parties." [FN17] The relevant section of the agreement begins with a statement of intent: "To allow production of the Pt. McIntyre Participating Area to begin while preserving Exxon's rights and ***794** the State's rights." The express intent of the amended agreement was to avert an impasse by isolating the field costs issue for separate resolution on appeal.

> FN17. *Stepanov v. Homer Elec. Ass'n*, 814 P.2d 731, 734 (Alaska 1991) (quoting *Mitford v. de Lasala*, 666 P.2d 1000, 1005 (Alaska 1983)).

Moreover, we have repeatedly noted that "[a] court should not interpret an agreement in a manner which would give meaning to one part of an agreement at the cost of annulling another part." [FN18] Exxon expressly retained a right to "appeal to or commence litigation in (or both) the Alaska Superior Court." Interpreting the "no bootstrapping" paragraph as a general waiver of an argument required for Exxon to prevail on appeal effectively eliminates Exxon's right to appeal. Instead, we read the agreement to give Exxon a meaningful right of appeal while preserving the "no bootstrapping" provision. Accordingly, Exxon may argue in this appeal that the geologic condition was met because the facts so indicate but not because the state approved the amended application for expansion.

> FN18. *Betz v. Chena Hot Springs Group*, 657 P.2d 831, 835 (Alaska 1982); *see also Earth Movers, Inc. v. State, Dep't of Transp. & Pub. Facilities*, 824 P.2d 715, 717-18 (Alaska 1992) (interpreting contract based on document as a whole).

B. *The Department of Natural Resources Has the Authority to Deny Expansion of the PBU Under the PBUA.*

While the parties dispute numerous aspects of the expansion and contraction decisions,[FN19] we find one issue dispositive-whether the department had the authority to consider the state's best interests in making a decision on expansion of the PBU.

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

> FN19. Concerning the contraction decision, for example, the parties dispute: the meaning of the PBUA text; whether the director's amended 1987 deferral superceded the PBUA contraction provisions; whether the lessees met the conditions of the 1987 deferral; and whether the director granted a second deferral.

Exxon argues that the department has no discretion to determine unit expansion; rather, Article 9 of the PBUA controls. Exxon interprets the PBUA to give itself a unilateral right to expand the PBU so long as the lands to be added contained a reservoir that was partially within the PBU. If this "geologic condition" was met, Exxon argues, the department had no discretion to deny expansion.

The state argues that the department has discretion to consider the public interest when deciding to expand the PBU under the PBUA and department regulations.

We first consider the text of the PBUA. We then look at extrinsic evidence.

1. *The text of the PBUA*

Article 9.1 of the PBUA discusses possible expansion of the PBU:

> The Unit Area may be enlarged from time to time so as to include any additional lands reasonably determined to be within any Reservoir any portion of which is within the Unit Area. The lands to be included shall be based on such subdivisions of the public land surveys as may be approved by the Director, but not less than the area approved by the well-spacing order affecting such lands for such Reservoir....

Exxon argues that the first sentence indicates that Exxon may enlarge the unit area, so long as the additional lands meet the condition. The state argues that the first sentence is ambiguous, but the rest of the PBUA indicates that the department has the power to expand the PBU.

The state is correct that the language is ambiguous. The passive voice can be ambiguous.[FN20] The text alone does not indicate whether Exxon or the department has the authority to expand the PBU. However, the subsections following the contested statement help to clarify it. Subsections (a) through (d) indicate the process for expansion of the PBU. The final step indicates that "after due consideration of all pertinent information, the Director shall render his decision." This text, and the absence of text ***795** indicating that Exxon was meant to have the right to expand, strongly favors the state's interpretation that the director has the authority to decide expansion of the PBU.

> FN20. *See Plate v. State,* 925 P.2d 1057, 1065 (Alaska App.1996) (finding evidence rule in passive voice ambiguous and resolving ambiguity by resort to commentary to rules); *see also E.I. du Pont de Nemours and Co. v. Train,* 430 U.S. 112, 128, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977) (resorting to other portions of federal statute to resolve ambiguous passive language).

Both sides argue that the use of the permissive "may" supports their interpretation. Exxon argues that the permissive had to be used to preserve Exxon's option of expansion. If the mandatory "shall" was used, Exxon would have been required to expand the PBU if the condition was met.

The state contends that use of the permissive indicates the department's discretion. The state notes that in four other articles of the PBUA, Articles 4.4, 5.4, 16.4, and 18.1, when the agreement intended to create a right that could be exercised by the lessees, it used the language "shall have the right" or "shall be entitled to."

[9][10] The state's interpretation is the most logical. In interpreting a contract, courts should "interpret the contract in a manner that makes the contract internally consistent." [FN21] Exxon's interpretation that Article 9.1 creates a right to expansion with the language "may" conflicts with other portions of the PBUA that use "shall have the right" or "shall be entitled to" to create a lessees' right.

> FN21. *Brobeck, Phleger, & Harrison v. Telex Corp.,* 602 F.2d 866, 872 (9th Cir.1979).

Finally, the state notes that Article 12.1 of the

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

PBUA expressly indicates that the PBUA "shall be subject to all valid applicable federal and state laws, rules, regulations and orders." Former 11 AAC 83.340 and former 11 AAC 83.345, state regulations in effect at the time the parties entered the PBUA, required the director's approval, based on a determination of necessity or advisability in the public interest, for a modification of an approved unit agreement.[FN22] Accordingly, the state argues that the PBUA required the director's approval for any modification of the agreement. Exxon has no response to this. This express statement also favors the state's interpretation that the department has discretion to deny expansion of the PBU. In sum, the text of the PBUA strongly indicates that the department had discretion to deny expansion as specified by its own regulations.

FN22. Former 11 AAC 83.345 (eff. 9/20/74) provided:

> Any modification of an approved unit agreement is subject to the director's approval in the same manner and upon the same determination as the original unit agreement.

Former 11 AAC 83.340 (eff. 9/20/74) provided in relevant part:

> A unit agreement will be approved by the director if he determines that the agreement is necessary or advisable in the public interest, is for the purpose of more properly conserving natural resources, and adequately protects all parties in interest including Alaska.

2. *Extrinsic evidence*

Extrinsic evidence provides substantial support for the commissioner's decision. The parties' course of performance of the PBUA and the existence of departmental regulations that are inconsistent with Exxon's view of the PBUA strongly support the conclusion that the department had discretion to deny expansion of the PBU.

a. *Exxon's and the department's course of performance*

The state argues that Exxon's and the department's course of performance of the PBUA shows that Exxon understood that the department retained discretion. Exxon offers no argument in response.

[11] The conduct of the parties is properly considered as evidence of the parties' intent.[FN23] In the course of performance of the PBUA, Exxon has previously requested contraction of the PBU and corresponding expansion of another unit. Exxon's application for the change in the PBU requested the director's approval under provisions including 11 AAC 83.301-.395 and argued that the change was in "the public interest in accordance with AS 38.05.180(p) and 11 AAC 83.303." Exxon has also requested expansion of the PBU and contraction of another unit. In both cases, the director's decisions to grant the change included an analysis of the best interests factors listed in 11 AAC 83.303.

FN23. *See, e.g., Peterson v. Wirum,* 625 P.2d 866, 872-74 (Alaska 1981).

***796** Furthermore, Exxon's application for the Pt. McIntyre expansion-the denial of which forms the main issue here-requested the director to expand the PBU "pursuant to the provisions of Section 5.3 and Section 9.1 of the [PBUA] and 11 AAC 83.351 and 11 AAC 83.356." The application expressly noted that the expansion "meets the criteria of 11 AAC 83.303" and listed three reasons. Exxon's and the department's prior course of performance of the PBUA contradicts Exxon's current position and strongly indicates that the department had discretion to deny expansion.

b. *The department's inability to contract around its regulations*

[12] Exxon argues that the department's own regulations allow the department to enter contracts that differ from existing regulations and provide that later-enacted regulations will not apply to preexisting contracts.[FN24] It also notes that the department has no statutory authority to alter a unit agreement without consent by the contracting parties.[FN25] Exxon claims that it drafted the PBUA to eliminate the department's discretion. Why, Exxon asks, would it draft an agreement that simply restates the department's regulations?

FN24. *See* 11 AAC 83.301(b) (1996) ("[The unitization regulations] apply to an existing oil and gas lease or approved unit agreement where not inconsistent with the lease or unit agreement or regulations in effect on the ef-

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

fective date of the lease or unit agreement.").

FN25. *See* AS 38.05.180(p) ("The commissioner may, with the consent of the holders of leases involved, establish, change or revoke drilling, producing, and royalty requirements of the leases and adopt regulations with reference to the leases, with like consent on the part of the lessees, in connection with the institution and operation of a cooperative or unit plan as the commissioner determines necessary or proper to secure the proper protection of the public interest.").

We disagree with Exxon's first contention-that the department can agree to contract terms that violate its regulations. The only authority cited for this proposition is 11 AAC 83.301(b), which states that the department's regulations "apply to an existing oil and gas lease or approved unit agreement where not inconsistent with the lease or unit agreement or regulations in effect on the effective date of the lease or unit agreement." This merely applies the department's later-enacted regulations as default rules to existing leases or unit agreements when there is no conflict.

Subsection .301(b) does not make existing department regulations inapplicable to new unit agreements. Former 11 AAC 83.340 and .345 existed before the approval of the PBUA. Former section .345 stated that "[a]ny modification of an approved unit agreement is subject to the director's approval in the same manner and upon the same determination as the original unit agreement." [FN26] Former section.340 required that "[a] unit agreement will be approved by the director if he determines that the agreement is necessary or advisable in the public interest, is for the purpose of more properly conserving natural resources, and adequately protects all parties in interest including Alaska." [FN27] Thus, 11 AAC 83.301(b) does not affect the applicability of the best interests analysis for expansions of the PBU according to former 11 AAC 83.340 and .345.[FN28]

FN26. Former 11 AAC 83.345 (eff. 9/20/74).

FN27. Former 11 AAC 83.340 (eff. 9/20/74).

FN28. When the department repealed 11 AAC 83.340 and .345 on June 28, 1981, the department adopted 11 AAC 83.303, which contained a similar (but more detailed) consideration of "the public interest" in approving changes to unit agreements. 11 AAC 83.303 (1996).

Moreover, 11 AAC 83.301(b) does not confer authority for the converse: to contract outside of the department's regulations. To allow such activity would be arbitrary; parties contracting with the department would not be held to the same regulations that non-contracting parties were required to comply with. And the department should never need to contract in violation of its own regulations, because it has the authority to change its regulations so long as the new regulation has a reasonable basis and is within the scope of the legislature's delegation of power to the department.[FN29] Because we conclude*797 that 11 AAC 83.301(b) does not allow the department to contract outside of its regulations, Exxon's argument that the department contracted away its regulatory discretion fails.

FN29. *See United Steelworkers of America Local Union 14534 v. NLRB*, 983 F.2d 240, 244-45 (D.C.Cir.1993) ("An agency may alter its interpretation of substantive law so long as its new interpretation does not conflict with the statute, and so long as the agency supplies a 'reasoned analysis' for 'changing its course.' " (citation omitted)).

In sum, the text of the PBUA and the extrinsic evidence support the conclusion that the department had discretion to deny expansion. The department did not, and could not, contract away its discretion to consider the state's best interests in approving expansions of the PBU. Exxon did not have a unilateral right to expansion under the PBUA.

C. *The Commissioner's Decision To Deny Expansion Because of the Excessive Field Cost Allowance Did Not Violate the 1980 Royalty Settlement Agreement.*

Exxon argues that the department's failure to expand the PBU violated the 1980 settlement because the 1980 settlement's resolution of field costs expressly applied to all lands covered by the PBUA "and, in addition, all other land to which the [PBUA] may hereafter be extended as therein provided."

Exxon's argument is premised on its interpretation of the PBUA that Exxon had a unilateral right to

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

expand the PBU if the geologic condition was met. If the department had the discretionary authority to deny expansion, Exxon had no right to force application of the 1980 settlement to lands outside the PBU, and the argument fails. Consistent with our previous conclusion that Exxon had no unilateral right to expansion of the PBU, we conclude that the commissioner did not breach the 1980 settlement.

Exxon argues further that the department breached the implied covenant of good faith and fair dealing of the 1980 settlement because the department's failure to allow expansion deprived Exxon of the benefit of its bargain and rendered the settlement a nullity. Exxon argues that for the commissioner to decide as he did "*solely because these [field cost] deductions will apply* " deprives it of the benefit it bargained for in the 1980 settlement. (Emphasis in original.) But the commissioner's decision does not support Exxon's argument that was denied solely because field cost deductions applied. The commissioner first stated "that the public interest with respect to non-economic and even some economic matters would be served at least as well if not better by the creation of a new unit as it would by expansion of the PBU to include the [Pt. McIntyre reservoir]." The commissioner expressly disclaimed both that field costs would never be allowed and that the amount paid under the 1980 settlement was a permissible consideration. Rather, the commissioner appeared to be concerned that Exxon would unfairly profit by overcharging field costs. According to his calculations, Exxon's actual field cost expenses were in the range of six to seventeen cents per barrel, far less than the seventy-nine cents per barrel allowed by the 1980 Royalty Settlement Agreement. The commissioner requested that Exxon justify the magnitude of the field cost, but Exxon did not respond. Presumably, if Exxon could show special production costs that warranted the substantial field costs, a deduction may have been allowed. The commissioner also noted the unfairness of allowing Exxon, but not other similarly situated lessees, a field cost deduction. The commissioner did not deny PBU expansion solely because the field costs would apply.

[13] Exxon also argues that the department's consideration of field costs in the denial of expansion rendered the 1980 settlement a nullity. If the 1980 settlement only concerned field costs deductions for production from expansions of the PBU, the problems of illusory contracts and lack of consideration might arise as Exxon argues. But the 1980 settlement applies primarily to existing PBU production, and Exxon has enjoyed a substantial and continuing benefit from the 1980 settlement-a field cost deduction of seventy-nine cents per barrel of oil produced from the PBU. Exxon's claim that "no rational settling party would agree" to the 1980 settlement if its field cost allowance ***798** were limited to the existing PBU is quite unpersuasive given the facts that the legislature expressly declared that paying field costs was not in the best interests of the state,[FN30] that most unit agreements did not allow for field costs deductions,[FN31] and that Exxon's co-lessees for the disputed tracts waived their rights to any field cost deductions. Accordingly, we conclude that the department breached neither the express terms of the 1980 settlement nor its implied covenant of good faith and fair dealing by exercising discretion to consider the public interest in denying expansion of the PBU.

FN30. *See* AS 38.05.180(f)(2) (enacted 1978).

FN31. The department allowed field cost deductions for the Duck Island Unit ("Endicott"), signed before the 1980 Settlement, and the Kuparuk River Unit. All other unit agreements did not allow field cost deductions. *See, e.g.,* the Milne Point Unit; the North Star Unit; and the Thetis Island Unit.

D. *The State Did Not Violate Exxon's Constitutional Rights.*

Exxon argues that the department's regulations unconstitutionally impair the obligations of contracts. This argument is premised on its interpretation of the PBUA. Because the department bargained away its discretion to change the PBU in the PBUA, Exxon argues, applying regulations that reinstate that discretion impairs the PBUA.

In addition, Exxon argues that the department's requirement that Exxon waive its right to field cost deductions under the PBUA for Pt. McIntyre production is an unconstitutional taking. Again, this argument is premised on Exxon's interpretation of the PBUA. For there to be a taking, Exxon must have a property interest in the field cost deduction for production from lands that may be added to the PBU.[FN32] In turn, this requires that Exxon have a right to ex-

© 2012 Thomson Reuters. No Claim to Orig. US Gov. Works.

pansion of the PBU to include these lands.

FN32. *See Bowen v. Public Agencies Opposed to Soc. Security Entrapment*, 477 U.S. 41, 55-56, 106 S.Ct. 2390, 91 L.Ed.2d 35 (1986).

The state argues simply that the department did not violate any of Exxon's contractual rights because the department has discretion to deny expansion and order contraction under the PBUA. First, because the department did not bargain away its discretion to change the PBU, it has not impaired the contract by using its discretion to deny the changes to the PBU. Second, Exxon has no right to expansion under the PBUA; thus, it has no property right in a field cost deduction from lands that only might be added to the PBU.

[14] As we determined previously, the state has the discretionary authority under the PBUA to approve changes to the PBU. Exxon's constitutional arguments therefore fail.

E. *The Department Is Not Equitably Estopped from Denying Expansion or Ordering Contraction of the PBU.*

Exxon argues that the state should be estopped from ordering contraction and denying expansion of the PBU because Exxon detrimentally relied upon the department's alleged agreement in the PBUA to expand and contract the PBU based solely on geologic factors and without exercise of its discretion. The state argues that the commissioner found the evidence insufficient to establish estoppel and that his finding is supported by substantial evidence.

We have stated that estoppel may apply against the government and in favor of a private party if four elements are present: "(1) the governmental body asserts a position by conduct or words; (2) the private party acts in reasonable reliance thereon; (3) the private party suffers resulting prejudice; and (4) the estoppel serves the interest of justice so as to limit public injury." [FN33] Whether estoppel applies in any given situation is a legal conclusion.[FN34]

FN33. *Crum v. Stalnaker*, 936 P.2d 1254, 1256 (Alaska 1997).

FN34. *See id.* at 1258 ("We determine that the Board erred in its legal conclusion that equitable estoppel is unavailable under the facts of this case.").

[15] Like Exxon's constitutional arguments, its estoppel argument hinges on its interpretation of the PBUA. Because we conclude that the department has discretion ***799** under the PBUA, Exxon has not been prejudiced by the department's use of its discretion to deny the expansion to the PBU. Thus, estoppel does not apply here.

V. *CONCLUSION*

The commissioner had discretionary authority to deny expansion of the PBU. For that reason, and because the decision to deny expansion did not violate the 1980 Royalty Settlement Agreement, the decision did not violate Exxon's constitutional rights, and the department was not equitably estopped from making that decision, we AFFIRM in all respects.

Appellee.	)

DECISION ON APPEAL

This case is before the superior court in its capacity as an appellate court on appeal from administrative determinations by the Department of Natural Resources (DNR) with respect to the Point Thomson Unit Agreement. *See* AS 22.10.020(d).

Factual and Procedural Background

In 1977, the Point Thomson Unit Agreement (PTUA) was entered into between Exxon (now ExxonMobil) and the Commissioner of the Department of Natural Resources for the State of Alaska for the purpose of facilitating the production of oil and gas at Point Thomson. [R. 1253-1271] ExxonMobil, which holds the largest percentage of leasehold interests at Point Thomson, is

identified in the PTUA as the Unit Operator. The other appellants in this action all have leasehold interests within the unit.

The following paragraphs of the unit agreement are particularly relevant to this appeal:

> 1. ENABLING ACT AND REGULATIONS. The Alaska Land Act (AS 38.05.005--370) and all valid and pertinent oil and gas statutes and regulations including the oil and gas operating statutes and regulations in effect as of the effective date hereof or hereafter issued thereunder governing drilling and producing operations, not inconsistent with the terms hereof or the laws of the State of Alaska, are hereby accepted and made a part of this agreement.
>
> ...
>
> 10. PLAN OF FURTHER DEVELOPMENT AND OPERATION. Within six months after completion of a well capable of producing unitized substances in paying quantities, the Unit Operator shall submit for the approval of the Director an acceptable plan of development and operation for the unitized land which, when approved by the Director, shall constitute the further drilling and operating obligations of the Unit Operator under this agreement for the period specified therein. Thereafter, from time to time before the expiration of any existing plan, the Unit Operator shall submit for the approval of the Director a plan for an additional specified period for the development and operation of the unitized land. The Unit Operator expressly covenants to develop the unit area as a reasonably prudent operator in a reasonably prudent manner.
>
> Any plan submitted pursuant to this section shall provide for the exploration of the unitized area and for the diligent drilling necessary for determination of the area or areas thereof capable of producing unitized substances in paying quantities in each and every productive formation and shall be as complete and adequate as the Director may determine to be necessary for timely development and proper conservation of the oil and gas resources of the unitized areas, and shall:
>
> (a) specify the number and location of any wells to be drilled and the proposed order and time for such drilling; and,
>
> (b) to the extent practicable, specify the operating practices regarded as necessary and advisable for the proper conservation of natural resources. ...

Said plan or plans shall be modified or supplemented when necessary to meet changed conditions, or to protect the interests of all parties to this agreement. Reasonable diligence shall be exercised in complying with the obligations of the approved plan of development. ...

16. CONSERVATION. Operations hereunder and production of unitized substances shall be conducted to provide for the most economical and efficient recovery of said substances without waste, as defined by or pursuant to state law or regulation.

...

20. EFFECTIVE DATE AND TERM. This agreement shall become effective upon approval by the Commissioner or his duly authorized representative as of the date of approval by the Commissioner and shall terminate five (5) years from said effective date unless:
    (a) such date of expiration is extended by the Commissioner, or
    (b) it is reasonably determined prior to the expiration of the fixed term or any extension thereof that the unitized land is incapable of production of unitized substances in paying quantities in the formations tested hereunder ... or
    (c) a valuable discovery of unitized substances has been made or accepted on unitized land during said initial term or any extension thereof, in which event the agreement shall remain in effect for such term and so long as unitized substances can be produced in quantities sufficient to pay for the cost of producing same from wells on unitized land ~~within any participating area established hereunder~~ and, should production cease, so long thereafter as diligent operations are in progress for the restoration of production or discovery of new production and so long thereafter as the unitized substances so discovered can be produced as aforesaid ...

21. RATE OF PROSPECTING, DEVELOPMENT AND PRODUCTION. The Director is hereby vested with authority to alter or modify from time to time in his discretion the quantity and rate of production under this agreement when such quantity and rate is not fixed pursuant to state law or does not conform to any statewide voluntary conservation or allocation program which is established, recognized and generally adhered to by the majority of operators in such state, such authority being hereby limited to alternation [sic] or modification in the public interest, the purpose thereof and the public interest to be served thereby to be stated in the order of alternation or modification. Without regard to the foregoing, the Director is also hereby vested with

> authority to alter or modify from time to time at his discretion the rate of prospecting and development and the quantity and rate of production under this agreement when such alternation or modification is in the interest of attaining the conservation objectives stated in this agreement and is not in violation of any applicable state law.
>
> Powers in this section vested in the Director shall only be exercised after notice to Unit Operator and opportunity for hearing to be held not less than ~~fifteen (15)~~ *thirty (30)* days from notice, *and shall not be exercised in a manner that would (i) require any increase in the rate of prospecting, development or production in excess of that required under good faith and diligent oil and gas engineering and production practices; or (ii) alter or modify the rates of production from the rates provided in the approved plan of development and operations then in effect or, in any case, curtail rates of production to an unreasonable extent, considering unit productive capacity, transportation facilities available, and conservation objectives; or (iii) prevent this agreement from serving its purpose of adequately protecting all parties in interest hereunder, subject to applicable conservation laws and regulations.*

The language that is struck out in Sections 20 and 21 above was deleted, and the italicized language in Section 21 was added in 1985 amendments to the PTUA. [R. 794, 1253-1268, 9448]

As set forth in Section 1 of the unit agreement, the regulations in effect at the time of the agreement's inception were "accepted and made a part of [the unit] agreement." *See also Exxon Corp. v. State*, 40 P.3d 786 (Alaska 2001).

Three of those regulations have particular bearing on this case.

Former 11 AAC.83.315 provided as follows:

> RATES OF PROSPECTING AND PRODUCTION. The director [of the former State Division of Lands] may require that any unit agreement contain a provision vesting authority in the director or other person, committee, or agency as may be designated in the agreement and satisfactory to the director, to alter or modify from time to time the rate of prospecting and development and the quantity and rate of production under the agreement.

Former 11 AAC 83.340 provided in relevant part as follows:

> APPROVAL OF UNIT AGREEMENT. A unit agreement will be approved by the director if he determines that the agreement is necessary or advisable in the public interest, is for the purpose of more properly conserving natural resources, and adequately protects all parties in interest including Alaska ...

Former 11 AAC 83.345 provided as follows:

> MODIFICATION OF UNIT AGREEMENTS. Any modification of an approved unit agreement is subject to the director's approval in the same manner and upon the same determination as the original agreement.

In addition to the above-quoted regulations, there was also a chapter of procedural regulations that were in effect in 1977 that applied to unit agreements. This chapter, entitled "Practice and Procedure," applied to several other chapters of the natural resources regulations, including the unitization chapter. It contained several provisions regarding administrative adjudications, including a provision for judicial appeals to the superior court of administrative decisions and actions.[1] But these former regulations did not contain any provision that required or authorized a unit termination or default action to be initiated by judicial proceedings. Former 11 AAC 88.100 – .185 (Eff. 9/20/74)

There are two subsections of the Alaska Land Act as it was in effect in 1977 that relate to unit agreements:

Former AS 38.05.180(m) provided as follows:

> To conserve the natural resources of all or a part of an oil or gas pool, field, or like area, (whether or not the part is then subject to a cooperative or unit plan of development or operation), lessees and their representatives may unite with each other, or jointly or separately with others, in collectively adopting or operating under a

[1] Former 11 AAC 88.160 (Eff. 9/20/74).

> cooperative or a unit plan of development or operation of the pool, field, or like area, or a part of it, whenever determined and certified by the commissioner to be necessary or advisable in the public interest. The commissioner may, with the consent of the holders of the leases involved, establish, alter, change, or revoke drilling, producing, rental minimum royalty, and royalty requirements of the leases and make regulations with reference to the leases, with like consent on the part of the lessees, in connection with the institution and operation of a cooperative or unit plan as he determines necessary or proper to secure the proper protection of the public interest. The commissioner may provide that oil and gas leases issued under this section shall contain a provision requiring the lessee to operate under a reasonable cooperative or unit plan, and he may prescribe a plan under which the lessee shall operate. The plan shall adequately protect all parties in interest, including the state.
>
> Former AS 38.05.180(n) provided in relevant part as follows:
>
> A plan authorized by (m) of this section, which includes lands owned by the state, may contain a provision vesting the commissioner, or a person, committee, or state agency with authority to alter or modify from time to time the rate of prospecting and development and the quantity and rate of production under the plan ...

The Alaska Land Act also accords broad authority to the Commissioner of the Department of Natural Resources. Specifically, AS 38.05.020 provides that "[t]he commissioner may establish reasonable procedures and adopt reasonable regulations necessary to carry out this chapter," and the commissioner may "exercise the powers and do the acts necessary to carry out the provisions and objectives of this chapter." These statutory provisions were in effect in 1977 and remain in effect today.

Overlying the entire statutory and regulatory construct is Article VIII, Section 2 of the Alaska Constitution, which provides, "[t]he legislature shall

provide for the utilization, development and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people."

Several current regulations have been discussed by the parties extensively in this appeal, including 11 AAC 83.303; 11 AAC 83.336; 11 AAC 83.361; and 11 AAC 83.374. None of these regulations was in effect when the PTUA became effective in 1977. They were all originally adopted in 1981.

The history of the Point Thomson Unit has been thoroughly set out in the record before this court, including in the decisions issued at the administrative level. [*See, e.g.*, R. 629-635] Since the unit's formation in 1977, eighteen exploration wells have been drilled within and around the PTU. At the request of the Unit Operator, the Division of Oil and Gas of the Department of Natural Resources (Division) certified seven wells within the PTU as capable of producing hydrocarbons in paying quantities. [R. 640] With one exception, all of those certifications were issued, and the wells all then abandoned, prior to 1987. [R. 5681] The last well was certified in 1994 and abandoned the following day. [Id.][2]

The PTU Lessees are required to submit Plans of Development (PODs) at specified intervals to the Division that set out their development plans for the unit. The current controversy arises from the Department of Natural Resources'

[2] However, the certification letter for the last well dated April 26, 1994 indicated, "It should be noted, however, that the well is not capable of producing in paying quantities as that phrase is defined in section 9 of the Point Thomson Unit Agreement." [R. 5681]

refusal to approve the Lessees' proposed 22nd Plan of Development for the Point Thomson Unit. [R. 1966-1976] The Division rejected the Lessees' first proposed 22nd Plan of Development in a decision dated September 30, 2005. [R. 12282] That proposed 22nd Plan, as described by the Division, conditioned PTU development on amending the State's existing tax and royalty structure and construction of a North Slope gas pipeline. [R. 12297] The Division found "the current PTU Owners have had the leases for far beyond their primary term, and their conclusion today is simply that they cannot make enough money to justify development. It is time for the PTU Owners to develop and produce or give new lessees ... a chance to develop the known hydrocarbon resources within the PTU." [R. 12303] That initial decision held that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU." [R. 12305] The initial decision then referenced Section 21 of the PTUA, and held that "the PTU Operator shall commence development operations within the PTU by October 1, 2007. The PTU Owners shall have an opportunity for hearing regarding this notice to modify the rate of PTU development." [*Id.*] The initial decision also required that "the PTU Operator shall begin commercial production of unitized substances from the PTU by October 1, 2009." [R. 12304]

Shortly after the issuance of the September 2005 decision, the Division issued an Amended Decision on October 27, 2005. [R. 12282] The Amended Decision removed all references to Section 21 of the PTUA, because, according to the Amended Decision, that section does "not apply to the Division's

evaluation of the Unit Operator's proposed plans for development of the Point Thomson Unit." [*Id.*][3] The Amended Decision of October 2005 accorded the Unit Operator 90 days within which to submit an acceptable POD. The Amended Decision also modified the initial decision to provide that the development and production deadlines previously specified in the initial decision were "*an example* of an acceptable PTU plan of development." [R. 12304; emphasis added] The Amended Decision eliminated the reference to the opportunity for a hearing regarding the proposed modification of the rate of PTU development. [R. 12305] But the Amended Decision retained the language from the initial decision that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU." [R.12305]

The initial decision and the Division's Amended Decision of October 2005 both noted that the Division had certified seven wells on the unit as capable of producing hydrocarbons in paying quantities. [R. 12295] Nothing in either the initial decision or the Amended Decision of the Division purported to decertify those wells. To the contrary, the Division's Amended Decision stated, "the PTU contains wells certified as capable of production in paying quantities." [R. 12302]

The Division's October 2005 Amended Decision recognized that negotiations between State representatives and some of the PTU Lessees for

[3] *See also* State's Br. at 49, n. 56. There, the State asserts that Section 21 "relates to the Director's authority to change the rate of prospecting and development once Lessees are operating under an approved POD," and is not applicable with respect to the approval of the POD itself, which the State asserts is governed solely by Section 10 of the PTUA. *But see* Section 21 as amended, paragraph 2, and the reference there excluding applicability of portions of that section to approved plans of development. [R. 794]

the construction of a gas pipeline were ongoing at that time, but clearly indicated that such negotiations would not serve as a basis to delay PTU development: "At this point in time, the PTU Owners do not control if or when a North Slope gas pipeline will ever be operational. Reliance on third parties, beyond the control of the PTU Owners, is not grounds for the delay of PTU development and production." [R. 642]

The ninety-day deadline for submission of an acceptable modified 22nd POD was extended by the Division until October 20, 2006, during which time negotiations continued with respect to the development of a gas pipeline. The resultant proposed Fiscal Contract for a gas pipeline included certain provisions dealing with the PTU. Specifically, the proposed Fiscal Contract provided that if certain PTU Lessees undertook designated actions with respect to the development of a gas pipeline, the State agreed not to terminate the PTU. [App. 125]

In May 2006, the proposed Fiscal Contract was submitted to the Alaska Legislature for its consideration as required by the Stranded Gas Development Act. [App. 125] On October 18, 2006, while the Fiscal Contract was still under legislative consideration, ExxonMobil submitted a modified 22nd POD to the Commissioner. [R. 3089-3105] The modified 22nd POD did not propose to put the unit into production by 2009, a commitment that had been delineated by the Division as a component of an acceptable plan of development in the Division's Amended Decision of October 2005. [R. 667] The Lessees have asserted that

the modified 22nd POD was consistent with the terms of the proposed Fiscal Contract. [App. 126] However, the Fiscal Contract had not been approved by the Legislature at that time, and indeed, has not ever been approved by the Legislature.

Oral argument before the Commissioner on the modified proposed 22nd POD was held on November 20, 2006. No participant requested an evidentiary hearing. However, approximately 5,000 pages of documents regarding the modified proposed POD were submitted to the Commissioner prior to the November 2006 hearing. [R. 5672]

The Commissioner issued a Decision on Appeal on November 27, 2006. [R. 5670-5689] As summarized in the decision itself, the Decision on Appeal:

> (1) denies the request for modification of the 2001 Expansion Agreement, as amended, which affects only the expansion leases; (2) affirms the Director's Decision in all respects to the extent it is consistent with this Commissioner's Decision, but the Director's Decision is disapproved to the extent that it can be read to mean the PTU contains certified wells; (3) adopts and incorporates into the Commissioner's Decision the findings and rationale of the Director's Decision as modified by this Decision; (4) rejects the cure or revised 22nd PTU POD submitted by the Lessees on October 18, 2006; and (5) terminates the PTU.

[R. 5671]

The Commissioner rejected the Lessees' contention that the modified proposed 22nd POD should be evaluated pursuant to the Reasonably Prudent Operator Standard. He characterized the "lessees' appeal [as] based on the premise that they do not have to produce because a Reasonably Prudent Operator would not produce." [R. 5684] The Commissioner acknowledged that

Section 10 of the PTUA included a covenant by the Lessees to "develop the unit area as a reasonably prudent operator in a reasonably prudent manner." But he added, "Section 10 says much more." [*Id.*] He noted the PTU was not in production even though "massive PTU reserves were found in the early 1980s." [R. 5686] Then he added,

> I specifically find that the Reasonably Prudent Operator standard does not apply to this Commissioner's Decision involving a long standing unit with leases far beyond their primary term and Lessees which unambiguously refuse to adequately explore, delineate, or produce massive known hydrocarbon reserves. The Reasonably Prudent Operator language of section 10 of the unit agreement does not supersede the other provisions of that section, or the applicable statutes, regulations or leases. Section 10 contains significant detail on what an acceptable POD must contain and the Director's Decision asked the Lessees to comply. Instead, they ask for the protection of the RPO standard, but on these facts, it matters not what a Reasonably Prudent Operator would do, the state is entitled to terminate the PTU.

[R. 5686-87]

In his decision, the Commissioner noted that seven wells in the PTU had been previously certified by DNR as "capable of producing in paying quantities." But he then held as follows:

> Whatever the merits of the certifications when they were originally issued, the suggestions in the Director's Decision that certified wells exist today or that the prior certifications of now non-existent exploration wells indefinitely extend the term of the leases upon which they were drilled or that the PTU should be treated as a unit with certified wells is disapproved and reversed in this Commissioner's Decision. Those suggestions are not supported by the facts. There are no certified wells in the unit capable of producing in paying quantities. All wells which were certified have been plugged and abandoned. Inconsistent findings and statements in the Director's Decision on certified wells are hereby disapproved.

[R. 5682]

The Commissioner affirmed the Director's Amended Decision "in all respects to the extent it is consistent with this Commissioner's Decision, but it is disapproved to the extent it can be read to mean the PTU contains certified wells." [R. 5688] The Commissioner rejected the revised 22nd POD because it did "not commit to put the unit into production." He concluded that "[t]he PTU is terminated." [R. 5688, 5689]

Some of the PTU Lessees sought reconsideration of the Commissioner's Decision. The primary issue on reconsideration addressed the propriety of the Commissioner's determination that the PTU contains no wells certified as capable of producing in paying quantities. From there, the Lessees asserted that since the wells remained certified, the unit could only be terminated through judicial proceedings, citing 11 AAC 83.374(d). The Lessees also asserted that they did not receive fair notice that the certified well status of the PTU wells was at issue, and requested that DNR reopen the administrative proceedings for that reason. [R. 9287]

On December 27, 2006, Acting Commissioner Marty Rutherford issued an 11-page Decision on Reconsideration, which affirmed the Commissioner's Decision of November 27, 2006 in all respects. [R. 9286-9298] The Reconsideration Decision expressly distinguished between the well decertification component of the November 2006 decision and the termination component of that same decision. The Reconsideration Decision characterized

the certified well status as a "collateral finding" to the termination decision. [R. 9288] Specifically, the Reconsideration Decision found:

> The certified well finding is not the basis of the November 27, 2006 unit termination decision. The unit termination decision is based primarily on two independent grounds neither one of which regards certified wells.
>
> One ground for unit termination is that DNR is entitled to terminate a unit which has been known to contain massive hydrocarbon reserves for more than 30 years, but which has never been put into production, when the lessees of the state oil and gas leases making up the unit unequivocally state that they still cannot find a way to put the unit into production. DNR is entitled to terminate a unit because the purpose of forming a unit is to effect production. Units are not formed for the purpose of simply holding properties until such time as the Lessees think production will be profitable enough to commence. On these facts, when the Lessees say they cannot put the unit into production, DNR can terminate the unit as a matter of law.
>
> The second primary ground for unit termination is the failure to submit an acceptable Plan of Development. . . .

[R. 9289-90]

The Reconsideration Decision also addressed, but did not directly resolve, the Lessees' argument that 11 AAC 83.374(d) requires the agency to pursue unit termination through court proceedings, and not by administrative determination. In this regard, the decision notes, "[e]ven if the PTU contains certified wells, the November 27, 2006 Decision is an appropriate DNR action which facilitates court review." [R. 9292] The Reconsideration Decision acknowledges that it is undisputed that the decertification approach "reverses longstanding DNR Oil and Gas Director's Decisions that certify non-existent or non-production wells." [R.

9295] But the Acting Commissioner indicates that the longstanding policy was "poor policy" which it was incumbent on the Commissioner to correct. [R. 9296]

The Reconsideration Decision also held that the Lessees' own submissions to the Commissioner demonstrated that the Lessees had adequate notice that decertification was an issue before the Commissioner. [R. 9294-95] The Acting Commissioner also found that the State was not estopped from decertifying the wells and that it had not breached the covenant of good faith and fair dealing under the Unit Agreement. [R. 9296-97]

Four of the PTU Lessees appealed the Commissioner's Decision and the Reconsideration Decision. The appeals were all consolidated to this court, sitting in its appellate capacity pursuant to AS 22.10.020(d).

In March 2007, the Appellants filed a motion with this court seeking to stay the administrative determinations pending appeal. They asserted that because the Division had certified wells in the unit as capable of producing hydrocarbons in paying quantities, subsection (d) of 11 AAC 83.374 applied such that the Division was required to "seek to terminate the unit agreement by judicial proceedings," and was precluded from administratively terminating the unit. By order dated May 1, 2007, this court denied the stay. While this court found that the Appellants had made a "clear showing of probable success on the merits" that the administrative termination of the unit did not comply with 11 AAC 83.374(d), this court also found that granting the stay would be contrary to the public interest, and particularly the benefit of according to DNR the opportunity to

appropriately address the related lease termination proceedings in the first instance. However, this court did query the parties at the end of those proceedings whether there was any significance to the fact that 11 AAC 83.374 was adopted in 1981 – after the PTUA was entered into in 1977 – an issue that was not the focus of the parties' briefing on the stay motion.

In a separate order issued on May 7, 2007, this court held that Alaska Gasline Port Authority and Jim Whitaker would not be considered parties to this appeal. However, they were permitted to, and did submit amicus curiae briefing to this court.

Oral argument on the appeal was held on October 5, 2007. At oral argument, the Appellants each indicated they were not pursuing an appeal with respect to the Commissioner's decision on the expansion leases. Thereafter, ExxonMobil and Chevron USA filed a motion to dismiss those claims on appeal. The State filed a limited objection, focused primarily on the language of the proposed order of dismissal of that portion of the appeal. That motion is addressed below.

Standard of Review

Four different standards apply to a court's review of the merits of an agency's rulings: "(1) the 'substantial evidence test' for questions of fact; (2) the 'reasonable basis test' for questions of law involving agency expertise; (3) the 'substitution of judgment test' for questions of law involving no agency expertise,

and (4) the 'reasonable and not arbitrary test' for review of administrative regulations." *ConocoPhillips v. DNR*, 109 P.3d 914, 919 (Alaska 2005)(footnote omitted).

While the issue of contract interpretation "generally presents a question of law,"[4] where a contract specifies that certain determinations are to be made through an administrative process, then the court's review of those determinations "would need to be appropriately deferential"[5] such that the reasonable basis test would apply. *See also Usibelli Coal Mine, Inc., v. State, Dept. of Natural Res.*, 921 P.2d 1134, 1146 (Alaska 1996). Under the reasonable basis standard of review for administrative decisions involving complex issues involving agency expertise, the court is to give deference to the agency's determination so long as it is reasonable, supported by evidence in the record as a whole, and there is no abuse of discretion. *Ellis v. State, Dept. of Natural Resources*, 944 P.2d 491, 493 (Alaska 1977).

In this case, the parties generally agree that the regulations that DNR adopted in 1981 are applicable to the PTUA to the extent those regulations are "not inconsistent with the ... unit agreement or regulations in effect on the effective date of the lease or unit agreement." 11 AAC 83.301(b). Section 1 of the PTUA expressly provides:

> The Alaska Land Act (AS 38.05.005--370) and all valid and pertinent oil and gas statutes and regulations including the oil and gas operating statutes and regulations in effect as of the effective

[4] *ConocoPhillips, 109 P.3d.* at 920.
[5] *Id.*

> date hereof or hereafter issued thereunder governing drilling and producing operations, not inconsistent with the terms hereof or the laws of the State of Alaska, are hereby accepted and made a part of this agreement.

See also Exxon Corp. v. State, 40 P. 3d 786, 796-797. Where the parties to this appeal disagree is as to which of the 1981 regulations are consistent with the PTUA and which are inconsistent.

In *Exxon Corp. v. State*, 40 P.3d 786 (Alaska 2001), the Alaska Supreme Court addressed the Prudhoe Bay Unit Agreement (PBUA), which, like the PTUA, became effective in 1977. Although the issue the court confronted in that case – whether the lessees had an absolute right to expansion of that unit – is dissimilar to that here, many of the legal principles discussed there by the Supreme Court are applicable when analyzing the legal issues presented in this case.

In the Prudhoe Bay case, Exxon asserted that the PBUA eliminated DNR's discretion to refuse to expand the Prudhoe Bay Unit (PBU). The Department argued that it had the authority to consider the State's best interests in making a decision on whether to expand the PBU. DNR relied not only on the contract language, but also on the regulations in effect at that time, and specifically former 11 AAC 83.340 and former 11 AAC 83.345 – regulations which the court held "required the director's approval, based on a determination of necessity or advisability in the public interest, for a modification of an approved unit agreement." 40 P.3d at 795 (footnote omitted). Exxon then asserted that DNR had agreed to contract terms that were binding upon the agency even if

those terms violated DNR's regulations. But the Supreme Court held that an agency does not have the authority to contract outside of its own regulations. "To allow such activity would be arbitrary; parties not contracting with the department would not be held to the same regulations that non-contracting parties were required to comply with." 40 P. 3d at 796.

The Prudhoe Bay *Exxon* case teaches that the interpretation of the PTUA contract in this case must be governed by the language of the contract itself, as well as the regulations and statutes that were in place when the contract was adopted. Thus, to the extent that Section 1 of the PTUA could be read to limit the applicability of regulations that were in effect at the time of the PTUA's adoption, that reading is contrary to Alaska law and must be rejected. All of the applicable regulations in effect at the time of the PTUA's adoption apply to the PTUA agreement. Secondarily, the current regulations and statutes apply to the PTUA "where not inconsistent with the ... unit agreement or regulations in effect on the effective date of the ... unit agreement." 11 AAC 83.301(b).

Discussion

There are two primary administrative determinations that are before the court in this appeal – (1) the Department's rejection of the Lessees' proposed modified 22nd Plan of Development for the Point Thomson Unit, and (2) the Department's termination of the Point Thomson Unit.

I. DNR's rejection of the proposed 22nd Plan of Development

A. DNR has the authority to administratively determine whether a proposed plan of development should be accepted or rejected.

The PTUA, when read in conjunction with the regulations in effect in 1977, clearly accorded to DNR the ability to administratively determine whether the Unit Operator is in compliance with Section 10 of the Unit Agreement. That section provides, among other statements, that any development plan submitted by the Unit Operator "shall be as complete and adequate *as the Director may determine* to be necessary for timely development and proper conservation of the oil and gas resources of the unitized areas." [R. 1260, emphasis added] Moreover, former 11 AAC 88.160 accords to the Unit Operator the right to appeal to the superior court a "decision or other action" by DNR. To the extent that the Appellants are asserting that the more recently adopted regulation 11 AAC 83.374 requires that rejection or acceptance of a proposed POD must be made in the first instance in judicial proceedings, as opposed to by DNR, that regulation would be inconsistent with the PTUA and former regulation and is accordingly inapplicable to this agreement.

B. What is the appropriate standard for the Department to apply when determining the adequacy of a plan of development?

The Appellants' primary assertion with respect to DNR's rejection of the proposed modified 22nd Plan of Development is that the agency applied the wrong legal standard when reviewing the proposed POD. The Appellants assert that as a matter of law, DNR is required to apply a reasonably prudent operator

(RPO) standard. They assert this standard is mandated based on the following sentence in Section 10 of the PTUA: "The Unit Operator expressly covenants to develop the unit area as a reasonably prudent operator in a reasonably prudent manner." [R. 1260] The Appellants assert that this contractual language, in conjunction with applicable statutes, "makes clear that DNR may not require the Operator to carry out a plan that is not reasonable from the perspective of the Operator, because it does not adequately protect the lessees' interests."[6]

The State asserts that the PTUA's reference to the reasonably prudent operator "acts primarily as a covenant *by the lessee* to act as a RPO and does not alter how DNR is to administer the PTUA. It defines the Lessees' commitment rather than limiting DNR's authority." [State's Br. at 46, emphasis in original] Accordingly, the State asserts that this court should affirm DNR's determination which rejected the 22nd Plan of Development because, as found by the Commissioner, both the original plan and the revised plan "suffered from the same defects" as each proposal did not commit to put the unit into production but instead contained the "unequivocal statement that the lessees cannot find a way to put the unit into production." [R. 9290, 9291]

Generally, issues of contract interpretation are legal issues as to which a court is to apply its independent judgment. But here, the disputed section of the PTUA – Section 10 – expressly confers upon the Division the authority to require a plan from the Lessees that "shall be as complete and adequate as the Director

---

[6] Jt. Br. at 54, *citing* AS 38.05.180.

may determine to be necessary for timely development and proper conservation of the oil and gas resources of the unitized area . . ." [R. 1260] Accordingly, this court's review of those determinations "would need to be appropriately deferential" such that the reasonable basis test should apply. *ConocoPhillips v. DNR,* 109 P.3d 914, 919 (Alaska 2005)(footnote omitted); *see also Usibelli Coal Mine, Inc., v. State, Dept. of Natural Res.*, 921 P.2d 1134, 1146 (Alaska 1996); *Pan American Petroleum Corp. v. Shell Oil Co.*, 455 P.2d 12, 22-23 (Alaska 1969).

Adoption of the Appellants' interpretation of the contract to mandate the RPO standard would run counter to the regulatory and statutory provisions that were in effect at the time of the contract's creation. The applicable effective regulation at the time of contracting in 1977 required a determination by the State "that the agreement is necessary or advisable in the public interest... and adequately protects all parties in interest including Alaska." Former 11 AAC 83.340. Likewise, former 11 AAC 83.345 provides that this same standard applied to modifications of approved unit agreements. To interpret Section 10 of the PTUA to focus on the Lessee's perspective, so as to preclude rejection of any plan of development that the Lessees asserted was unreasonable for them, irrespective of the public interest, would be inconsistent with this regulatory directive. *See also* former AS 38.05.180(m).

In this regard, the current regulation, 11 AAC 83.303, is not inconsistent with Section 10 of the PTUA or the former regulations. That regulation requires

the DNR Commissioner to approve a proposed plan of development upon a written finding that it will "(1) promote conservation of all natural resources ... (2) promote the prevention of economic and physical waste; and (3) provide for the protection of all parties of interest, including the state." 11 AAC 83.303(a), (c)(3). In evaluating these criteria, the regulation specifies that the Commissioner is to consider several factors, including "the geological and engineering characteristics of the potential hydrocarbon accumulation," "prior exploration activities in the proposed unit area," and "the applicant's plans for exploration or development of the unit area." 11 AAC 83.303(b). DNR thoroughly addressed these criteria when it rejected both of the Lessees' proposed 22nd Plans of Development. [*See, e.g.*, R. 12297-12303] DNR consistently rejected the fundamental tenet of both of the 22nd PODs that the Lessees proposed – that unit development should be conditioned upon the construction of a North Slope gas pipeline. [R. 12299]

Accordingly, this court finds that DNR did not err when it declined to review the modified POD under a reasonably prudent operator standard. In evaluating the POD, DNR also considered whether the proposed POD provided adequate protection of the public interest in light of the history of limited development in the unit area over its 30-year history. DNR's approach was consistent with Section 10's grant of authority to the Director to require a plan of development "as complete and adequate as the Director may determine to be necessary for timely development and proper conservation of the oil and gas

resources of the unitized areas," and complies with the applicable statutes and regulations.[7]

C. Substantial Evidence Supports DNR's Determination to Reject the 22nd POD

The Appellants also assert that even if judged by a different standard that the RPO, the modified 22nd POD should have been approved. They note that their modified plan called for an appraisal well to be drilled for the winter of 2008-2009. [Jt. Br. at 61] But with regard to this proposed well, DNR responded that under the Appellants' modified POD, they would pay the State $40 million if they did not drill the well as planned. [R. 3096] The Commissioner found "the value of the well to the state greatly exceeds $40,000,000 because a well or wells are needed to adequately appraise the PTU." [R. 5678] DNR, looking at the history of the unit, determined that "[t]he proposed payment is no substitute for adequate delineation of the PTU hydrocarbon accumulations, now long overdue and repeatedly requested by DNR." [R. 5683]

Further, the 22nd modified plan indicated that production would require a gas pipeline. [R. 3093] In rejecting that plan, DNR concluded that "neither the oil nor the gas condensate [within Point Thomson] require a gas pipeline to produce" -- a finding that is not directly refuted by the Appellants. [R. 9296]

---

[7] *But see* Section 21, second paragraph, of the PTUA as modified in 1985. [R. 794] That revision specifies that the Department may not require any increase in the rate of production or development "in excess of that required under good and diligent oil and gas engineering and production practices." This section may well have applicability when determining the appropriate remedy when DNR rejects a proposed plan of development. *See* discussion, *infra*.

In sum, there is substantial evidence in the record as a whole to support DNR's determination to reject the modified 22nd Plan of Development based on DNR's finding that the plan contained "no commitment to develop the unit and no firm commitment to adequately delineate the reservoirs." [R. 5677-78]

D. The Impact of the Fiscal Contract Negotiations

The Appellants that participated in the gas pipeline negotiations[8] have asserted that the DNR Commissioner acted in bad faith in rejecting the modified POD in light of the State's course of conduct during the negotiations for the Fiscal Contract for a gas pipeline. The Appellants also assert that the DNR Commissioner "breached the obligation of subjective good faith" based on the Commissioner's statements at a press conference that occurred the day he issued his November 2006 decision in this case. [App. 130-31] And these Appellants assert these same facts support a claim of estoppel against the State. Specifically, they assert that they relied on those provisions of the proposed Fiscal Contract that relieved the Lessees of submitting PODs for so long as the fiscal contract was in place. [R. 2247]

The State asserts that any reliance by the Appellants that is based on the proposed Fiscal Contract is unreasonable because that contract was never finalized when legislative approval was not forthcoming. The Appellants point to no assertion outside the context of the Fiscal Contract negotiations in which the State indicated that it would accept a modified POD that did not commit the unit

[8] Chevron was not a participant in these negotiations. [Exxon Br. at 62, n. 122]

into production. For example, the Commissioner's letter to Exxon of August 31, 2006, which accorded to Exxon the final extension of the appeal period, made no reference at all to the Fiscal Contract. [R. 3081]

The parties agree that this court should consider these claims de novo, since technically these is no administrative determination on these issues for this court to review. *See generally Danco Exploration v. State*, 924 P.2d 432, 434 (Alaska 1996).

To the extent the Appellants relied upon the proposed Fiscal Contract when they presented the modified POD, such reliance was unreasonable. Although the Fiscal Contract, had it been accepted by the Legislature, would have permitted the PTU to be developed in conjunction with the construction of a gas pipeline, the Fiscal Contract was never approved. DNR made no definitive statements that the Appellants would be relieved of their obligations under the PTUA even if the Fiscal Contract was not approved. To the contrary, DNR advised the Appellants that the agency would not delay a drilling commitment for so long as the Fiscal Contract negotiations were occurring. [R. 1958] In these circumstances, DNR is not estopped from rejecting the 22nd POD based on its determination that the POD did not propose an adequate development plan for the unit. *See, e.g., Mortvedt v. State, Dept. of Natural Res.*, 941 P.2d 126, 130 (Alaska 1997).

Nor can the Appellants maintain their claim for breach of the covenant of good fair and fair dealing. This covenant is intended to effectuate the reasonable

expectations of the parties under an existing contract. It "cannot be interpreted to prohibit what is expressly permitted" in the contract. *Casey v. Semco Energy, Inc.*, 92 P.3d 379, 384-385 (Alaska 2004), *quoting Ramsey v. City of Sand Point*, 936 P.2d 126, 133 (Alaska 1997). Here, the covenant cannot be applied to preclude DNR's rejection of the modified 22nd Plan of Development, because the authority to insist on a plan of development that is "as complete and adequate as the Director may determine to be necessary" is expressly accorded to DNR under the PTUA. [R. 1260]

Based on the foregoing analysis, DNR's rejection of the modified proposed 22nd Plan of Development is affirmed.

II. Did DNR have the authority to administratively terminate the PTUA?

The Director's Amended Decision of October 27, 2005 rejected the 22nd POD, but it did not purport to terminate the unit agreement. Rather, it stated that "the PTU Agreement is in default," and listed certain commitments that represented "an example of an acceptable PTU plan of development" to cure the default. [R. 12304] The Director's Amended Decision also indicated that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU." [R. 12305]

The Commissioner's Decision and Decision on Reconsideration, issued one year later and after a modified POD proposal had been submitted to DNR by the Lessees, not only rejected the modified 22nd POD proposal – it terminated

the unit. The Appellees have asserted that DNR does not have the authority to administratively terminate the unit, but must instead seek to terminate the agreement through judicial proceedings.

The State has asserted several bases to support its authority to administratively terminate the PTUA when it has rejected a proposed Plan of Development for the unit. Each of these bases is discussed below.

A. Section 20(c) of the PTUA is not applicable.

One potential basis for the PTUA's administrative termination is pursuant to Section 20 of the agreement itself. This section of the PTUA, termed a "habendum clause," specifies certain bases upon which the unit agreement automatically terminates. There is no reference to this specific clause of the PTUA in any of the agency determinations in this matter. Moreover, at oral argument before this court in October 2007, counsel for the State made clear that the State was not seeking to invoke this clause to support the agency's termination decision. [*See* Transcript of Oral Argument of 10/5/07 at 34] Accordingly, any authority to administratively terminate or cancel the unit agreement must derive either from other provisions within the PTU Agreement itself or the regulations and statutes that are applicable to this particular agreement.

B. Other sections of the PTUA regarding termination

Section 9 of the PTUA delineates the parties' obligations prior to the discovery of hydrocarbons at the unit. Since hydrocarbons were discovered at

the unit decades ago, it is inapplicable to the current controversy. But Section 9 of the agreement is noteworthy in that it expressly provides that if the Unit Operator fails to diligently drill until hydrocarbons are discovered, "the Commissioner may, after 15 days notice to the Unit Operator, declare this unit agreement terminated." [R. 1259] In contrast, Section 10 of the PTUA, which applies after a well capable of producing unitized substances in paying quantities has been completed, is silent on the rights of either party to terminate or cancel the contract. It does not expressly accord to the DNR a right to administratively terminate the unit – nor does it eliminate any such right.

Section 20, discussed above, specifies when the PTUA shall *automatically* terminate. This court does not interpret that habendum clause and Section 9 of the PTUA to preclude the cancellation or termination of the contract under any other circumstance apart from those listed there. *See generally Law of Federal Oil and Gas Leases*, Vol. 1 at §14.19[1](1992)(distinguishing cancellation through affirmative agency action from automatic termination by operation of law). Indeed, the parties in this action recognize that the State could seek to cancel the contract based on an alleged breach of Section 10 by the Lessees. [*See, e.g.*, Jt. Reply at 9] At issue is whether that cancellation proceeding would need to be initiated in state court or if the agency could seek to cancel the contract in an administrative proceeding. This court does not read the PTUA to preclude an administrative cancellation proceeding when the Director has determined that a

proposed plan of development is incomplete or inadequate under Section 10 of the PTUA.

C. The Statutes and Regulations in Effect in 1977

A fundamental question thus arises – did DNR have the implied authority to administratively terminate the PTUA under the statutes and regulations in effect when the PTUA was entered into in 1977? The Appellants assert that no such authority existed, such that the State "like parties to contracts generally, [must] seek relief by way of a claim of default in court." [CPA at 21] The State and the Port Authority assert that when the PTUA is silent, the agency has the inherent authority to administratively terminate the unit unless judicial action is specifically required by statute or applicable regulation. [Port Auth. Supp. at 1]

"Administrative agencies rest their power on affirmative legislative acts. They are creatures of statute and therefore must find within the statute the authority for the exercise of any power they claim." *McDaniel v. Cory*, 631 P.2d 82, 88 (Alaska 1981). The Alaska Land Act, as cited above, accorded broad authority to DNR's Commissioner to "establish reasonable procedures" and "exercise the powers and do the acts necessary to carry out the provisions and objectives" of the Act. AS 38.05.020(b). Those powers included the ability to authorize and certify unit agreements "whenever determined and certified by the

Commissioner to be necessary or advisable in the public interest." Former AS 38.05.180(m).[9]

The State and the Port Authority both cite to the United States Supreme Court case of *Boesche v. Udall*, 373 U.S. 472, 478 (1963), which held that the Department of Interior had a "traditional administrative authority" to cancel a federal lease unless such authority had been specifically withdrawn by federal law. Similarly, in *White v. State, Dept. of Natural Resources*, 14 P.3d 956 (Alaska 2000)(*White II*), the Alaska Supreme Court held that a lessee's breach of contract claim against the State "fit[s] comfortably within the scope of an ordinary administrative claim" and should be pursued before the administrative agency. 14 P.3d at 960. *See also Danco Exploration v. State*, 924 P.2d 432, 434 (Alaska 1996)("Oil and gas lessees and lease bidders which have grievances with the State must pursue the administrative procedures provided by [regulation]." Although there was no express statutory grant to DNR to terminate unit agreements in 1977, this court finds that this specified procedure falls "within the scope of an ordinary administrative claim" that is within the agency's broad statutory powers. *White v. State*, 14 P.3d at 960.

As discussed above, there were two chapters of regulations that were in effect in 1977 that applied to unitization agreements on state lands. One of these

---

[9] When the unit agreement included lands owned by the state, the Alaska Land Act provided that the unit agreement "may contain a provision vesting the commissioner ... with authority to alter or modify from time to time the rate of prospecting and development and the quantity and rate of production under the plan." Former AS 38.05.180(n). Section 21 of the PTUA corresponds to this statutory grant of authority.

chapters addressed only unitization agreements. Former 11 AAC 83.300 *et seq.* (Eff. 9/20/74). The other chapter, entitled "Practice and Procedure," applied to several chapters of the natural resources regulations, including the unitization chapter. It contained several provisions regarding administrative adjudications, including a provision for judicial appeals to the superior court of administrative decisions and actions.[10] These former regulations neither required nor authorized that a unit termination be initiated by judicial proceedings. Former 11 AAC 88.100 – 145 (Eff. 9/20/74).

Under the regulatory scheme as it was in existence in 1977, the administrative authority to terminate the unit agreement had not been restricted or withdrawn. And the statutory regimen accorded broad powers to the commissioner to manage state land. As correctly noted by the Port Authority, "[a]t the time the PTUA was adopted, no statute or regulation abrogated the Department's authority to administratively cancel a unit ..." [Port Auth. Supp. at 2] Instead, the procedural regulations in effect at that time expressly contemplated agency determination and judicial review of all issues. This court finds that DNR possessed the authority to administratively terminate the Point Thomson Unit Agreement when that agreement was adopted in 1977 under the statutory and regulatory structure as it existed at that time.

[10] Former 11 AAC 88.160 (Eff. 9/20/74).

D. To what extent are the current regulations applicable to the Point Thomson Unit Agreement?

In 1981, the State adopted several regulations that more comprehensively address unitization. With some modifications, most of these regulations remain in effect today. The parties in this action dispute both the interpretation of the current regulations and the extent to which those later-adopted regulations apply to the PTUA. Under Alaska law, the later-enacted regulations do not apply to the PTUA to the extent they conflict with either the terms of the PTU Agreement or with regulations that were in effect in 1977, when the PTUA was adopted. *Exxon v. State,* 40 P.3d 786 (Alaska 2001). While the parties to this appeal all generally agree with this principle, they have considerable disagreement as to which of the current regulations are consistent, and which are inconsistent, with the PTUA and former regulations.

1. 11 AAC 83.374 is not applicable when the basis for termination is the rejection of a plan of development, as opposed to failure to comply with an approved unit agreement.

One regulation at issue that was adopted after the PTUA, 11 AAC 83.374(d), specifies that if the Division determines that a default has occurred with respect to a unit in which there is a certified well, "the commissioner will, in his discretion, seek to terminate the unit agreement by judicial proceedings." This regulation was the focus of the stay proceedings in this case earlier this year, although at that time the parties had not addressed the fact that this regulation was adopted in 1981, after the PTUA's effective date of 1977.

This regulation is cited in the agency's decisions in this case only in the Decision on Reconsideration. There, the Acting Commissioner referenced the regulation, but indicated that the unit termination "is an appropriate DNR action which facilitates court review" and could be undertaken "[r]egardless of whether the unit contains certified wells." [R. 9292] Although the parties have provided extensive analysis of this statute in their briefing to this court, it does not appear that DNR relied upon this regulation as the basis for its termination decision.

11 AAC 83.374(a) provides that the "failure to comply with ... any plans of exploration, development or operation which are a part of the unit agreement, is a default under the unit agreement," thereby making the balance of that regulation applicable. As Exxon noted in its briefing to the agency on appeal of the Director's Amended Decision in November 2006, "failure to receive DNR approval of a plan of development does not constitute default under DNR regulations. . . " Instead, as noted by Exxon, "11 AAC 83.374(a) provides that failure to comply with the terms of an *approved* plan of development is a default under the unit agreement, not the failure to obtain approval." [R. 705, emphasis added]

Similarly, the Alaska Gasline Port Authority, in its amicus brief, has asserted that Section 374 should not apply in this case, where the issue is the agency's rejection of a proposed plan of development, as opposed to a lessee's failure to comply with an approved plan of development. [Amicus Br. at 29] In this court's view, upon close reading of the regulation, that position, espoused

both by Exxon in 2006 and by the Port Authority before this court, has merit. 11 AAC 83.374(a) does not apply to cases such as this in which DNR has rejected a proposed plan of development.

Moreover, even if the rejection of a modified plan of development were to constitute a "default" under Section 374, then that regulation would be inconsistent with the unit agreement, to the extent that this more recent regulation imposes a requirement of judicial termination proceedings that was not administratively or statutorily required in 1977.

The Appellants assert, however, that even if inconsistent with the PTUA, the 1981 regulation should nonetheless apply to the PTUA, because this later-enacted regulation impairs only DNR's rights, not the private parties to the PTUA, and is thus binding on the State so as to require judicial termination proceedings. In response to this court's request for supplemental briefing, the Appellants have asserted that under Alaska law, "[r]egulations that benefit those who are regulated are applied retroactively even if inconsistent with previous regulations." [CPA Supp. at 4] In support of this proposition, the Appellants cite to Atlantic Richfield Company v. State, 705 P. 2d 418, 424, n. 17 (1985). But in this court's view, the Appellants are reading the cited footnote in the *Arco* decision too broadly. In that case, the retroactive interpretation of a regulation was the only way in which that newly enacted regulation could be "meaningfully applied," such that the Supreme Court found an intent by the Department for that regulation to have retroactive effect. *Id.* Absent such unique circumstances, which are not

present here given the expected continuing creation of unit agreements throughout Alaska, neither the State nor the Appellants should be bound by subsequent regulations that are inconsistent with the State's prior contractual agreement or regulations in effect at the time of contracting.

Because this court finds that 11 AAC 83.374 is inapplicable to this case, this court will not issue a final determination with respect to DNR's purported "decertification" of the wells. As noted in the Commissioner's Decision on Reconsideration, [t]he certified well finding [was] not the basis of the November 27, 2006 unit termination decision." [R. 9289] In light of this court's rulings as set forth above, a decision on the decertification question is no longer essential to resolving the issues presented in this particular appeal. The Supreme Court instructs that an appellate court should generally not resolve legal issues when they are rendered moot. *Clark v. State, Dept. of Corrections*, 156 P.3d 384, 347 (Alaska 2007). Accordingly, apart from this court's statements on the decertification issue as set forth in the Order re Motion for Stay dated May 1, 2007, no further opinion on the propriety of the purported decertification of the seven wells is expressed by this court.

2. Does 11 AAC 83.336(a)(1) apply?

The State and Port Authority have advanced a different current regulation to support DNR's termination decision -- 11 AAC 83.336(a)(1). This regulation, adopted in 1981, provides as follows:

> A unit agreement becomes effective upon approval by the commissioner and automatically terminates five years from the

> effective date unless (1) a unit well in the unit area has been certified as capable of producing hydrocarbons in paying quantities, in which case the unit agreement will remain in effect for so long as hydrocarbons are produced in paying quantities from the unit area, or for so long as hydrocarbons can be produced in paying quantities and unit operations are being conducted in accordance with an approved unit plan of exploration or development, or, should production cease, for so long after that as diligent operations are in progress to restore production and then so long after as unitized substances are produced in paying quantities...

This regulation is not referenced anywhere in the Commissioner's termination decision or in the Decision on Reconsideration. But the State asserts on appeal that although the specific reference to the regulation to support the unit termination was not made at the agency level, the requisite elements of the regulation to support termination are all "contained within the findings made by the Commissioner." [10/5/07 Oral Arg. Transcript at 36]

On appeal, the State and the Port Authority assert that Section 336 is "essentially a habendum clause," such that if a plan of development is not approved, "the failure means [the] Unit Agreement simply terminated." [State's Br. at 95] In response, the Appellants assert that Section 336(a) "is inconsistent with the PTU Agreement and the effective date regulations and thus cannot apply in this case." The inconsistency, in their view, is that Section 336 would "graft onto the PTU Agreement a new event of termination: DNR approval of a plan of development." [CPA Reply at 28; *see also* Jt. Reply at 25] The Appellants correctly note that Section 20(c) of the PTUA contains no reference to an agency-approved plan of development as a condition for the unit agreement to remain in effect.

DNR notes that Section 20(c) of the Agreement was modified in 1985, and asserts that "because the PTUA modification occurred after the promulgation of section 336, Article 20(c) [of the PTUA] must conform to the [1981] regulation" [State's Br. at 98, n. 172; *see* R. 787-795] But the Appellants note that Section 1 of the PTUA was not amended in 1985. That section precludes the application of inconsistent regulations enacted after the effective date of the PTUA. This court finds the Appellants' assertion on this point persuasive. [Jt. Reply at 26] The 1985 amendments did not graft onto the PTUA the provisions of 11 AAC 83.336(a).

Section 336, as interpreted by the parties in this case, would result in the *automatic* termination of the PTUA whenever a proposed unit plan was rejected by the DNR. As such, it is inconsistent with the PTUA and the regulations that were in effect when the PTUA was executed in 1977. For although, as discussed by this court in the preceding portion of this opinion, DNR may seek to administratively terminate the PTU, neither the PTUA nor the applicable regulations and statutes in effect in 1977 permitted an automatic termination whenever a POD was unacceptable to the State. At oral argument, counsel for the State asserted that Section 336 was not inconsistent with the PTUA, because "[a]n acceptable plan of development is an express condition contained with the Point Thomson Unit Agreement." [10/5/07 Oral Arg. at 48] The State noted that Section 10 of the PTUA accords to the Director the authority to specify a plan of development that "shall be as complete and adequate as the Director may

determine to be necessary for timely development and proper conservation of the oil and gas resources of the unitized area." [R. 1260] As discussed above, this court has found that this provision of the contract accords to DNR the administrative authority to reject proposed plans of development. But rejection of a proposed plan of development does not result in automatic termination under the PTUA. Rather, a separate administrative determination as to the appropriate remedy is required in such instance. To the extent Section 336 would permit the automatic termination of the PTUA whenever a POD was rejected by the State, it is inconsistent with the PTUA and inapplicable to this unit.

E. The Appellants' Right to Due Process

The right to due process, under both the state and federal constitutions, prohibits the State from depriving any person of "life, liberty, or property, without due process of law." U.S. Const. amend. XIV, § 1; Alaska Const. Art. I, §7. The State acknowledges that the Appellants are entitled to due process with respect to their interests at Point Thomson. [State's Br. at 99]

The Appellants assert that their due process rights were violated when the Commissioner terminated the PTU on appeal from the Director's Decision. They assert that the only issues over which the Commissioner had jurisdiction were whether the Director had properly rejected the 22nd POD and whether the modified POD should be approved. [Exxon Br. at 47] The Appellants maintain that the Director's Decision, which stated simply that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU," was

Instead, the reconsideration motion and decision were primarily focused on the decertification issue, not the termination decision. [*See* R. 9288, 9291]

The Alaska Supreme Court's decision in *White v. State, Dept. of Natural Resources*, 984 P.2d 1122 (Alaska 1999)(*White I*) is instructive on these issues. In that case, White had requested a hearing before DNR on a disputed factual issue with respect to an oil and gas lease. DNR refused to grant him a hearing on the issue. The Supreme Court reversed and remanded, and held that the due process clause accorded to White the opportunity for a hearing on that issue before an agency determination was made that precluded the automatic extension of the lease. 984 P.2d at 1128.

Likewise, albeit in a quite different context, the Supreme Court found that a trial court had violated a parent's right to due process when the trial court entered a *permanent* child custody order after conducting a hearing that had been scheduled to determine *interim* custody. *Cushing v. Painter*, 666 P. 2d 1044, 1046 (Alaska 1983). Due process requires that parties are accorded "sufficient written notice, specifying the nature of the dispute and the relief requested." *Hickel v. Halford*, 872 P.2d 171,180 (Alaska 1994).

Here, the State did not seek termination under Section 20(c) of the PTUA. Rather, it sought to terminate the unit after it rejected the Appellants' proposed Plan of Development. Nothing in the PTUA nor the regulatory framework in place in 1977 mandated or authorized automatic termination of the unit when DNR rejected the proposed POD. And while this court has concluded that the

PTUA and then-existing regulations did not preclude DNR from pursuing termination at the administrative level, the Appellants were constitutionally entitled to a clear written notice that DNR was considering this remedy when it rejected the POD, and should have been accorded the opportunity to be heard with respect to the appropriate remedy when the modified 22nd POD was rejected. *See generally* former 11 AAC 88.155. The Director's statement that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU" is not constitutionally adequate notice that a termination would be administratively declared by the Commissioner on appeal of the Director's Decision rejecting the 22nd POD.

Accordingly, this matter is remanded to the DNR for the purpose of according to the Appellants a hearing on the appropriate remedy to the State upon DNR's rejection of the proposed 22nd Plan of Development. On remand, the agency should also consider the import of Section 21 of the PTUA, as amended in 1985, in determining the appropriate remedy.

III. The Expansion Leases

A separate component of the administrative determinations focused on the Expansion Agreement entered into in 2001 between the Appellants and the State. That agreement expanded the PTU on the condition that the PTU Lessees performed certain work at the PTU and put the unit into production with at least seven development wells by 2008. [R. 5678] The agreement also provided that

if the Lessees failed to perform the work in a timely manner, the expansion leases would automatically contract out of the unit and the Lessees would owe DNR certain sums of money. [*Id.*]

The Appellants did not complete the work contemplated under the Expansion Agreement. Instead, in October 2006, ExxonMobil proposed a modification of the Expansion Agreement. DNR characterized the proposed modification as allowing it "to retain the most valuable portions of the Expansion Acreage without putting the unit into production." [R. 5680]

In the Commissioner's November 2006 decision, the Lessees' request to modify the Expansion Agreement was denied. The Commissioner's decision also stated that "the state is entitled to have the Expansion Leases back and to receive payment." [R. 5688-89]

The Appellants originally appealed this aspect of the Commissioner's decision, but later abandoned this particular claim and in June 2007 paid the State the $20,000,000 payment plus interest then due as specified in the Expansion Agreement. On October 19, 2007, the Appellants filed a motion to dismiss the claims on appeal with respect to the Expansion Agreement. The State filed a partial opposition to the motion, disputing the language in the proposed order on these claims. Specifically, the Appellants' proposed order simply provided that all claims regarding the Expansion Agreement "are hereby dismissed as expressly abandoned by all Appellants and, in the alternative, as moot." The State's proposed order was broader, and sought to affirm a final

agency decision, effectively returning the expansion leases to the State. In reply, the Appellants asserted that the language from the Commissioner's decision that "the state is entitled to have the Expansion Leases back" should be considered dicta, and not a final agency determination with respect to the underlying leases in the expansion acreage. [R. 5689]

This court agrees with the Appellants that the validity of the leases encompassed within the expansion acreage was not directly before the Commissioner in this administrative proceeding, and thus is not properly before this court on appeal. With respect to mootness, this court agrees with the State's position that the claims related to the Expansion Agreement are more properly characterized as dismissed rather than moot.

Accordingly, with respect to the Expansion Agreement claims, all of the Appellants' claims concerning the Expansion Agreement are hereby dismissed as they have been expressly abandoned by all Appellants.

//

//

Conclusion

DNR's rejection of the Lessees' proposed modified 22nd Plan of Development, including DNR's interpretation of Section 10 of the Point Thomson Unit Agreement, is affirmed.

DNR's determination as set forth in the Commissioner's Decision and the Decision on Reconsideration that terminated the Point Thomson Unit is reversed and remanded, so as to accord to the Appellants notice and an opportunity to be heard before the agency as to the appropriate remedy when the Department has rejected the proposed modified 22nd Plan of Development for the Point Thomson Unit.

All of the Appellants' claims concerning the Expansion Agreement are dismissed as they have been expressly abandoned by all Appellants.

Dated this 26th day of December, 2007.

DECISION AFTER REMAND

This case is before this Court on appeal for the second time following an administrative determination on remand by the Commissioner of the Department of Natural Resources (DNR) terminating the Point Thomson Unit. Because the contractual agreement between DNR and the Appellants precludes the termination of the Point Thomson Unit in these circumstances without consideration of "good and diligent oil and gas engineering and production practices,"[1] and because DNR failed to accord the Appellants their constitutional right to procedural due process in the remand proceeding, DNR's decision is reversed.

[1] PTU REC at 794 (Section 21, paragraph 2 of the Point Thomson Unit Agreement). Given the procedural history of this matter, portions of the record are paginated multiple times. In this decision, citations to particular pages of the record are to the page numbers provided by the "PTU REC" pagination.

FACTS AND PROCEDURAL HISTORY

In March 1977, Exxon Corporation (now ExxonMobil) and the Commissioner of DNR entered into the Point Thomson Unit Agreement (PTUA).[2] The agreement was intended to facilitate the production of oil and gas at Point Thomson, an area on the North Slope of Alaska.[3] ExxonMobil holds the largest percentage of leasehold interests at Point Thomson and is identified in the PTUA as the Unit Operator. The other Appellants -- BP Exploration (Alaska) Inc., Chevron U.S.A., Inc. and ConocoPhillips Alaska, Inc. -- each have leasehold interests within the Point Thomson Unit (PTU).

In 1977, when the parties entered into the PTUA, Section 21 of the agreement provided:

> 21. RATE OF PROSPECTING, DEVELOPMENT AND PRODUCTION.
> The Director is hereby vested with authority to alter or modify from time to time in his discretion the quantity and rate of production under this agreement when such quantity and rate is not fixed pursuant to state law or does not conform to any statewide voluntary conservation or allocation program which is established, recognized and generally adhered to by the majority of operators in such state, such authority being hereby limited to alternation [sic] or modification in the public interest, the purpose thereof and the public interest to be served thereby to be stated in the order of alteration or modification. Without regard to the foregoing, the Director is also hereby vested with authority to alter or modify from time to time at his discretion the rate of prospecting and development and the quantity and rate of production under this agreement when such alteration or modification is in the interest of attaining the conservation objectives stated in this agreement and is not in violation of any applicable state law.
>
> Powers in this section vested in the Director shall only be exercised after notice to Unit Operator and opportunity for hearing to be held not less than fifteen (15) days from notice.

---

[3] *See* PTU REC at 1253-1271.

PTU REC at 1268.

During the first several years of the PTU's existence, DNR concluded that the Appellants had been "diligent in exploring the unit area." *Id.* at 9464.[4] By January 1982, a discovery well had indicated that the PTU was capable of producing in paying quantities, seven wells had been drilled within or near the PTU, and four more wells were then being drilled. *Id.*

But in October 1983, Exxon submitted its seventh proposed Plan of Development (POD) to DNR. This plan proposed that there be "no further drilling activities" in the PTU for the next five years, unless "contracts for actual construction of a feasible transportation system for the gas are let" before that time. *Id.* at 11252. On November 29, 1983, DNR approved this seventh POD but noted that "[a]pproval of the seventh plan does not relieve any lessee of a drilling commitment or other work commitment that may be attached to the lease as a condition for approval of an expansion of the Point Thomson Unit to include the lease in the unit area." *Id.* at 11250. Several months later, in March 1984, DNR conditionally granted an application to add more leases to the PTU. DNR's decision to grant the expansion application included several express conditions, one of which was that a well be drilled on lands covered by certain expansion leases by March 31, 1985. *Id.* at 10040. Another condition was that the Appellants submit to DNR acceptable proposed amendments to the PTUA aimed

[4] Kay Brown, then the Acting Director of DNR's former Division of Minerals and Energy Management, wrote this in a January 1982 memorandum to John Katz, DNR Commissioner at that time. *Id.* at 9463-64.

primarily at addressing the inclusion of additional leases within the PTU with royalty rates other than the standard 12.5%. *Id.* at 10039.

Against this backdrop, in late 1984 Exxon submitted proposed amendments to the PTUA to DNR. *Id.* at 790-95. In January 1985, DNR approved a number of these amendments. *Id.* at 787-88. Included among these amendments was a rewording of the second paragraph of Section 21 of the PTUA as follows:

> Powers in this section vested in the Director shall only be exercised after notice to Unit Operator and opportunity for hearing to be held not less than . . . thirty (30) days from notice, and shall not be exercised in a manner that would (i) require any increase in the rate of prospecting, development or production in excess of that required under good and diligent oil and gas engineering and production practices; or (ii) alter or modify the rates of production from the rates provided in the approved plan of development and operations then in effect or, in any case, curtail rates of production to an unreasonable extent, considering unit productive capacity, transportation facilities available, and conservation objectives; or (iii) prevent this agreement from serving its purpose of adequately protecting all parties in interest hereunder, subject to applicable conservation laws and regulations.

Id. at 794 (amended language underlined).[5]

On March 12, 1985, the lessees of certain of the expansion leases notified DNR that "efforts to promote the drilling of a well on the subject lessees have been unsuccessful and the required well [due by March 31, 1985] will not be drilled." *Id.* at 10026.

The instant dispute began over twenty years later, in August 2005, when the Appellants submitted their proposed 22nd POD to DNR. The Director of DNR's Division of Oil and Gas initially rejected the proposed 22nd POD on September 30, 2005. In this

[5] Before the Appellants submitted their proposed amendments, DNR had notified them that "the State would find acceptable" this amendment to Section 21. *Id.* at 10039, 10051.

initial decision, the Director concluded that "[f]ailure to submit an acceptable plan of development is grounds for termination of the PTU." *Id.* at 8948. Referring expressly to Section 21 of the PTU, the Director's initial decision provided:

> This decision provides notice under Article 21 of the PTU Agreement that Exxon must initiate development operations within the PTU by October 1, 2007. The Division will contact Exxon to schedule a hearing on this issue, which will be held not less than 30 days from the date of this decision. . . . The PTU Owners shall have an opportunity for hearing regarding this notice to modify the rate of PTU development.

Id. at 8927, 8948.

One month after issuing the September 2005 initial decision referencing Section 21, the Director issued an amended decision on October 27, 2005. The amended decision concluded that the Appellants had defaulted under the PTUA and applicable oil and gas regulations and accorded the Appellants an opportunity to cure the default by submitting an acceptable POD. *Id.* at 12304. But the amended decision also held that Section 21 does "not apply to the Division's evaluation of the Unit Operator's proposed plans for development of the Point Thomson Unit." *Id.* at 12282. Accordingly, the amended decision deleted the requirement contained in the initial decision that the Appellants commence development operations at the PTU by October 1, 2007 and deleted the provision that the Appellants would have an opportunity for a hearing under Section 21 of the PTUA regarding modification of the rate of PTU development. *Id.* at 12305. Instead, the amended decision shifted the burden to the Appellants to propose an acceptable POD, stating that "[a]n acceptable unit plan must contain specific commitments to timely delineate the hydrocarbon accumulations underlying the PTU and develop the unitized substances." *Id.* at 12304-05.

The Appellants were granted extensions of time to appeal from the Director's decision during negotiations with the State under the Stranded Gas Development Act. On October 18, 2006, the Appellants submitted a modified 22nd POD, *id.* at 3089-3105, and oral argument on the proposed modified 22nd POD was held before the Commissioner of DNR on November 20, 2006. Although the Appellants did not request an evidentiary hearing at that time, over 5,000 pages of documents regarding the modified proposed 22nd POD were submitted to the Commissioner prior to the hearing.

The Commissioner issued a Decision on Appeal on November 27, 2006. As summarized by the Commissioner at that time, that decision:

> (1) denies the request for modification of the 2001 Expansion Agreement, as amended, which affects only the expansion leases; (2) affirms the Director's Decision in all respects to the extent it is consistent with this Commissioner's Decision, but the Director's Decision is disapproved to the extent that it can be read to mean the PTU contains certified wells; (3) adopts and incorporates into the Commissioner's Decision the findings and rationale of the Director's Decision as modified by this Decision; (4) rejects the cure or revised 22nd PTU POD submitted by the Lessees on October 18, 2006; and (5) terminates the PTU.

Id. at 5671.

After the Commissioner denied their request for reconsideration, the Appellants appealed the Commissioner's decision to this Court. In a decision issued on December 26, 2007, this Court affirmed in part and reversed in part. *Exxon Mobil Corp. et al. v. State, Dep't of Natural Res.*, 3AN-06-13751 CI (Consolidated) (Dec. 26, 2007) (hereinafter, "2007 Decision").

This Court affirmed DNR's rejection of the proposed modified 22nd POD under Section 10 of the PTUA. Section 10 of the PTUA provides:

> 10. PLAN OF FURTHER DEVELOPMENT AND OPERATION. Within six months after completion of a well capable of producing unitized substances in paying quantities, the Unit Operator shall submit for the approval of the Director an acceptable plan of development and operation for the unitized land which, when approved by the Director, shall constitute the further drilling and operating obligations of the Unit Operator under this agreement for the period specified therein. Thereafter, from time to time before the expiration of any existing plan, the Unit Operator shall submit for the approval of the Director a plan for an additional specified period for the development and operation of the unitized land. The Unit Operator expressly covenants to develop the unit area as a reasonably prudent operator in a reasonably prudent manner.
>
> Any plan submitted pursuant to this section shall provide for the exploration of the unitized area and for the diligent drilling necessary for determination of the area or areas thereof capable of producing unitized substances in paying quantities in each and every productive formation and shall be as complete and adequate as the Director may determine to be necessary for timely development and proper conservation of the oil and gas resources of the unitized areas, and shall:
>
> (a) specify the number and location of any wells to be drilled and the proposed order and time for such drilling; and,
>
> (b) to the extent practicable, specify the operating practices regarded as necessary and advisable for the proper conservation of natural resources. . . .
>
> Said plan or plans shall be modified or supplemented when necessary to meet changed conditions, or to protect the interests of all parties to this agreement. Reasonable diligence shall be exercised in complying with the obligations of the approved plan of development.

PTU REC at 600-01. The Appellants had asserted that the "reasonably prudent operator" language contained in the first paragraph of Section 10, in conjunction with applicable statutes, "ma[d]e clear that DNR may not require the Operator to carry out a plan that is not reasonable from the perspective of the Operator, because it does not adequately protect the lessees' interests." 2007 Decision at 21 (quoting Jt. Br. at 54). This Court rejected that argument and concluded instead that Section 10 grants to DNR the authority to reject a proposed POD without regard to the reasonably prudent operator standard: "To interpret Section 10 of the PTUA to focus on the Lessee's perspective, so as to preclude rejection of any plan of development that the Lessees

asserted was unreasonable for them, irrespective of the public interest, would be inconsistent with" the applicable regulations and statutes. *Id.* at 22. But this Court strived to make clear that the contractual rights of the parties were not fully resolved under Section 10 of the PTUA, concluding that "rejection of a proposed plan of development does not result in automatic termination under the PTUA . . . [and] a separate administrative determination as to the appropriate remedy is required in such instance." *Id.* at 39. Accordingly, this Court reversed the termination of the PTU and remanded the matter to DNR as follows:

> DNR's rejection of the Lessees' proposed modified 22nd Plan of Development . . . is affirmed. DNR's determination as set forth in the Commissioner's Decision and the Decision on Reconsideration that terminated the Point Thomson Unit is reversed and remanded, so as to accord to the Appellants notice and an opportunity to be heard before the agency as to the appropriate remedy when the Department has rejected the proposed modified 22nd Plan of Development for the Point Thomson Unit.

Id. While the Court left open what standard to apply in the remand proceeding, the 2007 Decision did provide that: "on remand, the agency should also consider the import of Section 21 of the PTUA, as amended in 1985 . . . ." *Id.* at 42.

Promptly after this Court issued its December 2007 decision, the Commissioner sent a letter to the Appellants notifying them that DNR "is specifically considering the remedy of termination of the Point Thomson Unit." PTU REC at 30505. The Commissioner invited the Appellants to submit briefing on the following issues: "(1) whether the remedy of unit termination is the appropriate remedy for the Appellants' failure to submit an acceptable 22nd POD; and (2) if termination is not appropriate, what remedy would be an appropriate response to the Appellants' failure to submit an acceptable 22nd POD." *Id.* The Commissioner also alerted the Appellants that DNR's

planned remand proceedings would consist of oral argument and the submission of written briefs unless the Appellants requested and were accorded additional proceedings. *Id.* at 30505-06.

The Appellants responded with a number of procedural requests. *Id.* at 30507-11. The Appellants contended, among other things, that due process required that an independent hearing officer conduct the remand hearing, that the Commissioner institute procedures to prevent *ex parte* contacts with DNR staff on the subject of the remand hearing, and that DNR participate as an adversary during the proceeding. The Appellants also asserted that the hearing should be conducted in accordance with Section 21 of the PTUA. *Id.* at 30507-10, 30519. In that regard, they requested notice under Section 21 "of the specific nature and timing of the development activity DNR now finds necessary and proper . . . and the reasons for that belief." *Id.* at 30517. While the Commissioner denied most of the Appellants' requests, he did grant their request to present witnesses during the remand proceeding. *Id.* at 30513.

On February 19, 2008, the Appellants submitted a 23rd POD as a proposed remedy for DNR's rejection of the 22nd POD. *Id.* at 30000-19. An administrative hearing was then held from March 3 through 7, 2008, during which the Appellants called multiple witnesses to testify and submitted additional written materials. The Commissioner presided at the hearing and also designated Nanette Thompson, an employee of DNR's Division of Oil and Gas, to participate as the hearing officer. *See id.* at 30514. Ms. Thomson had previously appeared as DNR's representative before this Court during the 2007 administrative appeal. During the remand hearing, the

Commissioner was also advised by the same attorneys who had defended the agency in the original appeal.[6]

On April 22, 2008, the Commissioner issued a 75 page decision and concluded: "The 23rd POD proposed by Appellants as the remedy for rejection of the 22nd POD does not meet the standards in 11 AAC 83.303 and does not serve the public interest. It is not adequate to insure timely development as required by Section 10 of the PTUA. The Point Thomson Unit is terminated." *Id.* at 31465. In his decision, the Commissioner explained that the 23rd POD "does not adequately develop all of the known hydrocarbon resources in the unit area." *Id.* at 31464. The Commissioner also concluded, "most importantly, the public's interest would not be protected if I approve the 23rd POD because I do not believe, based on this record, that the Appellants will perform as promised this time." *Id.* at 31465.

The Commissioner's decision on remand expressly considered the import of Section 21, as instructed by this Court, and found that section of the PTUA inapplicable:

> Section 21 does not apply to my evaluation of Appellants' proposed remedy. Section 21 only applies where there is ongoing prospecting, development, or production operations. In this case, there are no ongoing operations. . . . The most recent drilling activity by the unit operator was in 1982, twenty-six years ago. The last seismic data was gathered almost a decade ago, in 1999. Thus, Section 21 is not implicated because there is currently no prospecting, development or production. This construction is most consistent with the PTUA as a whole . . . .
>
> Moreover, Section 21 does not supersede the applicable statutes and regulations which authorize unitization only when it is in the public interest. It does not trump Section 10 and the regulations, which give DNR the discretion to determine the adequacy of a proposed POD. Thus, Appellants' argument that if DNR rejects the 23rd POD, Section 21 shifts

[6] See Order Denying Motion for Partial Trial de Novo dated January 13, 2009 at 8-9.

> the responsibility to DNR to design an acceptable POD is inappropriate as a matter of public policy and inconsistent with DNR's authority.

Id. at 31455-56.

The Appellants sought reconsideration, and in a decision on reconsideration issued on June 11, 2008, the Commissioner affirmed. *Id.* at 31520-44. The Commissioner again rejected the Appellants' proposition that Section 21 applied to these proceedings: "Appellants' efforts to make the decision on remand turn on a DNR presentation of an acceptable POD under section 21 of the unit agreement and the reasonably prudent operator standard is inappropriate because the issue at hand is whether, given Judge Gleason's decision that DNR properly rejected the 22nd POD, it is in the public interest for the unit to continue." *Id.* at 31523.

The Appellants appealed the Commissioner's decision on remand to this Court. *See* AS 22.10.020(d). The parties' briefing on this second appeal was completed on May 26, 2009, and oral argument was held on July 20, 2009.

In their briefing to this Court, the Appellants summarized their primary issues on appeal as follows:

> · The procedures followed by the Commissioner on remand were constitutionally inadequate.
>
> · Before proceeding to termination, DNR needed to comply with its obligations under Section 21 and its duty of cooperation.
>
> · The Commissioner's decision must be reversed since no adjudication of the fundamental issue of material breach has yet occurred.
>
> · DNR's change of development policy did not give rise to a material breach of the unit agreement by the Appellants and could not have provided a basis to terminate.
>
> · Termination was unavailable as a remedy since there was no uncured material breach.

· The Commissioner committed legal error in evaluating the 23rd plan of development.

Br. of Appellants at i-iii.

DISCUSSION

A. Standard of Review

Four different standards apply to a court's review of the merits of an agency's rulings: "(1) the 'substantial evidence test' for questions of fact; (2) the 'reasonable basis test' for questions of law involving agency expertise; (3) the 'substitution of judgment test' for questions of law involving no agency expertise; and (4) the 'reasonable and not arbitrary test' for review of administrative regulations." *ConocoPhillips*, 109 P.3d at 919 (footnote omitted).

For the reasons explained below, this Court finds that the interpretation of Section 21 of the PTUA is dispositive of this appeal. The Appellants contend that DNR was required to comply with the provisions of Section 21 on remand, while DNR argues that Section 21 was inapplicable to the remand proceedings. The interpretation of this contract provision does not require DNR's administrative expertise. Accordingly, on remand this Court should substitute its own judgment to determine this legal issue.[7] *Quality Asphalt Paving, Inc. v. State, Dep't of Transp. & Pub. Facilities*, 71 P.3d 865, 872 n.10 (Alaska 2003) ("[W]e will substitute our own judgment for questions of law not

[7] In contrast, this Court applied the reasonable basis standard of review in its December 2007 decision as to DNR's determination to accept or reject a POD under Section 10 of the PTUA because that determination involved the exercise of agency expertise. 2007 Decision at 17.

involving agency expertise, such as contract interpretation."); *Alaska Hous. Fin. Corp. v. Salvucci*, 950 P.2d 1116, 1119 (Alaska 1997) ("Interpretation of a contract is a question of law on which this court substitutes its own judgment.").[8]

When interpreting a contract, this Court is "to give effect to the reasonable expectations of the parties." *Exxon Corp. v. State*, 40 P.3d 786, 793 (Alaska 2001) (citation omitted), *reh'g denied.* Those expectations should be determined "by looking to the words of the contract and any extrinsic evidence regarding intentions when they entered into a contract, including evidence of the parties' subsequent conduct." *Kay v. Danbar, Inc.*, 132 P.3d 262, 269 (Alaska 2006). The language of the contract is the "most important evidence of [the parties'] intention." *Id.* Unless words are defined otherwise within the contract, they are to be given their "ordinary, contemporary, common meaning." *Norville v. Carr-Gottstein Foods Co.*, 84 P.3d 996, 1001 n.3 (Alaska 2004).

B. Are the Appellants Entitled to a Section 21 Hearing?

Section 21 of the PTUA accords to DNR's Director of the Division of Oil and Gas[9] the authority to "alter or modify from time to time in his discretion the quantity and rate of

---

[8] It bears noting that this Court's 2007 Decision remanded the legal issue of the applicability of Section 21 to the agency to address in the first instance, consistent with the principle of primary agency jurisdiction. *See Eidelson v. Archer*, 645 P.2d 171, 176 (Alaska 1982) ("If [a complaining party] is required to pursue his administrative remedies, the courts may never have to intervene. And notions of administrative autonomy require that the agency be given a chance to discover and correct its own errors. Finally, it is possible that frequent and deliberate flouting of the administrative processes could weaken the effectiveness of an agency by encouraging people to ignore its procedures.") (*quoting McKart v. United States*, 395 U.S. 185, 194-195 (1969)).

[9] The PTUA references the Director of DNR's Division of Lands, a division which has been eliminated since the parties entered into the contract. PTU REC at 595; *see* Revisor's Notes to AS 38.05 (LexisNexis 2008) ("Through administrative reorganization, the Department of Natural

production when such alteration or modification is in the interest of attaining the conservation objectives stated in [the PTUA]" and not in violation of state law. PTU REC at 1268. However, under the amendments to Section 21 agreed to by DNR and the Appellants in 1985, the Director may not exercise this power

> in a manner that would (i) require any increase in the rate of prospecting, development or production in excess of that required under good and diligent oil and gas engineering and production practices; or (ii) alter or modify the rates of production from the rates provided in the approved plan of development and operations then in effect or, in any case, curtail rates of production to an unreasonable extent, considering unit productive capacity, transportation facilities available, and conservation objectives; or (iii) prevent this agreement from serving its purpose of adequately protecting all parties in interest hereunder, subject to applicable conservation laws and regulations.

Id. at 794 (underlining in original). Section 21 also expressly provides that the Appellants are entitled to notice and a hearing whenever the Director seeks to exercise the powers vested in him by that section. *Id.*

The Appellants argue that they were entitled to a hearing under Section 21 on remand because "the entire thrust of DNR's position, from its initial consideration of POD 22 through its most recent brief, has been that the rate of development at Point Thomson has not been fast enough, so that the rate of development needs to be increased and production needs to be obtained." Reply Br. of Appellants at 30-31 (*citing* Br. of Appellee at 2-7).

DNR argues Section 21 is not applicable for several reasons. Its position can be parsed into five arguments: (1) "Section 21 is only triggered when DNR takes unilateral action and seeks to order a change in the rate of prospecting, development or

---

Resources has eliminated the division of lands. Duties and responsibilities given to the division of lands under this chapter have been assigned to other divisions of the department.").

production" and does not apply when DNR simply rejects a POD;[10] (2) Section 21 does not apply when "there are no ongoing operations, and thus no existing functioning infrastructure;"[11] (3) a Section 21 hearing is precluded by this Court's December 2007 decision;[12] (4) to accord a Section 21 hearing to the Appellants in these circumstances would undermine the authority conferred upon DNR by certain statutes and regulations;[13] and (5) according the Appellants a Section 21 hearing in these circumstances would inappropriately shift the burden of establishing a development plan to DNR, or, as stated by DNR in its brief: "the Appellants are trying to manipulate Section 21 in a manner requiring that DNR devise a remedy measurable against Section 21's standards."[14] Each argument is addressed in turn.

1. Is Section 21 Triggered by the Rejection of a Proposed POD?

DNR argues that Section 21 is inapplicable to the remand proceedings because Section 21 does not apply when DNR has rejected a proposed POD. For the following reasons, the Court disagrees.

First, the language of Section 21 itself indicates that its application is not limited to only those situations where DNR seeks to modify an existing POD. When interpreting a contract, a court should strive to give effect and reasonable meaning to all provisions of the instrument. *Alaska Constr. & Eng'g, Inc. v. Balzer Pac. Equip. Co.*,

---

[10] Br. of Appellee at 48.

[11] *Id.* at 47.

[12] *Id.* at 49.

[13] *Id.* at 51-53.

[14] *Id.* at 50.

130 P.3d 932, 937 (Alaska 2006), *reh'g denied*. Here, subsection (ii) of the second paragraph of Section 21 provides that DNR's powers under Section 21 "shall not be exercised in a manner that would . . . alter or modify the rates of production from the rates provided *in the approved plan of development* and operations then in effect *or, in any case*, curtail rates of production to an unreasonable extent . . . ." PTU REC at 794 (emphasis added). Thus, subsection (ii) applies not only to situations in which DNR seeks to change the terms of approved POD but also to "any case" – which would include cases in which there is no approved POD. Additionally, subsection (i) of that same paragraph provides that DNR's powers under Section 21 "shall not be exercised in a manner that would . . . require any increase in the rate of prospecting, development or production in excess of that required under good and diligent oil and gas engineering and production practices" and makes no mention of applying only to approved POD's. *Id.* To interpret Section 21 of the PTUA as applicable only when DNR seeks to alter the terms of an approved POD would be inconsistent with the language of both subsections (i) and (ii) of the second paragraph of Section 21.

Second, as the Appellants noted in their reply brief, throughout the proceedings before both the DNR and this Court, DNR has repeatedly expressed its dissatisfaction with the rate of development of the PTU as a basis for its determinations.[15] In both the initial and amended decisions rejecting the 22nd POD, the Direcctor wrote, "The Director has the authority to modify the rate of development to achieve the conservation objectives under the PTU Agreement, and *I find that increasing the rate of development in the PTU is necessary and advisable.*" PTU REC at 8947, 12328 (emphasis added).

[15] Reply Br. of Appellants at 30-31 (*citing* Br. of Appellee at 2-7).

On appeal from the Director's amended decision, the Appellants submitted a revised 22nd POD. In rejecting this revised POD and ultimately terminating the PTU, the Commissioner largely adopted and incorporated the findings and rationale of the Director's amended decision, *see id.* at 5671, and characterized the Appellants' conduct as "unambiguously refus[ing] to *adequately* explore, delineate, or produce massive known hydrocarbon reserves." *Id.* at 5686 (emphasis added). And after this Court affirmed the Commissioner's decision to reject the revised 22nd POD under Section 10 and remanded the matter to the Commissioner, the Appellants submitted a proposed 23rd POD as an alternative to termination of the PTU. In rejecting this proposed POD, the Commissioner found that the 23rd POD was "*not adequate* to insure timely development" of the PTU. *Id.* at 31465 (emphasis added).

Third, a Section 21 hearing is the natural progression from the rejection of a POD under Section 10 when the proposed 23rd POD was rejected because DNR seeks to increase production in the Point Thomson Unit. This Court's December 2007 Decision addressed the standard under which DNR may reject proposed PODs pursuant to Section 10 of the PTUA and held DNR is accorded the authority under Section 10 to reject a proposed POD based solely upon consideration of the factors set forth in 11 AAC 83.303(a).[16] This Court rejected the Appellants' position that the reasonably prudent operator (RPO) standard should apply to DNR's assessment of a POD, reasoning that Section 10's reference to the RPO standard only obligated the Appellants to act as reasonably prudent operators – it did not obligate DNR to apply that standard when evaluating a proposed Plan of Development. 2007 Decision at 22-24.

[16] 2007 Decision at 22-23.

But when Section 10 is interpreted in that manner, it cannot be the basis for establishing a material breach of the PTUA by the Appellants. Stated differently, in December 2007 this Court recognized that the rejection of a proposed POD under Section 10 of the PTUA does not of itself constitute an act of default or a material breach of the PTUA by the Appellants. *Id.* at 34-35.

2. Does Section 21 Apply if the Current Rate of Prospecting, Development, or Production is Zero?

DNR next argues that Section 21 does not apply because there is no ongoing production in the PTU. By its terms, Section 21's applicability is limited to where DNR seeks to "alter or modify . . . the quantity and rate of [the PTU's] production[.]" PTU REC at 1268. DNR asserts that, "[w]here, as here, there are no ongoing operations, and thus no existing functioning infrastructure (such as active wells, production facilities and pipelines) Section 21 is not the proper provision of the PTUA" to apply to this proceeding. Br. of Appellee at 47.

The question presented is whether "rate of production" as used in Section 21 includes the rate of zero production. Nowhere in Section 21 is there an express limitation of its applicability to DNR proceedings undertaken only when the PTU is actively producing oil or gas. Further, the term "rate" is not defined in the PTUA. Therefore, this Court will look to the "ordinary, contemporary, common meaning" of the word "rate" to discern whether Section 21 of the PTUA should be interpreted to apply where there is no ongoing production in the unit and DNR seeks to increase that rate from zero so as to require production. *Kay*, 132 P.3d at 269.

"Rate" is a word with a variety of meanings. For example, it may refer to the price paid for a particular good or service, Black's Law Dictionary 1375 (9th ed. 2009)

(definition 2 of "rate *n*") (i.e., a hotel room rate), or it may be used as a verb, meaning "to set an estimate on" or "to determine or assign the relative rank or class of." Webster's Ninth New Collegiate Dictionary 976 (1990) (definitions 3a and 3b of "rate *vb*") (i.e., to rate an athlete's abilities). But in Section 21 of the PTUA, it is apparent from the context in which the term is used that "rate" refers to the amount or speed of production in the PTU. Black's Law Dictionary defines "rate" as a "[p]roportional or relative value; the proportion by which quantity or value is adjusted." Black's Law Dictionary 1375 (9th ed. 2009). Other dictionaries provide the following relevant definitions: "a fixed ratio between two things," Webster's Ninth New Collegiate Dictionary 976 (1990) (definition 3a of "rate *n*"), "a quantity, amount, or degree of something measured per unit of something else," *id.* (definition 4a of "rate *n*"), "[a] stated numerical amount of one thing corresponding proportionally to a certain amount of some other thing," The New Shorter Oxford English Dictionary on Historical Principles Vol. 2 2481 (1993) (definition 4 of "rate n^1"), and "[s]peed of movement, change, etc., the rapidity with which something takes place; frequency of a rhythmic action." *Id.* (definition 5 of "rate n^1").

Each of these ordinary, contemporary, and common definitions of "rate" lead this Court to conclude that "rate of production," as used in Section 21 of the PTUA encompasses not only situations in which there is active production, but also the situation in which the rate of production is zero. The referenced dictionary definitions of "rate" provide that the term refers to a proportional value or ratio. In the context of oil production, the common proportional measure of the rate of production is barrels per day, *see, e.g., Amber Res. Co. v. U.S.*, 87 Fed. Cl. 16, 20 (Fed. Cl. 2009); *Trees Oil Co. v. State Corp. Comm'n*, 105 P.3d 1269, 1274 (Kan. 2005); *Harken Sw. Corp. v. Bd. of*

Oil, Gas & Mining, 920 P.2d 1176, 1180 (Utah 1996), and, in the context of gas production, the common proportional measure of the rate of production is cubic feet per day. *See, e.g., Exxon Mobil Corp. v. State, Dep't of Revenue*, 219 P.3d 128, 132 (Wyo. 2009); *Cimarron Oil Corp. v. Howard Energy Corp.*, 909 N.E.2d 1115, 1120 (Ind. Ct. App. 2009). These definitions of "rate" encompass the possibility that oil may be produced at a "rate" of zero barrels per day and gas may be produced at a "rate" of zero cubic feet per day. This reading of "rate" is in line with the usage of the term "rate" in decisions from other courts.[17] *See Amara v. Cigna Corp.*, 534 F.Supp.2d 288, 324 n.18 (D. Conn. 2008) (emphasis added) (referencing an Internal Revenue Service ruling mentioning "a period of *zero* annual rate of accrual"); *State Bd. of Health v. Godfrey*, 290 S.E.2d 875, 877 (Va. 1982) (emphasis added) (referencing an expert witness's testimony regarding "slow or *nil* rates of absorption"); *Nw. Pipeline Corp. v. Adams County*, 131 P.3d 958, 960 (Wash. Ct. App. 2006) (emphasis added) (referencing the possibility that a company would have a "*zero* growth rate"). This Court concludes that the fact that the PTU currently has a zero rate of production does not preclude the applicability of Section 21.

3. Does This Court's December 2007 Decision Preclude a Section 21 Hearing?

DNR also contends that the Appellants were not entitled to a Section 21 hearing on remand because this Court's December 2007 decision precludes such a hearing. DNR argues that this Court's prior decision remanded to the agency for a "remedy"

---

[17] The Court's research has not located any Alaska appellate cases construing the word "rate." However, as noted above, DNR's Director of the Oil and Gas Division initially applied Section 21 in this case to a production rate of zero. *See* p. 5, *supra.*

proceeding. DNR maintains that this Court has already found the Appellants in default of the PTUA and limited the scope of the remand proceedings to giving the Appellants an opportunity to cure a material breach. DNR contends:

> [T]he court has already determined 'what happens' after DNR properly rejects a proposed POD under Section 10 of the PTUA: 'this matter is remanded to the DNR for the purpose of according to the Appellants a hearing on the appropriate remedy to the State upon DNR's rejection of the proposed 22nd Plan of Development.' . . . The court did *not* remand to give Appellants another chance to cure their material breach. Rather, because this court affirmed DNR's rejection of the revised 22nd POD and confirmed that the agency applied the proper legal standards in doing so, the sole issue on remand was 'the appropriate *remedy* to the State upon DNR's rejection of the proposed 22nd Plan of Development.

Br. of Appellee at 49, 78.

DNR accords too broad of an interpretation to the use of the term "remedy" in this Court's December 2007 decision. As explained above, this Court's 2007 Decision did not find that DNR's rejection of a POD under Section 10 constituted a material breach of the PTUA by the Appellants.[18] Rather, in that decision, this Court interpreted Section 10 to accord to DNR the right to reject a POD based primarily on a consideration of the public's interest and remanded the case to address the appropriate remedy in that circumstance. "Remedy," as used in the December 2007 decision, meant the following dictionary definition of the term: "[t]he means of enforcing a right." Black's Law Dictionary 1407 (9th ed. 2009). A Section 21 hearing is the contractual means by which DNR may enforce its right to seek increased production in the PTU. Stated differently, DNR has the right to seek increased production in the PTU, but it can only enforce that right in accordance with the provisions of the PTUA, including Section 21.

---

[18] *Supra* at 17.

4. Does the application of Section 21 after DNR rejects a proposed POD undermine DNR's authority conferred by statutes and regulations?

DNR also asserts that if Section 21 is applicable when DNR rejects a proposed POD, it would undermine the agency's authority to reject a POD under the applicable statutes and regulations. In this regard, DNR asserts:

> Section 21's "good and diligent" practices standards, which Appellants assert should have been applied on remand, are very different in kind from the criteria set out in Section 10 and 11 AAC 83.343. The phrase "good faith and diligent oil and gas engineering and production practices" was added as part of the 1985 amendments to the PTUA, and thus must be read consistently with 11 AAC 83.343 which was in existence in 1985 ... Injecting Section 21 standards into this analysis would have taken away the Commissioner's ability to consider the unit agreement, statutory, and regulatory POD criteria.[19]

DNR adds, "If section 21 [were] applied in the manner advocated by Appellants, its 'good and diligent' practices standard would be impermissibly elevated over the 'public interest.'"[20]

This Court finds DNR's argument in this regard to be unavailing. Rather, this Court agrees with the Appellants' analysis of the applicable statutory and regulatory provisions that apply when DNR rejects a proposed POD on the basis that it does not increase the rate of prospecting, development, or production to a level satisfactory to DNR.[21] And while this Court's 2007 Decision held that Section 10 of the PTUA accords DNR considerable discretion to reject a proposed POD, Section 21 accords specific contractual rights that the Appellants may then exercise to protect their interest in the

---

[19] Br. of Appellee at 53 (footnotes omitted).

[20] *Id.* at 54.

[21] *See generally* Reply Br. of Appellants at 29-31, including footnotes therein.

PTU. This contractual interpretation is consistent with the underlying statutes that were in place when the PTU was created in 1977 and incorporated into Section 1 of the PTUA. *See former* AS 38.05.180(m) and (n).[22]

5. Does a Section 21 Hearing Impermissibly Shift the Burden to DNR to Determine the Appropriate Rate of Production?

DNR's final argument with respect to the applicability of Section 21 asserts that the agency would be inappropriately "saddled with the burden of designing an adequate POD" at Point Thomson if the PTUA is interpreted to require a Section 21 hearing whenever a POD is rejected. Br. of Appellee at 52. But this Court finds that the provisions of Section 21 are reasonable contractual burdens that DNR knowingly assumed both in both 1977 and again when the PTUA was amended in 1985.[23]

For the foregoing reasons, upon DNR's rejection of the 22nd POD under Section 10, the Appellants are entitled to a hearing in accordance with Section 21 of the PTUA.

C. Further Proceedings and the Appellants' Right to Due Process

This Court having determined that the Appellants did not receive the Section 21 hearing that they should have been accorded under the PTUA, it is clear that further proceedings are necessary. The Appellants have taken the position that "it is now

---

[22] *See also* 11 AAC 83.343, adopted in 1981, which indicates that if the POD is disapproved, the Commissioner of DNR may propose modifications that would qualify the POD for approval, but is otherwise silent on how such modifications are to be proposed. *Cf.* 11 AAC 83.336, adopted in 1981, discussed in this Court's 2007 Decision at 36-39.

[23] Moreover, it would appear that the burden on DNR may well be considerably less onerous in a case such as this in which no production has been occurring, given the language contained in Section 20(c) of the contract, which provides that after a valuable discovery of unitized substances has been made, the PTUA shall remain in effect only for "so long as unitized substances can be produced in quantities sufficient to pay for the cost of producing same from wells on unitized lands within any participating area established hereunder . . . ." PTU REC at 608-09, 9448.

necessary that the dispute be referred to an independent hearing officer." Reply Br. of Appellants at 15 (citing AS 44.64.030(b)). Alternatively, the Appellants asserted in their opening brief that this Court should grant a trial *de novo*. Br. of Appellants at 94. For its part, DNR asserted that briefing of any remedy issues should be deferred until this Court has determined whether further proceedings are necessary. It maintains that if this Court finds a due process violation, "it makes the most sense to wait until the court identifies how DNR violated due process and exactly what process is due Appellants before the parties argue whether trial de novo or remand is the best way to address any deficiencies." Br. of Appellee at 43.

Accordingly, analysis of the due process issues raised by the Appellants is clearly necessitated.[24] The Appellants have identified several procedures that the Commissioner employed on remand that they assert were constitutionally inadequate. They maintain that DNR failed to separate the advocacy of its proprietary interests from its quasi-judicial adjudicatory functions by permitting the same staff and counsel who had defended the first appeal to assist the Commissioner in the remand proceeding. Br. of Appellants at 24-27. They also assert that DNR failed to accord the Appellants an adversarial hearing with the minimum procedural protections consistent with a fair proceeding. Specifically, they maintain that they were not accorded a neutral decision maker, adequate notice and adequate discovery, an appropriate burden of proof, an adversarial hearing in which DNR staff participated as a party, and a preclusion on *ex parte* contacts between the decision maker and any party. *Id.* at 27-33.

---

[24] The Court should address constitutional issues on appeal "only when a case cannot be fairly decided on other grounds." *Frost v. Spencer*, 218 P.3d 678, 682 (Alaska 2009).

This Court previously found in its 2007 Decision that DNR does have the authority to administratively adjudicate disputes related to the PTUA.[25] But it must do so consistent with the constitutional protections that are to be accorded to all litigants. "An impartial tribunal is basic to a guarantee of due process."[26] While an administrative agency may perform adjudicatory functions, it must do so in a way that adequately separates the adjudicatory function from the agency's administrative and investigatory functions so as to insure that all parties appearing before the agency are accorded their constitutional right to due process.[27]

In this case, it is undisputed that during the remand proceedings before the agency, the Commissioner, acting in an adjudicative role, was advised by the same attorneys who had represented the agency in the first appeal to this Court. Those attorneys are also representing the agency in this second appeal. In addition, the Commissioner appointed Ms. Thompson to serve as the hearing officer at the remand proceedings. She had previously been DNR's representative when the agency was defending its first decision in the 2007 appeal before this Court.

The Appellants assert that when the same attorneys who had defended the agency in the first appeal, together with Ms. Thompson, provided legal guidance to the Commissioner in private during the remand proceedings, it constituted a deprivation of their constitutional right to due process, citing *In re Robson*, 575 P.2d 771. In *Robson*, an attorney faced disciplinary proceedings before the Disciplinary Board of the Alaska

Bar Association. A member of the Bar Association's Executive Director's staff had investigated Mr. Robson's alleged attorney misconduct and prosecuted the case before the Board. The Executive Director was then present during the Disciplinary Board's private deliberations, although there was no indication that she actually took any active part in the deliberations. The Bar asserted that she was present during deliberations "to advise [the Board] on procedural matters, should the need arise."[28]

Mr. Robson then appealed the Board's decision to suspend his license to practice law, contending that he was deprived of procedural due process because the Executive Director had been present during the Board's deliberations. The Alaska Supreme Court agreed and held:

> When an administrative official has participated in the past in any advocacy capacity against the party in question, fundamental fairness is normally held to require that the former advocate take no part in rendering the decision. The purpose of this due process requirement is to prevent a person with probable partiality from influencing the other decision-makers.[29]

The Appellants assert that just as the Executive Director in *Robson* had participated in an advocacy capacity against Mr. Robson, so had the attorneys and Ms. Thompson previously participated in an advocacy capacity against the Appellants in this case, such that their assistance to the Commissioner during the remand proceedings constituted a violation of the Appellants' constitutional right to due process.[30]

---

[28] *Id.* at 775.

[29] *Id.* at 774. *See also In re Brion*, 212 P.3d 748, 754-55 (Alaska 2009); *Amerada Hess Pipeline Corp. v. Regulatory Comm'n of Alaska,* 176 P.3d 667, 677 (Alaska 2008) (per curiam); *In re Walton*, 676 P.2d 1078, 1082 (Alaska 1983). *Cf. Caperton v. A.T. Massey Coal Co.*, 129 S.Ct. 2252, 2262 (2009).

[30] Br. of Appellants at 26-27.

DNR asserts that *Robson* is distinguishable. It asserts that DNR's lawyers at the Attorney General's Office and private outside counsel "only provided legal guidance to the agency and were not 'advocates' or participants at the hearing"[31] and that Ms. Thompson's role on remand was not problematic because "Ms. Thomson was *not* the decision maker in the remand proceedings."[32]

This Court finds DNR's arguments on this issue to be unavailing. The advocates for DNR in the first appeal before this Court were advising the Commissioner during the subsequent remand proceedings before the agency. As DNR's attorneys before this Court in the first appeal, they "participated in the past in an advocacy capacity against the [Appellants]."[33] Furthermore, the hearing officer appointed by the Commissioner to assist him at the remand proceedings defended DNR's position in the original appeal before this Court, participating on behalf of the agency as the agency's unit manager for the PTU.[34] Under *Robson* and the due process requirement articulated by the Alaska Supreme Court in that decision, these advocates were precluded from providing legal guidance or, as was the case in *Robson*, simply being present whenever the Commissioner deliberated on remand. As such, the private interaction of these advocates with the Commissioner in the course of the remand proceeding resulted in a denial of due process to the Appellants, as it failed to "assure both the fact and

[32] *Id.* at 44 (emphasis in original).

[33] *Robson*, 575 P. 2d at 774.

[34] *See* audio recording of April 17, 2007 hearing. Media Number 3AN-6307-62.

appearance of impartiality in the [agency's] decisional function." *Robson,* 575 P.2d at 775.

DNR argues that any procedural infirmity was rectified by the Commissioner's issuance of a written decision on remand.[35] In this regard, it asserts that "the case that is more applicable to these facts is *Alyeska Pipeline Service Company v. State, Department of Environmental Conservation*."[36] But the *Alyeska* decision involved the propriety of an administrator making a written fee determination on an $8,073 fee invoice for costs incurred by the administrator related to a permit challenge -- a circumstance quite distinct from the termination of the PTU that is at issue in this litigation. *See Alyeska,* 145. P.3d at 563-64; *see also Mathews v. Eldridge*, 424 U.S. 319, 334-35 (1976) (one factor in determining the extent of process that is due is the nature of the private interest at stake).

Just as the Alaska Supreme Court found in *Robson*, there is no indication that the advocates in this case took any active part in the substantive deliberations of the Commissioner, and this Court has no doubt that the purpose of their private meetings with the Commissioner during the remand proceeding was entirely ethical.[37] Nonetheless, in order to assure both the fact and appearance of impartiality when the Commissioner was exercising his decisional function, DNR's litigation counsel should not have been providing legal guidance to the Commissioner at the remand hearing, nor

[37] *See Robson*, 575 P. 2d at 775.

should DNR's agency representative in the first appeal have served in the position of hearing officer at the remand proceeding.

The remainder of the alleged due process violations would appear to be substantially mooted by this Court's rulings as set forth above concerning the applicability of Section 21 and the constitutional entitlement of each party to a proceeding in conformance with the dictates of procedural due process.

In light of the foregoing, the parties are invited to provide the Court with further briefing regarding whether this Court should again remand this matter for an administrative proceeding[38] or retain jurisdiction and conduct a *de novo* proceeding. With respect to a *de novo* proceeding, the parties' briefing may address whether the appointment of a special master pursuant to Civil Rule 53 is appropriate. The parties shall each have thirty days from the date of this decision to submit additional briefing on these issues. No responsive briefing shall be filed thereafter unless otherwise ordered.

CONCLUSION

For the foregoing reasons, the DNR Commissioner's Findings and Decision on Remand is REVERSED. The parties shall have thirty days from the date of this decision to submit additional briefing as set forth above. This Court shall retain jurisdiction over this matter pending further order of the Court.

Subject: Pt Thomson hearing

Hi Cindy,

Just wanted to let you know that Matt Findley, Attorney with Ashburn & Mason, will be calling in for tomorrow's hearing.

Also, Joe Balash (Dep. Comm) and Jon Katchen (Inter-governmental Coordinator, Commissioner's Office) of DNR will be available. As will the Attorney General, Michael Geraghty.

Please let me know if I can be of further assistance.

6/12/12 POINT THOMSON SETTLEMENT: ANALYSIS AND LEGAL ISSUES; POINT THOMSON PLAN OF OPERATION: EXXONMOBIL

<TARGET><BILL></BILL><SUBJECT>6-12-12 POINT THOMSON SETTLEMENT ANALYSIS AND LEGAL ISSUES; POINT THOMSON PLAN OF OPERATION
EXXONMOBIL</SUBJECT><COMM>SJUD27</COMM></TARGET>

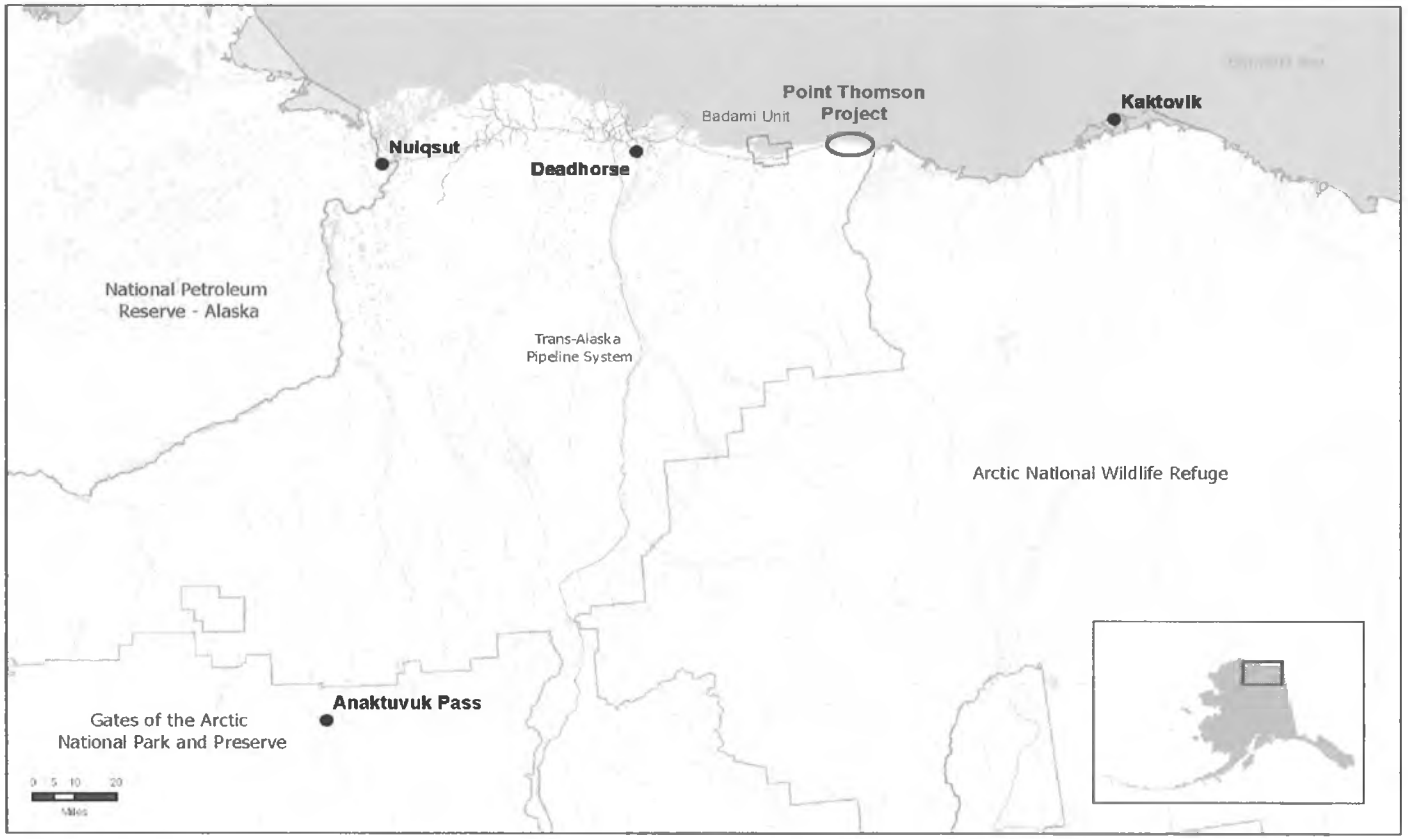
Point Thomson Plan of Operations

POINT THOMSON PROJECT

ExxonMobil's Commitment to Alaska

POINT THOMSON PROJECT

- Point Thomson is a strategic investment, critical for North Slope gas commercialization
  - Represents ~ 25% of discovered North Slope natural gas resources
- Producing Alaska's resources is a positive part of the development cycle
  - Generates significant direct value and new opportunities for the State and its citizens
- ExxonMobil expects to continue to work in Alaska for many years to come
  - We are committed to long-term, responsible resource development



Central Pad Evolution

POINT THOMSON PROJECT

Central Pad- April 2011

POINT THOMSON PROJECT

PTU-3

PTU-16

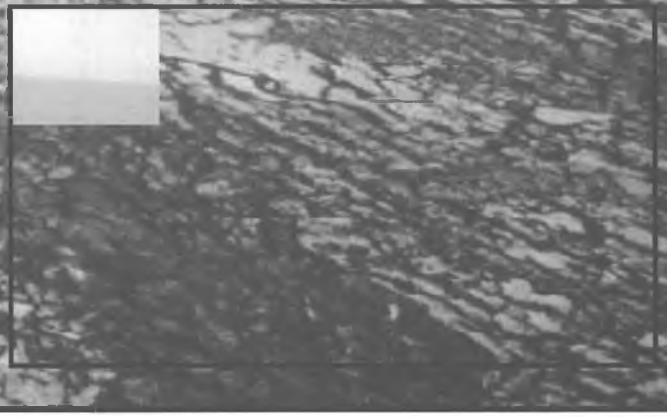
PTU-15

Spare Conductor

PTU-15 and PTU-16 Drilling Accomplishments

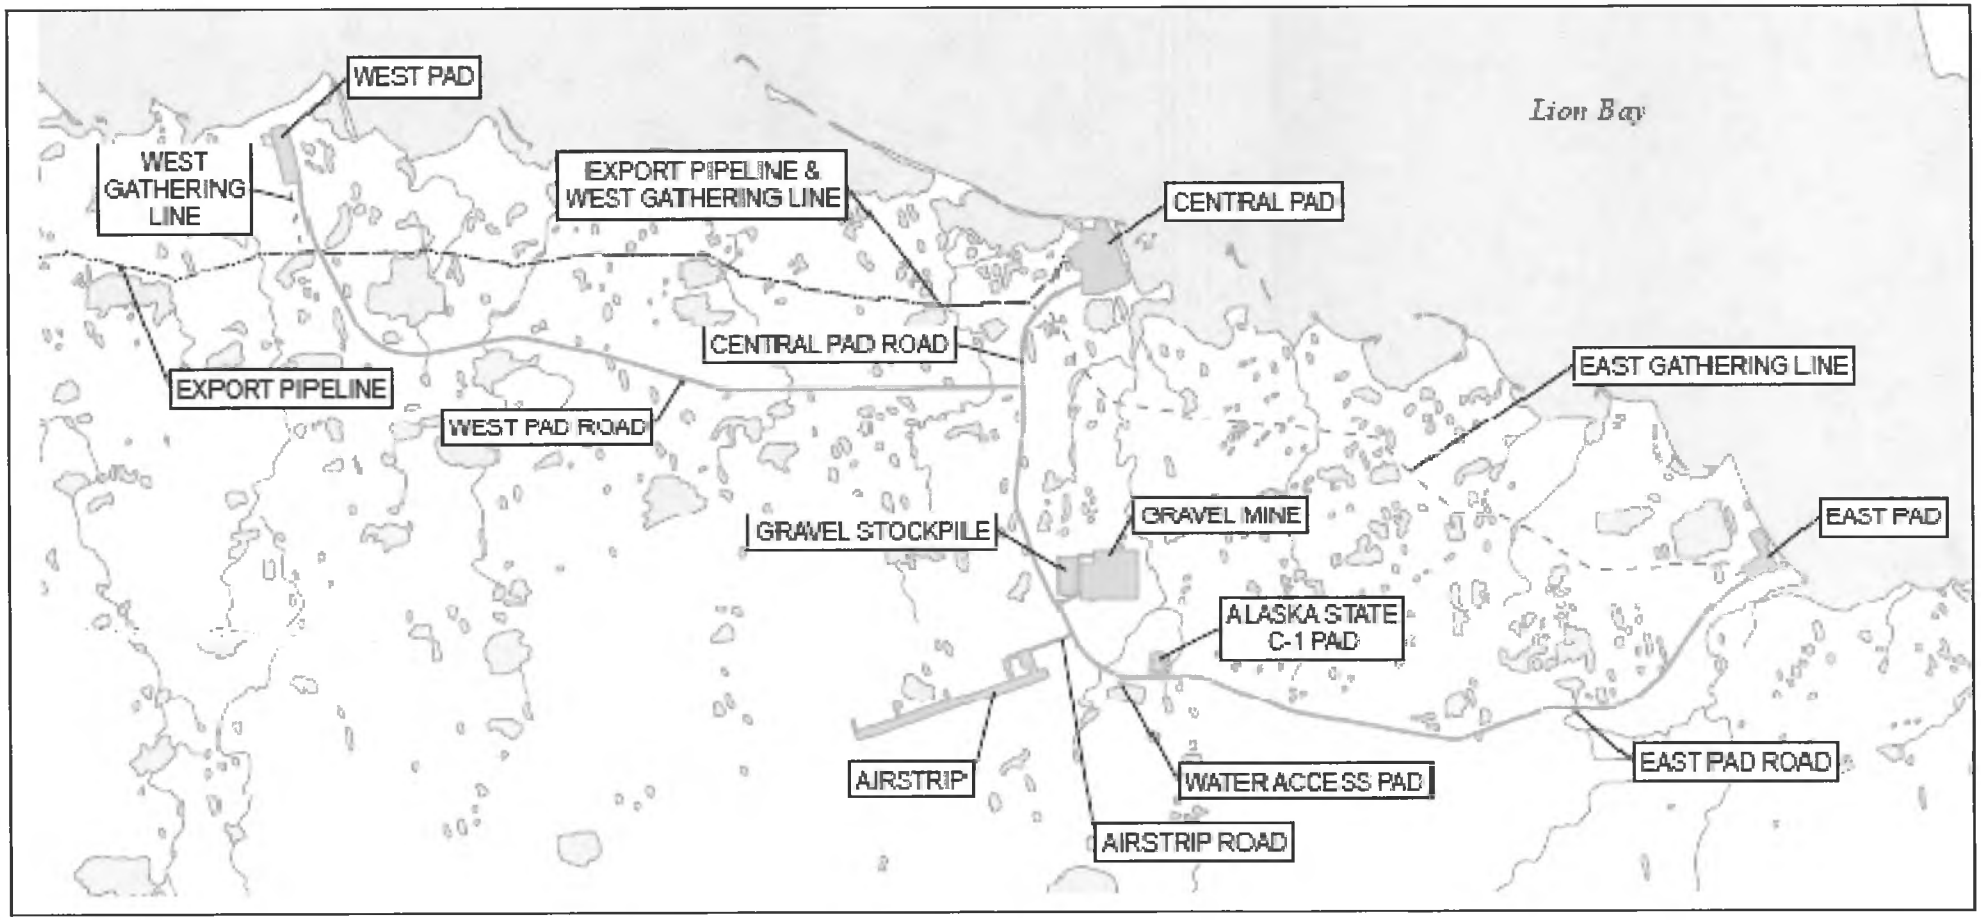
POINT THOMSON PROJECT

- Zero safety incidents (>3.5M hours w/o LTIs)
- Exemplary environmental performance
- Robust marine mammal protection plan
  - ➢ Recognized by USFWS for handling of a denning polar bear along ice road in April 2010
- Employment/economic benefits to community
  - ➢ 1,500 people from over 150 companies worked on project in 2010
  - ➢ Community outreach programs



Field Layout

POINT THOMSON PROJECT

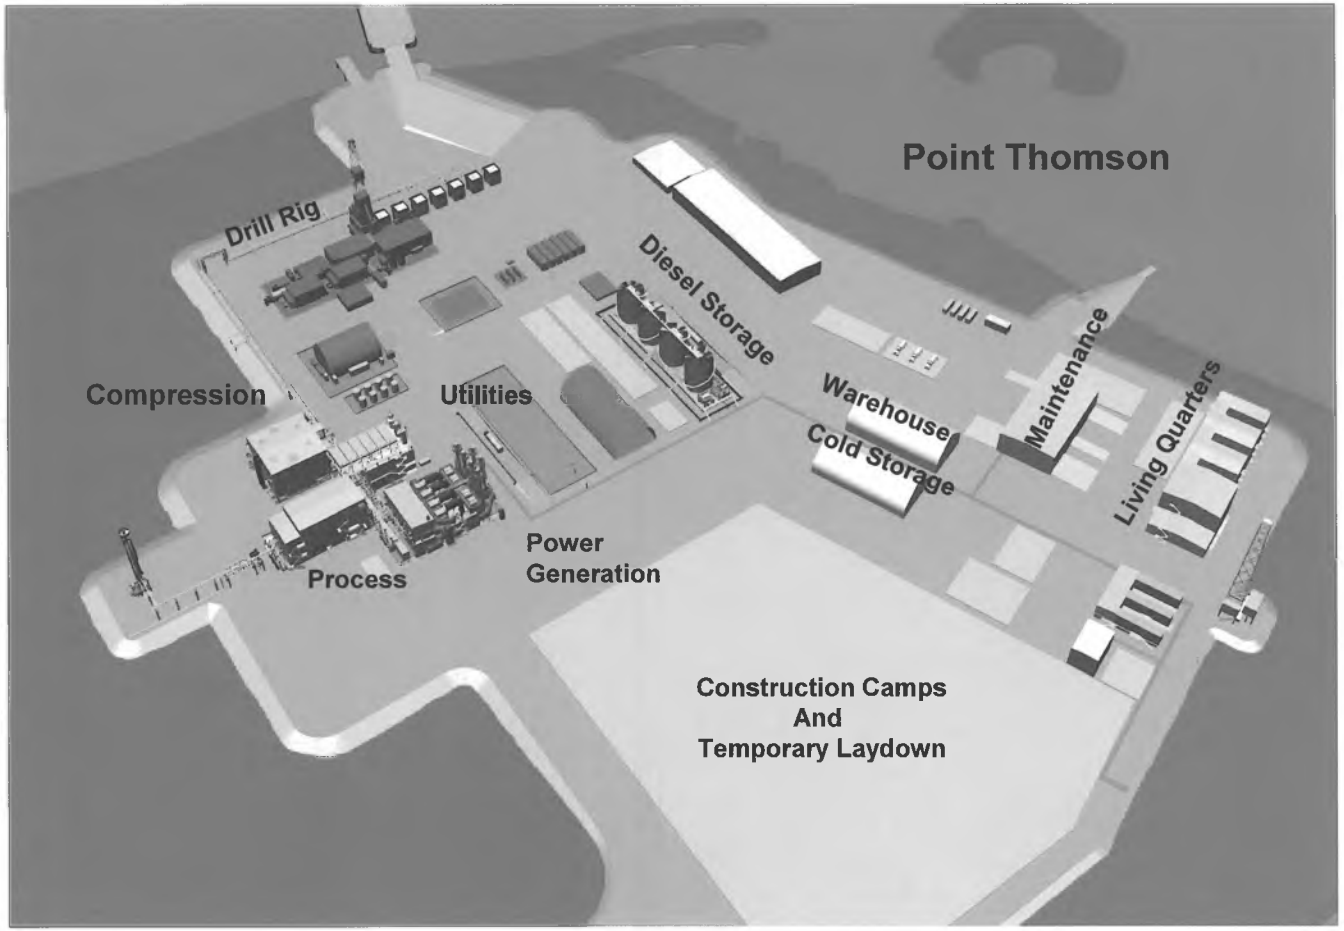


Initial Production Facility (IPS)

POINT THOMSON PROJECT

Scope

- Produce 10,000 barrels per day of condensate into TAPS
  - Cycle 200 million cubic feet per day of natural gas
- Major facility components:
  - Gas processing plant
  - 22 mile pipeline to Badami
  - Camp
  - Airstrip
- Small environmental footprint
  - Directional drilling from shore
  - Ice road construction (no off-lease permanent roads)
  - Utilize existing pads
- Nearly all facilities are re-useable

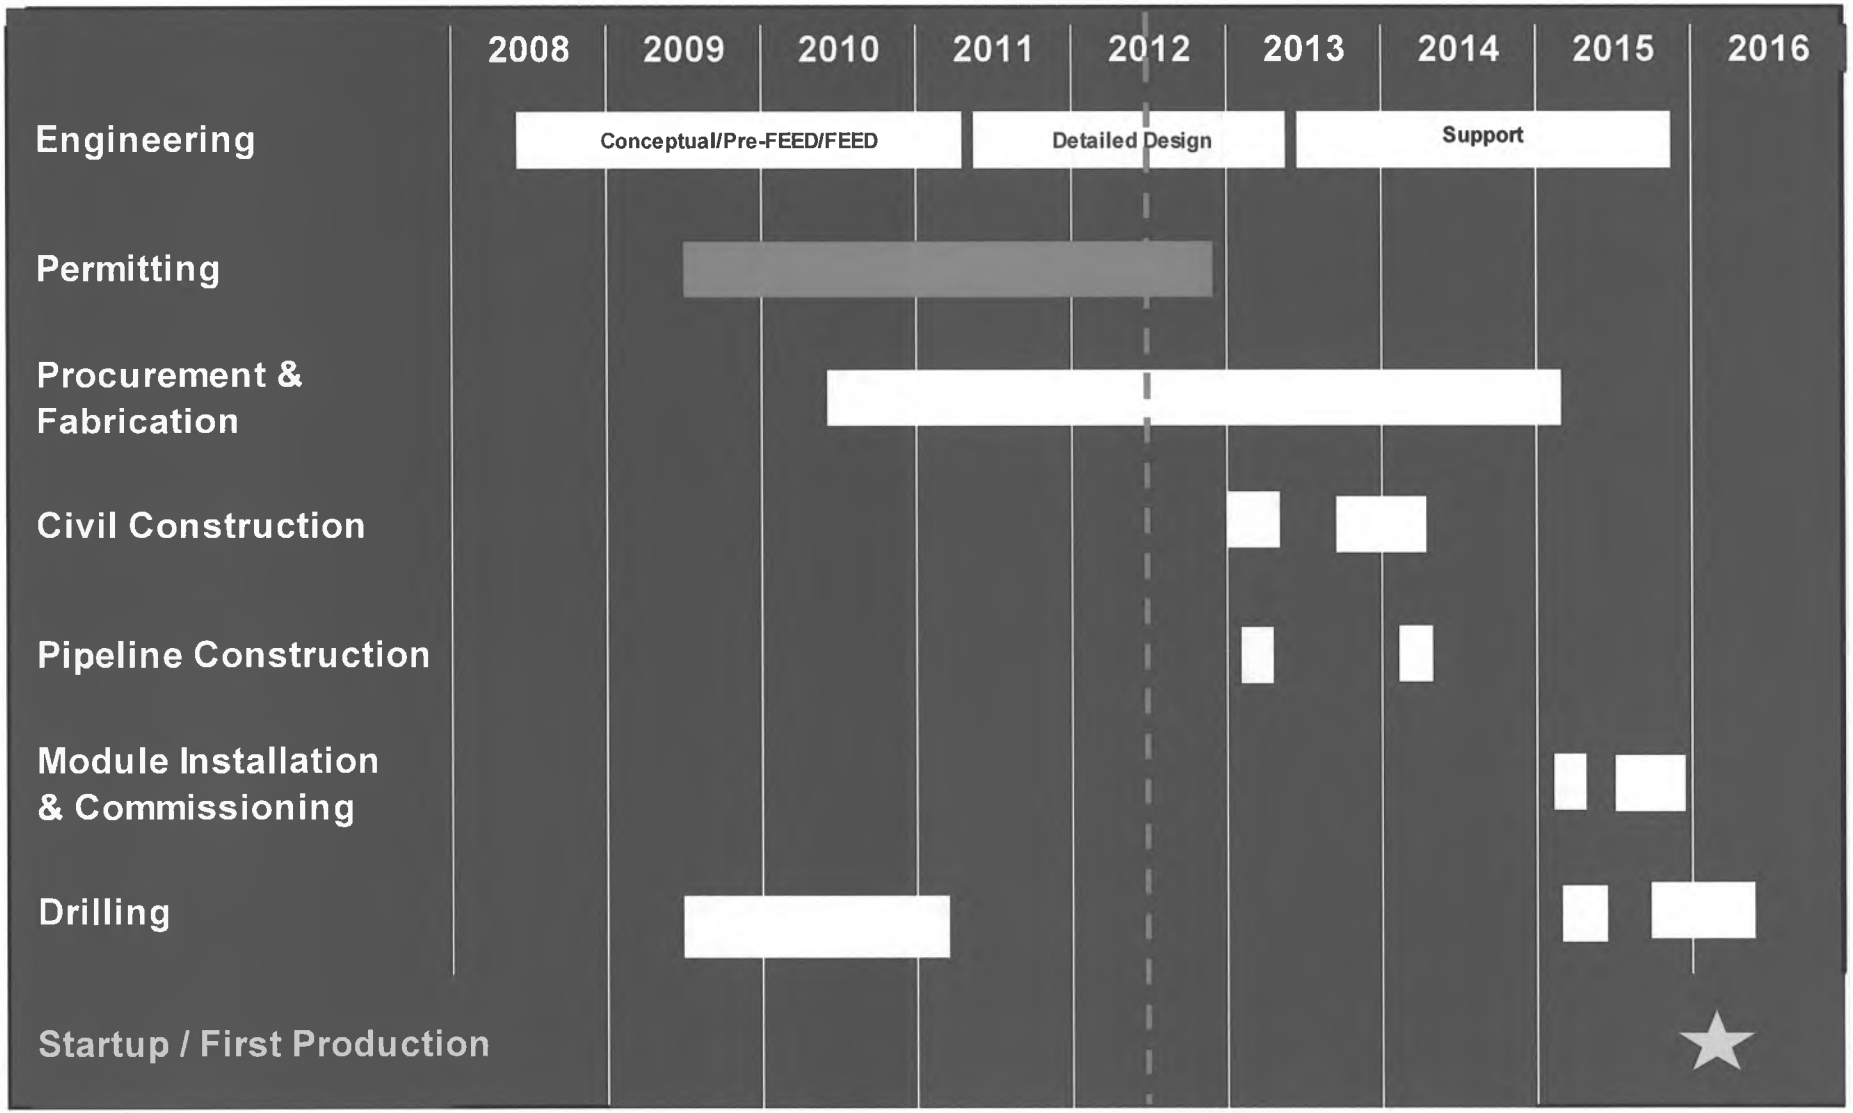


Key Challenges

- High reservoir pressures require 10,000 pounds per square inch gas compression to re-inject
- High carbon dioxide (CO_2) content at high pressure requires corrosive resistant design
- Minimal in-field infrastructure; materials and equipment supplied via coastal barge and sea ice roads
- Limited windows to perform drilling, logistics (ice road / barging) and construction activities

Clear and Committed Timeline

POINT THOMSON PROJECT



Today's Status

POINT THOMSON PROJECT

Engineering:

- Infrastructure and Pipeline engineering nearing completion by PND and Michael Baker, Jr., respectively
- Telecommunications engineering underway with GCI
- Facilities engineering ~ 40% complete

Procurement and Contracting:

- Multiple purchase orders placed, all major equipment on order
- Major contracts awarded including: Infrastructure/Civil Construction, Export Pipeline, and Logistics

Fabrication and Construction:

- Fuel Tank Construction commenced
- Execution Plans under development for Winter 2012-2013 construction season

Permitting:

- Draft Environmental Impact Statement
- All major State and North Slope Borough permit applications have been submitted

Community Engagement and Consultation

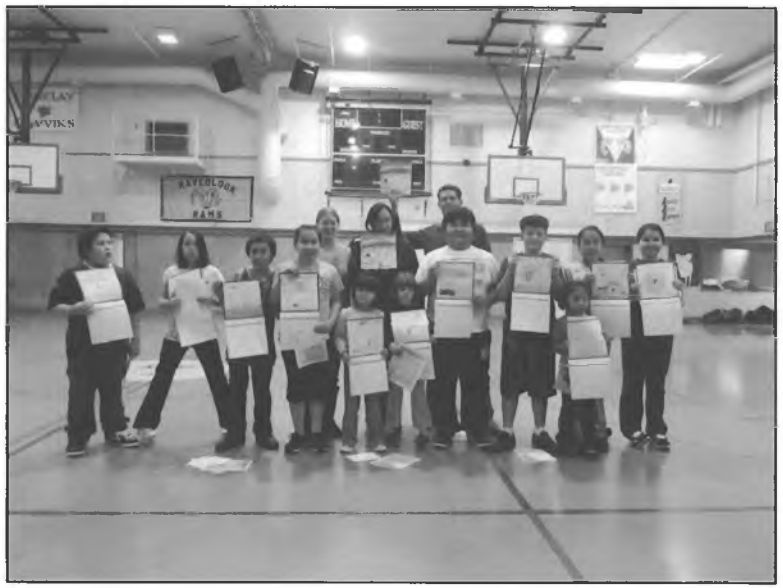
POINT THOMSON PROJECT

- Kaktovik Point Thomson Working Group established
  - Consultation with Village and Corporation leadership
- Community Meetings held in Kaktovik
  - Inform local residents and solicit feedback
- Specific design measures adopted as a result of local input
  - External paint colors and textures selected to reduce offsite visual effect
  - Export pipeline sections and gathering lines designed to withstand accidental bullet strikes
  - Pipelines elevated minimum 7-foot height above tundra for caribou migration
- Employment and Economic Benefits
  - Contracts with Regional and Village Corporations
  - Annual Career Fairs in Kaktovik
  - Subsistence Representatives, Marine Mammal Observers and Bear Monitors hired and trained
- Coordination with Traditional Whaling
  - Consultation with Kaktovik whaling captains and AEWC
  - Conflict Avoidance Agreement
- Protection of Native Allotments
  - Letters to owners/heirs
  - Ice road private property signage
- Education and Cultural Support

Direct benefits to the State of Alaska

POINT THOMSON PROJECT

- Commercializing North Slope natural gas resources is an important step forward for Alaska's economy and future, providing:
  - Business and job opportunities for Alaskans
  - New, long-term revenues for the state
  - Reliable sources of in-state energy supplies
  - Opportunity for further North Slope oil and gas exploration and resource development
- The Point Thomson Project provides direct benefits to the State of Alaska
  - Training and jobs for Alaskans
  - Revenues for Alaska
    - Native Corporations
    - North Slope Borough
    - State of Alaska
  - Increased throughput for Trans Alaska Pipeline
  - Continued community investment



Point Thomson Project

POINT THOMSON PROJECT

- Laying the foundation for future gas monetization on the North Slope

- Our vision includes:
  - Distinguishing our project with superior performance in safety, security, health, environment, quality, cost and schedule
  - Being good neighbors and partners with the communities in which we work
  - Building trust with the State of Alaska

VIA EMAIL TO SENATOR_JOE_PASKVAN@LEGIS.STATE.AK.US
& 1ST CLASS MAIL

The Honorable Joe Paskvan
Alaska State Legislature
1292 Sadler Way, Suite 308
Fairbanks, AK 99701

Re: Point Thomson Settlement

Dear Senator ~~Paskvan~~ Joe:

Thank you for your letter of April 30, 2012. You have asked a number of questions about the State's settlement of *Exxon Mobil Corporation v. State, Department of Natural Resources*, 3AN-06-13751 (consolidated), the litigation about the Point Thomson Unit. I welcome the opportunity to respond, with the assistance of the Department of Natural Resources.

Initially, I would like to clarify some aspects of the terms of the Point Thomson Settlement agreement ("the agreement"), in particular, the reference to a gas pipeline. While the agreement refers to two pipelines, it offers only *one* development path—that is, a Major Gas Sale as defined in Section 2.16—that contemplates a gas pipeline leaving the North Slope. Similarly, the State has agreed to take its royalty-in-kind under only *one* development path, *i.e.*, where the WIOs (the Point Thomson working interest owners) produce Point Thomson gas and inject it into Prudhoe Bay to aid in enhanced oil recovery. The State has not made any agreements affecting its royalty rights should the WIOs sanction a Major Gas Sale and construct a large-scale pipeline off the North Slope.

A brief summary of the development paths in the agreement may be helpful. As described below, in order to maintain their Point Thomson acreage, the Point Thomson WIOs must complete the IPS Project:

- **IPS Project:** The agreement requires the WIOs to complete the IPS Project, which is a gas cycling project that will result in approximately 10,000 barrels per day (bpd) production of liquid condensate into TAPS. The WIOs have completed the two wells necessary for this project (PTU 15 and PTU 16) and must complete construction of the production infrastructure by 2015, including construction of a common-carrier pipeline with the capacity to transport 70,000 bpd of liquids to existing infrastructure

at Badami.[1] The agreement provides strict forfeiture penalties should the WIOs not complete the IPS Project.

The agreement also addresses what happens after the IPS Project. Specifically, the agreement contemplates three post-IPS Project development scenarios, one of which the WIOs must choose by year-end 2019 or they will lose Point Thomson acreage. DNR thoroughly evaluated these development alternatives and concluded that, as set forth and specifically defined in the agreement, they are all in the public interest. The agreement provides for three different development paths because it is not clear today what the optimal Point Thomson development will be more than five years from now.

The three post-IPS Project development scenarios are:

- **Major Gas Sale:** (referred to in your letter as Alternative A.) This development path is the large-scale gas pipeline project as defined in Section 2.16, now likely to be an LNG project. The pipeline capacity must be greater than 500 million cubic feet per day (mmcf/d) and it must transport gas "off the North Slope." In the agreement, the State has made no royalty commitments with respect to a Major Gas Sale. Rather, the State retains its full royalty rights under the leases and Alaska law, including the discretion to take royalty in-value or in-kind. The agreement is also clear that in proceedings before the AOGCC, DNR retains the right to oppose a Major Gas Sale development proposal at Point Thomson if the proposed project is inconsistent with the agreement's terms (including Section 2.21) and applicable state law. Under this development path, gas would be available for in-state use and export.

- **Expanded Gas Cycling:** (Alternative B.) Under this option, the WIOs would increase IPS Project production by at least 10,000 to 20,000 bpd of gas condensates (DNR expects that if the WIOs choose this option, they likely will produce well beyond 30,000 bpd of gas condensates due to project economics). Under this development path, Point Thomson gas would not be available for in-state use or for export.

- **Prudhoe Bay Injection Project:** (Alternative C.) Under this development path, the WIOs would "blow down" Point Thomson, delivering the resulting liquids production into TAPS and transporting the gas to Prudhoe Bay for injection in order to enhance oil recovery at Prudhoe Bay. This development scenario does not address construction of a gas pipeline off the North Slope. It would require only a pipeline running between Point Thomson and Prudhoe Bay. This project was added to the agreement to provide for a development path at year-end 2019 if no Major Gas Sale has occurred. Both the State and the WIOs are optimistic that this project, if chosen, will be an intermediate step toward a later Major Gas Sale. Indeed, the construction of the gas pipeline between Point Thomson and Prudhoe Bay would serve as a pre-investment to a future Major Gas Sale and positions Point Thomson gas for a future

---

[1] The completion date of this project has been set back one year due to the Corps of Engineers' repeated delays in approving the WIOs' EIS application.

> Major Gas Sale. To select this development path, the WIOs must demonstrate that the enhanced oil recovery from Prudhoe Bay would offset any liquids loss from Point Thomson. *See* Section 2.21. In addition, the WIOs must persuade the AOGCC that this development option will satisfy state law requirements for conservation and maximum recovery. And the agreement is clear that DNR is free to oppose any development proposed to the AOGCC unless the proposal is consistent with the agreement's terms (including Section 2.21) and applicable state law.

Two elements of the Prudhoe Bay Injection Project seem to be causing confusion: (1) the State's agreement to take its royalty in-kind, and (2) the WIOs' commitment to make gas volumes available for sale to the State when it commits to this project. As explained in more detail below, taking royalty in-kind will ultimately maximize its value, and the immediate availability of gas will ensure a supply for the State while waiting for a large-scale gas pipeline project.

(1) State's agreement to take its royalty in-kind under the Prudhoe Bay Injection Project.

Under Alaska law and the terms of the Point Thomson leases and the unit agreement, royalty obligations attach when the gas leaves the unit boundary. In the event the WIOs choose and complete the Prudhoe Bay Injection Project, the State has agreed to take its royalty in-kind for gas that leaves the Point Thomson Unit boundary destined for injection at Prudhoe Bay. The State agreed to do this because the value of gas produced from Point Thomson and injected into Prudhoe Bay initially would be minimal. The State will therefore derive greater value from the gas by taking it in-kind and either: (a) having it injected into Prudhoe Bay along with the WIOs' gas to aid in enhanced oil recovery—which increases the State's royalty revenue from the resulting increased oil production; or (b) instead of re-injecting the gas, utilizing it for some other purpose, such as to fill an in-state gas pipeline. The agreement also provides that should the State choose to inject its in-kind gas into Prudhoe Bay, it can later withdraw this gas for in-state use. The State will not be responsible for any costs or fees associated with keeping its royalty-in-kind gas in the Prudhoe Bay reservoir.

The agreement also provides another choice for the State's royalty-in-kind gas —to leave it in Prudhoe Bay in anticipation of an eventual Major Gas Sale and construction of a large-scale pipeline off the North Slope. Under this scenario, once the big pipeline is complete, the WIOs would produce into this pipeline: (1) Prudhoe Bay gas; (2) Point Thomson gas that has been injected into Prudhoe Bay; and (3) previously unproduced gas from the Point Thomson field. For its part, the State could sell its in-kind gas that had been injected into Prudhoe Bay and put it in the big pipeline. The agreement also entitles the State to take payment in value from the Point Thomson lessees after project start-up of a Major Gas Sale for the State's Point Thomson in-kind gas that had been injected into Prudhoe Bay. By negotiating these royalty options, the State will derive greater royalty value than it would have by taking its royalty in-value when the gas is first produced from Point Thomson for injection into Prudhoe Bay.

(2) The WIOs' commitment to make gas volumes available for sale to the State if they choose the Prudhoe Bay Injection development path.

The Prudhoe Bay Injection Project also includes a commitment by the Prudhoe Bay WIOs to make significant gas from Prudhoe Bay immediately available to the State when they commit to the Prudhoe Bay Injection Project. This provision is intended to assure a sufficient supply of gas for the State if the WIOs choose this development option, because any "big pipeline" Major Gas Sale project would, at best, be several years away and potentially more. For example, if the WIOs committed to the Prudhoe Bay Injection Project in 2019, the State might need to take immediate action to secure an in-state gas supply. This is partly why the State has agreed to take royalty-in-kind—to have its own gas available for in-state needs as may be appropriate. To utilize its royalty-in-kind gas, however, the State would have to wait until the WIOs complete the Prudhoe Bay Injection Project. To ensure a supply of gas for State projects in the interim, the agreement provides that the State may purchase gas *immediately* upon the WIOs' commitment to a Prudhoe Bay Injection Project.

It is important to note that under this "make gas available immediately" provision, the State would purchase Prudhoe Bay gas owned by the Prudhoe Bay WIOs as a simple commercial sale. It would not be a purchase of, or an advance on, any eventual royalty-in-kind gas from Point Thomson. The price would be based on comparable, contemporaneous North Slope sales. The only relation these sales would have to the royalty-in-kind provisions discussed above is that the precise volumes of Prudhoe Bay gas made available to the State for immediate purchase will be tied to the anticipated volume of royalty-in-kind Point Thomson gas the State will receive upon completion of the Prudhoe Bay Injection Project.

And the State does not have to exercise its right to purchase gas. The provision was intended to provide flexibility to future policy makers, recognizing that if the WIOs choose the Prudhoe Bay Injection Project, a big pipeline Major Gas Sale project may not yet be on the immediate horizon, a fact that may have consequences for in-state gas use and energy planning.

Responses to Specific Questions

With this background, we now respond to your specific questions. Because several of the concerns you express seem to arise from a misunderstanding of some terms of the agreement, we have attempted to clarify such terms.

- **Under the Point Thomson settlement agreement, is the decision to build or not build a major gas sale pipeline under the sole control of the Point Thomson Working Interest Owners (WIOs)?**

No. The agreement provides that if a Major Gas Sale pipeline is constructed, the WIOs will retain Point Thomson acreage. The agreement does not inhibit or otherwise restrict the ability of any individual or entity to build a large-scale gas pipeline off the North Slope of Alaska.

- **As I currently understand the settlement agreement, there are only 2 alternatives which involve a gas pipeline: Alternative A, which would be a "major gas sale" pipeline built by the Producers with gas delivery off the North Slope and Alternative C, which would be an "in-state" pipeline built, if built, by someone other than the Producers. Is my understanding accurate?**

No. As the above discussion indicates, only one development path, a Major Gas Sale as defined in Section 2.16 (Alternative A), involves construction of a gas pipeline off the North Slope. Under the Prudhoe Bay Injection Project discussed above (Alternative C), the agreement provides for the WIOs to construct a gas pipeline running between Point Thomson and Prudhoe Bay, and for the gas to be injected into the Prudhoe Bay reservoir. The gas would be available to the State for in-state use in the event that a gas pipeline is built to transport gas off the North Slope, but such a pipeline is not an element of this development path. The Point Thomson Settlement does not prohibit the State, or anyone else, from building a gas pipeline to transport gas off the North Slope at any time.

- **Under the Point Thomson settlement, gas volumes greater than .5 bcf/d are defined as a "major gas sale." However, the AGIA process, requiring in-state volumes of less than .5 bcf/d, continues to obligate Alaska to $500 million in contributions to gas pipeline development with a risk of treble damages. The Point Thomson settlement seems to allow ultimate decision making with respect to construction or not of a gas pipeline of greater than .5 bcf to the producers [WIO's] until 2019 and then links Alaska's receipt of natural gas for in-state use to delivery of Point Thomson natural gas into a gas pipeline to Prudhoe Bay. The election by Alaska is mandatory under the settlement agreement in that Alaska is contractually obligated to take royalty-in-kind as compared to in-value once the Point Thomson gas is produced into the gas pipeline and goes to a Prudhoe Bay delivery point. Please let me know if this description as to Alaska's ability to receive natural gas for in-state use is not accurate. In part, I am concerned that Alaska's legal ability to receive natural gas is limited to the royalty share of natural gas out of Point Thomson.**

This description is not accurate. A "Major Gas Sale" is defined as a project transporting gas off the North Slope with throughput of more than 500 mmcf/d, but it does not limit Alaska's legal ability to receive its royalty share of natural gas from Point Thomson under any scenario. Nor is Alaska's legal ability to receive natural gas linked to delivery of Point Thomson gas into a pipeline to Prudhoe Bay. Rather, the agreement provides that should the WIOs choose to send Point Thomson gas to Prudhoe Bay for injection into that reservoir, the Prudhoe Bay WIOs *must* make gas available for sale to the State. This is not the only scenario, however, under which the State may procure natural gas from the North Slope.

Moreover, the AGIA project assurances provision (referred to in your question as "a risk of treble damages") does not require in-state volumes of less than 500 million cubic feet of gas per day. It would apply only if the State were to grant certain preferential tax, royalty, or monetary treatment "for the purpose of facilitating the construction of a competing natural gas pipeline project in this state … designed to accommodate throughput of more than 500,000,000 cubic feet a day of North Slope gas to market." (*See* AS 43.90.440(a) and (c)(1)).

Senator Joe Paskvan

Alaska State Senate • District E • Fairbanks • Ft Wainwright

The Honorable Michael Geraghty
Attorney General of Alaska
P.O. Box 110300
Juneau, AK 99811

April 30, 2012

Dear Mr. ~~Attorney General~~ Mike,

Thank you for participating in the Senate Judiciary Committee's Point Thomson settlement hearing on Friday, April 27th. I believe that it was important for the committee to seek a better understanding of the current position of the State with respect to a natural gas pipeline.

As I work my way through this complex legal issue, I would appreciate your continued assistance. Please reply to the following questions at your earliest convenience.

Under the Point Thomson settlement agreement, is the decision to build or not build a major gas sale pipeline under the sole control of the Point Thomson Working Interest Owners (WIOs)?

As I currently understand the settlement agreement, there are only 2 alternatives which involve a gas pipeline: Alternative A, which would be a "major gas sale" pipeline built by the Producers with gas delivery off the North Slope and Alternative C, which would be an "in-state" pipeline built, if built, by someone other than the Producers. Is my understanding accurate?

I am interested in receiving the Department of Law's broad description of the State's legal right to obtain natural gas from the North Slope.

I respectfully request any Attorney General opinions on the topic of the trigger of Alaska's royalty with respect to Prudhoe Bay and with respect to the Point Thomson settlement agreement. In particular, I generally understand that the trigger is at the point that gas leaves a unit. Under this scenario, unless gas leaves a unit, no royalty may be claimed by the state. Is my understanding accurate?

I also have concerns as to the concept of an "overlift." I request any Attorney General opinion as to this concept.

I am concerned that there are multiple and potentially competing forces involving natural gas pipeline development from the North Slope region. I assume that the AGIA constraint as to maximum volumes for an in-state gas pipeline (i.e., .5 bcf/d or less by volume) remains the law of the land. Is this accurate?

(907) 451-4347 Office • (907) 451-4348 Fax

Under the Point Thomson settlement, gas volumes greater than .5 bcf/d are defined as a "major gas sale." However, the AGIA process, requiring in-state volumes of less than .5 bcf/d, continues to obligate Alaska to $500 million in contributions to gas pipeline development with a risk of treble damages. The Point Thomson settlement seems to allow ultimate decision making with respect to construction or not of a gas pipeline of greater than .5 bcf to the producers [WIO's] until 2019 and then links Alaska's receipt of natural gas for in-state use to delivery of Point Thomson natural gas into a gas pipeline to Prudhoe Bay. The election by Alaska is mandatory under the settlement agreement in that Alaska is contractually obligated to take royalty-in-kind as compared to in-value once the Point Thomson gas is produced into the gas pipeline and goes to a Prudhoe Bay delivery point.

Please let me know if this description as to Alaska's ability to receive natural gas for in-state use is not accurate. In part, I am concerned that Alaska's legal ability to receive natural gas is limited to the royalty share of natural gas out of Point Thomson.

If the Point Thomson WIOs control the gas volumes out of Point Thomson, does that also mean that the gas volumes of natural gas available for in-state use by Alaskans is controlled by the Point Thomson WIOs? Further, does the Point Thomson settlement in any way put Alaskans at risk of having to potentially accept a blow down of Point Thomson in order to have natural gas sufficient to fill an in-state gas pipeline? If the in-state line were built at .5 bcf/d in volume from Prudhoe Bay, does this mean that Alaska's $1/8^{th}$ royalty share requires 4 bcf/d in natural gas from Point Thomson to Prudhoe Bay for Alaskans to have rights of access to gas? I ask this question as page 16 of DNR's Settlement Overview states in part: "Once Point Thomson gas is transmitted to Prudhoe Bay, state royalty-in-kind (RIK) is made available for in-state use." Further, I ask this question as page 6 of DNR's Settlement Overview states in part that the settlement: "Provides potential for significant gas volumes for in-state use no later than 2019."

As to a major gas sale pipeline [Alternative A] built by the Producers, what is the most optimistic date for completion of such a line such that there were actual gas volumes for in-state use? As to a decision by the Producers not to build a major gas sale pipeline, what is the earliest and latest date under the settlement agreement for the public announcement of that decision? If and when the WIO decision is made that the Alternative A pipeline will not be built, does that become the date when it is first known that the Alternative C gas pipeline may be necessary to build a gas pipeline from the North Slope solely for in-state use?

Is 4 bcf/d in natural gas out of Point Thomson consistent with a blow down of Point Thomson? Under the settlement agreement, is Alaska forced to accept the blow down of Point Thomson gas, which may be wasteful of the oil resource, in order to receive its royalty share of .5 bcf/d for an in-state gas pipeline?

What volumes of gas, if it is something other than 4 bcf/d out of Point Thomson, are consistent with a blow down of Point Thomson?

Can Alaska require the Producers to produce .5 bcf/d from Prudhoe Bay alone for in-state use, even if Point Thomson is not developed? By agreeing to accept RIK from Point Thomson, does this mean that only after Point Thomson gas is delivered to Prudhoe Bay will Alaska have the legal right to significant volumes of gas for in-state use?

Why is Alaska waiving its right to royalty-in-value even if no in-state gas pipeline exists?

Assuming the Alternative A pipeline is built by Point Thomson WIOs, is the only requirement under the settlement agreement, for access to Prudhoe Bay natural gas for in-state use, triggered when a major gas sale decision is made by Point Thomson WIOs? If the Point Thomson WIOs decide not to build a major gas sale pipeline, is the only access to natural gas by way of a gas pipeline built by someone other than the WIOs? In other words, is it true that gas under the Alternative C approach for in-state use only will not be built by the Producers?

Can Alaska "compete" with the Point Thomson WIO's and develop an Alternative C pipeline with volumes for export? In other words, can the state at this time participate in developing a gas line with volumes greater than .5 bcf/d without violating the Point Thomson settlement agreement [or the AGIA statutes]? If the state were to do this, will, at the minimum, the WIO's contractual obligation under the settlement agreement be voided or nullified as to an Alternative A pipeline? Under Alternative A of the settlement agreement, can it be assumed that no gas pipeline will be built with state participation which may have an export component?

Is the only line which "economics or costs…cannot be used as a rationale or justification for not completing…," the 12-inch line for Point Thomson liquids from Point Thomson to Badami? Is the same 12-inch liquids pipeline eligible for royalty modification under section 4.8 of the settlement agreement?

Can an in-state line be built with volumes greater than .5 bcf/d without violating either or both AGIA statutes and the Point Thomson settlement agreement? Does the settlement agreement set the maximum gas volumes for an in-state line at .5 bcf/d or less? Does the settlement agreement assume Alaska's good faith in not developing an in-state pipeline until the WIO's have made their decision whether to construct the large diameter Alternative A pipeline? If any gas pipeline were built in excess of .5 bcf/d by someone other than the WIO's under the settlement agreement, would that relieve the WIO's from having to perform under Alternative A or other portions of the settlement agreement? If any gas pipeline were built in excess of .5 bcf/d by someone other than TransCanada, would that someone currently be in violation of the AGIA statutes?

Comments have been made that AGIA's statutes may be applied to an in-state gas pipeline. Why? Isn't any discussion of an in-state gas pipeline premature until the WIOs have determined that a major gas sale pipeline will be built? Has TransCanada agreed to the WIOs' construction of a gas pipeline as defined as a major gas sale pipeline? I believe that AGIA's limitation prohibits an in-state gas line with a design capacity greater than .5 bcf/d. Is this correct? Does

the Point Thomson settlement agreement provide for the potential construction under Alternative A approach of a gas pipeline with design capacity greater than .5 bcf/d? Is the Point Thomson settlement agreement in current conflict under the language of the AGIA statutes as to the construction of an LNG export line under Alternative A concept of the Point Thomson settlement? Has TransCananda been contacted for its approval of the Point Thomson settlement agreement as relates to a pipeline other than that as set forth in the AGIA statutes? If so, please provide all documents as to the contacts and agreements reached. Did the Commissioner under the AGIA regulatory process or otherwise specifically reject the LNG approach?

Will a large diameter gas pipeline – for example, a 4.5 bcf/d pipeline – produce the lowest tariff as compared to an in-state pipeline of 1 bcf/d or smaller? Stated otherwise, will a .5 bcf/d pipeline or less produce a higher tariff than a large diameter pipeline?

Will injecting another gas pipeline concept, whether in the format of HB 9 or otherwise, produce more potential for Alaska to be in breach of either AGIA or the Point Thomson settlement agreement with respect to gas from the North Slope? Is it true that a gas line from Cook Inlet to Interior Alaska does not and cannot in any way violate either the AGIA statutes or the Point Thomson settlement agreement?

Does the construction of an in-state gas line, in compliance with AGIA limitations, impede or potentially remove any obligation upon Point Thomson WIOs to construct an Alternative A gas pipeline?

Does Alaska shoot itself in the foot with respect to a higher tariff if the State advances a small-diameter pipeline for in-state use and, shortly after, the WIOs, under the terms of the Point Thomson settlement, decide to build a lower tariff large-diameter pipeline?

If you have any comments or questions, please don't hesitate to contact me any time.

Sincerely,

Joe Paskvan

Re: Point Thomson Settlement Agreement

Dear Senator French:

Thank you for this opportunity to explain certain aspects of the settlement of *Exxon Mobil Corporation v. State, Department of Natural Resources*, 3AN-06-13751 (consolidated), the litigation that arose after DNR terminated the Point Thomson Unit. During the Senate Judiciary Committee hearing on April 27, 2012, Mr. William Walker, Mr. Craig Richards, and Dr. Mark Myers raised questions and concerns about the settlement agreement. Many of these points relate to technical issues that are best addressed by DNR, and I defer to that agency on these matters. I would like to discuss the legal allegations that Mr. Richards has made on behalf of Mr. Walker, however.

Mr. Richards and Mr. Walker argue that the settlement agreement violates Alaska law, citing several reasons for their allegations. They are incorrect on the law—as I explain below—but even more fundamentally, they misunderstand the authority of the Attorney General to settle the cases. Alaska's Attorney General has broad authority to enter into any agreement to settle litigation that he or she believes is in the best interest of the State.[1] The exercise of this authority is not subject to legislative approval or administrative review, and requires no prior public notice or comment. Settling litigation is an executive branch function, and a legislative role would violate separation of powers principles.[2]

---

1 *See, e.g., Public Defender Agency v. Superior Court*, 534 P.2d 947, 950-51 (Alaska 1975).

2 *See, e.g., Bradner v. Hammond*, 553 P.2d 1, 5 (Alaska 1976) (separation of powers doctrine prohibits "encroachments upon the executive by the legislative branch" in

Aside from the question of the Attorney General's authority, Mr. Walker and Mr. Richards make five allegations about the legality of the settlement agreement. They argue that the settlement should have been subject to public notice and comment because (1) it is a disposal of an interest in state land; (2) it is subject to the material amendments doctrine; and (3) it impermissibly disposes of state royalty gas. They also allege that the agreement (4) unlawfully attempts to restrict the State's future ability to tax Point Thomson gas, and (5) contracts around DNR's regulations, running afoul of the Alaska Supreme Court's 2001 decision in *Exxon v. State*.[3]

I will address each point in turn.

1. *The Agreement is not a "Disposal" of State Land.*

The Alaska Constitution provides that "[n]o disposals or leases of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be required by law."[4] A "disposal" is the transfer of an "interest" in state land, which includes the sale or leasing of land, mineral leasing, and right of way permits and licenses.[5]

The Point Thomson settlement agreement does not dispose of an interest in state property. The disposal occurred many years ago when the leases were issued. The settlement agreement addresses DNR's administration of these leases and the Point Thomson Unit Agreement. The State did not transfer any additional interests by entering into the unit agreement, approving Plans of Development ("PODs"), or forming participating areas under the unit agreement.

2. *The Agreement Does Not Amend Any Leases and Thus Does Not Implicate the Material Amendments Doctrine.*

The "material amendments" doctrine applies to competitively bid contracts, *e.g.*, leases. Unit agreements, in contrast, are not competitively bid. In general, "competitively

---

confirmation of executive appointments); *Public Defender Agency*, 534 P.2d at 950 ("When an act is committed to executive discretion, the exercise of that discretion within constitutional bounds is not subject to the control or review of the courts. To interfere with that discretion would be a violation of the doctrine of the separation of powers.").

3 40 P.3d 786 (Alaska 2001).

4 Alaska Const. art. VIII, sec. 10. This requirement is codified in the Alaska Lands Act at AS 38.05.035.

5 *See Northern Alaska Environmental Center v. State, Dep't of Natural Resources*, 2 P.3d 629, 636 (Alaska 2000).

bid contracts involving state resources cannot be materially amended."[6] The rationale behind this judicially created rule is that an amendment effectively produces a new contract, which the State should award only after a new round of public bidding.[7]

Here, DNR has not amended the lease terms. Mr. Walker and Mr. Richards point to no provisions in any of the Point Thomson oil and gas leases that have been amended, nor could they. Because the settlement agreement addresses only the terms of the unit agreement, the sole case cited by Mr. Walker and Mr. Richards, *Baxley v. State*, is inapplicable.[8]

3. *The Agreement Does Not Dispose of State Royalty Gas.*

In the settlement agreement, the State has committed to take its royalty in-kind only if the working interest owners complete a project injecting Point Thomson Gas into Prudhoe Bay in order to enhance oil recovery at Prudhoe Bay, while awaiting a potential subsequent Major Gas Sale project.[9] The agreement provides that the State's in-kind Point Thomson gas will be injected into Prudhoe Bay alongside the working interest owners' produced Point Thomson gas where it will both aid in enhanced oil recovery and be available for later withdrawal at the State's discretion for in-state use.[10] In the event there is a later Major Gas Sale project, the State may elect to have the working interest owners sell the gas that was previously taken in-kind and injected into Prudhoe Bay and instead take its royalty in-value based on the Major Gas Sale price.[11]

Agreeing to take royalty in-kind in this manner is consistent with the applicable leases that grant DNR discretion to take its royalty in-kind or in-value. In these circumstances, DNR regulations provide that royalty must be taken in-kind according to the lease terms.[12]

---

6 *Kenai Lumber Co. v. LeResche,* 646 P.2d 215, 221 (Alaska 1982).

7 *McKinnon v. Alpetco Co.,* 633 P.2d 281, 287 (Alaska 1981); *Baxley v. State*, 958 P.2d 422, 433 (Alaska 1998).

8 958 P.2d at 433.

9 *See* Section 4.16.2.

10 *See* Section 4.16.2.2; 4.16.2.4.

11 *See* Section 4.16.2.4(c)(i) ("For gas produced from Point Thomson after Project Start-up of a Major Gas Sale, the State from time to time may elect to take its royalty share in-value or in-kind pursuant to the Point Thomson leases, other applicable agreements and applicable State law.").

12 11 AAC 03.015.

The legal provisions that Mr. Walker and Mr. Richards cite on the topics of addressing public notice, royalty board submittal, and legislative approval all address state *disposals* of its royalty in-kind oil or gas, by sale or otherwise.[13] Here, there is no disposal because DNR has not agreed to sell or otherwise transfer its interest in any gas taken in-kind under the agreement. Rather, DNR will retain full title and control to all royalty in-kind gas injected into Prudhoe Bay. The State would potentially trigger the procedural requirements referenced by Mr. Walker and Mr. Richards only if it subsequently withdrew its gas to sell.

The terms of the agreement require only that the Commissioner determine in writing that taking in-kind is in the best interests of the State.[14] Section 5.8 of the Agreement makes this express finding.[15]

---

[13] *See, e.g.*, AS 38.05.183 ("Sale of Royalty); AS 38.06.050 (providing for Royalty Board Review for "proposed sale, exchange, encumbrance, or other disposition . . ."); AS 38.06.055 (providing for legislative approval of a "sale, exchange, or other disposition of oil or gas . . ."); 11 AAC 03.020 ("Procedures to be followed for dispositions").

[14] AS 38.05.182 ("any royalty . . . may be taken in kind rather than in value if the Commissioner determines that the taking in-kind would be in the best interests of the state."); 11 AAC.03.010(b) ("Before taking royalty oil, gas, or associated substances in-kind, the commissioner will determine in writing that taking in-kind will be in the best interests of the state.").

[15] DNR agreed to take its royalty in-kind under these circumstances in order to maximize royalty value to the State. Under this development scenario, Point Thomson gas is transported to Prudhoe Bay and injected into that reservoir to enhance oil recovery. Any gas that leaves the Point Thomson Unit boundary triggers the working interest owners' royalty obligations. But if the State were to take its royalty in-value at that time, the value would be minimal because the gas is not being sold by the working interest owners, but is instead being injected into Prudhoe Bay to aid enhanced oil recovery, and potentially for later withdrawal and sale as part of a Major Gas Sale project. If the gas injected into Prudhoe Bay is later sold as part of a Major Gas Sale project, its value will be higher than when it was initially produced from Point Thomson and injected into Prudhoe Bay. The agreement entitles the State to take payment in-value from the Point Thomson lessees after project start-up of a Major Gas Sale for the State's Point Thomson in-kind gas that had been injected into Prudhoe Bay. If there is not a pending Major Gas Sale, however, the State's injected gas in Prudhoe Bay is available for withdrawal at the State's discretion for in-State use. By negotiating these options with respect to royalty, the State ensured that it would derive greater royalty value than if the State had taken its royalty in-value when the gas was first produced from Point Thomson for injection into Prudhoe Bay.

4. *The Agreement Contains No Future Tax Commitments.*

The settlement agreement does not impermissibly bind future legislatures on tax issues. The tax provision in Section 4.16.1 makes no commitments at all about the future state of the law; it only articulates the current state of the law that permits deferral of taxation in certain circumstances, citing 15 AAC 55.151(c) .[16] To the extent Mr. Walker and Mr. Richards are arguing that the agreement's statement in Section 4.16 (Point Thomsen gas injected in to Prudhoe Bay is only subject to tax and royalty once) wrongfully limits the legislature's taxing authority, this argument is meritless.

5. *The Agreement Is Consistent with DNR's Regulatory Authority.*

Finally, Mr. Walker and Mr. Richards argue that DNR has contracted around its regulations providing for unit management, including POD review and the formation of participating areas.[17] To the contrary, the agreement represents an appropriate exercise of DNR's regulatory authority. The recognition in Section 5.1.3 that the agreement is a contract simply makes clear that parties have negotiated a binding agreement (just as oil and gas leases and unit agreements are binding contracts).

Under DNR's regulations,[18] a unit operator must submit a POD that commits to diligent development of the unit resources and sets out a long-term plan for future work activities. After reviewing the POD and considering the criteria set out in 11 AAC 83.303, DNR may approve or deny the POD. If DNR approves the POD, it must monitor activities to ensure that the unit operator complies with the plan.

Mr. Walker and Mr. Richards misunderstand how the POD process will work in conjunction with the agreement. First, the agreement does not eliminate the requirement to have a POD for the Initial Production System; the agreement itself serves as the Initial Production System POD. It sets forth the key work activities and timelines required for the Initial Production System, and it has other requirements that complement the POD.

---

16 Section 4.16.1 provides: "The Parties recognize that Alaska law regarding oil and gas production tax provides that gas produced from the Point Thomson Unit that would be used according to 15 AAC 55.151(e) in effect as of the Effective Date, and that would be injected into a reservoir within the Prudhoe Bay Unit in the course of operations of a Point Thomson Gas Development/Prudhoe Bay Enhanced Recovery Project for purposes of repressuring, including enhanced recovery, would be exempt from taxation at the time of its production from the Point Thomson Unit and would be subject to tax only at the time the gas would be ultimately produced for sale from the Prudhoe Bay Unit."

17 Walker Letter at 7-12.

18 11 AAC 83.343.

In addition, before moving forward with the Initial Production System POD and future PODs, the working interest owners must secure DNR's approval for their plan of operations under 11 AAC 83.158. Second, for development beyond the Initial Production System, the agreement expressly requires the submittal of PODs for both development planning and the development itself.[19]

Likewise, the agreement is consistent with DNR's participating area regulations. DNR's regulations require the creation of a participating area for acreage "reasonably estimated through use of geological, geophysical, or engineering data to be capable of producing or contributing to production of hydrocarbons in paying quantities."[20]

The agreement does not abrogate this important management authority. With participating areas, as with PODs, the agreement looks to the future in providing that participating areas will be formed if production actually commences at levels required by the agreement. Addressing participating areas in advance of production is consistent with DNR's regulations and, if the participating area is to be formed, the agreement[21] requires submission of the same supporting technical data that is currently required by DNR regulations.[22]

---

19 *See* Section 4.6. The agreement provides that these PODs will be approved only if they are consistent with the specific development requirements set forth in the agreement *Id.* DNR agreed to place its imprimatur on the post-Initial Production System development scenarios set forth in the agreement after engaging in an extensive diligence and review process. Determining that these development paths are in the public interest, and that any POD that conforms to these development requirements will be approved, is a reasonable and authorized exercise of DNR's POD review discretion.

20 11 AAC 83.351(a). Further, the regulations provide that the unit operator must apply for the creation of a participating area "at least ninety days before sustained production."

21 *See* Sections 4.3.1; 4.4.1; 4.4.2; 4.4.5 and Ex. F.

22 Because the agreement works within DNR's regulations, the discussion in *Exxon v. State,* 40 P.3d 786 (Alaska 2001) cited by Mr. Walker regarding DNR's authority to enter into contracts that violate its regulations is inapplicable. Walker Letter at 10-12. Further, the facts of that case have no application to the agreement. There, ExxonMobil argued that a provision in the Prudhoe Bay Unit agreement expressly abrogated DNR's regulatory discretion to evaluate whether expanding the unit was in the public interest and instead made expansion mandatory should certain geologic criteria be satisfied. *Id.* at 794-95. The Court rejected ExxonMobil's reading of the Prudhoe Bay Unit agreement. *Id.* at 795. The Court concluded that its interpretation of the Unit agreement was bolstered by the general principle that DNR could not agree to contract terms that violate its regulations. *Id.* at 796-97. Here, DNR is not contracting away the requirement

Mr. Walker and Mr. Richards also argue that the agreement impermissibly alters DNR's dispute resolution procedures by agreeing to arbitration and to superior court jurisdiction.[23] But the Commissioner and the Attorney General have flexibility when settling litigation to negotiate terms, including dispute resolution mechanisms. DNR's appeal regulations do not prohibit it from agreeing to arbitration or other dispute resolution procedures.[24] And agreeing to superior court jurisdiction for certain disputes is not a novel concept; DNR's regulations currently provide for judicial proceedings in certain circumstances.[25]

Finally, Mr. Walker and Mr. Richards misread DNR's regulations in asserting that DNR was required to provide public notice and issue written findings prior to entering into the agreement.[26] They are incorrect on both counts. DNR is required to issue written findings only when disposing of interests in state lands.[27] As discussed above, the agreement does not effect a disposal. In contexts other than disposals, DNR does not have to issue public interest findings in writing, or in any other particular form.

Nor was DNR required to provide for public notice and comment for the agreement. DNR regulations require notice and comment for approvals of a unit agreement, expansions of an approved unit, and extensions of the unit term.[28] But the agreement did none of these things and therefore did not trigger any of the conditions in 11 AAC 83.311 that require public notice and comment.

In conclusion, we fully stand behind the decision to settle the Point Thomson litigation. The settlement agreement secures the State's goal of settling this protracted

---

that PODs be submitted with certain information and approved by DNR, or the requirement that acreage must be in a participating area if it is contributing to production. Rather, DNR has agreed that it will approve future PODs *if* they are consistent with all of the conditions set out in the agreement. And DNR has agreed to what participating areas will form *if* production commences and the appropriate information is submitted to DNR.

23 Walker Letter at 10.

24 The State demanded that the agreement include an expedited arbitration provision to deal with an abandonment dispute because the State did not want to waste years in court litigating over whether the working interest owners had abandoned the Initial Production System. Arbitration does not apply to any other dispute.

25 11 AAC 83.374.

26 Walker Letter at 11.

27 *See* AS 38.05.035(e).

28 11 AAC 83.311.

and uncertain litigation, and advances the State's interest in the commercialization of Alaska's natural gas It is not a perfect settlement—no settlement achieves that standard—but the agreement unquestionably is in the public interest. I appreciate this opportunity to supplement the record and would be happy to answer any additional questions by the committee.

Sincerely,

Michael C. Geraghty
Attorney General

Anchorage, Alaska 99501-2133

Dear Senator French,

During the Senate Judiciary Committee hearing on April 27, 2012, Mr. William Walker, Mr. Craig Richards, and Dr. Mark Myers raised questions and concerns about the Point Thomson Settlement Agreement ("Agreement"). The concerns raised by Mr. Walker and Mr. Richards echoed the claims asserted in Mr. Walker's April 17, 2012 letter to Department of Natural Resources Commissioner Dan Sullivan, which has been included in the record. The issues raised by Mr. Walker, Mr. Richards, and Dr. Myers are based on a misunderstanding of the Agreement and its background.

The following response explains the context for the Agreement, describes the terms of the Agreement in detail, explains why it is in the public interest, and addresses the issues raised by Dr. Myers and by Mr. Richards on behalf of Mr. Walker. My analysis is focused primarily on the policy concerns raised at the hearing. The Attorney General will address the legal issues raised by Mr. Walker and Mr. Richards in a separate response.

I thank you for this opportunity to provide a response on this important public issue. A table of headings is set forth below for ease of reference.

I. STRATEGIC CONTEXT OF THE POINT THOMSON SETTLEMENT
A. Point Thomson History.
B. DNR's Default and Termination Decisions and the Ongoing Litigation.
C. World Oil & Gas Markets: Extreme Price Variability, Declining TAPS Throughput and LNG Opportunities.

II. STRATEGIC BENEFITS OF THE POINT THOMSON AGREEMENT
A. Overview: The Point Thomson Settlement Agreement Advances the State's Longstanding Interests Related to This Field.

B. Continuing with the Status Quo Entailed Inherent Risk for the State.

C. The Agreement Achieves Significant Near-Term Benefits for the State.

D. If the WIOs Breach Their Near-Term IPS Commitments, Then the State is Well-Protected Under the Agreement.

E. The Agreement Provides Long-Term Benefits and the Ability to Optimize Full Field Development.

1. DNR Retains the Authority to Review Development Plans, and if the WIOs Do Not Commit to or Sanction at Least One Expanded Development Alternative, Significant Acreage Will Contract Out of the Unit.

2. Given the Importance of a Large Scale Gasline to the State's Interests, the Agreement Focuses on a Major Gas Sale.

3. The Agreement Provides for Other Full Field Development Alternatives Aimed at Enabling the Optimization of State Resources.

III. DR. MYERS'S, MR. WALKER'S AND MR. RICHARD'S CRITICISMS OF THE AGREEMENT ARE BASED ON MISUNDERSTANDINGS OF ITS TERMS
A. Full Field Cycling is One of Several Viable Development Alternatives that Provide Significant Benefits to the State.

1. The Difference Between "Gas Cycling" and "Gas Blowdown."

2. The Agreement does not Unconditionally Authorize Gas Blowdown and the AOGCC Must Approve Any Proposed Development.

3. The 2008 PetroTel Study Taken Out of Context Does Not Provide a Realistic Portrait Regarding Full Field Development.

4. The 2008 PetroTel Study Does Not Fully Reflect DNR's Current Understanding of the Point Thomson Reservoir.

B. The Major Gas Sale Development Set Forth in the Agreement Contemplates a Large- Scale Gas Pipeline Project Off the North Slope.

C. The Agreement Contains a Firm Development Commitment in the Form of the IPS, and the Penalty of Losing the Unit *and* the Underlying Leases if the IPS is not Completed.

1. Per the Agreement, the IPS is a Firm Commitment Offering Benefits to the State Far in Excess of the 2009 Conditional Interim Decision.

2. Even if a Major Gas Sale is Sanctioned after Abandonment of the IPS, Previously Contracted Acreage is Forever Lost to the WIOs.

3. If the WIOs Do Not Develop Beyond the IPS, They Will Lose Significant Acreage.

D. The Agreement Addresses the Next Phase of Development after the IPS by Providing for Additional Development Alternatives that, if Completed, Allow the WIOs to Retain Additional Acreage.

1. Construction Commitments and Final Investment Decisions Will be Part and Parcel of Sanctioning a Major Gas Sale.

2. Point Thomson Gas Would Be Used for a Major Gas Sale under the Agreement.

3. If the WIOs Abandon the IPS and a Major Gas Sale is Not Sanctioned, DNR May Terminate the Unit and all Point Thomson Leases.

E. The Agreement Permits DNR to Closely Monitor the WIOs' Development Decisions and Activities and Impose Penalties for Failure to Abide by the Commitments in the Agreement.

1. Under the Agreement, DNR Retains its POD Powers.

2. The Agreement is Consistent with DNR's Participating Area Regulations.

3. DNR Considered 11 AAC 83.303 Prior to Entering into the Agreement.

4. If a Development path that is Selected by the WIOs is Inconsistent with the Agreement or Law, DNR Has the Right to Oppose the Option.

I. STRATEGIC CONTEXT OF THE POINT THOMSON SETTLEMENT

A. Point Thomson History.

Point Thomson is located 60 miles east of Prudhoe Bay in a remote arctic area.[1] The Point Thomson leases were acquired beginning in 1965.[2] Oil was discovered in 1975, and the Point Thomson Unit ("the Unit") was formed in 1977.[3] Following formation of the Unit, the Point Thomson owners drilled additional wells and discovered large quantities of oil and gas.[4]

The Point Thomson reservoir is a high-pressure retrograde condensate and natural gas reservoir with abnormally-pressured formations.[5] It presents unique engineering challenges with respect to development and production.[6] Since discovery of the field, the Point Thomson owners have drilled 19 exploration / delineation wells in the Point Thomson area.[7]

These wells have demonstrated that Point Thomson is a world class resource.[8] It is the largest undeveloped field in Alaska with one reservoir, the Thomson Sands, holding approximately eight trillion cubic feet of conventional natural gas, which is about 25% of the known North Slope gas reserves, and hundreds of millions of barrels of gas condensate and oil. The field also holds an estimated hundreds of millions of barrels of oil in the Brookian formations, which are geographically separate from the Thomson Sands reservoir.

Under the terms of the Point Thomson Unit Agreement, the Unit was set to expire in 1983 because it was not placed into production. The Department of Natural Resources ("DNR"), however, agreed to remove the automatic termination provision to give the Working Interest Owners ("WIOs") more time to delineate the field's resources and then move into timely production.[9] An unintended consequence of this modification to the Unit Agreement was that the

Unit continued for decades without production.[10] Despite its massive resource base, the State has not seen any hydrocarbon production from this important field.

For years, DNR tried to get the WIOs to submit a development plan that would place the Unit into commercial production.[11] All attempts to move the field into production were stymied – the primary reasons offered by the WIOs for refusing to place the Unit into production centered on high costs, engineering challenges, and the fact that no gas pipeline existed to transport the Unit's massive gas reserves.[12]

B. DNR's Default and Termination Decisions and the Ongoing Litigation.

DNR's frustration with the lack of development reached a breaking point in October 2005 when the Director of the Division of Oil and Gas of DNR ("Director") denied approval of the 22nd Plan of Development (a "POD") submitted by the WIOs because they refused to drill wells and put the Unit into production.[13] In this decision, Director Mark Myers placed the Unit into default and informed the WIOs that DNR would terminate the Unit if the WIOs refused to submit a development plan that would put the Unit into timely production.[14]

The WIOs appealed the Director's default decision to DNR Commissioner Menge.[15] This began the lengthy litigation between the State and the WIOs, which lasted for nearly seven years and had the potential to continue for a significant period of time.[16] Because the WIOs insisted on warehousing the Unit's massive reserves, Commissioner Menge affirmed Director Myers's default decision, rejected the WIOs' proposed POD, and terminated the Unit on November 27, 2006.[17] This decision was affirmed upon reconsideration by Acting Commissioner Marty Rutherford on December 27, 2006.[18]

The WIOs appealed the default and termination decisions to the Alaska Superior Court. Judge Gleason affirmed most aspects of DNR's decisions, but vacated the Unit termination decision. Judge Gleason ruled that the WIOs received insufficient notice and were therefore denied

18 *See id.*

an opportunity to be heard on the appropriate remedy for their refusal to place the Unit into production after thirty years. Judge Gleason remanded the matter to DNR.[19]

During the remand proceedings, the WIOs submitted a new POD, the 23rd POD. This POD committed to drilling wells and placing the Unit onto production with an initial program that would produce 10,000 barrels per day of gas condensates.[20]

On April 22, 2008, DNR Commissioner Irwin rejected this POD and issued a decision terminating the Unit. Commissioner Irwin rejected the 23rd POD for two main reasons: (i) after years of broken promises to develop the Unit, he did not trust the WIOs to follow through with this development plan; and (ii) even if they did put the Unit into production, the WIOs did not provide a path to full field development or consequences for the failure to move beyond the initial production phase.[21]

After terminating the Unit, Commissioner Irwin issued a three-page "Conditional Interim Decision" in January 2009 that allowed ExxonMobil to drill two wells on two state leases conditioned upon the WIOs' commitment to bring these leases into production.[22] ExxonMobil, the Unit Operator, drilled these two wells and has continued to work on permitting and engineering to move the Unit into production.[23] The Agreement builds on this progress and these work commitments.

Despite the 2009 Conditional Interim Decision, the broader litigation involving the Unit termination continued. The WIOs filed several appeals challenging Commissioner Irwin's 2008 Unit termination decision. On January 11, 2010, after extensive briefing, Judge Gleason reversed DNR's 2008 decision terminating the Unit.[24]

Her ruling was a significant setback for the State. She ruled that the failure to develop known reserves for thirty years and the WIOs' refusal to submit a POD committing to development did not constitute material breach of the Unit Agreement or a violation of state law.[25] The decision also reconstituted the Point Thomson Unit and upended DNR's oversight of Unit development by requiring DNR to conduct a "Section 21" hearing before it could default the Unit.[26] It was a ruling that potentially had far-reaching implications for DNR because it unraveled the "produce or lose" bargain that underlies State oil and gas leases, and it effectively shifted the obligation to develop State leases from lessees to DNR.[27] If this decision was upheld, it conceivably would allow the

WIOs to simply sit on the massive Point Thomson resources with no requirement to commercially produce hydrocarbons until a gas pipeline was built.[28]

Given the significant negative ramifications, the State filed a petition for review of Judge Gleason's decision with the Alaska Supreme Court.[29] The Supreme Court decided to hear the appeal, thereby halting the ongoing Superior Court proceeding. The main issue before the Alaska Supreme Court centered on whether Judge Gleason properly interpreted the applicable law to require a Section 21 hearing.[30] The Court was not asked to address whether DNR properly terminated the Unit.

A ruling from the Alaska Supreme Court on the State's petition for review was still pending as of the Agreement. It is important to understand the procedural context of the case at that time. Any ruling by the Supreme Court – favorable to the State or not – would not have resolved the entire case, it would have merely remanded to the Superior Court to continue with the litigation. Any final decision from the Superior Court would invariably have been appealed back to the Supreme Court. Thus, the litigation surrounding unit termination still had many years before final resolution. Even assuming the State ultimately prevailed in the unit termination litigation, it would have required individual proceedings to terminate the underlying Point Thomson leases. The litigation, in other words, was still far from final resolution.

B. World Oil & Gas Markets: Extreme Price Variability, Declining TAPS Throughput and LNG Opportunities.

The past decade has seen extreme price volatility in global energy markets. Nominal oil prices have bounced from $22 a barrel to $135 to $40 back to nearly $130 and now hover around $100. Natural gas prices have also been volatile – prices in the Lower-48 were as high as $14 per MMBtu in 2008 but dropped below $2 in April 2012. Meanwhile, the price and demand for liquefied natural gas ("LNG") in the Pacific Rim currently remains robust and is increasing due to a number of global factors – although LNG prices are also volatile. With the extreme volatility in energy markets, this much is certain: nobody can say for sure what the future holds in terms of oil and gas prices and profitable hydrocarbon development scenarios.

Another certainty is that the State of Alaska faces an urgent situation that threatens our economic future – the steady decline in oil production through the Trans-Alaska Pipeline System (TAPS). Despite remaining a world-class hydrocarbon basin, Alaska North Slope (ANS) oil production continues to fall. In April 2011, ANS production averaged almost 635,000 barrels per day. One year later, April 2012 production dropped by nearly 50,000 barrels and now averaged 577,000 barrels per day. In the meantime, North Dakota oil production, which sells at approximately a $20 discount compared to Alaska oil, has surged and it has overtaken Alaska as the

---

28 *See Id.*

29 As a general matter, parties cannot appeal a lower court's decision to the Alaska Supreme Court until the lower court has issued a final order. However, in limited circumstances, the Alaska Supreme Court will take an interlocutory petition for review of an ongoing superior court action if the lower court has issued an interim ruling that needs to be addressed before the lower court's proceedings can continue.

30 *See* State of Alaska Petition for Review at 4.

nation's number two oil producer.[31] Having Point Thomson – one of the State's largest oil and gas fields – remain undeveloped, with no infrastructure connecting it to TAPS, has not helped the State address the TAPS throughput decline challenge.

Having Point Thomson remain undeveloped and under a cloud of prolonged litigation also presented an impediment to the State's ability to advance another critically important, long-sought goal: commercializing our massive North Slope gas resources for both in-state use and for export.

Now a window of opportunity has opened for significantly increasing Alaska LNG exports to the Pacific Rim.[32] Demand for natural gas in the Pacific Rim is strong, and there is significant interest in Alaska gas. For the first time, the State's three producers on the North Slope are aligned with a state-backed effort to move forward to commercialize Alaska North Slope (ANS) gas. Before signing the Agreement, BP and ConocoPhillips wanted to increase the probability of transporting Point Thomson gas into a large diameter gas pipeline. It was this desire that launched discussions, for the first time in years, between the three Producers and the State, related to commercializing North Slope gas. Thus, the Agreement catalyzed the alignment among the Producers.

And recently, several reputable studies have shown that Alaska is economically competitive with other LNG projects. For example, in *"Alaskan LNG Exports Competitiveness Study, AGPA, Final Report, July 27, 2011,"* Wood Mackenzie concluded that Alaska is more competitive than Lower 48 and Canadian gas supplies and is on par with Australian LNG projects.[33] Similarly, the Brookings Institution recently released findings from its year-long study on U.S. LNG exports, noting that a large-scale Alaska LNG project to Asia would be in a strong competitive position with respect to other global LNG projects.[34]

This window of opportunity for commercializing North Slope gas will not be open indefinitely. Fortunately, the Agreement puts the WIOs on a clock to develop the Point Thomson resources. But, the State of Alaska is also on a clock. We face fierce competition from many countries and companies vying to meet the growing demand in LNG. Norway, Canada, Australia, Qatar, Russia, and countries in East Africa, in addition to producers in the Lower 48, are all seeking to supply the increased demand for LNG in the Pacific Rim. Indeed, over the past two years, *nine* Australia LNG projects have reached the Final Investment Decision stage.

To capitalize on this opportunity and to make sure Alaska is not left on the sidelines, the Parnell Administration has diligently worked to advance the prospects of a large scale LNG project. We have worked with our AGIA licensee through the Alaska Pipeline Project to move forward on the necessary permitting and engineering work for an LNG project; we have driven the alignment among the three North Slope producers and TransCanada; we are engaged in far reaching discussions with high-ranking federal officials in Washington, D.C. to seek support of a large-scale

31 http://www.adn.com/2012/05/15/2465480/n-dakota-passes-alaska-to-become.html

32 For over forty years Alaska has exported LNG from Cook Inlet to Asia. Alaska has never, however, exported North Slope gas.

33 http://www.arcticgas.gov/sites/default/files/documents/11-07-alaska-lng-competitiveness-study.pdf

34 http://www.brookings.edu/~/media/Files/rc/reports/2012/0502_lng_exports_ebinger/0502_lng_exports_ebinger.pdf.

LNG export project; and we have engaged private sector and government officials from Asia to educate them on the benefits and comparative advantages of Alaska natural gas.

Based on this outreach, we can say that the momentum is building and considerable interest exists in getting ANS gas to Alaskans and world markets.

II. STRATEGIC BENEFITS OF THE POINT THOMSON AGREEMENT

This Agreement significantly advances critical interests for the State of Alaska and its citizens across a number of areas. This section highlights and discusses many of these important areas.

A. Overview: The Point Thomson Settlement Agreement Advances the State's Longstanding Interests Related to This Field.

Before entering into settlement negotiations, the State had four longstanding objectives: (i) secure a commitment to timely production of the Unit's resources[35]; (ii) set out a path to full field development[36]; (iii) leverage Point Thomson development to advance a large scale gas pipeline[37]; and (iv) impose swift consequences if the WIOs failed to follow through on development commitments.

The Agreement achieves all of these goals. First, it provides an unequivocal, binding commitment to drill wells that will delineate resources and place the Unit into production, which will in turn increase TAPS throughput and foster exploration and development in the highly prospective Eastern North Slope.[38] Second, the Agreement lays out a path to full field development. Third, the Agreement advances ANS gas commercialization efforts by:

- Installing infrastructure that can be utilized for gas commercialization;

---

35 *See* Director Myers's October 27, 2005 Denial of the Proposed Plans for Development of the Point Thomson Unit. In this Decision, Director Myers placed the Unit into default because ExxonMobil refused to provide the State with a development plan. He told the WIOs that they could cure this default by submitting a POD containing "specific commitments to delineate the hydrocarbon accumulations underlying the PTU and develop the unitized substances." Decision at 22.

36 *See* Commissioner Irwin's April 22, 2008 Point Thomson Unit Findings and Decision on Remand From Superior Court. In this Decision, Commissioner Irwin rejected the WIOs' stated commitment to develop the field under a gas cycling pilot program, in part, because while the plan presented a reasonable first step for development, the plan failed to explain how ExxonMobil would continue to expand production as promised and what would happen if they did not expand production. Decision at 31-32. As detailed below, the Agreement addresses all of these issues.

37 Advancing a large scale gas pipeline has been a longstanding goal for the State. *See, e.g.,* the Stranded Gas Development Act (AS 43.82 *et seq.*) and by the Alaska Gasline Inducement Act (AS 43.90 *et seq.*).

38 Sections 1.6 - 1.7, 1.11, 4.1 (noting the benefits under the Agreement and explaining that the IPS work commitments are mandatory). Section 4.1 specifically provides: "The WIOs *shall* put the PTU 15 and PTU 16 wells on production utilizing the IPS by the end of the 2015-2016 winter season and in any event no later than May 1, 2016." (emphasis added).

- Imposing work commitments that will foster gas commercialization;
- Facilitating alignment between the three largest North Slope WIOs and the Alaska Pipeline Project parties;
- Incentivizing a Major Gas Sale "sanction" decision prior to May 2016.

Finally, the Agreement provides for Unit termination and the return of all Point Thomson leases if the Unit is not placed into production.[39] Similarly, if production only results in the development of some of the Unit's resources, acreage not placed into production will also terminate.[40]

In sum, the Agreement is structured around one key principle that the WIOs must earn their acreage: the more work, investment, and commitments they make, the more acreage they retain. In the 1980s, DNR agreed to revise the Unit Agreement in a manner that while unintentional, effectively took the WIOs off the clock and resulted in warehousing for decades. This Agreement puts the WIOs back on the clock.

B. Continuing with the Status Quo Entailed Inherent Risk for the State.

In evaluating any settlement, it is imperative to judge the settlement against realistic alternatives. The alternative to this settlement was the status quo of continued litigation. Continuing with the ongoing litigation entailed inherent risk to the State. While the State believed it had a strong case, there was no guarantee the State would have ultimately prevailed on every issue. Had the State lost, it might have been stuck with a legal precedent that could have potentially allowed the WIOs to sit on the field without having to move forward with production. And, even had the State ultimately prevailed on all issues in the litigation, it would have taken years to terminate the Unit and litigate the underlying leases to get them back under state control. This potential for additional delay also created risks for the State.

Despite this uncertainty, some have suggested that the State should not have settled the overall litigation, but instead allowed the WIOs to continue with the development plan authorized by Commissioner Irwin in 2009 while continuing to litigate the broader issue of the Unit termination. This view assumes that the WIOs would have proceeded with the development plan through completion. But that was certainly not guaranteed. Judge Gleason's decision re-instated the Point Thomson Unit after the 2009 Conditional Interim Decision, meaning the individual leases were no longer at immediate risk of termination for lack of production. With the Unit reinstated, the WIOs could have chosen to ignore Commissioner Irwin's 2009 decision, and they could have halted all development while the litigation was pending. Given the history of this Unit, such a risk was not insubstantial.

Further, the Agreement has spurred significant progress toward a large scale gas pipeline to move the North Slope gas resources. Indeed, the State agreed to the Agreement, in part, because the Producers committed to work together on a project to Commercialize North Slope gas. Gaining momentum on gas commercialization efforts is critically important given the window of opportunity

---

39 *See, e.g.,* Sections 1.8; 4.5.2.

40 Sections 1.8, 4.5.3, 4.5.7.

that currently exists for such a project. These opportunities and benefits would likely not be available if the State had continued to litigate.

Given the fierce competition that the State faces to commercialize ANS gas and the limited opportunity to get ANS gas to the world markets, the progress to commercialize ANS gas could easily be jeopardized by continuing with uncertain litigation. Without this Agreement, there is a heightened risk that ANS gas commercialization efforts would stall – that companies would be less likely to invest billions of dollars in a large scale gas pipeline project without greater certainty over the Point Thomson leases and the 25% of ANS gas reserves underlying them.

Finally, continued litigation would have frustrated advancing efforts to increase oil exploration and production from the Eastern North Slope of Alaska. Continuing with litigation would have delayed the activity and investments required by the Settlement, which in turn could have discouraged exploration and development because companies may be less likely to invest in this area without certainty related to Point Thomson development.

C. The Agreement Achieves Significant Near-Term Benefits for the State.

The WIOs must complete the Initial Production System (IPS), which entails drilling two wells (now completed), installing production facilities, and constructing a common carrier liquids pipeline capable of transporting 70,000 barrels of liquids condensate per day.[41] IPS production must begin by the 2015-2016 winter season.[42] The IPS is required to produce 200 million cubic feet a day of natural gas: approximately 10,000 barrels per day of condensate from the gas will be stripped from the gas and sent down TAPS, and the dry gas will be re-injected into the reservoir.[43] Further, the IPS commitments require an additional well to be drilled by 2016-2017 and permitting for two additional wells and another well pad.[44] The WIOs are also obligated to drill additional wells to keep the facilities fully loaded with gas at 200 million cubic feet per day.[45]

A primary function of the IPS Project is to test the viability of gas cycling from both a reservoir and operational perspective by generating reservoir quality and performance information.[46]

---

41 *See* Sections 1.6, 4.1.

42 Section 4.1.1.2. The original, agreed-upon start-up date of 2014-2015 was pushed back one year because the federal government failed to timely issue the Environmental Impact Statement.

43 Sections 1.6, 4.1.

44 Sections 4.1.2, 4.1.3.

45 Section 4.1.1.3.

46 It appears that there is misunderstanding or minimization of the complexities and uncertainties associated with Point Thomson development – including the scale of the project and challenges associated with the resources, economics, permitting processes, and facility constraints. Certain testimony offered at the Senate Judiciary Committee minimized the IPS and the challenges associated with developing an abnormally high pressured retrograde gas condensate reservoir like Point Thomson. There are very few, if any, retrograde condensate fields that have been cycled at over 10,000 PSI anywhere in the world. By industry standards, the IPS is a "mega-project" – to complete the IPS, the WIOs will have to spend *billions* of dollars. The IPS project requires the WIOs to drill wells, install production facilities, and to build pipelines and roads in a remote arctic

This will generate critical information to determine the optimum full field development option and facility expansion.[47] The Agreement is structured around an initial cycling development plan that will provide essential data to inform how the field should ultimately be developed.[48]

The contractually binding work commitments set out in the Agreement should finally bring the field into production *in the near future*. Indeed, the Agreement provides the quickest way to bring the Unit into production because it builds on Commissioner Irwin's 2009 decision authorizing Point Thomson development. Once they received DNR's 2009 authorization, the WIOs drilled two production wells. They have also completed most of the necessary engineering and permitting work. If DNR were now to require a different development approach, the WIOs would have to re-start the engineering and permitting process, which would add additional years before the State received the benefits of production from Point Thomson.

A key goal of the Agreement was to bring the Point Thomson field on line as soon as possible and avoid further delays. The requirements of Section 4.1, requiring the WIOs to bring wells into production utilizing the IPS by the end of the 2015-2016 winter season, meet this goal. The IPS gas cycling project will result in approximately 10,000 barrel per day (bpd) production of liquid condensate into TAPS, thus production will create employment opportunities for Alaskans and it will increase TAPS throughput and revenue for state and local governments.

Additionally, to get the field into production, the WIOs will have to invest billions of dollars, which will provide hundreds of jobs for Alaskans.[49] Alaskans can expect more employment in the future because the Agreement also contains a strong Alaska-hire provision.[50]

For decades, much of the highly prospective area between Prudhoe Bay and the Arctic National Wildlife Refuge (ANWR) – the Eastern North Slope – has been dormant, in large part because of its remoteness and the lack of infrastructure. The infrastructure installed under the Agreement, e.g., a 70,000 barrel per day common carrier liquids pipeline, roads, airstrip, and gravel pits, will help open the Eastern North Slope to additional development for other companies both large and small by creating economies of scale that will likely make marginal development more economic.[51] This is an important added benefit for the State.

The Agreement incentivizes full field development by allowing the WIOs to retain acreage that they place into production.[52] It also incentivizes additional development because the WIOs will presumably want to get the best return on their investment in billions of dollars of infrastructure by moving beyond the initial 10,000 barrel per day production.

---

environment. In the context of an abnormally high-pressure reservoir, this is an undertaking that requires world-class drilling, production, and execution skills.

47 Sections 1.6, 4.1.1.2.

48 Section 1.6.

49 Section 1.9.

50 Sections 1.9-1.11, 4.13.

51 Sections 1.10-1.11.

52 Sections 4.3 - 4.4, 4.5.1.

Despite these advantages, some have argued that even with the Agreement, the WIOs have no intention of following through with its terms and commitments to production – but that they will use the Agreement to further delay development. We do not agree, but even if this is the case, the State is now in a much stronger position legally because the Agreement provides definitive remedies for forfeiture of acreage for the failure to develop within the agreed-upon timelines. The Agreement therefore strengthens the State's litigation position because it provides clear deadlines that the WIOs must meet to move development forward or lose acreage. The Agreement also puts the State on firmer footing to get acreage back if the WIOs delay development because as detailed below, it removes many of the arguments that the WIOs have used in the past to delay development.

Finally, in a significant concession by the WIOS, the Agreement vacated Judge Gleason's decisions, thus permanently eliminating any argument that these decisions restricted DNR's management authority for Point Thomson, or any other unit in the state.[53]

D. If the WIOs Breach Their Near-Term IPS Commitments, Then the State is Well-Protected Under the Agreement.

As noted above, the Agreement contains both incentives for the WIOs to undertake work and production commitments, as well as significant consequences if they do not.

The WIOs appear to be intent on meeting their IPS commitments under the Agreement. Their Chief Executive Officers have announced to Alaska and to the world that they are moving forward with the IPS.[54] They have also spent considerable sums drilling wells and securing the necessary permits for this development plan. Further, the WIOs have contracted with over 150 Alaskan companies to fulfill their work commitments.[55]

But even if the WIOs fail to follow through on their commitments, the State is well-protected. In particular, if the WIOs breach the Agreement and abandon the IPS, they will lose significant acreage as early as 2015 under Section 4.2.2.[56] The Unit will automatically terminate by 2019, and unless the WIOs Sanction a Major Gas Sale or submit an acceptable "alternative" Plan of Development (POD) that places the remaining acreage into production they will subsequently lose all remaining Point Thomson leases.[57] DNR's decision to reject this "alternative" POD is at DNR's

---

53 Section 4.10.

54 *See, e.g.,* http://dnr.alaska.gov/commis/priorities/point_thomson_files/ceo_letter.pdf

55 Section 1.9.

56 Under this provision the amount of acreage returned to the State depends on whether: (1) the WIOs have drilled the West Pad well; and (2) how much money they have spent on Point Thomson development between year end 2007 and the abandonment date. *See* Section 4.2.2. If their total spending on Point Thomson development from 2007 to 2015 does not exceed $2 billion, they will lose the vast majority of the Point Thomson leases automatically in 2015.

57 Sections 4.1.6, 4.6.

"sole discretion."[58] This decision cannot be appealed to court, and the WIOs cannot argue that Section 21 of the Unit Agreement applies to the agency's rejection.[59]

After the Unit is terminated, the Agreement takes the extra step of ensuring the underlying leases return to the State in a timely manner. Even leases containing wells capable of producing in paying quantities are subject to swift termination. The WIOs with leases containing such wells (currently there are only two PTU 15 and 16) may only try and avoid lease termination by submitting a Plan of Operations to the Director that commits to placing the capable well on producing status within two years.[60] Moreover, DNR retains the sole discretion to accept the Plan: "Approval or rejection of the Plan of Operation *shall be within the sole discretion of the DNR*. . . . The Commissioner's decision on the Plan of Operation shall be Without Appeal." [61] If the WIOs fail to submit a Plan within sixty days following Unit termination, or the Commissioner denies approval of the Plan, "the leases shall terminate with acreage returning to the State Without Appeal."[62]

---

[58] Section 4.5.2.2.

[59] Section 4.5.2.2 provides, in part: "Submittal and approval of the alternative POD shall be subject to the terms of the PTUA including applicable State law. Nonetheless, DNR shall have sole discretion to accept or reject an alternative POD, and a final Commissioner decision on the alternative POD is Without Appeal. For purposes of this paragraph the WIOs agree not to assert that Section 21 of the PTUA applies in any respect to review of or a decision on the proposed alternative POD."

[60] Section 4.5.2.3. Under Alaska law, a lessee may retain any non-producing lease after the primary term if that lease contains a well capable of producing in paying quantities. AS 38.05.180(m).

[61] Throughout the Agreement, DNR has insisted that the failure to perform certain activities would result in automatic consequences that are "Without Appeal" – *i.e.,* that cannot be appealed to court. This is a strong provision that protects the State from potential future drawn-out litigation. "Without Appeal" is defined in Section 2.34 to mean:

> the WIOs have waived any rights under the PTUA, individual lease terms, Alaska law and/or the laws of the United States of America, to file an application, petition, administrative appeal, or any cause of action before any administrative tribunal or state or federal court of law, and that the WIOs shall not file any such application, petition, administrative appeal, or cause of action. With regard to acreage that is released to the State Without Appeal under this Agreement, upon the occurrence of the specified event resulting in the release of acreage, that release will occur immediately and automatically.

Section 4.5.2.3 (emphasis added). The WIOs, however, can contest whether the specified event has occurred that triggers the automatic termination – e.g., a WIO can contest whether it did in fact drill a well or whether *force majeure* has prevented them from performing. Section 5.1.4.

[62] Section 4.5.2.3. "If the Director or the Commissioner approve the Plan of Operation and the lessees fail to place the well on producing status within two years, the lease shall terminate with acreage returning to the State Without Appeal." *Id.*

Accordingly, pursuant to Section 4.5.2, if there is no IPS and a Major Gas Sale (MGS) is not sanctioned, then the Unit automatically terminates and DNR has the sole discretion to get *all* Point Thomson acreage automatically returned to the State.[63] The WIOs can no longer argue, for example, that Section 21 applies if they refuse to install the IPS or if they refuse to develop the field beyond the IPS.[64] They are now foreclosed from filing a compulsory unitization request with the AOGCC under AS 31.05.110.[65] And they cannot argue that they should retain leases because they are engaged in drilling operations or because the leases contain wells capable of producing in paying quantities.[66] The only justification that remains to forestall returning all acreage to the state in 2019 is if the WIOs show that a *force majeure* event prevented timely performance – which is a right that is secured to them under state law.

In sum, the Agreement strips the WIOs of their previously used arguments for refusing to put the Unit into production. The WIOs can no longer argue that Section 21 applies if they refuse to install the IPS or if they refuse to develop the field beyond the IPS.[67] Nor can they argue that they do not need to put the IPS onto production because a reasonably prudent operator would not cycle this field because doing so would be "uneconomic."[68] And the WIOs cannot argue that they get to indefinitely retain all leases with wells capable of producing in paying quantities.[69] Accordingly, the WIOs have relinquished most of the arguments that have been used in the past to prevent the State from terminating the Unit and getting acreage back. If they breach their IPS commitments or Abandon the IPS project, the State will vigorously enforce these provisions of the Agreement, which will limit the WIOs' ability to engage in long, drawn out litigation.

E. The Agreement Provides Long-Term Benefits and the Ability to Optimize Full Field Development.

One reason why Commissioner Irwin rejected POD 23 was because the WIOs failed to address what would happen *after* the IPS was placed on-line.[70] Would the WIOs timely move

---

63 Section 4.5.2.1 provides: "If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, the following shall occur: (1) subject to Paragraph 4.5.2.2, the Point Thomson Unit and the PTUA shall terminate Without Appeal; (2) except for leases subject to Paragraph 4.5.2.3, each WIO will immediately surrender its leases and all such acreage shall be automatically released Without Appeal to the State; (3) each WIO agrees that it will not apply to form a compulsory unit with the Alaska Oil and Gas Conservation Commission with respect to any lease formerly within the Point Thomson Unit; and (4) this Agreement shall terminate."

67 Section 2.3.4.

68 *See, e.g.,* Section 4.2.1 ("The economics or costs of the IPS Project cannot be used as a rationale or justification for not completing the IPS Project and do not constitute a factor outside the WIOs' control under Paragraph 4.2.3.").

69 Section 4.5.2.3.

70 *See* Commissioner Irwin's April 22, 2008 Point Thomson Unit Findings and Decision on Remand From Superior Court at 31.

forward with a full field development plan, or would they force DNR to litigate with them to get more development? Importantly, the Agreement answers the "what next" question because it sets out three full field development alternatives and imposes significant consequences if the WIOs fail to develop beyond the IPS.

1. DNR Retains the Authority to Review Development Plans, and if the WIOs Do Not Commit to or Sanction at Least One Expanded Development Alternative, Significant Acreage Will Contract Out of the Unit.

The Agreement mandates the IPS be put into production. Once the IPS is on-line, the WIOs are presented with the following specifically defined and delineated development paths for the Thomson Sands reservoir which the WIOs must pursue by year-end 2019 or they will lose significant Point Thomson acreage.[71]

- Sanction a Major Gas Sale and begin the process of developing the massive Point Thomson gas reserves to ship down a gas pipeline.[72]

- Expand the IPS to cycle more gas and increase condensate production into TAPS; this alternative will result in additional liquids condensate production but leaves the dry gas in the reservoir.[73]

- Produce the Point Thomson gas and condensate, and then transport and inject the dry gas into Prudhoe Bay and send the liquid condensate down TAPS; this alternative will materially increase oil production at Prudhoe Bay, allow for Point Thomson gas to be available for in-state use, and increase condensate production at Point Thomson.[74]

DNR retains the discretion to review these development plans and can reject them if they are inconsistent with the Agreement.[75]

In addition to these post-IPS development alternatives for the Thomson Sands reservoir, the WIOs must develop the Brookian oil accumulations. This is an important component of the Agreement given the estimates of oil in the Brookian accumulations. The WIOs must submit an acceptable development plan that moves the Brookian accumulations into timely production.[76] If they do not submit an acceptable development plan by 2018, they will lose the Brookian acreage.[77]

74 *See, e.g.,* Section 4.5.5.

75 *See* Section 4.6 (providing that future PODs must be submitted for DNR's approval and must be consistent with Section 10 of the Point Thomson Unit Agreement and the Settlement).

76 Section 4.7.

77 *Id.*

DNR has complete discretion to accept or reject the Brookian POD and its decision to reject the POD will result in the loss of the Brookian acreage, and this decision cannot be appealed to court.[78]

All three development paths can be pursued individually or simultaneously. They will each require billions of dollars of additional investment to complete, thereby providing significant employment opportunities for Alaskans, increasing revenue for the State and local governments, and two of the three will enable Alaskans to finally access large volumes of North Slope gas for in-state use. Each of these alternatives also provide that the WIOs can only fully secure additional Point Thomson acreage once expanded production of hydrocarbons begins.[79]

2. Given the Importance of a Large Scale Gasline to the State's Interests, the Agreement Focuses on a Major Gas Sale.

Advancing a Major Gas Sale has been a longstanding goal of the State and is therefore a primary goal of the Agreement.[80] The Agreement moves the State closer to a Major Gas Sale in a number of ways.

First, a Major Gas Sale unlocks the potential and resources of the Point Thomson field, which contains approximately 25% of ANS proven gas reserves.

Second, the Agreement provides that in addition to the IPS work, the parties undertake work together to commercialize ANS gas in conjunction with the IPS.[81] The letter to Governor Parnell from the CEOs of BP, ConocoPhillips, and ExxonMobil announced this forward alignment and made public the work that had already begun.[82] The producer alignment is important for a Major Gas Sale – it is also unprecedented when considering their alignment with TransCanada. The Point Thomson Agreement drove the alignment to work together on a single, large-scale, in-state LNG project.

---

78 Section 4.7 provides: "If the WIOs submit a POD for the Brookian by year-end 2018 that is approved by DNR, the acreage listed in Area F on Exhibit C shall remain in the Point Thomson Unit after any Unit contraction at year-end 2019 and shall be maintained through approved PODs or formation of expanded or new PA(s) in accordance with the PTUA including applicable State law. If the WIOs do not submit a Brookian POD by year-end 2018 or if DNR does not approve the Brookian POD, the acreage listed in Area F on Exhibit C shall be released to the State Without Appeal."

79 Section 4.4.2 (noting that the initial participating area will expand once the WIOs begin expanded production for a Major Gas Sale, IPS Gas Cycling Expansion Project, or the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project).

80 Section 1.11 ("A Major Gas Sale off the North Slope of Alaska is a primary goal of the Parties.").

81 Section 1.7 states: "In parallel with the work on the IPS, Parties and/or their affiliates to this Agreement will, upon execution of this Agreement, undertake work for commercialization of North Slope gas. This work will build on ongoing gas commercialization efforts."

82 http://dnr.alaska.gov/commis/priorities/point_thomson_files/ceo_letter.pdf

Third, and more specifically, the Agreement incentivizes progress on a Major Gas Sale project. It provides two windows for the producers to Sanction a Major Gas Sale commercial project: (1) from now until 2016, which if chosen, will enable the WIOs to temporarily secure additional Point Thomson acreage; and (2) if a Sanction decision is not made by 2016, then the WIOs will have to do engineering and permitting work on the other full field development alternatives laid out in the Agreement.[83]

And finally, the IPS and full field development alternatives will result in infrastructure and permits required for a Major Gas Sale.[84]

3. The Agreement Provides for Other Full Field Development Alternatives Aimed at Enabling the Optimization of State Resources.

One of the strengths of this Agreement is it provides the State and the WIOs flexibility regarding full field development. The past decade has seen considerable volatility in the global and domestic energy markets. Because nobody can predict the future, it is difficult to know the optimal development path for Point Thomson at present. Although the Agreement places an emphasis on a large scale gas commercialization pipeline project, there is significant value in retaining other paths for how the Point Thomson field should be developed in addition to a Major Gas Sale, which is why the Agreement also has full field cycling as an alternative.

Nevertheless, it has been suggested that full field cycling should be the *only* full field development alternative authorized by the State. We disagree.

First, before committing to full field cycling, the WIOs, and the State, need to better understand, among other things: (i) the operational capability to cycle gas at 10,000 psi; (ii) the efficiency of high pressure separation of condensate from the gas; (iii) the connectivity of the reservoir; (iv) the condensate yield (how much condensate drops out of the gas); and (v) the economic viability of long term gas cycling. There will be much more information on these important aspects once the IPS is online and producing condensates and reinjecting dry gas back into the reservoir.

Second, Point Thomson gas may be needed for a large-scale pipeline. The State therefore does not want to condemn the prospects of a large scale gas pipeline by insisting that Point Thomson gas cannot be made available for North Slope gas commercialization until Point Thomson is fully cycled, which could take 20 to 30 years. Indeed, insisting only on full field cycling could significantly restrict the State's flexibility on advancing a large-scale gas pipeline because full field cycling would deprive the State of the ability to use Point Thomson gas for such a pipeline.

Third, to help advance a large scale gas pipeline, the Agreement encourages the WIOs to sanction a Major Gas Sale by allowing the WIOs to retain the Unit (with the exception of the

---

83 Section 4.1.6.

84 Section 1.6 – 1.7 (noting that the infrastructure will serve as a "pre-investment" for a Major Gas Sale).

Brookian, which is subject to a separate process) if a Major Gas Sale goes forward and Point Thomson gas is transported down the gas pipeline.[85]

All three full field development alternatives as set forth and defined in the Agreement are in the public interest because they will provide significant benefits to the State, including increased oil production, billions of dollars in investment, additional revenue to State and local governments, and employment for Alaskans.

Overall, the flexibility related to full field development provided by the Agreement is one of its important strengths. Nobody knows what the future holds. It is in the State's interest to retain all alternatives that would optimize the overall benefit to the State for the development of the Point Thomson resources.

4. Mr. Walker's and Mr. Richard's Views on the Uses of the Point Thomson Reservoir Illustrate Why Full Field Development Alternatives are in the State's Interest.

Given the uncertainty of the future, today's views on the best way to fully-develop Point Thomson may not be tomorrow's. Mr. Walker's and Mr. Richard's changing views on the best uses of the Point Thomson Reservoir illustrate the reasonableness of providing full field development alternatives for the Point Thomson field to promote the State's interests. Mr. Walker asserted in his testimony before the Senate Judiciary Committee on April 27, 2012, and his recent letter to the DNR Commissioner Sullivan, that the only responsible way to develop Point Thomson is through full field cycling of liquids. This position is at odds with the positions he argued for in the written filings and oral testimony he submitted earlier during the pendency of the Point Thomson litigation.[86] There he urged DNR to require a blow down sort of development on the basis that Point Thomson provides the "best source of gas" for an LNG project and utilizing Point Thomson gas for a gas pipeline will provide significant benefits for the state. He advocated that DNR needed to get the WIOs to commit their Point Thomson gas reserves into a gas pipeline or, alternatively, terminate the Unit so that it could get another company to develop Point Thomson's gas reserves and put this gas into a gas pipeline.[87]

---

85 *See* Sections 4.4.2.

86 The Point Thomson record, which serves as the basis for this Agreement, contains over 35,000 pages of documents. Between the 2005 default decision and the 2009 lease termination proceedings held before Commissioner Irwin, DNR held three public hearings related to the issues covered in the Agreement. Mr. Walker participated in two of these hearings and submitted hundreds of pages of documents that were considered by DNR before settling this dispute.

87 For example, in 2005 Mr. Walker stated in a court filing that Point Thomson provides the "best source of gas" for an LNG project. [Ex. A at 6] He told DNR that utilizing Point Thomson gas for a gas pipeline will provide significant benefits for the state. [Ex. A at 8-9] Mr. Walker, citing a filing that he submitted to DNR, explained:

- "Natural gas from the PTU is necessary to make a natural gas line project from the North Slope possible. PTU proven gas reserves are sufficient to supply a large diameter gas pipeline at startup."
- "The Authority requires an assured supply of natural gas, such as that found in the PTU, to obtain financing for a gasline project"

Similarly, Mr. Richards testified to the Senate Judiciary Committee that the State should only allow for full field cycling of the Point Thomson field. But, in a 2008 brief to DNR, Mr. Richards argued to Commissioner Irwin that he should *reject* the WIOs' plans for field cycling because "Point Thomson is predominately a gas field."[88] A main focus of his brief was to encourage DNR to *forego* gas cycling development, which would keep the gas in the ground at Point Thomson, and terminate the unit so another party could come in and develop the gas reserves for a large scale gas pipeline.[89]

In sum, Mr. Walker's previous statements are diametrically opposed to his current position, articulated before the Senate Judiciary Committee on April 27, 2012. Indeed, previous statements that it is DNR's constitutional duty to develop Point Thomson's gas reserves as soon as possible significantly raises questions regarding Mr. Walker's most recent position on Point Thomson development. At a minimum, this demonstrates that even those that follow oil and gas issues closely, such as Mr. Walker, cannot be sure of what the most optimum full field development path is for the state regarding Point Thomson. It also demonstrates the importance of having more than one full field development alternative in the Agreement.

II. DR. MYERS'S, MR. WALKER'S AND MR. RICHARD'S CRITICISMS OF THE AGREEMENT ARE BASED ON MISUNDERSTANDINGS OF ITS TERMS

Dr. Myers, Mr. Walker, and Mr. Richards lay out similar criticisms of the Agreement. As shown below, their reading of the Agreement either misunderstands or misinterprets numerous provisions of the Agreement. Below is a brief summary and response to their claims.

A. Full Field Cycling is One of Several Viable Development Alternatives that Provide Significant Benefits to the State.

- "The Leaseholders are attempting to mothball valuable gas reserves that belong to the State and its citizens. These resources are now more valuable than ever, as a result of increases in the price of natural gas in the past few years. Clearly, it is in the State's best interest, and the best interest of its citizens, to develop these resources sooner rather than later."
- "DNR has a constitutional duty to the State and its citizens to ensure that the Point Thomson gas reserves are developed in a timely manner, and not mothballed as the Leaseholders seek to do."
- "It is in the interest of every citizen that a natural gas Project be built because such a Project will provide needed revenue for many government programs, both at the State and local levels. It is also in the public's interest because a natural gas Project will create jobs and economic activity." [*Id.* at 11]

88 *See* Ex. B at 23.

89 *See* Ex. B at 22-35. Mr. Richards also added: "the Port Authority respectfully submits that the Commissioner would be woefully ignoring his obligations as trustee of our people's resources if he did not focus these termination proceedings on the working interest owners' refusal to market gas from the unit." [Ex. B at 22]

The central criticism offered by Dr. Myers, and echoed by Mr. Walker and Mr. Richards, is that the only reasonable development path for Point Thomson is full field cycling, and that the State should not have agreed to any other development option in the Agreement.

As discussed in much more detail below, Dr. Myers, Mr. Walker, and Mr. Richards rely on a misguided application of the 2008 PetroTel study to support their view that full field cycling is the *only* development option that DNR should consider. This study, however, is not a complete guide to determine the feasibility or commercial viability of a full field scale cycling development. The 2008 study was only designed to evaluate the range of proven and potential hydrocarbon resources within the Thomson Sand reservoir and to get a preliminary understanding of the relative impact on potential rate of production and ultimate recovery of hydrocarbons.

It is critical to underscore that these *preliminary* 2008 estimates of technically recoverable resources were made without applying the real-world constraints that would apply to an actual development, such as limitations on the number of wells, restrictions on the placement of drilling pads and other facilities, gas handling limits, or economic metrics. Additionally, since issuance of the report in 2008, new data has been made available to DNR, which allowed the agency to conduct detailed studies and understand more fully the full range of challenges associated with development of the Point Thomson reservoir.

Nonetheless, DNR agrees that full field cycling may be a viable alternative for developing Point Thomson, and that is why the development path is included in the Agreement.[90] Indeed, it should be noted, that the IPS *is* a gas cycling project, and depending on the results of that development, full field cycling might be how the Point Thomson field is optimally developed.[91]

Generally speaking, the primary benefit of full field cycling is that it potentially allows the operator to recover the largest quantity of condensates and oil. But, when evaluating this development option, there are other considerations that cannot be overlooked. For example, the WIOs would not agree to a settlement that demanded only full field cycling; in part because they claim it is not yet known whether full field cycling at Point Thomson is technically feasible. Further, it is far from clear that full field cycling, even if technically feasible, would make economic sense to either the State or the WIOs, given that the costs could be much greater than for other development scenarios and the price of oil in the future is not known.[92] And, critically, full field cycling could delay production of natural gas from the reservoir, which in turn has the potential to significantly postpone a large-scale gas pipeline, a critical piece of Alaska's energy future. On the other hand, a market for North Slope natural gas does not currently exist and cannot be assured by the availability of Point Thomson gas. Thus, the public interest is best protected by retaining flexibility to determine the best path for full field development. Indeed, insisting on only one development option overlooks the benefits, discussed above, that accrue to the State by retaining flexibility with full field development.

In sum, the Agreement requires an initial cycling project and then provides for both full field cycling and other alternatives for possible full field development alternatives for Point Thomson.

---

90 Sections 1.7, 2.15, 4.6.2.

91 Sections 1.6 – 1.7.

92 For a detailed overview of the challenges associated with producing this field see http://www.arcticgas.gov/point-thomson-key-gas-field.

Any of these alternatives will provide considerable value to the State. The Agreement further protects the State because DNR retains the right to reject any development that is inconsistent with the Agreement or state law.[93] And, finally, prior to choosing one of these alternatives, the WIOs will still need to secure AOGCC approval, using data acquired through the IPS, that the development alternative ultimately selected is consistent with the Agreement and with State law.[94]

1. The Difference Between "Gas Cycling" and "Gas Blowdown."

To understand the Agreement, and some of the criticisms, it is worth pausing to discuss the two primary methods to develop a retrograde gas condensate field like Point Thomson.[95]

One development method, gas cycling, produces the natural gas, separates out the gas condensates, ships the condensates to market through a liquids pipeline, and re-injects the gas into the reservoir to maintain reservoir pressure. This is exactly what the IPS will do. In a retrograde condensate field, the reservoir pressure must be maintained above its "dew-point, which at Point Thomson is at a very high pressure," in order to prevent the reservoir's condensates and oil from "dropping out" of the gas phase in the reservoir and being lost to production. The primary benefit of this development method is that it allows the operator to recover the largest quantity of liquid condensates and oil by maintaining reservoir pressure. After recovery of the condensate the re-injected gas (minus the volume used for fuel) can then be produced and sold.

The second development method is gas "blowdown", where natural gas is produced from the reservoir and sold rather than re-injected. The liquid condensates are separated from the gas and sent to market through a liquids pipeline and the "dry" gas is transported through a gas pipeline. This type of development would allow the WIOs to simultaneously produce gas and liquids, and it would result in a huge rush of production because the Thomson Sands reservoir is highly pressurized. However, it will also result in the potential loss of considerable liquids in the reservoir because reservoir pressure is not maintained.

It should be emphasized that blowing down the Thomson Sands reservoir (the primary resource in the Unit) will have no impact on the ability to recover the significant volumes of oil contained in the shallower Brookian accumulations.

2. The Agreement does not Unconditionally Authorize Gas Blowdown and the AOGCC Must Approve Any Proposed Development.

---

93 Sections 5.7, 4.6 (DNR can reject PODs inconsistent with the Settlement Agreement or Section 10 of the Point Thomson Unit Agreement).

94 Section 5.7 provides: "In proceedings before the Alaska Oil and Gas Conservation Commission regarding approvals related to the IPS Project, a Point Thomson Expansion Project, or a Point Thomson project related to a Major Gas Sale, the DNR agrees it will not oppose any such application submitted that is consistent with the terms of this Agreement and applicable State law." Thus, if DNR believes that a development alternative is not consistent with the Settlement or with state law – i.e., the development will result in waste – then DNR can oppose such an alternative before the AOGCC.

95 For a more detailed overview of these issues see http://www.arcticgas.gov/point-thomson-key-gas-field and http://doa.alaska.gov/ogc/Gas/PtThompson_Pool_Rules.pdf

The main thrust of Dr. Myers' criticism is that the Agreement unconditionally authorizes the waste of significant volumes of oil and gas condensates. This criticism is misplaced because DNR retains the right to reject any development that is inconsistent with the Agreement. Moreover, nothing in the Agreement gives the WIOs an unconditional right to forgo full field cycling and blowdown the field.

Beyond DNR's tools to guide full field development, the Alaska Oil and Gas Conservation Commission ("AOGCC") will adjudicate any development and off-take plan proposed by the operator. The AOGCC is statutorily prohibited from allowing any development plan that will result in waste.[96] And State law provides that it is the AOGCC that must determine whether a particular development plan is wasteful.[97] The Agreement does not alter this relationship or responsibility, and it does not prevent DNR from opposing a development plan that conflicts with the Agreement or with state law.[98]

3. The 2008 PetroTel Study Taken Out of Context Does Not Provide a Realistic Portrait Regarding Full Field Development.

During their testimony before the Senate Judicial Committee on April 27, 2012, the only evidence that Dr. Myers and Mr. Walker cited to support their assertion that blowing down Point Thomson for a large scale pipeline would lead to considerable waste of oil and gas condensates was a 2008 PetroTel study. Based on this study, Dr. Myers and Mr. Walker also claim that the only reasonable development plan for Point Thomson is full field cycling.

The 2008 PetroTel study should not be used to judge the merits of the IPS and the expanded development alternatives set out in Agreement because the 2008 study was a preliminary analysis and was not designed to evaluate optimal developments scenarios.

In 2007, the Resource Evaluation section of the Division of Oil and Gas contracted with PetroTel, Inc. to perform geologic and engineering evaluation of the Point Thomson Sand reservoir. The study was initiated to provide a technical assessment of the Thomson Sand reservoir. The purpose of the evaluation was to get an independent analysis of the proven and potential hydrocarbon resources contained in the reservoir and gain a better understanding of unique issues associated with development and production of a retrograde gas condensate reservoir.

---

96 AS 31.05.095 provides: "The waste of oil and gas in this state is prohibited." Under AS 31.05.100, an operator must secure AOGCC approval by proving that the development will not result in waste before developing a pool. AS 31.05.170(15) defines waste to mean its "ordinary meaning" and includes "the inefficient, excessive, or improper use of . . . reservoir energy and . . . producing any oil or gas well in a manner which results or tends to result in reducing the quantity of oil or gas to be recovered from a pool[.]"

97 As the AOGCC has stated, "the operator of an oil or gas field applies to the AOGCC for 'Pool Rules.' These are specific rules that stipulate how to develop the reservoir in a way that maximizes oil and gas recovery." http://doa.alaska.gov/ogc/Gas/NS_Gas_Sales.pdf

98 Section 5.7 (DNR can oppose any development application pending before the AOGCC that is inconsistent with state law or the Settlement); Section 4.6 (DNR can reject PODs inconsistent with the Settlement Agreement or Section 10 of the Point Thomson Unit Agreement).

The scope of the 2008 study did not include optimization of any particular development scenario and it was not designed with the intent of describing a realistic development plan. It is vitally important to note, therefore, that these preliminary 2008 estimates of technically recoverable resource were made without applying the real-world constraints that would apply to an actual development project, such as limitations on the number of wells, regulatory restrictions on the placement of drilling pads and facilities, gas handling limits, or economic metrics.

Here, the 2008 PetroTel study cannot serve as a realistic basis to review a specific development plan precisely because *no consideration was given to these potential restrictions*, i.e., to the location or size of surface infrastructure or facilities, development costs, performance of high pressure facilities, gas handling constraints, or market conditions. Indeed, the 2008 PetroTel study did not consider *any* economic or operational constraints on the number of wells drilled, the amount of gas cycled per day, the volume of gas the facilities could handle, or the associated challenges imposed when permitting a full field development.

In addition, the 2008 study reported that up to 400 million barrels of oil could potentially be recovered from the Thomson Sands oil-rim, which is different from the Brookian resources. This thin oil rim lies between an overlying, highly mobile Thomson Sands gas cap and an underlying water leg. Subsequent modeling runs by DNR and PetroTel, however, indicate that a project to drain the thin oil column of the main Thomson reservoir could face serious challenges because, in part, the wells intended to produce the oil would produce gas instead of oil within a matter of weeks, effectively ending production from the oil rim. Even Dr. Myers conceded during his testimony that the oil rim estimates in the 2008 PetroTel study that he cited in his PowerPoint were likely too optimistic. Thus, the assumption of the 400 million barrels of recoverable oil from the oil rim, in retrospect, appears unrealistic given these challenges, the current state of technology, and development costs.[99]

Put simply, it is not appropriate to use the potentially recoverable reserves reported in the 2008 PetroTel study as the true measure of what will or won't be recovered at Point Thomson. Ultimately any development at Point Thomson will be a balance (optimization) of not only the potential resource and reservoir characteristics but also the real world development constraints that allow the operator to economically recover the maximum amount of oil and gas over an expected time frame.

4. The 2008 PetroTel Study Does Not Fully Reflect DNR's Current Understanding of the Point Thomson Reservoir.

The 2008 PetroTel study was a preliminary study and does not comport with the Division's current understanding of the challenges in developing the Thomson Sands reservoir. Since this

---

[99] Indeed, discounting the recoverability of the oil rim is consistent with the United States Department of Energy's analysis of the Point Thomson reservoir. After reviewing the 2008 PetroTel study, the Department of Energy stated the PetroTel findings "appear to be optimistic and open to question, especially with respect to the recovery predicted for oil from the oil rim." http://www.netl.doe.gov/technologies/oil-gas/publications/AEO/ANS_Potential.pdf at 2-30 Contrary to the 2008 PetroTel study, the DOE concluded that very little of the oil rim oil was recoverable and that "it is conservatively assumed that the gas reserves are 8.0 TCF and the liquids are estimated to be at least 300 MMBC." This number is in stark contrast to the earlier 2008 PetroTel estimates of 620-850 million barrels of petroleum liquids.

study was issued the Division has learned much more about the reservoir and the challenges associated with development of the resource within. After PetroTel completed the 2008 study, the Division acquired access to ExxonMobil's data room. The Division took the information it learned from the data room and, along with PetroTel, concluded that when comparing similar likely scaled full field developments, the potential liquids lost would be far less than the estimates contained in the 2008 PetroTel study.

More specifically, in September 2008 PetroTel was put under contract to the Alaska Department of Law to provide consulting services and expert testimony to the State of Alaska in connection with the litigation arising from DNR decisions to terminate the Point Thomson Unit. PetroTel performed additional studies and refinements to their earlier modeling efforts in order to advise the State and be in a position to testify in the Point Thomson Unit litigation if the litigation team deemed it appropriate. The work performed by PetroTel on behalf of the Point Thomson Unit litigation team is set forth in detail in Appendix A.

After completing this extensive review, the Division of Oil and Gas concluded that the potential amount of liquid condensate and oil that could be lost if Point Thomson were "blowndown" early for a Major Gas Sale would be significantly less that the estimates found in the 2008 PetroTel study that Dr. Myers and Mr. Walker rely upon. DNR cannot disclose the revised estimate because this information is protected under Alaska law.

This work culminated in a two day briefing by PetroTel and the Division of Oil and Gas for DNR Deputy Commissioner Rutherford and the Point Thomson litigation team in August of 2009. Commissioner Sullivan subsequently received similar briefings from Division staff in 2011. This work was integral to the Agreement and to DNR's decision to support the full field development alternatives authorized by the Agreement.

B. <u>The Major Gas Sale Development Set Forth in the Agreement Contemplates a Large- Scale Gas Pipeline Project Off the North Slope</u>.

Mr. Walker and Mr. Richards have raised questions regarding why the Agreement's definition of Major Gas Sale is a pipeline with capacity greater than 500 million cubic feet per day (mmcfd), as opposed to a larger number, such as the definition of Major Gas Sale in the Prudhoe Bay Unit Operating Agreement. Contrary to Mr. Walker and Mr. Richard's speculation, this definition does not contemplate a small-scale gas pipeline.

The 500 mmcfd threshold was included in the Agreement to reference the exception in AGIA that provides the State may be involved in the finance and construction of a gas pipeline of 500 mmcfd or less without incurring penalties. Requiring the Major Gas Sale to be in excess of 500 mmcfd made clear that any in-state "bullet line" would not qualify as a Major Gas Sale.

It would not be economic to construct a small line as speculated by Mr. Walker and Mr. Richards. In order for a gas pipeline project to make economic sense, the project size would likely need to eventually be well in excess of 500 mmcf per day.

An LNG project will need to be large scale to be economic. Given this, there was no reason to try and specify any minimum pipeline size in the Agreement beyond ensuring the line will be in excess of the 500 mmcfd AGIA limitation because it is not clear today exactly what the initial scope of any LNG project may be. An LNG project may "scale up" over its first few years and the

Agreement was designed to provide flexibility to ensure that an arbitrary limitation did not prevent the construction of an economic large-scale gas pipeline project.

C. The Agreement Contains a Firm Development Commitment in the Form of the IPS, and the Penalty of Losing the Unit *and* the Underlying Leases if the IPS is not Completed.

1. Per the Agreement, the IPS is a Firm Commitment Offering Benefits to the State Far in Excess of the 2009 Conditional Interim Decision.

Mr. Walker and Mr. Richards argue that the IPS was formerly a firm commitment under DNR's 2009 Conditional Interim Decision and that, under the Agreement, the IPS is now optional and that even if the WIOs Abandon the IPS, they still keep significant acreage.[100] Mr. Walker and Mr. Richards misunderstand the IPS and how it differs from the 2009 decision.

The IPS is not an "option." The Agreement employs binding mandatory language that *requires* the WIOS to complete the IPS. It provides: "The WIOs *shall* put the PTU 15 and PTU 16 wells on production utilizing the IPS by the end of the 2015-2016 winter season and in no event later than May 1, 2016."[101]

In the past when the WIOs have committed to cycling projects at Point Thomson, they have returned to the State and said that cycling is uneconomic. The Agreement takes away this excuse. Under Section 4.2.1, the "economics or costs of the IPS Project cannot be used as a rationale or justification for not completing the IPS Project and do not constitute a factor outside the WIOs' control under Paragraph 4.2.3."

The Agreement also requires the WIOs to "diligently pursue" the completion of the IPS and it provides that the failure to do so constitutes a breach of the Agreement that triggers significant consequences.[102] In particular, if the WIOs breach the Agreement by abandoning the IPS, [103] the WIOs lose significant acreage as soon as 2015,[104] and if there is no Major Gas Sale Sanctioned by 2019, then *all acreage* comes back to the State and the Unit terminates Without Appeal.[105]

The purpose of the Abandonment provision is not, as Mr. Walker suggests, to give the WIOs an "option." Instead, *the State* insisted on including this provision in order to establish predetermined consequences for the WIOs' failure to meet contractual obligations. The alternative,

---

100 Walker Letter at 5.

101 *See* Section 4.1.1.2 (emphasis added).

102 Section 4.2.1 provides: "The WIOs will have diligently pursued the IPS Project if the project work plans, activities, and pace are undertaken in a manner exemplified by the Point Thomson Provisional Schedule Level 1 work sheet attached as Exhibit E. Moreover, a lack of progress on project work plans, activities, and pace commensurate with the size and scale of the IPS Project over a one-year period is indicia of the WIOs' decision to Abandon the IPS Project."

103 Abandonment is defined in Section 4.2.1, which is quoted above.

104 *See* Section 4.2.2.

105 *See* Section 4.5.2.1.

to remain silent on consequences, would likely result in protracted litigation related to the appropriate remedy for the WIOs' failure to meet their binding contractual obligations.

The WIOs' agreement to these consequences for abandonment was a significant concession by the WIOs because, in the past, they have argued that unit and lease termination was not an appropriate remedy for failure to develop the Unit. Now the prospect of losing significant acreage in the near future looms large if the WIOs stop working on the IPS.

Indeed, under the Conditional Interim Decision, there was nothing to prevent the WIOs from stopping work and forcing the State to litigate *for years* on whether they needed to complete the project. This prospect became more likely once Judge Gleason reinstated the Unit, which gave the WIOs the ability to halt their work and wait for the litigation to reach a final resolution.

And contrary to Mr. Walker's contention, the IPS Project described in the Agreement is not in the same as the Conditional Interim Decision.[106] The Agreement goes far beyond the sparse terms of the Conditional Interim Decision. For example, the Agreement sets out a detailed work schedule that the WIOs must abide by; if they do not, then the State has grounds to declare that the IPS Project has been abandoned.[107] The Agreement also obligates the WIOs to keep the IPS fully loaded with gas by drilling additional wells if production falls off and to conduct debottlenecking work to increase liquids recovery.[108] It requires the WIOs to drill the West Pad well by the end of the 2016-2017 winter season[109] and requires the WIOs to pursue permitting of an East Pad, East Pad Well, and a Fifth Well.[110] The Agreement also requires the WIOs to begin working on the next phase of development by submitting a POD for DNR's approval.[111] And as noted above it dispatches with the WIOs' previous excuses for not developing the field.[112]

Accordingly, the IPS Project required by the Agreement differs significantly from the 2009 Conditional Interim Decision because it contains additional mandatory work commitments and provides contractually agreed upon remedies if the WIOs fail to meet their binding obligations.

2. Even if a Major Gas Sale is Sanctioned after Abandonment of the IPS, Previously Contracted Acreage is Forever Lost to the WIOs.

Mr. Walker and Mr. Richards seem to believe that, if the IPS is Abandoned and acreage is lost as a result, the Sanctioning of a Major Gas Sale will cause previously contracted acreage to come back into the Unit.[113] This is incorrect.

---

106 Walker Letter at 4, 5.

107 *See* Section 4.1.1.2; 4.2.1; Ex. E.

108 *See* Section 4.1.1.3; 4.1.1.4.

109 *See* Section 4.1.2.

110 *See* Section 4.1.3.

111 *See* Section 4.1.6, 4.6.

112 *See, e.g.*, Section 4.1.1.2 (the WIOs must complete the IPS – this commitment is not contingent on the outcome of engineering studies), 4.2.1 (the WIOs cannot use economics or costs as an excuse for not completing the project).

113 Walker Letter at 7.

The Agreement is clear that should the WIOs Abandon the IPS but later Sanction a Major Gas Sale, certain acreage that contracts as a result of Abandonment remains contracted.[114] More specifically, if the IPS is Abandoned, Areas E and F contract regardless of the amount of money spent between year-end 2007 and 2015, and if the WIOs spend less than $2 billion and do not drill the West Pad Well, the only acreage that remains in the Unit is Area A.[115]

This acreage will not, as Mr. Walker and Mr. Richards suggest, be reconstituted or recommitted to the Unit if the WIOs later Sanction a Major Gas Sale. The Agreement is explicit on this point: "If IPS Project Start-up has not occurred and a Major Gas Sale is Sanctioned prior to year-end 2019, any acreage that contracts from the Point Thomson Unit under Paragraph 4.2 (the Abandonment provision) of this Agreement *shall not be recommitted to the Point Thomson Unit.*"[116]

3. If the WIOs Do Not Develop Beyond the IPS, They Will Lose Significant Acreage.

Mr. Walker and Mr. Richards assert that the WIOs will retain "most, if not all, of Point Thomson in perpetuity" by producing 10,000 barrels per day through the IPS.[117] They are incorrect.

If the WIOs do not move beyond the IPS, then under Sections 4.5.3 and 4.7, Area E and F, and some leases in Area D, will automatically contract out of the PTU. This acreage automatically returns to the State in 2019. The WIOs cannot appeal this decision.[118]

Additionally, assuming that the WIOs fail to meet their binding commitment to drill the West Pad Well, then any acreage in Areas B and D that is not contributing to production, i.e., that is not included in the initial participating area, will contract from the unit under Section 4.5.3.2. And

---

114 The State did not insist on getting all of the acreage back in 2015 because the WIOs have, by drilling two wells capable of producing in paying quantities, earned the right to retain some acreage for an additional period of time to place those wells onto production or to Sanction a Major Gas Sale. This provision is also consistent with the central principle of the Settlement: the more work and money the WIOs spend, the more acreage they retain.

115 Under Section 4.2.2.4, only costs that are directly related to Point Thomson Development and that are paid for by the other Point Thomson WIOs can count towards the $2.0 billion number. Point Thomson Development is defined as "work activities" for the IPS and other work activities set out in the Settlement. This means that the WIOs cannot "get credit" for work they have completed on gas pipeline projects or for work completed at other fields (because the Point Thomson WIOs are not going to be billed for this work), nor will legal fees or overhead count because these are not work activities mandated by the Settlement. *See* Section 4.2.2.

116 *See* Section 4.5.7 (emphasis added).

117 Walker Letter at 4.

118 Section 4.5.3.1 provides: "The acreage in Area E and the northern half of ADL 377017 (ADL377017(N) on Exhibit C), without regard to whether this acreage was included in a technical PA application or is included in the PA as the result of a technical PA expansion under Paragraph 4.4.3, shall be released to the State Without Appeal. The remaining acreage in Area D shall be subject to the PTUA including applicable State law."

even if the WIOs have drilled the West Pad Well, then any acreage in Area D that is not contributing to production will contract from the Unit.

Consequently, by 2019, nearly half of the Point Thomson acreage will automatically return to the State Without Appeal if the WIOs do not expand beyond the IPS. If the WIOs do not move beyond the IPS, the only acreage the WIOs are entitled to hold is Area A. And depending on what else the WIOs have done and the extent of the IPS production, they may keep more leases beyond Area A. The Agreement therefore dramatically restricts the WIOs' ability to keep the State in court for years over their failure to develop the Unit's resources and will result in the automatic return of significant acreage to the State Without Appeal.

This outcome is entirely consistent with State law and the Unit Agreement, both of which provide for retention of acreage as a result of production.[119] The Agreement provides additional protection for the State that does not otherwise exist under the Unit Agreement by specifically tying the retention of additional acreage to undertaking and completing future development projects.[120]

D. The Agreement Addresses the Next Phase of Development after the IPS by Providing for Additional Development Alternatives that, if Completed, Allow the WIOs to Retain Additional Acreage.

1. Construction Commitments and Final Investment Decisions Will be Part and Parcel of Sanctioning a Major Gas Sale.

Mr. Walker and Mr. Richards believe that Sanctioning of a Major Gas Sale could occur in the absence of construction commitments and without final investment decisions,[121] but they misunderstand the definition of Sanction.

The definition of Sanction was carefully crafted to ensure that acreage would not be secured unless a Major Gas Sale project would actually be completed, with a pipeline constructed and gas flowing through the pipeline. The definition of Major Gas Sale mandates a pipeline that delivers gas "off the North Slope of Alaska."[122] The definition of Sanction expressly requires corporate approvals to "proceed with construction of the project to completion."[123] *This is a contractually-binding construction commitment to complete a gas pipeline, not a promise to conduct further "studies."*

---

119 *See* Section 11 of the Point Thomson Unit Agreement; AS 38.05.180(m); 11 AAC 83.336.

120 Sections 4.4, 4.5, and 4.7 explicitly discuss when and how acreage is retained and under what circumstances the Point Thomson Unit terminates and acreage returns to the state.

121 Walker Letter at 6-7.

122 *See* Section 2.16.

123 Section 2.28 defines Sanction to mean "formal and explicit approval of a Major Gas Sale. A Major Gas Sale shall be considered "Sanctioned" under this Agreement upon receipt by the State of documentary evidence of: (1) corporate approvals by parties sufficient to proceed with construction of the project to completion; (2) firm transportation service agreements that have been entered into sufficient to proceed with construction of the project to completion; and (3) necessary United States (and, if applicable, Canadian) federal regulatory certificates that have been issued and accepted."

Moreover, a Sanction requires Firm Transportation Service Agreements from customers who will ship gas on the pipeline, and to acquire necessary regulatory approvals, including a Certificate of Public Convenience and Necessity from the Federal Energy Regulatory Commission.[124] These agreements and regulatory approvals represent significant undertakings that will likely cost over a billion dollars and would not occur unless there was a real project.

2. Point Thomson Gas Would Be Used for a Major Gas Sale under the Agreement.

Mr. Walker and Mr. Richards claim if a Major Gas Sale is Sanctioned, the WIOs would retain the Point Thomson Unit without the need to develop Point Thomson gas reserves.[125] This contention is wrong.

If a Major Gas Sale is Sanctioned but the WIOs never produce Point Thomson gas, then they are in breach of the Agreement – assuming they have not pursued one of the other full field development alternatives. Under Section 4.6, the WIOs must submit a POD that complies with Section 10 of the Unit Agreement, which in turn requires the submission of PODs for DNR's approval that timely develop the Unit's resources.[126] Likewise, Section 4.6.1 provides that if a Major Gas Sale is sanctioned, the WIOs "*shall* submit a Future POD that includes works plans and project activities to *develop the Point Thomson Reservoir* for a Major Gas Sale."[127] The Agreement adds that DNR retains the right to reject the proposed POD if it fails to comply with these requirements.[128]

Thus, the Agreement makes very clear that once a Major Gas Sale has been Sanctioned, the WIOs are not relieved from developing the Point Thomson gas reserves – instead they must timely develop the PTU gas unless they decide to pursue another full field development alternative, *e.g.*, full field cycling under Section 4.6.3.

In addition, it provides that the only way to secure Point Thomson acreage after Sanctioning a Major Gas Sale, assuming no other full field development alternative is pursued, is by *producing the gas at Point Thomson.*[129] Section 4.4.2 states that the participating area will *only* expand to include additional Point Thomson acreage "upon Project Start-up of the project *to develop the Point Thomson Reservoir* for a Major Gas Sale[.]" Accordingly, Point Thomson gas molecules must be flowing through a gas pipeline off of the North Slope to secure acreage.

---

124 Section 2.28.

125 Walker Letter at 7.

126 Section 10 of the PTUA provides, in part, that "Any plan submitted pursuant to this section . . . shall be as complete and adequate as the Director may determine to be necessary for timely development and proper conservation of the oil and gas resources of the unitized area."

127 *See* Section 4.6.1 (emphasis added).

128 *Id.*

129 This critical principle applies to all of the development projects – *e.g.*, acreage is only secured when the IPS is on production (Section 4.3) when additional development

The Agreement is also clear that should natural gas production into a gas pipeline never commence from the Unit, then DNR retains the right under Section 2(e) of the Unit Agreement, and applicable state law, to contract non-producing acreage out of the Unit, assuming the Unit has been placed into production.[130] And if a Major Gas Sale has been Sanctioned, but the Unit has never been placed onto production by the IPS, then the State can terminate the Unit under the Unit Agreement and applicable law.[131]

Thus, even if a Major Gas Sale project commences and only uses gas from Prudhoe Bay, the Agreement does not allow the WIOs to permit Point Thomson to lay fallow indefinitely. Moreover, as discussed in detail above, this is one example of how the Agreement has put the WIOs back "on the clock" to get the Unit developed. Accordingly, the contention that the Agreement allows the WIOs "to continue to warehouse Point Thomson resources" is meritless.

3. If the WIOs Abandon the IPS and a Major Gas Sale is Not Sanctioned, DNR May Terminate the Unit and all Point Thomson Leases.

Mr. Walker and Mr. Richards are under the impression that if the IPS is Abandoned and a Major Gas Sale is not Sanctioned, the WIOs have the right to retain the entire Unit by submitting an "Expansion Project POD" by year-end 2019.[132] They misunderstand the Agreement's provisions.[133]

---

130 *See* Section 4.5.1 ("If by year-end 2019 a Major Gas Sale has been Sanctioned or the WIOs have Committed to a Point Thomson Expansion Project, acreage to be included in the PA . . . shall remain in the Point Thomson Unit following formation of the Initial PA, and thereafter shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e). If IPS Project Start-up has not occurred and the Initial PA has not been formed, but a Major Gas Sale is Sanctioned, such acreage shall remain in the Point Thomson Unit and shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e), as if the Initial PA had been formed effective May 1, 2016."). Section 2(e) of the Point Thomson Unit Agreement and the applicable State law (11 AAC 83.356) provide that acreage not contributing to production eventually contracts from the Unit. 11 AAC 83.356(b) provides: "ten years after sustained unit production begins, the unit area must be contracted to include only those lands then included in an approved participating area and lands that facilitate production[.]"

131 *See* Section 20(c) of the PTUA and 11 AAC 83.336.

132 Walker Letter at 7.

133 The "Expansion Project POD" does not apply to this situation. Instead, the Expansion Project POD will be submitted *after* the WIOs have begun producing from the IPS and *after* they have completed the necessary work under the "Expansion Planning POD" which the WIOs *must* submit if a Major Gas Sales has not been Sanctioned. Section 4.1.6. The "Expansion Planning POD" requires the WIOs to conduct engineering work and permitting for a Point Thomson Expansion Project: full field cycling or injecting PTU gas into Prudhoe Bay. Section 4.6.2. Once this work is completed, which must occur before year-end 2019, the WIOs must submit an "Expansion Project POD" (or Sanction a Major Gas Sale), or they will lose acreage. *See* Section 4.6.3, 4.5.3. The Agreement further provides that no additional acreage is secured until the expansion project the WIOs have committed to is complete and in production. *See* Section 4.4.2.

The Agreement only permits the WIOs to submit an Expansion Project POD *if the IPS project has been completed.* In the absence of completing the IPS, the WIOs must Sanction a Major Gas Sale or the Unit automatically terminates in 2019 and the WIOs lose all of their leases.[134]

The Agreement is clear: DNR has the complete discretion to terminate the Unit in 2019 *and* get all of the leases back Without Appeal if the IPS is not in production or a Major Gas Sale has not been sanctioned. Section 4.5.2.1 provides: "If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, the following shall occur . . . the Point Thomson Unit and the PTUA *shall terminate* Without Appeal . . . *each WIO will immediately surrender its leases and all such acreage shall be automatically released Without Appeal to the State*[.]" (emphasis added).

The Agreement does allow the WIOs to submit one last "alternative" POD[135] or ask DNR for the right to put any wells capable of producing into production in two years.[136] Even so, with both exceptions, DNR has unfettered discretion to deny the request, and the WIOs cannot appeal this determination.[137]

In short, DNR has the full authority, discretion, and contractual right to automatically terminate the Unit in 2019 *and* soon thereafter get all of the leases back Without Appeal if the Unit is not placed into production and a Major Gas Sale has not been Sanctioned. The foregoing provisions provide significant protection for the State because they make clear that if the WIOs fail to follow through on their development commitments, then all acreage comes back to the State. Such clarity is in sharp contrast to the lay of the land that existed under the Unit Agreement following Judge Gleason's decision because, under her decision, there was no assurance that DNR would be able to terminate the Point Thomson Unit or terminate the leases, and get the acreage back.

E. The Agreement Permits DNR to Closely Monitor the WIOs' Development Decisions and Activities and Impose Penalties for Failure to Abide by the Commitments in the Agreement.

1. Under the Agreement, DNR Retains its POD Powers.

With respect to PODs, Mr. Walker and Mr. Richards appear to believe that DNR has abrogated its POD review powers and obligations to ensure that future development advances the public interest.[138] They are wrong.

Although such acreage temporarily remains in the Unit after year-end 2019, DNR retains its authority to move to contract the unit if the WIOs are in violation of state law. Section 4.5.1.

134 *See* Section 4.5.2.

135 *See* Section 4.5.2.2. This provision is included because, under State law, a Unit operator *must* submit a Plan of Development. 11 AAC 83.343.

136 *See* Section 4.5.2.3.

137 *See* Section 4.5.2.1.

138 Walker Letter at 6-8; 12-13.

As an initial matter, the Agreement ensures the integrity of the POD review process by vacating Judge Gleason's 2010 decision, thereby permanently foreclosing the WIOs from arguing that this decision limited DNR's POD review remedies to a Section 21 hearing where DNR had the burden of proof to prove, among other things, that the specific increase in development demanded by DNR satisfies a "good and diligent practices" standard and would not harm the WIOs' interests.[139] Vacating this decision was a significant concession by the WIOs.

The Agreement further expressly preserves DNR's management of State lands under the POD review process. Under DNR's regulations,[140] a unit operator must submit a POD that: (i) commits to diligently developing the unit resources; and (ii) sets out a long-term plan for future work activities. After reviewing the POD and considering the criteria set out in 11 AAC 83.303, DNR has the discretion to approve or deny the POD. If the POD is approved, DNR must monitor activities to ensure that the unit operator is acting in compliance with the POD.

Mr. Walker and Mr. Richards misconstrue how the POD process will work in conjunction with the Agreement.[141] First, the Agreement does not do away with the requirement to have a POD for the IPS; the Agreement *is* the IPS POD.[142] It sets forth the key work activities and timelines that the WIOs must undertake with respect to the IPS, and it has other requirements (such as annual reporting regarding work activities and spend activity) that complement the POD.[143] In addition, before moving forward with the IPS POD and future PODs, the WIOs must secure DNR's approval for their Plan of Operations under 11 AAC 83.158.[144]

For the post-IPS PODs, the WIOs are obligated to submit PODs that comply with Section 10 of the Unit Agreement, and these PODs must contain all information required by 11 AAC 83.343.[145] DNR has the discretion to deny these PODs if they fail to comply with the requirements set out in

---

139 Brief of Appellant State of Alaska, Department of Natural Resources at 27-56 (May 10, 2011, Supreme Court Case No. S-13730).

140 11 AAC 83.343.

141 Walker Letter at 8.

142 *See* Section 4.1.

143 The IPS POD complies with the remaining requirements set out in 11 AAC 83.343 because it contains: (i) long-range plans for proposed development (set out in the recitals, 4.1, and 4.6); (ii) and plans for future delineation and exploration (set out in the recitals, 4.1, and 4.6); (iii) details of the proposed operations for one year (set out in Exhibit E); (iv) the surface location of proposed facilities, drill pads, etc, which are set out in submitted and proposed Plan of Operations; (v) under 4.1.5 and 4.2.1 the WIOs must submit annual reports detailing the work completed during the previous year; and (vi) DNR considered criteria consistent with 11 AAC 83.303 before approving this plan. *See* Section 1, 4.1, 4.2.1, 5.8; Ex. E.

144 The Plan of Operations will discuss in more detail the specific environmental impacts of the development plan and the mitigation measures that DNR will require to mitigate these impacts. They will also be subject to public review and comment, and DNR's approval.

145 *See* Section 4.6 ("The WIOs shall prepare plans of further development and operation for the Point Thomson Unit under Section 10 of the PTUA") and Section 4.6.4 1 (listing all of the technical data and information required by DNR's regulations).

the Agreement or are inconsistent with Section 10 of the Unit Agreement.[146] Moreover, if the WIOs fail to submit a POD that complies with the requirements set out in Section 4.6, this would constitute a breach of the Agreement.[147]

Finally, as discussed above and below, DNR has determined, after considering criteria consistent with 11 AAC 83.303, that the full field development paths set forth and defined in the Agreement are in the public interest.[148] DNR relied on the entire Point Thomson record, spanning over thirty years, to determine that the development paths set forth in the Agreement are acceptable and in the public interest. The WIOs' proposed POD was approved after DNR reviewed voluminous information, including confidential proprietary data in ExxonMobil's data room; engaged in extended discussions with the WIOs related to different development alternatives; and engaged Petrotel to help evaluate various proposed development plans and the economics of these plans.

The Commissioner considered and incorporated regulatory criteria in approving the IPS POD as part of the Agreement and in agreeing to what would constitute acceptable PODs for future development after the IPS. DNR has not relieved the WIOs of the requirement to submit a POD, and DNR has retained the ability to manage state lands under the POD process. Overall, with respect to PODs, Mr. Walker and Mr. Richards fail to recognize that, while the POD process is delineated in the Agreement, the Agreement does not cede the role of PODs in the unit management process, nor does it eliminate DNR's oversight authority.

2. The Agreement is Consistent with DNR's Participating Area Regulations.

Mr. Walker and Mr. Richards mistakenly argue that the Agreement abrogates DNR's unit management authority by eliminating participating area requirements.[149] But the Agreement does not abrogate this important management authority.

Rather, the Agreement works *within* DNR's regulatory framework for the creation of participating areas. DNR's regulations require the creation of a participating area for acreage "reasonably estimated through use of geological, geophysical, or engineering data to be capable of producing or contributing to production of hydrocarbons in paying quantities."[150] Further, the

---

146 *See* Section 4.6 (providing the DNR retains the right to reject any POD that is inconsistent with the terms of the agreement).

147 While Mr. Walker and Mr. Richards note that the WIOs will not be submitting an annual POD, Walker Letter at 8, they overlook the fact that there is not legal requirement for yearly PODS – the Point Thomson Unit Agreement merely requires PODs be submitted from "time to time." They also disregard that PODs are often in multi-year form (Point Thomson has previously operated under multi-year PODs, as has Prudhoe Bay), and they also fail to recognize that the Agreement obviates the need for year-by-year PODs because it clearly specifies work activities for both the IPS Project and delineates the path for future development.

148 *See* Section 5.8.

149 Walker Letter at 12.

150 11 AAC 83.351(a).

regulations provide that the unit operator must apply for the creation of participating areas "at least 90 days before sustained production."[151]

With participating areas, as with PODs, the Agreement looks to the future and provides that they will be formed if production actually commences at production levels required by the development alternatives. Further, the Agreement requires submission of the same supporting technical data currently required by DNR regulations. Addressing participating areas in advance of production is consistent with the regulation, which provides that the unit operator must apply for the creation of participating areas "at least 90 days before sustained production."[152] As discussed in detail above, prior to entering into this Agreement, DNR reviewed and analyzed a great deal of technical data, including confidential proprietary data related to reservoir performance. Thus, the participating areas provided for in the Agreement are based on sound technical review and are procedurally consistent with DNR's participating are regulations.

3. DNR Considered 11 AAC 83.303 Prior to Entering into the Agreement.

Mr. Walker and Mr. Richards claim that DNR failed to consider 11 AAC 83.303 and issue a written finding before agreeing to the Agreement.[153] They are wrong.

As an initial matter, there is no requirement that DNR must issue "written" findings under 11 AAC 83.303 before approving the Agreement and the activities authorized by it.[154] Rather, the applicable regulation requires that DNR "consider" the factors set out in 11 AAC 83.303(a) before approving such activities. [155]

Second, consistent with 11 AAC 83.303, DNR did consider the factors set out in 11 AAC 83.303(b) before approving the Agreement and, even though one is not required, it has issued written finding (the Agreement itself) to support its decisions.

---

151 *Id.*

152 If a participating area is to be formed, the Agreement requires submission of the same supporting technical data that is currently required by DNR regulations. The data enumerated in Exhibit F is taken from DNR's current form for applying for the creation of participating areas, and was expressly approved by DNR's technical staff. *See* Sections 4.4.5 & Ex. F.

153 Walker Letter at 8-9.

154 The only time DNR must issue a written finding is before approving a new unit agreement. 11 AAC 83.303(a). Here, DNR did not approve a new unit agreement – it settled litigation and approved a development plan.

155 11 AAC 83.303(a) provides that when reviewing a POD or a Participating Area application, DNR must consider proposed activity: (1) promotes conservation of all natural resources, including all or part of an oil or gas pool, field, or like area; (2) promotes the prevention of economic and physical waste; and (3) provides for the protection of all parties of interest, including the state. In evaluating the above criteria, "the commissioner will consider (1) the environmental costs and benefits; (2) the geological and engineering characteristics of the potential hydrocarbon accumulation or reservoir; (3) prior exploration activities in the proposed unit area; (4) the applicant's plans for exploration or development of the unit area; (5) the economic costs and benefits to the state; and (6) any other relevant factors . . . the commissioner determines necessary or advisable to protect the public interest." 11 AAC 83.303(b).

More specifically, consistent with 11 AAC 83.303, DNR evaluated due diligence dating back over nearly *a seven year period* and undertook unprecedented action in evaluating all aspects of the Agreement before agreeing to the terms. The Point Thomson litigation began in 2005. DNR conducted three formal public hearings related to the dispute and various proposed development plans. Collectively, these hearings lasted for weeks and involved dozens of witnesses and included the submission of tens of thousands of pages of documentation from the WIOs and the public. After the hearings concluded, the Parties began settlement negotiations in 2008. Throughout this process, DNR spent considerable time and effort to understand all matters covered in the Agreement, including the IPS POD, future development plans, and the formation of participating areas. DNR received and analyzed confidential and proprietary data relating to various development options; it spent countless hours with the WIOs, including in ExxonMobil and BP's data rooms, discussing these plans; it assembled a team of over 20 state employees from DNR and the Department of Law, and hired PetroTel and two highly respected law firms to help the State evaluate and analyze matters throughout the settlement negotiations; and it created a record exceeding at least 35,000 pages that support its decision to approve the Agreement

The record supporting the Agreement demonstrates that DNR fully and exhaustively considered all of the criteria set out in 11 AAC 83.303 before concluding that this Agreement is in the public interest.

4. <u>If a Development Path that is Selected by the WIOs is Inconsistent with the Agreement or Law, DNR Has the Right to Oppose It</u>.

Mr. Walker and Mr. Richards assert that the Agreement leaves DNR powerless to oppose the development approach ultimately selected by the WIOs.[156] They are wrong.

Section 5.7 provides that DNR will not oppose any project application submitted to the AOGCC by the WIOs "*that is consistent with the terms of this Agreement and applicable state law.*" This is significant because any development plan submitted to DNR and the AOGCC under the Agreement must comply with AOGCC regulations and DNR regulations (which are applicable state law) and must be consistent with the project definitions in the Agreement (such as the numerous benchmarks regarding a Prudhoe Bay Injection Project).[157] In this way, DNR retains its ability to make a final evaluation of whether any development option chosen and proposed by the WIOs under the Agreement is consistent with the public interest. And, if such a development approach is not consistent with State law or with the terms of the Agreement, then DNR can file an opposition before the AOGCC.

---

156 Walker Letter at 7.

157 *See* Section 2.21.

In conclusion, I appreciate this opportunity to supplement the record. DNR fully stands behind the decision to settle the Point Thomson litigation. The Agreement secures the State's goal of settling this protracted and uncertain litigation and moving the field into production, and advances the State's interest in the commercialization of Alaska's natural gas. It is not a perfect settlement – no settlement achieves that standard – but there should be no question that the Agreement is in the public interest. I would be happy to answer any additional questions by the committee.

Sincerely,

Joe Balash
Deputy DNR Commissioner

APPENDIX A

The scope of the first phase of the additional PetroTel work addressed in Section III.A.4 was fourfold and dealt primarily with gaining a better understanding of the range of uncertainties in the geologic description of the Point Thomson reservoir.

The first purpose was to generate additional realizations of the static geologic model in order to provide a statistical distribution of the in-place resource within the Point Thomson reservoir from which representative P90 (low-side), P50, and P10 (upside) cases could be extracted. Special consideration was given to creating a "stressed case" geologic description (P99) to capture a possible "worst case" outcome moving forward based upon the existing data from previously drilled wells.

The second purpose was to identify and quantify the uncertainty and potential impact of key variables in the reservoir description, such as reservoir structure, fluid contacts and facies distribution. The third goal was to quantify the expected connectivity of the reservoir within the geo-cellular model for the various descriptions. The final objective was to evaluate different delineation plans which, if executed, would test those key variables and reduce the reservoir uncertainty.

The next phase of work involved reviewing key reservoir data, fluid compositional data and well test data acquired through DNR access to ExxonMobil's confidential Point Thomson data room. The existing dynamic reservoir simulation model was updated based upon this additional information. Special effort was applied to better understand the PVT (pressure/volume/temperature) properties of the gas and refine the equation of state within the model to better match the results of production tests of existing wells and quantify the potential uncertainty in the expected condensate yield from the gas.

Once the dynamic simulator was updated, conceptual development/delineation drilling programs were evaluated and modeled to determine both the optimum and minimum sizing of a pilot project required to determine the validity, within a reasonable time frame, of gas cycling as a recovery mechanism in the Point Thomson reservoir. Variations were run to test the number and location of the wells within the expected physical surface constraints and drilling departure limits imposed by the high pressure reservoir. Each case employed appropriate and realistic facility technology and capacities. The impacts of varying certain aspects of facility design, such as the first stage pressure at which condensate is separated from the produced gas, were explored and quantified. Each cycling pilot case modeled was also run against a primary depletion case (gas blowdown) with the same well configuration to demonstrate the difference in recovery methods.

A methodology for estimating capital and operating costs was then developed beginning with confidential estimates generated by ExxonMobil and their contractors for previous project plans and using industry standards and economic indexes to adjust those estimates to current dollars. Project schedules were also developed based upon ExxonMobil's estimates as well as common practices employed for other large projects located on the North Slope of Alaska.

Ultimately, development scenarios were generated and modeled to evaluate what could be considered a most likely full-field scale development based upon the quantified reservoir risks and uncertainties, as well as the likely facility and surface constraints.

At this point it was decided that the development scenarios would focus primarily on production of the gas and condensate within the gas cap without any dedicated development of the underlying thin oil rim. As mentioned above, previous fine-scale mechanistic modeling of various configurations of dedicated wells targeting production from the oil rim had indicated that production of that resource would likely be very challenging and uncertain due to (i) the close proximity of the large, highly mobile, overlying gas cap, (ii) rapid coning of gas into dedicated oil rim wells that may hamper oil production, (iii) difficulties associated with abnormally pressured directional drilling, and (iv) limitations in the gas handling capacities of facilities. For this reason, oil rim production was not pursued further as part of a likely initial development.[158]

Various development scenarios were then run based on different geologic descriptions to provide production profiles representing a statistical range of outcomes; a P99 stressed case, a P90 low-side, a P50 case, and a P10 upside case. Production and cost profiles were generated for the various cases and provided to the Commercial Section of the Division of Oil and Gas to conduct economic analyses of the different scenarios through the expected life of the project. The analyses incorporated the current ACES tax structure and were run across a range of different assumptions such as commodity price and investment discount rates. This allowed a comparison of the relative economic strength of various development scenarios and outcomes using economic parameters such as Net Present Value (NPV) and Internal Rate of Return (IRR) for both the State and project working interest owners.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT AT ANCHORAGE

05 OCT 19 PM 4:15

BY DEPUTY CLERK KS

THE ALASKA GASLINE PORT AUTHORITY and JIM WHITAKER, Plaintiffs, v. THE STATE OF ALASKA, Department of Natural Resources, THOMAS IRWIN, Commissioner, Department of Natural Resources, and MARK MYERS, Director, Division of Oil and Gas, Defendants.	CASE NO.: 3AN-05-7486CIV

PLAINTIFFS' MEMORANDUM IN SUPPORT OF MOTION FOR TEMPORARY RESTRAINING ORDER AND/OR PRELIMINARY INJUNCTION

Plaintiffs the Alaska Gasline Port Authority (the "Authority") and Jim Whitaker, on his own behalf and on behalf of every citizen-taxpayer in Alaska ("Whitaker"), seek to enjoin Defendants the State, Department of Natural Resources ("DNR" or the "Department"), the Commissioner of DNR, Thomas Irwin (the "Commissioner") and the Director of DNR's Division of Oil and Gas, Mark Myers (the "Director") from approving, extending or acting upon the Point Thomson Unit ("PTU" or the "Unit") 21st or proposed 22nd Plan of Development, the Unit Agreement or any Unit leases. ExxonMobil Corporation ("ExxonMobil"), the Point Thomson ("PT") Unit Operator, and other holders of state leases in the PTU ("Leaseholders"), have concluded that it is uneconomic to develop the PTU gas reserves until there is a committed date for availability or construction of a pipeline to market. ExxonMobil and the other Leaseholders have requested indefinite postponement of any future drilling or production requirements in the PTU. Plaintiffs seek the right to be heard and to participate in the process to determine whether the resources of the State should

be locked up indefinitely upon the Leaseholders' request, and whether it is constitutionally permissible for DNR to allow ExxonMobil and the other Leaseholders to "mothball" State oil and gas resources in this manner, that is, to delay their development indefinitely.

Accordingly, the Court should enjoin DNR, the Commissioner and the Director from extending, approving or acting upon the Leaseholders' development postponement request, their proposed 22nd Plan of Development or extension of their 21st Plan of Development, and should direct DNR to conduct a public hearing on the issues raised by the Authority, Whitaker, and the public at large.

RELEVANT FACTS

The Authority was formed in 1999 pursuant to AS 29.35.600-29.35.730 by the North Slope Borough, Fairbanks North Star Borough and the City of Valdez. The Authority was formed for the purpose of building or causing to be built a gas line from Alaska's North Slope to tidewater at Valdez, to include a spur line from Glennallen to the Palmer area to provide gas to the South Central gas grid.

Since its formation, the Authority has engaged the services of Bechtel Corporation who provided a Project cost estimate and received a Private Letter Ruling from the IRS declaring that income to the Authority would be tax exempt. In January 2005 the Authority entered into an exclusive purchase agreement for Yukon Pacific Corporation ("YPC"). YPC was started in the early 1980's by former Governors William Egan and Walter Hickel to develop a gas line/LNG Project from the North Slope to tidewater at Valdez. Since its creation, YPC, among other things, obtained 12 senior permits from the Federal and State governments for the gasline Project which include a federal Environmental Impact Statement, Conditional Right of Way Permit, LNG Liquefaction Site Permit and a Federal Export License.

The Authority is one of three applicants under the Alaska Stranded Gas Development Act, AS 43.82 et seq., and is currently in negotiations with the Governor. In the past year Congress amended the Alaska Natural Gas Pipeline Act of 2004, 15 U.S.C. § 720n, to make the Authority's LNG Project qualify for the $18 billion federal loan guarantee gas line incentive package.

The Authority has received a Memorandum of Understanding ("MOU") from 5 West Coast LNG receiving terminals interested in receiving LNG from Alaska. It has also received an MOU from Totem Ocean Trailer Express for the shipment of LNG from Alaska to the West Coast on Jones Act compliant vessels. Given the current status of the Authority's Project, and by using existing West Coast gas grids, the Authority can market Alaska gas to both the Midwest and West Coast markets in 2011-2012.

The only remaining piece for the Authority's Project is the acquisition of the gas.

The substantial gas reserves in the PTU are not being utilized: the PTU is not presently producing either oil or gas for market. The U.S. Department of Energy estimates that there are eight trillion cubic feet ("TCF") of proven, recoverable natural gas reserves in the Unit. Exhibit 1.

These reserves are a valuable resource belonging to the State and its citizens. The State, Department of Natural Resources ("DNR" or the "Department") leased the lands in what is now the PTU beginning in 1965. The working interest ownership in the PTU leases, based solely on acreage, since there has been no production of oil or gas in the PTU, is shown on a DNR map as follows:

ExxonMobil	48.22%
BP	28.40%
ChevronTexaco	15.40%
ConocoPhillips	4.06%
Others	3.92%

ExxonMobil became the Unit Operator when the Unit was formed on March 1, 1977, and continues as the Unit Operator today. Ex. 2.

All Unit leases are beyond their primary term, and are listed by DNR as "expired," except for ADL 389716, which expires on May 31, 2008. Accordingly, the PTU leases remain in effect today solely because they are incorporated into a State oil and gas unit. *See* AS 38.05.180(m); 11 AAC 83.190; Unit Agreement § 18, Ex. 3.

No gas or oil has been produced from the Unit. In fact, neither ExxonMobil nor any of the other Leaseholders has even drilled a well in the Unit since 1999, and only 3 have been drilled since 1983. Moreover, despite several requests by DNR over the years for the Leaseholders to conduct additional drilling in the Unit, ExxonMobil has previously submitted, and continues to submit, annual plans for the Unit that include no drilling, and no development of the Unit's gas or oil resources. ExxonMobil, on behalf of the Leaseholders, recently requested an extension of all obligations to drill in the PTU, for an indefinite time period.

Several Leaseholders drilled wells in the Unit in the 1970s and 1980s. Seven wells were certified as capable of producing in paying quantities. Ex. 4. All seven are currently listed as plugged and abandoned by the Alaska Oil and Gas Conservation Commission (the "Commission" or "AOGCC"). This means that they cannot physically produce any gas or oil. Ex. 5. In fact, all wells that were drilled in the Unit are currently listed as plugged and abandoned, except one, the status of which is "suspended/confidential." Ex. 5.

When the Unit was formed, ExxonMobil agreed to exercise "[r]easonable diligence...in complying with the obligations of the approved plan of development." Unit Agreement § 10, Ex. 3. The Director of the Division of Oil and Gas (the "Director") may only approve a Plan of Development if it meets certain criteria, including that the Plan will "promote conservation of all

natural resources." "promote the prevention of economic and physical waste," and "provide for the protection of all parties of interest, including the State." 11 AAC 83.303(a); *see* 11 AAC 83.343(b).

Beginning in 1983, ExxonMobil proposed an indefinite suspension of drilling. Ex. 6. ExxonMobil felt that the Leaseholders had accomplished "sufficient drilling...to establish within reason the area and potential commerciality of the field." Ex. 6. ExxonMobil claimed that "[f]urther development prior to commencement of construction of a pipeline to market would constitute economic waste...." Ex. 6. Accordingly, ExxonMobil proposed a five-year Plan of Development with no further drilling. Ex. 6.

In the mid-1990's, the Leaseholders proposed a Plan of Development that included no drilling or development. Ex. 7. The Leaseholders asserted that "all development options are currently uneconomic." Ex. 7. Although the Director ultimately approved the Plan, he expressed concern "about the lack of exploration and development work...." Ex. 8. The Division wanted "a fair and honest attempt to get this acreage explored...." Ex. 8.

In 1998, the Leaseholders submitted another Plan that again contained no drilling. Ex. 9. The Leaseholders claimed, among other things, a "lack of a gas market and transportation system...." Ex. 9. According to the Leaseholders, the "development of the Thomson Sand gas [was] not economically justified at the present time." Ex. 9.

On April 1, 2005, the Authority made a detailed offer to purchase Alaska North Slope gas and transport it to market. Ex. 10. The offer was distributed to ExxonMobil, ConocoPhillips, British Petroleum, ChevronTexaco and others. During the several months that followed, the major producers, including the Leaseholders, declined to sell the Authority North Slope gas, or even to discuss prices or terms. Ex. 11.

[illegible]
Street
[illegible]

In relation to its revised Project, the Port Authority has intensified its correspondence and meetings with ExxonMobil as the PTU Operator. Ex. 12. In a letter dated August 18, 2005, ExxonMobil was asked to present "general terms/price information of a gas sales agreement that your company would find acceptable." Authority team members met with ExxonMobil executives in Houston on August 30, 2005. In a letter on August 31, 2005, ExxonMobil said it needs to pursue "an analysis includ(ing) all aspects of the value chain from the wellhead to the market to assess Project viability." Authority representatives expressed disappointment (in letters dated September 2 and September 12, 2005) that ExxonMobil had not provided information concerning "price and terms by which you would be willing to sell us gas." As of today, the Authority's offer to purchase Point Thomson (and other North Slope) gas is still open, but ExxonMobil has responded only with a description of its "analysis" needs.

The Authority cannot obtain financing to implement its pipeline LNG Project without a committed supply of natural gas. Since the PTU reserves are not being utilized, they represent the best source of gas for the Authority's pipeline startup needs. However, the Leaseholders have declined to sell any North Slope gas to the Authority.

On September 23, 2005, the Authority submitted a First Supplemental Agency Demand requesting a public hearing on the PT Unit to Defendant Myers, Director of DNR Division of Oil and Gas. Ex. 13. No substantive response has been received.

On September 30, 2005, the Authority appealed the Director's constructive denial of its request for public hearing to Defendant Irwin, Commissioner of DNR. Ex. 14. No response has been received.

ARGUMENT

A. PLAINTIFFS ARE ENTITLED TO A TRO/PRELIMINARY INJUNCTION.

To determine whether a party is entitled to injunctive relief, courts apply a "balance of hardships" approach that focuses on three factors:

1. The harm to the plaintiff;
2. The harm to, or protection of, the defendant; and
3. The strength of plaintiff's case.

North Kenai Peninsula Road Maintenance Service Area v. Kenai Peninsula Borough, 850 P.2d 636, 639 (Alaska 1993). *See Keystone Services, Inc. v. Alaska Transportation Comm'n*, 568 P.2d 952 (Alaska 1977) and *Alaska Public Utilities Comm'n v. Greater Anchorage Area Borough*, 534 P.2d 549 (Alaska 1975). Once plaintiff has met the preliminary threshold of showing irreparable harm, and that defendants will not be harmed by the injunction (or that they can be adequately protected from harm), plaintiff need only raise serious and substantial questions going to the merits of the case. *North Kenai Maintenance Area*, 850 P.2d at 639; *Keystone Services*, 568 P.2d at 954; *A.J. Industries, Inc. v. Alaska Public Service Comm'n*, 470 P.2d 537 (Alaska 1970).

The "serious and substantial question" standard means that the "issues raised cannot be 'frivolous or obviously without merit.'" *North Kenai Maintenance Area*, 850 P.2d at 639, *quoting State v. Kluti Kaah Native Village*, 831 P.2d 1270, 1273 (Alaska 1992). On the other hand, where the preliminary injunction will harm the defendant, and the defendant cannot be adequately protected, "'a showing of probable success on the merits is required before a temporary restraining order or preliminary injunction can be issued.'" *North Kenai Maintenance Area*, 850 P.2d at 639, *quoting State v. United Cook Inlet Drift Ass'n*, 815 P.2d 378, 378-79 (Alaska 1991).

In this case, it is apparent that Plaintiffs will be irreparably harmed if the Defendants continue to extend the PTU agreement and leases, without requiring development, indefinitely, as

LAW OFFICES
WALKER & LEVESQUE LLC
731 N Street
Anchorage, Alaska 99501
Phone: (907) 278-7000
Facsimile: (907) 278-7001

the Leaseholders seek. There is no relief, other than the injunctive relief requested, which can protect Plaintiffs. It is equally apparent that a TRO or injunction will cause no harm to the State or the Division of Oil and Gas.

Accordingly, Plaintiffs need only raise serious and substantial questions going to the merits of the case. In this case, Plaintiffs clearly meet this minimal threshold showing and are thus entitled to a preliminary injunction. In fact, as the following discussion demonstrates, Plaintiffs satisfy even the more stringent standard of a "probable success on the merits." *See A.J. Industries*, 470 P.2d at 540 and *Powell v. City of Anchorage*, 536 P.2d 1228, 1229 nn. 2 and 11 (Alaska 1973).

B. PLAINTIFFS WILL SUFFER IMMEDIATE AND IRREPARABLE HARM ABSENT INJUNCTIVE RELIEF.

Plaintiffs, and every citizen of the State, will be irreparably harmed unless the court issues the requested injunctive relief. No relief, other than a TRO or an injunction, can protect Plaintiffs from harm.

Plaintiff the Authority will be harmed because, without commitments from the Leaseholders to sell the PTU gas, the Authority cannot obtain financing to implement its pipeline-LNG Project. As a result of the Leaseholders' refusal to develop the PTU reserves and/or commit to sell them, the Authority's ability to obtain the necessary gas for startup may be delayed indefinitely. Currently, the Authority is denied the right to participate and to be heard in the DNR process leading to the extension or termination of the PT Unit Agreement, even though this process will likely determine whether the Authority can obtain commitments for gas reserves necessary to qualify for construction financing. The Authority may only appeal a decision, already made, to the Commissioner of DNR.

Plaintiff Whitaker and every other citizen of Alaska will likewise be irreparably harmed. It is the public policy of the State to develop a Project to take Alaska North Slope natural gas to

LAW OFFICES
WALKER & LEVESQUE LLC

ANCHORAGE, ALASKA 99501
PHONE: (907) 278-7000
FACSIMILE: (907) 278-7001

market. Further, the Alaska Constitution requires DNR to manage and develop the State's resources for the benefit of its people. *See, e.g.*, Alaska Constitution, art. VIII §§ 1, 2, 8 and 11, discussed below. It is in the interest of every citizen that a natural gas Project be built because such a Project will provide needed revenue for many government programs, both at the State and local levels. It is also in the public's interest because a natural gas Project will create jobs and economic activity. Currently, Whitaker and other citizens are denied the right to participate and to be heard in the DNR process leading to the extension or termination of the PT Unit Agreement, even though this process will affect every citizen of the State.

Further, Defendants' continued extension of the PT Unit Agreement, without benefit to the citizens of Alaska, causes harm to the State and the development of its resources, in which Plaintiffs have an interest. The Defendants continue to extend the PT Unit Agreement and leases without requiring ExxonMobil and the other Leaseholders to develop or produce from the PTU. Accordingly, irreparable harm is certain absent injunctive relief.

C. **THERE WILL BE NO HARM TO THE STATE.**

Just as clearly, there will be absolutely no harm to the state if injunctive relief is granted. To the contrary, the State has a duty, mandated by the Constitution, to develop its resources and to ensure that it receives value for the use of its land and resources. *See* discussion below. Thus, the State may in fact benefit, rather than suffer harm, from the relief requested by Plaintiffs. Further, the relief that Plaintiffs seek is merely the right to participate in a public hearing before DNR relating to the issues of PTU gas and getting it to market. A public hearing concerning disposition of the PTU will provide useful information from oil and gas related companies, gas distribution companies, major gas-consuming industries, oil and gas scientists, elected officials, and other members of the public.

Wagstaff &
[illegible] Street
[illegible] Alaska 9950[illegible]
[illegible]

Since Plaintiffs will be irreparably harmed, and the State will suffer no harm, Plaintiffs need only raise serious and substantial questions going to the merits. *Keystone Services*, 568 P.2d at 954; *A.P.U.C. v. Greater Anchorage*, 534 P.2d at 554; and *A.J. Industries*, 470 P.2d 537.

D. PLAINTIFFS HAVE RAISED SERIOUS AND SUBSTANTIAL QUESTIONS GOING TO THE MERITS.

There can be no doubt that Plaintiffs have raised serious and substantial, that is, "non-frivolous" questions going to the merits. Indeed, Plaintiffs have satisfied the more stringent standard of probable success on the merits.

1. Plaintiffs Have the Right to Participate and to be Heard in the DNR Proceeding.

In this proceeding, the Authority and Whitaker seek to participate and to be heard in the DNR proceeding, and to compel DNR to conduct a public hearing on this matter of vital importance to the citizens of Alaska and their natural resources, and to include Plaintiffs and other interested members of the public in the hearing.

The regulations afford a unit operator, such as ExxonMobil, the right to "reasonable notice and [an] opportunity to be heard," before DNR may terminate the unit agreement as a result of an uncured default. *See* 11 AAC 83. 374(c). Indeed, this is the minimum process afforded to a unit operator, and only applies to a unit "in which there is no well capable of producing oil or gas in paying quantities." *Id.* Where the unit contains a well "capable of producing oil or gas in paying quantities," DNR must initiate "judicial proceedings" to terminate the unit agreement. 11 AAC 83.374(d). Clearly, a unit operator's rights are protected, even where the unit operator is in default of its agreement. *See id.*

Another interested party affected by the Department's decision, such as the Authority here, must be afforded the same rights as the unit operator. *See, e.g., White v. State, Dep't of Natural*

FACSIMILE: (907) 278-7001

Resources, 984 P.2d 1112 (Alaska 1999). In this instance, the Authority seeks nothing more than a public hearing, in accordance with its rights to participate and to be heard. The Authority believes that such a hearing will be sufficient to expose the Leaseholders' request for an indefinite delay for what it really is—an ill-disguised attempt to mothball, rather than develop, valuable resources belonging to the citizens and the State of Alaska.

In addition, an "eligible person affected by a decision of the [D]epartment" has the right to appeal to or to request reconsideration from the Commissioner of DNR, and to request a hearing on its appeal or request for reconsideration. *See* 11 AAC 02.020 and 02.030. That is precisely what the Authority, an eligible person affected by DNR's decision, did in this instance. Further, where material facts are disputed and need to be resolved, sound legal principles require an agency to exercise its discretion to hold a hearing. *See White*, 984 P.2d at 1126. In this instance, the Authority described numerous factual issues to be considered at the hearing. *See* the Authority's Appeal to Commissioner Irwin, dated September 30, 2005. Ex. 14. These include:

1. Natural gas from the PTU is necessary to make a natural gasline Project from the North Slope possible.
2. PTU proven gas reserves are sufficient to supply a large diameter gas pipeline at startup.
3. The Authority requires an assured supply of natural gas, such as that found in the PTU, to obtain financing for a gasline Project.
4. ExxonMobil and the other Leaseholders have not developed or produced any gas or oil from the PTU, despite having held their leases for 30 years or more.
5. ExxonMobil and the other Leaseholders have proposed postponing all drilling—and hence and development or production—indefinitely in the PTU.
6. ExxonMobil and the other Leaseholders have refused repeated requests from the Authority, and from Yukon Pacific in the 1990s, for terms or prices for the purchase of natural gas.

See id. The Commissioner has denied the Authority its right to a hearing.

The Authority seeks nothing more than a full, public hearing in accordance with its rights. Because of the importance of the resources involved, and the expected benefit to the State and its citizens, a public hearing is necessary in this instance.

Another provision of the Alaska Constitution also supports the Authority's request for a public hearing. Article VIII, § 10 requires "public notice" prior to "disposals or leases of state lands: "No disposals or leases of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be prescribed by law." Alaska Const., art. VIII, § 10. *See also Baxley v. State.* 958 P.2d 422, 432 (Alaska 1998) (legislative enactment modifying oil and gas leases did not violate section because the public had ample opportunity to comment on the proposed lease amendments). Although the State may argue that this provision does not apply here because the PTU leases are not new disposals or leases of state lands, the Leaseholders have held their leases for between 30 and 40 years without developing the resources. Accordingly, any further delay in the development and production of these resources, as requested by the Leaseholders, should be subject to this public notice requirement.

2. <u>The Leaseholders Cannot be Permitted to "Mothball" Alaska's Natural Gas Resources.</u>

The Leaseholders are attempting to mothball valuable gas reserves that belong to the State and its citizens. These resources are now more valuable than ever, as a result of increases in the price of natural gas in the past few years. Clearly, it is in the State's best interest, and the best interest of its citizens, to develop these resources sooner rather than later.

The Leaseholders, however, do not agree. Since they are unwilling to develop the resources for sale to a party which would take them to market, and in fact want to mothball them indefinitely, their interests are directly adverse to those of the State. The Authority seeks a public hearing to

argue that the Unit Agreement and PTU leases should therefore be terminated, and the leases made available to third parties who are willing to develop the PTU gas reserves in a timely manner.

The Leaseholders' request for continued postponement of developing the PTU resources violates several provisions of the Alaska Constitution, notably Article VIII, §§ 1 and 2. Section 1 provides: "It is the policy of the State to encourage...the development of its resources by making them available for maximum use consistent with the public interest." Alaska Const., art. VIII, § 1. Section 2 provides: "The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State...for the maximum benefit of its people." *Id.*, art. VIII, § 2. The request for indefinite postponement of all drilling—and hence any development or production—plainly violates the intent of these provisions, which is to utilize the State's resources, such as the PTU gas reserves, for the maximum benefit of its citizens.

3. DNR's Constitutional Duty to Promote Development of Alaska's Natural Resources Requires it to Terminate the PTU Leases.

DNR has a constitutional duty to the State and its citizens to ensure that the PTU gas reserves are developed in a timely manner, and not mothballed as the Leaseholders seek to do. *See* Alaska Const., art VIII, §§ 8 and 11. *See Baxley v. State*, 958 P.2d 422, 432-33 (Alaska 1998). These provisions provide for the leasing of State lands, and require forfeiture in "the event of breach of conditions." *Id.*, art. VIII, § 8. Furthermore, continuation of lease rights depend upon the performance of annual labor, or the payment of rents or royalties, or upon other requests as may be prescribed by law." *Id.*, art. VIII, § 11.

Here, the State has leased the lands to the Leaseholders, but the Leaseholders refuse to develop the resources or even to negotiate for the sale of the resources to other parties, such as the Authority. To the contrary, as noted above, the Leaseholders seek to mothball the reserves, which, while it may be in their interests, is not in the best interest of the State or its citizens.

Facsimile: (907) 278-7001

DNR has the constitutional duty to require the Leaseholders to adhere to the terms of the Unit Agreement and leases, and to develop the resources in a timely manner. Since the Leaseholders refuse to comply with the Agreement and their leases, and seek to mothball the PTU gas reserves indefinitely, they are in breach of the Agreement and their leases. The leases and the Unit should therefore be terminated, and the Authority here seeks the opportunity to be heard on this issue.

4. The Public Trust Doctrine Requires DNR to Terminate the PTU Leases or to Require the Leaseholders to Market the Gas Reserves.

DNR's failure to require the Leaseholders to comply with the terms of the Unit Agreement and their leases also constitutes a violation of the public trust doctrine. The public trust doctrine provides that the State holds its mineral resources (and other natural resources) in trust for public use, "and that government owes a fiduciary duty to manage such resources for the common good of the public as beneficiary." *McDowell v. State*, 785 P.2d 1, 16 n.9 (Alaska 1989). Under the doctrine, where a trustee has discretion, courts "will only review the trustee's acts for abuse of discretion." *Baxley*, 958 P.2d at 434.

In addition, the Director may only approve a Plan of Development if it meets certain criteria, including that the Plan will "promote conservation of all natural resources," "promote the prevention of economic and physical waste," and "provide for the protection of all parties of interest, including the State." 11 AAC 83.303(a); *see* 11 AAC 83.343(b). A Plan that indefinitely postpones all development and production clearly does not satisfy these regulatory requirements.

In this instance, Plaintiff believes DNR has abused its discretion by failing to terminate the Unit Agreement and leases in the face of clear evidence that the Leaseholders have breached the terms of, and their obligations under, these documents. In fact, the abuse of discretion is evident because the Leaseholders' mothballing tactics are clearly adverse to the best interests of the State

and its citizens, and again Plaintiff seeks a public hearing at the administrative level on these allegations.

CONCLUSION

Plainly, Plaintiffs have raised serious and substantial, non-frivolous issues going to the merits. In fact, Plaintiffs have even met the higher threshold of probable success on the merits. Accordingly, the Court should enjoin the Department, the Commissioner and the Director from taking any action to extend the 21st PTU Plan of Development, to approve a 22nd Plan of Development, or to extend the PT Unit Agreement or leases, and should direct DNR to conduct a public hearing on the issues raised by Plaintiffs.

In re Remand Proceedings Pursuant to
December 26, 2007 Order of Superior Court
Regarding Point Thomson Unit Agreement

BRIEF OF ALASKA GASLINE PORT AUTHORITY ON REMAND BY SUPERIOR COURT ORDER DATED DECEMBER 26, 2007

The Alaska Gasline Port Authority ("Port Authority") hereby submits argument, pursuant to the Commissioners' determination to allow the Port Authority to file an end of hearing brief, in support of the decision of the Department of Natural Resources ("Department") to terminate the Point Thomson unit ("PTU").

INTRODUCTION

Bob Bartlett, Alaska's delegate in Congress, warned in his keynote address on the opening day of the constitutional convention of two different dangers that faced our fledgling State in relation to natural resource development.

> Two very real dangers are present. The first, and most obvious, danger is that of exploitation under the thin disguise of development. The taking of Alaska's mineral resources without leaving some reasonable return for the support of Alaska governmental services and the use of all the people in Alaska will mean a betrayal in the administration of the people's wealth. ***The second danger is that outside interests, determined to stifle any development in Alaska which might compete with their activities elsewhere, will attempt to acquire great areas of Alaska's public lands in order NOT to develop them until such time as, in the omnipotence and pursuance of their own interests, they see fit. If large areas of Alaska's patrimony are turned over to such corporations, the people of Alaska may be even more the losers than if the lands had been exploited.***[1]

[1] Vic Fischer, *Alaska's Constitutional Convention* 131 (1975) (quoting E.L. ("Bob") Bartlett, November 8, 1955) (emphasis added).

It does not take a student of Alaska history or of oil and gas law to recognize the working interest owners' lack diligence in pursuing a market and production for Point Thomson resources specifically, and off-slope gas sales in general, is a realization of our framers' fears. Oil and gas leases contemplate diligent development and marketing, a proposition that remains foreign even to the working interest owners' most recent proposed plan of development ("POD").

Put simply, forty years of speculation, broken promises, and refusal to aggressively market Point Thomson gas is long enough. The PTU working interest owners should not be allowed to continue to subjugate the State of Alaska's ("State") royalty interest to their own corporate purposes – or hold the State's own gas hostage as an inducement to gain royalty and tax concessions on a gas pipeline they may or may not one day build. The Commissioner should reject ExxonMobil Corporation's ("Exxon" or the "Unit Operator") newest proposed POD and affirm termination of the Point Thomson Unit Agreement ("PTUA").

I. MISCELLANEOUS OBSERVATIONS.

Before addressing why the unit is subject to termination under the habendum clause, and why past and the current Commissioners retain the power to cancel the unit under PTUA § 10 and for the lessees breach of the implied covenant to market product, the Port Authority would briefly like to address a few miscellaneous issues. These include (i) why the multi-year nature of the proposed November 2006 and February 2008 22nd PODs should result in their rejection; (ii) why, in oil and gas leasing, equity does not abhor a forfeiture; and (iii) the PTUA is structured such as to generally make the Unit Operator, not the other working interest owners, responsible to the State for in-unit decisions and obligations.

A. It Would be Improper for Past and the Current Commissioner to Accept a Multi-Year POD.

To the Port Authority's knowledge no seven to ten year POD has ever been approved by the Department for the North Slope, and in light of the Unit Operator's historic lack of willingness to delineate, develop, produce or market Point Thomson resources, the unit does not seem a fitting candidate. PTUA § 10 specifically contemplates a one-year POD,[2] and it is unreasonable for the Unit Operator to submit a long-term POD that would hamper the Commissioner's ability to maintain oversight, and if necessary, termination authority.

Additionally, acceptance of a multi-year POD would run afoul of the findings and stated policy rationale in the Commissioner's June 27, 2000 *Finding and Decisions* on Lessees' *Application for Change of [Prudhoe Bay] Unit Operator* (failure to have regular, periodic PODs – as opposed to annual reports – results in plans not being disclosed to or approved by the Commissioner). There is no part of the various proposed multi-year 22nd POD's that could not have been accomplished through a series of single-year PODs, and the newest POD should be rejected for the Unit Operator's fairly hollow attempt to use a long-term commitment to lock the unit up into yet another decade.

B. Equity Abhors a Forfeiture (Except in Oil and Gas Leasing).

Hornbook law tells us that "equity abhors a forfeiture," a proposition the Alaska Supreme Court has from time-to-time parotid.[3] But this principle does not hold in the unique body of oil and gas law where, although cases can be assembled to the contrary as done in the owners' pre-

[2] The exact provision as PTUA § 10 under FMUA § 10 has historically been interpreted as requiring annual POD's. BLM Handbook (Unitization (Exploratory)) H-3180-1 at II.H. ("BLM Handbook") ("Prior to the expiration of the initial or nay subsequent plan of development and operation, a new plan covering the next period (the following calendar year) should be submitted on a calendar year basis not later than March 1 of each year, for the authorized officer's approval.").

[3] *See e.g., Strack v. Miller,* 645 P.2d 184, 187 (Alaska 1982).

hearing brief,[4] forfeitures are typically favored with a view towards protecting the lessor. "Although there is division of authority as to whether the equitable remedy of cancellation is favored, it is generally accepted with regard to oil and gas leases that forfeitures are favored."[5]

However, this area of case law and policy rationale behind it need not be explored in depth, because in Alaska this issue was squarely addressed – and decided – by the framers of our Constitution. Section 8 of the Natural Resources Article of the Alaska Constitution expressly mandates that State mineral leases and permits be subject to forfeiture. "Leases and permits shall provide . . . for forfeiture in the event of breach of conditions."[6] It would work an absurdity for the framers to mandate forfeiture for breach of conditions for leases, but to adopt a different policy for leases held by a unit (which is most producing State oil and gas leases except maybe a few in Cook Inlet[7]).

C. The PTUA Generally Creates Obligations of Performance By the Unit Operator to the State, Not By the Other Working Interest Owners to the State.

Under PTUA § 4, Exxon is the Point Thomson Unit Operator. Section 8 provides:

> [T]he exclusive right, privilege, and duty of exercising any and all rights of the parties hereto which are necessary or convenient for prospecting for, producing storing, allocating, and distributing the united substances are hereby delegated to and shall be exercising by the Unit Operator as herein provided. Acceptable evidence of title to said rights shall be depositing with said Unit Operator and, together with this agreement, shall constitute and define the rights, privileges, and obligations of the Unit Operator.

---

[4] Owners Pre-Hearing Brief at 28-31.

[5] *Davis v. Cramer*, 837 P.2d 218, 225 (Colo. 1992). *See also Hiko Bell Mining & Oil Co.*, 100 IBLA 371 (1998) ("The courts have held that in connection with oil and gas leases, forfeitures are favored by the law so that such leases are to be construed liberally in favor of the lessor and provisions for forfeiture strictly enforced.").

[6] Alaska Const., art. XIII, § 8 ("Section 8. Leases. The legislature may provide for the leasing of, and the issuance of permits for exploration of, any part of the public domain or interest therein, subject to reasonable concurrent uses. *Leases and permits shall provide*, among other conditions, for payment by the party at fault for damage or injury arising from noncompliance with terms governing concurrent use, and *for forfeiture in the event of breach of conditions*.") (emphasis added).

[7] *See* Alaska Department of Natural Resources, *2007 Annual Report* §§ 1 and 2 <available at http://www.dog.dnr.state.ak.us/oil/products/publications/annual/report.htm (visited March 19, 2008)>.

The effect of this provision is that the working interest owners have delegated their rights to the Unit Operator to make just the Unit Owner, as opposed to all the working interest owners, answerable to the Department for performance of certain in-unit obligations established in the PTUA (but not out of unit obligations like marketing). As the Commissioner is no doubt aware, the PTUA is simply the federal model exploratory unit agreement ("FMUA") edited by the Department and working interest owners in the 1977 to account for the State, rather than the federal government, being the lessor.

"Under the Model Form Unit Agreement, the Unit Operator is delegated the exclusive authority to exercise all rights relating to prospecting for, producing, storing allocating, and distributing the unitized substances."[8] Thus the Unit Operator and government have final say on in-unit decisions such as prospecting, production rates and the size of participating areas under the PTUA § 8.

That is not to say that the working interest owners are without recourse if the Unit Operator makes poor decisions. Under the FMUA and PTUA it is pretty easy to remove the Unit Operator.[9] The Department of Interior has also allowed the working interest owners, but not royalty interest owners, to appeal certain Unit Operator decisions in limited circumstances.[10] However, the primary remedy that working interest owners have and are expected to exercise

---

[8] 2 Kramer & Martin at § 16.02[2][d].

[9] Section 6 provides that Exxon may resign at any time, and "the owners of the working interests according to their respective acreage interests in all unitized land, shall by majority vote select a successor Unit Operator . . ." Additionally, under PTUA § 5, "The Unit Operator may, upon default or failure in the performance of its duties or obligations hereunder, be subject to removal by the same percentage vote of the owners of working interest determined in like manner as herein provided for the selection of a new Unit Operator." That is, because the PTU is in default, the working interest owners may – per PTUA §§ 5 and 6 – by simple majority vote on an acreage basis replace Exxon as Unit Operator (and if Exxon either resigns or is removed as Unit Operator by a majority vote, and a new Unit Operator is not selected and qualified, "the Commissioner at his election may declare this Unit Agreement terminated.").

[10] *See Stanley Mollerstuen*, 146 IBLA 1 (1998); *Chevron U.S.A. Production Co. Rio de Viento, Inc.*, 149 IBLA 374 (1999).

under the PTUA against poor unit operations and decision making are private suits against the Unit Operator for breach[11] of the Unit Operating Agreement.[12]

II. THE UNIT IS SUBJECT TO TERMINATION UNDER THE HABENDUM CLAUSE.

A. Commissioner Should Clarify for the Record that the Unit Terminated Automatically under PTUA § 20(c) and 11 AAC 83.336(a)(1) (if Applicable).

The Point Thomson unit has terminated automatically under the habendum clause provisions in PTUA § 20(c) and 11 AAC 83.336(a)(1). The termination of a determinable estate upon the occurrence of the special limitation (e.g., failure to have a well capable of producing in paying quantities or an approved POD) is not a forfeiture but merely the expiration of the estate in accordance with its terms.

> A habendum clause in an oil and gas lease (or other mineral lease) providing a short primary term and a secondary term for 'so long as' production in paying quantities or operations therefore continue, or similar language, conveys a 'determinable' interest, that is, an interest subject to a special limitation. Such an interest automatically terminates by its own terms upon the occurrence of the stated event, namely, expiration of the primary term without production or operations at such time, or the cessation of production or operations during the secondary term. Such a habendum clause does *not* convey an interest subject to a condition subsequent, with the lessor having the optionally exercisable power of declaring a forfeiture upon nonproduction or cessation of production. Instead, the lessor has a possibility of reverter and does not need to take any affirmative action for the lease to terminate.[13]

---

[11] *See e.g., BHP Petroleum Co. V. Okie,* 836 P.2d 873 (Wyo. 1992).

[12] Under Section 7 the working interest owners must enter into a "Unit Operating Agreement." The Unit Operating Agreement ("PTUOA") must provide for allocation of benefits "and such other rights and obligations as between Unit Operator and the working interest owners as may be agreed upon by Unit Operator and the working interest owners . . ." The PTUOA had to be filed with the Director within 90 days of execution of the Unit Agreement (i.e., November of 1977) or the unit would terminate. Thereafter, "Any revision of the unit operating agreement must be submitted to the Director before it takes effect." The PTUOA cannot modify the Unit Agreement, and the Unit Agreement controls between any conflicts occurring between the State of Alaska and any working interest owner (including the Unit Operator).

[13] *McCullough Oil, Inc. v. Rezek, et al,* 176 W. Va. 638, 644-5 (W. Va. 1986) (internal citations omitted).

Common law makes clear that in agreements between private parties automatic termination happens without any notice being required, or action of any kind on the part of the lessor. Again, the West Virginia Supreme Court observed:

> A notice and demand clause in an oil and gas lease (or other mineral lease) has no effect upon the habendum clause or cessation of production clause of the lease. Ordinarily a notice and demand clause relates to express and implied contractual obligations (covenants) of the lessee under the lease and relates to forfeiture of the lease for a default, that is, for a breach of these obligations; the notice and demand clause does not relate to termination or expiration of the lease upon the occurrence of the estate limiting event stated in the habendum clause or cessation of production clause.[14]

However, in the administrative context, when the Department or Bureau of Land Management (the "BLM") are acting as both regulator and lessor, it is common practice for the agency to give notice of expiration after it makes appropriate administrative findings.[15] For instance, before the FMUA is held to have automatically terminated, BLM makes legal and factual findings and then gives notice of the expiration.[16] BLM can even backdate the date it determines automatic termination occurred from the date of its findings, thus reducing the amount of time leases formerly committed to a unit will have before themselves expiring.[17] It should be recognized that this administrative action does not turn automatic termination into administrative cancellation that requires a finding of default or breach and subsequent forfeiture.

---

[14] *Id. See also Renner v. Huntington-Hawthorne Oil and Gas Company, et al,* 39 Cal. 2d 93, 96-8 (Cal. 1952)("A determinable fee terminates upon the happening of the event named in the terms of the instrument which created the estate; no notice is required for, and no forfeiture results from, such termination.").

[15] *Kirkpatrick Oil & Gas Company, v. United States of America, et al,* 675 F.2d 1122, 1123 (10th Cir. 1982)("The initial terms had all expired by December 31, 1975. On November 26, 1976, the United States informed Kirkpatrick that its oil and gas leases were terminated for lack of paying production.").

[16] *Oronegro, Inc.*, 156 IBLA 170 (2002) ("By decision dated October 21, 1999, the . . . BLM, notified appellant that the North Kern Front Field Unit Agreement had terminated effective February 28, 1998, because of the cessation of unit production during that month and because diligent operations to restore production or discover new production had not been undertaken in the ensuring 20 months."); *D.L. Cook*, 144 IBLA 63 (1998) (because the three wells in the unit were not able to produce in paying quantities, and the unit operator had not commenced sufficient reworking or drilling operations within 60 days, the unit agreement is invalid under Section 9).

[17] 2 Kramer & Martin at § 16.02[6] ("Terminations can be retroactively determined as in the case of *Oronegro, Inc.*, where BLM sent out a notice of termination in October 1999, declaring that a particular unit had terminated February 28, 1998.") (citing *Oronegro, Inc.*, 156 IBLA 170 (2002)).

As an analogy, think of it like a one year lease expiring at the end of 12 months. At the end of the year when the landlord asks the tenant to move out, no forfeiture has occurred. The lease has simply ended as agreed by the parties when they entered into it. The fact that the lessor may be the government, and for whatever reason an administrative agency reviewing the lease makes a finding that 12 months has passed, does not turn the agency's action in forfeiture proceedings.

This distinction between automatic termination (also called expiration or termination by operation of law) and forfeiture or cancellation for breach has been long recognized in oil and gas law and is briefed in detail in the Port Authority's amicus brief before Judge Gleason. Although Judge Gleason ruled automatic termination did not occur (because the State did not assert the 20(c) argument and in the Court's view 11 AAC 83.336(a)(1) was inconsistent with the PTUA), it is extremely important that the Commissioner rule for the record that: (i) the unit terminated automatically under PTUA § 20(c); and (ii) under 11 AAC 83.336(a)(1) – if applicable – the unit would have terminated automatically upon the Unit Operator's failure to have an approved POD. As to the latter, the Port Authority is very confident that the Alaska Supreme Court can be convinced 11 AAC 83.336(a)(1) applied, and consequently all the hullabaloo about whether the Department should or is required to accept the newest 22nd POD is irrelevant because the estate has already expired.[18]

[18] And we even know from federal precedent such as *Oronegro, Inc.*, 156 IBLA 170 (2002), that regardless of when the Supreme Court makes that finding, termination of the Unit will be back dated to the fall of 2005. That will mean all the leases will have long since terminated as well because that will be when the 90 day period in 11 AAC 83.140 and Clause 5 of the DL-1 lease form began to run.

B. The Unit is Subject to Termination under Discovery Jurisdiction Habendum Clause Case Law Regardless of Whether there is a Capable Well or a POD was Rejected.

Even if the courts ultimately hold that the unit cannot be terminated under the habendum clause for not having a well capable of producing in paying quantities, or for the Unit Operator's failure to submit an acceptable POD, the unit is still subject to termination under the habendum clause (not PTUA § 10) because an unreasonable amount of time has passed without the owners having marketed product.

The majority of jurisdictions, under typical habendum clause language (e.g., "the lease shall continue so long thereafter as oil and gas or either or any of them are produced in paying quantities"), have adopted the rule that if actual production stops, or does not commence, then the lease terminates automatically at the end of the primary term.

> In a few states there is authority for another theory, namely that habendum clause requires merely discovery rather than production in paying quantities. . . In 'discovery' jurisdictions, the habendum clause is read to require the lessee to attempt to market the natural gas within a reasonable time. Failure to do so will lead to lease termination.[19]

Essentially this distinction comes down to whether marketing is a necessary incident of production. In most jurisdictions it is held there cannot be production without disposition so if product is not being marketed at the end of primary term the estate terminates under the habendum clause. Marketing in most states is consequently considered a special limitation to the determinable estate.

> In a jurisdiction where marketing is an essential part of production, an habendum clause which provides for a fixed term and so long thereafter as oil or gas is 'produced' will not be satisfied unless the oil or gas is actually removed from the earth which necessarily involves marking in the case of gas. In this context, marketing the product is a special limitation and a failure to market gas will result

[19] 3 Williams & Meyers at § 604.1.

> in an automatic termination of the lease unless termination is prevented by some other provision. On the other hand, in a jurisdiction where marketing is not an essential part of production, an habendum clause such as the one just described will be satisfied by commercial discovery without marketing the product.[20]

Thus discovery jurisdictions are more lessee friendly because a lessee's rights do not automatically terminate if product is not being marketed when the primary term ends. Rather in discovery jurisdictions if there is a lack of market the court will allow a lease to be held under the habendum clause into the secondary term so long as at the conclusion of the primary term there has been a valuable discovery and the acreage contains a "well capable of producing in paying quantities."

> In these states the discovery of gas (and perhaps oil) in commercial quantities during the primary term or an extension thereof satisfies the thereafter provision of the habendum clause, at least for a period of time, and thereby extends the lease into the secondary term.
>
> After the mineral is discovered the lessee has a duty to use due diligence to market the product, and the failure to do so will result in termination of the lease, under the habendum clause, after the primary term has expired.[21]

However, unlike in a case claiming a breach of the implied covenant to market, in a discovery jurisdiction habendum clause case the courts will terminate the unit after a reasonable amount of time *even if the lessee has continued to market with diligence.* [22]

> Here we find the breakdown of the conceptual distinction between the implied marketing covenant and the [discovery jurisdiction] habendum clause. However, the marketing covenant and the habendum clause are not completely assimilated: Satisfaction of the implied marketing obligation through continuing efforts to market the product will not satisfy the habendum clause indefinitely. At some point, even though there has been no breach of the covenant, the lease will expire if there is no production.[23]

---

[20] 5 Kuntz at § 60.1.
[21] 5 Williams & Meyers at § 855.
[22] *See e.g., Somont Oil Co., Inc. v. A & G Drilling, Inc.*, 49 P.3d 598 (Mont. 2002); *Fisher v. Grace Petroleum Corp.*, 830 P.2d 1380 (Ok. Civ. App. 1991).
[23] 5 Williams & Meyers at § 855.

If the Alaska courts refuse to apply the special limitations in the PTUA § 20(c) and 11 AAC 83.336(a)(1) then for purposes of interpreting the PTUA (and maybe all units) Alaska is a discovery jurisdiction and the unit is subject to termination if: (i) the operator did not exercise diligence at any time in finding a market, even if a market is not readily available; or (ii) after a reasonable amount of time no market is available even if the lessee exercised diligence in attempting to find one. Thus under discovery jurisdiction law either a lack of diligence or market can ultimately terminate the unit. This is because failure to acquire a market results in termination under the habendum clause, not the implied covenant to market. Under such a standard the PTU owners' interests are unquestionably subject to termination given 30 years has passed since unitization and no market has been secured.

III. THE UNIT IS SUBJECT TO TERMINATION UNDER PTUA § 10; THE REASONABLY PRUDENT OPERATOR STANDARD IN PTUA § 10 REQUIRES THE UNIT OPERATOR AND WORKING INTEREST OWNERS TO MARKET WITH DILIGENCE.

A. The Department has "Broad Authority" to Approve, Modify and Terminate Units, which Includes the Inherent Authority to Terminate the Unit for the Unit Operator's Failure to Submit an Acceptable POD under PTUA § 10.

Substantial energy has been expended arguing that the unit agreement is a private contract between the working interest owners and the State, and that the Department does not have the authority to unilaterally terminate it. However, federal case law demonstrates a government/lessor can do just that. In addition to the now well briefed holding in *Boesche v. Udal*, 373 U.S. 472 (1962), that the government has the inherent power to administratively terminate an oil and gas property interest when such power is not specifically withheld, IBLA decisions relating to the FMUA support that conclusion as applied to units.

In *Chevron U.S.A., Inc.,* 111 IBLA 96 (1989), after reviewing applicable provisions of the Mineral Leasing Act,[24] the leases, and the FMUA § 2 (almost identical to the PTUA § 2), it was determined that – so long as he considers the "reasonableness" of a plan – the Secretary of the Interior has broad authority to approve unit plans, including ratifying and expanding units, over the objection of the working and royalty interest owners.

> As can be seen, 30 U.S.C. § 226(j), the lease terms, and the MDUA all give the Secretary broad authority to approve any unit plan 'he may deem necessary or proper to secure the proper protection of the public interest,' to mandate unitization, and to prescribe a plan 'which shall adequately protect the rights of all parties in interest, including the United States.'[25]

Relying on this decision, the most learned of commentators, Professors Bruce Kramer and Patrick Martin, noted in their treatise on unitization that a government's sweeping authority under these provisions to approve and dictate unit plans extends to forced termination of units. "The broad authority to approve any unit plan that the Secretary deems reasonable or proper is sufficient to cover the forced termination and/or expansion of existing federal exploratory units."[26]

In short the Department – like the Department of the Interior – is not just any other lessor. Broad, inherent authority to approve, modify and terminate units is typically reserved to the overseeing agency on leased government land under statute, regulation and the leasing documents (i.e., leases and unit agreements).

B. The Implied Covenant to Market as a Reasonably Prudent Operator under PTUA § 10.

Lessees do not have a legal choice about whether to explore for, develop, produce and market hydrocarbon resources from Point Thomson. American courts since early in the 20th century have read into oil and gas leases a series of implied covenants in order to assure that a lessor's rights are protected, covenants which are extended to units upon unitization.[27] Courts use implied covenants to ensure a lessee does not act opportunistically towards a lessor whose interests might otherwise be held hostage by a lessee holding the land for speculation,[28] and in fact they are so important in protecting a lessor against a lessee's speculative behavior that many jurisdictions hold they are integral parts of the written contract and implied in fact rather than implied in law.[29]

In oil and gas leases and unit agreements, such as PTUA § 10, the duty to develop and/or produce as a reasonably prudent operator is often express. When not expressly provided for by the parties, as noted by the Alaska Supreme Court, courts imply such obligations.[30] Similarly,

---

[27] *See Parkin v. State Corp. Comm'n of Kansas*, 677 P.2d 991 (1984) (implied covenants extended to units).

[28] *Amoco Production Co. v. Douglas Energy Co.*, 613 F.Supp. 730, 733 (D. Kan. 1985) ("[H]olding leases for speculative purposes is condemned. Leases of this kind contemplate exploration and development, and not the bottling up of land for speculative or other purposes or the postponement of reasonable development. . ."); *Carter v. United States Smelting, Refining and Mining Co.*, 485 P.2d 748, 752 (Okla. 1971) (condemning holding a lease for "sheer speculation and without any purpose for further development"); *Garcia v. King*, 164 S.W.2d 509 (Tex. 1942) ("The lessors should not be required to suffer a continuation of the lease after the expiration of the primary period merely for speculation purposes on the part of the lessees.").

[29] *Smith v. Amoco Production Co.*, 31 P.3d 255 (Kan. 2001) (implied covenants in an oil and gas lease are implied in fact, rather than in law, in *inter alia* Kansas, Oklahoma, Texas and Montana).

[30] *Baxley v. State of Alaska,* 958 P.2d 422, 427 (1998) (Noting in passing that the State's oil and gas leases contain an implied covenant for lessees to "diligently explore and develop their leases."). *See also* Richard W. Hemingway, *The Law of Oil and Gas* § 8.3 (3d ed. 1991) ("All jurisdictions impose a prudent operator rule to determine whether lease development satisfies the implied covenant of further development. . . Within such relationship the lessee has an implied duty, after production is acquired, to develop the lease to its fullest extent."); *Meaher v. Getty Oil Co.,* 450 So.2d 443, 446 (Ala. 1984) ("[I]mplied covenants to reasonably develop the leased lands, recognized to exist in every oil and gas lease, continue to obligate the lessee to develop all the leased lands. . ."); *Byrd v. Bradham,* 280 Ark. 11, 14, 655 S.W. 2d 366, 367 (1983) ("In oil and gas leases where royalties constitute the chief consideration, an implied covenant exists that the lessee will explore and develop the property with reasonable diligence."); *Olson v. Schwartz,* 345 N.W.2d 33, 38 (N.Dak. 1984) ("It is well settled that the lessee of an oil and gas lease has an implied obligation to the lessor to do everything that a reasonably prudent operator would do in operating,

regardless of whether the duty to develop and produce as a reasonably prudent operator is express or implied, courts will additionally imply a duty to market oil and gas from the lease as a reasonably prudent operator.

> In the absence of such a duty, the courts, on the same theory that they imply covenants to test and develop, imply a covenant on part of the lessee to market the oil and gas produced. It would be of little benefit to the lessor to have express or implied covenants on part of the lessee to test, develop, and protect the land by drilling wells, if the lessee might cap them and refuse to market the product.[31]

The duty to market lies at the heart of the parties' purpose since without it the lessor does not receive royalty. The Texas Supreme Court long ago explained:

> Under the ordinary oil and gas lease, the lessee is not required to market the yield of the leased land at any certain time for any certain price. When the lease is silent on the subject, the lessee's duty is to exercise ordinary or reasonable care. . . Without the exercise of reasonable care to market the gas, there could be no compliance with the assignee's obligations to proceed with the development reasonable and necessary to bring the lease to a normal stage of production.[32]

The New Mexico Supreme Court put it a bit more succinctly:

---

developing, and protecting the property, with due consideration being given to the interests of both the lessor and the lessee, if there is no express clause in the lease relieving the lessee of this implied duty.").

[31] 2 W.L. Summers, *The Law of Oil and Gas* § 400 (1959 ed. and 2004 Supp.). The case law supporting the implied duty to market is legion. *See e.g., Wolfe v. Texas Co.,* 83 F.2d 425, 432 (10th Cir.), *cert. denied,* 299 U.S. 553 (1936) ("In the absence of an express provision in an oil and gas lease with respect to marketing the production there is an implied duty on the part of the lessee to make diligent efforts to market the production in order that the lessor may realize on his royalty interest."); *Davis v. Cramer,* 808 P.2d 358, 361 (Col. 1991) (*en banc*) ("Embodied in the covenant to operate diligently and prudently is the implied covenant to market."); *Tana Oil & Gas Corp. v. Bates,* 978 S.W.2d 735, 739 (Tex. App. 1998) ("Oil and gas law in Texas recognizes an implied covenant in gas leases such that a lessee must use due diligence to market the oil or gas produced within a reasonable time and at a reasonable price…[t]he behavior of a lessee in this regard must conform to the standard of a reasonably prudent operator."); *Gilmore v. Superior Oil Co.,* 192 Kan. 388, 392, 388 P.2d 602, 606 (Kansas 1964) ("Kansas has always recognized the duty of the lessee under an oil and gas lease not only to find if there is oil and gas, but to use reasonable diligence in finding a market for the product, or run the risk of causing the lease to lapse…"); *Townsend v. Creekmore-Rooney Co.,* 358 P.2d 1103, 1104 (Okla. 1960)("Where the oil and gas lease does not, in express terms, provide for the marketing of production discovered under the lease, the lessee is under an implied covenant only to market production within a reasonable time. In complying with said covenant the lessee must exercise due diligence in securing a market or a new market, if the one secured proves unsatisfactory. The matter of whether the lessee exercised due diligence in obtaining a satisfactory market within a reasonable time depends upon the facts of each case."); *Severson v. Barstow,* 103 Mont. 526, 63 P.2d 1022, 1024 (Mont. 1936) ("Where, as here, the principal consideration for a lease is the payment of royalty, the lease carries an implied covenant to use reasonable diligence to market the product when produced, although the lease is silent on the subject, and whatever is implied in a contract is as effectual as what is expressed…").

[32] *Cole Petroleum Co. v. United States Gas & Oil Co.*, 41 S.W.2d 414 (Tex. 1931).

> Obviously production without disposition of the product is futile. Thus the courts have developed the implied covenant 'to make diligent efforts to market the production in order that the lessor may realize on his royalty interest.'[33]

The Port Authority does not believe termination of the PTUA must be contingent on a finding that the November 2006 or February 2008 proposed 22nd PODs do or do not comply with the reasonably prudent operator standard. However, if such a proposition were correct it is not sufficient to inquire whether the Unit Operator's prior and promised development conduct alone complies with the reasonably prudent operator standard as expressly stated in PTUA § 10. The owners and Unit Operator's production and marketing efforts must likewise be measured against a hypothetical reasonable third party producer in order for the proposed PODs to comply with such a standard. Additionally, the Unit Operator and owners' breach of the implied marketing covenant provides independent grounds for forfeiting the unit outside of the Unit Operator's obligation to submit an acceptable POD under PTUA § 10 (with is also grounds for termination under PTUA § 10).

C. The Prudent Operator Standard as Applied to Oil and Gas Marketing.

The prudent operator standard has the same function in oil and gas law as the reasonable man standard has in negligence law. Thus to comply with this standard, Exxon (and the other owners) must act with regards to duties owed under implied covenants, including the duty to market oil and gas, as a prudent third party operator would under similar circumstances.

The standard against which a producer's marketing efforts must be measured has been summarized by Professor Kramer as follows:

---

[33] *Darr v. Eldridge*, 346 P.2d 1041 (N.M. 1959).

> [T]he lessee in any given case is compared to a hypothetical reasonable person engaged in oil and gas operations. Under such an objective standard, the lessee cannot justify his wrongful act or omission on the grounds that his course of action was reasonable based on circumstances peculiar to himself. Rather, the lessee's marketing activities are compared to those that would have been carried on by a reasonably prudent operator under similar circumstances. Where it is found that the lessee failed to meet this standard of conduct he will be liable for breach of the implied marketing covenant.[34]

Additionally, in relation to marketing Point Thomson product, there are at least four relevant corollaries to the duty of care owed by Exxon and the other working interest owners to the State as lessor.

First, a reasonably prudent operator will act if and when there is a "reasonable expectation of profit."[35] Second, the reasonableness of the acts of the lessees in marketing oil and gas cannot be measured in light of a lessee's individual circumstances, such as available financial resources, corporate objectives or self interests, a desire to favor development of another property, or an overall North Slope development strategy.[36]

[35] *See e.g., Whitman Farms, v. City of Longmont*, 97 P.3d 135, 137-8 (Colo. Ct. App. 2003) ("When, as here, there is a proven field of oil or gas, courts have held that a lessee is required to further develop the lease when there is a reasonable expectation that one or more new wells would generate enough revenue to cover the cost of development and return a reasonable profit. Thus, when a prudent operator would have a reasonable expectation of such economic viability and a lessee is not developing the field, it is proper to conclude that the lessee has breached the covenant of reasonable development and to grant an equitable termination to the lessor.").

[36] *Shelton v. Exxon Corp.*, 719 F.Supp. 537, 549 (S.D. Texas) (Exxon's failure to market gas from leasehold to meet certain corporate warranties without having to purchase gas on the open market "completely subordinated the rights of the mineral interest owners to Exxon's financial gain. Exxon's acts and omission in so doing were not those of a reasonable, prudent operator having its own and the plaintiff's interest in mind."), *rev'd on this point*, 921 F.2d 595 (concluding that the imprudent marketing claim had been released by a 1980 settlement). *See also Newell v. Phillips Petroleum Co.,* 144 F.2d 338, 339 (10th Cir. 1944) ("It was the duty of Phillips to operate this well prudently and with reasonable diligence... It's duty in that respect was not affected in any manner by its ownership of other wells in the vicinity. And its failure to discharge that duty, whether motivated by its interest in wells located lower on the structure, or otherwise, would render it liable in damages for any injury suffered by the owner of the royalty interest."); *Smith v. Amoco Production Co.,* 272 Kan. 58, 31 P.3d 255, 272 (Kan. 2001) ("Amoco admits that its obligations as lessee apply independently to each lease. The independent duty principle is applied to prevent Amoco from making the management of a given lease dependent upon the management of another lease."); *Amoco Production Co. v. Alexander,* 622 S.W.2d 563, 569 (Tex. 1981) ("The reasonably prudent operator standard is not to be reduced to the Alexanders because Amoco has other lessors in the same field. Amoco's status as a common lessee does not affect its liability to the Alexanders."); Pearson and Dancy, "Negotiating and Renegotiating the Gas

> The prudent operator . . . is a hypothetical oil operator who does what he ought to do not what he ought not to do with respect to operations on the leasehold. Since the standard of conduct is objective, a defendant cannot justify his act or omission on personal grounds or by reference to his peculiar circumstances. . . In short, the question is not what was meet [sic] and proper for *this* defendant to do, given his peculiar circumstances, but what a hypothetical operator acting reasonably would have done, given circumstances generally obtained in the locality.[37]

Third, diligence in marketing is a prerequisite to the working interest owners' standard of care given it is they – not the lessor – that are in the position to secure a market for the product.

> The covenant to market requires that the lessees exercise reasonable diligence to market the products. Reasonable diligence is whatever, in the circumstances, would be reasonably expected of all operators of ordinary prudence, having regard to the interests of both lessor and lessee. . .[38]

Fourth, a reasonably prudent operator's interaction with a nearby or prospective pipeline will recognize the economic realities of the industry are such that pipelines must secure long-term shipment commitments from either the gas producer or purchaser.

> [G]as normally is marketable only when the reserves in the field where the lease is situated justify the sizeable capital expenditure necessary to construct and lay a pipeline capable of transporting the gas to its market destination. Pipeline systems, of course, are complex creatures and are quite expensive to construct. Investors traditionally have not been willing to build pipelines unless gas is available in a sufficient quantity and has been committed to the pipeline for an adequately long period, thereby providing the investors with reasonable assurance that they will make a profit on their investment. Thus, the justification for the capital expenditure necessary to construct the pipeline usually comes in the form of long-term gas sale contracts which effectively commit the volume of gas to be sold to the purchaser who will transport the gas through its pipeline to the point of consumption.[39]

Contract: Producer Duties to Third Parties," 56 Okla. B.J. 2181 at 2182 (1985) ("lessee cannot justify his actions merely on the grounds that his course of action was reasonably based on circumstances peculiar to himself.").

[37] 5 Williams & Meyers at § 806.3 (emphasis in original).

[38] *Davis v. Cramer*, 808 P.2d 358, 363 (Colo. 1991).

[39] Holliman, *Exxon Corp. v. Middleton: Some Answers but Additional Confusion in the Volatile Area of Market Value Gas Royalty Litigation,* 13 St. Mary's L.J. 1, 6 (1981). *See also Panhandle Eastern Pipe Line Co. v. The United States,* 187 Ct. Cl. 129, 170 408 F.2d 690 (Ct. Cl. 1969) ("Since pipelines are expensive to construct, pipeline companies have been required to insure for themselves long-term supplies of natural gas in order to amortize their investments..."); *The Superior Oil Co. v. Western Slope Gas Co.,* 549 F.Supp. 463, 469 (D. Colo. 1982) ("Because gas purchasers must make substantial capital outlays in order to move the gas product to the retail consumer, they require same assurance that sufficient long-term supplies of gas will be available to them.").

Consequently, a reasonably prudent operator must act to diligently secure a pipeline connection,[40] include making necessary long-term gas sale or pipeline shipment commitments.[41] Even in the cases where the courts have found the implied covenant to market was not breached, they have nevertheless emphasized the diligence that operators showed with respect to trying to secure, and in some cases actually securing, pipeline connections.[42] In each of these cases the courts recognized that the producers' attempts to and actually contracting with a pipeline were central to the issue of whether reasonable diligence in marketing had been shown.

---

[40] *See Crain v. Hill Resources, Inc.*, 972 P.2d 1179, 1181 (Okla. Ct. App. 1998) (The "wells were never hooked up to a pipeline," and the court found that therefore the "lessees failed to comply with the implied covenant to market the gas and cancelled the lease."); *Davis v. Cramer,* 837 P.2d 218 (Colo. Ct. App. 1992) (When the well was completed in 1972 and the pipeline was completed near the well in 1975, but product was not marketed until 1978, the implied covenant to market had been breached.); *Barby v. Cabot Corp.*, 550 F.Supp. 188, 190 (W.D. Okla. 1981) ("Defendant's breach of its duty to diligently market the gas produced . . ." resulted from fact that "[d]efendant was dilatory in renegotiating" expired gas contracts.); *Cole Petroleum Co. v. United States Gas & Oil Co.*, 41 S.W.2d 414 (Tex. 1931) ("The jury found that reasonable care was not used by the assignee to connect the gas wells with a pipe line nor to sell the gas to the advantage of the parties. Without the exercise of reasonable care to market the gas, there could be no compliance with the assignee's obligation to proceed with the development reasonably necessary to bring the lease to a normal stage of production.").

[41] *See Hillard v. Stephens,* 276 Ark. 545, 550, 637 S.W.2d 581, 583-4 (Ark. 1982) ("Once the lessee-producer drills a well resulting in the commercial production of natural gas on the leased premises, the lessee-producer has the immediate duty to market the gas. In order to market such gas effectively, it is the custom in the industry and is usually necessary for the lessee-producer to sell the gas under a long-term gas purchase contract."); *Tara Petroleum Corp. v. Hughey,* 630 P.2d 1269, 1273 (Okla. 1981) (footnotes omitted) ("Once a producing well is drilled, a producer has a duty to market the gas. In order to market gas it is usually necessary to enter into a gas purchase contract – frequently a long term one. . . We have recognized this necessity of the market, and we believe that lessors and lessees know and consider it when they negotiate oil and gas leases.").

[42] *See e.g., Christianson v. Champlin Refining Co.,* 169 F.2d 207, 210 (10th Cir. 1948)(In determining whether an operator had "exercise[d] due diligence" the court emphasized the defendants "secure[d] within a year the construction of an expensive pipe line and made it possible to market the gas which was an inferior quality, which in itself, entailed additional difficulty, and were actually marketing the gas from the well within fifteen months from the date of completion."); *Tate v. Stanolind Oil Co.,* 172 Kan. 351, 358 240 P.2d 465, 470-71 (Kan. 1952)(In deciding whether marketing had occurred "within a reasonable time," the court considered that the pipeline "refused to take the gas," and the producer "proceeded before the commission to compel" the pipeline to take it and the pipeline "then agreed to do so."); *Fey v. A.A. Oil Corp.,* 129 Mont. 300, 320 285 P.2d 578, 588 (Mon. 1955) (In determining "[w]hether due diligence [in marketing] has been exercised," the court emphasized that "[t]he record is replete with the efforts of defendants to procure a pipe line company that would take the gas at the profit to lessors and lessees."); *Commissioners of the Land Office v. Carter Oil Co. of W. Va.,* 336 P.2d 1086, 1096 (Okla. 1958) (In determining whether "due diligence was exercised in the seeking and obtaining of a market" the court considered the fact that "[c]ontinued negotiations were carried on with other [potential buyers] and the operator found a buyer "taking the gas from the well head.").

Thus a general statement of the relevant marketing duty of a working interest owner as a party to the PTUA is as follows: upon discovery of oil or gas, an owner is under an implied duty to use diligence to market product and secure pipeline connections as a reasonably prudent operator, which includes marketing the product if there is a reasonable expectation of profit and a willingness to enter into necessary long-term gas sale or shipping commitments.

IV. THE UNIT OPERATOR HAS BREACHED THE IMPLIED COVENANT TO MARKET GAS, FOR WHICH TERMINATION IS A PROPER REMEDY.

A. Elements of Breach of the Implied Covenant to Market as a Reasonably Prudent Operator.

The easiest way to show the Point Thomson owners have not behaved as reasonably prudent operators in relation to marketing as required under PTUA § 10 – and to separately make the case that violation of the marketing covenant justifies forfeiture in its own right outside of the obligations in PTUA § 10 to submit an acceptable POD – is to demonstrate breach of the covenant. The elements of the cause of action for breach of the implied covenant to market are: (i) discovery of oil or gas on the leasehold; (ii) failure to sell the product so discovered; (iii) ability of a prudent operator to sell the product through the exercise of reasonable diligence; (iv) and damage to the lessor as a result of the failure to obtain a market.[43]

Of the four elements necessary for the State to prove a prima facia case of breach, only element (iii) is not facially met for the Point Thomson unit. Consequently the Port Authority will explore it further, explaining that: (a) in these circumstances it need not be shown that a prudent operator could have sold product (or at least the owners bear the burden to demonstrate a prudent operator could not have sold product); and (b) the owners have not acted with diligence in attempting to market product.

[43] 5 Williams & Meyers at § 855.

B. The Unit Operator and Other Owners Bear the Burden of Proof to Demonstrate Their Diligence in Marketing Product form the Unit.

In a case claiming a breach of the implied covenant to market, the lessor normally bears the burden to prove the ability of a prudent operator to sell the product through the exercise of reasonable diligence. But what happens if the lessor cannot meet this burden and substantial time passes? Should the lessee continue to maintain the right to produce and market the leasehold indefinitely notwithstanding his continuing inability to so?

The Port Authority has already explained this problem is resolved in discovery jurisdictions, not through a claim of the breach of the implied covenant to market, but in the rule that a failure to market product after a reasonable period of time results in forfeiture of the lease under the habendum clause regardless of diligence.

However, what happens in non-discovery jurisdictions when substantial time passes without marketing, yet the habendum clause is satisfied into the secondary term because there is either: (i) a habendum clause that requires the "capability of production" (such as PTUA § 20(c)) rather than "actual production;" or (ii) a habendum clause that requires "actual production" but the lease contains a shut-in royalty clause that allows payment of shut-in royalties to act as constructive production after the primary term?

> That the lessor must prove that diligence would have secured a market in a covenant case but need not make such proof in a habendum clause case suggests the possibility that the lessor may be favored with the lighter burden in pure covenant cases when the lease is being held under a shut-in royalty clause. Suppose the lessee drills a commercial gas well but no market is immediately available. He shuts the well in, commences shut-in royalty, and forgets the well. Some years later the lessor sues to cancel the lease for failure to market the gas. Should he bear the burden in such a case of showing that a market was available and could have been secured through due diligence?
>
> The [discovery jurisdiction] habendum clause cases are not controlling on this point, because the issue arises under the implied marketing covenant, not the

> habendum clause. Payment of the royalty is production for habendum clauses purposes. Nevertheless, if no efforts to market the gas are made by the lessee, or if his efforts fall below the standard of prudent operation, a court could properly grant cancellation for breach of covenant without proof that a market for gas existed. The ground for cancellation would be to prevent the lessee from holding the land for speculative purposes.
>
> A court reluctant to forfeit the lease where the lessee is paying shut-in royalty (although these sums are usually nominal) should at least shift the burden of proof to the operator to show that a market could not be obtained, even if the exercise of reasonable effort. A shut-in gas clause should not hold a nonproducing lease indefinitely in the absence of the exercise of due diligence to market the product. It is difficult to know whether a market could have been obtained unless efforts have been made to do so; the absence of effort implies a desire by the lessee to hold the land for speculation contrary to the base purposes of the lease.[44]

First, the Port Authority has already suggested that if the courts or Department refuse to give effect to the special limitations in PTUA § 20(c) and 11 AAA 83.336(a)(1), then Alaska is a discovery jurisdiction in this context and the unit is subject to termination under the habendum clause for a reasonable amount of time passing and marketing not having occurred. Second, if the unit is not subject to discovery jurisdiction rules, then for units held indefinitely by shut-in savings provisions, or a "can be produced" habendum clause where there is maintained a well capable of producing in paying quantities (the rationale is identical), it is proper if product has not been marketed with sufficient diligence for the Department under the implied marketing covenant to: (i) rule the unit cancelled for breach of the covenant without proof that a market existed, or (ii) at least shift the burden of proof to the Unit Operator and owners to show that a market could not be obtained, even if the exercise of reasonable effort.

[44] 5 Williams & Meyers at § 856.3.

C. The Unit Operator and Other Working Interest Owners Have Not Marketed Point Thomson Gas with Diligence.

The duty of care the lessees owe the State to find a market for gas is one of diligence. To even suggest the owners, in 43 years since the first lease sale or 31 years since unitization, have acted diligently to bring product to market is farcical. That is because not only have the Point Thomson working interest owners not diligently sought a market, they have used Point Thomson as a chess piece in their ongoing corporate strategies relating to the construction of a gas pipeline. The Port Authority respectfully submits that the Commissioner would be woefully ignoring his obligations as trustee of our people's resources if he did not focus these termination proceedings on the working interest owners' refusal to market gas from the Unit.

Exxon, BP and ConocoPhillips have not even been coy about their respective positions on North Slope gas development. Time and time again these owners have beat the refrain that they will not sell gas from Point Thomson until an off-slope pipeline gets build, they will not commit gas to a pipeline until the State makes royalty and tax concessions, they will not enter into gas purchasing agreements to allow a downstream gas purchaser to make shipping commitments on an independent pipeline, and they will not enter into firm transportation commitments to ship their own gas down a third party pipeline. Each one of these positions is a direct breach of the marketing covenant and will be addressed individually below.[45]

[45] In its September 16, 2006 Agency Demand letter to Director Myers ("Agency Demand"), PTUR 000001, and in the pleadings leading up to and argument at the November 20, 2006 hearing before Commissioner Menge, the Port Authority detailed and incorporated into the record many of the violations of the producers' obligations to market Point Thomson gas diligently. However, a brief recap of some of those arguments and producer statements is useful.

1. *The Unit Operator and Working Interest Owners Have Not Been Willing to Develop Point Thomson Resources Until There is an Off-Slope Gas Pipeline.*

The State should not be distracted by the most recent POD proposal to undertake a relatively small gas cycling project. As the Unit Operator testified before the Commissioner, Point Thomson is predominately a gas field.[46] That is why, starting in 1983, the Unit Operator repeatedly took the position in PODs for almost twenty-five years that only a major off-slope gas sale would economically justify development of the unit, with the crux of its justification for non-development and for not marketing unitized substances being a lack off-slope gas transportation facilities.[47] The newest version of the 22nd POD, a minimal development commitment to get around negotiating gas sales with a third party pipeline operator, is hardly a meaningful departure from this strategy.[48]

2. *The Unit Operator and Working Interest Owners Will Not Commit Gas to a Pipeline Until the State Makes Royalty and Tax Concessions.*

As has been addressed, lessees must undertake development and marketing if they have a reasonable expectation of profit. Yet irrespective of the level of profitability the various working

---

[46] "Gas is our predominant resource. It's over 90 percent of the hydrocarbons at Point Thomson . . . And we will be pursuing . . . the ultimate development of Point Thomson . . . to commercialize that gas, but as we're – as we know we're currently await a pipeline." Testimony of Craig Haymes, Hearing Transcript at 98-99 (February 27, 2008).

[47] 7th POD (1983) ("Sufficient drilling has been accomplished to establish within reason the area and potential commerciality of the field. Further development prior to commencement of construction of a pipeline to market would constitute economic waste through premature expenditure of funds which otherwise could be utilized for exploratory or development activity on other Alaska areas and leases."). *See also* 11th POD (1994) ("Exxon believes that the most likely way to commercialize ANS gas, other than the relatively small volume of gas for local sales, will be through a large scale delivery system, to an off-slope market."); 15th POD (1998) ("[H]urdles to economic development remain; particularly, high well and facilities costs, lack of a gas market and transportation system, and the unique technical challenges associated with high pressure gas cycling. Consequently, development of the Thomson Sand gas is not economically justified at the present time.").

[48] Cycling out 10,000 bbl/d, or about 3 to 4 mmbbl/y, of condensates in a field with know resources of several hundred million barrels can hardly be considered preparing for a major gas sale. Such a small amount of condensates will be cycled out in the next few years that if a major gas sale were to occur in the near future it would still be a gas blowdown.

interest owners and independent consultants are actually projecting from gas sales,[49] it has been repeatedly stated that major off-slope gas sales will not occur without fiscal concessions from the State.

Consider the 15th POD where the Unit Operator stated unit development was not commercially viable, and instead hinted that development might be appropriate upon a change in the State's royalty and tax structure.[50] The alluded to Stranded Gas Development Act ("SGDA"), AS 43.82, ultimately culminated in the SGDA negotiations fiasco where the producers used their stranglehold on Alaska's gas resources to extract sickening tax and royalty concessions in the Murkowski Administration contract. The very point of the implied covenant to market is to force lessees to live up to the spirit of the lease by requiring that they exercise diligence to try and produce and market product. For a lessee to demand renegotiation of fiscal terms (e.g., waiver of lessor's right to take gas in value) in order to take known resources to a profitable market is a gross violation of the implied marketing covenant and the State should not continue to tolerate it for Point Thomson.

And of course the Unit Operator and working interest owners continue to maintain this position. ConocoPhillips's AGIA filing, as well a litany of radio advertisements and legislative testimony, makes clear that that company expects the State to change its tax and royalty structure before it will consider marketing gas.[51]

---

[49] Consider, for instance, the Econ One findings and Green Gate LLC calculations included in the record with the Port Authority's "Appeal Letter" before the November 20, 2006 hearing.

[50] 15th POD (1998) ("Additionally, three of the PTU Owners (Exxon, BP and Phillips) have worked with the State of Alaska's North Slope Gas Commercialization Team which has recommended that changes be made to the State's tax and royalty structure to improve the economic feasibility of a North Slope gas project. This work culminated in the Governor's introduction of Stranded Gas legislation (HB 393) earlier this year. . . Future fiscal legislation will continue to be monitored for applicability to PTU resource commercialization.").

[51] *See* Attachment B.

Unbelievable, just a few weeks ago, Exxon filed comments on TransCanada's application under the Alaska Gasline Inducement Act ("AGIA"), AS 43.90, taking just that position. "An appropriate fiscal regime must be negotiated between the State and the ANS producers."[52]

> ExxonMobil considers the foregoing to be a fundamental condition to achieving commercially viable Alaska gas pipeline project under any legislative regime. Consistent with EM's testimony during the AGIA hearings, EM reiterates its offer to engage in substantive fiscal discussions with the State with a goal of developing a fiscal regime which can lead to a viable pipeline project.[53]

But even more telling are Exxon's multiple comments before the legislature on April 12, 2007 that Exxon will not be involved with a North Slope gas project if the State does not lock in fiscal terms.

> [I]ncreases in taxes and oil and gas related activities during the life of the project could significantly impact the commercial viability of the project and offset the benefits of taking on a project of this magnitude. Because fiscal terms could be modified under the proposed AGIA legislation, it dos not provide the fiscal stability necessary to ensure a commercially viable project.[54]

Exxon even hinted it may insist on fiscal certainty before marketing product even if such fiscal certainty is potentially unconstitutional under the Alaska Constitution.[55]

3. The Owners Are Not Diligently Seeking Pipeline Connections for Off-Slope Gas Sales, Either by Selling Gas on the North Slope or by Agreeing to Make Shipping Commitments on an Independent Pipeline.

Above numerous cases were cited to demonstrate that a reasonably prudent operator must act to diligently secure a pipeline connection, include making necessary long-term gas sale or pipeline shipment commitments. But the difference between the PTU working interest owners' behavior, and their legal obligations under the PTUA to market with diligence, is remarkable. It

---

[52] Attachment B at 1.
[53] *Id.* at 14 (referring to Attachment C, Exxon's testimony to Alaska House Resources Committee, April 12, 2007).
[54] Attachment C at 16.
[55] *Id.* at 19.

is worth focusing on two specific aspects of that behavior, the owners' lack of diligence in finding a party that will purchase gas on the North Slope, and their lack of diligence in encouraging the construction of or making gas commitments on an independently owned pipeline.

a. The Owners Will Not Enter into Gas Purchasing Agreements to Allow a Downstream Gas Purchaser to Make Shipping Commitments on an Independent Pipeline.

A fundamental disconnect between the North Slope producers' actions with Point Thomson, and their legal obligations, is their unquestioned supposition that they will under all circumstances retain title to unitized substances past the point of production. That is, the owners are behaving as if they do not have to diligently seek and ultimately sell to a party that would purchase the gas on the North Slope.

It is customary that a lessee will sell its gas to a third party and the gas purchase contract will determine the price the working and royalty interest owners receive for their gas. Because of this disputes dealing with a producer's obligation to market product tend to deal with gas sale contracts as opposed to a producer's direct participation in a pipeline open season and requisite firm transportation commitments. In fact marketing covenant cases have held that when a lessee sells gas to an affiliated company, the potential of a lessee acting opportunistically towards the lessor (on pricing for instance) make such arrangements "inherently suspect."[56]

Thus producers have a duty of care to diligently seek to sell gas through a gas sales contract.[57] Although the largest North Slope gas reserves holders (BP, Exxon and

---

[56] "Although the sale of gas by the lessee to a subsidiary is 'inherently suspect,' it does not [necessarily] constitute a breach of the covenant to market . . ." 5 Kuntz § 60.3 (quoting *Parker v. TXO Production Corp.*, 716 S.W.2d 644 (Tex. App. 1986)).

[57] "[E]ntering into a long term gas purchase contract will discharge the obligation to market the gas where the sale is for the best price obtainable at the time." 5 Kuntz § 60.3.

ConocoPhillips) no doubt find the idea anathema, other producers that do not have an interest in Trans Alaska Pipeline System currently undertake on-slope oil sales,[58] and the major North Slope producers could do so for gas.

However, in Alaska the major producers have made it clear there preference for integrated ownership of the value chain means they will not ship down someone else's pipeline, much less transfer title to the gas via a gas purchase contract that would, for instance, allow a downstream distributor, consumer, or even pipeline company to take title and make shipping arrangements from the unit boundary or the gas conditioning facilities. This is true even though such an arrangement could significantly reduce, and even eliminate, the risk the Point Thomson working interest owners would have if they themselves made firm transportation commitments and took their own gas to market.

As with their demand for fiscal concessions, Exxon is frank in its comments on the TransCanada AGIA application that they demand integrated ownership.

> [A]s explained in ExxonMobil testimony to the Alaska Legislature during April, 2007, because AGIA disconnects the upstream and the midstream aspects of the business, ExxonMobil's participation in an AGIA-related project would be difficult. Notwithstanding this situation, ExxonMobil believes it is important to offer the following comments on TransCanada's Application from the perspective of a possible 'owner-shipper' that expects to have both those roles in the project that is ultimately constructed.[59]

And the producers' behavior evidences their refusal to consider major on-slope gas sales. For instance, shortly after formation the Port Authority in 1999 made its first formal offer to purchase North Slope gas.[60] On April 1, 2005, the Port Authority in conjunction with Sempra

---

[58] Anadarko sells to a third-party upstream of Pump Station No. 1, and Pioneer has recently agreed to do so. Prior to merger with Unocal, Chevron sold to a third-party upstream of Pump Station No. 1 and has continued that practice on a limited basis after the merger.
[59] Attachment B at 5.
[60] Attachment D at ¶ 2.

LNG made a much more formal and detailed offer to purchase gas on the North Slope and transport it to market.[61] The offer was distributed to Exxon, ConocoPhillips, BP, ChevronTexaco and others. On May 27, 2005 Sempra LNG and the Port Authority had their first substantive discussion with Exxon about that offer, and the tone of the Unit Operator and its obvious unwillingness to commit gas to a project led to Sempra LNG pulling out of the project four hours later, even though in the months prior Sempra LNG had spent millions of dollars on project development.[62]

During the several months that followed, the major Point Thomson working interest owners declined to sell the Port Authority North Slope gas, or even to discuss prices or terms.[63] As of today, the Port Authority still labors to develop its project, but is prevented from moving the project forward by the unwillingness of the working interest owners to provide terms for the sale or shipment of North Slope gas.[64] This is notwithstanding the record established before Commissioner Menge at the November 20, 2006 hearing unquestionably demonstrated the working interest owners would have a reasonable expectation of profit if they pursued a Port Authority project.

Finally, although counsel for the Port Authority has not reviewed its AGIA application, it has heard that Sinopec has expressed interest in making gas purchase commitments that would have characteristics similar to an on-slope gas sale (e.g., Sinopec would absorb shipping commitment risk). If true, it is likely the PTU working interest owners have refused to take such an idea seriously, much less diligently pursue it.

---

[61] *See* Agency Demand at Exhibit 65.
[62] Attachment D ¶ 4.
[63] *Id.* at ¶ 4-7.
[64] *Id.* at ¶¶ 8-9.

b. The Unit Operator and Working Interest Owners Will Not Enter Into Firm Transportation Commitments to Ship Gas Down an Independent Pipeline

A lessee is not typically viewed by the courts as obligated to construct expensive pipeline facilities to comply with the duty to market.[65] Rather courts expect a lessee to work diligently towards finding a gas purchaser and to secure pipeline connections from existing or proposed third party pipelines. But in Alaska the Point Thomson working interest owners have turned this expectation on its head, instead demanding they own the pipeline facilities before gas will be marketed form the unit.

In all of the various PODs over the years Exxon consistently speaks in terms of the producers eventually building a gas pipeline to bring Point Thomson gas to market. Nowhere in the record can the Port Authority find evidence that the Unit Operator or other working interest owners seriously discussed or considered a third party building a line in which Point Thomson gas could be transported. Yet there is a long history of capable, qualified parties seeking to build an off-slope gasline, and numerous parties have sought Point Thomson gas from the owners. The owners have demonstrated a long history of refusing to diligently attempt to commit Point Thomson gas to qualified parties seeking to build an Alaska gas pipeline, regardless of such projects' economics.

For instance, in the 1980s and 1990s Yukon Pacific Corporation ("YPC"), a subsidiary of CSX Corporation, which because of its acquisition of Texas Gas Resources Corp. in 1983 was at the time one of the largest natural gas pipeline operators in America, sought to build a gasline from the North Slope to Valdez to allow delivery of liquefied natural gas to market in Asia. By

[65] *See e.g.*, Richard W. Hemingway, *The Law of Oil and Gas* § 8.9 (3d ed. 1991) ("Although the lessee has an obligation to market the products from the wells, it has been repeatedly held that he does not have to stand the expense of a long and costly gathering system to transport the products to the nearest market.").

at least 1989 YPC had attempted to purchase the necessary natural gas,[66] efforts that obviously did not come to fruition.

As discussed above since its inception the Port Authority has tried everything in its powers to engage the working interest owners in the hope of either purchasing or shipping Point Thomson gas. The Port Authority is right now able and willing to enter into long-term gas sale contracts or shipping commitments that would allow it to construct pipeline facilities to bring Point Thomson gas to market, but Exxon and the other owners have refused to provide terms of sale or shipment. No doubt such other third party project sponsors as the Alaska Natural Gas Development Authority and TransCanada have experienced a similar frustration.

That is because the Point Thomson working interest owners are not only not acting diligently in pursuing pipeline connections they are, to the detriment of the State's royalty interest, unequivocally warehousing Point Thomson gas until such time as they decide to undertake their own project.

Consider the comments on May 30, 2005, while Exxon was engaged in negotiations with the State under the SGDA, the Chairman and Chief Executive of Exxon, Lee Raymond, stated this fact with chilling clarity in an interview with National Gas Weekly.

> NGW: Will political problems seem to be popping up in Alaska and Canada affect the proposed gas pipelines?
>
> Raymond: There is not a mechanism in Canada to deal with all of the local, provincial and federal issues all in a consistent, timely manner. . . My friends at the International Energy Agency talk about developing more upstream resources, but they don't have a clue as to what it takes to do that. They think it just takes money. There isn't going to be an Alaska gas pipeline before there is a Canadian gas pipeline. I know some people in Alaska don't like to hear it, but Canada is a sovereign country, and the pipeline does have to go through Canada. Then you have these competing pipeline proposals, which is fine if that's what you want to

[66] *See* Agency Demand at Exhibit 71.

> do. But the reality is, nobody is going to build a pipeline without the producers. You and I know how pipelines get built. The pipeline goes to the bank. The guy at the bank says, what are you going to put in your pipeline? Gas. Do you own the gas? No. I don't own the gas. Well, who does own the gas, and do you have a commitment from them that they are going to put it through the pipeline? Well, no, we don't have that. Then I don't think I'm going to give you much money to build a pipeline.

Just consider the number of ways this statement violates the implied duty to market as a reasonably prudent operator. By its Chief Executive's own admission Exxon has followed a policy that an Alaskan North Slope gas pipeline will be built when and if Exxon chooses to do so, and until such a time it plans to sit on Point Thomson and other North Slope gas reserves.

On the night of Governor Palin's election, ConocoPhillips made a similar assertion:

> Jack Griffin, ConocoPhillips Alaska Inc.'s vice president for external affairs, predicted that no matter how many new proposals Palin solicits, she will end up negotiating with the three major oil produces, just as Murkowski did.
>
> 'There's only one proposal from the resource owners, and no project can move forward without the resource owners,' said Griffin.[67]

Even Exxon's recent comments on TransCanada's AGIA application are unequivocal in this regard, stating that Exxon's lack of desire to participate in the AGIA process that disconnects the upstream and midstream aspects of the business, and that Exxon expects to hold an equity interest in any project equivalent to its portion of gas being treated and shipped.[68] And if there were any doubt, Exxon's April 12th testimony before the legislature again made it clear that not only is its participation necessary, but so is BP and Exxon's. "[I]t will take ExxonMobil, BP, ConocoPhillips, and the State of Alaska. 'Until we are all aligned on this project it just is not going to happen,' he said."[69]

---

[67] Reuters, "Incoming Alaska Gov to Consider New Pipeline Deals," Wed. Nov. 8, 2006 (8:49 p.m. ET).
[68] Attachment B at 5.
[69] Attachment C at 11.

Although this position may be reasonable when measured against the working interest owners' corporate profit motives, it is not reasonable when measured against their legal obligations under the implied marketing covenants in the State's leases and units.

D. The Working Interest Owners' Marketing Commitments in the Newest Proposed POD do not Satisfy Their Legal Obligations Under the Unit Agreement.

The final issue the Port Authority would like to highlight in light of the Point Thomson working interest owners' refusal to market Point Thomson gas as a reasonable prudent operator is the following statement in Exxon's February 10, 2008 transmittal letter sending the most recent proposed POD to the Commissioner. The below is actually quite remarkable, because it is the first time the Port Authority is aware of that ANY Point Thomson working interest owner has ever shared terms under which it would consider marketing Point Thomson gas.

> In addition, necessary engineering work will be completed to allow individual PTU working interest owners to participate in an open season for a gas pipeline. Each owner must individually decide whether to participate in a specific gas sales opportunity. ExxonMobil, as an individual owner, will fully participate in and make commitments for its Point Thomson gas in an open season for a gas pipeline (producer owned, third-party owned, or some other combination) in that pipeline's open season on terms and conditions no less favorable to ExxonMobil than those upon which other shipping commitments are made.

Essentially Exxon is suggesting it will sell Point Thomson gas if it can do so on parity with the best deal any other shipper gets (although it is unclear how this statement meshes with various other recent Exxon statements about gas development in Attachments A and B). But even taken on its face, this position is woefully below what the law expects.

First, this commitment is expressly limited to Exxon. **The Commissioner should demand to know under what terms the other working interest owners are willing to market Point Thomson gas.**

Second, Exxon's obligation is to seek a market with diligence. It should be beating the pavement trying to find a market for its gas, not begrudgingly offering conditional terms of sale because it fears losing the property interest.

Third, Exxon conditions its willingness to sell gas only if it can do so "on terms and conditions no less favorable to ExxonMobil than . . . other shipping commitments." The gamesmanship is just palatable. A reasonable prudent operator does not play games, it diligently seeks a market, and courts recognize that what a lessee covenants is to "obtain the best price and terms available."[70] "[E]ntering into a long term gas purchase contract will discharge the obligation to market the gas where the sale is for the best price obtainable at the time."[71] Why would Exxon believe it has the legal right to warehouse gas if it has a reasonable expectation of profit, just because some other shipper was able to negotiate a slightly better deal?

V. CONCLUSION

In conclusion, the Port Authority respectfully requests the Commissioner affirm or make the following findings of law and fact (many of which have already been made in Director Myers's Amended Decision, Commissioner Menge's Decision, and/or the Acting Commissioner Rutherford's Decision on Reconsideration). As a general rule cites are only provided if the point of law was not addressed elsewhere in the brief, although a few cites were included to clarify which portion of the brief the suggested finding relates.

---

[70] *Texaco Inc. v. Duhe*, 274 F.3d 911 (5th Cir. 2001) (the obligation of the implied covenant is to use "reasonable diligence" to get the "best price reasonably possible," but "while royalty owners legitimately cannot expect the highest rates of return from their mineral or natural gas interests, they can expect returns consistent with the bargains-for exchange: reasonable rent for the intended use of land.").

[71] 5 Kuntz at § 60.3. These cases normally arise when a lessor accuses a lessee of selling for too low a price, but the principle is still the same. The lessee's duty under the marketing covenant is to sell gas at the best price currently available, or the prevailing market rate. *See e.g., Cabot Corp. v. Brown*, 754 S.W.2d 104 (Tex. 1987); *Yzaguirre v. KCS Resources, Inc.*, 53 S.W.3d 368 (Tex. 2001).

A. Habendum Clause.

1. The lessee's failure to have a well capable of producing in paying quantities meant the special limitation in the "can be produced" habendum clause in PTUA § 20(c) was triggered, and the unit is subject to automatic termination. For a well to be capable and to meet this requirement, it must be able to be turned on and product flow without additional equipment and repairs, [72] and plugged and suspended wells cannot meet this definition because: (i) 11 AAC 83.361 did not adopt a fiction that a certified well would be treated as capable even though not equipped; (ii) if 11 AAC 83.361 did create a fiction that a certified well would be treated as capable even though not equipped, then 11 AAC 83.361 is inconsistent with the known meaning of the PTUA § 20(c);[73] and/or (iii) when the Department revoked well certification the owners no longer met the special limitation in PTUA § 20(c).

2. Although Judge Gleason determined 11 AAC 83.336(a)(1) does not apply to the unit because it is inconsistent with the PTUA, it should be clarified for record that if 11 AAC 83.336(a)(1) does apply, then the unit would be subject to automatic termination upon the occurrence of the special limitation of not having an approved POD for a unit not in production.

3. If the courts or Department refuse to terminate the unit for the triggering of the special limitations in either PTUA § 20(c) (e.g., effect is not given to the "can be produced" requirement because of, for instance, 11 AAC 83.361) or 11 AAC 83.336(a)(1) (e.g., it is inconsistent with PTUA § 20(c)) then Alaska is a *de facto* discovery jurisdiction because, upon valuable discovery, a unit survives into its secondary term without marketing product. In such jurisdictions the habendum clause will be satisfied after the primary term without marketing product unless: (i) the operator did not exercise diligence at any time in finding a market, even if a market is not readily available; or (ii) after a reasonable amount of time no market is available even if the lessee exercised diligence in attempting to find one.

4. A reasonable amount of time to obtain a market had passed when Director Myers and Commissioner Menge rejected the original proposed 22nd PODs, and thus under law applicable to discovery jurisdictions the Unit was properly terminated under the habendum clause.

B. PTUA § 10.

5. The rejection of the all the proposed 22nd PODs under PTUA § 10 and 11 AAC 83.343 was consistent with the provisions of 11 AAC 83.303.

6. The Commissioner has inherent authority under PTUA § 10 to cancel the unit administratively for the Unit Operator's refusal to submit an acceptable POD since such authority was not withheld by applicable statute, regulation, or the PTUA.[74]

---

[72] *See e.g., Anadarko Petroleum Corp. v. Thompson*, 94 S.W.3d 550 (Tex. 2002).
[73] *Merrion Oil & Gas Corp.*, 169 IBLA 47 (2006).
[74] *Boesche v. Udal*, 373 U.S. 472 (1962).

7. In addition to the power of the Commissioner to administratively cancel an oil and gas lease or unit agreement when that power is not specifically withheld, the Commissioner's broad express authority under applicable statute, regulation, and PTUA to approve any unit plan that the Commissioner deems reasonable or proper is sufficient to cover the forced termination of the former Point Thomson unit.[75]

8. PTUA § 10 conditioned the existence of the Unit on the Unit Operator's submitting an acceptable plan of development; the Unit Operator's refusal to do so is a breach of a condition that subjects the unit to forfeiture.

9. The Unit Operator not only expressly covenanted in PTUA § 10 to develop the unit as a reasonably prudent operator, the Unit Operator and other working interest owners impliedly covenanted in PTUA § 10 to produce and market product from the unit as a reasonably prudent operator.

10. The Unit Operator and other working interest owners' past marketing activities and proposed terms of marketing (e.g., Exxon's terms of marketing) do not meet the reasonably prudent operator standard requirement of PTUA § 10.

C. <u>Breach of the Implied Covenant to Market.</u>

11. As to the first element of a cause of action for breach of the implied covenant to market, there has been discovery of oil and gas on the leasehold.

12. As to the second element of a cause of action for breach of the implied covenant to market, there has been a failure to sell the product so discovered.

13. As to the fourth element of a cause of action for breach of the implied covenant to market, there has been damage to the State of Alaska as lessor as a result of the failure to obtain market, including *inter alia* the failure to receive royalties from the sale of unitized substances.

14. As to the third element of a cause of action for the breach of the implied covenant to market, if an operator has not acted diligently in marketing product, it need not be shown that a market existed. Alternatively, the burden of proof should be shifted to the operator to show that a market could not be obtained.

15. As to the third element of a cause of action for the breach of the implied covenant to market, the Unit Operator and other working interest owners have not acted diligently in marketing product from the Unit.

16. The Unit Operator and other working interest owners breach of the implied covenant to market product is independent grounds for terminating the Unit.

---

[75] *See e.g.*, 2 Kramer & Martin at § 16.02[2][d]; *Chevron U.S.A., Inc.*, 111 IBLA 96 (1989) ("The broad authority to approve any unit plan that the Secretary deems reasonable or proper is sufficient to cover the forced termination and/or expansion of existing federal exploratory units.") (discussing *Chevron U.S.A., Inc.*, 111 IBLA 96 (1989)).

MEMORANDUM June 8, 2012

SUBJECT: Point Thomson settlement (Work Order No. 27-LS1577)

TO: Senator Hollis French
Chair of the Senate Judiciary Committee
Attn: Cindy Smith

FROM: Donald M. Bullock Jr.
Legislative Counsel

You asked for an opinion on a number legal issues related to the settlement of disputes concerning the leases and development of the Point Thomson Unit (PTU). At the time of the settlement, an appeal relating to the issues addressed in the settlement agreement before the Alaska Supreme Court had been argued and was under advisement by the court.[1]

There are two overriding questions relating to the PTU settlement agreement. First, is agreeing to the settlement agreement within the discretion and authority of the attorney general? Second, is the settlement agreement the best possible approach for the development of the PTU? The first question is a matter of law -- the law appears clear that the attorney general has the authority to settle litigation in which the state is a party. The second is a matter of opinion -- whether the settlement agreement is the best of all alternatives, or more subjectively, whether it is the agreement that any one legislator or other current or former officer of the state would make.

At this time, the settlement is final and the supreme court has closed the case on appeal.[2] Dismissal of the administrative appeal is pending in superior court.[3]

---

[1] The various cases involving the Point Thomson Unit are listed in paragraph 2.18 of the Settlement Agreement (March 29, 2012). The Settlement Agreement is document no. 3 in the record for the April 27, 2012 meeting of the Senate Judiciary Committee. The list of documents in the committee record is published on the Internet at *http://www.legis.state.ak.us/basis/get_documents.asp?chamber=SJUD&session=27&bill=&date1=20120427&time2=1330* (accessed June 5, 2012).

[2] Oral argument in Case No. S13730 was held on Feb. 8, 2012, the motion to dismiss the petition for review was filed on March 27, 2012, and the court granted the motion to dismiss on March 30, 2012. The appeal information is in the court system's appellate

Authority of the attorney general to enter into settlement agreements.

The forum in which the settlement agreement was presented is significant for determining the relative powers and authority of the attorney general in litigation and the Department of Natural Resources in the administration of oil and gas leases. The Department of Natural Resources and the commissioner of natural resources administer oil and gas leases under the Alaska Land Act (AS 38.05), and in particular, AS 38.05.180, which relates to oil and gas leasing. The duties and responsibilities of the attorney general with respect to litigation are listed in AS 44.23.020(b) and (d).[4] When representing the state in

---

database and published on the Internet at *http://www.appellate.courts.state.ak.us/frames1.asp?Bookmark=S13730* (accessed June 5, 2012).

[3] The order dismissing the administrative appeal may have been issued, but the case status is reported as "reopened." The docket published on Courtview lists "Order Upon Dismissal of Appeal" for Case No. 3AN-06-13751CI, dated April 18, 2012. A joint Stipulation for Dismissal of Administrative Appeal was filed on March 29, 2012. The docket is published on the Internet at *http://www.courtrecords.alaska.gov/eservices/casedetail.page.9?x=x3rZcQJPNwZRYwflnD4ouP9W4fw8-kbWZnVk*2aNAnc* (accessed June 5, 2012).

[4] **Sec. 44.23.020. Duties; and powers; waiver of immunity.**

. . .

(b) The attorney general shall

(1) defend the Constitution of the State of Alaska and the Constitution of the United States of America;

(2) bring, prosecute, and defend all necessary and proper actions in the name of the state for the collection of revenue;

(3) represent the state in all civil actions in which the state is a party;

(4) prosecute all cases involving violation of state law, and file informations and prosecute all offenses against the revenue laws and other state laws where there is no other provision for their prosecution;

(5) administer state legal services, including the furnishing of written legal opinions to the governor, the legislature, and all state officers and departments as the governor directs; and give legal advice on a law, proposed law, or proposed legislative measure upon request by the legislature or a member of the legislature;

(6) draft legal instruments for the state;

(7) make available a report to the legislature, through the governor, at each regular legislative session

(A) of the work and expenditures of the office; and

(B) on needed legislation or amendments to existing law;

litigation, the authority of the attorney general to settle a case may result in an outcome that may not be possible at the agency level because of the duties and responsibilities granted to an agency by law.

The authority to settle and the authority of the executive branch to control litigation was described by the Alaska Supreme Court in *Public Defender Agency v. Superior Court*:[5]

> Generally, an attorney general has those powers which existed at common law except where they are limited by statute or conferred upon some other state official. AS 44.23.020 indicates that the office of the Attorney General is to function with those powers and duties normally ascribed to it at common law:
>
> '(b) The attorney general shall . . .
>
> (7) perform all other duties required by law or which usually pertain to the office of the attorney general in a state.'[6]
>
> Under the common law, an attorney general is empowered to bring any action which he thinks necessary to protect the public interest, and he possesses the corollary power to make any disposition of the state's litigation which he thinks best. This discretionary control over the legal business of the state, both civil and criminal, includes the initiation, prosecution and disposition of cases.
>
> When an act is committed to executive discretion, the exercise of that discretion within constitutional bounds is not subject to the control or review of the courts. To interfere with that discretion would be a violation

---

> (8) prepare, publish, and revise as it becomes useful or necessary to do so an information pamphlet on landlord and tenant rights and the means of making complaints to appropriate public agencies concerning landlord and tenant rights; the contents of the pamphlet and any revision shall be approved by the Department of Law before publication; and
>
> (9) perform all other duties required by law or which usually pertain to the office of attorney general in a state.
>
> . . .
>
> (d) The attorney general may, subject to the power of the legislature to enact laws and make appropriations, settle actions, cases, and offenses under (b) of this section.
>
> . . . .

[5] 534 P.2d 947, 950 (Alaska 1975) (citations omitted).

[6] This paragraph is currently codified as AS 44.23.020(b)(9).

> of the doctrine of separation of powers. Although the Alaska Constitution does not expressly address itself to the doctrine of separation of powers, we have noted that often what is implied is as much a part of the constitution as what is expressed. The state constitution is divided into a number of separate articles. Since Article III concerns the executive branch, it can fairly be implied that this state does recognize the separation of powers doctrine.
>
> Both federal and state courts have consistently and carefully observed the line which divides their branch of government from that of the executive. They have held that the Attorney General cannot be controlled in either his decision of whether to proceed, or in his disposition of the proceeding.

Although *Public Defender Agency* specifically addressed the separation of powers between the judicial and executive branches, similar separation exists between the legislative and executive branches.

The attorney general discussed the relative responsibilities of the attorney general in the litigation situation and the responsibilities of the Department of Natural Resources for land exchanges outside of litigation in a 1981 opinion to Reed Stoops, Director, Division of Research & Development, Dept. of Natural Resources.[7] The opinion states, in part:

> By your memorandum of May 26, 1981, you requested our opinion regarding the relationship between the authority of the Attorney General to settle legal disputes and the statutory authority of the Department of Natural Resources to exchange state land for private land pursuant to AS 38.50. Your request speaks of both 'out-of-court settlements' (which are usually agreements, not filed in court, to settle a legal dispute without litigation) and 'settlements of litigation' (generally stipulations filed in court and approved by the judge to terminate litigation already initiated).
>
> In brief, it is our opinion that the Attorney General has authority unilaterally to settle litigation over title to a given parcel of land. *However, if that settlement involves an exchange of that land for land which is not at issue in the litigation, the provisions of AS 38.50 must be followed.* In addition, any unilateral settlement of litigation by the Attorney General is subject to constitutional constraints and must be in good faith and free of fraud. *Finally, because of legal considerations unique to land, we believe the Attorney General does not have authority unilaterally to settle legal disputes over land in the absence of litigation.*

(Emphasis added.)

---

[7] File No. A66-446-81, 1981 WL 38510 (Alaska A.G.) (Oct. 7, 1981).

The settlement of the Point Thomson litigation by the attorney general seems consistent with the authority of the attorney general. In its litigation phase, as opposed to the initial determinations by the Department of Natural Resources, the attorney general has the power to end the litigation by settlement. Regardless of whether one agrees with the form of settlement or not, the settlement seems to be within the discretion of the attorney general.

The settlement agreement describes the way in which the laws applicable to the PTU are to be interpreted in the administration of the unit. For example, although the state generally is to receive royalty oil and gas in kind under AS 38.05.182(a), the commissioner may elect to take the royalty in value; under section 4.16.2 of the settlement agreement, the royalty is to be taken under the described circumstances in kind and the commissioner may not elect to take the royalty in value.

With this background, the following are the questions you presented and my opinions relating to the settlement of the PTU issues.

Has there, in the history of the State of Alaska, ever been a large deal done with the ANS producers, to end litigation or otherwise, without any public process?[8]

A significant example of a settlement with Alaska North Slope oil and gas producers (ANS producers) is the settlement of the royalty litigation in *State v. Amerada Hess*.[9] That case involved the determination of the value of the state's royalty share of oil production, and the settlement ended a dispute that had been ongoing for approximately 18 years.[10]

---

[8] I am not sure what you mean by public process. There is public process in the enactment of legislation and the adoption of regulations. For example, the legislature enacted AS 38.05.180, which sets forth the duties and responsibilities of the Department of Natural Resources and the commissioner relating to oil and gas leases, and the department adopted regulations and drafted lease documents under the authority of that section and the general authority of the department to adopt regulations. However, when disputes advance to litigation in court, any public process is subject to court rules, and input from parties other than those directly involved in the controversy may be limited to amicus briefs. Also, because of various statutes relating to the confidentiality of information, such as AS 38.05.035(a) and AS 43.05.230, information critical to issues under consideration may not be available to the public. If public process means oversight of executive action by the legislature, the power of the legislature may be limited by the doctrine of separation of powers under which the legislative power is granted under art. II, sec. 1, and the executive power is granted under art. III, sec. 1, Constitution of the State of Alaska.

[9] Case No. 1JU-77-847 Civ.

[10] The Office of Management and Budget summarized the history of the Amerada Hess royalty litigation in the context of using the Amerada Hess settlement proceeds to pay the

Other settlements relating to oil and gas pipeline and marine transport of ANS crude are the 1985 settlement of tariff methodology for the Trans Alaska Pipeline (TAPS tariff settlement) and the Exxon Valdez spill claims settlement agreement.

With regard to the Exxon Valdez oil spill claims settlement, the attorney general described the authority of the attorney general and the governor to negotiate and agree to the settlement agreement on behalf of the state in a letter to Senator Richard Eliason and Representative Max Gruenberg. After discussing the authority of the executive under the separation of powers doctrine and quoting from *Public Defender Agency v. Superior Court, supra*, the attorney general concluded, "It is thus entirely clear that, as an incident of both common law and statutory powers, the Attorney General has the discretionary authority to settle the State's litigation."[11]

The opinion expressed in the letter to the legislators seems consistent with *Public Defender Agency v. Superior Court* and the statutory authority to settle cases in AS 44.23.020.

Can the commissioner abrogate his mandate to ensure the development option (e.g., cycling[12] versus gas blow-down[13]) chosen by the working interest owners is in the

debt service on bonds for capital projects financing for FY 2006. *Amerada Hess Royalty Oil Dispute and Settlement*, Office of Management and Budget (Dec. 15, 2004). The summary is published on the Internet at *http://omb.alaska.gov/ombfiles/06_budget/AmeradaHess.pdf* (accessed June 5, 2012).

[11] Letter from Charles E. Cole, Attorney General, to Sen. Richard Eliason, Chair of the Senate Special Committee on the Exxon Valdez Oil Spill Claims Settlement, and Rep. Max Gruenberg, Chair of the House Special Committee on the Exxon Valdez Oil Spill Claims Settlement, 1991 WL 916843 (April 2, 1991).

[12] "Cycling" is described in Patrick H. Martin and Bruce M. Kramer, *Williams & Meyers, Oil and Gas Law*, Manual of Terms (LexisNexis Matthew Bender 2011) as

> A primary recovery method by which condensate is recovered gas produced from a condensate gas reservoir and the residue gas is compressed and returned to the reservoir from which it was originally produced.

[13] "Blow-down" is described in *Williams & Meyers* as

> A term applied to the commencement of production of gas for sale after the completion of a cycling or recycling operation. The term refers to the reduction of pressure in the formation as a result of the production of gas. Gas royalty becomes payable to royalty owners upon the commencement of the blow-down.

public interest under 11 AAC 83.303? That is, can the commissioner contract around his statutory and regulatory obligations?

Although the commissioner of natural resources (commissioner) may not contract "around his statutory and regulatory obligations," the attorney general may enter into a settlement agreement in litigation that may resolve an issue in a different manner than what the commissioner may have chosen or had the power to accomplish administratively. Once the issues are being litigated, settlement is in the discretion of the attorney general and no longer in the discretion of the commissioner, though the attorney general may consult with the commissioner in the course of negotiating and reaching a settlement. Although the settlement authority rests with the attorney general, the commissioner also signed the settlement agreement, impliedly to express agreement in the terms of the settlement.

Your question includes two options for dealing with gas extracted from the PTU. Under cycling, condensate is removed from the gas and the residual gas is injected into the reservoir from which it was extracted. Blow-down refers to the decline in formation pressure when gas is produced for sale. In other words, the two options are to reinject residual gas with the possibility of extracting the gas for sale in the future or to produce the gas for sale.

The critical time for determining whether gas will be cycled or produced for sale is the end of 2016. Section 1.7 of the settlement agreement addresses the alternatives based on whether or not a major gas sale is sanctioned before the end of 2016:

> If a Major Gas Sale is Sanctioned prior to year-end 2016, the WIOs will begin work on a Point Thomson project associated with that Major Gas Sale. However, if a Major Gas Sale has not been Sanctioned by June of 2016, the WIOs have committed to begin engineering of a Point Thomson Expansion Project. An expanded cycling project would result in additional condensate production, totaling approximately 20,000 to 30,000 barrels per day into TAPS, depending on the level of expansion. Alternatively, a project to deliver Point Thomson gas to Prudhoe Bay for injection would significantly increase the rate of condensate production at Point Thomson, serve as a pre-investment for a Major Gas Sale project, and essentially complete installation of the Point Thomson wells and facilities required for a Major Gas Sale. In addition, this option would materially increase production at Prudhoe Bay, and result in enhanced recovery at Prudhoe Bay.

"Major Gas Sale" is defined in sec. 2.16 of the settlement agreement to mean "a large-scale pipeline project having a design throughput of more than 500 million cubic feet of gas per day that results in delivery of gas off the North Slope of Alaska."

The attorney general entered into the settlement agreement to end the PTU litigation. Part of the settlement agreement addresses the cycling and blow-down options and the situation in which each option could be exercised. Since the options are part of the settlement agreement, the option is subject to the agreement and is no longer under the purview of the commissioner. This situation is similar to the situation addressed in the opinion by the attorney general to Reed Stoops discussed above in that the settlement agreement was made in the litigation context and within the discretion of the attorney general as the state's lawyer.

Can the commissioner agree to have future disputes as to field development or related to interpretation of the settlement decided in a manner other than the DNR administrative process provided by law (i.e., by original determination by the superior court or by arbitration)?

The attorney general agreed to the terms of the agreement on behalf of the state; the state and the commissioner of natural resources are bound by the terms of the settlement agreement. The settlement agreement is complete and does not require further approval or agreement by the commissioner of natural resources.

The settlement agreement addresses the resolution of future disputes in section 5.1 of the settlement agreement. The introductory sentence in section 5.1 states:

> 5.1 Dispute Resolution. The following provisions *shall apply to this agreement*:

(Emphasis added.)

By its own provisions, disputes relating to the implementation of the settlement agreement are subject to the procedure within the settlement agreement. The resolution of disputes outside of the settlement agreement would continue to be subject to the dispute resolution provisions applicable to a dispute between a working interest owner and the commissioner of natural resources.

Can the commissioner of natural resources, in section 4.9 of the settlement agreement, pre-approve any lease assignment requested by any working interest owner within 90 days? In practical terms, can Chevron be bought out by another working interest owner and the state agree before it sees who bought its interest, the terms, and what impact that has on the PTU operating agreement?

Section 4.9 states the agreement by the state to approve lease assignments within 90 days after the effective date for tracts identified in Exhibit B to the settlement agreement. Because the state already agreed to approve the lease assignments in the settlement agreement, the assignments are not subject to review or other action by the commissioner outside of the terms of the settlement agreement.

Not being privy to conversations between the attorney general and the commissioner of natural resources, one may not know what work has already been done on the lease assignments and the extent to which the settlement agreement can be reasonably implemented on this point. One would hope that the attorney general negotiated a time-frame that was adequate for the commissioner to take the actions necessary to approve the lease assignments.

Can the state, through a non-competitive process, waive its right to take royalty in value and so encumber its rights relating to the taking in royalty in kind (under the option related to reinjection of PTU gas into the Prudhoe Bay Unit without royalty board and legislative approval?

Actually, the default is for the state to take oil and gas royalty in kind and not to take it in value. AS 38.05.182 addresses royalty on the state's natural resources:

> **Sec. 38.05.182. Royalty on natural resources.** (a) Any royalty provided for in AS 38.05.135 - 38.05.181 may be taken in kind rather than in money if the commissioner determines that the taking in kind would be in the best interest of the state. *However, royalties on oil and gas shall be taken in kind unless the commissioner determines that the taking in money would be in the best interest of the state.*
>
> (b) The commissioner shall submit a determination to take royalty in money to the legislature at the first opportunity during a current session or, if the legislature is not in session, at the next regular session. The legislature, within 60 days or by the adjournment of the session, whichever comes sooner, may revoke the determination by concurrent resolution.

(Emphasis added.)

Section 4.16.2 of the settlement agreement addresses taking royalty in kind:

> Royalty on Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project Gas. If the WIOs Commit to and complete construction of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then, upon Project Start-up, the State, as authorized by the Point Thomson leases and applicable State law, *will elect, for the period prior to Project Start-up of a Major Gas Sale, to take in-kind the State's royalty share of gas* produced from the Point Thomson Unit when produced into the gas pipeline from Point Thomson to Prudhoe Bay referenced in Paragraph 2.21(i).

(Emphasis added.)

Section 4.16.2 has the effect of excluding the royalty-in-value election and makes the election that is the general rule under AS 38.05.182(a). When the royalty gas is taken in

kind, the disposal of the gas is subject to AS 38.05.183, relating to the sale of royalty, and the advisory duties of the Alaska royalty oil and gas development advisory board under AS 38.06.

Note that, under section 4.16.2.2 General Terms, the state may take its royalty gas for sale or other use, or the royalty gas may be injected into the Prudhoe Bay unit reservoir to enhance the production of liquids. If injected into the Prudhoe Bay unit reservoir, the state maintains ownership of the royalty gas received from the PTU.[14]

Does the settlement require legislative approval under the Stranded Gas Development Act or under the logic of *Baxley v. State*?[15]

The settlement agreement is not a contract developed under the Stranded Gas Development Act (AS 43.82). Therefore there is no contract to submit to the legislature for approval under AS 43.82.435. The settlement agreement settles litigation and is subject to court acceptance and approval, which apparently has already been received.

Baxley involved a citizen-taxpayer challenge to an amendment to the royalty provisions for leases in the Northstar Oil Field that was negotiated by the commissioner of natural resources and approved by law. The Department of Natural Resources and BP Exploration (Alaska), Inc. (BP) negotiated a change in royalty terms that eliminated the net profit share provision, established new royalty rates, allowed the state to terminate (without litigation) the leases if BP did not begin development within a certain time period, and committed BP to employ Alaskans in the construction and operation of the field.[16] The legislature authorized the amendment of the leases as negotiated by the commissioner in 1996.[17]

---

[14] I am not sure how the state's PTU royalty gas will be taken from the Prudhoe Bay unit reservoir when gas in the reservoir is produced. An agreement with the working interest owners in the Prudhoe Bay unit may be needed to allocate gas between the state's royalty interest in Prudhoe Bay gas, PTU royalty gas effectively stored in the Prudhoe Bay unit reservoir, the gas of PTU working interest owners, and the share of gas owned by the Prudhoe Bay unit working interest owners.

[15] *Baxley v. State*, 958 P.2d 422 (Alaska 1998).

[16] *Baxley*, at 427.

[17] Ch. 139, SLA 1996.

The court summarized the plaintiffs allegations in *Baxley* as follows:[18]

> This case began in January 1997 when Clyde Baxley and the Republican Moderate Party brought a declaratory judgment action against the State and John Shively, Commissioner of the Department of Natural Resources. Baxley and the Party (collectively Baxley) asserted that they had citizen-taxpayer standing to challenge the Act. Baxley argued that the Act violates the Uniform Application Clause and the Public Notice Clause of the Alaska Constitution, and that it violates competitive bidding statutes and laws proscribing material amendments to competitively bid contracts. Baxley also contended that the Commissioner lacked the authority to modify the leases.

The court did not disturb the superior court's findings that the plaintiffs had standing,[19] agreed with the superior court that the Uniform Application Clause[20] did not apply,[21] agreed with the lower court that the legislation approving the lease amendments was not special legislation,[22] and found that the commissioner did not exceed the commissioner's broad statutory powers to negotiate amendments to the leases.[23] The court also found that the public notice requirement in art. VIII, sec. 10, was not violated "because the public had ample opportunity to comment on the proposed lease amendments before the legislature authorized any binding changes[.]"[24] Finally, the court found that the rule against material amendments to state contracts through a public bidding process did not apply to amendments approved by the legislature.[25]

---

[18] *Baxley*, at 427 - 28.

[19] *Baxley*, at 428.

[20] The Uniform Application Clause is in art. VIII, sec. 17, Constitution of the State of Alaska:

> **Section 17. Uniform Application.** Laws and regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated with reference to the subject matter and purpose to be served by the law or regulation.

[21] *Baxley*, at 429.

[22] *Baxley*, at 430 - 31.

[23] *Baxley*, at 432.

[24] *Id.*

[25] *Baxley*, at 433 - 34. Consideration of several issues were not considered by the court because they were not raised in the lower court. Those issues included whether the commissioner violated art. VIII, secs. 8 and 11 of the state constitution by not requiring

Baxley was a court challenge to actions taken by the legislature and the commissioner. Had the PTU settlement agreement been an agreement negotiated by the commissioner of natural resources and approved by the legislature, *Baxley* may have been relevant. However, the settlement agreement is an agreement between adversaries in the context of an appeal of an administrative decision, and the attorney general is authorized by AS 44.23.020(d) to settle cases such as this, subject to the power of the legislature to enact laws and make appropriations.[26]

Although different persons may have negotiated a settlement agreement with different terms, the PTU settlement agreement was negotiated by the attorney general as attorney for the state and presented to the court in the context of the appeal. The plaintiffs in *Baxley* unsuccessfully challenged the authority of the commissioner of natural resources to renegotiate lease terms; with regard to the PTU settlement agreement, negotiating and agreeing to the PTU settlement appears to be well within the authority of the attorney general.

Is the attorney general's authority to enter into a settlement so broad as to include terms that otherwise violate state law? That is, can the attorney general do by settlement what the commissioner of natural resources could not do by direct action outside of the settlement context?

The attorney general has broad authority to settle cases under the authority discussed above. Whether terms of a settlement are in violation in state laws may or not be clear. For example, in section 4.16.2, the settlement agreement provides that the state will take its royalty in kind. Does the provision of the settlement that removes the commissioner's option to take royalty in value violate state law by removing that option?

As in any litigation settlement, a party may give up something the party feels it is entitled to in exchange for something else it wants. A settlement agreement often involves compromises. Whether a provision of the settlement agreement under consideration violates state law may be difficult to determine, based on the broad discretion the commissioner has to manage leases and the broad authority of the attorney general to settle cases. Broad discretion provides flexibility, which may encompass a broad range of settlement alternatives.

BP to forfeit the leases that BP said it would not develop (*Baxley*, at 432 - 33), whether BP anticipatorily breached the lease agreements (*id.* at 433), and that the lease amendments violated the public trust doctrine (*id.* at 434)

[26] I am unaware of a statute that limits the authority of the attorney general to enter into a settlement agreement such as the one discussed in this memorandum. Also, the settlement agreement does not seem to require an appropriation to fund its implementation. If an appropriation had been or will be required, the legislature would have the power to appropriate as it sees fit, subject to veto.

The attorney general appears to have the authority to do by settlement what the commissioner of natural resources may not do under the commissioner's authority. For example, the commissioner of natural resources revoked the leases based on his interpretation of the law and leases, an action that resulted in the appeal and the settlement agreement; the attorney general had the option to negotiate with the working interest owners and reached a settlement to allow the leases to continue, subject to the terms of the settlement. Thus, there was a different outcome from the commissioner's initial action, but both were within the discretion of each state officer.

Where there is broad discretion to act, it is sometimes difficult to define the breadth of the discretion. If there are particular parts of the settlement agreement that you believe were outside of the attorney general's discretion, the options for correction are limited as the settlement agreement is under the jurisdiction of the court. The best outcome from the review of the PTU settlement agreement may be to find a better approach to be exercised in future settlements.

What is the absolute minimum amount of gas that must be moved under the settlement agreement? How does the amount of gas that must be moved under the settlement agreement compare to a major gas sale as defined under the Prudhoe Bay unit operating agreement?

Assuming that the question refers to the amount of gas that must be produced before the state is required to take its royalty share, there is no minimum amount that is specified. Under section 4.16.2, the trigger for the state to take its royalty gas is an event, not a volume of gas. The event is the project startup for the Point Thomson Gas Development/Prudhoe Bay Enhanced Recover Project, when gas is produced into the gas pipeline from Point Thomson to Prudhoe Bay. Under section 2.21(i), the gas pipeline from Point Thomson to Prudhoe Bay is expected to have the capacity "to transport significant volumes of Point Thomson gas in an amount that would position Point Thomson gas for a Major Gas Sale, for injection for: . . . use in repressuring, stimulation of production, and increasing ultimate recovery of Prudhoe Bay oil and for ultimate availability for a Major Gas Sale. . . ." "Major Gas Sale" is defined in section 2.16 of the settlement agreement as "a large-scale pipeline project having a design throughput of more than 500 million cubic feet of gas per day that results in delivery of gas off the North Slope of Alaska."

According to the excerpt of the Prudhoe Bay unit operating agreement presented to the Senate Judiciary Committee on April 27, 2012, and exhibit 5, a major gas sale is an average daily volume of separator off-gas of at least "1,750 MMScf/D,"[27] about three and one-half times the 500 million cubic feet of gas per day volume.

---

[27] "MMScf/D" means 1,000,000 standard cubic feet a day. 1,750 MMScf/D means 1,750,000,000 standard cubic feet a day or 1.75 billion standard cubic feet, if my math is correct.

Summary

The attorney general has broad authority to settle cases being litigated by the attorney general on behalf of the state. While there may be different views as to whether each of the issues addressed in the PTU settlement agreement was resolved in the way someone else may have resolved an issue, the attorney general has the discretion to settle all issues of the case within the settlement. The settlement agreement apparently has been adopted by the court and may now be implemented. While the legislature may review the settlement, the settlement agreement may not be amended without the consent of the parties or the approval of the court.

March 29, 2012

SETTLEMENT AGREEMENT

This Settlement Agreement (the "Agreement") is made by and between the State of Alaska (the "State"), acting through the Department of Natural Resources ("DNR"), on the one hand, and Exxon Mobil Corporation, as Point Thomson Unit Operator and pursuant to Section 22 of the Point Thomson Unit Agreement and as working interest owner and as successor in interest to Chevron U.S.A., Inc., ExxonMobil Oil Corporation, BP Exploration (Alaska) Inc., ConocoPhillips Alaska, Inc., and Leede Operating Company, L.L.C. (collectively the "Owner Group"), on the other hand. DNR and the Owner Group are at times hereinafter referred to collectively as the "Parties" and each individually as a "Party."

1. RECITALS

1.1 The Point Thomson leases were acquired beginning in 1965. Oil was discovered in 1975, and the Point Thomson Unit was formed in 1977. Following formation of the unit, the Point Thomson owners drilled additional wells and discovered additional oil and natural gas in paying quantities. The field is located 60 miles east of Prudhoe Bay in a remote arctic area. The Point Thomson reservoir is a high-pressure retrograde condensate and natural gas reservoir with abnormally-pressured formations, and presents unique engineering challenges with respect to development and production. Since the discovery of the field, the Point Thomson owners have drilled 19 exploration / delineation wells in the Point Thomson area, and recently completed the drilling of two additional wells, the PTU 15 and PTU 16, to initiate production from the Point Thomson Unit consistent with this Agreement.

1.2 On September 30, 2005 and October 27, 2005, the Director of the Division of Oil and Gas of DNR ("Director") denied approval of the 22nd Plan of Development (a "POD") submitted by the Working Interest Owners ("WIOs") with respect to the Point Thomson Unit, and placed the Point Thomson Unit into default. The WIOs appealed this decision to the Commissioner of DNR ("Commissioner"), who affirmed the default decision, rejected the WIOs' proposed POD, and terminated the Point Thomson Unit on November 27, 2006, which was affirmed upon reconsideration by the Commissioner on December 27, 2006. These decisions were affirmed in part, reversed in part, termination of the Point Thomson Unit was vacated, and the matter was remanded to DNR by the Superior Court of the State of Alaska on December 26, 2007.

1.3 On April 22, 2008, the Commissioner issued another decision terminating the Point Thomson Unit, affirmed upon reconsideration on June 11, 2008. On August 4, 2008, DNR issued lease expiration decisions related to leases within the Point Thomson Unit.

1.4 The Owner Group filed several appeals challenging these decisions. On January 11, 2010, the Superior Court of the State of Alaska reversed DNR's April 22, 2008 decision terminating the Point Thomson Unit. On February 5, 2010, DNR filed in the Supreme Court of the State of Alaska a petition for review of the Superior Court's January 11, 2010 decision, which was granted by the Supreme Court on May 28, 2010.

1.5 The Parties wish to resolve all pending litigation and administrative proceedings between them related to the Point Thomson Unit on the terms and conditions set forth in this Agreement.

1.6 This Agreement sets forth the WIOs' commitment to produce natural gas condensate liquids ("condensate") from the Point Thomson Reservoir for delivery into the TransAlaska Pipeline System ("TAPS"). The WIOs have committed to construct an Initial Production System ("IPS") which is to be completed by the end of the 2015-2016 winter season. The IPS facility is being designed to produce and re-inject (cycle) 200 million cubic feet per day of gas and to produce approximately 10,000 barrels per day of condensate. In addition, a liquid hydrocarbon pipeline is being designed that can transport approximately 70,000 barrels per day from Point Thomson to an existing pipeline interconnection at the Badami field, which will provide for final delivery of Point Thomson liquid hydrocarbons into TAPS. Operation and production from the IPS will provide data and information to assist in evaluation of additional development plans, including potential increased gas and condensate production from Point Thomson, and plans for the delivery of Point Thomson gas into a Major Gas Sale pipeline project.

1.7 In parallel with the work on the IPS, Parties and/or their affiliates to this Agreement will, upon execution of this Agreement, undertake work for commercialization of North Slope gas. This work will build on ongoing gas commercialization efforts. If a Major Gas Sale is Sanctioned prior to year-end 2016, the WIOs will begin work on a Point Thomson project associated with that Major Gas Sale. However, if a Major Gas Sale has not been Sanctioned by June of 2016, the WIOs have committed to begin engineering of a Point Thomson Expansion Project. An expanded cycling project would result in additional condensate production, totaling approximately 20,000 to 30,000 barrels per day into TAPS, depending on the level of expansion. Alternatively,

a project to deliver Point Thomson gas to Prudhoe Bay for injection would significantly increase the rate of condensate production at Point Thomson, serve as a pre-investment for a Major Gas Sale project, and essentially complete installation of the Point Thomson wells and facilities required for a Major Gas Sale. In addition, this option would materially increase production at Prudhoe Bay, and result in enhanced recovery at Prudhoe Bay.

1.8 The Agreement further establishes terms and conditions to facilitate development and provide benefits to the State of Alaska. Certain acreage within the Point Thomson Unit is secured when specified work activities are completed (e.g., the IPS is completed and producing) and key commitments or decisions are made (e.g., a Major Gas Sale is Sanctioned or WIOs Commit to a Point Thomson gas development / Prudhoe Bay enhanced oil recovery project or an IPS gas cycling expansion project). Likewise, the Agreement provides for the automatic release of certain acreage to the State if the IPS is not completed or if certain key commitments or decisions are not made (e.g., a Major Gas Sale is not Sanctioned or WIOs do not Commit to a Point Thomson gas development / Prudhoe Bay enhanced oil recovery project or an IPS gas cycling expansion project). Depending upon the work activities that occur, the Point Thomson Unit will remain in effect or may terminate.

1.9 Since 2009, work activities at Point Thomson have resulted in contracts with over 150 companies and the employment of hundreds of Alaskans.

1.10 In implementing the terms of this Agreement, the WIOs and the State anticipate there will be significant continued investment and employment opportunities for Point Thomson Unit development.

1.11 A Major Gas Sale off the North Slope of Alaska is a primary goal of the Parties. The Parties believe settlement of the Point Thomson litigation will assist in progressing a Major Gas Sale. It also allows for other development options that may be pursued independent of or in conjunction with a Major Gas Sale, and would allow for continued progress on permitting, regulatory, and engineering activities toward a Major Gas Sale. Progress toward a potential Major Gas Sale off the North Slope of Alaska and development of Point Thomson consistent with this Agreement should aid exploration and development opportunities of North Slope resources.

2. DEFINITIONS

Whenever the following terms are used in this Agreement, they shall have the meanings set forth in this Section 2:

2.1 "Abandon," "Abandoned," or "Abandonment" has the meaning provided in Paragraph 4.2.1.

2.2 "Authorization for Expenditure" means a formal approval or authorization of expenditures for a project or a phase of a project by the authorized corporate representative.

2.3 "Brookian" means the stratigraphic interval correlating with the sands and silts penetrated by the Sourdough 3 well (API No. 50-089-200260) between the interval 10,305 feet measured depth and 12,200 feet measured depth as measured by Dual

Induction Focused Log Run No. 3, dated March 6, 1996, or the sands and silts penetrated by the Flaxman Island A-1 well (API No. 50-089-200030) between the interval 11,848 feet measured depth and 12,643 feet measured depth as measured by Dual Induction Laterolog Run No. 4, dated August 7, 1975.

2.4 "Commit," "Committed," or "Commitment" in the context of a Point Thomson Expansion Project means documentation that the WIOs have conducted project evaluation and scoping and have obligated themselves to proceed diligently with the project through completion in accordance with the terms of this Agreement. The documentation to be provided shall include corporate authorization letters by the authorized corporate representative from the WIOs and any existing project Authorizations for Expenditure.

In addition, in the context of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the documentation to be provided also includes documentation demonstrating the completion of Front End Engineering and Design (FEED) and filing of formal applications for major federal and state permits, authorizations, certificates, or rights of way associated with construction of the project, from the U.S. Army Corp of Engineers, DNR and the Alaska Oil and Gas Conservation Commission, including any related NEPA review ("Authorizations").

After the WIOs "Commit," as defined above, to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, upon receipt of Authorizations consistent with FEED design work and the applications filed by the WIOs, the WIOs will proceed

in a timely manner to enter into contracts necessary to proceed with construction of the project consistent with the POD requirements.

2.5 "Continuous Operations" in the context of the IPS Project means continuing operation of wells and facilities to produce oil or gas from the Thomson Reservoir into a pipeline or other means of transportation to market. "Continuous Operations" does not include testing, evaluation, or temporary production. "Continuous Operations" exist even when production temporarily ceases or temporarily declines due to and for the period of: (1) planned or unplanned maintenance or repairs; (2) operational upsets; or (3) circumstances beyond the control of the WIOs that impact ongoing operations.

2.6 "DNR Point Thomson Orders" means the following DNR orders: (1) the Director's September 30, 2005 Denial of Proposed Plans of Development for the Point Thomson Unit and the Director's October 27, 2005 Amended Decision - Denial of Proposed Plans of Development of the Point Thomson Unit; (2) the Commissioner's November 27, 2006 Final Decision and the Commissioner's December 27, 2006 Decision on Reconsideration; (3) the Commissioner's April 22, 2008 Findings and Decision on Remand and the Commissioner's June 11, 2008 Decision on Reconsideration; (4) the Director's February 2007 and August 4, 2008 Decisions regarding thirty-one leases entitled Lease Expiration Due To Elimination From Unit; (5) the Commissioner's August 4, 2008 Decision on Consolidated Appeals From the Director's 2007 Decisions Terminating Thirteen State Oil and Gas Leases That Were Subject to the 2001 Point Thomson Unit Expansion Agreement; and (6) the Commissioner's January 27, 2009 Conditional Interim Decision.

2.7 "East Pad" means the proposed drilling pad located east of the IPS in Area D and from which one or more wells could be drilled.

2.8 "Effective Date" has the meaning provided in Paragraph 4.10.2.

2.9 "Expansion Planning POD" has the meaning provided in Paragraph 4.6.2.

2.10 "Expansion Project POD" has the meaning provided in Paragraph 4.6.3.

2.11 "Future POD" has the meaning provided in Paragraph 4.6.

2.12 "Initial Participating Area" or "Initial PA" means the participating area ("PA") formed for the Thomson Reservoir containing all or part of the leases listed in Area A on attached Exhibit C and contained in Area A of attached Exhibit D.

2.13 "Initial Production System" or "IPS" means the gas cycling facilities designed with capacity to produce and re-inject (cycle) 200 million cubic feet of gas per day utilizing reciprocal compression and with the objective of a minimum of 10,000 barrels per day of condensate for delivery into the TransAlaska Pipeline System ("TAPS").

2.14 "IPS Project" means the project to construct and install the IPS, and includes a 12-inch liquid hydrocarbon pipeline from Point Thomson to an interconnection with the Badami Field liquid hydrocarbon pipeline.

2.15 "IPS Gas Cycling Expansion Project" means an expansion of the IPS that must be: (i) a minimum of an additional 10,000 barrels per day if reciprocal compression is used; or (ii) a minimum of an additional 20,000 barrels per day if centrifugal compression is

used for delivery into TAPS. The WIOs have the discretion to decide on (i) or (ii) above and whether they will Commit to any IPS Gas Cycling Expansion Project.

2.16 "Major Gas Sale" or "MGS" means a large-scale pipeline project having a design throughput of more than 500 million cubic feet of gas per day that results in delivery of gas off the North Slope of Alaska.

2.17 "MGS POD" has the meaning provided in Paragraph 4.6.1.

2.18 "Point Thomson Cases" means (1) the following cases consolidated with Case No. 3AN-06-13751 CI: Case Nos. 3AN-06-13760 CI, 3AN-06-13773 CI, 3AN-06-13799 CI, 3AN-07-04634 CI, 3AN-07-04620 CI, 3AN-07-04621 CI, and 3AN-08-09369 CI; (2) the expansion leases termination appeal, Case No. 3AN-08-10156 CI; (3) the appeal from the AOGCC's decision dismissing involuntary unit petition, Case No. 3AN-09-07768 CI; (4) the Supreme Court appeal from denial of breach of contract damages claim, Case No. S-12743; (5) the appeal before the Department of Administration from DNR's denial of damages claim, Case No. OAH No. 08-0409; (6) the appeal from Commissioner Irwin's August 29, 2008 letter denying certain permit applications, Case No. 3AN-08-10825 CI; and (7) Chevron's Public Records Act case, Case No. 3AN-08-11804 CI.

2.19 "Point Thomson Development" means the IPS Project, drill wells, and work plans described in Paragraph 4.1 and other work activities set forth in this Agreement.

2.20 "Point Thomson Expansion Project" means an IPS Gas Cycling Expansion Project or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The WIOs have discretion on whether to Commit to any Point Thomson Expansion Project.

2.21 "Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project" means a project to deliver Point Thomson gas to Prudhoe Bay for injection that would significantly increase the rate of condensate production at Point Thomson into TAPS, serve as a pre-investment for a Major Gas Sale, essentially complete installation of the Point Thomson wells and facilities required for a Major Gas Sale, and allow for continued efforts towards, and positions Point Thomson gas for, a Major Gas Sale. In addition, this project would materially increase oil production at Prudhoe Bay into TAPS and result in substantial enhanced recovery at Prudhoe Bay. A Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project would result in production and recovery of liquids from Point Thomson and Prudhoe Bay that would be greater than production and recovery of liquids from Point Thomson from an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day. Before Project Start-up required approvals from the Alaska Oil and Gas Conservation Commission must be obtained.

The project would consist of:

(i) a newly constructed gas pipeline from Point Thomson to Prudhoe Bay with the capacity to transport significant volumes of Point Thomson gas in an amount that would position Point Thomson gas for a Major Gas Sale, for injection for: (a) use in repressuring, stimulation of production, and increasing ultimate

recovery of Prudhoe Bay oil; and (b) for ultimate availability for a Major Gas Sale; and

(ii) additional wells and facilities at Point Thomson to produce and process significant condensate production for delivery into TAPS through existing liquid hydrocarbon pipelines and pipelines constructed as part of the IPS Project. These facilities would also be used for a Major Gas Sale.

To ensure DNR receives necessary information regarding a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, in addition to information required under an Expansion Planning POD or an Expansion Project POD, the WIOs will meet and confer with DNR technical staff and schedule periodic reviews and workshops regarding reservoir and facility modeling results related to the project, and provide data and information to DNR for it to understand and track progress and evaluation of the project consistent with Section 16 of the PTUA. If the WIOs Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then at the State's request, the State and each individual WIO with a working interest in each Point Thomson Unit lease will negotiate a separate gas sales agreement that includes the terms set forth in Exhibit G. The Parties recognize that a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project will also be subject to Prudhoe Bay Unit agreements, including the Prudhoe Bay Unit plan of development approval process, which are not part of and would not be modified by this Agreement.

2.22 "Point Thomson Superior Court Case" means the case pending in the Superior Court of the State of Alaska, Case No. 3AN-06-13751 CI (Consolidated).

2.23 "Point Thomson Supreme Court Case" means the case pending in the Supreme Court of the State of Alaska, Case No. S-13730.

2.24 "Point Thomson Unit" has the meaning set forth in Section 3.

2.25 "Point Thomson Unit Agreement" or "PTUA" means the Unit Agreement for the Development and Operation of the Point Thomson Unit effective August 1, 1977, including all amendments thereto.

2.26 "Pre-Mississippian Section" means the interval of rock correlating with the Alaska State F-1 well (API No. 50-089-200190) below the depth of 13,846 feet measured depth as measured by the Dual Induction Laterolog Run No. 4, dated March 16, 1982, consisting of low grade metamorphic rocks containing argillite, phyllite, and quartzite along with intercalated beds of dolomite and limestone.

2.27 "Project Start-up" means the date of first production through facilities constructed as a result of the project in question but does not include testing, evaluation, or temporary production.

2.28 "Sanction" in the context of a Major Gas Sale means formal and explicit approval of a Major Gas Sale. A Major Gas Sale shall be considered "Sanctioned" under this Agreement upon receipt by the State of documentary evidence of: (1) corporate approvals by parties sufficient to proceed with construction of the project to completion; (2) firm transportation service agreements that have been entered into

sufficient to proceed with construction of the project to completion; and (3) necessary United States (and, if applicable, Canadian) federal regulatory certificates that have been issued and accepted.

2.29 "Thomson Reservoir" means the accumulation of hydrocarbon substances in the Thomson Sand and the Pre-Mississippian Section within the Point Thomson Unit.

2.30 "Thomson Sand" means the interval of rock correlating with the Point Thomson Unit No. 3 well (API No. 50-089-200070) between the depths of 13,657 and 13,932 feet measured depth as measured by the Dual Induction Laterolog Run No. 3, dated May 17, 1979, consisting of conglomerates, sandstones and siltstones.

2.31 "Unit Operator" means the Point Thomson Unit Operator designated in the PTUA and Point Thomson Unit Operating Agreement.

2.32 "West Pad" means the proposed drilling pad located west of the IPS in Area B and from which one or more wells could be drilled.

2.33 "West Pad Area" means the acreage containing all or part of the leases listed in Area B on Exhibit C and contained in Area B on Exhibit D.

2.34 "Without Appeal" means that the WIOs have waived any rights under the PTUA, individual lease terms, Alaska law and/or the laws of the United States of America, to file an application, petition, administrative appeal, or any cause of action before any administrative tribunal or state or federal court of law, and that the WIOs shall not file any such application, petition, administrative appeal, or cause of action. With regard to acreage that is released to the State Without Appeal under this Agreement, upon the

occurrence of the specified event resulting in the release of acreage, that release will occur immediately and automatically.

2.35 "Working Interest Owners" or "WIOs" means the working interest owners who are entitled to vote as to the applicable operation pursuant to, or who undertake a non-consent operation under, the Point Thomson Unit Operating Agreement.

3. UNIT CONFIGURATION

The Point Thomson Unit consists of the area and leases within the boundary set forth on the map attached as Exhibit A and the schedule of leases listed and identified on Exhibit B for a total acreage of 93,291.12 acres. The WIOs confirm that any leases not set forth on Exhibits A and B that formerly may have been included in the Point Thomson Unit have expired and the acreage has been released and returned to the State.

The map of the unit area reflecting the boundary of the Point Thomson Unit as set forth on Exhibit A and the schedule listing leases within the Point Thomson Unit area as set forth on Exhibit B are approved as Exhibit A and Exhibit B to the PTUA. The Unit Operator will file revised versions of Exhibits A and B when changes occur to the configuration or boundaries of the Point Thomson Unit area as set forth in this Agreement, with the revisions effective on the date the changes occur. Exhibit C is a listing of all or part of the leases listed on Exhibit A by area as referenced in this Agreement. Exhibit D is a map depicting the leases and areas set forth in Exhibit C. A reference to Exhibit C in this Agreement includes a reference to the corresponding area depicted in Exhibit D.

4. TERMS OF AGREEMENT

The Parties agree and understand as follows:

4.1 By signing this Agreement, the WIOs shall undertake and DNR approves the following work plan:

4.1.1 IPS Project.

4.1.1.1 The WIOs shall drill the PTU 15 and PTU 16 wells by the end of 2010, which work has been completed.

4.1.1.2 The WIOs shall put the PTU 15 and PTU 16 wells on production utilizing the IPS by the end of the 2015-2016 winter season and in any event no later than May 1, 2016. The work plan and activities associated with the IPS Project are set forth in Exhibit E. The PTU 15 and PTU 16 wells shall be placed on Continuous Operations either under production or gas injection. During the first year of production following IPS Project Start-up, the WIOs shall collect data and information regarding production, well and reservoir performance, IPS facility performance, and transportation system operations to aid in further development planning and decisions.

4.1.1.3 Additional wells shall be drilled and placed on production as needed to keep the IPS fully loaded with gas as set forth in Paragraph 2.13, to sustain the objective of a minimum of 10,000 barrels of condensate per day until the Thomson Reservoir is no longer able to sustain this objective.

4.1.1.4 After IPS Project Start-up, the WIOs shall identify and pursue debottlenecking work to increase the capacity of the installed facilities.

4.1.2 West Pad Well. The WIOs shall drill a Thomson Sand well from the West Pad by the end of the 2016-2017 winter season and in any event no later than May 1, 2017.

4.1.3 East Pad, East Pad Well, and Fifth Well. In addition to the wells and pads provided for in Paragraphs 4.1.1 and 4.1.2, the WIOs shall continue permitting for the East Pad, an East Pad well, and a fifth well, with the permitted location of the fifth well determined by the WIOs based on prior well results.

4.1.4 Wells to Target Thomson Sand Gas. All wells addressed in Paragraph 4.1 shall target Thomson Sand gas.

4.1.5 IPS POD. The work plans for the development and operation for the unitized land set forth in Paragraphs 4.1.1 through 4.1.4 shall constitute the drilling and operating obligations under Section 10 of the PTUA until May 1, 2017, unless IPS Project Start-up has not occurred due to factors outside the control of the WIOs under Paragraph 4.2.3 or force majeure under Paragraph 4.14, then until one year following IPS Project Start-up. The Unit Operator shall submit an annual report by March 1 of each year describing the operations conducted during the preceding year, but otherwise shall not be required to update the plan under 11 AAC 83.343.

4.1.6 Facility Expansion.

4.1.6.1 If a Major Gas Sale is Sanctioned by year-end 2019, then the WIOs are not obligated to pursue or continue to pursue the work plans for a Point Thomson Expansion Project set forth in Paragraphs 4.1.6.2, 4.6.2, or 4.6.3.

4.1.6.2 If a Major Gas Sale is not Sanctioned by June 1, 2016, the WIOs shall begin engineering and permitting of a Point Thomson Expansion Project. The WIOs shall incorporate these work plans into the Expansion Planning POD set forth in Paragraph 4.6.2 of this Agreement.

4.2 Completion of the IPS Project; Abandonment

4.2.1 Definition of Abandonment. For purposes of Paragraph 4.2, "Abandon," "Abandoned," or "Abandonment" means the WIOs are no longer diligently pursuing the IPS Project in good faith. Diligence is understood to mean the type of effort and activity demonstrated by the WIOs in drilling the PTU 15 and PTU 16 wells. The WIOs will have diligently pursued the IPS Project if the project work plans, activities, and pace are undertaken in a manner exemplified by the Point Thomson Provisional Schedule Level 1 work sheet attached as Exhibit E. Moreover, a lack of progress on project work plans, activities, and pace commensurate with the size and scale of the IPS Project over a one-year period is indicia of the WIOs' decision to Abandon the IPS Project. The economics or costs of the IPS Project cannot be used as a rationale or justification for not completing the IPS Project and do not constitute a factor outside the WIOs' control under Paragraph 4.2.3. To demonstrate diligence, the WIOs shall continue to provide to DNR documentation (e.g., spend reports, permit

applications, etc.) of their work activities and more detailed annual work plans to supplement the information in Exhibit E.

4.2.2 Consequences of Abandonment.

4.2.2.1 If the WIOs Abandon the IPS Project and have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of less than $2.0 billion dollars, then all Point Thomson Unit area acreage except for acreage included in Area A and Area B on Exhibit C shall be released to the State Without Appeal at year-end 2015.

4.2.2.2 If the WIOs Abandon the IPS Project and: (a) have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of less than $2.0 billion dollars; and (b) a West Pad well has not been spud by year-end 2016, then the Point Thomson Unit area acreage in Area B on Exhibit C shall be released to the State Without Appeal at year-end 2016.

4.2.2.3 If the WIOs Abandon the IPS Project and have incurred costs for Point Thomson Development during the period between year-end 2007 and year-end 2015 of $2.0 billion dollars or more, then only acreage listed in Area E and Area F on Exhibit C shall be released to the State Without Appeal at year-end 2015.

4.2.2.4 If the WIOs Abandon the IPS Project, the WIOs shall provide the State with accounting information provided by the Unit Operator in joint interest

billings to the WIOs to verify the costs incurred for Point Thomson Development between year-end 2007 and year-end 2015.

4.2.3 Factors Outside the Control of the WIOs. The WIOs shall not be considered to have Abandoned the IPS Project if the WIOs are unable to continue moving forward because of factors outside the control of the WIOs due to:

(a) circumstances addressed by Section 25 of the PTUA;

(b) design modifications due to significant technological or environmental obstacles that cause substantial additional work;

(c) litigation by third parties; or

(d) permitting and regulatory delays.

At the time the WIOs assert that one or more of the factors outside of their control has prevented them from moving forward with the IPS Project, the WIOs shall provide written notice to DNR with a description of the circumstances that have occurred and information to support the basis for their position. The WIOs shall exercise due care and diligence to address a factor outside of their control and shall keep DNR updated on the steps they are taking and their progress to move forward with the IPS Project under the circumstances. The WIOs shall provide written notice when they are able to continue moving forward with the IPS Project. If DNR disagrees with the position taken in the written notice from the WIOs, or if DNR otherwise believes the WIOs have Abandoned the IPS Project, DNR shall provide the WIOs written notice of DNR's position. DNR and the WIOs shall meet and review their respective positions in an effort to resolve any

differences. If the parties are not able to resolve their different assessments, then any dispute on whether the WIOs have Abandoned the IPS Project and whether failure to spud a West Pad well by the date set forth in Paragraph 4.2.2.2 is due to circumstances addressed by Section 25 of the PTUA, shall be subject to expedited arbitration. The parties shall agree upon expedited arbitration with the principles to be decided following execution of this Agreement.

4.2.4 Term of Abandonment Provision. This Paragraph 4.2 expires upon IPS Project Start-up, but in no event extends beyond year-end 2019, which date is fixed and not subject to Paragraph 4.14.

4.2.5 Year-end 2019. The provisions in this Paragraph 4.2 do not modify the provisions regarding Point Thomson Unit contraction/termination at year-end 2019 in Paragraphs 4.5.2 and 4.5.7 of this Agreement.

4.3 Formation of Initial Participating Area (Initial PA). This Paragraph 4.3 describes how the Initial PA will be formed for the Point Thomson Unit.

4.3.1 Initial Participating Area for Thomson Reservoir. The Initial PA shall be the first participating area for the Point Thomson Unit. The Initial PA shall contain the leases listed as the Initial Participating Area on Exhibit C. At least ninety (90) days before the date of first production through the IPS Project, the Unit Operator shall submit documentation regarding the Initial PA as provided in Paragraph 4.4.5, including PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C. The Initial PA for the Thomson Reservoir shall be formed and is approved upon IPS Project Start-up effective the date of first

production through the IPS Project with delivery into TAPS. Within twenty (20) days following the month of first production through the IPS Project with delivery into TAPS, the Unit Operator shall provide notice to DNR of the date of first production through the IPS Project with delivery into TAPS.

4.4 Expansion of IPA and Formation of New PAs. This Paragraph 4.4 describes how the Point Thomson Unit Initial PA may be: (1) conditionally expanded to include acreage in Area B upon completion of certain work activities; (2) expanded to include acreage in Area B and Area D upon approval of a PA application pursuant to the PTUA including applicable State law based on technical information from drilling and IPS production; and (3) expanded to include up to the entire Point Thomson Unit area (except Area F) upon Project Start-up of a Point Thomson project resulting from Sanction of a Major Gas Sale, an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day, or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The leases in the Initial PA, and the leases included in Area B, have been identified for inclusion in the Thomson Reservoir PA by the Parties for the purposes of this Agreement. The inclusion of leases in the PA does not constitute a determination under Section 11 of the PTUA of the land that otherwise would be included in the PA. Development of Point Thomson Unit acreage in Area F (Brookian reservoirs) is subject to the provisions set forth in Paragraph 4.7.

4.4.1 Area B Expansion. If: (i) a West Pad well is drilled as provided in Paragraph 4.1.2 and casing set across the Thomson Sand; and (ii) an Authorization for Expenditure for a gathering line to the West Pad is approved, then the Initial PA formed as provided in Paragraph 4.3 shall automatically expand to include the

West Pad Area (Area B) acreage listed on Exhibit C. Within twenty (20) days following the month in which the last of the above conditions is accomplished, the Unit Operator shall submit documentation regarding the expanded PA as provided in Paragraph 4.4.5, including the PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C, and notice confirming that the conditions set forth in this Paragraph 4.4.1 have been met including a copy of the Authorization for Expenditure. Upon receipt of proper notification, expansion of the Initial PA is automatically approved effective the first day of the month in which the last of conditions (i) and (ii) was met.

4.4.2 PA Expansion to Entire Unit. If by year-end 2019, (i) a Major Gas Sale is Sanctioned or (ii) the WIOs Commit to an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day or to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then, upon Project Start-up of the project to develop the Point Thomson Reservoir for a Major Gas Sale, the IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day, or the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, as applicable, the PA for the Thomson Reservoir shall expand to include the entire Point Thomson Unit area contained on Exhibit A and the leases listed and identified on Exhibit B, except acreage listed in Area F on Exhibit C or acreage that has contracted from the Point Thomson Unit if IPS Project Start-up has not occurred as provided under Paragraph 4.5.7. At least ninety (90) days before Project Start-up, the Unit Operator shall submit documentation regarding the expanded PA as provided in Paragraph 4.4.5,

including the PA tract allocations for each lease in the PA which shall be set forth in a revision to Exhibit C. Within twenty (20) days following the month of Project Start-up, the Unit Operator shall submit documentation confirming Project Start-up. Prior to the effective date of expansion of the PA, any acreage subject to this Paragraph 4.4.2 and not within the PA for the Thomson Reservoir shall be subject to the provisions of Paragraph 4.5.1.

4.4.3 PA Expansion Based on Technical Information. In addition to expansion of the PA for the Thomson Reservoir provided in Paragraph 4.4.1, prior to year-end 2019 the Unit Operator may submit an application for expansion of the PA pursuant to the PTUA including applicable State law based on drilling and IPS production results (i.e., technical information). This request could include acreage in Area B and Area D on Exhibit C. Any acreage included in the PA for the Thomson Reservoir as a result of this application shall be listed as a new Area C on Exhibit C and depicted as Area C on Exhibit D. The WIOs' rights to such an expansion of the PA and DNR's decisions regarding same shall be governed by the PTUA including applicable State law. The Parties acknowledge that any DNR decision on a technical PA submitted consistent with this Paragraph 4.4.3, including any appeal of a DNR decision to the Superior Court of the State of Alaska, may extend beyond year-end 2019.

4.4.4 Acreage Not Subject to Contraction. The following acreage shall not be subject to removal from a PA or contraction from the Point Thomson Unit:

(a) acreage that has been included in the Initial PA pursuant to an IPS Project Start-up under Paragraph 4.3;

(b) except as specifically provided in Paragraph 4.5.8, acreage that has been included in a PA pursuant to a PA expansion to include Area B under Paragraph 4.4.1;

(c) acreage that has been included in a PA pursuant to a PA expansion to include the entire Point Thomson Unit (except Area F) under Paragraph 4.4.2; or

(d) subject to 11 AAC 83.351(c), as applicable, and except as specifically provided in Paragraph 4.5.3, acreage that has been included in a PA pursuant to an approved PA expansion based on technical information under Paragraph 4.4.3.

Notwithstanding the above, this Paragraph 4.4.4 does not modify Section 20(c) of the PTUA should production cease from the PA.

4.4.5 PA Documentation. Information to be submitted to DNR under Paragraphs 4.3.1, 4.4.1 and 4.4.2 is provided in Exhibit F.

4.4.6 PA Dispute. Any dispute related to a PA under this Agreement shall be subject to Paragraph 5.1. A dispute regarding PA documentation or the tract allocation factors set forth in Exhibit C shall not impact formation or expansion of a PA under this Agreement, except as provided in Paragraph 4.4.3. Submittal of PA documentation under Paragraphs 4.3 and 4.4 shall be subject to the terms of the

PTUA including applicable State law. Approval of the tract allocation factors contained in Exhibit C shall be subject the terms of the PTUA including applicable State law. If the tract allocation factors submitted by the Unit Operator under Paragraphs 4.3 and 4.4 are disputed, the factors submitted by the Unit Operator shall take effect and apply until the dispute is finally resolved. Once resolved, the tract allocation factors will be retroactively adjusted.

4.5 Unit Contraction and Participating Area Reductions / Unit Status at Year-End 2019. This Paragraph 4.5 describes various development scenarios that could be present at year-end 2019, and the implications for acreage in the Point Thomson Unit. Particularly, this paragraph sets forth the terms and conditions under which some or all of the acreage could contract out of the Point Thomson Unit and be released to the State Without Appeal, and some or all of the acreage could remain in the Point Thomson Unit and be included in a PA. Paragraph 4.5 does not address Area F; Paragraph 4.7 describes what will happen with Area F acreage.

4.5.1 Acreage Subject to Inclusion in PA. If by year-end 2019 a Major Gas Sale has been Sanctioned or the WIOs have Committed to a Point Thomson Expansion Project, acreage to be included in the PA for the Thomson Reservoir under Paragraphs 4.4.2, 4.5.4, or 4.5.7 shall be entitled to be included in the PA. Such acreage shall remain in the Point Thomson Unit following formation of the Initial PA, and thereafter shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e). If IPS Project Start-up has not occurred and the Initial PA has not been formed, but a Major Gas Sale is Sanctioned, such acreage shall remain in the

Point Thomson Unit and shall be subject to elimination from the Point Thomson Unit in accordance with the terms of the PTUA including applicable State law, including Section 2(e), as if the Initial PA had been formed effective May 1, 2016.

4.5.2 No IPS or MGS.

4.5.2.1 If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, the following shall occur: (1) subject to Paragraph 4.5.2.2, the Point Thomson Unit and the PTUA shall terminate Without Appeal; (2) except for leases subject to Paragraph 4.5.2.3, each WIO will immediately surrender its leases and all such acreage shall be automatically released Without Appeal to the State; (3) each WIO agrees that it will not apply to form a compulsory unit with the Alaska Oil and Gas Conservation Commission with respect to any lease formerly within the Point Thomson Unit; and (4) this Agreement shall terminate.

4.5.2.2 If IPS Project Start-up has not occurred and a Major Gas Sale has not been Sanctioned by year-end 2019, then the WIOs may submit an alternative POD for the Point Thomson Unit no later than sixty (60) days prior to year-end 2019. Submittal and approval of the alternative POD shall be subject to the terms of the PTUA including applicable State law. Nonetheless, DNR shall have sole discretion to accept or reject an alternative POD, and a final Commissioner decision on the alternative POD is Without Appeal. For purposes of this paragraph the WIOs agree not to assert that Section 21 of

the PTUA applies in any respect to review of or a decision on the proposed alternative POD.

4.5.2.3 If the Point Thomson Unit is terminated under Paragraph 4.5.2.1, the lessees of leases containing the PTU 15, PTU 16 and wells drilled after execution of this Agreement, and lessees of leases containing any other wells capable of producing in paying quantities, may submit a Plan of Operations ("POO") for each lease to the Director within sixty (60) days of the date of Point Thomson Unit termination. The POO shall provide for placing the well on producing status within two (2) years of the date of approval of the POO. Approval or rejection of the POO shall be within the sole discretion of the DNR. If the Director denies approval of the POO, that decision may be appealed to the Commissioner. The Commissioner's decision on the POO shall be Without Appeal. If the lessees fail to submit a POO for the leases within sixty (60) days following Point Thomson Unit termination, or the Commissioner denies approval of the POO, the leases shall terminate with acreage returning to the State Without Appeal. If the Director or the Commissioner approve the POO and the lessees fail to place the well on producing status within two years, the lease shall terminate with acreage returning to the State Without Appeal.

4.5.3 IPS Project - No Expansion and No MGS. If IPS Project Startup has occurred and the WIOs do not Commit to a Point Thomson Expansion Project and a Major Gas Sale has not been Sanctioned by year-end 2019, then:

4.5.3.1 The acreage in Area E and the northern half of ADL 377017 (ADL 377017(N) on Exhibit C), without regard to whether this acreage was included in a technical PA application or is included in the PA as the result of a technical PA expansion under Paragraph 4.4.3, shall be released to the State Without Appeal. The remaining acreage in Area D shall be subject to the PTUA including applicable State law.

4.5.3.2 If a technical PA application has been filed pursuant to Paragraph 4.4.3, then, subject to Paragraph 4.5.3.1, the acreage included in the application shall not be subject to contraction until a final decision on the technical PA application. Once a final decision has been made on the PA application, any acreage not included in a PA shall be eliminated from the Point Thomson Unit.

4.5.4 IPS Project Expansion by 10,000 Barrels per Day and No MGS. If the WIOs Commit to an IPS Gas Cycling Expansion Project of minimum of an additional 10,000 barrels per day by year-end 2019, but that expansion is less than minimum of an additional 20,000 barrels per day, then the acreage in the northern half of ADL 377017 (ADL 377017(N) on Exhibit C), without regard to whether this acreage was included in a technical PA application or is included in the PA as the result of a technical PA expansion under Paragraph 4.4.3, and the acreage listed as within ADLs 377016, 389728 and 389730 in Area E on Exhibit C, shall be released to the State Without Appeal. The remaining acreage listed within Area E on Exhibit C shall be included in the acreage listed in Area D on Exhibit C and subject to the terms of the PTUA including applicable State law.

4.5.5 IPS Project Expansion by 20,000 Barrels per Day or a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project and No MGS. If IPS Project Start-up has occurred and the WIOs have Committed to either: (1) an IPS Gas Cycling Expansion Project of a minimum of an additional 20,000 barrels per day; or (2) a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project by year-end 2019, then all acreage, except as set forth in Paragraph 4.7, shall remain in the Point Thomson Unit at year-end 2019 and shall be entitled to be included in a PA as set forth in Paragraphs 4.4.2 and 4.5.1.

4.5.6 IPS with MGS. If IPS Project Start-up has occurred and a Major Gas Sale has been Sanctioned by year-end 2019, then all acreage, except as set forth in Paragraph 4.7, shall remain in the Point Thomson Unit at year-end 2019 and shall be entitled to be included in a PA as set forth in Paragraphs 4.4.2 and 4.5.1.

4.5.7 MGS Sanctioned – No IPS Project. If IPS Project Start-up has not occurred and a Major Gas Sale is Sanctioned prior to year-end 2019, any acreage that contracts from the Point Thomson Unit under Paragraph 4.2 of this Agreement shall not be recommitted to the Point Thomson Unit. Acreage remaining in the Point Thomson Unit shall be subject to Paragraphs 4.4.2 and 4.5.1.

4.5.8 Area B. If (i) an expanded PA based on technical information has not been approved as provided in Paragraph 4.4.3 that includes all of Area B or (ii) if a gathering line is not constructed and the well on the West Pad is not placed on Continuous Operations into the IPS by year-end 2019, then any of the West Pad Area (Area B) acreage listed on Exhibit C that was originally included in the PA

for the Thomson Reservoir pursuant to Paragraph 4.4.1, but subsequently has not been included in the PA expansion as provided for in Paragraph 4.4.3, shall be removed from the PA and included within Area D on Exhibit C, and thereafter shall be subject to the terms of the PTUA including applicable State law.

4.5.9 Segregation of Leases Released to State or Contracted from the Unit. Any lease, a portion of which is released to the State under Paragraphs 4.2 or 4.5, shall be segregated into a separate and distinct lease as to the portion remaining within the Point Thomson Unit, which does not include the portion that contracts out of the Point Thomson Unit and is released to the State, and the provisions of the original lease shall apply to the segregated portion that remains in the Point Thomson Unit.

4.6 Plans of Development/Future Work Plans. The WIOs shall prepare plans of further development and operation for the Point Thomson Unit under Section 10 of the PTUA ("Future POD") as provided in this Paragraph 4.6 for the periods set forth. Work plans for Point Thomson Unit acreage in Area F of Exhibit C shall be subject to the terms of Paragraph 4.7, not this Paragraph 4.6.

4.6.1 Major Gas Sale Sanction. If a Major Gas Sale is Sanctioned prior to year-end 2019, then within ninety (90) days following the Sanction date, the WIOs shall submit a Future POD that includes work plans and project activities to develop the Point Thomson Reservoir for a Major Gas Sale (the initial and each Future POD under this Paragraph 4.6.1 is hereinafter referred to as an "MGS POD"). Upon Project Start-up associated with an MGS POD, the obligations set forth in

Paragraph 4.1.1 shall terminate. The initial MGS POD shall be effective as of the date a Major Gas Sale is Sanctioned and shall remain in effect for two years following that date and until a subsequent MGS POD is approved. Subsequent MGS PODs shall be submitted to DNR within ninety (90) days before expiration of the prior MGS POD. Each MGS POD shall cover a period of two years and shall address the information contained in Paragraph 4.6.4. Following submittal of each MGS POD, DNR shall have sixty (60) days to review the MGS POD. Unless DNR provides the WIOs written notice that the MGS POD is inconsistent with the terms of this Agreement, the MGS POD is approved effective the date set forth above, even if DNR approval of the MGS POD occurs after that date.

4.6.2 Expansion Project Planning. Consistent with Paragraph 4.1.6.2, if a Major Gas Sale has not been Sanctioned by June 1, 2016, the WIOs must begin engineering and permitting of a Point Thomson Expansion Project. The WIOs shall submit a Future POD that includes work plans for evaluation and selection of an option for development of the Point Thomson Reservoir through a Point Thomson Expansion Project ("Expansion Planning POD"). The Expansion Planning POD shall be effective one year following IPS Project Start-up but no later than May 1, 2017, and shall remain in effect until the earlier of: (1) the effective date of an Expansion Project POD under Paragraph 4.6.3; (2) the effective date of an MGS POD under Paragraph 4.6.1; or (3) December 31, 2019 if a Major Gas Sale has not been Sanctioned and the WIOs do not Commit to a Point Thomson Expansion Project prior to that date. The Expansion Planning POD may supplement the work plans set forth in Paragraphs 4.1.1 through 4.1.4. The Expansion Planning

POD shall be submitted no later than ninety (90) days following the Expansion Planning POD effective date provided above and shall address the information contained in Paragraph 4.6.4. Following submittal of the Expansion Planning POD, DNR shall have sixty (60) days to review the Expansion Planning POD. Unless DNR provides the WIOs written notice that the Expansion Planning POD is inconsistent with the terms of this Agreement, the Expansion Planning POD is approved effective the date set forth above, even if DNR approval of the Expansion Planning POD occurs after that date.

4.6.3 Expansion Project Commitment. If a Major Gas Sale has not been Sanctioned by year-end 2019, and the WIOs Commit to a Point Thomson Expansion Project on or before year-end 2019, then the WIOs shall submit a Future POD based on the Expansion Planning POD work product that describes work plans and project activities to develop the Point Thomson Reservoir through a Point Thomson Expansion Project (the initial and each subsequent Future POD under this Paragraph 4.6.3 is hereinafter referred to as an "Expansion Project POD"). Upon Project Start-up of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the obligations set forth in Paragraph 4.1.1 shall terminate. Upon DNR approval, the initial Expansion Project POD shall be deemed effective on January 1, 2020 unless the WIOs Commit to a Point Thomson Expansion Project and an Expansion Project POD is approved prior to year-end 2019, and shall remain in effect for two years following that approval and until a subsequent Expansion Project POD is approved. The initial Expansion Project POD shall be submitted no later than ninety (90) days following the date the WIOs Commit to a

Point Thomson Expansion Project. Subsequent Expansion Project PODs shall be submitted to DNR within ninety (90) days before expiration of the prior Expansion Project POD. Each Expansion Project POD shall cover a period of two years and shall address the information contained in Paragraph 4.6.4. Following submittal of each Expansion Project POD, DNR shall have sixty (60) days to review the Expansion Project POD. Unless DNR provides the WIOs written notice that the Expansion Project POD is inconsistent with the terms of this Agreement, the Expansion Project POD is approved effective the date set forth above, even if DNR approval of the Expansion Project POD occurs after that date.

4.6.4 POD Information. Consistent with this Paragraph 4.6, Future PODs shall include plans to address the following:

(a) data acquisition and technical evaluations and qualifications to support the development plan;

(b) well planning including identification of the number of drill wells, well locations, and completion plans;

(c) project design basis and engineering plans for infrastructure, well pads, and process facilities;

(d) acquisition of permits and other approvals to accommodate drilling, construction, production transportation, and operations;

(e) operation and maintenance considerations;

(f) construction and start-up including estimated timing to complete the work activities;

(g) logistics; and

(h) safety, security, health, and environmental considerations.

4.6.5 POD Implementation. Any dispute regarding a Future POD, including whether a Future POD is consistent with this Agreement, whether WIOs are diligently progressing a project to develop the Point Thomson Reservoir for a Major Gas Sale, or whether WIOs are diligently progressing a Point Thomson Expansion Project consistent with this Agreement shall be subject to Paragraph 5.1. Any dispute related to a Future POD shall not be used as the basis to seek Point Thomson Unit contraction or release of acreage, unless DNR asserts the WIOs are not diligently progressing a project to develop the Point Thomson Reservoir for a Major Gas Sale or a Point Thomson Expansion Project consistent with this Agreement.

4.7 Area F. If the WIOs submit a POD for the Brookian by year-end 2018 that is approved by DNR, the acreage listed in Area F on Exhibit C shall remain in the Point Thomson Unit after any Unit contraction at year-end 2019 and shall be maintained through approved PODs or formation of expanded or new PA(s) in accordance with the PTUA including applicable State law. If the WIOs do not submit a Brookian POD by year-end 2018 or if DNR does not approve the Brookian POD, the acreage listed in Area F on Exhibit C shall be released to the State Without Appeal.

4.8 Royalty. Following IPS Project Start-up, the WIOs may submit a royalty modification application requesting a royalty reduction. DNR denial of the application does not relieve the WIOs or the State of their commitments to abide by the terms of this Agreement.

4.8.1 If applicable, the application shall be submitted pursuant to Alaska statutory provisions and shall be submitted and evaluated pursuant to Alaska law.

4.8.2 If the application is not submitted pursuant to Alaska statutory provisions, the WIOs may apply for royalty modification under this Paragraph 4.8.2. The State shall evaluate this application in good faith and the WIOs shall provide DNR with sufficient information to process the application. A decision by DNR denying an application submitted under this Paragraph 4.8.2 for any reason, including a determination that DNR may not legally approve that application because it does not have the authority to do so, shall be Without Appeal.

4.9 Lease Assignments. Within ninety (90) days of the Effective Date, the State agrees to approve lease assignments for each of the leases identified on Exhibit B as PTU Tract No. 1 through Tract No. 38, in the manner requested in writing by ExxonMobil, BP Exploration (Alaska) Inc., Chevron U.S.A. Inc., and ConocoPhillips Alaska, Inc., who, as represented by those requesting parties, are the only lessees to those assignments.

4.10 Litigation.

4.10.1 Joint Motions. Within ten (10) days of the date this Agreement is executed, the Parties shall jointly and simultaneously file: (a) a motion to vacate the February 11, 2010 Order Granting Stay of Proceedings in the Point Thomson Superior Court Case; and (b) a motion to vacate the December 26, 2007 and January 11, 2010 decisions in the Point Thomson Superior Court Case ("Joint Motion"). A copy of this Agreement shall be included with the filings. The Joint Motion described in Paragraph 4.10.1(b) shall expressly affirm that the DNR Point Thomson Orders will be automatically withdrawn as set forth in Paragraph 4.10.3 if the Joint Motion described in Paragraph 4.10.1(b) is granted.

4.10.2 Effective Date of Agreement. The effective date of this Agreement ("Effective Date") shall be the later of: (i) the date the Superior Court grants the Joint Motion described in Paragraph 4.10.1(b); (ii) the date of dismissal of the Point Thomson Supreme Court Case; and (iii) the date of dismissal of the Point Thomson Superior Court Case. If the Superior Court denies the Joint Motion described in Paragraph 4.10.1(b), or the Point Thomson Supreme Court Case and the Point Thomson Superior Court Case are not dismissed, this Agreement shall not become effective.

4.10.3 Other DNR Requirements.

4.10.3.1 Immediately upon the granting of the Joint Motion described in Paragraph 4.10.1(b), the DNR Point Thomson Orders shall be automatically withdrawn. Any authorization or approval issued by DNR as a result of any

of the DNR Point Thomson Orders allowing the WIOs to conduct activity within the Point Thomson Unit area shall not be affected by such action and shall remain valid and effective by its terms.

4.10.3.2 Within ten (10) days of the date the Superior Court grants the Joint Motion described in Paragraph 4.10.1(b), the Parties shall file a joint dismissal of the Point Thomson Supreme Court Case and the Point Thomson Superior Court Case pursuant to Alaska Appellate Rule 511.

4.10.4 Other Owner Requirements. Within ten (10) days of the Effective Date, the Owner Group shall file a release of Amended Notice of Lis Pendens in the Point Thomson Superior Court Case.

4.10.5 Other Joint Motions. Within ten (10) days of the Effective Date, the Parties shall jointly move to dismiss with prejudice the remaining Point Thomson Cases. A copy of this Agreement shall be included with each filing.

4.10.6 Costs and Fees. For purposes of this Paragraph 4.10, the State and the Owner Group shall each bear their own costs and attorney's fees.

4.11 Point Thomson Unit Status. By signing this Agreement, the Parties confirm that the Point Thomson Unit, the PTUA, and the Point Thomson Unit Operating Agreement have remained in effect since originally approved, and remain in effect as of the date of this Agreement as modified by this Agreement.

4.12 Interpretation. In the event of any conflict or inconsistency between this Agreement and the PTUA, this Agreement controls. Subject to and as modified by the terms of

this Agreement, the relationship between DNR and the WIOs shall continue to be governed by the PTUA including applicable State law.

4.13 Alaska Hire. Within the constraints of law, when the Unit Operator hires, it agrees to employ Alaska residents and contract with Alaska businesses to provide goods and services to support and work on construction, fabrication, or operation at Point Thomson to the extent Alaska residents or Alaska businesses are available, ready, willing, cost competitive, in compliance with all safety and environmental standards, qualified and able to accept employment at the time required, and are located in Alaska. The Unit Operator shall use, as far as is practicable, job centers and associated services operated by the Department of Labor and Workforce Development. The Unit Operator shall advertise for available positions locally and use, as far as practicable, Alaska job service organizations to notify the Alaskan public.

4.14 Force Majeure. The terms of this Agreement are subject to the unavoidable delay provisions of Section 25 of the PTUA. For the purposes of this Agreement, failure to timely receive permit approvals or other authorizations, despite the exercise of due care and diligence of the WIOs, is considered an unavoidable delay under Section 25 of the PTUA. Notwithstanding the foregoing, failure to obtain AOGCC approval related to the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project is not force majeure and will not be considered an unavoidable delay under Section 25 of the PTUA.

4.15 Dates Subject to Adjustment. Decisions, work activities, and dates associated with Thomson Reservoir development are interrelated. Except as specifically provided in

Paragraph 4.15.1, if one or more force majeure events result in an extension of the date for IPS Project Start-up by at least one full year from the date provided in Paragraph 4.1.1.2 as may be adjusted herein, regardless of the actual term of any single force majeure event, then for each full one-year period that IPS Project Start-up is delayed, the dates for future Thomson Reservoir decisions and work activities, including dates associated with a Point Thomson Expansion Project or Thomson Reservoir development for a Major Gas Sale, shall be extended by a corresponding period of time. This provision is applicable each and every time IPS Project Start-up is delayed by at least one additional full year. This Paragraph 4.15 shall apply in addition to any extension or adjustment to a date in this Agreement resulting from a force majeure event under Paragraph 4.14.

4.15.1 Dates Not Subject to Adjustment. The following dates are not subject to adjustment under Paragraphs 4.14 and 4.15:

(a) the expiration date (year-end 2019) for the Abandonment provision under Paragraph 4.2.4;

(b) the year-end 2007 to year-end 2015 time period for determination of project costs if the WIOs Abandon the IPS Project as provided under Paragraph 4.2;

(c) the date (year-end 2018) for WIO submittal of a Brookian POD under Paragraph 4.7; and

(d) the date for application of DNR standard administrative processes under Paragraph 5.1.3.1.

The number of days for submitting information or providing notice under this Agreement (e.g., "within ninety (90) days") are not subject to adjustment under Paragraph 4.14, including the number of days for submitting and approving Future PODs under Paragraph 4.6.

4.16 Taxes and Royalty for Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project. The Parties agree that any gas produced from a reservoir within the Point Thomson Unit and injected into a reservoir within the Prudhoe Bay Unit pursuant to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project is only subject to tax and royalty one time.

4.16.1 Tax on Injected Gas. The Parties recognize that Alaska law regarding oil and gas production tax provides that gas produced from the Point Thomson Unit that would be used according to 15 AAC 55.151(e) in effect as of the Effective Date, and that would be injected into a reservoir within the Prudhoe Bay Unit in the course of operations of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project for purposes of repressuring, including enhanced recovery, would be exempt from taxation at the time of its production from the Point Thomson Unit and would be subject to tax only at the time the gas would be ultimately produced for sale from the Prudhoe Bay Unit.

4.16.2 Royalty on Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project Gas. If the WIOs Commit to and complete construction of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then, upon Project Start-up, the State, as authorized by the Point Thomson leases and

applicable State law, will elect, for the period prior to Project Start-up of a Major Gas Sale, to take in-kind the State's royalty share of gas produced from the Point Thomson Unit when produced into the gas pipeline from Point Thomson to Prudhoe Bay referenced in Paragraph 2.21(i). Terms implementing this royalty in kind election are as follows.

4.16.2.1 Definitions. Whenever the following terms are used in this Paragraph 4.16.2, they shall have the meanings set forth in this Paragraph 4.16.2.1. Other capitalized terms shall have the meaning set forth in Paragraph 2 of this Agreement.

(a) "Delivery Point" means: (1) the terminus of the PTU / PBU Gas Pipeline in the Prudhoe Bay Unit ("PBU Delivery Point") if the PTU / PBU Gas Pipeline has been exempted from the requirement of a right-of-way lease under AS 38.35 ("Unregulated PTU / PBU Gas Pipeline"); or (2) the point where Point Thomson gas is produced and first delivered into the PTU / PBU Gas Pipeline ("PTU Delivery Point") if the PTU / PBU Gas Pipeline has not been exempted from the requirement of a right-of-way lease under AS 38.35 ("Regulated PTU / PBU Gas Pipeline").

(b) "Field Costs" means costs incurred by lessee that may be reimbursed or deducted from royalty gas under the Point Thomson leases and other applicable agreements.

(c) "Fuel / Losses" means any fuel consumption or losses associated with transporting gas through the PTU / PBU Gas Pipeline.

(d) "PBU" means the Prudhoe Bay Unit.

(e) "PTU / PBU Gas Pipeline" means the gas pipeline to be constructed for a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project that will begin in the Point Thomson Unit and terminate in the Prudhoe Bay Unit.

(f) "State RIK Gas" means the State's royalty share of gas produced from the Point Thomson Unit into the PTU / PBU Gas Pipeline that is taken by the State in kind, as described in this Paragraph 4.16.2.

(g) "Transportation Costs" means costs for transporting gas through the PTU / PBU Gas Pipeline.

4.16.2.2 General Terms.

(a) If the WIOs Commit to and complete construction of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, the State, as authorized by the Point Thomson leases and applicable State law, will elect to take in kind State royalty due when Point Thomson gas is produced into the PTU / PBU Gas Pipeline, with State RIK Gas delivered to the State at the Delivery Point.

(b) The State may take all or any portion of State RIK Gas for sale or other use at the time it is delivered to the Delivery Point.

(c) State RIK Gas not taken for sale or other use by the State at the time it is delivered to the Delivery Point will be injected into the PBU reservoir, where the gas will be used for enhanced liquids recovery.

(d) The State will retain title and risk of material loss on State RIK Gas in the PBU reservoir, but will not be responsible for any costs, payments, or fees, or charged for fuel or other operational losses, associated with use of State RIK Gas in the PBU reservoir.

(e) The State will not charge any costs, payments, or fees, nor require receipt of any other benefit for use of State RIK Gas that is delivered to the Delivery Point and injected into the PBU reservoir, beyond any royalty provided for under applicable PBU leases and other applicable agreements on liquids recovered from the PBU reservoir.

4.16.2.3 Transportation Costs, Field Costs, and Fuel / Losses. Except as interpreted or modified by the terms set forth in this Paragraph 4.16.2, any Transportation Costs, Fuel / Losses and Field Costs associated with State RIK Gas shall be addressed as set forth in the Point Thomson leases and other applicable agreements. The manner in which Transportation Costs, Fuel / Losses and Field Costs are addressed depends on whether the PTU /

PBU Gas Pipeline is a Regulated PTU / PBU Gas Pipeline or an Unregulated PTU / PBU Gas Pipeline at the time the State RIK Gas is produced and delivered into the PTU / PBU Gas Pipeline, recognizing that the status of the PTU / PBU Gas Pipeline may change. In addition, upon Project Start-Up of a Major Gas Sale, the treatment of these costs may change. No interest will be charged on any of the State's accrued Transportation Costs and Fuel / Losses prior to the due date under this Paragraph 4.16.2.

(a) Regulated PTU / PBU Gas Pipeline.

i. The State will pay Transportation Costs and be responsible for Fuel / Losses for State RIK Gas that is delivered to the State at the PTU Delivery Point pursuant to the terms of the approved transportation tariff for the PTU / PBU Gas Pipeline.

1. For State RIK Gas that is delivered to the State at the PTU Delivery Point and not injected into the PBU reservoir, the Transportation Costs will be paid by the State and deductions made for Fuel / Losses at the time of delivery to the State at the PTU Delivery Point.

2. For State RIK Gas that is delivered to the State at the PTU Delivery Point and is then injected into the PBU reservoir for enhanced liquids recovery, the Transportation Costs will accrue and deductions made for Fuel / Losses, but will not be

paid by the State until State RIK Gas is delivered from the PBU reservoir to the State for sale or other use.

ii. For State RIK Gas produced prior to Project Start-up of a Major Gas Sale, the State will not be responsible for Field Costs for State RIK Gas that is delivered to the State at the PTU Delivery Point, regardless of whether the State RIK Gas is injected into the PBU reservoir. For Point Thomson gas produced after Project Start-up of a Major Gas Sale, the State will be responsible for Field Costs to the extent provided under the Point Thomson leases and other applicable agreements.

(b) Unregulated PTU / PBU Gas Pipeline.

i. If costs for the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, including the PTU / PBU Gas Pipeline, were entitled to and received deductions and credits under AS 43.55, with substantially the same credits / benefits as exists under AS 43.55 on the Effective Date, then the State will not be responsible for Transportation Costs or Fuel / Losses associated with delivery of State RIK Gas to the State at the PBU Delivery Point prior to Project Start-up of a Major Gas Sale.

ii. If costs for the Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, including the PTU / PBU Gas Pipeline, were not entitled to or did not receive deductions and

credits under AS 43.55, with substantially the same credits/benefits as exists under AS 43.55 on the Effective Date, then the State will be responsible for Transportation Costs and Fuel / Losses associated with the delivery of State RIK Gas to the State at the PBU Delivery Point.

1. If State RIK Gas is not injected into the PBU reservoir, payment of Transportation Costs and deductions for Fuel / Losses will be due at the time of delivery of State RIK Gas to the State at the PBU Delivery Point.

2. If State RIK Gas is injected into the PBU reservoir, payment of Transportation Costs and deductions for Fuel / Losses will be due from the State when State RIK Gas is delivered from the PBU reservoir to the State for sale or other use.

iii. For State RIK Gas produced prior to Project Start-up of a Major Gas Sale, the State will not be responsible for Field Costs for State RIK Gas that is delivered to the State at the PTU Delivery Point, regardless of whether the State RIK Gas is injected into the PBU reservoir. For Point Thomson gas produced after Project Start-Up of a Major Gas Sale, the State will be responsible for Field Costs to the extent provided under the Point Thomson leases and other applicable agreements.

4.16.2.4 State RIK Gas Allocation Principles.

(a) For State RIK Gas Injected into the PBU reservoir:

i. Each WIO is responsible for delivery to the State and the State will take deliveries of State RIK Gas proportionately from each WIO.

ii. State RIK Gas will be subject to gas balancing agreement procedures that will be developed between the affected parties, including the State.

iii. State RIK Gas injected into the PBU reservoir will be available for delivery to the State from the PBU reservoir at any then-existing PBU facilities, including any facilities installed for a Major Gas Sale, at a location designated by PBU owners.

iv. Delivery of State RIK Gas to the State will not be unreasonably withheld.

v. Deliveries of State RIK Gas from the PBU reservoir may not unreasonably interfere with ongoing PBU operations.

vi. If delivery from the PBU reservoir is constrained at PBU delivery point(s), gas availability will be allocated 75% to PBU gas and 25% to Point Thomson gas. The allocation to Point Thomson gas will remain fixed even if other gas is injected into the PBU reservoir from another reservoir.

(b) Specific Principles Before Project Start-up a Major Gas Sale. If the State is taking delivery of State RIK Gas for sale or other use for delivery into a facility or pipeline connected to the PTU / PBU Gas Pipeline, the State will preferentially take delivery of State RIK Gas that has not been injected into the PBU Reservoir; otherwise, subject to constraints listed above, the State may take delivery of State RIK Gas that has been injected into the PBU reservoir.

(c) Specific Principles After Project Start-up of a Major Gas Sale.

i. For gas produced from Point Thomson after Project Start-up of a Major Gas Sale, the State from time to time may elect to take its royalty share in value or in kind pursuant to the Point Thomson leases, other applicable agreements and applicable State law.

ii. For State RIK Gas that was injected into the PBU reservoir prior to Project Start-up of a Major Gas Sale, the State may take delivery of its State RIK Gas from the PBU reservoir, or may from time to time, by notice consistent with the notice requirements of the Point Thomson leases and other applicable agreements, elect to take payment in-value as follows:

1. Whether the State receives gas or a payment for its share of State RIK Gas produced from the PBU reservoir, the share will be measured in proportion to gas offtake allocated to Point Thomson gas injected into the PBU reservoir, adjusted

for any withdrawal of State RIK Gas and WIO Point Thomson gas prior to Project Start-up of a Major Gas Sale.

2. Whether the State receives gas or a payment for its share of State RIK Gas produced from the PBU reservoir, there will be no deduction for Field Costs, but the deductions for Transportation Costs and Fuel / Losses, as set forth in Paragraph 4.16.2.3, will apply.

3. If the State elects to receive a payment for its share of State RIK Gas that was injected into the PBU reservoir prior to Project Start-up of a Major Gas Sale, payment will be calculated based on the royalty in value basis for Point Thomson gas under the applicable leases, at the time the gas is withdrawn from the PBU reservoir.

5. MISCELLANEOUS PROVISIONS

5.1 Dispute Resolution. The following provisions shall apply to this Agreement:

5.1.1 Until the date set forth in Paragraph 5.1.3.1, with respect to any dispute regarding the Parties' rights and obligations under this Agreement, including any matter that otherwise would be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, a Party may file an action in the Superior Court of the State of Alaska as set forth in Paragraph 5.5, except for matters set forth in Paragraph 5.1.2 or an Abandonment dispute via arbitration under Paragraph 4.2.3.

Thereafter, DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 shall apply to any dispute regarding the Parties' rights and obligations under this Agreement as provided under the PTUA and applicable State law. Within the application of DNR's administrative processes the Parties do not waive any rights under applicable State law.

5.1.2 Decisions Subject to DNR Standard Administrative Processes.

(a) The following matters shall be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, including the right of appeal to the Commissioner, the right of appeal to the Superior Court of the State of Alaska, and the right of appeal to the Supreme Court of the State of Alaska.

i. Decisions regarding a technical PA application under Paragraph 4.4.3.

ii. Decisions regarding inclusion of acreage in Area B and Area D in a PA and retention of that acreage in the Point Thomson Unit that are specifically governed by or subject to the PTUA including applicable State law as provided in Paragraphs 4.5.3, 4.5.4, and 4.5.8.

iii. Decisions related to providing PA documentation and tract allocations as provided in Paragraph 4.4.6.

(b) The following matters shall be subject to DNR standard administrative processes as set forth in 11 AAC 02.010-02.900, including the right of

appeal to the Commissioner, but otherwise are Without Appeal, with no right of appeal to the Superior Court of the State of Alaska or to the Supreme Court of the State of Alaska. Any DNR decision that is Without Appeal shall not have any precedential effect in any other matter, case, or dispute.

i. Decisions regarding the Brookian POD as provided in Paragraph 4.7.

ii. Decisions associated with an alternative POD as provided in Paragraph 4.5.2.2.

iii. Decisions associated with a royalty application as provided in Paragraph 4.8.2.

iv. Decisions associated with a Plan of Operations for leases as provided in Paragraph 4.5.2.3.

5.1.3 The Parties agree that this Agreement is a contract between the Parties. Subject to Paragraph 5.1.3.2, DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 shall include the right of any WIO to appeal a DNR decision or other action to the Superior Court of the State of Alaska, and the right to appeal any judgment of the Superior Court to the Supreme Court of the State of Alaska. Application of DNR standard administrative processes does not provide any right or basis for the State to alter the terms of this Agreement. DNR discretion and the authority to take action or make a decision regarding Point Thomson may only be

exercised by DNR in a manner that, consistent with Paragraph 5.7, does not conflict with the terms of this Agreement.

5.1.3.1 The date for application of DNR standard administrative processes as set forth in 11 AAC 02.010-02.900 and as provided in Paragraph 5.1.1 shall be the later of the following:

(1) year-end 2019, if IPS Project Start-up occurs or a Major Gas Sale is Sanctioned before year-end 2019;

(2) the date of IPS Project Start-up, if the date of IPS Project Start-up occurs after year-end 2019 due to force majeure under Paragraph 4.14; however, not later than year-end 2024, which date is fixed and not subject to adjustment even if IPS Project Start-up has not occurred by year-end 2024.

5.1.3.2 Paragraph 5.1.1 does not apply to DNR decisions referenced in Paragraph 5.1.2(b).

5.1.4 Any Party may dispute whether a specified event has occurred that pursuant to the terms of this Agreement would result in termination of the Point Thomson Unit Without Appeal or release of acreage Without Appeal under Paragraphs 4.2.2, 4.5.2.1, 4.5.3, or 4.5.4, with the dispute handled in accordance with Paragraph 5.1. In the event of such dispute, termination of the Point Thomson Unit Without Appeal or the release of acreage Without Appeal shall not be required until there has been a final judicial determination as to the occurrence of the specified event, or upon an Abandonment determination via arbitration under Paragraph 4.2.3.

This Paragraph 5.1.4 does not apply to DNR decisions referenced in Paragraph 5.1.2(b).

5.1.5 Any dispute that would be subject to the terms of the PTUA shall be determined in accordance with the PTUA including applicable State law.

5.2 No Admission. This Agreement does not constitute and shall not be deemed to be an admission by any Party about the merits, validity, or accuracy of any of the allegations, claims, or defenses of any Party.

5.3 Entire Agreement. This Agreement, including all exhibits attached hereto or referenced herein (all of which are hereby incorporated herein by this reference), represents the complete agreement of the Parties. This Agreement may not be modified, amended, or changed except by written instrument signed by each Party.

5.4 Term of Agreement. Unless earlier terminated in accordance with the provisions hereof, this Agreement shall remain in full force and effect until all obligations have been performed and all rights satisfied.

5.5 Enforcement. No Party shall contest: (a) the validity of this Agreement; (b) subject to Paragraph 5.1, the jurisdiction of the Superior Court of the State of Alaska to enforce this Agreement and its terms or the right of any Party to file an action in the Superior Court of the State of Alaska for enforcement of any of the terms of this Agreement or to enforce an arbitration decision; or (c) the authority of DNR to issue decisions as provided for in Paragraphs 5.1.1, 5.1.2, and 5.1.3.

5.6 Waiver. The failure by any Party at any time to require performance by any other Party or to claim a breach of any provision of this Agreement shall not be construed as affecting any subsequent breach or the right to require performance or to claim a breach with respect thereto.

5.7 Further Assurances. In proceedings before the Alaska Oil and Gas Conservation Commission regarding approvals related to the IPS Project, a Point Thomson Expansion Project, or a Point Thomson project related to a Major Gas Sale, the DNR agrees it will not oppose any such application submitted that is consistent with the terms of this Agreement and applicable State law.

5.8 Validity. The Commissioner has determined that entry into this Agreement and the individual terms and conditions set forth herein are necessary or advisable to protect the public interest, including a determination that the taking in kind of royalty as provided in Paragraph 4.16.2 will be in the best interests of the State. If any provision of this Agreement shall be held to be invalid or unenforceable, such provisions shall not affect in any respect the validity or enforceability of the remainder of this Agreement unless the invalidity materially affects the ability of any Party to perform as contemplated hereunder.

5.9 Order of Precedence. While the exhibits are an integral part of this Agreement, in the event any exhibit conflicts with a provision in the body of this Agreement, the provision in the body of this Agreement shall control, unless that provision of the exhibit expressly states that it supersedes a specifically identified section in the body of

this Agreement, in which case the specifically identified section shall be superseded only with respect to the specific provision of the exhibit.

5.10 Effect of Headings. The headings and subheadings of the sections and paragraphs of this Agreement are inserted for convenience of reference only and shall not control or affect the meaning or construction of any of the terms, covenants, and conditions of this Agreement in any manner.

5.11 Construction. The Parties agree that this Agreement was fully negotiated by the Parties and, therefore, no provision of this Agreement shall be interpreted against any Party because that Party or its legal representative drafted the provision.

5.12 Counterparts and Facsimile Signature. This Agreement may be executed in counterparts and each shall be deemed an original. This Agreement may also be executed by facsimile signature.

5.13 Governing Law. This Agreement shall be governed in all respects by the laws of the State of Alaska without regard to its choice of law or conflict of law provisions.

5.14 Venue. The Parties agree that any action arising out of or relating to this Agreement shall be brought only in a court of competent jurisdiction in the State of Alaska, with the understanding that the State of Alaska does not waive any right to object to federal court jurisdiction, including its rights under the 11th Amendment of the United States Constitution, nor does the State of Alaska agree to waive sovereign immunity.

5.15 Authority to Sign. Each undersigned representative of a Party to this Agreement certifies that he or she is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind such Party to this Agreement.

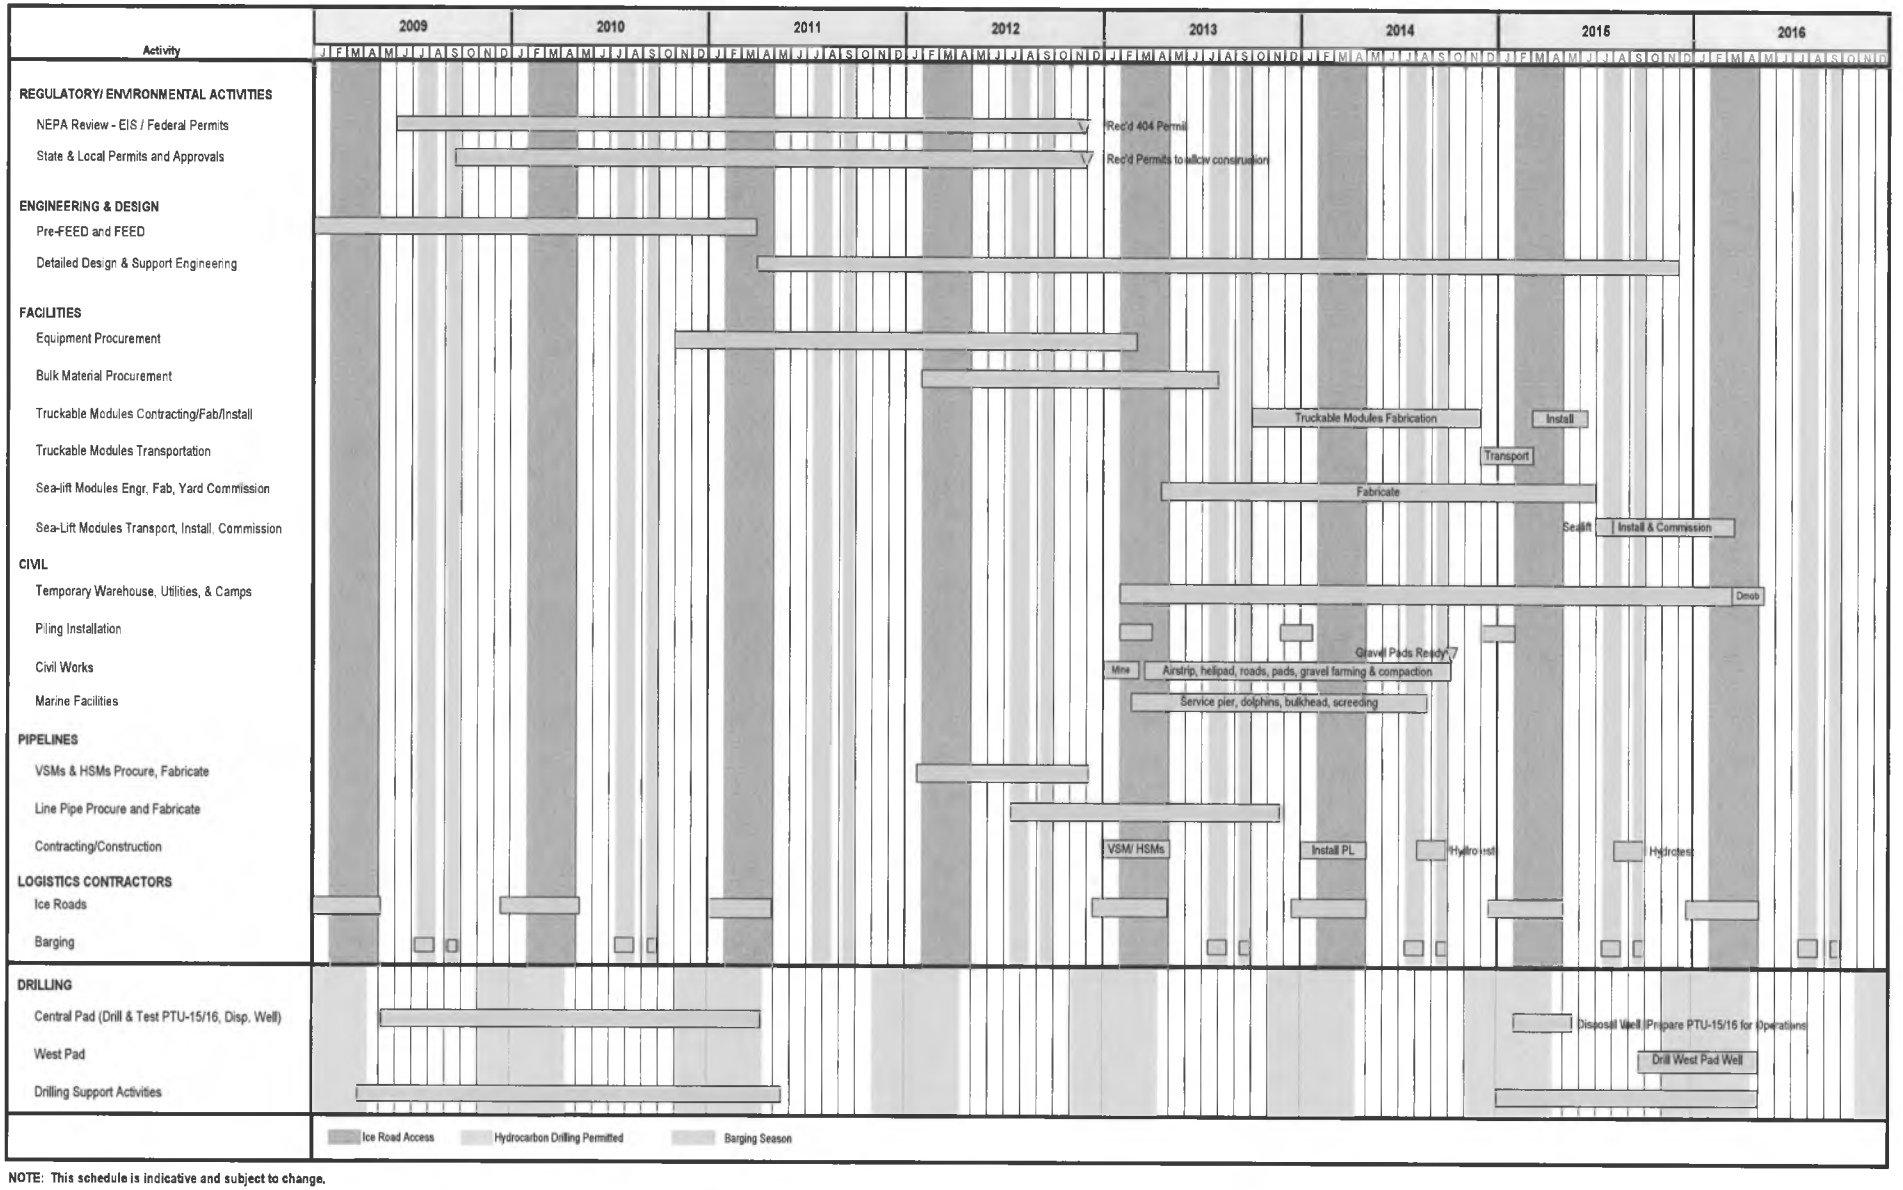
EXHIBIT E

Point Thomson Provisional Schedule Level 1 Work Sheet



NOTE: This schedule is indicative and subject to change.

Exhibit F

PA DOCUMENTATION

DNR will keep information submitted in a PA application confidential as provided in AS 38.05.035(a)(8) and its applicable regulations. In accordance with AS 38.05.035(a)(8)(C), in order for geological, geophysical and engineering data to be held confidential, the Unit Operator must request confidentiality at the time the data is submitted by indicating "CONFIDENTIAL" on all confidential data items.

1. Depth Structure Maps and digital grids (including faults) for each producing horizon.

2. Gross Isochore Maps and digital grids for each producing horizon

3. Hydrocarbon Net Pay Maps and digital grids for each producing horizon. Also include any fluid contact maps and digital grids used in creation of the hydrocarbon net pay maps.

4. Average Porosity and Hydrocarbon Saturation Maps and digital grids for each producing horizon.

5. Hydrocarbon Pore Feet Maps and digital grids for each producing horizon.

6. Paper and digital copies of representative seismic lines to support the applied for action. Data submitted should include both strike and dip oriented lines, include picked horizons for all mapped surfaces, mapped faults, and wells demonstrating time-depth ties to well log formation picks. Lines should be clearly annotated with seismic survey

ID, seismic volume, line number, picked horizon and well names. Map clearly showing location of all seismic and well sections provided.

7. Paper and digital copies of representative stratigraphic and structural well-log cross-sections. Cross-sections should include, log correlations for all mapped horizons, mapped faults, identified fluid contacts and deepest "oil down to" (ODT) and shallowest "water up to" (WUT) picks. Cross-sections should be of an appropriate scale that all annotations, picks, log curves and scales are clearly legible.

8. Hydrocarbon formation volume factors (B_o, B_g) applied to each reservoir.

9. Oil Gravity and/or Viscosity Maps and digital grids for each producing horizon.

10. Digital file (ascii or Excel spreadsheet) of formation picks in measured depth (MD) and sub-sea true vertical depth (sstvd) for each well, including all plug backs and pilot holes. Picks should include top and base of each producing interval, all known fluid contacts and deepest "oil down to" (ODT) and shallowest "water up to" (WUT) picks.

11. Digital files of calculated curve data from log analysis used in determining reservoir properties and in-place hydrocarbon volumes. Curve data should include total and/or effective porosity, water saturation, permeability, clay volume, and bulk volume water.

12. Criteria /cutoffs (i.e. porosity, saturation, volume shale, permeability) used to determine net pay in each producing horizon.

13. Digital file (ascii or Excel spreadsheet) of calculated rock properties of each producing interval for every well. Data to include, top and base depth of interval in measured

depth and sstvd, gross interval thickness (tvt), net sand thickness, net hydrocarbon pay thickness, net to gross ratio, average reservoir porosity, average reservoir water saturation (Sw), average permeability, permeability height (kh), and hydrocarbon pore feet

14. Location Map clearly showing all existing production, injection and planned wells. Horizontal wells should be shown as a line highlighting the existing and planned productive interval length. In addition, a digital file (ascii or Excel spreadsheet) provided with target x y coordinates for planned wells. For horizontal wells, x y coordinates for heel and toe locations should be provided for both existing and planned wells.

15. Summary of all oil and gas (including non-hydrocarbon constituents) compositional analyses, including gravity and viscosity data.

16. Paper and digital copies of all pressure build-up PTA and fluid PVT analyses.

17. Relative permeability curves for oil/water, gas/oil, and gas/water.

18. Paper and digital copies of all capillary pressure analyses, where available.

19. Calculated original oil and/or gas in place (OOIP and/or OGIP) volumes

20. Estimated ultimate recovery (EUR).

21. Proposed reservoir depletion plan set forth in the current POD.

22. Production forecast.

Exhibit G

GAS SALES AGREEMENT PROVISION

In the event of any conflict, the language of this Exhibit G shall control and supersede the language of Paragraph 2.21 with respect to the gas sales agreement provision. If the WIOs intend to Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, then at the State's request prior to the Commitment date, the State and each individual WIO with a working interest in each Point Thomson Unit lease will enter into negotiations for separate gas sales agreements, with sufficient lead time to ensure the terms below can be met, that include the following terms which the State has requested be common to all such agreements, with additional terms to be negotiated:

(a) The daily volume of gas to be sold by each WIO will be equal to that WIO's proportionate share of the State's total expected daily volume of Point Thomson royalty gas to be delivered into the PTU / PBU Gas Pipeline.

(b) The gas sales agreement would become effective if the WIOs Commit to a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project with gas to be available for delivery on the Commitment date.

(c) The term of each sales agreement will continue until the earlier of: (1) Project Start-up of a Point Thomson Gas Development / Prudhoe Bay Enhanced Recovery Project, (2) Project Start-up of a Major Gas Sale as defined under the Settlement Agreement, or (3) 10 years following the Commitment date.

(d) The delivery point for the gas will be at a mutually agreed location from Prudhoe Bay facilities.

(e) The State and each WIO will establish the price of gas in their contract based on a price mutually agreed between the State and that WIO considering most recent, relevant Alaska North Slope gas sales agreements, including consideration for volume commitments and terms. The gas sales agreement will allow for periodic price re-openers to be negotiated. The initial re-opener may not be triggered sooner than one year after the start of gas sales.

(f) Any royalty due on gas sold under this provision will be paid in value based on the contract price for that WIO.

99 Ind.App. 1; Browning v. Browning, 226 Mo. App. 322, 41 S.W.2d 860, 868.

A combination, or an agreement between two or more persons, for accomplishing an unlawful end or a lawful end by unlawful means. 4 B. & Ad. 345; Cumberland Telephone & Telegraph Co. v. Stevens, D.C.Miss., 274 F. 745, 746; Lauf v. E. G. Shinner & Co., C.C.A.Wis., 82 F.2d 68, 72; Morrison v. Goodspeed, 100 Colo. 470, 68 P.2d 458, 464.

A partnership in criminal purposes. Marino v. United States, C.C.A.Cal., 91 F.2d 691, 113 A.L.R. 975.

The essence of "conspiracy" is an agreement, together with an overt act, to do an unlawful act, or do a lawful act in an unlawful manner. Cooper v. O'Connor, 99 F.2d 135, 142, 69 App.D.C. 100, 118 A.L.R. 1440. Mere knowledge, acquiescence, approval, or attempt on part of one to perpetrate illegal act is insufficient. People v. Link, 365 Ill. 266, 6 N.E.2d 201.

A conspiracy may be a continuing one; actors may drop out, and others drop in; the details of operation may change from time to time; the members need not know each other or the part played by others; a member need not know all the details of the plan or the operations: he must, however, know the purpose of the conspiracy and agree to become a party to a plan to effectuate that purpose. Craig v. U. S., C.C.A.Cal., 81 F.2d 816, 822.

A consultation or agreement between two or more persons, either falsely to accuse another of a crime punishable by law; or wrongfully to injure or prejudice a third person, or any body of men, in any manner; or to commit any offense punishable by law; or to do any act with intent to prevent the course of justice; or to effect a legal purpose with a corrupt intent, or by improper means. Hawk. P.C. c. 72, § 2; Archb.Crim.Pl. 390, adding also combinations by journeymen to raise wages. State v. Murphy, 6 Ala. 765, 41 Am.Dec. 79.

Civil and Criminal Conspiracies

The term "civil" is used to designate a conspiracy which will furnish ground for a civil action, as where, in carrying out the design of the conspirators, overt acts are done causing legal damage, the person injured has a right of action. It is said that the gist of civil conspiracy is the injury or damage. While criminal conspiracy does not require such overt acts, yet, so far as the rights and remedies are concerned, all criminal conspiracies are embraced within the civil conspiracies. Martha Mills v. Moseley, 50 Ga.App. 536, 179 S.E. 159.

Accurately speaking, there is no such thing as a civil action for conspiracy. The better view is that the damage sustained, and not the conspiracy is the gist of the action. The combination may be of no consequence except as bearing upon rules of evidence or the persons liable. Dahlquist v. Mattson, 40 Idaho, 378, 233 P. 883, 885.

The essence of a "civil conspiracy" is a concert or combination to defraud or cause other injury to person or property, which results in damage to the person or property of plaintiff. Conner v. Bryce, Sup., 170 N.Y.S. 94, 95.

CONSPIRATIONE. An ancient writ that lay against conspirators. Reg.Orig. 134; Fitzh.Nat. Brev. 114.

CONSPIRATORS. Persons guilty of a conspiracy. State v. Collins, 88 Mont. 514, 294 P. 957, 961, 73 A.L.R. 861.

Where two or more persons enter on a common enterprise or adventure and criminal offense is contemplated each is a "conspirator". Kelly v. State, 31 Ala.App. 194, 13 So.2d 691, 692.

Those who bind themselves by oath, covenant, or other alliance that each of them shall aid the other falsely and maliciously to indict persons; or falsely to move and maintain pleas, etc. 33 Edw. I. St. 2. Besides these, there are conspirators in treasonable purposes; as for plotting against the government. Wharton.

CONSPIRE. To engage in conspiracy. Wright v. United States, C.C.A.La., 48 C.C.A. 37, 108 F. 805, 809.

It carries with it the idea of agreement, concurrence and combination, and hence is inapplicable to a single person or thing, and one cannot agree or conspire with another who does not agree or conspire with him. Horton v. Johnson, 192 Ga. 338, 15 S.E.2d 605, 615.

CONSTABLE. In American law. An officer of a municipal corporation (usually elected) whose duties are similar to those of the sheriff, though his powers are less and his jurisdiction smaller. He is to preserve the public peace, execute the process of magistrates' courts, and of some other tribunals, serve writs, attend the sessions of the criminal courts, have the custody of juries, and discharge other functions sometimes assigned to him by the local law or by statute. Allor v. Wayne County, 43 Mich. 76, 4 N.W. 492.

In English law. A public civil officer, whose proper and general duty is to keep the peace within his district, though he is frequently charged with additional duties. 1 Bl.Comm. 356. There are "high," "petty," and "special" constables. See the definitions, *infra*.

In Medieval law. A high functionary under the French and English kings, the dignity and importance of whose office was second only to that of the monarch. He was in general the leader of the royal armies, and had cognizance of all matters pertaining to war and arms, exercising both civil and military jurisdiction. He was also charged with the conservation of the peace of the nation. Thus there was a "Constable of France" and a "Lord High Constable of England." Rich v. Industrial Commission, 80 Utah 511, 15 P.2d 641, 644.

Constable of a castle. In English law. An officer having charge of a castle; a warden, or keeper; otherwise called a "castellain." Stat. Westm. 1, c. 7 (3 Edw. I.); Spelman, Gloss.

Constable of England. (Called, also, "Marshal.") His office consisted in the care of the common peace of the realm in deeds of arms and matters of war. Lamb. Const. 4; 3 Steph. Comm. 47; 4 Bla. Comm. 92.

Constable of Scotland. An officer who was formerly entitled to command all the king's armies in the absence of the king, and to take cognizance of all crimes committed within four miles of the king's person or of parliament, the privy council, or any general convention of the states of the kingdom. The office was hereditary in the family of Errol, and was abolished by the 20 Geo. III, c. 43. Bell; Ersk. Inst. 1, 3, 37.

Constable of the exchequer. An officer mentioned in Fleta, lib. 2, c. 31, and in 51 Hen. III, stat. 5, cited by Cowell.

High constables. In England, officers appointed in every hundred or franchise, whose proper duty

AlaskaUSA (800) 525-9094 www.alaskausa.org

common enemy; *defensive* when the parties agree to act in concert in defending each other against an enemy. Wharton.

The marine league, marking the limit of national jurisdiction on the high seas, is equal to three geographical (or marine) miles of 6,075 feet each.

In Spanish and Mexican law, the league, as a legal measure of length, consisted of 5,000 varas, and a vara was equivalent to 33⅓ English inches, making the league equal to a little more than 2.63 miles, and the square league equal to 4,428 acres. This is its meaning as used in Texas land grants. United States v. Perot, 98 U.S. 428, 25 L.Ed. 251; Hunter v. Morse, 49 Tex. 219. "League and labor," an area of land equivalent to 4,605 acres. Ammons v. Dwyer, 78 Tex. 639, 15 S.W. 1049. See Labor.

LEAKAGE. The waste or diminution of a liquid caused by its leaking from the cask, barrel, or other vessel in which it was placed.

Also an allowance made to an importer of liquids, at the custom-house, in the collection of duties, for his loss sustained by the leaking of the liquid from its cask or vessel.

LEAL. L. Fr. Loyal; that which belongs to the law.

LEALTE. L. Fr. Legality; the condition of a *legalis homo*, or lawful man.

LEAN. To incline in opinion or preference.

A court is sometimes said to "lean against" a doctrine, construction, or view contended for, whereby it is meant that the court regards it with disfavor or repugnance, because of its inexpedience, injustice, or inconsistency.

LEAP-YEAR. See Bissextile.

LEARN. To gain knowledge or information of; to ascertain by inquiry, study, or investigation. Fletcher Savings & Trust Co. v. American Surety Co. of New York, 92 Ind.App. 651, 175 N.E. 247, 251; Rambo v. Rambo, 245 Ala. 98, 16 So.2d 4, 5.

LEARNED. Possessing learning; erudite; versed in the law; informed.

In statutes prescribing the qualifications of judges, "learned in the law" designates one who has received a regular legal education, the almost invariable evidence of which is the fact of his admission to the bar. See Jamieson v. Wiggin, 12 S.D. 16, 80 N.W. 137, 46 L.R.A. 317, 76 Am.St.Rep. 585; O'Neal v. McKinna, 116 Ala. 620, 22 So. 905; Potter v. Robbins, 155 Tenn. 1, 290 S.W. 396, 399; Meard v. Moore, 154 Tenn. 566, 290 S.W. 15, 16, 50 A.L.R. 1152.

LEARNING. Legal doctrine. 1 Leon. 77.

LEASE. Any agreement which gives rise to relationship of landlord and tenant. Smith v. Royal Ins. Co., C.C.A.Cal., 111 F.2d 667, 671. Any grant of permissive use. People v. City of Chicago, 349 Ill. 304, 182 N.E. 419, 434.

Contract for exclusive possession of lands or tenements for determinate period. Barnett v. Lincoln, 162 Wash. 613, 299 P. 392, 394. Contract for possession and profits of lands and tenements either for life, or for certain period of time, or during the pleasure of the parties, Femmer v. City of Juneau, C.C.A.Alaska, 97 F.2d 649, 657; Smith v. Royal Ins. Co., D.C.Cal., 5 F.Supp. 435, 437; Intermountain Realty Co. v. Allen, 60 Idaho 228, 90 P.2d 704, 706, 122 A.L.R. 647. Contract for possession and profits of property for a recompense. White v. City of Grand Rapids, 244 N.W. 469, 260 Mich. 267; Stone v. City of Los Angeles, 114 Cal.App. 192, 299 P. 838, 840; Clark v. Harry, 182 Va. 410, 29 S.E.2d 231, 233. Conveyance, grant or devise of realty for designated period with reversion to grantor. Becker v. Manufacturers Trust Co., 262 App.Div. 525, 30 N.Y.S. 2d 542, 544; Moore v. Brandenberg, 234 Ky. 400, 28 S.W.2d 477, 478; Lewes Sand Co. v. Graves, Del., 1 Terry 189, 8 A.2d 21, 24. Conveyance of interest in real property for specified period or at will, Minneker v. Gardiner, 47 Ohio App. 203, 191 N.E. 793. Conveyance or grant of estate in real property for limited term with conditions attached, State ex rel. St. Louis County v. Evans, 246 Mo. 209, 139 S.W.2d 967, 969; Holcombe v. Lorino, 124 Tex. 446, 79 S.W.2d 307, 310; Dean v. Brower, 119 Cal.App. 412, 6 P.2d 580, 581. Conveyance, usually in consideration of rent or other recompense, for life, years, or at will. Smith v. Royal Ins. Co., C.C.A.Cal., 111 F.2d 667, 671; Clark v. Harry, 182 Va. 410, 29 S.E.2d 231, 233; but always for a less time than lessor has in the premises, Leonard v. Autocar Sales & Service Co., 325 Ill.App. 375, 60 N.E.2d 457, 462; Union Central Life Ins. Co. of Cincinnati, Ohio, v. Goode, 222 Iowa 716, 269 N.W. 762, 764. Grant of use and possession, in consideration of something to be rendered, Ottman v. Albert Co., 327 Pa. 49, 192 A. 897, 899.

A contract in writing, under seal, whereby a person having a legal estate in hereditaments, corporeal or incorporeal, conveys a portion of his interest to another, in consideration of a certain annual rent or render, or other recompense. Archb.Landl. & Ten. 2.

Instrument granting exclusive possession or control of premises, or portion, though use be restricted by reservations, will be considered lease, Barnett v. Lincoln, 162 Wash. 613, 299 P. 392, 394.

"Lease" or "hire" is a synallagmatic contract, to which consent alone is sufficient, and by which one party gives to the other the enjoyment of a thing, or his labor, at a fixed price. Civil Code La. art. 2669.

Oral agreement whereby property owner for fixed consideration gave another trapping privileges on his lands for trapping season held contract of "lease." Defelice v. Autin, La.App., 159 So. 648, 649.

The person who conveys is termed the "lessor," and the person to whom they are conveyed, the "lessee;" and when the lessor conveys lands or tenements to a lessee, he is said to lease, demise, or let them. 4 Cruise, Dig. 58; U. S. Nat. Bank of La Grande v. Miller, 122 Or. 285, 258 P. 205, 207, 58 A.L.R. 339; Howard v. Manning, 79 Okl. 165, 192 P. 358, 360, 79 A.L.R. 819. The word when used as verb, means to transfer for term specified therein from lessor to lessee property therein demised, also to let, to farm out, to rent; and there is authority for view that word "lease" may properly be used in two senses, first, in describing act of lessor in giving lease, and again in describing act of lessee in taking lease. Stone v. City of Los Angeles, 114 Cal.App. 192, 299 P. 838, 841.

The term embraces what are described as the covenants of the lease. Goldberg v. Grossman, 105 Pa.Super. 50, 160 A. 138, 139.

Whatever is sufficient to show that one party shall divest himself of possession and the other party shall come into it for a determinate time and for a fixed rental amounts to a lease. General American Life Ins. Co. v. North American Mfg. Co., 320 Ill.App. 488, 51 N.E.2d 619.

When the contract is bipartite the one part is called the "lease", the other the "counterclaim."

Concurrent Lease

One granted for a term which is to commence before the expiration or other determination of a previous lease of the same premises made to another person; or, in other words, an assignment of a part of the reversion, entitling the lessee to all the rents accruing on the previous lease after the date of his lease and to appropriate remedies against the holding tenant. Cargill v. Thompson, 57 Minn. 534, 59 N.W. 638.

Farm Lease

See Farm Lease.

Lease and Release

A species of conveyance much used in England, said to have been invented by Serjeant Moore, soon after the enactment of the statute of uses. It is thus contrived: A lease, or rather bargain and sale upon some pecuniary consideration for one year, is made by the tenant of the freehold to the lessee or bargainee. This, without any enrolment, makes the bargainor stand seised to the use of the bargainee, and vests in the bargainee the use of the term for one year, and then the statute immediately annexes the possession. Being thus in possession, he is capable of receiving a release of the freehold and reversion, which must be made to the tenant in possession, and accordingly the next day a release is granted to him. The lease and release, when used as a conveyance of the fee, have the joint operation of a single conveyance. 2 Bl. Comm. 339; 4 Kent, Comm. 482; Co.Litt. 207; Cruise, Dig. tit. 32, c. 11.

Mining Lease

See Mining.

Parol Lease

A lease of real estate not evidenced by writing, but resting in an oral agreement.

Perpetual Lease

A lease of lands which may last without limitation as to time; a grant of lands in fee with the reservation of a rent in fee; a fee-farm. Edwards v. Noel, 88 Mo.App. 434.

Sublease, or Underlease

One executed by the lessee of an estate to a third person, conveying the same estate for a shorter term than that for which the lessee holds it. The distinction between an assignment of a term for years and a sublease or subletting is that if the lessee parts with his entire interest in the term, it constitutes an assignment and not a subletting, although the transfer is in form a sublease; but if the lessee reserves to himself a reversionary interest in the term, it constitutes a sublease, whatever the form of the transfer. Johnson v. Thompson, 185 Ala. 666, 64 So. 554, 555; Weigle v. Rogers, 202 Mo.App. 520, 213 S.W. 501, 502; Holden v. Tidwell, 37 Okl. 553, 133 P. 54, 55, 49 L.R.A., N.S., 369, Ann.Cas.1915C, 394; Davis v. First Nat. Bank, Tex.Civ.App., 258 S.W. 241, 242.

For "Extension of lease," see Extension.

LEASEHOLD. An estate in realty held under a lease; an estate for a fixed term of years. See Stubbings v. Evanston, 136 Ill. 37, 26 N.E. 577, 11 L.R.A. 839, 29 Am.St.Rep. 300; Washington F. Ins. Co. v. Kelly, 32 Md. 421, 3 Am.Rep. 149; Greene Line Terminal Co. v. Martin, 122 W.Va. 483, 10 S.E. 2d 901, 903. Right of tenant at will is "leasehold." Public Service Co. of New Hampshire v. Voudoumas, 84 N.H. 387, 151 A. 81, 83, 70 A.L.R. 480.

LEASING, or LESING. Gleaning.

LEASING-MAKING. In old Scotch criminal law. An offense consisting in slanderous and untrue speeches, to the disdain, reproach, and contempt of the king, his council and proceedings, etc. Bell.

LEAUTE. L. Fr. Legality; sufficiency in law. Britt. c. 109.

LEAVE. Give. Grimes v. Crouch, 175 Va. 1 S.E.2d 115, 117.

To allow or cause to remain; to let remai moved or undone; to refrain from or neglec ing, doing, or changing; to let stay or cont to let be without interference; to suffer to re subject to another's action, control, or the to suffer to be undisturbed in action. Colli Hartford Accident & Indemnity Co., 178 Va 17 S.E.2d 413, 418.

To give or dispose of by will; to bequea devise. Townsend v. Gordon, 308 Mich. 4 N.W.2d 57, 60; Williams v. McPherson, 216 565, 5 S.E.2d 830, 831. "The word 'leave,' a plied to the subject-matter, *prima facie* me disposition by will." Thorley v. Thorley, 10 438; Carr v. Effinger, 78 Va. 203.

To put, place, deposit, deliver, or the Jaggers v. Southeastern Greyhound Lines, Tenn., 34 F.Supp. 667, 668; Stafford v. Conso ed Bus Lines, 179 Tenn. 185, 164 S.W.2d 1 Collins v. Hartford Accident & Indemnity Co Va. 501, 17 S.E.2d 413, 418, 137 A.L.R. 1046.

Willful departure with intent to remain a and not temporary absence with intention turning. Landreth v. Casey, 340 Ill. 519, 173 84, 85.

LEAVE AND LICENSE. A defense to an a in trespass setting up the consent of the pla to the trespass complained of.

LEAVE NO ISSUE. Not survived by a chi children or their descendants. A spouse of ceased child is not "issue" (*q. v.*). In re V Estate, 38 N.M. 383, 34 P.2d 667, 668, 93 A 1506.

LEAVE OF ABSENCE. Temporary absence duty with intention to return during which remuneration is suspended, State ex rel. Gaughey v. Grayston, 349 Mo. 700, 163 S 335, 341.

LEAVE OF COURT. Permission obtained fi court to take some action which, without such mission, would not be allowable; as, to sue ceiver, to file an amended pleading, to plea eral pleas. See Copperthwait v. Dummer, 1 L. 258.

LEAVE TO DEFEND. The bills of exchang 1855 (18 & 19 Vict. c. 67) allowed actions or and notes commenced within six months aft ing due to be by writ of summons in a form vided by the act, and unless the defendant s within twelve days obtain leave to appear a fend the action, allowed the plaintiff to sign ment on proof of service. This procedure w tained by the judicature act, but abolished in Whart. Lex.

LECCATOR. A debauched person. Cowell.

LECHERWITE, LAIRWITE, or LEGERWIT fine for adultery or fornication, anciently p the lords of certain manors. 4 Inst. 206.

Get AT&T Wi-Fi

PALMARIUM. In civil law. A conditional fee for professional services in addition to the lawful charge.

PALMER ACT. A name given to the English statute 19 & 20 Vict. c. 16, enabling a person accused of a crime committed out of the jurisdiction of the central criminal court, to be tried in that court.

PALMING OFF DOCTRINE. Rule of law itself by which it is determined whether a given state of facts constitutes "unfair competition." Soft-Lite Lens Co. v. Ritholz, 301 Ill.App. 100, 21 N.E. 2d 835, 838.

PALMISTRY. The practice of telling fortunes by a feigned interpretation of the lines and marks on the hand. Also, a trick with the hand. 2 Exch. Div. 268.

PALPABLE. Easily perceptible, plain, obvious, readily visible, noticeable, patent, distinct, manifest. State v. Department of Public Works, 143 Wash. 67, 254 P. 839, 844; Alabama Fuel & Iron Co. v. Minyard, 210 Ala. 299, 97 So. 918, 921. People v. Hughey, 382 Ill. 136, 47 N.E.2d 77, 80.

PAMPHLET. A small book, bound in paper covers, usually printed in octavo form, and stitched. U. S. v. Chase, 10 S.Ct. 756, 135 U.S. 255, 34 L.Ed. 117.

PAMPHLET LAWS. The name given in some states, such as Pennsylvania, to the publication, in pamphlet or book form, containing the acts passed by the state legislature at each of its biennial sessions.

PANDECTS. A compilation of Roman law, consisting of selected passages from the writings of the most authoritative of the older jurists, methodically arranged, prepared by Tribonian with the assistance of sixteen associates, under a commission from the emperor Justinian. This work, which is otherwise called the "Digest," because in his compilation the writings of the jurists were reduced to order and condensed *quasi digestiæ*, comprises fifty books, and is one of the four great works composing the *Corpus Juris Civilis*. It was first published in A. D. 533, when Justinian gave to it the force of law.

PANDER, *n.* One who caters to the lust of others; a male bawd, a pimp, or procurer. Hewitt v. State, 71 Tex.Cr.R. 243, 158 S.W. 1120, 1125.

PANDER, *v.* To pimp; to cater to the gratification of the lust of another. State v. Thibodeaux, 136 La. 935, 67 So. 973, 974. To entice or procure a female, by promises, threats, fraud, or artifice, to enter any place in which prostitution is practiced, for the purpose of prostitution. Boyle v. State, 110 Ark. 318, 161 S.W. 1049, 1051; Crawford & Moses' Dig. § 2707; Humphries v. State, 79 Tex.Cr.R. 637, 186 S.W. 332, 334; To take and detain a female for the purpose of sexual intercourse, on pretense of marriage. Crawford & Moses' Dig. (Ark.) § 2703.

PANDERER. One who solicits for prostitute or lewd woman. Lutes v. Commonwealth, 236 Ky. 549, 33 S.W.2d 620, 622, 74 A.L.R. 304.

PANDOXATOR. In old records. A brewer.

PANDOXATRIX. An ale-wife; a woman that both brewed and sold ale and beer.

PANEL. The roll or slip of parchment returned by the sheriff in obedience to a *venire facias*, containing the names of the persons whom he has summoned to attend the court as jurymen. Beasley v. People, 89 Ill. 571; People v. Coyodo, 40 Cal. 592; Co. Litt. 158*b*.

A list of jurors returned by a sheriff, to serve at a particular court or for the trial of a particular action. Pen.Code Cal. § 1057. The word may be used to denote either the whole body of persons summoned as jurors for a particular term of court, or those selected by the clerk by lot. State v. Gurlagh, 76 Iowa, 141, 40 N.W. 141.

In Scotch law. The prisoner at the bar, or person who takes his trial before the court of justiciary for any crime. This name is given to him after his appearance. Bell.

PANIER, in the parlance of the English bar societies, is an attendant or domestic who waits at table and gives bread, (*panis,*) wine, and other necessary things to those who are dining. The phrase was in familiar use among the knights templar, and from them has been handed down to the learned societies of the inner and middle temples, who at the present day occupy the halls and buildings once belonging to that distinguished order, and who have retained a few of their customs and phrases. Brown.

PANIS. Lat. In old English law. Bread; loaf; a loaf. Fleta, lib. 2, c. 9. See Mandato, Panes De.

PANNAGE. A common of pannage is the right of feeding swine on mast and acorns at certain seasons in a commonable wood or forest. Elton, Commons, 25; Williams, Common, 168.

PANNAGIUM EST PASTUS PORCORUM, IN NEMORIBUS ET IN SILVIS, UT PUTA, DE GLANDIBUS, ETC. 1 Bulst. 7. A pannagium is a pasture of hogs, in woods and forests, upon acorns, and so forth.

PANNELLATION. The act of impaneling a jury.

PANTOMIME. A dramatic performance in which gestures take the place of words. See 3 C. B. 871.

PAPAL SUPREMACY. The supremacy which the Pope claimed not only over the Emperor of the Holy Roman Empire, but over all other Christian princes. The theory was that they stood to the Pope as feudal vassals to a supreme lord; as such, the Pope claimed the right to enforce the duties due to him from his feudal subordinates through an ascending scale of penalties culminating in the absolution of the prince's subjects from the bonds of allegiance, and in the disposition of the sovereign himself. The papal supremacy was overthrown in England by acts of the Parliament which met in 1529 and was dissolved in 1536, ending in the Act of Supremacy. Hannis Taylor, Science of

Judicial Council nominee withdraws

By BECKY BOHRER
Associated Press
(04/08/11 12:09:50)

JUNEAU -- Gov. Sean Parnell's pick for the Alaska Judicial Council has withdrawn his name from consideration, saying he was wrongfully painted as an "extremist" and did not want to bring disrespect to the board.

Don Haase submitted his withdrawal letter to Parnell on Thursday, the day before the Legislature was set to vote on his confirmation. Last week, the Senate Judiciary Committee recommended a "no" vote amid concerns about statements that Haase had made under questioning about criminalizing adultery and possibly premarital sex.

There were concerns, too, with Parnell nominating a Valdez resident when the state constitution calls for the council -- which comprises seven members and is tasked with forwarding nominations for judgeship openings to the governor -- to be a geographically diverse group. Haase would have replaced a member from Ketchikan, leaving one council member representing southeast Alaska.

Parnell spokeswoman Sharon Leighow said the administration would submit another nominee for consideration but she did not immediately know whom or whether the submission would come before the Legislature convenes in joint session later Friday.

Haase told The Associated Press he has a "deep respect for an impartial judiciary." While he said he had no doubt that he could be impartial in assessing judicial nominees, he worried that others may think otherwise given the way he said he's been portrayed in the media.

"I don't consider myself an extremist, and anyone who knows me knows I'm not an extremist," he said.

During his confirmation hearings before the Senate Judiciary Committee, Haase was questioned about his affiliation with a conservative blog that appeared to advocate punishing extra-marital affairs as felonies. Haase said he only posted others' writings and wasn't involved with the blog anymore.

He also was asked by Sen. Joe Paskvan, D-Fairbanks, for his thoughts on a blog post mentioning a move in another state to criminalize adultery. Paskvan asked Haase if he believed it should be a crime; Haase said yes, adding that he believes affairs are harmful to kids and spouses.

Paskvan then asked if Haase believed premarital sex should be a crime; Haase said he could see legitimate reasons for trying to criminalize it.

Haase said in his withdrawal letter that he has "deep respect for our constitutional right to privacy. The unguarded comment made concerning extra-marital affairs was a spur-of-the-moment opinion, given after at most 10 seconds of thought on the issue."

"Immediately after the hearing, I realized the unworkable nature of such a law, both in constitutional terms and the practical matter of enforcement," he wrote, adding that he never suggested he would withhold support for a judicial nominee based on his or her opinion on the issue and that he was never given a chance to clarify his remarks before the committee.

Haase said in an interview that he wasn't pressured to withdraw and appreciated Parnell's support.

He said he had never been under such intense pressure and had grown more in the last two weeks than he had in the past 10 years. "Certainly," he said, "I'm learning to guard my tongue."

Haase's withdrawal was first reported by KCHU radio.

Dear Mr. Clarkson:

Thank you for your letter expressing concern about Larry Cohn's statements in front of the Senate Judiciary Committee last week. Following receipt of that letter, I listened to the hearing. I do not believe that Mr. Cohn's statement was inaccurate or false.

The question by Sen. Coghill and Mr. Cohn's full response were as follows:

> Q: Help me understand, do the non-public members get the same type of scrutiny from a judicial council selectee that a public member like this does?
>
> . . . .

A: Thank you, Mr. Chairman. For the record, my name is Larry Cohn, I am the Executive Director of the Alaska Judicial Council, and I was requested to be available to answer questions today, which is why I called in. As to the appointment of attorney members of the Council, that is done by the Board of Governors. Under our Constitution, that task has been delegated to the Board of Governors of the Alaska Bar Association. I have never been privy to that appointment process. I do know that they, to assist them in their decision, well, my understanding of how the process works is they solicit applicants among the bar and they solicit them by district because of the Constitution's requirement for geographical diversity. So, for example, if there is an opening in the Third Judicial District, they will send a notice around to all of the attorneys in the Third Judicial District and request, solicit applicants. When they have the applicants, I do know that they send out a poll to attorneys within that judicial district for feedback as to the qualifications of those attorneys. And then they meet with the benefit of that poll and make an appointment. But as to what criteria they apply, I have never been privy to that actual kind of discussion.

There is nothing exceptionable in this statement. Mr. Cohn, while acknowledging that he does not know what criteria the Board of Governors ultimately applies in making its appointment, accurately noted that the Board of Governors polls all of the attorneys in the judicial district where a vacancy has occurred. Obviously, the reason to poll all attorneys is to discover the sentiment of bar members as to the applicants for the position. Mr. Cohn used the term "feedback" to describe this process to discover the collective sentiment of the bar members in the district. It is an accurate

term. Moreover, his complete statement makes clear that he is discussing a poll of all attorneys as to their views as to which applicant is the most qualified.

That usage is neither false nor misleading. If one assumes — as did the framers of our Constitution — that attorneys will know well the strengths and weaknesses of the attorneys who practice in their area, and will have every incentive to support those with excellent habits who will represent them well in the nomination of attorneys for judicial office, then it is perfectly accurate to describe a poll of all the attorneys in the affected region as "a poll to attorneys for feedback as to the qualifications of those attorneys."

Perhaps, because you are a lawyer, you mistook Mr. Cohn's use of the word "poll" to signify the more detailed "bar poll," which is sent to all attorneys concerning candidates for judicial office. But there is nothing in his remarks that suggests that interpretation. And I doubt that legislators generally would attach that meaning.

Finally, to get to the nub of Sen. Coghill's question, I would echo Mr. Cohn's statement: The Constitution assigns the task of appointing attorney members of the Judicial Council to the Board of Governors. That would be the entity to definitively answer Sen. Coghill's question.

Your letter requested clarification of the record before the hearings resume. I am informed they resume today. For that reason, I am sending this letter even before the Council has had the opportunity to meet on this matter. Thus, I want to emphasize that I write for myself alone, and not on behalf of the Council. However, I have no reason to believe that the Council would not support these views.

Thank you for your letter and for your interest in the Alaska Judicial Council and its work.

Sincerely,

/s/

Walter L. Carpeneti

Re: Testimony of Larry Cohn to Senate Judiciary Committee, March 23, 2011/Legislative Confirmation of Public Member to the Judicial Council

Dear Chief Justice Carpeneti and Council Members:

Senator John Coghill forwarded to me a recording of Larry Cohn's testimony before the Senate Judiciary Committee of the Alaska Legislature on March 23, 2011, regarding the confirmation of Don Haase as a public member of the Alaska Judicial Council. Senator Coghill asked that I listen to Mr. Cohn's testimony, wherein he appeared before the Committee and testified under oath in his official capacity as Executive Director of the Judicial Council, in order to evaluate the accuracy and/or truthfulness of his testimony. Having now listened to Mr. Cohn's testimony, I must say that I have serious concerns.

After listening to Mr. Haase being questioned by Senators about his various personal and/or political, religious, and moral views, including his views about what the law should or should not be, Senator Coghill inquired as to just exactly what questions attorney members of the Judicial Council are asked prior to their appointment to the Council. In response to Senator Coghill's

inquiry, Senator French called on Mr. Cohn to provide testimony. Mr. Cohn then proceeded to represent to the Committee that attorney members of the Council are appointed by the Board of Governors after they are subjected to "a poll" of "attorneys within [the] Judicial District **for feedback** as to **the qualifications** of these attorneys. . . ." Contrary to Mr. Cohn's testimony, when an attorney member of the Judicial Council is appointed, the Bar Association does nothing more than (1) receive applications (with no information on the applicant); (2) mail a voting card to the attorneys within the Judicial District; and then (3) count the votes for the various applicants – the Board of Governors then appoints the winner of the vote. Contrary to Mr. Cohn's testimony, no poll-seeking "feedback" regarding "qualifications" of attorney applicants to the Judicial Council is conducted, whether within the Bar Association or otherwise.

Mr. Cohn's testimony, whether misinformed or misleading, was plainly inaccurate and false and the record needs to be corrected prior to the continuation of Mr. Haase's confirmation hearings before the Judiciary Committee. At this point in time, Mr. Cohn, through his testimony in his official capacity as Executive Director of the Judicial Council, has left the Senate Judiciary Committee and the public with the false impression that attorney members of the Council are subjected to some form of "polling" for "feedback" regarding their "qualifications" – when in truth they are subjected to nothing more than a "vote" of attorneys. We ask that you direct Mr. Cohn to correct his inaccurate testimony with the Committee.

Thank you for your consideration.

Very truly yours,

BRENA, BELL & CLARKSON, P.C.

Kevin G. Clarkson

Hi Hollis,

Here is the link to a historical roster of AJC members. This table is in our 25th biennial report that was very recently distributed to legislators and others: http://www.ajc.state.ak.us/about/roster.pdf. If you or staff have any other questions, I'll be around until noon at which time I've got a meeting. Thanks.

Larry

MEMORANDUM March 24, 2011

SUBJECT: Senate Judiciary Committee Action Regarding Governor's Judicial Council Proposed Appointment

TO: Senator Hollis French
Attn: Kristen Peterson

FROM: Doug Gardner
Director

The question you asked is whether the Senate Judiciary Committee may "hold" and thereby defeat a governor's proposed appointment to the Alaska Judicial Council by failing to report the name out of committee. The brief answer is no.

Article IV, § 8, establishes the Alaska Judicial Council, and, in relevant part to this discussion, provides that "[t]hree non-attorney members shall be appointed for six year terms by the governor, subject to confirmation by a majority of the members of the legislature in joint session." Uniform Rule 46 refers to the process in AS 39.05.080, and Article III, §§ 25 and 26, for the process the legislature follows when considering appointments by the governor.[1] AS 39.05.080 directs that the presiding officer of each

---

[1] Rule 46. Confirmation of Appointments.
Appointments by the governor are made pursuant to AS 39.05.080. Such appointments are subject to confirmation by a majority vote of the full membership of the legislature in joint session. (Secs. 25 and 26, Art. III, State Constitution.)

Section 3.25 - Department Heads.
The head of each principal department shall be a single executive unless otherwise provided by law. He shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session, and shall serve at the pleasure of the governor, except as otherwise provided in this article with respect to the secretary of state. The heads of all principal departments shall be citizens of the United States.

Section 3.26 - Boards and Commissions.
When a board or commission is at the head of a principal department or a regulatory or quasi-judicial agency, its members shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session, and may be removed as provided by law. They shall be citizens of the United States. The board or

house, in this case the President of the Senate, to assign the name of each of the governor's proposed appointments to a standing committee of each house for "a hearing, report, and recommendations. . ." AS 39.05.080(2)(B) goes on to direct that "the legislature shall, before the end of the regular session in which the appointment is presented, in joint session assembled, act on the appointments by confirming or declining to confirm by a majority vote of all of the members the appointments presented." If the legislature fails to act to confirm or decline to confirm an appointment during the regular session in which the appointment is presented, the legislature's failure to act constitutes a "declination to confirm." AS 39.05.080(3).

If a standing committee assigned to conduct a hearing regarding a prospective appointment fails to write a report or make a recommendation to the body, the result will be that the legislature will take up the name on the floor for confirmation despite the lack of committee action, as provided in AS 39.05.080(2)(B) and Article III, § 8 of the Alaska Constitution, and either confirm or decline to confirm the appointment. While it is less likely, it is possible under AS 39.05.080 as previously noted, that the legislature could take no action, thereby declining the appointment.

So, a committee that writes no report or makes no recommendation will have no effect on the procedural process of a governor's appointment being considered by a joint session of the legislature. It is unclear whether other members in a joint session would give more weight to a decision by the committee not to write a report with a recommendation, or to a committee report that articulates the reasons for either supporting confirmation or urging declination of confirmation.

Honorable Chair and Members of the Judiciary Committee,

Thank you for giving so much of your time to veting those of us volunteering to work within boards and commissions. Your questions were thoughtful and appreciated. I am confident that you have the well being of Alaska foremost in your mind.

I am new to this process, so I am writing to ask what being held over means to me. Will there be a second hearing for me to attend? If there are discussions about my candidacy, will I be invited to listen in or respond?

Thank you.

Don Haase

PS: Since the stated reason for holding my name over was geographic representation, you may be interested in seeing the roster, listing all members since statehood with their hometown. http://www.ajc.state.ak.us/about/roster.pdf. By my count, the First Judicial district has had 24 members, 2nd 2, 3rd 23, and 4th 20. The constitutional requirement is "Appointments shall be made with due consideration to area representation and without regard to political affiliation." Article IV, Section 8.

Cindy Smith

From: Roger Withington
Sent: Friday, April 01, 2011 10:35 AM
To: Cindy Smith
Subject: Standing Committee Reports and gubernatorial nominees

Good morning Cindy,

Using Infobases, I have searched the House and Senate Journals from 1989 (16th Legislature) forward and found no instances where Standing Committee Reports, that report that the particular committee has considered gubernatorial nominees for commissioners, and members of boards and commissions, etc., have indicated that the committee, or specific members of the committee, do not believe a particular nominee should be confirmed by the entire Legislative body.

It appears, however, that the way these reports are recorded in the Journal has changed over the years. For example, during the 16th and 17th Legislatures, the committee vote for each nominee was included in the Committee Report. Two examples, one from the 16th Legislature and one from the 17th Legislature are as follows.

16th Legislature
House Journal March 3, 1989
REPORTS OF STANDING COMMITTEES
The State Affairs Committee has considered the following appointments:

Athletic Commission
Joe B. "BJ" Hall
Recommending confirmation (2): Boucher (Chairman), Zawacki
No recommendation (2): Spohnholz, Hanley

Athletic Commission
James A. Reid
Recommending confirmation (3): Boucher (Chairman), Hanley, Zawacki
No recommendation (1): Spohnholz

Personnel Board
Michael C. Andrews
Recommending confirmation (2): Boucher (Chairman), Spohnholz
No recommendation (2): Hanley, Zawacki

The Judiciary Committee has considered the following appointment and recommends confirmation:

Attorney General
Douglas B. Baily
The report was signed by Gruenberg and Goll (Co-chairmen), Martin, Davidson, Ellis, Miller and M. Davis.

17th Legislature
House Journal, March 18, 1991
REPORTS OF STANDING COMMITTEES
The Resources Committee has considered the following appointments:

Big Game Commercial Services Board
Glen R. Alsworth
Recommending confirmation: Davidson, Carney, Ivan, Hudson, Moyer, Leman, Finkelstein, Lincoln

Board of Game
Richard Burley
Recommending confirmation: Hudson, Moyer, Leman
Recommending against confirmation: Lincoln
No recommendation: Davidson, Carney, Ivan, Finkelstein

The reports were signed by Representative Davidson, Chairman.

It appears that during the 18th Legislature, Journal entries started transitioning from including committee member votes to including only a generic statement such as:

> The report stated that though there were no stated objections in the report regarding confirmation of the named individual, this does not necessarily indicate an intention of a committee member to vote for or against the individual named at the time of the joint session on confirmation.

or, more simply:

> This does not reflect an intent by any of the members to vote for or against the confirmation of the individual during any further sessions.

In addition, it appears that for the more recent Legislatures, either one of the two statements noted above are included in the Standing Committee Reports, or a list of the committee members who signed the Committee Report, with no accompanying statement, is included.

I have asked Ms. Lowell and Ms. Waid if there are any policies or procedures that describe or dictate how Standing Committee Reports, that report that gubernatorial nominees have been considered, are entered into the Journal, but as yet, neither have responded. I will forward any response I receive from them.

Please keep in mind that although I believe my search of the Journals to be thorough, due to the disparate nature in which committee reports are recorded, I may have inadvertently missed some entries.

Please let me know if you need anything else.

Subject: RE: Standing Committee Reports and gubernatorial nominees

Good morning Cindy,

Below is Ms. Waid's response to my questions about policies or procedures that describe or dictate how Standing Committee Reports are entered into the Journal.

> Roger,
>
> On the Senate side we provide the Committees with a template of a form they can use when they report the nominees out of committee. In the far past, they came up with their own reports. When I first started working in the Senate Secretary's Office (that was in 1996) the Committee Aides would ask us for examples of report forms. We used to provide them with several options, but the report you noticed was what usually came back. I think we just started providing them with that template when they asked. They are free to come up with their own report, but lately they seem to be using our generic report.
>
> Let me know if this is what you were asking me.
>
> Kirsten

Thanks again.

Using Infobases, I have searched the House and Senate Journals from 1989 (16th Legislature) forward and found no instances where Standing Committee Reports, that report that the particular committee has considered gubernatorial nominees for commissioners, and members of boards and commissions, etc., have indicated that the committee, or specific members of the committee, do not believe a particular nominee should be confirmed by the entire Legislative body.

It appears, however, that the way these reports are recorded in the Journal has changed over the years. For example, during the 16th and 17th Legislatures, the committee vote for each nominee was included in the Committee Report. Two examples, one from the 16th Legislature and one from the 17th Legislature are as follows.

16th Legislature
House Journal March 3, 1989
REPORTS OF STANDING COMMITTEES
The State Affairs Committee has considered the following appointments:

Athletic Commission
Joe B. "BJ" Hall
Recommending confirmation (2): Boucher (Chairman), Zawacki
No recommendation (2): Spohnholz, Hanley

Athletic Commission
James A. Reid
Recommending confirmation (3): Boucher (Chairman), Hanley, Zawacki
No recommendation (1): Spohnholz

Personnel Board
Michael C. Andrews
Recommending confirmation (2): Boucher (Chairman), Spohnholz
No recommendation (2): Hanley, Zawacki

The Judiciary Committee has considered the following appointment and recommends confirmation:

Attorney General
Douglas B. Baily
The report was signed by Gruenberg and Goll (Co-chairmen), Martin, Davidson, Ellis, Miller and M. Davis.

17th Legislature
House Journal, March 18, 1991
REPORTS OF STANDING COMMITTEES
The Resources Committee has considered the following appointments:

Big Game Commercial Services Board
Glen R. Alsworth
Recommending confirmation: Davidson, Carney, Ivan, Hudson, Moyer, Leman, Finkelstein, Lincoln

Board of Game
Richard Burley
Recommending confirmation: Hudson, Moyer, Leman
Recommending against confirmation: Lincoln
No recommendation: Davidson, Carney, Ivan, Finkelstein

The reports were signed by Representative Davidson, Chairman.

It appears that during the 18th Legislature, Journal entries started transitioning from including committee member votes to including only a generic statement such as:

> The report stated that though there were no stated objections in the report regarding confirmation of the named individual, this does not necessarily indicate an intention of a committee member to vote for or against the individual named at the time of the joint session on confirmation.

or, more simply:

> This does not reflect an intent by any of the members to vote for or against the confirmation of the individual during any further sessions.

In addition, it appears that for the more recent Legislatures, either one of the two statements noted above are included in the Standing Committee Reports, or a list of the committee members who signed the Committee Report, with no accompanying statement, is included.

I have asked Ms. Lowell and Ms. Waid if there are any policies or procedures that describe or dictate how Standing Committee Reports, that report that gubernatorial nominees have been considered, are entered into the Journal, but as yet, neither have responded. I will forward any response I receive from them.

Please keep in mind that although I believe my search of the Journals to be thorough, due to the disparate nature in which committee reports are recorded, I may have inadvertently missed some entries.

Please let me know if you need anything else.

Alaska State Legislature

Please enter into the record my testimony to the Senate Judiciary
committee name

Committee on Confirmation: Demboski, AK Comm on Judicial Conduct, dated 3-23-11
bill # / subject public hearing date

My name is David Haeg and I represent myself and my family.

I thank the Senate Judiciary Committee for the opportunity to speak today.

Ms. Demboski has stated that she applied to be a member of the Commission on Judicial Conduct because she is a public-minded individual with an interest in the law and, as such, wants to ensure fair and equitable treatment for all parties involved in court cases.
Given this assurance on her part, I would hope that if evidence of malfeasance on the part of a judge, the commission and/or its sole investigator came to light that she would follow-up on this evidence and see that the matter is fully vetted and not swept under the carpet, especially if the information was forwarded to the Commission by a Superior Court Judge and also provided to the Ombudsman.

I look forward to hearing her thoughts on this issue and trust that if confirmed she will indeed do the right thing and not fall prey to the "good ol' boy mentality" of cronyism in the face of judicial corruption and investigatory negligence.

Again, thank you to the Chair and the Committee members for taking my comments.

Signed:

David Haeg

Cindy Smith: I am scheduled to be in attendance at a parole hearing at that time but I'm sure I could be excused by the chair to attend the confirmation . The parole hearings are scheduled for that full week. I will assume at this time that I can be available for the Committee hearing. Respecfully, Daniel Morris

Bernice "Berni" Troglio

Objective: Position with the Alaska Police Standard Council

SUMMARY OF QUALIFICATIONS

- Over 15 years of experience with substance abuse in program coordination and case management (6 years working with the sex offender criminal population and 3 years as a Mental Health Probation Supervisor)
- Strong organizational and case management skills with an attention to detail and the ability to master and apply new knowledge.
- Skilled in providing a confidential, safe, supportive, and non-judgmental environment while ensuring adherence to Local, State, and Federal policy guidelines.

TECHNICAL SKILLS & ABILITIES

Working knowledge of program coordination/case management procedures to include:

•Interviewing techniques •Individual/Group Counseling

•Understanding & Analyzing Individual/Group Human Behaviors

•Developing, implementing, and maintaining objectives for short and long-range plans with measurable indicators for improving statewide sex offender supervision.

Ability to:

•Meet and interview individuals.

•Interpret patterns among clientele in order to evaluate and analyze data in developing a therapeutic course in treatment or identification of social services if appropriate.

•Communicate effectively with clients and families in a manner that promotes respect and confidence.

•Analyze diverse situations and take prompt, effective action.

•Communicate verbally and in writing to a culturally diverse population.

•Analyze problem areas with regard to sex offender supervision, submit recommendations to the Director of Probation & Parole, and implement corrective action planning.

EMPLOYMENT HISTORY

Probation/Parole Officer II-III 1/99 – current

STATE OF ALASKA, DEPT OF CORRECTIONS Anchorage, AK

- Responsible for monitoring, instructing and demonstrating appropriate policy and procedures for Probation Officer II's and Community Counselors in the Mental Health and Sex Offender Units.
- Oversee case management of sex offenders by auditing probation officer's caseloads throughout the state for compliance with standard operating procedures and participating in weekly case reviews of sex offender probation cases.
- Supervise Adult Probation Officer II's with specialized caseloads of convicted sex offenders from various regions. Support and manage line officers as a trainer and mentor providing the latest information and best practices in the field of supervising sex offenders.
- Provide technical assistance to sex offender team members, Interstate Compact staff, victims of sexual assault, community groups, and others throughout the State.

- Continued -

STATE OF ALASKA, DEPT OF CORRECTIONS Cont'd

- Maintain training records for employees, monitor performance of staff, and observe work product to insure compliance with Department of Corrections Policy and Procedure.
- Develop, plan, coordinate, and schedule regular meetings to provide for consistent and accurate dissemination of information for the division and the department.
- Enforce policies and procedures, recommend disciplinary action, counsel staff on violation of Policy and Procedure, and write procedural memos to assure understanding of duties.
- Assist in the development of a model forensic polygraph program in Alaska to incorporate into the current supervision and treatment of sex offenders the development of the Containment Model.
- Research, organize, maintain, and disseminate a directory of approved polygraph examiners with specialized sex offender specific polygraph designations.
- Provide recommendations on contract awards, program development, practices and procedural development, and staff development.
- Respond to police inquiries and assist police officers and other probation officers with arrests, remands, and coordination of inquiry.
- Address grievances and questions from individuals or organizations following guidelines established by standard operating procedures and current contractual agreements.
- Develop and implement practices to improve statewide sex offender supervision, mental health services, and volunteer programming in Community Corrections.
- Monitor national literature and ensure that the Division is apprised of the most current trends in risk-management strategies for sex offenders.

Primary Counselor II 4/96 – 1/99
SALVATION ARMY CLITHEROE CENTER Anchorage, AK

- Managed cases at the 6th Avenue and Highland Mountain Correctional Centers.
- Provided educational and intervention services to incarcerated substance abusers.
- Prepared written case documentation and reports on a daily, monthly, quarterly, and annual basis.
- Performed therapeutic counseling, social work, and case management to residents in the chemical dependency unit.
- Coordinated individual client treatment plans to achieve individual and department rehabilitation goals.
- Participated in individual and group counseling sessions, educational classes, family counseling, didactic presentation, recreational therapy, and unit meetings.
- Determined, suggested, and participated in departmental in-service training.
- Compiled daily client data for funding requirements and maintained accurate treatment record.

- Continued -

QUALIFICATIONS SUMMARY

Seasoned leadership executive with over 19-years experience in creating, developing, and executing strategic plans for assessment, consolidation, cost reduction, human resource allocation, team-building, training, and improving the value of organizations. Innovative leader and mentor, who displays solid convictions, morals, integrity, and business ethics.

PROFESSIONAL EXPERIENCE AND ACCOMPLISHMENTS

LEADERSHIP

- Leads subordinates by example, actively responding to calls for service and participating in high-risk situations. Possesses and demonstrates the ability to remain calm, prioritize information, provide accountability and make decisions in stressful situations.

- Actively solicits citizen input and participation through face-to-face interactions. Seeks cooperation and collaboration between agencies in continued efforts to improve community and organizational quality of life.

- Nominated and selected to attend the 198th Session of the FBI National Academy including participation and successful completion of the Bureau's inaugural Leadership Challenge program.

COMMUNICATIONS

- Highly skilled in verbal and hands-on presentations; effectively addresses and engages a wide variety of audiences, from students and elders to employees and administrators, promoting overall community and organizational goals.

- Consistently called upon to write policy and operational procedures for an organization whose daily mission is the safety and protection of the communities it serves.

- Facilitates problem-solving meetings and employee performance discussions, generating employee input and involvement regarding organizational concerns.

TRAINING AND INSTRUCTION

- Dedicated to the safety of police officers and community members through the development and implementation of organized, engaging, and innovative training. Has conducted over 1500 hours of instruction in topics ranging from community/police partnerships, leadership, use of force, firearms, control tactics, report writing, and field training officer programs.

- Created and implemented the North Slope Borough Police Department's Field Officer Training Program. This program is used as the current standard for "department specific " training programs for the Alaska Police Standards Council, the certifying agency for police officers in the State of Alaska.

Kelly Alzaharna

TRAINING AND INSTRUCTION (cont.)

- Develops and delivers presentations at international seminars for the American Society of Law Enforcement Trainers, addressing participants from the U.S. and international communities. Provided "Focus on Leadership" interviews for the FBI National Academy in Quantico, Virginia.

Cindy Smith

From: Theresa Nangle Obermeyer [tobermeyer@gci.net]
Sent: Monday, February 07, 2011 8:54 AM
To: Sen. Hollis French
Cc: Lila Hobbs; Andy Moderow; Kristen Peterson; Cindy Smith; Thomas S. Obermeyer, Attorney
Subject: Nomination of Mr. William Granger, Wells Fargo, to Alaska Bar Association Board of Governors 3/1/11

Senator French and Staff:

This is to oppose the appointment of Mr. William Granger, Wells Fargo, as a "Public Member" again to Alaska Bar Association Board of Governors for a term of three years from 3/1/2011 to 3/1/2014. To my memory, Mr. Granger was appointed as a "Public Member" to Board of Governors originally by Governor Tony Knowles for the three year term and again appointed by Governor Frank Murkowski for another three year term. He has already served on Board of Governors for two consecutive terms. He was replaced for one three year term and now is supposed to serve again for anther three year term. Mr. Granger has not and will not be on Alaska Bar Association Board of Governors to serve the public. He has been and will be on Board of Governors only to serve Wells Fargo Bank.

Please let me know if I should call in to testify against Mr. Granger's appointment.

I will call you office.

Sincerely yours,

Theresa Nangle Obermeyer
3000 Dartmouth Drive

Boards & Commissions Factsheets

POLICE STANDARDS COUNCIL

Board: Alaska Police Standards Council
Board identification number: 081

Department: DEPARTMENT OF PUBLIC SAFETY

Authority: AS 18.65.140

Status: Active

Sunset date:

Requirements: Legislative Confirmation

Prohibitions: None

Term: 4 years

Description: 13 members: 11 appointed by the governor. The council consists of the following persons: 4 chief administrative officers or chiefs of police of local governments; the commissioner of public safety or a designee; the commissioner of corrections or a designee; 2 persons, each of who has been certified for 5 years or more by the council under this chapter, one of whom serves as a police officer and one of whom serves as a probation officer, parole officer, municipal correctional officer, or correctional officer; 1 correctional administrative officer who is employed at the level of deputy director or higher; and, 4 members of the public at large with at least 2 from the communities of 2,500 population or less.

Function: Establishes and enforces minimum standards for employment, certification, training and retention of police, correctional, probation, parole and municipal correctional officers; adopts regulations; investigates potential misconduct issues related to potential decertification of officers.

Chair: Board selects.

Special facts: Notwithstanding AS 18.65.160, the governor shall specify the terms of the person appointed under AS 18.65.150(4), added by sec. I of this Act, to the Alaska Police Standards Council, as follows: (1) one person shall be appointed for a two-year term; and (2) one person shall be appointed for a four-year term

Compensation: Standard Travel and Per Diem. No additional compensation.

Meetings: Normally 2 times per year – additional special meetings as required; 8 days maximum per year

PAST PRESIDENT AND VICE-PRESIDENT, of the Alaska Chiefs of Police Association. Served on legislative committees related to statewide criminal justice issues.

LIFE MEMBER, of the International Chiefs of Police, Alaska Chiefs of Police and the Alaska Peace Officers Association.

MEMBER, Alumni of the University of Louisville, Southern Police Institute.

Mew, Mark
Alaska Police Standards Council

Mark T. Mew

Mark Mew is the appointed chief of the Anchorage Police Department. He comes to the APD from the Anchorage School District, where he served as Director of Security and Emergency Preparedness for six years.

Mew had a full career in police service prior to his tour with the school district. He retired from the Anchorage Police Department in 2003, as Deputy Chief, after twenty years of service. While at the APD, Mew worked in patrol, detectives, SWAT, and at various administrative posts. Through much of his career he was responsible for implementing new police communications and technology systems.

Prior to coming to Alaska Mew worked at the Lane County (Oregon) Sheriff's Office, in the Corrections Division.

Mew was an appointee to the municipality's Public Safety Advisory Commission for several years. He has also been active in the National Emergency Number Association, the Alaska Association of Chiefs of Police, the McLaughlin Youth Center Community Advisory Board, the Boy Scouts of America, and many other associations, committees, and task forces.

Mew holds a bachelor's degree in Anthropology from the University of Oregon, and is a graduate of the FBI National Academy in Quantico, VA.

Mew makes his home in Eagle River, where he and his wife have raised a son and daughter.

Demboski, Amy
Commission on Judicial Conduct

Amy L. Demboski

INTRODUCTION

Initially, I acquired my dental skills in the military. After military service, I entered the private sector and have worked in almost every aspect of a dental practice. During the past 15 years I have grown as a person, an employee, and a leader. Through mutual respect, building those up around me, working hard, and leading by example; I have found we are truly limited by our own ambition. While working full time, I went to school full time, and in 5 years, achieved two college degrees. The secret to success: put one foot in front of the other, focus on the strengths of your co-workers, and be open to the wisdom and experience of others.

SUMMARY OF QUALIFICATIONS

- Marketing, Advertising, Human Resources, Payroll, Accounting, Collections
- Project Management: Development of new practices & expansion of existing practices
- Coordination of legal affairs: LLC incorporation, contract law, leasing
- Direct Patient Care: Certified Dental Assistant
- OSHA Compliance Director, Emergency Preparedness Facilitator, Training Coordinator

INTRODUCTION
initially, I acquired my dental skills in the military. After military service, I entered the private sector and have worked in almost every aspect of a dental practice. During the past 15 years I have grown as a person, an employee, and a leader. Through mutual respect, building those up around me, working hard, and leading by example; I have found we are truly limited by our own ambition. While working full time, I went to school full time, and in 5 years, achieved two college degrees. The secret to success: put one foot in front of the other, focus on the strengths of your co-workers, and be open to the wisdom and experience of others.

SUMMARY OF QUALIFICATIONS
• Marketing, Advertising, Human Resources, Payroll, Accounting, Collections

• Project Management: Development of new practices & expansion of existing practices
• Coordination of legal affairs: LLC incorporation, contract law, leasing
• Direct Patient Care: Certified Dental Assistant
• OSHA Compliance Director, Emergency Preparedness Facilitator, Training Coordinator

EMPLOYMENT
AUG 2005 to OCT 2010 - ADVANCED FAMILY DENTAL CARE
Project Management, Office Management, Human Resources, Payroll, Direct Patient Care
• Marketing, Advertising, Human Resources, Payroll, Accounting & Collections
• Project Management, Coordination of Legal Affairs, Contract Law & Leasing
• Managed & Coordinated all aspect of business
• Direct Patient Care: Expanded Duties Assistant
• OSHA Compliance Director, Emergency Preparedness Facilitator, Training Coordinator

JAN 2007 to MAY 2009 - ADVANCED FAMILY DENTISTRY
Project Manager, Human Resource Coordinator, Payroll, Direct Patient Care
• Facilitated Development & Management of all aspects of new business
• Marketing, Advertising, Human Resources, Payroll
• Training & Support of all new staff members

DEC 2000 TO AUG 2005 - LEE ELLENBURG, DDS
Dental Assistant
• Direct Patient Care: radiology, crown & bridge impressions, temporaries, impressions for all dental appliances, assist during all surgeries, ordering dental supplies

Education
BA Justice UAA 2006
BA History UAA 2007

From: Theresa Nangle Obermeyer <tobermeyer@gci.net>
Subject: **Renomination of Mr. William Granger to Board of Governors, Alaska Bar Association**
Date: March 9, 2011 5:47:06 PM AKST
To: "Honorable Hollis French II, Attorney" <Senator_Hollis_French@legis.state.ak.us>, "Honorable Bill Wielechowski, Attorney" <senator_bill_wielechowski@legis.state.ak.us>, "Honorable Joe Paskvan, Attorney" <senator_joe_paskvan@legis.state.ak.us>, Honorable Lesil McGuire <Senator_Lesil_McGuire@legis.state.ak.us>, Honorable John Coghill <senator_john_coghill@legis.state.ak.us>
Cc: Lila Hobbs <lila_hobbs@legis.state.ak.us>, Andy Moderow <andy_moderow@legis.state.ak.us>, Kristen Peterson <kristen_peterson@legis.state.ak.us>, Cindy Smith <cindy_smith@legis.state.ak.us>, Karla Hart <karla_hart@legis.state.ak.us>, Christy Harvey <christy_harvey@legis.state.ak.us>, Michelle Sydeman <michelle_sydeman@legis.state.ak.us>, Jake Hamburg <jake_hamburg@legis.state.ak.us>, Anna Sorensen <anna_sorensen@legis.state.ak.us>, Jeff Stepp <jeff_stepp@legis.state.ak.us>, Mike Pawlowski <michael_pawlowski@legis.state.ak.us>, Esther Tempel <esther_tempel@legis.state.ak.us>, Genevieve Wojtusik <genevieve_wojtusik@legis.state.ak.us>, Karen Lidster <karen_lidster@legis.state.ak.us>, Rynnieva Moss <rynnieva_moss@legis.state.ak.us>

Senator French and Alaska Judiciary Committee:

My testimony against the Renomination of Mr. William Granger to Board of Governors Alaska Bar Association can be heard online. It was today at about 1:42 P.M. http://www.legis.state.ak.us/basis/get_audio.asp?session=27&chamber=H&comm=JUD&date1=3/9/2011&start=1337. If you have any questions technically, please call (907)465-2870.

Below is a brief summary of what I said:

1. I began by asking for clarification as to whether Mr. Granger was on the line as I understood that he had just testified but I had been unable to hear what he said. My testimony was taken individually without the opportunity to hear what Mr. Granger said. He was allowed to respond after I had been disconnected.

2. I mentioned that I have mailed and/or emailed 60 copies of everything that has gone to the currently serving 60 member Alaska Legislature since 1992 without response. I stated that I refuse to be a partisan as I join hands with any ethical person without regard to partisan politics.

3. I stated that I never got involved at all in my husband's career as an attorney until one decade after Tom had perseveringly dedicated himself to becoming licensed to practice law in Alaska beginning in 1984. In 1994 I spoke for the first time to Board of Governors Alaska Bar Association . I was then routinely mailed the notices of the Meetings until January 15, 1999 when Ms. Deborah O'Regan, Executive Director, and Mr. Stephen Van Goor, Alaska Bar Counsel, "set me up" at the Bar office while the Board of Governors was at court. Three Anchorage Police officers arrived and I was jailed over night.

4. I brought up the fact that former Chief Justice Alex Bryner "descended" Alaska Bar Association Board of Governors in May, 2010. I am certain that in no other state in the U.S. is a former Chief Justice a member of a Board of Governors. We live in the only state that does not have a law school. Chief Justice Bryner's descension to Board of Governors is an example of control. Where is any level of creative thinking?

5. I talked about the grave security breach during the July, 2010 Alaska Bar Exam. For the first time in 26 1/2 years when the Exam began, there were four missing tests so the entire room of Alaska Bar Exam applicants in Anchorage had to wait about 35 minutes until Ms. Deborah O'Regan went back to the Bar office and xeroxed four more tests. As you know, the applicants had to have signed up by June 15 in order to take Alaska Bar Exam. Af first, I thought someone must have stolen four Exams but upon reflection I realized that four different applicants must have stolen the Exam. Everyone in the room except Tom Obermeyer might have had to test. You know Tom and how professional he is. Tom wrote to Board of Governors about this outrageous security breach. To my knowledge, no investigation was undertaken and Tom was again failed when Alaska Bar Exam results came out in November, 2010. Please ask Tom if you would like to read "Irregularities during the July, 2010 Alaska Bar Exam in Anchorage and Background" dated 8/30/10.

6. I discussed that the three "Public Members," Alaska Bar Association Board of Governors, are two Alaska dentists, Dr.

David Eichler and Dr. Don McLean, and now again Mr. Granger, who represents Wells Fargo, the fifth largest bank in the U.S, who had already served for 2000-2009. I wish I could say that I think these three "Public Members" represent the public's interest on Board of Governors but I observe just the opposite. I see control and going along with whatever the nine lawyer members do.

7. I spoke about the 27 years that Alaska Bench and Bar have been allowed to treat a family of six the way our family has been treated. I mentioned that ethical people do not take a person's money once without a thought of helping the individual. Alaska Bar Association continues to take our money seemingly without any thought of helping one of their own, Tom Obermeyer, Attorney. Paying for, studying for, and taking another three day test of minimal competency, Alaska Bar Exam, is the only option Tom, licensed since 1990 by similar Missouri Bar Exam, a state that has reciprocity with Alaska, has been given in 27 years.

8. I mentioned 27th Alaska Legislature 1st Session "Draft Bill Authorizing Admission of Reciprocal Applicants to Alaska Bar Association who have passed a written bar exam in a reciprocal state to the active practice of law; and providing for an effective date" http://www.tobermeyer.info/pdfs/reciprocity2011.pdf and the precedent "Laws of Alaska 1966 HB 520 Chapter No. 144 Authorizing the Department of Labor to enter into reciprocal agreements with other states regarding wage claims; and providing for an effective date" http://www.tobermeyer.info/pdfs/LawsofAK.pdf . This "Laws of Alaska 1966 HB 520" resulted in Mr. Gil Johnson, Attorney, (deceased) and possibly others being licensed to practice law in Alaska. Does "Draft Bill Authorizing Admission of Reciprocal Applicants to Alaska Bar Association" harm the public? I spoke of Governor Hickel's question:"Why don't they license you. They can discipline you if you do something unethical."

I asked if any of you had a question but was disconnected. Please let me know if you do.

I appreciated the opportunity to be heard by Alaska Senate Judiciary Committee today but it had no effect at all as you endorsed Mr. Granger's Renomination unanimously.

Sincerely yours,

Theresa Nangle Obermeyer, Ph.D.
3000 Dartmouth Drive

Representative Thompson and Alaska House Judiciary Committee:

I called in yesterday and listened to the interviews of the various nominees for Alaska Commission on Judicial Conduct, Alaska Judicial Council, and Violent Crimes Compensation Board, and Alaska Bar Association Board of Governors.

I was called on at about 1:40 P.M. I was badgered and cut off by you, Representative Thompson, after about a minute. Why?

I began by talking about the appointment of Nora Barlow, Partner, Delision Moran (brother of Bill Moran, current Chair, Alaska Permanent Fund Board per http://www.apfboardconfirmation.org/moran.html) to Violent Crimes Compensation Board (VCCB). I have had three Claims and three Hearings per http://www.tobermeyer.info/aquittal.html through VCCB after having been assaulted three times. After each Hearing, the lawyers who were the Hearing Officers were highly paid and they did not even attest to my veracity in their "Findings." Per the third Claim, I had been acquitted in a jury trial 3AN-98S-2211 CR State of Alaska/Hilton Anchorage vs. Theresa Nangle Obermeyer, Ph.D., on the same issue and still Mr. Paul Stockier, Hearing Officer, did not agree to my veracity. Mr. Stockier was and is an "Officer of the Court." In any other state in the U.S. he would have been disciplined if not disbarred for not agreeing to my acquittal in the seven day jury trial.

I was not given time to speak against the Reappointment of Mr. Bill Granger, "Public Member," Alaska Bar Association Board of Governors who was already on Board of Governors 2000-2009. I heard a little of Mr. Granger's comments. He actually stated how proud he is of Alaska Bar Association. On what basis is Mr. Granger proud of Alaska Bar Association? He should be ashamed. The two primary functions of Alaska Bar Association are Alaska law licensure and discipline. Regarding Alaska law licensure, my husband, Thomas S. Obermeyer, Attorney, licensed by similar Missouri Bar Exam, since 1990 and denied reciprocity, is still not licensed to practice law in Alaska after 27 years of effort. Regarding discipline, I spent a decade between 1993 and 2003 per http://www.tobermeyer.info/akbar.html , http://www.tobermeyer.info/pdfs/30complaints.pdf , http://www.tobermeyer.info/pdfs/complaintdetails.pdf , http://www.tobermeyer.info/pdfs/akbartotno061804.pdf , and http://www.tobermeyer.info/pdfs/tnotoakbar061804.pdf trying to be assisted by Alaska Bar Association while I was being treated unethically by Alaska Bar members. I know today that my treatment was worse because I gave Mr. Stephen Van Goor, Alaska Bar Counsel since 1980, transcripts and lengthy timely stamped documents as part of each complaint. In August, 2004, Mr. Van Goor filed a complaint against my husband's Missouri law license to Missouri Supreme Court over the names of the Alaska attorneys I had filed complaints against being posted on my website. Missouri Supreme Court dismissed Mr. Van Goor's complaint in silence. Since Mr. Van Goor did not want the names of the Alaska Bar members posted on my website, I took them off http://www.tobermeyer.info/pdfs/30complaints.pdf. That was in 2004. My husband and I have complied with whatever has been requested of us by Board of Governors and Mr. Van Goor to no avail. My husband has continued to be failed on Alaska Bar Exam, the only option he has been given in 27 years.

Why should citizens such as myself call to speak about important issues being presented to Alaska State House Judiciary Committee if we are going to be badgered and cut off as I was yesterday? I am owed an apology.

Sincerely yours,

Theresa Nangle Obermeyer, Ph.D.

MEMORANDUM State of Alaska

ALASKA PUBLIC OFFICES COMMISSION

DEPARTMENT OF ADMINISTRATION

TO: **APOC Commissioners** **DATE:** **February 4, 2011**

FROM: **Barbara J. Dreyer** BD
Associate Attorney II

SUBJECT: **APOC Staff Report: 11-01-CD**
Obermeyer v. Alaska Judicial Council

I. SUMMARY

Theresa Obermeyer ("Complainant") alleges in her Complaint[1] that Respondent Alaska Judicial Council ("AJC") violated APOC laws during the 2010 election season. The Complaint alleges that AJC (1) untimely disclosed six independent expenditures and (2) illegally spent State money without appropriation to influence an election.

Staff reviewed the complaint, materials provided by Complainant, the Answer, materials provided by AJC, the Alaska Judicial Council website (http://www.ajc.state.ak.us) and conducted an informal interview with AJC's representative Executive Director Larry Cohn on January 26, 2011.

II. ISSUES

1. Did AJC violate AS 15.13.110(h) when AJC failed to timely report six expenditures made or incurred October 26 and 27, 2010?
2. Did AJC violate AS 15.13.145 when AJC spent State money to influence the outcome of an election in excess of its appropriation?

III. SHORT ANSWERS

1. No, AJC did not violate its duty to report by failing to timely report six expenditures made or incurred October 26 and 27, 2010.
2. Yes, AJC violated AS 15.13.145 when AJC spent money to influence the outcome of an election in excess of its appropriations.

[1] **Exhibit 1**, Complaint.

IV. FACTS

AJC is a commission created by the Alaska Constitution. One of its duties is to evaluate the performance of justices and judges and recommend whether voters should retain those justices and judges for another term.[2] AJC publishes its findings as a recommendation to the voters through various media and, in turn, reports those independent expenditures to APOC. The Alaska legislature annually appropriates funds to AJC for these retention-related independent expenditures.

During the 2010 legislative session, the legislature appropriated $21,400 to AJC for publishing costs. A general election was held November 2, 2010 where Alaskan voters made retention votes on one justice and 27 judges. AJC reported independent expenditures totaling $41,878.73 to APOC. AJC submitted three 15-6 Forms reporting its estimated independent expenditures and then amended the 15-6 Forms on January 26, 2011 by filing an amended 15-6 Form.[3]

There are two questions presented in this Complaint. First, the Complaint alleges that AJC failed to timely report six independent expenditures (the "Six Independent Expenditures"). The Six Independent Expenditures at issue in this case are as follows:

1. 10/26/2010 Juneau Empire newspaper ads $274.68
2. 10/27/2010 Anchorage Daily News newspaper ads $1,656.21
3. 10/27/2010 Fairbanks Daily News-Miner newspaper ads $378.00
4. 10/27/2010 Kodiak Daily Mirror newspaper ads $274.10
5. 10/27/2010 Mat-Su Valley Frontiersman newspaper ads $256.35
6. 10/27/2010 Peninsula Clarion newspaper ads $294.01

---

[2] The Alaska Constitution and statutes require judges to stand for retention by appearing on the ballot to allow voters to decide whether the judges should be retained in office. Judges' terms between retention elections vary between four and 10 years.

[3] **Exhibits 2, 3, 4 and 5.** AJC's 15-6 Forms reporting independent expenditures filed with APOC September 27, October 7 and November 5, 2010 and amended on January 26, 2011.

AJC published its recommendations for retention in anticipation of the November 2, 2010 election through Spirit of Alaska Broadcasting (radio ads), Clear Channel Communications, Inc. (radio ads), Anchorage Media Group (radio ads), Alaska Newspapers, Inc. (newspaper ads), Anchorage Daily News (newspaper ads), Chilkat Valley News (newspaper ads), Daily Sitka Sentinel (newspaper ads), Delta Discovery (newspaper ads), Fairbanks Daily News Miner (newspaper ads), Ketchikan Daily News (newspaper ads), Kodiak Daily Mirror (newspaper ads), Mat-Su Valley Frontiersman (newspaper ads), Peninsula Clarion (Kenai) (newspaper ads), Petersburg Pilot (newspaper ads), Anchorage Publishing (newspaper ads), Valdez Star (newspaper ads), Wrangell Sentinel (newspaper ads), Mukiuk News (newspaper ads), Homer News (newspaper ads), Juneau Empire (newspaper ads), Alaska Star (newspaper ads). AJCs' total expenditures on these items (which constitute the entirety of its expenditures in the November 2, 2010 election) and reported to APOC were $41,887.55.

The second question is whether AJC violated APOC laws when it made expenditures in excess of its 2010 legislative appropriation.

V. ANALYSIS

1. *AJC did not violate AS 15.13.110(h) when AJC failed to timely report the Six Independent Expenditures.*

An independent expenditure must be reported to APOC in accordance with AS 15.13. An independent expenditure in excess of $250 made within nine days of an election must technically be reported to APOC within 24 hours if made within nine days of an election. AS 15.13.110(h). Here, the Six Independent Expenditures were each made within nine days of the election on November 2, 2010 and each was in excess of $250.[4] The question presented is whether late reporting is permissible in this instance. It is.

The facts show that the Commission should find no violation. AJC's Executive Director Larry Cohn stated during his informal interview that it is difficult for a filer such as AJC to accurately value media buys (and swaps) when they are ordered close to an election. This is a common valuation problem in Alaska media markets. In order to promote a robust and flexible marketplace for political speech, APOC Staff permits speech makers like AJC to make initial estimates of their proposed speech and then correct those estimates once the speech maker can truly value the cost of its activity. That is what happened here.

When AJC filed its 15-6 Forms on September 27, 2010 and October 7, 2010, AJC was making a good faith disclosure that AJC would be spending $38,741.02 on independent expenditures in 2010. AJC's Executive Director Larry Cohn described in his informal interview that, in the weeks leading up to the election, unforeseen developments required AJC to withdraw some of its proposed newspaper advertisements and place new advertisements. The newspapers were unable to give AJC a concrete value for these changes.[5] Without certainty from the newspapers, AJC was placed in an unstable reporting position. Thus, AJC waited until after the election and amended its disclosure filings on November 5, 2010. The changes made by AJC results in an increase of independent expenditures of only

---

[4]The 15-6 Forms signed and filed by AJCs on September 27, 2010, October 7, 2010 and November 5, 2010, in addition to 15-6 Form (Amended) filed by AJC January 26, 2011, each state that "an independent expenditure that exceeds $250 and is made within nine days of an election must be reported within 24 hours after the expenditures is made (emphasis in original)." This is a reiteration of AS 15.13.110(h).

[5]During his informal interview, AJC's Executive Director Larry Cohn informed APOC that one newspaper did not produce a final bill to AJC until January 2011 for the ads run concerning the November election.

a few thousand dollars, from $38,741.02 to $41,887.55. Because AJC's initial estimate was reasonable and the corrections were made when values became known, the Commission should find no violation.

2. *AJC violated AS 15.13.145 when AJC spent money to influence the outcome of an election in excess of its appropriation.*

Under AS 15.13.145, AJC may use money held by the State to influence the outcome of an election, but only if the funds have been specifically appropriated by the State legislature. The State had specifically approved monies to be used for the retention recommendation advertising. AJC has admitted to exceeding its appropriations in past years, including 2010. *See* AO 10-28-CD, University of Alaska (discussing the limitations of the University in engaging in election activities absent a State appropriation) and AO 10-12-CD, Alaska Mental Health Board and Advisory Board on Alcohol and Drug Abuse (money held by the State cannot be used for advocacy inconsistent with AS 15.13.145).

VI. STAFF CONCLUSION

AJC did not violate AS 15.13.110(h) when it filed estimates of the amounts and timing of the Six Independent Expenditures incurred within nine days of the November 2, 2010 election. AJC violated AS 15.13.145 when it used State money in excess of its appropriations in FY 98, 01, 05 and 11.

VII. RECOMMENDATION

Staff recommends a finding of no violation of AS 15.13.110(h).

AJC made a good faith effort to disclose the timing and amount of the Six Independent Expenditures. Given the uncertainty of the timing and amount of its media buys, AJC should not be penalized for providing information to the best of its ability in light of the fact that the timing and amount was unascertainable at the time of the disclosure of the Six Independent Expenditures.

Staff recommends a finding of violation of AS 15.13.145.

In Moore v. University of Alaska-Fairbanks Tanana Valley Campus ("UAF-TVC"), 02-21-CD, the Commission found that UAF-TVC used public money to influence the outcome of an election absent an appropriation in violation of AS 15.13.145, in combination with other violations of campaign finance laws. There, the Commission directed Staff to issue a letter of admonition which informed UAF-TVC concerning the requirements of public entities who intend to use money held by the State to influence an election. To deter future violations, Staff recommends a similar letter to AJC, but no fines for violation of AS 15.13.145. AJC Executive Director Larry Cohn agreed that, to avoid violations in the future, he could seek greater appropriations from the State in his annual budget.

APPENDIX A: APPLICABLE LAW

§ 15.13.110. Filing of reports

(a) Each candidate, group, and nongroup entity shall make a full report in accordance with AS 15.13.040 for the period ending three days before the due date of the report and beginning on the last day covered by the most recent previous report. If the report is a first report, it must cover the period from the beginning of the campaign to the date three days before the due date of the report. If the report is a report due February 15, it must cover the period beginning on the last day covered by the most recent previous report or on the day that the campaign started, whichever is later, and ending on February 1 of that year. The report shall be filed

(1) 30 days before the election; however, this report is not required if the deadline for filing a nominating petition or declaration of candidacy is within 30 days of the election;

(2) one week before the election;

(3) 105 days after a special election; and

(4) February 15 for expenditures made and contributions received that were not reported previously, including, if applicable, all amounts expended from a public office expense term account established under AS 15.13.116(a)(8) and all amounts expended from a municipal office account under AS 15.13.116(a)(9), or when expenditures were not made or contributions were not received during the previous year.

(b) Each contribution that exceeds $250 and that is made within nine days of the election shall be reported to the commission by date, amount, and contributor within 24 hours of receipt by the candidate, group, campaign treasurer, or deputy campaign treasurer. Each contribution to a nongroup entity for the purpose of influencing the outcome of an election that exceeds $250 and that is made within nine days of the election shall be reported to the commission by date, amount, and contributor within 24 hours of receipt by the nongroup entity.

(c) All reports required by this chapter shall be filed with the commission's central office and shall be kept open to public inspection. Within 30 days after each election, the commission shall prepare a summary of each report which shall be made available to the public at cost upon request. Each summary shall use uniform categories of reporting.

(d) Repealed by SLA 1994, ch. 126, § 35, eff. July 1, 1994.

(e) A group formed to sponsor an initiative, a referendum or a recall shall report 30 days after its first filing with the lieutenant governor. Thereafter each group shall report within 10 days after the end of each calendar quarter on the contributions received and expenditures made during the preceding calendar quarter until reports are due under (a) of this section.

(f) During the year in which the election is scheduled, each of the following shall file the campaign disclosure reports in the manner and at the times required by this section:

(1) a person who, under the regulations adopted by the commission to implement AS 15.13.100, indicates an intention to become a candidate for elective state executive or legislative office;

(2) a person who has filed a nominating petition under AS 15.25.140--15.25.200 to become a candidate at the general election for elective state executive or legislative office;

(3) a person who campaigns as a write-in candidate for elective state executive or legislative office at the general election; and

(4) a group or nongroup entity that receives contributions or makes expenditures on behalf of or in opposition to a person described in (1)--(3) of this subsection, except as provided for certain independent expenditures by nongroup entities in AS 15.13.135(a).

(g) An initiative committee, person, group, or nongroup entity receiving contributions exceeding $500 or making expenditures exceeding $500 in a calendar year in support of or in opposition to an initiative on the ballot in a statewide election or an initiative proposal application filed with the lieutenant governor under AS 15.45.020 shall file a report within 10 days after the end of each calendar quarter on the contributions received and expenditures made during the preceding calendar quarter until reports are due under (a) and (b) of this section. If the report is a first report, it must cover the period beginning on the day an initiative proposal application is filed under AS 15.45.020 and ending three days before the due date of the report.

(h) An independent expenditure report required under AS 15.13.040(e) shall be filed with the commission not later than 10 days after an independent expenditure has been made. However, an independent expenditure that exceeds $250 and that is made within nine days of an election shall be reported to the commission not later than 24 hours after the expenditure is made.

§ 15.13.145. Money of the state and its political subdivisions

(a) Except as provided in (b) and (c) of this section, each of the following may not use money held by the entity to influence the outcome of the election of a candidate to a state or municipal office:

(1) the state, its agencies, and its corporations;

(2) the University of Alaska and its Board of Regents;

(3) municipalities, school districts, and regional educational attendance areas, or another political subdivision of the state; and

(4) an officer or employee of an entity identified in (1)-(3) of this subsection.

(b) Money held by an entity identified in (a)(1)-(3) of this section may be used to influence the outcome of an election concerning a ballot proposition or question, but only if the funds have been specifically appropriated for that purpose by a state law or a municipal ordinance.

(c) Money held by an entity identified in (a)(1)-(3) of this section may be used

(1) to disseminate information about the time and place of an election and to hold an election;

(2) to provide the public with nonpartisan information about a ballot proposition or question or about all the candidates seeking election to a particular public office.

(d) When expenditure of money is authorized by (b) or (c) of this section and is used to influence the outcome of an election, the expenditures shall be reported to the commission in the same manner as an individual is required to report under AS 15.13.040.

RE: Statement of Independent Expenditures Complaint against Alaska Judicial Council Filing Stamped "Arrived" November 8, 2010

Dear Ms. Hickerson and APOC:

This is to file a complaint against Alaska Judicial Council regarding "An independent expenditure that exceeds $250 and is made within nine days of an election must be report within 24 hours after the expenditure is made" which is clearly stated on Form 15-6. Based on the stamped November 8 "Arrived" APOC form which was mailed 11/5/10, it looks like there were six expenditures over $250 between October 24 and November 2.

Additionally, I believe there should be a great deal of discussion as to whether Alaska Judicial Council should be allowed to spend State of Alaska money on Retention Elections. The role of the Council should be to review and recommend or reject Retentions of judges. I believe a separate committee or group should be formed for advocacy to raise and spend money. In the November 2, 2010 General Election Alaska Judicial Council spent $41,887.55 on advertising the Retention Election. Only one judge was not recommended so it was as though all the money was spent against one judge, i.e., Richard Postma. The Council to my knowledge spent a total of $11,086.00 including $7,336.00 "Arrived" September 27, 2010 and $3,750.00 "Arrived" October 7, 2010 on very malicious radio ads in which former Senator Vic Fischer defamed Judge Postma a few days before the Election so that Judge Postma was unable to respond. I believe Judge Postma was treated very unfairly. Attached is my writing of December 13 about Judge Postma's mistreatment.

These issues become very relevant because three Alaska Supreme Court Justices including Carpeneti, Winfree, and Christen or the majority of Alaska Supreme Court are up for Retention in November, 2012.

Sincerely yours,

Theresa Nangle Obermeyer

REVISION

Judge Richard Postma
22235 Woodcliff Court
Chugiak, Alaska 99567

RE: ACJC File No. 2010-005

Dear Judge Postma:

This is to give you information prior to the "Hearing" scheduled for 8:30 A.M. 12/15/10-12/17/10 in Courtroom 4 Anchorage U.S. District Court. I have been going to and giving lengthy documents to both Alaska Commission of Judicial Conduct (ACJC) and Alaska Judicial Council since 1994 as a public office holder, an interested citizen, and spouse of Thomas S. Obermeyer, Attorney, licensed since 1990 by similar Missouri Bar Exam, a state that has reciprocity with Alaska, but still not licensed to practice law in Alaska after 26 ½ years of effort. I feel great affinity to you as I have been treated in much the same way after I was elected to Anchorage School Board 1990-1994. I know "the dark side" of Alaska Bench and Bar.

ALASKA JUDICIAL COUNCIL

I question any document that comes out of the Alaska Judicial Council after the way I was treated by Ms. Teri Carns on 9/26/94 who in CY 2009 was paid $126,390.50 per ~~http://www.tobermeyer.info/transcript.html~~ which is "Fabe Retention Binder" Tab 10 and http://www.tobermeyer.info/transcript.html

http://doa.alaska.gov/dop/soce/pdf/JudicialEarned GreaterTha 100000 (40% pdf

Please review at Alaska Judicial Council website about Alaska Bar Poll per http://www.ajc.state.ak.us/onlinesurvey.html that Information Insights http://www.infoinsights.com/site/staff/brian/brian-rogers/ was founded and continues to be owned by Mr. Brian Rogers, current Chancellor, University of Alaska Fairbanks. Alaska Bar Poll used to be administered by UAA Justice Center. Please review "Fabe Retention Binder" Tab 5 about per http://www.tobermeyer.info scroll down to Theresa Nangle Obermeyer, Ph.D., vs. University of Alaska No.85-3826 DC CIVIL #A81-448 for which I got a "Not for Publication" ruling and was required to pay $17,161.75 5/13/86 or 24 years ago. I more recently posted http://www.tobermeyer.info scroll down to "University of Alaska Hearing 9/24/79 & Ruling by Robert Flint 10/29/79" Mr. Rogers, University of Alaska, and his Information Insights have zero credibility after the way I have been treated.

JAN 0 3 2011

EXHIBIT 1
Page 3 of 8

4 of 7 11 of 32

I got Alaska Public Offices Commission (APOC) Alaska Judicial Council "Statement of Independent Expenditures." Between 9/15/10 and 10/27/10 $41,887.55 was spent on the Retention Election. Obviously, you were the single focus of the advertising because all other judges were endorsed. I question if an Alaska government agency has a right to spend government funds in this manner. Three Alaska Supreme Court Justices will be on the ballot 11/12 including Chief Justice Carpeneti who continues to be ex officio Chair, Alaska Judicial Council, until 6/30/12.

BACKGROUND

I testified on 5/18/10 on the phone and 6/28/10 in person requesting that Alaska Judicial Council not endorse the Retention of Ms. Dana Fabe and Ms. Sharon Gleason in the 11/2/10 Election. I submitted as enclosed two one inch binders as background about my request that the Council reject endorsement of especially Ms. Fabe and secondarily Ms. Gleason. Both Ms. Fabe and Ms. Gleason were endorsed. Ms. Kathleen Tompkins-Miller abstained in the vote for the endorsement of Ms. Fabe.

I testified again at the "Public Hearing" on 11/15/10 for the Superior Court judgeship that is available because Ms. Stephanie Joannides is retiring. Please review that Ms. Joannides is so unethical that she held my only jury trial 11/2/98-11/10/98 per http://www.tobermeyer.info/aquittal.html . How much did my seven day jury trial cost Alaska Court System? I was not able to file a civil lawsuit for "Vindictive Prosecution" having gone to many local law firms to ask for legal representation because Tom continues not to be licensed here. At the "Public Hearing" 11/15/10, I told the Council that they knew full well how unfairly Ms. Fabe and the law firm of her husband, Randall Simpson, Partner, Jermain Dunnagan & Owens, have treated me because I gave them the documents in June. I wanted a full accounting of how much was spent in the 11/2/10 General Election to retain Ms. Fabe and non-retain you.

I called your Chambers 12/6/10 to find out when you leave your employment with Alaska Court System and spoke to Ms. Darbe Lopez. I was told you are scheduled to leave your employment 90 days from when the General Election was certified November 30. I understood for the first time that there is a "Hearing" 12/15/10-12/17/10. Even though I testified about this exact issue on November 15, I was not informed by Alaska Judicial Council that there is a "Hearing" December 15-17.

FYI, my husband and I both have been held up to public ridicule by Anchorage Daily News (ADN) for many years. I was defamed for at least 14 years as I held public office on Anchorage School Board 1990-1994 and when I have run for public office since. Neither my husband nor I have been able to so much as get a "Letter to the Editor" published for many years in ADN. I believe that Mr. John McKay, Attorney, ADN, does the bidding of Jermain Dunnagan & Owens, the law firm of Dana Fabe's husband, Randy Simpson.

According to APOC Report of the $41,887.55 spent by Alaska Judicial Council on the Retention Election, $11,086.00 was spent on radio ads. Was all of that amount spent on

the very disparaging radio ads against you by former Senator Vic Fischer several days before the Retention Election? I believe so. Senator Fischer's radio ads were "the bottom of the barrel" and could have been the single reason why you were not retained. Why did Senator Fischer stoop so low? Do you even know Vic Fischer?

RELEVANT RETENTION ELECTIONS

Judge Karl Johnstone was not recommended by Alaska Judicial Council in the mid1980s but I do not believe any money was spent against Judge Johnstone in the Retention Election. Judge Johnstone was retained.

Judge David Landry was not retained in 2006. I was appalled to read In re Landry 157 Pacific Reporter 3d 1049 (Alaska May 18, 2007). How was it possible that Judge Landry was allowed to pre-sign bail orders from December 1, 2004 until April, 2006 without be stopped by the Presiding Judge or one of his peers at the Kenai Courthouse? I believe Alaska Court System was at least as culpable as Judge Landry in the matter.

Judge Patrick McKay was recommended and retained in the 2010 Retention Election even though he had had two past criminal Driving While Intoxicated (DWI) conviction in 1988 when he served three days in jail and in November 12, 2009 when he got special treatment serving his 5 day sentence at Cordova Half Way House. Please compare Judge McKay's criminal offenses to what seems to be differences of approach with court personnel that has resulted in the ruination of your career. You have never had a criminal charge during this entire ordeal.

COMPLAINT 5/4/10

I received Complaint and your Answer 12/10/10 from Ms. Marla Greenstein. I am not acquainted with you although I met your wife when we waited to find out the Endorsements of Alaska Judicial Council on 6/28/10, I spoke on the phone with you on 10/1/10, and my husband and I introduced ourselves to ~~him~~ you on 11/12/10 at the Swearing In of the new licensees from the July 27-29, 2010 Alaska Bar Exam at which time ~~he~~ you spoke as President, Anchorage Bar Association.

Below are specific responses to ACJC Complaint.

Complaint (1) and (2), the issues should have been dealt with more effectively by the Presiding Judge of the District Court. Therefore, Alaska Court System bears tremendous responsibility for the situation in which you currently find yourself. The entire matter sounds like negative personnel issues with out of control subordinates and two Alaska Court System judges. It sounds like you have been "fed to the wolves."

Complaint (3) The names of the two judges should have been in (3) since it is apparent that those two judges are going to testify against you. Please provide me with their names. Were they District Court or Superior Court? If I have their names, I will be in a better position to understand what transpired. Those two judges must be very vindictive.

The matter sounds like petty jealousy that had nothing to do with your judicial duties. I believe those two judges should be roundly criticized for their inability to get along with you. Were they working together? It was "two against one." Your effort to reach out to other colleagues for help by filing complaints to ACJC "backfired." I have filed numerous complaint with ACJC which I believe today only made my treatment worse similar to the 30 lengthy complaints I filed against Alaska attorneys 1993-2003 to Alaska Bar Association per http://www.tobermeyer.info/akbar.html which resulted in Stephen Van Goor, Bar Counsel, filing a complaint against my husband's Missouri law license in 2004. The complaint was dismissed in silence by Missouri Supreme Court.

Complaint (4) You made an error in judgment by allowing yourself to undergo psychiatric examinations by D. M. Milner of April 6 and April 21, 2010. Who is the person? Why were you not offered a psychiatrist? I do not recommend that your avail yourself to any more mental exams because I assume the "mental health professional" will find something wrong with your mental health. I am impressed with your willingness to post on your website http://www.judgepostma.com/ACJC_Findings.php issues that were transpiring. I noticed that it was Ms. Gleason, Superior Court Presiding Judge, who relieved you of your duties on 9/30/09. Why was Ms. Gleason allowed to interfere with the current District Court Presiding Judge? I see tremendous culpability on the part of Alaska Court System as regards your treatment.

You should have known ACJC would get "an independent mental health expert" who would make you look mentally unbalanced. During my prosecution 1994-2003, I weathered at least 17 fabricated court charges and was represented only by public attorneys. I refused to spend the money that we needed for our four children's higher education on private Alaska lawyers. Was that a mistake on my part? I do not believe I would have been helped by private counsel but. of course, when an attorney is being highly paid, he/she is motivated. I was constantly asked to undergo a psychiatric examinations which I refused to do.

ANSWER 6/1/10

The Answer attachments prove unequivocally that you performed excellently on the bench as a District Court Judge. How was in possible that you who obviously received glowing endorsements from many diverse groups before your appointment to the bench on 6/14/07 could have changed so much by 2010 when Alaska Judicial Council did not endorse you for Retention on 6/28/10? I observe your treatment as a travesty of justice. You should have been given assistance internally if there was something amiss 2007-2010. Were you intentionally made to work with staff members who were going to undermine you?

Mr. Matt Jamin according to your Answer.is holding your "Hearing" 12/15/10-12/17/10. He will be acting as the lawyer for ACJC to my knowledge, not a part-time U.S. Magistrate. If he is acting as a U.S. Magistrate, he should not be paid by ACJC. This must be clarified. Mr. Jamin is often the lawyer for ACJC. He actually held one of my phony "Hearings" to my memory 10/94 after my first non-jury federal criminal trial.

7 of 7 14 of 32

Finally, under the guise of revoking my orchestrated probation I was jailed for 29 days 6/11/96-7/9/96 by Judge William B. Enright, San Diego U.S. District Court, because I filed for U.S. Senate.

I question Exhibit 3 Page 1 of 1. Why did Judge Patrick McKay and Judge Michael Spaan have such enormous totals of respondents compared to all the other judges?

CONCLUSION

FYI, Ms. Gleason came in third in U.S. District Judge Alaska Bar Poll presumably done in-house by Alaska Bar Association not Brian Rogers's Information Insights to replace Judge Jack Sedwick who will move to Senior status on 3/9/11. I believe Ms. Gleason and Ms. Fabe are working in concert to advance themselves to higher judgeships along with Ms. Fabe's husband's law firm, Jermain, Dunnagan & Owens. Ms. Fabe knows she has to hurry because she is already 59 years old so it might be too late for her to ascend to a higher judgeship. Ms. Gleason is 53. Currently, there is no minority/female U.S. District Court judge in Alaska. As I testified on 6/28/10, Mark Begich recommended Ms. Fabe for the U.S. Supreme Court judgeship which became available when Associate Justice Sotomayor, U.S. Supreme Court, was appointed per "Fabe Retention Binder" loose pages. I believe Ms. Fabe is currently focused on being appointed to replace Judge Andrew Kleinfeld on U.S. Court of Appeals for the Ninth Circuit unless she is too old.

I conclude that you are a scapegoat for these two very unethical women to advance their careers. It amazes me how power hungry Dana and Sharon really are. I speculate that Ms. Gleason as Presiding Judge, Third Judicial District, had a lot to do with your very unfair treatment behind the scenes. Judge Brian Clark was Presiding Judge and Judge Patrick Hanley is currently Presiding Judge, Anchorage District Court, during the period of your grievous mistreatment. I know both of them to some extent and believe they hope that Mr. Jamin will dismiss Complaint No. 2010-005 in its entirety. I doubt that he will but I hope so.

I will attend your "kangaroo court" December15-17.

Sincerely yours,

Theresa Nangle Obermeyer

Boards & Commissions Factsheets

POLICE STANDARDS COUNCIL

Board: Alaska Police Standards Council
Board identification number: 081

Department: DEPARTMENT OF PUBLIC SAFETY

Authority: AS 18.65.140

Status: Active

Sunset date:

Requirements: Legislative Confirmation

Prohibitions: None

Term: 4 years

Description: The council consists of 13 members: 11 appointed by the governor as follows: 4 chief administrative officers or chiefs of police of local governments; the commissioner of public safety or a designee; the commissioner of corrections or a designee; 2 persons, each of who has been certified for 5 years or more by the council under this chapter, one of whom serves as a police officer and one of whom serves as a probation officer, parole officer, municipal correctional officer, or correctional officer; 1 correctional administrative officer who is employed at the level of deputy director or higher; and, 4 members of the public at large with at least 2 from the communities of 2,500 population or less.

Function: The council establishes and enforces minimum standards for employment, certification, training and retention of police, correctional, probation, parole and municipal correctional officers; adopts regulations; investigates potential misconduct issues related to potential decertification of officers.

Chair: Board selects.

Special facts: Notwithstanding AS 18.65.160, the governor shall specify the terms of the person appointed under AS 18.65.150(4), added by sec. I of this Act, to the Alaska Police Standards Council, as follows:(1) one person shall be appointed for a two-year term; and (2) one person shall be appointed for a four-year term

Compensation: Standard Travel and Per Diem. No additional compensation.

Meetings: Normally 2 times per year for one day each – December and May or June, additional special meetings as required.

September 5, 2007

State of Alaska
Attn: Frank Bailey, Director of Boards and Commissions
P.O. Box 110001
Juneau, AK 99811-0001

Dear Mr. Bailey:

I am seeking consideration for appointment to the **State Emergency Response Commission (SERC)**. I am interested in the vacant rural LEPC seat.

I have served the last 2 years as the Aleutian Pribilof Islands LEPC chair. I have been an LEPC member for approximately 4 years. I have attended the LEPC/SERC tri-annual meetings for the past 3 years and am familiar with the format and issues facing this commission. I am willing to devote the time necessary to carry out any duties associated with this Commission.

I am a registered voter in Alaska, and have resided in the City of Unalaska for the past 12 years. I currently work for the city as the Acting Director of Public Safety. I have a strong interest in Emergency Preparedness and have completed over 30 courses in this field.

In closing, I ask for your consideration in this appointment. I have attached a resume and commission application for your review.

Respectfully,

Jamie Sunderland

Boards & Commissions Factsheets

JUDICIAL COUNCIL

Board: Alaska Judicial Council
Board identification number: 053

Department: JUDICIAL BRANCH

Authority: AK Const. Art. IV Sec. 8

Status: Active

Sunset date:

Requirements: Legislative Confirmation and Financial Disclosure

Prohibitions: Members may not serve on the Commission on Judicial Conduct simultaneously; no member, except the Chief Justice, may hold any other office or position of profit under the U.S. or State of Alaska.

Term: 6 years

Description: The council consists of 7 members: 3 non-attorney members appointed by Governor: with regard to area representation and without regard to political affiliation; (only non-attorney members require legislative confirmation); 3 attorneys appointed by the Bar Association; and Chief Justice (ex-officio and chair).

Function: The council nominates persons to Governor for any vacancy in an office of supreme court justice, court of appeals judge, superior court judge, district court judge, the public defender, or administrative tax law judges (Governor appoints one of two or more persons nominated by Council); conducts studies for improvement of the administration of justice; evaluates judges standing for retention election and publicizes findings and recommendations.

Chair: Chief Justice

Special facts: A quorum consists of 4 members. The council reports to Supreme Court/Legislature at least every 2 years. The Chief Justice serves a three-year term.

Compensation: Standard Travel and Per Diem.

Meetings: About 5 times per year as required by new vacancies; 1-2 days each.

Re: Alaska Police Standards Council Seat

Dear Mr. Bailey:

I am writing to advise you of my interest in serving as a member of the Alaska Police Standards Council. I am a twelve-year veteran of law enforcement service in Alaska, currently serving as the Chief of Police in Sitka, Alaska. I desire to see Alaska's public safety community continue to improve in both quality and recruit training, as well as the continued education of our experienced officers. I believe in a quality selection process and will strive to uphold and refine standards for entry into the police and corrections workforce.

I would consider it an honor to serve on the Alaska Police Standards Council. My resume and application are attached for your consideration.

Respectfully,

Sheldon Schmitt
Chief of Police
Sitka Police Department

cc: Terry Vrabec, Executive Director, APSC
Walt Monegan, Commissioner, Dept. of Public Safety

Enc: Resume

Sheldon Schmitt **Sitka Alaska**

University of Florida (1986)

- B.A. Degree – Criminal Justice

Experience

Alaska Division of Probation & Parole | 550 West 7th Avenue, Suite #601; Anchorage, Alaska 99501

Division Director 9/1/2011 – Present

- Serves as the final division authority, and is responsible for all of the activities and decisions of the division.
- Oversee the management of delegated areas through chief probation officers. Provide guidance and instruction on policy, goals, use of division resources, process coordination, and quality control.
- Adjudicates subordinates' grievances and approves the appropriate disciplinary action; appoints, promotes and transfers subordinates as needed to achieve program goals; assigns and reviews work, approves leave and prepares performance evaluations.
- Direct the preparation, development and implementation of revisions to legislation, rules, regulations, policies and procedures.
- Coordinate the division's activities with other divisions within the department, outside agencies and federal, state and local governments as necessary.
- Represent the division at legislative hearings and meetings, explaining and justifying the division's programs and budget; represent the division at various meetings and conferences with State and federal officials, members of the public and the media;
- Respond to inquiries concerning policy matters, program operations, legislative proposals, administrative reviews and quality control.

- Provide periodic reports required by the Commissioner, Governor, other jurisdictions and the public.

Alaska Board of Parole | 550 West 7th Avenue, Suite #601; Anchorage, Alaska 99501
Executive Director 10/16/2008 – 8/31/2011

- Served as Alaska's expert on parole, and was responsible for the implementation of Board policies, advised Board members on parole related matters and represented the Board to the Legislature, organizations and agencies.
- Provided daily management of the Board to include development of goals and objectives, policies and procedures, regulations and statutes; maintained computerized statistical data concerning Board activities; and administered the Board's budget.
- Supervised, trained and evaluated staff. Interviewed candidates for Board staff positions, appointed, promoted, transferred and initiated disciplinary actions in accordance with personnel rules and collective bargaining agreements.
- Reviewed file information to determine eligibility for parole of all adult inmates confined in both State and contractual institutions.
- Scheduled parole hearings and handled the mechanics of the hearings (location, recording and transcription of proceedings, etc.). Conducted all parole release, parole rescission and final parole revocation hearings.
- Advised Board members, parole applicants, attorneys, witnesses and victims on applicable parole guidelines, policies, regulations and laws; and determined admissibility of evidence.
- Trained new Board members, institutional and field parole officers, and other Department of Corrections employees in all aspects of parole.
- Informed Board members of current community resources available to parolees. Provided interpretation of mental health and other technical reports to Board members in lay terms.
- Represented the Board on criminal justice matters to other agencies, the public, the media and by serving on special task forces; testified before the Legislature and provided interpretation of complex policy, legal and casework matters referred by the courts, attorneys, Governor's office, Commissioner's office, and law enforcement and corrections personnel.
- Reviewed lawsuits against the Board and Department of Corrections, and provided information to the Attorney General's office for possible resolution of lawsuits.
- Presented all executive clemency cases to the Executive Clemency Advisory Committee or directly to the Governor and/or his staff.
- Prepared and submitted a variety of reports concerning Board activities required by the Department of Corrections, Legislature and Alaska statutes.

Alaska ASAP Misdemeanor Services | 303 K Street; Anchorage, Alaska 99501
Alaska ASAP Program Manager 8/1/1995 – 10/15/2008

- Supervised, planned, directed and implemented the program direction, policies and procedures for the statewide ASAP network.

- Functions as the Chief Probation Officer and Program Administrator.
- Oversaw the statewide misdemeanor probation, tobacco enforcement, substance abuse program approval, and the various drug court probation monitoring units (Wellness court, Mental Health Court, Felony DUI Court, Felony Drug Court, etc.).
- Assessed policy and procedure changes to achieve the most effective, positive impact on the program administration, and recommended any revised legislation, policies and procedures to the Division Director.
- Collaborated with Division staff in the development of the operating and capital budgets, and monitored the financial performance of the program to ensure that work was completed within the budget framework.
- Monitored staff performance, allocated manpower, established job priorities and prepared staff evaluations for supervisors and program staff.
- Provided statewide quality control and accountability of all ASAP program services by conducting and overseeing site reviews, as well as preparing and reviewing written evaluations and/or technical assistance plans.
- Developed requests for proposal for the section, as needed. Reviewed grantee applications, and provided guidance to members of the PEC (Performance Evaluation Committee) on their award recommendations.
- Oversaw the development and implementation of the client and program tracking systems designed to evaluate statewide statistical output and program outcome data.
- Represented ASAP and/or the Division in the coordination of services, meetings, presentations and legislative testimonies regarding the role and function of Alaska ASAP.
- Planned and delivered statewide workshops and training conferences regarding alcohol, drugs and the criminal justice system.
- Responded to complaints and inquiries made regarding the Division's programs.
- Served as the DUI Program Administrator for the State of Alaska. Past President of the National Organization of State Impaired-Driving Programs.

Alaska ASAP Misdemeanor Services | 303 K Street; Anchorage, Alaska 99501
Adult Probation Officer II -ASAP 9/17/1990 – 7/31/1995

- Reviewed defendant files to assess and identify the status of a court-ordered misdemeanor case.
- Exercised independent judgments and decisions regarding the type and manner of ASAP requirements that will be imposed.
- Administered the screening and drinker classification procedure for early identification of problem drinkers.
- Referred to education or treatment programs for mental health counseling, domestic violence intervention and/or substance abuse treatment.
- Prepared progress reports based on defendant's criminal and treatment history, prognosis, and recommendations for treatment.

- Conducted case reviews with education and treatment providers to assist clients in their involvement with behavioral health programs.
- Provided court testimony, correspondence, special assistance and reports on the status or progress of defendants while on misdemeanor probation.
- Developed alternative resources and sentencing treatment options for defendants who live in remote areas, as well as conducted case conferences with parents of minors to assess treatment options.
- Traveled to statewide communities to evaluate the effectiveness and efficiency of local grantee programs, and provided technical assistance with detailed recommendations on the probation and case management processes.
- Supervised the ASAP office in the absence of the Program Manager, as well as conducted statewide training and/or on the job training for new personnel.
- Recommended the hiring of new personnel, rated the work performance and assigned job duties for ASAP grantee personnel, as well as the Anchorage probation staff.
- Monitored and provided reports to federal grant reviewers regarding the status and ongoing development of the ASAP client tracking software.

OFFICE OF THE GOVERNOR
DEC 28 2006

Michael J. Stark

Juneau, Alaska 99801

December 27, 2006

Honorable Sarah Palin
Office of the Governor
Boards and Commissions
P.O. Box 110001
Juneau, Alaska 99811-0001

Re: Application for reappointment to the Alaska Board of Parole

Dear Governor Palin:

I am writing to express my strong interest in being considered by you for reappointment to the Alaska Board of Parole. I have served on the Board since March 2002, and respectfully seek appointment for another five-year term.

I served as Acting Chair of the Board from September 2004 – March 2005. For the last three years I have served as Vice Chair of the Board, elected by board members.

As evident from a review of my enclosed resume, prior to my appointment to the Board of Parole I had 27 years of state service in the Alaska Department of Law. Combined with my nearly five years of service on the board, I believe my work experience makes me uniquely qualified to continue serving on the board. During my last 21 years in the Attorney General's office, I served as lead counsel to the Alaska Department of Corrections and for my last 15 years as counsel to the parole board itself.

I have enclosed my resume and a letter of recommendation from Alaska Supreme Court Justice Walter L. Carpeneti for your review. Another letter of recommendation from United States Ambassador David Gross will be sent to your office in early January 2007 upon his return to Washington, D.C. I hope you will give favorable consideration to my request, as I believe I have much to contribute to the State of Alaska as a member of the Alaska Board of Parole.

Sincerely,

Michael J. Stark

EMPLOYMENT HISTORY

March 2002-present *Member, Alaska Board of Parole*

Appointed by governor to serve as member of five person board that conducts hundreds of hearings annually to determine suitability of offenders for release on parole or return to prison for violation of conditions of parole. Hearings are held in several locations around Alaska and two times each year in Arizona where approximately 900 Alaskan prisoners are incarcerated in a privately operated correctional facility. Also responsible for setting conditions of parole for several hundred parolees released from Alaska's correctional facilities. Elected Vice Chair of the Board in November 2003, and re-elected in 2004 and 2005.

May 1980 – January 2002 *Assistant Attorney General, Criminal Division Central Office, Alaska Department of Law, Juneau*

Supervise section of four attorneys serving as counsel to Alaska Department of Corrections and Alaska Board of Parole. Trial or appellate counsel, or supervising attorney in ongoing caseload of 150-220 prisoner-initiated lawsuits pending against state officials in state and federal courts. From 1996-2002, served as counsel to the Division of Fire Prevention (State Fire Marshall) and the Alaska Police Standards Council.

Over 20 years experience in civil litigation primarily involving civil rights and post-conviction relief actions. Counsel for state in prisoner class-action, *Cleary v. Smith,* 1981-1995: participated in seven week trial in 1984 and negotiated 88 page final settlement agreement in 1990. Represented state and state officials in dozens of appeals before Alaska and federal appellate courts. Counsel for Alaska in appeal before United States Supreme Court with Delaware, Vermont and Hawaii concerning state's authority to incarcerate prisoners in federal facilities, 1981.

Responsible for complex investigation and report of misconduct by high level officials in Anchorage probation office, 1988.

Provide oral and written advice to corrections, probation and parole officials. Draft criminal justice legislation and present testimony before legislative committees. Author of major rewrite of AS 33.30, Alaska's statutes on corrections. Coordinate and review major regulations projects for the Department of

Corrections, Board of Parole, and Alaska Police Standards Council. Provide final review of Department of Corrections policy and procedures prior to submission to commissioner. Train correctional and probation/parole officers in legal liabilities and other aspects of corrections law.

July 1979-May 1980 *Assistant Attorney General, Office of Special Prosecutions and Appeals, Criminal Division Central Office, Alaska Department of Law, Juneau*

Counsel for the state in criminal appeals before Alaska Supreme Court and Alaska Court of Appeals. Investigated and prosecuted tax fraud case against attorney in Kodiak, *State v. Vogt*. Presented position of Alaska Department of Law to Alaska Supreme Court regarding proposed changes to Criminal Rule 6 relating to grand juries. Trained law enforcement officers on Alaska's newly adopted revised criminal code.

August 1975-July 1979 *Assistant District Attorney, District Attorney's Office, Alaska Department of Law, Juneau*

Prosecutor in more than 35 misdemeanor and felony jury trials in District and Superior Courts throughout Alaska, including sexual assault and homicide cases. Counsel for state in several appeals before the Alaska Supreme Court. Provided legal advice to Juneau Police Department and Alaska State Troopers. Trained social service groups in legal aspects of sexual assault and domestic violence. Presented overview of criminal justice system in public schools.

August 1974-August 1975 *Assistant Attorney General, Civil Division Alaska Department of Law, Juneau*

Specialized in criminal matters and civil rights. Authored more than 15 pieces of legislation relating to criminal justice. Assisted Juneau District Attorney's Office: argued motions and conducted several trials. Served as counsel to Alaska Human Rights Commission. Represented the Commission before the superior court in two cases relating to freedom of religion and sexual discrimination in employment.

Boards & Commissions Factsheets

JUDICIAL CONDUCT

Board: Commission on Judicial Conduct
Board identification number: 052

Department: JUDICIAL BRANCH

Authority: AS 22.30.010

Status: Active

Sunset date:

Requirements: Legislative Confirmation and Financial Disclosure

Prohibitions: Members may not serve on the Judicial Council and the Commission on Judicial Conduct simultaneously.

Term: 4 years

Description: The commission consists of 9 members: 6 appointed by Governor - 3 public members who are not judges, retired judges, or members of the state Bar; 3 attorneys who have practiced law in Alaska for 10 years, from nominations provided by Bar Association. The 3 justices/judges are elected by the justices/judges of the state courts. Membership terminates if member ceases to hold position that qualified appointment.

Function: Reviews allegations against judges/justices and promotes compliance with codes of conduct for judges.

Chair: Commission selects.

Special facts: A quorum consists of a majority which must include 1 public member, 1 member of the Alaska Bar, and 1 judge member. The Court presents an annual budget to Legislature. The commission elects its chairman.

Compensation: Standard Travel and Per Diem.

Meetings: At least quarterly; 1-3 days each depending on caseload.

Re: Senate Bill 7
ACLU Statement of Support

Chair French, Vice-Chair Wielechowski:

Thank you for the opportunity to submit a written statement of support for Senate Bill 7.

The American Civil Liberties Union of Alaska represents thousands of members and activists throughout the State of Alaska who seek to preserve and expand individual freedoms and civil liberties guaranteed under the United States and Alaska Constitutions.

The Racially Differential Impact of Disfranchisement

Felony disfranchisement is a policy that bars citizens from the ballot box upon conviction of a felony. In the United States, over 5.3 million Americans cannot vote due to a felony conviction. Felony disfranchisement laws vary from state to state, but 48 states bar incarcerated individuals from casting a ballot, with only Maine and Vermont allowing inmates to vote. Eight states permanently ban certain individuals with a felony conviction from voting and two states bar all persons with felony convictions from voting.

The vast majority of disfranchised individuals are no longer incarcerated, but are living in their communities on probation or parole; 2.1 million of the

disfranchised population have fully completed their sentence. These ***disfranchised individuals are tax-paying citizens, involved with the issues in their community, but unable to vote to affect them.***

The impact of felony disfranchisement falls disproportionately upon communities of color. Nearly one and a half million African-American men, or 13%, are disfranchised due to felony convictions, a rate that is seven times the national average of one out of forty-one adults. If incarceration rates hold steady, three in ten of the next generation of black men can expect to be disfranchised at some point in their lives.

However, ***over the last decade the national trend has moved toward lowering barriers for the disfranchised. Since 1997, 19 states have made progressive changes to their felony disfranchisement laws, enfranchising over 700,000 formerly incarcerated individuals.***

In a democracy voting is a right, not a privilege. But for over 5 million Americans, that is not the case. We hope SB 7 will change that in Alaska.

Alaska Disfranchisement Policy

Alaska bars individuals with a felony conviction from voting until full completion of sentence, including incarceration, probation and parole. Upon completion of sentence the right to vote is automatically restored but individuals must include a copy of their discharge papers when registering to vote. Individuals with misdemeanor convictions never lose the right to vote, but they must vote by absentee ballot if in jail.

An estimated 10,176 people with felony convictions are barred from voting in Alaska. Approximately 44% of disfranchised people are in prison while 56% of disfranchised people are on probation or parole. Probationers and parolees are law-abiding citizens who are living in the community, working, raising their families and paying taxes.

Alaska Natives are significantly overrepresented in the disfranchised population. Alaska Natives comprise 32% of the total disfranchised population, though they only comprise 16% of the total population of Alaska. African-Americans comprise 9.5% of the disfranchised population, yet comprise only 3.5% of the total population of Alaska.

Voting & Public Safety

Felony disfranchisement runs counter to the goal of public safety. Restricting voting rights does not prevent crime, nor does it provide compensation to victims. In fact, disfranchising persons after release from prison is antithetical to the reentry process and harmful to long-term prospects for sustainable reintegration of ex-offenders into society. Recent research finds a link between voting participation and reoffense; people who voted after release from supervision were half as

likely to be re-arrested as those who did not vote.[1] Similar effects were found among people with a prior arrest; 27% of non-voters were re-arrested, compared to 12% of people who had voted. Far from making streets safer, felony disfranchisement may be detrimental to public safety. Voting demonstrates an individual's commitment to the institutions of American democracy. The irony of felony disfranchisement is that the very behavior that society strives to encourage – the commitment to the larger social and political collective – is undermined by a policy that requires people who desire to engage in that behavior to relinquish the right to vote.

For the above reasons, the ACLU is pleased to support SB 7, and thanks Senator Davis sponsoring this important legislation to expand civil liberties.

Please feel free to contact the undersigned should you require any additional information. We are happy to reply to any questions that which Members of the Committee may have. Thank you again for the opportunity to share our thoughts.

Sincerely,

Jeffrey Mittman
Executive Director
ACLU of Alaska

MEMORANDUM February 15, 2011

SUBJECT: "Civil rights" under art. V, sec. 2 of the state constitution (Work Order No. 27-LS0499)

TO: Senator Hollis French
Attn: Cindy Smith

FROM: Alpheus Bullard
Legislative Counsel

You have asked how a court is likely to interpret "civil rights" under art. V, sec. 2[1] of the state constitution and whether a person's "restoration" of civil rights under the provision equates with a person's "unconditional discharge" under AS 12.55.185(18).[2]

Article V, sec. 2 provides that "[n]o person may vote who has been convicted of a felony involving moral turpitude unless his civil rights have been restored." It is not clear how an Alaska court would interpret this provision. The Alaska Supreme Court has not yet addressed what constitutes "civil rights" for the purposes of this clause. The section's reference to "civil rights" must include rights other than the right to vote, otherwise the provision would be unnecessary.

Origins of the provision

The minutes of the constitutional convention provide some insight, but no definitive answer, as to how "civil rights" in art. V, sec. 2 should be interpreted. The only discussion and debate of the provision (that would become art. V, sec. 2) occurred on December 15, 1955.[3] On that day, delegate John S. Hellenthal, chairman of the convention's committee on suffrage, elections and apportionment, described a debate the

---

[1] **Disqualifications.** No person may vote who has been convicted of a felony involving moral turpitude unless his civil rights have been restored. No person may vote who has been judicially determined to be of unsound mind unless the disability has been removed.

[2] AS 12.55.185(18) provides:

> "unconditional discharge" means that a defendant is released from all disability arising under a sentence, including probation and parole[.]

[3] Minutes of the Constitutional Convention, Day 38 at 866 - 910.

committee had when drafting "Committee Proposal No. 1. Article on Suffrage and Elections":

> HELLENTHAL: The reason that the [term "moral turpitude"] was used was that not all felonies involve moral turpitude, not all. There are some felonies that do not and the term "moral turpitude" is a generally accepted word. Now we adopted this language on the advice of the adviser who agreed with that contention and who felt that we should not require all persons convicted of any felony to have to go before the pardon board. Now that was the reason for the language. Other language that was rejected was "a felony of serious nature". Another suggestion was "convicted of an infamous crime". ***There was one group in the Committee who felt that any person who served his time should automatically be restored to his civil rights. The majority definitely felt, and later the unanimous opinion of the Committee was that construction would not be sound.*** But they felt that not all convicted felons should have to go before the pardon board but only those of the more serious felonies. Now, Alaska has a fairly good criminal code, but throughout the United States there are many many offenses which in Alaska are misdemeanors, are considered felonies, and vice versa, and that is why the moral connotation was added and only that.

Minutes of the Constitutional Convention, at 890 - 891 (emphasis added) .

There is no record of any delegate taking issue with the judgment of the committee (as described by Hellenthal) on this point.

Note also, in the committee's original proposal, the "Disqualification" section read:

> No person judicially determined to be of unsound mind and no person convicted of a felony involving moral turpitude, ***unless pardoned and restored to his civil rights***, shall be qualified to vote in any State or local election.

Minutes of the Constitutional Convention, "Appendix V. Committee Proposals" (emphasis added).[4]

---

[4] Though the record isn't clear, it seems that the committee on style and drafting removed the "*pardoned and*" language from the provision.

Interpreting "civil rights"[5]

Federal law prohibits a convicted felon from possessing a firearm unless the felon's civil rights have been restored under state law. 18 U.S.C. 921(a)(20). The federal statute does not define "civil rights." For purposes of this statute, federal circuit courts have interpreted "civil rights" to include the right to vote, the right to seek and hold public office, and the right to serve on a jury. United States v. Dahms, 938 F.2d 131, 133 (9th Cir. 1991); United States v. Leuschen, 395 F.3d 155 (3d Cir. 2005) (appellant did not qualify for the restoration of civil rights defense, because his right to sit on a jury had not been restored under Pennsylvania law).

The Alaska Court of Appeals has addressed this statute as well, concluding that under Alaska law "defendants on probation or parole can not serve as jurors" and "[t]his disqualification means that, for purposes of federal firearms laws, [the defendant's] civil rights have not been restored." Barry v. State, 925 P.2d 255, 257 (Alaska App. 1996). The prohibition on felons serving as jurors is found in AS 33.30.241(b).[6] Another case dealing with juror qualifications makes a passing reference to "civil rights -- such as the right to vote or to carry a firearm." Singleton v. Alaska, 921 P.2d 636, 638 (Alaska App. 1996).

These cases do not specifically address article V, sec. 2 of the Constitution of the State of Alaska, and they would not be binding on the Alaska Supreme Court as it interprets that provision. But, they are an indicator of how a court would interpret art. V, sec. 2 if required to do so. It is my legal opinion that an Alaska court is likely to interpret "civil rights" under art. V, sec. 2 to include the right to vote, the right to seek and hold public office, and the right to serve on a jury.

Parolees and probationers

Less clear is whether persons on parole or probation, would be considered by a court to have had their civil rights restored for the purposes of art. V, sec.2. Under current law,

---

[5] The term "civil rights" has not had a fixed life in the law. Rights that were once considered as "political" (the right to vote) or "social" (right of unimpeded access to public accommodations) are now recognized as civil rights. See e.g. Voting Rights Act of 1965, 42 U.S.C. §§ 1973 - 1973aa-6 (2006) and Americans with Disabilities Act of 1990, 42 U.S.C. §§ 1201-12213 (Supp. 2008).

[6] **Sec. 33.30.241. Effect of judgment of conviction on civil rights.** (a) A person who is convicted of a felony involving moral turpitude as defined in AS 15.80.010 is disqualified from voting in a state or municipal election until the person's unconditional discharge.

(b) A person who is convicted of a felony is disqualified from serving as a juror until the person's unconditional discharge.

(c) In this section "unconditional discharge" has the meaning given in AS 12.55.185.

"'unconditional discharge' means that a defendant is released from all disability arising under a sentence, including probation and parole." AS 12.55.185(39). This definition applies to the term as it is used in AS 09.20.020 (relating to qualifications of jurors), AS 15.05.030 (loss and restoration of voting rights), and AS 33.30.241 (effect of judgment of conviction on civil rights).[7]

Perhaps telling of how an Alaska court might approach the issue is Roman v. State, 570 P.2d 1235 (Alaska 1977). In Roman, the Alaska Supreme Court held that the Alaska constitution entitles a released offender, whether a probationer or parolee,[8] to the same protections against search and seizure as an ordinary person.

> Any justification for treating parolees differently from any other person must stem from their special status. They are entitled to all rights accorded other persons except where valid purposes of parole require restrictions. Clearly, parole authorities have a special interest in the otherwise private affairs of the parolee. Most courts and commentators and some legislatures, however, have recognized that parole conditions must be reasonably related to the rehabilitation of the offender and the protection of the public and must not be unduly restrictive of liberty.

Id. at 1240 (internal citations omitted).

It remains to be seen whether an Alaska court would hold that there is a state justification for preventing persons who are no longer incarcerated, but not yet free of a condition of probation or parole, from voting due to a valid purpose of parole or probation.

If you have questions, or if I can be of further assistance, please do not hesitate to contact me.

TLAB:ljw:plm

---

[7] The statutes have not always been so clear regarding the status of a person on parole or probation. See 1985 Op. Alaska Atty Gen. 103, File No. 366-333-85 (January 29), 1985 Alas. AG LEXIS 312 (under AS 33.30.310, repealed in 1986, which referred to "imprisonment" suspending a person's civil rights, some opinions of the attorney general said that "parolees and those under suspended sentences may vote, while others [said] they may not.")

Senator Bettye Davis

March 10, 2011

Senator Hollis French, Chair
Senate Judiciary Committee

RE: Request for Hearing SB 7, 27-LS00083\A -"An Act relating to the Civil Rights of Felons."

Dear Senator French,

I respectfully request a hearing on SB 7 before the Senate State Affairs Committee. SB 7 allows felons to register to vote immediately upon release from incarceration and assume responsibility for their reintegration in their communities. The below documents have been transmitted electronically. Two complete paper copies are being delivered to your office.

Included in this hearing package are the following:

1. Sponsor Statement
2. Current version of SB 7, 27-LS0083\A.
3. *Sectional Summary
4. Fiscal Notes
   - OMB #21 - Elections
   - *OMB# 684 - Probation & Parole
5. *Memorandum, Legal Services September 22, 2011
6. Supportive Documents:
   - *Definition of Felony Crimes involving Moral Turpitude, AS 15.80.010(9)
   - *NCSL- Restoration of Voting Rights- listed by state, February, 2011
   - NCSL- Felon Voting Rights – Permanent Disenfranchisement States
   - NCSL - Legisbrief, "Felon Voting Rights," April-May 2009
   - NCSL –"Voting Rights Restoration Process"
   - NCSL- "Felon Voting Rights"
   - ACLU- Alaska February, 2011 Letter of Support
   - *ACLU – Alaska –Voting & Subsequent Crime and Arrest
   - ACLU Model Testimony, February, 2007
   - Processing Felons (DOC documents)

- *Alaska Department of Corrections 2009 Offender Profile - excerpted sections
- *Alaska Justice Forum, "Felon Disenfranchisement and the Voting Rights Act – *Farrakhan V. Gregoire*: 'A Crowd of One.'" Winter, 2010
- The Sentencing Project News: "Senate Committee Passes National Criminal Justice Commission Act of 2009," January 21, 2010
- The Sentencing Project News: "Washington State: 9th Circuit Court Reverses Disenfranchising Law; Landmark Decision Could Go to Supreme Court." January 8, 2010
- NAACP Testimony February 3, 2011
- *Letter – Alaska Police Officers' Association

***Note: The above underlined documents need to be added to SB 7 "Documents" on BASIS.**

The Committee may anticipate in-person and teleconference testimony.

If you require additional information, please contact Tom Obermeyer in my office at 465-3762.

Thank you for your consideration.

Sincerely,

Bettye Davis

SB 7 - "An Act relating to the civil rights of felons."

SPONSOR STATEMENT

The Alaska State Constitution Article V, Sec. 2 bars a person to vote "who has been convicted of a felony of moral turpitude unless his civil rights have been restored." The right to vote remains suspended from the date of conviction through the date of release from all conviction-related disabilities, including probation and parole (AS15.05.030; AS 15.60.010(39)). According to the Alaska Department of Corrections Offender Profile, in 2009 more than 10,000 Alaskans were ineligible to vote pursuant to this provision. This bill allows felons to register to vote immediately upon release from incarceration and start assuming responsibility for their reintegration in their communities.

Harsher sentencing laws over the past 30 years have allowed the prison population to balloon while reducing the rehabilitative model to almost non-existence. Article I, Section 12 of the Alaska Constitution requires: "Criminal administration shall be based upon . . . the principle of reformation." In Alaska the prison population increased from 800 prisoners in 1984 to over 5,000 in 2008, an increase of over 600%. Of those incarcerated in Alaska 48% were Caucasian, 52% were minorities. Although Alaska Natives represent only 16% of the population, they comprised 35% of total offenders in institutions in 2009. Likewise, African American represent 4% of the population but comprised 10% of the incarcerated. Nationally, minority felons are disproportionately disenfranchised under current law and the harm of this continued disenfranchisement after release is exacerbated by stigma and other forms of discrimination as they try to reenter society.

An estimated 5.3 million American citizens cannot vote because of a criminal conviction. Of these, 4 million are out of prison and living and working in communities. Restoring a person's right to vote is a critical element to successful reentry into society after incarceration and is consistent with our democracy's modern ideal of universal suffrage. The Democracy Restoration Act of 2009 was introduced in both houses of Congress to restore the right to vote to citizens once released from prison. It would affect more than 41,000 people on parole.

Felons across the country often cannot sit on juries, serve as teachers, firefighters or even barbers or plumbers; receive food stamps or live in public housing. These ex-offenders have a vested interest in what happens in society and if they are to participate they should have a right to vote.

The National Conference of State Legislatures (NCSL) in 2009 found that disenfranchisement still varies tremendously from state to state:

- In Maine and Vermont, felons do not lose their right to vote; even felons who are serving a prison sentence can vote.
- In 13 states and the District of Columbia, felons are ineligible to vote only while serving a prison sentence. Ex-offenders and those on probation and parole can vote.
- In 25 states, prisoners and people under community supervision, probation and/or parole are ineligible to vote, but ex-offenders are eligible.
- In eight states, all felons in prison and those in community supervision, as well as certain ex-offenders, are ineligible to vote.
- In Kentucky and Virginia, all felons and ex-offenders are permanently ineligible to vote, absent a pardon.

NCSL reported that between 1996 and 2008 28 states passed new laws on felon voting rights which included:

- Seven states repealed lifetime disenfranchisement laws, at least for some ex-offenders.
- Two states gave probationers the right to vote.
- Seven states improved data-sharing procedures among state agencies.
- Nine states passed requirements that ex-offenders be given information and/or assistance in regaining their voting rights at the time they complete their sentence.
- Twelve states simplified the process for regaining voting rights, for instance, by eliminating a waiting period or streamlining the paperwork process.

While this bill falls short of a Constitutional amendment to eliminate the voting prohibition entirely, it does limit disenfranchisement to those incarcerated and restores voting rights upon release. A hallmark of participatory democracy, voting affirms our membership in the social compact. Exclusion of criminal offenders from this process and from one of the most fundamental rituals of community involvement does nothing to promote public safety and reduce recidivism. It can only serve to impede social reintegration of these citizens. Felon disenfranchisement statutes rest on outdated retributory practices antithetical to contemporary standards of equal representation in the political process, standards explicitly stated in the Voting Rights Act.

Former US Supreme Court Justice Thurgood Marshall said:

"It is doubtful whether a state can demonstrate either a compelling or rational policy interest in denying former felons the right to vote. Ex-offenders have already paid their debt to society. They are as much affected by the actions of government as any other citizen and have as much of a right to participate in governmental decision-making. Furthermore, the denial of a right to vote to such persons is hindrance to the efforts of society to rehabilitate former felons and convert them into law abiding and productive citizens."

MEMORANDUM January 27, 2011

SUBJECT: Sectional Summary of SB 7 (Work Order No. 27-LS0083\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Alpheus Bullard
Legislative Counsel

You have requested a sectional analysis of the above referenced bill. As a preliminary matter, please note that a sectional analysis should not be considered an authoritative interpretation of the bill, and the bill itself is the best statement of its contents.

Section 1. Changes AS 09.20.020 to provide that a person who has been convicted of a felony may not serve as a juror while incarcerated for that crime, instead of being disqualified from serving as a juror until the person's unconditional discharge ("unconditional discharge" means that a person, convicted of a crime, is released from all disability arising under a sentence, including probation and parole).

Section 2. Changes AS 15.05.030 to provide that a person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law may not vote while incarcerated for that crime, instead of being disqualified as a voter until the person's unconditional discharge. Provides that a person who has been incarcerated will be advised of voter registration requirements and procedures upon release, and that the commissioner of corrections will notify the director of elections that the person is entitled to be registered as a voter.

Section 3. Changes AS 15.07.135 to provide that the voter registration of a person convicted of a crime that constitutes a felony involving moral turpitude will be cancelled only while that person is incarcerated, instead of until that person's unconditional discharge from custody.

Section 4. Changes AS 33.30.241(a) to provide that a person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law is disqualified from voting while incarcerated for that crime, instead of being disqualified from voting until the person's unconditional discharge.

Section 5. Changes AS 33.30.241(b) to provide that a person convicted of a felony is disqualified from serving as a juror while that person is incarcerated, instead of being disqualified from serving as a juror until the person's unconditional discharge.

Section 6. Repeals AS 15.60.010(39), a definition of "unconditional discharge," and AS 33.30.241(c), a definition of "unconditional discharge" as used in AS 33.30.241. The changes made by secs. 4 and 5 have removed the term from that section.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 7

Analysis

Passage of this legislation will have potential impact on the Department of Corrections, specifically in the Division of Probation & Parole, as they would be responsible for providing written notification to the person receiving restored rights to vote as well as notification to the Division of Elections. This would create a significant increase in workload to DOC. In 2008 the Department of Corrections released 1,732 individuals on parole and 6,708 individuals on probation. In 2009 the Department of Corrections released 1,939 individuals on parole and 6,747 on probation. The number of individuals released from incarceration annually is significant.

MEMORANDUM September 22, 2010

SUBJECT: Restoration of voting rights for certain felons
(Work Order No 27-LS0083\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Alpheus Bullard TAB
Legislative Counsel

This memorandum accompanies the draft bill you requested that would restore voting rights to persons convicted of felonies involving moral turpitude once these persons are released from incarceration. This bill is based on a draft prepared by this office for introduction in the 26th Legislature. The draft raises several issues.

Restoration of civil rights

Article V, sec. 2 of the Alaska Constitution provides that "[n]o person may vote who has been convicted of a felony involving moral turpitude unless his civil rights have been restored." The Alaska Supreme Court has not yet addressed what constitutes "civil rights" for the purposes of this clause.

The constitutional reference to "civil rights" must include rights other than the right to vote, otherwise the provision would be unnecessary. However, there is no discussion in the minutes of the constitutional convention indicating what the framers understood as "civil rights" for purposes of this section.

Federal law prohibits a convicted felon from possessing a firearm unless the felon's civil rights have been restored under state law. 18 U.S.C. 921(a)(20). The federal statute does not define "civil rights." For purposes of this statute, federal circuit courts have interpreted "civil rights" to include the right to vote, the right to seek and hold public office, and the right to serve on a jury. United States v. Dahms, 938 F.2d 131, 133 (9th Cir. 1991); United States v. Leuschen, 395 F.3d 155 (3d Cir., Pa. 2005).

The Alaska Court of Appeals has addressed this statute as well, concluding that under Alaska statute "defendants on probation or parole can not serve as jurors" and "[t]his disqualification means that, for purposes of federal firearms laws, [the defendant's] civil rights have not been restored." Barry v. State, 925 P.2d 255 (Alaska App. 1996). Another case dealing with juror qualifications makes a passing reference to "civil rights -- such as the right to vote or to carry a firearm." Singleton v. Alaska, 921 P.2d 636 (Alaska App. 1996).

These cases do not specifically address article V, sec. 2 of the Constitution of the State of Alaska, and they would not be binding on the Alaska Supreme Court as it interprets that provision. But, they are an indicator of how a court would interpret art. V, sec. 2 if required to do so. Because art. V, sec. 2 would make little sense if "civil rights" did not refer to something more than the right to vote (which is a prerequisite for seeking public office in Alaska), the enclosed draft changes the qualifications for jury service as well. Accordingly, I've changed the title of the bill from "An Act relating to the voting rights of felons" to "An Act relating to the civil rights of felons."

"Incarceration"
This draft provides that a person convicted of a crime that constitutes a felony involving moral turpitude under state or federal law may not vote in a state, federal, or municipal election while incarcerated for that crime. "Incarcerated" is not defined in this draft or in current statute. Should a person who is sentenced to custody in a residential facility be permitted to vote? I am not aware of all sentencing options available in application to crimes constituting "a felony involving moral turpitude under state and federal law." I would recommend seeking the Department of Corrections' expertise on this point.

Felons released from the federal penitentiary system
This draft requires the commissioner of corrections to establish procedures by which a person released from incarceration is advised of voter registration requirements and procedures. The department is tasked with (1) providing a person released from incarceration with a written notification of the person's restored right to vote and (2) notifying the director of the division of elections that the person is entitled to be registered as a voter. I don't know if the Department of Corrections can fulfill these responsibilities for persons released from a federal facility. This is more a question of fact than a legal issue. Again, I would recommend that you seek the department's advice on this point.

Applicability provision
Please consider adding to the bill an applicability provision specifying the manner in which the bill's provisions are to be given effect, giving specific attention to the applicability of the bill's provisions to felons released before the Act's effective date and whether the department should be directed to notify them of their right to vote.

If you have questions, please contact me. I will be on mandatory leave from September 24th to October 22nd. If you have questions during this time, please do not hesitate to contact our office for another attorney's assistance.

Enclosure

AS 15.80.010(9): DEFINITION OF FELONY CRIMES OF MORAL TURPITUDE

(See (9) next page)

Sec. 15.80.007. Sale of voter registration and election management software. The director may sell voter registration and election management system data processing software. (§ 18 ch 36 SLA 1990)

Revisor's notes. — Formerly AS 15.60.007. Renumbered in 2010.

Sec. 15.80.008. Recognized political party status. (a) A political group that the director has not recognized as a political party may obtain recognized political party status if, on or before May 31 of the election year for which the political group seeks recognition, the political group

(1) files an application with the director;

(2) submits bylaws to the director and the United States Department of Justice as required of political parties in AS 15.25.014; and

(3) meets the definition of a political party in AS 15.80.010.

(b) The director shall verify that each political group seeking recognized political party status under (a) of this section and each recognized political party meets the definition of a political party in AS 15.80.010.

(c) The director shall perform a verification described in (b) of this section at least once a month after the date of certification of the preceding general election, except that the director may suspend the monthly verifications on and after June 1 and before November 30 of a general election year. For purposes of (b) of this section, the director shall verify that the voters who have submitted registration forms to the division of elections are qualified under AS 15.05.010 and have declared affiliation with the political group or recognized political party for which the verification is performed.

(d) Within 10 days after a verification under (c) of this section, the director shall provide to a political group seeking recognized political party status under (a) of this section written notification when the political group has obtained recognized political party status.

(e) The director may not withdraw recognized political party status from a political group that no longer qualifies as a political party until after the first verification after a general election at which a governor was elected. The director shall notify the political group in writing of the withdrawal of recognition. (§ 56 ch 2 FSSLA 2005)

Revisor's notes. — Formerly AS 15.60.008. Renumbered in 2010, at which time "AS 15.80.010" was substituted for "AS 15.60.010" in (a)(3) and (b) of this section to reflect the 2010 renumbering of AS 15.60.010.

Sec. 15.80.010. Definitions. In this title, unless the context otherwise requires,

(1) "absentee voting official" means a person appointed to serve as an absentee voting official in accordance with AS 15.20.045;

(2) "ballot" means any document provided by the director on which votes may be cast for candidates, propositions, or questions;

(3) "director" means the director of elections who is the chief elections officer of the state appointed in accordance with AS 15.10.105(a);

(4) "division" means the division of elections created under AS 15.10.105;

(5) "election board" means the board appointed in accordance with AS 15.10.120;

(6) "election official" means election board members, members of counting or review boards, employees of the division of elections, and absentee voting officials;

(7) "electronically generated ballot" means any ballot other than a paper ballot that is physically marked by the voter using a writing instrument or a mechanical device;

(8) "federal election" means a general, special, or primary election held solely or in part for the purpose of selecting, nominating or electing a candidate for the office of President, Vice-President, presidential elector, United States senator, or United States representative;

(9) "felony involving moral turpitude" includes those crimes that are immoral or wrong in themselves such as murder, manslaughter, assault, sexual assault, sexual abuse of a minor, unlawful exploitation of a minor, robbery, extortion, coercion, kidnapping, incest, arson, burglary, theft, forgery, criminal possession of a forgery device, offering a false instrument for recording, scheme to defraud, falsifying business records, commercial bribe receiving, commercial bribery, bribery, receiving a bribe, perjury, perjury by inconsistent statements, endangering the welfare of a minor, escape, promoting contraband, interference with official proceedings, receiving a bribe by a witness or a juror, jury tampering, misconduct by a juror, tampering with physical evidence, hindering prosecution, terroristic threatening, riot, criminal possession of explosives, unlawful furnishing of explosives, promoting prostitution, criminal mischief, misconduct involving a controlled substance or an imitation controlled substance, permitting an escape, promoting gambling, possession of gambling records, distribution of child pornography, and possession of child pornography;

(10) "general election" means the election held on the Tuesday after the first Monday in November of even-numbered years;

(11) "hand-counted ballot" means a ballot designated to be counted by hand in precincts where precinct tabulators are not available;

(12) "house district" means one of the districts described in art. VI, sec. 1, Constitution of the State of Alaska;

(13) "judicial district" means one of the districts defined in AS 22.10.010;

(14) "lieutenant governor" includes an appointed lieutenant governor, governor, or acting governor if a vacancy has occurred in the office of lieutenant governor or governor;

(15) "limited political party" means a political group which organizes for the purpose of selecting candidates for electors for President and Vice-President;

(16) "local election" means a regular or special election held by a borough, city, school district, or regional educational attendance area;

(17) "master register" means the list of all registered voters in the state which is maintained by the director of elections;

(18) "member of a political party" means a person who supports the political program of a party;

(19) "numerical identifier" means a voter's date of birth, the last four digits of a voter's social security number, a voter's Alaska driver's license number, or a voter's Alaska identification card number or voter identification number;

(20) "oath" includes affirmation;

(21) "official registration list" means the list of all voters qualified to vote at a particular election compiled in accordance with AS 15.07.125;

(22) "optically scanned ballot" means a paper ballot designed to be read by an optical scanning machine;

(23) "party district committee" means the political party committee that performs the executive function for a region representing an area larger than a precinct and smaller than the state;

(24) "political group" means a group of organized voters which represents a political program and which does not qualify as a political party;

(25) "political party" means an organized group of voters that represents a political program and

(A) that nominated a candidate for governor who received at least three percent of the total votes cast for governor at the preceding general election or has registered voters in the state equal in number to at least three percent of the total votes cast for governor at the preceding general election;

(B) if the office of governor was not on the ballot at the preceding general election but the office of United States senator was on that ballot, that nominated a candidate for United States senator who received at least three percent of the total votes cast for

National Conference of State Legislatures

LEGISBRIEF

BRIEFING PAPERS ON THE IMPORTANT ISSUES OF THE DAY

APRIL-MAY 2009 VOL. 17, NO. 23

Felon Voting Rights

By Jennie Drage Bowser

Some felons never lose their right to vote.

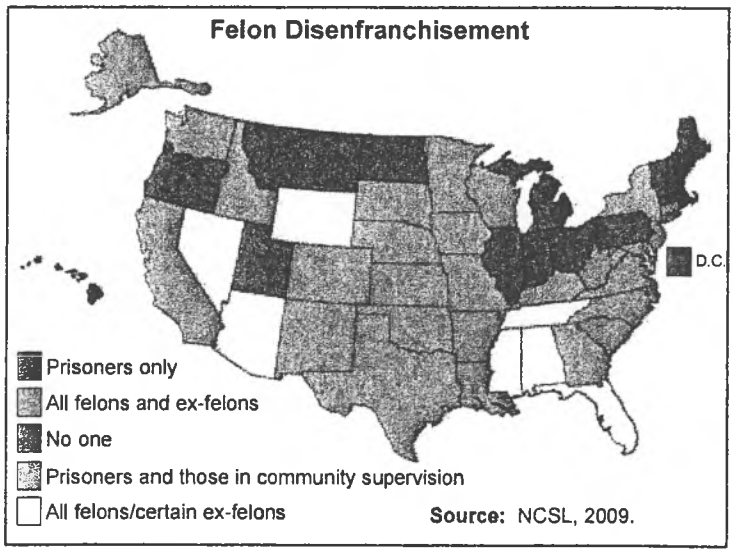
State approaches to felon disenfranchisement vary tremendously. In Maine and Vermont, felons never lose their right to vote. In Kentucky and Virginia, felons and ex-felons permanently lose their right to vote absent a pardon from the governor. The remaining 46 states have 46 different approaches to the issue.

According to the Washington, D.C.-based advocacy group, The Sentencing Project, 5.3 million Americans who were otherwise eligible to vote in 2008 were prevented from doing so due to a felony conviction. Of these, 2.1 million were ex-offenders who had served their sentences, 1.4 million were African-American men, and more than 676,000 were women.

Some states allow those serving a prison sentence to vote.

Categories of Disenfranchisement.

- In Maine and Vermont, felons do not lose their right to vote; even felons who are serving a prison sentence can vote.
- In 13 states and the District of Columbia, felons are ineligible to vote only while serving a prison sentence. Ex-offenders and people on probation and parole can vote.



All ex-offenders are eligible to vote in 40 states.

- In 25 states, prisoners and people under community supervision (probation and/or parole) are ineligible to vote, but ex-offenders are eligible.
- In eight states, all felons in prison and those in community supervision, as well as certain ex-offenders, are ineligible to vote.
- In Kentucky and Virginia, all felons and ex-offenders are permanently ineligible to vote, absent a pardon.

How Rights Are Restored. In 38 states, felons' voting rights are automatically restored upon completion of their sentence, which in some states includes probation and parole. In five states, certain ex-offenders are barred for life from voting, while the rights of others—generally first-time,

non-violent offenders—are restored automatically upon completion of their sentence. In the three remaining states where felons lose and can regain their voting rights, certain ex-offenders are barred from voting for life, while others can apply to have their rights restored.

Re-registering to vote often is a daunting process.

Barriers to Restoration of Voting Rights. Even in states where ex-offenders automatically regain the right to vote upon completion of their sentence, the process of re-registering to vote often is difficult. One reason is the complexity of the laws and processes surrounding disenfranchisement. In some cases, it is difficult to determine whose rights can be restored. This can vary according to the date of the crime, the conviction or the release from prison, or to the nature of the crime. The complex restoration process also can be daunting. It often involves lengthy paperwork, burdensome documentation, and involvement of several state agencies.

A second barrier to restoration of voting rights for ex-offenders is the often inconsistent communication among agencies. The methods of communicating the loss and restoration of voting rights among courts, corrections and elections officials are not always reliable, timely or consistent. This inconsistency can result in uneven application of the law, even when the laws are clear.

Another barrier is lack of information. Ex-offenders sometimes are not aware that they regain their voting rights automatically upon completion of their sentence. They go through life believing they cannot vote when, in fact, they can. In other cases, they are not informed of the process for regaining their rights or offered assistance in doing so. As long as they remain ignorant of the necessary steps, ex-offenders cannot begin the process of regaining voting rights.

A final obstacle is under-funding of parole boards in some states where offenders must apply to have their rights restored. A massive backlog of applications can exist because the agencies do not have adequate staff or resources to process them in a timely manner.

Most recent legislation seeks to expand felon voting rights.

State Action Most recent state legislation seeks to expand felon voting rights and ease the process of restoration. Between 1996 and 2008, 28 states passed new laws on felon voting rights.

- Seven repealed lifetime disenfranchisement laws, at least for some ex-offenders.
- Two gave probationers the right to vote.
- Seven improved data-sharing procedures among state agencies.
- Nine passed requirements that ex-offenders be given information and/or assistance in regaining their voting rights at the time they complete their sentence.
- Twelve simplified the process for regaining voting rights, for instance, by eliminating a waiting period or streamlining the paperwork process.

To date in 2009, 79 bills addressing the voting rights of felons and ex-offenders have been introduced in 25 state legislatures. In the 2007-2008 biennium, 129 bills were introduced in 27 states.

Felon Voting Rights
Permanent Disenfranchisement States

State	Who is permanently disenfranchised	How right to vote may be regained	Notes
Alabama §15-22-36, 15-22-36.1 §17-3-30, 17-3-31 Const. Art. 8 §182	All people convicted of a crime involving "moral turpitude" (includes all felonies)	*Nonviolent:* apply for Certificate of Eligibility to Register to Vote from Board of Pardons & Paroles; board must issue certificate within 45 days if all requirements are satisfied *Violent:* apply for a pardon from Board of Pardons & Paroles	
Arizona §13-904 et seq. Const. Art. 7 §2	All people convicted of two or more felonies	Obtain a Certificate of Absolute Discharge from the Bureau of Prisons, or an affidavit of discharge from a judge if the most recent sentence was probation; then submit an application for restoration of civil rights to the superior court in his/her county of residence. A two-year waiting period is required before applying if the most recent sentence was a prison term.	Right to vote is automatically restored upon completion of sentence for people with a single felony conviction
Delaware §15-1701 Const. Art. V §2 and 7	People convicted of murder, manslaughter, sexual offenses, or any felony involving a violation of the public trust (includes bribery, improper influence and use of office, and election offenses)	Apply for a pardon from the governor	Voting rights are automatically restored for all other ex-offenders five years after completion of sentence
Florida Rules 6, 9, 10A and 10B, Rules of	Serious crimes, excluding murder and sex crimes	Apply to have rights restored *without a hearing* before the Board of Executive Clemency	Voting rights restoration is automatic for most people convicted of non-violent

Executive Clemency §97.041(2)(b), 944.292 and 944.293 Const. Art. VI §4	Murder, sex crimes	Apply for rights without a hearing after waiting 15 years after completion of sentence, or petition the Board for a review and hearing	offenses.
Iowa IA Code §48A.30(d) and §914.1 et seq. Const. Art. II, §5	A person convicted of any infamous crime	Apply to the board of parole for recommendation or to the governor for a reprieve, pardon, commutation of sentence, remission of fines or forfeitures, or restoration of rights of citizenship.	Under an executive order signed January 14, 2011, voting rights will no longer be restored automatically upon completion of sentence, and will only be restored by the governor for individuals who have completed their sentence and paid all financial restitution and court costs as ordered.
Kentucky §116.025, 116.113 Const. §145 and 150	All people convicted of a felony, treason or bribery in an election	Submit Application for Restoration of Civil Rights to the Division of Probation and Parole, which forwards it to the governor.	
Mississippi Const. Art. 12 §241 §23-15-11, 23-15-19	People convicted or murder, rape, bribery, theft, arson, obtaining money or goods under false pretense, perjury, forgery, embezzlement or bigamy	Three options: 1) apply for a pardon from the governor 2) apply for an executive order restoring civil rights from the governor 3) ask the state legislature to pass a bill of suffrage on their behalf (requires a 2/3 majority)	People convicted of other offenses do not lose the right to vote
Nevada §176A.850, 213.090, 213.155, 213.157 Const. Art. 2, §1	Except for first-time non-violent felons, all people convicted of a felony.	1) obtain a pardon from the Board of Pardons Commissioners, or 2) petition for the restoration of civil rights in the court in which they were convicted	Rights are automatically restored upon completion of sentence for first-time non-violent felons
Tennessee §40-29-201 et seq.; 40-20-112; 2-19-143 Const. Art. 1 §5	People convicted after July 1, 1986, of voter fraud, treason, murder in the first degree, or aggravated rape.		Those convicted of any offense other than those listed to the left may request

	People convicted after July 1, 1996, but before July 1, 2006 of the above offenses or any other degree of murder or rape. People convicted on or after July 1, 2006 of all of the above offenses or felony bribery or misconduct by a public official.		a certificate of voting rights restoration from the pardoning authority, prison officials, or a parole officer
Virginia §53.1-231.2 Const. Art. II §1	All people convicted of a felony	1) after a five-year waiting period, petition the circuit court (not available to people convicted of violent or drug-related offenses); court's recommendation must be approved by the governor; or 2) after a two-year (for non-violent offenders) or five-year (for violent offenders) waiting period, apply to the governor for restoration of rights	

Washington §29A.08-520; 9.92.066; 9.94A.637; 9.94A.8859.95.260; chapter 9.96 Const. Art. VI §3	Certain sex offenders convicted after September 1, 2001	No procedure in place to obtain a certificate of discharge	All others may present a Certificate of Discharge to the voter registration official; certificate is received automatically upon completion of sentence. Ex-felons who owe court costs, fines or restitution can have voter registration revoked if they fail to make at least three payments over a 12-month period.
Wyoming §6-10-106; 7-13-105; 22-3-102 Const. Art. 6 §6	Except for people convicted of first-time non-violent felonies, all felons	Apply to the governor for a pardon or a restoration of rights after a five- to ten-year waiting period	First-time non-violent felons may, after a five-year waiting period, apply to the Wyoming Board of Parole for a certificate restoring voting rights

Voting Rights Restoration Process

Source

: U.S. Department of Justice, December 2000;
Updated by the National Conference of State Legislatures, January 2002

	Restoration Process
Alabama	The right to vote may be regained only through a pardon.
Alaska	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Arizona	1st offense - rights are automatically restored; 2nd and subsequent offenses - must apply to court for restoration; If felony convictions resulted in a prison sentence, felon must wait until two years after your unconditional release from incarceration or completion of parole before felon can apply. If felony convictions resulted in a sentence of probation, felon may apply for restoration of your voting rights immediately upon discharge from probation.
Arkansas	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote. Felons must provide evidence of their eligibility to vote after discharge of their sentence.*
California	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Colorado	Automatically restored upon completion of sentence and/or parole; felon must register to vote.
Connecticut	Felon may regain the right to vote upon submission of written or other satisfactory proof that all fines in conjunction with conviction have been paid and that felon has been discharged from confinement or parole. Felon must submit this information to the office of the Registrar of Voters. Probationers automatically regain the right to vote.*
Delaware	-A person convicted of murder, manslaughter or any felony constituting a sexual offense or an offense against public administration involving bribery, improper influence or abuse of office, may not have their voting rights restored. -Any other person who is disqualified as a voter because of a conviction of a crime shall have such disqualification removed upon being pardoned or five years after expiration of sentence, whichever may occur first. Expiration of sentence means satisfactory completion of imprisonment, probation and parole and satisfaction of all financial obligations required by the sentence, including restitution.
D.C.	Automatically restored upon release from confinement; felon must register to vote.
Florida	Civil rights, including the right to vote, are suspended when a person is convicted of a felony. A felon may have his or her civil rights restored by obtaining a full pardon, conditional pardon, or restoration of civil rights from the Governor of Florida.
Georgia	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Hawaii	Automatically restored upon release from confinement; felon must register to vote.

Idaho	Automatically restored upon completion of sentence, probation and parole; felon must register to vote.
Illinois	Automatically restored upon release from confinement; felon must register to vote.
Indiana	Automatically restored upon release from confinement; felon must register to vote.
Iowa	Must obtain a pardon or a restoration of citizenship from the Governor.
Kansas	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Kentucky	Must obtain a pardon from the Governor.
Louisiana	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Maine	Eligibility to vote not affected.
Maryland	-A first time offender for theft or infamous crime, other than buying or selling votes, the right to vote is automatically restored upon completion of your sentence, including any probation or parole. -If convicted of two or more such crimes, a person is not eligible to vote unless and until a pardon is obtained. -If convicted of buying or selling votes, a person is permanently prohibited from voting in Maryland.
Massachusetts	Automatically restored upon release from confinement; felon must register to vote.
Michigan	Automatically restored upon release from confinement; felon must register to vote.
Minnesota	If convicted of treason or of a felony, the right to vote is automatically restored upon discharge from sentence. Discharge occurs either by order of the sentencing court, following stay of sentence or stay of execution of sentence, or upon final expiration of sentence.
Mississippi	Right to vote may be restored by a pardon or an executive order issued by the Governor upon discharge from probation. The right to vote may also be restored by a two-thirds vote of the state legislature.
Missouri	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote; however, a person is forever disqualified from voting if convicted of a crime connected to the exercise of the right to vote.
Montana	Automatically restored upon release from confinement; felon must register to vote
Nebraska	Must obtain a "warrant of discharge" from the Nebraska Board of Pardons to regain the right to vote; however, if sentenced to confinement in an adult correctional facility, the felon can only regain the right to vote by applying to the Board of Pardons for a warrant of discharge
Nevada	-Felons who have completed probation may apply 6 months after the expiration of their term of probation to have their rights restored.* -Felons who have completed parole or who have served their full sentence may immediately petition the State Board of Parole Commissioners who may petition the district court for restoration of civil rights. *
New Hampshire	Automatically restored upon release from confinement; felon must register to vote.

New Jersey	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
New Mexico	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote. *
New York	-If convicted of a felony and sentenced to incarceration, felon automatically regains the right to vote upon expiration of the maximum time to which he or she was sentenced, or upon discharge from parole, whichever occurs first. -If convicted of a felony but not sentenced to incarceration, or if the sentence was suspended, felon's conviction does not affect the right to vote.
North Carolina	Automatically restored upon completion of sentence, probation and/or parole. For a North Carolina conviction, the agency having jurisdiction over a felon at the time he or she was unconditionally discharged is required to issue a certificate to the clerk of the General Court of Justice in the county where the felon was convicted, and that clerk shall then file the certificate with the original record at no fee. Once this is done, the felon can simply register and vote.
North Dakota	Automatically restored upon release from confinement; felon must register to vote.
Ohio	Automatically restored upon release from confinement; felon must register to vote.
Oklahoma	Once a conviction has become final and the maximum time set forth in the felon's sentence has expired, his or her right to vote is automatically restored.
Oregon	Automatically restored upon release from confinement or completion of parole; felon must register to vote.
Pennsylvania	Automatically restored upon release from confinement; felon must register to vote; however, if a felon was not registered to vote at the time of his or her conviction, the felon may need to wait 5 years from the date of release from incarceration in order to vote.
Rhode Island	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
South Carolina	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
South Dakota	In South Dakota, the right to vote is restored upon termination of a felon's sentence. When the sentence has been fully discharged, including parole, a felon should receive a certificate from the Secretary of Corrections stating that he or she has been restored to the full rights of a citizen. The Secretary should file a copy of the certificate with the sentencing court. After receiving this certificate the felon must register to vote.
Tennessee	-Persons convicted of murder, aggravated rape, treason, or voter fraud after July 1, 1986, or of rape after June 30, 1996, are ineligible to have their voting rights restored. -For other felony convictions after June 30, 1996, a felon may seek restoration of voting rights after the maximum sentence imposed for his or her conviction has expired, or after the felon has been pardoned, by petitioning the circuit court of the county where the felon lives or was convicted. -If a felon was convicted after July 1, 1986 but before June 30, 1996 of a felony other than murder, aggravated rape, treason, or voter fraud , a felon may request that either the board of probation and parole or the authority that supervised or incarcerated him or her during the sentence issue a Certificate of Restoration of Voting Rights. A felon is eligible to request this certificate after either being pardoned or after the maximum sentence which was imposed for the conviction has expired.
Texas	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote; if convicted persons may also regain their voting rights if they have been granted a gubernatorial pardon or release from the resulting disability to vote.

Utah	Automatically restored upon release from confinement/completion of sentence; felon must register to vote.
Vermont	Eligibility to vote not affected.
Virginia	If convicted of a felony in Virginia, then a felon must obtain a "removal of political disabilities" from the Governor in order to regain the right to vote. A felon is eligible to apply for the removal of political disabilities if he or she completed the sentence more than 5 years ago and if all court costs and restitution have been satisfied.
Washington	In order to regain the right to vote, a felon must have his or her civil rights restored. Civil rights are restored by the issuance of a certificate of discharge. When a felon has completed all of the requirements of sentence, the Department of Corrections notifies the sentencing court. The sentencing court then issues and provides the felon with a certificate of discharge, which will have the effect of restoring the right to vote. A felon must then register to vote, unless the crime was committed before 1984.
West Virginia	Automatically restored upon completion of sentence, probation and/or parole; felon must register to vote.
Wisconsin	Automatically restored upon release from confinement/completion of sentence; felon must register to vote.
Wyoming	The right to vote may be regained either by a pardon or by restoration of civil rights. The Governor has the power both to pardon and to restore rights. The Governor may issue certificates of restoration of rights upon a person's completion of probation or expiration of the term of the sentence. A felon must submit a written application to the Governor in order to request a certificate restoring the right to vote.

Felon Voting Rights

In 48 of the 50 states, at least some felons -- and in some states, all felons and ex-offenders -- lose their right to vote.

Background and History

The idea of taking away a criminal's right to vote has been around since ancient Greece and Rome. A condition called "civil death" in Europe involved the forfeiture of property, the loss of the right to appear in court, and a prohibition on entering into contracts, as well as the loss of voting rights. Civil death was brought to America by English colonists, but most aspects of it were eventually abolished, leaving only felon disenfranchisement intact in some parts of modern America.

The Face of Disenfranchisement

According to The Sentencing Project, 5.3 million Americans (1 in 40 adults) were unable to vote due to a felony conviction in the 2008 elections. This included 1.4 million African-American men, more than 676,000 women, and 2.1 million ex-offenders who have completed their sentences.

Categories of Disenfranchisement

State approaches to felon disenfranchisement vary tremendously. In Maine and Vermont, felons never lose their right to vote. In Kentucky and Virginia, felons and ex-felons permanently lose their right to vote absent a pardon from the governor. The remaining 46 states have 46 different approaches to the issue.

MAP HERE

In Maine and Vermont, felons do not lose their right to vote; even felons serving a prison sentence can vote.

In 13 states and the District of Columbia, felons are ineligible to vote only while serving a prison sentence. Ex-offenders and people on probation and parole can vote.

In 25 states, prisoners and people under community supervision (probation and/or parole) are ineligible to vote, but ex-offenders are eligible.

In eight states, all felons in prison and under community supervision, as well as certain ex-offenders, are ineligible to vote.

In Kentucky and Virginia, all felons and ex-offenders are permanently ineligible to vote, absent a pardon.

How Rights Are Restored

In 38 states, felons' voting rights are automatically restored upon completion of their sentence, which in some states includes probation and parole. In five states, certain ex-offenders are barred for life from voting, while the rights of others--generally first-time, non-violent offenders--are restored automatically upon completion of their sentence. In the three remaining states where felons lose and can regain their voting rights, certain ex-offenders are barred from voting for life, while others can apply to have their rights restored.

MAP HERE

Barriers to the Restoration of Rights

Even in states where ex-offenders automatically regain the right to vote upon completion of their sentence, the process of re-registering to vote often is difficult. One reason is the complexity of the laws and processes surrounding disenfranchisement. In some cases, it is difficult to determine whose rights can be restored. This can vary in some states according to the date of the crime, the conviction, or the release from prison, or the nature of the crime. The complex restoration process also can be daunting. It often involves lengthy paperwork, burdensome documentation, and the involvement and coordination of several state agencies.

A second barrier to restoration of voting rights for ex-offenders is the often inconsistent communication among agencies. The methods of communicating the loss and restoration of voting rights among courts, corrections and elections officials are not always reliable, timely or consistent. This inconsistency can result in uneven application of the law, even when the laws are clear.

Another barrier is lack of information. Ex-offenders sometimes are not aware that they regain their voting rights automatically upon completion of their sentence. They go through life believing they cannot vote when, in fact, they can. In other cases, they are not informed of the process for regaining their rights or offered assistance in doing so. As long as they remain ignorant of the necessary steps, ex-offenders cannot begin the process of regaining voting rights.

A final obstacle is under-funding of parole boards in some states where offenders must apply to have their rights restored. A massive backlog of applications can exist because the agencies do not have adequate staff or resources to process them in a timely manner.

Recent Trends in State Action

Most recent state legislation seeks to expand felon voting rights and ease the process of restoration. Between 1996 and 2008, 28 states passed new laws on felon voting rights.

- Seven repealed lifetime disenfranchisement laws, at least for some ex-offenders.
- Two gave probationers the right to vote.
- Seven improved data-sharing procedures among state agencies.
- Nine passed requirements that ex-offenders be given information and/or assistance in regaining their voting rights at the time they complete their sentence.
- Twelve simplified the process for regaining voting rights, for instance, by eliminating a waiting period or streamlining the paperwork process.

To date in 2009, 82 bills addressing the voting rights of felons and ex-offenders have been introduced in 25 state legislatures. In the 2007-2008 biennium, 129 bills were introduced in 27 states.

For more detailed information on 2001-2009 state legislation dealing with the voting rights of convicted felons, visit NCSL's Election Legislation Database and select the subtopic "Voters-Convicted Felons."

Re: Senate Bill 7
ACLU Statement of Support

Chair Wielechowski, Vice-Chair Paskvan:

Thank you for the opportunity to submit a written statement of support for SB 7.

The American Civil Liberties Union of Alaska represents thousands of members and activists throughout the State of Alaska who seek to preserve and expand individual freedoms and civil liberties guaranteed under the United States and Alaska Constitutions.

Felony disfranchisement is a policy that bars citizens from the ballot box upon conviction of a felony. In the United States, over 5.3 million Americans cannot vote due to a felony conviction. Felony disfranchisement laws vary from state to state, but 48 states bar incarcerated individuals from casting a ballot, with only Maine and Vermont allowing inmates to vote. Eight states permanently ban certain individuals with a felony conviction from voting and two states bar all persons with felony convictions from voting.

The vast majority of disfranchised individuals are no longer incarcerated, but are living in their communities on probation or parole; 2.1 million of the disfranchised population have fully completed their sentence. These disfranchised individuals are tax-paying citizens, involved with the issues in their community, but unable to vote to affect them.

The impact of felony disfranchisement falls disproportionately upon communities of color. Nearly one and a half million African-American men, or 13%, are disfranchised due to felony convictions, a rate that is seven times the national average of one out of forty-one adults. If incarceration rates hold steady, three in ten of the next generation of black men can expect to be disfranchised at some point in their lives.

However, over the last decade the national trend has moved toward lowering barriers for the disfranchised. Since 1997, 19 states have made progressive changes to their felony disfranchisement laws, enfranchising over 700,000 formerly incarcerated individuals. In a democracy voting is a right, not a privilege. But for over 5 million Americans, that is not the case. We hope SB 7 will change that in Alaska.

Alaska Disfranchisement Policy
Alaska bars individuals with a felony conviction from voting until full completion of sentence, including incarceration, probation and parole. Upon completion of sentence the right to vote is automatically restored but individuals must include a copy of their discharge papers when registering to vote. Individuals with misdemeanor convictions never lose the right to vote, but they must vote by absentee ballot if in jail.

Who is Disfranchised in Alaska?
An estimated 10,176 people with felony convictions are barred from voting in Alaska. Approximately 44% of disfranchised people are in prison while 56% of disfranchised people are on probation or parole. Probationers and parolees are law-abiding citizens who are living in the community, working, raising their families and paying taxes.

Racial Impact
Alaska Natives are significantly overrepresented in the disfranchised population. Alaska Natives comprise 32% of the total disfranchised population, though they only comprise 16% of the total population of Alaska. African-Americans comprise 9.5% of the disfranchised population, yet comprise only 3.5% of the total population of Alaska.

Voting & Public Safety
Felony disfranchisement runs counter to the goal of public safety. Restricting voting rights does not prevent crime, nor does it provide compensation to victims. In fact, disfranchising persons after release from prison is antithetical to the reentry process and harmful to long-term prospects for sustainable reintegration of ex-offenders into society. Recent research finds a link between voting participation and reoffense; people who voted after release from supervision were half as likely to be re-arrested as those who did not vote. Similar effects were found among people with a prior arrest; 27% of non-voters were re-arrested, compared to 12% of people who had voted.

Far from making streets safer, felony disfranchisement may be detrimental to public safety. Voting demonstrates an individual's commitment to the institutions of American democracy. The irony of felony disfranchisement is that the very behavior that society strives to encourage – the commitment to the larger social and political collective – is undermined by a policy that requires people who desire to engage in that behavior to relinquish the right to vote.

Please feel free to contact the undersigned should you require any additional information. We are happy to reply to any questions that may arise, or to answer informally any questions which Members of the Committee may have.

Thank you again for the opportunity to share our thoughts.

Sincerely,

Jeffrey Mittman

VOTING AND SUBSEQUENT CRIME AND ARREST: EVIDENCE FROM A COMMUNITY SAMPLE

Christopher Uggen and Jeff Manza*

I. INTRODUCTION

A number of recent studies have examined the origins and consequences of felon disenfranchisement laws in the United States. These studies have identified a large and growing group of citizens who have lost the right to vote because of felony convictions.[1] The burden has fallen particularly heavily on minority citizens, with

nearly two million African Americans currently disenfranchised.[2] American laws are uniquely restrictive on the international scene.[3] Since laws that regulate voting rights for felons and ex-felons are specific to each state—ranging from states with no restrictions to states enforcing lifetime bans on participation—there is wide variation in the size and distribution of the disenfranchised population.[4] A number of studies have suggested that disenfranchisement is likely to have impacted both electoral turnout and, in a handful of cases, even electoral outcomes.[5]

The existing research literature considering the *political* implications of disenfranchisement hardly exhausts the range of important issues to consider. One of the most important issues, the relationship between political participation and subsequent criminal activity, has yet to be systematically addressed. If voting is unrelated to later criminal behavior, then legal changes that extend the franchise to convicted felons are unlikely to affect crime or desistance rates. In that case, current policy debates over felon disenfranchisement laws should pivot primarily on questions of political rights and democracy. However, if those who vote are actually less likely to commit new crimes, legal changes easing the right to vote for felons may facilitate reintegration efforts and reduce rates of recidivism.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 194 2004-2005

The reintegrative effects of voting may have broader implications. The right to vote is one of the defining elements of citizenship in a democratic polity[6] and participation in democratic rituals such as elections affirms membership in the larger community for individuals and groups.[7] Because of all that voting represents in this society, voting can be viewed as a proxy for other kinds of civic engagement associated with the avoidance of illegal activity.

Establishing a causal relationship between voting, or civic reintegration more generally, and recidivism would require a large-scale longitudinal survey that tracked released offenders in their communities and closely monitored changes in their political and criminal behavior. At present, no such data exist.[8] Nevertheless, it is possible to bring some empirical data to bear on this question now. In this paper, we present a simple analysis of the relationship between voting and crime using data we have collected from the Youth Development Study, a prospective longitudinal investigation of a cohort of former Minnesota public school students.[9]

We will first establish a correlation between voting and crime by examining whether those who voted in the 1996 presidential election had lower rates of arrest, incarceration, and self-reported

criminal behavior in the years following this election than those who did not participate. We then conduct a logistic regression analysis to test whether this correlation is spurious due to factors that are associated with both voting and crime. By statistically controlling for prior self-reported and official criminal behavior and background factors such as race, gender, education, employment, and marital status, we can learn the extent to which the raw correlation is due to the self-selection of persons at low risk of crime into voting. While this approach cannot firmly establish political participation as a cause of desistance from crime, it allows us to rule out some of the most compelling alternative explanations for the correlation. We will estimate the net effect of voting on crime by statistically controlling for several factors closely linked to both behaviors.

II. CIVIC REINTEGRATION AND DESISTANCE FROM CRIME

A. Insights from Criminology and Prior Research

We might expect a relationship between political participation and recidivism for a number of reasons. Solid empirical evidence demonstrates that former criminal offenders who enter stable work[10] and family relationships[11] are most likely to desist from crime. In addition to securing stable employment and family situations, convicted felons are expected to return to their communities and either resume or begin their lives as active and law-abiding citizens. The primary causal mechanism hypothesized in these studies is one of informal social control, in which attachment to social institutions such as families and labor markets increase the reciprocal obligations between people and provide individuals with a stake in conforming behavior.[12] Social-psychological theories of symbolic interactionism, while differing from informal social control theories in some respects, make a similar prediction that the

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 196 2004-2005

assumption of work and family roles facilitates the development of an identity as a productive and responsible law-abiding citizen.[13]

Although the issue has received scant research attention in the study of desistance from crime, reintegration as a voting member of one's community would appear to be a logical analog to work and family reintegration. As Shadd Maruna notes in a recent study of desistance, the desire to "be productive and give something back to society" appears to be critical to the desistance process.[14] To date, however, much of the research on this question has been based on small-scale interview projects, or correlational studies based on highly selected samples.[15]

B. Insights from Democratic Theory

A second theory linking political participation to reduced crime derives from the literature on democracy. Conventional theories of democracy typically emphasize instruments available for citizens to control their government—through elections, public opinion, or popular revolts.[16] However, some democratic theorists focus on the benefits to the individuals who participate in democratic processes. In this latter view of democracy, individuals become citizens in part through the "educative" or "constitutive" impact of political participation.[17]

This view was first suggested by de Tocqueville and Mill, with the latter's classical statement explicitly referencing de

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 197 2004-2005

Tocqueville's *Democracy in America*.[18] According to Mill, when citizens participate regularly in politics, they develop an explicit identification with the polity and its norms and values.[19] In this sense, democracy fosters citizenship. In the narrowest reading of the constitutive argument, political participation produces citizens with a generalized sense of efficacy, who believe that they have a stake in the political system. This, in turn, fosters continued political participation.[20] Some classical studies provide evidence in support of this view.[21] More recently, the National Commission on Electoral Reform endorsed the idea that the greater an individual's participation in the political process, the more fair the individual is likely to consider the system.[22]

Theories of "expressive voting"[23] and communitarian and republican theories of government[24] hold that the right to vote is

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 198 2004-2005

important precisely because it helps make individuals into democratic citizens. In the words of one legal theorist

> the vote should be protected not simply because it enables individuals to pursue political ends, but also because voting is a meaningful participatory act through which individuals create and affirm their membership in the community and thereby transform their identities both as individuals and as part of a greater collectivity."[25]

The expressivist theories are today the leading response to rational choice models of voter turnout,[26] suggesting that people participate in part because elections give them an opportunity to express their civic identities.[27]

More expansive views of the impact of participation have also been developed, but typically in relation to forms of participation that extend beyond the mere act of voting. In her modern reconstruction of the idea of participatory democracy, for example, Pateman argues that

> the major function of participation in the theory of *participatory democracy* is . . . an educative one . . . including both the psychological aspect and the gaining of experience in democratic skills and procedures. . . . For a democratic polity to exist it is necessary for a participatory society to exist, i.e., a society where all political systems have been democratized and socialization through participation can take place in all areas.[28]

Other advocates of "strong democracy"[29] and deliberative democracy[30] emphasize forms of participation that go beyond the

"mere" act of voting and involve citizens talking about politics.[31] McAdam's analysis of the impact of social movement activism on the lives of activists and non-activists provides powerful evidence of the constitutive and life-changing experience of high-risk activism.[32] Although the political life of felons extends to myriad activities,[33] the analysis below will focus on a single fundamental question about political participation: How is voting related to crime and recidivism?

III. DATA AND MEASURES

The criminological and political theory literature reviewed in the previous section suggest some possible links between civic participation and desistance, but the case has yet to be proven. Qualitative data from in-depth interviews we have presented elsewhere[34] are suggestive, but not ideally suited to test ideas about the possible impact of civic integration. Moreover, our interviews hardly provide unambiguous evidence in support of such an impact. To develop a more systematic assessment, we examine some longitudinal survey data containing information about both voting and criminal behavior.

The study involves a survey of the effects of voting participation in the 1996 election upon self-reported crime and arrest in the years from 1997 to 2000. We consider both the simple correlation or association between voting and crime, as well as the net impact of voting after statistically controlling the effects of race, sex, education, marital status, employment, and anti-social behavior.

(noting that political decisions are reached through a combination of consensus decision-making derived from participation and electoral outcomes).

31. *See* Nina Eliasoph, Avoiding Politics: How Americans Produce Apathy in Everyday Life 11–12, 277–78 (1998) (arguing that democratic citizenship requires a vibrant public sphere—defined as associations and institutions in which private citizens carry on conversations about issues of common concern); *see also* Perrin, *supra* note 30, at 171 (arguing that "citizens gain capacities for intelligent, strategic operation in the public sphere by gathering cues and resources from a variety of civic contexts and experiences.").

34. Uggen et al., *supra* note 7, at 269–86.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 200 2004-2005

We first explore whether voting is at all related to crime and arrest and then address the more complicated issue of whether voting is an independent cause of desistance from crime. We analyze data from the Youth Development Study (YDS), a survey of 1,000 persons who began the study in 1988 as ninth-graders in St. Paul, Minnesota public schools.[35] The YDS offers a general sample, rather than a focused group of convicted felons. It is useful for our purposes, however, because it is among the very few existing data sets (if not the sole data set) that include information on both criminal behavior and voting. Self-reported crime and arrest data are drawn from data collected between 1988 and 2000. Political participation questions for the 1996 election are taken from the twelfth survey wave in 2000, when a total of 757 respondents, aged twenty-six to twenty-seven, remained in the sample. Subsequent criminal behavior is measured by self-reported indicators of property crimes and violence (reported in 1998 and 1999 for the years 1997 and 1998) and arrest and incarceration (reported in 2000 for the 1997–2000 period). Information on marital status, employment, and educational attainment were taken from the 1995 survey so that these background characteristics would precede both the 1996 voting data and the 1997-2000 information on subsequent criminal behavior. Finally, self-reported crime and arrest data prior to 1996, important statistical controls in this analysis, were taken from earlier retrospective reports of arrest, drunk driving, shoplifting, and violence.

These longitudinal data are important because a negative statistical association between voting and arrest may be an artifact of some unmeasured characteristic—such as a propensity for antisocial behavior—reflected in both processes. We exploit the longitudinal nature of the YDS to examine the effects of voting on subsequent arrest after statistically controlling for measures of self-reported deviance that would indicate antisocial propensity. In addition to race, sex, education, marital status, and employment, we control for arrest prior to 1996 and three indicators of common self-reported deviance: drunk driving, shoplifting, and hitting or threatening to hit another person. Our goal in this analysis is to determine whether the voting effect is signaling a real "prosocial

35. Mortimer, *supra* note 9, at 32–33, 36.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 201 2004-2005

orientation" linked to desistance from crime, or whether it is simply capturing stable, underlying differences across respondents in social background and criminal history.

Table 1. Variable Descriptions and Descriptive Statistics for Youth Development Study

Variable	Description	Percentage/ Mean
Voting		
1996 voting	Percentage reporting voting in the 1996 presidential election	65.2
Background		
Female	Percentage female	56.5
White	Percentage reporting white race	76.7
Years education in 1995	Number of years of education	13.6 (1.8)
Marriage in 1995	Percentage married	11.6
Employed in 1995	Percentage employed	82.3
Subsequent Crime		
Arrested 1997-2000	Percentage reporting arrest in 1997, 1998, 1999, or 2000	8.82
Incarcerated 1997-2000	Percentage reporting incarceration in jail or prison in 1997, 1998, 1999, or 2000	7.39
Violent crime 1997-1998	Percentage reporting hitting or threatening to hit someone, fighting, or robbing someone	32.3
Property crime 1997-1998	Percentage reporting shoplifting, theft, check forgery, or burglary	13.4
Any crime 1997-1998	Percentage reporting at least one property or violent offense in 1998 or 1999	38.3
Prior Deviance		
Arrest prior to 1996	Percentage arrested prior to 1996	18.7
Prior drunk driving	Percentage reporting driving after having too much to drink during high school (1988-1991)	28.4
Prior shoplifting	Percentage reporting shoplifting during high school (1988-1991)	38.0
Prior violence	Percentage reporting hitting or threatening to hit someone during high school (1988-1991)	41.4

Note: Standard deviations for continuous variables are in parentheses.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 202 2004-2005

Variable descriptions and summary statistics for each of these measures are shown in Table 1. Self-reported turnout rates were relatively high for this Minnesota cohort, with 65% of respondents reporting that they voted in 1996, one of the first federal elections in which they would have been eligible to cast ballots, as against 59.6% of people aged eighteen to twenty-four in that election in Minnesota, a high-turnout state.[36] At the time of data collection in 2000, approximately 57% of the remaining sample was female and about three-fourths of respondents were white.[37] By 1995, the cohort had achieved an average of 13.6 years of education and a good number were currently enrolled in post-secondary education. Only 12% were married by 1995 and approximately 82% were employed.

With regard to official measures of crime, about 9% reported being arrested and 7% reported being incarcerated at some point in the four years following the 1996 election. Prior to 1996, about 19% reported being arrested. With regard to self-reported criminality, we consider both property and violent offenses. About 38% of the sample indicated that they had committed at least one property crime or act of violence in the 1997-1998 period. The property crime indicator flags those who reported shoplifting, theft, forgery, and burglary. Overall, approximately 13% of the sample reported at least one of these offenses in 1997 or 1998. The violence indicator measures those

36. U.S. Bureau of the Census, *Reported Voting and Registration, by Sex and Age, for States: November 1996* (Aug. 17, 1998), *available at* http://www.census.gov/population/socdemo/voting/96cps/tab4B.txt (last visited June 9, 2004). There are a number of methodological issues raised by reliance on self-reported turnout. Some non-voting survey respondents claim to have voted, which may be explained by Bernstein's finding that "those who are under the most pressure to vote are the ones most likely to misrepresent their behavior when they fail to do so." This includes better-educated and more privileged groups with much lower levels of criminal activity, and also minorities in politically charged areas. *See* Robert Bernstein et al., *Overreporting Voting: Why It Happens and Why It Matters*, 65 Pub. Opinion Q. 22, 41 (2001).

37. As in other longitudinal surveys, race and family income are associated with sample attrition in the YDS. In supplementary analysis, however, we found no evidence that estimates reported here are biased by sample selectivity or attrition. For example, the magnitude and direction of the voting effects appear to be consistent across income and racial groups, although the estimated standard errors are larger, and fewer of the relationships are statistically significant in the subgroup analyses. More complete information about YDS sample attrition can be found in Mortimer, *supra* note 9, at 36–37, and further details about the crime measures are reported in Uggen & Janikula, *supra* note 15, at 337.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 203 2004-2005

who reported hitting or threatening to hit someone, being involved in a physical fight, or robbing someone by force. The combined prevalence of these behaviors is about 38% overall.

In sum, the YDS sample reflects the St. Paul, Minnesota community from which it is drawn,[38] tracking a cohort of young adults as they gain eligibility to vote, transition to adult work and family roles, and desist from crime and minor deviance. As in other samples of young adults from the general population,[39] we find high rates of self-reported crime and deviance, low rates of arrest, and age-appropriate levels of marital formation, employment, and educational attainment.

IV. RESULTS

We first present simple bivariate results.[40] These are shown in figures contrasting the percentage of voters who go on to commit crime or to be arrested with the percentage of non-voters who go on to commit crime or to be arrested. We then present multivariate results in tables with regression coefficients. These figures show the relationship between voting and crime while simultaneously controlling for the effects of other variables that could alter this relationship, such as prior deviance and marital status.

A. Bivariate Relationships

1. Voting is Correlated with Arrest and Incarceration

We first examine the most basic question about the relationship between political participation and criminality. Is there any correlation between voting and crime, arrest, and incarceration? Figure 1 shows the bivariate relationship between voting in 1996 and subsequent arrest and incarceration. The figure shows clear differences in rates of arrest and incarceration by levels of political participation. Approximately 16% of the non-voters were arrested

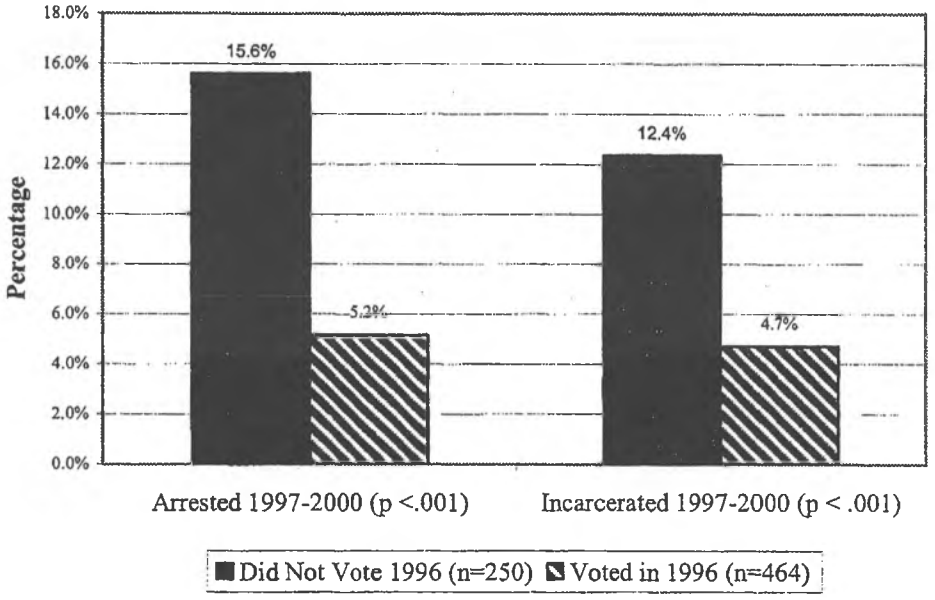
40. Results of study, considering two variables.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 204 2004-2005

between 1997 and 2000, relative to about 5% of the voters. Similarly, approximately 12% of the non-voters were incarcerated in jail or prison between 1997 and 2000, relative to less than 5% of the voters. Both of these contrasts represent statistically significant differences ($p < .001$) between those who participated in the 1996 election and those who did not participate.

Figure 1. Percentage Arrested and Incarcerated in 1997-2000 among Voters and Non-Voters in 1996



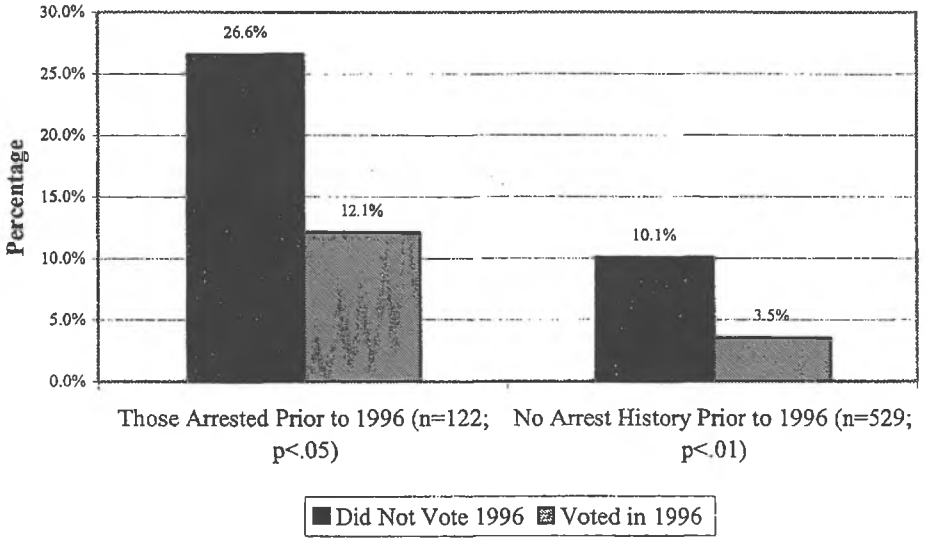
2. Voting is Correlated with Re-arrest among those with Arrest Histories

The YDS is a heterogeneous sample with regard to criminal history, but approximately 80% of the respondents had no prior arrests at the time of the 1996 election. We therefore split the sample into two groups to distinguish those with a prior arrest history from those with no such history. This allows us to learn whether the bivariate correlation shown in Figure 1 holds across different levels of criminal history. Figure 2 suggests that this is indeed the case. Among former arrestees, about 27% of the non-voters were re-arrested, relative to 12% of the voters. These results suggest that

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 205 2004-2005

there is at least some correlation between voting in 1996 and recidivism in 1997□2000 among people who have had some official contact with the criminal justice system.

Figure 2. Percentage Arrested in 1997-2000 among Voters and Non-Voters in 1996, by Arrest History



In Minnesota, those convicted of felonies may not vote until they have completed all prison, parole, or probation supervision. Therefore, it may be the case that the differences in re-arrest by voting status are due to *legal* restrictions on the ability of arrestees to vote—some of them may have been ineligible to vote in the 1996 election. The contrast shown in the right-hand side of Figure 2, however, suggests that this is unlikely to explain the correlation between voting and subsequent arrest. Even among those with no prior arrest history, about 10% of the non-voters were arrested, compared to less than 4% of the voters. Although there is less statistical power to detect these effects in the subgroup analysis in Figure 2 than in the analysis shown in Figure 1, both of these contrasts are again statistically significant ($p < .05$). Therefore, the relationship between voting and subsequent arrest does not appear to depend on criminal history.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 206 2004-2005

3. Voting is Correlated with Subsequent Self-Reported Crime

Arrest is an important measure of official contact with the criminal justice system, but a flawed measure of criminal behavior.[41] Many crimes go unreported and official arrest data may be subject to biases relating to class, race, and other factors. If civic participation is truly related to desistance from crime, however, voting effects should be visible on self-reported criminal behavior as well as arrest and incarceration. Figure 3 considers the relationship between voting and common property crimes and violent behavior. The figure indicates that about 11% of the voters reported a property crime, compared to about 18% of the non-voters. Similarly, about 27% of the voters reported violence or threats of violence, relative to about 42% of the non-voters. Both of these contrasts represent statistically significant differences ($p < .01$).

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 207 2004-2005

After examining Figures 1, 2, and 3, the answer to our first question about the basic relationship between crime and voting is clear: we find a significant bivariate association between voting and subsequent crime. Those who vote are less likely to be arrested and incarcerated, and less likely to report committing a range of property and violent offenses. Moreover, as Figure 2 shows, this relationship cannot be solely attributed to prior criminal history; voting is negatively correlated with subsequent crime among those with and those without a prior criminal history.

B. Multivariate Analysis

1. The Correlation between Voting and Arrest is Reduced when Controlling for Other Factors

Although Figures 1, 2, and 3 present an intriguing pattern of results, they show a correlation that may or may not be indicative of an underlying causal relationship. As our interviews with prisoners suggested, it seems likely that voting is correlated with other factors that are closely related to arrest. For example, race and sex are related to both processes. Women and whites had significantly higher turnout rates than men and African Americans in the 1996 election[42] as well as much lower rates of arrest.[43] Similarly, education is a very strong predictor of voter turnout in these data[44] and is also linked to crime and arrest.[45]

We begin to statistically control for the effects of these factors in Table 2. The table shows the effects of 1996 voter turnout on arrest in 1997-2000. Model 1 shows the significant bivariate association reported above in Figure 1. The exponentiated logistic regression coefficients may be interpreted as changes in the odds of arrest in these equations, such that the -1.044 voting effect in Model1 indicates a rate of arrest for voters that is a little more than one-third the corresponding rate for non-voters (e-1.044 = .35). Model 2,

# $p < .10$ * $p < .05$ ** $p < .01$

however, shows that a good portion of this voting effect on arrest is explained by differences in race, gender, and education levels of voters and non-voters. Controlling for the effects of education, marital and employment statuses are only weak predictors at this stage of the life course (most respondents were approximately twenty-one to twenty-two years of age in 1995). Whites, females, and those with greater education are unlikely to be arrested relative to non-whites, males, and those with fewer years of education.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 209 2004-2005

Nevertheless, the effect of voting is not rendered spurious by the inclusion of these background characteristics.

Finally, in Model 3, we no longer detect a statistically significant voting effect (p = .110) once the effects of prior criminal behavior and arrest are statistically controlled. This more stringent test suggests that the voting effect is at least partially a product of antisocial propensity—insofar as we can name and measure this construct with prior arrest and deviance indicators. Although the effect of voting is no longer statistically significant in Model 3 in either the arrest or incarceration models,[46] this does not necessarily indicate that the effect of voting is irrelevant with respect to subsequent crime. In predicting a relatively rare event such as arrest in a sample of this size, a large effect would be required to reach statistical significance. The magnitude and direction of the estimated voting effect warrant further investigation into the relationship.

2. The Correlation between Voting and Self-Reported Crime is Reduced when Controlling for Other Factors

We next consider the relation between voting and self-reported crime and deviance in Table 3. Voting in 1996 is again a strong negative predictor in the equation predicting any self-reported crime in 1997–1998. For this analysis, the indicator flags any crime, whether it is a property offense (shoplifting, theft, forgery, and burglary) or an act of violence (hitting or threatening to hit, fighting, and robbery). Although the voting effect is partially mediated by background characteristics and prior criminal behavior in Models 2 and 3, respectively, political participation remains a statistically significant predictor in all models. In the final model, which adjusts estimated voting effects for the degree of prior official and self-reported criminal history, the odds of committing any self-reported crime are approximately .60 times as high for voters as for non-voters (e-.506 = .60).

As with the arrest outcome, the self-reported crime results again show a strong correlation between voting and criminal behavior. In contrast to the final arrest model, however, a statistically significant voting effect remains in all three models predicting any crime of property or violence. When the crime items

46. The incarceration model is not shown, but is available upon request.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 210 2004-2005

are examined individually, or added in a summative scale and analyzed using ordinary least squares regression, the results tend to parallel those shown in the figures and Tables 2 and 3. A large bivariate relationship is partially mediated by indicators of socioeconomic status (mainly education) and prior official and self-reported criminal behavior. Regardless of the particular crime

outcome we examined, the voting effect is consistently negative in direction, but does not consistently reach standard levels of statistical significance ($p < .05$) in the final models that include all of the relevant statistical controls.

V. DISCUSSION

A. Insights from Convicted Felons

We first encountered the possibility that civic reintegration may be connected to motivations for desistance in a series of in-depth interviews we conducted with convicted felons in Minnesota.[47] Those we interviewed often spoke passionately about the stigma of a felony conviction and told us that losing the right to vote, in particular, was a powerful symbol of their status as "outsiders." Steven, an older male probationer, told us that "on top of the whole messy pile, there it was. Something that was hardly mentioned, and it meant a lot."[48] Pamela, a female prisoner in her forties, felt the loss of voting rights as additional "salt in the wound" and "another [loss] to add to the pile" of problems she was encountering as a result of her criminal convictions.[49] In that study, we argued that civic reintegration and the adoption of a role identity as an active citizen may facilitate desistance from crime and reconnection with other social institutions.

Yet while many of the prisoners, probationers, and parolees we met regretted the loss of their ability to participate as citizens in their communities, they were often skeptical about drawing any direct connection between voting and subsequent criminality. Andrew, a probationer in his twenties, thought it "would be a stretch" to tie voting to recidivism:

> To me that would be a stretch. . . . I think that people who are more likely to vote are, you know, just at different points in their life, and I just think that the people [who] are more likely to commit crimes aren't gonna either commit those crimes or not commit those crimes because

47. *See* Uggen et al., *supra* note 7, at 267; *see* Uggen & Manza, *supra* note 33, at 177 for interview details.

48. Interview by Christopher Uggen with a male inmate in his fifties, Minnesota prison (Mar. 27, 2001).

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 212 2004-2005

> they have the ability to, to vote. I just don't think that voting's gonna be a priority to them.[50]

Larry, a young prisoner, echoed these sentiments in arguing that "people that are gonna get into crime are gonna do it whether they have the right to vote or not."[51] Alex, in the midst of a long prison sentence, similarly doubted the link between voting and recidivism:

> I don't think that would have anything to do with it [committing future crime], the right to vote. . . . I mean I had the right to vote before I came to prison, but I still let my crime happen. I don't go around beating up on people as a hobby or anything. But it just happened. But I don't see voting as having an effect on criminal behavior.[52]

Other felons described voting as "a small factor," or as a possible deterrent to committing future felonies. In short, our interviews showed us that while many convicted felons care deeply about disenfranchisement and other civil disabilities, they were on the whole unconvinced that voting in itself would affect subsequent criminal behavior.

B. Results of the Statistical Analysis

Taken as a whole, however, our statistical analysis suggests that a relationship between voting and subsequent crime and arrest is not only plausible, but also supported by empirical evidence. We find consistent differences between voters and non-voters in rates of subsequent arrest, incarceration, and self-reported criminal behavior. While the single behavioral act of casting a ballot is unlikely to be the sole factor that turns felons' lives around, the act of voting manifests the desire to participate as a law-abiding stakeholder in a larger society. At a minimum, our multivariate analysis suggests that the political participation effect is not entirely attributable to preexisting differences between voters and non-voters in criminal history, class, race, or gender.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 213 2004-2005

Nevertheless, a substantial portion of the association between voting and subsequent criminality appears to be a result of the greater educational attainment of voters and their less serious criminal histories. While criminal histories are not amenable to intervention, education is at the heart of ongoing correctional efforts to reintegrate felons. Moreover, a general education program working in concert with citizenship education and political participation may be especially effective in facilitating desistance from crime. For example, Larry, one of the prisoners we interviewed, strongly advocated for greater educational resources:

> I think education is underrated. There's not enough of it. They don't think about it enough. I mean there should be more education. They keep taking it away. You know, I was going to [names university] through their program in [names city], and they took the program away. About a year later they brought a smaller version of it back, but still it's not the same as it was.[53]

When asked about whether civics education might be effective in prison, Larry responded:

> I think that'd be a really good idea, though, because most of us, and, you know, me included, don't really think about my place in society as a citizen. . . . It's just about, "What's going [on] with me and my immediate surroundings?" you know? "What's going to affect me?" instead of, "Where do I stand as a citizen?" That'd be interesting.[54]

VI. CONCLUSION

While these ideas are largely speculative, we can take from this study both provisional support for the idea of civic reintegration through voting and confirmation of the skepticism expressed by some of the prison inmates and probationers we interviewed. Voting appears to be part of a package of pro-social behavior that is linked to desistance from crime. Though the unique independent contribution of voting participation is likely to be small relative to pressing socioeconomic needs, family support, and other factors, the right to vote remains the most powerful symbol of stake-holding in our

53. Interview by Uggen & Manza, *supra* note 51.

54. *Id.*

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 214 2004-2005

democracy. To the extent that felons begin to vote and participate as citizens in their communities, it seems likely that many will bring their behavior into line with the expectations of the citizen role, avoiding further contact with the criminal justice system.

HeinOnline -- 36 Colum. Hum. Rts. L. Rev. 215 2004-2005

MODEL TESTIMONY: ALASKA, FEBRUARY 2007

Testimony of

DANIEL LEVITAS

On behalf of

THE AMERICAN CIVIL LIBERTIES UNION

On

SB 7

AN ACT RELATING TO THE VOTING RIGHTS OF INDIVIDUALS WITH FELONY CONVICTIONS

Before the

STATE AFFAIRS COMMITTEE
IN THE TWENTY-FIFTH LEGISLATURE - FIRST SESSION
STATE OF ALASKA

February 22, 2007

Good afternoon Madam Chairman and members of the Committee. Thank you very much for the opportunity to testify today on SB 7, a measure addressing the voting rights of persons with felony convictions in Alaska. I urge your support for this important legislation.

My name is Daniel Levitas and I am a consultant to the American Civil Liberties Union on the issue of felon enfranchisement and am based in Atlanta, Georgia. Founded in 1920, the ACLU is a nonprofit, nonpartisan organization with more than 500,000 members nationwide dedicated to preserving and protecting civil liberties and civil rights.

Currently there are an estimated 5.3 million Americans who are disfranchised as a result of a prior criminal conviction, including approximately 11,132 persons in Alaska, which represents 2.42% of the state's voting age population.[1] It is especially important to note that the majority of Alaska's disfranchised population is *not* in prison or jail, but actually living in the community. In fact, slightly more than half the 11,132 disfranchised persons in Alaska, or 6,010 people, are on felony probation (5,083 and 46%) or parole (927 and 8%).

Currently Alaska is one of 19 states where the right to vote is automatically restored upon completion of sentence, including the term of incarceration, probation and parole.

However, there are a growing number of states—20 to be exact—whose disfranchisement policies are less harsh than Alaska's and whose policies are likely to promote more effective reintegration of people with felony convictions. I hope that you and your colleagues in the Alaska legislature will give strong consideration to embracing this trend with the adoption of SB 7.

For example, in 13 states and the District of Columbia (including Oregon, Montana, Utah and Indiana), individuals with felony convictions can vote automatically upon release from prison.[2] In five

other states voting rights are restored automatically after release from prison and discharge from parole, but probationers may vote.[3] And in two states—Maine and Vermont—there are no felon disfranchising provisions.

In taking up SB 7, Alaska policymakers are hardly alone in considering less restrictive disfranchising provisions. Over the past ten years there has been a broad national trend of adopting less restrictive measures with 16 states implementing positive reforms to their felon disfranchisement policies. And legislators in Colorado and Washington State are currently debating measures nearly identical to SB 7, which would fully enfranchise all persons upon release from incarceration. And just last fall, Rhode Island voters approved a statewide ballot initiative that restored voting rights to approximately 15,000 individuals on parole and probation in that state.

This trend is also one that enjoys support across the political spectrum. While testifying last summer in favor of renewing the expiring provisions of the Voting Rights Act, former Cabinet Secretary Jack Kemp declared his support for felon enfranchisement. And Florida's new Governor, Charlie Crist, who said during his campaign that he favored instituting automatic restoration of voting rights, was recently scheduled to meet personally with Kemp to discuss how to move forward on this issue. In Virginia, one of only three states that still permanently disfranchise felony offenders, the Republican controlled state senate voted overwhelmingly early this month in favor of a constitutional amendment that would allow the General Assembly to restore voting rights to formerly incarcerated individuals who committed nonviolent crimes.

In Alaska, as is the case elsewhere in the United States, the vast majority of inmates are going to return to their communities. It is therefore in our collective interest for people with felony convictions to function as responsible taxpayers and citizens, recognizing the full range of their responsibilities to society. Passage of SB 7 would help facilitate this goal by enabling more people with prior felony convictions to vote and thereby giving them a higher stake in their Alaska communities. After all, people on probation and parole are law-abiding citizens who are living in the community, working or seeking work, raising their families and paying taxes.

Restricting voting rights does not prevent crime or provide compensation to victims. Instead, disfranchising people following their release from incarceration accomplishes exactly the opposite of what we should be doing to promote re-entry. In this way, prolonged disfranchisement of citizens with criminal convictions after their release from incarceration is actually harmful to the prospects for sustainable reintegration of people with felony convictions into society. In fact, extending the right to vote to individuals who are released from incarceration is also likely to reduce the chances that they will re-offend as recent research finds a link between voting participation and re-offense: people who voted after release from supervision were half as likely to be re-arrested as those who did not vote.[4] Similar effects were found among people with a prior arrest; 27% of non-voters were re-arrested, compared to 12% of people who had voted. [5]

In contrast, maintaining Alaska's current policy of disfranchising offenders who are deemed safe enough to be living and working in local communities on probation or parole can only discourage these offenders from becoming productive members of society, enhance their likelihood of re-arrest, and weaken democratic institutions by decreasing participation in the voting process.

Overall, criminal disfranchisement also has a disproportionate impact on minority communities. While disfranchisement policies prevent 2.5% of the total population from voting nationwide, they prevent 13% of the total population of African American men from casting a ballot.[6] In Alaska, while the majority of individuals with felony convictions are Caucasian, felony disfranchisement still has a very significant racially disproportionate effect. For example, 1,469 of the 11,132 Alaskans who are disfranchised as a result of a felony conviction are African American, which represents 7.6% of the overall black voting age population in the state. This compares with the aforementioned disfranchisement rate of just 2.4% for all

voters (including minorities). Put another way, African Americans are disfranchised at a rate nearly four times that of whites in Alaska as a result of current disfranchisement policy.

Alaska Natives are similarly impacted. According to state Department of Corrections statistics, in 2000, Alaska Natives constituted 31%[7] of the total disfranchised population, though they comprised only 15.6% of the total population.[8] And of the 5,046 persons on probation and parole as of December 2003, approximately 55% (or 2,774 persons) were white, while 28% were Alaska Natives, and approximately 9% were African American, which is more than double the state's 3.7% black population.[9] The remaining 6% of parolees and probationers were divided roughly equally between Latinos and Asian Americans/Pacific Islanders.

Voting is a fundamental right and a civic duty. As the U.S. Supreme Court stated in its landmark 1964 decision, Reynolds v. Sims, *"The right to vote freely for the candidate of one's choice is of the essence of a democratic society, and any restrictions on that right strike at the heart of representative government."*[10]

Thank you very much.

---

[1] Alaska's voting age population was 459,529 people as of December 31, 2004 – the date for which we have the most recent comprehensive data on disfranchised persons.

[2] The 13 states are: HI, IL, IN, MA, MI, MT, NH, ND, OH, OR, PA, RI, UT.

[3] The five states are: CA, CO, CT, NY, and SD.

PROCESSING FELONS

A person convicted of a felony involving moral turpitude cannot vote in a state or municipal election from the date of conviction through date of unconditionally discharged. The Division is notified in different ways by the Department of Corrections when a person has been convicted of a felony or has been discharged from a felony. Region III receives a statewide list of felons each month by the Department of Corrections and processes the names on the list. Each Regional Office receives notification from Department of Corrections and probation offices also of those who have been convicted or have been discharged.

FELONY CONVICTION

Prior to placing a felony conviction on a voter's record, staff must verify the conviction was for a felony involving moral turpitude. AS 15.60.010(9) provides a sample list. If the felony is not included in this list, the Division asks the AG's Office for advice on whether or not the felony involves moral turpitude.

When processing the Department of Corrections list of convicted felons, all information on the list must match the information on the voter's record before inactivating the record. Update the condition code of the voter's record to FC (felon convicted) and use the date of conviction as the suspend date. The list is the supporting document for microfilming and should be coded as SC (status change).

If the Regional Offices are notified by Corrections of a felony conviction, inactivate the voter's record in VREMS 1.10 using the FC code and suspend date of the conviction. All information on the letter must match the information on the voter's record before you change the status. Any type of condition code can be changed to a FC status including inactive voters and purged voters. The only code in VREMS that cannot be changed with an FC would be XX (deceased).

FELONY DISCHARGE

Department of Corrections sends the Regional Office a "Notification of Restoration of Rights" letter when a felon has been discharged. Update the voter's status from FC to FD in VREMS 1.10, using the date of discharge as the restored date. The information on the letter must match the information on the voter's record before you change the status. The letter is the supporting document for microfilming and should be coded as FD (felon discharge) and included with the SD documents. The voter must re-register to vote to activate the record.

If a Notification of Restoration of Rights letter is received for a voter record who has a condition code other than FC, the condition code must be updated first to FC, using the day prior to the felon's discharge date as the suspend date, and then to FD using the discharge date as the restored date. This applies even if the voter is listed as an active registered voter. This situation occurs when the Department of Corrections does not send the original notification when a felony occurs. The Notification of Restoration of

Rights letter is the supporting document for microfilming and should be coded as both FC and FD. If you change an active registered voter to FD that has a current registration date, the voter should be sent a letter indicating he or she can now re-register to vote.

If the Notification of Restoration of Rights letter does not have enough information to determine either the correct voter or the felony, contact Corrections to verify the information needed before updating the voter record. Also use the Court Records website to determine the felony or discharge dates (www.courtrecords.alaska.gov/)

Felony charges NOT involving moral turpitude, per AG's Office responses

- DUI
- Furnish alcohol to minor
- Misconduct involving weapons
- Probation violation (would apply if the violation was for a conviction of a felony involving moral turpitude)
- Stalking
- License or permit required for Alcoholic Beverages
- Failure to register as a sex offender

STATE OF ALASKA

DEPARTMENT OF CORRECTIONS

SEAN PARNELL, GOVERNOR
Division of Probation & Parole
Region 2, Fairbanks Office
455 3rd Avenue, Suite 130
Fairbanks, Alaska 99701
(907) 458-6830

January 28, 2011

[redacted]

RECEIVED
FEB 02 2011
REGION III
OFFICIAL

Re: Probation Supervision in case [redacted]

Dear [redacted]

This letter is to serve as official notification that your probation supervision expired on January 25, 2011 and contact with the Fairbanks Probation Office is no longer required.

Pursuant to AS 15.05.030, please be advised that you should re-register with the Division of Elections (P.O. Box 110017, Juneau, AK 99811-0017), now that you have been discharged from probation supervision. Also, please be advised that your right to vote (after contacting Division of Elections), your right to be a member of a jury, and your right to hold elected office are automatically restored.

Although your above rights have been restored [rights to vote, jury service, and to hold elected office], you should be aware that your right to possess firearms (all shotguns, rifles, as well as handguns) and ammunition remains restricted. Possession of any rifle, shotgun, rifle and/or ammunition could subject you to prosecution for a felony criminal offense under state or federal law. Even if you received a suspended imposition of sentence and an order has been issued setting aside the conviction, your right to possess firearms and ammunition has not been restored. You should contact your attorney if you have questions.

Thank you for your cooperation during your probation/parole supervision and best of luck to you in the future. If you have any questions concerning this subject or any other matter, please contact me.

Sincerely,

Samantha M. Zinsli
Criminal Justice Technician II

2009 Offender Profile

www.correct.state.ak.us/corrections/admin

Vision Statement

The Alaska Department of Corrections enhances the safety of our communities. We provide secure confinement, reformative programs, and a process of supervised community reintegration.

Commissioner's Letter

The Mission of the Department of Corrections is to enhance the safety of our communities while providing secure confinement, reformative programs, and a process of supervised community reintegration.

I am pleased to make this profile available on line. This report is based on our best information and serves as a snapshot of a typical day. Data comes from our Offender Tracking Information System (OTIS), and is meant to give a general summary of Alaska's offender population.

The 2009 Offender Profile – which encompasses many hours of research and calculation on the part of department staff – serves as a valuable tool for our department in the successful accomplishment of our mission.

Joe Schmidt
Commissioner

Notes:
Count and admissions data include information about all offenders under the jurisdiction of the state of Alaska who are entered into the OTIS database.
Count information consists of monthly averages of daily counts; incarcerated offenders not entered into the OTIS database when a count was tallied were not included.
Admissions data includes all criminal admits (except transfers) for all offenders.

Felon Disenfranchisement and the Voting Rights Act — *Farrakhan V. Gregoire*: "A Crowd of One"

Deborah Periman

Sidebar story: Further Background on Felon Disenfranchisement

"Felon Disenfranchisement and the Voting Rights Act — *Farrakhan V. Gregoire*: 'A Crowd of One'" by Deborah Periman. *Alaska Justice Forum* 26(4): 1, 11–12 (Winter 2010). Early this year, the U.S. Court of Appeals for the Ninth Circuit issued its opinion in *Farrakhan v. Gregoire*, a challenge to Washington State's felon disenfranchisement law. The court's decision stands alone among the circuits in holding that state law denying felons the right to vote is a violation of section 2 of the Voting Rights Act, where discrimination in the state's criminal justice system results in race-based denial of the vote. Despite speculation, suggestions that the *Farrakhan* decision signals the demise of Alaska's disenfranchisement law are overstated. Nevertheless, the case is noteworthy for reopening the conversation about why we deny certain offenders the right to vote, and whether these laws reflect viable public policy or are simply relics of an era in which racial and class prejudices limited participation in the political process.

> [B]ecause the holding of *Farrakhan* I places us in a crowd of one among the circuits, I believe we should be particularly mindful before reversing the district court and invalidating felon disenfranchisement in the State of Washington.
>
> — Judge M. Margaret McKeown, dissenting, *Farrakhan v. Gregoire*, 590 F.3d 989, 1016 (9th Cir. 2010)

- Collateral consequences of criminal conviction

Early this year, the U.S. Court of Appeals for the Ninth Circuit issued its opinion in *Farrakhan v. Gregoire*, a challenge to Washington State's felon disenfranchisement law. The court's decision stands alone among the circuits in holding that state law denying felons the right to vote is a violation of section 2 of the Voting Rights Act (VRA), where discrimination in the state's criminal justice system results in race-based denial of the vote. Although there has been substantial speculation in the media over the implications of the decision, suggestions that the *Farrakhan* decision signals the demise of Alaska's disenfranchisement law are overstated. Nevertheless, the case is noteworthy for reopening the conversation about why we deny certain offenders the right to

vote, and whether these laws reflect viable public policy or are simply relics of an era in which racial and class prejudices limited participation in the political process.

Background: Felon Disenfranchisement and the Voting Rights Act

State laws throughout the country have traditionally barred those with certain types of criminal convictions from participating in the political process. Currently, 48 states and the District of Columbia have offender disenfranchisement statutes. These disenfranchisement laws are one component of the "civil death" once accorded criminal offenders. The concept of civil death dates back to ancient Athens and Rome, where those convicted of certain crimes entered a state of infamy marked by civic penalties such as the inability to vote, hold public office, and speak publicly on political issues. In medieval Europe and England, similar laws caused forfeiture of property and political rights for crimes punishable by death or life imprisonment. Laws disenfranchising felons were received into the American colonies as part of the general reception of the laws of England. Following the Revolution, in the allocation of power between the states and the federal government under the Constitution of 1787, the states retained control over access to the ballot. Almost immediately, the newly formed states adopted felon disenfranchisement laws, either constitutionally or through codification.

State control over access to the ballot was limited with ratification of the 15th Amendment, which prohibits states from abridging the right to vote "on account of race" and grants enforcement powers to Congress. Pursuant to the enforcement clause, and in conjunction with the mid-twentieth century civil rights movement, Congress enacted the Voting Rights Act of 1965. Its explicit purpose is to eliminate racial discrimination in voting throughout the United States in accordance with the mandate of the 15th Amendment. Section 2 of the Act provides that no prerequisite to voting shall be imposed in a manner that results in a denial of the right to vote on account of race or color (42 U.S.C. § 1973(a) (2010)). This standard is violated where, "based on the totality of the circumstances," it is shown that political processes in a state are not equally open to members of a class, in that such members "have less opportunity than other members of the electorate to participate in the political process..." (42 U.S.C. § 1973(b)).

Section 2 challenges to felon disenfranchisement laws are not new. Broadly speaking, these challenges assert that disproportionate numbers of minorities in the criminal justice system, and the concomitant denial of the vote to this class of citizens, result in *de facto* race-based exclusion of class members from the political process. To date the Courts of Appeals for the First, Second, Ninth, and Eleventh Circuits have analyzed the validity of such claims. Among the circuits, only the Ninth has held that challenges to felon disenfranchisement statutes raise valid Section 2 claims. The First, Second, and Eleventh Circuits are in accord (the latter two circuits sitting *en banc* as full courts rather than three judge panels) that such challenges fall outside the purview of the Voting Rights Act. These courts have concluded that Congress never intended the Act to deprive the states of their right to disenfranchise felons; such a result would impermissibly alter the balance of power between the federal government and the states, impinging on the states' traditional right to establish voter qualifications.

The Farrakhan Opinion

In a departure from this majority view, two members of the three judge panel in *Farrakhan v. Gregoire* held that the discriminatory impact of Washington state's disenfranchisement law stems

from racial discrimination in the state's criminal justice system; the resulting denial of the vote is, therefore, a violation of section 2. At the trial court level, the plaintiffs, minority citizens of Washington who lost their right to vote under the state felon disenfranchisement statute, presented reports of expert witnesses on racial disparities in all levels of Washington's criminal justice system. The reports highlighted studies showing that these disparities could not be explained by legitimate factors such as minorities' higher levels of criminal activity. Notably, one study found that "substantially more than one half of Washington State's racial disproportionality cannot be explained by higher levels of criminal involvement" (*Farrakhan*, 2010, n. 5).

These reports led the trial court to enter findings that racial discrimination exists in Washington's criminal justice system and that this discrimination "hinders the ability of racial minorities to participate effectively in the political process, as disenfranchisement is automatic" (*Farrakhan*, 2010, 995). Nevertheless, the lower court held that plaintiffs failed to establish a Voting Rights Act violation because it was discrimination in the justice system, and not the disenfranchisement statute itself, that caused the loss of voting rights. Following an initial appeal, remand to the trial court, and second appeal, Ninth Circuit Judge Tashima, writing for himself and Judge Reinhardt (with Judge McKeown dissenting), held that Section 2 of the Voting Rights Act "demands that...racial discrimination not spread to the ballot box." Thus, based on the "uncontroverted record" of discrimination in the justice system, Washington's disenfranchisement law violates federal civil rights law (*Farrakhan*, 2010, 1015). (See "Further Background: Scope of Analysis," page 1.)

Felon Disenfranchisement in Alaska

Disenfranchisement of felons in Alaska is rooted in the Alaska Constitution, which provides "No person may vote who has been convicted of a felony involving moral turpitude unless his civil rights have been restored" (Alaska Const. art V, § 2). The right to vote remains suspended from the date of conviction through the date of release from all conviction-related disability, including probation and parole (AS 15.05.030; AS 15.60.010(39)). According to the Alaska Department of Corrections Offender Profile, in 2009 more than 10,000 Alaskans were ineligible to vote pursuant to this provision.

There is no question that in Alaska, as elsewhere, racial minorities are disproportionately represented in the criminal justice system. For example, Department of Corrections figures show that in 2009 Alaska Natives comprised over 35 percent of total offenders in institutions, yet Alaska Department of Labor 2008 population figures estimated that Alaska Natives comprised about 16 percent of the total population in Alaska. African-Americans, estimated to have comprised just over 4 percent of Alaska's population, represented over 10 percent of offenders in Alaska correctional institutions. (See "Alaska Offender Profile 2009" in this issue.) Despite this well-known disparity, Alaska lacks an extensive body of empirical data establishing conclusively that the overrepresentation of minority groups in Alaska's criminal justice system is attributable solely to systemic racial discrimination. This is the critical distinction between Alaska and Washington. As noted above, the Farrakhan opinion rests on a finding of fact by the trial judge that "there is discrimination in Washington's criminal justice system on account of race"; in reaching this finding the court relied on "extensive," unrefuted studies showing that over half of Washington's racial disproportionality could not be explained by legitimate factors (*Farrakhan*, 2010, 994–995). It is unlikely a trial judge would find the existing data in Alaska a sufficient evidentiary foundation to support a similar finding of fact here. This does not imply that racial bias is absent from Alaska's

criminal justice system, merely that widespread empirical studies have not unequivocally ruled out all other explanations for disparity in the system. (See "Further Background: Ethnic Disparity in Alaska," page 1.)

Shifting Policy

Although Alaska's disenfranchisement statute does not appear vulnerable to an immediate *Farrakhan* challenge, the essential holding of the case suggests that state policymakers may wish to consider limiting the reach of the current statute, or proposing a Constitutional amendment to eliminate the voting prohibition entirely. (Senate Bill 68, currently pending in the Alaska Legislature, would limit disenfranchisement to those incarcerated, and restore voting rights upon release.) Academic literature makes clear that for generations disenfranchisement laws throughout the country have excluded minority citizens from the vote in overwhelmingly greater percentages than Caucasian, and that the rates of minority exclusion are growing. Moreover, there is evidence that dilution of minority voting attributable to disenfranchisement statutes has affected the outcome of elections in a number of jurisdictions. In this state, the disproportionate number of Alaska Natives excluded from the political process under the disenfranchisement statute is particularly troubling given Alaska's history of discrimination in voting practices. (See "Further Background: Preclearance under the Voting Rights Act," page 1.)

At an even more basic level, however, the right to vote is the hallmark of participatory democracy. It affirms our membership in the social compact. Exclusion of criminal offenders from this process, and from one of the most fundamental rituals of community involvement, does nothing to promote public safety and can only serve to impede social reintegration of these citizens.

In his February 2010 State of the Judiciary address, Chief Justice Carpeneti observed, "Probably no problem is of greater concern to us at this time than the alarmingly high rates of recidivism in our state." The recently established Alaska Prisoner Re-Entry Task Force was created to examine how the state might better assist offenders to make a successful transition from incarceration back into their communities. Voting is an integral part of this process; studies suggest that civic reintegration facilitates successful reentry and reduces the risk of recidivism.

For all of these reasons, there is growing recognition that felon disenfranchisement statutes rest on outdated retributory practices antithetical to contemporary standards of equal representation in the political process, standards explicitly stated in the Voting Rights Act. *Farrakhan,* though out of step with the weight of authority in its statutory interpretation, gives effect to the spirit of inclusion that lies at the core of the Voting Rights Act.

Deb Periman, J.D., is a member of the Justice Center faculty.

Further Background on Felon Disenfranchisement

Scope of Analysis

This case summary of *Farrakhan* provides a basic, simplified overview. It does not address the distinction between vote denial and vote dilution claims under the Voting Rights Act, nor does it address the impact of changes in Washington's disenfranchisement law over the course of the Farrakhan litigation, the various approaches taken by the courts in addressing Section 2's "totality

of the circumstances" standard, or *Senate Report 97-417*, which lists typical factors a court might consider in evaluating a challenged voting practice.

Ethnic Disparity in Alaska

In 2004, the Alaska Judicial Council published a comprehensive summary of criminal justice processes in Alaska. *Alaska Felony Process: 1999* (February 2004) was commissioned, in part, to identify whether "disproportionate numbers of ethnic minorities at all points in Alaska's criminal justice system" were the result of discrimination or of other legitimate factors. The Council reported that justice for felony defendants in Alaska after charges were filed was "in many respects substantially equal." Presumptive sentences showed no disparities associated with ethnicity. With the exception of drug offenses, non-presumptive sentences were uniformly imposed among ethnic groups. Disparity in drug sentencing was limited to African-Americans in Anchorage and Natives outside Anchorage. The Council concluded in the Executive Summary that the "isolated nature of these disparities appeared to be inconsistent with conscious discrimination." However, phases of the felony process other than sentencing, specifically pre-disposition incarceration, charge reduction and overall time of incarceration, did show disparities by ethnicity that could not be explained by legitimate criteria. For example, statewide African-Americans and Alaska Natives could expect to spend 7 days longer in predisposition incarceration than Caucasian defendants. Although this disparity could not be attributed to any factor measured in the study other than ethnicity, the Judicial Council noted that additional socioeconomic data might have explained some of the disparate outcomes.

Preclearance under the Voting Rights Act

Alaska is one of nine states covered in its entirety by Section 5 of the Voting Rights Act, which prohibits changes in election practices without federal review and approval. This "preclearance" status is the result of a state's historic use of tests or devices to restrict the opportunity to vote, or of statutorily defined underrepresentation in the voting process. In territorial Alaska, Natives faced a number of barriers to voting, among them a 1924 law requiring voters to read and write English. With the advent of statehood, Alaska's Constitution similarly limited voter participation to those who could "read or speak the English language," a limitation not repealed until 1970. These and myriad other factors led to less than 50 percent of Alaska's voting age population participating in the voting process in 1964, a level of under-participation that brought Alaska within Section 5's preclearance requirements.

SENATE COMMITTEE PASSES NATIONAL CRIMINAL JUSTICE COMMISSION ACT OF 2009

The bi-partisan National Criminal Justice Commission Act of 2009 (S. 714) was passed out of the Senate Committee on the Judiciary today by voice vote. The legislation, sponsored by Sen. Jim Webb (D-Va.) would create a commission to conduct a thorough evaluation of the nation's justice system and offer recommendations for reform at every stage of the criminal justice system.

The establishment of such a commission could not come at a more critical time. With 2.3 million people in prisons and jails, the United States has the highest incarceration rate in the world. Federal and state governments spend more than $50 billion each year on corrections, and the population behind bars continues to grow.

A new approach to crime prevention is necessary and the time for reform is upon us. The commission created by this legislation would establish an organized and proactive approach to studying and advancing programs and policies that promote public safety, while overhauling those practices that are found to be fundamentally flawed.

Washington State: 9th Circuit Court Reverses Disenfranchising Law; Landmark Decision Could Go to Supreme Court

In a landmark case for individuals with felony records, a federal appeals court has thrown out Washington State's restrictions on felon voting on the basis that the current law violates the Voting Rights Act by creating discrimination in voting. The 2-1 decision in *Farrakhan v. Gregoire* would apply to all persons with convictions in the state, including 18,000 who are currently incarcerated, according to the Associated Press. Circuit Court Judge A. Wallace Tashima wrote that attorneys for six Washington state prisoners "have demonstrated that police practices, searches, arrests, detention practices, and plea bargaining practices lead to a greater burden on minorities that cannot be explained in race-neutral ways."

The 9th Circuit Court of Appeals found that discrimination does, in fact, exist in law enforcement, prosecutorial and judicial outcomes in Washington State and therefore, those with felony records should have the right to vote.

The lawsuit was filed in 1996 by Muhammad Shabazz Farrakhan while serving a three-year sentence at the Washington State Penitentiary for a series of felony-theft convictions. Five other minority inmates joined as plaintiffs in the lawsuit that contended that because nonwhites make up a large percentage of the prison population, a state law prohibiting inmates and parolees from voting is illegal because it dilutes the electoral clout of minorities, the *Seattle Post-Intelligencer* stated.

"In this case, we have proved that the criminal justice system in this state is biased against African-Americans, and the impact has been a violation of their voting rights," said Larry Weiser, a law professor at Gonzaga University School of Law who is the lead attorney in the lawsuit, and joined by several national civil rights organizations.

SB7 – FELONS' RIGHT TO VOTE OR BE JURORS

February 3, 2011

Good morning Chairman Wielechowski, Vice Chair Paskvan, and other members of this committee. I appreciate your holding this hearing and inviting me to share with you the opinion of the NAACP. The NAACP strongly supports SB7 – Felons' Right to Vote or Be Jurors as it is consistent with our national policy which supports the re-enfranchisement of ex-felony offenders once they have been released from prison or jail. We urge its immediate enactment and offer special thanks to Senator Davis for being our champion on this issue.

My name is Hilary Shelton and I am the Director of the NAACP's Washington Bureau and the Senior Vice President for Advocacy and Policy. The NAACP is our Nation's oldest, largest and most widely-recognized grassroots civil rights organization and we currently have more than 2,200 units in every state in the Nation.

At the heart of this debate, Mr. Chairman, is a question of rehabilitation, democracy and fairness. Currently, an estimated 5.3 million Americans across our nation are denied the right to vote because of laws that prohibit or restrict voting by people with felony convictions. Three fourths of these Americans are no longer in jail.

In Alaska, more than 11,000 people are currently disenfranchised. Of these men and women, over 77%, or almost 9,000 are no longer incarcerated.

The NAACP supports federal legislation, the *Democracy Restoration Act*, which would permit men and women to register and vote in federal elections once they have been released from prison, even if they are on probation or parole. SB7 is Alaska's equivalent to the *Democracy Restoration Act* on the state level.

By allowing men and women who are no longer incarcerated to register and vote, we are encouraging them to take another positive step towards creating a commitment to, a bond with, and a stake in their community. This will, in turn, can only help with the reentry process.

Furthermore, by allowing ex-felons to register once they are released from prison we are avoiding potential problems at the polls. After the 2000 election the NAACP received sworn testimony from a number of people, including a Catholic priest, who said their right to vote was questioned on election day by poll workers who accused them of being on probation or parole and thus ineligible to vote. By allowing people to register and vote as soon as they leave prison, we are eliminating this potential misunderstanding.

Ex-felon re-enfranchisement is of special concern to the NAACP due to disparate number of African Americans who come in contact with the criminal justice system and, as a result, find themselves either temporarily or permanently disenfranchised.

As a result of the racial disparities that continue to plague our criminal justice system, a vastly disparate number of the people who are incarcerated and subsequently disenfranchised are racial or ethnic minorities. Nation-wide, an estimated 13%, or one out of every 8 African American men cannot vote because of the law in the state where he resides and a prior felony conviction. This is seven times the national average.

In Alaska, 2.4% of the overall population is disenfranchised as a result of a felony conviction. However almost 8% of the state's African Americans cannot vote. Furthermore, although African Americans make up just over 4% of Alaska's population, we represent more than 13% of those Alaskans who cannot vote.

Because the right to vote is such an important element of the democratic process, it is simply wrong to predicate it upon a system rife with racial disparities. And with voting such an integral part of becoming a productive member of American society, the way forward for our Nation should be a new paradigm in which we encourage ex-felons to vote, not prohibiting them.

Thank you again Chairman Wielechowski, Vice Chair Paskvan, and other members of this committee for holding this important hearing and for inviting me here today. As I indicated earlier, the NAACP strongly supports SB7 and urges its immediate enactment.

Dear Senator Davis:

On behalf of our respective organizations, we are writing regarding your introduction of SB 7, an act relating to voting rights of felons.

We met recently to review proposed legislation and are unanimously opposed to this bill. Current law already allows convicted felons to regain their voting rights upon unconditional discharge. That law provides a reasonable threshold and we see no need to change it.

We urge you to reconsider this legislation. Please contact the APOA office in Anchorage at 277-0515 if you have any questions.

Sincerely,

Department of Education & Early Development

Office of the Commissioner

March 22, 2011

The Honorable Hollis French
Chair, Senate Judiciary Committee
Alaska State Senate
Alaska State Capitol, Room 417
Juneau, AK 99801

Dear Chair French:

Thank you for the opportunity to provide in writing responses to questions that the Department of Education and Early Development (EED) was unable to answer during testimony at the Senate Judiciary Committee's meeting on March 11, 2011. The committee hearing was related to Senate Bill 9 – Compulsory School Attendance Age.

Outlined below are the questions along with the responses provided for the committee. Although the bill has moved from the Senate Judiciary Committee, Ms. Smith from your office requested EED's responses so that they may be passed along to the next committee of referral as well as for the committee's consideration in case of a vote on the Senate Floor.

Questions & Responses:

1. Sen. Coghill asked about the disposition of a truancy case in the Northwest Arctic School District. EED is still waiting for information from the District Attorney's office in the Northwest Arctic region. EED will forward the response to the committee once it is received in our office.

2. Sens. Wielechowski, Paskvan, French & Coghill – Where does Commissioner Hanley stand on this legislation? The administration, including the Commissioner of Education & Early Development, has not taken a position on this legislation. The administration respects the legislative process and the deliberation of statewide policy, and does not take positions on each piece of legislation that comes before the legislature.

3. Sen. Coghill - How many students under 16 drop out currently? See a one-year table below.

Dropout Counts for age 16 or less

(from dropout rate calculation)

Grade	2009-2010 Dropouts
7	83
8	81
9	324
10	384
11	283
12	6

4. Sen. French – Can the physical plant support an additional 1400+ students? When examining the number of students who drop out of school at the district level the overall numbers do not appear to be so great that it would negatively impact school buildings in a manner causing capacity problems.

5. Sen. French – It would be interesting to know whether attendance rates increase with the passage of laws like SB9.

   While we are unable to predict if attendance rates in Alaska would be impacted with the passage of SB9, there is research from other states regarding compulsory education laws and graduation rates.

   The committee was provided information from the National Conference of State Legislatures (NCSL) by the bill's sponsor. According to the web site of six states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rate. Only Nevada experienced a decline.

   Another study referenced on the NCSL web site looked at state graduation states in those states that raised the compulsory attendance age to 17 or 18. This study, conducted by the Bluegrass Institute for Public Policy, found mixed results. The study found that eight states that had enacted an age 18 minimum dropout age by 2001 improved their graduation rates between 2001 and 2007. In fact, three states, Ohio, Oklahoma and Kansas, had improvements that were scarcely more than the national average improvement. Seven states actually saw a decline in their graduation rates while the rest of the nation was improving. Overall, only five of the 15 states had rates of improvement notably above the overall national average improvement from 2001-2007.

According to the Rennie Center for Education Research & Policy, in a report titled Raise the Age, Lower the Dropout Rate?, of ten states with the highest graduation rates only three states require attendance to the age of 18. Further, this study indicates that of the fourteen states with the lowest dropout rates only five require attendance to the age of 18.

The department examined information available from both the Education Commission of the States (ECS) on compulsory education laws in states, and from the National Center on Educational Statistics (NCES) on graduation rates. We found that of the states that have the highest graduation rates, those at 80% or higher, two had a compulsory age on the upper end of 18, two at 17 and eight at 16. For those states with the lowest graduation rates, 70% or less, four had a compulsory age on the upper end of 18, three at 17, and four at 16.

Thank you for the opportunity to follow up with these responses in writing. If you have any related questions or would like additional information, please contact our Legislative Liaison, Marcy Herman, at marcy.herman@alaska.gov or at 465-2803.

Sincerely,

Les Morse

Senator Bettye Davis

SB 9 27-LS0085 "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor."

SPONSOR STATEMENT

This bill changes the Alaska compulsory school attendance ages from 7-16 to 6-18. At the same time it necessarily amends the criminal statute of contributing to the delinquency of a minor from the maximum age 16 to 18. The legislative intent of this bill is to require all students to start school earlier when their brains are growing and developing at a dramatic rate from birth to age 7 and to stay in school long enough to graduate. This bill allows earlier identification of children with learning disabilities and more time to take successful corrective action. This bill will not preclude parents from homeschooling children, or using charter or alternative schools, or any other of the twelve enumerated exceptions to compulsory education under AS 14.30.010(b), including completion of grade 12 or graduation from a secondary school before age 18.

The Alaska compulsory school age statute is out of date with modern educational practice and thinking. The law has not changed since territorial days when few children attended school beyond 8th grade or bothered to graduate, because most jobs did not require much education. The majority of Alaskan students today are already in school by age six and many by the minimum age five. Head Start and prekindergarten programs are growing in popularity. The state already funds a pilot pre-kindergarten program and SB 6 this year proposes funding such a program statewide.

In 1852 Massachusetts became the first state to pass compulsory school attendance laws, and by 1918 all states required children to receive an education. Today every state and territory requires children to enroll in public or private education or to be home-schooled. Thirty-two states require students to begin their education by age 6 or 5 and to remain in school until 16 or older. Twenty-four states and American Samoa set the minimum at age 6, and eight states and the District of Columbia, Puerto Rico and the Virgin Islands set the minimum at age 5. All children are required to continue their education into their high school years, with twenty states setting the compulsory cutoff age at age 18; eleven at age 17; and nineteen states including Alaska and the Virgin Islands at age 16.

By increasing the school attendance age to 18, this bill should discourage earlier dropouts and reduce juvenile crime, teen pregnancy and other at risk behaviors. Studies have found that students without a diploma earn less than 75% of those with a diploma; they are more likely to live in poverty, go to jail, and have health problems.

The Alaska Department of Education and Early Development reported 8,245 students or 67.7% graduated in 2010 while 3,186 dropped out. The graduation rate of Alaska Native students was 55.4%, a group which experienced twice the dropout rate of all students. These rates remain well below the national average. The National Education Association's first priority two years ago in its "12-Point Action Plan for Reducing the School Dropout Rat" was to "*mandate high school graduation or equivalency as compulsory for everyone below the age of 21.*" It reported:

"Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of 'dropping out' before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education."

Opponents to increasing compulsory school age who are concerned about forcing students to be in the classroom against their will argue that these students may become disruptive and require more time and expense on behavior and truancy problems. This bill, however, is directed at more than just "seat time." It is to become part of a larger plan to motivate rather than to punish or ignore students. It aims to help students stay in school long enough to graduate and go on to college or better-paying jobs. Students will want to come to school, stay in school, and graduate, if academic problems are identified early and they helped long before they dropout. For those students who want to work or are not as academically inclined, school districts are encouraged to continue accredited alternative schools and work-study programs to help students earn credits toward a diploma if they must work at the same time. Coupled with early efforts to retain, train, and graduate, this bill can bring hope and success to thousands of Alaskan students who otherwise might not stay in school long enough to graduate or develop to the best of their potential.

MEMORANDUM January 31, 2011

SUBJECT: Sectional Summary of SB 9 (Work Order No. 27-LS0085\M)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Raises the age from 16 to 18 for the crime of contributing to the delinquency of a minor for repeated absences from school.

Section 2. Raises the compulsory school age from 16 to 18.

Section 3. Amends an exception to the compulsory school attendance age to provide for graduation for a secondary school.

BILL NO. SB9

Analysis

This bill lowers the compulsory age for attendance by one year, from age 7 to 6; and extends the age of required attendance by two years, from age 16 to 18. The exception is if a student completes the 12th grade or graduates from a secondary school.

In FY2010 there were approximately 1,406 students between the ages of 16 and 18 that dropped out of public school after the October student count period. The average cost of a student run through the FY12 foundation formula is $10,568. 1,406 x $10,568 = $14,858,608.

Graduation Rates in Alaska
Fact Sheet

The Graduation Rate is reported as a fraction. The numerator is the sum of the number of graduates receiving a regular diploma before June 30. The denominator is the sum of the number of graduates, plus the number of dropouts in grade nine three school years prior, plus the number of unduplicated dropouts in grade ten two school years prior, plus the number of unduplicated dropouts in grade eleven in the prior school year, plus the number of unduplicated dropouts in grade 12 during the current year, plus the number of grade 12 continuing students.

A **graduate** is defined as a student who has received a regular diploma from a state- or district-approved education program, as evidenced by receipt of a secondary school diploma from school authorities. Any student who receives a diploma under a waiver from the competency examination required under AS 14.03075 (a), as specified by the state board is considered to be a graduate. This does not include an individual who:

- receives a certificate of completion;
- receives a certificate of attendance;

The statewide Graduation Count has increased significantly over the last five years.

School Year	Graduation Rate	Graduate Count
2004	62.9%	7,290
2005	61.4%	6,905
2006	61.6%	7,361
2007	63.0%	7,666
2008	62.6%	7,855
2009	67.5%	8,008
2010	67.7%	8,245

The Alaska Native/American Indian Graduation Rate has shown improvement over the same five year time period:

School Year	Graduation Rate	Graduate Count
2004	46.1%	1,327
2005	43.2%	1,233
2006	45.1%	1,442
2007	51.2%	1,689
2008	48.1%	1,523
2009	55.4%	1,508
2010	55.4%	1,616

Please note that the new Graduation Rate required by the Final Title 1 Regulations under NCLB will use a different calculation. The new Graduation Rate, also known as the Four-Year Adjusted Cohort Rate, will follow an actual group of students across four

years of high school. Alaska will no longer be incorporating prior years' counts of dropouts to calculate the Graduation Rate.

Dropout Rates in Alaska
Fact Sheet

The Dropout Rate is computed by dividing the number of dropouts in the current school year by the number of students enrolled in grades 7-12 on October 1 of the current school year. School year is defined as the12-month period beginning with July 1 and ending June 30.

A **Dropout** is defined as a student who was enrolled in the district at some time during the school year and whose enrollment terminated. This does not include an individual who:

- graduated from high school or completed a state or district approved education program, as evidenced by receipt of formal recognition from school authorities;
- transferred to another public school, private school or state or district approved education program;
- is temporarily absent due to suspension;
- is absent due to illness or medical condition;
- died.

The statewide Dropout Rate has decreased as well as the number of dropouts for three consecutive years:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	6.0%	3,791
2006	5.8%	3,642
2007	5.5%	3,434
2008	5.2%	3,232
2009	5.2%	3,146

The Alaska Native/American Indian Dropout Rate has not reflected the proportionate decrease over the same time period:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	8.2%	1,276
2006	8.4%	1,333
2007	8.3%	1,299
2008	8.5%	1,224
2009	8.5%	1,172

In 2007-2008 Alaska showed a wide range in difference with district by district comparisons of Dropout Rates. Four districts reported 0 dropouts. Two districts reported over 25% Dropout Rates. Both districts with the highest rates, Delta/Greely School District and the Nenana City School District, had a large percentage of dropouts reported in the statewide correspondence schools.

NEA-ALASKA

Affiliated with the National Education Association

February 18, 2011

RECEIVED

FEB 21 2011

Sen. Bettye Davis
Room 30, State Capitol
Juneau, AK 99801

Dear Senator Davis:

Thank you for your introduction of Senate Bill 9, "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor."

On behalf of NEA-Alaska's nearly 13,000 public school employees and retired members I am privileged to offer this letter of support for the passage of Senate Bill 9.

Each January, for the past 55 years, elected NEA-Alaska delegates from Ketchikan to Barrow gather in Anchorage to set policy for the year. A few weeks ago, those 400 elected delegates affirmed their support for legislation to expand the age of compulsory school attendance and to address the problem of truancy in Alaska's public schools. As president of NEA-Alaska and as a 30 year teacher in Western Alaska I know firsthand the issue of children deciding to end their education on their 16th birthday. In this global economy, a high school diploma is a minimum for Alaska's children entering adulthood.

This legislation will help keep children in school and tracking towards their graduation. NEA-Alaska urges passage of Senate Bill 9 by the 27th Alaska Legislature.

NEA-Alaska applauds your efforts to improve K-12 education in Alaska.

Sincerely,

Barb Angaiak
President

NEA's 12-Point Action Plan for Reducing the School Dropout Rate

To address the nation's school dropout crisis, NEA has developed a 12-point action plan that includes the most promising actions supported by experience and data.

1. Mandate high school graduation or equivalency as compulsory for everyone below the age of 21. Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of "dropping out" before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education.

2. Establish high school graduation centers for students 19-21 years old to provide specialized instruction and counseling to all students in this older age group who would be more effectively addressed in classes apart from younger students.

3. Make sure students receive individual attention in safe schools, in smaller learning communities within large schools, in small classes (18 or fewer students), and in programs during the summer, weekends, and before and after school that provide tutoring and build on what students learn during the school day.

4. Expand students' graduation options through creative partnerships with community colleges in career and technical fields and with alternative schools so that students have another way to earn a high school diploma. For students who are incarcerated, tie their release to high school graduation at the end of their sentences.

5. Increase career education and workforce readiness programs in schools so that students see the connection between school and careers after graduation. To ensure that students have the skills they need for these careers, integrate 21st century skills into the curriculum and provide all students with access to 21st century technology.

6. Act early so students do not drop out with high-quality, universal preschool and full-day kindergarten; strong elementary programs that ensure students are doing grade-level work when they enter middle school; and middle school programs that address causes of dropping out that appear in these grades and ensure that students have access to algebra, science, and other courses that serve as the foundation for success in high school and beyond.

7. Involve families in students' learning at school and at home in new and creative ways so that all families-single-parent families, families in poverty, and families in minority communities-can support their children's academic achievement, help their children engage in healthy behaviors, and stay actively involved in their children's education from preschool through high school

graduation.

8. Monitor students' academic progress in school through a variety of measures during the school year that provide a full picture of students' learning and help teachers make sure students do not fall behind academically.

9. Monitor, accurately report, and work to reduce dropout rates by gathering accurate data for key student groups (such as racial, ethnic, and economic), establishing benchmarks in each state for eliminating dropouts, and adopting the standardized reporting method developed by the National Governors Association.

10. Involve the entire community in dropout prevention through family-friendly policies that provide release time for employees to attend parent-teacher conferences; work schedules for high school students that enable them to attend classes on time and be ready to learn; "adopt a school" programs that encourage volunteerism and community-led projects in school; and community-based, real-world learning experiences for students.

11. Make sure educators have the training and resources they need to prevent students from dropping out including professional development focused on the needs of diverse students and students who are at risk of dropping out; up-to-date textbooks and materials, computers, and information technology; and safe modern schools.

12. Make high school graduation a federal priority by calling on Congress and the president to invest $10 billion over the next 10 years to support dropout prevention programs and states who make high school graduation compulsory.

Subject: RE: Alaska State Legislature Senate Bill 9 - Increasing compulsory school age to 18
Attachments: NCSL Dropout Task Force Recommendations.pdf

Hi Tom,
Attached is the NCSL Dropout Task Force report, released just this week.
Here is the online link: http://www.ncsl.org/default.aspx?TabId=22196

As I mentioned, I will FedEx 10 copies to you now – you will have them in the morning.
Below are the relevant portions. I will be in touch soon with more information.

Best,
Sunny

One of the recommendations of the NCSL Task Force on School Dropout Prevention and Recovery – "Conduct policy audits, eliminate counterproductive policies and provide incentives for collaboration" includes a paragraph about raising the school compulsory age, as follows (see embedded references). Note that the second study actually credits, in part, raising the compulsory school age to 17 for Tennessee's 15-point improvement in grad rates from 2002 to 2008 (see p. 28 of the Balfanz report):

Evidence suggests that raising the maximum compulsory school age above 16 curtails dropout rates and produces other positive results.[i] Until recently, a majority of states permitted students to drop out of high school at the age of 16; now 32 states have set their compulsory school age to 17 or 18.[ii] States can make maximum compulsory school attendance requirements more meaningful by revoking work permits and driving privileges of students who drop out before the state-set minimum school-leaving age. States also can require that students who withdraw from school before graduation receive information not only about the economic consequences of dropping out, but also how they can complete their high school diploma after they do so.

Subject: (ding, final answer) - grad rates for 6 states that recently raised compulsory school age
Attachments: gradnation.pdf

Tom, I think the most reliable research – to your question – was conducted recently by the Grad Nation researchers (report attached) –
p. 46:
Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.
6 states: Illinois, Indiana, Nebraska, Nevada, New Hampshire, and South Dakota
(Michigan increased in 2009 - not included here)

Perhaps bringing copies of that report to the committee will satisfactorily answer the question. These are very well respected researchers.
What else can I do to help?
Sunny

Subject: research - compulsory school age

Tom,
Attached are the two reports referred to in the NCSL Dropout task force report. Especially, see p. 46 of the Building a Grad Nation report:

Increasing Compulsory School Age Requirements

In our previous research, students identified "too much freedom" as a key factor that enabled them to drop out of high school, and poor attendance is a strong predictor of dropping out.[36] Most states originally enacted compulsory school attendance laws between 1870 and 1910, a time when fewer than 10 percent of 17-year-olds graduated from high school, due in large part to the fact that a high school education was not a prerequisite to participating in the mainstream workforce.[37] Over the last year, extensive research has been conducted at the state level that highlights the growing gap between the areas where states are experiencing job growth and the educational levels of their populations.[38] Students required to attend high school for an additional year experience a 12 percent increase in earnings. These students are also less likely to report being unemployed, having health problems, being depressed, and working in lower-skilled jobs. They are also more likely to report higher levels of satisfaction with their lives overall.[39] Many states have responded to these issues by raising the compulsory school age to send the message to students that graduating from high school is absolutely essential.

Since 2002, 12 states have raised the compulsory school age from 16 to 17 or 18.[40] Currently, 21 states have a compulsory school age of 18 and 32 states have a compulsory school age of 17 or 18.[41] In some states that have a compulsory school attendance age of 17, like Tennessee and West Virginia,

students must remain in school until they are 18 to keep their driver's license.

A 1991 MIT and Harvard study shows that raising the compulsory school age acts as a constraint on dropping out.[42] **Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.**

Despite broad movement on raising the compulsory school age, this movement has not been uniformly embraced within the states. Over the last year alone, 13 states have introduced legislation to raise their compulsory school age to 17 or 18 that has stalled or died in committee.[43] Among the states that were unsuccessful in raising the compulsory school age, opposition from home school educators, parents, students, local businesses, and advocacy groups; an inability to determine if an increase in graduation and attendance rates or decrease in dropout rates can be attributed to increasing the compulsory school age; and the fiscal estimate were cited as critical barriers.[44] In some states where officials cited raising the compulsory school age law as a key tool to set clear expectations at the state level and to drive anti-truancy efforts locally, they also indicated that they feared in some cases parents were home schooling their children to get around the compulsory school age and to enable them to enter the workforce full time at an earlier age.

Final report of the Task Force to Study Raising the Compulsory Public School Attendance Age to 18. Submitted to the Maryland General Assembly and Governor.

Also attached is a Spring 2009 pub I just discovered – it analyzes state data on grad rates /dropout rates for states that have set the compulsory school age to 18. It's a really useful overview of the issue – but it concludes that there's not enough evidence to focus on age 18 as a policy over other dropout prevention efforts.
But – interestingly, it does not compare grad rates from when the policy took effect through now. Also, the data they refer to is 2004-05 NCES data.

Also attached is the final report of the Maryland task on compulsory school age of 18. It recommends raising the age and has lots of useful arguments and data.

I am trying to compile information about grad rates in the 20 states that have set their age to 18; but it's a big job and I'm not sure I can complete it in time for you – the thing is, I need to figure out when each state's compulsory ed age took effect; then look at grad rates from that year to 2006-07 (latest year data is available from NCES) – and I don't know if I can do that all by tomorrow – I'll try!

Recommendations

The Task Force believes that Maryland must do more to engage children and keep them in school. However, the Task Force agrees that in isolation, a change in the compulsory attendance age will not reduce the dropout rate. The reality is a policy change can require students to attend school, but it can't make them learn. Whether the students benefit from being in school depends largely upon the programs and support they receive there. Accordingly, the Task Force supports the implementation of these recommendations, and the engagement of students at an earlier age, in order to address the needs of children at risk of dropping out of school. In the context of strengthened, expanded supports for the students who would be affected, students who would otherwise drop out, would, of their own volition, choose to remain in school and earn a diploma. Thereby, addressing the issue of legally mandating students to remain in school would become unnecessary.

Recommendation One

Establish a statewide initiative that will:

a) Be flexible while maintaining a consistent approach to meeting the needs of 16- to - 18 year old dropouts and potential dropouts, regardless of where they live or attended school;

b) Expand the data collection work on existing dropout-prevention and re-entry programs that has been done, and design and implement a program to analyze the effectiveness of these dropout-prevention programs;

c) Establish pilot model programs based on proven or promising approaches, and evaluate their success prior to statewide implementation. (Consideration should be given to geographic location, size, and diversity of school systems.);

d) Provide an infrastructure (people, organization, time of day, location, resources, community and family involvement), and identify reallocation of funding and new funding that guarantee effective interagency services and assure increased numbers of students will stay in school and graduate; and,

e) Examine articulation and funding agreements and formulas among agencies and institutions to determine which of these enhance students' opportunities and which serve as barriers.

efforts; provide professional development; and allocate the resources, both financial and otherwise, to ensure that all Maryland students maximize their educational potential.

Rationale

If the compulsory attendance age is raised, Maryland will immediately need to put in place a system of supports and services for students who under the previous requirement would have dropped out, and for those young adults who have already dropped out but will be required to return to school. A statewide framework must be built to accommodate these students; this multi-faceted recommendation can serve as the blueprint.

Before Maryland puts dropout prevention and intervention programs and practices in place, devoting staff, resources, and time, we must know that these programs and practices will be effective.

Task Force research on current practices and programs included collecting data from school systems on existing programs. Members analyzed the evidence shared by districts, and examined the findings of national longitudinal dropout studies. This process revealed weaknesses in data collected on programs across the state. Task Force findings in this area included the following:

- There is a significant discrepancy among districts in what is identified as an alternative education or dropout-prevention program.
- The data evaluating these programs are inconsistent.
- It is difficult, if not impossible, to compare the costs per student of these programs.

Better data collection is essential to confirming programs' success before statewide implementation. It is also essential for reasons of accountability. Although there are programs that address at-risk students, there have been limited studies done on the effectiveness of these programs. This lack of robust data has inhibited the Task Force from making more specific recommendations regarding the designs of ideal dropout-prevention and re-entry programs. Scant data has also constrained this Task Force's analysis of the need for alternative programming, the additional years to educate students, and the associated costs. Before moving forward with costly initiatives, it is imperative that evidence-based decisions be made that support both the need for change, as well as the justification for funding.

A review of promising practices in other states indicated a significant expense (around $200 million dollars per year) to simply raise the compulsory age requirement to 18 under the present school environment and current instructional delivery systems. The additional expenses associated with truly alternative programs—over and above the school systems' commitment to the typical child served—should be based on research that has taken place in Maryland, with Maryland children, ideally in multiple settings. The analysis of these pilot programs would then

inform further discussion of the fiscal support needed for an alternative program to meet the needs of Maryland's students, teachers, businesses, and families.

Recommendation Two

Support and promote the awarding of a High School Diploma by Assessment as a valid credential, and work with the federal government to remove any disincentives for recognizing a high school diploma earned by passing the national GED Tests.

Rationale

The traditional route to the diploma must remain the preferred pathway. However, Maryland must acknowledge that the traditional, four-year high school experience is an unrealistic expectation for some children. Alternatives, including the awarding of a High School Diploma by Assessment through the GED Tests, must be provided, supported, and promoted. Maryland must support and promote alternative pathways for those students for whom it is appropriate. Certainly, these pathways should not be promoted to every child at risk of dropping out.

INCREASE ACCESS TO GED INSTRUCTION AND TESTING

GED instructional programs should be more effectively publicized and more widely available. Schools should be encouraged to distribute accurate information about local GED instructional programs, including the cost of testing, both to students who have already dropped out of school and to students at risk of dropping out. Students also need to know that a High School Diploma by Assessment is a valid credential to enter Maryland community colleges. They also need to know that without a college degree their future income potential is limited compared to that of a college graduate. One opportunity for providing this information is the exit interview that COMAR requires of all students who withdraw from Maryland public schools. In order to implement this recommendation, instructional programs and testing services would need to be expanded. For example, demand for GED instruction exceeds current capacity.

IMPLEMENT THE "GED OPTION" PROGRAM

Maryland students wishing to attempt the GED Tests must first drop out of school to conform to the American Council on Education (ACE) requirement. ACE does offer an alternative for targeted students who remain in school. The GED Option program targets students who are able to complete high school requirements, but who, for a variety of circumstances, are behind in the credits needed to graduate with their class. With the GED Option, the student remains enrolled and attends high school for at least 15 hours of instruction per week. This

instruction includes not only GED preparation, but also workforce development skills and/or career and technology education. As the GED Tests are a valid method of earning a diploma, Maryland should consider implementing the GED Option program, which has been adopted in 11 states, including New York and Virginia. To implement a similar GED Option in Maryland, the State Board of Education would need to amend COMAR to recognize the GED Option program as an approved pathway leading to a Maryland high school diploma.

REMOVE DISINCENTIVES

The GED Tests are a valid route to the diploma and should be promoted as such, regardless of how the federal government categorizes GED Tests under No Child Left Behind (NCLB). Currently, NCLB requires Maryland to count its graduates with a High School Diploma by Assessment as dropouts. As a result, these students negatively affect the school, school system, and state graduation rates, which are used in the determination of Adequate Yearly Progress. There is much at stake here for schools and school systems. Those not making Adequate Yearly Progress are subject to a series of escalating consequences that include corrective actions and complete restructuring of the school or school system. It is easy to see why a school or school system might not promote the GED program as positively or as often as it should. This is a damaging disincentive to meeting students' needs, and it must be eliminated. This Task Force urges the Maryland Congressional delegation to work with the Congress and the President to amend No Child Left Behind to allow students who earn a GED to be counted as high school graduates. Implementing this recommendation would increase Maryland's high school graduates by five percent (based on FY 2006 data).

CHOOSE DIPLOMA PATHS INDIVIDUALLY

Identifying the GED Tests as the most appropriate path for a student to earn a diploma must be done with careful consideration for each student. However, the GED Tests are not appropriate or attainable for every child. Some students, including some English Language Learners and some students with special needs, would not be successful on the GED Tests. Together, parents, school personnel, and the student must review the student's skills, needs, and future goals against all of the diploma routes and choose the best one for the student.

Recommendation Three

Create multiple pathways to the Maryland High School Diploma for students with disabilities and English Language Learners. These diploma pathways should include these options: work study beginning in grade 9; a five-year high school program; and instruction at times outside of the traditional school schedule.

Rationale

Raising the compulsory attendance age alone will not produce more high school graduates. Indeed, whether the compulsory attendance age is raised or not, other actions and new alternatives to help students complete a path to graduation are needed. Particularly in need of alternatives to traditional high school programs are students with disabilities and students with little or no English language skills, referred to as English Language Learners.

Flexible, alternative routes to the Maryland High School Diploma will provide these students additional opportunities to be successful. Allowing five-year high school programs, for example, will allow more time for remediation for students having difficulty passing the High School Assessments. The additional time may also be used to meet the requirements for a Maryland High School Diploma. Another consideration in creating these diploma pathways is the age of English Language Learners at the time of enrollment. For example, an English Language Learner may enroll in high school at age 17 speaking no English. To be successful, some students may need to be enrolled for a period of time past age 18.

An alternative route to the Maryland High School Diploma that offers instruction outside of the traditional school schedule is also essential. It is not unusual for some families to place obligations (e.g., working to support the family or supervising siblings) on students that make it difficult for the students to fully participate in school. A flexible schedule with opportunities for learning in the evening, on the weekend, or during the summer would allow these students to attend school while still fulfilling their familial responsibilities.

Based on student feedback on a Maryland school district survey (Cecil County Public Schools, 2007), a five-year high school program could address the special needs of students at risk by providing:

- Additional help in academic subjects;
- Work-study opportunities that can be built into student schedules beginning at an earlier age; and,
- Additional time to meet graduation requirements, including the High School Assessments.

Alternate formats and creative solutions for instruction may enable students to complete their education. For example, school schedules may use part-time day classes; combine part-time day classes with night school; and/or include work study and technical post-secondary education.

Recommendation Four

The State Board of Education must adopt a definition of alternative education that addresses different modes of instruction and appropriate strategies for current dropouts and for children and young adults at risk of dropping out.

Rationale

Unlike several other states, Maryland has no formal definition of alternative education. This omission must be addressed promptly. Adopting a formal definition in state regulations is necessary: to ensure that alternative education programs deliver instruction that meets content standards; to offer appropriate, targeted courses that enable students to reintegrate into a comprehensive school when ready; to address individual learning styles of students; and generally to meet standards for education as set forth by the Maryland State Board of Education. The Task Force must emphasize that flexible schedules should be considered for these programs to meet the needs of students with personal obligations such as job responsibilities and other family obligations.

A review of the literature and current practices for alternative education programs across the nation revealed common types of program locations and common elements of quality practice and programming, summarized below.

Alternative Education Program Locations

- Separate room or teacher within a comprehensive high school where additional services are provided
- School within a comprehensive high school
- Separate facility

(Source: State of Wisconsin, Department of Public Instruction)

Elements of Quality Practice and Programming

- Low student/teacher ratio
- Accredited
- Authority to grant credentials (High School Diplomas or GED)

- Credit recovery (allowing students the opportunity to make up credits that were lost due to failure)
- Certified teachers
- Flexible scheduling
- Strong relationships with the district office and other high schools
- Private funding and/or public-private partnerships

(Source: State of Wisconsin, Department of Public Instruction)

To support students, alternative education models need to offer a range of services and instruction, including anger management; small group instruction; some individualized instruction; computerized, self-paced instruction; guidance services; and study skills. Strong, consistent and persistent support services are critical to students' success.

In crafting a regulatory definition for alternative programs, the State Board of Education should consider the aforementioned program locations, elements of quality practice and programming, and range of services and instruction. Also important to the process is encouraging and considering the input of stakeholders, such as local school systems, higher education, community organizations, experts in alternative programs, parents, and students.

During the process of developing the alternative program definition, the State Board of Education and/or Maryland State Department of Education should also work to change perceptions of alternative programs. Too often, alternative education programs carry a reputation in their respective communities as programs for "bad kids." This view must be changed as an alternative program infrastructure is put into place. While these programs do serve some students with behavioral problems, they also serve many other students who do not have behavior issues but do require an alternative educational setting in order to be successful. Alternative programs have great potential for helping children achieve success; communities must understand this so they can get involved with and support the school and its students.

Recommendation Five

Should the compulsory age of attendance be raised to 18, Maryland should provide the adequate financial support to raise the age of compulsory attendance to age 18.

Rationale

This Task Force has identified many, but not all, of the costs that would be associated with an increase in the compulsory attendance age. Raising the compulsory attendance age can be done responsibly and effectively only by providing the resources necessary to engage all students at a young age and keep them engaged until they successfully complete high school.

While it is not the job of this Task Force to identify specific funding sources necessary to support an increase in the compulsory attendance age, or otherwise implement these recommendations, students will not benefit from an unfunded mandate. The subcommittee recognized that much more than an infusion of money would be necessary to effect this legislated change should it come to fruition. Preparation time would need to be built into the implementation date to allow systems to hire and professionally develop additional teachers, build additional classrooms, purchase and outfit relocatable classrooms, order needed textbooks and supplies, redraw school boundaries, analyze transportation needs, account for the special needs of the physically and educationally disabled students returning or remaining, and include the appropriate amount of money in the local school boards' funding requests to the local political jurisdictions in time to meet all of the deadlines for adequate consideration in the budgetary process. Public-private partnerships may need to be explored as the State and local school systems attempt to marshal sufficient resources to implement any changes to the compulsory age of attendance.

Recommendation Six

Appoint a group to study Maryland's existing truancy courts, examine their structure, assess their effectiveness, and, if appropriate, make a recommendation for expanding truancy courts statewide.

Rationale

Currently, Maryland lacks an established system of support and consequences for frequently truant students. And while Maryland has established consequences for parents/guardians, they are rarely enforced. Without enforcement in place, the compulsory attendance law is insignificant, and raising the compulsory attendance age will have little or no influence on keeping students in school. Therefore, the State should consider a truancy court system in each county to instill hope, improve student attendance, enhance achievement, and reduce delinquent behavior through a proactive partnership of schools, courts, and families.

Truancy courts currently exist in several Maryland counties, but data on their effectiveness is not known. Truancy courts have been used with strong success in several states, including North Carolina, where a newly developed truancy court has successfully transformed truant elementary and middle school students in two counties into perfect or nearly perfect attendance students. According to Judge Richard Chaney of Durham, North Carolina, only one student failed to graduate high school out of the students who regularly came into his courtroom. In St. Louis County, Missouri, a three-year evaluation of the truancy court showed 60 percent of students significantly improved their attendance rates, reducing absences by an average of 44

percent (St. Louis County Truancy Court, 2005). Additionally, in Ingham County, Michigan, approximately 63 percent of the 600 students referred to truancy court in the first two years have improved their attendance (Burton, 2003). Dramatic successes have also been found in Delaware. In 2003, 55 percent of the 739 students with cases closed achieved overall compliance with the truancy court; 94 percent of the students achieving full compliance remained in school at the end of the year; 70 percent of all students were still in school at the end of the year; and, 66 percent of all 2002 students involved with the truancy court continued to remain in school more than a year later (State of Delaware Justice of the Peace Court, 2003).

Should truancy courts be established, Maryland should consider a system whereby each truancy court works closely with the local State's Attorneys office, Sheriff's department, Department of Social Services, local leaders, and local boards of education to ensure compliance with compulsory attendance laws.

A statewide truancy court system should consider targeting students who were absent between 10 and 30 times. One judge, volunteer or appointed, per court could handle truancy cases once a week before or after school. The truancy judge would review a student's attendance, behavior, and academic performance. After an accumulation of multiple absences, the student would be placed on probation. If there is no improvement, the student might face community service, juvenile detention, or parental supervision in school.

The court would also intervene with issues underlying a student's truancy, including depression and drug and/or alcohol abuse, and make the appropriate referrals and placements.

Suggestions for keeping students in school through the truancy court system include transportation assistance; parent participation; counseling; parenting classes; support groups; and positive reinforcement, such as praise for small accomplishments and rewards for attendance and compliance with the truancy system.

Setting Clear and High Academic and Graduation Standards

Increasing Compulsory School Age Requirements

In our previous research, students identified "too much freedom" as a key factor that enabled them to drop out of high school, and poor attendance is a strong predictor of dropping out.[36] Most states originally enacted compulsory school attendance laws between 1870 and 1910, a time when fewer than 10 percent of 17-year-olds graduated from high school, due in large part to the fact that a high school education was not a prerequisite to participating in the mainstream workforce.[37] Over the last year, extensive research has been conducted at the state level that highlights the growing gap between the areas where states are experiencing job growth and the educational levels of their populations.[38] Students required to attend high school for an additional year experience a 12 percent increase in earnings. These students are also less likely to report being unemployed, having health problems, being depressed, and working in lower-skilled jobs. They are also more likely to report higher levels of satisfaction with their lives overall.[39] Many states have responded to these issues by raising the compulsory school age to send the message to students that graduating from high school is absolutely essential.

Since 2002, 12 states have raised the compulsory school age from 16 to 17 or 18.[40] Currently, 21 states have a compulsory school age of 18 and 32 states have a compulsory school age of 17 or 18.[41] In some states that have a compulsory school attendance age of 17, like Tennessee and West Virginia, students must remain in school until they are 18 to keep their driver's license.

A 1991 MIT and Harvard study shows that raising the compulsory school age acts as a constraint on dropping out.[42] Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.

Despite broad movement on raising the compulsory school age, this movement has not been uniformly embraced within the states. Over the last year alone, 13 states have introduced legislation to raise their compulsory school age to 17 or 18 that has stalled or died in committee.[43] Among the states that were unsuccessful in raising the compulsory school age, opposition from home school educators, parents, students, local businesses, and advocacy groups; an inability to determine if an increase in graduation and attendance rates or decrease in dropout rates can be attributed to increasing the compulsory school age; and the fiscal estimate were cited as critical barriers.[44] In some states where officials cited raising the compulsory school age law as a key tool to set clear expectations at the state level and to drive anti-truancy efforts locally, they also indicated that they feared in some cases parents were home schooling their children to get around the compulsory school age and to enable them to enter the workforce full time at an earlier age.

Combating Chronic Absenteeism

In the past few years, there has been growing awareness that communities with low graduation rates often have very high rates of chronic absenteeism from the early elementary grades forward. Recently, a number of communities have begun to organize to establish the norm that every student should be in school every day. Both Baltimore and New York City have launched joint efforts involving the school system and city agencies to create multi-pronged efforts to provide the range of supports needed to get more students to attend school on a regular basis. In addition, a new national effort called Attendance Counts has launched a website to spread best practices.[45] The federal government and most states and districts, however, do not track or report chronic absenteeism (commonly defined as missing a month or more of school) at the school or district level, instead focusing on aggregate attendance that can often mask serious chronic absenteeism challenges.

3. Task Force Recommendations

The state legislature plays a critical role in raising public awareness about the dropout problem; setting expectations for schools and districts and holding them accountable; and providing the data infrastructure to help schools and districts identify and support struggling students. The following recommendations identify how legislators can be most effective in dropout prevention and recovery efforts.

Create and sustain urgency to improve high school graduation rates

Legislatures can make it a state priority to improve high school graduation rates. Legislatures cannot do this alone, however. We must help organize and participate in powerful partnerships among key stakeholders, including legislators, governors, superintendents, state boards of education, educators, community-based organizations, parents, and business leaders. These stakeholders each play a critical role in developing the many options and solutions necessary to help all kids navigate a path to graduation and beyond.

Creating or participating in a statewide task force, advisory board, commission, office or other entity that can take a long-term view of the state dropout problem indicates bipartisan support, brings statewide visibility to the dropout problem, and raises awareness among the media and constituents. When legislators establish or participate in such a process, we send the message that improving dropout rates is a state legislative priority and that stakeholders have allies in the legislature who can codify their efforts in statute.

States need to set ambitious goals for improving high school graduation rates, and legislatures are well-positioned to ensure that state goals are understood by the public; that progress is accounted for and recognized; and that incentives and resources are available to help schools and districts meet state goals. Publicizing the goal and state progress will help inform citizens, parents and students about the costs and consequences of dropping out, and the many options available to keep kids on the path to graduation.

Task Force Recommendations

- Create and sustain urgency to improve high school graduation rates.
- Insist on high expectations and a rigorous curriculum for all students.
- Provide options and pathways to engage all students.
- Put excellent teachers, principals, and other caring adults in schools.
- Identify and support struggling students.
- Develop dropout recovery programs to reengage out-of-school youth.
- Build capacity to transform or replace low graduation-rate high schools.
- Conduct policy audits, eliminate counterproductive policies and provide incentives for collaboration.
- Hold schools and districts accountable for improving high school graduation rates.

4. Call to Action

The costs of dropping out are high—to the student; to the states; and to the nation. For students who do not earn their high school diploma, the future is grim. We no longer live in a society where high school dropouts can earn a living wage. Not only do dropouts see a significant decrease in earning power and workforce opportunities, but they also are far more likely to spend their lives periodically unemployed, on government assistance, or cycling in and out of the prison system.[39] Each high school dropout is a loss to our states and communities through costs to society, diminished quality of life, and—most importantly—loss of productive, engaged citizens.

The current economic crisis offers an opportunity to act. The economic downturn has wreaked havoc on state budgets, forcing difficult choices and driving important conversations about state economic priorities, responsibilities and accountability. The current crisis in state budgets is expected to continue for several more years. It provides an opportunity to pare duplicate services; hold agencies accountable for improving results; and find new ways to collaborate, share information, and ensure that state policy environments provide incentives for improving high school graduation rates.

State legislators must be leaders in dropout prevention and recovery and set the expectation that all students will successfully graduate from high school ready for success in college, careers and life. The time is now—we cannot wait until the current economic crisis subsides. We must take advantage of this opportunity to reexamine our expectations, policies and processes to ensure that schools and districts have every incentive and opportunity to help kids navigate a path to graduation and beyond.

This is our responsibility and thus our call to action: We must ensure that graduating every child means graduating every child. The clock is ticking for our children, our states and our nation.

ɟure 7. Percentage Change in Graduation Rates, 2001-2002 to 2007-2008, by State

States Making Great Gains

The education recommendations, policy guidelines and legislation that state lawmakers have put in place during the past decade are playing a vital role in decreasing the number of students who drop out of high school in Tennessee and Alabama.

A new report shows positive signs that states are making progress in reducing the number of students who drop out of high school. The report—released in November 2010 by the America's Promise Alliance, Civic Enterprises and Johns Hopkins University's Everyone Graduates Center—highlights successful case studies in Tennessee and Alabama. It acknowledges the role of state legislators in creating policy environments that have helped increase high school graduation rates, including strong leadership with clear graduation rate goals; collaboration among many sectors that is guided by data; commitment to innovation and continuous improvement; technical assistance for evidence-based solutions; and high expectations, better policies and more support for students.

Tennessee: From 2002 to 2008, Tennessee led the nation in increasing its high school graduation rate from just under 60 percent to 75 percent. Researchers credit a statewide approach that included collaboration and coordination among stakeholders; setting clear and high statewide expectations; effectively using data to improve teaching and learning; and improving technical assistance to struggling schools.

Alabama: Between 2002 and 2008, Alabama's high school graduation rate increased from 62 percent to 69 percent. Researchers credit leadership from state policymakers that made dropout prevention and increased graduation rates a statewide priority; set clear and high statewide expectations and standards for students; built capacity for comprehensive school improvement, including state-sponsored professional development and training; and provided intensive supports to students to finish high school.

Education Program

Compulsory Education

Overview

Legislation & Laws

News Articles

Overview

More than 150 years have passed since Horace Mann helped Massachusetts establish a statewide system of education that eventually led to the requirement that all children attend public school. In 1852, Massachusetts became the first state to pass compulsory school attendance laws, and by 1918, all states required children to receive an education.

Compulsory Education Requirements

Today, every state and territory requires children to enroll in public or private education or to be home-schooled. More than half—32 states—require students to begin their education by age 6. Some states' set their age requirements as low as age 5 and as high as age 8. All children are required to continue their education into their high school years, with 26 states setting the cutoff age at 16. The remaining states require students to stay in school through age 17 or 18.
