Governor Parnell appointed Don Quarberg to the Big Game Commercial Services Board. The announcement was made on July 6, 2011 and included 8 other government organizations and departments aside from the Big Game Commercial. Those other appointments are reported as separate articles here on The Alaska News dot com.

As a part of his tasks, he will be advising for the regulating and licensing activities of providers of commercial services to big game hunters in the interest of the state's wildlife resources.

Quarberg is from Delta Junction and works as a professor emeritus at the University of Alaska Fairbanks and current chair of the Delta Fish & Game Advisory Committee. Quarberg is an active member or leader of several hunting and outdoor-related Alaskan organizations such as the Alaska Professional Hunters Association, Alaska Outdoor Council, National Rifle Association, and Safari Club International.

Formerly, he has also served as a member of the Delta Bison Management Working Group, the Deltana Fair Board of Directors, the Delta Lions Club, and the Salcha-Delta Soil and Water Conservation District.

His dedication to his work and the long line of agencies he has served only proves his flexibility when handling and dealing with different working environment and people.

Quarberg is a U.S. Navy veteran and holds a master's degree in fisheries science from Texas A&M University. His bachelor's degree in natural resources and water resources management is from the University of Wisconsin.

Quarberg appointed to guide board

by Staff Report / newsroom@newsminer.com
07.06.11 - 11:46 pm

FAIRBANKS — Don Quarberg of Delta Junction has been appointed by Gov. Sean Parnell to the Big Game Commercial Services Board, the state panel that licenses and regulates guides and other commercial hunting service providers.

Quarberg will take a seat reserved for a member of the public, according to a news release Wednesday from the Office of the Governor.

Quarberg is chairman of the Delta Fish and Game Advisory Committee and a member of the Alaska Professional Hunters Association, Alaska Outdoor Council, National Rifle Association and Safari Club International, according to the news release.

Quarberg, a retired University of Alaska Fairbanks professor, for many years worked as the Cooperative Extension agriculture agent in Delta. He holds a master's degree in fisheries science from Texas A&M University.

Delta Junction farmers call for multimillion-dollar bison fence

by Tim Mowry / tmowry@newsminer.com
04.18.11 - 11:10 pm

FAIRBANKS — If you build it, they will still come. But at least they won't be able to get in.

That's the premise behind a proposal from an advisory group to the Alaska Department of Fish and Game to fence in 100,000 acres of private agricultural land in Delta Junction to prevent crop damage caused by a herd of wild bison.

The proposal includes approximately 160 miles of fence around two large blocks of agricultural land and a 45-mile "drift" fence on the south side of the Richardson and Alaska highways from the Tanana River to the Gerstle River to keep bison out of areas that will not be fenced in.

At this point, nobody really knows how much the project would cost, where the money would come from to pay for it, what state agency would lead the project, or whether the Alaska Legislature would even give its needed approval.

"It's kind of pie in the sky," is how Don Quarberg of Delta, a hunting representative on the working group, put it.

Fencing is one of the topics that will be discussed Thursday during a public meeting sponsored by the Department of Fish and Game to discuss an update of the Delta Bison Management Plan. The meeting is at 7 p.m. in the Alpine Lodge.

The department is also proposing to reduce the size of the herd in an attempt to reduce crop damage. The department's management objective is 360 bison before spring calving, and the state is proposing a new objective of 275 to 325 pre-calving. The herd currently numbers about 340 animals.

The purpose of Thursday's meeting is to get feedback on the proposals and future management, state wildlife planner Randy Rogers with the Department of Fish and Game in Fairbanks said.

"We expect we will get quite a lot of public comment," he said

Hunters will likely provide a good portion of that comment. A permit to hunt Delta bison is the most coveted hunting permit in Alaska. Last year, the department received more than 20,000 applications from hunters for 120 drawing permits.

The hunting community has offered no support for fencing, whether it's fencing the bison in or out, Rogers said. Hunters also oppose any reduction in the herd.

But some farmers say something has to be done. Bison get approximately half their food supply from agricultural land. In addition to eating crops like hay and

barley, bison damage plants by tromping through them.

The Department of Fish and Game has a mandate from the Legislature to manage a free-ranging bison herd, so "we don't consider any fencing options as part of the plan right now," Rogers said.

The Legislature has shown little interest in Delta bison management, Rogers said, though Rep. Eric Feige, R-Chickaloon, co-chairman of the House Resources Committee, asked the department for an estimate of how much it would cost to fence the bison onto the 90,000-acre Delta Bison Range, which was established by the Legislature in 1977 to provide food for the bison.

Based on Fish and Game's rough estimate of $50,000 per mile, it would cost roughly $3.15 million to fence in the bison range, which has a circumference of 63 miles. That compares to approximately $8 million to build 160 miles of fence to enclose private agricultural land and $2.25 million to build a 45-mile drift fence on the south side of the Alaska Highway to keep them away from agricultural lands.

Division of Agriculture Director Franci Havemeister, meanwhile, agreed that fencing is the only way to keep bison out of agricultural land.

"Ultimately it's a funding issue," she said. "Who's going to pay for it?"

Delta cooperative extension agent Phil Kaspari, a farmer and member of the bison working group, would like to see some kind of fence to protect farmers' crops.

"I see that as a huge improvement for the agricultural community, but I'm not optimistic in seeing anything happen for years, " he said.

A written comment period of at least 30 days will follow Thursday's meeting, Rogers said.

Contact staff writer Tim Mowry at 459-7587.

Bison meeting

The Alaska Department of Fish and Game is holding a public meeting Thursday at the Alpine Lodge on Dale Road to talk about future management of the Delta Bison Herd. Public comment will be accepted. The meeting begins at 7 p.m.

Rebne, Brenda
Big Game Commercial Svcs Board

STATE OF ALASKA
OFFICE OF THE GOVERNOR
P.O. Box 110001, Juneau, AK 99811-0001
Phone: (907) 465-3500 Fax: (907) 465-3532

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: **Big Game Commercial Service Board**
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: **Brenda Ann Rebne**

Mailing Address: ___

Residence Address: ___

City, State and Zip Code: **Anchorage, Alaska 99504**

Home or Message Telephone: ___ Business Telephone: ___

Fax Number: ___ Cell Phone: ___

Email address: ___

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES X NO ___ Voter Registration Number (Optional): ___

Social Security Number (Optional, required if appointed for travel, reimbursement etc.): ___

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years? YES X NO ___ if 'YES', explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts. **2007 - fined $500.00 for illegally shooting a moose. I immediately turned myself and the moose in to the local State Trooper, where the moose was promptly transferred to a local community member. Horns were short of 50" requirement.**

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?

YES X NO ___

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES ___ NO X

If 'YES', explain:

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria.

B. List both formal and informal education and training experiences: (Use additional paper if necessary).

Currently enrolled in the Degree Completion Program at Alaska Pacific University pursuing a Bachelor's in Business Management.

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor).

Membership in Other Organizations, Offices Held & Dates:

NativeVillage of Cantwell Board Member, Secretary/Treasurer, 2000 - 2003

Diane Benson
Fairbanks Pipeline Company
Former Alaska Lt. Governor Candidate
Chugiak, AK

When my son was severely injured in the Iraq War I could not imagine how he or our family could ever recover. Within weeks after losing both legs to a bomb my son saw a poster at physical therapy of an amputee skiing. He decided that was what he wanted to do. He and his wife thereafter learned together to ski, scuba dive, and bike marathons. When people come together as a community and provide opportunity to those struggling; make the dream of being in motion come true, lives change and communities are enriched. Today, my son and his wife are happy and active. After our time at Walter Reed Army Medical I had to do something and so I became involved in various groups including the ADA Commission, the VFW Ladies Auxiliary Post 10041, the Anchorage Chamber's Military Appreciation Committee, the Military Order of the Purple Heart and now, HAVE-Alaska.

Kyle Moxley
U.S. Army Ret.
Tolsona Lake, AK

"I served in Iraq 9/1/2003 – 3/26/2004 when I was severely injured by an IED during a patrol in Fallujah. I have since been through multiple surgeries and therapies that enabled me to keep the presence of my right arm. I have since earned a Bachelor's in Business Administration and am currently working on my M.B.A . I have always envisioned myself in the military and now that I can no longer physically be in the military, I can be an active part of veteran's lives."

Karla Moxley
Educator
Tolsona Lake, AK

"Although I have never actively served in the military, I have been influenced by my father and brother, both Marines' drill instructors, and my wounded warrior husband, Kyle. Since my husband's injuries, I have acquired a wealth of knowledge, lists of resources and numerous contacts that I enjoy sharing with other wounded soldiers and their families. As the primary caregiver of a wounded soldier, I offer a unique prospective towards interacting with and caring for wounded warriors. I am a wife, a mom of five children, a high school math teacher and coach, plus I am earning my Master's in Educational Leadership."

Brenda Rebne
President-Ahtna Facilities Services
Anchorage/Cantwell, AK

"In this last year, I've spent a lot of time at a medical facility that services wounded warriors. Nothing can make a person enjoying freedom feel smaller than being face to face with a wounded warrior. The sacrifices are great and for these strong and valued warriors lifelong. What can I do to say thank you? Words are so fleeting and thank you just isn't enough. So I'm going to commit to this cause and do the best job I can. As the saying goes, "I don't know, what I don't know" but I'm willing to learn and I'm willing to put the time in to help make the organization worthy of its mission and do something positive that actually means something more than a thank you could ever do. How much more would it do for a wounded warrior that may have thought they would never be able to enjoy the outdoors or those activities again? I can't imagine. If I can play a small part in making that happen, I'm there!"

Aaron Bloomquist
Full Curl Outdoors
Tok/Copper Center, AK

"My dedication to our veterans stems from a reverence for "The Greatest Generation" in my family. Of my grandparents and great uncles, seven served in World War II. My grandfather Charlie Fisher served in every

theater in WWII. He was the inspiration for much of my love of the outdoors. He instilled in me a respect and admiration for those that fight so we, as Americans, may live free and fulfilling lives. I organized our first Wounded Warrior bear hunt in 2006 after reading about veterans fishing trips on Kodiak Island. I was honored to share the field with Dan, Doc, and Brian, all severely injured Veterans of the war in Iraq. I hope all the veterans served by HAVE-Alaska are as excited to spend time in our great State as I am to host them on their adventures."

Mark John
VP-Marketing-Major Alaska Corporation
Anchorage, AK

"I have the utmost respect and admiration for our military. Their un-selfless service and bravery does not get recognized nearly enough. I believe we should express our gratitude to our veterans, those who are presently serving and those who have served each and every day, not just on special occasions. We should not forget their service but do all we can to provide them what they require to do their job now and assist them when they return; especially those harmed and wounded protecting our personal freedom. Let us always be thankful for the contributions of our military and not forget the sacrifice they have made for us."

Ron Jordan
U.S Navy 1969-1974
Anchorage, AK

"I am a Navy veteran myself. I was A Navy medic from Aug. 1969 to January 1974. In that time I served with the 12th. Artillery third Marine Division. I also served with the Kenai Alaska National Guard as A medic 1977 to 1978 after coming back to Alaska and while living in Homer in 1974 to 1978. Being able to help and improve the life style of the military injured and being able to give them the self reliance to do the things that they would like to do for themselves is a good thing."

Craig Fleener
Dept. Commissioner ADF&G - Game
Fort Yukon/ Anchorage, Ak
(Currently deployed to Afghanistan with the National Guard)

Bruce Morgan
President - Sampson Steel
Anchorage, AK

Alaska Game Board Chairman Ron Somerville Apologizes for Offensive Remarks to Natives

Implies Absent Natives Off Drinking Beer

Alex deMarban / Anchorage Daily News / November 2, 2006

The new Board of Game chairman apologized Wednesday for implying that Natives absent from a recent meeting may have been off drinking beer.

Ron Somerville, who has a long history of angering Natives with outspoken views on subsistence, added that the uproar in the Native community over the comments is a diversionary tactic.

The Game Board is restricting subsistence hunts in the Nelchina basin north and east of Anchorage, including the popular caribou hunt, and Natives from the region strongly oppose the changes.

Somerville, of Juneau, said he was trying to lighten tension at the end of a long Game Board meeting last month when he made his comment about beer drinking.

"If I offended somebody, I'm terribly, terribly embarrassed by that, if it was taken other than as just a way of breaking the tension and I apologize for that. I don't think I have to, to be honest with you, but if that's what happened and someone took it wrong ..." he said.

A Native woman privately complained to him at the meeting that the comments were offensive, he said. He had not heard of any other complaints until now, he said.

The Alaska Federation of Natives voted Saturday to ask the U.S. Department of Justice, the Alaska Human Rights Commission and the state ombudsman to investigate the remarks.

Alcohol is a sensitive topic in Native villages, where it's blamed for high rates of violent crime, suicide, fetal alcohol syndrome and other ills.

If the remarks are deemed "inappropriate, discriminatory, oppressive or discourteous," AFN will ask the state to pursue "corrective action," including removing Somerville, according to a resolution passed at the AFN convention.

Somerville made his remarks Oct. 7. During a public comment period, he called on three people in a row signed up to speak but who weren't there, according to a recording provided by Game Board staff.

The three were part of a group of more than 50 Alaska Natives from Copper River-area communities who had been speaking throughout the day.

Some charged the board with wanting to restrict subsistence hunting to create a surplus of caribou, leaving enough to open a sport hunt for the first time in 17 years next year.

After the third speaker didn't show, Somerville said:

"There must have been a run on free beer or something."

Somerville called Donna Hicks of Copper Center to speak.

Hicks was present. "Don't like beer, Donna?" he asked.

Some general laughter followed the statements, though it's impossible to tell from the recording who is laughing.

Several Natives in the audience were offended.

"I was like, 'That was uncalled for, especially since he knew we were all Indians,' " said Tammany Straughn of Cantwell. "It's stereotyping, like, 'Oh they're drunken Indians.' That's the way I felt."

Board member Ben Grussendorf of Sitka "kind of stiffened up" when he heard the comment, he said.

There were about 45 people in the audience. About six Natives looked at each other, apparently questioning the remarks, he said.

Grussendorf said the meeting had become somewhat informal, even conversational.

"I think he meant it in jest, and it just didn't sit well," Grussendorf said.

Somerville, appointed chairman at that October meeting, is no stranger to political fire storms or Native issues.

For much of the 1980s, he headed the pro-sport hunting and fishing Alaska Outdoor Council, leading efforts to overturn the state's old rural priority for subsistence.

In 1991, Gov. Wally Hickel suggested Somerville to head the Department of Fish and Game, touching off a statewide flurry of protests by Alaska Natives.

The appointment, ultimately rejected by the fish and game boards, was critical because the state was seeking new ways to provide subsistence hunting and fishing. The state's rural priority had been ruled unconstitutional in 1989.

The AFN delegates were told of Somerville's comments by Brenda Rebne of Ahtna Inc., the Glennallen-based regional Native corporation for the Copper River area.

The board wants to make the Nelchina rules so cumbersome that people won't apply to subsistence hunt, Rebne announced at the convention.

She pointed out that the Game Board has made it impossible for many young people to proxy hunt for elders, among other restrictions.

In October, the board also reduced the number of caribou permits per household from three to two.

The board plans to continue discussing, but not make decisions on, Nelchina subsistence hunts at its Nov. 10-15 meeting in Wrangell, said Matt Robus, state director of wildlife conservation.

Furthers restrictions the board might consider at an Anchorage meeting in March include reducing ATV and other vehicular use, such as planes and RVs that take hunters nearer to prey, and awarding permits based in part on household income.

The Nelchina caribou hunt has been contentious for years, with many hunters saying it's unfair and excludes too many.

Thousands of Alaskans apply every year to hunt caribou in the basin, an area roughly framed by the Parks, Denali, Richardson, Glenn and Tok Cutoff highways, but sometimes only a small percentage win permits.

Once the board finishes rewriting the rules, it will redefine the amount of caribou and moose necessary for subsistence hunts. If there's a surplus of caribou, the board could create a general drawing hunt for all Alaskans after subsistence needs are met.

That's not the board's intent, Somerville said Wednesday, but it might end up that way.

Please return to the Senate Secretary's Office (Room 211).

BOARD OF GAME

GENERAL: According to the statutes (**AS 16.05.221. Boards of Fisheries and Game),** "The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and with a view to providing diversity of interest and points of view in the membership."

1. Do you believe that a "diversity of interest and points of view" is, in fact, important to the Board of Game? Please explain.

2. Please comment on the "diversity of interest and points of view" in the current membership of the Board of Game.

3. Do you believe that your appointment would provide "diversity of interest and points of view," as required by statute? Please explain.

Alaska Statutes.
Title 16. Fish and Game
Chapter 5. Fish and Game Code
Section 221. Boards of Fisheries and Game.

previous: Section 220. The Board of Fish and Game. [Repealed, Sec. 40 Ch 206 SLA 1975].
next: Section 230. Term of Office. [Repealed, Sec. 40 Ch 206 SLA 1975].

AS 16.05.221. Boards of Fisheries and Game.

(a) For purposes of the conservation and development of the fishery resources of the state, there is created the Board of Fisheries composed of seven members appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and with a view to providing diversity of interest and points of view in the membership. The appointed members shall be residents of the state and shall be appointed without regard to political affiliation or geographical location of residence. The commissioner is not a member of the Board of Fisheries, but shall be ex officio secretary.

(b) For purposes of the conservation and development of the game resources of the state, there is created a Board of Game composed of seven members appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The governor shall appoint each member on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and with a view to providing diversity of interest and points of view in the membership. The appointed members shall be residents of the state and shall be appointed without regard to political affiliation or geographical location of residence. The commissioner is not a member of the Board of Game, but shall be ex officio secretary.

(c) Members of the Board of Game serve staggered terms of three years and, except as provided in AS 39.05.080 (4), each member serves until a successor is appointed. An appointment to fill a

vacancy in the membership of the Board of Game shall be made in the same manner as the original appointment and, except as provided in AS 39.05.080 (4), an appointment to fill a vacancy is for the balance of the unexpired term.

(d) Members of the Board of Fisheries serve staggered terms of three years. The terms of members of the board begin on July 1. Notwithstanding AS 39.05.080 (1), by April 1 of the calendar year in which the term expires, the governor shall appoint a person to fill the vacancy that will arise on the board due to expiration of the term of a member of the board and submit the name of the person to the legislature for confirmation. If a vacancy arises on the board, the governor shall, within 30 days after the vacancy arises, appoint a person to serve the balance of the unexpired term and submit the name of the person to the legislature for confirmation. A person appointed to fill the balance of an unexpired term shall serve on the board from the date of appointment until the earlier of the expiration of the term or the failure of the legislature to confirm the person under AS 39.05.080.

Alaska Department of Fish and Game

Welcome to the Alaska Board of Game!

Board of Game Members, 2011-2012

Board of Game News

- Board of Game to Meet in Fairbanks, March 2-11
- Notice of proposed changes in the regulations of the Alaska Board of Game - Interior Region 2012 (*PDF 55 kB*)

Board of Game

The Board of Game consists of seven members serving three-year terms. Members are appointed by the governor and confirmed by the legislature. Members are appointed on the basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, with a view to providing diversity of interest and points of view in the membership (see Alaska Statute 16.05.221).

The Board of Game's main role is to conserve and develop Alaska's wildlife resources. This includes establishing open and closed seasons, areas for taking game, setting bag limits; and regulating methods and means. The board is also involved with setting policy and direction for the management of the state's wildlife resources. The board is charged with making allocative decisions, and the Department of Fish and Game is responsible for management based on those decisions.

The board meeting cycle generally occurs from October through March. The board considers changes to regulations on a region-based schedule. Each region will be discussed on a Two-year cycle. Board of Game meetings vary in duration from 5 to 11 days and occur in communities around the state. The board may also meet due to a court action, legislation or an emergency situation. The board uses biological and socioeconomic information provided by the Alaska Department of Fish and Game, public comment received from people inside and outside of the state, and guidance from the Alaska Department of Public Safety and Alaska Department of Law when creating regulations that are sound and enforceable.

The Board of Game's authority to adopt regulations as described in AS 16.05.255. Those regulations can be found under 5 AAC Chapters 84, 85, 92, and 99.

Call For Proposals

The Alaska Board of Game calls for proposed changes in the regulations pertaining to hunting, trapping, and the use of game for the following regions:

1. Southeast Region (Game Management Units 1, 2, 3, 4, and 5)
2. Southcentral Region (Game Management Units 6, 7, 8, 14C, and 15)
3. Central/Southwest Region (Game Management Units 9, 10, 11, 13, 14A, 14B, 15, 16 & 17)

Read More

Proposal Deadline

The Board of Game is now issuing an annual Call for Proposals rather than a separate a Call for each meeting. The proposal deadline for the 2012/2013 meeting cycle will be May 1, 2012. For every year thereafter, the proposal deadline will be May 1st. For those years when May 1st occurs on a weekend, the proposal deadline will be set for the Friday preceding that weekend.

Governor Parnell, show some respect for wildlife, and Alaskans

By **TINA M. BROWN**

7 comments »

Latest by ArtVandelay 2 days 22 hours ago

Former of Fish & Game Conservation Director Corey Rossi's wildlife violations are an embarrassment to Alaska, a disgrace to the Parnell administration, an insult to the good people who work at Fish & Game and an affront to all Alaskans. Unfortunately, Rossi was not the only individual in Alaska's wildlife management who should resign.

Cliff Judkins, the current chair of the Board of Game, was with Corey Rossi and former BoG member Bob Bell on a musk ox hunt during which they were caught with trophy horns that were supposed to have been destroyed as a condition of their subsistence hunt. Nevertheless, Governor Parnell did not ask Judkins to step down from the BoG or even from his position as chair.

Members of Advisory Committees (local volunteer groups statewide that send recommendations on proposals to the Board of Game and the Board of Fish) are not currently vetted. While most AC members are dedicated, knowledgeable citizens, some recent and/or current AC members in our state have wildlife violations, sex violations; and even though the Juneau-Douglas Advisory Committee is a deservedly well respected group, one of its former members was a convicted felon. (Note that the JDAC now asks each applicant about his/her record, even though the state does not require such vetting.)

The Joint Boards (Board of Game and Board of Fish) is currently addressing this AC vetting problem, however some members of the Board of Game and the Board of Fish have wildlife violations themselves, including Parnell's most recently confirmed appointee. Parnell knew of this appointee's wildlife violations when he appointed him, but chose not to tell our legislators during the confirmation process.

And Parnell's most recent appointee, Lynn Keogh, Jr., who is currently in the process of being confirmed by the state Legislature, has a fairly lengthy civil court record (**http://www.courtrecords.alaska.gov/pa/pa.urd/PAMW6500**) including listings in Anchorage, Glennallen, Homer, Kenai, and Palmer. Additionally, despite the state mandate for diversity in the Board of Game, Mr. Keogh's resume clearly shows that he brings nothing new to the BoG.

Predator control in Alaska is out of control because many of those who manage Alaska's wildlife are out of control. Governor Parnell, stop letting underqualified and disreputable people manage Alaska's wildlife. Clean up your house: Replace Mr. Rossi with someone who has the professional qualifications, education, experience, and personal integrity necessary for the position; reform wildlife management in the last frontier, and appoint reputable people with diverse backgrounds to our Board of Game. Alaska's wildlife belongs to all Alaskans. Start treating it — and the Alaskans whom you represent — with respect.

• Brown is a resident of Juneau.

ALASKA STATE LEGISLATURE

SENATOR HOLLIS FRENCH

April 3, 2012

Lynn Keogh
4778 Mills Drive
Anchorage, AK 99508

Dear Mr. Keogh,

I'm writing in advance of your confirmation hearing before the Senate Resources Committee this Friday, April 6, 2012. As a member of the committee, I have received numerous emails urging me to vote one way or the other regarding your nomination. Some of those emails have alleged that you have had past brushes with the law. While the application you filed with the Board does not record any convictions for the past ten years, my staff has shown me a lengthy list of court cases that appear in Court View, which bear your name. I have no way of knowing whether or not any of these cases actually involve you. I anticipate asking you a question about the cases on the record during the confirmation hearing. In the interest of fairness, it seemed better to send you this letter now informing you of my intention.

Here are the questions I intend to ask. How many times have you been charged with a crime as an adult? How many times have you been convicted of a crime as an adult? What were the circumstances surrounding those convictions? Are there any civil cases that you have been involved in that should come to the committee's attention?

Sincerely yours,

Session: State Capitol • Juneau, Alaska 99801 • (907) 465-3892 • 1 (866) 465-3892 • Fax: (907) 465-6595
Interim: 716 West 4th Avenue • Anchorage, Alaska 99501 • (907) 269-0234 • Fax: (907) 269-0238

BOARD OF GAME APPOINTMENTS

April 4, 2012

Tom Lamal
1734 Becker Ridge Road
Fairbanks, Alaska 99709
(907) 479-7544 Hm. 388-5153 cell
tomlamal@yahoo.com

Dear Governor Parnell,

As you consider appointing new members to the Board of Game, please rebalance the Board so that the residents' interests are considered on an equal basis with the commercial guide interests.

Many residents are concerned with the focus of the current Board of Game. For example, in January there were 23 proposals presented to the BOG Statewide Meeting requesting some preferences for resident hunters and the board rejected all requests. Now, residents will have to wait until 2016 when the Board of Game will consider statewide proposals.

Presently the Board of Game is comprised of two guides (Nate Turner & Lynn Keogh), one assistant guide (Stosh Hoffman), present and past representatives to the Big Game Commercial Services Board (Ted Spraker & Robert Mumford) and several board members who have close ties or are directly associated with the Alaska Professional Hunters Association, which lobbies to keep commercial operations in the forefront.

All of the Western States, except Alaska have a high allocation of game for their residents and don't force nonresidents to use a guide for any specie. Alaska is missing an excellent opportunity to collect a lot more money in tag fees without discouraging nonresident participation.

I would be honored to have the opportunity to discuss this with you or someone on your staff and I would be willing to fly to Juneau if that would help the resident's cause. I have served on different boards, a commission and committees, so I understand how things can get directed away from a group's mission.

I urge you to appoint Board of Game members who want to keep Alaska family hunting traditions in place and create quality opportunities for our youth.

Sincerely,
Tom Lamal

Dear Senators,
I am writing to express my dismay over the potential nominees to the Board of Game that you will be presented with this afternoon.

Once again, Gov Parnell has failed to offer a diverse perspective to the Board. The BoG is already top-heavy with professional hunters and trappers who will benefit monetarily from BoG decisions. Enough is enough.

All three nominees (MsTeresa Sager-Albaugh, Mr Robert Mumford, and Mr Lynn Keogh Jr) have narrow viewpoints and bring no change to the current makeup of the Board. Sager-Albaugh has voted in the past for intensive predator control. Mumford is a member of the Alaska Professional Hunters Association, and Keogh is an active guide who has voted (as a nominee) for the airborne killing of wolves, and also for the killing of bears.

In particular, Mr Keogh seems to have not been vetted at all by the Parnell administration. He has a lengthy public record on the CourtView website. If he cannot obey even our basic laws -- repeatedly -- how can he hold a position that makes rules for others to follow? Given the recent wrongdoings of members of the department, State needs only candidates that have demonstrated integrity.

Today is a crucial day; you have the ability to bring long-overdue change to the composition of this Board. Please reject these nominees and demand that Gov Parnell selects nominees who are non-consumptive users, or bring a rational, educated scientific background into game management.

Thank you for your time and consideration.
Best regards,
Janice Golub

Subject: Board of Game appointment: Lynn Keogh

Dear Senator Paskvan,

I am writing to ask for a "NO" vote on the appointment of Lynn Keogh to the Alaska Board of Game. Mr. Keogh has demonstrated an incredible disrespect for the laws of Alaska, evidenced by numerous violations in the records of the Alaska Court System. Someone with such poor judgment has no place serving on the board that addresses the game laws of Alaska.

Thank you for your consideration.

Sincerely,
Marilyn Houser
2411 Ingra Street

Attachments: IMG-20120405-02102.jpg

Importance: High

Categories: Printed

Senate Resource Committee Members:

I am a hunter and a fisherman. I am appalled at the direction our Board of Game has taken. They are no longer science-based and are doing great and irreparable harm to our wildlife and game management. We are becoming a WILD GAME FARM.

Our constitution is inclusive and diverse. The Board of Game is narrow and focused on eliminating bears and wolves-in the most horrific manner.

I am urging you to vote for diversity and for sound game management. Please Vote Down the following appointments:
Lynn Keogh Jr.
Teresa Sager-Albaugh
Robert Mumford

I have attached a screen shot of an email sent by Randy Ruedrich basically threatening legislators if they don't do what Rod Arno of the Alaska Outdoor Council wants them to do. How much longer can Alaska's wildlife sustain the blows from a decade of NO DIVERSITY ON THE BOARD?

PLEASE DO SOMETHING! VOTE THESE RADICALS OUT!

Here is some other information on why I strongly urge you to vote down Lynn Keogh's nomination:

1. Keogh is an active guide, and hunter and trapper. He will be another loyal representative of hunters and trappers, bringing no diversity to a body that is mandated to represent all Alaskans. The approximately 85% of Alaskans who neither hunt nor trap currently have no say about how Alaska's wildlife is managed.
2. Keogh has a narrow viewpoint: he is a staunch advocate for killing predators. As a BOG nominee (which entitled him to vote at recent meetings) he voted in favor of airborne killing of wolves on the Kenai Peninsula, despite overwhelming public opposition.
3. Keogh has enthusiastically joined the BOG's war on bears. His resume and his votes at the recent Fairbanks BOG meeting demonstrate that he would continue to support extreme control (killing) programs targeting bears and other predators.
4. Keogh apparently has little appreciation for state laws, as evidenced by his encounters with the Alaska court system over the years. (See www.courtrecords.alaska.gov) In light of several recent and highly publicized debacles involving wildlife managers in Alaska, nominees must be held to the highest degree of integrity. Keogh fails such scrutiny.

For many of the same reasons, I urge you to vote down Teresa Sager-Albaugh:

. Teresa Sager-Albaugh is up for reappointment to the BOG. She, like Keogh, is very bad news for our wildlife. She helped vote down the Denali Buffer Zone for wolves in 2008 and also voted for aerial wolf killing on the Kenai Peninsula, both times ignoring overwhelming public input. She is staunchly pro-[illegible]ensive Management (killing predators to boost moose populations for hunters), an NRA member, and former president of the pro-hunting Alaska Outdoor Council. In short, she brings absolutely no diversity to the BOG.

Vote down Robert Mumford as well:

. Robert Mumford is a retired Alaska State Trooper, Division of Fish and Wildlife Protection. He is a lifetime member of the NRA and a member of the Alaska Professional Hunters Association. He's a former member of the Alaska Big Game Commercial Services Board, which licenses hunting guides and regulates the big game commercial service (guided hunt) industry. We see nothing in his listed qualifications that indicates he would bring any diversity to the BOG.

Subject: Do Not Approve Lynn Keogh Jr. for the Board of Game

Senator Paskvan,
I moved to Alaska in 1981 to live in the wilderness north of Talkeetna. I value wildlife and nature, and I have an education in fisheries and wildlife management.
I urge you to NOT approve Lynn Keogh Jr., because we the vast majority of Alaskans who are non-consumptive users of wildlife would continue to have no representation if he is appointed.

To: Sen. Joe Paskvan
Cc: Art Greenwalt
Subject: Lynn Keogh, Board of Game Candidate

Dear Senator Paskvan and Staff:

Recently I contacted your Juneau office with my concerns about Mr. Keogh Jr. I elaborate on them bit more further along in this email. Suffiice it to say Gov. Parnell's choice of this individual is a real slap in the face to the 85% of Alaskans who neither hunt or trap yet constitutionally are equal owners of our wildlife resource. Of specific interest are his interactions with the state court system, which have been many. I have been told his 2011 PDF check was garnished and he owes several thousands of dollars to the courts, which assertions should be documented in the attached PFD files.

To be specific:

1. As a guide and hunter he provides no diversity to a state entity originally designed to exhibit such. In fact, the Board as presently constituted offers no diversity whatsoever leaving the 85% of Alaskans who neither hunt or trap with no voice concerning a resource the State Constitution holds as equally owned by all residents.

2. Narrow viewpoint and lack of insight. Mr. Keogh is anti-predator. He has already shown this perspective in recent votes in which he has participated on the board. For instance, when the board took up airborne killing of wolves on the Kenai Peninsula, there were 380 comments sent to the members against the program and only 6 supporting it. Mr. Keogh and the others voted airborne killing into place. Though Fish and Game had noted the habitat is already very limited in providing moose forage due to decades of fire suppression, and even though one BOG member said he couldn't see where predator control would make any difference, it was enacted.

Similarly, when Rep. Seaton at the recent House Resources Comm. hearing on Keogh's nomination noted that the moose forage in his district has been devastated by an abundance of hares competing for the vegetation, Mr. Keogh correctly noted the plants will produce toxins that keep the hares from eating them. What Mr. Keogh apparently did not understand is this is a process that can take months. Apparently, he expects the moose to suspend foraging while waiting for this to take place. Such a lack of insight and understanding is distressing in someone in such a position.

3. He has apparently little appreciation for state laws as evidenced by his encounters with the court system over the years. Included below are just some records revealed by a search of the state files. Also, you can find Mr. Keogh Jr.'s (note the birthdate in distinguishing between Sr. and Jr.) extensive court record at: http://www.courtrecords.alaska.gov/pa/pa.urd/PAMW6500 Given the recent debacle with Corey Rossi it would behoove any entity associated with wildlife management in Alaska to be held to a high degree of integrity. His documented history would fail such scrutiny.

At a time when Alaskans are becoming more aware of the failings and biases of our Board of Game, of how it fails to represent but a select, elite group of people, appointments to this Board should be able to pass a litmus test of considerable quality and intensity for certainly they will be subject to such each time they meet with the public.

CAUTION: This screen shows only that a case was filed. It does not show how the case ended. Do not assume that a defendant was convicted just because a criminal case was filed.

Subject: Opposition to Confirmation of Lynn Keogh, Jr. to Board of Game

Dear Senator Paskvan:

http://juneauempire.com/opinion/2012-03-19/governor-parnell-show-some-respect-wildlife-and-alaskans

Not long ago, you and other members of the Senate Resources Committee grilled Governor Parnell's most recent new BoG appointee Nick Yurko on some tough issues, particularly bear snaring. While this was gratifying to watch, it did no good. Mr. Yurko listenend politely, got confirmed (after which time we discovered that he had fish & wildlife violations which the governor chose not to reveal to you), and started voting for controversial extreme predator control measures such as bear snaring, which is widely opposed by the majority of Alaskans, including, for crying out loud, the Safari Club International.

Now you have coming before you Lynn Keogh, Jr., who brings no diversity whatsoever to the Board of Game and who also supports controversial extreme predator control measures such as bear snaring. Additionally, Mr. Keogh has a questionable civil court record.

I do not have to like the members of the Board of Game, but I **do** have to be represented, and I **do** have to respect the members of the Board of Game. I am not currently represented by any Board of Game members, and I will not be represented by Lynn Keogh. Neither do I respect Mr. Keogh, given his apparent disregard for the law and for the wildlife management views of the majority of Alaskans.

In the case of Board of Game appointees, the buck starts with Governor Parnell, but the buck ***stops*** with our Legislature. You are not rubber stampers, and I urge you not to act like rubber stampers. Somebody has to step up to do the right thing for Alaska's wildlife and for the majority of Alaskans who depend upon it in various ways. That somebody has to be you. We can do better than Lynn Keogh; in fact, there are several better choices on the list of BoG applicants. I urge you to do the right thing by voting against the confirmation of Lynn Keogh for the Board of Game.

Sincerely,
Tina M. Brown

Subject: Please vote NO on Lynn Keogh Jr. for Game Board

Dear Sen. Paskvan,

Please oppose the nomination of Lynn Keogh, Jr. for the Alaska Board of Game.

His appointment further insures that the Board will continue to have NO diversity of opinion or viewpoints, since he is a hunter or trapper like all sitting members of the
Board. Where are the Board members who should come from the **80 percent** of Alaskans who do not hunt or trap, but who also are owners in common of this public resource?

In addition to Mr. Keogh's background (which is identical to all current Board members, and fails to fulfill the diversity requirements of the statutes), his numerous documented brushes with the la clearly show a disrespect for the rule of law as the basis for a civil society.

Thank you for considering our expression of opinion on this matter. We hope you will act consistent with it.

Subject: Opposition to Confirmation of Lynn Keogh, Jr. to Board of Game

Dear Senator French:

Mr. Lynn Keogh, Jr., has been appointed to the Alaska Board of Game. I have deep concerns over his appointment and urge you to vote against his confirmation.

1. Mr. Keogh has a long civil court record over the years in Anchorage, Glennallen, Homer, Kenai, and Palmer. You can view all of his court records at http://www.courtrecords.alaska.gov/pa/pa.urd/PAMW6500. When viewed as a body, his offenses suggest a pattern of disregard for the law. It is reasonable to believe that this pattern is likely to prevail in other aspects of Mr. Keogh's life. This is not the kind of person I want representing me on the Board of Game.

2. According to Alaska Statue *AS 16.05.221 (b),* members of the Board of Game should provide "diversity of interest and points of view in the membership." Mr. Keogh's resume shows that he brings no diversity to the Board, a body which already lacks diversity; Mr. Keogh is a guide and a hunter appointed to join a board already filled with guides and hunters. Where, for instance, is representation for the robust and growing tourism industry? Where is representation for nonconsumptive users such as wildlife photographers, nature writers, hikers, backpackers, and other wildlife viewers? These by far constitute the majority of users of Alaska's wildlife resources.

3. Many Alaskans and other people from down south and all over the world (potential tourists) are deeply disappointed in and discouraged by recent BoG actions such as bear snaring (for the first time since statehood). Given his resume and his votes at the very recent Fairbanks BoG meeting, Mr. Keogh, if confirmed, will further disappoint and discourage those people.

4. The most recently confirmed BoG member has fish & wildlife violations on record, and other current BoG members have fish & wildlife violations on record in the Alaska Court System. This is both disturbing and embarrassing; adding another BoG member with a record such as Mr. Keogh's would exacerbate an already disgraceful situation.

5. At a time when the public image of Alaska's wildlife management officials is already tarnished, there is no reason to further damage the reputation of Alaska's wildlife management policies.

6. Alaskans want and deserve to respect and trust their Board of Game members. We trust you to select such members. The list of Board of Game applicants contains 37 names. Several of these applicants have excellent qualifications and clean criminal records. They are responsible, honest individuals who would bring much needed diversity to the BoG. With such candidates ready and willing to serve, there is no reason for you to confirm a candidate as questionable as Mr. Keogh. We can and should do better.

7. Keogh has already demonstrated that he does not support the views of the majority of Alaskans. Given his resume and his recent votes at the Fairbanks BoG meeting, it is clear that Keogh supports the war on bears. Also, Keogh supported the airborne killing of wolves on the Kenai, a measure that was overwhelmingly opposed by Alaskans. Keogh's approach to wildlife management will further alienate Alaskans and potential tourists to our state.

According to Alaska Statute, members of the Board of Game shall be appointed on the "basis of interest in public affairs, good judgment...and with a view to providing diversity of interest and points of view in the membership." Mr. Keogh does not fulfill these qualifications, so I urge you to vote against the confirmation of Lynn Keogh, Jr. to the Board of Game.

Sincerely,
Tina M. Brown

Subject: Keogh hearing

To whom it may concern:

I am concerned over Mr. Lynn Keogh's appointment to the Alaska Board of Game. The Senate Resources Committee confirmation hearing is Friday, April 6, 2012, at 3:30 pm. I am sending my concerns to you for your consideration.
Mr. Keogh has a long civil court record over the years in Anchorage, Glennallen, Homer, Kenai, and Palmer.
According to Alaska Statute, members of the Board of Game shall be appointed on the "basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the Board, and with a view to providing diversity of interest and points of view in the membership."
Mr. Keogh's numerous court records suggest to me that he does not meet these qualifications.
Additionally, Mr. Keogh's resume shows experience in an area already overrepresented on the Board and does not add to the diversity of user community points of view which an effective Board should be able to represent. This, too, suggest to me that Mr. Keogh does not meet the qualifications necessary to become a member of the Alaska Board of Game.
Alaskans want to respect their members of the Board of Game, and they want their Board of Game members to represent all Alaskans, especially since the State Constitution states that Alaska's wildlife belongs to each of us.
I hope you will consider my concerns during your deliberations at the confirmation hearing.

Sincerely
Jos Bakker josb1214@aol.com

Subject: Opposition to Lynn Keogh's Nomination to the Board of Game

Dear Senator Paskvan,

I am resending my letter of March 26th for your consideration as I will not be able to give testimony at tomorrow's public hearings voicing my opposition to appointee Lynn Keogh to the Board of Game.

Thank you for your attention to this important matter.

Regards,

Penelope Wells

Dear Senator Paskvan:

Back in the 1980's, I lived in College Gate and would take my neighbor's dog, Sugar Bear, on walks in the neighborhood. Upon passing Lynn Keogh Sr.'s house, Sugar Bear seemed to sense something ominous and would pull us as far as she could to the other side of the street. Through the garage door windows and sometimes when the doors were open, you could see trapping paraphernalia, animal skins, and hopefully only skins, hanging up. I could never understand why he ran, albeit discreetly, his trapping outfit in our comfortable Anchorage neighborhood.

Apparently, the Keogh family are still in the trapping and hunting business. Unfortunately, nominating Lynn Keogh to the Board of Game would be electing more of the same. His bias toward a small minority interest to the exclusion of others would be detrimental to balanced board of game management policies. I believe Keogh's trapping business is a conflict of interest. Also, I question his integrity to serve on the Board when Court records reveal his many game violations.

The current Board of Game is a sham and desperately needs a diverse range of individuals reflecting the demographics of our State. There are many qualified candidates out there and it would be refreshing to see more science-based and outdoor recreational candidates nominated to the Board.

Please consider the majority of us non-consumptive, recreational Alaskans--along with millions of visitors from all corners of the world (including my relatives)--who wish to view and marvel over our magnificent Alaskan wildlife; a national treasure worth much more alive than dead!

Again, for the above reasons, please vote against Lynn Keogh's nomination to the Board of Game.

Look forward to hearing from you.

Respectfully submitted,

Penelope Wells

Dear Representative,
As a long time Alaskan and from a family that hunts and fishes, I feel we need achieve some semblance of balance on the board. Our state government needs to uphold the law and only confirm appointees who qualify and provide diversity of interest and points of view. There are 40 other names on the list of possible nominees, besides Lynn Keogh, and the Governor needs to go back and reconsider other names which include at least a couple of prominent scientists.
It is time to strike a balance and confirm a prominent scientist.
Do not confirm Lynn Keogh.
Sincerely,
Melissa Goozen

tomlamal@yahoo.com

Dear Governor Parnell,

As you consider appointing new members to the Board of Game, please rebalance the Board so that the residents' interests are considered on an equal basis with the commercial guide interests.

Many residents are concerned with the focus of the current Board of Game. For example, in January there were 23 proposals presented to the BOG Statewide Meeting requesting some preferences for resident hunters and the board rejected all requests. Now, residents will have to wait until 2016 when the Board of Game will consider statewide proposals.

Presently the Board of Game is comprised of two guides (Nate Turner & Lynn Keogh), one assistant guide (Stosh Hoffman), present and past representatives to the Big Game Commercial Services Board (Ted Spraker & Robert Mumford) and several board members who have close ties or are directly associated with the Alaska Professional Hunters Association, which lobbies to keep commercial operations in the forefront.

All of the Western States, except Alaska have a high allocation of game for their residents and don't force nonresidents to use a guide for any specie. Alaska is missing an excellent opportunity to collect a lot more money in tag fees without discouraging nonresident participation.

I would be honored to have the opportunity to discuss this with you or someone on your staff and I would be willing to fly to Juneau if that would help the resident's cause. I have served on different boards, a commission and committees, so I understand how things can get directed away from a group's mission.

I urge you to appoint Board of Game members who want to keep Alaska family hunting traditions in place and create quality opportunities for our youth.

Sincerely,
□Tom Lamal

Subject: Lynn Keogh's nomination to the Board of Game

I urge you to oppose Lynn Keogh's appointment to the Board of Game. In 2000-2001 I served on a Board of Game subcommittee with Mr. Keogh. The purpose of the subcommittee was to reach a consensus solution to the conflicts between trappers and hikers with dogs. The only area of the State to be considered was GMU 14(c) which encompasses primarily Chugach State Park and its busy hiking and skiing trails.

A majority of the committee members were trappers and hunters, but there were two of us who were there to represent hikers and cross country skiers. The subcommittee met six times, with each meeting consuming most of a day. The ADF&G provided us with mediators, and substantial support.

Mr. Keogh is a trapper, and it was clear from the beginning that his goal was to destroy the possibility of compromise. At several of our meetings Mr. Keogh started in early with personal attacks on the hiker/skier members of the committee. Much time was wasted. Ultimately no compromise was reached.

No one on the Board of Game represents my views. And yet some of the members are polite, amiable, and easy to talk to. That is not true of all members of the BOG.

If approved, Mr. Keogh will be join the unfriendly members who steadfastly refuse to speak with non hunters. I no longer expect appointment of a non hunter to the BOG. It has been 40 years since the last non hunter was on the BOG, and it is obvious that there is an unspoken policy mandating that only hunters and trappers be appointed.

But it reasonable to hope that the newest appointee to the BOG will be a person who will treat non hunters with respect, and who will converse with non hunters in an amiable fashion. That's the Alaskan way.

Mr. Keogh shouldn't be appointed. He will make things worse than they already are.

Very truly yours, Kneeland Taylor

Hello Mr. Paskvan,

First, I am a hunter and I am not against trapping. But I feel that Mr. Keogh is not a good candidate for the "Bored" of Game which has become an unbalanced board in recent years. There are many more uses for animals besides killing and eating and I don't think Mr. Keogh realizes that perspective.

Thank you,

Subject: Board of game prospective appointee Keogh

Categories: Staff Appointments

Dear Senator Paskvan,

Please do not appoint Mr. Keogh to the Alaska Board of Game. We do not like his methods of "game management" and predator control beliefs and intentions! The Board of Game in Alaska has become a disgrace that many, (I believe the majority) of Alaskan citizens are disgusted and outraged by. It is not supported by empirical evidence, the opinions of Alaska biologists and it is cruel and unethical.
If these methods continue, they are also a threat to the image and value of Alaskan wilderness which will not only affect its citizens, but the tourist industry.
Please sir, you must understand and agree that a so-called predator control policy that has as its goal the extermination of every bear in a 300+ square mile area is unheard of, proven to be unscientifically ineffective where extremely short- term results, if any, are gained at all (many biologists have testified that it will not make a difference, killing off predators has not been effective in the past, that the cause of lower ungulate populations is over-hunting by humans and destruction of habitat.)
The answer to this is not an escalation in the killing off of predators, to include extermination of bears in entire units, shooting brown bears at bait stations (a first), and an escalation in the aerial hunting of wolves, now beginning on the Kenai Peninsula for the first time in Alaska.
As you know, the board recently considered snaring brown bears, but tabled the measure due to public outrage. I am quite certain this cruel possibility will be attempted by them again.
We do not want an Alaska where bears and wolves are extinct, which is the case in almost every state in the lower 48 because of the type of behavior and attitudes that Mr. Parnell has and his prospective appointee, Mr. Keogh have and the type of incompetence exhibited by our own board of fish & game.
Please do not allow this prospective appointee of Mr. Parnell – Mr. Keogh- be appointed. He will only perpetuate the disgraceful performance of our Fish and Game board.
Respectfully,
Deb Thomas

Dear Sirs:

I am writing to oppose the appointment of Lynn Keogh Jr. to the AK Board of Game. From what I understand Mr. Keogh is a hunter and guide and has been cited for wildlife violations. I would think that someone with violations would not be considered.

I would like to see someone represent the animals, and since that won't happen, how about someone with the tourist industry, or wildlife photographer, or a grandfather who takes his children for walks on the trails.

From serving on boards in my former state, I'm sure Mr. Keogh wasn't the only person put up for consideration, if he was, then Alaska is in a very sad place.

Thank you,

I strongly oppose this nomination. Mr Keogh has a long record of court appearances that does not suggest much interest in ethics or lawfulness or integrity—rather the opposite!. Furthermore he does not provide the least bit of diversity to the Board, and diversity is part of the mandate for structuring the Board. There are other nominees who would provide the needed diversity. In the past, he has shown little or no respect to folks of differing opinions, which is inappropriate in any government official. Please vote NO!

Subject: Do not confirm Lynn Keogh, please.

Dear Senator Paskvan,

The BoG shows no interest in meeting the responsibility to always hold open meetings and listen to members of the public who have a wider vision for our wildlife, one that credibly involves the public and that balances decisions from diverse points of view. One view being that our wildlife resources, including bears, are highly valuable to non-trappers, i.e., the tourism industry, photographers, and persons like me who simply enjoy viewing them.

Trapper, Lynn Keogh, will add no diversity as required by *AS 16.05.221 (b),* to the BoG and the BoG already seriously lacks diversity. They often vote in lock step! In addition, Mr. Keogh's criminal history, shows a disregard for the law. With other BoG members having a history of legal violations, including fish and game violations, our elected representatives need to say, "Enough!"

I am counting on you to refuse to confirm Lynn Keogh to the BoG. Please send a message that most Alaskan's expect a diverse and higher standard for those who make decisions about wildlife for all Alaskans instead of for an insular few.

Thank you for considering my views.

Hello Senator Paskvan:

I'm an Alaskan and I'm a person who cares deeply about keeping AK's wildlife wild. I think the current Board of Game has done a horrible job representing the majority of Alaskans – 80% of Alaskan's do not hunt, 100% of the BOG hunt and too many of them make their living from guiding hunts. Lynn Keogh Jr. is just another hunter that does not represent me in wanting to conserve the natural wildlife system. On top of that, he already has 13 violations against him, so he is another person with no respect for following the rules or caring for wildlife. He is not the right person to be on the BOG; please vote against his nomination to the Board of Game.

3/27/12

Senate Resources Committee:

Despite 4 other well qualified candidates for the Board of Game that would bring much-needed diversity of viewpoints to this extremely biased, one-sided Board, the Governor chose to nominate a very controversial, biased hunter/trapper, Lynn Keogh.
I'm urging you to vote against the Governor's nominee to the Board of Game, Lynn Keogh for the following very compelling reasons:

1. Keogh is a strong advocate of predator control using all methods. Despite overwhelming public opposition for airborne killing of wolves on the Kenai, Keogh voted in favor of the killing. In fact, the majority of Alaskans do not hunt or trap AND are opposed to predator control. Even a good number of hunters and trappers are opposed to this archaic, unnecessary, cruel, unscientific, baseless activity that the Board and Dept have chosen to continually expand throughout the state.

2. Court records show at least thirteen violations of state laws over the past several years by Mr. Keogh. Do you really want to appoint another repeated offender lawbreaker to an important State Board? Obviously this man has shown a lack of good judgement on numerous occasions, or maybe he believes he is above the law.

3. Keogh has been rude and dismissive to people who do not share his biased opinions. This has been demonstrated in AWA Advisory Board meetings and will no doubt continue at BOG meetings.

4. Keogh has shown himself to be an extremist when it comes to predator control. This type of person SHOULD NOT be seated on a Board that is already extreme in their views and represent only some hunters and trappers instead of the majority of Alaskan citizens as well as citizens of the U.S. who also "own" this wildlife.

Thank you.

Carol Jensen

Subject: no on Keogh

Dear Senator Paskvan:

As a 40 year resident of Alaska and active outdoorsman, I am urging you to vote against the nomination of Lynn Keogh, Jr. for the open seat on the Board of Game. I do not feel that his well-publicized views represent the majority of Alaskans. He would be a disaster to a Board that is already held in deep suspicion by many of us.

Thank you very much.

Subject: Opposition to Lynn Keogh's Nomination to the Board of Game

Dear Senator Paskvan,

Back in the 1980's, I lived in College Gate and would take my neighbor's dog, Sugar Bear, on walks in the neighborhood. Upon passing Lynn Keogh Sr.'s house, Sugar Bear seemed to sense something ominous and would pull us as far as she could to the other side of the street. Through the garage door windows and sometimes when the doors were open, you could see trapping paraphernalia, animal skins, and hopefully only skins, hanging up. I could never understand why he ran, albeit discreetly, his trapping outfit in our comfortable Anchorage neighborhood.

Apparently, the Keogh family are still in the trapping and hunting business. Unfortunately, nominating Lynn Keogh to the Board of Game would be electing more of the same. His bias toward a small minority interest to the exclusion of others would be detrimental to balanced board of game management policies. I believe Keogh's trapping business is a conflict of interest. Also, I question his integrity to serve on the Board when Court records reveal his many game violations.

The current Board of Game is a sham and desperately needs a diverse range of individuals reflecting the demographics of our State. There are many qualified candidates out there and it would be refreshing to see more science-based and outdoor recreational candidates nominated to the Board.

ase consider the majority of us non-consumptive, recreational Alaskans--along with millions of visitors from all corners of the world (including my relatives)--who wish to view and marvel over our magnificent Alaskan wildlife; a national treasure worth much more alive than dead!

Again, for the above reasons, please vote against Lynn Keogh's nomination to the Board of Game.

Look forward to hearing from you.

Respectfully submitted,

Penelope Wells

Subject: Do NOT appoint Lynn Keogh to BOG

If anyone doubted that BOG appointments are rigged to support an already very unpopular agenda of extreme hunting/trapping/snaring/baiting and all the rest, the governor's latest nomination of Lynn Keogh proves it. As his record shows, the man is utterly unqualified to sit on the BOG (or any board, for that matter), dictating statewide policy. Keogh is obviously being suggested as a last gasp effort to keep the voting as is--in favor of the current unpopular, unscientific, totally biased and incompetent agenda. How transparent can it get?

There are plenty of other truly qualified applicants who will bring a diversity of opinion to the BOG, representing other views--based on science and actually responsive to public opinion--of how to manage our precious wildlife resources. This would be in line with what the Alaskan constitution dictates--representation for ALL Alaskans, who, incidentally, own these wildlife resources-- not just a politically well-connected minority. This extreme bias of the BOG has gone on long enough--in my 28 years here I have yet to see a representative of "non-consumptive" wildlife use on the BOG. Since the Murkowski administration, we have seen nothing but extremists, resulting in the current mess we are in (or "train wreck", as Tony Knowles aptly termed it). The BOG's utter disregard of dissenting opinion is an insult to the people of this state, and their irresponsible "management" tactics an insult to our intelligence. This cannot be allowed to continue. We need a truly diverse, representative Board, not this stacked deck we are consistently being dealt. It's in your power to do something about it--like stop Keogh's appointment and insist on someone from a differing (God forbid, even a non-consumptive!) point-of-view. What a concept!

Keogh's record speaks for itself: Several run-ins with the law, a disruptive, bullying presence in previous board scenarios, open support for the current extremist "anti-predator" agenda, and intolerance for opposing views--just what the Governor ordered, apparently. Any of the above should make him unqualified to sit on a statewide board, supposedly meant to represent, in an unbiased manner, the interests of all citizens of this state. It's impossible not to see through this ruse--and I hope you will bring it to a screeching halt. If you don't, who will?

It would be utterly refreshing--and sensible--to see a BOG which was truly balanced, which responded to public opinion and needs, which had a sense of ethics and professionalism (speaking of which, why is Judkins, a game law violator, still sitting as BOG director?), and was truly interested in managing wildlife for the benefit of all. In the current BOG, we have none of this. Appointing Keogh will only perpetuate an intolerable situation. Appointing someone with a fresh, unbiased, ethical perspective will do no end of good to remedy it.

Sincerely,

Paul Chanek

Subject: Lynn Keogh is NOT the right choice for the BOG!

Dear Sirs and Madam;

It would be greatly appreciated if for once the BOG was not stacked with predator haters.

Of course since man is the top predator it "natural" to eliminate all others but today is the 21st century. I enjoy wildlife for what it is and am also a scientist that knows by eliminating all predators the ecosystem is out of whack. Lynn Keogh is the same old knuckle dragger mold the BOG has always had. 90 percent of Alaskan's do not hunt, trap or otherwise kill wildlife. Speak for us for a change!

Subject: Lynn Keogh, Candidate for Board of Game (additional information)
Attachments: KEOGH 3AN-03-5561.$7585..pdf; ATT00001.htm; KEOGH 3KN-06-110 SC.$4863.46.pdf; ATT00002.htm; KEOGH.3AN-06-10755 CI.$14,758.pdf; ATT00003.htm; KEOGH.3AN-06-10756 CI. $50,612.57.pdf; ATT00004.htm; KEOGH.COURT CASES ON WEBSITE.pdf; ATT00005.htm

Dear Senator Paskvan:

Governor Parnell's choice of Lynn Keogh Jr. is a slap in the face to the 85% of Alaskans who neither hunt or trap yet constitutionally are equal owners of our wildlife resource. Of specific interest are his interactions with the state court system, which have been many, and the perpetuation of the status quo he brings to the Board of Game as yet another guide and hunter.

To be specific:

1. As a guide and hunter he provides no diversity to a state entity originally designed to exhibit such. In fact, the Board as presently constituted offers no diversity whatsoever leaving the 85% of Alaskans who neither hunt or trap with no voice concerning a resource the State Constitution holds as equally owned by all residents.

2. Narrow viewpoint. Mr. Keogh is unreservedly anti-predator. He has already shown this perspective in recent votes in which he has participated on the board. For instance, when the board took up airborne killing of wolves on the Kenai Peninsula, there were 380 comments sent to the members against the program and only 6 supporting it. Mr. Keogh and the others voted airborne killing into place. Though Fish and Game had noted the habitat is already very limited in providing moose forage due to decades of fire suppression, and even though one BOG member said he couldn't see where predator control would make any difference, it was enacted.

3. Lack of insight. When Rep. Seaton at the recent House Resources Comm. hearing on Keogh's nomination noted that the moose forage in his district has been devastated by an abundance of hares competing for the vegetation, Mr. Keogh correctly noted the plants will produce toxins that keep the hares from eating them. What Mr. Keogh apparently did not understand is this is a process that can take months. Apparently, he expects the moose to suspend foraging while waiting for this to take place. Such a lack of insight and understanding is distressing in someone in such a position.

4. Keogh apparently has little appreciation for state laws. as evidenced by his encounters with the Alaska court system over the years. Court records at http://www.courtrecords.alaska.gov show at least 13 violations over the past several years. Given the recent highly publicized debacles involving former Alaska Department of Fish & Game Commissioner Corey Rossi and BOG member Cliff Judkins (who still sits on the Board), a wildlife management nominee must be held to the highest degree of integrity. Keogh's documented history fails such scrutiny. It is unconscionable to let a person make crucial decisions when he has demonstrated a long-standing pattern of poor judgment.

5. At least 4 people who are currently on the applicant list for the BOG would bring diversity to the Board by representing the vast majority of residents who do not hunt or trap. All of these applicants have clean court records, and all are respectable Alaskans we can trust to make wildlife management decisions based on science. Keogh is not one of them.

6. Keogh has already joined the BOG's war on bears. Many, many Alaskans and potential visitors are outraged and discouraged by recent BOG-approved programs such as bear baiting and snaring. Given his resume and his votes at the recent Fairbanks BOG meeting, Keogh would continue to support extreme control (killing) programs targeting bears and other predators. Each year visitors

spend millions of dollars hoping to see Alaska's bears and other wildlife; policies favored by Keogh give the state a "black eye" and cause economic harm to the tourism industry.

7. Several years ago AWA Advisory Board member Kneeland Taylor served with Keogh on a committee set up to work out a compromise between trappers and hikers with dogs. Kneeland reports that Keogh began most meetings with verbal personal attacks on the hikers, and did his best to sabotage the committee's work. He ultimately succeeded, and the result was no compromise.

At a time when Alaskans are becoming more aware of the failings and biases of our Board of Game, of how it fails to represent but a select, elite group of people, appointments to this Board should be able to pass a litmus test of considerable quality and intensity for certainly they will be subject to such each time they meet with the public.

Subject: Lynn Keogh

Dear Senator Paskvan,

As a longtime Alaskan, who has lived almost half my life in the bush, I strongly oppose Lynn Keogh's appointment to the Board of Game. He adds no diversity to the Board, has a pattern of legal issues in his past, and has shown so far, in his vote for Kenai predator control, that he does not consider ADFG's scientific input to be important. He does not work well with those who have opposing views--a necessary quality on a Board that is supposed to thoughtfully consider the views of all Alaskans. The Board currently has no diversity at all, and this is the time to inject some into a board that is supposed to represent Alaska's public, but is instead becoming inscreasingly radical, and a rubber stamp for white urban sport-hunting-guiding-trapping organizations who support irrational, non-science-based programs in the false belief they will make more moose and caribou by pushing carrying capacity to the brink--a sure recipe for unsound management leading to unending boom and bust cycles instead of sustained yield. I am a longtime hunter who eats far more caribou and bear than beef--and I still find Mr. Keogh's views objectionable and a reflection of a very narrow spectrum of Alaska's diverse views. All should be included on the Board of Game, and currently, this is not the case.

I strongly urge you to vote against the confirmation of Lynn Keogh to the BOG and to support a candidate that will bring much-needed diversity to the Board.

.erely,

To: Sen. Joe Paskvan
Subject: Vote against Lynn Keogh

Dear Senator,

Lynn Keogh does not represent the majority of Alaskans and I urge you to **vote against** his nomination to the Board of Game.

Please consider:

1. **Keogh is an active guide, and hunter and trapper**. (He boasts of learning to trap when he was a youngster, and he served on the Alaska Trappers Association board of directors.) As such **he will bring no diversity** to a body that is mandated to represent **all** Alaskans. In fact, the BOG presently offers **no diversity whatsoever**, leaving the 85% of Alaskans who neither hunt nor trap with no voice concerning a resource the State Constitution holds as equally owned by all residents.

2. **Keogh has a narrow viewpoint: he is a staunch advocate for killing predators**. As a BOG nominee (which entitled him to vote at recent meetings) this viewpoint was evident. For instance, when the Board took up airborne killing of wolves on the Kenai Peninsula there was overwhelming public opposition (over 300 comments and hours of testimony against, and only six comments for it), but Keogh voted in favor of the plan and it was approved.

3. **Keogh lacks knowledge and insight**. Rep. Paul Seaton at a recent House Resources Committee hearing noted that the moose forage in his district has been devastated by an abundance of hares competing for the vegetation. Keogh correctly noted the plants will produce toxins that keep the hares from eating them. However, what Keogh seemed not to understand is this process can take months. Apparently, he expects the moose to suspend foraging while waiting. Such a lack of insight and understanding is distressing in someone who would have authority over wildlife management.

4. **Keogh apparently has little appreciation for state laws**, as evidenced by his encounters with the Alaska court system over the years. Court records at **www.courtrecords.alaska.gov** show at least 13 violations over the past several years. Given the recent highly publicized debacles involving former director of Alaska's Division of Wildlife Conservation Corey Rossi and BOG member Cliff Judkins (who still sits on the Board), a wildlife management nominee must be held to the highest degree of integrity. Keogh's documented history fails such scrutiny. It is unconscionable to let a person make crucial decisions when **he has demonstrated a long-standing pattern of poor judgment**.

5. **At least 4 people who are currently on the applicant list for the BOG would bring diversity to the Board** by representing the vast majority of residents who do not hunt or trap. All of these applicants have clean court records, and all are respectable Alaskans we can trust to make wildlife management decisions based on science. Keogh is not one of them.

Subject: Lynn Keogh Appointment to Board of Game

Dear Senator Paskvan:

This email comes from a deep concern over the latest Board of Game appointment by Gov. Parnell, i.e., Lynn Keogh. My hope is to bring sufficient attention to the total inadequacy of Mr. Keogh for this position to the pertinent members of the Senate and House.

There are three major points (and perhaps many other near-major) to be made in objection to this appointment.

1. Lack of diversity. Mr. Keogh is a guide and a hunter. The BOG already has two guides and all members are hunters. Yet the state constitution says the board should represent all Alaskans as we are all equal (and I stress "equal") owners of this resource. What this reality means is, for instance, if you neither hunt nor trap you have no representation on the board that sets all the regulations concerning your wildlife. As such, you and the 84% of Alaskans who hold neither hunting or trapping licenses are without voice in these matters. Mr. Keogh's presence simply emphasizes that lack of concern for a diverse board.

2. Narrow viewpoint and lack of insight. Mr. Keogh is anti-predator. He has already shown this perspective in recent votes in which he has participated on the board. For instance, when the board took up airborne killing of wolves on the Kenai Peninsula, there were 380 comments sent to the members against the program and only 6 supporting it. Mr. Keogh and the others voted airborne killing into place. Though Fish and Game had noted the habitat is already very limited in providing moose forage due to decades of fire suppression, and even though one BOG member said he couldn't see where predator control would make any difference, it was enacted.

Similarly, when Rep. Seaton at the recent House Resources Comm. hearing on Keogh's nomination noted that the moose forage in his district has been devastated by an abundance of hares competing for the vegetation, Mr. Keogh correctly noted the plants will produce toxins that keep the hares from eating them. What Mr. Keogh apparently did not understand is this is a process that can take months. Apparently, he expects the moose to suspend foraging while waiting for this to take place. Such a lack of insight and understanding is distressing in someone in such a position.

3. Court violations. A quick search of COURTVIEW reveals that Mr. Keogh (Jr.) has had 13 violations lodged against him in the past several years. That is a minimum of the 27 listed as at times it is hard to distinguish between Jr. and Sr. Regardless, it shows a rather astounding lack of concern in following state laws, a lack that is quite liable to have diffused into other areas of his life. In view of the recent debacle of Corey Rossi and our game laws, one would think the governor would take pains to present an appointment of unquestionable integrity. This is most definitely not the case with Lynn Keogh.

At a time when wildlife issues are splitting the state in so many ways; at a time when outside trophy hunting organizations are expanding their influence on our wildlife management, it would seem there is all the more need for a diverse, knowledgeable, upstanding Board of Game. Instead, in all these respects our board fails to measure up.

I hope I have piqued your interest in this issue. Mr. Keogh's nomination will be going before the Senate Resources Committee soon then it starts its journey to a final joint hearing at the end of the session. It is my hope Mr. Keogh will be denied a position on the Board of Game for the above reasons. We need a Board of Game that responds to the science of the management issues rather than to the wishes of a few trophy hunting organizations with influence in Alaska. There are numerous possible nominees far more qualified in all respects on the list of potential BOG nominations. Mr. Parnell could have chosen far more wisely.

Sent: Saturday, March 31, 2012 10:25 AM
To: Sen. Joe Paskvan
Subject: BOG Nominee

Senator Paskvan,

I am writing to you to oppose Gov. Parnell's latest nominee to the Board of Game, Lynn Keogh, Jr. With the recent embarrassing, high profile incidents involving Corey Rossi and Denby Lloyd, it would seem to me that the State would want upstanding people involved in making decisions. While I do not personally know Mr. Keogh other than meeting him at a State Park meeting in 2007, a quick search of the Alaska Court System records show multiple interactions with the Police and the Court system over the years. The phrase, "the tip of the iceberg" comes to mind.

Back on 04/18/07, Mr. Keogh was "attacked" by a brown bear near it's den, after he killed another bear outside the entrance to the den. After this incident, it does not take a rocket scientist to imagine that Mr.
Keogh, if he did have any respect for wildlife to start with, would likely prefer that not one bear remain in Alaska.

While Mr. Keogh may be an excellent trapper, he should not be a member of the BOG. Over the last 12 years, an ever increasing radical approach has been pushed for and adopted by this State. The true biologists in ADF&G have seemed to move hand in hand with almost all recommendations that the BOG, a citizen advisory board, has proposed with no observable resistance. If there was some Board or group within the State that served as a check on the BOG's power, then it might not be so bad that single minded individuals like Mr. Keogh held this position.
Unfortunately, no one with any other view of the situation appears to exist in this State.

The amount of money that the State has spent over the years on this extensive predator control and wildlife management should be an embarrassment but it seems that the State has millions of dollars to throw at this issue. It has become apparent that the State does not care that the positions in the BOG are filled with single minded hunters and trappers and that no other views or ideas are represented. Those other views and ideas are held by the rest of the State, the 85% or to put it in numbers, the over 613,000 Alaska residents who neither hunt or trap.
It would be good if you and our other Legislators would represent their constituents, not just the vocal, rich, radical few, and select people for the BOG who know how to manage wildlife for a sustainable future and not just to kill predators.

I could go on but I will not. Mr. Keogh is not an appropriate candidate for the BOG, and I would hope that you seriously consider the path the State has chosen to take and the individuals that it is choosing to "manage" it's wildlife. Sound science has not been involved in most of the decisions over the last 12 years. There are several other candidates for this position that actually are qualified and would bring some sanity, balance, and sound science to the out of control circus that is the Alaska Board of Game.

Sincerely,

Robert Gengler

Subject: Board of Game appoointment

My husband and I are opposed to the appointment of Lynn Keogh Jr. to the Board of Game. We are both retired and planned eagerly to spend a month in Alaska coming to see your diverse and wonderful wildlife. We will not do so until Alaska protects their wildlife. Appointing Mr. Keogh to your Board of Game will not bring the diversity of opinions to the Board that your laws intend. Debate and listening to other opinions is the foundation of our county and democracy. Mr. Keogh is a trapper, hunter, and guide. His opinions will be similar to those already on the board. Your wildlife deserves input from people with differing opinions on how to protect them. Seeing wildlife happy and safe is a major reason many people come from all over the world to visit your state. We all want to see bear, wolf, moose, etc. We do not come to hunt, but come to enjoy your animals alive in their native habitat. We have killed off all our bears, wolves, etc in Indiana. Please do not make the same mistake we made here in the lower 48. We did not respect and protect our wildlife and they are now gone forever. When our friends and family member communicate their desire or plans to go to Alaska we tell them about your Board of Game and the hunting practices of aerial killing, trapping, snaring and managing wildlife for moose hunters. They are horrified. Please appoint someone to your Board of Game that will speak up for the animals. In our opinion the board does not fairly represent your wildlife and those of us who do not want to kill them. Thank you for your consideration in this matter.

Subject: new BOG nominee

Dear Senator Paskvan:

Please oppose the appointment of Lynn Keough to the Board of Game. There are enough representatives that favor big game hunting already. We need a more balanced board, one that represents other points of view such as tourism and recreational use of our wild lands.

Our natural resources are supposed to be managed for the benefit of all Alaskans.
This nominee will not contribute to that mandate. Thank you,

Sincerely,

Susan Valenti

RE: Confirmation of Board of Game Nominee Lynn Keogh

Dear Senators,

The Alaska Center for the Environment, Alaska Wildlife Alliance, Defenders of Wildlife, the National Parks Conservation Association, and concerned citizens would like to thank you for the opportunity to comment on Board of Game nominee, Lynn Keogh.

Our organizations have been advocating for years for a more balanced and diverse Board of Game as required by law. According to Alaska Statute *AS 16.05.221 (b)* members of the Board of Game shall be appointed on the "basis of interest in public affairs, good judgment, knowledge, and ability in the field of action of the board, and **with a view to providing diversity of interest and points of view in the membership.**"

This statute aims to protect citizens' rights from being undermined by powerful special interest groups. It is written in law that Alaska's resources are to be used for the common good; therefore committees, commissions and boards are often mandated to reflect a variety of interests.

Currently the Board of Game is made up entirely of professional guides, hunters and trappers and one retired biologist. There is no one to represent the tourism industry, wildlife viewers or other non-consumptive users.

Over the past decade, the Board of Game has become more extreme, and now serves only a small subset of Alaskans. The recent approval to shoot grizzly bears from helicopters, wolves on the Kenai without scientific justification, and the use of snares to kill bears in Unit 16B and 19D, despite overwhelming public opposition from many different segments of the population, are only a few of the latest examples.

The lack of science-based decision making at the Board of Game level, combined with the political nature of wildlife management has lead to a loss of trust and credibility. Alaskans from all walks of life are speaking up, clearly revealing their concerns and frustration over the direction our state is taking.

If this seven member board is to continue to wield all of the power over how our wildlife resources are utilized, then we need to get serious about appointing qualified members who will each bring something valuable and unique to the table.

After reviewing Mr. Keogh's resume, observing him at the Board of Game meetings and reviewing his voting record, we are confident that Mr. Keogh does not add any diversity or expertise to this board.

There are forty names on the list of possible nominees, a couple of which are respected scientists who would restore some credibility and **diversity of interest and points of view** to the Board of Game.

It is our recommendation that the Senate Resources Committee not confirm Mr. Keogh to the Board of Game.

Thank you for your consideration.

Subject: Lynn Keogh's nomination to BoG

Dear Senators:

Please vote against the nomination of Lynn Keogh to the Board of Game. This man is a trapper, hunter and guide and offers no diversity. He would represent only a very small portion of Alaskans, those who are hunters and trappers. He has no respect for wildlife and has a narrow point of view. Members on the Board of Game need to be diversified to represent all Alaskans, not just hunters and trappers. They also need to be of ethical and moral character. Please vote against Lynn Keogh's nimination.

Thank you.

Subject: Board of Game Confirmation

Dear Senator Paskvan:

Regarding confirmation of most recent Board of Game appointee: The only difference between Al Barrette and Lynn Keogh, Jr. is that the latter doesn't publicly quote the Bible to justify killing wolves.

Apparently, the Alaska constitutional mandate for "diversity " in wildlife management is being interpreted as having a roughly equal number of guides, hunters and trappers appointed to the Board of Game. Boy that 15 or so percent of Alaskans who hunt and trap---and especially the professional guiding services---are really well-represented on the Board of Game by a "diverse" group of hunters, trappers and guiding service operators! - Rudy Wittshirk

We need a balanced Board of Game as BOG is supposed to represent ALL Alaskans.
Current BOG is way out of balance and favors Commercial and Sport Hunters, Trappers, Local and Out Of State Organizations. Science and many State F & G, F & W. persons do not support ongoing predator control when unwise overhunting , limited browse, natural fluctuations are key factors in less Game.

Juneau, Alaska 99801

Dear Senators,

The Alaska Outdoor Council supports the nomination of Mr. Lynn Keogh to the Alaska Board of Game.

The Alaska Outdoor Council (AOC) is a statewide organization of 10,000 Alaskans who hunt, fish, trap and enjoy the Alaska outdoor lifestyle. Our members depend on the Board of Game to make reasoned decisions on the allocation of the public game resource. Mr. Keogh has distinguished himself in this regard. He has participated in a limited number of meetings of the Board since his appointment, but has already contributed a great deal. AOC generally likes to see nominees be familiar with the BOG process. Mr. Keogh has a long record of service to his local Fish and Game Advisory Committee and has participated in that capacity in the Board of Game process. We also like to see a working familiarity with the basic provisions of the constitution, statutes and regulations that guide the board. Mr. Keogh has demonstrated this knowledge, both through the questions he asks of the public, his fellow board members and the department, but also in the statements he has made about his votes.

As you might expect, there is organized opposition to Mr. Keogh. Those organized against Mr. Keogh, representing a small percentage of Alaskans, hope to force the Governor to appoint someone with a limited perspective on how game resources are used. This opposition is based (but not always stated) on his votes on proposals before the board to implement scientific management. AS 16.05.255 (h) is clear: "The Board of Game shall establish population and harvest goals and seasons for intensive management of identified big game prey populations to achieve a high level of human harvest." While we understand that some people disagree with this policy as established by the legislature, we hope you will agree that it would be patently unfair for legislators to vote against Mr. Keogh based on his vote to implement a policy that the legislature itself established. Further, Mr. Keogh's votes during his short tenure on the board have been consistent with other board members who were confirmed by the legislature by sizable majorities.

The AOC communicates with its members through a variety of media. These votes on confirmations to the Board of Game are some of the most important issues before the

legislature to AOC members. It should come as no surprise to you that we will be making available to AOC members and clubs information about the confirmation process, as well as how individual legislators vote, so they can be informed as they participate in their democracy. Allow me to share with you that we spent the last few weekends at large gatherings of Alaskans, from all walks of life, who love the outdoors. The unanimous position of the hundreds of Alaskans that visited our booth in the main pavilion at the largest sportsman's show in the state was to support Lynn Keogh. We hope the legislature will recognize that broad support from the general public, and confirm him to the board.

We thank you for your public service, and ask that you join the majority of Alaskans, as opposed to a small but organized group of opponents, in supporting Lynn Keogh to the Board of Game.

Sincerely,

Rod Arno

Subject: Lynn Keogh confirmation to BOG

Dear Senator Paskvan, I've been keeping an eye on your progress with modifying the oil tax and am pleased with the discussion and research that the senate has given the issue thus far, and remain grateful for your having asked some tough but fair and objective questions while it was in your hands. I'm hopeful for some kind of changes to better incentivise the large producers to undertake more exploration and pursue more aggressively new production opportunities and give them an opportunity to demonstrate their stated interest in further developing a mutually beneficial and rewarding business relationship with the state of Alaska rather than the blind allegience seemingly demonstrated in the past, exclusively for the benefit of the bottom line profits for their shareholders. I remain convinced that mutually beneficial and respectful business realationships are not only possible, but in the long run more profitiable for both parties, and appreciate your leadership in creating that type of opportunity, and ensuring it developes in a two way fashion.

I understand you are considering Lynn Keogh's confirmation to the Board of Game today, for whatever it's worth, while I dont know Lynn personally I do associate with several of his friends and know them to all be standup citizens. I honestly believe he is a good choice for the postion, and while I trust in your judgement in the end as to weather there are other more well suited individuals or not, I also trust that you will give full and fair consideration for his qualifications and for folks like myself who believe he will fairly and fully represent our needs with respect to quality management of this portion of our great states resources. I truly believe Lynn to be a conservationist with the welfare of Alaska's wildlife as his first priority.

Thanks again for all you do, we will be thinking of you along with Biship Kettler here in Kuparuk tonight when we have small Good Friday gathering.

Chris

Oh, by the way, I promised Senator Ellis I'd weigh in on the Film incentives he's supporting as well, of course I support tax advantages to stimulate industry, be it oil, or tourism, or film making, or fishing. I hope you'll let him know I backed him up!

Also, I dotn know if you are aware that I've been a volunteer on the Alaska Safe Boating Committe for the past 5 years? The house recently passed HB 310 repealing the sunset provision of our budget clause, I hope you have a chance to be involved in those discussions on our behalf as well. Jeff Johnson and the few people who with him work for you (and us) in overseeing safe boating practices, are very effective, very frugal, and should be allowed to focus on continuing to improve safe boating in our state, especially rural communities which they are impacing in such a powerful way, without having to spend so much time appealing to the legislature for their small amount of funding every year.

Wow, I'm embarrassed to write with so many requests of you like this! Thankfully I know you're on our side and have great staff to help you keep track of so many things!

Viva La Fairbanks!

Hi Joe-
Just wanted to make sure that you are aware of the incredible level of support in Fairbanks for Lynn Keogh on the BOG.
I am hearing rumors about opposition due to a couple minor non criminal violations.
Would be a sad shame to 86 a guy for something as trivial as that, especially with the knowledge and passion he has for Alaskans right to hunt and fish. Sure hope you can help with this.

On behalf of the Laundry House Gang and true Alaskans throughout the interior.

Re: Confirmation of Lynn Keogh for appointment to the Alaska Board of Game

Dear Senator Paskvan and Senator Wagoner,

I am writing to express Alaska Backcountry Hunters & Anglers **support** of Lynn Keogh's appointment and confirmation to the Alaska Board of Game (BOG).

I have attended many BOG meetings as a representative of our organization, and I recently attended the March 2012 Region III BOG meeting in Fairbanks. I was there all day every day of the meeting, but this was the first meeting I have attended since Mr Keogh was appointed. I was very impressed with how he respectfully engaged and interacted with all members of the public, both on and off the record, and his active verbal involvement in deliberations of the board.

He is well spoken and considers all sides, and whether or not our organization may agree or disagree with how he votes on various proposals, we believe he will be a valuable asset to the BOG.

We fully support his confirmation to the Board of Game.

Sincerely,
Mark Richards

Fairbanks Area Legislators,

The Fairbanks Fish and Game Advisory Committee (FAC) supports the confirmation of appointed Board of Game member Lynn Keogh.

The FAC is made up of 15 members elected by the community's of Fairbanks, North Pole, Ester and Salcha, all having different backgrounds but unified in the common goal of managing our wildlife resources for present and future generations.

During our March 23rd monthly meeting the FAC voted unanimously to support the confirmation of Lynn Keogh. Our members feel Mr. Keogh is very approachable and open to the concerns of our communities regarding Game Board issues. During the last three Board of Game meetings Mr. Keogh was well prepared to openly discuss written proposals and to accept recommendations for solutions to very highly contested issues. During several discussions Mr. Keogh's input helped put closure on issues of debate providing strong compromise.

The FAC supports Mr. Keogh's confirmation to the Board of Game.

Sincerely,

Terry Marquette, Chairman
Fairbanks Fish and Game Advisory Committee

Dear Senator: Joe Paskvan,

I am writing in support of Lynn Keogh's appointment to the Alaska Board of Game. Mr. Keogh is a lifelong Alaskan, and owner and operator of Key O's Guide Service, a family-owned sport fishing business. He is also a former director of the Alaska Trappers Association, and a two-term member of the Anchorage Fish and Game Advisory Board. Mr. Keogh started trapping with his father as a young child, and he has been an avid hunter and fisherman, as well as a professional guide, since that time. He believes strongly in Alaskans inherent right to utilize and grow our game population for the maximum benefit of all Alaskans. To say the least, Mr. Keogh's extensive knowledge in hunting, fishing, and trapping is an asset to the Board of Game. Please vote in favor of Mr. Keogh's confirmation tomorrow, Friday, April 6.

I also strongly support Theresa Sager-Albaugh for reappointment and do not oppose Bob Mumford.

Best Regards,

Dan Caldwell

Senate Resources--I urge you to support the reappointment of Teresa Sager-Alba and Lynn Keogh and the appointment of Bob Mumford to the Board of Game. I am sure that these folks will continue the sound-scientific based management process that the Board has followed for the past nine years.

Parnell's Nominee for the Board of Game – More of the Same (Act Today!)

4

An email obtained by The Mudflats shows Republican Party Chair Randy Ruedrich forwarding an email from Rod Arno of the Alaska Outdoor Council which threatens legislators with strong-arm tactics if they don't approve Governor Sean Parnell's latest disastrous appointment to the Board of Game.

From: Randy Ruedrich <xxxxxx@gci.net>
Date: March 30, 2012 8:09:07 AM AKDT
To: <xxxxxx@kpunet.net>, <xxxxxx@gci.net>, <xxxxxx@hotmail.com>
Subject: Anti's go after Lynn Keogh's confirmation to Board of Game

Get the word out, we can't let the antis defeat Lynn's confirmation to the BOG like they did with Al Barrette.

POMs need to be sent to every legislator from now until the Joint House and Senate Confirmations vote supporting Keogh. Plus let legislators know we'll go after everyone of them who votes against Keogh next November.

Thanks Rod , AOC

"Go after every one of them who votes against Keogh?" Mr. Arno and Mr. Ruedrich may wish to note that legislators do not take an oath to special interest groups, nor to their political party. They take one to the people.

Lynn Keogh's appointment to the Board of Game needs to be confirmed by the legislature for him to keep his seat on the board. Keep in mind that the Board of Game is supposed to represent a diversity of wildlife interests – hunting, trapping, biology, photography, tourism, bear watching, and those who simply enjoy the opportunity that the outdoor life in Alaska affords to sometimes catch sight of its amazing wildlife. This diversity isn't just a suggestion, or an idealistic goal – it is mandated by statute that demands a diversity of interest and points of view.

At this point in time, the Board is overrun with only a couple of these groups, namely big game hunting and trapping. Does Keogh bring anything new to the board? Hardly.

So far he has approved killing both wolves and bears from helicopters, and also the baiting of brown bears – all extreme and controversial positions that would have been unimagined in Alaska until recently. He also voted to approve total extermination of bears in a 540 square mile area and to reduce wolves to the "lowest level possible" in a 1,360 square mile area.

Not only that, but in the growing tradition of Parnell appointments who do not appear to have been vetted, Mr. Keough has a civil court record as long as your arm. He is the defendant in all cases, and the plaintiff is the State of Alaska. Most of the long list of offenses are for traffic violations, but four are of particular interest, and involve illegal use of a high horsepower motor while guiding, and not paying boat launch fees. He seems to have a problem with issues of respecting rules, and repeatedly trying to get away with things about which he should know better. One wonders with a list this long of times he did get caught, how many times didn't he?

You can behold Mr. Keogh's impressive civil court record HERE.

Yowza. Right?

The Senate did hear testimony from three people regarding Mr. Keogh. There was Valerie O'Connor from the Alaska Center for the Environment who spoke in opposition to his nomination. Then there was Juneau resident Tina Brown, also opposed.

Didn't anyone stick up for Mr. Keogh? Oh, yes. Someone did. This guy. Remember him? Yup, Al Barrett – the one skinning a wolf in a video while quoting verses from the Bible. It's good to have friends… Barrett's nomination for this very position got soundly rejected by the legislature, and it's time that Mr. Keogh met the same fate.

As Ms. Brown from Juneau said, in an opinion piece that ran in the Juneau Empire:

If we are ever to achieve some semblance of balance on the board, we need to demand that our legislators uphold the law and only confirm appointees who qualify and provide diversity of interest and points of view.

Predator control in Alaska is out of control because many of those who manage Alaska's wildlife are out of control. Governor Parnell, stop letting underqualified and disreputable people manage Alaska's wildlife. Clean up your house…

One disastrous Sean Parnell commission pick went down in flames yesterday. After massive public outcry, the "racist dentist" extracted himself from consideration for appointment to the Alaska Public Offices Commission.

Please contact your state senator TODAY and make sure to tell them not to be intimidated by threats from special interest groups, and their own party. Tell them to vote NO on Lynn Keogh, and to ask the governor to find a qualified candidate who brings the diversity to the board that the law mandates.

And do it TODAY. The Senate votes at 3:30pm.

What is it about Republicans that makes them dislike government so much? Even when they are in control. If a governor's nominated appointees have to be confirmed by the legislature, why not just accept what they do? Republicans for decades have been in full tantrum mode and it is dangerous to our system of government. I truly believe that modern Republicans would much prefer a dictatorship, of their own making of course, all the while wrapping themselves in apple pie, motherhood and the flag.

It is just sickening and it is happening all over the country as well as in Washington. In Michigan, where the governor is a Republican and they control both houses of the legislature, they are finding ways around the state constitution's requirement for a 2/3

majority to have a law take immediate effect. For years that requirement probably served their purposes but now, because the Democratic minority could stall their agenda, they want to circumvent it.

And, of course, we know what is going on in Washington. Anything to block the success of the Obama Administration or the American people. It doesn't matter that the Republicans brought the country to the brink of disaster by the end of the Bush Administration, all they care about is not letting the country or the president succeed.

Republicans have no love for their country. That's the story, plain and simple. In their anger at having lost the general election in 2008, in their anger about not having total control of everything in the states they think they own, they have betrayed the American people. And this American is hopping mad!

It occurs to me that they think that government interferes with everything they think is fun and their god given right.

Guns, shooting animals, big cars with poor gas mileage, having a theocracy, woman in the kitchen barefoot and pregnant, no paying for anything that they don't want, schools, roads etc.
I could go on and on.

Am working my way through Chris Mooney's The Republican Brain. Thought I wouldn't get much out of it, that I knew all this stuff already. I was wrong. Holy cow, I had no idea.

At 74..and having gone trapping here in Oregon..from the time I was in fifth grade..until I graduated from high school..for 6 weeks..every winter..I learned the history, the rules and the ethos of what is done..and why. We trapped..under permit..and the state kept count..as the rules were for thinning..not destruction of whole ..swaths of an area. Keeping all sorts of ..populations..in-balence. Reading the ..beyond selfserving rules which are being pushed, as we speak..rather then looking to scientific ..balencing of assorted interests..is sickening to me/mine.

Just sent an email off to Senator French. Maybe preaching to the choir but I know it can't hurt to keep the pressure on and lines of communication open.

Congratulations on Vitamin Democracy to get rid of the Dentist. He should be boycotted out of business. Educate more Dentists.

Senator Joe Paskvan, Co-Chairman, Senate Resources Committee
Senator Tom Wagoner, Co-Chairman, Senate Resources Committee
Alaska State Legislature, Senate Resources Committee
State Capitol Building
Juneau, Alaska 99801

Dear Senators,

The Alaska Outdoor Council supports the nomination of Mr. Lynn Keogh to the Alaska Board of Game.

The Alaska Outdoor Council (AOC) is a statewide organization of 10,000 Alaskans who hunt, fish, trap and enjoy the Alaska outdoor lifestyle. Our members depend on the Board of Game to make reasoned decisions on the allocation of the public game resource. Mr. Keogh has distinguished himself in this regard. He has participated in a limited number of meetings of the Board since his appointment, but has already contributed a great deal. AOC generally likes to see nominees be familiar with the BOG process. Mr. Keogh has a long record of service to his local Fish and Game Advisory Committee and has participated in that capacity in the Board of Game process. We also like to see a working familiarity with the basic provisions of the constitution, statutes and regulations that guide the board. Mr. Keogh has demonstrated this knowledge, both through the questions he asks of the public, his fellow board members and the department, but also in the statements he has made about his votes.

As you might expect, there is organized opposition to Mr. Keogh. Those organized against Mr. Keogh, representing a small percentage of Alaskans, hope to force the Governor to appoint someone with a limited perspective on how game resources are used. This opposition is based (but not always stated) on his votes on proposals before the board to implement scientific management. AS 16.05.255 (h) is clear: "The Board of Game shall establish population and harvest goals and seasons for intensive management of identified big game prey populations to achieve a high level of human harvest." While we understand that some people disagree with this policy as established by the legislature, we hope you will agree that it would be patently unfair for legislators to vote against Mr. Keogh based on his vote to implement a policy that the legislature itself established. Further, Mr. Keogh's votes during his short tenure on the board have been consistent with other board members who were confirmed by the legislature by sizable majorities.

The AOC communicates with its members through a variety of media. These votes on confirmations to the Board of Game are some of the most important issues before the

legislature to AOC members. It should come as no surprise to you that we will be making available to AOC members and clubs information about the confirmation process, as well as how individual legislators vote, so they can be informed as they participate in their democracy. Allow me to share with you that we spent the last few weekends at large gatherings of Alaskans, from all walks of life, who love the outdoors. The unanimous position of the hundreds of Alaskans that visited our booth in the main pavilion at the largest sportsman's show in the state was to support Lynn Keogh. We hope the legislature will recognize that broad support from the general public, and confirm him to the board.

We thank you for your public service, and ask that you join the majority of Alaskans, as opposed to a small but organized group of opponents, in supporting Lynn Keogh to the Board of Game.

Sincerely,

Rod Arno

Sager-Albaugh, Teresa
Board of Game

Teresa Sager Albaugh
[redacted]
Tok, Alaska 99780

I am a lifelong Alaskan, raised in Fairbanks, and a 23 year resident of the Tok / Mentasta area. I have a strong personal interest and family background in hunting, fishing and trapping, and support sound scientific, sustained yield management of Alaska's renewable resources. I also support the tenets of our state constitution guaranteeing all residents equal access to fish and game.

Focus on the Family

PERSONAL BACKGROUND

I grew up in a family where being outdoors - well out of town and away from the crowds – was considered a great thing. As a child, my five siblings and I spent summers with our mother, father, aunt, uncle and grandparents at the family cabin, where we literally got our feet wet, our faces dirty, and our hearts and minds filled with a deep appreciation for "the woods." We learned to fish with a rod and reel, handle firearms, and to clean and eat what we killed. As adults, we have continued these traditions and we have the pleasure of now passing them on to our children, nieces and nephews.

I personally have had the good fortune of many wonderful hunting opportunities for moose, caribou, sheep, bear, and deer, as well as ducks, ptarmigan and grouse. My husband, Bill, runs a trapline in the winter and as often as possible I join him to learn from and share the experience. We live in a log home, haul water, run a propane cook stove and lights, and provide our own part-time power system. Much of our diet comes from the wild food we harvest and each year's bounty from the garden.

I have no formal or professional training in wildlife management. My experience comes from a combination of personal field observation spending time in the natural environment, and a layman's study of applicable state and federal fish and game laws.

In part because of my personal interest in the outdoors, my work as a legislative aide often involved resource issues, which allowed me to hear many hours of testimony from Alaskans who expressed their perspectives and strong opinions on a wide range of fish and wildlife issues. I was also fortunate to have worked toward the passage of laws that have benefited hunters and trappers. My service on the board of directors of the Alaska Outdoor Council, including two years as president, has further broadened my understanding and appreciation of how important wildlife and the outdoors are to the people of the state. I have attended local Advisory Committee meetings, offered testimony to the Game Board, and provided public comments to the National Park Service on proposals of impact to the people, land, fish and game of my area.

Enabling present and future Alaskans to be responsible stewards of the resource, and to continue building and strengthening our outdoor heritage by assuring opportunity, are objectives I consider very meaningful and important. I believe they are goals that can be pursued and achieved through the efforts of the Board of Game, and I would be grateful for the opportunity to serve in that capacity.

Jeff Stepp

Subject: Appointments of Sager-Albaugh and Mumford to Board of Game

Dear Senator Paskvan:

I am writing to ask you do not confirm Teresa Sager-Albaugh to another term on the Board of Game.

She has shown her unwillingness to listen to public input when, before she was first confirmed but had been appointed, she voted against the wishes of the 500 signatories to a petition supporting the continuation of the Denali Buffer Zone. She voted in favor of 5 recreational trappers. In doing so she also chose to ignore the testimony of the park superintendent.

She brings absolutely no diversity to the Board, being a former president of the Alaska Outdoor Council and an NRA member. Once again, the vast majority of non-hunting Alaskans are being ignored and have no real voice in this resource which is owned equally by all Alaskans according to the state constitution. Sager-Albaugh has consistently, often against the science, voted in favor of Intensive Management. In short, she is one of the worst choices for continued service on the BoG.

As for Mr. Mumford, I take heart in his considerable experience as a wildlife trooper. I hope that will serve him well should he be confirmed. But once again I see no diversity in his presence as he is a hunter, NRA member, member of the Alaska Professional Hunters Association, and cannot be said to represent that constantly-ignored 85% of non-hunting Alaskans.

While I cannot speak to Mr. Mumford's perspective, definitely Ms. Sager-Albaugh brings nothing good from her previous term and promises only more of the same mismanagement that anymore is the mark of the present Board of Game.

Thank you,

Art Greenwalt, Vice Pres. Alaska Wildlife Alliance

STATEMENT

I have lived in Alaska continuously since 1976 and have always had a passion for the diverse wildlife here. After leaving the military I continued working in the computer field for a couple of years, but always with the goal of ultimately obtaining employment with the Alaska State Trooper's Fish Wildlife Protection Division. I became an Alaska State Trooper in January 1982 and transferred into the Wildlife division in 1984, in which I remained throughout my career. By choice, I transferred several times to various posts throughout the state, and enjoyed the unique diversity each offered. I served in the communities of Palmer, Wasilla, Sand Point, Kodiak, Fairbanks, Coldfoot, Soldotna and Anchorage. During these assignments I was privileged to learn the local areas, become acquainted with the people who live there, and contacted the resource users. Living in the regions I patrolled helped me develop good judgment and an understanding of the people I contacted. I also learned to develop good working relations with the various State and Federal agencies that have parallel goals in the stewardship of Alaska's wildlife.

After retiring from AST Fish Wildlife Protection in 2002 I worked briefly as an assistant guide on the Alaska Peninsula. Additionally, I was employed as a commercial pilot surveying wildlife from Prudhoe Bay to Barrow, and I continue to work seasonally in Tok, transporting sportsmen into and out of the field. I am also a current volunteer Alaska Hunter Education instructor. During the summer of 2010 I worked under contract to provide Land Security for the Native Village of Tyonek.

I have proudly served as a member of the Big Game Commercial Services Board over four years, and am the Board appointed liaison with the Wildlife Troopers. I was reappointed to the board in March, 2010 for a final four year term.

My strong commitment to Alaska's wildlife combined with my experience in many areas of Alaska and knowledge of the people and issues that we face, I believe qualify me to serve on the Board of Game. I would be honored to be appointed and would work hard to be a productive member of the Board of Game.

Press Release Wording

Robert Mumford, [redacted] of Anchorage has been appointed to the Board of Game. Robert is a retired Fish and Wildlife Trooper that has lived in Alaska for over 35 years. He has served on the Big Game Commercial Services Board and is employed by Doyon Universal Services and is also a commercial pilot.

MEMORANDUM

Date: 3/7/2011

To: Senator Tom Wagoner, Co-Chair
Senate Resources Committee

From: Senator Hollis French HFS

RE: Hearing Request – SB 13 – Waive Park Fee for Disabled Veterans

---

This is a request that you schedule a hearing for SB 13 – Waive Park Fee for Disabled Veterans. For the committee's use, I have attached a copy of the bill, a sponsor statement, a sectional, related statutes and some backup materials.

If you have any questions, please contact Andy Moderow in my office at 907-465-4923.

Senator Hollis French

Sponsor Statement

SB 13 – Waive Park Fee for Disabled Veterans

Alaska's veterans served our country with pride. This legislation shows a small token of our appreciation, by providing disabled veterans in our state with free access to state park facilities.

Our parks provide all Alaskans with the opportunity explore and recreate in Alaska's wild places. To provide these opportunities to those with disabilities, many park facilities are compliant with ADA standards. Six cabins have been modified to include features like wheelchair ramps. Two boat launches, 14 campgrounds, 10 historic sites and dozens of day use locations provide handicap accessible facilities. Regardless of disability, the system is truly open to all Alaskans.

In 1991, Alaska passed a law which created a special disabled veteran camping permit, providing disabled veterans with free camping in state park campgrounds. Senate Bill 13 extends this free benefit to public use cabins, boat ramps, RV facilities and day parking.

Please join me and support this meaningful piece of legislation.

MEMORANDUM March 8, 2011

SUBJECT: Sectional Summary for SB 13 (Work Order No. 27-LS0097\A)

TO: Senator Hollis French
Attn: Andy Moderow

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends AS 41.21.026(a) to reference to the exceptions in AS 41.21.026(d) and (f).

Section 2. Amends AS 41.21.026(d) to refer to a veteran in the singular to conform to the amendment to AS 41.21.026(e) in sec. 3 of the bill, and to new subsection AS 41.21.026(f) that would be added by sec. 4 of the bill.

Section 3. Amends AS 41.21.026(e) by adding a definition of "veteran" for purposes of AS 41.21.026.

Section 4. Adds a new subsection -- AS 41.21.026(f) -- to describe the fees in AS 41.21.026(a) that may not be charged or collected from a resident who is a disabled veteran.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 13

Analysis

The current statute (AS 41.21.026(d)) provides an exemption to disabled veterans from paying fees for overnight camping in a state park facility. SB 13 would expand the exemption from state park fees for disabled veterans to include the following additional park fees:

- Rental of public use cabins
- Use of an RV dump station
- Admission or guided tours to a visitor centor or historic site
- Use of an approved boat ramp
- Day use
- Attendance to educational programs

It would cost approximately $10,000 in programming changes to the online cabin reservation system to implement the exemption from fees for disabled vets.

This legislation would result in a annual loss of revenue to the state of up to $252,000 in park user fees. This fiscal note includes $252,000 in general funds to replace the anticipated loss of revenue, to allow the same level of service in state parks to continue . If the lost fees are not replaced, the Division of Parks could lose approximately three park ranger positions.

It is likely some public use cabins could be vacant but not available to the public because they would be reserved by disabled vets but not used. There may be an increase in use and demand of park facilities as a result of this legislation.

Current Statutes

Sec. 41.21.026. Fees for the use of state park system facilities.

(a) Notwithstanding (b) of this section, the department may charge or collect a fee in a park unit for

(1) rental of public use cabins or other overnight lodgings;

(2) overnight use of a developed campsite;

(3) special park use permits;

(4) competitive and exclusive commercial use permits;

(5) noncompetitive and nonexclusive commercial use permits;

(6) use of a sewage holding tank dump station;

(7) admission to or guided tours of visitor centers and historic sites;

(8) use of an improved boat ramp in a park facility developed principally for boat launching;

(9) sale of firewood;

(10) sale of merchandise for informational or educational purposes related to public use and understanding of parks, including maps, plans, and other graphic materials;

(11) use of a developed facility that has developed parking and rest rooms; and

(12) presentation or attendance at programs related to natural or cultural history, outdoor skills or education, or other topics concerned with public use, enjoyment, or understanding of parks.

(b) The department may not charge or collect a fee for an ordinary use of a park unit or the use of a restroom in a park unit.

(c) The department shall establish the fees that may be charged or collected under (a) of this section by regulation. Before setting the fees, the department shall consider at public hearings

(1) the cost to the state of operating the facility or managing the activity;

(2) the normal fees charged for similar facilities or activities by governmental and nongovernmental entities;

(3) the cost of administering a fee collection program for the facility or activity; and

(4) the public interest.

(d) The department shall issue free of charge to disabled veterans of this country an annual state park developed campsite permit. The permit shall allow a disabled veteran to use a state park developed campsite for personal recreation use without a charge or fee under (a)(2) of this section. While utilizing a developed campsite without charge under this subsection, the disabled veteran shall comply with all other statutes or regulations pertaining to the use of the developed campsite. The department shall provide a form for use by a disabled veteran when applying for a permit under this section. Not later than February 1 of each year, the department shall prepare a report on the number of permits issued to disabled veterans under this subsection during the previous calendar year and notify the legislature that the report is available.

(e) In this section, "developed campsite" means a campsite having access to the following public facilities:

(1) restrooms;

(2) a picnic table;

(3) an outdoor cooking facility; and

(4) an approved water source.

Current Statutes

Sec. 38.05.067. Preference for veterans for unoccupied residential land.

(a) Except as provided in (d) of this section, before offering to the general public any unoccupied residential land, the director shall offer the land at a restricted sale at which only veterans may buy.

(b) The director may not sell the land under this section at less than the fair appraised market value. The director shall adopt regulations necessary to ensure that land sold under this section is for bona fide residential use and not for speculation.

(c) When not in conflict with this section, other provisions of AS 38.05.045 - 38.05.067 apply to sales under this section.

(d) This section does not apply to the sale of state land under AS 38.05.057 , AS 38.08, or AS 38.09.

(e) In this section, "veteran" means a person with 90 days or more of active service in the armed forces of the United States who has been honorably discharged or a person with 90 days or more of service in the Alaska Territorial Guard.

Current Statutes

Sec. 01.10.055. Residency.

(a) A person establishes residency in the state by being physically present in the state with the intent to remain in the state indefinitely and to make a home in the state.

(b) A person demonstrates the intent required under (a) of this section

(1) by maintaining a principal place of abode in the state for at least 30 days or for a longer period if a longer period is required by law or regulation; and

(2) by providing other proof of intent as may be required by law or regulation, which may include proof that the person is not claiming residency outside the state or obtaining benefits under a claim of residency outside the state.

(c) A person who establishes residency in the state remains a resident during an absence from the state unless during the absence the person establishes or claims residency in another state, territory, or country, or performs other acts or is absent under circumstances that are inconsistent with the intent required under (a) of this section to remain a resident of this state.

2010 ALASKA STATE PARKS FEES

Fees subject to change.

Alaska Department of NATURAL RESOURCES

Revised March 2010

ANNUAL PASSES	
Alaska Resident Disabled Vet Camping (1 Only)	Free

ADA Facilities

This listing is alphabetized by facility type, such as trails, cabins or campgrounds. The Alaska State Parks Statewide Brochure has facilities listed by town with a notation marking facilities with accessible features. Click here for the statewide brochure.

If a park or cabin is underlined, click on the name for more information on that park or cabin. Click on the town name for park location and other facilities, as shown in the statewide brochure pages.

For more detailed information, visit the State's ADA Coordinator's Office ADA Parks Accessibility Survey 2002.

Disclaimer: Accessibility standards change over time as guidelines are being developed. When a facility is built or remodeled, it meets guidelines current at the time of construction. Although access issues are addressed, some persons with particular disabilities may have difficulty with, for example, the signing, window latches or stoves. It is recommended that the disabled park visitor bring along a fully able companion on his or her first visit to a park facility in case of difficulties or problems. Solo trips can be taken later, knowing the facility and terrain. If anyone using facilities listed here encounters difficulties not mentioned, please contact local park staff or email: dnr.pksweb@alaska.gov Suggestions and comments are welcomed.

Boat Launches

- Kenai River Special Management Area - Cooper Landing Boat Launch, near Sterling
  A 250 foot boardwalk connects parking, toilets and the boat ramp. The boardwalk has a maximum gradient of 5%. There are also viewing areas and interpretive displays. Pressurized water is available.
- Kenai River Special Management Area - The Pillars Boat Launch, near Kenai
  Accessible dock with a less than 5% gradient to it. Dock is only for boat exit/entry - no fishing allowed from dock. There is paved parking with easy access to viewing deck with interpretive displays. Pressurized water is available.

Cabins

- Chena River State Recreation Area - Chena River Cabin. near Fairbanks with road access
  There is a ramp up to the porch and a ramp from the cabin to the latrine. North Fork Cabin, in the same park, also has road access, but is not fully accessible.
- Chena River State Recreation Area - Twin Bears Camp. near Fairbanks with road access
  This facility has 12 rustic cabins, mess hall and recreation hall. It can be rented by an individuals or group. Ramps exist between three cabins, mess hall, recreation hall and main latrine.
- Chugach State Park State Park - Yuditnu Cabin. near Anchorage
  The cabin is accessible, but the latrine is not. Therefore, help may be needed when

using the latrine. The trail to access the cabin is an old road. Motorized access is allowed, by snowmachines in the winter (all week) and ATVs in the summer (Sunday thru Wednesday only). Bicycles are also allowed (all week).

- Kachemak Bay State Park - Halibut Cove Lagoon East Cabin, remote park near Homer

  Cabin and latrine are along a boardwalk with a maximum gradient of 5%. Assistance may be needed on the ramp from the dock to the cabin boardwalk system. At low tide, the ramp is very steep.
- Shoup Bay State Marine Park - Kittiwake Cabin, remote park near Valdez

  Recommend inner lagoon drop off. Assistance may be needed from boat to hard-pack gravel trail. Click on park name above for more information.
- Thumb Cove State Marine Park - Spruce Glacier Cabin, remote park near Seward

  Assistance may be needed from the beach to boardwalk system. Boardwalk extends from fire ring on beach to the cabin and latrine.

Fishing Access

- Buskin River State Recreation Site, near Kodiak
  Accessible fishing platform at river's edge. Parking and trail to platform is paved.
- Chugach State Park - Bird Creek, near Anchorage
  Fishing is from a pier over the river. Best to use at high tide. At low tide, the water is beyond the pier. Paved access to the pier.
- Crooked Creek State Recreation Site, near Soldotna
  May need assistance getting to and from the river due to a steep grade.
- Deep Creek State Recreation Area - Deep Creek North Campground, near Homer
  Trail is gravel path to river, may need assistance. Parking and viewing area with interpretive displays is paved.
- Matanuska Lakes State Recreation Area (formerly Kepler-Bradley Lake State Recreation Area) - Matanuska Lake, near Palmer
  Trail to accessible fishing dock is a 500 foot gravel path with a 8.3% maximum gradient and handrails.
- Kenai River Special Management Area - Bings Landing Campground, near Sterling
  Accessible boardwalk along river.
- Quartz Lake State Recreation Area, near Delta Junction
  At Quartz Lake Campground, gravel trail with less then 5% grade to accessible fishing dock. At Lost Lake Campground, gravel trail with less then 5% grade to accessible boat/fishing dock.

Return to top of page

Historic Sites

- Baranof Castle State Historic Site, near Sitka
  An accessible, 700 foot, concrete sidewalk with handrails leads from the street level to interpretive displays and viewpoint at the top of Castle Hill. The maximum gradient is 8.3% and the elevation gain is 40 feet.
- Big Delta State Historical Park, near Delta Junction
  The visitor center, called Rika's Roadhouse, has accessible ramp. Trails are hard-pack gravel with interpretive sites. Pressurized water is available.
- Denali State Park - Alaska Veteran's Memorial, near Trapper Creek
  Parking, trails, picnic sites, interpretive shelter and the memorial are paved with a less than 5 % slope. Pressurized water is available.
- Fort Abercrombie State Historical Park, near Kodiak
  Kodiak Military History Museum are accessible.
- Independence Mine State Historical Park, near Palmer
  Visitor Center is accessible by ramp. Parking, nearby trails and interpretive site with

spotting scopes are paved.

- Old Sitka State Historic Park, near Sitka
  Trails are hard-pack gravel, with sections of boardwalk. Approximately 100 feet of trail has a 14% gradient. The rest of the trail has a gradient of 12% or less. Parking is paved.
- Petroglyph Beach State Historic Site, in Wrangell
  An accessible boardwalk leads to a viewing deck and interpretive displays overlooking Petroglyph Beach. The boardwalk has a maximum gradient of 8.3% and is approximately 220 feet.
- Potter Section House State Historical Site, near Anchorage
  Trails around the house are paved. Nearby viewing deck and boardwalk has a 8% maximum gradient. The house itself is park office space and not open to the public.
- Totem Bight State Historical Park, near Ketchikan
  The trails are hard-pack gravel - may need assistance on steep portions. Buildings are accessible.
- Wickersham State Historic Site, in Juneau
  The Wickersham House Museum is accessible.

Return to top of page

Picnic Shelters

- Anchor River State Recreation Area - Slidehole Campground, near Homer
  Pressurized water.
- Big Lake North State Recreation Site, near Wasilla
  Paved parking, gravel path.
- Captain Cook State Recreation Area - Stormy Lake Day Use, near Kenai
- Chena River State Recreation Area - Red Squirrel Campground, near Fairbanks
  Paved parking, gravel path.
- Chena River State Recreation Site, in Fairbanks
- Chugach State Park - Eklutna Lake Campground, near Anchorage
- Clam Gulch State Recreation Area, near Soldotna
- Delta State Recreation Site, near Delta Junction
  Pressurized water is available.

Restrooms

Most restrooms facilities in state parks are pit latrines. Those that are accessible are shown in the statewide brochure pages mentioned at the top of the page. A small number of facilities have flush toilets and are listed here. If the facility is listed elsewhere on this page, flush toilets are mentioned there as well.

- Chena River State Recreation Site, in Fairbanks
- Chugach State Park - Eagle River Campground, near Anchorage
  Flush toilets in overflow area only.

Return to top of page

Trailheads and Trails

- Chilkat Bald Eagle Preserve, near Haines
  1.75 mile trail of pavement and boardwalk for viewing eagles along the Chilkat River.
- Chugach State Park - Bird Creek to Indian Bike Trail, near Anchorage
  A paved trail starts at Indian Creek at mile 103.0 of the Seward Highway and goes east along Turnagain Arm to Bird Creek Campground and beyond to mile 99.2 of the Seward Highway. Grade exceeds 5% in the Bird Creek area. The trail is eight feet wide with no shoulder.
- Chugach State Park - Bird Point to Girdwood Bike Path, near Anchorage
  The trail is the Old Seward Highway between Bird Point and Girdwood, and is now a paved, multi use path for pedestrians, bicycles and other non-motorized use. It starts at Mile 96.1 of the Seward Highway (Bird Point) and ends at mile 90.1, near the Girdwood turnoff, with a total length of six miles. The typical width is 10 feet with wide unpaved shoulders for runners. Twice, the path exceeds a 5% gradient with a maximum of 7%: for 800 feet at 0.2 miles east of Bird Point, and for 500 feet at 3 miles, halfway between Bird Point and Girdwood. Where the gradient exceeds 5%, the paved width is 12 feet. Restrooms and picnic shelters are at approximately one mile east of Bird Point, and two miles west of Girdwood.
- Chugach State Park - Bird Ridge Trailhead, near Anchorage
  Lower section of trail is paved, a distance of approximately 0.3 miles. Viewing areas at either end of pavement, with accessible restrooms at the upper end. Average gradient is 4.7% with the entire trail less than 8%. There is no cross slope and the trail width is 4.74 feet/1.4 meters. Elevation gain is 66 feet. Parking is paved. Upper section of trail is steep and unimproved. This trail has a trail guide with Universal Access Information. Request one from the DNR Public Information Center.
- Chugach State Park - Eagle River Nature Center, near Anchorage
  The center itself is accessible. Surrounding area and trails are hard-pack gravel. Beginning section of trail has a long, 8% maximum gradient. Parking is paved
- Chugach State Park - Eklutna Lake, near Anchorage
  The Lakeside Trail is an old, gravel road bed, with some large ruts and rocks. Sections have been rebuilt due to damage from the lake and have a steep gradient. ATVs (Sunday thru Wednesday only) and bicycles (all week) use the trail.
- Chugach State Park - Potter Creek Interpretive Trail, near Anchorage
  Paved parking, with interpretive panels and spotting scope. The first 220 feet of this 0.46 mile trail is paved, with accessible restrooms at the end. The 5.3% is the maximum gradient for this section. The trail continues from there as hard-pack gravel and has a greater than 8% gradient, with 17% maximum gradient. There is no cross slope and the trail width is 5 feet/1.5 meters. Elevation gain is 240 feet. Trail connects to the unimproved Turnagain Arm Trail. This trail has a trail guide with Universal Access Information. Request one from the DNR Public Information Center.
- Denali State Park - Alaska Veteran's Memorial, near Trapper Creek
  Trails are paved throughout the Memorial.
- Denali State Park - Denali View North, near Trapper Creek
  Approximately 1200 feet of paved trail with interpretive panels.
- Independence Mine State Historical Park, near Palmer
  Visitor Center is accessible by ramp. Trails to the center core of the mine compound are paved with less than 5% gradient. Trail to the mine portal is paved with a 15% gradient. Other trails are hard-pack gravel.
- Matanuska Lakes State Recreation Area (formerly Kepler-Bradley Lake State Recreation Area) - Matanuska Lake, near Palmer
  Trails are hard-pack gravel.
- Lake Louise State Recreation Area, near Glennallen
  Trail is hard-pack gravel.
- Old Sitka State Historic Park, near Sitka
  Trails are hard-pack gravel, with sections of boardwalk. Approximately 100 feet of trail has a 14% gradient. The rest of the trail has a gradient of 12% or less. Parking is paved.
- Settlers Cove State Recreation Site, near Ketchikan
  A short portion of the trail is accessible for approximately 200 yards to the Lunch Creek Bridge.
- Totem Bight State Historical Park, near Ketchikan
  The trails are hard-pack gravel - may need assistance on steep portions. Buildings are accessible.

- Willow Creek State Recreation Area - Willow Creek Campground, near Wasilla
  Trail is hard-pack gravel down to the river.

Viewpoints

- Chugach State Park - Beluga Point, near Anchorage
  At Mile 110.5 of the Seward Highway along Turnagain Arm. Paved parking, spotting scopes, interpretive panels.
- Chugach State Park - Bird Point, near Anchorage
  At Mile 95 of the Seward Highway along Turnagain Arm. Paved parking, spotting scopes, interpretive panels, accessible restrooms.
- Chugach State Park - Glen Alps, near Anchorage
  On the Hillside, off Upper Huffman. Paved and hard-packed gravel trails leads to viewpoint on hill that overlooks Anchorage, Cook Inlet and the Alaska Range. Accessible restrooms.
- Denali State Park - Denali View North, near Trapper Creek
  At Mile 162.7 of the Parks Highway. Paved parking and approximately 1200 feet of paved trail with interpretive panels. Accessible restrooms
- Denali State Park - Denali View South, near Trapper Creek
  At Mile 135.2 of the Parks Highway. Paved parking, interpretive panels, accessible restrooms.

Return to top of page

Visitor Centers

- Big Delta State Historical Park, near Delta Junction
  The visitor center, called Rika's Roadhouse, has a ramp. Trails are hard-pack gravel with interpretive sites. Pressurized water is available.
- Chugach State Park - Eagle River Nature Center, near Anchorage
  The center is accessible. Parking is paved. Surrounding grounds and trails are hard-pack gravel. Beginning section of trail has 8% maximum gradient.
- Independence Mine State Historical Park, near Palmer
  Visitor Center has a ramp. Trails to the center core of the mine compound are paved with less than 5% gradient. Trail to the mine portal is paved with a 15% gradient. Other trails are hard-pack gravel.

Disabled Veteran's Annual Camping Pass

The legislature granted Disabled Alaskan Veterans (DAV) the right to receive one Alaska State Park Camping Pass free of charge. The DAV Camping Pass, which is valid in all developed Alaska State Park campgrounds, is good for two years. There is no DAV pass for boat launch or day use, nor can the DAV camping pass be used to purchase a boat launch or day use pass as the second pass at the discount rate.

To receive a free DAV camping pass, an eligible disabled veteran must present proof of a **service connected disability and Alaska residency** at either the Anchorage or Fairbanks DNR Public Information Centers (see below). Alaskan resident is defined as a person who is physically present in the state with the intent to remain indefinitely and to make a home in the state, has maintained the person's domicile in the state for the 12 consecutive months prior to requesting the issuance of a Disabled Alaska Veteran (DAV) camping pass, is not claiming residency in another state, territory or country, and is not obtaining benefits under claim of residency in another state, territory or country. Proof of residency can be in the form of an Alaskan Driver's License, Alaska Sport Fishing or hunting License, Alaska Voters Registration Card, or other documentation suitable to the department that proves Alaska residency.

Evidence of service connected disability can be provided by the presentation of a Veteran's Administration Patient Data Card (red, white, and blue) imprinted with "service connected disability" under the photo identification, or a current year letter from the US Department of Veteran's Affairs, which states the person has a service-connected disability and is signed by the Veteran Services Officer. Other types of VA cards exist, but cannot be accepted as proof of disability. Information on obtaining either the card or the letter can be found through the local Veteran's Administration office or calling 1-800-827-1000. Please note: A Veterans Universal Access Identification card with the veteran's social security number and birth date printed on the card will no longer be accepted, in compliance with the Personal Information Protection Act which passed the Alaska Legislature in 2008. .

The Disabled Alaska Veteran camping pass is non-transferable. If the qualified DAV's vehicle is sold, the decal must be removed. Or, if the windshield is broken and must be replaced, the individual is requested to scrape as much of the decal off as possible and return the remains to any area office. In either of these cases, a replacement decal will be issued for $10 upon receipt of the removed decal. If the decal is lost or if no remains of a previous decal can be produced, and the DNR has record of the owner's previous issuance of the DAV decal, a one-time replacement decal may be purchased for $100.

SENATE BILL NO. 13

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR FRENCH

Introduced: 1/19/11
Referred: Resources, Finance

A BILL

FOR AN ACT ENTITLED

"An Act providing for the waiver of certain fees and charges in state parks for disabled veterans." or reduction

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 41.21.026(a) is amended to read:

(a) Notwithstanding (b) of this section **and except as provided in (d) ~~and (f)~~** and (g) **of this section**, the department may charge or collect a fee in a park unit for

(1) rental of public use cabins or other overnight lodgings;

(2) overnight use of a developed campsite;

(3) special park use permits;

(4) competitive and exclusive commercial use permits;

(5) noncompetitive and nonexclusive commercial use permits;

(6) use of a sewage holding tank dump station;

(7) admission to or guided tours of visitor centers and historic sites;

(8) use of an improved boat ramp in a park facility developed

principally for boat launching;

(9) sale of firewood;

(10) sale of merchandise for informational or educational purposes related to public use and understanding of parks, including maps, plans, and other graphic materials;

(11) use of a developed facility that has developed parking and rest rooms; and

(12) presentation or attendance at programs related to natural or cultural history, outdoor skills or education, or other topics concerned with public use, enjoyment, or understanding of parks.

* **Sec. 2.** AS 41.21.026(d) is amended to read:

(d) The department shall issue free of charge to **a** disabled **veteran** [VETERANS] of this country an annual state park developed campsite permit. The permit shall allow **the** [A] disabled veteran to use a state park developed campsite for personal recreation use without a charge or fee under (a)(2) of this section. While utilizing a developed campsite without charge under this subsection, the disabled veteran shall comply with all other statutes or regulations pertaining to the use of the developed campsite. The department shall provide a form for use by a disabled veteran when applying for a permit under this section. Not later than February 1 of each year, the department shall prepare a report on the number of permits issued to disabled veterans under this subsection during the previous calendar year and notify the legislature that the report is available.

* **Sec. 3.** AS 41.21.026(e) is amended to read:

(e) In this section,

(1) "developed campsite" means a campsite having access to the following public facilities:

(A) [(1)] restrooms;

(B) [(2)] a picnic table;

(C) [(3)] an outdoor cooking facility; and

(D) [(4)] an approved water source**;**

(2) "veteran" has the meaning given in AS 38.05.067.

(5)

* **Sec. 4.** AS 41.21.026 is amended by adding a new subsection to read:

(f) The department may not charge or collect a fee under (a)~~(1)~~, (6) - (8), (11), or (12) of this section from a resident who is a disabled veteran.

(g) The dept. may not...

SENATOR LESIL MCGUIRE

SPONSOR STATEMENT FOR SENATE BILL 24

"An Act establishing the Sport Fishing Guide Services Board and licensing requirements for sport fishing guide-outfitters, sport fishing outfitters, sport fishing assistant guides, and sport fishing transporters; making conforming amendments; allowing the Department of Fish and Game to collect information on guiding services; and providing for an effective date."

Sport fishing is a key element of Alaska's cultural and economic landscape and the sustainable development of our fisheries is one of the Legislature's fundamental constitutional responsibilities. Each year approximately 460,000 individuals spend roughly 2.5 million days sport fishing in Alaska. Sport fishing and especially guided sport fishing has become an integral part of Alaska's economy. In 2007 guided sport fishing contributed an estimated $641 million to Alaska's economy and supported 7183 jobs. Annual direct expenditures attributed to sport fishing totaled $1.4 billion or 3.1% of the total gross state product (GSP) in 2007. An average of 1,670 sport fishing business licenses and 1,981 sport fishing guide licenses have been sold annually of which 90% are issued to Alaska residents. The sport fishing guide services industry is also an important source of information for fisheries managers. Sport fishing guides currently provide logbook data to the Department of Fish and Game which provides the department with one of the critical tools required to manage our fisheries.

Senate Bill 24 seeks to achieve two goals, each consistent with the language set forth in the State Constitution which mandates sustainable development for the maximum economic benefit of Alaska. The first goal is to assure that Alaska's sport fishing services continue to compete favorable in the marketplace with the best in the world. The second goal is to assure that, as the state's valuable fishery resources are invested in the sport fishing services industry, the State of Alaska is doing so as would a diligent investor in any business. SB 24 achieves these goals by establishing a more accurate, stable and appropriate regulatory framework than currently exists. Also, by shifting regulation of the industry from the Department of Fish and Game to a Sport Fishing Guide Services Board established within the Department of Commerce, Community and Economic Development SB 24 places sport fishing guides alongside other analogous industry groups. The new board is modeled on a similar board created for big game guides in 2005 and will promote self-regulation, quality control and accountability in the industry.

SB 24 also recognizing the importance of the logbook program by proposing to permanently repeal the logbook's termination language in the existing statute. The Alaska legislature extended the program's termination date for one year only in both 2009 and 2010. Data collected through the logbook program provides information fishery managers need. The program also allows Alaska to receive an exemption from the National Saltwater Angler Registry; a federal program that would begin levying fees for registration in 2011.

MEMORANDUM January 24, 2011

SUBJECT: Sectional summary of SB 24 (Work Order 27-LS0278\A)

TO: Senator Lesil McGuire
Attn: Mike Pawlowski

FROM: Brian J. Kane BJK
Legislative Counsel

You have requested a sectional summary of SB 24, a bill establishing a Sport Fishing Guide Services Board and certain licensing requirements.

Please note that a sectional summary of a bill is not an authoritative interpretation of a bill. The bill itself is the best statement of its contents.

Section 1 of the bill states the purpose of the bill.

Section 2 of the bill adds the Sport Fishing Guide Services Board to the applicability section of the Business and Profession's "Centralized Licensing" chapter.

Section 3 of the bill creates the Sport Fishing Guide Services Board along with the board's duties and powers regarding licensing and regulating the activities of providers of sport fishing guide, sport fishing outfitter, sport fishing assistant guide, and sport fishing transportation services to persons engaging in sport fishing in the interest of the state's fisheries resources. This section also establishes the licensing requirements for a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter, as well as enforcement measures and a list of unlawful acts.

Section 4 of the bill amends AS 16.05.395 to conform to changes made in the bill.

Section 5 of the bill allows the Department of Fish and Game to collect certain information and records from sport fishing guide-outfitters, sport fishing outfitters, and sport fishing transporters.

Section 6 of the bill amends AS 25.27.244(a)(2) to conform to the licensing changes made by the bill.

Section 7 of the bill amends AS 41.21.506(b) to conform to the licensing changes made by the bill.

Section 8 of the bill extends the the sunset date of certain sections relating to sport fishing operators and guides so that the current statutory requirements for operator and guide licensing remain in effect until the effective date of certain provisions of the bill.

Section 9 of the bill repeals sections 22 and 31, ch. 58, SLA 2010, which are sections related to sport operators and guides that have a conditional effective date, in order to conform with changes made in this bill.

Section 10 of the bill provides for the initial appointment of members of the Sport Fishing Guide Services Board.

Section 11 of the bill provides a procedure for accepting license applications for sport fishing guide-outfitter licenses, sport fishing outfitter licenses, sport fishing assistant guide licenses, and sport fishing transporter licenses.

Section 12 of the bill repeals a conditional effective date in order to conform with changes made in this bill.

Sections 13 and 14 of the bill provide for effective dates.

(Revised 1/27/2011 OMB)

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB24

Analysis

This bill will create a nine member Sport Fishing Guide Services Board in the Department of Commerce, Community, and Economic Development (DCCED), and establish two new licensing categories.

As DCCED will have the authority to collect license fees, this will result in a loss of Fish & Game Fund revenue to ADF&G of approximately $240.0 per year.

The cost of operating the exisiting program in ADF&G is approximately $400.0, and includes statewide licensing of sport fishing business owners and sport fishing guides, registering all vessels used in guided sport fishing trips, and logbook reporting activities for all guided fishing trips. Annual revenue shortfalls of approximately $200.0 have been covered by Fish & Game Funds. Adding two new license categories will increase program costs (logbooks, data processing, and recording) by an estimated $40.0.

The department assumes fees will be set to generate enough revenue to the General Fund to fund the cost of administering the entire program, and that $440.0 interagency receipts will be received by ADF&G from DCCED via a Reimbursable Services Agreement.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. _____

Analysis

SB 24 places the administration of the Sports Fishing Guide Services Board in the Department of Commerce, Community and Economic Development with an effective date for most provisions of the bill of January 1, 2012.

Personal Services consist of three full time positions of one Investigator and two Licensing Examiners. Also included are two part time positions for Regulations Specialist and Licensing Supervisor. This staffing level is consistent with Personal Service requirements for the existing service level for the Big Game Commercial Services Board.

Travel costs are for board meetings inclusive of appointed members and staff. These cost estimates are for two board meetings a year.

Services cost include board support activities such as advertising, room rentals, printing, expert witnesses, network, legal services, IT support, Administrative Hearings and other general office functions.

Commodities has a one time start up cost of 15.0 for office furniture and hardware. After the first year of service these costs are expected to come down and stabilize.

This program includes the cost of collection of logbook data sheets, data processing and analysis, and providing a summary of all reported participation, effort and harvest information to regulatory bodies such as the Alaska Board of Fisheries and North Pacific Fishery Management Council.

Services includes the cost of the RSA to Fish and Game.

Senate Bill 24: Sport Fishing Guides; Board, Licenses

Sponsor Statement

What, exactly, is the problem that this legislation is attempting to solve? What are the benefits to the State and small businesses of passing this legislation? What are the risks/consequences of not passing this legislation?

Is the development of Alaska's fisheries unsustainable without the passage of this legislation?

Is ADF&G doing a poor job of managing the resource? Does ADF&G have enough resources (staff, etc.) to manage all the logbook data submitted by members of the sport fishing guide industry?

Does ADF&G support shifting regulation of the industry to Department of Commerce, Community & Economic Development? Does DCCED want to regulate the industry?

Legislation

Comments from ADF&G? Support or oppose?

Comments from Department of Commerce, Community, and Economic Development? Support or oppose?

What is the economic impact on guides and lodge owners? Please compare cost of current licenses vs. cost of new licenses. Please describe impact of legislation on small business owners.

Letters of Support

Kenai River Sportfishing Association (Eldon Mulder, Board Chair)
Kenai River Professional Guide Association

Mark & Miriam Edwards, Owners, Naha Bay Outdoor Adventures (near Ketchikan)

SB 24: SUPPORT
(PROVIDED BY SPONSOR)

Kenai River
Professional Guide
ASSOCIATION

Senator Lesil McGuire
State Capitol Building, Room 125
Juneau, AK 99801-1182

January 21, 2011

Dear Senator McGuire:

Kenai River Professional Guide Association (KRPGA) is a 501 (c) 6 non-profit organization devoted to protecting and preserving our national treasure, the Kenai River. Our primary goal is to foster responsible and sustainable Alaska sport fishing opportunity while promoting habitat protection and pro-active management of Kenai Peninsula sport fisheries. We support and represent the guided sportfishing industry on the Kenai River, one of the largest bodies of sport fishing guides in Alaska. KRPGA has long supported responsible and ethical guided fishing on the Kenai Peninsula and elsewhere in the state.

KRPGA strongly supports SB-24, an act that would establish a sport fishing guide services board and licensing requirements for sport fishing guide-outfitters, sport fishing outfitters, sport fishing assistant guides, and sport fishing transporters. We appreciate the comprehensive nature of the bill, as it encompasses all major sectors of the sportfishing industry.

We have been in support of a professional sportfishing guide services board for many years and have had our representatives at most of the meetings that have taken place thus far through the Alaska Department of Fish and Game (ADF&G). KRPGA has been a leading advocate for professional standards on the Kenai River, including the establishment of the Kenai River Guide Academy through Kenai Peninsula College, which is now a requirement to guide on the Kenai River.

Thank you for your efforts in bringing forth this legislation. KRPGA looks forward to working with the Legislature in forming the new guide services board and lend our full support. We believe that a Guide Board of our peers is a positive step into the future for our industry and the State of Alaska.

Sincerely,

Dave Goggia
KRPGA President

KENAI RIVER SPORTFISHING
ASSOCIATION

January 21, 2011

Senator Lesil McGuire
State Capitol Building, Room 125
Juneau, AK 99801-1182

Dear Senator McGuire:

Kenai River Sportfishing Association (KRSA) is a 501 (c) 3 fishery conservation organization dedicated to preserving the greatest fishing river in the world – the Kenai – through program work in habitat protection, fisheries management, research, and angler education.

KRSA supports Senate Bill 24 (SB 24), which would establish the Sport Fishing Guide Services Board and licensing requirements for sport fishing guide-outfitters, sport fishing outfitters, sport fishing assistant guides, and sport fishing transporters. KRSA believes that the best interests of the state would be served through the establishment of a professional services board that ensures consistent and comprehensive standards in the guided sport fishing industry in Alaska. A professional services board will provide for accountability, quality control and self-regulation for this industry, similar in scope to the big game guide industry and other analogous industry groups.

Are these standards currently lacking?

The 2007 report from the Alaska Department of Fish and Game (ADF&G) on the *Economic Impacts and Contributions of Sportfishing in Alaska* demonstrated that sportfishing is a significant contributor to the Alaskan economy. With approximately 460,000 in sport fishing license sales and 2.5 million angler days in 2007, the sportfishing industry accounted for $1.4 billion in direct expenditures, of which guided sport fishing generated $641 million in expenditures and supported more than 7,000 jobs. On average there are close to 1,700 sport fishing business licenses and 2,000 sport fishing guide licenses sold in Alaska, of which 90% are issued to Alaska residents. As guided sport fishing is an integral component of the Alaskan economy, a sport fishing guide services board would establish a more stable, appropriate and accurate regulatory framework than currently exists, and would help assure that Alaska's sport fishing industry is in position to compete favorably in the marketplace with other world class destinations.

Isn't ADF&G doing a good job now?

224 Kenai Avenue, Suite 102 • Soldotna, Alaska 99669
Phone: (907) 262-8588 • Fax: (907) 262-8582 • www.kenairiversportfishing.com • E-mail: info@kenairiversportfishing.com

In addition to the establishment of a guide services board, KRSA also supports other important aspects of SB 24, specifically the removal of sunset language on the guide logbook program. As the charter logbook program provides the Department with important information on guided angler activities and harvests, it is appropriate that sunset language be permanently removed on one of the important tools required for responsible management of our fisheries. The logbook program allows Alaska an exemption from the National Saltwater Angler Registry, a federal program that will begin levying fees for registration in 2011.

Thank you for your effort in sponsoring SB 24. We look forward to testifying in support of SB 24 as it moves through the Legislature this year.

Respectfully,

Ricky Gease

Ricky Gease
KRSA Executive Director

Open eyes to shady dealings

By Howard Delo Outdoors | Posted: Thursday, December 29, 2011 9:28 pm

I'm finding as I get older the time just seems to fly by, even on the rare occasions when it drags, like sitting in the dentist's chair listening to the drill and smelling the burning bone or lying motionless on a too-small table for 30 minutes or more while the MRI machine is clanking, grinding and buzzing an inch from my face. Tomorrow wraps up another year that actually only started about four months ago — or so it seems!

I'd like to wish you all a happy and prosperous New Year with the hope that all your fishing trips produce whoppers (fish or stories, doesn't really matter which) and your hunting trips fill your freezers (or mine if you feel generous).

Speaking of that, if you are planning to apply for any drawing permit hunts for the fall 2012 and the spring 2013, you only have until tomorrow at 5 p.m. to submit your online application to Fish and Game. If you have questions, call the Palmer office at 746-6300 today before end of business to get an answer.

On a more serious note, I wrote an article for the paper a couple of weeks ago suggesting that the sport fish guide licensing process needs to be overhauled to allow for the revocation of a guide's license in the event that person is convicted of a serious Fish and Game violation or is a repeat offender in violating the more minor Fish and Game regulations. Right now, no statute or regulation mandates the loss of a sport fish guide license in case of a violation conviction, no matter how many times or how serious the violation.

Let me give you a little behind the scenes on how that article came about. A reader had emailed the paper asking if the news staff intended to do a follow-up story on a guide who was cited this past fishing season on multiple counts of a Class A misdemeanor Fish and Game violation. The paper had published a short article in August about the original citation. That first article contained information that the particular guide had been convicted in 2006 of some other Fish and Game violations involving a hefty fine and jail time, both of which were largely suspended. The inquiring email stated that the trial for the current charges was scheduled for early December.

I was asked to look into the situation and develop a story. I found out that the trial was rescheduled into early January 2012, so no resolution of the current charges would be immediately available. I also found out from public court records that the particular individual involved had several other Fish and Game convictions from previous years, as well as other relatively minor traffic convictions and a DUI conviction on his record.

When I asked folks involved in law enforcement and in the sport fish guide license issuing program if these convictions could result in the guide losing his license, I was told that would not happen for lack of a statute or regulation providing that authority to the issuing agency.

I used this information, minus the non-Fish and Game violation convictions, in the article to essentially set the stage to illustrate why the sport fish guide licensing process needed revision.

This particular individual has held a guide's license for years and, short of a judge ordering revocation as part of sentencing for a conviction, cannot be denied a new license for the next year if he applies and meets the general criteria and provides the required paperwork.

There were several comments added to the story by readers, all of which openly called for this person's license revocation and agreeing that the process needs to be tightened up to prevent future abuses of this sort. Further information has come to light since that article was published that this same individual was convicted of multiple federal felonies in another state in past years as well. These are the facts as available through public court records.

A couple of other things are simmering on the back burner related to this story. I believe a bill has been introduced in the Legislature to form a sport fish guide services board analogous to the hunting guide services board that already exists.

If established, this services board could have regulatory authority to revoke licenses for ethical reasons, just as the hunting guide board currently has.

Since this board would probably be established within the Department of Commerce, Community and Economic Development, where the hunting guide services board currently is placed, its regulatory authority over sport fish guides could be significant if set up appropriately.

I also inquired if the Alaska Board of Fisheries (BOF) had the authority to revoke a sportsfish guide license for cause. I haven't gotten an answer to that question yet, but I would suspect the BOF does not have that level of authority.

They exist to regulate methods and means, seasons, and generally to allocate the harvestable surplus portion of a fishery — not decide under what conditions user licenses can be issued or retained.

The creation of a sport fish guide services board would be a step in the right direction.

However, I still think a legislative statute specifying why and for how long a sport fish guide license can be revoked for violation convictions would be a valuable tool in overseeing the sport fish guide industry. I would think the ethical and honest sport fish guides and their representative organizations would openly support such a statute as well.

We all tell jokes about used car salesmen and their supposedly shady dealings. Would the sport fishing guides want the same stereotype in the public eye? I would think not! Appropriate laws and service boards with oversight of that industry would dispel any stereotype of shady dealings, at least in my mind!

Howard Delo is a retired fisheries biologist with the Alaska Department of Fish and Game. You can leave him a message by emailing sports@frontiersman.com.

Katmai Service Providers Inc.

An Organization of Commercial Operators in
Katmai National Park and Preserve

February 16, 2011

Honorable Senator Joe Paskvan
Co-Chair, Senate Resources committee

RE: SB24

Dear Senator Paskvan:

Katmai Service Providers is a non-profit organization that represents businesses that provide Sportfishing, bear viewing and other Services to visitors to Southwestern Alaska. Following this letter is our membership roster which includes the major National Park Service Commercial Use Authorizations licensed to do business in and around Katmai National Park & Preserve.

Two years ago, we discovered that the Alaska Department of Fish and Game had established a Task Force to create new regulations to address "overcrowding" in the Sportfishing Business/Guide Industry. In spite of the fact that all of our sportfishing business owners and guides were licensed by the Department, our members were never directly notified of the new regulations proposal, public hearing schedule or web based comment opportunities. Furthermore, the Department didn't provide or post web based information on who was on the Task Force, how they were selected, or how to contact them to provide input. Additionally, the proposed regulations submitted by the Task Force were a "mirror image" of the Big Game Commercial Services Board Hunting Guide Regulations which lacked initiative and foresight in addressing issues specific to the Sportfishing industry. These proposed regulatory requirements were simply not applicable to the Sport Fishing industry and we prevailed in our efforts to have the issue dropped……now, to our dismay, it has arrived again in the form of Senate Bill SB24.

Katmai Service Providers is again strongly opposed to SB24 for the following reasons:

1) Once again the entire Sportfishing industry was not timely notified of your proposed bill and asked for our input even though it will affect our very existence. We don't understand why industry input was once again unsolicited particularly in light of what occurred two years ago. Why not get the support of the industry you are proposing to regulate so that reasonable changes may be discussed and implemented?

2) SB24 is the same "mirror image" of the Big Game Board's language that we opposed two years ago because it doesn't fit our industry! If the licensing system truly needs changing,

why not build on what is currently in place rather than copy a 50 year old program designed for the hunting industry.

3) SB24 is too broad and attempts to apply the same regulatory standards to the entire state. If there is a problem in a specific geographical area (i.e. Kenai Peninsula) that may need additional regulation, it could be addressed on a regional basis working through the local borough in conjunction with the Alaska Department of Fish and Game. Sportfishing businesses in Alaska are already highly regulated by local Boroughs, the National Park Service, the U.S. fish and Wildlife Service, the Coast Guard, the Alaska DNR as well as the Alaska Department of Fish and Game.

4) The Senator Sponsor statement tries to push the bill into law by stating that the ADF&G needs the data from the logbooks. We as an industry agree; renew the current law that expires in 2011 that requires us to fill out the logbooks. Furthermore, the bill implies that this new law would help with issues of safety. See item 3 above; this concern has already been addressed with requirements that all guides a USCG license, CPR etc. Lastly, the bill attempts to put the enforcement of regulations on the Board. I don't know that misconduct by fishing guides is a big problem. Regardless, you will still have to have due process. You have to catch violators in the act and prosecute them. That is still going to be up to law enforcement personnel operating in the field, not some board investigator.

In summary, the proposed statewide legislation is too broad and lack's industry insight to improve the current regulatory system. And above all, a compelling need for change has not been established. Therefore, we must strongly oppose SB24 as it will seriously hinder our businesses as well as the stated #1 goal of keeping the Alaska Sportfishing Industry the best in the world!

Thank you for providing Katmai Service Providers the opportunity to comment on SB24. We would be happy to meet with you and any of your constituents if you have any questions or comments in this regard.

Sincerely,

Sonny Petersen

Senate Resources Committee
Senator Thomas Wagoner
Alaska State Capitol, Room #427
Juneau, AK 99801
Sen.Thomas.Wagoner@legis.state.ak.us

Dear Senator Wagoner;

I respectfully submit the following comments in full support of Senate Bill 24.

I am the owner and operator of Alaska Sportsman's Bear Trail Lodge located in King Salmon Alaska. I have been living and operating in the King Salmon area as a sport fishing guide and lodge owner for 25 years. I have been a member of several special task forces put together by prior administrations to address fishery and socio economic concerns in the Bristol Bay area as well as the rest of Alaska. I was an active participant in the original task force put together to create and mold this idea of professionalizing the sport fishing industry and I fully believe in the work we preformed and the resulting bill reflected here.

In light of the fact that the sport fishing industry has grown to proportions beyond anyone's belief who was here in the 70's and 80's, I feel it is time that we take action to insure future growth is controlled and directed in a manner that will protect and preserve all the states fisheries while maintaining an industry environment that is competitive and healthy.

This bill takes into consideration the diversity found in Alaska's guided fisheries and the unique challenges found in various areas of the state. It will not impose unnecessary restrictions to guides in Southwest Alaska that may be needed to conserve fishery resources in Southeast Alaska. It was formed around a foundation that has already proven reliable to the state. It was personally important to me, before I could support this idea, that it would be based on something that was already working in a manner acceptable in an outdoor industry. By using the framework the Big Game industry had laid out previously, I found the foundation I needed to lend my support.

I hope you might find the same comfort in your preliminary review of this bill. I know that there will be opposition to overcome, but I would hope that those who are opposed might also realize that taking initiative to protect, provide and police our own industry will strengthen our industry in the long term. I encourage you to contact me at any point and will be happy to make myself as available as possible to support the content of this bill.

Thank you for the opportunity to comment on this bill, please don't hesitate to contact me for any further information or support you might require.

Sincerely,

Nanci A Morris Lyon

Subject: Support for SB 24

Senator Wagoner,

I am pleased to see that SB 24 has made it to the hearing stage in the Senate Resources Committee. This bill is something that has been needed for a long time in the sport fishing industry and I strongly support the passage of this bill. As a sport fishing guide on the Kenai and surrounding area, as well as a Registered Big Game guide, I can see the need for the sport fishing industry to finally become recognized for what it truly is and SB 24 will accomplish that.

With the State of Alaska investing heavily in fish resources for our industry, there needs to be accountability on our part so that the state can rest assured that we are providing the best product available for consumers as they come to visit our great state. The current licensing standards that we have in statute are not an accurate picture of the typical business model that we see operating in the field at this time and SB 24 reflects what is really happening in today's industry. This will go a long way to providing more accurate information to Fish and Game and the Department of Commerce, Community and Economic Development for future decisions that will shape this industry. I am also concerned that the current minimum qualifications that we have in statute will sunset at the end of this year if this bill does not pass. I guess this means that some will go back to providing services without a first aid card or even liability insurance. I am quite sure that we, as a state, have come further than that. The idea of a professional board is certainly not a new concept. There are several industries in this state that embrace this system and seem to be doing an excellent job of monitoring, collecting information and setting up ethical standards to ensure best business practices for their longevity. These are just a few examples of the benefits of SB 24.

As a member of the original task force that was set up to tackle this issue, I was surprised that such a diverse group of individuals from across the state were able to sit down, communicate and create a comprehensive consensus document that is now known as SB 24. That just shows us that there are industry concerns statewide whether we operate in salt or fresh water that everyone felt needed to be addressed.

Please feel free to contact myself and other members of the task force if you have any particular questions or need any assistance. I am sure that all of us will be willing to help and support your efforts. Thank you.

Senator Wagoner,

As the only commercial representative serving on the State of Alaska workgroup several years ago for the guided sport industry we developed the Sport fish guide Services Board modeled after the big game guide board which had the support of the committee as well as my personal support. Please contact me if you have any questions about SB 24 and we would be happy to discuss the legislation from the commercial fishing perspective.

SEAGO
SouthEast **Alaska** Guides Organization

February 7, 2011

Senator Lesil McGuire
State Capitol Room 125
Juneau AK, 99801

Re: Support for Senate Bill 24

Dear Senator McGuire:

The Southeast Alaska Guides Organization (SEAGO) represents charter operators and lodges throughout the Southeast Alaska region. We are writing to you in support of Senate Bill 24—the Sport Fishing Guide Services Board.

We believe that a Guide Services Board would have the following positive effects on our industry:

1) The program will help to clarify the size and scope of our industry, the extent of its activity, and help to identify individuals or groups that seek to operate outside of regulation.

2) By thus identifying our industry, and with research we understand will be conducted through the program, the board will help to quantify the economic, and socio-economic value and impacts of our industry on Alaska's communities.

3) The Sport Fishing Guide Services Board will bind the industry into a cohesive group that can interact on a credible, influential level with state, federal, and international regulatory agencies.

4) The Board will have authority to regulate, if need be, the level of activity and effort in any given unit of its own definition, thereby protecting and preserving the viability of the industry and the investment of its participants. We understand that any development of regulation for the industry will be done in total transparency with input and influence by industry members and the public at large.

We give Senate Bill 24 our fullest support. Please let us know if there is anything further we can do to facilitate the passing of this bill.

Sincerely,

Forrest Braden
Interim Executive Director, SEAGO

Sent: Friday, February 04, 2011 12:31 PM
To: Sen. Joe Paskvan
Subject: Senate Bill 24

Senator Paskvan,

Thank you for your time in reviewing this letter. I'm the General Manager for Alaska Wildland Adventures in Cooper Landing, AK. We operate, among other things, the Kenai River Sportfishing Lodge that primarily fishes the Kenai (Upper and lower sections) and Resurrection Bay. We employ a staff of eight full time guides that all operate motorized and drift only boats. This coming season will be our 35th year of business of providing fully guided fishing experiences to our clients.

Recently, Senate Bill 24 that has been introduced by Senator McGuire has come to my attention. I am highly concerned about the negative impact this bill will have the future of my business and the ability of our industry to be competitive for the greater good of the customer.

This bill introduces very stringent regulations and creates another level of bureaucracy to already heavily regulated sport fishing fishery. As you are probably aware, the Kenai River is managed by Alaska state parks under the title of Kenai River Special Management Area (KRSMA). This special management area is a partnership with Kenai National Wildlife Refuge (KNWR) and Chugach National Forest (CNF) that manages all guide fishing and non-fishing (scenic rafting) activity on the Kenai River and watershed. KRSMA has established many levels of regulations and laws in order for our company to operate on this body of water. Our fishing guides are required to attend the Kenai River Guide Academy, obtain a U.S. Coast Guard license, enroll in a mandated drug testing program, and pay expensive guide fee's. Alone, the Kenai River Guide Academy requires our staff to attend an eight-hour course that is five days in length during the off-season. This Academy requires our guide staff to take unpaid time off and pay for their own expenses to attend the course in Soldotna, no matter if they live there or not.

On top of these regulations, KNWR (Federal management) has its own requirements and operates a limited entry system that further regulates our business and guide staff. The current requirements and regulations alone should prove that our guides meet the qualification to be professional guides on the river. SB 24 would just add unnecessary and redundant regulations to our fishery that is already heavily regulated and enforced. Currently the Kenai River has a complex management environment and adding another form of regulation, like you propose, will make it even more difficult for our business. Our operating season is only ninety days long because of our short Alaskan summers and

the more government regulations that are add on to that season, the more likely we cannot succeed as business.

I'm concerned that SB 24 would reduce competition for our clients, terminate employment opportunities for our staff and make it uneconomical to operate our business.

Our sportfishing business alone brings in over $600,000 annually in revenue that goes directly back to staff payroll, purchasing local services, and other avenues that trickle back into the surrounding communities in which we operate. Creating a Sport fishing board that only consists of nine members who would be responsible for the entire state regulations of sport fishing guides would not properly represent the diversity that Alaska has with it many different sport fishing waters. What is good for one area is probably not going to be the same for the other. Each fishery area brings its own circumstance and issues that are not the same statewide. This board could lead to more and more regulations when we already have systems and regulations in place that can handle what you propose.

Simply put, the market price point for a guided fishing trip cannot possibly pay for the increased costs this legislation would require.

I would like to learn more about the need for this bill.

Thank you for your time and I look forward to your reply.

Sincerely,

Kyle T. Kelley

Sent: Friday, February 04, 2011 12:34 PM
To: Sen. Joe Paskvan
Subject: SB 24

Dear Senator Paskvan,

I am writing to express my opposition to SB 24, I know you are hearing the bill today and plan on holding it for a later hearing with public testimony but I wanted to let you know early that there is strong opposition to this bill in the guided sport fishing industry.

As a long time guided sport fishing operator (over 25 years) I have seen the regulatory burden grow substantially in scope and cost. I am unaware of what problem this bill is trying to fix other than some lower Kenai River guides trying to level the playing field so every guide is subjected to the same hurdles they have to overcome. The Kenai regulations were enacted because of a substantial overcrowding situation on the river that led to extreme competition for clients and some unscrupulous operators crossing the line of ethical behavior. As you know, in a competitive business environment, businesses that operate unethically, unsafely, or at a level of customer satisfaction lower than their competitors are quickly eliminated. While some level of government regulation is needed, this bill crosses into regulating good behavior at the expense of those that are already operating quality businesses.

Presently operators are subject to the following federal, state and local regulations and more, this bill just adds to that. Currently operators are subject to the following federal regulations...

Operators of motorized vessels must obtain a USCG license which requires a minimum of 360 days of documented boating experience.
Operators must pass physical exams to maintain their license
Operators must document sea time to stay current and renew every five years
Operators and crews must be drug tested and in a random testing program
Operators must adhere to USCG "rules of the road" or risk citation
Operators must know and follow federal fisheries regulations (halibut)
Vessels must be current at all time with required federal safety standards
Operators are subjected to boardings by federal officers
Operators on federal lands (forest service) have additional requirements

State regulations include...

Mandatory business licensing
Mandatory guide licensing
Mandatory insurance requirements
Mandatory First Aid and CPR
Mandatory log books and record keeping
Knowledge and practice of state fishing regulations or we are cited, not the angler
On water and dockside boardings for safety, enforcement and creel surveys and sampling
State Park permitting (cumbersome) for those operating in a park

Local regulation includes...

Local area licensing - cities
Sales tax collection and reporting - cities and boroughs
Head and/or passenger tax i.e. Whittier
Bed tax collection and reporting i.e. Kodiak

In addition most responsible businesses are members of local and state chambers of commerce, CVBs, marketing organizations, charter associations, etc. that encourage and support safe and ethical business practices.

As an operator who also works as a big game transporter and thus deals with the big game commercial services board I can personally attest to the problems with that agency including infighting of the different classifications of operators and an 'exclude them to protect myself' type mentality. This bill is not needed and is not wanted by much of the industry. I e you not to move it.

Thank you for your help on tourism issues! What we need is stable, sustainable marketing dollars that will benefit the industry, create jobs, strengthen families, and provide revenue to our state, not more regulation. Feel free to contact me at any time and thanks for all that you do.

m: Kent John [kent@greatalaska.com]
nt: Friday, February 04, 2011 3:54 PM
To: Sen. Joe Paskvan
Subject: Senate Bill 24

Dear Joe:

I am contacting you regarding Senate Bill 24. My name is Kent John, and I am the sport fishing operations manager for Great Alaska Adventure Lodge. I am also the president of the Alaska Wilderness Recreation and Tourism Association- a consortium of wilderness dependent businesses in the state of Alaska.

Great Alaska Adventure Lodge is currently in our 30th year of operation providing guided sport fishing, adventure travel and wildlife viewing experiences on the Kenai Peninsula, Lake Clark National Park and Denali. We currently employ 12 or more fishing guides annually, with taxable revenue over a million dollars annually.

Our sport fishing operations are focused on the upper, middle and lower Kenai river, with offshore boats running in Cook Inlet and Seward/Resurrection bay.

As I am sure you know, the Kenai river is currently the most highly regulated river in the state, if not the world. All guides are required to complete the mandatory Kenai River Guide Academy- 40 class hours (only offered in the off-season currently, with no on-online version available) combining guide ethics, river access, landowner/boat use issues, salmon biology, regulations and much more.

course is already the most extensive required guide course in the united states, and the limited number of seats available make getting new guides a challenge for many operators- one that we as Kenai River lodge owners and guide services have embraced, for the quality guides that the system produces. This bill would not have the same effect- *it would cripple our industry.*

The upper Kenai river is also a limited entry area, with a limited number of businesses allowed to run sport fishing operation on the watershed. The federal Refuge requirements mean extensive management in addition to the overall Kenai River requirements.

Finally, the saltwater environment has already reached a "limited entry" status as of this coming season.

Senate Bill 24 would add an unnecessary and frankly devastating layer of bureaucracy to this already challenging process for lodge owners across the state. Unlike the trophy hunting industry, which is based upon a model of very few animals being harvested with a very high cost per animal, much of our sport fishing is non-consumptive as we release a large percentage of our catch every year, including 100% of our native trout and Steelhead species. Applying the same model from guided hunting to guided sport fishing would be devastating to our industry.

I urge you not to support this bill. The sport fishing industry is a trickle down economic model that provides millions upon millions of dollars to the local economy, as well as providing local jobs, government taxes, and all without overly leveraging our state's amazing resources. To add this unnecessary and damaging level of bureaucracy would, in my opinion, be the potential tipping point for economic viability for many operators like myself who employ more than one or two guides.

ou would like to discuss this, I am available on my cell phone at 907 398 6372 or by email at Kent@greatalaska.com. I will be calling in to listen to the proceedings on Monday.

Thank you for your time.

Sincerely,

><(((º>.....

Subject: Fw: Concerns About Draft Bill - Sport Fishing Guide Services Board and Licensing Bill/ referenced 26-LS0521/A, dated 2/18/09

Please see my email below to Senator Lesil McGuire regarding the proposed Guide Bill.

Also below are my original concerns regarding this bill when it was first talked about in 2008.

It is hard to see what this bill is trying to accomplish.

- The fish stocks in both fresh and saltwater are expertly managed by the Department of Alaska Fish and Game, who have the ability to introduce emergency measures at local levels if species are threatened.

- If there are examples of over crowding of guides at "hot spots" then these problems should be managed at a local level in the region impacted.

This proposed bill will put many small "ma & pa" operations out of business over night. This will have a devastating impact on many small communities across Alaska.

Please do everything you can to stop this bill.

Regards / thanks

Mark & Miriam Edwards

Subject: Fw: Concerns About Draft Bill - Sport Fishing Guide Services Board and Licensing Bill/ referenced 26-LS0521/A, dated 2/18/09

Senator Lesil McGuire,

Please see below my original comments and concerns regarding the Guide Bill.

I made these comments back in 2008. My comments are just as applicable now as they were back in 2008.

So, please note - I have just invested nearly $50,000 for a halibut charter permit as required by federal regulations which take effect this year.
Under your proposed bill I will not be able to use it. Therefore not only will you be putting me out of business with this proposal I would have also flushed $50,000 down the drain.

We very much hope that you discuss the bill with the senators who looked closely at this a few years ago, and we very much hope that you kill this bill.

Regards

P.O. Box 7482
Ketchikan,
Alaska
AK 99901

6th March 2008

For the attention of Representative Les Gara,

This letter provides our concerns about the Sport Fishing Guide Services Board and Licensing Bill/ referenced 26-LS0521/A, dated 2/18/09 which is currently at the draft stage. If our interpretation of the Bill is correct, my wife and I will be put out of business at the end of 2009, and will be forced to leave southeast Alaska.

About Us

My wife and I, and two children moved to Southeast Alaska in the spring of 2002 in order to get away from big city living and its associated problems. We established a small Bed and Breakfast remote from the road system at Loring in Naha Bay which is about 20 miles north of Ketchikan. Ketchikan is an economically depressed city which has not fully recovered from the closure of the pulp mill in 1997. Loring is a very small remote community with no job opportunities. We have only been able to move to this beautiful area of southeast Alaska by

establishing our own business. If our business fails as a result of changing regulations we will be forced to leave our home in southeast Alaska.

When we established our small B&B, we decided to limit the number of guests to 6, and typically the groups that book with us are smaller and consist of no more than 2, 3 or 4 people. We started by offering lodging and self-guided skiff rentals and we made arrangements for third party charters when required. Hiring of independent charters proved to be difficult and unreliable due to our remote location. Hiring of independent freshwater guides was (and still is) impossible due to the fact that there are no independent guides operate in our area. In the spring of 2007, I obtained my US Coast Guard Captains license, and we started to offer our own saltwater charters and guided freshwater fishing as part of our lodging, with myself being the charter captain and freshwater guide. The increased income, reliability and flexibility arising from offering our own guide and charter service has significantly improved the long term viability of our small business.

We have chosen to keep our business small and diversified in order to limit our impact on our neighbors and the surrounding environment. Most days, when I charter fish, I operate in saltwater areas with no other charter boat or private fishing boat. When I guide on the remote rivers to the north of us, we do not encounter any other anglers whatsoever.

Our business model targets small family groups who want a remote Alaskan experience and who want to experience several styles of Alaskan fishing. A typical booking for example may involve 6 nights accommodation with a day of charter fishing, a day of guided freshwater fishing, a day of self-guided fishing and possibly some non fishing guided days such as marine wildlife tours or nature walks. Overall, saltwater charters and guided freshwater fishing only make up about 30% of our total fishing days, but guests choosing a small number of guided days make up over 90% of our business. In other words, just about all of our guests want at least one of two days of saltwater charters or guided freshwater fishing as part of their longer stay with us.

Any impact on our ability to provide guide and charter and guide services for our guests will have an immediate and devastating impact on our business and way of life. We do not believe that we are unique, and there are many similar small scale "ma and pa" operations who are also threatened by the proposals within the Sport Fish Guide Services Board and Licensing Bill.

Impact of the Sport Fish Guide Services Board and Licensing Bill on Us and Other Small Businesses Like Ours.

Generally, we believe that the Bill as currently written will fail to achieve its objective of protecting the resources whilst providing a safe experience's for visitors and is in fact unnecessary. To date, Alaska's fish resources have been expertly managed by Alaska Department of Fish and Game and there are currently no concerns about fish species under the management of AKF&G. If there are concerns at localized "hot spots" about the number of guides, this should be addressed by legislation that manages this issue at these particular hot spot locations.

Also, we feel that this legislation will unfairly impact small guide businesses and B&B type lodges such as ourselves which are the back bone of the Alaska tourist experience and economy. These businesses are also essential to the Alaskan remote way of life and economy of small communities. This Bill will result in the closure of these small businesses and drive customers to the larger lodges and guide services. This will result in an increase in concentration of fishing effort at specific places of businesses. In other words, the effect of the legislation will be the exact opposite of what is trying to achieve.

We can support the above statements by highlighting our concerns about specific portions of the bill and how they impact us directly. We also know that we are not unique and our concerns are shared by other small businesses such as ours.

First, it is unclear from the language of the bill how existing self-employed guides operating their own business as allowed by the current Combined Sport Fishing Guide -Business License will be grandfathered into the new system of licenses. The Bill makes no mention of this type of guide/business. This in itself is creating a significant degree of stress and uncertainty. We, like other owner operated guide businesses take bookings a number of years in advance. We already have bookings for 2010 and are currently responding to enquiries for 2011. We are now facing the prospect that a future change in regulations that prevents us from providing guide or charter services will leave us in breach of our current obligations.

Section 08.57.110. of the proposed bill says "The Department shall issue a sport fishing guide-outfitter license to a natural person if the person …. (8) has been licensed as and performed the services of a sport fishing assistant guide in the state for at least 20 days in each of three years and received favorable recommendation from at least one licensed sport fishing guide-outfitter".

Taken at its literal sense, this implies that to qualify for the new sport fishing guide-outfitter license you must have worked for someone else for 3 years. This would exclude me and many others like me who are self-employed and who have operated our own businesses with the current Combined Sport Fishing Business and Guide License. It is also totally unrealistic for me to have to work for someone else for the next 3 years to obtain a guide license. Even if there were guide jobs available, the pay would not be sufficient for me to support my family. We would also have to close down our business and loose the goodwill and reputation that we have worked so hard to build up over the last seven years.

reference to a qualifying number of days is also an area of significant concern to me and other small owner/operated guide businesses. My number of guided days in 2007 was around 12. In 2008 it was around 10. I currently have commitments for 2009 for 19 guided days. (added Jan 2011 .... In 2010 we provided 26 days if guiding services.) If 20 days per year over 3 years is in fact to be some form of qualifying criteria, me and many other small self employed owner/operators will be excluded from obtaining a guide license. In effect, small owner/operated guide businesses will be punished for developing small sustainable business models.

For me, and many other similar small owner/operated guide businesses, the impact of not being allowed to guide on our B&B business will be devastating. As stated above, whilst the number of guided fishing days is relatively small compared with larger lodge and guide operations, these guests make up over 90% of our business. If I cannot guide, my wife and I loose over 90% of our entire revenue. This will put us out of business immediately.

We have looked at alternatives and can advise the following:

* It will be impossible for me to take a job as an assistant guide for a three year qualifying period. Even if job opportunities were available, the pay will not be sufficient for me to support my family. In the meantime our existing business is closed down with the loss of seven years good will and reputation.

* Our remote location makes booking third party charters very expensive and unreliable. business cannot withstand the increased costs of hiring independent charter boats. Our remote location makes hiring independent freshwater guides impossible. There are no other independent freshwater guides operating in our area.

* Our business model does not support the salary and overheads associated with directly employing licensed captains and guides. We would need to increase the guest capacity to support more staff. Our premise is not large enough to accommodate additional guests and staff. Increasing the size of our business with more guests and staff will have a negative impact on our neighbors living in our small community (which is the exact opposite of the intent of the Guide Bill!), and local government planning restrictions in fact prevent us from expanding at our current location. Relocating is also not a viable alternative.

As sated above, we do not believe that the Bill will achieve its objectives. We request that this Bill should be withdrawn and legislation drawn up to study and address the issue of excessive guides operating at localized hot spots.

Failing this, if this legislation is going to progress, we request that the following proposal is incorporated into the Bill in order to alleviate the disproportionate effect this Bill will have on small owner operated guide business currently operating with the current Combined Sport Fishing Guide and Business License.

We propose that the following text (highlighted in red) is added to Section 08.57.110.

Section 08.57.110. Sport fishing Guide-Outfitter License

"The Department shall issue a sport fishing-outfitter license to a natural person if the person: …..

re-number clause (8), as (8.1) then add a new text and clause (8.2). so over all this section reads as:

…….. start revised text……

(8.1) has been licensed as and performed the services of a sport fishing assistant guide in the state for at least 20 days in each of three years and received favorable recommendation from at least one licensed sport fishing guide-outfitter.

Or

(8.2) has been licensed as and has performed the services of a combined sport fishing guide and sport fishing business for 3 years, and has maintained the required liability insurance for these 3 years, and has received favorable recommendation from at least one client for each of these 3 years.

…….. end revised text……..

(Note: The above proposal assumes that the legislation will come into effect in 2010 and the minimum qualifying years are 2007, 2008 and 2009.)

We very much hope that our proposals are considered, and if the Bill continues to move forward we very much hope that our amendment is incorporated in the Bill in order to avert the disproportionate and devastating impact that this Bill will have on small owner operated guide businesses.

We very much thank you for your consideration in this matter. If you have any questions, please call me on 907 617 2895.

Regards

SB 24 OVERVIEW January 20, 2012

SB 24: 2012

The Senate Resources Committee heard and held SB 24 Sport Fishing Guiding Services, during the session in 2011.

The Committee subsequently established a Sub-committee, chaired by Senator Wagoner with Senator McGuire and Senator Stedman as members. Additionally, Representatives Austerman and Thompson participated in the Sub-committee.

Emails were sent to as many interested parties as we could determine from the public comments (totaling some 63) on September 13, 2011 directing them to the website for this legislation and asking for their comments. That site is:

http://aksenate.org/mcguire/SB24/

A public hearing was held on October 10, 2011 at the Anchorage LIO.

Changes to SB 24 (27-LS0278\A) in CS SB 24 (27-LS0278\I)

Please note that this analysis is not an authoritative interpretation of changes to the bill. The bill itself is the best statement of its contents.

The following references are to the A version of SB 24

Title The following changes were made to the Title of the bill:

1. No changes.

Section 1 The following changes were made to section 1:

1. Inserted new subsection (b) which expresses legislative intent that the funding for the electronic systems required under section 6 are to come from general funds.

Section 2 The following changes were made to section 2:

1. No changes.

Section 3 Inserted new subsection 3 inserting the Sport Fish Guide Services Board established in section 4 to the list of Boards and Commissions in AS 08.03.01(c) that provides for termination dates (2018) and transition provisions upon termination.

Section 4 The following changes were made to section 3 (new section 4):

1. Deleted language on p. 3 lines 10-18 authorizing the board to adopt a certification examination for unit areas.
2. Inserted new language (I version, p. 2, lines 24-28) requiring one member from each of the major sport fish regions; southeast, southcentral and interior.
3. Inserted new language (I version, p. 3, lines 5-6) prohibiting the public member from having held a commercial fishing license or permit.
4. Inserted new requirements (I version, p. 4, lines 7-13) that the board make recommendations to the legislature on the impact of sport fishing on the state's economy and how to mitigate constraints on the industry to the legislature and the governor.
5. Deleted language on p. 4, lines 11-18 allowing the board to establish guide use units.

6. Inserted new language requiring board approval before a regulation that limits entry to sport fishing guides can go into effect (I version, p. 4, lines 20-22)
7. Inserted new language (I version, p. 4, lines 23-26) requiring that the examination must be offered electronically and that an applicant who fails the examination may immediately retake the examination.
8. Changed the name of license established on p. 4, line 27 from "Sport Fishing-Guide Outfitter" to "Sport Fishing Guide."
9. Changed the sport fishing guide license from a biennial to an annual license.
10. Deleted the requirement on p. 5, line 11-12 to pass a certification examination on guide use units in order to obtain a "sport fishing guide license."
11. Deleted the requirement on p. 5, lines 13-15 to be licensed for three years as an assistant guide in order to obtain a "sport fishing guide license."
12. Deleted the requirement on p. 5, lines 16-17 to satisfy "all additional requirements" established by the board in order to obtain a "sport fishing guide license."
13. Deleted the authorization on p. 5, lines 26-28 authorizing a sport fishing guide to operate as an assistant guide.
14. Changed the language on p. 5, line 31 from "directly supervise" to "supervise or employ" to describe relationship between assistant guide and a sport fishing guide.
15. Deleted the language on p. 6, line 2-3 authorizing a sport fishing guide supervise another guide operating in a unit.
16. Changed the Sport Fishing Outfitter license from a biennial license to an annual license.
17. Deleted the requirement on p. 7, line 8-9 that a person pass a qualification examination in order to receive a Sport Fishing Outfitter license.
18. Deleted the requirement on p. 7, line 9-10 that a person pass a qualification examination for the unit they are operating in to receive a Sport Fishing Outfitter license.
19. Deleted the requirement on p. 7, line 12-13 that a person satisfy "all additional requirements" adopted by the board to get a Sport Fishing Outfitter license.
20. Clarified on p. 7, line 17 that a Sport Fishing Guide, as well as a Sport Fishing Outfitter can provide sport fishing outfitter services.

21. Changed the age limit to become a Sport Fishing Assistant Guide on p. 8, line 5 to 16 years old from 18.
22. Added "or supervises" to the requirement that an assistant guide show proof of employment by a person with a Sport Fishing Guide license to the language on p. 8, line 15-17.
23. Deleted the requirement on p. 8, line 18-19 that a person satisfy "all additional requirements" in order to obtain an assistant guide license.
24. Changed the language from "supervision and employ" to "supervision **or** employ" on p. 8, line 25 to clarify relationship between a Sport Fishing Guide and an Assistant Guide.
25. Changed the language on p. 9, line 7-8 to require an assistant guide to carry proof of "employment or supervision by a currently licensed sport fishing guide.
26. Deleted the language prohibiting the department from granting a renewal to a person who has not maintained their license (p. 10, lines 18-31).
27. Deleted the language on p. 11, line 1-4 relating to a sport fishing guide or assistant guide personally piloting an aircraft.
28. Deleted the language on p. 11, lines 17-19 allowing a guide to be disciplined by the board for breaching an agreement with a client.
29. Deleted the language on p. 11, lines 20-21 allowing a guide to be disciplined by the board for failing to comply with limitations or conditions of professional practice of the licensee.
30. Added new language (I version, p. 11, lines 8-10) allowing the board to notify state or federal agencies if a disciplinary action has been taken.
31. Deleted the language on p. 13, lines 4-8 prohibiting a guide from operating in a unit for which the guide has not been licensed.
32. Removed "assistant guide" from the responsibility section (p. 14, line 31 – p. 15 line 15).
33. Changed the "department of fish and game" on page 15, line 26-27 to "the department" of commerce, community and economic development.

Section 5 The following changes were made to Section 4:

1. No changes.

CS FOR SENATE BILL NO. 24( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR MCGUIRE

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Sport Fishing Guide Services Board and licensing requirements for sport fishing guides, sport fishing outfitters, sport fishing assistant guides, and sport fishing transporters; making conforming amendments; allowing the Department of Fish and Game to collect information on guiding services; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE PURPOSE AND INTENT. (a) The purpose of this Act is to promote the health, safety, and welfare of the guided fish angler and the stability of the sport fish guide industry in the state by regulating the activities of providers of sport fishing guide, outfitter, and transportation services.

(b) It is the intent of the legislature that funding for the establishment of an electronic

system to store forms, records, and reports as required by AS 16.05.396(f), added by sec. 6 of this Act, be appropriated from the general fund.

* **Sec. 2.** AS 08.01.010 is amended by adding a new paragraph to read:

(39) Sport Fishing Guide Services Board (AS 08.57.010).

* **Sec. 3.** AS 08.03.010(c) is amended by adding a new paragraph to read:

(22) Sport Fishing Guide Services Board (AS 08.57.010) - June 30, 2018.

* **Sec. 4.** AS 08 is amended by adding a new chapter to read:

Chapter 57. Sport Fishing Guides and Related Occupations.

Article 1. Sport Fishing Guides, Outfitters, Assistant Guides, and Transporters.

Sec. 08.57.010. Creation and membership of board. (a) For the purposes of licensing and regulating the activities of providers of sport fishing guide, sport fishing outfitter, sport fishing assistant guide and sport fishing transportation services to persons engaging in sport fishing in the interest of the state's fisheries resources, the Sport Fishing Guide Services Board is created. For administrative purposes, the board is in the Department of Commerce, Community, and Economic Development.

(b) The board consists of nine members appointed by the governor and subject to confirmation by the legislature as follows:

(1) five members who are currently licensed sport fishing guides or sport fishing outfitters under this chapter, at least three of whom are currently licensed sport fishing guides; the five members must include

(A) both salt water and fresh water sport fishing guides or sport fishing outfitters; and

(B) at least one person employed as a sport fishing guide or a sport fishing outfitter in the Interior region of the state; at least one person employed as a sport fishing guide or a sport fishing outfitter in the Southcentral region of the state; and at least one person employed as a sport fishing guide or a sport fishing outfitter in the Southeast region of the state;

(2) one member who is a currently licensed sport fishing transporter under this chapter;

(3) one member of the Board of Fisheries;

(4) two public members who

(A) are familiar with the Alaska sport fishing industry;

(B) do not hold a current license issued under this chapter or a current commercial fishing license or permit issued under AS 16;

(C) have not held a commercial fishing license or permit under AS 16; and

(D) are familiar with concerns of private landowners and access issues related to sport fishing activities under this chapter.

(c) The board members serve staggered three-year terms.

(d) Members of the board do not receive compensation, but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

Sec. 08.57.020. Board assistance. State agencies shall provide the board with information, data, or technical assistance requested by the board for the purposes of licensing and regulating the activities of providers of sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transportation services.

Sec. 08.57.030. Duties and powers of board. (a) The board shall

(1) prepare and grade a qualification examination for a sport fishing guide license that requires demonstration that the applicant is qualified generally to provide sport fishing guide and sport fishing outfitter services, and, in particular, possesses knowledge of fishing and sport fishing laws and regulations;

(2) authorize the issuance of a sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license if the applicant for the license satisfies the requirements for the license;

(3) impose appropriate disciplinary sanctions on a licensee under this chapter;

(4) require an applicant for issuance or renewal of any class of license issued under this chapter to state in a written and signed document whether the applicant's right to obtain, or exercise the privileges granted by, a sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license is revoked or suspended in this state or another state or in Canada or Mexico;

(5) regularly disseminate information regarding examinations and

other qualifications for all classes of licenses described in this chapter;

(6) adopt procedural and substantive regulations required by this chapter;

(7) provide for administration of examinations for sport fishing guide licenses at least twice a year;

(8) meet at least twice annually;

(9) report to the governor and the legislature on the economic effect of sport fishing on the state's economy and make recommendations to mitigate constraints, including those of the government, on sport fishing and the sport fishing industry; and

(10) during the first 10 days of the regular legislative session, make an annual report of the board's recommendations to the governor and notify the legislature that the report is available.

(b) The board may adopt regulations as the board considers appropriate to

(1) establish a code of ethics for professions regulated by the board; and

(2) authorize the department to obtain from the Department of Fish and Game a copy of a sport fishing guide's logbooks and other information that is required by AS 16.05.396.

(c) Notwithstanding AS 16.05.020, 16.05.251, and 16.05.258, a regulation that limits entry to sport fishing guides must be approved by the board before it goes into effect.

(d) An examination prepared by the board under (a)(1) of this section must, in a manner accessible to the public, be offered electronically. An applicant who fails an examination may immediately retake the examination on payment of a fee established under AS 08.57.240.

Article 2. Licensing and Certification.

Sec. 08.57.100. Eligibility for licenses. Notwithstanding AS 08.57.110 - 08.57.150, a person may not receive or renew a sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license if the person's right to obtain or exercise the privileges granted by a sport fishing guide,

sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license or registration is suspended or revoked in this state or another state or in Canada or Mexico.

outfitter

Sec. 08.57.110. Sport fishing guide license. (a) On and after January 1, 2014, the department shall issue an annual sport fishing guide license to a natural person if the person

(1) is 18 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a license to carry passengers for hire issued by the United States Coast Guard if, in the provision of sport fishing guide services, the person operates a vessel and the license is required by the United States Coast Guard for the area in which the sport fishing guide provides sport fishing guide services;

(5) holds a current sport fishing license from this state;

(6) has passed a qualification examination approved by the board for a sport fishing guide license;

(7) has applied for a sport fishing guide license on a form provided by the department and paid the license application fee and the sport fishing guide license fee.

(b) A person may not provide sport fishing guide services unless the person holds a current sport fishing guide license.

(c) A sport fishing guide may guide and outfit sport fishing activities and may provide transportation services, personally or through a sport fishing assistant guide, to clients of the sport fishing guide.

(d) A sport fishing guide may

(1) directly provide sport fishing guide services to clients; or

(2) supervise or employ an assistant guide who provides sport fishing assistant guide services to clients.

(e) While engaged in providing sport fishing guide services, a sport fishing

guide shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing guide license;

(2) the current licenses, tags, permits, and reporting forms that are required to engage in the sport fishery for which the sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing guide.

(f) A master sport fishing guide license authorizes a sport fishing guide to use the title master sport fishing guide, but is, for all other purposes under this chapter, a sport fishing guide license. The department shall issue an annual, renewable master sport fishing guide license to a natural person if the person

(1) is, at the time of application for a master sport fishing guide license, currently licensed as a sport fishing guide under this section;

(2) provides an affidavit certifying that the person has operated in the state as a sport fishing guide for at least 12 of the last 15 years, including the year immediately preceding the year in which the person applies for a master sport fishing guide license;

(3) submits 10 letters from clients for whom the person has personally provided sport fishing guiding services that give the sport fishing guide favorable evaluations; and

(4) applies for a master sport fishing guide license on a form provided by the department and pays the application fee, if any.

Sec. 08.57.120. Sport fishing outfitter license. (a) On and after January 1, 2014, the department shall issue an annual sport fishing outfitter license to a natural person if the person

(1) is 18 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a current sport fishing license from this state; and

(5) has applied for a sport fishing outfitter license on a form provided by the department and paid the license application fee and the sport fishing outfitter license fee.

(b) A person may not provide sport fishing outfitter services unless the person holds a current sport fishing guide or sport fishing outfitter license.

(c) A person holding a sport fishing outfitter license may not provide sport fishing guide services or transportation services, personally or through a sport fishing assistant guide, unless the person also holds a sport fishing guide license.

(d) A person holding a sport fishing outfitter license may not be physically present with the client during any portion of the sport fishing activities unless the person also holds a sport fishing guide or sport fishing assistant guide license.

(e) A sport fishing outfitter shall provide an activity report on a form provided by the Department of Fish and Game, which must contain all information the Department of Fish and Game requires.

(f) While engaged in providing sport fishing outfitting services, a sport fishing outfitter shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing outfitter license; and

(2) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing outfitter.

Sec. 08.57.130. Sport fishing assistant guide license. (a) On and after January 1, 2014, the department shall issue an annual sport fishing assistant guide license to a natural person if the person

(1) is 16 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a license to carry passengers for hire issued by the United States Coast Guard if, in the provision of sport fishing guide services, the person

operates a vessel and the license is required by the United States Coast Guard for the area in which the sport fishing assistant guide provides sport fishing guide services;

(5) holds a current sport fishing license from this state;

(6) provides to the department a written employment agreement from a currently licensed sport fishing guide who employs or supervises the sport fishing assistant guide; and

(7) has applied for a sport fishing assistant guide license on a form provided by the department and pays the license application fee and the license fee.

(b) A person may not provide sport fishing assistant guide services unless the persons holds a current sport fishing assistant guide license.

(c) A sport fishing assistant guide may not participate in a guided sport fishing activity unless under the supervision or employ of a currently licensed sport fishing guide.

(d) While providing sport fishing assistant guide services, a sport fishing assistant guide shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing assistant guide license;

(2) the current licenses, tags, permits, and reporting forms that are required to engage in the sport fishery for which the sport fishing assistant guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing assistant guide; and

(4) proof of employment or supervision by a currently licensed sport fishing guide.

Sec. 08.57.140. Sport fishing transporter license. (a) On and after January 1, 2014, the department shall issue an annual sport fishing transporter license to a natural person if the person

(1) applies for a sport fishing transporter license on a form provided by the department; and

(2) pays the license application fee and the license fee.

(b) A person may not provide sport fishing transporter services and accommodations unless the person holds a current sport fishing transporter license.

(c) A sport fishing transporter

(1) may provide transportation services and accommodations to persons engaging in sport fishing in the field

(A) at a permanent lodge, house, or cabin owned by the transporter; or

(B) on a boat with permanent living quarters; - transporter - and

(2) may not provide sport fishing guide, sport fishing outfitter, or sport fishing assistant guide services without holding the appropriate licenses.

(d) While providing transportation services, a sport fishing transporter shall have the following documents readily available for inspection:

(1) a current sport fishing transporter license;

(2) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing transporter.

(e) In this section, "field"

(1) means an area outside of established year-round dwellings, businesses, or other developments associated with a city, town, or village;

(2) does not include permanent hotels or roadhouses on the state road system or state or federally maintained airports.

Sec. 08.57.150. Renewal of sport fishing guide, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter licenses. (a) An applicant for renewal of a sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license shall submit

(1) a request for renewal of the license on a form provided by the department;

(2) an affidavit that all required logbooks and reports due during the term of the prior license have been filed as required; and

(3) the appropriate license fees for the next licensing period.

(b) The department may not renew a sport fishing guide, sport fishing

outfitter, sport fishing assistant guide, or sport fishing transporter license under this section unless

(1) all fees have been paid in full; and

(2) the applicant provides evidence of continued professional competence as required by the board.

Sec. 08.57.160. Financial responsibility and other requirements for sport fishing guides, sport fishing outfitters, and sport fishing transporters. The department shall require satisfactory proof of sport fishing guides, sport fishing outfitters, and sport fishing transporters of a general liability insurance policy or marine protection and indemnity insurance policy, covering the services provided by the person and the person's employees to clients engaged in sport fishing that provides coverage of at least $100,000 for each incident, and $300,000 for all incidents in a year. The person shall maintain the insurance required by this section for the duration of the license.

Article 3. Enforcement.

Sec. 08.57.200. Discipline of a sport fishing guide, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter. (a) The board may impose a disciplinary sanction in a timely manner under (b) of this section and in accordance with AS 08.01.075 if the board finds that a licensee

- felony
- moral turpitude

(1) is convicted of a violation of a state or federal statute or regulation relating to sport fishing or to provision of sport fishing guide, sport fishing assistant guide, sport fishing outfitter, or sport fishing transportation services;

(2) has failed to file records or reports required by law;

(3) has negligently misrepresented or omitted a material fact on an application for any class of sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license.

(b) The board may impose the following disciplinary sanctions, singly or in combination:

(1) permanently revoke a license;

(2) suspend a license for a specified period;

(3) censure or reprimand a licensee;

(4) impose limitations or conditions on the professional practice of a licensee;

(5) impose requirements for remedial professional education to correct deficiencies in the education, training, and skill of the licensee;

(6) impose probation requiring a licensee to report regularly to the board on matters related to the grounds for probation;

(7) impose a civil fine not to exceed $5,000.

(c) If the board imposes a disciplinary sanction under (b) of this section, the board shall, as the board considers appropriate, notify the applicable state and federal agencies.

(d) The board shall permanently revoke a license issued under this chapter if the board finds, after a hearing, that the license was obtained through fraud, deceit, or misrepresentation.

(e) A certified copy of a judgment of conviction of a licensee for an offense is conclusive evidence of the commission of that offense in a disciplinary proceeding instituted against the licensee under this section based on that conviction, regardless of whether the conviction resulted from a plea of nolo contendere or the conviction is under appeal, unless the conviction is overturned on appeal.

(f) A person whose license is suspended or revoked under this section may not engage in the provision of sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transportation services during the period of license suspension or revocation.

(g) If the board revokes a license under this section, the person whose license has been revoked shall immediately surrender the license to the department.

(h) The board may, before a final hearing is held or during an appeal, summarily suspend a licensee from practice of a profession under this chapter for a period of not more than 30 days if the board finds that the licensee poses a clear and immediate danger to the public health and safety. A person is entitled to a hearing before the board to appeal a summary suspension within seven days after the order of suspension is issued. A person may appeal an adverse decision of the board on an appeal of summary suspension to a court of competent jurisdiction.

Sec. 08.57.210. Unlawful acts. (a) It is unlawful for a

(1) person who is licensed under this chapter intentionally to obstruct or hinder or attempt to obstruct or hinder lawful sport fishing engaged in by a person who is not a client of the person;

(2) sport fishing assistant guide knowingly to guide or outfit sport fishing activities except while employed and supervised by a sport fishing guide;

(3) person who is licensed under this chapter knowingly to enter or remain on private, state, or federal land unlawfully during the course of providing sport fishing guide, sport fishing outfitter, sport fishing assistant guide, or sport fishing transportation services;

(4) person who is licensed under this chapter to

(A) commit or aid in the commission of a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation; or

(B) permit the licensee's client to commit a violation of a regulation adopted under this chapter or a state or federal sport fishing statute or regulation that the licensee knows or should know is being or will be committed without

(i) attempting to prevent it, short of using force; and

(ii) promptly reporting the violation to the Department of Public Safety by the most expeditious reasonable means available;

(5) person without a current sport fishing guide license knowingly to guide or advertise as or represent to be a sport fishing guide;

(6) person without a current master sport fishing guide license knowingly to advertise as or represent to be a master sport fishing guide;

(7) person without a current sport fishing guide license or sport fishing outfitter license knowingly to outfit or advertise as or represent to be a sport fishing outfitter;

(8) person without a current sport fishing guide or sport fishing assistant guide license knowingly to provide sport fishing assistant guide services;

(9) person without a current sport fishing guide or transporter license

knowingly to provide sport fishing transportation services or advertise as or represent to be a sport fishing transporter;

(10) person knowingly to provide sport fishing guide, sport fishing assistant guide, sport fishing outfitter, or sport fishing transportation services during the period for which the person's license to provide that service is suspended or revoked;

(11) person who is licensed as a sport fishing transporter, or who provides transportation services under a transporter license, knowingly to accompany or direct a client of the person in sport fishing activities except as necessary to perform the specific duties of transporting, embarking, or disembarking a client or clients, the client's or clients' equipment, or fish harvested by the client or clients.

(b) Except as provided in (c) - (e) of this section, in addition to disciplinary sanctions imposed under AS 08.57.200, a person who commits an offense set out in (a) of this section, is guilty of a class A misdemeanor.

(c) A person licensed as a sport fishing guide but not as a master sport fishing guide who, without any culpable mental state, advertises as or represents to be a master sport fishing guide is guilty of a violation.

(d) In addition to disciplinary sanctions imposed under AS 08.57.200, a person who, without any culpable mental state, violates AS 08.57.110(e) is guilty of a violation.

(e) In addition to disciplinary sanctions imposed under AS 08.57.200, a person who knowingly violates AS 08.57.110(e) is, for a

(1) first offense in a three-year period, guilty of a violation; and

(2) second or subsequent offense in a three-year period, guilty of a class B misdemeanor.

(f) In addition to any other penalty provided by law, a court may revoke a license issued under this chapter of a person who is convicted under this chapter, and equipment may be seized and forfeited in accordance with AS 16.05.190 and 16.05.195.

Sec. 08.57.220. Responsibility of sport fishing guide, outfitter, or transporter for violations. A sport fishing guide, sport fishing outfitter, or sport

fishing transporter is equally responsible

(1) under AS 08.57.200 for a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation, committed by a person while in the course of the person's employment with the sport fishing guide, sport fishing outfitter, or sport fishing transporter; or

(2) under AS 08.57.210 for a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation, committed by a person while in the course of the person's employment with the sport fishing guide, sport fishing outfitter, or sport fishing transporter if the sport fishing guide, sport fishing outfitter, or sport fishing transporter expressly or impliedly authorizes an unlawful act.

Sec. 08.57.230. Sport fishing guide, outfitter, and transporter records. (a) A person who holds a sport fishing guide license issued under AS 08.57.110, a sport fishing outfitter license issued under AS 08.57.120, or a sport fishing transporter license issued under AS 08.57.140 shall comply with the reporting requirements of AS 16.05.396.

(b) A person who is required to complete a report under this section may not provide false information or omit material facts in a report.

(c) A person who is required to complete a report under this section may not be issued a license under AS 08.57.110 unless the Department of Fish and Game has received all reports required under AS 16.05.396 and this section.

Sec. 08.57.240. License and examination fees. (a) The department shall set fees under AS 08.01.065 for a

(1) sport fishing guide license;

(2) sport fishing outfitter license;

(3) sport fishing assistant guide license;

(4) sport fishing transporter license;

(5) license application fee.

(b) In setting license fees, the department shall consider the cost of reporting and reimburse the Department of Fish and Game for costs associated with reporting.

(c) The license fee for the sport fishing guide, outfitter, or assistant guide

license is in addition to the fee required for a sport fishing license issued by the Department of Fish and Game under AS 16.05.340.

(d) An applicant for a qualifying examination for a sport fishing guide license shall pay a fee established by regulations adopted under AS 08.01.065.

(e) The fee for the sport fishing transporter license must be equal to the fee for the sport fishing guide.

(f) The amount of the license fee for a nonresident may not be less than two times the amount of the license fee for a resident and may be increased by the board by regulation.

Article 4. General Provisions.

Sec. 08.57.490. Definitions. In this chapter,

(1) "board" means the Sport Fishing Guide Services Board;

(2) "client" means a person who is a member of a fishing party that engages or uses a person to provide sport fishing guide services and who is not a licensed sport fishing guide or sport fishing assistant guide;

(3) "compensation"

(A) means direct or indirect payment, remuneration, or other benefits received in return for services, regardless of the source; in this subparagraph, "benefits" includes wages or other employment benefits given directly or indirectly to an individual or organization, and any dues, payments, fees, or other remuneration given directly or indirectly to a fishing club, business, organization, or individual who provides sport fishing guide services;

(B) does not include reimbursement for the actual daily expenses for fuel, food, or bait;

(4) "department" means the Department of Commerce, Community, and Economic Development;

(5) "fish" means any species of aquatic finfish, invertebrate, or amphibian, in any stage of its life cycle, found in or introduced into the state, and includes any part of the aquatic finfish, invertebrate, or amphibian;

(6) "sport fishing" means the taking of or attempting to take for personal use, and not for sale or barter, any fresh water, marine, or anadromous fish by

hook and line held in the hand, or by hook and line with the line attached to a pole or rod that is held in the hand or closely attended, or by other means defined by the Board of Fisheries;

(7) "sport fishing guide services"

(A) means assistance, for compensation or with the intent to receive compensation, to a person to take or to attempt to take fish by accompanying or physically directing a person during sport fishing activities;

(B) does not include services provided by an assistant, deckhand, or similar person who works directly under the supervision of and on the same vessel as the sport fishing guide or sport fishing assistant guide;

(8) "sport fishing outfitter services" means the provision, for compensation or with the intent to receive compensation, of vessels and sport fishing equipment to one or more persons who use them for sport fishing activities; in this paragraph, the provision of vessels and sport fishing equipment includes rentals, leases, or other exchanges where transfer of ownership does not occur and the vessel or sport fishing equipment is returned to the provider;

(9) "take" means taking, pursuing, fishing, or in any manner disturbing, capturing, or killing or attempting to take, pursue, fish, or in any manner capture or kill fish;

(10) "transportation services" means the carriage, for compensation or with the intent to receive compensation, of persons engaged in sport fishing, their equipment, or fish harvested to or from sport fishing activities and the advertising of these services; "transportation services" does not include the carriage by aircraft of persons engaged in sport fishing, their equipment, or fish harvested

(A) on nonstop flights between airports listed in the Alaska supplement to the Airmen's Guide published by the Federal Aviation Administration; or

(B) by an air taxi operator or air carrier for which the carriage of those persons, their equipment, or fish harvested is only an incidental portion of its business; in this subparagraph, "incidental" means transportation provided to those persons by an air taxi operator or air carrier who does not

(i) charge more than the usual tariff or charter rate for the carriage of those persons, their equipment, or fish harvested;

(ii) advertise transportation services or sport fishing activities to the public; in this sub-subparagraph, "advertise" means soliciting persons seeking to engage in sport fishing to be customers of an air taxi operator or air carrier for the purpose of providing air transportation for sport fishing activities through the use of print or electronic media, including advertising at trade shows, or the use of sport fishing broker services or other promotional services;

(11) "vessel" means a floating craft, powered, towed, rowed, or otherwise propelled, that is used for delivering, landing, or taking fish within the jurisdiction of the state.

*** Sec. 5.** AS 16.05.395 is amended to read:

Sec. 16.05.395. Sport fishing vessel registration. For calendar year 2005 and subsequent calendar years, a person may not use a vessel to provide sport fishing services under **AS 08.57** [AS 16.40.260 - 16.40.299] unless the vessel is registered with the department and proof of registration is attached to and clearly visible on the vessel while the vessel is used to provide sport fishing services. The department shall register vessels used to provide sport fishing services, and provide proof of registration, without charge. The department may adopt regulations as the department finds necessary to implement this section.

*** Sec. 6.** AS 16.05 is amended by adding a new section to read:

Sec. 16.05.396. Sport fishing guide, sport fishing outfitter, and sport fishing transporter records; confidentiality of records and activity reports. (a) The department may collect information from sport fishing guides, including

(1) the name and license number of each vessel that is used in providing sport fishing guide services;

(2) the amount of fishing effort, catch, and harvest by clients of a sport fishing guide;

(3) the locations fished during the provision of sport fishing guide services; and

(4) other information that the department requires by regulation.

(b) The department may collect information from sport fishing outfitters and transporters.

(c) Information collected under this section is confidential to the extent provided under AS 16.05.815 or AS 40.25.110.

(d) The department may adopt regulations under AS 44.62 (Administrative Procedure Act) that it considers necessary to implement this section.

(e) The department shall make sport fishing log books received under this section and activity reports received under AS 08.57.140 available for law enforcement purposes to state agencies, federal law enforcement agencies, and other law enforcement agencies on request.

(f) Forms, records, and reports required under this chapter shall be distributed, received, and stored electronically.

(g) A person who is required to provide information under this section may not provide false information or omit material facts in a report or other information provided under this section.

*** Sec. 7.** AS 25.27.244(s)(2) is amended to read:

(2) "license"

(A) means, except as provided in (B) of this paragraph, a license, certificate, permit, registration, or other authorization that, at the time of issuance, will be valid for more than 150 days and that may be acquired from a state agency to perform an occupation, including the following:

(i) license relating to boxing or wrestling under AS 05.10;

(ii) authorization to perform an occupation regulated under AS 08;

(iii) teacher certificate under AS 14.20;

(iv) authorization under AS 18.08 to perform emergency medical services;

(v) asbestos worker certification under AS 18.31;

(vi) boiler operator's license under AS 18.60.395;

(vii) certificate of fitness under AS 18.62;

(viii) hazardous painting certification under AS 18.63;

(ix) security guard license under AS 18.65.400 - 18.65.490;

(x) license relating to insurance under AS 21.27;

(xi) employment agency permit under AS 23.15.330 - 23.15.520;

(xii) registration as a broker-dealer, an agent, a state investment adviser, or an investment adviser representative under AS 45.55.030;

(xiii) certification as a pesticide applicator under AS 46.03.320;

(xiv) certification as a storage tank worker or contractor under AS 46.03.375;

(xv) certification as a water and wastewater works operator under AS 46.30;

(xvi) commercial crewmember fishing license under AS 16.05.480 other than an entry permit or interim-use permit under AS 16.43;

(xvii) fish transporter permit under AS 16.05.671;

(xviii) sport fishing **guide license under AS 08.57.110** [OPERATOR LICENSE UNDER AS 16.40.260];

(xix) sport fishing **outfitter** [GUIDE] license under **AS 08.57.120** [AS 16.40.270];

(B) does not include

(i) a vessel license issued under AS 16.05.490 or 16.05.530;

(ii) [REPEALED

(iii)] a business license issued under AS 43.70;

(iii) [(iv)] an entry permit or interim-use permit issued under AS 16.43; or

(iv) [(v)] a driver's license issued under AS 28.15;

*** Sec. 8.** AS 41.21.506(b) is amended to read:

(b) The commissioner shall adopt regulations under AS 44.62 (Administrative Procedure Act) that are necessary to achieve the purposes of AS 41.21.500 - 41.21.514 and to implement the plan adopted under (a) of this section. The regulations must

(1) designate incompatible uses and prohibit or restrict them; and

(2) establish a registration, licensing, or comparable procedure for professional fishing guides and **the** [SUCH] additional fishing guide controls **that** [AS] the commissioner considers necessary; notwithstanding the requirements established by the commissioner to implement this paragraph, the commissioner shall establish a procedure by which the holder of a valid sport fishing **guide** [OPERATOR] license issued under **AS 08.57.110** [AS 16.40.260] may petition for, and the director of the division of parks, or the director's designee, shall expeditiously issue, a waiver to allow the sport fishing **guide** [OPERATOR] license holder **access to the** [TO USE THE SERVICES IN THE] Kenai River Special Management Area **for guide services even if the guide** [OF A GUIDE LICENSED UNDER AS 16.40.270 WHO] has not completed the procedures and additional controls that are required by the department under this paragraph; the waiver authorized in this paragraph applies only for the duration of the sport fishing season during which the waiver application is submitted and only if the sport fishing operator license holder

(A) employing the licensed guide has lost the services of a licensed guide because of unforeseen circumstances; and

(B) is unable to hire as a replacement an available licensed guide who has satisfied all the requirements of this paragraph, including those required by regulation.

*** Sec. 9.** Section 8, ch. 70, SLA 2004, as amended by sec. 3, ch. 61, SLA 2009, sec. 1, ch. 48, SLA 2010, and sec. 1, ch. 13, SLA 2011, is amended to read:

Sec. 8. AS 16.05.340(a)(26); AS 16.40.260, 16.40.270, 16.40.280, 16.40.290, 16.40.299 [; AS 25.27.244(s)(2)(A)(xviii), AND 25.27.244(s)(2)(A)(xix)] are repealed January 1, **2015** [2013].

*** Sec. 10.** Sections 22 and 31, ch. 58, SLA 2010, are repealed.

*** Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

INITIAL APPOINTMENT OF MEMBERS OF THE SPORT FISHING GUIDE SERVICES BOARD. (a) Notwithstanding AS 08.57.010(c), added by sec. 4 of this Act, and AS 39.05.055, the governor shall appoint the initial members of the Sport Fishing Guide Services Board to serve terms as follows and shall designate the terms to be served by each person appointed:

(1) three members serve for one year;

(2) three members serve for two years; and

(3) three members serve for three years.

(b) Notwithstanding AS 08.57.010(b), the governor shall appoint persons who are active, licensed registered guides under AS 16.40.260 - 16.40.299 at the time of appointment to fill the initial registered guide positions on the Sport Fishing Guide Services Board.

*** Sec. 12.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICATIONS. The Sport Fishing Guide Services Board shall

(1) accept applications for sport fishing guide licenses, sport fishing outfitter licenses, sport fishing assistant guide licenses, and sport fishing transporter licenses, and be available to administer, not later than January 1, 2015, the required examination under AS 08.57.030(a)(1), as added by sec. 4 of this Act; and

(2) issue, effective January 1, 2015, to those applicants under (1) of this section who satisfy all requirements for a particular license a valid sport fishing guide license, sport fishing outfitter license, sport fishing assistant guide license, or sport fishing transporter license.

*** Sec. 13.** Section 32, ch. 58, SLA 2010, is repealed.

*** Sec. 14.** Sections 1, 2, 3, 11, and 12, and AS 08.57.010, 08.57.020, 08.57.030(a)(1), 08.57.030(a)(6), 08.57.030(a)(8), 08.57.030(b)(1), 08.57.240, and 08.57.490, as enacted by sec. 4 of this Act, take effect January 1, 2013.

*** Sec. 15.** Except as provided in sec. 14 of this Act, this Act takes effect January 1, 2015.

SENATE BILL NO. 24

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR MCGUIRE

Introduced: 1/19/11
Referred: Resources, Finance

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Sport Fishing Guide Services Board and licensing requirements for sport fishing guide-outfitters, sport fishing outfitters, sport fishing assistant guides, and sport fishing transporters; making conforming amendments; allowing the Department of Fish and Game to collect information on guiding services; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PURPOSE. The purpose of this Act is to promote the health, safety, and welfare of the guided fish angler and the stability of the sport fish guide industry in the state by regulating the activities of providers of sport fishing guide, outfitter, and transportation services.

*** Sec. 2.** AS 08.01.010 is amended by adding a new paragraph to read:

(39) Sport Fishing Guide Services Board (AS 08.57.010).

* **Sec. 3.** AS 08 is amended by adding a new chapter to read:

Chapter 57. Sport Fishing Guide-outfitters and Related Occupations.

Article 1. Sport Fishing Guide-outfitters, Outfitters, Assistant Guides, and Transporters.

Sec. 08.57.010. Creation and membership of board. (a) For the purposes of licensing and regulating the activities of providers of sport fishing guide, sport fishing outfitter, sport fishing assistant guide and sport fishing transportation services to persons engaging in sport fishing in the interest of the state's fisheries resources, the Sport Fishing Guide Services Board is created. For administrative purposes, the board is in the Department of Commerce, Community, and Economic Development.

(b) The board consists of nine members appointed by the governor and subject to confirmation by the legislature as follows:

(1) five members who are currently licensed sport fishing guide-outfitters or sport fishing outfitters under this chapter, representing both salt water and fresh water sport fishing guide-outfitters or sport fishing outfitters; at least three of the five members shall be currently licensed sport fishing guide-outfitters;

(2) one member who is a currently licensed sport fishing transporter under this chapter;

(3) one member of the Board of Fisheries;

(4) two public members who

(A) are familiar with the Alaska sport fishing industry;

(B) do not hold a current license issued under this chapter or a current commercial fishing license issued under AS 16; and

(C) are familiar with concerns of private landowners and access issues related to sport fishing activities under this chapter.

(c) The board members serve staggered three-year terms.

(d) Members of the board do not receive compensation, but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

Sec. 08.57.020. Board assistance. State agencies shall provide the board with information, data, or technical assistance requested by the board for the purposes of licensing and regulating the activities of providers of sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transportation

services.

Sec. 08.57.030. Duties and powers of board. (a) The board shall

(1) prepare and grade

(A) a qualification examination, in written and oral form, for a sport fishing guide-outfitter and sport fishing outfitter license that requires demonstration that the applicant is qualified generally to provide sport fishing guide-outfitter and sport fishing outfitter services, as appropriate, and, in particular, possesses knowledge of fishing and sport fishing laws and regulations; and

(B) a certification examination, in written and oral form, for each sport fish guide use unit in which the sport fishing guide-outfitter or sport fishing outfitter intends to provide services; the examination must require demonstration that the applicant is qualified to provide sport fishing guide-outfitter or sport fishing outfitter, as appropriate, in the sport fish guide use unit for which the applicant seeks to be certified and, in particular, must require demonstration that the applicant possesses knowledge of the terrain, water, transportation problems, fish, and other characteristics of the sport fish guide use unit;

(2) authorize the issuance of a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license if the applicant for the license satisfies the requirements for the license;

(3) impose appropriate disciplinary sanctions on a licensee under this chapter;

(4) require an applicant for issuance or renewal of any class of license issued under this chapter to state in a written and signed document whether the applicant's right to obtain, or exercise the privileges granted by, a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license is revoked or suspended in this state or another state or in Canada or Mexico;

(5) regularly disseminate information regarding examinations and other qualifications for all classes of licenses described in this chapter;

(6) adopt procedural and substantive regulations required by this chapter;

(7) provide for administration of examinations for sport fishing guide-outfitter and sport fishing outfitter licenses at least twice a year; and

(8) meet at least twice annually.

(b) The board may adopt regulations as the board considers appropriate to

(1) establish a code of ethics for professions regulated by the board;

(2) authorize the department to obtain a copy of a sport fishing guide-outfitter's logbooks or outfitter service records from the Department of Fish and Game that are required by AS 16.05.396;

(3) establish sport fish guide use units and registration requirements for sport fish guide use units;

(4) establish, as necessary for resource conservation purposes and to promote economic stability within the sport fish guide industry,

(A) the maximum number of licensees who may operate in a sport fish guide use unit; and

(B) a concessionaire program to achieve the maximum number of licensees in sport fish guide use units.

Is there currently any limit?

Article 2. Licensing and Certification.

Sec. 08.57.100. Eligibility for licenses. Notwithstanding AS 08.57.110 - 08.57.150, a person may not receive or renew a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license if the person's right to obtain or exercise the privileges granted by a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license or registration is suspended or revoked in this state or another state or in Canada or Mexico.

Sec. 08.57.110. Sport fishing guide-outfitter license. (a) On and after January 1, 2013, the department shall issue a biennial sport fishing guide-outfitter license to a natural person if the person

(1) is 18 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident

alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a license to carry passengers for hire issued by the United States Coast Guard if, in the provision of sport fishing guide services, the person operates a vessel and the license is required by the United States Coast Guard for the area in which the sport fishing guide-outfitter provides sport fishing guide services;

(5) holds a current sport fishing license from this state;

(6) has passed a qualification examination for a sport fishing guide-outfitter license;

(7) has passed a certification examination prepared by the board for the sport fish guide use unit or units in which the person operates;

(8) has been licensed as and performed the services of a sport fishing assistant guide in the state for at least 20 days in each of three years and received a favorable recommendation from at least one licensed sport fishing guide-outfitter;

(9) satisfies all additional requirements adopted in regulation by the board;

(10) has applied for a sport fishing guide-outfitter license on a form provided by the department and paid the license application fee and the sport fishing guide-outfitter license fee.

(b) A person may not provide sport fishing guide-outfitter services unless the person holds a current sport fishing guide-outfitter license.

(c) A sport fishing guide-outfitter may guide or outfit sport fishing activities and may provide transportation services, personally or through a sport fishing assistant guide, to clients of the sport fishing guide-outfitter.

(d) A person who is licensed as a sport fishing guide-outfitter may be employed by another sport fishing guide-outfitter to perform the functions of a sport fishing assistant guide and may operate as a sport fishing assistant guide.

(e) A sport fishing guide-outfitter may

(1) directly provide sport fishing guide-outfitter services to clients;

(2) directly supervise an assistant guide who provides sport fishing

assistant guide services to clients; or

(3) directly supervise a sport fishing guide-outfitter who is not certified for the sport fish guide use unit in which the sport fishing guide-outfitter is operating.

(f) While engaged in providing sport fishing guide-outfitter services, a sport fishing guide-outfitter shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing guide-outfitter license;

(2) the current licenses, tags, permits, and reporting forms that are required to engage in the sport fishery for which the sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing guide-outfitter.

(g) A master sport fishing guide-outfitter license authorizes a sport fishing guide-outfitter to use the title master sport fishing guide-outfitter, but is, for all other purposes under this chapter, a sport fishing guide-outfitter license. The department shall issue a biennial, renewable master sport fishing guide-outfitter license to a natural person if the person

(1) is, at the time of application for a master sport fishing guide-outfitter license, currently licensed as a sport fishing guide-outfitter under this section;

(2) provides an affidavit certifying that the person has operated in the state as a sport fishing guide-outfitter for at least 12 of the last 15 years, including the year immediately preceding the year in which the person applies for a master sport fishing guide-outfitter license;

(3) submits 10 letters from clients for whom the person has personally provided sport fishing guiding or outfitting services that give the sport fishing guide-outfitter favorable evaluations; and

(4) applies for a master sport fishing guide-outfitter license on a form provided by the department and pays the application fee, if any.

Sec. 08.57.120. Sport fishing outfitter license. (a) On and after January 1, 2013, the department shall issue a biennial sport fishing outfitter license to a natural

person if the person

(1) is 18 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a current sport fishing license from this state;

(5) has passed a qualification examination for a sport fishing outfitter license;

(6) has passed a certification examination prepared by the board for the sport fish guide use unit in which the person operates;

(7) satisfies all additional requirements adopted in regulation by the board; and

(8) has applied for a sport fishing outfitter license on a form provided by the department and paid the license application fee and the sport fishing outfitter license fee.

(b) A person may not provide sport fishing outfitter services unless the person holds a current sport fishing outfitter license.

(c) A sport fishing outfitter may not provide sport fishing guide-outfitter services or transportation services, personally or through a sport fishing assistant guide.

(d) A sport fishing outfitter may not be physically present with the client during any portion of the sport fishing activities.

(e) A sport fishing outfitter shall provide an activity report on a form provided by the Department of Fish and Game, which must contain all information the Department of Fish and Game requires.

(f) While engaged in providing sport fishing outfitting services, a sport fishing outfitter shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing outfitter license; and

(2) a driver's license or similar identification card that is issued by a

state or federal agency and that bears a photograph of the sport fishing outfitter.

Sec. 08.57.130. Sport fishing assistant guide license. (a) On and after January 1, 2013, the department shall issue a biennial sport fishing assistant guide license to a natural person if the person

(1) is 18 years of age or older;

(2) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(3) is certified in first aid and cardiopulmonary resuscitation by the American Red Cross or a similar organization;

(4) holds a license to carry passengers for hire issued by the United States Coast Guard if, in the provision of sport fishing guide services, the person operates a vessel and the license is required by the United States Coast Guard for the area in which the sport fishing assistant guide provides sport fishing guide services;

(5) holds a current sport fishing license from this state;

(6) provides to the department a written employment agreement from a currently licensed sport fishing guide-outfitter who employs the sport fishing assistant guide or has passed a sport fishing assistant guide course approved by the board;

(7) satisfies all additional requirements adopted in regulation by the board; and

(8) has applied for a sport fishing assistant guide license on a form provided by the department and pays the license application fee and the license fee.

(b) A person may not provide sport fishing assistant guide services unless the persons holds a current sport fishing assistant guide license.

(c) A sport fishing assistant guide may not participate in a guided sport fishing activity unless under the supervision and employ of a currently licensed sport fishing guide-outfitter.

(d) While providing sport fishing assistant guide services, a sport fishing assistant guide shall have the following documents readily available for inspection on request of a representative of the Department of Fish and Game or a peace officer of the state:

(1) a current sport fishing assistant guide license;

(2) the current licenses, tags, permits, and reporting forms that are required to engage in the sport fishery for which the sport fishing assistant guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing assistant guide; and

(4) proof of employment by a currently licensed sport fishing guide-outfitter.

Sec. 08.57.140. Sport fishing transporter license. (a) On and after January 1, 2013, the department shall issue a biennial sport fishing transporter license to a natural person if the person is a licensed big game transporter under AS 08.54.650 or

(1) applies for a sport fishing transporter license on a form provided by the department;

(2) pays the license application fee and the license fee; and

(3) satisfies all additional requirements adopted in regulation by the board.

(b) A person may not provide sport fishing transporter services and accommodations unless the person holds a current sport fishing transporter license.

(c) A sport fishing transporter

(1) may provide transportation services and accommodations to persons engaging in sport fishing in the field

(A) at a permanent lodge, house, or cabin owned by the transporter; or

(B) on a boat with permanent living quarters;

(2) may not provide sport fishing guide-outfitter, sport fishing outfitter, or sport fishing assistant guide services without holding the appropriate licenses.

(d) While providing transportation services, a sport fishing transporter shall have the following documents readily available for inspection:

(1) a current sport fishing transporter license;

(2) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing transporter.

(e) In this section, "field"

(1) means an area outside of established year-round dwellings, businesses, or other developments associated with a city, town, or village;

(2) does not include permanent hotels or roadhouses on the state road system or state or federally maintained airports.

Sec. 08.57.150. Renewal of sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter licenses. (a) An applicant for renewal of a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license shall submit

(1) a request for renewal of the license on a form provided by the department;

(2) an affidavit that all required logbooks and reports due during the term of the prior license have been filed as required; and

(3) the appropriate license fees for the next licensing period.

(b) The department may not renew a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license under this section unless all fees have been paid in full.

(c) The department may not issue a license to a person who held a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license and who has failed to renew the license under this section for four consecutive years unless the person again meets the qualifications for initial issuance of the license under AS 08.57.110 - 08.57.140, as appropriate.

Sec. 08.57.160. Financial responsibility and other requirements for sport fishing guide-outfitters, sport fishing outfitters, and sport fishing transporters. (a) The department shall require satisfactory proof of sport fishing guide-outfitters, sport fishing outfitters, and sport fishing transporters of a general liability insurance policy or marine protection and indemnity insurance policy, covering the services provided by the person and the person's employees to clients engaged in sport fishing that provides coverage of at least $100,000 for each incident, and $300,000 for all incidents in a year. The person shall maintain the insurance required by this subsection for the duration of the license.

(b) If a sport fishing guide-outfitter or sport fishing assistant guide personally pilots an aircraft to transport clients during the provision of sport fishing activities, the sport fishing guide-outfitter or sport fishing assistant guide shall have a commercial pilot's rating or a minimum of 500 hours of flying time in the state.

Article 3. Enforcement.

Sec. 08.57.200. Discipline of a sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter. (a) The board may impose a disciplinary sanction in a timely manner under (b) of this section and in accordance with AS 08.01.075 if the board finds that a licensee

(1) is convicted of a violation of a state or federal statute or regulation relating to sport fishing or to provision of sport fishing guide-outfitter, sport fishing assistant guide, sport fishing outfitter, or sport fishing transportation services;

(2) has failed to file records or reports required by law;

(3) has negligently misrepresented or omitted a material fact on an application for any class of sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter license;

(4) has breached an agreement with a client to provide sport fishing guide-outfitter, sport fishing outfitter, or sport fishing transportation services to a client; or

(5) has failed to comply with limitations or conditions of the professional practice of the licensee.

(b) The board may impose the following disciplinary sanctions, singly or in combination:

(1) permanently revoke a license;

(2) suspend a license for a specified period;

(3) censure or reprimand a licensee;

(4) impose limitations or conditions on the professional practice of a licensee;

(5) impose requirements for remedial professional education to correct deficiencies in the education, training, and skill of the licensee;

(6) impose probation requiring a licensee to report regularly to the

board on matters related to the grounds for probation;

(7) impose a civil fine not to exceed $5,000.

(c) The board shall permanently revoke a license issued under this chapter if the board finds, after a hearing, that the license was obtained through fraud, deceit, or misrepresentation.

(d) A certified copy of a judgment of conviction of a licensee for an offense is conclusive evidence of the commission of that offense in a disciplinary proceeding instituted against the licensee under this section based on that conviction, regardless of whether the conviction resulted from a plea of nolo contendere or the conviction is under appeal, unless the conviction is overturned on appeal.

(e) A person whose license is suspended or revoked under this section may not engage in the provision of sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transportation services during the period of license suspension or revocation.

(f) If the board revokes a license under this section, the person whose license has been revoked shall immediately surrender the license to the department.

(g) The board may, before a final hearing is held or during an appeal, summarily suspend a licensee from practice of a profession under this chapter for a period of not more than 30 days if the board finds that the licensee poses a clear and immediate danger to the public health and safety. A person is entitled to a hearing before the board to appeal a summary suspension within seven days after the order of suspension is issued. A person may appeal an adverse decision of the board on an appeal of summary suspension to a court of competent jurisdiction.

Sec. 08.57.210. Unlawful acts. (a) It is unlawful for a

(1) person who is licensed under this chapter to intentionally obstruct or hinder or attempt to obstruct or hinder lawful sport fishing engaged in by a person who is not a client of the person;

(2) sport fishing assistant guide to knowingly guide or outfit sport fishing activities except while employed and supervised by a sport fishing guide-outfitter;

(3) person who is licensed under this chapter to knowingly enter or

remain on private, state, or federal land unlawfully during the course of providing sport fishing guide-outfitter, sport fishing outfitting, sport fishing assistant guide, or sport fishing transportation services;

(4) sport fishing guide-outfitter to knowingly engage in providing sport fishing guide services outside of a sport fish guide use unit for which the sport fishing guide-outfitter is certified unless the registration requirement for the unit has been suspended by the board or unless the board has not adopted by regulation a registration requirement for a sport fish guide use unit;

(5) person to knowingly guide or outfit without having a current sport fishing guide-outfitter, sport fishing outfitter, or sport fishing assistant guide license and a valid Alaska sport fishing license in actual possession;

(6) person who is licensed under this chapter to

(A) commit or aid in the commission of a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation; or

(B) permit the licensee's client to commit a violation of a regulation adopted under this chapter or a state or federal sport fishing statute or regulation that the licensee knows or should know is being or will be committed without

(i) attempting to prevent it, short of using force; and

(ii) promptly reporting the violation to the Department of Public Safety by the most expeditious reasonable means available;

(7) person without a current sport fishing guide-outfitter license to knowingly guide or outfit or advertise as or represent to be a sport fishing guide-outfitter;

pg 6 line 21-25

(8) person without a current master sport fishing guide-outfitter license to knowingly advertise as or represent to be a master sport fishing guide-outfitter;

(9) person without a current sport fishing outfitter license to knowingly outfit or advertise as or represent to be a sport fishing outfitter;

(10) person without a current sport fishing assistant guide license to knowingly provide sport fishing assistant guide services;

(11) person without a current sport fishing guide-outfitter or transporter license to knowingly provide sport fishing transportation services or advertise as or represent to be a sport fishing transporter;

(12) person to knowingly provide sport fishing guide-outfitter, sport fishing assistant guide, sport fishing outfitter, or sport fishing transportation services during the period for which the person's license to provide that service is suspended or revoked;

(13) person who is licensed as a sport fishing transporter, or who provides transportation services under a transporter license, to knowingly accompany or direct a client of the person in sport fishing activities except as necessary to perform the specific duties of transporting, embarking, or disembarking a client or clients, their equipment, or fish harvested by the client or clients.

(b) Except as provided in (c) - (e) of this section, in addition to disciplinary sanctions imposed under AS 08.57.200, a person who commits an offense set out in (a) of this section, is guilty of a class A misdemeanor.

(c) A person licensed as a sport fishing guide-outfitter who, without any culpable mental state, advertises as or represents to be a master sport fishing guide-outfitter is guilty of a violation.

(d) In addition to disciplinary sanctions imposed under AS 08.57.200, a person who, without any culpable mental state, violates AS 08.57.110(f) is guilty of a violation.

(e) In addition to disciplinary sanctions imposed under AS 08.57.200, a person who knowingly violates AS 08.57.110(f) is, for a

(1) first offense in a three-year period, guilty of a violation; and

(2) second or subsequent offense in a three-year period, guilty of a class B misdemeanor.

(f) In addition to any other penalty provided by law, a court may revoke a license issued under this chapter of a person who is convicted under this chapter, and equipment may be seized and forfeited in accordance with AS 16.05.190 and 16.05.195.

Sec. 08.57.220. Responsibility of sport fishing guide-outfitter, assistant

guide, outfitter, or transporter for violations. A sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter is equally responsible

(1) under AS 08.57.200 for a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation, committed by a person while in the course of the person's employment with the sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter; or

(2) under AS 08.57.210 for a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation, committed by a person while in the course of the person's employment with the sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter if the sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, or sport fishing transporter expressly or impliedly authorizes an unlawful act.

Sec. 08.57.230. Sport fishing guide-outfitter, outfitter, and transporter records. (a) A person who holds a sport fishing guide-outfitter license issued under AS 08.57.110, a sport fishing outfitter license issued under AS 08.57.120, or a sport fishing transporter license issued under AS 08.57.140 shall comply with the reporting requirements of AS 16.05.396.

(b) A person who is required to complete a report under this section may not provide false information or omit material facts in a report.

(c) A person who is required to complete a report under this section may not be issued a license under AS 08.57.110 unless the Department of Fish and Game has received all reports required under AS 16.05.396 and this section.

Sec. 08.57.240. License and examination fees. (a) The Department of Fish and Game shall set fees under AS 08.01.065 for a

(1) sport fishing guide-outfitter license;

(2) sport fishing outfitter license;

(3) sport fishing assistant guide license;

(4) sport fishing transporter license;

(5) license application fee.

(b) In setting license fees, the Department of Fish and Game shall consider the cost of reporting and reimburse the department for costs associated with reporting.

(c) The license fee for the sport fishing guide-outfitter, outfitter, or assistant guide license is in addition to the fee required for a sport fishing license issued by the Department of Fish and Game under AS 16.05.340.

(d) An applicant for a qualifying examination for a sport fishing guide-outfitter license or outfitter license shall pay a fee established by regulations adopted under AS 08.01.065.

(e) The fee for the sport fishing transporter license must be equal to the fee for the sport fishing guide-outfitter.

(f) The amount of the license fee for a nonresident may not be less than two times the amount of the license fee for a resident and may be increased by the board by regulation.

Article 4. General Provisions.

Sec. 08.57.490. Definitions. In this chapter,

(1) "board" means the Sport Fishing Guide Services Board;

(2) "client" means a person who is a member of a fishing party that engages or uses a person to provide sport fishing guide services and who is not a licensed sport fishing guide-outfitter or sport fishing assistant guide;

(3) "compensation"

(A) means payment, remuneration, and other benefits received in return for services;

(B) includes wages or other employment benefits given directly or indirectly to an individual or organization, and any dues, payments, fees, or other remuneration given directly or indirectly to a fishing club, business, organization, or individual who provides sport fishing guide services;

(C) does not include reimbursement for the actual daily expenses for fuel, food, or bait;

(4) "department" means the Department of Commerce, Community, and Economic Development;

(5) "fish" means any species of aquatic finfish, invertebrate, or amphibian, in any stage of its life cycle, found in or introduced into the state, and includes any part of the aquatic finfish, invertebrate, or amphibian;

(6) "sport fishing" means the taking of or attempting to take for personal use, and not for sale or barter, any fresh water, marine, or anadromous fish by hook and line held in the hand, or by hook and line with the line attached to a pole or rod that is held in the hand or closely attended, or by other means defined by the Board of Fisheries;

(7) "sport fishing guide services"

(A) means assistance, for compensation or with the intent to receive compensation, to a person to take or to attempt to take fish by accompanying or physically directing a person during sport fishing activities;

(B) does not include services provided by an assistant, deckhand, or similar person who works directly under the supervision of and on the same vessel as the sport fishing guide or sport fishing assistant guide;

(8) "sport fishing outfitter services" means the provision, for compensation or with the intent to receive compensation, of vessels and sport fishing equipment to one or more persons who use them for sport fishing activities if the provider of the services does not direct or accompany, and is not present with, the person or persons while the sport fishing activities are occurring; in this paragraph, the provision of vessels and sport fishing equipment includes rentals, leases, or other exchanges where transfer of ownership does not occur and the vessel or sport fishing equipment is returned to the provider;

(9) "take" means taking, pursuing, fishing, or in any manner disturbing, capturing, or killing or attempting to take, pursue, fish, or in any manner capture or kill fish;

(10) "transportation services" means the carriage, for compensation or with the intent to receive compensation, of persons engaged in sport fishing, their equipment, or fish harvested to or from sport fishing activities and the advertising of these services; "transportation services" does not include the carriage by aircraft of persons engaged in sport fishing, their equipment, or fish harvested

(A) on nonstop flights between airports listed in the Alaska supplement to the Airmen's Guide published by the Federal Aviation Administration; or

(B) by an air taxi operator or air carrier for which the carriage of those persons, their equipment, or fish harvested is only an incidental portion of its business; in this subparagraph, "incidental" means transportation provided to those persons by an air taxi operator or air carrier who does not

(i) charge more than the usual tariff or charter rate for the carriage of those persons, their equipment, or fish harvested;

(ii) advertise transportation services or sport fishing activities to the public; in this sub-subparagraph, "advertise" means soliciting persons seeking to engage in sport fishing to be customers of an air taxi operator or air carrier for the purpose of providing air transportation for sport fishing activities through the use of print or electronic media, including advertising at trade shows, or the use of sport fishing broker services or other promotional services;

(11) "vessel" means a floating craft, powered, towed, rowed, or otherwise propelled, that is used for delivering, landing, or taking fish within the jurisdiction of the state.

*** Sec. 4.** AS 16.05.395 is amended to read:

Sec. 16.05.395. Sport fishing vessel registration. For calendar year 2005 and subsequent calendar years, a person may not use a vessel to provide sport fishing services under **AS 08.57** [AS 16.40.260 - 16.40.299] unless the vessel is registered with the department and proof of registration is attached to and clearly visible on the vessel while the vessel is used to provide sport fishing services. The department shall register vessels used to provide sport fishing services, and provide proof of registration, without charge. The department may adopt regulations as the department finds necessary to implement this section.

*** Sec. 5.** AS 16.05 is amended by adding new sections to read:

Sec. 16.05.396. Sport fishing guide-outfitter, sport fishing outfitter, and sport fishing transporter records; confidentiality of records and activity reports.

(a) The department may collect information from sport fishing guide-outfitters, including

(1) the name and license number of each vessel that is used in providing sport fishing guide services;

(2) the amount of fishing effort, catch, and harvest by clients of a sport fishing guide-outfitter;

(3) the locations fished during the provision of sport fishing guide services; and

(4) other information that the department requires by regulation.

(b) The department may collect information from sport fishing outfitters and transporters.

(c) Information collected under this section is confidential to the extent provided under AS 16.05.815 or AS 40.25.110.

(d) The department may adopt regulations under AS 44.62 (Administrative Procedure Act) that it considers necessary to implement this section.

(e) The department shall make sport fishing log books received under this section and activity reports received under AS 08.57.140 available for law enforcement purposes to state agencies, federal law enforcement agencies, and other law enforcement agencies on request.

(f) Forms, records, and reports required under this chapter may be distributed, received, and stored electronically.

Sec. 16.05.398. Sport fishing guide-outfitter, sport fishing outfitter, sport fishing assistant guide, and sport fishing transporter fees. The department shall perform the duties prescribed in AS 08.57.240.

*** Sec. 6.** AS 25.27.244(s)(2) is amended to read:

(2) "license"

(A) means, except as provided in (B) of this paragraph, a license, certificate, permit, registration, or other authorization that, at the time of issuance, will be valid for more than 150 days and that may be acquired from a state agency to perform an occupation, including the following:

(i) license relating to boxing or wrestling under

AS 05.10;

(ii) authorization to perform an occupation regulated under AS 08;

(iii) teacher certificate under AS 14.20;

(iv) authorization under AS 18.08 to perform emergency medical services;

(v) asbestos worker certification under AS 18.31;

(vi) boiler operator's license under AS 18.60.395;

(vii) certificate of fitness under AS 18.62;

(viii) hazardous painting certification under AS 18.63;

(ix) security guard license under AS 18.65.400 - 18.65.490;

(x) license relating to insurance under AS 21.27;

(xi) employment agency permit under AS 23.15.330 - 23.15.520;

(xii) registration as a broker-dealer, an agent, a state investment adviser, or an investment adviser representative under AS 45.55.030;

(xiii) certification as a pesticide applicator under AS 46.03.320;

(xiv) certification as a storage tank worker or contractor under AS 46.03.375;

(xv) certification as a water and wastewater works operator under AS 46.30;

(xvi) commercial crewmember fishing license under AS 16.05.480 other than an entry permit or interim-use permit under AS 16.43;

(xvii) fish transporter permit under AS 16.05.671;

(xviii) sport fishing **guide-outfitter license under AS 08.57.110** [OPERATOR LICENSE UNDER AS 16.40.260];

(xix) sport fishing **outfitter** [GUIDE] license under

AS 08.57.120 [AS 16.40.270];

(B) does not include

(i) a vessel license issued under AS 16.05.490 or 16.05.530;

(ii) [REPEALED

(iii)] a business license issued under AS 43.70;

(iii) [(iv)] an entry permit or interim-use permit issued under AS 16.43; or

(iv) [(v)] a driver's license issued under AS 28.15;

*** Sec. 7.** AS 41.21.506(b) is amended to read:

(b) The commissioner shall adopt regulations under AS 44.62 (Administrative Procedure Act) that are necessary to achieve the purposes of AS 41.21.500 - 41.21.514 and to implement the plan adopted under (a) of this section. The regulations must

(1) designate incompatible uses and prohibit or restrict them; and

(2) establish a registration, licensing, or comparable procedure for professional fishing guides and such additional fishing guide controls as the commissioner considers necessary; notwithstanding the requirements established by the commissioner to implement this paragraph, the commissioner shall establish a procedure by which the holder of a valid sport fishing **guide-outfitter** [OPERATOR] license issued under **AS 08.57.110** [AS 16.40.260] may petition for, and the director of the division of parks, or the director's designee, shall expeditiously issue, a waiver to allow the sport fishing **guide-outfitter** [OPERATOR] license holder **access to the** [TO USE THE SERVICES IN THE] Kenai River Special Management Area **for guide-outfitter services even if the guide-outfitter** [OF A GUIDE LICENSED UNDER AS 16.40.270 WHO] has not completed the procedures and additional controls that are required by the department under this paragraph; the waiver authorized in this paragraph applies only for the duration of the sport fishing season during which the waiver application is submitted and only if the sport fishing operator license holder

(A) employing the licensed guide has lost the services of a licensed guide because of unforeseen circumstances; and

(B) is unable to hire as a replacement an available licensed guide who has satisfied all the requirements of this paragraph, including those required by regulation.

*** Sec. 8.** Section 8, ch. 70, SLA 2004, as amended by sec. 3, ch. 61, SLA 2009, and sec. 1, ch. 48, SLA 2010, is amended to read:

Sec. 8. AS 16.05.340(a)(26); AS 16.40.260, 16.40.270, 16.40.280, 16.40.290, 16.40.299 [; AS 25.27.244(s)(2)(A)(xviii), AND 25.27.244(s)(2)(A)(xix)] are repealed January 1, **2013** [2012].

*** Sec. 9.** Sections 22 and 31, ch. 58, SLA 2010, are repealed.

*** Sec. 10.** The uncodified law of the State of Alaska is amended by adding a new section to read:

INITIAL APPOINTMENT OF MEMBERS OF THE SPORT FISHING GUIDE SERVICES BOARD. (a) Notwithstanding AS 08.57.010(c), added by sec. 3 of this Act, and AS 39.05.055, the governor shall appoint the initial members of the Sport Fishing Guide Services Board to serve terms as follows and shall designate the terms to be served by each person appointed:

(1) three members serve for one year;

(2) three members serve for two years; and

(3) three members serve for three years.

(b) The governor shall appoint persons who are active, licensed registered guides under AS 16.40.260 - 16.40.299 at the time of appointment to fill the initial registered guide-outfitter positions on the Sport Fishing Guide Services Board.

*** Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICATIONS. The Sport Fishing Guide Services Board shall

(1) accept applications for sport fishing guide-outfitter licenses, sport fishing outfitter licenses, sport fishing assistant guide licenses, and sport fishing transporter licenses, and be available to administer, not later than April 1, 2012, the required examinations and certification under AS 08.57.030(a)(1), as added by sec. 3 of this Act; and

(2) issue, effective January 1, 2013, to those applicants under (1) of this section who satisfy all requirements for a particular license a valid sport fishing guide-

outfitter license, sport fishing outfitter license, sport fishing assistant guide license, or sport fishing transporter license.

* **Sec. 12.** Section 32, ch. 58, SLA 2010, is repealed.

* **Sec. 13.** Sections 8, 9, and 12 of this Act take effect January 1, 2013.

* **Sec. 14.** Except as provided in sec. 13 of this Act, this Act takes effect January 1, 2012.

Memorandum

TO: Senator Lesil McGuire

FROM: Susan Warner, Legislative Analyst

DATE: February 7, 2011

RE: Professional/Occupational Licensing Regulated by the Alaska Department of Commerce, Community, and Economic Development.

LRS Report 11.149

You asked about licensing regulated by the Alaska Department of Commerce, Community, and Economic Development. Specifically you asked for the number of licensees per industry sector regulated by the Department and by boards within the Department.

There are 20 licensing boards regulated by the Alaska Department of Commerce, Community, and Economic Development (DCCED), Division of Professional Licensing. Additionally, the Division regulates several occupations without a board. We provide a list of all regulatory bodies within DCCED, and the professions and number of licensees they regulate, on the following page.

We hope this is helpful. If you have questions or need additional information, please let us know.

Professional/Occupational Licensing Regulated by the Alaska Department of Commerce, Community, and Economic Development (DCCED)

Regulatory Authority	Profession/Occupation	No. of licensees
Board of Public Accountancy	Public accountants	1,495
Board of Registration for Architects, Engineers, and Land Surveyors	Architect and engineer corporations	529
	Architects, engineers, and land surveyors	5,484
Board of Barbers and Hairdressers	Barbers, body piercers, estheticians, hairdressers, shop/school owners, and tattooists	5,962
Big Game Commercial Services Board	Guides and transporters	1,728
Board of Chiropractic Examiners	Chiropractors	246
Board of Dental Examiners	Office permits, hygienists, and dentists	1,805
Board of Marine Pilots	Marine pilots and vessel agents	105
Board of Marital and Family Therapy	Marital and family therapists	84
State Medical Board	Physicians and osteopaths	3,714
Board of Certified Direct-Entry Midwives	Midwives	55
Board of Nursing	Nurse aides	2,908
	Nurses	11,247
Board of Examiners in Optometry	Optometrists	160
Board of Pharmacy	Pharmacists and drug distributors	2,834
State Physical Therapy and Occupational Therapy Board	Physical and occupational therapists	976
Board of Professional Counselors	Counselors	488
Board of Psychologist and Psychological Associate Examiners	Psychologists	253
Board of Certified Real Estate Appraisers	Real estate appraisers	254
Real Estate Commission	Real estate brokers	2,329
Board of Social Work Examiners	Social workers	643
Board of Veterinary Examiners	Veterinarians and veterinarian technicians	428
DCCED Division of Professional Licensing (not regulated under a board or commission)	Acupuncturists	95
	Audiologists and hearing aid dealers	81
	Animal euthanasia program licenses	13
	Collection agency	530
	Concert promoters	17
	Contractors	5,729
	Dieticians	173
	Dispensing opticians	104
	Electrical administrators	848
	Geologists	651
	Guardians and conservators	8
	Home inspectors	69
	Mechanical administrators	517
	Mortgage originators	282
	Mortgage licensees	107
	Mortuary, embalmers, and funeral home owners	132
	Naturopaths	47
	Nursing home administrators	47
	Nutritionists	5
	Physician assistants	502
	Residential contractor endorsements	707
	Speech pathologists	223
	Underground storage tank workers	69
Total number of licensees		54,683

Notes:
Schedule two days; November 29th and 30th or November 30th and December 1st.
Place and Time to be announced
State will pay for travel expenses (air or gas mileage), hotel and per diem. SAVE RECIEPTS!!
Be giving thought to:
The value of adding Limited Entry as a tool into the state's "tool box". What criteria should be used to limit a fishery and how should it be us
An information packet will be sent one week prior to this meeting.

* This document was just received on Monday 2/7 at 1:30pm : HAS NOT BEEN REVIEWED

Sport Fishing in Alaska

Sport fishing is a key element of Alaska's cultural and economic landscape and the sustainable development of our fisheries is one of the Legislature's fundamental constitutional responsibilities. Each year approximately 460,000 individuals spend roughly 2.5 million days sport fishing in Alaska. Sport fishing and especially guided sport fishing has become an integral part of Alaska's economy. In 2007 guided sport fishing contributed an estimated $641 million to Alaska's economy and supported 7183 jobs. Annual direct expenditures attributed to sport fishing totaled $1.4 billion or 3.1% of the total gross state product (GSP) in 2007. An average of 1,670 sport fishing business licenses and 1,981 sport fishing guide licenses have been sold annually of which 90% are issued to Alaska residents. The sport fishing guide services industry is also an important source of information for fisheries managers. Sport fishing guides currently provide logbook data to the Department of Fish and Game which provides the department with one of the critical tools required to manage our fisheries.

Senate Resources Sport Fishing Guide Licensing Program Subcommittee

The State of Alaska's current licensing system for sport fishing guides will expire on January 1, 2013. Previous attempts by the Legislature to extend this program for more than a year or to create a new licensing system for guides have spurred debates about the program within the guiding community and amongst policy makers. This spring, the Senate Resources Committee established a subcommittee to evaluate the State's sport fishing guide licensing program and craft solutions to address the needs of the industry and the public while protecting our precious resources.

The Senate Resources Committee created this website to provide a forum for the public to weigh in on the issues and for the subcommittee to post its work and announcements. Please submit your comments using the form below and submit your email address to receive updates about upcoming hearings and the subcommittee's work.

Division of Sport Fish

Briefing Paper

Issue: Limited entry for the Alaskan sport fishing guide industry.

Background: Alaska has some of the most known sport fisheries in the world. The sport fish guide industry provides Alaskans and visitors to our state opportunities to participate in Alaskan sport fisheries. These opportunities result in anglers being able to feed their families as well as contribute to the economies of Alaska's many coastal communities. They also result in numerous job opportunities, both directly as owners of guide businesses and their employed guides and deckhands and indirectly as hotel owners tackle stores, and packaging services.

Total Number of Businesses Registered/Licensed by Year								
1998	**1999**	**2000**	**2001**	**2002**	**2003**	**2004**	**2005**	**2006**
2,065	2,242	2,184	2,129	2,102	2,086	2,087	1,648	1,688

Total Number of Guides Registered/Licensed by Year								
1998	**1999**	**2000**	**2001**	**2002**	**2003**	**2004**	**2005**	**2006**
3,823	4,225	4,437	4,550	4,757	4,827	5,054	1,760	1,915

Increasingly allocation conflicts between unguided and guided fisheries and between commercial and guided fisheries are occurring. To address these conflicts various regulatory agencies are trying to "restrict" guide operations. This is being done in a variety of means including, but not limited to, limiting days guided anglers can fish to limiting the number of guided anglers on a vessel. Regulatory agencies, including the National Marine Fisheries Service and various federal and state land management agencies including the Alaska State Parks are also limiting guide operations through federally-authorized limited entry programs or concessionaire permits, respectively.

None of these programs however comprehensively address the root issue. As a result these attempts cause instability in the sport fishing guide industry. For example, over a 7 year period about 45% of the participants in the halibut charter fishery changed. They also differentially impact anglers who rely on guide operations to access Alaska's fishery resources, many of whom are Alaskans.

A recent legal opinion from the Department of Law suggests it is possible to legislatively authorize a limited entry program for the Alaskan sport fishing guide industry. To assess support for developing a limited entry program, the Department convened a cross-section of guides from across Alaska. This group supported introducing legislation and entertaining the debate as to adding this tool to the management tool box. The framework of the proposed program is attached.

Recommendation: Introduce legislation to create a limited entry program for the Alaska sport fish guide industry.

Benefits of establishing a sport fish guide limited entry program:

- Assures resource conservation/sustainability
- Reduces economic distress among guides
- Preserving the quality experience of the angler
- Increases customer (client) confidence in industry
- Considers impacts of federal regulatory actions
- Considers "balloon effects" of management
- Stabilize the sport fish guide industry
- Eases regulatory management of fisheries
- Prevents economic distress/over-capitalization among guides
- Limits effort on fully utilized stocks
- Avoids over-capitalization
- Considers regional/fishery differences
- Reduces allocation issues

Drawbacks of establishing a sport fish guide limited entry program:

- Requires establishment of an infrastructure (and associated costs) for program administration
- Reduces free enterprise and competition in the sport fishing guide industry
- May increase cost of participation in the guided sport fishery

Potential supporters:

- Established guides in the sport fishing community
- Regulatory agencies
- Commercial anglers
- Private anglers worried about competition with guides for fishing areas

Potential critics:

- Individuals who wish to enter the sport fishing guide business in the future.
- Sport anglers concerned about increased cost due to loss of competition

Contact: Kelly Hepler, Director – Division of Sport Fish, Alaska Department of Fish and Game

Attachment A
Framework for a Limited Entry Program for the Sport Fish Guide Industry

Who petitions: The options include the Commissioner of ADF&G, the Alaska Board of Fisheries, and/or the industry. Under Administrative Procedures Act anyone can petition.

Criteria for establishment: Industry economics, resource conservation, fully allocated fisheries, angler access, etc…

Who would be granted a limited entry permit: The holders of the sport fish operators license (i.e., the business owners).

Area endorsement: A permit would allow a business to operate within a defined area. People not holding a permit would not be allowed to operate in the area.

Unit endorsement: A permit would allow a business to provide some number of angler-days of fishing opportunity within the defined geography. A sub-option could include the ability to allocate the angler-days by species (e.g., 50% could be for halibut).

Initial issuance: Based on logbook history on client days based on qualifying years.

Duration of issuance: Indefinite in duration. (benefits Alaskans, property of the commons, would disadvantage businesses)

Sale: Allowed to any ADFG licensed sport fish operator up to ownership caps.

Transfers: Allow in-season transfers of some percentage (10%) of a business' client-days to another business already in the fishery (up to ownership caps).

Ownerships caps: vary by region or fishery (with grandfather clause), but underlying idea is to prevent excessive consolidation and allow new entrants.

Use Provisions: Issued business must use permits and endorsements to provide sport fishing guide services.

Who oversees: ADFG or CFEC or a new SFEC

Fees: Proportional based on value of fishery; Percent of value of permit

What criteria should be used to determine if a fishery is to be limited?

- Are existing regulations sufficient to address resource conservation concerns without cause economic distress among guides?
- Would use of existing regulatory structures differentially impact guided vs. unguided anglers access to resources?
- Would companion fisheries be impacted? If so, should they be included?
- Is management served?
- Upon petition – a control date is established.
- Quality of experience

What criteria should be used to determine the optimal number of permits and client-days in the fishery?

- Limit may be the maximum number of client days fished in the fishery in one the last 4 years.
- Is management served (is there a reason to increase or decrease is number)?
- Quality of experience.

How would shares (client-days) be distributed?

- History of past participation in the limited fishery (Number of client-days).
- History of consistent participation (client-days) in the fishery.
- Investment in guide operations (vessels, gear, lodges, client lists, etc).
- Relative income dependence (may have issues).

Task Force Meetings: some of my notes are a little 'sketchy" but this is close:
All meetings were held in Anchorage;

1. December 11 -12, 2006 (initial meeting to establish the framework)
2. March 6 -7, 2007
3. April 10, 2007
4. November 30, 2007
5. January, 2008
6. November 19, 2008

Public "Road Show" Meetings: Statewide;

1. Sitka – September 18, 2008
2. Fairbanks – October 7, 2008
3. Ketchikan – October 20, 2008
4. Soldotna – October 27, 2008
5. Homer – October 28, 2008
6. Anchorage – November 12, 2008
7. Palmer – November 13, 2008
8. Juneau – November 15, 2008
9. Kodiak – November 17, 2008

Anything else Charlie? Just give me a holler. I have so much collected from those glory days; from the original briefing paper to a summary of definitions, so there is a good chance I have whatever else you might need. Have a good weekend.

Sport Fishing Guide Services Board Concept
Summary of Progress
December 9, 2008

Concept initiation

- 2006, Commissioner Campbell formulated a task force composed of sport fish guide interests statewide with a charge statement to investigate limited entry for the sport fishing guide industry.
- Task force composition included 2 guide operators from Southeast Alaska, 4 guide operators from South-central (2 saltwater, 2 freshwater), 2 freshwater guide operators from the Interior, and a commercial fisheries representative.
- In January 2008, emphasis of the task force shifted to a guide services board approach patterned after the big game commercial service board. This shift was motivated by the realization that a limited entry program would require a constitutional amendment.
- During September 2008, draft language was posted on the Department website including: the creation, composition, and duties of the board; guide license types, examinations, ethics standards and penalties for violations.
- The Department held 10 public meetings during October-November 2008 (4 in Southeast, 1 in Kodiak, 1 in Fairbanks, and 4 in South-central).

Standard public meeting message

- The Department only had approval from Commissioner Lloyd and the Governor's Office to seek public comments and report back to the Commissioner.
- This concept HAS NOT been approved for legislative submission in January, 2009.
- Information conveyed included:
    - Formation of the guide service board;
    - The various classes and requirements of license types and testing procedures;
    - Ethics complaints and penalties for violations;
    - Concepts of guide use units and limitations of guides in units where the board determined that there were excessive numbers of guides.
- We (ADF&G staff) took extensive notes which will be posted on Department web site soon.

Results of public meetings

- Approximately 260 people in total attended.
- The largest meetings were in Anchorage (~75 people) and Soldotna (~45 people).
- 2% (7 individuals) supported the language as presented. A majority of the public attending and comments on the web site postings opposed the language.
- 25-30% of the people wanted some form of limitation, but not the language presented. Most preferred a Limited Entry system similar to the existing program for commercial fisheries.
- The remainder of people thought that some type of restriction on guide numbers was necessary IN CERTAIN AREAS OF THE STATE, but did not want to see the proposed regulations imposed statewide. Some offered alternatives such as super exclusive registration programs.
- A number of people at two meetings suggested we should HOLD OFF ON SUBMITTING LEGISLATION until two major issues are addressed:
    1. Determine how the board would decide how many guides should operate in any guide use unit, with Dept. of Law approval of the process; and
    2. How will the concessionaire program work to cap or reduce the number of guides in those units, and will DNR and Dept. of Law approve the process?
- People at several meetings recommended that guide restrictions be implemented in salt water fisheries, but not in fresh water fisheries. The concept of regional boards vs. one statewide board also surfaced several times.
- Participants felt that licensing and guide use unit exams were unreasonable and an insult to long term operators.
- A number of people at several meetings preferred to limit all types of anglers to reduce effort/harvest (guided and unguided).
- The make up of guide service board membership was questioned at many meetings. The current language has guide-outfitters and outfitters being a majority of board members.
- One recommendation from the Kodiak meeting was that one board member should be a licensed guide-outfitter who lived and operated in a coastal community of 500 people or less.

ADF&G Contact: Charlie Swanton, phone: 465-6184.

ARTICLE 1. SPORT FISHING GUIDES, OUTFITTERS, ASSISTANT GUIDES AND TRANSPORTERS

Sec. 08.54.590. Purpose. The purpose of this chapter is to promote stability of the sport fish guide industry in Alaska by regulating the activities of providers of sport fishing guide, outfitter, and transporter services to sport fishermen.

Sec. 08.54.591. Creation and membership of board.

(a) For the purposes of licensing and regulating the activities of providers of sport fishing guide, outfitter, and transporter services to sport fishermen in the interest of the state's fisheries resources, there is created the Sport Fishing Guide Services Board. For administrative purposes, the board is in the Department of Commerce, Community, and Economic Development.

(b) The board shall consist of nine members as follows:

(1) Five members who are currently licensed sport fishing guide-outfitters or sport fishing outfitters under this article, both salt water and fresh water sport fishing guide-outfitters shall be represented; at least three of the five must be currently licensed sport fishing guide-outfitters;

(2) one member who is currently a licensed sport fishing transporter under this article;

(3) one member of the Board of Fisheries who is chosen by the Board of Fisheries;

(4) two public members who are familiar with the Alaskan sport fishing industry, who do not hold a current license issued under this chapter or a current commercial fishing license issued under AS16; and are familiar with private landowner and access issues affected by sport fishing activities governed under this chapter.

Sec. 08.54.595. Board assistance.

(a) State agencies shall provide the board with information, data, or technical assistance requested by the board for the purposes of licensing and regulating the activities of providers of sport fishing guide-outfitter, outfitter, assistant guide or transporter services to sport fishermen.

Sec. 08.54.600. Duties of board.

(a) The board shall

(1) prepare and grade:

(A) a qualification examination for a sport fishing guide-outfitter, outfitter, and assistant guide license that requires demonstration that the applicant is qualified generally to provide sport fishing guide-outfitter, outfitter, and assistant guide activities and, in particular, possesses knowledge of fishing and sport fish laws and regulations; and

(B) a certification examination for each Sport Fish Guide Use Unit in which the sport fishing guide-outfitter, outfitter, or assistant guide intends to provide services in; the examination must require demonstration that the applicant is qualified to provide sport fishing guide-outfitter, outfitter, or assistant guide services in the Sport Fish Guide Use Unit for which the applicant seeks to be certified and, in particular, must require demonstration that the applicant possesses knowledge of the terrain, waters, transportation problems, fish, and other characteristics of the Sport Fish Guide Use Unit.

(2) authorize the issuance of sport fishing guide-outfitter, outfitter, assistant guide, and transporter licenses after the applicant for the license satisfies the requirements for the license;

(3) impose appropriate disciplinary sanctions on a licensee under AS 08.54.600 - 08.54.790;

(4) require an applicant for issuance or renewal of any class of license issued under this article to state in a written and signed document whether the applicant's right to obtain, or exercise the privileges granted by, a sport fishing guide-outfitter, outfitter, assistant guide, or transportation license is revoked or suspended in this state or another state or in Canada;

(5) regularly disseminate information regarding examinations and other qualifications for all classes of licenses described in this article;

(6) adopt procedural and substantive regulations required by this chapter;

(7) provide for administration of examinations for sport fishing guide-outfitter, outfitter, and assistant guide-outfitter licenses at least twice a year; and

(8) meet at least twice annually.

(b) The board may adopt regulations as the board considers appropriate to

(1) establish a code of ethics for professions regulated by the board;

(2) authorize the department to obtain a copy of a sport fish guide-outfitter logbooks or outfitter service records from the Department of Fish & Game;

(3) establish Sport Fish Guide Use Units;

(4) establish as necessary for resource conservation purposes and/or to promote economic stability within the sport fish guide industry

(A) the maximum number of certified licensees who may operate in a Sport Fish Guide Use Unit and

(B) a concessionaire program to limit participation by licensees within Sport Fish Guide Use Units.

(5) establish regulations that will bring persons who, in the past, provided sport fishing guide-operator, assistant guide, outfitter or transporter services as defined in current statute and regulation into compliance with new statutes and regulations pertaining to such and establish a time-frame and criteria for doing so.

Sec. 08.54.605. Eligibility for licenses.

(a) Notwithstanding AS 08.54.610, 08.54.620, 08.54.630, 08.54.650, and 08.54.660, a person may not receive or renew a sport fish guide-outfitter, outfitter, assistant guide, or transporter license if :

(1) the person has been convicted of a felony offense against the person under AS 11.41, or similar federal laws or laws of other states, or

(2) the person's right to obtain, or exercise the privileges granted by, a sport fishing guiding, outfitting, assistant guide, or transportation services license or registration is suspended or revoked in this state or another state or in Canada or Mexico.

(b) A person may not receive a certification for a Sport Fish Guide Use Unit if the person is prohibited by (a) of this section from receiving or renewing a sport fishing guide-outfitter, outfitter, or assistant guide license.

Sec. 08.54.610. Sport fishing guide-outfitter license.

(a) A natural person may obtain a biannual sport fishing guide-outfitter license if the person:

(1) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(2) is certified in first aid and CPR by the American Red Cross or a similar organization;

(3) holds a license to carry passengers for hire issued by the United States Coast Guard if the person operates a vessel in the provision of sport fishing guide services and the license is required by the United States Coast Guard for the area in which the sport fishing guide-outfitter provides sport fishing guide services;

(4) holds a current sport fishing license from this state;

(5) has passed a qualification examination for a sport fishing guide-outfitter license

(6) has passed a certification examination prepared by the board for the Sport Fish Guide Use unit in which he operates;

(7) has been licensed as and performed the services of a sport fishing assistant guide in the state for at least 20 days within each of three years and received a favorable recommendation from at least one licensed sport fishing guide-outfitter;

(8) satisfies all additional requirements adopted in regulation by the Sport Fishing Guide Services Board.

(9) has applied for a sport fishing guide-outfitter license on a form provided by the department and paid the license application fee and the sport fishing guide-outfitter license fee.

(b) A person may not provide sport fishing guide-outfitter services unless the person holds a current sport fishing guide-outfitter license;

(c) A sport fishing guide-outfitter may guide or outfit sport fishing activities and may provide transportation services, personally or through a sport fish assistant guide, to sport fishermen who are clients of the sport fishing guide-outfitter.

(d) A person who is licensed as a sport fishing guide-outfitter may be employed by another sport fishing guide-outfitter to perform the functions of an assistant sport fishing guide and may operate as an assistant sport fishing guide in any Sport Fish Guide Use Unit for which the person is certified as a sport fishing guide-outfitter under 610 (a)(6) of this chapter or as an assistant sport fishing guide under 630(a)(6) of this Chapter.

(e) A sport fishing guide-outfitter shall

(1) directly provide sport fishing guide-outfitter services to clients, or

(2) directly supervise an assistant guide who provides sport fishing assistant guide services to clients, or

(3) directly supervise a sport fishing guide-outfitter who is not certified for the Sport Fishing Guide Use Unit in which they are operating.

(f) While engaged in providing sport fishing guide-outfitter services, a sport fishing guide-outfitter shall have readily available for inspection upon request of a representative of the Department or a peace officer of the state the following:

(1) a current sport fishing guide-outfitter license;

(2) the current licenses, tags, permits and reporting forms that are required to engage in the sport fishery for which the sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing guide-outfitter;

(g) A master sport fishing guide-outfitter license authorizes a sport fishing guide-outfitter to use the title master sport fishing guide-outfitter, but is for all other purposes under this chapter a sport fishing guide-outfitter license. A natural person is entitled to receive a renewable master sport fishing guide-outfitter license if the person

(1) is, at the time of application for a master sport fishing guide-outfitter license, currently licensed as a sport fishing guide-outfitter under this section;

(2) provide an affidavit certifying that they have operated in the state as a sport fishing guide-outfitter for at least 12 of the last 15 years, including the year immediately preceding the year in which the person applies for a master sport fishing guide-outfitter license;

(3) submits 10 letters from clients for whom the person has personally provided sport fishing guiding or outfitting services and the person receives a favorable evaluation; and

(4) applies for a master sport fishing guide-outfitter license on a form provided by the department and pays the application fee, if any.

Sec. 08.54.620. Sport fishing outfitter license

(a) A natural person may obtain a biannual sport fishing outfitter license if the person:

(1) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(2) is certified in first aid and CPR by the American Red Cross or a similar organization;

(3) holds a current sport fishing license from this state;

(4) has passed a qualification examination for a sport fishing outfitter license;

(5) has passed a certification examination prepared by the board for the Sport Fish Guide Use Unit in which they operate;

(6) satisfies all additional requirements adopted in regulation by the Sport Fishing Guide Services Board; and,

(7) has applied for a sport fishing outfitter license on a form provided by the department and paid the license application fee and the sport fishing outfitter license fee.

(b) A person may not provide sport fishing outfitter services unless the person holds a current sport fishing outfitter license;

(c) A sport fishing outfitter may not provide sport fishing guide-outfitter services or provide transportation services, personally or through a sport fish assistant guide.

(d) A sport fishing outfitter shall not be physically present with the client during any portion of the sport fishing activities.

(e) A sport fishing outfitter shall provide an activity report on a form provided by the Department of Fish and Game. An activity report must contain all information required by the Department of Fish and Game.

(f) While engaged in providing sport fishing outfitting services, a sport fishing outfitter shall have readily available for inspection upon request of a representative of the Department or a peace officer of the state the following:

(1) a current sport fishing outfitter license;

(2) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing outfitter;

Sec. 08.54.630. Assistant sport fishing guide license.

(a) A natural person is entitled to an assistant sport fishing guide license if the person

(1) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(2) is certified in first aid and CPR by the American Red Cross or a similar organization;

(3) holds a license to carry passengers for hire issued by the United States Coast Guard if the person operates a vessel in the provision of sport fishing guide services and the license is required by the United States Coast Guard for the area in which the sport fishing assistant guide provides sport fishing guide services;

(4) holds a current sport fishing license from this state;

(A) provides to the Department a written employment agreement from a currently licensed sport fishing guide-outfitter who employs the sport fish assistant guide.

(5) satisfies all additional requirements adopted in regulation by the Sport Fishing Guide Services Board; and

(6) applies for an assistant sport fishing guide-outfitter license on a form provided by the department and pays the license application fee and the license fee.

(b) An assistant sport fishing guide shall be under the supervision of a currently licensed sport fishing guide-outfitter while participating in a guided sport fishing activity.

(c) While providing assistant sport fishing guide services, an assistant sport fishing guide shall have readily available for inspection upon request of a representative of the Department or a peace officer of the state the following:

(1) a current assistant sport fishing guide license;

(2) the current licenses, tags, permits and reporting forms that are required to engage in the sport fishery for which the assistant sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the assistant sport fishing guide; and

(4) proof of employment by a currently licensed sport fishing guide.

Sec. 08.54.650. Sport Fishing Transporter license.

(a) A person is entitled to a sport fishing transporter license if the person is a licensed Big Game transporter under AS 08.54.650 or

(1) applies for a sport fishing transporter license on a form provided by the department; and

(2) pays the license application fee and the license fee.

(3) satisfies all additional requirements adopted in regulation by the Sport Fishing Guide Services Board.

(b) A sport fishing transporter may not provide sport fishing guide-outfitter, sport fishing outfitter services, or sport fishing assistant guide services without holding the appropriate licenses.

(c) While providing transporting services, a sport fishing transporter shall have readily available for inspection

(1) a current sport fishing transporter license;

(2) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the sport fishing transporter;

Sec. 08.54.660. Renewal of sport fishing guide-outfitter, outfitter, assistant guide, and transporter licenses.

(a) An applicant for renewal of a sport fishing guide-outfitter, outfitter, assistant guide, or transporter license shall submit

(1) a request for renewal of the license on a form provided by the Department; and

(2) the appropriate license fees for the next licensing period.

(b) The department shall not renew a sport fishing guide-outfitter, outfitter, assistant guide, or transporter license under this section unless all fees have been paid in full and the sport fishing guide-outfitter, outfitter, assistant guide, or transporter has signed an affidavit that all required logbooks and reports due during the term of the prior license have been filed as required

Sec. 08.54.670. Failure to renew.

The department may not issue a license to a person who held a sport fishing guide-outfitter, outfitter, assistant guide, or transporter license and who has failed to renew the license under this chapter for four consecutive years unless the person again meets the qualifications for initial issuance of the license

Sec. 08.54.680. Financial responsibility and other requirements for sport fishing guide-outfitters, outfitters, and transporters.

(a) The department requires satisfactory proof of sport fishing guide-outfitters, outfitters, and transporters of a general liability insurance policy or marine protection and indemnity insurance policy, covering the services provided by the person and the person's employees to sport fishermen, that provides coverage of at least $100,000 for each incident, and $300,000 for all incidents in a year;

(b) If a sport fishing guide-outfitter, or assistant guide personally pilots an aircraft to transport clients during the provision of sport fishing activities, the sport fishing guide-outfitter, or assistant guide shall have a commercial pilot's rating or a minimum of 500 hours of flying time in the state.

ARTICLE 02. ENFORCEMENT

Sec. 08.54.710. Discipline of a sport fishing guide-outfitter, outfitter, assistant guides and transporters.

(a) The board may impose a disciplinary sanction in a timely manner under (c) of this section and in accordance with AS08.01.075 if the board finds that a licensee;

(1) is convicted of a violation of any state or federal statute or regulation relating to sport fishing or to provision of sport fishing guide, outfitter, or transportation services;

(2) has failed to file records or reports required by law;

(3) has negligently misrepresented or omitted a material fact on an application for any class of sport fishing guide, outfitter or transporter license; or

(4) has breached an agreement with a client to provide sport fishing guide-outfitter, outfitter, or transportation services to a client.

(5) has failed to comply with limitations or conditions of the professional practice of the licensee.

(b) The board may impose a disciplinary sanction in a timely manner under (c)(3) - (7) of this section if the board finds, after a hearing, that a licensee has acted unethically as a sport fishing guide-outfitter, outfitter, assistant guide, or transporter.

(c) The board may impose the following disciplinary sanctions, singly or in combination:

(1) permanently revoke a license;

(2) suspend a license for a specified period;

(3) censure or reprimand a licensee;

(4) impose limitations or conditions on the professional practice of a licensee;

(5) impose requirements for remedial professional education to correct deficiencies in the education, training, and skill of the licensee;

(6) impose probation requiring a licensee to report regularly to the board on matters related to the grounds for probation;

(7) impose a civil fine not to exceed $5,000.

(d) The board shall permanently revoke any license issued under this chapter if the board finds after a hearing that the license was obtained through fraud, deceit, or misrepresentation.

(e) A certified copy of a judgment of conviction of a licensee for an offense is conclusive evidence of the commission of that offense in a disciplinary proceeding instituted

against the licensee under this section based on that conviction, regardless of whether the conviction resulted from a plea of nolo contendere or the conviction is under appeal, unless the conviction is overturned on appeal.

(f) A person whose license is suspended or revoked under this section may not engage in the provision of sport fishing guide-outfitter, outfitter, assistant guide, or transportation services during the period of license suspension or revocation.

(g) If the board revokes a license under this section, the person whose license has been revoked shall immediately surrender the license to the department.

(h) The board may summarily suspend a licensee from practice of the profession under this chapter, for a period of not more than 30 days, before a final hearing is held or during an appeal if the board finds that the licensee poses a clear and immediate danger to the public health and safety. A person is entitled to a hearing before the board to appeal the summary suspension within seven days after the order of suspension is issued. A person may appeal an adverse decision of the board on an appeal of summary suspension to a court of competent jurisdiction.

Sec. 08.54.720. Unlawful acts.

(a) It is unlawful for a:

(1) person who is licensed under this chapter to intentionally obstruct or hinder or attempt to obstruct or hinder lawful sport fishing engaged in by a person who is not a client of the person;

(2) a sport fishing assistant guide to knowingly guide or outfit sport fishing activities except while employed and supervised by a sport fishing guide-outfitter;

(3) person who is licensed under this chapter to knowingly enter or remain on private, state, or federal land unlawfully during the course of providing sport fishing guide services, outfitting services or transportation services;

(4) sport fishing guide-outfitter to knowingly engage in providing sport fishing guide services outside of a sport fish Guide Use Unit for which the sport fishing guide-outfitter is certified unless the registration requirement for the Unit has been suspended by the board;

(5) person to knowingly guide or outfit without having a current sport fishing guide-outfitter, outfitter or assistant guide license and a valid Alaska sport fishing license in actual possession;

(6) sport fishing guide-outfitter to knowingly fail to comply with AS 08.54.610(e);

(7) person who is licensed under this chapter to:

(A) commit or aid in the commission of a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation by the licensee or the client of the licensee; or

(B) permit the commission by a client of the licensee of a violation of a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation that the licensee knows or should know is being or will be committed without

(i) attempting to prevent it, short of using force; and

(ii) promptly reporting the violation to the Department of Public Safety by the earliest reasonable means available.

(8) person without a current sport fishing guide-outfitter license to knowingly guide or outfit, advertise as a guide-outfitter, or represent to be a guide-outfitter;

(9) person without a current master sport fishing guide-outfitter license to knowingly advertise as, or represent to be, a master sport fishing guide-outfitter;

(10) person without a current sport fishing outfitter license to knowingly outfit, advertise as or represent to be a sport fishing outfitter

(11) person without a current assistant sport fishing guide license to knowingly provide assistant sport fishing guide services;

(12) person without a current sport fishing guide-outfitter or transporter license to knowingly provide transportation services, advertise as or represent to be a sport fishing transporter;

(13) person to knowingly provide sport fishing guide-outfitter services, assistant guide services, outfitter services or transportation services during the period for which the person's license to provide that service is suspended or revoked;

(14) person who is licensed as a sport fishing transporter, or who provides transportation services under a transporter license, to knowingly accompany or direct a sport fisherman in sport fishing activities who is a client of the person except as necessary to perform the specific duties of transporting, embarking or disembarking sport fishermen, their equipment, or fish harvested by sport fishermen;

(b) In addition to disciplinary sanctions imposed under AS 08.54.710, a person who commits an offense set out in (a) of this section, is guilty of a class A misdemeanor.

(1) A person licensed as a sport fishing guide-outfitter who, without any culpable mental state, violates (a)(9) of this section is guilty of a violation.

(2) A person who, without any culpable mental state, violates AS 08.54.610(f) is guilty of a violation.

(3) A person who knowingly violates AS 08.54.610(f) is, for a

(A) first offense in a three-year period, guilty of a violation; and

(B) second or subsequent offense in a three-year period, guilty of a class B misdemeanor.

(c) In addition to any other penalty provided by law, a court may revoke a license issued under this chapter of a person who is convicted under this chapter and equipment may be seized and forfeited in accordance with AS16.05.190-195.

Sec. 08.54.740. Responsibility of sport fishing guide, assistant guide, outfitter, or transporter for violations.

(a) A sport fishing guide-outfitter, assistant guide, outfitter, or transporter is equally responsible under AS 08.54.710-720 for a violation of this chapter, a regulation adopted under this chapter, or a state or federal sport fishing statute or regulation committed by a person while in the course of the person's employment with the sport fishing guide-outfitter, assistant guide, outfitter, or transporter.

Sec. 08.54.760. Sport Fishing Guide and Outfitter records; confidentiality of records and activity reports.

(a) The Department of Fish & Game may collect information from sport fishing guide-outfitters including

(1) the name and license number of each vessel that is used in providing sport fishing guide services;

(2) the amount of fishing effort, catch, and harvest by clients of a sport fishing guide-outfitter;

(3) the locations fished during the provision of sport fishing guide services; and

(4) other information that the Department of Fish & Game or the board requires by regulation.

(b) The Department of Fish and Game may collect information from sport fishing outfitters and transporters

(c) A person who holds a sport fishing guide-outfitter or outfitter license issued under AS 08.54.610 shall comply with the reporting requirements in this section.

(d) A person who is required to complete reports under this section shall not provide false information or omit material facts in a report.

(e) A person who is required to complete reports under this section may not be issued a license under AS 08.54.610 unless the Department of Fish and Game has received all reports required under this section for the preceding year.

(f) Information collected under this section is confidential to the extent provided under AS 16.05.815 or AS 40.25.110.

(g) The Department of Fish and Game may adopt regulations under AS 44.62 (Administrative Procedure Act) that it considers necessary to implement this section.

(h) The Department of Fish and Game shall make sport fishing log books received under this section, and activity reports received under AS 08.54.650 , available to state agencies, federal law enforcement agencies, and other law enforcement agencies if requested for law enforcement purposes.

(i) Forms, records, and reports required under this chapter may be distributed, received, and stored electronically.

Sec. 08.54.770. License and examination fees.

NOTE: Realistic license fees, based upon estimated program costs, will be developed and will be posted for public review as soon as they are available

(a) The department shall set fees under AS 08.01.065 for each of the following:

(1) sport fishing guide-outfitter license;

(2) sport fishing outfitter license;

(3) sport fishing assistant guide license;

(4) sport fishing transporter license;

(5) license application fee.

(b) In setting license fees, the department shall consider the cost of reporting and reimburse the Department of Fish and Game for costs associated with reporting.

(c) The license fee for the sport fishing guide-outfitter, outfitter, or assistant guide license is in addition to the fee required for a sport fishing license issued by the Department of Fish and Game under AS 16.05.340 .

(d) An applicant for a qualifying examination for a sport fishing guide-outfitter license shall pay a fee established by regulations adopted under AS 08.01.065 .

(e) The fee for the sport fishing transporter license must be equal to the fee for the sport fishing guide-outfitter and outfitter license.

(f) The amount of the license fee for a nonresident shall be at least two times the amount of the license fee for a resident and may be increased by the board by regulation.

Sec. 08.54.790. Definitions.

(1) "board" means the Sport Fishing Guide Services Board;

(2) "client" means a person who is a member of a fishing party that engages or uses a person to provide sport fishing guide services and who is not a licensed sport fishing guide-outfitter or sport fishing assistant guide;

(3) "compensation" means payment, remuneration, and other benefits received in return for services. "Compensation" includes wages or other employment benefits given directly or indirectly to an individual or organization, and any dues, payments, fees, or other remuneration given directly or indirectly to a fishing club, business, organization, or individual who provides sport fishing guide services. "Compensation" does not include reimbursement for the actual daily expenses for fuel, food, or bait.

(4) "department" means the Department of Commerce, Community, and Economic Development;

(5) "fish" means any species of aquatic finfish, invertebrate, or amphibian, in any stage of its life cycle, found in or introduced into the state, and includes any part of such aquatic finfish, invertebrate, or amphibian;

(6) "sport fishing equipment" means fishing rods, poles, reels, lines, bait, hooks, lures, flies, fish attractants, landing nets, gaffs, and other equipment commonly used to take or attempt to take sport-caught fish.

(7) "sport fishing assistant guide" means a person who, for compensation or with intent to receive compensation, provides sport fishing guide services to clients of a licensed sport fishing guide-outfitter during sport fishing activities.

(8) "sport fishing outfitter services" means to provide, for compensation or with the intent to receive compensation, vessels that are located in the water and sport fishing equipment to persons who use them for sport fishing activities by a person who neither directs, accompanies or is present with the sport fishermen while the sport fishing activities are occurring

(9) "sport fishing" means the taking of or attempting to take for personal use, and not for sale or barter, any fresh water, marine, or anadromous fish by hook and line held in the hand, or by hook and line with the line attached to a pole or rod which is held in the hand or closely attended, or by other means defined by the Alaska Board of Fisheries;

(10) "sport fishing guide-outfitter" means a person who is licensed to provide sport fishing guide-outfitter services to persons who are engaged in sport fishing;

(11) "sport fishing guide services" means assistance, for compensation or with the intent to receive compensation, to a person to take or to attempt to take fish by accompanying or physically directing a person during sport fishing activities. "Sport fishing guide services" does not include services provided by an assistant, deckhand, or similar person who works directly under the supervision of and on the same vessel as the sport fishing guide or assistant sport fishing guide.

(12) "take" means taking, pursuing, fishing, or in any manner disturbing, capturing, or killing or attempting to take, pursue, fish, or in any manner capture or kill fish;

(13) "transportation services" means the carriage for compensation of a person, their equipment, or fish harvested to or from sport fishing activities and advertises these services; "transportation services" does not include the carriage by aircraft of sport fishermen, their equipment, or fish harvested

(A) on nonstop flights between airports listed in the Alaska supplement to the Airmen's Guide published by the Federal Aviation Administration; or

(B) by an air taxi operator or air carrier for which the carriage of sport fishermen, their equipment, or fish harvested is only an incidental portion of its business; in this subparagraph, "incidental" means transportation provided to a sport fisherman by an air taxi operator or air carrier who does not

(i) charge more than the usual tariff or charter rate for the carriage of sport fishermen, their equipment, or fish harvested;

(ii) advertise transportation services or sport fishing activities to the public; in this sub-subparagraph, "advertise" means soliciting sport fishermen to be customers of an air taxi operator or air carrier for the purpose of providing air transportation for sport fishing activities through the use of print or electronic media, including advertising at trade shows, or the use of sport fishing broker services or other promotional services.

(14) "vessel" means a floating craft powered, towed, rowed, or otherwise propelled, which is used for delivering, landing, or taking fish within the jurisdiction of the state,

Dora,

I finished working with Jenny Strickler at Commerce and worked out numbers that Charlie approves. They are PRELIMINARY estimates and could be modified but are the best we have to date. They are:

Guide-Outfitter: $165/year

Nonresident guide-outfitter: $330

Assistant Guide: $70

Outfitter: $200

Transporter: $200

I'll be in Soldotna Monday, October 27 and Homer Tuesday, October 28 for public meetings and will make these PRELIMINARY numbers available then.

Rob

ABSTRACT

In 2006, 1,677 sport fishing businesses and 3,454 guides licensed under the Alaska Department of Fish and Game guide and business registration program, signifying intent to provide sport fishing services in Alaska. The program licensed 1,695 businesses and 3,531 guides in 2007, and 1,659 sport fishing businesses and 3,522 sport fishing guides in 2008. Of the 1,659 sport fishing businesses registered in 2008, 1,525 were combination owner/guide licenses. Based on the 2008 physical addresses of both the businesses and guides, 90% of the businesses were residents of Alaska, and 10% were from other residency strata (defined as nonresidents), 72% of the guides were residents and 28% were nonresidents.

Of the 2,553 saltwater logbooks issued in 2008, 2,089 were activated, and of the 2,538 freshwater logbooks issued in 2008, 1,785 were activated. Of those businesses that submitted logbook information in 2008, 58% offered saltwater services, and 42% offered freshwater guided services. In 2006, logbook records show that 1,368 saltwater vessels were active, 1,409 were active in 2007 and 1,355 were active in 2008. On average during those three years, 55% of the saltwater vessels were active in Southeast Alaska and 45% were active in Southcentral Alaska.

A total of 65,671 saltwater charter trips were conducted in 2006, 67,152 trips in 2007, and 62,006 trips in 2008 statewide. On average, 84% of the saltwater angler days were nonresidents, 12% were residents and 4% were crew, comped fishing or unknown residency. In freshwater, 46,781 trips were taken in 2006, 48,697 in 2007, and 48,501 in 2008. Of the statewide freshwater trips, 90% of the angler days were nonresidents, 8% were residents, and 2% were crew fishing or unknown residency.

Average saltwater salmon harvests between 2006 and 2008 show that coho and king salmon were the predominant species, consisting of 67% and 15% of the harvest respectively statewide. Saltwater bottomfish harvests between 2006 and 2008 show that Pacific halibut were the predominant species with 68% of the total saltwater harvest statewide. Total halibut harvest statewide ranged from 379,473 fish in 2007 to a low of 339,718 fish in 2008. In freshwater, coho salmon were the predominant harvested species, followed by sockeye and then king salmon.

Key words: Sport fishing, guide and business registration, freshwater logbook, saltwater logbook, participation, effort, harvest, sport fishing vessel, Pacific halibut, salmon, bottomfish, Southeast Alaska, Southcentral Alaska

BACKGROUND

The Alaska Department of Fish and Game (ADF&G) Division of Sport Fish (DSF) has operated a program since 1998 to register and license both sport fishing guides and sport fishing guide businesses and to collect information on sport fishing participation, effort, and harvest by saltwater and freshwater guided clients. This report briefly summarizes the approach, history, and results of this program for 2006 through 2008.

GUIDE AND BUSINESS REGISTRATION AND LICENSING

The activities of the guided sport fishing industry in Alaska have significantly increased in recent years with implications to fish allocation and management decisions. Resolution of related issues was hampered by lack of information regarding the industry and its impact on fishery resources in many parts of Alaska. The sport fishing guide and business registration and licensing programs were designed to provide a comprehensive system to better define this diverse industry throughout Alaska. A brief history of the statewide registration and licensing process follows.

Beginning in May 1995 the owner(s) of any business that engaged in sport fish guiding of anglers anywhere in Alaska were required to register their business information, employees acting as sport fishing guides for the business, and listing all vessels used for guiding. In 1997 sport fishing guides were required to register and provide information about the employing business (Dean 2001; Dean and Howe 1999).

In 1998, the Alaska Board of Fisheries (BOF) adopted new statewide sport fishing guide registration regulations and definitions during their February Statewide Finfish meeting in Girdwood, Alaska (5 AAC 75.075: *Sport Fishing Services and Sport Fishing Guide Services; License Requirements; Regulations of Activities)*. It should be stressed that this was a registration process, not a licensing process. No fees were required and businesses and guides were allowed to provide services in any area of the state, assuming other regulatory requirements were met. In 1998 ADF&G registered guide businesses and guides and stopped registering charter vessels, because the Commercial Fisheries Entry Commission (CFEC) implemented a licensing program for all vessels to be used for guided sport fishing. From 1998 through 2004, ADF&G continued to register sport fishing businesses and sport fishing guides.

On May 11, 2004, the Alaska Legislature adopted House Bill 452 (HB 452), that established licensing requirements for sport fishing guide business owners and sport fishing guides on a statewide basis. This bill was created to establish minimum professional standards that were required of both freshwater and saltwater sport fish guides and business owners before a license could be obtained. The standards were established to protect consumers and to promote the viability and legitimacy of a professional sport fish guide industry. Businesses providing sport fish guided services were now required to obtain a State of Alaska Occupational Business License and hold liability insurance with a minimum of $300,000 coverage for all incidents in a year (AS 16.40.260). Licensed sport fishing guides were required (1) to be citizens of the United States, Canada, or Mexico, (2) hold a current first aid card, (3) have a current year Alaska sport fishing license and (4) have a valid U.S. Coast Guard operator's license if they were to operate a motorized vessel in navigable waters. License application forms and the information collected have remained consistent in design from 2006 through 2008 (Appendix A).

LOGBOOKS

In February, 1998 the BOF adopted regulations (5 AAC 75.076) requiring logbooks for saltwater charter vessels statewide. Information on the amounts and locations of charter activity and actual participation and harvest by individual vessels and businesses was needed by the BOF for allocation and management of Chinook salmon *Oncorhynchus tshawytscha*, rockfish *Sebastes* spp., and lingcod *Ophiodon elongatus*, and by the North Pacific Fisheries Management Council (NPFMC) for allocation of Pacific halibut *Hippoglossus stenolepis*. To meet these information needs ADF&G implemented a saltwater sport fishing charter vessel logbook program for DSF Region I, Southeast Alaska (Southeast), and Region II, Southcentral Alaska (Southcentral; Table 1; Figure 1).

In 1999, the NPFMC was considering proposals to limit the guided sport halibut harvest. Their concerns were: (1) that growth in this fishery was reallocating resources away from the individual fishing quota (IFQ) commercial longline fishery, and (2) that in some areas there was overcapitalization and localized depletion of the halibut resource. NPFMC endorsed a two-prong approach to resolve the perceived impact of increased guided charter halibut fishing. The first was establishment of guideline harvest limits (GHL) for International Pacific Halibut Commission (IPHC) Areas 2C and 3A (Figure 2), and the second was a process to establish local area management plans for halibut fisheries in coastal communities.

Since 1998, the logbook design has undergone annual revisions, driven primarily by changes or improvements in the collection of halibut, lingcod and rockfish data through the logbook program, Statewide Harvest Survey (SWHS), and expanded port sampling programs. House Bill

452, adopted in 2004, not only established new licensing requirements, but also established a logbook reporting requirement for all freshwater businesses in addition to the existing saltwater reporting requirements. For various reasons, both technical and policy-based, information on halibut harvests was not collected from 2002 through 2005. The collection of halibut data was resumed in 2006. In addition, the 2006 logbook was redesigned to require reporting of angler license numbers and the harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data (Appendix C).

The data from logbooks are compiled to show where fishing effort occurs, the extent of participation, and the species and numbers of fish kept and released by individual clients. This information is used for regulation and the development and management of fisheries, for project evaluation, and for formulation of department policies and priorities that reflect angler needs, concerns, and preferences. It also provides ADF&G with a tool to promote management of Alaska's resources for sustained yield.

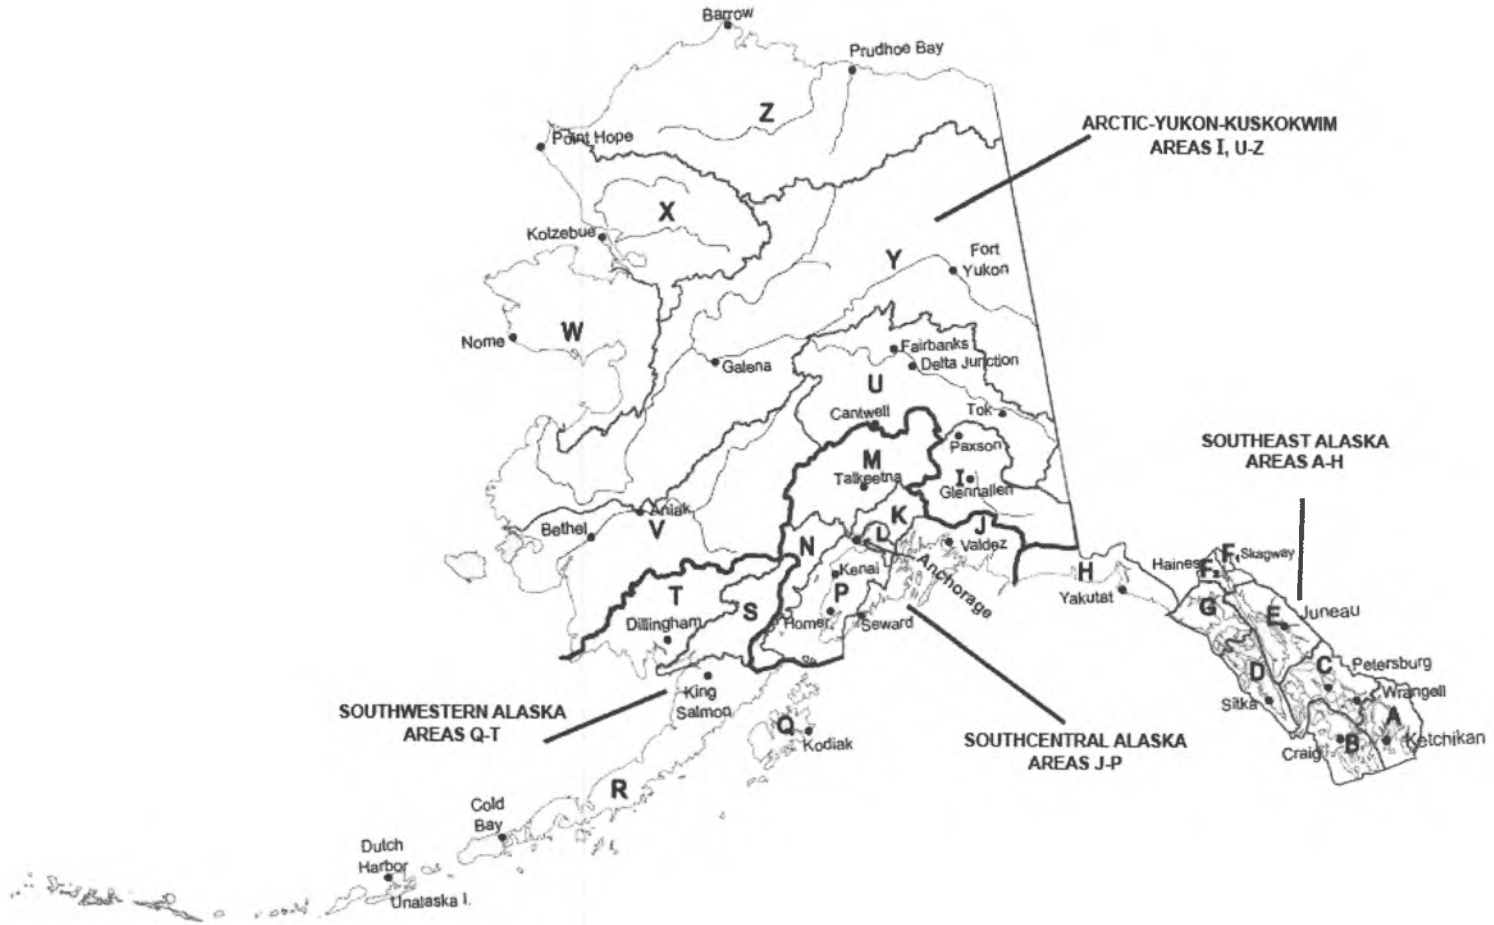

Figure 1.–Map of Alaska and Division of Sport Fish regions and management areas.

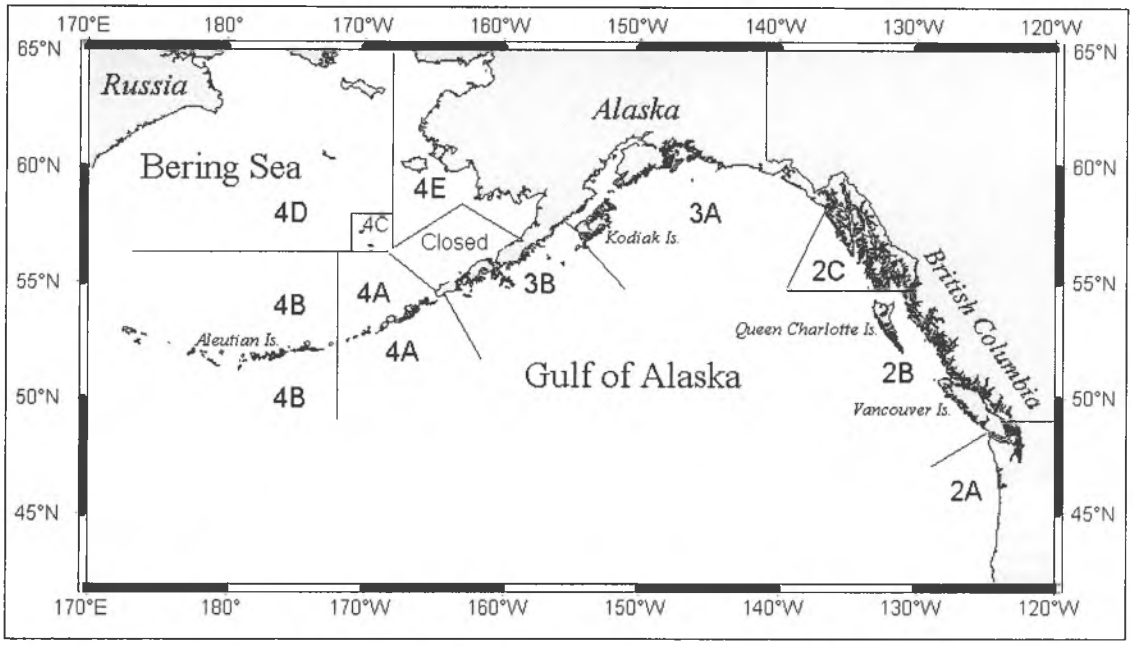

Figure 2.–International Pacific Halibut Commission (IPHC) regulatory areas.

Currently, a logbook record is required for every chartered or guided trip taken with clients, defined as an outing with one group of clients that ends when the clients and their fish (if fish were kept) are offloaded. Each trip is associated with an individual licensed business and guide.

VESSEL REGISTRATION

In addition to establishing a licensing program and statewide freshwater logbook requirement, HB 452 included establishment of a vessel registration program to be conducted by ADF&G as part of the logbook program to monitor the number of vessels used in the guided marine and freshwater fisheries. All boats used in marine or fresh water were referred to as "charter or guide boats" regardless of their size or the manner in which they are used. All vessels used in the charter guide industry were required to be registered with ADF&G. Vessel registration information was collected when logbooks were issued to a business. Registration information included the Department of Motor Vehicles or DMV number or the U.S. Coast Guard vessel documentation number. Upon completion of vessel registration with ADF&G, each vessel was provided with two decals and year tags to indicate that the vessel is used in the guide industry (Appendix B3 and B4). Decals must be applied and visible on both sides of the vessel.

METHODS

GUIDE AND BUSINESS LICENSING

Businesses and guides can be licensed to provide sport fishing guided services if they meet the minimum qualifications specified in regulation (AS 16.40.260 and AS 16.40.270).

During the month of January from 2006 through 2008, the Division of Sport Fish mailed renewal license applications to each sport fishing guide and sport fishing business that was licensed in the previous year. In addition, guides and businesses could obtain a license in person at local

ADF&G offices or through the Internet. The license applications could be used in any of three ways (Appendix A):

- To license a business only,
- To license a guide only,
- To license a combination business and guide (an owner/operator where the owner also conducted the guiding).

The licensing process collected business owner or guide name, permanent mailing information, permanent and inseason phone number if applicable. Additionally, the name of the business, name of the business owner, occupational business license number, insurance company information and insurance binder or policy number and effective dates were required. A guide is required to be a citizen of the United States, Canada, or Mexico, hold a current first aid card and have a current year Alaska sport fishing license along with any tags or permits required for specific fisheries. If a guide planned to operate a motorized vessel on navigable waters with clients on board, the guide was required to have a current U.S. Coast Guard Operator's License and provide that number and expiration date on the license application.

Unique license numbers were assigned according to how licensing occurred. License numbers did not remain the same in subsequent years. If an operator or guide licensed at an ADF&G office, a pre-numbered application was used and that number became the license number for that year. Renewal or internet license applications were randomly assigned numbers by the computer database that processed the information

Once the license applications were reviewed for completeness and accuracy, DSF mailed a wallet-sized license to each guide or business. Those applicants who licensed by going to an ADF&G office received a copy of their license, which allowed them to operate immediately. Those who licensed using the renewal application or by applying through the Internet, were required to wait until they received their license in the mail prior to operating or providing guiding services.

LOGBOOK DATA COLLECTION

A standard statewide saltwater logbook design was used from 2006 through 2008 (Appendix B). The freshwater logbook underwent very few changes between 2006 and 2008. Logbook reporting is a mandatory process governed by regulation (AS 16.40.280). As such, the reporting process was considered to be a census of all charter/guided trips. Logbooks were available and issued from ADF&G area offices located statewide, in addition to vendors located in Valdez and Seward.

Other than a few minor design changes, both the saltwater and freshwater logbooks collected the same information during all three years. Some changes were made to improve or simplify the use of the forms based on operator input, and to improve the capture of client and crew harvest information. Some of the annual design changes in the saltwater logbook were driven primarily by changes or improvements in the collection of halibut and rockfish data, and by requests from the NPFMC for information needed for allocation of halibut. In 2006, both logbooks were redesigned to require reporting of angler license numbers and the harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data. The most significant changes made to the saltwater logbook occurred between 2005 and 2006 (Appendix C).

Changes between the 2005 and 2006 saltwater logbooks included:

- The data page design went from a single page designed to collect information from nine different trips to a data page that collected information from one unique trip per page.
- A section to collect Business and Vessel Information was added. Business and Guide license numbers along with the Alaska Boat Registration number (AK. #) or U.S.C.G. documentation number was recorded on every data page. This information was intended to confirm that the information was associated with the correct business on record, and to validate the vessel registration information.
- A section to collect Trip information was added. Trip information collected the date fished, port or community where clients or fish were off-loaded, total number of clients on the vessel including those that did not fish, targeted species (salmon or bottomfish), primary statistical area fished, maximum number of rods fished, and number of boat hours fished. This design change resulted in more detailed information unique to each trip taken with a group of clients.
- A section to collect Individual Angler and Catch Information was added. In 2006, the collection of halibut information resumed. The new design also required the reporting of individual angler license numbers along with harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data.
- A signature line was added that required the guide who led the trip to sign their name certifying that the information was true and correct to the best of their knowledge.
- A notice statement drafted by the NPFMC was printed within the front cover of the 2006 saltwater logbook. The notice announced that a control date of December 9, 2005 was being established. Those businesses and guides not participating in the Southeast or Southcentral charter halibut industry by this date might not be eligible for future access and/or quota in these fisheries.

No significant changes took place in the freshwater logbook design between 2005 and 2006 (Appendix D).

Changes between the 2006 and 2007 saltwater logbooks include:

- Additional client information was obtained, to indicate if "comped" anglers fished. A "comped" angler was an angler who did not compensate the guide for that charter trip. By including "comped" anglers, the data captured by onsite dockside samplers and data from the logbook census were more comparable, since all anglers on board a charter vessel and their catches were now being counted.
- Vessel AK # or U.S.C.G. documentation numbers were no longer being collected on each data page. The vessel information collected during the logbook assignment to a business on the sign-out sheet was adequate.

No significant changes took place in the freshwater logbook design between 2006 and 2007 (Appendix D).

The changes to the saltwater logbook forms between 2007 and 2008 were in response to requests by the NPFMC in an effort to continue improvement in the collection of halibut information in preparation for a potential IFQ or moratorium program. Changes between the 2007 and 2008 saltwater logbooks include:

- A request to collect information on the port or community where the fishing trip began.
- Indicate the IPHC area fished: 2C, 3A, 3B or 4.
- The collection of the angler's first and last name in addition to the angler license number.
- The number of halibut kept year-to-date (YTD) in IPHC area 2C in anticipation of an annual limit on guided halibut harvest per client. The annual limit was never implemented but this column had already been added and logbooks distributed prior to the decision to not implement an annual halibut limit.
- The signature of an angler on the back side of each trip sheet if that angler kept halibut in 2C as verification of the information provided on the data page.

No significant changes took place in the freshwater logbook between 2007 and 2008 (Appendix D).

Saltwater Logbook Forms

A saltwater logbook consisted of the cover page, schedule of reporting deadlines, one logbook check out sheet to show the business to which the logbook was issued and register the saltwater vessel, a set of instructions for filling out the information on the logbook sheets, and 50 data sheets to record trip information. Data collection on each of the 50 pages consisted of:

- ADF&G business owner license number;
- ADF&G guide license number for the guide leading the trip;
- Date that fishing took place;
- Port or community where fishing began;
- Port or community of off loading,
- Total number of paying clients on the vessel (including those that did not fish, but not including "comped" anglers or crew members that fished);
- Primary statistical area fished while targeting salmon or bottomfish;
- Number of boat hours fished;
- Crew, client, and "comped" angler's current ADF&G sport fishing license or PID (permanent fishing license) number, birthdate of youth anglers under the age of 16;
- First and last name of each client and youth angler;
- Client residency(Alaska resident/nonresident of Alaska);
- A breakdown by fish species kept (and/or released) by each individual angler.

During a saltwater charter trip, the operator must decide if his/her gear or fishing methods are effectively targeting bottomfish, salmon or both. A 6-digit statistical code where most of the fish were caught or targeted is logged for each trip. Statistical maps were provided to the operator upon logbook issuance.

Saltwater species information collected included kept and released information for "large" Chinook (king salmon) 28" and longer and for "small" Chinook (king salmon) less than 28". Also recorded were coho *O. kisutch*, sockeye *O. nerka*, pink *O. gorbuscha*, and chum *O. keta*

salmon, halibut, lingcod, pelagic rockfish, yelloweye, and other nonpelagic rockfish, salmon shark *Lamna ditropis*, and a category for the number of all other species not already listed (Appendix C).

To determine the number of businesses and guides that were "active" in the industry, a cross reference is made to the logbooks to determine if actual guided trips were provided. If ADF&G received at least one charter vessel trip form that reported targeted effort, the charter operation turning in the form was considered an "active" bottomfish or salmon charter operator with an "active" vessel.

Freshwater Logbook Forms

A freshwater logbook consisted of the cover page, schedule of reporting deadlines, one logbook check out sheet to show the business to which the logbook was issued, a freshwater vessel registration page that collects the unique AK # assigned by the Department of Motor Vehicles (DMV) or a United States Coast Guard (USCG) documentation number and primary drainage, a set of instructions for filling out the information on the logbook sheets, and 50 data sheets to record trip information. Data collection on each of the 50 pages consisted of:

- ADF&G guide license number,
- Date that fishing took place,
- Specific name of river, stream or lake fished,
- Site code of site fished as reference within a list provided with each logbook,
- Number of logbook pages used for a specific trip,
- Name of any other species kept,
- Crew, client, and "comped" angler's current ADF&G sport fishing license number, and a youth angler designation for anglers under 16 years of age.
- Client residency,
- A breakdown by fish species kept and released.

Upon acquiring a freshwater logbook, the operator registers all vessels that may be used during the course of the fishing season. Freshwater vessel registration requires that the vessel already have a unique AK # assigned by DMV or a USCG documentation number. Freshwater vessels primarily have AK #'s. The operator must provide the AK # and indicate the primary freshwater drainage where the vessel will operate.

The freshwater logbook does not collect targeted species information like the saltwater logbook, it collects information on species kept and released regardless of what was targeted or sought after. A trip is counted if a logbook data page is submitted with effort information regardless of catch. Freshwater trips are assigned a region of the state based on the name of the site fished, each freshwater site is assigned a unique regional alpha code followed by a numeric code within the region in which it is located (Table 1).

Freshwater information collected were: kept and released numbers for king, coho, and sockeye salmon, cutthroat *O. clarkii*, rainbow and steelhead trout *O. mykiss*, lake trout *Salvelinus namaycush*, Dolly Varden *S. malma*, Arctic grayling *Thymallus arcticus*, northern pike *Esox lucius*, sheefish *Stenodus leucichthys* and a category for the number of all other fish not already listed (Appendix D).

Business operators are allowed to and even encouraged to pick up as many logbooks as they anticipated needing during the course of the season. The ability to acquire as many logbooks as are needed prevents them from having to make multiple trips to an ADF&G office. As a result, numerous businesses ended up getting more logbooks than were eventually used. Because of this, ADF&G differentiates between the number of logbooks issued versus the number that are actually used or activated.

LOGBOOK OUTREACH AND VERIFICATION

In December 2005, the Commissioner of the ADF&G issued a statement that detailed the strategies for assuring the accuracy of reporting of Pacific halibut harvest for the saltwater charter logbook. (Appendix E).

Outreach

An outreach program was initiated to reach as many operators as possible to field questions and to ensure compliance with the reporting requirements. The outreach program was conducted on-site (in the field) by ADF&G employees and off-site from the Anchorage ADF&G office.

On-site Logbook Inspections

Logbook outreach occurred in parts of Southeast and Southcentral regions in conjunction with existing creel survey and port sampling programs. "Courtesy logbook inspections" were conducted as time allowed by ADF&G creel and port sampling technicians during their regular dockside checks of the primary fisheries from May through September. In addition, management staff conducted periodic checks of charter logbooks, mostly in 2006. Logbooks were inspected to make sure that they were filled out correctly, and staff answered any questions about how they should be filled out. These checks were not intended for enforcement or for evaluating the accuracy of data but rather as another opportunity to encourage compliance and completeness and as an indicator of how important logbook data are to ADF&G. These inspections were conducted as time allowed by ADF&G creel and port sampling technicians during their regular dockside checks for the primary fisheries from May through September.

Off-site Logbook Review

The goal of the outreach program was to ensure compliance with all reporting requirements, by emphasizing education early in the season. Off-site outreach was conducted by the Division of Sport Fish, Research and Technical Services (RTS) staff in the Anchorage office. All logbook trip data was subject to a reporting deadline. Logbook data pages were required to be completed and returned to ADF&G on a weekly basis as specified in the instructions of both the saltwater and freshwater logbooks. Timely submission was a requirement to facilitate recall and to allow ADF&G staff to review each data page for completeness and legibility. All logbook data sheets were received by RTS in Anchorage where ADF&G data entry staff date-stamped each data page with the date received, reviewed each page for incomplete, illegible or erroneous information, and conducted phone calls to business owners and guides for follow up and clarification. Calls early in the season were intended to alleviate repeat errors in reporting which were thought to result in fewer calls being necessary later in the fishing season.

As logbook data sheets were received, RTS staff conducted reviews by monitoring all data for completion and legibility prior to data entry. In the event that some of the logbook data sheets required verification from the operator or guide, staff would place phone calls

Phone calls to the business owners and guides significantly improved the quality of the data, minimized reoccurring mistakes by the guide, increased compliance, and contributed to the outreach portion of this program. Logbook data entry staff contacted charter operators to resolve logbook reporting issues and to improve future reporting. These calls were intended to improve data quality and reinforce the message to the guide industry that logbook data are important and are consistently being reviewed. In 2006, 3,011 calls were made to operators, 1,415 in 2007 and 2,160 in 2008. Follow up phone calls have become a valuable outreach tool and will continue to be a standard procedure in the future.

Verification

Logbook data were compared to actual counts of harvested fish (verified) and to reported harvest data (unverified) from onsite interviews. These comparisons are ongoing and are part of a more comprehensive evaluation of logbook data quality (Meyer et al. 2008).

Two unique methods were used to conduct post-season verification of logbook data:

1. A comparison was made between logbook data and guided trip information collected from the Alaska Statewide Harvest Survey (SWHS; Jennings et al. 2007).
2. The data collected from the logbooks was compared to the data collected in the saltwater creel programs administered through ADF&G. Saltwater creel programs include the *Assessment of Recreational Halibut and Groundfish Harvest in Southcentral Alaska* program in Homer, the *Haines Marine Sport Fishery Harvest in Southeast Alaska*(Chapell *In prep*), and the *Harvest estimates for selected marine sport fisheries in Southeast Alaska* (Wendt and Jaenicke *In prep*).

RESULTS

Guide and Business Licensing

In 2006, 1,677 sport fishing businesses and 3,454 guides were licensed with ADF&G. In 2007, 1,695 businesses and 3,531 guides were licensed, and in 2008, 1,659 sport fishing businesses and 3,522 sport fishing guides were licensed with ADF&G to provide sport fishing services in Alaska. The total number of businesses and guides includes all saltwater and freshwater operators. Of the 1,659 sport fishing businesses licensed in 2008, 1,525 were combination owner/guide licenses. Physical addresses of both the businesses and guides in 2008 indicated that 90% of the businesses were Alaska residents, and 10% were from other residency strata (defined as nonresidents), 72% of the guides were residents and 28% were nonresidents.

The licensed businesses and guides were subtotaled by region for Southeast, Southcentral, and Other Alaska, including the Arctic-Yukon-Kuskokwim area and nonresident license applicants.

From 2006 through 2008, an average of 28% of the licensed businesses had physical addresses in Southeast, 57% in Southcentral, 5% had permanent addresses in other parts of Alaska, and 10% had nonresident addresses based on their license applications. From 2006 through 2008, an average of 22% of the licensed guides had permanent addresses in Southeast, while 47% in Southcentral, 4% in other parts of Alaska and 27% had nonresident addresses based on their license applications (Table 2).

Based on the submission of saltwater logbook data pages with trip information in 2006, 777 businesses provided saltwater services and 503 provided freshwater services, and 140 businesses

provided both freshwater and saltwater services. In 2007, 786 businesses provided saltwater services and 513 provided freshwater services and 132 businesses provided both freshwater and saltwater services. In 2008, 766 businesses provided saltwater services and 508 provided freshwater services and 122 businesses provided both freshwater and saltwater services (Table 3 and Table 4).

Total[d]	643	645	630	1,518	1,581	1,636

Note: Data are current as of 07/16/09.

[a] Business counts are based on the business number listed on the signout sheet of a logbook (this can be a business only or a combined business/guide license).

[b] Guide counts are based on the guide number written on each log page (this can be a guide only or a combined business/guide license).

[c] Region is based on the site code provided for the site fished on each log page.

[d] Total is not additive because a business or guide could operate in both areas. Includes businesses and guides that offered both saltwater and freshwater services.

VESSELS

Saltwater

The number of vessels registered to provide saltwater sport fishing charter services was 1,671 in 2006, 1,666 in 2007, and 1,604 in 2008. A vessel, though registered, is not considered "active" unless that vessel was used on a guided trip as indicated by the submission of a logbook data page. Of the 1,671 saltwater vessels registered in 2006, 1,368 were active, of the 1,666 vessels registered in 2007, 1,409 were active, and in 2008 of the 1,604 registered vessels, 1,355 were active in saltwater. Based on the primary port of operation indicated at registration and port of offloading, 746 saltwater vessels operated in Southeast, 621 operated in Southcentral, and 1 vessel operated in both Southeast and Southcentral in 2006. In 2007, 768 saltwater vessels operated in Southeast, 641 operated in Southcentral, and 0 vessels operated in both Southeast and Southcentral. In 2008, 759 saltwater vessels operated in Southeast, 596 operated in Southcentral, and 0 vessels operated in both Southeast and Southcentral (Table 5).

Logbook data indicate that vessels will target all possible species; bottomfish, salmon and both during the course of a fishing season (Table 6).

Table 5.–Number of registered and active saltwater vessels by region, 2006–2008.

	Registered Vessels			Active Vessels		
Region[a]	2006	2007	2008	2006	2007	2008
SE	926	918	907	747	768	759
SC	745	748	697	622	641	596
Total[b]	1,671	1,666	1,604	1,368	1,409	1,355

Note: Data are current as of 07/09/09.

[a] Region is based on primary port of operation listed on sign-out sheet and port of off loading, active is determined by the salmon or bottomfish statistical area.

[b] Total is not additive because vessels can operate in both areas.

Table 6.–Number of active saltwater vessels that made at least one trip in each target category, by region, 2006–2008.

		Target[a]			
Year	Region[b]	Salmon	Bottomfish	Both	No Statistical Area
2006	SE	631	495	637	5
	SC	383	551	486	6
	Total	1,014	1,046	1,123	11
2007	SE	637	494	676	49
	SC	377	576	495	32
	Total	1,014	1,070	1,171	81
2008	SE	623	534	649	56
	SC	325	546	441	22
	Total	948	1,080	1,090	78

Note: Data are current as of 07/09/09.

[a] Target is based on salmon and bottomfish statistical areas.

[b] Region is based on primary port of off loading, salmon statistical area and bottomfish statistical area.

Freshwater

Based on the primary drainage and sites fished, many more freshwater vessels operate in Southcentral than in other regions (Table 7).

Table 7.–Number of registered freshwater vessels by year and region, 2006–2008.

Year	SE	SC	AYK	Unknown	Total[a]
2006	131	1,640	219	98	2,086
2007	131	1,657	239	15	2,041
2008	122	1,738	261	8	2,128

Note: Data are current as of 07/14/09.

[a] Total not additive because a vessel could be registered and operate in more than one region.

TRIPS

Saltwater

Logbook data indicate that 65,671 saltwater charter trips were conducted statewide in 2006, 67,152 trips were conducted in 2007, and 62,006 trips were conducted in 2008. During all three years, a majority of the trips that targeted salmon only occurred in Southeast, whereas, the majority of trips that targeted bottomfish only occurred in Southcentral. During the same three years, operators in Southeast conducted significantly more trips in which both salmon and bottomfish were targeted on the same trip. If a statistical area fished was not provided, no targeted species was assigned (Table 8).

Table 8.–Number of saltwater trips by targeted species by region, 2006–2008.

		Species Targeted[a]				
Year	Region[b]	Salmon[c]	Bottomfish[c]	Both[c]	No Statistical Area	Total
2006	SE	14,309	6,146	18,628	5	39,088
	SC	3,481	15,555	7,537	10	26,583
	Total	17,791	21,702	26,165	15	65,671
2007	SE	12,759	6,144	20,633	62	39,598
	SC	2,876	16,489	8,145	44	27,554
	Total	15,635	22,633	28,778	106	67,152
2008	SE	11,338	7,368	18,634	109	37,449
	SC	2,135	15,733	6,617	72	24,557
	Total	13,473	23,101	25,251	181	62,006

Note: Data are current as of 07/09/09.

[a] Species targeted is based on the provision of salmon and bottomfish statistical areas.

[b] Region is based on the port of offloading, and salmon or bottomfish statistical areas.

[c] The same vessel can make multiple trips targeting either salmon, bottomfish or both.

Freshwater

In 2006, 46,781 freshwater guided fishing trips were taken, 48,697 were taken in 2007, and 48,501 taken in 2008. On average, 84% of the freshwater trips took place in Southcentral, 10% in the Arctic-Yukon-Kuskokwim (AYK) area, and 6% in Southeast (Table 9).

Table 9.–Number of freshwater trips by region, 2006–2008.

	Region[a]			
Year	SE	SC	AYK	Total
2006	3,038	39,512	4,231	46,781
2007	3,256	40,543	4,898	48,697
2008	3,113	40,587	4,801	48,501

Note: Data are current as of 07/16/09.

[a] Region is based on the area code on the site code listed on each log page.

[b] Unknown means the record didn't have a site code listed, thus a region could not be determined.

LOGBOOK TRIP EFFORT AND HARVEST

Statewide saltwater charter trips appear to have decreased in 2008 after a steady increase between 2006 and 2007, the number of angler days fished declined steadily since 2006. For freshwater guided fishing statewide, the number of trips and angler days fished appeared to remain steady with very slight adjustments (Table 10).

SALTWATER

An average of 82% of the saltwater logbooks that were issued were activated (effort or catch reported) each year. From 2006 through 2008, the saltwater logbook collected client residency. Records show that for those three years, 90% of the angler days of effort in the saltwater charter salmon fishery were conducted by nonresident anglers, compared with 8% by residents and 2% by crew, comped anglers or those of unknown residency. Records also indicate that for those three years, 82% of the angler days of effort in the saltwater charter bottomfish fishery were conducted by nonresident anglers, 14% by residents and 4% by crew fishing, comped anglers or those of unknown residency (Tables 11-16).

Based on the number of angler days fished from 2006 through 2008, 69% of the salmon participation took place in Southeast, and 31% in Southcentral. Within that same time period, 42% of the bottomfish participation took place in Southeast, and 58% occurred in Southcentral (Tables 11-16).

From 2006 through 2008 coho and king salmon were the predominant salmon species harvested, making up 67% and 15% respectively of the harvest statewide, with the remaining 18% consisting of a combination of other salmon (Tables 11, 13, 15).

Halibut were the most harvested bottomfish from 2006–2008, with 68% of the total harvest statewide Halibut harvests were 377,366 fish in 2006, 379,473 fish in 2007, and a low of 339,718 fish in 2008. Statewide, 32% of the halibut harvest occurred in Southeast and 68% occurred in Southcentral (Tables 12, 14, 16).

FRESHWATER

On average, 71% of the freshwater logbooks that were issued were actually activated. From 2006 through 2008, 8% of the freshwater participation occurred in Southeast, 84% occurred in Southcentral, and 8% took place in the Alaska-Yukon-Kuskokwim (AYK) or interior Alaska.

For those three years, 90% of the angler days of effort in the freshwater guided fishery were conducted by nonresident anglers, 8% were residents and 2% were crew fishing, comped anglers or those of unknown residency. The highest percent of nonresident fishing occurred in Southcentral.

From 2006 through 2008 coho, sockeye and king salmon were the predominent salmon species, making up 45%, 29% and 20% respectively on average of the harvest statewide, with the remaining 7% consisting of a combination of other salmon (Tables 17-19).

DISCUSSION

GUIDE AND BUSINESS LICENSING

The 2006 through 2008 ADF&G guide and business licensing process differed from the registration process prior to 2005 in terms of the approach used, fees, and the information collected on license applications. The current licensing approach reflects changes made in 2005 to reflect the new minimum requirements established by HB 452. Guides and businesses offering guided fishing services are now held to a higher standard of compliance than previous to 2005. Violations of the guide licensing statutes or regulations adopted under HB 452 are either violations or misdemeanors, and courts are authorized to revoke the license of the guide or business under certain conditions, such as repeated convictions within a three-year period.

ADF&G no longer collects the information collected in earlier years on the type (saltwater vs. freshwater) and location (regions/subareas) of services. The 2006-2008 licensing processes have been similar and provide a basis for establishing a long-term database of licensed businesses and guides. Charter/guide business and guide licensing still reflects the intent to operate, while actual activity is confirmed by the submission of logbook trip data.

LOGBOOKS

ADF&G initiated a mandatory saltwater charter logbook program in 1998. The BOF adopted regulations requiring annual registration of sport fishing guides and businesses, and logbook reporting. The logbook and registration/licensing program was intended to provide information on actual participation and harvest by individual vessels and businesses.

Recent emphasis from ADF&G management staff and NPFMC on more timely saltwater data spurred discussions on how to hasten logbook data availability. Currently, logbook data entry involves collecting logbook sheets from the guide, entering the logbook data into a logbook database, and editing the data. This process can take RTS from six to eight weeks. Discussions included the possibility of an electronic submission option that would provide data to ADF&G and NPFMC staff in a more timely manner. Any option for a logbook change would have to include a design that is appealing and easy for the guide industry to use, such that they would perceive it as beneficial to a process that they already consider "burdensome." Electronic reporting options were, at first, appealing to fulfill both management needs and halibut management needs for more timely information. Further discussions concluded that electronic reporting would still necessitate the use of a paper version of the logbook due to enforcement and trip recording requirements. Data would still need to be verified for errors, be entered accurately into a database, and be available for onsite inspection. There are currently no options for going "paperless", and no perceived benefit to managers or the industry that would result from the process. The "paperless" approach would require a change in regulation for reporting requirements along with extensive research into the cost of electronic reporting. The discussion for going "paperless" will continue however.

Upon further discussion and research, an alternative approach was considered. ADF&G programmers researched the option of developing a system that would electronically scan the image of a redesigned logbook data page. Scanned images would minimize data entry time but allow for data entry personnel to fix images flagged as unrecognizable, thus maintaining data accuracy and quality. This option is not any more "burdensome" to the industry and would

likely make the weekly reporting requirement more palatable knowing that the data would be more immediately available.

In 2010, a field test of the redesigned saltwater logbooks will be conducted to test the new scannable saltwater logbook data page and scanning software. Upon review of the test data pages and likely adjustments to the design, it is hoped that this new design will be fully adopted and implemented by 2011.

Preliminary results from verification studies comparing the accuracy of logbook harvest data with the statewide harvest survey estimates, and onsite creel programs are favorable. Logbook data will continue to be compared to counts from those two programs. Comparisons are ongoing and are part of a more comprehensive evaluation of logbook data quality. Logbook halibut data has been used extensively. Saltwater and freshwater logbook data have also been used for a variety of regulatory analyses for state managed species.

ACKNOWLEDGEMENTS

Southeast and Southcentral regional and area staff, especially numerous front counter personnel, have been critical to the success of the ADF&G sport fishing guide and business licensing and logbook program. The above staff along with Rob Bentz, Bob Chadwick and Mike Jaenicke from Southeast, Scott Meyer, Matt Miller and Tom Vania from Southcentral, and Tom Taube from Fairbanks have also provided valuable comments during the process of registration and logbook form design.

Doug Vincent-Lang has provided valuable insight on the history of the program and facilitated numerous discussions with NOAA and IPHC. Bob Clark's thoughtful insight and direction has been very much appreciated. We also acknowledge the expertise and infinite patience exhibited by Joanne MacClellan in preparing this report. Her knowledge and willingness to assist is invaluable.

Kirk Brogdon of the division's Research and Technical Services section deserves considerable credit for designing and implementing efficient information management systems for data capture, cleaning, storage, and reporting. These systems, accessible via the division's Intranet, allowed area staff statewide to query the most up-to-date registration and logbook databases via their Internet browser.

Kathy Kush should be acknowledged for her incredible skills in streamlining the licensing process and making sure that all license applications are processed in a timely manner that has allowed the guides and businesses to start operation without delay.

Margaret Nussbaum, Diane Novinska, Jennifer Bond, Mary Yanagawa and several seasonal technicians deserve credit for receiving, entering, and filing the licensing and logbooks forms. With their perseverance, we met reporting deadlines that seemed nearly impossible with available staffing and workloads.

We also acknowledge the cooperation of the thousands of sport fishing guides and sport fishing businesses that licensed and completed their logbooks in a timely and compliant manner.

APPENDIX A
SPORT FISH BUSINESS OWNER/GUIDE LICENSE APPLICATION

2006 SPORT FISH BUSINESS OWNER/GUIDE LICENSE

License #

Alaska Department of Fish and Game / Division of Sport Fish - RTS
333 Raspberry Road, Anchorage, Alaska 99518-1599
Telephone: (907) 267-2369 or (907) 267-2390
http://www.sf.adfg.state.ak.us/statewide/Guides/guide.cfm

FEES (CHECK ONE):

- ☐ $ 50.00 Guide License only
- ☐ $100.00 Business Owner License only
- ☐ $100.00 Combined Business Owner/Guide License

METHOD OF PAYMENT:

- ☐ Check #: _____
- ☐ Money Order #: _____
- ☐ Cash *(Anchorage, Juneau and Fairbanks offices ONLY)*
- ☐ Credit Card *(Anchorage, Juneau and Fairbanks offices ONLY or Internet)*

Make checks payable to: State of Alaska All fees are nonrefundable. Allow 10-14 days for processing

SEE REVERSE FOR INSTRUCTIONS

SECTION A. TO BE FILLED OUT BY ALL APPLICANTS.

Name of Business Owner or Guide: _____ (Last) _____ (First) _____ (M.I.)
Permanent Mailing Address: _____ (City) (State) (Zip)
Telephone Number: ( ) _____ In-season Telephone Number: ( ) _____
e-mail address if available: _____

SECTION B. TO BE FILLED OUT BY THE BUSINESS OWNER OR THEIR AGENT.

BUSINESS INFORMATION:
Name of Business: _____
Name of Business Owner: _____
State of Alaska Occupational Business License Number: _____ Expiration Date: _____
INSURANCE: *See detailed insurance requirements on back.*
Name of Insurance Company: _____
Policy/Binder #: _____ Effective Dates: From: _____ To: _____
Remember to get a logbook for your business at the nearest ADF&G office prior to commencement of guiding activities.

SECTION C. TO BE FILLED OUT BY THE GUIDE OR THEIR AGENT.

Are you a citizen of the United States, Canada, Mexico or a resident alien? Yes ☐ No ☐
Current First Aid card: Certifying agency: _____ Exp. Date: Mo:____ Yr: _____
2006 Alaska Sport Fishing License # (not your Guide License #): _____
U.S. COAST GUARD OPERATOR'S LICENSE: *(See explanation on back)*
Do you plan to operate a motorized vessel in Navigable Waters? Yes ☐ No ☐ **If yes**, complete the next line.
U. S. Coast Guard Operator's License #: _____ Expiration Date: _____

SIGNATURE OF BUSINESS OWNER/AGENT or GUIDE:
I hereby certify that all information is true and correct and that I understand this information is subject to public disclosure.
X _____ **Circle one:** Applicant or Agent **Date:** _____

This temporary license application, must be signed and stamped by an ADF&G employee and in your possession before guiding activities begin. Keep this temporary license while operating until your permanet wallet-sized card arrives. Allow 10-14 days.

Name of ADF&G Representative *(print)*: _____ **Place of Issue:** _____
Signature: _____ **Date:** _____

Appendix A3.–Sport fish business owner/guide license application, 2008.

-continued-

INSTRUCTIONS FOR THE 2008 SPORT FISH BUSINESS OWNER/ GUIDE LICENSE APPLICATION

Attention: *The following will apply without exception:*

1. All applicable sections of the license application must be complete and legible prior to ADF&G validation. No "pending", "unknowns," or blanks will be accepted.
2. Incomplete license applications will be returned, resulting in a processing delay.
3. A signature is required.
4. This is a license application only. A *permanent* license will be mailed within 21 business days.
5. There may be requirements by other state and federal agencies to operate as a guide in Alaska.

INSTRUCTIONS:

SECTION A: ALL applicants must complete this section.

SECTION B: BUSINESS OWNER OR THEIR AGENT - Complete this section if you are the owner/agent of the sport fishing business. This section should be filled out even if the owner does not intend to personally guide clients. An agent for this business **CANNOT** apply as a guide on the same application. A seperate license application must be submitted.

LIABILITY INSURANCE REQUIREMENT: General liability or marine protection that covers at least $100,000 for each incident and $300,000 for all incidents in a year. Insurance must cover **ALL** periods of time when the owner or owner's employees are providing sport fishing services to clients. Insurance must be current, **NOT** pending.

IMPORTANT NOTICE TO BUSINESS OWNERS

State regulation (5 AAC 75.075) requires that all operators providing sport fishing guide services in Alaska must apply annually for a license with the Department of Fish and Game **before** guiding services begin. Business owners are required to register all charter vessels with ADF&G and acquire a logbook prior to commencement of guiding activities. ***Guides hired by an operator must keep a copy of the business license in their possession while guiding.***

SECTION C: GUIDES - Complete this section if you intend to guide for a sport fish operation owned by someone other than you or if you are the business owner who also intends to guide (owner/operator).

U.S. COAST GUARD OPERATOR'S LICENSE: A licensed sport fish guide must have, at minimum, an OUPV or 6-pak U.S.C.G. operator's license in their possession while operating a motorized vessel with clients or transporting clients on a motorized vessel in navigable waters. Navigable waters are determined by the U.S. Coast Guard. Applicant must provide the U.S.C.G. license number, expiration date and date of birth (DOB).

IMPORTANT NOTICE TO GUIDES

State regulation (5 AAC 75.075) requires that all licensed guides providing sport fishing guide services in Alaska must apply annually for a license with the Department of Fish and Game ***before*** guiding activities begin.

WHAT A GUIDE MUST HAVE IN POSSESSION WHILE GUIDING

A sport fish business owner or guide should be able to present all documents required for licensing upon request by a representative of the department of fish and game, or any peace officer of the state. While engaged in providing sport fishing guide services, a sport fishing guide shall have the following readily available for inspection:

- A current sport fishing guide license;
- A copy of the current ADF&G sport fishing business license of the guide's employer;
- A current Alaska sport fishing license, tags, stamps or permits that are required to engage in the sport fishery for which the guide services are providing;
- An identification card issued to the sport fishing guide by a state or federal agency that bears a photo of the sport fishing guide.

Appendix A3.–Page 2 of 2.

APPENDIX B
VESSEL REGISTRATION FORMS, DECALS AND TAGS

ADF&G REPRESENTATIVE:

DO NOT ISSUE A LOGBOOK UNLESS THE APPLICANT HAS THE FOLLOWING:

- 2008 ADF&G Sport Fish Business and Guide License
- Current AK Vessel Number issued by DMV or Current U.S.C.G. Vessel Documentation No.

NONE OF THE ABOVE CAN BE "PENDING"

A logbook issued without the above items will result in a processing delay and a return of the sign-out sheet to the issuing office for your completion and follow-up. Subsequent data sheets will NOT be processed until the information is complete.

2008 ADF&G Sport Fish Business Owner and Guide License applications are available at all ADF&G offices or online at:

http://www.admin.adfg.state.ak.us/license/

AK Vessel Registration # is available from Alaska Div. of Motor Vehicles at (907)269-5551 or online at:

http://www.state.ak.us/local/akpages/ADMIN/dmv/reg/boat.htm

State of Alaska, Department of Fish & Game
Division of Sport Fish - RTS
333 Raspberry Rd.
Anchorage, AK 99518

2008 Saltwater Sport Fish Charter Logbook Sign-Out AND Vessel Registration

Must be completed

INSTRUCTIONS TO ADF&G REPRESENTATIVE: Please forward the white copy of this form to **Sport Fish Research & Technical Services, 333 Raspberry Rd., Anchorage, AK 99518**. ADF&G area offices should keep the pink copy.

LOGBOOK NO.

2008 FRESHWATER SPORT FISH GUIDE

Vessel Registration

NOTE TO ADF&G REPRESENTATIVE

Confirm that the vessel information requested on the bottom of this page is complete. Every vessel that this business is intending to operate while providing sport fishing guided services, must be recorded.

Attach the white (top) copy of this page to the sign-out sheet, whether or not there are registered vessels. Mail the sign-out sheet and the vessel registration page to the Anchorage ADF&G RTS office.

REGISTERING YOUR VESSEL(S)

For each vessel you plan to use to conduct sport fishing guided activities, please fill out the information below.

If a vessel is newly purchased, leased or borrowed at anytime during the guiding season, it must have a current AK Number or a U.S.C.G. documentation number. If a vessel is added midseason, add it to the (pink) portion of this page and turn it in with your final logbook data sheet.

For purposes of vessel registration, vessels are defined as: **rafts, canoes, motorized and nonmotorized water vehicles.**

Single person float tubes are exempt from registration.

See page iv for detailed information on vessel registration.

VESSEL AK # (DMV) OR U.S.C.G. VESSEL DOCUMENTATION NO.	PRIMARY AK DRAINAGE/COMMUNITY THE VESSEL WILL OPERATE OUT OF IN 2008

Continue on another sheet if you have more vessels. Transfer the business name and logbook number onto that extra sheet.

APPENDIX E
ADF&G COMMISSIONER STATEMENT

Conceptual Strategies for Assuring the Accuracy of Reporting of Pacific Halibut Harvest for the 2006 ADF&G Saltwater Charter Logbook

The Alaska Department of Fish and Game is going to reinstate the reporting of Pacific halibut harvest in the Saltwater Charter Logbook program for 2006. The following conceptual ideas are currently being considered as implementation strategies to address the need for accurate reporting of the harvest of Pacific halibut by saltwater charters:

- Reporting of kept and released for Pacific halibut will be at the level of the individual chartered client (angler).
- Unique identification information for each client will be required and will be reported with the associated kept and released information for each fish species. One of the following identifiers will be used to identify each client and their trip characteristics: (1) ADF&G Sport Fishing License number; (2) Permanent Identification Card number; (3) Disabled Veterans License number; or (4) name for underage anglers (or possibly identified by accompanying adult's license number). Collecting this information will enable cross-verification (charter operator versus client) of logbook information (see next bullet).
- Off-site (cross-) verification will involve follow-up mail surveys of chartered anglers, using the identifying information provided in the logbook reports, combined with the ADF&G license databases.
- Mandatory recording of all information for each chartered trip before clients and harvest are offloaded at the end of the trip.
- Reporting (i.e., turning in charter logbook sheets) will occur on a weekly basis. Weekly reporting will enable timely feedback to charter operators regarding possible reporting errors and omissions, so for example incomplete and missing data in logbooks (e.g., statistical areas missing digits, port of landing missing, no effort information recorded, etc.) can then be addressed in a timely and accurate manner.
- Dock-side creel surveys will provide verification of the number of clients and numbers of Pacific halibut kept will occur for a random subsample of locations and charter trips for a yet-to-be determined portion of saltwater charter trips in Southeast and Southcentral Alaska. Verification will involve direct counting of clients upon offloading, and direct observation and counting of harvested halibut.
- Stricter penalties for logbook violations were implemented in 2004 when the legislature passed guide licensing and reporting provisions.

As noted above these ideas are conceptual in nature, and specific implementation details are under development and subject to change.

Appendix E1.–December 2005 ADF&G commissioner statement detailing strategies for reporting of Pacific halibut harvest for the saltwater charter logbook.

AIDEA Alaska Industrial Development and Export Authority

ALASKA ENERGY AUTHORITY

January 26, 2011

The Honorable Tom Wagoner
The Honorable Joe Paskvan
Co-Chairs, Senate Resources Committee
Alaska State Legislature
State Capitol Rm 427
Juneau, Alaska 99801-1182

RE: SB 42, "An Act relating to procurement for the Alaska Energy Authority; establishing the Alaska Railbelt energy fund and relating to the fund; relating to and repealing the Railbelt energy fund; relating to the quorum of the board of the Alaska Energy Authority; relating to the powers of the Alaska Energy Authority regarding employees and the transfer of certain employees of the Alaska Industrial Development Export Authority to the Alaska Energy Authority; relating to acquiring or constructing certain projects by the Alaska Energy Authority; relating to the definition of 'feasibility study' in the Alaska Energy Authority Act; and providing for an effective date."

Dear Senators Wagoner and Paskvan:

On January 18, 2011, Senate Bill 42 (Companion Bill HB 103) was introduced by request of the Governor and referred to the Senate Resources Committee. Alaska's Energy Policy target is to reach 50 percent of its electricity generation through renewable energy by 2025. A new large hydroelectric project is needed to achieve this goal. This legislation would authorize the Alaska Energy Authority (AEA) to move forward on pursuing such a project to supply electricity to the railbelt region of the state. In November 2010, AEA released its "Preliminary Decision Document" identifying the Susitna Hydroelectric project as the recommended project to pursue.

SB 42 authorizes AEA to 1) acquire, construct and own new power projects 2) hire staff in exempt service 3) adopt regulations establishing its own procurement process 4) create subsidiary corporations for the purpose of acquiring, constructing, owning, maintaining and operating power projects and 5) defines the Board of Director's quorum as four of seven members.

We respectfully request you to schedule SB 42 for a hearing in your committee and we urge favorable action on this bill. A copy of SB 42, the sectional analysis and a summary of the seven related fiscal notes are attached. We will be happy to meet with you and other members of the committee to provide any other information you may require. Thank you for considering our request.

Sincerely,

ALASKA ENERGY AUTHORITY

FOR Michael C. Harper
Acting Executive Director

Attachments (3)

SB 42

An Act relating to the procurement of supplies, services, professional services, and construction for the Alaska Energy Authority; establishing the Alaska Railbelt energy fund and relating to the fund, relating to and repealing the Railbelt energy fund; relating to the quorum of the board of the Alaska Energy Authority; relating to the powers of the Alaska Energy Authority regarding employees and the transfer of certain employees of the Alaska Industrial Development Export Authority to the Alaska Energy Authority; relating to acquiring or constructing certain projects by the Alaska Energy Authority; and relating to the definition of "feasibility study" in the Alaska Energy Authority Act; providing an effective date.

Sectional Analysis

Section	Analysis
1	Amends AS 36.30.015(f) (the procurement code) to allow AEA to adopt regulations to govern AEA's procurement of supplies, services and construction. AEA regulations will be required to reflect competitive bidding principles; AEA would be given authority similar to other state corporations such as AHFC and KABATA
2	Amends AS 37.05.520 to explicitly allow the legislature to appropriate money from the Railbelt energy fund to a newly created Alaska Railbelt energy fund (AS 42.45.035)
3	Amends AS 39.25.110 to allow AEA to hire an executive director and other staff.
4	Adds new section 42.45.035 creating the Alaska Railbelt energy fund as a separate fund in AEA; Department of Revenue will be the fiduciary; allows AEA to use money in the fund for power projects, transmission lines and interties serving the Railbelt region.
5	Amends AS 44.83.040 (a) by defining that four, not three, AEA directors constitutes a quorum. The Board of Directors was expanded from five to seven members in 2010.
6	Adds new subsection AS 44.83.040 (e) allowing the authority to appoint persons as staff in the exempt service under AS 39.25
7	Amends AS 44.83.080 by allowing AEA to acquire and construct new power projects and to perform feasibility studies, and engineering and design, with respect to power projects
8	Adds new section AS 44.83.085 allowing AEA to create subsidiary corporations for the purpose of acquiring, constructing, owning, maintaining, operating, or financing power projects.
9	Adds new subsection AS 44.83.090 (c) allowing created subsidiaries to exercise powers granted to AEA.

10	Amends AS 44.83.396(a) to include how AEA administers newly acquired power projects in the operation of a power project
11	Adds new subsection AS 44.83.396 (f) to include subsidiary owned projects in the operation of a power project
12	Amends AS 44.83.990(3) by defining feasibility study to include new power projects
13	Repeals the Railbelt energy fund – AS 37.05.520
14	Revisor's instructions
15	Adds new section to uncodified law relating to the transfer of certain employees from AIDEA to AEA by providing a deadline of 12/31/2011
16	Provides a conditional effective date to the repeal of the Railbelt energy fund which will occur when the balance of the fund is appropriated and transferred to the new Alaska Railbelt Energy Fund or appropriated and expended for other purposes.
17	Immediate effective date for all sections except as provided in section 16

Analysis:

ALASKA INDUSTRIAL DEVELOPMENT & EXPORT AUTHORITY - AIDEA

Personal Services: TOTAL $(5,578.7)

$ (5,578.7) Decrease in personal services costs with transfer of 42 employees to Alaska Energy Authority.

$ - Request one new position for AIDEA - Accountant IV, Range 20, to accommodate anticipated increased work load. Estimated cost is $110.0
No net increase in AIDEA Receipts requested - Cost offset by receipts from AEA for facilities costs. See net change in receipts for AIDEA Facilities Component.
Net reduction in position count to AIDEA is 41.

Contractual Services: TOTAL $341.6

$ 341.6 Contractual cost of AEA Employees providing shared services (Operations Department) to AIDEA.

$ (5,237.1) Net Change to Expenditures

ALASKA INDUSTRIAL DEVELOPMENT & EXPORT AUTHORITY - Facilities Maintenance

Currently AIDEA absorbs the building operating costs . This fiscal note estimates the impact to AEA and AIDEA if AEA reimbursed AIDEA for their pro rata share.

Facility Operating Cost = $3.4 per PCN per year x 42 employees = $142.8

Contractual Services: No net impact to expenditure line. Reimbursement of actual costs impacts only the revenue source.

Impact to Fund Source: Reduces AIDEA receipts and increases I/A receipts. Tranfer AIDEA receipt authority to operations component

ALASKA ENERGY AUTHORITY - Statewide Project Development, Alternative Energy and Efficiency
FN 1 of 2

Personal Services: TOTAL $ 5,638.7

Increase in personal services costs with transfer of approximately 42 employee from AIDEA. All employee costs will be accounted for in one component - Statewide Project Development, AEE. This transfer reduces contractual services in several AEA components and increases personal services in this component.

$	160.0	Approximately 2 FTE's providing support to the AEA PCE Component - GF funds.
$	2,207.5	Approximately 16 FTE's providing support to the AEA Rural Energy Operations Component - GF and CIP receipts.
$	2,320.0	Approximately 17 FTE's providing support to the AEA Statewide Project Development & AEE Component - GF and CIP receipts.
$	891.2	Approximately 7 FTE's who are defined as shared service. This includes 6 positions that report to the Deputy Director of Operations and one engineer that works on both AIDEA and AEA projects.
$	5,578.7	
$	60.0	Request one new position for AEA - Loan Officer R20. Request additional SF receipts of $60.0 with remaining funds through current funding levels.
$	5,638.7	

Contractual Services: TOTAL $ (2,311.1)

$	(2,320.0)	Decrease Contractual Services and transfer cost to Personal Services. Approximately 17 FTE's.
$	(285.1)	Operations - Shared Services. Decrease Contractual Services and transfer cost to Personal Services.
$	142.8	Facility Operating Cost = $3.4 per PCN per year x 42 employees = $142.8
$	151.2	G&A Cost Currently paid by AIDEA = $3.6 per PCN per year x 42 employees = $151.2
$	(2,311.1)	

$	3,327.6	Net change to expenditures

ALASKA ENERGY AUTHORITY - Statewide Project Development, Alternative Energy and Efficiency
FN 2 of 2

Personal Services: TOTAL $ 1,125.0

Increased to include 8 staff for the first year as follows:

$	210.0	Project Manager Rg 27
$	175.0	Environmental Manager Rg 26
$	70.0	Administrative Assistant Rg 12
$	100.0	Project Accountant Rg 18
$	155.0	Financial/Budget Analyst Rg 24
$	140.0	Public Outreach/Legislative Liaison Rg 23
$	155.0	Procurement Manager Rg 24
$	120.0	Data Systems Specialist Rg 20
$	1,125.0	

Contractual Services: TOTAL $ 238.0

$	189.0	Annual Lease - 4,500 sq. ft. x $3.50 per sq. ft./mo. X 12 mo.'s
$	13.0	Utilities - $1.3 per person x 10 (8 staff + 2 contractors)
$	36.0	G&A Expense: $3.6 per person - $3.6 x 10 (8 staff + 2 contractors)
$	238.0	

Equipment/Furniture: TOTAL $ 413.0

$	28.00	IT Equipment $2.0 per person per year x 14 (8 staff + 6 contractors). Assumes all equipment purchases in 1st yr for project office (including contract labor needs).
$	385.00	Tenant Improvement $315.0 ($70 x 4,500 sq ft); Moving Expenses $21.0 and Furniture 49.0
$	413.00	

ALASKA ENERGY AUTHORITY - Rural Energy Operations

Personal Services: No Impact.

Contractual Services: TOTAL $ (2,328.3)

$	(2,207.5)	Reduce cost contractual costs of employee services and transfer out to Statewide component. Approximately 16 FTE's.
$	(121.8)	Reduce contractual costs of Operations employees who provide shared services. Transfer cost to Statewide component personal services.
$	(2,328.3)	

ALASKA ENERGY AUTHORITY - Power Cost Equalization

Personal Services: No Impact.

Contractual Services: TOTAL $ (160.0)

$	(160.0)	Reduce cost contractual costs of employee services and transfer out to Statewide component. Approximately 2 FTE's.
$	(160.0)	

ALASKA ENERGY AUTHORITY - Owned Facilities

Personal Services: No Impact.

Contractual Services: TOTAL $ (25.0)

$	(25.0)	Reduce cost contractual costs of employee services and transfer out to Statewide component. Approximately 15% of 1 FTE.
$	(25.0)	

Summary of Net Increase in GF Request for AEA:

$	76.9	Shared Services - IT Support not previously paid for by AEA
$	40.8	Shared Services -HR Support not previously paid for by AEA.
$	294.0	O/H Facility Operating Cost/G&A not previously paid for by AEA.
$	411.7

FISCAL NOTE #1

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 42

Analysis

This bill empowers the Alaska Energy Authority (AEA) to hire employees. The impact of this legislation to AIDEA's Operating component is that approximately 42 employees will transfer to AEA and decrease AIDEA's cost of personal services. This cost analysis assumes that AIDEA and AEA will maintain certain shared services (Finance, Operations, and Credit Departments).

Personal Services:	$(5,578.7)	Transfer of 42 employees to AEA Statewide Component.
Contractual Services:	$ 341.6	Contractual cost of AEA Employees providing shared services. Net
Change	$(5,237.1)	

Under this analysis, AIDEA contractual costs increase by the cost of AEA employees providing shared services (Operations Department) to AIDEA. The Finance and Credit departments provide shared services to AEA.

One new Finance position is requested to meet anticipated increased work. The anticipated cost of this position is estimated to be $110.0 No additional funding is requested to support this position. AIDEA anticipates that this position can be funded with the additional AIDEA receipts gained as a result of billing AEA for their share of the building operating costs, estimated in this analysis to be $142.8.

(42) Employee transfers to AEA Statewide Component
1 New position - Accountant, Rg 20
(41) Net Positions

Please see cost analysis in AEA's Statewide Project Development & AEE component for more detail as well as a list of the PCN's transferred to AEA.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 42

Analysis

This bill empowers the Alaska Energy Authority (AEA) to hire employees. Currently AIDEA absorbs 100% of the facility operating costs. This fiscal note estimates the impact to AIDEA if AEA reimbursed AIDEA for their pro-rata share of the facility operating costs based on PCN count.

Facility Operating Cost = $3.4 per PCN per year x 42 employees = $142.8.

There is no net impact to the expenditure line as actual building costs remain the same. Increase in I/A receipts reduces AIDEA receipts in this component. AIDEA receipt authority is transferred to the AIDEA operations component.

See related fiscal notes for both AIDEA and AEA Statewide Project Development components for the full impact of this legislation.

FISCAL NOTE

FISCAL NOTE #3

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 42

Analysis

Note: This is fiscal note 1 of 2 for the AEA Statewide Project Development component. The cost information relevant to the power of AEA to have employees is presented separately from the cost information relevant to the power of AEA to construct and own projects (See fiscal note 2 of 2 Statewide Project Development for cost of AEA to establish a project office for the Susitna Hydro Projects.)

This bill empowers the Alaska Energy Authority (AEA) to hire employees. All AEA employee costs will be accounted for in this component. This increases personal services with the transfer of approximately 42 employees from AIDEA. This transfer reduces contractual services in several AEA components and increases personal services in this component. One new position (Loan Officer Rg 20) is requested to meet anticipated increased work in lending activities. This position will be primarily responsible for AEA loan programs.

Personal Services: TOTAL $5,638.7

$ 160.0	Approximately 2 FTE's providing support to the AEA PCE Component - GF Funds.
$ 2,207.5	Approximately 16 FTE's providing support to the AEA Rural Energy Operations Component - GF & CIP.
$ 2,320.0	Approximately 17 FTE's providing support to the AEA Statewide Pj Devel & AEE Component - GF & CIP.
$ 891.2	Approximately 7 FTE's who are defined as shared services. This includes 6 positions that report to the Deputy Director of Operations and one engineer that works on both AIDEA and AEA projects.
$ 5,578.7	Subtotal Personal Services - 42 employees transferred from AIDEA to AEA.
$ 60.0	Request 50% funding for one new position for AEA - Loan Officer Rg 20.
$ 5,638.7	

Contractual Services: TOTAL $(2,311.1)

$(2,320.0)	Decrease Contractual Services and transfer cost to Personal Services. Approximately 17 FTE's.
$ (285.1)	Operations - Shared Services. Decrease Contractual Services and transfer cost to Personal Svcs.
$ 142.8	Facility Operating Costs = $3.4 per PCN per year x 42 employees = $142.8 (See also AIDEA Facilities Comp).
$ 151.2	G&A Cost currently paid by AIDEA = $3.6 per PCN per year x 42 employees = $151.2.
$(2,311.1)	

$ 3,327.6	Net Change in Expenditures

PCN List (Title, Range, PCN, Dept./Area):

Transfers from AIDEA:

1) PCE Program Administrator Rg 17 - 080411 (PCE)
2) Accounting Technician Rg 12 - 080217 (PCE)
3) Deputy Director - Operations Rg 27 - 080405 (Operations Shared Services)
4) Data Systems Specialist Rg 22 - 080227 (Operations Shared Services)
5) HR Specialist Rg 18 - 080455 (Operations Shared Services)
6) Administrative Assistant Rg 13 - 080473 (Operations Shared Services)
7) Data Processing Tech II Rg 15 - 08X037 (Operations Shared Services)
8) Project Manager Rg 22 - 080223 (Operations Shared Services)
9) Technical Engineer Rg 25-080229 (Rural Energy Shared Services)
10) Deputy Director-Rural Energy Rg 27 - 080206 (Rural Energy)
11) Project Manager II Rg 24 - 080231 (Rural Energy)
12) Coordinator Rural Community Outreach Rg 24 -080401 (Rural Energy)
13) Project Development Specialist Rg 20 -080403 (Rural Energy)
14) Warehouse Manager Rg 15 - 080440 (Rural Energy)
15) Technical Engineer II Rg 25 - 080443 (Rural Energy)

See Page 3 of 3 for Continued Analysis.

BILL NO. SB 42

Analysis Continued

PCN List (Title, Range, PCN, Dept./Area):

Transfers from AIDEA - continued:

16) Assistant Project Manager Rg 22 - 080466 (Rural Energy)
17) Rural Electric Utility Worker Rg 20 - 080479 (Rural Energy)
18) Project Manager Rg 25 - 080491 (Rural Energy)
19) Project Manager Rg 25 - 080498 (Rural Energy)
20) Rural Electric Utility Worker Rg 20 - 217010 (Rural Energy)
21) Project Assistant Rg 16 - 217011 (Rural Energy)
22) Rural Electric Utility Worker Rg 20 - 217012 (Rural Energy)
23) Program Manager Bulk Fuel & RPSU Rg 25 - 217014 (Rural Energy)
24) Project Manager Rg 22 - 08T019 (Rural Energy)
25) Circuit Rider Technician Rg 20 - 08X003 (Rural Energy)
26) Executive Director Rg 28 - 080208 (AEA Statewide)
27) Executive Assistant Rg 16 - 080219 (AEA Statewide)
28) Project Manager Rg 25 - 080222 (AEA Statewide)
29) Administrative Assistant Rg 12 - 080410 (AEA Statewide)
30) Administrative Assistant Rg 12 - 080434 (AEA Statewide)
31) Grants Assistant Rg 15 - 080233 (AEA Statewide)
32) Grants Administrator Rg 22 - 080457 (AEA Statewide)
33) Project Manager Rg 22 - 080230 (AEA Statewide)
34) Project Manager Rg 24 - 080232 (AEA Statewide)
35) Deputy Director - AEEE Rg 27 - 080407 (AEA Statewide)
36) Project Manager - Energy Data Inventory Rg 22 - 080425 (AEA Statewide)
37) Project Manager Rg 24 - 080458 (AEA Statewide)
38) Project Manager Rg 24 - 08X007 (AEA Statewide)
39) Assistant Project Manager - Wind Rg 22 - 08X028 (AEA Statewide)
40) Assistant Project Manager - Hydro Rg 22 - 08X029 (AEA Statewide)
41) Assistant Project Manager - GEO/Ocean Rg 22 - 08X033 (AEA Statewide)
42) Assistant Project Manager - Energy Efficient Rg 20 - 08X034 (AEA Statewide)

New Position:

43) Loan Officer Rg 20

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 42

Analysis

This legislation allows the Alaska Energy Authority (AEA) to have employees. The impact to the Rural Energy Operating component is a reduction in contractual costs of employee services for an estimated 16 FTE's that were previously AIDEA employees estimated to be $2,207.5 and a reduction in contractual costs of Operations employees who provide shared services estimated to be $121.8. These positions are funded by both GF and CIP receipts. Costs are transferred to the Statewide component personal services. Please see the fiscal note analysis for the AEA Statewide Project Development, Alternative Energy and Efficiency component (FN 1 of 2) for more detail.

FISCAL NOTE #7

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 42

Analysis

Note: This is fiscal note 2 of 2 for the AEA Statewide Project Development component. The cost information relevant to the AEA project construction portion of this legislation is presented separately from the cost information relevant to the power of AEA to have employees (See fiscal note 1 of 2 for the costs of AEA Statewide Project Development to have employees).
Section 6, 9, and 11 of this bill expands AEA's powers to allow AEA to acquire, construct, and conduct feasibility studies of new power projects. Section 6 of the bill would amend the powers of AEA to add provisions related to new power projects. Sections 9 and 11 of the bill would empower AEA to exercise for new power projects, the existing statutory authority managing power projects which are currently limited to power projects from the pre-1993, "former energy program for Alaska."

This fiscal note reflects the costs to AEA to establish a project office in pursuit of constructing and owning the Susitna Hydro project.

PERSONAL SERVICES: $1,125.0 - Increased to include 8 staff for the first year as follows:

Project Manager Rg 27
Environmental Manager Rg 26
Administrative Assistant Rg 12
Project Accountant Rg 18
Financial/Budget Analyst Rg 24
Public Outreach/Legislation Liaison Rg 23
Procurement Manager Rg 24
Data System Specialist Rg 20

CONTRACTUAL: $238.0 - Increase for Contractual services including Lease, Utilities, and G&A costs for Project Office. Utilities and G&A estimates include a cost associated with contract labor personnel.

$ 189.0	Annual Lease - 4,500 sq. ft. x $3.50 per sq. ft./mo. x 12 mo.'s.
$ 13.0	Utilities $1.3 per person x 10 (8 staff + 2 contractors) first year.
$ 36.0	G&A Expense: $3.6 per person - $3.6 x 10 (8 staff + 2 contractors).
$ 238.0	

EQUIPMENT/FURNITURE: $413.0 -Increase for 1st year Project Office set up costs. This cost estimate assumes all equipment and furniture purchases in the first year as well as one time only moving expenses and tenant improvements.

$ 28.0	IT Equipment $2.0 per person per year x 14 (8 staff + 6 contractors). Assumes all equipment purchases in 1st year for project office (including contract labor needs).
$ 385.0	Tenant Improvement $315.0 ($70 x 4,500 sq. ft.); Moving Expenses $21.0; and Furniture 49.0
$ 413.0

MEMORANDUM February 15, 2011

SUBJECT: Description of changes made to SB 42
(CSSB 42(RES); Work Order No. 27-GS1822\M)

TO: Senator Joe Paskvan
Chair of the Senate Resources Committee
Attn: Jeff Stepp

FROM: Brian J. Kane BJK
Legislative Counsel

You asked me to provide a summary of the changes made from the "A" version of the bill to the "M" version of the bill. In your CS request based on the "A" version, you asked that I remove all parts of the bill except what was necessary to move forward on a Susitna River hydroelectric project, and I attempted to do just that.

I deleted all sections except for sections 7, 10, and 17. It did not appear to me that any of the other sections were absolutely necessary -- statutorily -- to allow for a Susitna River power project. The main section that needed to be retained for a Susitna River power project to move forward was section 7, and only adding paragraphs (18) and (19) seemed necessary to achieve your goal. Amending any other paragraph of AS 44.83.080 would mean that the change covered all possible power projects of the Alaska Energy Authority (authority), not just a Susitna River project. The addition of paragraphs (18) and (19) allows the authority to acquire and perform studies related to a Susitna River project. I kept section 10 in the bill because it related directly to a Susitna River paragraph in section 7. Section 17 was retained because it was the effective date.

If you would like any other of the bill sections from the "A" version re-inserted into the bill or other changes made to the current version, please let me know.

BJK:ljw
11-107.ljw

(1) allow AEA's acquisition and construction of the Susitna Project, as described in AEA's *Railbelt Large Hydro Evaluation: Preliminary Decision Document* (i.e., not "certain projects" but this one very specific project); and

(2) delete all sections that seek to restore the powers and duties of AEA's pre-1993 levels, unless those powers and duties are necessary to accomplish #1 above.

27-GS1822\M

2/14/11

CS FOR SENATE BILL NO. 42(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to a Susitna River hydroelectric project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 44.83.080 is amended to read:

Sec. 44.83.080. Powers of the authority. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers:

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to adopt regulations governing the exercise of its corporate powers;

(5) to improve, equip, operate, and maintain power projects and bulk fuel, waste energy, energy conservation, energy efficiency, and alternative energy facilities and equipment;

(6) to issue bonds to carry out any of its corporate purposes and powers, including the establishment or increase of reserves to secure or to pay the bonds or interest on them, and the payment of all other costs or expenses of the authority incident to and necessary or convenient to carry out its corporate purposes and powers;

(7) to sell, lease as lessor or lessee, exchange, donate, convey, or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the authority, the action is in furtherance of its corporate purposes;

(8) to accept gifts, grants, or loans from, and enter into contracts or other transactions regarding them, with any person;

(9) to deposit or invest its funds, subject to agreements with bondholders;

(10) to enter into contracts with the United States or any person and, subject to the laws of the United States and subject to concurrence of the legislature, with a foreign country or its agencies, for the construction, financing, operation, and maintenance of all or any part of a power project or bulk fuel, waste energy, energy conservation, energy efficiency, or alternative energy facilities or equipment, either inside or outside the state, and for the sale or transmission of power from a project or any right to the capacity of it or for the security of any bonds of the authority issued or to be issued for the project;

(11) to enter into contracts with any person and with the United States [,] and, subject to the laws of the United States and subject to the concurrence of the legislature, with a foreign country or its agencies for the purchase, sale, exchange, transmission, or use of power from a project, or any right to the capacity of it;

(12) to apply to the appropriate agencies of the state, the United States, and a foreign country and any other proper agency for the permits, licenses, or approvals as may be necessary, to maintain and operate power projects in accordance with the licenses or permits, and to obtain, hold, and use the licenses and permits in the same manner as any other person or operating unit;

(13) to enter into contracts or agreements with respect to the exercise

of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(14) to recommend to the legislature

(A) the pledge of the credit of the state to guarantee repayment of all or any portion of revenue bonds issued to assist in construction of power projects;

(B) an appropriation from the general fund

(i) for debt service on bonds or other project purposes; or

(ii) to reduce the amount of debt financing for the project;

(15) to carry out the powers and duties assigned to it under AS 42.45;

(16) to make grants or loans to any person and enter into contracts or other transactions regarding the grants or loans;

(17) to promote energy conservation, energy efficiency, and alternative energy through training and public education**;**

(18) to acquire a Susitna River power project, whether by construction, purchase, gift, or lease;

(19) to perform feasibility studies and engineering and design with respect to a Susitna River power project.

* **Sec. 2.** AS 44.83.396(a) is amended to read:

(a) A power project that was acquired or constructed **under AS 44.83.080(18) or** as part of the former energy program for Alaska is owned, and shall be administered, by the authority.

* **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

AMENDMENT

OFFERED IN THE SENATE BY SENATOR WIELECHOWSKI

TO: CSSB 42(RES), Draft Version "D"

Page 2, line 10:

Delete "and other staff"

Page 3, line 9:

Delete "and employees of the authority are"

Insert "of the authority is"

Page 6, line 28, following "EMPLOYEES.":

Insert "(a)"

Page 7, following line 1:

Insert a new subsection to read:

"(b) Notwithstanding any other provision of law, staff members of the Alaska Industrial Development and Export Authority who will be transferred as staff to the Alaska Energy Authority and who are employed as of the effective date of this section

(1) shall immediately be appointed to the classified service upon their transfer;

(2) may not have a reduction in pay

(A) solely because of the assignment described in this subsection; or

(B) if the employee is assigned to a position in the classified service that is classified at a lower rate of pay than that received when the position was assigned to the exempt service;

(3) shall retain the step status previously held immediately before the transfer and shall be entitled to receive any merit or cost-of-living salary increases they would receive

had they not been transferred."

Senate Resources Committee

Explanation of Changes to SB 42

February 23, 2011

The Committee Substitute for SB 42, Version D, Conforms to the "Response to Committee Questions and Concerns regarding SB 42" that the Committee discussed on Monday, February 21.

Summary of Changes to the Original Bill:

1. Title of the bill is changed to conform with changes in the body of the legislation.
2. Senate Bill 42 seeks to modify the State Procurement Code; however, the CS deletes that language so that there are no statutory changes relating to AEA and procurement.
3. The CS makes changes relating to the Alaska Railbelt Energy Fund, preserving the legislature's authority to appropriate.
4. Most significantly, the CS makes changes relating to the Creation of Subsidiaries and adds a section titled, Approval of Subsidiaries, so that the subsidiaries created are specific to the Watana Hydroelectric Power Project on the Susitna River.
5. NOTE: The Fiscal Notes of SB 42 are not impacted by any of these changes and will remain the same for the CS for SB 42, Version D.

Explanation of Changes to SB 42:

SB 42: (Change in the title to conform with the bill.)

Page 1, Line 1 following "**An Act**" through Page 1, Line 2, "**Authority**;" Delete all material.

[Deletes "An Act relating to the procurement of supplies, services, professional services, and construction for the Alaska Energy Authority" so that the title conforms to the deletion of Section 1 of SB 42.]

SB 42: (Change in the title to conform with the bill.)

Page 1, Line 8 following "**Authority;**"

Insert "**relating to the Alaska Energy Authority creating subsidiary corporations for power projects; providing approval by law for the Alaska Energy Authority to create a subsidiary corporation relating to the Watana Hydroelectric Power Project;**"

[This new language appears in the title of CS for SB 42 on Page 1, Lines 6 – 9. This additional language in the title is necessary to conform with changes in the original bill.]

SB 42: (Original bill sought to change AS 36.30.015, which falls under Chapter 30: State Procurement Code of the Alaska Statutes.)

Page 1, Line 11 through page 2, Line 13:

Delete all material.

SB 42: (Relating to the Alaska Railbelt Energy Fund)

Page 3, Line 4, following "The":

Delete "authority may use"

Insert "legislature may appropriate"

[The new language appears in the CS on Page 2, Line 22]

SB 42: (Simple edit because "construction" was listed twice in the same sentence.)

Page 4, Line 22, before "operation":

Delete "**construction,**"

SB 42: (Relating to the Creation of Subsidiaries)

Page 5, Line 27, following "authority may":

Insert "if approved by law,"

[The new language appears in the CS on Page 5, Line 14 and 15]

SB 42: (Relating to the Creation of Subsidiaries)

Page 5, Line 27, following "create" through page 5. Line 28:

Delete "one or more subsidiary corporations"

Insert "a subsidiary corporation"

[The new language appears in the CS on Page 5, Line 15]

SB 42: (Relating to the Creation of Subsidiaries)

Page 5, Line 29, following "power":

Delete "power projects"

Insert "a power project"

[The new language appears in the CS on Page 5, Line 16]

SB 42: Page 6, after Line 28:

Insert: "APPROVAL FOR SUBSIDIARY: (a) The Alaska Energy Authority is authorized to create a subsidiary corporation as provided under AS 44.83.085 for the purpose of acquiring, constructing, owning, maintaining, operating, or financing the Watana Hydroelectric Power Project. This authorization constitutes the approval by law required under AS 44.83.085, enacted by Section 7 of this Act. In this Section, "Watana Hydroelectric Power Project" means the hydroelectric power project to be located at or near river mile 184 on the Susitna River, including dams, buildings, improvements, land, equipment, engineering and design plans, transmission lines, permits, licenses, governmental approvals, and other assets or property of any kind associated with the hydroelectric power project.

[The new language appears in the CS as Sec. 7 on Page 5, Lines 13 – 24, and is necessary language so that AEA can begin the FERC process for the Watana Hydroelectric Power Project.]

Renumber the bill sections accordingly.

CS FOR SENATE BILL NO. 42(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Alaska Railbelt energy fund and relating to the fund; relating to and repealing the Railbelt energy fund; relating to the quorum of the Alaska Energy Authority; relating to the powers of the Alaska Energy Authority regarding employees and the transfer of certain employees of the Alaska Industrial Development Export Authority to the Alaska Energy Authority; relating to the acquisition or construction of certain projects by the Alaska Energy Authority; relating to the Alaska Energy Authority's creating subsidiary corporations for power projects; providing approval by law for the Alaska Energy Authority to create a subsidiary corporation relating to the Watana Hydroelectric Power Project; relating to the definition of 'feasibility study' in the Alaska Energy Authority Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 37.05.520 is amended to read:

Sec. 37.05.520. Railbelt energy fund. There is established in the general fund the Railbelt energy fund. The fund consists of money appropriated to it by the legislature and interest received on money in the fund. The **Department of Revenue** [DEPARTMENT OF REVENUE] shall manage the fund. The legislature may appropriate money from the fund **to capitalize the Alaska Railbelt energy fund (AS 42.45.035) or** for programs, projects, and other expenditures to assist in meeting Railbelt energy needs, including projects for retrofitting state-owned buildings and facilities for energy conservation.

*** Sec. 2.** AS 39.25.110 is amended by adding a new paragraph to read:

(44) the executive director and other staff of the Alaska Energy Authority appointed under AS 44.83.040.

*** Sec. 3.** AS 42.45 is amended by adding a new section to read:

Sec. 42.45.035. Alaska Railbelt energy fund. (a) The Alaska Railbelt energy fund is established as a separate fund. The fund consists of

(1) money appropriated to the fund by the legislature;

(2) gifts, bequests, contributions from other sources, and federal money;

(3) interest earned on the fund balance; and

(4) investments, to be managed by the Department of Revenue, which shall be the fiduciary of the fund under AS 37.10.071.

(b) The fund is not a dedicated fund.

(c) The legislature may appropriate from the fund to conduct feasibility studies on, license, permit, acquire, construct, or make grants for power projects and electrical transmission lines and interties that serve the Railbelt region.

(d) In this section, "Railbelt region" means the service territories of the electrically interconnected electric utilities that serve Fairbanks, Wasilla, Palmer, Anchorage, the Kenai Peninsula, and other electrically interconnected communities.

*** Sec. 4.** AS 44.83.040(a) is amended to read:

(a) The chair and vice-chair of the Alaska Industrial Development and Export Authority shall serve as officers of the Alaska Energy Authority. The powers of the Alaska Energy Authority are vested in the directors, and **four** [THREE] directors of

the authority constitute a quorum. Action may be taken and motions and resolutions adopted by the Alaska Energy Authority at a meeting by the affirmative vote of a majority of the directors. The directors of the Alaska Energy Authority serve without compensation, but they shall receive the same travel pay and per diem as provided by law for board members under AS 39.20.180.

* **Sec. 5.** AS 44.83.040 is amended by adding a new subsection to read:

(e) The authority may appoint persons as staff, including an executive director, and may employ professional advisors, counsel, technical experts, agents, and other employees. The executive director and employees of the authority are in the exempt service under AS 39.25.110.

* **Sec. 6.** AS 44.83.080 is amended to read:

Sec. 44.83.080. Powers of the authority. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers:

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to adopt regulations governing the exercise of its corporate powers;

(5) to improve, equip, operate, and maintain power projects and bulk fuel, waste energy, energy conservation, energy efficiency, and alternative energy facilities and equipment;

(6) to issue bonds to carry out any of its corporate purposes and powers, including **the acquisition or construction of a project to be owned or leased, as lessor or lessee, by the authority or by another person or the acquisition of an interest in a project or a right to capacity of a project,** the establishment or increase of reserves to secure or to pay the bonds or interest on them, and the payment of all other costs or expenses of the authority incident to and necessary or convenient to carry out its corporate purposes and powers;

(7) to sell, lease as lessor or lessee, exchange, donate, convey, or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment

of the authority, the action is in furtherance of its corporate purposes;

(8) to accept gifts, grants, or loans from, and enter into contracts or other transactions regarding them, with any person;

(9) to deposit or invest its funds, subject to agreements with bondholders;

(10) to enter into contracts with the United States or any person and, subject to the laws of the United States and subject to concurrence of the legislature, with a foreign country or its agencies, for the construction, financing, **acquisition,** operation, and maintenance of all or any part of a power project or bulk fuel, waste energy, energy conservation, energy efficiency, or alternative energy facilities or equipment, either inside or outside the state, and for the sale or transmission of power from a project or any right to the capacity of it or for the security of any bonds of the authority issued or to be issued for the project;

(11) to enter into contracts with any person and with the United States [,] and, subject to the laws of the United States and subject to the concurrence of the legislature, with a foreign country or its agencies for the purchase, sale, exchange, transmission, or use of power from a project, or any right to the capacity of it;

(12) to apply to the appropriate agencies of the state, the United States, and a foreign country and any other proper agency for the permits, licenses, or approvals as may be necessary, to **acquire, construct,** maintain, and operate power projects in accordance with the licenses or permits, and to obtain, hold, and use the licenses and permits in the same manner as any other person or operating unit;

(13) to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(14) to recommend to the legislature

(A) the pledge of the credit of the state to guarantee repayment of all or any portion of revenue bonds issued to assist in construction of power projects;

(B) an appropriation from the general fund

(i) for debt service on bonds or other project purposes;

or

(ii) to reduce the amount of debt financing for the project;

(15) to carry out the powers and duties assigned to it under AS 42.45;

(16) to make grants or loans to any person and enter into contracts or other transactions regarding the grants or loans;

(17) to promote energy conservation, energy efficiency, and alternative energy through training and public education**;**

(18) to acquire power projects, whether by construction, purchase, gift, or lease;

(19) to perform feasibility studies and engineering and design with respect to power projects.

* **Sec. 7.** AS 44.83 is amended by adding a new section to read:

Sec. 44.83.085. Creation of subsidiaries. The authority may, if approved by law, create a subsidiary corporation for the purpose of constructing, financing, acquiring, owning, operating, or maintaining a power project. A subsidiary corporation created under this section may be incorporated under AS 10.20.146 - 10.20.166. The authority may transfer assets of the authority to a subsidiary corporation created under this section. A subsidiary corporation created under this section may borrow money and issue bonds as evidence of that borrowing and has all the powers of the authority that the authority grants to the subsidiary corporation. Unless otherwise provided by the authority, the debts, liabilities, and obligations of a subsidiary corporation created under this section are not the debts, liabilities, or obligations of the authority.

* **Sec. 8.** AS 44.83.090 is amended by adding a new subsection to read:

(c) In this section, "authority" includes a subsidiary corporation created under AS 44.83.085.

* **Sec. 9.** AS 44.83.396(a) is amended to read:

(a) A power project that was acquired or constructed **under AS 44.83.080(18) or** as part of the former energy program for Alaska is owned, and shall be administered, by the authority.

*** Sec. 10.** AS 44.83.396 is amended by adding a new subsection to read:

(f) In this section, in reference to a specific power project, "authority" means the subsidiary corporation created under AS 44.83.085, if the authority has created a subsidiary corporation under AS 44.83.085 to construct, finance, acquire, own, operate, or maintain the specific power project.

*** Sec. 11.** AS 44.83.990(3) is amended to read:

(3) "feasibility study"

(A) means a study conducted for the purpose of establishing the economic and environmental practicality of completing a proposed power project [UNDER FORMER AS 44.83.181];

(B) includes engineering and design work to meet the requirements for submission of a license application for a proposed new project to the Federal Energy Regulatory Commission;

*** Sec. 12.** AS 37.05.520 is repealed.

*** Sec. 13.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPROVAL FOR SUBSIDIARY. The Alaska Energy Authority is authorized to create a subsidiary corporation as provided under AS 44.83.085 for the purpose of acquiring, constructing, owning, maintaining, operating, or financing the Watana Hydroelectric Power Project. This authorization constitutes the approval by law required under AS 44.83.085, enacted by sec. 7 of this Act. In this section, "Watana Hydroelectric Power Project" means the hydroelectric power project to be located at or near river mile 184 on the Susitna River, including dams, buildings, improvements, land, equipment, engineering and design plans, transmission lines, permits, licenses, governmental approvals, and other assets or property of any kind associated with the hydroelectric power project.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: CERTAIN STATE EMPLOYEES. The Alaska Energy Authority and the Alaska Industrial Development and Export Authority shall jointly identify the employees of the Alaska Industrial Development and Export Authority who will be transferred as staff to the Alaska Energy Authority. The transfer of employees to the Alaska Energy Authority shall

be completed not later than December 31, 2011.

*** Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the heading of AS 44.83.040 from "Officers; meetings; quorum" to "Officers; meetings; quorum; employees."

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT; NOTIFICATION. Section 12 of this Act takes effect only if the Twenty-Seventh Alaska State Legislature makes an appropriation that becomes law that appropriates the unexpended and unobligated balance in the Railbelt energy fund (AS 37.05.520) (1) to the Alaska Railbelt energy fund (AS 42.45.035), created by sec. 3 of this Act, or (2) for other authorized purposes. The commissioner of administration shall notify the lieutenant governor and the revisor of statutes when the conditions described in this section are met.

*** Sec. 17.** If, under sec. 16 of this Act, sec. 12 of this Act takes effect, it takes effect on the day after the effective date of the appropriation described in sec. 16 of this Act.

*** Sec. 18.** Except as provided in sec. 17 of this Act, this Act takes effect immediately under AS 01.10.070(c).

CS FOR SENATE BILL NO. 42(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to a Susitna River hydroelectric project and the power of the Alaska Energy Authority to apply for permits, licenses, or approvals necessary to acquire or construct power projects; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 44.83.080 is amended to read:

Sec. 44.83.080. Powers of the authority. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers:

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to adopt regulations governing the exercise of its corporate powers;

(5) to improve, equip, operate, and maintain power projects and bulk fuel, waste energy, energy conservation, energy efficiency, and alternative energy

facilities and equipment;

(6) to issue bonds to carry out any of its corporate purposes and powers, including the establishment or increase of reserves to secure or to pay the bonds or interest on them, and the payment of all other costs or expenses of the authority incident to and necessary or convenient to carry out its corporate purposes and powers;

(7) to sell, lease as lessor or lessee, exchange, donate, convey, or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the authority, the action is in furtherance of its corporate purposes;

(8) to accept gifts, grants, or loans from, and enter into contracts or other transactions regarding them, with any person;

(9) to deposit or invest its funds, subject to agreements with bondholders;

(10) to enter into contracts with the United States or any person and, subject to the laws of the United States and subject to concurrence of the legislature, with a foreign country or its agencies, for the construction, financing, operation, and maintenance of all or any part of a power project or bulk fuel, waste energy, energy conservation, energy efficiency, or alternative energy facilities or equipment, either inside or outside the state, and for the sale or transmission of power from a project or any right to the capacity of it or for the security of any bonds of the authority issued or to be issued for the project;

(11) to enter into contracts with any person and with the United States [,] and, subject to the laws of the United States and subject to the concurrence of the legislature, with a foreign country or its agencies for the purchase, sale, exchange, transmission, or use of power from a project, or any right to the capacity of it;

(12) to apply to the appropriate agencies of the state, the United States, and a foreign country and any other proper agency for the permits, licenses, or approvals as may be necessary, to maintain, [AND] operate**, acquire, or construct** power projects in accordance with the licenses or permits, and to obtain, hold, and use the licenses and permits in the same manner as any other person or operating unit;

(13) to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(14) to recommend to the legislature

(A) the pledge of the credit of the state to guarantee repayment of all or any portion of revenue bonds issued to assist in construction of power projects;

(B) an appropriation from the general fund

(i) for debt service on bonds or other project purposes; or

(ii) to reduce the amount of debt financing for the project;

(15) to carry out the powers and duties assigned to it under AS 42.45;

(16) to make grants or loans to any person and enter into contracts or other transactions regarding the grants or loans;

(17) to promote energy conservation, energy efficiency, and alternative energy through training and public education**;**

(18) to acquire a Susitna River power project, whether by construction, purchase, gift, or lease;

(19) to perform feasibility studies and engineering and design with respect to a Susitna River power project.

* **Sec. 2.** AS 44.83.396(a) is amended to read:

(a) A power project that was acquired or constructed **under AS 44.83.080(18) or** as part of the former energy program for Alaska is owned, and shall be administered, by the authority.

* **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

Governor Parnell Backs Susitna Dam Project

November 24, 2010, Juneau, Alaska – Governor Sean Parnell today announced his support for the Low Watana site on the Susitna River as the primary hydroelectric opportunity for Alaska's Railbelt. The governor's support follows the Alaska Energy Authority (AEA) recommendation for the large hydroelectric project.

"In order to provide low-cost electricity for the Interior and the Railbelt and to meet the state's goal of having half of Alaska's electricity generated by renewable resources by 2025, we must invest in a large-scale hydro project," Governor Parnell said.

Earlier this year, the Alaska Legislature appropriated funds to study the feasibility of major Alaska hydroelectric projects including Susitna, Chakachamna and Glacier Fork.

The AEA report concluded that the Susitna Project would produce two to three times more energy and at a lower per unit cost than the others; that Susitna is less likely to result in adverse environmental effects; that the project has fewer licensing and permitting complexities; that it can start sooner and involves simpler construction; and that it has a lower long-term operational risk factor.

Governor Parnell also announced he will propose legislation that will allow AEA to pursue funding for and ownership of the project.

AEA will hold a series of public workshops on the hydro project in February. A copy of AEA's large hydro study is available at: www.akenergyauthority.org

Governor pushes Susitna dam project

by Diana Haecker ~ January 19th, 2011

KTNA

Governor Sean Parnell is actively pushing to make the Susitna Hydro project a reality and submitted a bill to the legislature that would authorize the Alaska Energy Authority to move forward with the project.Parnell said the project must go ahead to create new opportunities for economic development and jobs for Alaskans. According to the bill, the Susitna hydro project would supply 50 percent of the needed energy in the railbelt.

The proposed bill would put AEA in charge to acquire, construct, own and operate new power projects. It also proposes to end the existing Railbelt Energy Fund and to create a new Railbelt Energy Fund that would be controlled by AEA.

The governor's bill would give AEA sweeping authority to go ahead with environmental and feasibility studies and to seek preliminary approvals for the Su Dam project from the Federal Energy Regulatory Commission.

The Su Hydro project, as currently proposed, would dam the Susitna River at Watana and create a nine-mile long water reservoir.

Governor's Bill Paves Way for Susitna Dam Project

Government News

January 14, 2011, Juneau, Alaska – Governor Sean Parnell today transmitted legislation that would authorize the Alaska Energy Authority (AEA) to move forward on pursuing a large hydroelectric project to supply much-needed energy to Interior and Southcentral Alaska.

"Alaska must invest now to create new opportunities for economic development and jobs for Alaskans," Governor Parnell said. "A Susitna Dam hydroelectric project will not only provide an important supply of energy for Alaskan homes and businesses, it will create jobs for Alaskans."

The bill would authorize AEA to acquire, construct, own, and operate new power projects; create a new Alaska Railbelt Energy fund, as a fund of AEA; repeal the existing Railbelt Energy fund (AS 37.05.520) after the balance of the existing fund is appropriated and transferred into the new fund, or appropriated and expended for other purposes; address quorum requirements of the AEA board, and allow for the adoption of regulations to govern the procurement of supplies, professional services, and construction.

Alaska's energy policy target is to reach 50 percent of its electricity generation through renewable resources by 2025. The legislation has been designed to give AEA the ability to continue with environmental and feasibility studies, positioning the state to seek preliminary approval from the Federal Energy Regulatory Commission for a project that would provide half of Southcentral Alaska's electricity demand. The bill will also define the board of director's quorum to be four of seven members.

A copy of the bill is available at:

Subject: Re: SB 42 Hearing Request

Jeff, I will not have a PowerPoint and my presentation will be on the particulars of the bill. I plan on covering some history of the organization and why we are requesting the restoration of the powers and duties. I'll have some people online for questions: Brian Bjorkquist Dept of Law, Chris Rutz, AEA procurement manager. Amy Adler, AEA controller will be with me in Juneau for fiscal note questions if they arise. I was not planning on Bryan Carey online unless you think there will be specific Susitna questions.

We are working on the followup questions from the Susitna presentation (Wagoner/Stedman) are there other issues or concerns that I should be aware of?

Could you give me the callin number for teleconference?

Let's touch base via phone on Monday.

Thanks for getting the bill scheduled, I appreciate it.

Alaska Energy Authority - Susitna Railbelt Energy Plan **FY2012 Request: $65,731,063**
Reference No: 45811

AP/AL: Appropriation
Project Type: Energy
Category: Development
Location: Statewide
Contact: Sarah Fisher-Goad
House District: Statewide (HD 1-40)
Contact Phone: (907)771-3000
Estimated Project Dates: 07/01/2011 - 06/30/2016

Brief Summary and Statement of Need:
This request is for environmental permitting and necessary field work for large scale hydroelectric projects. This project contributes to the Department mission of reducing the cost of energy in Alaska.

Funding:	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	Total
Rail Enrgy	$65,731,063	$32,600,000	$33,800,000	$20,100,000	$10,400,000		$162,631,063
Total:	$65,731,063	$32,600,000	$33,800,000	$20,100,000	$10,400,000	$0	$162,631,063

☐ State Match Required ☐ One-Time Project ☐ Phased - new ☐ Phased - underway ☑ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional information / Prior Funding History:
Refer to the funding matrix in the detailed description.

Project Description/Justification:
This request is for environmental permitting and necessary fieldwork for large-scale hydroelectric projects. Large hydroelectric projects are the only way for the state to become electrical energy secure, provide long term predictable costs of energy and obtain the goal of 50% renewable energy by 2025. These funds will enable Alaska Energy Authority to carry out preparation and filing of Federal Energy Regulatory Commission (FERC) Preliminary Permit, begin work on a FERC license application, required engineering design, environmental studies, financing, and regulatory and resource agency coordination for Susitna and other hydroelectric projects.

Funding History:

YEAR	AMOUNT	LEGISLATION
FY11	$ 10,000,000	SLA 10 Ch 43 Sec 7 Pg 19 Ln 16
FY09	$ 2,500,000	SLA 08 Ch 29 Sec 13 Pg 87 Ln 14

"Doing Alaska's Work, Living Alaska's Lives, Making Alaska a Great Place to Live"

March 8, 2011

The Honorable Joe Paskvan
State Senate
Alaska State Capitol
Juneau, AK 99801

RE: Support for Classified Employees' Amendment to SB 42

Dear Senator Paskvan:

We are enlisting your support for a committee amendment to transfer exempt employees into classified service. SB 42 relates to energy projects, but also transfers more than 40 employees from the Alaska Industrial Development Export Authority to the Alaska Energy Authority. This is a good opportunity to bring into classified service a group whose job titles and duties are logically and traditionally assigned within the classified service.

The job titles being proposed for the transfer positions typically found in classified service, including Administrative Assistants, Accounting Technicians, Data Processing Technicians, Warehouse Managers, and Project Managers. Some of these positions are as low as Range 12 and 13; hardly typical of positions found in politically exempt status.

The State of Alaska's personnel system was founded on the merit principle of employment which includes recruiting and selecting employees on the basis of their abilities and skills, retention of employees based on the adequacy of their performance and separation for cause. The selection process also integrates equal treatment of applicants and employees and maintains selection and retention of an employee's position secure from political influences. A more detailed look at the provisions can be found in AS 39.25.101. When the personnel act was first adopted, only a handful of positions were exempt and we suspect that our founders did not envision the too-numerous exemptions now found in the statutes.

We believe the employees in question were hired on the basis of their qualifications and are performing well. By transferring them into classified service, there will be statutory provisions to protect their employment and ensure top quality work free from outside interferences.

Thank you for considering our request. We are grateful for your important work on SB 42 which will help create jobs and lower energy bills.

Sincerely,

Pete Ford
President
Juneau Central Labor Council

Watana Project

Briefing Document on FERC process

1. General

For the Watana dam on the Susitna River, the FERC licensing process will govern the schedule for the project implementation. Unfortunately, over the years, the FERC process has demonstrated a lack of predictability for owners and developers - mainly because of the iterations of consultation, and study scope creep associated with consultation with multiple Federal and State agencies and the substantial and aggressive interest in hydro projects by Non-Governmental Organizations such as American Rivers *et. al.* - whether based locally to a project, or remote and nationally funded. Additionally, FERC has lost much control to agencies with mandatory conditioning authority and often these agencies do not have any mandate to balance power and non-power values so the conditions can create delays and great expense in the implementation of a new license.

The process allows for many opportunities for interventions and disputes over the adequacy of environmental studies and or the conclusions emanating from studies.

With few exceptions, FERC regulates all operating *non-federal* hydropower – extending its jurisdiction to projects that meet at least one of the following tests:

(1) Occupancy of federal land.

(2) Residing on a navigable watercourse,

(3) Use of surplus water or water power from a federal dam, or

(4) If there is any effect on interstate commerce, including linkage of the project to the grid.

The license:

- Authorizes construction and operation of a hydropower project
- Is issued for a term of up to 50 years
- Includes measures to protect the environment (mitigation)
- Requires the licensee obtains ownership or easement on project lands and waters.

2. FERC License Process

FERC has three processes to obtain a license to construct and operate a hydro power project (Traditional, Alternative, and Integrated), though many of the recent process based strategies and discussions on the matter have been focused on relicensing existing projects rather than licensing a new project. Since 2005, the default process has been the "Integrated Licensing Process (ILP) described herein.

The ILP has five key stages: Notice of Intent; Study Plan Development and NEPA Scoping; Implementation of Study Plan; Preliminary Licensing Proposal and Application; and Review of Application and Final Decision. These stages include 24 discrete steps, which progress on a strict timeline. All of the steps are subject to deadlines determined once the Notice of Intent (NOI) is issued, unless modified with FERC's permission.

The Integrated Licensing Process (ILP) integrates the development of license application and environmental review, and it coordinates FERC and other regulatory agencies that undertake concurrent environmental review.

Under the ILP, the Notice of Intent includes a Pre-Application Document (PAD) that compiles existing information about project impacts on hydrology and other natural resources. By this means, stakeholders can be notified of the available studies and will hopefully not demand extra, redundant studies. In the case of Watana, of course there is a very substantial database of studies from the 1980s that will be referenced in any PAD although it is probable that some studies or analysis will be needed to update the information.

Within 60 days of the NOI, the Office of Energy Projects will start NEPA scoping to assure the consistency of the study plan and the environmental review. This lessens the risk that issues that may prove to be material to the licensing decision have not been adequately studied.

Under the ILP, FERC and other agencies should deliberately explore and implement arrangements for cooperation in the preparation of the environmental document. Such cooperation will begin before the study plan is drafted and lessens any dispute between FERC and the agencies so that FERC's environmental document provides the record necessary for all agency decisions.

An important aspect of the ILP is that it establishes specific criteria for each study request and the licensee's response, including nexus to project impacts and cost-effectiveness compared to an alternative study method. It establishes a mandatory

procedure to resolve any study dispute between the licensee and any agency with mandatory conditioning authority. A panel of three members undertakes a peer review whether a particular study complies with the stated criteria. This avoids unresolved disputes about the study plans being carried forward in the form of challenges to the adequacy of the license application or environmental document.

Under ILP, FERC will publish draft license articles in any draft environmental document (in this case an EIS), in order to permit early analysis of whether its articles and other draft conditions are consistent. This avoids conflicts between FERC and other agencies appearing very late in the process.

As noted above, since 2005, the ILP has been the default process and AEA – if it wishes to do otherwise - will have to request authorization to use the "Traditional License Process" (TLP) or "Alternative License Process" (ALP) at the same time it files its Notice of Intent. These processes are all quite similar, and none of them affords much opportunity to shorten or streamline the licensing process. Authorization to use a process other than ILP typically requires the written support of a one or more resource agencies, Native Americans, or even NGO groups.

The previous work on Susitna in the 1980s was implemented under the Traditional Licensing Process.

3. Preliminary Permit

AEA may apply for a Preliminary Permit from FERC for the site, although this is not a required part of the license process. The awarding of a Preliminary Permit - for 3 years - by FERC essentially provides the following benefits:

- Establishes that AEA has first preference on the site - over other potential applicants - for filing a license application;
- Establishes – for interested agencies – that AEA has initiated the FERC process, and thus allows agencies to establish budgets for their participation;
- Initiates a 3-year study process;
- "Locks up" any Federal land – and interest – in the project.

The Preliminary Permit does not convey any authority to enter project lands or construct the project.

4. Factors driving unpredictability

Together with this note is a simplified, aggressive schedule for the obtaining of a FERC license. Only one "bar" on the schedule is engineering studies because the engineering studies required for the license applications are somewhat more predictable and easily manageable.

The challenges in licensing include:

- The diversity and timing of stakeholders participation that will seek project concessions and benefits
- Myriad stakeholder groups including, but not limited to:

Federal Agencies

- NMFS
- US Fish and Wildlife Service
- Army Corps of Engineers
- Bureau of Land Management
- National Park Service
- USGS

State Agencies

- Alaska Fish and Game
- Department of Environmental Quality (401 cert)
- Alaska Department of Natural Resources

Alaskan Native Groups

- Native Americans
- Native Corporations

NGOs

- Alaska Rate Payers
- American Rivers
- Alaska Conservation Alliance
- Trout Unlimited
- Sierra Club
- Natural Heritage Institute (based in San Francisco)
- American Whitewaters
- Other local groups

The aggressive schedule shown projects that a FERC license could be obtained by mid 2016. However, this target could easily be "derailed", particularly with respect to matters pertaining to the participation of multiple agencies, and the extensive environmental studies often required by them (and NGOs).

Typical delays result from:

- Delays and/or inability to agree on Study Plans;
- Requirements by Agencies for studies 9or revised studies) over a longer period than shown (two seasons);
- Delay in State issuance of the Section 401 Water Quality Cert and potential challenges to the permit by stakeholders;
- Inability of FERC to complete the draft and final EIS in the allotted time;
- Other regulatory review cycles within the FERC process;
- Endless comment and response cycles
- Lack of agreement on basic "Protection, Mitigation and Enhancement" measures (PM&Es); and
- Unknown interventions or lawsuits at any time, even after FERC issues the license.

The main tasks particularly subject to delay have been highlighted. If all agencies embraced the project in a responsive and collegial manner, the projected five and a half years could be achieved, but it must be recognized that the schedule could easily extend to eight years or more.

5. Elements of the Proposed Work Plan

To minimize the time required to license the project, there are three key strategies that AEA can embrace:

- Minimizing the need for new studies – by utilizing as many of the previous studies undertaken for the 1980s license application. A foundation of this effort will be to persuade agencies and interested stakeholders that the prior studies retain validity with only basic updates. Instrumental to this is the preparation of a Gap Analysis – which AEA has already initiated - to highlight any missing data or studies (particularly environmental, social and cultural), using the current proposed project layout as the baseline;
- Early and complete engagement with interested agencies and stakeholders so that particular aspects of studies and data gathering required by interested

parties can be 'fleshed out' as soon as possible. Close engagement with stakeholders and demonstrable commitment by AEA to required environmental mitigation and protection measures must continue throughout the FERC process;

- Clear commitment to environmental protection measures; and,
- Settlements between interested parties and AEA must be achieved and recorded as early as possible so that as many matters can be finalized as possible prior to the preparation of the License Application.

To fully define the methodology, tasks and strategy for the FERC process, AEA has scheduled a workshop with its FERC Advisor / Engineering Consultant in March.

MWH

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

March 14, 2011

Dear Senator Paskvan and Senator Wagoner,

This afternoon, I had a phone conversation with Rich Wilson, Bill Noll and Frank Mielke of the Alaska Rate Payers Association to discuss their ideas and recommendations on possible changes to Senate Bill 42. I understand that both of you have been acquaintances of these gentlemen for quite a long time and I believe you are familiar with who they are and what the Alaska Rate Payers Association represents.

I have not had the opportunity to study the 15 page proposed amendments or CS to SB 42, but have been briefed on the highlights during a 45 minute discussion. I believe there are some very good ideas coming from decades of experience. I will continue to review these recommendations and would be more than happy to discuss them with you at your convenience. I also have advised the Rate Payers to reach out to both of you as co-chairs to see what options there are to adopt some of these changes to Senate Bill 42 or at least have them discussed with the committee.

Attached, please find two copies of the recommendations and highlights from the Alaska Rate Payers Association. Thank you, and please feel free to contact me to discuss this at any time.

Sincerely,

Senator Joe Thomas

Highlighting Important Features of The Alaska Ratepayers Proposed Bill Entitled "The Susitna Power Authority"

1. **Board and Purpose.** The Susitna Power Authority ("Authority") is governed by a five-person Board of Directors to build and operate hydroelectric generation in the Susitna River, and transmission facilities anywhere in the state conveying Susitna power. [Section .030]

2. **Appointment and Terms of Board.** The Authority is established as a new authority in the Dept. of Commerce, Community & Economic Development. Members of the Board are appointed by the Governor and confirmed by the Legislature serving 5 year fixed terms on good behavior, removable only for cause. [Section .040]

3. **Executive Director.** An Executive Director serves at the pleasure of the Board which establishes the Director's duties and compensation. Employment by the Authority is exempt from the provisions of the State Personnel Act. [Section .050]

4. **Annual Report; Exemption from Certain General Statutes.** The Authority will provide an annual management and performance report, including financial variance reporting, to the Legislature and to the Governor. This will offer the Legislature more detailed oversight than what is contained in the provisions of the current revised HB 103. The Authority is exempt from the Executive Budget Act, as well as from the State Procurement Act, Title 42 (regulating public utilities) and Title 35 (governing public facilities). Any project of this size and cost needs authority to avoid unnecessary delays and costs to complete work on time and on budget. [Section .080(b)]

   This Authority is governed by five directors with relevant engineering, large project management and financial experience. Their objective is to produce hydroelectric power on the Susitna River in the quickest possible time at the lowest possible cost. Therefore, the Authority is relieved of the generally applicable exactions of the Budget Act, the Procurement Act, the Public Utilities and Public Facilities Acts as well as the State Personnel Act. Like other State entities, the Authority will adopt its own rules covering all these subjects with provisions of particular relevancy to the construction and operation of a large hydroelectric project. It is organized for success and achievement. [Section .080]

5. **Borrowing, Bonds, Debt.** The Authority is able to issue and refund bonds, with certain limits on the total amount of issue and the interest rates which may be paid. The extensive statutory language is calculated to make the Authority's bonds fully salable and acceptable in the bond markets. None of the debt or liability of the Authority is a debt or liability of the State of Alaska. [Section .150]

6. **Exemption from Taxes.** The real and personal property of the Authority are exempt from taxes and special assessments. [Section .150]

7. **Legislative Auditor's Annual Review.** The Legislative Auditor conducts an annual audit of the Authority whose records are available to the auditor at all times. [Section .080]

8. **Exemption from Local Planning, Zoning and Building Codes.** The Authority is exempt from planning, zoning, permitting or other such governmental powers of the State's political subdivisions. [Section .280]

9. **Permits and Powers under Federal Power Act.** The Authority may seek licenses and permits under the Federal Power Act and may proceed to condemn property under the provisions of said Act. [Section .080]

10. **Power of Condemnation.** The Authority shall have the power of eminent domain set forth in AS 09 including the declaration of taking. The State consents to the occupation and use of any State property for any hydroelectric facility of this Authority. [Section .080]

11. **Setting of Rates and Charges.** The Authority establishes its rates and charges, and is not subject Title 42 authorities of the Regulatory Commission of Alaska. [Section .080]

HB _____ Draft of 14 March 2011

An Act creating the Susitna Power Authority

Sec. 44.89.010. Purpose

The purpose of the Authority created in this chapter is to develop own and operate electric power and transmission and related facilities in the Susitna Basin. Transmission facilities may also be built and operated in areas other than the Susitna Basin.

Sec. 44.89.020. Establishment of Authority

(a) There is established a Susitna Power Authority. The Authority is a public corporation and an instrumentality of the State within the Department of Commerce, Community and Economic Development, but the Authority has a separate and independent legal existence from the State. The exercise by the Authority of the powers in this chapter is considered an essential governmental function of the State.

(b) The Authority may not be terminated as long as it has bonds, notes, or other obligations outstanding. Upon termination of the Authority, its rights and property pass to the State.

Sec. 44.89.030. Board of Directors of Authority

(a) The Authority shall be governed by a board of directors consisting of the following:

(1) Five members, appointed by the governor and confirmed by the Legislature who shall have experience in electric utility, management, finance, construction or operations;

(2) Members shall serve for staggered terms of 5 years, and may be reappointed to additional terms. The Initial board members' terms for four of the seats shall be for one, two, three and four years each. All appointments for members thereafter shall be for a five year term. Such members may only be removed for cause.

(b) If a vacancy occurs in a member's seat, the governor shall make an appointment, effective immediately, for the unexpired portion of that member's term, subject to subsequent confirmation of the Legislature.

Sec. 44.89.040. Operation of Authority

(a) The powers of the Authority are vested in the board.

(b) Three members constitute a quorum.

(c) The board shall elect a chairman, and other officers, to serve at the pleasure of the board.

(d) Action may be taken on the affirmative vote of 3 board members.

(e) The members of the board shall receive a stipend of $300 a day while performing business of the Authority.

Sec. 44.89.050. Executive Director

The Authority shall employ an executive director who may not be a member of the board. The executive director shall serve at the pleasure of the board. The board shall establish the duties and compensation of the executive director.

Sec. 44.89.060. Employment of Personnel; Exception from State Personnel Act

The executive directory may hire employees of the Authority, which is independent of the State Personnel Act. The board shall prescribe the duties and compensation of Authority employees.

Sec. 44.89.070. Legal Advisor

The Authority may retain legal counsel to advise the Authority on legal matters, or may contract with the department of law for legal counsel.

Sec. 44.89.080. Powers and Duties

(a) Except as otherwise explicitly made applicable to the Authority, the performance of the Authority's duties and the exercise of its powers, including its powers to issue bonds and otherwise incur debt, shall be governed exclusively by this chapter. In furtherance of its purposes, the Authority may

(1) own, acquire, construct, develop, create, construct, equip, operate, maintain, extend and improve any and all assets of any kind related to the generation and transmission of electricity within the Susitna River Basin, and in the case of transmission and related facilities in areas other than the Susitna River Basin;

(2) sue and be sued;

(3) adopt a seal;

(4) adopt, amend, and repeal regulations under AS44.62 and establish bylaws.

(5) make and execute agreements, contracts, and all other instruments with any public or private person, government unit, corporation, cooperative, municipality or other business entity lawfully conducting business in the United States for the exercise of its

powers and functions under this chapter and for the analysis, licensing, financing, design, construction, maintenance, improvement or operation of facilities, properties, or projects of the Authority:

(A) incurring indebtedness, obtaining investments in the Authority's projects, acquiring or granting lump sum payments for services in advance or in arrears, grants and other financing; and

(B) entering into public-private partnerships or service contracts in any form;

(6) in its own name acquire, lease, sell, rent or convey real and personal property;

(7) issue and refund bonds in accordance with this chapter, in order to pay the cost of any electrical generation, transmission and related facilities; the Authority may also secure payment of the bonds as provided in this chapter;

(8) incur other indebtedness, including lines of credit and indebtedness to the Rural Utilities Services, or any other governmental agency, and secure that indebtedness as provided in this chapter;

(9) apply for and accept gifts, grants, or loans from a federal agency or an agency or instrumentality of the State, or from a municipality, private organization, or other source, including obtaining title to state, local government, or privately owned land, directly or through a department of the State having jurisdiction of the land;

(10) fix and collect charges for the generation and transmission of electricity, and related services, including any necessary costs preliminary to construction.

(11) bring civil actions, refer criminal actions to the appropriate Authority, and take other actions or enter into agreements with law enforcement or property owners or managers to enforce property rights or other rights of the Authority.

(12) pledge, encumber, transfer, or otherwise obligate revenue derived by the Authority from any source, including charges for the generation and transmission of electricity, and related facilities or services;

(13) deposit or invest its funds, subject to agreements with bondholders;

(14) procure insurance against any loss in connection with its operation;

(15) contract for and engage the services of consultants, experts, financial, engineering and technical advisors that the Authority considers necessary for the exercise of its powers and functions under this chapter;

(16) apply for, obtain, hold, and use permits, licenses, or approvals from

appropriate agencies of the State, the United States, a foreign country and any other proper agency in the same manner as any other person;

(17) perform reconnaissance studies and engineering, survey ,and design studies with respect to the facilities for the generation and transmission of electricity and appurtenant facilities;

(18) exercise powers of eminent domain or file a declaration of taking as necessary for any facilities for or related to the generation and transmission of electricity;

If for any of the purposes hereunder, including temporary construction purposes, and the making of additions or improvements, the Authority shall find it necessary or convenient for it to acquire any real property whether for immediate or future use, then the Authority may find and determine that such property is required for a public use, and upon such due determination, such property shall be and shall be deemed to be required for such public use until otherwise determined by the Authority, such determination of fact shall not be affected by the fact that such property has theretofore been taken for, or is then devoted to, a public use; but the public use in the hands or under the control of the Authority shall be deemed superior to the public use in the hands of any other person, association or corporation. If the Authority is unable to agree for the acquirement of any such property, or if the owner thereof shall be incapable of disposing of the same, or if, after diligent search and inquiry, the name and residence of any such owner cannot be ascertained, or if any such property has been acquired or attempted to be acquired and title or other rights therein have been found to be invalid or defective, the Authority may acquire such property by condemnation under and pursuant to the provisions of this chapter:

When any real property within this State is sought to be acquired by condemnation, the Authority shall cause a survey and map to be made thereof, and shall cause such survey and map to be filed in its office. There shall be annexed to such survey and map a certificate executed by the chief engineer of the Authority, or by such other officer or employee as may be designated by the Board of Directors stating that the property or interest therein described in such survey and map are necessary for its purposes.

Upon filing such survey and map, the Authority may proceed to acquire the real property by eminent domain as set forth in AS 09.55.240-460, including the power of declaration of taking set forth in AS 09.55.420 et seq., all as may be modified by provisions of this chapter.

The Authority may, at its option, acquire such real property within the State of Alaska, under the aforesaid eminent domain law or, in the event it is a licensee under the Federal Power Act, it may acquire such real property as is necessary for its purposes through the exercise of the right of eminent domain as provided in the Federal Power Act, as it may be from time to time amended.

The term "real property" as used in this chapter is defined to include lands, structures, franchises and interests in land, including lands under water and riparian rights, and any and all other things and rights usually included within the said term, and includes also any and all interests in such property less than full title, such as easements, rights of way, uses, leases, licenses and all other incorporeal hereditaments and every estate, interest or right, legal or equitable, including terms for years and liens thereon by ways of judgments, mortgages or otherwise, and also all claims for damages for such real estate.

(19) confer and contract with municipalities, other governments, and electrical cooperatives, concerning electrical generation and transmission facilities;

(20) do all acts and things necessary or useful to carry out the powers expressly granted or necessarily implied in this chapter; nothing in this chapter limits the powers of the Authority that are expressly granted or necessarily implied.

(b) the Authority shall

(1) prepare an annual report of its operations to include a financial and income statement, a statement of changes in financial position, a reconciliation of changes in equity accounts, a summary of significant accounting principles, an auditor's report, comments regarding the year's business, and prospects for the next year; the report shall be completed by the twentieth day of the regular session of the Legislature and submitted to the Legislative Budget and Audit Committee and the presiding offices of each house of the Legislature, and the governor of Alaska. Quarterly budget variance reports shall be filed with the same parties during construction of facilities.

(2) be exempt from AS 37.07 (Executive Budget Act);

(3) establish a personnel management system for hiring employees and setting employee-benefit packages;

(4) establish procedures, rules, and rates governing per diem and travel expenses of the employees of the Authority in substantial conformity to statutes, procedures, rules, and rates applicable to State employees of similar State entities;

(5) coordinate the exercise of its powers to plan, design, construct, operate and maintain electrical generation and transmission and related facilities;

(6) have the exclusive Authority to determine and fix charges for the generation and transmission of electricity and related services that it owns, constructs or operates;

(7) be exempt from the AS 36.30 (State Procurement Act);

(8) be exempt from regulation under AS 42 (Public Utilities);

(9) be exempt from AS 35.

Sec. 44.89.090. Assets Funds and Revenue of the Authority

(a) The Department of Revenue shall separately account for all assets and revenue of the Authority.

(b) The deposit or investment of money in the Authority's funds may be made by the board. The interest earned on or profits derived from the deposit, investment, or sale of an investment by the Authority are funds of the Authority.

Sec. 44.89.100. Bonds of the Authority

(a) Notwithstanding any other provision of law, the Authority may borrow money and issue and refund bonds on which the principal and interest are paid out of and secured by the gross revenue derived by the Authority for the ownership, use, and operation of its facilities and services, and other revenue of the Authority under this chapter and any other revenue or money that the legislature may appropriate. Before issuing bonds, the Authority shall submit to the state bond committee a description of the bond issue and a preliminary prospectus, offering circular, or official statement relating to the bond issue, and shall contain a finding on the effect on the State or its political subdivisions to market bonds.

(b) The bonds of the Authority may be sold in the amount or series at the time determined by its board of directors. Bonds or a series of bonds may not be sold if the effective interest rate over the life of the bonds exceeds 11 percent a year or a rate of interest that is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of the sale of the bonds, whichever is higher.

(c) The Authority may issue bonds in an aggregate amount not to exceed $12,000,000,000, plus the cost of issuance.

(d) The amount of refunding bonds that can be issued by the Authority and bond premiums may not be included in the aggregate amount, but may be in addition to the amount authorized by (c) of this section.

Sec. 44.89.110. Trust Indentures and Trust Agreements; Funds and Reserves

(a) in the discretion of the Authority, an issue of bonds may be secured by a trust indenture or trust agreement between the Authority and a corporate trustee, by a secured loan agreement or other instrument, or by a resolution giving powers to a corporate trustee, by means of which the Authority may

(1) make agreement with the trustee or the holders of the bonds that the Authority

determines to be necessary or desirable, including agreements as to the

(A) application, investment, deposit, use and disposition of

(i) the proceeds of bonds of the Authority;

(ii) money or other property of the Authority;

(iii) money or other property in which the Authority has an interest;

(B) fixing charges for the generation and transmission of electricity and related facilities and services;

(C) assignment by the Authority of its rights in in any contract with respect to its facilities or services or in a mortgagee or other security interest created with respect to its facilities;

(D) terms and condition under which the Authority may issue additional bonds;

(E) vesting in a trustee of rights, powers, duties, money, or property in trust for the benefit of the bondholders, including the right to enforce payment, performance and all other rights of the Authority or of the bondholders, under a lease, contract, power sales agreement, contract of sale, mortgage, security agreement, or other trust by injunction or other proceeding or by taking possession by agent or otherwise, and operating electrical generation and transmission and facilities and services and applying the same in accordance with the trust agreement;

(2) pledge, mortgage, or assign money, leases, agreements, property, or other rights or assets of the Authority either currently in hand or to be received in the future, or both; and

(3) provide for any other matters that affect the security or protection of the bonds.

(b) Notwithstanding any other provision of this chapter, the trust agreement must contain an agreement by the Authority that the Authority will at all time maintain charges sufficient to

(1) pay the costs of operation and maintenance of its facilities and the principal of and interest on bonds issued under the trust agreement as the bonds severally become due and payable;

(2) provide for debt service coverage as considered necessary by the Authority for the marketing its bonds; and

(3) provide for renewals, replacements, and improvements of its facilities , and to maintain reserves required by the terms of the trust agreement.

(c) For the purpose of securing one or more issues of its bonds, the Authority may establish one or more special funds, called "capital reserve funds", and shall pay into those funds the proceeds of the sale of its bonds and any other money that is available to the Authority of the purposes of those funds. The funds shall be established only if the Authority determines that the establishment would enhance the marketability of the bonds. All money held in a capital reserve fund, except as provided in this section, shall be used as required solely for the (1) payment of the principal of and interest on bonds or of the sinking fund payments with respect to those bonds, (2) the purchase or redemption of bonds, or (3) the payment of a redemption premium required to be paid when those bonds are redeemed before maturity, However, money in a fund may not be withdrawn from the fund at any time in an amount that would reduce the amount of the fund to less than the capital reserve requirement set out in (d) of this section, except for the purpose of making, with respect to those bonds, payment, when due, of principal, interest, redemption premiums, and the sinking fund payments for the payment of which other money of the Authority is not available. Income or interest earned by or increment to a capital reserve fund due to the investment of the funs of any other amounts in the fund may be transferred by the Authority to other funds or accounts of the Authority to the extent that the transfer does not reduce the amount of the capital reserve fund below the capital reserve fund requirement.

(d) If the Authority decides to issue bonds secured by a capital reserve fund, the bonds may not be issued if the amount in the capital reserved fund is less than the amount of the capital reserve fund requirement, if any, established by resolution of the Authority, unless the Authority at the time of issuance of the obligation, deposits in the capital reserve fund from the proceeds of the obligations to be issued or from other sources an amount that, together with the amount then in the fund, will not be less than the capital reserve fund requirements.

(e) In computing the amount of a capital reserve fund for the purposes of this section, securities in which all or a portion of the fund is invested shall be valued by some reasonable method established by the Authority by resolution. Valuation on a particular date shall include the amount of any interest earned or accrued to that date.

(f) If the Authority decides to issue bonds secured by a capital reserve fund, the bonds may not be issued until 30 days after the Authority has mailed notification to the State bond committee and the Legislative Budget and Audit Committee by certified mail of its intention to establish a capital reserve fund to secure the bond issue. The notification must include the amount of the capital reserve fund to be established, the amount of bonds proposed to be issued, and the total cost for which the bonds are to be issued. The notification shall be accompanied by an estimate by the Authority of the need to withdraw money from the capital reserve fund during the term of the bond issue, the amount that may be necessary to withdraw, and the time at which withdrawals are

estimated to be needed. By January 30 of each year, the Authority shall prepare, and provide to the State Bond Committee and the Legislative Budget and Audit Committee, a revised estimate, considering the same factors, and a statement of all withdrawals that have occurred from the date of issuance of the bonds to the end of the preceding calendar year.

(g) Nothing in this section creates a debt or liability of the State.

(h) Notwithstanding any other provision of law, the Authority may establish other funds and reserves as the board of directors may determine reasonable and prudent for the issuance of bonds or for the conduct of the business and affairs of the Authority. The interest earned on or profit derived from these funds and reserves shall be the property of the Authority.

Sec. 44.89.120. Validity of Pledge

It is the intention of the legislature that a pledge made in respect of bonds shall be perfected and shall be valid and binding from the time the pledge is made, that the money or property so pledged and after that received by the Authority shall immediately be subject to the lien of the pledge without physical delivery or further act, and that the lien of the pledge shall be valid and binding against all parties having claims of any kind in tort, contract, or otherwise against the Authority irrespective of whether the parties have noticed. Neither the resolution, trust agreement, or any other instrument by which a pledge is created need be recorded or filed under the provisions of the Uniform Commercial Code in order to be perfected or to be valid, binder, effective against the parties. This section does not affect title to or conveyances of real property and does not limit the applicability of AS 40.17.080(b).

Sec. 44.89.130. Non-Liability on Bonds

(a) Neither the members of the board nor a person executing the bonds of the Authority is liable personally on the bonds or is subject to personal liability or accountability by reason of the issuance of the bonds.

(b) The bonds issued by the Authority do not constitute an indebtedness or other liability of the State or of a political subdivision of the State other than the Authority, but shall be payable solely from the income, receipts, or other money or property of the Authority. All documents published by the Authority or to which the Authority is a signatory and used in or for the issuance of bonds by the Authority must state that they are prepared by or for the Authority.

(c) The Authority may not pledge the faith or credit of the State or of a political subdivision of the State other than the Authority, and the issuance of a bond by the Authority does not directly, indirectly, or contingently obligate the State or a political subdivision of the State to apply money from, levy, or pledge any form of taxation to the

payment of the bond or to make payments due on the bonds from any source of funds not pledged for repayment of the bonds.

Sec. 44.89.140. Pledge of State

The State pledges to and agrees with the holders of bonds issued under this chapter and with a federal agency that loans or contributes money in respect to electrical generation and transmission and related facilities that the State will not limit or alter the rights and powers vested in the Authority under this chapter to fulfill the terms of a contract made by the Authority with the holders or federal agency or in any way impair the rights and remedies of the holders under the bonds, together with the interest on them, with interest on unpaid installments of interest, and all costs and expenses in connection with an action or proceeding by or on behalf of the holders, until such obligations are fully met and discharged. The Authority may include this pledge and agreement of the State, insofar as it refers to holders of bonds of the Authority, in a contract with the holders and, insofar as it relates to a federal agency, in a contract with the federal agency.

Sec. 44.89.150. Exemption from Taxation

The real and personal property of the Authority and its assets, income and receipts are declared to be the property of a political subdivision of the State and are exempt from all taxes and special assessments of the State or a political subdivision of the State. All Bonds of the Authority are declared to be issued by a political subdivision of the state and for an essential public and governmental purpose. The bonds, the interest on the bonds, the income from the bonds and the transfer of the bonds, and all assets, income, and receipts pledged to pay or secure the payment of the bonds or interest on the bonds are, at all times, except from taxation by or under the Authority of the State, except for inheritance and estate taxes and taxes on transfers by or in contemplation of death. Nothing in this section affects or limits an exemption from license fees, property taxes, or excise, income, or other taxes provided under any other law, nor does it create a tax exemption with respect to the interest of any business enterprise or other person, other than the Authority in any property, assets, income, receipts, project, or lease, regardless of whether financed under this chapter.

Sec. 44.89.160. Bonds, Legal Investments for Fiduciaries

The bonds of the Authority are securities in which all public officers and bodies of the State and all municipalities and municipal subdivisions, all insurance companies and associations and other persons carrying on any insurance business, all banks, bankers, trust companies, savings banks, savings association, including savings and loan associations and building and loan associations, investment companies and other persons carry on banking business, all administrators, guardians, executors, trustee, and other fiduciaries , and other persons who are now or may afterward be authorized to invest in

bonds or other obligations of the State may property and legally invest money, including capital in their control or belonging to them. Notwithstanding any other provision of law, the bonds of the Authority are also securities that may be deposited with any and be received by all public officers and bodies of the State and all municipalities and municipal subdivisions for any purposes for whittle deposit of bonds or other obligations the State is now or may afterward be authorized to issue.

Sec. 44.89.170. Audit

The legislative auditor annually shall audit, or cause to have audited, the financial records of the Authority. The form and content of the financial records shall be in accordance with generally accepted accounting procedures. The financial records shall be available to the legislative auditor any reasonable time.

Sec. 44.89.180. State Appropriations Not Affected.

The chapter does not prevent the State from making appropriations for or in aid of the acquisition, design, construction, or operation of electrical generation and transmission and related facilities.

Sec. 44.89.190. Insurance

The Authority shall keep in force public liability insurance in an amount reasonably calculated to cover potential claims for bodily injury, death or disability, and property damage that may arise from or be related to its operation and activities, naming the State as an additional insured.

Sec. 44.89.200. Safeguarding of Money

The Authority shall maximize revenue from and deposit all money in depositories under guidelines issued by the commissioner of revenue and otherwise safeguard the money under guidelines as the commissioner of revenue may from time to time issue..

Sec. 44.89.210. Fidelity Bond

The Authority shall obtain a fidelity bond in an amount determined by the board, for the members of the board and any official responsible for Authority accounts and finances. A bond must be in effect for the tenure of the bonded person.
[use terms of *19.75.321*]

Sec. 44.89.220. Bond Terms

(a) the bonds of the Authority mature at the time fixed by the board. The bonds may be subject to redemption before their fixed maturities as determined by the board, or the Authority's executive director when delegated that responsibility on AS 44.89.230, and with the premium fixed by the board, but a bond many not be subject to redemption before its fixed maturity date unless the right to redeem that bond is expressly mentioned on the face of the bond. The bonds

(1) may be denominations determined by the board;

(2) may be issued in coupon form or in fully registered form, and may be register able as to principal or both principal and interest, and under regulations and conditions the board provides;

(3) are payable as to principal and interest at the place determined by the board;

(4) shall be signed on behalf of the Authority as the board may direct; the signatures may be facsimile signatures; each of the interest coupons, if any, attached to the bonds shall be signed by the facsimile signatures of the officials as the board may direct;

(5) shall have the seal of the Authority impressed, printed, or lithographed on them; and

(6) shall be issued under and subject to the terms, condition, and covenants, providing for the payment of the principal and interest on the bonds and the other terms, conditions, covenants, and protective features safeguarding this payment and relating to the operations, maintenance or capital improvements as found necessary by the board, which covenants may include a provision requiring the setting aside and maintenance of certain reserves to secure the payment of the principal and interest or for operations, maintenance or capital improvements.

(b) The board may select a trustee or trustees for the holders of the bonds or any series of the bonds, for the safeguarding and disbursement of any of the money in any of the funds created under this chapter or for the duties of authentication, delivery, and registration of the bonds as the board may determine. The board shall fix the rights, duties, powers, and obligations of the trustee or trustees.

(c) In determining the matters and questions relating to the issuance and sale of the bonds and the fixing of the maturities, terms, condition, covenants, and other subjects of the bonds as provided in (a) and (b) of this section, the decisions of the board shall be those found to be reasonably necessary for the best interests of the Authority and the construction, operation and maintenance of its facilities, and those that will accomplish the most advantageous sale of the bonds, giving due regard to (1) necessary or normal

costs of maintenance and operation; (2) renewals and replacements of and repairs to the facilities; (3) all improvements to electrical generation and transmission and related facilities; (4) the future growth and expansion of all of the facilities; and (5) the possibility of additional revenue bond financing for electrical generation and transmission and related facilities. A decision of the board as expressed in any bond resolution is final when any bonds have been issued under the bond resolution.

(d) A bond resolution may provide that the bonds issued must contain a recital that the bonds are issued under this chapter, and any bonds containing this recital are conclusively considered to be valid and to have been issued in conformity with this chapter.

(e) The validity of the authorization and issuance of bonds is not affected by any proceeding for the acquisition or construction of the additions, improvements, or facilities for which the bonds have been issued or by any contract in connection with the acquisition or construction.

Sec. 44.89.230. Bond Resolution

(a) When issuing bonds of the Authority, the board shall adopt the bond resolution and approve all other documents and proceedings necessary for the issuance, sale, and delivery of the bonds or any part or series of them. The bond resolution shall fix the aggregate principal amount and denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions, and covenants of the bonds or each of them. The board shall also determine and provide for the date and manner of sale of the bonds, and shall provide where the notice of sale, if any, is to be published.

(b) The board may delegate to the Authority's executive director the Authority to approve final principal maturities and dates, interest rates, redemption rights, and interest payment dates under the terms and conditions the board determines by resolution.

Sec. 44.89.240. Enforcement by Holder

The holder of any bonds or the trustee for the holders of bonds or any series of them, may by appropriate proceedings in state court, compel the transfer, setting aside, and payment of money and the enforcement of all of the terms, conditions, and covenants as required and provided in AS 44.89.220 and AS 44.89.230 and in the bond resolution.

Sec. 44.89.250. Bond Negotiability

The bonds and the coupons attached to them are fully negotiable instruments under the laws of the State.

Sec. 44.89.260. Refunding

(a) The bonds or any part of them may be refunded at or before their maturity by the issuance of refunding revenue bonds of the Authority if, in the opinion of the board, refund is advantageous to and in the best interest of the Authority.

(b) The board shall adopt the resolution authorizing refunding and all other documents and proceedings necessary for the issuance, exchange or sale, and delivery of the bonds. All provisions of AS 44.89.100-.160 except AS 44.89.100(c) and AS 44.89.220-.270 applicable to revenue bonds are applicable to the refunding bonds and to the issuance, sale, or exchange of the bonds, except as otherwise provided in this section.

(c) Refunding bonds may be issued in a principal amount sufficient to provide money for the payment of all bonds to be refunded by them, and in addition, for the payment of all expenses incident to the calling, retiring, or paying of the outstanding bonds, and the issuance of the refunding bonds. These expenses include, without limitation,

(1) the difference in amount between the par value of the refunding bonds and any amount less than par for which the refunding bonds are sold;

(2) any amount necessary to be made available for the payment of interest on the refunding bonds from the date of sale of the bonds to the date of payment of the bonds to be refunded or to the date on which the bonds to be refunded will be paid under the call of the bonds or agreement with holders of the bonds;

(3) the premium, if any, necessary to be paid in order to call or retire the outstanding bonds; and

(4) the interest accruing on the outstanding bonds to the date of the call or retirement and other costs of issuance and refunding.

Sec. 44.89.270. Bonds as Legal Investments

Bonds of the Authority, including electrical generation and transmission and related facilities bonds, are legal investments for all banks, trust companies, savings banks, savings and loan associations, and other persons carrying on a banking business, all insurance companies and other persons carrying on an insurance business, and all executors, administrators, trustee, and other fiduciaries. The bonds may be accepted as security for deposits of all money of the State and its political subdivisions.

Sec. 44.89.280. Exemption from Local Regulation

Notwithstanding any contrary provision of law, the activities of the Authority are exempt

from land use planning, zoning, permitting, or other similar governmental powers of political subdivision of the State.

Sec. 44.89.290. Statutory Construction

This chapter shall be liberally construed in order to carry out the purposes for which it was enacted. All existing laws in conflict with this chapter are superseded as necessary to accomplish the purposes of this chapter.

Sec. 44.89.300. Compelling Attendance of Witnesses

For the purpose of exercising its powers and performing its duties hereunder, and of securing such information as it may deem necessary hereunder, the Authority shall have the power to compel the attendance of witnesses and the production of documents. The power hereby conferred upon the Authority may be exercised by any one or more of the Board of Directors if he or they are authorized so to act on behalf of the Authority by resolution or by law. A subpoena issued under this section shall be regulated by the civil practice law and rules.

Sec. 44.89.310. Consent of State

The State of Alaska hereby consents to the occupation and use by the Authority of any and all property of the State of whatever kind or character for any hydroelectric or transmission facility authorized herein, and hereby vests the Authority with and delegates to it the rights to exercise any and every right and power of the State in connection therewith, whether proprietary or sovereign in character, which the State itself might exercise.

Sec. 44.89.320. Definitions

(a) "Electrical generation and transmission and related facilities", for purposes of this chapter means facilities for the generation of electricity from renewable sources, including hydroelectric of any capacity and volume, wind power and geothermal, and facilities for the transmission of electricity from any source whatsoever, and any other facilities reasonably necessary or useful to accomplish the generation and transmission of such electricity.

Highlighting Important Features of The Alaska Ratepayers Proposed Bill Entitled "The Susitna Power Authority"

1. **Board and Purpose.** The Susitna Power Authority ("Authority") is governed by a five-person Board of Directors to build and operate hydroelectric generation in the Susitna River, and transmission facilities anywhere in the state conveying Susitna power. [Section .030]

2. **Appointment and Terms of Board.** The Authority is established as a new authority in the Dept. of Commerce, Community & Economic Development. Members of the Board are appointed by the Governor and confirmed by the Legislature serving 5 year fixed terms on good behavior, removable only for cause. [Section .040]

3. **Executive Director.** An Executive Director serves at the pleasure of the Board which establishes the Director's duties and compensation. Employment by the Authority is exempt from the provisions of the State Personnel Act. [Section .050]

4. **Annual Report; Exemption from Certain General Statutes.** The Authority will provide an annual management and performance report, including financial variance reporting, to the Legislature and to the Governor. This will offer the Legislature more detailed oversight than what is contained in the provisions of the current revised HB 103. The Authority is exempt from the Executive Budget Act, as well as from the State Procurement Act, Title 42 (regulating public utilities) and Title 35 (governing public facilities). Any project of this size and cost needs authority to avoid unnecessary delays and costs to complete work on time and on budget. [Section .080(b)]

   This Authority is governed by five directors with relevant engineering, large project management and financial experience. Their objective is to produce hydroelectric power on the Susitna River in the quickest possible time at the lowest possible cost. Therefore, the Authority is relieved of the generally applicable exactions of the Budget Act, the Procurement Act, the Public Utilities and Public Facilities Acts as well as the State Personnel Act. Like other State entities, the Authority will adopt its own rules covering all these subjects with provisions of particular relevancy to the construction and operation of a large hydroelectric project. It is organized for success and achievement. [Section .080]

5. **Borrowing, Bonds, Debt.** The Authority is able to issue and refund bonds, with certain limits on the total amount of issue and the interest rates which may be paid. The extensive statutory language is calculated to make the Authority's bonds fully salable and acceptable in the bond markets. None of the debt or liability of the Authority is a debt or liability of the State of Alaska. [Section .150]

6. **Exemption from Taxes.** The real and personal property of the Authority are exempt from taxes and special assessments. [Section .150]

7. **Legislative Auditor's Annual Review.** The Legislative Auditor conducts an annual audit of the Authority whose records are available to the auditor at all times. [Section .080]

8. **Exemption from Local Planning, Zoning and Building Codes.** The Authority is exempt from planning, zoning, permitting or other such governmental powers of the State's political subdivisions. [Section .280]

9. **Permits and Powers under Federal Power Act.** The Authority may seek licenses and permits under the Federal Power Act and may proceed to condemn property under the provisions of said Act. [Section .080]

10. **Power of Condemnation.** The Authority shall have the power of eminent domain set forth in AS 09 including the declaration of taking. The State consents to the occupation and use of any State property for any hydroelectric facility of this Authority. [Section .080]

11. **Setting of Rates and Charges.** The Authority establishes its rates and charges, and is not subject Title 42 authorities of the Regulatory Commission of Alaska. [Section .080]

Re: Questions on Potential Fish Impact of Proposed Susitna Hydroelectric Project

Dear Sara Fischer-Goad and Commissioner Cora Campbell:

The Susitna River and its clear water tributaries are home to some of Alaska's most important populations of wild rainbow trout and salmon. We are writing to learn more about the potential fisheries impacts of the proposed Susitna Hydroelectric project. To date, we have found the information to be scarce.

At the outset we'd note that we believe a large scale Hydroelectric power project would benefit Southcentral Alaska residents, if done right, and if it does not damage important fish populations our residents rely upon for recreational and commercial fishing activities.

The Susitna drainage is home to trophy wild rainbow trout and grayling. Many of those fish overwinter in the Susitna River, and spend the warmer months in the Susitna's clearwater tributaries. The Susitna River is, in areas where these fish overwinter, braided. We would like to know what information is available to assure Alaskans that during periods of low water caused by dam operations, these braids will not be dewatered. We do not want to see winter-kill of one of Alaska's most important wild trout populations.

Conversely, in the summer months, trophy-sized silvers, kings, chum, and pink salmon come up the Susitna in large numbers. We would not want dam-induced low water levels to impact the braids used by these fish as they come upriver to their spawning streams. Small numbers of these fish continue to travel the Susitna through November in some years.

We would like a comprehensive answer to these questions, as well as information on the risk to these fish populations through dam-induced low water periods.

Thank you very much. We look forward to a timely response.

1 Executive Summary

Electric Power Systems, Inc. (EPS) studied the feasibility of adding a new hydro generation plant at Susitna. Both 420 MW and 600 MW plant sizes were evaluated. The study evaluated the feasibility of the project and performed a phase one study of the required system improvements necessary to support the new generation and transmission.

The study indicates that the project is feasible. Numerous transmission system improvements are required to support the proposed generation. Transmission improvements from Fairbanks to the Mat-Su valley will be required, as listed below.

- New Gold Creek 230 kV substation along the existing Railbelt 138 kV Northern Intertie at Gold Creek.
- Three new 230 kV lines between Gold Creek and the Susitna Hydro Plant.
- The existing 138 kV line from Healy to Douglas will need to be converted to 230 kV.
- Two new 230 kV lines connecting Douglas to the new substation at Gold Creek.
- A new 230 kV line between Gold Creek and Healy.
- A new 230 kV bus is required at Healy substation.
- The existing 138 kV bus sections at Cantwell, Stevens, and Douglas must be converted to 230 kV along with the substation step down transformers.
- The Healy - Wilson 138 kV will be converted to 230 kV operation.
- Two new 100 MVA, 230 / 138 kV transformers will be required at Wilson.
- The existing Healy – Gold Hill 138 kV line will need to be upgraded to 230 kV operation.
- The conversion of the Ester and Nenana substations to 230 kV will be required.
- Two new 100 MVA 230 / 138 kV transformers will be required at Gold Hill.
- Two new static VAR compensation (SVC) devices will be required to support the project. The SVCs will most likely be required at Healy and Douglas, interconnecting at 230 kV.
- A new 230 kV substation at Lorraine was added. This substation intersects the Pt. MacKenzie - West Terminal – East Terminal – Plant 2 230 kV line and the Pt. MacKenzie - Teeland 230 kV line.
- A new 230 kV line from Pt. MacKenzie to Douglas was added.
- A new 230 kV line from Lorraine to Douglas was added.

Some modifications to the spinning reserve policies and to the underfrequency load shedding schemes will also be necessary.

The estimated costs of the transmission and substation projects are as follows (in millions):

- Triple Circuit From Devils Canyon to Gold Creek - $47.4
- Single Circuit 230 kV Gold Creek – Healy - $153.3
- Double circuit 230 kV Gold Creek – Douglas - $192.1
- Single Circuit 230 kV Douglas – Teeland - $37.9
- Double Circuit 230 kV Douglas – Lorraine - $117.0
- Single Circuit 230 kV Lorraine – Pt MacKenzie - $7.3
- Convert 138 kV Healy – Gold Hill 230 kV line - $149.2
- Pt MacKenzie Modifications - $2.4
- Lorraine Substation - $13.4

• Douglas Station	-	$14.3
• Teeland Station	-	$1.0
• Gold Creek Station	-	$17.0
• Healy Station	-	$5.6
• Wilson Station	-	$6.5
• Nenana/Ester stations	-	$6.0
• Intertie Transformers	-	$7.0
• SVC systems	-	$52.0
• Devils Canyon Substation (exc transformers)	-	$9.5
• Unidentified projects	-	$50.0
Total Susitna Integration Costs	-	$888.9

The identified projects are those that are required as a result of a high-level screening study of the Susitna Hydroelectric project. These projects include the major infrastructure necessary to integrate the Susitna project into the Railbelt. However, there will be many projects, such as communications improvements required for relaying and control, control and monitoring (Supervisory Control And Data Acquisition) and minor transmission and substation improvements that will be required to strengthen the interconnected grid of the Railbelt. These projects cannot be identified by a high level screening study, but are estimated at $50.0 in the above summary.

It should also be pointed out that certain improvements not included in the above list would be required if slightly different generation dispatches were utilized in the study. The study assumed 200 MW of the Susitna project was utilized in the Fairbanks area and 400 MW was used in the Anchorage/Kenai area. Differences in the actual power flow out of Susitna could result in significant changes to the list of recommended projects. Power flow above 400 MW to the Anchorage and Kenai areas may require transmission improvements from the Pt. MacKenzie, Lorraine, Teeland area into the Anchorage area and from Anchorage to the Kenai Peninsula.

In all the power flows used in the study, Bradley Lake was required to be dispatched. Absent the energy from Bradley Lake, acceptable power flows and system stability achieved in the study would not be possible unless a Kenai gas-fired resource was used in Bradley's place. Without the addition of the Southern Intertie, the Kenai will be subject to essentially the same generation restrictions that exist today. In order to alleviate Kenai "must run" generation, the Southern Intertie would be required to optimally utilize the energy of Susitna on the Kenai Peninsula.

2 Introduction

The Alaska Energy Authority (AEA) has asked Electric Power Systems, Inc (EPS) to determine the required system improvements to the Railbelt electrical system to support the proposed Susitna Hydroelectric Project (Project). Specifically, this study evaluated the feasibility of the Susitna project and identified the basic electrical infrastructure improvements necessary to support the project.

EPS evaluated the operation of the Railbelt electrical system with the addition of the project in the 2020 time frame. EPS studied two generation levels for the project, 420 MW and 600 MW. The project interconnects with the existing Railbelt system along the existing Anchorage – Fairbanks Intertie, between Cantwell and Stevens substations.

The report is separated into two sections, the first is the electrical studies required to identify the Railbelt improvements necessary to support the Susitna Project and the second part includes feasibility level costs estimates for the projects identified in the studies.

3 Power Flow Base Cases and Modeling Issues

EPS created three power flow base cases, representing the 2020 winter peak, 2020 summer peak, and 2020 summer valley load condition. Additionally, two levels of generation at Susitna were evaluated; a 420 MW and a 600 MW level. This resulted in a total of six power flow base cases.

The Railbelt power flow base cases used for this study are the 2015 planning cases developed for previous studies for the Railbelt Intertie Operating Committee (IOC). The planning cases have load levels representative of the 2020 time frame within reasonable estimates of the load growth. The power flow model also includes various generation and transmission upgrades to the Railbelt, expected to be in place by 2020. These improvements are outlined below.

Load Updates

The system loads were updated to a 2020 level based on load forecasts.

Generation Updates

Three combustion turbines (CTs) and one heat recovery steam generator (HRSG) generator were added at the new International substation (ITSS) within Chugach (CEA). The generators are configured as one stand-alone CT plus a 2x1 configuration(two CTs feeding waste heat to one steam turbine (ST)).

Three combustion turbines and one HRSG generator were added at Eklutna substation within MEA. The generators were configured as one stand-alone CT plus a 2x1 CT / HRSG configuration.

Beluga unit #8 is decommissioned in the CEA area.

The Nikiski Solars units are decommissioned in the HEA area.

Transmission Updates

The AMLP Substation #14 (115 kV) substation was built out to remove a tapped line within the AMLP system. The AMLP A.P.A. Switchyard (115 kV) substation was built out to remove a tapped line within the AMLP system. Substation #15 was also reconfigured to accommodate this change. A Fort Richardson (115 kV) substation was added with connections to Substation #20 and Plant 2. The Fort Richardson 34.5 kV substation was modified to connect to the North Sub substation.

CEA International Substation (138 kV) was built out to remove bus ties, reconfigure the bus structure, add breaker positions, and remove tapped line configurations. A 138 kV transmission line from Retherford substation to University substation was added.

A second (express) 115 kV line was added between Briggs substation and Eklutna substation, within the MEA system.

Within HEA, the Tesoro 115 kV substation was expanded to remove a tapped line configuration to Bernice substation. A new Tesoro load bus was added. The Bernice 115 kV substation was built out to remove the Bernice tapped line segment. New load transformers were added at Bernice Lake substation. The Bernice Lake – Tesoro – Marathon - Beaver Creek - Soldotna 69 kV lines and subsystem was reconfigured to incorporate a new normal operating configuration. Sterling 115 kV and Pioneer 115 kV substations were added. A Diamond Ridge 69 kV substation load bus was added.

Susitna Generation Upgrades

Both proposed Susitna generation options were modeled. The Susitna units were modeled as three 140 MW units for the 420 MW cases or three 200 MW units for the 600 MW cases. This results in the loss of one of the Susitna units becoming the single largest contingency for the Railbelt. The capacity of the Susitna units required that the Railbelt carry at least 140 MW or 200 MW (depending on the generation scenario) of spinning reserve online. EPS created the six power flow dispatches with this new spinning reserve requirement. Table 1 below lists the dispatches that were used for this study.

The dispatch cases attempted to use Susitna at or near maximum as much as possible. Other hydro resources were typically dispatched, along with the most efficient new or proposed combustion turbines within the system.

Table 1 – Generation Dispatch

Susitna Transmission Upgrades

To accommodate the addition of the Susitna project, several transmission improvements to the Railbelt are required. These are described below.

- A new substation was added along the existing Railbelt 138 kV Northern Intertie at Gold Creek. This is the point of interconnection for the Susitna Hydro Project.
- From Gold Creek, three 230 kV lines run seven miles to the Susitna Hydro Plant.
- The substation at Gold Creek intercepts the existing northern Intertie that runs between Teeland and Healy. The existing 138 kV line from Healy to Douglas is built to a 345 kV design, but operated at 138 kV. This section of the line will need to be converted to 230 kV operation, and was converted in the model.

- Two additional 230 kV lines were added to the power flow model, directly connecting the Douglas substation to the new substation at Gold Creek.
- An additional 230 kV line was added from the new substation at Gold Creek to Healy.
- A new 230 kV bus is required at Healy substation.
- The existing 138 kV bus sections at Cantwell, Stevens, and Douglas were converted to 230 kV and the substation step down transformers were changed to 230 kV on the high side.
- The Healy to Wilson 138 kV was converted to 230 kV operation and moved to the new 230 kV Healy bus.
- Two 100 MVA, 230 / 138 kV transformers were added at Wilson.
- Two new static VAR compensation (SVC) devices were added to support the new Susitna generation and transmission. A new 200 MVAR SVC was added at the new Healy 230 kV bus and a new 200 MVAR SVC was added at the upgraded Douglas 230 kV bus.
- A new 230 kV substation at Lorraine was added. This substation intersects the Pt. MacKenzie - West Terminal – East Terminal – Plant 2 230 kV line and the Pt. MacKenzie - Teeland 230 kV line.
- A new 230 kV line from Pt. MacKenzie to Douglas was added.
- A new 230 kV line from Lorraine to Douglas was added.
- The study results eventually indicated that the existing Healy – Gold Hill 138 kV line will also need to be upgraded to 230 kV operation (will require re-conductoring). This will also necessitate the conversion of the Ester and Nenana substations from 138 kV to 230 kV, and will require adding two 100 MVA 230 / 138 kV transformers at Gold Hill.

One line diagrams showing the 2020 Railbelt system with the changes mentioned above are included in appendix A.

4 Transient Stability Cases

Standard IEEE dynamic stability models for the generator, turbine, and excitation models of the Susitna units were used. IEEE standard models were also used for the new SVC's added at Douglas and Healy.

EPS ran several line faults and unit trips to determine the impact that the new Susitna generation would have on the Railbelt. Below is a description of the line fault and trip contingencies run for this study.

L1. Fault on Susitna - Gold Creek 230 kV line at 1 second, near the Susitna end. Fault cleared at 5 cycles.
L2. Fault on Gold Creek - Healy 230 kV line at 1 second, near the Gold Creek end. Fault cleared at 5 cycles.
L3. Fault on Healy - Wilson 230 kV line at 1 second, near the Healy end. Fault cleared at 5 cycles.
L4. Fault on Healy - Nenana 138 kV line at 1 second, near the Healy end. Fault cleared at 5 cycles.
L5. Fault on Gold Creek - Douglas 230 kV line at 1 second, near the Gold Creek end. Fault cleared at 5 cycles.
L6. Fault on Teeland - Douglas 230 kV line at 1 second, near the Teeland end. Fault cleared at 5 cycles.

L7. Fault on Lorraine - West Terminal 230 kV line at 1 second, near the Lorraine end. Fault cleared at 5 cycles.
L8. Fault on Pt MacKenzie - International 138 kV line at 1 second, near the Pt MacKenzie end. Fault cleared at 5 cycles.
L9. Fault on Teeland - Cottle 115 kV line at 1 second, near the Teeland end. Fault cleared at 6 cycles.
L10. Fault on Briggs - Plant 2 115 kV line at 1 second, near the Briggs end. Fault cleared at 5 cycles.
L11. Fault on Plant 2 - University 230 kV line at 1 second, near the Plant 2 end. Fault cleared at 5 cycles.
L12. Fault on University - Dave's Creek 115 kV line at 1 second, near the University end. Fault cleared at 6 cycles.
L13. Fault on Soldotna - Quartz Creek 115 kV line at 1 second, near the Soldotna end. Fault cleared at 6 cycles.

The following unit trip contingencies were also studied. Each scenario represents a unit trip (unit breaker opens) event.

G1. Susitna Unit #1 during the 420 MW loading cases (140 MW trip).
G2. Susitna Unit #1 during the 600 MW loading cases (200 MW trip).
G3. AML&P Plant 2 Unit #7
G4. Bradley Lake Unit #1
G5. International Substation Unit #2
G6. Healy Clean Coal
G7. North Pole Combined Cycle Unit #1

Table 2 lists the transient stability results for each of the contingencies described above.

Most of the line fault contingencies analyzed showed stable results. The University - Daves Creek and Soldotna - Quartz Creek line contingencies resulted in considerable load shedding, which is the expected result when the Kenai Tie is opened with heavy transfers.

The results for the original L3 line contingency (fault and trip the Healy – Wilson 230 kV line) were unstable for all of the power flow base cases. The system would go out of step and collapse between Fairbanks and Healy along the remaining Healy – Gold Hill 138 kV line.

There are currently two lines connecting Healy to Fairbanks. One is the Healy - Wilson line that was converted to 230 kV for the purposes of this study, and the other is the Healy – Gold Hill line which remained at 138 kV in the original cases of this study. For this study, generation at both the northern and southern ends of the Railbelt was decreased or turned off to accommodate the new Susitna generation. This increased flow heading both north and south along the Railbelt. When the Healy - Wilson line is faulted and tripped, the flow on the remaining Healy – Gold Hill 138 kV line increases considerably, causing the system to go unstable along this line.

The Healy – Gold Hill 138 kV line was upgraded to 230 kV operation and changes were made to Nenana, Ester, and Gold Hill stations to accommodate the 230 kV operation. Two new 100 MVA, 230 / 138 kV transformers were added at Gold Hill. New transient stability cases were run for the Healy – Wilson and Healy Gold Hill 230 kV line fault and trip contingencies. These contingencies are stable following the upgrade of the Healy – Gold Hill line.

The addition of the Susitna Hydro plant significantly increases the size of the single largest generation contingency within the Railbelt. All of the generation trip scenarios were stable.

For the unit trip scenarios where a Susitna unit was tripped, the Railbelt experiences significant load shedding. This sudden large loss of generation highlights the need for the Railbelt to re-examine the underfrequency load shedding (UFLS) scheme. In the summer peak case with 420 MW of Susitna online, when 140 MW of Susitna generation is tripped, the system frequency hangs near 59.2 Hz after 20 seconds. This indicates that a larger kicker block of load should be shed in order to bring the system towards 60 Hz more quickly. In the summer valley case with 600 MW of Susitna online, the trip of 200 MW of Susitna causes the system to over-shed load and the system frequency settles at 60.2 Hz after 20 seconds. Should a large hydro project such as Susitna be considered, especially in conjunction with other renewable energy projects such as wind energy, strong consideration should be given to a stored energy system to provide regulation and spinning reserve requirements.

5 Transmission Cost Estimates

The transmission improvements identified in the electrical study were estimated using a unit cost estimate for each transmission line section. In each of the identified transmission lines, a preliminary route was identified and an estimate of mountainous vs flat terrain was developed. A per mile cost of mountainous transmission line construction and flat terrain construction was developed and used for all lines included in the study.

Line routes that include more than one circuit assume a double circuit transmission line construction. The new transmission lines between Douglas and Healy stations are assumed constructed along the corridor of the Anchorage – Fairbanks Intertie. The construction of the Douglas – Lorraine circuit line is assumed to be a double-circuit transmission line, with one line continuing from Lorrain to Pt. MacKenzie station.

The conversion of the Healy – Gold Hill transmission line is assumed to be the same cost as new construction.

All line costs are based on using twin bundled 954 kcmil conductor supported on steel H-frame structures. A single overhead fiber optic ground wire (OPGW) and a single overhead ground wire (OHGW) are included in the estimates. Routes are assumed to follow existing transmission corridors, and double circuit structures are used where applicable. Costs include administration, engineering, permitting and construction management allowances (assumed to be 15% of

construction cost), but do not include land acquisition costs. Following is a summary of our estimates:

	Length	Avg. cost/mile	Total cost
Triple circuit (one S/C and one D/C line) Devils Canyon to Gold Creek	12 miles	$3,948k	$47.4
Single circuit 230kV from Gold Creek to Healy	96 miles	$1,597k	$153.3
Double circuit 230kV from Gold Creek to Douglas	74 miles	$2,596k	$192.1
Single circuit 230kV from Douglas to Teeland	26 miles	$1,459k	$37.9
Double circuit 230kV from Douglas to Lorraine	47 miles	$2,489k	$117.0
Single circuit 230kV from Lorraine to Pt. Mackenzie	5 miles	$1,459k	$7.3
Single circuit 230kV from Healy to Gold Hill	103 miles	$1,448k	$149.1

6 Conclusions

EPS has completed a high level study to evaluate the improvements required to the Railbelt transmission system to support the proposed Susitna project. The study indicates that the project is feasible and identified a minimum number of projects that would be required to integrate the project into the Raibelt. Although these projects are listed as projects required to support the Susitna project, the majority of the identified projects are not specific to the Susitna project, but are required to strengthen the Railbelt transmission system to allow power to be reliably transferred between load areas, irrespective of the generation source.

The transmission improvements are dependent upon the assumed power flows from Susitna and the generation of existing Railbelt units, primarily the new ITSS plant in Anchorage and the Bradley Lake and Cooper Lake hydro units on the Kenai. Susitna power flows different than those assumed in the study will result in considerably different projects. In particular, increased flows to the south and decreased energy from Bradley/Cooper Lake projects will increase the need for transmission to the Anchorage and Kenai areas above that which is identified in this study.

SVCs will be required at Healy and Douglas stations to control voltage and provide support for transient stability. EPS did not determine the exact ratings for the SVCs but rather determined that the transmission system is feasible.

There are many projects that would be required to integrate the Susitna project, or any other large generation project with the Railbelt electrical system that cannot be identified in this study. The control and operation of the transmission system would require improvements to the communication system of the electric utilities as well as control and monitoring improvements, improvements to the spinning reserve and under frequency load shedding policies.

Date: 1/25/2011

Re: Bill Hearing Request: SB 44: SOUTHEAST STATE FOREST

I respectfully request a Senate Resources Committee hearing on SB 44: SOUTHEAST STATE FOREST at your soonest possible convenience.

HB 105 adds an additional 23,181 acres of commercial forest lands to the Southeast State Forest, allowing the Division of Forestry in the Department of Natural Resources to manage this land to increase long-term supply for local processors and wood energy needs, provide near-term jobs in pre-commercial thinking, timber harvest and milling, and retain the land in State ownership for multiple uses.

Attached you will find a copy of SB 44, the transmittal letter, a briefing paper, an area map, and letters of support.

If you need any additional information, please contact Trevor Fulton, Legislative Liaison for the Department of Natural Resources, at 907-465-4730 or Chris Maisch, Director of the Division of Forestry, at 907-451-2666.

January 14, 2011

The Honorable Gary Stevens
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Article III, Section 18, of the Alaska Constitution, I am transmitting a bill relating to the Southeast State Forest. The Southeast State Forest was established in June 2010, under Chapter 112, SLA 2010, in an effort to ensure that State lands in Southeast Alaska that had already been designated for commercial forestry management would be managed as an integrated unit and according to a broader long-term and comprehensive forest management plan. This bill would designate an additional 23,181 acres of commercial forest lands that are conducive to meeting these goals, almost doubling the size of the Southeast State Forest, and further ensuring an appropriate land base for long-term forest management. The lands would continue to be open for multiple uses, including wildlife harvest and recreational activities.

Adding lands to the Southeast State Forest enables the Division of Forestry in the Department of Natural Resources to manage this land to increase long-term timber supply for local processors and wood energy needs, provide near-term jobs in pre-commercial thinning, timber harvest and milling, and retain the land in State ownership for multiple uses.

The bill contains provisions to avoid conflicts with the newly formed City and Borough of Wrangell's land selection and entitlement. Additionally, if new municipalities are incorporated before June 30, 2019, lands that were vacant, unappropriated, and unreserved before establishment of the State Forest will be included in the calculation of the municipal entitlement acreage, but may not be selected.

Alaska's timber industry and energy needs remain top priorities of my administration. This legislation is one important piece of our overall strategy to stabilize and revitalize the timber industry and expand wood energy opportunities in Southeast Alaska.

I urge your prompt and favorable action on this measure.

Sincerely,

Sean Parnell
Governor

Enclosure

Public Briefing: HB 105/SB 44

Additional Lands to Southeast State Forest

Alaska Department of NATURAL RESOURCES

January 24, 2011

DEPARTMENT OF NATURAL RESOURCES -- DIVISION OF FORESTRY

Background. Pursuant to SCSHB 162(RES), the 25,291 acre Southeast State Forest was established in June 2010. These forest lands will be managed as an integrated unit and according to a state forest management plan. While the lands were previously available for timber harvest before the State Forest was established, the State Forest designation ensures these productive forest lands will remain in state ownership and contribute to the long term viability of the timber based economy in southeast.

An additional 23,181 acres of State lands in the southern southeast have been identified as appropriate for inclusion into the Southeast State Forest. The Department of Natural Resources manages over 159,000 acres of uplands in southern southeast Alaska. Timber management is allowed on approximately one third of this land; the State actively manages this timber base to supply wood to local processors. The remaining land is designated primarily for other uses including land sales, recreation, water resources, and fish and wildlife habitat, including over 25,000 acres of legislatively designated state parks, refuges, and public use areas.

Adding lands to the State Forest will ensure that the State's most suitable lands in Southeast remain available to contribute to timber supply through the State's ongoing timber sale program. Much of the State owned timber land in southeast Alaska was inherited from the U.S. Forest Service and is comprised of young, second-growth stands. Actively-managed second-growth stands provide more timber volume per acre on shorter rotations and can result in improved deer browse than unmanaged stands. We can increase timber yield and associated timber supply from state land by thinning these stands. Thinning is a long-term investment and is only justified if the land will continue to be available for forest management.

Purpose. This bill would add an additional 23,181 acres of State lands to the Southeast State Forest from lands currently available for timber harvest. The Division of Forestry would then be able to manage the 48,472 acres of Southeast State Forest lands for a long-term supply of timber and retain these lands in state ownership for multiple uses.

Proposed Additions to Southeast State Forest The proposed additions to the Southeast State Forest include 23 parcels totaling approximately 23,181 acres (see chart). Approximately 21 percent of these lands are from six parcels that had previously been reserved pending legislative transfer to the University of Alaska. That legislation did not pass freeing these lands for long-term forest management in the State Forest. The legislation includes general use lands on Prince of Wales, Tuxekan, Gravina, Kosciusko, Revillagigedo, Wrangell, Suemez, Mitkof, Kuiu, Dall, and Zarembo Islands. Six of these parcels are adjacent or near existing State Forest parcels. The Division of Forestry worked with the Division of Mining, Land, and Water to identify and exclude lands that are priorities for the state land disposal program.

State Forest Management. The Southeast State Forest will be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest will continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. State Forest lands will be managed consistent with the management intent under the current Prince of Wales Island Area Plan, Prince of Wales Island Area Plan Amendment, and Central/Southern Southeast Area Plan. Changes to management intent would require public and interagency review through adoption of a State Forest Management Plan under AS 41.17.230.

Municipal Entitlements. The City and Borough of Wrangell boundary encompasses five parcels in the proposed state forest additions (St. Johns Harbor, Eastern Passage, Pat Creek, Pat Creek Uplands and Earl

West Cove). A State Forest designation will not affect the amount or location of land the Wrangell Borough can select. That determination is based on the maximum total acreage of vacant, unappropriated, unreserved land in the borough boundaries within two years after the date of incorporation (AS 29.65.030). However, a borough would not normally be able to select land within a State Forest. To avoid conflicts with the Wrangell entitlement, the Southeast State Forest bill specifies that the Wrangell Borough may select State Forest land within the borough boundary.

If new municipalities are incorporated before June 30, 2019, lands that were vacant, unappropriated, unreserved land before establishment of the State Forest will be included in the calculation of the municipal entitlement acreage, but may not be selected.

FISCAL NOTE #1

STATE OF ALASKA **BILL NO. SB 44**
2011 LEGISLATIVE SESSION

Analysis

This bill adds 23,181 acres to the southeast State Forest in Southern Southeast Alaska by redsignating certain state-owned parcels. A timber management plan would be developed to actively manage the parcels for higher timber volumes per acre, shorter rotations, and less impact on wildlife. Designation of these parcels as State Forest lands and the development of a timber management plan will allow for long-term management activities, including the thinning of young second-growth timber stands, generally not considered appropriate for undesignated state lands.

Implementation of this bill will not require new positions or funding.

The bill will have no short-term impact to the revenue stream, but will provide for long-term increases in forest productivity and subsequent increased timber revenues.

Senate Bill 44
Southeast State Forest

Sponsor Statement

How many "near term jobs in pre-commercial thinning, timber harvest and milling" will be created by the passage of this legislation? Of the 23,000 total acres, how much of that will be utilized by the timber industry? What is the anticipated economic impact (i.e., "increased timber revenues") in the region (please be specific)?

What is the current status of these 23,000 acres of state-owned parcels (re: land use, etc.)?

See SEACC's "options for resolution." Are these reasonable options? Is there room for compromise? Why or why not?

Alaska Economic Trends is a monthly publication dealing with a wide variety of economic-related issues in the state. Its purpose is to inform the public about those issues.

Alaska Economic Trends is funded by the Employment Security Division within the Alaska Department of Labor and Workforce Development. It's published by the Department of Labor.

Alaska Economic Trends is printed and distributed by Assets, Inc., a vocational training and employment program, at a cost of $1.37 per copy.

Material in this publication is public information, and with appropriate credit may be reproduced without permission.

New scholarship one way to invest in our growing population

By Commissioner Click Bishop

This month's Trends focuses on Alaska's population, which is projected to increase 25 percent by 2034, from roughly 692,000 to more than 862,000 people. We expect Alaska's senior population, age 65-plus, to more than double and Alaska Native numbers to grow by more than 45,000, to almost 20 percent of our population.

The Alaska Department of Labor and Workforce Development, Research and Analysis section's projections are more than just head counts. Our state, local, and tribal governments use the data for planning for new schools, roads, police, and fire departments. The numbers are used to allocate funds for everything from job training and housing to community development and health care services.

Community organizations use the numbers to develop social service and community action projects. Businesses use the numbers to decide where to locate retail centers, movie theaters, banks, and offices — most often leading to new jobs.

Population information helps health care providers predict the spread of diseases through communities with elderly people and children. And during floods, tornadoes, or earthquakes, the numbers help rescuers plan for how many people will need help.

R&A's projections show the number of working Alaskans will also increase by 11 percent, to almost 490,000. As the "boomer" generation retires, jobs will open for succeeding generations.

As we move into the second decade of this century, we must continue to explore and develop ways to ensure the long-term vitality of Alaska's workforce. Often, that means investing now in workforce development to obtain significant returns in the future.

A new program would provide some of that investment for university or vocational training in Alaska. The Alaska Performance Scholarship, which aims to improve Alaska's student performance and future opportunities, was created this year after being proposed by the Parnell administration and passed into law by the Legislature.

This scholarship will provide annual awards of up to $4,755 to qualifying high school graduates who pursue university or vocational training in Alaska. Beginning with Alaska's high school class of 2011, graduates may qualify for the Alaska Performance Scholarship, with 2011-12 funding to be determined no later than May 1.

The State Board of Education and Early Development recently approved and began phasing in 2011 curriculum regulations, which should be fully implemented by 2013. Students who graduate in 2011 will need five or more credits of math and science, a GPA of 2.5 or higher, and scores of at least 21 on the ACT or 1450 on the SAT. Students pursuing a career and technical education certificate program may substitute WorkKeys scores of 5 or higher for an ACT or SAT.

Current high school freshmen and sophomores should prepare to take the full curriculum, including four years of English, four years of social studies, and either four years each of math and science or three years each of math and science plus two years of a foreign or Alaska Native language.

For more information, including funding status, detailed eligibility requirements, and how to apply, go to: aps.alaska.gov.

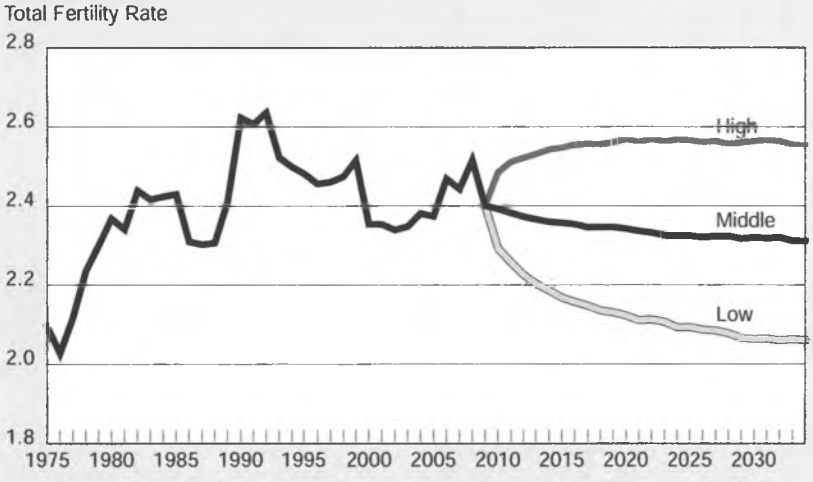
Population Projections, 2010 to 2034

Alaska by age, sex, and race

Population projections tell us more than how many people we should expect — they tell us what kinds of services we'll need to support the future population. Alaskans use these projections to plan for social services like nursing homes, schools, and hospitals. This article is an overview of projected numbers for the state, regions, and borough/census areas as well as the Alaska Native population. It also summarizes how the Department of Labor makes these projections and explains components of change (mortality, fertility, and migration).

The state's total population is projected to increase by nearly 25 percent from 2009 to 2034, growing from 692,314 to 862,750 people. The number of seniors (age 65-plus) is expected to grow the most of any age group, more than doubling in size as Alaska's baby boomers age. Alaska's Native population is projected to increase by more than 45,000 by 2034.

1 Total Fertility Rate
Alaska, 1975 to 2034



Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Projected population growth varies significantly across the state and in each of the economic regions, with the largest gain of about 38 percent in the Anchorage/Matanuska-Susitna region by 2034. By contrast, the projection for Southeast is a drop of 14.2 percent over the same period.

Methodology

Rather than building forecasts on economic factors, demographers base projections on the current population and historical trends in each of the components of population change. Specifically, they "age" the population[1] of each sex while accounting for natural increase (births minus deaths) and migration (in-migration and out-migration)[2]. However, past and current economic conditions also affect demographic variables[3].

Statewide, the demographers repeated the projections 2,000 times with random combinations of potential fertility and migration numbers, while keeping the age-specific mortality, or death rate, fixed. The projections took into account variations in recent trends of natural increase and migration, which gave a statistically valid[4] high and low projection range at the state level. There is a 90 percent chance that the actual values will fall

[1] For example, if a person is 10 years old in 2009, he or she will be 35 in the 2034 projection.
[2] This method is the "cohort component method."
[3] For example, fertility rates may drop during a recession.
[4] The probabilistic projection method provided a probability distribution for Alaska's future population, by sex and single years of age. After calculating 2,000 sets of component paths for each age and sex, the demography unit applied them to a cohort component projection model. More specifically, Leslie Matrices were used to project natural increase, with projected vectors of migrants added at each step. This process generated a distribution of 2,000 potential population paths from 2010 to 2034. The sums of the boundaries of the 90 percent confidence intervals for each age-by-sex are reported as the 90 percent confidence high and low variants.

within the range. These ranges do not account for all future uncertainty, such as state economic and social changes.

High and low ranges are not statistically significant at the regional and borough/census area levels, as they are adjusted to add up to the state's ranges to attempt to capture the uncertainty of these projections.

Mortality

Mortality rates across all age groups refer to a person's life expectancy at birth if that person lived according to age-specific mortality rates that year. Just as the makeup of Alaska's population varies greatly among groups, so does life expectancy. Overall, Alaska's life expectancy has been similar to that of the nation. From 2000 to 2034, life expectancy for Alaskan males is expected to rise from 74.9 to 79.9 years, and from 79.7 to 83.6 years for females.

Mortality is the most predictable component of change for Alaska's population. It has been relatively stable over recent history, and is expected to continue improving, following the U.S. Social Security Administration's projected future changes in U.S. mortality.

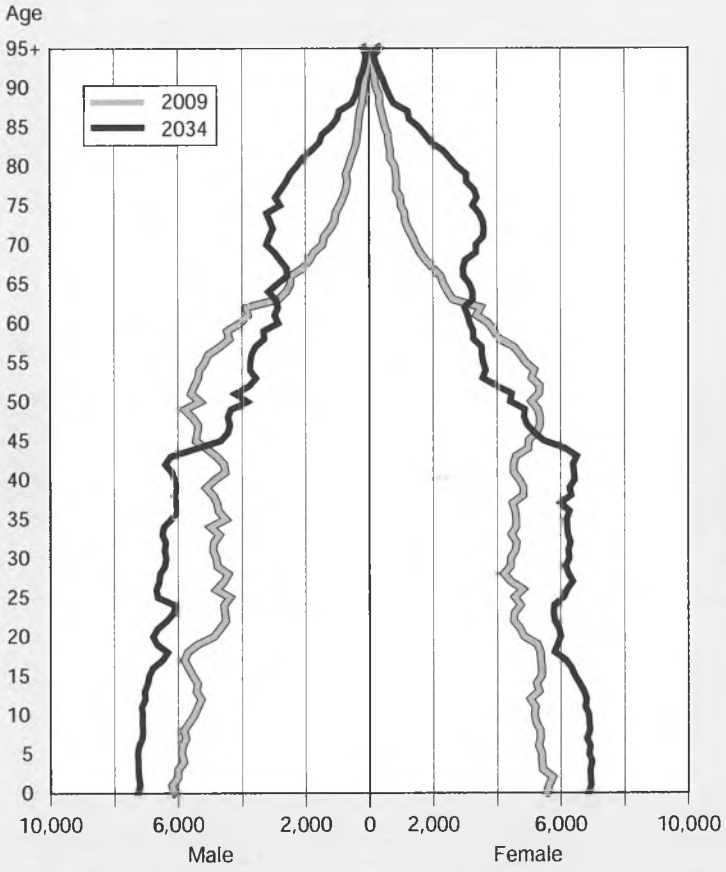
Fertility

The level of fertility, or births, is expressed in the Total Fertility Rate (TFR). The TFR for a specified year is the average number of children that a woman would bear if she followed that year's age-specific fertility rates throughout her childbearing years. A TFR of 2.1 children per woman would be necessary for natural increase (births minus deaths) to break even. Alaska's TFR ranks among the highest in the U.S, allowing for robust and steady growth. Even if net-migration (in-migration minus out-migration) were zero, Alaska would continue to grow from natural increase alone.

Fertility varies greatly across the state, with estimated TFR ranging from 5.1 children per woman in the Wade Hampton Census Area to just 1.3 in the Aleutians West Census Area. However, the current global trend of rural-to-urban migration results in lower overall fertility rates. Assuming that continues in Alaska, the state's projected fertility rate is likely to be 2.3 in 2034, down from the 2009 estimate of 2.4. The statistical model estimated the level of uncertainty around this value by using variance from recent decades.

4 Population By Age and Sex
Alaska, 2009 and 2034[1]



[1] Middle projection series
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Exhibit 1 shows the projected levels of TFR through 2034. There is a 10 percent chance TFR will fall outside these bounds in any given year, so it is likely to be outside this range at some point over the next 25 years.

Migration

The most volatile component is migration, which is affected by the economy in Alaska and the Lower 48. Wars, pipeline construction, and the oil boom led to significant influxes of new residents throughout Alaska's modern history, while base closures, pipeline completion, and the oil bust prompted people to leave. However, large-scale economic events like the construction of the oil pipeline are unlikely over the next 25 years. Even construction of a natural gas pipeline probably would not reach that level of impact. Therefore, migration rates are likely to remain stable.

The projection model considered two ratios of migration (migrants divided by total population): in-migration and out-migration. The model estimated with 90 percent certainty that Alaska's net-migration will fall within about 1 percent of Alaska's population in a given year through 2034. (See Exhibit 2.) For example, if population is projected to be 700,000 in a given year, there is a 90 percent chance that net-migration will be within +/- 7,000 people. However, as with TFR, net-migration is likely to fall outside the predicted range at some point over the next 25 years, as it's 10 percent likely to do so in any given year.

Special populations

The military makes up a large portion of the population in Anchorage, Fairbanks, Denali, and Kodiak, and these military populations were held constant over the projection period to avoid "aging" these populations, which would underestimate residents in their 20s and 30s. Fish processing (group quarters) populations in Aleutians East and Aleutians West were also kept constant to prevent errantly "aging" these transient populations.

Statewide projections

Though the department projects a total statewide population increase through 2034 (see Exhibits 3 through 6), the annual rate of growth will likely slow over the projection period because of the expected increase in deaths relative to births. However, as stated earlier, the state is expected to continue growing even if net-migration were zero. By 2014, the most likely scenario is a population of 723,619, with 794,975 people in 2024 and 862,750 by 2034. The level of uncertainty greatly increases with time.

Projections for age groups

Alaska's population 4 years of age and younger is projected to increase by 22.3 percent, from 57,899 to 70,805 children between 2009 and 2034. (See Exhibit 6.) Numerous potential levels of fertility and migration cause greater uncertainty for younger age groups.

The most likely scenario for school-age children (ages 5 to 17) is 25.7 percent growth, from 141,873 to 178,392 people between 2009 and 2034. With the "echo boom" cohort (the children of baby boomers) now entering working ages, the short-term projection for the school-age group supports slow growth; but further into the future, the projected total school age population will grow at a steady pace.

Alaska's working-age population (ages 18 to 64) is currently 440,279 people, and is likely to increase by 11 percent over the projection period to 488,696 in 2034. As baby boomers become retirees, the echo boomers will move into the working ages, yielding almost no change in the overall working-age population for the majority of the period.

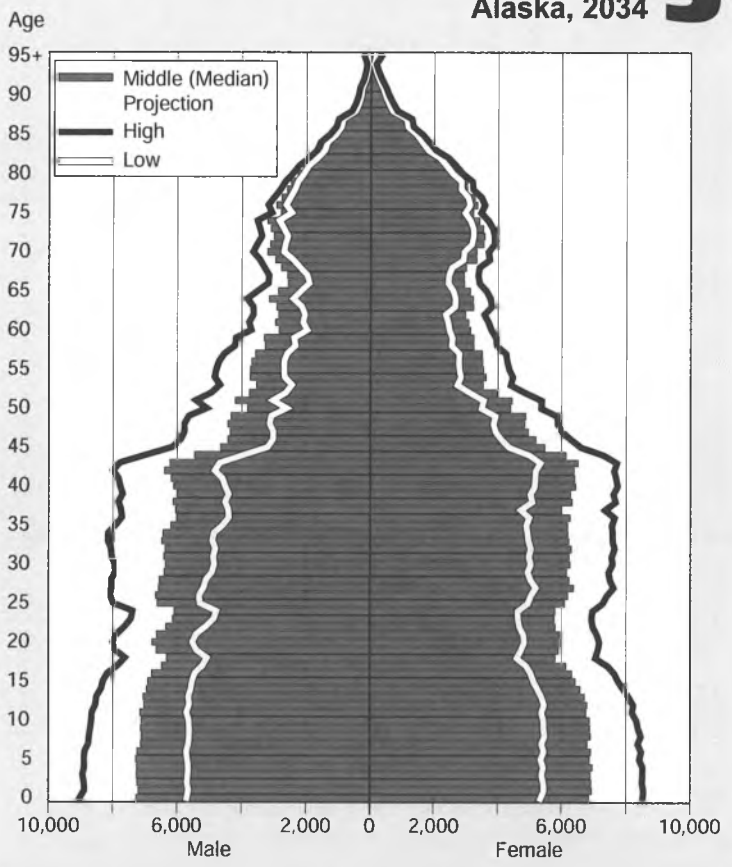
As mentioned earlier, retirees (ages 65 and older) are likely to more than double by 2034. This is attributable to Alaska's large number of baby boomers reaching age 65 and older in 2009, representing 7.5 percent of the state's population. That number is projected to climb 138.9 percent (to 124,857) by 2034, when it would represent 14.5 percent of the population. (See Exhibit 7.) The U.S. Census Bureau projects a similar trend for the nation as a whole, with the proportion age 65 and older in the U.S. increasing from 12.9 percent in 2009 to 19.8 percent in 2034.

Increasing dependency ratios

Dependency ratios show the burden of support on the working-age population to care for the young and old, traditionally nonworking populations. In 2009, every 100 Alaskans of working age supported 45.4 people under age 18, and 11.9 people over age 65, which adds up to a total dependency ratio of 57.3. Each of these figures is expected to rise over the next 25 years. (See Exhibits 7 and 8.)

With the aging of Alaska's echo boom, the youth dependency ratio will probably first decrease to 45.2 in 2014, then rise to 50.0 in 2024 and 51.0 in 2034. The aged dependency ratio is projected to increase to 14.6 by 2014, then 23.5 by 2024, and 25.5 by 2034. Though there is uncertainty in the specific figures for the aged dependency ratio, it is certain it will climb dramatically over the next 25 years.

Population By Age and Sex
Alaska, 2034 **5**



Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Projections for regions and boroughs/census areas

Population change is likely to vary greatly across the state, following paths similar to the last decade. (See Exhibits 9 and 10.) Regions and boroughs/census areas are more susceptible to the impact of migration than any other component of change because it includes intrastate and interstate migration. Although applying recent trends of migration to regions and boroughs/census areas can predict growth or decline, it is possible these trends will significantly change across the state in the future. Migration depends on economic and social factors, making it less predictable.

6 Population by Age
Statewide and Alaska Natives, 2009 to 2034[1]

Total Alaska Population							Alaska's Native Population

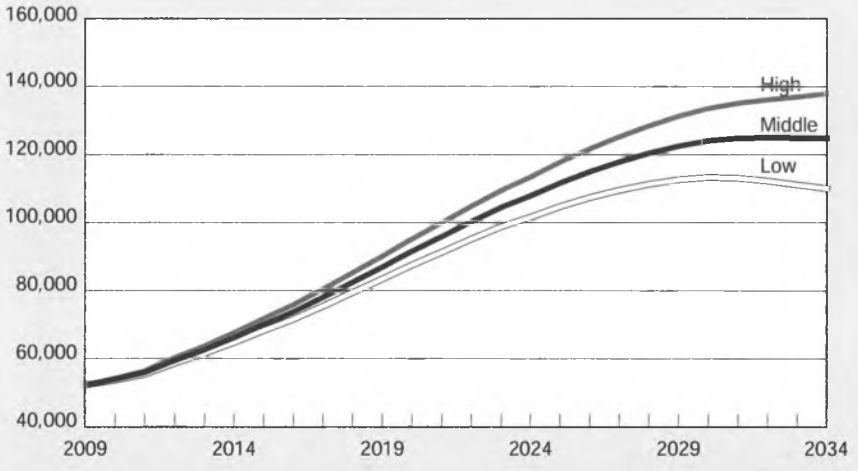
7 Age 65 and Older
Alaska's population, 2009 to 2034



Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Those with the most dramatic expected losses in average annual population include the Haines Borough (-1.5 percent) and the Wrangell-Petersburg and Prince of Wales census areas (-1.3 percent).

The Anchorage/Mat-Su region's population is projected to grow by more than 142,535 — 38.0 percent, with a 1.5 percent average annual growth rate — from 374,902 people in 2009 to 517,429 in 2034. Anchorage is expected to continue growing, following the state's rural-to-urban migration trend. The Mat-Su Borough has grown dramatically throughout Alaska's history as a state, and is expected to continue.

The boroughs and census areas with the highest projected average annual growth rates over the period are the Matanuska-Susitna Borough (3.1 percent), the Wade Hampton Census Area (2.3 percent), and the Bethel Census Area (1.4 percent).

The Gulf Coast region's population boomed during the 1980s, but growth has moderated in recent years. The projections yield an increase of roughly 5,239 people between 2009 and 2034 — 6.8 percent — but recent trends

could change significantly with future resource development.

Alaska's Interior region has grown steadily over recent years. However, the future of the populations in the Fairbanks North Star Borough and the Southeast Fairbanks Census Area may greatly depend on the military. Assuming current trends continue, the predicted increase for the Interior is 16,195 people between 2009 and 2034, or 14.9 percent.

High birth rates in the Northern and Southwest regions are anticipated to outpace the projected out-migration, resulting in net growth in those regions. Projections show the Northern region gaining about 5,908 residents (a 25.0 percent increase), and the Southwest region adding 10,433 (a 26.6 percent increase).

The only regional population expected to decline over the projection period is Southeast. Due to particularly low birth rates and the highest median age in the state (39.3), growth would require a sharp rise in net-migration. Southeast's projected loss is about 9,866 people (a 14.2 percent drop) between 2009 and 2034. The future of Southeast is uncertain because of its dependence on future social and economic developments.

Projections show no change in the population rank-ordering of the regions over the projection period. In other words, the Anchorage/Mat-Su region is likely to remain the most populous, followed by the Interior, Gulf Coast, Southeast, and Southwest regions. The Northern region is expected to remain the least populated because of rural-to-urban migration.

Alaska Native projections

The department used the 2009 "bridged race[5]" estimate as a base for the Alaska Native[6] population, applying the same method as regions and boroughs/census areas.

Mortality, fertility, and migration rates among Alaska Natives have historically differed greatly from those of the overall state population. Native mortality and fertility rates are among the highest in the nation. Alaska Native life expectancy will likely follow the U.S. Social Security Administration's projections for change in U.S life expectancy over the projected period. From 2009 to 2034, life expectancy for Alaska Native males is expected to rise from 67.2 to 74.7 years, and from 73.7 to 78.6 years for Native females. Projected fertility will decline from 3.2 children per woman in 2009 to 3.0 in 2034, due to the rural-to-urban migration discussed earlier. Because of the social and economic characteristics of urban centers, urban women are more likely to have fewer children than their rural counterparts.

Compared to statewide rates, Alaska Native migration is relatively low. Natives migrate to the state at just above 2 percent of the total Native population and leave the state at just over 2 percent of the population. This very slight annual loss

[5] "Bridge" series race estimates use the definition of race from the 1990s, when people could only choose one race to define themselves. With the 2000 census, people could check all of the races that applied. As a result, race as reported after 2000 is no longer compatible with earlier data, and statistics on race are far more complex.

[6] Alaska Native: A person with origins in any of the original peoples of North or South America (including Central America), who maintains tribal affiliation or community attachment. (Federal Office of Management and Budget) This includes Native Americans in Alaska; however, the majority of Natives in Alaska are Alaska Natives.

through migration is projected to continue through 2034.

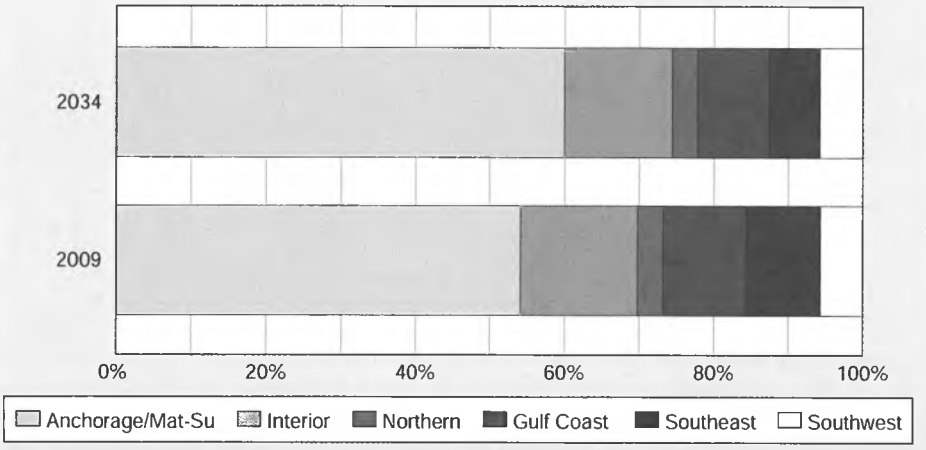
The Department of Labor projects stable growth for the Native population through the projection period, from 125,200 people in 2009 to 171,660 in 2034. (See Exhibits 6 and 11.) Additionally, Natives are expected to increase as a share of the state's population, from 18.1 percent in 2009 to 19.9 percent in 2034.

Historical trends for natural increase and interstate net-migration have been relatively stable, so uncertainty estimates were unnecessary for this group. Therefore, the Alaska Native projections are only comparable to the middle series of the statewide projections and can be subtracted from this series to estimate the non-Native population.

Decreasing fertility rates are reflected in the Native share of the total population under age 20. That proportion is projected to decline over the period from 22.4 percent in 2009 to 21.9 percent in 2034. The median age for the population is expected to rise from 25.8 to 29.8 between 2009 and 2034.

Natives ages 65 and older are projected to follow the same broad trends as the overall population in Alaska and the U.S. Specifically, the number of elderly Natives is expected to rise by 161.9 percent — from 7,888 in 2009 to 20,660 in 2034. The proportion of Natives age 65 and older within the total Native population will likely grow from 6.3 percent in 2009 to 11.7 percent in 2034. Increases in Native life expectancy will also affect future population change.

Population by Economic Region 10
Alaska, 2009 and 2034[1]



[1] Middle projection series
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Historically, migration has not played as large a role in population change as natural increase; therefore only small losses in the population due to net out-migration are projected. However, rural-to-urban migration is expected to continue, so Alaska Natives are likely to help shape the future of urban centers.

The Department of Labor's Native projections are only at the state level in this series. While Alaska uses the same classification for Native Americans as the U.S. Census Bureau does for the nation, the demographic makeup of the two populations is vastly different, therefore not comparable.

A complete description of the methods and results for these population projections (including high and low projection series) are available on the Research and Analysis Web site at laborstats.alaska.gov. Click on "Population & Census" on the left, then "Estimates & Projections."

The story of the Matanuska-Susitna Borough's growth in population and employment, which has long outstripped the rest of the state, is an old one. That saga continued in 2009, as employment kept growing in the borough even when it fell in the rest of Alaska for the first time in 21 years. Early indicators for 2010 are also positive.

One large place

Only Fairbanks and Anchorage have more residents than the Mat-Su Borough, which had a 2009 population of 84,314. (See Exhibit 1.) In addition, the Mat-Su is nearly as large as West Virginia at 24,682 square miles. Although it is a big place, 90 percent of its residents live in "the Valley," a tight corridor between the communities of Sutton on the Glenn Highway and Willow on the Parks Highway.

Wasilla, Palmer, and Houston are the only three communities that are incorporated or have political boundaries, and the residents of these three towns represent just 17 percent of the borough's population. The rest live in various unorganized or census-designated places (CDPs). According to state demographer Greg Williams, ten of the top 14 places in the state that experienced the most rapid growth between 2000 and 2009 are in the Mat-Su Borough. If these places were to incorporate, four of them would be larger than the City of Wasilla. One of them, Knik-Fairview, would become the fourth-largest city in the state.

Different economy than most

Historically, the lifeblood of the area came from farming, gold, and coal mining. Although the Mat-Su Borough remains the largest agricultural producer in the state and coal mining might make

a comeback, these industries were eclipsed decades ago by forces that have put the borough on the state's economic pedestal.

Today, an array of sectors vitalize the area's economy. Its most important stimulus is its status as a bedroom community — a place where people live while working elsewhere. An expanding visitor industry also plays a role, as does a growing list of borough enterprises that provide services to the rest of the state. One example is the new Goose Creek prison, which is scheduled to open in 2012.

However, the most important explanation for the borough's rapid employment growth is that its businesses and institutions are providing a larger range of goods and services to its burgeoning population.

Residents spend more locally

Exhibits 2 and 3 show employment growth in the borough over the past decade and since 1959. The number of jobs in the borough grew more than three times as fast as the rest of the state in the past decade, and this trend continues because residents spend a growing share of their income locally. Economists call this phenomenon import substitution, and it increases payroll as well as salaries. For example, between 2000 and 2009, health care employment doubled and retail added more than 1,000 jobs.

The fact that employment grew considerably faster than population may be another indicator of this trend. Growth in sales tax revenue in Palmer and Wasilla is further evidence of the borough capturing more of its residents' consumption dollars. Between 2000 and 2009, collected sales tax more than doubled (even after adjustment for inflation), even though the borough's population grew only 42 percent.

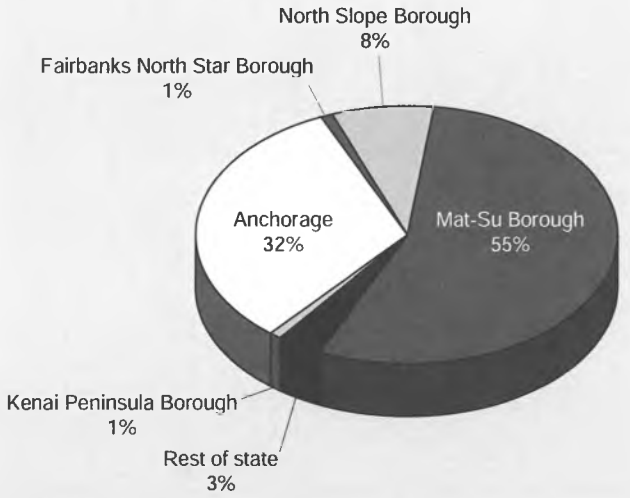
Many earn their living elsewhere

In some ways, the Matanuska-Susitna Borough's commuter patterns are not that different from elsewhere in the country. That is, many people who live there commute outside the borough each day, and data produced by the Alaska Department of Labor and Workforce Development shed some

4 Where Mat-Su Residents Work[1] 2008



[1]Excludes uniformed military, federal, and self-employed workers, 2008
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

light on where these residents work. (See Exhibits 4, 5, 6, and 7.) According to these data (which exclude federal, uniformed military, and self-employed workers), nearly a third of the Mat-Su Borough's residents work in Anchorage, and this hasn't changed much over the years. (See Exhibit 4.)

Unlike many areas that are home to a large population of commuters, the borough also has many residents that travel to remote job sites. For example, in 2008, 8 percent of the area's residents worked on the North Slope and another 5 percent held jobs in other distant places around the state.

Over the past decade, the proportion of commuters and those who work locally has not changed much. In both 2000 and 2008, 45 percent commuted beyond the borough's boundaries. However, an interesting trend emerged: workers were taking more jobs farther away. The number of commuters working on the North Slope doubled between 2005 and 2008 — a reflection of the employment rebound in the state's oil patch and the Mat-Su area's role as home to a large share of the state's oil industry workforce. The borough supplies the second-largest group of oil industry workers to the North Slope, after Anchorage.

There are many reasons so many Mat-Su residents commute, but two are paramount. The borough offers a competitive housing market, and the state's largest labor market (Anchorage) is within easy reach of most residents.

Housing is key to the economy

The numbers clearly show that a large part of the Mat-Su Borough's appeal is its affordable housing market. Other factors such as lifestyle and scenery probably play an important role, but they are more difficult (if not impossible) to quantify.

In 2010, the average sale price of a single-family home in the area was $239,572: just three-quarters of the price of a single-family home in Anchorage (see Exhibit 8) and significantly below the statewide average of $277,941. This difference is a strong enticement to those who want to live close to a larger city.

Measuring how many wage earners it takes to pay the average mortgage also shows why an Anchorage worker might choose to live in the Mat-Su area. It takes 1.2 Anchorage wage earners to pay the average Mat-Su mortgage versus 1.6 to buy a home in Anchorage.[1] (See Exhibit 9.) Because average wages in the borough are significantly lower than those in Anchorage, it also takes 1.6 wage earners for those who work in the Mat-Su to afford a home there, so those who live and work

[1] The Alaska Affordability Index is a measurement of the number of wage earners necessary to afford an average home, based on workers who earn average wages for their geographic location, and the average price for a single family home.

in the Mat-Su don't see the benefit of the lower housing prices.

Most earnings come from elsewhere

One reason many residents choose to work outside the borough is that they can earn better wages elsewhere. (See Exhibit 10.) The average annual salary in the Mat-Su area in 2009 was $36,492, nearly $13,000 less than in Anchorage. Even higher wages are available on the North Slope and elsewhere in Alaska. The borough's wages tend to be lower because of the prevalence of retail and service jobs. (See Exhibit 11.)

More of the higher paying jobs — such as those in oil, transportation, government, and the military — are also based elsewhere in the state. In 2008, Mat-Su residents earned more of their wages in Anchorage than they did at home, and 61 percent of all earnings came from outside the borough. (See Exhibit 6.)

Mat-Su provides services statewide

Besides the visitor industry and the housing market, other types of businesses provide services to the rest of the state, bringing new jobs into the Mat-Su area. These include Job Corps, Alaska Department of Corrections, GCI, and the surveying company TerraSond. Other examples are car dealers, greenhouses, farmer's markets, and others that cater to the local population as well as to Anchorage clientele.

A dynamic visitor sector

Bed tax receipts in the Mat-Su area more than tripled over the past five years — mainly due to the opening of large destination lodges — while visitor growth in most of the state was muted. The borough also has a well-developed visitor industry that caters to more independent travelers. A significant slice of its visitors come from Anchorage, and many own recreational property in the area.

Agriculture is still a player

The Mat-Su area remains the largest agricultural producer in the state. Most of its value is in crops like vegetables, potatoes, hay, and livestock. The recent explosion of farmer's markets in Southcental Alaska is boosting farming in the Mat-Su.

Population, population, population

Since 2000, the borough's population has grown by 42 percent versus a 9 percent increase for An-

chorage and 10 percent statewide. (See Exhibit 12.) The Mat-Su's 2009 population of 84,314 is an increase of 24,992 people since 2000. Only Anchorage's absolute population grew more than that, but not by much. Unlike the rest of the state, most of this growth came from migration. (See Exhibit 13.) Overall, the borough went from comprising 7 percent of the state's population in 1990 to 12 percent in 2009. (See Exhibit 14.)

The demographics are different

The median age of the Mat-Su area's population is 34.5, one year older than the statewide median age and nearly four years older than the area's median age in 1990. (See Exhibit 15.) Its population is considerably less diverse than the state's — 84.1 percent white versus 70.4 percent statewide. The age breakdown of its population is similar to the state average, as is the ratio of men to women.

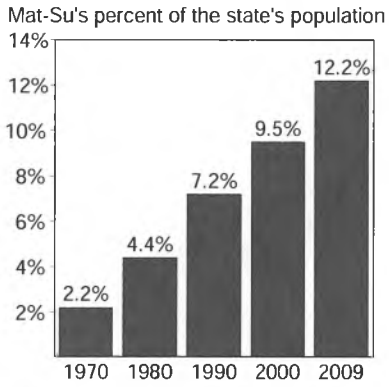
14 Growing Share of Alaska
Mat-Su Borough, 1970 to 2009



Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

There are more married couples and family households in the borough (two or more people related by blood or marriage) than there are statewide, and those households are considerably bigger. The average family size in the Mat-Su was 4.3, versus 3.4 statewide. Median household income was $67,132 — close to the statewide average, but 7 percent below Anchorage.

Hints of a continued bright future

If Southcentral Alaska's economy continues to grow, the Mat-Su area will undoubtedly continue to capture a lopsided share of that action. The combination of its cost advantages and land availability is hard to beat. If projects such as a new coal mine, a rail extension, or Knik Arm crossing come to fruition or if Port MacKenzie attracts significant business, they too could become factors. But the economic fundamentals are likely to remain the most important factors in the borough's future: providing a competitive housing market, making more goods and services available locally, and finding new ways to sell goods and services to the rest of the state.

A Safety Minute

Tread safely this winter

Winter is here, and so are icy, slippery conditions. Slips and falls are the number two cause of accidental death and disability behind vehicle accidents, so please be prepared this season. Preparation may mean anything from studded tires or chains on our vehicles to personal traction devices on our shoes. There are many types of traction devices available depending on your needs. Here are a few more winter travel tips:

- Wear footwear with maximum traction.
- Remove snow immediately from walkways or driveways before it becomes packed or turns to ice.
- Prevent ice from forming by spreading an ice melt product, and always read the directions before use.
- Walk defensively in parking lots, because cars and trucks cannot stop as fast on ice and snow.
- Watch your footing while exiting a vehicle; hold on to the vehicle for more stability.

By NEAL FRIED, Economist

Employment Scene

Unemployment rate at 7.9 percent

Alaska's seasonally adjusted unemployment rate for October inched up to 7.9 percent. September's rate was revised down slightly, from 7.8 percent to 7.7 percent.

The comparable national jobless rate for October was 9.6 percent, unchanged from September. Exactly a year ago, the national unemployment rate was 10.1 percent, compared to 8.4 percent for Alaska. The improvement in Alaska's jobless rate has been similar to the nation's, but October marks the second straight year that Alaska's unemployment rate has been lower than the national rate.

Winter unemployment begins to climb

Not seasonally adjusted unemployment rates increased in most of the state's regions in October. This is typical when Alaska's labor market enters its winter slump. Fishing declines, the visitor industry is nearly shuttered, and the construction industry buttons down for mostly indoor work. Another sign of the seasonal downturn is October's increase in the number of regular weeks claimed for unemployment — from 8,583 in September to 10,106 in October.

In nearly all regions, unemployment rates rose in October but remain below year-ago levels. For example, the Gulf Coast region's rate rose to 9.0 percent, from 7.9 percent in September — but that's still lower than last year's 9.8 percent.

Seasonal industries contract

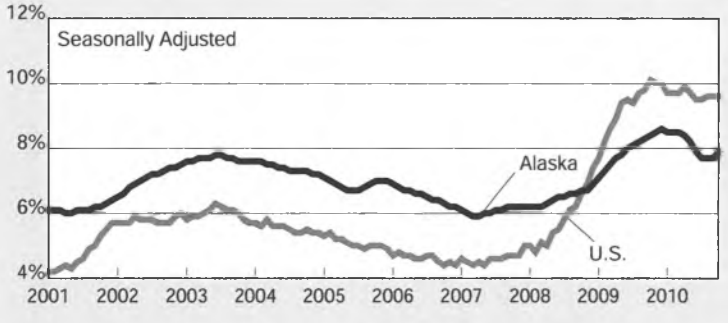
The North Slope Borough and Juneau had the lowest October unemployment rates, and the Wade Hampton Census Area and Skagway had the highest. Although Wade Hampton frequently has one of the highest rates in the state, Skagway had the second-lowest jobless rate in the state just last month. The end of the tourism season explains Skagway's dramatic unemployment shift.

Employment on the rebound in 2010?

Preliminary second-quarter data from the 2010 Census of Employment and Wages (QCEW) became available recently, and the results are intriguing. (Nearly all the QCEW employment is based on quarterly payroll reports provided by employers around the state.) Over-the-year changes in total employment turned negative during the second, third, and fourth quarters of 2009; were mixed during the first quarter of 2010; but turned positive during the second quarter of 2010 (see Exhibit 2).

Why is this important? In 2009, after employment grew for 21 straight years in Alaska, it stopped and lost some ground. That year, employment fell by approximately 0.5 percent, a modest decline but still a loss. Many economic observers, including this author, expected this trend to continue through most of 2010. Instead, only February's over-the-year changes are negative so far. In addition, each

1 Unemployment Rates, Alaska and U.S.
January 2001 to October 2010



Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

following month has turned increasingly positive. As a result, average employment during the first half of 2010 was up 0.4 percent, or 1,325 jobs, over the same period in 2009 — a small gain, but positive nonetheless.

The jury is still out for 2010, at least until the third-quarter QCEW numbers become available (especially because the third quarter represents peak economic activity of the year). If the trend remains positive in 2010, Alaska will have come through the national recession largely unscathed.

[1] Because of the creation of new boroughs, this borough or census area has been changed or no longer exists. Data for the Skagway Municipality and Hoonah-Angoon Census Area (previously Skagway-Hoonah-Angoon Census Area) became available in 2010. Data for the Wrangell Borough, and Petersburg and Prince of Wales-Hyder census areas will be available in 2011. Until then, data will continue to be published for the old areas.

Changes in Producing the Estimates

The U.S. Department of Labor's Bureau of Labor Statistics has implemented a change to the method used to produce statewide wage and salary employment estimates. That change has resulted in increased monthly volatility in the wage and salary estimates for many states, including Alaska. Therefore, one should be very cautious in interpreting any over-the-year or month-to-month change for these monthly estimates. The Quarterly Census of Employment and Wages series may be a better source of information for trends analysis (http://labor.alaska.gov/qcew.htm).

For more current state and regional employment and unemployment data, visit our Web site: **laborstats.alaska.gov**

Employer Resources

On-the-job training benefits employers as well as workers

As an employer looking to hire new staff, consider establishing an on-the-job training (OJT), which allows you to tap a larger pool of candidates who may need additional training to become qualified.

On-the-job training provides a range of benefits. In addition to helping find, train, and pay candidates while they work, OJTs also reimburse part of the employee's wages during the training period — often a motivating factor for employers. Employers may train workers to meet their specific needs, and OJT hires tend to be more loyal to employers who have provided better career opportunities through training.

The Alaska Department of Labor and Workforce Development's Employment Security Division provides OJTs and wage reimbursement through the Alaska Job Center Network.

The on-the-job training process

The Alaska Job Center looks for candidates who may be a good match for vacant positions, and evaluates the interested employer and the job for OJT eligibility. If eligible, the employer may interview candidates prior to an assessment of the employer's needs and the prospective worker's skills.

The Alaska Job Center uses the WorkKeys®* assessment to compare the individual's abilities to the skills required for the position — this is called a Skills Gap Analysis — and uses this analysis to create a training plan. To finalize the OJT, both parties sign an agreement that delineates the training plan, reimbursement amount, and length of the training.

Throughout the OJT, the job center monitors the work to ensure participants and employers adhere to the training plan, then reimburses employers as outlined in the agreement.

How to seek an on-the-job training

For more information about on-the-job training, contact the Alaska Job Center Network at (877) 724-2539 or go to www.jobs.alaska.gov/offices to find a job center near you.

OJTs are available to public, private nonprofit, and private sector employers based on availability. However, OJTs are not available for gambling establishments, swimming pools, aquariums, zoos, or golf courses. Also, because OJTs are meant to train people for full-time, long-term jobs, they may not be used for high-turnover, part-time, low-skill, or seasonal positions.

RE: State Forest

Dear Chris:

The City of Coffman Cove fully supports the inclusion of additional lands to the State Forest. The addition of 23,181 acres will ensure the future of a small timber industry in Southeast Alaska. The concept of a State Forest is a good management tool to help Southeast Alaska diversify its economy to include timber harvest along with tourism and fishing.

Coffman Cove has a long history as a logging community. While we are trying to incorporate other industries, timber is still an important part of our lifestyle and economy. Other communities in Southeast Alaska find themselves in similar situations. With the shift in US Forest Service management of the Tongass National Forest we find ourselves in a situation where planning for the future is impossible. The establishment of the State Forest will allow some sensible management practices. The additional acreage will ensure there is enough land base to provide some stability.

Please feel free to copy this letter to use in any capacity to support the State Forest. I will write a similar letter to Senator Stedman and Representative Johansen.

Sincerely,

Elaine Price

Anchorage, AK 99501

RE: Additional Lands to Southeast State Forest

Dear Mr. Maisch:

The Resource Development Council (RDC) is writing to support the inclusion of an additional 23,181 acres to the Southeast State Forest. This state land in southern Southeast Alaska is appropriately suited for inclusion into the new state forest as it has been consistently managed for timber harvest. A state forest designation over these lands would expand the Southeast State Forest to 48,472 acres and ensure they will remain in state ownership and contribute to the long-term viability of the forest products industry in Southeast Alaska.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

RDC supported the creation of the 25,291-acre Southeast State Forest, which was established in June 2010. In Southeast Alaska, demand for state timber exceeds supply and local mills are dependent on a consistent supply to stay in business. The majority of the timber in Southeast Alaska is on federal land, but federal timber sales have declined sharply. Subsequently, the demand for state timber from local mills has increased significantly.

Much of the new state forest was inherited from the U.S. Forest Service with young second-growth stands. There is broad support for shifting timber harvesting in Southeast Alaska from old growth to second growth stands. The new state forest and the proposed additional parcels to it will help provide a sustainable timber supply to local mills and accelerate the harvest of second-growth timber. Actively managed second-growth stands will provide more timber volume per acre on shorter rotations.

The shift to second-growth harvesting can be accelerated and timber volume increased on state land by thinning these stands. However, thinning is a long-term investment and is only justified if the land will be available for timber harvesting.

The Division of Forestry will manage the state forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple use, including wildlife habitat and harvest, as well as recreational activities. The forest will be managed as part of the State Forest System in accordance with a new management plan that will be developed within the next three years. In the interim, existing guidance under the current Prince of Wales Island Area Plan and Central/Southern Southeast area plans will apply.

RDC supports the proposed additions to the Southeast State Forest from lands currently available for timber harvest and believes a larger state forest in the region will benefit the economy.

Sincerely,

Carl Portman
Deputy Director

RE: Support of Additional Lands to Southeast State Forest

Dear Chris:

The Alaska Forest Association supports inclusion of an additional 23,181 acres to the Southeast State Forest. The state's timber sale program in Southeast is very small, but very effective. The federal government controls about 94% of the land in Southeast Alaska but they have been supplying only about 20% of the timber that our industry has harvested in the last few years. While State and private timberlands have supplied the other 80%, this has not been sufficient to keep our mills operating. Currently we have only a single medium-size mill still operating in the region along with a handful of very small mills.

Unlike the federal forest management program, the State effort has provided economically viable timber sales on a regular and consistent basis within the constraints of sustained yield principles. In addition to supporting our timber industry the State's timber sale program brings in revenue in the form of stumpage payments that are invested back into the statewide forest management program.

Dedicating more State lands in Southeast Alaska to long-term forest management helps ensure these lands will continue to support the State timber sale program. This helps sustain our remaining timber industry until we can either overcome the impediments that make the federal timber unavailable or until we can persuade Congress to allow the State to own or manage a significant portion of the Tongass. By dedicating lands for long-term forest management the State is better positioned to invest in practices that enhance forest productivity, such as pre-commercial thinning. By increasing the growth and yield from the State Forest, more timber can be supplied to our industry from these lands in perpetuity.

We urge you to support the current efforts to increase the size of the Southern Southeast State Forest.

Sincerely,

Owen Graham

Governor Parnell
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell,

The Alaska Society of American Foresters (SAF) is Alaska's organization of professional foresters and other natural resource scientists dedicated to the sustainable management and protection of Alaska's forests and related resources.

The Alaska Society of American Foresters and Southeast state chapters have reviewed the HB 105 and corresponding Senate Bill 44 – which will add an additional 23,181 acres of State lands to the 25,291 acre existing Southeast State Forest established last year. This expanded Southeast State Forest of 48,474 acres will be managed by the Department of Natural Resource' Division of Forestry, which has an exemplary record of managing Alaska's forests and related resources.

The Alaska SAF commends the Governor Parnell and the Alaska Legislature for the establishment of a SE Alaska State Forest.

The Alaska Society of American Foresters is please to support HB 105. Enactment of HB 105 will enable the Department of Natural Resources Division of Forestry to sustainably manage the timber, fisheries, wildlife, waters, recreation, and other multiple benefits that will strengthen the local economy, provide jobs, and improve quality of life of all Southeast Alaska communities.

Sincerely,

Kathryn S. Pyne,
Alaska SAF, Chair

Senator Tom Wagoner
State Capitol Room 427
Juneau AK, 99801

Re: Bills Relating to Southeast State Forest Need to Balance Timber with Other Uses

Dear Senators Paskvan and Wagoner;

The Southeast Alaska Conservation Council appreciates the opportunity to comment on SB 44 and HB 105.

Issue: On January 18, 2011, Governor Parnell transmitted SB 44 and HB 105 to the legislature for consideration, which would add 23,181 acres of land to the Southeast State Forest (SESF).[1] These identical bills would nearly double the size of the 25,291 acre SESF established by the Legislature in 2010.[2] Last year, SB 225 proposed transferring five of the 23 parcels to be added – about 21 percent of the lands – to the University of Alaska. That bill did not pass.

Concerns: Logging is the main priority for the SESF. Fish and wildlife habitat and community use are secondary. Adding more land to the SESF creates and imbalance between timber development and other uses. Solutions are:

1. **Balance new timber lands with new State Parks;**
2. **Remove land parcels with important to fish and wildlife habitat from legislation.**

Points of concern with SB 44 and HB 105 --

1. Designating this much state land for timber-first management in Southeast Alaska is imbalanced. If SB 44 is enacted, nearly 49,000 acres of state lands in Southeast Alaska will be managed primarily for timber production, when only 25,000 acres is designated for state parks, refuges, and other public use areas.
2. Less than 16 percent of all the State-owned land in Southeast Alaska is safeguarded for the long-term use and enjoyment of current and future generations of Alaskans.
3. DNR wants to add lands to the Southeast State Forest in order to make the long-term investments in actively managing 2nd growth timber stands a realistic management

[1] http://forestry.alaska.gov/pdfs/2011PublicBriefingHB105.pdf
[2] http://forestry.alaska.gov/pdfs/Fact_Sheet_on_SESF.pdf

option. If so, then including the Hook Arm parcel on Dall Island and the Kuiu Island parcel at the mouth of Rowan Bay does not make sense.

a. Hook Arm parcel (nearly 1,000 acres)
    i. all old-growth timber
    ii. the Alaska Heritage Resources Survey reports prehistoric heritage sites in or around this unit
    iii. pink salmon anadromous stream in unit
    iv. contains significant karst and cave resources
b. Rowan Bay parcel (652 acres)
    i. Over 80 percent of the parcel is old-growth timber
    ii. There are two anadromous streams (pink, chum, & coho)
    iii. Currently, DNR manages the parcel to maintain and retain old-growth habitat for wildlife and salmon.[3]
    iv. The Plan also states: "There are numerous heritage sites within the parcel, including the site of the prehistoric Rowan Village."

4. Given the distance of the Hook Arm and Rowan Bay parcels from the nearest community, the timber will likely be exported.
    a. Exporting Alaska wood means exporting Alaska jobs and the fish and wildlife resources this old-growth habitat supports.
    b. Nearly 27 percent of the timber sold from State lands in Southeast Alaska the last four years was isolated timber on Zarembo Island like that in Hook Arm and Rowan Bay and sold without a local manufacture requirement. This timber could be exported.
5. AS 41.17.210(a) requires that "[t]he proposal of the governor include a report and recommendations of the commissioner including (1) a preliminary forest inventory . . . ." The only inventory information provided by DNR to support SB 44 and HB 105 is the gross acres for each parcel. This is woefully insufficient to evaluate fully the merits of this proposal.

Options for Resolution –

1. **Balance new timber lands with new State Parks.** Designate the following 7991 acres of state land as State Parks:
    - *Sumdum (near Juneau)* – 5 acres -- this small undeveloped parcel occupies the head of Sanford Cove and lies adjacent to a popular cruise ship, charter and recreational boat travel corridor to Tracy and Endicott Arms Wilderness; it is a historic and culturally significant site.
    - Cleveland Peninsula (near Ketchikan) – 4,055 acres -- this parcel consists of three distinct parts, all of which occupy the northern part of Cleveland Peninsula, located northwest of Ketchikan. These lands are highly used by a guided hunting businesses and an important stop over for a youth education program that is the single largest private employer in Wrangell.
    - Mite Cove (near Pelican) – 320 acres – important to the nearby community of Pelican for recreation and subsistence activities; key safe anchorage for commercial boaters, particularly important for a fish packing business key integral to the troll fishery.
    - Lynn Canal and William Henry Bay (near Haines) – 1679 acres—these two parcels are located on the east shore of Lynn Canal. The Lynn Canal uplands and tidelands

[3] http://dnr.alaska.gov/mlw/planning/areaplans/cs_southeast/pdf/adoptchap3.pdf at p. 3-71

are recommended for designation as a State Marine Park in the Northern Southeast Area Plan (p.3-84).[4]

- *Rowan Bay (652 acres)* (see description of values above)
- *Hook Arm (Dall Island)* – 1,280 acres – (see description of values above)

The proposed conveyance of the above lands to the University of Alaska last year in SB 225 created substantial public controversy. Public testimony shows these lands contain important cultural, historical, recreation, fish, wildlife and other important community values. We urge the Committee to safeguard these special recreational, scenic, cultural, historical, and wilderness values for the long-term benefit of Southeast Alaskans by designating them state parks.

Designating these lands as state parks will help balance the consumptive and non-consumptive uses of state lands in Southeast Alaska, which is key for maintaining both a strong economy and high quality of life in the region.

2. **Drop the Hook Arm and Rowan Bay parcels from SB 44 & HB 105 and request better inventory information from the Division of Forestry before proceeding further with the bill.**

Sincerely,

Buck Lindekugel

Juneau, AK 99801-1182

RE: SB 44 – An Act relating to the Southeast State Forest

Southeast Alaska Fishermen's Alliance is a non-profit membership based organization that represents commercial fishermen participating in the salmon, crab, shrimp and longline fisheries of Southeast Alaska.

The timber industry in Southeast Alaska has long been an important industry to our region and mostly the timber and fishing industry have managed to co-exist successfully in this region. But, we are concerned as you expand the Southeast State Forest and re-emphasize logging on these lands that you consider the need to extend the logging buffer zones to a width of 100 feet rather than the current 66 feet buffer contained within the Forest Practices Act.

We understand the complexity of the Forest Practice Act and the lengthy battle that occurred to reach a compromise but we believe that it is equally important to be conservative and protect the habitat and watersheds that are so important to the health of our fishery resources.

The commercial fishing industry, subsistence, personal use, and recreational fishermen are all dependent upon maintaining healthy fisheries as are the

coastal communities and safeguarding the watershed systems with 100 foot buffers will go a long way in assuring us that we maintain healthy fishery resource that so many people depend upon.

Sincerely,

Kathy Hansen

Sent: Sunday, February 20, 2011 8:30 AM
To: Sen. Tom Wagoner
Subject: SE AK Timber Harvest Plan SB 44

Dear Senator Wagoner,

Sorry I was not able to wait to testify yesterday.

I am concerned about setting state land aside for timber development. Without responsible timber harvest practices in place, there will be harm to fish and wildlife habitat. I am also against the export of round logs. Wrangell has a depressed economy and round log exports will take jobs away from this community. Any timber development in this area should create local jobs with the protection of fish and wildlife in the areas designated.

I also ask that Pats Creek drainage and Earl West be protected from timber harvest. Both areas are well used locally for sport fishing, recreation, with some commercial fishing in both areas. I have seen cohos and chums in Pats Lake. The lake and surrounding areas are well used by locals all year long. Both Earl West and Pats Creek drainage have great sites for launching canoes and kayaks. Also sport fishing for salmon off the beach in Pats Creek drainage is easily accessible to locals.

Sincerely yours,

Marlene Clarke

Testimony Notes on SB44:SE State Forest before Senate Resource Committee 2/19/2011

My name is Eric Lee and I am representing myself. I thank you for this opportunity to comment on SB44.

I was born in Petersburg on Mitkof Island in 1951 and subsistence hunted deer on Mitkof Island every year from the time I was a boy until the season on Mitkof was closed in 1975 due to the drastic decline of deer following extensive logging and two hard winters.

When I was young, before logging deforested much of the best deer winter habitat on Mitkof, game was plentiful. The deer and wolf populations rose and fell in the same natural cycle they had followed for millenia. The deer season was open from August through the end of the year and the limit was four deer.

Following the deer population crash and season closure in 1975, the deer made only a slow and partial recovery. Because of this, the season remained closed entirely for 16 years. In 1991 it was reopened for just two weeks and one buck. In spite of this very restricted management, the deer population has never recovered and, except for a small archery season, the deer season on Mitkof Island remains just two weeks and one buck.

This dramatic reduction in deer-carrying capacity of our island is directly attributable to the deforestation of deer winter range and the extensive system of logging roads on the island which allows poachers access to most of the island for road hunting, and easy traveling for the wolves that use the roads for their migratory hunting.

Much of the low elevation lands on the south side of Mitkof Island that once provided ideal habitat for deer and other animals was roaded and clear-cut during the 1960's, 70's, and 80's. The effect on our subsistence hunting in that area has been dramatic. These lands once were the breadbasket of our community, and now deer are hard to find. A hunter can hunt for days and not see a buck.

The four parcels of land on Mitkof Island, Favor Peak, South Mitkof, Frederick Point, and Woodpecker Cove that are included in this bill are in areas that have already sustained considerable damage from past logging. Of these four parcels, Woodpecker Cove is the most important to our community for subsistence and recreational uses. It has been heavily logged, but is in the process of making slow recovery. There is hope here that some day that area will again be the breadbasket it once was for our community. More logging in the area will set that recovery back many decades and likely some areas will never recover.

The geographic location of the Woodpecker Cove Parcel being higher elevation and facing the mouth of the Stikine River, would mean a very ugly clear-cut would be clearly visible from the mouth of the Stikine River, were that parcel ever logged.

For these reasons I urge the removal of the Woodpecker Cove parcel from this bill. The logging of the other three parcels on our island which has already been heavily logged, will result in further damage to the intact habitat that remains on this island. Therefore it is vitally important that the Woodpecker Cove parcel be withdrawn. It is far too important to our community for subsistence and recreation, and should be spared.

I thank you for your consideration of my comments.

Sincerely,

Eric Lee

February 25, 2011

As a resident of Wrangell, Alaska, I am writing to urge you to consider the consequences of clear-cutting our forests. I do think we should consciously save something for our children's children and otherwise act responsibly concerning our planet and its forests.

Remember wildlife needs habitat
Remember salmon need habitat with buffer zones protecting streams

Our planet is our Garden of Eden to be used responsibly.

Thank you for using our forests wisely.

Cordially,

Jean Petticrew

Jean Petticrew

SB 44
HB 105

TESTIMONY OF RONALD R. WOLFE
SB 44 AN ACT RELATING TO THE SOUTHEAST STATE FOREST"
February 19, 2011

Mr. Chairman, members of the Senate Resources Committee, my name is Ronald Wolfe, I live in Juneau Alaska where I have been a professional forester since 1982. Currently, I am Sealaska Corporation Natural Resource Manager and I wish to offer my testimony in support of SB 44. Mr. Chris Maisch, Alaska State Forester has provided testimony of what this bill does and the specifics of the legislation and rather than repeat the all of the specifics of the bill I offer my concurrence with the information he provided to the committee.

In addition to that information it is important for the Senate Resources Committee to understand the precipitous situation of our Southeast region. Virtually every village and community has lost population over the past decade and The Alaska Economic Trends[1] in December forecast ever further declines in the future to the year 2034:

- (-14.2) % decline for Southeast as a region overall
- (- 33.9) % decline for Prince of Wales and outer Ketchikan
- (- 34.6) % decline for Wrangell-Petersburg
- and the discouraging news continues for every Borough and area in our region

Such population declines adversely impact everything, property values, the ability of communities to operate such basic things as schools, some villages may loose their school altogether, utilities, fuel and grocery delivery, transportation and the list goes on.

We need all of our industries in the face of such dire population forecasts, and it's no secret that the timber industry here is a mere shadow of itself and is on the verge of total collapse which if occurs moves Southeast Alaska closer to a catastrophic economic implosion. The industry today is supported metaphorically by a three legged stool; our timber comes from:

1. Sealaska Corporation and other private landowners
2. the Tongass National Forest, and
3. from the State of Alaska

We depend on each other to create enough critical mass to hang on, we use the same logging contractors, fuel suppliers, tug operators and the entire infrastructure that we need and that also helps to support Southeast Alaska overall.

Timber from these sales will be available for domestic manufacture and round log export. Both markets are important, wood that will go to the few remaining sawmills is important for their survival, but it is important to note that wood that is round log exported may provide higher revenues that make the timber sale economical to operate. In some instances our local mills actually export the logs themselves; so our local sawmills depend on round log export. Sealaska on the other hand is primarily in the round log

[1] Alaska Economic Trends December 2010: Table 9, page 10

export market, but we provide wood to local sawmills as well. So you see our industry is very inter-dependent on markets and infrastructure.

Some have expressed concern over round log export with a claim that we are exporting jobs. This is simply not the case. In addition to the economic contribution discussed earlier Sealaska commissioned an independent third party expert to investigate this in 2005. The McDowell Group[2] found that domestic manufacture creates 4.5 jobs per million board feet of harvest where as round log export creates 4.3 jobs per million board feet of harvest. Those who claim otherwise do not understand the jobs we create our sort yards and perhaps more importantly the stevedoring jobs for our ship loading.

The study further found that stevedoring and other round log export jobs allow the work force to remain in village where their families live, whereas domestic manufacture jobs require people to relocate to the community where the mill is located. Part time jobs such as stevedoring provide crucial income and allow rural village residents to pursue subsistence activities; both of which are necessary for survival. So you see round log export is important to such communities as Hydaburg, Hoonah and Kake for instance, whereas Viking Lumber is important for Craig and Klawock, and all of this is important for what remains of our industry. I offer the most recent report McDowell Group prepared[3] for Sealaska for the year 2008 for further information on the importance of round log export to our region.

It is important for the Committee to understand the land ownership of Southeast Alaska for the contextual setting of the bill. Southeast Alaska is about 23 million acres if one extends the 141st Meridian south and considers all of Alaska to the east to be our Southeast Region. Development is precluded over the vast majority of this region, some 89 %, most of this is owned by the federal government and is in parks, wilderness, national monuments and other classifications which preclude development altogether. Some is in State Parks. Development that occurs on the remaining lands must achieve resource protection first in order to comply with the Tongass Timber Reform Act, de facto roadless rule implementation, the Clean Water Act, the Bald Eagle Protection Act, the Endangered Species Act, the Alaska Forest Resources and Practices Act, Oil Spill laws and the list goes on and on; development can occur only on what's left.

Passage SB 44 will help to stabilize timber supply from state lands and will allow these lands to be managed with a commitment towards forestry that is necessary for the long term planning horizons required for such things as sustainable resource management. These lands will be managed in accordance with our Alaska Forest Resources and Practices Act which has been demonstrated to be working well to protect water quality, anadromous fish habitat, wildlife and other important public resources.
Thank you, I urge expeditious passage of this bill.

EXECUTIVE SUMMARY

The purpose of this study was to compare the employment impact of Sealaska timber harvests with the impact of Tongass timber harvests. The primary difference between the two harvests, in terms of job creation, is that Sealaska harvests, in addition to logging jobs, create jobs in shiploading. Tongass harvests, because of the primary manufacturing requirement, create jobs in sawmills. This report examines these and other employment characteristics. Key findings of this study are summarized below:

- Sealaska harvested an average of 92 million board feet (mmbf) of timber from its lands in 2002 and 2003. During those same years the Tongass harvest averaged 42 mmbf.

- Sealaska and Tongass logging typically account for approximately 2.1 jobs per mmbf of timber harvested. This does not include stevedoring or sawmill jobs.

- Sealaska-related stevedoring activity generated jobs for 209 Southeast village residents in 2002 and 2003, with earnings totaling approximately $1 million annually. This equates to 2.2 jobs per mmbf. These mostly part-time jobs were in Hydaburg, Klawock, Kake and Hoonah.

- Tongass timber harvests created an average of 100 sawmill jobs in Southeast in 2002 and 2003 with payroll of $2 million annually. This equates to 2.4 jobs per mmbf. These mostly full-time jobs were primarily in Ketchikan, Wrangell and Klawock.

- Including logging and sawmill employment, Tongass harvests created an average of 4.5 jobs per mmbf. This is a measure of direct employment impacts attributable to the Tongass harvest.

- Including logging and stevedoring jobs, Sealaska harvests created an average 4.3 jobs per mmbf. This is a measure of direct employment impacts only.

- Other Sealaska-related impacts are readily measurable. Including employment with Sealaska Timber Corporation (STC) contractors (logging and stevedoring), STC offices and Sealaska Corporation headquarters, Sealaska timber harvests accounted for an average of 416 jobs in 2002 and 2003, from an average annual harvest of 95 million board feet. That equates to 4.9 jobs per mmbf.

- Income from STC logging activity is widely dispersed among village residents and is an important source of cash, particularly for many who have a high degree of dependence on subsistence activities. Placing a domestic

manufacturing requirement on Sealaska timber harvests would transfer jobs from cash-poor areas to communities with existing sawmills.

- Not included in this study is the spending on goods and services by Sealaska Timber Corporation (other than logging and stevedoring), spending by Sealaska Corporation and Sealaska Heritage Institute, and spending by all of the employees of these organizations. This spending creates additional economic activity and employment in Southeast. Previous research has found that direct, indirect and induced employment related to Sealaska peaked at approximately 1,000 jobs in Southeast Alaska in 2002 and 2003.

- Also not factored into this analysis are other Sealaska contributions to Southeast including dividends paid to shareholders, SHI scholarships, and support for various regional programs. The shareholder intern program and shareholder hire policy, which have provided educational and career opportunities (that may not otherwise have been available) to many Southeast residents, are likewise not factored into this analysis.

In summary, the overall economic impact of Sealaska timber harvests is greater than that of the Tongass harvests (as would be expected, with about double the total harvest volume). Further, this analysis suggests that on a per mmbf basis, Sealaska's economic impact at least matches that of the Tongass (even with its primary manufacturing requirements).

Introduction

The purpose of this analysis is to compare the number of jobs created from timber harvests on Sealaska lands to harvests from the Tongass National Forest in Southeast Alaska on a per-million-board-foot basis.

There are two key components of the Southeast Alaska logging industry: logging activity in the Tongass National Forest and logging on private landholdings. In Southeast, the most significant volume of private timber is harvested by Sealaska Timber Corporation (STC). There are also timber harvests on land owned by the State of Alaska, University of Alaska, Alaska Mental Health Trust, as well as other much smaller scale harvests.

Timber harvested in the Tongass National Forest has primary manufacturing requirements, which mandate that most harvested logs be at least minimally processed in Alaska prior to export. Cedar can be exported as round logs and these exports are an important part of the financial viability of Tongass operators.[1] The primary manufacturing requirement creates employment in local sawmills. Timber harvested from private land in Southeast has no similar manufacturing requirements and is mostly exported as round logs.

While most Sealaska timber is not processed in Southeast Alaska, STC timber contracts create certain jobs that Tongass harvests do not. Log "manufacturing" and scaling are somewhat more labor intensive on Sealaska harvests, as logs are sorted and prepared to the exact specifications of the export market. Ship loading activity, in particular, provides significant employment and wages to village residents in Southeast. Logs are felled, transported to tidewater and loaded on ships in the remote locations along the coast of Prince of Wales (POW) Island, Hoonah and Kake to be transported to market. In addition, Sealaska timber harvests support the operations of Sealaska Corporation and Sealaska Heritage Institute, which provide employment and other economic opportunities in Southeast Alaska.

Methodology

The analysis was based on a combination of primary and secondary research. Primary research sources included a review of internal STC data supplemented by interviews with STC contractors regarding employment on STC contracts in 2002 and 2003. Secondary data sources included published and unpublished employment data from the Alaska Department of Labor and Tongass National Forest timber harvest volume from the USDA Forest Service.

In 2004, yellow cedar accounted for 7.2 percent of the Tongass National Forest harvest and Western red cedar accounted for 7.3 percent of the Tongass harvest.

Published employment data for the forestry and logging industry includes establishments primarily engaged in cutting and trucking timber. However, logging-related employment also includes road building, towing, log scaling, sorting and other jobs. Companies engaged in these logging support activities report their employment to the Alaska Department of Labor in different ways, because of the vertical integration of some companies, or other factors. As a result, establishments engaged in similar activities may be assigned different industry codes under the North American Industry Classification System (NAICS). Certain businesses may be categorized in non-logging NAICS categories. For example, establishments primarily engaged in trucking timber are classified in Industry 484220, Specialized Freight; however, employment numbers specific to timber trucking are not available. As a result, employment estimates for the logging industry as reported by the ADOL include some, but not all, employment in other logging support jobs such as road building, trucking and towing.

Due to these data limitations, this analysis focuses on the economic impacts of logging and sawmill components of the timber harvest process. Employment from logging activity in the Tongass is published annually by the USFS, but was considered preliminary at the time of this report. Following discussions with the USFS regional economist regarding the methodology of the agency's annual report on timber supply and demand, the study team calculated Tongass and Sealaska-related employment based on the most recent logging and sawmill industry employment data. The respective percentages of Tongass and Sealaska timber in 2002 and 2003 were applied to the total regional employment data for the logging industry to estimate employment in these occupations.

The assumption was made that road building, logging and log trucking activity are essentially the same on Tongass and Sealaska harvests. It was further assumed that the difference in employment between Tongass and Sealaska harvests occurs after the logs reach tidewater. For Tongass harvests, logs are either loaded on trucks or barged to sawmills for processing. For Sealaska, logs are staged and rafted by bundles into log booms and loaded on ships for transport (this 'in water' work includes log booming, towing, and rafting ground construction and maintenance) and also transported by truck and barge.

Because of the uncertainty regarding employment from Tongass harvests, the assumption that logging activities are similar for Tongass and Sealaska harvests may not be completely accurate in certain instances. For example, to fully optimize the value of logs for the export market, Sealaska harvests may require more time in bucking and quality control work. Further, it has been reported that Sealaska helicopter-supported harvests create more jobs (up to 50 percent more) than Tongass helicopter-supported harvests, due to the more selective nature of Sealaska's harvests.[2] Further, due to the importance of quality in log exports, STC contracts create more employment in sort yards. Nevertheless, the basic assumption that harvesting employment is essentially the same of Sealaska and Tongass harvests is required to insure an "apples to apples" comparison is made in the absence of detailed data related to Tongass contractor employment.

[2] This estimate is based on interviews with representatives of Columbia Helicopters, a firm that conducts helicopter logging on Sealaska land and on the Tongass.

Employment data provided by Sealaska contractors is considered to be accurate, but should be considered best estimates in the absence of Alaska Department of Labor data specific to STC contractors. Similar data on Tongass-related employment at the contractor level was not available; for this reason, the comparison of Sealaska and Tongass employment is based on uniform secondary data sources only. Additional employment data provided by STC contractors is presented at the conclusion of the Sealaska section to illustrate total direct, indirect and induced employment from Sealaska timber harvests. Similar data is not available for Tongass-related employment.

Southeast Alaska Timber Harvests

Sealaska Timber Corporation (STC) harvests represented 50 percent of the timber cut in Southeast Alaska in 2002 and 2003, while Tongass harvests in that period accounted for between 18 and 27 percent of the total harvest. Other timber harvests occurred on land owned by the State of Alaska, Alaska Mental Health Trust, University of Alaska, Bureau of Indian Affairs (BIA), or other Alaska Native corporations.

Southeast Alaska Timber Harvests, 2002-2003
(in million board feet)

	2002	2003	Average
Tongass National Forest	33.8	50.8	42.3
Sealaska	95.9	93.8	94.9
Other	63.1	41.7	52.4
Total Harvest	192.8	186.3	189.6

Source: USDA Forest Service, *Timber Supply and Demand 2003*

Tongass Harvest Volume

Current Tongass timber harvests are significantly lower than in prior decades and are expected to remain well below the allowable sale quantity (ASQ) of 187 million board feet (mmbf) annually, based on a 2004 McDowell Group report[3]. In 2003, the Tongass harvest volume was approximately 51 mmbf, a 50 percent increase over the previous year's harvest of 34 mmbf. The most recent two-year average harvest was just over 42 mmbf. Future Tongass harvests are uncertain due to a recent 9th Circuit Court of Appeals decision that found the Forest Service's timber demand analysis flawed.

Sealaska Harvest Volume

STC harvested 95 mmbf of timber annually between 2002 and 2003. Sealaska Corporation is the only ANCSA Corporation in Southeast Alaska with sufficient landholdings to maintain a sustained annual yield of timber[4].

Southeast Alaska Logging Employment

In 2002 and 2003, logging in Southeast Alaska accounted for an average of 362 and 406 jobs, respectively.[5] Employment peaked at 519 jobs in August of 2003 and 482

[3] McDowell Group, 2004. *Timber Markets Update and Analysis of an Integrated Industry in Alaska.*
[4] McDowell Group, 2004.
[5] Alaska Department of Labor and Workforce Development. Does not include stevedoring jobs and all transportation and construction jobs related to logging.

jobs in August of 2003. Based on annual averages, logging in Southeast created 1.9 jobs per mmbf in 2002 and 2.2 jobs per mmbf in 2003.

Tongass-Related Employment

Tongass National Forest logging and sawmilling directly created an average of 187 jobs for the years 2002 and 2003. Timber harvests on the Tongass National Forest create employment in several industries including road building, logging (tractor, shovel, standard cable and helicopter), towing, log scaling and sorting. Because of the prevalence of muskeg and other loose soils in Southeast Alaska, road construction is a significant part of logging support activity. Logging activity (excluding sawmilling) created an average of 63 and 111 jobs in Southeast in 2002 and 2003, respectively, with an average of 87 for the two-year period.

Tongass logging activity also creates employment in Southeast sawmills due to the primary manufacturing requirements for National Forest timber. Tongass timber accounted for 73 percent and 59 percent of the logs milled in Southeast mills in 2002 and 2003, respectively[6]. Based on this volume of Tongass timber supplied annually to Southeast Alaska mills, the Tongass accounted for 110 and 89 sawmill jobs in 2002 and 2003, respectively, for a two-year average of 100 jobs.

Tongass-Related Logging and Sawmill Employment in Southeast Alaska, 2002-2003

Year	Tongass Logging Employment	Sawmill Employment	Total Tongass-Related Employment
2002	63	110	173
2003	111	89	200
2002-2003 average	87	100	187

Source: McDowell Group estimate based on employment data from Alaska Department of Labor and Workforce Development and USDA Forest Service, *Timber Supply and Demand 2003.*

Based on the average timber harvest volume of 42 mmbf from the Tongass National Forest, Tongass logging activity created 5.1 jobs per mmbf in 2002, decreasing to 3.9 jobs per mmbf in 2003. The two-year average was approximately 4.4 jobs per mmbf of Tongass timber.

Jobs per Million Board-Feet of Tongass National Forest Timber Harvested, 2002-2003

Year	Total Tongass-Related Employment	Tongass Harvest (in mmbf)	Employment per mmbf
2002	173	33.8	5.1
2003	200	50.8	3.9
2002-2003 average	187	42.3	4.4

Source: McDowell Group estimates based on employment data from the Alaska Department of Labor and Workforce Development and timber harvest volumes from USDA Forest Service, *Timber Supply and Demand 2003.*

[6] Kilborn (2004) in USDA Forest Service, *Timber Supply and Demand 2003*

This estimate of employment per mmbf of timber harvested includes sawmill employment. Because the labor requirements for Tongass logging activity are assumed to be generally similar to Sealaska harvests, any difference in employment rates occurs after the timber is harvested and transported to tidewater. In the case of Tongass timber harvests, this is primarily sawmill employment (while shiploading activity is unique to Sealaska harvests).

The following table illustrates sawmill employment per mmbf for the sawmill component of Tongass employment, indicating an average range of 1.8 to 3.3 sawmill jobs per mmbf of Tongass timber harvested. Sawmill jobs are typically higher paying than jobs created in stevedoring. Statewide, the average annual earnings in the sawmill industry was $31,716 in 2003 (Southeast regional data is not available due to confidentiality of the data). At the statewide average, Southeast sawmills generated $2.8 million in earnings in 2003.

Sawmill Jobs per Million Board-Feet of Tongass National Forest Timber Harvested, 2002-2003

Year	Tongass-Related Sawmill Employment	Tongass Harvest (in mmbf)	Employment per mmbf
2002	110	33.8	3.3
2003	89	50.8	1.8
2002-2003 average	100	42.3	2.4

Source: McDowell Group estimates based on employment data from the Alaska Department of Labor and Workforce Development and timber harvest volumes from USDA Forest Service, *Timber Supply and Demand 2003.*

In addition to logging and sawmill employment, other economic impacts created from Tongass logging include indirect and induced employment. This includes employment created from spending by companies in support of their operations and the induced employment created from spending by employees in the local economies of Southeast Alaska. Fully quantifying these "multiplier" effects is beyond the scope of this study.

Sealaska-Related Employment

Sealaska Timber Corporation logging activity is conducted on Sealaska Corporation's landholdings in remote areas of Southeast Alaska. STC's logging activity is an important source of employment for rural Southeast residents, many of whom who find limited employment opportunities in their communities. Income from STC activity is widely dispersed among village residents and is an important source of cash, particularly for many who have a high degree of dependence on subsistence activities. These economic impacts have been documented in previous research[7].

STC harvested an annual average of 95 mmbf of timber in 2002 and 2003. Most of this harvest occurred in the Prince of Wales Island area (POW), including Dall Island, Natzuhini and Soda Bay. Approximately 65 mmbf was harvested from POW, 17 mmbf from the Hoonah area, and approximately 12 mmbf near Kake in 2003.

Based on the assumption that STC represented 50 percent of the timber harvested in Southeast Alaska in 2002 and 2003, it was assumed that 50 percent of logging employment, as reported by the Alaska Department of Labor, was due to STC logging contracts in that period. Based on that assumption, STC contracts created an annual average of approximately 192 logging jobs in 2002 and 2003. This estimate excludes subcontract activities, and is not a full accounting of STC-related employment due to the data limitations cited above.

Sealaska-Related Logging Employment in Southeast Alaska, 2002-2003

Year	Sealaska % of Total Harvest	Total Logging Employment	Sealaska Logging Employment
2002	50%	362	180
2003	50%	406	204
2002-2003 Average	50%	384	192

Source: McDowell Group estimates based on employment data from the Alaska Department of Labor and Workforce Development and timber harvest volumes from USDA Forest Service, *Timber Supply and Demand 2003*

An important source of employment not reflected in this data is stevedoring-related activity. This includes preparing the logs for shipping (bundling) and loading the logs on ships. Sealaska logging activity generated employment and income opportunities for an average of 209 individuals in Southeast Alaska in 2002 and 2003. This translates to an average of 2.2 stevedoring jobs per mmbf.

[7] McDowell Group, 2004, *The Impact of Sealaska Corporation on the Southeast Alaska Economy.*

Stevedoring Jobs per Million Board-Feet of Sealaska Timber Harvest, 2002-2003

Year	Sealaska harvest in mmbf	Number of Workers	Jobs per mmbf
2002	95.9	211	2.2
2003	93.8	206	2.2
Average	94.9	209	2.2

Care must be taken in comparing these stevedoring jobs with the sawmill jobs created form Tongass timber harvests (which averaged 100 jobs in 2002 and 2003). Tongass sawmill activity provides generally regular, day-to-day jobs for a smaller number of workers. STC stevedoring-related activity provides intermittent jobs for a larger number of workers. The approximately 100 sawmill workers dependent on the Tongass earned a total of $2 million in payroll, while the 209 STC-related stevedoring workers earned approximately $1 million.

Other Sealaska Timber Harvest Related Employment

The total number of jobs that are in some way dependent on the income generated by Sealaska logging activity is greater than the logging and stevedoring jobs. STC activity supports the operations of STC headquarters in Ketchikan, plus three regional offices elsewhere in Southeast Alaska. Logging income also supports employment at Sealaska corporate headquarters and Sealaska Heritage Institute in Juneau. Without logging income, employment levels of both organizations would likely be significantly reduced (if not non-existent).

Based on a 2004 report by McDowell Group, STC contracts created an average of at least 461 jobs in Southeast Alaska in 2002 and 2003. The seasonal nature of logging activity and related changes in demand for labor provide significant peak employment for a larger number of residents than is reflected in the average employment numbers. Peak employment was approximately 713 full-time and part-time employees in 2002 and 2003.

Sealaska Corporation Direct Employment and STC Contractor Employment Southeast Alaska, 2002-2003
(Annual Average Employment)

Year	STC Headquarters	STC Contractors	Sealaska Corporation and SHI	Total Employment
2002	29	425	53	507
2003	29	331	55	415
2002 - 2003 Average	29	378	54	461

Based on direct Sealaska and STC contractor employment, Sealaska logging activity created an average of approximately 4.9 jobs per mmbf of timber harvested in 2002 and 2003.

Jobs per Million Board-Feet
from Sealaska Timber Harvests, 2002-2003
(Annual Average Employment)

Year	Harvest Volume	Employment	Average Jobs per mmbf
2002	95.9	507	5.3
2003	93.8	415	4.4
2002-2003 Average	94.9	461	4.9

This method captured some indirect employment impacts, but not all. It did not capture induced impacts. Spending on payroll and purchases of goods and services by Sealaska Timber Corporation, Sealaska Corporation and Sealaska Heritage Institute creates additional economic activity and employment, referred to as a multiplier effect. Including direct, indirect and induced employment, STC activity created approximately 1,000 jobs in Southeast Alaska in 2002 and 2003.

Some of Sealaska's contributions to Southeast are beyond the scope of this report, including dividends paid to shareholders, SHI scholarships, the shareholder intern program and shareholder hire policy, which provide educational and career opportunities to many Southeast residents.

Executive Summary

The purpose of this study is to measure the economic impact of Sealaska Corporation and its subsidiary operations on Southeast Alaska in 2008. This report presents region-wide data and impacts, as well as data for Kake, Hydaburg, and Prince of Wales Island overall.

Sealaska-Related Spending and Employment in Southeast

- Sealaska Corporation, Sealaska Timber Corporation, and Sealaska Heritage Institute spent $45 million in 2008 in support of corporate and timber-related operations in Southeast Alaska. This spending included payroll and the purchase of goods and services, including timber harvest-related contracts. Spending was spread throughout the Southeast region. Approximately 350 businesses and organizations in 16 Southeast communities received spending from Sealaska-related activities.
- Region-wide, Sealaska and its contractors directly employed approximately 363 full and part-time workers in 2008. These workers earned an estimated $15 million in payroll.
- Sealaska and its contractor employment combined make the corporation one of the largest for-profit private sector employers in Southeast Alaska.
- Including direct and indirect employment and payroll, Sealaska-related employment totaled nearly 490 workers and approximately $21 million in payroll in Southeast Alaska in 2008.

Other Sealaska-Related Benefits in Southeast

Sealaska Corporation has a mission broader than paying dividends to shareholders. In addition to generating dividends, Sealaska's mission includes cultural preservation, shareholder education, and shareholder hire. Sealaska Corporation provides the seed money for the Sealaska Heritage Institute, which sponsors and supports numerous Native culture programs across Southeast Alaska. Using money set aside by Sealaska Corporation, Sealaska Heritage Institute awarded $410,000 in scholarships in 2008.

Role of Sealaska in Southeast Communities

Sealaska logging activity and, in particular, ship-loading activity, represent important sources of cash to many village residents. A total of 135 Hydaburg and Kake residents earned some income from ship-loading in 2008. Though these jobs are part-time, they are an important source of cash income. This income and other Sealaska-related economic activity are increasingly important in light of the long-term decline in these community's economies and population.

Hydaburg

- In Hydaburg, approximately 68 local residents earned income from Sealaska-related ship-loading and logging activity. Sealaska-related personal income in Hydaburg was approximately $700,000 in 2008, about 12 percent of the community's total personal income of $6 million. Hydaburg continues to struggle economically and is Southeast Alaska's poorest community, in terms of per capita income.

Craig, Klawock, and Prince of Wales (POW) Island Economy

- Sealaska is the single largest source of employment on POW Island. Sealaska-related activity contributed approximately 210 jobs to the POW Island economy in 2008. This includes both full-time and part-time employment in Sealaska logging-related activity. (This count includes employment for residents of Hydaburg as well as other POW communities.)
- Sealaska accounted for approximately $6 million in personal income to residents of Prince of Wales Island in 2008.
- Sealaska contracts related to logging in the POW area totaled $25 million in 2008.
- In addition to logging contracts, Sealaska spent $600,000 in 2007 with 31 POW businesses and organizations in Craig, Hydaburg, and Klawock.

Though the Prince of Wales Island population grew slightly in 2008, the island's economy has been in decline in recent years. All of the larger communities on the island have seen population declines, including Craig (down 18 percent since 2000), Klawock (down 8 percent), and Thorne Bay (down 21 percent). In the absence of Sealaska timber harvests, the decline would have been much more severe. Future Sealaska timber harvests will be key in curbing further economic decline on Prince of Wales Island.

Kake

- In Kake, approximately 87 workers earned income from Sealaska-related forest industry activity in 2008. Most of this income is related to ship-loading, but also includes silviculture-related jobs.
- Kake's economy continues to struggle with economic decline. The community's population in 2008 totaled 519 residents, 24 percent below the 2003 population of 679 and 33 percent below Kake's peak population of 775 residents in 1998. The decline in Sealaska timber harvest-related activity is only one of several factors that have affected the local economy.

Summary of Economic Impacts of Sealaska Corporation on Southeast Alaska, 2008

Total Southeast Regional Impacts	
Direct employment (peak)	363
Direct + indirect employment (peak)	490
Direct payroll	$15 million
Direct + indirect payroll	$21 million
Total direct Sealaska payroll and spending in Southeast	$45 million
Number of Southeast businesses and organizations receiving Sealaska dollars	350
Number of Southeast communities receiving Sealaska dollars	16
Dividends to Southeast shareholders	$7.9 million
Local Area Impacts*	
Craig/Klawock and Other POW Island Impacts	
Sealaska-related employment	210
Sealaska-related payroll	$8 million
Sealaska-related income to POW residents	$6 million
Hydaburg Impacts	
Sealaska-related employment	68
Sealaska-related income to Hydaburg residents	$0.7 million
Percentage of total personal income	12%
Kake Impacts	
Sealaska-related employment in Kake	87

*Note: Individual area totals do not include all indirect impacts of Sealaska activity. The numbers in this table are based on the best available data and should be considered estimates.

Introduction

Sealaska Corporation is a Native-owned corporation founded in 1971 as one of the 13 regional Native corporations under the Alaska Native Claims Settlement Act (ANCSA). The corporation's mission is to manage corporate assets to provide economic, social, and cultural benefits to its shareholders. Sealaska is the largest private landholder in the Southeast Alaska, and represents more than 20,000 Tlingit, Haida, and Tsimshian shareholders, roughly 40 percent of whom live in Southeast Alaska.

Sealaska's economic activity in Southeast Alaska is generated by its headquarters, and its operations subsidiary Sealaska Timber Corporation (STC) and Sealaska Heritage Institute (SHI). Sealaska Corporation's cultural and educational mission is administered by Sealaska Heritage Institute, which sponsors and supports numerous Native language and culture programs across Southeast Alaska, including the biennial cultural event Celebration. Additionally, Sealaska Heritage Institute awards scholarships each year from funds set aside by Sealaska Corporation to Alaska Natives who are Sealaska shareholders or shareholder descendants.

The purpose of this study is to measure the economic impact of Sealaska Corporation and its subsidiary operations on the Southeast Alaska economy in 2008. Sealaska Timber Corporation, through a number of contracting companies, harvests and exports logs primarily from Prince of Wales Island areas. Communities specifically affected by logging and ship-loading activity include Hydaburg, Klawock, Craig, and the Prince of Wales economy in general. In the past, Kake also has benefitted from STC timber harvests, but currently, activity in these communities is limited to silviculture-related work. Kake residents also are employed loading logs on to ships for export. Juneau, as headquarters to Sealaska Corporation and Sealaska Heritage Institute, benefits from administrative and managerial jobs located in the city.

This analysis includes the employment and personal income effects of Sealaska operations in Southeast overall. Sealaska Corporation, Sealaska Timber Corporation, and Sealaska Heritage Institute provided detailed data on spending and employment in Southeast communities. Additionally, STC provided data on recent timber harvest activity in the region. Key Sealaska contractors were contacted to collect information about the residency of their employees working on Sealaska contracts. This, along with data from the Alaska Department of Labor and Workforce Development (ADOL), the US Bureau of Economic Analysis (BEA), and the US Census Bureau, provided the data used in this analysis.

Personal income is a strong indicator of economic impact in a community or region. Little data, however, exists on personal income in small communities in Alaska. The most current measure of per capita income for communities such as Craig, Klawock, Kake, and Hydaburg is the 2000 Census. More recent data is available from the BEA for larger geographic areas, such as boroughs or census areas; this data, however, does not accurately reflect many of the small communities within these areas.

Given the lack of particularly relevant and timely data, the study team relied on a mix of data to estimate personal income for these communities, including current employment data and wage rate data (ADOL, 2008); census area level income source data (US Census Bureau, 2000 Census and BEA, 2005); as well as other income data from the Commercial Fisheries Entry Commission (CFEC), based on the value of residents' commercial seafood harvest over the last several years.

Sealaska's Economic Impact in Southeast Alaska

This economic impact analysis focuses on the quantifiable impact of Sealaska Corporation business activity, primarily timber harvesting, on Southeast communities in 2008. Impact measures include spending on payroll and on goods and services in Southeast Alaska, as well as local jobs directly related to Sealaska's activities.

In this section, spending and employment data are provided for Sealaska Corporation headquarters and the Sealaska Heritage Institute, both in Juneau, and Sealaska Timber Corporation (STC), headquartered in Ketchikan and with employees in Hoonah and Craig.

Spending and employment data reveal important economic impacts, but do not provide a complete picture of the corporation's impact on the Southeast region or its communities. Each year Sealaska Heritage Institute awards a number of scholarships to shareholders and shareholder descendents. While the dollar value of scholarships awarded in 2008 is included in this analysis, the long-term economic benefits of these investments (such as recipients of educational funding returning to Southeast Alaska with degrees and vocational certificates) are beyond the scope of this report. Sealaska Corporation's shareholder intern program and shareholder hire policy likewise have provided educational and career opportunities that otherwise may not have been available to many Southeast residents. Shareholders also have benefited from corporate dividends. In 2008, Sealaska Corporation paid $7.9 million to shareholders in Southeast communities, an average of $432 per shareholder.

Sealaska-Related Spending in Southeast Alaska

Sealaska Corporation headquarters, the Sealaska Heritage Institute, and Sealaska Timber Corporation spent a combined $45 million in payroll and the purchase of goods and services in Southeast Alaska in 2008. Approximately 350 businesses and nonprofit organizations in 16 Southeast communities received Sealaska-related spending in 2008. These businesses include logging and towing contractors, marine service centers, air carriers, and nonprofit organizations, among others.

Sealaska Corporation Headquarters Spending

In 2008, Sealaska Corporation headquarters spent approximately $9.1 million on the purchase of goods and services in Southeast communities, compared to $8.6 million spent in 2007. Sealaska Corporation spending was slightly decreased in Kake, from roughly $1.6 million in 2007 to $1.5 million in 2008, and slightly increased in Klawock, from $860,000 in 2007 to $1 million in 2008.

Sealaska Corporation Headquarters Spending in Southeast Alaska, by Community, 2000, 2002, 2003, 2007 and 2008 (in thousands of dollars)

Community	2000	2002	2003	2007	2008
Juneau	$3,950	$5,988	$3,314	$4,055	$4,529

Total Southeast Spending	**$6,383**	**$7,530**	**$4,803**	**$8,605**	**$9,140**

Source: Spending data provided by Sealaska Corporation.

Sealaska Heritage Institute Spending

In 2008, the Sealaska Heritage Institute spent a total of approximately $900,000 on the purchase of goods and services. This includes spending on scholarships awarded to Sealaska shareholders and shareholder descendents. Data on spending by location was unavailable for 2007, but if the proportion spent in Southeast is assumed to be similar to that found in previous studies, approximately two-thirds ($980,000) was spent in Southeast communities in 2007. In 2008, nearly $410,000 of the spending went to scholarships awarded to Sealaska shareholders or shareholder descendents living around the country, including Southeast communities.

Sealaska Heritage Institute Spending, 2003, 2007 and 2008

Region	2003	2007*	2008
Total Spending	$790,000	$1,592,000	$900,000
Spending in Southeast	$485,000	$980,000*	$490,000

Source: Spending data provided by Sealaska Heritage Institute.

*Note: The 2007 figure for Heritage Institute spending in Southeast Alaska is a McDowell Group estimate; actual regional spending data were not available from Heritage Institute or Sealaska Corporation at the time of this report.

Sealaska Timber Corporation Spending

Sealaska Timber Corporation spent approximately $28 million on the purchase of goods and services in support of Southeast logging activity in 2008, a 13 percent increase in spending since 2007. Most of STC's spending goes to logging, stevedoring, and towing contractors operating in the Prince of Wales Island area. The following table shows STC's direct spending by community in 2007 and 2008.

Sealaska Timber Corporation Spending
in Southeast Alaska, by Community*, 2000, 2002, 2003, 2007 and 2008
(in thousands of dollars)

Community	2000	2002	2003	2007	2008

*Note: Spending attributed to location of contractor or vendor headquarters.
**Note: Ketchikan spending includes STC contracts for logging and related activity located on POW Island.

Sealaska-Related Employment and Payroll

Sealaska Corporation employment and its contractor employment combined continue to make the corporation one of the largest for-profit private sector employers in Southeast Alaska. In terms of peak employment, Sealaska accounts for more jobs than Alaska Airlines or Greens Creek Mining Company, two of the region's other large for-profit private employers.

Sealaska Corporation headquarters employment in Juneau averaged 52 workers in 2008, with a total payroll of $4.6 million. Sealaska Heritage Institute employment in Juneau averaged 25 workers, with a total payroll of $950,000 for the year. STC directly employed an average of 16 workers in Southeast in 2008, including 11 in Ketchikan, four in Craig, and one in Hoonah. These jobs accounted for $1.3 million in total annual payroll.

Sealaska Corporation, Sealaska Timber Corporation, and Sealaska Heritage Institute, Payroll in Southeast Alaska, 2000, 2002, 2003, 2007 and 2008 (in thousands of dollars)

	2000	2002	2003	2007	2008
Sealaska Corporation Headquarters	$4,200	$2,300	$2,220	$3,889	$4,607

Source: Payroll data provided by Sealaska Corporation, Sealaska Heritage Institute, and STC.
*Sealaska Heritage Institute payroll data was unavailable for 2000.
**Does not include Sealaska Heritage Institute Payroll

Sealaska Timber Corporation timber harvest-related contracts and Sealaska silviculture contracts created an estimated peak of 261 jobs in Southeast Alaska in 2008, down from approximately 330 jobs in 2007. While payroll data is not available for these contractors, it is estimated that STC contractor jobs accounted for roughly $10 million in total payroll in 2008, two-thirds of total Sealaska-related payroll in Southeast Alaska that year.

Sealaska-Related Annual Average Employment in Southeast Alaska, 2002, 2003, 2007 and 2008

Total Sealaska-Related Direct Employment in Southeast Alaska	**695**	**730**	**421**	**363**

Source: Sealaska Corporation, Sealaska Heritage Institute, STC and STC vendor employment data supplied by STC.

Region-wide, Sealaska Corporation, Sealaska Heritage Institute, Sealaska Timber Corporation, and STC contractors employed approximately 363 full-time and part-time workers in 2008 in Southeast Alaska. Annual average employment was 258 workers. This represents a 14 percent decline in the total number of employees (peak employment) from 2007 to 2008 and a 15 percent decline in annual average employment during the same time period. Sealaska-related employment created an estimated $15 million in payroll to Southeast Alaska workers.

The following table provides Sealaska contractor-related employment for key communities and areas of Southeast. Hydaburg, Kake, and the Craig/Klawock areas are the most affected by Sealaska-related employment in the region. The total of 303 workers differs from the peak employment figure of 261 noted in the previous table due to how ship-loading employment is measured. At any one time in 2008, the most people employed loading logs onto ships was 79. A total of 135 Kake and Hydaburg residents, however, earned some income from ship loading in 2008. The following table reflects this larger number. Other Kake and Hydaburg residents were employed in other jobs related to Sealaska timber activity, pushing total Sealaska-related employment in those communities to 87 and 68 jobs, respectively.

Sealaska Timber Corporation Contractor Employment in Southeast Alaska, 2000, 2002, 2003, 2007 and 2008

Community	2000	2002	2003	2007	2008
Kake	143	118	130	30	87
Hydaburg	74	82	85	70	68

Total Southeast Employees	**775**	**597**	**635**	**330**	**303**

Source: McDowell Group estimates based on data supplied by Sealaska and STC.

Sealaska's direct spending on payroll and the purchase of goods and services creates additional economic activity in the local economy, referred to as the multiplier effect. Including direct and indirect employment and payroll, Sealaska-related employment totals approximately 490 workers and $21 million in payroll in Southeast Alaska, based on McDowell Group estimates.

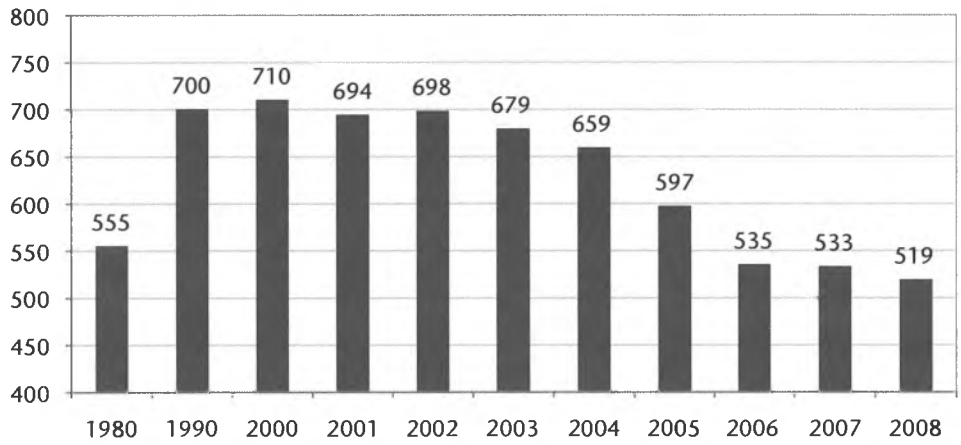
Kake

In the past, Sealaska Timber Corporation timber harvests have played an important role in the Kake economy. Though STC has not harvested any timber in the Kake area since 2006, when 15 mmbf were cut, Sealaska has continued to have a positive economic impact on the community through ship-loading employment and employment associated with silviculture activities. Despite Sealaska's contribution, the community continues to struggle economically.

Population

Kake is a community of 519 residents (2008) located on the northwest coast of Kupreanof Island. The community's population has declined steadily since 2000, when it had 710 residents. Kake's economy is based on commercial fishing and seafood processing, local government, tourism, and remaining timber and silviculture activities.

Kake Population, 1980, 1990, and 2000-2008

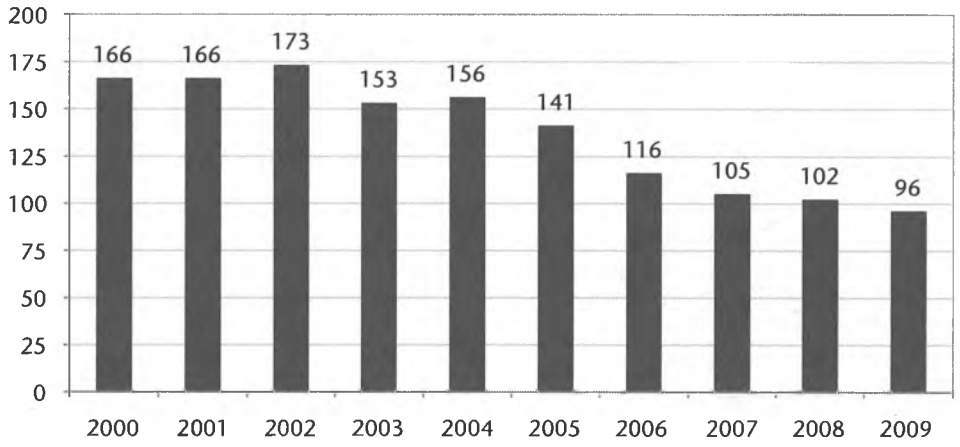


Source: ADOL 2008 population estimates.

School Enrollment

School enrollment trends reflect the community's population decline. The most recent school enrollment numbers are 45 percent below the peak of seven years ago.

Kake School Enrollment, 2000-2009



Source: ADEED district enrollment totals, 2000-2009.

Employment

ADOL data illustrates the importance of local government and tribal services in terms of employment in Kake. The top three employers are the City of Kake, the Kake City School District, and the Organized Village of Kake. This indicates a shift from the recent past (2003), when all three top employers were private-sector companies. Currently, Kake Tribal Corporation is the community's largest private-sector employer, and the fourth largest employer overall. Detailed employment data for individual employers is no longer available from ADOL, so 2007 data remains the best available information. The only notable change in the top ten list is the shutdown of LAB Flying Service. It also should be noted that Southeast Stevedoring, which employed 73 Kake residents on a temporary part-time basis in 2008, is not included in ADOL employment data for Kake because it does not have any operations in the Kake area.

Top Ten Employers in Kake, 2007
Non-Agricultural Employment

Employers	Annual Average Employment	Peak Monthly Employment
City of Kake	27	37
Kake City School District	25	33
Organized Village of Kake	25	28
Kake Tribal Corporation	23	36

Catholic Community Services Inc.	5	6
LAB Flying Service Inc.	5	6
All Other Employers (17)	33	59
Total Employment	**193**	**290**

Source: ADOL, unpublished statewide employer data.

Consistent with population trends, employment in Kake has declined significantly in recent years. From an annual average employment of 311 jobs in 2003, the community's employment fell to 193 in 2007 and recovered very slightly to 196 jobs in 2008. Much of the decrease in employment since 2003 can be attributed to the cessation of Kake Tribal Logging and Timber operations in 2004 and Kake Foods in 2006. Together, these two companies averaged 108 jobs in 2003, according to ADOL.

Employment in Kake, 2003-2008
Non-Agricultural Employment

Year	Annual Average Employment
2003	311
2004	200
2005	197
2006	218
2007	193
2008	196

Source: ADOL, unpublished data.

Wage and salary employment in Kake generated $4.6 million in payroll in 2008, down from the 2007 payroll total of $4.8 million, according to ADOL data.

Commercial Fishing

Commercial fishing activity is an important source of income for Kake residents. While participation in commercial fisheries has declined significantly in recent decades, ex-vessel values have been reasonably stable since 2000, with estimated annual gross earnings ranging from $800,000 to $1.1 million. In 2008, 23 Kake resident permit holders fished 33 different permits, and earned $916,000 in gross (ex-vessel) revenue.

Commercial Fishing Activity in Kake, 2000-2008

Year	Fishermen Who Fished	Permits Fished	Pounds Landed	Est. Gross Earnings
2000	28	45	1,081,000	890,000

2008	23	33	823,000	916,000

Source: Commercial Fishing Entry Commission, permit and fishing activity by community, 2000-2008.

Personal Income

Based on data from the Bureau of Economic Analysis and the US Census Bureau, McDowell Group estimates that personal income in Kake totaled approximately $11 million in 2008.

In 2000, Sealaska directly or indirectly accounted for 30 percent of all personal income dollars flowing into Kake. In 2003, Sealaska accounted for about one-fifth of all personal income dollars, or approximately $2.5 million (including dividends). In 2008, Sealaska-related employment in the Kake area was limited to 87 mostly part-time jobs, including ship-loading and silviculture jobs. These workers earned approximately half a million dollars. Sealaska also contributed $207,000 in dividends to Kake residents in 2008. In total, Sealaska accounted for approximately $700,000 in personal income, or about 6 percent of the community total.

Commercial fishing accounted for an estimated $600,000 in annual personal income. This amount is less than the total ex-vessel value. Ex-vessel value is a measure of gross income to fishermen. Take-home pay (personal income) is ex-vessel value less expenses such as fuel, gear, insurance, etc.

Local government, including city offices and the Kake City School District, contributed $2 million in personal income to community residents in 2008, approximately 18 percent of all local personal income.

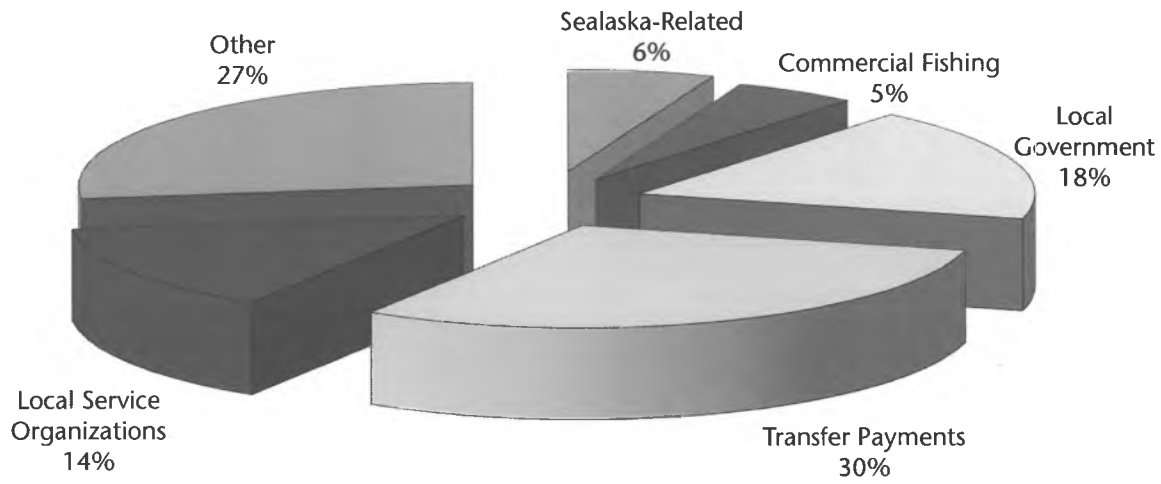
Local service organizations include Organized Village of Kake, Southeast Alaska Regional Health Consortium (SEARHC), the Rural Alaska Community Action Program, and other organizations providing services to local

residents. Together these organizations accounted for approximately $1.5 million in personal income, or 14 percent of total personal income in 2008.

In 2008, transfer payments accounted for approximately 30 percent of all personal income for Kake residents, or about $3.3 million. Again, transfer payments include all payments from governments to individuals, such as Alaska Permanent Fund dividends, Social Security payments, welfare payments, and other government transfers.

The "other" category of personal income includes all other sources, in particular income generated from other private sector commercial activity, such as construction, retail sales, and transportation services. It also includes state and federal government, which employ a small number of Kake residents. The total estimated personal income from this category was approximately $3 million in 2008.

Sources of Personal Income in Kake, 2008
Total Personal Income: $11 million



Source: McDowell Group estimates.

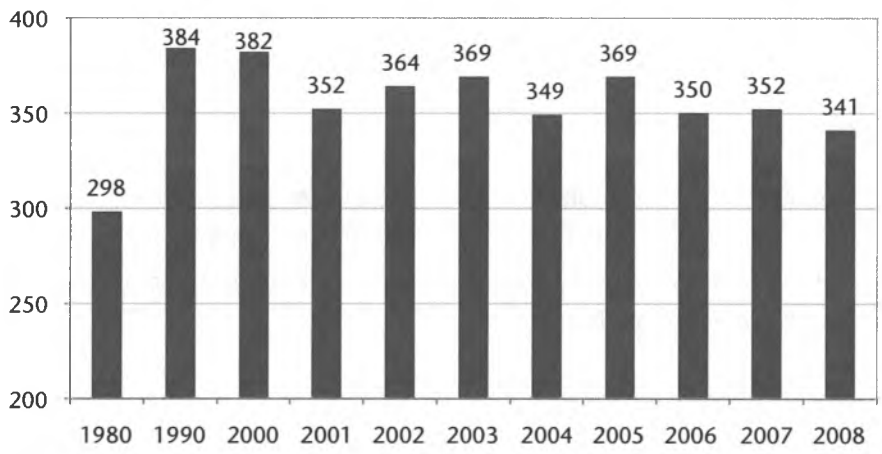
Hydaburg

In 2008, STC harvested 30mmbf in the Hydaburg area, down slightly from 31 mmbf in 2007 and significantly from the 81 mmbf harvested in 2004. With regard to Sealaska timber harvests, the community of Hydaburg benefits primarily from the employment opportunities associated with loading logs onto ships for transport to overseas export markets.

Population

Since 1990, Hydaburg has maintained a fairly stable population, ranging between 340 and 385 residents, though the general trend is down. In 2008, the community had a population of 341, its lowest point since prior to 1990. Hydaburg's economy is based on commercial fishing activity, timber harvesting, and local government.

Hydaburg Population, 1980, 1990, and 2000-2008

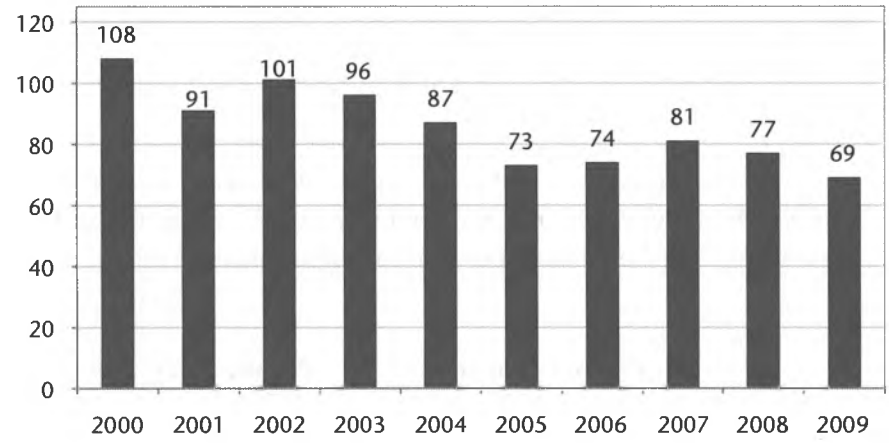


Source: ADOL 2008 population estimates.

School Enrollment

Hydaburg's school enrollment has fallen more significantly than has the local population. School enrollment is currently at about 69 students, 36 percent below the 2000 level.

Hydaburg School Enrollment, 2000-2009



Source: ADEED district enrollment totals 2000-2009.

Employment

As in other remote villages in Southeast, Hydaburg's local school district and tribal council provide a significant number of jobs within the community. Employment data for 2007 indicates the school district was the largest employer in Kake that year; preliminary 2008 data suggests, however, the Hydaburg Cooperative Association moved to the top spot last year.

Top Ten Employers in Hydaburg, 2007
Non-Agricultural Employment

Employers	Annual Average Employment	Peak Monthly Employment
Hydaburg City School District	19	24

All Other Employers (2)	1	3
Total Employment	**80**	**117**

Source: ADOL, unpublished statewide employer data.

In 2007, Southeast Stevedoring was the top private sector employer in the community, providing one-fifth of the annual average employment. Southeast Stevedoring reported having 60 Hydaburg residents on its payroll in 2007 and 62 in 2008.

Between 2005 and 2007, employment in Hydaburg remained fairly stable at between 70 and 80 annual-average jobs. Employment increased to an average of 87 jobs in 2008, mostly the result of increased local government employment.

Employment in Hydaburg, 2003-2008
Non-Agricultural Employment

Year	Annual Average Employment
2003	73
2004	71
2005	77
2006	80
2007	80
2008	87

Source: ADOL, unpublished data.

Wage and salary employment in Hydaburg generated $2.9 million in payroll in 2008, up from the 2007 payroll total of $2.4 million, according to ADOL data.

Commercial Fishing

Earnings for Hydaburg residents from commercial fishing have been increasing in recent years and reached a high of $1.7 million in 2007. The 2008 total was slightly less, with 23 local fishermen earning just less than $1.5 million.

Commercial Fishing Activity in Hydaburg, 2000-2008

Year	Fishermen Who Fished	Permits Fished	Pounds Landed	Est. Gross Earnings
2000	21	31	935,000	510,000
2001	21	36	1,317,000	543,000

2006	22	40	965,000	832,000
2007	20	37	2,988,000	1,681,000
2008	23	40	1,492,000	1,465,000

Source: Commercial Fishing Entry Commission, Permit and Fishing Activity by Community, 2000-2008.

Personal Income

Based on McDowell Group estimates, Hydaburg's personal income totaled approximately $6 million in 2008. The community has had among the lowest per capita income rates in the state. At the time of the census, per capita income in Hydaburg was $11,401, about half the Alaska average.

In 2000, Sealaska timber harvests accounted for one-quarter (27 percent) of all personal income in Hydaburg. Southeast Stevedoring was the largest Sealaska-related source of employment, contributing about $600,000 in personal income to the community that year. In 2008, Sealaska-related employment income to Hydaburg residents from Southeast Stevedoring totaled just less than $400,000. Including other sources of employment income (several Hydaburg residents work for STC logging contractors) and dividend payments (about $134,000 in 2008), Sealaska accounted for a total of approximately $700,000 in personal income for Hydaburg residents in 2008, or about 12 percent of the community total.

Commercial fishing accounted for an estimated $900,000 in annual personal income for the 23 Hydaburg resident permit holders who fished 40 different permits in 2008.

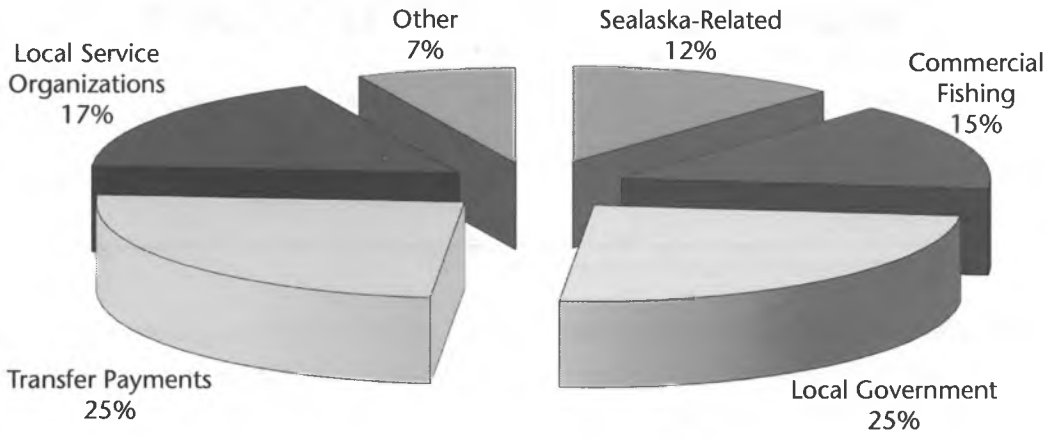
Local government, including the school district, accounted for an estimated $1.5 million in personal income in Hydaburg in 2008, 25 percent of the community total.

Local service organizations, including Southeast Alaska Regional Health Consortium (SEARHC), the Rural Alaska Community Action Program, and the Hydaburg Cooperative Association IRA, accounted for an additional $1 million in personal income.

Transfer payments also accounted for about one-quarter of all personal income for Hydaburg residents in 2008, or about $1.5 million. Again, transfer payments include all payments from governments to individuals, such as Permanent Fund dividends, Social Security payments, welfare payments, and other government transfers.

The "other" category of personal income includes all other sources, including Haida Corporation, other local businesses, and US Postal Service positions. The total estimated personal income from this category was roughly $400,000.

Sources of Personal Income in Hydaburg, 2008
Total Personal Income: $6 million



Source: McDowell Group estimates.

Craig, Klawock, and Prince of Wales Island Economy

Though the population of Prince of Wales Island remains well below its peak, the island's population increased slightly in 2008, adding 112 residents, an increase of about 3 percent. Since 2000, the population of POW has declined 13 percent, primarily due to reduced timber harvests. The island's population was 4,581 in 2000, 593 residents more than in 2008. All of the recent growth has been in the Craig/Klawock area. Other communities on the island continue to experience population decline.

POW Island Population, by Community, 2000, 2006-2008

Community	2000	2006	2007	2008	% Change 2000-2008
POW Island	4,581	3,984	3,876	3,988	-13%
Craig	1,725	1,404	1,352	1,414	-18%
Klawock	854	779	741	785	-8%
Thorne Bay	557	480	465	440	-21%
Hydaburg	382	350	352	341	-11%

Source: ADOL 2008 population estimates.

The POW Island economy is a mix of timber industry, commercial fishing, government, and tourism related employment. Local government continues to be a mainstay of the POW economy; the City of Craig and the Craig City School District were among the top three employers in 2007 and 2008. Other key employers include Alaska Commercial Company, the US Forest Service, Viking Lumber, and Southeast Alaska Regional Health Consortium (SEARHC).

Top Ten Employers on Prince of Wales Island, 2007
Non-Agricultural Employment

Employers	Annual Average Employment	Peak Monthly Employment
Craig City School District	83	96
Alaska Commercial Company	82	103
City of Craig	63	70
Southeast Island School District	56	76
US Forest Service (Department of Agriculture)	49	58
Klawock City School District	37	46
Viking Lumber Company, Inc.	36	38
Southeast Alaska Regional Health Consortium	33	36
Alaska Power & Telephone Co.	31	34
City of Klawock	28	31
All Other Employers (142)	691	1,174
Total Employment	**1,187**	**1,762**

Source: ADOL, unpublished statewide employer data.

Total employment on POW Island in 2008 averaged 1,280 jobs, 36 jobs fewer than in 2007. Total payroll for 2008 was $40.5 million, just above the 2007 total of $40.1 million. Sealaska-related employment on POW Island totaled approximately 210 full and part-time jobs and $8 million in payroll.

Sealaska accounted for approximately $6 million in personal income to residents of Prince of Wales Island in 2008. (Some Sealaska-related payroll on POW is earned by workers who are not residents of the island).

The Honorable Tom Wagoner
Senate Resources Committee
Alaska State Legislature
State Capitol
Juneau, AK 99801

Dear Senators Paskvan and Wagoner:

Senate Bill 49 was read across the floor on January 19, 2011 and transmitted to the Senate Resources Committee for consideration. I respectfully request a hearing to be scheduled at your earliest convenience for the changes to the production tax on oil and gas to be discussed.

Governor Parnell is committed to getting more oil into the pipeline and increasing job opportunities for Alaskans. As oil production declines and as the federal government moves on several fronts to block responsible projects, we must offer more incentives for development of state lands.

Senate Bill 49:

- Establishes a lower base tax rate for areas outside of current fields and units to encourage development of undeveloped leases or properties;
- Caps overall production tax rates to encourage investment at most commodity prices;
- Establishes a bracket system based on existing ACES tax rates;
- Extends tax incentives available in Cook Inlet to the North Slope to encourage in-field drilling in existing units;
- Limits the time for assessment of additional production taxes; and
- Reduces the interest rate on delinquent taxes and refunds.

These changes are aimed at ensuring that the state continues to receive fair compensation for the sale of its resource while establishing a more competitive investment climate for job creation.

If the Committee requires any additional information, please contact me.

Sincerely,

VBlaisdell

Ginger Blaisdell
Director

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 49

Analysis

***The revenue impact of this bill is indeterminate.
This bill makes several changes to the oil and gas production tax system. Each of the major changes, along with their potential revenue impact, are discussed below.

1. **The interest rate on delinquent taxes is changed** from the greater of 5 percentage points above the annual rate of interest charged by the 12th Federal Reserve District or 11 percent, to the lesser of 3 percent points above the annual rate of interest charged by the 12th Federal Reservice District or 11 percent. The effective date of this provision is 7/1/11. The Department of Revenue (DOR) does not forecast interest on taxes; therefore this provision has no quantifiable revenue impact. There will be $100,000 in one-time contractor costs to implement this change in our accounting system.

2. **The ANS WC oil price thresholds for the minimum tax are lowered** from the range of $15 to $25 to the range of $12.50 to $20 per barrel. The effective date of this provision is 1/1/2013. The DOR expects no revenue impact from this change since oil prices are forecasted to be above these amounts.

3. **The tax rate is changed and it is calculated annually rather than monthly for production in unitized areas or areas where there has been commercial production.** The tax rates under the bill are bracketed and only the increment of production tax value (PTV) within each bracket is taxed at that bracket's rate. The brackets range from 25% for PTV up to $30 per barrel to 50% for PTV over $92.50 per barrel. The maximum total production tax rate is 50%. The effective date of this provision is 1/1/2013. Using the Fall 2010 forecast assumptions, this provision is expected to result in revenue impacts as follows:
FY 2013: -$382 million
FY 2014: -$961 million
FY 2015: -$1,126 million
FY 2016: -$1,341 million
FY 2017: -$1,423 million

4. **For areas that are not unitized as of 1/1/2011 and where there has been no commercial production, the tax rate has changed and the lease expenditures in those areas may not be applied outside those areas.** The tax rates under the bill are bracketed and only the increment of PTV within each bracket is taxed at that bracket's rate. The brackets range from 15% for PTV up to $30 per barrel to 40% for PTV over $92.50 per barrel. The maximum total production tax rate is 40%. The effective date of this provision is 1/1/2013. Using the Fall 2010 forecast assumptions, this provision is expected to increase revenue slightly in amounts less than $20 million in FY 2013 through FY 2017.

5. **The provision requiring that credits be taken over two years is eliminated**. This provision would result in companies using credits earlier than they would without this change, and except for time value of money impact, it is revenue neutral. The effective date of this provision is 1/1/2012. Using the Fall 2010 forecast assumptions, this provision is expected to decrease revenue in the amount of $250 million in CY 2012 (taken over FY 2012 and FY 2013). Another $100 million in refunds would also be likely sought for credit certificates in FY 2012.

6. **The 40% credit for well lease expenditures is expanded to include qualified expenditures incurred north of 68 degrees North Latitude**. The effective date of this provision is 1/1/2012. The DOR has very limited data upon which to estimate the revenue impact of this provision. We estimate this provision will decrease revenue in the amount of $200 million to $400 million annually. No additional positions will be required, however, there will be a one-time contractual cost of $15,000 for auditor training on well lease expenditures.

7. **The statute of limitations on the assessment of taxes is changed from six to four years after the annual return is filed**. The effective date of this provision is 1/1/2014. The DOR does not forecast assessments of tax upon audit; therefore this provision has no quantifiable revenue impact. Two additional oil and gas auditor IV positions will be required beginning in FY 2014 to implement this provision. These positions are expected to cost $287,400 annually.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 49

Analysis

This bill may encourage producers to invest more by allowing them to receive the benefits of credits for that investment more quickly. First, currently under AS 43.55.023(b), only half the 20% qualified capital expenditure (QCE) credit can be taken in any one year. Section 11 of this bill would amend AS 43.55.23(b) to allow the full QCE credit to be taken in one year. Second, under AS 43.55.23(d), a producer that applies to obtain a transferable certificate for expenditures on the North Slope giving rise to a QCE credit or the loss carry-forward credit (AS 43.55.023(a)) will be issued two certificates, each for half the credit amounts, with one of the certificates only good for the next calendar year.

This limitation dilutes the incentive the credit provides to the extent that a producer/investor must wait before receiving the full benefit of the credit. Section 12 of this bill would amend AS 43.55.023(d) to allow the certificates received be for immediate use for North Slope expenditures, just as they are currently for expenditures in Alaska outside the North Slope. Third, Section 17 of the bill makes it easier for a small producer receiving a credit for North Slope expenditures to sell that credit to the State by eliminating the requirement that the producer spend additional money before receiving the credit monies.

In addition to allowing a quicker monetization of a given amount of credits, the bill extends the current 40% credit provided under 43.55.023(l) for well expenditures in Alaska off the North Slope to well expenditures on the North Slope. Currently, the North Slope producers receive a 20% qualified capital expenditure credit for well expenditure capital. Under the amendments provided in Sections 15 and 16 of the bill, producers would receive a 40% credit for those expenditures. This increased credit amount may encourage investment in wells on the North Slope.

This bill has a higher minimum tax rate apply to lower ANS West Coast prices. To the extent investors perceive the possibility that ANS West Coast prices will fall this low, these changes to the minimum tax may discourage investment. Also, by having separate production tax value calculations for "new production" units , the investors in these new units will have less ability to lower tax liability on "old production" units.

This bill lowers the marginal tax rates for existing and new fields by having progressively higher tax rates only apply to incremental production tax value. To the extent that investments are made as a consequence of these changes to the tax regime, royalty revenue may rise. The fiscal impact on royalty revenue is an indeterminate positive.

SB49 Production Tax on Oil and Gas
By Request of the Governor

SECTION ANALYSIS

Sections 1-3: Sections 1-2 are conforming amendments to reflect changes to AS 43.05.225. Section 3 amends AS 43.05.225(1) to provide that the tax rate on delinquent taxes under Title 43 is charged at the lower of three percentage points above the applicable annual federal rate or at the annual rate of 11 percent. This provision is to be effective July 1, 2011.

Section 4-5: Conforming amendment required by amendment to AS 43.05.225, interest rates due on delinquent taxes.

Section 6: Amends AS 43.55.011(e) to levy the annual production tax at the rate of 25 percent plus progressivity for oil and gas from a lease or property containing land that as of December 31, 2010, was or had previously been within a unit or in commercial production. A new tax rate of 15 percent, plus an annual progressivity tax, is levied on oil and gas produced from a lease of property containing land that had not previously been in a unit or in commercial production prior to December 31, 2010. For each category of production, the progressivity tax is levied on an annual basis. This amendment would be effective January 1, 2013, and apply to production after December 31, 2012.

Section 7: AS 43.55.020(f) is amended to lower the threshold prices at which the minimum tax applies, and would apply to production after December 31, 2012.

Section 8: AS 43.55.011(g) is repealed and reenacted to provide an annual incremental progressivity tax for all production. The applicable incremental progressivity tax rate applies only to the fraction of average annual production tax value per BTU equivalent barrel that falls within that incremental rate. For production subject to the 25 percent base rate, progressivity is capped at 25 percent above the base rate, for a maximum rate of 50 percent. For production subject to the 15 percent base rate, progressivity is capped at 25 percent above the base rate, for a maximum rate of 40 percent. This change would be effective January 1, 2013, and apply to production after December 31, 2012.

Section 9: AS 43.55.020, monthly payments of estimated taxes, is repealed and reenacted to account for the annual progressivity calculation and the new tax rate for certain fields.

Section 10: Conforming amendment related to interest rate changes.

Section 11: AS 43.55.023(a) is amended to remove the requirement that tax credits for qualified capital expenditures be applied against taxes or certificated
over two years. This change would be effective January 1, 2012, and would apply to production after December 31, 2011.

Section 12: AS 43.55.023(d) is amended to provide that transferable tax credit certificates will be issued as one certificate. This is to be effective January 1, 2012, for expenditures after December 31, 2011.

Sections 13-14: AS 43.55.023(g) is amended to reflect the interest rate change, and to reflect the repeal of AS 43.55.023(m), related to the issuance of well lease expenditure credit certificates.

Sections 15-16: AS 43.55.023 (*l*) and (n) are amended to expand the 40 percent well lease expenditure credit to qualified expenditures made on leases or properties north of 68 degrees North Latitude. This change is to be effective January 1, 2012, for expenditures after December 31, 2011.

Sections 17 -18: Conforming amendments are made to AS 43.55.028 (e) and (g) to reflect the repeal of AS 43.55.023(m).

Section 19: AS 43.55.075(a) is amended to change the statute of limitations for assessment of additional production taxes from six years to four years after the return is filed. This change is applicable to production after December 31, 2013, for tax liability beginning tax year 2014.

Sections 20: AS 43.55.160(a) is repealed and reenacted to account for changes in the calculation of the progressivity tax, and to account for new tax rates for certain production under AS 43.55.011(e) (2).

Sections 21-23. These sections make conforming amendments to account for interest rate change.

Section 24: AS 43.55.023(m) is repealed, all capital credit certificates, regardless of the location of the exploration, development or production expenditures, will be issued as one certificate.

Section 25: The applicability provision clarifies that sections 11, 12, 15 and 16 apply to expenditures made after December 31, 2011; sections 6-9 and 20 apply to oil and gas produced after December 31, 2012, and section 19 applies to any tax liability for the production of oil and gas after December 31, 2013 and

Section 26: This section provides that the Department of Revenue will have authority to adopt regulations to implement this Act, not to be effective before the effective date of the provisions implemented by this Act.

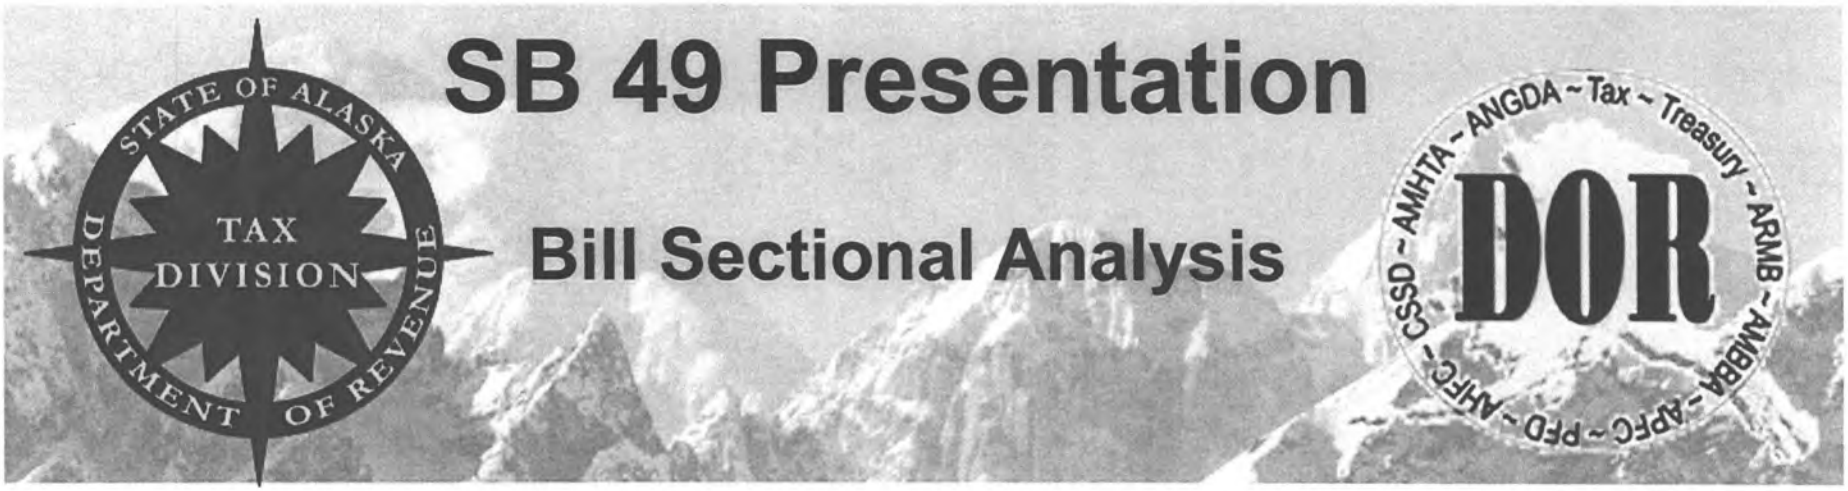
Section 27: The provisions related to the issuance of credit certificates and the expansion of the well lease expenditure credit to the North Slope, sections 11, 12, 14-18, 24 and 25(a), take effect January 12, 2012.

Section 28: The provisions related to new production and the progressivity tax, sections 6-9, 20, and 25(b), take effect January 1, 2013.

Section 29: The provisions related to the statute of limitations for the assessment of production taxes takes effect January 1, 2014.

Section 30: The provisions related to the change in the interest due on delinquent taxes and refunds take effect July 1, 2011.

LIB



Presentation to the
Senate Resources Committee
March 9, 2011
Alaska Department of Revenue

Main proposed changes

Progressivity Rates & Cap	Progressivity defined as discrete brackets, rather than as a continuous function, and applied only to incremental revenue. Maximum progressivity of 25%.	2013
Base Tax Rate	Base tax rate reduction from 25% to 15% for leases or properties neither unitized nor producing as of 12/31/2010.	2013
Tax Credits	Extension of 40% well lease expenditure tax credits to North Slope. Tax credits can be claimed in a single year instead of two years.	2012
Tax Calculation	Yearly tax calculation based on average prices and costs, instead of monthly tax calculation impacted by short term price and cost peaks.	2013

2012 Effective 1/1/2012 for expenditures made before 12/31/2011.

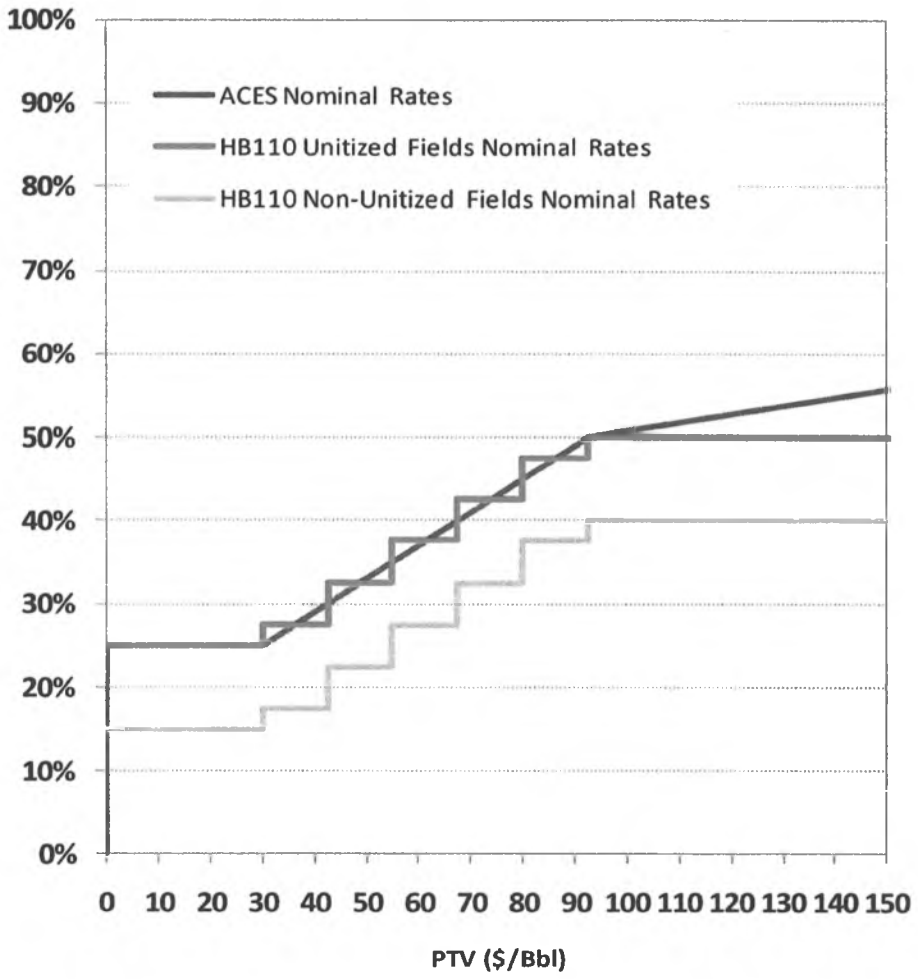
2013 Effective 1/1/2013, applies to production after 12/31/2012.

SB 49
Bill Sectional

Changes to progressivity and maximum tax rate

- **Section 8:** Provides incremental, bracketed progressivity. The applicable progressivity rate applies only to the fraction of the production tax value that falls within the incremental rate. Maximum total tax rate is 50% for production subject to the 25% base rate. Maximum total tax rate is 40% for production subject to the 15% base rate.

Nominal Production Tax Rates



PTV/boe ($/boe)		Tax Bracket (%)	
From	To	Non-Unitized Fields	Unitized Fields
0.0	30.0	15.0%	25.0%
30.0	42.5	17.5%	27.5%
42.5	55.0	22.5%	32.5%
55.0	67.5	27.5%	37.5%
67.5	80.0	32.5%	42.5%
80.0	92.5	37.5%	47.5%
92.5	*and above*	40.0%	50.0%

Conforming amendments for tax rate changes

- **Section 9:** Statute requiring monthly payments is revised to account for annual progressivity calculation and new tax rate for certain fields.
- **Section 20:** AS 43.55.160 repealed and reenacted amended to account for changes in progressivity, and new 15% tax rate. Segments maintained per current statute.

15% base rate for new units

- **Section 6*:** Levy of tax.
  - Rate is 25% + bracketed progressivity for oil and gas from current leases or properties.
  - Rate is 15% + bracketed progressivity for production from lease or property that had not been in a unit or in commercial production prior to Dec 31, 2010.

* Portions of this section discussed elsewhere in presentation

40% well lease expenditure credit extended to North Slope

- **Sections 15-16:** Expands the 40% well lease expenditure credit to qualified expenditures made on the North Slope.
- **Sections 17-18:** Conforming amendments to reflect repeal of AS 43.55.023 (m).

Capital credits can be taken in the year earned

- **Section 11:** Removes requirement that tax credits for qualified capital expenditures be taken over two years.
- **Section 12:** Provides that tax credit certificates will be issued as one certificate.
- **Section 14:** Conforming amendment to reflect repeal of AS 43.55.023 (m), relating to the issuance of well lease expenditure credit certificates.
- **Section 24:** Repeals AS 43.55.023(m), since all capital credit certificates will be issued as one certificate.

Switch from monthly to annual progressivity

- **Section 6*:** Levy of tax.
  - Progressivity would be levied on an annual, rather than a monthly, basis.

* Portions of this section discussed elsewhere in presentation

Strengthens the minimum tax

- **Section 7:** Lowers threshold prices for application of minimum tax.
  - 4% of gross minimum tax would apply when ANS WC price is over $20 (currently $25)
  - Thresholds for 0%, 1%, 2%, 3% tax lowered

Interest rate reduced for delinquent taxes and refunds

- **Sections 1-5:** AS 43.05.225 is amended to reduce interest rates on delinquent taxes and refunds.
  - New rate - federal rate plus 3% or 11 %, whichever is lower.
  - Current rate is federal rate plus 5% or 11%, whichever is higher.
- **Section 10:** Conforming amendment for interest rate change.

Conforming amendments for interest rate change

- **Section 13:** Conforming amendment to reflect interest rate change.
- **Sections 21-23:** Conforming amendments for interest rate change.

Statute of Limitations for production tax assessment reduced

- **Section 19:** Statute of limitations for production tax reduced from 6 years to 4 years, beginning with 2014 tax liability.

Effective dates, applicability, authority for regulations

- **Section 25:** Applicability provision for clarification.
- **Section 26:** Provides DOR authority to adopt regulations to implement the bill.
- **Sections 27-30:** Effective date provisions.

SB 49 Effective Dates

7/1/2011:

Reduced interest rate for overpayment and underpayment of taxes.

1/1/2012:

Credits for expenditures made after this date can be used in one year .

40% Well Lease Expenditure credit extended to North Slope.

1/1/2013:

Annual progressivity, bracketed progressivity, 50% max rate.

Lower tax rate for new leases or properties.

Changes to minimum tax thresholds.

1/1/2014:

Statute of limitations for production tax changed from 6 years to 4 years.

Oil and Gas Production Tax
Status Report to the Legislature
Alaska Department of Revenue
January 18, 2011

Report Purpose

In August 2006, the 24th Alaska state legislature approved House Bill 3001, which represented a major restructuring of the state's oil and gas production tax. As part of the legislation, lawmakers asked that the Department of Revenue study the impact of the production tax changes on several criteria and produce a report on or before the first day of the 2011 legislative session on the findings of that study.[1] This report summarizes those findings.

Executive Summary

This report evaluates six elements of Alaska's production tax system since implementation of the Petroleum Profits Tax (PPT) in 2006 and Alaska's Clear and Equitable Share (ACES) in 2007. The six elements and our key findings with respect to each of them are described briefly below.

1. **Revenue Generation/Tax Rate** – State revenues under PPT and ACES exceeded the amount that would have been received under ELF for each of the four fiscal years since implementation of a net profits tax. Although the production tax rate under ACES may be as high as 75%, tax rates in each of the

[1] ***AS 43.55.180 Required Report.*** ***(a)*** *The department shall study*
(1) *the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011 , the tax credits provided under AS 43.55.023 - 43.55.025, and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and*
(2) *the effects of the tax rates under AS 43.55.011 (i) on state revenue and on oil and gas exploration, development, and production on private land, and the fairness of those tax rates for private landowners.*
(b) *The department shall prepare a report on or before the first day of the 2011 regular session of the legislature on the results of the study made under (a) of this section, including recommendations as to whether any changes should be made to this chapter. The department shall notify the legislature that the report prepared under this subsection is available.*

four years were much lower than the maximum rate.

The oil tax rate of 5% of the gross value at the point of production at AS 43.55.011(i) for private landowners has not raised any significant concerns that have been communicated to the Department of Revenue.

2. **Industry Investment** – Investment in the form of capital expenditures has increased in each of the four fiscal years since implementation of the net profits tax, however, it is unclear how much of the capital expenditures were drilling or well-related and how much were maintenance or facilities-related.

3. **Impact on Exploration, Development, and Production –** Exploration has generally increased from 2003, when the EIC credit was implemented, but has dropped off in 2010. Development continues in three relatively new North Slope projects, yet production continues to decline.

4. **Industry Employment and New Entrants –** Industry employment rose steadily from 2006 through 2009, but dipped slightly in 2010. The number of companies filing annual tax returns doubled between 2006 and 2009, indicating interest by companies that are either new or returning to the Alaska oil and gas industry.

5. **Use and Expansion of Tax Credits** – The amount of credits used has increased annually since 2006 and we expect the trend to continue as new credit programs were added in the 2010 legislative session.

6. **Tax Administration and Compliance –** The department continues to write regulations for the new tax system, and the first audits under the net profits tax have been completed. The department has, however, been hampered in its tax reporting and compliance efforts by the lack of a centralized database to house and manage the large volumes of oil and gas data it receives.

7. **Conclusions and Recommendations –** Based on the multiple changes to the tax laws over the past few years, drawing any conclusion about their effect on Alaska's investment climate is difficult. However, what is clear is that production continues to decline. The state should continue to monitor its competitiveness with other oil and gas jurisdictions worldwide and be prepared to change its tax structure as needed.

Overview

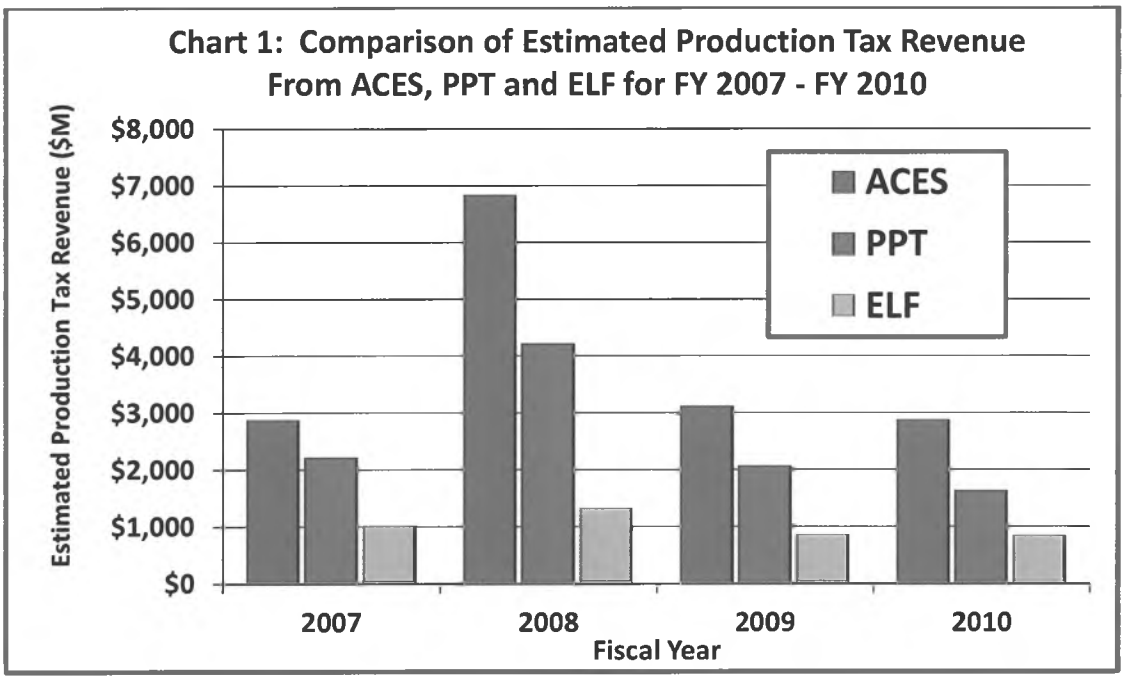
This report reviews and summarizes information gathered over the approximate five-year period since the implementation of the Petroleum Profits Tax (PPT) in 2006, and in 2007, Alaska's Clear and Equitable Share (ACES). The report covers six critical elements for evaluation and a section with conclusions and recommendations, as follows:

1. Revenue Generation/Tax Rate
2. Industry Investment
3. Impact on Exploration, Development and Production
4. Industry Employment and New Entrants
5. Use and Expansion of Tax Credits
6. Tax Administration and Compliance
7. Conclusions and Recommendations

Revenue Generation/Tax Rate

Both PPT and ACES have generated more production tax revenue for the State than would have been received under the previous production tax system, which used the Economic Limit Factor (ELF). In the one year that PPT was in place, FY 2007, the production tax totaled $2.2 billion. That year, the ANS West Coast oil price averaged $61.60 and production on the North Slope averaged 734,000 barrels per day. In contrast, the average oil price one year earlier, in FY 2006, was $62.12, production averaged 840,000 barrels per day, and the production tax under ELF totaled $1.2 billion--$1 billion, or 45% less than collected under PPT. It should be noted that PPT became effective on April 1, 2006, adding two months of tax collections to the FY 2007 total, making FY 2007 effectively a 14-month fiscal year. Regardless, the level of PPT collections above those that would have been collected under ELF, at least at moderately high prices, is significant.

In the three years that ACES has been in place, production tax revenues have increased to higher levels than under PPT. This is largely because ACES has higher base and progressivity tax rates than did PPT, and because one of the credits under PPT – the transition investment expenditure credit – was reduced substantially. The chart below shows production tax revenue collections under PPT and ACES as compared to how production tax revenue collections would have looked under two tax systems that were not in place during those years.



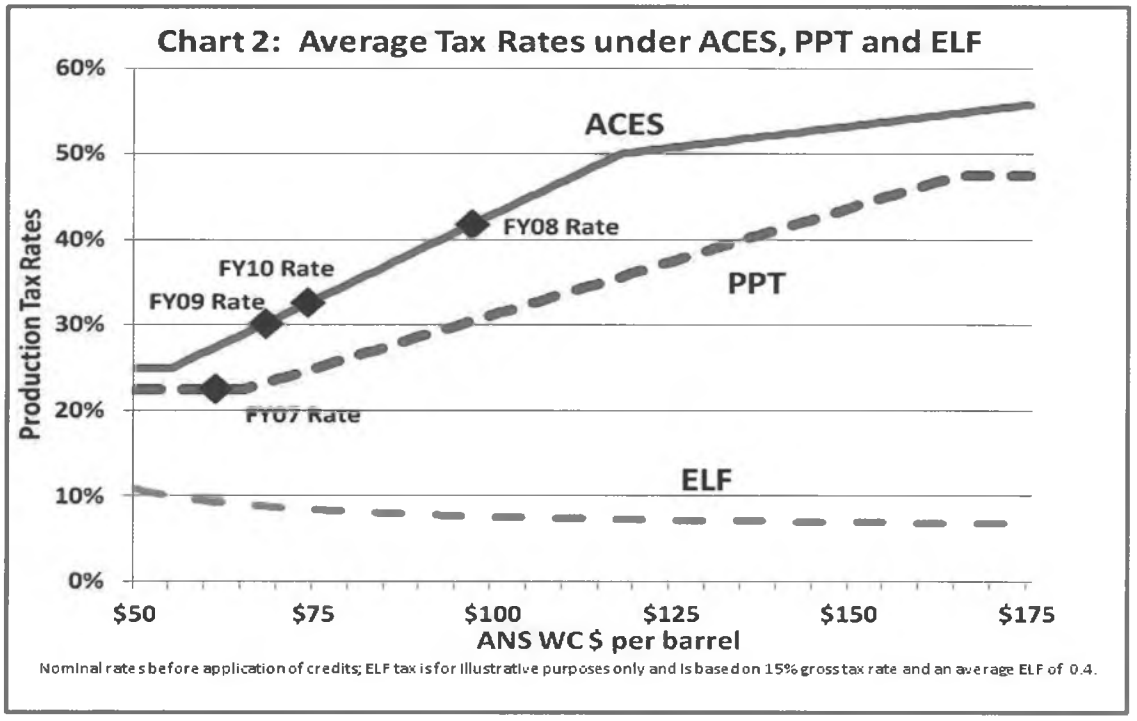
Production tax under both PPT and ACES is calculated on the net profits of oil and gas production, whereas ELF production tax was calculated on the gross profits of oil and gas production. Relative to taxes based on the gross value of production, net profit tax systems generally provide more tax revenue when oil prices are high and less tax revenue when prices are low. The progressive tax mechanism, designed to increase the total tax rate when per-barrel profit exceeds a pre-determined threshold, can increase the tax rate substantially. In addition to the progressive tax rate, the per-barrel profit level where the progressive tax is triggered is important. In the case of ACES, the progressive tax trigger is $30 net profit per barrel, whereas with PPT, the progressive tax trigger was $40 net profit per barrel.

Alaska North Slope (ANS) oil prices over the past four fiscal years were high relative to previous fiscal years. ANS crude prices over the four fiscal years of 2007 through 2010 averaged about $75 per barrel compared to $42 per barrel for the fiscal years of 2003 through 2006. Under ACES, an average price of $75 per barrel would yield an average profit of $50 per barrel, producing a combined base and progressivity tax rate of 33% (25% + [($50-$30)*.004]). The tax under this scenario before credits would be $16.50 per barrel. In contrast, the tax rate under ELF of 15% of the gross value at the point of production, even if the ELF calculated to 1, would yield a production tax of $10.50 per barrel, assuming transport costs of $5 per barrel.

When oil prices are low, however, a net profits-based tax structure would likely provide less production tax revenue than a gross profits-based tax. For example, a tax of 15% on the gross value, regardless of profit, could create a loss for companies producing oil

if profits were equal to or less than the tax. Because PPT and ACES recognize the costs of production in their calculation, a company with no profit would not pay any production tax and would likely get tax credits to offset future tax liabilities. Low oil prices experienced late in the year 2008 and early 2009 generated tax liabilities for many companies operating on the North Slope that were lower than they would have been under the ELF system.

Chart 2 below shows the average tax rates of PPT, ACES and ELF under a range of oil prices. Also shown is the average tax rate in each of the years that a net profits tax has been in place.



The department was also asked to review the tax rate for oil produced from private land of 5% of the gross value at the point of production.[2] The department is not aware of any concerns expressed on behalf of industry or private landowners as to the fairness of this tax.

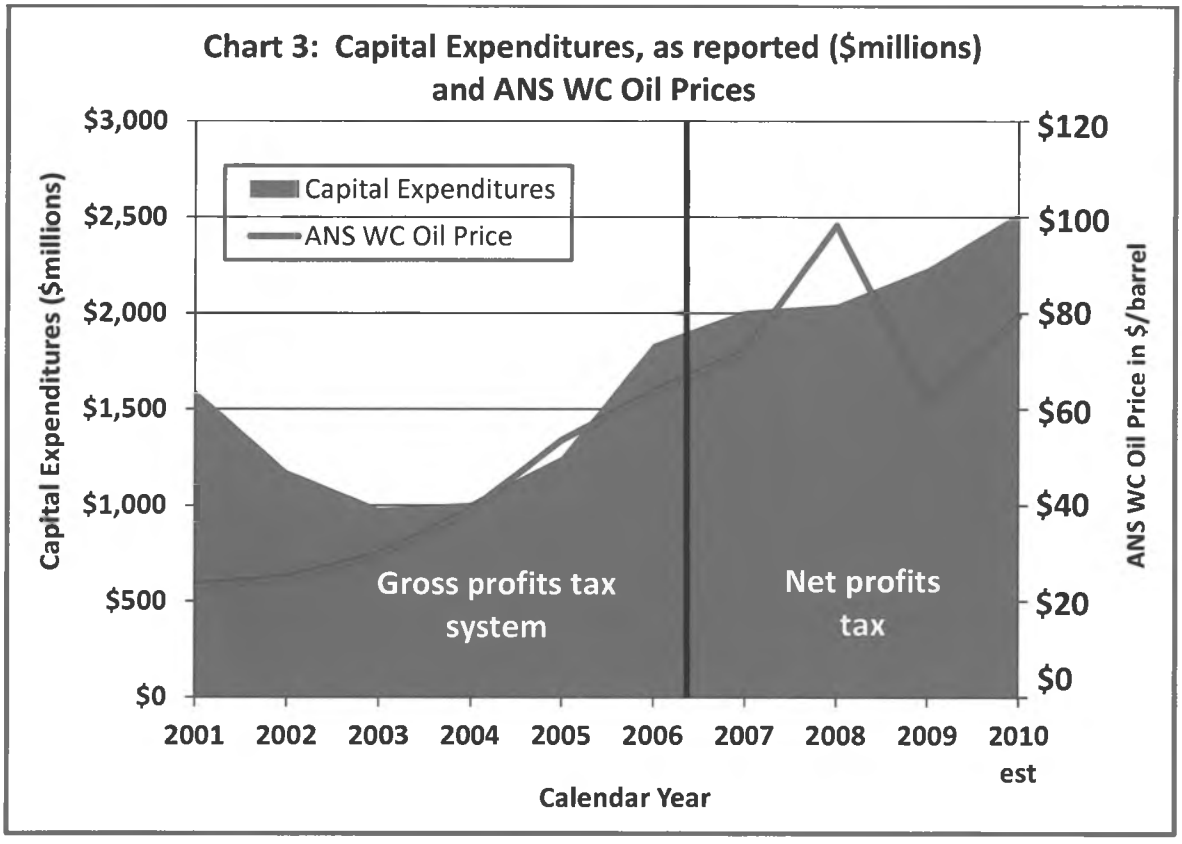
Industry Investment

Investment is an important component in Alaska's oil and gas industry. Producing oil, especially in an arctic environment, requires substantial financial outlays before, during

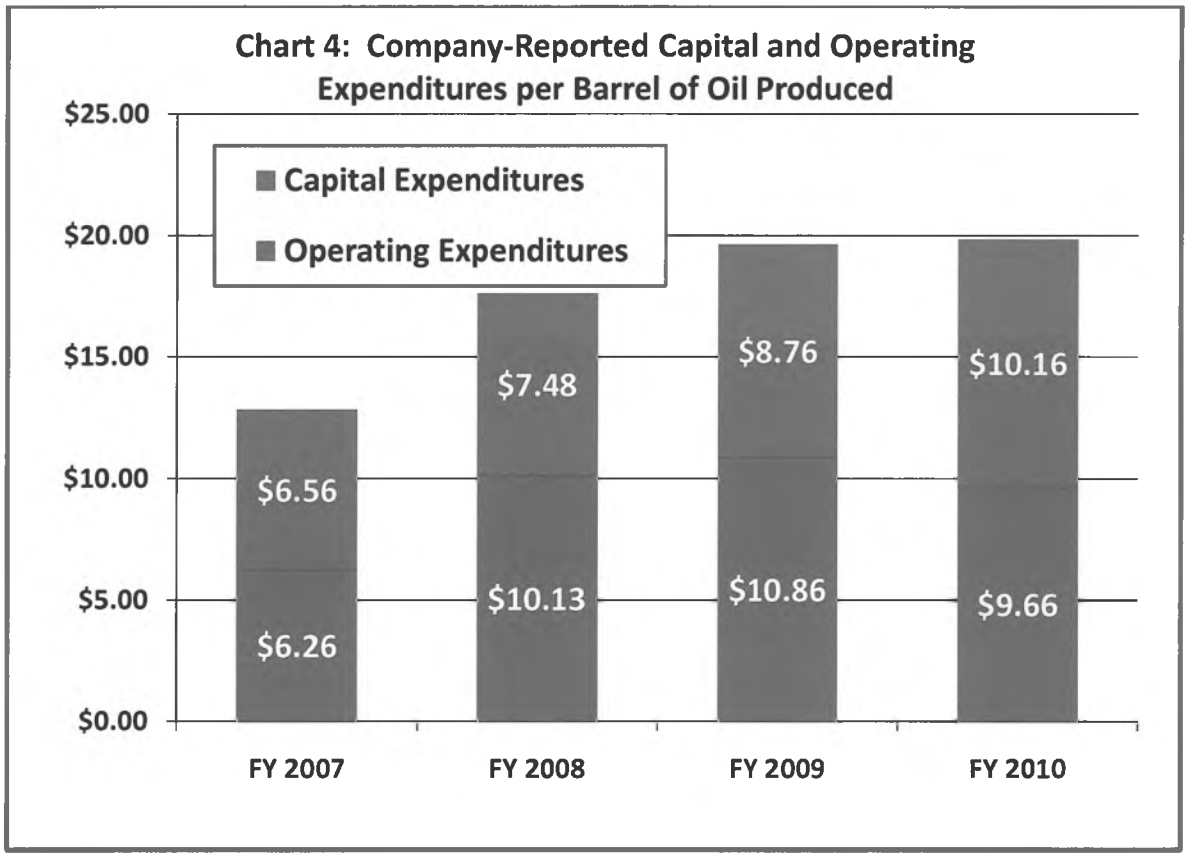
[2] AS 43.55.011(i)

and after producing the oil. In massive oil fields such as Prudhoe Bay, which has been operating for more than 30 years, maintaining and upgrading equipment and facilities is key to continued undisrupted oil production. Companies must also invest in research and new technologies in order to achieve the maximum recoverability of petroleum from the reservoirs they have developed. Because the companies that invest in petroleum projects can and do operate in areas outside of Alaska and the country, Alaska oil projects must compete with other petroleum opportunities throughout the world for those investment dollars.

Industry investment is generally reflected in capital expenditures, as opposed to operating expenditures, which are normally considered day-to-day expenditures for producing oil and gas. Alaska's fiscal system, which gives credits for capital expenditures, theoretically encourages these types of investments. Our review of the past 10 years of data appears to bear this out. Chart 3 below shows company-reported data from tax filings from calendar year 2001 through calendar 2010 (estimated). While capital expenditures over the five-year period (2006 through 2010) since the implementation of a net profits tax with credits for capital expenditures have increased each year, we have limited data as to the nature of the expenditures.

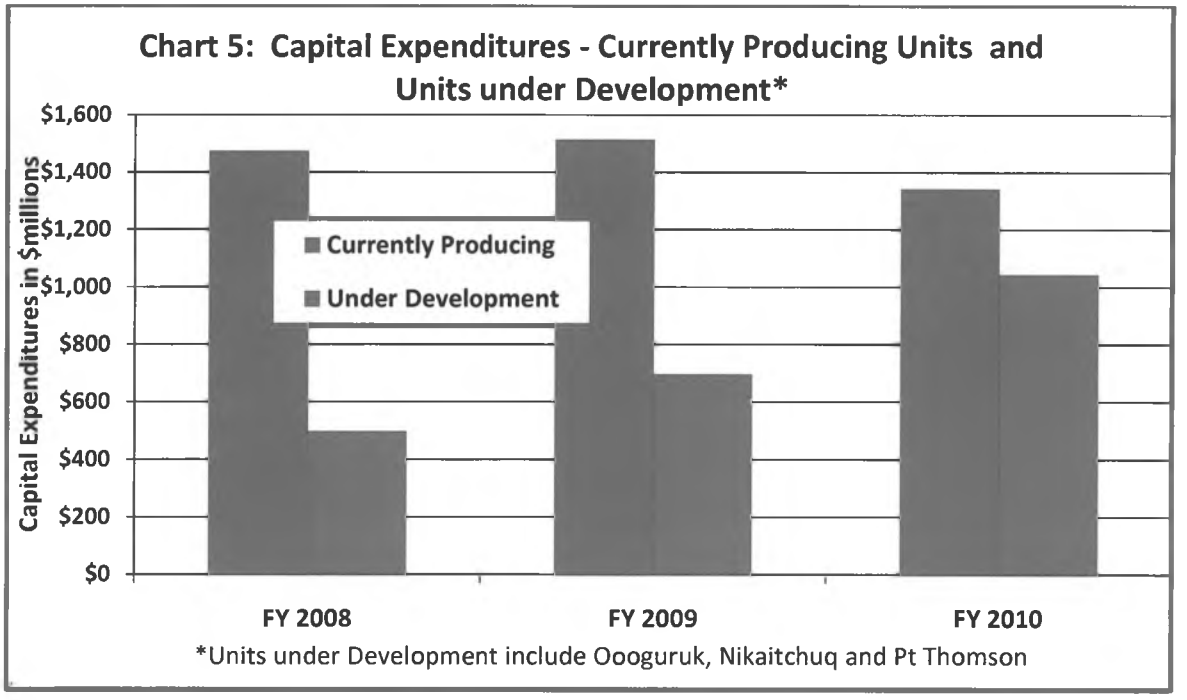


In the context of petroleum basin operations, capital expenditures are generally an indicator of expanding production or enhancing or extending the life of facilities or equipment. Expenditures for drilling wells normally fall into the category of capital expenditures as do expenditures for building housing or processing facilities. The Department of Revenue has extremely limited data from which to determine the nature of the capital expenditure increases. Given the age of North Slope facilities and infrastructure, it is quite possible that much of the capital investment in currently producing properties such as Prudhoe Bay is to extend the life of the facilities or infrastructure. Production on the North Slope continues to decrease, with a 7% decline rate between FY 2009 and FY 2010. The end result is that capital expenditures per barrel of oil produced are rising, while operating expenditures per barrel have leveled off and even decreased somewhat, as shown in Chart 4 below.[3]



[3] The slight decline in capital expenditures per barrel between FY 2007 and FY 2008 can be explained by the fact that FY 2007 included 14 months of expenditures, due to the effective date of the tax change of April 1, 2006.

One trend that has been observed in annual capital expenditures figures is that the proportion of capital spending in units under development has been increasing relative to the total capital expenditures spent on the North Slope. Chart 5 below shows expenditures by currently producing units and units under development over the past three fiscal years.

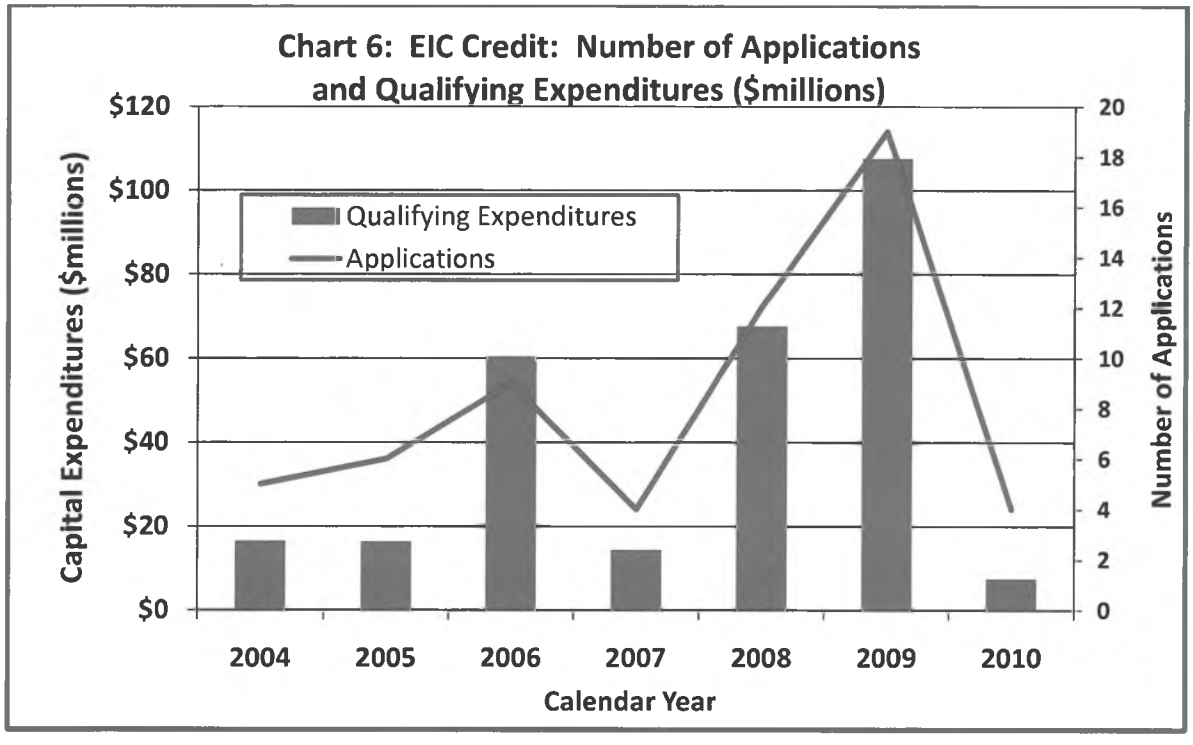


Capital expenditures also earn credits under the new production tax system. The credit system for capital expenditures on the North Slope does not distinguish between types of capital expenditures in existing units. The legislature in 2010 expanded the credit program in Cook Inlet to include an additional 20% credit (total of 40% credit) for lease expenditures related to wellwork. A credit increase of this nature may also prove beneficial to incentivize capital expenditures on drilling and increased wellwork on the North Slope.

Impact on Exploration, Development and Production

As discussed in the previous section, the net profits tax system includes credits for capital expenditures, without distinction as to the nature of the expenditure. The tax system also includes credits for exploration expenditures through its exploration incentive credit (EIC) at AS 43.55.025. This credit was implemented in 2003 and was expanded with the ACES tax changes. If a project meets certain exploration criteria, it may be eligible for 40% credit under the EIC program.

The department began receiving applications under the EIC program in 2004, and the number of applications and amount of qualifying expenditures has generally increased each year peaking in the winter of 2008/2009[4]. The number of applications for EIC credit decreased significantly in 2010, reflecting a decrease in activity for the winter of 2009/2010. Chart 6 shows the number of applications and the expenditures that qualify under the EIC program from 2004 through 2010.

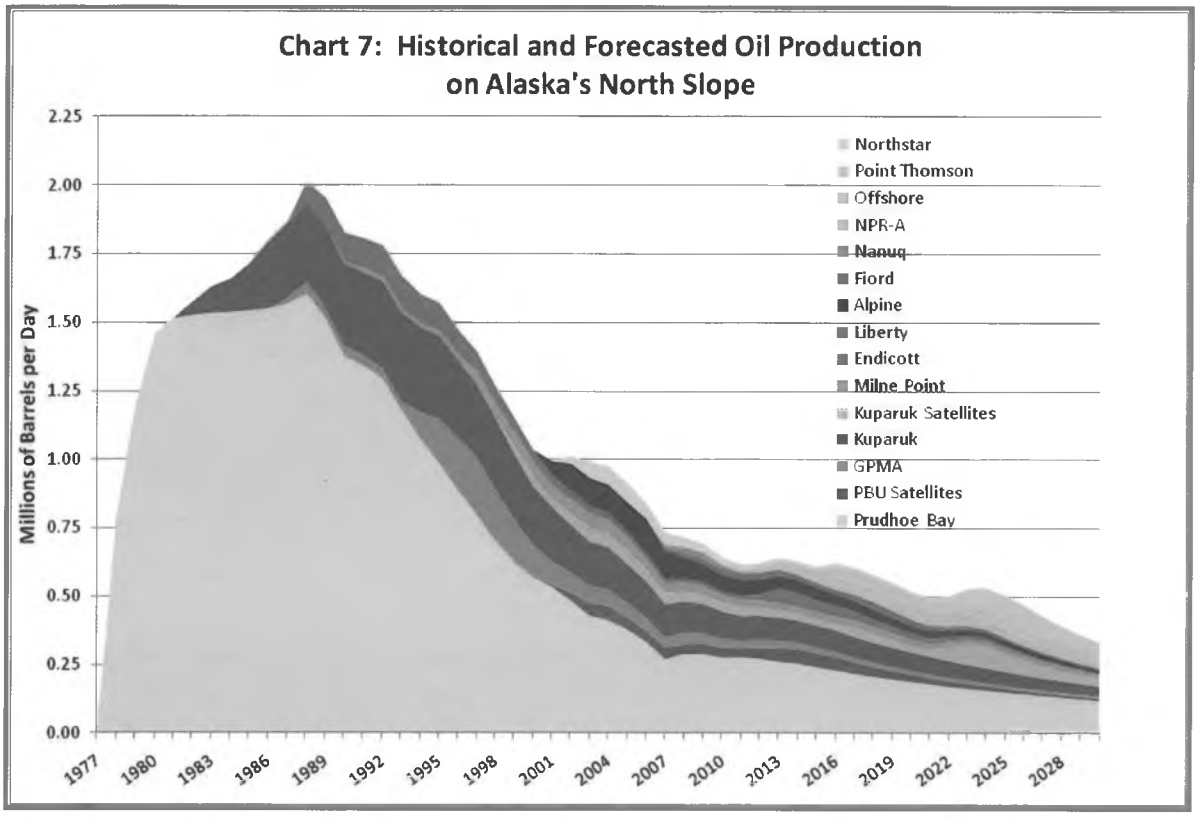


It is much more difficult to measure a tax system's impact on oil development and production from existing fields. The department's production forecasters twice annually create production profiles from limited information about an area's geology, drilling results, and other information exchanged in confidential discussions with operators. The compilation of production profiles for each North Slope field is a challenging task, employing the use of an engineering consultant, generally accepted engineering principles, and special software. The results of this compilation are subject to further revision as projects face delays that are typical in the petroleum industry such as reservoir challenges, permitting difficulties or lack of project funding.

New commercial developments on the North Slope include the Oooguruk Unit, which began production in 2009, and the Nikaitchuq Unit, which is expected to begin production in 2011. The Point Thomson Unit is also under development, expected to

[4] The sharp decrease in 2007 may be due to the tax change to the PPT, which at the time provided credit equal to the lower credit rate of the EIC program, without the reporting requirements.

begin production in 2015. Despite the addition of these developments, North Slope production continues to decline. From FY 2009 to FY 2010, oil production declined 7%; another 4% decline is projected between FY 2010 and FY 2011. Chart 7 below shows historical and projected oil production from the North Slope.

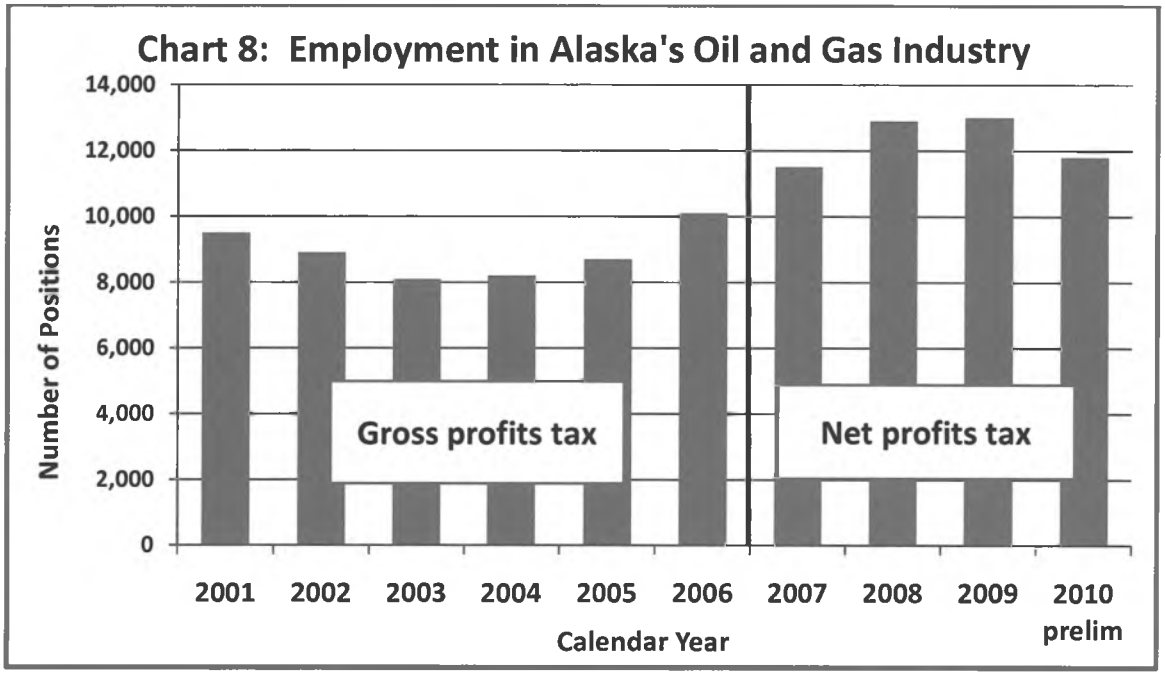


Industry Employment and New Entrants

Employment in the oil and gas sector is another important measure of the health of the oil and gas industry in Alaska. Although oil and gas employment is not the largest category in the state, it is among the most sought-after employment, due to high wages. The Alaska Department of Labor and Workforce Development (DOLWD) reports that in 2009, the average earnings for a person employed in the oil and gas extraction industry was close to $14,000 per month. These earnings are more than 3 times higher than the average earnings for all industries and government in the state of about $4,000 per month.

The department also reports number of employees by industry. Oil industry employment in the state includes jobs with duties that would fall into one of three categories: (1) oil and gas extraction; (2) drilling oil and gas wells; and (3) support activities for oil and gas operations. Officials at DOLWD acknowledge that the definition

is fairly narrow, leaving out important oil-related employment, such as jobs at Alyeska Pipeline Service Company and at refineries in the state. Employment in the oil and gas industry has increased in the years since PPT was implemented, although the department projects a slight decrease in 2010. These data are shown in Chart 8 below.



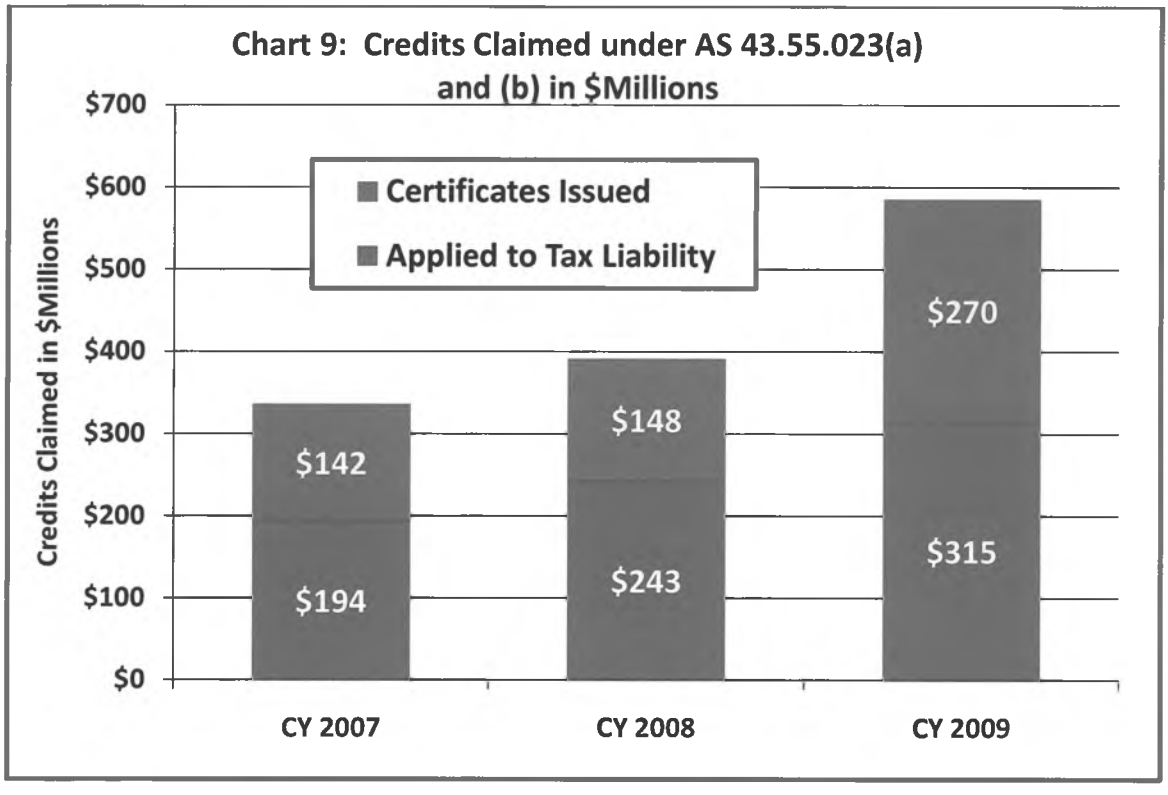
The state has seen new entrants into the Alaska oil and gas industry since the implementation of a net profits production tax. At the most recent lease sale held in October of 2010, a company new to Alaska successfully bid on over 100 tracts of oil and gas property. The steadily increasing number of production tax returns filed annually also indicates companies' new or renewed interest in Alaska's oil and gas opportunities. In 2006, the first year that filings were made under a net profits tax, there were 19 companies filing annual returns. In 2007, the number of companies filing production tax returns totaled 26, and in 2008, 36 companies filed annual production tax returns. The filing for 2009 increased only slightly from 2008, with 39 companies filing returns.

Use and Expansion of Tax Credits

Tax credits have played and continue to play an important role in the net profits production tax system. There are currently five credit programs specific to the oil and gas production tax, and each of the programs have had substantial interest, and in most cases, use from taxpayers. Alaska's tax credit programs are intended to steer spending to certain in-state activities.

The most widely used credits under the production tax system are the qualified capital expenditure credits at AS 43.55.023(a). Tax credits under this program may be applied to production tax to reduce a taxpayer's tax liability. If an oil and gas company has no tax liability, the credit may be carried forward, transferred to another company, or sold to the state. AS 43.55.023(b), credits for carried-forward net operating losses, are also widely used and may also be carried forward, transferred to another company, or sold to the state. Combined, these credits made up over 80% of the credits issued by the DOR Tax Division over the past three years.

Chart 9 below shows the total number of tax credits claimed under AS 43.55.023(a) and (b), categorized by the number of tax credits applied against a tax liability and the number of credits that were issued credit certificates for future use. We note that credits increased in each of the three years shown. The forecast for increased capital expenditures will translate to more credits applied against tax liabilities as well as more credits certificated.



Other credits include Small Producer/New Area Development credits (AS 43.55.024(a) and (c)) and Alternative Credit for Exploration (AS 43.55.025). These credits have seen less use than the credits under .023.

Credits have been expanded – both in credit rate and number of credits available – over the past year. The credit rate under the Qualified Capital Expenditure credit (AS 43.55.023) was increased for well lease expenditures relative to projects in Cook Inlet from 20% to 40%. Credit under the corporate income tax was also increased and extended (AS 43.20.043) for exploration and development of natural gas in Cook Inlet. The credit rate increased from 10% of qualified capital expenditures and qualified services to 25% of these costs and the credit program was extended from 2013 to 2016. For a complete listing of tax credits available against the production tax and other taxes, see the Fall 2010 *Revenue Sources Book*, at:
http://www.tax.alaska.gov/programs/documentviewer/viewer.aspx?2126f

Tax Administration and Compliance

The numerous changes associated with the shift from a tax on gross value to a tax on profits have been a challenge for the Department of Revenue in a few specific areas. The first order of business under a tax system with a new, different way of calculating the tax is to define the inputs. This has taken place over the past several years in the process of creating, vetting, and implementing regulations. The regulations writing process for the production tax change has been extraordinarily interactive with the taxpayers, incorporating their input in all phases of development. Although this process may have slowed the pace of development, it resulted in more clarity in a complex set of regulations. The regulations writing process continues to date.

The change to a production tax on net profits also posed challenges for the audit staff in the areas of hiring qualified auditors and training auditors for the new demands of the position. The department has had difficulties attracting qualified auditors under the state pay schedule. New and expanded credit programs have also added to their workload. Despite these challenges, the audit staff has completed most of the audits under the PPT system.

The greatest difficulties faced by the department since the implementation of a net profits production tax system are the collection, use, and storage of the huge amounts of data received monthly and annually. As an example, the department receives monthly information from each active oil and gas company regarding the amount of oil and gas produced, the amount spent in operating and capital expenditures, the amount of credits earned and used, and the payment submitted. The department also receives documents pertaining to petroleum sales and netback calculations, most of which are submitted in Adobe Acrobat pdf format, which is not a suitable format for data storage or use. Assembling this data in a useable format is time-intensive and subject to error, as the data are cut and pasted into spreadsheets manually. Further compilations and changes subject the data to additional error and distortion.

The department's access to and use of this important data would be substantially improved if the information were housed in a central database, with access provided to all users of the data. The department believes securing a database will assist in operating more efficiently and effectively as an interface with both taxpayers and the public.

Conclusions and Recommendations

A government's fiscal regime is just one element for oil and gas companies to consider when weighing options for where to invest. Many other elements, such as resource risk, political risk, environmental factors, and availability of labor and equipment, also play a part in companies' decisions about where to invest. It is very difficult to separate these factors in order to determine the extent to which a government's fiscal system influences investment choices.

While it is untenable to blame a tax system for the lack of industry investment, it is equally untenable to claim that the tax system is the reason increased activity or investment occurs. The past three years have seen dramatic swings in oil prices from a high of $134 per barrel to a low of $38 per barrel just 6 months later. An economic recession stifled investment and business activity in the United States and much of the developed world for over a year. The economic activity of the past three years may not have been the best benchmark by which to judge the impact of a tax system.

Nevertheless, it is prudent for state officials to monitor praise for and criticisms of its fiscal systems from both industry and the general population that they serve. High oil prices of recent years have swelled state bank accounts and some have suggested that the state is in the best financial position since statehood. Business periodicals and industry journals report that state is benefitting at the expense of a single industry – petroleum – and that the tax rate under ACES is too high and "takes away the upside" for the oil and gas producers. Criticism is often centered around the marginal tax rate under ACES, under which the government share of each additional dollar of profit may be as high as 93%.

State officials also make efforts to stay informed on the global oil and gas markets and opportunities in other jurisdictions, including how Alaska ranks competitively against them. Among the recent events in government taxation was the royalty modification undertaken by the Canadian province of Alberta. Studies conducted for the Alberta government showed that the royalty changes made in 2007, combined with the recession, the changes in natural gas markets, and other jurisdictions' efforts to attract investment, were making Alberta less competitive for limited petroleum investment

capital. The government responded to this information by changing its royalty structure in a way that the government's share of oil and gas profits would be lower.

The State of Alaska depends heavily on the oil industry, with more than 80% of its unrestricted revenue coming from oil taxes and royalties. State officials should continue to monitor the state's competitiveness in oil and gas opportunities, and be prepared to modify it as the need arises.

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400
Juneau, Alaska 99800-0400
Phone: (907) 465-2300
Fax: (907) 465-2389

The Honorable Paul Seaton
State Capitol Room 102
Juneau AK, 99801

February 18, 2011

SUBJECT: Response to Questions regarding House Bill 110 on February 8, 2011

Dear Representative Seaton:

The purpose of this document is to respond to four questions about House Bill 110 submitted by your office via email on February 8, 2011. The questions and answers to those questions follow.

(1) HB 110 proposes a separate tax regime on new fields than on existing fields. Under a scenario where a company is producing oil from an existing field, and simultaneously moves into a new field and begins producing oil from that field please describe the anticipated change in how state Auditors will approach company operations, given the cost and tax differentials between these existing and new fields. Will DOR be requesting additional auditors? How many of these auditors will be Field Auditors as opposed to office Auditors.

The Department does not anticipate a need for additional auditors due to the lower tax rate for new fields. The Department does not make a distinction between "field auditors" and "office auditors". Each auditor visits taxpayer offices as necessary for access to files and information that has to be viewed in the taxpayer's office.

(2) Will the Ugnu heavy oil formation be considered a new field? How will a separate formation within an existing unit be treated by the Department?

The Department uses the concepts of "units" and "participating areas" to distinguish between different oil and gas accumulations for tax purposes. The majority of the Ugnu formation is located within existing units, primarily the Prudhoe Bay, Kuparuk, and Milne Point units. Any production and lease expenditures would be included in information reported for the relevant unit, likely as a new participating area within the unit. Similarly, current viscous oil production is included in information reported for the relevant units. For example, the West Sak participating

area is part of the Kuparuk River Unit, and the Orion participating area is part of the Prudhoe Bay Unit.

To the extent that portions of the Ugnu formation are located outside of existing units, those areas could qualify for the lower tax rates provided for new units in HB 110.

(3) If state net profit taxes on petroleum are reduced by roughly $1 billion, what is the anticipated amount of federal tax that will be paid by companies on this increase in revenue?

The Department's modeling of federal government revenue typically assumes a 35% marginal tax rate for federal corporate income tax. If a $1 billion reduction in state taxes results in a $1 billion increase in taxable income, our modeling would suggest a $350 million increase in federal corporate income tax revenue. If the tax reduction is instead reinvested into additional development in Alaska, as intended, the benefit to the federal government would be reduced or eliminated. The Department plans to present more detailed information related to federal government revenue and total government take at a future bill hearing.

(4) Please create two separate models of the revenue picture for the state. One model should use the current tax structure established under ACES, and the other model use the Governor's proposed tax structure under HB 110. Apply the following assumptions to both models:

- **50% TAPS throughput is oil from New Fields (over a seven-year period TAPS Legacy Field oil is switched over to New Field Oil at a rate of 7% per year so that at the end of the seven years roughly 50% of TAPS throughput is New Field Oil.)**
- **ANS WC price of $90 per barrel (and $50 per barrel) with a cost of $36 per barrel**
- **$15 Billion in capital investment for new infrastructure available for credit**

The Department has developed models that allow us to compare revenues under the current and proposed tax structures. There are a number of assumptions that must be made in addition to the assumptions outlined above. We would like to meet with you to further clarify the scenario before proceeding.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400
Juneau, Alaska 99800-0400

The Honorable Paul Seaton
The Honorable Eric Feige
Co-Chairs, House Resources Committee
Alaska State Legislature
Juneau AK, 99801

February 21, 2011

SUBJECT: Response to Questions from House Resources Meeting on February 7, 2011

Dear Representatives Seaton and Feige:

The purpose of this document is to respond to the follow-up questions from the House Resources Committee meeting on February 7, 2011. The requests/questions and responses follow.

(1) Provide information about the department's record in forecasting.

The majority of revenue comes from oil production. The department's revenue forecast is driven primarily by two inputs: oil production and oil price. The following discussion briefly discusses the department's history in forecasting these two variables.

Production Forecasting
Recently, inquiries have been made regarding the accuracy and reliability of historical oil production forecasts published by the Department. History has shown that our production forecasts have been overstated for many years. With changes to methodologies and processes in the last two years, the amount by which production forecasts have been overstated has been reduced to 2%. Because of the production forecasting changes made in 2009, it is unfair to compare the last two years to the past. The Department will continue to exercise due diligence and care in the preparation, and review of the production forecasts. The response that follows will examine factors that may have contributed to differences in forecast vs. actual production for Alaska's North Slope (ANS).

The Department of Revenue relies on historical production data as well as both public and private information as the basis for its biannual production forecast. Because forecasts are directly affected by the quality of the input data, the Department of Revenue production forecasts are sensitive to data provided both publicly and privately by the field operators.

It is important to define both what is involved in a production forecast and what is not. In general terms, a forecast is simply an opinion of future oil production. In addition to the quality

of the input data, the uncertainty of the forecast will also depend on the methods employed by the forecaster. Historically, the Department engaged a single contractor to conduct its forecasts until 2009. This contractor relied on a certain method to produce his forecasts. Beginning in 2009 a new contractor was engaged to perform the forecasts and relies on a different methodology to forecast production.

It is also necessary to understand from the outset that, under both current and former methodologies, the production forecasts conducted for and under the directive of the Department have been based only on technically recoverable oil. The forecasts do not include any analysis of whether or not barrels that are technically recoverable are also economically recoverable. This is reasonable given that near term oil production should be relatively certain. Involving an analysis that included economically recoverable barrels would add another layer of complexity and uncertainty to the forecast and require that the department, in essence, predict the future value of a barrel of oil. At the same time this added uncertainty would not provide any cure for near term production overestimates.

As previously mentioned, the accuracy of the forecast will be highly dependent on the methods used by the person making the forecast. In this regard, the current methods employed by the department's staff and contractor have changed significantly from the previous contractor. The result has been that the near term forecasts have been within about 2% of actual production during that same time period.

Perhaps one of the most significant changes in methodology relates to the use of a well-by-well analysis to forecast production and decline curves as used in the current practice, whereas in the past, forecasting had been done on an area-wide or field basis. While the well-by-well basis is more time and labor intensive, the methodology reveals trends that are not observable on an area-wide basis.

Current practice also includes internal staff in addition to the contractor. The department performs in-depth analysis of production trends, forecast to forecast by field, and comparisons of forecasted production to actual, among other analyses.

Another factor that has likely had a material impact and is currently employed in the new methodology is the magnitude of the "b factor" used to calculate the production decline curve. The factor previously used had been as high as 1.4 and has now been reduced to be less than 1.0 in current practice. There is a large body of empirical evidence indicating that “b” factor should never be greater than or equal to 1.0 in any field.

By employing a method of forecasting that adheres to strict and standard petroleum engineering principles the department now excludes barrels that may fall into a high risk area of eventually being brought into future production. For example, both back out barrels and certain recovery projects that have not been tested and proven could be subject to many variables that may or may

not lead to their ultimate production. Accordingly, these volumes are now only included in the department's forecast if they are shown to be in place and have demonstrated a response.

Some factors are beyond the state's control. A standard practice is to go to the producer's and ask when new fields may come on line. A good example is Liberty, which had originally been predicted to begin production in 2011. However, recent events and decisions by the company have delayed start-up until somewhere around 2013. Even though the Liberty pool is in federal waters, facilities are located onshore and production will flow through TAPS and had been included by the state in forecasting total ANS production. When setbacks in timing such as Liberty are unforeseeable, they will by definition, show up as errors in any forecast at a later date.

Below are three additional examples:

1. Aurora Field
   "BP Exploration (Alaska) Inc. said Feb. 23 that production is expected to increase to a peak rate of 15,000 to 20,000 barrels per day as field development continues." *"Aurora field begins production." 2/28/01 Petroleum News*
   - Production at Aurora peaked at an average of 10,447 barrels per day in 2006 according to DNR – just over half of the highest estimate by BP in 2001.

2. Polaris Field
   "BP will develop Polaris with water flood, which is expected to improve total recovery to 15-30 percent of original oil in place, with production rates expected to peak at 12,000-15,000 barrels of oil per day from water injection…" *"BP applies for pool rules for viscous Schrader Bluff Polaris accumulation: Company tells AOGCC western Prudhoe satellite will be developed with water flood, EOR test deferred; initial wells proving up productivity, but hydrate formation causing problems in keeping wells operating; Ugnu sand included." 12/29/02 Petroleum News*
   - Through 2009 production at the Polaris field had not reached the levels predicted by BP in 2002. Specifically, production at the Polaris field peaked at an average of 4,764 barrels per day in 2008 – approximately 60% less than BP predicted in 2002.

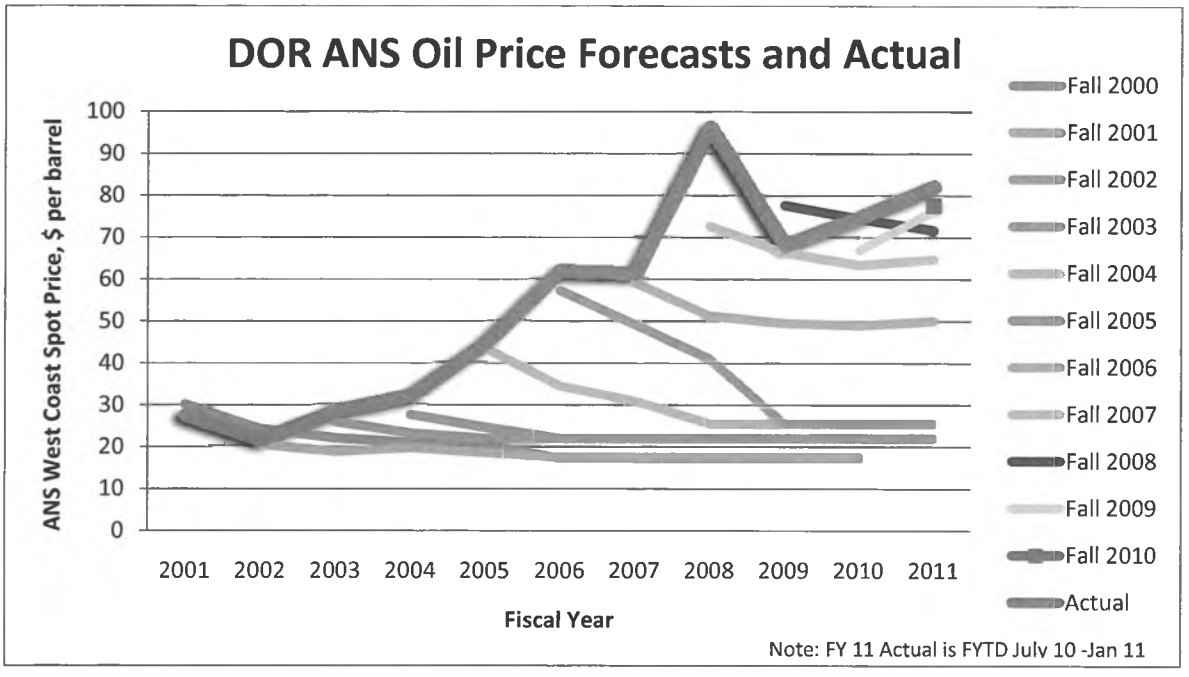
3. West Sak Field
   "The companies said production of West Sak oil is now at about 10,000 barrels per day, and with the Drill Site 1E and 1J project, production is expected to reach approximately 45,000 bpd by 2007." *"$500 million West Sak heavy oil project approved." 8/15/2004 Petroleum News*
   - According to DNR, production at West Sak was just over 11,000 barrels per day in 2004. In 2007 West Sak produced an average of 17,575 barrels per day or less than 40% of the rate forecast by BP in 2004. As of 2009, production at West Sak still has not reached 20,000 barrels a day.

Because the Department of Revenue relies, at least in part, on information provided by the operators of each field in order to forecast production, bias or error inherent in the operator's view of future production often translates into the forecast variances by the Department of Revenue. In short, the forecast is limited by the quality of the data inputs, the methodologies used, and unforeseen events. Incorporating internal staff, the additional in-depth analysis and controls, and sound petroleum engineering methods are steps taken by the department to improve the quality of the production forecast.

Price Forecasting

The chart below shows the DOR fall oil price forecasts from fall 2000 through fall 2010 compared to actual oil prices. The past decade was defined by a swift rise in oil prices from FY 2002 to FY 2007, followed by a sudden spike in FY 2008 and a subsequent crash. The chart shows the rapid rise in price was not anticipated by the department's forecasts. This is on par with other forecasts made during this period. For example, in 2002 the U.S. Energy Information Administration (EIA) forecasted the world oil price would be $23.36 (2000 dollars) in CY 2010. The actual CY 2010 price was $60.56 per barrel (2000 dollars). Moreover, during the previous decade the EIA's forecasts were typically more bullish than other oil price forecasts made by several reputable groups, such as the International Energy Agency, Petroleum Economics Ltd., Natural Resources Canada, and others.

After the price crash, prices remained around $70 to $80 per barrel until last fall when prices began to climb above this range. The price of ANS West Coast (ANS WC) peaked close to $100 per barrel in early February of this year. The department's current ANS WC price projection for FY 2011 is $77.96. As of the end of January, the fiscal-year-to-date price for ANS WC is $82.32.



(2) Provide information about transit pipelines for new developments. Specifically, who would construct them, how much would they cost, and who would pay for them and how?

Oil is transported through gathering lines, transit lines and feeder pipelines before it gets into the Trans-Alaska Pipeline System (TAPS). The owners (producers) of the oil incur the costs of gathering crude oil from the wellhead and getting it to a point where it can be processed and treated to become pipeline quality. Additional lines may need to be constructed from the central processing facility if no infrastructure exists.

An upstream pipeline is the first pipeline to transport oil en route to an interconnection point for delivery to another pipeline. Producers usually provide the gathering lines, central processing facilities and transit lines to the downstream pipelines.

A downstream pipeline receives oil from another pipeline. Producers often have ownership in feeder pipelines and larger lines like TAPS where they provide transportation for others as a common carrier and are subject to RCA and FERC regulations. Rates on such pipelines are designed to recover the cost of providing the transportation service (including a return of and a return on investment) through a tariff paid by the shippers on the line. Shippers nominate volumes and the pipeline company manages the flow.

The cost of a pipeline depends on the location, length of the line and size and quality of the pipe. Costs for a particular system will depend on the specification of those variables. The scope of a

project quantifies those variables from estimates of throughput, reserves, production and life of the field, which are some of the factors that also determine if a find is economic to develop. The range of costs per barrel mile of oil transported is not meaningful without defining the scope of the project.

The Oil and Gas Journal publishes an annual Pipeline Economics Report which includes data on pipeline and compressor station construction costs. Data also includes estimated pipeline costs as presented in applications to FERC. The study is available for purchase through the following link:

http://www.pennenergy.com/index/research-and_data/oil-and_gas/product-display/2130774133/products/pennenergy/research/Petroleum/PipeLines-Transportation-Storage/surveys/us-pipeline-study.html

(3) Provide a discussion on the fiscal impact of switching from a monthly to an annual tax rate calculation.

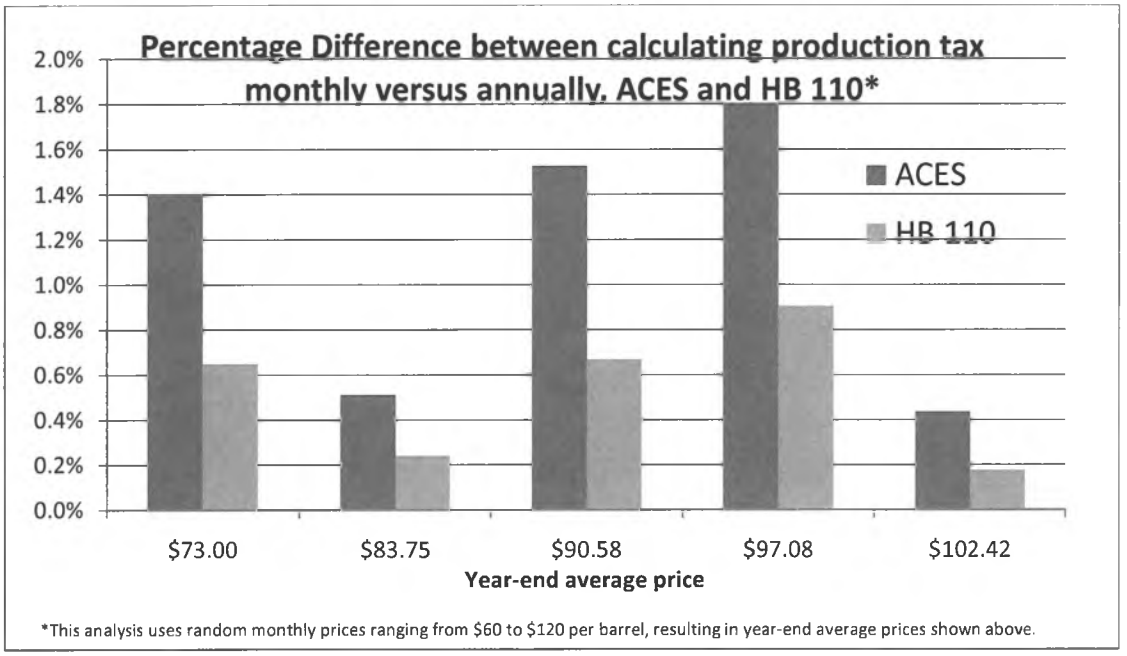
Under current law, ACES is an annual tax with monthly estimated payments based on production levels and oil price in the months the estimate is calculated and on one-twelfth of annualized lease expenditures. The proposal under HB 110 is to change the calculation such that the tax liability is calculated using average annual production levels and an average annual price along with annualized lease expenditures. Estimated monthly production tax payments would still be made under this proposal, but would be "trued up" in the annual tax return when the average annualized figures are known.

The fiscal impact to state revenues of this change alone may be significant in years where there is substantial monthly oil price volatility. A recent example of the extremes in oil price volatility may be found in FY 2009, when oil prices reached $133 per barrel in July and decreased 71% in five months to $37 per barrel in December 2008.

The impact of changing from a monthly to an annual tax calculation is greater under the current ACES tax than it is under the proposed tax structure with bracketed tax rates. This is because the progressive tax under current law is formulaic, and each dollar increase in profit increases the tax rate. Under the proposed HB 110, the tax rate would be bracketed, with the same tax rate applied to a range of profits per barrel. For example, profits of $56 per barrel would be taxed at the same rate as profits of $67 per barrel under the HB 110 proposal. This means of calculating the tax rate provides for less production tax volatility even if it were calculated using monthly values.

We tested this theory by applying a range of monthly prices to forecasted assumptions about production levels and lease expenditure levels, holding these levels flat from month to month, despite potential seasonal variation. With these assumptions, we found that although more

production tax was generated by calculating the production tax monthly than by calculating the tax annually, there was less of a difference in the monthly/annual calculation under the bracketed rates in HB 110 than with the rates currently under ACES, as shown below.



(4) What was the rationale for the $12 million figure for the Small Producer Credit and the $6 million figure for the New Area Development Credit in ACES?

The original PPT proposal in 2006 from then-Governor Frank Murkowski proposed a "standard deduction" of $73 million per year for each taxpayer.

As a deduction under the proposed tax at 20%, the tax savings per taxpayer would have been $14.6 million per year (20% x $73 million). The deduction would have applied to all companies, regardless of how much oil they produced, although there was legislative testimony that indicated that the amount was calculated based on production of 5,000 barrels of oil per day at $40 per barrel (5,000 x $40 x 365).

The tax proposal was heard in several legislative committees and underwent numerous changes in each committee. Among the changes was a shift in the standard deduction provision from a deduction to a credit. The committee substitute from the House Resources Committee changed the provision into a $12 million credit, which closely approximates the $14.6 million in the original proposal.

Although it is unclear how and when the provision was pared down to include only producers with 100,000 barrels of oil equivalent, the credit was generally regarded as an incentive to small producers. Later in the process, likely in one of the special sessions held to consider the tax changes, the New Area Development Credit was added. It is also likely that the amounts were fixed at $12 million and $6 million for ease in applying to the 12 months of a year.

(5) Provide a list of small producers that qualify for the Small Producer credit.

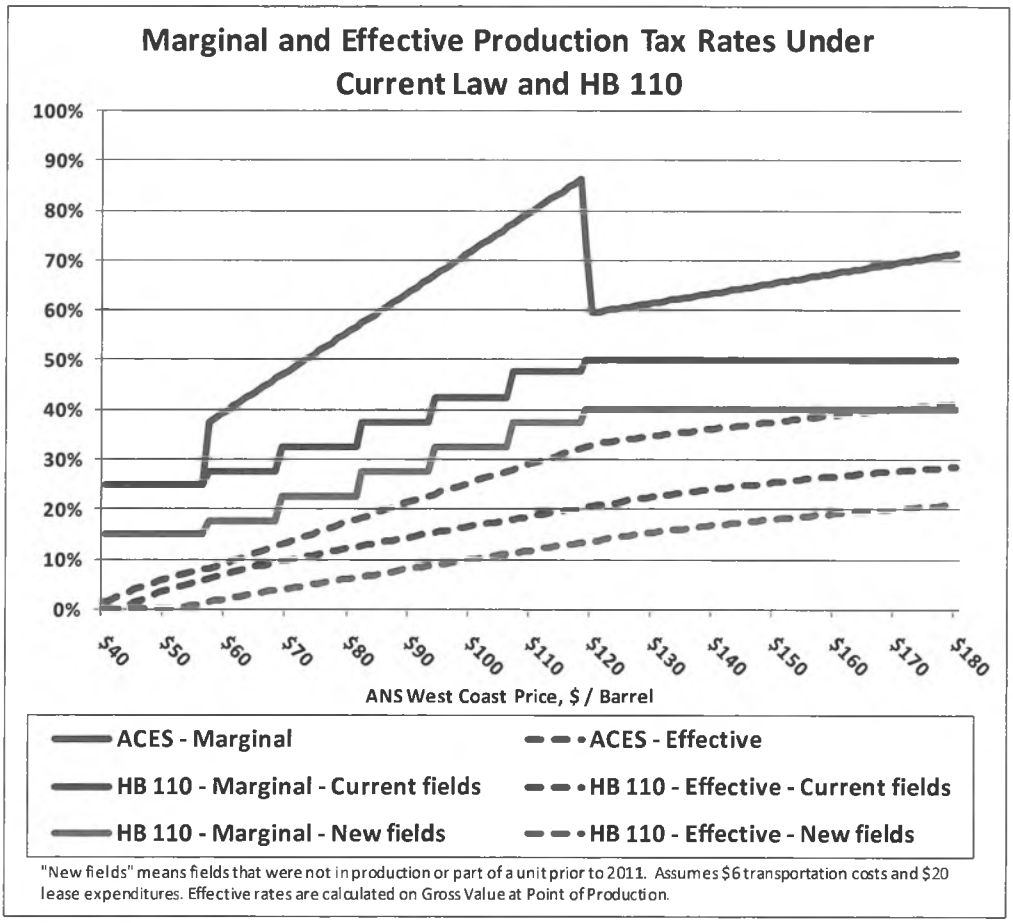
The small producer credit at AS 43.55.024(c) is available to producers who produce less than 100,000 BTU equivalent barrels of oil or gas per day and the credit may only be applied against a tax liability, and not carried forward or certificated. Although the amount of tax liability a producer has and the amount of credit they have earned is considered taxpayer-confidential, the production level of each of the producers is not confidential. Provided below is a list of producers who are currently producing oil and/or gas at levels below 100,000 BTU equivalent barrels per day. Assuming they have a production tax liability, they would be eligible for some or all of the $12 million tax credit.

Companies Currently Eligible for Credit under AS 43.55.024(c)

1. Anadarko Petroleum Corporation
2. Aurora Gas
3. Chevron Corporation
4. Cook Inlet Energy
5. Doyon Limited
6. ENI S.p.A.
7. Marathon Oil Corporation
8. Municipal Light and Power
9. Nana Regional Corporation
10. Pioneer Natural Resources
11. XTO Energy

(6) Provide a figure showing ACES marginal and effective tax rates on same chart.

The chart below shows the marginal and effective tax rates under ACES and HB 110. The marginal tax rate reflects the tax rate on a $1 increase in production tax value. The effective tax rate is the average tax rate assessed on the gross value at the point of production after credits have been applied.



(7) Provide a list of the top ten petroleum producing states that we are competing against for investment.

According to the Energy Information Administration, the following table shows the top ten oil producing states in 2009.

Top Ten Oil Producing States in the U.S.

State	Average Daily Production (thousands of barrels per day)
Texas	1,106
Alaska	645
California	567
North Dakota	218
Louisiana	189
Oklahoma	184
New Mexico	168
Wyoming	141
Kansas	108
Colorado	78

(8) Compare credits offered by other states with Alaska's credits.

This response is composed of two parts. The first part discusses tax incentives in various states and the second part discussed corporate income tax credits in other states.

Many other states offer tax incentives, exemptions, credits, or temporary suspensions, to reduce the tax on certain production. Generally, these tax incentives apply to production from a specified geographic area or a type of well or drilling technique. The incentive may be a reduced tax rate or an exemption from tax for a specified time period. States may exempt production from some wells, such as stripper wells entirely. Incentives may be limited to a certain volume or gross value at the well, or allowed only up to a certain percentage of project recovery costs.

Here are some common types of tax incentives:

Horizontal drilling definition: Some states offer incentives to encourage use of horizontal drilling. Although horizontal wells may have higher drilling costs, they may also have higher recovery rates. North Dakota defines horizontal well as meaning "a well with a horizontal displacement of the well bore drilled at an angle of at least eighty degrees within the productive formation of at least three hundred feet." Other states require an angle of at least 70 degrees, or less of a drilling depth.

Tax rate variation: Adjustable tax rates may apply to all production based on the price of oil or gas, or only to production from new, stripper, or horizontal wells. The reduced tax rate may

apply only up to a certain volume or market price, when that "trigger" volume or market price is reached, some of the tax incentives no longer apply.

Exemptions or reduced rate: A common tax incentive in a gross tax system is to exempt production for certain time, or to allow a reduced rate up to a certain production volume. To qualify, the well may need to be certified as a new, horizontal, or other type of well that qualifies for favored tax treatment.

Demonstration of increased production: This type of incentive can be related to a marginal well, an enhanced-recovery project or any well with declining production. In short, a baseline production amount is established and the operator applies to the tax or other commission for approval of a project designed to increase production. If the well production does increase, the operator may be eligible for a tax refund, exemption or other tax incentive, such as recovery of all or part of the project costs.

The following are some tax incentives in other states[1]:

Louisiana Severance Tax Exemptions, Rates and Suspensions
Oil Full Rate: 12-1/2% of its value at the time and place of severance
Incapable Oil Rate: 6-1/4% of its value. Oil produced from a well is incapable of producing an average of more than twenty-five barrels of oil per day during the entire taxable month and which also produces at least fifty percent salt water per day.

Stripper Oil Rate: 3-1/8% of its value. Oil produced from a well that is incapable of producing an average of more than ten barrels of oil per day during the entire taxable month.

Oil tax deduction allows producers to deduct a $0.25 per barrel for transporting oil or condensate from producing fields to processing facilities.

Tertiary recovery severance tax suspension: Allows crude oil production from a qualified tertiary project not to pay severance tax until the project has reached payout.

Horizontal mining and drilling projects severance tax suspension: Taxed at the special reduced rate of 3.125% of value until the cumulative value of hydrocarbon production from the project equals 2.33 times the private investment invested by the working interest owners.

Horizontal wells severance tax suspension: On any horizontally drilled well or any horizontal recompletions from which production commences after July 31,1994, all severance tax shall be suspended for a period of 24 months or until payout of well cost is achieved, whichever comes

[1] These states have gross tax systems, so upstream costs are not accounted for in determining the wellhead value, although some tax credits may incorporate a determination of exploration and development costs to calculate a project payback.

first. Pay out of well cost shall be the cost of completing the well to commencement of production.

Deep wells severance tax suspension: Wells drilled to a true vertical depth of 15,000 feet or more, where production commences after July 31, 1994 shall be exempt from severance tax for 24 months from the date production begins, or until payout of well cost, whichever comes first.

Texas Severance Tax Incentives

Enhanced Oil Recovery(EOR) Incentive: Oil produced from an approved new enhanced oil recovery project or expansion of an existing project is eligible for a special EOR tax rate of 2.3 percent of the production's market value(one-half of the standard rate) for 10 years after Commission certification of production response. For the expansion of an existing project the reduced rate is applied to the incremental increase in production after response certification.

The two year inactive well incentive: If an oil or gas well has been inactive(i.e., has no more than one month of production) during the preceding two years, any new oil, gas well gas, or casing head gas production may be eligible for up to a 10-year severance tax exemption.

Severance tax relief for marginal oil wells: The bill provides three levels of tax credits on oil production from qualified low-producing oil leases for any given month, depending on Comptroller's average taxable oil prices, adjusted to 2005 dollars, based on applicable price indices of the previous three months. An operator of a qualifying low-producing oil lease would be entitled to: (1) a 25% tax credit if the average taxable oil price were above $25 per barrel but not more than $30; (2) a 50% tax credit if the price were above $22 per barrel but not more than $25, and (3) a 100% tax credit if the price were $22 or less. The bill defines a qualifying low-producing oil lease as a lease that averages, over a 90-day period, less than 15 barrels per day per well or 5% recoverable oil per barrel of produced water per well.

Enhanced Efficiency Equipment Severance Tax Credit: Severance tax credits are available for marginal wells (an oil well that produces 10 barrels of oil or less per day on average during a month) for using equipment that reduces the energy required to produce a barrel of fluid by 10% as compared to alternative equipment.

Oklahoma Severance Tax Incentives

Tertiary Oil Recovery Projects: Any incremental production of crude oil or other liquid hydrocarbons which results from an enhanced recovery project is exempt starting from the project beginning date until project payback is achieved but not to exceed a payback period of 36 months.

Horizontally Drilled Well: The production of oil and gas from a horizontally drilled well producing prior to July 1, 1994, is exempt starting from the project beginning date until project payback is achieved, but not to exceed a payback period of 24 months commencing with the month of initial production.

North Dakota Oil Extraction Tax Incentive
Oil Extraction Tax Incentive for Bakken Horizontal Wells: The first seventy-five thousand barrels of oil produced during the first eighteen months after completion, from a horizontal well drilled and completed in the Bakken formation after June 30, 2007, and before July 1, 2008, is subject to a reduced tax rate of 2% of the gross value at the well of the oil extracted under this chapter.

*The gross production tax rate on gas is subject to a price index change on July 1 each year, the rate through June 30, 2011 is $.0914 per mcf. The gross production tax rate on oil is 5% of the gross value and the oil extraction tax rate is 6.5% of the gross value; 4% if the well qualifies for a reduced rate; 2% from qualifying wells in the Bakken formation; and 0% if the well qualifies for an exemption.

The following list discusses credits that are offered against corporate income tax in several other oil and gas producing states.

- California: **Enhanced Oil Recovery Credit:** Taxpayers are allowed a credit of one third of the federal tax against state tax.[2] This results in a credit of 5% of allowable costs for projects in California. No deductions for costs allowed as a credit; reduce basis in property by amount of the credit. Because federal credit is currently phased out, there is no current California credit. (See federal credits page).
- Oklahoma: **Coal Credit:** For tax years beginning on or after January 1, 2007, the credit shall be Five Dollars ($5.00) for each ton of coal mined, produced, or extracted in, on, under, or through a permit in Oklahoma.[3]
- Wyoming: **The state does not levy a corporate income tax**
- Texas, North Dakota, South Dakota: **No credits for oil & gas**

(9) Provide information about oil tax structure, environmental regulation, and land ownership for other oil producing states in the U.S.

The following discusses oil and gas tax structures in other states. We are in the process of compiling information about environmental regulation and land ownership in other states, and will provide that information to the committee when it is available.

Most state oil and gas severance[4] taxes are imposed on the gross taxable value of oil and natural gas. Under a gross tax, wellhead value is calculated net of transportation, processing and

[2] Cal. Rev. & Tax. Cd. § 23604 Oil recovery credit.
[3] Okla. Stat. § 2357.11 Tax Credit.

manufacturing costs. Generally, costs incurred upstream of the point of production are not deducted or considered when calculating gross taxable value. Gross production taxes can be levied on gross income, with a higher percentage applying as the income level increases. As an example, if gross income attributable from the sale of oil and gas is under $25,000, the tax rate is 2%; if $25, 000 but under $100,000, 3%, and so on. The following table shows the severance tax rates for several of the top oil producing states.

Severance Tax Rates by State	
Wyoming	6%
Texas	4.6%
Oklahoma	7%
North Dakota*	11.5%
Louisiana	12.5%
California	0%
New Mexico	3.75%
Kansas	4.33%

Alaska's severance tax is a net tax on the annual production tax value of oil and gas. Downstream transportation costs are deducted or "netted out" to arrive at a gross value at the point of production. Upstream costs, typically referred to as lease expenditures, are deducted from the gross value at the point of production to arrive at the annual production tax value upon which the tax is levied. If upstream costs are also qualified capital expenditures, they can qualify for a 20 percent credit that can be applied to the production tax liabilities, or redeemed as a certificate. Other credits, such as exploration credits, may also apply.

(10) Discuss the federal tax credits available in Alaska.

The following list presents the primary oil and gas related tax credits that are available against federal corporate income tax. There are also many federal tax credits that are available to all corporations which are not detailed here.

Enhanced Oil Recovery Credit (EOR)

- Credit of 15% of qualified costs against federal tax.
- Credit phases out when price of oil exceeds $28 /bbl (adjusted for inflation).
- No EOR allowed since 2005, because the list price exceeded the inflation adjusted price of oil. The list price for 2009 was $56.39 /bbl

[4] Severance taxes can also be called a mining license tax, net proceeds tax, royalty tax or production. Of course, there may also be property taxes, state income taxes and federal taxes levied on mineral production.

Marginal Well Credit

- Credit up to $3/bbl available only to owner of operating interest.
- Marginal well = oil production not more than 25 bbls/day, and not less than 95% water.
- Credit available only when price of oil less than $18/bbl.

Nonconventional Fuel Source Credit

- Credit up to $3 (adjusted for inflation) per BOE (barrel of oil equivalent, with 5.8 million Btu content)
- Credit completely phased out when inflation adjusted price of oil exceeds $33.46/bbl. List price of oil in 2009 was $56.39 /bbl.
- Credit on oil only from shale or tar sands.
- Credit on synthetic fuels from coal.
- Credit on gas produced only from:
  1. Devonian shale
  2. coal seams
  3. tight formations
  4. biomass
  5. geo pressured brine

(11) Provide a list of credits available from the federal government, and indicate what credits companies operating in Alaska have applied for. Provide examples of federal credits for the examples cited in our presentation (new explorer and existing producer with $200 million exploration program).

As a note on tax administration, corporations claim credits on tax returns when filed. Corporations do not apply for credits prior to filing a return.

No oil companies operating in Alaska have claimed federal corporate income tax credits in recent years because the federal credits have been phased out at current oil prices.

(12) Provide copies and a discussion on the Frazier Institute 2010 Global Petroleum Survey.

The complete Fraser Institute 2010 Global Petroleum Survey is available for free to the public at the following address: http://www.fraseramerica.org/commerce.web/product_files/global-petroleum-survey-2010_US.pdf

The Fraser Institute is an independent, non-profit research organization. The Global Petroleum Survey is based on the responses from managers and executives of petroleum exploration and production companies, and service providers, around the world. 645 professionals, representing 364 companies with a combined budget of $161 billion, contributed to the 2010 survey. Survey respondents rate various jurisdictions on 17 metrics related to investment attractiveness.

(13) If 44% of respondents to the Frasier survey indicated that Alaska's tax regime deters investment, what did the other 56% say?

Following is the detailed breakdown of responses regarding Alaska's tax regime:

- 25% said Alaska's tax regime "encourages investment"
- 31% said Alaska's tax regime "is not a deterrent to investment"
- 25% said Alaska's tax regime "is a mild deterrent to investment"
- 16% said Alaska's tax regime "is a strong deterrent to investment"
- 3% said they "would not invest due to this criterion"

(14) If Alaska modified petroleum taxes so that they were "the most favorable" where would that put AK on the Frazier graph?

The Fraser composite index takes an unweighted average of responses to 17 different factors affecting investment. Therefore, moving to a more favorable tax regime would likely result in a modest improvement in Alaska's composite index score. Also, improving our tax system would demonstrate to companies that Alaska is open for business and is taking steps to partner with industry and actively encourage investment in the state.

One example of a jurisdiction that recently made changes in its fiscal regime is Alberta. Alberta announced changes to its royalty system (Alberta's primary mechanism for receiving revenue from oil and gas) in early 2010. Alberta's composite index score went from 47.46 in 2009 to 36.70 in 2010, and its ranking in the Fraser composite improved from 92 in 2009 to 60 in 2010.

(15) If the state invested in infrastructure development, such as a road to the Umiat area, where would this put Alaska on the Frazier graph?

Quality of infrastructure is one of the 17 factors studied in the Fraser survey. Generally speaking, investing in improved infrastructure, such as roads to resources, would likely improve our score in this area. The impact on the overall perceptions of Alaska would likely depend on whether a road was an isolated investment in a specific project, or part of a broader initiative to improve the attractiveness of Alaska for industry investment.

(16) Please provide statistics on the major producers in Alaska and whether they are currently investing in the five Most Attractive and five Least Attractive jurisdictions on the Frazier graph.

The three largest oil producers in Alaska are currently Conoco Phillips, Exxon Mobil, and BP. As measured by the composite index in the Fraser survey, the five most attractive jurisdictions for investment are South Dakota, Texas, Illinois, Wyoming, and Austria. The five least attractive jurisdictions for investment are Bolivia, Venezuela, Russia, Ukraine, and Iran. To determine areas where the companies are invested, we reviewed Exxon's 2009 Financial &

Operating Review, Conoco's 2009 Fact Book, and BP's 2009 Annual Report. Note that there may be minor investments, or plans for future investments, that are not readily identified.

Among the most favorable jurisdictions, Conoco has investments in the Williston Basin of South Dakota; all three major producers are heavily invested in Texas; Conoco has a 50 percent interest in a refinery in Illinois; Conoco and Exxon both have operations in Wyoming; investments in Austria were not identified.

Among the least favorable jurisdictions, BP had operations in Bolivia that were nationalized in 2008; all the major producers were invested in Venezuela prior to nationalizations in 2007, with Conoco and Exxon pulling out and BP agreeing to joint venture contract terms; all three major producers have significant investments in Russia; investments by the major producers in Ukraine and Iran were not identified.

We hope our responses fully answer your questions. As mentioned above, we are currently compiling additional information to fully respond to request number 9 above, and we will provide that information when it is completed.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR

The Honorable Eric Feige
State Capitol Room 126
Juneau AK, 99801

February 23, 2011

The Honorable Paul Seaton
State Capitol Room 102
Juneau AK, 99801

SUBJECT: Response to Modeling Request from Co-Chair Seaton

Dear Representative Feige and Seaton:

Enclosed please find the results of the hypothetical modeling project requested by Co-chair Seaton during the House Resources Committee meeting on February 21, 2011, and earlier by email.

Please pay particular attention to the assumptions and caveats provided in the cover sheet for the analysis. The assumptions used were as requested, and this analysis in no way represents a Department of Revenue forecast or expectation.

Sincerely,

Bruce Tangeman
Deputy Commissioner

Title:	**Comparison of Revenue under ACES and HB 110 with Requested Volume, Price, and Cost Assumptions***
Preparer:	Cherie Nienhuis, Petroleum Economic Policy Analyst and Dan Stickel, Petroleum Economist
Date:	23-Feb-11
Purpose:	As requested by Representative Seaton
Data Source:	Major ACES tax variables and major proposed variables in HB 110
Key Assumptions:	*Assumptions as requested by requestor, which are neither supported nor condoned by the Department of Revenue. The following assumptions were dictated: 50% TAPS throughput is oil from New Fields (over a seven-year period TAPS Legacy Field oil is switched over to New Field Oil at a rate of 7% per year so that at the end of the seven years roughly 50% of TAPS throughput is New Field Oil.) ANS WC price of $90 per barrel, and $50 per barrel Costs of $36 per barrel $15 Billion in capital investment for new infrastructure available for credit With the models, please provide tables below the model, or on a separate page, so we can review the input data. The following assumptions were made by the Department, to implement the models: Incremental oil only ocurrs in the HB 110 case Stated decline rate, and incremental oil additions, continue beyond the first 7 years. Stated cost of $36 is for incremental oil and includes $7 transportation costs, $19 operating costs, $10 capital costs. Costs for exising oil are $10 / barrel operating costs, $10 / barrel capital costs, plus $7 / barrel transporation costs ($27 / barrel total) Simplistic transportation cost model - half of transit costs vary relative to production (costs will increase as throughput declines) The $15 billion of new infrastructure is exclusive to incremental oil and spread evenly across the first 7 years (appx $2.1 billion per year) Production decline rate is levied on a compound basis, resulting in smaller absolute declines each year This analysis does not include assumptions relating to lease expenditure exemptions, or proposed credits. We do not include credits other than the 20% capital credit, and for simplification we assume all credits can be taken in one year. See assumptions listed on each sheet.
History:	None
Disclaimer:	This analysis does not represent a Department of Revenue forecast or expectation. The modeling shown here represents a hypothetical scenario only using assumptions provided by the requestor. Under HB 110, the 15% base tax rate would apply only to oil and gas produced from leases or properties that have not been in a unit as of 1/1/2011 and have never had commercial production. We forecast that the vast majority of additional North Slope production will come from existing units and will not receive the 15% base tax rate. The Department of Revenue is in the process of reviewing and updating the data on which this analysis is based. As a result, future analysis could have different results. The information contained in this workbook may be privileged, confidential or otherwise protected from disclosure. If you are not the intended recipient, any use, dissemination, disclosure, distribution or copying is strictly prohibited.

Comparison of Revenue under ACES and HB 110 with Requested Volume, Price, and Cost Assumptions - $90 ANS Scenario

Prepared 02/23/11 by Department of Revenue for Rep Seaton

This analysis does not represent a Department of Revenue forecast or expectation.

These hypothetical assumptions were specifically requested by the requestor and the Department of Revenue does not in any way support the assumptions.
This analysis does not include assumptions relating to lease expenditure exemptions, or proposed credits

KEY INPUTS					
Initial Production (bpd)	600,000		Incremental facilities capital ($ mm)	$	15,000
Decline rate - existing	7%		Years to spread facilities spend	$	7
Oil Price	$90		Incremental Opex / bbl	$	19
Existing Opex / bbl	$ 10		Incremental Capex / bbl	$	10
Existing Capex / bbl	$ 10		Transit costs	$	7

All amounts in $ millions except for all production and amounts labeled as per barrel amounts

ACES Scenario - Existing oil with decline rate

Year	Production (bpd)	Annual Taxable GVPP	Capital Expenditures	Operating Expenditures	Total Costs	PTV	PTV / barrel	Base Tax	Progressive Tax	Total Tax before Credits	Capital Credits	NOL Tax Credits	Total Tax after Credits	Credits for carry forward or refund
1	600,000	$ 15,905	$ 2,190	$ 2,190	$ 4,380	$11,525	60.14	$2,881	$1,390	$4,271	$ 438	$ -	$3,833	$ -

Comparison of Revenue under ACES and HB 110 with Requested Volume, Price, and Cost Assumptions - $90 ANS Scenario

Prepared 02/23/11 by Department of Revenue for Rep Seaton

This analysis does not represent a Department of Revenue forecast or expectation.

These hypothetical assumptions were specifically requested by the requestor and the Department of Revenue does not in any way support the assumptions.

This analysis does not include assumptions relating to lease expenditure exemptions, or proposed credits

The Honorable Paul Seaton
State Capitol Room 102
Juneau AK, 99801

SUBJECT: Response to Questions from House Resources Meeting on February 21, 2011

Dear Representatives Feige and Seaton:

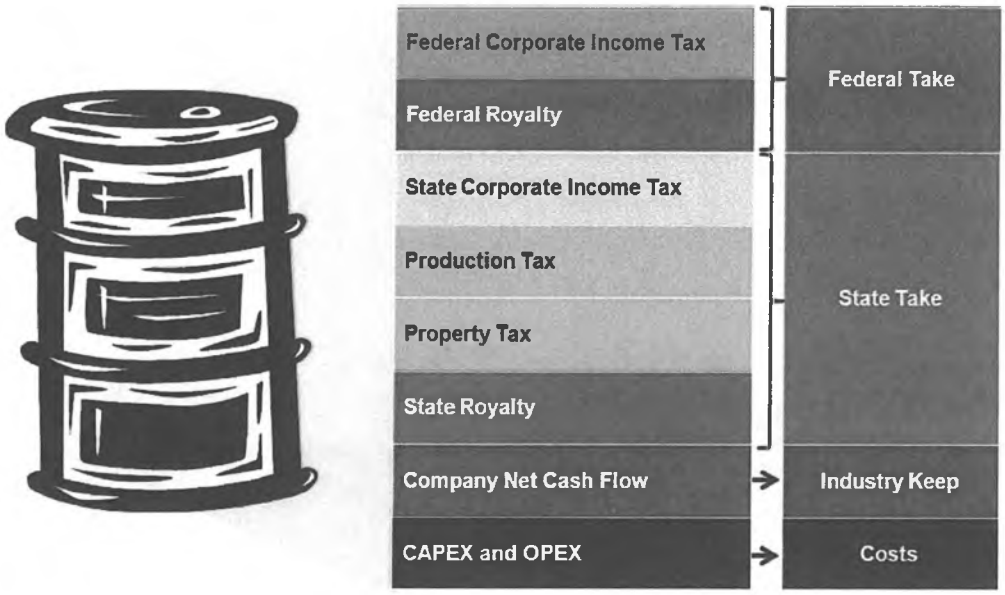
The purpose of this document is to respond to the follow-up questions from the House Resources Committee meeting on February 21, 2011. The requests/questions and responses follow.

1) **Compare effective tax rates to other jurisdictions where major producers are investing.**

   In comparing Alaska to other jurisdictions it is informative to look at total government take, as opposed to just taxes. Total government take includes all aspects of a particular fiscal regime including royalties, corporate income taxes, and production shares. The total government take is calculated as:

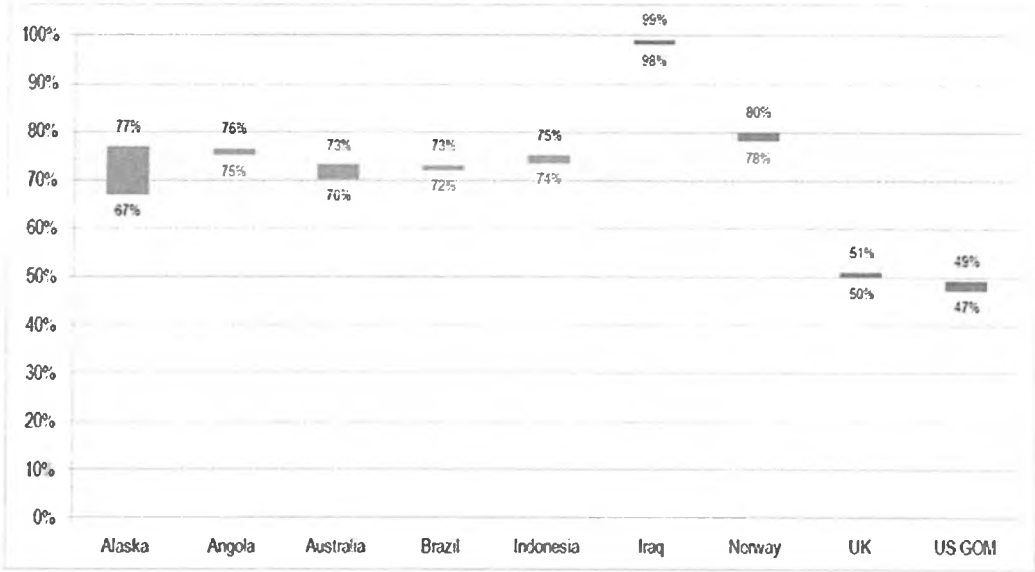
$$\frac{\textit{Federal Take + State Take}}{\textit{Field Revenue – Capex – Opex}}$$

The following graphic illustrates the components that comprise government take.



The following chart, extracted from a presentation given to Senate Finance on 2/22/10, presents total government take at oil prices of $70 and $150, in jurisdictions selected for their ability to attract hydrocarbon investments. The government take calculations are based on a production profile and costs similar to those in Alaska, with the various fiscal systems applied. The chart shows that Alaska's current total government take (about 67% at $70 oil and about 77% at $150 oil) is similar to the government take in a number of these jurisdictions; though significantly higher than the government take in the UK and the US Gulf of Mexico. Although Alaska's government take is similar to some other jurisdictions, Alaska is not currently attracting the desired level of exploration and development.

Remaining NS Oil Profile
Total Government Take



Note: Oil price $70-$150/bbl *Total Government Take - Alaska*

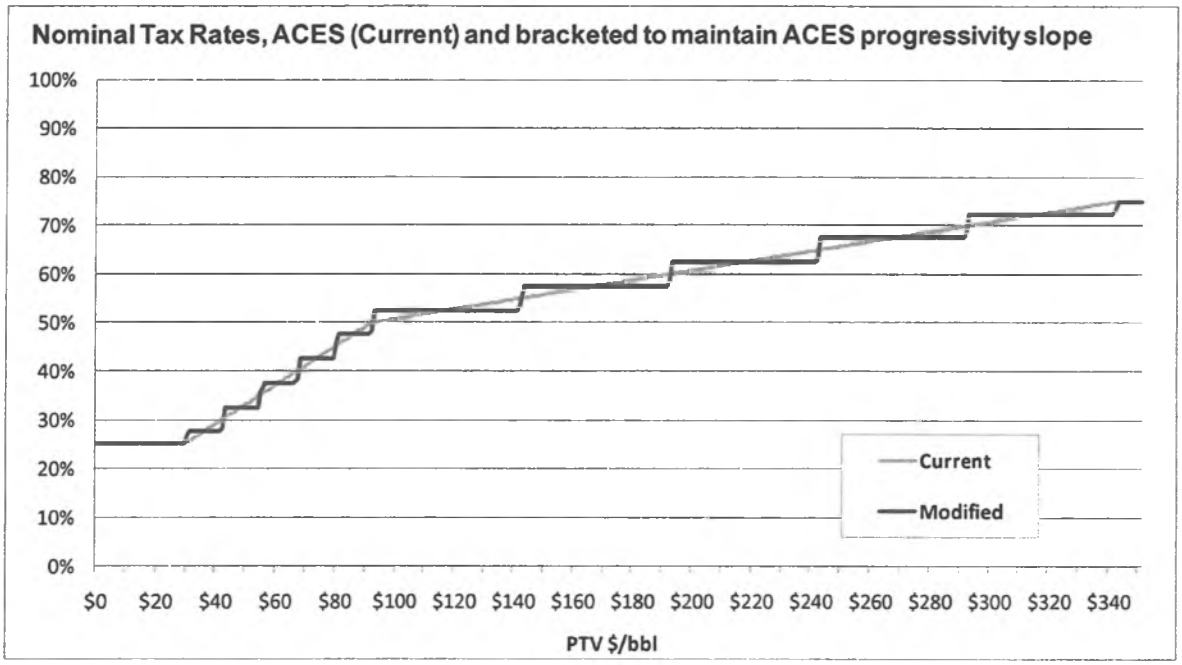
2) How much reinvestment of tax savings would occur if HB 110 passes as written?

The Department cannot say for certain the amount of reinvestment that will occur if HB 110 is enacted. A primary goal of the bill is to improve the investment climate in Alaska. Many companies that are currently producing, or hope to pursue new exploration and development, have testified to the beneficial impact this bill will have in terms of encouraging new investment and production.

3) Provide a slide showing tax rates if we were to maintain the same tax rates as ACES, but bracket progressivity.

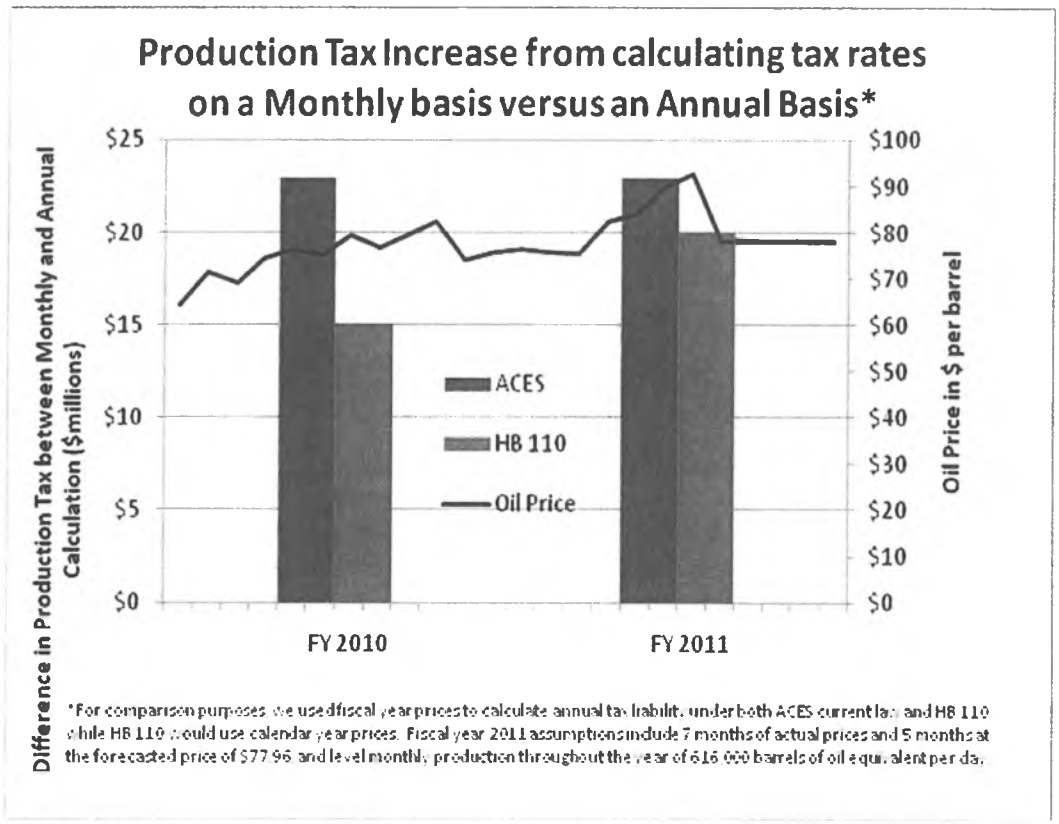
The following table and graph show how a marginal bracket approach could be applied to the production tax, while maintaining the same progressivity slope that exists currently under ACES. HB 110 implements this approach, with the exception that HB 110 caps the total tax rate at 50% compared to 75% under ACES.

Production Tax Value Bracket ($/boe)	Production Tax Rate (%)
0 to 30	25.0%
30 to 42.5	27.5%
42.5 to 55	32.5%
55 to 67.5	37.5%
67.5 to 80	42.5%
80 to 92.5	47.5%
92.5 to 142.5	52.5%
142.5 to 192.5	57.5%
192.5 to 242.5	62.5%
242.5 to 292.5	67.5%
292.5 to 342.5	72.5%
More than 342.5	75.0%



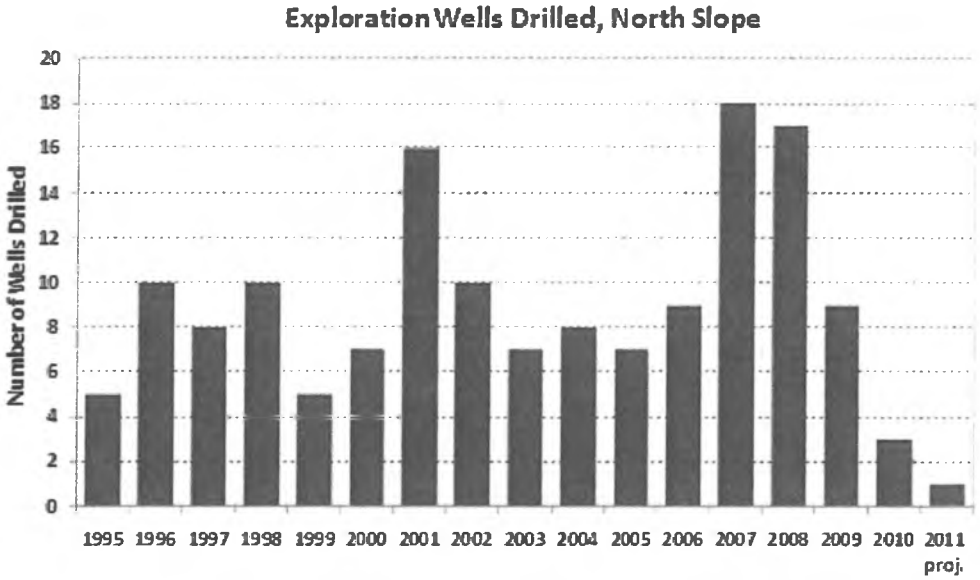
4) **Provide estimates of the revenue impact of switching from monthly to annual progressivity calculation.**

House Bill 110 proposes a change to the production tax rates and with it, a change to the calculation of those rates from a monthly calculation to an annual calculation. Depending on the monthly volatility in oil prices, the tax rate calculated annually may be different than the tax rate calculated monthly, thereby affecting total production tax revenues. Under most scenarios, the annual calculation will yield a lower tax rate and therefore lower production tax revenues than the monthly calculation. The difference in production tax revenue calculated monthly versus annually is much less under HB 110 than it is under ACES, however. We provide the following graph which shows the production tax increase for FY10 and projected for FY11 from calculating the tax rate monthly versus annually for both ACES and for HB 110.



5) **Provide a slide showing exploration wells drilled each year, including prior to 2005.**

The following chart shows exploration wells drilled on the North Slope since 1995, according to the Alaska Oil and Gas Conservation Commission. The Department of Natural Resources currently projects one exploration well for 2011.



Source: Alaska Oil and Gas Conservation Commission and Department of Natural Resources

6) Provide information on the components of federal government take, and explain why the federal government does not reduce their take to encourage exploration.

For production on state land, the primary component of federal government take is the corporate income tax, with a top marginal tax rate of 35%. State taxes are deductible in calculating federal taxable income. If a company is paying at the top marginal tax rate, then of the profit that remains after state taxes and royalties, the federal government receives 35% through the corporate income tax.

The federal government does have certain tax credits that help to encourage development at lower oil prices. These were discussed in the Department's response to questions raised at the February 7, 2011 hearing for HB 110, and that response is included again in its entirety below.

The following list presents the primary oil and gas related tax credits that are available against federal corporate income tax. There are also many federal tax credits that are available to all corporations which are not detailed here.

Enhanced Oil Recovery Credit (EOR)

- Credit of 15% of qualified costs against federal tax.
- Credit phases out when price of oil exceeds $28 /bbl (adjusted for inflation).
- No EOR allowed since 2005, because the list price exceeded the inflation adjusted price of oil. The list price for 2009 was $56.39 /bbl

Marginal Well Credit

- Credit up to $3/bbl available only to owner of operating interest.

- Marginal well = oil production not more than 25 bbls/day, and not less than 95% water.
- Credit available only when price of oil less than $18/bbl.

Nonconventional Fuel Source Credit

- Credit up to $3 (adjusted for inflation) per BOE (barrel of oil equivalent, with 5.8 million Btu content)
- Credit completely phased out when inflation adjusted price of oil exceeds $33.46/bbl. List price of oil in 2009 was $56.39 /bbl.
- Credit on oil only from shale or tar sands.
- Credit on synthetic fuels from coal.
- Credit on gas produced only from:
  1. Devonian shale
  2. coal seams
  3. tight formations
  4. biomass
  5. geo pressured brine

7) Provide our legal opinion regarding whether new information about company spending could be collected by statute, versus by regulation.

Under current statutes, the Department may request taxpayer information needed to provide forecasts and to administer the production tax, including information needed to audit claimed capital credit expenditures. Current statutes authorize the Department to adopt regulations requiring taxpayers to submit more detailed information about capital expenditures.

Under AS 43.05.230 (e), the Department would be able to release information about classification of capital spending only to the extent that it could be compiled as a general statistic that would prevent the identification of a particular return or report.

Under AS 43.55.890, the Department can publish information on qualified capital expenditures, as defined in AS 43.55.023, if aggregated among three or more producers or explorers, by month or calendar year and lease or property, unit, or area of the state.

8) Does Section 20 of the bill allow small producers to "double up" on credits?

Section 20 of HB 110 does not allow small producers to "double up" on credits. Section 20 of HB 110 makes no change to the AS 43.55.024(a) new area development credit or to the .024(c) credits for small producers. House Bill 110 simply cleans up the reporting to address the .024 credits since current AS 43.55.160 does not take into account the fact that for some producers, those credits will sunset in 2016, while for other producers the credit will be available for 9 years after they commence production. The amendments to

AS 43.55.160 in HB 110 simply take this into account, no change is made to how the AS 43.55.024 credits apply.

9) **Provide information about the state revenues and other benefits that would accrue from OCS development.**

The Outer Continental Shelf (OCS) encompasses submerged lands and waters between state jurisdiction and the extent of federal jurisdiction. State jurisdiction in Alaska extends three miles from the coastline. Federal jurisdiction extends 197 miles beyond the state jurisdiction for a total of 200 miles total from the coastline.

Revenue from oil and gas activity in Federal waters within three nautical miles of state waters is subject to Section 1337 (8)(g) of the Outer Continental Shelf Lands Act (OCSLA), which requires 27% of the total revenue to be shared with the state.

According to reports released by the MMS in 2006, the Alaska OCS is estimated to contain at least 50 billion barrels of oil equivalent (BOE) at the 50% confidence level. It is unclear what percentage of the estimated 50 billion BOE of technically recoverable resource would fall within the three to six mile region requiring revenue sharing with the state of Alaska. However, the State of Alaska would likely benefit indirectly from any development in the OCS.

In addition to direct revenue sharing the state would be entitled to from any development within three miles of state waters, the State of Alaska would benefit from OCS development through increased employment, increased throughput on the Trans-Alaska Pipeline System (TAPS), increased property tax payments and multiple other sources of revenue enhancement through the multiplier effect. Specifically, increased TAPS throughput would reduce the tariff on a per barrel basis increasing wellhead value for all production including, taxable production on state lands. Further, increased throughput on TAPS would likely assist in extending the operating life of TAPS allowing for increased recovery of oil in North Slope fields that might not otherwise have been recovered.

10) **Produce an estimate of what the price of oil would have to be to cover the cost of the Governor's proposed FY 12 budget were all the provisions of HB 110 in effect currently.**

The Governor's proposed FY 12 budget, with proposed amendments as of February 16, 2011, includes a total authorization to spend of $5,466.2 million of Unrestricted General Funds, after accounting for transfers and savings.

House Bill 110 is written to gradually phase in the provisions of the production tax changes. As such, our analysis shows that there is little to no direct fiscal impact in FY 12 from the provisions of HB 110 other than agency costs of approximately $100,000 to adjust the Tax Division's accounting system. Under the provisions in HB 110, therefore,

the price of oil would have to average approximately $81 per barrel to provide sufficient unrestricted revenue to cover the Governor's budget for FY 12.

If we assume that all of the provisions of HB 110 are in place prior to the start of FY 12, a price of approximately $90 to $92 per barrel would be needed to provide sufficient unrestricted revenue to cover the Governor's budget for FY 12. This figure is calculated using the bracketed annual tax rates included in HB 110, as well as the annual $200 to $400 million estimate for the well lease expenditure credit (which accounts for the range of oil prices in the result). We did not include estimates for provisions that were revenue neutral or for those that did not have a quantifiable impact on our revenue forecast. Our analysis included adjustments to only production tax and royalty; all other revenues were assumed to be the same as estimated in our Fall 2010 forecast.

11) Provide clarification on how the minimum tax is applied.

In response to discussion in the committee hearing, we would like to provide clarification regarding how the minimum tax under ACES is applied. HB 110 would strengthen the minimum tax by adjusting the price thresholds used in calculating the minimum tax.

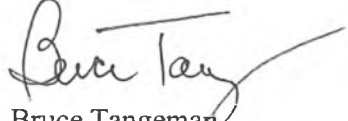
Under current law, the production tax is the higher of the minimum tax under AS 43.55.011(f) and the tax under AS 43.55.011(e). At an oil price of $21 per barrel, the tax calculated under AS 43.55.011(e) would likely be zero, as the costs of the oil production would overtake any profit from that production. In that case, the minimum tax under AS 43.55.011(f) would apply. The minimum tax under current law would be 3% of gross value at the point of production, or about $0.42 [3% x ($21-$7 transit costs]. Because HB 110 lowers the threshold so that 4% of gross value applies to oil prices at $20 and above, the minimum tax would be 4% of the gross value at the point of production, or about $0.56 [3% x $21-$7].

12) Modeling request from Co-Chair Seaton

Co-chair Seaton has requested that the Department prepare models of ACES and HB 110, using a specific set up assumptions. The result of this analysis will be provided to the committee separate from this letter.

We hope our responses fully answer your questions.

Sincerely,



Bruce Tangeman
Deputy Commissioner

State of Alaska

The Honorable Eric Feige
The Honorable Paul Seaton
Co-Chairs, House Resources Committee
Alaska State House
Juneau AK, 99801

February 23, 2011

SUBJECT: Response to Questions regarding House Bill 110 on February 11, 2011

Dear Representatives Feige and Seaton:

The purpose of this document is to respond to questions that were asked of the Department of Revenue during the department's testimony on House Bill 110 on February 11, 2011. The questions and answers to those questions follow.

(1) Could DOR use the regulations process to require information from producers that would help identify the portion of capital spending that represents investment in new exploration and production, compared to maintaining existing facilities and production?

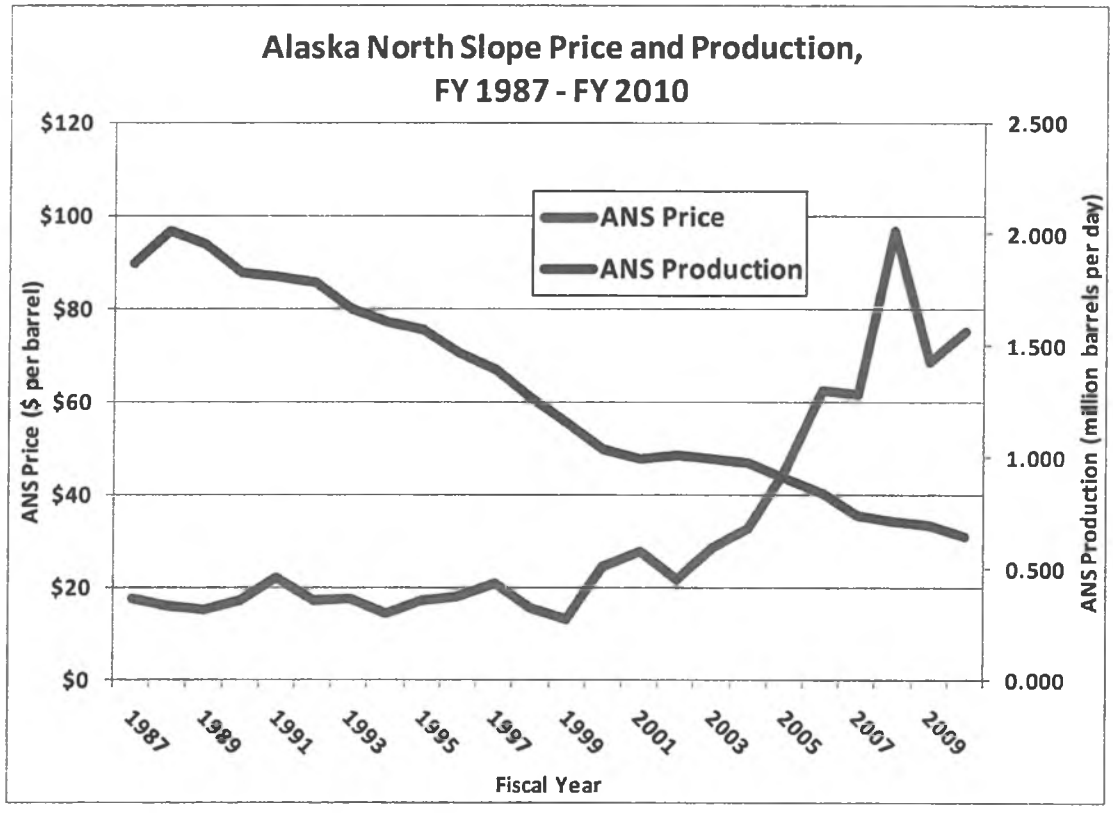
Under current statutes, the Department may request taxpayer information needed to provide forecasts and to administer the production tax, including information needed to audit claimed capital credit expenditures. Current statutes authorize the Department to adopt regulations requiring taxpayers to submit more detailed information about capital expenditures.

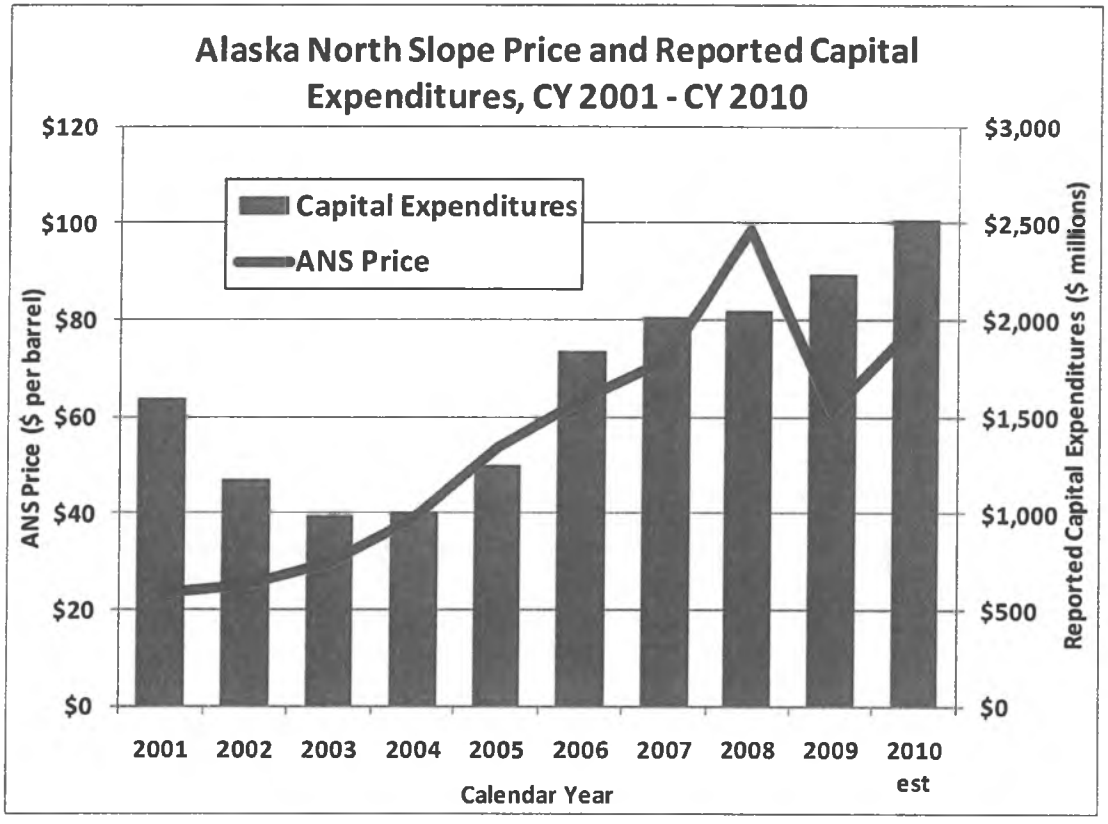
Under AS 43.05.230 (e), the Department would be able to release information about classification of capital spending only to the extent that it could be compiled as a general statistic that would prevent the identification of a particular return or report.

Under AS 43.55.890, the Department can publish information on qualified capital expenditures, as defined in AS 43.55.023, if aggregated among three or more producers or explorers, by month or calendar year and lease or property, unit, or area of the state.

(2) The committee requested statistics comparing the price of oil to historical production and investment in fields

The following two charts present ANS oil prices compared to historical production, and total reported capital expenditures. The Department does not have capital expenditure information for years prior to 2001.





(3) The committee requested information about what companies (other than the "Big 3") have projects that are included in the "under development" and "under evaluation" categories of our production forecast, as well as projects that are not included in our forecast.

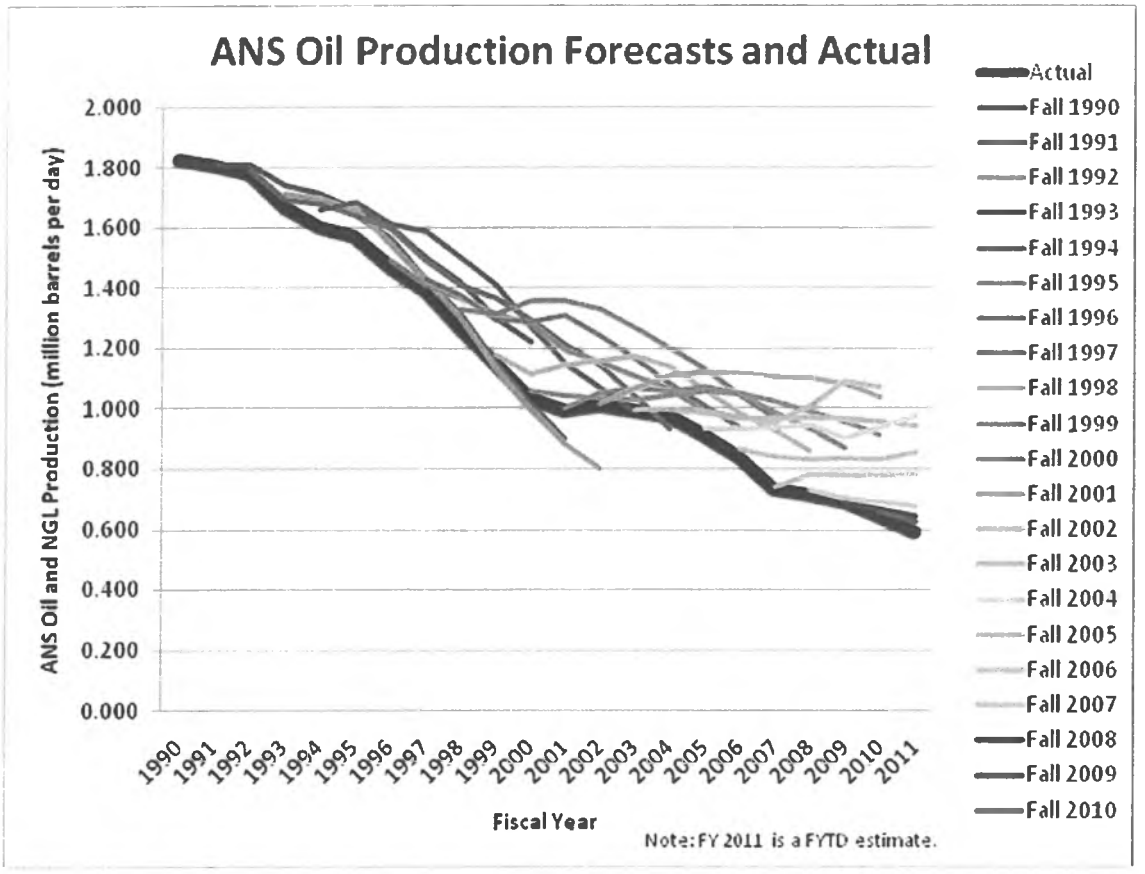
The following projects were identified by our production forecasting consultant as significant projects being pursued by operators other than ConocoPhillips, BP, and ExxonMobil. This list is compiled using public information from the Department of Natural Resources, and reporting in Petroleum News and other media sources.

We include production in our forecast from Badami (operated by Savant), Nikaitchuq (operated by ENI), Oooguruk (operated by Pioneer), and Umiat (operated by Renaissance).

We are not yet including production in our forecast from the Beechy Point Unit (operated by Brooks Range Petroleum), Dewline Unit (operated by Ultrastar), and South Miluveach Unit (operated by Brooks Range Petroleum). We also are not yet including production from Ugnu (various operators), or the Outer Continental Shelf (various operators).

(4) The committee requested a chart showing all DOR's production forecasts since 1990, and actual production.

The chart below shows the Department of Revenue's Alaska North Slope (ANS) production forecasts from fall 1990 to fall 2010. The forecasts are for both oil and natural gas liquids (NGLs).



(5) The committee asked about types of information that other countries require and make available, that we could possibly make available in Alaska.

In 2007, Gaffney, Cline & Associates reviewed reporting and disclosure requirements in other oil and gas producing countries. Their findings were summarized in a memorandum dated October 19, 2007, and a PowerPoint presentation dated October 20, 2007. Both documents will be made available to the committee.

(6) The committee asked if any producers have actually paid the 87% marginal production tax rate.

There was a period of four months in mid-2008 during which oil prices reached levels, when combined with the average level of lease expenditures, produced production tax values for some taxpayers that reached or exceeded the $92.50 per barrel inflection point that is associated with

the 87% marginal production tax rate that has been presented in this committee. The months and associated prices are as follows:

Month. Year	ANS Oil Price ($/bbl)
May 2008	$125.41
June 2008	$133.78
July 2008	$132.87
Aug 2008	$115.98

Although taxpayer confidentiality provisions prohibit DOR from disclosing specific information about any taxpayer, it is fair to say that several taxpayers experienced marginal tax rates at or very near the published 87% rate during these four months.

(7) To Department of Law as well as Revenue: Why is more data available in other countries and based upon existing US laws, why is this information not available to the US. Are there any laws in the U.S. that prevent companies from providing more data?

The data currently made available is based on the statutes and regulations currently in place in Alaska. AS 43.55.890 specifically authorizes the Department to release certain information related to the production tax. Otherwise, the Department may publish aggregated statistics that do not identify a particular project or taxpayer under 43.05.230 (e).

We are not aware of any provisions at the federal level that would prevent Alaska from requiring more information specific to the state.

(8) Provide a break-out of the ANS forecasted production (slide 12 of the DOR 2/11 presentation) that separates production, evaluation, and development by producer.

AS 43.55.890 states, "the department may publish the following information under this chapter, if aggregated among three or more producers or explorers…." Providing production forecast information at the requested level of detail is not allowed under statute.

Sincerely,

Bruce Tangeman

February 22, 2011

Senator Thomas H. Wagoner
Senate District Q
Co-Chair: Senate Resources Committee
Alaska State Legislature
State Capitol, #427
Juneau, AK 99801

Dear Senator Wagoner:

Thank you for your letter of February 4, 2011. I appreciate your interest in leasing practices designed to incentivize meaningful exploration and development of state lands and resources.

The Division of Oil and Gas is currently exploring several potential methods for creating just such incentives. Potential changes to our leasing structure must be carefully evaluated for the proper balance of "carrots" and "sticks" to ensure that, while we eliminate non-productive lessees to the greatest degree possible, we do not inadvertently discourage good operators who simply require time to acquire additional resources or information to make exploration and production activities economic.

Options currently available to us under our leasing statute and regulations include the following:

- Various combinations of cash bonus bid, royalty share and net profit share as the bid variables;
- Imposition of a minimum work commitment, made public before the lease sale and which may include penalty provisions if not fulfilled;
- Exploration incentive credits for exploratory wells;
- Exploration incentive credits for geophysical work performed within two years of a lease sale which may be assigned against royalty, rentals or taxes during a limited time period;
- Royalty modification upon application and a definitive finding;
- Lease terms of five to ten years in length;
- Producing leases excepted from statewide acreage limitations;
- Offering tracts in excess of 5,760 acres;
- Immediate, competitive offering of lands returned to the state;
- Rental reductions on returned lands to encourage re-leasing.

Several of these options have been exercised in the past, with varying but less than optimal results. For example, in 1980 the State issued 10-year leases with a work commitment requirement to begin drilling by the end of year five. The leases were terminated, and the State found itself in litigation over requests for extension of the leases. In a current example, 5-year leases were issued, resulting in a premature application for unitization to avoid relinquishment of the leases, on which production may be possible but has not been proven.

Nevertheless, the Division of Oil and Gas is evaluating all available options, as well as possible solutions for which we do not currently have adequate authority, such as changes to our lease qualification requirements. It is our goal to implement the changes we feel will be most effective overall at the earliest opportunity.

The next oil and gas lease sale, on May 24th, will offer the Cook Inlet and Alaska Peninsula lands. While the available timeframe will not allow for radical changes to our leasing structure at this sale, know that all leases that have been relinquished or otherwise returned to the State, including the recently relinquished Cosmopolitan Unit leases, will be offered.

The North Slope, North Slope Foothills and Beaufort Sea lands will be offered in late October, 2011. We believe that the changing industry view of this acreage provides a great opportunity for implementation of changes in our leasing approach based on existing authorities.

I'm happy to discuss this further with you, as is Kevin Banks, Director of the Division of Oil and Gas.

Sincerely,

Daniel S. Sullivan
Commissioner

ALASKA STATE LEGISLATURE

LEGISLATIVE BUDGET AND AUDIT COMMITTEE

Division of Legislative Audit

February 28, 2011

Honorable Members of the
Alaska State Legislature

The Honorable Sean Parnell
Governor
State of Alaska

The Honorable Daniel R. Levinson
Inspector General
Office of the Inspector General
U.S. Department of Health and Human Services

We are pleased to transmit the Single Audit of the State of Alaska for the fiscal year ended June 30, 2010. The audit was conducted in accordance with auditing standards generally accepted in the United States of America; *Government Auditing Standards* issued by the Comptroller General of the United States, and complies with the federal Single Audit Act Amendments of 1996 and the related *OMB Circular A-133* issued by the U.S. Office of Management and Budget.

The report includes an opinion on the basic financial statements of the State of Alaska for FY 10, recommendations on financial and compliance matters, and required auditor's reports on internal controls and compliance, and the Schedule of Expenditures of Federal Awards.

The findings and recommendations included in this report are organized by department and include prior financial/compliance findings not fully corrected by the departments. Our FY 09 Single Audit contained 25 recommendations; this report presents a total of 30 recommendations, eight of which were presented at least in part last year. Included in this year's recommendations are four recommendations made to Alaska Housing Finance Corporation whose audit was performed by other auditors. With your active support and encouragement, we hope to continue seeing improvement in the implementation of these recommendations by the state agencies.

We would again like to acknowledge the professional assistance and cooperation of the Department of Administration's Division of Finance. The division has a strong professional commitment to excellence in the financial accounting and reporting for the State of Alaska. Its continued efforts towards resolving statewide accounting and reporting concerns are commendable.

We would also like to acknowledge the cooperation of all other state agencies involved during the conduct of this audit.

The dedicated staff of the Division of Legislative Audit remains committed to improving the financial accountability of the State of Alaska. Your active involvement is critical to improving that accountability. We are available to assist you in that effort.

Pat Davidson, CPA
Legislative Auditor

DEPARTMENT OF REVENUE

One recommendation was made to the Department of Revenue (DOR) in the *State of Alaska, Single Audit for the Fiscal Year Ended June 30, 2009*. Prior year Recommendation No. 2 is not resolved and is reiterated in this report as Recommendation No. 4.

No new recommendations have been made during the FY 10 statewide single audit.

Recommendation No. 4

DOR's commissioner should ensure staff within its Tax Division implement controls to improve the auditing of oil and gas severance tax revenues.

Prior Finding

In FY 08 and FY 09 significant deficiencies in controls were reported over the auditing of severance tax revenues by DOR's Tax Division. Control deficiencies included insufficient audit oversight, a lack of standard procedures to guide the audit process, inadequate reviews of audits, and untimely reviews and reconciliations of tax returns.

Title 43 of the Alaska Statutes gives DOR the authority to collect tax revenues for the State and to ascertain the correctness of such revenues. The department's main tool for ascertaining the correctness of severance tax revenues is its Tax Division audit section. There are no statutory requirements that DOR's tax auditors conduct their audits in accordance with industry audit standards such as those issued by the American Institute of Certified Public Accountants or the Government Accountability Office. Historically, DOR's audit section has relied upon standard audit programs and supervisor review and oversight to ensure that their audits are timely, accurate and that audit results can withstand the scrutiny of the administrative appeal process and, in some cases, litigation.

With the passage of PPT[2] and ACES[3] legislation, management's controls over the auditing of severance taxes deteriorated. The new laws are more complex to audit. The hiring and retention of experienced, competent audit staff has proven challenging. Delays in drafting PPT and ACES regulations have further disrupted the audit process.

Legislative Audit's Current Position

Significant control deficiencies continued over the auditing of oil and gas severance tax revenues in FY 10. A loss of experienced audit staff during FY 10 compounded the struggles that the audit section was already experiencing.

Our review of DOR's oil and gas severance tax audits and inquiries with DOR staff noted the following deficiencies:

- The division continues to conduct audits without developing standard processes including audit plans and procedures.
- A significant portion of an audit's methodology and results were insufficiently documented.
- The deficiencies in audit documentation forced the tax section to issue a less detailed report than what is issued as part of their standard report format.

[2] *Petroleum Profits Tax* (enacted in August 2006).
[3] *Alaska's Clear and Equitable Share* (enacted in November 2007).

- Audit supervisors did not review and approve audit methodology prior to audits being conducted.
- Audit supervisory reviews were limited, sporadically documented, and only conducted at the end of the audit.

Oil and gas severance taxes, totaling approximately $2.6 billion in FY 10, are a significant source of revenue for the State of Alaska. Insufficient internal controls over the auditing of severance tax revenue may result in the loss of revenue and increase the risk that tax revenue assessments will not hold upon appeal.

We recommend that DOR's commissioner take action to ensure that Tax Division management improves controls over the auditing of severance tax revenues. Specifically, standardized audit processes should be developed and implemented. Auditors also need more oversight and timely feedback during the audit process.

Agency Response – Department of Revenue

Item 1: *The division continues to conduct audits without developing standard processes including audit plans and procedures.*

Response: *We disagree. The division is, and has been, in the process of developing standard processes including audit plans and procedures. Development of standard processes is an ongoing project. As you are aware, the legislature significantly changed the way oil and gas production tax is calculated with the passage of the Petroleum Profits Tax (PPT) in 2006. In 2007, the legislature made further changes to the production tax through the passage of Alaska's Clear and Equitable Share (ACES) legislation. These two major pieces of legislation completely overhauled the production tax scheme and instituted a new tax credit program. The Division has worked diligently over the last four years to implement the changes while continuing to work on audits of tax returns filed under the previous tax structure. Implementation includes not only developing standard processes, but also drafting regulations, hiring and training new auditors, developing tax return forms, establishing tax credit audit and examination procedures, educating taxpayers, and various other duties that accompany the implementation of what is basically a new tax program. You are aware that the oil and gas production tax is administered without automated systems. This means that all processes are performed manually which further strains the Tax Division's limited resources. Although development of standard processes is not yet complete, this does not mean that the Division is not and has not been working on developing those processes.*

Item 2: *A significant portion of an audit's methodology and results were insufficiently documented.*

Response: We agree. The audit in question was started by a highly experienced individual who retired a few months after the audit was opened. The audit was then

transferred to another senior auditor who resigned his position before the audit was completed. The audit was transferred yet again to another senior auditor who had to quickly familiarize himself with all issues within the audit and complete the audit within a short period of time. As stated above, oil and gas production tax audits are conducted without the assistance of automated systems. All audit work, including transaction sampling and testing, is performed manually. Data for this particular audit included over 2 million documents with thousands of transactions per document. During the course of the audit, the auditors manually tested over 1 million transactions. The time it took to perform the manual testing caused the auditor to run out of time to complete proper documentation of audit findings prior to expiration of the statute of limitations. The Tax Division took the position that it was in the best interest of the state to issue the audit with insufficient documentation and with a less detailed audit report than to miss the statute of limitations and, in effect, issue no audit at all. The auditor was instructed to issue the audit, but continue to document audit findings and complete the audit report after the fact. The taxpayer was informed that it would receive a more comprehensive explanation of our adjustments at a later date.

Item 3: *The deficiencies in audit documentation forced the tax section to issue a less detailed report than what is issued as part of their standard report format.*

Response: *We agree. See explanation under Item 2, above.*

Item 4: *Audit supervisors did not review and approve audit methodology prior to audits being conducted.*

Response: *We agree, but disagree that this in an issue. It is not common practice for the Tax Division to approve audit methodology prior to audits being conducted. Audits are assigned to auditors based on their level of experience and their job class. Audits of the largest oil and gas production taxpayers are assigned to Oil and Gas Revenue Auditor IV's (OGRA IV). Under the class specifications, OGRA IV's "serve as lead auditor having complete responsibility for the largest oil and gas production tax . . . audits." The particular audit in question was assigned to an OGRA IV who was required to perform the audit with no day-to-day oversight. Audit methodology is at the auditor's discretion provided, however, that the end result is that the auditor has accurately evaluated tax liabilities. As stated previously in this letter, the Tax Division is still implementing what is essentially a new tax program and specific audit methodology has not yet been defined for these audits.*

Item 5: *Audit supervisory reviews were limited, sporadically documented, and only conducted at the end of the audit.*

Response: *We agree. Audit reviews in all programs are conducted at the end of audits. That is common practice in all audits in the audit profession. We also agree that supervisory reviews were limited and sporadically documented in some of the audits closed during the fiscal year. Again, this was due to the continual implementation of PPT, ACES and the new credit program. Implementation has put a strain on audit resources. Money requested to continue contract audits has been reduced which put further strain on our resources.*

However, management continually communicates with staff on tax issues via meetings and emails, and has discussions about the proper application of statutes and regulations. As a result of the poor documentation of the audit identified in issues 2 and 3, management has instituted the practice of meeting with the audit leads and team members on the largest audits at least once a month to discuss the progress of the audit and any issues that may have arisen that require management input.

The bulk of the findings in the audit report are attributable to:

- *staff turnover, particularly at the supervisory level;*
- *the inability to recruit senior level auditors at current pay levels, despite intensive recruitment efforts over the last two years; this means (1) less experienced auditors are working major audits, and (2) supervisors are having to spend time conducting complex audits, instead of using that time to supervise and developing audit manuals, processes and procedures; and*
- *lack of automated tax processing systems to manage and share information; this dramatically increases the amount of time needed to complete audits and review returns, and thus, siphons resources away from program development.*

As junior auditors in the Production Tax Audit Group gain experience, they will be able to take on more complex and higher volume audit work. This should relieve some of the resource strain, provided these auditors continue working for the Department once they reach senior levels. Over the last three years, great efforts have been made by the Department to obtain an automated tax processing system to manage and share information, but funding for this project has not yet been forthcoming.

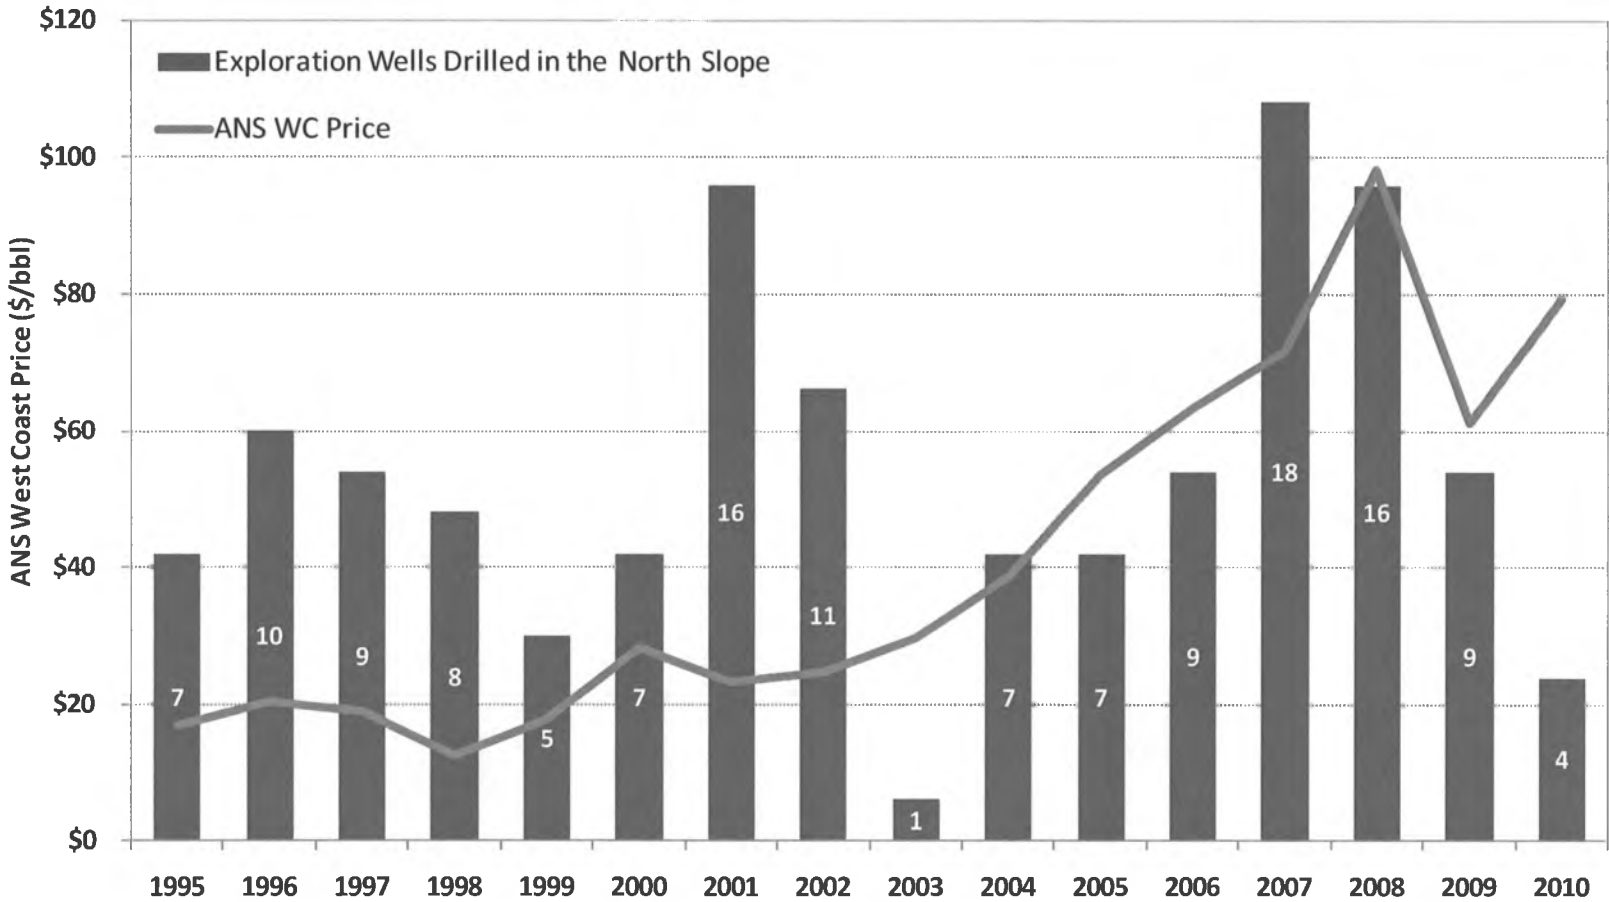
North Slope Exploration Drilling

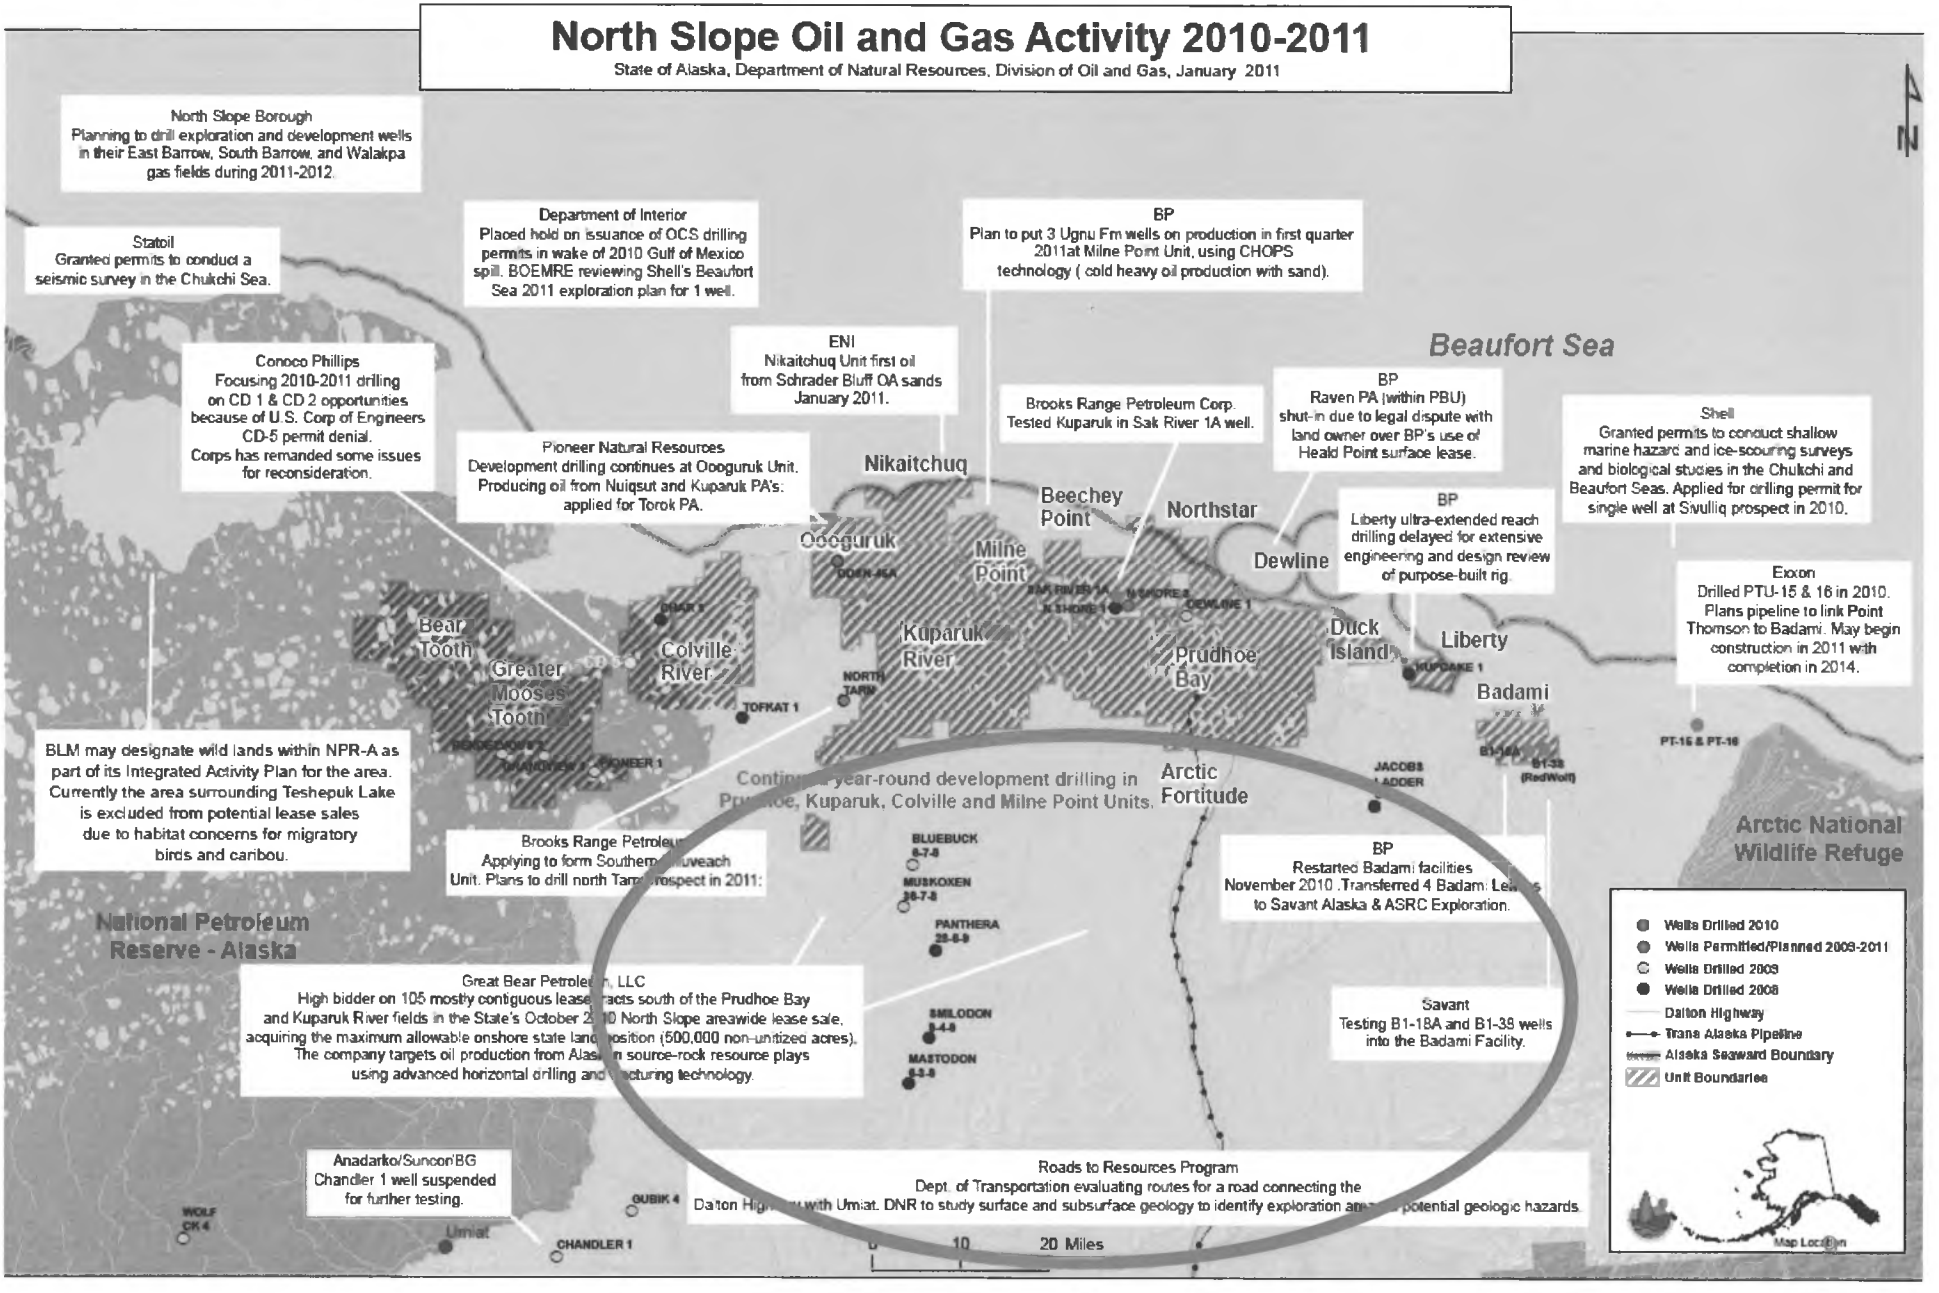


Source: Alaska Oil and Gas Conservation Commission

There's lots of oil left in Alaska…

- Cumulative production through 2010 has been over 16 billion barrels
- Remaining North Slope reserves exceed 5 billion barrels
- Geology-based estimates of total oil volumes are much higher. For instance, we do not include any of the approximately 20 billion barrels in the giant Ugnu deposit, or offshore volumes from the Chukchi or Beaufort Seas, in our forecast

Areas of North Slope are Underdeveloped



How Can We Reverse the Trend?

- Sample Investor Decision Criteria:
  - Prospectivity
  - Geopolitical stability
  - Regulations (access to resources, development permitting, environmental constraints)
  - Operations (existing infrastructure, experienced workforce availability, costs, market proximity)
  - **Tax Regime => SB 49 Focus**

Outline for Presentation

- Goals and Rationale for SB 49
- Production Tax Mechanism
- Components of SB 49

Production Tax Overview

- **Production Tax Value (PTV)** is the market price less transportation costs and allowable lease expenditures
  - Allowable lease expenditures include operating and capital expenditures
- **Base tax rate** of 25% on PTV
- **Progressive Surcharge Rate**
  - Triggered when a company's PTV reaches $30 per barrel
  - $30.00/bbl < PTV < $92.50/bbl = Surcharge adds 0.4% to tax rate for each additional $1 increase in PTV, until combined tax rate reaches 50%
  - $92.50/bbl < PTV < $342.50/bbl = Surcharge adds 0.1% for each additional $1 increase in PTV until combined tax rate reaches the maximum of 75%

Production Tax Overview

How the Tax is Calculated

Production Tax Value (PTV) X Base Tax Rate =	Base Tax
	+
PTV X Progressive Surcharge Rate =	Progressive Surcharge
Pre-Credit Tax Bill	Total Taxes Before Credits
	-
Credits	Credits Applied Against Taxes
Final Tax Bill	**Total Production Taxes Owed**

FY 12 Production Tax Projected

	Per Barrel	Barrels	Value ($ million)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$82.67	622,182	$51.4 / day
Annual Production (bbl)			
Total Annual Production/Value		**227,096,430**	**$18,774.1**
Royalty and Federal barrels		(34,669,890)	($2,866.2)
Taxable barrels		**192,426,540**	**$15,907.9**
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	($2.05)		
TAPS Tariff	($4.67)		
Other	$0.33		
Total Transportation Costs	**($6.39)**	**192,426,540**	**($1,229.6)**
Lease Expenditures			
Deductible Operating Expenditures	($12.86)		($2,474.1)
Deductible Capital Expenditures	($13.14)		($2,528.3)
Total Lease Expenditures	**($26.00)**	**192,426,540**	**($5,002.4)**
Production Tax Value (PTV)	**$50.28**	**192,426,540**	**$9,675.9**
Production Tax			
Base Tax (25%*PTV)			$2,419.0
Progressive Tax Rate = ($50.28-$30) * 0.4% = **8.1%**			
Progressive Tax = (8.1% * PTV)			$785.0
Total Tax Due before credits			**$3,204.0**
Credits Applied Against Taxes			($450.0)
Total Tax after credits			**$2,754.0**

Source: Department of Revenue Fall 2010 Revenue Sources Book, Appendix D
This simple model assumes constant production, price, and expenditures for the entire year; results will differ from our larger model and forecast.
The per-barrel expenditures shown are per taxable barrel and do not reflect expenditures per all barrels produced.

Production Tax Credits Overview

- **Qualified Capital Expenditure Credit** – 20% credit for qualified capital expenditures (40% for well lease expenditures outside North Slope).
- **Carried-Forward Annual Loss Credit** –25% credit for carried-forward annual loss.
- **Small Producer / New Area Development Credit** – Up to $12 million / year for small producers and up to $6 million / year for production outside North Slope and Cook Inlet.
- **Alternative Credit for Exploration** – 30% or 40% of eligible exploration expenditures if certain criteria are met.
- **Cook Inlet Jack-Up Rig Credit** – 80% to 100% credit for first three exploration wells drilled using jack-up rig in Cook Inlet.

Source: Alaska Department of Revenue. Chapter 3 of the Fall 2010 Revenue Sources Book provides detailed information on credits

Outline for Presentation

- Goals and Rationale for SB 49
- Production Tax Mechanism
- Components of SB 49

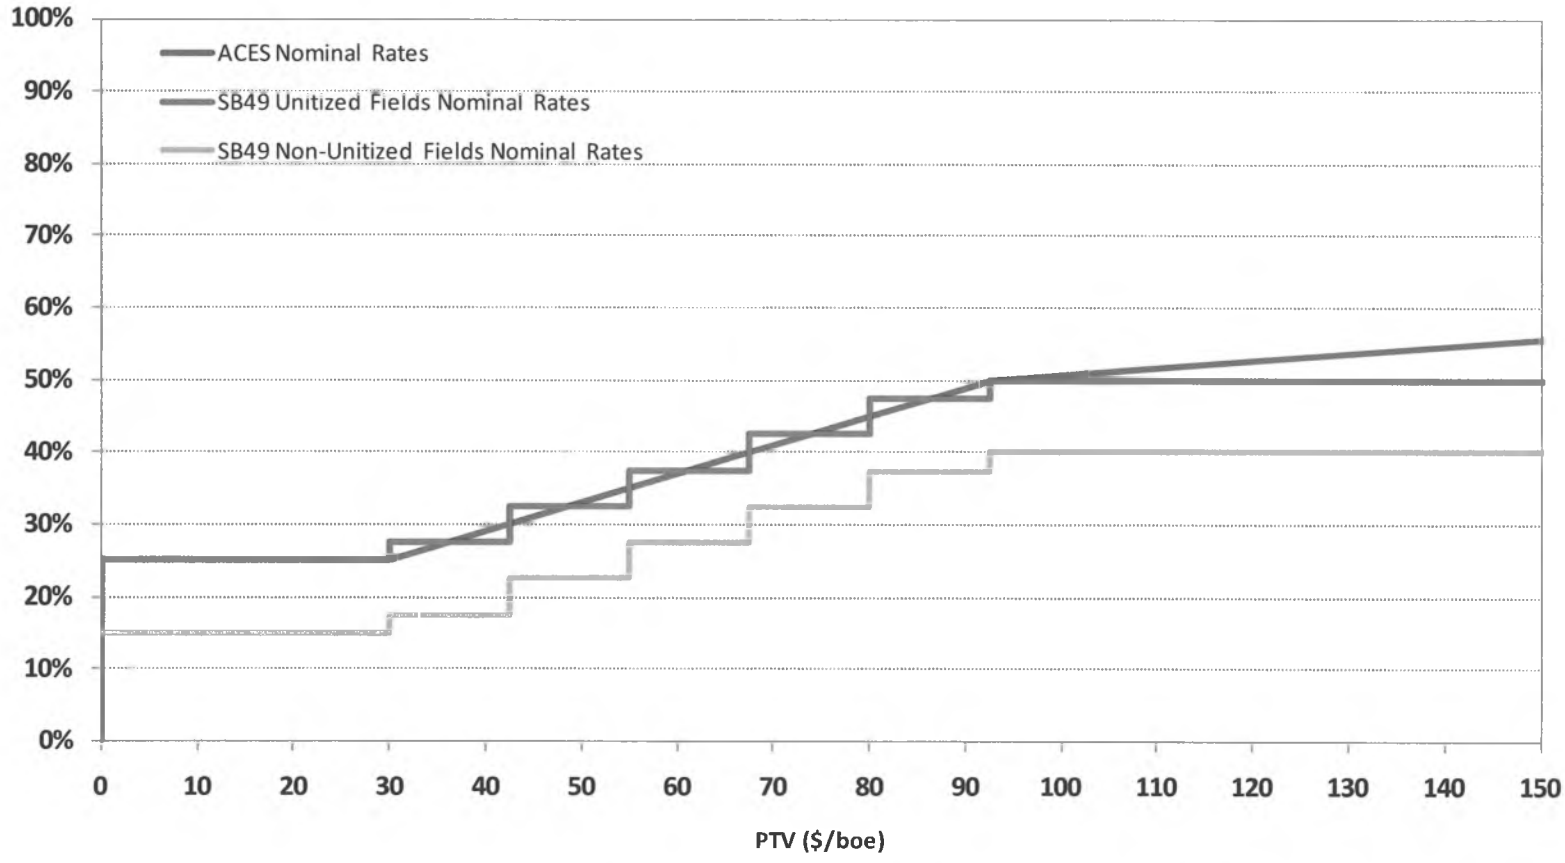
Main proposed changes

Progressivity Rates & Cap	Progressivity defined as discrete brackets, rather than as a continuous function, and applied only to incremental revenue. Maximum progressivity of 25%.	2013
Base Tax Rate	Base tax rate reduction from 25% to 15% for leases or properties properties neither unitized nor producing on or before 12/31/2010.	2013
Tax Credits	Extension of 40% well lease expenditure tax credits to North Slope. Tax credits can be claimed in a single year instead of two years.	2012
Tax Calculation	Yearly tax calculation based on average prices and costs, instead of monthly tax calculation impacted by short term price and cost peaks.	2013

2012 Effective 1/1/2012 for expenditures made before 12/31/2011.

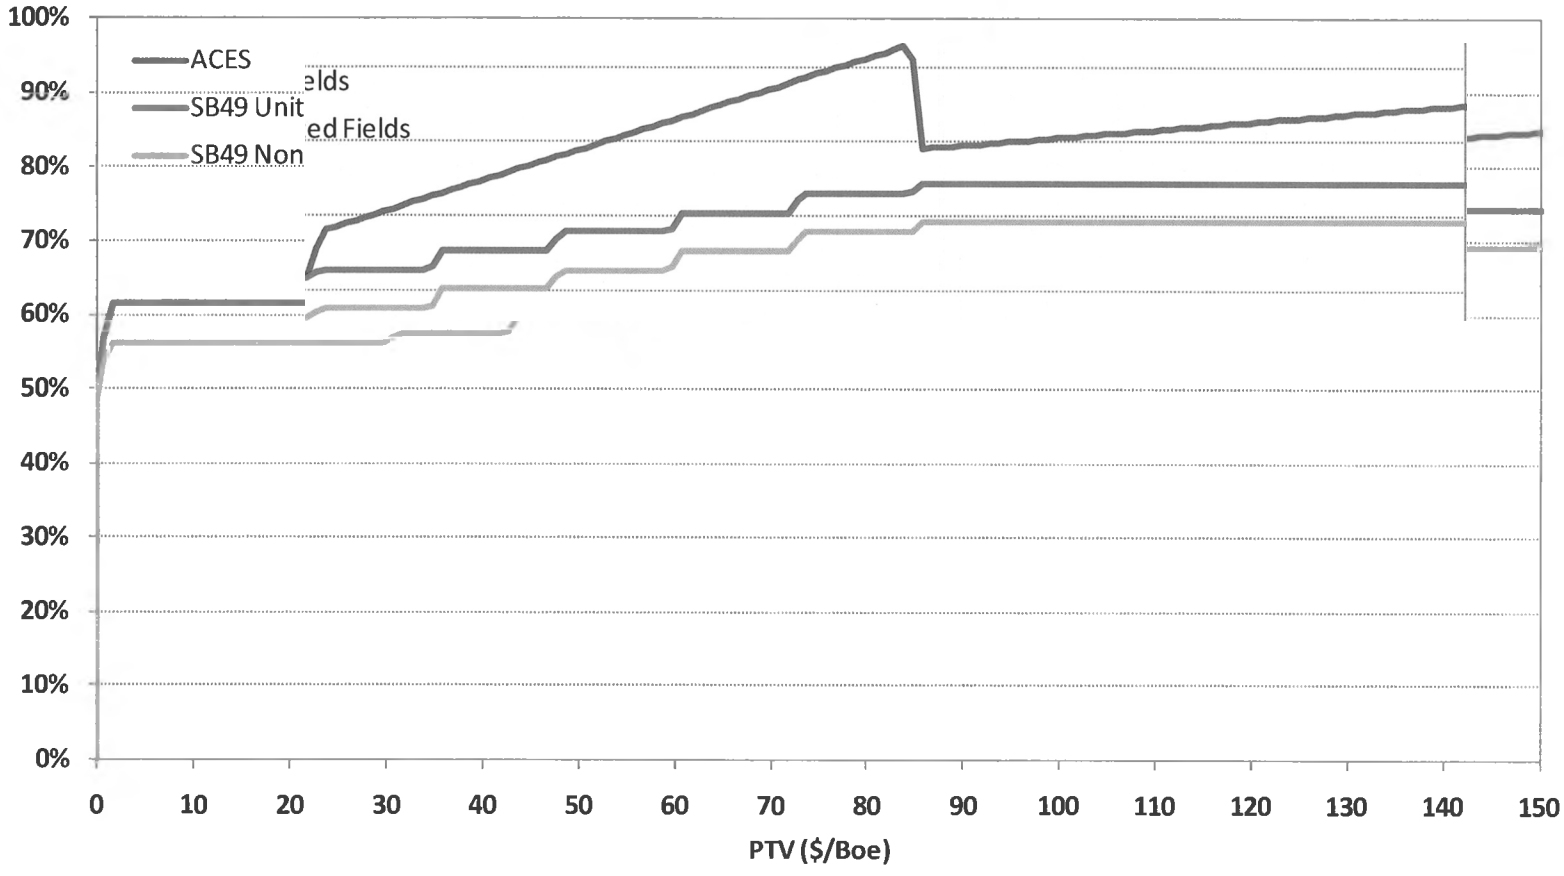
2013 Effective 1/1/2013, applies to production after 12/31/2012.

Nominal Production Tax Rates

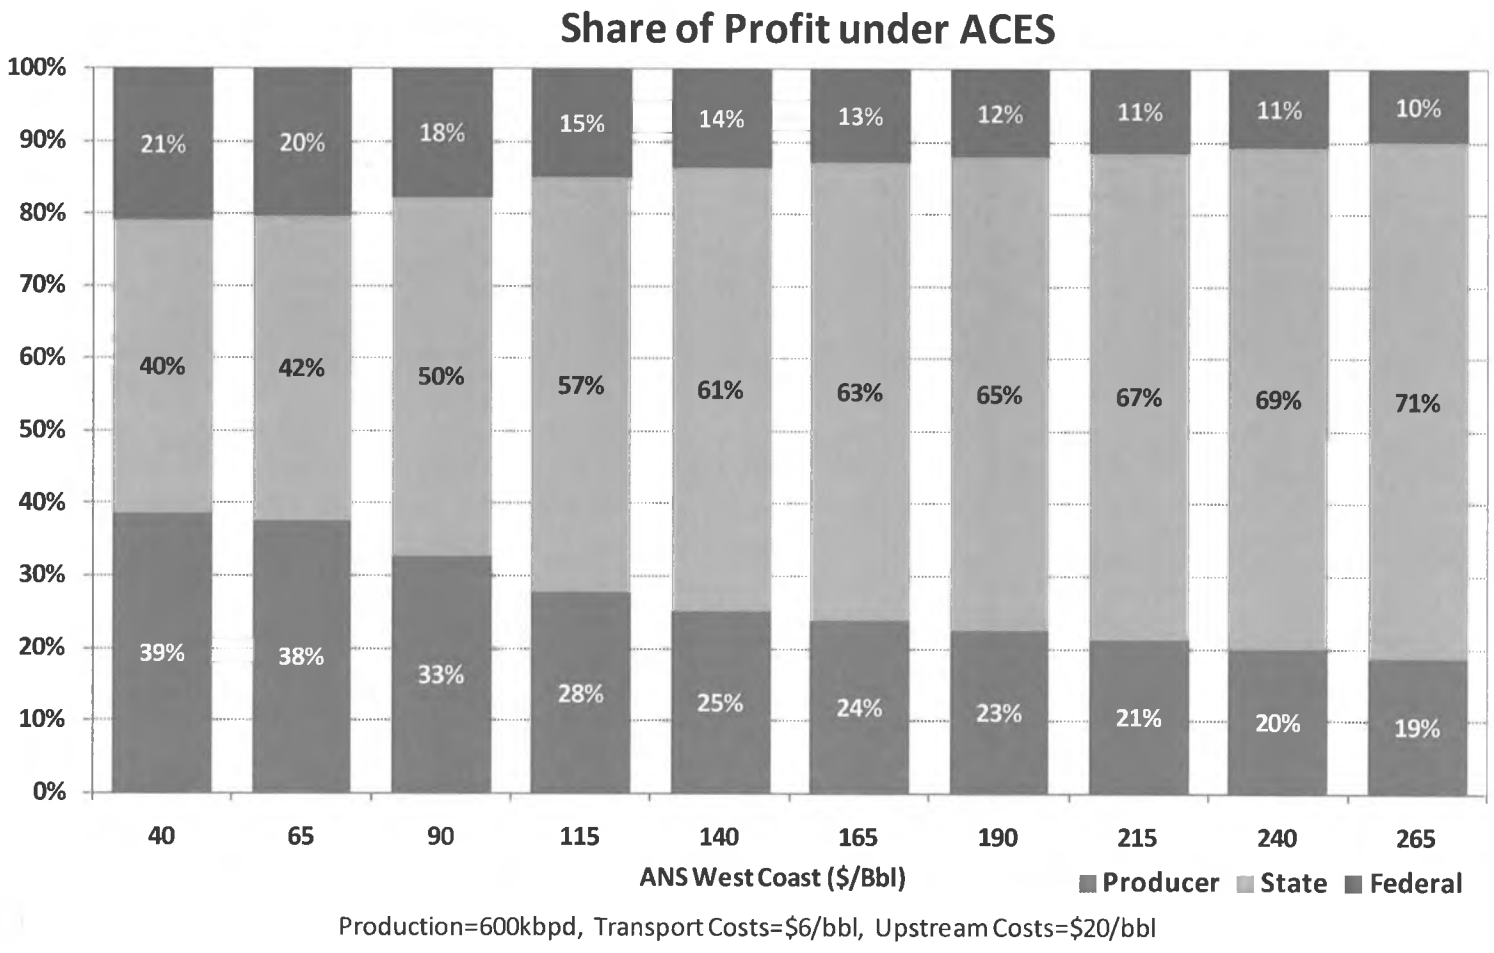


Marginal Government Take

(Incremental Government Take generated by a US$ 1/boe increase in Production Tax Value, with all other conditions remaining unchanged)

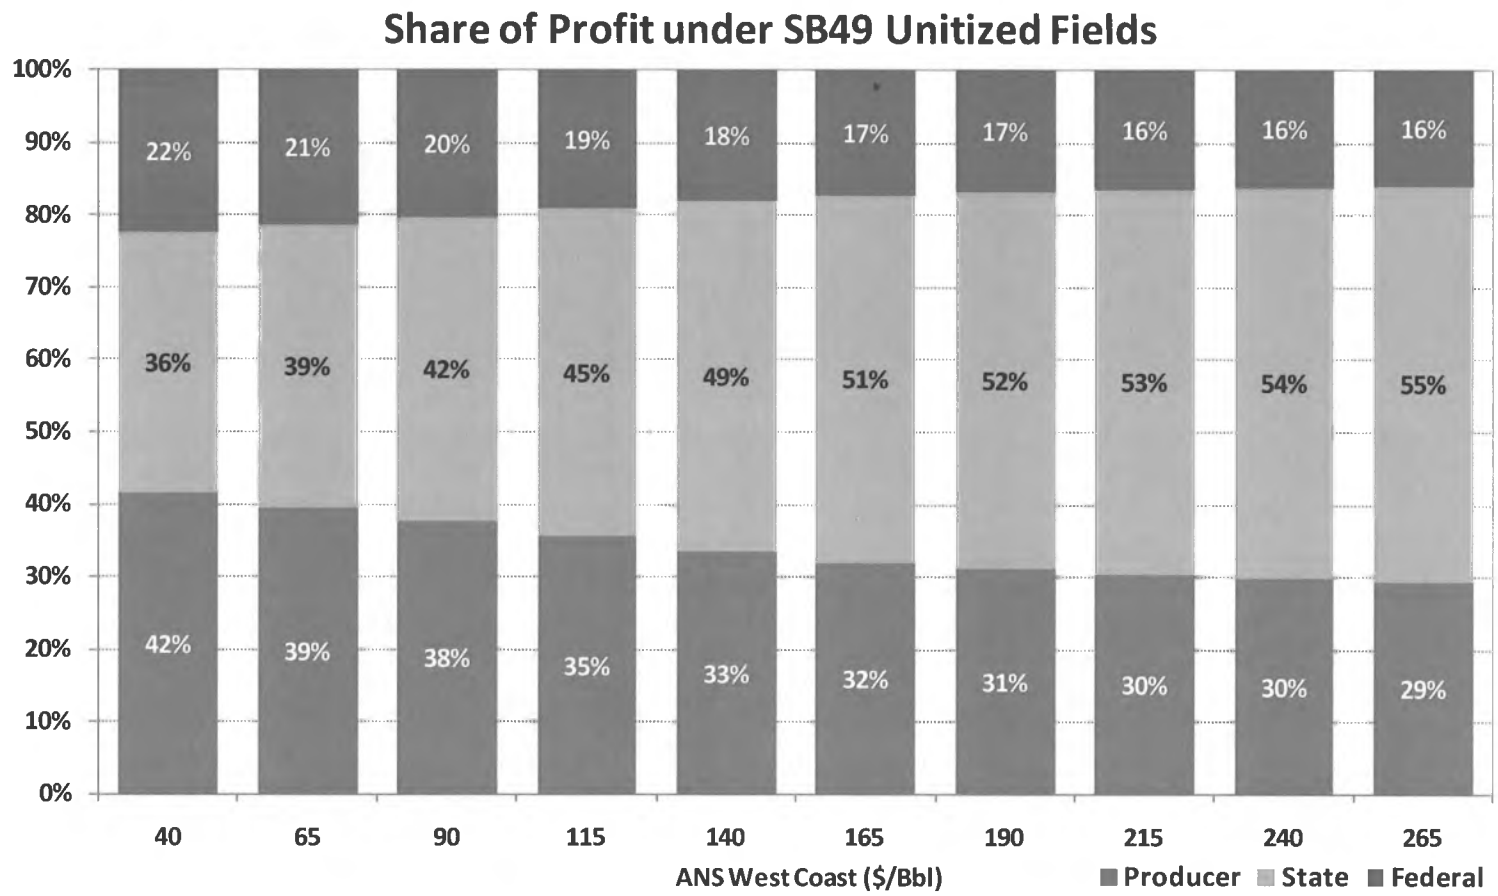


Share of total profit - ACES



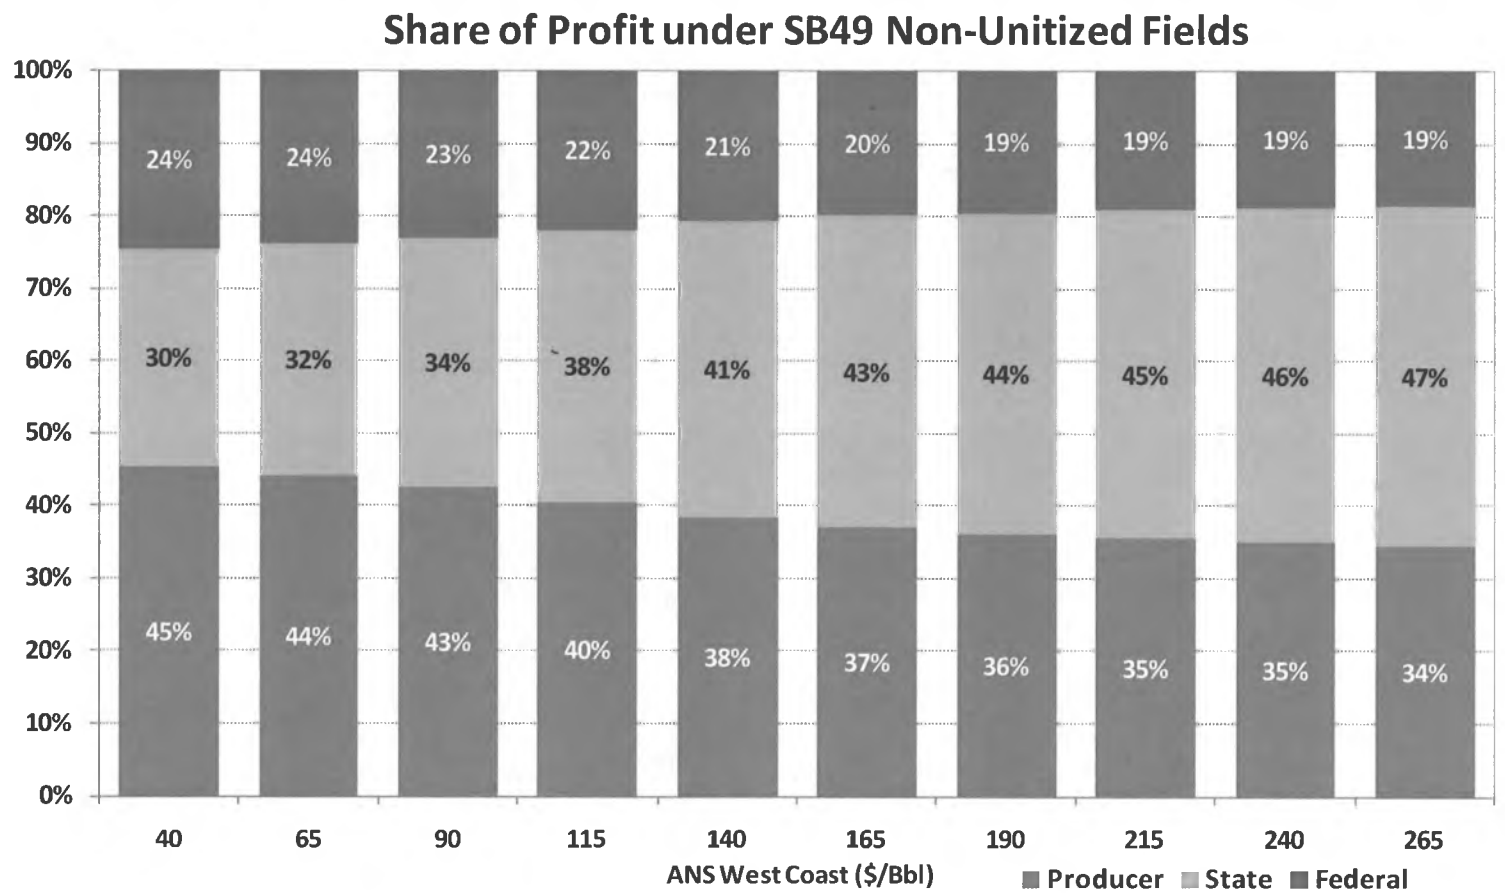
Production=600kbpd, Transport Costs=$6/bbl, Upstream Costs=$20/bbl

Share of total profit
SB49: Unitized Fields



Production=600kbpd, Transport Costs=$6/bbl, Upstream Costs=$20/bbl

Share of total profit
SB49: Non-Unitized Fields



Production=600kbpd, Transport Costs=$6/bbl, Upstream Costs=$20/bbl

SB49 Goals

1. Improve investment climate
2. Create jobs for Alaskans
3. Increase production

Senate Resources Committee
Questions asked by Committee Members re: Senate Bill 49 on 3/11/2011

1. Please compare royalty rates in Alaska with royalty rates in other states; that is, please compare royalties paid to Alaska as an owner state vs. royalties paid to private land owners in Texas, North Dakota, etc. (Stevens)

2. Slide #3: According to modeling or predictions by the bill sponsor, how many jobs for Alaskans will be created by the passage of SB 49? (Wielechowski)

3. Slide #3: According to modeling or predictions by the bill sponsor, how much will production increase? (Wielechowski)

4. Slide #4: At this point in the life cycle of a mature field, is there an industry norm for the number of new development wells that we might expect to see? (Paskvan)

5. Slide #4: Please explain the standard life cycle of a basin. Please compare the production of Alaska's mature basins with the production of other mature basins. Is the North Slope Production on Slide #4 a normal curve? Would a company build this production decline into a normal investment model? How are investments modeled based on the standard life cycle of a basin? (Stedman)

6. Slide #5: How much of the ANS production that is "under evaluation" is unitized vs. non-unitized? (French)

7. Slide #7: What happened in 2003? (French)

8. Slides #4 – #7: Please compare trends in Alaska with trends in North America and worldwide? (Stedman)

9. Does the Administration believe that there should be, as part of the SB 49 negotiations, a guaranteed increase in exploration and development wells in exchange for the passage of SB 49? (Paskvan)

10. Please explain "duty to produce." (Wielechowski)

11. According to recent ConocoPhillips statements/reports, they have added reserves to their Alaska portfolio. Have those reserves been added to DOR's forecasted ANS production? (Wielechowski)

Hello Team Resources,

The Committee heard approx 12 of the 23 slides prepared by DOR on Friday. Sen Paskvan asked me to convey that during today's hearing, the DOR will proceed with the presentation that they began on Friday. Therefore, there are no new committee docs for today's Senate Resources hearing.

On Wednesday, the Committee will receive the scheduled presentation by Lenny Dees (Master Auditor, DOR) regarding the oil and gas tax credits.

It appears, then, that the Committee will skip the presentation on the "Oil and Gas Production Tax Status Report to the Legislature" this week; however, it may be re-scheduled for a later date.

Please let me know if you have any questions or comments.

Best,
JS

Subject: SB 49 Back-Up: DOR Slide re Effective Tax Rate on Gross
Attachments: SB 49_Back-Up_DOR Slide re Effective Tax Rate.pdf

Hello All,

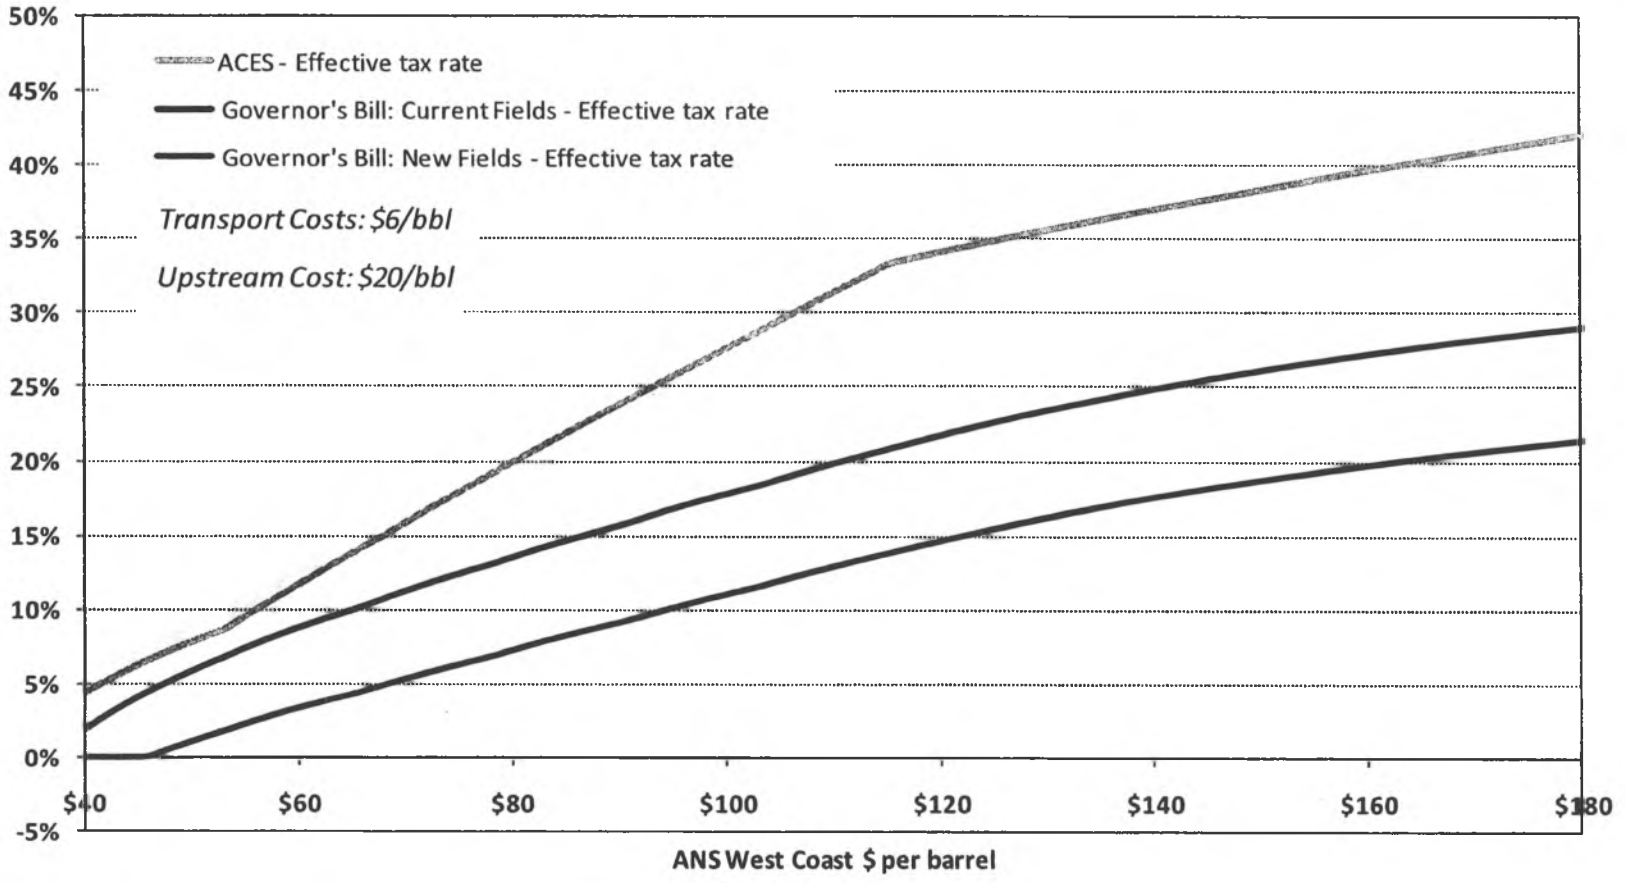
Sen Paskvan was reviewing the attached slide in preparation for this afternoon's Resources Committee hearing. The slide, titled Effective Tax Rate on Gross, was used in a presentation of HB 110 in the House Resources Committee on February 21, 2011.

Sen Paskvan asked me to share the slide with members, as he intends to ask Mr. Dees about this slide today.

Best,
Jeff

Effective Tax Rates on Gross Current law and HB 110

Effective Tax Rate based on Gross Value (After Credits)



PRODUCTION TAX CREDITS

PRESENTED TO THE SENATE RESOURCES COMMITTEE

MARCH 16, 2011

Overview

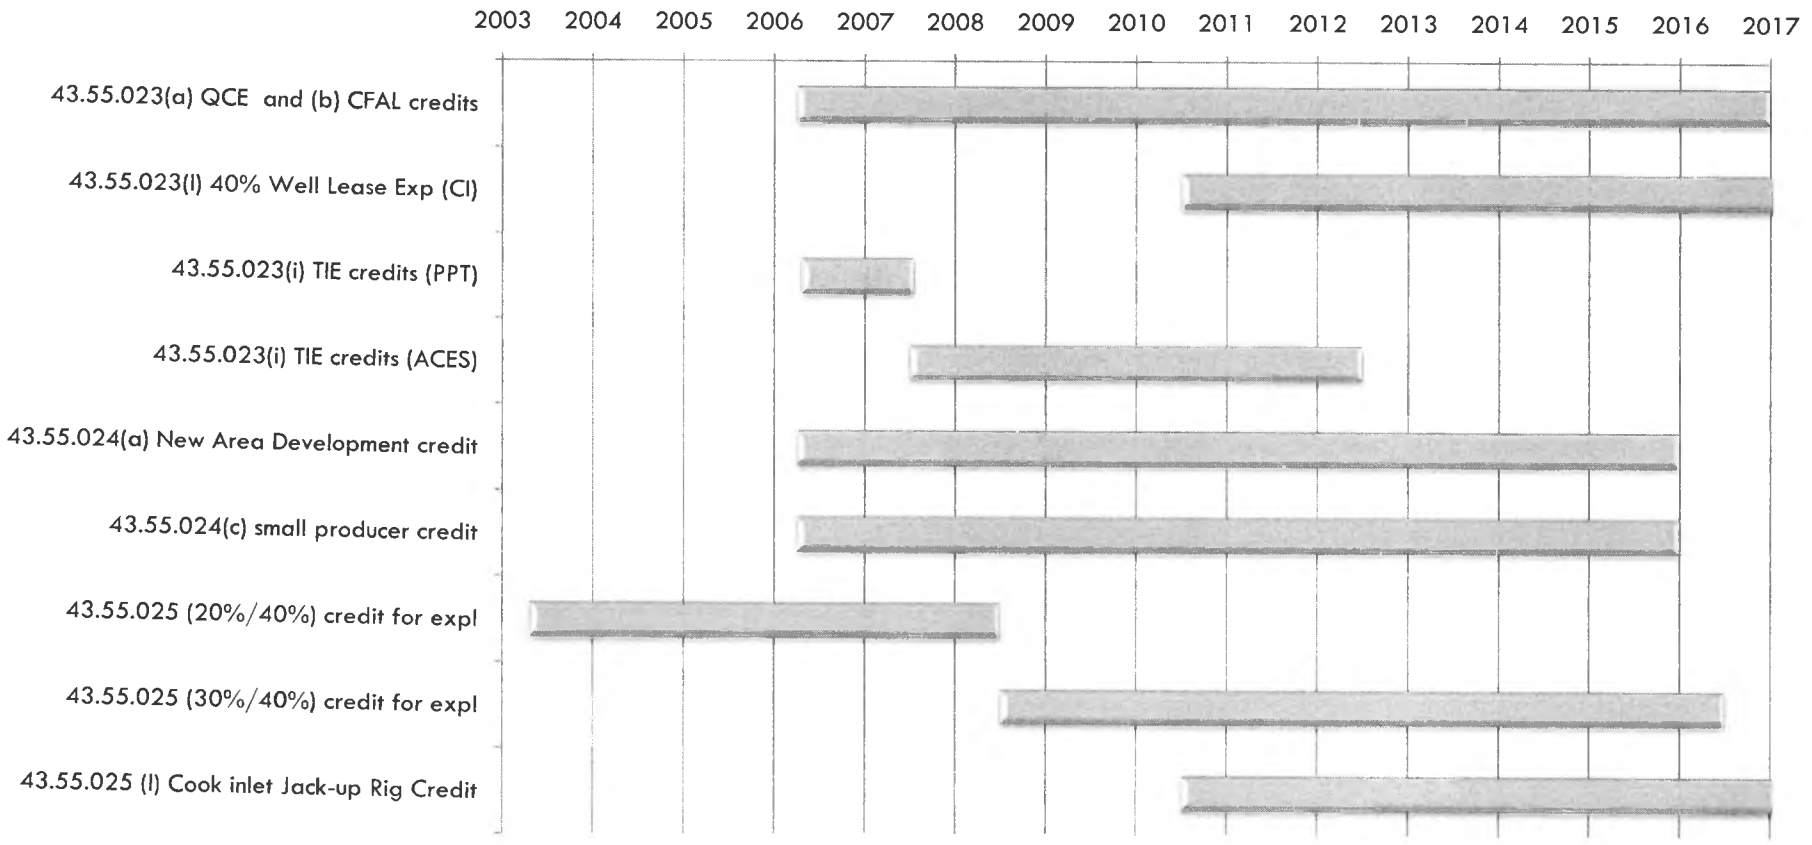
- **Types of Production Tax Credits**
- Credits Applied Against Production Tax Liability
- Transferable Tax Credit Certificates
- Cash Refunds History

Types of Production Tax Credits

Credits which may be taken against oil and gas production taxes include:

- Capital Expenditure Credits
- Alternative Tax Credits for Oil and Gas Exploration
- Net Operating Loss ("NOL") Carry Forward Credits
- Transitional Investment Expenditure ("TIE") Credit
- Additional Nontransferable Tax Credits
- Well Lease Expenditures Credit
- Cook Inlet Jack-up Rig Credit

Timelines for Production Tax Credits



Types of Production Tax Credits

Capital Expenditure Credits - (AS 43.55.023(a)(1))

- **20%** of qualified capital expenditures (QCE)
- QCE include drilling, construction of facilities, new equipment, etc.
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for exploration credit
- Must be spread over 2 years (except for expenditures incurred south of 68 degrees North latitude – effective July 1, 2010)
- Credits may be cashed or transferred

Types of Production Tax Credits

Exploration Credits

- Two Main Types
  - Capital Credit for Exploration Activity 43.55.023(a)(2) **(20%)**
  - Alternative Tax Credits for Oil and Gas Exploration 43.55.025 **(30%-40%)**

Types of Production Tax Credits

Capital Credit for Exploration Activity 43.55.023(a)(2)

- **20%** of qualifying expenditures related to geologic and geophysical exploration, or in connection with an exploration well
- Requires that data be submitted to DNR
- Must be spread across 2 years (except for expenditures incurred south of 68 degrees North latitude – effective July 1, 2010)
- Same expenditures may also qualify for NOL Carry Forward Credits
- Credits may be cashed or transferred

Types of Production Tax Credits

Exploration Credits

- Two Main Types
  - Capital Credit for Exploration Activity under 43.55.023(a)(2) **(20%)**
  - Alternative Tax Credits for Oil and Gas Exploration under 43.55.025 **(30%-40%)**

Types of Production Tax Credits

Alternative Tax Credits for Oil and Gas Exploration - 43.55.025

- **30% - 40%** of qualified expenditures depending on well location and proximity to existing wells and unit boundaries
- Qualified expenditures include certain expenses associated with seismic and geophysical exploration work, and exploration well drilling
- Same expenditures may also qualify for NOL Carry Forward Credit
- Same expenditures do ***not*** qualify for Capital Expenditure Credit
- To receive credit, taxpayer must provide certain well data to DNR
- Expires 2016
- Credits may be cashed or transferred

Types of Production Tax Credits

NOL Carry Forward Credit - 43.55.023(b)

- **25%** of net operating loss
- Applied against tax liability in following year
- Credit based on adjusted lease expenditures which include both operating and capital expenses
- Includes capital expenditures which also qualify for qualified capital expenditure credit under 43.55.023(a)(1) and exploration credit under 43.55.023(a)(2)
- Credits may be cashed or transferred

Types of Production Tax Credits

Transitional Investment Expenditure (TIE) Credits

43.55.023(i)

- Credit equals 20% of qualifying capital expenditures:
  - incurred between March 31, 2001 and April 1, 2006, and
  - not exceeding 10% of the capital expenditures incurred between March 31, 2006 and January 1, 2008.
- Revised under Aces to cover only producer or explorer not having production prior to January 1, 2008
- Credits are ***not*** transferable and may ***not*** be carried forward beyond 2013
- Same capital expenditures may ***not*** qualify for exploration credit under 43.55.025

Types of Production Tax Credits

Additional Nontransferable Tax Credit- 43.55.024**(a)**

- Referred to as "New Area Development" credit
- Up to $6 million
- Available for companies producing from leases or properties outside of Cook Inlet and North Slope
- Credit can only be applied against tax liability
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

Types of Production Tax Credits

Small Producer Credit - 43.55.024**(c)**

- Up to $12 million, depending upon level of production
- Available for companies producing less than 100,000 bbl/day of oil BTU-equivalent
- Production not restricted by region
- Credit can only be applied against tax liability
- Expires 2016 or 9 years after first commercial oil or gas production if before May 1, 2016
- Credits may ***not*** be cashed or transferred or carried forward

Types of Production Tax Credits

Well Lease Expenditure Credit - 43.55.023(l)

- 40% of well lease expenditures incurred in the state south of 68 degrees north latitude
- Must be intangible drilling costs or seismic work conducted within the boundaries of a exploration or production unit
- Credit may be applied against tax liability, or certificated and cashed or transferred to another taxpayer

Types of Production Tax Credits

Cook Inlet Jack-Up Rig Credit - 43.55.025(l)

- Credit of 100%/90%/80% of up to $25 million each of exploration expenditures for first 3 unaffiliated persons drilling wells using the same jack up rig penetrating and evaluating prospects in the pre-Tertiary zone.
- Taxpayer obtaining credit may not claim .023 credit for same expenditure
- 50% of credit to be repaid over 10 year period if well yields sustained production

Overview

- Types of Production Tax Credits
- **Credits Applied Against Production Tax Liability**
- Transferable Tax Credit Certificates
- Cash Refunds History

Credits Applied Against Production Tax Liability

Credits may be redeemed in two ways:

(1) All Credits may be applied against production tax liability

- Capital Expenditure and Capital Exploration Credits split over two years (except south of 68 degree North latitude – eff. July 1, 2010)
- NOL , TIE, Small Producer and Alternative Tax Credits for Oil and Gas Exploration may all be applied against tax liability in total in a single year

(2) Some Credits may be converted into a transferable Tax Credit Certificate

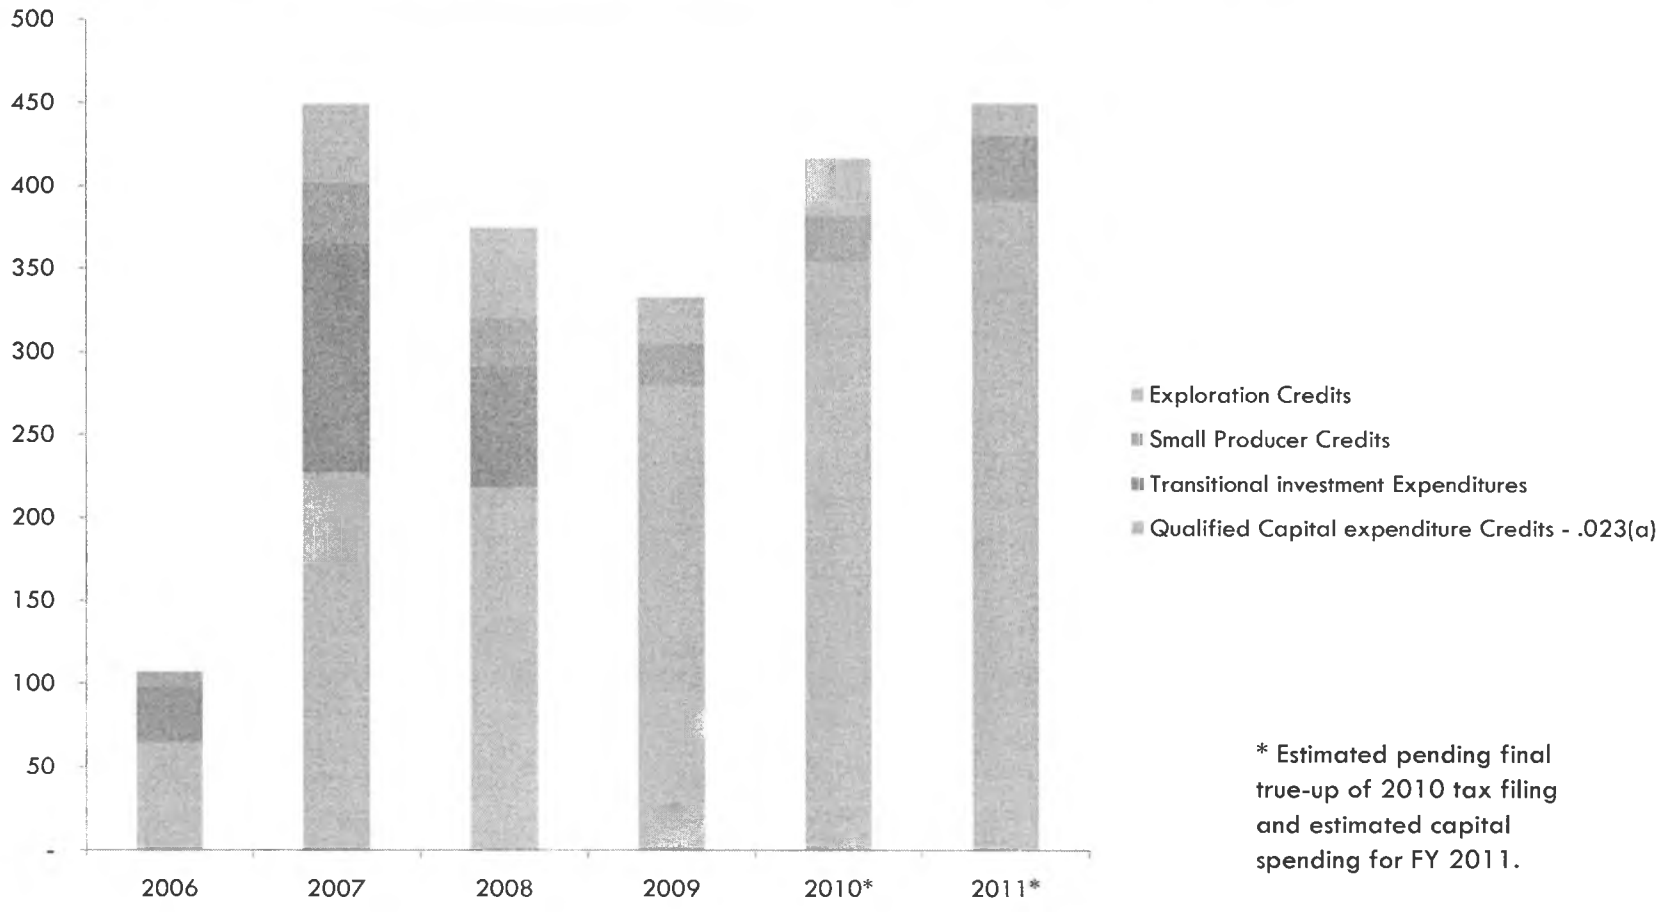
- Capital Expenditure, Capital Exploration, NOL, and Alternative Tax Credits for Oil and Gas Exploration are convertible to tax certificates
- Capital Expenditure, Capital Exploration and NOL Tax Credit Certificates must be applied over two years (except south of 68 degrees North latitude – passed 2010)
- Alternative Tax Credits for Oil and Gas Exploration Certificates can be used in single year

Production Tax Credits Applied Against Tax Liability (Fiscal Year)

	2006	2007	2008	2009	2010*	2011*	Total
Capital Expenditure Credit	65	227	219	280	349	391	1,535
TIE Credits	33	138	73	0	0	0	243
Small Producer Credits	9	37	30	26	28	40	169
Exploration Credits	1	47	55	28	34	20	185
Totals	107	449	375	333	417	450	2,131

* Estimated

Production Tax Credits Applied Against Tax Liability (Fiscal Year)



* Estimated pending final true-up of 2010 tax filing and estimated capital spending for FY 2011.

Overview

- Types of Production Tax Credits
- Credits Applied Against Production Tax Liability
- **Transferable Tax Credit Certificates**
- Cash Refunds History

Transferable Tax Credit Certificates

Companies may also claim tax credits by applying for a Transferable Tax Credit Certificate (TTCC)

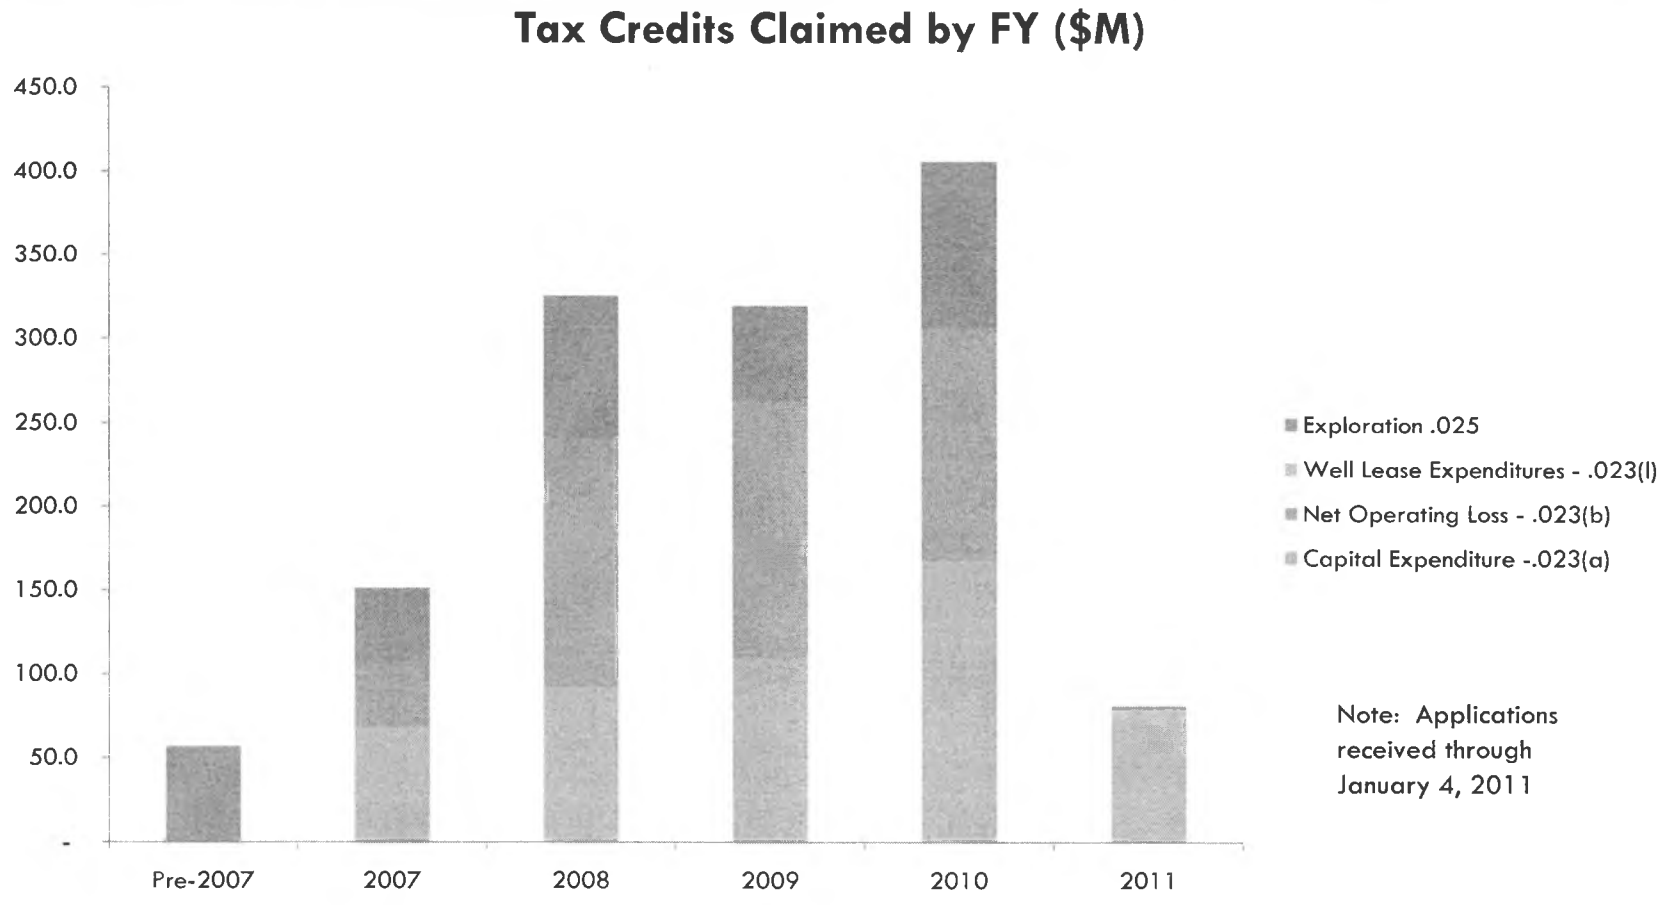
- Available to companies (explorers) with no tax liability to which credits can be applied
- Tax Credit Certificates under 43.55.023(a) and (b) must be split or applied over two years (except credits issued for expenditures incurred south of 68 degrees North latitude effective July 1, 2010)
- May be transferred to another taxpayer or cashed with the state

Production Tax Credits Under AS 43.55 Claimed by FY ($M)

Credit Type	Pre-2007	2007	2008	2009	2010	2011*	Total
Capital Expenditure - .023(a)		68.2	91.7	109.6	168.0	72.8	510.3
Net Operating Loss .023(b)		38.1	148.5	153.5	138.7	.2	479.0
Well Lease Expenditure - .023(l)						5.8	5.8
Exploration -.025	48.3	44.9	85.5	56.6	99.5	2.4	337.2
Total	48.3	151.3	325.6	319.7	406.2	81.3	1332.4

* Applications received through January 4, 2011.

Transferable Tax Credit Certificates



Transferable Tax Credit Certificate Activity by Fiscal Year ($M)

	Pre-2007	2007	2008	2009	2010	2011*	Total
Issued	16.2	99.9	130.8	308.2	361.3	191.5	1,107.9
Refunded		(54.6)	(54.1)	(193.1)	(250.5)	(299.3)	(851.6)
Transferred/ Applied to Taxes	(12.3)	(40.0)	(46.6)	(20.0)	(1.2)	(62.7)	(182.8)
Activity by year	3.9	5.2	30.1	95.1	109.6	(170.4)	
Transferable Tax Credit Certificates Outstanding	3.9	9.1	39.2	134.2	243.9	73.4	73.4

*Payment activity through February 4, 2011.

Overview

- Types of Production Tax Credits
- Credits Applied Against Production Tax Liability
- Transferable Tax Credit Certificates (TTCC)
- Cash Refunds History

Cash Refunds History

Cash Refunds Governed by AS 43.55.028:

- To cash must be usable against tax liability
- Must show subsequent (24 months) QCEs or lease bids equal to cash sought (repealed in 2010)
- Have a zero tax owed in current and past years
- Have no more than 50,000 BOE/d

Cash Refunds History

Tax Credits Purchased

By fiscal year ($M)

2007	$ 54.6
2008	54.1
2009	193.1
2010	250.5
2011 (thru 02/04/11)	299.3
TOTAL	$851.6

Cash Refunds History

Oil & Gas Tax Credit Fund

Appropriations -	$ 904	M
Tax Credit Purchases (TC Fund)	(772)	M
Tax Credit Purchases (GF)	(79)	M
Interest Earned	22	M
Balance	$ 75	M

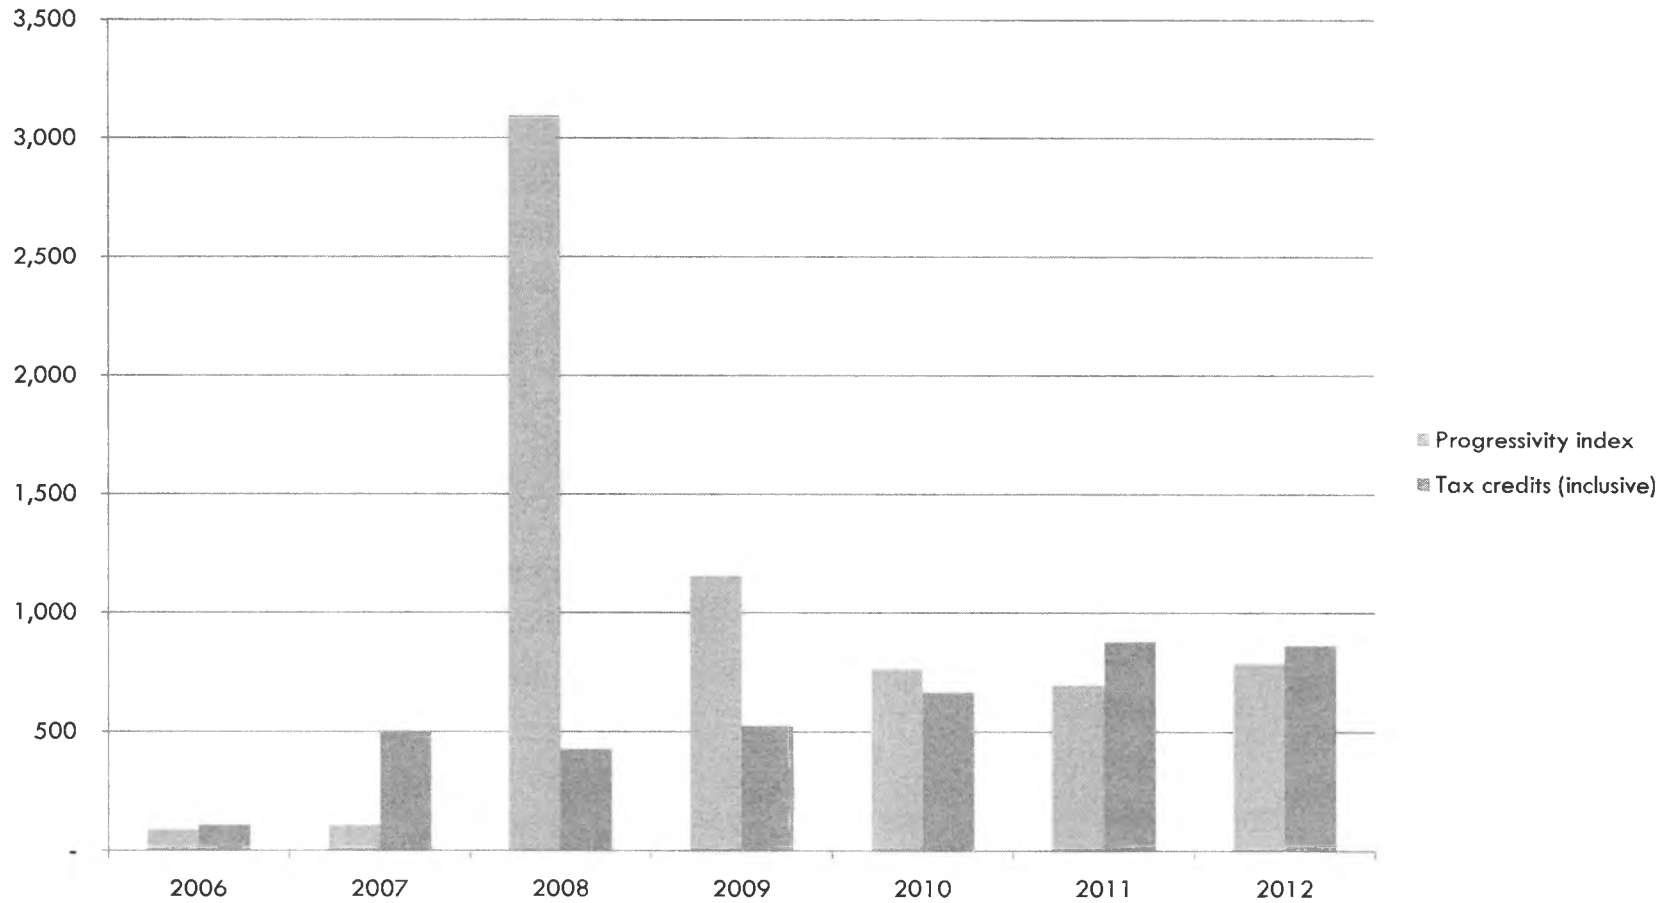
Progressivity Index versus Total Production Tax Credits



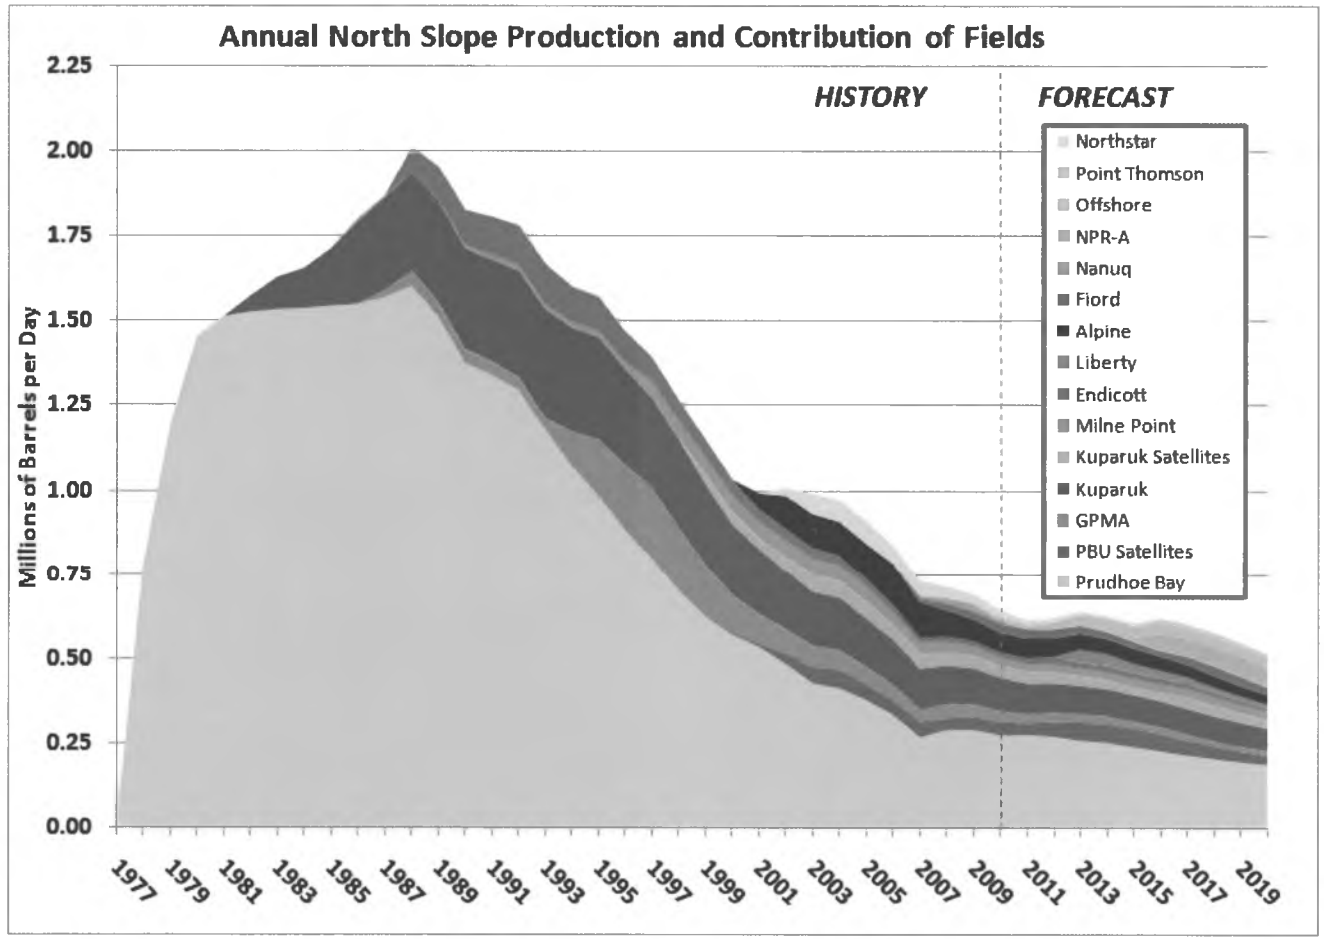
GCA
Gaffney, Cline & Associates

Issues In Considering SB49

Senate Resources Committee
March 18, 2011

A Question Of Nature or Nurture ?

GCA
Gaffney, Cline & Associates



Source: Fall 2010 Revenue Sources Book

Fiscal System Design

GCA
Gaffney, Cline & Associates

- **2 Parts *Art* to every 1 Part *Science***
- **What works well for one state/country does not necessarily work for another**
  - Over time it may actually no longer work optimally where it once did
- **Influencing factors include (but not limited to):**
  - GDP & GDP/Capita
  - Energy as % of GDP
  - Infrastructure Availability
  - Infrastructure Capacity
  - Competition from elsewhere
  - Hydrocarbon Basin Maturity
  - Skilled Local Labor Force
  - H S & E
  - Institutional Capacity

The "Pressure" to Change

GCA
Gaffney, Cline & Associates

- Fiscal system change occurs generally because:
  a) Governments want their perceived fair share; or
  b) Attract Investment/Industry

★ *The two are not always the same or even nearly the same*

- Request for change justified by:
  - 'Objective' Calculations – model results based on a large number of assumptions
  - 'Subjective' Calculations – experts assessing major changes in direction or behavior

Creating "Best" Fiscal Systems

GCA
Gaffney, Cline & Associates

- **Countries and States continually assess their internal needs and their world-wide competitive position to set hydrocarbon fiscal terms**
  - Attract Investment
  - Generate revenue for the treasury
  - Create jobs, increase local skill base

- **There are far more systems in place than there are countries with petroleum legislation**
  - Many areas of similarity
  - Many areas of difference
  - Different 'vintages' can be active at the same time

Where is Alaska today?

GCA
Gaffney, Cline & Associates

1. Production continues to decline despite unprecedented prices
2. TAPS (either operational limit or economic limit)
3. Heavy oil potential under assessment
4. New plays on the verge of being unlocked?
5. New resources viewed by some as "stranded"
   - Access to infrastructure
6. Logistical challenges and high costs remain
7. Long lead times to bring on new fields
8. Players
   - Incumbents and new entrants

Future Scenarios for Alaska

GCA
Gaffney, Cline & Associates

Hard to predict the future in a nice tidy narrow range

- Requires many assumptions that leads to '*noise*' and time and focus taken away from discussing and understanding root causes and the real issues
- Lack of planning data

What are the possible upside/downside scenarios to consider in looking to change ACES?

- Upside – Reduced taxes leads to investment in new resources and technologies that keep TAPS flowing through 2050
- Downside – Reduced taxes, still no new fields brought on line, TAPS reaches limit in the 2020's

The Importance Of Oil To Alaska

GCA
Gaffney, Cline & Associates

- **Alaska (2010)**
  - Oil taxes and royalties accounted for almost 90% of unrestricted General Fund revenue

- **Big 3 (2010)**
  - Alaska profits and production accounted for 5% - 30% of their "economy"

Alaska remains very important to the big oil companies .... but the relative importance to them is much, much less than it is to the State

Some Big Questions ...

GCA
Gaffney, Cline & Associates

- Is it necessary to change ACES ?

  Will I get +/- the same investment and production anyway if I do not ?

  If I get more investment and production, how much more ?

  Will TAPS obtain oil from "somewhere" to keep flowing, regardless ?

  How long can I "delay" before being comfortable that I know the likely outcome ?

  What can I influence ? How ?

Some (Very High Level) Metrics ...

GCA
Gaffney, Cline & Associates

- **Difference between 3% and 6% decline**
  - 1.5 to 2 billion barrels (TAPS threshold dependent)
- **150,000 Bopd for 20 years**
  - 1 billion barrels
- **Delays cost money; value halves ...**
  - In 7 years at 10% discount rate
  - In 15 years at 5% discount rate
- **$100 a barrel (market price) worth to State approximately (undiscounted)**
  - $40 under ACES
  - $30 under SB49 (area dependent)
- **$150 a barrel (market price)**
  - $75 under ACES
  - $55 under SB49 (area dependent)

Some (Very High Level) Metrics ...

GCA
Gaffney, Cline & Associates

- **Put another way, at $100/Bbl**
  - Getting 150,000 Bopd for 20 years that you might not have got is worth ~$30 billion to the State
  - Changing to SB49 if you would have got it anyway costs $10-15Bn
- **At $150/Bbl**
  - Getting 150,000 Bopd for 20 years that you might not have got is worth ~$50-60 billion to the State
  - Changing to SB49 if you would have got it anyway costs $15-25Bn

- **Delaying 150,000 Bopd by 10 years (halve value; i.e. discounted)**
  - ~$20 – 40 Bn ?

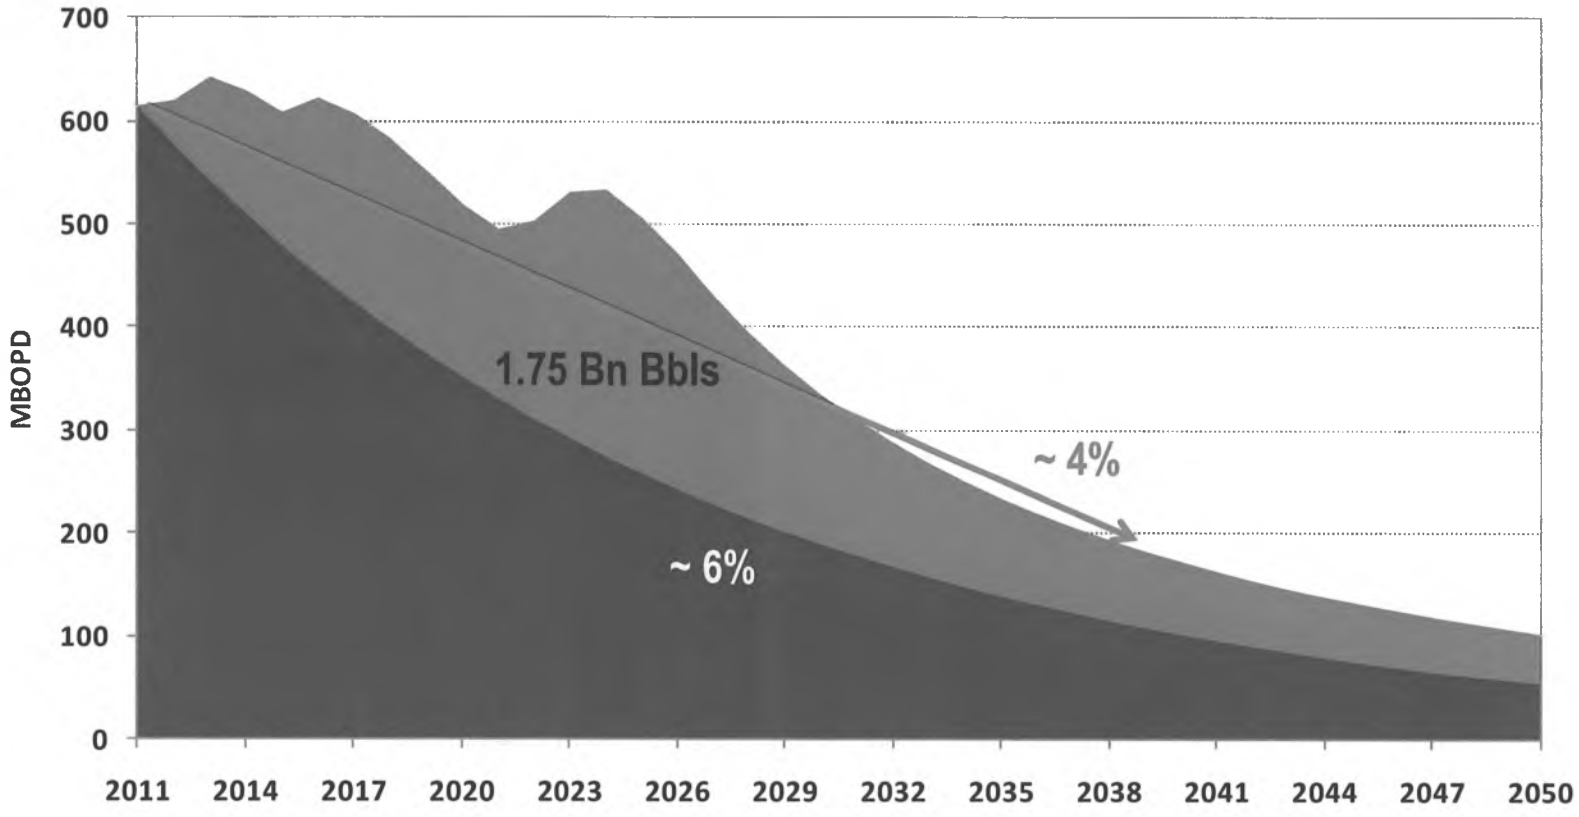
Based On Cash Flow Model

GCA
Gaffney, Cline & Associates

- **Examine the "what if" economic impacts (for example) to try and assess some possible "goalposts"**
  - Change fiscal take and limit long term decline to 3% - 4% (DoR 2010 Fall Profile)
  - Do Nothing and decline is actually around 6%
  - Do Nothing and still limit long term decline to 3% - 4%

Continued 6% Decline and DOR Fall 2010 Forecast

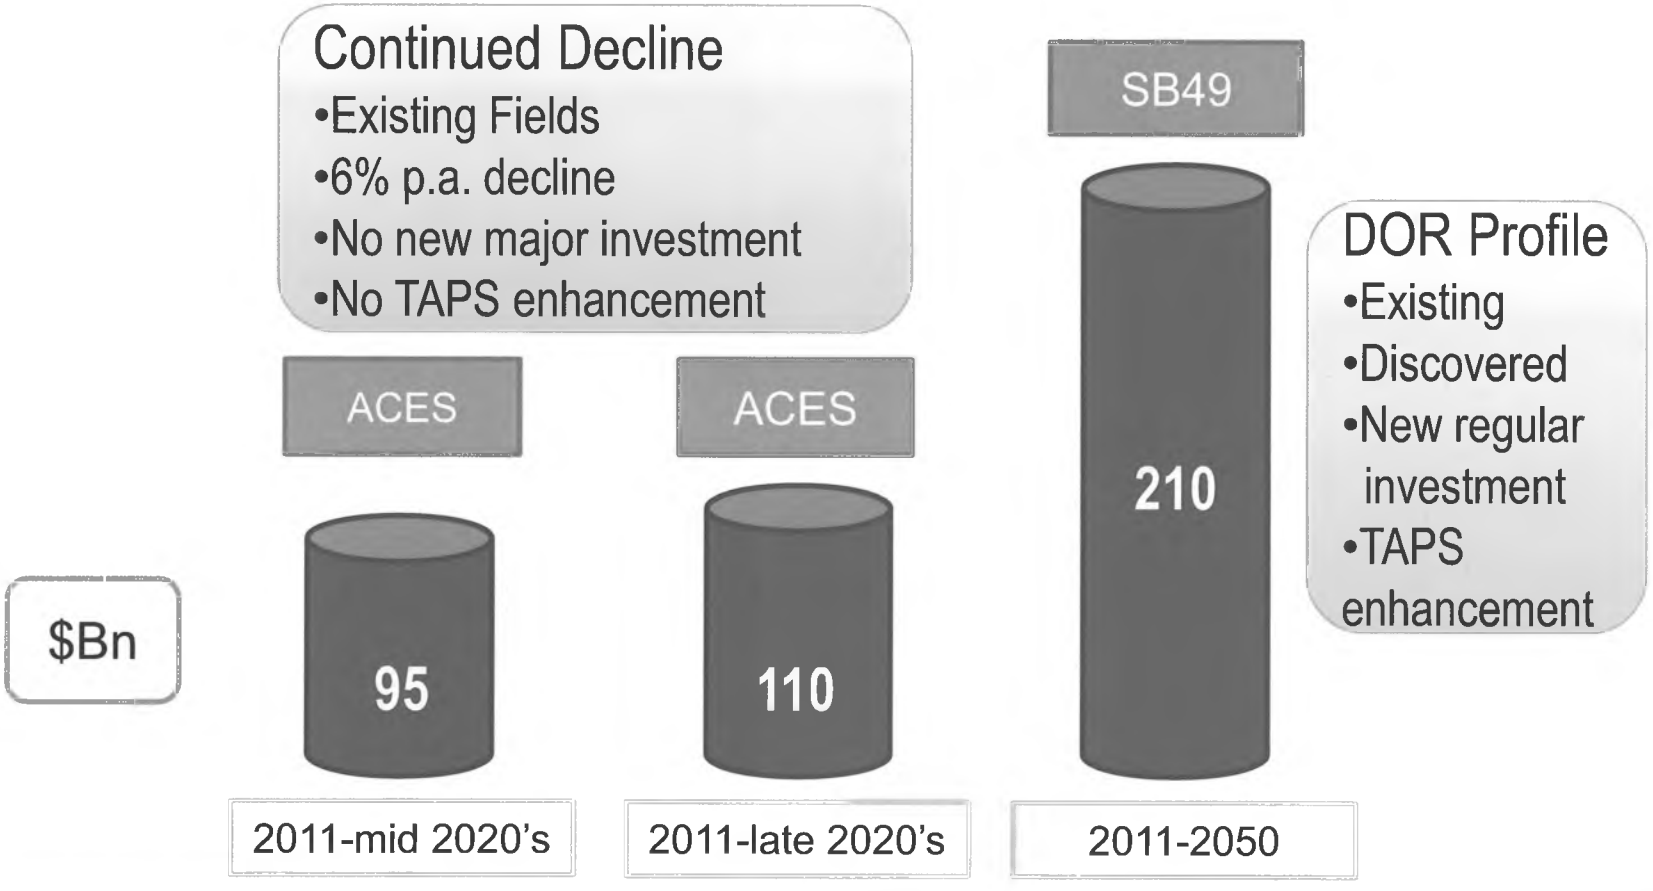
GCA
Gaffney, Cline & Associates



State Undiscounted Cash Flow

GCA
Gaffney, Cline & Associates

~$100 + Bn Potential Gain….



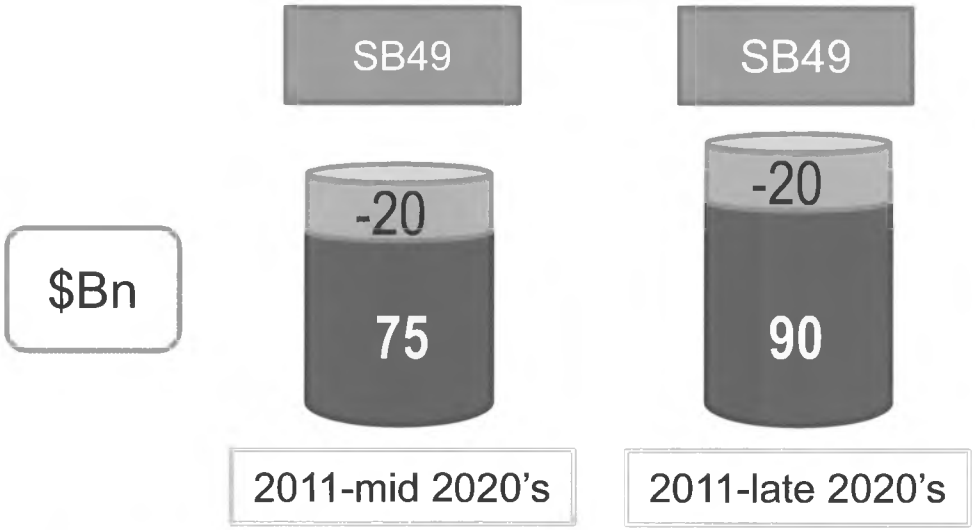
* DOR price & cost forecasts

State Undiscounted Cash Flow

GCA
Gaffney, Cline & Associates

~$20-50 Bn Potential Downside….

Assumes:
- Make change to SB49
- Still no new investment
- No TAPS enhancement



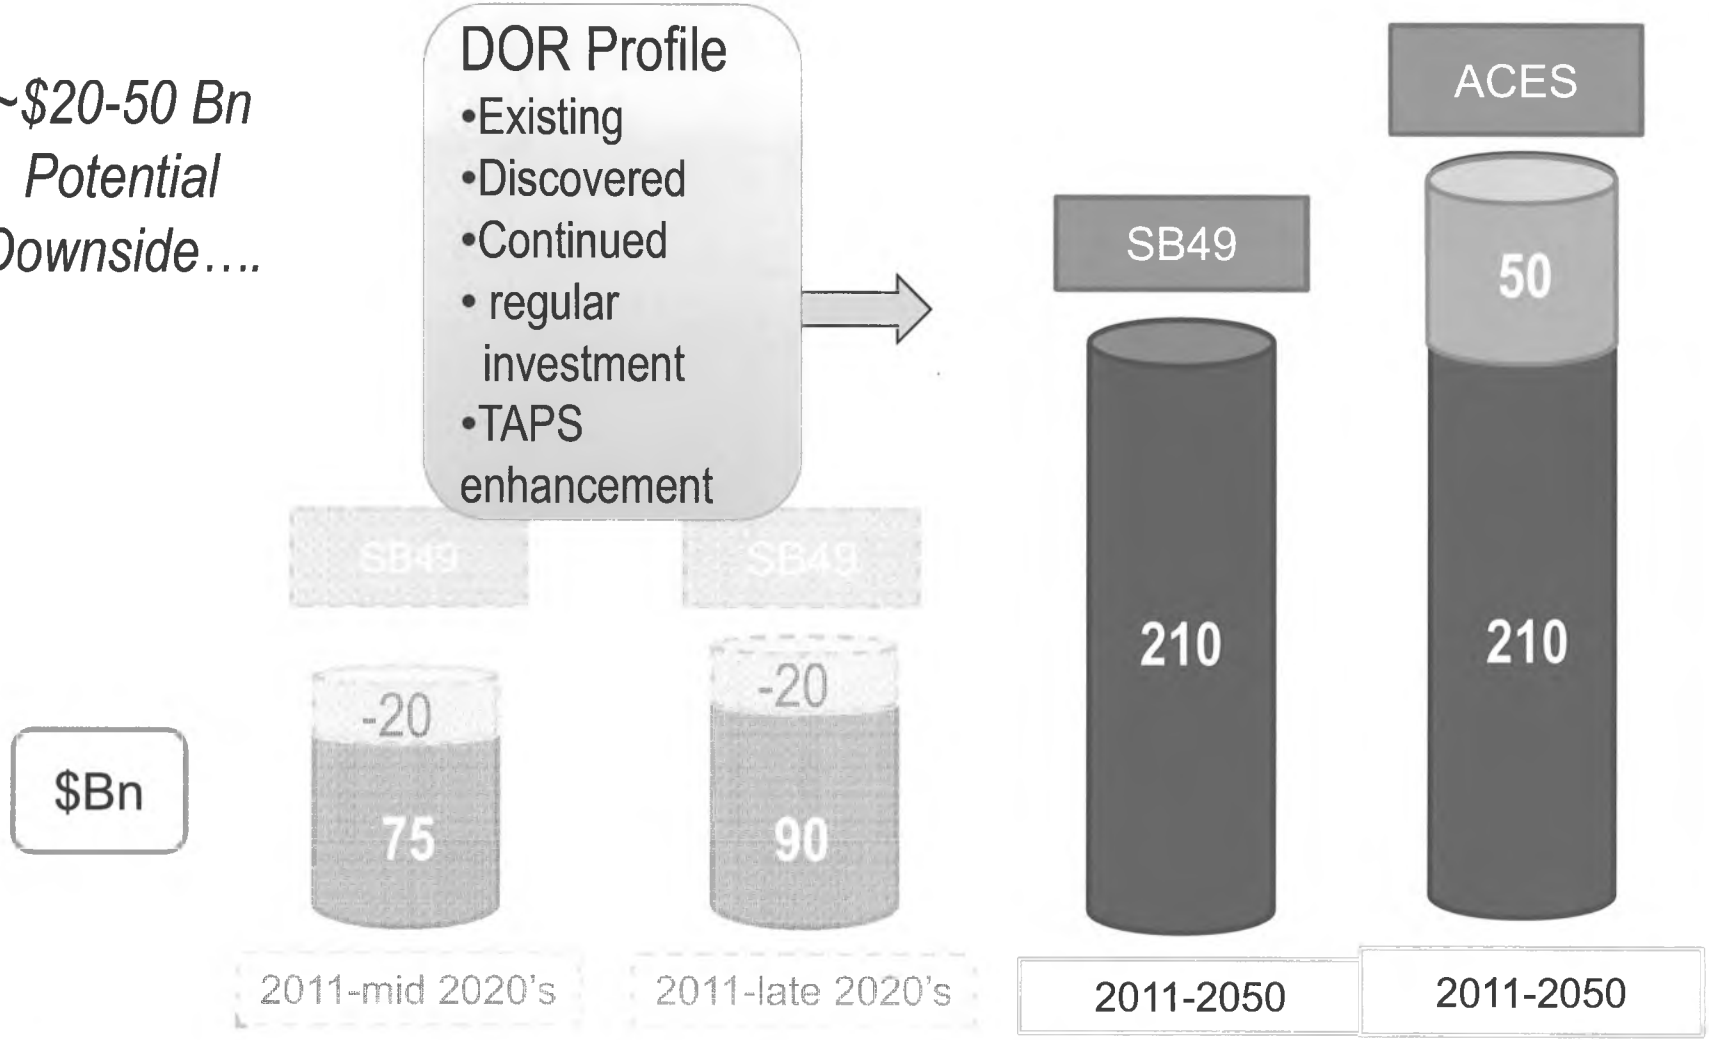
* DOR price & cost forecasts

State Undiscounted Cash Flow

GCA
Gaffney, Cline & Associates

~$20-50 Bn Potential Downside….

DOR Profile
- Existing
- Discovered
- Continued
- regular investment
- TAPS enhancement



* DOR price & cost forecasts

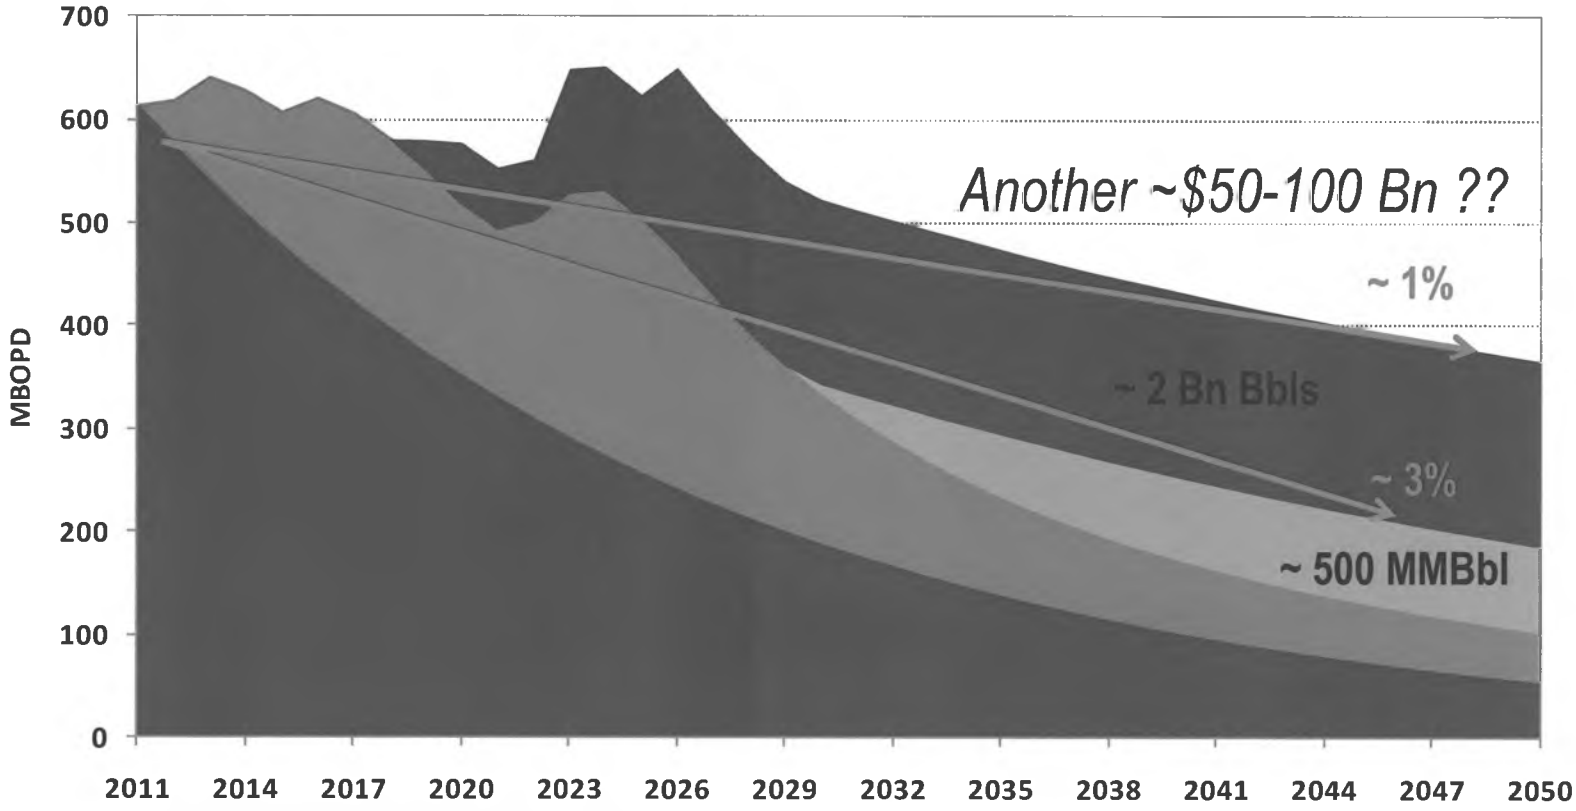
How To Consider The Options

GCA
Gaffney, Cline & Associates

- Examine the "what if" economic impacts of (for example) to try and assess some possible "goalposts"
  - Do Nothing and still limit long term decline to 3% - 4%
  - Do Nothing and decline is actually around 6%
  - Change fiscal take and limit long term decline to 3% - 4%
- **The prize of achieving 3% decline ..**
  - …. or better

Potentially Better Still

GCA
Gaffney, Cline & Associates



Ongoing Infield and Exploratory Drilling ….

… Heavy Oil and Non-Conventional Resources ?

Illustrative Potential Capital Requirements

GCA
Gaffney, Cline & Associates

	Bn Bbls	Cost Range ($/Bbl)		Capex ($Bn)	
DOR Fall 2010	5	14		68	
Conventional Oil, Existing Field Areas	1	10	15	10	15
Conventional Oil, New Areas	2	15	25	30	50
Heavy Oil	4	20	40	80	160
If All of the Above (Beyond DOR Forecast)				**120**	**225**

…. and then there are unconventional resources ….

Available Investment Capital

GCA
Gaffney, Cline & Associates

- **Producer spending can be put in three categories:**
  - Mandatory – loss of license if they don't
  - Should – monetary penalties / loss of production if they don't
  - Discretionary – used to "balance the books"
- **How much of the lack of new discretionary spending in Alaska is because the 'tax is too high' versus significant spending being directed to the top two categories above?**
  - Projects not viable
  - Better alternatives elsewhere at present

Conclusion

GCA
Gaffney, Cline & Associates

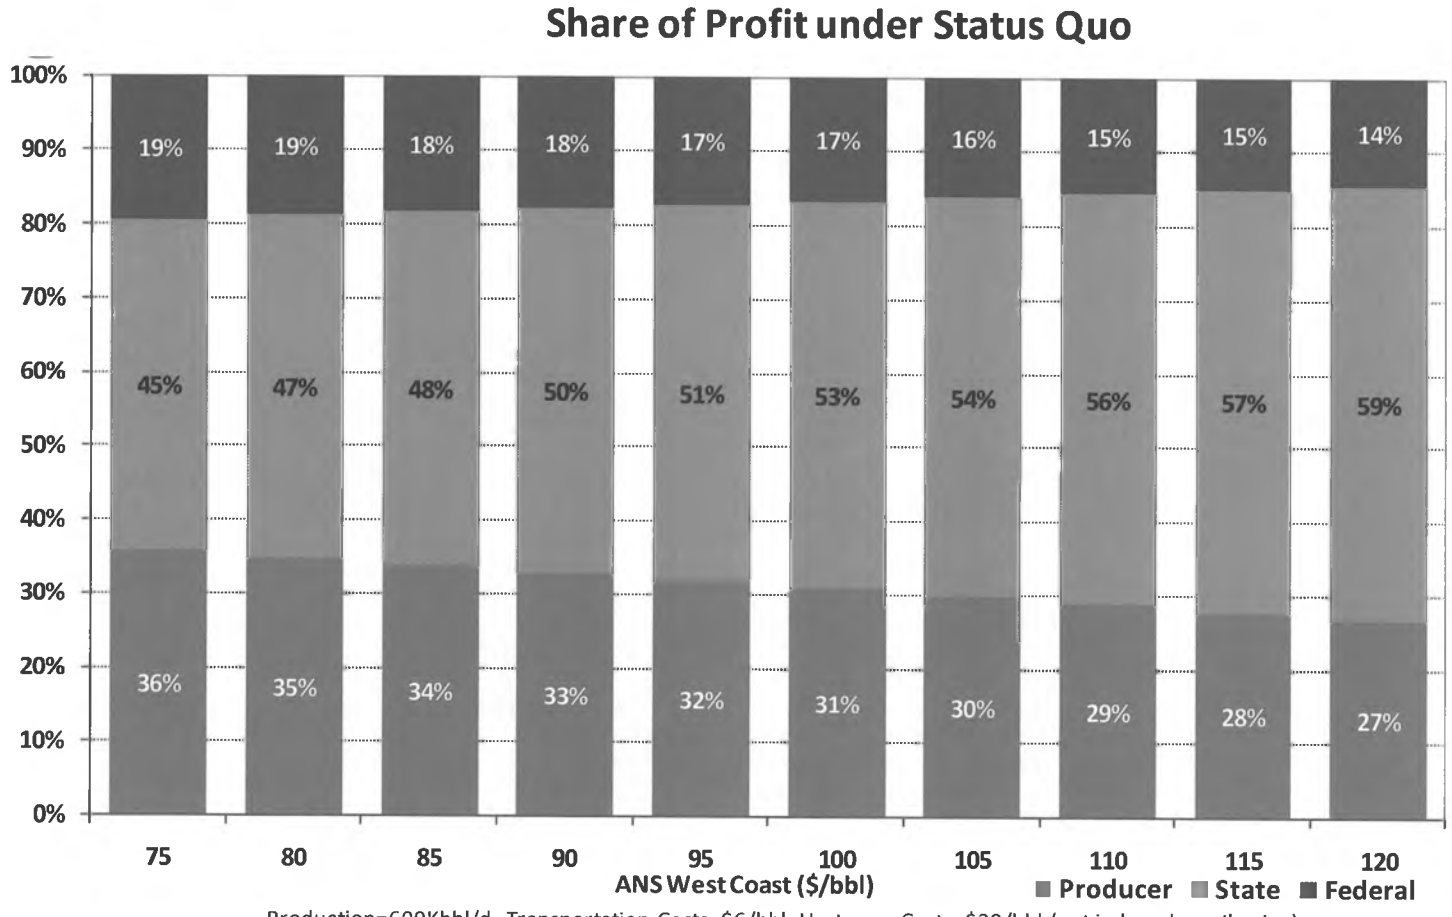
- Hard to predict the future in a nice tidy narrow range
- Potential impact of early pipeline shutdown significant to all parties, but most significant by far to the State
- Production Tax one of the possible levers the State can use to incentivize further investments and help extend the life of TAPS

Profit share graph Assumptions

Assumptions	Value	Unit
Transportation Costs	6.00	$/bbl
Royalty Rate	12.5%	
Upstream CAPEX	10.00	$/bbl
Upstream OPEX	10.00	$/bbl
Total Upstream Costs	**20.00**	**$/bbl**
Daily Production	600,000	bbl/d
Property Tax (% of CAPEX)	2.00%	
Total Allowable Costs	**20.20**	**$/bbl**

- ANS West Coast Price range
  - from $75/bbl to $120/bbl in increments of $5/bbl
- Costs are constant through price range

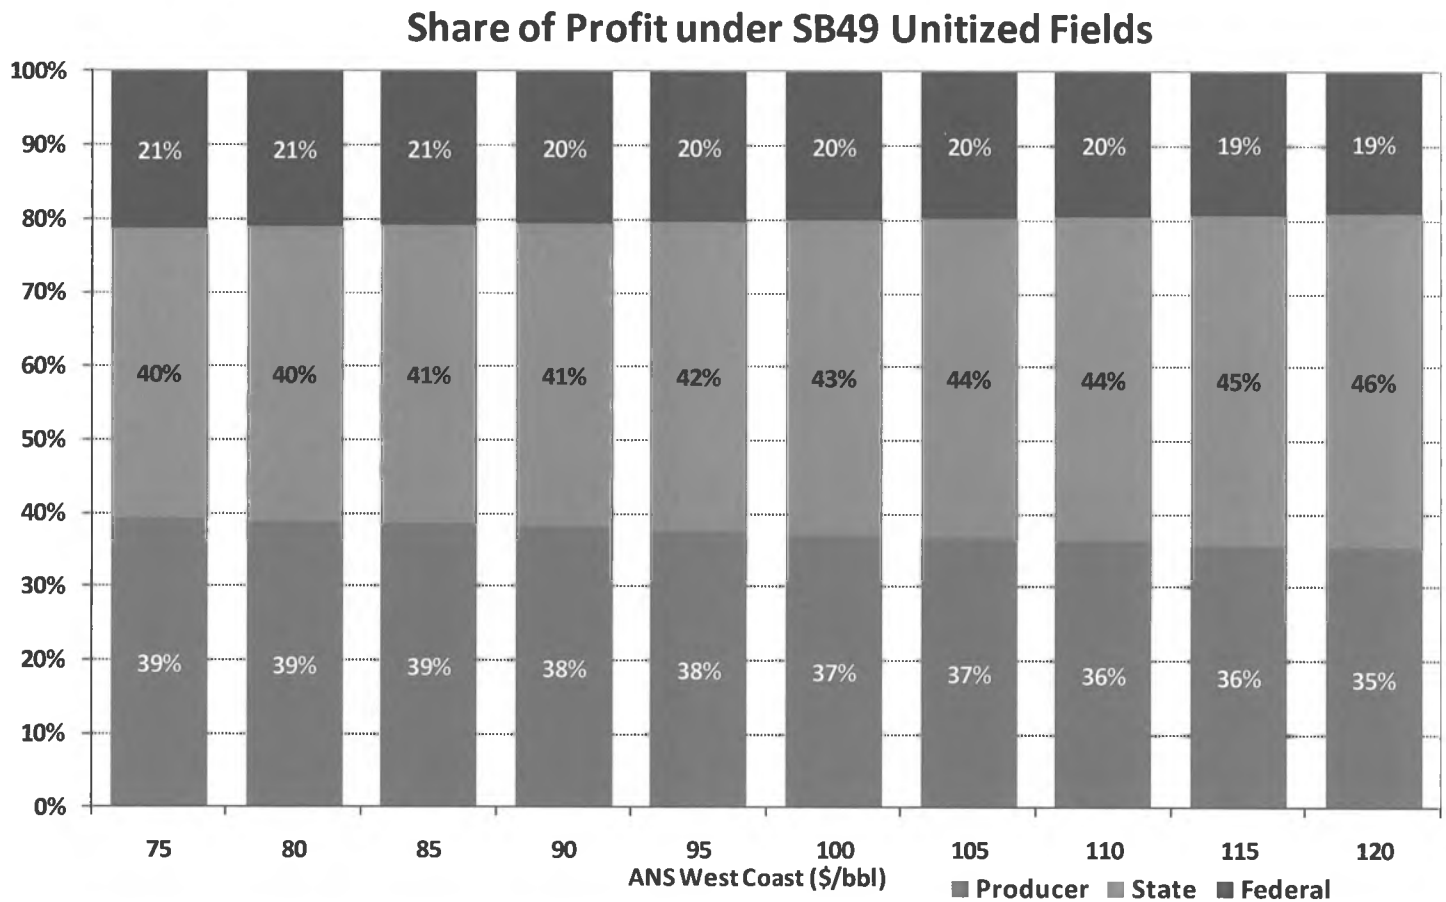
Profit Share under Status Quo



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

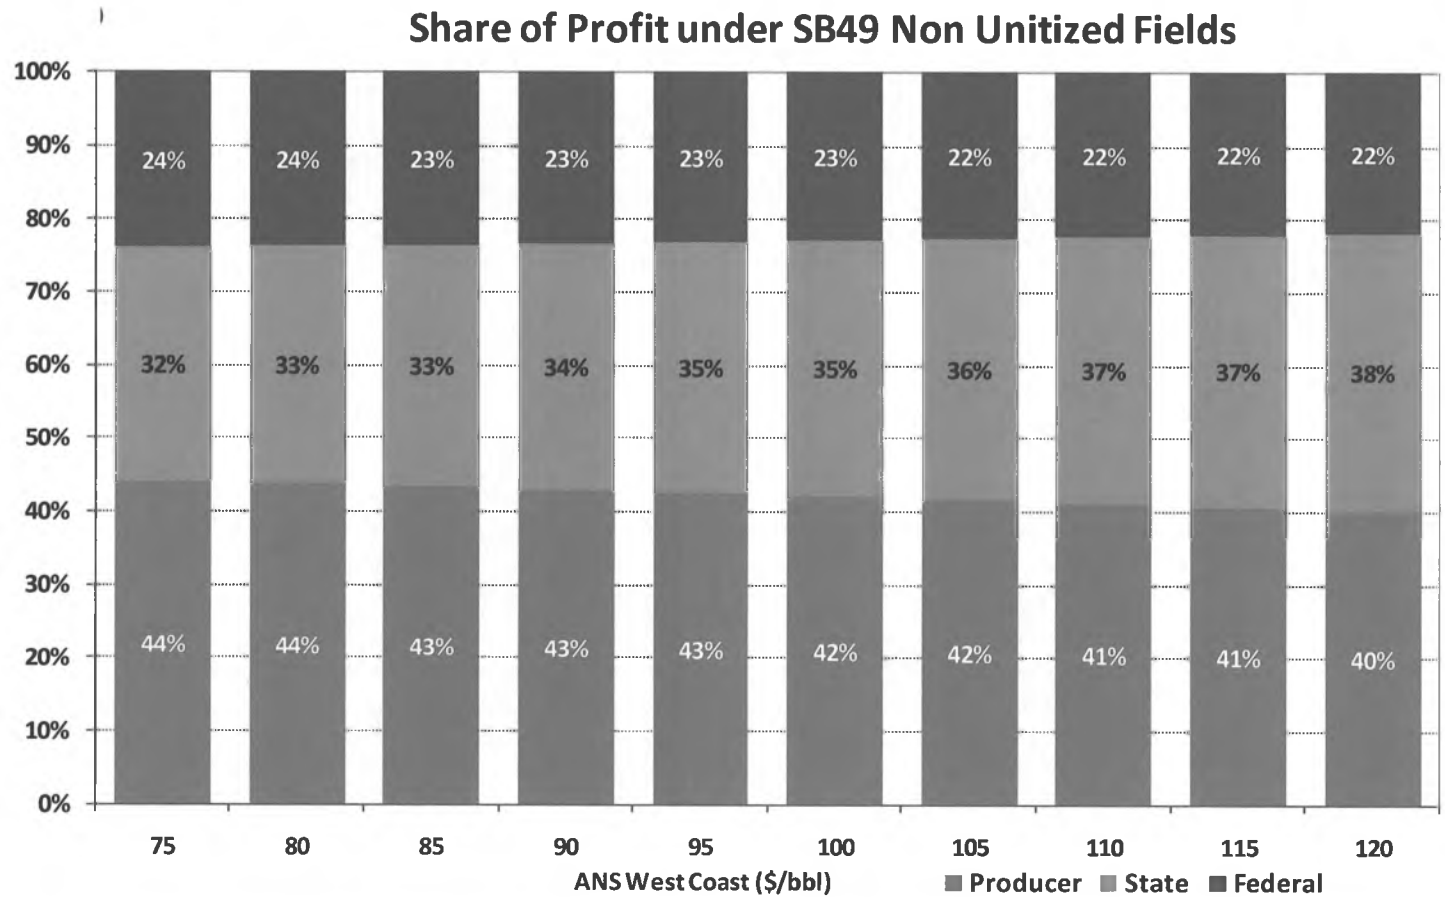
Profit Share under SB49 Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

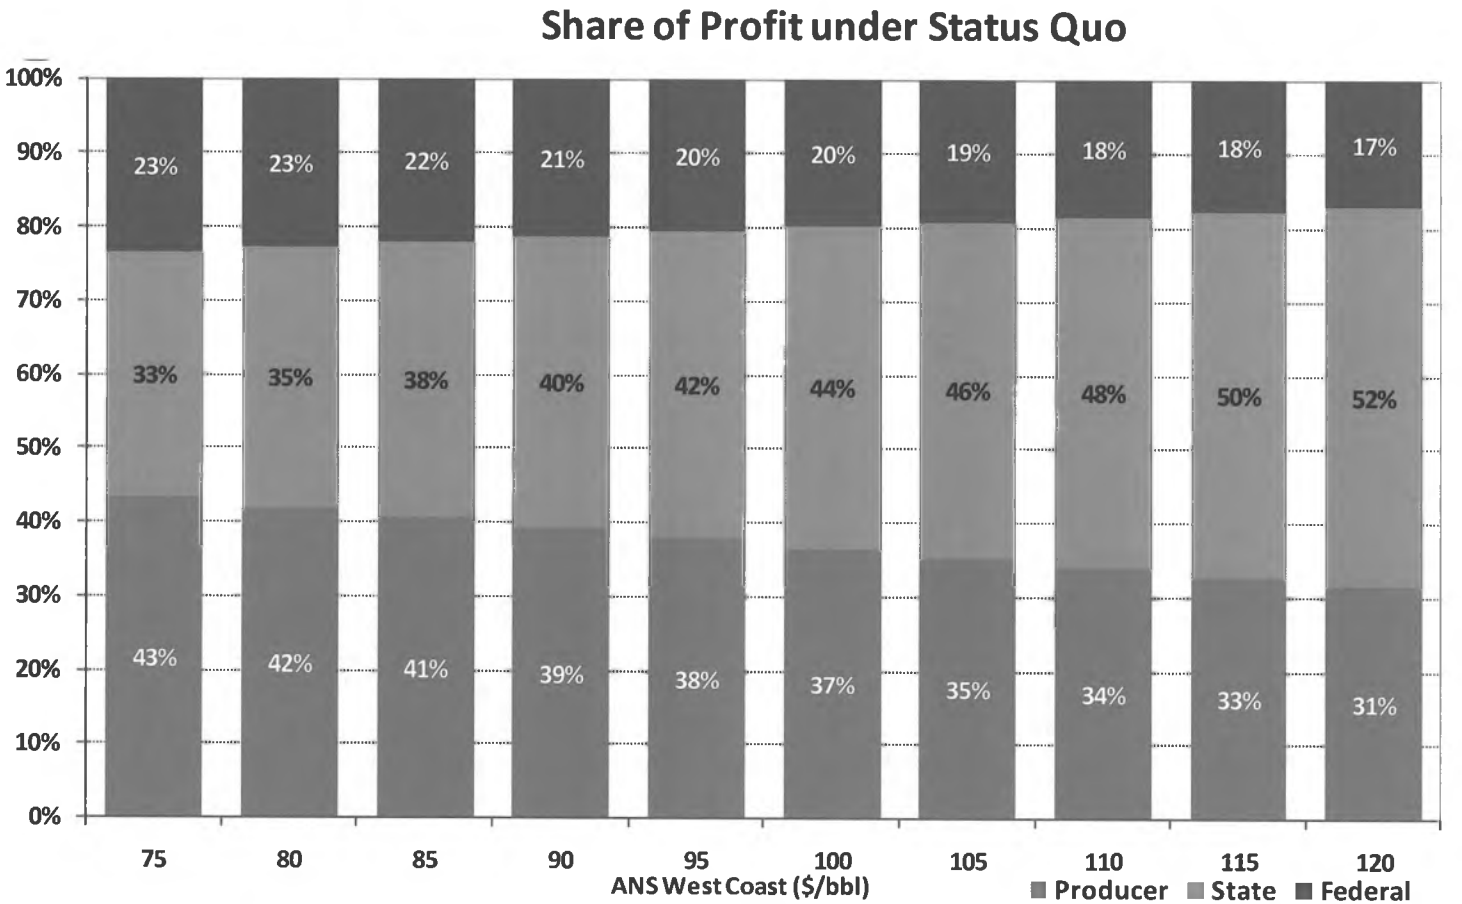
Profit Share under SB49
Non-Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

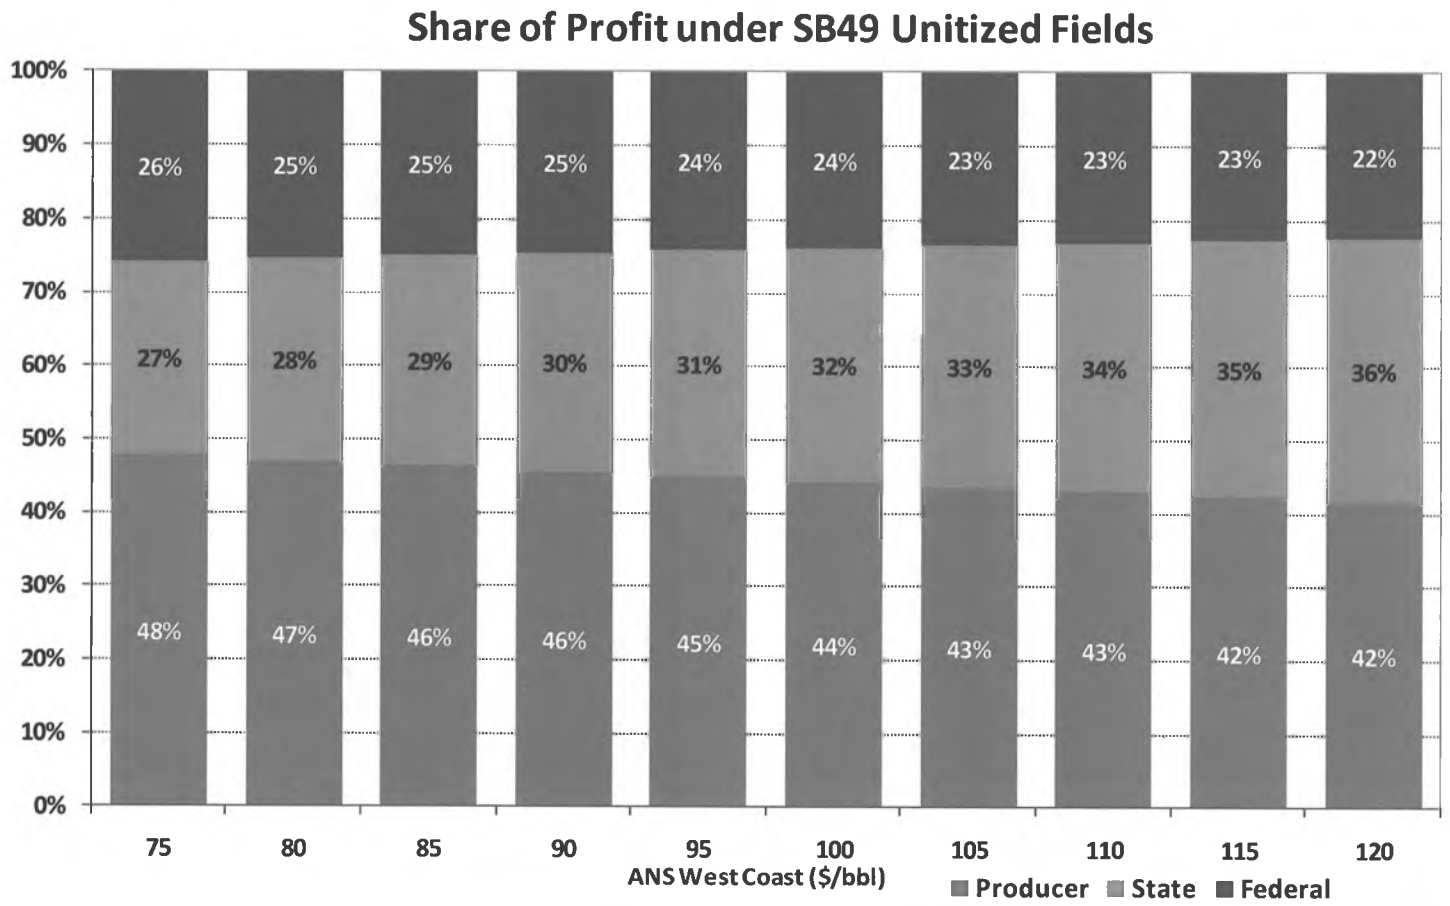
Profit minus Royalty Share under Status Quo



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

Profit minus Royalty Share under SB49 Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

Profit minus Royalty Share under SB49 Non-Unitized Fields

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

Presentation to the Senate Resources Committee April 1, 2011 Alaska Department of Revenue

ACES Status Report

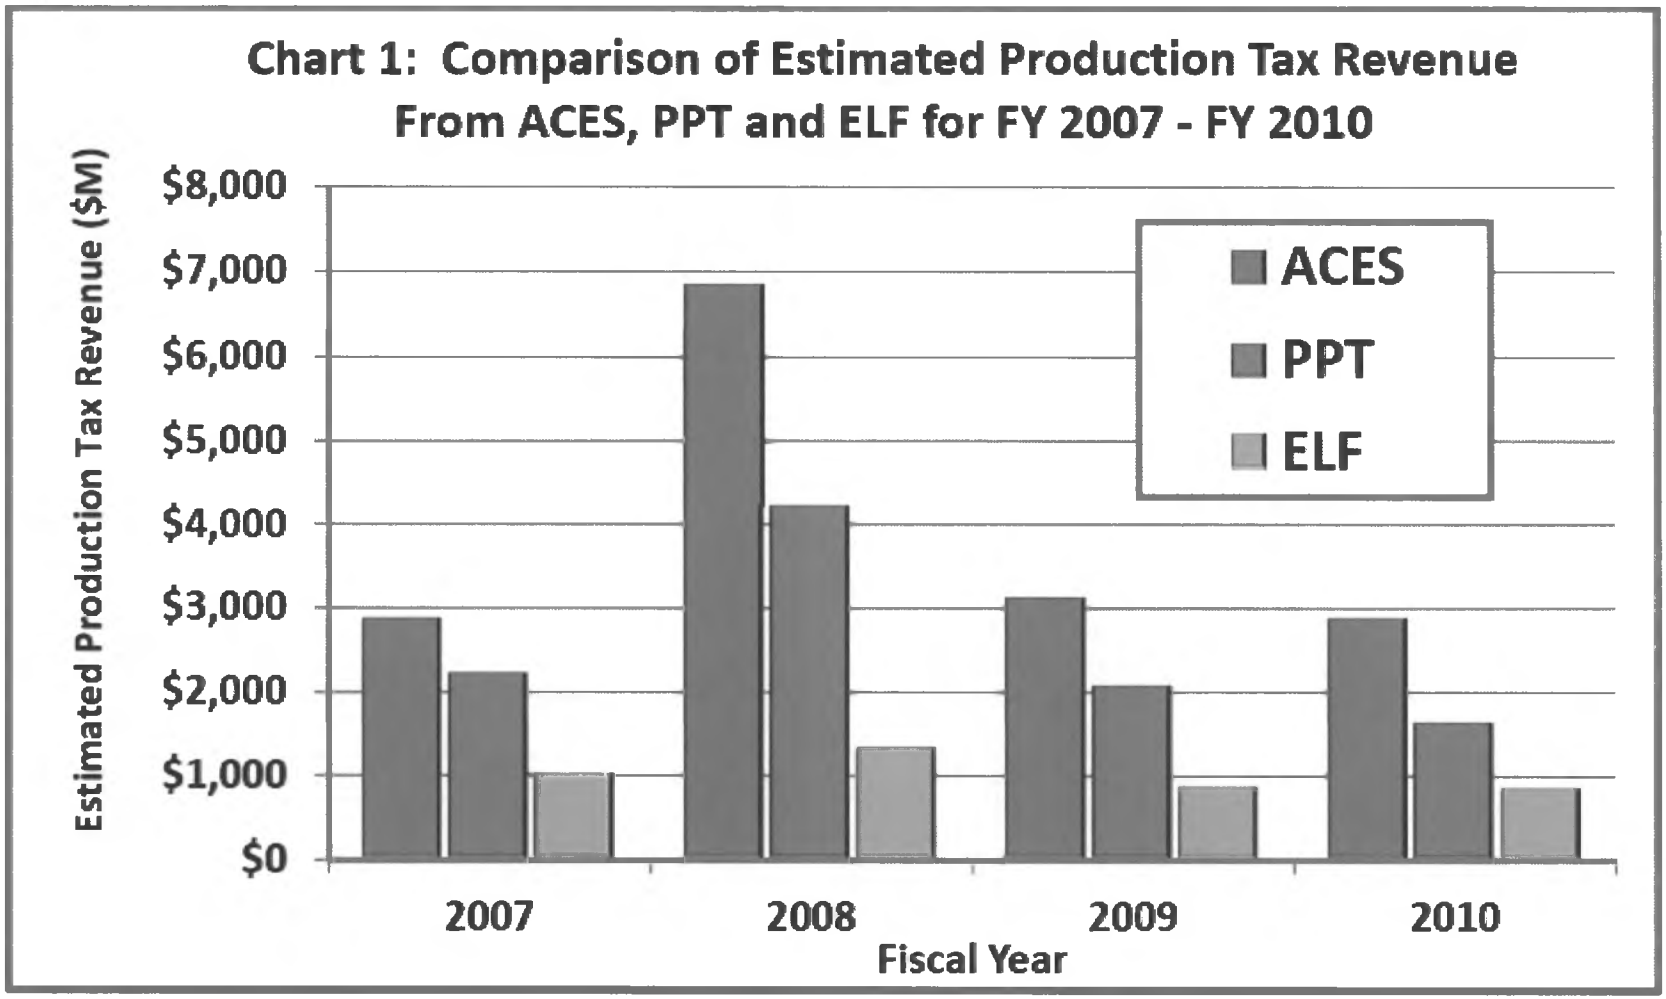
- **Overview of the Publication**
- **What We Know**

- ***Required report to the legislature under AS 43.55.180***
- ***Released January 18, 2011***

Overview of ACES Status Report

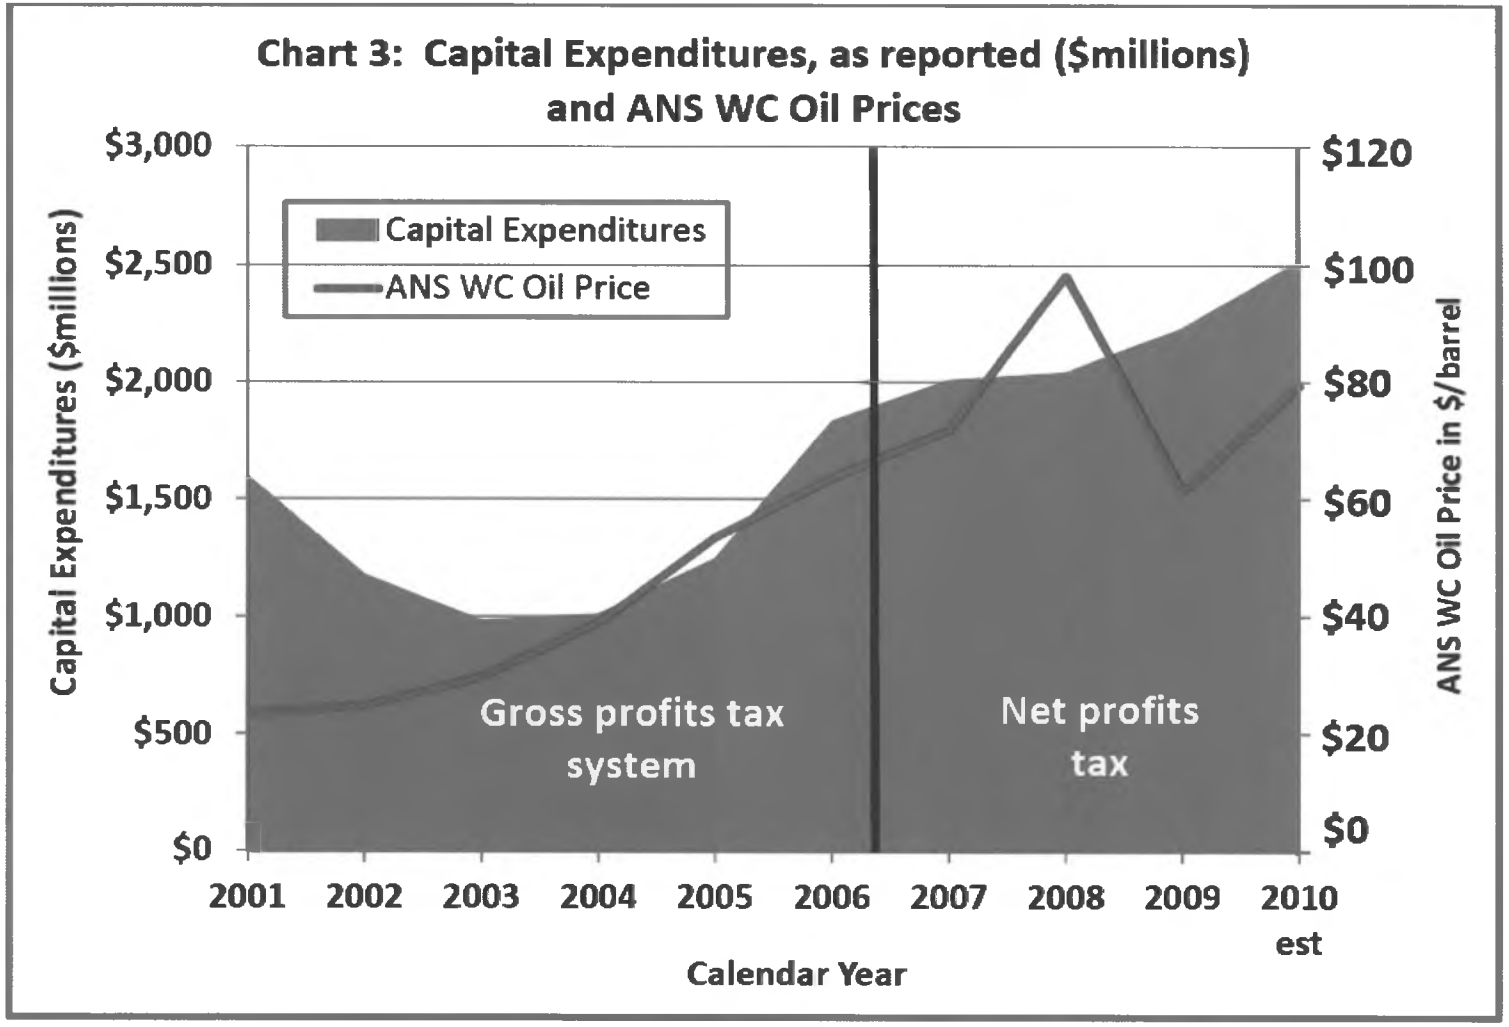
1. **Revenue Generation / Tax Rate**
2. **Industry Investment**
3. **Impact on Exploration, Development, Production**
4. **Industry Employment and New Entrants**
5. **Use and Expansion of Tax Credits**
6. **Tax Administration and Compliance**
7. **Conclusions and Recommendations**

What We Know:
State Revenue Has Increased



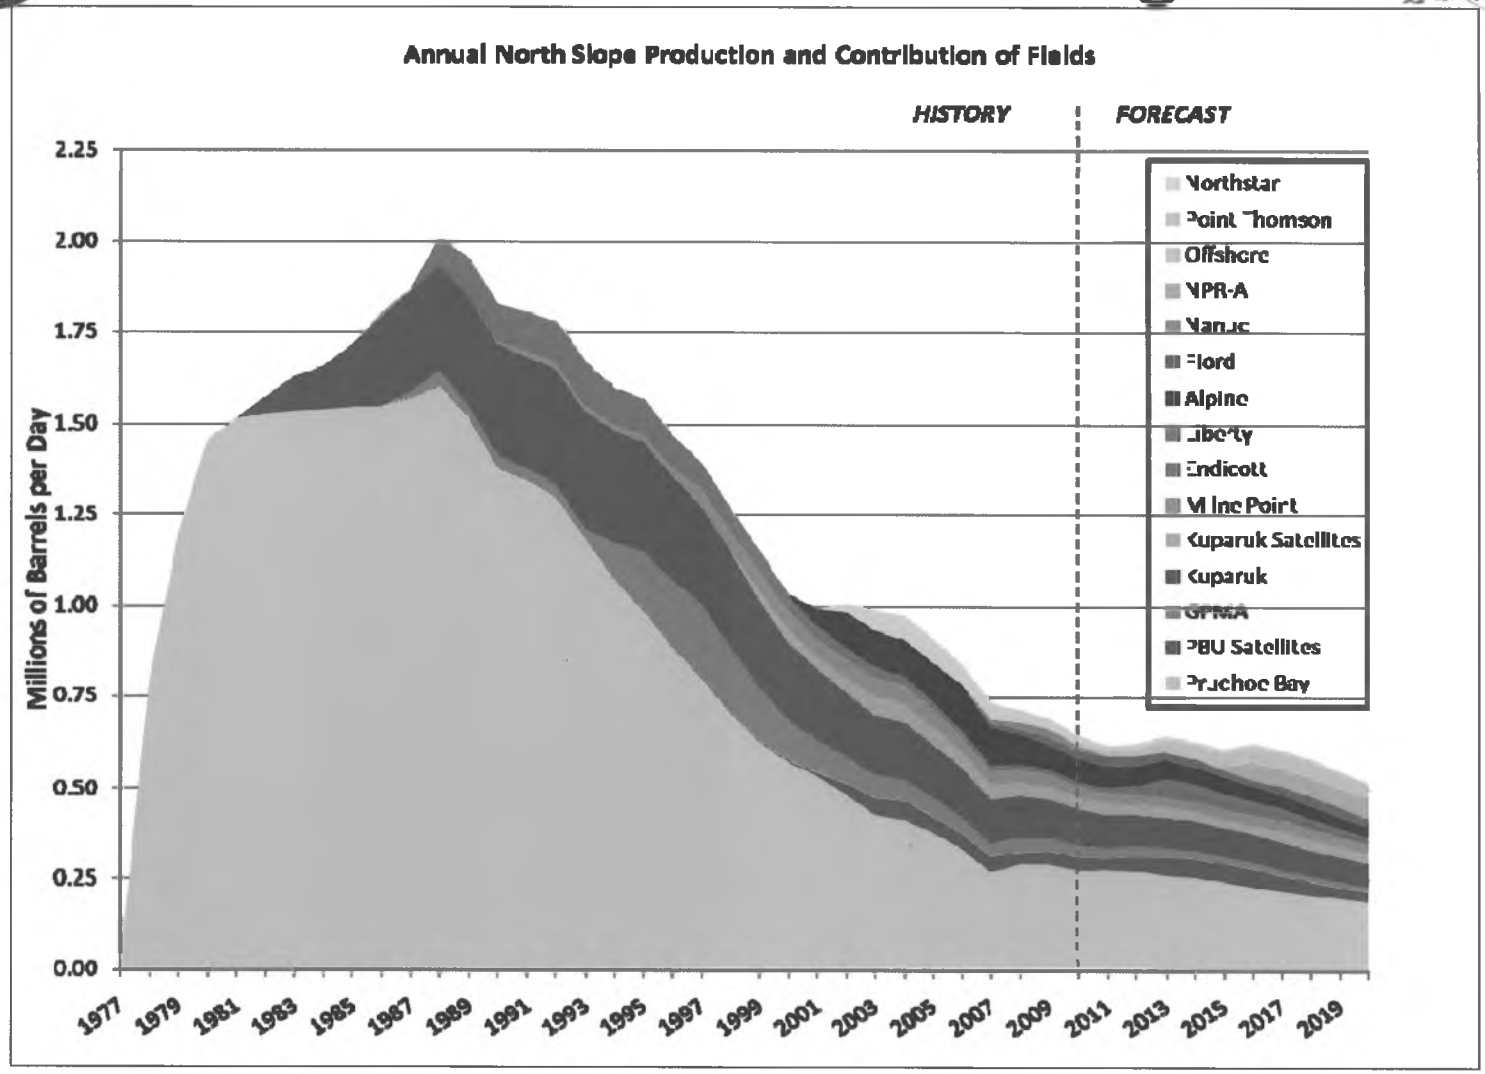
Source: Oil & Gas Tax Status Report 2011

What We Know: Companies are spending more



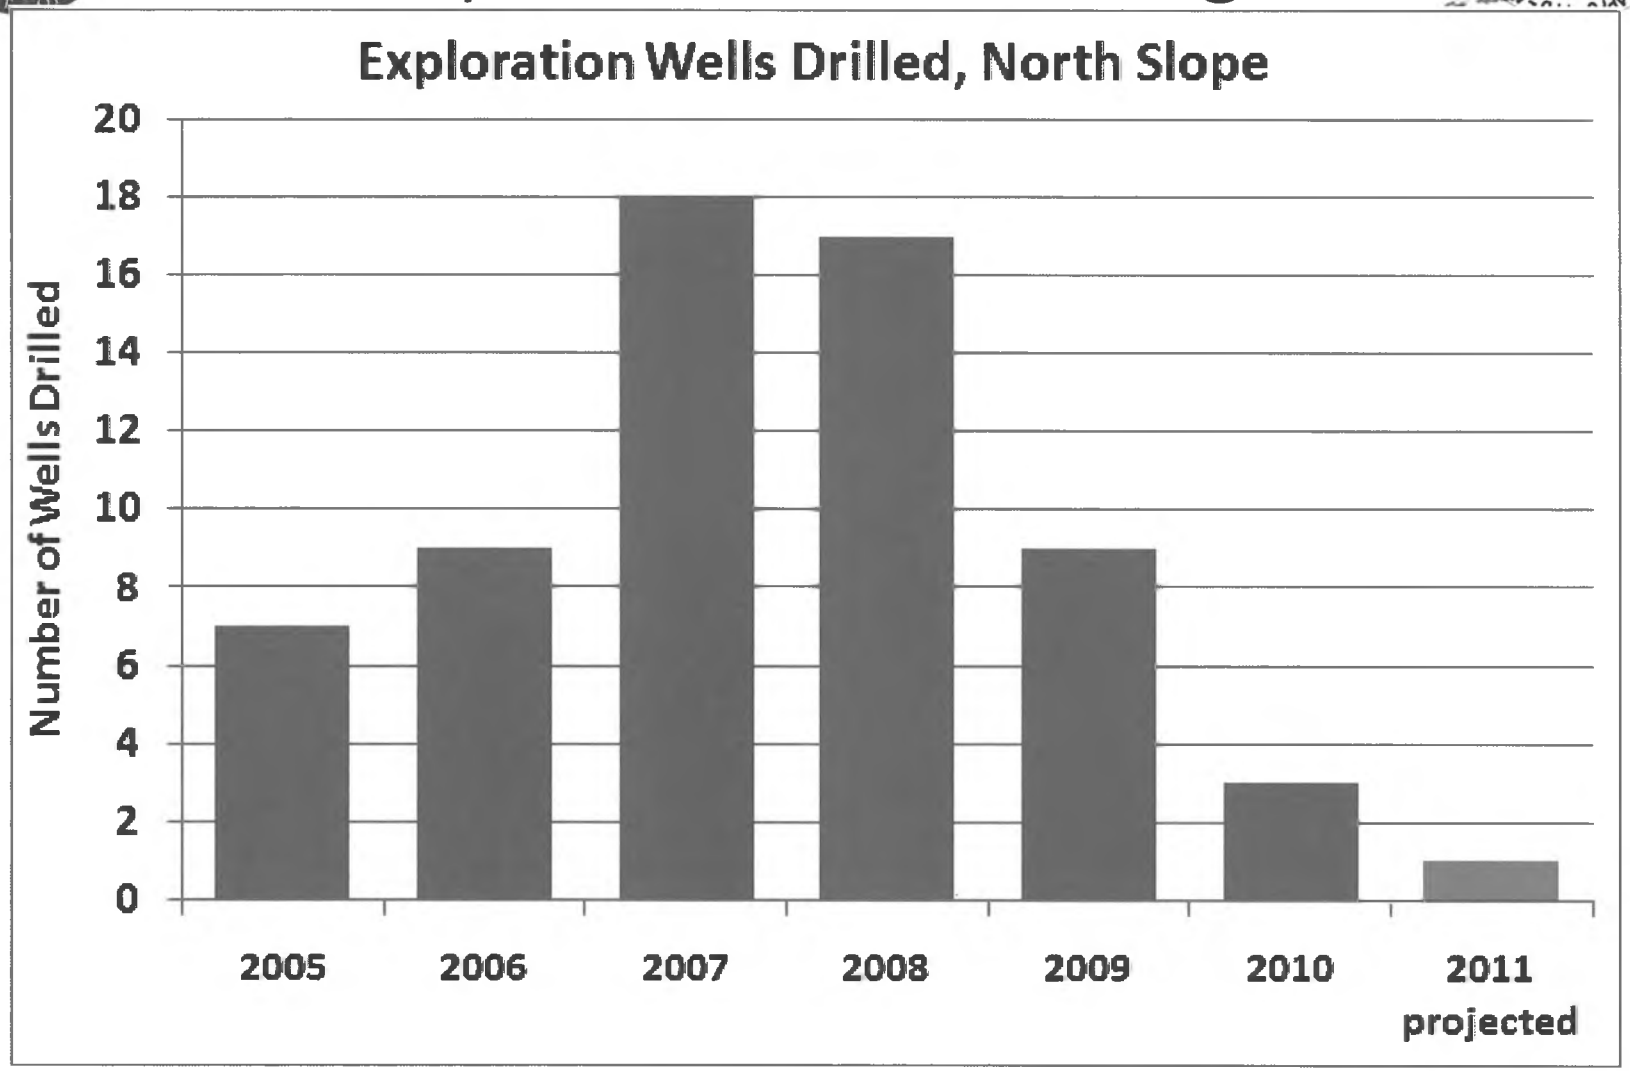
Source: Oil & Gas Tax Status Report 2011

What We Know: Production Is Declining



Source: Oil & Gas Tax Status Report 2011, and Fall 2010 Revenue Sources Book

What We Know: Exploration is Declining



Source: Alaska Oil & Gas Conservation Commission and Alaska Department of Natural Resources

Conclusion

- **Cannot conclusively identify the ACES impact compared to all the other factors in recent years**
- **We know we have more revenue in the short term**
- **We know oil production keeps declining**
- **We know there is little exploration taking place**

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400

The Honorable Thomas Wagoner
Alaska State Senator
State Capitol Room 427
Juneau AK, 99801

SUBJECT: Response to Questions from SB 49 Bill Sectional Presentation in Senate Resources on March 9, 2011 and March 11, 2011

Dear Senators Paskvan and Wagoner:

The purpose of this document is to respond to the follow-up questions raised by the Senate Resources Committee meeting during our presentation of the SB 49 bill sectional on March 9, 2011 and March 11, 2011. The requests/questions and responses follow. In addition, several policy issues were raised for future discussion, and we look forward to discussing these issues with the committee as the hearing process continues.

1) What is the definition of a unit?

The term "unit" is defined for production tax purposes under AS 43.55.900 (23):

(23) "unit" means a group of tracts of land that is
(A) subject to a cooperative or a unit plan of development or operation that has been certified by the commissioner of natural resources under AS 38.05.180(p);
(B) subject to a cooperative or a unit plan of development or operation that has been certified by the United States Secretary of the Interior under 30 U.S.C. 226(m);
(C) subject to an agreement of the owners of interests in the tracts of land to validly integrate their interests to provide for the unitized management, development, and operation of the tracts of land as a unit, within the meaning of AS 31.05.110(a); or
(D) within the unit area of a unit created by order of the Alaska Oil and Gas Conservation Commission under AS 31.05.110(b)

In addition, if requested, the Department of Natural Resources is prepared to provide the committee with a brief presentation explaining the concepts of leases, units, and participating areas in more detail.

2) **Provide slides from a prior presentation by Gaffney, Cline & Associates that show Internal Rate of Return and Return on Investment statistics for infield drilling.**

The model developed for BP's infill drilling program, and the Gaffney, Cline & Associates presentation to the House Oil & Gas committee, were released by the previous administration on October 30, 2007. The model and presentation are both available in the "Gasoline & Tax Issues: 2004-2010 – ACES" section of the Legislative Budget & Audit Committee web site at the following address: http://lba.legis.state.ak.us/.

3) **What are the "gaps" in data collected by the Department?**

15 AAC 55.345 sets out procedures for applying certain tax credits. The regulation is already in place, and requires a producer or explorer filing a claim to set out "the information required by the department on a form prescribed by the department". The department has not yet revised the form to include the types of information that has been requested during the current legislative session. Initial proposals are to include requests for the following types of information:

- Exploration costs
  - G&G (geophysics and geology) costs
  - Exploration wells
- Development Wells
  - In-field drilling
  - Workover
  - Operations CapEx
- Facilities
  - Repairs
  - Upgrades
  - New Equipment
  - Operations CapEx

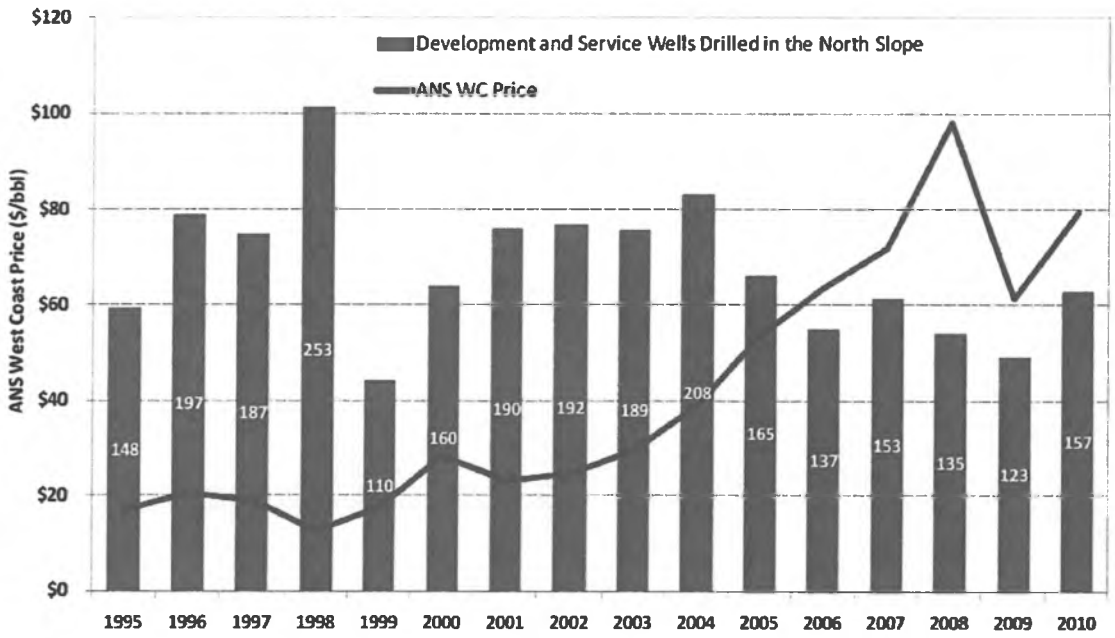
4) **How effective has the 40% well lease expenditure credit been in Cook Inlet?**

The 40% credit for well lease expenditures in Cook Inlet was created with legislation passed in the 2010 session. Given the short time in which the credit has been in place, it is not yet possible to gauge the effectiveness of the credit other than anecdotally.

5) **Provide information about the number of in-field wells drilled last year compared to prior years.**

The following chart shows the number of development and service wells drilled on the North Slope annually from 1995 to 2010. This information is part of the Department's

presentation to the committee dated March 11, 2011.



Source: Alaska Oil and Gas Conservation Commission

6) Have the minimum tax thresholds ever been triggered?

Under current law, a company's tax liability under ACES is the higher of the tax calculated under AS 43.55.011(e) and the minimum tax, as calculated under AS 43.55.011(f). The minimum tax thresholds are based on the average ANS West Coast crude oil price over the entire calendar year, with the highest tax rate—4%--being applied when the average price of ANS WC crude is greater than $25 per barrel. Therefore, the minimum tax in effect since ACES was implemented in 2007 is 4% of the gross value at the point of production.

Although some companies would calculate a higher value under the minimum tax than under the ACES tax at .011(e), they have been allowed to offset their tax liabilities with credits. To date, we are not aware of any companies that had an annual tax liability under the minimum tax.

7) Provide information about the historical amounts of interest payments for delinquent taxes and refunds under AS 43.05.225 (1).

The following table presents total interest collected under AS 43.05.225 (1) for FY 2008, FY 2009, and FY 2010. These amounts include both interest paid to the state for delinquent taxes, and interest paid by the state for delinquent refunds. All the amounts shown below are positive revenues to the state: typically, the state has collected more in interest than it has paid out.

The Department does not have an estimate of the change in interest due to the lower interest rate provisions in SB 49. Compiling such an estimate would require manually examining and recalculating the interest for hundreds of tax returns or more.

Total Interest by Year (Positive revenue to the state - $ millions)

Fiscal Year	General Fund	CBRF	Total
FY 2008	$7.1	$219.1	$226.2
FY 2009	$5.2	$27.9	$33.1
FY 2010	$78.6	$85.6	$164.3
Total FY 08- FY 10	$90.9	$332.6	$423.5

8) **Provide information about the number of companies available each year for audit (either submitting returns or credit applications).**

The requested information was included in the "Oil and Gas Production Tax Status Report to the Legislature" released on January 18, 2011. On page 11 of that publication, we reported the following:

"In 2006, the first year that filings were made under a net profits tax, there were 19 companies filing annual returns. In 2007, the number of companies filing production tax returns totaled 26, and in 2008, 36 companies filed annual production tax returns. The filing for 2009 increased only slightly from 2008, with 39 companies filing returns."

9) **Provide information about what the oil industry is investing in, in Alaska.**

Department of Revenue Audit Master Lennie Dees will share available information in his presentation to the committee on tax credits, currently planned for Wednesday, March 16.

10) **Provide an analysis where the $3 billion in cumulative production tax credits have been used.**

Department of Revenue Audit Master Lennie Dees will share available information in his presentation to the committee on tax credits, currently planned for Wednesday, March 16.

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

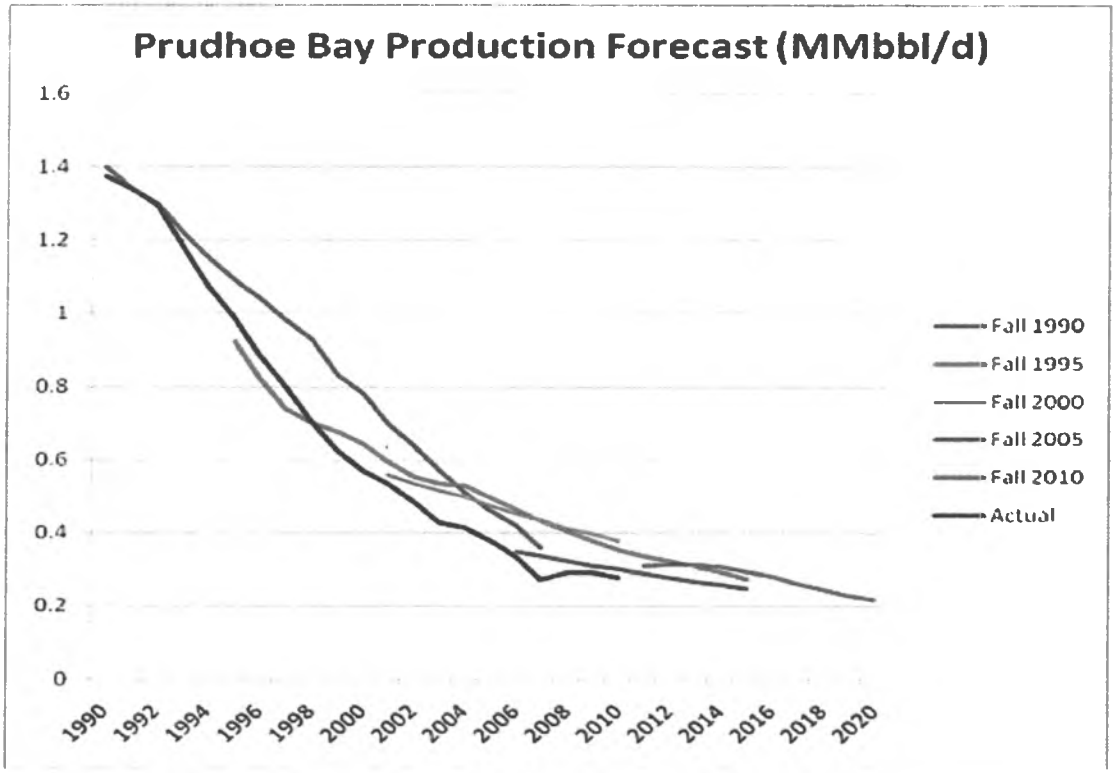
SUBJECT: Response #2 to Questions from SB 49 Bill Sectional Presentation in Senate Resources on March 11 and 14, 2011, and Tax Credits Presentation on March 16, 2011.

Dear Senators Paskvan and Wagoner:

The purpose of this document is to respond to the remaining follow-up questions raised by the Senate Resources Committee meeting during our presentation of the SB 49 bill introduction on March 11 and 14, 2011, and during our tax credits presentation on March 16, 2011. The requests/questions and responses follow. We have provided responses for many other questions from these meetings at a prior date.

1) **Provide the Department's previous forecasts for Prudhoe Bay production in 5-year increments (2010, 2005, 2000, etc).**

   Historical production forecasts can be found online in the Fall Revenue Sources Book: http://www.tax.alaska.gov/programs/sourcebook/index.aspx



- These forecasts include Prudhoe Bay production only.
- These forecasts exclude Greater Point McIntyre Area (GPMA) production.
- Forecast volumes include NGLs.

2) Explain the concept of "duty to produce."

"Duty to Produce" refers to a more common expression, "duty to develop" that is the implied covenant of an oil and gas lease in the primary term of a lease. The lessor (usually the State) grants the lion share of the value of the hydrocarbons produced from the lease and the oil company lessee is committed to develop the land, reasonably produce any hydrocarbons found, and use their expertise to market the production for the mutual benefit of both the royalty owner (the State) and producer (lessee).

The duty to develop is implied unless the lease explicitly requires it. Depending on the factual circumstances and the language of the lease, the commitment to develop the lease is met if the lessee is working under an approved plan of exploration, development, or operations. Depending on the specific wording in the lease, the lessee also may be complying with its obligation to develop and produce if it is producing either oil or gas but not both.

3) **Can we look at a possible correlation between declines in exploration in 2003 and 2010, and the economic downturns in 2001 and 2008. Is Alaska's decline in exploration in those years similar to other states after removing gas exploration wells?**

Rig counts, which constitute a proxy for drilling activity, have been impacted by the recent economic downturns, affecting the United States mostly in 2002 / 2003 and in 2008 / 2009.

The following two charts represent the evolution of the number of active rigs drilling for oil targets both onshore and offshore (gas rigs are excluded from this count) in:

- Selected states and the total US since 2002
- Global regions and international total since 2002

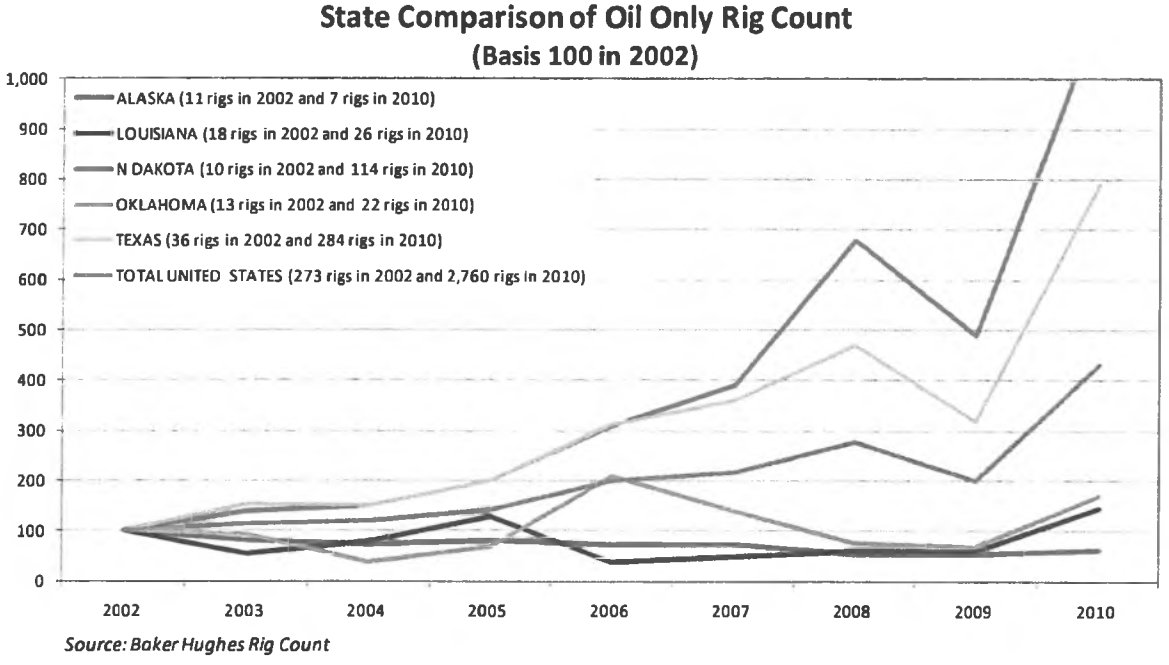
Baker Hughes, which publishes rig counts, did not differentiate oil from gas rigs prior to 2002. Please note that such rig count includes rigs drilling exploration wells and rigs drilling development wells (no differentiation between these types of wells is made in the data set).

These charts display the relative change in rig counts (consistently with previous information provided to the Committee) over the past decade, using 2002 as a base year (the rig count for each series for any given year is represented relative to the rig count for that series in year 2002. For example, if the rig count was to go from 8 in 2002 to 16 in 2010, this would be reflected in the chart by a line going from 100 in 2002 to 200 in 2010).

United States

No trend common to all states trend can be observed during the 2002 to 2004 time period. Alaska and Oklahoma rigs counts both decreased during this period, while North Dakota increased both years. Louisiana rig count decreased slightly in the first year, and then increased in the second year, but did not return to year 2002 levels. Texas experienced the opposite, increasing in year one, then dropping marginally in year two. Overall, the total United States oil only rig count increased slightly over the two year period.

During the 2008 to 2009 period, activity in all states either remained the same or declined, and from 2009 to 2010, activity in all states increased. Overall, the US rig count dropped by close to 27% between 2008 and 2009 (from 276 oil rigs in 2008 to 201 in 2009) and more than doubled between 2009 and 2010. It is noteworthy that from 2009 to 2010, the Alaska rig count increased by 17%, while all other states presented here typically increased by more than doubled.

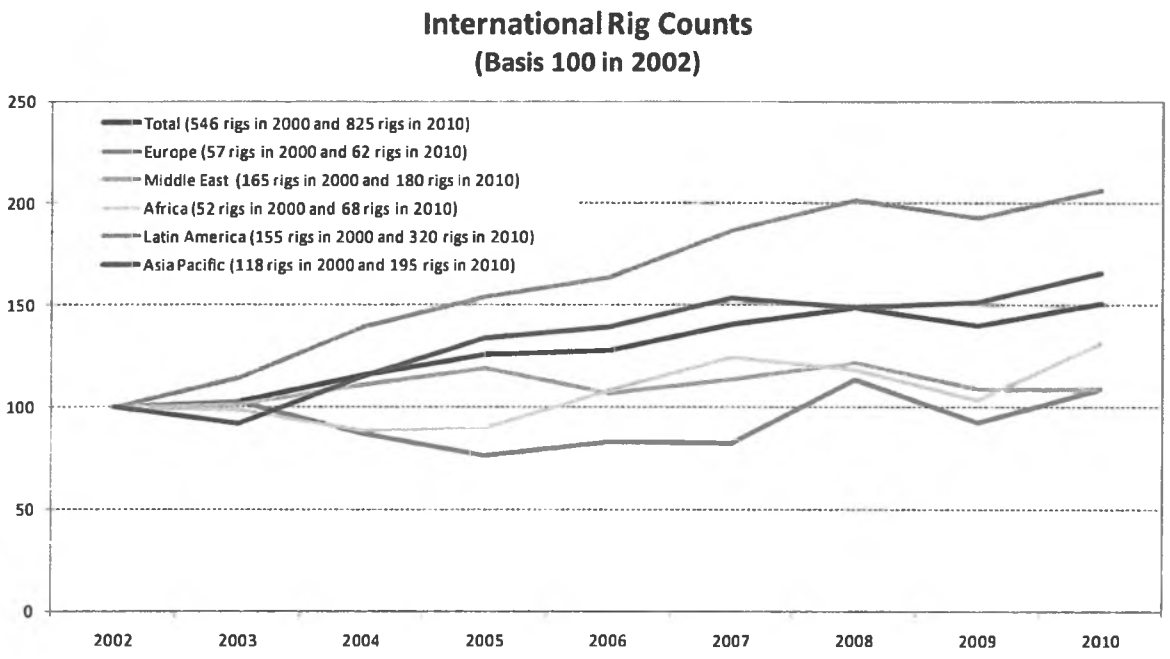


Source: Baker Hughes Rig Count

International

As was the case for the United States, there is no common directly observable trend across geographic areas during the 2002 to 2004 time period. The Middle East and Latin America both increased rig count over the two year period. Africa is the only region which decreased rig count both years; although the overall decrease, 2002 relative to 2004, was only 12%. Europe increased by one rig between 2002 and 2003, then decreased marginally between 2003 and 2004. Asia Pacific decreased initially, and then increased between 2003 and 2004 for an overall increase of 14%. The total rig count internationally increased both years, for an overall increase of 15%.

During the 2008 to 2010 time period, Europe, Africa and Latin America all decreased rig count in 2009 and increased again in 2010. The Middle East decreased in year one and remained the same in year two. The only region to increase both years was Asia Pacific, with an overall increase of 11%. The total rig count internationally followed the majority of the regions, decreasing in year one, and increasing again in year two, and in addition, 2010 rig count surpassed the 2008 count.



4) **Provide information about companies that are working together on exploration wells shown in the exploration wells slide.**

The source of the data on the exploration wells graph presented in committee was AOGCC. They make public certain details about drilling activities in the state. Along with the well data, AOGCC provides the name of the operator of the well. We provide a copy of the well data, along with the name of the operator of each well, as an attachment to this letter. Neither the Department of Revenue nor the Department of Natural Resources maintains information about the other companies that may have worked with the operators on these wells.

5) **How do drilling agreements work when companies are working together? If one company pulls out of a project, is the project typically cancelled?**

Companies working together in established units, commonly referred to as working interest owners (WIOs), operate those units under guidelines contained in unit operating agreements. These unit operating agreements contain provisions regarding the operation of the unit, as well as voting rights of each WIO. Many unit operating agreements have options for WIOs to "opt out" of a project that the operator proposes. If this is the case, then WIOs that do not want to participate in a project may opt not to do so. Provisions of each of the unit operating agreements are distinct for each unit, however, may treat this particular issue differently.

6) **Compare royalty rates in Alaska with royalty rates in other states; that is, compare royalties paid in Alaska as an owner state to royalties paid to private land owners in Texas, North Dakota, etc.**

Oil and gas leasing in Alaska differs from that in many states due to the fact that the state of Alaska owns the mineral rights under most of the oil and gas-prone land. In other petroleum-rich states, such as Texas and Oklahoma, a large percentage of the land leased for petroleum development is private land, wherein the private landowners also hold the mineral rights. A company that wants to lease rights to the minerals often pays a bonus, rent, and/or royalties to the owner of those minerals. In Alaska, the owner is often the state; in other states, the owner is often a private individual.

Private ownership of petroleum minerals in states like Texas, Oklahoma, and Louisiana, can be as much as 97%, according to a source within the Alberta Department of Energy.[1] In these states, petroleum developers often must negotiate with private landowners to lease rights to the minerals under their property. The terms of the negotiation can vary, but often contain a royalty provision. Our research shows that private landowners have been successfully negotiating royalties of 1/16 share (6.25%) up to 4/16 share (25%) in more recent leasing activities. The terms of the lease will likely be subject to the potential of the resource base, and the economic viability of the petroleum development project.

7) **Please show SB 49 compared to our revenue forecast in the "income statement" format for FY 2010, FY 2011, and FY 2012.**

The production tax estimates for FY 2012, FY 2011, and FY 2012 under SB 49 are shown in the "income statement" format on the following pages.

[1] "A Comparison of United States and Alberta Royalty Systems," Barry Rodgers, Alberta Department of Energy, July 17, 2006, available online at http://pnwer.dataweb.com/tables/jointables/meetingparticipantjoin/files/presentation/PNWERPresentation.pdf

FY 2010 Production Tax Estimates - SB49

	Price	Barrels	Value ($M)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$74.90	643,517	$48.2
Annual Production (bbl)			
Total		234,883,705	$17,592.8
Royalty, Federal and other barrels[1]		-31,067,340	($2,326.9)
Taxable barrels		203,816,365	$15,265.8
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	-$2.21		
TAPS Tariff	-$3.81		
Other	$0.00		
Total Transportation Costs	-$6.02	203,816,365	($1,227.0)
Deductible Lease Expenditures[2]			
Deductible Operating Expenditures	-$10.64		($2,168.7)
Deductible Capital Expenditures	-$8.55		($1,742.0)
Total Lease Expenditures	-$19.19	203,816,365	($3,910.7)
Production Tax			
Production Tax Value (PTV)			$10,128.1
Base Tax (25%*PTV)			$1,528.6
Production Tax Value per barrel	$49.69		
Progressive Tax			$1,176.9
Total Tax before credits			$2,705.5
Credits (includes $300M in well lease exp credit)			($650.0)
Estimated Total Tax after credits[3]			**$2,055.5**

Notes: DOR revenue historical and current models are based on fiscal year data, which is also used for this analysis. SB49 would use calendar year averages for production, price, and costs, and the results may differ slightly from that shown in this analysis. (1) Royalty, Federal and other barrels represents our best estimate of barrels that are not taxed. This estimate includes both state and federal royalty barrels, barrels produced from federal offshore property and barrels used in production. (2) Deductible Lease Expenditures represents our best estimate of lease expenditures that are applicable to currently producing fields that are likely to produce a tax liability for the company or companies producing them. The per-barrel expenditures reflect expenditures **per taxable barrel** and do not reflect expenditures per all barrels produced. (3) Estimated Total Tax after credits is a calculated total based on constant daily production, constant oil prices, and constant expenditures for the entire year. Variations in these assumptions captured in larger revenue models will produce different results that differ from the estimates in the simple model above.

FY 2011 Production Tax Estimates - SB49

	Price	Barrels	Value ($M)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$77.96	615,902	$48.0
Annual Production (bbl)			
Total		224,804,230	$17,525.7
Royalty, Federal and other barrels[1]		-34,100,490	($2,658.5)
Taxable barrels		190,703,740	$14,867.3
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	-$2.07		
TAPS Tariff	-$4.17		
Other	$0.24		
Total Transportation Costs	-$6.00	190,703,740	($1,144.2)
Deductible Lease Expenditures[2]			
Deductible Operating Expenditures	-$12.99		($2,477.0)
Deductible Capital Expenditures	-$10.43		($1,988.4)
Total Lease Expenditures	-$23.42	190,703,740	($4,465.4)
Production Tax			
Production Tax Value (PTV)			$9,257.6
Base Tax (25%*PTV)			$1,430.3
Production Tax Value per barrel	$48.54		
Progressive Tax			$1,029.9
Total Tax before credits			$2,460.2
Credits (includes $300M in well lease exp credit)			($700.0)
Estimated Total Tax after credits[3]			**$1,760.2**

Notes: DOR revenue historical and current models are based on fiscal year data, which is also used for this analysis. SB49 would use calendar year averages for production, price, and costs, and the results may differ slightly from that shown in this analysis. (1) Royalty, Federal and other barrels represents our best estimate of barrels that are not taxed. This estimate includes both state and federal royalty barrels, barrels produced from federal offshore property and barrels used in production. (2) Deductible Lease Expenditures represents our best estimate of lease expenditures that are applicable to currently producing fields that are likely to produce a tax liability for the company or companies producing them. The per-barrel expenditures reflect expenditures **per taxable barrel** and do not reflect expenditures per all barrels produced. (3) Estimated Total Tax after credits is a calculated total based on constant daily production, constant oil prices, and constant expenditures for the entire year. Variations in these assumptions captured in larger revenue models will produce different results that differ from the estimates in the simple model above.

FY 2012 Production Tax Estimates - SB49

	Price	Barrels	Value ($M)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$82.67	622,182	$51.4
Annual Production (bbl)			
Total		227,096,430	$18,774.1
Royalty, Federal and other barrels[1]		-34,669,890	($2,866.2)
Taxable barrels		192,426,540	$15,907.9
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	-$2.05		
TAPS Tariff	-$4.67		
Other	$0.33		
Total Transportation Costs	-$6.39	192,426,540	($1,229.6)
Deductible Lease Expenditures[2]			
Deductible Operating Expenditures	-$12.86		($2,474.1)
Deductible Capital Expenditures	-$13.14		($2,528.3)
Total Lease Expenditures	-$26.00	192,426,540	($5,002.4)
Production Tax			
Production Tax Value (PTV)			$9,675.9
Base Tax (25%*PTV)			$1,443.2
Production Tax Value per barrel	$50.28		
Progressive Tax			$1,148.2
Total Tax before credits			$2,591.4
Credits (includes $300M in well lease exp credit)			($750.0)
Estimated Total Tax after credits[3]			**$1,841.4**

Notes: DOR revenue historical and current models are based on fiscal year data, which is also used for this analysis. SB49 would use calendar year averages for production, price, and costs, and the results may differ slightly from that shown in this analysis. (1) Royalty, Federal and other barrels represents our best estimate of barrels that are not taxed. This estimate includes both state and federal royalty barrels, barrels produced from federal offshore property and barrels used in production. (2) Deductible Lease Expenditures represents our best estimate of lease expenditures that are applicable to currently producing fields that are likely to produce a tax liability for the company or companies producing them. The per-barrel expenditures reflect expenditures per **taxable barrel** and do not reflect expenditures per all barrels produced. (3) Estimated Total Tax after credits is a calculated total based on constant daily production, constant oil prices, and constant expenditures for the entire year. Variations in these assumptions captured in larger revenue models will produce different results that differ from the estimates in the simple model above.

8) **Please recast the fiscal note analysis using flat oil prices of $100, $110, and $120 instead of the Department's forecast oil prices.**

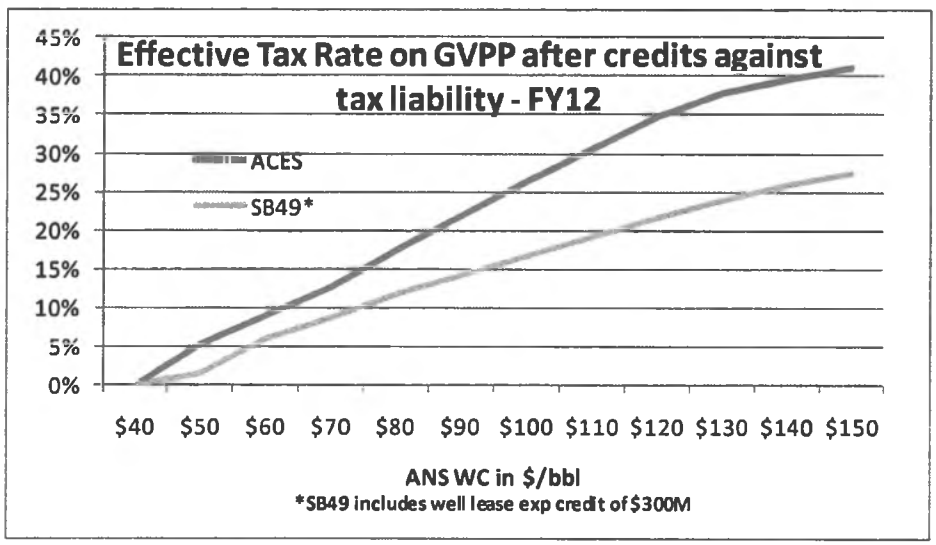
Revenue Impact of Progressivity Portion of SB49, at Requested Oil Prices (in $millions)					
ANS WC Price in $/bbl	FY 2013	FY 2014	FY 2015	FY 2016	FY 2017
$100	$669	$1,335	$1,260	$1,336	$1,272
$110	$948	$1,884	$1,787	$1,880	$1,799
$120	$1,269	$2,518	$2,394	$2,505	$2,405

9) **Provide a 5-year forecast for capital expenditures and the credits derived from those expenditures.**

Estimated Capital Expenditures and Credits, FY 2011 - FY 2015 in $millions					
	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015
Forecasted Capital Expenditures	$2,572	$2,936	$3,175	$3,019	$2,899
Total Forecasted Credits*	$665	$675	$675	$650	$625

*Total Forecasted Credits includes both credits likely to be used against tax liabilities and credits for which transferable tax credit certificates will be issued, without regard to the requirement that use of the credits must be split between two years.

10) **Provide a chart of effective tax rates under current law and SB 49 using forecasted transportation costs, lease expenditures, and credits for FY 2012.**



11) Provide information to show whether the $1.1 billion in credits paid to explorers has led to any production.

The $1.1 billion in tax credits referenced above is the estimated amount of credits for which credit certificates have been issued. A large portion of those certificates have been issued to companies developing the Oooguruk and Nikaitchuq units. Both of those units are now in production, with the Oooguruk unit producing about 10,000 barrels per day, and the Nikaitchuq unit began production in February of this year. That production could be attributed to a portion of the $1.1 billion in credit certificates issued.

12) Provide a breakout of the types of capital expenditures in as much detail as possible.

Types of capital expenditures provided on documents provided by oil and gas producing companies include the following categories:

- Exploration Drilling
- Appraisal Drilling
- Well Tie Ins
- Wellwork
- Facility Capacity Upgrades
- Facility – Integrity
- Seismic Acquisition & Test
- Major Accident Review
- Waterflood Optimization
- Roads, Pads and Runway
- Facility Siting Mitigation
- Fire and Gas / Automation
- Chemical Storage
- Infrastructure

We do not have any more detail about types of capital expenditures for current expenditures.

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

SUBJECT: Corrected Well Data from Alaska Oil & Gas Conservation Commissioner (AOGCC)

Dear State Legislators:

It has been brought to our attention that the drilling activity charts presented by the Department of Revenue on the basis of AOGCC data contained some inaccuracies. Simply put, we received different sets of data from different people within AOGCC and we realized there was a problem because the data sets didn't match. It has to do with what is and is not included as you work through the well data. Once we realized there was a problem, we worked with AOGCC to determine the correct data and it is enclosed herein. These updated slides have been based on AOGCC data and their staff have cross-checked the numbers with their internal, confidential database. What has not changed is the fact that exploration is down in 2010 and that only one exploration well is expected in 2011 by the Alaska Department of Natural Resources.

We would like to apologize for this error and provide assurance to the committees that we will be more diligent in cross checking information before providing it to any legislative body.

Sincerely,

Bruce Tangeman
Deputy Commissioner

Alaska Oil and Gas Industry Information Submittal and Disclosure Summary

Compiled with Input from DOR, DNR, DOLWD & AOGCC, March 22,2011

Type of Data	Agency Receiving Data	Agencies With Which Data May be Shared	Reason for Data Submission (Citation)	Submittal Timeframe	Publication and Public Access	Form of Reported Info.
EXPLORATION AND APPRAISAL						
Joint Operating Agreements	DNR-DOG	Public portions of unit operating agreements; confidential portions may be shared with DOR under AS38.05.035(a)(12)	Required for unitization under AS 38.05.180(p), or for approval of drillling or development contracts under AS 38.05.180(t); 11 AAC 83.301 - 11 AAC 83.395; 11 AAC 83.400	With the application to unitize	generally public, but portions may be entitled to confidentiality	Varies
Work Programs and Budgets	AOGCC: Proposed work programs only, no budget information	DNR-DOG authorized personnel upon request (confidential wells on state lands only)	20 AAC 25.005, 20 AAC 25.010, 20 AAC 25.015, 20 AAC 25.105, 20 AAC 25.280	Prior to work (as much notice as possible)	Records for exploratory and stratigraphic test wells / wellbores are held confidential for 25-months, then released to the public record (excluding those few that have been granted extended confidential status by DNR's Commissioner). Public records are available through the AOGCC library and	Printed (AOGCC library); scanned records (Internet)
	DNR-DOG (Unit Section): Plans of Exploration; no budget	Some is public; confidential may be shared with DOR under AS38.05.035(a)(12)	11 AAC 83.301 - 11 AAC 83.395;	With application to unitize and periodically after that	generally public, but portions may be entitled to confidentiality	
	DNR-DOG (Permitting Section): Plan of Operations, no budget DNR-DOG (Leasing Section): Exploration License, work commitment	Plan of Operations - Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
Seismic	DNR-DOG (Permitting Section)	Public document, all agencies	Permit Application (11 AAC 96.210)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
	DNR-DOG	Confidential seismic remains in DOG possession at all times; other authorized DNR personnel may view data as needed.	Entitled to seismic on state lands through MLUP permit requirements (AAC 96.210) , tax credit requirements (AS 43.55.025 and .023(a)(2)) and exploration license requirements (11 AAC 82.981); Entitled to seismic on fed or private lands if issuing these tax credits; also obtains advanced processing datasets in units upon request to evaluate unit & PA formation, expansion or support for operator-requested unit actions (AAC 83.306, etc.)	Statute: notify DNR w/in 30 days of completion of processing. Reality: MLUP data may take months.	Data receiving tax credits will be publicly released after 10 yrs, subject to private landowner approval (public access system to be determined). MLUP and unit request data remain confidential indefinitely.	Formerly included paper, now electronic, in industry-standard formats
Daily Drilling Reports	AOGCC	DNR-DOG authorized personnel upon request (confidential wells on state lands only)	Maintnence of accurate well history records (20 AAC 25.070)	30 days after completion, suspension or abandonment of well/wellbore	See "Work Programs and Budgets", above	Printed (AOGCC library); scanned records (Internet)
Logs & Wellbore Surveys	AOGCC	DNR-DOG has its own specific well log data submittal requirements; other logs disclosed to DNR-DOG authorized personnel upon request (confidential wells on state lands only)	AS 31.05.030, 20 AAC 25.071 (Reason: accurate well records)	90 days after completion, suspension or abandonment of well/wellbore	See "Work Programs and Budgets", above	Printed (AOGCC library); scanned records (Internet)
Well Tests	AOGCC	DNR-DOG authorized personnel upon request (confidential wells on state lands only)	Maintnence of accurate well history records (20 AAC 25.071)	30 days after completion, suspension or abandonment of well/wellbore	See "Work Programs and Budgets", above	Printed (AOGCC library); scanned records (Internet)
Cuttings and Conventional Core Chips	AOGCC	DNR-DOG authorized personnel upon request (confidential wells on state lands only)	Maintnence of accurate well history records (20 AAC 25.071)	Cuttings: 30 days after completion, suspension or abandonment of well/wellbore; Core chips: 30 days after the conventional core is	See "Work Programs and Budgets", above. Cuttings and core chips are available at the Geologic Materials Center.	Rock samples
Geological Models and Maps	AOGCC and DNR: Supplied by Unit Operator	DNR-DOG upon request (non-confidential information only)	Field and pool regulation and classification (20 AAC 25.520) and regulation of underground injection of fluids (20 AAC 25.460)	Non-confidential information available upon publication of AOGCC order; confidential information not available for release	AOGCC library (public records only)	Printed (AOGCC library)
	DNR-DOG (Permitting Section): Project area map	Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
	DNR-DOG: possibly with unit application; Participating Area applications	May be shared with DOR under AS38.05.035(a)(12)	11 AAC 83.301 - 11 AAC 83.395	with application to unitize or application to form PA	entitled to confidentiality	
All data collected in drilling and evaluating wells, including interpretive, value-added, and wellbore seismic data not reported to AOGCC	DNR-DOG	Confidential well data remains in DOG possession at all times; other authorized DNR personnel may view data as needed.	Receives comprehensive datasets for wells on state leases through Lease Plan of Operations (AAC 83.158); also on fed and private lands if issuing tax credit (AS 43.55.025 and 023(a)(2)).	varies, but prompt	Data submitted under Plan of Ops remains confidential indefinitely; tax credit well data to be released after AOGCC well confidentiality expires, subject to federal primacy and private landowner approval (public access to be determined).	Varies

PRODUCTION / OPERATIONS						
Production	AOGCC	Regular production information is not confidential; database transfer to DNR completed monthly	20 AAC 25.230 (Reason: regular production records are public-domain)	One-month reporting lag	Internet (regular production data; AOGCC statistical report)	Downloadable database in MS Access format; downloadable ASCII text file; production charts
	DNR-DOG	Production data is generally public	AS 38.05.180(x)		Production data is generally public	
	DNR-DOG (Permitting Section): Plan of Operations	Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
	DOR	DNR/Upon Request/Under Confidentiality Agreement.	AS 43.55.040	Daily & Monthly	Only released in aggregated form.	Received via email, fax, PDF, excel spreadhseet and plain text.
Injection	AOGCC	Regular injection information is not confidential; database transfer to DNR completed monthly	20 AAC 25.432 (Reason: regular injection records are public-domain)	One-month reporting lag	Internet (regular injection data; AOGCC statistical report)	Downloadable database in MS Access format; downloadable ASCII text file; production charts
	DNR-DOG: Plan of Operations, storage	Public Data - All Agencies	AS 38.05.180(x); Permit Application (11 AAC 83.158)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
Facility Maps and Studies	DNR-DOG (Permitting Section)	Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
Safety and Environmental Reports	DNR-DOG (Permitting Section)	Public document, all agencies	Corrective action plans		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
	DNR-PSIO	Generally PSIO can openly share the non-confidential information with liaison agencies. Caveat: most of what operators share with PSIO is confidential and typically PSIO is given a presentation by operators and not allowed to take any information, other than hand-written notes.	Receives some information regarding root causes of incidents and corrective actions - typically plays into discussions of operator quality management/business practices and operations (AO 234 ; DOG leases)	Varies on operator and their willingness to cooperate and share information with PSIO.	Little, but varies.	Varies, but typically in presentation/discussion format and PSIO is not allowed to take any information, other than hand-written notes.
Work Programs and Budgets	DNR-DOG: (Permitting Section): No budget	Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as PDF
	DNR-PSIO	Generally PSIO can openly share the non-confidential information with liaison agencies. Caveat: most of what operators share with PSIO is confidential and typically PSIO is given a presentation by operators and not allowed to take any information, other than hand-written notes.	Some information received regarding quality management/business practices and operations - typically in response to an incident involving infrastructure failure (AO 234; DOG leases)	Varies on operator and their willingness to cooperate and share information with PSIO.	Little, but varies.	Varies, but typically in presentation/discussion format and PSIO is not allowed to take any information, other than hand-written notes.

Alaska Oil and Gas Industry Information Submittal and Disclosure Summary

Compiled with Input from DOR, DNR, DOLWD & AOGCC, March 22,2011

Type of Data	Agency Receiving Data	Agencies With Which Data May be Shared	Reason for Data Submission (Citation)	Submittal Timeframe	Publication and Public Access	Form of Reported Info.
BUDGET / EXPENDITURE / COST DATA						
Sales Price and Netback Costs	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Administering the production tax (e.g. this is used in determining the gross value at point of production).	Supplied to DOR monthly (one-month lag) and in annual filings.	Some data in this category may be disclosed to the public provided it is properly aggregated and allowed to be released under 43.05.230 and 43.55.890.	Summarized data sent to DOR in Excel monthly information report. Detailed information provided in various formats.
Sales Contracts	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Administering the production tax (e.g. this is used in determining the gross value at point of production).	Supplied to DOR monthly (one-month lag) and in annual filings.	Some data in this category may be aggregated and used in calculations that are subsequently disclosed to the public.	Contracts provided in PDF or Word documents.
Tax Credit Information (applications for tax credit certificates, credits claimed against tax liability)	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Administering the production tax (e.g. calculating the tax liability or issuing tax credit certificates.)	Credit applications are received throughout the year. Credit information is received by DOR on monthly information report (one-month lag) and in annual filings.	Some data in this category may be disclosed to the public provided it is properly aggregated and allowed to be released under 43.05.230 and 43.55.890.	Credit information submitted through credit application forms (PDF files) and monthly information report (Excel file).
Opex- Projections	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Used in forecasting production tax revenue.	Supplied to DOR twice a year (fall and spring)	Some data in this category is aggregated and used in the DOR forecast of total ANS expenditures, which is published in RSB.	Copies of communications with WIOs is provided (PDF copies of letters).
Capex- Projections	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Used in forecasting production tax revenue.	Supplied to DOR twice a year (fall and spring)	Some data in this category is aggregated and used in the DOR forecast of total ANS expenditures, which is published in RSB.	Copies of communications with WIOs is provided (PDF copies of letters).
Opex- Actual	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Administering the production tax (e.g. this is used in determining the production value).	Summarized opex data is supplied to DOR monthly (one-month lag) with limited breakdown of expense types. Details sometimes included in back-up files.	43.55.890 allows for lease expenditures to be disclosed to the public when aggregated among 3 or more companies.	Summarized data sent to DOR through Excel monthly reporting form. Supplemental detailed information provided in various formats.
Capex- Actual	DOR, Tax Division	AS 38.05.036(c) and AS 43.55.230 specify the information DOR can share with DNR.	Administering the production tax (e.g. this is used in determining the production tax value).	Summarized capex data is supplied to DOR monthly (one-month lag) with limited breakdown of expense type. Details sometimes included in back-up files.	43.55.890 allows for qualified capital expenditures to be disclosed to the public when aggregated among 3 or more companies.	Summarized data sent to DOR through Excel monthly reporting form. Detailed information provided in various formats.
ABANDONMENT						
Abandonment Plan and Budget	AOGCC: Well abandonment plan only, no budget information	DNR-DOG authorized personnel upon request (non-confidential wells and confidential wells on state lands only)	20 AAC 25.105 (Reason: accurate well records)	30 days after completion, suspension or abandonment of well/wellbore	Records for development or service well/wellbores are not confidential. Records for exploratory and stratigraphic test wells are held confidential for 25-months, then released to the public record (excluding those few that have been granted extended confidential status by DNR's Commissioner). Public records are available through the AOGCC library and Internet.	Printed (AOGCC library); scanned records (Internet)
	DNR-DOG (Permitting Section): Plan only DNR-DOG (Leasing Section): List of wells/infrastructure on lease	Public document, all agencies	Permit Application (11 AAC 83.158 and 346)		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
Progress Reports	AOGCC (well abandonment operations only, no budget information)	DNR-DOG authorized personnel upon request (non-confidential wells and confidential wells on state lands only)	20 AAC 25.070 (Reason: accurate well records)	30 days after completion, suspension or abandonment of well/wellbore	See "Abandonment Plan and Budget", above	Printed (AOGCC library); scanned records (Internet)
	DNR-DOG (Permitting Section)	Public document, all agencies	Status-Completion Reports		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
Environmental Clean-up Assessment	AOGCC	DNR-DOG authorized personnel upon request (non-confidential wells and confidential wells on state lands only)	Wellsite clearance inspection: physical condition of site only, does not include chemical sampling, analysis or reporting (Onshore: 20 AAC 25.170; Offshore: 20 AAC 25.172)	Upon completion of Inspection	See "Abandonment Plan and Budget", above	Printed (AOGCC library); scanned records (Internet)
	DNR-DOG (Permitting Section)	Public document, all agencies	Status-Completion Reports		Public Document, as Public Noticed	electronic filing not required (may be submitted as adobe .pdf)
WORKFORCE / LABOR						
Unemployment Insurance Contributions	DOLWD-Employment Security Division	Disclore to certain agencies under AS 23.20.110.	AS 23.20.110	Quarterly	No	Electronic

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400
Juneau, Alaska 99800-0400
Phone: (907) 465-2300
Fax: (907) 465-2389

March 22, 2011

The Honorable Joe Paskvan
Co-Chair, Senate Resources Committee
State Capitol Room 115
Juneau AK, 99801

The Honorable Thomas Wagoner
Co-Chair, Senate Resources Committee
State Capitol Room 427
Juneau AK, 99801

SUBJECT: Response #1 to Questions from SB 49 Bill Sectional Presentation in Senate Resources on March 11 and 14, 2011, and tax credits presentation on March 16, 2011.

Dear Co-Chairs Paskvan and Wagoner:

The purpose of this document is to respond to the follow-up questions raised by the Senate Resources Committee meeting during our presentation of the SB 49 bill introduction on March 11 and 14, 2011, and during our tax credits presentation on March 16, 2011. The requests/questions and responses follow. As noted in this document, there are a handful of remaining questions which we will provide answers to at a later date.

QUESTIONS FROM BILL INTRODUCTION PRESENTATION

1) **Discuss whether / how North Slope reserve additions recently reported by Conoco Phillips are included in our production forecast.**

   The Department of Revenue considers technically recoverable oil in the production forecast. Updated estimates of original oil in place (OOIP) and technically recoverable reserves are discussed with the individual operators on at least an annual basis and will be considered in future forecasts.

2) **What is the forecasted production decline over the next decade?**

The Department of Revenue's Fall 2010 production forecast, which includes producing, under development and under evaluation, projects an average decline rate of 2.1% per year from FY 2010 through FY 2020. The under evaluation portion is the most speculative and could greatly affect the production curve if it were not realized.

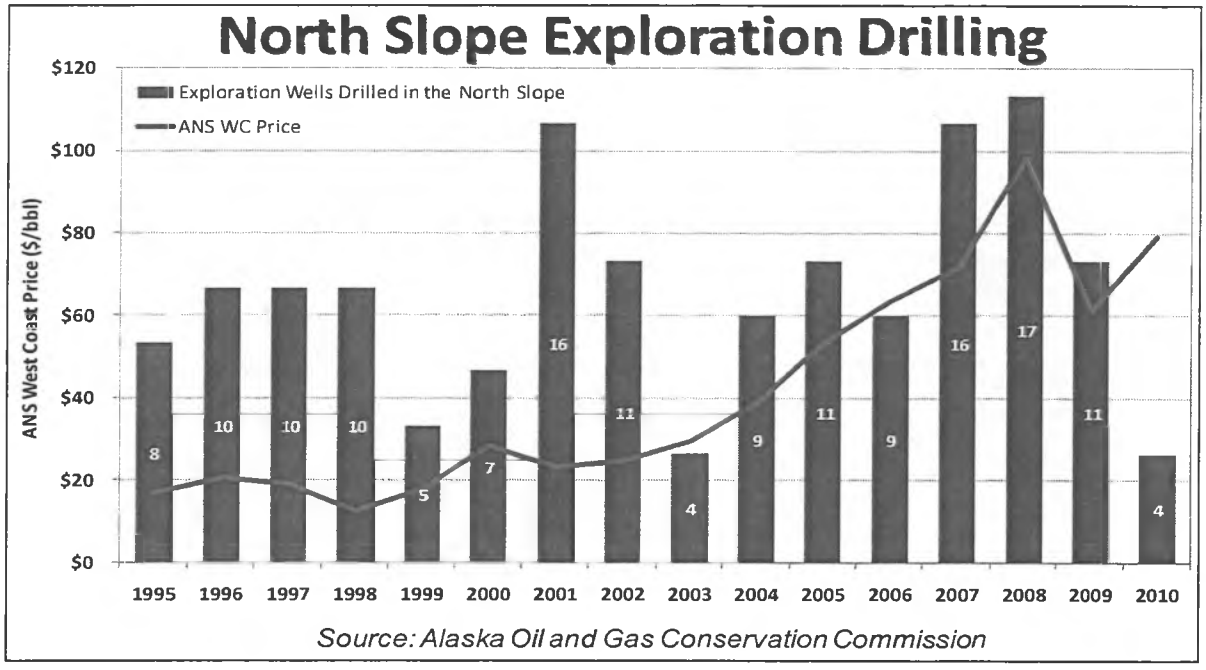
3) **What part of the Department's production forecast comes from areas that are not currently unitized?**

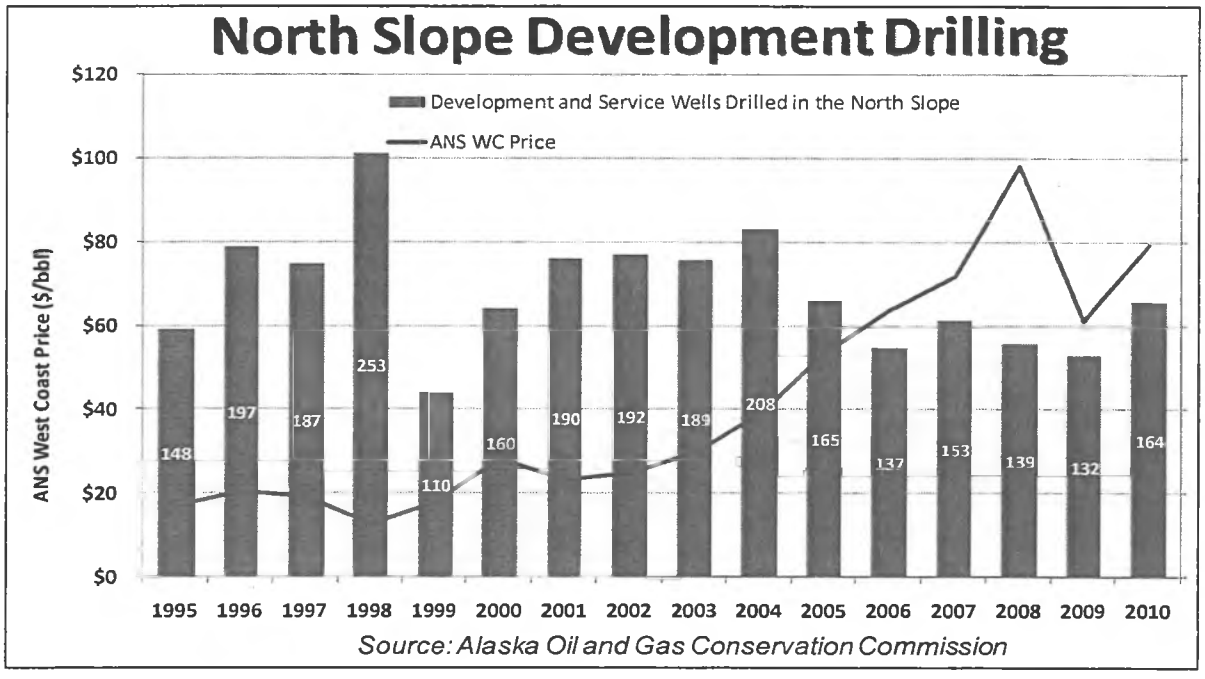
The vast majority of production in our forecast comes from areas that are currently unitized. Through FY 2020, the only production in our forecast that comes from an area that is not currently in a unit is a portion of the forecast production from the NPR-A. In general, production from areas that are not yet unitized does not have the level of certainty required to be included in our production forecast. In order to be included, a field must at least be "under evaluation," meaning it is a technically viable project where engineering, cost, risk and reward are all being actively evaluated. Most of the oil outside existing units does not yet meet these criteria.

4) Why was only one exploration well drilled in 2003?

It has been brought to our attention that the drilling activity charts presented by the Department of Revenue on the basis of AOGCC data contained some inaccuracies. Corrected exploration and development drilling activity charts are included below.

Several factors may have contributed to the decline in exploration drilling in 2003, including the economic downturn at the beginning of that decade, merger and acquisition activity impacting companies active in Alaska, and changes in corporate strategy.





5) **Compare trends in the number of exploration and development wells drilled in Alaska, to trends in the U.S. or worldwide.**

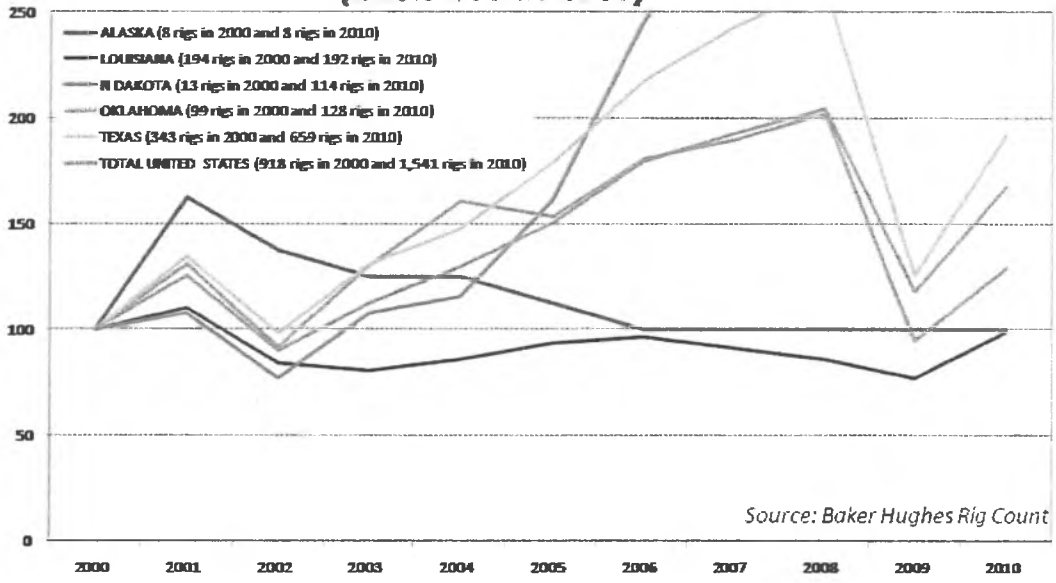
The number of active rigs can be used to compare oil and gas activity levels in various jurisdictions. The following charts show trends in rig counts in the United States, and internationally. These charts display the relative change in rig counts over the past decade using 2000 as a base year (the rig count for each series for any given year is represented relative to the rig count for that series in year 2000 – for example, if the rig count was to go from 8 in 2000 to 16 in 2010, this would be reflected in the chart by a line going from 100 in 2000 to 200 in 2010). These statistics include oil and gas rigs, active both onshore and offshore. No differentiation is made between exploration and development rigs in this context.

In summary, one can observe over the 2000 to 2010 period:

- A relatively flat rig count in Alaska
- The impacts of the recent recessions and of the "shale boom" in other US States
- Rig count in Europe remaining relatively stable
- Rig count in other areas, including the US, typically increasing by over 50%

Alaska and States with over 100 rigs in 2010

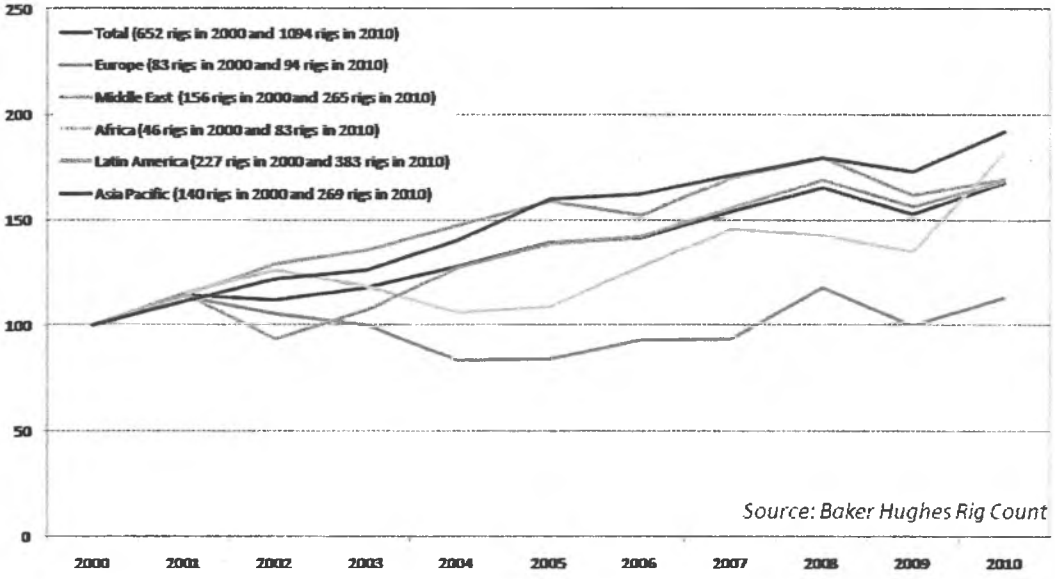
(basis 100 in 2000)



Notes: Includes oil and gas rigs (reflects impact of shale gas boom), as well as onshore and offshore (State + Federal). Selected States have over 100 active rigs in 2010 (except Alaska)

International Rig Counts

(basis 100 in 2000)



Notes: Includes oil and gas rigs, as well as onshore and offshore.

6) **Provide information about the "normal" number of development wells drilled in a mature oil field.**

The definition of an "elephant" oil field varies substantially in practical use, but typically refers to very large oil fields with total oil resources estimated in the hundreds of millions to billions of barrels. Prudhoe Bay is an "elephant" oil field with estimates from BP of more than 25 billion barrels of OOIP. More than 1,100 producing wells have been drilled in the Prudhoe Bay field as well as more than a hundred injection wells.

Unfortunately, it would be difficult to estimate a "normal" number of producing wells in a normal or hypothetical field as the development program will depend on the geology and the physical characteristics of the oil, among other factors. For example, looking at AOGCC data, Prudhoe Bay has seen an average of between 40 and 60 new producing "wells/penetrations" completed each year since 2000. While Kuparuk has seen an average of between 8 and 10 new producing "wells/penetrations" completed each year in that same time. In both cases, the productivity of the wells seem to be decreasing with time.

More public Prudhoe Bay statistics can be found at the following web address:
http://www.bp.com/liveassets/bp_internet/globalbp/STAGING/global_assets/downloads/A/abp_wwd_alaska_prudhoe_bay_fact_sheet.pdf

7) **Provide information about the pattern of natural decline in exploration of a mature oil basin, and how Alaska's mature basins compare. Also explain how a company would typically model investments in a mature oil basin.**

Following are graphs of the Alaska North Slope (ANS) and Norway's historical and forecasted production. Norway is not as mature as ANS. Norway's production peaked in 2000 at approximately 3.5MMBPD and is currently declining at an average rate of 13% ten years after peaking. ANS peaked in 1988 at 2.011MMBPD and is currently declining at a rate of 4.3%. For comparison, ten years after ANS peaked the decline rate was 9.1%.

Bob George of Gaffney, Cline and Associates testified before the committee on March 18, 2011. In his testimony, Mr. George addressed this question and explained that a company would typically assume a production path not unlike that of Alaska's in modeling investments in a mature oil basin, with a fast ramp up, a plateau period, and a period of decline. However Mr. George also noted that there are multiple opportunities in Alaska that could allow the state to return to growing production, including heavy oil, new discoveries, and increased development of known resources.

8) **Does the Department of Revenue have access to drilling plans and / or plans of development when preparing their production forecast, and how far out do those planning documents go?**

Yes, the Department of Revenue has access to drilling plans and plans of development (PODs) when preparing the production forecast. In the near term, about one or two years out, the operators are usually very specific, sharing drilling schedules, budgets, production forecasts, etc. with us. In the time up to five years, some of the operators usually have a "plan" for future development that is somewhat less specific that may include anticipated wells, some budget information and perhaps anticipated production. Beyond five years, some of the operators will have a general plan that may just include the prospective field and a very general time estimate of the start of the field. The Department of Revenue does consider the Plans of Development submitted by the operators to the Department of Natural Resources.

9) **What would the revenue reductions have been each year since the passage of ACES, if the provisions of SB 49 had been in place instead?**

The following table provides the estimated impact of SB 49 using historical Department of Revenue models, which are set up to provide revenue forecasts by fiscal year. SB 49 as proposed would use calendar year prices to determine the average price for calculating progressivity and then allocate the revenue to fiscal years. This structural difference might cause the impacts to be slightly more in one year and less in the next, but the revenue impact should be the same over time.

Note also that this table does not reflect production level increases that would likely have been experienced had SB 49 been implemented during these years.

Production Tax Revenue under ACES and the Estimated Impact of HB 110/SB 49 on Production Tax Revenue in Prior Years*

(in $billions)

Year	Production Tax Revenue under ACES	Impact of Tax Rate Change	Impact of Well Lease Exp Credit	**Total Estimated Impact**	Estimated Production Tax Revenue under HB 110/SB 49
FY 2008	$6.81	-$2.06	-$0.30	**-$2.36**	$4.45
FY 2009	$3.10	-$0.99	-$0.30	**-$1.29**	$1.81
FY 2010	$2.86	-$0.60	-$0.30	**-$0.90**	$1.96

***Notes regarding this analysis**

This analysis considers revenue impacts of only those provisions of HB 110 and SB 49 that can be reasonably quantified and that are not considered revenue neutral over time (such as the elimination of the credit split). Additionally, because historical models are maintained on a fiscal year basis, fiscal year inputs such as prices, production and costs were used for this analysis, even though annual tax calculations in HB 110 and SB 49 are based on calendar year inputs. For the well lease expenditure credit, we chose a median of the range of $200 to $400 million per year as stated in the fiscal note.

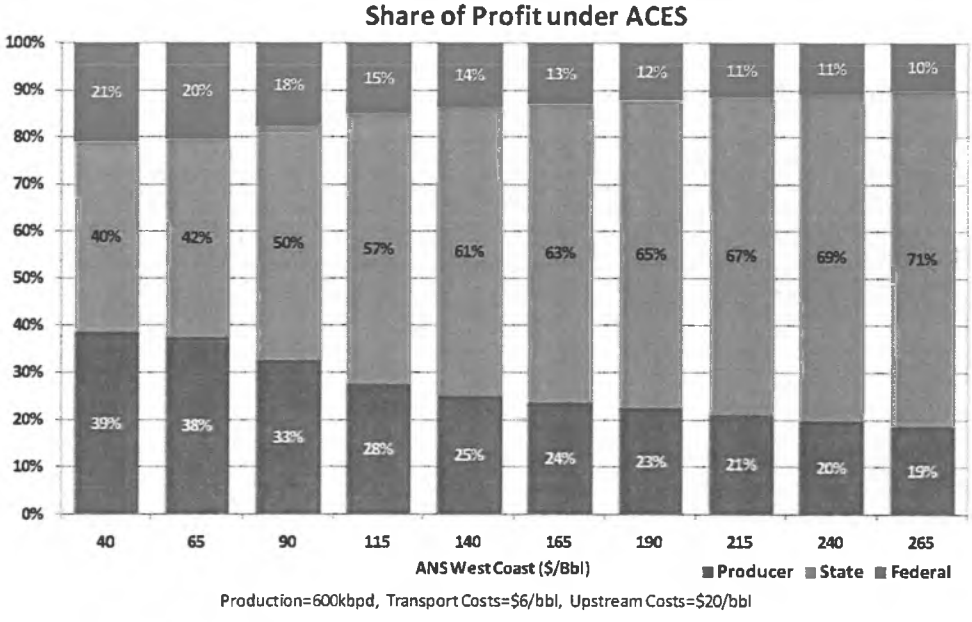
This analysis does not consider the likely production increases had HB 110/SB 49 been in effect.

10) Please provide the numbers, and assumptions, behind the profit share graph on slide 20 as presented.

The chart uses a range of possible ANS West Coast prices, with no change in costs across the range. The chart assumes production on state land. Following are the assumptions used in producing the chart. The chart as presented in committee is also included below.

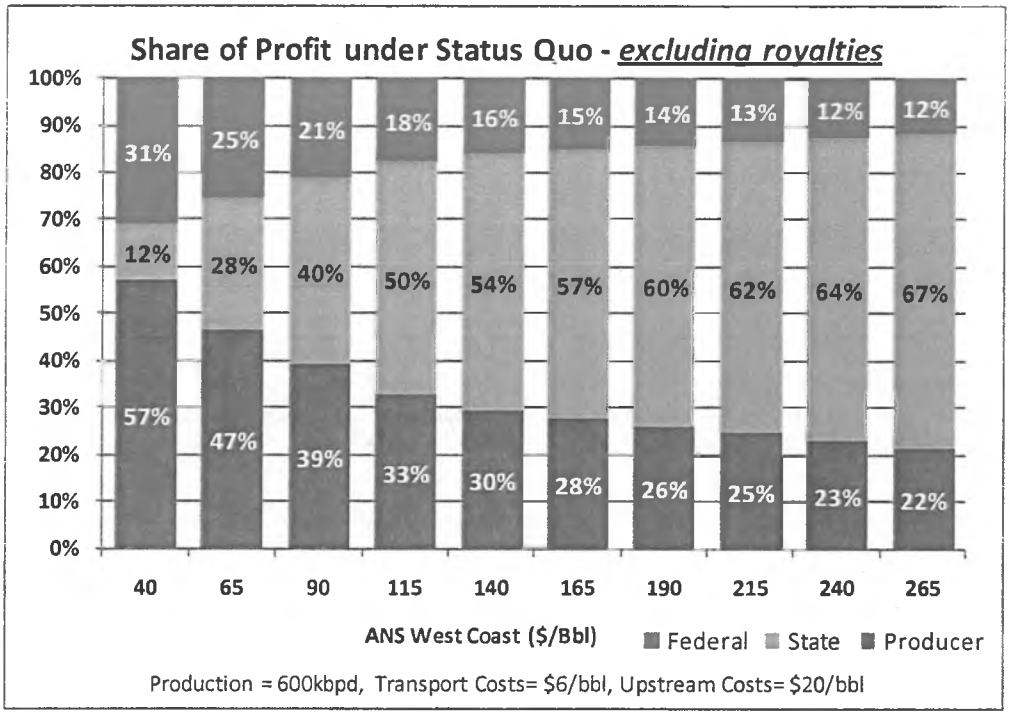
Assumptions	Value	Unit
Transportation Costs	6.00	$/bbl
Royalty Rate	12.5%	
Upstream CAPEX	10.00	$/bbl
Upstream OPEX	10.00	$/bbl
Total Upstream Costs	20.00	$/bbl
Daily Production	600,000	Kbbl/d
Property Tax (% of CAPEX)	2.00%	

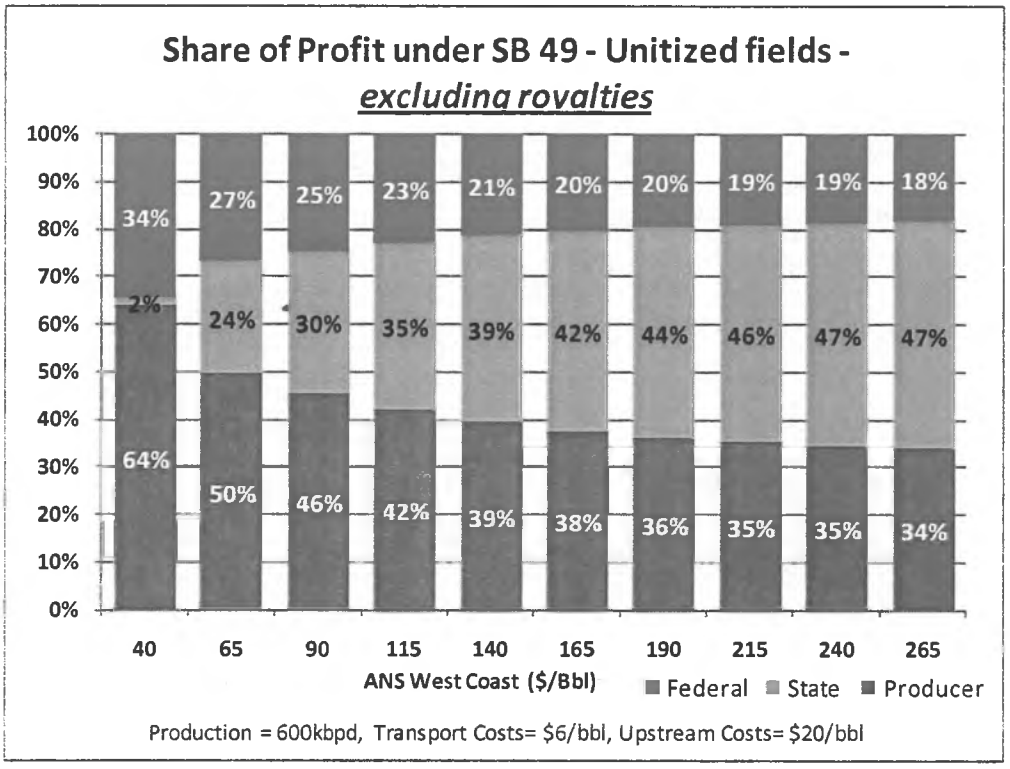
Share of total profit - ACES



11) Please reproduce the profit share graph on slide 20 without including state royalty.

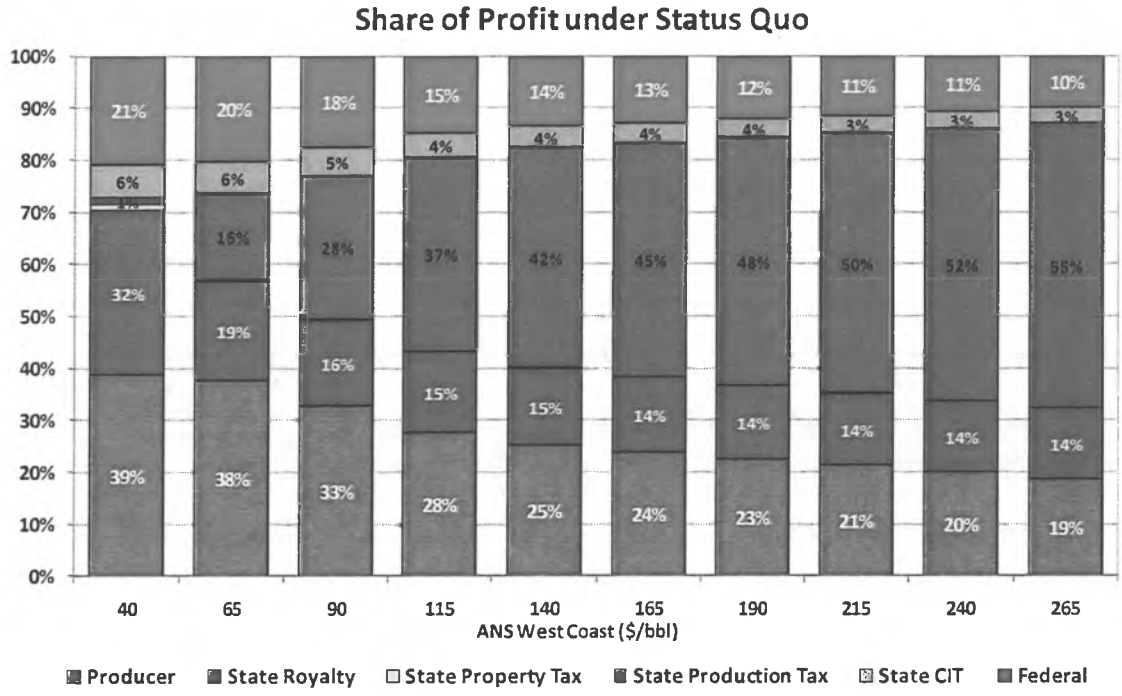
The following charts show the distribution of profit (excluding royalty) at various oil prices, under both status quo and SB 49. Royalty is an integral part of the state's fiscal system and we maintain that it should be included in the analysis of distribution of profit.

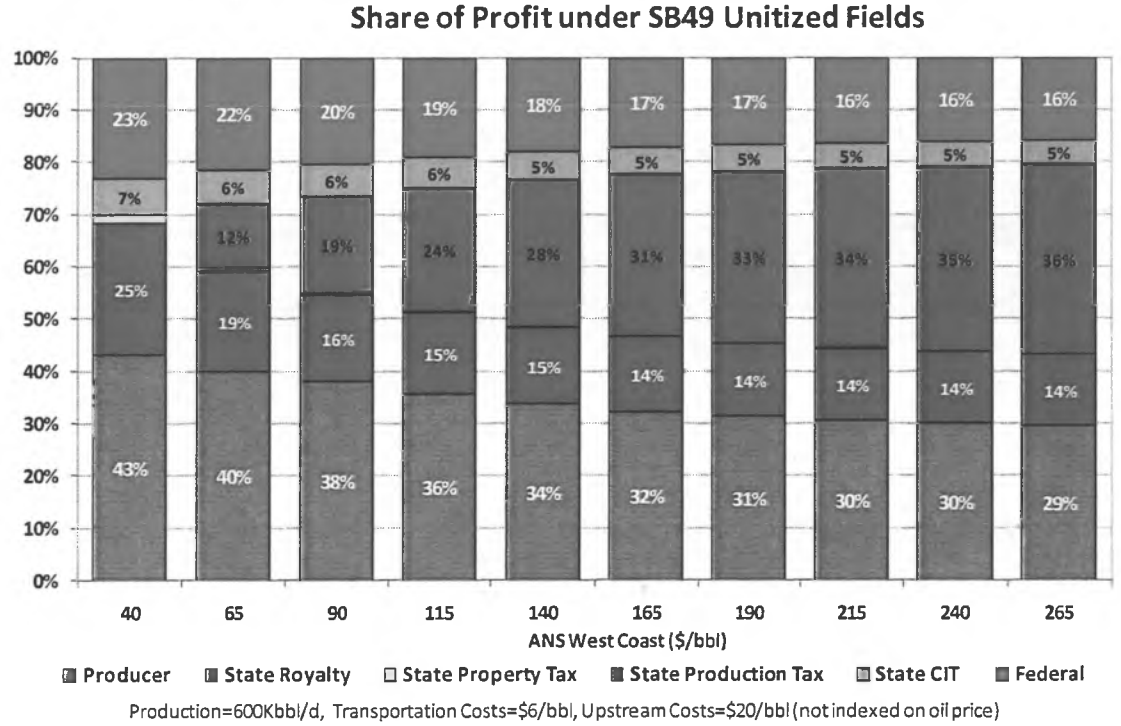




12) Please reproduce the profit share graph on slide 20, including royalty, with the state share broken down into the various components.

The following charts show the distribution of profit at various oil prices, including detailed breakdown of the components of state take, under both status quo and SB 49.





13) Explain why the profit shares on the share graph on slide 20 and 21 are different than shares of gross value.

Profit and gross value are two different numbers – one includes costs to produce oil and one does not. The concept of "profit" used in the "share of profit" slides represents the wellhead value of oil (which excludes transportation costs), less lease expenditures (operating and capital costs). The concept of "gross value at point of production" represents the value at the entry point into a common carrier pipeline (such as TAPS) and excludes only transportation costs.

14) Provide the model used to produce the profit share graph on slide 20.

The Department has prepared a one-year snapshot model designed to illustrate the impacts of SB49 on the state, federal and producer takes for a certain production rate, under fixed oil price and cost assumptions. Department staff are available to meet with interested legislators who wish to manipulate this model.

QUESTIONS FROM TAX CREDITS PRESENTATION

15) What is the difference between an exploration well and a development well?

Following are definitions of different types of wells, from the AOGCC:

- "Exploratory Well" means a well drilled to discover or to delineate a pool
- "Development Well" means a well drilled to a known productive pool
- "Service Well" means a well used for injecting water, gas, or other fluids into a reservoir or producing formation in pressure maintenance, enhanced recovery, or storage operations, for disposing of oil field wastes, or for conducting other operations in support of oil or gas production
- "Stratigraphic Test Well" means a hole drilled for the sole purpose of gaining structural or stratigraphic information to aid in exploring for oil and gas

16) Explain the difference between the $85.5 million in exploration credits for FY 2008 shown in today's presentation, and a lower number ($38.5 million) provided in an earlier presentation.

The table used in the earlier presentation incorrectly excluded 3 applications for exploration credit claims totaling $47 million submitted and received during FY 2008. The data was omitted from a report obtained out of the database used to track credit applications. The error was discovered as we reconciled the eventual credits paid or refunded by the state to the applications received.

17) Will the Department be revising its estimate for credits taken in 2011 based on the recent announcement that Repsol will be investing in an exploration program on the North Slope?

The Department will not be revising the estimate for credits taken in FY 2011 based on Repsol's recent announcement about its North Slope investment plans. The Department may, however, revise estimates for FY 2012 and later years' expenditures and credits, pending further information gathered during our extensive fall forecasting process. As part of our fall forecast, we review plans of development, and we meet individually with oil and gas explorers and developers in order to gain a better understanding of their projects. This will also give us the opportunity to inquire about spending plans, and whether or not the projects will likely meet the criteria for credit under one of our exploration tax credits or other credits. Assuming company plans proceed as intended, we will likely incorporate these new estimates into our Fall 2011 forecast.

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

OUTSTANDING QUESTIONS

The following questions remain from the Senate Resources hearings on March 11, 14, and 16, 2011. We are working on these questions and will respond at a future date.

1) **Provide the Department's previous forecasts for Prudhoe Bay production in 5-year increments (2010, 2005, 2000, etc)**

2) **Explain the concept of "duty to produce".**

3) **Can we look at a possible correlation between declines in exploration in 2003 and 2010, and the economic downturns in 2001 and 2008. Is Alaska's decline in exploration in those years similar to other states after removing gas exploration wells?**

4) **Provide information about companies that are working together on exploration wells shown in the exploration wells slide.**

5) **How do drilling agreements work when companies are working together? If one company pulls out of a project, is the project typically cancelled?**

6) **Compare royalty rates in Alaska with royalty rates in other states; that is, compare royalties paid in Alaska as an owner state to royalties paid to private land owners in Texas, North Dakota, etc.**

7) **Please show SB 49 compared to our revenue forecast in the "income statement" format for FY 2010, FY 2011, and FY 2012.**

8) **Please recast the fiscal note analysis using flat oil prices of $100, $110, and $120 instead of the Department's forecast oil prices.**

9) **Explain the difference between the $85.5 million in exploration credits for FY 2008 shown in today's presentation, and a lower number ($38.5 million) provided in an earlier presentation.**

10) **Provide a 5-year forecast for capital expenditures and the credits derived from those expenditures.**

11) **Provide a chart of effective tax rates under current law and SB 49 using forecasted transportation costs, lease expenditures, and credits for FY 2012.**

12) **Provide modeling to show whether the $1.1 billion in credits paid to explorers has led to any production.**

13) **Provide a breakout of the types of capital expenditures in as much detail as possible.**

State of Alaska

Department of Revenue

Commissioner's Office

March 25, 2011

Senator Joe Paskvan
State Capitol Room 115
Juneau AK, 99801

Re: Answers to questions posed March 17, 2011

Dear Senator Paskvan:

The purpose of this document is to respond to the questions you raised in our meeting with you on March 17, 2011. The requests/questions and responses follow.

1. **Prepare a version of the FY 2011 income statement that replaces the "credits applied against tax liability" with "total credits earned" regardless of when or how those credits are used.**

   Please see income statement for FY 2011 on the following page.

FY 2011 Production Tax Estimates with Total Credits earned[4]

	Price	Barrels	Value ($M)
Avg ANS Oil Price ($/bbl) & Daily Production (bbls)	$77.96	615,902	$48.0
Annual Production (bbl)			
Total		224,804,230	$17,525.7
Royalty, Federal and other barrels[1]		-34,100,490	($2,658.5)
Taxable barrels		190,703,740	$14,867.3
Downstream (Transportation) Costs ($/bbl)			
ANS Marine Transportation	-$2.07		
TAPS Tariff	-$4.17		
Other	$0.24		
Total Transportation Costs	-$6.00	190,703,740	($1,144.2)
Lease Expenditures			
Total Operating Expenditures	-$13.39		($2,553.0)
Total Capital Expenditures	-$13.49		($2,572.0)
Deductible Operating Expenditures[2]	-$12.99		($2,477.0)
Deductible Capital Expenditures[2]	-$10.43		($1,988.4)
Total Deductible Lease Expenditures	-$23.42	190,703,740	($4,465.4)
Production Tax			
Production Tax Value (PTV)			$9,257.6
Base Tax (25%*PTV)			$2,314.4
Production Tax Value per barrel	$48.54		
Progressive Tax = (7.4% * PTV)			$686.7
Total Tax before credits			$3,001.1
Credits			
Credits applied against tax liability			($400.0)
Estimated Total Tax after credits[3]			**$2,601.1**
Total credits earned (including not applied against tax)[4]			($665.0)
Total Tax before credits less total credits earned[4]			$2,336.1

Notes: (1) Royalty, Federal and other barrels represents our best estimate of barrels that are not taxed. This estimate includes both state and federal royalty barrels, barrels produced from federal offshore property and barrels used in production.
(2) Deductible Lease Expenditures represents our best estimate of lease expenditures that are applicable to currently producing fields that are likely to produce a tax liability for the company or companies producing them. The per-barrel expenditures reflect expenditures **per taxable barrel** and do not reflect expenditures per all barrels produced.
(3) Estimated Total Tax after credits is a calculated total based on constant daily production, constant oil prices, and constant expenditures for the entire year. Variations in these assumptions captured in larger revenue models will produce different results that differ from the estimates in the simple model above.
(4) Total credits earned is shown by request and is intended to reflect the net exposure to the state from all production tax credit activity in a year without regard to when and how the credits are applied or redeemed.

2. **Prepare slides showing effective tax rates on gross (after credits) for ACES and SB 49, for FY 2012-2016. Prepare similar slides showing effective tax rate on gross after all credits – including those used against tax liability and those which will likely be certificated – for ACES and SB 49 for the same years.**

   See the following pages for the slides requested in question number 2.

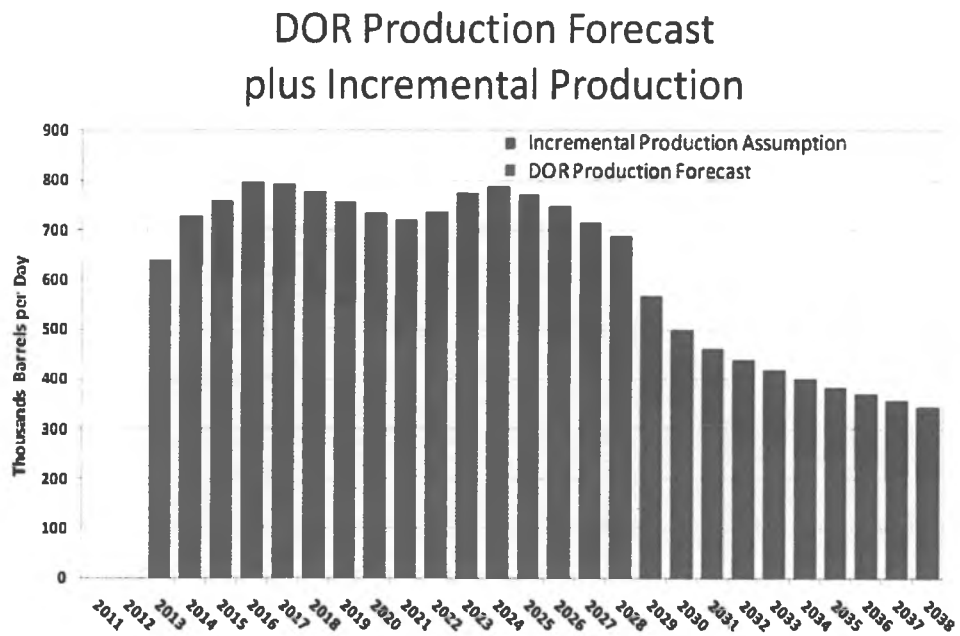
3. Provide the analysis of the Great Bear scenario that was prepared for the House Resources Committee.

The following charts have been prepared to illustrate the potential impact of incremental production on state revenue. This illustration does not constitute a "best case scenario" but rather one single potential outcome out of a very wide range of possible production and price scenarios. The assumptions used are based on the Fall 2010 production and price forecasts and on recent industry testimony and as such, can be considered as neither excessively optimistic nor conservative. This scenario does not represent a Department of Revenue forecast or expectation. The analysis assumes that following the enactment of HB 110, incremental production beyond what is included in the Department's current production forecast would come from state lands. For this analysis, production included in the Department's forecast is assumed to be taxed at a 25% base rate and a maximum progressivity of 25% under HB 110. For illustration purposes, incremental production has been assumed to follow a profile similar to that presented by Great Bear Petroleum, as described in their 18th February, 2011 testimony[1]. This incremental production is assumed to come from currently non-unitized fields, which under HB 110, would be taxed at a 15% base rate and a maximum progressivity of 25%.

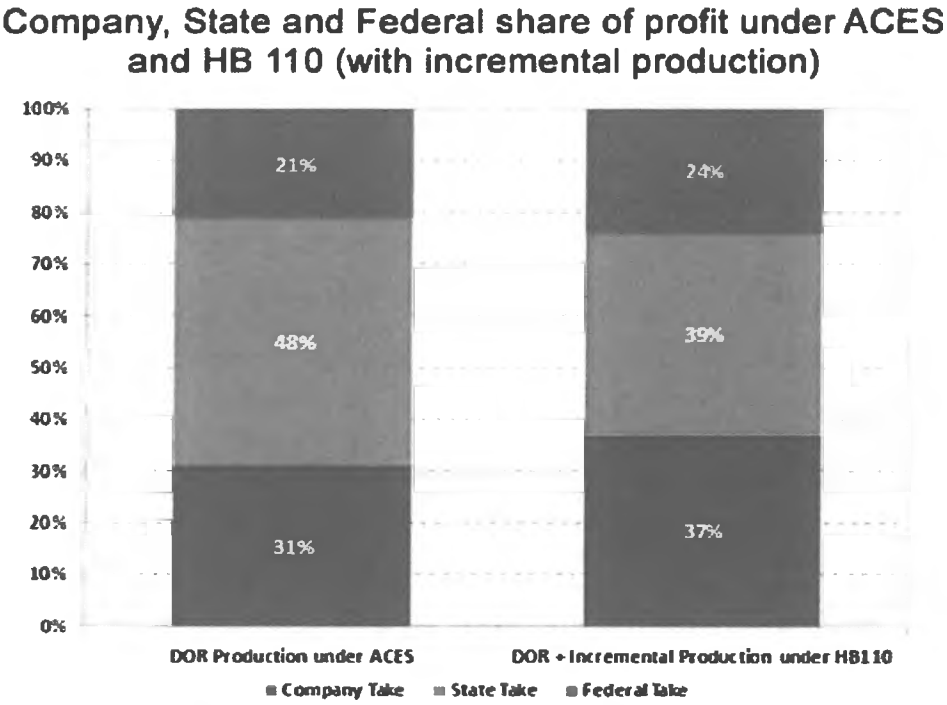


Source: DOR Production Profile; Fall 2010 Revenue Sources Book.
Incremental Production: Great Bear Petroleum; 18 February, 2011.

Overall, the enactment of HB 110 under this set of assumptions would reduce the "State Take" (all state revenues including production tax, royalty, corporate income tax and property tax) from

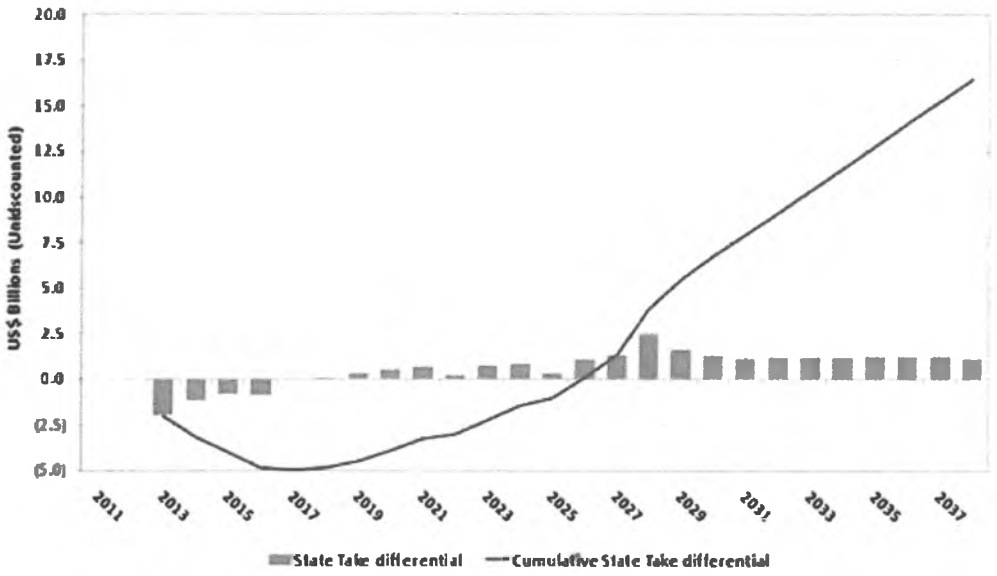
[1] Production starts in 2014 with 295 thousand barrels per day peak in 2028. Note: Great Bear Petroleum labels this as a 'Potential Oil Production Profile' and lists certain assumptions used in the preparation of this profile in their testimony.

48% to 39% of profits. Overall "Government Take", which also includes federal corporate income taxes, would be reduced from 69% to 63%.



However, while the relative State Take decreases under HB 110, it is applied to a "larger pie", which includes the assumed incremental production. Over the 2013 to 2038 period, total state revenue under HB 110, with the incremental production, would be $17 billion higher than it would be under ACES with no incremental production.

Additional state revenue under HB 110



Note: State Take for DOR + Incremental Production under HB110 minus State Take for DOR Production under ACES

Under the assumptions used, state revenue under HB 110, with the incremental production, would be higher than under the status quo beginning in 2018. Cumulative state revenue under the HB110 scenario starts exceeding what would have been received under ACES in 2026. As stated earlier, this is but one many potential scenarios as incremental production could conceivably be greater, or lower, than assumed for the purpose of this illustration.

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

SEAN PARNELL, GOVERNOR

The Honorable Thomas Wagoner
Alaska State Senator
State Capitol, Room 427
Juneau, AK 99801

Re: Response to Questions from Senate Resources Hearing on April 1, 2011

Dear Senators Paskvan and Wagoner:

The purpose of this document is to respond to the follow-up questions raised by the Senate Resources Committee meeting during our presentation of the Oil & Gas Production Tax Status Report on April 1, 2011. The requests/questions and responses follow.

1) **Provide information about the Department's use of contract auditors and the possibility of using contract auditors when positions cannot be filled.**

   We have used and are currently using contract auditors to perform some of the audits on the AS 43.55.025 alternative credit for oil and gas exploration applications.

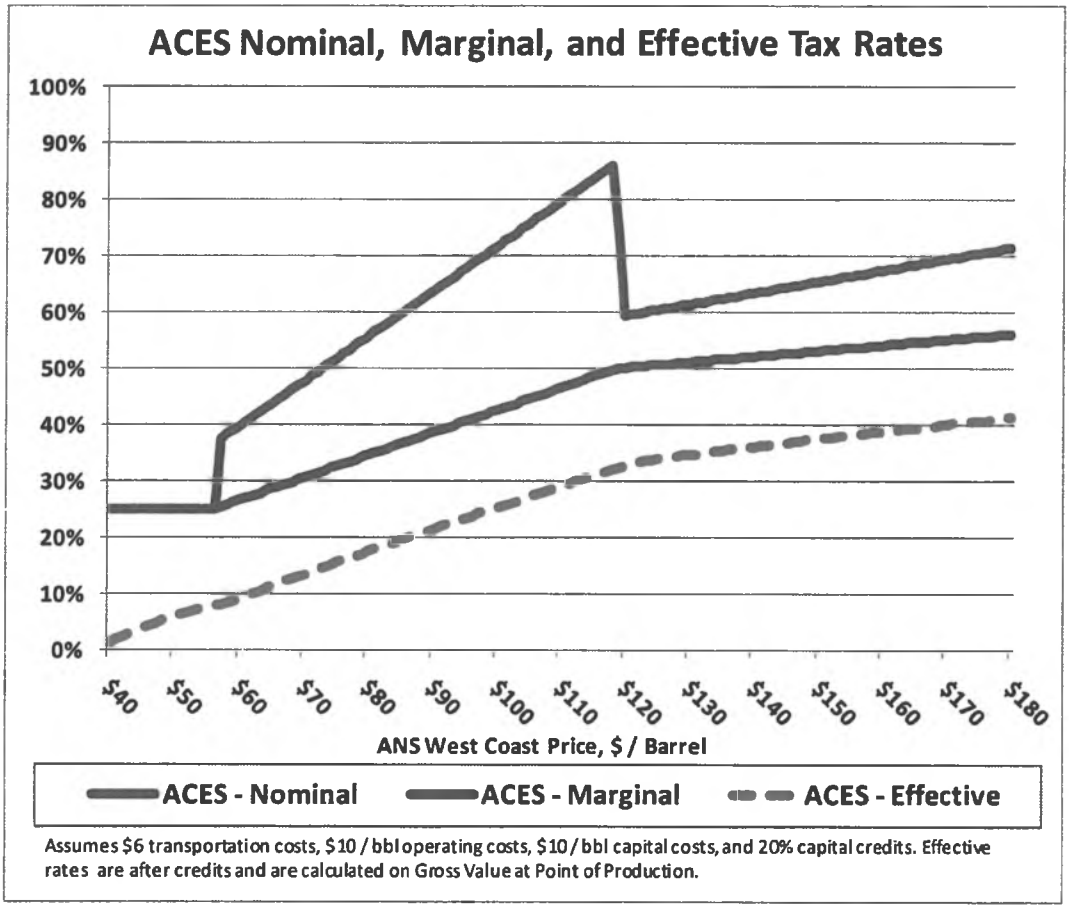
   We have also used and will use contract auditors to perform the annual AGIA reimbursement audit of the licensee as required by AS 43.90.220. These audits are calendar year end audits performed and completed within the next tax year.

   We have not used contract auditors for other uses, due to lack of available funding.

2) What are the nominal and effective tax rates under ACES when the price for ANS oil is $100 per barrel?

The following chart compares nominal, marginal, and effective tax rates under ACES at a range of oil prices. For this analysis we assumed $6 per barrel transportation costs, $10 per barrel operating costs, $10 per barrel capital costs, and credits in the amount of 20% of capital costs.

Based on this analysis, at an ANS price of $100 per barrel, the nominal tax rate is 42.6%, the marginal tax rate is 71.8%, and the effective tax rate on gross value is 25.3%.



We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska

Department of Revenue

Commissioner's Office

Re: Answers to questions posed April 4, 2011

Dear Senator Paskvan:

The purpose of this document is to respond to the questions posed in an email from Jeff Stepp of your office dated April 4, 2011. The requests/questions and responses follow.

1. **For the years 2005 – 2011*, how much (gross dollars) are the capital expenditures by operators with production tax liability?**
2. **For the years 2005 – 2011*, how much are the capital expenditures by operators with some production tax liability but whose liability for that tax was reduced to zero with credits?**
3. **For the years 2005 – 2011*, how much are the capital expenditures by operators with no production and, therefore, no tax liability?**
4. **What is the specific number of companies that fit into each of the above categories in each of the years?**
5. **What is the total number of operators reporting taxes in each of those years (2005 – 2011*)?**
6. **Please identify the names of the operators in each of the categories in each of the years.**
7. **For the years 2005 – 2011*, name the operators filing reports.**

The Department of Revenue began receiving capital and operating expenditure data with the passage of PPT, which became effective in FY 2007. The department has since that time received monthly information forms and annual tax returns from oil and gas companies in the state. The department has a relatively solid data set for FY 2007 through FY 2010, and can provide information about those years. The data are limited to expenditures on the North Slope. Due to confidentiality constraints, we can provide information only about companies with production and companies with no production. We cannot disclose taxpayer-specific information, therefore we cannot provide answers to questions 5 – 8.

The table below provides the information we could compile for questions 1 – 4 above.

North Slope Capital Expenditures and Number of Companies with and without production, FY07 - FY10

Fiscal Year	North Slope Capital Expenditures by Companies with Production	Number of Companies with Production - North Slope	North Slope Capital Expenditures by Companies with No Production	Number of Companies with No Production - North Slope	North Slope Capital Expenditures - All Companies	Total Number Companies - North Slope
2007	$1,713,888,686	5	$388,085,401	13	$2,101,974,087	18
2008	$1,494,140,538	6	$477,661,229	18	$1,971,801,768	24
2009	$2,108,129,331	8	$103,848,115	12	$2,211,977,446	20
2010	$2,336,081,390	9	$52,611,147	11	$2,388,692,537	20

8. What is the amount of credits refunded for FY05 – FY 11, and what are the forecasted credits refunded for FY12 and forward?

Credits became refundable with the passage of PPT beginning in FY 2007. The amounts of credits refunded in each of the years since then, and forecasted for FY 2012 is shown below. We do not attempt to estimate refundable credits on a forecast basis further out than one year from the current date.

FY 2007 = $54.6 million
FY 2008 = $54.1 million
FY 2009 = $193.1 million
FY 2010 = $250.5 million
FY 2011 = $430.0 million
FY 2012 = $400.0 million
TOTAL = $1,382 million

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

State of Alaska
Department of Revenue

Commissioner Bryan Butcher

Re: Answers to questions posed on April 5, 2011

Dear Senator Paskvan:

The purpose of this document is to respond to the questions posed on April 5, 2011. The requests/questions and responses follow.

Is it accurate to say that "the production tax rate under ACES may be as high as 75% (Oil & Gas Tax Status Report, p. 1)" when the price of a barrel of crude is approximately $400? Also, to confirm, are you talking about the nominal, marginal, or effective tax rate in that line?

This statement would be accurate. 75% is the maximum nominal tax rate for production tax only, and applies when the production tax value is greater than $342.50 per barrel.

On page 1 – page 2 of the January 17, 2011 Oil and Gas Production Tax Status Report, the report says that, "tax rates in each of the four years were much lower than the maximum rate." What was the corresponding tax rate in each of those four years?

Chart 2, on page 5 of the report, shows the average nominal tax rate paid in FY 07, 08, 09, and 10. The average nominal tax rates paid in each year were as follows: FY 2007, 22.5% (under PPT); FY 2008, 41.8%; FY 2009, 30.2%; and FY 2010, 32.6%.

The Oil & Gas Tax Status Report 2011 says that "the government share of each additional dollar of profit may be as high as 93% (page 14)." Please provide the back-up numbers to support that statement.

The maximum marginal rate under the current fiscal system has been quoted as either 87% or 93%. Both these numbers are correct, but refer to different things.

The maximum marginal rate of 87% refers to the percentage of the incremental taxable revenue (defined as the taxable revenue generated by a US$ 1/bbl increase in ANS

West Coast price with all other conditions remaining unchanged) that is captured by the State through the production tax only.

The calculation of this ACES maximum marginal rate is illustrated in Appendix A using the data presented by the Department of Revenue (DoR) to Senate Finance Committee on 25 January 2011 for FY2010.

Assuming an ANS West Coast price of US$ 116.71/bbl (leading to a Production tax Value per barrel (PTV/bbl) of US$ 91.50 in this example), the taxable barrels revenue would be US$ 23,787 million (MM) and the production tax before credit would be US$ 9,250MM.

Assuming an ANS West Coast price US$ 1 higher of US$ 117.71/bbl (with PTV/bbl rising commensurately to US$ 92.50), the taxable barrels revenue would be US$ 23,991MM and the production tax before credit would be US$ 9,427MM.

The ACES marginal rate is calculated by dividing the incremental production tax (US$ 177MM) by the incremental taxable revenue (US$ 204MM) generated by the US$ 1 oil price increase. In this case, the marginal rate is 87%, which is the maximum marginal rate for ACES.

Figure 1: ACES Marginal Rate Calculation

ACES Marginal Rate	116.71$/bbl case	117.71$/bbl case	Incremental
Taxable barrels Revenue ($MM)	23,787	23,991	204
Production Tax ($MM)	9,250	9,427	177
Marginal Tax Rate	*(Production Tax / Taxable Barrels)*		87%

Others have referred to 93% as the correct marginal rate. This is correct if one considers all the taxes a producer needs to pay i.e. the Production Taxes plus Royalty and State and Federal Income Taxes. This is illustrated in Appendix B using simplified assumptions.

Using the same assumptions, with ANS West Coast Price increasing from US$ 116.71/bbl to US$ 117.71/bbl, Royalty increases from US$ 3,626MM to US$ 3,657MM, Production Tax increases from US$ 9,250MM to US$ 9,427MM and Income Tax increases from US$ 3,997MM to US$ 4,008MM.

The marginal government rate of 93% is calculated by dividing the total incremental state and federal government take (US$ 219MM) by the incremental total revenue (US$ 235MM) generated by the US$ 1 oil price increase. Because each taxable element is calculated on different base amounts the total revenue has been used for consistency in the percent marginal rate calculation.

Figure 2: Government Marginal Rate Calculation

Government Marginal Rate	116.71$/bbl case	117.71$/bbl case	Incremental
Total Revenue ($MM)	27,413	27,648	235
Government Take ($MM)	16,873	17,092	219
Marginal Tax Rate	*(Gov't Take / Total Revenue)*		93%

In other words, the maximum marginal rate of 93% refers to the percentage of the incremental revenue that is captured by both State and Federal Governments. Note that at extreme prices over $300 / barrel, it is possible for the marginal rate to go even higher.

Appendix A

Note: data and assumptions below as per DoR presentation to Senate Finance Committee on 25 January 2011 for FY2010 save for the oil price which has been modified to illustrate where the ACES marginal rate is at its highest.

Figure A1: Production Tax assuming average ANS West Coast Price of US$ 116.71/bbl

Income Statement Type Summary	Per barrel	Barrels	Value ($million)
ANS West Coast & Daily Production	116.71	643,517	75

Appendix B

Note: These calculations are based on commonly used assumptions, such as 41% corporate income tax rate, for illustration purposes. Property taxes are not specified as these have no impact on marginal rates.

Figure B1: Government take assuming average ANS West Coast Price of US$ 116.70/bbl

Simplified Tax Summary	Value ($million)
Royalty and federal barrels ($MM)	3,626
Production Tax ($MM)	9,250
Income Tax (41%) ($MM)	3,997
Total Government Take	16,873

Figure B2: Government take assuming average ANS West Coast Price of US$ 117.70/bbl (US$ 1/bbl increment)

Simplified Tax Summary	Value ($million)
Royalty and federal barrels ($MM)	3,657
Production Tax ($MM)	9,427
Income Tax (41%) ($MM)	4,008
Total Government Take	17,092

We hope our responses fully answer your questions.

Sincerely,

Bruce Tangeman
Deputy Commissioner

Title:	**Tax and Credit Report as Requested**
Preparer:	Cherie Nienhuis, Petroleum Economic Policy Analyst
Date:	4-Apr-11
Purpose:	To answer specific questions from Senator Paskvan about the production tax
Data Source:	DOR forecast models
Key Assumptions:	All assumptions included in forecast models
History:	None
Disclaimer:	The Department of Revenue is in the process of reviewing and updating the data on which this analysis is based. As a result, future analysis could have different results.

The information contained in this workbook may be privileged, confidential or otherwise protected from disclosure. If you are not the intended recipient, any use, dissemination, disclosure, distribution or copying is strictly prohibited.

Tax and Credit Report as Requested

	FY 2010	FY 2011	FY 2012
GVPP	$14,039	$13,723	$14,678
Total Lease Expenditures	$4,659	$5,125	$5,494
PTV (all expenditures)*	$9,380	$8,598	$9,184
Tax after credits applied against tax liability	$2,871	$2,615	$2,738
Credits Earned by type			
Capex credits (.023a)	$465	$500	$575
NOL credits (.023b)	$210	$120	$55
Small producer credit (.024c)	$35	$40	$40
Exploration credit (.025)	$5	$5	$5
Total credits earned*	$715	$665	$675

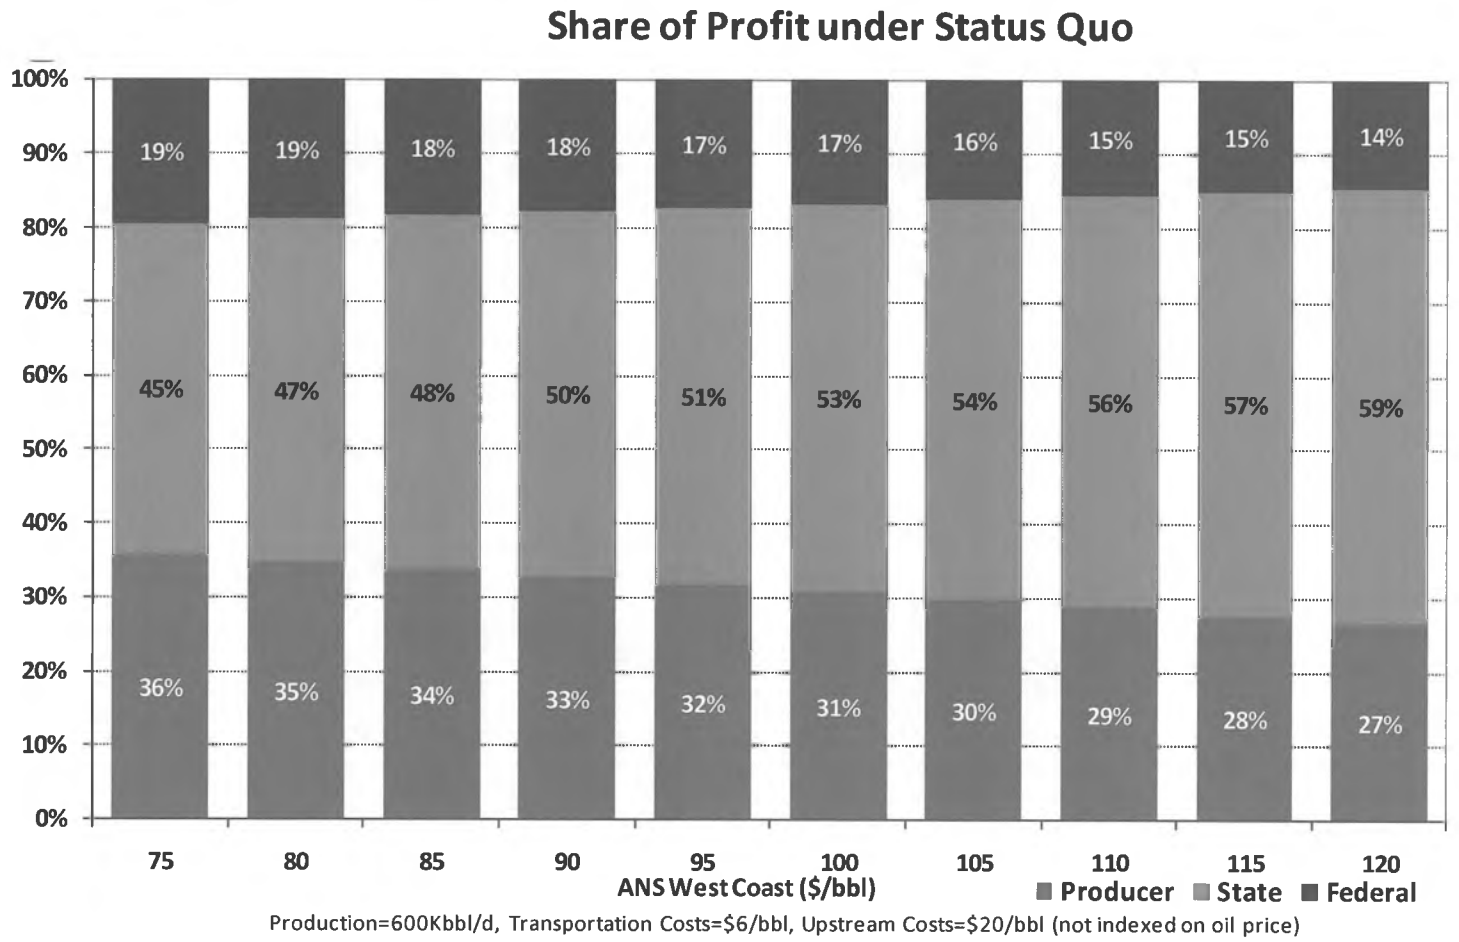
*PTV will not match published numbers because this report shows all expenditures, regardless of whether they were made by a company with a production tax liability.
**Total credits earned is an estimate of credits earned based on expenditures in the year; this estimate is not a forecast of credits to be used against tax liability in these years.
This analysis uses Fall 2010 assumptions

Profit share graph Assumptions

Assumptions	Value	Unit
Transportation Costs	6.00	$/bbl
Royalty Rate	12.5%	
Upstream CAPEX	10.00	$/bbl
Upstream OPEX	10.00	$/bbl
Total Upstream Costs	**20.00**	**$/bbl**
Daily Production	600,000	bbl/d
Property Tax (% of CAPEX)	2.00%	
Total Allowable Costs	**20.20**	**$/bbl**

- ANS West Coast Price range
  - from $75/bbl to $120/bbl in increments of $5/bbl
- Costs are constant through price range

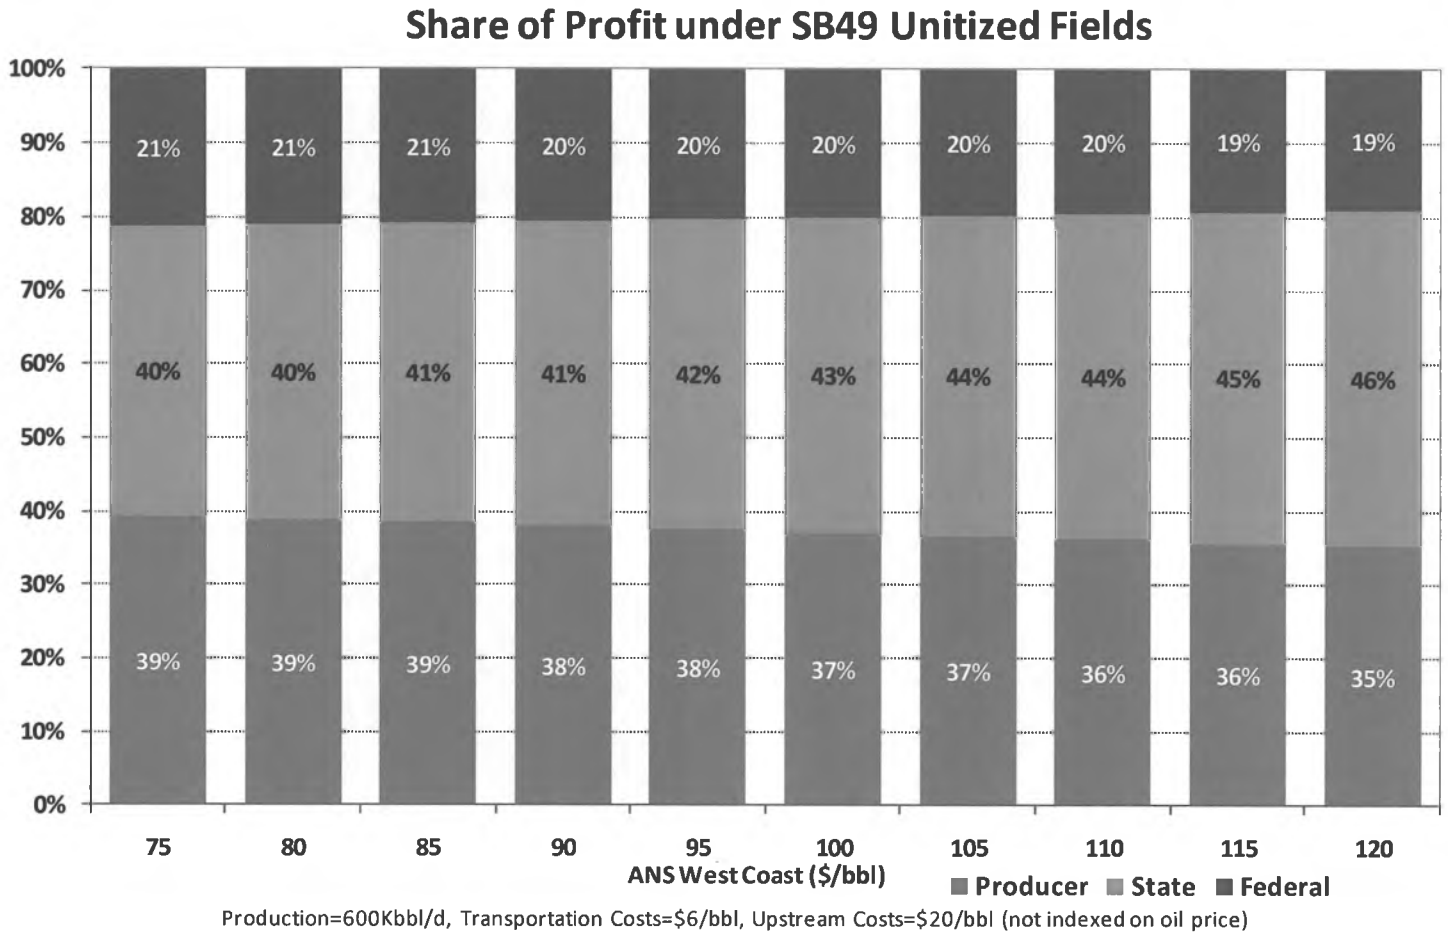
Profit Share under Status Quo



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

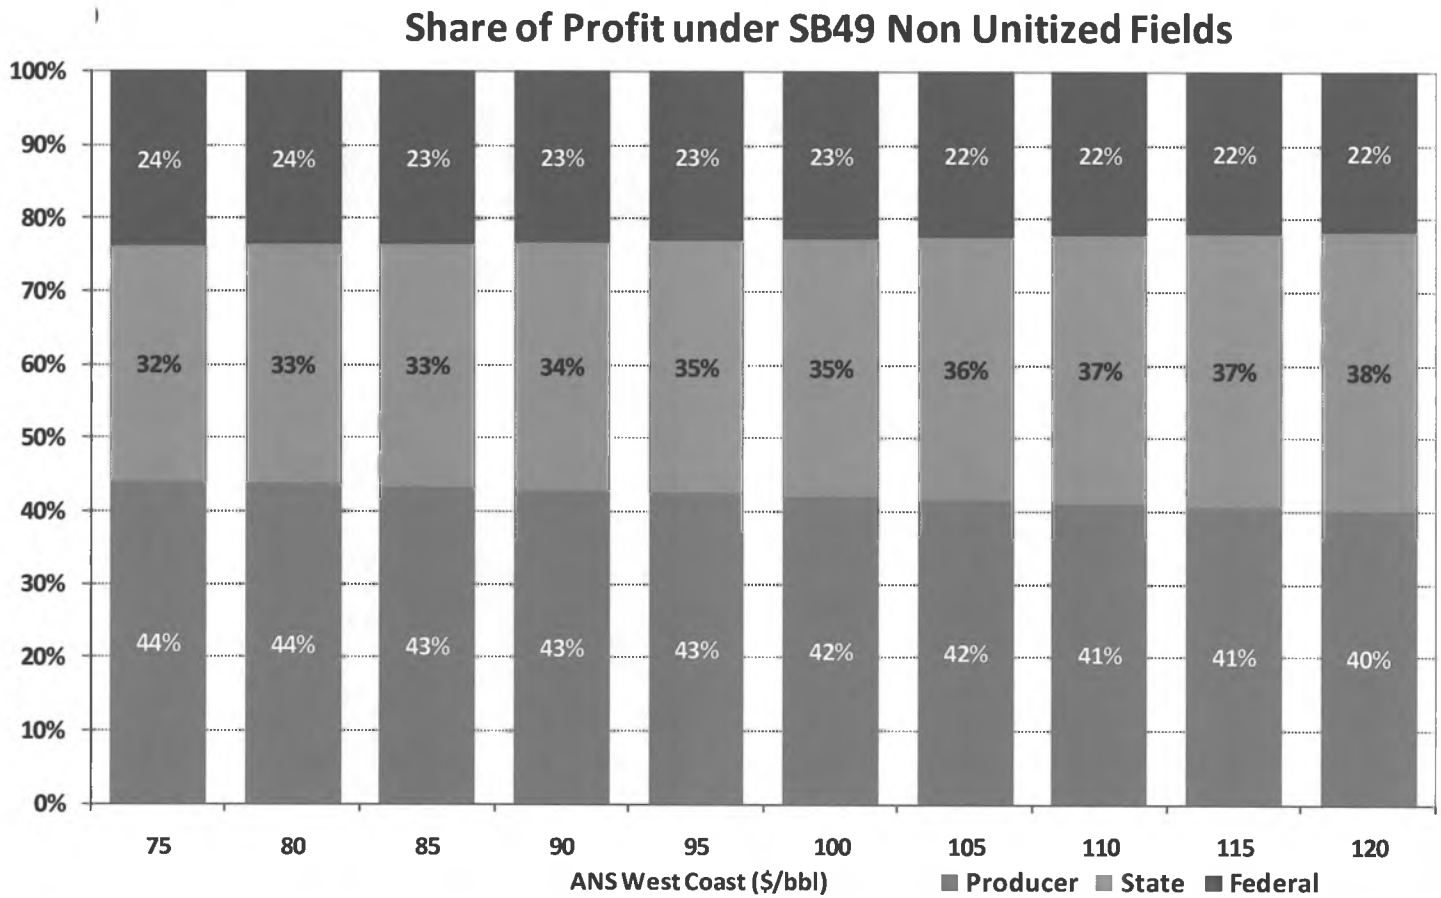
Profit Share under SB49 Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

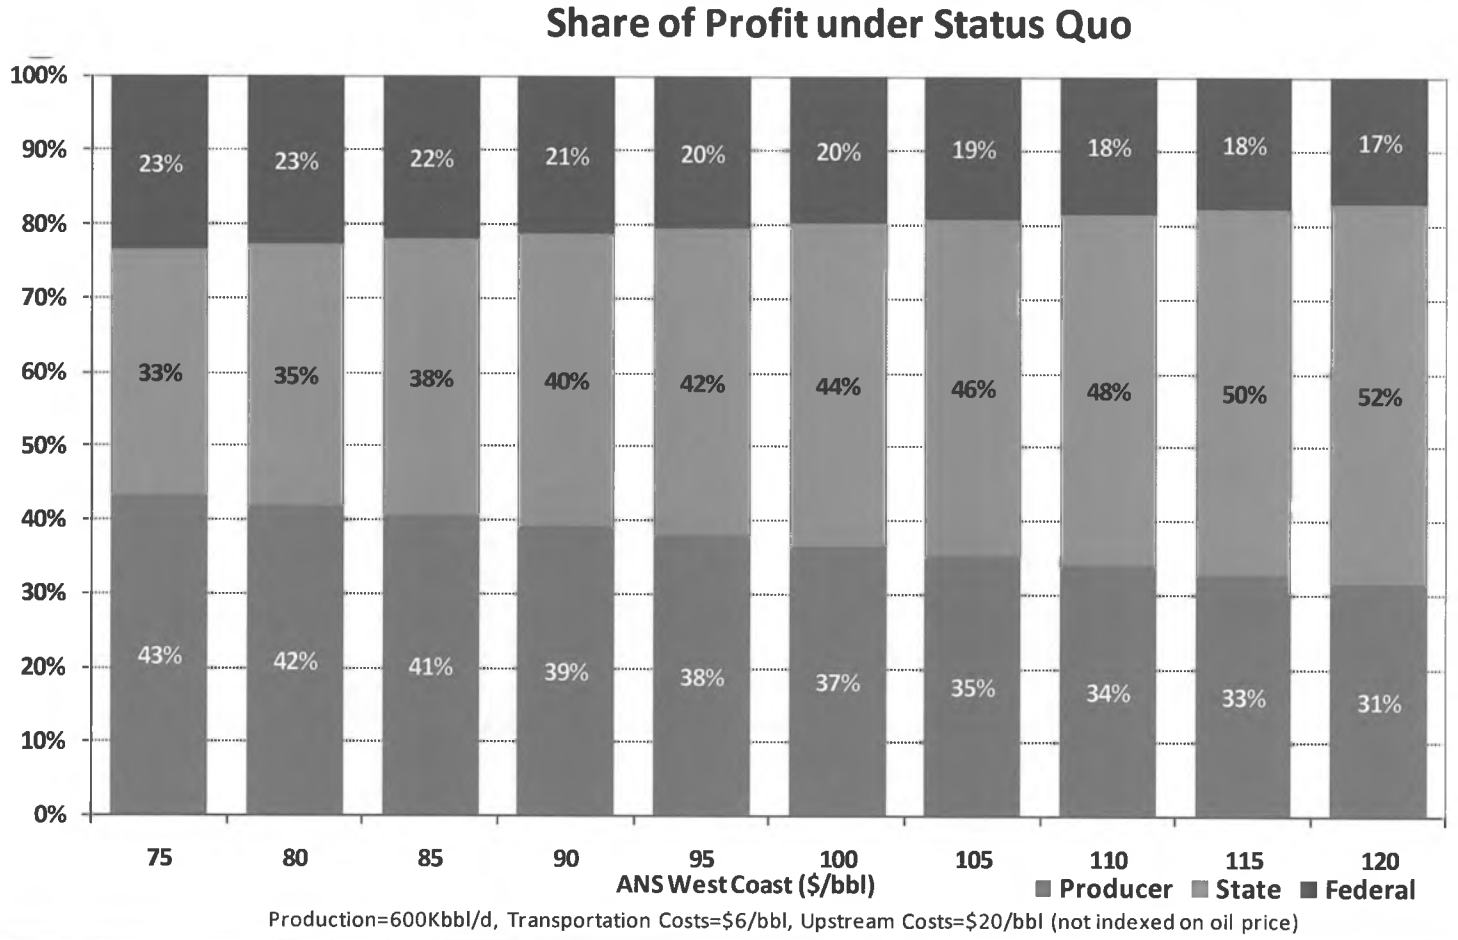
Profit Share under SB49
Non-Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures

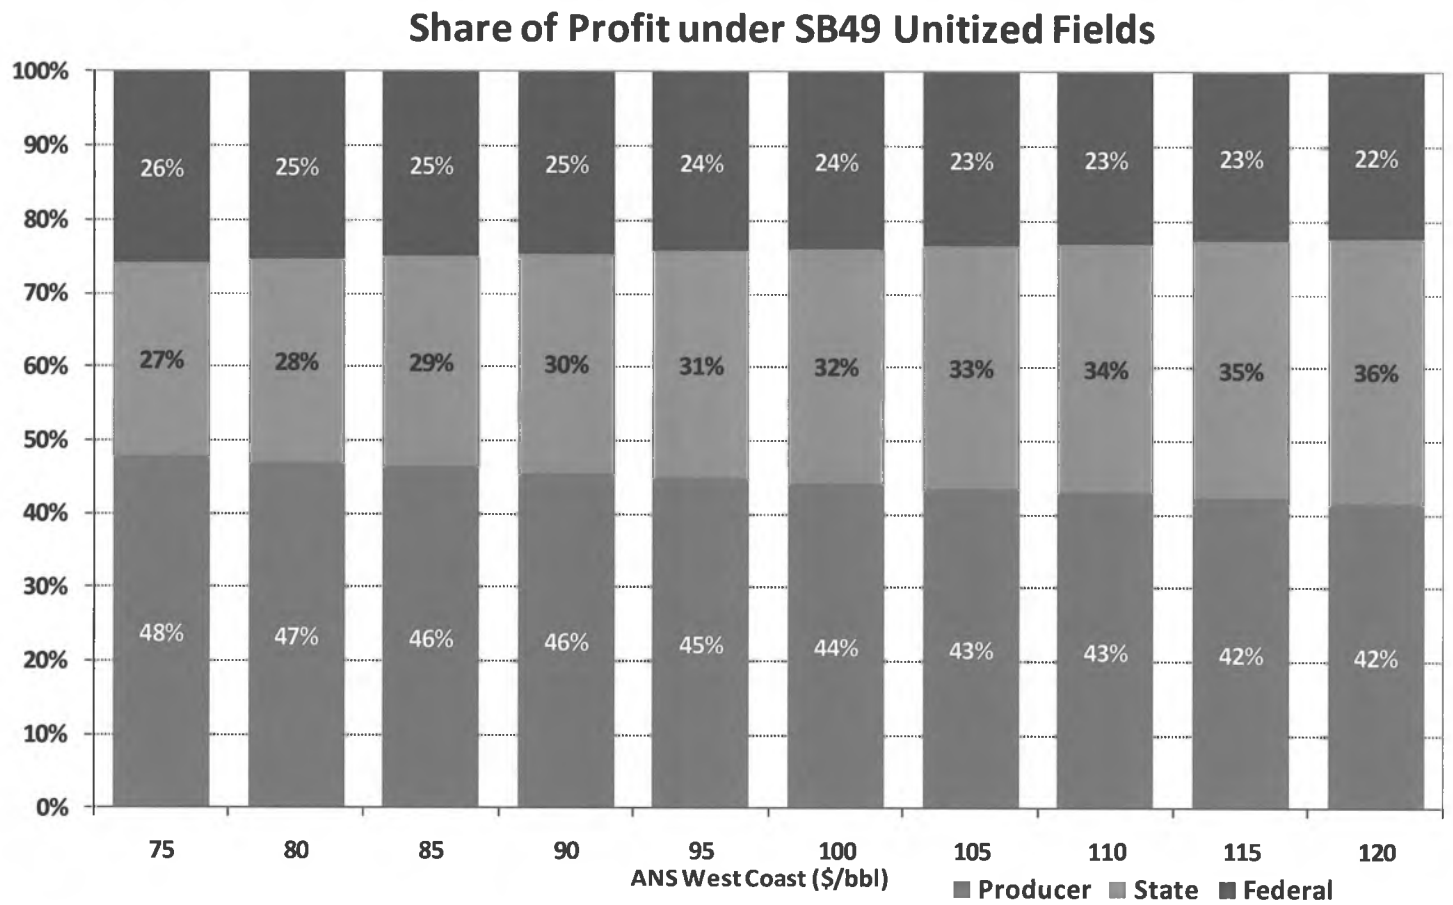
Profit minus Royalty Share under Status Quo



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

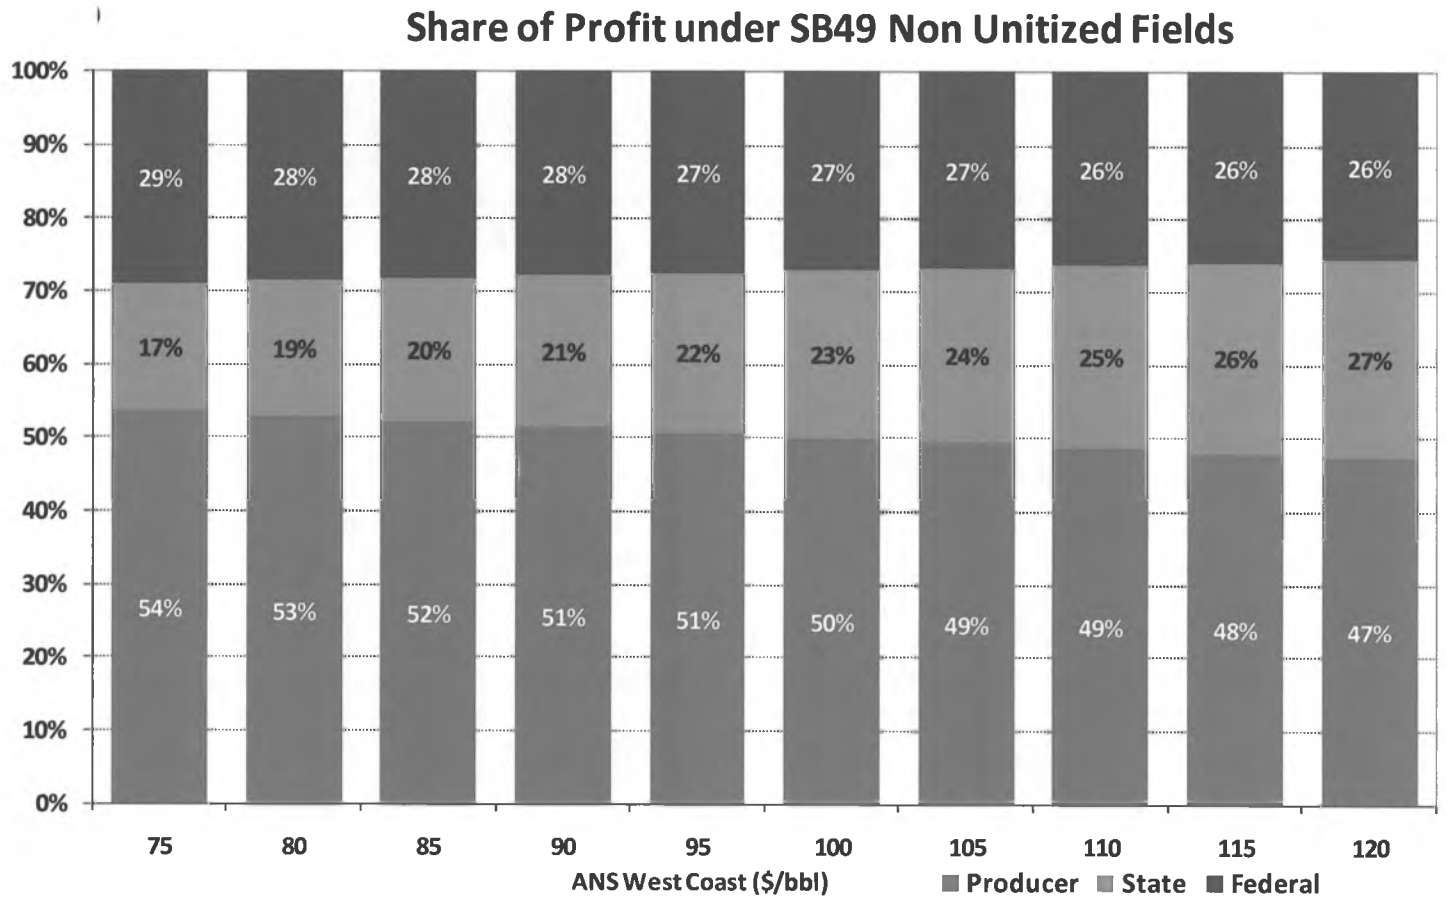
Profit minus Royalty Share under SB49 Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

Profit minus Royalty Share under SB49 Non-Unitized Fields



Production=600Kbbl/d, Transportation Costs=$6/bbl, Upstream Costs=$20/bbl (not indexed on oil price)

Profit minus Royalty: Gross Value at Market (minus) Transportation Costs (minus) Lease Expenditures (minus) Royalty

Memorandum

TO: Senator Resources Committee
FROM: Chuck Burnham, Legislative Analyst
DATE: March 29, 2011
RE: *Review of Selected Claims Made by the Supporters of SB 49*
LRS Report 11.245

You asked that we review certain claims made in a publication by the "Make Alaska Competitive Coalition" regarding the state's oil taxes and the impact of those taxes on investments and jobs. Specifically, you wanted us to examine the veracity of that organization's claims that Alaska's current oil tax structure is "driving away business" and motivating petroleum industry employers to move jobs out of Alaska. You were particularly interested in learning about variables other than taxation that impact the decisions of petroleum producing companies as to where and when to invest their resources.

Summary

We address your request, in part, through an analysis of the Fraser Institute's 2010 *Global Petroleum Survey*, which garnered responses from 645 respondents representing 345 companies regarding 133 oil producing jurisdictions.[1] To our knowledge, it is the largest publicly-available survey of its kind. In hearings for HB 110 (the companion bill to SB 49) before the House Resources Committee, representatives of the Governor's administration referred to elements of the survey as evidence of Alaska's competitive disadvantage in attracting investment from the oil and gas industry, and to support the claim that state taxes on the industry need to be reduced. It appears that in using the results of the survey to support those views, the Administration, industry groups, and other advocates of cutting oil taxes, such as the "Make Alaska Competitive Coalition," may have oversimplified and/or misinterpreted the survey results and the degree of negativity it reflects on Alaska.

Our analyses of the data collected by the survey, and of reports published by the Alaska Department of Revenue, suggest that a minority of industry officials hold negative views of Alaska's overall attractiveness for investment. With specific regard to taxation, a majority of survey respondents found Alaska's system attracts or has no impact on investment. These respondents combined with those who find the state's tax regime to be nothing more than a "mild deterrent," leave fewer than twenty percent of survey respondents who view taxes to be a significant barrier to investment in the state.

We located no research that definitively concludes that Alaska's petroleum taxation system, or that of other jurisdictions, is the primary driver of industry investment. Clearly, taxation is an important variable that impacts business decisions; however, it is equally clear that it is but one among many such significant variables. The massive expansion in petroleum exploration and production in North Dakota, where the oil tax system is viewed relatively favorably by industry (and has been for years), clearly demonstrates how variables other than taxation can drive increased investment.

[1] It is important to note that while 645 individuals responded to the survey, none of those individuals has sufficient knowledge of every variable in each of the 133 jurisdictions to provide responses to questions on those areas. Therefore, the number of responses for any given area on any specific variable is likely well below the number of overall respondents to the survey. In order to be included in the survey report, a jurisdiction was required to have garnered at least five responses for all seventeen variables. At least eleven jurisdictions were excluded due to lack of response. We contacted the authors of the survey to determine how many respondents are represented in the information on Alaska presented in their report to get a clearer picture of the extent of industry opinion represented therein; however, the Fraser Institute considers that information to be confidential. Dr. Gerry Angevine, lead researcher on the survey, suggested that the number of responses was "more than five but fewer than 200." Without knowing the precise number of individuals who provided responses on Alaska, we cannot discuss the accuracy of the survey's findings on the state with any authority. It is an established fact of statistical sampling practice, however, that as a sample grows smaller relative to the entire population being examined, the margin of error increases and, therefore, confidence in the survey's results decreases. Dr. Angevine can be reached via email at *gerry.angevine@fraserinstitute.org*.

As you know, in advocating for lower taxes on the petroleum industry in the state, the MACC has made a number of claims regarding oil and gas jobs in Alaska. Primary among those claims, in this case published on its website, is the following:

> Exploration jobs are down: Department of Labor statistics show jobs in the oil industry has shed 1,700 jobs over the last two years.

In a television commercial funded by the MACC, which is currently in broadcast circulation on a number of stations, the narrator makes the following statement:

> Alaska has lost almost 2,000 oil industry jobs, while North Dakota added 25,000.[2]

The advertisement provides a timeframe for neither the Alaska job losses, nor for the North Dakota gains; however, we assume that it approximates the same two-year time-period cited in the MACC's other media on the topic. The commercial does not directly claim that oil explorers and producers have transferred jobs directly from Alaska to North Dakota, but that appears to be the intended implication. Our final assumption on these claims is that the MACC is referring to the two-year period from November 2008 to November 2010—the most recent two-year period for which the Alaska Department of Labor and Workforce Development (DOLWD) has compiled data.

Our review of data on "oil and gas" employment compiled by the DOLWD suggests that, in the course of the past two years, roughly 2,000 jobs in that sector were "lost." However, that calculus is only true if one selects the month with the highest level of employment and compares it to the month with the lowest level of employment. Looking at the entire period in question, Alaska experienced a reduction of about 1,300 oil and gas jobs (11/2008-11/2010). However, selecting a given month in one year and comparing it to a month in another year produces highly volatile results. For example, by simply choosing the two-year period from February 2008-February 2010, instead of the period the MACC chose, job losses are reduced to only 400. We believe a more appropriate means of comparison is to use *average annual employment*, which eliminates a degree of the volatility that accompanies selectively comparing monthly employment. Using annual measures, Alaska lost approximately 700 oil and gas jobs over the three years 2008-2010. Nevertheless, the number of such jobs in the state remains above the ten-year average, and an argument can be made that the decline is part of a normal cycle of increases and decreases in what has historically been a volatile industry sector with regard to numbers of employees.[3]

Determining whether jobs are leaving Alaska for North Dakota, or any other petroleum producing jurisdiction, is not possible with the data available to us. As we detail below, among the points that are clear is that, relative to overall petroleum production levels, Alaska's oil and gas workforce has always been smaller than those of other oil producing areas.

To be clear, we take no position on the Governor's tax proposals, nor is it our intention to disparage the *Global Petroleum Survey* or to impugn the motives of the Administration and others who have used it to support their position. Rather, this report is meant to examine claims that have been made by those supporting tax cuts from a perspective that has not yet been presented to the Legislature, and to review some of the numerous variables besides taxation that impact the decisions of oil and gas industry executives in the course of their determining where to invest and expand or decrease workforces.

Fraser Institute *Global Petroleum Survey*

The Fraser Institute—a Canada-based research organization—conducts an annual *Global Petroleum Survey* to measure the views of executives, managers, and other influential members of petroleum exploration and production companies regarding the barrier to investment of petroleum-producing areas. It does so by asking those executives to rate jurisdictions on seventeen variables divided among three broader topics as follows:

[2] The commercial "Change Our Economic Tune" is available on the MACC website at *http://www.makealaskacompetitive.com/ads-photographs/*.

[3] Employment figures for 2010 are preliminary. Data are from the Alaska Department of Labor and Workforce Development, Research and Analysis, *http://laborstats.alaska.gov/*. The Department defines oil and gas jobs as those related to oil and gas extraction, drilling oil and gas wells, and support activities of oil and gas operations, as delineated by the North American Industry Classification System.

Commercial Environment	Regulatory Climate	Geopolitical Risk / Stability
Fiscal terms	Cost of regulatory compliance	Political stability
Taxation regime	Uncertainty regarding regulatory issues (interpretation, enforcement)	Security of personnel and assets
Trade barriers	Uncertainty regarding environmental regulation	Disputed land claims
Quality of infrastructure	Labor regulations, employment agreements, and local hiring requirements	Uncertainty over what lands can be protected as wilderness, parks, etc.
Labor availability	Regulatory duplications and inconsistencies	Socio-economic agreement / community development conditions
	Legal system	Quality of geological database

For each of these seventeen variables, respondents were asked to choose one of the following responses for each jurisdiction with which they were familiar:

1—Encourages investment

2—Is not a deterrent to investment

3—Is a mild deterrent to investment

4—Is a strong deterrent to investment

5—Would not invest due to this criterion

Survey Reporting Methodology

In the "Survey Methodology" section of their report, the authors of the *Global Petroleum Survey* begin with the following explanation:

> The survey is designed to identify the provinces, states, and countries with the highest barriers to investment in oil and gas exploration and production.[4]

As this quote indicates, the survey is intended to identify the *worst* jurisdictions for petroleum investment as perceived by the industry. This is reflected in the scoring mechanism, which effectively considers only the three levels of *negative* response. That is, for each of the seventeen variables and jurisdictions for which a sufficient level of response was received, the authors measured the proportion of responses that indicated a "mild deterrent to investment," "strong deterrent to investment," and those that indicated that the respondent "would not invest" due to a given criterion. For each variable, the jurisdiction with the highest proportion of negative responses was given a score of "100," with other jurisdictions listed in descending order of negative responses received. The authors included numerous bar graphs based on this method, with the least attractive area reflected by the highest bar on the far right of the graph and the least negative area represented on the far left of the graph by the shortest bar.

There is nothing inherently wrong, in our view, with this methodology, and the survey report provides interesting data. Problems can arise, however, in readers' interpretation of survey data as they are presented graphically in the Fraser Institute report. Further, it can be argued whether response number 3—indicating that a variable is "a mild deterrent to investment"—should be included and generally given the same weight in graphic representations as the other clearer and more definitive negative responses 4 and 5, which indicate that a variable is a "strong deterrent," and one that wholly precludes investment in an area, respectively. Finally, the debate over HB 110 is primarily about oil taxes. As we've outlined,

[4] Gerry Angevine, Ph.D. and Miguel Cervantes, "Global Petroleum Survey 2010," Fraser Institute, p. 7. The entire report can be accessed online at *http://www.fraserinstitute.org/publicationdisplay.aspx?id=16223&terms=global+petroleum+survey*. The Fraser Institute describes itself as an "independent non-partisan research and educational organization."

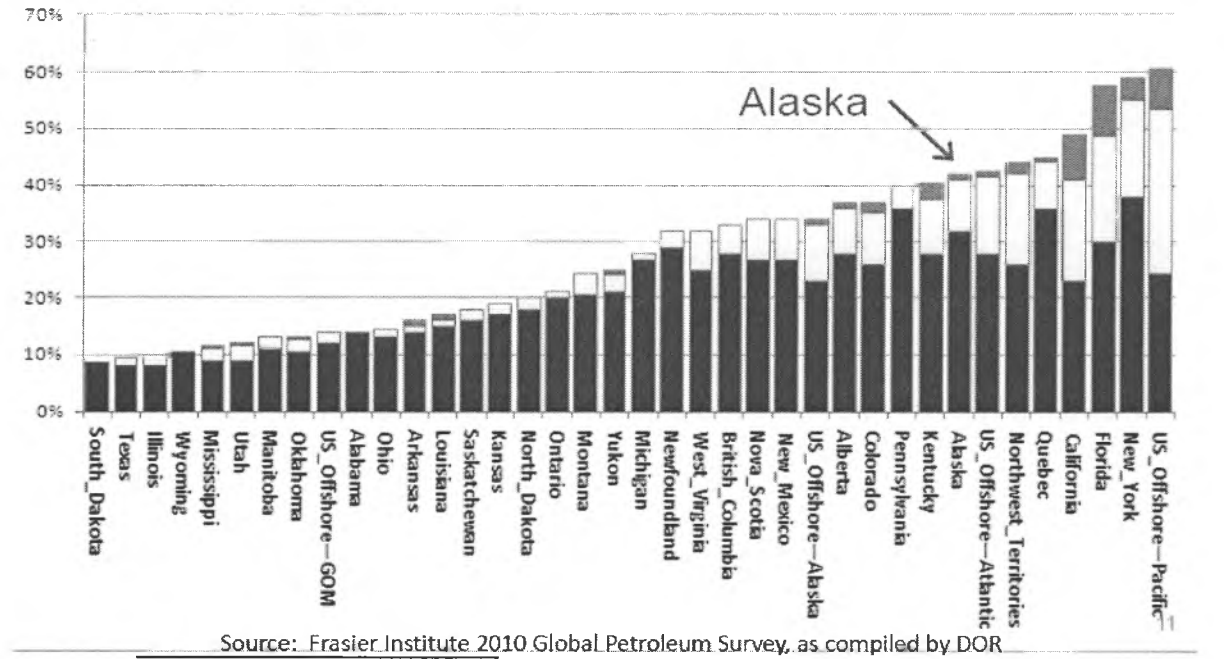
the *Global Petroleum Survey* measured sentiment on 17 variables. Taxation was but one of these variables, none of which were given more "weight" than another in determining the overall attractiveness of a given area. It is very difficult, therefore, to determine the degree to which Alaska would improve its standing as a region for investment were its tax structure to be changed in the manner sought in HB 110. We discuss each of these potentially problematic issues below.

Problems of Interpretation

Figure 1 (following page) is a graph produced by the Alaska Department of Revenue, using data from the *Global Petroleum Survey*, which was included in a February 7, 2011, presentation introducing HB 110 to the House Resources Committee.[5] The graph is generally in the same style as those included in the Fraser Institute's report on the survey except, of course, the particular emphasis on Alaska. The bars of the graph in Figure 1 have up to three color-coded sections. The bottom section, in dark blue, represents the "mildly deterrent" responses. The middle tan section reflects responses indicating a tax regime strongly deters investment; while the top section, in green, shows the proportion of respondents who indicate that they would not invest in a jurisdiction.

As you can see, of the 38 jurisdictions in North America for which survey responses were received, the "US Offshore Pacific" is viewed most negatively, while South Dakota is seen as the area with the fewest negatives for investment. Alaska is shown in position 31, near the "least attractive" far right of the graph. The reader sees that the "Alaska" bar reaches over half-way to the top of the graph, while Florida, New York, and U.S. Offshore are one line of delineation from the top. This gives the impression that these jurisdictions are viewed nearly universally as unattractive places for petroleum investment. One must keep in mind, however, that only the negative responses to survey questions are reflected in the bars of the graph. Looking at the far-left, vertical, or "Y," axis of the graph, it becomes clear that the uppermost line of delineation equates to 70 percent of responses being negative. Therefore, the *worst* jurisdictions for investment were identified as such in about 60 percent of responses, while Alaska was viewed negatively by slightly over 40 percent. Said another way, the overall attractiveness of Alaska to petroleum investment was not viewed as even a minor deterrent in almost 60 percent of responses. To put this in context, about three in ten respondents viewed South Dakota—the state with the lowest proportion of negative responses on taxation—as being more attractive than Alaska, while two in ten found that North Dakota—the state with the fastest growing levels of oil exploration and production—presents fewer negatives than Alaska.

Figure 1: Excerpt from Alaska Department of Revenue Presentation to House Resources, Feb. 7, 2011



Source: Frasier Institute 2010 Global Petroleum Survey, as compiled by DOR

[5] Slides for the presentation are available online at *http://www.legis.state.ak.us/basis/get_documents.asp?session=27&bill=HB110.*

There is no denying that to the extent that Alaska is viewed negatively impacts investment in the state, the survey data are troubling. Our point here is that the differences among the states in overall negative ratings—and particularly between Alaska and states legitimately competing for petroleum investment dollars—may not be as dramatic as some interpretations of the graphic portions of both the survey and presentations by the Administration on HB 110 have suggested.[6]

"Mild Deterrent"

As we mentioned, the meanings of four of the possible responses to questions in the *Global Petroleum Survey* are obvious: Responses 1 and 2 indicate that a given variable encourages investment and does not deter investment, respectively; while responses 4 and 5 state that a variable strongly discourages investment and causes a company to forego investment completely. Between these responses is the, to our ears, less definitive language of response 3, which indicates that a variable is a "mild deterrent" to investment. The survey report does not provide a precise definition for this term, so we presume it to follow the common definition of something that may be rather easily overcome or outweighed by other considerations.

Again, we understand that the survey was designed to measure the level of negativity that members of the oil and gas industry associate with petroleum-producing jurisdictions and do not take issue with that approach. We do, however, believe that the data collected through the survey could have been reported in a fashion that more clearly identifies issues that are fundamental problems as opposed to those that either may be easily addressed or are not serious obstacles. In other words, the survey report provides no "weight" to the relative importance of the variables reviewed.[7] Similarly, negative responses could have been weighted to provide a more nuanced understanding of the severity of that sentiment on a given variable by assigning higher values to the two most negative responses. The larger point is that we believe it legitimate to question whether industry players would be discouraged from an otherwise promising investment by a variable that is "mildly deterrent." We believe it reasonable to conclude that the answer to that question is no, at least with respect to a single mildly deterrent variable having the impact of driving away investment.

In light of that conclusion, we compiled Table 1 (following page), which shows the proportions of each of the 5 possible responses on the issue of taxation regime for all of the states an provinces covered by the survey. We include an additional column that combines the results for responses 1-3. Therefore, this column can be viewed as including all responses that characterized the taxation regimes as mildly deterrent, not a deterrent, or encouraging investment.

[6] For this report we leave aside the question of whether it is legitimate to compare and rank Alaska's attractiveness to investors with states that have a minute fraction of its proven oil and gas reserves.

[7] To be fair, the bar graphs of the Fraser Institute's survey color code the proportion of the bars represented by the three levels of negativity (the presentation by DOR to House Resources does so as well, but does not provide a key to the coding).

Table 1: Petroleum Industry Views on Tax Systems from the 2010 *Global Petroleum Survey*

	1	2	3	1 - 3	4	5

Yukon	18%	73%	9%	100%	0%	0%

Notes and Source: This table show's responses to a question regarding the impression of petroleum industry executives in the Fraser Institute's 2010 Global Petroleum Survey. The column "1 - 3" is an aggregate of responses in columns 1, 2, and 3, and represents the proportion of responses indicating that the tax system of a given jurisdiction encourages investment, does not deter investment, or is a mild deterrent to investment, respectively.

As you can see, 16 percent of those responding to questions on Alaska's tax system found that variable to be a strong deterrent (response 4), while three percent indicated that taxes preclude investment (response 5). Among these 35 jurisdictions, these negatives are relatively high; however, collectively those negative responses represent fewer than two out of ten respondents. By contrast, the aggregate of responses for those that see the tax system as, at worst, a mild deterrent, was 81 percent, and a majority—56 percent—view the tax system as encouraging or having no impact on investment.

Assuming that the *Global Petroleum Survey* is a reasonably accurate reflection of sentiments in the petroleum industry, those who claim that Alaska's taxes are "driving away business" must be referring to the business of the roughly 19 percent of industry leaders who view those taxes as a serious deterrent. If that is the case, an important question for the Legislature is the extent to which it will benefit the state to cut taxes or offer incentives to win over that proportion of the industry. Of course, it is possible that cuts and credits may increase the efforts of industry players who do not hold a negative view of Alaska's taxes as well; however, members of the industry have generally declined to definitively confirm or deny the extent to which this is the case or, for that matter, whether any level of tax cuts or credits will increase their activities in the state. In the current debate over petroleum taxes in Alaska, it appears that one of the few firm conclusions that can be reached is that, with the data available and information presented thus far to the Legislature, the calculus for determining the mix of taxes and credits that are optimum to attract investment to the state is extremely challenging.

Variables Other than Taxation—The North Dakota Boom

As we mentioned, the researchers who compiled the *Global Petroleum Survey* asked industry leaders questions on seventeen variables, all of which, the researchers identify as important in the making of investment decisions. Although this point is fairly obvious, it is important to keep it in mind when considering HB 110/SB 49 because the focus of those bills is almost exclusively on taxation and credits.

The importance of any of the variables considered in the survey (and indeed those not considered) relative to other variables in the investment decision-making process depends largely on the very precise circumstances of the company, region, project, geology, and value of the commodity being sought, among other factors. For example, an oil producer may be offered very attractive fiscal and taxation terms, low costs of regulatory compliance, few barriers to trade, and favorable labor agreements by the country of Sudan but decline to pursue investment strictly out of concern about security and the political stability of the government. Conversely, Canada's Northwest Territories may offer generous exploration credits and other attractive terms but industry may be discouraged by aboriginal land claims and stringent environmental regulation. More likely than either of these examples, however, is that industry executives carefully weigh *all* variables when making long-term plans for development, and that it is rare for any one or two variables to be *the* determining factor in deciding where to invest. A review of the recent experience of North Dakota may be an instructive insight into how a confluence of variables brings investment to an area.

North Dakota

As you know, North Dakota has experienced an oil boom in recent years, and is frequently identified by the Make Alaska Competitive Coalition and others as a major competitor for industry investment.[8] That state's production tax on oil is 5 percent of the wellhead value plus an extraction tax of 6.5 percent, which may be reduced or eliminated if oil prices fall below a statutory minimum "trigger," which stands at $46.79 per barrel for FY 2011. If the average price of a barrel of oil remains above the trigger price for any consecutive five-month period, the 6.5 percent rate applies; however, if the price falls below the trigger for five-consecutive months, the rate is reduced or the tax suspended for certain wells based on their type or age. Generally, at recent oil prices, these taxes are lower than in Alaska; however, North Dakota's tax system is not viewed by industry as the most attractive. Respondents to the *Global Petroleum Survey* collectively ranked the state 13th among the 38 jurisdictions in North American that were reviewed.

Given that relatively low levels of taxation have existed in North Dakota for years, one would expect that the recent oil boom was driven by the discovery of a major new oil field. However, the existence of very large petroleum deposits in North Dakota has been common knowledge since the early 1950s. Much of this petroleum lies in the shale strata of the geological areas known as the "Bakken" formation and, to a lesser extent, the "Three Forks" formation. These areas encompass most of the western third of North Dakota and smaller portions of eastern Montana and southeastern Saskatchewan Province. Estimates

[8] According to the U.S. Energy Information Administration, the current oil boom moved North Dakota from the seventh-highest petroleum producing state in the U.S. in 2009, to the fourth highest in 2010. In 2009, an average of 53 rigs and roughly 4,500 wells were in operation; by the fall of 2010, over 140 rigs were operating on nearly 5,200 wells (*https://www.dmr.nd.gov/oilgas/stats/statisticsvw.asp*). Over the next 20 years the North Dakota Oil and Gas Division foresees 2,140 new wells per year replacing depleted wells, requiring the operation of up to 165 rigs at any given time. Recent rig counts bear out that estimate, as the NDOGD lists 170 rigs in the state as of February 14, 2011. Rig counts are available online at *https://www.dmr.nd.gov/oilgas/riglist.asp*.

of the volume of the area's oil deposit range widely, from around 38 billion barrels (BBbl) to 500 BBbl; likewise, approximations of the portion of this petroleum that is recoverable range widely from 3 percent to 50 percent. Relatively conservative estimates put the amount of recoverable oil between 3 BBbl and 5 BBbl.[9]

So, why, in light of low taxes and a large oil field near extensive pipeline infrastructure in a stable, secure area, is it only in recent years that oil production has exploded in North Dakota? In fact, the Bakken spawned previous "oil booms" in the 1960s and early 1980s, but the easily recoverable oil in the area was exhausted in just a few years in each of those cases. The recent growth in exploration and production was spawned by technological advancements in horizontal well drilling and hydraulic fracturing ("fracking") techniques, which have facilitated access to reserves in the formation's mostly high-density rock structures.[10] As a result, even at the low-end estimates of reserves and recoverable oil, the amount of economically recoverable product in the formation will engender substantial oil and gas production for many years, but only if petroleum prices remain high enough to support these more expensive extraction methods.[11] According to a presentation by the Director of the North Dakota Oil and Gas Division (NDOGD), current levels of drilling and production are sustainable at oil prices above $50 per barrel.

In light of the above information, claims that petroleum industry investment in North Dakota, at the expense of such investment in Alaska, is occurring primarily due to differences in tax structure appear to be problematic. To the contrary, it is clear that the rapid expansion of oil and gas production in North Dakota was initiated by advances in oil recovery technologies. To be sure, many other variables in the state must be viewed as favorable to the industry members doing business there; however, even had the oil tax rate in North Dakota been zero, in the absence of technological improvements, its petroleum resources would still be locked deep underground. It is also worth noting that despite North Dakota's relatively low oil tax rates, the petroleum industry is aggressively lobbying the state Legislature for tax cuts.[12]

Alaska Department of Revenue Oil and Gas Production Tax Status Report

Pursuant to AS § 43.55.180, the Department of Revenue (DOR) is required to annually provide a report to the Legislature describing the effects of the state's petroleum production tax system on oil and gas development, exploration, production, revenue, and a number of other variables. In the summary for the most recent such report, published January 18, 2011, the DOR makes the following comments:

> **Industry Investment** – Investment in the form of capital expenditures has increased in each of the four fiscal years since implementation of the net profits tax, however, it is unclear how much of the capital expenditures were drilling or well-related and how much were maintenance or facilities-related.
>
> **Impact on Exploration, Development, and Production** – Exploration has generally increased from 2003, when the EIC credit was implemented, but has dropped off in 2010. Development continues in three relatively new North Slope projects, yet production continues to decline.
>
> **Industry Employment and New Entrants** – Industry employment rose steadily from 2006 through 2009, but dipped slightly in 2010. The number of companies filing annual tax returns doubled

[9] More information on attempts to estimate the Bakken's reserves is published by the State of North Dakota at *http://www.nd.gov/ndic/ic-press/bakken-form-06.pdf*.

[11] Hydraulic fracturing is a resource intensive process that significantly increases the cost of petroleum recovery. It is also a controversial technique that has raised concerns among certain members of the public, environmental groups, and regulators. The U.S. Environmental Protection Agency is currently studying the process and its consequences. More information is available on the EPA website at *http://water.epa.gov/type/groundwater/uic/class2/hydraulicfracturing/wells_hydrowhat.cfm*. The Canadian province of Quebec recently placed a moratorium on the procedure in order to further study its environmental impacts (*http://ca.finance.yahoo.com/news/Does-shale-gas-industry-capress-5532805.html?x=0*)

[12] Dale Wetzel, "North Dakota Oil Pressing for Tax Cuts," *Bloomberg News*, February 1, 2010, *http://www.bloomberg.com/news/2011-02-01/north-dakota-oil-industry-pressing-for-tax-cuts.html*.

between 2006 and 2009, indicating interest by companies that are either new or returning to the Alaska oil and gas industry.

Use and Expansion of Tax Credits – The amount of credits used has increased annually since 2006 and we expect the trend to continue as new credit programs were added in the 2010 legislative session.

The DOR cautions that multiple changes to the tax laws in recent years makes drawing conclusions about impacts on investment in Alaska difficult, and warns that production continues to decline. Nonetheless, these recent statements, made by the agency that is the primary advocate for the Governor's tax proposals before the Legislature, do not support the claim that the state's oil taxes are "driving away business." As we have said, this report is not intended to in any way deny that Alaska faces significant challenges to increasing oil production and maintaining current revenue levels. However, the publicly available evidence on Alaska's taxation system, some of which we have reviewed in this report, does not appear to support the level of certainty that some supporters of cutting taxes have displayed in claiming that the tax system is the exclusive culprit in driving away industry investment.[13]

The Context of Recent Job Losses

As we mentioned, based on annual averages, Alaska saw a reduction of 700 oil and gas jobs between 2008 and the preliminary total for 2010; however, if one selects the month of highest employment over that two-year period—December 2008, with 13,700 jobs—and subtracts the month in which the fewest number of oil and gas employees were working—September 2010, with 11,600 jobs—a claim of job losses totaling roughly 2,100 jobs can be made. Comparing annual averages with monthly totals begins to illustrate the problems with such a claim. That is, the number of oil and gas jobs in Alaska is a highly volatile measure, which, since 2001, has regularly increased or decreased by 200-600 jobs per month. As a result, selecting data on the extremes in a given pairing of months can be misleading in the larger context of industry employment. Further, as Table 2 (following page) shows, the most recent two-year period is one of historically volatile levels of both oil prices and related employment in Alaska, which followed a steep, years-long expansion in that workforce—an increase of 34 percent from 2001-2007.[14] While it is true that the oil and gas workforce has decreased overall in the past two years, the 12,100 preliminary average for of such jobs in 2010 is 19.3 percent above the cumulative average annual employment of 10,145 since the year 2000.

[13] The entire report is available online at *http://www.revenue.state.ak.us/2011%20OG%20Tax%20Report%201-18-2011%20on%20Letterhead.pdf*.

[14] The reasons for this expansion, and their relative impacts, are subjects of significant debate. Although we make comparisons in this report with employment, production, and oil prices, we draw no firm conclusions on their relationships. In recent years, a number of maintenance issues, accidents, production activities requiring additional manpower, and other factors have been present that likely contributed to greater demand for oil field workers. The extent to which each of these variables led to increases in the workforce, however, remains unclear.

Table 2: Average Annual Alaska Oil and Gas Jobs and North Slope Oil Price and Production, 2001-2010

Year	Annual Oil & Gas Employment[1]	ANS for West Coast Delivery[2] (nominal $ per barrel)	ANS Production[2] (barrels per day)
2000	8,800	$28.40	997,821
2001	9,500	$23.23	993,844
2002	8,900	$24.81	996,856
2003	8,100	$29.57	988,950
2004	8,200	$38.86	939,170
2005	8,700	$53.59	889,498
2006	10,100	$63.65	758,957
2007	11,500	$71.54	737,206
2008	12,800	$98.40	705,681
2009	12,900	$61.00	671,845
2010	12,100	$77.93	619,044
Overall Average	**10,145**	**$51.91**	**845,352**

Notes and Sources: 1) 2010 employment figures are preliminary. Alaska Department of Labor and Workforce Development, Research and Analysis, *http://laborstats.alaska.gov/*. The Department defines oil and gas jobs as those related to oil and gas extraction, drilling oil and gas wells, and support activities of oil and gas operations, as delineated by the North American Industry Classification System.
2) Alaska North Slope oil prices and production levels are annual averages we calculated based on information from an online database on the website of the Alaska Department of Revenue at *http://www.tax.alaska.gov/programs/oil/dailyoil/dailyoil.aspx*. Please note that because these figures are based on daily prices and production, they may differ somewhat from figures published elsewhere derived from a different methodology.

The data in Table 1 are annual averages that, while useful, do not fully capture the volatility of the daily and monthly changes that occur. The data lines in Figure 1 (following page) are based on daily oil prices and monthly employment levels, and provide better insight into the volatility of these variables and the dramatic changes they have undergone in recent years.

As you can see in Figure 2 (following page), both Alaska North Slope (ANS) oil prices (blue line, left vertical axis) and oil and gas employment (red line, right vertical axis) began an extended period of increases in early 2005. Oil prices suffered a relatively brief swoon in mid-2006 but initiated another steep climb in early 2007 that ultimately saw per barrel prices climb from the mid-$40 range to over $144 in July of 2008. Over that two-year period, oil and gas employment expanded by approximately 2,000 jobs—roughly equal to the decrease between December 2008 and September 2010.

Figure 3 (page 12) represents the same variables as Figure 1, but for only the two most recent years of data, and includes an overlay of the price of ANS oil. As you can see, oil production and employment trended down over this period while prices generally moved higher. Beyond showing the relationship between these variables, the graph illustrates again their significant degree of volatility.

Average Monthly Oil and Gas Employment
ANS Production
ANS West Coast Price

We do not intend to imply through these figures and discussion that the causal relationships between prices, production, and/or oil and gas employment are clear or reducible to a simple graph, nor are we suggesting that price and production are the only variables that impact employment—they are not. That there is some relationship is obvious; however, equally apparent is that many other variables influence employment levels. In 2008, the DOLWD dedicated an issue of its *Alaska Economic Trends* magazine to the oil industry in the state, and included substantial discussion of the industry workforce and the various issues that have had significant impacts on employment levels over the years.[15] We review a number of the significant points in that article below.

According to Neal Fried, Economist III with DOLWD and the primary author of the *Trends* issue on the state's oil industry, despite comprising 29 percent of Alaska's gross state product in 2007, the petroleum industry provided just four percent of the state's jobs. Nonetheless, these jobs are important both because of their high average wages and due to their obvious importance to the state's most vital industry. Mr. Fried describes the levels of oil and gas employment in Alaska since 1991, when the industry had 10,700 workers, as having "fluctuated from year to year, with an overarching declining trend accompanied by periods of recovery."[16] The following excerpts from Mr. Fried's article outline a number of these fluctuations, and provide some of the reasons that they occurred:

> Other factors aside from production levels and prices explain the changing size of the oil industry's work force, both nationally and in Alaska. Dramatic improvements in technology in the last decade have had a powerful effect on employment levels . . . According to the Federal Reserve Bank of Dallas, the national oil and gas industry was the leader in productivity gains throughout the 1990s and continues to be an above-average performer. In other words, the oil industry has been able to perform more work using fewer workers.
>
> One of the largest contractions in Alaska's oil industry work force took place from 1991 to 1992. BP, along with other oil industry employers and contractors, went through a period of major restructuring and consolidation in response to declining oil prices. The downsizing cost the industry 1,300 jobs – a record one-year loss. Weak oil prices and other factors buffeted the industry again in 1995, when Atlantic Richfield Co. made major cuts to the size of its work force. By 1998, employment in Alaska's oil patch began to recover with the development of the Alpine, Tarn and Badami fields, the drilling at West Sak, and preliminary work at North Star, Liberty and other fields. Oil prices plunged from nearly $19 per barrel in 1997 to $13 in 1998 and record job losses followed. For the first time since 1983, Alaska's oil industry employment fell below 8,000 and the losses reverberated throughout the state's economy.
>
> Finally, in 2000, recovery kicked in and by 2001, oil industry employment reached a 10-year high, nearly 2,000 jobs higher than the industry's nadir in 1999. The near concurrent development of both the Alpine and North Star oil fields were the two major reasons for the upswing in activity. What gave the oil industry's employment numbers some extra loft was the construction of large oil modules in Kenai and Anchorage. Before that, they were built in the Lower 48 or overseas. The year 2000 marked a historic event: Alaska's largest oil industry employer and discoverer of Prudhoe Bay, Atlantic Richfield, disappeared from the scene when it sold its assets to BP and ConocoPhillips. The sale was a signal to many observers that Alaska's oil industry was moving into its very "mature" stage of development, and – barring any major field discoveries, the opening of ANWR for exploration or construction of a gas line – the industry's employment trajectory was most likely on a permanent downward sloping curve.
>
> The following four years appeared to reinforce that view. With most of the work completed on the North Star and Alpine fields, oil industry employment began to fall steeply in 2001 and then hover

[15] *Trends* is a monthly publication that studies a wide variety of issues that impact Alaska's economy. Previous issues of the publication, including the September 2008 issue on the oil industry, can be accessed online at *http://labor.alaska.gov/trends/*.

[16] *Trends*, September 2008, p. 6.

> at the 8,000 level through 2004. What made that peculiar was the fact that the price of oil was recovering nicely from its 2001 low of $23 a barrel to $39 in 2004. Even so, it appeared as if Alaska's oil work force was entering an era of stagnation and enduring decline. Finally, and possibly due to four years of above average oil prices that by 2005 had more than doubled from the 2001 low, the oil industry began to stir again in 2005. Unlike many earlier recoveries, this one wasn't tied to one or two projects. Instead, there were a lot of smaller ones: continued work on heavy oil in West Sak, an increase in the production of viscous oil, the repair of Prudhoe Bay production wells, work around Alpine, the building of new connecting pipelines, and the continued development of a number of satellite fields.
>
> Then in early 2006, a section of BP's pipeline sprung a leak. It eventually turned out to be the largest oil spill in the North Slope's history. Soon afterward, BP discovered additional corrosion problems, forcing the company to shut down the pipeline for a short period. The spill and corrosion led BP to spend more than $260 million in 2007 and 2008 to replace 16 miles of pipeline in Prudhoe Bay and up-grade the company's facilities. Undoubtedly, that helped turbo-charge Prudhoe Bay employment numbers in late 2006 and early 2007.

Again, we are not suggesting that recent decreases in oil industry employment are not a cause for some concern. We do note, however, that according to the DOLWD, oil and gas workers represented 4.1 percent of claimants for unemployment insurance, which is roughly equal to the portion of the overall Alaska workforce comprised by the oil and gas sector.[17] Further, as the above excerpt makes clear, regular fluctuations and occasional dramatic changes are the norm, rather than the exception, in oil and gas employment levels in Alaska. To be clear, such volatility is not seen in Alaska alone. According to the North Dakota Department of Commerce, that state's oil and gas worker turnover, or "replacement," rate for 2010 was 34 percent, and similar turnover levels are expected through in coming years.[18]

Oil and Gas Jobs Moving to Other States

As we mentioned, we are aware of no publicly available data that show oil and gas jobs have been transferred directly from Alaska to North Dakota or any other state. It is true that, on the whole, such employment has decreased over the past two years in Alaska, while North Dakota has seen a large increase due to rapidly expanding production in the Bakken formation in the western third of the state. However, the growth in the North Dakota industry's employment, while quite dramatic, does not appear to reach the levels suggested by the MACC.

According to data published by the North Dakota Petroleum Council, direct employment in its oil and gas industry increased 264 percent, from 5,051 to 18,328, between 2005 and 2009.[19] A study prepared for the North Dakota Department of Commerce reports that industry employment is expected to continue to rise through 2011, to approximately 20,500 workers, and remain at that level through 2015. To be sure, a quadrupling of the oil and gas workforce since 2005 is nothing short of a boom for the industry; however, the roughly 15,000 jobs added in that time period fall well short of the 25,000 jobs that the MACC cites. Since 2009, growth in North Dakota oil and gas employment slowed compared to the 2005-2009 period, adding fewer than 2,000 jobs over the past two years—roughly comparable to the number that the MAAC claims Alaska has lost.[20]

When measured by the amount of oil produced per employee, Alaska's oil industry is the most efficient in the U.S.—typically by a wide margin. For example, preliminary data from the U.S. Energy Information Administration show that, in 2010, North

[17] "Unemployment Insurance Claimant Characteristics 2010," Alaska Department of Labor and Workforce Development

[18] North Dakota employment figures are from "North Dakota Oil and Gas Workforce Needs and Skills Study," prepared by Electronic Media for the North Dakota Department of Commerce, December 2010, *http://www.commerce.nd.gov/uploads%5Cresources%5C315%5Coil-and-gas-executive-summary.pdf*.

[19] The North Dakota Petroleum Council represents and advocates for over 250 companies in states the oil and gas industry. More information on the group and its activities is available online at *http://www.ndoil.org/?id=25&ncid=4&nid=162*.

[20] "North Dakota Oil and Gas Workforce Needs and Skills Study," p. 1.

Dakota produced an estimated 122,471,000 barrels of oil and employed an average of 19,070 oil and gas employees.[21] This equates to per employee production of about 6,422 barrels for that year. By contrast, an average of 12,100 oil field workers in Alaska produced 224,840,000 barrels of oil, or about 18,580 per worker—nearly three times the per employee rate of production in North Dakota. In other words, because North Dakota's oil production is derived from a much higher and more geographically dispersed number of wells, the state needs far more workers than Alaska to produce its oil. Therefore, in that state, it appears that the number of workers employed is more directly tied to production than is the case in Alaska.

According to labor economist Neal Fried, this disparity is typical between Alaska and other states. In his 2008 *Trends* article, Mr. Fried compared production levels and numbers of employees in Alaska to those of seven other oil production states. In every case, Alaska workers were more efficient, sometimes to a stunning degree. For instance, Colorado produced 23,903,000 barrels of oil in 2007 and had 18,913 oil and gas employees. That same year Alaska produced ten-times the amount of oil with about 6,700 fewer employees.[22]

Compared to the per employee oil production rate in Alaska for 2007, the 2010 rate decreased by over 5,000 barrels, or nearly 20 percent. By contrast, over the same time period, overall oil production has decreased by about 17 percent, but average annual oil and gas employment in the state has increased over 5 percent. Again, we believe the complex interplay of these variables with the many other factors that help determine oil and gas employment levels in the state belie simplistic attempts to explain changes in those levels or claims that jobs have been "moved" to another jurisdiction.

We hope this is helpful. If you have questions or need additional information, please let us know.

[21] The U.S. Department of Energy, Energy Information Administration, provides a wide variety of data on its website at *http://www.eia.gov/*. Oil production data are available at *http://www.eia.gov/dnav/pet/pet_crd_crpdn_adc_mbbl_m.htm*.

[22] Neal Fried, *Trends*, September 2008, p. 11. Please note that the oil and gas employees in other states have produced much more natural gas than Alaska, which mitigates the differences in per worker production levels somewhat. Even controlling for gas production, however, Alaska appears to have higher levels of efficiency that other areas.

State of Alaska

Department of Revenue

Commissioner's Office

SEAN PARNELL, GOVERNOR
333 Willoughby Avenue, 11th Floor
P.O. Box 110400
Juneau, Alaska 99811-0405
Phone: (907) 465-2300
Fax: (907) 465-2394

January 14, 2010

Honorable Governor Parnell,

Recently you requested a review of Alaska's oil and gas production tax, and recommendations for how the production tax could be improved. Enclosed for your review is analysis of Alaska's oil and gas production tax (otherwise referred to as "ACES"), which was compiled at my request by the Department of Revenue's technical staff. The ACES Status Report evaluates whether ACES is meeting its intended goals of providing a fair share of revenue to the state while encouraging investment in new oil and gas exploration and development activities.

Based on the report, I am recommending a collection of potential amendments to ACES and its associated Exploration Incentive Credit (EIC) program. The amendments are primarily intended to accomplish two things: 1. Further incentivize drilling and other production enhancing activities; and 2. Address a number of provisions of ACES that may keep explorers from enjoying the full intended value of the capital credit program.

The status report shows that ACES successfully allowed the state to share in the benefits of high oil prices while accommodating fluctuations in production costs and oil prices. ACES adjusted when oil prices tumbled and kept oil operations in Alaska highly profitable relative to other oil provinces. With respect to the impact that the new production tax has had on investment activity, the report is positive, but ultimately inconclusive. While the overall level of taxation increased with ACES, it distributed the impact of that tax burden in a way designed to incentivize investment in new exploration and development. Since ACES passed the legislature, overall spending on oil and gas activities on the North Slope has increased. However, given only two and a half years of experience, during which time oil prices climbed to $140 per barrel then plunged to under $30 per barrel, it would be premature to attribute the increased level of oil company investment to the success of ACES.

Oil taxes are clearly an important factor in industry investment decisions. However, it is misleading to isolate their influence from other key factors, such as world oil prices, geologic potential, access to land, resources and markets, costs of infrastructure and support services, and the legal and regulatory framework. As noted in the report, the true merit of Alaska's current fiscal system can only be determined when it is evaluated in conjunction with these other variables. The scope of the status report, and the limited timeframe since ACES passed, do not allow for such a comprehensive analysis and definitive conclusions.

In addition to documenting several promising trends in industry spending activity, the report notes a number of discrete policy issues associated with the production tax where improvement can be made. These warrant your consideration as potential amendments to the ACES framework.

1. **Increase Credits for All Well-Related Activity to 30%:** The Capital Credit and Exploration Incentive Credit (EIC) programs have been identified as influential in spurring exploration activities. However, the EIC program's 30% credits are only available to wells located more than 3 miles from all existing wells. The state has a significant interest in also incentivizing infill drilling and other well work that will increase oil production, particularly for heavy oil. I therefore recommend expanding the EIC program so that all expenditures related to drilling and well work that add new production or increase the efficiency of existing production will qualify for the 30% EIC credit under AS 43.55.025 regardless of a well's location relative to existing wells.

2. **Increase Access to Capital Credits for New Explorers:** Small producers are currently required to invest in new activities during subsequent years in order to obtain direct payment from the state for previously earned tax credits. This is not an issue for existing producers because they simply deduct credits from their current tax bill and do not need to seek direct payment from the state. Deleting this provision would make the tax credits more accessible to smaller explorers, level the playing field between new and existing operators, and eliminate an unfair double standard.

3. **Accelerate Capital Credit Usage**: Companies currently can only use half of their capital credits in the year they are earned, and the other half the following year. This is true whether the credits are applied against a tax liability or purchased by the state. Taxpayers would see increased value in the credits if they could apply the entire credit in the first year. In addition, this would ease the cost of administering these credits.

4. **Waive Interest on Late Tax Payments Due to Drafting of Regulations**: The ACES regulations, including those defining 'allowable lease expenditures' are being finalized this month. Under the statutes, these regulations are to be applied retroactively to various dates in 2007. To the extent additional taxes are due as a result of the application of the new regulations, such payments would be subject to interest and possibly penalties. While the department can waive penalties, it cannot waive interest charges. A statutory change is required in order to permit the waiver of interest.

I am confident you will find the ACES Status Report informative and interesting. Please consider my recommendations to improve the effectiveness and fair administration of ACES and the EIC program. I look forward to continuing to work with you to encourage additional oil and gas development while preserving Alaska's equitable share of oil and gas profits.

Sincerely,

Patrick S. Galvin
Commissioner

Alaska's Clear and Equitable Share (ACES)
Status Report
Alaska Department of Revenue
January 14, 2010

Introduction

In November 2007, the Alaska Legislature passed House Bill 2001, known as Alaska's Clear and Equitable Share (ACES). ACES made modifications to the prior production tax called the Petroleum Profits Tax (PPT), enacted in 2006. The changes made first with PPT and later with ACES represented substantial production tax reform in that the basis of the tax shifted from the *gross value* to the *net value* of oil and gas production. The gross tax which had been in place prior to the PPT is generally referred to as the Economic Limit Factor (ELF).

This report was prepared at the request of the Commissioner of Revenue in order to evaluate whether ACES is meeting its intended goals of providing a fair share of oil and gas revenue to the state, and encouraging investment in the exploration and development of new oil and gas resources in Alaska.

Following are the key findings of this report:

1) State revenues under ACES in FY 2009 exceeded amounts which would have been generated under either the PPT or ELF systems. The crossover point at which ACES is projected to provide more revenue than ELF is $51 per barrel west coast price in FY 2010.

2) Activation of the progressive surcharge is estimated to occur when west coast sales prices reach $56 per barrel.

3) Capital spending on the North Slope totaled over $2.2 billion in FY 2009 an increase over FY 2008. This is nearly the highest level of capital spending in nominal dollars since oil production began in the state.

4) The impact of the production tax modifications on industry investment cannot be clearly determined due to the influence of other factors and given the limited timeframe during which ACES has been in place.

5) Operating costs have risen since the enactment of PPT and ACES, but the impact of these cost increases to state tax revenues was moderated by the "standard deduction" provision of ACES, which expired December 31, 2009.

6) Increased reporting requirements, particularly of forward looking expenditure information, has greatly enhanced the accuracy of the Department's revenue forecasting efforts.

7) The Department has made significant progress in implementing ACES regulations, but there will be challenges to both the department and taxpayers as the regulations are implemented. Preliminary audits of taxpayers under the new profits-based system (formerly PPT) have begun, consistent with the normal audit timeframe.

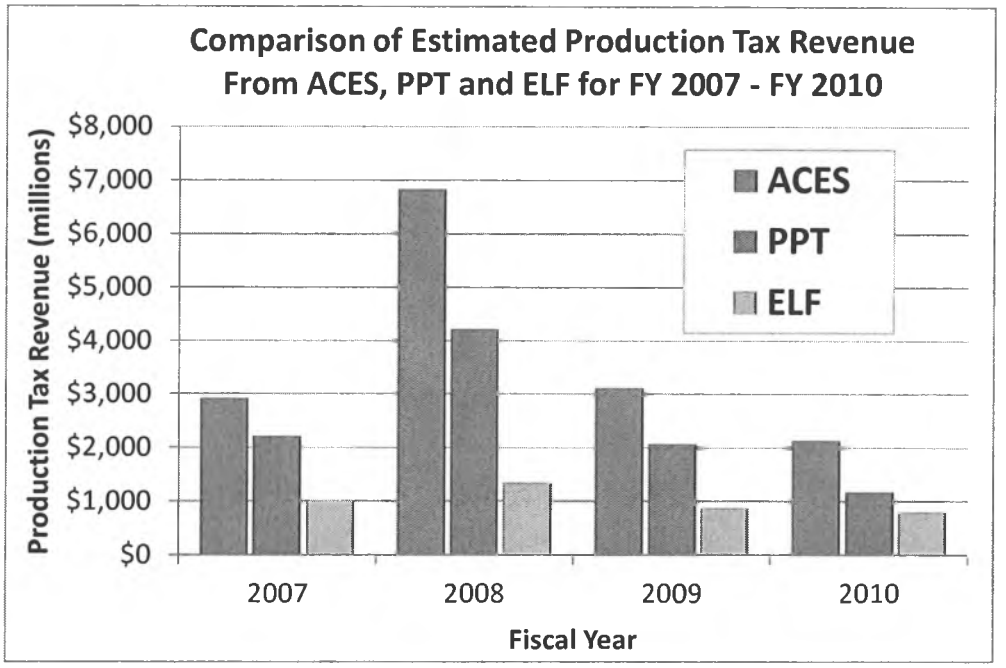
Comparison of Revenues under ACES, PPT and ELF

The net tax structure – first enacted under PPT (2006) and later with ACES (2007) – represents a significant change from the oil and gas tax structure used for much of Alaska's history. Under the earlier tax, known as the Economic Limit Factor (ELF), production tax was levied on oil and gas producing properties, regardless of whether operations were profitable. The current production tax structure requires companies to pay tax only when they are making profits from oil and gas production in the state. In addition, tax credits are provided for capital expenditures, with higher credits available for certain oil and gas exploration investments.

Since its enactment in 2007, ACES has generated more state revenue than would have been generated under either PPT or ELF. In FY 2008, a period of very high oil prices and profits, ACES generated $6.8 billion in production tax revenue, compared with $4.2 billion which would have been received under PPT and $1.3 billion which would have been received under ELF. In fiscal year 2009, during which west coast oil prices average $68.34, ACES generated just over $3.1 billion. This compares with roughly $2 billion that would have been generated under PPT and $858 million under the earlier ELF system.

Figure A compares revenue from ACES, PPT and ELF for FY 2007-2010. The FY 2009 revenues are preliminary. Estimates for FY 2010 are based on the Department's fall 2009 forecast of an average west coast oil price of $66.93 per barrel.

Figure A[1]



The progressive feature in ACES means that the state receives more production tax revenue when oil prices are high relative to underlying costs. Similarly, it significantly lessens the state's share of revenues when per-barrel margins decline. This effect was illustrated in 2008, when oil prices reached a high of $140 per barrel in July, bringing in $900 million in production tax for the month, and later plunged to below $30 per barrel in December, producing a total of $50 million in production tax for the month. Over the course of the full year, ANS crude oil averaged over $92 per barrel, resulting in five times more revenue than would have been realized under the ELF system.

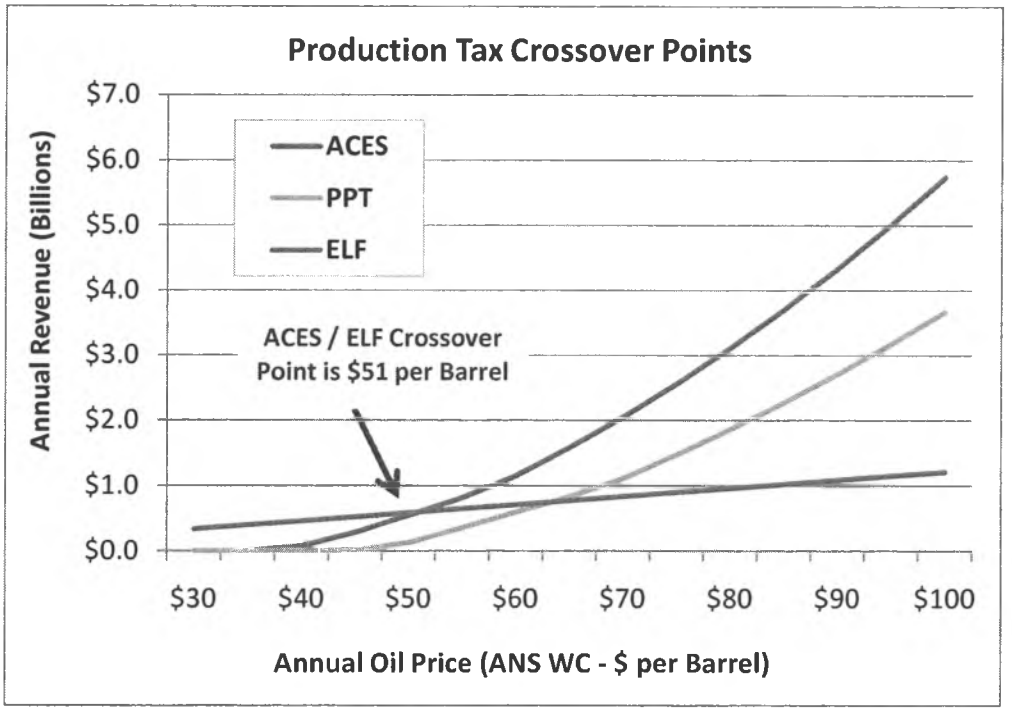
Figure B shows estimated revenues that would be received under ACES, ELF and PPT at various oil prices.[2] The oil price crossover point at which the state receives more revenue under ACES than the ELF system is roughly $51 per barrel. The crossover point has increased over prior

[1] Production tax revenue includes surcharges but does not include any settlements which go to the Constitutional Budget Reserve Fund. FY 2007 PPT revenue includes true-up payments for the period of April 2006 through December 2006. FY 2007 ACES revenue assumes similar true-up payments for comparison purposes. For FY 2007 - FY 2009, assumes actual data for oil price, production, costs and other variables. For FY 2010, assumes oil price, production, costs and other variables as of the fall 2009 forecast. Costs under PPT for FY 2010 for Prudhoe Bay and Kuparuk are based on aggregated company forecasts. For ACES only, assumes that standard deduction would apply for all of FY 2007-FY 2009 and first half of FY 2010. Actual tax revenue, as opposed to modeled revenue, is used for PPT in FY 2007 and ACES in FY 2008-FY 2009.

[2] This analysis assumes a constant oil price for the entire year, production of 655,000 barrels per day, deductible lease expenditures of $20 per barrel and transit costs of $6 per barrel.

years because lease expenditures, which are deductible under ACES, have increased since ACES was passed. It is expected that lease expenditures will decrease as costs decline in delayed response to the decline in oil prices from their 2008 levels.

Figure B[3]



Lease Expenditures

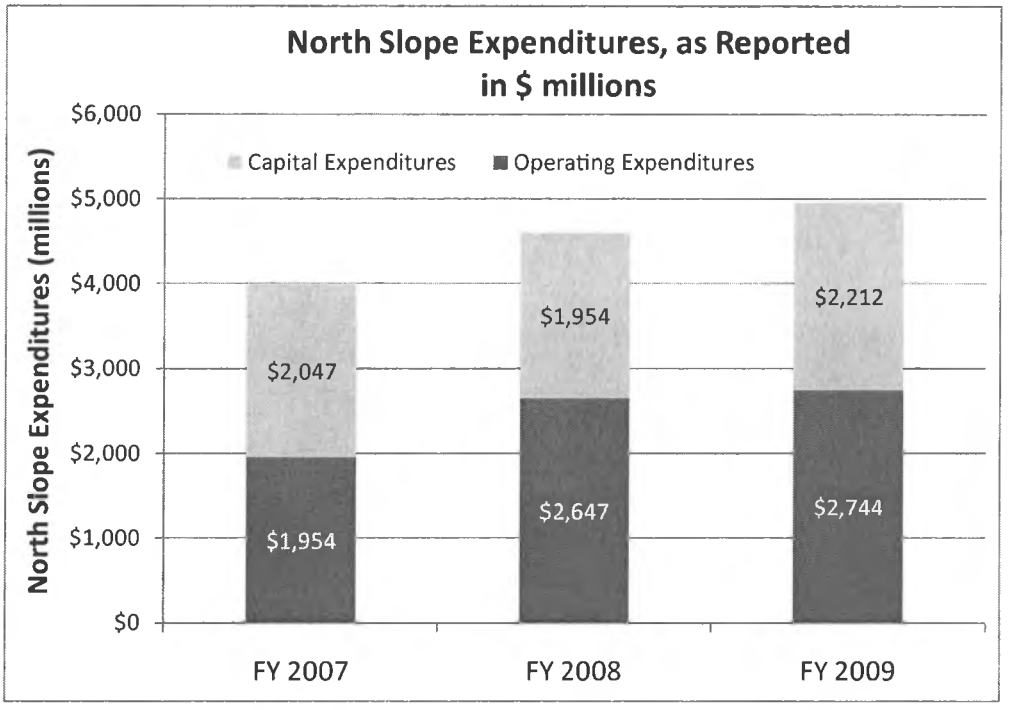
With the introduction of the net tax, it became necessary for the state to identify and forecast allowable lease expenditures for purposes of the tax calculation. Prior to the passage of PPT, the department had not been required to track or audit oil and gas production costs in Alaska. Some early cost data had been acquired directly from producing companies and through preliminary examination of federal tax returns. However, even during the debate over PPT, the state did not have access to comprehensive, Alaska-specific data that would enable policymakers to analyze the effects of the proposed tax over the life of a project. With much more information now being provided under the new tax structure, the department is developing a better understanding of oil and gas costs in Alaska, which will significantly benefit future policy deliberations.

[3] Assumes fixed operating and capital cost of $20 per barrel.

Lease expenditures fall into two general categories that constitute the major deductions under the ACES tax system. Operating expenditures are the costs to operate an oil or gas production facility on a day-to-day basis. These include labor, heat and light for the facilities, and some well work and minor equipment repairs. Capital expenditures are costs incurred to enhance or improve the reserve base, level of production, or facilities. Drilling is one of the most common forms of capital costs, as is facility construction or expansion.

Figure C shows the operating and capital expenditures, as reported on company tax returns and monthly reports, for their North Slope operations, from FY 2007 through FY 2009. Note that the graph represents all reported expenditures for all North Slope properties, regardless of whether or not they are subject to the "standard deduction" provisions of AS 43.55.165(j).

Figure C[4]



Operating Expenditures

Operating costs have risen significantly in recent years for the oil and gas industry worldwide. This has often been linked to the corresponding rise in oil prices beginning around 2002. Projects around the world that were once marginally economic have become viable, increasing the demand for limited supplies of engineering, procurement and construction services, as well

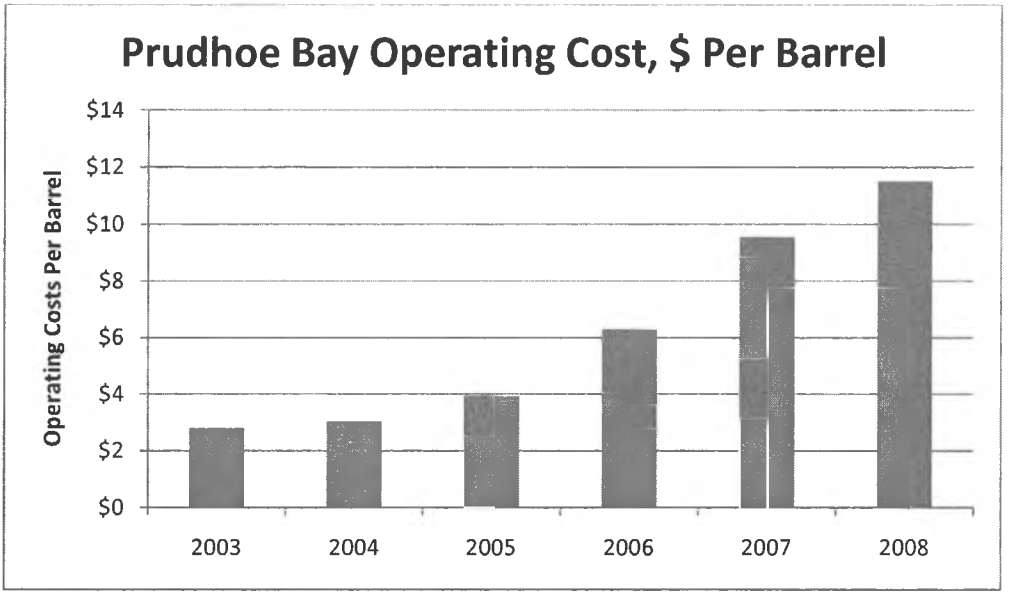
[4] Operating expenditures includes total reported costs, not standard deduction; FY 2007 estimated based on incomplete reporting

as raw materials. Cambridge Energy Research Associates (CERA) reports the upstream operating cost index rose for oil and gas field operations roughly 67% between 2002 and the end of 2008.[5] Meanwhile, the global capital cost index rose over 100% during the same period.[6]

Alaska-specific information obtained through public sources and shared in confidence during the Stranded Gas Development Act negotiations and through ACES reporting shows similar trends on the North Slope. Estimates of operating costs prior to PPT ranged from $3 to $5 per barrel. More recent information indicates that operating costs on the North Slope have doubled, and in some cases nearly tripled. Following the Prudhoe Bay corrosion incidents in 2006, operating expenditures on major repairs increased. However, since that time, the proportion of total operating expenditures directed to major repairs does not appear to have been a key driver in the growth of total operating expenditures.

Figure D shows the upward trend in per-barrel operating costs at Prudhoe Bay from 2003 to 2008. The chart shows a dramatic increase over the six-year period, consistent with cost increases seen in the oil and gas sector worldwide.

Figure D



The recent downturn of the global economy has started to push operating costs back down again. In June of 2009, CERA reported that worldwide, operating costs had declined 8 percent

[5] IHS CERA Upstream Operating Cost Index (UOCI), http://www.ihsindexes.com (Accessed December 11, 2009)
[6] IHS CERA Upstream Capital Cost Index (UOCI), http://www.ihsindexes.com (Accessed December 11, 2009)

over the previous 6 months.[7] The most recent information reported to the department under the new ACES requirements shows this trend to also be developing on the North Slope.

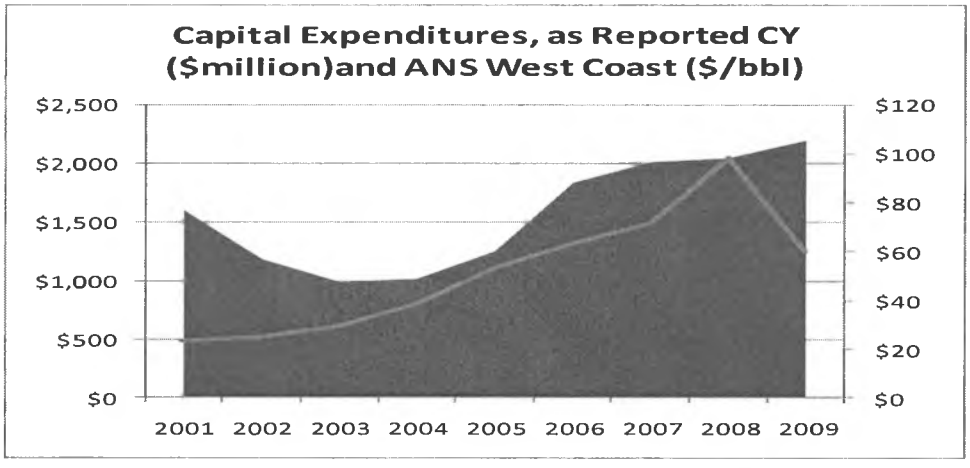
Much of this change can once again be linked to recent trends in oil prices. Lower oil prices led to a slackening of worldwide project activity, driving down the costs of transportation and various consumables. Despite this correlation, however, operating costs have not fallen at the same rate as oil prices. While the department anticipates that per-barrel operating costs will continue to decline under the lower oil price forecast for FY 2009 and FY 2010, they are expected to remain relatively high compared with those from five or more years ago.

Capital Expenditures

Capital expenditures have also increased since PPT and ACES were enacted. While capital expenditures on pipeline repairs at Prudhoe Bay increased after the Prudhoe Bay corrosion incidents in 2006, the majority of growth in capital expenditures is attributable to drilling, seismic and other projects. As shown below, capital spending on the North Slope in CY 2009 was roughly twice the level in either 2003 or 2004. At least some of this increase is due to new development activities. Two major developments – Oooguruk and Nikaitchuq – have gone forward despite recent oil price setbacks. Development of the Point Thomson field is also underway.

Figure E shows historical capital expenditures from CY 2001 to 2009 as reported by oil and gas producing companies operating on the North Slope.

Figure E



[7] IHS CERA: "*Period of Sustained Cost Escalation for Upstream Oil and Gas Facilities Comes to an End,*" June 5, 2009. http://www.cera.com/aspx/cda/public1/news/pressReleases/pressReleaseDetails.aspx?CID=10388 (Accessed December 11, 2009)

In order to forecast North Slope lease expenditures, the department receives forward looking spending projections from taxpayers, and also consults a variety of information sources, including unit forecasts, plans of development, and federal partnership returns. These data give the department significantly better insight into future development plans, as well as trends in operating and capital expenditures.

This information shows a variety of changes on the North Slope in the years ahead. There is continuing development of newer fields like Oooguruk, Nikaitchuq, and Point Thomson. Growth in capital expenditures at many major North Slope units (i.e. Prudhoe Bay, Kuparuk, Colville River and others) appear to slow slightly or decline in the next year or two and re-surge thereafter to the level of the recent past or higher. This trend is consistent with indicators of worldwide industry activity which show a dramatic drop in capital expenditures from the high levels experienced in 2008. This suggests that recent economic contraction may have caused some North Slope development projects to be delayed as producers hope to form a better idea of where the economy and oil prices may be headed.

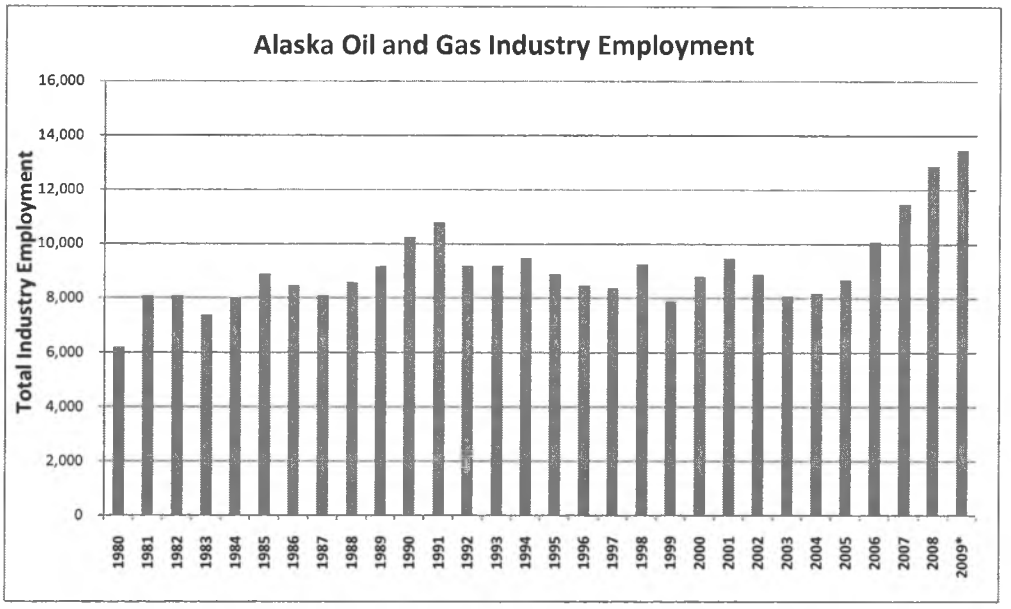
It would be presumptuous to solely attribute the rise in expenditures to the success of the investment incentives found in ACES. Many factors beyond tax policy drive oil and gas investment decisions. However, one of Alaska's new explorers, Savant Alaska, stated in a recent Petroleum News article that ACES had assisted in their development efforts at Badami. "ACES was an important component for Savant in considering investment in Alaska. It definitely had its intended consequence with us." [8]

Industry Employment

Employment in the industry has also increased steadily since the implementation of PPT and ACES, with 2009 forecast to be the highest in state history. It is important to note that this occurred concurrent with a steady rise in the oil prices, which has generally shown a strong correlation with industry activity.

[8] Kay Cashman quoting Savant's Chief Operating Officer Greg Vigil, "Savant Accelerates Badami Drilling Plan," *Petroleum News*, Volume 14, No. 3, January 18, 2009.

Figure F[9]



Flexibility of Tax Burden Evidenced

The increased revenues generated under ACES represent an increased tax burden on Alaska's oil and gas industry. However, there is evidence that ACES effectively adjusts that burden when oil prices drop and profit margins are squeezed. In 2009, a period of relatively low oil prices in comparison to recent years, 35 percent of ConocoPhillips total reported exploration and production profit in the first quarter of the year (Q1), 55 percent in Q2, and 36 percent in Q3, came from its Alaska operations, which only account for 12 percent of the company's worldwide production.[10]

ACES Structure and Tax Rate

The ACES tax consists of a base rate of 25% plus a progressive surcharge, which is triggered when a company's net profits — also known as "production tax value"— exceed $30 per barrel. Beyond this point, the base tax rate is increased by 0.4% for each additional $1 increase in per-barrel production tax value. Using current estimated transportation and production costs of roughly $26 per barrel, the surcharge would begin to be applied when west coast oil prices reach $56 per barrel. When the combined base rate and progressive surcharge reach 50%

[9] Data from Alaska Department of Labor and Workforce Development, Research and Analysis Section (January 11, 2010). Includes nonagricultural wage and salary data and excludes the self-employed. *Estimates for 2009 are preliminary.

[10] ConocoPhillips, Form 10-Q Quarterly Reports Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934, March 31, 2009, June 30, 2009 and September 30, 2009.

(approximately $92.50 per-barrel profit or $118.50 West Coast price) the progressive surcharge is lessened to 0.1% for each additional $1 increase in per-barrel production tax value. The maximum nominal tax rate is 75%, which would apply at a profit rate of $342.50 per barrel or $368.50 West Coast price.

As with any tax, ACES may be evaluated using a variety of different metrics, including "effective," "nominal" and "marginal" tax rate comparisons. While each of these can be helpful under the appropriate circumstances, each is also subject to certain limitations. It is important when using these metrics to understand their relative value and how they reflect upon the objectives of the tax system.

The "effective tax rate" is the share of the total gross taxable value at the point of production that is paid in production taxes after credits are applied. It is a good universal measure of the sharing of total petroleum value that can be compared to gross value-based tax systems.

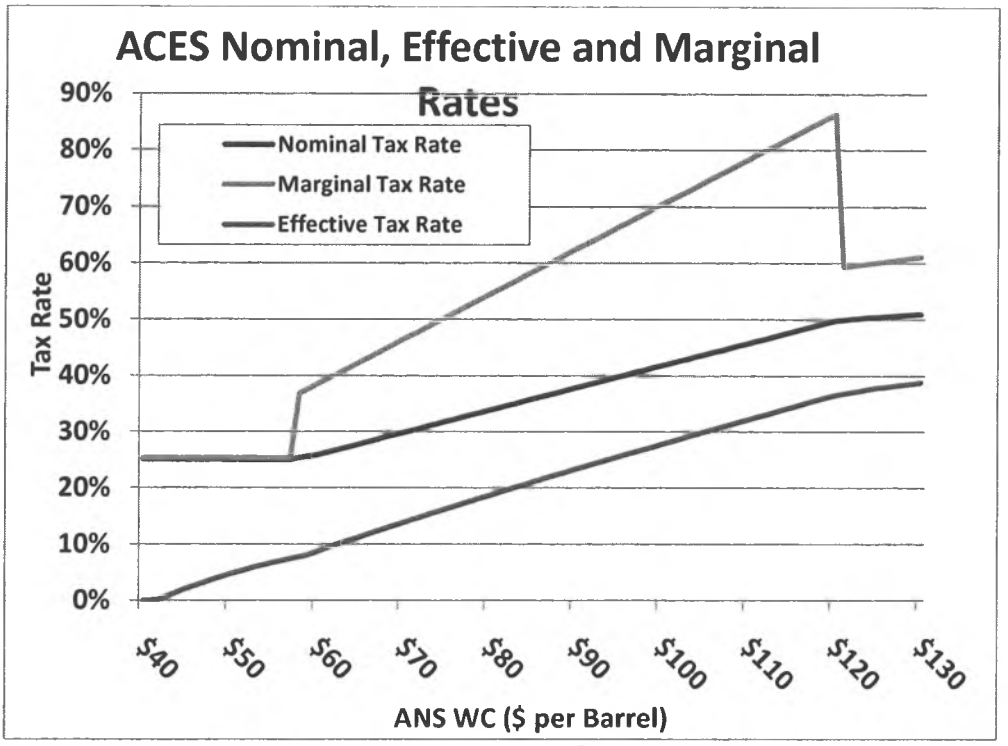
The "nominal tax rate" is the statutory tax rate as applied to the net value of oil and gas production. It does not account for credits or other tax benefits which ultimately impact a company's bottom line. Under ACES, the nominal tax rate varies with the per-barrel profitability. In addition to a base tax rate of 25%, ACES levies a progressive surcharge that can raise the combined nominal tax rate to 75% at extreme price levels.

The "marginal tax rate" is the rate theoretically applied to each dollar increase in oil price. In the case of ACES, the marginal tax rate is 25% until per barrel profit reaches $30 per barrel (about $56 per barrel in west coast spot price under the current cost structure), at which point it increases for every additional dollar up to a marginal tax rate of 87% when the profit reaches $92.50 per barrel (about $118.50 per barrel on the west coast). Following this peak, the marginal tax rate drops off significantly as the profit level continue to rise. With a net based tax system, this metric shows a company the impact of making additional investment, because each dollar they invest is "subsidized" by the government based on the amount of marginal tax they have avoided paying on that dollar.

Each of these metrics has their limitations when considered in isolation from other metrics, or when only one data point on the curve is presented. For example, a marginal tax rate of up to 87% initially sounds excessive. However, at that same price level, the effective tax rate (the tax burden) is less than 40%. The marginal rate of 87% actually represents the state's "portion" of any new investment made at such high prices.

Figure G shows the nominal, effective and marginal tax rates under ACES using a wide range of west coast spot prices.

Figure G



Production Tax Administration and Implementation

The passage of ACES presented significant challenges for tax administration and implementation because it involved comprehensive structural changes to the tax on the heels of the prior year's legislative changes through PPT. These challenges are experienced both on the taxpayer and on the state side.

Tax Credit Successes and Difficulties

The increased spending levels reported earlier in this document, may be due in part to the expansion of capital and exploration credits provided under ACES for reinvestment in the state. Credits can be applied against tax liabilities, sold to other companies or, for companies producing less than 50,000 boe/day, can be purchased by the state. Nearly $550 million in credits were claimed in FY 2009. Approximately $193 million was paid to oil and gas companies

to purchase oil and gas tax credits, while an additional $350 million in tax credits were used to offset tax liabilities.

Some administrative difficulties have arisen due to the requirement that the 20% capital credit be spread out over two years. It has taken a substantial amount of time and resources to develop a database with which the division can track the issuance and staged application of these credits for each taxpayer. This detailed tracking was made necessary by the transferability and use of the credits, and some confusion by taxpayers and their transferees regarding how the credits could be applied. In addition, the two-year spread in the application of the capital credits diminishes their value to taxpayers who look for quick return of their investment dollars. Finally, one of the reasons for the two-year spread in credits was to assist the department in forecasting future revenues. However, the department has found that the information provisions in ACES have been extremely valuable and successful in improving the volume and quality of spending projection data provided to the department by operators. This forward looking spending information has been much more valuable to the revenue forecasting process than the two-year spread in credits.

The Department has also received feedback regarding the reinvestment requirements for new explorers. Under current law, companies generally receive a financial benefit of over 45 percent of exploration expenditures incurred in the state. However, a new entrant to Alaska (with no production to immediately apply the credit against) can only get full value for their expenditures by applying to the state for cash payment for their credits earned. In order to receive such a payment, the company must continue to make expenditures in future years. Although this provision was originally created to support new explorers, it appears to be a limiting factor for companies that have fewer financial resources and are only considering a single exploration investment. In application, this requirement creates a "double standard" where new entrants to Alaska are provided less value for their credits compared to incumbent companies.

"Standard Deduction" provision at AS 43.55.165(j)

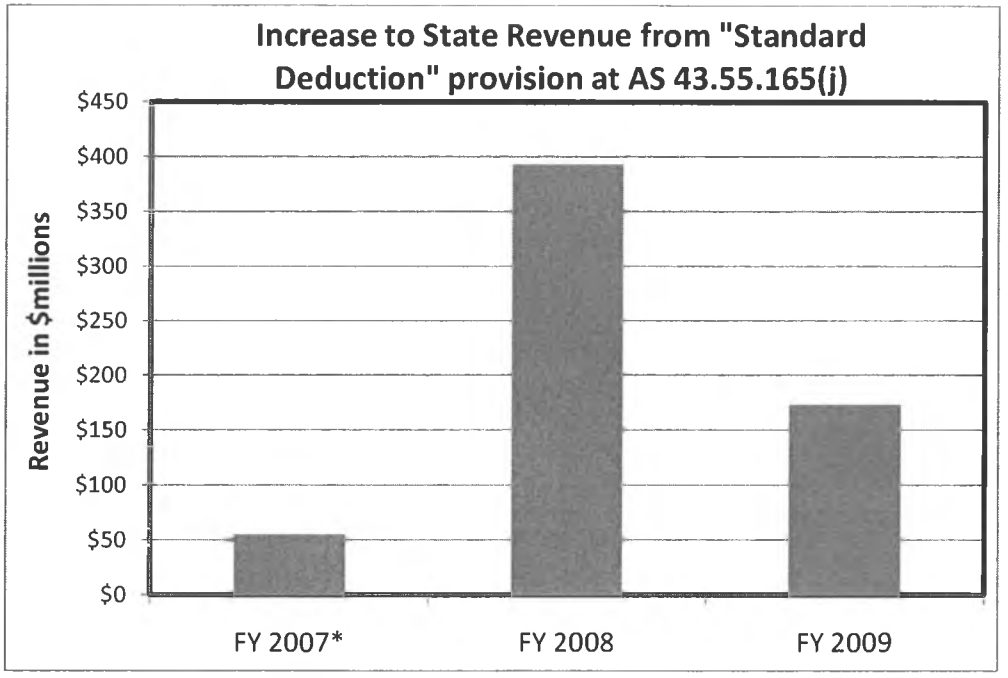
The ACES tax reform made modifications to the deductibility of operating expenditures for certain fields on the North Slope. Alaska Statute 43.55.165(j) limited the deduction of operating expenditures at leases or properties that have produced a cumulative 1 billion barrels of oil and NGLs since the lease or property began oil production. The Prudhoe Bay Unit and the Kuparuk River Unit are subject to these provisions based on their cumulative production. The provision, coined the "standard deduction," limits the deduction of operating expenditures to the amount deducted on the first PPT returns, filed April 1, 2007, for calendar year 2006 expenditures, adjusted annually. This provision, which was effective through December 31,

2009, was intended to moderate the risk associated with adopting a profits based tax without substantial historical data on which to rely for future cost estimates.

Based on company-reported expenditure data, the provision has resulted in a substantially greater tax liability to the state during the time it has been in place. The total liability in FY 2008 was substantially larger than the liability for FY 2009 due to the higher tax rate in FY2008 because of higher net profits realized due to high oil prices.

Figure H shows the increased revenue to the state from the standard deduction from FY 2007 through FY 2009.

Figure H[11]



Regulations

The ACES tax included new restrictions and guidance on allowable lease expenditures, requiring complex regulations. The department has actively sought industry input on the structure of the regulations to ensure they continue to achieve their intended purposes, while avoiding undue burdens for either side. The process has included numerous public workshops pertaining to credit regulation, conforming regulatory changes required by ACES, lease expenditures, facility sharing costs and transportation costs. As a result, the regulation drafting process has been

[11] *Standard Deduction was only in place for half of FY 2007.

lengthy and complex. However, the regulations to define allowable lease expenditures are expected to be finalized this month.

Under the statute the regulations are retroactive to various 2007 dates. To the extent additional taxes are due, taxpayers would be required to pay interest on what would now be late tax payments. The department has discretion to waive any penalties for late payments. However, a statutory change would be needed in order for the department to provide a waiver from interest payments.

Reporting and Revenue Forecasting

ACES requires that companies exploring for or producing oil and gas in the state submit a monthly information report to the department. This report includes estimated data on production volumes, the value of the production, and the operating and capital expenditures related to production. The monthly report is used primarily by state economists to monitor company production and spending. Included with the monthly report is an estimate of taxes owed and credits earned. Twice annually, companies are asked to provide the department with forward-looking expenditure information, along with future production plans to aid the department in providing the legislature with state revenue forecasts.

These reports, in combination with the monthly information reports and the annual tax returns, have significantly enhanced the quality of the department's revenue forecasts.

Audit Compliance

The ACES legislation extended from three to six years, the period in which the department is required to assess production taxes owed. The extension was seen as necessary to assure proper tax assessments, particularly given the complexity of overlapping ELF, PPT and ACES tax laws. The new tax law also included funding for four new "Audit Masters" within the department. The department is still experiencing significant difficulties recruiting and filling audit positions. The department has successfully recruited three Audit Masters, and these individuals have been placed within sections of the Tax Division to assist with implementation and administration of the tax. The recruitment of the fourth Audit Master, and Oil and Gas Revenue Auditors is ongoing.

During 2008, the department's auditors began auditing tax returns that were submitted for calendar year 2006 under the PPT program.

Conclusion

The ACES production tax has been effective in allowing the state to share in the benefits of high oil profitability. It has also responded well to lower oil prices by reducing state tax burden on Alaska's oil and gas producers. Over $2 billion in new capital investment was reported in fiscal year 2009 reaching near-record levels. While these and other indicators suggest that the profits-based tax system has supported North Slope exploration and development, it would be misleading to suggest that ACES alone influences the level of investment. While tax is recognized as being an important factor in investment decisions, it is not the primary determinant. Long-term price forecasts, as well as the resources themselves, have proven to be much more significant drivers of industry activity.

The department is continuing to analyze ACES to identify opportunities to improve the tax framework in order to support additional exploration and development in the state, while not harming the state's revenue base.

The new reporting requirements under ACES are helping the department develop a better understanding of industry expenditures and activity, and have assisted in the state's revenue forecasting efforts. Development of new tax regulations is progressing, though several challenges remain for both the state and taxpayers. Numerous workshops have been held to solicit industry input and these will continue as the department continues to work through outstanding issues. In 2008, the production tax audit group began auditing taxpayers who submitted annual returns for CY 2006 under PPT.

Overall, the information reviewed by the department indicates that ACES is performing as expected when it was passed by the Legislature in 2007. The economic provisions are resulting in the revenue levels anticipated, and the investment incentives appear to distribute the increased tax burden in a fashion that continues to encourage reinvestment, though the experience with the credit program could be improved for new explorers. Challenges remain in the implementation by the department, but they are manageable and the department is positioned to meet those challenges.

I. INTRODUCTION AND BACKGROUND

A. Introduction

On October 16, 2007, Eni US Operating Co. Inc. (Eni), as operator of the Nikaitchuq Unit (NU), on behalf of its affiliate Eni Petroleum US LLC, 100 percent working interest owner of the subject leases, submitted an application to the commissioner of the State of Alaska Department of Natural Resources (ADNR) for modification of royalty under AS 38.05.180(j)(1)(A) (Attachment 1). On November 30, 2007, ADNR issued a Preliminary Findings and Determination to respond to Eni's royalty modification application. The public was invited to comment on the preliminary decision for 30 days ending January 7, 2008. ADNR hereby issues its Final Findings and Determination as required under AS 38.05.

Eni has applied for royalty modification on 12 leases which overlie the Schrader Bluff and the Sag River reservoirs. However, the Sag River reservoir was withdrawn from the application at the request of Eni. Eni requests that the fixed royalty rates of

- 12.5 percent on the Net Profit Share (NPS) lease, ADL 391283, and
- 16.66667 percent on the 11 leases (ADLs 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616)

be reduced to the minimum rate allowed, 5.0 percent, with an annual sliding-scale royalty percentage adjustment based on the level of Alaska North Slope West Coast (ANSWC) crude oil price. The 30 percent net profit share rate on ADL 391283 is to remain unchanged. Attachment 2 depicts the Nikaitchuq Unit boundaries and leases subject to this royalty modification application.

This Final Findings and Determination responds to the royalty modification application as required under AS 38.05.180(j)(8). Part I summarizes the royalty modification application and process. Part II reviews the history of the Nikaitchuq Unit formation and development, and Eni's royalty modification application. Part III reviews the state's authority to carry out royalty modification. Part IV reviews the requirements and terms of royalty modification pursuant to this application. Part V contains ADNR's analysis of the application under the royalty modification criteria. Part VI is the Final Findings and Determination.

B. Royalty Modification Procedure

This Final Findings and Determination is the first step in a process contemplated in AS 38.05.180(j) that could result in an authorization to modify the royalty terms for certain leases. The commissioner published the Preliminary Findings and Determination, gave public notice of a 30-day public comment period (Attachments 3 and 4), and offered to appear before the Legislative Budget and Audit Committee to provide a review of the

Findings and Determination and the administrative process. The commissioner will keep the submitted data confidential under AS 38.05.035(a)(9) at the request of the lessee or lessees making application for the royalty reduction. This Final Findings and Determination by ADNR regarding royalty modification is final and not appealable. With the Applicant's concurrence, ADNR will amend the subject leases to conform to the terms of this royalty modification Final Findings and Determination.

II. SUMMARY OF ENI'S APPLICATION FOR ROYALTY MODIFICATION

A. Unit and Lease Summary

ADNR approved the formation of the Nikaitchuq Unit effective April 29, 2004. At that time, Kerr-McGee Oil & Gas Corp. (KMG) held 70 percent of the working interest and Armstrong Oil & Gas Inc. (Armstrong) held 30 percent. The unit originally consisted of eight leases covering 12,968 offshore acres in the shallow waters of Harrison Bay in the Beaufort Sea, approximately three miles north of Oliktok Point. The Kuparuk River Unit (KRU) lies to the south, and the Milne Point Unit (MPU) lies to the east of the Nikaitchuq Unit. The Tuvaaq Unit, formed in August 2004, was adjacent to the western boundary of the original Nikaitchuq Unit. Effective October 5, 2007, ADNR approved the first expansion of the Nikaitchuq Unit, termination of the Tuvaaq Unit and the contraction of the Kuparuk River Unit. The Nikaitchuq Unit expanded to include all of the Tuvaaq Unit leases, the Kigun lease, formerly committed to the KRU, and two additional leases acquired by ENI at the 2004 Beaufort Sea Sale.

All 12 leases in the Eni royalty modification application are committed to the expanded Nikaitchuq Unit. (See lease map in Attachment 2.)

The ownership of the Nikaitchuq Unit has changed significantly since formation. Eni acquired Armstrong's 30 percent WIO of Nikaitchuq Unit in August 2005. In August 2006, Anadarko Petroleum Co. (Anadarko) acquired KMG, including KMG's 70 percent WIO in Nikaitchuq Unit, and became Nikaitchuq Unit operator. Eni subsequently acquired the remaining 70 percent Nikaitchuq Unit ownership from the operator, Anadarko, in March 2007, and became the 100 percent WIO and operator of Nikaitchuq Unit.

On January 11, 2006, KMG submitted an application for royalty modification under AS 38.05.180(j)(1)(A) for 14 leases of which 12 are the subject of this application.[1] KMG's application requested that the royalty rate for the 14 leases be modified from their respective existing fixed royalty rates of 16.67 percent and 12.5 percent to a fixed royalty rate of 5 percent. Effective October 31, 2006, the ADNR issued the Final Findings and Determination of the Commissioner of the Department of Natural Resources for the Nikaitchuq Development Royalty Modification Application denying KMG's application for royalty modification.

[1] The KMG application included ADLs 355021, 355024, 388571, 388572, 388574, 388575, 388577, 388578, 388580, 388581, 388582, 388583, 390615, and 390616.

B. Project Development History

In the 2003-2004 and 2004-2005 exploration/appraisal drilling programs KMG/Armstrong encountered accumulations of hydrocarbons in the area of the then-proposed Nikaitchuq Unit. A total of six wells were drilled in the Nikaitchuq area in the 2004 and 2005 winter drilling seasons; two additional wells were drilled in 2006.

The planned development includes:

- Construction of a gravel pad with drilling, gathering and production facilities on Oliktok Point near the existing ConocoPhillips Alaska Inc. seawater treatment facility.
- Construction of a gravel drilling island near Spy Island tied back via a 3.8-mile subsea flow line and utility bundle to Oliktok Point for fluid processing.
- Construction of a +/-14-mile pipeline from Oliktok Point to a tie-in near KRU DS-1Y pad for connection to the Kuparuk Transportation common carrier pipeline.
- Consideration of future modifications required to adjust facility configuration to accommodate actual results of well performance.
- A total of 73 wells drilled between 2008 and 2011, of which 31 are expected to be producers.
- First oil expected in 2010.

Development studies indicate that extended reach horizontal producing and injection wells required for pressure maintenance are needed to economically recover the hydrocarbons in place. The planned development would permit a relatively small "footprint" for centralized facilities and minimal well pads, thereby reducing environmental impacts to the region. Initial drilling will be from a 313,000-square-foot pad to be constructed at Oliktok Point. Existing roads will be utilized for access. The production facilities will be located on the same pad. Later, a small gravel island is to be constructed within the barrier islands for future drilling. A subsea bundle containing a three-phase production line and multiple utility lines will be constructed to connect the gravel island to Oliktok Point to transport production and provide fuel, secondary recovery fluid, and power to the gravel island.

C. Eni Royalty Modification Request

On October 16, 2007, Eni submitted an application (Attachment 3) to the ADNR commissioner for modification of royalty on 12 leases, ADLs: 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616 and ADL 391283 under AS 38.05.180(j)(1)(A). In accordance with 11 AAC 88.105, 11 AAC 83.185, and 11 AAC 05.010(a)(10)(H) Eni submitted a complete application with the required $250.00 filing fee.

The Eni application for royalty modification submitted on October 16, 2007, requests a 5.0 percent fixed royalty if the Alaska North Slope West Coast (ANSWC) crude oil price falls below an ANSWC price equivalent to the U.S. Department of Interior, Minerals Management Service (MMS) NYMEX West Texas Intermediate (WTI) oil price threshold for royalty modification for OCS August 2004-2006 deepwater oil leases in the Gulf of Mexico (GOM).[2] Eni proposes a sliding-scale royalty rate in any month after production start-up (expected in 2010) that would range between 5.0 and 16.6667 percent, depending on the average monthly price of ANSWC crude oil. An ANSWC monthly (nominal) price below the Alaska Department of Revenue (ADOR) *Spring 2007 Revenue Sources* forecast between 2010 (the year of first production) and 2017 shown in Figure II.1 (below) would trigger a reduced royalty rate from original fixed lease rates of 12.5 percent and 16.6667 percent, respectively. The amount of the reduction in royalty percentage would depend on (a) the original lease rate (either 12.5 percent or 16.6667 percent) and (b) the extent to which the actual future oil price falls below the ADOR forecast threshold.[3]

The original fixed royalty rate of 16.6667 percent for ADLs 388571, 388572, 388574, 388575, 388577, 388581, 388582, 388583, 390615, and 390616 and 12.5 percent with 30 percent net profit for ADL 391283 would be subject to the sliding scale modification in a low commodity price environment to a level at or above a floor of 5 percent. The 30 percent net profit share to the State attached to ADL 391283 would be unchanged under the Eni royalty modification proposal.

The Eni application also would provide full royalty relief at a reduced rate of 5 percent for all leases regardless of oil price if monthly production is below 4,000 barrels of oil per day for the first 10 years following the effective date of the royalty modification decision.

---

[2] ADNR estimates threshold to be $42.53 per barrel in 2010 based on a 2007 NYMEX WTI price of $42.64 assuming a 94 percent basis adjustment to ANSWC and 2 percent price escalation pursuant to the ENI proposal. See: MMS, *Price Thresholds and Annual Market Prices for MMS Deepwater and Deep Depth Oil and Gas Royalty Relief Programs*, Deep Water Oil, Economics Division at www.mms.gov/econ/DWRRAPrice1.htm.

[3] Under the Eni proposal, the royalty percentage rate adjustment would be approximately ¾ percentage point per $1 change in ANSWC price for leases with a 16.6667 percent base royalty rate and ½ percentage point per $1 change in ANSWC price for leases with a 12.5 percent base royalty rate. After 2017, the ADOR ANSWC price forecast is inflated by the monthly change in the Producer Price Index (PPI).

III. SUMMARY OF ROYALTY MODIFICATION AUTHORITY AS 38.05.180(j)(1)(A), (2), (3), (4)(A), (5)

A. General Royalty Modification Requirements

AS 38.05.180(j)(1)(A) authorizes the DNR commissioner to provide for royalty modification on individual leases, leases unitized as described in (p) of this section (AS 38.05.180), leases subject to an agreement described in (s) or (t) of this section (AS 38.05.180), or interests unitized under AS 31.05 to allow for production from an oil or gas field or pool if:

1. the oil or gas field or pool has been sufficiently delineated to the satisfaction of the commissioner;
2. the field or pool has not previously produced oil or gas for sale; and
3. oil or gas production from the field or pool would not otherwise be economically feasible.
4. Under AS 38.05.180(j)(2), the commissioner may not grant a royalty modification unless the lessee or lessees requesting the royalty modification make a clear and convincing showing that a royalty modification meets the three requirements set out above and is in the best interests of the state.

B. General Royalty Modification Terms

1. Under AS 38.05.180(j)(3) the royalty modification terms must provide for an increase or decrease or other modification of the state's royalty share by a sliding-scale royalty or other mechanism that shall be based on a change in the price of oil or gas and may also be based on other relevant factors such as a change in production rate, projected ultimate recovery, development costs, and operating costs.
2. Under AS 38.05.180(j)(4)(A) a modification to royalty may not be granted for the field or pool if the royalty modification would result in a royalty rate of less than 5 percent in amount or value of the production removed or sold from a lease or leases covering the field or pool.
3. Under AS 38.05.180(j)(5) a royalty reduction must include an explicit condition that the royalty reduction is not assignable without the prior written approval, which may not be unreasonably withheld, by the commissioner. The commissioner shall, in the preliminary and final findings and determinations, set out the conditions under which the royalty reduction may be assigned and may not grant a royalty reduction without an explicit condition that the royalty reduction is not transferable.

IV. DISCUSSION OF ROYALTY MODIFICATION CRITERIA

A. Leases Are Eligible For Consideration

The leases meet the requirements for consideration and all eleven subject leases proposed for royalty modification are committed in entirety to the Nikaitchuq Unit. AS 38.05.180(j)(1) allows modification of royalty for individual leases and unitized leases.

B. Reservoir Delineation: Discussion of Reservoir Geology and Engineering

1. Introduction to reservoir delineation.

The commissioner may grant royalty modification to allow for production from an oil or gas field or pool if the oil or gas field or pool has been sufficiently delineated to the satisfaction of the commissioner.

The area within the Nikaitchuq Unit for which royalty relief is sought lies offshore in the Beaufort Sea in the vicinity of Spy Island, approximately three miles north of Oliktok Point. The Nikaitchuq Unit is north of and contiguous with the northern edge of the KRU and the Milne Point Unit (MPU). The KRU is operated by ConocoPhillips and produces from the Cretaceous Kuparuk River Formation and shallower Schrader Bluff Formation. The BP-operated MPU field lies to the south-southeast of the Nikaitchuq Unit and produces oil from the Schrader Bluff, Kuparuk, and Triassic Sag River formations. The western edge of the proposed Nikaitchuq Unit is adjacent to the recently expanded Oooguruk Unit (OU) operated by Pioneer. Production from the OU is expected from the Kuparuk and Jurassic Nuiqsut sandstones.

Within the Nikaitchuq Unit, potential commercially recoverable reserves have been tested in both the Cretaceous Schrader Bluff and the Triassic Sag River formations.

Based upon the submitted application and the planned initial development, the request for royalty modification at Nikaitchuq is limited to the OA sand of the Schrader Bluff Formation. For the purpose of this application, the OA sand is defined in Kerr McGee Nikaitchuq #1 (API No. 50629231930000), completed in 2004, as the interval between 5034 feet measured depth (4127 feet subsea true vertical depth) and 5090 feet measured depth (4170 feet subsea true vertical depth).

ENI has adequately delineated the OA sand of the Schrader Bluff Formation in the Nikaitchuq area. Their drilling, testing, and evaluation programs appear to have highlighted the obvious risks inherent to developing viscous oil and identified the possible upside potential available through use of extended reach drilling and advanced completion technologies.

Although upside potential may also exist within the shallower Schrader Bluff N sand interval, the current lack of core, well test, or fluid data from this interval increases the risk and precludes it from being deemed delineated and included as part of this application. ENI plans to gather more data to thoroughly evaluate the N sand during the course of developing the deeper OA sand.

The Sag River Formation contains lighter oil than the Schrader; however, it is plagued with poor quality reservoir rock. The development potential is marginal at best unless there are significant advances in stimulation or enhanced oil recovery technology. Delineation of the Sag River Formation at Nikaitchuq to date has revealed limited reserves and similar test results to the analog at MPU where wells within the Sag River Formation consistently show initial flush production followed by steep decline within the first year. ENI is still evaluating the development potential of this interval and, as such, it has been excluded from this application.

2. Exploration History of the Area

Two key early exploration wells lie within several miles of the Nikaitchuq development area. The Unocal East Harrison Bay State #1 well lies near the northwest corner of the KRU, to the southwest of the Nikaitchuq Unit. The well was drilled in February 1977 to a measured depth of 9,809 feet, bottoming in argillite basement. The East Harrison Bay State #1 well logs appear to contain about 15 feet of oil-bearing Kuparuk Formation that appears cemented in the upper half. The Jurassic section looks silty on logs. The ARCO Kalubik #3 well, drilled in February 1998, lies to the south-southwest of the Nikaitchuq area. The well bottomed in the Jurassic at a measured depth of 7,000 feet. The well encountered a 40-foot-thick measured depth (MD) interval of Kuparuk C sandstone that appears on electric logs as oil-bearing, but siderite cemented in the upper 10 feet of the interval. On well logs the Jurassic interval contains silt with a 12-foot silty sand developed around 6,565 feet MD. The well was plugged and abandoned on March 6, 1998.

3. Drilling History

The first major exploration activity in the area in the early 1970s targeted the Ivishak Formation following the discovery of the prolific Ivishak Formation in Prudhoe Bay State #1 in 1967. The Hamilton Brothers Milne Point #18-1 was one of the early wells drilled on the Milne Point structure in 1970 in search of Ivishak and Lisburne objectives. This well encountered about 50 feet of tight oil-saturated sandstone that was not tested and a section of Kuparuk sandstone that tested at a rate of 875 BOPD. This discovery led to increased industry interest in the Milne Point area and led to exploration and delineation drilling for Kuparuk reserves. In the early 1980s the Sag River was cored in the Conoco Milne Point Unit #C-1 well and contained bleeding oil and gas. The Sag River Sandstone was also cored in the MPU #L-1 well and contained no visible porosity or staining and appeared tight on wire line logs.

In the early 1990s about a dozen wells were drilled to the west-southwest of the Nikaitchuq area with Jurassic sandstones and Kuparuk C sandstones as targets. The ARCO Kalubik #1 well encountered approximately 160 feet of productive Nuiqsut and Nechelik sandstone that tested approximately 336 BOPD (un-stimulated). In addition, the well penetrated an 85-foot section of Sag River Sandstone with calculated log porosities in the range of 15 to 22 percent. The Thetis Island #1 well also encountered an 80-foot section of porous Sag River sandstone with log-calculated porosities in the range of 16-24 percent. A pay section of Nuiqsut sandstone was also encountered that tested at an average rate of 120 BOPD with a high rate of 650 BOPD. Both the Kalubik #1 well and Thetis Island #1 well drilled through Brookian sandstones that contained mud log hydrocarbon shows.

In the late 1990s BP drilled several dedicated Sag River Sandstone test wells, including MPU #C-23, #K-33, #E-13A, 3F-33, #F-33A, and #F-73A. Alaska Oil and Gas Conservation Commission (AOGCC) production data indicate that several Milne Point wells have produced oil out of the Sag River Sandstone and two oil producing wells MPU F-33A and K-33, are currently shut-in. MPU #C-23 produced 378,012 barrels of oil between 1996 and 2001. MPU #F-33 produced 314,276 barrels of oil between September 1996 and May 1999 and was subsequently plugged and abandoned. MPU #K-33 has produced approximately 93,241 barrels of oil since 1997. MPU #E-13A produced 366,665 barrels of oil between 1995 and April 2001. MPU #F-33A produced approximately 661,099 barrels of oil since April of 2001. MPU #F-73A produced 13,430 and is now a water-alternating-gas injection (WAGIN) well. BP estimated the original oil-in-place (OOIP) at 62 MM STB oil and the reservoir area about 8500 acres based upon seismic and log data during an AOGCC Conservation Order hearing in May 1998. AOGCC reservoir data indicate that the oil commonly recovered from the Sag River sandstone has an API oil gravity of about 37 degrees. Total production from the MPU Sag River Sandstone has been 1,834,131 barrels of oil and 1,875,668 MSCF gas through October 2007. MPU Sag River recovery is less than 3 percent to date based on OOIP. The original GOR ranged from 784 – 974 SCF/STB. Production from the Sag River pool at MPU has been intermittent with extended shut-in periods since June 1999.

Between 2004 and 2005, Kerr McGee (KMG) drilled six wells in the Nikaitchuq and Tuvaaq Units. Initially, the primary exploration target was the Sag River Formation; the Kuparuk Formation was a secondary target. Although the wells did not encounter reservoir quality sand in the Kuparuk, the well logs indicated that sands in the shallower Schrader Bluff Formation were prospective. KMG then adjusted the exploration program to thoroughly evaluate the Schrader Bluff Formation. Three of the six wells tested oil from the viscous Schrader Bluff or Sag River formations. In 2006/2007 KMG drilled two additional pre-development wells from Oliktok Point to further delineate and test the Schrader Bluff sandstone. The two wells are currently suspended.

4. Schrader Bluff Formation Tests

KMG Nikaitchuq #4

Approximately 3,000 feet of gross horizontal Schrader Bluff OA sand was drilled in this well, with approximately 2,270 feet of horizontal or lateral net pay, from a 30-foot true-vertical-depth net pay thickness. A two-week production test was performed on the well using an electric submersible pump (ESP) to aid in producing the 16–17 API crude. The well tested at rates up to 1,200 barrels of oil per day during periods of the initial test. Permeability estimated from the test was greater than 350 millidarcies and was confirmed from the analysis of the flow tests conducted on a whole core obtained from the well.

KMG Tuvaaq #1

The well was not tested. It penetrated 30 feet net pay Schrader Bluff OA Sand and 12 feet net Schrader Bluff N sand. There were no cores taken at Tuvaaq. Schrader Bluff N sand was interpreted to be oil-filled here and at Kigun #1 appeared unconsolidated with permeability estimated from 100-1000 millidarcies and porosity 25-35 percent.

KMG Kigun #1

The well was not tested. It penetrated 29 feet net pay Schrader Bluff OA sand and 30 feet net N sand. An MDT tool run sampled the Schrader Bluff OA fluids which were 18 degree API, GOR 59 SCF/STB and viscosity of 82 cp at 87 degree reservoir temperature. (Contamination of the samples with oil-based mud caused concern about the reliability of the sample estimates and properties.) Schrader Bluff OA sand core data indicated 25 percent to 38 percent porosity and up to 1,000 millidarcies permeability in the sandstone intervals.

KMG Oliktok Point I-1 KMG Oliktok Point I-2

These two wells were drilled by KMG during the 2006/2007 drilling season as pre-development wells to further test and delineate the Schrader Bluff reservoir. These wells have been suspended. Results from these wells are currently held confidential under AS 38.05.035(a)(9).

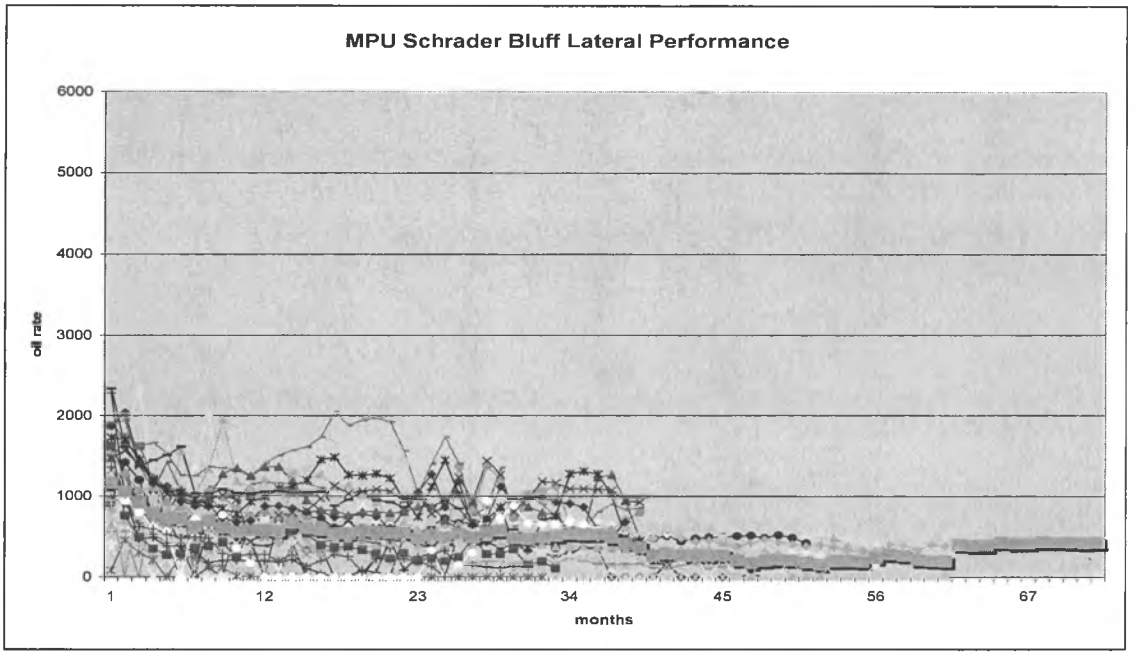
5. Analog Schrader Bluff Formation Performance

Milne Point Unit (MPU) Schrader Bluff Pool (Figure 1), Kuparuk River Unit (KRU) West Sak Pool (Figure 2) and Prudhoe Bay Unit (PBU) Polaris and Orion pools – Figure 3, represent analog Schrader Bluff Formation horizontal well performance. Each of the pools was developed initially with vertical or slanted completions. More recently a number of horizontal lateral and multi-lateral wells have been completed in each of these pools. MPU and KRU Schrader Bluff wells show a distinct, lower rate performance than the newer developed Polaris and Orion Pool wells. A significant portion of the performance difference is likely due to differences in fluid quality. Within the Schrader Bluff Formation / West Sak, developments oil gravities can vary between 15-24 degrees API and viscosity can vary between 5-130 centipoise. To date, development has been limited to those areas with higher API Gravity and lower viscosity. Later Schrader Bluff Formation developments are building on earlier techniques by going from vertical to

horizontal and multilaterals wells. The horizontal and multilaterals should consistently outperform the older wells because more formation is exposed and the completions are more efficient.

The wells in each Schrader Bluff Formation pool exhibit early flush production for six to 12 months. The PBU Schrader Bluff completions show slightly higher initial rate profiles followed by relatively steep decline. The average MPU Schrader Bluff completion (heavy bright green points and line) declined from 1200 bopd to 500 bopd at 12 to 40 months. KRU West Sak lateral completions have performed similar to MPU Schrader Bluff.

Figure 1. MPU Schrader Bluff Formation lateral performance and average performance (heavy green).



6. Reservoir delineation determination.

ENI has adequately delineated the OA sand of the Schrader Bluff Formation in the Nikaitchuq area. Their drilling, testing, and evaluation programs appear to have highlighted the obvious risks inherent to developing viscous oil and identified the possible upside potential available through use of extended reach drilling and advanced completion technologies.

Figure 2. KRU West Sak sands lateral performance and average performance (heavy orange).

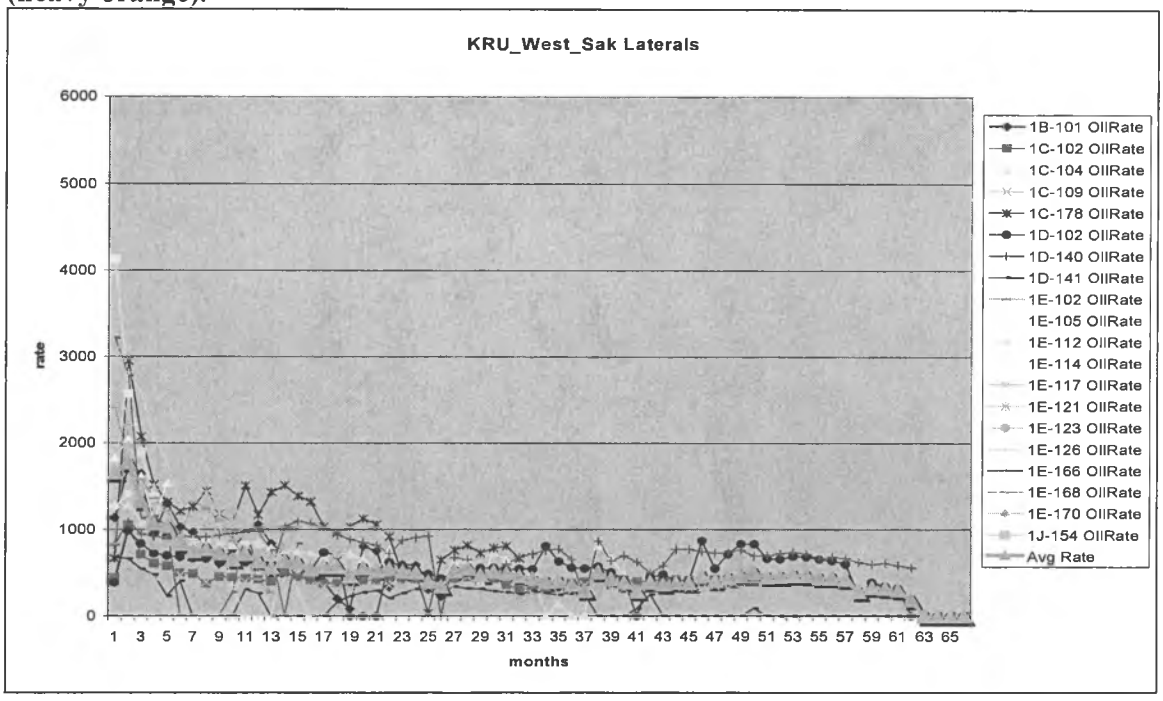


Figure 3. PBU Polaris and Orion Schrader Bluff Formation initial performance.

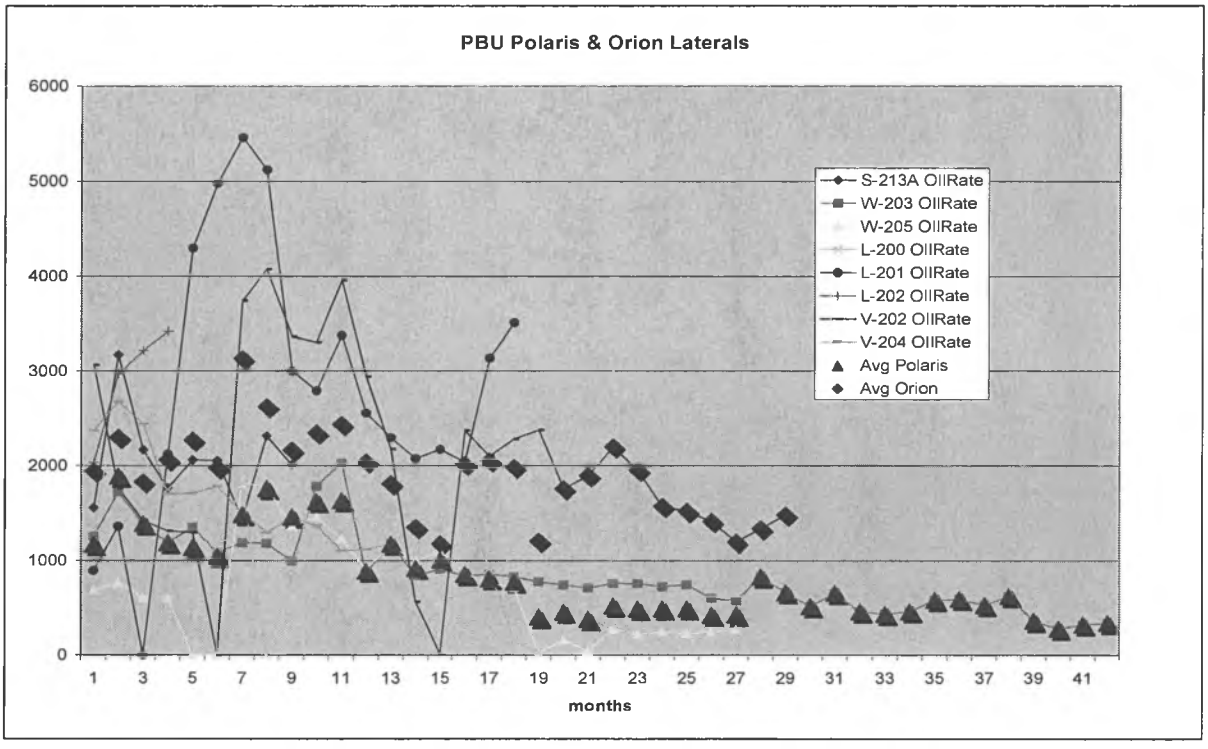

ENI stated that their plan is to develop Nikaitchuq Schrader Bluff Formation with horizontal wells. Their prognosis of performance can be compared to the analogs by evaluating average Schrader Bluff well performance from initial completion to date. There are up to seven years of production history for the various Schrader Bluff Formation horizontal and lateral wells. Orion appears to be more productive so far but the long term performance has yet to be defined. ENI appears to estimate their development will improve on the previous KRU and MPU Schrader Bluff completions by using the latest technology, namely very long horizontal and or multi-lateral completions. ENI's cases align reasonably with the MPU Schrader Bluff and KRU West Sak and PBU Polaris average performance. PBU Orion performance is notably better than ENI's high case average rates. Analyses of oil samples taken within the OA sand in the Nikaitchuq area demonstrate measured oil viscosities of 95–188 centipoise. This is heavier than the average viscosity of production from existing KRU, MPU and PBU Schrader Bluff developments. In addition, the Nikaitchuq development will include construction of a new standalone facility. The KRU, MPU, and PBU Schrader Bluff pools had existing infrastructure and production from other formations to support the additional development. Both of these factors increase the risk and make this project more economically challenged compared to existing heavy oil developments.

C. No Previous Sale of Produced Oil or Gas

The pools underlying the leases have not previously produced oil or gas for sale.

D. Economic Analysis

ADNR used its own in-house probabilistic economic model (ADNR Model) for the Nikaitchuq development to independently assess the financial performance and ultimate economic effects of a royalty modification for both Eni and for the State of Alaska. Eni shared with the state portions of its proprietary economic model, but the state chose to use its own model that incorporated many input assumptions provided by Eni.[4]

ADNR closely examined the assumptions and methods currently in use by the U.S. Minerals Management Service (MMS) for the Deep Water Royalty Relief Program. The MMS has developed an in-house proprietary probabilistic economic model for Royalty Suspension Viability Program. ADNR adopted an approach similar to that of the MMS by applying the quantitative results from the ADNR model to a prudent-investor decision framework. The ADNR decision framework is confidential. It is designed to replicate the kind of analytical framework used by industry for making prudent oil and gas investment decisions under uncertain conditions involving significant capital outlays and lengthy project life cycles.

[4] Eni has submitted financial and technical data and analyses and requested that they be held confidential in accordance with AS 38.05.035(a)(9). Thus this section does not discuss any confidential information concerning Eni's geologic, engineering and cost data. These documents are included and discussed in detail in the confidential *Economic Analysis and Internal Decision Process*, (Attachment 6).

The prudent investor standard is maintained throughout the project evaluation process. Under this standard, ADNR incorporates a collection of project performance benchmarks that are consistent with industry norms.

To obtain royalty relief the applicant must show by clear and convincing evidence that without royalty modification the project is not economically feasible. Nikaitchuq is an offshore, heavy oil prospect with relatively high expected exploration and development costs and low expected production possibilities. The final analysis of Nikaitchuq project development conducted by ADNR pursuant to the Eni royalty modification application suggests that, under reasonable assumptions about future oil prices and without some form of royalty relief, this project would not be sanctioned for funding and development.

In its simplest form, the ADNR Model describes project cash-flows for the Nikaitchuq development over a 50-year time horizon. The ADNR Model incorporates expected investment, production, price, revenue, and cost. It incorporates fiscal system attributes, including state and federal tax, state production tax (including the recent ACES legislation)[5], and royalty obligations, as well as other important commercial relationships, such as facility sharing and pipeline transportation charges.

The ADNR in-house model is flexible enough to allow ADNR to evaluate the effects of changes to the fiscal system. The model provides a platform for systematic evaluation of the effect of a change to the royalty rate. The model calculates the changes to the various financial metrics that result from a change in the royalty rate. These metrics include annual and cumulative discounted and undiscounted cash flow, years to payout, net present value (NPV), expected monetary value (EMV), and internal rate of return (IRR) on investment, as well as state revenues. Also, ADNR used its model to carry out sensitivity analysis of key driver assumptions and to characterize certain price, production, and cost variables in terms of probability distributions to evaluate how uncertainty among these drivers affects key project metrics and state revenues.

Eni furnished ADNR with 200 realizations of project production that depict the range of values and probabilities for the many reservoir factors that that determine ultimate reservoir recovery (e.g., aerial and vertical extent, rock characteristics, fluid composition and properties). These 200 Eni realizations represent the universe of possible resource recovery outcomes for ADNR's Monte Carlo analysis that fit the well-test data. The ADNR model samples repeatedly from this universe of production realizations, as well as from volatility inherent in price formation, as characterized in the mean reversion price model (see below), to generate a distribution of net present value (NPV) outcomes for the Nikaitchuq project. The central tendency (mean and median) and dispersion (variance) of the NPV outcomes depict project performance uncertainty and speak to the dimensions of ADNR's prudent-investor decision framework mentioned above.

ADNR incorporated the applicant's input data into its model along with its own assumptions about the path of uncertain future prices to derive independent results for the

[5] See HB2001 (11/15/2007).

economic feasibility of the Nikaitchuq project. The ADNR Model examines a range of possible inputs to derive a P50, or median, outcome from a Monte Carlo simulation. The P50 result is the value where 50 percent of the outcomes lay below this point and 50 percent of the outcomes lay above the P50 outcome. The ADNR Model uses Palisades Software's "@Risk" Monte Carlo software application to run the simulations and determine risk-weighted outcomes reported in the confidential supplement to this *Final Findings and Determination* (Attachment 7).

Calculating risk weighted outcomes is critical to a full analysis of a project. The probabilistic rate profile, determined based on the applicant's reservoir simulation results, is combined with pricing to determine the project revenue stream. Annual Alaska North Slope West Coast (ANSWC) crude oil prices were generated from an Ornstein-Uhlenbech type Mean-Reversion price model[6] with parameters estimated as described by Schwartz, (1997)[7] using annual price data for ANSWC crude as reported by Platt's. The starting ANSWC delivered price used in the model is $67 per barrel, the average price for 2007. The risk weighted cost profiles are then matched to the revenue stream generated by the probabilistic price and production models. This yields an NPV distribution. The mean of the NPV distribution is the EMV for the entire project that incorporates uncertainty and can be compared "apples-to-apples" with other versions of the project.

ADNR analyzed various senarios to explore Nikaitchuq project performance with and without royalty modification. DNR approves royalty modification only when it believes a project will not go forward without it. This means that the impact to royalty revenues to the state is the difference between the royalty revenues with royalty modification as was prescribed in the DNR decision and zero. Even under low price scenarios, ADNR determined that the state can expect to receive an additional $100 million over the life of the project.

If it is assumed that the project could have gone forward without royalty modification (again, not what ADNR assumes) the impact would be as indicated in Table 1. This table presents several possible price scenarios and the indicated change to the state royalty cash flow stream.

In Table 1 the scenarios labeled "$43 and Above (Sustained)" and "$40 Sustained" simply use a flat price deck for "Alaska North Slope West Coast" (ANSWC) crude oil (before inflation) for the life of the project, the price does not vary from year-to-year. An oil price of $40 is always just below the $42.64 royalty modification threshold and thus results in 5 percent royalty rates for every barrel of oil produced from the reservoir for the life of the project and the greatest negative impact to overall state royalty revenues.

---

[6] Dixit & Pindyck, 1994, http://www.puc-rio.br/marco.ind/sim_stoc_proc.html#mc-mrd.

[7] The Stochastic Behavior of Commodity Prices: Implications for Valuation and Hedging", Schwartz, E., Journal of Finance, 1997, Volume 52, issue 3, 923-973

Table 1. Change in Alaska royalty revenues if royalty modification were not necessary and project produced oil without royalty modification.

Price Scenario	Impact on State of Alaska Royalty Revenue ("With Royalty Modification Per Decision" Minus "Without Royalty Modification", 5% discount rate)
$43 and Above (Sustained)	$0 million
DNR Price Model	($39 million)
$40 Sustained	($160 million)

The "DNR Price Model" scenario does not use a constant or "sustained" price for the life of the project (i.e. flat price deck) as is the case with the other two scenarios in Table 1. We use a forward-looking, Monte Carlo-based "mean-reversion" model, as discussed above. This price model creates a price forecast where oil price fluctuates over time, simulating real-life price variability similar to what history has shown. The price for 2007, $67 per barrel ANSWC, was taken from U.S. Energy Information Agency's most recent price projection for West Texas Intermediate (WTI) crude, and adjusted for ANS-WTI basis by taking the previous 12-month average difference between these two prices. The model reverts to DNR's expected mean value of $53 per barrel, over time.

The ADNR has determined that under ADNR's price and discounting assumptions, the project attributes furnished by Eni, and the existing lease royalty rates in effect prior to this *Final Finding and Determination* (16.6667 percent fixed royalty rate and the 12.5 percent fixed royalty with 30 percent NPS for ADL 391283), the Nikaitchuq project does not meet prudent-investor standards for economic feasibility. ADNR concludes further that the royalty modification terms and conditions stipulated in Section IV.B would improve project economics. Eni represents that royalty modification would make project sanction more likely.

V. PUBLIC COMMENTS

On November 30, 2007, ADNR issued a Preliminary Findings and Determination to respond to Eni's royalty modification application. The public was invited to comment on the preliminary decision for thirty days, ending January 7, 2008 (Attachments 3 and 4).

No comments were received from the public.

VI. STATE'S PROPOSED ROYALTY MODIFICATION

A. Royalty Modification Requirements for the Nikaitchuq Project

1. Eni's application for royalty modification on ADLs 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616, and ADL 391283 meets the requirements for consideration under AS 38.05.180(j)(1). Eni has paid the filing fee and submitted a complete application for the royalty modification including financial and technical data that meet the requirements of 11 AAC 88.105, 11 AAC 83.185, 11 AAC 05.010(a)(10)(H), and AS 38.05.180(j)(6).

2. The Schrader Bluff pool has been sufficiently delineated to the satisfaction of the commissioner for the purpose of considering royalty modification; this pool has not previously produced oil or gas for sale.

3. Eni has shown that oil or gas production from the Schrader Bluff pool would not otherwise be economically feasible.

4. Eni has made a clear and convincing showing that a modification of royalty meets the requirements of 38.05.180(j)(1)(A), and is in the best interests of the state.

B. Royalty Modification Terms for the Nikaitchuq Project

1. Royalty modification pursuant to the terms herein is granted to Eni US Operating Co. Inc. (Eni), as operator and 100 percent working interest owner of the Nikaitchuq project (Project), on ADLs 388571, 388572, 388575, 388574, 388577, 388581, 388582, 388583, 390615, 390616, and 391283. Royalty modification is denied for ADL 388580 because there was no apparent resource allocated to this lease.

2. Only production from Nikaitchuq Unit's Schrader Bluff OA reservoir, as delineated under this Findings and Determination, shall be eligible for royalty modification. To receive royalty modification on production, the lease must be committed to an approved participating area within six years of the date of Project sanction. After six years, any subject lease or portion of a subject lease not committed to an approved participating area for the Nikaitchuq Schrader Bluff OA reservoir shall revert to the respective individual lease royalty rates that were in effect immediately prior to this Findings and Determination.

3. If the Project, not materially changed from that set out in the October 16, 2007, royalty modification application, is not sanctioned by all working interest owners by February 28, 2008, this royalty modification decision is rescinded.

4. Within 30 days following the date of Project sanction, the working interest owners shall provide ADNR with the Project sanction documents, approvals for expenditure, and other documents supporting the technical and financial data submitted with Project sanction documents excluding any proprietary data. ADNR agrees to keep all such data confidential.

5. If six years following the date of Project sanction total actual Project spending starting December 1, 2007, does not meet $822 million in nominal dollars, then this royalty modification is rescinded. If 11 years following the date of Project sanction total actual Project spending does not meet $1.398 billion in nominal dollars, then this royalty modification is rescinded. The ADNR may audit the working interest owners' spending on this Project to determine compliance any time between the sixth and the 13th year following Project sanction. If at either cost threshold juncture this royalty modification is rescinded, then Eni will refund to the State of Alaska the difference between the royalty which would have been due at the royalty rates that were in effect immediately prior to the effective date of this Findings and Determination and the royalty due at the modified royalty rate, with interest as set forth in AS 38.05.135(d).

6. The NPS lease regulations set out in 11 AAC 83.201 – 11 AAC 83.295 remain in full force and effect for ADL 391283, except that the cost to the applicant for the application for royalty modification will not be included in any NPS lease Development Account balance.

7. (a) Nikaitchuq royalty modification mechanism implemented as follows:

   i. Original lease rates are 12.5 percent for ADL 391283 and 16.67 percent for ADLs 388571, 388572, 388575, 388574, 388577, 388581, 388582, 388583, 390615, and 390616.

   ii. For the first 25 years following the date of first sustained production, when Alaska North Slope West Coast ("ANS WC") delivered crude prices are below the threshold price per barrel as adjusted by inflation, then production from the Nikaitchuq Schrader Bluff OA reservoir on the subject lease will pay a 5 percent royalty. The ANS WC crude price for the month of production is the average assessment by Platt's Oilgram Price Report and Reuters online data providing service, of the spot price for ANS delivered on the West Coast. The average assessment of the spot price for ANS by each reporting service is the average of the midpoints of the high and low closing assessments for the spot price for ANS for all days during the month of production for which closing assessments are

reported. The threshold price shall start at $42.64 per barrel. This threshold price will be adjusted annually for inflation starting on May 1, 2008, and shall be adjusted on each May 1 thereafter. The inflation adjustment shall be (1 + inflation rate) multiplied by the previous year's inflation-adjusted threshold price. The inflation rate shall be determined by taking the previous year's annual implicit price deflator for GDP (initially, for the year 2007) as reported by the end of April of each year, dividing that deflator by the two-years-previous annual implicit price deflator (initially, for the year 2006), and then subtracting 1. The source of the inflation data shall be the Department of Commerce Bureau of Analysis (BEA) U.S. Economic Accounts-GDP. National Income and Productions Account (NIPA) Table 1.1.9. When the monthly ANS WC oil price is above the threshold, royalty rates for production attributable to such month(s) shall return to the original lease royalty rates.

iii. This royalty modification shall be terminated 25 years following the date of first sustained production and at that time royalty rates shall revert to the respective individual lease royalty rates that were in effect immediately prior to this Findings and Determination.

(b) For the 18th through the 120th months after first commercial production from the Nikaitchuq Schrader Bluff OA reservoir, if production from all of the subject leases averages below 4,000 barrels of oil per day for any previous twelve month period, full royalty modification rates of 5 percent shall be in effect for all production from the Nikaitchuq Schrader Bluff OA reservoir, regardless of oil price. Provided, however, nothing in this provision shall prevent Eni from applying for royalty modification under AS 38.05.180 (j)(1)(B)or (C).

8. In the determination of royalty value of oil or gas from any of its properties, Eni shall waive any rights to a transportation deduction for the pipeline constructed pursuant to the Easement granted on ADL 417493. This waiver shall remain in effect even if such pipeline is converted to a common carrier.

9. If any working interest owner should contract to use any processing facilities at any time for production from the reservoirs delineated and leases covered in this Findings and Determination, that working interest owner shall furnish ADNR the facilities contract, including information regarding the fee structure and volumes processed unless such contract prevents disclosure of such information. This information will be kept confidential by ADNR. The working interest owner shall also furnish produced oil, water, and gas volumes on a monthly basis broken down by individual working interest owner.

10. Should any third party petition the Nikaitchuq Unit facility owners to contract for use of any unit facilities, the cost of use shall be based on market rates. Any

resulting contract covering facilities access or use shall be shared with the ADNR. ADNR agrees to keep all such information confidential.

11. This royalty modification is not assignable without prior written approval of the ADNR commissioner, which shall not be unreasonably withheld. The assignee must be fit, willing, and able to satisfy all of the duties and obligations attached to this royalty modification and all other lease terms.

12. If at any time royalty modification is rescinded, the terms and conditions of this Findings and Determination shall terminate, with two exceptions. First, the provisions of Term 8 shall survive the termination of royalty modification. Second, all obligations to keep information confidential that was submitted pursuant to this Findings and Determination shall survive the termination of royalty modification.

VI. PROPOSED FINDINGS AND DETERMINATION

After detailed consideration where all the materials presented by the applicant were reviewed and incorporated into our analysis, the ADNR has determined that Eni meets the necessary requirements and that royalty modification for the Nikaitchuq development project is warranted under the terms established in Section IV of this finding and determination.

Senate Bill 85
Sponsor Statement
TAX CREDIT FOR NEW OIL & GAS DEVELOPMENT

This bill authorizes credits for 100% of the costs of the qualified development expenditures that were incurred after a "pool" is discovered and before production of oil or gas in paying quantities.

The Alaska Oil and Gas Conservation Commission (AOGCC) determines the date the "pool" was discovered and the Department of Natural Resources (DNR) determines the date of commencement of production from that pool. Eligible costs for the credit are those that are qualified capital expenditures (AS 43.55.023) or lease expenditures (AS 43.55.165).

The credit is required to be taken within five years, is not transferable and may not be used to reduce a tax liability to below zero.

Alaska's declining oil production has extremely serious ramifications on the Trans Alaska Pipeline System (TAPS), the revenues of the State of Alaska, and on the domestic production for the United States of America.

Alaska's production is about one-third of the peak 2.1 million barrels per day in 1988 and projected to continue declining 5-6% per year. [1] Without reversals in the current decline, the continuation of the entire system is at risk.

This new credit is expected to produce increased activity in oil production and thus, an increase in the through-put in the TAPS system.

The legislation is patterned after revisions recently made to Alberta's royalty taxing regime (May 2010). As a result of the revisions, Alberta expects industry reinvestments of $700 million per year and creation of 8,000 jobs in 2011-2012.

Senate Bill 85
Sectional Analysis
TAX CREDIT FOR NEW OIL & GAS DEVELOPMENT

Section 1: Existing law prohibits multiple tax credits, this adds the new credits established in this bill, **43.55.026**.

Section 2: Adds new credits established in this bill, **43.55.026,** to existing law that restricts multiple tax credits..

Section 3: sets out new **43.55.026** for the new tax credit.

(a) Directs that the new credit applies to qualified expenditures that were incurred prior to production of oil or gas in paying quantities for a lease or a property taxable under AS 43.55.011(e)[1] and that is not and has not been within a unit, or produced oil or gas, as of December 31, 2010.

(b) Establishes that the credit amount is 100% of the qualified development expenditures incurred after completing the drilling of the first well that discovers a pool (capable of commercial production) and before production (in paying quantities) commences. Those dates are determined by the Department of Revenue (DOR), in consult with

1. Alaska Oil and Gas Conservation Commission (AOGCC) for establishing the date on which the first well drilled discovered a pool (capable of commercial production); and
2. Department of Natural Resources (DNR), for establishing the date that production (in paying quantities) commences.

---

[1] *(AS 43.55.011(e) establishes the oil and gas production tax that replaced the ELF production tax in 2006.).*

SA SB85 S(RES) 2-23-11 /mj

(a) Establishes that the credit may be applied against the production tax during the five years immediately following the date of production commencement, or, if the credit is fully applied before the end of the five year period, until the credits for the expenditures are fully applied, whichever occurs first. Credits expire if not taken within that five year period and may not be applied against the production tax from a lease or property not eligible for the credit.

Essentially, there is a five year "holiday" from the production tax under this new credit or the time required to recoup 100% of the development costs, whichever occurs first.

(b) Restricts the use of the new credit so there are not multiple credits.

(c) Establishes that the credit or any portion of the credit is not transferable and may not reduce the tax liability below zero for AS 43.55.011(e) (the production tax) for any calendar year.

Essentially, the tax credit stays with the drilling site and the new credit may not allow the tax payer to obtain a refund from the state in any calendar year.

(d) Allows the DOR to adopt regulations needed to administer the new credit.

(e) Establishes procedures so that when a lease or property that utilizes this new credit becomes part of a unit under AS 38.05.180(p)[2], the credit is applied only to the production tax due for the lease or property that qualified for the credit.

(f) Defines:
1. "production in paying quantities".
2. "qualified development expenditure".

Section 4: Amends existing law to include new section for this tax credit in **43.55.026**.

Section 5: Establishes an immediate effective date for the legislation.

---

TRANS ALASKA PIPELINE SYSTEM

The 800-mile-long Trans Alaska Pipeline System (TAPS) is one of the world's largest pipeline systems. Starting in Prudhoe Bay on Alaska's North Slope, TAPS stretches through rugged and beautiful terrain to Valdez, the northernmost ice-free port in North America. Since pipeline startup in 1977, Alyeska - TAPS' operator - has transported more than 15 billion barrels of oil.

In 1968, oil was discovered at Prudhoe Bay in the North Slope, located in northern Alaska between the Brooks Range Mountains and the Beaufort Sea (part of the Arctic Ocean). A consortium of oil companies planning to produce the oil determined that a pipeline offered the best means to transport crude oil from the North Slope to a navigable port in southern Alaska where it could be shipped by tanker to refineries in the continental United States.

ABOUT ALYESKA PIPELINE SERVICE COMPANY

Alyeska Pipeline Service Company, named after the Aleut word Alyeska meaning mainland, was established in 1970 and charged with designing, constructing, operating, and maintaining TAPS. At the time, construction of the pipeline was the largest privately financed construction project ever attempted, and cost over $8 billion when completed. Pipeline construction began in March 1975 and was finished in June 1977. Crude oil began flowing in the pipeline on June 20, 1977 and the first tanker filled with North Slope crude oil left Valdez on August 1, 1977.

The consortium of companies that own TAPS today includes: BP Pipelines Alaska (46.93%), ConocoPhillips Transportation Alaska, (28.29%), ExxonMobil Pipeline Company (20.34%), Unocal Pipeline Company (1.36%), and Koch Alaska Pipeline Company, L.L.C., (3.08%).

PIPELINE FACTS

The 48-inch diameter steel pipeline runs 800 miles and crosses three mountain ranges and 800 rivers or streams. Moving "hot" oil across the permafrost rich soil of Alaska presented a special challenge to pipeline designers. Typical pipeline construction at the time involved burying most pipelines, but because of the permafrost through most of Alaska, large segments of the trans-Alaska pipeline were elevated above ground to keep the permafrost from melting. About half of the 800 mile pipeline is buried in a conventional manner.

More than 16 billion barrels have moved through the Trans Alaska Pipeline System since start up in 1977. The volume of oil flowing through the pipeline has decreased from a peak of 2.1 million barrels per day in 1988 to about 671,000 bpd in 2010. Alaska today supplies nearly 17% of the United States' domestic crude oil production.

Over 19,000 oil tankers have been loaded with Alaska crude oil in Valdez since the pipeline began operation. The Marine Terminal cost $1.4 billion to build, covers 1,000 acres, and includes 18 oil storage tanks with a total capacity of over 9 million barrels.

SPILL PREVENTION AND RESPONSE

Alyeska Pipeline spends over $60 million annually to oil spill prevention and response in Prince William Sound, and has dedicated over 300 personnel to this effort, mostly through its Ship Escort/Response Vessel System (SERVS). Created in July 1989, SERVS is considered one of the best oil spill prevention and response forces in the world. The SERVS mission is three fold: prevention, preparation, and response. Each laden tanker is escorted through Prince William Sound to the Gulf of Alaska by response vessels capable of assisting a distressed tanker. In addition, oil spill response equipment has been pre-stationed throughout the Sound for rapid response.

Between 60-70 drills are held annually so personnel and equipment along all 800 miles of TAPS are ready 24/7 to respond to any contingency.

THROUGHPUT, FLOW RATE AND CRUDE OIL

- Approximately 650,000 barrels of oil per day currently move through the pipeline at about 3 mph (one barrel = 42 gallons).
- Transport time is about 14 days from Prudhoe Bay to Valdez.
- Maximum daily throughput was 2,145,297 barrels on January 14, 1988.
- Five separate oil streams enter TAPS at Pump Station 1. The commingled oil is approximately 112 degrees F and cools to approximately 54 degrees F during its trip to Valdez.
- Oil volume is measured as it enters and leaves the pipeline and at metering stations along the pipeline route. Metering is essential for accounting and leak detection.
- 178 mainline valves control oil flow and protect the environment by limiting the potential size of spills, especially near stream crossings and other environmentally sensitive areas.
- 83 check valves automatically prevent reverse flow of oil.
- 71 gate valves can block oil flow in either direction.

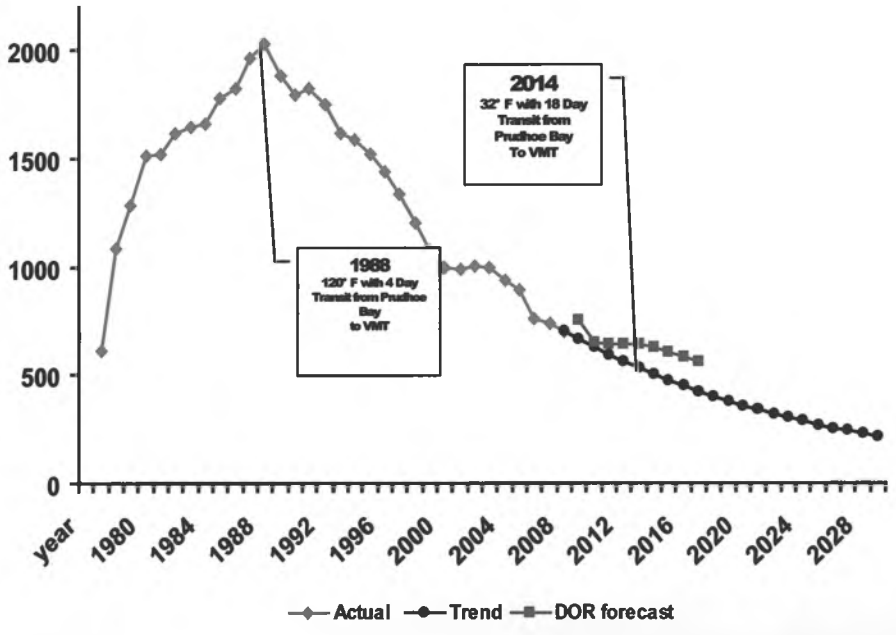
ALASKA OIL PRODUCTION IN DECLINE

- Production is now only about one third of what it was at its peak in 1989.
- Production is projected to continue declining 5-6% per year. Even new fields being developed won't be enough to offset the declining output of the Prudhoe Bay field.
- At this rate, TAPS will be transporting less than 500,000 barrels of oil per day in five to six years.

The technical challenges of low throughput (wax and water buildup, frost heaves, ice crystals and plugs, etc.) can and will be solved.

Economics are the biggest challenge. What will happen when current oil fields are depleted (as depicted on the chart above) or when it is no longer profitable for oil companies to transport oil in TAPS?

TAPS currently supplies approximately 15% of the U.S. oil production. What will happen if this source of domestic oil stops?



Mary Jackson

To: Jeff Stepp; Mary Jackson
Cc: Banks, Kevin R (DNR); Fulton, Trevor M (DNR)
Subject: SB 85 SRES follow-up
Attachments: Discov to Prod.ppt

Here are two answers from questions that were raised during SRES hearing on SB 85. Please forward to the committee and let us know if there are any further questions.

1) What's the development cost of a typical new project?
Recent examples of new project costs include: Nikaitchuq is expected to cost $1.45 billion to fully develop (published in 2009)
Costs to develop Oooguruk are $550 million (from Pioneer's 2007 capital budget report)

2)What's the duration between exploration and first production?
Based on 54 Alaskan oil pools statewide, the average time between exploration and first production is 10.9 years, but most fields come on considerably sooner, and some others can take decades for a variety of holdups to be resolved. Many of the longest waits are for pools with heavy oil, or other "puddles" near the major fields that had to wait for facilities capacity, etc. before they could be produced.

The target of SB 85 is **NEW** oil

- Senate Bill 85 proposes a new credit:

- AS 43.55.026: **Development Cost Credit** (p. 2, lines 12-16)
  - 100% of qualified development expenditures (CAPEX)
    - Minus credits issued under 43.55.023 (a) [20% of qualified capital expenditures]
    - and 43.55.023 (b) [25% of net operating loss]

- For undeveloped properties and pools (p. 2, lines 7-11)
  - A lease or property that as of December 31, 2010 has not been directly involved in *sustained production*; or
  - A pool that as of December 31, 2010 has not been involved directly in sustained production.

Page references are given for the E Version of CS SB 85 (27-LS0484\E)

Example: $10 million capital expenditure

Producer with a tax liability		Producer with no tax liability	
CAPEX:	$10,000,000	CAPEX:	$10,000,000
.023(a):	($2,000,000)	.023(a):	($2,000,000)
		.023(b):	($2,500,000)[1]
.026 Credit:	$8,000,000	.026 Credit:	$5,500,000

[1]Assuming that the producer had a carry forward loss for the purposes of .023 (b) of $10,000,000.

Limitations on the .026 credit

- The .026 credit may not be transferred and may not be used to reduce a person's tax liability under AS 43.55.011(e) below zero. (p. 2, line 30 – p. 3, line 1)

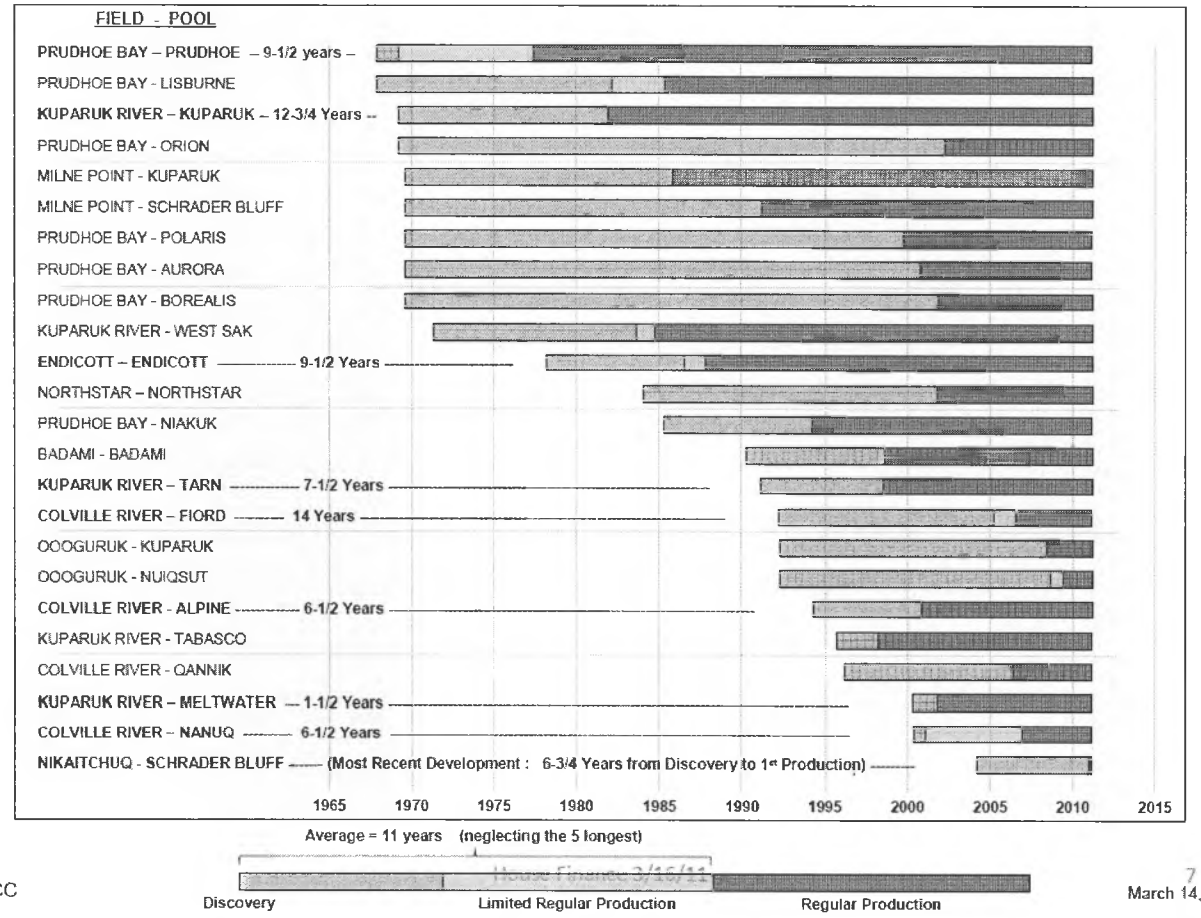
- The .026 credit may not be taken against the tax levied by AS 43.55.011(e) until there is production.
  - For the purposes of applying the .026 credit the tax shall be allocated in proportion to the volume of production from that lease or property. (p. 3, lines 6-13)
  - Example: If production from the new pool within an existing unit is only 10% of production from the unit the credit may only be applied against a maximum of 10% of the tax due from the unit.

Page references are given for the E Version of CS SB 85 (27-LS0484\E)

Creating a stampede.

- In order to qualify for the proposed credit, qualified development expenditures must be made before 2018 (p. 2, line 1)

Development Timeline for North Slope Oil Fields



The proposed .026 credit is for expenditures made after discovery and before sustained production (p. 2, lines 12-21).

In the AOGCC chart to the left, that is for primarily the blue, and possibly the tan sections of the timeline.

Source: AOGCC Presentation to House Finance (3/16/2011)

Monitoring the future; making Alaska Competitive for the long term.

- Section 4 of CS for Senate Bill 85 establishes the Alaska Oil and Gas Competitiveness Review Board.

- The Board is comprised of: (Page 4, lines 6-30)
  - Two members of the Legislature (one from the Senate appointed by the President, one from the House appointed by the Speaker).
    - The members of the Legislature serve as the co-chairs of the Board.
  - The Commissioners of DNR and DOR (or their designees).
  - Five public members appointed by the Governor
    - A geologist
    - A petroleum engineer
    - An economist
    - A member of an environmental or conservation group
    - A member of the public

Page references are given for the E Version of CS SB 85 (27-LS0484\E)

Duties and Reports

- The duties of the Board are to:
  - Review Historical, current and potential levels of investment;
  - Identify factors that affect investment;
  - Review the competitive position of the state
  - Make written findings before December 1 of each year (p. 5, lines 14-25) regarding:
    - Changes to the State's regulatory environment
    - Changes to the State's fiscal regime
    - Alternative means for increasing the state's ability to attract and maintain investment in and development of the state's oil and gas resources.

CS FOR SENATE BILL NO. 85( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS WAGONER, Stevens, McGuire, Huggins, Dyson, Giessel, Menard

A BILL

FOR AN ACT ENTITLED

"An Act providing for a tax credit applicable to the oil and gas production tax based on the capital cost of developing new oil and gas production; establishing the Oil and Gas Competitiveness Review Board; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20.043(g) is amended to read:

(g) A taxpayer that obtains a credit for a qualified capital investment or cost incurred for qualified services under this section may not also claim a tax credit or royalty modification for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**. However, a taxpayer may elect not to obtain a credit under this section in order to qualify for a credit provided under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**.

*** Sec. 2.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.026. Development cost credit. (a) This section applies to a credit

for a qualified development expenditure incurred before 2018 and before the start of sustained production that is taxable under AS 43.55.011(e). The qualified development expenditure must be incurred for development outside of the Cook Inlet sedimentary basin and outside of the Point Thomson unit established under AS 38.05.180(p) as the area of the Point Thomson unit existed on December 31, 2010. The qualified development expenditure must be for the development of a

(1) lease or property that, as of December 31, 2010, contains land that is not or previously had not been within a unit or is not or had not previously been involved directly in sustained production; or

(2) pool that, as of December 31, 2010, is not directly involved in or had not previously been involved directly in sustained production.

(b) The total amount of the credits under this section is equal to 100 percent of the qualified development expenditures that are incurred after the completion of the first well drilled that discovers a pool capable of commercial production from the lease or property and before the start of sustained production, less the amount of credits taken under AS 43.55.023(a) and (b). In consultation with the Alaska Oil and Gas Conservation Commission, the department shall determine the date

(1) on which the first well drilled discovered a pool capable of production; and

(2) of the start of sustained production from the pool, lease, or property.

(c) A credit under this section may be applied against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for the credit until the credit for qualified development expenditures has been fully applied.

(d) A qualified development expenditure that is taken as a credit under this section may not be used as an expenditure for which a credit may be taken under AS 43.20.043. A credit under AS 43.55.023 may not be taken against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for a credit during the same month in which a credit is taken under this section.

(e) A credit or portion of a credit under this section is not transferable and may not be used to reduce a person's tax liability under AS 43.55.011(e) to below zero for

any calendar year.

(f) The department shall adopt regulations describing the procedures for determining the amount of the credit, record keeping, verification of the accuracy of the credit claimed, allocating expenditures to a pool eligible for a credit under (a)(2) of this section, and other regulations necessary to administer this section.

(g) If a pool, lease, or property for which a credit may be taken under this section subsequently becomes a part of a unit, or a pool that is in a unit first begins sustained production after December 31, 2010, the credit may be applied only against the tax levied by AS 43.55.011(e) for the production of oil and gas attributable to the pool, lease, or property that qualified for the credit. For the purpose of applying the credit, the tax shall be allocated to the pool, lease, or property that qualified for the credit in proportion to the volume of production from that pool lease or property within the unit.

(h) In this section,

(1) "pool" has the meaning given in AS 31.05.170;

(2) "qualified development expenditure" means an expenditure, other than an expenditure for exploring for new oil or gas reserves, that may be recognized as a qualified capital expenditure as defined in AS 43.55.023;

(3) "sustained production" has the meaning given in AS 43.55.025(*l*).

* **Sec. 3.** AS 43.55.180(a) is amended to read:

(a) The department shall study

(1) the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011, the tax credits provided under **AS 43.55.023 - 43.55.026** [AS 43.55.023 - 43.55.025], and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and

(2) the effects of the tax rates under AS 43.55.011(i) on state revenue and on oil and gas exploration, development, and production on private land, and the

fairness of those tax rates for private landowners.

* **Sec. 4.** AS 44.99 is amended by adding new sections to read:

Article 06. Oil and Gas Competitiveness Review Board.

Sec. 44.99.600. Oil and Gas Competitiveness Review Board established. (a) The Oil and Gas Competitiveness Review Board is established.

(b) The board shall consist of nine members as follows:

(1) one senator appointed by the president of the senate;

(2) one representative appointed by the speaker of the house of representatives;

(3) five members of the public appointed by the governor, including one member who is a petroleum engineer, one member who is a geologist, one member who is an economist, and one member who is a member of an environmental or conservation group;

(4) the commissioner of natural resources or the commissioner's designee; and

(5) the commissioner of revenue or the commissioner's designee.

(c) The senator and representative appointed to the board under (b)(1) and (2) of this section shall be cochairs.

(d) Each legislative member serves for the duration of the legislature during which the member is appointed. Each public member serves for three years. An individual who has served on the board may be reappointed.

(e) A vacancy on the board shall be filled in the manner of the original appointment.

(f) A member of the board may be removed and replaced at the discretion of the person appointing that member.

(g) The public members of the board serve without compensation but shall receive per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

(h) The board may enter into contracts for professional services and may employ staff for administrative support for the board.

Sec. 44.99.610. Duties. The duties of the board include the following:

(1) review historical, current, and potential levels of investment in the state's oil and gas sector;

(2) identify factors that affect investment in oil and gas exploration, development, and production in the state, including tax structure, rates, and credits; royalty requirements; infrastructure; workforce availability; and regulatory requirements;

(3) review the competitive position of the state to attract and maintain investment in the oil and gas sector in the state as compared to the competitive position of other regions with oil and gas resources;

(4) in order to facilitate the work of the board, establish procedures to accept and keep confidential information that is beneficial to the work of the board, including the creation of a secure data room and confidentiality agreements to be signed by individuals having access to the confidential information;

(5) make written findings and recommendations, together with suggested legislation, to the Alaska State Legislature before December 1 of each year, or as soon thereafter as practicable, regarding

(A) changes to the state's regulatory environment that would be conducive to encouraging increased investment while protecting the interests of the people of the state and the environment;

(B) changes to the state's fiscal regime that would be conducive to increased and ongoing long-term investment in and development of the state's oil and gas resources; and

(C) alternative means for increasing the state's ability to attract and maintain investment in and development of the state's oil and gas resources.

Sec. 44.99.620. Information to be provided to board. (a) The commissioner of natural resources, the commissioner of revenue, the commissioner of environmental conservation, and other commissioners and state agencies that have responsibility for and maintain information related to oil and gas investment and activity in the state shall, at the request of the board, provide information required by the board to carry out the duties described in AS 44.99.610.

(b) At the request of the board, and except for information that is confidential under AS 43.05.230, a commissioner may disclose to the board information that is otherwise confidential after each member of the board and each staff member for the board with access to the information signs a confidentiality agreement prepared by the commissioner making the disclosure. Information that is confidential under AS 43.05.230 may not be disclosed to the board.

Sec. 44.99.630. Definition. In AS 44.99.600 - 44.99.630, "board" means the Oil and Gas Competitiveness Review Board.

* **Sec. 5.** AS 44.99.600, 44.99.610, 44.99.620, and 44.99.630, added by sec. 5 of this Act, are repealed June 30, 2021.

* **Sec. 6.** This Act takes effect immediately under AS 01.10.070(c).

SENATE BILL NO. 85

"An Act providing for a tax credit applicable to the oil and gas production tax based on the capital cost of developing new oil and gas production; establishing the Oil and Gas Competitiveness Review Board, and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 43.20.043(g) is amended to read:
(g) A taxpayer that obtains a credit for a qualified capital investment or cost incurred for qualified services under this section may not also claim a tax credit or royalty modification for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR]43.55.025**, or 43.55.026**. However, a taxpayer may elect not to obtain a credit under this section in order to qualify for a credit provided under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**.

~~* **Sec. 2.** AS 43.55.023(a) is amended to read:~~
~~(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:~~
~~(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, [OR] AS 43.55.025**, or 43.55.026**, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; however, not more than half of the tax credit may be applied for a single calendar year;~~
~~(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer~~
~~(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);~~
~~(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).~~

* **Sec. 2 ~~3~~.** AS 43.55 is amended by adding a new section to read:
Sec. 43.55.026. Development cost credit. (a) This section applies to a credit for a qualified development expenditure incurred before 2018 and before the start ~~the date~~ of sustained production ~~of oil or gas in paying quantities for a lease or property~~ that is taxable under AS 43.55.011(e). The qualified development expenditure must be incurred for development outside of the Cook Inlet

sedimentary basin and outside of the Point Thomson unit established under AS 38.05.180(p) as the area of Point Thomson existed on December 31, 2010. The qualified development expenditure must be for the development of a

(1)lease or property that, as of December 31, 2010 ~~and that~~ contains land that, ~~as of December 31, 2010,~~ is not or previously had not been within a unit or is not or had not previously been involved directly in sustain production or; ~~or produced oil or gas in paying quantities.~~

(2) Pool that, as of December 31, 2010, is not directly involved in or had not previously been involved in sustained production.

(b) The total amount of the credit under this section is equal to 100 percent of the qualified development expenditures that are incurred after the completion of the first well drilled that discovers a pool capable of commercial production from the lease or property and before the start ~~commencement~~ of sustained production ~~in paying quantities~~ , less the amount of credits taken under AS 43.55.023(a) and (b). ~~The department,~~ In consultation with the

~~(1)~~ Alaska Oil and Gas Conservation Commission, the department shall determine the date

(1) on which the first well drilled discovered a pool capable of production ~~from a lease or property for which the credit is taken~~; and

(2) ~~Department of Natural Resources, shall determine the date~~ of the ~~commencement~~ start of sustained production from the pool, lease or property. ~~in paying quantities from the lease or property for which the credit is taken~~.

(c) A ~~The~~ credit under this section may be applied against the tax levied by ~~due under~~ AS 43.55.011(e) for the pool, lease, or property that is the basis for the credit until the credit for qualified development expenditures has been fully applied. ~~during the five-year period immediately following the date of the commencement of production in paying quantities, or, if the credit is fully applied before the end of the five-year period, until the date the credits for qualified development expenditures have been fully applied against the tax due under AS 43.55.011(e), whichever occurs first. A credit for a qualified expenditure expires if not taken within five years after the date of the commencement of production in paying quantities and may not be applied to the tax due under AS 43.55.011(e) for the production of oil or gas from a lease or property not eligible for the credit under this section~~.

(d) A qualified development expenditure that is taken as a credit under this section may not be used as an expenditure for which a credit may be taken under AS 43.20.043 ~~or AS 43.55.023~~. A credit under AS 43.55.023 may not be taken against the tax levied by ~~due under~~ AS 43.55.011(e) for the pool, lease, or property that is the basis for a credit during the same month in which a credit is taken under this section.

(e) A credit or portion of a credit under this section is not transferable and may not be used to reduce a person's tax liability under AS 43.55.011(e) to below zero for any calendar year.

(f) The department shall adopt regulations describing the procedures for determining the amount of the credit, record keeping, verification of the accuracy of the credit claimed, allocating expenditures to a pool elibible for a credit under (a)(2) of this section and other regulations necessary to administer this section.

(g) If a pool, lease or property for which a credit may be taken under this section subsequently becomes a part of a unit, or a pool that is in a unit first begins sustained production after December 31, 2010, ~~under AS 38.05.180(p)~~, the credit may be applied only against the tax levied by ~~due under~~ AS 43.55.011(e) for the production of oil and gas attributable to the pool, lease or property that qualified for the credit in proportion to the volume of production from that pool, lease or property within the unit .

(h) In this section,

(1) "pool" has the meaning given in AS 31.05.170; ~~"production in paying quantities" means production of oil and gas in quantities sufficient to recover the cost of operating and marketing, although the quantity may be insufficient to recover the cost of drilling;~~

(2) "qualified development expenditure" means an expenditure, other than an expenditure for exploring for new oil or gas reserves, that may be recognized as a

~~(A)~~ qualified capital expenditure as defined in AS 43.55.023; or

~~(B) lease expenditure under AS 43.55.165 if oil or gas had been produced from the lease or property at the time the qualified development expenditure was incurred.~~

(3)"sustained production" has the meaning given in AS 43.55.025(*l*).

* **Sec. ~~3~~ 4.** AS 43.55.180(a) is amended to read:

(a) The department shall study

(1) the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011, the tax credits provided under **AS 43.55.023 - 43.55.026** [AS 43.55.023 - 43.55.025], and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and

(2) the effects of the tax rates under AS 43.55.011(i) on state revenue and on oil and gas exploration, development, and production on private land, and the fairness of those tax rates for private landowners.

*Sec. 4 AS 44.99 is amended by adding new sections to read:

Entire Section 4 in version \E is new (page 4, line 2 to page 6 line 8) Oil and Gas Competitiveness Review Board.

* Sec. 5 AS 44.99.600, 44.99.610, 44.99.620 and 44.99.630, added by sec. 5 of this Act are repealed June 30, 2021.

* **Sec. ~~6~~ 5.** This Act takes effect immediately under AS 01.10.070(c).

Draft CS Senate Bill 85 version \E 3-24-11
Sectional Analysis
TAX CREDIT FOR NEW OIL & GAS DEVELOPMENT

TITLE: Adds new Oil and Gas Competitiveness Review Board.

Section 1: Existing law prohibits multiple tax credits claimed against corporate income, this adds the new credits established in this bill, **43.55.026**.

Section 3: sets out new **43.55.026** for the new tax credit.

(a) Directs that the new credit applies to qualified development expenditures that were incurred before 2018 and before sustained production occurs. Excludes the credit from the Cook Inlet Basin and the Point Thomson unit. Restricts the credit to:
(1) A lease or property not within a unit or previously been within a unit, or
(2) A pool that is not or previously had not been involved with sustained production.

NOTE: effect is that a pool within a unit is eligible if it is not now or previously had been under sustained production. Exclusion specifically of Point Thomson unit compared to subsection (1) is duplicative and should be deleted.

(b) Establishes that the credit amount is 100% of the qualified development expenditures incurred after completing the drilling of the first well that discovers a pool (capable of commercial production) and before production (in paying quantities) commences. The Department of Revenue (DOR), in consultation with the Alaska Oil and Gas Commission (AOGCC) establishes the date of the credit from the first well drilled to the start of sustained production from that pool, lease or property.

(c) Establishes that the credit may be applied against the production tax levied until the credits for the expenditures are fully applied, whichever occurs first.

Essentially, the production tax liability is used to offset the development costs and the production tax liability is the determining factor for the amount of credit.

(d) Restricts the use of the new credit so there are not multiple credits.

(e) Establishes that the credit or any portion of the credit is not transferable and may not reduce the tax liability below zero for AS 43.55.011(e) (the production tax) for any calendar year.

Essentially, the tax credit stays with the drilling site and the new credit may not allow the tax payer to obtain a refund from the state in any calendar year.

(f) Allows the DOR to adopt regulations needed to administer the new credit.

(g) Establishes procedures so that when a lease or property that utilizes this new credit becomes part of a unit under AS 38.05.180(p)[1], the credit is applied only to the production tax due for the lease or property that qualified for the credit.

(h) Defines:
1. "pool" by referencing existing statute AS 31.05.170.
2. "qualified development expenditure".
3. "sustained production" by referencing existing statute AS 43.55.025(*l*).

Section 4: Establishes a new Oil and Gas Competitiveness Review Board.

Section 5: This is the repeal section for the new Oil and Gas Competitiveness Review Board.

Note that it references "sec. 5" which is incorrect – should read "sec. 4".

Amends existing law to include new section for this tax credit in **43.55.026**.

Section 6: Establishes an immediate effective date for the legislation.

Honorable Tom. Wagoner
Co-chair, Senate Resources Committee
State Capitol
Juneau, AK 99801

Re: Senate Bill 85

Dear Chairman Wagoner -

We are appreciative of your efforts behind the introduction of Senate Bill 85. As you know, our experiences under ACES has proven to be difficult in attracting new investment to Alaska's North Slope.

The proposed 100% capital credit program, as proposed in your legislation, would clearly provide a meaningful incentive for new investment on the North Slope.

Again, we appreciate your efforts to modify Alaska's burdensome tax regime. It is important that Alaska make changes this legislative session. We will continue to monitor the progress of your legislation.

Sincerely,

William D. Armstrong
President

Mary Jackson

Subject: Amended Written Public Testimony on SB49

Senator Wagoner, I inadvertently confused your bill, SB85, with that of Governor Parnell's, SB49. Therefore, I have amended my public testimony to correct my error. I would be most appreciative if you would substitute my amended written public testimony, which is the Attachment to this email message, for my earlier submission containing my aforementioned inadvertent error, i.e., mixing up SB85 with SB49.

Respectfully,

/s/ James W. Elliott

Alaska State Legislature

Please enter into the record my testimony to the Senate Resources Committee

Bill/Subject: SB49 Date: March 30, 2011

SB49 Emailed Written Public Testimony (Amended) to Senate Natural Resources Committee through Senator Wagoner' Office - March 30, 2011

Senate Natural Resources Committee Co-Chairs Sen. Paskvan and Sen. Wagoner, I am unable to attend today's public hearing on the subject bill. Therefore, I respectfully request that my written testimony, which follows, be entered in the public record of today's hearing on SB49.

First, I wish to thank you and the other members of the Senate Natural Resources Committee for your service on-behalf of the people of Alaska. The Alaska Legislature is an esteemed institution, and your job of charting a fiscally sound course for our great State regarding its natural resources is a daunting responsibility.

Second, I am pleased to have this opportunity to submit my testimony, albeit in writing, on SB49. Specifically, with respect to Governor Parnell's proposed tax reductions and incentives to the big oil producers, ConocoPhillips, BP, Exxon, Shell, et al., I have the following concerns and comments:

1. What exactly is the Governor's justification for Alaska giving some the largest, most profitable corporations on the planet tax breaks and incentives to find and produce a product that, by all accounts, is in high demand and for which there is a limited supply globally? To date, the Governor has failed to present any convincing evidence in support of his proposal to reduce taxes and provide incentives to the major oil companies.

2. Where are the data, analyses, and oil industry commitments that would lend credibility to the Governor's proposed fiscal strategy for creating more jobs and increasing future oil revenues for the State if his planned is approved by the Legislature?

3. By the Governor's own estimation, his tax breaks and incentives to the oil companies will cost Alaska $5 billion in revenue over the next five fiscal years. Some in the Legislature have estimated that his proposal could cost the State, depending on the price of oil, as much as $2 billion in revenue annually. Can Alaska afford the Governor's plan? I suggest it cannot.

4. I am just a four-acre farmer, but the last time I checked the advice of reputable economic and fiscal experts, the Governor's wishful thinking-cross your fingers approach to fiscal planning is not sound policy. Don't Alaskans deserve a more fiscally prudent plan than our Governor's roll of the dice?

5. To offset his projected loss in State revenue, Governor Parnell proposes that Alaska dip into its savings to cover any deficits necessary to balance its annual operating budgets. Would it not be more prudent to forego his tax breaks and incentives to the oil companies in favor of the more conservative fiscal policy of paying for current year expenditures from current year revenues? Using one-time, non-recurring savings to cover budget deficits, as the Governor proposes, is a slippery slope fiscally.

6. According to the National Petroleum Council's Global Oil & Gas Study, which was made available July 18, 2007, "The major oil and gas companies are increasingly turning their attention to overseas development opportunities, leaving U.S. production largely in the hands of independent oil and gas companies." That being the case, one ought to ask just how practical is Governor Parnell's proposal to place Alaska in the unenviable position of having to deficit spend annually and drain down its savings to offset said annual operating budget deficits on the decidedly uncertain bet that his plan will attract more exploration and production activities from the major oil companies, like ConocoPhillips, BP, Exxon, and Shell?

Per the concerns and comments expressed above, I am opposed to SB49, urge you to vote against it, and support Senator Wagoner's proposed legislation, SB85, instead.

/s/ James W. Elliott 2440 East Tudor Road #1135 Anchorage, Alaska 99507

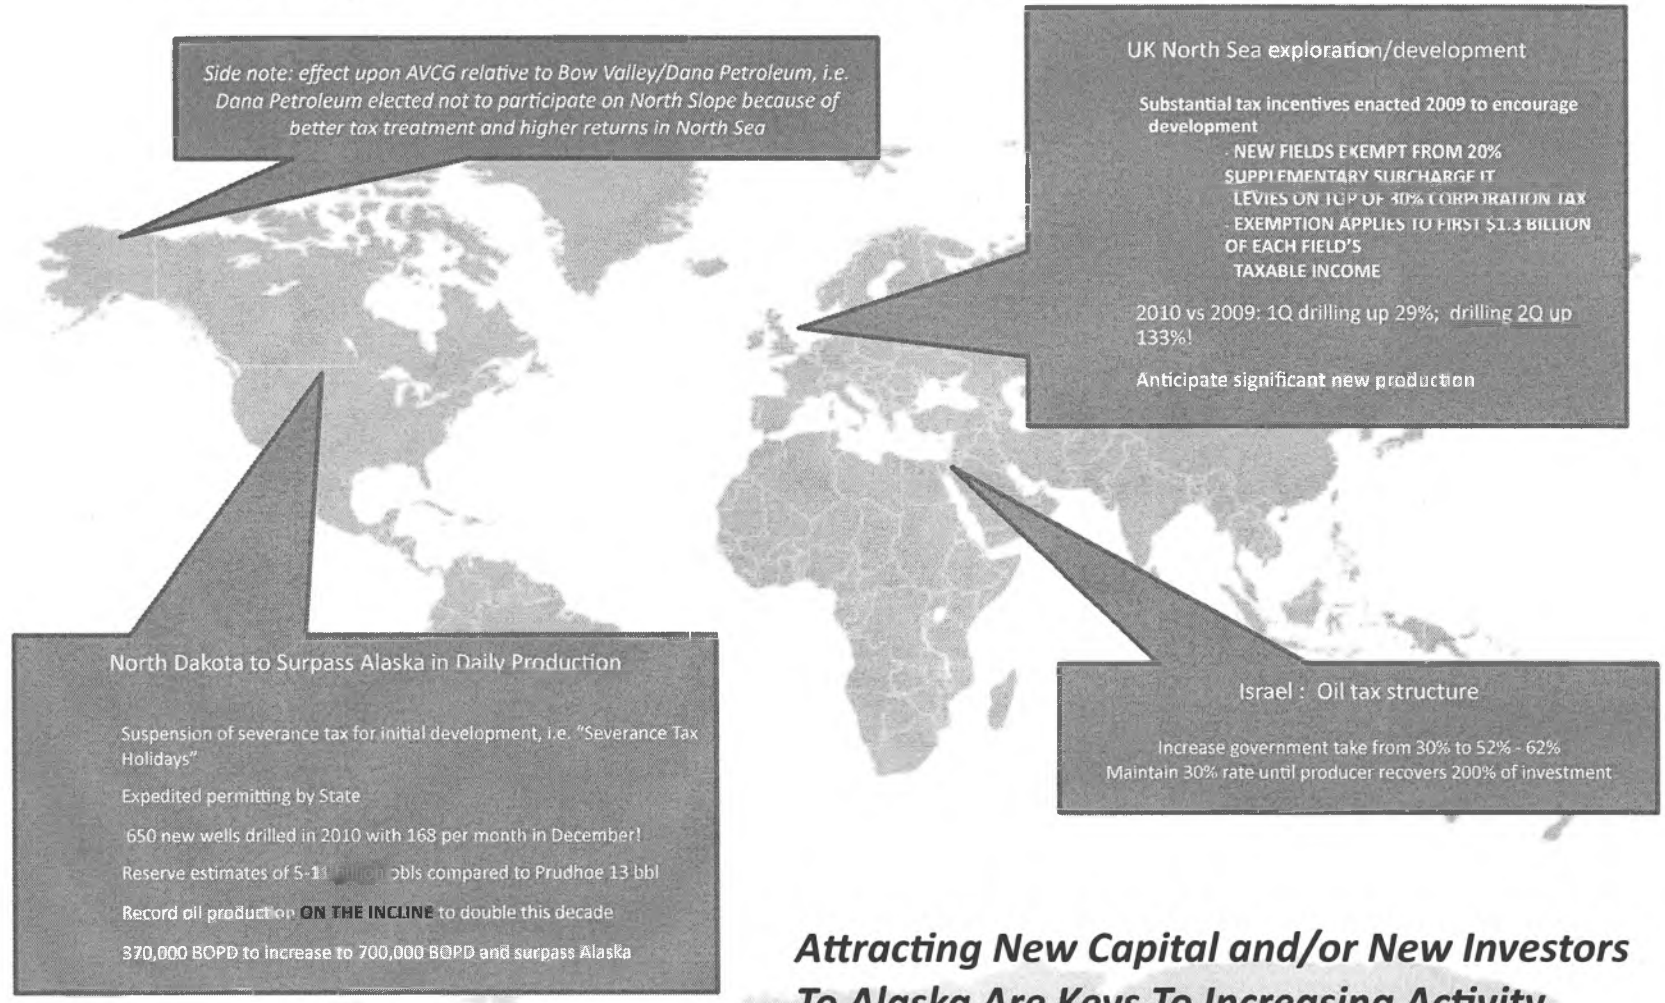
Attracting New Investors In The Face Of Global Competition For Capital



Side note: effect upon AVCG relative to Bow Valley/Dana Petroleum, i.e. Dana Petroleum elected not to participate on North Slope because of better tax treatment and higher returns in North Sea

UK North Sea exploration/development

Substantial tax incentives enacted 2009 to encourage development

- **NEW FIELDS EXEMPT FROM 20% SUPPLEMENTARY SURCHARGE IT LEVIES ON TOP OF 30% CORPORATION TAX**
- **EXEMPTION APPLIES TO FIRST $1.3 BILLION OF EACH FIELD'S TAXABLE INCOME**

2010 vs 2009: 1Q drilling up 29%; drilling 2Q up 133%!

Anticipate significant new production

North Dakota to Surpass Alaska in Daily Production

Suspension of severance tax for initial development, i.e. "Severance Tax Holidays"

Expedited permitting by State

650 new wells drilled in 2010 with 168 per month in December!

Reserve estimates of 5-11 billion bbls compared to Prudhoe 13 bbl

Record oil production **ON THE INCLINE** to double this decade

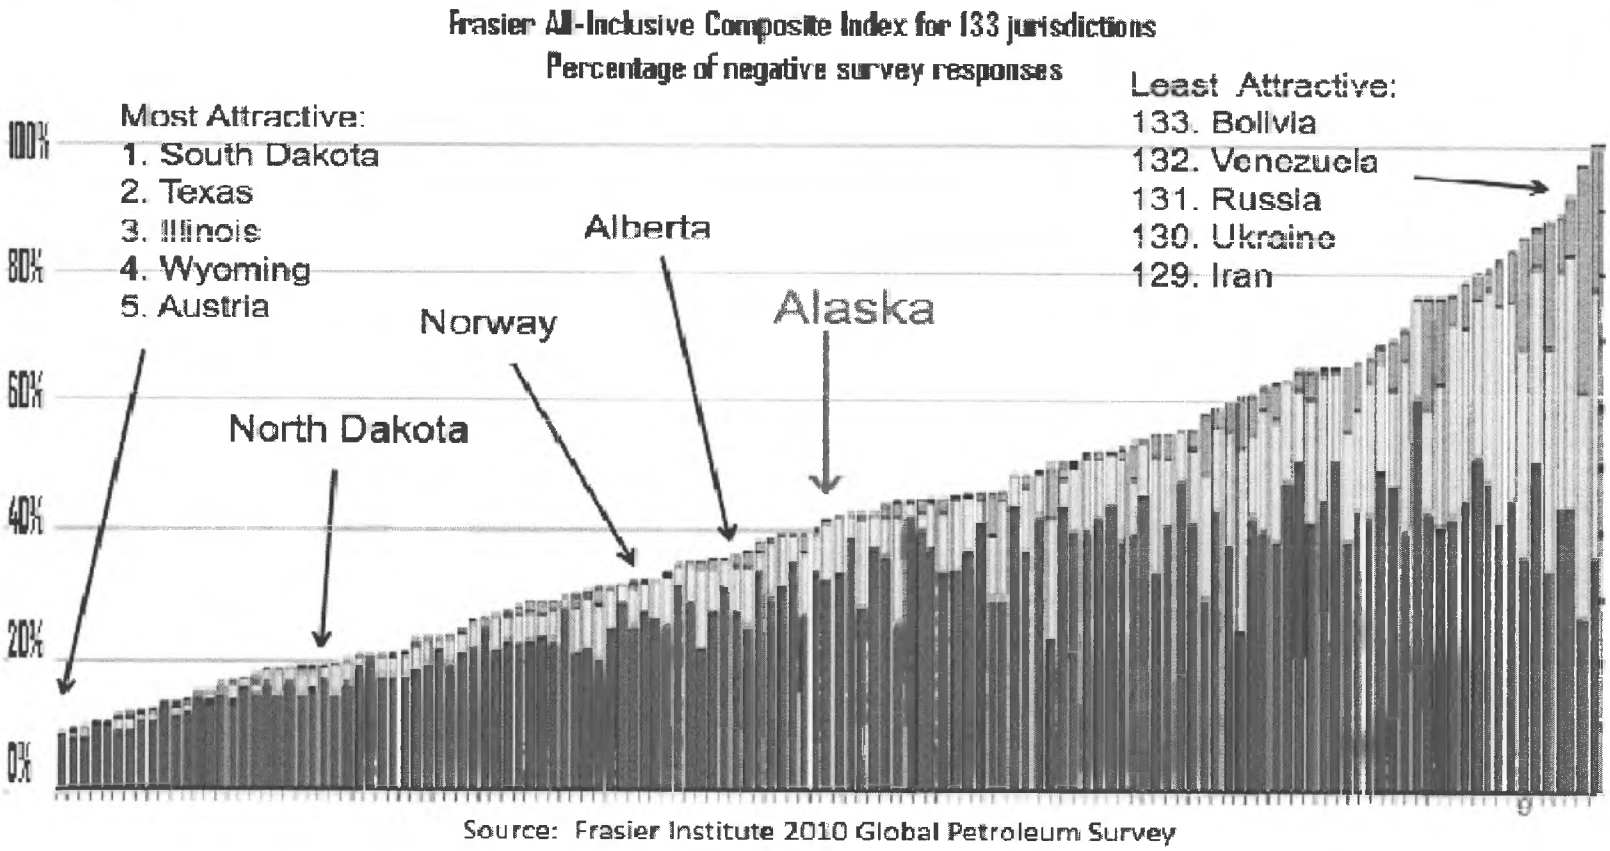
370,000 BOPD to increase to 700,000 BOPD and surpass Alaska

Israel : Oil tax structure

Increase government take from 30% to 52% - 62%
Maintain 30% rate until producer recovers 200% of investment

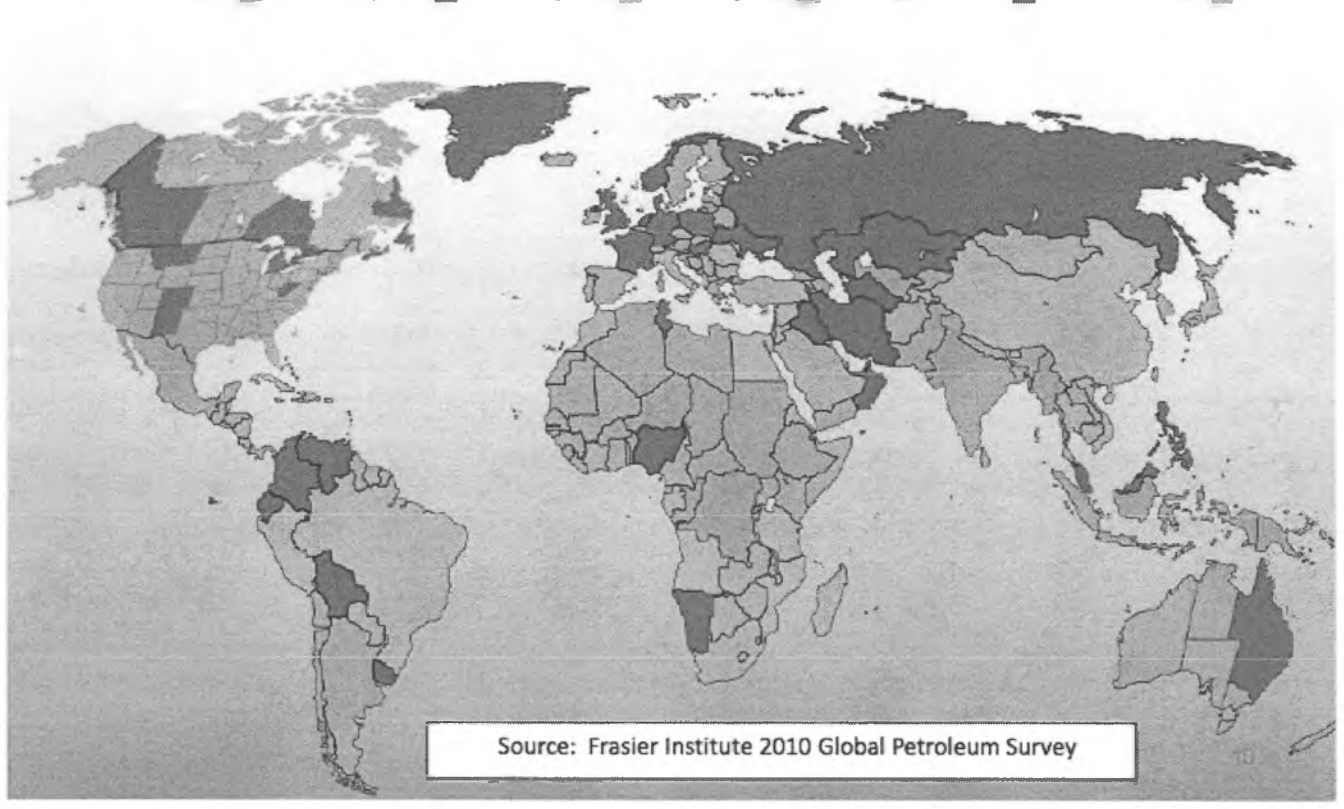
Attracting New Capital and/or New Investors To Alaska Are Keys To Increasing Activity That Will Level Production

Frasier: Alaska is #68 of 133 in terms of overall attractiveness



Source: SB 49 Dept of Revenue Presentation, 2/5/2011

Frasier: Alaska's investment climate is "in the middle" globally



Source: SB 49 Dept of Revenue Presentation, 2/5/2011

AVCG's Thoughts, Suggested Changes To SB 85

1) **AVCG supports the SB 85 Development Cost Credit for a credit of up to 100% of qualified CAPEX...would help us attract new investors & capital**
   - ✓ For AVCG's approach to development of "early on production" with stages of modular facilities rather than wait on one massive facility, there is significant – perhaps 50% - CAPEX for development wells and add-on modules 2 years or so after production startup
   - ✓ Modify credit to apply to all CAPEX in the approved Field Development Plan and not just CAPEX spent to start of production, eg Credits to the date the Department of Natural Resources attests that the formal Field Development Plan for CAPEX has been achieved ... or for CAPEX spent 2 years after initial production startup

2) **However, AVCG believes that to level production, comprehensive change must address ALL the "next frontiers" for major developments on the NS**
   - ✓ **Exploration with smaller fields sharing regional processing facilities**
   - ✓ **Low-permeability sands**
   - ✓ **Source rock shales**
   - ✓ **NS viscous oil**
   - ✓ **Major projects in existing fields/zones, ie "Big Fields Get Bigger"**
   - o NS offshore oil
   - o NS natural gas

3) **SB 85 addresses NEW oil, e.g. the first 3 items listed above...these may be insufficient to level the production...SB 49, however, addresses ALL oil sources which is needed**

AVCG's Recommends Merger of 49 & 85 To Achieve The Common Goal of "No Decline"

Merge ideas of SB 85 into the broader bill and support proposals in SB 49 :

1) **Revise the progressivity surcharge to the "bracketed tax structure" with calculations made annually instead of monthly**
2) **Cap the total tax at 50% when oil prices top $92.50/bbl**
3) **For development of new fields outside existing production units, the base tax rate will be 15% insteadof 25% and cap the total tax at 40%..and introduce credit structure of HB 85**

A bracketed structure with reduced base rate and cap and a reduced base tax rate for new fields with a lower cap would attract more investor partners for AVCG et al to increase small field development and establishment of the North Slope's first "open access" facility sharing processing facilities.

4) **Accelerate the payment for exploration and other qualified capital investments to one year vs. two years**

The acceleration of credit recovery payments to a one year cycle would allow for AVCG and its partners to consider drilling 3 exploration wells per year instead of an average of 2 per year...a chance for more discoveries sooner

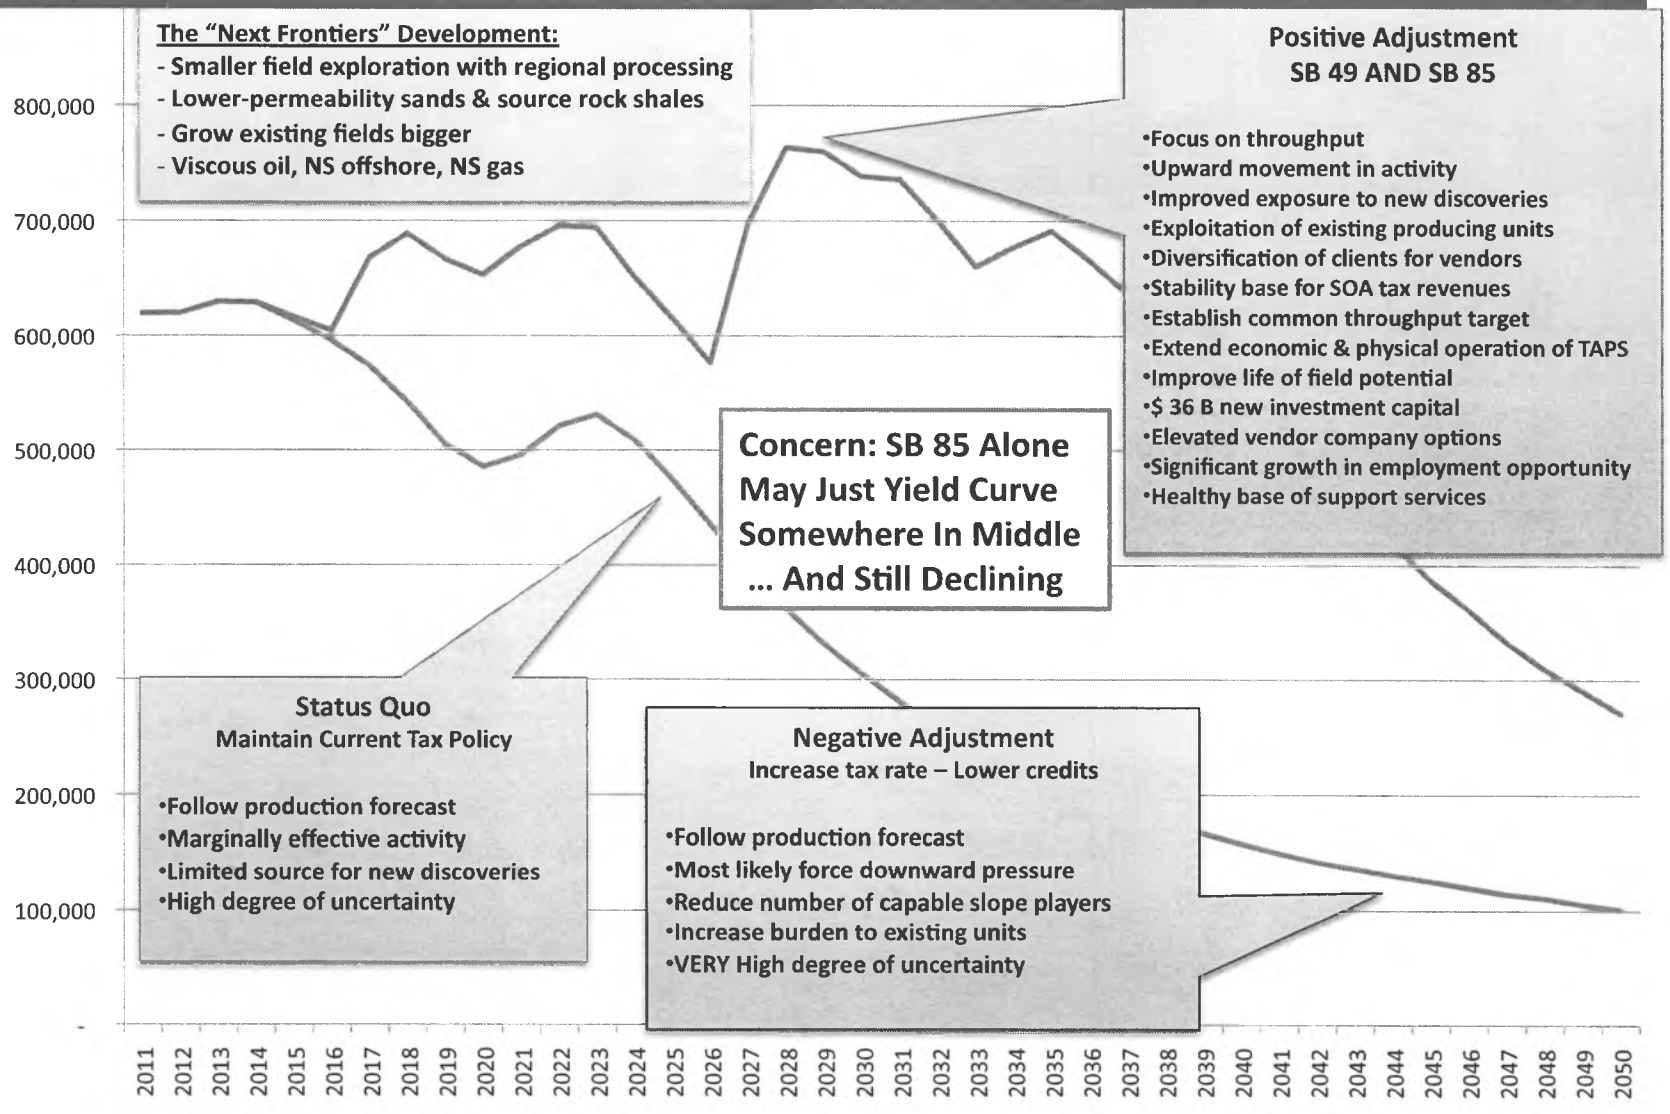
5) **Increase the tax credits for "qualified capital" investments from the current 20% to 40%...OR SB 85**

An increase in qualified capital credits to 40% would provide immediate impact to BRPC's project investment base and would extend our ability to encourage additional and continued capital investment from our current WIO's therefore providing more opportunities for successful discoveries and future development projects

6) **Extend indefinitely the "Small Producer Tax Credit" of $12MM a year from expiring on May 1, 2016 (or certainly extend another 5 years to May 1, 2021 then re-assess at that time). This is an item not currently in current bills but would be helpful in attracting new long-range development capital for BRPC and others like our company.**

Currently, we have a sanctioning proposal in front of our WIO's that projects first oil and revenues in 2013. With the Small Producers Credit expiring in May 2016, the development would be limited to a 3 year use of this credit. We would propose an extension through 2021 to allow our first project the full credit to attract new investors.

AVCG LLC



The "Next Frontiers" Development:
- Smaller field exploration with regional processing
- Lower-permeability sands & source rock shales
- Grow existing fields bigger
- Viscous oil, NS offshore, NS gas
Positive Adjustment
SB 49 AND SB 85
•Focus on throughput
•Upward movement in activity
•Improved exposure to new discoveries
•Exploitation of existing producing units
•Diversification of clients for vendors
•Stability base for SOA tax revenues
•Establish common throughput target
•Extend economic & physical operation of TAPS
•Improve life of field potential
•$ 36 B new investment capital
•Elevated vendor company options
•Significant growth in employment opportunity
•Healthy base of support services
Concern: SB 85 Alone May Just Yield Curve Somewhere In Middle ... And Still Declining
Status Quo
Maintain Current Tax Policy
•Follow production forecast
•Marginally effective activity
•Limited source for new discoveries
•High degree of uncertainty
Negative Adjustment
Increase tax rate – Lower credits
•Follow production forecast
•Most likely force downward pressure
•Reduce number of capable slope players
•Increase burden to existing units
•VERY High degree of uncertainty

Changes to CS SB 85 version E (27-LS0484\E) in CS SB 85 version X (27-LS0484\X)

Title: No changes.

Section 1: No changes.

Section 2: The following changes were made to section 2.

1. 43.55.026 (a): The period during which a credit can be accrued has been changed to within 24 months after the completion of the first development well for a qualifying pool, lease or property. The reference to the Pt. Thomson unit in the E version has been removed.
2. 43.55.026 (b): Credits earned for exploration expenditures under AS 43.55.025 have been added to the list of credits that are subtracted from the 100 percent of qualifying development expenditures. The timing of qualifying development expenditures and the consultation with AOGCC has been changed to conform to the change in subsection (a).
3. 43.55.026 (c): No changes.
4. 43.55.026 (d): Language relating to taking a credit under AS 43.55.023 during the same month in which a credit is taken has been deleted.
5. 43.55.026 (e): No changes.
6. 43.55.026 (f): Authority to promulgate regulations for allocating the tax levied by AS 43.55.011(e) for the purposes of (g) has been added to the powers granted to the department of Revenue.
7. 43.55.026 (g): The allocation language has been simplified to clarify that a credit earned under AS 43.55.026 can offset a person's tax liability in proportion to the volume of production from the pool, lease or property for which the qualified development expenditure was incurred.
8. 43.55.026 (h): The definition of qualified development expenditure has been limited to a qualified capital expenditure as defined in AS 43.55.023.

Section 3: Added a new section 3 that includes reference language to AS 43.55.160 (a) that conforms the change made in new section 4 to the calculation of production tax value.

Section 4: Added a new section 4 that adds a new subsection to AS 43.55.160 that increases the production tax value by the value of a credit received under AS 43.55.026.

Section 5: No changes to the section (previously section 3).

Changes to CS SB 85 version E (27-LS0484\E) in CS SB 85 version X (27-LS0484\X)

Section 6: No changes to the section (previously section 4).
Section 7: No changes to the section (previously section 5).
Section 8: No changes to the section (previously section 6).

CS FOR SENATE BILL NO. 85( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS WAGONER, Stevens, McGuire, Huggins, Dyson, Giessel, Menard

A BILL

FOR AN ACT ENTITLED

"An Act providing for a tax credit applicable to the oil and gas production tax based on the capital cost of developing new oil and gas production; relating to the determination of the production tax value of oil and gas; establishing the Oil and Gas Competitiveness Review Board; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 43.20.043(g) is amended to read:

(g) A taxpayer that obtains a credit for a qualified capital investment or cost incurred for qualified services under this section may not also claim a tax credit or royalty modification for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**. However, a taxpayer may elect not to obtain a credit under this section in order to qualify for a credit provided under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**.

* **Sec. 2.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.026. Development cost credit. (a) This section applies to a credit for a qualified development expenditure incurred before 2018 and within 24 months after the completion of the first development well for a qualifying pool, lease, or property that is subject to the tax levied by AS 43.55.011(e). The qualified development expenditure for which a credit may be authorized under this section must be outside of the Cook Inlet sedimentary basin and for development of a

(1) lease or property that, as of December 31, 2010, contains land that is not or previously had not been within a unit or is not or had not previously been involved directly in sustained production; or

(2) pool that, as of December 31, 2010, is not directly involved in or had not previously been involved directly in sustained production.

(b) The total amount of the credits under this section is equal to 100 percent of the qualified development expenditures that are incurred within 24 months after the completion of the drilling of the first development well for production from the lease or property, less the amount of credits taken under AS 43.55.023(a) and (b) and 43.55.025 for the same expenditures. In consultation with the Alaska Oil and Gas Conservation Commission, the department shall determine the date the drilling of the first development well is completed for a pool capable of sustained production.

(c) A credit under this section may be applied against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for the credit until the credit for qualified development expenditures has been fully applied.

(d) A qualified development expenditure that is taken as a credit under this section may not be used as an expenditure for which a credit may be taken under AS 43.20.043.

(e) A credit or portion of a credit under this section is not transferable and may not be used to reduce a person's liability for the tax levied by AS 43.55.011(e) below zero for any calendar year.

(f) The department shall adopt regulations describing the procedures for determining the amount of the credit, record keeping, verification of the accuracy of the credit claimed, allocating the tax levied by AS 43.55.011(e) to a pool, lease, or property for the purposes of (g) of this section, and other regulations necessary to

administer this section.

(g) The credit under this section may be applied only against the tax levied by AS 43.55.011(e) for the production of oil and gas attributable to the pool, lease, or property for which a qualified development expenditure is incurred that qualifies for the credit. For the purpose of applying the credit, the tax shall be allocated to the pool, lease, or property that is subject to the credit in proportion to the volume of production from that pool, lease, or property within the unit.

(h) In this section,

(1) "pool" has the meaning given in AS 31.05.170;

(2) "development well" means a well drilled to a pool capable of sustained production;

(3) "qualified development expenditure" means a qualified capital expenditure, as defined in AS 43.55.023, that is incurred after the drilling for the first development well is complete;

(4) "sustained production" has the meaning given in AS 43.55.025(*l*).

*** Sec. 3.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section **and subject to the adjustment in (f) of this section**, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil and gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by

the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(2) AS 43.55.011(g), the monthly production tax value of the taxable

(A) oil and gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from

those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170.

* **Sec. 4.** AS 43.55.160 is amended by adding a new subsection to read:

(f) The production tax value determined under (a)(1)(A), (a)(1)(B), (a)(1)(E), (a)(2)(A), (a)(2)(B), and (a)(2)(E) of this section shall be increased by the amount of credit taken by a producer under AS 43.55.026 for a pool, lease, or property in an area described in (a)(1)(A), (a)(1)(B), (a)(1)(E), (a)(2)(A), (a)(2)(B), and (a)(2)(E) of this section.

*** Sec. 5.** AS 43.55.180(a) is amended to read:

(a) The department shall study

(1) the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011, the tax credits provided under **AS 43.55.023 - 43.55.026** [AS 43.55.023 - 43.55.025], and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and

(2) the effects of the tax rates under AS 43.55.011(i) on state revenue and on oil and gas exploration, development, and production on private land, and the fairness of those tax rates for private landowners.

*** Sec. 6.** AS 44.99 is amended by adding new sections to read:

Article 06. Oil and Gas Competitiveness Review Board.

Sec. 44.99.600. Oil and Gas Competitiveness Review Board established. (a) The Oil and Gas Competitiveness Review Board is established.

(b) The board shall consist of nine members as follows:

(1) one senator appointed by the president of the senate;

(2) one representative appointed by the speaker of the house of representatives;

(3) five members of the public appointed by the governor, including one member who is a petroleum engineer, one member who is a geologist, one member who is an economist, and one member who is a member of an environmental or conservation group;

(4) the commissioner of natural resources or the commissioner's

designee; and

(5) the commissioner of revenue or the commissioner's designee.

(c) The senator and representative appointed to the board under (b)(1) and (2) of this section shall be cochairs.

(d) Each legislative member serves for the duration of the legislature during which the member is appointed. Each public member serves for three years. An individual who has served on the board may be reappointed.

(e) A vacancy on the board shall be filled in the manner of the original appointment.

(f) A member of the board may be removed and replaced at the discretion of the person appointing that member.

(g) The public members of the board serve without compensation but shall receive per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

(h) The board may enter into contracts for professional services and may employ staff for administrative support for the board.

Sec. 44.99.610. Duties. The duties of the board include the following:

(1) review historical, current, and potential levels of investment in the state's oil and gas sector;

(2) identify factors that affect investment in oil and gas exploration, development, and production in the state, including tax structure, rates, and credits; royalty requirements; infrastructure; workforce availability; and regulatory requirements;

(3) review the competitive position of the state to attract and maintain investment in the oil and gas sector in the state as compared to the competitive position of other regions with oil and gas resources;

(4) in order to facilitate the work of the board, establish procedures to accept and keep confidential information that is beneficial to the work of the board, including the creation of a secure data room and confidentiality agreements to be signed by individuals having access to the confidential information;

(5) make written findings and recommendations, together with

suggested legislation, to the Alaska State Legislature before December 1 of each year, or as soon thereafter as practicable, regarding

(A) changes to the state's regulatory environment that would be conducive to encouraging increased investment while protecting the interests of the people of the state and the environment;

(B) changes to the state's fiscal regime that would be conducive to increased and ongoing long-term investment in and development of the state's oil and gas resources; and

(C) alternative means for increasing the state's ability to attract and maintain investment in and development of the state's oil and gas resources.

Sec. 44.99.620. Information to be provided to board. (a) The commissioner of natural resources, the commissioner of revenue, the commissioner of environmental conservation, and other commissioners and state agencies that have responsibility for and maintain information related to oil and gas investment and activity in the state shall, at the request of the board, provide information required by the board to carry out the duties described in AS 44.99.610.

(b) At the request of the board, and except for information that is confidential under AS 43.05.230, a commissioner may disclose to the board information that is otherwise confidential after each member of the board and each staff member for the board with access to the information signs a confidentiality agreement prepared by the commissioner making the disclosure. Information that is confidential under AS 43.05.230 may not be disclosed to the board.

Sec. 44.99.630. Definition. In AS 44.99.600 - 44.99.630, "board" means the Oil and Gas Competitiveness Review Board.

*** Sec. 7.** AS 44.99.600, 44.99.610, 44.99.620, and 44.99.630, added by sec. 6 of this Act, are repealed June 30, 2021.

*** Sec. 8.** This Act takes effect immediately under AS 01.10.070(c).

Alberta Natural Gas and Conventional Oil Investment Competitiveness Study 2009

Alberta

Our Approach

Vision

- Alberta is a vibrant and attractive place to live, work, and invest, with outstanding opportunities for current and future generations.
- Alberta's fiscal and regulatory structure helps enable the natural gas and conventional oil sector to be competitive, successful, and sustainable, delivering maximum value for Albertans.
- Alberta's resource management framework reflects trusting and lasting relationships among all stakeholders.

Alberta

Building Blocks

Our building blocks for a successful project include:

- Forming and maintaining strong lasting relationships with our stakeholders.
- Sharing industry and financial information with each other to inform investment competitiveness questions.
- Sharing questions and advising on the key question we all have for this study.

Alberta

Key Question

Is Alberta competitive for investment within the natural gas and conventional oil sector?

Project Overview

Project Goals

- Improved working relationship between Alberta Department of Energy, industry and the financial sector.
- A common understanding of Alberta's investment competitiveness within the natural gas and conventional oil sectors.
- Recommendations for consideration by the Minister of Energy and Executive Council.

Integrated Processes

- Stakeholder engagement.
- Effective dialogue – Two-way communication.
- Solid, well planned approach and timely execution.
- Strong and effective project management office.

Alberta

Project Scope

- For the purposes of this investment competitiveness study, dialogue will be limited to the economic and financial aspects of investment competitiveness, including investors' perceptions.

- While tenure and regulatory issues are being addressed in separate processes, the *related* economic and financial aspects will be assessed in this study.

- We recognize that there are other stakeholders, however, the purpose of this study is to gather essential information around investment levels and competitiveness.

Our Expectations

The Investment Competitiveness Study Is:

- Looking at whether natural gas and conventional oil investment in Alberta is competitive for investment.
- Future-focused
- About validating and making recommendations on the current and expected future state of natural gas and conventional oil investment competitiveness.
- A cooperative joint approach from industry, government and the financial sector.

The Investment Competitiveness Study Is Not:

- Predetermining outcomes before discussion and debate.

Alberta

Key Project Stakeholders

Project Management Committee

- Government of Alberta
- Oil and Gas Industry
- Financial Sector
- Pipelines Sector

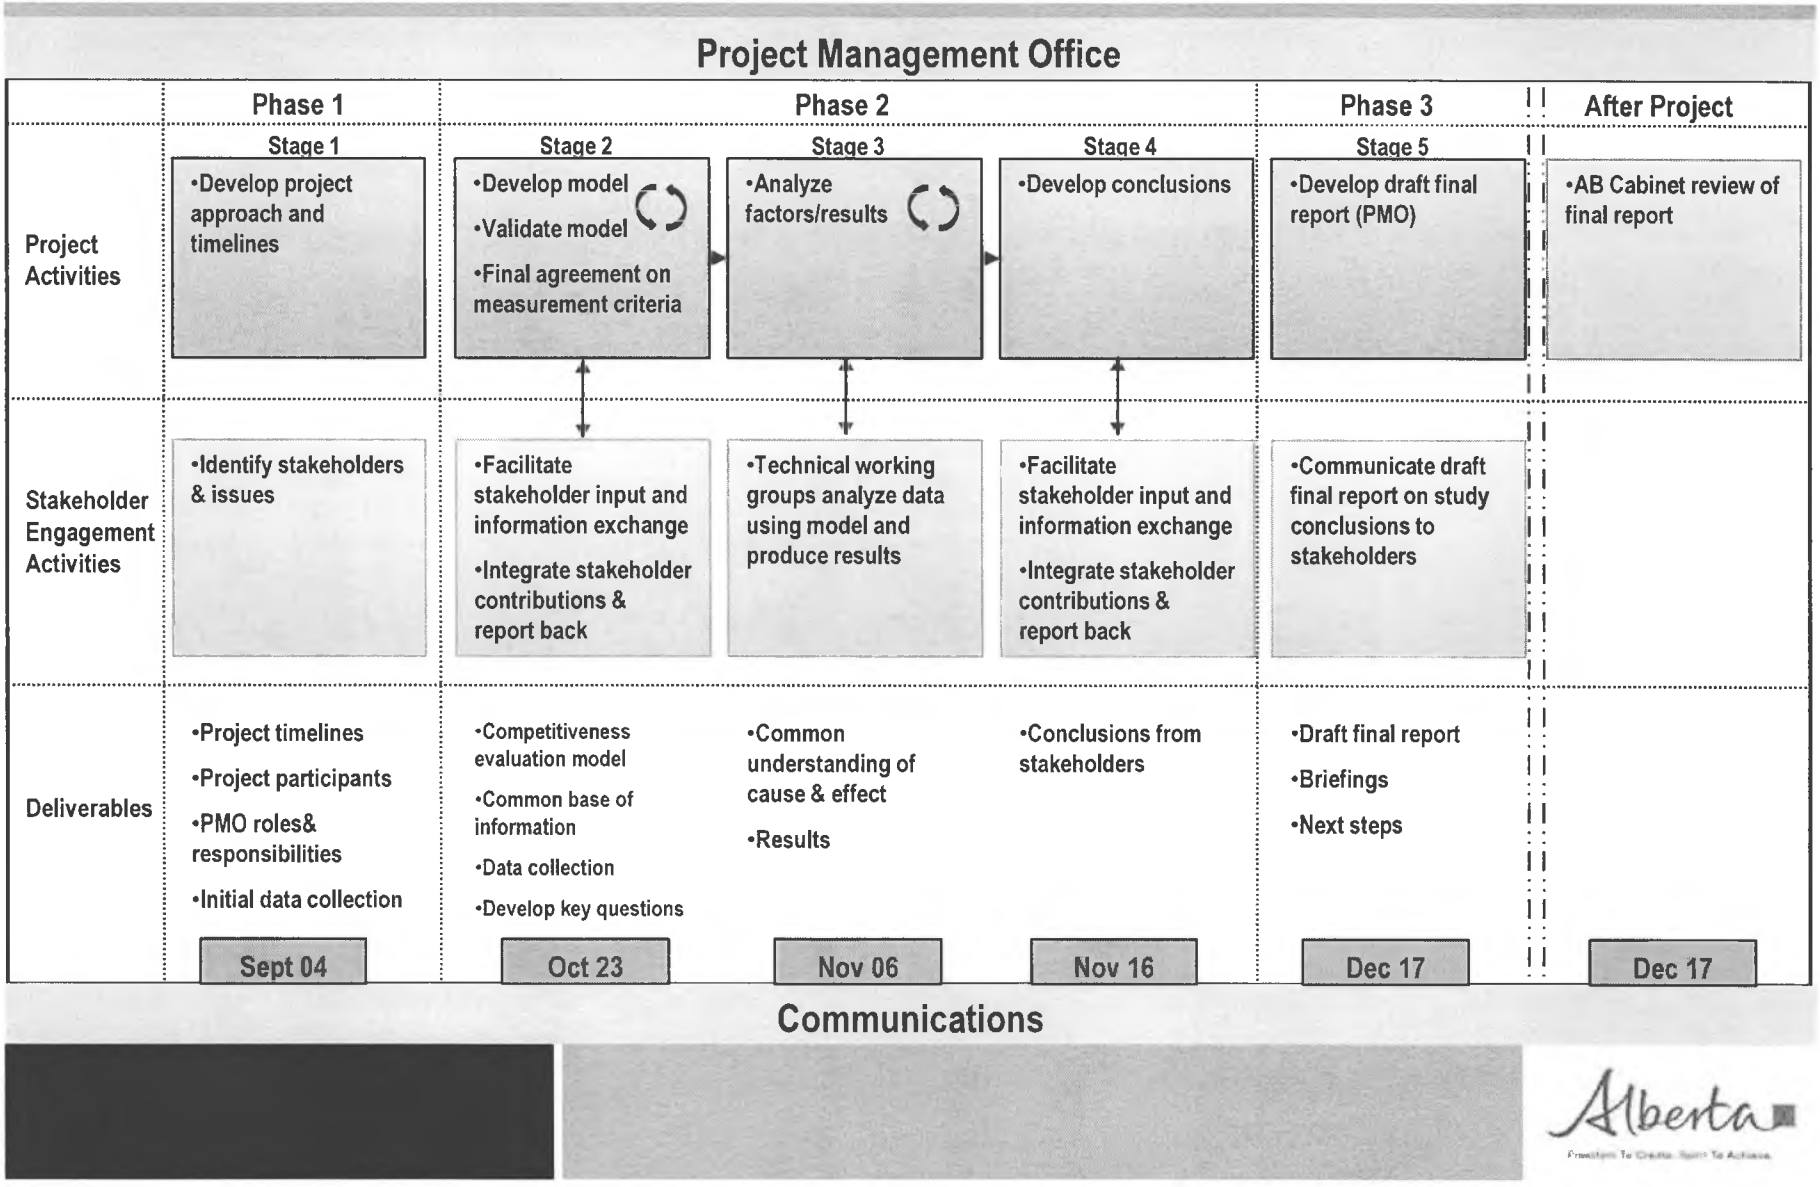
To inform, debate, validate and participate in, the investment competitiveness study, through a combination of interviews, interdisciplinary workshops and focus groups.

All stakeholder groups will be comprised of executives (CEO's) who will be interviewed, and technical/data experts who will form a large part of the working groups and inter-disciplinary team.

Alberta

Decision-Making Process

Project Approach



Our Progress To-Date

Alberta

Technical/Data Stream Update

Focus:

- To ensure an accurate understanding of Alberta's competitive position for natural gas and conventional oil.
- Investment competitiveness will be determined on the basis of discounted cash-flow analysis and established and accepted investment criteria.
- Participants include oil and gas companies, and related industry associations as well as the Alberta Department of Energy.
- Data acquisition kicked off July 20th.
- 27 natural gas submissions – data validation nearing completion.
- 11 Conventional oil submissions – data validation initiated; additional information required.

Alberta

Technical/Data – Measures of Competitiveness

Factors of Competitiveness that are being reviewed:

- Type Well Economics:
  - Rate of Return (IROR)
  - Cost per Unit (Barrel of Oil or Mcf of Natural Gas)
  - Net Present Value (NPV)
  - Degree of Fiscal Front End Loading
  - Expected Monetary Value (EMV)
  - Resource Owner Share
  - Profitability Ratio (PFR)
  - Price / Cost Ratio
  - Risked PFR
  - Payout Time (months)
  - Fiscal System Performance: Equity, Efficiency, Neutrality, and Robustness
  - Incremental Investment Impacts e.g., Company Taxable Position – full credit vs. stand alone, (new entrants)

Alberta

Technical/Data – Measures of Competitiveness

- Resource Characteristics:
  - Resource in place
  - Recoverable resources

- Current Conditions:
  - Recent & Existing production levels.
  - Recent & Existing activity levels: investment, producing wells, wells drilled by year.
  - Existing fiscal structures: statutory tax rates, royalty rates, other production levies.
  - Differences in cost structures (how much does the same well cost in different jurisdictions).
  - Relative returns (ROCE, ROE, ROI).

Alberta

Project Management Office Team Progress

- Project Management Office established.
- Roles, responsibilities, project timelines validated.
- Key Deputy Ministers briefed on current progress.
- Stakeholder engagement lists and processes completed.
- List of key questions to guide the study developed.
- Initial meetings and focus groups with industry and government groups facilitated.
- Detailed timeline developed for stakeholder engagement process and a calendar of events for workshops, meetings etc. with key stakeholders.

Alberta

List of Key Stakeholders

Stakeholder Category	Stakeholder Group (executive and technical experts who have the data)	Method(s) of Engagement
Government of Alberta	Executive Level (Premier, Cabinet, Ministers, Deputy Ministers, Special Committees)	Interviews/ Report/ Briefing (strategic)
	Alberta Energy	Interviews/ Focus Group/ Workshops (strategic and technical)
	Department of Finance and Enterprise	Focus Group/ Workshops (strategic)
	Treasury Board	Focus Group/ Workshops (strategic)
	Environment	Focus Group/ Workshops (strategic)
	ERCB	Focus Group/ Workshops (strategic)
Federal Government	National Energy Board	Workshops
Oil and Gas	Industry Associations (CAPP/ SEPAC)	Focus Group/ Workshops (strategic)
	Large CAPS (CEO's)	Interviews/ Workshop Rep (strategic)
	Small Producers/ Juniors and Mid-Caps	Focus Group/ Workshops (strategic)
	Working Groups (oil and gas)	Focus Group/ Workshops (strategic and technical)

List of Key Stakeholders

Stakeholder Category	Stakeholder Group (executive and technical experts who have the data)	Method(s) of Engagement
Financial Sector	Bankers: Corporate and Investment Banking	Interviews/ Workshops (strategic and technical)
	Investors: Public, Private and Institutional	Interviews/Workshops (strategic and technical)
Pipeline Sector	Trans Canada	Interviews/ Workshops
	Enbridge	

Alberta

Next Steps

Alberta

Next Steps

- One-on-one executive interviews to discuss competitiveness factors, key issues, and industry success in the future.
- Analysis of data by the technical data team.
- Interdisciplinary team workshops and focus groups to develop and confirm competitiveness evaluation model, review results of the modeling and analysis, and develop conclusions and recommendations .

Alberta

Alberta Natural Gas and Conventional Oil Investment Competitiveness Study 2009

Stakeholder Briefing Document

I. Overview

Our Vision:

1) *Alberta is a vibrant and attractive place to live, work, and invest, with outstanding opportunities for current and future generations.*

2) *Alberta's fiscal and regulatory structure helps enable the natural gas and conventional oil sector to be competitive, successful, and sustainable, delivering maximum value for Albertans.*

3) *Alberta's resource management framework reflects trusting and lasting relationships among all stakeholders.*

A vibrant and successful natural gas and conventional oil industry is critical to Alberta and Canada's economic prosperity. The natural gas and conventional oil sector is the economic engine of Alberta, contributing to a standard of living for the province's citizens and for all Canadians that is among the highest in the world. A study by the University of Calgary shows that the oil and gas sector alone represents one-half of Alberta's economy.[1] Without the natural gas and conventional oil sector, our economic standard of living would most certainly be lower and the necessary tax burden would be higher.

North America's natural gas and conventional oil sector is at a crossroads. This means that Alberta's industry is also at a crossroads. Environmental responsibilities, rising costs due to a variety of factors including shortages of key labor skills and investment inputs ranging from steel to engineering and management, and the transformation of Alberta's largest market for natural gas from a net importer where supply is constrained to a situation where some at least speculate that the U.S. could become a net exporter, are just some of the recent developments that make it necessary to ensure that Alberta has the appropriate regulatory and fiscal environment to remain competitive for natural gas and conventional oil investment.

[1] "Energy and the Alberta Economy: Past and Future Impacts and Implications", Institute for Sustainable Energy, Environment, and Economy, December 2006

While there are most certainly competitive challenges, Alberta is fortunate to possess vast resources of natural gas (both conventional and unconventional) and huge conventional oil potential.[2] There is every reason to believe that Alberta will continue to be an attractive and competitive place to invest. What is critical at this juncture, however, is that a more strategic, inclusive and planned approach be taken to facilitate ongoing investment and success for Alberta. In an increasingly dynamic and competitive market economy, we cannot afford to assume that what clearly worked well in the past will remain appropriate for the future. It is critical to celebrate our past successes, and there are many, but it is prudent to plan for our future. Our past successes have not come from being passive observers. We must review our practices and investment strategies and take responsibility for our economic and financial future. This is why a competitiveness review is so important at this time.

It is Alberta Department of Energy's goal to have the fiscal and regulatory structure that helps enable Alberta's natural gas and conventional oil sector to remain vibrant and sustainable, and to deliver maximum value for Albertans. As key stakeholders, we need to work together to answer the fundamental question:

What does success look like for Alberta's natural gas and conventional oil future?

The challenges facing us demand that we work cooperatively. To do this we need a common understanding of the value of our resources, and recognition that both investors and resource owners need to benefit from the development of Alberta's natural resources. Success, therefore, has the following three components:

1. A common understanding of the value of our resources and the challenges in developing them;

2. Positive working relationships and constructive dialogue; and

3. A regulatory and fiscal framework that:

    - Facilitates the maximum production from the widest possible range of exploration and development opportunities, at the lowest possible costs, consistent with good conservation and environmental practices;

    - Recognizes that investors need to realize a reward for their investment and ingenuity, consistent with the level of risks undertaken; and

[2] The Alberta Research Council found that use of CO2 enhanced recovery technology yielded additional recovery of oil in place of about 9 per cent "CO2 Enhanced Hydrocarbon Recovery – Final Report Incremental Recovery and CO2 Storage Potential in Alberta", March 31, 2009. Extending that finding across all light and medium oil resources in Alberta could yield addition oil recovery of up to 4.8 billion barrels.

- Recognizes that resource owners deserve to receive a competitive level of compensation for granting the right to develop and profit from their natural resources – the economic rent.

Alberta's history is characterized by a dynamic entrepreneurial spirit including the courage to adapt our key economic sectors to global realities in order to remain competitive and attractive for investors. Now is the time to once again revisit our strategy and ensure that we have the regulatory and fiscal environment to enable our natural gas and conventional oil sector to be vibrant and sustainable, and profitable for all stakeholders.

II. Rationale

To determine the investment competitiveness of Alberta's natural gas and conventional oil resources, in order to arrive at a common understanding of resource economics and re-establish positive working relationships between the Alberta Department of Energy and industry.

III. Compelling Questions

The compelling questions requiring your input are as follows:

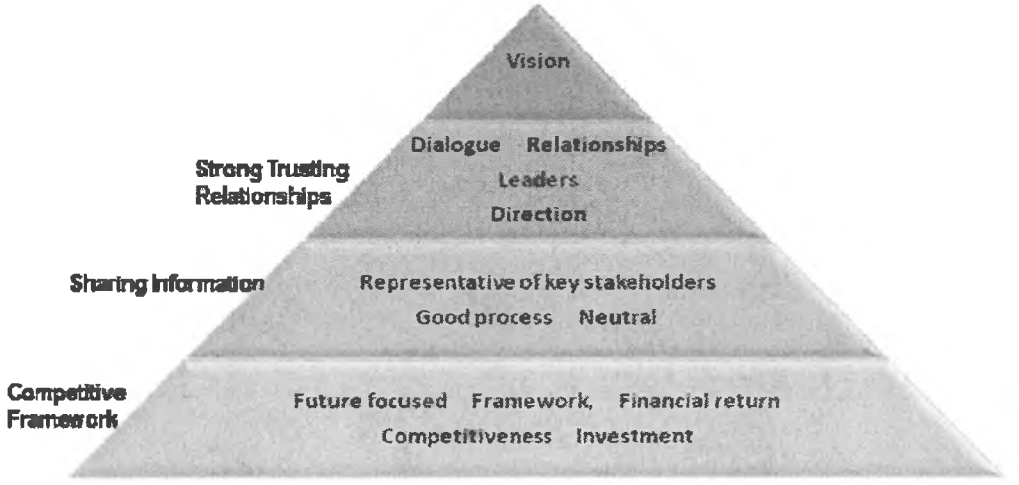
How should we (DOE and industry) position Alberta's natural gas and conventional oil sector for ongoing success, in order to remain profitable, sustainable and competitive for the future?

What is industry's role? What is the Department of Energy's role?

IV. Guiding Principles

- Constructive dialogue among stakeholders is essential;
- Positive relationships need to be maintained and developed between industry and DOE;
- Industry deserves to be rewarded for their investment consistent with the level of risks undertaken; and
- Resource owners deserve to be compensated for granting the right to develop and profit from their natural resources.

To ensure that the positive relationships between the Department of Energy and industry are facilitated, it is necessary to keep the following touchstones in mind:



Only through strong trusting relationships, the sharing of leading-edge data and a future-focused competitive framework can the ADOE and the natural gas and conventional oil industry help to shape the foundation and future of Alberta and position Alberta for success.

V. Approach

Our approach is based on the belief that the success of this study can only be achieved through constructive interaction and dialogue. This will be done by talking directly to the key stakeholders utilizing methods such as interviews, focus groups and workshops. In addition, we will develop a reporting back process to the key stakeholders to ensure that we build positive relationships. We will communicate to the key stakeholders who participated in the process and the ideas generated in the discussions. Issue resolution and risk management strategies will also be employed to ensure that the project remains on task and that stakeholders' contributions are noted as required.

Two-levels of stakeholder engagement will be required to ensure that both an executive and technical analyst perspective will be represented in the investment competitiveness study. These two-levels of stakeholder engagement will take the form of interviews, focus groups and a cross-sector workshop made up of the government, industry, and banks. The executive group will include high- level administrators from government, natural gas and conventional oil industries and the financial sector in Alberta. This group will provide high-level strategic, economic and financial advice on Alberta's investment competitiveness and will also be a forum for continued improvement of relationships between industry and the Alberta Department of Energy. The second level of stakeholder engagement will be the technical (data) analysts who will use their technical

expertise and data knowledge to assist in informing the executive group and in examining the suggestions relating to Alberta's future investment competitiveness within the natural gas and conventional oil sector.

VI. Scope

The Alberta Department of Energy will lead a focused investment competitiveness study that will compare the investment competitiveness of Alberta's natural gas and conventional oil sector with that of appropriate competing jurisdictions, both domestic and international.

The study will take into account conventional oil, conventional gas, and unconventional gas (coal bed methane, shale gas and tight sands). Oil Sands will not be included in the scope of this work.

Recognizing that Alberta companies have opportunities nationally and internationally to invest, the study will provide details about competing jurisdiction's resources and production profiles; resource conditions, market conditions; finding, development, and operations costs; fiscal terms; and regulatory environment. Such details will include:

- Oil and Gas Reserves, Pool Sizes, Production Profiles, Drilling Success Rates and Future Potential
- Resource Conditions – Depth, Location, Reservoir Characteristics, Access Restrictions
- Market Conditions – Transportation Costs and Netback Prices
- Costs - Finding, Development, and Operations:
  - Well Drilling – Drilling, Completion, Equipment, and Tie-In
  - Regulatory
  - Land Access and Seismic
  - Lifting, Gathering, and Compression
  - Processing Costs
  - Overhead, and General and Administrative Costs
- Fiscal Terms – Royalties, Corporate Income Taxes, other Taxes (including Severance Taxes and Property Taxes) Rentals and Fees, and Bonuses
- Regulatory Environment
- Tenure process (fragmentation)
- Well licence approval process (time lines)

- Well density regulations (Pad Drilling)
- Commingling regulations
- Resource management data requirements
- Surface Access
- Municipality Restrictions and Approvals (e.g. Sour Gas, Letters of Credit)
- First Nations Process
- Other Environmental Compliance (e.g., groundwater testing, minimum distances from dwellings, GHG, Air, Land, Water, etc...)
- Impacts / overlap of Federal Regulations

The Investment Competitiveness study will involve key stakeholders including other Government Departments, the Energy Resource Conservation Board, Canadian Association of Petroleum Producers (CAPP) and the Small Explorers and Producers Association of Canada (SEPAC).

For the purposes of this investment competitiveness study:

- Dialogue will be limited to the economic and financial aspects of investment competitiveness, including investors' perceptions.

- While tenure and regulatory issues are being addressed in separate processes, the related economic and financial aspects will be assessed in this study.

- We recognize that there are other stakeholders, however, the purpose of this study is to gather essential information around investment levels and competitiveness

VII. Methodology

Under the guidance of a Project Management Office and the Executive Director of Economics and Markets for the Department of Energy, interviews, focus groups and workshops will be held with stakeholders to identify issues, confirm inputs/methodology, identify work/ information requirements, review, analyze and make recommendations for the preparation of the final deliverable.

Investment competitiveness will be determined on the basis of discounted cash-flow analysis and established and accepted investment criteria for measuring profitability, risk, and fiscal system performance. Measures of Investment Competitiveness include:

- Rate of Return (IROR)
- Net Present Value (NPV)
- Expected Monetary Value (EMV) – Risked NPV
- Profitability Ratio (PFR)
- Risked PFR
- Price / Cost Ratio
- Cost per Unit (Barrel of Oil or Mcf of Natural Gas)
- Payout time (months)
- Resource Owner Share
- Degree of Fiscal Front End Loading
- Incremental Investment Impacts; e.g., Company Taxable Position – full credit vs. stand alone, new entrants)
- Fiscal System Performance: Equity, Efficiency, Neutrality, and Robustness

Cost information to be used in the analysis will be limited to those directly related to the associated reserves. Other measurement criteria and competitiveness indicators will be incorporated as identified through the stakeholder engagement process.

VIII. Critical Success Factors:

The following factors are tantamount to a successful process whereby the project objectives and questions will be debated, deliberated and achieved.

- Industry and other project stakeholders fully understand the process, deliverables and implications of the Investment Competitiveness Study.
- Advisors are brought onto the project early in the process and provide effective support to the industry and DOE teams.
- Project risks and issues are managed proactively.
- Project is managed effectively and key milestones are met.
- Active participation and support from Ministry, Industry Associations and industry senior management in communicating value of study to peers and subordinates.
- Appropriate time is provided to government to fully respond to the report once it is completed.

IX. Key Project Stakeholders

To facilitate the process of stakeholder engagement and ensure that Government, industry and the financial sectors are equitably represented; the following key stakeholder groups have been identified.

Stakeholder Category	Stakeholder Group
Government of Alberta	Executive Level (Premier, Cabinet, Ministers, Deputy Ministers and Special Committees) Department of Energy Department of Finance & Enterprise Treasury Board Alberta Environment Energy Resources Conservation Board
Federal Government	National Energy Board
Pipelines Sector	TransCanada Enbridge
Conventional Oil and Natural Gas Producers	Industry Associations (CAPP, SEPAC) Large CAPS (CEO level) Small Producers/ Juniors and Mid-Caps Working Groups oil and natural gas
Financial Sector	Bankers: Corporate and Investment Banking Investors: Public, Private and Institutional

X. Our Promise

Our promise, based on the aforementioned identified objectives, is to collaborate with our stakeholders. This means that we will look to you for data, information, advice and innovation in formulating solutions and incorporate your advice into our recommendations to the maximum extent possible.

XI. Key Deliverables

Deliverables from the review will include:

- A comprehensive comparison of the economic value of Alberta's natural gas and conventional oil resources by area and resource type, including a comparison of Alberta's competitiveness relative to that of competing jurisdictions.
- A thorough comparison of the characteristics of Alberta's natural gas and conventional oil resources relative to competing jurisdictions, with particular focus on British Columbia, Saskatchewan and on-shore United States; e.g., Texas.
- An identification of the key attributes of oil and gas producers in Alberta going forward.
- An assessment of the regulatory framework to identify potential impacts on investment competitiveness (e.g. impacts on costs and resource recovery) and to identify key enablers and barriers for future natural gas and conventional oil development in Alberta.
- Recommendations for consideration by the Minister of Energy and Executive Council.
- Where appropriate, other recommendations for future studies and / or policy considerations.

XII. Resources Required

The resources required to inform this study, and participate in it include:

1. Financial and economic data provided by the industry including the producers, the financial sectors and other key stakeholders to support their perspectives;
2. Financial and economic data provided by the Department of Energy; and
3. Non-economic factors that influence the study such as human, technology-based and cultural factors.

SENATOR LESIL MCGUIRE

SPONSOR STATEMENT FOR SENATE BILL 91

"An Act amending the termination date of the licensing of sport fishing operators and sport fishing guides; and providing for an effective date."

Senate Bill 91 will ensure the continuation of Alaska's sport fish guide licensing and reporting program. Legislation authorizing the program was passed in 2004 and the program has proven beneficial to both the sport fishing industry and resource managers. With more than 1.8 million clients, 88% of whom are nonresidents, taking more than 460,000 guided fishing trips in Alaska annually; guided sport fishing has become an integral part of Alaska's tourism economy. In fact, a study commissioned by the Alaska Department of Fish and Game estimated that nonresident spending on sport fishing was more than $650 million in 2007.

Since the program's inception, an average of 1,670 sport fishing business licenses and 1,981 sport fishing guide licenses have been sold annually. 90% of license holders are Alaska residents and the professionalization of the sport fishing guide industry has benefitted both the industry and the resource. The data collected through the program provides the information state and federal managers need to sustainably manage sport fish populations. The program also allows Alaska to receive an exemption from the National Saltwater Angler Registry; a federal program that would begin levying fees for registration in 2011.

Recognizing the importance of the program, the Alaska legislature extended the program's termination date for one year in 20010; SB 91 proposes to amend the program's associated termination language in existing statutes in order to allow this valuable program to continue serving Alaskans and their valuable fishery resources.

2011 LEGISLATIVE SESSION

BILL NO. SB 91

Analysis

This bill extends the termination date of the licensing program for sport fishing guides and sport fishing operators from January 1, 2012 to January 1, 2013. The division has budgeted $400.0 in the FY12 Governor's budget to administer the Sport Fish operator/guide/vessel program. The program generates average Fish & Game Fund revenues of $240.2, with the balance of program expenditures funded with Sport Fishing license sale revenue.

Senator Tom Wagoner, Co-Chairman
Senator Joe Paskvan, Co-Chairman
Senate Resources Committee
Alaska State House of Representatives
State Capitol, Mail Stop 3100
Juneau AK 99801

RE: Support for SB 91 - An Act amending the termination date of the licensing of sport fishing operators and sport fishing guides; and providing for an effective date.

Dear Co-Chairmen Wagoner and Paskvan, and Committee Members,

UFA supports SB 91, which would extend the sunset date on the sport guide and vessel licensing program from January 1, 2012 to January 1, 2013. It is essential for the Department of Fish and Game to have a system of registration and communication with operators of fishing guide businesses to be able to measure activity and harvest for effective fisheries management. Without passage of SB 91, the registration and logbook program that is in place will not continue beyond the current year. Without such a system to accomplish the objectives regarding recreational fisheries in the Magnuson-Stevens Fishery Conservation and Management Act of 2005, it is our belief that the State of Alaska would be in jeopardy of losing management jurisdiction over marine fisheries to the federal government.

United Fishermen of Alaska is the largest statewide commercial fishing trade association, representing 38 commercial fishing organizations participating in fisheries throughout the state and its offshore waters.

Sincerely,

Mark Vinsel
Executive Director

CC: Senator Lesil McGuire

LAWS OF ALASKA

2004

SCS CSHB 452(RES)

Chapter No.
_____

AN ACT

Relating to licensing and regulation of sport fishing operators and sport fishing guides; relating to licensing and registration of sport fishing vessels; authorizing the Department of Fish and Game and the Alaska Commercial Fisheries Entry Commission to release records and reports to the Department of Natural Resources and the Department of Public Safety; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

Relating to licensing and regulation of sport fishing operators and sport fishing guides; relating to licensing and registration of sport fishing vessels; authorizing the Department of Fish and Game and the Alaska Commercial Fisheries Entry Commission to release records and reports to the Department of Natural Resources and the Department of Public Safety; and providing for an effective date.

---

* **Section 1.** AS 16.05.340(a) is amended by adding a new paragraph to read:

(26) Fishing services licenses

(A) Sport fishing operator license $100

(B) Sport fishing guide license 50

(C) Sport fishing operator and sport fishing guide combined license 100

* **Sec. 2.** AS 16.05 is amended by adding a new section to read:

Sec. 16.05.395. Sport fishing vessel registration. For calendar year 2005 and subsequent calendar years, a person may not use a vessel to provide sport fishing services under AS 16.40.260 - 16.40.299 unless the vessel is registered with the department and proof of registration is attached to and clearly visible on the vessel while the vessel is used to provide sport fishing services. The department shall register vessels used to provide sport fishing services, and provide proof of registration, without charge. The department may adopt regulations as the department finds necessary to implement this section.

* **Sec. 3.** AS 16.05.420 is amended to read:

Sec. 16.05.420. License, tag, [AND] permit, and registration violations. (a) A false statement of a material fact in an application for a license, tag, [OR] permit, **and sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430 voids the license, tag, [OR] permit, **or registration** for which the application is made.

(b) A person may not make a false statement, or omit a material fact, in an application for a license, tag, [OR] permit, **or sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430. A person who without any culpable mental state makes a false statement as to the person's identity or residency in an application for a license, tag, [OR] permit, **or sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430 is guilty of a violation and upon conviction is punishable by a fine of not more than $300. A person who knowingly violates this subsection is guilty of a class A misdemeanor.

(c) A person to whom a license, [OR] tag, **or sport fishing vessel registration** has been issued under this chapter may not alter, change, loan, or transfer the license, [OR] tag, **or sport fishing vessel registration**. A person may not use a license, [OR] tag, **or sport fishing vessel registration** that has been issued under this chapter to another person.

* **Sec. 4.** AS 16.05.490(a) is amended to read:

(a) As a condition to delivery or landing of fish or engaging in commercial fishing in the state, a license is required for a commercial vessel [, INCLUDING A VESSEL USED IN CHARTER SERVICE FOR THE RECREATIONAL TAKING OF FISH AND SHELLFISH].

* **Sec. 5.** AS 16.05.815(a) is amended to read:

(a) Except as provided in (b) and (c) of this section, records required by regulations of the department concerning the landings of fish, shellfish, or fishery products, and annual statistical reports of fishermen, buyers, and processors required by regulation of the department are confidential and may not be released by the department or by the Alaska Commercial Fisheries Entry Commission except as set out in this subsection. The department may release the records and reports set out in this subsection to the Alaska Commercial Fisheries Entry Commission. The department and the Alaska Commercial Fisheries Entry Commission may release the records and reports set out in this subsection to the recipients identified in this subsection if the recipient, other than a recipient under (5) - (9) of this subsection, agrees to maintain the confidentiality of the records and reports. The department and the Alaska Commercial Fisheries Entry Commission may release

(1) any of the records and reports to the National Marine Fisheries Service and the professional staff of the North Pacific Fishery Management Council as required for preparation and implementation of the fishery management plans of the North Pacific Fishery Management Council within the exclusive economic zone;

(2) any of the records and reports to the professional staff of the Pacific States Marine Fisheries Commission who are employed in the Alaska Fisheries Information Network project for the purpose of exchanging information with users authorized by the department;

(3) any of the records and reports to the Department of Revenue to assist the **department** [DEPARTMENT OF REVENUE] in carrying out its statutory responsibilities;

(4) records or reports of the total value purchased by each buyer to a municipality that levies and collects a tax on fish, shellfish, or fishery products if the municipality requires records of the landings of fish, shellfish, or fishery products to be submitted to it for purposes of verification of taxes payable;

(5) such records and reports as necessary to be in conformity with a court order;

(6) on request, the report of a person to the person whose fishing

activity is the subject of the report, or to a designee of the person whose fishing activity is the subject of the report;

(7) on request, annual statistical reports of a fisherman, buyer, or processor to the fisherman, buyer, or processor whose activity is the subject of the report, or to a designee of the fisherman, buyer, or processor whose activity is the subject of the report;

(8) **any of the records and reports** [FISH TICKETS, FISH TICKET INFORMATION, SALTWATER CHARTER LOGBOOKS, SALTWATER CHARTER LOGBOOK INFORMATION, AND ANNUAL STATISTICAL REPORTS OF FISHERMEN, BUYERS, AND PROCESSORS AND INFORMATION IN THOSE REPORTS] to the Department of Public Safety **for law enforcement purposes**;

(9) fish tickets, fish ticket information, and annual statistical reports of fishermen, buyers, and processors and information in those reports to the law enforcement personnel of the National Marine Fisheries Service and the National Oceanic and Atmospheric Administration for the purpose of enforcing fishery laws in waters of this state and in waters of the exclusive economic zone adjacent to this state;

(10) fish tickets and fish ticket information regarding halibut to the International Pacific Halibut Commission; [AND]

(11) any of the records and reports to the child support enforcement agency created in AS 25.27.010, or the child support enforcement agency of another state, for child support purposes authorized under law**; and**

(12) any of the records and reports to the Department of Natural Resources to assist the department in carrying out its statutory responsibilities in regard to sport fishing operations and sport fishing guides within the Kenai River Special Management Area under AS 41.21.500 - 41.21.514.

*** Sec. 6.** AS 16.40 is amended by adding new sections to read:

Article 6. Sport Fishing Services.

Sec. 16.40.260. Sport fishing operator license. (a) The department shall issue an annual sport fishing operator license to a person who

(1) holds a current business license under AS 43.70 to provide services

to sport fishermen;

(2) presents proof satisfactory to the department of a general liability insurance policy or marine protection and indemnity insurance policy, covering the services provided by the person and the person's employees to sport fishermen, that provides coverage of at least $100,000 for each incident, and $300,000 for all incidents in a year;

(3) pays the license fee prescribed by AS 16.05.340(a); and

(4) satisfies all additional requirements adopted in regulation by the Board of Fisheries.

(b) A person may not provide sport fishing services unless the person holds a current sport fishing operator license and has current insurance coverage as required in (a)(2) of this section.

(c) A person who holds a current sport fishing operator license may contract to provide sport fishing guide services to a sport fisherman through an employee who holds a current sport fishing guide license under AS 16.40.270.

(d) A person who holds a current sport fishing operator license may not directly provide sport fishing guide services to a sport fisherman unless the person also holds a current sport fishing guide license under AS 16.40.270(b).

(e) A person who holds a sport fishing operator license may not aid in the commission of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40, including regulations relating to the proper method to release fish, by a sport fishing guide who is employed by the person or by a sport fisherman who is a client of the person.

Sec. 16.40.270. Sport fishing guide license. (a) A natural person may obtain an annual sport fishing guide license if the person

(1) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(2) is certified in first aid by the American Red Cross or a similar organization;

(3) holds a license to carry passengers for hire issued by the United States Coast Guard if the person operates a vessel in the provision of sport fishing

guide services and the license is required by the United States Coast Guard for the area in which the fishing guide provides fishing guide services;

(4) holds a current sport fishing license from this state;

(5) pays the license fee prescribed by AS 16.05.340(a); and

(6) satisfies all additional requirements adopted in regulation by the Board of Fisheries.

(b) A natural person may obtain an annual sport fishing operator and sport fishing guide combined license if the person satisfies the requirements for a sport fishing operator license under AS 16.40.260 and for a sport fishing guide license under this section and pays the license fee prescribed by AS 16.05.340(a).

(c) A person may not provide sport fishing guide services unless the person

(1) holds a current sport fishing guide license; and

(2) holds a current sport fishing operator license or is an employee of a person who holds a current sport fishing operator license.

(d) A sport fishing guide may provide sport fishing guide services only to persons who have engaged the services of the sport fishing operator by whom the sport fishing guide is employed. A sport fishing guide may not contract directly with a person to provide sport fishing guide services to a person unless the sport fishing guide also holds a current sport fishing operator license.

(e) While engaged in providing sport fishing guide services, a sport fishing guide shall have readily available for inspection

(1) a current sport fishing guide license;

(2) the current licenses, tags, and permits that are required to engage in the sport fishery for which the sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the fishing guide; and

(4) proof of

(A) employment as a sport fishing guide by a person who holds a current sport fishing operator license; or

(B) current licensure as a sport fishing operator.

(f) A sport fishing guide may not

(1) aid in the commission of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40 by a client of the sport fishing guide; or

(2) permit the commission by a client of the sport fishing guide of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40 that the sport fishing guide knows or reasonably believes is being or will be committed without

(A) attempting to prevent it, short of using force; and

(B) reporting the violation.

Sec. 16.40.280. Reports. (a) The department may collect information from sport fishing guides, including

(1) the name and license number of each vessel licensed under AS 16.05.490 that is used in providing sport fishing guide services;

(2) the amount of fishing effort, catch, and harvest by clients of a sport fishing guide;

(3) the locations fished during the provision of sport fishing guide services; and

(4) other information that the department or board requires by regulation.

(b) A person who holds a license issued under AS 16.40.260 or 16.40.270 shall comply with the reporting requirements in this section and reporting requirements adopted in regulation by the department or board. The department and the board may adopt by regulation requirements for timely submission of reports required under this section or under regulations adopted by the department or board.

(c) A person who is required to complete reports under this section may not provide false information or omit material facts in a report.

(d) A person who is required to complete reports under this section may not be issued a new license under AS 16.40.260 or 16.40.270 unless the department has received all reports required under this section for the preceding year.

(e) Information collected under this section is confidential to the extent provided under AS 16.05.815.

(f) The department or board may adopt regulations under AS 44.62

(Administrative Procedure Act) that it considers necessary to implement this section.

Sec. 16.40.290. Penalty. (a) Except as provided in (b) and (c) of this section, a person who knowingly violates AS 16.40.260 - 16.40.299 or a regulation adopted under AS 16.40.260 - 16.40.299 is guilty of a class A misdemeanor.

(b) A person who, without any culpable mental state, violates AS 16.40.270(e) is guilty of a violation.

(c) A person who knowingly violates AS 16.40.270(e) or who knowingly fails to comply with a requirement for timely submission of reports required by a regulation adopted under AS 16.40.280(b) is, for a

(1) first offense in a three-year period, guilty of a violation; and

(2) second or subsequent offense in a three-year period, guilty of a class B misdemeanor.

(d) In addition to any other penalty provided by law, a court may revoke the sport fishing guide license of a person who is convicted under (a) or (c)(2) of this section.

(e) In this section, "knowingly" has the meaning given in AS 11.81.900.

Sec. 16.40.299. Definitions. In AS 16.40.260 - 16.40.299,

(1) "sport fishing guide" means a person who is licensed to provide sport fishing guide services to persons who are engaged in sport fishing;

(2) "sport fishing guide services" means assistance, for compensation or with the intent to receive compensation, to a sport fisherman to take or to attempt to take fish by accompanying or physically directing the sport fisherman in sport fishing activities during any part of a sport fishing trip; "sport fishing guide services" does not include

(A) sport fishing services; or

(B) services provided by an assistant, deckhand, or similar person who works directly under the supervision of and on the same vessel as a sport fishing guide;

(3) "sport fishing services" means the indirect provision of assistance, for compensation or with the intent to receive compensation, to a person engaged in sport fishing in taking or attempting to take fish or shellfish by a business that

employs a sport fishing guide to provide sport fishing guide services to the person during any portion of a sport fishing trip; "sport fishing services" does not include

(A) an activity for which a sport fishing guide license is required; or

(B) booking and other ancillary services provided by a tour broker or agent to a sport fishing services operator.

*** Sec. 7.** AS 25.27.244(s)(2)(A) is amended by adding new sub-subparagraphs to read:

(xviii) sport fishing operator license under AS 16.40.260;

(xix) sport fishing guide license under AS 16.40.270;

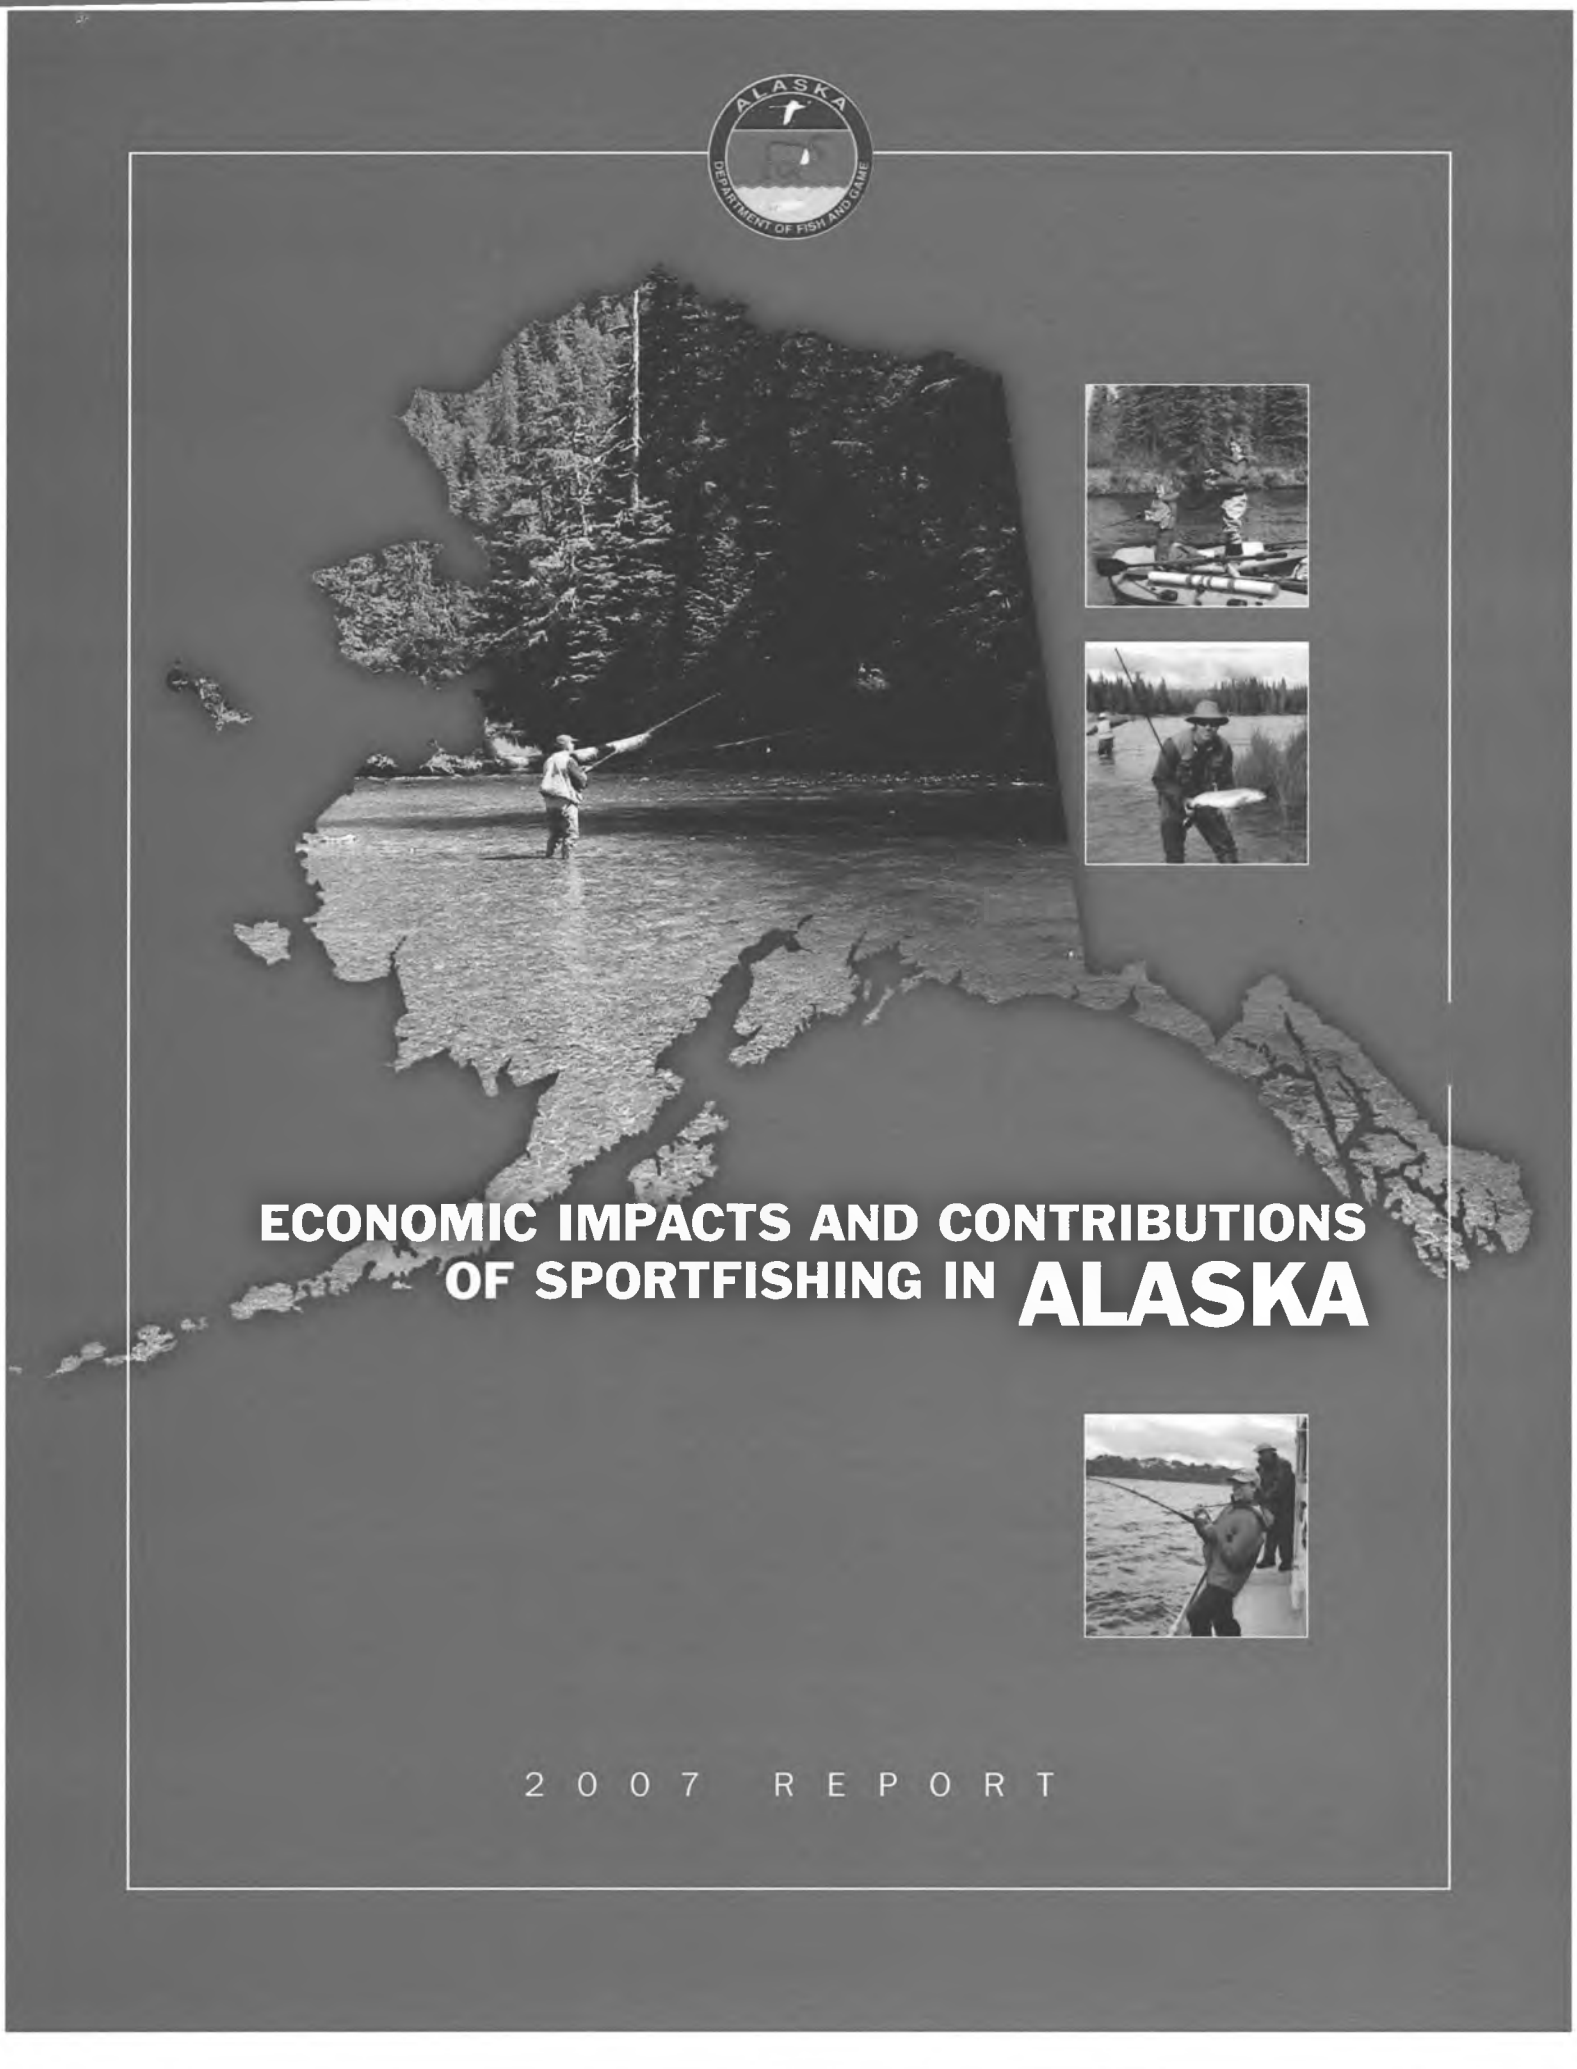
*** Sec. 8.** AS 16.05.340(a)(26); AS 16.40.260, 16.40.270, 16.40.280, 16.40.290, 16.40.299; AS 25.27.244(s)(2)(A)(xviii), and 25.27.244(s)(2)(A)(xix) are repealed January 1, 2010.

*** Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; REGULATIONS. The Board of Fisheries and the Department of Fish and Game each may proceed to adopt regulations necessary to implement the changes made by secs. 1, 3, 4, 5, and 6 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

*** Sec. 10.** Sections 2 and 9 of this Act take effect immediately under AS 01.10.070(c).

*** Sec. 11.** Except as provided in sec. 10 of this Act, this Act takes effect January 1, 2005.



ECONOMIC IMPACTS AND CONTRIBUTIONS OF SPORTFISHING IN ALASKA

2007 REPORT

A Message from the Director

CHARLIE SWANTON, DIRECTOR
ADF&G, DIVISION OF SPORT FISH

Alaska supports arguably some of the finest and most diverse sportfishing in the world. These opportunities provide Alaskans with a significant and sustainable source of food, relaxation, and social benefits. Additionally, the money spent by residents and visitors who participate in sportfishing activities produces significant economic benefits to Alaska.

The Division of Sport Fish is committed to providing an array of biological, social and economic information to fishery managers and fishery regulators who plan and evaluate fishery projects and make informed decisions about the management of fishery resources.

This report summarizes a recent effort by the Division to provide estimates of angler spending in Alaska and the contribution it makes to Alaska's economy. The results are based on an extensive statewide study of resident and nonresident anglers who went sportfishing in Alaska during 2007. The report contains estimates of the total expenditures on sportfishing by anglers and estimates of the subsequent economic effects this spending had in terms of employment, wages, salaries and tax receipts.

A key objective of this project was to establish a consistent and repeatable methodology for collecting and reporting estimates of economic contribution in Alaska such that reasonably precise estimates would be routinely available to agency personnel, fisheries decision-makers, and the public.

We hope that you find the following information useful and that it contributes to well-informed decision making.

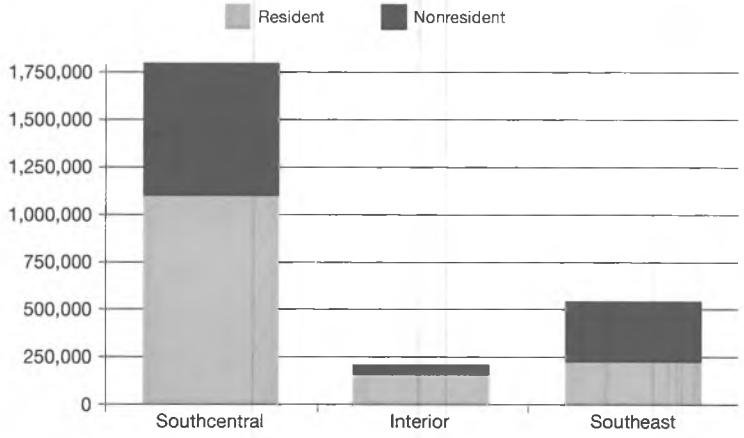
Sportfishing in ALASKA

Sportfishing is an important component of the Alaskan economy. It contributes to the well-being of Alaskans as recreation, as a source of food, and as part of the state's collective economic fabric. In 2007, 190,644 Alaska residents bought a fishing license, along with 284,890 nonresidents.

Spending a day fishing with rod and reel usually involves spending at least some money for travel, equipment, and supplies. Because a large number of anglers—both resident and nonresident—spend many days each year enjoying Alaska's diverse fishing opportunities, the annual total of that spending is substantial.

The money spent by anglers in turn helps to support thousands of Alaskan jobs in industries ranging from fishing tackle sales to hospitality and lodging to air taxi and guide services which are an important part of the economy in many of Alaska's local communities. At the same time, angler spending is also creating federal, state and local tax revenues which support local and borough governments and help pay for fisheries management in Alaska.

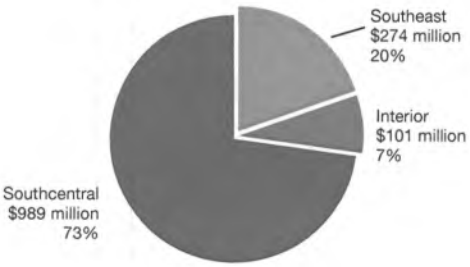
DAYS OF SPORTFISHING IN ALASKA BY REGIONS AND RESIDENCY, 2007



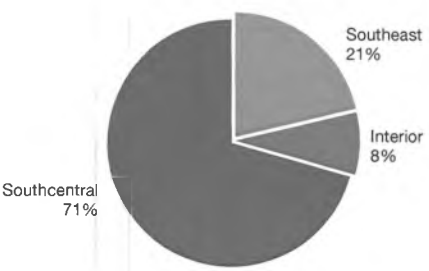
TOTAL SPORTFISHING EXPENDITURES, All ANGLERS

$1.4 billion

SPORTFISHING EXPENDITURES BY REGION, ALL ANGLERS



DAYS OF SPORTFISHING BY REGION, ALL ANGLERS



Economic IMPACTS & Contributions

The purpose of the study was to obtain current estimates of the economic contribution of sportfishing activities to the Alaska economy and to develop a consistent method for producing such estimates on a regular basis. This project provides a survey-based process that can now be updated periodically at reasonable cost.

For 2007, the year covered by this report, 1,163 resident and 1,807 nonresident surveys were completed by anglers who fished in Alaska. From the survey responses collected, estimates of how much each angler spends per day of fishing and per year on fishing-related equipment were produced. These survey results were combined with the total number of licensed anglers in 2007 and the total days of fishing in Alaska as estimated by the Division's Statewide Harvest Survey. This survey, conducted every year by the Division, tracks annual sportfishing participation and harvest. By combining the economic survey results with the Statewide Harvest Survey results, it was possible to estimate the total amount of resident and nonresident spending in Alaska as a whole and within specific regions of the state.

An economic model was then used to estimate the additional economic effects that angler spending produced within each region of the state. Using the collective dollars spent by anglers, an economic model known as IMPLAN estimated the total jobs, tax revenues and other economic contributions. Regional as well as statewide totals can be determined and are summarized in the following pages. Information on the dollars associated with guided fishing trips and with nonresident fishing is also included. First, here are some statewide highlights.

Economic Impact vs. Economic Contribution

This project measured and reported the economic impacts and contributions of licensed anglers to Alaska's state and regional economies. The words "impact" and "contribution" are not necessarily synonymous.

Economic impact typically refers to the effects of money being brought in from outside the state or region. It was possible to estimate the total amount of resident and nonresident spending in Alaska as a whole and within specific regions by combining the economic survey results with the ADF&G Statewide Harvest Survey results.

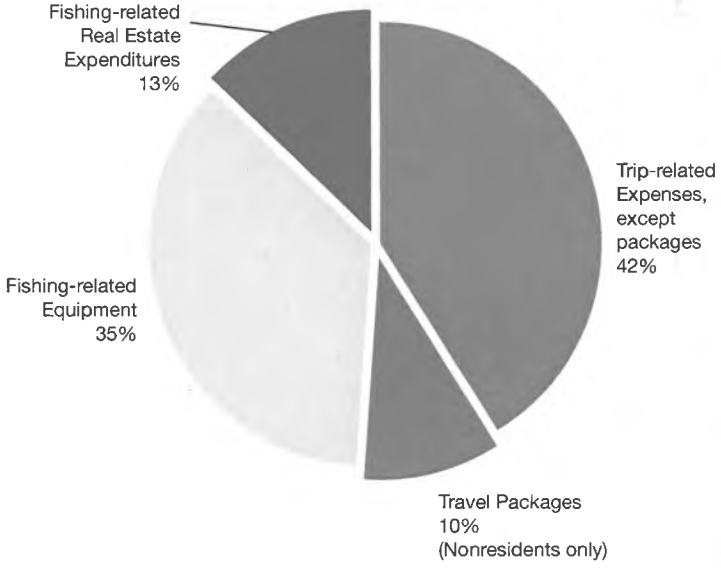
Economic contribution refers to in-state spending by all anglers. In theory, if the dollars spent by resident anglers were not spent on sportfishing, the same money would be spent on other things and would still stimulate economic activity. It isn't possible to accurately predict whether these local dollars would be spent in or outside of Alaska.

This study generated both economic impact estimates (non-resident spending) as well as estimates of the economic contributions of spending by Alaska anglers in 2007.

Total Resident and Nonresident Sportfishing Expenditures, by Category

	Resident Anglers	Nonresident Anglers	All Anglers
Licenses and Fees	$6,627,558	$16,536,955	$23,164,513
Trip Expenditures (non-package)	$219,829,151	$347,358,999	$567,188,150
Package Expenditures	n/a	$137,519,700	$137,519,700
Equipment Expenditures	$433,693,104	$41,385,450	$475,078,554
Real Estate Expenditures	$73,139,537	$109,697,619	$182,837,156
Total Expenditures	**$733,289,349**	**$652,498,723**	**$1,385,788,072**

TOTAL ANGLER SPENDING BY CATEGORY



Average Per Day Expenditure for Trip-Related Items Only, Including Package Trips

(Lodging, fuel, food, travel packages, etc.)

	Per Day
All Alaska Fishing Combined	**$277.46**
Residents Only	$150.63
Non-Residents Only	$448.78
Saltwater	
Residents, Unguided	$162.81
Residents, Guided	$466.53
Non-Residents, Unguided	$209.40
Non-Residents, Guided	$744.03
Freshwater	
Residents, Unguided	$91.73
Residents, Guided	$509.56
Non-Residents, Unguided	$213.24
Non-Residents, Guided	$790.41

ECONOMIC ACTIVITY, OR MULTIPLIER EFFECT: SUPPORTED BY GUIDED AND UNGUIDED FISHING TRIPS

Trip-related and Package Expenditures*

JOBS: SUPPORTED BY GUIDED AND UNGUIDED FISHING TRIPS

Trip-related and Package Expenditures*

*Only trip related expenditures (food, fuel, lodging, etc.) could be divided into guided and unguided portions. It was not possible to divide equipment expenditures in such a manner.

How Economic Effects Occur

While the economic effects of sportfishing occur on a large scale statewide, it's important to note that they happen one angler at a time.

Suppose, for example, that a construction worker in downtown Anchorage decides to go fishing on his day off. He stops after work at the local tackle shop and spends $250 for a rod and reel along with some line, lures, a knife and cooler. Sandwiches, soda, and ice for the trip come from the local grocery store, and he spends still more money to fill his vehicle with gas on the way home. Very early the next morning, he starts the 150-mile drive out the Seward and Sterling highways to the Kenai River where he'll fish for king or coho salmon.

Meanwhile, the money he left behind goes to work. Some of the money he spent for fishing gear helps to pay the wages of a sales clerk, for example, who in turn spends some that evening at a local restaurant, to buy groceries, or pays his utility bill at the local light and power company. These payments, known collectively as the "multiplier effect", help to support still other jobs as the money our angler spent ripples outward in many directions through the local economy, even to those sectors not directly related to fishing. See page 11 for more definitions.

Regional Economic EFFECTS

Economic effects can be measured regionally and locally as well as statewide. Alaska has several distinct regions, each with its own characteristic sport fisheries that show different patterns in angling participation, spending, and economic effects.

STATEWIDE RESULTS

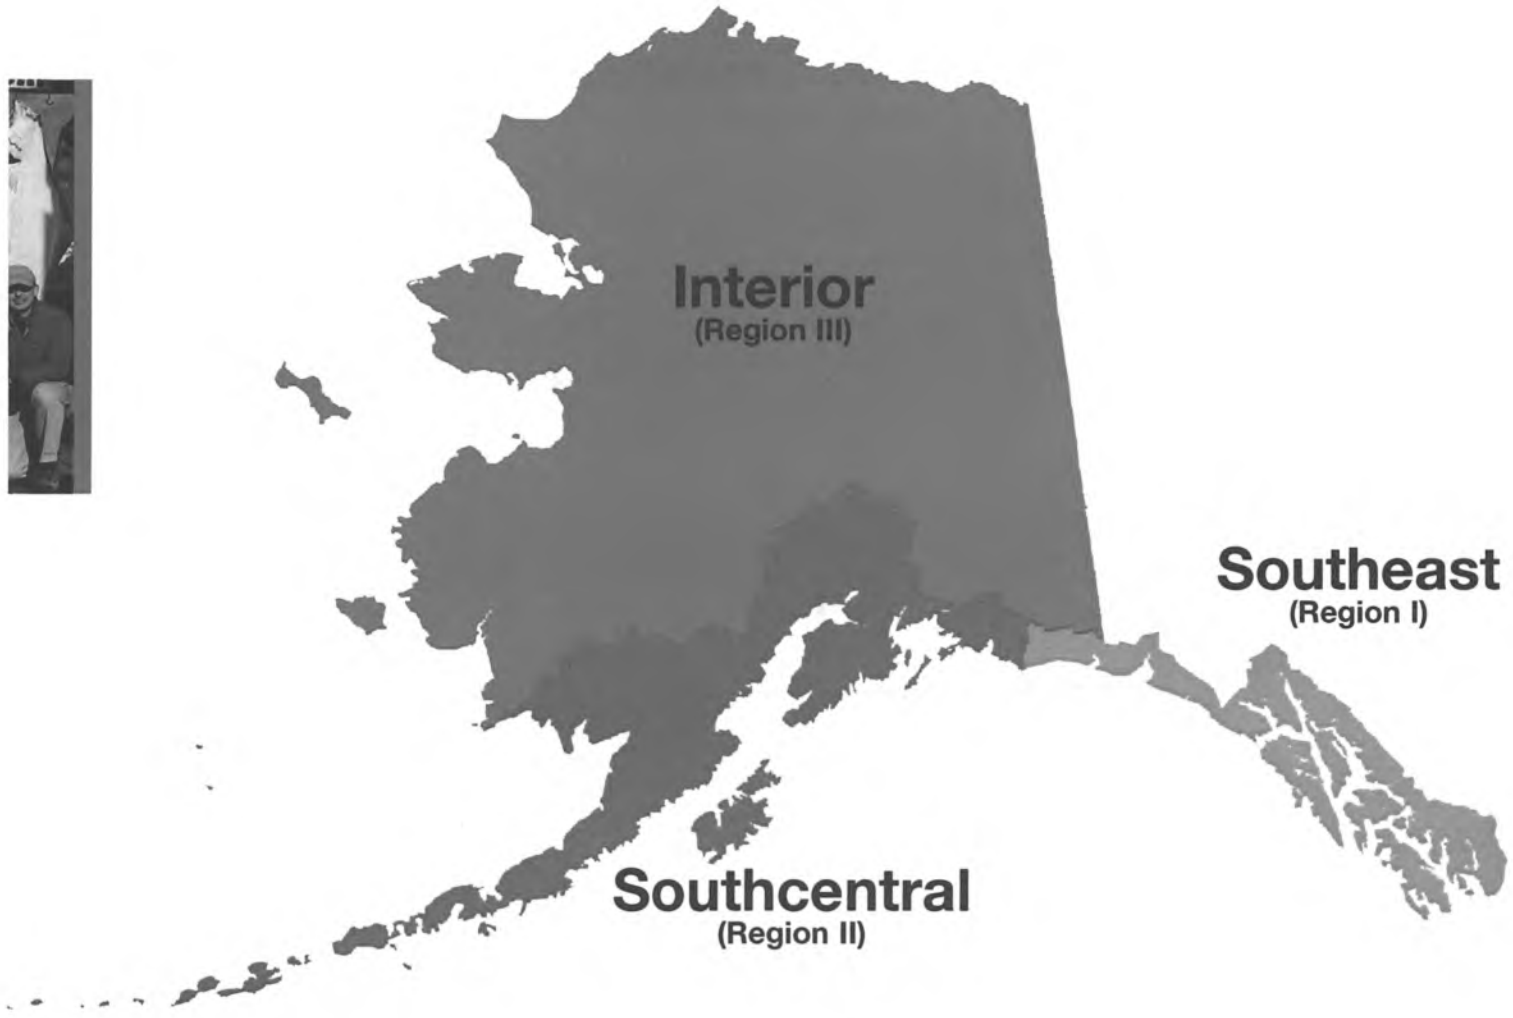
Alaska is blessed with many world-class freshwater and marine fisheries. In 2007, resident and nonresident anglers spent nearly $1.4 billion on equipment, boats, and trip-related and other items. Alaska anglers on average spent $2,914 on sportfishing trip expenses, fishing-related equipment, licenses, and other items in 2007. The actual amount spent per angler varies based on his or her preferred fishing locations, region, and more. Details are available in the technical report (see sidebar on page 8).

As anglers' expenditures exchange hands, economic contributions are generated statewide. In 2007, these contributions amounted to 15,879 jobs, $246 million in tax revenues and $545 million in income. Economic output, which is the value of all goods and services produced by businesses as a result of anglers' expenditures, was just over $1.6 billion.

SOUTHEAST (REGION 1)

The so-called Panhandle area extending roughly from Yakutat south-southwest through Juneau and Ketchikan to the British Columbia border is a complex maze of islands, straits, and mountains. The saltwater salmon fishing here is outstanding, although some anglers find steelhead, along with river-resident trout, to be just as appealing.

Total spending by all anglers, resident and nonresident combined, for Southeast Alaska in 2007 was estimated to be $274 million. The total economic output came to $295 million, which supported 3,063 jobs and generated $22 million in state and local taxes.



SOUTHEAST MARINE (SUBREGION)

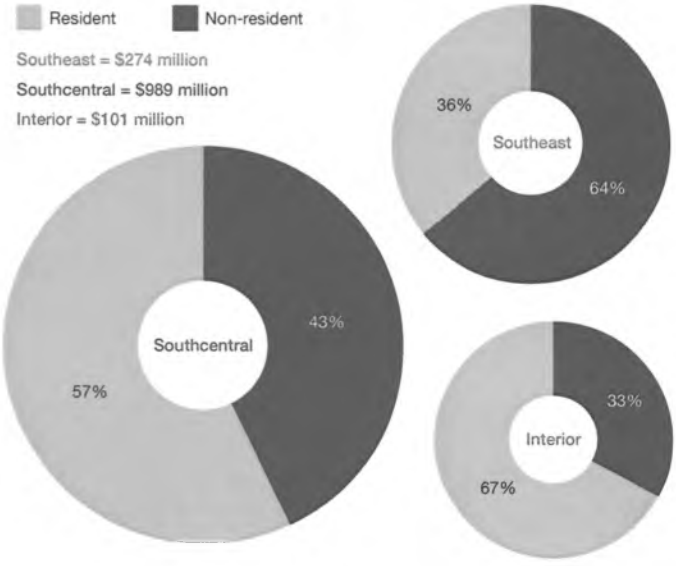
Within southeast Alaska, the popularity of salt-water fishing accounted for almost half of all angler spending. Saltwater anglers in southeast Alaska spent $132 million of the $274 million spent on sportfishing in southeast Alaska in 2007, which supported 1,897 jobs and created $14 million in state and local tax revenues.

SOUTHCENTRAL (REGION II)

This is by far the most popular angling region in Alaska as measured in total angler days. It includes Prince William Sound, Cook Inlet and the Anchorage area, as well as Kodiak Island and the Bristol Bay area to the west of Cook Inlet. All five salmon species are fished widely here in both salt- and fresh-water, along with halibut and other saltwater species. Trophy rainbow trout in the various Bristol Bay drainages are world-famous.

Anglers spent $989 million in the Southcentral region in 2007, supporting 11,535 area jobs and creating $91 million in state and local taxes.

RESIDENT AND NONRESIDENT EXPENDITURES BY REGION



Economic measures reported in this chart are based on regional IMPLAN model outputs using 2007 angler expenditures.

For More Details...

This report is a summary of a 300 page technical report available free from the Alaska Department of Fish and Game, Division of Sport Fish. The complete report presents detailed descriptions of the methods and data sources used in the study, as well as the complete results. Visit ***www.sf.adfg.state.ak.us/statewide/economics*** *to download a copy in PDF form. You may also contact the Department at (907) 267-2366, or william.romberg@alaska.gov, to request a printed copy of the report.*

Regional Economic EFFECTS (cont.)

COOK INLET (SUBREGION)

Notably, much of Southcentral's economic activity centers around the Cook Inlet area, partly because Anchorage and the Matanuska-Susitna valley are such large population centers with good fishing nearby. The Kenai River, for example, is an easy drive from Anchorage and is widely known among anglers as one of the world's foremost salmon rivers. In addition, there are large sport fisheries for halibut and other groundfish that are accessed from several communities that border Cook Inlet. In the Cook Inlet subregion alone (a subset of Southcentral region), anglers spent about $733 million in 2007, which supported 8,056 jobs and generated $55 million in state and local taxes.

INTERIOR (REGION III)

Among anglers, the northern two-thirds of the state could be called the road less traveled. This vast area contains many small communities and sport fisheries located off the road system with fisheries less accessible than places farther south in the state. However, the fishing is none the less exceptional, and in addition to salmon and trout there are fisheries for unique species such as sheefish, arctic char, and burbot, as well as huge northern pike found in the "flats" region of the lower Yukon River.

Angling traffic here is lighter than in other regions of the state but still significant. Total regional spending by all anglers in this region topped $101 million in 2007 and directly or indirectly supported 923 area jobs and $7 million in state and local taxes.

Total Angler Expenditures
$1.4 Billion

RESIDENT AND NONRESIDENT OUTPUT BY REGION

Output = total economic activity generated by angler spending
Income = salaries, wages, employee benefits and proprietors' profits stimulated by anglers
Jobs = same as employment, these are the total number of both full-time and part-time jobs supported by angler spending
Tax Revenues = the total personal and business tax revenues earned by local, state, and federal government that are generated by angler spending
†The contributions are for trip spending only, including travel packages. It was not possible to allocate equipment and real estate expenditures by type of water fished.

Definitions of Terms Used in this Report

Angler Expenditures: the dollars spent for the primary reason of sportfishing. Such expenditures include trip-related expenses for fishing (fuel, guide services, lodging, etc.), fishing tackle and other fishing equipment, the portion of ancillary equipment used for fishing that may have multiple uses (e.g., coolers, binoculars), and real estate maintenance and construction expenditures if used primarily for the pursuit of sportfishing.

Total Multiplier Effect (also known as Total Economic Activity): the results (measured in output, income, jobs and taxes) of the total rounds of business and consumer spending stimulated by anglers' original expenditures.

Income: generated as a result of anglers' expenditures, this includes total payroll, including salaries and wages, as well as benefits such as insurance, and retirement benefits paid to employees and business proprietors.

Employment: the total number of both full-time and part-time jobs supported as a result of anglers' expenditures.

Tax Revenues: the total tax revenues earned by local, state and federal governments as a result of anglers' expenditures. All forms of local, state and federal taxes are included.

ACKNOWLEDGEMENTS

Funding for this study was provided by the Alaska Legislature which approved a $229,800 Fish and Game Fund increment and a $200,000 General Fund increment to the Division of Sport Fish FY-2008 budget. The Division of Sport Fish would like to thank Southwick Associates for their dedicated work on this project as well as the many anglers and guide businesses who participated in this study by providing detailed information on their sportfishing-related expenditures in 2007.

Southwick Associates, based in Fernandina Beach, FL, was founded in 1989 to serve state fish and wildlife agencies and the sportfishing and hunting industries. From our north Florida offices, we continue to serve this core group, and now provide economic and business intelligence to many more.

Brief for SB 294: SPORT FISH GUIDE LICENSES
(Reauthorization of Program/Repeal of Sunset)
March 10, 2010

Alaska Department of Fish and Game Contacts:
Charlie Swanton- Charles.Swanton@alaska.gov; phone: 465-6184 or 321-0955
Jennifer Yuhas - Jennifer.Yuhas@alaska.gov; phone: 465-6137 or 388-7951.

Background:

- Original legislation passed in May, 2004; effective January 1, 2005.

- Proposed by the Department for three main reasons:
  1. Information on guide numbers and their fishing activities was either not available or limited in many parts of the state;
  2. Establish minimum standards to operate a business or contract as a guide (safety, liability insurance, US Coast Guard license, etc.) as a means to increase professionalism and reduce speculative entry; and
  3. Provide comprehensive and credible data on guided sport fishing activities to regulatory agencies: Alaska Board of Fisheries (BOF), International Pacific Halibut Commission (IPHC), and North Pacific Fisheries Management Council (NPFMC).

Legislation:

Sec.16.40.260 Sport fishing operator license;
Sec.16.40.270 Sport fishing guide license;
Sec.16.40.280 Reports;
Sec.16.40.290 Penalties for violations.

These legislative sections include licensing provisions and fees (AS. 16.05.340(a)) for sport fishing business owners ($100), sport fishing guides working for the business ($50), and business owners who are also a guide (owner/operator combo $100). The mandatory reporting requirements, logbooks, are for both fresh and saltwater guide activities (freshwater logbooks were instituted in 2005). The penalties for sport fish guiding violations by business owners and guides include possible revocation of their license.

Companion Regulations:

5 AAC 75.075 Sport fishing services and sport fishing guide services; license requirements; regulation of activities.

5 AAC 75.076. Sport fishing services and sport fishing guides reporting requirements.

5 AAC 75.077. Sport fishing guide vessel registration requirements.

Present Benefits and Utility:

- A comprehensive list of all sport fishing guides working in salt water is part of the data requirements that will allow Alaska to receive an exemption from participating in the National Saltwater Angler Registry (up to $25/saltwater angler in 2011).

- The logbook data for saltwater anglers has been used extensively within the IPHC and NPFMC for rule making on Pacific Halibut.

- Both freshwater and saltwater logbook harvest data has been presented and utilized by the Alaska Board of Fisheries. Harvest estimate verification studies are being conducted comparing logbook, statewide sport fish harvest survey, and dock side creel programs.

Participation Statistics:

- An average of **1,647 sport fishing business licenses** (including owner/operator combo) have been sold (2005-2009); 90% of owners are Alaskan residents.

- An average of **1,882 sport fishing guide licenses** have been sold (2005-2009); 73% of guides are Alaskan residents.

- Based on logbook data, over **2.1 million clients took 536,960 guided fishing trips** (from 2005 through 2009); 67% of clients fished in saltwater, 33% fished in freshwater and 88% of all clients were nonresidents.

- An average of **1,334 vessels in saltwater** were used for guided fishing trips (2005-2009).

Electronic Reporting (Modernization initiative):

- One of Commissioner Lloyd's initiatives is modernization and timely reporting of recreational harvest data. We have been actively working on this task:

    - In July, 2009 we developed a scannable saltwater logbook form which will reduce the time lag when logbook data is available from 2 to 3 months to 1 to 2 weeks. This new form will be employed for saltwater forms statewide in 2010. Ten public meetings were held across the state to explain this new format and received nearly unanimous support from user groups and public.

    - In April, 2010 the point of sale hunting and fishing licensing program will be launched at all ADF&G regional offices. This program will be made available to all license vendors shortly thereafter.

    - We will convert the freshwater logbook to a scannable format starting in 2011.

State Capitol
Juneau, AK 99801

You asked about mining in Alaska. Specifically, you were interested in the history of mining in the state, including a timeline, the socioeconomic impact of mining in Alaska, and a description of selected large-scale mines.

BRIEF HISTORY OF MINING IN ALASKA

Mining was an extremely important component in Alaska's early development and economy. The lure of gold brought prospectors by the thousands to Alaska. Cities such as Fairbank, Juneau, and Nome, as well as many other communities, were founded on mining. While the discovery and production of gold in the late 1800s is what many associate with mining in Alaska, the later discoveries and production of zinc, lead, silver, coal, and construction materials such as sand, gravel, and rock have all played a role in the state's mining industry. Numerous roads and other infrastructure in the state were originally constructed to serve the mining industry. While mining diminished in the state in the mid-20th century, the industry has experienced a renaissance over the last few decades.

According to our review of the subject, the history of mining in Alaska can be disaggregated into three general time-periods:

- Discovery (mid-late 1800s) to World War II;
- World War II to the late 1980s; and
- Late 1980s to present day.

We discuss prominent aspects of each of these epochs below, followed by a chronological timeline of important events in Alaska's mining history.[1]

Early Discovery and Exploration—Thousands Lured to Alaska by Gold

Gold exploration and mining initially began in the area with the Russian explorers in the mid-1800s. After the acquisition of Alaska by the United States in 1867, exploration and production gradually increased for both placer mining and eventually lode (or hard rock) mining.[2] In 1880, Joe Juneau and Richard Harris (founders of the city of Juneau) found large pieces of quartz mixed with gold in Southeast Alaska at what became the Gold Creek Mine. Subsequently, numerous prospectors were lured to the new town site of Juneau. Two years later, gold deposits were also found on Douglas Island, across the channel from

[1] We compiled information on mining in Alaska from numerous sources including State of Alaska Departments of Commerce, Community and Economic Development, Natural Resources, and Labor and Workforce Development. Additionally, we obtained information from the Resource Development Council for Alaska and the Alaska Miners Association. We use some of the information we obtained from these entities verbatim in this report. Also, we spoke at length with Steve Borell, P.E., executive director of the Alaska Miners Association, who provided us with much valuable information on the topic. Mr. Borell can be reached at (907) 563-9229.

[2] Gold mining operations may be carried out by either *placer* mining or *lode* (also called hard rock) mining. Placer mining is a method of using water to excavate, transport, concentrate, and recover heavy minerals from alluvial or placer deposits. This can be done individually by one prospector and was the technique used in the early days of mining and on many small-scale mines today. Lode mining refers to ground level and underground mining of lode deposits—minerals that are bound to other rock requiring that the rock be crushed and pulverized before extraction of the minerals begins. Most of the large gold mines both historically and today are lode mines.

Juneau, resulting in the creation of the Treadwell Mine. According to Steve Borell, executive director of the Alaska Miners Association, the Treadwell Mine soon became the largest gold mine in the world.[3]

Gold discoveries in the Yukon in 1896 launched the famous Klondike gold rush. Thousands of prospectors passed through Juneau on their way to the Yukon and the rush created the city of Skagway. The Klondike gold rush also spread "gold fever" across the United State and elsewhere, which subsequently contributed to many prospectors coming to Alaska for exploration.

Gold was discovered in Nome in 1898 bringing many treasure hunters seeking their fortunes. Another large gold strike was made in the Tanana Hills in interior Alaska early in the 20th century, which contributed to the founding of Fairbanks. This find would eventually become one of the most productive in Alaska. The Kennecott copper deposit was discovered in the Valdez-Cordova area around the same time. The Kennecott eventually proved to contain the richest copper ore deposits ever found and the mine remained in operation until 1938. Also, the Independence Gold Mine in Hatcher Pass was founded in the same time period and operated until World War II.

We provide more detail on three important early mines in Alaska's history—the Independence, Kennecott and Treadwell—in the last section of this report.

While the most prominent Alaska gold strikes in the early years were in the Fairbanks, Juneau, and Nome areas, there were numerous other discoveries throughout the state of both gold and other minerals. We touch on a few of these below.[4]

- In 1892 gold was discovered at Pitka's Bar on Birch Creek, leading to the development of the Circle Mining District;
- Turnagain arm experienced a gold rush in 1895, which led to the development of the towns of Sunrise and Hope;
- Gold was discovered at Valdez Creek in 1903;
- In 1908 gold was discovered in the Iditarod area. This discovery led to other finds in the area including the Innoko-Tolstoi-Ophir and Aniak-Tulusak districts; and
- The Goodnews Bay platinum placer deposit was discovered in 1926.

New mining practices started to emerge during the early part of the 20th century and large companies began buying individual mining claims and hiring workers. Proceeds from sales were used to purchase equipment such as hydraulic hoses, draglines, and dredges. New mills that could crush rock were built at the lode mines. The industrialization of gold mining practices continued until 1942 when President Roosevelt ordered the closure of all nonessential mines to free up men for the war. Gold mining throughout Alaska and the United States came to an abrupt halt.

---

[3] Steve Borell, P.E., executive director of the Alaska Miners Association (AMA), can be reached at (907) 563-9229. The AMA is a non-profit corporation headquartered in Anchorage that works to promote the mining industry in Alaska *http://www.alaskaminers.org/*.

[4] For more details on the early history of mining in Alaska, you may wish to review a report produced by the State of Alaska's Department of Commerce, Community, and Economic Development entitled "Alaska Mineral History" available at *http://alaskamining.com/alaskamininghistory1.html*.

World War II until the 1980s—Dry Period for Mining

The wartime ban was lifted in 1946, but gold mining was slow to recover. After the war, gold could be sold only to the U.S. government at a fixed rate of $35 per ounce. Additionally, postwar inflation skyrocketed, and gold mining became an unprofitable venture. According to Steve Borell of the Alaska Miners Association, and other sources, lode mining *production* in Alaska was virtually nil for more than 40 years. Other factors that contributed to the drying up of mining in the state over these decades, including the following:

- Numerous base metal mines in operation during World War II led to a overcapacity of these materials;
- In the late-1960s oil was identified in Prudhoe Bay and Alaska became focused on the oil industry (to the detriment of other industries, some believe); and
- According to Mr. Borell, the Alaska Native Claims Settlement Act of 1971, and the Alaska National Interest Lands Conservation Act of 1980, effectively took many millions of potentially minable lands "off the table" for development.

1980s to Present—Mining Resurgence in State

Since the 1980s mining has rebounded in the state and is now a robust industry again. This resurgence occurred for a number of reasons. For one, the excess capacity of minerals around the world created around WWII began to ease and prices for gold, which was deregulated in 1971, and other minerals began to rise. Gradually, mining became economically feasible again. Also, while large scale production had not been occurring in the decades preceding this time, exploration had continued in a modest way.

In 1989, the Greens Creek Mine (silver, zinc, gold, and lead) and the Red Dog Mine (zinc, lead, and silver) began production and proved that large mines could operate successfully in the state. Today Greens Creek employs around 340 and the Red Dog around 550. With the advent of these endeavors, the mining industry in Alaska began a period of steady and continuous growth. Today there are six large mines operating in the state and many more in development. Along with Greens Creek and the Red Dog, the following large mines are in production in Alaska (2010 employees in parentheses):

- Usibelli Coal Mine, (130);
- Fort Knox Gold Mine, (500);
- Pogo Gold Mine, (300); and
- Kensington Gold Mine, (200).

We provide more detailed information on these mines in the final section of this report.

In addition to these six large mines, the following is a list of potential large mines in various stages of development across the state.

- Rock Creek/Big Hurrah (gold);
- Nixon Fork (gold and copper);

- Chuita (coal);
- Wishbone Hill (coal);
- Donlin Creek (gold);
- Livengood (gold);
- Pebble Project (copper, gold, and molybdenum); and
- Niblack (gold, silver, copper, and zinc).

Additionally, there are an estimated 200 smaller placer mines in operation throughout the state. Most of these are one to three person operations but a few have up to 20 employees, according to Mr. Borell. Also, there are a number of commercial ventures throughout the state that equip recreational miners (often tourists) and set them up panning in historically rich placer mining grounds.

Alaska Mining Timeline

Below we provide a chronological listing of some of the notable occurrences in Alaska mining history.[5] (A number of these items we touched on earlier in this report.) We also suggest you review a document produced by the Alaska Division of Geological and Geophysical Surveys entitled "Historical Sketch on Mining on Alaska," which we include as Attachment A. The sketch provides an excellent 5-page history of mining in Alaska.[6]

- 1880 Joe Juneau and Richard Harris (founders of the city of Juneau) discovered gold in Southeast Alaska. Eventually, large mining complexes—including the Treadwell, Perseverance, and Alaska Juneau Consortia—that collectively employed up to 3,500, were started and remained active in Juneau until World War II.
- 1885 Turnagain arm experienced a gold rush leading to the development of the towns of Hope and Sunrise. Turnagain arm experienced around 100 years of varying mining activity.
- 1886 The Interior's first gold rush occurred when gold was discovered on Franklin Bar of the Fortymile River. The Fortymile district produced over 568 thousand ounces of placer gold.
- 1888 Gold discovered on the Kenai Peninsula by Alexander King.
- 1892 Gold discovered on Birch Creek setting off a rush to what became known as the Circle Mining district, which has produced over 1 million ounces of gold.

[5] Please note that while we reviewed many sources for this timeline and made efforts to include the major events in Alaska mining history, important happenings may have eluded us.

[6] A number of the items we include in our timeline come from this document. While it was originally published in 1982, Dr. David Szumigala, senior mineral analyst, ADGGS, appended the report to add information since 1982. He can be reached at (907) 451-5025.

- 1896 The Klondike gold strike in the Yukon Territory captured the imagination of thousands of treasure seekers worldwide and triggered numerous placer-mining endeavors in Alaska.

- 1898 Many flock to the beaches of Nome after gold is discovered. The Cape Nome district produced over 5 million ounces of gold.

- 1902 Gold discovered at Valdez Creek.

- 1905 The Kennecott copper deposit, discovered in the early 1900s, was commissioned as a mine in 1905 and operated for 33 years producing 590 thousand tons of copper and 9 million ounces of silver.

- 1908 Iditarod joined the gold rush districts and produced over 1.5 million ounces of gold. The discovery led to others in the area including the Innoko-Tostoi-Ophir and Aniak-Tuluksak districts.

- 1914 Gold was discovered on Livengood Creek by N.R. Hudson and Jay Livengood. The village of Livengood, 50 miles from Fairbanks, was founded near their placer mining operation. In 2007, a lode gold deposit was discovered and over $58 million has been invested in developing the site through 2010.

- 1917 The Treadwell Mine experiences a cave-in that eliminated three of the five large mining ventures in the Juneau gold belt, seriously affecting the Juneau economy.

- 1920 By 1920 copper production was only half that of the peak World War I years, primarily because of declining market conditions.

- 1926 Platinum was discovered at Goodnews Bay. Eventually, a bucket-line dredge that operated continuously for 40 years was installed.

- 1930s The worldwide depression had a mixed impact on Alaska mining. Many metal prices (including copper) declined dramatically; tin, antimony, mercury, and industrial materials production also suffered. However, President Roosevelt nearly doubled the price of gold in 1934 (to $35 an ounce), which resulted in an increase in gold-mining activities.

- 1938 What is now referred to as the Independence Mine was once two mines: the Alaska Free Gold Mine and Independence Mine. In 1938 the two were bought together under one company, the Alaska-Pacific Consolidated Mining Company (APC). In its peak year, 1941, APC employed 204 men, blasted nearly a dozen miles of tunnels, and produced 34,416 ounces of gold worth $1,204,560 ($17,208,000 in today's dollars).

- 1940s World War II greatly affected the Alaska mining industry. Increased costs, high defense priorities, and military needs for manpower cause gold production to slip dramatically.

- 1942 President Roosevelt signs Executive Order L-208 closing all gold mines in the United States because gold extraction was considered

nonessential for the war effort. Gold mining in Alaska starts a long dry period.

- 1943 The Usibelli Coal Mine, nearly Healy, starts operation. The family-owned mine has been in production continuously since then.

- 1955 The need for uranium in nuclear weapons and for energy applications led to the discovery and development of the Bokan Mountain uranium-thorium mine near Ketchikan. The mine operated intermittently from 1955-1971.

- 1950s The fixed price of gold leads to the continued demise of the gold-mining industry. By the 1960s, most gold mining operations—with the exception of a number of resilient small operators—had ceased business altogether.

- 1968 Oil discovered in Prudhoe Bay. This was good for sand and gravel production but mining as an industry was largely ignored or put on the back burner.

- 1970s-80s Throughout the 1970s and early 1980s, the sand and gravel industry dominated mineral production in Alaska.

- 1970s The Red Dog (1968), Greens Creek (1979), Ambler mineral belt (1970s), and Quartz Hill (1974) were all discovered around this time. The use of helicopters in exploration helped to overcome the long-standing access problem.

- 1971 Gold prices were deregulated and interest in the industry began to slowly build up.

- 1984 The Valdez Creek Mine, a placer mine using standard open-pit mining methods, produced around 460,000 ounces of gold during operations from 1984-1985.

- 1989 Alaska's mineral industry enters a new phase with the development of large lode mines in the 1980s. The Red Dog Mine in northwestern Alaska begins producing zinc, lead, and silver in 1989 and continues to be one of the world's largest zinc producers.

- 1989 The Greens Creek Mine, on Admiralty Island near Juneau, began production of zinc, lead, silver, and gold. The mine is among the top 10 silver producers in the world.

- 1996 The Fort Knox Mine near Fairbanks began gold production. The open-pit mine was the largest in Alaska from 1997-2007 and has produced around a million ounces of gold.

- 2006 The Pogo Mine near Delta Junction began mining gold after being discovered in 1995. The underground mine produced almost 1.5 million ounces from 2006 to 2010.

- 2010 The Kensington Mine near Juneau began modern gold production in July of 2010 utilizing underground mining methods. The mine employs around 200 men and women.

- 2011 Mining exploration continues at a robust pace in Alaska. Many discoveries throughout Alaska have been made over the last several decades and may one day become mines. Among the projects in advanced exploration phases are the Pebble project (copper-gold-molybdenum) near Lake Iliamna, the Donlin Creek gold project near Aniak, the Niblack (copper-zinc-gold-silver) project near Ketchikan, and the Bokan Mountain (rare earth mineral) project also near Ketchikan.

SOCIOECONOMIC IMPACT OF MINING

Mining and the Alaskan economy have been interrelated since the United States purchased the territory in 1867. The total value of minerals produced from 1880 to 1980, excluding oil and gas, amounts to almost $20 billion in 1980 dollars. The total value of metals, industrial minerals, coal, peat and other mineral commodities produced in Alaska from 1880 to 2009 is slightly less than $27.2 billion.[7]

The success of the Alaskan mining industry, like agriculture, commercial fishing, logging, or other resource operations, hinges on complex economic factors that include commodity prices, inflation, availability of manpower, energy, materials, technology, government policy, accessibility, economics, and development of infrastructure.

Mining was Alaska's largest industry from before the turn of the century until World War II. The discovery of gold brought thousand to the state and played a significant role in the formation of population centers including Fairbank, Juneau, Nome and many smaller communities. Additionally, large mines such as the Alaska Juneau, Treadwell, Independence, and Kennecott employed many as the territory was growing. While mining was essentially dormant from the 1940s to the 1980s, it is again an important—albeit small compared to the oil industry—economic factor in the state.

Metal mining has reestablished itself as a major industry in Alaska and has experienced continuous steady growth over the last few decades. During the last decade, Alaska's mining employment has outpaced the nations' by nearly 40 percent and most of Alaska's other private industries, according to Alaska Department of Labor and Workforce Development (DOLWD) data.

Mining jobs have higher earnings than any other industry except oil and gas with an average salary of more than $90,000 a year—nearly twice the statewide average-annual earnings.[8] One reason for the high salaries is that the industry employs skilled occupations such as heavy equipment operators, miners, drillers, and others. These types of occupations tend to pay well without requiring a college degree. Also, nearly three-quarters of all wage and salary earnings from mining stay within the state due to Alaska residents making up about three-quarters of all workers in the mining industry, according to the DOLWD.

[7] This information was provided by David Szumigala, senior mineral analyst, Division of Geological and Geophysical Surveys (907-451-5025). The value is not adjusted for inflation.

[8] This is the average salary for miners working in the large scale mines. It does not figure in the hundreds of smaller scale placer miners.

The most recent economic data available on mining in Alaska come from a January 2011 McDowell Group report produced for the Alaska Miners Association entitled "The Economic Benefits of Alaska's Mining Industry."[9] Below we highlight some of the findings from this report, a copy of which we include as Attachment B. (The estimated benefits listed are for 2010.)

- 3,500 direct and 2,000 indirect jobs attributed to the mining industry;
- $350 million in total direct and indirect payroll;
- Average annual wages of around $95,000;
- $13 million in local government revenue through property taxes and payments in lieu of taxes;
- Nearly $60 million in state government revenues (through rents, royalties, fees, and taxes);
- $3 billion in gross mineral production value (including production from all the large mine, placer mines, and rock, sand, and gravel operations); and
- Almost $150 million in payments to Alaska Native corporations.[10]

In addition, we contacted David Szumigala, senior mineral analyst with the Division of Geological and Geophysical Surveys (907-451-5025), about the McDowell Group report. Dr. Szumigala relates that most of the figures from the report come from his division or the Department of Commerce, Community, and Economic Development and that he considers the report reliable and accurate. We include, as Attachment C, the introduction to a report co-authored by Dr. Szumigala entitled "Alaska's Mineral Industry 2009." On the third and fourth pages of this document are tables that track the value of the Alaska mineral industry and mine employment from 1981-2009 and mine employment throughout the last decade.[11]

Finally, for another perspective on the economic impacts of mining in Alaska, we include, as Attachment D, the section on the mining industry from a 2010 report on the Alaska economy from Professor Scott Goldsmith of the University of Alaska Anchorage, Institute of Social and Economic Research (ISER). Professor Goldsmith's report contains much data on the mining industry and includes the following paragraphs on the mining sector.[12]

> The mining sector consists of three different activities: (1) hard rock mining for export, (2) coal mining that serves both local and export markets, and (3) production of construction materials—sand, gravel, and rocks—for the local market. Hard rock mining

[9] The McDowell Group is a Juneau-based research agency that provides a variety of consulting services regarding resource development industries (among others) (*http://www.mcdowellgroup.net/index.htm*).

[10] All Alaska Native corporations benefit from mining industry activity – through the Alaska Native Claims Settlement Act's royalty sharing provisions (sections 7(i) and (j)). Benefits also include jobs for shareholders and business partnerships.

[11] The entire 94-page Alaska's Mineral Industry 2009 report can be accessed at *http://dggs.alaska.gov/webpubs/dggs/sr/text/sr064.PDF*.

and about half of the coal mining activity comprise the economic base portion of this sector.

The economic base, in turn can be divided into three components: exploration and development of new mineral prospects; production of zinc, lead, gold, and silver from large-scale mines (Red Dog, Fort Knox, Pogo, and Greens Creek); and production of a variety of minerals from smaller operations that include both business and recreational operations. Most direct employment is associated with operations of the large-scale mines although exploration and development employment, which varies considerably from year-to-year, can be significant when a large prospect, such as a Donlin Creek or Pebble is under investigation or development. Only primary processing of minerals occurs within the state.

A potential growth area in Alaska mining in the years and decades to come may be in "rare earth minerals" also called rare earth elements (REE).[13] These REEs are necessary to produce many types of electronics, including computers, clean energy products, and sensitive military hardware. Until the mid-1980s, the United States dominated REE production; however, China now has a near monopoly—over 95 percent—of the world's production of REEs. In recent years, China has implemented restrictions regarding the export of these minerals to other countries, including the United States.

Exploration for REEs is currently underway on Prince of Wales Island in Southeast Alaska. The site, Bokan Mountain, is thought to hold about 3.8 million tons of rare minerals or, as United States Senator Lisa Murkowski said in December 2010, "more than enough to break China's stranglehold on the market and protect America's access to the rare earths that are vital to the production of cutting-edge technologies in this country." Studies indicate that rare earth minerals may be present in around eight different regions of the state, primarily in southeast Alaska, the Seward Peninsula near Nome, and the Ambler district on the south slopes of the Brooks Range.

While mining has been and is an important economic factor in Alaska, the industry is not without its critics. Metals mining is a controversial topic in Alaska manifested in environmental concerns surrounding the proposed Pebble Mine and law suits over impacts from existing mines such as the Red Dog. Many of these concerns focus on potential negative environmental impacts from mining and the corresponding adverse effects on other important state industries such as fisheries or tourism. Mining proponents with whom we spoke believe that Alaska's robust regulatory system provides sufficient checks and balances to ensure the environmentally responsible development of mineral resources.

Brief Description of Selected Current and Historical Mines

In this final section, we provide more detail on three historical mines (Independence, Kennicott and Treadwell), and all current large mines.[14]

[13] Rare earth minerals are set of seventeen chemical elements in the periodic table, specifically the fifteen lanthanoids plus scandium and yttrium.

[14] Descriptions of these mines came (in some cases verbatim) from the State of Alaska Department of Commerce, Community and Economic Development, Office of Economic Development, or the Division of Mining, DNR.

Independence Mine

Located in the Hatcher Pass area, the Independence Mine was once two mines: The Alaska Free Gold Mine and Independence Mine. In 1938 the two were bought together under one company, the Alaska-Pacific Consolidated Mining Company (APC). With a block of 83 mining claims, APC became the largest producer in the Willow Creek Mining District. The claims covered more than 1,350 acres and included 27 structures. In its peak year, 1941, APC employed 204 men, blasted nearly a dozen miles of tunnels, and produced 34,416 ounces of gold worth $1,204,560; $17,208,000 in current dollars.

Kennicott Mine

The Kennicott copper deposit was discovered by Clarence Warner and Jack Smith in the early 1900s in the Chitina Valley near McCarthy. Production of the rich deposits began after the completion of the 186-mile-long Copper River and Northwestern Railroad in 1911. The mine eventually proved to contain the largest and richest copper ore deposits ever found. The Kennicott operated 33 years producing 590K tons of copper and 9 million ounces of silver.

Treadwell Mine

The Treadwell gold mine was the largest mine of the Alaskan Panhandle and, in its time, the largest gold mine in the world. During its operation from 1881 to 1922 over 3 million troy ounces of gold were extracted from the Treadwell. The mine was owned and operated by John Treadwell who was a carpenter and builder who came to Alaska prior to the Klondike Gold Rush. Treadwell had twelve years of experience in both placer and lode mines before embarking on this endeavor. The Treadwell was composed of four sub-sites and at its peak employed over 2000 people.

Red Dog Mine

The Red Dog Mine is located in northwestern Alaska, approximately 82 miles north of Kotzebue, and 46 miles inland from the coast of the Chukchi Sea. The mine is the largest zinc producer in the world and is owned by NANA Regional Native Corporation and operated by Teck Cominco Alaska. Full production started in 1990 and, in 2008, shipped 567,911 tons of zinc and 135,143 tons of lead in the form of concentrates. The mine was further credited with 7,498,024 ounces of silver production. It employs over 500 individuals (including contractors), over 50 percent of whom are NANA shareholders.

The Red Dog produces more than one million tons of zinc and lead concentrates annually using conventional open-pit mining, milling, and flotation technologies. All concentrates are exported to world markets via the DeLong Mountain Transportation System, which connects the mine and mill site to port facilities on the Chukchi Sea.

Fort Knox Mine

The Fort Knox mine is the largest surface gold mine in Alaska. The mine is part of a complex that currently consists of two open-pit gold mines (Fort Knox and True North), and the Fort Knox mill, where gold is recovered through the cyanide vat leach process and cyanide heap leaching. Fort Knox began operations in 1996 as a stand-alone mine. It was converted to a regional gold processing facility with the permitting and development of the True North satellite open-pit mine in 2001. The True North mine is a small satellite operation (now being reclaimed) located about six miles northwest of Ft. Knox. The mine is operated by Fairbanks Gold Mining, Inc., a wholly owned subsidiary of Kinross Gold Corporation. A Canadian gold company, Kinross is currently the world's seventh largest primary gold producer. Total Ft. Knox production in 2008 amounted to 329,105 ounces from 12.78 million tons of ore.

Greens Creek Mine

The Greens Creek Mine, owned by Hecla Mining Company, was commissioned in 1989 and is located near Juneau. It is among the top ten silver producers in the world and the largest Southeast Alaska for-profit employer. It employs around 550 and is the largest payer of property taxes in Juneau. Production at Greens Creek in 2008 was 7,145,711 ounces silver, 67,269 ounces gold, 62,603 tons of zinc, and 50,887 tons of lead from 734,910 tons of ore.

Usibelli Coal Mine

This is Alaska's only coal mine and has been in continuous operation since 1943. It produced over two million tons in 2010 and exported around 50 percent of that amount. The Usibelli Mine is family-owned and located in the Alaska Range near the town of Healy. The mine fuels 40 percent of Interior Alaska's electricity and employed 130 individuals in 2010.

Pogo Mine

Discovered in 1994, the Pogo Mine site is located in the upper Goodpaster River valley, 85 miles southeast of Fairbanks. Production of gold in 2010 was 347,219 ounces, pushing total mine production over a million ounces of gold. The project is primarily owned by Sumitomo Metal Mining Company. The mine employs approximately 300 direct employees and 100 contractors and paid more than $36 million in wages in 2010. Capital spending at the mine exceeded $10 million in 2010.

Kensington Mine

The Kensington Gold Mine is located approximately 45 miles north of Juneau and 35 miles south of Haines, Alaska. The mine site is within the City and Borough of Juneau and the Tongass National Forest. Production started in July 2010 and an average of approximately 125,000 ounces of gold annually over an initial mine life of 10 plus years is expected. The underground mining operation includes placing tailings as paste backfill to fill mined areas and provide support for ongoing mining. The project employs around 200 full-time employees.

"Historical Sketch of Mining in Alaska," appended April 7, 2011 by Dr. David Szumigala, senior minerals geologist, Alaska Division of Geological & Geophysical Surveys

From Bundtzen, T.K., Eakins, G.R., and Conwell, C.N., 1983, Alaska mineral resources 1981-82: Alaska Division of Geological & Geophysical Surveys Annual Report 1981-82, 153 p., 4 sheets, scale 1:2,500,000. (Available at DGGS website - http://dggs/webpubs/dggs/ar/text/ar1981-82.PDF)

HISTORICAL SKETCH OF MINING IN ALASKA

Mining and the Alaskan economy have been interrelated since the United States purchase of the territory in 1867. Total value of minerals produced from 1880 to 1980, excluding oil and gas, amounts to almost $20 billion in 1980 dollars. Total value of metals, industrial minerals, coal, peat and other mineral commodities produced in Alaska from 1880 to 2009 is slightly less than $27.2 billion. The value is unadjusted for inflation.

The success of the Alaskan mining industry, like agriculture, commercial fishing, logging, or other resource operations, hinges on complex economic factors that include commodity prices, inflation, availability of manpower, energy, materials, technology, government policy, accessibility, and a changing economic infrastructure.

Centuries before Russian settlement, Tlingit and Athabascan Indians, Aleuts, and Eskimos utilized Alaskan marble, copper, jade, and materials such as obsidian for carved utensils, art ornaments, religious objects, and weapons of war. Copper ornaments from Alaska were objects of trade throughout the Pacific Northwest and as far south as California.

The arrival of European explorers did not initially stimulate mineral-resource development in Alaska. In 1838, Russian-American traders discovered the mercury sulfide, cinnabar, 21 miles east of Aniak in southwestern Alaska. Because they were primarily exploiting fur bearers in the territory, the traders opted not to develop this discovery. The first recorded mining venture was in 1848 on the Russian River, Kenai Peninsula (Berry, 1973). Peter Doroshin, a mining engineer, spent 2 years developing the prospect, but only recovered a few ounces of gold.

From 1854 to 1857, the Russians mined coal from thin seams near Port Graham and utilized this energy resource to fuel ocean steamers. A similar interest in coal was generated on Admiralty Island, but no deposits were mined. By the 1860s, Russian Americans finally began to view Alaska as a potential source of minerals. Unfortunately for the Russian Empire, Baron Edward Stoeckl, the Russian minister to the United States, completed the Treaty of Cession of Russian America on March 30, 1867 (Naske, 1973). Hence, the rugged and distant territory became the property of the United States for $7.2 million.

Shortly after the purchase, Canadian and American prospectors from the Cassiar District in British Columbia floated down the Stikine River and prospected in Southeastern Alaska. The first recorded mineral location was a copper discovery on Prince of Wales Island west of Ketchikan in 1867. Placer deposits at Windham and Holkham bays yielded over 2,000 ounces of gold from 1869 to 1871. Alaskan hard-rock mining commenced at the Stewart Mine near Sitka in the mid-1870s. In 1880, Joe Juneau and Richard Harris discovered placer gold near the present city of Juneau. These modest deposits were pathfinders to huge, low-grade gold lodes, and by 1882 several mines were in production. Eventually, large mining complexes (including the Treadwell, Perseverance, and Alaska-Juneau Consortia, with 1,000- 3,500 employees, maintained "the heartbeat of Juneau" (Stone and Stone, 1980) until the end of World War II.

Prospectors initially explored interior Alaska regions such as Fortymile (1886) and Circle (1893), but important coastal discoveries at Unga Island (1889) and Sunrise on the Kenai Peninsula (1893-94) also resulted in small gold rushes and gold production. The 1896 Klondike strike in

the Yukon Territory captured the imagination of thousands of treasure seekers worldwide and triggered more than 34 placer-mining stampedes in Alaska, including the Nome (1898), Fairbanks (1902) Iditarod (1909), and Livengood (1914) rushes.

The gold boom was accompanied by other developments in the territory. Copper mining began in Southeastern Alaska around 1900, and by 1905, 10 mines employing almost 400 people were in operation west of Ketchikan. Copper from lodes in Prince William Sound was shipped as concentrates to west-coast smelters at about the same time. Production of the rich Kennicott deposits in Chitina Valley began after completion of the 186-mile-long Copper River and Northwestern Railroad in 1911. In 1902, tin was first mined on the Seward Peninsula; at the same time, shipments of marble, gypsum, and garnet left Southeastern Alaska mines for west coast markets.

Production of gold peaked in 1906 at 1,034,000 ounces and was maintained at high levels until World War I. Copper production peaked in 1916, when 59,927 tons of copper metal were produced from 30 mines in the Chitina Valley, Prince William Sound, and Ketchikan District. During the critical copper shortages of World War I, Alaska's copper contribution amounted to more than 10 percent of United States production. World War I demand for strategic minerals such as tungsten, antimony, tin, and chromium stimulated small-scale mining ventures. During this period, an all-time high of 8,300 workers were employed in Alaskan mines.
